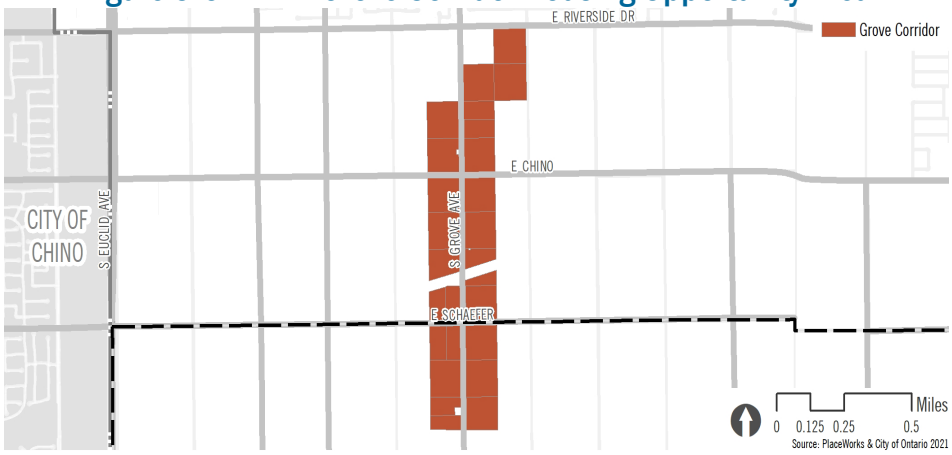
~~*Forty-one sites (299.4 acres) are currently classified as MDR in the Policy Plan, which will be amended to allow up to 30 dwelling units per acre if at least 25 percent of units are affordable to lower incomes, consistent with the Affordable Housing Overlay District. Projects that do not have housing affordable to lower-income households and projects that include less than 25 percent of affordable units will be subject to a maximum density of 25 units per acre. To account for the development of circulation, sidewalks, and other site requirements, the realistic density of 22 dwelling units per acre is used to establish the maximum capacity on all MDR sites.*~~

~~*Eight sites (81.7 acres) are proposed to be classified as Mixed-Use Eucalyptus / Chino Airport Overlay (MU-EU). This land use category is envisioned to accommodate employee-intensive office, entertainment facilities, live/work, and supporting retail uses in a campus environment designed to leverage proximity to the park and maintain compatibility with surrounding residential areas. Stand-alone and mixed-use residential is also permitted outside of the Chino Airport safety zone. As previously discussed, sites within the Chino Airport safety zones 1-4 are not included in the Opportunity Area. This land use category allows residential*~~

~~development with a density range of 25 to 45 dwelling units per acre, which is sufficient to facilitate the development of lower- and moderate-income housing. To account for potential non-residential development, only 40 percent of the land area on each site is estimated to have residential potential. A realistic density of 35 dwelling units per acre is used to establish the total housing capacity on each site.~~



~~Twenty-nine parcels (219.5 acres) are proposed to be classified as Mixed-Use Great Park (currently called the NMC West Mixed-Use Area). Areas with this land use classification accommodate a vertical and horizontal mixture of commercial, office, entertainment, and residential uses, all connecting to the Great Park in a pedestrian-oriented atmosphere. These mixed-use areas are envisioned as low-rise (3-5 stories) with some mid-rise (5-10 stories) near the intersection of Euclid and Edison/Ontario Ranch Road. The land use category allows densities up to 65 dwelling units per acre, which is sufficient to facilitate the development of lower- and moderate-income housing. To account for non-residential development, 70 percent of the land area on each site is estimated to have residential potential. Seventy percent is estimated because similar large mixed-use areas on the eastern side of the Channel have developed as primarily residential, and several developers have approached the City with plans to reduce the size of commercial areas in existing specific plans east of the Channel. A realistic density of 35 dwelling units per acre is used to establish the total housing capacity on each site.~~

~~Using the metrics described above, the Great Park Corridor Opportunity Area has a total capacity of 13,080 new units, 6,509 of which have the capacity to accommodate lower-income housing, 3,286 are presumed to have capacity for housing affordable to moderate-income households, and 3,286 are presumed to have capacity for housing affordable to above moderate-income households.~~

Grove Corridor

The Grove Corridor Opportunity Area extends along Grove Avenue north from the Great Park Corridor Opportunity Area and terminating at Riverside Drive. The corridor provides a vital connection between southern Ontario and the city's existing urban fabric. This area is envisioned as a mixed-income residential district with a mixed-use activity node at Chino Avenue and a new community park near Riverside Drive. The sites along the Grove Corridor were identified for higher-density housing development for several reasons, including planning objectives like activating the street and enhancing transit options, development potential, and infrastructure availability. Housing within the Opportunity Area will benefit from proximity to the Great Park and the new community park. The extents of the Opportunity Area are shown in Figure 5-9 and described below.

Figure 5-9 Grove Corridor Housing Opportunity Area

- Zoning – Grove Corridor

  All sites are currently zoned for Specific Plan all sites in this area are currently zoned SP-AG, and they will be rezoned to SP-AG-AH for inclusion in the Affordable Housing Overlay District (Program 13). The AH Overlay will be applied to all sites. It will establish a minimum density of 20 du/ac and allow the Policy Plan designation to govern the maximum densities.

  As previously discussed, the Agriculture Overlay District will remain in place until the parcel is ready for development consistent with the Policy Plan and Affordable Housing Overlay District. Property owners and developers alike have expressed interest in redeveloping this area, so existing agricultural operations are not expected to limit development potential.

  The City is also proposing to update its Policy Plan land uses as described in Program 13. Sites in this area will have Policy Plan designations of MDR and Mixed-Use. MDR will allow a range of 20-30 du/ac for projects with at least 25 percent of units affordable to lower incomes, and a range of 20-25 du/ac for all other projects. The Mixed Use area (Mixed-Use Grove), at the intersection of Grove and Chino Avenues is envisioned as a low-rise (three to five stories) mixture of retail and residential uses that will create identity and place along the corridor and serve the surrounding residents. The Mixed Use Area will allow 20-65 du/ac. With the changes outlined in Program 13, all sites identified support densities necessary to facilitate lower- and moderate-income housing development.

  There are 21 parcels (150.8 acres) currently or proposed to be classified as MDR in the Policy Plan. Four parcels (36 acres) are proposed to be classified as Mixed-Use Grove in the Policy Plan.

- Site Size – Grove Corridor

  No sites in this opportunity area are smaller than 0.5 acres or larger than 10 acres.

- Existing Use

  The Opportunity Area consists of 25 parcels (186.8 acres) ~~that are identified as suitable for housing development~~. Like the Great Park Corridor, ~~several~~the majority of these sites continue to house the agricultural operations (16 parcels, 130.6 acres) ~~that once dominated this portion of Ontario~~. Several sites have also already begun to transition to interim uses such as building supply sales/storage, truck parking and open storage (8 parcels, 46.7 acres). Finally, there is 1 vacant parcel (9.5 acres) that has already shuttered former agricultural operations.

  On the agricultural parcels, ~~T~~there are approximately six existing farm homes that were built ~~in conjunction with~~to serve the agricultural operations.

  These aging farmhouses are largely vacant or owner-occupied. These homes do not provide established affordable housing, and they are not currently occupied by lower-income households, as shown on Figure 3-14, the median income in this area is between $55,000 and $125,000 annually. Further, development of the identified sites would only occur after the land was voluntarily vacated and sold or redeveloped by the owner occupants of the property. As seen in areas that have recently developed to the east of the Cucamonga Channels, owners who opt to sell or redevelop their properties typically see very large profits and would be able to secure replacement housing without assistance. The six existing homes are projected to be replaced by more than 4,100 homes (more than 685 times the current stock).

  Because of the extremely low density of housing and the anticipated type of development, the existing residential uses are not expected to impede development potential. Land with very similar conditions to the sites identified in this area has recently developed on the eastern side of the Cucamonga Channel, forming new residential neighborhoods. The same trend is expected to continue ~~westward~~in this area as infrastructure expands.

  No existing uses are expected to impede development of housing.

- Availability of Sites

  Similar to the Great Park Corridor, the City has planned to phase out agricultural uses in this area since annexation in 1997, but insufficient infrastructure limited what could be achieved.

  As described under Infrastructure Availability, sewer and water service is expected to extend north from the new trunk line on Merrill Avenue (estimated completion in 2022) north along Grove Avenue, with the southern-most sites expected to be first served. Based on discussion with OMUC, the sites in this area are expected to have service in two phases:

  - Between Southern SCE easement and Schaefer Avenue: 3 to 5 years

  - Between Schaefer Avenue and Riverside Drive: 4 to 6 years

  As backbone infrastructure becomes available, development is likely to occur rapidly, as seen in recent years on the eastern side of the Channel. This assertion is informed by conversations with property owners eager to develop, by an on-going dialogue with home building advocacy groups, and by regular inquiries from developers interested in this area of the City.

~~One of the planned sewer lines will travel along Grove Avenue. As service is expanded from the south, the properties identified in this Opportunity Area will have prime access to expanded infrastructure.~~

- Feasibility of Development

  As with the Great Park Corridor, the anticipated timing of infrastructure expansion paired with heightened interest of both developers and property owners, described under Availability of Sites, indicates that development is not only feasible, but very likely to occur once backbone infrastructure is in place.

  Strategy 6 Market Trends illuminates the aggressive development climate that has already manifested in the eastern side of the Ontario Ranch and references other new communities that included affordable housing. The discussion of Size of Sites for all sites also provides examples of affordable housing projects that have developed on larger greenfield sites. Together, these illustrate that the sites within this opportunity are suitable for lower-income housing.

Parcels with multiple Policy Plan land use designations have been divided, so only those portions of the parcel deemed suitable for housing development are included. As discussed later under this strategy (see "Realistic Capacity" and Units by RHNA Income Category), housing capacity assumptions have been adjusted to reflect only the portion of the parcel included in the inventory. The timing for the availability of infrastructure has been factored into the capacity estimates for all sites in this area, and the City's policy, promoting the creation of mixed-income neighborhoods is reflected in how the RHNA allocation is divided by income category for these sites. ~~The sites along the Grove Corridor were identified for higher-density housing development for several reasons, including planning objectives like activating the street and enhancing transit options, development potential, and infrastructure availability.~~

~~Bringing a higher concentration of mixed-income residents to the corridor will create energy on the street, distinguishing Grove Avenue as an important community connector. The influx of new residents will also make the corridor a prime candidate for expanded bus service, improving transit options for residents and strengthening the connection between north and south Ontario.~~

~~*The Opportunity Area consists of 25 parcels (186.8 acres) that are identified as suitable for housing development. Like the Great Park Corridor, several of these sites continue to house the agricultural operations that once dominated this portion of Ontario. Several sites have also already begun to transition to interim uses such as truck parking and open storage. There are approximately six existing homes that were built in conjunction with agricultural operations. Because of the extremely low density of housing and the anticipated type of development, the existing residential uses are not expected to impede development potential. Land with very similar conditions to the sites identified in this area has recently developed on the eastern side of the Cucamonga Channel, forming new residential neighborhoods. The same trend is expected to continue westward as infrastructure expands.*~~

~~*One of the planned sewer lines will travel along Grove Avenue. As service is expanded from the south, the properties identified in this Opportunity Area will have prime access to expanded infrastructure.*~~

~~*To account for the need to extend infrastructure and to address the greater distance from the planned trunk line and other facilities, the percentage of units estimated to be affordable to lower-income households is reduced based on distance from Merrill Avenue and the estimated timing within the planning period when infrastructure is expected to be available. The corridor is divided into two sections.*~~

~~***South of Schaefer Avenue.*** *In this area, OMUC estimated that utilities could be available in three to five years, depending on the rate of development. In recognition of the reduced time during the planning period when development is expected to be*~~

~~*feasible, only 40 percent of the realistic development capacity is estimated as affordable to lower incomes.*~~

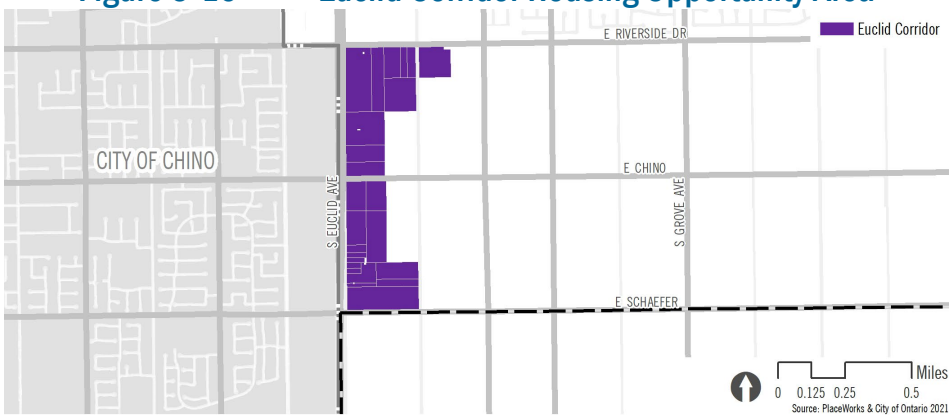
~~***North of Schaefer Avenue.*** *In this area, OMUC estimated that utilities could be available in four to six years, depending on the rate of development. In recognition of the reduced time during the planning period when development will be feasible, only 25 percent of the realistic development capacity is estimated as affordable to lower incomes.*~~

~~*Throughout the Opportunity Area, the housing capacity that is not counted toward the City's lower-income RHNA is estimated to facilitate the development of above moderate-income housing. It is assumed that the above moderate-income housing will not only help to create integrated mixed-income communities but will also help to finance the expansion of infrastructure.*~~

~~*As previously discussed, all sites in this area are currently zoned SP-AG, and they will be rezoned to SP-AG-AH for inclusion in the Affordable Housing Overlay District (Program 13). The Agriculture Overlay District will remain in place until the parcel is ready for development consistent with the Policy Plan and Affordable Housing Overlay District. Property owners and developers alike have expressed interest in redeveloping this area, so existing agricultural operations are not expected to limit development potential.*~~

~~*In addition, Policy Plan land use categories are used to establish each site's capacity and affordability potential.*~~

~~*There are20-21 parcels (150.8 acres) currently or proposed to be classified as MDR in the Policy Plan. The definition for MDR will be amended to allow up to 30 dwelling units per acre if at least 25 percent of units are affordable to lower incomes, consistent with the Affordable Housing Overlay District. Projects that do not have housing affordable to lower incomes and projects that include less than 25 percent of affordable units will be subject to a maximum density of 25 units per acre. To account for the development of circulation, sidewalks, and other site requirements, the realistic density of 22 dwelling units per acre is used to establish the maximum capacity on all MDR sites.*~~



~~*Four parcels (36 acres) are proposed to be classified as Mixed-Use Grove in the Policy Plan. This activity center is envisioned as a low-rise (three to five stories) mixture of retail and residential uses that will create identity and place along the corridor and serve the surrounding residents. The land use category allows densities up to 65 dwelling units per acre, which is sufficient to facilitate the development of lower- and moderate-income housing. To account for non-residential development, only 65 percent of the land area on each site is estimated to have residential potential. A realistic density of 35 dwelling units per acre is used to establish the total housing capacity on each site.*~~

~~*Using the metrics described previously, the Grove Corridor Opportunity Area has a total capacity of 4,130 new units, 1,152 of which have the capacity to accommodate lower-income housing, and 2,978 units are presumed to have capacity for housing affordable to above moderate-income households.*~~

Euclid Corridor

The Euclid Corridor Opportunity Area includes the parcels on the city's western border along Euclid Avenue between Schaefer Avenue and Riverside Drive. The sites along the Euclid Corridor were identified for higher-density housing development to complement the multifamily housing across the street in Chino, fulfill regional transit goals, and because of their development potential as well as infrastructure availability. The extents of the Opportunity Area are shown in Figure 5-10 and described in the text that follows.

Figure 5-10 Euclid Corridor Housing Opportunity Area

- Zoning – Euclid Corridor

  All sites are currently zoned for Specific Plan all sites in this area are currently zoned SP-AG, and they will be rezoned to SP-AG-AH for inclusion in the Affordable Housing Overlay District (Program 13). The AH Overlay will be applied to all sites. It will establish a minimum density of 20 du/ac and allow the Policy Plan designation to govern the maximum densities.

  As previously discussed, the Agriculture Overlay District will remain in place until the parcel is ready for development consistent with the Policy Plan and Affordable Housing Overlay District. Property owners and developers alike have expressed interest in redeveloping this area, so existing agricultural operations are not expected to limit development potential.

  The City is also proposing to update its Policy Plan land uses as described in Program 13. Sites in this area would have policy plan designations of MDR and Mixed-Use. MDR will allow a range of 20-30 du/ac for projects with at least 25 percent of units affordable to lower -incomes, and a range of 20-25 du/ac for all other projects. Mixed Use is proposed on one parcel at the intersection of Euclid Avenue and Riverside Drive. The proposed Mixed-Use designation would allow 20-75 du/ac. With the changes outlined

in Program 13, all sites identified support densities necessary to facilitate lower- and moderate-income housing development.

- Size of Sites – Euclid Corridor

  ~~AB 1397 requires additional justification to include parcels larger than 10 acres in the sites inventory for lower-income housing.~~ Five ~~of the~~ parcels identified in this area (68.3 acres) are larger than 10 acres. ~~-~~As discussed under Size of Sites for all sites, large sites in the Ontario Ranch provide unique opportunities for the development of affordable housing projects, and are not considered an impediment to affordable housing, but could rather been seen as an asset.

  As discussed under Size of Sites for all sites, parcels smaller than 0.5 acres have been excluded from the land inventory, but are not expected to impede development on adjacent sites in any way.

  ~~The City has included these sites because Ontario has ample recent evidence of large greenfield sites developing with residential uses. Areas east of the Channel had nearly identical parcel patterns to those in this area. Many properties to the east have already been subdivided and developed as housing. The remaining undeveloped land east of the Channel is expected to develop likewise. Other large urban greenfield projects, such as Irvine's Great Park neighborhood, reflect the same pattern of subdividing larger parcels to create mixed-income communities. Several of the communities in Irvine's Great Park neighborhood include multifamily affordable housing, indicating that this process can produce opportunities for lower-income housing. The Affordable Housing Overlay District that will be applied to all parcels in the Opportunity Area (Program 13) also provides incentives to promote housing affordable to lower-income households. The development of the Euclid Corridor Opportunity Area is expected to mirror the trends already established on the eastern side of the Channel, with infrastructure availability determining where projects will develop first.~~

- ~~The sites along the Euclid Corridor were identified for higher-density housing development to complement the multifamily housing across the street in Chino, fulfill regional transit goals, and because of their development potential as well as infrastructure availability.~~

- ~~SBCTA has plans to expand a BRT route along Euclid Avenue. While potential BRT stops have not yet been identified, rapid transit stops are typically one-half mile to one mile apart. If future transit stops are placed at Riverside Drive, and halfway between~~

~~Chino and Schaefer Avenues approximately three-quarters of a mile apart, 54 percent of the land area identified in the Euclid Corridor Opportunity Area will be within a 5-minute walk of a BRT; nearly 100 percent of the sites will fall within a 10-minute walk of the same BRT stops.~~

- Existing Use

The Opportunity Area includes 22 parcels (132.2 acres) that are identified as suitable for housing development. Two parcels (10.3 acres) are vacant. Eighteen parcels (110.0 acres) continue to house the agricultural operations~~ that once dominated this portion of Ontario~~. One parcel (8.8 acres) is principally occupied by the parking area that serves the nearby swap meet and livestock sales yard (neither the swap meet nor the livestock sales yard are included in the inventory). The final three parcels (3.1 acres) are underutilized commercial sites fronting Euclid Avenue. These sites were identified for redevelopment because they consist of small buildings operated by independent tenants, and they are surrounded by agricultural and vacant land. It is anticipated that these properties will redevelop concurrent with the rest of the Opportunity Area. The City has been in contact with property owners in this area, and ~~there are no objections to~~the potential redevelopment of the identified sites with housing, including affordable options is feasible in the 6th cycle.

On the agricultural parcels, ~~T~~there are approximately 12 existing farm homes that were built primarily ~~in conjunction with~~to serve agricultural operations.

As in the Great Park and Grove Corridors, these aging farmhouses are largely vacant or owner-occupied. These homes do not provide established affordable housing, and they are not currently occupied by lower-income households, as shown on Figure 3-14, the median income in this area is among the highest in the City with incomes between $87,100 and $125,000 annually. Further, development of the identified sites would only occur after the land was voluntarily vacated and sold or redeveloped by the owner occupants. As seen in areas that have recently developed to the east of the Cucamonga Channel, owners who opt to sell or redevelop their properties typically see very large profits and would be able to secure replacement housing without assistance. The 12 existing homes are projected to be replaced by more than 2,900 homes (nearly 250 times the current stock).

Because of the extremely low density of housing and the anticipated type of development, the existing residential uses are not expected to impede development potential. Land with very similar conditions to the sites identified in this area has recently developed on the eastern side of the Cucamonga Channel.

- Availability of Sites

  As in the Great Park and Grove Corridors, the City has planned to phase out agricultural uses in this area since annexation in 1997, but insufficient infrastructure limited what could be achieved.

  As previously described under infrastructure availability, sewer and water service is expected to extend north from the new trunk line on Merrill Avenue (estimated completion in 2022) north along Euclid Avenue, with the southern-most sites expected to be first served. Based on discussion with OMUC, the sites in this area are expected to have service during the two phases of expansion:

  - Adjacent to Schafer Avenue: 3-5 years

  - Between Schaefer Avenue and Riverside Drive: 4 to 6 years

  It is estimated that the seven parcels closest to Schaefer Avenue could have access to infrastructure in 3 to 5 years, earlier than other sites in this Opportunity Area, because the City is changing the land uses immediately south of the Opportunity Area (between Schaefer Avenue and the Great Park Opportunity Area) to allow light industrial, business park, and logistics facilities. These types of operations are in extremely high demand, so it is anticipated that the development of such facilities would bring infrastructure to the southern portions of the Opportunity Area earlier in the planning period than would otherwise occur. ~~In response to property owner and developer interest, the City is changing the land use immediately south of the Opportunity Area (between Schaefer Avenue and the Great Park Opportunity Area) to allow light industrial, business park, and logistics facilities. Because land for these types of operations is in extremely high demand, it is anticipated that the development of such facilities will bring infrastructure to the Opportunity Area earlier in the planning period than would occur if the area were designated for residential. It is estimated that the seven parcels closest to Schaefer Avenue could have access to infrastructure in three to five years.~~

  As backbone infrastructure becomes available, development is likely to occur rapidly, as seen in recent years on the eastern side of the Channel. This assertion is informed by conversations with property owners eager to develop, by an on-going dialogue with

home building advocacy groups, and by regular inquiries from developers interested in this area of the City.

- Feasibility of Development

  As with the Great Park Corridor, the anticipated timing of infrastructure expansion paired with heightened interest of both developers and property owners, described under "Availability of Sites" indicates that development is not only feasible, but very likely to occur once backbone infrastructure is in place.

  Strategy 6 Market Trends illuminates the aggressive development climate that has already manifested in the eastern side of the Ontario Ranch and references other new communities that included affordable housing. The discussion of Size of Sites for all sites also provides examples of affordable housing projects that have developed on larger greenfield sites. Together, these illustrate that the sites within this opportunity are suitable for lower-income housing.

  Parcels with multiple Policy Plan land use designations have been divided, so only those portions of the parcel deemed suitable for housing development are included. As discussed later under this strategy (see "Realistic Capacity" and Units by RHNA Income Category), housing capacity assumptions have been adjusted to reflect only the portion of the parcel included in the inventory. The timing for the availability of infrastructure has been factored into the affordability estimates for all sites in this area, and the City's policy, promoting the creation of mixed-income neighborhoods is reflected in how the RHNA allocation is divided by income category for these sites.

~~*AB 1397 requires additional justification to include parcels larger than 10 acres in the sites inventory for lower-income housing. Five of the parcels identified in this area (68.3 acres) are larger than 10 acres. The City has included these sites because Ontario has ample recent evidence of large greenfield sites developing with residential uses. Areas east of the Channel had nearly identical parcel patterns to those in this area. Many properties to the east have already been subdivided and developed as housing. The remaining undeveloped land east of the Channel is expected to develop likewise. Other large urban greenfield projects, such as Irvine's Great Park neighborhood, reflect the same pattern of subdividing larger parcels to create mixed-income communities. Several of the communities in Irvine's Great Park neighborhood include multifamily affordable housing, indicating that this process can produce opportunities for lower-income housing. The Affordable Housing Overlay District that will be applied to all parcels in the Opportunity Area (Program 13) also provides incentives to promote housing affordable to lower-income households. The development of the Euclid Corridor Opportunity Area is*~~

~~*expected to mirror the trends already established on the eastern side of the Channel, with infrastructure availability determining where projects will develop first.*~~

~~*The Euclid Corridor was identified as suitable for development during the 2021-2029 planning period because one of the planned sewer lines will travel along Euclid Avenue. As service is expanded from the south, the properties identified will have prime access to expanded infrastructure.*~~

~~*To account for the need to extend infrastructure and to address the distance from the planned trunk line and other facilities, the percentage of units estimated to be affordable to lower-income households is reduced based on distance from Merrill Avenue, and the time in the planning period when infrastructure is expected to be available. The corridor is divided into two sections.*~~

~~***Adjacent to Schaefer Avenue.*** *In response to property owner and developer interest, the City is changing the land use immediately south of the Opportunity Area (between Schaefer Avenue and the Great Park Opportunity Area) to allow light industrial, business park, and logistics facilities. Because land for these types of operations is in extremely high demand, it is anticipated that the development of such facilities will bring infrastructure to the Opportunity Area earlier in the planning period than would occur if the area were designated for residential. It is estimated that the seven parcels closest to Schaefer Avenue could have access to infrastructure in three to five years. In recognition of the reduced time during the planning period when development will be feasible, 40 percent of the realistic development capacity is estimated as affordable to lower incomes.*~~

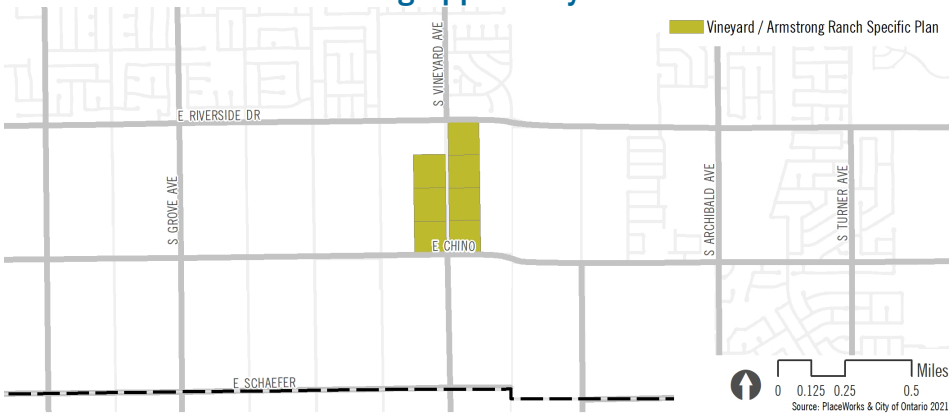
~~***North to Riverside Drive.*** *For the remaining sites in the Opportunity Area, a more conservative estimate of four to six years, depending on the rate of development, is assumed. In recognition of the reduced time during the planning period when development will be feasible, only 25 percent of the realistic development capacity is estimated as affordable to lower incomes.*~~

~~*Throughout the Opportunity Area, the housing capacity that is not counted toward the City's lower-income RHNA is estimated to facilitate the development of above moderate-income housing. It is assumed that the above moderate-income housing will not only help to create integrated mixed-income communities but will also help to finance the expansion of infrastructure.*~~

~~*As previously discussed, all sites in this area are currently zoned SP-AG, and they will be rezoned to SP-AG-AH for inclusion in the Affordable Housing Overlay District (Program 13). The Agriculture Overlay District will remain in place until the parcel is ready for development consistent with the Policy Plan and Affordable Housing Overlay District. Property owners and developers alike have expressed interest in redeveloping this area, so existing agricultural operations are not expected to limit development potential.*~~

~~*In addition, Policy Plan land use categories are used to establish each site's capacity and affordability potential.*~~

~~*There are 21 parcels (117.2 acres) currently or proposed to be classified as MDR in the Policy Plan. The definition for MDR will be amended to allow up to 30 dwelling units per acre if at least 25 percent of units are affordable to lower incomes, consistent with the Affordable Housing Overlay District. Projects that do not have housing affordable to lower incomes and projects that include less than 25 percent of affordable units will be subject to a maximum density of 25 units per acre. To account for the development of circulation, sidewalks, and other site requirements, the realistic density of 22 dwelling units per acre is used to establish the maximum capacity on all MDR sites.*~~



~~*One parcel (15 acres) is proposed to be classified as Mixed-Use Neighborhood Activity Hub (MU-NH) in the Policy Plan. This activity center is envisioned as a low-rise (three to five stories) mixture of retail and residential uses that will create identity and place along the corridor and serve the surrounding residents. The land use category allows densities up to 75 dwelling units per acre, which is sufficient to facilitate the development of lower- and moderate-income housing. To account for non-residential development, 75 percent of the land area on the site is estimated to have residential potential. Seventy-five percent is estimated because recent projects in mixed-use areas on the eastern side of the Channel have developed as primarily residential, and several developers have approached the City with plans to reduce the size of commercial areas in existing specific plans east of the Channel. In addition, a realistic density of 35 dwelling units per acre is used to establish the total housing capacity on the site.*~~

~~*Using the metrics described, the Euclid Corridor Opportunity Area has a total capacity of 2,960 new units, 731 of which have the capacity to accommodate housing affordable to lower-income households, and 2,229 units are presumed to have capacity for housing affordable to above moderate-income households.*~~

Vineyard Corridor / Armstrong Ranch Specific Plan

The Vineyard Corridor / Armstrong Ranch Opportunity Area includes the parcels on either side of Vineyard Avenue between Chino Avenue and Riverside Drive. The sites along Vineyard Avenue were identified as "overflow" sites to help the City maintain a large inventory of potential sites as development occurs throughout the planning period. The extents of the Opportunity Area are shown in Figure 5-11 and described in the text that follows.

Figure 5-11 Vineyard Corridor / Armstrong Ranch Specific Plan Housing Opportunity Area

- Size of Sites – Vineyard Corridor/Armstrong Ranch Specific Plan

  No sites in this opportunity area are smaller than 0.5 acres or larger than 10 acres.

- Zoning – Vineyard Corridor/Armstrong Ranch Specific Plan

  The three ~~sites~~parcels (28.2 acres) on the western side of Vineyard Avenue are currently zoned SP-AG. They will be rezoned to SP-AG-AH for inclusion in the Affordable Housing Overlay District (Program 13). The Agriculture Overlay District will remain in place until the parcel is ready for development consistent with the Policy Plan and Affordable Housing Overlay District. Property owners and developers alike have expressed interest in redeveloping this area, so existing agricultural operations are not expected to limit development potential.

  The four ~~sites~~parcels (36.2 acres) on the eastern side of Vineyard Avenue are governed by the Armstrong Ranch Specific Plan. The City will update the Specific Plan as part of its rezoning program (Program 13) to allow a minimum of 20 dwelling units per acre and maximum of ~~at least~~ 30 or more dwelling units per acre on the sites included in the Opportunity Area.

  As backbone infrastructure becomes available, development is likely to occur rapidly, as seen in recent years on the eastern side of the Channel. This assertion is informed by conversations with property owners eager to develop, by an on-going dialogue with home building advocacy groups, and by regular inquiries from developers interested in this area of the City.

- ~~The sites along Vineyard Avenue were identified as "overflow" sites to help the City maintain a large inventory of potential sites as development occurs throughout the planning period.~~

- Existing Use

  The Opportunity Area includes seven parcels (64.3 acres), all of which are currently used for agricultural purposes. Land with very similar conditions to the sites identified in this area has recently developed on the eastern side of the Cucamonga Channel.

- Availability of Sites

  As in the other Opportunity Areas that comprise this strategy, the City has planned to phase out agricultural uses in this area since annexation in 1997, but insufficient infrastructure limited what could be achieved.

  As previously described under infrastructure availability, sewer and water service is expected to extend north from the new trunk line on Merrill Avenue (estimated completion in 2022) north along Euclid, Bon View, Grove, and Walker Avenues, with the southern-most sites expected to be first served. Based on discussion with OMUC, the sites in this area are expected to have service during the final phases of expansion:

  - Between Schaefer Avenue and Riverside Drive: 4 to 6 years

  Discussions with the development community show that there is substantial interest in developing these sites when infrastructure is available.

- Feasibility of Development

  Discussions with the development community show that there is substantial interest in developing these sites when infrastructure is available. These sites were identified after discussions with property owners and developers interested in intensifying these area.

  The greatest deterrent to the development of these sites is the availability of infrastructure, which may be available in four to six years, depending on the rate of development. In recognition of the reduced time during the planning period when development will be feasible, only 25 percent of the realistic development capacity is estimated as affordable to lower -incomes, while the remaining housing capacity is estimated to facilitate the development of

above moderate-income housing. It is assumed that the above moderate-income housing will not only help to create an integrated mixed-income community but will also help to finance the expansion of infrastructure.

~~The three sites (28.2 acres) on the western side of Vineyard Avenue are currently zoned SP-AG. They will be rezoned to SP-AG-AH for inclusion in the Affordable Housing Overlay District (Program 13). The Agriculture Overlay District will remain in place until the parcel is ready for development consistent with the Policy Plan and Affordable Housing Overlay District. Property owners and developers alike have expressed interest in redeveloping this area, so existing agricultural operations are not expected to limit development potential.~~

REALISTIC CAPICITY

To determine the realistic capacity on these sites, the City identified a realistic density below the maximum, and applied an additional reduction factor to sites with a mixed-use designation to account for potential non-residential uses. A summary of the assumptions and realistic capacity is included in Table 5-5, and detailed descriptions of the adjustment factors applied to sites within each zoning designation is provided after the table.

Table 5-13
Strategy 6: Realistic Capacity

Zoning/ Policy Plan (after rezoning)	Number of Parcels	Acres*	Max Density (du/ac)	Max Capacity (units*)	Adjustment Factor**	Final Realistic Capacity (units*)
Opportunity Area: Great Park Corridor						
SP-AG-AH / MDR	42	299.4	30	8,983	73.3%	**6,568**

Source: City of Ontario, 2022.
*Acres and units have been rounded.
**See Adjustment Factor below for a detailed description of the adjustment factors applied to each group of sites.

Adjustment Factors

- SP-AG-AH / MDR (Great Park, Grove, and Euclid Corridors, and Vineyard Corridor/Armstrong Ranch Specific Plan)

  Description:

  - Number and size of sites: 94 parcels, 631.8 acres
  - Allowable density: 20-30 dwelling units per acre
  - RHNA affordability: varies based on location of site relative to planned infrastructure expansion.
    - *Great Park Corridor – Infrastructure in 1-3 years.* ~~Lower income~~Lower-income (50 percent), ~~Moderate income~~Moderate-income (25 percent), ~~Above moderate income~~Above moderate-income (25 percent)

- *1 parcel in Great Park Corridor, Southern portions of Grove Corridor & Euclid Corridors - Infrastructure in 3-5 years.* ~~Lower income~~Lower-income (40 percent), ~~Above moderate income~~Above moderate-income (60 percent)
- *Northern portions of Grove Corridor & Euclid Corridor, all of Vineyard Corridor/ Armstrong Ranch Specific Plan - Infrastructure in 3-5 years.* ~~Lower income~~Lower-income (25 percent), ~~Above moderate income~~Above moderate-income (75 percent)

- Existing Use: Agriculture, Open Storage, Building Supplies sales/storage

- Infrastructure availability: Planned, RHNA affordability distribution accounts for phasing of infrastructure

- Environmental constraints: Unconfirmed liquefaction potential on 7 parcels (44.8 acres), as discussed under Strategy Six "Environmental Constraints," recent projects within the area that has high water levels, have not required mitigation so no adjustment has been provided.

Capacity Factors:

- *Land Use Controls and Site Improvements.* 95 Percent Adjustment

  Portions of parcels that were not deemed appropriate for residential development (due to presence of a utility easement, designation as a future park, or other factor that would preclude residential development) are not included in the acreage estimates within the land inventory. As such, the factor applied here is intended to account for the portion of each site that will be dedicated to internal circulation, sidewalks, and other public areas. Five percent of the land area has been reserved to account for these uses. The total adjustment factor applied is 95 percent.

- *Realistic Residential Capacity.* No Adjustment

  The SP-AG-AH zone, with a Policy Plan designation of MDR is intended for 100 percent residential projects. For this reason, 100 percent of the site area was considered viable for residential development, and no reduction factor was applied.

- *Typical Densities.* 77.1 Percent Adjustment

  Project applications and requests for specific plan amendments in the eastern Ontario Ranch, have continuously requested higher and higher densities to meet current market demand. Specific plans that were originally imagined as

primarily single-family homes have repositioned to include a greater variety of higher density options. Examples of recently completed homes that are similar to what would be expected in the MDR areas of western Ontario Ranch include motor court and row town products, both of which have been built at densities between 22 and 25 dwelling units per acre in the eastern Ontario Ranch. The City also looked at the densities of recent affordable projects in the northern part of the city (Vista Verde, completed in 2021, and Emporia I, completed in 2020), which were built at densities of 26 and 27 dwelling units per acre, to provide a more conservative estimate while also estimating a high enough density to realize cost savings, a realistic density of 23 dwelling units per acre was used to estimate realistic capacity. Twenty-three dwelling units per acre is 77.1 percent of the maximum density allowed.

In addition to the adjustment factor, 34 existing units (19 in the Great Park Corridor, 3 in the Grove Corridor, 12 in the Euclid Corridor) within the MDR designation (as previously discussed under "Site-Specific Information") have been removed from the realistic capacity to ensure estimates focus on growth rather than replacement.

- *Infrastructure* Availability. Adjustments made to affordability distribution

  As previously discussed, infrastructure availability will enable development of the western Ontario Ranch to occur in a pattern similar to that of the eastern Ranch. Infrastructure is expected to expand south to north as development occurs. Part of the funding for expansion of the infrastructure system will come from investments by market-rate developers. With the current strong demand for residential uses, it is not anticipated that the availability of infrastructure will limit the number of units that can and will be built on each site, only the timing for when those sites will be able to develop and the potential affordability levels. To account for this, and in recognition of the need to offset costs for infrastructure expansion, the percent of the realistic capacity estimated as suitable for lower-income units decreases as you move north from Merrill Avenue, where the initial trunk line is anticipated to complete construction in 2022. The areas farthest from Merrill Avenue anticipate the lowest percentage of affordable units, with the balance expected to be above-~~moderate income~~moderate-income. It is expected that above-moderate housing will help to offset the costs associated with infrastructure expansion.

The realistic capacity is divided by affordability level as follows:

- Great Park Corridor *(Infrastructure in 1-3 years)*

  ~~Lower income~~Lower-income (50 percent), ~~Moderate income~~Moderate-income (25 percent), ~~Above moderate income~~Above moderate-income (25 percent)

- 1 parcel in Great Park Corridor, Southern portions of Grove & Euclid Corridors *(Infrastructure in 3-5 years)*

  ~~Lower income~~Lower-income (40 percent), ~~Above moderate income~~Above moderate-income (60 percent)

- Northern portions of Grove Corridor & Euclid Corridor, all of Vineyard Corridor/ Armstrong Ranch Specific Plan *(Infrastructure in 3-5 years)*

  ~~Lower income~~Lower-income (25 percent), ~~Above moderate income~~Above moderate-income (75 percent)

The results of this distribution are recorded in Table 5-14.

- *Environmental Constraints.* No Adjustment

  As discussed under Strategy Six "Environmental Constraints," there is unconfirmed liquefaction potential on 7 MDR parcels (44.8 acres) in the Great Park Corridor. However, geotechnical studies for recent projects within the zone have not identified any specific risks, and additional mitigation has not been required, soils and groundwater levels are assumed to be similar throughout of the zone, so adjustment was not considered necessary.

Total Capacity Adjustments: (.95)x(1)x(.771)x(1)x(1) = 73.3 percent~~Forty-one sites (299.4 acres) are currently classified as MDR in the Policy Plan, which will be amended to allow up to 30 dwelling units per acre if at least 25 percent of units are affordable to lower incomes, consistent with the Affordable Housing Overlay District. Projects that do not have housing affordable to lower-income households and projects that include less than 25 percent of affordable units will be subject to a maximum density of 25 units per acre. To account for the development of circulation, sidewalks, and other site requirements, the realistic density of 22 dwelling units per acre is used to establish the maximum capacity on all MDR sites.~~

- SP-AG-AH / MU-EU (Great Park Corridor)

  Description:

  - Number and size of sites: 8 parcels, 81.7 acres
  - Allowable density: 25-45 dwelling units per acre
  - RHNA affordability: ~~Lower income~~Lower-income (50 percent), ~~Moderate income~~Moderate-income (25 percent), Above-~~Moderate income~~Moderate-income (25 percent)
  - Existing Use: Agriculture
  - Infrastructure availability: Planned, RHNA affordability distribution accounts for phasing of infrastructure
  - Environmental constraints: None known

  Capacity Factors:

  - *Land Use Controls and Site Improvements.* 31.1 Percent Adjustment

    Portions of parcels that were not deemed appropriate for residential development (due to presence of a utility easement, designation as a future park, or other factor that would preclude residential development) are not included in the acreage estimates within the land inventory. As such, the factor applied here represents the portion of each site that will be dedicated internal circulation, sidewalks, and other public areas. Five percent of the land area has been reserved to account for these uses. The total adjustment factor applied is 95 percent.

  - *Realistic Residential Capacity.* 42.1 Percent Adjustment

    This mixed-use area will allow for 100 percent residential uses, mixed use projects, and 100 percent non-residential uses. This is a new land use in the City that will allow for some low-impact, small scale, light industrial uses as well as commercial and residential projects. Market demand for both residential and light industrial uses is high. An adjustment factor of 42.1 percent has been applied to account for potential non-residential development on these sites. This estimate generally reflects the mix of project types the City anticipates based on conversations with developers and property owners.

- *Typical Densities.* 77.8 Percent Adjustment

  This mixed-use designation allows residential densities between 25 and 45 dwelling units per acre. A realistic density in the middle of the allowed range, 35 dwelling units per acre, was deemed realistic to determine the total capacity on these sites. This was based on projects developed in other areas of the city with a similar characteristic to the City's vision for affordable housing in this area, including the 1001 E. Holt Blvd., a mixed-use multi-family project (35 dwelling units per acre), and based on affordable projects outside of the City, like the Adams Avenue Affordable Housing Community in Murrieta, CA, will complete adoption hearings in 2022 and is proposed at a density of 32 dwelling units per acre over a 6.22 acre site. Accordingly, 35 dwelling units per acre will provide a realistic capacity estimate for units on these sites. Thirty-five dwelling units per acre is 77.8 percent of the maximum density allowed on the site.

  In addition to the adjustment factor, 2 existing units in the Great Park Corridor with a designation of MU-EU (as previously discussed under "Site-Specific Information") have been removed from the realistic capacity to ensure estimates focus on growth rather than replacement.

- *Infrastructure Availability.* Adjustments made to affordability distribution

  As previously discussed, infrastructure availability will enable development of the western Ontario Ranch to occur in a pattern similar to that of the eastern Ranch. Infrastructure is expected to expand south to north as development occurs. Part of the funding for expansion of the infrastructure system will come from investments by market-rate developers. With the current strong demand for residential uses, it is not anticipated that the availability of infrastructure will limit the number of units that can and will be built on each site, only the timing for when those sites will be able to develop and the potential affordability levels. To account for this, and in recognition of the need to offset costs for infrastructure expansion, the percent of the realistic capacity estimated as suitable for lower-income units decreases as you move north from Merrill Avenue, where the initial trunk line is anticipated to complete construction in 2022. The areas farthest from Merrill Avenue anticipate the lowest percentage of affordable units, with the balance expected to be above-~~moderate income~~moderate-income. It is expected that above-moderate housing will help to offset the costs associated with infrastructure expansion.

The realistic capacity is divided by affordability level as follows:

- *Great Park Corridor – Infrastructure in 1-3 years.* ~~Lower income~~Lower-income (50 percent), ~~Moderate income~~Moderate-income (25 percent), ~~Above moderate income~~Above moderate-income (25 percent)

The results of this distribution are recorded in Table 5-14.

- *Environmental Constraints.* No Adjustment

No known site constraints

Total Capacity Adjustments: (.95)x(.421)x(.778)x(1)x(1)=31.1 percent

~~Eight sites (81.7 acres) are proposed to be classified as Mixed Use Eucalyptus / Chino Airport Overlay (MU-EU). This land use category is envisioned to accommodate employee-intensive office, entertainment facilities, live/work, and supporting retail uses in a campus environment designed to leverage proximity to the park and maintain compatibility with surrounding residential areas. Stand-alone and mixed-use residential is also permitted outside of the Chino Airport safety zone. As previously discussed, sites within the Chino Airport safety zones 1-4 are not included in the Opportunity Area. This land use category allows residential development with a density range of 25 to 45 dwelling units per acre, which is sufficient to facilitate the development of lower- and moderate-income housing. To account for potential non-residential development, only 40 percent of the land area on each site is estimated to have residential potential. A realistic density of 35 dwelling units per acre is used to establish the total housing capacity on each site.~~

- SP-AG-AH / MU-GP (Great Park Corridor)

  Description:

  - Number and size of sites: 29 parcels, 219.5 acres
  - Allowable density: 20-65 dwelling units per acre
  - RHNA affordability: ~~Lower income~~Lower-income (50 percent), ~~Moderate income~~Moderate-income (25 percent), Above-~~Moderate income~~Moderate-income (25 percent)
  - Existing Use: Agriculture, Open Storage, Truck Wash, Vacant Site with Concrete Pad and Fence

- Infrastructure availability: Planned, RHNA affordability distribution accounts for phasing of infrastructure

- Environmental constraints: Unconfirmed liquefaction potential on 19 parcels (137.7 acres), as discussed under Strategy 6, "Environmental Constraints," recent projects within the area that potentially has high water levels, have not required mitigation so no adjustment has been provided.

Capacity Factors:

- *Land Use Controls and Site Improvements.* 95 Percent Adjustment

  Portions of parcels that were not deemed appropriate for residential development (due to presence of a utility easement, designation as a future park, or other factor that would preclude residential development) are not included in the acreage estimates within the land inventory. As such, the factor applied here represents the portion of each site that will be dedicated internal circulation, sidewalks, and other public areas. Five percent of the land area has been reserved to account for these uses. The total adjustment factor applied is 95 percent.

- *Realistic Residential Capacity.* 73.7 Percent Adjustment

  This mixed-use designation (currently called MU-NMC West, but a name change is proposed) allows for 100 percent residential uses, mixed use projects, and 100 percent non-residential uses. This is land use is envisioned as the southwestern activity center for citizens of Ontario with bot vertical and horizontal mixed-use development that connects to the Great Park. To determine the amount of mixed-use land area that is expected to develop for residential uses, the City looked at trends in the eastern Ontario Ranch, where developers have consistently approached the City to reduce the commercial footprint within the adopted specific plan. The City also examined the mix of uses built or otherwise in the pipeline in the area designated as Mixed-Use NMC East in the Policy Plan, which was envisioned for a similar use as the MU-GP designation. In the Mixed-Use NMC East areas the mix of uses is approximately 75 percent residential. Consistent with these trends, approximately 73.7 percent of the area is expected to develop for residential purposes, while the balance is reserved for non-residential uses. The total adjustment factor applied is 73.7 percent.

- *Typical Densities.* 53.8 Percent Adjustment

  This mixed-use designation allows residential densities between 20 and 65 dwelling units per acre. A realistic density at the lower end of the allowed range, 35 dwelling units per acre, was deemed realistic to determine the total capacity on these sites. This was based on projects developed in other areas of the city with a similar characteristic to the City's vision for affordable housing in this area, including the 1001 E. Holt Blvd., a mixed-use multi-family project (35 dwelling units per acre), and based on affordable projects outside of the City, like the Adams Avenue Affordable Housing Community in Murrieta, CA, will complete adoption hearings in 2022 and is proposed at a density of 32 dwelling units per acre over a 6.22 acre site. Accordingly, 35 dwelling units per acre will provide a realistic capacity estimate for units on these sites. Thirty-five dwelling units per acre is 53.8 percent of the maximum density allowed on the site.

  In addition to the adjustment factor, 7 existing units in the Great Park Corridor with a designation of MU-GP (as previously discussed under "Site-Specific Information") have been removed from the realistic capacity to ensure estimates focus on growth rather than replacement.

- *Infrastructure* Availability. Adjustments made to affordability level estimates rather than capacity

  As previously discussed, infrastructure availability will enable development of the western Ontario Ranch to occur in a pattern similar to that of the eastern Ranch. Infrastructure is expected to expand south to north as development occurs. Part of the funding for expansion of the infrastructure system will come from investments by market-rate developers. With the current strong demand for residential uses, it is not anticipated that the availability of infrastructure will limit the number of units that can and will be built on each site, only the timing for when those sites will be able to develop and the potential affordability levels. To account for this, and in recognition of the need to offset costs for infrastructure expansion, the percent of the realistic capacity estimated as suitable for lower-income units decreases for sites farther away from Merrill Avenue, where the initial trunk line is anticipated to complete construction in 2022. The areas farthest from Merrill Avenue anticipate the lowest percentage of affordable units, with the balance expected to be above-~~moderate income~~moderate-income. It is expected that above-moderate housing will help to offset the costs associated with infrastructure expansion.

The realistic capacity is therefore divided by affordability level as follows:

- *Great Park Corridor – Infrastructure in 1-3 years.* ~~Lower income~~Lower-income (50 percent), ~~Moderate income~~Moderate-income (25 percent), ~~Above moderate income~~Above moderate-income (25 percent)

The results of this distribution are recorded in Table 5-14.

- *Environmental Constraints.* No Adjustment

  As discussed under Strategy Six "Environmental Constraints," there is unconfirmed liquefaction potential on 19 MU-GP parcels (137.7 acres) in the Great Park Corridor. However, geotechnical studies for recent projects within the zone have not identified any specific risks, and additional mitigation has not been required, soils and groundwater levels are assumed to be similar throughout of the zone, so adjustment was not considered necessary.

Total Capacity Adjustments: (.95)x(.737)x(.538)x(1)x(1)=37.7 percent

~~Twenty-nine parcels (219.5 acres) are proposed to be classified as Mixed-Use Great Park (currently called the NMC West Mixed-Use Area). Areas with this land use classification accommodate a vertical and horizontal mixture of commercial, office, entertainment, and residential uses, all connecting to the Great Park in a pedestrian-oriented atmosphere. These mixed-use areas are envisioned as low-rise (3-5 stories) with some mid-rise (5-10 stories) near the intersection of Euclid and Edison/Ontario Ranch Road. The land use category allows densities up to 65 dwelling units per acre, which is sufficient to facilitate the development of lower- and moderate-income housing. To account for non-residential development, 70 percent of the land area on each site is estimated to have residential potential. Seventy percent is estimated because similar large mixed-use areas on the eastern side of the Channel have developed as primarily residential, and several developers have approached the City with plans to reduce the size of commercial areas in existing specific plans east of the Channel. A realistic density of 35 dwelling units per acre is used to establish the total housing capacity on each site.~~

- SP-AG-AH / MU-GR (Grove Corridor)

  Description:

  - Number and size of sites: 4 parcels, 36 acres

- Allowable density: 20-65 dwelling units per acre

- RHNA affordability: ~~Lower income~~Lower-income (25 percent), Above-~~Moderate income~~Moderate-income (75 percent)

- Existing Use: Agriculture

- Infrastructure availability: Planned, RHNA affordability distribution accounts for phasing of infrastructure

- Environmental constraints: None known

Capacity Factors:

- *Land Use Controls and Site Improvements.* 95 Percent Adjustment

  Portions of parcels that were not deemed appropriate for residential development (due to presence of a utility easement, designation as a future park, or other factor that would preclude residential development) are not included in the acreage estimates within the land inventory. As such, the factor applied here represents the portion of each site that will be dedicated internal circulation, sidewalks, and other public areas. Five percent of the land area has been reserved to account for these uses. The total adjustment factor applied is 95 percent.

- *Realistic Residential Capacity.* 68.4 Percent Adjustment

  This mixed-use designation (currently called MU-NMC West, but a name change is proposed) allows for 100 percent residential uses, mixed use projects, and 100 percent non-residential uses. This is land use is envisioned as the southwestern activity center for citizens of Ontario with bot vertical and horizontal mixed-use development that connects to the Great Park. To determine the amount of mixed-use land area that is expected to develop for residential uses, the City looked at trends in the eastern Ontario Ranch, where developers have consistently approached the City to reduce the commercial footprint within the adopted specific plan. The City also examined the mix of uses built or otherwise in the pipeline in the area designated as Mixed-Use NMC East in the Policy Plan, which was envisioned for a similar use as the MU-GP designation. In the Mixed-Use NMC East areas the mix of uses is approximately 75 percent residential. Because the City would like to encourage a greater mix of uses on these sites to serve as a neighborhood center for central Ontario Ranch, a smaller percent of the area, approximately 68.4 percent of the

area is expected to develop for residential purposes, while the balance is reserved for non-residential uses. The total adjustment factor applied is 68.4 percent.

- *Typical Densities.* 53.8 Percent Adjustment

  This mixed-use designation allows residential densities between 20 and 65 dwelling units per acre. A realistic density at the lower end of the allowed range, 35 dwelling units per acre, was deemed realistic to determine the total capacity on these sites. This was based on projects developed in other areas of the city with a similar characteristic to the City's vision for affordable housing in this area, including the 1001 E. Holt Blvd., a mixed-use multi-family project (35 dwelling units per acre), and based on affordable projects outside of the City, like the Adams Avenue Affordable Housing Community in Murrieta, CA, will complete adoption hearings in 2022 and is proposed at a density of 32 dwelling units per acre over a 6.22 acre site. Accordingly, 35 dwelling units per acre will provide a realistic capacity estimate for units on these sites. Thirty-five dwelling units per acre is 53.8 percent of the maximum density allowed on the site.

  In addition to the adjustment factor, 3 existing units in the Grove Corridor with a designation of MU-GR (as previously discussed under "Site-Specific Information") have been removed from the realistic capacity to ensure estimates focus on growth rather than replacement.

- *Infrastructure Availability.* Adjustments made to affordability level estimates rather than capacity

  As previously discussed, infrastructure availability will enable development of the western Ontario Ranch to occur in a pattern similar to that of the eastern Ranch. Infrastructure is expected to expand south to north as development occurs. Part of the funding for expansion of the infrastructure system will come from investments by market-rate developers. With the current strong demand for residential uses, it is not anticipated that the availability of infrastructure will limit the number of units that can and will be built on each site, only the timing for when those sites will be able to develop and the potential affordability levels. To account for this, and in recognition of the need to offset costs for infrastructure expansion, the percent of the realistic capacity estimated as suitable for lower-income units decreases as you move north from Merrill Avenue, where the initial trunk line is anticipated to complete construction in 2022. The areas farthest from Merrill Avenue

anticipate the lowest percentage of affordable units, with the balance expected to be above-~~moderate income~~moderate-income. It is expected that above-moderate housing will help to offset the costs associated with infrastructure expansion. The realistic capacity is divided by affordability level as follows:

- *Grove Corridor (north of Schaefer Avenue)- Infrastructure in 4-6 years.* ~~Lower income~~Lower-income (25 percent), ~~Above moderate income~~Above moderate-income (75 percent)

The results of this distribution are recorded in Table 5-14.

- *Environmental Constraints.* No Adjustment

No known site constraints.

Total Capacity Adjustments: (.95)x(.68.4)x(.538)x(1)x(1)=35.0 percent

- SP-AG-AH / MU-ER (Euclid Corridor)

Description:

- Number and size of sites: 1 parcel, 15.0 acres
- Allowable density: 25-75 dwelling units per acre
- RHNA affordability: ~~Lower income~~Lower-income (25 percent), Above-~~Moderate income~~Moderate-income (75 percent)
- Existing Use: Agriculture
- Infrastructure availability: Planned, RHNA affordability distribution accounts for phasing of infrastructure
- Environmental constraints: None known

Capacity Factors:

- *Land Use Controls and Site Improvements.* 95 Percent Adjustment

Portions of parcels that were not deemed appropriate for residential development (due to presence of a utility easement, designation as a future park, or other factor that would preclude residential development) are not included in the acreage estimates within the land inventory. As such, the factor applied here represents the portion of each site that will be dedicated internal circulation, sidewalks, and other public areas. Five percent of the land area has been reserved to

account for these uses. The total adjustment factor applied is 95 percent.

- *Realistic Residential Capacity.* 78.9 Percent Adjustment

  This mixed-use designation (currently called MU-NMC West, but a name change is proposed) allows for 100 percent residential uses, mixed use projects, and 100 percent non-residential uses. This is land use is envisioned as the southwestern activity center for citizens of Ontario with bot vertical and horizontal mixed-use development that connects to the Great Park. To determine the amount of mixed-use land area that is expected to develop for residential uses, the City looked at trends in the eastern Ontario Ranch, where developers have consistently approached the City to reduce the commercial footprint within the adopted specific plan. The City also examined the mix of uses built or otherwise in the pipeline in the area designated as Mixed-Use NMC East in the Policy Plan, which was envisioned for a similar use as the MU-GP designation. In the Mixed-Use NMC East areas the mix of uses is approximately 75 percent residential. Because the location of this site is directly across the street from a successful neighborhood shopping center, it is expected that a smaller amount of retail and other nonresidential uses will be viable, while residential uses will remain in high demand. Consistent with these trends, approximately 78.9 percent of the area is expected to develop for residential purposes, while the balance is reserved for non-residential uses. The total adjustment factor applied is 78.9 percent.

- *Typical Densities. 46.7* Percent Adjustment

  This mixed-use designation allows residential densities between 20 and 75 dwelling units per acre. A realistic density at the lower end of the allowed range, 35 dwelling units per acre, was deemed realistic to determine the total capacity on these sites. This was based on projects developed in other areas of the city with a similar characteristic to the City's vision for affordable housing in this area, including the 1001 E. Holt Blvd., a mixed-use multi-family project (35 dwelling units per acre), and based on affordable projects outside of the City, like the Adams Avenue Affordable Housing Community in Murrieta, CA, which will complete adoption hearings in 2022 and is proposed at a density of 32 dwelling units per acre over a 6.22 acre site. Accordingly, 35 dwelling units per acre will provide a realistic capacity estimate for units on these sites. Thirty-five dwelling units per acre is 53.8 percent of the maximum density allowed on the site.

- *Infrastructure Availability.* Adjustments made to affordability level estimates rather than capacity

  As previously discussed, infrastructure availability will enable development of the western Ontario Ranch to occur in a pattern similar to that of the eastern Ranch. Infrastructure is expected to expand south to north as development occurs. Part of the funding for expansion of the infrastructure system will come from investments by market-rate developers. With the current strong demand for residential uses, it is not anticipated that the availability of infrastructure will limit the number of units that can and will be built on each site, only the timing for when those sites will be able to develop and the potential affordability levels. To account for this, and in recognition of the need to offset costs for infrastructure expansion, the percent of the realistic capacity estimated as suitable for lower-income units decreases as you move north from Merrill Avenue, where the initial trunk line is anticipated to complete construction in 2022. The areas farthest from Merrill Avenue anticipate the lowest percentage of affordable units, with the balance expected to be above-~~moderate income~~moderate-income. It is expected that above-moderate housing will help to offset the costs associated with infrastructure expansion. The realistic capacity is divided by affordability level as follows:

  - *Euclid Corridor (north of sites adjacent to Schaefer Avenue)-Infrastructure in 4-6 years.* ~~Lower income~~Lower-income (25 percent), ~~Above moderate income~~Above moderate-income (75 percent)

  The results of this distribution are recorded in Table 5-14.

- *Environmental Constraints.* No Adjustment

  No known site constraints.

Total Capacity Adjustments: (.95)x(.789)x(.467)x(1)x(1)=35.0 percent

~~Using the metrics described above, the Great Park Corridor Opportunity Area has a total capacity of 13,080 new units, 6,509 of which have the capacity to accommodate lower-income housing, 3,286 are presumed to have capacity for housing affordable to moderate-income households, and 3,286 are presumed to have capacity for housing affordable to above moderate-income households.~~

UNITS BY RHNA INCOME CATEGORY

As discussed in previous section, infrastructure availability will enable development of the western Ontario Ranch to occur in a pattern similar

to that of the eastern Ranch. Infrastructure is expected to expand south to the north as development occurs. Part of the funding for expansion of the infrastructure system will come from investments by market-rate developers. With the current strong demand for residential uses, it is not anticipated that the availability of infrastructure will limit the number of units that can and will be built on each site, only the timing for when those sites will be able to develop and the affordability of resulting units. To account for this, and in recognition of the need to offset costs for infrastructure expansion, the percent of the realistic capacity estimated as suitable for lower-income units decreases on sites farther away from Merrill Avenue, the southern-most street in the western Ontario Ranch, where the initial trunk line is anticipated to complete construction in 2022. The areas farthest from Merrill Avenue anticipate the lowest percentage of affordable units, with the balance expected to be above-~~moderate income~~moderate-income. It is expected that above-moderate housing will help to offset the costs associated with infrastructure expansion. The realistic capacity is divided by affordability level as follows:

- Great Park Corridor
  - South of SCE easement *(Infrastructure in 1-3 years)*
    ~~Lower income~~Lower-income (50 percent), ~~Moderate income~~Moderate-income (25 percent), ~~Above moderate income~~Above moderate-income (25 percent)
  - North of SCE easement *(Infrastructure in 3-5 years)*
    ~~Lower income~~Lower-income (40 percent), ~~Above moderate income~~Above moderate-income (60 percent)
- Grove Corridor
  - South of Schaefer Avenue *(Infrastructure in 3-5 years)*
    ~~Lower income~~Lower-income (40 percent), ~~Above moderate income~~Above moderate-income (60 percent)
  - North of Schaefer Avenue *(Infrastructure in 4-6 years)*
    ~~Lower income~~Lower-income (25 percent), ~~Above moderate income~~Above moderate-income (75 percent)
- Euclid Corridor
  - South of Schaefer Avenue *(Infrastructure in 3-5 years)*
    ~~Lower income~~Lower-income (40 percent), ~~Above moderate income~~Above moderate-income (60 percent)
  - North of Schaefer Avenue *(Infrastructure in 4-6 years)*
    ~~Lower income~~Lower-income (25 percent), ~~Above moderate income~~Above moderate-income (75 percent)

- Vineyard Corridor/ Armstrong Ranch Specific Plan
  - Whole Area (*Infrastructure in 4-6 years*)
    ~~Lower income~~Lower-income (25 percent), ~~Above moderate income~~Above moderate-income (75 percent)

Table 5-14
Strategy 6: Units by Income Category

Zoning/ Policy Plan (after rezoning)	Number of Parcels	Acres*	Units by RHNA Income Category			Final Realistic Capacity (units*)
			Lower (units*)	Moderate (units*)	Above Moderate (units*)

*Acres and units have been rounded.

Notes:
1 All MU-EU and MU-GP parcels are south of the SCE easements.
2 All MU-GR parcels are north of Schaefer Avenue.
3 All MU-ER parcels are north of sites adjacent to Schaefer Avenue.

~~To account for the need to extend infrastructure and to address the nine larger parcels, only 50 percent of the realistic development capacity in this area is estimated to be affordable to lower income households. The balance of the capacity is split between moderate income housing and above moderate income housing. It is assumed that the above moderate-~~

~~income housing will help create integrated mixed income communities and combine with non-residential uses to help finance any necessary subdivision and expansion of infrastructure.~~

~~To account for the need to extend infrastructure and to address the greater distance from the planned trunk line and other facilities, the percentage of units estimated to be affordable to lower-income households is reduced based on distance from Merrill Avenue and the estimated timing within the planning period when infrastructure is expected to be available. The corridor is divided into two sections.~~

- ~~**South of Schaefer Avenue.** In this area, OMUC estimated that utilities could be available in three to five years, depending on the rate of development. In recognition of the reduced time during the planning period when development is expected to be feasible, only 40 percent of the realistic development capacity is estimated as affordable to lower incomes.~~

- ~~**North of Schaefer Avenue.** In this area, OMUC estimated that utilities could be available in four to six years, depending on the rate of development. In recognition of the reduced time during the planning period when development will be feasible, only 25 percent of the realistic development capacity is estimated as affordable to lower incomes.~~

~~Throughout the Opportunity Area, the housing capacity that is not counted toward the City's lower-income RHNA is estimated to facilitate the development of above moderate-income housing. It is assumed that the above moderate-income housing will not only help to create integrated mixed-income communities but will also help to finance the expansion of infrastructure.~~

~~As previously discussed, all sites in this area are currently zoned SP-AG, and they will be rezoned to SP-AG-AH for inclusion in the Affordable Housing Overlay District (Program 13). The Agriculture Overlay District will remain in place until the parcel is ready for development consistent with the Policy Plan and Affordable Housing Overlay District. Property owners and developers alike have expressed interest in redeveloping this area, so existing agricultural operations are not expected to limit development potential.~~

~~In addition, Policy Plan land use categories are used to establish each site's capacity and affordability potential.~~

~~There are20-21 parcels (150.8 acres) currently or proposed to be classified as MDR in the Policy Plan. The definition for MDR will be amended to allow up to 30 dwelling units per acre if at least 25 percent of units are affordable to lower incomes, consistent with the Affordable Housing~~

Overlay District. Projects that do not have housing affordable to lower incomes and projects that include less than 25 percent of affordable units will be subject to a maximum density of 25 units per acre. To account for the development of circulation, sidewalks, and other site requirements, the realistic density of 22 dwelling units per acre is used to establish the maximum capacity on all MDR sites.

Four parcels (36 acres) are proposed to be classified as Mixed-Use Grove in the Policy Plan. This activity center is envisioned as a low-rise (three to five stories) mixture of retail and residential uses that will create identity and place along the corridor and serve the surrounding residents. The land use category allows densities up to 65 dwelling units per acre, which is sufficient to facilitate the development of lower- and moderate-income housing. To account for non-residential development, only 65 percent of the land area on each site is estimated to have residential potential. A realistic density of 35 dwelling units per acre is used to establish the total housing capacity on each site.

Using the metrics described previously, the Grove Corridor Opportunity Area has a total capacity of 4,130 new units, 1,152 of which have the capacity to accommodate lower-income housing, and 2,978 units are presumed to have capacity for housing affordable to above moderate-income households.

The Euclid Corridor was identified as suitable for development during the 2021-2029 planning period because one of the planned sewer lines will travel along Euclid Avenue. As service is expanded from the south, the properties identified will have prime access to expanded infrastructure.

To account for the need to extend infrastructure and to address the distance from the planned trunk line and other facilities, the percentage of units estimated to be affordable to lower-income households is reduced based on distance from Merrill Avenue, and the time in the planning period when infrastructure is expected to be available. The corridor is divided into two sections.

- **Adjacent to Schaefer Avenue.** In recognition of the reduced time during the planning period when development will be feasible, 40 percent of the realistic development capacity is estimated as affordable to lower incomes.

- **North to Riverside Drive.** For the remaining sites in the Opportunity Area, a more conservative estimate of four to six years, depending on the rate of development, is assumed. In recognition of the reduced time during the planning period when development will be feasible, only 25 percent of the realistic development capacity is estimated as affordable to lower incomes.

~~Throughout the Opportunity Area, the housing capacity that is not counted toward the City's lower-income RHNA is estimated to facilitate the development of above moderate-income housing. It is assumed that the above moderate-income housing will not only help to create integrated mixed-income communities but will also help to finance the expansion of infrastructure.~~

~~As previously discussed, all sites in this area are currently zoned SP-AG, and they will be rezoned to SP-AG-AH for inclusion in the Affordable Housing Overlay District (Program 13). The Agriculture Overlay District will remain in place until the parcel is ready for development consistent with the Policy Plan and Affordable Housing Overlay District. Property owners and developers alike have expressed interest in redeveloping this area, so existing agricultural operations are not expected to limit development potential.~~

~~In addition, Policy Plan land use categories are used to establish each site's capacity and affordability potential.~~

~~There are 21 parcels (117.2 acres) currently or proposed to be classified as MDR in the Policy Plan. The definition for MDR will be amended to allow up to 30 dwelling units per acre if at least 25 percent of units are affordable to lower incomes, consistent with the Affordable Housing Overlay District. Projects that do not have housing affordable to lower incomes and projects that include less than 25 percent of affordable units will be subject to a maximum density of 25 units per acre. To account for the development of circulation, sidewalks, and other site requirements, the realistic density of 22 dwelling units per acre is used to establish the maximum capacity on all MDR sites.~~

~~One parcel (15 acres) is proposed to be classified as Mixed Use Neighborhood Activity Hub (MU-NH) in the Policy Plan. This activity center is envisioned as a low-rise (three to five stories) mixture of retail and residential uses that will create identity and place along the corridor and serve the surrounding residents. The land use category allows densities up to 75 dwelling units per acre, which is sufficient to facilitate the development of lower- and moderate-income housing. To account for non-residential development, 75 percent of the land area on the site is estimated to have residential potential. Seventy-five percent is estimated because recent projects in mixed-use areas on the eastern side of the Channel have developed as primarily residential, and several developers have approached the City with plans to reduce the size of commercial areas in existing specific plans east of the Channel. In addition, a realistic density of 35 dwelling units per acre is used to establish the total housing capacity on the site.~~

~~Using the metrics described, the Euclid Corridor Opportunity Area has a total capacity of 2,960 new units, 731 of which have the capacity to accommodate housing affordable to lower-income households, and 2,229 units are presumed to have capacity for housing affordable to above moderate-income households.~~

~~In addition, Policy Plan land use categories are used to establish each site's capacity and affordability potential.~~

~~The sites are proposed to be re-classified as MDR in the Policy Plan. As previously noted, the definition for MDR will also be amended to allow up to 30 dwelling units per acre if at least 25 percent of units are affordable to lower incomes, consistent with the Affordable Housing Overlay District. Projects that do not have housing affordable to lower incomes and projects that include less than 25 percent of affordable units, will be subject to a maximum density of 25 units per acre. To account for the development of circulation, sidewalks, and other site requirements, the realistic density of 22 dwelling units per acre is used to establish the maximum capacity on all MDR sites.~~

~~The four sites (36.2 acres) on the eastern side of Vineyard Avenue are governed by the Armstrong Ranch Specific Plan. The City will update the Specific Plan as part of its rezoning program (Program 13) to allow at least 30 dwelling units per acre on the sites included in the Opportunity Area. To account for the development of circulation, sidewalks, and other site requirements, the realistic density of 22 dwelling units per acre is used to establish the maximum capacity on these sites.~~

~~Using the metrics described, the Vineyard Corridor/Armstrong Ranch Opportunity Area has a total capacity of 1,416 new units, 354 of which have the capacity to accommodate lower-income housing, and 1,062 units are presumed to have capacity for housing affordable to above moderate-income households.~~

Strategy 7: Accessory Dwelling Units

Accessory dwellings are a part of the strategy for meeting the City's share of its RHNA for housing affordable to low- and moderate-income households. Ontario has many single-family homes on lots that would allow space to build an ADU.

State law has been amended to facilitate and encourage the production of accessory dwellings. In 2016, AB 2299 and SB 1069 required cities to revise their zoning code to conform to the new ADU law. In 2019, SB 68, AB 881, and SB 13 further amended California Government Code Sections 65852.2 and 65852.22, and Health and Safety Code Section 17980.12 pertaining to local regulations for ADUs. In January 2020, the City Council enacted

Ordinance 3175 to incorporate recent changes to state law with respect to ADUs.

Ontario has seen an influx in ADU applications, increasing from just 30 units permitted in 2019 to 69 permits issued in 2020. Based on past and current trends, the City expects that 120 to 360 ADUs will be built during the Housing Element period of 2021-2029.

The affordability for ADUs built in Ontario is based on SCAG's ADU survey and affordability assumptions for San Bernardino County. Applying those affordability assumptions to Ontario and the range of production estimates, the City can expect the production of 69 to 207 lower-income ADUs over the Housing Element period. Table 5-~~3~~ 15 includes the summary of ADU projection estimates by affordability level. To encourage this level of production, the Housing Plan proposes a program to incentivize the production of ADUs (Program 27).

Table 5-~~3~~15
Accessory Dwelling Unit Projections, 2021–2029

Household Income Category	Percent of ADUs Projected[1]	Range of ADU Estimates	
		Conservative Trend[2]	Maximum Trend[3]
Lower	57.5%	69	207
Moderate	34.8%	42	125
Above Moderate	7.7%	9	28
ADUS Projected (2021-2029)		**120**	**360**

Source: City of Ontario, 2021.

Notes:

1. The methodology for the affordability distribution of ADUs can be accessed online at: https://scag.ca.gov/sites/main/files/file-attachments/adu_affordability_analysis_120120v2.pdf?1606868527
2. The conservative trend assumes 15 dwelling units will be built per year. This estimate is based on half of the reduced number of permits issued in 2019.
3. The maximum trend assumes 45 dwelling units will be built per year. This estimate is based on the average of the permits issued in 2019 and 2020.

Summary of Capacity to Accommodate RHNA Allocation

Table 5-~~4~~ 16summarizes the City's strategy to achieve its 2021-2029 RHNA. It is recognized, however, that these strategies are deemed conservative–the City expects that additional residential and mixed-use projects will occur within specific plan areas and on underutilized sites throughout the city. The City's RHNA strategy reflects the City's policy to support the creation of mixed-income communities by assuming a mix of lower- and moderate-income housing on identified sites in established neighborhoods and a mix of lower-, moderate-, and above moderate-income housing in areas where there is no existing residential component.

The following provides a high-level summary of the City's RHNA strategies.

- **Above moderate-income**. In addition to the capacity identified in pipeline projects and the analysis of strategies, the City has entitled additional capacity for several thousand homes that have not been credited toward the RHNA. Areas with development potential that are not included in the inventory include entitled specific plans, the downtown mixed-use district, and mixed-use areas along the I-10 corridor. Several specific plans were also recently amended to allow more housing at higher densities, a trend the City expects to continue. There is sufficient capacity to accommodate the above moderate-income housing requirement of the RHNA.

- **Moderate-income**. Prior sections contained an analysis of the strategies that will be used to accommodate the moderate- and lower-income RHNA. Sites and densities were demonstrated to be sufficient to accommodate housing affordable to moderate-income households.

- **Lower-income**. Prior sections contained an analysis of the strategies that will be used to accommodate the lower-income RHNA. Sites and densities were demonstrated to be sufficient to accommodate affordable housing. In addition, specific programs were shown for each strategy that would encourage and facilitate housing production and that would also remove any potential constraints to development.

5.2 Administrative and Financial Resources

Funding Sources for Affordable Housing

The City's local housing programs are supported through federal funding and state funding programs that assist first-time homebuyers, build affordable housing, and help special-needs groups, such as seniors and large households, as listed in Table 5-17~~5~~. In most cases, other entities, including for-profit and nonprofit developers, apply for funds or other program benefits. For example, developers apply directly for Section 202 grants. In general, the City relies on the private sector to develop new affordable units.

Table 5-175
Federal and State Housing Funding Programs

Program Name	Description	Eligible Activities
Federal Funding Programs		
Community Development Block Grant (CDBG) Program	The Department of Housing and Urban Development (HUD) awards CDBG annually to entitlement jurisdictions and states for general activities, including housing and economic development activities. HUD also offers various other programs that can be used by the City and nonprofit and for-profit agencies for the preservation of low-income housing units, such as Section 202 and Section 108 loan guarantees. The annual appropriation for CDBG is split between states and local jurisdictions called "entitlement communities."	Acquisition Rehabilitation Homebuyer Assistance Economic Development Assistance Homeless Assistance Public Services Infrastructure Replacement
HOME Investment Partnerships Program	The Home Investment Partnerships Program (HOME) was created under the Cranston Gonzalez National Affordable Housing Act enacted in November 1990. HOME funds are awarded annually as formula grants to participating jurisdictions. HUD establishes Home Investment Trust Funds for each grantee, providing a line of credit that the jurisdiction may draw upon as needed. The program's flexibility allows states and local governments to use HOME funds for grants, direct loans, loan guarantees, or other forms of credit enhancement or rental assistance or security deposits.	Acquisition Rehabilitation Homebuyer Assistance Rental Assistance
Housing Choice Voucher (HCV) Rental Assistance (Section 8)	Provides rental assistance payments to owners of market-rate properties on behalf of very low-income tenants.	Rental Assistance
Section 811	Provides grants to nonprofit developers of supportive housing for disabled persons. The grants may be used to construct or rehabilitate group homes, independent living facilities, and intermediate care facilities. The grants may also have a rental assistance component.	Acquisition Rehabilitation New Construction Rental Assistance
Section 203(k)	Provides fixed-rate, low-interest loans to organizations wishing to acquire and rehabilitate property.	Land Acquisition Rehabilitation Refinancing of Existing Debt
Section 202	Grants to private nonprofit developers of supportive housing for very low-income seniors.	New Construction

Table 5-175
Federal and State Housing Funding Programs

Program Name	Description	Eligible Activities
Low-Income Housing Tax Credits (LIHTC)	In 1986, Congress created the federal LIHTC program to encourage private investment in the acquisition, rehabilitation, and construction of low-income rental housing. Because high housing costs in California make it difficult, even with federal credits, to produce affordable rental housing, the California legislature created a state low-income housing tax credit program to supplement the federal credit. The state credit is essentially identical to the federal credit, the Tax Credit Allocation Committee allocates both, and state credits are only available to projects receiving federal credits. Twenty percent of federal credits are reserved for rural areas and 10 percent for nonprofit sponsors. To compete for the credit, rental housing developments have to reserve units at affordable rents to households at or below 46 percent of area median income. The targeted units must be reserved for the target population for 55 years.	New Construction
Mortgage Credit Certificate Program	Offers income tax credits to first-time homebuyers. The County distributes the credits.	Homebuyer Assistance
Supportive Housing Program (SHP)	Offers grants to agencies who offer supportive housing and services to the homeless.	Transitional Housing Housing for Disabled Persons Supportive Housing Support Services
Community Reinvestment Act	The Community Reinvestment Act (CRA), enacted by Congress in 1977, is intended to encourage depository institutions to help meet the credit needs of the communities in which they operate, including low- and moderate-income neighborhoods, consistent with safe and sound banking operations. The CRA requires that each insured depository institution's record in helping meet the credit needs of its entire community be evaluated periodically. That record is taken into account in considering an institution's application for deposit facilities, including mergers and acquisitions.	New Construction Rehabilitation Acquisition Support Services Supportive Housing Homebuyer Assistance
Emergency Solutions Grant	Awards grants to nonprofits for the provision of shelter support services.	Support Services
Emergency Solutions Grant-CARES (ESG-CV)	One-time funding for programs targeted to homeless or those at-risk for housing to prepare for, respond to, or prevent impacts of the coronavirus pandemic.	Support Services (Homeless Facilities and Program)
Multifamily Housing Program (MHP)	Provides loans for new construction, rehabilitation, and preservation of affordable rental housing. Payments on the loans are deferred for a specified period of time.	New Construction Rehabilitation Preservation
CalHOME	Provides grants to local governments and nonprofit agencies for homebuyer assistance, rehabilitation, and new construction. The agency also finances acquisition, rehabilitation, and replacement of manufactured homes.	Homebuyer Assistance Rehabilitation New Construction

Table 5-17~~5~~
Federal and State Housing Funding Programs

Program Name	*Description*	*Eligible Activities*
California Self-Help Housing Program	Provides grants for the administration of mutual self-help housing projects.	Homebuyer Assistance New Construction Administrative Costs
Emergency Housing and Assistance Program	Provides grants to support emergency housing.	Shelters Transitional Housing
Affordable Housing and Sustainable Communities Program	Provides funding to support infill development projects with the goal of reducing greenhouse gas emissions.	New Construction Rehabilitation
Veterans Housing and Homeless Prevention Program	Provides funding to buy, construct, rehabilitate or preserve affordable multifamily housing for veterans and their families.	Acquisition Construction Rehabilitation Preservation
Senate Bill 2 – Building Jobs and Homes Act	Provides planning grant funding to jurisdictions for plans and process improvements that will help to accelerate housing production.	Technical Assistance Planning Document Updates
Local Early Action Planning (LEAP) Grants	The (LEAP grants program provides over-the-counter grants complemented with technical assistance to local governments for the preparation and adoption of planning documents, and process improvements that: Accelerate housing production. Facilitate compliance to implement the sixth-cycle Regional Housing Needs Assessment.	Housing element updates Updates to zoning, plans or procedures to increase/accelerate housing production Pre-approved architectural and site plans Establishing State-defined Pro-housing policies *See complete list in LEAP program materials*
No Place Like Home	Through a County application process, provides loans to acquire, develop, preserve, or rehabilitate permanent supportive housing facilities.	Permanent Supportive Housing
Infrastructure Infill Grant	Provides gap financing for infrastructure improvements necessary to support the development of affordable infill housing.	Infrastructure Improvements

Table 5-17~~5~~
Federal and State Housing Funding Programs

Program Name	*Description*	*Eligible Activities*
Local Housing Trust Fund Program	Provides matching grants to funds provided by Local Housing Trust Funds.	Site Acquisition Site Development Homebuyer Assistance Transitional Housing Emergency Shelter Multifamily Housing
Transit-Oriented Development Program	Supports the development of affordable multifamily rental housing near transit stations through low-interest loans.	New Construction Rehabilitation Infrastructure Improvements
State Funding Programs		
Affordable Housing Partnership Program (AHPP)	Provides lower interest rate CalHFA loans to homebuyers who receive local secondary financing.	Homebuyer Assistance
Self-Help Builder Assistance Program	Provides lower interest rate CalHFA loans to owner-builders who participate in mutual self-help housing projects. Also provides site acquisition, development financing, and construction financing for self-help projects.	Homebuyer Assistance Site Acquisition Site Development Home Construction
California Housing Assistance Program	Provides 3% silent second loans in conjunction with 97% CalHFA first loans to give eligible homebuyers 100% financing.	Homebuyer Assistance
Extra-Credit Teacher Program	Provides $7,500 silent second loan with forgivable interest in conjunction with lower-interest-rate CalHFA first loans to assist eligible teachers in buying homes.	Homebuyer Assistance
Housing Enabled by Local Partnerships	Provides 3% interest rate loans, with repayment terms up to 10 years, to local government entities for locally determined affordable housing priorities.	Wide Range of Eligible Activities
Predevelopment Loan Program	The California Department of Housing and Community Development (HCD) administers the program, which provides funds to pay the initial costs of developing affordable housing developments. Priority is given to applications with matching financing from local agencies or federal programs.	Pre-development
Multifamily Housing Program	HCD conducts the acquisition and rehabilitation component of the Multifamily Housing Program to acquire and rehabilitate existing affordable rental housing. Priority is given to projects currently subject to regulatory restrictions that may be terminated. Assistance is provided through low-interest construction and permanent loans. Eligible applicants include local government agencies, private nonprofit organizations, and for-profit organizations.	Rental Acquisition Rental Rehabilitation
Transitional Housing Program for Emancipated Foster/Probation Youth (THP-Plus)	This program provides funds for housing and services for persons who need support services for transition-age youth.	Supportive Housing Foster Care

Table 5-175
Federal and State Housing Funding Programs

Program Name	*Description*	*Eligible Activities*
Special-Needs Housing Program	Allows local governments to use Mental Health Services Act (MHSA) funds to finance the development of permanent supportive rental housing.	New Construction Supportive Housing
Home Mortgage Purchase Program	CalHFA sells bonds to raise funds for providing below-market-rate loans to qualifying first-time homebuyers.	Homebuyer Assistance

Housing Choice Vouchers

The federal government provides approximately $3 million to the Housing Authority of the County of San Bernardino to administer the Housing Choice Voucher (HCV) program. These funds are used to maintain the affordability of publicly subsidized affordable housing projects in Ontario. This allocation includes funding for approximately 501 Housing Choice Vouchers, and the Family Self-Sufficiency Program. Within Ontario, the approximate number of HCVs have been available: 496 in 2016, 422 in 2017, 527 in 2018, 676 in 2019, and 747 in 2020. As of July 2021, there are 773 vouchers in use for the City of Ontario. This includes 735 in traditional voucher programs and 38 in special voucher programs, such as the Veterans Affairs Supportive Housing. The waitlists, which are for the entire County of San Bernardino remain closed as of July 2021. In March 2021, there were 20,382 tenant-based households on the waitlist and 60,744 total households on the waitlist.

(See Programs 23, 25, 27, and 31)

Community Development Block Grants (CDBG)

The federal government provides funds for a range of housing and community development activities, including acquisition and disposition of real estate or property, public facilities and improvements, relocation, rehabilitation and construction of housing, homeownership assistance, and demolition activities. In addition, these funds can be used to acquire or subsidize at-risk units. The City of Ontario received approximately $1.8 million in funding in 2019–2020.

(See Programs 3, 4, 6, 9, 27, 31, and 33)

HOME Partnership

Ontario received approximately $666,000 in 2019–2020 in federal HOME funds. HOME funds can be used for activities that promote affordable rental housing and lower-income homeownership, including building acquisition, new construction, reconstruction, moderate or substantial rehabilitation, first-time homebuyer assistance, and tenant-based assistance, as well as the preservation of affordable housing.

(See Programs 1, 3, 4, 24, 27, 32, and 33)

Transformative Climate Communities

Ontario received funding through the Transformative Climate Communities (TCC) grant program from the State of California ($33.2 million) for a variety of project types, including housing. The TCC housing component included gap funding of approximately $14 million for the development of a 101-unit affordable housing project known as Vista Verde. The construction of the Vista Verde Apartments begun on June 17, 2019, and was completed in March 2021. Within the project area, 24 solar photovoltaic (PV) systems were installed on the single-family homes, providing approximately 31 kilowatts (kw) in renewable energy capacity. Of the 101 units, 11 will be rented to households making below 30 percent of the area median income (AMI), 37 units will be rented to households at 50 percent AMI, and 42 units will be rented out to households at 60 percent AMI. The affordable housing units will be made available through a lottery process. Applicants who already work and live in Ontario will be given preference.

(See Programs 8 and 10)

Permanent Local Housing Allocation

Ontario received funds that will be used for housing programs and homeless programs. The City is planning to use a portion of the Permanent Local Housing Allocation (PLHA) funds for first-time homebuyer programs in conjunction with reuse funds on hand from the CalHome and BEGIN programs formerly offered. Programs are currently in design development to determine income targeting and benefits.

(See Program 24)

6. PROGRAM EVALUATION

The 2021–2029 Housing Element sets forth goals, policies, and programs to address the community's housing needs. An important step in developing the City's housing strategy is the evaluation of the prior Housing Element in meeting the community's housing needs. This section evaluates progress in meeting the objectives of the 2013–2021 Housing Element.

6.1 2013–2021 Housing Element Goals

The 2013–2021 Housing Element defined four general goals to guide the allocation of financial, administrative, and land resources in Ontario. These broad goals and quantified objectives are summarized here.

- **Goal 1:** Encourage a diverse supply of housing types to accommodate a variety of incomes and lifestyles, support household and job growth, and facilitate mobility.
- **Goal 2:** Provide housing opportunities to meet the needs of residents, be affordable to all economic segments, and meet the City's share of the region's need for housing.
- **Goal 3:** Promote and encourage housing opportunity for all, regardless of age, race, sex, ethnicity, ancestry, national origin, marital status, physical condition, or family size.
- **Goal 4:** Promote and encourage the rehabilitation of deteriorated units and the conservation of the currently sound housing stock.

6.2 2013–2021 Special Housing Needs Summary of Accomplishments

California Government Code Section 65588 requires that local governments review the effectiveness of the housing element goals, policies, and related actions to meet the community's special housing needs. Special needs are those associated with specific demographic or occupational groups that call for specific program responses, such as preservation of single-room occupancy hotels or the development of units with larger bedroom counts. The statute specifically requires analysis of the special housing needs of people who are elderly or disabled (including developmental disabilities), female-headed households, large families, farmworkers, and people experiencing homelessness. These special-needs groups often spend a disproportionate amount of their income to secure safe and decent housing and are sometimes subject to discrimination based on their specific needs or circumstances.

As shown in Table 6-1, Review of Previous Housing Element, the 2013 - 2021 Housing Element included several programs that addressed the community's special housing needs. Some of the accomplishments are highlighted below:

- In partnership with the Housing Authority of San Bernardino County, the approximate number of Housing Choice Vouchers (HCV) that were used by Ontario residents are: 496 in 2016, 422 in 2017, 527 in 2018, 676 in 2019, and 747 in 2020.
- In 2020, City staff worked with the National Foundation of Affordable housing to assist with the rehabilitation and preservation of the Ontario Townhouses project including an extension of the Project Based Vouchers (PBV) contract for an additional 20 years.
- From 2016-2020, the city's Homeless Continuum of Care implemented programming for homeless residents through Mercy House providing basic needs and services to 4,662 clients. During Fiscal Year 2019-20, funding for the street outreach team was increased from 10 hours per month to 40 hours per week to better deliver services designed to house persons experiencing homelessness.
- The City has provided a range of supportive services for seniors. Between 2013 and 2020, 182 seniors were assisted with fair housing issues, 1,008 seniors were assisted with landlord/tenant mediation, 1,964 seniors were assisted with supportive services, two seniors received housing rehab grants, nine seniors received tenant-based rental assistance, and 782 units of affordable housing units were restricted for seniors.
- The City worked with two different developers on affordable housing developments that were completed in Fiscal Year 2020-21 - Emporia Place (75 units) and Vista Verde (101 units). These two new developments provide family housing for extremely low-, very low-, and low-income households.
- From 2016-2020, the City, in conjunction with Mercy House Living Centers, implemented the HOME Tenant-Based Rental Assistance program to provide rental assistance for chronically homeless individuals and families through rental assistance subsidies, security deposits, and utility deposits.

Table 6-1
Review of Previous Housing Element

Program	Implementation	Result/Effectiveness	Continue/Modify/Delete
Neighborhoods and Housing			
1. Code Enforcement Code compliance is an important tool to ensure that the value, character, and quality of neighborhoods, property, and housing are well maintained. Listed below are the programs implemented by the Code Enforcement program specifically designed to improve the quality of Ontario neighborhoods and eliminate health and safety related to building conditions: • General Code Enforcement: The City utilizes an interdepartmental approach for inspecting properties for compliance with state and local regulations regarding the condition and maintenance of residential buildings and properties. If deficiencies are found, the property owner is notified of the code deficiency and compliance measures required, and the property owner is granted a period of time to correct the matter. To facilitate timely compliance, City staff direct the property owners to City–administered rehabilitation loans and/or other nonprofit housing loan programs, where available. • Community Improvement Team: This team has been specifically designed to proactively implement an intensive code compliance program to address serious code violations within focus areas. As part of this team approach, various City departments work together to bring a myriad of resources to the focus area to arrest neighborhood decline and improve the living conditions within the area. • Systematic Health and Safety Inspection Program: The program is designed to ensure the quality of the rental stock and reduce substandard building conditions. Through this program, all rental housing units over seven	Objectives: Continue code enforcement using a progressive approach of voluntary compliance, citations, and court action if needed. Continue to apply for funding. Responsible Agencies: Housing and Neighborhood Improvement, Police, Fire, Economic Development, Building, and Planning Departments Funding: CDBG, HOME, ORA, and CalHOME funds Timing: Ongoing, inspect properties annually	The Community Improvement Team completed the following: Inspections: 5,305 in 2016, 4,646 in 2017, 5,201 in 2018, 5,283 in 2019, and 3,878 in 2020 Cases closed: 2,076 in 2016, 2,166 in 2017, 1,925 in 2018, 2,145 in 2019, and 1,607 in 2020. The Rental Inspection Program completed the following: Inspections: 4,018 in 2016, 7,477 in 2017, 6,948 in 2018, 5,134 in 2019, and 1,372 in 2020. Abated violations: 1,963 in 2016, 4,190 in 2017, 5,960 in 2018, 4,083 in 2019, and 317 in 2020. The COVID-19 crisis severely hindered Community Improvement Department activities in 2020.	Continue

Table 6-1
Review of Previous Housing Element

Program	Implementation	Result/Effectiveness	Continue/Modify/Delete
years old are inspected on a four-year schedule unless it is necessary to inspect more frequently due to substandard conditions. • Abandoned and Distressed Property Program and Foreclosure Opportunities Response Team (FORT) Program: These programs were established to protect Ontario neighborhoods from becoming blighted through the lack of adequate maintenance and security of abandoned and distressed properties.			
2. *Quiet Home* Residential neighborhoods located directly west of Ontario International Airport experience high noise levels. In the early 1990s, the Federal Aviation Administration, City of Los Angeles, and City of Ontario created a program to improve the quality of life in noise-impacted neighborhoods and community/airport compatibility. Eligible homes are outfitted with sound insulation to reduce the interior noise levels to 45db CNEL. The second component consists of the voluntary acquisition of eligible properties and reuse of properties in a manner compatible with the airport. Eligibility is restricted to properties located within the noise contour map. Currently, the Los Angeles World Airport is updating the Part 150 Study, which may impact the eligibility area. The study is anticipated to be completed within 2014–2015.	Objectives: Continue to implement program. Responsible Agencies: Ontario Housing Authority Funding: Federal Aviation Administration, Los Angeles World Airport Timing: Ongoing	Since the program began in 1994, 1,599 units have been insulated and 256 properties were acquired. The program has sold 30 parcels for future airport-compatible development. The program was terminated in September 2015 because of updated noise exposure maps (NEM) eligibility noise contour, which eliminated funding for the program.	Delete – program no longer exists, and the noise contours have been modified in such a way that there is not a qualifying area for the funding from the Federal Aviation Administration.
3. *Historic Preservation* Known as the Original Model Colony, Ontario is rich in local history. The City operates a comprehensive historic preservation program. It is a certified local government, a designation that signifies that the City's program meets state and federal historic preservation standards. The City has six historic districts and is surveying nine additional areas for the potential of	Objectives: Continue to implement program. Responsible Agencies: Planning Department Funding: General Fund, state and federal grants Timing: Ongoing	As of 2020, 7 properties on the Ontario Register were reviewed for historic significance, 4 were removed, and 3 received a Tier Determination. Of the 3 properties that received a Tier Determination, 2 received Local Landmark designation, and 1 received a Local Historic District designation. Additionally, 1 Mills Act Contract (preservation agreement) was approved, and 6 contracts of the Annual Mills Act were completed. Staff continues to	Continue

Table 6-1
Review of Previous Housing Element

Program	Implementation	Result/Effectiveness	Continue/Modify/Delete
historic district designation. It encourages historic preservation efforts through Mills Act contracts, surveys of potentially historic structures, and an adaptive reuse program (for the Emporia District and Downtown). The City also implements an award-winning web-based historical resource management system that catalogs local historical resources and eventually offers interface capacities for the public to search the database.		implement design review for historic properties and as of 2018, completed 237 projects for design review. Staff participated in or coordinated the following community outreach activities: Model Colony Awards program, Historic Plaque program, Historic Preservation Month Photo Contest, development of an ESRI Storymap geographically displaying photographs and information for local historical points of interest, Ontario Showcase/Heritage Celebration, and the Ontario Festival of the Arts.	
4. Housing Rehabilitation Loan and Grants When funding is available, the City offers housing rehabilitation loans and grants to qualified homeowners. Due to the State elimination of redevelopment funding and recent federal funding cutbacks, the City of Ontario is not currently able to provide owner-occupied rehabilitation programs. Should funding become available, the City will re-establish this program and provide associated quantified objectives.	Objectives: Continue to implement program, as funding is available. Responsible Agencies: Housing Department Funding: CDBG, HOME, CalHOME Timing: Ongoing	The City of Ontario designed the Community Improvement Code Abatement Loan Program. In 2019 and 2020, no homes were rehabilitated through this program. Under implementation of the CIT Homeowner Occupied Rehabilitation Loan Program, no homes were rehabilitated from 2016 to 2020. Under implementation of the CIT Emergency Grant Program, the following number of homeowners received assistance: 1 in 2016, 1 in 2017, and 0 from 2018-2020. The City's largest housing rehabilitation program, the CARES Program, continues to remain on hold. Funding for this program had been provided through the Ontario Redevelopment Agency's Low- and Moderate-Income Housing Fund (LMIHF). To date, no replacement funding has been identified and secured. Using Community Development Block Grant (CDBG) funds, the City designed the Conservation Home Improvement Program (CHIP Loan). The program was launched in June 2020 to assist homeowners with exterior home improvements. As of July 2021, two loans were approved, with construction in progress and another two homeowners were proceeding through the eligibility process.	Modify to only include Conservation Home Improvement (CHIP) Loan Program

Table 6-1
Review of Previous Housing Element

Program	Implementation	Result/Effectiveness	Continue/Modify/Delete
5. CARES The City of Ontario implements the comprehensive CARES Neighborhood Revitalization Program within selected focus neighborhoods. The components of this comprehensive, multiagency program include code enforcement, arterial street improvement, relief program, exterior improvement program, and sidewalk or safe routes to school program. The program seeks to stabilize neighborhoods through a comprehensive approach to building community. The program has several components: • **Single-Family Improvement Loans.** The City offers two low-interest deferred loan programs for homeowners (with a one- to five-year deferment) to make exterior improvements to their home. • **Neighborhood Improvements.** The City improves streets (e.g., resurfacing, replacing curb and gutter, improving sidewalks and drainage), plants trees and greenways, and enforces codes.	Objectives: Continue program implementation, as funding is available. Responsible Agencies: Housing and Neighborhood Revitalization Agency Funding: CDBG, HOME, General Fund Timing: Ongoing	As of July 2021, the program is on hold. This program was previously funded with LMIHF, HOME, and General Funds. However, limited availability of funding during the 5th cycle planning period hindered the City's ability to implement this program.	Continue and modify – City will seek funding to continue this program and restructure it as needed.
6. Neighborhood Plans Ontario's neighborhoods define the sense of identity and community for residents, the quality of life experienced, and the image and role of Ontario. The City currently implements many programs to improve neighborhoods. However, the City has identified a need to foster a stronger sense of neighborhood identity in the community. While this goal is being achieved in CDBG-eligible areas (CARES program) and in historic areas, efforts need to be expanded to other neighborhoods. During the planning period, the City will begin a public outreach effort to solicit input from neighborhood leaders and residents as to particular needs and goals. This process may result in the establishment of ongoing dialog with the City,	Objectives: Designate focus neighborhoods, outreach plan and process, and initiate survey efforts. Evaluate the potential of creating neighborhood improvement plans. Responsible Agencies: Planning Department, Housing and Neighborhood Revitalization Agency Funding: General Fund Timing: Ongoing	The primary Neighborhood Planning programs implemented from 2016 to 2020 include the HEAL Zone and Transformative Climate Communities (TCC), Zoning Consistency Program, and Active Transportation Program (ATP). Through the HEAL Zone and TCC programs, feedback from community leaders helped inform decision makers on policy and capital improvements. In 2020, over 6,000 people were invited to a variety of virtual workshops from topics including urban forestry to affordable housing and solar installation. Over four stakeholder meetings were attended through zoom. The Zoning Consistency program was completed in 2018. A total of 552 properties were rezoned to either be consistent with existing residential uses or be more	Continue and modify to include that the City will continue to work on a Multimodal Transportation Center (MTC) Needs Assessment and Siting Criteria project. This assessment will assist in determining the optimum location for an MTC on or near the Ontario International Airport connecting future modes of transportation, including light-rail opportunities.

Table 6-1
Review of Previous Housing Element

Program	Implementation	Result/Effectiveness	Continue/Modify/Delete
neighborhood organizations, or the preparation of neighborhood improvement plans.		compatible with adjacent residential development by limiting uses. Members of a local community garden helped to develop language for a new Urban Agriculture section of the Development Code that went into effect January 2016. The City received funding for infrastructure improvements as part of the ATP Cycle 1, Cycle 2, and Cycle 3. The ATP Cycle 1 and Cycle 2 were completed with improvements to pedestrian safety and access around Euclid, Bon View, Corona, Vineyard, and El Camino Elementary Schools. As part of ATP Cycle 3, design and right-of-way (ROW) acquisition was completed for the area around Sultana Elementary and De Anza Middle School. Additionally, the City acquired the Systemic Safety Analysis Report Program (SAARP) Caltrans Grant to examine how to incorporate improved pedestrian, biking, and transit opportunities along the Euclid Avenue corridor. The City also received a GoHuman demonstration grant through the Southern California Association of Governments (SCAG) to provide an opportunity for public input to pedestrian and bicycle improvements being considered in downtown. As part of the Active Transportation Master Plan, community outreach and most of the walk audits around public schools was completed. The City continues to move forward on the Multimodal Transportation Center Needs Assessment and Siting Criteria project that began in 2019 that will centralize multimodal options for residents and employees of and visitors to Ontario. The City is also in the process of updating the City Parks Master Plan and initiated a city-wide parks survey in 2020. As of July 2021, the City anticipates that the City Council will adopt the Master Plan soon.	

Table 6-1
Review of Previous Housing Element

Program	Implementation	Result/Effectiveness	Continue/Modify/Delete
7. Neighborhood Stabilization The Dodd-Frank Wall Street Reform and Consumer Protection Act of 2010 provided an additional $1 billion for the Neighborhood Stabilization Program (NSP) that was originally established under the Housing and Economic Recovery Act of 2008. HUD awarded grants to 270 states and selected local governments to mitigate the negative impact of the nation's economic decline and housing market collapse and to stabilize and revitalize communities/areas hit the hardest. The City of Ontario was provided an allocation of $1,872, 853 in NSP3 funds. The City will utilize these funds (1) to acquire, rehabilitate, and resell single-family homes; (2) to acquire and rehabilitate multiple-family properties; (3) to provide financial assistance; (4) to establish land banks; (5) to demolish blighted structures; (6) to redevelop demolished or vacant properties; and (7) for administration (capped at 10 percent).	Objectives: Designate focus neighborhoods, outreach plan and process, and initiate survey efforts. Evaluate the potential of creating neighborhood improvement plans. Responsible Agencies: Housing and Neighborhood Revitalization Agency Funding: Federal NSP3 funds Timing: Ongoing	Federal NSP3 funds were exhausted in 2013 and all NSP grant funding was closed out in 2018. In 2019, the City Council approved the Neighborhood Preservation Strategy Plan, which designated four focus neighborhoods: Downtown, Nocta, Mission-Mountain, and Fourth-Grove.	Modify to switch from federal NSP to implementing Ontario's 2019 Neighborhood Preservation Strategy Plan
8. Community-Oriented Policing The City of Ontario Police Department uses CDBG funds to implement a community-oriented policing program in designated low- and moderate-income neighborhoods. This partnership involves working with community leaders, businesses, and property owners to address neighborhood issues including code enforcement, crime-free multi-family housing, safe and clean streets, and school interventions. With respect to housing, the Police Department implements the Crime-Free Multifamily Housing Program to control and eliminate crime in apartment buildings. Under this program, the Police Department will provide training to apartment owners, conduct a property inspection to identify and eliminate potential crime hazards, and certify properties where the owner signs a written agreement and commitment to maintain the program.	Objectives: Continue implementation of COPs program; coordinate marketing efforts with the new Quadrennial Inspection Program. Responsible Agencies: Housing and Neighborhood Revitalization Agency, Code Enforcement, and Police Department Funding: General Fund, CDBG Timing: Ongoing	The Community Engagement Team takes a pro-active approach by partnering with building and property owners to prevent, deter, and solve crimes. The Crime-Free Housing and Trespassing program completed the following activities: • In 2016, Code Enforcement presented the Systematic Rental Inspection Program at the Multifamily Crime-Free Training for apartment complex property owners and managers. • In 2018, 80 apartment buildings and 8 businesses were enrolled in the Crime-Free Housing and Trespassing program. 280 individuals were served with trespassing forms. • In 2019, two Crime-Free Multi-Housing classes were hosted by the Ontario Police Department. A total of 13 properties are enrolled in the Crime-Free Multi-Housing Program. A total of 16 properties are enrolled in the Trespassing Enforcement Program	~~Continue~~Delete

Table 6-1
Review of Previous Housing Element

Program	Implementation	Result/Effectiveness	Continue/Modify/Delete
		and 527 individuals were served with forbidden trespass forms. • In 2020, no Crime-Free Multi-Housing classes were hosted due to COVID-19. A total of 13 properties are enrolled in the Crime-Free Multi-Housing Program. A total of 16 properties are enrolled in the Trespassing Enforcement Program and 427 individuals were served with forbidden trespass forms. Additionally, during inspections, on-site improvements are identified under the concept of Crime Prevention Through Environmental Design (CPTED). In 2019 and 2020, the Community Engagement Team prepared 3 comprehensive CPTED reports for businesses in the city. These reports outlined positive aspects of the businesses, challenges, and recommendations for improvement.	
Housing Supply and Diversity			
9. Downtown Plan Ontario's Downtown covers 12 blocks along Euclid Boulevard. In 1983, the City adopted the Center City Redevelopment Project area to encourage development of a high-intensity, multiuse central business district and surrounding neighborhoods that maximize the productivity of commercial areas and housing opportunities. The $200 million Town Center Square project will provide a mix of housing, educational, retail, office, and government uses that will stimulate the renewal of Downtown. Although the General Plan redesignates a majority of the area for new housing and mixed uses, a comprehensive planning process is necessary to ensure the sensitive integration of new housing, commercial uses, open space, pedestrian paths, and transportation into the fabric of Downtown.	Objectives: Create a Downtown Plan to facilitate new mixed-use and residential development; continue to acquire property and assemble sites to facilitate new housing. Responsible Agencies: Planning Department Funding: General Fund, Tax Increment Timing: 2015	The objective of the downtown planning effort is to facilitate new mixed-use and residential development and continue to acquire property and assemble sites to facilitate new housing. To facilitate new development and establish new businesses within the downtown area, the HEART (Historic Euclid Avenue Revitalization Team) Initiative was established in 2015. Through improved transit and placemaking efforts that integrate arts and culture, the HEART Initiative is creating an environment that attracts new housing, improves existing housing, and encourages a mix of uses and activities. A strategic plan to diversify land uses and improve mobility and connectivity in the downtown area was approved in 2020. In 2020, new affordable housing development was completed, including a 100% affordable (low and very low income) 101-unit transit-oriented development (TOD) project on Virginia/Holt and 100% affordable (low and very low income) 75-unit project on Vine/Holt. A 153-unit	Continue

Table 6-1
Review of Previous Housing Element

Program	Implementation	Result/Effectiveness	Continue/Modify/Delete
		mixed-use development was in the entitlement phase at the end of 2020. As of July 2021, the City was continuing to review and the project had not been approved by the Planning Commission. The Downtown Plan area is included in a $35 million Transformative Climate Communities (TCC) Grant awarded to the City to increase prosperity and improve transportation and housing within a disadvantaged community. The TCC program includes affordable housing, active transportation improvements, mobility hub, urban greening, carbon farm, solar photovoltaic, and transit improvements. This grant is a collaborative effort with public and community-based organizations. Projects in the Downtown include the planting of approximately 300 right-of-way trees and development of the Vista Verde 101-unit Affordable Housing project.	
10. Mountain and Euclid Corridors Euclid Avenue and Mountain Avenue extend the entire length of Ontario. In recent years, developers have expressed interest in building residential and commercial projects along these corridors. Mountain Avenue has had numerous senior and affordable housing projects built adjacent or near to the corridor, and developers have begun to show interest in Euclid Avenue. Both corridors have commercial property that is proposed for redesignation as residential. To facilitate corridor development, the City will redesignate properties along Euclid Avenue and Mountain Avenue for medium- and high-density residential development as shown on the Official Land Use Plan (LU-01). The City will also develop a lot-consolidation ordinance to incentivize the assemblage of parcels. Incentives may include fee modifications, flexibility in design, expedited permit processing, or others.	Objectives: Redesignate corridors for medium- and high-density residential uses and develop a lot consolidation ordinance to facilitate the assemblage of lots into larger parcels. Responsible Agencies: Planning Department Funding: General Fund Timing: Summer 2014	All sites on the Housing Element Available Land Inventory along corridors Euclid Avenue and Mountain Avenue have been rezoned to medium-density residential, high-density residential, or mixed-use designations, and are consistent with the General Plan. The City continues to monitor the on-going status of development in the Euclid Avenue and Mountain Avenue corridors.	Modify to reflect that rezoning was completed. Continue lot consolidation ordinance. Add that the City will continue to monitor the ongoing status of development in the Euclid Avenue and Mountain Avenue corridors.

Table 6-1
Review of Previous Housing Element

Program	Implementation	Result/Effectiveness	Continue/Modify/Delete
11. Holt Boulevard Holt Boulevard is one of the original corridors paralleling the railroad and extending through Ontario and neighboring communities. With the development and success of commercial uses fronting the freeways, the commercial viability of Holt Boulevard has gradually eroded, leaving a significant number of underutilized uses on small parcels. The General Plan has declared Holt Boulevard as a focus area for mixed uses, both perpendicular to Mountain Avenue, at the base of Downtown, and in the East Holt Boulevard Study Area. To stimulate investment in these areas, the City will adopt a lot consolidation ordinance and incentives to encourage the recycling of land to residential uses. The City will also explore the use of density incentives to encourage mixed-use development, offering higher densities for quality projects of a certain size.	Objectives: Redesignate Holt Boulevard for high-density residential and mixed uses, and develop a lot consolidation ordinance to facilitate the assemblage of lots into larger parcels. Responsible Agencies: Planning Department Funding: General Fund Timing: 2015	All sites on the Housing Element Available Land Inventory along the Holt Boulevard corridor have been rezoned to accommodate higher densities. The City continues to monitor the on-going status of development in the Holt Boulevard area.	Modify to reflect that rezoning was completed. Continue lot consolidation ordinance. Add that the City will continue to monitor the ongoing status of development in the Holt Boulevard area.
12. New Model Colony The New Model Colony covers 8,200 acres of the former San Bernardino Agricultural Preserve. This area is intended to provide a range of housing opportunities for the city's emerging regional and national employment centers. Buildout of this area is contingent on completion of infrastructure, approval of specific plans, and cancellation of Williamson Act contracts. The City has entered into an agreement with a consortium to fund $430 million in infrastructure serving the eastern New Model Colony. Many specific plans for this area have been approved. Some of the original Williamson Act contracts will also expire during the planning period. The General Plan has designated much of the area for medium- and high-density residential and mixed use. Although development is not expected to occur during the planning period, the City will continue to process specific plan applications and work with developers to	Objectives: Continue to review, approve, and implement plans to develop the New Model Colony. Responsible Agencies: Planning Department Funding: General Fund Timing: Ongoing	New Model Colony is now known as Ontario Ranch. City staff continues to review and process applications for development in Ontario Ranch. Within Ontario Ranch, the following number of permits for new single-family and multifamily homes were issued: 482 in 2016, 762 in 2017, 1,063 in 2018, 1,398 in 2019, and 864 in 2020. Completion of infrastructure, approval of specific plans, and cancellation of the Williamson Act contracts remain ongoing as of July 2021. The City continues to coordinate with developers on planned developments.	Continue and modify to update name to Ontario Ranch.

Table 6-1
Review of Previous Housing Element

Program	Implementation	Result/Effectiveness	Continue/Modify/Delete
address outstanding issues, in particular the financing of infrastructure in the western New Model Colony.			
13. Downtown Core Catalyst Project The City of Ontario has embarked on a strategy for a large-scale undertaking that would act as the catalyst for the resurgence of Downtown Ontario. The City of Ontario was awarded one of only 13 prestigious Catalyst awards from the State of California in 2010 for efforts to revitalize downtowns through this strategy. Upon completion of all of the activities included in the Downtown Core Catalyst, 519 housing units will be developed.	Objectives: Continue to implement the programs identified in the Downtown Core Catalyst Project as funding is available. Responsible Agencies: Housing and Neighborhood Revitalization Agency Funding: State and federal Timing: By 2018	The Catalyst program was completed in 2017. During the Catalyst program, 375 of the anticipated 519 housing units were completed in the Downtown area and the City met all data collection and monitoring requirements of the program. This program did not provide funding for development or program implementation and with the loss of redevelopment funds, the remainder of the planned development was unable to be completed during the project term.	Delete
14. Design Review The City implements a design review program to ensure quality housing, maintain property values, stabilize neighborhoods, and improve quality of life. For standard projects, the City's Residential Design Guidelines provide objective standards and graphics to illustrate the preferred methods of planning, neighborhood design, and construction for subdivisions, open space and landscaping, lots and buildings, architecture, and other aspects. For certain infill projects in the Downtown or other focus areas of the community, the City may adopt a PUD ordinance or Planned Residential Development Overlay to provide for more flexibility in design. Specific plans provide another means to address the design of large-scale projects. The General Plan includes a Community Design Element that provides unifying and broader principles of community design.	Objectives: Continue to implement design review process. Responsible Agencies: Planning Department Funding: General Fund Timing: Ongoing	City staff continues to implement a design review process. The City is in the process of updating its The Ontario Plan, including the Policy Plan. The update includes Objective Design and Development Standards for single-family residential, multifamily residential, and mixed-use developments.	Continue and modify to refer to Objective Design and Development Standards that are being developed with the General Plan Update that is currently in process as of July 2021. Update program name to "Senate Bill 2 Implementation"

Table 6-1
Review of Previous Housing Element

Program	Implementation	Result/Effectiveness	Continue/Modify/Delete
15. Green Building Green building means creating structures and using materials that are environmentally responsible and resource efficient, considering a building's entire life cycle. To reduce per capita energy use, the City will promote conservation and renewable energy generation techniques in public facilities and private development. The City will require new construction to reduce energy demand by incorporating building and site design strategies. Conservation will be the priority strategy for renovation of existing facilities. The General Plan also includes land planning strategies that impact energy demand reduction, including narrowing street widths, installing broad-canopied trees for shade, and clustering compact development to reduce automobile use.	Objectives: • Promote green building practices in the private sector and explore point-of-sale energy retrofits for residences. • Renewable energy incentive and energy efficiency programs. • Develop a citywide 20-year energy plan. • Support pilot development project as a net-zero-energy community and formulate solar site orientation guidelines. Responsible Agencies: Planning/Building/Public Works Funding: General Fund Timing: Ongoing	The City continues to encourage opportunities in the private sector for point-of-sale retro-fits. The City is in the process of updating its General Plan, including the section on energy discussion. The City continued to trend towards the target of 30% greenhouse gas reduction below Year 2020 business as usual by Year 2020. The City is actively participating in the TCC Ontario Shines Program that has resulted in over 24 low-income solar installations. Overall, City consumption of potable water has been reduced by 21% through a combination of water use reduction, transition to recycled water irrigation systems, and drought-tolerant landscaping. The City is continuing to reduce emissions through participation in GGRF Cal Fire Grant that provided additional planting of 150 tress acting as a carbon sink and supporting reductions in the heat island effect.	Continue
16. Land Monitoring Program to Meet the RHNA The City is in the process of updating the Development Code for consistency with the Land Use designations of The Ontario Plan. This program will implement a land monitoring program to ensure that the City has enough land to meet its Regional Housing Needs Allocation, through out the planning period. The City has identified 83 acres to be rezoned to allow development to occur at a density of 25–45 dwelling units per acre. This program will ensure that the proposed sites are rezoned to appropriate densities and identify additional sites to be rezoned if any of the proposed sites cannot be rezoned. All rezoned sites will permit owner-occupied and rental multi-family developments by right and will not require a conditional use permit, a planned unit development permit, or any other discretionary review. All sites will accommodate a minimum of 20 units per acre and at least 16 units per site, per state law requirements. In addition, the City will ensure that at least 50% of its	Objectives: Ensure there is a sufficient supply of multi-family zoned land to meet the housing needs identified in the Regional Housing Needs Allocation. Responsible Agencies: Planning Funding: General Fund Timing: Within the first three years of the planning period.	The Development Code was updated for consistency with Land Use Designations in 2018 or 2019. The rezoning required to meet the 5th cycle Regional Housing Needs Allocation (RHNA) was completed. Between 2015 and 2018, 83 acres were rezoned to allow 25-45 units per acre to meet all of the lower-income RHNA shortfall requirements, based on the following: • PZC15-002, 1200 parcels: - Planning Commission approval October 27, 2015 - City Council approval first reading November 17, 2015; second reading December 1, 2015 • PZC15-003, parcels on Mountain Ave. between Benson Ave. and San Antonio Ave. (known number): - Planning Commission approval December 22, 2015	Continue and update, include No-Net Loss and, if necessary, another rezone program.

Table 6-1
Review of Previous Housing Element

Program	Implementation	Result/Effectiveness	Continue/Modify/Delete
lower- income RHNA shortfall is accommodated on sites designated for exclusively residential uses.		- City Council approval first reading February 2, 2016; second reading February 16, 2016 • PZC16-001, 881 parcels: - Planning Commission approval March 22, 2016 - City Council approval first reading May 3, 2016; second reading May17, 2016 • PZC16-004, 525 parcels: - Planning Commission approval January 24, 2017 - City Council approval first reading March 7, 2017; second reading March 21, 2017 • PZC17-001, 800 parcels: - Planning Commission approval January 23, 2018 ~~- City Council approval first reading March 6, 2018; second reading March 20, 2018~~ City staff monitors entitlement applications to ensure that the Available Land Inventory is maintained and verifies that development of identified sites complies with the minimum density indicated in the Available Land Inventory or identifies alternate sites to meet the City's RHNA needs. Safeguards have been incorporated into the City's Discretionary Permit Application, which includes an affidavit regarding compliance with the Available Land Inventory.	
Governmental Regulations/Constraints			
17. Incentives The City of Ontario offers several different types of incentives to facilitate housing production, including: • **Financial Incentives:** The City makes available financial incentives that meet certain criteria. For instance, impact fee reductions are allowed for	Objectives: Offer financial and regulatory incentives for residential projects that meet City housing and affordable housing goals. Responsible Agencies: Housing and Neighborhood Revitalization Agency Funding: General Fund	The City continues to offer financial incentives for affordable housing projects where feasible and as funding is available. Incentives were used at Vista Verde and Emporia. Vista Verde Apartments were completed in 2021 and consist of 101 units of family housing for households with incomes ranging up to 60 percent of area median income. The City assisted the development with over $23	Continue

Table 6-1
Review of Previous Housing Element

Program	Implementation	Result/Effectiveness	Continue/Modify/Delete
projects built in the Downtown. The City is financially assisting a variety of nonprofit organizations to provide senior housing, housing for homeless people, and other services. Density bonuses allowed for qualified projects work as a financial incentive by increasing the revenue stream of projects. The City also has established its Community Housing Development Organization (CHDO) program to leverage the nonprofit sector resources with available HOME CHDO funding. The intent of the CHDO funding is to work with nonprofit CHDOs to help preserve, enhance, and improve existing neighborhoods through acquisition, rehabilitation, and/or new housing construction activities. Finally, the City continues to grant low-cost leases (e.g., $1 per year leases) to qualified organizations to provide senior housing and homeless housing. These types of financial incentives will be provided to allow the City to meet its community development and housing objectives. • **Regulatory Incentives:** The regulatory incentive program is intended to realize improved value, a rich palette of amenities, landmarks, and identifiable places. While the underlying land use designations still apply, the City may offer various incentives through a discretionary permit. Special incentives may be granted for mixed-use developments, residential infill projects near transit facilities, the replacement of underperforming commercial uses with new residential use, the improvement and/or intensification of existing, mid-block residential uses, or lot consolidation and development of desired projects. The menu of incentives may include density transfers, modifications in development standards, increased residential density, and other	Timing: Ongoing and at least annual outreach to developers of affordable housing, including non-profit.	million in multifamily housing bonds and $14,729,325 from the TCC grant program. The project is located within CA Opportunity Zone. The City provided streamlined permitting for solar systems. Emporia Place Phase I was completed in 2019 and consists of (75 units of family housing for households with incomes ranging up to 60 percent of area median income). The City assisted the development with $15,675,000 in a Housing Authority Gap Loan and $19,471,038 in Tax Credit Equity. For other projects where developers declined incentives, they cited prevailing wage requirements as the reason. Housing incentives have also been included in the comprehensive Development Code update, which was adopted in 2016.The City is planning to add an overlay to further increase allowable densities to offset concerns from the development community.	

Table 6-1
Review of Previous Housing Element

Program	Implementation	Result/Effectiveness	Continue/Modify/Delete
incentives to be negotiated on a case-by-case basis.			
18. Land Acquisition Land acquisition for residential development is perhaps one of the greatest challenges to creating affordable housing. Over the past five years, the City of Ontario has seen increasing land prices. To facilitate the development of affordable housing, the City has actively purchased land and made it available at a low cost (typically a $1 per year lease) to affordable housing developers and nonprofit agencies to create affordable senior housing, emergency shelters, affordable attached ownership projects, and other affordable housing projects. As situations merit and projects are proposed that meet the City's housing goals and the public interest, the City of Ontario will continue to acquire residential land that can be leased or sold at below-market rates for the production of affordable housing.	Objectives: Continue to approve financial incentives for residential projects that meet City housing and affordable housing goals. Responsible Agencies: Ontario Housing Authority Funding: General Fund, NSP3, and other funding as available Timing: Ongoing	City staff continues to implement programs as funds become available. The City has acquired some sites for affordable housing development and then sold those properties to qualified affordable housing developers, including sites for Emporia Place Phase I, Emporia Place Phase II, and Vista Verde. Emporia I: Land Sold: $3,375,000. Completed in 2019 • 75 Units: - 8 extremely low income units (30% of AMI) - 12 very low income units (40% of AMI) - 30 very low income units (50% of AMI) - 24 low income units (60% of AMI) Emporia II: Working with Related to secure tax credits in upcoming application cycle (March 2022) Vista Verde: Land Sold: $2,420,000. Completed in 2021 • 101 Units - 21 extremely low income units (30% of AMI) - 37 very low income units (50% of AMI) - 42 low income units (60% of AMI)	Continue
19. Planned Unit Development (PUD) Within an established suburban fabric, there are considerable challenges to creating affordable housing. As development standards and lot standards change over time, it is not uncommon to have irregularly shaped and nonconforming parcels that are simply not conducive to redevelopment. The City has adopted a Planned Unit Development Ordinance that permits a variety of housing types in every residential zone. The City may conditionally permit attached and detached single-family residences, town homes, patio	Objectives: Continue to utilize the PUD to create tailored development standards to facilitate new housing. Responsible Agencies: Planning Department Funding: General Fund Timing: Ongoing, 2010	The PUD continues to be a viable tool to implement new multifamily housing. Building permits for multifamily homes by year include 2 in 2014, 0 in 2015, 98 in 2016, 81 in 2017, 246 in 2018, 458 in 2019, and 188 in 2020, for a total of 1,173.	Continue

Table 6-1
Review of Previous Housing Element

Program	Implementation	Result/Effectiveness	Continue/Modify/Delete
homes, zero lot line, and any other type of housing product permitted by the regulations of the underlying zone. The PUD is a tool that has been successfully used for Town Square to encourage and facilitate innovative design, variety, and flexibility in the types of housing products, including the provision of affordable housing, that would otherwise not be allowed or possible through standards in the underlying zoning districts.			
20. Mixed-Use and High-Density Residential Zone and Standards The General Plan directs significant housing growth to mixed-use areas. These areas include the Downtown, Euclid Avenue, the I-10 Corridor, the New Model Colony, and Holt Boulevard. These mixed-use areas each have a distinct mix of land uses and density ranges (see Policy Plan Land Use Exhibit LU-11, Land Use Designation Summary Table). To facilitate the development of quality housing and exemplary design, the City will create mixed-use zoning and development standards allowing up to 125 units per acre and a high-density residential zone and standards allowing 25 to 45 units per acre. The parameters of the ordinance have yet to be designed; however, the intent of the ordinance is to facilitate high-density housing. In both these zones, high-density residential and mixed use will be allowed by right.	Objectives: Develop new mixed-use and high-density residential development zone and standards to implement the General Plan. Allow residential uses by right in both zones. Responsible Agencies: Planning Department Funding: General Fund Timing: 2014	New General Plan land use designations were adopted in 2010. The 2016 comprehensive update to the Development Code implements the General Plan land use designations and allows residential uses by right within the High-Density Residential and Mixed-Use zones. The City continues its efforts in processing zone changes to bring alignment with the adopted General Plan. In 2020, no additional parcels were rezoned to High-Density Residential or Mixed-Use zones.	Continue and modify to refer to Objective Design and Development Standards that are being developed with the General Plan Update that is currently in process, as of July 2021.

Table 6-1
Review of Previous Housing Element

Program	Implementation	Result/Effectiveness	Continue/Modify/Delete
Housing Assistance			
21. Public Housing The Housing Authority of the County of San Bernardino administers the Housing Voucher rental program for the City of Ontario. Funded by the US Department of Housing and Urban Development, the Housing Voucher program extends rental subsidies to very low-income households by offering the tenant a voucher that pays the difference between the current fair market rent (FMR) established by the Housing Authority and 30 percent of the tenant's income. A tenant has the option to choose housing that costs more than the FMR, if the tenant pays the extra rent above the payment standard. The Housing Authority also implements the scattered site program, Family Self-Sufficiency program, Section 8 project-based assistance, and HUD-assisted multiple-family housing units. This program serves up to 600 individuals and families in the City of Ontario.	Objectives: Continue to assist up to 600 households under the public housing program and seek additional vouchers as available. Responsible Agencies: Housing Authority of the County of San Bernardino Funding: US Department of Housing and Urban Development Timing: Ongoing	Public housing programs in Ontario are administered through the Housing Authority of the County of San Bernardino (HACSB). Within Ontario, the approximate number of Housing Choice Vouchers have been available: 496 in 2016, 422 in 2017, 527 in 2018, 676 in 2019, and 747 in 2020.	Continue, add mobility objectives and commitment to facilitating the movement of voucher holders to areas of high opportunity and resources.
22. Homeownership The City has a broad-based homeownership program for residents. The City uses a combination of funds (BEGIN, HOME, CalHome, and other available funding) to provide down payment assistance to homebuyers seeking to purchase homes in Ontario. The City of Ontario also works in conjunction with Neighborhood Partnership Housing Services (NPHS), a nonprofit organization, and the Inland Fair Housing and Mediation Board (IFHMB) to further the City's homeownership goals through homebuyer education, counseling, and down payment assistance.	Objectives: Implement down payment assistance programs citywide. Responsible Agencies: Housing and Neighborhood Revitalization Funding: HCD, BEGIN, CalHOME Timing: Ongoing	In 2016, the City secured $1 million in CalHome Mortgage Assistance Program funds to offer down payment assistance to qualified low-income families, assisting a total of one household. The CalHome Mortgage Assistance program ended in 2017. City staff continue tracking the use of loan funds paid off in a reuse account for use on eligible projects. The City is planning to use a portion of the Permanent Local Housing Allocation (PLHA) funds for first-time homebuyer programs in conjunction with reuse funds on hand from the CalHome and BEGIN programs formerly offered. Programs are currently in design development to determine income targeting and benefits.	Continue and modify

Table 6-1
Review of Previous Housing Element

Program	Implementation	Result/Effectiveness	Continue/Modify/Delete
23. Preservation of At-Risk Housing The City maintains more than 1,500 units of rental housing affordable to seniors, families, and individuals earning lower incomes. The City is committed to preserving its stock of affordable housing, some of which is at risk of conversion and/or needs significant renovation and improvement. The City remains committed to preserving its affordable housing and will monitor the status of the affordable housing projects, provide technical assistance, and consider appropriate actions should these projects be at imminent risk of conversion.	Objectives: Monitor the status of at-risk projects and, if they are at imminent risk of conversion, provide technical assistance and/or financial assistance to preserve the properties as deemed feasible. Responsible Agencies: Ontario Housing Authority Funding: Federal government Timing: Ongoing	The 2013-2021 Housing Element reported the existence of one development with affordable units that were at risk of converting to market rate within 10 years of the start of the planning period. That development, the Ontario Townhouses project, a project-based Section 8 voucher property, was preserved in 2020. City staff worked with the National Foundation for Affordable Housing to assist with the rehabilitation of the Ontario Townhouses project, a project-based Section 8 voucher property, including an extension of the Project Based Vouchers (PBV) contract for an additional 20 years. The project was completed during early 2020. As of September 2021, there are a total of 3,539 assisted, multifamily rental units in the city, of which, 460 units were "at-risk" of conversion to market rate. To address the preservation of public housing for very low- and low-income persons, the City maintains contact with owners of at-risk units as the use restriction expiration date approaches to communicate with the owner the importance of the units to the supply of affordable housing in Ontario, as well as its desire to preserve the units as affordable. The City will make every effort in using local incentives that can be offered to property owners to preserve any at-risk units.	Continue
24. Jack Galvin Accord The City of Ontario has more than 2,100 mobile homes, which provide affordable market-rate housing for lower-income families, seniors, and individuals. In 1990, the City Council adopted an ordinance to regulate mobile home space rents but later repealed that ordinance per state law. Subsequently, in working with mobile home park owners and tenants, the City drafted the Jack Galvin Mobile Home Park Accord, which was accepted by park owners. The accord places limits on the allowable increases based on the Consumer Price Index; allows for additional adjustments for changes utilities, taxes, and capital improvements; provides a process for requesting rent	Objectives: Continue to implement the Jack Galvin Accord and monitor the effectiveness of the accord. Responsible Agencies: Housing and Neighborhood Revitalization Funding: General Fund Timing: Ongoing	City staff administered the Accord that covers 1,697 mobile home units in 10 mobile home parks throughout Ontario. City staff distributed the annual rent adjustments allowed as part of the Accord and designed to limit rental increases within the participating mobile home parks. The Accord was approved for a 5-year extension on November 15, 2019, with an expiration date of January 5, 2025.	Continue

Table 6-1
Review of Previous Housing Element

Program	Implementation	Result/Effectiveness	Continue/Modify/Delete
reductions for service reductions; and allows for rent adjustments for resale. The term of the agreement was adopted in 1999, and per extensions continues in effect today. The City will continue to implement and enforce this ordinance.			
Special-Needs Housing			
25. Fair Housing Ontario is committed to furthering fair housing opportunities so that people in all walks of life have the opportunity to find suitable housing in the community. To that end, the City contracts with a fair housing service provider to provide landlord/tenant education, conduct testing of the rental and ownership market, and investigate and mediate housing complaints where needed. The City periodically prepares the required federal planning reports, including the Analysis of Impediments to Fair Housing Choice (AI), to document the City's progress in improving and maintaining fair housing opportunities. As part of the AI update, the City will review its Municipal Code, local government regulations, and other practices such as the definition of a family. Recommendations will be made to eliminate potential constraints and further fair housing in Ontario.	Objectives: • Continue to contract with local fair housing providers to provide educational, outreach, advocacy, and mediation services. • Conduct AI concurrently with the development of the Consolidated Plan, and review and change potential impediments, including the definition of a family. • Provide fair housing information at City Hall, the Ontario Senior Center, and the Ontario Housing Authority. Responsible Agencies: Ontario Housing Authority Funding: CDBG Timing: Ongoing	The City of Ontario has worked in conjunction with the Inland Fair Housing and Mediation Board to affirmatively further fair housing opportunities in this community. The Inland Fair Housing and Mediation Board "actively supports and promotes freedom of residence through education, advocacy, and litigation to the end that all persons have the opportunity to secure the housing they desire and can afford, without regard to their race, color, religion, gender, sexual orientation, national origin, familial status, marital status, disability, ancestry, age, source of income or other characteristics protected by law." The definition of the family has been updated to one or more persons living together in a dwelling unit, with common access to, and common use of all living, kitchen, and eating areas within the dwelling unit. In addition, the City has provided fair housing information at City Hall, the Ontario Senior Center, and the Ontario Housing Authority.	Continue and update to comply with Assembly Bill 686. Modify to remove reference to definition of family.
26. Homeless Continuum of Care The City implements a Homeless Services Continuum of Care to prevent homelessness and assist people in becoming self-sufficient. Working together with homeless service providers, the City has developed a full-service homeless continuum of care consisting of a homeless outreach service center, transitional housing, permanent housing, and supportive housing services. The City funds other programs that assist homeless people utilizing Emergency Solutions Grant funds.	Objectives: Continue to fund Mercy House to implement the Continuum of Care program for homeless residents and other programs as funding is available. Responsible Agencies: Housing and Neighborhood Revitalization Funding: Federal funds and private financing Timing: Ongoing	The City's Continuum of Care implements programming for homeless residents. The Mercy House Ontario Access Center has provided basic needs and services to the following number of (unduplicated) clients: 1,385 in 2016, 1,041 in 2017, 809 in 2018, 683 in 2019, and 744 in 2020. The Assisi House and Aftercare Services Program has provided transitional housing and aftercare services to the following number of (unduplicated) clients: 47 in 2016, 59 in 2017, 38 in 2018, 59 in 2019, and 50 in 2020.	Continue

Table 6-1
Review of Previous Housing Element

Program	Implementation	Result/Effectiveness	Continue/Modify/Delete
The City also actively participates in regional homeless efforts, including the Interagency Council on Homelessness, which is a countywide effort of governmental and nonprofit organizations working to end homelessness within the County of San Bernardino.		HOME Tenant-Based Rental Assistance (TBRA) has provided tenant-based rental assistance to the following number of households: 15 in 2016, 17 in 2017, 23 in 2018, 25 in 2019, and 34 in 2020. Through HUD's Supportive Housing Program, Project Gateway has helped secure permanent housing with wrap-around services for chronically homeless individuals with disabilities and their families. The following number of households have been served: 13 in 2016, 12 in 2017, 12 in 2018, 12 in 2019, and 13 in 2020. In cooperation with Ontario Housing Authority, Mercy House, and Mercy House CHDO, a total of 76 permanent housing units continue to be provided for priority occupancy to participants in the CoC. Ontario has created new programs to assist in the delivery of services designed to house persons experiencing homelessness within the city. • In Fiscal Year 2019-20, the funding for the street outreach team was increased from 10 hours per month to 40 hours per week. • The Extreme Weather Motel Voucher Program assisted 11 persons with a total of 58 bed nights in 2019, and 14 persons in 2020. The Program was adapted to begin the COVID-19 motel voucher program in March 2020, serving 57 households from March 2020 to September 2020. The Emergency Motel Voucher Program was implemented in November 2020 to provide shelter to unhoused individuals and families. During Fiscal Year 2020-21, 92 households were served by the Emergency Motel Voucher Program. All individuals assisted are provided with the opportunity for case management focused on connecting the individuals to housing. • The LMIHF Utility Assistance Program assists persons experiencing homelessness with $0 income to participate in the existing HOME TBRA program operated as part of the CoC. This program was	

Table 6-1
Review of Previous Housing Element

Program	Implementation	Result/Effectiveness	Continue/Modify/Delete
		canceled in March 2020 in an effort to focus resources on housing unsheltered persons during the COVID-19 pandemic. • The City partnered with a local school district to identify homeless families and assist these families with rental subsidies through the HOME TBRA Program. • The City facilitated monthly meetings with Ontario focused homeless providers and governmental agencies to coordinate services to transition individuals/families from homelessness into a stable housing program. • The COVID-19 Rapid Re-Housing Program finds housing solutions for persons at-risk of homelessness during the pandemic. During 2020, 2 households received assistance.	
27. Senior Housing The City is actively working with nonprofit housing groups to build senior housing projects in the community. In addition to facilitating housing construction, the City also provides a range of supportive services for seniors. These include fair housing services, housing rehabilitation grants, preservation of subsidized senior housing, low-cost transportation services, and a range of other services tailored to meet the unique needs of Ontario's senior population.	Objectives: Continue to provide a full range of housing support services. Responsible Agencies: Housing and Neighborhood Revitalization Funding: State and federal funds Timing: Ongoing	The City continues to monitor 762 units of affordable senior housing. The City continued to work with non-profit housing groups to build senior housing projects in the community. The City provided a range of supportive services for seniors. Between 2013 and 2020, 182 seniors were assisted with fair housing issues, 1,008 seniors were assisted with landlord/tenant mediation, 1,964 seniors were assisted with support services, 2 seniors received housing rehab grants, 9 seniors received tenant-based rental assistance, and 782 units of affordable housing were restricted for seniors.	Continue
28. Housing for People with Disabilities The City enforces state and federal accessibility laws to facilitate the improvement of housing for disabled people. The City also prepares a Transition Plan to comply with state and federal accessibility laws. The City has adopted a reasonable accommodation process and administratively allows modifications to land use, building codes, and the permitting process to facilitate the reasonable accommodations without going through a standard variance process. However,	Objectives: • Continue to assist with the development of housing for persons with disabilities, including those with developmental disabilities. • Update the definition of family to comply with state law. Responsible Agencies: Building and Planning Department	The City enforces state and federal accessibility laws to facilitate the improvement of housing for persons with disabilities and encourages reasonable accessibility accommodations. The definition of the family has been updated to one or more persons living together in a dwelling unit, with common access to, and common use of all living, kitchen, and eating areas within the dwelling unit. The City's Tenant-Based Rental Assistance (TBRA) Program has served 17 disabled households since inception in 2014. For the next cycle, the definition of a	Continue and modify to remove reference to definition of family. Add reference to Inland Regional Center.

Table 6-1
Review of Previous Housing Element

Program	Implementation	Result/Effectiveness	Continue/Modify/Delete
given the large number of people with disabilities, the growing need for housing opportunities, and changing legal context for housing planning, additional efforts are needed. Many homes were built before the advent of modern accessibility standards and thus many homes remain inaccessible to people with disabilities and persons with developmental disabilities. To address this issue, the City will evaluate the feasibility and appropriateness of modifying building standards to encourage visitability concepts in new housing. Additionally, to ensure compliance with state law, the City will update its definition of "family" to state "One or more persons living together in a dwelling unit, with common access to, and common use of all living, kitchen, and eating areas within the dwelling unit."	Funding: General Fund Timing: Ongoing, update the definition of family within one year of adoption of the Housing Element.	family will be changed to one or more persons living together in a dwelling unit, with common access to, and common use of all living, kitchen, and eating areas within the dwelling unit. This program will continue to assist with the development of housing for persons with disabilities, including those with developmental disabilities.	
29. Family Housing Ontario has a large number of family households, specifically large families with five or more members. The City has a multifaceted program for increasing and maintaining the supply of family housing. The Housing Authority of San Bernardino County allocates housing choice vouchers to lower-income families in Ontario, many of whom are large families. Another key effort is the City's program to acquire, rehabilitate, and preserve existing affordable housing units that accommodate families and large families. Over the past five years, the City and the Housing Authority have preserved the vast majority of publicly subsidized affordable units for families. Finally, the City funds through its Community Development Block Program programs such as child care, after-school programs, food programs, and other services targeted for lower-income households, including large families.	Objectives: Continue program implementation. Responsible Agencies: Housing and Neighborhood Revitalization, Housing Authority of the County of San Bernardino Funding: General Fund, CDBG Timing: Ongoing	The City continues to monitor 1,228 units of affordable family housing. In addition, Ontario worked with two different developers to construct two affordable housing developments with construction that were completed during Fiscal Year 2020-21 - Emporia Place (75 units) and Vista Verde (101 units). These two new developments will provide for extremely low-, very low-, and low-income units for families.	Continue

Table 6-1
Review of Previous Housing Element

Program	Implementation	Result/Effectiveness	Continue/Modify/Delete
30. Extremely Low-Income Households The City offers programs to address the housing needs of extremely low-income (ELI) households. As funding is available, the City provides a number of incentives to encourage the production of ELI housing. The City offers fee reductions for ELI housing, supports grant applications to increase the supply of affordable housing, works with nonprofit organizations to build affordable housing, and provides land writedowns.	Objectives: • Work with nonprofits and/or for-profit developers to build housing for ELI households through supporting grants and funding applications. • Offer fee reductions and land writedowns for new affordable housing for low-income, very low-income, and ELI households. Responsible Agencies: Planning Department, Housing and Neighborhood Revitalization Funding: CDBG, HOME, federal and state grants Timing: Annually	The City continues to provide housing assistance to extremely low-income households. The City has restricted the following number of housing units for extremely low-income occupants: 12 in 2016, 12 in 2017, 12 in 2018, 20 in 2019, and 20 in 2020. Under implementation of Project Gateway, the following number of housing units were occupied by extremely low-income households: 8 in 2016, 10 in 2017, 10 in 2018, 6 in 2019, and 13 in 2020. The HOME Tenant Based Rental Assistance (TBRA) has assisted the following total number of households: 9 in 2016, 11 in 2017, 14 in 2018, 13 in 2019, and 34 in 2020. The CoC Permanent Housing (excluding Project Gateway and HOME TBRA) has assisted the following number of households: 6 in 2016, 6 in 2017, 6 in 2018, 2 in 2019, and 2 in 2020. The Assisi House and Aftercare Services program has served the following number of (unduplicated) persons: 47 persons in 2016, 29 in 2017, 38 in 2018, 59 in 2019, and 50 in 2020. The Ontario Access Center has served the following number of (unduplicated) persons: 1,385 in 2016, 1,039 in 2017, 808 in 2018, 683 in 2019, and 744 in 2020. Foothill Family Shelter has assisted the following number of (unduplicated) persons: 12 in 2016, 26 in 2017, and 7 in 2018. Services for Victims of Domestic Violence and Their Children has assisted the following number of (unduplicated) persons: 54 in 2016, 25 in 2017, 74 in 2018, 52 in 2019, and 86 in 2020. The Family Stabilization Program at SOVA Program Center has assisted the following number of	Continue

Table 6-1
Review of Previous Housing Element

Program	Implementation	Result/Effectiveness	Continue/Modify/Delete
		(unduplicated) persons: 2,444 in 2016, 2,589 in 2017, 2,503 in 2018, 1,890 in 2019, and 2,776 in 2020. Fair Housing services has assisted the following number of (unduplicated) households: 101 in 2016, 71 in 2017, 106 in 2018, 105 in 2019, and 126 in 2020. Landlord-Tenant Mediation services has assisted the following number of (unduplicated) households: 863 in 2016, 740 in 2017, 718 in 2018, 539 in 2019, and 892 in 2020. Senior Services has assisted the following number of (unduplicated) persons: 142 in 2016, 133 in 2017, 166 in 2018, 122 in 2019, and 157 in 2020. Child Care Subsidies has assisted the following number of (unduplicated) persons: 18 in 2016, 17 in 2017, 6 in 2018, 14 in 2019, and 56 in 2020.	
31. Special-Needs Housing In implementing affordable housing programs, the City will work with housing providers to ensure that special housing needs are addressed for seniors, large families, female-headed households, single-parent households with children, persons with disabilities and developmental disabilities, homeless individuals and families, and farmworker families. The City will seek to meet these special housing needs through a combination of regulatory incentives, zoning standards, new housing construction programs, housing rehabilitation, homebuyer assistance programs, and supportive services programs. In addition, the City may seek funding under the federal Housing Opportunities for Persons with AIDS, California Child Care Facilities Finance Program, and other state and federal programs designated specifically for special needs groups such as seniors, persons with disabilities, and persons at risk for homelessness.	Objectives: Collaborate with affordable housing developers and secure funding, if feasible, to assist with the development of special needs housing projects. Responsible Agencies: Planning Department, Housing and Neighborhood Revitalization Funding: CDBG, HOME, federal and state grants Timing: Annually	In conjunction with public agencies and community organizations, the following number of Supportive Housing Program project-based vouchers are available each year for chronically homeless with disabilities and their families: 12 in 2016, 12 in 2017, 12 in 2018, 12 in 2019, and 13 in 2020. The City, in conjunction with Mercy House Living Centers, implemented the HOME Tenant-Based Rental Assistance to provide rental assistance and assistance with security deposits and utility deposits to chronically homeless individuals and households. Each year, the following number of homeless households have received assistance for permanent housing: 15 in 2016, 17 in 2017, 23 in 2018, 25 in 2019, and 34 in 2020. The City continues to pursue funding under the federal Housing Opportunities for Persons with AIDS, California Child Care Facilities Finance Program, and other state and federal programs designated specifically for special-needs groups such as seniors, persons with disabilities, and persons at risk for homelessness.	Continue

7. HOUSING ELEMENT OUTREACH

The City of Ontario conducted a housing element outreach program that included a combination of public meetings, consultations, and surveys. See also description of outreach, as related to the AFH in section 3. The Public Review Draft Housing Element was released October 14, 2021. It was discussed at a Planning Commission meeting, which was open to the public, on December 20, 2021. There were no comments received from the public. Commissioners asked clarifying questions and expressed support for the Housing Element.

7.1 2020-2024 Consolidated Plan

The community outreach process for the preparation of the 2020-2024 Consolidated Plan and 2020-2021 One-Year Action Plan offered numerous opportunities for public input, comment, and review. The City hosted and coordinated a public hearing, three community forums, resident surveying, and stakeholder consultations. The culmination of public input provided the City with priority areas to help address housing needs and homelessness.

Public Outreach

A public hearing was held on February 3, 2020, to provide the public an overview of the process and components of a Consolidated Plan and for the public to submit comments and input on the Community Needs Assessment Survey. Bilingual staff was available for translation. Display advertisements and legal advertisements to promote the public hearing were published on January 9 and January 17, 2020, in the local newspaper *Inland Valley Daily*.

Three community forums were held on February 19, 2020, at Veterans Memorial Park Community Center, February 25, 2020, at Dorothy Quesada Community Center, and February 28, 2020, at De Anza Park Community and Teen Center. Residents were provided with the Community Needs Assessment Survey and information about the Consolidated Plan. Attendees were invited to participate in an engagement activity where residents selected their highest priority in select categories among activities eligible for Community Development Block Grant (CDBG), HOME, and Emergency Solutions Grant (ESG) funding.

The City held a community fair on February 29, 2020, with over 500 residents in attendance. At the Housing department booth, attendees were invited to complete the Community Needs Assessment Survey and

participate in the engagement activity presented at the community forums.

Stakeholder Consultations

The City consulted with 18 stakeholder groups representing public and private entities, service providers, or community organizations. Table 7-1 provides more information on the stakeholder consultation process, including the type of stakeholder, specific housing topics discussed, and anticipated outcomes of the consultation.

Table 7-1
Stakeholder Consultations

Agency/Group/ Organization	*What section of the 2020-2024 Consolidated Plan was addressed by Consultation?*	*How was the Stakeholder consulted and what are the anticipated outcomes of the consultation or areas for improved coordination?*
Ontario Housing Authority	Housing Need Assessment Public Housing Needs	Invited to participate in community meetings/public hearings and a copy of the executive summary was provided for feedback and comments. Coordination in providing affordable housing.
Neighborhood Partnership Housing Services, Inc.	Housing Need Assessment	Invited to participate in community meetings/public hearings and a copy of the executive summary was provided for feedback and comments. Coordination with first-time homebuyer and owner-occupied rehabilitation loan programs, and other programs and services relating to homebuyer education, financial literacy, and homeowner assistance.
AOF/Golden State Community Development Corp.	Housing Need Assessment	Invited to participate in community meetings/public hearings and a copy of the executive summary was provided for feedback and comments. Coordination with a possible Community Housing Development Organization (CHDO).
Mercy Housing Living Centers	Homelessness Strategy Homeless Needs – Chronically homeless Homeless Needs - Families with children Homelessness Needs - Veterans Homelessness Needs - Unaccompanied youth	Invited to participate in community meetings/public hearings and a copy of the executive summary was provided for feedback and comments. Coordination in providing homeless services and permanent supportive housing.
Inland Fair Housing and Mediation Board	Housing Need Assessment Non-Homeless Special Needs Fair Housing Strategy	Invited to participate in community meetings/public hearings and a copy of the executive summary was provided for feedback and comments. Coordination in providing increased services for senior citizens, fair housing services, landlord/tenant mediation services, fair housing education, testing, and enforcement, first-time homebuyer education, and financial literacy programs.
County of San Bernardino Office of Homeless Services	Homelessness Strategy Homeless Needs – Chronically homeless Homeless Needs - Families with children Homelessness Needs - Veterans Homelessness Needs - Unaccompanied youth	Invited to participate in community meetings/public hearings and a copy of the executive summary was provided for feedback and comments. Coordination in providing homeless services in the region, HMIS services, Continuum of Care coordination, and coordinated assessment system.
Ontario-Montclair YMCA	Non-Housing Community Development Strategy	Invited to participate in community meetings/public hearings and a copy of the executive summary was provided for feedback and comments. Coordination of childcare for affordable housing residents.
Ontario-Montclair School District	Homeless Needs - Families with children	Invited to participate in community meetings/public hearings and a copy of the executive summary was provided for feedback and comments. Identification and coordination of services for homeless families within the school district.

Table 7-1
Stakeholder Consultations

Agency/Group/ Organization	*What section of the 2020-2024 Consolidated Plan was addressed by Consultation?*	*How was the Stakeholder consulted and what are the anticipated outcomes of the consultation or areas for improved coordination?*
Ontario Senior Center	Non-Homeless Special Needs	Invited to participate in community meetings/public hearings. Coordination of Homeowner Energy Assistance Program (HEAP) services and social services for senior residents within affordable senior housing projects.
Rolling Start, Inc.	Non-Homeless Special Needs	Invited to participate in community meetings/public hearings and a copy of the executive summary was provided for feedback and comments. Coordination of Section 504 outreach and identifying potential participants for affirmative marketing outreach for affordable housing units.
San Bernardino County Department of Behavioral Health	Housing Need Assessment Homelessness Strategy Homeless Needs – Chronically homeless	Invited to participate in community meetings/public hearings and a copy of the executive summary was provided for feedback and comments. Coordination of Project Gateway (Shelter Plus Care vouchers) and proactively working together to secure additional resources to serve Ontario residents.
Foothill AIDS Project	Housing Need Assessment Homelessness Strategy	Invited to participate in community meetings/public hearings and a copy of the executive summary was provided for feedback and comments. Coordination and identification of potential participants for affirmative marketing outreach for affordable housing units.
County of San Bernardino Children and Family Services	Non-Housing Community Development Strategy	Invited to participate in community meetings/public hearings and a copy of the executive summary was provided for feedback and comments. Coordination for potential bridge housing resources.
Inland Valley Hope Partners	Homelessness Strategy Homeless Needs – Chronically homeless Homeless Needs - Families with children	Invited to participate in community meetings/public hearings and a copy of the executive summary was provided for feedback and comments. Coordination in providing services for the homeless and those at-risk of homelessness and identification of potential participants for affirmative marketing outreach for affordable housing units.
House of Ruth, Inc.	Homelessness Strategy Homeless Needs - Families with children	Invited to participate in community meetings/public hearings and a copy of the executive summary was provided for feedback and comments. Coordination of providing services for victims of domestic violence and potential identification of participants for affirmative marketing outreach for affordable housing units.
State of California Housing and Community Development	Housing Need Assessment	The City reviews all possible leveraging resources and will investigate opportunities to use various programs that will fund identified community needs (Affordable Housing and Sustainable Communities (AHSC), Veteran Housing and Homeless Prevention (VHHP), Emergency Housing and Assistance Program Capital Development (EHAP-CD), and others). Actively support efforts to create permanent affordable housing funding sources.
Foothill Family Shelter	Homelessness Strategy Homeless Needs - Families with children	Invited to participate in community meetings/public hearings and a copy of the executive summary was provided for feedback and comments. Coordination in providing homeless services, transitional housing, and identification of potential participants for affirmative marketing outreach for affordable housing units.
Housing Authority of the County of San Bernardino	Public Housing Needs	Requested review of public housing needs section and a copy of the executive summary was provided for feedback and comments. Implement permanent supportive housing programs and work together to secure state and federal resources for the region.

Summary of Priority Needs

The Community Needs Assessment Survey, in concert with the feedback at meetings and consultations, highlight the City's clear and detailed need for investment in affordable housing for both owner-occupied and renter-occupied households, programs for homeless persons, and homelessness prevention. Table 7-2 summarizes the city's housing needs, including level of priority, identified throughout the outreach process.

Table 7-2
Summary of Priority Needs

Need	Priority Level	Description	Basis for Priority Level
Affordable housing- rental assistance	High	Housing Choice Vouchers (Section 8) extend rental subsidies to very low-income households by offering the tenant a voucher that pays the difference between the current fair-market rent (FMR) established by the Housing Authority and 30 percent of the tenant's income.	Rental assistance programs are a high priority because they are a way to meet the pressing need for affordable housing. (See Program 23.)
Affordable housing- production of new units	High	Projects to produce new affordable housing units may be targeted to owner-occupied or renter-occupied housing types.	Production of new units is a high priority because they are a way to meet the pressing need for affordable housing. (See Programs 8, 9, 10, 11, 15, and 32)
Affordable housing- rehab of existing units	Medium	Rehabilitation of existing units could be targeted to owner-occupied or renter-occupied households. The programs would preserve the existing housing stock.	Rehab of existing units is important because preservation and maintenance are critical to maintain quality housing conditions. Nearly 60% of existing units were built prior to 1979, indicating a potential need for rehab. (See Programs 1, 3, 31, and 33)
Affordable housing – acquisition of existing units	High	The acquisition or preservation of existing units may assist in creating new affordable housing units or ensuring the continued affordability of units preserved.	Acquisition of existing units is a high priority because they are a cost-effective way to meet the pressing need for affordable housing (See Programs 16, 17, and 25~~, and 26~~)
Homelessness- outreach	High	The City has developed a Continuum of Care in Ontario that serves all segments of the homeless population and those at risk of homelessness. Outreach programs provide basic needs to homeless individuals and families and also provide appropriate referrals to services needed by specific populations, such as those with chronic substance abuse, victims of domestic violence, veterans, and persons with HIV/AIDS.	Outreach services are a high priority because they can provide the necessary first step toward the goal of transitioning someone from homelessness to stable housing. (See Programs 27, 28, 32 and 33)
Homelessness- emergency/ transitional shelter	High	The City has developed a Continuum of Care in Ontario that serves all segments of the homeless population and those at risk of homelessness. Emergency shelter and transitional housing programs provide temporary housing for homeless individuals and families.	An emergency/transitional shelter is a high priority because it can provide a temporary roof as someone works toward the goal of transitioning from homelessness to stable, permanent housing. (See Programs 17, 20, 27, 28, and 33)
Homelessness- rapid re-housing	High	The City has developed a Continuum of Care in Ontario that serves all segments of the homeless population and those at risk of homelessness.	Rapid re-housing is a high priority because it can provide a temporary roof as someone works toward the goal of transitioning from homelessness to stable, permanent housing. Ontario will continue to work with its partners at the Housing Authority for the County of San Bernardino and the County of San Bernardino

Table 7-2
Summary of Priority Needs

Need	Priority Level	Description	Basis for Priority Level
		Rapid re-housing programs provide a needed resource to quickly move those living on the streets or in shelters into permanent housing.	Department of Behavioral Health to provide rapid re-housing services. (See Programs 17, 20, 27, 28, and 33)
Homelessness- prevention	High	The City has developed a Continuum of Care in Ontario that serves all segments of the homeless population and those at risk of homelessness. Prevention services can often be the link to keep a household in their current housing and diminish the growth of the homeless population.	Services that keep someone who is at risk of becoming homeless in their home is a high priority because it meets a pressing need and is more cost-effective than providing housing for someone once they've become homeless. (See Programs 17, 20, 27, 28, and 33)

Assessment of Fair Housing

The City of Ontario's outreach process for the Consolidation Plan also included outreach for fair housing. A broad array of outreach was conducted, such as community forums, focus groups, and public hearings to ensure that the analysis contained in the Fair Housing Assessment truly reflects conditions in a community and that the goals and strategies are targeted and feasible.

Stakeholder Consultations and Surveys

In preparation of the Fair Housing Assessment, the City reached out to a wide array of stakeholders to hear directly about fair housing issues affecting residents. Stakeholders included Spanish-speaking groups, tenants, homeowners, fair housing organizations, civil rights and advocacy groups, organizations serving people with disabilities (including physical disabilities and people with HIV/AIDs), organizations serving domestic violence survivors, social services providers, and homeless providers. All community meetings had translation services available in Spanish. In addition, all meetings were held in locations accessible to people with mobility issues.

Fair housing surveys were conducted in-person both in English and Spanish at the community meetings and community fair. The majority of respondents were members of protected classes. Of the 73 respondents, 21 found housing discrimination to be an issue in Ontario, and 14 directly experienced discrimination. Survey respondents cited race as the reason for discrimination, followed by color, familial status, national origin, and disability.

Contributing Factors to Fair Housing Issues

The 2020 Assessment of Fair Housing Choice identified the following contributing factors to fair housing issues:

- Lack of meaningful language access for individuals with limited English proficiency (See Programs 24 and 27)
- Lack of affordable housing in moderate- and high-resource areas of the city (See Programs 13 and 23)
- Lack of investment/community revitalization strategies in low-resource areas of the city (See Programs 4, 10, and 27)
- Availability of rentals that accept HCV in moderate- and high-resource areas of the city (See Program 23 and 31)
- Displacement of residents in moderate- and/or high-resource areas of the city because of economic pressure (See Programs 23, 27, and 32)
- Concentration of affordable housing in low-resource areas of the city (See Programs 13 and 23)
- Lack of access to opportunity due to high housing cost (See Programs 11 and 27)
- Instances of private discrimination (See Programs 20 and 27)
- Lack of accessible affordable housing appropriate for persons with disabilities (See Programs 3, 27, 30, and 33)
- Availability of affordable housing units in a range of sizes (See Programs 23 and 31)
- Age of housing stock in northwest area of the city (See Programs 1, 3, 16, 31, and 33)
- Cost of home repairs (See Programs 1, 3, 16, 29, 31, and 33)
- Availability of affordable housing in the form of accessory dwelling units (ADUs) and junior accessory dwelling units (JADUs) (See Programs 20, 27)
- Lack of meaningful language access for individuals with limited English proficiency to learn about rehabilitation options (Program 27)

- Lack of investment/community revitalization strategies in low-resource areas of the city that would improve health outcomes for residents (See Programs 1, 4, 6, 10, and 27)
- Lack of investment/community revitalization strategies in low-resource areas of the City to improve economic outcomes for residents (See Programs 1, 4, 6, 10, and 27)

Fair Housing Goals and Priorities

The following goals and strategies will serve as an effective basis for affirmatively furthering fair housing by reducing patterns of segregation, mitigating displacement, addressing disproportionate housing needs, and increasing access to opportunity for members of protected classes.

Goal 1: Increase the supply of affordable housing in high opportunity areas.

Ontario has a significant portion of its residents who are rent-burdened and facing severe housing problems. Additionally, publicly supported affordable housing accounts for slightly less than 3 percent of the total housing stock, and Ontario and its environs are experiencing rapidly rising housing costs. Members of protected classes, particularly Hispanic and Black residents, experience these problems most acutely. These indicate a need to expand the supply of affordable housing. The following strategies address Goal 1.

- Explore the creation of new funding sources of affordable housing.
- Using best practices from other jurisdictions, explore policies and programs that increase the supply of affordable housing, such as linkage fees, inclusionary housing, public land set-aside, community land trusts, transit-oriented development, expedited permitting and review, and reduced building permit fees for nonprofit developers.
- Explore opportunities to provide low-interest loans to single-family homeowners and grants to homeowners with household incomes of up to 120 percent of the Area Median Income to develop ADUs with affordability restriction on their property.
- Align zoning codes to conform to recent California affordable housing legislation.

(See Programs 1, 6, 16, 24, and 27)

Goal 2: Increase community integration for persons with disabilities.

There is a lack of permanent supportive housing for non-elderly persons with disabilities in Ontario. By prioritizing HOME funding for such projects, which should ideally set aside 10 to 25 percent of units for persons with disabilities who need supportive services, the City can help make development proposals more competitive for Low-Income Housing Tax Credit (LIHTC) and Mental Health Services Act assistance. The following strategy addresses Goal 2.

- Prioritize HOME funding for developments that include permanent supportive housing for non-elderly persons with disabilities.

(See Programs 3, 16, 27, and 33)

Goal 3: Ensure equal access to housing for persons with protected characteristics, who are disproportionately likely to be lower-income and to experience homelessness.

Although California law provides strong legal tools to combat source of income discrimination, some landlords violate these laws, as they do housing discrimination laws more generally. Targeted education efforts would help to reduce the incidence of unlawful source of income discrimination. Attendees at community stakeholder meetings were unaware that landlords are required to accept vouchers and third-party checks and would benefit from fair housing education. The following strategies address Goal 3.

- Conduct fair housing training for landlords and tenants on California's Source of Income Discrimination protections to reduce the number of voucher holders turned away.

(See Program 23 and 27)

Homelessness

The 2020 San Bernardino County Homeless Count identified 102 homeless persons residing in Ontario, including 74 persons unsheltered and 28 homeless individuals living in emergency shelters or transitional housing.

7.2 Neighborhood Preservation Strategy Plan

In 2019, the City developed the Neighborhood Preservation Strategy Plan (NPSP) to focus on improving the overall quality of life in neighborhoods and develop a nexus between the conditions of the neighborhood and the solutions to improve it. The NPSP focused on four target neighborhoods where the NPSP could significantly address neighborhood conditions: Downtown, Nocta, Mission-Mountain, and Fourth-Grove neighborhoods. Each of these neighborhoods were identified based on demographics, land use data, and Community Improvement active cases, including outcomes from Systematic Health and Safety Inspection Program inspections, select My Ontario app reports, and calls for police service data. In reviewing the base conditions of these neighborhoods, the City determined that:

- All target neighborhoods have a lower median income than the city as a whole.
- Three of the four target neighborhoods have a higher proportion of renter-occupied households than owner-occupied households.
- The majority of the target neighborhoods have both renter-occupied and owner-occupied households that are experiencing housing cost burden at a rate higher than the city as a whole, where households are paying more than 30 percent of their income for housing costs.
- Two of the four target neighborhoods have a higher proportion of housing stock built prior to 1980 than the city as a whole.
- My Ontario App has the highest number of reports for debris in the public right-of-way among all reports evaluated for all four target neighborhoods.

To strengthen and improve quality of life in the four target neighborhoods, the City identified six strategic components to address over a three-year span: community engagement, neighborhood fairs, new resident marketing initiatives, establishment of the Neighborhood Action Team, evaluation of opportunities for affordable homeownership, and evaluation of community resources and infrastructure.

Strengthening community engagement is a primary objective of the NPSP. Community engagement strengthening efforts can be divided into three main components: capitalizing on existing community outreach and engagement, creating new events for engagement opportunities, and non-event based ongoing engagement in a variety of mediums. To accomplish this, the City will undertake the following actions.

- The Community Improvement Department will work in collaboration with the Neighborhood Action Team to identify existing events, workshops, and meetings that impact the four target neighborhoods. These include Integrated Waste quarterly clean-up days, Ontario Night Out, Neighborhood Watch meetings, Crime-Free Multi-Housing meetings, Community Life and Culture events (Culture Fest, Arts Festival, etc.), Downtown Strategic Plan workshops, and Community Health Workers monthly community engagement forums.

- One neighborhood fair is planned to be held annually within targeted neighborhoods. This event will bring together various City, County, and School District agencies, along with business owners, the Ontario Chamber of Commerce, the Ontario Hispanic Chamber of Commerce, and community organizations for a one-day event designed to bring services and information to the residents within their neighborhood.

- The City will purchase and fund a new mobile recreation program, including the purchase of a customized vehicle, related supplies, and staffing for 1,500 hours of operation per year.

- The City will develop an initial community survey that will be distributed at workshops, meetings, and engagement events to residents within the target neighborhoods to identify the opinions and needs of those residents, with the purpose of developing more focused engagement and programs/projects within each target neighborhood.

(See Program 6)

Neighborhood fairs are a key strategy to educate neighborhood residents about city programs available to them, develop relationships between the City and residents, and obtain feedback from residents through day-of activities and surveys. The City will hold at least one "block-party" style neighborhood fair over the course of the three years. The City will partner with other public sector agencies that impact community life within the target neighborhoods, such as San Bernardino County Department of Public Health, San Bernardino County Workforce Development Department, Ontario-Montclair School District, and Chaffey Joint Union School District, private local business owners, including the Ontario Chamber of Commerce, Ontario Hispanic Chamber of Commerce, and community organizations and non-profit agencies that work in the community, such as Habitat for Humanity, Neighborhood Partnership Housing Services, Boy Scouts and Girl Scouts, Inland Fair Housing and Mediation Board, Neighborhood Partnership Housing Services, Rotary Club, and Kiwanis.

(See Program 6)

The Neighborhood Action Team is the implementing entity for this strategy. The core team will include staff members from Housing Department, Community Improvement Department, Ontario Police Department, Community Life and Culture, Public Works, Ontario Municipal Utilities Company, Information Technology, Management Services, Ontario Fire Department, San Bernardino County Department of Public Health, Ontario-Montclair School District, and Chaffey Joint Union School District. In addition to the monthly meetings and solutions or other options to address "flash point" properties or blocks, the Neighborhood Action Team will implement community clean-up programs to address property maintenance issues within the targeted neighborhoods. These include Property Clean-Up Programs, Neighbors Helping Neighbors Program, and Community Clean-Up Days.

(See Program 6)

An important component of this strategy will be identifying possible means to create opportunities to expand homeownership within the target neighborhoods and throughout Ontario. Housing Department staff, along with strategic community partners, have evaluated homeownership models, from down-payment assistance programs to innovative in-fill development opportunities that would promote more affordable homeowner housing. Each target neighborhood has undeveloped land that may be suitable for housing and during the course of the strategy, undeveloped lots will be evaluated to determine possible housing options for affordable homeownership. Homeownership models may include small-lot development and community land trusts. In addition, opportunities for funding down-payment assistance loans to assist lower-income households purchase their first home from the State of California or other federal resources will be explored to develop new homeownership assistance programs. To educate residents of the four target neighborhoods of tools available through the city, the NPSP includes developing educational material to distribute to new homeowners and renters within the target neighborhoods. Again, this will be a multi-agency effort to provide residents with information that would be helpful to new residents in the community.

The final component of the NPSP will be to implement a small commercial façade improvement program within Downtown Ontario.

(See Program 6)

8. HOUSING GOALS AND POLICIES

The City of Ontario aspires to be the premier city of the Inland Empire. Building from the Ontario International Airport, the Ontario Ranch, the City's rich cultural and historic heritage, and transportation and economic assets, the City seeks to define a prosperous future through design. How we design our housing, neighborhoods, and community, and how we provide public services are critical to the achievement of that vision.

The City's vision is underpinned by four principles supporting Ontario as a unified and prosperous community:

- A dynamic balance that enables our community to confront the continued dynamic growth of the region and technological change with confidence and a sense of opportunity.
- A prosperous economy that sustains the reality of prosperity across our entire community that positively impacts all the people of Ontario.
- Distinctive development that integrates our varied and diverse focal points, districts, villages, and neighborhoods to provide a feeling of coherence without sacrificing uniqueness.
- Recognized leadership in local governance that stimulates excellence and serves to unify the people.

The Housing Element plays a critical role in achieving this vision. Housing Ontario residents and the workforce, creating quality neighborhoods of distinctive design, assisting residents with special needs, and responsibly accommodating growth and community development are fundamental to achieving the City's long-term vision of prosperity.

The Housing Plan sets forth goals and policies to achieve this end. This includes goals and policies for housing and neighborhood quality, housing diversity and supply, removal of governmental constraints, housing assistance, and special needs. Within this framework, this chapter proposes both existing and new programs to implement these goals and policies.

Table 8-1 at the end of the chapter lists the programs, key planning objectives, funding sources, implementing agency, time frame for implementation, and quantified program objectives, where feasible.

Goal 1: Neighborhoods and Housing

Ontario's neighborhoods determine our quality of life and reflect the value we place in our community. Neighborhoods differ in lot sizes, housing types, history, purpose, and environment. Whether rural residential, suburban, historic, or urban, Ontario's neighborhoods should provide a nurturing environment for all residents to enjoy their lives. Residential neighborhoods should provide quality housing, ample parks and recreational opportunities, tree-lined streets and sidewalks for walking, safety and security, and public facilities and services.

As an established community, Ontario is committed to improving its older neighborhoods. This goal may be achieved through redevelopment, housing rehabilitation, code enforcement, and neighborhood improvement projects. Ontario will facilitate the development of new neighborhoods consistent with their unique purpose, such as the Ontario Ranch, the Ontario Airport Metro Center, and other areas. Taken together, Ontario is committed to creating and strengthening neighborhoods to promote a high quality of life for residents.

Goal H1: Stable neighborhoods of quality housing, ample community services and public facilities, well-maintained infrastructure, and public safety that foster a positive sense of identity.

Policies

H1-1 **Housing Rehabilitation.** We support the rehabilitation, maintenance, and improvement of single-family, multiple-family, and mobile homes through code compliance, removal of blight where necessary, and provision of rehabilitation assistance where feasible.

H1-2 **Neighborhood Conditions.** We direct efforts to improve the long-term sustainability of neighborhoods through comprehensive planning, provision of neighborhood amenities, rehabilitation and maintenance of housing, and community building efforts.

H1-3 **Community Amenities**. We shall provide adequate public services, infrastructure, open space, parking and traffic management, pedestrian, bicycle, and equestrian routes, and public safety for neighborhoods consistent with City master plans and neighborhood plans.

H1-4 **Historical Preservation.** We support the preservation and enhancement of residential structures, properties, street designs, lot configurations, and other reminders of Ontario's past that are considered to be local historical or cultural resources.

H1-5 **Neighborhood Identity**. We strengthen neighborhood identity through creating parks and recreational outlets, sponsoring neighborhood events, and encouraging resident participation in the planning and improvement of their neighborhoods.

Goal 2: Housing Supply and Diversity

Bolstered by its International Airport, burgeoning employment sector, the Ontario Ranch, and unparalleled transportation access, Ontario aspires to be the urban center of the Inland Empire. Housing diversity is critical to achieving this goal. Ontario is committed to ensuring the provision of the widest range of housing choices for the varied lifestyles of its residents and future workforce. This includes single-family and multiple-family housing, mixed- and multi-use housing, senior housing, live-work units, and other types of housing opportunities.

Housing production is to be encouraged in a responsible manner that furthers citywide and neighborhood goals. New housing will be creatively designed, sustainable, and accessible. Residential and mixed-use growth is strategically directed to the Downtown, corridors, Ontario Airport Metro Center area, Ontario Ranch, and other areas. By encouraging an adequate supply and diversity of housing, Ontario will accommodate its changing housing needs, support economic prosperity, foster an inclusive community, and become the urban center of the Inland Empire.

Goal H2: Diversity of types of quality housing that are affordable to a range of household income levels, accommodate changing demographics, and support and reinforce the economic sustainability of Ontario.

Policies

H2-1 **Corridor Housing.** We revitalize transportation corridors by encouraging the production of higher-density residential and mixed uses that are architecturally, functionally, and aesthetically suited to corridors.

H2-2 **Historic Downtown**. We foster a vibrant historic downtown by facilitating a wide range of housing types and affordability levels for households of all ages, housing preferences, and income levels.

H2-3 **Ontario Airport Metro Center**. We foster a vibrant, urban, intense, and highly amenitized community in the Ontario Airport Metro Center area through a mix of residential, entertainment, retail, and office-oriented uses.

H2-4 **Ontario Ranch**. We support a premier lifestyle community in the Ontario Ranch, distinguished by diverse housing, highest design quality, and cohesive and highly amenitized neighborhoods.

H2-5 **Housing Design**. We require architectural excellence through adherence to City design guidelines, thoughtful site planning, environmentally sustainable practices, and other best practices.

H2-6 **Infill Development.** We support the revitalization of neighborhoods through the construction of higher-density residential developments on underutilized residential and commercial sites.

Goal 3: Governmental Regulations

The City is committed to facilitating and encouraging the production, maintenance, and improvement of housing in a responsible manner; however, various factors may limit the City's ability to address its housing needs, such as governmental regulations or environmental considerations. Market factors may also affect the feasibility of building housing or the affordability of housing in the community. Moreover, housing goals may at times conflict with the need to promote other important City goals, including open space or the provision of jobs for the region.

Whereas City land use policy and municipal codes provide a regulatory framework for addressing housing, existing regulations cannot address every situation. To facilitate the type of development desired and to realize the greatest community benefits, the City's regulatory framework must be flexible and incentive based. The development review process must be time sensitive, predictable, and thorough. The review process must support long-term community benefits, rather than just short-term gain. Finally, the regulatory framework must contain a broad range of incentives to stimulate desired development and private investment and realize the community features that improve quality of life.

Goal H3: A City regulatory environment that balances the need for creativity and excellence in residential design, flexibility and predictability in the project approval process, and the provision of an adequate supply and prices of housing.

Policies

H3-1 **Incentives**. We maintain incentive programs that can be offered to projects that provide benefits to the community such as exceptional design quality, economic advantages, environmental sustainability, or other benefits that would otherwise be unrealized.

H3-2 **Flexible Standards**. We allow flexibility in the application of residential and mixed-use development standards to gain benefits such as exceptional design quality, economic advantages, sustainability, or other benefits that would otherwise be unrealized.

H3-3 **Development Review**. We maintain a residential development review process that provides certainty and transparency for project stakeholders and the public, yet allows for the appropriate review to facilitate quality housing development.

H3-4 **Financial Incentives**. We consider financial incentives to facilitate and encourage the production, rehabilitation, or improvement of housing, or the provision of services where such activity furthers housing and community-wide goals.

Goal 4: Housing Assistance

Ontario recognizes the importance of an adequate supply of affordable housing and its importance to the quality of life of residents. Residential developments in the Ontario Ranch and Ontario Airport Metro Center area will provide quality housing opportunities to attract and retain Ontario's workforce and support citywide economic development goals. Lower- and moderate-income residents will require homeownership and rental assistance to secure and maintain housing.

Housing prices and rents in Ontario and across the region continue to lead to lower homeownership rates, longer commutes, increased traffic congestion, higher cost burdens, and overcrowding in neighborhoods. Working with partners and the state and federal governments, the City of Ontario is committed to providing a range of housing types and prices affordable to all economic segments of the city and assisting residents and

the workforce to secure and maintain housing that is affordable and appropriate to their needs.

Goal H4: **Increased opportunities for low- and moderate-income households and families to afford and maintain quality ownership and rental housing opportunities, including move-up opportunities. Inclusive communities, racial equity, fair housing choice, and access to opportunity.**

Policies

H4-1 **Preservation of Affordable Apartments**. We strive to facilitate the preservation of the affordability of publicly assisted apartments for lower-income households through financial assistance, technical assistance, rehabilitation, and collaborative partnerships.

H4-2 **Homeownership Opportunities**. We increase and expand homeownership rates for lower- and moderate-income households by offering financial assistance, low-interest loans, and educational resources, and by working in collaboration with partnerships.

H4-3 **Rental Assistance**. We support the provision of rental assistance for individuals and families earning extremely low, very low, and low income with funding from the state and federal government.

H4-4 **Mixed-Income Housing**. We encourage the integration of affordable housing in the Ontario Ranch, Ontario Airport Metro Center area, and existing neighborhoods.

H4-5 **Collaborative Partnerships**. We support collaborative partnerships of nonprofit organizations, affordable housing developers, major employers, and for-profit developers to produce affordable housing.

H4-6 **Fair Housing**. We further fair housing by prohibiting discrimination in the housing market, lifting barriers that restrict access to housing, and providing education, support, and enforcement services to address discriminatory practices.

Goal 5: Special Needs

The City is home to a large number of people with special housing needs. These special needs may be related to occupation, income, family characteristics, disability, veteran status, or other characteristics. Special needs groups include, but are not limited to, seniors, large families with children, people with disabilities, single-parent families, college students, veterans, and people who are homeless. Though each group is markedly different, they share the challenge of finding suitable and affordable housing.

Ontario aspires to be the premier city the Inland Empire. As such, the city's population will become increasingly diverse, with people of many cultures, backgrounds, family types, ages, and experiences. The housing needs of Ontario's residents will be equally diverse. Recognizing the contributions of this diversity to the community, Ontario has the opportunity to demonstrate leadership in addressing the housing and support needs of all residents. Ontario is thus committed to creating a community that allows people to live in the city for their entire life, regardless of their special needs.

Goal H5: **A full range of housing types and community services that meet the special housing needs for all individuals and families in Ontario, regardless of income level, age, or other status.**

Policies

H5-1 **Senior Housing.** We support the development of accessible and affordable senior housing and provide financial assistance for seniors to maintain and improve their homes.

H5-2 **Family Housing.** We support the development of larger rental apartments that are appropriate for families with children, including, as feasible, the provision of services, recreation, and other amenities.

H5-3 **Disabled People.** We increase the supply of permanent, affordable, and accessible housing for people with disabilities, and provide assistance to allow them to maintain and improve their homes.

H5-4 **Homeless People.** We partner with nonprofit partners to provide emergency shelters, transitional housing, permanent supportive housing, and supportive services for people who are homeless.

H5-5 **Supportive Services.** We financially support organizations, as feasible, that provide support services that meet the needs of those with special needs and further the greatest level of independence.

H5-6 **Partnerships.** We collaborate with nonprofit organizations, private developers, employers, government agencies, and other interested parties to develop affordable housing and provide support services.

9. HOUSING PROGRAMS

9.1 Neighborhoods and Housing

1. Code Enforcement

Code compliance is an important tool to ensure that the value, character, and quality of neighborhoods, property, and housing are well maintained. Listed below are the programs implemented by the Code Enforcement program specifically designed to improve the quality of Ontario neighborhoods and eliminate health and safety related to building conditions:

- General Code Enforcement: The City uses an interdepartmental approach for inspecting properties for compliance with state and local regulations regarding the condition and maintenance of residential buildings and properties. If deficiencies are found, the property owner is notified of the code deficiency and compliance measures required, and the property owner is granted a period of time to correct the matter. To facilitate timely compliance, City staff direct the property owners to City–administered rehabilitation loans and/or other nonprofit housing loan programs, where available.

- Community Improvement Team: This team has been specifically designed to proactively implement an intensive code compliance program to address serious code violations within focus areas. As part of this team approach, various City departments work together to bring a myriad of resources to the focus area to arrest neighborhood decline and improve the living conditions within the area.

- Systematic Health and Safety Inspection Program: The program is designed to ensure the quality of the rental stock and reduce substandard building conditions. Through this program, all rental housing units over seven years old are inspected on a four-year schedule unless it is necessary to inspect more frequently due to substandard conditions.

- Abandoned and Distressed Property Program and Foreclosure Opportunities Response Team (FORT) Program: These programs were established to protect Ontario neighborhoods from becoming blighted through the lack of adequate maintenance and security of abandoned and distressed properties.

The City will focus efforts throughout the city, with a particular emphasis on areas to the north and northwest of the Ontario International Airport.

Implementation

- ***Objectives*:** Continue code enforcement using a progressive approach of voluntary compliance, citations, and court action if needed. Continue to apply for funding. Prevent the displacement of 60 lower income households due to the conservation of their housing through property maintenance, at least 75 percent in northwest Ontario (Figures 2-2 and 3-1).
- ***Responsible Agencies*:** Housing and Neighborhood Preservation Departments, Police, Fire, Economic Development, Building, and Planning Departments.
- ***Funding:*** Community Development Block Grant (CDBG), HOME, and CalHOME funds.
- ***Timing:*** Ongoing; inspect properties annually.

2. Historic Preservation

Known as the Original Model Colony, Ontario is rich in local history. The City operates a comprehensive historic preservation program. It is a certified local government, a designation that signifies that the City's program meets state and federal historic preservation standards. The City has eight historic districts and is surveying nine additional areas for the potential of historic district designation. It encourages historic preservation efforts through Mills Act contracts, surveys of potentially historic structures, and an adaptive reuse program (for the Emporia District and Downtown).

Implementation

- ***Objectives***: Continue to implement program.
- ***Responsible Agencies***: Planning Department
- ***Funding***: General Fund, state and federal grants
- ***Timing***: Ongoing

3. Housing Rehabilitation Loan and Grants

When funding is available, the City offers housing rehabilitation loans and grants to qualified homeowners to pay for accessibility improvements, emergency repairs, home renovations, and other services that improve the homes and lives of Ontario residents, including seniors

and persons with disabilities. The City launched the Conservation Home Improvement Program (CHIP) loan in 2020 with Community Development Block Grant (CDBG) funding provided through the Department of Housing and Urban Development (HUD). CHIP offers rehabilitation loans to qualifying owner-occupied households to make energy and/or water conservation improvements to the exterior of properties. As of 2021, the City approved two CHIP loans that have progressed to construction and are reviewing two additional applications. The City will continue to implement CHIP as funding is available and ~~seek~~ apply for other sources of funding, including Permanent Local Housing Allocation (PLHA) and CalHome funds to support rehabilitation loans and grant programs. To encourage participation, the City will continue to provide information on its website. Once community events resume, the City will market the programs in person, particularly to the four target neighborhoods shown in Figure 2-2. Materials to promote the rehabilitation loans and grant programs will be offered in English and Spanish to reduce language barriers.

Implementation

- ***Objectives:*** Support 90~~30~~ rehabilitated units through CHIP and/or future rehabilitation programs, at least 75 percent of assisted rehabilitations will be in the Fourth and Grove, Downtown, Nocta and Mission-Mountain neighborhoods in northwest Ontario.
- ***Responsible Agencies:*** Housing Department
- ***Funding*:** CDBG, HOME, CalHOME
- ***Timing*:** Ongoing

4. CARES

The City of Ontario has previously implemented the comprehensive CARES Neighborhood Revitalization Program within selected focus neighborhoods. The components of this comprehensive, multi-agency program have included code enforcement, arterial street improvement, relief program, exterior improvement program, and sidewalk or safe routes to school program. The program sought to stabilize neighborhoods through a comprehensive approach to building community. The program is currently on hold because of limited availability of funds. The City will seek funding opportunities to continue the program and restructure it as needed, depending on the requirements of the funding program. If funding can be secured to continue the CARES program, the City will focus efforts throughout the city, with a particular emphasis on areas to the north and northwest of the Ontario International Airport. While the

City continues to look for funding opportunities to reengage the broader CARES Neighborhood Revitalization Program, some project objectives have continued under other funding sources. Using CDBG funds the City has developed the Conservation Home Improvement Program (see Program 3), designed to enable income qualified homeowners to make energy and water conservation improvements to their properties. The City also uses CDBG to fund the Community Improvement Team, a division of the Community Improvement Department tasked with implementing an intensive code compliance program (see Program 1) committed to reducing blight in eligible neighborhoods. Finally, the City continues to use CDBG funding to partially fund slurry seal and alley pavement improvement projects. Upon securing future funding, the City will be able to tie these existing efforts into the more comprehensive CARES Neighborhood Revitalization Program.

Implementation

- ***Objectives*:** Seek funding to continue program implementation, as funding is available, and restructure as needed.
- ***Responsible Agencies*:** Housing and Neighborhood Preservation Departments ***Funding*:** CDBG, HOME, General Fund
- ***Timing*:** ~~Ongoing~~The City will evaluate funding opportunities on a quarterly basis. If funds for the CARES Neighborhood Revitalization Program remain unavailable as of summer 2024, the City will identify other funding programs and submit applications to fund the activities specified in this program.

5. Neighborhood Plans

Ontario's neighborhoods define the sense of identity and community for residents, the quality of life experienced, and the image and role of Ontario. The City currently implements many programs to improve neighborhoods; however; the City has identified a need to foster a stronger sense of neighborhood identity in the community. While this goal is being achieved in CDBG-eligible areas (CARES program) and in historic areas, efforts need to be expanded to other neighborhoods. ~~During the planning period~~By summer 2023, the City will begin a public outreach effort to solicit input from neighborhood leaders and residents as to particular needs and goals. This process may result in the establishment of ongoing dialog with the City, neighborhood organizations, or the preparation of neighborhood improvement plans. In addition, the City will continue the Multimodal Transportation Center (MTC) Needs Assessment and Siting Criteria project. This assessment will assist in determining the optimum location for an MTC on or near

the Ontario International Airport connecting future modes of transportation, including light-rail opportunities.

Implementation

- ***Objectives*:** Designate focus neighborhoods, outreach plan and process, and initiate survey efforts. Evaluate the potential of creating neighborhood improvement plans. Encourage participation from residents from areas of concentrated poverty.
- ***Responsible Agencies*:** Planning, Housing, and Community Improvement Departments.
- ***Funding*:** General Fund
- ***Timing*:** ~~Ongoing~~. To foster a stronger sense of neighborhood identity in neighborhoods that have not had recent planning efforts, conduct public outreach effort to solicit input from neighborhood leaders and residents. Initiate outreach by summer 2023.

6. Neighborhood Stabilization

In July 2019, the City adopted the Neighborhood Preservation Strategy Plan (NPSP) to develop community partnerships between the City, its residents, business owners, community organizations, and neighborhoods. The NPSP identified four initial target neighborhoods (Downtown, Nocta, Mission-Mountain, Fourth Grove) based on baseline demographic information related to economic, education, housing, languages, and families that will be the focus of the NPSP efforts. The NPSP has been designed to meet objectives over a three-year span within the four target neighborhoods. Components of the strategy include community engagement, neighborhood fairs, new resident marketing initiatives, establishment of the Neighborhood Action Team, evaluation of opportunities for affordable homeownership, and evaluation of community resources and infrastructure. ~~Implementation~~

~~***Objectives:***~~ The City will ~~I~~implement the key components of the NPSP to strengthen the four target neighborhoods, improving neighborhood conditions and resident quality of life: community engagement, neighborhood fairs, neighborhood action team, homeownership opportunities, community education materials, and economic development activities. Fair housing objectives under Program 27 will support the implementation of the NPSP.

The Housing and Community Improvement Departments will report on the progress of the NPSP at the end of each fiscal year for the life of the program.

Community Engagement: The Housing and Community Improvement Departments will collaborate with the Neighborhood Action team to attend existing events in the target neighborhoods (e.g., Integrated Waste quarterly clean-up days, Ontario Night Out, Neighborhood Watch meetings, Crime-Free Multi-Housing meetings, Community Life and Culture events [Culture Fest, Arts Festival, etc.], Downtown Strategic Plan workshops, Community Health Workers monthly community engagement forums). The City will develop an ongoing community engagement plan through distributing an initial community survey in the first year that will inform focused engagement plan, programs, and projects within each of the target neighborhoods.

Neighborhood Fairs: Conduct at least one neighborhood fair each year over the three-year term of the NPSP.

Neighborhood Action Team: The Neighborhood Action Team will be composed of staff from Housing and Community Improvement Departments, Ontario Police Department, Community Life and Culture, Public Works, Ontario Municipal Utilities Company, Information Technology, Administrative Services, Ontario Fire Department, San Bernardino County Department of Public Health, Ontario-Montclair School District, and Chaffey Joint Union School District. The Neighborhood Action Team will meet monthly to evaluate upcoming planned community engagement opportunities, discuss partnerships and updates, and strategize solutions for the target neighborhoods. The Neighborhood Action Team will also implement community clean-up programs, including the Property Clean-Up Program (grant fund program with up to $3,000 per property for exterior improvements), Neighbors Helping Neighbors Program (partnership opportunity with local housing nonprofits and community volunteer groups), and Community Clean-Up Days (a minimum of two clean-up days per program year).

Homeownership Opportunities: Housing Department staff will evaluate homeownership model programs to promote homeownership in each of the target neighborhoods. Homeownership models may include small-lot development, community land trusts, and opportunities for funding down payment assistance loans.

Community Education Materials: Housing and Community Improvement Department staff will develop a packet of materials (available physically and online through the City's website) to be distributed to new homeowners and renters within the target neighborhoods. In addition to resident information packages, develop a business user's guide to inform local business owners of Ontario Municipal Code and Ontario Development Code requirements. The business user's guide would be developed in coordination with the

Economic Development Agency, the Community Development Agency, and Ontario Municipal Utilities Company.

Economic Development Activities: For the initial year of NPSP, the Housing and Economic Development Agency will implement a small commercial façade program for qualifying businesses within the 100-600 blocks of North Euclid Avenue. The commercial façade program will support four businesses.

Implementation

- *Objectives:* The Housing and Community Improvement Departments will collaborate with the Neighborhood Action team to attend existing events in the target neighborhoods, with an average of four per month. At least one neighborhood fair each year. Neighborhood Action Team will meet monthly. Assisting at least 20 households with first-time homebuyer loans (see also Program 25). Support four businesses with the commercial façade program. See also quantified objectives under Program 27.

- ***Responsible Agencies*:** Housing and Community Improvement Departments, Economic Development Agency

- ***Funding:*** CDBG

- ***Timing*:** ~~Within three years of Housing Element adoption~~Attend neighborhood meetings monthly. Distribute an initial community survey by January 2023. Develop ongoing community engagement plan by January 2024. Begin meetings of the Neighborhood Action Team by summer 2022. Develop informational materials for new homeowners and renters and business owners by summer 2024.

9.2 ~~7. Community-Oriented Policing~~

~~The City of Ontario Police Department uses CDBG funds to implement a community-oriented policing program in designated low- and moderate-income neighborhoods. This partnership involves working with community leaders, businesses, and property owners to address neighborhood issues, including code enforcement, crime-free multifamily housing, safe and clean streets, and school interventions. With respect to housing, the Police Department implements the Crime-Free Multifamily Housing Program to control and eliminate crime in apartment buildings. Under this program, the Police Department will provide training to apartment owners, conduct a property inspection to identify and eliminate potential crime hazards, and certify properties~~

~~where the owner signs a written agreement and commitment to maintain the program.~~

~~Implementation~~

- ~~Objectives: Continue implementation of Community Oriented Policing (COPs) program; coordinate marketing efforts with the new Quadrennial Inspection Program.~~
- ~~Responsible Agencies: Housing and Community Improvement Departments, and Ontario Police Department~~
- ~~Funding: General Fund, CDBG~~
- ~~Timing: Ongoi~~

9.2 Housing Supply and Diversity

7. Accessory Dwelling Units (ADUs)

The City shall promote accessory dwelling units (including junior accessory dwelling units) (ADUs/JADUs) as an affordable housing option in high-resource areas and an economic mobility opportunity in Ontario through the following actions. The cumulative impact of these strategies would exceed the conservative estimate of 120 units to achieve 360 ADUs in the planning period, with at least one third of the units (180) available as affordable housing to lower income households.

- Consider a program to waive, reduce, or defer connection or impact fees for ADUs that agree to affordability covenants for a set period of time. The City will consider options in 2026 and implement programs as necessary by 2027.
- Continue to provide information such as Frequently Asked Questions (FAQ) on the City's website. Expand information on the City's website to provide educational materials and additional guidance, including permitting procedures and construction resources. Update the information provided on the City's website to include by December 2022, ensuring information is provided in multiple languages (including Spanish).
- Assess the feasibility of establishing a loan program to help homeowners finance the construction of ADUs. The City shall consider incentives to encourage homeowners to deed restrict ADUs for lower-income households. The City will consider qualification requirements for income-restricted ADUs

appropriately address Ontario residents' housing needs to identify barriers to qualifying (e.g., proof of residency, income levels, employment record, credit history, etc). The City will consider options in 2026 and implement programs as necessary by 2027.

- Actively market ADU guidance and materials in areas with high access to resources to encourage the development of new affordable housing in areas of opportunity as a strategy to enhance mobility and reduce displacement of low-income households seeking affordable housing options. support property owners interested in building ADUs and JADUs to increase the overall housing stock in residential zones and to promote this housing type as a more affordable housing alternative. During the Housing Element planning period, the ordinance will be updated as appropriate in compliance with state law and adjusted as issues arise and new best practices develop. Some of the features of the program will include:

  - Receive technical assistance through SCAG to evaluate permitting practices for ADUs and JADUs and implement improvements

  - Online application process with staff intake for quality control

  - Maintain and develop materials for better applicant guidance, as needed

  - Provide consistent staff training and support

  - Look for all opportunities to provide certainty earlier in the process

  - Reduce steps and shorten timeframes, and

  - Continue to watch the prefabricated housing market, including companies that produce 3D-printed homes, repurposed shipping containers, and modular construction in order to integrate new ideas into the permitting process as appropriate.

- Develop and implement a monitoring program. The program will track ADU approvals and affordability. The City will use this monitoring program to track progress in ADU development and adjust or expand the focus of its education and outreach efforts through the 2021-2029 planning period. The City will evaluate ADU production and affordability two years into the planning

period (2023) and if it is determined these units are not meeting the lower-income housing need, the City will consider other housing sites that are available to accommodate the unmet portion of the lower-income RHNA.

See also Program 27 Fair Housing.

Implementation

- ***Objectives***: A cumulative impact of these strategies that exceeds the conservative estimate of 120 units to achieve 360 ADUs in the planning period, with at least one third of the units (180) available as affordable housing to lower income households.
- ***Responsible Agencies***: Housing and Planning Departments and Ontario Housing Authority
- ***Funding***: General Fund, CDBG
- ***Timing***: Consider fee waiver and loan programs in 2026 and implement programs as necessary by 2027. Continue to provide and update program information on the City's website throughout the planning period, in English and Spanish. Actively market ADU program throughout the planning period. Implement monitoring - evaluate ADU production and affordability two years into the planning period (2023).

8. Downtown Plan

Ontario's Downtown covers 12 blocks along Euclid Boulevard. The City developed a Downtown District Plan that encompasses four downtown districts that create sub-zones within the Mixed-Use (MU-1) zoning district: Euclid Avenue Entertainment District (LUA-1), Arts District North and South (LUA-2S and LUA-2N), Holt Boulevard District (LUA-3), and Civic Center District (LUA-4). The Downtown District Plan vision provides opportunities for high-density, market-rate and affordable housing in the Euclid Avenue Entertainment District and Holt Boulevard District, offering convenient access to downtown amenities, local commercial centers, public services, open space, and public transportation. The Downtown Plan area is included in a $35 million Transformative Climate Communities (TCC) Grant awarded to the City to increase prosperity and improve transportation and housing within a disadvantaged community. The TCC program includes affordable housing, active transportation improvements, mobility hub, urban greening, carbon farm, solar photovoltaic, and transit improvements. This grant is a collaborative effort with public and community-based organizations.

Implementation

- ***Objectives*:** Adopt the Downtown District Plan to facilitate new mixed-use and residential development; continue to acquire property and assemble sites to facilitate new housing.
- ***Responsible Agencies***: Planning Department
- ***Funding*:** General Fund, Tax Increment, Transformative Climate Communities (TCC)
- ***Timing*:** Within one year of Housing Element adoption

9. Mountain and Euclid Corridors

Euclid Avenue and Mountain Avenue extend the entire length of Ontario. In recent years, developers have expressed interest in building residential and commercial projects along these corridors. Mountain Avenue has had numerous senior and affordable housing projects built adjacent to or near the corridor, and developers have begun to show interest in Euclid Avenue. Both corridors have commercial property that is proposed for redesignation as residential. To facilitate corridor development, the City previously rezoned properties along Euclid Avenue and Mountain Avenue for medium- and high-density residential development, as shown on the Official Land Use Plan (LU-01). During the planning period, the City will develop a lot-consolidation ordinance to incentivize the assemblage of parcels. Incentives may include fee modifications, flexibility in design, expedited permit processing, or others. The City will continue to monitor the ongoing status of development in the Euclid Avenue and Mountain Avenue corridors.

Implementation

- ***Objectives*:** Develop a lot consolidation ordinance to facilitate the assemblage of lots into larger parcels. with up to three assemblages anticipated during the planning period in the Euclid Avenue and Mountain Avenue corridors. Continue to monitor the ongoing status of development in the Euclid Avenue and Mountain Avenue corridors.
- ***Responsible Agencies*:** Planning Department
- ***Funding*:** General Fund
- ***Timing*:** Within two years of Housing Element adoption, ongoing monitoring of development

10. Holt Boulevard

Holt Boulevard is one of the original corridors paralleling the railroad and extending through Ontario and neighboring communities. With the development and success of commercial uses fronting the freeways, the commercial viability of Holt Boulevard has gradually eroded, leaving a significant number of underutilized uses on small parcels. The Policy Plan has declared Holt Boulevard as a focus area for mixed uses, both perpendicular to Mountain Avenue, at the base of Downtown, and in the East Holt Boulevard Study Area. Sites along Holt Boulevard have been previously rezoned to accommodate higher densities. To stimulate investment in these areas, the City will adopt a lot consolidation ordinance and incentives to encourage the recycling of land to residential uses. The City will continue to monitor the ongoing status of development in the Holt Boulevard area. The Holt Boulevard area is included in a $35 million Transformative Climate Communities (TCC) grant awarded to the City to increase prosperity and improve transportation and housing within a disadvantaged community. The TCC program includes affordable housing, active transportation improvements, mobility hub, urban greening, carbon farm, solar photovoltaic, and transit improvements. This grant is a collaborative effort with public and community-based organizations and includes the development of the 101-unit Vista Verde Affordable Housing project.

Implementation

- ***Objectives*:** Develop a lot consolidation ordinance to facilitate the assemblage of lots into larger parcels, with up to five assemblages anticipated during the planning period in the Holt Boulevard area. Continue to monitor the ongoing status of development in the Holt Boulevard area.
- ***Responsible Agencies*:** Planning Department
- ***Funding*:** General Fund
- ***Timing*:** Within two years of Housing Element adoption, ongoing monitoring of development

11. Ontario Ranch

Ontario Ranch covers 8,200 acres of the former San Bernardino Agricultural Preserve. This area is intended to provide a range of housing opportunities for the City's emerging regional and national employment centers. Buildout of this area is contingent on completion of infrastructure, approval of specific plans, and cancellation of Williamson Act contracts. The City has entered into an agreement with a consortium to fund $430 million in infrastructure serving the eastern Ontario Ranch.

The initial sewer trunk line, expected to develop in 2022, will travel along Merrill Avenue between Euclid and Walker Avenues. From there, additional sewer lines are planned to extend north along Euclid, Bon View, Grove, and Walker Avenues, with the southern-most sites expected to be first served. Infrastructure is expected to expand south to north as development occurs.

The City will monitor the timing of the provision of infrastructure. to ensure that infrastructure is being provided pursuant to these assumptions so that housing can be developed early in the planning period. The City will amend the sites inventory or rezone additional sites should infrastructure not be provided pursuant to the timeframes stated. (See also Program 14. Land Monitoring Program to Meet the RHNA.)

Many specific plans for this area have been approved. Some of the original Williamson Act contracts will also expire during the planning period. The Policy Plan has designated much of the area for medium- and high-density residential and mixed-use. Within western Ontario Ranch (largely undeveloped), the Policy Plan lays groundwork to promote a mixed-income community, with low-density, medium-density, high-density, and mixed-use well integrated with one another. Ontario Ranch offers important opportunity to integrate housing affordable to all income levels, especially lower-income households. The City will continue to process specific plan applications and work with developers to address outstanding issues, in particular the financing of infrastructure in western Ontario Ranch. In addition, the City will meet with potential developers to explore opportunities to integrate affordable housing in new developments.

Implementation

- ***Objectives*:** Continue to review, approve, and implement plans to develop Ontario Ranch, and meet with potential developers to encourage the development of affordable housing.
- ~~***Responsible Agencies*:** Planning Department~~
-
- ***Funding***: General Fund
- ***Timing*:** ~~Ongoing~~Based on discussions with the Ontario Municipal Utilities Company (OMUC), with consideration of the cost, market conditions, and phasing needed to expand infrastructure, the City anticipates that infrastructure is likely to be available as follows:

- Merrill Ave to the southern SCE (Southern California Edison) easement: 2023-2025
- Southern SCE easement to Schaefer Ave: 2025-2027
- Schaefer Ave to Riverside Drive: 2026-2028

12. Green Building

Green building means creating structures and using materials that are environmentally responsible and resource efficient, considering a building's entire life cycle. To reduce per-capita energy use, the City will promote conservation and renewable energy generation techniques in public facilities and private development. The City will require new construction to reduce energy demand by incorporating building and site design strategies. Conservation will be the priority strategy for renovation of existing facilities. The Policy Plan also includes land planning strategies that impact energy demand reduction, including narrowing street widths, installing broad-canopied trees for shade, and clustering compact development to reduce automobile use.

Implementation

- ***Objectives:***
  - Promote green building practices in the private sector and explore point-of-sale energy retrofits for residences.
  - Renewable energy incentive and energy-efficiency programs.
  - Develop a citywide 20-year energy plan.
  - Support pilot development project as a net-zero-energy community and formulate solar site orientation guidelines.
- ***Responsible Agencies*:** Planning Department, Building Department, Public Works
- ***Funding*:** General Fund
- ***Timing*:** Ongoing

13. 2021-2029 Regional Housing Need

To meet state law requirements (California Government Code Sections 65583(c)(1)(A) and 65583(c)(1)(B)) to address the 2021-2029 Regional Housing Needs Allocation (RHNA) and to ensure a sufficient selection of sites are available for higher-density development, the City shall amend the Policy Plan and the Development Code, as needed, to provide adequate sites for 8,333 lower-income units and 2,735 moderate-income units (11,068 total units). The City will increase maximum density to at least 30 dwelling units per acre (du/ac) on a minimum of 270-370 acres depending on the mix of densities employed. Sites for lower-income units must allow at least 30 du/ac and are subject to the requirements of California Government Code Section 65583.2(h), including allowing owner-occupied and rental multifamily housing "by right" without discretionary review if 20 percent or more of the units in a project proposed on the site are affordable to those with lower incomes. The sites rezoned to accommodate lower-income RHNA must be able to accommodate a minimum of 16 units per site. At least half (50 percent) of the sites rezoned to accommodate lower-income RHNA shall be designated/zoned for residential uses only, except that all of the very low- and low-income housing need may be accommodated on sites designated for mixed uses if those sites allow 100-percent residential use and require that residential uses occupy 50 percent of the total floor area of a mixed-use project. The applications can be subject to design review as long as the project does not trigger the California Environmental Quality Act review process.

An **Affordable Housing Overlay** zone will be created and applied to those sites proposed to change from another zone to MU-2 in the East and West Holt Corridors ~~to all parcels in the sites inventory that are zoned MU-2 along Holt Boulevard~~ and parcels identified in the sites inventory in the ~~area~~ Ontario Ranch, south of Riverside Drive. The Overlay establishes a minimum density of 20 dwelling units per acre for all development regardless of affordability status and provides for special standards for affordable housing projects ~~where at least 25% of proposed units are restricted for lower income households, including~~in the Ontario Ranch.

In the Ontario Ranch, the AH Overlay provides incentives to develop two tiers of affordable housing.

- *Tier 1.* The first tier would include housing projects with at least 20% of units affordable to lower incomes. Projects in this tier would no longer be required to develop a new specific plan under the AH Overlay.

- *Tier 2.* The second tier would include projects with at least 25% of units dedicated as affordable to lower incomes via deed restriction

or another long-term legal mechanism. Tier 2 projects would be subject to the same provisions as Tier 1, but the maximum density allowed on properties within the AH Overlay and designated as MDR on the Official Land Use Plan (Exhibit LU-01) of the Policy Plan component of The Ontario Plan would increase from 25 to 30 dwelling units per acre.

Projects developing without a specific plan would be allowed to develop according to the Policy Plan designation. Sites designated as MDR in the Policy Plan would be allowed to develop according to MDR-25 zoning standards, if the project qualifies as Tier 2, and it cannot achieve a density of 30 du/ac under MDR-25 standards, HDR-45 zoning standards may be used instead. Sites designated as MU in the Policy Plan may be developed in accordance with a comparable existing zoning implementation tool that allows for the density and/or intensity permitted by the Policy Plan.

To ensure that these incentives are primarily used as a means to promote the development of affordable housing, the AH Overlay would also require projects choosing to develop without a specific plan to calculate the minimum density over the entirety of the project site (or the portion of the project site that is located within the AH Overlay, if the project area also includes properties that are not within the AH Overlay).~~:~~

- ~~No specific plan shall be required unless the parcels are already affected by an adopted specific plan~~
- ~~The project can apply the development standards for the zone that implements the current or proposed Policy Plan designation~~
- ~~For parcels with a Policy Plan designation of MDR, the maximum density shall increase from 25 to 30 units per acre (before application of state density bonus provisions)~~
- ~~For mixed-use projects, at least 75 percent of the project area must be dedicated to residential uses, and densities shall be consistent with the applicable Policy Plan designation.~~

The following **specific plans** will be updated to require properties within these Specific Plan areas that are also included in the sites inventory include a minimum density of 20 du/ac and allow at least 30 du/ac:

- The Ontario Mills Specific Plan
- The Armstrong Ranch Specific Plan

The City will also **update the policy plan** designations and associated tables as necessary ~~to reflect~~consistent with the proposed zoning changes, the intent of the overlay zone, and the changes to the specific plans.

Implementation

- ***Objectives:*** Accommodate Ontario's share of the 2021-2029 RHNA.
- ***Responsible Agencies*:** Planning Department
- ***Funding*:** General Fund
- ***Timing*:** Specific sites will be rezoned prior to February 12, 2025

14. Land Monitoring Program to Meet the RHNA

The City is in the process of updating the Development Code for consistency with the Land Use designations of its Policy Plan. This program will implement a land monitoring program to ensure that the city has enough land to meet its RHNA throughout the planning period.

California Government Code Section 65863 stipulates that a jurisdiction must ensure that its Housing Element inventory can accommodate its share of the RHNA by income level throughout the planning period. If a jurisdiction approves a housing project at a lower density or with fewer units by income category than identified in the Housing Element, it must quantify at the time of approval the remaining unmet housing need at each income level and determine whether there is sufficient capacity to meet that need. If not, the city must "identify and make available" additional adequate sites to accommodate the jurisdiction's share of housing need by income level within 180 days of approving the reduced-density project. The City will evaluate residential development proposals for consistency with goals and policies of the Policy Plan and the 2021-2029 Housing Element sites inventory and make written findings that the density reduction is consistent with the Policy Plan and that the remaining sites identified in the Housing Element are adequate to accommodate the RHNA by income level. If a proposed reduction of residential density will result in the residential sites inventory failing to accommodate the RHNA by income level, the City will identify and make available additional adequate sites to accommodate its share of housing need by income level within 180 days of approving the reduced-density project. (See also monitoring of infrastructure provision timing in Program 11. Ontario Ranch.)

Implementation

- ***Objectives:*** Ensure there is a sufficient supply of multifamily zoned land to meet the housing needs identified in the RHNA.
- ***Responsible Agencies:*** Planning Department
- ***Funding:*** General Fund
- ***Timing:*** Throughout the 2021-2029 planning period.

15. Residential By-Right for Developments with 20-Percent Affordable

To comply with Assembly Bill (AB) 1397, sites with Assessor's Parcel Numbers (APNs) listed in Table 9-1-in the land inventory in this 6th cycle Housing Element shall be allowed to be developed for residential use by-right, in accordance with Government Code Section 65583.2(c). This by-right (without discretionary review) requirement is only for housing developments in which at least 20 percent of the units are affordable to lower-income households. The application of the requirement should not be used to further constrain the development of housing. As such, housing developments that do not contain the requisite 20 percent would still be allowed to be developed according to the underlying (base) zoning.

Table 9-1
Assessor's Parcel Numbers

104857602	104857601	101050176	101054306	101055234	101055233	101055232	101052217
101052206	101054301	101054327	101054304	101054305	101055216	101054302	101054313
101054314	101055237	104860414	104860415	101049116	101049102	101049103	101050207

Implementation

- ***Objectives:*** Comply with California Government Code Section 65583.2(c)
- ***Responsible Agencies:*** Planning Department
- ***Funding:*** General Fund
- ***Timing:*** Continuously during the planning period.

9.3 Governmental Constraints

16. Incentives

The City of Ontario offers several different types of incentives to facilitate housing production, including:

- **Financial Incentives:** The City makes available financial incentives that meet certain criteria. For instance, impact fee reductions are allowed for projects built in the Downtown. The City is financially assisting a variety of nonprofit organizations to provide senior housing, housing for homeless people, and other services. Density bonuses allowed for qualified projects work as a financial incentive by increasing the revenue stream of projects. The City also has established its Community Housing Development Organization (CHDO) program to leverage the nonprofit sector resources with available HOME CHDO funding. The intent of the CHDO funding is to work with nonprofit CHDOs to help preserve, enhance, and improve existing neighborhoods through acquisition, rehabilitation, and/or new housing construction activities. Finally, the City continues to grant low-cost leases (e.g., $1 per-year leases) to qualified organizations to provide senior housing and homeless housing. These types of financial incentives will be provided to allow the City to meet its community development and housing objectives.

- **Regulatory Incentives:** The regulatory incentive program is intended to realize improved value, a rich palette of amenities, landmarks, and identifiable places. While the underlying land use designations still apply, the City may offer various incentives through a discretionary permit. Special incentives may be granted for mixed-use developments; residential infill projects near transit facilities; the replacement of underperforming commercial uses with new residential uses; the improvement and/or intensification of existing, mid-block residential uses; or lot consolidation and development of desired projects. The menu of incentives may include density transfers, modifications in development standards, increased residential density, and other incentives to be negotiated on a case-by-case basis.

Implementation

- ***Objectives*:** Offer financial and regulatory incentives for residential projects that meet City housing and affordable housing goals. Facilitate the acquisition of 30 existing, abandoned homes to convert to affordable housing in the Fourth and Grove,

Downtown, Nocta and Mission-Mountain neighborhoods in northwest Ontario.

- ***Responsible Agencies*:** Housing Department
- ***Funding*:** General Fund
- ***Timing*:** Ongoing and at least annual outreach to developers of affordable housing, including nonprofit.

17. Land Acquisition

Land acquisition for residential development is perhaps one of the greatest challenges to creating affordable housing. Over the past five years, the City of Ontario has seen increasing land prices. To facilitate the development of affordable housing, the City has actively purchased land and made it available at a low cost (typically a $1 per-year lease) to affordable housing developers and nonprofit agencies to create affordable senior housing, emergency shelters, affordable attached ownership projects, and other affordable housing projects. As situations merit and projects are proposed that meet the City's housing goals and the public interest, the City will continue to acquire residential land that can be leased or sold at below-market rates for the production of affordable housing.

Implementation

- ***Objectives*:** Continue to approve financial incentives for residential projects that meet City housing and affordable housing goals. Facilitate the acquisition of 30 existing, abandoned homes to convert to affordable housing in the Fourth and Grove, Downtown, Nocta and Mission-Mountain neighborhoods in northwest Ontario.
- ***Responsible Agencies*:** Ontario Housing Authority and Housing Department
- ***Funding*:** General Fund, and other funding as available
- ***Timing*:** Ongoing

18. Planned Unit Development

Within an established suburban fabric, there are considerable challenges to creating affordable housing. As development standards and lot standards change over time, it is not uncommon to have irregularly shaped and nonconforming parcels that are simply not conducive to redevelopment. The City has adopted a Planned Unit Development

(PUD) Ordinance that permits a variety of housing types in every residential zone. The City may conditionally permit attached and detached single-family residences, town homes, patio homes, zero lot line, and any other type of housing product permitted by the regulations of the underlying zone. The PUD is a tool that has been successfully used for Town Square to encourage and facilitate innovative design, variety, and flexibility in the types of housing products, including the provision of affordable housing, that would otherwise not be allowed or possible through standards in the underlying zoning districts.

Implementation

- ***Objectives*:** Continue to use the PUD Ordinance to create tailored development standards to facilitate new housing.
- ***Responsible Agencies*:** Planning Department
- ***Funding*:** General Fund
- ***Timing*:** Ongoing

19. Mixed-Use and High-Density Residential Zone and Standards

The Policy Plan directs significant housing growth to mixed-use areas. These areas include the Downtown, Euclid Avenue, the Interstate (I-) 10 Corridor, Ontario Ranch, and Holt Boulevard. These mixed-use areas each have a distinct mix of land uses and density ranges (see Policy Plan Land Use Exhibit LU-11, Land Use Designation Summary Table). The City will continue its efforts in processing Development Code changes to align with the updated Policy Plan following the Ontario Plan update, which is in progress as of 2021. This includes reviewing the Euclid Francis Mixed-Use Area land use designation that has an assumed build-out of 156 units based on 50 percent of the area developed at 30 du/ac, which exceeds the allowed density range for the corresponding zoning district, Mixed Use-11 (allows a maximum of 25 units per acre). Additionally, as a part of The Ontario Plan, the City will develop Objective Design and Development Standards for multifamily residential and mixed-use developments to replace subjective standards/policies as required by California Government Code Section 65589 (see Program 21, Senate Bill 2 Implementation).

Implementation

- ***Objectives*:** Process necessary changes to the Development Code to ensure consistency with land use designations for mixed-use and multifamily residential in the updated Policy Plan, including adopting Objective Design and Development Standards with The Ontario Plan.

- ***Responsible Agencies*:** Planning Department
- ***Funding*:** General Fund
- ***Timing*:** Complete by December 31, 2023

20. Development Code Amendments

To comply with state law, address identified constraints to residential development and remove barriers to housing for special-needs groups, including, but not limited to, low-, very low-, and extremely low-income households, the City will amend its Development Code, as described herein:

- **Density Bonuses.** Within two years of Housing Element adoption, pursuant to California Government Code Section 65915 et seq., amend the Development Code to update the density bonus ordinance to address recent updates to state law. If additional changes to state law occur during the planning period, the density bonus ordinance will be updated to comply with those changes.
- **Accessory Dwelling Units (ADUs).** The City adopted updates to the ADU ordinance as a part of the Development Code update in 2020 to comply with state law. In late 2021, City staff initiated drafting another update to the City's ADU ordinance to comply with State law. It will allow ADUs to be created on lots zoned for single-family residences with a proposed or existing single- family residence on the lot. It will be scheduled for Planning Commission review in March 2022 and City Council approval in April 2022. During the planning period, the City will implement the ADU ordinance and update it to comply with any new state requirements. (See also Program 7 ADUs)
- **Specific Plan Requirements.** The City will amend its Development Code to eliminate the Specific Plan requirement in the Ontario Ranch for residential development projects that include a minimum of 25-percent affordable units.
- **Transitional and Supportive Housing.** Allow transitional and supportive housing as a residential use in all zones allowing residential uses, subject only to those restrictions that apply to other residential uses of the same type in the same zone and without any discretionary action. Additionally, permit supportive housing by right in any nonresidential or mixed-use zone that permits multifamily (AB 2162, Government Code Section 65583(c)(3)).

- **Employee Housing.** Treat employee housing that serves six or fewer persons as a single-family structure and permitted in the same manner as other single-family structures of the same type in the same zone (Health and Safety Code Section 17021.5). The Development Code will also be amended to treat employee housing consisting of no more than 12 units or 36 beds as an agricultural use and permitted in the same manner as other agricultural uses in the same zone (Section 17021.6) in zones where agricultural uses are permitted, specifically removing minimum lot size of 10 acres. Review Development Code for compliance with Section 17021.8, which requires a streamlined ministerial process for qualifying agricultural employee housing on land designated as Agricultural in the City's Policy Plan.

- **Single-Room Occupancy Units.** Allow single-room occupancy (SRO) housing in one or more zones without a use permit or administrative use permit, as other residential uses are regulated in the City's Development Code (Government Code Section 65583(c)(1)). Review location requirements for SRO facilities to expand affordable housing opportunities for extremely low-income households.

- **Emergency Shelter Parking.** The City's zoning permits an emergency shelter by right in the IL zone and conditionally permits an emergency shelter in the MDR-11, MDR-18, MDR-25, CC, LUA-3, IG, and IH zones. Emergency shelters are also permitted by right in the Emergency Shelter Overlay, subject to the base zone standards and consistent with Government Code Section 65583(4)(A). The City will review and revise parking requirements for emergency shelters to ensure that parking standards are sufficient to accommodate all staff, provided standards do not require more parking for emergency shelters than other residential or commercial uses within the same zone, per California Government Code Section 65583(a)(4).

- **Low-Barrier Navigation Centers.** Allow low-barrier navigation centers, a type of emergency shelter with wrap-around services, by right in zones that allow for mixed-use and nonresidential zones permitting multifamily uses, per California Government Code Section 65662.

- **Residential Care Facilities.** Define residential care facilities. Allow for residential care facilities with seven or more persons and subject them to the same restrictions that apply to other residential uses of the same type in the same zone.

- **Boarding, Lodging, and Rooming Houses.** Review and amend Development Code standards for Boarding, Lodging, or Rooming House to remove the restrictions that the homes cannot be occupied by more than one federal, state, or youth authority parolee and add requirement that homes shall be required to sign a "Crime-Free Lease Addendum" to their rental or lease agreement, in order to prevent discrimination based on criminal history, complying with California Code of Regulations, Title 2, Section 12264-12271.

Implementation

- ***Objectives*:** Comply with state law, address identified constraints to residential development, and remove barriers to housing for special-needs groups
- ***Responsible Agencies:*** Planning Department
- ***Funding*:** General Fund
- ***Timing*:** Within two years of Housing Element adoption, evaluation of potential constraints ongoing

21. Senate Bill 2 Implementation

As a part of the City's Senate Bill (SB) 2 grant workplan, the City plans to develop Objective Design and Development Standards (ODDS) for residential projects: mixed use, multifamily, and single-family developments. As the City's current Development Code does not have standards for Mixed-Use areas and detached developments at multifamily densities, the project will include developing comprehensive numerical development standards for these uses, such as setbacks, building heights, lot coverage, etc. This will also include the elimination of subjective development standards/policies, which shall be replaced with objective design standards, as required by Government Code Section 65589.

The City will review existing standards and guidelines in the Development Code, Downtown Design Guidelines, and applicable Specific Plans that incorporate residential development and assess the potentially needed amendments to create ODDS for all types of housing development. The City will also prepare a compliance checklist and style sheet for applicants to provide a clear list of minimum design requirements and architectural examples to illustrate design requirements.

Implementation

- ***Objectives***: Complete tasks associated with SB 2 grant workplan, including preparing and adopting ODDS to replace subjective standards/policies for all types of residential development, and making supplemental compliance checklist and style sheet available for applicant use.
- ***Responsible Agencies***: Planning Department
- ***Funding:*** SB 2
- ***Timing***: Complete by December 31, 2023

22. Streamline Housing Development Process

Establish a written policy or procedure and other guidance as appropriate to specify the SB 35 (2017) streamlining approval process and standards for eligible projects, as set forth under Government Code Section 65913.4.

Implementation

- ***Objectives***: Establish written policy or procedure and other guidance as appropriate to specify SB 35 streamlining approval process.
- ***Responsible Agencies***: Planning Department
- ***Funding***: General Fund
- ***Timing***: Within two years of Housing Element adoption

9.4 Housing Assistance

23. Public Housing

The Housing Authority of the County of San Bernardino administers the Housing Voucher rental program for the City of Ontario. Funded by HUD, the Housing Voucher program extends rental subsidies to very low-income households by offering the tenant a voucher that pays the difference between the current fair-market rent (FMR) established by the Housing Authority, and 30 percent of the tenant's income. A tenant has the option to choose housing that costs more than the FMR, if the tenant pays the extra rent above the payment standard. The Housing Authority also implements the Family Self-Sufficiency program, Section 8 project-based assistance, and HUD-assisted multiple-family housing units. As of 2021, program serves nearly 800 individuals and families in the City of Ontario. The City will work with the Housing Authority of San Bernardino to provide biannual training to landlords regarding fair-

housing requirements, including the requirement that they accept vouchers, and encourage them to market available units at their rental properties in high-resource areas to voucher holders to increase mobility from low- to high-resource areas.

Implementation

- ***Objectives*:** Continue to assist up to 800 households under the public housing program and seek additional vouchers as available. Hold biannual trainings to educate landlords on fair-housing requirements to expand the use of Housing Choice Vouchers to moderate- and high-resource areas of the city.
- ***Responsible Agencies*:** Housing Authority of the County of San Bernardino
- ***Funding*:** US Department of Housing and Urban Development
- ***Timing*:** Ongoing; work with the Housing Authority of San Bernardino to provide biannual training to landlords regarding fair-housing requirements

24. Homeownership

The City has a broad-based homeownership program for residents. The City uses a combination of funds (BEGIN, HOME, CalHome, and other available funding) to provide down payment assistance to homebuyers seeking to purchase homes in Ontario. The City also works in conjunction with Neighborhood Partnership Housing Services (NPHS), a nonprofit organization, and the Inland Fair Housing and Mediation Board (IFHMB) to further the City's homeownership goals through homebuyer education, counseling, and down payment assistance. The City is planning to use a portion of the Permanent Local Housing Allocation (PLHA) funds for first-time homebuyer programs in conjunction with reuse funds on hand from the CalHome and BEGIN programs formerly offered. Programs are currently in design development to determine income targeting and benefits. To encourage participation, the City will continue to provide information on its website. Once community events resume, the City will market the programs in person. Materials to promote the first-time homebuyer program will be offered in English and Spanish to reduce language barriers.

Implementation

- ***Objectives*:** Implement down payment assistance programs citywide, assisting at least 20 households with first-time homebuyer loans.

- ***Responsible Agencies*:** Housing Department
- ***Funding*:** California Department of Housing and Community Development (HCD), BEGIN, CalHOME, PLHA
- ***Timing*:** Down payment assistance Programs to be launched during FY 2022-23; then ~~O~~ongoing.

25. Preservation of At-Risk Housing

As of 2020, the City maintains 1,910 units of rental housing affordable to seniors, families, and individuals earning lower incomes, with 807 units at risk of conversion during the planning period. To address the preservation of public housing for very low- and low-income persons, the City maintains contact with owners of at-risk units as the use restriction expiration date approaches to communicate with the owner the importance of the units to the supply of affordable housing in Ontario, as well as its desire to preserve the units as affordable. The City will make every effort in using local incentives that can be offered to property owners to preserve any at-risk units.

Implementation

- **Objectives:**
  - Monitor the status of the 807 units that are at-risk to maintain at least 1,910 units. For the 807 units at imminent risk of conversion during the planning period, provide technical assistance and/or financial assistance to preserve the properties as deemed feasible.
  - Meet with the owners (or their representatives) of the subsidized rental housing developments that are facing unexpected risk to the affordable units in a timely fashion, to discuss their plans for maintaining, converting, or selling their properties. If any of the owners indicate that the affordability of the units is at risk of conversion to market-rate housing or that the owner intends to sell the property, the City will seek to facilitate the acquisition of the property by another for-profit or nonprofit entity to preserve the rental units as affordable housing. The City will not take part directly in negotiations regarding the property but will apply for state or federal funding on behalf of an interested nonprofit entity, if necessary, to protect the affordability of the rental units. The City will request that the property owners provide evidence that they have complied with state and federal regulations regarding notice to tenants and other procedural matters

related to conversion, and the City will contact HUD, if necessary, to verify compliance with notice requirements.

- Work with the Housing Authority to ensure that low-income tenants displaced as a result of a conversion receive priority for federal housing vouchers.

- In accordance with 65863.10, ~~E~~ensure that tenants are adequately notified throughout the preservation/acquisition process as to the status of their housing units, impacts of the ownership change or preservation process on occupancy and rents, their rights and responsibilities as tenants, and who to contact with questions or concerns. The City will work with the responsible entity (whether the existing property owner, the Housing Authority, a nonprofit entity, or a new for-profit entity) to distribute information and conduct tenant meetings, as needed, to keep residents informed of the preservation process, tenant options, and what to expect once the process has been completed.

- ***Responsible Agencies*:** Ontario Housing Authority
- ***Funding*:** Federal government
- ***Timing*:** Ongoing; ensure tenants are notified that restrictions are expiring within three years, one year, and six months.

26. Jack Galvin Accord

The City of Ontario has more than 2,100 mobile homes, which provide affordable market-rate housing for lower-income families, seniors, and individuals. In 1990, the City Council adopted an ordinance to regulate mobile home space rents but later repealed that ordinance per state law. Subsequently, in working with mobile home park owners and tenants, the City drafted the Jack Galvin Mobile Home Park Accord, which was accepted by park owners. The accord places limits on the allowable increases based on the Consumer Price Index; allows for additional adjustments for changes in utilities, taxes, and capital improvements; provides a process for requesting rent reductions for service reductions; and allows for rent adjustments for resale. The agreement was adopted in 1999, and per extensions, continues in effect today. The most recent extension was approved for a five-year term on November 15, 2019, with an expiration date of January 5, 2025. The City will continue to implement and enforce this ordinance.

Implementation

- ***Objectives*:** Continue to implement the Jack Galvin Accord and monitor the effectiveness of the accord.
- ***Responsible Agencies*:** Housing and Neighborhood Preservation Agency
- ***Funding*:** General Fund
- ***Timing*:** Ongoing; re-evaluate prior to expiration of extension on January 5, 2025

9.5 Special-Needs Housing

27. Fair Housing

Ontario is committed to furthering fair housing opportunities so that people in all walks of life have the opportunity to find suitable housing in the community. To that end, the City contracts with a fair-housing service provider to provide landlord/tenant education, conduct testing of the rental and ownership market, and investigate and mediate housing complaints where needed. The City periodically prepares the required federal planning reports, including the Analysis of Impediments to Fair Housing Choice (AI), to document the City's progress in improving and maintaining fair housing opportunities. Recommendations will be made to eliminate potential constraints and further fair housing in Ontario. The City adopted an updated Assessment of Fair Housing (AFH) in 2020. This Housing Element incorporates the goals and priorities of the Ontario 2020 AFH. The goals of the Ontario 2020 AFH include:

Goal 1: Increase the supply of affordable housing in high-opportunity areas.

Goal 2: Increase community integration for persons with disabilities.

Goal 3: Ensure equal access to housing for persons with protected characteristics, who are disproportionately likely to be lower-income and to experience homelessness.

To further comply with AB 686, the City will implement actions to Affirmatively Furthering Fair Housing (AFFH). The ongoing and additional actions the City will take to address AFFH shall take actions to address significant disparities in housing needs and in access to opportunity for all persons regardless of race, color, religion, sex, gender, sexual orientation, marital status, national origin, ancestry, familial status, source of income, or disability, and other characteristic protected

by the California Fair Employment and Housing Act (Part 2.8, commencing with Section 12900, of Division 3 of Title 2), Section 65008, and any other state and federal fair housing and planning law.

Implementation

- ***Objectives:***

  - Continue to contract with local fair housing providers to provide educational, outreach, advocacy, and mediation services. Through the partnership, develop a method to track fair housing issues to identify patterns in the City by December 2024, and implement annually for the rest of the planning period. Perform comprehensive review of fair housing data by December of each year.

  - Conduct AI concurrently with the development of the Consolidated Plan, and review and change potential impediments. Adopt a new AFH by 2026 for the 2025 to 2030 Consolidated Plan, ensuring that plan implements relevant goals and actions from the 6th Cycle Housing Element.

  - Provide fair housing information at City Hall, the Ontario Senior Center, and the Ontario Housing Authority. By December 2023, Fair Housing information shall be provided in multiple languages, including Spanish, to reduce barriers to education due to primary language.

  - Implement Goal 1 of the 2020 Ontario AFH to increase the supply of affordable housing by committing to (1) explore the creation of new funding sources of affordable housing annually; (2) meet with other San Bernardino Valley/San Bernardino County jurisdictions on a bi-annual basis to identify ~~use~~ best practices from other jurisdictions, explore policies and programs that increase the supply of affordable housing, such as linkage fees, inclusionary housing, public land set-aside, community land trusts, transit-oriented development, and expedited permitting and review; (3) by December 2025, explore opportunities to provide low-interest loans to single-family homeowners and grants to homeowners with household incomes of up to 120 percent of the Area Median Income to develop ADUs with affordability restriction on their property (see also Program 7 ADUs); and (4) annually ensure ~~align~~ Development Codes ~~to~~ conform to recent California affordable housing legislation.

- Implement Goal 2 of the 2020 Ontario AFH to increase community integration for persons with disabilities by committing to (1) prioritize HOME funding for such projects annually, which should ideally set aside 10 to 25 percent of units for persons with disabilities who need supportive services, the City can help make development proposals more competitive for low-income housing tax credit (LIHTC) and Mental Health Services Act assistance. As a part of this effort, the City will consider barriers persons with disabilities may face in accessing affordable housing, including barriers to qualify for housing (e.g., proof of residency, income levels, employment record, credit history, etc.). Meet with community partners and service providers for persons with disabilities to help identify potential projects on an annual basis.

- Implement Goal 3 of the 2020 Ontario AFH to ensure equal access to housing for persons with protected characteristics, who are disproportionately likely to be lower-income and to experience homelessness by committing to conduct fair housing training for landlords and tenants on California's Source of Income Discrimination protections twice a year, starting in 2024, to reduce the number of voucher holders turned away. Provide all program materials, including promotional materials, in multiple languages (including Spanish).

- Partner with San Bernardino County to promote the CalWorks program to provide assistance for eligible low-income families with children to meet basic needs and enter, or re-enter, the workforce, particularly for residents of northwest Ontario that have lower access to job centers compared to residents in southwest Ontario. Support San Bernardino County and the CalWorks program in providing trainings, job fairs, or other similar event in northwestern Ontario on an annual basis, starting in 2025.

- Meet biannually with Omnitrans to assess if any new unmet transit needs have developed and, if so, will provide technical assistance in applying for state and federal funding for expansions. In particular, ensure that Omnitrans sufficiently serves Ontario Ranch with consistent and safe transit options to ensure all income levels have reliable access essential services.

- As described in Program 20, Development Code Amendments, review and amend Development Code standards for Boarding, Lodging, and Rooming Houses to remove the restrictions that the homes cannot be occupied by more than one federal, state, or youth authority parolee and add requirement that homes shall require to sign a "Crime-Free Lease Addendum" to their rental or lease agreement, in order to prevent discrimination based on criminal history, complying with California Code of Regulations, Title 2, Section 12264-12271.

- ~~The City shall promote accessory dwelling units (including junior accessory dwelling units) (ADUs/JADUs) as an affordable housing option in high resource areas and an economic mobility opportunity in Ontario through the following actions.~~

  - ~~Consider a program to waive, reduce, or defer connection or impact fees for ADUs that agree to affordability covenants for a set period of time~~

  - ~~Continue to provide information such as Frequently Asked Questions (FAQ) on the City's website. Expand information on the City's website to provide educational materials and additional guidance, including permitting procedures and construction resources.~~

  - ~~Assess the feasibility of establishing a loan program to help homeowners finance the construction of ADUs. The City shall consider incentives to encourage homeowners to deed restrict ADUs for lower income households.~~

    - ~~Actively market ADU guidance and materials in areas with high access to resources to encourage the development of new affordable housing in areas of opportunity as a strategy to enhance mobility and reduce displacement of low-income households seeking affordable housing options.~~

  - ~~Develop and implement a monitoring program. The program will track ADU approvals and affordability. The City will use this monitoring program to track progress in ADU development and adjust or expand the focus of its education and outreach efforts through the 2021-2029 planning period. The City will evaluate ADU production and affordability two years into the planning period (2023) and if it is determined these units are not meeting the~~

~~lower-income housing need, the City will consider other housing sites that are available to accommodate the unmet portion of the lower-income RHNA.~~

- ***Responsible Agencies*:** Housing and Planning Departments, Ontario Housing Authority
- ***Funding*:** General Fund, CDBG
- ***Timing*:** Ongoing. Prioritize HOME funding use for affordable housing for persons with disabilities with supportive services annually. Meet with community partners and service providers annually. Conduct fair housing training for landlords and tenants twice a year, starting in 2024. Support San Bernardino County and the CalWorks program in providing trainings, job fairs, or other similar event in northwestern Ontario on an annual basis, starting in 2025. Meet biannually with Omnitrans.

28. Homeless Continuum of Care

The City implements a Homeless Services Continuum of Care to prevent homelessness and assist people in becoming self-sufficient. Working together with homeless service providers, the City has developed a full-service homeless continuum of care consisting of a homeless outreach service center, transitional housing, permanent housing, and supportive housing services. The City funds other programs that assist homeless people using Emergency Solutions Grant funds.

The City also actively participates in regional homeless efforts, including the Interagency Council on Homelessness, which is a countywide effort of governmental and nonprofit organizations working to end homelessness within the County of San Bernardino.

Implementation

- ***Objectives*:** Continue to fund Mercy House to implement the Continuum of Care program for homeless residents and other programs as funding is available.
- ***Responsible Agencies*:** Housing Department
- ***Funding*:** Federal funds and private financing
- ***Timing*:** Ongoing; attend monthly Interagency Council on Homelessness meetings

29. Senior Housing

The City is actively working with nonprofit housing groups to build senior housing projects in the community. In addition to facilitating housing construction, the City also provides a range of supportive services for seniors. These include fair housing services, housing rehabilitation grants, preservation of subsidized senior housing, low-cost transportation services, and a range of other services tailored to meet the unique needs of Ontario's senior population.

Implementation

- ***Objectives*:** Continue to provide a full range of housing support services.
- ***Responsible Agencies*:** Housing Department
- ***Funding*:** State and federal funds
- ***Timing*:** Ongoing

30. Housing for People with Disabilities

The City enforces state and federal accessibility laws to facilitate the improvement of housing for disabled people. The City also prepares a Transition Plan to comply with state and federal accessibility laws. The City has adopted a reasonable accommodation process and administratively allows modifications to land use, building codes, and the permitting process to facilitate the reasonable accommodations without going through a standard variance process. However, given the large number of people with disabilities, the growing need for housing opportunities, and changing legal context for housing planning, additional efforts are needed. Many homes were built before the advent of modern accessibility standards and thus many homes remain inaccessible to people with disabilities and persons with developmental disabilities. To address this issue, the City will evaluate the feasibility and appropriateness of modifying building standards to encourage visitability concepts in new housing.

The City partners with the Inland Regional Center, one of 21 regional centers in California that provide point-of-entry services for people with developmental disabilities. The City will continue to partner with the Inland Regional Center to provide services to its residents with disabilities.

Implementation

- ***Objectives*:** Continue to assist with the development of housing for persons with disabilities, including those with developmental disabilities.
- ***Responsible Agencies*:** Building and Planning Department
- ***Funding*:** General Fund
- ***Timing*:** Ongoing

31. Family Housing

Ontario has a large number of family households, specifically large families with five or more members. The City has a multifaceted program for increasing and maintaining the supply of family housing. The Housing Authority of San Bernardino County allocates housing choice vouchers to lower-income families in Ontario, many of whom are large families. Another key effort is the City's program to acquire, rehabilitate, and preserve existing affordable housing units that accommodate families and large families, with a focus on expanding affordable housing units in high resources areas of the City. Over the past five years, the City and the Housing Authority have preserved the vast majority of publicly subsidized affordable units for families. Finally, the City funds through its CDBG programs such as childcare, after-school programs, food programs, and other services targeted for lower-income households, including large families.

Implementation

- ***Objectives*:** Continue program implementation.
- ***Responsible Agencies*:** Housing Department, Housing Authority of the County of San Bernardino
- ***Funding*:** General Fund, CDBG
- ***Timing*:** Ongoing

32. Extremely Low-Income Households

The City offers programs to address the housing needs of extremely low-income (ELI) households. As funding is available, the City provides a number of incentives to encourage the production of ELI housing. The City offers fee reductions for ELI housing, supports grant applications to increase the supply of affordable housing, works with nonprofit organizations to build affordable housing, and provides land writedowns.

Implementation

- **Objectives:**
  - Work with nonprofits and/or for-profit developers to build 2,820 units of housing for ELI households through supporting grants and funding applications.
  - Offer fee reductions and land writedowns for new affordable housing for low-income, very low-income, and ELI households.
- ***Responsible Agencies*:** Housing and Planning Departments.
- ***Funding*:** CDBG, HOME, federal and state grants
- ***Timing*:** Annually

33. Special-Needs Housing

In implementing affordable housing programs, the City will work with housing providers to ensure that special housing needs are addressed for seniors, large families, female-headed households, single-parent households with children, persons with disabilities and developmental disabilities, homeless individuals and families, and farmworker families. The City will seek to meet these special housing needs through a combination of regulatory incentives, zoning standards, new housing construction programs, housing rehabilitation, homebuyer assistance programs, and supportive services programs. In addition, the City may seek funding under the federal Housing Opportunities for Persons with AIDS, California Child Care Facilities Finance Program, and other state and federal programs designated specifically for special-needs groups such as seniors, persons with disabilities, and persons at risk for homelessness. The City will continue to support the SOVA Program Center and Mercy House, whose services defray the cost of living, which assists those with lower incomes, such as seasonal and permanent farmworkers and other groups with special housing needs to be able to afford housing.

Implementation

- ***Objectives:*** Collaborate with affordable housing developers and secure funding, if feasible, to assist with the development of special-needs housing projects.
- ***Responsible Agencies*:** Housing and Planning Departments
- ***Funding*:** CDBG, HOME, federal and state grants
- ***Timing:*** Annually

34. Infrastructure Provision and Financing

The City will seek opportunities minimize infrastructure costs for residential development by identifying infrastructure needs and available sources of funding for infrastructure improvements, annually. The City will analyze existing and potential infrastructure financing measures for their ability to meet infrastructure needs without an adverse impact to housing costs and identify and annually apply for state or United States Department of Agriculture (USDA) infrastructure funding programs to support improvement efforts. The City shall monitor the cost of infrastructure and associated fees on development to determine whether they impact the production of housing and will develop a strategy to reduce costs for developers, if needed. The City will focus the implementation of this program in areas of concentrated poverty, including northwest Ontario.

Implementation

- ***Objectives:*** Seek opportunities to minimize infrastructure costs for residential development, such as identifying available sources of funding for infrastructure improvements.
- ***Responsible Agencies*:** Planning Department, Ontario Municipal Utilities Company
- ***Funding*:** General Fund, federal and state grants
- ***Timing:*** Ongoing, annually analyze needs and resources and apply for funding

9.6 Quantified Objectives

Identifying quantified objectives refers to the number of new units that may potentially be constructed over the planning period, the number of existing units that can be expected to be rehabilitated, and the conservation of existing affordable housing stock. This information is presented in Table 9-2.

Table 9-2
Quantified Objectives for the 2021–2029 Housing Element

Housing Program	Quantified Objectives by Income Group					Totals
	Extremely Low Income	Very Low Income	Low Income	Moderate Income	Above Moderate	
New Construction	2,820	2,820	3,286	3,329	8,599[1]	20,854[1]
Rehabilitation[2]	~~1~~30	~~1~~30	~~1~~30	0	0	90~~30~~

ORDINANCE NO. _____

AN ORDINANCE OF THE CITY COUNCIL OF THE CITY OF ONTARIO, CALIFORNIA, APPROVING FILE NO. PZC21-002, A ZONE CHANGE TO MODIFY THE ZONING MAP TO ESTABLISH THE AH (AFFORDABLE HOUSING) ZOINING OVERLAY DISTRICT, AND MAKING FINDINGS IN SUPPORT THEREOF.

WHEREAS, the CITY OF ONTARIO ("Applicant") has filed an Application for the approval of a Zone Change, File No. PZC-21-002, as described in the title of this Resolution (hereinafter referred to as "Application" or "Project"); and

WHEREAS, the Application proposes to establish an Affordable Housing Overlay District to facilitate housing opportunities within the City through the implementation of required rezone programs pursuant to the City's adopted Housing Element where required for compliance with State Housing Element law; and

WHEREAS, the Affordable Housing Overlay District applies to sites identified in the housing inventory, part of the City's Housing Element, located (1) south of Riverside Drive, (2) along East Holt Boulevard between the Cucamonga Creek Channel and Corona Avenue, and (3) areas designated as MU-2 at the northeast corner of West Holt Boulevard and Mountain Avenue; and

WHEREAS, a related General Plan Amendment (File No. PGPA21-004) is being processed concurrently with this application for the Housing Element update to the Policy Plan (General Plan) component of The Ontario Plan addressing State mandates and the 6th Cycle Regional Housing Needs Allocation ("RHNA") and this application also proposes to modify the Policy Plan Land Use Plan (Exhibit LU-01) to establish an Affordable Housing Overlay; and

WHEREAS, a related Development Code Amendment (File No. PDCA21-001) is being processed concurrently with this application to establish density standards applicable to the Affordable Housing Overlay District; and

WHEREAS, the Project has been reviewed for consistency with the Housing Element of the Policy Plan component of The Ontario Plan, as State Housing Element law (as prescribed in Government Code Sections 65580 through 65589.8) requires that development projects must be consistent with the Housing Element, if upon consideration of all its aspects, it is found to further the purposes, principals, goals, and policies of the Housing Element; and

WHEREAS, the Project is located within the Airport Influence Area of Ontario International Airport, which encompasses lands within parts of San Bernardino, Riverside, and Los Angeles Counties, and is subject to, and must be consistent with, the policies and criteria set forth in the Ontario International Airport Land Use Compatibility Plan ("ALUCP"), which applies only to jurisdictions within San Bernardino County, and addresses the noise, safety, airspace protection, and overflight impacts of current and future airport activity; and

WHEREAS, the Application is a project pursuant to the California Environmental Quality Act (Public Resources Code Section 21000 et seq.) ("CEQA") and an initial study has been prepared to determine possible environmental impacts; and

WHEREAS, Ontario Development Code Table 2.02-1 (Review Matrix) grants the Planning Commission the responsibility and authority to review and make recommendation to City Council on the subject Application; and

WHEREAS, City of Ontario Development Code Division 2.03 (Public Hearings) prescribes the manner in which public notification shall be provided and hearing procedures to be followed, and all such notifications and procedures have been completed; and

WHEREAS, on December 20, 2021, the Planning Commission conducted a public hearing and approved Resolution No. PC21-093 recommending the City Council approve a Resolution adopting an Addendum to The Ontario Plan Environmental Impact Report (State Clearinghouse No. 2008101140), certified by the City Council on January 27, 2010, in conjunction with File Nos. PGPA21-004, PZC-21-002, and PDCA21-001. The Addendum finds that the proposed project introduces no new significant environmental impacts. Furthermore, all mitigation measures previously adopted with the Certified Environmental Impact Report are incorporated into the Project by reference; and

WHEREAS, the City's "Local Guidelines for the Implementation of the California Environmental Quality Act (CEQA)" provide for the use of a single environmental assessment in situations where the impacts of subsequent projects are adequately analyzed; and

WHEREAS, the Application is a project pursuant to the California Environmental Quality Act (Public Resources Code Section 21000 et seq.) ("CEQA") and an initial study has been prepared to determine possible environmental impacts; and

WHEREAS, on March 1, 2022, the City Council of the City of Ontario conducted a hearing to consider the Initial Study/Addendum and the Project, and concluded said hearing on that date; and

WHEREAS, as the first action on the Project, on March1, 2022, the City Council approved a resolution adopting an Initial Study/Addendum to a previous Certified EIR prepared pursuant to CEQA, the State CEQA Guidelines and the City of Ontario Local CEQA Guidelines, which indicated that all potential environmental impacts from the Project were less than significant or could be mitigated to a level of significance; and

WHEREAS, all legal prerequisites to the adoption of this Ordinance have occurred.

NOW, THEREFORE, IT IS HEREBY FOUND, DETERMINED, AND ORDAINED by the City Council of the City of Ontario, as follows:

SECTION 1. ***Environmental Determination and Findings.*** As the decision-making body for the Project, the City Council has reviewed and considered the information contained in the previous Certified EIR and supporting documentation. Based upon the facts and information contained in the previous Certified EIR and supporting documentation, the City Council finds as follows:

(1) The environmental impacts of this project were reviewed in conjunction with an Addendum to The Ontario Plan ("TOP") Environmental Impact Report — State Clearinghouse No. 2008101140 ("Certified EIR"), which was certified by the Ontario City Council on January 27, 2010, in conjunction with File Nos. PGPA21-004, PZC-21-002, and PDCA21-001; and

(2) The EIR Addendum and administrative record have been completed in compliance with CEQA, the State CEQA Guidelines, and the City of Ontario Local CEQA Guidelines; and

(3) The City's "Guidelines for the Implementation of the California Environmental Quality Act (CEQA)" provide for the use of a single environmental assessment in situations where the impacts of subsequent projects are adequately analyzed. This Application introduces no new significant environmental impacts; and

(4) The EIR Addendum contains a complete and accurate reporting of the environmental impacts associated with the Project, and reflects the independent judgment of the City Council; and

(5) There is no substantial evidence in the administrative record supporting a fair argument that the project may result in significant environmental impacts; and

(6) The proposed project will introduce no new significant environmental impacts beyond those previously analyzed in the Certified EIR, and all mitigation measures previously adopted by the Certified EIR, are incorporated herein by this reference.

SECTION 2. ***Additional Environmental Review Not Required.*** Based on the Addendum, all related information presented to the City Council, and the specific findings set forth in Section 1, above, the City Council finds that the preparation of a subsequent or supplemental Environmental Impact Report is not required for the Project, as the Project:

(1) Does not constitute substantial changes to the Certified EIR that will require major revisions to the Certified EIR due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects; and

(2) Does not constitute substantial changes with respect to the circumstances under which the Certified EIR was prepared, that will require major revisions to the Certified EIR due to the involvement of new significant environmental effects or a substantial increase in the severity of the previously identified significant effects; and

(3) Does not contain new information of substantial importance that was not known and could not have been known with the exercise of reasonable diligence at the time the Certified EIR was certified/adopted, that shows any of the following:

(a) The Project will have one or more significant effects not discussed in the Certified EIR; or

(b) Significant effects previously examined will be substantially more severe than shown in the Certified EIR; or

(c) Mitigation measures or alternatives previously found not to be feasible would in fact be feasible and would substantially reduce one or more significant effects of the Project, but the City declined to adopt such measures; or

(d) Mitigation measures or alternatives considerably different from those analyzed in the Certified EIR would substantially reduce one or more significant effects on the environment, but which the City declined to adopt.

SECTION 3. ***Ontario International Airport Land Use Compatibility Plan ("ALUCP") Compliance.*** The California State Aeronautics Act (Public Utilities Code Section 21670 et seq.) requires that an Airport Land Use Compatibility Plan be prepared for all public use airports in the State; and requires that local land use plans and individual development proposals must be consistent with the policies set forth in the adopted Airport Land Use Compatibility Plan. On April 19, 2011, the City Council of the City of Ontario approved and adopted the Ontario International Airport Land use Compatibility Plan ("ALUCP"), establishing the Airport Influence Area for Ontario International Airport ("ONT"), which encompasses lands within parts of San Bernardino, Riverside, and Los Angeles Counties, and limits future land uses and development within the Airport Influence Area, as they relate to noise, safety, airspace protection, and overflight impacts of current and future airport activity. As the decision-making body for the Project, the City Council has reviewed and considered the facts and information contained in the Application and supporting documentation against the ALUCP compatibility factors, including [1] Safety Criteria (ALUCP Table 2-2) and Safety Zones (ALUCP Map 2-2), [2] Noise Criteria (ALUCP Table 2-3) and Noise Impact Zones (ALUCP Map 2-3), [3] Airspace protection Zones (ALUCP Map 2-4), and [4] Overflight Notification Zones (ALUCP Map 2-5). As a result, the City Council, therefore, finds and determines that the Project, when implemented in conjunction with the conditions of approval, will be consistent with the policies and criteria set forth within the ALUCP.

SECTION 4. ***Concluding Facts and Reasons.*** Based upon the substantial evidence presented to the City Council during the above-referenced hearing, and upon the specific findings set forth in Section 1 through 3, above, the City Council hereby concludes as follows:

(1) The proposed Zone Change is consistent with the goals, policies, plans and exhibits of the Vision, Policy Plan (General Plan), and City Council Priorities components of The Ontario Plan; and

Land Use Element:

- Goal LU1: A community that has a spectrum of housing types and price ranges that match the jobs in the City and that make it possible for people to live and work in Ontario and maintain a quality of life.

  - LU1-6: *Complete Community*. We incorporate a variety of land uses and building types in our land use planning efforts that result in a complete community where residents at all stages of life, employers, workers and visitors have a wide spectrum of choices of where they can live, work, shop and recreate within Ontario.

Compliance: The proposed Zone Change reflects the existing uses of the properties or closely coordinates with land use designations in the surrounding area and provides opportunities for choice in living environments.

- Goal LU2: Compatibility between a wide range of uses.

  - LU2-1: *Land Use Decisions*. We minimize adverse impacts on adjacent properties when considering land use and zoning requests.

Compliance: The proposed Zone Change reflects the existing uses of the properties or closely coordinates with land use designations in the surrounding area and will not create adverse impacts on adjacent properties.

- Goal LU5: Integrated airport systems and facilities that minimize negative impacts to the community and maximize economic benefits.

  - LU5-7: *ALUCP Consistency with Land Use Regulations*. We comply with state law that requires general plans, specific plans and all new development be consistent with the policies and criteria set forth within an Airport Land Use Compatibility Plan for any public use airport.

Compliance: The proposed Zone Change is consistent with the adopted Airport Land Use Compatibility Plan for both Ontario International Airport and Chino Airport.

Housing Element:

- Goal H2: Diversity of types of quality housing that are affordable to a range of household income levels, accommodate changing demographics, and support and reinforce the economic sustainability of Ontario.

  - H2-1: *Corridor Housing*. We revitalize transportation corridors by encouraging the production of higher density residential and mixed-uses that are architecturally, functionally and aesthetically suited to corridors.

Compliance: The proposed Zone Change supports higher density residential and mixed-use development that is functionally and aesthetically suited along transportation corridors.

- H2-4: *New Model Colony*. We support a premier lifestyle community in the New Model Colony distinguished by diverse housing, highest design quality, and cohesive and highly amenitized neighborhoods.

Compliance: The proposed Zone Change is consistent with the policy to support a diverse housing type throughout Ontario.

- H2-6: *Infill Development*. We support the revitalization of neighborhoods through the construction of higher-density residential developments on underutilized residential and commercial sites.

Compliance: The proposed Zone Change supports the revitalization of neighborhoods through the infill development of higher-density residential and mixed-use developments on underutilized properties.

- Goal H3: A City regulatory environment that balances the need for creativity and excellence in residential design, flexibility and predictability in the project approval process, and the provision of an adequate supply and prices of housing.

- H3-2: *Flexible Standards*. We allow flexibility in the application of residential and mixed-use development standards in order to gain benefits such as exceptional design quality, economic advantages, sustainability, or other benefits that would otherwise be unrealized.

Compliance: The proposed Zone Change supports flexibility in the application of development standards to achieve a variety of residential development on higher density residential and mixed-use properties.

- Goal H5: A full range of housing types and community services that meet the special housing needs for all individuals and families in Ontario, regardless of income level, age or other status.

- H5-2: *Family Housing*. We support the development of larger rental apartments that are appropriate for families with children, including, as feasible, the provision of services, recreation and other amenities.

Compliance: The proposed Zone Change supports the development of larger rental apartments on higher density residential and mixed-use properties to meet the housing needs of all individuals and families in Ontario.

(2) The proposed Zone Change would not be detrimental to the public interest, health, safety, convenience, or general welfare of the City. The proposed zoning designation is compatible with the zoning and land uses in the surrounding areas; and

(3) The proposed Zone Change will not adversely affect the harmonious relationship with adjacent properties and land uses. The allowed uses of the properties will be similar to other properties in the areas; and

(4) The subject site is physically suitable, including, but not limited to, parcel sizes, shapes, access, and availability of utilities, for the request and anticipated development. The sites identified for the AH Overlay District are of adequate size to accommodate a variety of residential development and are physically suitable for the anticipated future development.

SECTION 5. ***City Council Action.*** Based upon the findings and conclusions set forth in Sections 1 through 4, above, the City Council hereby APPROVES the herein described Zone Change, attached hereto as "Attachment A," and incorporated herein by this reference.

SECTION 6. ***Custodian of Records.*** The documents and materials that constitute the record of proceedings on which these findings have been based are located at the City of Ontario City Hall, 303 East "B" Street, Ontario, California 91764. The custodian for these records is the City Clerk of the City of Ontario.

SECTION 7. ***Severability.*** If any section, sentence, clause or phrase of this Ordinance or the application thereof to any entity, person or circumstance is held for any reason to be invalid or unconstitutional, such invalidity or unconstitutionality shall not affect other provisions or applications of this Ordinance which can be given effect without the invalid provision or application, and to this end the provisions of this Ordinance are severable. The People of the City of Ontario hereby declare that they would have adopted this Ordinance and each section, sentence, clause or phrase thereof, irrespective of the fact that any one or more section, subsections, sentences, clauses or phrases be declared invalid or unconstitutional.

SECTION 8. ***Effective Date.*** This Ordinance shall become effective 30 days following its adoption.

SECTION 9. ***Publication and Posting.*** The Mayor shall sign this Ordinance and the City Clerk shall certify as to the adoption and shall cause a summary thereof to be published at least once, in a newspaper of general circulation in the City of Ontario, California within 15 days following the adoption. The City Clerk shall post a certified copy of this ordinance, including the vote for and against the same, in the Office of the City Clerk, in accordance with Government Code Section 36933.

Attachment A: Affordable Housing Overlay

Attachment B: Affordable Housing Overlay and Current Zoning

ORDINANCE NO. _____

AN ORDINANCE OF THE CITY COUNCIL OF THE CITY OF ONTARIO, CALIFORNIA, APPROVING FILE NO. PDCA21-001, A DEVELOPMENT CODE AMENDMENT REVISING SECTION 6.01.035, ADDING PROVISIONS TO ESTABLISH THE AH (AFFORDABLE HOUSING) OVERLAY DISTRICT, AND MAKING FINDINGS IN SUPPORT THEREOF.

WHEREAS, the CITY OF ONTARIO ("Applicant") has filed an Application for the approval of a Development Code Amendment, File No. PDCA21-001, as described in the title of this Ordinance (hereinafter referred to as "Application" or "Project"); and

WHEREAS, the Application is of Citywide impact, affecting approximately 50 square miles (31,789 acres) of land, which is generally bordered by Benson Avenue and Euclid Avenue on the west; Interstate 10 Freeway, Eighth Street, and Fourth Street on the north; Etiwanda Avenue and Hamner Avenue on the east; and Merrill Avenue and the San Bernardino County/Riverside County boundary on the south; and

WHEREAS, certain minor changes are proposed to the City of Ontario Development Code, as follows:

- Section 6.01.035 (Overlay Zoning Districts) is to be amended, adding Subparagraph C.6 to establish an Affordable Housing Overlay District,

- The purpose of the Affordable Housing Overlay District is to facilitate housing opportunities within the City through the implementation of required rezone programs pursuant to the City's adopted Housing Element where required for compliance with State Housing Element law,

- The Affordable Housing Overlay District applies to sites identified in the housing inventory, part of the City's Housing Element, located 1) south of Riverside Drive, 2) along East Holt Boulevard between the Cucamonga Creek Channel and Corona Avenue, and 3) areas designated as MU-2 at the northeast corner of West Holt Boulevard and Mountain Avenue; and

WHEREAS, the Development Code (Ontario Municipal Code Title 9) provides the legislative framework for the implementation of The Ontario Plan, which states long-term principles, goals, and policies for guiding the growth and development of the City in a manner that achieves Ontario's vision, and promotes and protects the public health, safety, comfort, convenience, prosperity, and welfare of its citizens; and

WHEREAS, a related General Plan Amendment (File No. PGPA21-004) is being processed concurrently with this application for the Housing Element update to the Policy Plan (General Plan) component of The Ontario Plan addressing State mandates and the 6th Cycle Regional Housing Needs Allocation (RHNA) and this application also proposes to modify the Policy Plan Land Use Plan (Exhibit LU-01) to establish an Affordable Housing Overlay; and

WHEREAS, a related Zone Change (File No. PZC-21-002) is being processed concurrently with this application to establish an Affordable Housing Overlay District; and

WHEREAS, on December 20, 2021, the Planning Commission conducted a public hearing and approved Resolution No. PC21-093 recommending the City Council approve a Resolution adopting an Addendum to The Ontario Plan Environmental Impact Report (State Clearinghouse No. 2008101140), certified by the City Council on January 27, 2010, in conjunction with File Nos. PGPA21-004, PZC21-002, and PDCA21-002. The Addendum finds that the proposed project introduces no new significant environmental impacts. Furthermore, all mitigation measures previously adopted with the Certified Environmental Impact Report are incorporated into the Project by reference; and

WHEREAS, the City's "Local Guidelines for the Implementation of the California Environmental Quality Act (CEQA)" provide for the use of a single environmental assessment in situations where the impacts of subsequent projects are adequately analyzed; and

WHEREAS, the Application is a project pursuant to the California Environmental Quality Act (Public Resources Code Section 21000 et seq.) ("CEQA") and an initial study has been prepared to determine possible environmental impacts; and

WHEREAS, Ontario Development Code Table 2.02-1 (Review Matrix) grants the City Council the responsibility and authority to review and act on the subject Application; and

WHEREAS, the Project is located within the Airport Influence Area of Ontario International Airport ("ONT"), which encompasses lands within parts of San Bernardino, Riverside, and Los Angeles Counties, and is subject to, and must be consistent with, the policies and criteria set forth in the Ontario International Airport Land Use Compatibility Plan (ALUCP), which applies only to jurisdictions within San Bernardino County, and addresses the noise, safety, airspace protection, and overflight impacts of current and future airport activity; and

WHEREAS, City of Ontario Development Code Division 2.03 (Public Hearings) prescribes the manner in which public notification shall be provided and hearing procedures to be followed, and all such notifications and procedures have been completed; and

WHEREAS, on December 20, 2021, the Planning Commission of the City of Ontario conducted a hearing to consider the Initial Study/Addendum and the Project, and concluded said hearing on that date, voting to issue Resolution No. PC21-093, recommending the City Council approve the Application; and

WHEREAS, on March 1, 2022, the City Council of the City of Ontario conducted a hearing to consider the Initial Study/Addendum and the Project, and concluded said hearing on that date; and

WHEREAS, as the first action on the Project, on March 1, 2022, the City Council approved a resolution adopting an Initial Study/Addendum to a previous Certified EIR prepared pursuant to CEQA, the State CEQA Guidelines and the City of Ontario Local CEQA Guidelines, which indicated that all potential environmental impacts from the Project were less than significant or could be mitigated to a level of significance; and

WHEREAS, all legal prerequisites to the adoption of this Ordinance have occurred.

NOW, THEREFORE, IT IS HEREBY FOUND, DETERMINED, AND ORDAINED by the City Council of the City of Ontario, as follows:

SECTION 1. ***Environmental Determination and Findings.*** As the decision-making body for the Project, the City Council has reviewed and considered the information contained in the previous Certified EIR and supporting documentation. Based upon the facts and information contained in the previous Certified EIR and supporting documentation, the City Council finds as follows:

(1) The environmental impacts of this project were reviewed in conjunction with an Addendum to The Ontario Plan Environmental Impact Report, certified by the City of Ontario City Council on March 1, 2022, in conjunction with File Nos. PGPA21-004, PZC21-002, and PDCA21-002; and

(2) The Addendum and administrative record have been completed in compliance with CEQA, the State CEQA Guidelines, and the City of Ontario Local CEQA Guidelines; and

(3) The City's "Guidelines for the Implementation of the California Environmental Quality Act (CEQA)" provide for the use of a single environmental assessment in situations where the impacts of subsequent projects are adequately analyzed. This Application introduces no new significant environmental impacts; and

(4) The Addendum contains a complete and accurate reporting of the environmental impacts associated with the Project, and reflects the independent judgment of the City Council; and

(5) There is no substantial evidence in the administrative record supporting a fair argument that the project may result in significant environmental impacts; and

(6) The proposed project will introduce no new significant environmental impacts beyond those previously analyzed in the Certified EIR, and all mitigation measures previously adopted by the Certified EIR, are incorporated herein by this reference.

SECTION 2. ***Additional Environmental Review Not Required.*** Based on the Addendum, all related information presented to the City Council, and the specific findings set forth in Section 1, above, the City Council finds that the preparation of a subsequent or supplemental Certified EIR is not required for the Project, as the Project:

(1) Does not constitute substantial changes to the Certified EIR that will require major revisions to the Certified EIR due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects; and

(2) Does not constitute substantial changes with respect to the circumstances under which the Certified EIR was prepared, that will require major revisions to the Certified EIR due to the involvement of new significant environmental effects or a substantial increase in the severity of the previously identified significant effects; and

(3) Does not contain new information of substantial importance that was not known and could not have been known with the exercise of reasonable diligence at the time the Certified EIR was certified/adopted, that shows any of the following:

(a) The project will have one or more significant effects not discussed in the Certified EIR; or

(b) Significant effects previously examined will be substantially more severe than shown in the Certified EIR; or

(c) Mitigation measures or alternatives previously found not to be feasible would in fact be feasible and would substantially reduce one or more significant effects of the Project, but the City declined to adopt such measures; or

(d) Mitigation measures or alternatives considerably different from those analyzed in the Certified EIR would substantially reduce one or more significant effects on the environment, but which the City declined to adopt.

SECTION 3. ***Ontario International Airport Land Use Compatibility Plan ("ALUCP") Compliance.*** The California State Aeronautics Act (Public Utilities Code Section 21670 et seq.) requires that an Airport Land Use Compatibility Plan be prepared for all public use airports in the State; and requires that local land use plans and individual development proposals must be consistent with the policies set forth in the adopted Airport Land Use Compatibility Plan. On April 19, 2011, the City Council of the City of Ontario approved and adopted the Ontario International Airport Land use Compatibility Plan ("ALUCP"), establishing the Airport Influence Area for Ontario International Airport ("ONT"), which encompasses lands within parts of San Bernardino, Riverside, and Los Angeles Counties, and limits future land uses and development within the Airport Influence Area, as they relate to noise, safety, airspace protection, and overflight impacts of current and future airport activity. As the decision-making body for the Project, the City Council has reviewed and considered the facts and information contained in the Application and supporting documentation against the ALUCP compatibility factors, including [1] Safety Criteria (ALUCP Table 2-2) and Safety Zones (ALUCP Map 2-2), [2] Noise Criteria (ALUCP Table 2-3) and Noise Impact Zones (ALUCP Map 2-3), [3] Airspace protection Zones (ALUCP Map 2-4), and [4] Overflight Notification Zones (ALUCP Map 2-5). As a result, the City Council, therefore, finds and determines that the Project, when implemented in conjunction with the conditions of approval, will be consistent with the policies and criteria set forth within the ALUCP.

SECTION 4. ***Concluding Facts and Reasons.*** Based upon the substantial evidence presented to the City Council during the above-referenced hearing, and upon the specific findings set forth in Section 1 through 3, above, the City Council hereby concludes as follows:

(1) The proposed Development Code Amendment is consistent with the goals, policies, plans and exhibits of the Vision, Policy Plan (General Plan), and City Council Priorities components of The Ontario Plan. The Development Code Amendment proposes:

(a) The identification of specific sites to be included in the AH Overlay District that are included in the housing inventory, which is part of the City's Housing Element, and located (1) south of Riverside Drive, (2) along East Holt Boulevard between the Cucamonga Creek Channel and Corona Avenue, and (3) areas designated as MU-2 at the northeast corner of West Holt Boulevard and Mountain Avenue that are suitable for affordable housing development projects; and

(b) Defining that affordable housing projects for the purposes of the AH Overlay provides that a certain identified percentage of the total units within each development are designated as affordable to lower income households and guaranteed for a minimum of 30 years; and

(c) Establishing that development standards applicable to proposed development in the AH Overlay District shall be in accordance with the applicable base zone, other overlay zones, and all applicable provisions of the Development Code; and

(d) Establishing that all new residential development, within the AH Overlay District, regardless of affordability, requires a minimum density of 20 dwelling units per acre; and

(e) Establishing that affordable housing projects on properties designated as MDR in the Policy Plan shall allow a maximum density of 25 to 30 dwelling units per acre.

(2) The proposed Development Code Amendment would not be detrimental to the public interest, health, safety, convenience, or general welfare of the City. The Development Code Amendment incorporates safeguards intended to ensure that the purposes of the Development Code are preserved; the project will not be contrary to or damage the public health, safety, convenience, or general welfare; the project will not result in any significant environmental impacts; and the project will be in full conformity with the Vision, City Council Priorities, and Policy Plan components of The Ontario Plan.

SECTION 5. ***City Council Action.*** Based upon the findings and conclusions set forth in Sections 1 through 4, above, the City Council hereby APPROVES the herein described Development Code Amendment, included as "Attachment A" attached hereto and incorporated herein by this reference.

SECTION 6. ***Custodian of Records.*** The documents and materials that constitute the record of proceedings on which these findings have been based are located at the City of Ontario City Hall, 303 East "B" Street, Ontario, California 91764. The custodian for these records is the City Clerk of the City of Ontario.

SECTION 7. ***Severability.*** If any section, sentence, clause or phrase of this Ordinance or the application thereof to any entity, person or circumstance is held for any reason to be invalid or unconstitutional, such invalidity or unconstitutionality shall not affect other provisions or applications of this Ordinance which can be given effect without the invalid provision or application, and to this end the provisions of this Ordinance are severable. The People of the City of Ontario hereby declare that they would have adopted this Ordinance and each section, sentence, clause or phrase thereof, irrespective of the fact that any one or more section, subsections, sentences, clauses or phrases be declared invalid or unconstitutional.

SECTION 8. ***Effective Date.*** This Ordinance shall become effective 30 days following its adoption.

SECTION 9. ***Publication and Posting.*** The Mayor shall sign this Ordinance and the City Clerk shall certify as to the adoption and shall cause a summary thereof to be published at least once, in a newspaper of general circulation in the City of Ontario, California within 15 days following the adoption. The City Clerk shall post a certified copy of this ordinance, including the vote for and against the same, in the Office of the City Clerk, in accordance with Government Code Section 36933.

ATTACHMENT A:
Development Code Amendment
File No. PDCA21-001

Development Code Section 6.01.035 (Overlay Zoning Districts) is hereby amended, adding Subparagraph C.6 to read as follows:

"6. AH (Affordable Housing) Overlay District.

a. *Purpose.* The purpose of the AH Overlay District is to facilitate housing opportunities within the community via implementation of required rezone programs pursuant to the City's adopted Housing Element where required for compliance with State Housing Element law.

b. *Applicability*. The herein established rights and responsibilities applicable to the AH Overlay District shall apply to sites identified in the housing inventory, part of the City's Housing Element, located 1) south of Riverside Drive, 2) along East Holt Boulevard between the Cucamonga Creek Channel and Corona Avenue, and 3) areas designated as MU-2 at the northeast corner of West Holt Boulevard and Mountain Avenue.

c. *Definitions.*

(1) Affordable Housing Project. Affordable housing projects for the purposes of the affordable housing overlay are defined as follows:

(a) *Tier 1*. Any projects with a residential component with at least 20% of total units are designated as affordable to lower incomes via deed restriction or another mechanism to guarantee affordability for a minimum of 30 years.

(b) *Tier 2*. Any projects with a residential component with at least 25% of total units are designated as affordable to lower incomes via deed restriction or another mechanism to guarantee affordability for a minimum of 30 years.

d. *Development Standards.* The development standards applicable to proposed development in the Affordable Housing Overlay District shall be in accordance with the applicable base zone, other overlay zones, and all applicable provisions of the Development Code, unless otherwise indicated herein, or where necessary to comply with Federal and State law.

(1) Minimum Density. Within the AH Overlay District, all new residential development, regardless of affordability, requires a minimum density of 20 dwelling units per acre. The minimum density shall be calculated as an average over the entire project area on sites south of Riverside Drive.

(2) Affordable Housing Projects. Development of affordable housing projects, as defined for the purposes of the affordable housing overlay, shall be allowed by-right within the AH Overlay District and are encouraged in accordance with the following provisions:

(a) *Specific Plan Base Zoning.* Affordable housing projects with a base zoning designation of SP may develop as follows:

(i) *Tier 1 Affordable housing projects:*

- *Medium Density Residential.* Affordable housing projects on properties designated as MDR in the Policy Plan may be developed in accordance with either the SP zoning district or the MDR-25 zoning district.

- *Mixed Use*. Affordable housing projects on properties designated as MU in the Policy Plan may be developed in accordance with either the SP zoning district or a comparable existing zoning implementation tool that aligns with the density and intensity of the proposed project. The following exceptions would apply:

  - *Maximum Density*. The maximum density allowed is equivalent to the maximum density identified for the applicable Mixed-Use area in the Land Use Designations Summary Table (Table LU-02) of the Policy Plan component of The Ontario Plan.

- *Calculating Minimum Density*. If a project with a base designation of SP develops without a specific plan, minimum density shall be calculated as an average over the entire portion of the project area that is within the AH Overlay District.

(ii) *Tier 2 Affordable housing projects:*

- Same as Tier 1, with the following additions:

  - *Medium Density Residential.* Affordable housing projects on properties designated as MDR in the Policy Plan shall allow a maximum density of 25 to 30 dwelling units per acre."

RECOMMENDATION:

That the City Council take the following actions:

A. Consider and adopt the Resolution certifying the Environmental Impact Report (State Clearinghouse No. 2021010318) prepared for the South Ontario Logistics Center Specific Plan, File No. PSP19-001, which includes the adoption of a Statement of Overriding Considerations

and Mitigation Monitoring and Reporting Plan;

B. Consider and adopt the Resolution approving a General Plan Amendment (File No. PGPA19-004) modifying the Land Use Element of the Policy Plan component of The Ontario Plan (General Plan), changing the land use designations shown on the Land Use Plan Map (Exhibit LU-1) for 39 acres of land, from Low-Medium Density Residential (5.1-11 dwelling units per acre) and Business Park (0.6 FAR) to Business Park (0.6 FAR) and Industrial (0.55 FAR), and modify the Future Buildout Table (Exhibit LU-03) to be consistent with the land use designation changes; and
C. Introduce and waive further reading of the Ordinance adopting the South Ontario Logistics Center Specific Plan (File No. PSP19-001).

THE FOLLOWING COUNCIL GOALS ARE BEING ACHIEVED:
Invest in the Growth and Evolution of the City's Economy
Operate in a Businesslike Manner
Invest in the City's Infrastructure (Water, Streets, Sewers, Parks, Storm Drains and Public Facilities)
Ensure the Development of a Well Planned, Balanced, and Self-Sustaining Community in Ontario Ranch

FISCAL IMPACT: Adoption of the South Ontario Logistics Center Specific Plan would result in both short and long-term fiscal impacts to the City. Short-term impacts include infrastructure improvements to serve the new Business Park and Industrial development. The cost of these improvements is included in the Nexus Study and Development Impact Fees ("DIF") previously adopted by the City Council. The developer will be required to install improvements or pay the DIF associated with the various improvements. Long-term fiscal impacts include the ongoing operations and maintenance services (police, fire, maintenance, etc.) necessary to serve the new development. While the development will result in increased property tax revenue, the increase is insufficient to cover the cost of services associated with the project. To address this shortfall, the developer will be required to form and/or join a Community Facilities District to cover the additional public service costs. The general fund will not be used to fund this Ontario Ranch development.

BACKGROUND & ANALYSIS:

BACKGROUND: The Ontario Plan (TOP) Policy Plan (General Plan) provides the basic framework for development within the 8,200-acre area commonly referred to as Ontario Ranch. The Policy Plan requires City Council approval of a Specific Plan for new developments within Ontario Ranch. A Specific Plan is required to ensure that sufficient land area is included to achieve cohesive, unified districts and neighborhoods. Additionally, a Specific Plan is required to incorporate a development framework for detailed land use, circulation, infrastructure improvements (such as drainage, sewer, and water facilities), provision for public services, and urban design and landscape standards.

General Plan Amendment: The project area is bordered by Eucalyptus Avenue to the north, Merrill Avenue to the south, existing right-of-way for the future Campus Avenue extension to the west, and Grove Avenue to the east.

As part of the Project, a General Plan Amendment application is proposed to eliminate the Low-Medium Density Residential (5.1-11 dwelling units per acre) and Business Park (0.6 Floor Area Ratio ("FAR")) land use designations, replacing them with the Business Park (0.6 FAR) and Industrial (0.55 FAR) land use designations. The General Plan Amendment will facilitate the potential development of up to 5,333,518 square feet of Industrial and Business Park development. The amendment includes changes to Policy Plan Exhibit: LU-01, Official Land Use Plan, (see Exhibit A: General Plan Land Use Map Amendment, attached) and Exhibit: LU-03, Future Buildout, to reflect the proposed land use designation changes (see Exhibit B: Amended Exhibit LU-03, Future Buildout, attached).

The General Plan Amendment will provide for a larger developable Industrial land use area, consistent with the current industrial market demands, as well as adjacent existing and approved land uses, including the Chino Airport to the south, the Ontario Ranch Business Park Specific Plan to the west, and the Merrill Commerce Center Specific Plan to the east. The Business Park land use area is intended to accommodate less intense industrial, commercial, and office uses that will assist in transitioning from the Chino Airport and general industrial uses to the south, to the future Medium-Density Residential (11.1-25 dwelling units per acre) development to the north, across Eucalyptus Avenue.

South Ontario Logistics Center Specific Plan: The South Ontario Logistics Center Specific Plan serves to implement the City's Policy Plan for the project site and establishes regulations for development through the stipulation of permitted land uses, development standards, infrastructure requirements, and implementation requirements for the development of 219.39 acres of land that makes up the Specific Plan. The South Ontario Logistics Center Specific Plan establishes a comprehensive set of design guidelines and development regulations to guide and regulate site planning, landscape, and architectural character, and ensure that superior community design is achieved during project development. The South Ontario Logistics Center Specific Plan establishes the procedures and requirements to approve new development within the project site to ensure that Policy Plan goals and policies are achieved.

Land Use Plan: The South Ontario Logistics Center Specific Plan consists of five Planning Areas (see Exhibit C: South Ontario Logistics Center Specific Plan Land Use Map, attached) that will accommodate a variety of commercial, office, technology, light manufacturing, and warehouse/distribution uses. The Land Use Plan implements the vision of The Ontario Plan by providing opportunities for employment in manufacturing, distribution, research and development, service, and supporting retail at intensities designed to meet the demand of current and future market conditions. The Specific Plan establishes a maximum 0.6 FAR for Business Park designated properties (Planning Areas 1 and 3) and maximum 0.55 FAR for Industrial General designated properties (Planning Areas 2, 4, and 5). The maximum FAR associated with each Specific Plan land use designation is consistent with the Policy Plan's Business Park and Industrial land use designations.

The Specific Plan proposes the potential development of up to 5,333,518 square feet of Industrial and Business Park development (see Exhibit D: Land Use Summary Table, attached). Planning Areas 1 and 3, located along the northern portion of the Specific Plan area, adjacent to Eucalyptus Avenue, are 23.65 and 11.52 acres in size, respectively, and can be developed with up to 919,050 square feet of Business Park development. In addition, buildings within the Business Park land use

area that front onto a public right-of-way cannot exceed a building footprint of 125,000 square feet, in order to maintain a pedestrian-oriented scale and massing appropriate to the site and future residential land uses to the north. Planning Areas 2, 4, and 5, located along the southern portion of the Specific Plan and south of the Business Park designated areas, are 106.71, 60.06, and 17.45 acres in size, respectively, and can be developed with up to 4,414,470 square feet of Industrial development.

Design Guidelines: The design theme and concept for the South Ontario Logistics Center Specific Plan was created to ensure a high-quality, attractive, and cohesive design structure for the Specific Plan, which meets each of the following objectives:

1. Demonstrates high-quality development that complements and integrates into the community and adds value to the City;
2. Creates a functional and sustainable place that ensures South Ontario Logistics Center is competitive regionally and appropriate in the Ontario Ranch community;
3. Illustrates the distinctive characteristics of the two land use districts: Business Park District (Planning Areas 1 and 3) and Industrial – General District (Planning Areas 2, 4, and 5);
4. Establishes criteria for building design and materials, landscape design, and site design that provide guidance to developers, builders, architects, landscape architects, and other professionals preparing plans for construction;
5. Provides guidance to City staff and the Planning Commission in the review and evaluation of future development projects in the South Ontario Logistics Center Specific Plan area;
6. Incorporates construction and landscape design standards that promote energy and water conservation strategies; and
7. Implements the goals and policies of The Ontario Plan and the intent of the Ontario Development Code.

The Design Guidelines have been established to promote high-quality architecture as required by the Ontario Development Code and TOP. The proposed architectural theme of the Specific Plan incorporates a Contemporary Architectural style and the five Planning Areas will be required to be designed to be compatible with and complement one another. The design guidelines of the Specific Plan will require all buildings to provide a recognizable base, body, roofline, and entry. The Specific Plan provides examples of the type of Industrial and Business Park concepts that are envisioned to be constructed within the Specific Plan.

All buildings will be required to be designed to highlight the primary entryways by incorporating special materials, visual relief, massing, and shading. Additionally, the facades that front onto a public street will incorporate vertical and horizontal articulation and material changes that will assist in enhancing these elevations and providing visual interest from the public view.

Circulation Concept: The circulation plan for the Specific Plan reinforces the objective of moving vehicles, pedestrians, cyclists, and public transit safely and efficiently through and around the project. The Specific Plan establishes the hierarchy and general location of roadways within the South Ontario Logistics Center Specific Plan. Traffic signals will be constructed or modified at the following major intersections:

1. Campus Avenue and Eucalyptus Avenue;
2. Bon View Avenue and Eucalyptus Avenue;
3. Grove Avenue and Eucalyptus Avenue;
4. Campus Avenue and Merrill Avenue;
5. Bon View Avenue and Merrill Avenue;
6. Cucamonga Avenue and Merrill Avenue;
7. Grove Avenue and Merrill Avenue; and
8. Mid-block at Grove Avenue, Between Eucalyptus and Merrill Avenues.

Additionally, primary access to the Business Park development will be provided along Eucalyptus Avenue to the north, Campus Avenue to the west, and Grove Avenue to the east. Primary access into the Industrial development will be provided along Merrill Avenue to the south, Campus Avenue to the west, and Grove Avenue to the east.

Landscape Design: The landscape design theme for the South Ontario Logistics Center Specific Plan encourages landscape materials and designs that enhance the aesthetics of the structure, create and define public and private spaces, and provide shade and environmental benefits. Table 5.1 of the South Ontario Logistics Center Specific Plan identifies the plant material and trees to be used within parking lots, along street parkways, and adjacent to buildings. Additionally, the Specific Plan establishes the overall landscape coverage for the project and the landscape setbacks along the perimeter streets and interior property lines.

Infrastructure and Services: The backbone infrastructure to serve all areas of the Specific Plan will be installed by the developers in accordance with the Ontario Ranch (New Model Colony) Master Plans for streets, water (including recycled water), sewer, storm drain, and fiber optic facilities. Natural gas will be provided by The Gas Company and electricity by SCE. Development of the project requires the installation by the developer of all infrastructure necessary to serve the project as a standalone development, with phasing and ultimate details to be reviewed and approved via a Development Agreement with the project site's final map.

Specific Plan Phasing: Development phasing within the Specific Plan will be determined by the developers, based upon real estate market conditions. The Specific Plan outlines development phase one as Planning Areas 1 and 2, and development phase two as Planning Areas 3, 4, and 5 (Figure 4.1: Conceptual Site Plan). The phases may be developed as sub-phases and may occur either sequentially or concurrently with one another. Specific infrastructure, community facilities, and open space dedications will be provided/conditioned with future individual tract map(s) and/or development plan(s) that will be presented to the Planning Commission at a future date.

COMPLIANCE WITH THE ONTARIO PLAN: The proposed project is consistent with the principles, goals and policies contained within the Vision, Governance, Policy Plan (General Plan) and City Council Priorities components of The Ontario Plan.

California Government Code (Title 7, Division 1, Chapter 3, Article 8, Section 65450-65457) permits the adoption and administration of specific plans as an implementation tool for elements contained in the local General Plan. Specific plans must demonstrate consistency in regulations, guidelines, and programs with the goals and policies set forth in the General Plan. The South Ontario Logistics

Center Specific Plan has been prepared in conformance with the goals and policies of the City of Ontario Policy Plan (General Plan). The policy analysis in Chapter 7.0 "General Plan Consistency" of the Specific Plan describes the manner in which the South Ontario Logistics Center Specific Plan complies with the Policy Plan goals and policies.

HOUSING ELEMENT COMPLIANCE: The project is consistent with the Housing Element of the Policy Plan (General Plan) component of The Ontario Plan, as the project site is not one of the properties in the Available Land Inventory contained in Table A-3 (Available Land by Planning Area) of the Housing Element Technical Report Appendix.

Senate Bill 330 ("SB 330"): The Housing Accountability Act (Government Code Section 65589.5 et seq.) was passed by the California Legislature, signed by the Governor, and became effective on January 1, 2020. The bill is the result of the Legislature's extensive findings regarding the California "housing supply crisis" with "housing demand far outstripping supply." The legislation adds Chapter 12 to Division 1 of Title 7 of the Government Code (Section 66300 et seq.) that applies to "affected cities," which are identified as cities in urbanized areas as determined by the most recent census. In accordance with SB 330, the Department of Community Development and Housing ("HCD") has prepared a list of affected cities and has determined that Ontario is an "affected city." Therefore, pursuant to Government Code Section 66300(b)(1)(A) and (b):

(b) (1) Notwithstanding any other law except as provided in subdivision (i), with respect to land where housing is an allowable use, an affected city shall not enact a development policy, standard, or condition that would have any of the following effects:

(A) Changing the general plan land use designation, specific plan land use designation, or zoning of a parcel or parcels of property to a less intensive use or reducing the intensity of land use within an existing general plan land use designation, specific plan land use designation, or zoning district below what was allowed under the land use designation and zoning ordinances of the affected county or affected city, as applicable, as in effect on January 1, 2018…" except when approved by HCD or when the following exception is set out in Government Code Section 66300(i)(1) applies:

(i) (1) This section does not prohibit an affected county or an affected city from changing a land use designation or zoning ordinance to a less intensive use if the city or county concurrently changes the development standards, policies, and conditions applicable to other parcels within the jurisdiction to ensure that there is no net loss in residential capacity.

As discussed earlier in this staff report, the General Plan Amendment is proposed to change the site's land use designations from Low-Medium Density Residential and Business Park to approximately 35.2 acres of Business Park (0.6 FAR) and 184.2 acres of Industrial (0.55 FAR) land uses. The GPA would, therefore, eliminate the low-medium density land use designation, thereby theoretically eliminating 1,352 units (as determined by the City's density determinations to be 8.5 dwelling units per acre). In compliance with SB 330, the EIR evaluated the elimination of 1,352 units and determined that, based on SB 330 Exceptions for lack of water and sewer to serve a residential project and the no net loss of residential capacity, the Project is consistent with HCD exception findings. The proposed Project site does not have sufficient water or wastewater facilities to serve a residential project. As explained in Section 3.4.1.2, of the Draft EIR, at present there is no water or sewer infrastructure that could serve residential units because the land has been used for

agricultural purposes with water provided by on-site wells and sewer provided by septic systems. The Project Applicant is working on projects both approved and under review that span the length of Eucalyptus Avenue to the north, Merrill Avenue to the south, Euclid Avenue to the east, and Grove Avenue to the west (Ontario Ranch Business Park Specific Plan – Approved; Ontario Ranch Business Park Specific Plan Amendment – Under review; and, South Ontario Logistics Center Specific Plan – Subject Project), with a combined estimated cost of $144,331,000 (see Table 1, Project Cost Estimate by Project Area). The total estimated cost includes individual streets, lengths of pipe, storm drain, sewer, water, streetlights, curbing, paving, signals, power/fiber, and more. This cost would be financially infeasible for the 1,352 units presently allowed under the current residential General Plan designation and therefore the cost of such improvements would make residential development on the site financially infeasible (see Government Code Section 66589.5(d)(2) cited above).

Table 1: Project Cost Estimate by Project Area

Project Name	***Cost Estimate***
Ontario Ranch Business Park Phase 1 (Specific Plan - Approved)	$72,151,000
South Ontario Logistics Center (Specific Plan – Subject Project, Under Review)	$59,780,000
Ontario Ranch Business Park Phase 2 (Specific Plan Amendment, Under Review)	$12,400,000
Total	***$144,331,000***

In order to demonstrate “no net loss of residential capacity,” the Project will be required to demonstrate increased residential zoning capacity on a “SB330 Replacement Site” by 1,352 units to off-set the Project site loss of zoning capacity (Low Medium Density, 5.1 to 11 du/ac). In tandem with the City’s adoption of the 6th Cycle Housing Element, scheduled to go before the City Council for their consideration, the City is also adopting an Affordable Housing Overlay zone and applying this zone to all parcels in the sites inventory that are south of Riverside Drive or are zoned MU-2 along Holt Boulevard. Relevant to the Project, the Affordable Housing Overlay zone will establish a minimum density of 20 dwelling units per acre for all development (regardless of Policy Plan designation or underlying zoning district), and increase the maximum density from 25 to 30 units per acre for parcels that are designated in the Policy Plan for Medium Density Residential (“MDR”) when an affordable housing project is proposed with at least 25 percent of proposed units that are restricted for lower income households. The creation of the Affordable Housing Overlay zone and increased maximum density of 5 dwelling units per acre will increase residential capacity on 473.7 acres of such parcels currently designated MDR, by 2,368 dwelling units.

On December 20, 2021, the Planning Commission reviewed and recommended City Council approval of a General Plan Amendment (File No. PGPA21-004) for the Housing Element update to the Policy Plan (General Plan) component of The Ontario Plan, to address State mandates regarding the Regional Housing Needs Allocation (“RHNA”), as well as to modify the Policy Plan Land Use Plan (Exhibit LU-01) and to establish a Zone Change (File No. PZC21-002). The Project EIR addresses the potential impacts associated with relocating residential density from the Project site to the SB330 Replacement Sites located north of the Project site, along Grove Avenue, pursuant to SB330. With

the City adoption of the 6th Cycle Housing Element and associated Affordable Housing Overlay zone, no net loss of residential capacity will occur as a result of the Project.

AIRPORT LAND USE COMPATIBILITY: The California State Aeronautics Act (Public Utilities Code Section 21670 et seq.) requires that an Airport Land Use Compatibility Plan be prepared for all public use airports in the State; and requires that local land use plans and individual development proposals must be consistent with the policies set forth in the adopted Airport Land Use Compatibility Plan.

Ontario International Airport: On April 19, 2011, the Ontario City Council approved and adopted the Ontario International Airport Land use Compatibility Plan ("ALUCP"), establishing the Airport Influence Area for Ontario International Airport, which encompasses lands within parts of San Bernardino, Riverside, and Los Angeles Counties, and limits future land uses and development within the Airport Influence Area, as they relate to noise, safety, airspace protection, and overflight impacts of current and future airport activity. The proposed Project is located within the Airport Influence Area of Ontario International Airport and was evaluated and found to be consistent with the policies and criteria of the ALUCP. Any special conditions of approval associated with uses in close proximity to the airport are included in the conditions of approval provided with the attached resolutions.

Chino Airport: Chino Airport is owned and operated by the County of San Bernardino and is situated within the boundaries of the City of Chino, immediately south of Ontario. Portions of the City of Ontario are impacted by aircraft operations at Chino Airport (Exhibit E - Chino Airport Composite Safety Zones & TOP Land Use Designations). The adopted ALUCP for Chino Airport was approved in 1991 and does not reflect the most recently adopted 2005 Airport Master Plan. Also, the existing Chino Airport Land Use Compatibility Plan does not reflect the 2011 Caltrans Airport Land Use Planning Handbook. Public Utilities Code Section 21670.1(c) requires local jurisdictions under the "alternative process" to "rely upon" the California Airport Land Use Planning Handbook (Handbook) published by the California Department of Transportation (Caltrans), Division of Aeronautics in October 2011, for preparing Compatibility Plans and to utilize the Handbook's height, land use, noise, safety, and density criteria. Although the City of Ontario does not have the formal responsibility under the "alternative process" to prepare a compatibility plan for Chino Airport, the City of Ontario has completed an Airport Land Use Compatibility Assessment that analyzes Chino Airport's impacts on Ontario, consistent with policies and criteria set forth within the Caltrans 2011 California Airport Land Use Planning Handbook. The City of Ontario is currently working towards completing an Airport Land Use Compatibility Plan for portions of the City that are impacted by aircraft operations at Chino Airport. The proposed Project is located within the Airport Influence Area of Chino Airport and was evaluated and found to be consistent with the California Airport Land Use Planning Handbook and the City of Ontario's Chino Airport Land Use Compatibility Assessment. Future development within the Project Site shall be subject to Open Land and people-per-acre occupancy intensity calculations that are described below.

The Project site is located within Safety Zones 1, 3, and 6 (Handbook Generic Safety Zones) and new development will be required to provide Open Land (an open area that is at least 300 feet long by 75 feet wide) consistent with the Handbook's percentage criteria for each Safety Zone and people-per-acre limits. Safety Zone 1 is part of the Runway Protection Zone and cannot be developed with

any structures or buildings. Safety Zone 3 is required to provide a minimum of 15 percent of Open Land, and occupancy must be limited to 100 people per acre on average, and a maximum of 300 people in any one acre. Safety Zone 6 is required to provide a minimum of 10 percent of Open Land, and occupancy is limited to 300 people per acre on average, and a maximum of 1,200 people in any one acre.

ENVIRONMENTAL REVIEW: The Specific Plan is located within the City of Ontario in what was formally the approximate 8,200-acre City of Ontario Sphere of Influence (SOI). On January 7, 1998, the City of Ontario adopted the New Model Colony General Plan Amendment setting forth a comprehensive strategy for the future development of the Sphere of Influence. The New Model Colony is bound by Riverside Drive to the north, Milliken/Hamner Avenue to the east, Euclid Avenue to the west and Merrill Avenue/Bellegrave Avenue to the south.

On January 27, 2010, the City adopted The Ontario Plan and certified the accompanying Environmental Impact Report ("EIR"). The Ontario Plan serves as the City's new General Plan for the entire City, including the New Model Colony (now referred to as Ontario Ranch). The Ontario Plan identified many areas that might have a potentially significant impact on the environment. These areas included: 1) Aesthetics; 2) Biological Resources; 3) Geology and Soils; 4) Hazards and Hazardous Materials; 5) Hydrology and Water Quality; 6) Land Use and Planning; 7) Mineral Resources; 8) Population and Housing; 9) Public Services; 10) Recreation; and 11) Utilities and Service Systems. Through the EIR process, these potential impacts were analyzed, revisions were incorporated into the plan and/or mitigation measures were identified that reduced the potential environmental impacts to a level that was less than significant.

Even though an EIR was prepared for The Ontario Plan, the analyses focused on the program or "big picture" impacts associated with development. With the submittal of the South Ontario Logistics Center Specific Plan, Staff is charged with evaluating the potential impacts of development at the project level. Staff determined that an EIR should be prepared for the South Ontario Logistics Center Specific Plan. As noted in the Planning Commission staff report, dated January 25, 2022, an EIR was prepared for the South Ontario Logistics Center Specific Plan addressing the following key areas:

- Agricultural Resources
- Air Quality
- Biological Resources
- Cultural Resources
- Geology and Soils
- Greenhouse Gas Emissions
- Hazards and Hazardous Materials
- Hydrology and Water Quality
- Land Use and Planning
- Noise
- Population/Housing
- Public Services
- Transportation and Traffic

- Tribal Cultural Resources
- Utilities and Service Systems

The South Ontario Logistics Center Specific Plan EIR (State Clearinghouse No. 2021010318) evaluates each of these areas and identifies mitigation measures and/or revisions to the plan to lessen the impacts of the project. Of the 15 areas considered by the EIR, all but five of the impact areas were mitigated to a level of less than significant. Even with the mitigation measures, the impacts to agriculture and forestry resources, air quality, cultural resources, greenhouse gases, and transportation and traffic could not be reduced to less than significant, resulting in some impacts remaining potentially significant and unavoidable. While mitigation of all potential impacts to a level of less than significant is desirable, the fact that five areas will remain significant and unavoidable is not unexpected. The identification of these areas as significant and unavoidable validates the work previously completed for The Ontario Plan. It is Staff's opinion that the Project-required infrastructure improvements, which will provide the opportunity for the development of residential, the Great Park, and commercial on the west side of Ontario Ranch to occur, job creation, and potential point of sale tax revenue, outweigh the potential impacts associated with the Project. Therefore, Staff recommends the City Council certify the EIR, including the adoption of the Statement of Overriding Considerations and Mitigation Monitoring and Reporting Plan for the project.

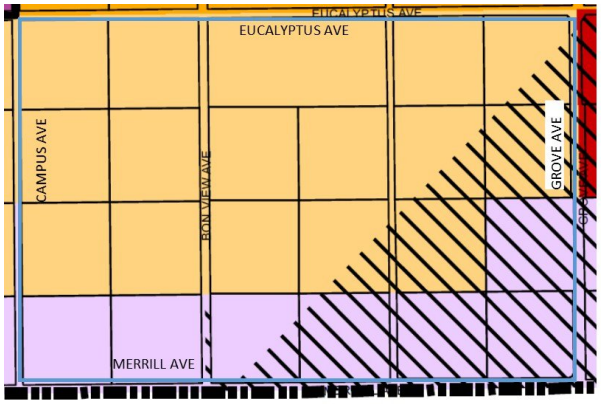
PLANNING COMMISSION REVIEW: On January 25, 2022, the Planning Commission conducted a public hearing and voted unanimously (6-0) to recommend the City Council certify the South Ontario Logistics Center Specific Plan Environmental Impact Report (State Clearinghouse No. 2021010318), including the adoption of a Statement of Overriding Considerations and Mitigation Monitoring and Reporting Plan; approval of the General Plan Amendment (File No. PGPA19-004); and adoption of the South Ontario Logistics Center Specific Plan (File No. PSP19-001).

PUBLIC COMMENTS: The Planning Department received written comments prior to and after the Planning Commission hearing on January 25, 2022 (See Exhibit "F"). During the public hearing, twenty members of the public commented on the project. The comments were both in support and opposition to the project. A summary of the comments in opposition are provided below along with a staff response to the concerns raised.

1.Statements were made that it was premature for the Planning Commission to make a recommendation on the Draft EIR to City Council, because the Draft EIR response to comments had not been addressed or made public. *The Planning Commission's role is to review the Draft EIR and make a recommendation to City Council. The City Council is the approving authority on the final certification of the EIR. In addition, per California Environmental Quality Act, a City must respond to comments 10 day prior to the public hearing by the approving authority.*

2.Several labor union organization members spoke in opposition to project, requesting that the Applicant hire local trained and skilled union labor workforce for the construction of the warehouse facilities. *The Applicant stated at the meeting that they do have agreements with local labor trade organizations and that they will continue to make those commitments with the trade organizations.*

3.Concerns were raised about the impact of logistic and warehouse uses on a local and regional



level regarding air quality, traffic, habitat/open space and agriculture resources. *The South Ontario Logistics Center Specific Plan EIR evaluated air quality, transportation/traffic, agriculture resources, and biological resources and identified mitigation measures and/or revisions to the plan to lessen the impacts of the project. Even with the mitigation measures, the impacts to agriculture and forestry resources, air quality, cultural resources, greenhouse gases, and transportation and traffic could not be reduced to less than significant, resulting in some impacts remaining potentially significant and unavoidable. While mitigation of all potential impacts to a level of less than significant is desirable, the fact that air quality, transportation/traffic, agriculture resources, and biological resources areas will remain significant and unavoidable is not unexpected. The identification of these areas as significant and unavoidable validates the work previously completed for The Ontario Plan.*

Notes
1 Historically, citywide buildout levels do not achieve the maximum allowable density/intensity on every parcel and are, on average, lower than allowed by the Policy Plan. Accordingly, the buildout projections in this Policy Plan do not assume buildout at the maximum density or intensity and instead are adjusted downward. To view the buildout assumptions, access the Methodology report.
2 Acres are given as adjusted gross acreages, which do not include the right-of-way for roadways, flood control facilities, or railroads.
3 Assumed Density/Intensity includes both residential density, expressed as units per acre, and non-residential intensity, expressed as floor area ratio (FAR), which is the amount of building square feet in relation to the size of the lot.
4 Projections of population by residential designation are based on a persons-per-household factor that varies by housing type. For more information, access the Methodology report.
5 To view the factors used to generate the number of employees by land use category, access the Methodology report.
6 Acreages and corresponding buildout estimates for these designations do not reflect underlying land uses within the Business Park, Industrial and Commercial Overlays. Estimates for these areas are included within the corresponding Business Park, Industrial and General Commercial categories.

Re: Public Hearing Item C: Comments on South Ontario Logistics Center Specific Plan: Environmental Assessment, General Plan Amendment, And Specific Plan Review For File Nos. PGPA19-004 AND PSP19-001

Dear Planning Commission Members and Ms. Vaughn:

We are writing on behalf of Californians Allied for a Responsible Economy ("CARECA"), to provide comments on Public Hearing Item C, "Environmental Assessment, General Plan Amendment, and Specific Plan Review for File Nos. PGPA19-004 and PSP19-001" for the South Ontario Logistics Center Specific Plan Project (collectively, "the Project"). The environmental assessment is a Draft Environmental Impact Report ("DEIR") prepared by the City of Ontario ("City") for the South Ontario Logistics Center Specific Plan (SCH No. 2021010318).

CARECA is an unincorporated association of individuals and labor organizations that may be adversely affected by the potential public and worker health and safety hazards, and the environmental impacts of the Project. The coalition includes Ontario residents Ricardo Cuevas, Irvin Cruise, Luis Garcia, Jaime Paredes, John Fierro, the District Council of Ironworkers, and Southern California Pipe Trades DC 16, along with their members, their families, and other individuals who live and work in the City of Ontario.

printed on recycled paper

The proposed Project consists of a General Plan Amendment, Specific Plan, Development Plan Review, Tentative Parcel Maps, and a Development Agreement to allow for the development of an industrial and business park encompassing 23 parcels totaling 219.39 acres in the City of Ontario, San Bernardino County, California. The proposed Project site is on a total of 219.39-acre site bound by Eucalyptus Avenue to the north, Campus Avenue to the west, Merrill Avenue to the south, and Grove Avenue to the east. The Project is proposed in two phases. Phase 1, comprised of Planning Areas ("PAs") 1 and 2, would allow approximately 3,174,518 sf of industrial and business park uses. Phase 1 consists of the construction of Buildings 1 through 8 and includes the Development Plan for PAs 1 and 2. The DEIR also evaluates, at a programmatic level, potential future development of Phase 2, comprised of three future planning areas (no specific development proposals have been identified for the Phase 2 area). Furthermore, pursuant to the Housing Accountably Act, or Senate Bill 330 (SB330), the Project will create an Overlay District on an "SB330 Replacement Site" to increase the residential zoning capacity by 1,352 units, which will offset the loss of residential zoning capacity within the Project site. In order for this Overlay District to be approved, a Zone Change and General Plan Amendment are required.

On January 3, 2022, we submitted comments on the Project's DEIR. The evidence presented in our initial comments shows that the DEIR does not accurately disclose, analyze, and mitigate potentially significant air quality, agricultural, public health, GHG, energy, transportation, and biological resources impacts. The public comment period on the DEIR closed just two weeks ago. The City has not yet responded to our comments or the DEIR comments of any other members of the public or responsible agencies, and has not revised or recirculated the DEIR in response to our comments. The Staff Report explains that the City has not yet prepared the Final EIR.[1] It is therefore premature for the Planning Commission to recommend certification of the Final EIR or approval of the Project to the City Council.

And as will be discussed below, the Planning Commission lacks substantial evidence to make, or recommend that the City Council make, the requisite findings to approve the Specific Plan and General Plan Amendment. The Planning Commission also cannot make, or recommend that the City Council make the requisite findings to cancel the Williamson Act contracts on the Project site at this time.

---

[1] Staff Report, p. 29.

printed on recycled paper

For these reasons, CARECA urges the Planning Commission not to take any action on the Project at this hearing. Instead, the Commission should continue today's recommendation hearing to a future date after the City has responded to all comments on the DEIR and prepared a legally adequate Final EIR pursuant to CEQA.

I. It is Premature to Recommend Approval of the Project

It is premature for the Planning Commission to make a recommendation regarding approval of the Project at this time because the City has not reviewed or responded to comments on the Draft EIR. The Planning Commission Staff Report states that "[r]esponses to comments are being prepared by the Project Applicant and consultants and will be provided with the Final EIR to be reviewed and considered by the City Council."[2] Written responses to comments are required by CEQA.[3] In order to address environmental issues raised in public comments, the City may need to make modifications to the Project or consider alternatives and additional mitigation that is not currently proposed in the DEIR or as part of the Project. CARECA urges the Planning Commission to remand the DEIR back to Staff to allow for preparation of a legally adequate Final EIR before making any recommendation to the City Council.

II. The Planning Commission is Precluded from Making the Requisite Findings to Approve the Specific Plan and General Plan Amendment At this Time.

Section 4.01.035(D) of the City of Ontario Development Code ("ODC") provides that an application to adopt, amend, or supplement a Specific Plan shall be denied if one or more of the below listed findings cannot be clearly established:

1. The proposed Specific Plan, or amendment thereto, is consistent with the goals, policies, plans and exhibits of the Vision, Policy Plan

---

[2] Staff Report, p. 29.

[3] CEQA Guidelines Section 15088 (B) (The written response shall describe the disposition of significant environmental issues raised (e.g., revisions to the proposed project to mitigate anticipated impacts or objections). In particular, the major environmental issues raised when the lead agency's position is at variance with recommendations and objections raised in the comments must be addressed in detail giving reasons why specific comments and suggestions were not accepted. There must be good faith, reasoned analysis in response. Conclusory statements unsupported by factual information will not suffice).

printed on recycled paper

(General Plan), and City Council Priorities components of The Ontario Plan;

2. The proposed Specific Plan, or amendment thereto, would not be detrimental to the public interest, health, safety, convenience, or general welfare of the City;
3. In the case of an application affecting specific property(ies), the proposed Specific Plan, or amendment thereto, will not adversely affect the harmonious relationship with adjacent properties and land uses; and
4. In the case of an application affecting specific property(ies), the subject site is physically suitable, including, but not limited to, parcel size, shape, access, and availability of utilities, for the request and anticipated development.

Similarly, ODC Section 4.01.025(D)(3)(b) provides that a General Plan Amendment is justified if the proposed General Plan Amendment would not be detrimental to the public interest, health, safety, convenience, or general welfare of the City.

Here, the Planning Commission lacks substantial evidence to find that the Project's approvals would not be detrimental to the public interest, health, safety, convenience, or general welfare of the City, due to the Project's unresolved environmental and public health impacts. To begin with, the Project's DEIR identifies significant and unavoidable impacts to agricultural resources, air quality, cultural resources, greenhouse gases, and transportation/traffic. And beyond the impacts identified in the DEIR, our comments on the DEIR identify potentially significant impacts that the City did not adequately disclose, analyze, or mitigate. These include impacts on air quality, public health, greenhouse gas emissions, energy, transportation, and biological resources. Since the City has not yet corrected the DEIR's flaws, there is substantial evidence demonstrating that the Project, as currently proposed, has several unmitigated significant impacts which preclude the findings required by the ODC. Until the errors and omissions in the DEIR are corrected, and additional mitigation is applied to the Project to further reduce significant impacts, the Planning Commission lacks the requisite substantial evidence to find that the Project's approvals would not be detrimental to the public interest, health, safety, convenience, or general welfare of the City.

The Planning Commission also lacks substantial evidence to find that the proposed Specific Plan will not adversely affect the harmonious relationship with

printed on recycled paper

adjacent properties and land uses.[4] The City's Staff Report and the DEIR acknowledge, in Impact 5.2-3, that the Specific Plan would not be harmonious with adjacent properties and land uses:

> Development of the City in accordance with TOP would increase the amount of nonagricultural land uses. When nonagricultural land uses are placed near agricultural uses, the odors, noises, and other hazards related to agriculture conflict with the activities and the quality of life of the people living and working in the surrounding areas. Consequently, conversion of agricultural uses in the city may cause farms and agricultural land uses outside the City to be converted to nonagricultural uses because of the nuisances related to agriculture. Impact 5.2-3 would remain significant and unavoidable. Therefore, a Statement of Overriding Considerations would be required.[5]

Since the DEIR identified this impact as significant and unavoidable, the Planning Commission is precluded from finding that the Project approvals will not adversely affect the harmonious relationship with adjacent properties and land uses.

III. The Planning Commission Cannot Make or Recommend Making the Requisite Findings to Approve the Tentative Parcel Map

The proposed Project includes a Tentative Parcel Map to allow for the development of an industrial and business park on approximately 219 acres. According to the ODC, a tentative parcel map shall be denied if one or more of the below listed findings cannot be clearly established:

1. The proposed map is consistent with the goals, policies, plans and exhibits of the Vision, Policy Plan (General Plan), and City Council Priorities components of The Ontario Plan, and applicable area and specific plans, and planned unit developments;
2. The design or improvement of the proposed subdivision is consistent with the goals, policies, plans and exhibits of the Vision, Policy Plan (General

[4] ODC Section 4.01.035(D)(4).
[5] Planning Commission Staff Report, File Nos. PGPA19-004 and PSP19-001 (January 25, 2022) pg. 23.

printed on recycled paper

Plan), and City Council Priorities components of The Ontario Plan, and applicable specific plans and planned unit developments;
3. The site is physically suitable for the type of development proposed;
4. The site is physically suitable for the proposed density of development;
5. The design of the subdivision or the proposed improvements are not likely to cause substantial environmental damage or substantially and avoidably injure fish or wildlife or their habitat;
6. The design of the subdivision or type of improvements are not likely to cause serious public health problems; and
7. The design of the subdivision or the type of improvements will not conflict with easements, acquired by the public at large, for access through or use of, property within the proposed subdivision.[6]

Here, due to the Project's significant and unavoidable impacts, and otherwise unresolved significant environmental impacts, the Commission cannot clearly establish all of the above findings at this time.

IV. The Planning Commission Cannot Make or Recommend Making the Requisite Findings to Cancel the Williamson Act Contracts

The Project would require the cancellation of several Williamson Act contracts. At the time of the publication of the Notice of Preparation, there was an active Williamson Act Contract (Contract #72-392) on APN 1054-051-01, 02 and 1054-061- 01, 02. A notice of nonrenewal was recorded for that contract, starting the process to terminate the contract. There are also several active Williamson Act contracts located within the SB330 Replacement Site. The DEIR states that "[o]nce development is proposed for the SB330 Replacement Site, a notice of non-renewal may be recorded, starting the process to terminate these contracts." The DEIR states that "[c]ancellation of any site will comply with provisions and requirements identified at Government Code (GC) §51280 et seq. [the Williamson Act]."[7] But the DEIR lacks substantial evidence to support this claim because the City will not be able to make the requisite findings to cancel the Williamson Act contracts. For the same reason, the Planning Commission is precluded from recommending the approval of this Project until these issues are resolved.

---

[6] ODC Section 4.02.095 (D).
[7] DEIR, pg. 4.1-5.

printed on recycled paper

In order to cancel a Williamson Act contract, cancellation must be (1) consistent with the purposes of the Act, or (2) in the public interest.[8] A cancellation of a contract is consistent with the Act if the decisionmaker makes all of the following findings:

> (1) That the cancellation is for land on which a notice of nonrenewal has been served pursuant to Section 51245.
> (2) That cancellation is not likely to result in the removal of adjacent lands from agricultural use.
> (3) That cancellation is for an alternative use which is consistent with the applicable provisions of the city or county general plan.
> (4) That cancellation will not result in discontiguous patterns of urban development.
> (5) That there is no proximate noncontracted land which is both available and suitable for the use to which it is proposed the contracted land be put, or, that development of the contracted land would provide more contiguous patterns of urban development than development of proximate noncontracted land.[9]

Cancellation of a contract is in the public interest only if the decisionmaker makes the following findings:

> (1) that other public concerns substantially outweigh the objectives of this chapter; and
> (2) that there is no proximate noncontracted land which is both available and suitable for the use to which it is proposed the contracted land be put, or that development of the contracted land would provide more contiguous patterns of urban development than development of proximate noncontracted land.[10]

For determining whether cancellation is consistent with the Act or in the public interest, the Act explains that "the uneconomic character of an existing agricultural use shall not by itself be sufficient reason for cancellation of the contract... The uneconomic character of the existing use may be considered only if there is no other reasonable or comparable agricultural use to which the land may be put."[11]

---

[8] Gov. Code Section 51282(a).
[9] Gov. Code Section 51282(b).
[10] Gov. Code Section 51282(c).
[11] Gov. Code Section 51282(d).

printed on recycled paper

Here, the DEIR puts forth one reason for cancelling the Williamson Act contracts on the Project site: their uneconomic character. The DEIR variously states:

> Ontario's future development emphasizes mixed-use, commercial, industrial, and residential projects rather than supporting the continuation of agricultural uses, which are becoming less economically viable;[12]
>
> Existing agricultural uses within the City are becoming economically unsustainable and represent land uses that are increasingly incongruous with continuing urbanization of the City;[13] and
>
> Economic viability of agricultural uses in the City has declined as a result of losing many of the necessary support services. Increasing urbanization, rising land values, and relatively high operational costs have also put City agricultural and dairy farming uses at a competitive disadvantage in regional markets. Ultimately, the long-term viability of agriculture within the City is limited due to the increasing land values, increased water costs, higher labor costs, higher property taxes, competition from other parts of the state, and the growing urbanization of the area.[14]

Since the DEIR makes it clear that the uneconomic character of the Williamson Act contracts is the sole reason for their cancellation, the Planning Commission is unable to make the requisite findings to cancel the contracts at this time.

Further, the Commission will not be able to find that cancellation is consistent with the purposes of the Act at this time because cancellation is likely to result in the removal of adjacent lands from agricultural use. The DEIR acknowledges that as the agricultural uses diminish, so too are the necessary support uses such as feed stores, agricultural equipment sales and rentals, and manure services. And the Planning Commission Staff Report states that conversion of agricultural uses may cause nearby agricultural uses to be converted to nonagricultural uses because of the nuisances related to agriculture. Thus,

---

[12] DEIR, pg. 4.1-3.
[13] DEIR, pg. 4.1-12 – 13.
[14] DEIR, pg. 4.1-13.

printed on recycled paper

cancellation will likely result in removal of adjacent agricultural lands without adequate mitigation, and is inconsistent with the purposes of the Act.

As a result, the City will not be able to make the requisite findings to cancel the Williamson Act contracts.

V. CONCLUSION

For these reasons, CARECA urges the Planning Commission to continue its recommendation hearing on the Project until a legally adequate Final EIR has been prepared for the Project which fully analyzes and mitigates the Project's potentially significant environmental and public health impacts. We thank you for the opportunity to provide these comments.

Sincerely,

Aidan P. Marshall

Project Title/File No: South Ontario Logistics Center Specific Plan EIR (PSP19-001/PGPS19-004)

Dear Planner Vaughn:

Thank you for the opportunity to provide comment on the subject project through the public hearing January 25 at 6:30 pm, with written comment due by noon that day.

I am writing as a resident of the neighboring city of Chino regarding the impacts of this massive warehouse proposal on current agricultural lands. The unavoidable significant impacts of this project on our region are of great concern. Our communities are already heavily impacted by logistics development and the diesel truck traffic involved.

Of primary concern is the poor air quality in our region, and the resulting public health impacts. Attached with this letter you will find a research report from April of 2021 about the impacts of logistics on warehouses and pollution. Also attached is a recent news article about the effects of growing up with smog. I hope you will take the time to review this information and consider the health of our communities as you review the DEIR for this project.

Here in the Inland Valleys, we are losing our rich agricultural heritage and open working lands. These lands sequester carbon, provide green spaces and storm water retention. The lack of vision by local politicians for preserving these lands for sustainable agriculture mixed with livable communities is disappointing. Local small farms, training in farming, open space improvements such as restoring native habitat, and residential communities mixed in could address so many issues we have in this community. Approving massive warehouses with all the problems they bring does nothing for the community.

Jobs that come with these projects are typically low paying, physically demanding jobs with no upward mobility. Many jobs are rapidly replaced through automation. Our workforce deserves better opportunities.

Vehicle Miles Traveled and greenhouse gas emissions contribute to climate change and our warming planet. Here in the Inland Valley, we are already experiencing hotter summers, cooler

winters, and drought conditions. Approving this project increases local VMT and spews diesel and gas emissions throughout our communities.

Attached you will also find the California Attorney General's Warehouse Best Practices and Mitigation Measures to Comply with CEQA. I hope you will consider these best practices as you review this project. You will also find attached the recent settlement regarding the World Logistics Center project in Moreno Valley. Please note the many mitigations that developers and city officials agreed to for this project and incorporate them into your planning.

As a resident of the adjoining City of Chino, I strongly urge you to pause approvals for warehouse projects in Ontario. Invoke a moratorium on all current and future warehouse projects while the Planning Commission, your City Planners, and your City Council educate themselves on the harmful impacts of these projects.

Thank you for your attention to my concerns and this information.

Sincerely,

Mary Ann Ruiz

Growing up with smog leads to health issues

Researchers say those living in regions with high levels of air pollution suffer from lifelong problems

By Claudia Boyd-Barrett
Correspondent

Amparo Miramontes and her husband thought they'd found the perfect place to raise a family when they moved with their baby daughter from Burbank to Fontana in 2010. They bought a spacious, fivebedroom home for a fraction of the cost of anything equivalent in the San Fernando Valley. The neighborhood was safe, rural and friendly. They barely noticed the nearby landfill and the small but growing collection of online shopping warehouses.

Then they started getting sick. Miramontes was constantly wiping mucus from her daughter's nose and taking her to the pediatrician's office to be treated for respiratory infections. Allergies, the doctor said.

Within a couple of years, Miramontes herself was struggling to breathe. At 34, she was diagnosed with asthma, even though she had no history of the condition. When she became pregnant with her second child in 2013, the doctors induced the baby four weeks early because Miramontes' oxygen levels were dangerously low. Her newborn son also had breathing difficulties.

"Finally I started asking the question: What could cause this?" Miramontes said. "I talked to the doctor about it and he told me there was something called PM 2.5 (referencing fine particulates in smoggy air), and that it was linked to a lot of symptoms they were seeing all over the world for kids exposed to high pollution levels."

Researchers have known for decades that air pollution is bad for people's health, but only recently have they begun to understand the full extent of the danger. Babies and young children are especially at risk from toxins

SMOG»PAGE7

Kevin and Amparo Miramontes, with their children Ari, 12, Lucas Orion, 8, and Echo their dog, stand near an industrial park and landfill across the freeway and less than a mile from their home in Fontana on Dec. 12.
PHOTOS BY MINDY SCHAUER — STAFF PHOTOGRAPHER

Homes and industrial buildings closely coexist in the Southridge Village area of Fontana. Community members began a coalition in an effort to prevent the city from allowing more warehouses to be built.

Smog

FROM PAGE 1

in the air because their bodies are still developing, and they breathe in proportionally more air than adults. New research suggests that growing into adulthood in smoggy communities can result in permanent, life-altering damage.

An ongoing study of more than 12,000 school children by USC found that those exposed to high levels of air pollution had smaller and more unhealthy lungs by the time they reached adulthood than did those who breathed cleaner air. Now, researchers are looking into the possibility that early exposure to smog might even alter DNA, possibly harming subsequent generations.

Stanford University researchers recently discovered that breathing dirty air alters gene expression in young children in a way that could predispose them to heart disease as adults. A growing number of studies have linked early exposure to air pollution to other, potentially life-long ills including obesity, developmental delays, ADHD, autism, preterm birth and birth defects.

"There's just an enormous body of evidence that suggests these early windows of exposure" affect children's health, said Tracy Bastain, an associate professor in the Department of Population and Public Health Sciences at USC's Keck School of Medicine.

"Air pollution impacts can be (felt) across the lifespan and these early periods, especially prenatal periods when the fetus is developing, and during the early childhood periods ... are particularly sensitive."

Children in the Inland Empire are among those at highest risk.

The region is the smoggiest in the nation, according to the American Lung Association. Specifically, San Bernardino and Riverside counties rank among the top 10 counties in the United States for year-round particle pollution, a precursor to smog that includes PM 2.5, or particulate matter 2.5 — tiny, airborne droplets that penetrate deep into the lungs and are linked to increased rates of respiratory illness, heart disease and premature death.

The problem has worsened in San Bernardino County since about 2015 when air pollution levels started ticking up after years of decline. Riverside County has fared better, but the number of high ozone days also has been trending upward. Both counties received a "Fail" grade for air quality in the American Lung Association's most recent State of the Air report.

Now, some parents in the Inland Empire are sounding the alarm. They say their kids are battling asthma, persistent nosebleeds and other ailments that studies show can be linked to air pollution.

Many believe the recent drop in air quality is the result of an explosion in online shopping warehouses and logistics led by retail giant Amazon, a trend that is driven by soaring consumer demand for home-delivered goods. The new industry has brought heavy truck and freight traffic off the freeways and into communities such as Fontana and San Bernardino. That's on top of the region's existing geographic and topographic challenges, particularly its location beside several mountain ranges, which results in the accumulation of pollution that originates in coastal areas such as LosAngeles and Orange counties.

Many researchers say climate change is almost certainly playing a role in the new wave of pollution. Hotter temperatures combined with traffic exhaust creates ideal conditions for the formation of smog. Climate change also is making wildfires more

common and bigger, creating longer periods of elevated smoke in the region's air — another reason behind the downturn in local air quality.

Dr. Afif El-Hasan, a San Juan Capistrano pediatrician and a spokesperson for the American Lung Association, said people should be "extremely concerned" about pollution levels in the Inland Empire and the risks to children living there. In the short-term, air pollution inflames children's airways and affects their ability to fight off infection, leading to more frequent asthma attacks and respiratory illnesses. In the long-term, he said, those children are more likely to develop heart disease, cancer, emphysema and other health problems as adults.

"If you're basically condemning these children to reduced lung capacity for their lives and not giving them healthy air to breath, they're going to have problems later on, whether it's going to be directly in the lungs or in another part of their bodies," El-Hasan said.

Unless action is taken to clean the region's air, he said, "it is going to affect the allocation of resources later on, when all of these kids whowere exposed to all this air pollution become very sick and require expensive treatment."

Dr. Brett Cherry, an allergist and immunologist at Riverside Medical Clinic, often sees patients, including children, with allergy symptoms such as itchy eyes or a constantly runny nose who test negative for typical allergens such as pollen and pet dander. What they're actually reacting to, Cherry said, is polluted air.

"Sometimes they joke that my prescription should be, 'move to the beach.'" Instead, Cherry advises them to stay indoors when the air is particularly bad, run air conditioning to filter the air whenever possible, and be aware of anything that triggers their symptoms. In some cases where this doesn't help, he prescribes medications.

Among Cherry's older patients are people who grew up in the region during the 1960s and '70s, when air pollution in the Inland Empire was far worse and smoking was more prevalent. Many of those patients have dealt with allergies and asthma since they were children; some now battle chronic lung disease. To them, the air quality these days — even with the recent retrenchment — isn't bad by comparison, Cherry said. But to him, he said, the region's air is concerning, particularly with the recent increase in wildfires and smoke.

Indoor summer

Leonardo Barrera can't write his name or tie his shoes but, at age 3, he's a pro at using his inhaler.

His mother, Roxana Barrera, said he's suffered breathing difficulties most of his short life and that she and her husband keep him inside when outdoor air poses a risk. But last summer, she said, there were so many smoggy days in their San Bernardino community that Leonardo was kept indoors pretty much all the time.

"It's hard to tell a kid not to run. He just wants to run everywhere. He wants to be wild and free," she said. "I worry that when he's older he's still going to have these issues. He's still going to have to use an inhaler."

The Barrera family lives close to dozens of logistics center warehouses and the San Bernardino BNSF Railyard, one of the biggest and busiest logistics hubs in California. Trucks constantly rumble up and down the nearby roads; Barrera recently counted 30 semi-trailers at the intersection nearest her home in the time it took the light to turn green.

Young Leonardo isn't alone in his battle to breathe. Many other kids in the neighborhood, Barrera noted, seem to have asthma and respiratory problems.
A 2015 study of elementary school children in Barrera's community confirms what she's noticed anecdotally.
Lead researcher Rhonda K. Spencer-Hwang at the Loma Linda University School of Public Health said she was surprised and angered to discover that children living in Barrera's neighborhood were much sicker than kids who went to school just 7 miles away. The problem has likely worsened since the study was conducted, given the increase in air pollution, she said. And while children across the Inland Empire are exposed to bad air quality, Spencer-Hwang said those living closest to key sources of pollution, such as the railyard, are hurt the most.
Referencing children in the study, she said breathing the polluted air "impacted their ability to blow out."
In surveys, the parents reported significantly more asthma among their kids and that they thought "a chronic cough was normal, like a smoker's cough, because they all had it."
Dr. Barbara Ariue, a pediatric allergist with Loma Linda University Children's Hospital, said this trend plays out among the young patients she sees.
Babies and children from low-income neighborhoods like Barrera's are more likely to live near transportation hubs and busy roads and endure respiratory problems as a result. Those families often don't have air conditioning or can't afford to run it, so they open windows when it gets hot, inviting dirty air into their homes and inadvertently, their children's lungs.

Parents take action

Liz Sena, a nurse's assistant and mother of two young children, had long been bothered by two related issues: South Fontana's bad air quality and the number of warehouses popping up in the community.
Isolated at home during the pandemic, Sena began chatting with other residents on Facebook and realized she wasn't alone with her concerns. Many residents complained about the local haze, a condition in which the air is so thick they couldn't see the nearby San Bernardino Mountains. They shared posts about frequent headaches and shortness of breath and about how their kids repeatedly suffered nosebleeds or seemed to need more and more asthma medication.
"I realized that this is real. If so many of us are sharing the same stories … this isn't just happening to one or two people," Sena said. "We started to say, 'How do we do something about this?'" So Sena and like-minded residents formed the South Fontana Concerned Citizens Coalition. The group attends City Council and Planning Commission meetings, seeking stricter regulation of warehouse development and air quality and calling for a reduction in truck traffic and more investment in parks and green spaces. They've protested against warehouse projects near homes and schools.
Their actions and those of other environmental and community activists in the region have garnered some results.
In July, state Attorney General Rob Bonta filed a lawsuit against Fontana following the city's approval of a nearly 206,000-square-foot warehouse project by Duke Realty Corp., arguing that the city failed to properly review and mitigate environmental

concerns. Last year, the South Coast Air Quality Management District board, which regulates air quality in the region, approved a landmark rule that will require large warehouse operations — those 100,000 square feet or more — to reduce their impact on air quality by transitioning to electric trucks or installing solar panels, among other measures.

Dr. Sarah Rees, deputy executive officer for planning and rule development at the South Coast Air Quality Management District, said the rule is expected to reduce air pollution in communities near warehouses and transportation corridors. The California Air Resources Board also recently took unprecedented action to reduce emissions from trucks.

But Rees said more change will be required from the federal government to bring down emissions enough to improve air quality and community health. More than 80% of the emissions that form smog come from mobile sources and most of those are from heavy-duty trucks, as well as ships and locomotives, Rees said.

"We're working hard to partner with (the Environmental Protection Agency) and other entities in the federal government to make them understand the urgency ... so that they can help us work together to clean up the air," she said.

Still, some parents worry change won't be big enough, or happen fast enough, to protect their kids and undo damage that's already happened.

Ana Gonzalez, a Rialto resident and executive director of the Inland Empire- based Center for Community Action and Environmental Justice, said parents fear their kids won't live as long because of the poor air quality. She said her own son was recently diagnosed with asthma at age 15, three years after developing severe bronchitis and pneumonia.

"You almost feel guilty for living in an area where you're putting your own kids, you're exposing them to this danger," she said. "But when you're a single parent that's all you can afford."

Meanwhile, Amparo Miramontes said she and her husband have done what they can to counter the air pollution around them. They've installed air filters throughout their home, bought new windows to keep the dust out and added purifying plants. They send their kids to school in Upland, where the air is cleaner, and take them to swimming lessons at an indoor pool. It's helped, she said. But her son, who is now 8, still gets nosebleeds two to three times a week and has asthma. He also recently was diagnosed with autism.

Many others, particularly in low-income neighborhoods like Barrera's, can't afford to take the same measures as Miramontes and her family. About 15% of Inland Empire residents lived in poverty as of 2019, according to the Public Policy Institute of California and more than 40% struggle to make ends meet.

Miramontes said she wants health officials to test children in the area for air pollution exposure. She wants warehouse operators to fund indoor recreation centers for kids so they can play in clean air. And she'd like to see commercials on TV explaining what PM 2.5 is and why it's dangerous.

"I can't stay silent. I feel like we all have a responsibility to take care of each other," she said. The warehouses and pollution are "costing us our health. And the very people that are going to have to pay are the kids."*Claudia Boyd-Barrett reports for*

The Center for Health Reporting at USC's Schaeffer Center for Health Policy and Economics. This report was supported by a grant from First 5 L.A.

Homes and industrial buildings closely coexist in the Southridge Village area of Fontana on Dec. 12. Experts say air pollution in the Inland Empire has dramatically increased since 2015.

To: [redacted]

Good Evening my name is Patrick Haninger and I'm with the Golden State Environmental Justice Alliance. Our organization submitted a comment letter regarding the DEIR. Our comment letter Identified several deficiencies with the DEIR. Additionally we submitted a letter to the Planning Commission with analysis of the project area using models from CalEnviroScreen as well as additional commentary regarding Proposition 70 land analyzed in the DEIR.

The Comment Period for the Draft EIR ended less than 30 days ago, this project is already before you tonight and is tentatively scheduled to be heard before the City Council in just a few short weeks.

The City of Ontario Planning Commission in good conscience should delay a vote to recommend approval or denial of this project to the City Council until such time as the Final EIR has been made public which includes all responses to comment letters submitted to the Draft EIR.

Further, the citizens of Ontario as well as the state of California deserve full transparency regarding this project and the Prop 70 land that is involved.

During these turbulent times, we as citizens expect and deserve our local government's elected and appointed officials to protect us from environmental and social injustice, to aid in the preservation and rehabilitation of the environment in which we all share, and to ensure accountability and responsibility in regard to the environmental decisions they may make. If you choose to take a vote tonight and move this project forward We stand by our comment letter and believe the DEIR is flawed and must be redrafted and recirculated for public review. In closing we call on this commission to be a leader on the aforementioned issues and be the first line of defense for our citizenry and environment. Only by working together can we continue to be excellent stewards of our environment, outstanding stewards to our citizens and each other. Thank you.

CalEnviroScreen 4.0 Information

CalEnviroScreen is a mapping tool that helps identify California communities that are most affected by many sources of pollution, and where people are often especially vulnerable to pollution's effects. CalEnviroScreen uses environmental, health,and socioeconomic information to produce scores for every census tract in the state. The scores are mapped so that different communities can be compared. An area with a high score is one that experiences a much higher pollution burden than areas with low scores. CalEnviroScreen ranks communities based on data that are available from state and federal government sources. CalEnviroScreen is updated and maintained by The Office of Environmental Health Hazard Assessment, on behalf ofthe California Environmental Protection Agency.

CalEnviroScreen Data on South Ontario Locistics Project EIR Location/Area

The above listed project sits in census tract 6071001903. Overall, when compared to other census tracts, the project site census tract is in the 72nd percentile regarding pollution. As far as pollution burden is concerned, this census tract is in the 99th percentile. This data means only 1 percent of census tracts in the entire state of California have a worse pollution burden on its residents. In terms of Ozone, this census tract is in the 77th percentile, Particulate Matter 2.5 93rd percentile, Diesel Particulate Matter 57th percentile, Toxic Releases 68th percentile and Traffic 18th percentile.

CA Proposition 70

California Proposition 70 (Wildlife, Coastal, and Park Land Conservation Act of 1988) was passed by California voters on the June 7, 1988 statewide primary ballot as an initiated state statute.

Proposition 70 authorized a $776 million general obligation bond to provide funds for the "acquisition, development, rehabilitation, protection, or restoration of park, wildlife, coastal, and natural lands in California including lands supporting unique or endangered plants or animals."

The intent of CA Prop 70 was to provide taxpayer funds to local agencies and non profit organizations for the preservation of park, wildlife, coastal, and natural lands within the state of CA in perpetuity.

CA Proposition 70 as related to South Ontario Logistics Center Project

Section 5907 (b) (3) (F) states the following:

(b)"Three hundred thirty-eight million seven hundred thousand dollars ($338,700,000) to the Department of Parks and Recreation for acquisition of parklands, wildlife habitat, coastal, and natural lands in California, and for grants to local agencies and nonprofit organizations, including an amount not to exceed five million eighty thousand five hundred dollars ($5,080,500) for state administrative costs, in accordance with the following schedule:

(3) One hundred eighty-five million four hundred thousand dollars ($185,400,000) to the Department of Parks and Recreation for grants to local agencies in accordance with the following schedule:
(F) Twenty million dollars ($20,000,000) for a grant to the County of San Bernardino for acquisition of land primarily through the use of conservation easements within the Chino Agricultural Preserve."

As related to the South Ontario Logistics Center Project, there are 8 APN's (Assessor's Parcel Number) listed below that are part of this project. The first set of numbers is how the APN's appear in the DEIR and in parenthesis is how they appear when searched on the County of San Bernardino's Parcel Search Tool.

1054-051-01 (1054051010000)
1054-051-02 (1054051020000)
1054-061-01 (1054061010000)
1054-061-02 (1054061020000)
1054-251-01 (1054251010000)
1054-251-02 (1054251020000)
1054-301-01 (1054301010000)
1054-301-02 (1054301020000)

A records search reveals these 8 APN's are owned by the County of San Bernardino, C/O Southern California Agricultural Land Foundation (SCALF). This land was likely acquired with money allocated to the County of San Bernardino by Proposition 70 for the purpose of preserving its use as Agricultural Land in perpetuity. SB 1124 authorized the sell or exchange of the originally acquired properties purchased with Proposition 70 funds, with the condition that the County of San Bernardino preserve all lands and conservation easements acquired as the replacement properties in perpetuity for agricultural preservation, including agricultural and wildlife education or wildlife habitat, or for open space and conservation.

Due to the ownership of these 8 parcels by the County of San Bernardino as well as the convoluted nature of the source of funding and legislation used by the County to acquire these lands GSEJA questions why they are included in this entitlement process at all.

GSEJA is concerned that changing the land use zoning on agricultural land which was to be preserved by the county of San Bernardino in perpetuity, will be of great detriment to the citizens of the City of Ontario as well as the State of California.

Conclusion

Consider the above referenced information when making this important decision. Realize that you and the citizens of this area face some of the WORST POLLUTION BURDEN in the entire state of California.

Additionally, as an informational document to the public and decision makers, (City of Ontario Planning Commission and City Council) the Draft EIR is flawed. The City of Ontario Planning Commission in good conscience should delay a vote to recommend approval or denial of this

project to the City Council until such time as the Final EIR has been made public which includes all responses to comment letters submitted to the Draft EIR.

Further, the citizens of Ontario as well as the state of California deserve full transparency regarding the lands purchased with taxpayer funds and how said lands and funds are being utilized for their intended intentions.

It is the responsibility of the City's elected and appointed officials to make environmentally responsible development decisions. Based on the CalEnviroScreen data, this is more than sufficient evidence of the further air quality impacts that the citizenry of Ontario and its surrounding area will continue to encounter with further development of another warehouse/distribution center. We are not against development, as we believe it is necessary for further economic growth in our current society. Development needs to be conducted with the highest of expectations to ensure the local population does not suffer further air quality burdens.

We stand by our comments and believe the EIR is flawed and needs to be redrafted and recirculated for public review.

Respectfully Submitted,

Patrick Haninger

GSEJA

Glossary of Terms

Ozone - Amount of daily maximum 8-hour Ozone concentration

Particulate Matter 2.5 - Annual mean PM 2.5 concentrations

Diesel Particulate Matter - Diesel PM emissions from on-road and non-road sources

Toxic Releases - Toxicity-weighted concentrations of modeled chemical releases to air from
facility emissions and off-site incineration.

Traffic -Traffic density, in vehicle-kilometers per hour per road length, within 150 meters of the census tract boundary.

From: Angela Miramontes [redacted]
Sent: Tuesday, January 25, 2022 11:24 AM
To: Planning Director
Subject: South Ontario Logistics Center - Public Comment (meeting 1/25 @ 6PM)

My name is Angela Miramontes, Chair of Civic Engagement, League of United Latin American Citizens (LULAC) LULAC de Ontario and lifelong resident of the City of Ontario. This is notification that I, along with a number of individuals, community leaders, community organizations, and environmental groups are adamantly opposed to the Planning Commission's approval of the South Ontario Logistics Center (Agenda
Item C-3).

On behalf of the residents and citizens of the Ontario community, I request that you take action to deny the approval of the South Logistics Center - "totaling 219.39 acres in the City of Ontario. The development proposes 8 warehouse buildings, totaling a maximum
development of 5,333,518 square feet of warehouse and office use." As planning
commissioners, you need to recognize that the Ontario community is opposed to this Logistics Center and other warehouse projects based on the findings of the Draft Environmental Impact Report (DIR). These findings from the Draft EIR (PSP19-001) examines the potential environmental impacts as a result of this project which includes the following: Air quality, biological
resources, agricultural resources, cultural resources, Greenhouse gas emissions, noise, health impacts,, transportation, Tribal Cultural Resources and utilities. This project will have significant and unavoidable impacts pertaining to violations of
laws on the Federal, State and local levels which includes:
4.1.7. - The Project would convert Prime Farmland to urban development, and it would conflict with existing Williamson Act contract lands. This unavoidable significant impact is consistent with findings of the City's TOP EIR, which implemented the interim Agricultural Overlay District in anticipation of future development for the site. Even with implementation of regulatory requirements, standard conditions of approval, and consideration of mitigation, the Project would result in significant and unavoidable
impacts.
4.3.1 - A total of 47 sensitive species of plants and 59 sensitive species of animals have the potential to occur on or within the vicinity of the Project area. These include those species listed or candidates for listing by the United States Fish and Wildlife Service
(USFWS), CDFW and California Native Plant Society (CNPS). A total of 17 plant species have the potential to exist on site. These species are listed as state or federally Threatened or Endangered. These species include: Tricolored blackbird, Grasshopper sparrow, Great blue heron, California glossy snake, Burrowing owl, Swainson's hawk,
and Western pond turtle. While the Western Burrowing Owl (BUOW) is not protected by state or federal endangered species acts, the possession or destruction of individual
BUOW, their nests and/or eggs is prohibited under California CDFW Code §3503, 3503.5 and 3513, as well as the federal Migratory Bird Treaty Act of 1918 (MBTA) (16 U.S.C. 703-711). Under CEQA, goals would consist of measures that would avoid, minimize and mitigate impacts to a less than significant level. For individual projects, mitigation must be roughly proportional to the level of impacts, including cumulative
impacts, in accordance with the provisions of State CEQA Guidelines §15126.4(a)(4)(B),§15064, §15065, and §16355. If it were later determined that active nests would be lost as a result of site preparation, it would be in conflict with these regulations, and could also be considered a significant impact under CEQA without mitigation. In order to
avoid violation of the MBTA and CDFW Code requirements, CDFW guidelines 1995 and 2012 suggest that project-related disturbances at active nesting territories be reduced or
eliminated during the BUOW nesting/breeding cycle (typically February 1 to August 31).

4.4.7 - The Project site consists of the Borba main house, the manager's house, the Boersma house, the Borba main dairy barn/milking parlor, the Borba auxiliary dairy barn/milking parlor, the Boersma dairy barn/milking parlor, four single-family residences, an older barn, and structures associated with a dairy farm operation.
Consistent with the direction provided by the City, the assessment of the Project site's historical resources found significance forthe Borba main house and the Boersma House and the associate dairy as they are recognized likely eligible for listing on the local
inventory. This unavoidable significant impact is consistent with findings of the City's TOP EIR, which implemented the interim Agricultural Overlay District in anticipation of future development for the site. Even with implementation of regulatory requirements, standard conditions of approval, and consideration of mitigation, the Project would result in significant and unavoidable impacts
4.6.6 - Implementation of the proposed Project would result in net annual emissions that exceed the GHG emissions significance threshold of 3,000 MTCO2e/yr under the
City's CAP. Therefore, Project-related GHG emissions and their contribution to global climate change would be cumulatively considerable, and GHG emissions impacts would
be significant. 4.6.6 Significant Unavoidable Impacts Even with implementation of regulatory requirements, standard conditions of approval, and reasonable and feasible
mitigation, the Project would result in significant and unavoidable impacts with respect to consistency with GHG plans and GHG emissions, on an individual and cumulative basis.
4.13.7 - Cumulative traffic impacts at Project Buildout are estimated to exceed the City's adopted VMT threshold. Regardless of potential reductions in VMT through feasible TDM measures, as future Project design features and building tenants are not yet
known, reductions in VMT related to TDM measures cannot be accurately estimated or guaranteed. Even with implementation of regulatory requirements, standard conditions
of approval, and consideration of mitigation, the Project would result in significant and unavoidable impacts. In order to be able to make sensible decisions which include participation of Ontario community organizations, residents,and citizens, we call on you to support a moratorium on the proliferation of warehouses in Ontario. This is the most critical issue
that the voters will address in the Ontario City Council Elections in November 2022.

Your decision to deny the South Logistics Center project will be the first step towards protecting Ontario Air quality, biological resources, agricultural resources, cultural resources, Greenhouse gas emissions, noise, transportation, Tribal Cultural Resources
and utilities, as well as, the health and quality of life of Ontario residents.

Thank you,

Angela Miramontes

Correction to include agenda Item number RE: South Ontario Logistics Center (Agenda Item C.3)

On Jan 25, 2022, at 7:04 AM, Anthony Noriega [redacted] wrote:

Public comments submitted to the Ontario Planning Commission by Anthony Noriega, at 6:57 am on 25 Jan 2022. RE: South Ontario Logistics Center (Agenda Item C.3)

My name is Anthony Noriega, Director District 5, League of United Latin American Citizens (LULAC) LULAC de Inland Empire. This is notification that I, along with many of your constituents, community leaders, community organizations, and environmental groups are adamantly opposed to this project and to the continued proliferation of warehouses in Ontario.

On behalf of the residents and citizens of the Ontario community, I ask that you reject the South Ontario Logistics Center project. As Planning Commissioners, you need to recognize that the Ontario community is opposed to this project and others

As Planning Commissioners, each of you plays a critical role relative to land use, urban design, and the quality and sustainability of the built environment. Your team focuses on development that enhances economic value, quality of life, and complete community. However, as is evident in this project and other warehouse projects, you support the business developers and expansion of warehouses without regard for the negative impact on the health and safety of the entire community, including our existing neighborhoods. You ignore quality of life and potential for rewarding and sustainable jobs.

Your past decisions have failed to protect our health, safety, and quality of life in existing neighborhoods, to the detriment of residents here and in the larger community. The increased impacts on air quality, noise, truck traffic and

public health that will be caused by this warehouse project and others is magnified if you move forward with this project.

Ontario residents, as well as the surrounding communities, already suffer from these impacts. The promise of good jobs is an empty promise, as most of the jobs provide by these large logistics projects are filled through temp agencies with low pay; and even if hired by the logistics company, worker health and safety are not priorities. Many, if not most, of these jobs will disappear as warehouses are further automated.

In order to be able to make sensible decisions which include participation of Ontario community organizations, residents, and citizens, we call on you to support a moratorium on any additional warehouse logistics projects in Ontario, including those that are currently going through CEQA approvals. . This is a critical issue that the voters will address in the Ontario City Council Elections in November 2022. Your decision to deny the the South Logistics Center project will be the first step towards protecting the Ontario Air Quality and the Ontario community.

To: Planning Director
Subject: Comments for Public Hearing Item "C" South Ontario Logistics Center

Good Evening, Planning Commission Chair Gage and Commissioners Anderson, Dean, DeDiemar, Lampkin, Ricci, and Willoughby:

My name is Lois Sicking Dieter. I am a 30 plus year resident of the Inland Valley, an air pollution engineer, and member of the LULAC de Ontario Coalition for Clean Air (LOCCA).

I am speaking in opposition to the South Ontario Logistics Center approvals and ask you to vote "No" on the actions listed under Public Hearing Item C. The Proposed Project for the South Ontario Logistics Center is before you to allow 9 Warehouse/Logistics Center buildings of a total 5.3 million sq ft on 219 acres of currently agricultural land to be rezoned to industrial and business park use.

Ontario residents and I ask you to "No" vote on the certification of the Final Environmental Impact Report (EIR), deny the adoption of a Mitigation Monitoring and Reporting Program, reject the Statement of Overriding Considerations, with an associated denial of the General Plan Amendment (File No. PGPA19-004) to modify the Policy Plan (General Plan) Land Use Plan (Exhibit LU-01), and deny changing the land use designation on 219 acres of agricultural land to industrial /business park land, vote "No" to Specific Plan (File No. PSP19-001 – South Ontario Logistics Center Specific Plan).

This request to vote "No" is based on several aspects to include unavoidable significant environmental impacts identified in the EIR as Agricultural Resources, Air Quality, Historic Resources, Greenhouse Gas Emissions, and Vehicles Miles Traveled. The Mitigation Monitoring and Reporting Program proposed to mitigate these environmental impacts is inadequate and falls short of true mitigation. Staff provides a Statement of Overriding Considerations as a remedy for those aspects that have "unavoidable" significant environmental impacts.

We also have concerns regarding the evaluations for Agricultural Resources, Land Use and Planning, Air Quality, Noise, Biological Resources, Population/Housing (where 157 acres were zoned for low to medium residential unit of the 219 acres now proposed for industrial warehousing and logistics center), and Hydrology/Water Quality. Several appear to warrant designation as having a "significant environmental impact." In the big picture, I ask you, are these EIR elements and staff recommendations defensible if challenged?
In the near future, despite the vote outcome this evening, the South Ontario Logistics Center proposal will go to the City Council for review and a vote. In the meantime, we will continue our review and will provide detailed and substantive comments.

In summary, based on the above stated issues, concerned Ontario residents and I ask you to vote "No" on all proposals, to deny certification of the EIR, deny the adoption of a Mitigation Monitoring and Reporting Program, reject the Statement of Overriding Considerations, with an associated denial of the General Plan Amendment PGPA19-004 and deny changing the land use designation from agricultural land to industrial /business park land, and vote "No" on the Specific Plan PSP19-001 for the South Ontario Logistics Center Specific Plan.

Thank you for your time and consideration.
Lois Sicking Dieter, LOCCA Member, Upland, CA, [redacted] Jan 25, 2022

Subject: Agenda #C planning hearing 1/25/2022

My name is Randy Wetmur a proud member of Ironworkers local 416. Myself and the local skilled and Trained Union members that live in the community do not support this project. It doesn't benefit the community, just the developers pocket. We need a project that will be considerate to the community and the skilled and trained workforce that lives in it, not the untrained workers that will be coming from outside of the city, county, or state. Please VOTE NO!!!
Thank You

Randy Wetmur

Honorable Mayor of the City of Ontario
City Council Members of the City of Ontario Members of the City of Ontario Planning Commission City Hall
303 East "B" Street
Ontario, California 91764

Re: Ontario Ranch Business Park Specific Plan (SCH Number: 2019050018)

Dear Honorable Mayor and Members of the City Council and Planning Commission:

On behalf of Golden State Environmental Justice Alliance, a California not for profit corporation ("GSEJA"), which submitted a comment letter dated December 16, 2021, in regard to the South Ontario Logistic Center Specific Plan, SCH Number: 2021010318 ("Project"), we hereby formally withdraw GSEJA's December 16, 2021 comment letter and its objections to the above-referenced Project. GSEJA no longer opposes the Project and instead now supports the Project.

Sincerely,

DocuSigned by:
Joe Bourgeois

CITY OF ONTARIO PLANNING DEPARTMENT

PLANNING COMMISSION STAFF REPORT

January 25, 2022

303 East B Street, Ontario, California 91764 Phone: 909.395.2036 / Fax: 909.395.2420

FILE NOS: PGPA19-004 and PSP19-001

SUBJECT: A public hearing to consider certification of the South Ontario Logistics Center Specific Plan Final Environmental Impact Report (State Clearinghouse No. 2021010318), including the adoption of a Mitigation Monitoring and Reporting Program and a Statement of Overriding Considerations, for the following: 1) A General Plan Amendment (File No. PGPA19-004) to modify the Land Use Plan (Exhibit LU-01) of the Policy Plan (General Plan) of The Ontario Plan to change the land use designations on 219.39 acres of land, from 157.06 acres of Low-Medium Density Residential (5.1-11 dwelling units per acre) and 62.36 acres of Business Park (0.6 FAR) to 184.22 acres of Industrial (0.55 FAR) and 35.17 acres of Business Park (0.6 FAR), and modify the Future Buildout Table (Exhibit LU-03) to be consistent with the land use designation changes; and 2) a Specific Plan (File No. PSP19-001 – South Ontario Logistics Center Specific Plan) to establish the land use districts, development standards, design guidelines, and infrastructure improvements for the potential development of up to 5,333,518 square feet of Industrial and Business Park land uses. The Project site is generally bordered by Eucalyptus Avenue on the north, Merrill Avenue on the south, existing right-of-way for the future Campus Avenue extension to the west, and Grove Avenue to the east. Submitted by Grove Land Venture, LLC. City Council action is required.

PROPERTY OWNERS: Pocamo, LLC; George Borba Family Trust; George Borba, Jr., County of San Bernardino, Rudy Haringa Trust, Gerben Hettinga

---

RECOMMENDED ACTION: That the Planning Commission consider and adopt the following:

(1) The resolution recommending the City certify the South Ontario Logistics Center Specific Plan Final Environmental Impact Report (State Clearinghouse No. 2021010318), including the adoption of a Mitigation Monitoring and Reporting Program and Statement of Overriding Considerations;

(2) The resolution recommending the City Council approve the General Plan Amendment (File No. PGPA19-004) pursuant to the facts and reasons contained in the staff report and attached resolution; and

(3) The resolution recommending the City Council approve the South Ontario Logistics Center Specific Plan (File No. PSP19-001) pursuant to the facts and reasons contained in

Case Planner:	Alexis Vaughn

the staff report and attached resolution, and subject to the conditions of approval contained in the attached departmental reports.

Figure 1: Project Location

PROJECT SETTING: The Project site is comprised of 219.39 acres of land located within the Ontario Ranch area annexed into the City of Ontario on November 30, 1999. The Project site is bounded by Eucalyptus Avenue on the north, Merrill Avenue on the south, the existing right-of-way for the future Campus Avenue on the west, and by Grove Avenue on the east, within the SP/AG (Specific Plan/Agricultural Overlay) zoning district, and is depicted in Figure 1: Project Location, above. The Project site is currently occupied by agricultural uses, including dairy farms and row crops, several residential structures, and vacant land that was previously used for agriculture. The site is moderately flat, sloping from northeast to southwest, with an approximate 17-foot drop in elevation from the northeast corner to the southwest corner of the Specific Plan area. There is an active Williamson Act Contract (Contract #72-392) on APNs 1054-051-01, 1054-051-02, 1054-061-01, and 1054-061-02; however, a notice of non-renewal was recorded, starting the process to terminate the Contract. Cancellation will comply with provisions and requirements identified in Government Code Section 51280 et seq. The City will be required to make the statutory findings, and the landowner will be required to pay the requisite cancellation fee. The existing surrounding land uses, zoning, and general plan

and specific plan land use designations are summarized in the "Surrounding Zoning & Land Uses" table located in the Technical Appendix of this report.

PROJECT ANALYSIS:

(1) Background — The Ontario Plan ("TOP") Policy Plan (general plan) provides the basic framework for development within the 8,200-acre area commonly referred to as Ontario Ranch. The Policy Plan requires City Council approval of a Specific Plan for new developments of 10 acres or more within Ontario Ranch. A Specific Plan is required to ensure that sufficient land area is included to achieve cohesive, unified districts and neighborhoods. Additionally, a Specific Plan is required to incorporate a development framework for detailed land use, circulation, infrastructure improvements (such as drainage, sewer, and water facilities), provision for public services (including parks and schools), and urban design and landscape standards.

(2) General Plan Amendment (File No. PGPA19-004) – The South Ontario Logistics Center Specific Plan serves to implement the City's Policy Plan for the Project site and provides regulations for development of the Project site, including the establishment of allowed land uses, development standards, infrastructure requirements, and implementation requirements for the development of approximately 219.4 acres within the Specific Plan boundaries. In order to implement the Specific Plan land use plan as shown in Figure 3: Specific Plan Land Use Plan, the Project includes a General Plan Amendment ("GPA") to change the land uses designated Low-Medium Density Residential (5.1-11 dwelling units per acre) and Business Park (0.6 Floor Area Ratio (FAR)), to Business Park (0.6 FAR) and General Industrial (0.55 FAR). The GPA will facilitate the potential development of up to 5,333,518 square feet of General Industrial and Business Park development. The amendment includes changes to Policy Plan Exhibit LU-01, Official Land Use Plan (see Figure 2: General Plan Land Use Plan Amendment), and Exhibit LU-03, Future Buildout, to reflect the proposed land use designation changes (see Exhibit A—Amended Policy Plan Exhibit LU-03, Future Buildout, attached).

In response to current industrial market demands, the GPA proposes industrial development along the Project's Merrill Avenue frontage. Additionally, the GPA proposes business park development along the Project's Eucalyptus Avenue frontage, which will serve to buffer future medium density residential (11.1 to 25.0 dwelling units per acre) land uses allowed to the north by the Policy Plan, across Eucalyptus Avenue, from the heavier industrial uses that would be allowed by the proposed GPA.

The Project site is located within the Chino Airport Influence Area (AIA) and is impacted by Safety Zones 1, 3 and 6, as shown in Figure 4: Chino Airport Safety Zones and Existing Policy Plan Land Use Designations. The Safety Zone policies and criteria provide restrictions that limit the height and placement of buildings, lot coverage, concentration of people, the storage of hazardous materials, and excludes or limits sensitive land uses (residential, schools, day care centers, hospitals, etc.). The Project site is also impacted by existing aircraft traffic patterns from Runway 3-21, where aircraft fly directly over the

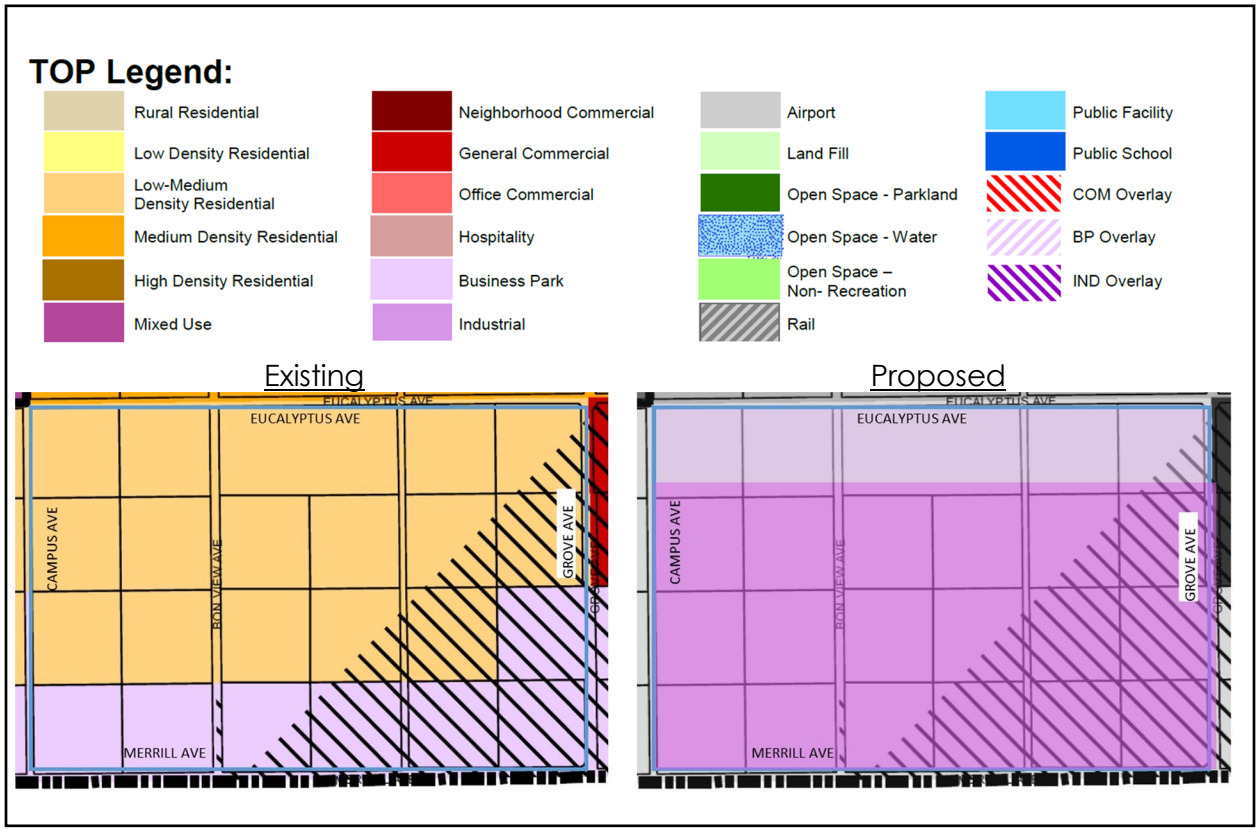

Figure 2: General Plan Land Use Plan Amendment

Project site while making Touch-and-Go landings, a maneuver where aircraft land on a runway and take off again without coming to a full stop; the pilot then circles the airport in a defined pattern to allow many landings to be practiced in a short time. State law requires that local jurisdictions "rely upon" the compatibility guidance provided by the California Airport Land Use Planning Handbook (published by the Caltrans, Division of Aeronautics) for establishing compatible land uses. The existing General Plan Low-Medium Density Residential land designation is considered an incompatible land use within the Safety Zones and prohibits residential land uses within Safety Zone 1, limits residential density to one dwelling unit per 2-acre lot in Safety Zone 3 and limits 300 people per acre within Safety Zone 6. The proposed General Plan amendment from Business Park and Low-Medium Density Residential to Industrial and Business Park would create land use consistency with Chino Airport and satisfy the criteria set forth in the California Airport Land Use Planning Handbook.

The proposed Business Park and General Industrial land uses are consistent with other approved and proposed Specific Plans located along the same corridor generally bounded by Eucalyptus Avenue to the north and Merrill Avenue to the south, including the existing Ontario Ranch Business Park and proposed expansion, Merrill Commerce Center, and West Ontario Commerce Center.

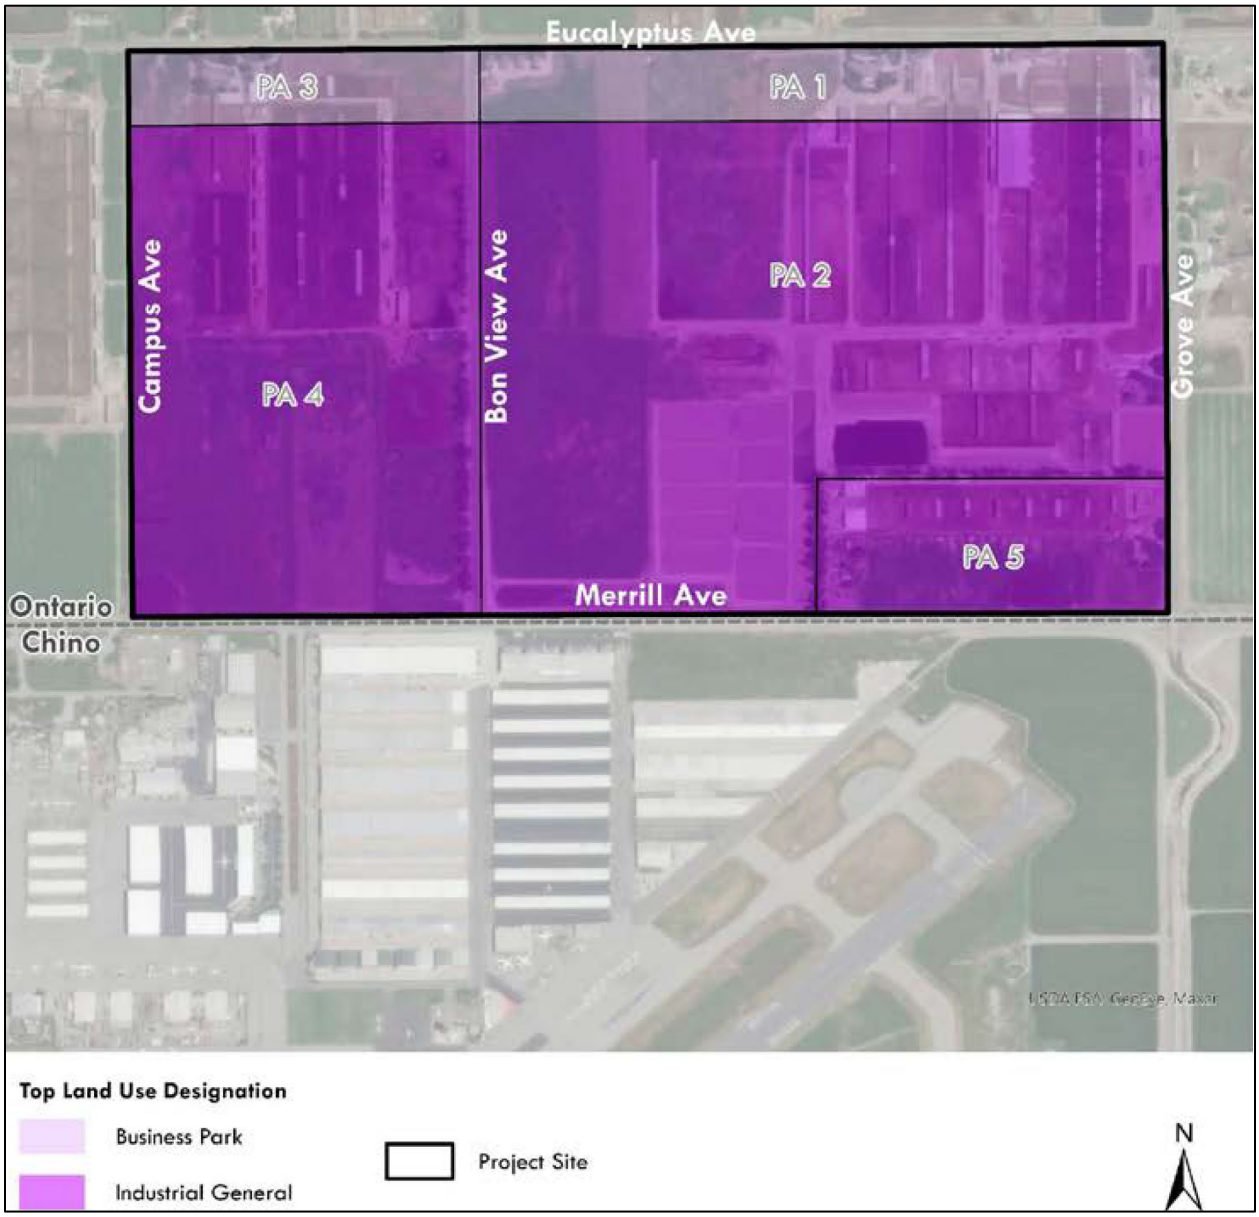

Figure 3: Specific Plan Land Use Plan

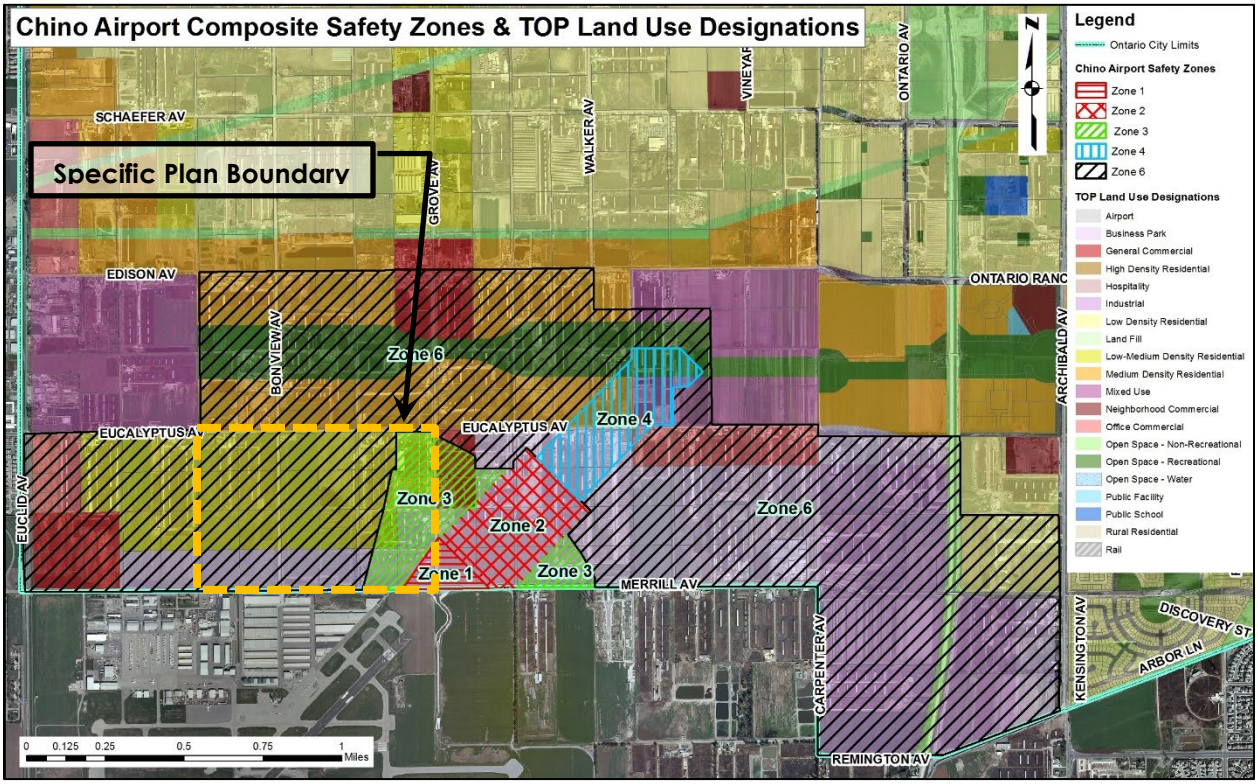

Figure 4: Chino Airport Safety Zones and Existing Policy Plan Land Use Designations

(3) Specific Plan (File No. PSP19-001) — The South Ontario Logistics Center Specific Plan establishes a comprehensive set of design guidelines and development regulations to guide and regulate site planning, landscape, and architectural character, and ensure that excellence in community design is achieved during Project development. The South Ontario Logistics Center Specific Plan establishes the procedures and requirements to approve new development within the Project site to ensure that TOP Policy Plan goals and policies are achieved. A copy of the proposed South Ontario Logistics Center Specific Plan is included as Attachment A of the attached recommended resolution for File No. PSP19-001.

(a) Land Use Plan. The South Ontario Logistics Center Specific Plan consists of five Planning Areas that will accommodate a variety of commercial, office, technology, light manufacturing, and warehouse/distribution uses. The Land Use Plan implements the vision of TOP by providing opportunities for employment in manufacturing, distribution, research and development, service, and supporting retail land uses at intensities designed to meet the demand of current and future market conditions.

The Specific Plan identifies the land use intensity anticipated in the five proposed Planning Areas (see Figure 3: Specific Plan Land Use Plan). The Applicant is proposing immediate development of Planning Areas 1 and 2, subject to market conditions. Planning Areas 3 through 5 will be developed in the future, pending acquisition of the

properties and market demands. The Specific Plan is proposing a maximum 0.6 FAR within the Business Park land use designation (Planning Areas 1 and 3) and 0.55 FAR within the General Industrial land use designation (Planning Areas 2, 4, and 5). The proposed FARs for each of the Planning Areas is consistent with the Policy Plan Land Use designations for Business Park and Industrial.

Within Phase 1 of Specific Plan development, which consists of Planning Areas 1 and 2, up to 5,333,518 square feet of industrial and business park buildings may be constructed. Planning Area 1, located along the northern portion of the Specific Plan Area, is 23.65 acres in size and can potentially be developed with 618,076 square feet of business park buildings. In addition, The Specific Plan limits buildings within the Business Park land use district, which front onto a public right-of-way, to a maximum building footprint of 125,000 square feet. Planning Area 2, located along the southern portion of the Specific Plan, is 106.71 acres in size and can potentially be developed with up to 2,556,442 square feet of industrial buildings (see Figure 5: Land Use Summary Table and Figure 6: Conceptual Phasing/Site Plan, below).

Phase 2 development will occur in the future, pending land acquisition and market conditions, and will include Planning Area 3, within the Business Park land use district located along Eucalyptus Avenue (11.52 acres with a potential for 300,972 square feet of development), and Planning Areas 4 and 5, within the General Industrial land use district located along Merrill Avenue (includes 60.06 acres of land with a potential for 1,438,914

Planning Area	Maximum Floor Area Ratio[1]	Site Acreage	Maximum Building Square Footage
Planning Area 1: Business Park	0.60	23.65	618,076 SF
Planning Area 3: Business Park	0.60	11.52	300,972 SF
Planning Area 2: Industrial - General	0.55	106.71	2,556,442 SF
Planning Area 4: Industrial -General	0.55	60.06	1,438,914 SF
Planning Area 5: Industrial – General	0.55	17.45	419,114 SF
TOTAL		**219.39**	**5,333,518**

Note:
1. Provided the General Plan Amendment application submitted in conjunction with this Specific Plan to designate PAs 1 and 3 as Business Park and PAs 2,4, and 5 as Industrial – General is approved.

Figure 5: Land Use Summary Table

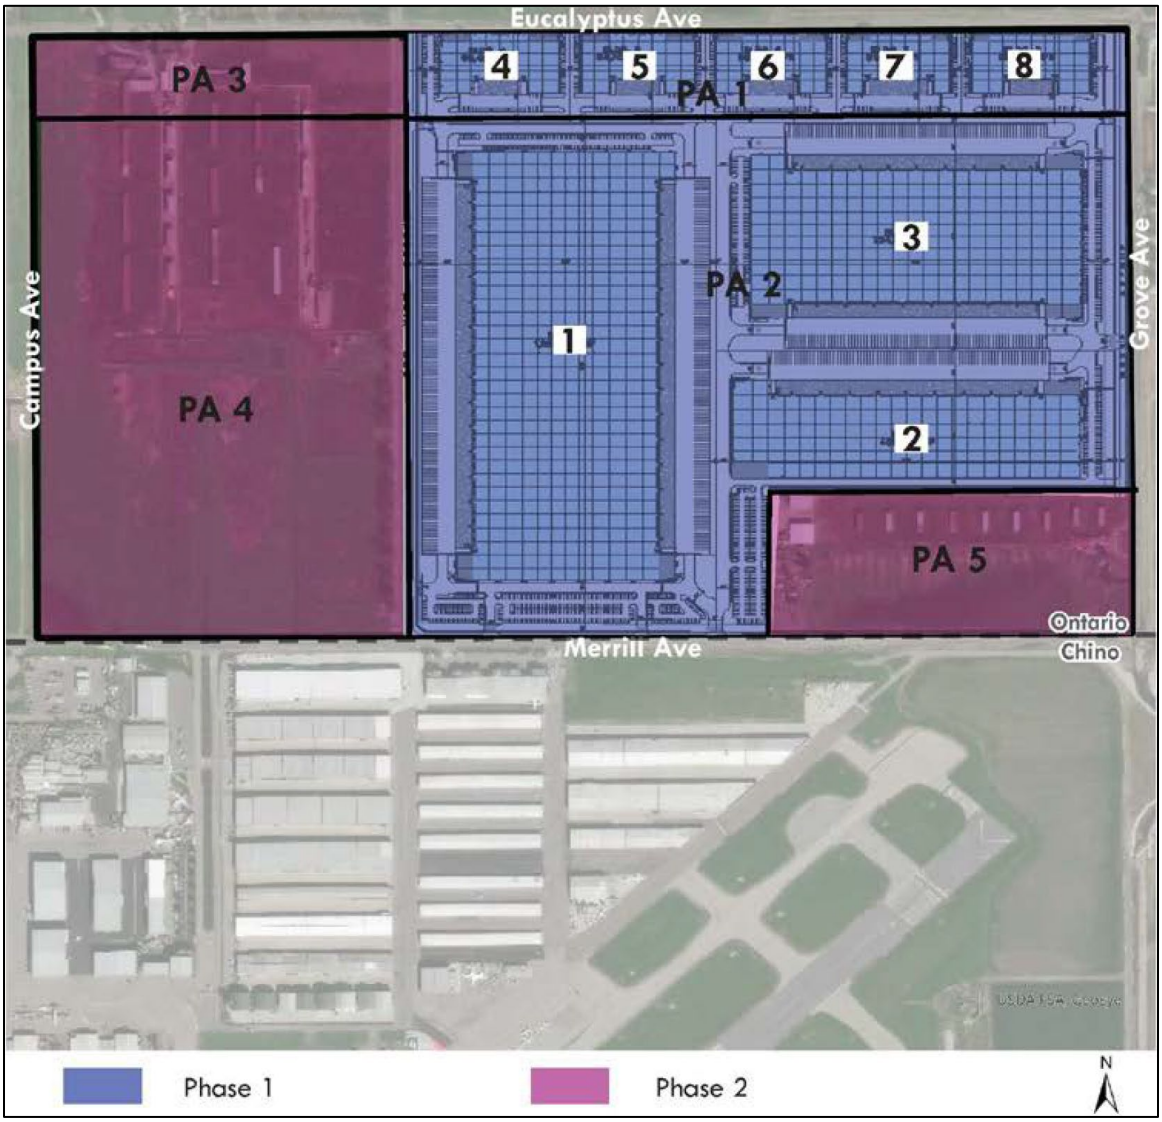

Figure 6: Conceptual Phasing/Site Plan

square feet of development and 17.45 acres of land with potential for 419,114 square feet of development, respectively).

(b) Design Guidelines. The design theme and concept for the South Ontario Logistics Center Specific Plan was crafted to ensure a high-quality, attractive, and cohesive design structure for the Specific Plan. The guidelines provide the following objectives for all future development within the Specific Plan area:

- Demonstrates high-quality development that complements and integrates into the community and adds value to the City.

- Creates a functional and sustainable place that ensures South Ontario Logistics Center is competitive regionally and appropriate in the Ontario Ranch community.
- Illustrates the distinctive characteristics of the land use plan zoning districts: Business Park District (Planning Areas 1 and 3) and General Industrial District (Planning Areas 2, 4, and 5).
- Establishes criteria for building design and materials, landscape design, and site design that provide guidance to developers, builders, architects, landscape architects, and other professionals preparing plans for construction.
- Provides guidance to City staff and the Planning Commission in the review and evaluation of future development projects in the South Ontario Logistics Center Specific Plan area.
- Incorporates construction and landscape design standards that promote energy and water conservation strategies.
- Implements the goals and policies of The Ontario Plan and the intent of the Ontario Development Code.

The Planning Areas within the South Ontario Logistics Center are designed to be architecturally consistent yet distinct through use and circulation. The Design Guidelines have been established to promote high-quality architecture as required by the Ontario Development Code and The Ontario Plan. The proposed architectural theme of the Specific Plan incorporates a Contemporary Architectural style, and the five Planning

Figure 7: Business Park Design Examples

Figure 8: Industrial Design Examples

Areas will be designed to be compatible with and complement one another. The design guidelines of the Specific Plan requires all buildings to provide a recognizable base, body, roofline, and entry. The Specific Plan provides examples of the type of industrial and business park concepts that are envisioned to be constructed within the Specific Plan (see Figure 7: Business Park Design Examples and Figure 8: Industrial Design Examples, above).

All buildings shall be designed to highlight the primary entryways by incorporating special materials, visual relief, massing, and shading. Additionally, the facades that front onto a public street will incorporate vertical and horizontal articulation and material changes that will assist in enhancing these elevations and providing visual interest within areas that may be viewed by the public.

(c) Circulation Concept. The Circulation Plan for the Specific Plan reinforces the objective of moving vehicles, pedestrians, cyclists, and public transit safely and efficiently through and around the Project. The Specific Plan establishes the hierarchy and general location of roadways within the South Ontario Logistics Center Specific Plan. Future traffic signals will be constructed or modified at the following major intersections:

- Campus Avenue and Eucalyptus Avenue
- Bon View Avenue and Eucalyptus Avenue

- Cucamonga Avenue and Eucalyptus Avenue (potential location, to be determined by future development)
- Grove Avenue and Eucalyptus Avenue
- Campus Avenue and Merrill Avenue
- Mid-block at Campus Avenue, between Eucalyptus and Merrill Avenues (potential location, to be determined by future development)
- Bon View Avenue and Merrill Avenue
- Cucamonga Avenue and Merrill Avenue
- Grove Avenue and Merrill Avenue
- Mid-block at Grove Avenue, between Eucalyptus and Merrill Avenues
- Sultana Avenue and Eucalyptus Avenue (within the Ontario Ranch Business Park Specific Plan area)
- Sultana Avenue and Merrill Avenue (within the Ontario Ranch Business Park Specific Plan area)

Additionally, primary access into the business park development will be provided along Eucalyptus Avenue to the north and Grove Avenue to the east. Primary access into the industrial development will be provided along Merrill Avenue to the south, Campus Avenue to the west, Grove Avenue to the east, and Bon View Avenue interior to the Project site (see Figure 9: Circulation Plan, below).

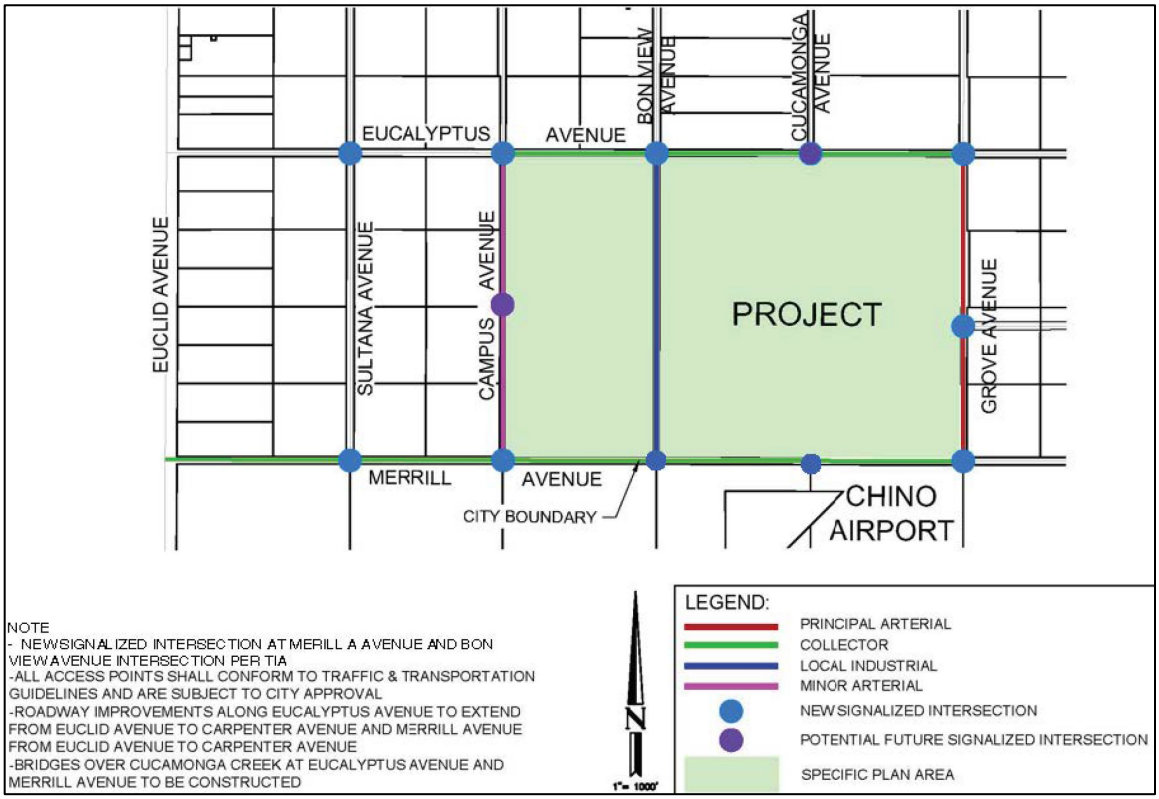

Figure 9: Circulation Plan

Merrill Avenue and Eucalyptus Avenue, which run east-to-west along the southern and northern portions of the Project site, will be improved as four-lane collector streets with 98-foot and 108-foot rights-of-way, respectively. Each street will include a parkway and a multipurpose trail, and Merrill Avenue will include a Class-II bike lane (see Figure 10: Merrill and Eucalyptus Avenues Street Cross Sections, below).

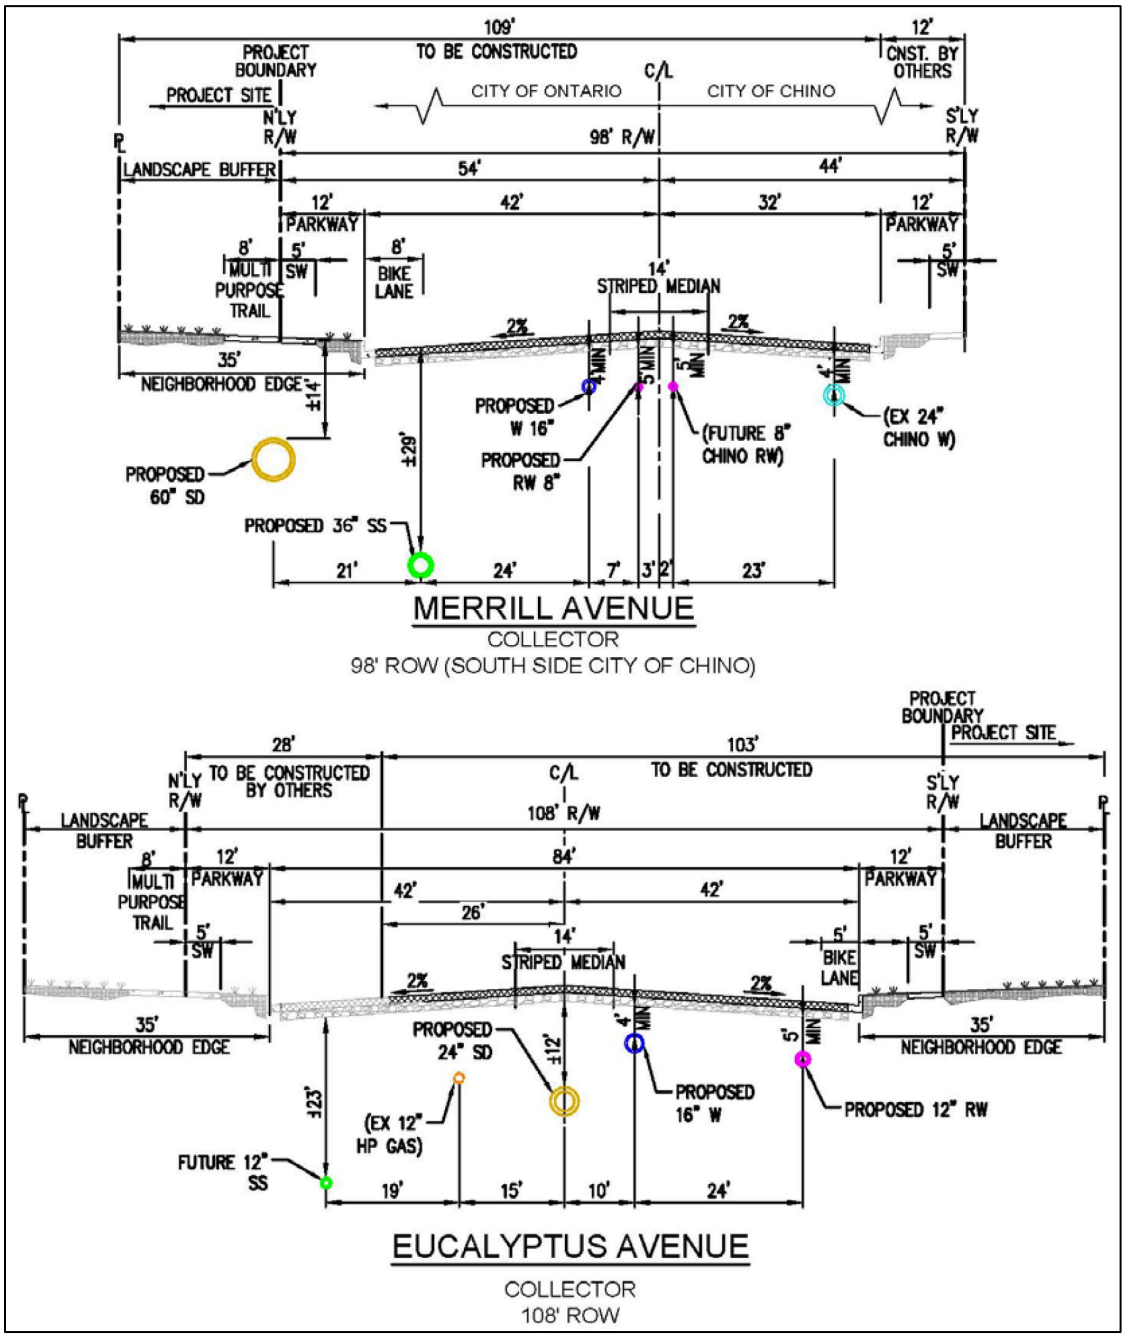

Figure 10: Merrill and Eucalyptus Avenues Street Cross Sections

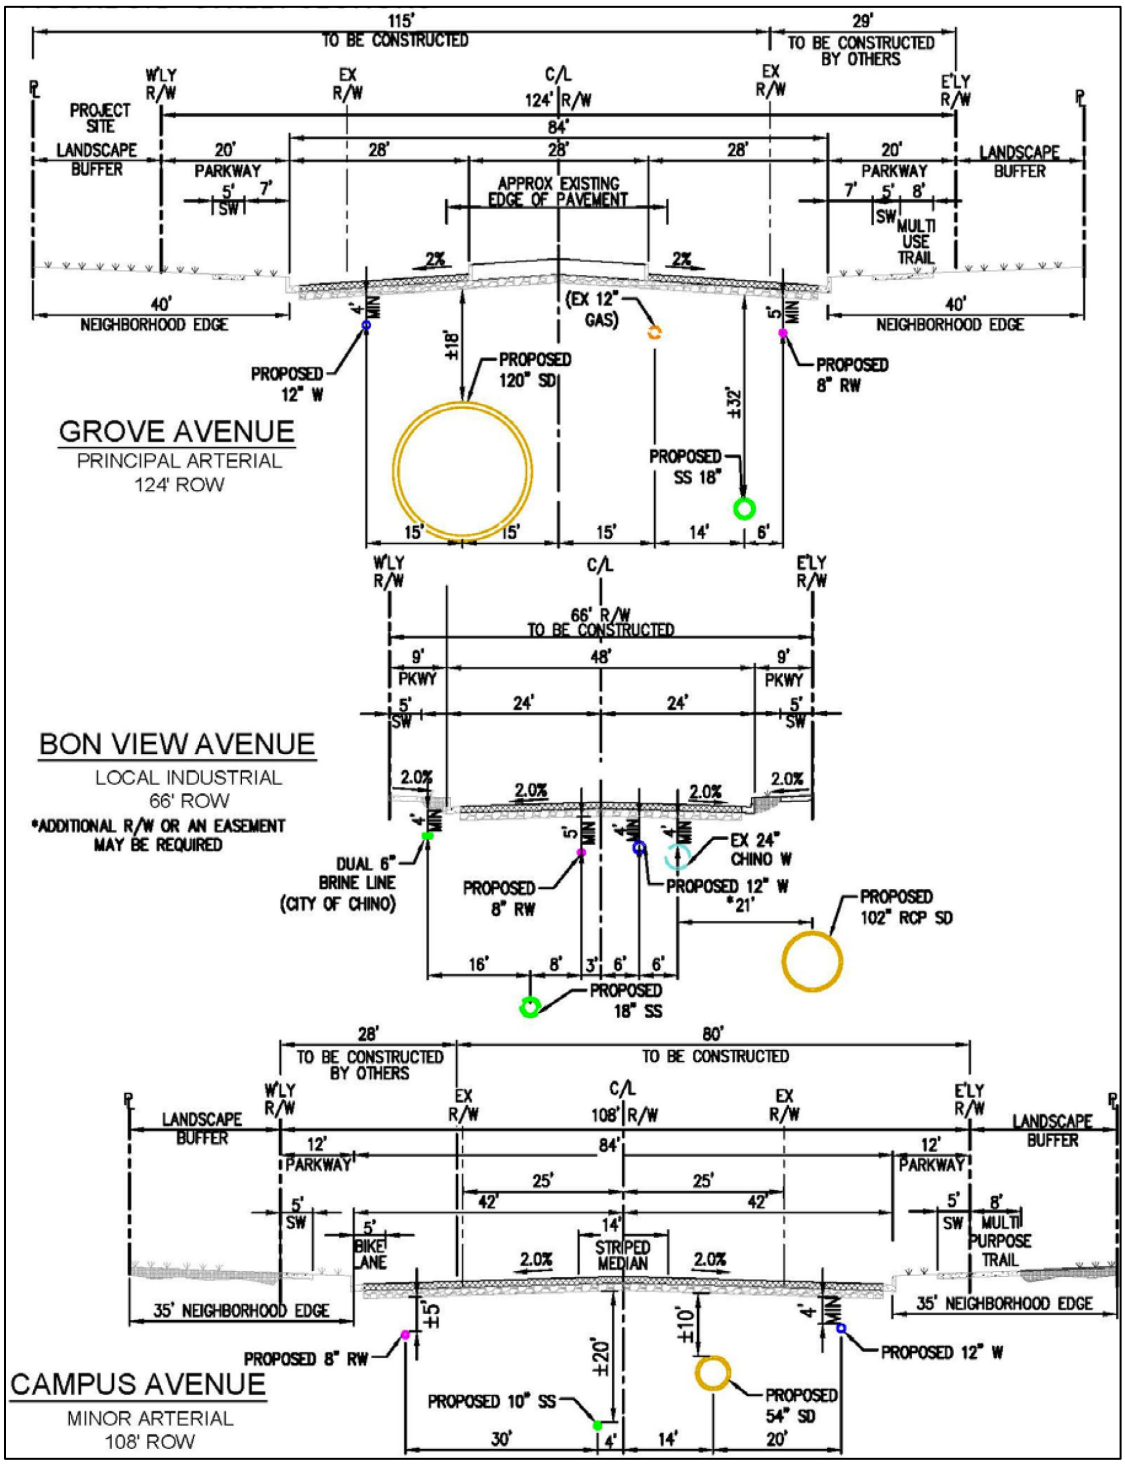

Figure 11: Grove, Bon View, and Campus Avenues Street Cross Sections

Grove Avenue, a principal arterial having a 124-foot right-of-way width, will run north-south along the Project's eastern boundary and will be improved with a 40-foot wide neighborhood edge adjacent to the street. The neighborhood edge will include a 20-foot wide landscape buffer and 20-foot wide parkway containing a five-foot wide sidewalk. Bon View Avenue, a local industrial street having a 66-foot right-of-way width, will run north-south through the interior of the Project site. A 9-foot wide parkway containing a five-foot wide sidewalk will be provided; however, additional right-of-way or an easement may be required in the future. Campus Avenue, a minor arterial having a 108-foot right-of-way width, will run north-south along the Project's western boundary and will be improved with a 35-foot wide neighborhood edge. The neighborhood edge will include a 23-foot wide landscape buffer with an eight-foot wide multi-purpose trail, and a 12-foot wide parkway containing a five-foot wide sidewalk (see Figure 11: Grove, Bon View, and Campus Avenues Street Cross Sections, above).

(d) Landscape Design. The landscape design theme for the South Ontario Logistics Center Specific Plan encourages durable landscape materials and designs that enhance the aesthetics of the structure, create and define public and private spaces, and provide shade and environmental benefits. The South Ontario Logistics Center Specific Plan establishes a base landscape palette for the South Ontario Logistics Center and includes a variety of groundcovers, shrubs, ornamental grasses, and evergreen and deciduous trees. The selection complements the design theme of the Specific Plan area and features water-efficient, drought-tolerant species native to the region. Similar plant materials may be substituted for the species listed in the landscape pallet if the alternative plants are climate appropriate and enhance the thematic setting.

The minimum landscape coverage required for the Business Park land use district is 15 percent and the Industrial land use district is required to provide a 10 percent minimum landscape coverage. As illustrated on the street cross sections, Grove Avenue will be required to provide a 40-foot wide neighborhood edge, Merrill, Campus, and Eucalyptus Avenues will be required to provide a 35-foot wide neighborhood edge. Bon View Avenue will be designed with a 4-foot wide curb adjacent landscape parkway and a 5-foot wide sidewalk.

(e) Infrastructure and Services. The backbone infrastructure to serve all areas of the Specific Plan will be installed by the developer in accordance with the Ontario Ranch (New Model Colony) Master Plans for streets, water (including recycled water), sewer, storm drain, and fiber optic facilities. Natural gas will be provided by The Gas Company and electricity by SCE. Development of the Project requires the installation by the developer of all infrastructure necessary to serve the Project as a standalone development, with phasing and ultimate details to be reviewed and approved via a Development Agreement with the Project site's final map.

(f) Specific Plan Phasing. Development phasing within the Specific Plan, as illustrated in Figure 6: Conceptual Phasing/Site Plan, will be determined by the developers, based upon acquisition of properties and real estate market conditions. The

Specific Plan outlines development Phase 1 as Planning Areas 1 and 2, and development Phase 2 as Planning Areas 3, 4, and 5. The phases may be developed as sub-phases and may occur either sequentially or concurrently with one another. Specific infrastructure, community facilities, and open space dedications will be provided/conditioned with one or more future individual parcel map(s) and/or development plan(s).

(g) Signage. The South Ontario Logistics Center Specific Plan has required that a comprehensive sign program be submitted for the Project site, to ensure quality and consistent signage throughout the whole site.

COMPLIANCE WITH THE ONTARIO PLAN: The proposed Project is consistent with the principles, goals and policies contained within the Vision, Governance, Policy Plan (General Plan), and City Council Priorities components of The Ontario Plan (TOP). More specifically, the goals and policies of TOP that are furthered by the proposed Project are as follows:

(1) City Council Goals.

- Invest in the Growth and Evolution of the City's Economy
- Operate in a Businesslike Manner
- Invest in the City's Infrastructure (Water, Streets, Sewers, Parks, Storm Drains and Public Facilities)
- Ensure the Development of a Well Planned, Balanced, and Self-Sustaining Community in the New Model Colony

(2) Governance.

Decision Making:

- Goal G1: Sustained decision-making that consistently moves Ontario towards its Vision by using The Ontario Plan as a framework for assessing choices.

➢ G1-2 Long-term Benefit. We require decisions to demonstrate and document how they add value to the community and support the Ontario Vision

(3) Policy Plan (General Plan)

Land Use Element:

➢ LU1-1 Strategic Growth. We concentrate growth in strategic locations that help create place and identity, maximize available and planned infrastructure, and foster the development of transit.

➢ LU1-6 Complete Community: We incorporate a variety of land uses and building types in our land use planning efforts that result in a complete community where

residents at all stages of life, employers, workers and visitors have a wide spectrum of choices of where they can live, work, shop and recreate within Ontario. (Refer to Complete Community Section of Community Economics Element).

- Goal LU2: Compatibility between a wide range of uses.

Community Economics Element:

- Goal CE2: A City of distinctive neighborhoods, districts, and corridors, where people choose to be.

  - CE2-1 Development Projects. We require new development and redevelopment to create unique, high-quality places that add value to the community.

  - CE2-2 Development Review. We require those proposing new development and redevelopment to demonstrate how their projects will create appropriately unique, functional and sustainable places that will compete well with their competition within the region.

  - CE2-4 Protection of Investment. We require that new development and redevelopment protect existing investment by providing architecture and urban design of equal or greater quality.

  - CE2-5 Private Maintenance. We require adequate maintenance, upkeep, and investment in private property because proper maintenance on private property protects property values.

Safety Element:

- Goal S1: Minimized risk of injury, loss of life, property damage and economic and social disruption caused by earthquake-induced and other geologic hazards.

  - S1-1 Implementation of Regulations and Standards. We require that all new habitable structures be designed in accordance with the most recent California Building Code adopted by the City, including provisions regarding lateral forces and grading.

Community Design Element:

- Goal CD1: A dynamic, progressive city containing distinct neighborhoods and commercial districts that foster a positive sense of identity and belonging among residents, visitors, and businesses.

  - CD1-1 City Identity. We take actions that are consistent with the City being a leading urban center in Southern California while recognizing the diverse character of our existing viable neighborhoods.

- CD1-2 Growth Areas. We require development in growth areas to be distinctive and unique places within which there are cohesive design themes.

- CD1-3 Neighborhood Improvement. We require viable existing residential and non-residential neighborhoods to be preserved, protected, and enhanced in accordance with our land use policies.

- Goal CD2: A high level of design quality resulting in public spaces, streetscapes, and developments that are attractive, safe, functional and distinct.

- CD2-1 Quality Architecture. We encourage all development projects to convey visual interest and character through:

  - Building volume, massing, and height to provide appropriate scale and proportion;
  - A true architectural style which is carried out in plan, section and elevation through all aspects of the building and site design and appropriate for its setting; and
  - Exterior building materials that are visually interesting, high quality, durable, and appropriate for the architectural style.

- CD2-7 Sustainability. We collaborate with the development community to design and build neighborhoods, streetscapes, sites, outdoor spaces, landscaping and buildings to reduce energy demand through solar orientation, maximum use of natural daylight, passive solar and natural ventilation, building form, mechanical and structural systems, building materials and construction techniques.

- CD2-8 Safe Design. We incorporate defensible space design into new and existing developments to ensure the maximum safe travel and visibility on pathways, corridors, and open space and at building entrances and parking areas by avoiding physically and visually isolated spaces, maintenance of visibility and accessibility, and use of lighting.

- CD2-9 Landscape Design. We encourage durable landscaping materials and designs that enhance the aesthetics of structures, create and define public and private spaces, and provide shade and environmental benefits.

- CD2-10 Surface Parking Areas. We require parking areas visible to or used by the public to be landscaped in an aesthetically pleasing, safe and environmentally sensitive manner. Examples include shade trees, pervious surfaces, urban run-off capture and infiltration, and pedestrian paths to guide users through the parking field.

- CD2-11 Entry Statements. We encourage the inclusion of amenities, signage and landscaping at the entry to neighborhoods, commercial centers, mixed use

areas, industrial developments, and public places that reinforce them as uniquely identifiable places.

- CD2-12 Site and Building Signage. We encourage the use of sign programs that utilize complementary materials, colors, and themes. Project signage should be designed to effectively communicate and direct users to various aspects of the development and complement the character of the structures.

- CD2-13 Entitlement Process. We work collaboratively with all stakeholders to ensure a high degree of certainty in the efficient review and timely processing of all development plans and permits.

- Goal CD3: Vibrant urban environments that are organized around intense buildings, pedestrian and transit areas, public plazas, and linkages between and within developments that are conveniently located, visually appealing and safe during all hours.

- CD3-1 Design. We require that pedestrian, vehicular, bicycle and equestrian circulation on both public and private property be coordinated and designed to maximize safety, comfort and aesthetics.

- CD3-2 Connectivity Between Streets, Sidewalks, Walkways and Plazas. We require landscaping and paving be used to optimize visual connectivity between streets, sidewalks, walkways and plazas for pedestrians.

- CD3-3 Building Entrances. We require all building entrances to be accessible and visible from adjacent streets, sidewalks or public open spaces.

- CD3-5 Paving. We require sidewalks and road surfaces to be of a type and quality that contributes to the appearance and utility of streets and public spaces.

- CD3-6 Landscaping. We utilize landscaping to enhance the aesthetics, functionality and sustainability of streetscapes, outdoor spaces and buildings.

- Goal CD5: A sustained level of maintenance and improvement of properties, buildings and infrastructure that protects the property values and encourages additional public and private investments.

- CD5-1 Maintenance of Buildings and Property. We require all public and privately owned buildings and property (including trails and easements) to be properly and consistently maintained.

- CD5-2 Maintenance of Infrastructure. We require the continual maintenance of infrastructure.

HOUSING ELEMENT COMPLIANCE: The Project is consistent with the Housing Element of the Policy Plan (General Plan) component of The Ontario Plan, as the Project site is not one of the properties in the Available Land Inventory contained in Table A-3 (Available Land by Planning Area) of the Housing Element Technical Report Appendix.

Senate Bill 330 ("SB 330") — The Housing Accountability Act (Government Code Section 65589.5 et seq.) was passed by the California Legislature, signed by the Governor, and became effective on January 1, 2020. The bill is the result of the Legislature's extensive findings regarding the California "housing supply crisis" with "housing demand far outstripping supply." SB 330 amends Government Code Section 65589.5, adds Government Code Sections 65940, 65943 and 65950, and repeals and readopts Government Code Sections 65906.5, 65913.10 and 65941.1. To summarize, no city may disapprove a residential housing development project for low- to moderate-income households (as defined therein) unless it makes a finding that the housing development project "would have a specific, adverse impact upon the public health or safety, and there is no feasible method to satisfactorily mitigate or avoid the specific adverse impact without rendering the development unaffordable to low- and moderate-income households…" such as where the housing development project is proposed on land "which does not have adequate water or wastewater facilities to serve the project." (Government Code Section 65589.5(d)(2), (4)).

In addition, the legislation adds Chapter 12 to Division 1 of Title 7 of the Government Code (Section 66300 et seq.) that applies to "affected cities," which are identified as cities in urbanized areas as determined by the most recent census. In accordance with SB 330, the Department of Community Development and Housing ("HCD") has prepared a list of affected cities and has determined that Ontario is an "affected city." Therefore, pursuant to Government Code Section 66300(b)(1)(A) and (b):

> *(b) (1) Notwithstanding any other law except as provided in subdivision (i), with respect to land where housing is an allowable use, an affected city shall not enact a development policy, standard, or condition that would have any of the following effects:*
>
> *(A) Changing the general plan land use designation, specific plan land use designation, or zoning of a parcel or parcels of property to a less intensive use or reducing the intensity of land use within an existing general plan land use designation, specific plan land use designation, or zoning district below what was allowed under the land use designation and zoning ordinances of the affected county or affected city, as applicable, as in effect on January 1, 2018…"*

except when approved by HCD or when the following exception is set out in Government Code Section 66300(i)(1) applies:

> *(i) (1) This section does not prohibit an affected county or an affected city from changing a land use designation or zoning ordinance to a less intensive use if the*

city or county concurrently changes the development standards, policies, and conditions applicable to other parcels within the jurisdiction to ensure that there is no net loss in residential capacity.

As discussed in Section 2 of this staff report, the General Plan Amendment is proposed to change the site's land use designations from Low-Medium Density Residential and Business Park to approximately 35.2 acres of Business Park (0.6 FAR) and 184.2 acres of Industrial (0.55 FAR) land uses. The GPA would, therefore, eliminate the low-medium density land use designation, thereby theoretically eliminating 1,352 units (as determined by the City's density determinations to be 8.5 dwelling units per acre). In compliance with SB 330, the EIR evaluated the elimination of 1,352 units and determined that based on SB 330 Exceptions for lack of water and sewer to serve a residential project and the no net loss of residential capacity, the Project is consistent with HCD exception findings. The proposed Project site does not have sufficient water or wastewater facilities to serve a residential project. As explained in Section 3.4.1.2, of the Draft EIR, at present there is no water or sewer infrastructure that could serve residential units because the land has been used for agricultural purposes with water provided by on-site wells and sewer provided by septic systems. The Project Applicant is working on projects both approved and under review that span the length of Eucalyptus Avenue to the north, Merrill Avenue to the south, Euclid Avenue to the east, and Grove Avenue to the west (Ontario Ranch Business Park Specific Plan – Approved; Ontario Ranch Business Park Specific Plan Amendment – Under review; and, South Ontario Logistics Center – Subject Project), with a combined estimated cost of $144,331,000 (see Table 1, Project Cost Estimate by Project Area). The total estimated cost includes individual streets, lengths of pipe, storm drain, sewer, water, streetlights, curbing, paving, signals, power/fiber, and more. This cost would be financially infeasible for the 1,352 units presently allowed under the current residential General Plan designation and therefore the cost of such improvements would make residential development on the site financially infeasible (see Government Code Section 66589.5(d)(2) cited above).

Table 1: Project Cost Estimate by Project Area	
Project Name	***Cost Estimate***
Ontario Ranch Business Park Phase 1 (Specific Plan - Approved)	$72,151,000
South Ontario Logistics Center (Specific Plan – Subject Project, Under Review)	$59,780,000
Ontario Ranch Business Park Phase 2 (Specific Plan Amendment, Under Review)	$12,400,000
Total	***$144,331,000***

In order to demonstrate "no net loss of residential capacity," the Project will be required to demonstrate increased residential zoning capacity on a "SB330 Replacement Site" by 1,352 units to off-set the Project site loss of zoning capacity (Low Medium Density, 5.1 to 11 du/ac). In tandem with the City's adoption of the 6th Cycle Housing Element,

scheduled to go before the City Council for their consideration in February 2022, the City is also adopting an Affordable Housing Overlay zone and applying this zone to all parcels in the sites inventory that are south of Riverside Drive or are zoned MU-2 along Holt Boulevard. Relevant to the Project, the Affordable Housing Overlay zone will establish a minimum density of 20 dwelling units per acre for all development (regardless of Policy Plan designation or underlying zoning district), and increase the maximum density from 25 to 30 units per acre for parcels that are designated in the Policy Plan for Medium Density Residential ("MDR") when an affordable housing project is proposed with at least 25 percent of proposed units are restricted for lower income households. The creation of the Affordable Housing Overlay zone and increased maximum density of 5 dwelling units per acre will increase residential capacity on 473.7 acres of such parcels currently designated MDR, by 2,368 dwelling units. On December 20, 2021, the Planning Commission reviewed and recommended to the February 15, 2022, City Council hearing for approval a General Plan Amendment (File No. PGPA21-004) for the Housing Element update to the Policy Plan (General Plan) component of The Ontario Plan, to address State mandates regarding the Regional Housing Needs Allocation ("RHNA"), as well as to modify the Policy Plan Land Use Plan (Exhibit LU-01) to establish a Zone Change (File No. PZC21-002). The Project EIR addresses the potential impacts associated with relocating residential density from the Project site to the SB330 Replacement Sites located north of the Project site, along Grove Avenue, pursuant to SB330. With the City adoption of the 6th Cycle Housing Element and associated Affordable Housing Overlay zone, no net loss of residential capacity will occur as a result of the Project.

AIRPORT LAND USE COMPATIBILITY PLAN (ALUCP) COMPLIANCE: The California State Aeronautics Act (Public Utilities Code Section 21670 et seq.) requires that an Airport Land Use Compatibility Plan be prepared for all public use airports in the State; and requires that local land use plans and individual development proposals must be consistent with the policies set forth in the adopted Airport Land Use Compatibility Plan.

(1) Ontario International Airport — On April 19, 2011, the City Council of the City of Ontario approved and adopted the Ontario International Airport Land use Compatibility Plan ("ALUCP"), establishing the Airport Influence Area for Ontario International Airport, which encompasses lands within parts of San Bernardino, Riverside, and Los Angeles Counties, and limits future land uses and development within the Airport Influence Area, as they relate to noise, safety, airspace protection, and overflight impacts of current and future airport activity. The proposed Project is located within the Airport Influence Area of Ontario International Airport and was evaluated and found to be consistent with the policies and criteria of the ALUCP. Any special conditions of approval associated with uses in close proximity to the airport are included in the conditions of approval provided with the attached resolutions.

(2) Chino Airport — Chino Airport is owned and operated by the County of San Bernardino and is situated within the boundaries of the City of Chino, immediately south of Ontario. Portions of the City of Ontario are impacted by aircraft operations at Chino Airport. The adopted ALUCP for Chino Airport was approved in 1991 and does not reflect

the most recently adopted 2005 Airport Master Plan. Also, the existing Chino Airport Land Use Compatibility Plan does not reflect the 2011 Caltrans Airport Land Use Planning Handbook. Public Utilities Code Section 21670.1(c) requires local jurisdictions under the "alternative process" to "rely upon" the California Airport Land Use Planning Handbook (Handbook) published by the California Department of Transportation (Caltrans), Division of Aeronautics in October 2011, for preparing Compatibility Plans and to utilize the Handbook's height, land use, noise, safety, and density criteria. Although the City of Ontario does not have the formal responsibility under the "alternative process" to prepare a compatibility plan for Chino Airport, the City of Ontario has completed an Airport Land Use Compatibility Assessment that analyzes Chino Airport's impacts on Ontario, consistent with policies and criteria set forth within the Caltrans 2011 California Airport Land Use Planning Handbook. The City of Ontario is currently working towards completing an Airport Land Use Compatibility Plan for portions of the City that are impacted by aircraft operations at Chino Airport. The proposed Project is located within the Airport Influence Area of Chino Airport and was evaluated and found to be consistent with the California Airport Land Use Planning Handbook and the City of Ontario's Chino Airport Land Use Compatibility Assessment. Future development within Project Site shall be subject to Open Land and people per acre occupancy intensity calculations that are described below.

The Project site is located within Safety Zones 1, 3, and 6 (Handbook Generic Safety Zones) and new development will be required to provide Open Land (an open area that is 300 feet long by 75 feet wide) consistent with the Handbook's percentage criteria for each Safety Zone and people per acre limits. Safety Zone 1 is part of the Runway Protection Zone and cannot be developed with any structures or buildings. Safety Zone 3 is required to provide a minimum of 15 percent of Open Land, and occupancy must be limited to 100 people per acre on average, and a maximum of 300 people in any one acre. Safety Zone 6 is required to provide a minimum of 10 percent of Open Land, and occupancy is limited to 300 people per acre on average, and a maximum of 1,200 people in any one acre.

ENVIRONMENTAL REVIEW: The Specific Plan is located in the City of Ontario in what was formerly the approximate 8,200-acre City of Ontario Sphere of Influence (SOI) area. On January 7, 1998, the City of Ontario adopted the New Model Colony ("NMC") General Plan Amendment, setting forth a comprehensive strategy for the future development of the SOI. The NMC is generally bordered by Riverside Drive to the north, Milliken Avenue to the east, Euclid Avenue to the west and Merrill Avenue to the south.

(1) The Ontario Plan Environmental Impact Report — On January 27, 2010, the City Council adopted The Ontario Plan ("TOP") and certified the accompanying Environmental Impact Report ("EIR") (State Clearinghouse No. 2008101140). TOP includes the General Plan for the entire City, including the NMC (now referred to as "Ontario Ranch"). TOP EIR identified many areas that might have a potentially significant impact on the environment. These areas included: 1) Aesthetics; 2) Biological Resources; 3) Geology and Soils; 4) Hazards and Hazardous Materials; 5) Hydrology and Water Quality;

6) Land Use and Planning; 7) Mineral Resources; 8) Population and Housing; 9) Public Services; 10) Recreation; and 11) Utilities and Service Systems. Through the EIR process, these potential impacts were analyzed, revisions were incorporated into the plan, and/or mitigation measures were identified that reduced the potential environmental impacts to a level that was less than significant.

TOP also identified several potential impacts that, even with revisions and/or mitigation measures, could not be reduced to a level of less than significant. These areas included:

(a) Agriculture Resources.

Impact 5.2-1. Buildout of TOP would convert 3,269.3 acres of California Resource Agency designated Prime Farmland, Unique Farmland, and Farmland of Statewide Importance to residential, commercial, mixed-use, and industrial land uses. Consequently, Impact 5.2-1 would remain significant and unavoidable and a Statement of Overriding Considerations would be required.

Impact 5.2-2. There are a number of Williamson Act contracts within the City that have yet to expire. Buildout of TOP would most likely require the cancellation or nonrenewal of these contracts. The current use of these contracts would slow the rate of conversion from agricultural to nonagricultural land but it would not impede the conversion. Since there are some Williamson Act contracts still active in the Ontario Ranch, implementation of the proposed land use plan for The Ontario Plan would conflict with these contracts and cause a significant impact. Consequently, Impact 5.2-2 would remain significant and unavoidable and a Statement of Overriding Considerations would be required.

Impact 5.2-3. Development of the City in accordance with TOP would increase the amount of nonagricultural land uses. When nonagricultural land uses are placed near agricultural uses, the odors, noises, and other hazards related to agriculture conflict with the activities and the quality of life of the people living and working in the surrounding areas. Consequently, conversion of agricultural uses in the city may cause farms and agricultural land uses outside the City to be converted to nonagricultural uses because of the nuisances related to agriculture. Impact 5.2-3 would remain significant and unavoidable. Therefore, a Statement of Overriding Considerations would be required.

(b) Air Quality.

Impact 5.3-1. The Project would not be consistent with the Air Quality Management Plan ("AQMP") because air pollutant emissions associated with buildout of the City of Ontario would cumulatively contribute to the nonattainment designations in the South Coast Air Basin ("SoCAB"). Furthermore, buildout of the Proposed Land Use Plan would exceed current estimates of population, employment, and vehicle miles traveled for Ontario and, therefore, these emissions are not included in the current regional

emissions inventory for the SoCAB. As both criteria must be met in order for a project to be considered consistent with the AQMP, the Project would be considered inconsistent with the AQMP. Consequently, Impact 5.3-1 would remain significant and unavoidable and a Statement of Overriding Considerations would be required.

Impact 5.3-2. Construction activities associated with buildout of TOP would generate short-term emissions that exceed the South Coast Air Quality Management District's ("SCAQMD") regional significance thresholds; cumulatively contribute to the SoCAB's nonattainment designations for O3, PM10, and PM2.5; and potentially elevate concentrations of air pollutants at sensitive receptors. Consequently, Impact 5.3-2 would remain significant and unavoidable and a Statement of Overriding Considerations would be required.

Impact 5.3-3. Buildout of TOP would generate long-term emissions that would exceed SCAQMD'S regional significance thresholds and cumulatively contribute to the SoCAB nonattainment designations for O3, PM10, and PM2.5. Consequently, Impact 5.3-3 would remain significant and unavoidable and a Statement of Overriding Considerations would be required.

Impact 5.3-5. Approval of residential and other sensitive land uses within 500 feet of I-10, I-15, or SR-60 would result in exposure of persons to substantial concentrations of diesel particulate matter. Consequently, Impact 5.3-5 would remain significant and unavoidable and a Statement of Overriding Considerations would be required.

Impact 5.3-6. Conversion of agricultural land to nonagricultural uses would temporarily expose residents to objectionable odors. Consequently, Impact 5.3-6 would remain significant and unavoidable and a Statement of Overriding Considerations would be required.

(c) Cultural Resources

Impact 5.5-1. Although protective regulations are in place and preservation policies are included in TOP, implementation of the Proposed Land Use Plan, especially within growth focus areas, has the potential to impact Tier III historic resources. Mitigation Measure 5-1 would require a historical evaluation for properties within historic resources in the Focus Areas under the City's ordinance. However, the ordinance does not provide a high level of protection for Tier III resources. As a result, historical resources categorized under the Ordinance as Tier III could potentially be impacts with implementation of the Proposed Land Use Plan. Consequently, Impact 5.5-1 would remain significant and unavoidable and a Statement of Overriding Considerations would be required.

(d) Global Climate Change.

Impact 5.6-1. Buildout of the City of Ontario would generate greenhouse gas emissions that would significantly contribute to global climate change impacts in California. GHG emissions generated in the City would significantly contribute to climate change impacts in California as a result of the growth in population and employment in the City and scale of development activity associated with buildout of the Proposed Land Use Plan. Consequently, Impact 5.6-1 would remain significant and unavoidable and a Statement of Overriding Considerations would be required.

(e) Noise.

Impact 5.12-1. Buildout of the Proposed Land Use Plan would result in an increase in traffic on local roadways in the City of Ontario, which would substantially increase noise levels. Consequently, Impact 5.12-1 would remain significant and unavoidable and a Statement of Overriding Considerations would be required.

Impact 5.12-2. Noise-sensitive uses could be exposed to elevated noise levels from transportation sources. Any siting of new sensitive land uses within a noise environment that exceeds the normally acceptable land use compatibility criterion would result in a potentially significant impact and would require a separate noise study through the development review process to determine the level of impacts and required mitigation. Consequently, Impact 5.12-2 would remain significant and unavoidable and a Statement of Overriding Considerations would be required.

Impact 5.12-3. Construction activities associated with buildout of the individual land uses associated with the Proposed Land Use Plan would expose sensitive uses to strong levels of groundborne vibration. Consequently, Impact 5.12-3 would remain significant and unavoidable and a Statement of Overriding Considerations would be required.

Impact 5.12-5. Construction activities associated with buildout of the individual land uses associated with the Proposed Land Use Plan would substantially elevate noise levels in the vicinity of sensitive land uses. Consequently, Impact 5.12-5 would remain significant and unavoidable and a Statement of Overriding Considerations would be required.

Impact 5.12-6. Noise-sensitive land uses within the 65 dBA CNEL contour of the Los Angeles/Ontario International Airport would be exposed to substantial levels of airport-related noise. Consequently, Impact 5.12-6 would remain significant and unavoidable and a Statement of Overriding Considerations would be required.

(f) Transportation and Traffic.

Impact 5.15-1. Buildout of the Proposed Land Use Plan would result in additional traffic volume that would significantly cumulatively contribute to main-line freeway segment impacts. The City's development impact fees cannot be used for

improvements to roadway facilities under Caltrans jurisdiction. Consequently, impacts to freeway segments within the City under Impact 5.16-1 would be significant and unavoidable and a Statement of Overriding Considerations would be required.

While these impacts will be significant and unavoidable, the City determined that the benefits of the Ontario Ranch development outweigh the potential unavoidable, adverse impacts of the plan. As a result, the City adopted a Statement of Overriding Considerations for those impacts that could not be fully mitigated to a level of "less than significant."

(2) South Ontario Logistics Center Specific Plan Environmental Impact Report — Even though an EIR was prepared for TOP, the analyses focused on the program or "big picture" impacts associated with development. With the submittal of the South Ontario Logistics Center Specific Plan, staff is charged with evaluating the potential impacts of development at the Project level. Staff did not complete an Initial Study for the Project, as it was clear that an EIR should be prepared for the South Ontario Logistics Center Specific Plan. Through the Notice of Preparation and scoping meeting discussion, the South Ontario Logistics Center EIR (State Clearinghouse No. 2021010318) was prepared for the Specific Plan document, addressing the following issues:

- Agricultural Resources
- Air Quality
- Biological Resources
- Cultural Resources
- Geology and Soils
- Greenhouse Gas Emissions
- Hazards and Hazardous Materials
- Hydrology and Water Quality
- Land Use and Planning
- Noise
- Population/Housing
- Public Services
- Transportation
- Tribal Cultural Resources
- Utilities and Service Systems

The South Ontario Logistics Center Specific Plan EIR evaluates each of these various areas and identifies mitigation measures and/or revisions to the plan to lessen the level of significance. With the implementation of the various mitigation measures, many of the potential adverse impacts can be reduced to a level of less than significant. Of the 15 areas considered by the EIR, all but five of the impact areas were mitigated to a level of less than significant. The five remaining impact areas, even with the mitigation measures, could not be reduced to less than significant, resulting in some impacts remaining potentially significant and unavoidable. These areas include:

(a) Agriculture and Forestry Resources.

Impact 4.1-1. The proposed Project would convert Farmland to non-agricultural use. No feasible mitigation measures have been identified that would mitigate agricultural resources to below a level of significance. Impacts would remain significant and unavoidable.

Impact 4.1-2. The proposed Project contains several parcels under Williamson Act contracts. No feasible mitigation measures have been identified that would mitigate agricultural resources to below a level of significance. Impacts would remain significant and unavoidable.

Impact 4.1-5. The proposed Project would convert Farmland to non-agricultural use. No feasible mitigation measures have been identified that would mitigate agricultural resources to below a level of significance. Impacts would remain significant and unavoidable.

(b) Air Quality.

Impact 4.2-1. The proposed Project would be inconsistent with the applicable air quality plan. Implementation of Mitigation Measure (MM) AQ-1 through AQ-5 would contribute to minimizing criteria air pollutant emissions from operation of the proposed Project by the greatest amount feasible. However, as shown in Table 4.2-9 and Table 4.2-11, even with incorporation of mitigation, Project related operation-phase activities would still result in air pollutant emissions exceeding the SCAQMD's emission thresholds. Thus, the proposed Project would continue to be inconsistent with the AQMP. Therefore, the Project impact would remain significant and unavoidable.

Impact 4.2-2. The proposed Project would be inconsistent with the applicable air quality plan. Implementation of Standard Conditions (SC) AQ-1 and MM AQ-1 through AQ-5 would contribute to minimizing criteria air pollutant emissions from operation of the proposed Project by the greatest amount feasible. However, as shown in Table 4.2-9, Table 4.2-11, and Table 4.2-12, even with incorporation of standard conditions and mitigation, Project related operation-phase activities would still remain significant and would potentially contribute to the O3, NO2, PM10, and PM2.5 nonattainment designations of the SoCAB. Therefore, the Project impact would remain significant and unavoidable.

(c) Cultural Resources.

Impact 4.4-1. The proposed Project would demolish significant historical resources discovered on site, to facilitate Project development. Implementation of MM CUL-1 through MM CUL-5 would lessen Project related operation-phase activities; however, impacts would still remain unavoidable and significant.

(d) Greenhouse Gases.

Impact 4.6-1. Buildout of the proposed Project would generate approximately 71,088 $MTCO_2e$ per year from mobile and other sources that would exceed the significance threshold and would have a significant impact on the environment. Table 4.6-7 shows the Project's emissions inventory with incorporation of mitigation. Specifically, incorporation of MM AQ-2 through AQ-5, would require the use of electrical off-road equipment, require electrical hookups at loading bays for cold storage, require the implementation of a Transportation Demand Management (TDM) program to reduce single-occupant vehicle trips and encourage public transit, and prohibits idling when engines are not in use. Since the majority (71 percent) of emissions are from mobile sources and neither the Project Applicant nor the City have regulatory authority to control tailpipe emissions, no feasible mitigation measures exist that would reduce the Project's impacts with respect to mobile operational emissions to less than significant levels. Furthermore, the Project's long-term operational GHG emissions would exceed City's threshold of 3,000 MTCO2e per year despite the implementation of MM AQ-2 through MM AQ-5, as well as MM GHG-1, which requires the Project to achieve a minimum of 100 points on the CAP Screening Threshold Checklist. Therefore, this Project impact will remain significant and unavoidable.

Impact 4.76-2. Implementation of the proposed Project would conflict with the City's Community Climate Action Plan ("CAP"). Implementation of Mitigation Measure GHG-1 would require future individual projects accommodated under the proposed Project to be designed to achieve at least 100 points on the City's GHG Screening Threshold Table. This measure would ensure that future individual projects are consistent with the City's Community CAP and would reduce Impact 4.6-2 to less than significant. However, there is the potential for the Project to generate GHG emissions that would result in significant impacts on the environment. Pending adoption of the City CAP update; a determination that the City CAP as updated is consistent with applicable State and regional GHG emissions reduction plans; and a determination that the proposed Project is consistent with the CAP as updated, the potential for Project GHG emissions to result in a significant impact on the environment is conservatively considered to be a significant and unavoidable impact.

(e) Transportation and Traffic.

Impact 4.13-2. The proposed Project was found to exceed the City's adopted Vehicle Miles Traveled ("VMT") threshold by 6.77 percent. Reductions in commute VMT through feasible TDM measures such as those described previously would be provided by the Project and would be implemented as part of future Certificates of Occupancy for future tenants as noted in MM TRANS-1. Inclusion of such VMT reduction measures in areas that are characteristically suburban in context are noted to be limited to a maximum VMT reduction of 10 percent. However, as future Project design features and building tenants are not yet known, reductions in VMT related to the above TDM

measures cannot be accurately estimated or guaranteed. The VMT analysis determined that the Project's impact on VMT would remain significant and unavoidable.

While mitigation of all potential impacts to a level of less than significant is desirable, the fact that four areas will remain significant and unavoidable is not unexpected. The identification of these areas as significant and unavoidable validates the work previously completed for TOP. Staff continues to believe that the benefits of the proposed development outweigh the potential impacts associated with it. Therefore, staff recommends the Planning Commission recommend that the City Council 1) certify the South Ontario Logistics Center Specific Plan EIR (State Clearinghouse No. 2021010318) and that a Statement of Overriding Considerations be adopted for the Project, 2) approve the South Ontario Logistics Center Specific Plan document, and 3) approve the associated General Plan Amendment.

PUBLIC COMMENTS RECEIVED: Public comments were received regarding the Draft EIR as part of the 45-day public review period, which extended from November 15, 2021, to January 3, 2022, and include the following topics of discussion: air quality impact analysis and mitigation measures; backup generators and equipment permitting processes; airport land use compatibility; traffic impact and traffic safety analyses; biological assessments, resources, habitats, and mitigation measures; clarification of referenced files and figures; inclusion of adjacent projects; infrastructure improvements; project piecemealing; specific plan document; SB 330 and replacement site analysis; lack of floor plans, grading plans, elevations, and earthwork quantities; environmental justice; census tract community makeup for the Project site and the SB 330 replacement site; hazards and hazardous materials; economic/fiscal impact analyses; employment analysis, including provisions for highly-skilled workers; project alternatives; energy analysis; public health; greenhouse gases and mitigation measures; project description; analysis, quantification, and mitigation of potentially significant impacts; and ponded water and potential jurisdictional waters. Responses to comments are being prepared by the Project Applicant and consultants and will be provided with the Final EIR to be reviewed and considered by the City Council.

CONDITIONS OF APPROVAL: See attached department reports.

TECHNICAL APPENDIX:

Surrounding Zoning and Land Use:

	Existing Land Use	*General Plan Designation*	*Zoning Designation*	*Specific Plan Land Use*
Site	Agricultural, Dairy, and Vacant	Low-Medium Density Residential (5.1-11 dwelling units per acre) and Business Park (0.6 FAR)	SP (AG Overlay)	N/A
North	Agricultural, Dairy, and Vacant	Medium Density Residential (11.1-25 du/ac)	SP (AG Overlay)	N/A
South	Chino Airport	N/A	N/A	N/A
East	Agricultural, Dairy, and Vacant	Business Park (0.6 FAR) and Industrial (0.55 FAR)	Merrill Commerce Center	Business Park and Industrial
West	Agricultural, Dairy, and Vacant	Low-Medium Density Residential (5.1-11 dwelling units per acre) and Business Park (0.6 FAR)	SP (AG Overlay)	N/A

Notes
1 Historically, citywide buildout levels do not achieve the maximum allowable density/intensity on every parcel and are, on average, lower than allowed by the Policy Plan. Accordingly, the buildout projections in this Policy Plan do not assume buildout at the maximum density or intensity and instead are adjusted downward. To view the buildout assumptions, access the Methodology report.
2 Acres are given as adjusted gross acreages, which do not include the right-of-way for roadways, flood control facilities, or railroads.
3 Assumed Density/Intensity includes both residential density, expressed as units per acre, and non-residential intensity, expressed as floor area ratio (FAR), which is the amount of building square feet in relation to the size of the lot.
4 Projections of population by residential designation are based on a persons-per-household factor that varies by housing type. For more information, access the Methodology report.
5 To view the factors used to generate the number of employees by land use category, access the Methodology report.
6 Acreages and corresponding buildout estimates for these designations do not reflect underlying land uses within the Business Park, Industrial and Commercial Overlays. Estimates for these areas are included within the corresponding Business Park, Industrial and General Commercial categories.

RESOLUTION NO. PC22-004

A RESOLUTION OF THE PLANNING COMMISSION OF THE CITY OF ONTARIO, CALIFORNIA, RECOMMENDING THE CITY COUNCIL CERTIFY THE PROJECT ENVIRONMENTAL IMPACT REPORT (STATE CLEARINGHOUSE NO. 2021010318) AND ADOPT FINDINGS OF OVERRIDING CONSIDERATIONS AND A MITIGATION MONITORING AND REPORTING PROGRAM FOR FILE NO. PGPA19-004, A GENERAL PLAN AMENDMENT, AND FILE NO. PSP19-001, THE SOUTH ONTARIO LOGISTICS CENTER SPECIFIC PLAN, LOCATED WITHIN ONTARIO RANCH AND GENERALLY BORDERED BY EUCALYPTUS AVENUE TO THE NORTH, GROVE AVENUE TO THE EAST, MERRILL AVENUE TO THE SOUTH, AND CAMPUS AVENUE TO THE WEST, AND MAKING FINDINGS IN SUPPORT THEREOF – APNS: 1054-071-01, 1054-071-02, 1054-081-03, 1054-091-01, 1054-091-02, 1054-101-01, 1054-101-02, 1054-231-01, 1054-231-02, 1054-241-01, 1054-241-02, 1054-321-01, 1054-321-02, 1054-311-01, 1054-311-02, 1054-051-01, 1054-051-02, 1054-061-01, 1054-061-02, 1054-251-01, 1054-251-02, 1054-301-01, AND 1054-301-02.

WHEREAS, the Project Environmental Impact Report ("EIR"), Statement of Overriding Considerations, and Mitigation Monitoring and Reporting Program for File No. PGPA19-004, a General Plan Amendment, and File No. PSP19-001, the South Ontario Logistics Center Specific Plan, have been prepared in accord with the California Environmental Quality Act ("CEQA"), the State CEQA Guidelines, and the City of Ontario Guidelines for implementation of CEQA; and

WHEREAS, the EIR has been prepared to address the environmental effects of a Specific Plan (South Ontario Logistics Center) to establish land use designations, development standards, and design guidelines for approximately 219.4 acres of land within Ontario Ranch, generally located north of Merrill Avenue, south of Eucalyptus Avenue, east of Campus Avenue, and west of Grove Avenue; and

WHEREAS, the EIR consists of the Draft EIR and the comments and responses to comments made on the Draft EIR; and

WHEREAS, the EIR for File Nos. PGPA19-004 and PSP19-001 was circulated for a 45-day public review period and a notice of its availability was published in a local newspaper and posted in the Office of the Clerk of the Board of Supervisors of San Bernardino County; and

WHEREAS, copies of the EIR were distributed to the Planning Commission, City departments, and federal, state, regional, local, and other agencies and individuals; and

WHEREAS, to address the requirements of SB330, the certification of the EIR is contingent upon City Council approval of General Plan Amendment, File No. PGPA21-004, for the Housing Element update to the Policy Plan (General Plan) component of The Ontario Plan, to address State mandates regarding the Regional Housing Needs Allocation ("RHNA"), as well as to modify the Policy Plan Land Use Plan (Exhibit LU-01) to establish a Zone Change (File No. PZC21-002); and

WHEREAS, on January 25, 2022, the Planning Commission of the City of Ontario conducted a duly noticed public hearing on the EIR at which time all persons wishing to testify were heard and the EIR was fully studied; and

WHEREAS, all other legal prerequisites to the adoption of this Resolution have occurred.

NOW, THEREFORE, IT IS HEREBY FOUND, DETERMINED, AND RESOLVED by the Planning Commission of the City of Ontario, as follows:

SECTION 1: ***Environmental Determination and Findings.*** As the recommending body for the Project, the Planning Commission has reviewed and considered the information contained in the Environmental Impact Report (EIR) and supporting documentation. Based upon the facts and information contained in the EIR (SCH# 2021010318) and supporting documentation, the Planning Commission recommends that the City Council make the following findings:

(1) The EIR contains a complete and accurate reporting of the environmental impacts associated with the Project; and

(2) The EIR was completed in compliance with CEQA and the Guidelines promulgated thereunder; and

(3) The EIR reflects the independent judgment of the City Council; and

SECTION 2: ***Planning Commission Action.*** Based upon the substantial evidence presented to the Planning Commission during the above-referenced hearing and upon the specific findings set forth in Section 1 above, the Planning Commission recommends that the City Council make the following findings:

(1) The Project EIR analyzed the environmental impacts-associated with the implementation of the South Ontario Logistics Center Specific Plan, and finds that, if the Specific Plan is adopted and development occurs as proposed by this plan, and with implementation of proposed mitigation measures, the following impacts will still be significant and unavoidable:

(a) Air Quality – Impacts related to a net increase in criteria pollutants would remain significant and unavoidable with the implementation of recommended mitigation measures; and

(b) Agricultural Resources – Project-specific impacts and cumulative impacts would remain significant and unavoidable; and

(c) Transportation – Impacts related to intersections are projected to be cumulatively significant and unavoidable; and

(d) Greenhouse Gas Emissions – Project-specific impacts and cumulative impacts would remain significant and unavoidable.

(e) Cultural Resources – Impacts related to demolition of historical resources discovered on site would remain significant and unavoidable.

SECTION 3: ***Recommendation.*** Based upon the findings and conclusions set forth in Sections 1 and 2 above, the Planning Commission hereby recommends that the City Council certify the Project EIR, adopt a Statement of Overriding Considerations, and that the associated Mitigation Monitoring Program also be approved by the City Council.

SECTION 4: ***Indemnification.*** The Applicant shall agree to defend, indemnify and hold harmless, the City of Ontario or its agents, officers, and employees from any claim, action or proceeding against the City of Ontario or its agents, officers or employees to attack, set aside, void, or annul this approval. The City of Ontario shall promptly notify the applicant of any such claim, action, or proceeding, and the City of Ontario shall cooperate fully in the defense.

SECTION 5: ***Custodian of Records.*** The documents and materials that constitute the record of proceedings on which these findings have been based are located at the City of Ontario City Hall, 303 East “B” Street, Ontario, California 91764. The custodian for these records is the City Clerk of the City of Ontario.

SECTION 6: ***Certification to Adoption.*** The Secretary shall certify to the adoption of the Resolution.

- - - - - - - - - - - - - -

The Secretary Pro Tempore for the Planning Commission of the City of Ontario shall certify as to the adoption of this Resolution.

I hereby certify that the foregoing Resolution was duly and regularly introduced, passed and adopted by the Planning Commission of the City of Ontario at a regular meeting thereof held on the 25th day of January, 2022, and the foregoing is a full, true and correct copy of said Resolution, and has not been amended or repealed.

Rick Gage
Planning Commission Chairman

ATTEST:

Rudy Zeledon
Planning Director and
Secretary to the Planning Commission

STATE OF CALIFORNIA)
COUNTY OF SAN BERNARDINO)
CITY OF ONTARIO)

I, Gwen Berendsen, Secretary Pro Tempore of the Planning Commission of the City of Ontario, DO HEREBY CERTIFY that foregoing Resolution No. PC22-004, was duly passed and adopted by the Planning Commission of the City of Ontario at their regular meeting held on January 25, 2022, by the following roll call vote, to wit:

AYES: Dean, DeDiemar, Gage, Lampkin, Ricci, Willoughby

NOES: None

ABSENT: Anderson

ABSTAIN: None

Gwen Berendsen
Secretary Pro Tempore

RESOLUTION NO. PC22-005

A RESOLUTION OF THE PLANNING COMMISSION OF THE CITY OF ONTARIO, CALIFORNIA, RECOMMENDING THE CITY COUNCIL APPROVE FILE NO. PGPA19-004, AN AMENDMENT TO THE LAND USE ELEMENT OF THE POLICY PLAN (GENERAL PLAN), REVISING EXHIBIT LU-01 (OFFICIAL LAND USE PLAN) AND EXHIBIT LU-03 (FUTURE BUILDOUT), AFFECTING PROPERTY BORDERED BY EUCALYPTUS AVENUE TO THE NORTH, MERRILL AVENUE TO THE SOUTH, CAMPUS AVENUE TO THE WEST, AND GROVE AVENUE TO THE EAST, FROM APPROXIMATELY 157.1 ACRES OF LOW-MEDIUM DENSITY RESIDENTIAL (5.1-11 DWELLING UNITS PER ACRE) AND APPROXIMATELY 62.4 ACRES OF BUSINESS PARK (0.6 FAR) TO APPROXIMATELY 184.2 ACRES OF INDUSTRIAL (0.55 FAR) AND APPROXIMATELY 35.2 ACRES OF BUSINESS PARK (0.6 FAR), AND MAKING FINDINGS IN SUPPORT THEREOF—APNS: 1054-071-01, 1054-071-02, 1054-081-03, 1054-091-01, 1054-091-02, 1054-101-01, 1054-101-02, 1054-231-01, 1054-231-02, 1054-241-01, 1054-241-02, 1054-321-01, 1054-321-02, 1054-311-01, 1054-311-02, 1054-051-01, 1054-051-02, 1054-061-01, 1054-061-02, 1054-251-01, 1054-251-02, 1054-301-01, AND 1054-301-02. (SEE ATTACHMENTS 1 AND 2) (PART OF THE GENERAL PLAN AMENDMENT CYCLE ONE FOR THE 2022 CALENDAR YEAR).

WHEREAS, Grove Land Venture, LLC has filed an Application for the approval of a General Plan Amendment, File No. PGPA19-004, as described in the title of this Resolution (hereinafter referred to as "Application" or "Project"); and

WHEREAS, the City of Ontario adopted the Policy Plan (General Plan) as part of The Ontario Plan in January 2010. Since the adoption of The Ontario Plan, the City has evaluated Exhibits LU-01: Official Land Use Plan and LU-03: Future Buildout further and is proposing modifications; and

WHEREAS, the proposed changes to Exhibit LU-01 Official Land Use Plan include changes to land use designations of certain properties shown on Exhibit A to make the land use designations of these properties consistent with the proposed South Ontario Logistics Center Specific Plan as well as the surrounding land uses (Chino Airport to the south) and proposed and approved land use designations and specific plans along the same corridor (Business Park (0.6 FAR) adjacent to Eucalyptus Avenue and Industrial (0.55 FAR) adjacent to Merrill Avenue; Ontario Ranch Business Park Specific Plan to the west; Merrill Commerce Center and West Ontario Commerce Center to the east); and

WHEREAS, Policy Plan Exhibit LU-03 (Future Buildout) specifies the expected buildout for the City of Ontario, incorporating the adopted land use designations. The

proposed changes to Exhibit LU-01 (Official Land Use Plan) will require that Exhibit LU-03 (Future Buildout) is modified to be consistent with Exhibit LU-01 (Official Land Use Plan), as depicted on Exhibit B, attached; and

WHEREAS, the Project is located within the Airport Influence Area of Ontario International Airport, which encompasses lands within parts of San Bernardino, Riverside, and Los Angeles Counties, and is subject to, and must be consistent with, the policies and criteria set forth in the Ontario International Airport Land Use Compatibility Plan ("ALUCP"), which applies only to jurisdictions within San Bernardino County, and addresses the noise, safety, airspace protection, and overflight impacts of current and future airport activity; and

WHEREAS, the project site is also located within the Airport Influence of Chino Airport and must be consistent with policies and criteria set forth within the 2011 California Airport Land Use Planning Handbook published by the California Department of Transportation, Division of Aeronautics, which addresses the noise, safety, airspace protection, and overflight impacts of current and future airport activity; and

WHEREAS, the Application is a project pursuant to the California Environmental Quality Act (Public Resources Code Section 21000 et seq.) ("CEQA"); and

WHEREAS, to address the requirements of SB330, the approval of General Plan Amendment, File PGPA 19-004, is contingent upon City Council approval of General Plan Amendment, File No. PGPA21-004, for the Housing Element update to the Policy Plan (General Plan) component of The Ontario Plan, to address State mandates regarding the Regional Housing Needs Allocation ("RHNA"), as well as to modify the Policy Plan Land Use Plan (Exhibit LU-01) to establish a Zone Change (File No. PZC21-002); and

WHEREAS, as the first action on the Project, on January 25, 2022, the Planning Commission recommended approval of a Resolution recommending City Council certify the South Ontario Logistics Center Specific Plan Environmental Impact Report (State Clearinghouse No. 2021010318), including the adoption of a Mitigation Monitoring and Reporting Plan and a Statement of Overriding Considerations; and

WHEREAS, on January 25, 2022 the Planning Commission of the City of Ontario conducted a hearing to consider the Project, and concluded said hearing on that date; and

WHEREAS, all legal prerequisites to the adoption of this Resolution have occurred.

NOW, THEREFORE, IT IS HEREBY FOUND, DETERMINED, AND RESOLVED by the Planning Commission of the City of Ontario, as follows:

SECTION 1: ***Environmental Determination and Findings.*** As the recommending body for the Project, the Planning Commission has reviewed and considered the information contained in the South Ontario Logistics Center Specific Plan Environmental Impact Report ("EIR") (State Clearinghouse No. 2021010318), the Mitigation Monitoring and Reporting Program ("MMRP"), and a Statement of Overriding Considerations, prepared for the project, and supporting documentation. Based upon the facts and information contained in the EIR, MMRP, and Statement of Overriding Considerations and supporting documentation and administrative record, including all written and oral evidence presented to the Planning Commission, the Planning Commission finds as follows:

(1) The South Ontario Logistics Center Specific Plan EIR, MMRP, Statement of Overriding Considerations, and administrative record have been completed in compliance with CEQA, the State CEQA Guidelines and the City of Ontario Local CEQA Guidelines; and

(2) The South Ontario Logistics Center Specific Plan EIR, MMRP, and Statement of Overriding Considerations contain a complete and accurate reporting of the environmental impacts associated with the Project and reflects the independent judgment of the Planning Commission.

SECTION 2: ***Ontario International Airport Land Use Compatibility Plan ("ALUCP") Compliance.*** The California State Aeronautics Act (Public Utilities Code Section 21670 et seq.) requires that an Airport Land Use Compatibility Plan be prepared for all public use airports in the State and rely upon the 2011 California Airport Land Use Planning Handbook published by the California Department of Transportation, Division of Aeronautics; and requires that local land use plans and individual development proposals must be consistent with the policies set forth in the adopted Airport Land Use Compatibility Plan.

(1) On April 19, 2011, the City Council of the City of Ontario approved and adopted the ALUCP, establishing the Airport Influence Area for Ontario International Airport, which encompasses lands within parts of San Bernardino, Riverside, and Los Angeles Counties, and limits future land uses and development within the Airport Influence Area, as they relate to noise, safety, airspace protection, and overflight impacts of current and future airport activity. As the recommending authority for the Project, the Planning Commission has reviewed and considered the facts and information contained in the Application and supporting documentation against the ALUCP compatibility factors, including [1] Safety Criteria (ALUCP Table 2-2) and Safety Zones (ALUCP Map 2-2), [2] Noise Criteria (ALUCP Table 2-3) and Noise Impact Zones (ALUCP Map 2-3), [3] Airspace protection Zones (ALUCP Map 2-4), and [4] Overflight Notification Zones (ALUCP Map 2-5). As a result, the PLANNING COMMISSION, therefore, finds and

determines that the Project, when implemented in conjunction with the conditions of approval, will be consistent with the policies and criteria set forth within the ALUCP; and

(2) Chino Airport is owned and operated by the County of San Bernardino and is situated within the boundaries of the City of Chino, immediately south of Ontario. Portions of the City of Ontario are impacted by aircraft operations at Chino Airport. The adopted ALUCP for Chino Airport was approved in 1991 and does not reflect the most recently adopted 2005 Airport Master Plan. Also, the existing Chino Airport Land Use Compatibility Plan does not reflect the 2011 Caltrans Airport Land Use Planning Handbook. Public Utilities Code Section 21670.1(c) requires local jurisdictions under the "alternative process" to "rely upon" the California Airport Land Use Planning Handbook (Handbook) published by the California Department of Transportation (Caltrans), Division of Aeronautics in October 2011, for preparing Compatibility Plans and to utilize the Handbook's height, land use, noise, safety, and density criteria. Although the City of Ontario does not have the formal responsibility under the "alternative process" to prepare a compatibility plan for Chino Airport, the City of Ontario has completed an Airport Land Use Compatibility Assessment that analyzes Chino Airport's impacts on Ontario, consistent with policies and criteria set forth within the Caltrans 2011 California Airport Land Use Planning Handbook. The City of Ontario is currently working towards completing an Airport Land Use Compatibility Plan for portions of the City that are impacted by aircraft operations at Chino Airport. The proposed Project is located within the Airport Influence Area of Chino Airport and was evaluated and found to be consistent with the California Airport Land Use Planning Handbook and the City of Ontario's Chino Airport Land Use Compatibility Assessment. As the recommending authority for the Project, the Planning Commission has reviewed and considered the facts and information contained in the Application and supporting documentation against the ALUCP compatibility factors, including Safety, Noise, Airspace Protection, Overflight. As a result, the PLANNING COMMISSION, therefore, finds and determines that the Project, will be consistent with the policies and criteria set forth within the California Airport Land Use Planning Handbook and the City of Ontario's Chino Airport Land Use Compatibility Assessment.

SECTION 3: ***Concluding Facts and Reasons.*** Based upon the substantial evidence presented to the Planning Commission during the above-referenced hearing, and upon the specific findings set forth in Sections 1 and 2 above, the Planning Commission hereby recommends that the City Council make the following findings:

(1) The proposed General Plan Amendment is consistent with the goals and policies of The Ontario Plan as follows:

(a) **LU2-1 Land Use Decisions.** We minimize adverse impacts on adjacent properties when considering land use and zoning requests.

Compliance: The proposed General Plan Amendment (GPA) closely coordinates with land use designations in the surrounding area and will not increase adverse impacts on adjacent properties. The Project site is located within the Chino Airport Influence Area and is impacted by Safety Zones 1, 3 and 6. The Safety Zone policies and criteria provide restrictions that limit the height and placement of buildings, lot coverage, concentration of people, the storage of hazardous materials, and excludes or limits sensitive land uses (residential, schools, day care centers, hospitals, etc.). The Project site is also impacted by existing aircraft traffic patterns from Runway 3-21, where aircraft fly directly over the Project site while making Touch-and-Go landings. State law requires that local jurisdictions "rely upon" the compatibility guidance provided by the California Airport Land Use Planning Handbook (published by the Caltrans, Division of Aeronautics) for establishing compatible land uses. The existing General Plan Low-Medium Density Residential land designation is considered an incompatible land use within the Safety Zones and prohibits residential land uses within Safety Zone 1, limits residential density to one dwelling unit per 2-acre lot in Safety Zone 3 and limits 300 people per acre within Safety Zone 6; therefore staff is in support of the proposed GPA. In addition, the State Division of Aeronautics prohibits the development of new incompatible land uses surrounding existing airports, and as such, the proposed project would create land use consistency with Chino Airport and satisfy the criteria set forth in the Handbook.

(b) **LU4-1 Commitment to Vision.** We are committed to achieving our Vision but realize that it may take time and several interim steps to get there.

Compliance: The proposed land use designation change from Low-Medium Density Residential (5.1 to 11 dwelling units per acre) and Business Park (0.6 FAR), to Industrial (0.55 FAR) and Business Park (0.6 FAR) will provide consistency between the TOP Policy Plan Land Use Plan and the proposed South Ontario Logistics Center Specific Plan and will result in a logical land use pattern in and around the affected areas. The entire corridor of parcels located south of Eucalyptus Avenue, north of Merrill Avenue, east of Euclid Avenue, and west of the Cucamonga Creek Channel are envisioned by the City to be an industrial and business park corridor that serves as a buffer between the airport land use to the south (within the City of Chino), and the future commercial, residential, and mixed-use land uses to be located north of Eucalyptus Avenue.

(c) **LU5-7 ALUCP Consistency with Land Use Regulations**. We comply with state law that requires general plans, specific plans, and all new development be consistent with the policies and criteria set forth within an Airport Land Use Compatibility Plan for any public use airport.

Compliance: The proposed project is located within Overflight Zones of ONT. A consistency determination was completed, and the proposed project is consistent with the policies and criteria of the ONT ALUCP. The Project site is also located within the Chino Airport Influence Area (AIA) and is impacted by Safety Zones 1, 3 and 6. The Safety

Zone policies and criteria provide restrictions that limit the height and placement of buildings, lot coverage, concentration of people, the storage of hazardous materials, and excludes or limits sensitive land uses (residential, schools, day care centers, hospitals, etc.). The Project site is also impacted by existing aircraft traffic patterns from Runway 3-21, where aircraft fly directly over the Project site while making Touch-and-Go landings. State law requires that local jurisdictions "rely upon" the compatibility guidance provided by the California Airport Land Use Planning Handbook (published by the Caltrans, Division of Aeronautics) for establishing compatible land uses. The existing General Plan Low-Medium Density Residential land designation is considered an incompatible land use within the Safety Zones and prohibits residential land uses within Safety Zone 1, limits residential density to one dwelling unit per 2-acre lot in Safety Zone 3 and limits 300 people per acre within Safety Zone 6. The proposed General Plan amendment from Business Park and Low-Medium Density Residential to Industrial and Business Park would create land use consistency with Chino Airport and satisfy the criteria set forth in the California Airport Land Use Planning Handbook.

(d) **S4-6 Airport Noise Compatibility.** We utilize information from Airport Land Use Compatibility Plans to prevent the construction of new noise sensitive land uses within airport noise impact zones.

Compliance: The Project site is located within the 55-60 dB CNEL noise contour for Chino Airport. Sensitive land uses (e.g., schools, residences) would be prohibited within the 55-60 dB CNEL noise contour. Allowed uses include warehouse, light manufacturing, ancillary office/commercial, and professional office uses; therefore, no significant impacts are anticipated.

(2) The proposed General Plan Amendment would not be detrimental to the public interest, health, safety, convenience, or general welfare of the City;

(3) The Land Use Element is a mandatory element of a General Plan, which pursuant to Government Code Section 65358, is allowed up to four general plan amendments per calendar year. This General Plan Amendment is the first amendment to the Land Use Element during the 2022 calendar year, consistent with state law.

(4) The project is consistent with the Housing Element of the Policy Plan (General Plan) component of The Ontario Plan, as the project site is not one of the properties in the Available Land Inventory contained in Table A-3 (Available Land by Planning Area) of the Housing Element Technical Report Appendix.

Senate Bill 330 ("SB 330") – Housing Accountability Act (Government Code Section 65589.5 et seq.) (SB 330) was passed by the California Legislature, signed by the Governor, and became effective on January 1, 2020. The bill is the result of the

Legislature's extensive findings regarding the California "housing supply crisis" with "housing demand far outstripping supply."

SB 330 amends Government Code Sections 65589.5, adds Government Code Sections 65940, 65943 and 65950, and repeals and readopts Sections 65906.5, 65913.10 and 65941.1. To summarize, no city may disapprove a residential housing development project for low- to moderate-income households (as defined therein) unless it makes a finding that the housing development project "would have a specific, adverse impact upon the public health or safety, and there is no feasible method to satisfactorily mitigate or avoid the specific adverse impact without rendering the development unaffordable to low- and moderate-income households…" such as where the housing development project is proposed on land "which does not have adequate water or wastewater facilities to serve the project." (Government Code Section 65589.5(d)(2), (4)).

In addition, the legislation adds Chapter 12 to Division 1 of Title 7 of the Government Code (Section 66300 et seq.) that applies to "affected cities," which are identified as cities in urbanized areas as determined by the most recent census. In accordance with SB 330, the Department of Community Development and Housing ("HCD") has prepared a list of affected cities and has determined that Ontario is an "affected city." Therefore, pursuant to Government Code section 66300(b)(1)(A) and (b):

> *(b) (1) Notwithstanding any other law except as provided in subdivision (i), with respect to land where housing is an allowable use, an affected city shall not enact a development policy, standard, or condition that would have any of the following effects:*
>
> *(A) Changing the general plan land use designation, specific plan land use designation, or zoning of a parcel or parcels of property to a less intensive use or reducing the intensity of land use within an existing general plan land use designation, specific plan land use designation, or zoning district below what was allowed under the land use designation and zoning ordinances of the affected county or affected city, as applicable, as in effect on January 1, 2018…"*

except when approved by HCD or when the following exception is set out in Government Code Section 66300(i)(1) applies:

> *(i) (1) This section does not prohibit an affected county or an affected city from changing a land use designation or zoning ordinance to a less intensive use if the city or county concurrently changes the development standards, policies, and conditions applicable to other parcels within the jurisdiction to ensure that there is no net loss in residential capacity.*

The General Plan Amendment ("GPA") is proposed to change the Project site's land use designations from Business Park (0.6 FAR) and Low-Medium Density Residential (5.1-11 du/ac) to Business Park (0.6 FAR) and Industrial (0.55 FAR) land uses. The General Plan Amendment will allow development of up to 919,048 square feet of business park and 4,414,470 square feet of industrial, for a maximum development of 5,333,518 square feet. The GPA would, therefore, eliminate the low-medium density housing designation, thereby theoretically eliminating 1,352 units (as determined by the City's density determinations to be 8.5 dwelling units per acre [du/ac.]). In compliance with SB330, the EIR evaluated the elimination of 1,352 units and determined that based on SB 330 Exceptions for lack of water and sewer to serve a residential project and the no net loss of residential capacity, the Project is consistent with HCD exception findings. The Project site does not have sufficient water or wastewater facilities to serve a residential project. As explained in Section 3.4.1.2, of the Draft EIR, at present there is no water or sewer infrastructure that could serve residential units because the land has been used for agricultural purposes with water provided by on-site wells and sewer provided by septic systems. The Project Applicant is working on projects both approved and under review that span the length of Eucalyptus Avenue to the north, Merrill Avenue to the south, Euclid Avenue to the east, and Grove Avenue to the west (Ontario Ranch Business Park Specific Plan – Approved; Ontario Ranch Business Park Specific Plan Amendment – Under review; and, South Ontario Logistics Center – Subject Project), with a combined estimated cost of $144,331,000 (see Table 1, Project Cost Estimate by Project Area, below). The total estimated cost includes individual streets, lengths of pipe, storm drain, sewer, water, streetlights, curbing, paving, signals, power/fiber, and more. This cost would be financially infeasible for the 1,352 units presently allowed under the current residential General Plan designation and therefore the cost of such improvements would make residential development on the site financially infeasible (see Government Code Section 66589.5(d)(2) cited above).

Table 1: Project Cost Estimate by Project Area	
Project Name	***Cost Estimate***
Ontario Ranch Business Park Phase 1 (Specific Plan - Approved)	$72,151,000
South Ontario Logistics Center (Specific Plan – Subject Project, Under Review)	$59,780,000
Ontario Ranch Business Park Phase 2 (Specific Plan Amendment, Under Review)	$12,400,000
Total	**$144,331,000**

In order to demonstrate "no net loss of residential capacity," the Project will be required to demonstrate increased residential zoning capacity on a "SB330 Replacement Site" by 1,352 units to off-set the Project site loss of zoning capacity (Low Medium Density, 5.1 to 11 du/ac). In tandem with the City's adoption of the 6th Cycle Housing Element in

February 2022, the City is also adopting an Affordable Housing Overlay zone and applying this zone to all parcels in the sites inventory that are south of Riverside Drive or are zoned MU-2 along Holt Boulevard. Relevant to the Project, the Affordable Housing Overlay zone will establish a minimum density of 20 dwelling units per acre for all development (regardless of Policy Plan designation or underlying zoning district), and increase the maximum density from 25 to 30 units per acre for parcels that are designated in the Policy Plan for Medium Density Residential ("MDR") when an affordable housing project is proposed with at least 25 percent of proposed units are restricted for lower income households. The creation of the Affordable Housing Overlay zone and increased maximum density of 5 dwelling units per acre will increase residential capacity on 473.7 acres of such parcels currently designated MDR, by 2,368 dwelling units. On December 20, 2021, the Planning Commission reviewed and recommended to the February 15, 2022, City Council hearing for approval a General Plan Amendment (File No. PGPA21-004) for the Housing Element update to the Policy Plan (General Plan) component of The Ontario Plan, to address State mandates regarding the Regional Housing Needs Allocation ("RHNA"), as well as to modify the Policy Plan Land Use Plan (Exhibit LU-01) to establish a Zone Change (File No. PZC21-002). The Project EIR addresses the potential impacts associated with relocating residential density from the Project site to the SB330 Replacement Sites located north of the Project site, along Grove Avenue, pursuant to SB330. With the City adoption of the 6th Cycle Housing Element and associated Affordable Housing Overlay zone, no net loss of residential capacity will occur as a result of the Project.

(5) During the amendment of the general plan, opportunities for the involvement of citizens, California Native American Indian tribes (Government Code Section 65352.3), public agencies, public utility companies, and civic, education, and other community groups, through public hearings or other means were implemented consistent with Government Code Section 65351.

SECTION 4: ***Planning Commission Action.*** Based upon the findings and conclusions set forth in Sections 1 through 3, above, the Planning Commission hereby RECOMMENDS THE CITY COUNCIL APPROVE the proposed General Plan Amendment, as depicted in Attachment 1 (Policy Plan Land Use Plan (Exhibit LU-01) Revision) and Attachment 2 (Future Buildout (Exhibit LU-03) Revision) of this Resolution.

SECTION 5: ***Indemnification.*** The Applicant shall agree to defend, indemnify, and hold harmless, the City of Ontario or its agents, officers, and employees from any claim, action or proceeding against the City of Ontario or its agents, officers or employees to attack, set aside, void, or annul this approval. The City of Ontario shall promptly notify the applicant of any such claim, action, or proceeding, and the City of Ontario shall cooperate fully in the defense.

SECTION 6: ***Custodian of Records.*** The documents and materials that constitute the record of proceedings on which these findings have been based are located at the City of Ontario City Hall, 303 East "B" Street, Ontario, California 91764. The custodian for these records is the City Clerk of the City of Ontario.

SECTION 7: ***Certification to Adoption.*** The Secretary shall certify to the adoption of the Resolution.

The Secretary Pro Tempore for the Planning Commission of the City of Ontario shall certify as to the adoption of this Resolution.

I hereby certify that the foregoing Resolution was duly and regularly introduced, passed and adopted by the Planning Commission of the City of Ontario at a regular meeting thereof held on the 25th day of January, 2022, and the foregoing is a full, true and correct copy of said Resolution, and has not been amended or repealed.

Rick Gage
Planning Commission Chairman

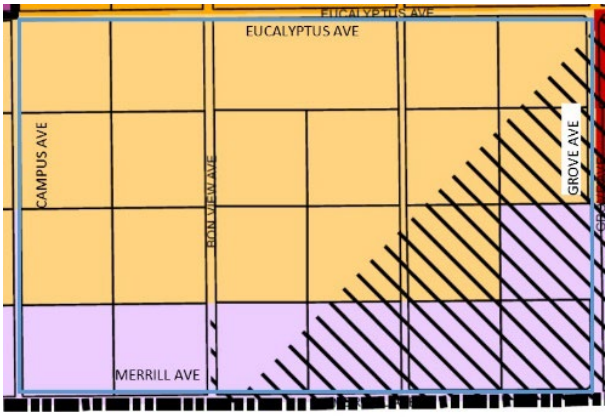
ATTEST:

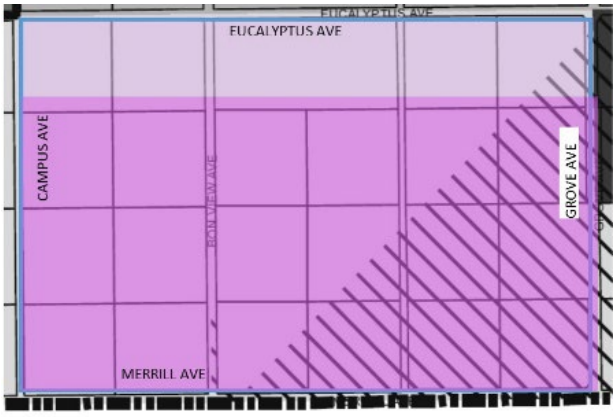
Rudy Zeledon
Planning Director and
Secretary to the Planning Commission

STATE OF CALIFORNIA)
COUNTY OF SAN BERNARDINO)
CITY OF ONTARIO)

I, Gwen Berendsen, Secretary Pro Tempore of the Planning Commission of the City of Ontario, DO HEREBY CERTIFY that foregoing Resolution No. PC22-005, was duly passed and adopted by the Planning Commission of the City of Ontario at their regular meeting held on January 25, 2022, by the following roll call vote, to wit:

AYES: Dean, DeDiemar, Gage, Lampkin, Ricci, Willoughby





NOES: None

ABSENT: Anderson

ABSTAIN: None

Gwen Berendsen
Secretary Pro Tempore

Notes
1 Historically, citywide buildout levels do not achieve the maximum allowable density/intensity on every parcel and are, on average, lower than allowed by the Policy Plan. Accordingly, the buildout projections in this Policy Plan do not assume buildout at the maximum density or intensity and instead are adjusted downward. To view the buildout assumptions, access the Methodology report.
2 Acres are given as adjusted gross acreages, which do not include the right-of-way for roadways, flood control facilities, or railroads.
3 Assumed Density/Intensity includes both residential density, expressed as units per acre, and non-residential intensity, expressed as floor area ratio (FAR), which is the amount of building square feet in relation to the size of the lot.
4 Projections of population by residential designation are based on a persons-per-household factor that varies by housing type. For more information, access the Methodology report.
5 To view the factors used to generate the number of employees by land use category, access the Methodology report.
6 Acreages and corresponding buildout estimates for these designations do not reflect underlying land uses within the Business Park, Industrial and Commercial Overlays. Estimates for these areas are included within the corresponding Business Park, Industrial and General Commercial categories.

RESOLUTION NO. PC22-006

A RESOLUTION OF THE PLANNING COMMISSION OF THE CITY OF ONTARIO, RECOMMENDING THE CITY COUNCIL APPROVE THE SOUTH ONTARIO LOGISTICS CENTER SPECIFIC PLAN (FILE NO. PSP19-001), TO ESTABLISH LAND USE DISTRICTS, DEVELOPMENT STANDARDS, DESIGN GUIDELINES, AND INFRASTRUCTURE IMPROVEMENTS FOR THE POTENTIAL DEVELOPMENT OF UP TO 5,333,518 SQUARE FEET OF GENERAL INDUSTRIAL AND BUSINESS PARK LAND USES ON 219.39 ACRES OF LAND GENERALLY BORDERED BY EUCALYPTUS AVENUE ON THE NORTH, MERRILL AVENUE ON THE SOUTH, GROVE AVENUE ON THE EAST, AND CAMPUS AVENUE ON THE WEST, AND MAKING FINDINGS IN SUPPORT THEREOF—APNS: 1054-071-01, 1054-071-02, 1054-081-03, 1054-091-01, 1054-091-02, 1054-101-01, 1054-101-02, 1054-231-01, 1054-231-02, 1054-241-01, 1054-241-02, 1054-321-01, 1054-321-02, 1054-311-01, 1054-311-02, 1054-051-01, 1054-051-02, 1054-061-01, 1054-061-02, 1054-251-01, 1054-251-02, 1054-301-01, and 1054-301-02.

WHEREAS, Grove Land Venture, LLC (“Applicant”) has filed an Application for the approval of a Specific Plan, File No. PSP19-001, as described in the title of this Resolution (hereinafter referred to as "Application" or "Project"); and

WHEREAS, the Application applies to approximately 219.4 acres of land, bounded by Eucalyptus Avenue to the north, Merrill Avenue to the south, Grove Avenue on the east, and Campus Avenue on the west, within the Business Park (0.6 FAR) and Low-Medium Density Residential (5.1-11 du/ac) land use designations, and is presently improved with agriculture/dairy and single-family residential uses; and

WHEREAS, the property to the north of the project site is within the SP(AG) zoning district and is currently developed with agricultural uses and a dairy farm. The property to the east is within the Merrill Commerce Center Specific Plan and is currently developed with agricultural uses and a dairy farm. The property to the south of the project site is located within the City of Chino and is developed with the Chino Airport. The property to the west of the project site is located within the SP(AG) zoning district and is developed with agricultural and dairy uses; and

WHEREAS, the South Ontario Logistics Center Specific Plan establishes a comprehensive set of design guidelines and development regulations to guide and regulate site planning, landscape, and architectural character, and ensuring that excellence in community design is achieved during project development. In addition, the Specific Plan will establish the procedures and requirements to approve new development within the project site to ensure The Ontario Plan (“TOP”) goals and policies are achieved; and

WHEREAS, the South Ontario Logistics Center Specific Plan consists of approximately 219.4 acres of land, which includes the potential development of up to 5,333,518 square feet of business park and industrial development; and

WHEREAS, a request for approval of a General Plan Amendment (File No. PGPA19-004) to change the land use designations shown on the Land Use Plan Map (Exhibit LU-1) for 219.4 acres of land from Low-Medium Density Residential (5.1-11 du/ac) and Business Park (0.6 FAR) to Industrial (0.55 FAR) and Business Park (0.6 FAR), and modify the Future Buildout Table (Exhibit LU-03) to be consistent with the land use designation changes has also been submitted as part of the proposed South Ontario Logistics Center Specific Plan; and

WHEREAS, the land use intensity of the South Ontario Logistics Center Specific Plan anticipated in the five planning areas is consistent with TOP. The Specific Plan is proposing a maximum 0.6 Floor Area Ratio (FAR) within the Business Park land use designation (Planning Areas 1 and 3) located along the northern portion of the Specific Plan area. Planning Area 1 is 23.65 acres in size and can be potentially developed with 618,076 square feet of business park development. Planning Area 3 is 11.52 acres in size and can potentially be developed with 300,972 square feet of business park development. In addition, buildings within the Business Park land use area that front onto a public right-of-way shall not exceed a 125,000 square-foot building footprint. The Specific Plan is proposing a maximum 0.55 FAR within the Industrial land use designation (Planning Areas 2, 4, and 5) located along the southern portion of the Specific Plan. Planning Area 2 is 106.71 acres in size and can potentially be developed with 2,556,442 square feet of industrial development. Planning Area 4 is 60.06 acres in size and can potentially be developed with 1,438,914 square feet of industrial development. Planning area 5 is 17.45 acres in size and can potentially be developed with 419,114 square feet of industrial development. The proposed FARs for each of the Planning Areas is consistent with the Policy Plan Land Use designations for Business Park and Industrial; and

WHEREAS, the South Ontario Logistics Center Specific Plan has been prepared in conformance with the goals and policies of the City of Ontario Policy Plan (General Plan). The policy (General Plan) analysis in the Appendix “Policy Plan (General Plan) Consistency,” of the Specific Plan describes the manner in which the South Ontario Logistics Center Specific Plan complies with the Policy Plan goals and policies applicable to the South Ontario Logistics Center Specific Plan; and

WHEREAS, the South Ontario Logistics Center Specific Plan does not conflict with the Land Use Policies of the General Plan (Policy Plan component of TOP) and will provide for development, in a manner consistent with the General Plan. The policy (General Plan) analysis in the Appendix “Policy Plan (General Plan) Consistency,” of the Specific Plan describes the manner in which the South Ontario Logistics Center Specific

Plan complies with the Policy Plan goals and policies applicable to the South Ontario Logistics Center Specific Plan; and

WHEREAS, an Environmental Impact Report ("EIR") (State Clearinghouse No. 2021010318), including the adoption of a Mitigation Monitoring and Reporting Program and a Statement of Overriding Consideration have been prepared in accord with the California Environmental Quality (CEQA), the State CEQA Guidelines and the City of Ontario Guidelines to address the environmental effects of the Specific Plan (South Ontario Logistics Center); and

WHEREAS, Ontario Development Code Table 2.02-1 (Review Matrix) grants the Planning Commission the responsibility and authority to review and make a recommendation on the subject Application; and

WHEREAS, the Project has been reviewed for consistency with the Housing Element of the Policy Plan component of The Ontario Plan, as State Housing Element law (as prescribed in Government Code Sections 65580 through 65589.8) requires that development projects must be consistent with the Housing Element, if upon consideration of all its aspects, it is found to further the purposes, principals, goals, and policies of the Housing Element; and

WHEREAS, the Project is located within the Airport Influence Area of Ontario International Airport, which encompasses lands within parts of San Bernardino, Riverside, and Los Angeles Counties, and is subject to, and must be consistent with, the policies and criteria set forth in the Ontario International Airport Land Use Compatibility Plan ("ALUCP"), which applies only to jurisdictions within San Bernardino County, and addresses the noise, safety, airspace protection, and overflight impacts of current and future airport activity; and

WHEREAS, the project site is also located within the Airport Influence of Chino Airport and must be consistent with policies and criteria set forth within the 2011 California Airport Land Use Planning Handbook published by the California Department of Transportation, Division of Aeronautics, which addresses the noise, safety, airspace protection, and overflight impacts of current and future airport activity; and

WHEREAS, City of Ontario Development Code Division 2.03 (Public Hearings) prescribes the manner in which public notification shall be provided and hearing procedures to be followed, and all such notifications and procedures have been completed; and

WHEREAS, to address the requirements of SB330, the approval of the South Ontario Logistics Center Specific Plan is contingent upon City Council approval of General Plan Amendment, File No. PGPA21-004, for the Housing Element update to the Policy Plan (General Plan) component of The Ontario Plan, to address State mandates

regarding the Regional Housing Needs Allocation ("RHNA"), as well as to modify the Policy Plan Land Use Plan (Exhibit LU-01) to establish a Zone Change (File No. PZC21-002); and

WHEREAS, on January 25, 2022, the Planning Commission of the City of Ontario conducted a hearing to consider the Project, and concluded said hearing on that date; and

WHEREAS, all legal prerequisites to the adoption of this Resolution have occurred.

NOW, THEREFORE, IT IS HEREBY FOUND, DETERMINED, AND RESOLVED by the Planning Commission of the City of Ontario, as follows:

SECTION 1: ***Environmental Determination and Findings.*** As the recommending body for the Project, the Planning Commission has reviewed and considered the information contained in the Environmental Impact Report (EIR), Mitigation Monitoring and Reporting Program and a Statement of Overriding Consideration prepared for the project and supporting documentation. Based upon the facts and information contained in the EIR (SCH# 2021010318) and supporting documentation, the Planning Commission finds as follows:

(1) The South Ontario Logistics Center Specific Plan EIR, Mitigation Monitoring and Reporting Program and a Statement of Overriding Consideration contains a complete and accurate reporting of the environmental impacts associated with the Project; and

(2) The South Ontario Logistics Center Specific Plan EIR, Mitigation Monitoring and Reporting Program and a Statement of Overriding Consideration was completed in compliance with CEQA and the Guidelines promulgated thereunder; and

(3) The South Ontario Logistics Center Specific Plan EIR, Mitigation Monitoring and Reporting Program and a Statement of Overriding Consideration reflects the independent judgment of the Planning Commission.

SECTION 2: ***Ontario International Airport Land Use Compatibility Plan ("ALUCP") Compliance and Chino Airport Influence Area.*** The California State Aeronautics Act (Public Utilities Code Section 21670 et seq.) requires that an Airport Land Use Compatibility Plan be prepared for all public use airports in the State and rely upon the 2011 California Airport Land Use Planning Handbook published by the California Department of Transportation, Division of Aeronautics; and requires that local land use plans and individual development proposals must be consistent with the policies set forth in the adopted Airport Land Use Compatibility Plan.

(1) On April 19, 2011, the City Council of the City of Ontario approved and adopted the ALUCP, establishing the Airport Influence Area for Ontario International

Airport, which encompasses lands within parts of San Bernardino, Riverside, and Los Angeles Counties, and limits future land uses and development within the Airport Influence Area, as they relate to noise, safety, airspace protection, and overflight impacts of current and future airport activity. As the recommending authority for the Project, the Planning Commission has reviewed and considered the facts and information contained in the Application and supporting documentation against the ALUCP compatibility factors, including [1] Safety Criteria (ALUCP Table 2-2) and Safety Zones (ALUCP Map 2-2), [2] Noise Criteria (ALUCP Table 2-3) and Noise Impact Zones (ALUCP Map 2-3), [3] Airspace protection Zones (ALUCP Map 2-4), and [4] Overflight Notification Zones (ALUCP Map 2-5). As a result, the PLANNING COMMISSION, therefore, finds and determines that the Project, when implemented in conjunction with the conditions of approval, will be consistent with the policies and criteria set forth within the ALUCP; and

(2) Chino Airport is owned and operated by the County of San Bernardino and is situated within the boundaries of the City of Chino, immediately south of Ontario. Portions of the City of Ontario are impacted by aircraft operations at Chino Airport. The adopted ALUCP for Chino Airport was approved in 1991 and does not reflect the most recently adopted 2005 Airport Master Plan. Also, the existing Chino Airport Land Use Compatibility Plan does not reflect the 2011 Caltrans Airport Land Use Planning Handbook. Public Utilities Code Section 21670.1(c) requires local jurisdictions under the "alternative process" to "rely upon" the California Airport Land Use Planning Handbook (Handbook) published by the California Department of Transportation (Caltrans), Division of Aeronautics in October 2011, for preparing Compatibility Plans and to utilize the Handbook's height, land use, noise, safety, and density criteria. Although the City of Ontario does not have the formal responsibility under the "alternative process" to prepare a compatibility plan for Chino Airport, the City of Ontario has completed an Airport Land Use Compatibility Assessment that analyzes Chino Airport's impacts on Ontario, consistent with policies and criteria set forth within the Caltrans 2011 California Airport Land Use Planning Handbook. The City of Ontario is currently working towards completing an Airport Land Use Compatibility Plan for portions of the City that are impacted by aircraft operations at Chino Airport. The proposed Project is located within the Airport Influence Area of Chino Airport and was evaluated and found to be consistent with the California Airport Land Use Planning Handbook and the City of Ontario's Chino Airport Land Use Compatibility Assessment. As the recommending authority for the Project, the Planning Commission has reviewed and considered the facts and information contained in the Application and supporting documentation against the ALUCP compatibility factors, including Safety, Noise, Airspace Protection, Overflight. As a result, the PLANNING COMMISSION, therefore, finds and determines that the Project, will be consistent with the policies and criteria set forth within the California Airport Land Use Planning Handbook and the City of Ontario's Chino Airport Land Use Compatibility Assessment.

SECTION 3: ***Concluding Facts and Reasons.*** Based upon the substantial evidence presented to the Planning Commission during the above-referenced hearing,

and upon the specific findings set forth in Section 1 and 2, above, the Planning Commission hereby recommends that the City Council make the following findings:

(1) The approximately 219.4-acre South Ontario Logistics Center Specific Plan is suitable for business park and industrial development and is consistent with the goals, policies, plans and exhibits of the Vision, Policy Plan (General Plan), and City Council Priorities components of The Ontario Plan. The proposed land uses in the proposed districts will also be in harmony in terms of access, size, and compatibility with existing land use in the surrounding area; and

(2) The proposed South Ontario Logistics Center Specific Plan is in conformance with the Land Use Policies and Goals of the Policy Plan and will provide standards and guidelines for the harmonious development within the districts, in a manner consistent with the Policy Plan. The Specific Plan is proposing business park and industrial type development for the approximately 219.4-acre site, which is what is proposed to be mandated by the land use plan of the Policy Plan, therefore, the proposed industrial uses will be in conformance with the policies and goals of the Policy Plan; and

(3) During the South Ontario Logistics Center Specific Plan review, opportunities for the involvement of citizens, California Native American Indian tribes (Government Code Section 65352.3.), public agencies, public utility companies, and civic, education, and other community groups, through public hearings or other means were implemented consistent with California Government Code Section 65351; and

(4) The project is consistent with the Housing Element of the Policy Plan (General Plan) component of The Ontario Plan, as the project site is not one of the properties in the Available Land Inventory contained in Table A-3 (Available Land by Planning Area) of the Housing Element Technical Report Appendix.

Senate Bill 330 (“SB 330”) – Housing Accountability Act (Government Code Section 65589.5 et seq.) (SB 330) was passed by the California Legislature, signed by the Governor, and became effective on January 1, 2020. The bill is the result of the Legislature’s extensive findings regarding the California “housing supply crisis” with “housing demand far outstripping supply.”

SB 330 amends Government Code Section 65589.5, adds Government Code Sections 65940, 65943 and 65950, and repeals and readopts Sections 65906.5, 65913.10 and 65941.1. To summarize, no city may disapprove a residential housing development project for low- to moderate-income households (as defined therein) unless it makes a finding that the housing development project “would have a specific, adverse impact upon the public health or safety, and there is no feasible method to satisfactorily mitigate or avoid the specific adverse impact without rendering the development unaffordable to low- and moderate-income households…” such as where the housing development project is

proposed on land "which does not have adequate water or wastewater facilities to serve the project." (Government Code Section 65589.5(d)(2), (4)).

In addition, the legislation adds Chapter 12 to Division 1 of Title 7 of the Government Code (Section 66300 et seq.) that applies to "affected cities," which are identified as cities in urbanized areas as determined by the most recent census. In accordance with SB 330, the Department of Community Development and Housing ("HCD") has prepared a list of affected cities and has determined that Ontario is an "affected city." Therefore, pursuant to Government Code section 66300(b)(1)(A) and (b):

> *(b) (1) Notwithstanding any other law except as provided in subdivision (i), with respect to land where housing is an allowable use, an affected city shall not enact a development policy, standard, or condition that would have any of the following effects:*
>
> *(A) Changing the general plan land use designation, specific plan land use designation, or zoning of a parcel or parcels of property to a less intensive use or reducing the intensity of land use within an existing general plan land use designation, specific plan land use designation, or zoning district below what was allowed under the land use designation and zoning ordinances of the affected county or affected city, as applicable, as in effect on January 1, 2018…"*

except when approved by HCD or when the following exception is set out in Government Code Section 66300(i)(1) applies:

> *(i) (1) This section does not prohibit an affected county or an affected city from changing a land use designation or zoning ordinance to a less intensive use if the city or county concurrently changes the development standards, policies, and conditions applicable to other parcels within the jurisdiction to ensure that there is no net loss in residential capacity.*

The General Plan Amendment ("GPA") is proposed to change the Project site's land use designations from Business Park (0.6 FAR) and Low-Medium Density Residential (5.1-11 du/ac) to Business Park (0.6 FAR) and Industrial (0.55 FAR) land uses. The General Plan Amendment will allow development of up to 919,048 square feet of business park and 4,414,470 square feet of industrial, for a maximum development of 5,333,518 square feet. The GPA would, therefore, eliminate the low-medium density housing designation, thereby theoretically eliminating 1,352 units (as determined by the City's density determinations to be 8.5 dwelling units per acre [du/ac.]). In compliance with SB330, the EIR evaluated the elimination of 1,352 units and determined that based on SB 330 Exceptions for lack of water and sewer to serve a residential project and the no net loss of residential capacity, the Project is consistent with HCD exception findings. The Project site does not have sufficient water or wastewater facilities to serve a residential project. As explained in Section 3.4.1.2, of the Draft EIR, at present there is no water or sewer

infrastructure that could serve residential units because the land has been used for agricultural purposes with water provided by on-site wells and sewer provided by septic systems. The Project Applicant is working on projects both approved and under review that span the length of Eucalyptus Avenue to the north, Merrill Avenue to the south, Euclid Avenue to the east, and Grove Avenue to the west (Ontario Ranch Business Park Specific Plan – Approved; Ontario Ranch Business Park Specific Plan Amendment – Under review; and, South Ontario Logistics Center – Subject Project), with a combined estimated cost of $144,331,000 (see Table 1, Project Cost Estimate by Project Area, below). The total estimated cost includes individual streets, lengths of pipe, storm drain, sewer, water, streetlights, curbing, paving, signals, power/fiber, and more. This cost would be financially infeasible for the 1,352 units presently allowed under the current residential General Plan designation and therefore the cost of such improvements would make residential development on the site financially infeasible (see Government Code Section 66589.5(d)(2) cited above).

Table 1: Project Cost Estimate by Project Area	
Project Name	***Cost Estimate***
Ontario Ranch Business Park Phase 1 (Specific Plan - Approved)	$72,151,000
South Ontario Logistics Center (Specific Plan – Subject Project, Under Review)	$59,780,000
Ontario Ranch Business Park Phase 2 (Specific Plan Amendment, Under Review)	$12,400,000
Total	**$144,331,000**

In order to demonstrate “no net loss of residential capacity,” the Project will be required to demonstrate increased residential zoning capacity on a “SB330 Replacement Site” by 1,352 units to off-set the Project site loss of zoning capacity (Low Medium Density, 5.1 to 11 du/ac). In tandem with the City’s adoption of the 6th Cycle Housing Element in February 2022, the City is also adopting an Affordable Housing Overlay zone and applying this zone to all parcels in the sites inventory that are south of Riverside Drive or are zoned MU-2 along Holt Boulevard. Relevant to the Project, the Affordable Housing Overlay zone will establish a minimum density of 20 dwelling units per acre for all development (regardless of Policy Plan designation or underlying zoning district), and increase the maximum density from 25 to 30 units per acre for parcels that are designated in the Policy Plan for Medium Density Residential (“MDR”) when an affordable housing project is proposed with at least 25 percent of proposed units are restricted for lower income households. The creation of the Affordable Housing Overlay zone and increased maximum density of 5 dwelling units per acre will increase residential capacity on 473.7 acres of such parcels currently designated MDR, by 2,368 dwelling units. On December 20, 2021, the Planning Commission reviewed and recommended to the February 15, 2022, City Council hearing for approval a General Plan Amendment (File No. PGPA21-004) for the Housing Element update to the Policy Plan (General Plan) component of The

Ontario Plan, to address State mandates regarding the Regional Housing Needs Allocation ("RHNA"), as well as to modify the Policy Plan Land Use Plan (Exhibit LU-01) to establish a Zone Change (File No. PZC21-002). The Project EIR addresses the potential impacts associated with relocating residential density from the Project site to the SB330 Replacement Sites located north of the Project site, along Grove Avenue, pursuant to SB330. With the City adoption of the 6th Cycle Housing Element and associated Affordable Housing Overlay zone, no net loss of residential capacity will occur as a result of the Project.

SECTION 4: ***Planning Commission Action.*** Based upon the findings and conclusions set forth in Sections 1 through 3, above, the Planning Commission hereby RECOMMENDS THE CITY COUNCIL APPROVE the herein described Application, subject to each and every condition set forth in the Department reports attached hereto as "Attachment B," and incorporated herein by this reference.

SECTION 5: ***Indemnification.*** The Applicant shall agree to defend, indemnify and hold harmless, the City of Ontario or its agents, officers, and employees from any claim, action or proceeding against the City of Ontario or its agents, officers or employees to attack, set aside, void, or annul this approval. The City of Ontario shall promptly notify the applicant of any such claim, action, or proceeding, and the City of Ontario shall cooperate fully in the defense.

SECTION 6: ***Custodian of Records.*** The documents and materials that constitute the record of proceedings on which these findings have been based are located at the City of Ontario City Hall, 303 East "B" Street, Ontario, California 91764. The custodian for these records is the City Clerk of the City of Ontario.

SECTION 7: ***Certification to Adoption.*** The Secretary shall certify to the adoption of the Resolution.

- - - - - - - - - - - - - -

The Secretary Pro Tempore for the Planning Commission of the City of Ontario shall certify as to the adoption of this Resolution.

I hereby certify that the foregoing Resolution was duly and regularly introduced, passed and adopted by the Planning Commission of the City of Ontario at a regular meeting thereof held on the 25th day of January, 2022, and the foregoing is a full, true and correct copy of said Resolution, and has not been amended or repealed.

Rick Gage
Planning Commission Chairman

ATTEST:

Rudy Zeledon
Planning Director and
Secretary to the Planning Commission

STATE OF CALIFORNIA)
COUNTY OF SAN BERNARDINO)
CITY OF ONTARIO)

I, Gwen Berendsen, Secretary Pro Tempore of the Planning Commission of the City of Ontario, DO HEREBY CERTIFY that foregoing Resolution No. PC22-006, was duly passed and adopted by the Planning Commission of the City of Ontario at their regular meeting held on January 25, 2022, by the following roll call vote, to wit:

AYES: Dean, DeDiemar, Gage, Lampkin, Ricci, Willoughby

NOES: None

ABSENT: Anderson

ABSTAIN: None

Sewer Subarea Master Plan (SSAMP)

1.0 INTRODUCTION

The South Ontario Logistics Center Specific Plan (this "Specific Plan") is one of the initial industrial specific plans implementing the vision outlined by the City of Ontario for the Ontario Ranch area (formerly New Model Colony). The Ontario Ranch area covers 8,200 acres of the former 14,000-acre San Bernardino Agricultural Preserve, which was historically used for dairy or cattle farming by descendants of Dutch, French Basque, Portuguese, and Mexican families.

The Agricultural Preserve was divided in 1999, with portions incorporated into the three adjacent cities of Chino, Chino Hills, and Ontario. The City of Ontario named its portion the *New Model Colony* after the original *Model Colony of Ontario* established by the Chaffey Brothers, William and George Jr., in 1882. The original Model Colony was founded on innovative land development principles that included the distribution of water rights with land purchases (Mutual Water Company), a grand boulevard (Euclid Avenue), and an agricultural college (Chaffey College, established 1885).

Within Ontario Ranch, the City of Ontario promotes innovative land development principles to continue the legacy of the Model Colony. The land use plan for Ontario Ranch provides for housing, commercial and industrial areas, parks, a lake, a golf course, and trail and bike links. Specific plans are required to guide development in Ontario Ranch to ensure the City objectives are achieved.

On January 26, 2010, the City of Ontario adopted The Ontario Plan, which serves as its new business plan and includes a long-term vision and principle-based policy plan, essentially functioning as the General Plan for the city, including Ontario Ranch.

1.1 Purpose and Intent of the Specific Plan

The South Ontario Logistics Center Specific Plan provides zoning regulations for development of the project site by establishing permitted land use, development standards, infrastructure requirements, and implementation requirements for development. A comprehensive set of design guidelines and development regulations are included to guide and regulate site planning, architectural character, and landscape within the community, ensuring that excellence in community design is achieved during project development. The Specific Plan establishes the procedures and requirements to approve new development within the project site.

The purpose of the Specific Plan is to:

1. Provide a planning framework that responds to the physical and market driven aspects of future development opportunities;
2. Specify adequate and coordinated infrastructure, utilities, and public services for this area of the Ontario Ranch;
3. Promote compatible uses and interfaces with adjacent properties;

4. Ensure the appropriate location and intensity of uses through new development parameters; and
5. Conform with State laws and local ordinances and policies for the preparation of the Specific Plan.

The objectives of the Specific Plan are to:

1. Create a professional, well-maintained, and attractive environment for the development of a multi-purpose business park, light industrial and warehousing/logistics complex.
2. Provide the entitlements and framework for the development of at least 5.3 million square feet of business park and light industrial uses.
3. Provide employment opportunities for community residents.
4. Facilitate the construction of utilities, roads, and other major infrastructure that are sufficiently sized to adequately serve the Specific Plan area.
5. Expand Ontario's industrial uses in proximity to local airports and regional transportation networks.
6. Create an economic engine to drive future growth in Ontario Ranch, spur infrastructure improvements in the area and implement the Specific Plan vision.

1.2 Project Description

This Specific Plan is the regulatory document for the South Ontario Logistics Center, accommodating up to 5,333,518 square feet of business park and general industrial uses on approximately 219 gross acres of land. The Specific Plan addresses consistency with The Ontario Plan; provides a development plan identifying land uses, circulation, infrastructure, streetscape, and landscape plans; establishes allowable uses and development standards for reviewing individual projects; presents design guidelines to create a visually attractive environment; summarizes the development review process; and specifies provisions for administration and implementation of the Specific Plan.

The South Ontario Logistics Center is envisioned to contain business park and industrial buildings supported by public roads and utility infrastructure systems, private driveways, parking lots, truck courts, lighting, landscaping, signage, and other functional and decorative features. The business park uses in smaller buildings are positioned along Eucalyptus Avenue while industrial uses in larger warehouse-style buildings comprise the balance of the site. As designed, building users are expected to be a mixture of local, national, and international businesses that bring job opportunities and economic growth to Ontario. A summary of the land uses is as follows:

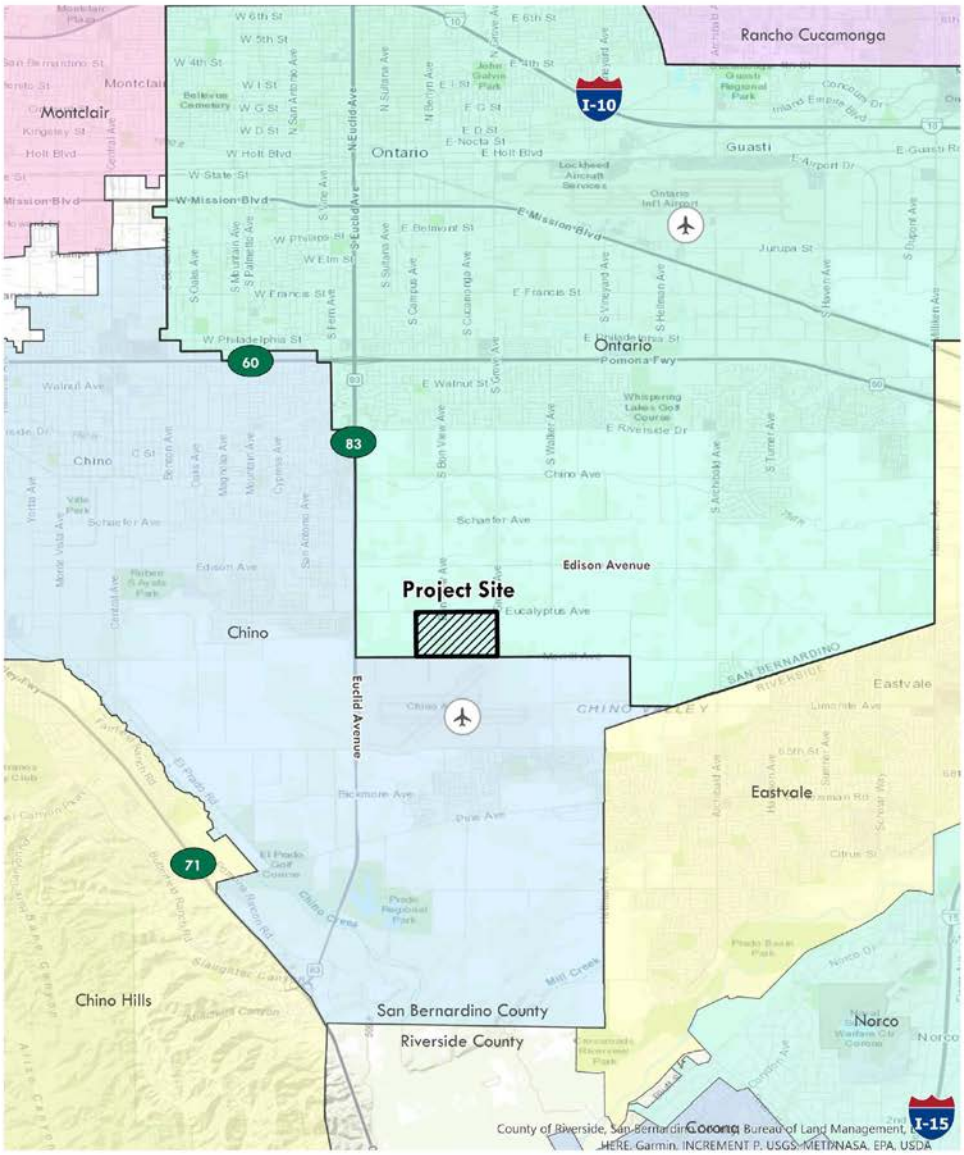

Table 1.0 Land Use Summary

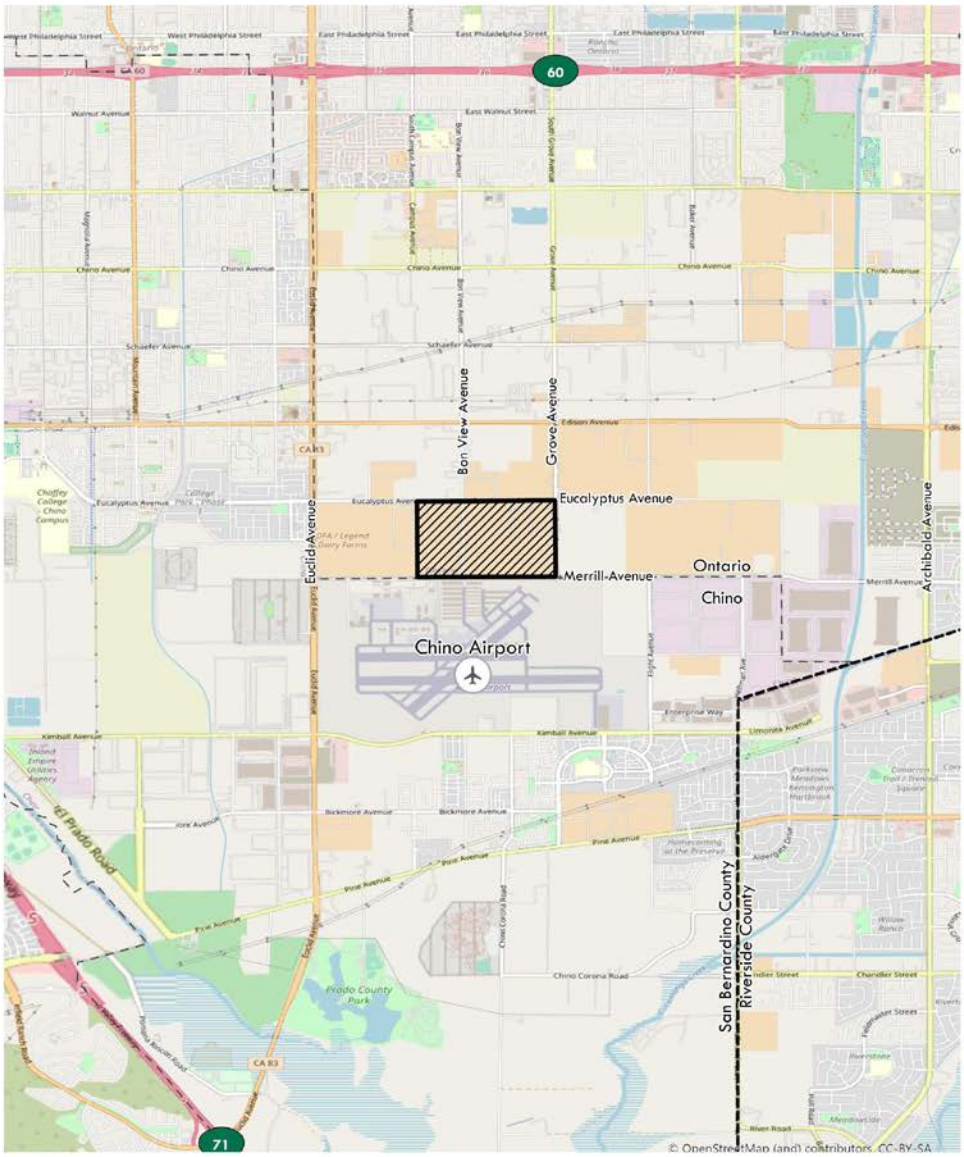
Land Use Designation	Acreage	Maximum Building Square Footage
Business Park Planning Areas	35.17 AC	919,048 SF
Industrial – General Planning Areas	184.22 AC	4,414,470 SF
Total	219.39 AC	**5,333,518 SF**

Location and Specific Plan Boundary



The Specific Plan area is located in the southwestern portion of the city of Ontario within the community called Ontario Ranch (Figure 1.1, Regional Map). The site is approximately 0.80 miles east of State Route 83 (CA-83); 2.97 miles south of State Route 60 (CA-60); 4.5 miles west of Interstate 15 (I-15); and 7.5 miles north of State Route 91 (CA-91) (Figure 1.2, Vicinity Map). The Specific Plan area encompasses 23 parcels bounded by Eucalyptus Avenue on the north, Grove Avenue on the east, Merrill Avenue on the south, Campus Avenue on the west, and consists of the following Assessor Parcel Numbers (APNs): 1054-071-01, -02; 1054-081-03; 1054-091-01, -02; 1054-101-01, -02; 1054-231-01, -02; 1054-241-01, -02; 1054-321-01, -02; 1054-311-01, -02; 1054-051-01, -02; 1054-061-01, -02; 1054-251-01, -02, 1054-301-01, -02. (Figure 1.3, Specific Plan Boundary).

Regional Map

Vicinity Map

South Ontario Logistics Center Specific Plan **Figure 1.2**

Specific Plan Boundary

South Ontario Logistics Center Specific Plan **Figure 1.3**

Employment Generation

At build-out, the South Ontario Logistics Center is anticipated to create hundreds of jobs in warehousing, logistics, light manufacturing, and administration. Actual job creation depends on the type of land uses ultimately developed, as a wide range of office, business park, and industrial uses are permitted. For example, e-commerce uses such as internet merchant fulfillment would yield more jobs than a distribution warehouse since many e-commerce companies employ labor-intensive picking and packing operations. Employment opportunities will range from entry level to highly skilled labor, adding to Ontario's competitive advantage in the region. South Ontario Logistics Center will also provide expanded opportunities for start-up businesses.

Infrastructure Framework

In cooperation with adjacent property owners and developers, the Specific Plan will help establish the necessary framework to enable the continued growth and development of Ontario Ranch. The Specific Plan identifies master planned domestic water, recycled water, sewer, storm drain and fiber optic infrastructure.

Community Compatibility

The Specific Plan land use plan designates the northern frontage along Eucalyptus Avenue as Business Park, which provides for smaller scale buildings with less intense uses. The Industrial designation is applied to the remainder of the Specific Plan area, which is adjacent to the Chino Airport across Merrill Avenue.

1.3 Specific Plan Requirements

The range of topics addressed in a specific plan is left to the discretion of the decision-making body. However, all specific plans must, at a minimum, address the following:

1. The distribution, location, and extent of the uses of land, including open space, within the area covered by the plan.
2. The proposed distribution, location, and extent and intensity of major components of public and private transportation, sewage, water, drainage, solid waste disposal, energy, and other essential facilities proposed to be located within the area covered by the plan and needed to support the land uses described in the plan.
3. Standards and criteria by which development will proceed, and standards for the conservation, development, and utilization of natural resources, where applicable.
4. A program of implementation measures including regulations, programs, public works projects, and financing measures necessary to carry out the above identified items.

1.4 Authority and Scope of the Specific Plan

The Ontario Plan requires approval of a Specific Plan for development within Ontario Ranch to guide development of the project site, ensure unified districts and neighborhoods, and implement the City's goals and policies. The City of Ontario has zoned the project site SP (Specific Plan) Zoning District with an AG (Agriculture) Overlay District. This Specific Plan provides zoning regulations to govern development of

the site and shall take precedence over the City of Ontario Development Code. However, in instances where the Specific Plan is silent, the Development Code shall prevail.

The California Government Code (Title 7, Division 1, Chapter 3, Article 8, Sections 65450 through 65457) grants the City the authority to adopt a specific plan by ordinance (a regulatory plan) or resolution (a policy driven plan). This Specific Plan is a regulatory document, providing land use and design guidance adopted by ordinance.

As a regulatory plan, this document serves as zoning law for the land within the Specific Plan area. Development plans, site plans, and tentative tract and parcel maps must be consistent with this Specific Plan and The Ontario Plan. The topics covered in this Specific Plan include land use, infrastructure, development standards, design guidelines, and implementation measures. The minimum requirements of a specific plan are established by California Government Code Sections 65450 through 65457 and City of Ontario Code Sections 9-1.2100 to 9-1.2125.

No local public works project may be approved, no tentative map or parcel map for which a tentative map was not required may be approved, and no zoning ordinance may be adopted or amended within an area covered by a specific plan unless it is consistent with the adopted specific plan (California Government Code Section 65455). The California Government Code also requires compatibility with local, regional and other planning measures. For example, the Specific Plan must be consistent with any applicable comprehensive airport land use plan (ALUP) (California Government Code Section 65302.3). After adoption, any identification of inconsistency must be followed by amendment of either the existing plans and regulations or the specific plan itself. Failure to correct inconsistencies can result in the inability to enforce specific plan regulations and policies.

1.5 Other Governing Documents

In addition to this Specific Plan, which includes a Land Use Plan, Infrastructure Plan, Development Regulations, Design Guidelines, and an Implementation Plan tailored to the South Ontario Logistics Center, the following documents also contain applicable information:

- The Ontario Policy Plan (which serves as the City's State mandated General Plan) that includes City-wide policies pertaining to land use, housing, mobility, safety, environmental resources, parks & recreation, community economics, community design, and social resources.
- The City of Ontario Development Code, which governs over topics on which this Specific Plan's development regulations are silent. (Where the requirements of this Specific Plan differ from the requirements of the Ontario Development Code, this Specific Plan takes precedence.)
- The South Ontario Logistics Center Development Agreement, which specifies methods for the financing, acquisition, and construction of infrastructure systems and provides assurance that development of the property may proceed subject to Ontario's rules and regulations in effect at the time of this Specific Plan's approval.
- The Airport Land Use Compatibility Plans for Ontario International Airport (ONT) and Chino Airport. The City of Ontario is currently preparing an Airport Land Use Compatibility Plan for Chino Airport which relies on the California Airport Land Use Planning Handbook published by Caltrans Division of Aeronautics, that

is expected to be adopted in 2021. The Chino Airport Land Use Compatibility Plan will establish policies and criteria for the four types of compatibility impacts which include safety, noise, airspace protection, and overflight. Projects within the Specific Plan boundary shall be required to be consistent with the policies and criteria of the Airport Land Use Compatibility Plans for Ontario International Airport and Chino Airport.

- The Mitigation Monitoring and Reporting Program (MMRP) that is part of the South Ontario Logistics Center's Environmental Impact Report (EIR) prepared in compliance with the California Environmental Quality Act. The MMRP stipulates measures that are required to be implemented to mitigate the environmental effects of the commerce center's construction and operation.

1.6 California Environmental Quality Act Compliance

The Specific Plan is a discretionary project and is subject to the requirements of the California Environmental Quality Act (CEQA). Pursuant to State and local CEQA guidelines, an Environmental Impact Report (EIR) addressing the impacts associated with the development of a project must be considered and certified by the City prior to approval of a Specific Plan.

To address potential environmental impacts, it is anticipated that an EIR will be prepared. The EIR will analyze the potential environmental impacts of the adoption and implementation of the Specific Plan and any concurrently processed permits. The EIR for the Specific Plan will be helpful in dealing with concurrently processed implementing projects (such as development within the Specific Plan and/or related infrastructure provision) and subsequent activities within the Specific Plan area. With a detailed analysis of the Specific Plan and associated development, many subsequent activities, such as grading permits or other development permits, could be found to be within the scope of the project described in the EIR, and no further environmental documents would be required.

1.7 Organization of this Specific Plan

The Specific Plan is organized by chapter as follows:

1. **Introduction.** This chapter states the purpose and intent of the Specific Plan, introduces the proposed project, summarizes specific plan requirements, and explains the scope and authority of the Specific Plan and its compliance with CEQA.

2. **Existing Conditions.** This chapter explains the baseline conditions for the project site including current and surrounding land uses, airport influence, circulation, utilities, and environmental conditions.

3. **Development Plan.** This chapter establishes the overall development concept for the Specific Plan including the land use plan, infrastructure plans for water, sewer, drainage, and circulation, and the provision of public services such as fire, police, and solid waste disposal.

4. **Land Use and Development Regulations.** This chapter establishes the land use designations and regulations for the Specific Plan. Upon adoption of this Specific Plan, the land use and development standards within this chapter serve as the legal zoning for the Specific Plan area.

5. **Design Guidelines.** This chapter provides direction for site planning, architecture, and landscape design in the Specific Plan area.

6. **Administration and Implementation.** This chapter provides requirements for development review and administration of the Specific Plan including amendment procedures and implementation priorities.

7. **The Ontario Plan Consistency.** This chapter describes the Specific Plan's conformance with The Ontario Plan.

2.0 EXISTING CONDITIONS

The following sections document the conditions prior to the adoption of this Specific Plan, including land uses, airport influence areas, Williamson Act contracts, land use designations, circulation, and environmental conditions.

2.1 Existing and Surrounding Land Uses

The Specific Plan area is occupied by agricultural uses, including a dairy farm, row crops, and vacant land. Approximately six residences that house the dairy owner and workers are also located within the Specific Plan area. Dairy farming and agriculture have been the primary uses of the property since the 1930s or earlier.

Figure 2.1 shows the existing uses in the vicinity, which include:

- North across Eucalyptus Avenue: dairy farm and agricultural row crops
- South across Merrill Avenue: Chino Airport (City of Chino)
- East across Grove Avenue: dairy farm and agricultural row crops
- West across Campus Avenue: dairy farm and agricultural row crops

The Ontario Plan designates the surrounding areas in Ontario Ranch for business park, commercial, and residential uses.

2.2 Airport Influence Areas

Ontario International Airport Influence Area

The Ontario International Airport Land Use Compatibility Plan (ONT ALUCP) was adopted by the Ontario City Council on April 19, 2011. The intent of a compatibility plan is to avoid conflicts between airport operations and surrounding land uses. The Specific Plan area is not within the safety, noise impact, or airspace protection zones of the ONT ALUCP; however, it is within the Airport Influence Area, as is the entire City of Ontario. While a Real Estate Transaction Disclosure policy is not required for non-residential land, developers or tenants may purchase a Natural Hazard Disclosure report that would indicate that the property is in an Airport Influence Area.

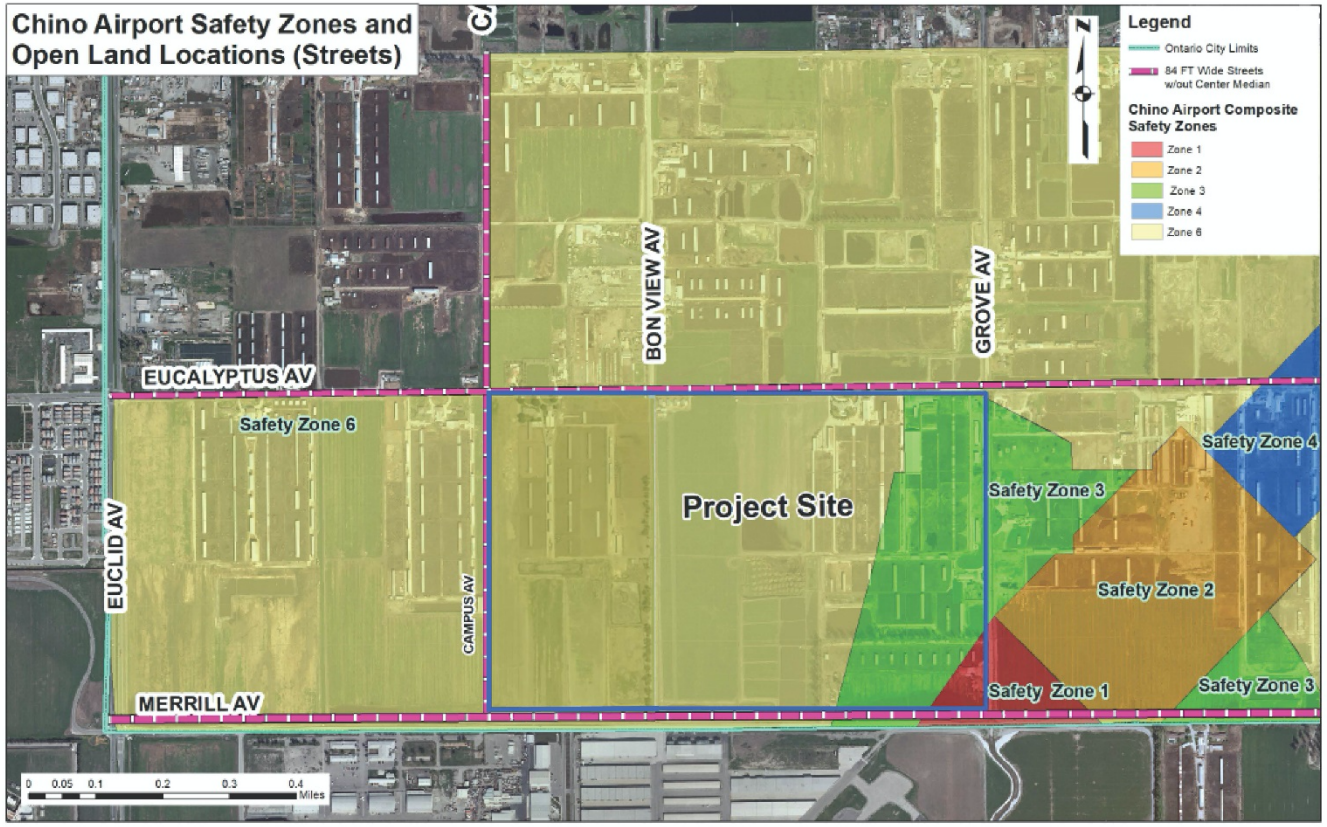
Chino Airport Overlay Zone

The Specific Plan area is within Safety Zone 1, 3 and 6 of the Chino Airport Overlay (Generic Safety Zones for General Aviation Airports from the Caltrans Division of Aeronautics – California Airport Land Use Planning Handbook) as shown in Figure 2.2 Airport Influence Areas.

The following open land and occupancy limit requirements shall apply in Chino Airport Safety Zones, as established by the Chino Airport Compatibility Plan.

Zone 1: No buildings shall be located in Safety Zone 1.
Zone 3: At least 15% of the zone shall remain as open land* and occupancy shall be limited to 100 people per acre on average and a maximum of 300 people in any one acre.

Zone 6: At least 10% of the zone shall remain as open land* or an open area every ¼ mile to ½ mile is required; occupancy shall be limited to 300 people per acre on average and a maximum of 1,200 people in any one acre.



* Open land is defined as areas at least 300 feet long by 75 feet wide (about 0.5 acre) that are relatively level and free of tall vertical objects such as structures, overhead lines/wires, and large trees and poles greater than 4 inches in diameter and taller than 4 feet above the ground. Parking lots can be considered as acceptable open lands. In the Specific Plan area, surrounding roads (Eucalyptus, Campus and Merrill Avenues), drive aisles, and truck parking lots can be considered as acceptable open lands in urbanized settings.

Existing Surrounding Land Uses

South Ontario Logistics Center Specific Plan **Figure 2.1**

Airport Influence Areas

South Ontario Logistics Center Specific Plan

Figure 2.2

2.3 Williamson Act Contracts

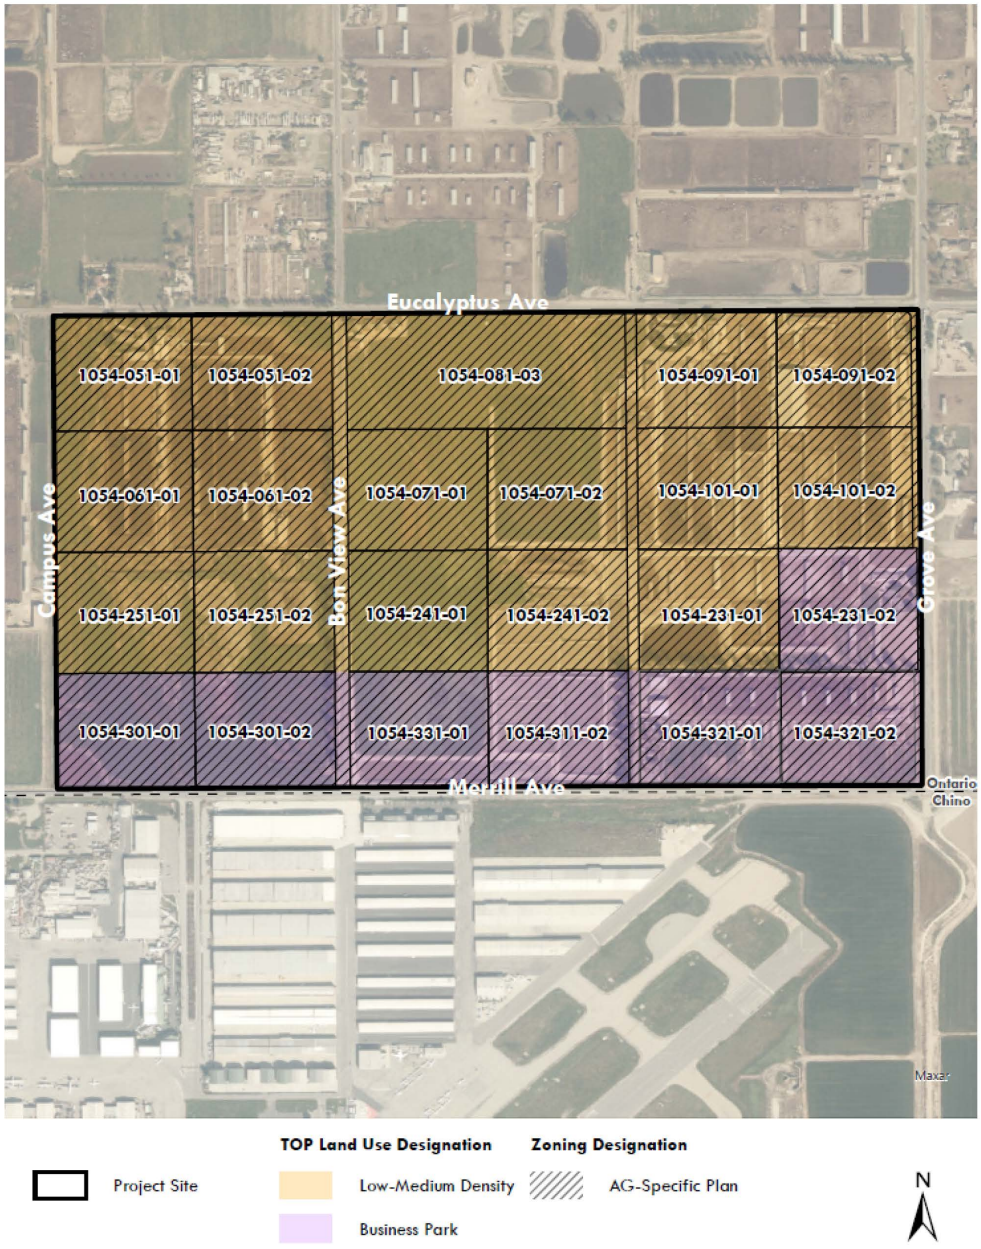
The California Land Conservation Act of 1965, commonly referred to as the Williamson Act, enables local governments to enter into contracts with private landowners for the purpose of restricting specific parcels of land to agricultural or related open space use. In return, landowners receive property tax assessments that are much lower than normal because they are based upon farming and open space uses as opposed to full market value. The motivation for the Williamson Act is to promote voluntary land conservation, particularly farmland conservation. At the time this Specific Plan was prepared (2021), there is an active Williamson Act Contract (Contract #72-392) on APN 1054-051-01, 02 and 1054-061-01, 02. However, a notice of non-renewal was recorded, starting the process to terminate this Contract. As one of the discretionary actions associated with the South Ontario Logistics Specific Plan, these existing Williamson Act Contracts will be cancelled. Cancellation would comply with provisions and requirements identified at Government Code (GC) §51280 et seq. The City would be required to make the required statutory findings (GC §51282(a)). The landowner would be required to pay the requisite cancellation fee.

2.4 Existing Ontario Plan and Zoning Land Use Designations

The Ontario Plan existing land use designations and existing zoning map designations for the Specific Plan area (prior to adoption of the South Ontario Logistics Center Specific Plan) are shown in Figure 2.3.

The Ontario Plan existing land use designations are:

- Business Park (0.6 Floor Area Ratio (FAR))
  Assessor Parcel Number (APN): 1054-231-02; 1054-321-01, -02; 1054-311-02; 1054-331-01; 1054-301-01, -02.



- Low-Medium Density Residential (5.1 – 11 dwelling units per acre)
  APN: 1054-071-01, -02; 1054-081-03; 1054-091-01, -02, 1054-101-01, -02; 1054-231-01; 1054-241-01, -02, 1054-252-01, -02, 1054-061-01, -02, 1054-051-01,-02.

- Chino Airport Overlay
  APN: 1054-101-02; 1054-231-01, -02; 1054-311-02, 1054-321-01, -02 and portions of 1054-091-02; 1054-101-01; 1054-241-02; 1054-311-01

The project includes an application for a General Plan Amendment to change the land use designations to Industrial and Business Park, as discussed in Chapter 3, Development Plan.

The existing zoning designation is SP (Specific Plan) Zoning District with an AG (Agriculture) Overlay District. The AG Overlay indicates that the land can continue to be used for agricultural uses, but the SP District designation requires approval of a specific plan by the City for urban development of the project site.

Existing TOP Land Use and Zoning

South Ontario Logistics Center Specific Plan **Figure 2.3**

2.5 Existing Circulation

The Specific Plan area is located approximately three miles south of State Route 60 via State Route 83 (Euclid Avenue), which is located west of the Specific Plan area, as shown in Figure 1.1 and Figure 1.2 .

Vehicular circulation in the Specific Plan area is provided by Eucalyptus Avenue on the north, Merrill Avenue on the south, Grove Avenue on the east, and Campus Avenue on the west.

Grove, Eucalyptus, Campus and Merrill Avenues do not provide fully dedicated rights-of-way as specified in The Ontario Plan and lack major street and parkway improvements.

Bon View Avenue is a fully dedicated street but lacks street and parkway improvements.

The site currently takes access from multiple drive entrances off Grove Avenue and Eucalyptus Avenue. There are no site access points from Merrill and Bon View Avenues due to dirt berms along these property lines.

There is an existing unused dedicated paper street (Cucamonga Avenue) that runs north/south through the center of the site that will be vacated.

There are no traffic signals located at the street intersections bordering the site.

No sidewalks exist adjacent to the site.

2.6 Existing Environmental Conditions

Topography

The topography of the site is moderately flat, sloping from the northeast to the southwest with approximately a 17-foot drop in elevation.

Geology, Soils, and Seismicity

A geotechnical feasibility study included boring to depths of 20 to 30± feet and trenching to depths of 5 to 10± feet. Manure was present at the ground surface at two of the trenches with thicknesses of 4½ to 5± inches. Highly organic topsoil materials were encountered at some of the boring and trench locations, which consisted of silty fine sands and contained manure and/or other fibrous organic material. A 6±-inch-thick surficial layer of aggregate base was observed at the ground surface at one of the borings.

Artificial fill soils were encountered beneath the AB layer and at the ground surface at one of the boring locations, extending to depths of 2½ to 3± feet. The fill soils consisted of medium dense fine sand with trace silt, fine gravel, and AC fragments. Native alluvial soils were encountered at the ground surface or beneath the fill, topsoil, and manure at all of the boring and trench locations. The near-surface alluvium generally consisted of loose to medium dense fine sands and silty fine sands to fine sandy silts, extending to depths of 4½ to 8½± feet below ground surface. Beneath these soils, the borings encountered stiff to very stiff clayey silts, silty clays, and sandy clays with occasional layers of medium dense silty sands, sandy silts, and clayey sands, extending to at least the maximum depth explored of 30± feet below existing site grades. Free water was not encountered during the drilling of any of the borings.

The subject site is located in an area that is subject to strong ground motions due to earthquakes. Research of available maps indicates that the Specific Plan area is not located within an Alquist-Priolo Earthquake Fault Zone. Furthermore, no evidence of faulting was identified during the geotechnical investigation. Therefore, the possibility of significant fault rupture on the site is considered low.

The potential for other geologic hazards such as seismically induced settlement, lateral spreading, tsunamis, inundation, seiches, flooding, and subsidence affecting the site is considered low. Research of the San Bernardino County Land Use Services website indicates that the subject site is not located within a zone of liquefaction susceptibility. Based on the mapping performed by San Bernardino County and the conditions encountered at the boring locations, liquefaction is not considered to be a design concern for development within the Specific Plan area.

Hydrology

Storm runoff from the site generally drains from north to south. Onsite detention areas are located in the central and southerly portions of the site.

The site surface drains southerly to a dirt swale located adjacent to Merrill Avenue, then westerly to a set of four corrugated steel pipes, then southerly to an earthen channel adjacent to Euclid Avenue.

Areas north of the project site drain southerly towards Eucalyptus Avenue and then westerly towards Euclid Avenue. Eucalyptus Avenue is not fully improved, so it is possible that offsite flows from the north enter the project site.

According to Federal Emergency Management Agency (FEMA) Flood Insurance Rate Maps, the project site is not located within a flood hazard zone.

Biological Resources

The Specific Plan area generally represents low biological resource value due to highly disturbed site conditions and historic dairy/agricultural use, resulting in low biological diversity. The entire site has been disturbed by agricultural use and no native habitat was present.

There is limited vegetation on the majority of the site; the vegetation that exists is generally non-native grasses and weeds. Project site contains approximately 94 acres of agriculture fields. These fields are currently fallow. The agriculture fields are disturbed and dominated by non-native species of grasses and plants. Species observed include Avenasp., Bromussp., Russian thistle (Salsola tragus) and alfalfa (Medicago sativa).

The site contains approximately 107.45 acres of disturbed agriculture infrastructure. These areas contain no native habitat and are currently used for containing livestock. These areas are mostly developed with agricultural use structures or residential buildings. Vegetation within these areas consists of non-native ornamental plant species.

The project site contains approximately 19.0 acres of areas stock/retention ponds and channels. These ponds and channels are man-made and fed by wells. The ponds are dry and dominated by upland species such as bromus and Russan thistle, but the stock pond drainage channels contain grasses such as Burmda (Cynodon dactylon) and curly dock (Rumex crispus).

2.7 Existing Ground Water Wells

In compliance with the Chino Basin Water Master's Well Procedure for Developers, a well use/destruction plan and schedule for all existing private/agricultural wells shall be submitted to the City of Ontario for approval prior to the issuance of permits for any construction activity. If a private well is actively used for water supply, the Developer shall submit a plan to abandon such well and connect users to the City's

water system (residential to the domestic water system and agricultural to the recycled water system) when available. Wells shall be destroyed/abandoned per the California Water Resource Guidelines and require permitting from County Health Department. The locations of existing wells are shown in Figure 2.4, “Existing Ground Water Wells”. A copy of such permit and Form DWR 188 Well Completion Form shall be provided to the Development Engineering Department and the Utilities Engineering Department prior to issuance of grading and/or building permits. If the Developer proposes temporary use of an existing agricultural well for purposes other than agriculture, such as grading, dust control, etc., the developer shall make a formal request to the City of Ontario for such use prior to issuance of permits for any construction activity. Upon approval, the Developer shall enter into an agreement with the City of Ontario and pay any applicable fees as set forth by the agreement.

Existing Ground Water Wells

South Ontario Logistics Center Specific Plan **Figure 2.4**

3.0 DEVELOPMENT PLAN

This chapter provides the framework to guide development of the South Ontario Logistics Center Specific Plan. The chapter presents the proposed planning areas, infrastructure plans, and public services to support the project.

3.1 Land Use Plan

The Specific Plan consists of five Planning Areas accommodating a variety of industrial-serving commercial, low-intensity office, technology, light manufacturing, and warehouse/distribution uses that are compatible with the site's location within Safety Zone 1, 3 and 6 of the Chino Airport Influence Area. Chino Airport Runway 21 Runway Protection Zone and CFR Part 77 height restriction of the Chino Airport. The Land Use Plan implements the vision of The Ontario Plan by providing opportunities for employment in manufacturing, distribution, and research and development at intensities designed to meet the demand of current and future market conditions. A list of allowable uses by Planning Area is presented in Chapter 4 (Land Use and Development Standards).

Figure 3.1a (Land Use Plan) identifies the location of the land use designations for the proposed Project area. The Specific Plan zoning mirrors the TOP Land Use Districts and is identified along with the five Planning Areas in Figure 3.1b.

BP (Business Park) Zoning District: The BP zoning district accommodates industrial-serving commercial, low intensity office uses, and certain light industrial uses. Development within this district is typically multi-tenant in nature; however, single-tenant buildings are not precluded.

IG (Industrial - General) Zoning District: The IG zoning district accommodates storage and warehousing uses located in larger buildings on larger sites. Uses may include e-commerce, high cube warehouses, or distribution. A wide range of manufacturing and assembly uses are also permitted in this district.

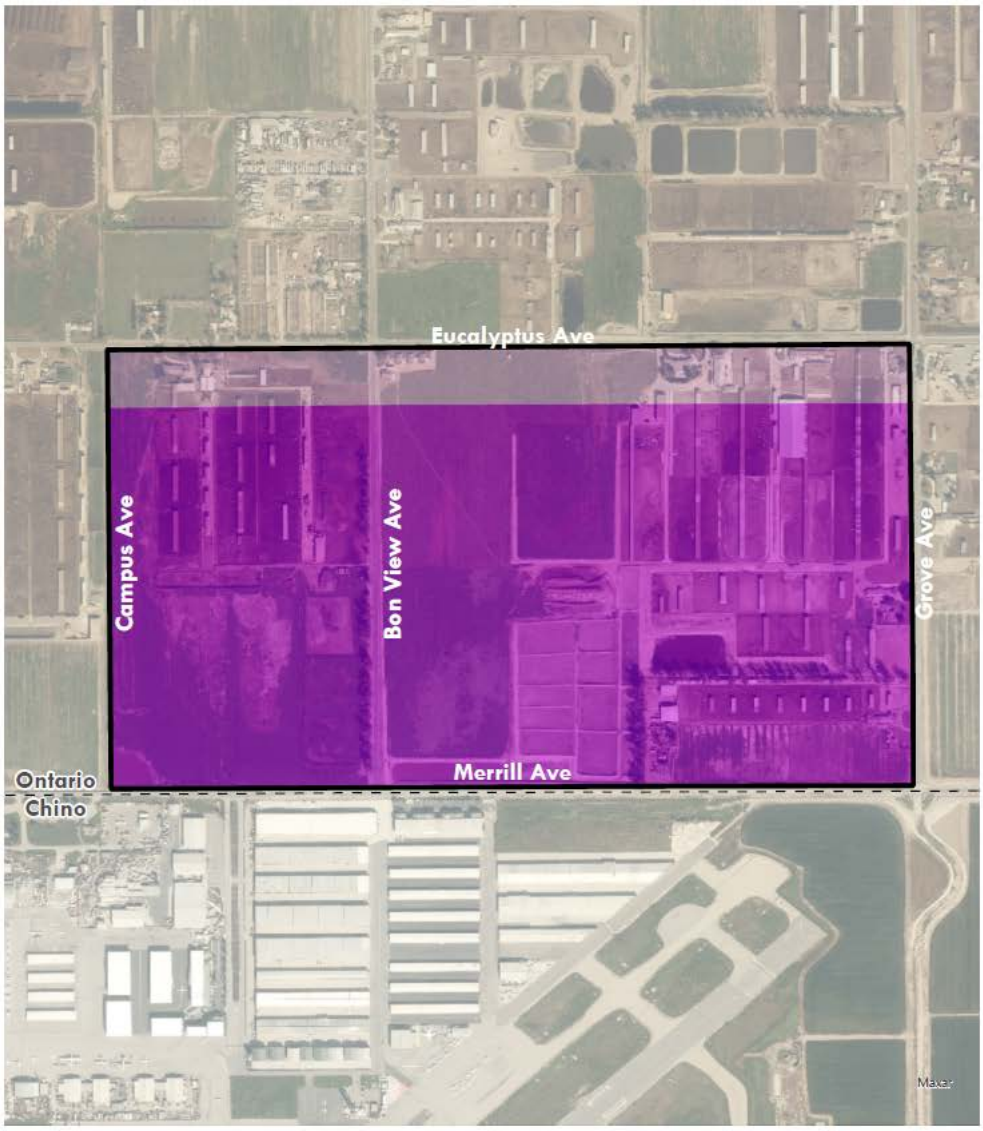


Table 3.1 provides the maximum allowable gross building area for each Planning Area at its associated floor area ratio. Development standards (found in Chapter 4), such as setbacks, parking, landscaping, infrastructure, and site design, may reduce the maximum gross square footage.

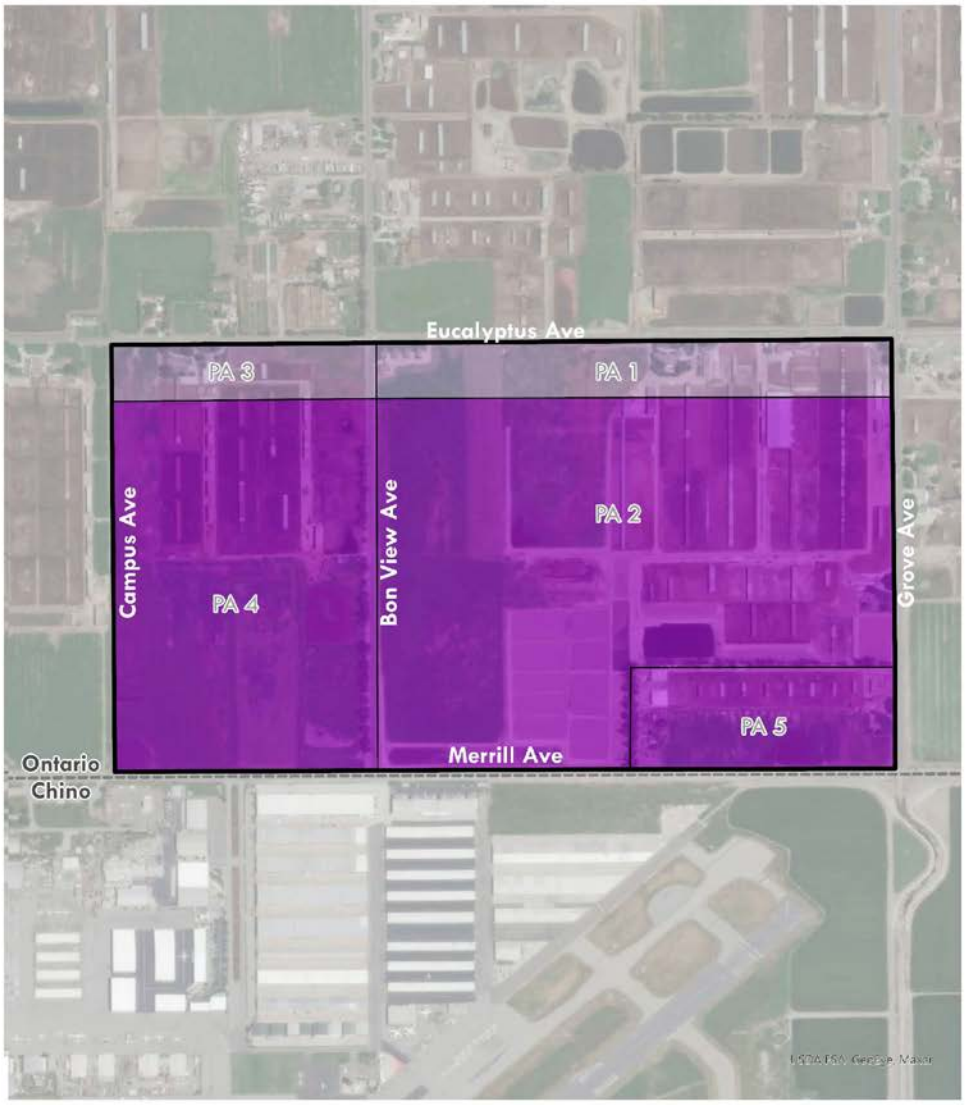
Table 3.1 Maximum Specific Plan Build-Out

Planning Area	Maximum Floor Area Ratio[1]	Site Acreage	Maximum Building Square Footage
Planning Area 1: Business Park	0.60	23.65	618,076 SF
Planning Area 3: Business Park	0.60	11.52	300,972 SF
Planning Area 2: Industrial - General	0.55	106.71	2,556,442 SF
Planning Area 4: Industrial -General	0.55	60.06	1,438,914 SF
Planning Area 5: Industrial – General	0.55	17.45	419,114 SF
TOTAL		**219.39**	**5,333,518**

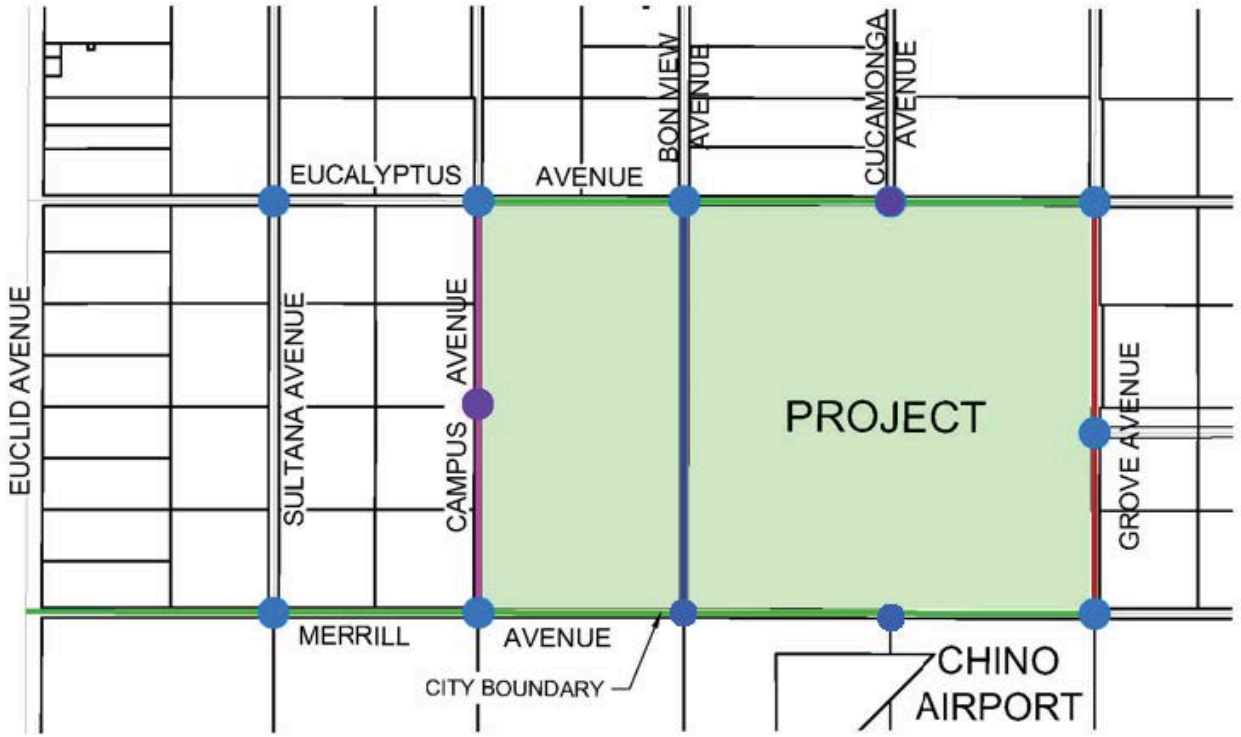


Note:
1. Provided the General Plan Amendment application submitted in conjunction with this Specific Plan to designate PAs 1 and 3 as Business Park and PAs 2,4, and 5 as Industrial – General is approved.

TOP Land Use Plan

South Ontario Logistics Center Specific Plan **Figure 3.1a**

Proposed Specific Plan Land Use Plan



South Ontario Logistics Center Specific Plan **Figure 3.1b**

3.2 Street Plan

The Street Plan (Figure 3.2) facilitates movement of vehicles, pedestrians and cyclists within the Specific Plan area, consistent with the City of Ontario's Roadway Classification System, shown in Figure 3.3.

Figures 3.4 and 3.4a presents typical street cross sections for Grove, Eucalyptus, Merrill, Bon View, and Campus Avenues. Preliminary improvement responsibilities are indicated in the cross sections; however, final fair share responsibilities for street improvements shall be as determined in a Development Agreement with the City. Conceptual streetscape design is presented in Chapter 5 (Design Guidelines). Road surface, sidewalk, and trail improvements within the Specific Plan area shall be approved by the City's Engineering Department.

3.2.1 Grove Avenue

Grove Avenue is located along the eastern boundary of the Specific Plan area and is designated as an Other Principal Arterial in The Ontario Plan's Functional Roadway Classification Plan. Grove Avenue is designed with a 124-foot wide right-of-way, a 28-foot wide center median, and 28-foot wide pavement from median to curb face. The existing street right-of-way varies; therefore, a varied street dedication of 10 to 29 feet is required. An additional 20 feet dedication for the following neighborhood edge is required.

The Grove Avenue streetscape design illustrated in Chapter 5, Design Guidelines, specifies 20-foot wide parkways that include a five-foot wide sidewalk and 20-foot wide landscape buffer setbacks. The east side also includes an eight-foot wide decomposed granite multipurpose trail. Together, the parkways and landscape buffer setbacks create 40-foot wide neighborhood edges as specified in the *Ontario Ranch Colony Streetscape Master Plan*.

3.2.2 Eucalyptus Avenue

Eucalyptus Avenue is located along the northern boundary of the Specific Plan area, providing east/west access to the site. Eucalyptus Avenue is designated by the Functional Roadway Classification Plan as a four-lane Collector Street. The Specific Plan specifies an 108-foot wide right-of-way with 84 feet of pavement including curb/gutter. An additional 23ft dedication for the neighborhood edge is required.

The Eucalyptus Avenue streetscape design presented in Chapter 5, Design Guidelines, for the south side of the street adjacent to the project site specifies a 12-foot wide parkway including a seven-foot wide curb-adjacent landscaped area and a five-foot wide sidewalk. A five-foot wide Class II on-street bike lane at the edge of the street on the south side is proposed. The north side provides an eight-foot wide on-site multipurpose trail within a 23-foot wide landscape buffer setback. Together, the parkway and landscape buffer setback create a 35-foot wide neighborhood edge, as described in the *Ontario Ranch Colony Streetscape Master Plan*. A 21-foot dedication will be required for Eucalyptus Avenue.

3.2.3 Merrill Avenue

Merrill Avenue is designated as a four-lane Collector Street in the Functional Roadway Classification Plan and provides east-west access to the project's southern boundary. The centerline of this street forms the boundary between the City of Ontario to the north and the City of Chino to the south. The Specific Plan specifies a 98-foot wide right-of-way and 74 feet of pavement including curb and gutter for Merrill Avenue. An additional 23ft dedication for the neighborhood edge is required on the north side.

The Merrill Avenue streetscape design presented in Chapter 5, Design Guidelines, for the north side of the street includes an eight-foot wide Class II on-street bike lane at the edge of the street, a seven-foot wide curb-adjacent landscaped area, a five-foot wide sidewalk and an eight-foot wide multipurpose trail is located within a 23-foot wide landscape buffer setback. Together, these improvements establish a 35-

foot wide neighborhood edge, as specified in the *Ontario Ranch Streetscape Master Plan*. A 21-foot street dedication will be required for Merrill Avenue.

3.2.4 Bon View Avenue

Bon View Avenue is designated as a Local Industrial with a 66-foot wide right-of-way and 48 feet of pavement including curb and gutter. The Bon View Avenue right-of-way exists and no dedication is required.

The Bon View Avenue streetscape presented in Chapter 5, Design Guidelines, specifies 9-foot wide parkways including a five-foot wide sidewalk.

3.2.5 Campus Avenue

Campus Avenue is located along the western boundary of the Specific Plan area, providing west access to the site. Campus Avenue is designated as a Minor Arterial Street per the Functional Roadway Classification Plan. The Specific Plan specifies a 108-foot wide right-of-way and will require a 29-foot half-width dedication and a 12-foot parkway including the sidewalk. An additional 23 foot dedication for the neighborhood edge is required.

The Campus Avenue streetscape presented in Chapter 5, Design Guidelines, specifies a 12-foot parkway with a 5’ sidewalk and an 8’ multipurpose trail as part of the 35-foot Neighborhood Edge on the east side, while the western side includes a five-foot wide Class II on-street bike lane at the edge of the street.

3.2.6 Local Circulation

Final site planning and off-site design shall be subject to City approval. In addition to the typical street section described and depicted, additional right-of-way and geometric enhancements such as additional left turn and right turn lanes, including but not limited to those at intersections, may be required to adequately mitigate impacts identified in the Traffic Impact Analysis/Specific Plan EIR. Local roadway circulation shall accommodate trucks with a double trailer combination wheelbase of 67 feet (known as the WB-67 design vehicle).

Driveways shall conform to access requirements of the City of Ontario Traffic and Transportation Design Guidelines and be to the satisfaction of the City Engineer. Driveway locations, specifically those that are in proximity to master-planned or future traffic signals, shall be located so as not to interfere with queues as projected in the Traffic Impact Analysis for the Specific Plan. The use of surrounding roads, drive aisles and truck parking lots to address the open land requirement for the Chino Airport Overlay zone is discussed in Chapter 2 (Section 2.2: Airport Influence Areas).

Fair share responsibilities for street improvements will be addressed in a Development Agreement with the City.

3.2.7 Traffic Control Devices

Traffic signs regulating, warning, and/or guiding traffic on public roads shall conform to the California Manual on Uniform Traffic Control Devices (MUTCD), latest edition. Traffic-control signs, whether on public or private property, shall conform to the California MUTCD.

3.2.8 Truck Routes

The City of Ontario designates and maintains a network of truck routes that provide for the effective transport of goods while minimizing negative impacts on local circulation and noise-sensitive land uses (Figure 3.5). Merrill Avenue, which runs along the southern boundary of the Specific Plan area, is a designated truck route from Euclid Avenue to Archibald Avenue. PCC pavement shall be installed per City Standard 1207 at signalized intersections along truck routes.

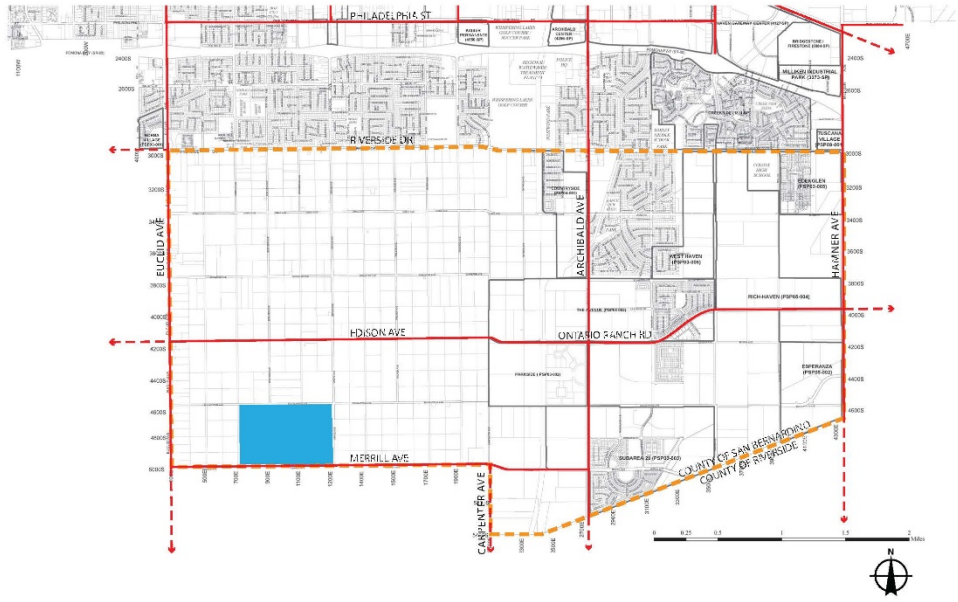
3.2.9 Pedestrian Circulation

Sidewalks will be provided along both sides of the street to improve safety and the pedestrian experience, connect the various parts of the Specific Plan area, and expand access to nearby land uses. Sidewalks shall be five-feet wide, constructed of concrete, and installed in conjunction with adjacent roadway improvements.

3.2.10 Trails and Bike Paths

Trails and bicycle paths provide an additional mode of circulation in and around the Specific Plan area.

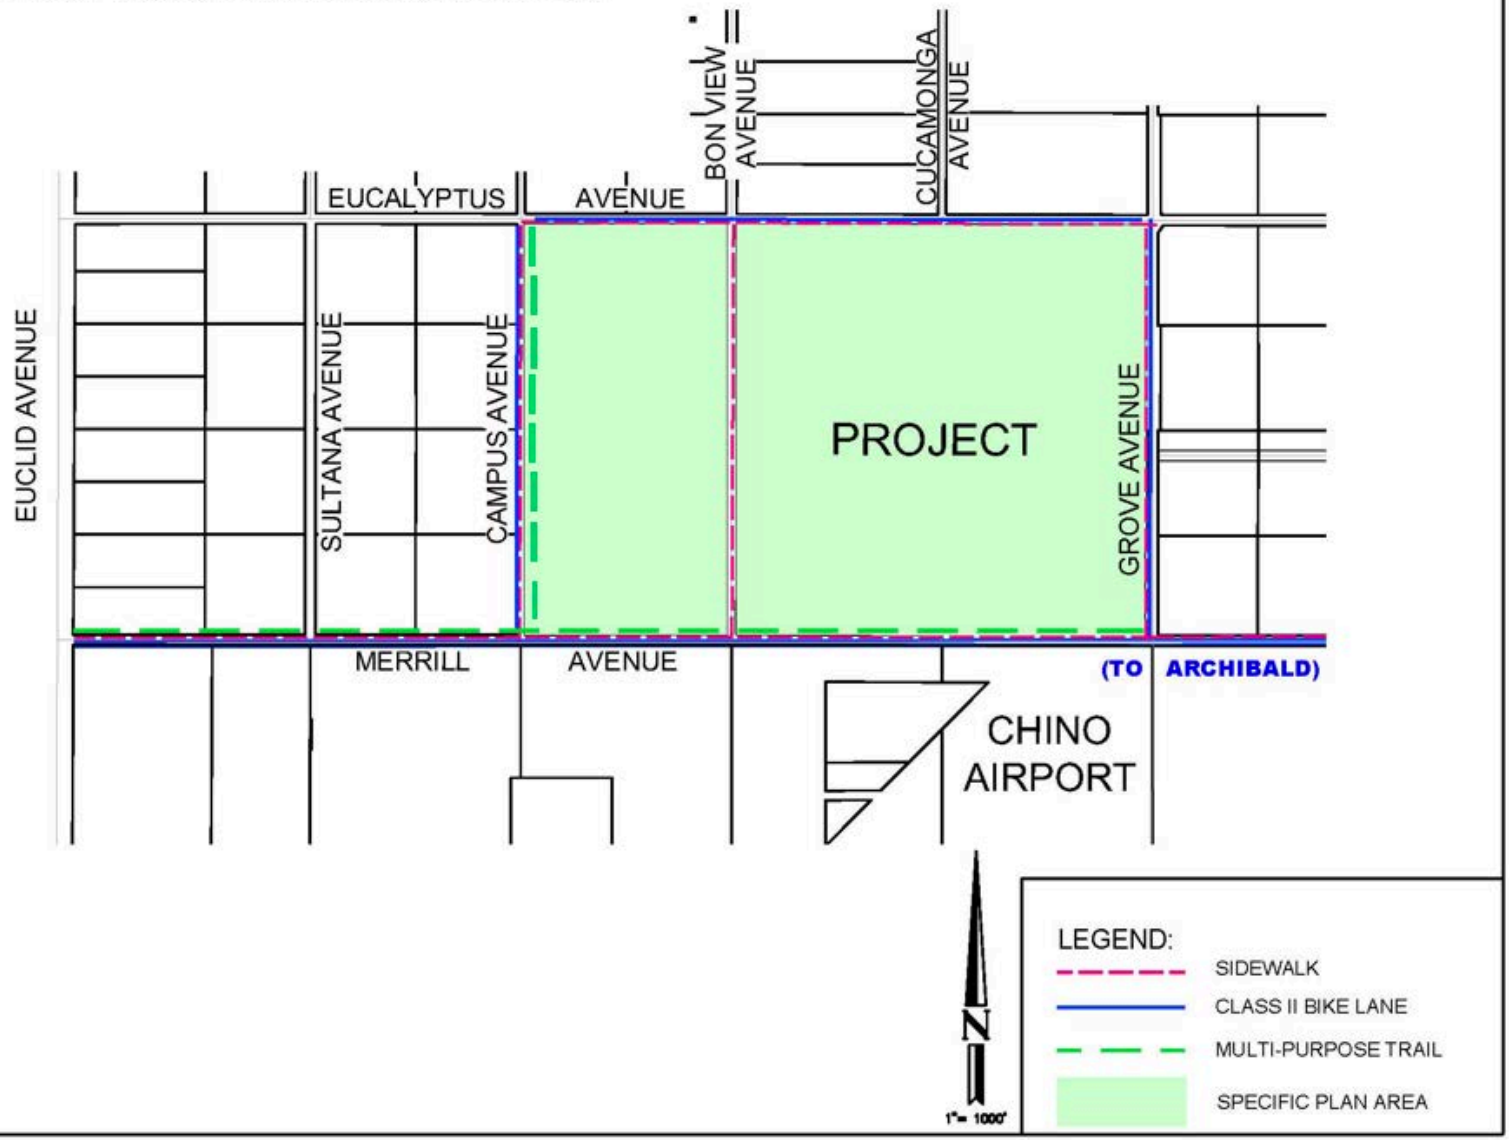
The Ontario Plan Mobility Element specifies a Class II bikeway on the north side of Merrill Avenue, south side of Eucalyptus and on the west side of Campus Avenue. A Class II bikeway is defined as a dedicated (striped) lane along the street, with no parking allowed in the bike lane. This bike lane provides linkages to the City's bike path system (Figure 3.6).



Eight-foot wide multipurpose trails are provided on the east side of Grove Avenue, east side of Campus, the north side of Eucalyptus Avenue and the north side of Merrill Avenue (Figure 3.6).

The Specific Plan's trail and bikeway improvements shall be installed in conjunction with street improvements. The City reserves the right to implement bike lanes on Eucalyptus at the discretion of the Traffic and Transportation Division.

3.2.11 Transit



Transit options provide an alternative mode of transportation for motorists and a primary mode for the transit-dependent. The City is coordinating with regional transit agencies to implement Bus Rapid Transit (BRT) service to target destinations and along corridors, including Euclid Avenue west of the Specific Plan area.

Truck Routes

South Ontario Logistics Center Specific Plan **Figure 3.5**

FIGURE 3.6 - BICYCLE AND PEDESTRIAN PLAN

3.3 Potable Water Plan

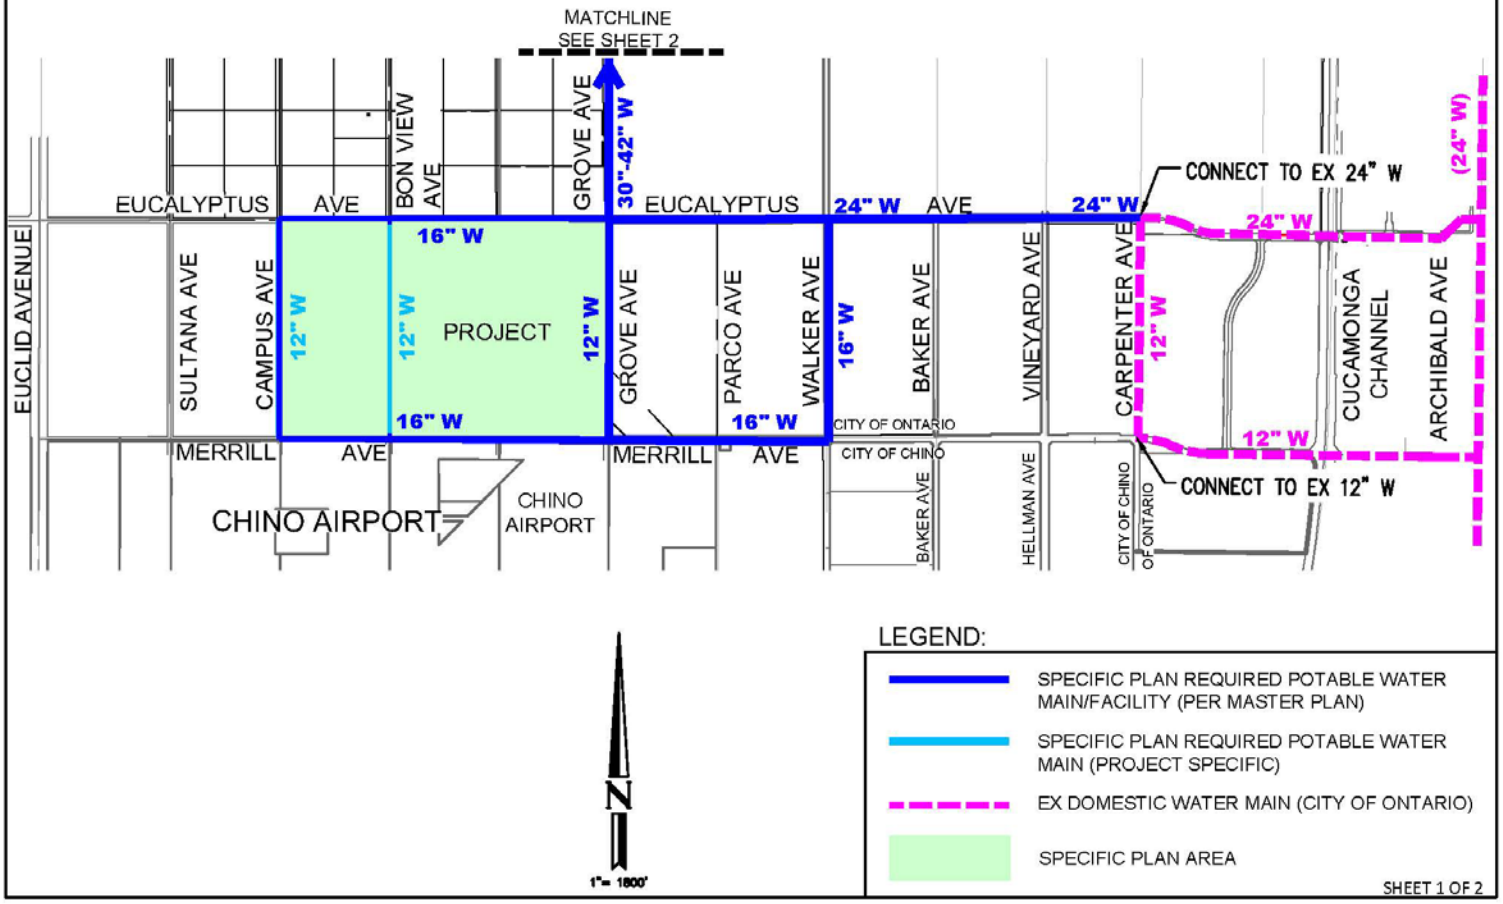
Water service to the Specific Plan area will be provided by the City of Ontario. Potable water is provided by imported water from the Water Facilities Authority (WFA), Chino Basin Desalter Authority (CDA) and groundwater from the Chino Basin, extracted via the City's wells. The WFA was formed in 1980 as a Joint Powers Authority by the Cities of Chino, Chino Hills, Ontario and Upland, and the Monte Vista Water District. It was formed to construct and operate water treatment facilities that provide a supplemental supply of potable water to its member agencies.

Currently there are no City potable water mains or City potable water infrastructure in the vicinity of the Specific Plan Area. Potable Water System Improvements for the Specific Plan area (Figure 3.7a & Figure 3.7b) require the planning, design, and construction of the 925 Pressure Zone (PZ) Phase 2 West Backbone, which includes: Extending the 24-inch potable water main in Eucalyptus Avenue from Carpenter Avenue to Grove Avenue; installing a 30-inch to 42-inch potable water main in Grove Avenue connecting from the 24-inch potable water main in Eucalyptus Avenue and extending to Chino Avenue; installing an 18-inch potable water main in Chino Avenue connecting from the 30-inch to 42-inch potable water main in Grove Avenue and extending to connect to the end point of an existing 18-inch potable water main on the west side of the Cucamonga Channel; installing a 42-inch potable water main in Grove Avenue that ended at Chino Avenue and extending to Philadelphia Street; installing a 42-inch potable water main in Philadelphia Street connecting from the 42-inch potable water main in Grove Avenue and extending to Cucamonga Avenue; installing a 42-inch potable water main in Cucamonga Avenue connecting from the 42-inch potable water main in Philadelphia Street and extending to Bon View Avenue Reservoir site and to the Reservoir. At the time this Specific Plan was prepared, the alignment of the 42-inch water line between Chino Avenue and the water reservoir site had not been finalized and is subject to change. This Specific Plan will be required to participate in the future Phase 2 Water System Improvements north of Chino Avenue, as detailed in the development agreement with the City.

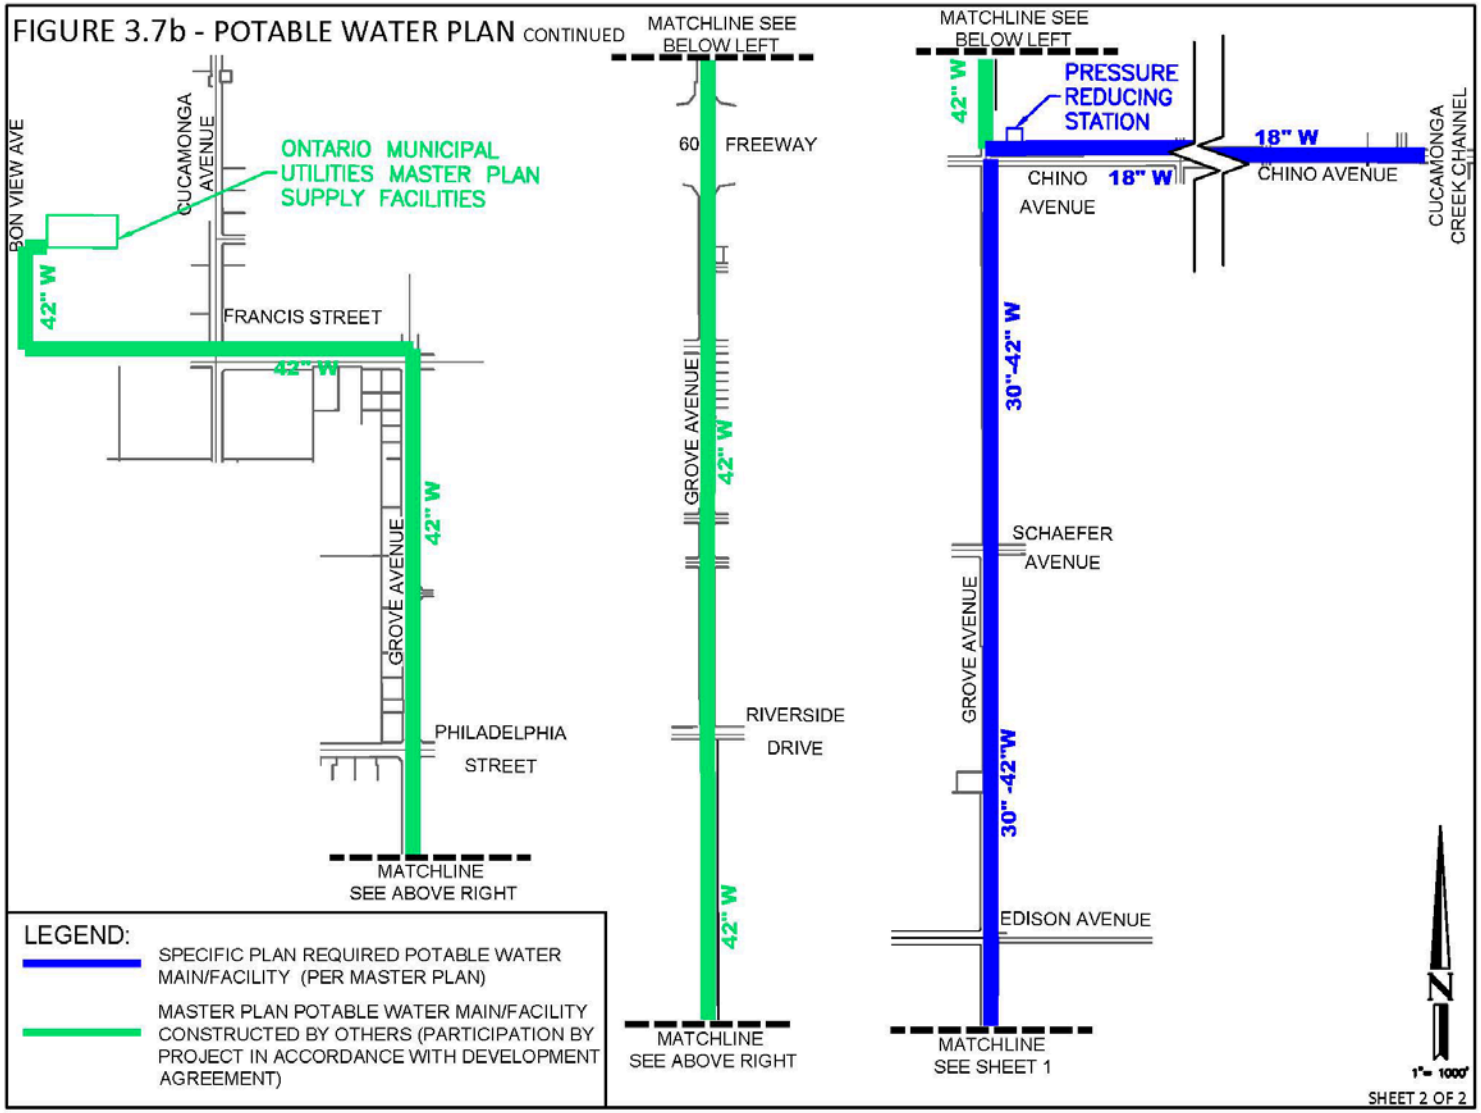
In addition to the 925 Pressure Zone (PZ) Phase 2 West Backbone, the Specific Plan area requires the planning, design, and construction of a Secondary Industrial 16-inch Loop between the 925 Pressure Zone (PZ) Phase 2 West Backbone and the Specific Plan area which includes: installing a 16-inch potable water main in Eucalyptus Avenue connecting to the 30-inch to 42-inch 925 Pressure Zone (PZ) Phase 2 West Backbone main in Grove Avenue and extending to Campus Avenue; installing a 12-inch potable water main in Campus Avenue connecting from the 16-inch potable water main in Eucalyptus Avenue and extending to Merrill Avenue; installing a 16-inch potable water main in Merrill Avenue connecting from the 12-inch potable water main in Campus Avenue and extending to Walker Avenue; installing a 16-inch potable water main in Walker Ave from the 16-inch potable water main at Merrill Avenue and extending northernly to connect to the existing 24-inch potable water main at Eucalyptus Avenue.

The Specific Plan area also requires the planning, design, and construction of the Adjacent Potable Water System, which includes: installing a 12-inch potable water main in Bon View Avenue connecting to the 16inch potable water main in Eucalyptus Avenue and extending to connect to the 16-inch potable water main in Merrill Avenue; and, installing a 12-inch potable water main in Grove Avenue connecting to the

16-inch potable water main in Eucalyptus Avenue and extending to connect to the 16-inch potable water main in Merrill Avenue.

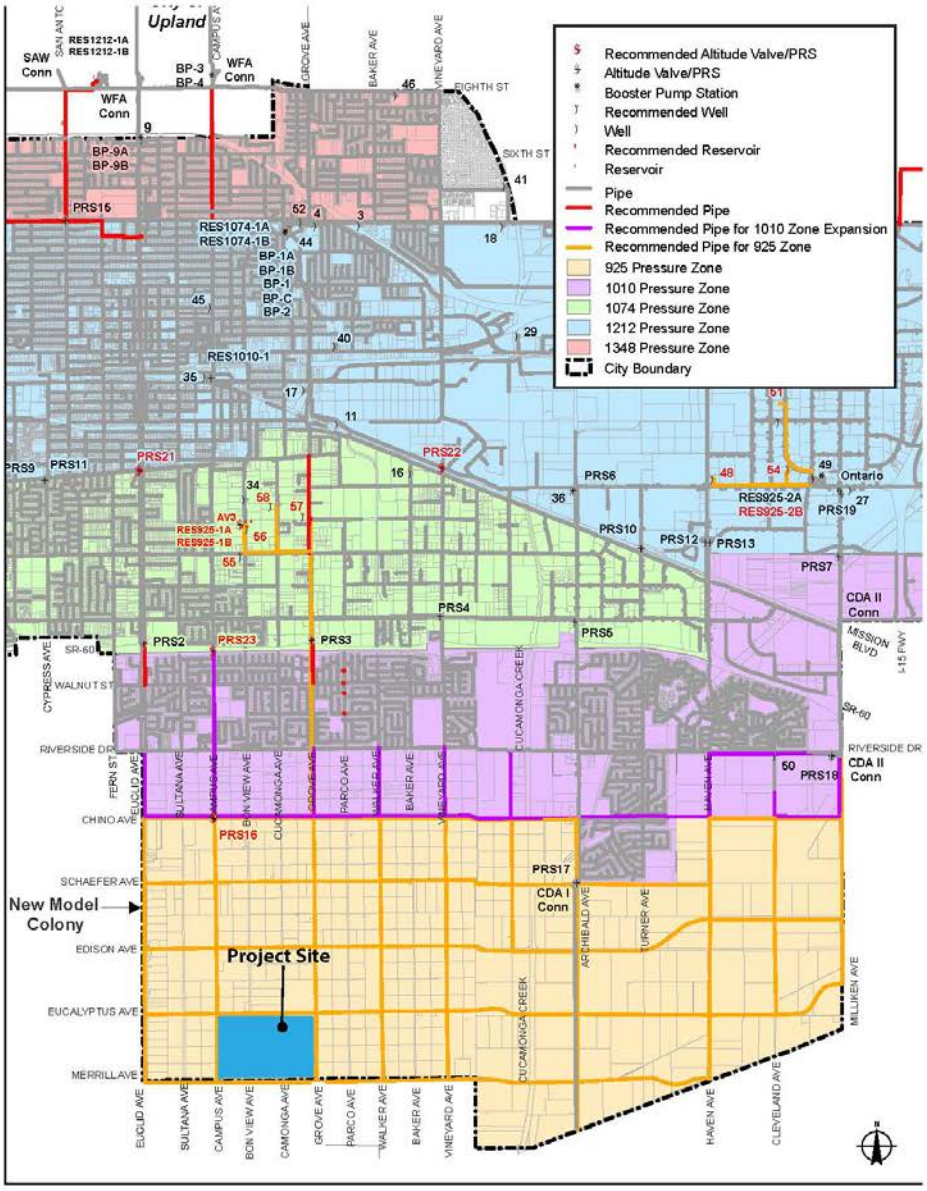


At minimum, the full Potable Water Infrastructure shown on Figure 3.7a and 3.7b shall be completed as Part of Phase 1 of the Specific Plan, which includes 925 Pressure Zone (PZ) Phase 2 West Backbone, the Secondary Loop, and the Adjacent Potable Water System



Water mains required to serve the project will need to be constructed prior to or concurrent with on-site water improvements. Within the project site, a network of 2-inch water lines for domestic water service and 8- to 10-inch water lines for fire service water will be installed. The on-site water system includes connections to the water main in Eucalyptus Avenue to serve PA-1 and to the main in Merrill Avenue to serve PA-2.

Until the ultimate pipeline network for Ontario Ranch has been completed, there may be instances where construction of improvements to serve a project may not meet the required fire flow demands. Therefore, projects within the Specific Plan area may be required to construct additional pipelines not indicated in the Master Plan or upsize master planned pipelines to meet Fire Department fire flow requirements and/or Water Master Plan criteria. The developer shall submit a hydraulic analysis to the City for review and approval to demonstrate adequate fire flow and adherence to Potable Water Master Plan criteria.



The overall water infrastructure plan to serve the City of Ontario is shown on Figure 3.8. The City's ultimate domestic water system consists of five pressure zones. Most of Ontario Ranch (including the Specific Plan area) is located within the 925 Pressure Zone. The sizing and alignment of potable water lines shall follow the current approved City of Ontario water system plan. Transmission line locations are subject to change, based on City conducted and approved hydraulic analysis. Required potable water infrastructure is subject to change based upon findings of the approved hydraulic study and master plan updates.

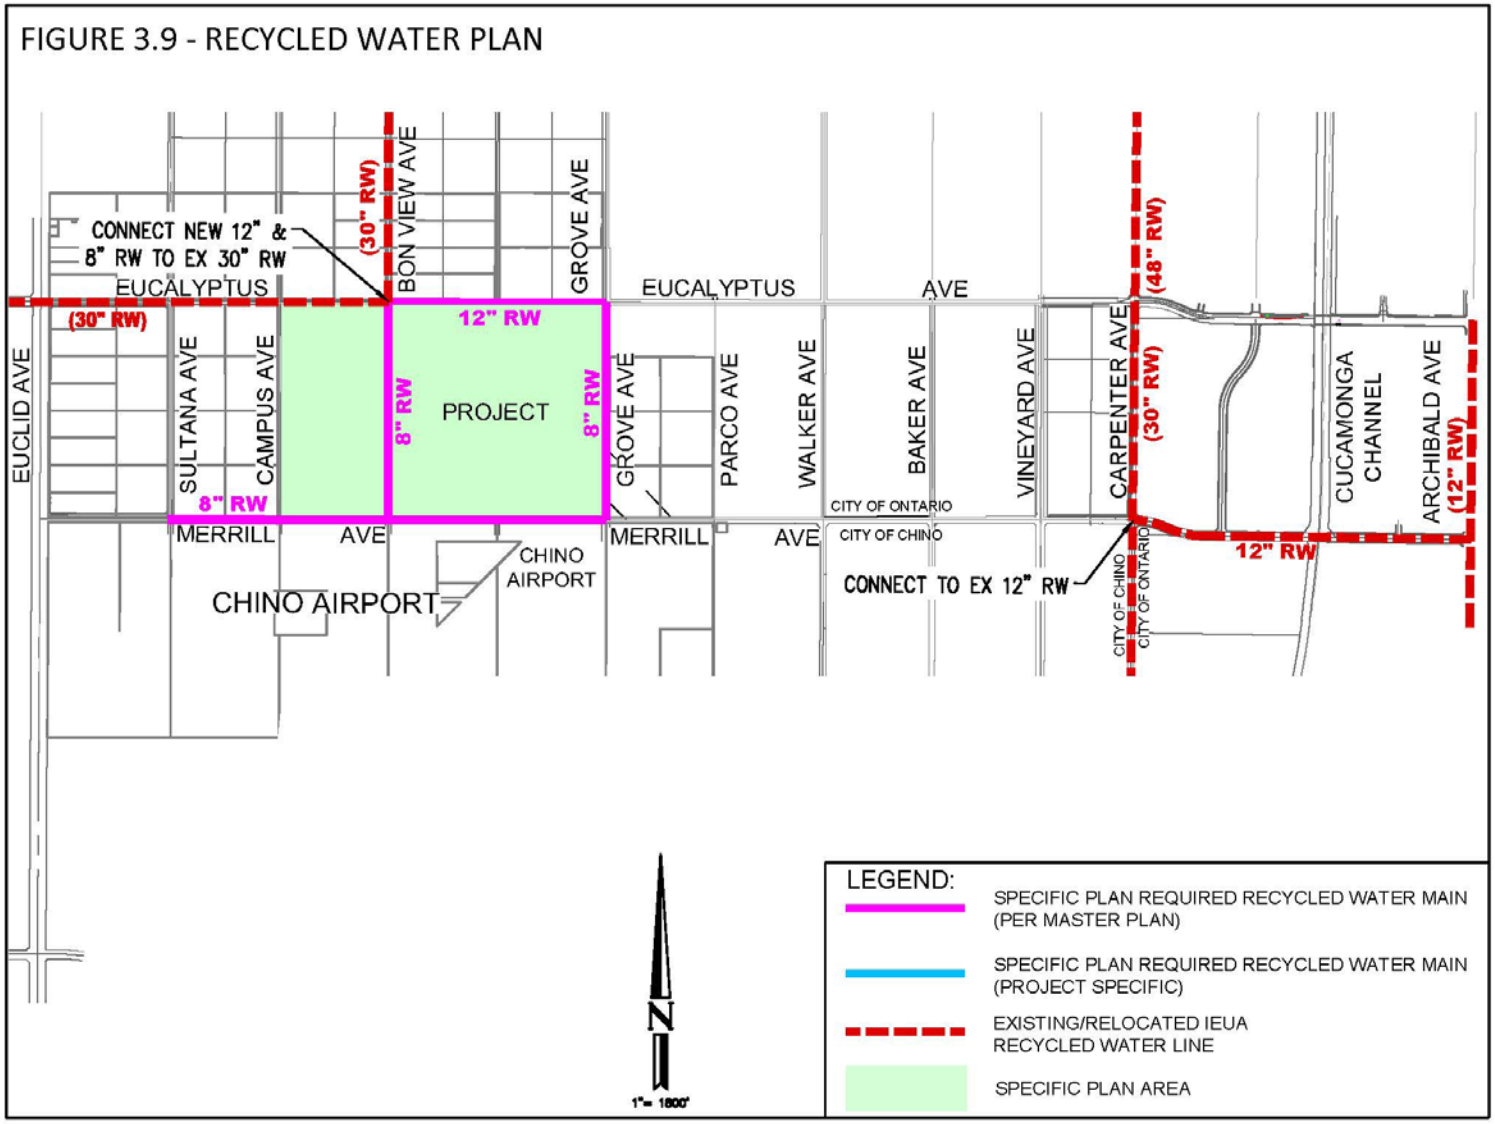
City of Ontario Ultimate Water System

South Ontario Logistics Center Specific Plan **Figure 3.8**

Size and location of waterlines subject to change based on current approved Master Plan as well as City conducted and approved hydraulic analysis.

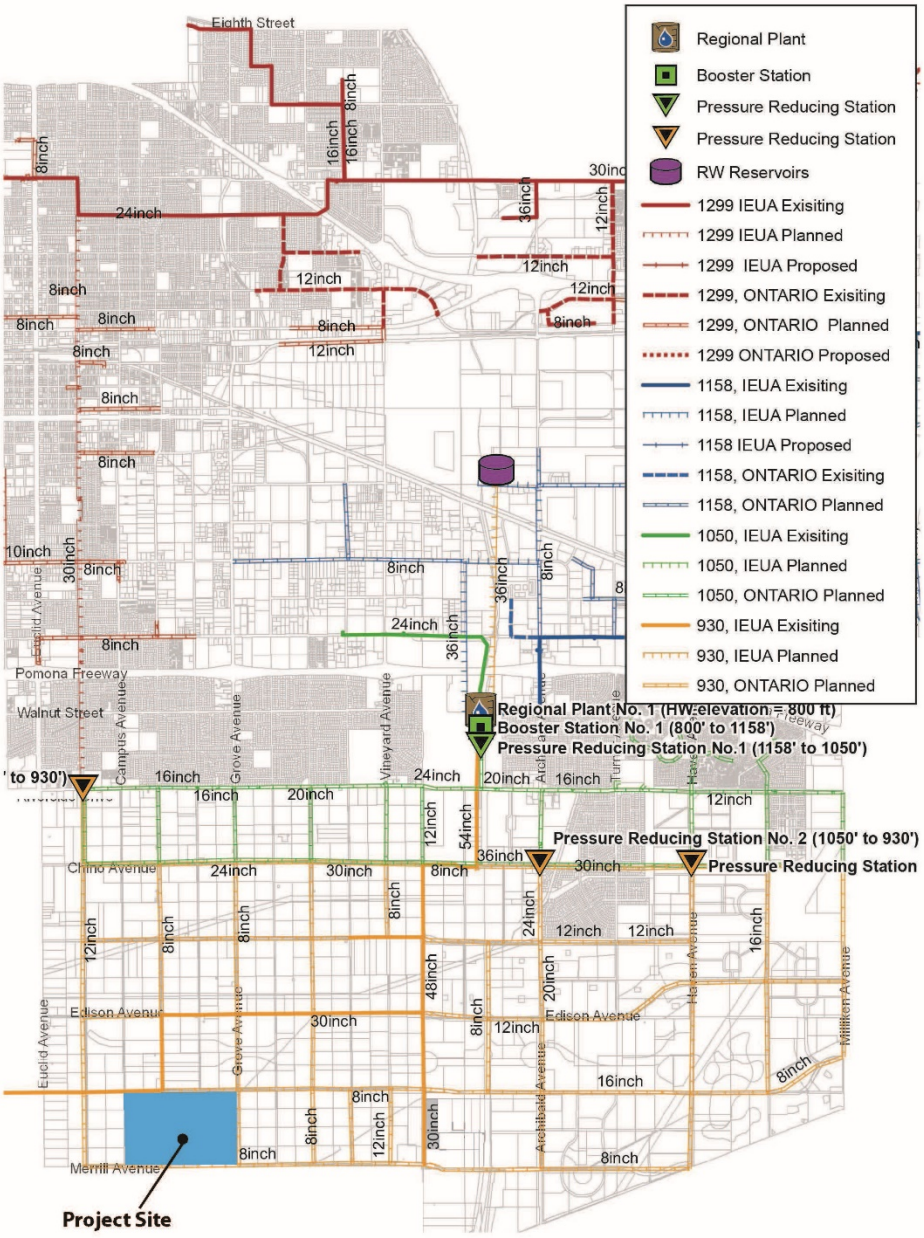
3.4 Recycled Water Plan

The City of Ontario Ordinance 2689 requires all new development in Ontario Ranch to connect to and use recycled water for all approved uses, including but not limited to landscape irrigation. Prior to use of recycled water, approval from the City of Ontario and State Water Resources Control Board (SWRCB) is required. Interim connection to potable water is not allowed.



Currently there are no City recycled water mains or City recycled water infrastructure in the vicinity of the Specific Plan Area. Recycled Water is provided to the City of Ontario by the Inland Empire Utility Agency (IEUA) from its four wastewater reclamation plants. The entire Specific Plan area is within the City's master planned 930 Pressure Zone. Recycled Water Infrastructure Improvements for the Specific Plan area (Figure 3.9) require the planning, design, and construction of 930 Pressure Zone (PZ) Recycled Water Master Plan mains, which includes: installing a 12-inch recycled water main in Eucalyptus Avenue connecting to the 8-inch recycled water main in Grove Avenue and extending to connect to the IEUA 30-inch recycled water main in Eucalyptus Avenue at Bon View Avenue; installing an 8-inch recycled water main in Bon-View Avenue to connect to the IEUA 30-inch recycled water main in Eucalyptus Avenue and extending to connect to the 8-inch recycled water main in Merrill Avenue; installing an 8-inch recycled water main in Merrill Avenue connecting to the 8-inch recycled water main in Sultana Avenue and extending to connect to the 8-inch recycled water main in Grove Avenue; installing an 8-inch recycled water main in Grove Avenue connecting to the 8-inch recycled water main in Merrill Avenue and extending to connect to the 12-inch recycled water main in Eucalyptus Avenue.

The layout and construction of planned developments within the Specific Plan area may require a project specific 8-inch recycled water main in Campus Avenue, connecting to the 8-inch recycled water main in Merrill Avenue, and extending to the 30-inch RW main in Eucalyptus Avenue. It may also require an 8-inch recycled water main in Merrill Avenue, connecting to the 8-inch recycled water main at Campus Avenue and Sultana Avenue.



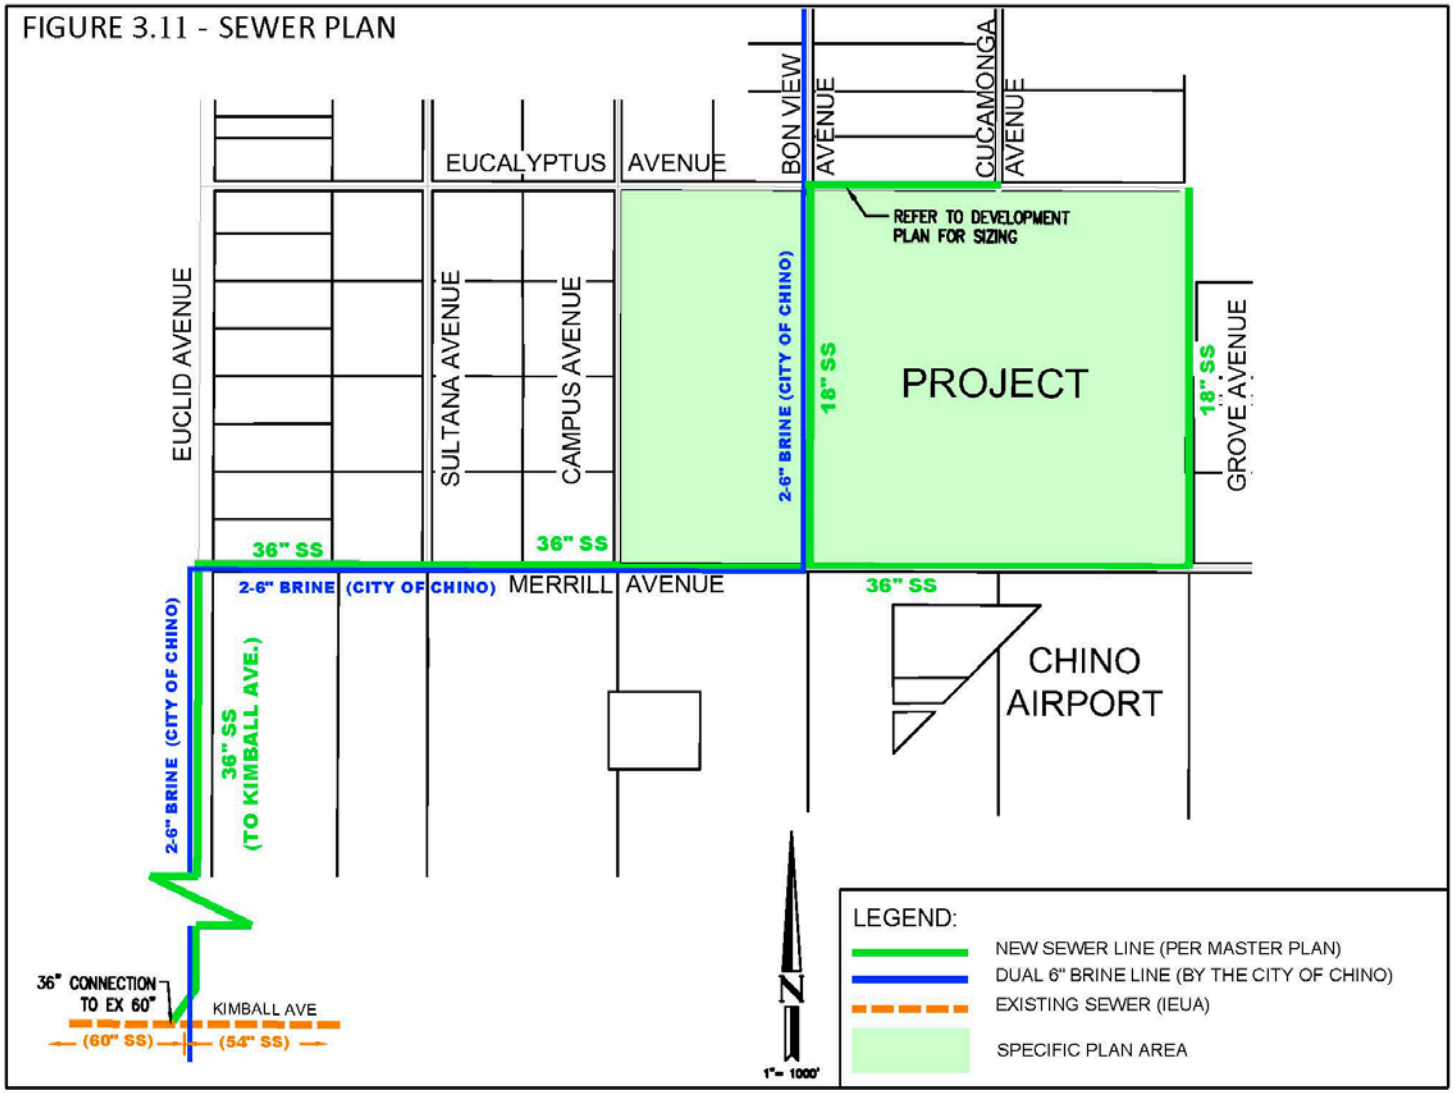
The future recycled water system to serve the City of Ontario is shown on Figure 3.10. The sizing and alignment of existing and proposed recycled water lines are shown in the exhibit.

Sizing and alignment of the recycled water lines will be consistent with the City of Ontario Recycled Water System Master Plan and/or a City approved hydraulic analysis.

FIGURE 3.9 - RECYCLED WATER PLAN

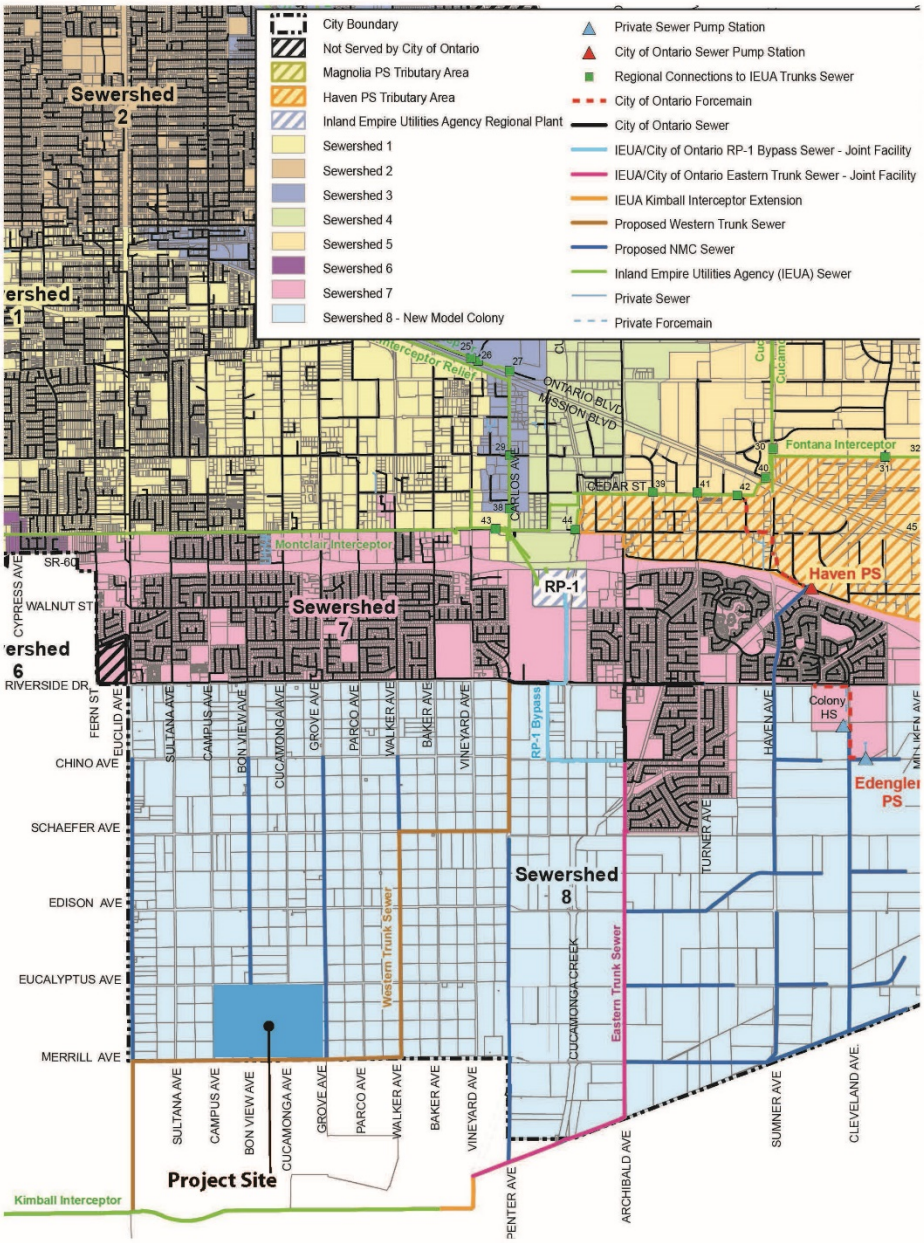
City of Ontario Future Recycled Water System

South Ontario Logitics Center Specific Plan **Figure 3.10**



3.5 Sewer Plan

Regional wastewater treatment services are provided to the City of Ontario and its neighboring agencies by the Inland Empire Utilities Agency (IEUA). Several regional trunk sewers collect sewage generated in the city and transport it to IEUA's Regional Plant No.1 and Regional Plant No.5 for treatment. The City of Ontario's sewer service area is divided into eight sewersheds, primarily based on the outlet points where the City's system ties into the IEUA downstream facility. Ontario Ranch is located in Sewer shed 8.



There are no sewer mains located within the broader vicinity of the Specific Plan area; therefore, the Specific Plan includes a network of new public sewer mains (Figure 3.11), consistent with the City of Ontario's Ultimate Sewer System Plan (Figure 3.12). A 36-inch sewer main will connect to an existing IEUA interceptor trunk main sewer located in Kimball Avenue to the south, run north in Euclid Avenue to Merrill Avenue, then stays a 36-inch sewer main east to Grove Avenue. The IEUA interceptor trunk sewer main is 54-inches east of Euclid and 60-inches west of Euclid Avenue. An 18-inch sewer main would run from Merrill Avenue north within Bon View Avenue and Grove Avenue to Eucalyptus Avenue. A sewer main will run within Eucalyptus Avenue, from a point west of Grove Avenue to Bon View Avenue where it will connect to the 18-inch sewer main within Bon View Avenue. The size of the Eucalyptus Avenue sewer main will be determined during development plan preparation for PA1 and PA2.

The ultimate sizing and alignment of sewer infrastructure shall be consistent with the City of Ontario ultimate sewer system plan and/or a City conducted and approved hydraulic analysis.

A Sewer Sub-Area Master Plan (SSAMP) shall be prepared for each tract map and development within the Specific Plan.

3.6 Conceptual Grading Plan

The topography of the site is moderately flat, sloping from the northeast to the southwest with approximately a 17-foot drop in elevation across the Specific Plan area.

The grading activities for the Specific Plan area will generally consist of clearing and grubbing, demolition of existing structures, and moving surface soils to construct building pads, driveways and streets.

Conceptual grading and earthwork analysis indicate the project can be balanced onsite. Earthwork will include approximately 425,912 cubic yards (CY) of cut and 425,912 CY of fill with 272,777 CY of over-excavation. Geotechnical and/or environmental conditions encountered during grading operations may impact final earthwork calculations. Grading plans for each development project within the Specific Plan area shall be reviewed and approved by the City of Ontario prior to the issuance of grading permits. Grading plans and activities shall conform to the City's grading ordinance and dust and erosion control requirements.

All landscaped areas within the Specific Plan area shall be graded as shallow swales and designed to accept runoff water from impervious surfaces. Water quality retention basins, trenches, etc., (the exact location of which will be determined at the time of Water Quality Management Plan (WQMP) approval for individual implementing projects) will have a maximum side slope of 3:1.

3.7 Dry Utilities Plan

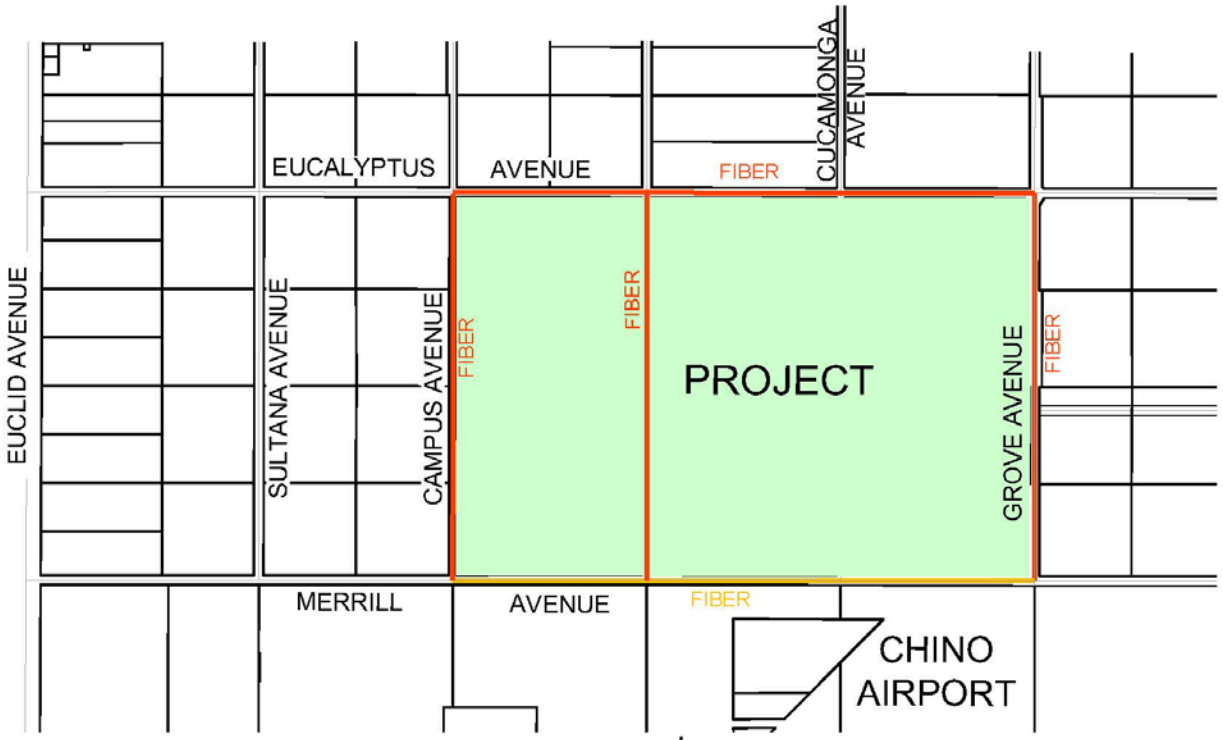
Utility services provided to the site shall be installed underground in accordance with City of Ontario guidelines.

Communication System

According to the City of Ontario 2013 Fiber Optic Master Plan, the fiber optic infrastructure, including approximately 23 miles of backbone fiber south of Riverside Drive, is an investment in a long-term capital asset using newly constructed and existing conduit to provide high speed communication links to key locations throughout the city. Developments within Ontario Ranch are required to install and provide fiber conduit to all improved lots. Proposed on-site facilities will be placed underground within a duct and structure system that will be installed by the developer. Pursuant to the City's Fiber Optic Master Plan, the fiber optic network will be owned and operated by the City and as such maintenance of the installed system will be the responsibility of the City and/or Special District fiber optic entity and not the developer. The Specific Plan area will be connected to the City's system as shown on Figure 3.13.

Natural Gas

Southern California Gas Company maintains 3" and 12" mains in Eucalyptus Avenue, a 12" main Grove Avenue and 2" mains located east and west of the site in Merrill Avenue. There mains are available to provide service to the project site. Gas mains will be installed to the individual development projects by the Gas Company, as necessary.



Electrical

Southern California Edison will provide electricity to the Specific Plan area from existing facilities in the vicinity. New lines within the Specific Plan area shall be installed according to City of Ontario requirements.

Cable

Charter does not maintain any facilities with the vicinity of the proposed project site. A main extension would be required if services are desired.

FIGURE 3.13 - FIBER OPTIC PLAN

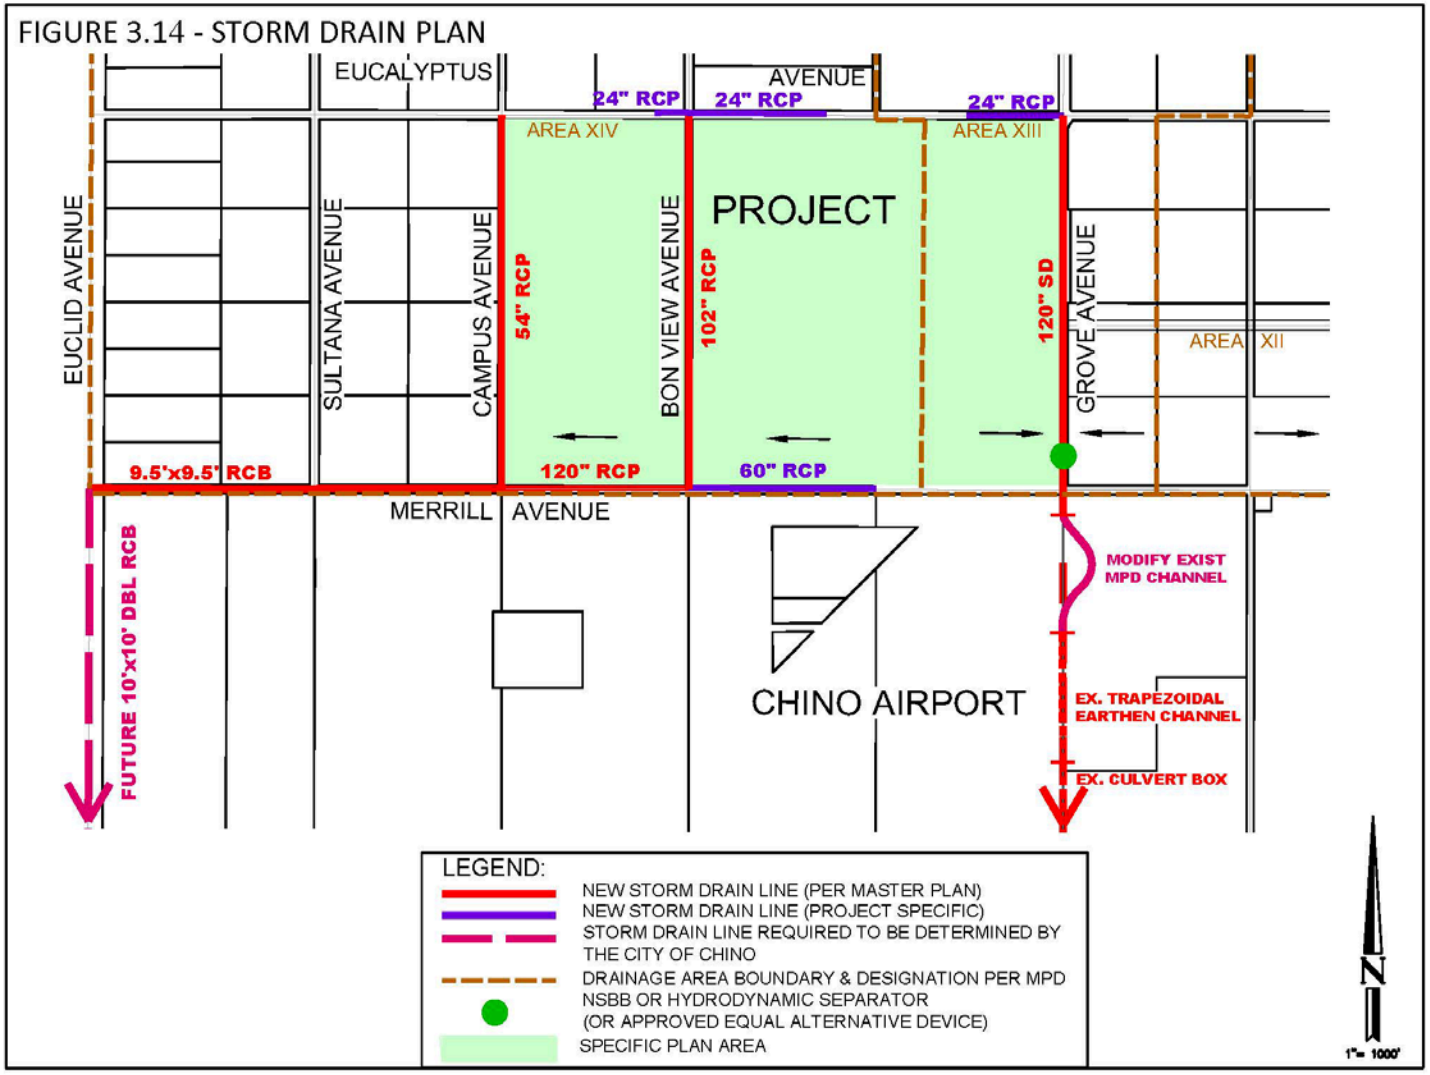
3.8 Storm Drainage Plan

The Specific Plan area storm drain improvements (Figure 3.14) are consistent with the facilities specified in Drainage Area XIV of the City of Ontario Planned Drainage Facilities (Figure 3.15).

Catch basins located throughout the site will collect runoff. On-site storm drain systems will convey runoff to the following facilities:

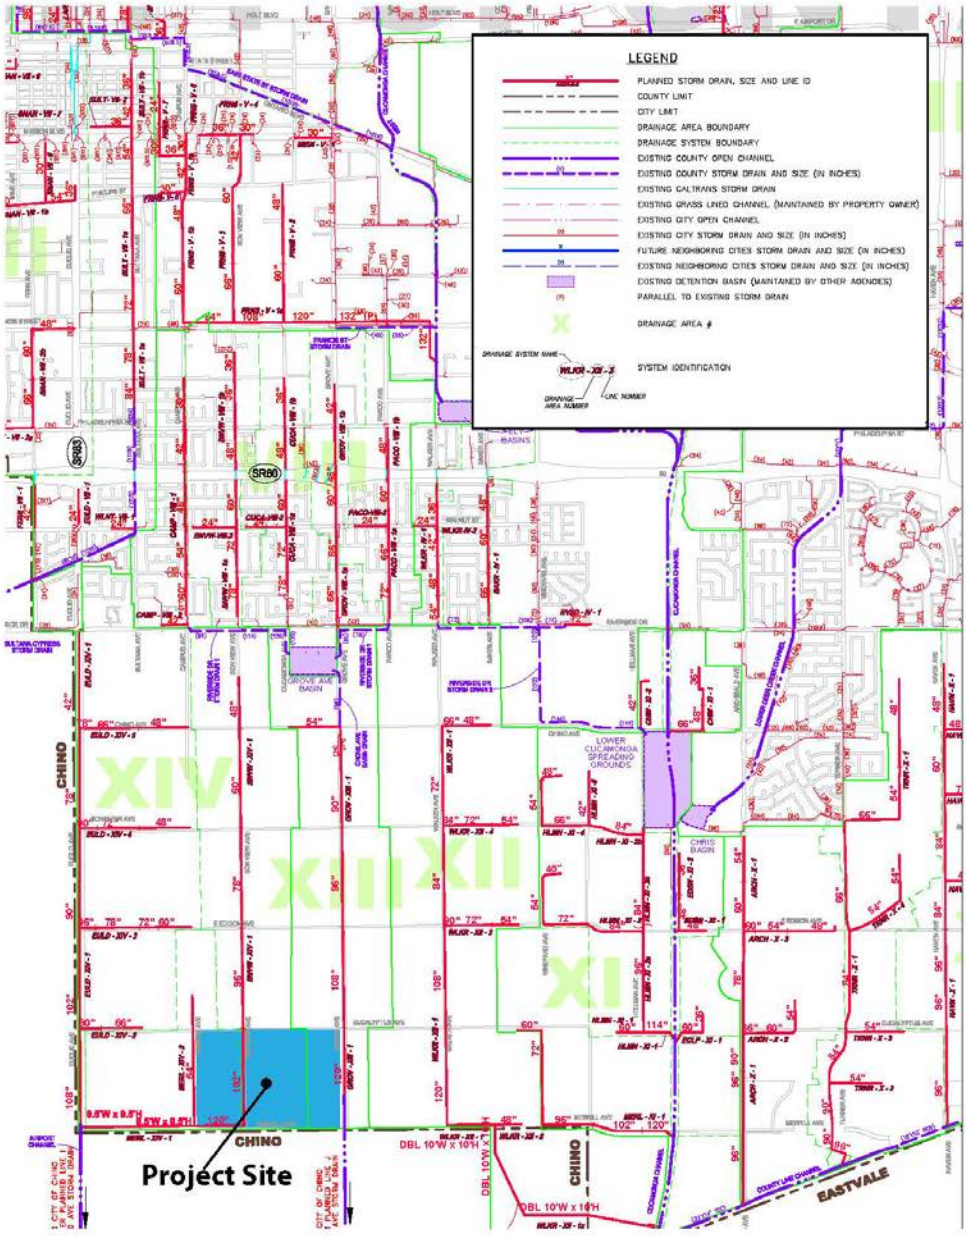
- 120-inch storm drain in Grove Avenue leading south to existing facilities via modification of an existing channel.
- 102-inch reinforced concrete pipe in Bon View Avenue.
- 60-inch reinforced concrete pipe in Merrill Avenue adjacent to the Specific Plan area, which will transition to a 120-inch reinforced concrete pipe running west to a reinforced concrete box at Euclid Avenue.
- 54-inch storm drain in Campus Avenue which connects to the future storm drain in Merrill Avenue.
- 10' x 10' storm drain in Euclid connecting to the Prado flood control basin.

Additional on-site drain improvements would include storm water detention/ retention/ water quality basins, which would capture, treat, and/or gradually release storm water into the downstream public storm drain systems. Onsite storm water treatment would incorporate underground chambers installed within each building's parking area.



Development within this specific plan shall be responsible to construct the ultimate storm drain improvements if they are not installed at time of development.

Each storm drain in Campus Avenue, Bon View Avenue, Grove Ave and Merrill Avenue will be equipped with a hydrodynamic separator, or series of hydrodynamic separators to satisfy the statewide trash mandate. Each device will be approved by and listed on the Certified Full Capture System List of Trash Treatment Control Devices of the State Water Resources Control Board (SWRCB).



NPDES Compliance

The grading and drainage of the Specific Plan area will be designed to retain/infilter, harvest, and re-use or biotreat surface runoff to comply with the current requirements of the San Bernardino County NPDES Stormwater Program's Water Quality Management Plan (WQMP) for significant new development projects. The objective of the WQMP for this project is to minimize the detrimental effects of urbanization on the beneficial uses of receiving waters, including effects caused by increased pollutants and changes in hydrology. These effects may be minimized through the implementation of site designs that reduce runoff and pollutant transport by minimizing impervious surfaces and maximizing on-site infiltration, employing Source Control Best Management Practices (BMP's), or using on-site structural Treatment Control BMP's where the infeasibility of installing Low Impact Development BMP's is demonstrated.

All Priority Land Use (PLU) areas within the Specific Plan Area shall comply with the statewide Trash Provisions adopted by State Water Resources Control Board (SWRCB) and trash requirements in the most current San Bernardino County Area-Wide MS4 Permit.

City of Ontario Planned Drainage Facilities

South Ontario Logistics Center Specific Plan **Figure 3.15**

New development within the Specific Plan area will utilize a variety of Low Impact Development site drainage designs to manage stormwater, including but not limited to retention/infiltration basins, trenches and swales, and above ground and/or below ground bio-treatment systems. Development projects within the Specific Plan area will comply with the latest Low Impact Development guidelines and incorporate features including but not limited to:

- Landscape designs that promote water retention and incorporation of water conservation elements such as use of native plants and drip irrigation systems;
- Permeable surface designs in areas with low traffic;
- Parking lots that drain to landscaped areas to provide retention and infiltration, or bio-treatment where infiltration is infeasible;
- Limited soil compaction during grading operations within landscaped storm water infiltration areas of not more than 80 percent compaction.

Prior to the issuance of a grading or construction permit, a Storm Water Pollution Prevention Plan (SWPPP), Erosion & Sediment Control Plan sheets, and a WQMP shall be prepared and approved. The SWPPP and Erosion & Sediment Control Plan Sheets shall identify and detail all appropriate BMP's to be implemented or installed during construction of the project, and the WQMP shall describe all post-construction BMP's designed to address water quality and quantity of runoff for the life of the project.

3.9 Public Services

This sub-section addresses public services within the Specific Plan area, including police, fire and solid waste disposal services.

3.9.1 Police

The City of Ontario will provide police services to the Specific Plan area. The closest police station is located approximately five miles north of the Specific Plan area at 2500 S. Archibald Avenue, just south of SR-60. This station is also the City of Ontario Police Department headquarters.

3.9.2 Fire

The City of Ontario will provide fire protection services to the Specific Plan area. The Ontario Fire Department currently has eight stations, which are staffed with eight four-person paramedic engine companies and two four-person truck companies. The closest operational fire station, Station 2, is located at 544 W. Francis Street, approximately four miles north of the Specific Plan area.

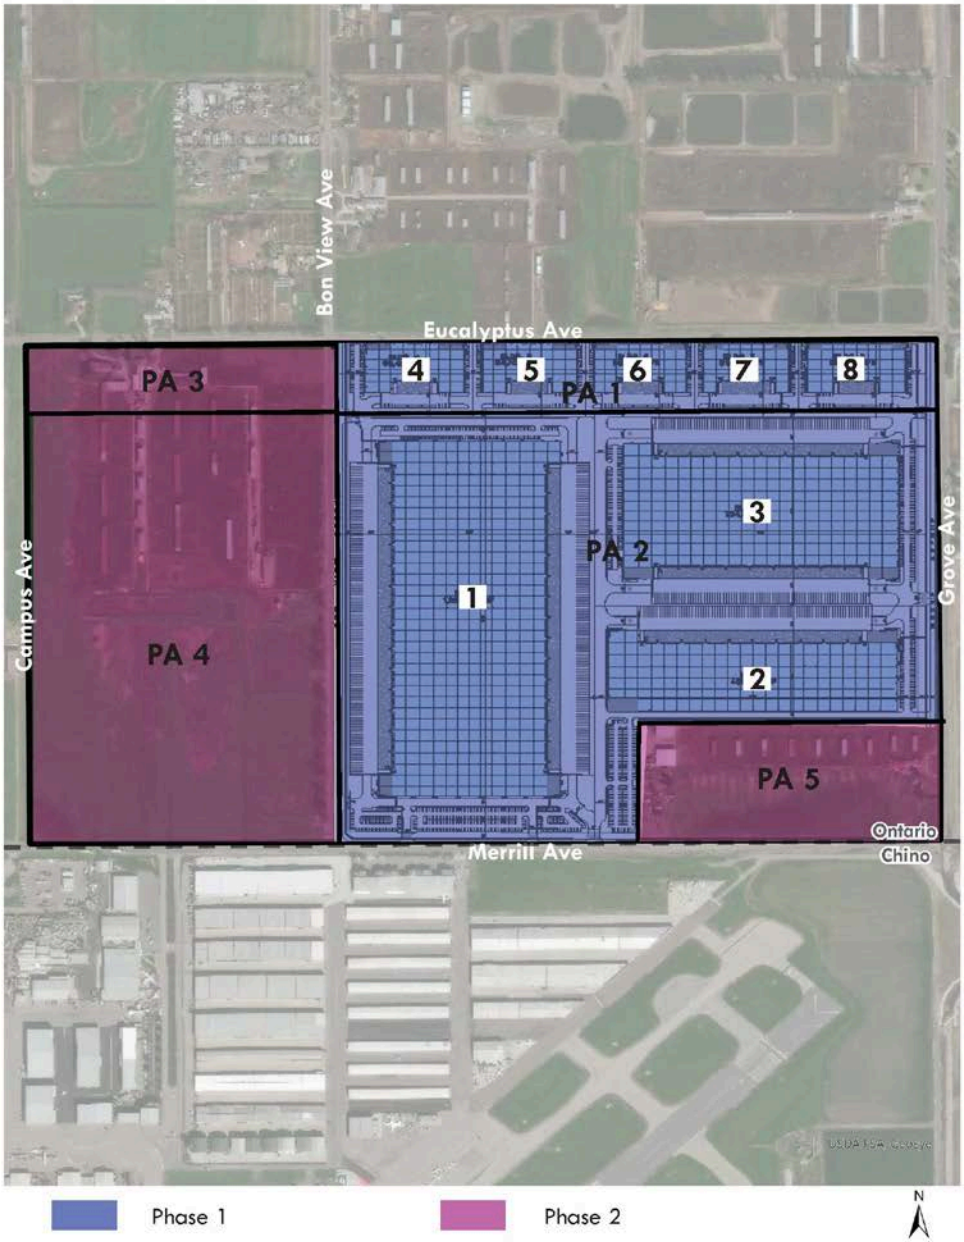
3.9.3 Solid Waste Disposal

The City of Ontario will provide solid waste services to the Specific Plan area. The City offers a full array of commercial and industrial services designed to meet the business community's needs. Solid waste facilities follow the "Solid Waste Department Refuse and Recycling Planning Manual." The Manual establishes the City of Ontario's requirements for refuse and recycling storage and access for service, as well as addresses the City's recycling goals. The Mid-Valley Landfill is the nearest County of San Bernardino landfill located at 2390 N. Alder Avenue in the City of Rialto, approximately 20 miles northeast of the Specific Plan area.

3.10 Phasing Plan

Development phasing of the Specific Plan area will be determined by the landowner and/or developer based upon real estate market conditions. Phasing sequencing is subject to change over time to respond to various market and local factors and as such, individual phases may overlap or develop concurrently. Phasing will occur as appropriate levels of infrastructure are provided. Infrastructure improvements, as required and approved by the City Engineer to support the development, shall be installed by the developer.

Figure 3.16, Conceptual Phasing Plan, describes two general phases of development for South Ontario Logistics Center.



Phase 1: Phase 1 consists of the construction of Buildings 1 through 8 as numbered in the Conceptual Site Plan and includes the Development Plan (PAs 1 and 2). This phase may be developed in several sub-phases in response to market demands and according to the logical and orderly completion of infrastructure improvements.

Phase 2: Phase 2 consists of the balance of the Project site (PAs 3, 4, and 5) .

Specific Plan backbone infrastructure shall be installed by the project developer, in accordance with the applicable City-adopted infrastructure plan for the area, as well as the provisions of this Specific Plan and an approved Development Agreement. Final grading and infrastructure improvements will be completed in accordance with the approved Development Agreement and City Engineer approval. Fair share responsibilities for improvements shall be addressed in a Development Agreement with the City of Ontario.

All the Specific Plan required infrastructure can be found in Section 3.3 (Figure 3.7 and 3.7a) for Potable Water, Section 3.4 (Figure 3.9) for Recycled Water, Section 3.5 (Figure 3.11) for the Sewer Plan, Section 3.7 (Figure 3.13) for the Fiber Optic Plan, and Section 3.8 (Figure 3.14) for the Storm Drain Plan. Phasing will be determined per separate Development Agreement.

Conceptual Phasing Plan

South Ontario Logistics Center Specific Plan **Figure 3.16**

4.0 LAND USE AND DEVELOPMENT STANDARDS

This chapter identifies allowable uses and development standards including building height, setbacks, lot coverage, parking, and landscape within the Specific Plan area. These regulations are intended to create a harmonious relationship among development within the Specific Plan area and with surrounding land uses as well as to protect the health, safety, and general welfare of the community.

4.1 General Provisions

Upon adoption of this Specific Plan, the allowable land uses and development standards within this document become the governing zoning for new construction, additions, or remodels within the Specific Plan area. However, in reviewing individual projects requiring discretionary approval, additional conditions may be applied by the approving body to accomplish the goals and objectives of this Specific Plan.

4.2 Allowable Uses

Table 4.1 (Allowable Uses) provides the land uses, activities, and facilities allowed within the Specific Plan's BP (Business Park) and IG (Industrial - General) Zoning Districts discussed in Chapter 3. These uses include a variety of industrial-serving commercial, low-intensity office, technology, light manufacturing, and warehouse/distribution uses that are compatible with the site's location within Safety Zone 6 of the Chino Airport. The letters/symbols used in Table 4.1 shall have the following meanings:

"P" - Permitted Land Uses

A Permitted Use (P) is permitted by right and may be established as the primary use of a building without the need for discretionary approval. Permitted Uses are subject to the development standards and guidelines applicable to the zoning district in which the use is located.

"C" - Conditionally Permitted Land Uses

A Conditionally Permitted Use (C) is permitted upon issuance of a Conditional Use Permit (CUP) pursuant to Section 4.02.015 of the Ontario Development Code and City processing procedures.

"A" - Administratively Permitted Land Uses

An Administratively Permitted Use (A) is permitted upon issuance of an Administrative Use Permit (AUP) pursuant to Section 4.03.015 of the Ontario Development Code and City processing procedures.

"—" - Prohibited Land Uses

A land use indicated with a "—" symbol is prohibited within the zoning district.

Land Uses Not Listed

A land use not listed in Table 4.1 shall be considered a prohibited land use. For land uses similar to those listed in Table 4.1, but not expressly stated in this Specific Plan, the City of Ontario Planning Director or his/her designee shall have the authority to make a determination of the applicability of similar land uses.

Table 4.1: Allowable Uses

Land Use	BP District	IG District
AGRICULTURAL USES

Truck, Utility Trailer, and Recreational Vehicle Rental and Leasing	C	P
Offices		
Administrative and Support Services	P	--
Finance and Insurance Offices	P	--
Management of Companies and Enterprises	P	--
Office Ancillary to a Primary Industrial Use (less than 10% of GFA)	P	P
Professional, Scientific, and Technical Services (e.g., accounting, tax preparation, architecture, bookkeeping, legal, engineering, consulting)	P	--
Real Estate Offices	P	--
Retail		
Alcoholic beverage sales for consumption off the premises (includes all retailers off-sale licenses issued by the State of California Department of Alcoholic Beverage Control)	C	--

Auction Houses	C	--
Automotive Parts and Accessories (including tires)	P	--
Convenience stores (without alcoholic beverage sales)	P	--
Gasoline Fueling Station with or without Convenience Store (without alcoholic beverage sales)	C	--
Internet Fulfillment/Warehousing/Distribution (E-Commerce)	P	P
Industrial Retail Sales (retail sales of goods and/or products either manufactured, warehoused or wholesaled on-site)		
• Maximum 15% of building floor area or 8,000 square feet, whichever is less	A	A
• Over 15% of building floor area or 8,000 square feet	C	C
Non-Store Retailers (includes electronic shopping and mail-order houses, vending machine operators, and other direct selling establishments excluding fuel/petroleum dealers)	P	P
WAREHOUSING		
Warehousing and Storage (General and Other)		
• Completely within enclosed building	P	P
• Outdoor Storage Accessory to an Allowed Use	A	A
• Outdoor Storage as the Primary Use	--	C
Refrigerated Warehousing and Storage	P	P
OTHER		
Religious Assembly	C	--
Parking Facilities	P	--
Vocational/Trade Schools	C	C

Notes:
1. Excluding Commercial Crop Production of Marijuana
2. P=Permitted, C= Conditionally Permitted, A=Administratively Permitted, "—"=Prohibited
3. Refer to the Specific Plan EIR and Ontario International Airport Land Use Compatibility Plan (ONT ALUCP) for additional development criteria and policies that may affect allowable land uses.

4.3 Conceptual Site Plan

The conceptual site plan for the South Ontario Logistics Center Specific Plan is presented in Figure 4.1. Under this conceptual plan, Planning Area 1 (Business Park Zoning District) is developed with five buildings totaling 464,820 square feet (SF) and Planning Area 2 (Industrial – General Zoning District) is developed with three buildings totaling 2,462,135 SF (Table 4.2). Cumulatively, the eight buildings depicted in the conceptual site plan provide 2,926,955 SF of development.

The conceptual site plan reflects current market trends, site conditions, and planned infrastructure. However, the conceptual site plan may be modified provided it does not exceed the maximum building area presented in Table 3.1 and complies with this Specific Plan and applicable provisions of the City of Ontario Development Code.

Table 4.2 Conceptual Site Plan

Planning Area	SP Zoning District	Site Acreage	Proposed Conceptual Building Square Footage
1	BP	23	464,820 SF
2	IG	107.34	2,462,135 SF
TOTAL		**130.34**	**2,926,955 SF**

Conceptual Site Plan

South Ontario Logistics Center Specific Plan

Figure 4.1

4.4 Development Standards

Table 4.3 (Development Standards) provides a summary of the development standards applicable to the land uses, structures, and related improvements located within the Specific Plan area. Refer to the Ontario Development Code for any standard not addressed in Table 4.3.

Table 4.3 Development Standards

Development Standard	Zoning District	
	BP	IG
Minimum Lot Area	10,000 sq ft	20,000 sq ft
Minimum Lot Dimensions		
1. Lot Width	100 ft	100 ft
2. Lot Depth	100 ft	100 ft
Maximum Floor Area Ratio	0.60	0.55
Maximum Building Footprint [1]	125,000 sq ft	N/A
Minimum Landscape Setback		
1. Grove Avenue	20 ft	20 ft
2. Eucalyptus Avenue	23 ft	N/A
3. Merrill Avenue	N/A	23 ft
4. Bon View Avenue	10 ft	10 ft
5. Interior Side	N/A	N/A
6. Interior Rear	N/A	N/A
Minimum Building Setback [2]		
1. Grove Avenue	20 ft	20 ft
2. Eucalyptus Avenue	23 ft	N/A
3. Merrill Avenue	N/A	23 ft
4. Campus Ave	10ft	10ft
5. Bon View Avenue	10 ft	10 ft
6. Interior Side	10 ft	10 ft
7. Interior Rear	10 ft	10 ft
Minimum Parking Space and Drive Aisle Separations[3,4,7]		
1. Parking Space or Drive Aisle to Street Property Line	20 ft	10 ft
2. Parking Space or Drive Aisle to Interior Property Line	5 ft	5 ft
3. Parking Space to Buildings, Walls, and Fences	Areas adjacent to public entries and office areas: 10 ft Areas adjacent to other building areas: 5 ft Within screened loading and storage yard areas: 0 ft	
4. Drive Aisles to Buildings, Walls, and Fences	5ft	5ft
5. Drive Aisles within Screened Loading and Storage Yard Areas	0 ft	0 ft

Table 4.3 Development Standards

Development Standard	Zoning District	
	BP	IG
Maximum Building Height [5,6]	45 ft	55 ft
Minimum Landscape Coverage	15%	10%
Walls, Fences, and Hedges	Per Ontario Development Code Division 6.02 (Walls, Fences, and Obstructions) and Section 5.5 (Buffering and Screening) of the Design Guidelines in Chapter 5.	

Notes:

1. Maximum building footprint limit is applicable only to buildings that front onto a public right-of-way.
2. Setback areas shall be measured from the property line and shall be landscaped.
3. Within yard areas fully screened by a decorative wall, there shall be no minimum drive aisle or parking space setback required, unless adjacent to residentially zoned properties.
4. The minimum separation area between a building, wall, or fence and a parking space or drive aisle shall be fully landscaped. The separation area may include pedestrian walkways, as necessary; however, a minimum 5-foot wide planter area shall be maintained between a building wall and a pedestrian walkway. The minimum separation dimension shall not include any area devoted to vehicle overhang.
5. Architectural projections, mechanical equipment, and focal elements may be allowed to exceed the maximum height up to 25 percent above the prescribed height limit.
6. The maximum building height and floor area ratio may be restricted pursuant to the Ontario International Airport Land Use Compatibility Plan (ONT ALUCP) and The Chino Airport Land Use Compatibility Plan. Refer to the ALUCP for properties affected by airport safety zones for additional development criteria and policies that may affect allowable land uses.
7. The use of surrounding roads, drive aisles and truck parking lots to address the open land requirement for the Chino Airport Overlay zone is discussed in Chapter 2 (Section 2.2, Airport Influence Areas).

Table 4.4 (Off-Street Parking and Loading Design Standards) establishes the design standards for off-street parking in the Specific Plan area. Refer to the Ontario Development Code for any parking-related standard not addressed in Table 4.4.

Table 4.4: Off-Street Parking and Loading Design Standards

Development Standard	Requirement
Parking space dimensions	
1. Standard parking	9 feet wide by 18 feet long
2. Tractor trailer parking	12 feet wide by 45 feet long
3. At grade loading space	12 feet wide by 18 feet long
Minimum aisle width for 90-degree parking	24 feet
Maximum gradient at parking space	5 percent measured in any direction
Dock-high loading facilities	

Table 4.4: Off-Street Parking and Loading Design Standards

Development Standard	Requirement
1. Dock high door loading space	12 feet wide by 45 feet long with 14-foot minimum vertical clearance measured from finished surface of loading dock.
2. Truck maneuvering area	Meet the minimum practical turning radius of a 53-foot semi-trailer/tractor combination.

Table 4.5 (Required Number of Parking and Loading Spaces) specifies the number of parking spaces that must be provided according to land use. For a use not specified in the table, refer to the Ontario Development Code, Table 6.03-1, Off-Street Parking Requirements.

Table 4.5: Required Number of Parking and Loading Spaces

Land Use	Number of Required Spaces
Multi-tenant business park	Per 1,000 square feet of gross floor area: • 3 spaces • Required parking for "general office" when exceeding 10% of gross floor area • One tractor trailer parking space per 4 dock-high loading doors
General office when exceeding 10 percent of building gross floor area	4 spaces per 1,000 square feet of gross floor area of office use
Industrial speculative building	Per 1,000 square feet of gross floor area: • Up to 50,000 square feet: 1.85 spaces • 50,001 – 100,000 square feet: 1 space • 100,001 square feet and over: 0.5 space • One tractor trailer parking space per 4 dock-high loading doors. • Plus required parking for "general business offices" and other associated uses, when those uses exceed 10 percent of the building gross floor area.
Manufacturing	1.85 spaces per 1,000 square feet of gross floor area • plus one tractor trailer parking space per 4 dock-high loading doors. • Plus required parking for "general business offices" and other associated uses, when those uses exceed 10 percent of the building floor area.
Restaurant (including outdoor seating area up to 25 percent of gross floor area)	• Under 2,000 square feet: 5 spaces per 1,000 square feet of gross floor area • More than 2,000 square feet: 10 spaces per 1,000 square feet of gross floor area
Warehousing and distribution (including associated office use if less than 10 percent of building gross floor area)	• First 20,000 square feet: 1 space per 1,000 square feet of gross floor area • Additional square feet: 0.5 space per 1,000 square feet of additional gross floor area

	• Plus one tractor trailer parking space per 4 dock-high loading doors • Plus required parking for "general office" and other associated uses when exceeding 10 percent of the building gross floor area

Sufficient off-street loading and unloading spaces shall be provided on each development site, and adequate provisions and space shall be made for maneuvering freight vehicles and handling freight. Loading activity, including turnaround and maneuvering, shall be made on site. Buildings, structures, and loading facilities shall be designed and placed on the site so that vehicles, whether rear loading or side loading, may be loaded or unloaded at any loading dock, door, or area without extending beyond the property line.

5.0 DESIGN GUIDELINES

This chapter identifies conceptual themes for site planning, architecture, and landscape design within the Specific Plan area. The guidelines are intended to ensure a cohesive and attractive development that meets the following objectives:

1. Demonstrates high-quality development that complements and integrates into the community and adds value to the city.
2. Creates a functional and sustainable development that ensures South Ontario Logistics Center is regionally competitive and appropriate within the Ontario Ranch community.
3. Illustrates the distinctive characteristics of its two zoning districts: Business Park (BP) District (Planning Area 1 and 3) and Industrial - General (IG) District (Planning Area 2, 4 and 5).
4. Establishes criteria for building design and materials, landscape design, and site design that provide guidance to developers, builders, architects, landscape architects, and other professionals preparing plans for construction.
5. Provides guidance to City staff and the Planning Commission in the review and evaluation of future development projects in the South Ontario Logistics Center Specific Plan area.
6. Incorporates construction and landscape design standards that promote energy and water conservation strategies.
7. Implements the goals and policies of The Ontario Plan and the intent of the Ontario Development Code.

5.1 Site Design

Site design within Planning Area 1 and 3 (BP District) and Planning Area 2, 4 and 5 (IG District) shall incorporate the following design features.

Key provisions include:

1. Provide a well-organized site plan that emphasizes pedestrian connectivity and attractive landscape areas for the public through the location and arrangement of buildings, circulation, and parking areas.
2. Orient buildings towards street frontages to create an inviting public perimeter.
3. Provide visible pedestrian access to buildings from the street, parking areas, and perimeter sidewalks through signage, prominent architectural features, and landscape design.
4. Employ enhanced paving, accent trees, and other landscape features that highlight major building entries.
5. Design drive aisles to minimize impact to pedestrians, provide adequate stacking space, and prevent queuing of vehicles onto public streets.

6. Locate visitor and short-term parking areas at the front and sides of buildings near primary building entrances.
7. Create small parking clusters through the design and placement of landscape areas, drive entrances, and/or buildings to avoid large, visually dominant parking lots.
8. Locate loading and storage areas away from streets when feasible, ensure adequate space for vehicle backing and maneuvering on-site, and provide adequate parking for loading vehicles so normal traffic flow is not impeded.
9. Screen parking areas and loading docks facing the street using landscape buffers planted with screen trees and drought-tolerant vegetation.
10. Orient and screen elements such as trash enclosures, loading bay doors, and service docks to minimize their visibility.
11. Locate service entrances to avoid conflict with front entries.
12. Place electrical rooms and transformers away from front entries and street views.

5.2 Architectural Design

The building design, materials, colors, and textures establish its theme and character. Architecture shall be compatible and complementary with other buildings within the Specific Plan area; however, design diversity is encouraged to provide visual interest. Although development within Planning Area 1 and 3 (BP District) and Planning Area 2, 4 and 5 (IG District) differ in building height and scale, similar design concepts apply as follows.

Key provisions include:

1. Ensure scale, massing, fenestration, materials, and colors are consistent with the building's architectural style and compatible with the overall design in the Specific Plan area.
2. Avoid blank walls by providing articulation on building elevations visible from the public right-of-way through elements such as cornices, parapets, expression lines, and changes in materials and/or colors.
3. Provide the greatest level of articulation on the front facades that are visible from the public rights-of-way and the main entrances.
4. Design entry features as a significant aspect of a building's overall composition through massing, detailing, architectural treatments, and/or special materials and colors.
5. Employ recessed or covered building entrances to provide shade and visual relief.
6. Design office buildings, business parks, and office areas of industrial or warehouse buildings with an emphasis on the use of windows, architectural details, and building articulation.
7. Integrate the design of industrial/warehouse office areas into the overall building composition so they create powerful architectural statements and not visually disjointed "add-ons".
8. Employ a minimum of four different colors, materials, and/or textures on each building.
9. Avoid terminating a change in material or color at a building edge; instead, select a logical termination point in relation to the architectural features or massing.
10. Paint exposed downspouts, service doors, and mechanical screens the same color as the adjacent wall.
11. Elevations to the front of buildings across Eucalyptus Ave shall be additionally enhanced due to residential land use designation across the street.

5.3 Landscape Design

Conceptual landscape plans encourage durable landscape materials and designs that enhance the aesthetics of structures, create and define public and private spaces, and provide shade and environmental benefits. The following guidelines ensure that intersection sight lines and pedestrian safety are preserved. Landscaping plans within the Specific Plan area shall comply with the City of Ontario "Landscape Development Guidelines", the "Standard Drawings" and "Traffic and Transportation Guidelines" for sight-distance.

Key provisions include:

1. Landscape and irrigate all areas of the site not covered by buildings, structures, paving, or impervious surfaces.
2. Design and grade projects to direct storm runoff from building roofs and paved areas into swaled landscape areas for retention/infiltration. Landscape areas may be used for storm water basins and swales at no greater than 50 percent of the available landscape area and may not obstruct the mature root zone of required tree locations.
3. Provide shade for expanses of paving, building walls, roofs, and windows with irrigated shade trees located in appropriate areas where space permits to reduce the impacts of heat gain.
4. Design parking lot landscaping to reduce associated heat buildup, improve aesthetics, and integrate with on-site landscape and adjacent streetscape.
5. Use landscaping to aid in the screening and buffering of mechanical equipment, trash collection areas, loading docks, and outside storage areas from public view.
6. Coordinate utilities with landscape plans by showing utilities on plans to ensure placement clear of required tree locations. Utilities such as backflow devices and transformers shall be screened using landscaping that provides at least 75 percent coverage. Backflow devices and transformers shall be located at least five feet from hardscape to ensure space for landscape screening.
7. Prepare landscape plans that meet the requirements of the Landscape Development Guidelines and provide for the efficient use of water. Plants shall be selected and planted based upon their adaptability to the climate and topographical conditions of the project site.
8. Select drought-tolerant plants such as colorful shrubs and groundcovers, ornamental grasses and succulents, evergreen and deciduous trees, and species native to Southern California or naturalized to the local arid climate.
9. Incorporate water conservation features in landscape and irrigation plans.
10. Place a landscape planter island every ten parking spaces within parking lots. Planter islands shall be at least five feet in width exclusive of curbs and the same length as the abutting parking space. Planter islands shall include at least one tree, appropriate shrubs, and groundcover. Parking areas located behind screen walls shall not be subject to this provision.
11. Provide a minimum dimension of five feet exclusive of curbs for all landscape areas, except for vine pockets.

12. Space living plant materials less than or equal to the mature plant diameter. Non-living ornamental landscape materials may comprise a maximum of five percent of the landscape area requirements and shall be permeable.

5.3.1 Streetscapes

Streetscape design creates an aesthetically pleasing view for pedestrians, cyclists, and motorists, screens parking and loading areas from the public right-of-way, and integrates the development into the surrounding community. The following streetscape designs are conceptual only; final grading, plantings, and tree locations shall be determined on a project-by-project basis.

5.3.1.1 Grove Avenue Streetscape

Grove Avenue features a 28-foot wide landscaped median, 7-foot wide parkways, 5' wide sidewalk, within a 40' neighborhood edge and a 20-foot wide landscape setbacks. An 8' multipurpose trail is located on the east side. (Figure 5.1). Tree species along Grove Avenue include *Platanus acerifolia* 'Bloodgood' in the parkway, alternating Cercis occidentalis and Platanus acerfolia 'Bloodgood' groups behind the sidewalk and Pinus eldarica and Cercis occientalis in the median.

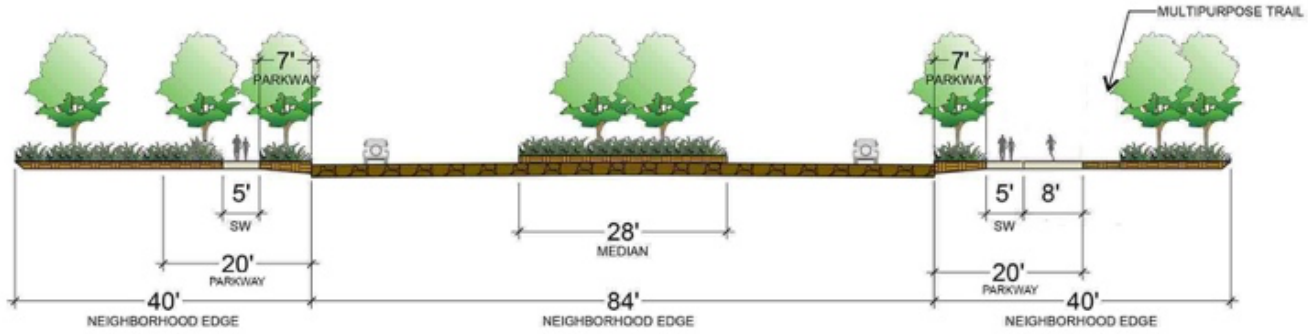

FIGURE 5.1: **GROVE AVENUE CONCEPTUAL STREETSCAPE**

5.3.1.2 Eucalyptus Avenue Streetscape

The typical Eucalyptus Avenue section will feature a 12-foot wide parkway and 23-foot wide landscape setback to create a 35-foot Neighborhood Edge. The parkway will include a 7-foot wide curb-adjacent landscape strip generally planted with trees and groundcover and a five-foot wide sidewalk. An eight-foot

wide multi-purpose trail is located on the north side. A five-foot wide on-street Class II bike lane is located on the south side. Tree species along Eucalyptus Avenue will include Pistache trees in the parkway and behind the sidewalk alternating with groups of Podocarpus gracilior trees. The Neighborhood Edge creates a buffer along the Specific Plan boundary as well as a visual statement (Figure 5.2).

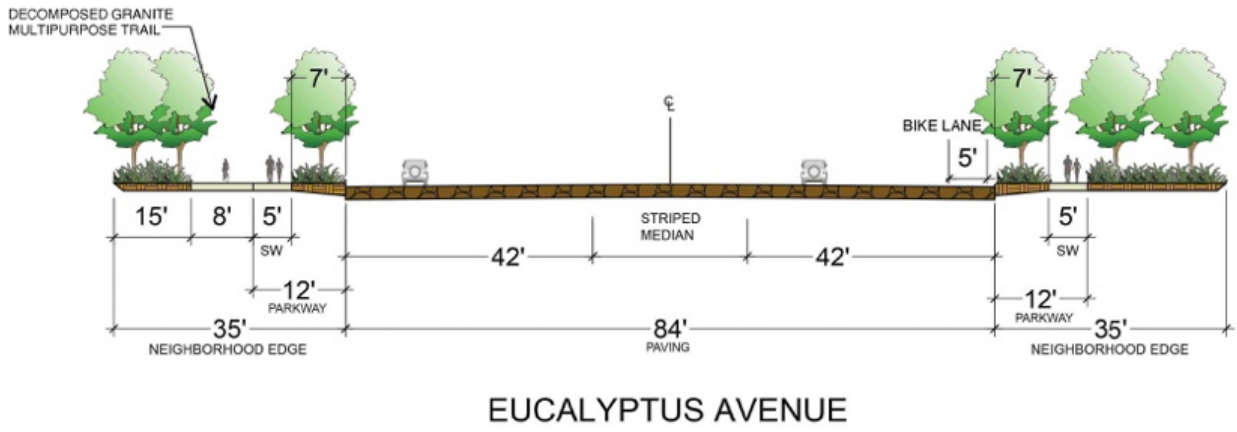

FIGURE 5.2: **EUCALYPTUS AVENUE CONCEPTUAL STREETSCAPE**

5.3.1.3 Merrill Avenue Streetscape

The typical Merrill Avenue section on the north side of the street will feature an eight-foot wide on-street Class II bike lane, 12-foot wide parkway, eight-foot wide multi-purpose trail and 23-foot wide landscape setback. The parkway will include a seven-foot wide curb-adjacent landscape strip and a five-foot wide sidewalk. Tree species along Merrill Avenue will include Quercus agrifolia in the parkway and behind the sidewalk alternating with Cercis canadensis 'Forest Pansy.' The parkway and landscape setback will combine to form the 35-foot Neighborhood Edge buffer

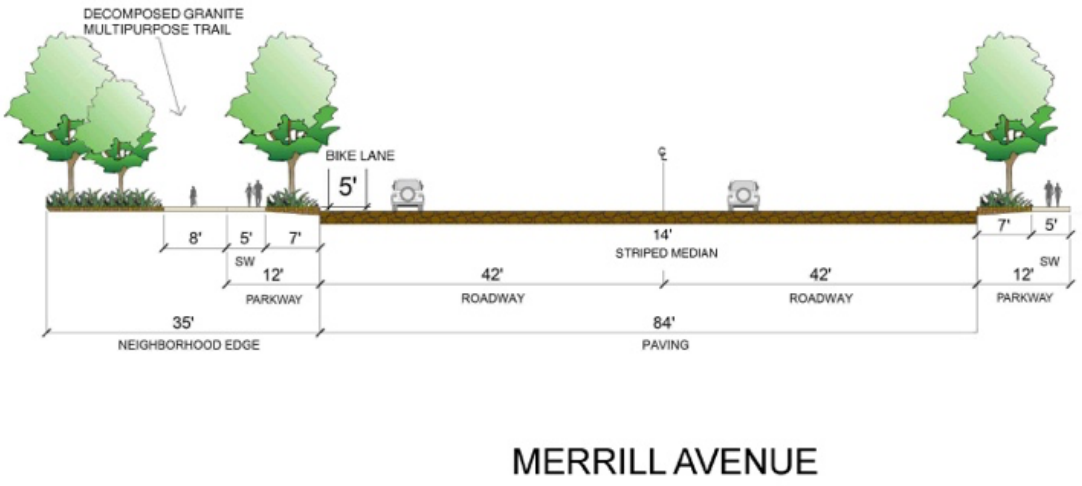

FIGURE 5.3: **MERRILL AVENUE CONCEPTUAL STREETSCAPE**

*5.3.1.4 **Bon View Avenue Streetscape***

The Bon View Avenue section features 9-foot wide parkways with an 4-foot wide curb-adjacent landscape strip planted with trees and groundcover and a five-foot wide sidewalk (Figure 5.4). Tree species along Bon View Avenue include Chinese Pistache and Coast Live Oak.

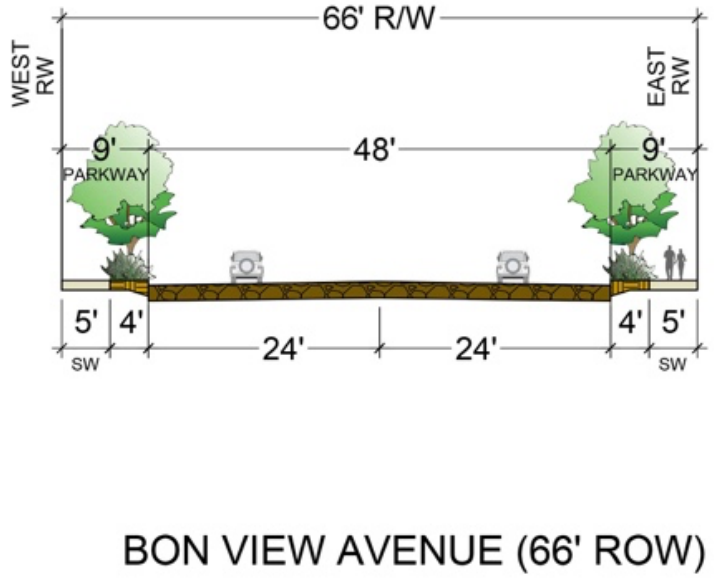

FIGURE 5.4: **BON VIEW AVENUE CONCEPTUAL STREETSCAPE**

5.3.1.5 Campus Avenue Streetscape

The Campus Avenue section features a 15-foot wide landscape setback to create a 35-foot Neighborhood Edge (Figure 5.5). The east side of Campus Avenue includes a 12-foot parkway with a 5’ sidewalk and an 8’ multipurpose trail as part of the 35-foot Neighborhood Edge, while the western side includes a five-foot wide Class II on-street bike lane at the edge of the street. The Neighborhood Edges include a 7-foot wide curb-adjacent landscape strip that will be planted with trees and groundcover. Tree species along Campus Avenue include Drake Elm, Tulip Trees, and African Sumacs.

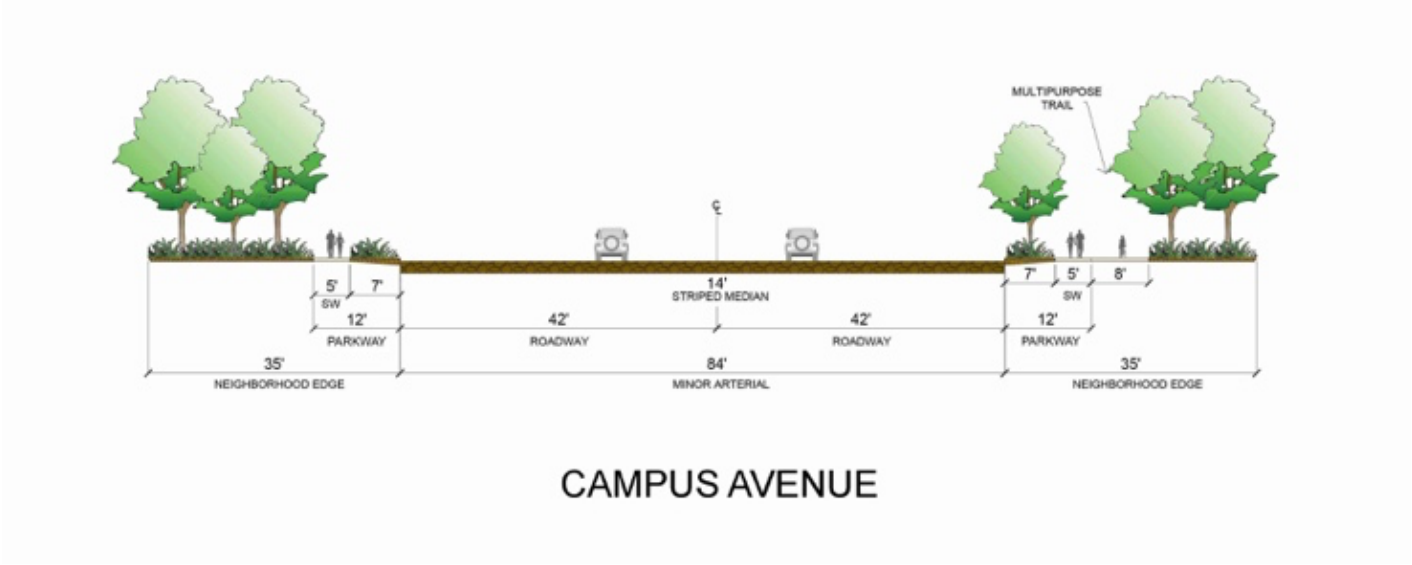

FIGURE 5.5: **CAMPUS AVENUE CONCEPTUAL STREETSCAPE**

5.3.2 Project Entries

The Specific Plan area includes multiple shared vehicular driveways accessible from Grove, Eucalyptus, Merrill, Campus and Bon View Avenues. Figure 5.6 presents a typical conceptual entry design featuring enhanced paving; a landscaped setback with flowering accent trees, canopy trees, and drought-tolerant landscaping; a multipurpose trail; sidewalk; and landscaped parkway with street trees.

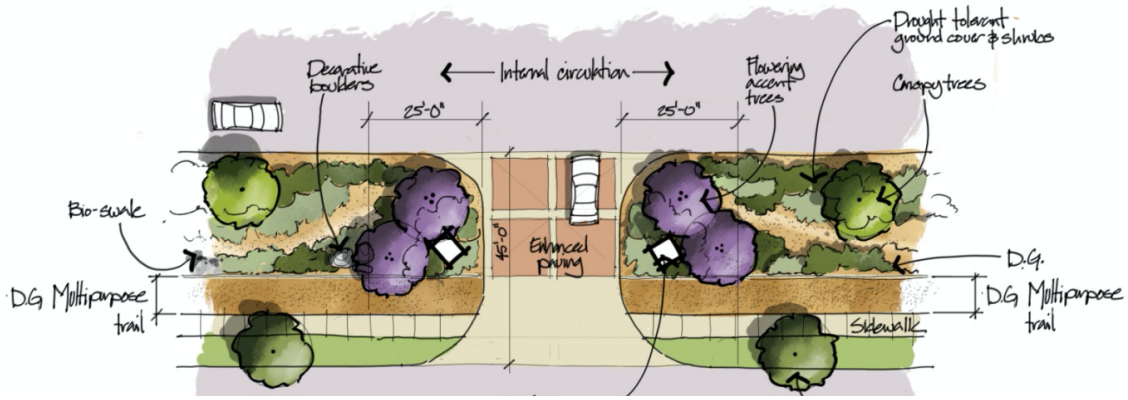

FIGURE 5.6: **CONCEPTUAL VEHICULAR ENTRY**

5.3.3 Plant Palette

The Plant Palette shown in Table 5.1 establishes a base palette for the Specific Plan area and includes a variety of groundcovers, shrubs, ornamental grasses, and evergreen and deciduous trees. The selection complements the design theme of the Specific Plan area and features water-efficient, drought-tolerant species native or adapted to the region. Similar plant materials may be substituted for the species listed in Table 5.1 if the alternative plants are appropriate to the climate and enhance the thematic setting.

Table 5.1: Plant Palette

Botanical Name	Common Name	Use
Chilopsis linearis	Desert Willow	Tree
Chitalpa tashkentensis	Chitalpa	Tree
Cinnamomum camphora	Camphor Tree	Tree
Cupressus sempervirens	Italian Cypress	Tree
Heteromeles arbutifolia	Toyon	Tree
Juniperus s. 'Skyrocket'	Skyrocket Juniper	Tree
Koelreuteria bipinnata	Chinese Flame Tree	Tree
Lagerstroemia i. 'Muskogee'	Crape Myrtle	Tree

Table 5.1: Plant Palette

Botanical Name	Common Name	Use
Magnolia g. 'Samuel Sommer'	Magnolia	Tree
Magnolia g. 'Little Gem'	Magnolia	Tree
Olea europaea	Olive	Tree
Pinus canariensis	Canary Island Pine	Tree
Pinus eldarica	Afghan Pine	Tree
Pistacia chinensis	Chinese Pistache	Tree
Platanus acerifolia	London Plane	Tree
Platanus racemosa	California Sycamore	Tree
Quercus agrifolia	Coast Live Oak	Tree
Schinus molle	California Pepper	Tree
Tristania conferta	Brisbane Box	Tree
Washingtonia filifera	California Fan Palm	Tree
Phoenix dactylifera	Date Palm	Tree
Acca sellowiana	Pineapple Guava	Shrub
Buxus j. 'Green Beauty'	Japanese Boxwood	Hedge
Callistemon 'Little John'	Dwarf Bottle Brush	Shrub
Carissa macrocarpa 'Tuttle'	Natal Plum	Shrub
Cistus 'Sunset Pink'	Sunset Pink Rockrose	Shrub
Dianella 'Little Rev'	Dwarf Dianella	Shrub
Dianella tasmanica	Dianella	Shrub
Dodonaea viscosa 'Purpurea'	Hopseed Bush	Shrub
Eleagnus pungens	Silverberry	Shrub
Leucophyllum f. 'Green Cloud'	Texas Ranger	Shrub
Ligustrum j. texanum	Texas Privet	Shrub
Pittosporum tobira 'Variegata'	Variegated Mock Orange	Hedge
Pittosporum t. 'Wheeleri'	Wheeler's Dwarf	Shrub
Rhaphiolepis i. 'Clara'	Indian Hawthorn	Hedge
Rhaphiolepis i. 'Springtime'	Indian Hawthorn	Hedge
Rhamnus californica	Coffeeberry	Shrub
Rhamnus c. 'Mound San Bruno'	Dwarf Coffeeberry	Shrub
Rosmarinus o. 'Tuscan Blue'	Rosemary	Shrub
Salvia c. 'Allen Chickering'	Allen Chickering Sage	Shrub
Salvia greggii	Autumn Sage	Shrub
Salvia leucantha	Mexican Sage	Shrub
Westringia fruticosa	Coast Rosemary	Shrub
Xylosma congestum	Shiny Xylosma	Hedge
Agave 'Blue Flame'	Blue Flame Agave	Accent
Aloe maculata	Soap Aloe	Accent
Aloe petricola	Stone Aloe	Accent
Aloe polyphylla	Spiral Aloe	Accent
Aloe striata	Coral Aloe	Accent
Echeveria 'Ruffles'	Ruffles Echeveria	Accent
Hesperaloe parviflora	Red Yucca	Accent
Acacia redolens 'Low Boy'	Dwarf Acacia	Groundcover

Table 5.1: Plant Palette

Botanical Name	Common Name	Use
Baccharis p. 'Pigeon Point'	Dwarf Coyote Bush	Groundcover
Baccharis p. 'Centennial'	Coyote Bush	Groundcover
Carex pansa	California Meadow Sedge	Grass
Carex tumulicola	Foothill Sedge	Grass
Festuca mairei	Altas Fescue	Grass
Festuca o. 'Glauca'	Blue Fescue	Grass
Lonicera j. 'Halliana'	Hall's Honeysuckle	Groundcover
Muhlenbergia capillaris	Pink Muhly	Grass
Myoporum parvifolium	Myoporum	Groundcover
Rosa 'Flower Carpet' - Red	Red Flower Carpet Rose	Groundcover
Rosmarinus o. 'Huntington Carpet'	Prostrate Rosemary	Groundcover
Salvia 'Bee's Bliss'	Bee's Bliss Sage	Groundcover
Senecio mandraliscae	Blue Fingers	Groundcover
Sesleria autumnali	Moor Grass	Grass
Trachelopspermum jasminiode	Star Jasmine	Groundcover
Distictus buccinatoria	Blood-Red Trumpet Vine	Vine

5.4 Walls and Fences

Walls and fences are important design features intended to both complement building and landscape architecture and provide functional elements. Any proposed entry gates shall be reviewed by the City of Ontario Traffic and Transportation Division prior to installation, and shall be permitted only if approved.

Key provisions include:

1. Provide attractive, durable, and complementary wall and fencing materials consistent with the building design.
2. Offset and architecturally treat long expanses of wall surfaces every 100 feet with material changes, pilasters and posts, staggered walls, or landscape treatments to prevent visual monotony.
3. Soften the appearance of fencing with plants that reach the height of the wall or fence at maturity.
4. Construct sliding gates visible from a public street with tubular steel, vertical steel pickets, or high-density perforated metal screening painted to match or complement adjacent walls. Interior gates not visible to public view may be galvanized steel or chain link.
5. Prohibit chain link fencing visible from public street rights of way.

5.5 Buffering and Screening

To alleviate the unsightly appearance of loading and service areas, buffering and screening design features shall be used to enhance the overall development. Entry gates shall be reviewed and approved by the City of Ontario Traffic and Transportation Division prior to installation.

5.5.1 Parking Lots

1. Buffer parking lots adjacent to and visible from public streets using a combination of architectural wing walls, buildings, decorative screen walls, evergreen hedges, and landscape buffers.
2. Use plants for screening that are a minimum of three feet tall at the time of installation.

5.5.2 Loading and Service Areas (Truck Courts)

1. Screen loading docks and truck parking areas visible from Grove Avenue, Eucalyptus Avenue, Merrill Avenue and Bon View Avenue and Campus Avenue. Screening may include portions of buildings, landscaping, evergreen hedges, and/or decorative walls.
2. Incorporate gated/screened entrances to loading areas into the overall architectural design of the development.
3. Design walls and fencing to be a minimum of eight feet high and a maximum of 14 feet high, as measured from finished grade, to screen truck courts and hide views of the top of loading bays or trailers.
4. Utilize buildings, architectural wing walls, and/or landscaping to screen service areas.
5. Screen ground- and roof-mounted mechanical equipment from public view. Ground-mounted equipment shall be screened with decorative walls or landscaping. Building architecture shall be designed to screen roof-mounted equipment.
6. Ensure refuse containers are easily accessible by service vehicles yet screened from public view within the building's façade or within a walled enclosure.
7. Obtain a use permit for outdoor storage, which shall be limited to predefined areas. Storage areas shall be screened from public view by decorative walls or landscaping with a minimum height of eight feet and a maximum height of 14 feet. The height of outdoor storage shall not-exceed the height of screening.

Loading and Service Area Example

5.6 Lighting

Site lighting provides illumination for operations, safety, security, and ambiance in parking lots, loading dock areas, pedestrian walkways, building entrances, signage, and architectural and landscape features.

Key provisions include:

1. Choose lighting fixtures that complement the building architecture and promote consistency throughout the Planning Areas.
2. Install ground- or low-mounted fixtures to provide safety and convenience along pedestrian walkways, entrances, activity areas, steps, ramps, and special features.
3. Allow building-mounted accent lighting for general illumination provided there is no light spill or distraction onto roadways or adjacent properties. Plain shoebox or unshielded wall packs are not permitted.
4. Direct exterior lighting fixtures downward to avoid unnecessary light spill and glare.
5. Limit pole-mounted, building-mounted, or tree-mounted lighting fixtures to no more than 30 feet high to minimize light spill and glare.
6. Shield and direct pole-mounted lights away from public streets.
7. Ensure exterior lighting is consistent with the Chino Airport Land Use Compatibility Plan.
8. Design parking lot lighting plans to avoid placing fixtures in required tree locations.

5.7 Signage

Approval of a comprehensive sign program shall be required for development within the Specific Plan area. A sign program facilitates integration of signs with the overall site and building design to create a unified visual statement and provide for flexible application of sign regulations in the design and display of multiple signs.

Key provisions include:

1. Install entry monument signage to identify the South Ontario Logistics Center. Entry monuments shall be designed in accordance with City of Ontario Traffic and Transportation Guidelines for monument placement.
2. Employ signage to identify a center and tenants within a center, direct vehicular traffic, and provide on-site way-finding for pedestrians.
3. Employ signage within industrial sites to give direction to loading and receiving, visitor parking, and other special uses.
4. Provide a unifying sign theme in developments with multiple users.
5. Coordinate signage with the building design, materials, colors, size, and placement.
6. Design signage with backlit or internally illuminated individual channel letters. Can-type box signs with translucent backlit panels are discouraged.
7. Avoid covering significant architectural elements with signage.
8. Position flush-mounted signs with respect to architectural features and align with signs on other buildings to maintain a pattern.
9. Place street address signs perpendicular to approaching vehicular traffic.
10. Ensure signage located within a landscape planter is not blocked or damaged by plant materials.
11. Conserve energy by utilizing an automatic illumination shut-off mechanism when businesses are closed.
12. Construct signs from high-quality materials and avoid exposed wiring, ballasts, conduits, fasteners, raceways, or similar hardware.

Signage Examples

5.8 Sustainable Design Strategies

South Ontario Logistics Center is committed to sustainable design strategies that integrate principles of environmental stewardship into the design and construction process. Appropriate strategies shall be determined for each project within the Specific Plan area.

5.8.1 Sustainable Construction & Technology Concepts

1. Design and construct energy-efficient buildings to reduce air, water, and land pollution and environmental impacts from energy production and consumption.
2. Employ passive design including skylights, building orientation, landscaping, and strategic colors to improve building energy performance.
3. Reduce the heat island effect by providing shade structures and trees that produce large canopies. In addition, choose roof and paving materials that possess a high level of solar reflectivity.
4. Use recycled and other environmentally-friendly building materials wherever possible.
5. Incorporate skylights into at least two percent of warehouse/distribution building roof area to provide natural light and reduce electric lighting demand.
6. Use energy-efficient LED (or similar) products.
7. Provide interior or exterior bicycle storage consistent with the California Green Building Standards Code.
8. Use drought-tolerant landscaping with drip irrigation and include plantings such as trees, shrubs, groundcovers and/or vines. Optional amenities include benches, trellises, thematic fencing, and decorative walkways.
9. Employ high-performance dual-pane window glazing in office storefronts.

5.8.2 Water Quality

1. Design landscape areas with retention/infiltration swales and basins, or employ bio-treatment when infiltration is infeasible, as required by the San Bernardino County MS4 Permit and Water Quality Management Plan.
2. Select native and drought-tolerant plants to reduce water demand.
3. Integrate permeable pavement and perforated curbs throughout the project area as feasible to allow stormwater to enter planter areas, assist with filtration, and control runoff.
4. Use captured runoff to augment irrigation systems whenever possible.
5. Employ irrigation systems that respond to changing weather conditions, irrigate by hydro zone, and use micro-irrigation techniques.

6. Use recycled water to irrigate landscape areas and for other appropriate uses. The use of recycled water for certain purposes is required by the City of Ontario Recycled Water Master Plan.

Sustainable Design Examples

6.0 IMPLEMENTATION

This chapter summarizes the development process for implementation of the South Ontario Logistics Center Specific Plan and provides for the orderly development of the Specific Plan area.

6.1 Applicability

The provisions, standards, and guidelines contained within this Specific Plan provide the regulations for land use and development within South Ontario Logistics Center. The Specific Plan supersedes the development standards and regulations of the Ontario Development Code unless stated otherwise in this document. Whenever the provisions and development standards of the Specific Plan conflict with those of the Ontario Development Code, the Specific Plan shall take precedence. Where the Specific Plan is silent, the Ontario Development Code shall apply.

Definition of Terms

The terms used within the Specific Plan shall mean the same as defined in the Ontario Development Code, unless otherwise noted.

6.2 Severability

The Specific Plan serves as the implementation tool for the City's Policy Plan (General Plan). In the event that any provision of this Specific Plan or its application to any person or circumstance is held to be invalid or unconstitutional by any court of competent jurisdiction, such portion shall be deemed separate, distinct and independent, and shall not affect the validity of the remaining provisions of this Specific Plan or applications thereof, which can be implemented without the invalid provision or application.

6.3 Interpretation

If an issue, condition, or situation occurs that is not sufficiently covered or provided for in this Specific Plan, those that are applicable for the most similar issue, condition, or situation shall be used. Unless otherwise provided, any ambiguity concerning the content or application of the Specific Plan shall be resolved by the City of Ontario Planning Director in a manner consistent with the goals, policies, objectives, and intent established in the Specific Plan.

6.4 Consistency with Other Plans and Regulations

This sub-section discusses consistency of the Specific Plan with The Ontario Plan, Airport Land Use Compatibility Plans, the California Building Code, and CEQA.

6.4.1 Consistency with The Ontario Plan

No land use, activity, or facility shall be permitted that is inconsistent with the objectives, policies, general land uses, and programs of The Ontario Plan, as amended.

The South Ontario Logistics Center entitlement applications include a General Plan Amendment to change the site's land use designations from Low Medium Density Residential to Business Park and Industrial - General to be consistent with this Specific Plan.

6.4.2 Consistency with Airport Land Use Compatibility Plans

Projects located within the Specific Plan area are subject to the restrictions and provisions of the Airport Land Use Compatibility Plans prepared for Ontario International Airport and Chino Airport.

6.4.3 Consistency with California Building Code

Projects located within the Specific Plan area must comply with the State of California Building Code as adopted and implemented by the City of Ontario.

6.4.4 Consistency with CEQA

The City of Ontario is defined as the lead agency under the California Environmental Quality Act (CEQA) based upon its authority to approve this Specific Plan. Concurrent with approval of this Specific Plan, the City Council will be required to certify the associated Environmental Impact Report (EIR), including a Mitigation Monitoring and Reporting Program to ensure that all approved EIR mitigation measures are implemented. The Planning Director shall be responsible for confirming that mitigation measures have been implemented through each project's approved plans.

6.5 Specific Plan Revisions

It is recognized that modifications to the text or exhibits of this Specific Plan may be warranted in the future to accommodate unforeseen conditions or events. Revisions shall be processed in a manner prescribed by the City of Ontario Planning Department pursuant to the provisions in this section.

6.5.1 Minor Modifications to the Specific Plan

Minor modifications to the Specific Plan shall be processed administratively without the submission of a formal Specific Plan Amendment application and shall not require a public hearing or review by the Planning Commission. The Planning Director shall have the authority to review and make a determination of approval, approval with conditions, or denial of a request for minor modification to the Specific Plan. The Planning Director may, at his/her discretion, refer any such request to the Planning Commission or City Council.

Minor modifications are defined as:

1. Expansions or reductions to a Planning Area boundary or acreage, provided that the total acreage within each affected Planning Area is not modified by more than 20 percent.
2. An increase in maximum building area for single- and multi-tenant buildings of up to 20 percent, provided that the maximum square footage for the Planning Area established by this Specific Plan is not exceeded.
3. A modification of up to 20 percent of a project's required minimum lot area, minimum lot dimensions, or setbacks if compatible with the surrounding land uses and consistent with the overall design character of the South Ontario Logistics Center.
4. Additions, deletions, or modifications to Table 4.1, Allowable Uses, which lists the permitted and conditionally permitted uses in the Specific Plan area, provided the Planning Director determines the changes to be consistent with the objectives and intent of the Specific Plan.
5. Minor modification of conceptual design criteria for architectural features and materials, landscape treatments, lighting, signage, and sustainable design strategies.
6. Revisions to roadway alignment when the change results in centerline shift of less than 250 feet.
7. Revisions to infrastructure facility sizing and precise location for dry utilities, water, sewer, and storm drainage improvements subject to approval of the City Engineer.
8. Changes to the Phasing Plan, provided infrastructure is available to serve the phase as determined by the City Engineer.
9. Revisions to exhibits in the Specific Plan that do not substantially change its intent or character.
10. Modifications of a similar nature to those listed above, which are deemed minor by the Planning Director and conform to the purpose and intent of this Specific Plan and The Ontario Plan.

6.5.2 Specific Plan Amendments

Proposed changes to this Specific Plan that do not meet the criteria for a Minor Modification shall be subject to a formal Specific Plan Amendment application process pursuant to Section 4.01.035 of the Ontario Development Code and California Government Code Section 65450, et seq.

If the proposed amendment requires supplemental environmental analysis pursuant to CEQA, the applicant shall adhere to the City's adopted procedures and CEQA Guidelines.

6.6 Subdivision Maps

Development within the Specific Plan area may require the processing of tentative and final tract or parcel maps and/or lot line adjustments or mergers. Subdivision maps and lot changes shall be reviewed and approved pursuant to Section 4.02.085 of the Ontario Development Code and other applicable City codes

and regulations, California Government Code Section 66410 et seq. (Subdivision Map Act), as well as the provisions of this Specific Plan.

6.7 Development and Land Use Review Procedures

Review procedures for development and land use within the Specific Plan area shall be as provided in this Specific Plan and in accordance with the Ontario Development Code.

6.7.1 Development Plan Review

Development proposed within the Specific Plan area shall be subject to Development Plan review pursuant to Section 4.02.025 of the Ontario Development Code. The review is intended to ensure compliance with the provisions of this Specific Plan, protect the integrity and character of the physical composition of the City, and encourage high quality development.

6.7.2 Conditional Use Permit

A Conditional Use Permit shall be required for uses deemed "conditionally permitted" in Table 4.1 (Allowable Uses). Applications for a Conditional Use Permit shall be processed pursuant to Section 4.02.015 of the Ontario Development Code.

6.7.3 Administrative Use Permit

An Administrative Use Permit shall be required for uses deemed "administratively permitted" in Table 4.1 (Allowable Uses). Applications for an Administrative Use Permit shall be processed pursuant to Section 4.03.015 of the Ontario Development Code.

6.7.4 Appeals

Appeals of decisions of the Development Advisory Board, Zoning Administrator, Planning Director, or the Planning Commission regarding implementation of this Specific Plan may be made by the applicant or other aggrieved party pursuant to Division 2.04 of the Ontario Development Code.

6.8 Development Agreement

Approval of a statutory development agreement authorized pursuant to California Government Code Section 65864 et seq. shall be required by this Specific Plan. The Development Agreement shall include, but not be limited to, methods for financing, acquisition, and construction of necessary infrastructure. The Development Agreement shall be fully executed prior to recordation of the first Final Map.

6.9 Specific Plan Phasing

Implementation of this Specific Plan is anticipated to occur in two phases, as discussed in Chapter 3.10, Phasing Plan:

Phase 1: Phase 1 consists of the construction of Buildings 1 through 8 as numbered in the Conceptual Site Plan. This phase may be developed in several sub-phases in response to market demands and according to the logical and orderly completion of infrastructure improvements.

Phase 2: Phase 2 consists of the development of PAs 3, 4, & 5.

These phases may be developed as sub-phases and may occur either sequentially or concurrently with one another.

All the Specific Plan required infrastructure can be found in Section 3.3 (Figure 3.7 and 3.7a) for Potable Water, Section 3.4 (Figure 3.9) for Recycled Water, Section 3.5 (Figure 3.11) for the Sewer Plan, Section 3.7 (Figure 3.13) for the Fiber Optic Plan, and Section 3.8 (Figure 3.14) for the Storm Drain Plan. Phasing will be determined per separate Development Agreement.

6.9.1 Phasing Objectives

Development phasing shall meet the following objectives:

1. The orderly build-out of the project based upon market and economic conditions;
2. The provision of adequate parking, infrastructure, and public facilities concurrent with the development of each phase; and
3. The protection of the public health, safety, and welfare.

6.9.2 Findings for Modification of the Phasing Plan

The Planning Director shall have the authority to approve modification of the Phasing Plan, subject to the following findings:

1. The modification is consistent with the Policy Plan (General Plan);
2. The modification will not adversely affect the implementation of the Specific Plan;
3. The modification will not be detrimental to public health, safety, and general welfare; and
4. The modification will not delay the construction of infrastructure improvements necessary to serve the development.

6.10 Financing of Public Improvements

The financing of the construction, operation, and maintenance of public infrastructure improvements, facilities, and services within the Specific Plan area shall be provided through a combination of mechanisms. Final determination of the scope of improvements, maintenance responsibilities, and funding sources shall be specified in the approved Development Agreement, executed prior to recordation of the first Final Map.

Financing options may include, but are not limited to, the following:

1. Private capital investment by the project developer, the property owner(s), or a Property Owners Association.
2. Private capital investment by a consortium of property owners and/or developers of the project and/or surrounding area.
3. Community Facilities District (CFD) established pursuant to the Mello-Roos Community Facilities District Act of 1982, or other special district, to provide funding for the construction of public facilities or the provision of public services. City Council approval shall be a prerequisite for use of special district financing mechanisms.
4. Development Impact Fee (DIF) credits to be applied for infrastructure completed by the project developer.
5. Enhanced Infrastructure Financing District to fund infrastructure development through tax increment financing pursuant to Senate Bill 628.
6. Community Revitalization and Investment Authorities (CRIA) to fund infrastructure development through tax increment financing pursuant to Assembly Bill 2.

6.11 Maintenance Plan

Final determination of maintenance responsibilities for the public and private improvements constructed in association with this Specific Plan shall be specified in the approved Development Agreement, which shall be executed prior to recordation of the first Final Map. However, it is anticipated that maintenance shall be generally shared by three entities as described below and outlined in Table 6.1, Maintenance Responsibilities.

6.11.1 City of Ontario, Community Facilities District & Other Special District

The establishment of a community facilities district, landscape and lighting district, or other special district to fund the maintenance of public facilities shall be at the City's discretion. It is anticipated that public maintenance shall include the following:

1. Right-of-way for public streets within the Specific Plan area (Grove Avenue, Eucalyptus Avenue, Merrill Avenue, Campus Ave and Bon View Avenue) shall be dedicated to the City of Ontario per

the provisions of this Specific Plan (Chapter 3, Development Plan) and as approved by the City Engineer.

2. Landscape improvements and public streetlights within the public right-of-way shall be maintained through a landscape and lighting district or other special maintenance district established by the City.
3. The City shall maintain off-site infrastructure improvements, including water, sewer, and storm drainage facilities.
4. The City shall maintain NPDES facilities located within the curb-to-curb area of public streets. Operation and maintenance requirements for NPDES stormwater runoff source control and treatment control Best Management Practices shall be identified in the approved Water Quality Management Plan for the project.

6.11.2 Property Owners Association

A Property Owners Association (POA) may be established for the maintenance of common areas, including such improvements as on-site landscape areas and parking and drive aisles within South Ontario Logistics Center. It is anticipated that improvements maintained by the POA would include the following:

1. Driveways;
2. On-site open spaces, landscape areas, common areas, parking lots, and walkways;
3. Landscaping within setback/landscape buffer areas along Campus Avenue;
4. NPDES facilities within landscape setbacks and on-site common areas;
5. Property identification signage and architectural elements located within the landscape buffer;
6. Fencing and walls, including graffiti removal; and
7. Water, sewer, recycled water facilities and storm drainage facilities located on-site and constructed by the developer are considered privately owned and to be maintained by the property owners or the Property Owner Associations. The Property Owners Association(s) shall maintain permanent on-site water quality basins, trenches, swales and biotreatment filters required by the San Bernardino County MS4 Permit and Water Quality Management Plan.

Table 6.1: Maintenance Responsibilities

Area of Responsibility	City or Special District	Property Owners or POA	Utility

Behind the curb improvements - landscaping within the public right-of-way (parkways) and sidewalks and neighborhood edge	☐		
Other Improvements			
Traffic Signals and Traffic Control Signs on public streets	☐		
Street lights in the public right-of-way	☐		
Drive aisles		☐	
On-site parking areas		☐	
Common open space		☐	
Landscaping within setback/landscape buffer areas		☐	
Monument signage		☐	
Walls and fences		☐	
Stormwater drainage/water quality control facilities within the curb-to-curb area of public streets and Merrill and Bon View public storm drain proposed behind the curb	☐		
Stormwater drainage/water quality control facilities behind the curb		☐	
Water, recycled water, and sewer infrastructure in the public right-of-way	☐		
Dry utilities: electricity, natural gas, communication systems			☐
City of Ontario Fiber Optic Conduit (in Ontario Ranch Streets)	☐		

6.12 Additional Entitlement Requirements

Currently, there are no existing City utilities, nor any improvement plans for City utilities in the vicinity of the Specific Plan area. Several miles of new infrastructure are required to provide City utility services to the Specific Plan area. In order to ensure orderly expansion of the City Utility Systems and other City infrastructure, the following additional entitlement requirements are imposed upon all subdivision maps and developments within the Specific Plan area.

6.12.1 Conceptual Design Report

Prior to approval of any entitlement applications (subdivision maps, Development Plan Reviews, etc.), a conceptual design report shall be prepared and submitted to the Development Agency Engineering Department and the Utilities Engineering Department for review and approval of the extent of all public improvements required for the project. The study shall identify existing and future rights-of-ways (ROW) and infrastructure improvements and establish all vertical and horizontal alignments for each utility. The report shall include cross-sections, profiles, and any supporting details needed to demonstrate that utilities can be adequately accommodated in the public ROW. The study shall account for all utility conflicts, right-of-way variations, existing obstructions, and the timing of utility installation. Utilities cannot be located along an alignment that conflicts with existing conditions (e.g. electrical poles, private property, etc.) unless the applicant accepts the responsibility of modifying the existing conditions (e.g. undergrounding, relocation, ROW acquisition, etc.).

6.12.2 Preliminary Design Report

As a condition of entitlement (subdivision map, Development Plan Review, etc.) within the Specific Plan area and prior to submittal of Infrastructure Improvements Plans, a Preliminary Design Report (PDR) for all public infrastructure shall be submitted and approved by the Development Agency Engineering Department and the Utilities Engineering Department. The PDR shall include the following:

Conceptual Design Compliance: A discussion modifying or confirming the conceptual design established in the project's Conceptual Design Report shall be included. The study shall confirm all rights-of-ways (ROW), infrastructure improvements, and vertical and horizontal alignments for each utility.

Street Cross Sections and Profiles: Street cross sections and profiles shall be provided for each public street, private street and Public Utility Easement (PUE) containing a public utility and at any points along the alignments where the ROW varies. The cross sections shall show the location and size of each utility and shall annotate the property/ROW lines, the type of finished surface material, the distance of each utility from centerline, the depth from finished surface to top of pipe, and the distance between utilities (outside wall to outside wall).

Constructability Review: The report shall include a discussion of the constructability issues along the proposed alignment and identify the recommended construction methods that may be utilized. The study shall perform field investigation (field survey and potholing) in order to identify potential utility conflicts, right-of-way variations, existing obstructions, and constructability issues created by the timing of utility installation.

Supporting Details: The PDR shall include any supporting details needed to demonstrate that utilities can be adequately accommodated in the public ROW, including the placement of large appurtenances, clearance from existing obstructions, etc.

30% Design Drawings: The PDR findings shall be incorporated into a 30% design plan set and included in the PDR.

Western Trunk Sewershed Scope: In order to qualify for Development Impact Fees (DIF) and to assure that the Western Trunk Sewer (WTS) is designed to serve its entire Sewer Master Plan Tributary Area, the PDR shall include the WTS and all the Master Plan Trunk Sewers connecting to the WTS. The PDR shall include: the WTS from the Kimball Interceptor to the Whispering Lakes Pump Station at Riverside Drive and Carpenter Avenue; the Euclid Trunk Sewer from the WTS in Merrill Avenue to Chino Avenue; the Bon View Trunk Sewer from the WTS in Merrill Avenue to Chino Avenue; the Grove Trunk Sewer from the WTS in Merrill Avenue to Chino Avenue; and the Walker Trunk Sewer from the WTS in Schaeffer Avenue to Chino Avenue.

Horizontal and Vertical Alignment Studies: Horizontal and vertical alignment studies shall demonstrate the entire sewershed and subsewersheds can be sewered.

Sewer Sizing Hydraulic Calculations: Sewer sizing hydraulic calculations shall demonstrate the proposed trunk sewer designs can accommodate the Master Plan Flows to meet the Master Plan Design Criteria.

6.12.3 Utilities Systems Map (USM)

Prior to approval of any entitlement application (subdivision maps, Development Plan Reviews, etc.), as part of the entitlement application a Conceptual Utilities Systems Map (USM) shall be prepared and submitted to the Development Agency Engineering Department and the Utilities Engineering Department for review and approval. The USM is a summary plan sheet exhibit that shows all the public offsite infrastructure requirements and demands for the Development Project (and/or Subdivision), the onsite private infrastructure improvements, and the interaction between the public and private utilities systems. As a Condition of Approval for the Development Project (and/or Subdivision), the Conceptual Utilities Systems Map shall be updated into a Final Utilities Systems Map to reflect the changes that occur between entitlement and Final Plan and Permit Approval. Reference the Ontario Municipal Utilities Company Utilities Engineering Department's Utilities Systems Map (USM) Requirements for details.

6.12.4 Integrated Waste Management Report (IWMR) and Solid Waste Handling Plan (SWHP)

Prior to approval of any entitlement application (subdivision maps, Development Plan Reviews, etc.), as part of the entitlement application a Conceptual Integrated Waste Management Report (IWMR) and a Conceptual Solid Waste Handling Plan (SWHP) shall be prepared and submitted to the Development Agency Engineering Department and the Utilities Engineering Department for review and approval. The SWHP summary plan sheet exhibit that demonstrates the project site's design conformance with the Integrated Waste Department's requirements, including the requirements for Sizing of Storage, Location of Collection Areas, Accessibility for Collection Vehicles, and Collection of Sorted/Diverted Waste Types. The IWMR is a report that presents project specific information that is not able to be demonstrated within the Solid Waste Handling Plan, including discussions on: project solid waste operations; project compliance with all applicable laws, statues, policies, and requirements; and, conformance with all the Integrated Waste Department's requirements, including the requirements for Sizing of Storage, Location of Collection Areas, Accessibility for Collection Vehicles, and Collection of Sorted/Diverted Waste Types. As a Condition of Approval for the Development Project (and/or Subdivision), the Conceptual SWHP and the a Conceptual IWMR shall be updated into a Final SWHP and Final IWMR to reflect the changes that occur between entitlement and Final Plan and Permit Approval. The SWHP and IWMR may be required to be updated from whenever there are new occupants, new uses or changes to existing uses, Tenant Improvements, Business Licenses, and Certificates of Occupancy. Reference the Ontario Municipal Utilities Company Utilities Engineering Department's Integrated Waste Management Report (IWMR) and Solid Waste Handling Plan (SWHP) Requirements for details.

7.0 GENERAL PLAN CONSISTENCY

California Government Code (Title 7, Division 1, Chapter 3, Article 8, Section 65440-65457) permits the adoption and administration of Specific Plans as an implementation tool for elements contained within a jurisdiction's local General Plan. Approval of this Specific Plan is based on the finding that the regulations, guidelines, and programs contained within this Specific Plan are consistent with The Ontario Plan. The Ontario Plan establishes the direction and vision for the City of Ontario and provides a single comprehensive document to shape its future. The Ontario Plan provides for policies to accommodate change over its 30-year lifespan. The Ontario Plan consists of a six-part Component Framework: 1) Vision, 2) Governance Manual, 3) Policy Plan, 4) City Council Priorities, 5) Implementation, and 6) Tracking and Feedback. The following sections demonstrate the South Ontario Logistics Center Specific Plan implements the goals and policies of the City's Policy Plan (General Plan).

7.1 Land Use Element

GOAL LU1:	**A community that has a spectrum of housing types and price ranges that match the jobs in the City and that make it possible for people to live and work in Ontario and maintain a quality of life.**

Policy LU1-2 Sustainable Community Strategy

We integrate state, regional, and local Sustainable Community/Smart Growth principles into the development and entitlement process.

The Specific Plan encourages the efficient use of energy resources in design, product selection, and operational techniques. The Design Guidelines in Chapter 5 address lighting, bicycle parking, sustainable landscaping, and sustainable design strategies. Landscape provisions require the use of drought-resistant vegetation and shade trees to conserve water and reduce heat islands. The sustainable design strategies include design and construction of energy efficient buildings to reduce air, water, and land pollution and environmental impacts from energy production and consumption. Protecting water quality, reducing runoff, and reducing water demand for landscaping are promoted in the Development Plan in Chapter 3 through the recycled water plan and storm drainage facilities source control and treatment practices.

Policy LU1-3 Adequate Capacity

We require adequate infrastructure and services for all development.

The Specific Plan establishes a Phasing Plan that is coordinated with affected infrastructure providers and ensures that uses on the project site are adequately served. The Specific Plan requires infrastructure development to occur in a timely manner. Potable and recycled water, sewer, fiber optic communications, and storm drain infrastructure improvements that ultimately serve the Specific Plan area are addressed in Chapter 3, Development Plan. Infrastructure and services will be consistent with City of Ontario infrastructure master plans and the approved development agreement.

GOAL LU2: Compatibility between a wide-range of uses.

Policy LU2-3 Hazardous Uses

We regulate the development of industrial and similar uses that use, store, produce or transport toxic substances, air emissions, other pollutants or hazardous materials.

Uses within the Specific Plan are required to comply with federal, state, and local regulations pertaining to the use, storage, disposal, and transport of hazardous materials, toxic substances, and other pollutants.

Policy LU2-6 Infrastructure Compatibility

We require infrastructure to be aesthetically pleasing and in context with the community character.

The Specific Plan design guidelines (Chapter 5) support high-quality development that complements the desired community character. Landscaped areas separate parking areas to keep parking lots from being the dominant visual element of the site. The Specific Plan also establishes landscape setback requirements (Chapter 4, Land Use and Development Standards) and conceptual streetscape design (Chapter 5, Design Guidelines) along all roadways within the Specific Plan area to create safe and attractive streets for pedestrians, cyclists, and motorists and ensure a cohesive pattern of development.

Policy LU2-9 Methane Gas Sites

We require sensitive land uses and new uses on former dairy farms or other methane-producing sites to be designed to minimize health risks.

The Specific Plan incorporates into its Implementation Plan (Chapter 6) requirements for development to comply with the mitigation measures identified in the project environmental impact report, including those for soil remediation and proper venting to address the potential existence of methane gases within the Specific Plan area.

GOAL LU5: Integrated airport systems and facilities that minimize negative impacts to the community and maximize economic benefits.

Policy LU5-7 ALUCP Consistency with Land Use Regulations

We comply with state law that requires policy plan/general plans, specific plans, and all new development be consistent with the policies and criteria set forth within an Airport Land Use Compatibility Plan for any public use airport.

The Specific Plan area is within the Ontario International Airport Influence Area and the Chino Airport Influence Area. The Specific Plan discusses compliance with the ALUCP requirements for the Ontario Airport and the Chino Airport in Chapter 2, Section 2.2, Airport Influence Areas.

7.2 Community Design Element

GOAL CD1: A dynamic, progressive city containing distinct neighborhoods and commercial districts that foster a positive sense of identity and belonging among residents, visitors, and businesses.

Policy CD1-2 Growth Areas

We require development in growth areas to be distinctive and unique places within which there are cohesive design themes.

The Specific Plan design guidelines (Chapter 5, Design Guidelines) and development standards (Chapter 4, Land Use and Development Standards) ensure high quality, cohesive, attractive, and appropriately-scaled development that complements and integrates into the Ontario Ranch community and adds value to the City.

GOAL CD2: A high level of design quality resulting in public spaces, streetscapes, and developments that are attractive, safe, functional, and distinct.

Policy CD2-1 Quality Architecture

We encourage all developments to convey visual interest and character through:

- Building volume, massing, and height to provide appropriate scale and proportion;
- A true architectural style which is carried out in plan, section, and elevation through all aspects of the building and site design and appropriate for its setting;
- Exterior building materials that are visually interesting, high quality, durable, and appropriate for the architectural style.

The Specific Plan design guidelines (Chapter 5) ensure that: 1) scale, massing, fenestration, materials, and colors are consistent with the building's architectural style and compatible with the overall design in the Specific Plan area; 2) articulation is provided through elements such as cornices, parapets, expression lines, and changes in materials and/or colors; 3) use of a variety of colors, materials, and/or textures on each building is appropriate to the architectural features or massing.

Policy CD2-5 Streetscapes

We design new and, when necessary, retrofit existing streets to improve walkability, bicycling and transit integration, strengthen connectivity, and enhance community identify through improvements to the public right-of-way such as sidewalks, street trees, parkways, curbs, street lighting, and street furniture.

Chapter 3, Section 3.2, Street Plan, addresses connectivity, street improvements, pedestrian and bicycle plans, and transit. In Chapter 5, Section 5.3, Landscape Design, the Specific Plan identifies street improvements and streetscape including parkways, street trees, sidewalks, landscape buffers, and street lighting for Grove Avenue, Eucalyptus Avenue, Merrill Avenue, and Bon View Avenue within the Specific Plan area, which are consistent with the Circulation Element of The Ontario Plan. The Specific Plan streetscape design creates an aesthetically pleasing view for pedestrians, cyclists, and motorists, screens parking and loading areas from the public right-of-way, and visually integrates the development into the surrounding Ontario Ranch community.

Policy CD2-6 Connectivity

We promote development of local street patterns and pedestrian networks that create and unify neighborhoods, rather than divide them, and create cohesive and continuous corridors, rather than independent "islands".

The Specific Plan creates an efficient street system by providing convenient connections with adjacent land uses in compliance with the vision of The Ontario Plan Circulation Element. The design of Specific Plan street sections (Chapter 3.2: Street Plan) and streetscape (Chapter 5.3, Landscape Design) provides road improvements including sidewalks, trails and bikeways to promote connectivity and supplement vehicular transportation.

Policy CD2-7 Sustainability

We collaborate with the development community to design and build neighborhoods, streetscapes, sites, outdoor spaces, landscaping and buildings to reduce energy demand through solar orientation, maximum use of natural daylight, passive solar and natural ventilation, building form, mechanical and structural systems, building materials and construction techniques.

The Specific Plan is committed to sustainable design strategies that integrate principles of environmental stewardship into the design, construction, and operation process. The Specific Plan incorporates sustainability principles into its design guidelines (Chapter 5.8, Sustainable Design Strategies), such as drought tolerant landscaping, skylights in warehouse/distribution buildings to provide natural light and reduce lighting demand, high performance dual pane glazing in office storefronts, and LED products for energy efficient site lighting. Design strategies include the design and construction of energy efficient buildings to reduce air, water, and land pollution and environmental impacts from energy production and consumption. The use of recycled water to irrigate landscape is required by the Specific Plan's Recycled Water Plan (Chapter 3.4), consistent with the City of Ontario Recycled Water Master Plan.

Policy CD2-9 Landscape Design

We encourage durable landscaping materials and designs that enhance the aesthetics of structure, create and define public and private spaces, and provide shade and environmental benefits.

Consistent with the vision for Ontario Ranch as outlined in the Ontario Ranch Streetscape Master Plan, the Specific Plan (Chapter 5.3, Landscape Design) provides for landscaped setbacks and landscaped parkways adjacent to bike lanes and sidewalks, defining these public spaces. The landscaped setbacks and parkways include drought-tolerant plants featuring colorful shrubs and groundcovers, ornamental grasses and

succulents, evergreen and deciduous trees, and species native to Southern California or naturalized to the arid climate to promote durable plant materials. The plant selection complements the design theme of the Specific Plan area. Parking lot landscaping reduces associated heat buildup, improves aesthetics, and integrates into onsite landscape design and adjacent streetscapes. Swaled landscape areas retain/infiltrate stormwater run-off to improve water quality and promote groundwater recharge. Shade trees thoughtfully located near expanses of paving, building walls, roofs, and windows reduce the impacts of heat gain.

Policy CD2-11 Entry Statements

We encourage the inclusion of amenities, signage, and landscaping at the entry to neighborhoods, commercial centers, mixed use areas, industrial developments, and public places that reinforce them as uniquely identifiable places.

The Specific Plan establishes design guidelines to ensure high-quality development and a sense of place. As discussed in Chapter 5.3, Landscape Design, Grove, Eucalyptus, Merrill and Bon View Avenues feature landscaped setbacks that provide attractive entries into the site. Entry monument signage is predominantly placed to identify the South Ontario Logistics Center.

Policy CD2-12 Site and Building Signage

We encourage the use of sign programs that utilize complementary materials, colors, and themes. Project signage should be designed to effectively communicate and direct users to various aspects of the development and complement the character of the structure.

The Specific Plan (Chapter 5.7, Signage) requires approval of a comprehensive sign program to address parcel identification, building identification and directional signage within the Specific Plan area. A comprehensive sign program will integrate project signage with the overall design of the site and structures to create a unified visual statement. A comprehensive sign program provides flexible application of sign regulations to provide incentive and latitude in the design and display of multiple signs. Industrial uses on the site will also be appropriately signed to give direction to loading and receiving, visitor parking, and other special uses.

GOAL CD3:	**Vibrant urban environments that are organized around intense buildings, pedestrian and transit areas, public plazas, and linkages between and within developments that are conveniently located, visually appealing, and safe during all hours.**

Policy CD3-1 Design

We require that pedestrian, vehicular, bicycle, and equestrian circulation on both public and private property be coordinated and designed to maximize safety, comfort, and aesthetics.

The Specific Plan (Chapter 3.2, Street Plan) coordinates street, sidewalk, trail, and bikeway designs to serve onsite land uses and extend access to the surrounding area in compliance with The Ontario Plan Mobility Element. The Specific Plan specifies street improvements for Grove Avenue, Eucalyptus Avenue, Merrill Avenue, and Bon View Avenue. The Specific Plan streetscape design (Chapter 5.3, Landscape Design) provides an aesthetically pleasing view for pedestrians, cyclists, and motorists, screens parking and loading areas from the public right-of-way, and integrates the development into the surrounding community.

Policy CD3-5 Paving

We require sidewalks and road surfaces to be of a type and quality that contributes to the appearance and utility of streets and public places.

The Specific Plan development standards (Chapter 4, Land Use and Development Standards) require that design and materials for sidewalks and road surfaces within the Specific Plan area be approved by the City's Engineering Department. Specific Plan design guidelines (Chapter 5) encourage the use of enhanced paving to mark major building entries and paving materials that possess a high level of solar reflectivity to reduce the heat island effect.

GOAL CD5: A sustained level of maintenance and improvement of properties, buildings and infrastructure that protects the property values and encourages additional public and private investment.

Policy CD5-1 Maintenance of Buildings and Property

We require all public and privately owned buildings and property (including trails and easements) to be properly and consistency maintained.

The Specific Plan includes a Maintenance Responsibility Matrix in Chapter 6, Implementation, identifying the parties responsible for maintenance of roadways, parkways, trails, sidewalks, common areas, walls and monuments, infrastructure, and utilities within the Specific Plan area. Privately owned buildings will be maintained as specified by the Property Owners Association (Chapter 6.11.2).

Policy CD5-2 Maintenance of Infrastructure

We require the continued maintenance of infrastructure.

The Specific Plan includes a Maintenance Responsibility Matrix in Chapter 6, Implementation, identifying the parties responsible for maintenance of roadways, parkways, trails, sidewalks, common areas, walls and monuments, infrastructure, and utilities within the Specific Plan area.

7.3 Mobility Element

GOAL M1: A system of roadways that meets the mobility needs of a dynamic and prosperous Ontario.

Policy M1-1 Roadway Design and Maintenance

We require our roadways to:

- Comply with federal, state, and local design and safety standards.
- Meet the needs of multiple transportation modes and users.
- Handle the capacity envisioned in the Functional Roadway Classification Plan.
- Endeavour to maintain a peak hour Level of Service (LOS) E or better at all intersections.
- Be compatible with the streetscape and surrounding land uses.
- Be maintained in accordance with best practices and our Right-of-Way Management Plan

The Specific Plan complies with the Functional Roadway Classification Plan of the Mobility Element and, therefore, aims to comply with federal, state, and local design and safety standards; meet the needs of multiple transportation modes and users; and maintain a Level of Service of E or better at all intersections addressed in the project environmental impact report. The Specific Plan site design strives to minimize the effects of truck traffic on nearby uses.

Policy M1-2 Mitigation of Impacts

We require development to mitigate its traffic impact.

The Specific Plan requires in Chapter 1.6, California Environmental Quality Act Compliance, and in Chapter 6.4.4, Consistency with CEQA, that projects within the Specific Plan area comply with all mitigation measures, conditions, and project design features identified in the project environmental impact report. Chapter 5.1, Site Design, provides guidelines to ensure buildings, structures, and loading facilities are designed so loading and unloading activities occur on-site without extending beyond the property line.

GOAL M2: A system of trails and corridors that facilitate and encourage bicycling and walking.

Policy M2-1 Bikeway Plan

We maintain our Multipurpose Trails & Bikeway Corridor Plan to create a comprehensive system of on- and off-street bikeways that connect residential areas, businesses, schools, parks, and other key destination points.

The Specific Plan includes a Circulation Plan in Chapter 3 to provide connectivity to the trails and bikeway corridors identified in the Ontario Multipurpose Trails and Bikeway Corridor Plan, including installation of a Class II Bikeway along Merrill Avenue and multipurpose trails along Grove, Eucalyptus, and Merrill Avenues.

Policy M2-3 Pedestrian Walkways

We require walkways that promote safe and convenient travel between residential areas, businesses, schools, parks, recreation areas, and other key destination points.

The Specific Plan street sections and streetscape designs (Chapter 3.2, Street Plan and Chapter 5.3, Landscape Design) provide for construction of five-foot wide public pedestrian sidewalks for Grove Avenue, Eucalyptus Avenue, Merrill Avenue, and Bon View Avenue to connect with existing and planned pedestrian circulation systems. Pedestrian sidewalks are separated from vehicular travel lanes by a landscaped parkway. The Specific Plan area street improvements are consistent with the City's Ontario Ranch Streetscape Master Plan.

GOAL M3: A public transit system that is a viable alternative to automobile travel and meets basic transportation needs of the transit dependent.

Policy M3-2 Transit Facilities at New Development

We require new development to provide transit facilities, such as bus shelters, transit bays and turnouts, as necessary.

The Specific Plan discusses in Chapter 3.2.11, Transit, that the City is coordinating with regional transit agencies to implement Bus Rapid Transit (BRT) service to target destinations and along corridors.

GOAL M4: An efficient flow of goods through the City that maximizes economic benefits and minimizes negative impacts.

Policy M4-1 Truck Routes

We designate and maintain a network of City truck routes that provide for the effective transport of goods while minimizing negative impacts on local circulation and noise-sensitive land uses, as shown in the Truck Routes Plan.

The Specific Plan is designed to enable easy access to the truck route network and to encourage its industrial users to implement effective goods movement strategies. The Land Use and Circulation Plans for the Specific Plan area (Chapter 3, Development Plan) are designed to focus trucks on the designated Merrill Avenue truck route. The design guidelines in Chapter 5.1, Site Design, stipulate buildings, structures, and loading facilities be designed to ensure that loading and unloading activities and maneuvering of freight vehicles occurs on-site without extending beyond the property line.

7.4 Environmental Resources Element

GOAL ER1: A reliable and cost effective system that permits the City to manage its diverse water resources and needs.

Policy ER1-3 Conservation

We require conservation strategies that reduce water usage.

The Specific Plan incorporates water conservation strategies into its development plan and design guidelines. The use of recycled water to irrigate landscape areas is required consistent with the City of Ontario Recycled Water Master Plan (Chapter 3, Development Plan). Landscape and irrigation plans are encouraged to use water conservation features such as drought-tolerant plant species native or adapted to the region and drip irrigation (Chapter 5, Design Guidelines). The Specific Plan encourages the design and construction of energy efficient buildings to reduce air, water, and land pollution and environmental impacts from energy production and consumption.

Policy ER1-5 Groundwater Management

We protect groundwater quality by incorporating strategies that prevent pollution, require remediation where necessary, capture and treat urban run-off, and recharge the aquifer.

In Chapter 3.8, Storm Drainage Plans, the Specific Plan stipulates that prior to issuance of grading or construction permits, a Storm Water Pollution Prevention Plan (SWPPP) be prepared and approved by the City. The SWPPP will identify and detail appropriate Best Management Practices (BMPs) to prevent pollutant discharge into storm drain systems and natural drainages and aquifers. In addition to the preparation of a SWPPP, a WQMP will be prepared and approved that will enforce long-term BMPs to prevent pollutant discharges into storm drain systems for the life of the project. Chapter 5.8.2, Water Quality, requires the provision of on-site landscape swales to collect and treat stormwater run-off.

Policy ER1-6 Urban Run-off Quantity

We encourage the use of low impact development strategies to intercept run-off, slow the discharge rate, increase infiltration, and ultimately reduce discharge volumes to traditional storm drain systems.

The Specific Plan (Chapter 3.8, Storm Drainage Plan) incorporates low impact development strategies including landscape designs that promote water retention; permeable surface designs in parking lots and areas with low traffic; parking lots that drain to landscaped areas to provide treatment, retention, or infiltration; and limited soil compaction during grading.

Policy ER1-7 Urban Run-off Quality

We require the control and management of urban run-off, consistent with Regional Water Quality Control Board regulations.

In Chapter 3.8, Storm Drainage Plan, the Specific Plan specifies that prior to issuance of grading or construction permits, a Water Quality Management Plan (WQMP) is required to minimize stormwater runoff and provide on-site opportunities for groundwater recharge integrated into project design and amenities. The grading and drainage of the Specific Plan area will be designed to retain/infilter, harvest & re-use or biotreat surface runoff to comply with the current requirements of the San Bernardino County NPDES Stormwater Program's WQMP for significant new development projects.

Policy ER1-8 Wastewater Management

We require the management of wastewater discharge and collection consistent with waste discharge requirements adopted by the Regional Water Quality Control Board.

In Chapter 3.5, Sewer Plan, the Specific Plan provides for design of a wastewater system consistent with City and Regional Water Quality Control Board requirements. The Specific Plan includes a network of new public sewer mains consistent with the City of Ontario's Ultimate Sewer System Plan.

GOAL ER3:	**Cost-effective and reliable energy system sustained through a combination of low impact building, site and neighborhood energy conservation and diverse sources of energy generation that collectively helps to minimize the region's carbon footprint.**

Policy ER3-1 Conservation Strategy

We require conservation as the first strategy to be employed to meet applicable energy-saving standards.

The Specific Plan incorporates energy-saving conservation strategies into its design guidelines (Chapter 5) by addressing lighting, bicycle parking, sustainable landscaping, and energy efficiency. Sustainable design strategies (Chapter 5.8) include design and construction of energy efficient buildings to reduce air, water, and land pollution and environmental impacts from energy production and consumption.

Policy ER3-3 Building and Site Design

We require new construction to incorporate energy efficient building and site design strategies, which could include appropriate solar orientation, maximum use of natural daylight, passive solar and natural ventilation.

The Specific Plan's Sustainable Design Strategies (Chapter 5.8) include the use of passive design to improve building energy performance through skylights, building orientation, landscaping, and use of select colors.

GOAL ER4: Improved indoor and outdoor air quality and reduced locally generated pollutant emissions.

Policy ER4-4 Indoor Air Quality

We comply with State Green Building Codes relative to indoor air quality.

The Specific Plan requires development projects in the Specific Plan area to comply with the State of California Building Code as adopted and implemented by the City. The Specific Plan's Sustainable Design Strategies (Chapter 5.8) include the design and construction of energy efficient buildings to reduce air, water, and land pollution.

GOAL ER5: Protected high value habitat and farming and mineral resources extraction activities that are compatible with adjacent development.

Policy ER5-2 Entitlement and Permitting Process

We comply with state and federal regulations regarding protected species.

The Specific Plan acknowledges that development projects within the Specific Plan area shall comply with the mitigation measures of the project environmental impact report.

7.5 Safety Element

7.5.1

GOAL S1: Minimized risk of injury, loss of life, property damage and economic and social disruption caused by earthquake-induced and other geologic hazards.

Policy S1-1 Implementation of Regulations and Standards

We require that all new habitable structures be designed in accordance with the most recent California Building Code adopted by the City, including provisions regarding lateral forces and grading.

The Specific Plan requires development projects to comply with the State of California Building Code as adopted and implemented by the City.

Policy S1-2 Entitlement and Permitting Process

We follow state guidelines and the California Building Code to determine when development proposals must conduct geotechnical and geological investigations.

The Specific Plan acknowledges that projects within the Specific Plan area shall comply with state guidelines and the California Building Code. Research of available maps indicates that the Specific Plan site is not located within an Alquist-Priolo Earthquake Fault Zone. Furthermore, there was no visible evidence of faulting during geotechnical investigation.

GOAL S2: Minimized risk of injury, loss of life, property damage and economic and social disruption caused by flooding and inundation hazards.

Policy S2-1 Entitlement and Permitting Process

We follow State guidelines and building code to determine when development proposals require hydrological studies prepared by a State-certified engineer to assess the impact that the new development will have on the flooding potential of existing development down-gradient.

The Specific Plan acknowledges that projects within the Specific Plan area shall comply with applicable mitigation measures of the project environmental impact report, state guidelines, and the California Building Code regarding flooding and inundation hazards.

GOAL S3: Reduced risk of death, injury, property damage and economic loss due to fires, accidents and normal everyday occurrences through prompt and capable emergency response.

Policy S3-8 Fire Prevention through Environmental Design

We require new development to incorporate fire prevention consideration in the design of streetscapes, sites, open spaces and buildings.

The Specific Plan acknowledges that projects within the Specific Plan area shall comply with the City's development review process, which provides for review by the City's Fire Department and potential redesign to incorporate fire prevention design elements within streetscapes, sites, open spaces, and buildings.

GOAL S4: An environment where noise does not adversely affect the public's health, safety, and welfare.

Policy S4-1 Noise Mitigation

We utilize the City's Noise Ordinance, building codes and subdivision and development codes to mitigate noise impacts.

The Specific Plan acknowledges that projects within the Specific Plan area shall comply with mitigation measures of the project environmental impact report, the City's noise ordinance, subdivision and development codes, and the California Building Code to mitigate noise impacts.

GOAL S5: Reduced risk of injury, property damage and economic loss resulting from windstorms and wind-related hazards.

Policy S5-2 Dust Control Measures

We require the implementation of Best Management Practices for dust control at all excavation and grading projects.

The Specific Plan acknowledges that projects within the Specific Plan area shall comply with mitigation measures of the project environmental impact report, the construction management plan, and subdivision and development codes regarding dust control.

GOAL S6: Reduced potential for hazardous materials exposure and contamination.

Policy S6-9 Remediation of Methane

We require development to assess and mitigate the presence of methane, per regulatory standards and guidelines.

The Specific Plan acknowledges that projects within the Specific Plan area shall comply with mitigation measures of the project environmental impact report.

GOAL S7: Neighborhoods and commercial and industrial districts that are kept safe through a multi-faceted approach of prevention, suppression, community involvement, and a system of continuous monitoring.

Policy S7-4 Crime Prevention through Environmental Design (CPTED)

We require new development to incorporate CPTED in the design of streetscapes, sites, open spaces and buildings.

The Specific Plan acknowledges that projects within the Specific Plan area shall comply with the City's development review process, which provides for review by the City's Police Department and potential redesign to incorporate crime prevention design elements in streetscapes, sites, open spaces, and buildings. Parcel lighting (Chapter 5.6, Lighting) addresses illumination of parking lots, loading dock areas, pedestrian walkways, building entrances, signage, and architectural and landscape features. A key provision includes the installation of ground or low mounted fixtures to provide for safety and convenience along pedestrian walkways, entrances, activity areas, steps, ramps, and special features. Chapter 5.1, Site Design, also encourages delineation of pedestrian access to on-site buildings from adjacent streets and parking areas by marking building entrances with signage, prominent architectural features, and/or landscaping features.

7.6 Community Economics Element

GOAL CE1: A complete community that provides for all incomes and stages of life.

Policy CE1-1 Jobs-Housing Balance

We pursue improvement to the Inland Empire's balance between jobs and housing by promoting job growth that reduces the regional economy's reliance on out-commuting.

The Specific Plan anticipates the creation of jobs in warehousing, logistics, light manufacturing, and administration within the Specific Plan area, which helps improve the region's jobs-housing balance. Actual job creation depends on the type of land uses ultimately developed on the site as a wide-range of commercial, office, and industrial uses are permitted in the Specific Plan. The Land Use Plan (Chapter 3.1)

implements the vision of The Ontario Plan by providing opportunities for employment in manufacturing, distribution, research and development, service, and supporting retail at intensities designed to meet the demand of current and future market conditions.

Policy CE1-5 Business Attraction

We proactively attract new and expanding businesses to Ontario in order to increase the City's share of growing sectors of the regional and global economy.

In Chapter 3.1, Land Use Plan, the Specific Plan provides for the construction of over 3.1 million square feet of business park and industrial development in compliance with City and regional planning goals and strategies that facilitate goods movement throughout the SCAG region.

GOAL CE2: A City of distinctive neighborhoods, districts, and corridors, where people choose to be.

Policy CE2-1 Development Projects

We require new development and redevelopment to create unique, high-quality places that add value to the community.

The Specific Plan contains design guidelines in Chapter 5 to guide future development consistent with the vision for Ontario Ranch. The guidelines ensure high quality, cohesive and attractive development that complements and integrates into the community and adds value to the City. The Specific Plan also establishes landscape setbacks along the roadways within the Specific Plan area to create safe and attractive streets for pedestrians, cyclists, and motorists.

Policy CE2-2 Development Review

We require those proposing new development and redevelopment to demonstrate how their projects will create appropriately unique, functional and sustainable places that will compete well with their competition within the region.

The Specific Plan establishes a land use plan (Chapter 3.1) and design guidelines (Chapter 5) addressing site design, building design, and landscape design that ensure high-quality, functional and sustainable development that is regionally competitive and appropriate for the Ontario Ranch community.

Policy CE2-5 Private Maintenance

We require adequate maintenance, upkeep, and investment in private property because proper maintenance on private property protects property values.

The Specific Plan includes a Maintenance Responsibility Matrix (Chapter 6.11) identifying the public, private, or utility providers responsible for maintenance of roadways, parkways, trails, sidewalks, common areas, walls and monuments, infrastructure, and utilities within the Specific Plan area. A Property Owners Association will be established for the maintenance of on-site common areas, including such improvements as landscape areas and drive aisles.

Policy CE2-6 Public Maintenance

We require the establishment and operation of maintenance districts or other vehicles to fund the long-term operation and maintenance of the public realm whether on private land, in rights-of-way, or on publicly-owned property.

The Specific Plan includes a Maintenance Responsibility Matrix (Chapter 6.11) identifying the public, private, or utility providers responsible for maintenance of roadways, parkways, trails, sidewalks, common areas, walls and monuments, infrastructure, and utilities within the Specific Plan area. Right-of-way for public streets and infrastructure improvements within the Specific Plan area shall be dedicated to the City of Ontario for maintenance purposes. Landscape improvements and public streetlights within the public right-of-way shall be maintained through a landscape and lighting district or other special maintenance district established by the City. Dry utilities such as electricity, natural gas, and communication systems will be maintained by the appropriate utility company.

LAND DEVELOPMENT DIVISION CONDITIONS OF APPROVAL

CITY OF ONTARIO PLANNING DEPARTMENT
303 East B Street, Ontario, California 91764 Phone: 909.395.2036 / Fax: 909.395.2420

Date Prepared: **11/30/2021**

File No: **PSP19-001**

Related File: **PGPA19-004**

Project Description: **A public hearing to consider certification of the Environmental Impact Report (State Clearinghouse No. 2021010318), including the adoption of a Mitigation Monitoring and Reporting Program and a Statement of Overriding Considerations, for the following: 1) A General Plan Amendment (File No. PGPA19-004) to modify the Land Use Plan (Exhibit LU-01) of the Policy Plan (General Plan) of The Ontario Plan to change the land use designations on 219.39 acres of land, from 157.06 acres of Low-Medium Density Residential (5.1-11 dwelling units per acre) and 62.36 acres of Business Park (0.6 FAR) to 184.22 acres of General Industrial (0.55 FAR) and 35.17 acres of Business Park (0.6 FAR), and modify the Future Buildout Table (Exhibit LU-03) to be consistent with the land use designation changes; and 2) a Specific Plan (File No. PSP19-001 – South Ontario Logistics Center Specific Plan) to establish the land use districts, development standards, design guidelines, and infrastructure improvements for the potential development of up to 5,333,518 square feet of General Industrial and Business Park land uses. The project site is generally bordered by Eucalyptus Avenue on the north, Merrill Avenue on the south, existing right-of-way for the future Campus Avenue extension to the west, and Grove Avenue to the east;** (APNs: 1054-071-01, 1054-071-02, 1054-081-03, 1054-091-01, 1054-091-02, 1054-101-01, 1054-101-02, 1054-231-01, 1054-231-02, 1054-241-01, 1054-241-02, 1054-321-01, 1054-321-02, 1054-311-01, 1054-311-02, 1054-051-01, 1054-051-02, 1054-061-01, 1054-061-02, 1054-251-01, 1054-251-02, 1054-301-01, 1054-301-02); **submitted by Grove Land Venture, LLC.**

The Planning Department, Land Development Section, conditions of approval applicable to the above-described Project, are listed below. The Project shall comply with each condition of approval listed below:

1.0 Standard Conditions of Approval. The project shall comply with the *Standard Conditions for New Development*, adopted by City Council Resolution No. 2017-027 on April 18, 2017. A copy of the *Standard Conditions for New Development* may be obtained from the Planning Department or City Clerk/Records Management Department.

2.0 Special Conditions of Approval. In addition to the *Standard Conditions for New Development* identified in condition no. 1.0, above, the project shall comply with the following special conditions of approval:

2.1 Specific Plan. The following shall be submitted to the Planning Department within 30 days following City Council approval of the Specific Plan/Specific Plan Amendment:

(a) Five bound copies of the final Specific Plan document;

(b) One complete, unbound copy of the final Specific Plan document;

(c) One CD containing a complete Microsoft Word copy of the final Specific Plan document, including all required revisions;

(d) Five CDs, each containing a complete PDF copy of the final Specific Plan document, including all required revisions; and

(e) One CD containing a complete electronic website version of the final Specific Plan document, including all required revisions.

2.2 Indemnification. The applicant shall agree to defend, indemnify and hold harmless, the City of Ontario or its agents, officers, and employees from any claim, action or proceeding against the City of Ontario or its agents, officers or employees to attack, set aside, void or annul any approval of the City of Ontario, whether by its City Council, Planning Commission or other authorized board or officer. The City of Ontario shall promptly notify the applicant of any such claim, action or proceeding, and the City of Ontario shall cooperate fully in the defense.

2.3 Additional Fees.

(a) Within 5 days following final application approval, the Notice of Determination ("NOD") filing fee and applicable Department of Fish and Wildlife fee shall be provided to the Planning Department. The fee shall be paid by check, made payable to the "Clerk of the Board of Supervisors", which shall be forwarded to the San Bernardino County Clerk of the Board of Supervisors, along with all applicable environmental forms/notices, pursuant to the requirements of the California Environmental Quality Act ("CEQA"). Failure to provide said fee within the time specified may result in a 180-day extension to the statute of limitations for the filing of a CEQA lawsuit.

RESOLUTION NO. _____

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF ONTARIO, CALIFORNIA, ADOPTING ENVIRONMENTAL FINDINGS PURSUANT TO THE CALIFORNIA ENVIRONMENTAL QUALITY ACT AND CERTIFYING THE SOUTH ONTARIO LOGISTICS CENTER SPECIFIC PLAN FINAL ENVIRONMENTAL IMPACT REPORT (STATE CLEARINGHOUSE NO. 2021010318), ADOPTING FINDINGS OF OVERRIDING CONSIDERATIONS AND A MITIGATION MONITORING AND REPORTING PROGRAM FOR FILE NO. PGPA19-004, A GENERAL PLAN AMENDMENT, AND FILE NO. PSP19-001, THE SOUTH ONTARIO LOGISTICS CENTER SPECIFIC PLAN, LOCATED WITHIN ONTARIO RANCH AND GENERALLY BORDERED BY EUCALYPTUS AVENUE TO THE NORTH, GROVE AVENUE TO THE EAST, MERRILL AVENUE TO THE SOUTH, AND CAMPUS AVENUE TO THE WEST, AND MAKING FINDINGS IN SUPPORT THEREOF – APNS: 1054-071-01, 1054-071-02, 1054-081-03, 1054-091-01, 1054-091-02, 1054-101-01, 1054-101-02, 1054-231-01, 1054-231-02, 1054-241-01, 1054-241-02, 1054-321-01, 1054-321-02, 1054-311-01, 1054-311-02, 1054-051-01, 1054-051-02, 1054-061-01, 1054-061-02, 1054-251-01, 1054-251-02, 1054-301-01, AND 1054-301-02.

WHEREAS, GROVE LAND VENTURE, LLC. (“Applicant”) proposes to develop the South Ontario Logistics Center Specific Plan (“Project”), an approximately 5,333,518-square foot of business park and industrial uses on approximately a 219.39-acre site in the southwestern portion of the City of Ontario; and

WHEREAS, the Project site consists of 23 parcels and is bound by Eucalyptus Avenue to the north, Campus Avenue to the west, Merrill Avenue to the south, and Grove Avenue to the east; and

WHEREAS, pursuant to the Housing Accountability Act (SB 330), the Project will create an Overlay District on an “SB330 Replacement Site“ to increase the residential zoning capacity by 1,352 units, which will offset the “loss” of residential zoning capacity within the Project site; and

WHEREAS, the Project requires approvals of General Plan Amendment (PGPA19-004), Development Plan Review (PDEV20-028) (DPR3), Tentative Parcel Maps (PMTT21-011), Development Agreement, and SB330 Replacement Site Overlay District; and

WHEREAS, the City originally issued a Notice of Preparation (“NOP”) for the South Ontario Logistics Center Specific Plan for which the public review period extended through January 20, 2021. The NOP was published on Friday, December 18, 2020, in the Inland Valley Daily Bulletin, a newspaper of general circulation in the Project area. The City received comments from multiple agencies on the NOP; and

WHEREAS, pursuant to Public Resources Code section 21083.9 and State CEQA Guidelines section 15082(c) and 15083, a public scoping meeting was held on Monday, December 21, 2020, where comments were received; and

WHEREAS, a Draft Environmental Impact Report ("Draft EIR") was prepared, incorporating comments received in response to the NOP, and determined that mitigation measures were required to mitigate impacts to a less than significant level for aesthetics, biological resources, cultural resources, geology and soils, hazards and hazardous materials, hydrology and water quality, tribal cultural resources, and further concluded that despite the incorporation of all feasible mitigation measures, the proposed Project would nonetheless result in significant and unavoidable impacts relating to noise, utilities and service systems; and

WHEREAS, after completing the Draft EIR (State Clearinghouse No. 2021010318), the City released the document for public review for a 49-day public comment period, beginning November 15, 2021 and concluding January 3, 2022. A Notice of Availability ("NOA") for File Nos. PGPA19-004 and PSP19-001, was circulated along with the Draft EIR and was published in a local newspaper and posted in the Office of the Clerk of the Board of Supervisors of San Bernardino County. At that time, the City also provided a Notice of Availability to all organizations and individuals who had previously requested such notice; and

WHEREAS, copies of the EIR were distributed to the Planning Commission, City departments, and federal, state, regional, local, and other agencies and individuals; and

WHEREAS, during the 45-day comment period on the Draft EIR, the City consulted with and requested comments from all responsible and trustee agencies, other regulatory agencies and others pursuant to State CEQA Guidelines section 15086; and

WHEREAS, during the official public review period for the Draft EIR, the City received seven written comment letters, all of which the City responded to in the Final EIR; and

WHEREAS, pursuant to Public Resources Code section 21092.5, the City provided copies of its responses to commenting public agencies at least ten days prior to the City's consideration of the Final EIR on February 17, 2022; and

WHEREAS, on January 25, 2022, the Planning Commission of the City of Ontario conducted a duly noticed public hearing on the EIR at which time all persons wishing to testify were heard and the EIR was fully studied, and concluded said hearing on that date. After considering all public testimony, the Planning Commission issued Resolution No. PC22-004, recommending City Council certification of the Project EIR; and

WHEREAS, six written public comments were received prior to the Planning Commission hearing and twenty-two people spoke on the project at said hearing; and

WHEREAS, the City prepared The Ontario Plan Final Environmental Impact Report ("TOP EIR") (SCH # 2008101140) in association with the 2009 General Plan Update ("GPA") and certified the TOP EIR on January 26, 2010; and

WHEREAS, the TOP EIR is a Program EIR from which later specific plan EIRs, such as the EIR for this Project, are tiered; and

WHEREAS, the City prepared the Final EIR, which consists of the Draft EIR, all technical appendices prepared in support of the Draft EIR, all written comment letters received on the Draft EIR, written responses to all written comment letters receive on the Draft EIR, and errata to the Draft EIR and technical appendices; and

WHEREAS, the "EIR" consists of the Final EIR and its attachments and appendices, as well as the Draft EIR and its attachments and appendices (as modified by the Final EIR); and

WHEREAS, pursuant to Public Resources Code section 21092.5, the City provided copies of the Final EIR to all commenting public agencies; and

WHEREAS, the City provided a Notice of Public Hearing and/or Intent to Certify an Environmental Impact Report to all organizations and individuals who had previously requested such notice, and published the Notice of Public Hearing on February 18, 2022, in the Inland Valley Daily Bulletin, a newspaper of general circulation in the Project area; and

WHEREAS, all potential significant adverse environmental impacts were sufficiently analyzed in the Final EIR; and

WHEREAS, the City of Ontario is the lead agency on the Project, and the City Council is the approving authority for the proposed approval to construct and otherwise undertake the Project; and

WHEREAS, on March 1, 2022, the City Council of the City of Ontario conducted a hearing on the Project and concluded said hearing on that date; and

WHEREAS, as contained herein, the City has endeavored in good faith to set forth the basis for its decision on the Project; and

WHEREAS, all the requirements of CEQA, the State CEQA Guidelines, and the City's Local Guidelines have been satisfied by the City in the EIR, which is sufficiently detailed so that all of the potentially significant environmental effects of the Project have been adequately evaluated; and

WHEREAS, the EIR prepared in connection with the Project sufficiently analyzes both the feasible mitigation measures necessary to avoid or substantially lessen the Project's potential environmental impacts and a range of feasible alternatives capable of eliminating or reducing these effects in accordance with CEQA, the State CEQA Guidelines and the City's Local Guidelines; and

WHEREAS, all of the findings and conclusions made by the City Council pursuant to this Resolution are based upon all oral and written evidence presented to it as a whole and are not based solely on the information provided in this Resolution; and

WHEREAS, environmental impacts identified in the EIR which the City finds are less than significant and do not require mitigation are described in Section IV, B hereof; and

WHEREAS, environmental impacts identified in the EIR as potentially significant but which the City finds can be mitigated to a level of less than significant, through the imposition of feasible mitigation measures identified in the EIR and set forth herein and in the Mitigation Monitoring and Reporting Plan, attached hereto as Exhibit A, are described in Section IV, C hereof; and

WHEREAS, environmental impacts identified in the EIR as potentially significant and which the City finds cannot be fully mitigated to a level of less than significant, despite the imposition of all feasible mitigation measures identified in the Final EIR and set forth herein, are described in Section IV, D hereof; and

WHEREAS, the cumulative impacts of the Project identified in the EIR and set forth herein, are described in Section IV, E hereof; and

WHEREAS, alternatives to the Project that might eliminate or reduce significant environmental impacts are described in Section IV, F hereof; and

WHEREAS, the existence of any growth-inducing impacts and significant and irreversible environmental changes resulting from the proposed Project identified in the EIR and set forth herein, are described in Section IV, G hereof; and

WHEREAS, because some environmental impacts identified in the EIR as potentially significant cannot be fully mitigated to a level of less than significant, despite the imposition of all feasible mitigation measures identified in the EIR and set forth herein, the City Council has balanced the economic, legal, social, technological, and other benefits of the Project against its significant and unavoidable impacts, and has determined that the benefits of the Project outweigh the unavoidable adverse impacts, and therefore, render those impacts “acceptable.” The City Council has documented its determination regarding significant and unavoidable impacts in the Statement of Overriding Considerations in Section V hereof; and

WHEREAS, prior to taking action, the City Council has heard, been presented with, reviewed and considered all of the information and data in the administrative record, including the EIR, and all oral and written evidence presented to it during all meetings and hearings on the Project; and

WHEREAS, the EIR reflects the independent judgment of the City Council and is deemed adequate for purposes of making decisions on the merits of the Project; and

WHEREAS, no comments made in the public hearings conducted by the City or any additional information submitted to the City have produced substantial new

information requiring recirculation or additional environmental review under State CEQA Guidelines section 15088.5; and

WHEREAS, all other legal prerequisites to the adoption of this Resolution have occurred.

NOW, THEREFORE, IT IS HEREBY FOUND, DETERMINED, AND RESOLVED by the City Council of the City of Ontario, as follows:

SECTION I. RECITALS

The recitals above are true and correct and are incorporated into this Resolution by reference as findings of fact.

SECTION II. SUMMARY OF FINDINGS

The City Council hereby finds that it has been presented with the EIR, which it has reviewed and considered, and further finds that the EIR is an accurate and objective statement that has been completed in full compliance with CEQA and the State CEQA Guidelines. The City Council finds that the EIR reflects the independent judgment and analysis of the City. The City Council declares that no evidence of new significant impacts or any new information of "substantial importance" as defined by State CEQA Guidelines section 15088.5, has been received by the City after circulation of the Draft EIR that would require recirculation. Therefore, the City Council hereby certifies the EIR based on the entirety of the record of proceedings.

SECTION III. PROCEDURAL COMPLIANCE WITH CALIFORNIA ENVIRONMENTAL QUALITY ACT

A. RECORD OF PROCEEDINGS

For purposes of CEQA and these Findings, the Record of Proceedings for the proposed Project consists of the following documents and other evidence, at a minimum:

- The NOP, NOA, and all other public notices issued by the City in conjunction with the proposed Project.
- The DEIR and FEIR for the proposed Project.
- All written comments submitted by agencies or members of the public during the public review comment period on the DEIR.
- All responses to written comments submitted by agencies or members of the public during the public review comment period on the DEIR.
- All written and verbal public testimony presented during noticed public hearings for the proposed Project.
- The Mitigation Monitoring and Reporting Program.

- The reports and technical memoranda included or referenced in the FEIR.
- All documents, studies, EIRs, or other materials incorporated by reference in the DEIR and FEIR.
- The Resolutions adopted by the City in connection with the proposed Project, and all documents incorporated by reference therein, including comments received after the close of the comment period and responses thereto.
- Matters of common knowledge to the City, including but not limited to federal, state, and local laws and regulations.
- Any documents expressly cited in these Findings.
- Any other relevant materials required to be in the record of proceedings by PRC § 21167.6(e).

B. CUSTODIAN AND LOCATION OF RECORDS

The documents and other materials that constitute the administrative record for the City's actions related to the proposed Project are at the City of Ontario - Planning Department, 303 East "B" Street, Ontario, CA. The City Planning Department is the custodian of the administrative record for the Project. Copies of these documents, which constitute the record of proceedings, are and at all relevant times have been and will be available upon request at the offices of the Planning Department. This information is provided in compliance with PRC § 21081.6(a)(2) and CEQA Guidelines §15091 (e).

C. PROJECT OBJECTIVES

The following objectives have been established for the proposed Project and will aid decision makers in their review of the proposed Project and associated environmental impacts:

- Create a professional, well-maintained and attractive environment for the development of a multi-purpose business park, industrial and warehousing/office space complex.
- Provide the entitlements and framework for the development of approximately 5.3 million square feet (SF) of business park and industrial general.
- Provide employment opportunities for community residents.
- Facilitate the construction of utilities, roads, and other major infrastructure investments that will be sufficiently sized to adequately serve the Project area.
- Expand the City’s industrial uses in proximity to local airports and regional transportation networks.

- Create an economic engine to drive future growth in Ontario Ranch, spur infrastructure improvements in the area and implement the Project vision.

SECTION IV. CALIFORNIA ENVIRONMENTAL QUALITY ACT FINDINGS

The California Environmental Quality Act (Pub. Resources Code, § 21000 et seq.) (CEQA) requires that public agencies shall not approve or carry out a project for which an environmental impact report (EIR) has been certified that identifies one or more significant adverse environmental effects of a project unless the public agency makes one or more written Findings for each of those significant effects, accompanied by a brief explanation of the rationale for each Finding (State CEQA Guidelines [Cal. Code Regs., tit. 14, § 15000 et seq.], § 15091). This document presents the CEQA Findings of Fact made by the City of Ontario, in its capacity as the CEQA lead agency, regarding the South Ontario Logistics Center Specific Plan (Project), evaluated in the Draft Environmental Impact Report ("Draft EIR") and Final Environmental Impact Report (FEIR) for the Project.

The City Council hereby adopts the "CEQA Findings of Fact" which were prepared in accordance with State CEQA Guidelines section 15091 and which are as follows:

A. INTRODUCTION

Public Resources Code section 21002 states that "public agencies should not approve projects as proposed if there are feasible alternatives or feasible mitigation measures available which would substantially lessen the significant environmental effects of such projects[.]" Section 21002 further states that the procedures required by CEQA "are intended to assist public agencies in systematically identifying both the significant effects of proposed projects and the feasible alternatives or feasible mitigation measures which will avoid or substantially lessen such significant effects."

Pursuant to section 21081 of the Public Resources Code, a public agency may only approve or carry out a project for which an EIR has been completed that identifies any significant environmental effects if the agency makes one or more of the following written finding(s) for each of those significant effects accompanied by a brief explanation of the rationale for each finding:

1. Changes or alterations have been required in, or incorporated into, the project which mitigate or avoid the significant effects on the environment.
2. Those changes or alterations are within the responsibility and jurisdiction of another public agency and have been, or can and should be, adopted by that other agency.
3. Specific economic, legal, social, technological, or other considerations, including considerations for the provision of employment opportunities for highly trained workers, make infeasible the mitigation measures or alternatives identified in the environmental impact report.

As indicated above, section 21002 requires an agency to "avoid or substantially lessen" significant adverse environmental impacts. Thus, mitigation measures that "substantially lessen" significant environmental impacts, even if not completely avoided, satisfy section 21002's mandate. (*Laurel Hills Homeowners Assn. v. City Council* (1978) 83 Cal.App.3d

515, 521 ["CEQA does not mandate the choice of the environmentally best feasible project if through the imposition of feasible mitigation measures alone the appropriate public agency has reduced environmental damage from a project to an acceptable level"]; *Las Virgenes Homeowners Fed., Inc. v. County of Los Angeles* (1986) 177 Cal. App. 3d 300, 309 ["[t]here is no requirement that adverse impacts of a project be avoided completely or reduced to a level of insignificance . . . if such would render the project unfeasible"].)

While CEQA requires that lead agencies adopt feasible mitigation measures or alternatives to substantially lessen or avoid significant environmental impacts, an agency need not adopt infeasible mitigation measures or alternatives. (Pub. Resources Code, § 21002.1(c) [if "economic, social, or other conditions make it infeasible to mitigate one or more significant effects on the environment of a project, the project may nonetheless be carried out or approved at the discretion of a public agency"]; see also State CEQA Guidelines, § 15126.6(a) [an "EIR is not required to consider alternatives which are infeasible"].) CEQA defines "feasible" to mean "capable of being accomplished in a successful manner within a reasonable period of time, taking into account economic, environmental, social, and technological factors." (Pub. Resources Code, § 21061.1.) The State CEQA Guidelines add "legal" considerations as another indicia of feasibility. (State CEQA Guidelines, § 15364.) Project objectives also inform the determination of "feasibility." (*Jones v. U.C. Regents* (2010) 183 Cal. App. 4th 818, 828-829.) "'[F]easibility' under CEQA encompasses 'desirability' to the extent that desirability is based on a reasonable balancing of the relevant economic, environmental, social, and technological factors." (*City of Del Mar v. City of San Diego* (1982) 133 Cal.App.3d 401, 417; see also *Sequoyah Hills Homeowners Assn. v. City of Oakland* (1993) 23 Cal.App.4th 704, 715.) "Broader considerations of policy thus come into play when the decision making body is considering actual feasibility[.]" (*Cal. Native Plant Soc'y v. City of Santa Cruz* (2009) 177 Cal.App.4th 957, 1000 ("Native Plant"); see also Pub. Resources Code, § 21081(a)(3) ["economic, legal, social, technological, or other considerations" may justify rejecting mitigation and alternatives as infeasible] (emphasis added).)

Environmental impacts that are less than significant do not require the imposition of mitigation measures. (*Leonoff v. Monterey County Board of Supervisors* (1990) 222 Cal.App.3d 1337, 1347.)

The California Supreme Court has stated, "[t]he wisdom of approving . . . any development project, a delicate task which requires a balancing of interests, is necessarily left to the sound discretion of the local officials and their constituents who are responsible for such decisions. The law as we interpret and apply it simply requires that those decisions be informed, and therefore balanced." (*Citizens of Goleta Valley v. Board of Supervisors* (1990) 52 Cal.3d 553, 576.) In addition, perfection in a project or a project's environmental alternatives is not required; rather, the requirement is that sufficient information be produced "to permit a reasonable choice of alternatives so far as environmental aspects are concerned." Outside agencies (including courts) are not to "impose unreasonable extremes or to interject [themselves] within the area of discretion as to the choice of the action to be taken." (*Residents Ad Hoc Stadium Com. v. Board of Trustees* (1979) 89 Cal.App.3d 274, 287.)

B. FINDINGS REGARDING ENVIRONMENTAL IMPACTS NOT REQUIRING MITIGATION

The City Council hereby finds that the following potential environmental impacts of the Project are less than significant and therefore do not require the imposition of Mitigation Measures.

1. AESTHETICS

a. *Scenic Vistas*

Threshold: Would the project have a substantial adverse effect on a scenic vista?

Finding: Less than significant (Draft EIR, p. 7-1.)

Explanation: **Specific Plan-Phase I/Future Development Areas**

Scenic vistas that are visible from the South Ontario Logistics Center Specific Plan (Project) site include the San Gabriel Mountains and the San Bernardino National Forest, which are located at the north end of the City of Ontario (City). Construction of the Project site would result in alterations to the scenic vistas views. However, while construction activities on the Project site would modify foreground views as observed by some viewers, construction is temporary and considering the existing nature of the Project site, developed nature of surrounding areas, and the current partially obscured views from existing off-site development, the changes the construction activities would represent are not considered to be substantial. Additionally, because most views are already obscured, limited, and short-in duration, views as seen by the majority of viewers would not be significantly adversely affected. Therefore, while construction of the Project site would change the existing views toward the mountains, impacts associated with adversely affecting a scenic vista would be less than significant.

Upon completion of construction on the Project site, the new structure would be a new permanent visual element in the environment. The new structures and operations associated with the Project would change the foreground views of the San Gabriel Mountains as observed from viewers looking north, across the site. However, most views are already obscured, limited, and short-in duration so views, as seen to the north, would not be significantly adversely affected.

SB330 Replacement Site

The proposed rezoning of the SB330 Replacement Site would not substantially change the overall character of this area, nor would it alter views of any scenic vista in comparison to current zoning. No development is proposed at this time. Any future development would be required to follow the City's standard discretionary review

process, including compliance with the City's municipal code and CEQA. No significant impacts are anticipated in this regard. (Draft EIR, pp. 7-1 through 7-2.)

b. *Scenic Resources*

Threshold: Would the Project substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway?

Finding: No impact. (Draft EIR, p. 7-2.)

Explanation: **Specific Plan-Phase I/Future Development Areas**

The Project site is located approximately 0.80 miles east of State Route 83 (CA-83), the closest designated scenic highway; 2.7 miles south of State Route 60 (CA-60); 4.5 miles west of Interstate 15 (I-15); and 7.5 miles north of State Route 91 (CA-91). The nearest scenic corridors are Euclid Avenue, located four miles north and Mission Boulevard, located approximately six miles north. The Project would not substantially damage these scenic resources as the distance from scenic resources is too great to have a negative influence on scenic resources. Therefore, no impact will occur.

Upon completion of construction on the Project site, the new structure would be a new permanent visual element in the environment. The new structures and operations associated with the Project would change the foreground views of the San Gabriel Mountains as observed from viewers looking north, across the site. However, most views are already obscured, limited, and short-in duration so views, as seen to the north, would not be significantly adversely affected.

SB330 Replacement Site

The proposed rezoning of the SB330 Replacement Site to higher density would not have any greater impact to these resources, as the proposed rezoning would not affect the limits of development, and no development is proposed at this time. Any future development would be subject to the City's standard discretionary review process, compliance with the City's municipal code, and CEQA compliance. No significant impacts are anticipated. (Draft EIR, p. 7-2.)

c. Visual *Character*

Threshold: In non-urbanized areas, would the project substantially degrade the existing visual character or quality of public view of the site and its surroundings? If the project is in an urbanized area, would the project conflict with applicable zoning and other regulations governing scenic quality?

Finding: Less than significant. (Draft EIR, p. 7-2.)

Explanation: **Specific Plan-Phase I/Future Development Areas**

The Project would be constructed in a rural landscape within a previously developed area and would include parcels designated as general industrial and business park land use zones with prominent views of the San Gabriel Mountains to the north and vague views of the San Bernardino Mountains to the east; all visible from the Project site. Construction of the Project would result in grading over approximately 219.39 acres to accommodate development of the approximately 5.4 million-square-foot Project encompassing eight buildings, as well as associated parking, right-of-way dedications, driveways, sidewalks, and landscaping. Construction of the Project site would result in temporary visual changes to the site. Construction activities would involve earthmoving and grading activities and views from off-site areas of the work and construction equipment would be visible during this time. In addition, building of the proposed structures and interior site elements such as paving, installation of utilities, and installation of landscaping would result in temporary visual changes to the site. However, because the site is relatively flat and does not contain substantial variation in landforms, these activities would not result in substantial alteration of existing grades or any slopes that represent areas of substantial scenic quality. Site grading would comply with City standards, ordinances, and codes. Conformance with these codes would help reduce the potential stark changes to the visual environment during construction.

Because of its temporary nature, views of the site's construction would be typical of other construction activities, and because construction would not substantially contrast with surrounding uses or other ongoing construction in the vicinity, these impacts are less than significant. Therefore, as discussed above, although construction would change the site's appearance, it would not result in a substantial degradation to the existing visual character or quality of the site.

Upon completion of the Project, a permanent change to the existing views of the site from Merrill Avenue, the surrounding residencies, and other surrounding uses and existing development would occur. The Project would be a total of 5.4 million square feet and is anticipated to be a typical concrete tilt-up structure similar to other industrial/ business park uses in the vicinity. To help reduce visual impacts, the warehouse would be designed in accordance with all required design and development standards of the City. The Project site would be of a high-quality development and would meet the proposed goals, policies, and actions in the General Plan. Additionally, the Project would be consistent with and is an in-kind use with other industrial development in the area.

More specifically, the Project buildings would be no more than 45 feet at their maximum height. The exterior of the building also would be articulated and at varying depths with windows and color variations in the paint scheme. Although the building would differ in appearance from some surrounding uses, it would not substantially degrade the existing visual character of the site or public views. To further reduce changes in the visual environment, the Project site would incorporate landscaping to visually buffer the structures and would include various embellishments such as trees, shrubs and ground covers, and other visual accents along the perimeter of the site and adjacent to the exterior walls of the proposed structures to compliment the surrounding site. Therefore, impacts would be less than significant.

SB330 Replacement Site

The proposed rezoning of the SB330 Replacement Site to higher density would not have any greater impact to these resources, as the proposed rezoning would not affect the limits of development, and no development is proposed at this time. Any future development would be subject to the City's standard discretionary review process, compliance with the City's municipal code, and CEQA compliance. No significant impacts are anticipated. (Draft EIR, pp. 7-2 through 7-3.)

d. *Light and* Glare

Threshold: Would the Project create a new source of substantial light or glare which would adversely affect day or nighttime views in the area?

Finding: Less than significant. (Draft EIR, p. 7-3.))

Explanation: **Specific Plan-Phase I/Future Development Site**

The urbanized nature of the Project area would lead to a high baseline of light and glare from industrial and commercial businesses and vehicle lights traveling at night. Construction of Phase I of the Project site would be limited to daytime hours (unless otherwise approved by the City), and nighttime lighting would not be required until the site is operational. Therefore, no short-term impacts associated with light and glare would occur. These lights would be used to improve visibility and safety on the site and would be directed to maximize site visibility and minimize glare to sensitive receptors. Lighting would also be properly screened to avoid further impact to nearby receptors. Directly south of the Project area is an airport which emits a substantial amount of light and would increase illumination of the surrounding residences. In accordance with Ontario Municipal Code (OMC), §4-11.08, §4 11.09, and §6.03.050 (A), all parking facilities developed shall be provided with nighttime security lighting and designed to confine emitted light to the parking areas. This lighting may cause slight glare to the surrounding

residences and vehicles passing along the bordering roadways. The maximum permitted height of luminaires within a parking lot shall not exceed a height of 14 feet when there is no cutoff involved. If a 90 degree or greater cutoff is enacted, the maximum height shall not exceed that of 24 feet. Anything less than 90 degrees of cutoff, the maximum height of luminaire shall be 30 feet.

Consistent with the City's Development Code, all lighting used on the Project site is required to be directed and/or shielded to prevent the light from adversely affecting adjacent properties, and no structures or features that create adverse glare effects are permitted. Thus, all exterior lighting would be shielded/hooded to prevent light trespass onto nearby properties. Additionally, the Project would use a variety of non-reflective building materials, and although some new reflective improvements (i.e., windows and building front treatments) would be introduced to the site, the Project would not be a source of glare in the area. Therefore, long-term impacts associated with light and glare would be less than significant.

SB330 Replacement Site

The proposed rezoning of the SB330 Replacement Site to a slightly higher density would not have any greater impact to these resources, as the proposed rezoning would not affect the limits of development, and no development is proposed at this time. The slight increase in density would not change the overall character of this area. Furthermore, development of this area was already addressed as part of the City's TOP EIR. Any future development would be subject to the City's standard discretionary review process, compliance with the City's municipal code, and CEQA compliance. No significant impacts are anticipated. (Draft EIR, pp. 7-3 through 7-4.)

2. AGRICULTURE AND FORESTRY RESOURCES

a. *Forestland Zoning*

Threshold: Would the Project conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code section 12220(g)), timberland (as defined by Public Resources Code section 4526), or timberland zoned Timberland Production (as defined by Government Code section 51104(g)?

Finding: No impact. (Draft EIR, p. 4.1-18.)

Explanation:

Specific Plan-Phase I/Future Development Areas
Construction and Operations

The Project site does not include areas zoned as forestland, timberland or timberland designated as Timberland Production as

those classifications are defined in the cited code sections. The City's Zoning Map does not recognize or symbolize areas as forestland, timberland or timberland designated as Timberland Production. In fact, the Project site contains a limited number of stands of trees (Google Earth 2021 and site visit March 2021). Therefore, no impact would occur.

SB330 Replacement Site
Construction and Operations

As stated above, the City's Zoning Map does not recognize forest land or timberland on the SB330 Replacement Site. The SB330 Replacement Site would be located on land with various residential and commercial land use designations according to the City's TOP Land Use Map. Therefore, no impact would occur. (Draft EIR, p. 4.1-18.)

b. ***Loss of Forest Land***

Threshold: Would the Project result in the loss of forest land or conversion of forest land to non-forest use?

Finding: No impact. (Draft EIR, p. 4.1-19.)

Explanation: **Specific Plan-Phase I/Future Development Areas**
Construction and Operations
The Project would not result in the loss of forestland or the conversion of forestland to non-forest use. No parcels within or adjacent to the Project site are designated as forest land, as the City's Zoning Map and Land Use Plan map do not symbolize forest land. No impact would occur.

SB330 Replacement Site
Construction and Operations
The construction and operations of the SB330 Replacement Site would not result in the loss of forestland or the conversion of forestland to non-forest use. No parcels within or adjacent to the SB330 Replacement Site are designated as forest land, as the City's Zoning Map and Land Use Plan map do not symbolize forest land. No impact would occur. (Draft EIR, p. 4.1-19.)

C. AIR QUALITY

a. ***Air Quality Plans and Air Quality Standards***

Threshold: Would the Project conflict with or obstruct implementation of the applicable air quality plan; violate any air quality standard or contribute substantially to an existing or projected air quality violation?

Finding: Less than significant. (Draft EIR, pp. 4.2-18 through 4.2-19.)

Explanation: **SB330 Replacement Site**

The SB330 Replacement Site located along the Grove Avenue Corridor includes low density residential, low-medium density residential, medium density residential, neighborhood commercial, and agricultural land uses. The Project proposes rezoning the SB330 Replacement Site to a higher residential density to increase the maximum number of housing units allowed on the site. This action however does not propose any specific construction of new structures or redevelopment of the SB330 Replacement Site. Any future development of the SB330 Replacement Site would be subject to environmental regulations as required under CEQA and the City's standard discretionary review process.

The process of rezoning the SB330 Replacement Site for a higher residential density would not generate new emissions and thus would not conflict with or obstruct implementation of the AQMP. In fact, by "relocating" the 1,352 dwelling units of zoning potential from the Project site to the SB330 Replacement Site, the net effect is anticipated to be an overall reduction in air emissions in consideration of the SB330 Replacement Site DU's being at a higher density, generating less traffic per dwelling unit, and overall having reduced Vehicle Miles Travelled and associated air emissions due to the SB330 Replacement Site being in a higher density mixed-use environment in close proximity to transit and regional transportation facilities. Therefore, this impact would be less than significant. (Draft EIR, pp. 4.2-18 through 4.2-19.)

b. ***Cumulatively Considerable Pollutant Emissions***

Threshold: Would the Project result in a cumulatively considerable net increase of any criteria pollutant for which the Project region is non-attainment under an applicable state or federal ambient air quality standard?

Finding: Less than significant. (Draft EIR, p. 4.2-27.)

Explanation: **SB330 Replacement Site**

The net effect of relocating the 1,352 DU of zoning potential to the SB330 Replacement Sites is expected to have an overall net air quality benefit, regionally, due to reduced traffic and energy emissions from higher density development in a mixed mixed-use area with transit. There may be localized effects from the additional density, although this would be generally similar to the nature and extent of air quality impacts addressed in the City's TOP EIR. Also note that the SB330 Replacement Site is being considered by the City for even higher density as part of the City's TOP Update, which would have separate City review and CEQA analysis. Finally, any future residential development within the SB330 Replacement Site would be subject to applicable local, regional, state and federal air quality regulations as summarized under the Regulatory Framework

discussion above. Therefore, this impact would be less than significant. (Draft EIR, p. 4.2-27.)

c. *Sensitive Receptors*

Threshold: Would the Project expose sensitive receptors to substantial pollutant concentrations?

Finding: Less than significant. (Draft EIR, p. 4.2-33.)

Explanation: **Specific Plan – Phase 1**

Construction LST

Since CalEEMod calculates construction emissions based on the number of equipment hours and the maximum daily soil disturbance activity possible for each piece of equipment, equipment-specific grading rates are used to determine the maximum daily disturbed acreage for comparison to LSTs. Based on CalEEMod modeling, construction of Phase 1 and Phase 2 would use the same number of and types of equipment, therefore Table 4.2-13: Equipment-Specific Grading Rates of the Draft EIR, is used to determine the maximum daily disturbed acreage for comparison to LSTs. The appropriate SRA for the localized significance thresholds is the Southwest San Bernardino Valley Area (SRA 33) since this area includes the Project. LSTs apply to CO, NO2, PM10, and PM2.5. Project construction is anticipated to disturb a maximum of 4.0 acres in a single day.

According to the SCAQMD LST methodology, LSTs would apply to the operational phase of a project only if it includes stationary sources or attracts mobile sources that may spend long periods queuing and idling at the site (e.g., warehouse or transfer facilities). Since the Project includes the construction of a warehouse, among other industrial and business park uses, the operational phase LST protocol is conservatively applied to both the area source and on-site mobile source emissions. However, the CalEEMod model outputs do not separate on- and off-site emissions for mobile sources. Therefore, as a worst-case scenario assessment, this analysis conservatively includes all on-site Project-related stationary sources, on-site off-road equipment (forklifts), and three percent of the Project-related new mobile sources, since a portion of mobile sources could include trucks idling on-site. Projects that do not exceed the SRA's operation LSTs would not result in significant impact.

The SCAQMD's methodology states that "off-site mobile emissions from the Project should not be included in the emissions compared to LSTs." Therefore, only emissions included in the CalEEMod "on-site" emissions outputs were considered. The nearest sensitive receptor to Phase 1 is a single-family residence located 150 feet (46 meters) east of the Project. Therefore, LSTs for receptors located at 46 meters were interpolated and utilized for this analysis. Table 4.2-14: Phase 1 – Unmitigated Localized Significance of Construction

Emissions, presents the results of localized emissions during each construction phase. In addition, construction, paving, and architectural coating emissions were also combined since these phases of construction are anticipated to overlap. Because LST emissions do not include VOCs, construction **Mitigation Measure AQ-1** was not included when calculating construction LST. Table 4.2-14 of the Draft EIR shows that emissions of these pollutants on the peak day of construction would not result in significant concentrations of pollutants at nearby sensitive receptors. Significant impacts would not occur concerning LSTs during construction. (Draft EIR, pp. 4.2-30 through 4.2-31.)

Future Development Areas – Phase 2

Construction LST

The SCAQMD's methodology states that "off-site mobile emissions from the Project should not be included in the emissions compared to LSTs." Therefore, only emissions included in the CalEEMod "on-site" emissions outputs were considered. The nearest sensitive receptors to Phase 2 is a single-family residence located 85 feet (26 meters) north of the Project. Therefore, LSTs for receptors located at 26 meters were interpolated and utilized for this analysis. Table 4.2-16 Phase 2 – Unmitigated Localized Significance of Construction Emissions of the Draft EIR, presents the results of localized emissions during each construction phase. In addition, construction, paving, and architectural coating emissions were also combined since these phases of construction are anticipated to overlap. Because LST emissions do not include VOCs, **Mitigation Measure AQ-1** was not included when calculating construction LST. Table 4.2-16 shows that emissions of these pollutants on the peak day of construction would not result in significant concentrations of pollutants at nearby sensitive receptors. Significant impacts would not occur concerning LSTs during construction. (Draft EIR, p. 4.2-38.)

Criteria Pollutant Health Impacts

Localized effects of on-site Project emissions on nearby receptors for Phase 1 would be less than significant. The LSTs represent the maximum emissions from a project that are not expected to cause or contribute to an exceedance of the most stringent applicable state or federal ambient air quality standard. The LSTs were developed by the SCAQMD based on the ambient concentrations of that pollutant for each SRA and distance to the nearest sensitive receptor. The ambient air quality standards establish the levels of air quality necessary, with an adequate margin of safety, to protect public health, including protecting the health of sensitive populations. However, as discussed above, neither the SCAQMD nor any other air district currently have methodologies that would provide Lead Agencies and CEQA practitioners with a consistent, reliable, and

meaningful analysis to correlate specific health impacts that may result from a proposed project's mass emissions. Information on health impacts related to exposure to ozone and particulate matter emissions published by the U.S. EPA and CARB have been summarized above and discussed in the Regulatory Framework section. Health studies are used by these agencies to set the Federal and State AAQS. None of the health-related information can be directly correlated to the pounds/day or tons/year of emissions estimated from a single, proposed project. Therefore, without thresholds and standards there is no way to ascertain if there is a significant environmental impact. (Draft EIR, p. 4.2-33.)

Carbon Monoxide Hotspots

An analysis of CO "hot spots" is needed to determine whether the change in the level of service of an intersection resulting from the Project would have the potential to result in exceedances of the CAAQS or NAAQS. It has long been recognized that CO exceedances are caused by vehicular emissions, primarily when vehicles are idling at intersections. Vehicle emissions standards have become increasingly stringent in the last 20 years. Currently, the CO standard in California is a maximum of 3.4 grams per mile for passenger cars (requirements for certain vehicles are more stringent). With the turnover of older vehicles, introduction of cleaner fuels, and implementation of control technology on industrial facilities, CO concentrations have steadily declined. Accordingly, with the steadily decreasing CO emissions from vehicles, even very busy intersections do not result in exceedances of the CO standard.

The South Coast Air Basin (SCAB) was re-designated as attainment in 2007 and is no longer addressed in the SCAQMD's AQMP. The 2003 AQMP is the most recent version that addresses CO concentrations. As part of the SCAQMD CO Hotspot Analysis, the Wilshire Boulevard/Veteran Avenue intersection, one of the most congested intersections in Southern California with an average daily traffic (ADT) volume of approximately 100,000 vehicles per day, was modeled for CO concentrations. This modeling effort identified a CO concentration high of 4.6 ppm, which is well below the 35-ppm Federal standard. Therefore, any project generating less than 100,000 vehicles per day could not exceed the CO standard. As such, it can be reasonably inferred that CO hotspots would not be experienced at any vicinity intersections resulting from 7,288 additional vehicle trips attributable to Phase 1. Therefore, impacts would be less than significant. (Draft EIR, p. 4.2-35.)

Construction-Related Diesel Particulate Matter

Project construction would result in the generation of DPM emissions from the use of required off-road diesel equipment. The amount to which the receptors are exposed (a function of concentration and duration of exposure) is the primary factor used to determine health

risk (i.e., potential exposure to TAC emission levels that exceed applicable standards). Health-related risks associated with diesel-exhaust emissions are primarily linked to long-term exposure and the associated risk of contracting cancer.

The use of diesel-powered construction equipment would be temporary and episodic. The duration of exposure would be short and exhaust from construction equipment dissipates rapidly. Current models and methodologies for conducting health risk assessments are associated with longer-term exposure periods of 9, 30, and 70 years, which do not correlate well with the temporary and highly variable nature of construction activities. The California Office of Environmental Health Hazard Assessment (OEHHA) has not identified short-term health effects from DPM. Construction is temporary and would be transient throughout the site (i.e., move from location to location) and would not generate emissions in a fixed location for extended periods of time which would limit the exposure of any proximate individual sensitive receptor to TACs.

Additionally, construction is subject to and would comply with California regulations (e.g., California Code of Regulations, Title 13, §§2485 and 2449), which reduce DPM and criteria pollutant emissions from in-use off-road diesel-fueled vehicles and limit the idling of heavy-duty construction equipment to no more than five minutes. These regulations would further reduce nearby sensitive receptors' exposure to temporary and variable DPM emissions. Given the temporary and intermittent nature of construction activities likely to occur within specific locations in the Project site (i.e., construction is not likely to occur in any one location for an extended time), the dose of DPM of any one receptor is exposed to would be limited.

A Health Risk Assessment (HRA) was conducted based on the SCAQMD's Health Risk Assessment Guidance for Analyzing Cancer Risks from Mobile Source Diesel Idling Emissions for CEQA Air Quality Analysis and the SCAQMD Risk Assessment Procedures and the guidance from OEHHA. Construction-related activities would result in Project-generated emissions of DPM from the exhaust of off-road, heavy-duty diesel equipment for site preparation (e.g., clearing, grading); paving; application of architectural coatings; on-road truck travel; and other miscellaneous activities. For construction activity, DPM is the primary toxic air contaminant of concern. On-road diesel-powered haul trucks traveling to and from the construction area to deliver materials and equipment are less of a concern because they would not stay on the site for long durations. Diesel exhaust from construction equipment operating at the site poses a health risk to nearby sensitive receptors.

PM10 construction emissions rates in grams per second were calculated from the total annual on-site exhaust emissions reported

in CalEEMod during construction. Maximum (worst case) PM10 exhaust construction emissions over the entire construction period were used in AERMOD, a U.S. EPA-approved dispersion model, to approximate construction DPM emissions. Risk levels were calculated based on the California Office of Environmental Health Hazard Assessment (OEHHA) guidance document, Air Toxics Hot Spots Program Risk Assessment Guidelines (February 2015). SCAQMD's threshold for cancer risk is ten in-one-million and the acute or chronic noncancer hazard index is one. Projects that do not exceed these thresholds would not result in a significant impact.

The construction phase HRA was conducted for the Project (see Appendix B2 for HRA modeling results of the FEIR). Results of the assessment indicate that the cancer risk would be 8.80 in one million, which would not exceed the SCAQMD threshold of 10 in in-one one-million. Non-cancer hazards for DPM would be below SCAQMD threshold of 1.0, with a chronic hazard index computed at 0.006 and an acute hazard index of 0.03. Therefore, construction risk levels would be less than SCAQMD thresholds. Impacts would be less than significant. (Draft EIR, pp. 4.2-35 through 4.2-36.)

Operational Diesel Particulate Matter

An operational phase HRA was also conducted for this Project. Analysis included both on-site and off-site impacts from the diesel trucks accessing the warehouse development on nearby residential and worker receptors.

Vehicle DPM emissions were estimated using PM10 emission factors generated with CARB's On-Road Motor Vehicle Emission Inventory Model (EMFAC) 2017. EMFAC is a mathematical model that was developed to calculate emission rates from motor vehicles that operate on highways, freeways, and local roads in California and is commonly used by CARB to project changes in future emissions from on-road mobile sources. EMFAC, incorporates regional motor vehicle data, information and estimates regarding the distribution of vehicle miles traveled (VMT) by speed, and number of starts per day.

For this Project, annual average PM10 emission factors were generated by running EMFAC for vehicles in the SCAQMD within the South Coast portion of San Bernardino County. EMFAC generates emission factors in terms of grams of pollutant emitted per vehicle activity and can calculate a matrix of emission factors at specific values of vehicle speed, temperature, and relative humidity. Truck emissions were based on the first possible year of operations for a fleet mix of various aged vehicles, as opposed to average emissions over a 30-year window. Trucks were assumed to travel at a speed of 45 to 55 miles per hour (mph) (depending on roadway) for off-site truck travel and 15 mph for on-site truck travel.

Air dispersion modeling was performed using the United States Environmental Protection Agency (U.S. EPA) AERMOD dispersion model. AERMOD is a steady-state, multiple-source, Gaussian dispersion model designed for use with emission sources situated in terrain where ground elevations can exceed the stack heights of the emission sources. AERMOD requires hourly meteorological data consisting of wind vector, wind speed, temperature, stability class, and mixing height. Uniform Cartesian receptors were used to evaluate the locations of the maximally exposed sensitive receptors. Surface and upper air meteorological data from the Chino Airport Monitoring Station provided by the SCAQMD was selected as being the most representative meteorology. In addition, National Elevation Dataset (NED) terrain data was imported into AERMOD for the Project. The modeling and analysis were prepared in accordance with the SCAQMD Modeling Guidance for AERMOD.

Idling emissions were represented in the model via line volume sources along each loading dock and 15 minutes of idling for each truck was assumed. Truck travel emissions were represented in the model via line volume sources along local roads and inside the facility where the trucks are expected to travel. Trucking routes were determined per the traffic impact analysis conducted for the proposed Project.

Note that the concentration estimate developed using this methodology is conservative and is not a specific prediction of the actual concentrations that would occur at the Project site any one point in time. Actual 1-hour and annual average concentrations are dependent on many variables, particularly the number and type of vehicles and equipment operating at specific distances during time periods of adverse meteorology.

A health risk computation was performed to determine the risk of developing an excess cancer risk calculated on a 30-year exposure scenario using CARB's Risk Assessment Stand Alone Tool (RAST). Health risks were analyzed at the point of maximum impact and are a conservative estimate. The pollutant concentrations are then used to estimate the long-term cancer health risk to an individual as well as the non-cancer chronic health index. SCAQMD's threshold for cancer risk is ten 10 in-one-million and the acute or chronic noncancer hazard index is one. Projects that do not exceed these thresholds would not result in a significant impact.

The cancer and chronic health risks are based on the annual average concentration of PM10 (used as a proxy for DPM). As DPM does not have short-term toxicity values, acute risks were conservatively evaluated using hourly PM10 concentrations and the REL for acrolein. The chronic and carcinogenic health risk calculations are based on the standardized equations contained in the U.S. EPA

Human Health Evaluation Manual (1991) and the OEHHA Guidance Manual (2015).

Based on the AERMOD outputs, the highest annual average diesel PM10 emission concentrations from diesel truck traffic near sensitive receptors would be 0.00161 µg/m3. The calculations conservatively assume no cleaner technology with lower emissions in future years. The highest calculated carcinogenic risk resulting from the Project is 1.39 per million. As such, the carcinogenic risk would not exceed 10 in one million and impacts related to cancer risk would be less than significant.

Acute and chronic impacts were also evaluated in the HRA. An acute or chronic hazard index of 1.0 is considered individually significant. The hazard index is calculated by dividing the acute or chronic exposure by the reference exposure level. The highest maximum chronic and acute hazard index associated with both DPM and acrolein emissions from the Project would be 0.0003 and 0.0028, respectively. As a result, non-carcinogenic hazards are calculated to be within acceptable limits. Therefore, impacts would be less than significant. (Draft EIR, pp. 4.2-33 through 4.2-38.)

Project Buildout (Phase 1 and Phase 2)

Construction LST and Operational LST

Construction and Operational LST focus on localized emission impacts on the nearest sensitive receptor, therefore it is not appropriate to measure impacts of Phase 1 emissions on the sensitive receptor nearest to Phase 2 and vice versa. As discussed previously, Phase 1 and Phase 2 construction and operational emissions do not exceed the LST standards based on the distance to the nearest sensitive receptor. (Draft EIR, p. 4.2-41.)

Criteria Pollutant Health Impacts

As previously discussed, localized effects of on-site Project emissions on nearby receptors for Phase 1 and Phase 2 would be less than significant. The LSTs represent the maximum emissions from a project that are not expected to cause or contribute to an exceedance of the most stringent applicable state or federal ambient air quality standard. However, as discussed above, neither the SCAQMD nor any other air district currently have methodologies that would provide Lead Agencies and CEQA practitioners with a consistent, reliable, and meaningful analysis to correlate specific health impacts that may result from a proposed project's mass emissions. None of the health-related information can be directly correlated to the pounds/day or tons/year of emissions estimated from a single, proposed project. Therefore, without thresholds and standards there is no way to ascertain if there is a significant environmental impact. (Draft EIR, pp. 4.2-41 through 4.2-42.)

Carbon Monoxide Hotspots

As noted above, CO hotspots were not experienced at the Wilshire Boulevard/Veteran Avenue intersection with approximately 100,000 vehicles per day. Therefore, any project generating less than 100,000 vehicles per day would not exceed the CO standard. As such, it can be reasonably inferred that CO hotspots would not be experienced at any vicinity intersections resulting from 12,502 additional vehicle trips attributable to Phase 1 and Phase 2. Therefore, impacts would be less than significant. (Draft EIR, p. 4.2-42.)

Construction-Related Diesel Particulate Matter

Construction of Phase 1 and Phase 2 would occur sequentially, and emissions would cease once construction is completed. As noted above, a construction phase HRA (see Appendix B2 for HRA modeling results of FEIR) determined that the cancer risk would be 8.80 in one million, which would not exceed the SCAQMD threshold of 10 in one million. Non-cancer hazards for DPM would be below SCAQMD threshold of 1.0, with a chronic hazard index computed at 0.006 and an acute hazard index of 0.03. Therefore, construction risk levels would be less than SCAQMD thresholds. Impacts would be less than significant. (Draft EIR, p. 4.2-42.)

Operational Diesel Particulate Matter

Health risks from the combined operations of both Phase 1 and Phase 2 were evaluated above under the Health Risks section . The carcinogenic risk would not exceed 10 in one million and non-carcinogenic hazards would not exceed 1. Therefore, impacts would be less than significant. (Draft EIR, p. 4.2-42.)

SB330 Replacement Site

The net effect of relocating the 1,352 dwelling units (DU) of zoning potential to the SB330 Replacement Site is expected to have an overall net air quality benefit, regionally, due to reduced traffic and energy emissions from higher density development in a mixed-use area with transit. There may be localized effects from the additional density, although this would be generally similar to the nature and extent of air quality impacts addressed in the City's TOP EIR. With respect to health risk, there is a further favorable benefit of moving the residential zoning from the Project site to the SB330 Replacement Site, in that developing 1,352 dwelling units on the Project site would be adjacent to the Chino Airport and recently approved adjacent industrial uses (Ontario Ranch Business Park to the west and the Merrill Commerce Center to the east). Also note that the SB330 Replacement Site is being considered by the City for even higher density as part of the City's TOP Update, which would have separate City review and CEQA analysis. Finally, any future residential development within the SB330 Replacement Site would be subject to applicable local, regional, state, and federal air quality

regulations as summarized in the DEIR. Therefore, this impact would be less than significant. (Draft EIR, p. 4.2-42.)

d. ***Other Adverse Emissions***

Threshold: Would the Project result in other emissions (such as those leading to odors) adversely affecting a substantial number of people?

Finding: Less than significant. (Draft EIR, p. 4.2-43.)

Explanation: **Specific Plan – Phase 1/Future Development – Phase 2**

Construction

During construction activities, construction equipment exhaust and application of asphalt and architectural coatings would temporarily generate odors. Any construction-related odor emissions would be temporary and intermittent. Standard construction requirements and compliance with established regulations (Code of Federal Regulations [CFR], Part 1926 – *Safety and Health Regulations for Construction,* Subpart H - *Materials Handling, Storage Use and Disposal, et al*.) addressing construction materials storage, use, and disposal would minimize odor impacts from construction activity. Furthermore, short-term construction-related odors are expected to cease upon the drying or hardening of odor-producing materials. Therefore, impacts associated with construction-generated odors are considered less than significant.

Operations

The type of facilities that are considered to have objectionable odors include wastewater treatment plants, compost facilities, landfills, solid waste transfer stations, fiberglass manufacturing facilities, paint/ coating operations (e.g., auto body shops), dairy farms, petroleum refineries, asphalt batch plants, chemical manufacturing, and food manufacturing facilities. The warehouses proposed under the Project would not result in these types of uses. In addition, the proposed Project would be required to comply with SCAQMD Rule 402 which prevents discharging nuisance odors. Therefore, the Project would not create objectionable odors.

SB330 Replacement Site

The net effect of relocating the 1,352 DU of zoning potential to the SB330 Replacement Sites is expected to have an overall net air quality benefit, regionally, due to reduced traffic and energy emissions from higher density development in a mixed-use area with transit. There may be localized effects from the additional density, although this would be generally similar to the nature and extent of

air quality impacts addressed in the City's TOP EIR. The slightly higher density in the SB330 Replacement Site area would be expected to have similar other emissions (odors) as the current lower density zoning. Also note that the SB330 Replacement Site is being considered by the City for even higher density as part of the City's TOP Update, which would have separate City review and CEQA analysis. Finally, any future residential development within the SB330 Replacement Site would be subject to applicable local, regional, state and federal air quality regulations as summarized under the Regulatory Framework discussion above. Therefore, this impact would be less than significant.

Conclusion

The Project will comply with all applicable SCAQMD rules including Rule 402 which prevents discharging nuisance odors. In addition, the Project does not include any land uses that have been identified by the SCAQMD as odor sources. Therefore, the Project would not create objectionable odors and this impact would be less than significant. (Draft EIR, pp. 4.2-43 through 4.2-44.)

1. 4. **BIOLOGICAL RESOURCES**

a. ***Sensitive Species***

Threshold: Would the Project have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service?

Finding: Less than significant. (Draft EIR, p. 4.3-17.)

Explanation: **Specific Plan – Phase I**

Construction

Sensitive Plants

No special-status plant species were detected on the Project site during the reconnaissance surveys and no special-status plant species are expected to occur on the Project site due to lack of suitable habitat. The Project site's lack of sensitive plant species is summarized in *Table 4.3-1, Plant Species with the Potential of Occurring on the Project Site* above. Longstanding weed abatement/fire break disking and other anthropogenic disturbances have likely altered soil chemistry and other substrate characteristics such that on-site soils may not currently be capable of supporting sensitive plant species. Therefore, the development of the Project

would not result in a substantial adverse effect, either directly or through habitat modification, on any plant specifies identified as a candidate, sensitive or special status species in local or regional plans, policies, or regulation or by the CDFW or USFWS. Hence, no significant impact to special-status plant species or their habitat would occur. (Draft EIR, pp. 4.3-17 through 4.3-18.)

Operations

Operations of the Project will not have a significant effect on sensitive plants, animals or their habitat. Once construction activities for the Project are completed, no additional impacts will occur with Project operations as it relates to sensitive species. Edge effects (including lighting, noise, trash/debris, urban and stormwater run-off, toxic materials, exotic plant and animal infestation, dust, trampling, and unauthorized recreation) shall be minimized by landscaping, elevation difference, minimization of effects, and compensatory mitigation. Therefore, impacts will be less than significant, and no further mitigation will be required. (Draft EIR, p. 4.3-19.)

b. ***Riparian Habitat***

Threshold: Would the Project have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service?

Finding: Less than significant. (Draft EIR, p. 4.3-22.)

Explanation: **Specific Plan – Phase I**

Construction and Operations

The Project site contains approximately 19 acres of stock/retention ponds and channels. These ponds and channels are man-made, for agricultural use and fed by wells. The man-made ponds and channels are not connected to a natural stream, nor do they divert natural flow from any river, stream, or lake. Since the source of the water for these man-made features are not part of a natural stream, river, or lake, the stock ponds are not considered jurisdictional under the CDFW Lake and Streambed Alteration Program. The program restricts entities so that they may not substantially divert or obstruct any naturally occurring material from stream, river, or lake under the CDFW Lake and Streambed Alternation Program. Therefore, the stock ponds, which receives no hydrologic flow on the Project site are not part of the “natural flow” of a stream, river, or lake, and would not be considered jurisdictional by CDFW. Further, the man-made

stock ponds are not adjacent to and are not considered Waters of the United States (WUS). The stock ponds are isolated features that are not tributary to nor do they have a significant nexus (biological, chemical, or physical connection) to traditional navigable waters of the United States. Therefore, the man-made ponds on the Project site would not be considered federally jurisdictional under the CWA. In addition, the General Biological Assessment determined that no vernal pools were observed on-site and species such as the San Diego fairy shrimp would not be present on the Project site. Therefore, a less than significant impact would occur in this regard.

Specific Plan – Future Development Areas
Construction and Operations

The Stock ponds on the Project site do not meet the criteria under the CDFW Lake and Streambed Alternation nor considered WUS. A less than significant impact would occur in this regard.

SB330 Replacement Site
Construction and Operations

The SB330 Replacement Site may contain riparian and wetland areas, including agricultural drainages and ponds. The relatively slight increase in residential density is not considered a significant impact as the SB330 Replacement Site area is already planned for future development as part of the City's TOP, and the impacts of such development were evaluated in the City's TOP EIR. Prior to any site-specific development, potential future residential development would be required to conduct site-specific biological resource surveys as part of the City's standard discretionary review process, including compliance with CEQA and applicable local, state, and federal regulations. Therefore, a less than significant impact would occur.

Conclusion

The Project site and SB330 Replacement Site do not contain suitable riparian or wetland habitat as confirmed by HES's General Biological Assessment and the City's Areas of Potential Occurrence of Sensitive Species map. Therefore, a less than significant impact would occur during Phase I and future development areas without mitigation implemented. (Draft EIR, pp. 4.3-22 through 4.3-23.)

c. *Wetlands*

Threshold: Would the Project have a substantial adverse effect on federally protected wetlands as defined by Section 404 of the Clean Water Act (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?

Finding: Less than significant. (Draft EIR, p. 4.3-22.)

Explanation: **Specific Plan – Phase I**

Construction and Operations

The Project site contains approximately 19 acres of stock/retention ponds and channels. These ponds and channels are man-made, for agricultural use and fed by wells. The man-made ponds and channels are not connected to a natural stream, nor do they divert natural flow from any river, stream, or lake. Since the source of the water for these man-made features are not part of a natural stream, river, or lake, the stock ponds are not considered jurisdictional under the CDFW Lake and Streambed Alteration Program. The program restricts entities so that they may not substantially divert or obstruct any naturally occurring material from stream, river, or lake under the CDFW Lake and Streambed Alternation Program. Therefore, the stock ponds, which receives no hydrologic flow on the Project site are not part of the "natural flow" of a stream, river, or lake, and would not be considered jurisdictional by CDFW. Further, the man-made stock ponds are not adjacent to and are not considered Waters of the United States (WUS). The stock ponds are isolated features that are not tributary to nor do they have a significant nexus (biological, chemical, or physical connection) to traditional navigable waters of the United States. Therefore, the man-made ponds on the Project site would not be considered federally jurisdictional under the CWA.

In addition, the General Biological Assessment determined that no vernal pools were observed on-site and species such as the San Diego fairy shrimp would not be present on the Project site. Therefore, a less than significant impact would occur in this regard.

Specific Plan – Future Development Areas
Construction and Operations

The Stock ponds on the Project site do not meet the criteria under the CDFW Lake and Streambed Alternation nor considered WUS. A less than significant impact would occur in this regard.

SB330 Replacement Site
Construction and Operations

The SB330 Replacement Site may contain riparian and wetland areas, including agricultural drainages and ponds. The relatively slight increase in residential density is not considered a significant impact as the SB330 Replacement Site area is already planned for future development as part of the City's TOP, and the impacts of such development were evaluated in the City's TOP EIR. Prior to any site-specific development, potential future residential development would be required to conduct site-specific biological resource surveys as part of the City's standard discretionary review process, including compliance with CEQA and applicable local, state, and federal regulations. Therefore, a less than significant impact would occur.

Conclusion

The Project site and SB330 Replacement Site do not contain suitable riparian or wetland habitat as confirmed by HES's General Biological Assessment and the City's Areas of Potential Occurrence of Sensitive Species map. Therefore, a less than significant impact would occur during Phase I and future development areas without mitigation implemented. (Draft EIR, pp. 4.3-22 through 4.3-23.)

d. ***Wildlife Movement***

Threshold: Would the Project interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?

Finding: Less than significant. (Draft EIR, p. 4.3-25.)

Explanation: **Specific Plan – Phase I**

Operation

The Project site does not function as a wildlife movement corridor. As previously stated, the Project site has been previously disturbed for agricultural use with multiple manmade structures present on the Project site. Operation of the Project would involve warehousing and commercial uses on the Project site. This usage would be consistent with previous uses of the site in that both would reduce the area's ability to act as a natural wildlife corridor. Therefore, operation of the Project would not interfere with the movement of any native resident or migratory fish or wildlife species. The Project would neither interfere with any established native resident or migratory wildlife

corridors, nor impede the use of native wildlife nursery sites. Thus, operation of the Project would not create a significant impact.

SB330 Replacement Site
Construction and Operations

The SB330 Replacement Site is characterized by existing commercial, residential, and agricultural uses as well as vacant parcels. The SB330 Replacement Site is not a wildlife corridor or native wildlife nursery site. The Project only proposes to rezone the SB330 Replacement Site area to allow higher density, as this area is already contemplated for development consistent with the City's TOP and has been evaluated in the City's TOP EIR. Prior to any site-specific development, potential future residential development would be required to conduct site-specific biological resource surveys as part of the City's standard discretionary review process, including compliance with CEQA and applicable local, state, and federal regulations. Therefore, a less than significant impact would occur. (Draft EIR, pp. 4.3-25 through 4.3-26.)

e. ***Local Policies and Ordinances***

Threshold: Would the Project conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?

Finding: Less than significant. (Draft EIR, p. 4.3-26.)

Explanation: **Specific Plan – Phase I**

Construction and Operations

TOP supports the protection of high value habitat areas by establishing habitat conservation areas and complying with state and federal regulations regarding protected species. Since the Project site does not support high value habitats or protected species, the Project will not conflict with these policies.

The City's Municipal Code has a provision to protect parkway trees within public rights-of-way and requires a permit to remove or relocate any trees, and planting of replacement trees or a cash in-lieu fee compensation for any tree removed. Should the Project result in the removal of trees that are considered parkway trees, a permit will be required. According to the Arborist report conducted for the Project site, the site does not contain any trees of significant value. Further, the Project site contains no trees that fall under the definition of a heritage tree, as defined in the City's Development Code

§6.05.020. The Arborist report determined that there are no significant or specimen trees on the Project site. None of the trees onsite are in excellent condition or have a condition rating greater than 70%. It was determined that no trees need any protective measures to preserve the health of the tree during the development or redevelopment activity. Lastly, no trees are viable candidates for relocation due to the condition they are currently in. Therefore, buildout of the Project would result in a less than significant impact.

Lastly, no impacts to any adopted Habitat Conservation Plan, Natural Community Conservation Plan, or Other Approved Local, Regional, or State Habitat Conservation plan are anticipated upon Project buildout. Therefore, no impact will occur in this regard.

Specific Plan – Future Development Areas
Construction and Operations

Refer to discussion above for Phase I of the Project site.

SB330 Replacement Site
Construction and Operations

The relatively slight increase in residential density is not considered a significant impact as the SB330 Replacement Site area is already planned for future development as part of the City's TOP, and the impacts of such development were evaluated in the City's TOP EIR. Prior to any site-specific development, potential future residential development would be required to conduct site-specific biological resource surveys, including an arborist report, as part of the City's standard discretionary review process, including compliance with CEQA and applicable local, state, and federal regulations. Therefore, a less than significant impact would occur.

Conclusion

The Project site and SB330 Replacement Site do not conflict with any local policies or ordinances protecting biological resources. Therefore, a less than significant impact would occur during Phase I and future development areas without mitigation implemented. (Draft EIR, pp. 4.3-26 through 4.3-27.)

f. ***Habitat Conservation Plans***

Threshold: Would the Project conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan?

Finding: No impact. (Draft EIR, 4.3-26.)

Explanation: **Specific Plan – Phase I**

Construction and Operations

TOP supports the protection of high value habitat areas by establishing habitat conservation areas and complying with state and federal regulations regarding protected species. Since the Project site does not support high value habitats or protected species, the Project will not conflict with these policies.

The City's Municipal Code has a provision to protect parkway trees within public rights-of-way and requires a permit to remove or relocate any trees, and planting of replacement trees or a cash in-lieu fee compensation for any tree removed. Should the Project result in the removal of trees that are considered parkway trees, a permit will be required. According to the Arborist report conducted for the Project site, the site does not contain any trees of significant value. Further, the Project site contains no trees that fall under the definition of a heritage tree, as defined in the City's Development Code §6.05.020. The Arborist report determined that there are no significant or specimen trees on the Project site. None of the trees onsite are in excellent condition or have a condition rating greater than 70%. It was determined that no trees need any protective measures to preserve the health of the tree during the development or redevelopment activity. Lastly, no trees are viable candidates for relocation due to the condition they are currently in. Therefore, buildout of the Project would result in a less than significant impact.

Lastly, no impacts to any adopted Habitat Conservation Plan, Natural Community Conservation Plan, or Other Approved Local, Regional, or State Habitat Conservation plan are anticipated upon Project buildout. Therefore, no impact will occur in this regard.

Specific Plan – Future Development Areas

Construction and Operations

Refer to discussion above for Phase I of the Project site.

SB330 Replacement Site

Construction and Operations

Refer to discussion above under Impact 4.3-5 and 4.3-6. The relatively slight increase in residential density is not considered a significant impact as the SB330 Replacement Site area is already planned for future development as part of the City's TOP, and the impacts of such development were evaluated in the City's TOP EIR. Prior to any site-specific development, potential future residential development would be required to conduct site-specific biological

resource surveys, including an arborist report, as part of the City's standard discretionary review process, including compliance with CEQA and applicable local, state, and federal regulations. Therefore, a less than significant impact would occur.

Conclusion

The Project site and SB330 Replacement Site do not conflict with any local policies or ordinances protecting biological resources. Therefore, a less than significant impact would occur during Phase I and future development areas without mitigation implemented. (Draft EIR, pp. 4.3-26 through 4.3-27.)

2. CULTURAL RESOURCES

a. *Human Remains*

Threshold: Would the Project disturb any human remains, including those interred outside of dedicated cemeteries?

Finding: Less than significant. (Draft EIR, p. 4.4-24.)

Explanation:

Specific Plan – Phase I/ Future Development Areas
Construction and Operations

No cemeteries or similar uses exist on the Project site. As well, no uses on the Project site would include the preservation, containment, or burial of human remains. Despite the lack of human remains on the Project site, there is still a remote possibility of encountering human remains buried since the existing uses were established in 1963. The Cultural and Paleontological Resources Assessment conducted for the Project concluded that the potential presence of archeological deposits, which include human remains, would be low. However, in order to maintain a conservative consideration of potential impacts to human remains the Project would comply with the mandates provided by State regulations, including PRC §5097.98. PRC §5097.98 contains provisions which would be implemented upon the discovery of human remains, including evaluation by the County Coroner and notification of the NAHC.

The archaeological records search and field survey did not reveal any resources known to contain human remains within or near the Project site. Since completion of the cultural resources report, additional archaeological resources were found at two locations near the Project site. Therefore, the Project area is considered sensitive for archaeological resources despite the urbanized nature of the surrounding and long history of ground-disturbing activities. Therefore, the potential exists for Project construction to reveal

unknown human remains. If human remains are found, those remains would require proper treatment in accordance with applicable laws, including Health and Safety Code (HSC) §§7050.5-7055 and PRC §5097.98 and §5097.99. HSC §§7050.5-7055 describe the general provisions for treatment of human remains. Specifically, HSC §7050.5 prescribes the requirements for the treatment of any human remains that are accidentally discovered during excavation of a site. HSC §7050.5 also requires that all activities cease immediately, and a qualified archaeologist and Native American monitor be contacted immediately. As required by state law, the procedures set forth in PRC §5087.98 would be implemented, including evaluation by the County Coroner and notification of the NAHC. The NAHC would then designate the Most Likely Descendant (MLD) of the unearthed human remains.

However, previously undiscovered human remains could be encountered during construction activities. If human remains are found during excavation, excavation would be halted in the vicinity of the find and any area that is reasonably suspected to overlay adjacent remains shall remain undisturbed until the County Coroner has investigated, and appropriate recommendations have been made for the treatment and disposition of the remains. Following compliance with the established regulatory framework (i.e., HSC §§7050.5-7055 and PRC §§5097.98 and 5097.99), the Project's impacts concerning potential to disturb human remains, would be reduced to less than significant.

SB330 Replacement Site

Construction and Operations

The potential for discovering human remains as part of potential future development at the SB330 Replacement Site would be similar to that described above for the Specific Plan area. Any future development within the SB330 Replacement Site area would follow the City's standard discretionary review process and require compliance with existing regulations including those cited above. Following compliance with the established regulatory framework (i.e., HSC §§7050.5-7055 and PRC §§5097.98 and 5097.99), the Project's impacts concerning potential to disturb human remains, would be reduced to less than significant.

Conclusion

If human remains were discovered on either the Project site or SB330 Replacement Site, no further disturbance shall occur until the County Coroner is notified immediately and has decided on the origin

and disposition pursuant to PRC §5097.98. Compliance with PRC §5097.98 would ensure a less than significant impact would occur. (Draft EIR, pp. 4.4-24 through 4.4-26.)

3. ENERGY

a. *Wasteful Use of Energy*

Threshold: Would the Project result in potentially significant impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation?

Finding: Less than significant. (Draft EIR, p. 7-4.)

Explanation: **Specific Plan-Phase I/Future Development Areas**

Construction

During construction, the Project would consume energy through the combustion of fossil fuels in construction vehicles, worker commute vehicles, and construction. Construction vehicles and related energy-consuming equipment would be used during all phases of construction. Limitations on idling of vehicles and equipment and requirements that equipment be properly maintained would result in fuel savings.

The Project would use gasoline and diesel-powered construction and transportation equipment. The Project is estimated to consume 267,476 gallons of gasoline and 349,054 gallons of diesel fuel over the entire construction period. The construction fuel demands would account for 0.04% of the San Bernardino County annual gasoline consumption and 0.14% of San Bernardino County annual diesel fuel consumption.

Construction equipment would comply with the latest United States Environmental Protection Agency and California Air Resources Board engine emission standards designed to reduce pollutants and minimize unnecessary fuel consumption. Energy use during construction of the Project would not result in wasteful, inefficient, or unnecessary consumption of energy and would not require expanded energy supplies or the construction of new infrastructure. Therefore, it is anticipated that the construction phase of the Project would not conflict with State or local plan for renewable energy efficiency objectives. Impacts associated with construction would be less than significant.

Operation

The operational phase of the Project would consume energy as part of building operations and transportation activities. Building operations for the project would involve energy consumption for multiple purposes, including but not limited to building heating and cooling, refrigeration, lighting, and electronics. Project would be required to comply with California Building Energy Efficiency Standards (Title 24). Title 24 establishes planning and design standards for sustainable site development, energy efficiency, water conservation, and material conservation.

Based on the modeling output files used to estimate GHG emissions associated with the proposed land uses, operations would consume approximately 24,111,453 kWh/year of electricity and 21,637,730 kBTU/year of natural gas. This additional demand would result in an 0.16% increase in electricity consumption and 0.04% increase in natural gas consumption for the County of San Bernardino.

In 2024, Californians are anticipated to use approximately 14,197,483,655 gallons of gasoline and approximately 3,195,776,812 gallons of diesel fuel. San Bernardino County annual fuel use in 2024 is anticipated to be 854,295,454 gallons of gasoline and 280,932,332 gallons of diesel fuel. Operational energy would also be consumed by vehicle trips associated with the Project. Fuel consumption would be primarily related to vehicles used by employees and visitors associated with the Project. Based on estimates contained in the CalEEMod output files (see Appendix B of the DEIR), Project related vehicle trips would result in the consumption of 2,818,869 gallons of gasoline and 3,645,871 gallons of diesel fuel annually. These annual fuel consumption estimates represent likely potential maximums that would occur under Project Buildout Conditions. Under future conditions, average fuel economies of vehicles accessing the Project site can be expected to improve as older, less fuel-efficient vehicles are removed from circulation. Average fuel economies of vehicles accessing the Project site can also be expected to improve over time in response to fuel economy and emissions standards imposed on newer vehicles entering the transportation system.

Transportation fuels (gasoline and diesel) are produced from crude oil, which can be domestic or imported from various regions around the world. Based on current proven reserves, current crude oil production would be sufficient to meet 50 years of worldwide consumption. As such, it is expected that existing and planned

transportation fuel supplies would be sufficient to serve the Project's demand.

Mitigation Measures AQ-2 through **AQ-5** will have the additional effect of reducing Project vehicle fuel consumption. **Mitigation Measure AQ-2** requires the use of electrical off-road equipment such as forklifts and hostlers/yard trucks. **Mitigation Measure AQ-3** requires electrical hookups at loading bays for cold storage. **Mitigation measure AQ-4** requires the implementation of a Transportation Demand Management (TDM) program to reduce single-occupant vehicle trips and encourage public transit. Additionally, **Mitigation Measure AQ-5** prohibits idling when engines are not in use.

The Project would meet or surpass standards established under the California Code Title 24, Part 6 (the California Energy Code) and California Green Building Standards Code (CALGreen; CCR, Title 24, Part 11) as implemented by the City. The Project would be consistent with City's CAP, which includes measures related to building energy. For these reasons, Project operational fuel consumption would not result in the use of energy in a wasteful manner and would not conflict or obstruct State or local plans for renewable energy or energy efficiency. Therefore, operation impacts associated with energy consumption would be less than significant.

SB330 Replacement Site

The proposed rezoning of the SB330 Replacement Site to a slightly higher density would not have any greater impact to these resources, as the proposed rezoning would not affect the limits of development, and no development is proposed at this time. Furthermore, development of this area was already addressed as part of the City's TOP EIR. The net effect of shifting this residential density from low medium density at the Specific Plan site to an average medium density at the SB330 Replacement Site is anticipated to result in an overall reduction in energy demand, due to higher density development having lower energy demand, from both an energy consumption perspective and with respect to transportation-related energy consumption. Also, any future development would be subject to the City's standard discretionary review process, and compliance with applicable local, state and federal regulations, including the City's municipal code and CEQA. No significant impacts would occur. (Draft EIR, pp. 7-4 through 7-6.)

b. ***Energy Efficiency Plans***

Threshold: Would the Project conflict with or obstruct a state of local plan for renewable energy or energy efficiency?

Finding: Less than significant. (Draft EIR, p. 7-4.)

Explanation: **Specific Plan-Phase I/Future Development Areas**

Construction

During construction, the Project would consume energy through the combustion of fossil fuels in construction vehicles, worker commute vehicles, and construction. Construction vehicles and related energy-consuming equipment would be used during all phases of construction. Limitations on idling of vehicles and equipment and requirements that equipment be properly maintained would result in fuel savings.

The Project would use gasoline and diesel-powered construction and transportation equipment. The Project is estimated to consume 267,476 gallons of gasoline and 349,054 gallons of diesel fuel over the entire construction period. The construction fuel demands would account for 0.04% of the San Bernardino County annual gasoline consumption and 0.14% of San Bernardino County annual diesel fuel consumption.

Construction equipment would comply with the latest United States Environmental Protection Agency and California Air Resources Board engine emission standards designed to reduce pollutants and minimize unnecessary fuel consumption. Energy use during construction of the Project would not result in wasteful, inefficient, or unnecessary consumption of energy and would not require expanded energy supplies or the construction of new infrastructure. Therefore, it is anticipated that the construction phase of the Project would not conflict with State or local plan for renewable energy efficiency objectives. Impacts associated with construction would be less than significant.

Operation

The operational phase of the Project would consume energy as part of building operations and transportation activities. Building operations for the project would involve energy consumption for multiple purposes, including but not limited to building heating and cooling, refrigeration, lighting, and electronics. Project would be required to comply with California Building Energy Efficiency

Standards (Title 24). Title 24 establishes planning and design standards for sustainable site development, energy efficiency, water conservation, and material conservation.

Based on the modeling output files used to estimate GHG emissions associated with the proposed land uses, operations would consume approximately 24,111,453 kWh/year of electricity and 21,637,730 kBTU/year of natural gas. This additional demand would result in an 0.16% increase in electricity consumption and 0.04% increase in natural gas consumption for the County of San Bernardino.

In 2024, Californians are anticipated to use approximately 14,197,483,655 gallons of gasoline and approximately 3,195,776,812 gallons of diesel fuel. San Bernardino County annual fuel use in 2024 is anticipated to be 854,295,454 gallons of gasoline and 280,932,332 gallons of diesel fuel. Operational energy would also be consumed by vehicle trips associated with the Project. Fuel consumption would be primarily related to vehicles used by employees and visitors associated with the Project. Based on estimates contained in the CalEEMod output files (see Appendix B of the Draft EIR), Project related vehicle trips would result in the consumption of 2,818,869 gallons of gasoline and 3,645,871 gallons of diesel fuel annually. These annual fuel consumption estimates represent likely potential maximums that would occur under Project Buildout Conditions. Under future conditions, average fuel economies of vehicles accessing the Project site can be expected to improve as older, less fuel-efficient vehicles are removed from circulation. Average fuel economies of vehicles accessing the Project site can also be expected to improve over time in response to fuel economy and emissions standards imposed on newer vehicles entering the transportation system.

Transportation fuels (gasoline and diesel) are produced from crude oil, which can be domestic or imported from various regions around the world. Based on current proven reserves, current crude oil production would be sufficient to meet 50 years of worldwide consumption. As such, it is expected that existing and planned transportation fuel supplies would be sufficient to serve the Project's demand.

Mitigation Measures AQ-2 through **AQ-5** in the Air Quality Section will have the additional effect of reducing Project vehicle fuel consumption. **Mitigation Measure AQ-2** requires the use of

electrical off-road equipment such as forklifts and hostlers/yard trucks. **Mitigation Measure AQ-3** requires electrical hookups at loading bays for cold storage. **Mitigation Measure AQ-4** requires the implementation of a Transportation Demand Management (TDM) program to reduce single-occupant vehicle trips and encourage public transit. Additionally, **Mitigation Measure AQ-5** prohibits idling when engines are not in use.

The Project would meet or surpass standards established under the California Code Title 24, Part 6 (the California Energy Code) and California Green Building Standards Code (CALGreen; CCR, Title 24, Part 11) as implemented by the City. The Project would be consistent with City's CAP, which includes measures related to building energy. For these reasons, Project operational fuel consumption would not result in the use of energy in a wasteful manner and would not conflict or obstruct State or local plans for renewable energy or energy efficiency. Therefore, operation impacts associated with energy consumption would be less than significant.

SB330 Replacement Site

The proposed rezoning of the SB330 Replacement Site to a slightly higher density would not have any greater impact to these resources, as the proposed rezoning would not affect the limits of development, and no development is proposed at this time. Furthermore, development of this area was already addressed as part of the City's TOP EIR. The net effect of shifting this residential density from low medium density at the Specific Plan site to an average medium density at the SB330 Replacement Site is anticipated to result in an overall reduction in energy demand, due to higher density development having lower energy demand, from both an energy consumption perspective and with respect to transportation-related energy consumption. Also, any future development would be subject to the City's standard discretionary review process, and compliance with applicable local, state and federal regulations, including the City's municipal code and CEQA. No significant impacts would occur. (Draft EIR, pp. 7-4 through 7-6.)

4. GEOLOGY AND SOILS

a. *Fault Rupture*

Threshold: Would the Project directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the

State Geologist for the area or based on other substantial evidence of a known fault; strong seismic ground shaking; seismic-related ground failure including liquefaction; or landslides?

Finding: Less than significant. (Draft EIR, p. 4.5-12.)

Explanation: **Specific Plan – Phase I/Future Development Areas**

Construction and Operations

The Project site is not within an Alquist-Priolo Earthquake fault zone and there are no Alquist-Priolo fault zones within the Project area. The nearest fault to the Project site is the Central Avenue Fault approximately three miles southwest of the Project site. According to the geotechnical investigation prepared for this Project, the Project site is not within an Alquist-Priolo fault zone and there was no evidence of faulting identified during the investigation of the Project site. The Project site's distance from the nearest fault line would minimize risks attributed to ground rupture and gapping. Therefore, the impacts associated with the rupture of a known fault would be less than significant and no mitigation would be required.

SB330 Replacement Site
Construction and Operations

The SB330 Replacement Site is not within an Alquist-Priolo Earthquake fault zone and there are no Alquist-Priolo fault zones within the SB330 Replacement Site area. The nearest earthquake fault to the SB330 Replacement Site is the Central Avenue Fault approximately three miles southwest of the SB330 Replacement Site. Movement along a fault to the extent that a gap–or rupture–forms on the earth surface would not affect the Grove Avenue Corridor due to its distance from active fault lines and fault zones; especially Alquist-Priolo fault lines. No specific development within the SB330 Replacement Site is proposed at this time as part of the Project. Any potential future development within the SB330 Replacement Site area would be subject to the City's standard discretionary review process, including the OMC and CEQA compliance. Therefore, a less than significant impact would occur.

Conclusion

In conclusion, both the Project site and the proposed SB330 Replacement Site are not located within an Alquist-Priolo Earthquake fault zone. Risks attributed to ground rupture and gapping are minimized due to the distance of both sites from the nearest fault zones. Therefore, a less than significant impact will occur, and no mitigation is required. (Draft EIR, pp. 4.5-12 through 4.5-13.)

Specific Plan – Phase I/Future Development Areas
Construction and Operations

Surface Fault Rupture

The Project site is not within an Alquist-Priolo Earthquake Fault Zone and there are no Alquist-Priolo fault zones within the Project area. Furthermore, there was no evidence of faulting identified during the geotechnical investigation of the Project site per SCG. The Project site is not subject to surface rupture of a known active fault, as the nearest fault to the site is approximately three miles to the southwest. The possibility of significant fault rupture on the Project site is considered to be low (SCG 2019). Therefore, impacts would be less than significant.

Ground Shaking

Southern California is considered a seismically active region and the regional vicinity of the areas being evaluated contains a number of known earthquake faults. As part of the geotechnical report, 2016 and 2019 CBC Seismic Design Parameters were generated for future structural improvements within the Project area. Structures for human occupancy must be designed to meet or exceed 2016 and 2019 CBC standards for earthquake resistance. The CBC contains provisions for earthquake safety based on factors including occupancy type, the types of soil and rock on-site, and the strength of ground motion with a specified probability at the site. Therefore, future development of habitable structures within the Project site would be conducted in accordance with the 2016 and 2019 CBC Seismic Design Parameters generated as part of the geotechnical report, which would reduce impacts from seismic ground shaking to a less than significant level.

Liquefaction

Liquefaction occurs when saturated fine-grained sands or silts lose their strengths during an earthquake and behave as a liquid. Three main factors contribute to susceptibility to liquefaction: 1) shallow groundwater; 2) low density non-cohesive (granular) soil; and 3) strong ground shaking. According to the geotechnical report, the Project site is not within a zone of liquefaction susceptibility and the subsurface conditions at the boring locations are not considered to be conducive to liquefaction (SCG 2019). Although the Project site is shown as an area of historic liquefaction risk to historic high groundwater, liquefaction potential under the Project site is low due to the depth of groundwater and the mix of soil type and is not considered to be a design concern for the Project. Therefore, Project

development would not subject people or structures to liquefaction hazards, and impacts would be less than significant.

SB330 Replacement Site

Construction and Operations

The SB330 Replacement Site contains generally fine-grained sediments, and includes areas identified as low to moderate liquefaction susceptibility, according to the Figure S-1, Seismic Hazards of the City's TOP EIR. No specific development within the SB330 Replacement Site is proposed at this time as part of the Project. Any potential future development within the SB330 Replacement Site area would be subject to the City's standard discretionary review process, including the City Municipal Code OMC and CEQA compliance. Therefore, a less than significant impact would occur.

Conclusion

In accordance with the City's standards, policies, and goals, both the Project site and the proposed development of the SB330 Replacement Site would not subject people or structures to liquefaction hazards, and impacts would be less than significant.

Specific Plan – Phase I / Future Development Areas

Construction and Operations

The Project site has a gentle slope of less than one percent running generally to the south-southwestern portion of the Project site. No extreme elevation differences exist in or around the Project site that would potentially lead to landslide effects. According to the San Bernardino County Geologic Hazard map the Project site and the immediate area are not within a zone of generalized landslide susceptibility. The Project area is also outside of the hazard zone for rockfall/debris-flow. The relatively flat topography of the Project site along with its location outside of identified landslide susceptibility and rockfall/debris-flow hazard areas would lead to a less than significant impact from occurring due to landslides.

SB330 Replacement Site

Construction and Operations

The SB330 Replacement Site is outside of an area of landslide susceptibility. Further, the area within and around the SB330 Replacement Site is largely flat without steep hills or rocky formations which would be susceptible to landslides. No specific development

within the SB330 Replacement Site is proposed at this time as part of the Project. Any potential future development within the SB330 Replacement Site area would be subject to the City's standard discretionary review process, including the City municipal code OMC and CEQA compliance. Therefore, a less than significant impact would occur.

Conclusion

In conclusion, both the Project site and the SB330 Replacement Site have relatively flat topography of the along with its location outside of identified landslide susceptibility and rockfall/debris-flow hazard areas. This would lead to a less than significant impact from occurring due to landslides. (Draft EIR, pp. 4.5-13 through 4.5-15.)

b. ***Soil Erosion***

Threshold: Would the Project result in substantial soil erosion or the loss of topsoil?

Finding: Less than significant. (Draft EIR, p. 4.5-15.)

Explanation: **Specific Plan – Phase I/Future Development Areas**

Construction

The Project site was found to contain artificial fills at depths of up to three feet below the ground level and native alluvial soils at least 25 feet below ground level. The artificial fill soils were observed at multiple boring and trench locations. *Figure 4.5-1, Bore and Trench Locations* of the Draft EIR shows each boring and trenching locations in the Project site. The artificial fill soils that were encountered were found to possess various levels of strength and density under testing. However, some of the artificial fill materials were found to be prone to hydro-collapse once exposed to water. It was then concluded that the artificial fill materials would not be suitable to support the proposed structures. The native alluvial soils were also found to possess varied strength and density levels. Remedial grading has been recommended to replace the near-surface native alluvial soils with compacted structural fill soils. The native soils that would be left in place after the remedial grading would not be subject to significantly increased stress levels from the foundations of the proposed structures.

The construction of the Project would involve excavation activities that would affect surface and near-surface soils. Over excavation of the Project would be implemented to remove any artificial fill soils, which extend from approximately 0.5 to three feet below the existing

grade. In addition to the excavation and removal of the fill material, the development of the Project would require grading preparation, excavation, trenching and paving activities that could result in soil erosion if exposed to periods of high wind or storm-related events. Dust control measures such as watering would be utilized to control the potential for erosion to occur. Construction contractors would also be required to implement a dust control plan in compliance with South Coast Air Quality Management District Rule 403 to reduce wind erosion.

Construction activities such as excavation and grading would be minimal given that the Project site is relatively flat. No major grading or excavation would be needed to substantially alter the slope of the site, create, or remove steep slopes, create retaining walls, or make other landform modifications. Nevertheless, grading and earthwork activities during construction would expose soils to potential short-term erosion by wind and water. During construction, the Project site would be required to comply with erosion and siltation control measures. This would include measures such as sand-bagging, placement of silt fencing, erosion control blankets, straw wattles, mulching, etc., to reduce runoff from the site and to hold topsoil in place during all grading activities. As mass grading proceeds, finish grading commences, and construction begins the erosion measures would be removed or relocated as necessary. Additionally, the construction on the Project site would be required to comply with the National Pollutant Discharge Elimination System (NPDES); refer to *Section 4.8, Hydrology and Water Quality* for discussion of the anticipated NPDES permitting process. Construction impacts on the Project site would be minimized through compliance with the Construction General Permit (CGP). The NPDES permit requires development and implementation of a Stormwater Pollution Prevention Plan (SWPPP) and monitoring plan, which must include erosion-control and sediment-control Best Management Practices (BMPs). The BMPs would be required to meet or exceed measures required by the CGP to control potential construction-related pollutants and would comply with the OMC Title 6, Chapter 6 – Stormwater Drainage System. Erosion-control BMPs are designed to prevent erosion, whereas sediment controls are designed to trap sediment once it has been mobilized. All required permits and the erosion control plan would be verified by the City prior to initiation of any construction and prior to the issuance of any grading permit. Conformance to these requirements and verification by the City as

part of the development approval process would ensure that potential impacts from construction of the warehouse are less than significant.

Operations

Operation of the Project would not involve procedures which would result in substantial soil erosion. Following construction of the Project, the Project site would be covered with hardscape which would not contribute to erosion. The Project site also would contain some landscaping, but these areas would include ground covers to reduce erosion or and loss of on-site soils post-construction. This would ensure that operation of the Project site would not result in the loss of topsoil or sedimentation into local drainage facilities and water bodies. In addition, a network of storm drains and gutters would be installed, upgraded if needed, and maintained as necessary throughout the developed site. Therefore, the potential for substantial soil erosion or the loss of topsoil is considered less than significant.

SB330 Replacement Site
Construction

The site is relatively flat, does not contain any significant landforms, and is currently developed with existing structures with some undeveloped lots used for agricultural purposes. Note that no specific development is proposed at this time, and the proposed increase in residential density is not anticipated to have any greater impact than evaluated for this site within the City's TOP EIR. If the site is redeveloped, the existing structures would be removed, and some minor excavation and grading would be needed to prepare the site for construction. Due to the existing acreage of the site, the same requirements for conformance with the NPDES permits, implementation of a SWPPP and use of BMPs as discussed for the Project site would be required. Similarly, all plans would be submitted to the City for review and approval prior to the issuance of and grading or construction permits as part of the City's standard development review process. This would ensure, should the SB330 Replacement Site be developed, potential impacts from construction-related erosion would be less than significant.

Operations

The Project does not propose any specific development at the SB330 Replacement Site. Any future development would have similar

impacts regarding topsoil loss as discussed above for the Specific Plan site, and as evaluated within the City's TOP EIR. All future development would be subject to the City's standard discretionary review process, including compliance with the OMC and other applicable local, state, and federal requirements as set forth in the Regulatory Framework section above. Therefore, the potential for substantial soil erosion or the loss of topsoil is considered less than significant.

Conclusion

Conformance to the City's standard discretionary review process, including compliance with the OMC and other applicable local, state, and federal requirements as set forth in the Regulatory Framework section above, will result in a less than significant from occurring on both the Project site and the SB330 Replacement Site. In addition, a network of storm drains and gutters would be installed, upgraded if needed, and maintained as necessary throughout the developed site. Therefore, the potential for substantial soil erosion or the loss of topsoil is considered less than significant. (Draft EIR, pp. 4.5-15 through 4.5-18.)

c. ***Unstable Soils***

Threshold: Would the Project be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction or collapse?

Finding: Less than significant. (Draft EIR, p. 4.5-18.)

Explanation: **Specific Plan – Phase I/Future Development Areas**

Construction and Operations

Liquefaction and landslides not considered to be a design concern for the Project, and potential for lateral spreading would be low.

The major cause of ground subsidence is the excessive withdrawal of groundwater. Based on the conditions encountered in the borings and trenches conducted for the geotechnical report groundwater was not observed within approximately 30 feet of the ground surface. Recent water level data obtained from the SWRCB GeoTracker website (https://geotracker.waterboards.ca.gov/) indicates that the highest groundwater level is approximately 83 feet below ground surface (bgs) in the vicinity of the Project site (SCG 2019). Therefore, based on anticipated groundwater depths, it is not expected that groundwater would affect excavations for the foundations and

utilities. However, minor subsidence is expected to occur in the soils below the zone of soil removal, due to settlement and machinery working. The subsidence is estimated to be 0.10 feet.

The geotechnical report provides recommendations to support the proposed structures and offset impacts from subsidence of 0.10 feet such as scarification and air drying of over-excavated materials to obtain a stable subgrade. The City adopts the CBC by reference and PPP GEO-1 requires compliance with the recommendations of the geotechnical report. Therefore, with implementation of PPP GEO-1, the Project applicant would comply with the recommendations of the geotechnical report and impacts from potential subsidence of 0.10 feet would be reduced to a less than significant level.

SB330 Replacement Site
Construction and Operations

As discussed under Impact 4.5-1, the SB330 Replacement Site is within a zone of suspected low to moderate liquefaction susceptibility. The site is relatively flat and not considered to be subject to landslide risk. No specific development within the SB330 Replacement Site is proposed at this time as part of the Project. Any potential future development within the SB330 Replacement Site area would be subject to the City's standard discretionary review process, including the OMC and CEQA compliance. Therefore, a less than significant impact would occur.

Conclusion

Through implementation of recommendations from the geotechnical report, the City's standard discretionary review process, and compliance of all state, local, and regulatory requirements, the impacts for both the Project site and the SB330 Replacement Site will remain less than significant. (Draft EIR, pp. 4.5-18 through 4.5-19.)

d. ***Expansive Soils***

Threshold: Would the Project be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code, creating substantial risks to life or property?

Finding: Less than significant. (Draft EIR, p. 4.5-19.)

Explanation: **Specific Plan – Phase I/Future Development Areas**

Construction and Operations

Expansive soils are soils that expand and contract depending on their moisture level. This change can occur seasonally as water

levels and precipitation changes throughout the year. These soils normally occur within the first five feet below the surface. Expansive soils can lead to structural damage as their compositions and volume changes dramatically. The near-surface soils encountered during the field study for the geotechnical investigation consisted of silty sands and well-graded sands. Those materials are classified as low to non-expansive. Therefore, they would not be liable to significant expansion and a less than significant impact would occur.

SB330 Replacement Site
Construction and Operations

The SB330 Replacement Site is delineated in the City's Areas of Susceptibility map as being within an area containing generally fine-grained sediments, which have the potential for expansion (in fine-grained clayey soils). No specific development within the SB330 Replacement Site is proposed at this time as part of the Project. Any potential future development within the SB330 Replacement Site area would be subject to the City's standard discretionary review process, including the OMC and CEQA compliance. The City's development review process requires site-specific geotechnical reports to evaluate soil hazards such as expansive soils. All structural design and grading plans must account for site-specific soil conditions, which are incorporated into site-specific design plans through the City's discretionary review process. The proposed rezoning allows for a slight increase in residential density, which is not anticipated to result in any new or substantially more severe environmental impact than was evaluated in the City's TOP EIR. In consideration of the above, a less than significant impact would occur.

Conclusion

The near-surface soils encountered during the field study for the Project site consisted of silty sands and well-graded sands. Those materials are classified as low to non-expansive. Therefore, they would not be liable to significant expansion and a less than significant impact would occur. Furthermore, the SB330 Replacement Site is characterized as having fine-grained clayey soils, which have potential for expansion. However, no development is proposed at this time for the SB330 Replacement Site; once proposed, it would be subject to the City's standard discretionary review process, including the OMC and CEQA compliance. This would result in a less than significant impact from occurring. (Draft EIR, pp. 4.5-19 through 4.5-20.)

e. *Septic Tanks*

Threshold: Would the Project have soils incapable of adequately supporting the use of septic tanks or alternative waste water disposal systems where sewers are not available for the disposal of waste water?

Finding: No impact. (Draft EIR, p. 4.5-20.)

Explanation: **Specific Plan – Phase I/Future Development Areas**

Construction and Operations

No septic tanks or other alternative wastewater disposal systems are proposed. The Project proposes a sewer infrastructure plan that includes a network of new public sewer mains that would connect to the Inland Empire Utilities Agency (IEUA) sewer system. Water and wastewater systems and their development are further discussed in *Section 4.15, Utilities and Service* of this EIR. No impact would occur.

SB330 Replacement Site
Construction and Operations

No specific development is proposed at this time within the SB330 Replacement Site area. It is not anticipated that any future residential development in this location would utilize septic or alternative wastewater disposal, given the urban density of proposed zoning and the City's existing and planned wastewater treatment system. Therefore, no impact would occur.

Conclusion

The Project proposes a sewer infrastructure plan that includes a network of new public sewer mains that would connect to the Inland Empire Utilities Agency (IEUA) sewer system. Furthermore, the SB330 Replacement Site would utilize septic or alternative wastewater disposal, given the urban density of proposed zoning and the City's existing and planned wastewater treatment system. Therefore, no impact would occur for both of these sites. (Draft EIR, pp. 4.5-20 through 4.5-21.)

5. GREENHOUSE GAS EMISSIONS

a. *Emissions Generation*

Threshold: Would the Project generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?

Finding: Less than significant. (Draft EIR, p. 4.6-24.)

Explanation: **SB330 Replacement Site**

The net effect of relocating the 1,352 dwelling units of zoning potential to the SB330 Replacement Sites is expected to have an

overall net GHG benefit, regionally, due to reduced traffic and energy emissions from higher density development in a mixed-use area with transit. Also note that the SB330 Replacement Site is being considered by the City for even higher density as part of the City's TOP Update, which would have separate City review and CEQA analysis. Finally, any future residential development within the SB330 Replacement Site would be subject to applicable local, regional, State, and federal air quality regulations. Therefore, this impact would be less than significant. (Draft EIR, p. 4.6-24.)

b. ***Emission Reduction Plans***

Threshold: Would the Project conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emission of greenhouse gases?

Finding: Significant and unavoidable. (Draft EIR, p. 4.6-26.)

Explanation: **Specific Plan – Phase 1, Future Development Areas – Phase 2, SB330 Replacement Site**

SCAG Regional Transportation Plan/Sustainable Communities Strategy Consistency

On September 3, 2020, SCAG's Regional Council adopted Connect SoCal (2020 - 2045 RTP/SCS). The RTP/SCS is a long-range visioning plan that balances future mobility and housing needs with economic, environmental, and public health goals. The RTP/SCS embodies a collective vision for the region's future and is developed with input from local governments, county transportation commissions, tribal governments, nonprofit organizations, businesses, and local stakeholders in the counties of Imperial, Los Angeles, Orange, Riverside, San Bernardino, and Ventura. SCAG's RTP/SCS establishes GHG emissions goals for automobiles and light-duty trucks for 2020 and 2035 as well as an overall GHG target for the Project region consistent with both the target date of AB 32 and the post-2020 GHG reduction goals of Executive Orders 5-03-05 and B-30 15.

The RTP/SCS contains over 4,000 transportation projects, ranging from highway improvements, railroad grade separations, bicycle lanes, new transit hubs and replacement bridges. These future investments were included in county plans developed by the six county transportation commissions and seek to reduce traffic bottlenecks, improve the efficiency of the region's network, and expand mobility choices for everyone. The RTP/SCS is an important planning document for the region, allowing project sponsors to qualify for federal funding.

The plan accounts for operations and maintenance costs to ensure reliability, longevity, and cost-effectiveness. The RTP/SCS is also supported by a combination of transportation and land use strategies that help the region achieve state GHG emissions reduction goals

and Federal Clean Air Act (FCAA) requirements, preserve open space areas, improve public health and roadway safety, support our vital goods movement industry, and utilize resources more efficiently. GHG emissions resulting from development-related mobile sources are the most potent source of emissions, and therefore Project comparison to the RTP/SCS is an appropriate indicator of whether the Project would inhibit the post-2020 GHG reduction goals promulgated by the state. The Project's consistency with the RTP/SCS goals is analyzed in detail in Table 4.6-10 of the DEIR.

The goals identified in the 2020 RTP/SCS were used to determine consistency with the SCAG's RTP/SCS. As shown in Table 4.6-10 of the DEIR, the Project would be consistent with all stated goals of the 2020 RTP/SCS. Implementation of the Project would not result in any significant impacts or interfere with SCAG's ability to achieve the region's post-2020 mobile source GHG reduction targets.

CARB Scoping Plan

The California State Legislature adopted AB 32 in 2006. AB 32 focuses on reducing GHGs (CO2, CH4, NOX, HFCs, PFCs, and SF6) to 1990 levels by the year 2020. Pursuant to the requirements in AB 32, CARB adopted the Climate Change Scoping Plan (Scoping Plan or CCSP) in 2008, which outlines actions recommended to obtain that goal. The CCSP provides a range of GHG reduction actions that include direct regulations, alternative compliance mechanisms, monetary and non-monetary incentives, voluntary actions, market-based mechanisms such as the cap-and-trade program, and an AB 32 implementation fee to fund the program. As shown in Table 4.6-11 of the DEIR, the Project is consistent with most of the strategies, while others are not applicable to the Project.

The 2017 Scoping Plan Update identifies additional GHG reduction measures necessary to achieve the 2030 target. These measures build upon those identified in the first update to the CCSP in 2013. Although a number of these measures are currently established as policies and measures, some measures have not yet been formally proposed or adopted. It is expected that these actions to reduce GHG emissions will be adopted as required to achieve statewide GHG emissions targets. As such, impacts related to consistency with the Scoping Plan would be less than significant. (Draft EIR, pp. 4.6-26 through 4.6-35.)

6. HAZARDS AND HAZARDOUS MATERIALS

a. *Hazardous Materials*

Threshold: Would the Project create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?

Finding: Less than significant. (Draft EIR, p. 4.7-18.)

Explanation: **Specific Plan – Phase I and Future Development Areas**

Operation

Operation of the Project would involve the use of small amounts of hazardous materials, such as industrial cleansers, greases, and oils for cleaning and maintenance purposes. The Project may also involve transport, use, and disposal of hazardous materials; the specific substances and quantities of such materials are presently unknown. The use, storage, transport, and disposal of hazardous materials would be governed by existing regulations of several agencies, including the U.S. EPA, U.S. Department of Transportation, California OSHA, and the San Bernardino County Fire Protection District. Compliance with applicable laws and regulations governing the use, storage, transportation, and disposal of hazardous materials would ensure that all potentially hazardous materials are used and handled in an appropriate manner and would minimize the potential for safety impacts. Additionally, the proposed Project would also be operated with strict adherence to all emergency response plan requirements set forth by the San Bernardino County Fire Protection District. Mandatory compliance with laws and regulations would ensure that operational impacts would be less than significant. (Draft EIR, p. 4.7-18.)

b. ***Accident or Upset***

Threshold: Would the Project create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?

Finding: Less than significant. (Draft EIR, p. 4.7-22.)

Explanation: **Specific Plan – Phase I and Future Development Areas**

Operations

Operation of the Project site would involve typical hazardous materials and chemicals such as solvents and cleaning products associated with operation of an industrial land development. As discussed in Impact 4.7-1 above, any routine transport, use, and disposal of these materials during warehouse operations must adhere to Federal, State, and local regulations for transport, handling, storage, and disposal of hazardous substances. Prior to Project approval, a Hazardous Materials Business Plan (MBP) also would be required for approval to show conformance with all applicable materials handling protocols. Adherence to these regulations is overseen and enforced by the SBCFD. The SBCFD manages six hazardous material and hazardous waste programs.

The CUPA program is designed to consolidate, coordinate, and uniformly and consistently administer permits, inspection activities, and enforcement activities throughout San Bernardino County.

CUPA consolidates, coordinates, and makes consistent the following hazardous materials and hazardous waste programs:

- Hazardous materials release response plans and inventory (business plan)
- Hazardous waste generation and on-site treatment
- Aboveground Petroleum Storage Act (APSA)/Spill Prevention, Control, and Countermeasure Plan (SPCC plan)
- Underground storage tanks (UST)
- California Accidental Release Program (CALARP)
- Hazardous materials management plans and inventory statements under California Fire Code

Furthermore, household hazards such as cleaners and solvents contain such low quantities of liquid and material that they do not pose a significant threat related to the release of hazardous materials into the environment. A less than significant impact would occur in this regard. (Draft EIR, pp. 4.7-22 through 4.7-23.)

c. ***Hazards Near Schools***

Threshold: Would the Project emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?

Finding: Less than significant. (Draft EIR, p. 4.7-24.)

Explanation: **Specific Plan – Phase I and Future Development Areas**

Construction and Operations

No existing or proposed schools are located within one-quarter mile of the Project site. The nearest operating school to the Project site is Cal Aero Preserve Academy, located at 15850 Main St., in the City of Chino, approximately 1.14 miles southeast of the Project site (Google Earth Pro, 2020). The next closest school is Egan Lyle High School, located at 15180 Euclid Ave in the City of Chino, approximately 1.15 miles southwest of the Project site.

The Project would not emit hazardous emissions or include the handling of hazardous or acutely hazardous materials, substances,

and/or wastes within one-quarter mile of an existing or proposed school. The transport of hazardous substances or materials to-and-from the Project site during construction and long-term operational activities would be required to comply with applicable federal, State, and local regulations intended to reduce public safety hazards.

The Project's toxic air contaminant emissions (and their associated health risks) would be less than significant to all sensitive receptors, including schoolchildren near the Project site and the primary truck travel routes to/from the Project site.

SB330 Replacement Site
Construction and Operations

The SB330 Replacement Site is within a half-mile of Levi H. Dickey Elementary School, located at 2840 S. Parco Ave. Rezoning the SB330 Replacement Site is not anticipated to have any new or substantially more severe impacts than addressed under the City's TOP EIR, or that would occur under current zoning, because the uses will be substantially the same as that evaluated in the City's TOP EIR . These potential impacts are anticipated to be similar to that described above for the Project site. Rezoning the SB330 Replacement Site to provide slightly greater residential density is not anticipated to result in any new or substantially more severe pollutants than would occur under current zoning. The SB330 Replacement site would be subject to applicable local, state, and federal regulations as described in the Regulatory Framework section, including the City's standard discretionary review process, the City's municipal code, and CEQA compliance. In consideration of the above, a less than significant impact is anticipated.

Conclusion

The Specific Plan portion of the Project would not emit harmful amounts of hazardous emissions or handle hazardous or acutely hazardous materials, substances, and/or wastes within one-quarter mile of an existing or proposed school. Additionally, schools would be unlikely to be exposed to substantial safety hazards associated with the routine transport of hazardous substances or materials to-and-from the Project site due to the low amount of anticipated toxic air contaminants associated with the Project. The SB330 Replacement Site's proposed slight increase in residential density is not anticipated to result in significant impacts in light of existing regulatory requirements and the City's standard discretionary review

process. A less than significant impact would occur. (Draft EIR, pp. 4.7-24 through 4.7-25.)

d. ***Public Airports***

Threshold: For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard for people residing or working in the project area?

Finding: Less than significant. (Draft EIR, p. 4.7-26)

Explanation: **Specific Plan – Phase I and Future Development Areas**

Construction and Operations

The Project site is within the ONT and Chino Airport's AIA. The southeast corner of the Project area is within Zone C and the balance is within Zone D of the Chino Airport as designated in the ALUCP. Zone C is known as the Compatibility Zone for Non-Residential Land Use, designating the area for uses such as Light Industrial. Warehousing and office buildings are permitted in Zone D as well. Both Zone C and D requirements align with the Specific Plan. Furthermore, the maximum building height for the Project is 55 feet and the Project does not require ALUCP review. In the San Bernardino County Chino Airport Comprehensive Land Use Plan, the site is within Safety Zone 6 (Traffic Pattern Zone) of the Chino Airport Overlay (Generic Safety Zones for General Aviation Airports from the Caltrans Division of Aeronautics – California Airport Land Use Planning Handbook). Safety Zone 6 compatibility criteria prohibit people-intensive uses such as stadiums, large daycare centers, hospitals, and nursing homes, however light industrial and manufacturing uses are acceptable within this zone, provided that they do not generate any visual, electronic, or physical hazards to aircraft. Phase 1 and Future development Areas fit these criteria because the Projects are based on light industrial and manufacturing uses. The Specific Plan's land uses are compatible with these guidelines because it does not involve people-intensive uses. The Caltrans Division of Aeronautics – California Airport Land Use Planning Handbook (Handbook) guidelines suggest the provision of approximately 10 percent usable open land, or an open area approximately every ¼ to ½ mile should be provided in projects within Safety Zone 6. The Handbook further indicates that ideal emergency landing sites are ones that are long, level, free of obstacles and with minimum dimensions of 300 feet long by 75 feet wide, much like a runway. In the Specific Plan area, surrounding

roads (Eucalyptus Avenue, Grove Avenue, Merrill Avenue, and Bon View Avenue), drive aisles, and truck parking lots can be considered as acceptable open lands in urbanized settings.

Furthermore, the Project site is not within a ONT safety zone, noise impact zone, or airspace protection zone. Therefore, the Project would not result in a safety hazard or excessive noise for people residing or working in the Project area and impacts would be less than significant.

SB330 Replacement Site
Construction and Operations

The SB330 Replacement Site is within the Chino Airport's AIA. The southern portion of the SB330 Replacement Site is approximately one mile from the Chino Airport. The southernmost limits of the SB330 Replacement Site, immediately north of Eucalyptus Avenue, are within the Aircraft Departure Accident Risk Intensity Contours, which means there is a potential risk for aircraft accidents to occur. Within the Aircraft Departure Accident Risk Intensity Contour lies safety and airspace compatibility factors. The main objective of safety compatibility factors is to simply minimize the risks associated with potential aircraft accidents. This task is made up of two components; 1) safety on the ground; and 2) safety for aircraft occupants. The fundamental objective for providing safety on the ground is to protect people and property in the event of an aircraft accident near an airport. Safety for aircraft occupants involves trying to find ways in which to enhance the chances of survival of occupants of an aircraft involved in an accident beyond the runway environment. If buildout were to occur for the SB330 Replacement Site, there will be a relatively slight increase in residential development within this influence area. Through implementation of safety zone requirements, as SB330 is within Safety Zone 6, within buildout of the site, the risk for potential safety hazards from occurring would be less than significant. Any future development in the SB330 Replacement Site would comply with all applicable local, state, and federal safety regulations, and would require compliance with the City's municipal code as part of the City's standard development review process, including CEQA compliance.

Conclusion

The Specific Plan and SB330 Replacement Site are located within areas governed by the Chino Airport ALUCP. Proposed uses are

consistent with the ALUCP, and will be regulated by applicable local, state, and federal regulations including the City's municipal code. A less than significant impact would occur. (Draft EIR, pp. 4.7-26 through 4.7-27.)

e. ***Emergency Plans***

Threshold: Would the Project impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?

Finding: Less than significant. (Draft EIR, p. 4.7-27.)

Explanation: **Specific Plan – Phase I and Future Development Areas**

Construction and Operations

The Project site does not contain any emergency facilities, nor does it serve as an emergency evacuation route. During construction and long-term operation of the Project, adequate emergency access for emergency vehicles would be maintained along public streets that abut the Project site. The City, as part of its discretionary review process, reviewed the Project's application materials to ensure that appropriate emergency ingress and egress would be available to-and-from the Project site and that circulation on the Project site was adequate for emergency vehicles.

The City has adopted an Emergency Operations Plan to identify evacuation routes, emergency facilities, and City personnel and equipment available to effectively deal with emergency situations. No revisions to the adopted Emergency Operations Plan would be required as a result of the Project.

The nearest fire station is the Chino Valley Fire Department Station 63, located approximately 1 mile south of the site at 7550 Kimball Ave. Response times at this station would not be impaired by Project implementation because primary access to all major roads would be maintained during construction and operation of the Project.

Because both Project construction and operations would not disrupt or interfere with emergency access to nearby roadways, would not interfere with the City's emergency response plan, and would comply with design standards for emergency services, impacts would be less than significant.

SB330 Replacement Site
Construction and Operations

The SB330 Replacement Site does not contain any emergency facilities. During future construction and long-term operation of the Project, adequate emergency access for emergency vehicles would have to be maintained along public streets that abut the SB330 Replacement Site. As a result of a lack of proposed development, impacts are anticipated to be less than significant.

Conclusion

The Project site does not contain any emergency facilities, nor does it serve as an emergency evacuation route. During Project construction and long-term operations, adequate emergency access for emergency vehicles would be maintained along public streets that abut the Project site. A less than significant impact would occur. (Draft EIR, pp. 4.7-27 through 4.7-28.)

f. ***Wildland Fires***

Threshold: Would the Project expose people or structures to a significant risk of loss, injury or death involving wildland fires, including where wildlands are adjacent to urbanized areas or where residences are intermixed with wildlands?

Finding: Less than significant. (Draft EIR, p. 4.7-28.)

Explanation: **Specific Plan – Phase I and Future Development Areas**

Construction and Operations

The Project site is not located within a State Responsibility Area or a very high fire hazard severity zone. Neither the California Department of Forestry and Fire Protection (CalFire) nor the County of San Bernardino identify the Project site within an area susceptible to wildland fires. The Project site and surrounding areas generally consist of agricultural, industrial and/or residential uses, which are generally not associated with wildland fire hazards (Google Earth Pro, 2019; CalFire, 2008). The Project would comply with all applicable local and state regulations related to fire safety, as evaluated through the City's standard development review process. Impacts would be less than significant.

SB330 Replacement Site
Construction and Operations

Similar to the Specific Plan area, the SB330 Replacement Site is not located within a State Responsibility Area or a very high fire hazard severity zone. The SB330 Replacement Site is not proposed for development at this time, and any future development would comply

with applicable regulatory requirements including the City's municipal code. A less than significant impact would occur.

Conclusion

Neither the Project nor the SB330 Replacement Site are located within a State Responsibility Area or a very high fire hazard severity zone. All future development will comply with applicable local and state regulations related to wildfire, including the City's municipal code as part of the City's standard discretionary review process. A less than significant impact would occur. (Draft EIR, pp. 4.7-28 through 4.7-29.)

7. HYDROLOGY AND WATER QUALITY

a. *Water Quality Standards*

Threshold: Would the Project violate any water quality standards or waste discharge requirements?

Finding: Less than significant. (Draft EIR, p. 4.8-15.)

Explanation: **Specific Plan – Phase I/Future Development Areas**

Construction

Construction in the Specific Plan – Phase I/Future Development Areas would generally consist of clearing, grading, excavation, and construction activities which could potentially impact water quality through soil erosion and increasing the amount of silt, debris, and pollutants carried in stormwater runoff. Examples of pollutants include the use of fuels, solvents, and paints. Furthermore, the refueling and parking of construction vehicles and other equipment on-site during construction may result in oil, grease, or related pollutant leaks and spills that may discharge into the storm drain system.

The Project is required to comply with the NPDES General Construction Permit (GCP) Water Quality Order 2009-0009-DWQ (as amended by Order No. 2010- 0014-DWQ and 2012-006-DWQ) per PPP HYD-2, which requires the preparation and implementation of a SWPPP and Erosion Sediment and Control Plan, prior to obtaining any grading or building permits. A SWPPP would identify site-specific construction BMPs to reduce or eliminate sediment, erosion, hazardous materials, and other pollutants that runoff from the Project site. The SWRCB requires that projects that disturb one or more acres of land must obtain coverage under the statewide GCP. The GCP also requires that prior to the start of construction

activities, the project applicant must file PRDs with the SWRCB, which includes a NOI, risk assessment, site map, annual fee, signed certification statement, SWPPP, and post-construction water balance calculations (PPP HYD-1). Furthermore, the construction contractor would be required to maintain a copy of the SWPPP at the site and implement all construction BMPs identified in the SWPPP during construction activities. Prior to the issuance of a grading permit, the project applicant is required to provide proof of filing of the PRDs with the SWRCB, which include preparation of the SWPPP. Construction BMPs would include but not be limited to the following BMPs listed in *Table 4.8-2, Construction BMPs* of the DEIR.

Furthermore, the ESCP that shall be submitted would address any potential erosion issues associated with the proposed grading and site preparation activities. Overall, submittal of the PRD's and implementation of the SWPPP and ESCP during the construction phase of both Specific Plan -Phase I/ Future Development Areas would ensure the minimization or elimination of any anticipated and expected pollutants of concern. Therefore, the Project would comply with all applicable water quality standards and waste discharge requirements resulting in a less than significant impact.

Operations

During the operational phase of the Project, runoff could include a variety of contaminants that could impact water quality such as oils, grease, fuel, antifreeze, byproducts of combustion (such as lead, cadmium, nickel, and other metals), as well as fertilizers, herbicides, pesticides, and other pollutants from landscaping maintenance. Therefore, an extensive drainage plan would be in place which includes on-site storm drains, culverts, catch basins and detention basins. The basins would be designed to lessen the flow of post-development runoff to pre-development conditions, and would be designed to treat runoff for pollutants, pursuant to SWRCB regulations.

According to the Santa Ana RWQCB MS4 permit, this Project would be classified as a Priority Development Project because it would create more than 10,000 square feet of impervious surfaces. Therefore, a preliminary WQMP has been created for this Project. The preliminary WQMP (*Appendix G2*) has incorporated combined LID treatment, source control BMPs, and treatment control BMPs. A final WQMP would be prepared pursuant to PPP HYD-3, as required

by MS4 permitting to address BMP sizing and operations and maintenance. The Final WQMP would be submitted to the City prior to the start of construction.

The preliminary WQMP for the Project includes, but is not limited to, the following site design BMPs:

- Construct streets, sidewalks, and parking lot stalls to the minimum widths necessary.
- Install on-site biotreatment basins/trenches with underdrains where soil type is poorly draining.

Source control BMPs are designed to minimize the potential for pollutants to come into contact with stormwater, thereby limiting the potential for water quality impacts downstream. A variety of source control BMPs would be incorporated into the Project and implemented during its operation, including the following:

- Minimize non-stormwater site runoff through efficient irrigation system design and controllers.
- Minimize trash and debris in storm runoff in parking lots, and roadways through a regular sweeping program.
- Provide solid roofs over all trash enclosures.
- Provide site occupants with a copy of the project WQMP and stormwater BMPs.
- Provide site occupants and employees with education/training materials for operation and maintenance of the stormwater BMPs.
- Install stormwater placards/stenciled messages with a “No Dumping” message on all on-site/ off-site storm drain inlets.

Treatment control BMPs are designed to control stormwater pollutants where it is not feasible to install on-site Site Design/LID BMPs, with the requisite capacity to treat the Design Capture Volume for identified Pollutants of Concern or where pretreatment of stormwater runoff is required, ahead of infiltration BMPs. The following treatment control BMP would be incorporated into the Project’s operational phase:

- Gravity Separator devices for pretreatment of sediment, trash/litter or oil and grease.

Furthermore, the preliminary WQMP shows that the Project can treat the full design capture volume (DCV) on-site. The DCV would be captured and treated by the proposed Contech underground corrugated metal pipe (CMP) systems (CMP) and Maxwell Drywells. As discussed above, stormwater runoff would be captured via the proposed catch basins that convey the runoff into bio clean hydrodynamic separators (Debris Separating Baffle Boxes [DSBBs]). The DSBBs consist of settling chambers for separating out larger solids and a media filter cartridge for capturing fine total suspended solids that may contain metals, nutrients, and bacteria. Runoff is then detained in the CMP detention basins and the Maxwell Drywells for capture, pretreatment, and/or gradually release storm water into the downstream public storm drain systems. On-site storm water treatment would incorporate underground chambers installed within each building's parking area. The proposed on-site storm drains would be sized during the Project's final design phase to restrict site discharges such that there would be no negative impact on existing downstream drainage facilities. Each storm drain in Campus Avenue, Bon View Avenue, Grove Avenue, and Merrill Avenue would be equipped with a hydrodynamic separator, or series of hydrodynamic separators to satisfy the statewide trash mandate. Each device would be approved by and listed on the Certified Full Capture System List of Trash Treatment Control Devices of the SWRCB.

As specified in the preliminary WQMP, the Hydrologic Conditions of Concern (HCOC) requirements are achieved by using the LID and hydromodification BMPs. The mitigation volume is approximately 434,211 cu-ft ((0.95 *1,017,027) – 531,965). The total volume being retained is 687,210 cu-ft which is greater than the mitigation volume needed. As a result, the mitigation volume has been contained by the proposed BMPs. Thus, operational water quality impacts would be less than significant with the implementation of PPP HYD-3 and maintenance of the BMPs described above and as specified in the WQMP. Furthermore, the Project would comply with all state, county, and local regulations regarding stormwater runoff during construction and operational phases of the Project. Therefore, water quality standards and waste discharge requirements would not be exceeded, and surface water and groundwater quality would not be degraded. Impacts would be less than significant.

SB330 Replacement Site

Construction and Operations

The SB330 Replacement Site along Grove Corridor is characterized by agricultural and urban development consisting of single-family residential units, agricultural plots, and some commercial uses. The TOP EIR evaluated development of the SB330 Replacement Site. The Project proposes a slight increase in residential zoning capacity pursuant to SB330. However, the Project does not change the development area evaluated in the City's TOP EIR. In addition, the Project does not propose any specific development of the SB330 Replacement Site at this time.

Pursuant to TOP, any new development projects of over one acre would be required to conform to all applicable state, regional, and local guidelines, standards of approval, and permitting requirements, including the City's discretionary review process as to not violate water quality standards or waste discharge requirements or otherwise substantially degrade surface or groundwater quality. Development of the SB330 Replacement Site was evaluated as part of the City's TOP EIR, and the proposed rezoning would have no additional significant impacts beyond that evaluated in the City's TOP EIR.

Conclusion

Construction and operations of Specific Plan – Phase I/Future Development Areas and SB330 Replacement Site would not violate water quality standards or waste discharge requirements or otherwise substantially degrade surface or groundwater quality with implementation of PPP HYD-1 through HYD-3 and compliance with all applicable regulation and permitting. (Draft EIR, pp. 4.8-15 through 4.8-21.)

b. ***Groundwater Supplies***

Threshold: Would the Project substantially deplete groundwater supplies or interfere substantially with groundwater recharge such that the Project may impede sustainable groundwater management of the basin?

Finding: Less than significant. (Draft EIR, p. 4.8-21.)

Explanation: **Specific Plan – Phase I/Future Development Areas**

Construction and Operation

The Project site contains several active wells that feed into man-made ponds and channels. In compliance with the Chino Basin

Water Master's Well Procedure for Developers, a well use/destruction plan and schedule for all existing private/agricultural wells shall be submitted to the City for approval prior to the issuance of permits for any construction activity. If a private well is actively used for water supply, the Developer shall submit a plan to abandon such well and connect users to the City's water system when available. Wells shall be destroyed/abandoned per the California Water Resource Guidelines and require permitting from County Health Department. Pursuant to PPP HYD-4, a copy of such permit and Form DWR 188 Well Completion Form shall be provided to the Development Engineering Department and the Utilities Engineering Department prior to issuance of grading and/or building permits. If the Developer proposes temporary use of an existing agricultural well for purposes other than agriculture, such as grading, dust control, etc., the developer shall make a formal request to the City of Ontario for such use prior to issuance of permits for any construction activity. Upon approval, the Developer shall enter into an agreement with the City and pay any applicable fees as set forth by the agreement. Therefore, with PPP HDY-4 implemented, construction-related impacts are not anticipated.

Water service to the Project would be provided by the City, which currently receives approximately 70 to 80 percent of its groundwater supply from the Chino Basin in addition to imported, local, and recycled water provided from the Water Facilities Authority (WFA), Chino Basin Desalter Authority (CDA), and Inland Empire Utilities Agency (IEUA), respectively. The Chino Basin is one of the largest groundwater basins in southern California, with approximately 5 million acre-feet of water demand in storage and has an unused capacity to store approximately 1 million acre-feet of additional water. Thus, the basin has the capacity to store an additional amount of water similar to the storage capacity of Diamond Valley Lake. The availability of additional storage in the basin allows the City to take advantage of wet years by storing additional water for use in dry years. Ontario participates in the Dry Year Yield (DYY) program with IEUA and Metropolitan Water District (MWD). In addition, the City benefits from recharge of IEUA recycled water, in compliance with Title 22 water quality standards, which can be pumped or stored for future use.

A Water Supply Assessment (WSA) has been prepared (Appendix J1 of the DEIR) and is discussed in DEIR *Section 4.15, Utilities and*

Service Systems. The WSA demonstrates that the Project's projected water demands are generally consistent with those assumed in the City's Urban Water Management Plan. Therefore, due to the availability of water supplies, payment of fees, and ability for the City to meet the Project's water demand, the Project would not substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the Project may impede sustainable groundwater management of the basin.

SB330 Replacement Site
Construction and Operations

Rezoning of the SB330 Replacement Site for residential uses would result in a net decrease for potable water demand and a very slight increase in total water demand (potable plus recycled) compared to the water demand due to replacing low-medium density residential zoning with medium density residential zoning. Since the rezoning of the SB330 Replacement Site would result in a net decrease of potable water demand and slight increase in total water demand, future development on the SB330 Replacement Site would be adequately served by the City without substantially decreasing groundwater supplies. Similarly, if wells are located within the SB330 Replacement Site, future projects are subject to the Chino Basin Water Master's Well Procedure for Developers and PPP HYD-4 shall be implemented. Since future development on the SB330 Replacement Site would not substantially decrease groundwater or interfere substantially with groundwater recharge and comply with all applicable regulations and guidelines with PPP HYD-4 implemented, impacts would be less than significant.

Conclusion

Construction and operations of Specific Plan – Phase I/Future Development Areas and SB330 Replacement Site would not substantially decrease groundwater supplies or interfere substantially with groundwater recharge that would impede sustainable groundwater management of the Chino Basin due to availability of water supplies, payment of fees, and ability for the City to meet the Project's water demand in addition to implementation of PPP HYD-4. Impacts would be less than significant. (Draft EIR, pp. 4.8-21 through 4.8-23.)

c. ***Erosion or Siltation, Flooding, Runoff***

Threshold: Would the Project substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river, in a manner which would (i) result in substantial erosion or siltation on- or off-site, (ii) substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or off-site, (iii) create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff or impede or redirect flood flows?

Finding: Less than significant. (Draft EIR, p. 4.8-23.)

Explanation: **Specific Plan – Phase I/Future Development Areas**

Construction and Operations

Construction of the Project would alter the existing drainage pattern of the site, but not in a manner that would result in substantial erosion or siltation. The Project would include the use of an Erosion Control Plan and methods that reduce overall erosion during construction and operation, such as preserving vegetation, soil binders, mulching, soil roughening, and stabilization. Furthermore, this Project will be conditioned to construct the Master Planned Euclid Avenue storm drain. The Project area storm drain improvements, shown in *Figure 3-15, Storm Drain Plan* of the DEIR, are consistent with the facilities specified in Drainage Area XIV of the City Planned Drainage Facilities (refer to *Figure 3-16, City of Ontario Planned Drainage Facilities* of the DEIR).

Drainage Area XIV consists of an area approximately 2.8 square miles along the westerly boundary of Ontario Ranch-West. The area is generally bounded by Riverside Drive to the north, Euclid Avenue to the west, Merrill Avenue to the south, and Bon View Avenue to the east. There are no improved drainage facilities other than graded earthen ditches since the majority of the area is currently being used for agriculture. Drainage Area XIV drains to the City of Chino. It discharges to the existing Airport Channel at the intersection of Euclid Avenue and Merrill Avenue. The Airport Channel is an interim facility that runs south along the east side of Euclid Avenue to the Prado Flood Control Basin. The City of Chino's future master-planned storm drain, the Euclid Avenue Storm Drain (Line "I" per City of Chino's Master Plan of Drainage for Subarea 2), would need to be re-evaluated by the City of Chino, to accommodate updated flow rates projected to be discharged from Drainage Area XIV, within the

Ontario Ranch area, per this study. In 2003, the Master Plan of Drainage was revised (Revision No. 2) to include Subarea 2 “The Preserve”, which identified capacity expansion due to the addition of 8.5 square miles in the southeast area of the City of Chino. The Preserve is encompassed by the City (Ontario Ranch area) to the north, Riverside County to the south and east, and Euclid Avenue to the west. Drainage Basin Areas were added and redefined from the Chino Airport Master Plan and the City’s New Model Colony (Ontario Ranch) Drainage Master Plan. In 2004 and 2007, two unofficial amendments were prepared to update Revision No. 2, which identified revisions necessary for the Drainage Basins B, D, and J, and Drainage Basin G respectively for the ultimate build-out of The Preserve area. On-site drain improvements for the Project would include storm water detention/ retention/ water quality basins, which would capture, treat, and/or gradually release storm water into the downstream public storm drain systems. Onsite storm water treatment would incorporate underground chambers installed within each building’s parking area. Each storm drain in Campus Avenue, Bon View Avenue and Merrill Avenue will be equipped with a hydrodynamic separator, or series of hydrodynamic separators to satisfy the statewide trash mandate. Each device will be approved by and listed on the Certified Full Capture System List of Trash Treatment Control Devices of the SWRCB. As previously discussed above, the Project’s proposed hydrology would include an on-site internal storm drain system that discharges via catch basins to underground detention chambers and Maxwell Drywells scattered throughout each on-site truck yard near Building 1 West, Building 1 East, Building 2 North, Building 2 south, and Buildings 3 through 8. The treated water would be discharged from the proposed on-site storm drain system into the City’s proposed 102-inch RCP master plan storm drain on Bon View Avenue.

There are currently no improved drainage facilities aside from a few on-site detention areas located in the central and southerly portions of the site. Thus, the Project would include storm drain improvements consistent with the facilities specified in Drainage Area XIV of the City of Ontario Planned Drainage Facilities.

Catch basins located throughout the site would collect runoff. On-site storm drain systems would convey runoff to the following facilities:

- 120-inch storm drain in Grove Avenue leading south to existing facilities via modification of an existing channel.
- 102-inch RCP in Bon View Avenue.
- 60-inch RCP in Merrill Avenue adjacent to the Specific Plan area, which will transition to a 120-inch RCP running west to a RCB at Euclid Avenue.
- 54-inch storm drain in Campus Avenue which connects to the future storm drain in Merrill Avenue.
- 10-foot by 10-foot storm drain in Euclid Avenue connecting to the Prado flood control basin.

Since the existing storm drain infrastructure does not have the capacity to accept stormwater flows in excess of the 100-year storm, the Project proposes an additional detention system at the site. Runoffs tributary to on-site truck yards would be sufficiently detained in a way that the overall proposed condition 100-year discharge from the site to the existing dirt channel in Euclid Avenue would be significantly below the existing 100-year discharge conditions. Runoffs from the parking lot west of Building 3 (1.5 cfs over 0.45 acres), the frontage landscape north of Building 4 (1.0 cfs over 0.35 acres), and parking lots south of Building 1 (18.0 cfs over 7.70 acres), would be allowed to discharge undetained. Note that the proposed on-site storm drains would be sized during the Project's final design phase to restrict site discharge such that there would be no negative impact on existing downstream drainage facilities.

With implementation of the proposed BMPs and existing on-site detention, the total proposed 100-year condition discharge from the Project site to the existing dirt channel in Euclid Avenue, via proposed on-site storm drains and proposed master plan storm drains in Bon View Avenue and Merrill Avenue, would be approximately 49.3 cfs. This is significantly less than the existing 100-year condition discharge of 141 cfs from the site to Merrill Avenue.

With the implementation of the PPP HYD-1 through HYD-3 which includes SWPPP, Erosion Control Plans, BMPs and storm plan Project features, the Project would not substantially increase the rate or amount of erosion/siltation and surface runoff in a manner that would result in on- or off-site flooding. Additionally, site design LID features and on-site detention facilities would ensure that

stormwater runoff does not exceed the capacity of the storm drain system. The calculated stormwater runoff volume for the 100-year storm under post-development conditions would be less than the amount of stormwater runoff for the 100-year storm under existing conditions. Therefore, this impact would be less than significant.

SB330 Replacement Site
Construction and Operations

The City's TOP EIR evaluated development of the SB330 Replacement Site. Similar to Impact 4.8-1, any future development conducted on the SB330 Replacement Site would be subject to all applicable state, regional, and local regulatory compliance, including the City's discretionary review process. Development of the SB330 Replacement Site was evaluated as part of the City's TOP EIR, and the proposed rezoning would have no additional significant impacts beyond that evaluated in the City's TOP EIR with implementation of regulatory requirements and standard conditions of approvals.

Conclusion

With implementation of PPP HYD-1 through HYD-3 which includes SWPPP, Erosion Control Plans, BMPs and storm plan Project features, construction and operations of Specific Plan – Phase I/Future Development Areas and SB330 Replacement Site would not result in substantial erosion or siltation on- or off-site, substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or off-site, create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff, or impede or redirect flood flows. (Draft EIR, pp. 4.8-23 through 4.8-26.)

d. ***Flood Hazard***

Threshold: In flood hazard, tsunami, or seiche zones, would the Project risk release of pollutants due to project inundation?

Finding: No impact. (Draft EIR, p. 4.8-26.)

Explanation: **Specific Plan – Phase I/Future Development Areas**

Construction and Operations

The Project site is within FEMA Flood Zones X and D, per FEMA FIRM Map No. 06071C9335H dated August 28, 2008. Zone D is an area where there are possible but undetermined flood hazards, as no analysis of flood hazards has been conducted. Zone X is an area

determined to be outside the 0.2 percent annual chance floodplain. There are no large water bodies, including rivers or streams that would cause flooding on the Project site.

The Project site, however, is within the dam failure inundation zone for the San Antonio Dam. The San Antonio dam is under USACE's jurisdiction and operates as a flood control and debris dam for the San Antonio River. California dams are monitored and inspected annually by the California Division of Safety of Dams (DSOD). Dam owners are required to maintain Emergency Action Plans (EAPs) that contain procedures for damage assessment and emergency warnings. An EAP also identifies potential emergency conditions at a dam and specifies preplanned actions to help minimize property damage and loss of life should those conditions occur. Dam owners are also instructed by the EAP to issue early warning and notification messages to downstream emergency management authorities.

The City has never been impacted by a major dam failure and the dam has a very low probability of dam failure. According to the latest dam inundation map dated February 1986, the arrival time of the first flood wave would be between 8 and 10 hours after the catastrophic failure of the dam and the depth of water is estimated to be approximately two feet. This would allow for a significant time for implementing evacuation procedures, as specified in the City's 2018 Hazard Mitigation Plan. In addition, the Project's proposed BMPs and LID measures would result in the treatment and biofiltration of any floodwaters that enter the site, thus preventing significant pollutants from entering the regional storm drain system.

The Project site is not located near any water storage tanks or reservoirs that would result in a seiche during seismic activity. Furthermore, the Project site is inland and approximately 31.1 miles from the Pacific Ocean and therefore is not at risk of flooding due to tsunamis. Release of pollutants due to inundation would not occur. Overall, no impact would occur.

SB330 Replacement Site
Construction and Operations
The SB330 Replacement Site is within FEMA Flood Zones X and D, per the FEMA FIRM Map No. 06071C9335H, dated August 28, 2008, and FEMA FIRM Map 06071C8620H, dated August 28, 2008. Similarly, there are no large water bodies, including rivers or streams that would cause flooding on the SB330 Replacement Site. The SB330 Replacement Site is also subject to the City's emergency

evacuation procedures in case of dam failure. Furthermore, any future development within the SB330 Replacement Site area would follow the City's standard discretionary review process and require compliance with existing regulations including those cited above. BMPs and LID measures would treat any floodwaters entering the SB330 Replacement site. Since future development would adhere to established regulatory framework, and with implementation of BMPs and LID measures, impacts would be less than significant.

Conclusion

The Specific Plan – Phase I/Future Development Areas and SB330 Replacement Site are not located near large water bodies, including rivers or streams that would result in impacts from flooding, seiches, or from tsunamis. Pollutants shall be captured and treated before entering the City's master storm water system. A less than significant impact would occur. (Draft EIR, pp. 4.8-26 through 4.8-27.)

e. ***Water Quality Control Plan***

Threshold: Would the Project conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan?

Finding: Less than significant. (Draft EIR, p. 4.8-27.)

Explanation: **Specific Plan – Phase I/Future Development Areas**

Construction and Operations

The Project would adhere to all applicable state, regional, and local regulatory framework which would ensure that surface and groundwater quality are not adversely impacted during construction. In addition, implementation of the LID and BMP measures at the site, including hydrodynamic separators, underground detention, and Maxwell drywells would ensure that water quality is not impacted during the operational phase of the Project. As a result, the Project would not obstruct or conflict with the implementation of the Santa Ana River Basin Water Quality Control Plan. On-site groundwater wells would be abandoned per the California DWR Standards and would require a permit from the San Bernardino DEHS and completion of a DWR 188 Well Completion Form.

Upon development, the Project site would be connected to the City's public water supply and there would be no on-site wells for use of groundwater. The City manages both the potable and non-potable supplies to ensure withdrawals from the Chino Groundwater Basin do not exceed the safe yield for the Basin, as per the Chino Basin Watermaster's Optimum Basin Management Program (OBMP). The Chino Basin is listed as "very low" priority pursuant to the Sustainable Groundwater Management Act (SGMA), and therefore is not operating under a Groundwater Sustainability Plan (GSP) pursuant to SGMA. However, the Chino Basin is an adjudicated basin

operating under the OBMP noted above (refer to *Section 4.15*, *Utilities and Service Systems* for more information regarding potable water).[1] The Project would not obstruct or conflict with the OBMP. With adherence to all applicable regulative framework, and implementation of PPP HYD-1 through HYD-4, impacts would be less than significant.

SB330 Replacement Site
Construction and Operations

As discussed above for the Specific Plan site, rezoning of the SB330 Replacement Site would not significantly impact any water quality control plan or groundwater management plan. The Project would result in a slight increase in density for the SB330 Replacement Site area, but the land uses would be similar to that which is already allowable. Any future development would be required to comply with applicable local, state and federal requirements related to water quality and groundwater management. Since future development would adhere to established regulatory framework, impacts would be less than significant.

Conclusion

Implementation of the Project and future development on the SB330 Replacement Site per the TOP would not obstruct or conflict with the implementation of a water quality control plan or sustainable groundwater management plan. Compliance with all applicable regulatory framework and implementation of standards of approval governing water quality and groundwater would ensure that any water quality control plan or sustainable management plan cited above would not be obstructed by the Project and any future development on the SBB 330 Replacement Site. Impacts would be reduced to less than significant levels. (Draft EIR, pp. 4.8-27 through 4.8-29.)

8. LAND USE AND PLANNING

a. *Established Communities*

Threshold: Would the Project physically divide an established community?

Finding: No impact. (Draft EIR, p. 4.9-13.)

Explanation: **Specific Plan – Phase I/Future Development Areas**

Construction and Operations

Examples of projects that could physically divide an established community include a new freeway or highway that traverse an established neighborhood. The Project proposes business park and industrial uses on approximately 219.39 acres. The Project would

[1] https://water.ca.gov/Programs/Groundwater-Management/Basin-Prioritization (accessed May 3,2021).

replace the existing agricultural uses and does not propose any new streets or other physical barriers, which could physically divide an established community. Given its nature and scope, the Project would not physically divide an established community. Therefore, no impact would occur.

SB330 Replacement Site
Construction and Operations

The SB330 Replacement Site is currently occupied by agricultural, commercial, residential, and vacant land uses. Single-family residences are located throughout the SB330 Replacement Site, but are distant in space and do not share a common boundary. Therefore, these residences are not part of an established community but are stand-alone residential properties. Streets that currently provide access to the SB330 Replacement Site include E. Riverside Drive, Cucamonga Avenue, Grove Avenue, Edison Avenue, Schaefer Avenue, and Chino Avenue. E. Riverside Drive comprises the southern boundary of an established residential community on the north side of the roadway. The SB330 Replacement Site does not extend north of E. Riverside Drive; therefore, it would not divide the established community.

The Project proposes rezoning of the SB330 Replacement Site to a slightly higher residential density to increase the maximum number of housing units to ensure there is no net loss of residential zoning density. This action however does not propose any specific construction of new structures or redevelopment of the SB330 Replacement Site that would demolish any existing uses. The slight increase in residential zoning density would not represent a physical barrier to this area. Therefore, no impact would occur.

Conclusion

Construction and operation of projects on the Project site and replacement site would not result in a physical division of the community. While new uses would replace the existing development, this would not result in a physical separation where none currently exists. No impact would occur, and mitigation is not required. (Draft EIR, p. 4.9-13.)

b. ***Conflicts With Plans***

Threshold: Would the Project cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect?

Finding: Less than significant. (Draft EIR, p. 4.9-14.)

Explanation: **Specific Plan – Phase I/Future Development Areas**

Construction and Operations

The Project includes a GPA, Specific Plan, Development Agreement, Development Plan, Tentative Parcel Maps, and Williamson Act contract cancellations, to allow for development of an industrial and business park on 23 parcels covering approximately 219.39 acres in the City. The development would include eight buildings ranging from 81,500 square feet (sf) to 1,268,794 sf. The development would allow for the development of approximately 5,333,518 square feet of industrial and business park buildings.

The GPA would change the existing land use designations of the 219.39-acre Project site from 157.06 acres of Low-Medium Density Residential and 62.36 acres of Business Park to 35.16 acres of Business Park and 184.26 acres of General Industrial, to facilitate development of the Project. The Project would provide a land use plan, circulation plan, streetscape plan, infrastructure service plan, grading plan, maintenance plan, phasing plan, design guidelines, development regulations, and implementation measures to guide the development of the Project site. A specific plan is required by the City in order to comprehensively plan for development of the Project site. Implementation of the Project would achieve the intent of the Policy Plan and TOP for the Project site.

BP (Business Park) Zoning District: The BP zoning district accommodates industrial-serving commercial, office uses, and very light industrial uses. Development within this district is typically multi-tenant in nature; however, single-tenant buildings are not precluded. Permitted uses include construction uses; manufacturing uses; wholesale trade uses; health care and social assistance uses; commercial uses; and warehousing uses. The Project would allow for up to 919,048 square feet of Business Park building space to be developed on a total of 35.17 acres within Planning Areas 1 and 3. These Planning Areas would be developed with business park buildings that would allow for the development of uses such as offices, technology centers, research and development, enterprises, light manufacturing and warehouse/distribution uses.

IG (Industrial - General) Zoning District: The IG zoning district accommodates storage and warehousing uses located in larger buildings on larger sites. Uses may include e-commerce, high cube

warehouses, or distribution. A wide range of manufacturing and assembly uses are also permitted in this district. Permitted uses include agricultural uses; construction uses; wholesale trade uses; commercial uses; and warehousing uses. The Project would allow up to 4,414,470 square feet of industrial building space to be constructed within Planning Area 2, 4, and 5. These Planning Areas would comprise 184.26 acres and would allow for the development of uses such as general light industrial, manufacturing, warehouse/distribution, and e-commerce fulfillment center operations.

The following information consists of an evaluation of the Project's consistency with applicable plans and policies that have been adopted for the purpose of avoiding or mitigating an environmental effect.

Southern California Association of Governments RTP/SCS Compatibility

The Project is considered a project of regionwide significance pursuant to the criteria outlined in SCAG's *Intergovernmental Review Procedures Handbook* (November 1995) and State CEQA Guidelines §15206, because it would involve a net increase of over 500,000 square feet of business establishment. Therefore, a consistency analysis with the applicable regional planning guidelines and strategies of SCAG's RTP/SCS is required. *Table 4.9-3* provides an assessment of the Project's consistency with the recently adopted 2020-2045 RTP/SCS (Connect SoCal) goals. The RTP/SCS goals are directed toward transit, transportation and mobility, and protection of the environment and health of residents. The consistency analysis below focuses on the broad, policy-oriented goals of the 2020-2045 RTP/SCS to determine the Specific Plan's consistency with the RTP/SCS.

The Ontario Plan Compatibility

An analysis of the Project's consistency with Citywide goals in TOP is provided in *Table 4.9-4, Consistency with the City of Ontario General Plan (*TOP*)* of the DEIR. *Table 4.9-4* of the DEIR focuses on consistency with the City's General Plan Elements that address environmental issues. Goals and policies that do not address environmental effects or are not applicable to the Project are not addressed below. (Draft EIR, p. 4.9-16.)

The Project is consistent with the Housing Element of the Policy Plan (General Plan) component of The Ontario Plan, as the Project site is not one of the properties in the Available Land Inventory contained in Table A-3 (Available Land by Planning Area) of the Housing Element Technical Report Appendix. The General Plan Amendment (GPA) is proposed to change the Project site's land use designations from Low-Medium Density Residential and Business Park to approximately 35.2 acres of Business Park (0.6 FAR) and 184.2 acres of Industrial (0.55 FAR) land uses. The GPA would, therefore, eliminate the low-medium density land use designation, thereby theoretically eliminating 1,352 units (as determined by the City's density determinations to be 8.5 dwelling units per acre). In compliance with SB 330, the EIR evaluated the elimination of 1,352 units and determined that based on SB 330 Exceptions for lack of water and sewer to serve a residential project and the no net loss of residential capacity, the Project is consistent with HCD exception findings. The proposed Project site does not have sufficient water or wastewater facilities to serve a residential project. As explained in Section 3.4.1.2, of the Draft EIR, at present there is no water or sewer infrastructure that could serve residential units because the land has been used for agricultural purposes with water provided by on-site wells and sewer provided by septic systems. The Project Applicant is working on projects both approved and under review that span the length of Eucalyptus Avenue to the north, Merrill Avenue to the south, Euclid Avenue to the east, and Grove Avenue to the west (Ontario Ranch Business Park Specific Plan – Approved; Ontario Ranch Business Park Specific Plan Amendment – Under review; and, South Ontario Logistics Center – Subject Project), with a combined estimated cost of $144,331,000. The total estimated cost includes individual streets, lengths of pipe, storm drain, sewer, water, streetlights, curbing, paving, signals, power/fiber, and more. This cost would be financially infeasible for the 1,352 units presently allowed under the current residential General Plan designation and therefore the cost of such improvements would make residential development on the site financially infeasible (see Government Code Section 66589.5(d)(2) cited above).

In order to demonstrate "no net loss of residential capacity," the Project will be required to demonstrate increased residential zoning capacity on a "SB330 Replacement Site" by 1,352 units to off-set the Project site loss of zoning capacity (Low Medium Density, 5.1 to 11 du/ac). In tandem with the City's adoption of the 6th Cycle Housing Element, scheduled to go before the City Council for their consideration in February 2022, the City is also adopting an Affordable Housing Overlay zone and applying this zone to all parcels in the sites inventory that are

south of Riverside Drive or are zoned MU-2 along Holt Boulevard. Relevant to the Project, the Affordable Housing Overlay zone will establish a minimum density of 20 dwelling units per acre for all development (regardless of Policy Plan designation or underlying zoning district), and increase the maximum density from 25 to 30 units per acre for parcels that are designated in the Policy Plan for Medium Density Residential ("MDR") when an affordable housing project is proposed with at least 25 percent of proposed units are restricted for lower income households. The creation of the Affordable Housing Overlay zone and increased maximum density of 5 dwelling units per acre will increase residential capacity on 473.7 acres of such parcels currently designated MDR, by 2,368 dwelling units. On December 20, 2021, the Planning Commission reviewed and recommended to the February 15, 2022, City Council hearing for approval a General Plan Amendment (File No. PGPA21-004) for the Housing Element update to the Policy Plan (General Plan) component of The Ontario Plan, to address State mandates regarding the Regional Housing Needs Allocation ("RHNA"), as well as to modify the Policy Plan Land Use Plan (Exhibit LU-01) to establish a Zone Change (File No. PZC21-002). The Project EIR addresses the potential impacts associated with relocating residential density from the Project site to the SB330 Replacement Sites located north of the Project site, along Grove Avenue, pursuant to SB330. With the City adoption of the 6th Cycle Housing Element and associated Affordable Housing Overlay zone, no net loss of residential capacity will occur as a result of the Project. The SB 330 Replacement Site is located approximately 0.3 miles north of the Project site and is generally bound by Cucamonga Avenue to the west, East Riverside Drive to the north, Walker Avenue to the east, and Edison Avenue to the south. Existing land uses surrounding the approximate 473-acre SB330 Replacement Site boundary include agricultural uses, nurseries, truck/trailer storage, and single-family residential. According to the City's Land Use Plan, Land use within the SB330 Replacement Site includes residential, general commercial, and neighborhood commercial, as well as open space park land. (Final EIR, pp. 3.11 through 3.12.)

Ontario Development Code Consistency

Upon adoption of the Project, the development regulations and design standards within the Project would apply to the Project area and would establish the applicable zoning regulations and development standards. The Specific Plan would become the land use implementation tool for the Project area. As stated in Ontario Development Code §1.01.035, in the event of any conflict between the requirements of the Development Code and the standards contained within an adopted project, the requirements of the project shall govern, and when the provisions of a project are silent on a specific matter, the regulations set forth in the Development Code shall apply. As such, the Project would not result in conflicts with the

Ontario Development Code, and impacts would be less than significant.

Airport Environs Land Use Plan Consistency

The Project site is located immediately to the north of the Chino airport and is approximately 4.3 miles to the southwest of the Ontario International Airport and is within the Airport Influence Areas for these airports. The Project site is within the Ontario and Chino Airport's Airport Influence Area. The southeast corner of the Project area is within Zone C and the balance is within Zone D of the Chino Airport as designated in the Chino Airport Land Use Compatibility Plan (ALUCP). Zone C is known as the Compatibility Zone for Non-Residential Land Use, designating the area for uses such as Light Industrial. For Zone D, warehousing and office buildings are permitted. The Specific Plan aligns with the requirements of both Zone C and D of the Chino ALUCP for densities and compatible land uses. Furthermore, the maximum building height for the Project is 55 feet so the Project does not require ALUCP review (as noted in ALUC's comment on the NOP) According to the San Bernardino County Chino Airport Comprehensive Land Use Plan, which focuses on ensuring that coexisting communities and airports are safe and peaceful, the site is within Safety Zone 6. Safety Zone 6 compatibility criteria allow light industrial and manufacturing uses as well.

Furthermore, the Project site is largely within the Aircraft Departure Accident Risk Intensity Contours of the Chino Airport Land Use Compatibility Plan. This means there is a potential risk for aircraft accidents to occur. In the Aircraft Departure Accident Risk Intensity Contour, development must comply with safety and airspace compatibility factors. The Specific Plan meets these safety factors to further reduce the risk of impact from aircraft accidents, such as building height and materials. The Project site is within the Ontario International Airport ALUCP. However, it is not within a safety zone, a noise impact zone, or an airspace protection zone of the Ontario International Airport. Therefore, a less than significant impact will occur.

SB330 Replacement Site
Construction and Operations

Any future development on the SB330 Replacement Site would be evaluated to demonstrate consistency with the applicable land use regulations and policies cited above, as part of the City's standard development review process. The relatively slight increase in residential density is not anticipated to result in any new or substantially more severe environmental impacts than evaluated in the City's TOP EIR as it is planned growth that is anticipated in the

evaluations of the TOP EIR. In fact, the increased density would allow for a wider variety of residential product types placed within a mixed-used transit-oriented development area, providing a greater level of consistency with local and regional land use plans than the current low medium density zoning at the Specific Plan site, which is in an increasingly urbanizing industrial corridor. Therefore, the proposed upzoning at the SB330 Replacement Site would not create a new significant impact. Impacts would be less than significant.

Conclusion

The Project would develop business park and industrial uses that would further support the local regional economy and business. Although the Project includes land uses not currently designated on these specific sites in TOP, once adopted, the Project would provide appropriate land use regulations and zoning policies which would create a coherent and efficient usage of the land. The Project would promote orderly development to coincide with adjacent land uses, including Chino Airport. The Project embodies the goals and policies in the applicable long-range planning documents. Implementation of the Project would not conflict with applicable plans adopted for the purpose of avoiding or mitigating an environmental effect. This would remain true with the implementation of the Grove Avenue SB330 Replacement Site. Impacts would be less than significant, and no mitigation is necessary. (Draft EIR, pp. 4.9-14 through 4.9-29.)

9. MINERAL RESOURCES

a. *Regional and Statewide Mineral Resources*

Threshold: Would the Project result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?

Finding: Less than significant. (Draft EIR, p. 7-7.)

Explanation: The Project site is within the City of Ontario and its Sphere of Influence is designated Mineral Resource Zone 3, which is defined as areas where the significance of mineral deposits cannot be determined from available data. However, only areas in the far north of the City have been designated as areas where significant mineral deposits are present or there is likelihood of their presence, and development should be controlled. In addition, Figure OS-6f, Mineral Resource Zones, of The Ontario Plan (TOP) Draft EIR shows that the proposed Project area is also located within MRZ-3. Development of the Project site would not result in the loss of identified regional or local mineral resources, conversion of an identified mineral resource use, or conflict with existing mineral resource extraction activities. Impacts would be less than significant.

Similar to the Project site, the SB330 Replacement Site is within an MRZ-3 area, indicating that there are no known deposits of significant minerals. Further, the proposed rezoning at the SB330 Replacement Site would not change the overall development footprint, nor is any development proposed at this time. Therefore, impacts would continue to be less than significant. (Draft EIR, p. 7-7.)

b. ***Locally-Important Mineral Resource***

Threshold: Would the Project result in the loss of availability of a locally-important mineral resource recovery site delineated on a local general plan, specific plan or other land use plan?

Finding: Less than significant. (Draft EIR, p. 7-7.)

Explanation: The Project site is within the City of Ontario and its Sphere of Influence is designated Mineral Resource Zone 3, which is defined as areas where the significance of mineral deposits cannot be determined from available data. However, only areas in the far north of the City have been designated as areas where significant mineral deposits are present or there is likelihood of their presence, and development should be controlled. In addition, Figure OS-6f, Mineral Resource Zones, of The Ontario Plan (TOP) Draft EIR shows that the proposed Project area is also located within MRZ-3. Development of the Project site would not result in the loss of identified regional or local mineral resources, conversion of an identified mineral resource use, or conflict with existing mineral resource extraction activities. Impacts would be less than significant.

Similar to the Project site, the SB330 Replacement Site is within an MRZ-3 area, indicating that there are no known deposits of significant minerals. Further, the proposed rezoning at the SB330 Replacement Site would not change the overall development footprint, nor is any development proposed at this time. Therefore, impacts would continue to be less than significant. (Draft EIR, p. 7-7.)

10. NOISE

a. ***Noise Standards***

Threshold: Would the Project result in the generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?

Finding: Less than significant. (Draft EIR, p. 4.10-15.)

Explanation: **Specific Plan – Phase 1**

Construction

Construction noise typically occurs intermittently and varies depending on the nature or phase of construction (e.g., land clearing, grading, excavation, paving). Noise generated by construction equipment, including earth movers, material handlers, and portable generators, can reach high levels. During construction, exterior noise levels could affect the residential neighborhoods surrounding the construction site. The nearest sensitive receptors to the Phase 1 construction area is an existing residential residence located approximately 200 feet from the Project boundary, on the northeast corner of Grove Avenue and Eucalyptus Avenue.

Phase 1 construction activities would include demolition, site preparation, grading, building construction, paving, and architectural coating. Such activities would require industrial saws, excavators, and dozers during demolition; dozers and tractors during site preparation; excavators, graders, and dozers during grading; cranes, forklifts, generators, tractors, and welders during building construction; pavers, rollers, mixers, and paving equipment during paving; and air compressors during architectural coating. Typical operating cycles for these types of construction equipment may involve 1 or 2 minutes of full power operation followed by 3 to 4 minutes at lower power settings. Other primary sources of acoustical disturbance would be random incidents, which would last less than one minute (such as dropping large pieces of equipment or the hydraulic movement of machinery lifts). Noise generated by construction equipment, including earth movers, material handlers, and portable generators, can reach high levels. Typical noise levels associated with individual construction equipment are listed in *Table 4.10-9: Typical Construction Noise Levels* of the DEIR. Equipment noise levels at 150 feet and 85 feet, the distance to the nearest sensitive receptors during Phase 1 and Phase 2 construction activities are included in *Table 4.10-9* of the DEIR.

The City of Ontario has not established noise limits for temporary construction activities. Therefore, for the purposes of this analysis, the City of Chino threshold of 65 dBA at the affected residential property is used to analyze construction noise impacts to affected residences in the City of Ontario. Chino city limits are also adjacent to the southern boundary of the Project. If construction equipment remained stationary and was located at the Project boundary nearest to the closest sensitive receptor construction noise could exceed the

City's 65 dBA threshold. However, construction equipment will be moving throughout the site and all stationary equipment is located away from sensitive receptors as a best practice.

Following FTA's methodology for quantitative construction noise assessments, FHWA's Roadway Construction Noise Model (RCNM) was used to predict construction noise. The noise levels calculated in *Table 4.10-10, Phase 1 Construction Noise Levels at Nearest Receptor* of the DEIR, show estimated exterior construction noise. Following FTA methodology, when calculating construction noise, all equipment is assumed to operate at the center of the Project because equipment would operate throughout the Project site and not at a fixed location for extended periods of time. It was assumed that all Project demolition would occur during Phase 1, therefore, the distance used in the RCNM model for demolition was 1,831 feet because the center of the entire site would be used and the nearest receptor would be located to the north along Eucalyptus Avenue. For the remaining construction phases, the distance used in the RCNM model was 2,188 feet, measured from the center of the Phase 1 area to the nearest sensitive receptor located on the northeast corner of Grove Avenue and Eucalyptus Avenue.

Construction noise would not exceed the 65 dBA threshold at residential properties. In addition, compliance with the Municipal Code would minimize impacts from construction noise by limiting construction to daytime hours on weekdays and Saturdays. Phase 1 construction activities would result in a less than significant noise impact.

Operations

Implementation of the proposed Project would create new sources of noise in the Project vicinity. The major noise sources associated with the Project that would potentially impact existing nearby residences include stationary noise equipment (i.e. trash compactors, air conditioners, etc.); truck and loading dock (i.e., slow moving truck on the site, maneuvering and idling trucks, equipment noise); parking areas (i.e., car door slamming, car radios, engine start-up, and car pass-by); and off-site traffic noise.

Mechanical Equipment

The nearest sensitive receptor to the Phase 1 Project site is the residence on the northeast corner of Grove Avenue and Eucalyptus

Avenue, approximately 200 feet from the Project boundary. Potential stationary noise sources related to long-term operation of the Project would include mechanical equipment. Mechanical equipment (e.g., heating ventilation and air conditioning [HVAC] equipment) typically generates noise levels of approximately 52 dBA at 50 feet. Based on preliminary site plans, the nearest potential location for a HVAC unit would be on the roof of Building 8, approximately 320 feet from the nearest residential property. HVAC noise levels would attenuate by the distance to approximately 35.9 dBA, which is well below the City's 65 dBA daytime and 45 dBA nighttime noise standards for residential uses. Operation of mechanical equipment would not increase ambient noise levels beyond the acceptable compatible land use noise levels.

Truck and Loading Dock Noise

During loading and unloading activities, noise would be generated by the trucks' diesel engines, exhaust systems, and brakes during low gear shifting' braking activities; backing up toward the docks; dropping down the dock ramps; and maneuvering away from the docks. The nearest loading/unloading activities to residential properties would occur on the northern edge of the Project site at the business park area, buildings five through eight.

The proposed Project buildings include dock-high doors for truck loading/unloading and manufacturing/light industrial operations. The nearest dock-high doors to residences are located approximately 223 feet from the Project property line and are oriented to the south, away from the residences to the north. Loading dock noise is approximately 68 dB at 30 feet. Loading dock noise levels would be approximately 42.6 dBA after accounting for distance and the intervening structures. Furthermore, loading dock doors would be surrounded with protective aprons, gaskets, or similar improvements that, when a trailer is docked, would serve as a noise barrier between the interior warehouse activities and the exterior loading area. This would attenuate noise emanating from interior activities, and as such, interior loading and associated activities would be permissible during all hours of the day. Therefore, noise levels associated with truck loading/unloading activities would not exceed the City's 65 dBA daytime and 45 dBA nighttime noise standards when measured at the nearest residential uses.

Parking Noise

Phase 1 of the Project would provide 1,241 parking stalls, 511 trailers stalls, and 446 dock doors. Parking stalls would be located on all sides of the proposed buildings except the north side of the business park buildings which face the residential properties. Nominal parking noise would occur within the on-site parking facilities. Traffic associated with parking lots is typically not of sufficient volume to exceed community noise standards, which are based on a time-averaged scale such as the CNEL scale. The instantaneous maximum sound levels generated by a car door slamming, engine starting up, and car pass-bys range from 53 to 61 dBA; however due to the orientation of the buildings, sensitive receptors would be shielded from parking lot noise. It should be noted that parking lot noises are instantaneous noise levels compared to noise standards in the hourly L_{eq} metric, which are averaged over the entire duration of a time period.

Off-Site Traffic Noise

Implementation of Phase 1 of the Project would generate increased traffic volumes along nearby roadway segments. According to the Traffic Impact Study, Phase 1 of the Project would generate 7,232 daily trips which would result in noise increases on Project area roadways. In general, a traffic noise increase of less than 3 dBA is barely perceptible to people, while a 5-dBA increase is readily noticeable. Generally, traffic volumes on Project area roadways would have to approximately double for the resulting traffic noise levels to increase by 3 dBA. Therefore, permanent increases in ambient noise levels of less than 3 dBA are considered to be less than significant.

Traffic noise levels for roadways primarily affected by the Project were calculated using the FHWA's Highway Noise Prediction Model (FHWA-RD-77-108). Traffic noise modeling was conducted for conditions with and without the Project, based on traffic volumes from the Traffic Impact Analysis. *Table 4.10-11, Phase 1 Opening Year and Opening Year Plus Project Traffic Noise Levels* of the DEIR demonstrates that opening year Phase 1 Project traffic-generated noise levels on Project area roadways would range between 63.6 dBA CNEL and 75.8 dBA CNEL at 100 feet from the centerline, and the Project would result in a maximum increase of 1.5 dBA CNEL along Grove Avenue. Phase 1 noise impacts from off-site traffic would be less than significant.

Future Development Areas - Phase 2 Construction

Analyzed as a worst-case scenario, Phase 2 construction activities are assumed to be similar to Phase 1, and would include site preparation, grading, building construction, paving, and architectural coating. Such activities would require dozers and tractors during site preparation; excavators, graders, and dozers during grading; cranes, forklifts, generators, tractors, and welders during building construction; pavers, rollers, mixers, and paving equipment during paving; and air compressors during architectural coating. The nearest sensitive receptors to the Phase 2 construction area are existing residential properties located approximately 85 feet from the Project boundary, on the north side of Eucalyptus Avenue. Typical noise levels associated with individual construction equipment are listed in *Table 4.10-9, Typical Construction Noise Levels* of the DEIR.

As discussed previously, the City of Ontario has not established noise limits for temporary construction activities. Therefore, for the purpose of this analysis, the City of Chino threshold of 65 dBA at the affected residential property is also used to analyze construction noise impacts to affected residences in the City of Ontario.

The noise levels calculated in *Table 4.10-12, Phase 2 Construction Noise Levels at Nearest Receptor* of the DEIR, show estimated exterior construction noise. Following FTA methodology, when calculating construction noise, all equipment is assumed to operate at the center of the Project because equipment would operate throughout the Project site and not at a fixed location for extended periods of time. Therefore, the distances used in the RCNM model was 1,427 feet, measured from the center of the Phase 2 area to the nearest sensitive receptor located on the opposite side of Eucalyptus Avenue.

Construction noise would not exceed the 65 dBA threshold at residential properties. In addition, compliance with the Municipal Code would minimize impacts from construction noise by limiting construction to daytime hours on weekdays and Saturdays. Phase 2 construction activities would result in a less than significant noise impact.

Operations

As discussed under Phase 1, implementation of Phase 2 of the Project would also create new sources of noise in the project vicinity. The major noise sources associated with Phase 2 that would potentially impact existing nearby residences include stationary noise equipment (i.e., trash compactors, air conditioners, etc.); truck and loading dock (i.e., slow moving truck on the site, maneuvering and idling trucks, equipment noise); parking areas (i.e., car door slamming, car radios, engine start-up, and car pass-by); and off-site traffic noise. Noise levels on Project area roadways would range between 63.6 dBA CNEL and 75.9 dBA CNEL at 100 feet from the centerline, and the Project would result in a maximum increase of 1.6 dBA CNEL along Grove Avenue.

Mechanical Equipment

The nearest sensitive receptors to the Phase 2 Project site are the residences on the north side of Eucalyptus Avenue, approximately 85 feet from the Project boundary. Potential stationary noise sources related to long-term operation of the Project would include mechanical equipment. Mechanical equipment (e.g., HVAC equipment) typically generates noise levels of approximately 52 dBA at 50 feet. Although the site plan for Phase 2 has not been designed, as a worst-case scenario, the minimum setbacks permitted have been assumed for Phase 2 buildings located next to the nearest sensitive receptors (30 feet) Therefore, the nearest potential location for a HVAC unit would be located approximately 125 feet from the nearest residential property. HVAC noise levels would attenuate by the distance to approximately 44.0 dBA, which is well below the City's 65 dBA daytime and 45 dBA nighttime noise standards for residential uses. Operation of mechanical equipment would not increase ambient noise levels beyond the acceptable compatible land use noise levels.

Truck and Loading Dock Noise

During loading and unloading activities, noise would be generated by the trucks' diesel engines, exhaust systems, and brakes during low gear shifting' braking activities; backing up toward the docks; dropping down the dock ramps; and maneuvering away from the docks. Although the site plan for Phase 2 has not been designed, for this analysis it has been assumed that Phase 2 buildings located nearest sensitive receptors would have a similar layout as those in Phase 1.

Assuming a similar design as Phase 1, dock-high doors for truck loading/unloading and manufacturing/light industrial operations would be oriented to the south and located approximately 223 feet from the nearest residence to the north. Loading dock noise levels would be approximately 42.6 dBA after accounting for distance and the intervening structures. Furthermore, loading dock doors would be surrounded with protective aprons, gaskets, or similar improvements that, when a trailer is docked, would serve as a noise barrier between the interior warehouse activities and the exterior loading area. This would attenuate noise emanating from interior activities, and as such, interior loading and associated activities would be permissible during all hours of the day. Therefore, noise levels associated with truck loading/unloading activities would not exceed the City's 65 dBA daytime and 45 dBA nighttime noise standards when measured at the nearest residential uses.

Parking Noise

Because Phase 2 of the Project has not been designed yet, this analysis assumes that parking area setbacks would be the minimum permitted under the business park land use (20 feet) as proposed under Phase 2 and nearest to sensitive receptors. The Phase 2 business park is assumed to generate 135 vehicle trips during peak hours. Based on distance and the number of vehicles, Phase 2 parking lot noise is calculated to be 41.3 dBA L_{eq} at the nearest receptor and would not exceed the City's noise standards.

Off-Site Traffic Noise

Implementation of Phase 2 of the Project would generate increased traffic volumes along nearby roadway segments. According to the Traffic Impact Study, the proposed Project would generate 5,214 daily trips which would result in noise increases on Project area roadways. Project traffic-generated noise levels on Project area roadways would range between 56.8 dBA CNEL and 74.4 dBA CNEL at 100 feet from the centerline, and the Project would result in a maximum increase of 1.0 dBA CNEL along Eucalyptus Avenue. Noise impacts from off-site traffic would be less than significant.

Project Buildout (Phase 1 + Phase 2)
Operations

As discussed under Phase 1 and Phase 2 operations, implementation of the proposed Project would create new sources of noise in the Project vicinity. Project Buildout looks at all major noise

sources from both Phase 1 and Phase 2 when the entire Project is built and operational. Project Buildout impacts to sensitive receptors would be similar to those discussed under Phase 2 as the nearest sensitive receptor to the Project site is located 85 feet from the Phase 2 area.

Mechanical Equipment

Refer to mechanical equipment discussions under Phase 1 and Phase 2. The nearest sensitive receptors to the Phase 2 Project site are the residences on the north side of Eucalyptus Avenue, approximately 85 feet from the Project boundary. Potential stationary noise sources related to long-term operation of the Project would include mechanical equipment. Mechanical equipment (e.g., HVAC equipment) typically generates noise levels of approximately 52 dBA at 50 feet. Although the site plan for Phase 2 has not been designed, it can be assumed that Phase 2 buildings located next to the nearest sensitive receptors would use the same setbacks as those in Phase 1. Therefore, the nearest potential location for a HVAC unit would be located approximately 175 feet from the nearest residential property. HVAC noise levels would attenuate by the distance to approximately 36.7 dBA, which is well below the City's 65 dBA daytime and 45 dBA nighttime noise standards for residential uses. Operation of mechanical equipment would not increase ambient noise levels beyond the acceptable compatible land use noise levels.

Truck and Loading Dock Noise

Refer to truck and loading dock discussion noise under Phase 1 and Phase 2. During loading and unloading activities, noise would be generated by the trucks' diesel engines, exhaust systems, and brakes during low gear shifting and braking activities; backing up toward the docks; dropping down the dock ramps; and maneuvering away from the docks. Although the site plan for Phase 2 has not been designed, for this analysis it has been assumed that Phase 2 buildings located nearest sensitive receptors would have a similar layout as those in Phase 1.

Assuming a similar design as Phase 1, dock-high doors for truck loading/unloading and manufacturing/light industrial operations would be oriented to the south and located approximately 223 feet from the nearest residence to the north. Loading dock noise levels would be approximately 42.6 dBA after accounting for distance and the intervening structures. Furthermore, loading dock doors would

be surrounded with protective aprons, gaskets, or similar improvements that, when a trailer is docked, would serve as a noise barrier between the interior warehouse activities and the exterior loading area. This would attenuate noise emanating from interior activities, and as such, interior loading and associated activities would be permissible during all hours of the day. Therefore, noise levels associated with truck loading/unloading activities would not exceed the City's 65 dBA daytime and 45 dBA nighttime noise standards when measured at the nearest residential uses.

Parking Noise

Refer to parking noise discussions under Phase 1 and Phase 2. Because Phase 2 of the Project has not been designed yet, this analysis assumes parking areas would be similar to those analyzed in Phase 1. Traffic associated with parking lots is typically not of sufficient volume to exceed community noise standards, which are based on a time-averaged scale such as the CNEL scale. The instantaneous maximum sound levels generated by a car door slamming, engine starting up, and car pass-bys range from 53 to 61 dBA; however due to the orientation of the buildings, sensitive receptors would be shielded from parking lot noise. It should be noted that parking lot noises are instantaneous noise levels compared to noise standards in the hourly L_{eq} metric, which are averaged over the entire duration of a time period.

Off-Site Traffic Noise

Implementation of the Project would generate increased traffic volumes along nearby roadway segments. According to the Traffic Impact Study, the Project Buildout would generate a total of 12,446 daily trips which would result in noise increases on Project area roadways. *Table 4.10-14, Project Buildout (Phase 1 and Phase 2) Opening Year Plus Project Traffic Noise Levels* of the DEIR identifies Project traffic-generated noise levels from both Phase 1 and Phase 2 combined. Noise levels on Project area roadways would range between 56.9 dBA CNEL and 74.7 dBA CNEL at 100 feet from the centerline, and the Project would result in a maximum increase of 1.6 dBA CNEL along Merrill Avenue and Grove Avenue. Noise impacts from off-site traffic would be less than significant.

The Traffic Impact Assessment also identifies average daily traffic for the year 2040 "Horizon Year Without Project" and "Horizon Year Plus Project." Noise levels for these scenarios are compared in *Table*

4.10-13, Horizon Year and Horizon Year Plus Project Buildout Traffic Noise Levels of the DEIR. As shown in *Table 4.10-13* of the DEIR, roadway noise levels in 2040 would range between 58.3 dBA CNEL and 76.0 dBA CNEL at 100 feet from the centerline. In 2040, Project generated traffic would result in a maximum increase of 1.1 dBA CNEL on Eucalyptus Avenue. As such, the Project would result in an increase of less than 3.0 dBA CNEL for the roadway segments analyzed and traffic noise. Noise impacts from off-site traffic would be less than significant in this regard.

SB330 Replacement Site

The Project proposes rezoning the SB330 Replacement Site to a higher residential density to increase the maximum number of housing units to ensure there is no net loss of residential zoning density. This action however does not propose any specific construction of new structures or redevelopment of the SB330 Replacement Site. The additional traffic associated with the 1,352 DU in-zoning density at the SB330 Replacement Site has been accounted for in the Project's Traffic Analysis. In fact, by "relocating" the 1,352 DU of zoning potential from the Project site to the SB330 Replacement Site, the net effect is anticipated to be an overall reduction in mobile noise in consideration of the SB330 Replacement Site DU's being at a higher density, generating less traffic per dwelling unit, due to the SB330 Replacement Site being in a higher density mixed-use environment in close proximity to transit and regional transportation facilities. Operational noise will be evaluated on a site-specific basis consistent with the City's TOP and Municipal Code. Any future development of the SB330 Replacement Site would be subject to environmental regulations as required under CEQA and the City's standard discretionary review process. Therefore, this impact would be less than significant.

Conclusion

Implementation of the Project would not result in substantial temporary or permanent increases in ambient noise levels. Table 4.10-10 and Table 4.10-12 of the DEIR confirm that construction of Phase 1 and Phase 2 of the Project would exceed construction noise thresholds. Table 4.10-11 and Table 4.10-13 of the DEIR show that the operation of Phase 1 and Phase 2 individually would not result in noise levels that would exceed City daytime and nighttime thresholds. In addition, Table 4.10-14 and Table 4.10-15 of the DEIR demonstrate that operational noise levels from the entire site, both

Phase 1 and Phase 2 combined would not exceed City noise standards during the Project's opening year or in the future (2040). Therefore, the Project would result in a less than significant impact. (Draft EIR, pp. 4.10-15 through 4.10-29.)

b. ***Vibration***

Threshold: Would the Project result in the exposure of persons to or generation of excessive groundborne vibration or groundborne noise levels?

Finding: Less than significant. (Draft EIR, p. 4.10-29.)

Explanation: **Specific Plan – Phase 1, Future Development Areas - Phase 2, and Project Buildout**

Construction Vibration

Construction operations can generate varying degrees of ground vibration, depending on the construction procedures and equipment. Operation of construction equipment generates vibrations that spread through the ground and diminish with distance from the source. Construction on the Project site would have the potential to result in varying degrees of temporary ground-borne vibration, depending on the specific construction equipment used and the operations involved.

The FTA has published standard vibration velocities for construction equipment operations. In general, the FTA architectural damage criterion for continuous vibrations (i.e., 0.2 in/sec) appears to be conservative. The types of construction vibration impacts include human annoyance and building damage. Human annoyance occurs when construction vibration rises significantly above the threshold of human perception for extended periods of time. Building damage can be cosmetic or structural. Ordinary buildings that are not particularly fragile would not experience any cosmetic damage (e.g., plaster cracks) at distances beyond 30 feet. This distance can vary substantially depending on the soil composition and underground geological layer between vibration source and receiver. In addition, not all buildings respond similarly to vibration generated by construction equipment. For example, for a building that is constructed with reinforced concrete with no plaster, the FTA guidelines show that a vibration level of up to 0.20 in/sec is considered safe and would not result in any construction vibration damage.

Table 4.10-16, Typical Construction Equipment Vibration Levels of the DEIR, lists vibration levels at 25 feet for typical construction equipment. Vibration levels at 150 feet and 85 feet, the distance to the nearest sensitive receptors during Phase 1 and Phase 2 construction activities are also included in Table 4.10-16 of the DEIR.

Ground-borne vibration generated by construction equipment spreads through the ground and diminishes in magnitude with increases in distance. Based on FTA data, vibration velocities from typical heavy construction equipment operations that would be used during Project construction range from 0.003 to 0.089 in/sec PPV at 25 feet from the source of activity.

The nearest sensitive receptor to the Phase 1 construction site is approximately 150 feet to the east, the nearest receptor to the Phase 2 construction site is 85 feet to the north. At 85 feet the vibration velocities from construction equipment would not exceed 0.0142 in/sec PPV, which is below the FTA's 0.20 in/sec PPV threshold for building damage and below the 0.10 in/sec PPV annoyance threshold. It is also acknowledged that construction activities would occur throughout the Project site and would not be concentrated at the point closest to the nearest structure. Therefore, vibration impacts associated with Project construction and operation would be less than significant.

Operational Vibration

The proposed Project would include truck movement activity at the proposed Project site. These movements would generally be low-speed (i.e., less than 15 miles per hour) and would occur over new, smooth surfaces. For perspective, Caltrans has studied the effects of propagation of vehicle vibration on sensitive land uses and notes that "heavy trucks, and quite frequently buses, generate the highest earthborn vibrations of normal traffic." Caltrans further notes that the highest traffic-generated vibrations are along freeways and state routes. Their study finds that "vibrations measured on freeway shoulders (five meters from the centerline of the nearest lane) have never exceeded 0.08 inches per second, with the worst combinations of heavy trucks and poor roadway conditions (while such trucks were moving at freeway speeds). This level coincides with the maximum recommended safe level for ruins and ancient monuments (and historic buildings)". The distance from the centerline of the nearest lane to sensitive receptors along the truck route is a minimum of 50

feet (15 meters), at this distance, roadway vibrations from trucks would not exceed the annoyance threshold. Onsite, truck movements would be a low speed (not at freeway speeds) and over smooth surfaces (not under poor roadway conditions), Project-related vibration associated with truck activity would not result in excessive ground borne vibrations; thus, no vehicle-generated vibration impacts would occur. In addition, there are no sources of substantial ground borne vibration associated with the Project, such as rail or subways. The proposed Project would not create or cause any vibration impacts due to operations.

SB330 Replacement Site

The additional allowable residential density at the SB330 Replacement Site would not result in a net change in total dwelling units in the City. No specific development is planned at this time. The slight increase in density is not anticipated to change the overall impact of developing this area as compared to what was assumed in the City's TOP EIR. Any future development within the SB330 Replacement Site would be subject to the City's standard discretionary review process, including compliance with the City's TOP, compliance with the municipal code, and site-specific CEQA review.

Conclusion

Construction of the Project would not generate excessive vibration levels that would cause building damage or annoyance. In addition, operations associated with the Project, including slow moving trucks, would not result in the generation of substantial vibration impacts. Therefore, vibration impacts associated with Project construction and operation would be less than significant. (Draft EIR, pp. 4.10-29 through 4.10-31.)

c. ***Airport Noise***

Threshold: For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?

Finding: No impact. (Draft EIR, p. 4.10-31.)

Explanation: **Specific Plan – Phase 1, Future Development Areas - Phase 2, Project Buildout, and SB330 Replacement Site**

Chino Airport

The proposed Project is across Merrill Avenue from the Chino Airport. The Chino General Plan's Noise Element has noise contours for the Chino Airport. The noise contours show the Project site outside the 65 dBA CNEL contour and, in addition, the proposed Project would be an industrial business park, which is not considered a noise-sensitive land use. Therefore, there would be no impact.

Shifting the Project site's residential zoning to the SB330 Replacement Site would have a net beneficial impact regarding airport noise compatibility by moving this allowable residential density from next to the Chino Airport to a planned mixed-use urban core along Grove Avenue.

Ontario International Airport

The proposed Project is approximately 5 miles southwest of the Ontario International Airport. The Ontario International Airport Land Use Compatibility Plan Policy Map 2-3, Noise Impact Zones, shows airport noise contours. The map shows that the Project site is outside the 60-65 dB CNEL contour. As discussed above, the proposed Project would be an industrial business park, which is not considered a noise-sensitive land use. There would be no impact.

Conclusion

In conclusion, for both the proposed Project and SB330 Replacement Site, the Project site would be converted to an industrial business park and if development is proposed for the SB330 Replacement Site, the SB330 Replacement Site would be Medium Density Residential, which is not considered a noise-sensitive land use. This would result in no impact, and no mitigation is necessary. (Draft EIR, pp. 4.10-31 through 4.10-32.)

11. POPULATION AND HOUSING

a. *Population Growth*

Threshold: Would the Project induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of road or other infrastructure?

Finding: Less than significant. (Draft EIR, p. 4.11-10.)

Explanation: **Specific Plan - Phase I/Future Development Areas**

The Project would not introduce new population or housing to the Project site. Development would include business park and industrial uses, which would result in jobs for residents in the surrounding area. The Project's construction and operations will result in up to 5,333,518 square feet of industrial/warehouse, business park, and ancillary office space. The area surrounding the Project site will receive improvements to its roadways, landscaping, signage, lighting, and utility improvements to serve the site.

Employment Growth

Construction

The construction phase of the development would generate temporary employment opportunities, including short-term design, engineering, and construction jobs. Construction related jobs would not result in a significant population increase because they are expected to be filled by persons within the local economy. Because many of the employment opportunities are expected to be filled by persons within the local economy and the unemployment rate is approximately 7.2 percent within the jurisdictions in the Project vicinity of the Riverside-San Bernardino-Ontario Metropolitan Area as of May 2021. An adequate number of persons are available to fill the employment positions without constructing new residential units. Furthermore, the small percentage of skilled and managerial positions could either be filled by the local economy or by persons outside the local economy. Therefore, the implementation of the Project would result in less than significant growth inducement impacts in the Project vicinity.

Operations

The projected number of employees that would result from the implementation of the Specific Plan was calculated based on the land use projection assumptions in the TOP EIR. The Project site has the potential to generate 5,459 employees.

It should be noted that the "VMT Assessment" conducted by Urban Crossroads also projected a total of 5,459 employees which was used to determine the service population for purposes of calculating vehicle miles traveled per service population.

The forecast increase in Project employment is well within SCAG's forecast employment increase for the City of 55,400 and the forecast employment increase for the County of 273,000 by 2045.

Additionally, the Logistics/Utilities sector constitutes 15.9 percent of the jobs in the City of Ontario, highest among job sectors. The implementation of the Project would contribute to job growth in this already prosperous industrial sector. Project-related employment growth impacts are not anticipated to be significant, as the nearby regional population centers have adequate housing supply for anticipated Project workers.

Population Growth

Implementation of the Project would increase jobs in the City, which would have the potential to increase the demand for housing in the area. As stated, the proposed increase in 5,333,518 square feet of business park and industrial uses has the potential to result in 5,459 jobs. The San Bernardino Council of Governments (SBCOG) region is housing-rich. The Project would produce more jobs and therefore would support the improvements designated by SCAG in pursuit of an improved jobs-housing-balance for the County. Because the region is housing-rich, it is expected that jobs at the Project site would be drawn from the local and regional labor force.

However, even if the Project increase in employees added equivalent population to the Project site, growth of 5,459 residents would be well within the growth projections assumed for the City and the region, specifically, 96,900 by 2045 in the City and 674,000 by 2045 in the County. Therefore, the Project would not result in substantial population growth, and impacts would be less than significant.

Jobs-Housing Balance

As stated, the SBCOG region is considered housing rich. According to SCAG RTP/SCS, “the region will add 3,672,000 people, 1,621,000 households and 1,660,000 jobs over the RTP/SCS (2045) planning horizon.” The Project would produce more jobs and therefore would support the improvements designated by SCAG in pursuit of an improved jobs housing-balance for the County.

Project impacts on the jobs-housing balance are estimated by comparing employment and household buildout statistics of the Project to that of SCAG’s 2045 projections.

At Project buildout, the jobs-housing ratio for the City is estimated to be 2.35 which is similar to and only marginally different than SCAG projections for the City in 2045 of 2.27. Buildout of the Specific Plan

would result in an estimated jobs-housing ratio of 1.22 for the County, equivalent to the SCAG projection for the County of 1.22. Therefore, no significant impact related to jobs-housing balance is anticipated to occur with implementation of the Project.

SB330 Replacement Site
Construction and Operations

The proposed rezoning of the SB330 Replacement Site would not result in any additional housing. By definition, pursuant to SB330, the rezoning of the SB330 Replacement Site would offset the "lost" residential zoning capacity of the Specific Plan site, such that there would be "no net loss." Indirect population and housing impacts associated with the slight increase in residential density are not anticipated to be significant or otherwise represent new or substantially more severe environmental impacts than identified in the City's TOP EIR. Therefore, impacts associated with population and housing would be less than significant.

Conclusion

As a result of the Project and related components, 5,459 new employees are expected for the City of Ontario. All growth is planned according to TOP and SCAG and would put no unnecessary strain on housing in the region. The construction phase of the development would generate temporary employment opportunities and would not result in a significant population increase because they would be filled by workers in the region. A less than significant impact is expected to occur. (Draft EIR, pp. 4.11-10 through 4.11-13.)

b. ***Displacement of Housing***

Threshold: Would the Project displace substantial numbers of existing housing, necessitating the construction of replacement housing elsewhere; and displace substantial numbers of people, necessitating the construction of replacement housing elsewhere?

Finding: Less than significant impact. (Draft EIR, p. 4.11-13.)

Explanation: **Specific Pan – Phase I/Future Development Areas**

Construction and Operations

The existing Project site currently contains an operational dairy farm and is improved with several residential structures, dairy barns, storage structures, feed storage barns, and numerous livestock corrals. Existing uses would be removed during Project site preparation. The displaced residential units and occupants are

voluntarily selling the property to the applicant. Furthermore, the City and surrounding region has adequate housing capacity to accommodate the displaced residents, as discussed above. The affected units are within an Agricultural Overlay District that anticipated future development of this site, which was addressed in the City's TOP EIR. No significant impact would occur.

SB330 Replacement Site
Construction and Operations

The SB330 Replacement Site is proposed for a slight increase in residential density for this 473.7-acre area. The slight increase in density, which was already reviewed as part of the City's TOP EIR, is not anticipated to result in any additional housing or occupant displacement than would occur under current zoning. Any displacement of housing or occupants would proceed in accordance with the City's standard development review process, including housing relocation assistance. As noted above there is adequate housing stock in the City and surrounding region to absorb the displacement of any residents in the SB330 Replacement Site area. Furthermore, this area is currently being planned by the City as part of the City's TOP Update process to include substantially more housing opportunities. Therefore, impacts in this regard are less than significant.

Conclusion

The 1,352 dwelling units provided by the Grove Avenue Corridor SB330 Site would make up for any displacement of housing due to the Project. Therefore, the Project would not displace a substantial number of existing housing, and no net loss of housing would occur. A less than significant impact is anticipated. (Draft EIR, pp. 4.11-13 through 4.11-14.)

12. PUBLIC SERVICES

a. *Fire Protection*

Threshold: Would the Project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for fire protection?

Finding: Less than significant. (Draft EIR, p. 4.12-11.)

Explanation: **Specific Plan- Phase I/Future Development Areas**

Construction and Operations

The development of the Project site includes eight buildings with a maximum of 5,333,518 square feet of industrial warehouse and office uses, constructed. Office uses are ancillary to the warehouses and occupy up to 1,075,235 square feet spread across the buildings. The industrial warehousing would occupy up to 4,337,356 square feet of the Project area. The increase in development and workers within the Project site would potentially result in additional calls for fire department services and increase the need for additional fire department staffing and equipment. The area that would be occupied by the Project is currently developed with agricultural uses. Although there are existing uses, the modification of the area to industrial and office uses would potentially create an increased need for fire protection.

The eight new tilt-up industrial/warehouse buildings would be constructed from non-flammable concrete and would be equipped with automatic ceiling-mounted fire sprinkler systems. All other fire-related safety features would be in accordance with the applicable provisions of the adopted California Fire Code CFC and the City's Municipal Code §4-4.01, ordinances, and standard conditions regarding fire prevention and suppression measures related to water improvement plans, fire hydrants, fire access, and water availability. Additionally, prior to the approval of the Project, the City's Building Department and OFD would review building plans in order to ensure that all applicable fire safety features are incorporated as part of the Project. Prior to the approval of occupancy permits for the new buildings, it would be required that the OFD would inspect all new structures in order to ensure that all fire safety features have been implemented and installed correctly.

The City has ten existing fire stations; the closest stations being Fire Station #2, located approximately 3.67 miles northwest and Fire Station #3, located approximately 3.55 miles north of the Project site. The existing facilities would serve the southern portion of the City, including the Project site.

Implementation of the Specific Plan would be required to be consistent with the City's General Plan for Business Park and Industrial uses as well as permitted floor area ratios (FAR). Additionally, fire service needs for the Project and surrounding area have been anticipated in the development of the planned fire service facility. Therefore, fire protection and emergency services to the

Project would be accommodated within the City's new and existing fire service facilities, and buildout of the Project would not result in a significant impact on the ability to maintain adequate level of fire protection service to the area.

The Project would not create any deficiencies in current response times or staffing models, nor require provision of new or expanded fire facilities, construction of which would have the potential to cause significant environmental impacts. Therefore, fire protection and emergency services to the Project would be accommodated within the City's planned and existing fire service facilities, and buildout of the Project would not result in a significant impact on the ability to maintain adequate level of fire protection service to the area. Development impact fees (DIF) would also be collected in order to build and supply necessary infrastructure for fire protection services, as necessary. Therefore, impacts related to fire protection services would be less than significant. (Draft EIR, pp. 4.12-11 through 4.12-12.)

SB330 Replacement Site

Construction and Operations

The SB330 Replacement Site is in an area that is already served by the City including OFD, OPD, Parks and Recreation, and other public facilities such as libraries. The City's TOP evaluated plans for expansion and increased demand for City services including fire and police protection services, schools, parks and recreation, and other public facilities. This includes the need for new stations or locations of new City buildings to provide services to residents.

Impacts on public facilities are typically associated with population increases. The rezoning of the SB330 Replacement Site proposes a slight increase in residential zoning capacity pursuant to SB330; however, the increased residential density would likely lead to a lower total population, as higher density residential developments tend to have fewer occupants per unit (3.347 persons per household) than low-medium density (3.997 persons per household). . Future development on the SB330 Replacement Site would increase the local population for that area but would not increase the overall City population.

No specific development is proposed for the SB330 Replacement Site. Any future development would be subject to applicable local, state and federal environmental regulations, including the City's discretionary review process. Analysis of public service impacts as

part of the City's CEQA and discretionary review process would be conducted prior to any site-specific development of potential future residential housing. In addition, all future development would be required to pay a Development Impact Fee (DIF) to ensure the provision of adequate public services within the City. Development of the SB330 Replacement Site was evaluated as part of the City's TOP EIR, and the proposed rezoning would have no additional significant impacts beyond that evaluated in the City's TOP EIR. (Draft EIR, pp. 4.12-14 through 4.12-15.)

b. ***Police Protection***

Threshold: Would the Project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for Sheriff Law Enforcement Services?

Finding: Less than significant. (Draft EIR, p. 4.12-12.)

Explanation: **Specific Plan- Phase I/Future Development Areas**

Construction and Operations

The increase in development and workers within the Project site would result in additional calls for police services. However, implementation of the Specific Plan would include installation of security features and natural surveillance through the provision of low-intensity security lighting in and around the new buildings in addition to the parking areas. The Project would incorporate design features that would discourage crime including features such as thematic fencing, decorative walkways and trellises. The design would also incorporate skylights and landscaping into the Project. Additionally, pursuant to the City's existing permitting process, the City's Building Department would review final site plans in order to ensure that crime prevention through design measures is incorporated as part of the Project. Furthermore, as the eight new buildings are expected to operate 24 hours a day, 7 days a week, someone would always be on-site, thereby lowering the crime potential for the Project site, lessening the potential for increased police facilities or personnel.

The OPD has prepared for growth of the Ontario Ranch area, where the Project site is located, and is expected to have adequate facilities and personnel to serve the proposed development. The OPD would

continue to add staff and equipment on an as-needed basis in order to accommodate the incremental increasing demands from buildout of land uses, as was identified in the City's General Plan. Furthermore, buildout of the Project would not require construction of additional police facilities to maintain adequate police protection service. Thus, impacts related to police services would be less than significant. (Draft EIR, pp. 4.12-12 through 4.12-13.)

SB330 Replacement Site

Construction and Operations

The SB330 Replacement Site is in an area that is already served by the City including OFD, OPD, Parks and Recreation, and other public facilities such as libraries. The City's TOP evaluated plans for expansion and increased demand for City services including fire and police protection services, schools, parks and recreation, and other public facilities. This includes the need for new stations or locations of new City buildings to provide services to residents.

Impacts on public facilities are typically associated with population increases. The rezoning of the SB330 Replacement Site proposes a slight increase in residential zoning capacity pursuant to SB330; however, the increased residential density would likely lead to a lower total population, as higher density residential developments tend to have fewer occupants per unit (3.347 persons per household) than low-medium density (3.997 persons per household). Future development on the SB330 Replacement Site would increase the local population for that area but would not increase the overall City population.

No specific development is proposed for the SB330 Replacement Site. Any future development would be subject to applicable local, state and federal environmental regulations, including the City's discretionary review process. Analysis of public service impacts as part of the City's CEQA and discretionary review process would be conducted prior to any site-specific development of potential future residential housing. In addition, all future development would be required to pay a Development Impact Fee (DIF) to ensure the provision of adequate public services within the City. Development of the SB330 Replacement Site was evaluated as part of the City's TOP EIR, and the proposed rezoning would have no additional significant impacts beyond that evaluated in the City's TOP EIR. (Draft EIR, pp. 4.12-14 through 4.12-15.)

c. *Schools*

Threshold: Would the Project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times, or other performance objectives for schools?

Finding: Less than significant. (Draft EIR, p. 4.12-13.)

Explanation: **Specific Plan- Phase I/Future Development Areas**

Construction and Operations

The Project site is located within the Chino Valley Unified School District (CVUSD), which is part of the Chaffey Joint Union High School District. Therefore, the Project applicant would be required to pay the impact fees levied by the CVUSD, set within the limits of California SB 50. This funding program has been found by the Legislature to constitute "full and complete mitigation of the impacts" on the provision of adequate school facilities (Government Code §65995[h]). SB 50 establishes three potential limits for school districts, depending on the availability of new school construction funding from the state and the particular needs of the individual school districts. The school districts, including the CVUSD, within the City qualify for Level 1 fees, in which each district justifies their development fees for each land use and cannot request payment of development fees for school facility construction exceeding the amount of the statutory fees expressed in Education Code Section 17620. If school districts conduct a school facility needs assessment and qualify for participation in the State Funding Program by the State Allocation Board, among meeting other requirements, they can be eligible for Level 2 and Level 3 Fees. SB 50 also relieves jurisdictions from having the authority of denying approval of a legislative or adjudicative action under CEQA in reference to real estate development based upon the inadequacy of school facilities. Since the Project will pay any applicable fees pursuant to SB 50, a less than significant impact would occur. (Draft EIR, p. 4.12-13.)

SB330 Replacement Site

Construction and Operations

The SB330 Replacement Site is in an area that is already served by the City including OFD, OPD, Parks and Recreation, and other public facilities such as libraries. The City's TOP evaluated plans for

expansion and increased demand for City services including fire and police protection services, schools, parks and recreation, and other public facilities. This includes the need for new stations or locations of new City buildings to provide services to residents.

Impacts on public facilities are typically associated with population increases. The rezoning of the SB330 Replacement Site proposes a slight increase in residential zoning capacity pursuant to SB330; however, the increased residential density would likely lead to a lower total population, as higher density residential developments tend to have fewer occupants per unit (3.347 persons per household) than low-medium density (3.997 persons per household). . Future development on the SB330 Replacement Site would increase the local population for that area but would not increase the overall City population.

No specific development is proposed for the SB330 Replacement Site. Any future development would be subject to applicable local, state and federal environmental regulations, including the City's discretionary review process. Analysis of Public service impacts as part of the City's CEQA and discretionary review process would be conducted prior to any site-specific development of potential future residential housing. In addition, all future development would be required to pay a Development Impact Fee (DIF) to ensure the provision of adequate public services within the City. Development of the SB330 Replacement Site was evaluated as part of the City's TOP EIR, and the proposed rezoning would have no additional significant impacts beyond that evaluated in the City's TOP EIR. (Draft EIR, pp. 4.12-14 through 4.12-15.)

d. ***Parks***

Threshold: Would the Project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times, or other performance objectives for parks?

Finding: Less than significant. (Draft EIR, p. 4.12-13.)

Explanation: **Specific Plan- Phase I/Future Development Areas**

Construction and Operations

The City provides over thirty parks for its residents. There are numerous parks in proximity to Project site that could be used by

existing local residents and future employees of the Project site. The Project would pay applicable development impact fees including Quimby Act park fees. These fees, along with additional funding accruing to the City's general fund through direct and indirect economic benefit, would offset any additional demand caused by the Project's business park and industrial uses. No significant impact is anticipated with payment of fees. (Draft EIR, p. 4.12-13.)

SB330 Replacement Site

Construction and Operations

The SB330 Replacement Site is in an area that is already served by the City including OFD, OPD, Parks and Recreation, and other public facilities such as libraries. The City's TOP evaluated plans for expansion and increased demand for City services including fire and police protection services, schools, parks and recreation, and other public facilities. This includes the need for new stations or locations of new City buildings to provide services to residents.

Impacts on public facilities are typically associated with population increases. The rezoning of the SB330 Replacement Site proposes a slight increase in residential zoning capacity pursuant to SB330; however, the increased residential density would likely lead to a lower total population, as higher density residential developments tend to have fewer occupants per unit (3.347 persons per household) than low-medium density (3.997 persons per household). . Future development on the SB330 Replacement Site would increase the local population for that area but would not increase the overall City population.

No specific development is proposed for the SB330 Replacement Site. Any future development would be subject to applicable local, state and federal environmental regulations, including the City's discretionary review process. Analysis of public service impacts as part of the City's CEQA and discretionary review process would be conducted prior to any site-specific development of potential future residential housing. In addition, all future development would be required to pay a Development Impact Fee (DIF) to ensure the provision of adequate public services within the City. Development of the SB330 Replacement Site was evaluated as part of the City's TOP EIR, and the proposed rezoning would have no additional significant impacts beyond that evaluated in the City's TOP EIR. (Draft EIR, pp. 4.12-14 through 4.12-15.)

e. ***Other Public Facilities***

Threshold: Would the Project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times, or other performance objectives for other public facilities?

Finding: Less than significant. (Draft EIR, p. 4.12-14.)

Explanation: **Specific Plan- Phase I/Future Development Areas**

Construction and Operations

Other Public Facilities generally refers to libraries and government buildings that serve the population within the jurisdiction. The Project construction and operation would not require the physical modification of any of the City's public facilities. Specifically, the development of the warehousing and office buildings would not conflict with any library facilities. As stated previously, the nearest library facility to the Project is the South Ontario Lewis Family Branch Library, approximately 4 miles northeast of the site. The construction and operation of the Project site would not result in a substantial increase in demand for these services such that a significant deterioration of the existing facilities would occur, or such that new facilities would be required.

Additional library services were accounted for in the City's TOP. The City has plans to build a new 37,646-square-foot public library in the New Model Colony (NMC) or "Ontario Ranch" area that would provide similar services as the Main Library and a 6,763-square-foot expansion in the Old Model Colony (OMC), totaling 44,409 new square feet of public library services. This would give citizens in that area access to similar levels of service as already exist in the OMC. The expansion of library services in the OMC would continue to bring similar levels of service to the residents in the OMC. In addition, the Ontario library system participates in an interlibrary exchange as part of the Inland Library System, which includes 18 other independent public libraries in Inyo, Riverside, and San Bernardino Counties. This would give existing and future citizens of Ontario access to additional library services. Therefore, additional construction of facilities would not be required.

Other potential impacts to surrounding public facilities include the Chino Airport. The Project was found to be compliant with the regulations and policies presented in the Chino Airport Land Use

Community Plan (ALUCP). Because of the lack of substantial population growth and the Project's compliance with the Chino Airport ALUCP, a less than significant impact is expected to occur on surrounding public facilities.

Overall, a less than significant impact would occur to nearby public facilities. (Draft EIR, p. 4.12-14.)

SB330 Replacement Site

Construction and Operations

The SB330 Replacement Site is in an area that is already served by the City including OFD, OPD, Parks and Recreation, and other public facilities such as libraries. The City's TOP evaluated plans for expansion and increased demand for City services including fire and police protection services, schools, parks and recreation, and other public facilities. This includes the need for new stations or locations of new City buildings to provide services to residents.

Impacts on public facilities are typically associated with population increases. The rezoning of the SB330 Replacement Site proposes a slight increase in residential zoning capacity pursuant to SB330; however, the increased residential density would likely lead to a lower total population, as higher density residential developments tend to have fewer occupants per unit (3.347 persons per household) than low-medium density (3.997 persons per household). . Future development on the SB330 Replacement Site would increase the local population for that area but would not increase the overall City population.

No specific development is proposed for the SB330 Replacement Site. Any future development would be subject to applicable local, state and federal environmental regulations, including the City's discretionary review process. Analysis of public service impacts as part of the City's CEQA and discretionary review process would be conducted prior to any site-specific development of potential future residential housing. In addition, all future development would be required to pay a Development Impact Fee (DIF) to ensure the provision of adequate public services within the City. Development of the SB330 Replacement Site was evaluated as part of the City's TOP EIR, and the proposed rezoning would have no additional significant impacts beyond that evaluated in the City's TOP EIR. (Draft EIR, pp. 4.12-14 through 4.12-15.)

13. RECREATION

a. *Increased Use*

Threshold: Would the Project increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?

Finding: Less than significant. (Draft EIR, p. 7-7.)

Explanation: **Specific Plan-Phase I/Future Development Areas**

The demand for parks is determined by changes and increases in housing and population. The Project site would be developed with an industrial use, and no new residents or housing would be introduced to the area. Therefore, buildout of the Project would not directly induce population growth or increase demand on parks and recreational resources. Impacts in this regard would be less than significant.

SB330 Replacement Site

The nearest City park to the SB330 Replacement Site is Centennial Park, located approximately 1.4 miles northwest of the SB330 Replacement Site. With the proposed slight increase in residential density at the SB330 Replacement Site, this could result in an increase of usage to recreational facilities, although this would not be expected to cause substantial additional deterioration of recreational facilities outside of the SB330 Replacement Site area. No specific development is proposed at this time. As development is proposed, individual projects would pay required DIF fees to offset the need for local and citywide recreational facilities. On a City level, the net effect of shifting residential density from the Specific Plan site to higher density at the SB330 Replacement Site is anticipated to be a net reduction in recreational facility demand due to typically fewer persons per dwelling unit in higher density development. In addition, the SB330 Replacement Site is envisioned by the City as a pedestrian friendly mixed use transit-oriented development area, which would lend itself to more efficiently planned local and subregional recreational opportunities. For reasons noted above, the proposed rezoning would have no additional significant impacts beyond that evaluated in the City's TOP EIR. Therefore, impacts would be less than significant. (Draft EIR, pp. 7-7 through 7-8.)

b. ***Construction and Expansion***

Threshold: Does the Project include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment?

Finding: No impact. (Draft EIR, p. 7-8.)

Explanation: **Specific Plan-Phase I/Future Development Areas**

The demand for parks is determined by changes and increases in housing and population. The Project site would be developed with an industrial use, and no new residents or housing would be introduced to the area. Therefore, buildout of the Project would not directly induce population growth or increase demand on parks and recreational resources. No impact would occur.

SB330 Replacement Site

The slight increase in residential density is not anticipated to require construction of additional recreational facilities to serve the SB330 Replacement Site beyond that envisioned in the City's TOP EIR. The rezoning results in a shift of residential density from the Specific Plan site to the SB330 Replacement Site, at a slightly higher density (but the same number of dwelling units). Higher density residential development typically has lower recreational facility demand (due to fewer persons per dwelling unit). Furthermore, any future development at the SB330 Replacement Site would be required to comply with the City's standard discretionary review process, including provision of adequate on-site recreational amenities, as well as payment of applicable DIF fees to offset impacts to recreational facilities. No impact would occur. (Draft EIR, pp. 7-8 through 7-9.)

14. TRANSPORTATION AND TRAFFIC

a. *Plans, Policies, and Ordinances*

Threshold: Would the Project conflict with a program, plan, ordinance or policy addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities?

Finding: Less than significant. (Draft EIR, p. 4.13-9.)

Explanation: **Specific Plan Phase I/ Future Development Areas**

TOP Mobility Element

The City's General Plan Mobility Element guides mobility and transportation in the City, including transit, bicycle and pedestrian facilities. The Project would be consistent with the plan, programs, goals and policies of the Mobility Element by enhancing transportation networks and for vehicles and bicycle facilities, safely accommodating pedestrian walkways and providing easy access to the Project site via public transportation. The Project's circulation

system has been designed consistently with the City's traffic and transportation guidelines and existing transportation system. Additionally, the Project would comply with the City's DIF program which would require a payment of fees to ensure that the regional circulation and/or arterial expansions planned by the City and County (i.e., CMP) keep pace with the projected population increases or other identified roadway deficiencies. Refer to the following bicycle, pedestrian and transit facilities discussion below for more information.

Bicycle and Pedestrian Facilities

The City proposes a Class II bikeway and multipurpose trails along Merrill Avenue and Campus Avenue adjacent to the Project. The Project would improve all trails and bikeways along the Project frontages in conjunction with street improvements. The Project would provide sidewalks along all street abutting the Project site, and multipurpose trails would be provided the south side of Eucalyptus Avenue and the north side of Merrill Avenue. A bikeway on Merrill Avenue would connect to the city's existing bike path system. As such, the Project supports the City's goal of encouraging bicycling and walking by increasing the connectivity of the city's bicycle and pedestrian system. The sidewalks and trails would be designed to ensure pedestrian and bicyclist safety consistent with the City's Mobility Element. Therefore, a less than significant impact would occur.

Transit Facilities

Transit options provide an alternative mode of transportation for motorists and a primary mode for the transit dependent. The Project is located near the Omnitrans Route 81 route. Omnitrans Route 81 operates on Riverside Drive north of the site. However, there are no existing bus routes near the vicinity of the Project. The Riverside Transit Authority (RTA) serves the City of Eastvale (and other areas of Riverside County). Transit service is reviewed and updated by Omnitrans periodically to address ridership, budget and community demand needs. Changes in land use can affect these periodic adjustments which may lead to either enhanced or reduced service where appropriate. The City strives to provide a transit system that serves as a viable alternative to automobile travel. The Project would support transit use by improving existing pedestrian and bicycle facilities in the Project area. The Project would also increase the number of employees in the area that may access the site by public

transit. The Project would not introduce new features to any public road that would affect transit in the Project area. As such, a less than significant impact would occur.

SB330 Replacement Site

As the proposed Project would include the reallocation of 1,352 low to moderate density residential dwelling units to a mixed-use corridor with higher density residential that would offer improved access to transit, there are numerous aspects of the proposed change that would reduce VMT compared to the "No Project" condition.

The City's TOP EIR evaluated development of the SB330 Replacement Site. The Project proposes rezoning the SB330 Replacement Site to a higher residential density to increase the maximum number of housing units to ensure there is no net loss of residential zoning density. This action however does not propose any specific construction of new structures or redevelopment of the SB330 Replacement Site. The Technical Advisory and City Guidelines each provide evidence that land use projects located within a transit priority area (TPA) or close to a high-quality transit corridor would tend to generate low VMT when compared to typical suburban residential areas characterized by dispersed, low-density, single-use, automobile dependent land use patterns. In addition to proximity to transit, higher density projects located within walking distance of a diverse mix of land uses (e.g., shopping, office, government services, etc.) also generates lower VMT when compared to typical dispersed suburban development. The proximity of complementary land uses combined with safe and convenient bike and pedestrian networks are proven to reduce the need for automobile dependent travel and therefore a reduction in VMT. The Project's reallocation of 1,352 low to moderate density residential dwelling units to a higher density transit-oriented corridor that includes a diverse mix of uses would result in lower net VMT when compared to standard low to moderate density residential development.

Similarly, to the Specific Plan Phase I/ Future Development Areas, any future development on the SB330 Replacement Site would be required to conform to all applicable local, state, and federal transportation/traffic plans and regulations including the City's discretionary review process. Development of the SB330 Replacement site would be designed accordingly with the City's TOP

Mobility Element and planned circulation as illustrated in Figure 3-4, Roadway Classification Plan. In addition, a TIA assessment and VMT assessment as part of the City's CEQA and discretionary review process would be conducted prior to any site-specific development of potential future residential housing. Should significant impacts be identified as part of potential future of the SB330 Replacement Site area, roadway improvements or mitigation would be developed pursuant to the City's TOP Circulation Element and CEQA requirements for transportation impacts (CEQA Guidelines §15126.4(a)). Furthermore, it should be noted that there is an added benefit in relocating the residential density from the Specific Plan site to the SB330 Replacement Site, in that the higher density residential zoning at the SB330 Replacement Site would be in a mixed- use transit-oriented core area of the City, which is being studied as part of the City's current TOP Update process for even higher density to promote transit, reduced demand on vehicle travel and other sustainability principles.

Conclusion

The Project as well as the potential development of the SB330 Replacement Site would not conflict with the relevant goals, policies, and ordinances, addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities. Therefore, impacts would be less than significant. (Draft EIR, p. 4.13-9 through 4.13-12.)

b. ***Design Hazards***

Threshold: Would the Project substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?

Finding: Less than significant. (Draft EIR, p. 4.13-31.)

Explanation: **Specific Plan Phase I/ Future Development Areas**

The roadway improvements and installation of driveways that would be implemented during construction of the Project could require the temporary closure of travel lanes, but full roadway closure and traffic detours are not expected to be necessary. However, construction activities may temporarily restrict vehicular traffic that could increase hazards. Therefore, in order to ensure the safe passage of persons and vehicles through construction zones, the Project would be required to comply with Municipal Code §7-3.07, which requires that prior to any activity that would encroach into a right-of-way, the area be safeguarded through the installation of safety devices that would

be specified by the City's Engineering Department during the construction permitting process to ensure that construction activities would not increase hazards. Implementation of the Specific Plan through the City's permitting process would reduce potential construction related increases in hazards to a less than significant level. Furthermore, the Project includes driveway and intersection improvements that would be implemented as part of the Project. In addition, the Project includes improvements to allow for heavy truck access to the Project site. Conflicts have the potential to occur if: 1) there is inadequate site access or 2) there is inadequate turning radii in and out of the site. Implementation of the Specific Plan and its circulation plans will ensure avoidance of these inadequacies.

Site Access

The proposed project includes the construction and/or improvement of 11 driveways to and from the Project site from adjacent roadways. Exhibit 1-4 in the TIA (Appendix I1 of the DEIR) illustrates and describes access to the Project site. The Project's proposed circulation and off-site improvements would be constructed accordingly with Recommendations 1 through 27 listed in the Project Traffic Analysis to accommodate on-site access. Additionally, all roadway improvements would be designed consistently with the City's TOP Mobility programs, plans, goals and policies, and City Traffic and Transportation Guidelines. Therefore, direct access to the Project site would not substantially increase hazards due to geometric design features or dangerous intersections and a less than significant impact would occur.

Turning Radius

The TIA evaluated large trucks' turning radius to determine necessary intersection improvements in the study area. The TIA overlaid a truck turning template on the site plan at each applicable Project driveway and site adjacent intersections anticipated to be utilized by large trucks in order to determine appropriate curb radius and to verify that trucks will have sufficient space to execute turning maneuvers.

The following change is necessary in order to accommodate the wide turning radius of the heavy trucks:

- Driveway 1 should be modified to provide a 50-foot curb radius on the northeast and southeast corners and to widen the drive aisle to 60-feet.

The Project design features identified above are based on this study and would ensure adequate large truck access to and from the Project site and adjacent intersections. Implementation of the identified Project design features would ensure that impacts would be less than significant, and the Project would not substantially increase hazards due to heavy truck maneuvers.

SB330 Replacement Site

Rezoning the SB330 Replacement Site is not anticipated to have any new or substantially more severe impacts than addressed under the City's TOP EIR, or that would occur under current zoning. Additionally, potential impacts are anticipated to be similar to that described above for the Specific Plan site. Similar to the discussion above, a traffic analysis as part of the City's CEQA and discretionary review process would be required prior to development of potential future residential housing. The traffic analysis would require any on- and off-site circulation improvements from potentially future development on the SB330 Replacement Site to conform between existing/planned roadways pursuant to the City's TOP and Municipal Code to ensure safe and efficient operations. In consideration of the above, a less than significant impact is anticipated.

Conclusion

In summary, buildout of the Project would result in changes to the circulation network but would not increase hazards due to design features. The SB330 Replacement Site, once development is proposed, would conform to existing roadways design standards, preventing impacts of hazards. Impacts and potential impacts will remain less than significant. (Draft EIR, pp. 4.13-31 through 4.13-32.)

c. ***Emergency Access***

Threshold: Would the Project result in inadequate emergency access?

Finding: Less than significant. (Draft EIR, p. 4.13-32.)

Explanation: The Project is not anticipated to result in any significant emergency access impacts during construction. In case of an emergency, the construction manager will have assigned staff to flag emergency response vehicles and direct them to the emergency location. Unimpeded access throughout the Project site would be maintained by ensuring that vehicles would not be parked or placed in a manner that would impede access for emergency response vehicles. Project site conditions, during and after the workday, would be either

maintained or left in a condition that adheres to Division of Occupational Safety and Health (OSHA) safety standards to prevent any hazardous condition that may affect construction staff and emergency responders.

Access roads to the site will be constructed throughout the Project site for construction staff/inspectors, construction equipment and materials delivery/removal, and emergency response vehicles. The access roads will be kept or maintained in such condition to allow for the safe passage for emergency response vehicles. The Project would implement both on- and off-site improvements, consistent with Recommendations 1 through 27, to ensure the safe and efficient access to the Project Site.

Overall, the Project would adhere to applicable city laws and regulations, including adequate access and signage. No significant impacts are anticipated. (Draft EIR, p. 4.13-32.)

15. UTILITIES AND SERVICE SYSTEMS

a. *Wastewater Treatment Requirements*

Threshold: Would the Project require or result in the relocation or construction of new or expanded water, wastewater treatment or storm water drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects (wastewater treatment and distribution)?

Finding: Less than significant. (Draft EIR, p. 4.15-5, 4.15-14, 4.15-22.)

Explanation: **Wastewater Treatment and Distribution**

The Project site is located in OR and is within IEUA's wastewater service area boundary. Wastewater conveyance will be provided by the City of Ontario.

Specific Plan - Phase I and Future Development Area

Wastewater Conveyance

There are no existing sewer mains near the Project site that are within the jurisdiction of the City of Ontario and the proposed Project would require the construction of both on- and off-site sewer mains. It would be financially infeasible for residential development to bear the cost of infrastructure improvements required to support a residential development. The City of Ontario's 2012 Sewer Master Plan shows the existing infrastructure serving the Project area as well as the ultimate sewer system. The ultimate sewer collection

system will include approximately 140,000 feet of additional trunk sewer to serve the OR. The sewer master plan includes a Capital Improvement Program (CIP) to ensure adequate long-range planning for implementing the City's sewer infrastructure improvements in line with the City's 2010 General Plan buildout scenario.

Sewer services for the Project site will be provided by the City. There are no sewer mains located within the broader vicinity of the Project area; therefore, the Specific Plan includes a network of new public sewer mains, consistent with the City's Ultimate Sewer System Plan. A Sewer Sub-Area Master Plan (SSAMP) shall be prepared for each tract map and development within the Specific Plan. A 36-inch sewer main will connect to an existing IEUA interceptor trunk main sewer located in Kimball Avenue to the south, run north in Euclid Avenue to Merrill Avenue, then east to Grove Avenue. The IEUA interceptor trunk sewer main is 54 inches east of Euclid and 60 inches west of Euclid Avenue. An 18-inch sewer main would run from Merrill Avenue north within Bon View Avenue and Grove Avenue to Eucalyptus Avenue. A sewer main will run within Eucalyptus Avenue, from a point west of Grove Avenue to Bon View Avenue where it will connect to the 18-inch sewer main within Bon View Avenue. The size of the Eucalyptus Avenue sewer main will be determined during development plan preparation for planning area (PA) 1 and PA2 of the Project. Note that all of these offsite sewer mains are regional facilities identified in the City's Sewer System Plan and/or already required for construction by other projects. The Project will pay a fair share of these offsite regional sewer system improvements, which all occur within existing streets or are part of future development. As these off-site facilities have already been identified in the City's Sewer Master Plan, the Project will not require the construction or expansion of existing wastewater treatment facilities beyond that already identified by the City as part of its regional wastewater system.

The Project also includes various on-site sewer infrastructure to connect the Specific Plan site to the City's sewer system. The ultimate sizing and alignment of the sewer shall be consistent with the Sewer Master Plan, the City's Water and Sewer Design Development Guidelines, the Municipal Code, and/or a City conducted and approved hydraulic analysis. A Sewer Sub-Area Master Plan (SSAMP) shall be prepared for each Tract Map and development within the Specific Plan. The impacts of all on-site

infrastructure are addressed throughout the EIR as part of the overall Specific Plan site development.

Therefore, the proposed Project would not result in the construction of new wastewater facilities or expansion of existing facilities, the construction of which could cause significant environmental effects, and impacts would be less than significant. (Draft EIR, pp. 4.15-5 through 4.15-6.)

SB330 Replacement Site

The proposed increase in residential density for the SB330 Replacement Site would likely result in a slight increase in water demand for this area, due to increased residential density. The net effect of the Project site plus the SB330 Replacement Site is anticipated to be similar in overall demand as the current General Plan land use designations. Pursuant to SB330, the Project will create an Overlay District on the SB330 Replacement Site to increase the residential zoning capacity by 1,352 units, which will offset the "loss" of residential zoning capacity within the Project site. In order for this Overlay District to be approved, a Zone Change is required. The additional density is assumed to be spread evenly across the 473-acre SB330 Replacement Site. This area is currently zoned with a mix of low density, low-medium density and medium density residential allowing an estimated 3,690 DU, in addition to 18 acres of Neighborhood Commercial and 44 acres of General Commercial. As part of the City's current TOP Update process, City staff are evaluating this SB330 Replacement Site area for higher density land uses to create a mixed used transit-oriented area, currently envisioned with approximately 10,161 DU and a mixed-use area of 44 acres. Once development occurs, it would comply with applicable regulations and requirements including the City's standard development review process. (Draft EIR, p. 4.15-6.)

Water Facilities

Specific Plan – Phase I & Future Development Areas

Construction and Operations

The Project site is currently agricultural land use, including dairy operations and field crops. The site is not connected to the City's water supply and utilizes groundwater for irrigation of crops and other agricultural-related uses. The use of this water supply would cease upon implementation of the proposed Project. There are also three

potable water wells on site which would be abandoned in accordance with California Department of Water Resources (DWR) standards.

Potable water distribution to the proposed Project would be provided by the City of Ontario. There are no existing water mains near the Project that are within the City's jurisdiction; existing water mains along the west half of Euclid Avenue and the south half of Merrill Avenue are within City of Chino jurisdiction. It would be financially infeasible for residential development to bear the cost of infrastructure improvements required to support a residential development. The Project proposes new offsite potable water mains as specified in the City's Water Master Plan, which has identified water facilities to serve the OR. Note that the off-site facilities described below are part of the City's Water Master Plan, and the Project is paying a fair -share for these regional improvements. These improvements are part of the City's Water Master Plan and have already been conditioned upon other projects to construct.

Potable water system improvements for the proposed project require the planning, design, and construction of the 925 Pressure Zone (PZ) Phase 2 West Backbone, which includes: extending the 24-inch potable water main in Eucalyptus Avenue from Archibald Avenue to Grove Avenue; installing a 30-inch potable water main in Grove Avenue connecting from the 24-inch potable water main in Eucalyptus Avenue and extending to Chino Avenue; installing a 42-inch potable water main in Grove Avenue connecting from the 30-inch potable water main in Grove Avenue at Chino Ave and extending to Francis Avenue; installing a 42-inch potable water main in Francis Avenue connecting from the 42-inch potable water main in Grove Avenue and extending to Bon View Avenue; installing a 42-inch potable water main in Bon View Avenue connecting from the 42-inch potable water main in Francis Avenue and extending to Bon View Avenue Reservoir site and to the Reservoir; a 9 million gallon reservoir on the Bon View Reservoir site; and, two 2,500 gallons per minute (gpm) wells with any treatment necessary to meet water quality standards and the 16-inch and 24-inch collection main from the wells to the reservoirs.

In addition to the 925 Pressure Zone (PZ) Phase 2 West Backbone, the Specific Plan area requires the planning, design, and construction of a Secondary Loop between the 925 Pressure Zone (PZ) Phase 2 West Backbone and the Specific Plan area which includes: installing a 16-inch potable water main in Eucalyptus Avenue connecting from the 30-inch potable water main in Grove

Avenue and extending to Campus Avenue; installing a 12-inch potable water main in Campus Avenue connecting from the 16-inch potable water main in Eucalyptus Avenue and extending to the 16-inch potable water main in Merrill Avenue; installing a 16-inch potable water main in Merrill Avenue connecting from the 12-inch potable water main in Campus Avenue and extending to the 16-inch potable water main in Walker Avenue; and installing a 16-inch potable water main in Walker Avenue connecting from the 16-inch potable water main in Merrill Avenue and extending to the 24-inch potable water main in Eucalyptus Avenue; installing a 12-inch potable water main in Grove Avenue connecting to the 24-inch potable water main in Eucalyptus Avenue and extending to connect to the 16-inch potable water main in Merrill Avenue; and installing a 12-inch potable water main in Bon View Avenue connecting to the 16-inch potable water main in Eucalyptus Avenue and extending to connect to the 16-inch potable water main in Merrill Avenue. The Specific Plan area also requires the planning, design, and construction of the Adjacent Potable Water System, which includes: installing a 12-inch potable water main in Sultana Avenue connecting to the 16-inch potable water main in Eucalyptus Avenue and extending to connect to the 16-inch potable water main in Merrill Avenue.

Until the ultimate pipeline network for South Ontario Logistics Center has been completed, there may be instances where construction of improvements to serve a project may not meet the required fire flow demands. Therefore, development within the Specific Plan area may be required to construct additional pipelines not indicated in the City's Water Master Plan or upsize master planned pipelines to meet Fire Department fire flow requirements and/or Water Master Plan criteria. All lines would be installed per City master plans, located in road rights-of-way that are already improved, and/or already addressed in prior CEQA documents. The developer will submit a hydraulic analysis to the City for review and approval to demonstrate adequate fire flow and adherence to the City's Water Master Plan criteria.

Although off-site construction of the water lines would be necessary for operation of the proposed Project, these facilities have been planned by the City in its Water Master Plan, and no extensions or capacity expansions beyond the planned system would be required. Furthermore, any offsite construction of potable water infrastructure would be implemented in accordance with the City's Water and Sewer Design Development Guidelines and the standards and specifications of the Municipal Code. Off-site water mains required

to serve the Project will need to be constructed prior to or concurrent with on-site water improvements. Within the project site, a network of 2-inch water lines for domestic water service and 8- to 10-inch water lines for fire service water will be installed. The on-site water system includes connections to the water main in Eucalyptus Avenue to serve PA-1 and to the main in Merrill Avenue to serve PA-2. On-site construction of the proposed infrastructure would be constructed in compliance with City's Water and Sewer Design Development Guidelines and the Municipal Code. The necessary installation of on-site water lines is included as part of the proposed Project and would not result in any physical environmental effects beyond those identified in other sections of this EIR.

There are currently no existing City recycled water mains or City recycled water infrastructure in the vicinity of the Project site and the proposed Project would require the construction of both on- and off-site recycle water mains to serve the site, consistent with the City's Recycled Water Master Plan. Recycled water infrastructure improvements for the Project require the planning, design, and construction of the 930 PZ Recycled Water Master Plan mains. The Specific Plan area requires the planning, design, and construction of new recycled water system lines which would be installed as follows: installing a 12-inch recycled water main in Eucalyptus Avenue connecting to the 8-inch recycled water main in Grove Avenue and extending to connect to the IEUA 30-inch recycled water main in Bon View Avenue; installing an 8-inch recycled water main in Bon View Avenue connecting to the 12-inch recycled water main in Eucalyptus Avenue and extending to connect to the 8-inch recycled water main in Merrill Avenue; installing an 8-inch recycled water main in Merrill Avenue connecting to the 8-inch recycled water main in Bon View Avenue and extending to connect to the 8-inch recycled water main in Grove Avenue; installing an 8-inch recycled water main in Grove Avenue connecting to the 8-inch recycled water main in Merrill Avenue and extending to connect to the 12-inch recycled water main in Eucalyptus Avenue and installing an 8-inch recycled water main in Merrill Avenue connecting to the 8-inch recycled water main in Bon View Avenue and extending to Campus Avenue. If a recycled water pipeline point of connection exists at the intersection of Merrill Avenue and Sultana Avenue at the time of entitlement, the 8-inch recycled water main may need be installed in Merrill Avenue connecting to the 8-inch recycled water main in Campus Avenue and extended to Sultana Avenue.

All lines would be installed per City master plans, located in road rights-of-way that are already improved, and/or already addressed in prior CEQA documents.

Therefore, the proposed Project would not result in the construction of new water facilities or expansion of existing facilities, the construction of which could cause significant environmental effects, and impacts would be less than significant. (Draft EIR, pp. 4.15-14 through 4.15-15.)

SB330 Replacement Site

Construction and Operations

The Project is not proposing any specific development in the SB330 Replacement Site. The area is already planned for water and recycled water infrastructure, and the slight increase in density is not anticipated to result in new or substantially more severe environmental impacts than evaluated in the City's TOP EIR and that would occur under current zoning densities. Any future development in this area would be evaluated as part of the City's standard discretionary review process, including consistency with the City's TOP and municipal code, as well as consistency with the UWMP and Water and Recycled Water Master Plans. (Draft EIR, p. 4.15-17.)

Conclusion

The proposed Project and the SB330 Replacement Site would not result in the construction of new wastewater facilities or expansion of existing facilities, the construction of which could cause significant environmental effects, and impacts would be less than significant. (Draft EIR, pp. 4.15-5 through 4.15-6, 4.15-14 through 4.15-17.)

Storm Water Facilities

Specific Plan – Phase I/ Future Development Areas

Construction and Operations

As detailed above, the proposed Project would not adversely impact existing and planned stormwater drainage facilities.

SB330 Replacement Site

Construction and Operations

As detailed above, the SB330 Replacement Site would not adversely impact existing and planned stormwater drainage facilities.

Conclusion

Neither the Specific Plan site nor the SB330 Replacement Site will require construction of additional storm water infrastructure beyond what is already planned for in the City's regional drainage master planning. Impacts are less than significant. (Draft EIR, p. 4.15-22.)

b. ***Water Supplies***

Threshold: Would the Project have sufficient water supplies available to serve the Project and reasonably foreseeable future development during normal, dry and multiple dry years?

Finding: Less than significant. (Draft EIR, p. 4.15-17.)

Explanation: **Specific Plan – Phase I and Future Development Areas**

Construction and Operations

Water Demand

Water use for the proposed Project was calculated using domestic water demand rates and recycled water irrigation demand rates as specified in the UWMP. Table 4.15-4 of the DEIR shows the total water demand estimate for the proposed development.

The total domestic water demand within the South Ontario Logistics Center Specific Plan area is estimated to be 327,508 gal/day (366.9 AFY). The total recycled water demand is estimated to be 216,253 gal/day (242.2 AFY). The total water demand would be 543,761 gal/day or 609.1 AFY.

The 2015 UWMP projected water demands are based on future land uses as specified in the City's latest 2010 General Plan. The proposed General Plan Amendment (GPA) would amend the City's General Plan Land Use Map by changing the existing land use designations of the Project site from Low Medium Density Residential and "Business Park" to "General Industrial" and "Business Park" in different areas, to facilitate development of the Project site. Pursuant to SB330, an additional GPA will be processed concurrently to increase density elsewhere in the City to achieve no net loss of unit capacity. Based on the projected future land use for the Project site in the UWMP, the water demand for a medium density residential development was estimated, as shown in Table 4.15-5 of the DEIR, Water Demand Estimate for the Project Site Based on Projected Future Land Use in 2015 UWMP. In order to evaluate water supply reliability, California statutes require the consideration of water supplies and demands in three types of water conditions: normal, single dry, and multiple dry water years . The 2015 UWMP indicates that the City is capable of meeting the water

demands of its customers in normal, single dry, and multiple dry years between 2020 and 2040.

Comparing Project water demand in Table 4.15-4 of the DEIR with water demand assumed in the 2015 UWMP as shown in Table 4.15-5 of the DEIR shows that the total domestic water demand within the site area will decrease, compared to planned land use as depicted in the 2015 UWMP. Water usage per the 2015 UWMP is estimated to be 742,856 gal/day (832.1 AFY). The total recycled water demand is estimated to be 183,914 gal/day (206.0 AFY). Therefore, the total water demand per the 2015 UWMP would be 926,770 gal/day or 1,038 AFY, compared to a total water demand of the Project (shown in Table 4.15-4 of the DEIR) of 543,761 gal/day or 609.1 AFY.

Therefore, implementation of the proposed project will not obstruct the City's ability to meet water demands of its customers in normal, single dry, and multiple dry years, because the Project will not use any additional water that was not accounted for.

SB330 Replacement Site

Construction and Operations

In addition to evaluating changes in water demand for the Project site in comparison to the 2015 UWMP (Tables 4.15-4 and 4.15-5 of the DEIR), this WSA also evaluates a related aspect of the Project, the change in water demand associated with increasing residential density within the Grove Avenue Corridor SB330 Replacement Site study area. Per SB330, in order for the City to approve the Specific Plan, the City must also rezone an area in the City to offset the loss in residentially zoned land. The City has determined that the Project would displace 1,352 DU of residential capacity as part of the Project approval. As stated previously, the City has evaluated the Project and has determined that it would result in the "loss" of approximately 1,352 low to moderate density housing units (due to the proposed rezoning and associated General Plan Amendment and Zone Change). Therefore, as part of the Project, the City will be required to rezone a separate area in the City with higher density, to ensure that there is no net loss in allowable housing density due to the Project Therefore, the City has identified an additional density of 1,352 DU within the Grove Avenue Corridor, with an assumed average density of Medium Density Residential. The additional daily water usage will be a net increase of 398,840 gal/day.

The implementation of the Project, and the rezoning of lower-density land for the SB330 Replacement Site for the Project, will result in a slight decrease in domestic water demand, an increase in recycled water demand, and an overall slight increase in total water demand (of 1.7%, or 15,831 gallons/day), compared to the 2015 UWMP. Therefore, implementation of the Project would result in a nominal increase in water demand and will not obstruct the City's ability to meet water demands.

Conclusion

According to the City's UWMP, the City has adequate supplies to serve 100 percent of its customers during normal, dry year, and multiple dry year demand through 2040 accounting for projected population increases and corresponding increases in water demand. Projected water demand for the proposed Project was included in the UWMP 2015 projections and was based on the 2010 General Plan land use designations. The 2010 General Plan land use designations for the Project site were general industrial and business park land uses. The proposed Project would consist of up to 5,333,518 square feet of industrial/warehouse and ancillary office space. The projected water demand for the proposed Project is slightly increased to the water demand for the land use that was accounted for in the 2015 UWMP. Therefore, implementation of the proposed Project would result in a nominal increase in water demands and will not obstruct the City's ability to meet water demands of its customers in normal, single- dry, and multiple-dry years.

The City will have sufficient water supplies available during normal, single dry, and multiple dry years through the year 2040 to meet all projected water demands associated with its existing and future customers, including the proposed Project. In the unlikely event of a water shortage, implementation of the City's Water Conservation Plan and water efficiency strategies would ensure that sufficient water supplies were available to serve its customers, including the Project and existing and future users.

Proposed Water Conservation Strategies

Landscaping within the South Ontario Logistics Center Specific Plan area will be implemented in line with the City of Ontario's Landscape Development Guidelines. The guidelines include water conservation measures that need to be incorporated into landscape designs, the different elements that need to be incorporated into preliminary landscape plans, and the required landscape construction

documents. Construction documents need to include a water efficient landscape worksheet, grading design, erosion control measures, and a maintenance schedule. Furthermore, the South Ontario Logistics Center Specific Plan includes key provisions for landscaping plans within the Project area which include:

- Selecting drought-tolerant plants such as colorful shrubs and groundcovers, ornamental grasses and succulents, evergreen and deciduous trees, and species native to Southern California or naturalized to the arid Southern California climate.
- Incorporating water conservation features in landscape and irrigation plans.

In addition to the City having adequate water supply to service the proposed Project, these water conservation measures would decrease water demand and impacts would be less than significant. (Draft EIR, pp. 4.15-17 through 4.15-21.)

c. ***Wastewater Capacity***

Threshold: Would the Project result in a determination by the wastewater treatment provider which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?

Finding: Less than significant. (Draft EIR, p. 4.15-7.)

Explanation: **Specific Plan - Phase I and Future Development Area**

The Project site is located in the OR and is within IEUA's wastewater service area boundary. The proposed Project will be served by the RP-5 wastewater treatment plant. Buildout of the proposed Project would generate approximately 543,761 gal/day. The current liquid treatment capacity of RP-5 is 15 mgd, and the plant treats an average of 9 mgd. Thus, RP-5 has a remaining wastewater treatment capacity of 6 mgd. The proposed Project's generated wastewater would represent less than one percent of the RP-5's remaining treatment capacity. Therefore, wastewater generated by the proposed Project would be adequately treated at the RP-5.

RP-5 is required by federal and state law to meet applicable standards of treatment plant discharge requirements subject to Order No. RS-2015-0036 NPDES No. CA8000409. The permit includes the conditions needed to meet minimum applicable technology-based requirements. The NPDES permit regulates the amount and type of pollutants that the system can discharge into receiving waters. RP-5 is operating in compliance with and would

continue to operate subject to state waste discharge requirements and federal NPDES permit requirements, as set forth in the NPDES permit and order. Furthermore, the proposed Project will comply with IEUA's Ordinance No. 97 ensuring that wastewater discharge into the sewer system is compliant with the NPDES permit conditions, bio-solid use and disposal requirements, and any other federal or state laws.

The additional wastewater (quantity and type) that would be generated by the proposed Project and treated by the RP-5 would not impede the treatment plant's ability to continue to meet its wastewater treatment requirements. Impacts on wastewater treatment would be less than significant.

SB330 Replacement Site

IEUA will also provide wastewater services to development on the SB330 Replacement Site. The slight increase in residential density will generate additional wastewater, although future development would be required to fund fair share of improvements to ensure adequate treatment capacity, through connection fees, development impact fees and service fees. An NPDES Permit will be obtained prior to start of construction and the development on the site would be compliant with the NPDES permit conditions, bio-solid use, disposal requirements, and other applicable federal or state laws. Impacts would be less than significant.

Conclusion

The additional wastewater that would be generated by the proposed Project and treated would not impede the treatment plant's ability to continue to meet its wastewater treatment requirements. Impacts on wastewater treatment would be less than significant. (Draft EIR, p. 4.15-7.)

d. ***Solid Waste***

Threshold: Would the Project generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals?

Finding: Less than significant. (Draft EIR, p. 4.15-27.)

Explanation: **Specific Plan – Phase 1 and Future Development Areas**

Construction and Operations

Prior to construction of the proposed Project, onsite structures would need to be demolished and its debris moved offsite to appropriate

landfills. The Project site currently contains an operational dairy farm and is improved with several residential structures, dairy barns, storage structure, feed storage barns, and numerous livestock corrals. The Project site does not currently contain an existing storm drain or sewer facility, but there are large existing retention ponds that collect the surface and agricultural waste accumulations from the dairy farming practices. The Project site is currently served with three portable water wells as well as two above ground fuel storage tanks and various mechanical systems for dairy production practices. The remainder of the Project site is used as irrigated cropland with berms located along the site perimeter. Using aerial imagery of the site and the application of geological information systems, it was determined that approximately 1,571 tons of demolition debris will result from this Project .

The demolition of the existing structures may cause a strain on existing landfill capacities if waste exceeds the daily permitted capacity for the landfills serving the City. Collectively, the two primary landfills have a daily permitted capacity of 20,854 tons per day (tpd), and an average daily disposal of 12,994 tpd, as reported in 2019. Therefore, the two landfills have a residual capacity of 7,860 tpd. The 1,517 tons of demolition waste that would be disposed of in landfills would occur over a period of approximately two and a half months and would not exceed the daily residual capacity of the landfills.

Buildout of the proposed project is estimated to generate 24,363 ppd of solid waste.

The two landfills serving Ontario have capacity residual capacity of 7,860 tpd. The estimated 24,363 ppd or 12.18 tpd generated by the proposed project would be adequately served by the Badlands Sanitary, or El Sobrante landfills.

Overall, sufficient landfill capacity is available in the region for the estimated solid waste generated by the proposed project during operations, and project development would not require an expansion of landfill capacity. Impacts would be less than significant for the operational phase.

Regulatory Compliance

Additionally, Assembly Bill 341 requires all businesses in California that generate four cubic yards or more of waste per week to implement one of the following actions in order to reuse, recycle, compost, or otherwise divert commercial solid waste from disposal:

- Source separate recyclable and/or compostable material from solid waste and donate or self-haul the material to recycling facilities.
- Subscribe to a recycling service with their waste hauler in the service area.
- Provide recycling service to their tenants (if commercial or multifamily complex).
- Demonstrate compliance with the requirements of California Code of Regulations Title 14.

Furthermore, the proposed Project would implement the requirements of the City's Integrated Waste Department's Refuse & Recycling Planning Manual on refuse and recycling storage and access for service, as well as addressing the City's recycling goals. The requirements of Chapter 3, Integrated Waste Management, of the Municipal Code will also be implemented to ensure that the proposed project complies with all applicable state and federal laws, including, but not limited to, The Integrated Waste Management Act of 1989. A construction waste management plan would be submitted and implemented in compliance with § 4.408 of the 2016 California Green Building Code Standards.

SB330 Replacement Site

The proposed slight increase in residential density would generate additional solid waste than currently anticipated for this area based on current zoning. However, the increase would be nominal relative to the total volume generated in the City, and any future residential development would be required to comply with the City's standard discretionary review process, including compliance with all applicable state and federal laws, including, but not limited to the City's municipal code and Integrated Waste Department's Refuse & Recycling Planning Manual. Impacts would be less than significant.

Conclusion

Through application and accordance of the City's goals, policies, and standards and adherence to all state, federal, and local laws and regulations, the impacts for both the Project site and S330 Replacement Site will remain less than significant. (Draft EIR, pp. 4.15-27 through 4.15-29.)

e. *Solid Waste Laws*

Threshold: Will the Project comply with federal, state, and local statutes and regulations related to solid waste?

Finding: Less than significant. (Draft EIR, p. 4.15-27.)

Explanation: **Specific Plan – Phase 1 and Future Development Areas**

Construction and Operations

Prior to construction of the proposed Project, onsite structures would need to be demolished and its debris moved offsite to appropriate landfills. The Project site currently contains an operational dairy farm and is improved with several residential structures, dairy barns, storage structure, feed storage barns, and numerous livestock corrals. The Project site does not currently contain an existing storm drain or sewer facility, but there are large existing retention ponds that collect the surface and agricultural waste accumulations from the dairy farming practices. The Project site is currently served with three portable water wells as well as two above ground fuel storage tanks and various mechanical systems for dairy production practices. The remainder of the Project site is used as irrigated cropland with berms located along the site perimeter. Using aerial imagery of the site and the application of geological information systems, it was determined that approximately 1,571 tons of demolition debris will result from this Project .

The demolition of the existing structures may cause a strain on existing landfill capacities if waste exceeds the daily permitted capacity for the landfills serving the City. Collectively, the two primary landfills have a daily permitted capacity of 20,854 tons per day (tpd), and an average daily disposal of 12,994 tpd, as reported in 2019. Therefore, the two landfills have a residual capacity of 7,860 tpd. The 3,0411,517 tons of demolition waste that would be disposed of in landfills would occur over a period of approximately two and a half months and would not exceed the daily residual capacity of the landfills.

Buildout of the proposed project is estimated to generate 24,363 ppd of solid waste.

The two landfills serving Ontario have capacity residual capacity of 7,860 tpd. The estimated 24,363 ppd or 12.18 tpd generated by the proposed project would be adequately served by the Badlands Sanitary, or El Sobrante landfills.

Overall, sufficient landfill capacity is available in the region for the estimated solid waste generated by the proposed project during

operations, and project development would not require an expansion of landfill capacity. Impacts would be less than significant for the operational phase.

Regulatory Compliance

Additionally, Assembly Bill 341 requires all businesses in California that generate four cubic yards or more of waste per week to implement one of the following actions in order to reuse, recycle, compost, or otherwise divert commercial solid waste from disposal:

- Source separate recyclable and/or compostable material from solid waste and donate or self-haul the material to recycling facilities.
- Subscribe to a recycling service with their waste hauler in the service area.
- Provide recycling service to their tenants (if commercial or multifamily complex).
- Demonstrate compliance with the requirements of California Code of Regulations Title 14.

Furthermore, the proposed Project would implement the requirements of the City's Integrated Waste Department's Refuse & Recycling Planning Manual on refuse and recycling storage and access for service, as well as addressing the City's recycling goals. The requirements of Chapter 3, Integrated Waste Management, of the Municipal Code will also be implemented to ensure that the proposed project complies with all applicable state and federal laws, including, but not limited to, The Integrated Waste Management Act of 1989. A construction waste management plan would be submitted and implemented in compliance with § 4.408 of the 2016 California Green Building Code Standards.

SB330 Replacement Site

The proposed slight increase in residential density would generate additional solid waste than currently anticipated for this area based on current zoning. However, the increase would be nominal relative to the total volume generated in the City, and any future residential development would be required to comply with the City's standard discretionary review process, including compliance with all applicable state and federal laws, including, but not limited to the City's municipal code and Integrated Waste Department's Refuse & Recycling Planning Manual. Impacts would be less than significant.

Conclusion

Through application and accordance of the City's goals, policies, and standards and adherence to all state, federal, and local laws and regulations, the impacts for both the Project site and S330 Replacement Site will remain less than significant. (Draft EIR, pp. 4.15-27 through 4.15-29.)

16. WILDFIRE

a. *Response Plans*

Threshold: If located in or near state responsibility areas or lands classified as very high fire hazard severity zones, would the Project substantially impair an adopted emergency response plan or emergency evacuation plan?

Finding: Less than significant. (Draft EIR, p. 7-9.)

Explanation: The Project site is not within a Very High Fire Hazard Severity Zone, and the Project site is also not near a Fire Hazard Severity Zone, when using WUI as a measure of proximity. The construction of the proposed Project would be generally confined to the Project site and would not physically impair access to the site or the Project area. The proposed Project would be required to comply with all applicable City codes. The Project site is relatively flat and there are no steep slopes where high winds can exacerbate wildfire risks. Adjacent areas to the Project site are also urbanized, therefore, there are no wildlands adjacent to the site that may expose Project occupants to pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire due to slope and prevailing winds. Additionally, the proposed Project would not require the installation of infrastructure that would exacerbate fire risk. Less than significant impacts would occur.

CAL FIRE'S FHSZ Viewer Map identifies that the SB330 Replacement Site is not within a Very High FHSZ zone, and is within an LRA zone (it is not within an SRA zone). The replacement site is approximately 9.0 miles northeast from a Very High FHSZ zone located within the City of Ontario. Any future development would be required to comply with applicable local and state requirements, including applicable provisions of the City's municipal code related to fire safety and emergency access. Therefore, the proposed slight increase in residential density is not anticipated to result in any new or substantially severe environmental impact in this regard. (Draft EIR, pp. 7-8 through 7-9.)

b. ***Pollutant Concentrations***

Threshold: Due to slope, prevailing winds, and other factors, would the Project exacerbate wildfire risks, and thereby expose project occupants to, pollutant concentrations from a wildfire or the uncontrolled spread of wildfire?

Finding: Less than significant. (Draft EIR, p. 7-9.)

Explanation: **Specific Plan-Phase I/Future Development Areas**

The development of the Project would remove the existing agriculture and decrease the risk of any potential fire outbreak. Thus, wildfire is not anticipated to occur on-site that would expose Project occupants to pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire. Worse-case extreme high winds that could exacerbate wildfire would not expose construction workers to pollutant concentrations since all agriculture uses would be removed. The Project site is also in a well vehicularly circulated area with existing roadways which would be further improved once the Project is completed. The site and its surrounding areas do not contain tall trees that would experience a crown fire.

Furthermore, due to the presence of surrounding development, non-contiguous nature of the existing undeveloped areas, presence of area roadways, lack of steep slopes, and concrete construction of the Project, it is not likely to be affected by a wildfire during construction or operations. In addition, the surrounding agricultural areas would be separated from the structures by roads, landscaping, parking, and other accommodating Project features. Lastly, the construction of the Project would be predominantly concrete which is not typically susceptible to fire. Specifically, the site would be built consistent with the California Building Code Chapter 7A requiring new buildings to use ignition-resistant construction methods and materials. It is anticipated that these design elements would reduce exposure of the Project site and structure to wildfire. Furthermore, the City's plan for fire prevention requires that all plans are reviewed and are required for all new buildings and for changes to existing buildings. The OFD reviews these plans to help ensure that the applicable codes, ordinances, and standards are being followed, and to prevent unnecessary hazards. Therefore, there will be a less than significant impact.

SB330 Replacement Site

The proposed slight increase in residential density at the SB330 Replacement Site is not anticipated to result in any new or

substantially more severe environmental impact related to wildfire. No specific development is proposed at this time. Any future development would be required to comply with applicable local and state requirements, including applicable provisions of the City's municipal code related to fire safety and emergency access. Therefore, the proposed slight increase in residential density is not anticipated to result in any new or substantially severe environmental impact in this regard. (Draft EIR, pp. 7-9 through 7-10.)

c. ***Infrastructure Risks***

Threshold: Would the Project require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment?

Finding: Less than significant. (Draft EIR, p. 7-10.)

Explanation: **Specific Plan- Phase I/Future Development Areas**

The Project would include the construction of roadways, landscaping, signage, lighting, and utility improvements. The Project site is consistent with the area's land use and would be consistent with the City's zoning designation upon approval of the proposed zone change. The site is not located near a wildland interface and it is not within a designated Very High FHSZ. The Project site would include installation of utilities and roads within the Project area. The Project does not include any fuel breaks and does not require a fuel break. In addition, emergency water sources are not required beyond water supply needed to comply with applicable building codes as well as the City's Municipal Code. No elements of the Project would exacerbate the risk of wildfire. Therefore, there would be less than significant impact.

SB330 Replacement Site

The proposed slight increase in residential density at the SB330 Replacement Site is not anticipated to result in any new or substantially more severe environmental impact related to wildfire risk. No specific development is proposed at this time. The proposed rezoning would not change the development footprint, nor is it anticipated to require substantial additional infrastructure (beyond what would be required under current zoning) that would, in turn, lead to an increase in wildfire risk. Any future development would be required to comply with applicable local and state requirements,

including applicable provisions of the City's municipal code related to fire safety and emergency access. Therefore, the proposed slight increase in residential density is not anticipated to result in any new or substantially severe environmental impact in this regard. (Draft EIR, p. 7-10.)

d. ***Runoff Risks***

Threshold: Would the project expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes?

Finding: Less than significant. (Draft EIR, p. 7-11.)

Explanation: **Specific Plan- Phase I/Future Development Areas**

Aerial imagery indicates that the Project is in a rural part of the City and is not adjacent to a wildland-urban interface or in an area subject to landslide after a wildland fire event. Development of the Project would alter existing ground contours of the Project site and would increase the impervious surface area on the site, all of which would result in changes to the existing drainage patterns interior to the site. The Project would include the installation of a 120-inch public storm drain main along Grove Avenue leading south to existing facilities via modification of an existing channel. The overall Project would result in a network of drainage lines on- and off-site to accommodate stormwater runoff flows. The drainage plan for the Project site is designed according to the City of Ontario's Master Plan standards. The new storm drain would increase the efficiency of the drainage infrastructure in that area and provide an updated conveyance system. Additional on-site storm drain improvements would include stormwater detention/retention/water quality basins, which would capture, treat, and/or gradually release stormwater into the downstream public storm drain system. On-site stormwater treatment would incorporate underground chambers installed within each building's parking area. The installation of the drainage design features would prevent flooding on- and off-site. A less than significant impact would occur.

SB330 Replacement Site

The proposed slight increase in residential density at the SB330 Replacement Site is not anticipated to result in any new or substantially more severe environmental impact related to wildfire risk. No specific development is proposed at this time. The proposed rezoning would not change the development footprint. In addition,

the SB330 Replacement Site is relatively flat, and has a low landslide potential. The proposed rezoning is not otherwise anticipated to result in a new or substantially more severe exposure of people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage change that would, in turn, lead to an increase in wildfire risk. Any future development would be required to comply with applicable local and state requirements, including applicable provisions of the City's municipal code related to fire safety and emergency access. Therefore, the proposed slight increase in residential density is not anticipated to result in any new or substantially severe environmental impact in this regard. (Draft EIR, p. 7-11.)

D. FINDINGS REGARDING SIGNIFICANT ENVIRONMENTAL IMPACTS THAT CAN BE REDUCED TO A LESS THAN SIGNIFICANT LEVEL

The City Council hereby finds that Mitigation Measures have been identified in the EIR and these Findings that will avoid or substantially lessen the following potentially significant environmental impacts to a less than significant level. The potentially significant impacts, and the Mitigation Measures that will reduce them to a less than significant level, are as follows:

1. *AIR QUALITY*

a. *Sensitive Receptors*

Threshold: Would the Project expose sensitive receptors to substantial pollutant concentrations?

Finding: Less than significant with mitigation. (Draft EIR, p. 4.2-30.)

Explanation: **Specific Plan – Phase 1**

Operational LST

Operational emissions are based on CalEEMod operational outputs and conservatively includes all on-site Project-related stationary sources, and on-site off-road equipment (forklifts and hostler/yard trucks). In addition, a portion of mobile sources are included to capture on-site vehicle emissions including idling trucks and TRUs. Based on Project site plans, it was assumed that each vehicle would drive a maximum of one mile on-site (0.5 miles when entering and 0.5 miles when leaving), for a total of 3,616 miles driven on site. In CalEEMod, each passenger car is assumed to drive 33.2 miles and each truck is assumed to drive 80 miles for a total of 152,858 daily miles. Because 3,616 on-site miles is 2.37 percent of the total 152,858 daily miles, on-site mobile emissions are assumed to be three percent of the total mobile emissions. TRU idling is assumed to be 15 minutes, five minutes waiting to check in, five minutes idling at the docking doors, and five minutes waiting to check out.

Therefore, on-site TRU emissions are assumed to be a quarter of the total daily emissions . The Phase 1 operational localized emissions shown in Table 4.2-15: Phase 1 – Localized Significance of Operational Emissions of the Draft EIR, indicates that Phase 1 mitigated emissions would not exceed thresholds. (Draft EIR, p. 4.2-32.)

Future Development Areas – Phase 2

Operational LST

Operational emissions are based on CalEEMod operational outputs and conservatively includes all on-site Project-related stationary sources, on-site off-road equipment (forklifts and hostler/yard trucks). In addition, a portion of mobile sources are included to capture on-site vehicle emissions including idling trucks and TRUs. Because Phase 2 has no conceptual plans yet, it was assumed that vehicle circulation in Phase 2 would be similar that in Phase 1, therefore each vehicle would drive a maximum of one mile on-site (0.5 miles when entering and 0.5 miles when leaving), for a total of 2,507 miles driven on on-site. In CalEEMod, each passenger car is assumed to drive 33.2 miles and each truck is assumed to drive 80 miles for a total of 110,795 daily miles. Because 5,507 on-site miles is 2.35 percent of the total 110,795 daily miles, on-site mobile emissions are assumed to be three percent of the total mobile emissions. TRU idling is assumed to be 15 minutes, five minutes waiting to check in, five minutes idling at the docking doors, and five minutes waiting to check out. Therefore, on-site TRU emissions are assumed to be a quarter of the total daily emissions The Phase 2 operational localized emissions shown in Table 4.2-17: Phase 2 – Localized Significance of Operational Emissions, indicates that Phase 2 mitigated emissions would not exceed thresholds. (Draft EIR, p. 4.2-39.)

Conclusion

Project construction and operations would not expose sensitive receptors to substantial pollutant concentrations. Construction and operations would not exceed SCAQMD LST thresholds, would not create a CO hotspot, and would not generate concentrations of DPM that would result in carcinogenic, chronic, or acute health risk effects. Therefore, Project impacts would be less than significant in this regard.

In addition, the recent adoption of South Coast AQMD's proposed Rule 2305 (refer to South Coast Air Quality Management District under Section 4.2.2 Regulatory Setting) means that the Project operator could potentially be required to pay mitigation fee if the Project does not generate enough WAIRE Points. The Project operator may be required to implement additional emission reduction strategies. Conservatively, this EIR is not taking credit for these

potential reductions. Compliance with proposed Rule 2305 would reduce emissions below what is currently analyzed. (Draft EIR, pp. 4.2-42 through 4.2-43.) **MM AQ-1** through **AQ-5** require that the Project utilize "Super-Compliant" low Volatile Organic Compound (VOC) paints which have been reformulated to exceed the regulatory VOC limits (i.e., have a lower VOC content than what is required) put forth by SCAQMD's Rule 1113 for all architectural coatings; only electric-powered equipment be used on-site for daily warehouse and business operations; all truck/dock bays that serve cold storage facilities within the proposed buildings shall be electrified to facilitate plug-in capability and support use of electric standby and/or hybrid electric transport refrigeration units; preparation of a Transportation Demand Management (TDM) program to reduce the use of single occupant vehicles by employees, thereby increasing the number of trips by walking, bicycle, carpool, vanpool, and transit; and signage shall be placed at truck loading/parking/access areas to reduce idling emissions. **MM AQ-1** through **AQ-5** would reduce potential impacts to air quality to a level that is less than significant.

MM AQ-1 The Project shall utilize "Super-Compliant" low VOC paints which have been reformulated to exceed the regulatory VOC limits (i.e., have a lower VOC content than what is required) put forth by SCAQMD's Rule 1113 for all architectural coatings. Super-Compliant low VOC paints shall be no more than 10g/L of VOC. Prior to issuance of a building permit, the Ontario Building Department shall confirm that plans specify that all architectural coatings will be super-compliant low VOC paints.

MM AQ-2 Only electric-powered/zero emissions off-road equipment (e.g., yard trucks/hostlers, forklifts, indoor material handling equipment, etc.) shall be utilized on-site for daily warehouse and business operations. The project developer/facility owner shall disclose this requirement to all tenants/business entities prior to the signing of any lease agreement. In addition, the limitation to use only electric-powered/zero emissions off-road equipment shall be included in all leasing agreements.

Prior to issuance of a Business License for a new tenant/business entity, the project developer/facility owner and tenant/business entity shall provide to the City of Ontario Planning Department and Business License Department a signed document (verification document) noting that the project development/facility owner has disclosed to the tenant/business entity the requirement to use only electric-powered/zero emissions equipment for daily operations. This verification document shall be signed by authorized agents for the project developer/facility owner and tenant/business entities. In

addition, if applicable, the tenant/business entity shall provide documentation (e.g., purchase or rental agreement) to the City of Ontario Planning Department and Business License Department to verify, to the City's satisfaction, that any off-road equipment utilized will be electric-powered or produce zero emissions.

Prior to the issuance of building permits, the City of Ontario Building Department shall confirm that if emergency generators are proposed, the Project applicant shall explore non-diesel options. If non-diesel generators are determined to not be feasible, the Project applicant shall provide written justification to be approved by the City's Building Department.

MM AQ-3 All truck/dock bays that serve cold storage facilities within the proposed buildings shall be electrified to facilitate plug-in capability and support use of electric standby and/or hybrid electric transport refrigeration units. All site and architectural plans submitted to the City of Ontario Planning Department shall note all the truck/dock bays designated for electrification. Prior to the issuance of a Certificate of Occupancy, the City of Ontario Building Department shall verify electrification of the designated truck/dock bays.

MM AQ-4 Prior to issuance of occupancy permits, the Project operator shall prepare and submit a Transportation Demand Management (TDM) program detailing strategies that would reduce the use of single occupant vehicles by employees by increasing the number of trips by walking, bicycle, carpool, vanpool, and transit. The TDM shall include, but is not limited to the following:

- Provide a transportation information center and on-site TDM coordinator to educate residents, employers, employees, and visitors of surrounding transportation options;
- Promote bicycling and walking through design features such as showers for employees, self-service bicycle repair area, etc. around the Project site;
- Provide on-site car share amenities for employees who make only occasional use of a vehicle, as well as others who would like occasional access to a vehicle of a different type than they use day-to-day;
- Promote and support carpool/vanpool/rideshare use through parking incentives and administrative support, such as ride-matching service; and

- Incorporate incentives for using alternative travel modes, such as preferential load/unload areas or convenient designated parking spaces for carpool/vanpool users.

MM AQ-5 All truck access gates and loading docks within the Project site shall have a sign posted that states:

- Truck drivers shall turn off engines when not in use
- Truck drivers shall shut down the engine after five minutes of continuous idling operation once the vehicle is stopped, the transmission is set to "neutral" or "park," and the parking brake is engaged.
- Telephone numbers of the building facilities manager and CARB to report Violations
- Truck travel is restricted to identified truck routes only

In addition, signage shall be installed to direct trucks to the appropriate designated truck routes.

b. ***Cumulatively Considerable Pollutant Emissions***

Threshold: Would the Project result in a cumulatively considerable net increase of any criteria pollutant for which the Project region is non-attainment under an applicable state or federal ambient air quality standard?

Finding: Less than significant with mitigation. (Draft EIR, pp. 4.2-19 through 4.2-24.)

Explanation: **Specific Plan – Phase 1**

Construction

The duration of construction activities associated with Phase 1 of the Project is estimated to last approximately twelve months. Construction-generated emissions associated with the Project were calculated using the CARB-approved CalEEMod computer program, which is designed to model emissions for land use development projects, based on typical construction requirements. Typical construction equipment assumed by CalEEMod include industrial saws, excavators, and dozers for demolition; dozers and tractors for site preparation; excavators, graders, dozers, scrapers and tractors for grading; cranes, forklifts, generators, tractors, and welders for construction; pavers, paving equipment, and rollers for paving; and air compressors for painting. Predicted maximum daily construction-generated emissions for the Project are summarized in Table 4.2-8: Phase 1 - Construction-Related Emissions of the Draft EIR.

Fugitive dust emissions may have a substantial, temporary impact on local air quality. In addition, fugitive dust may be a nuisance to those living and working in the Project vicinity. Uncontrolled dust from construction can become a nuisance and potential health hazard to those living and working nearby. SCAQMD Rules 402 and 403 (prohibition of nuisances, watering of inactive and perimeter areas, track out requirements, etc.), are applicable to the Project and were applied in CalEEMod to minimize fugitive dust emissions. Standard Condition (SC) AQ-1 requires the implementation of Rule 402 and 403 dust control techniques to minimize PM10 and PM2.5 concentrations.

Unmitigated Phase 1 construction emissions would exceed the SCAQMD threshold for the ozone precursor VOC. The majority of these emissions are generated during the architectural coatings phase of construction. **MM AQ-1** is required to reduce maximum daily VOC emissions below the SCAQMD threshold. **MM AQ-1** requires the Project to use “Super-Compliant” low VOC paints. Implementation of **MM AQ-1** will reduce Phase 1 construction impacts to less than significant. (Draft EIR, pp. 4.2-20 through 4.2-21.)

Future Development Areas - Phase 2

Construction

The duration of construction activities associated with Phase 2 of the Project were modeled to last approximately twelve months. The exact construction timeline is unknown; however, to be conservative, earliest dates possible were utilized in the modeling (assumed

June 1, 2022). This approach is conservative given that emissions factors decrease in future years due to regulatory and technological improvements and fleet turnover. Construction-generated emissions associated the Project were calculated using the CARB-approved CalEEMod computer program, which is designed to model emissions for land use development projects, based on typical construction requirements. See Appendix B1 for more information regarding the construction assumptions used in this analysis. Predicted maximum daily construction-generated emissions for the Project are summarized in Table 4.2-10: Phase 2 – Maximum Daily Construction-Related Emissions.

Fugitive dust emissions may have a substantial, temporary impact on local air quality. In addition, fugitive dust may be a nuisance to those living and working in the Project vicinity. Uncontrolled dust from construction can become a nuisance and potential health hazard to those living and working nearby. SCAQMD Rules 402 and 403 (prohibition of nuisances, watering of inactive and perimeter areas, track out requirements, etc.), are applicable to the Project and were applied in CalEEMod to minimize fugitive dust emissions. SC AQ-1 requires the implementation of Rule 402 and 403 dust control techniques to minimize PM10 and PM2.5 concentrations.

Unmitigated Phase 2 construction emissions would exceed the SCAQMD threshold for the ozone precursor VOC. The majority of these emissions are generated during the architectural coatings phase of construction which use VOC emitting paints. The VOC exceedance occurs during the painting phase of construction. Low VOC paint must be used during the painting phase to reduce impacts. **MM AQ-1** is required to reduce maximum daily VOC emissions below the SCAQMD threshold. **MM AQ-1** requires the Project to use “Super-Compliant” low VOC paints. Implementation of **MM AQ-1** will reduce Phase 2 construction impacts to less than significant. (Draft EIR, pp. 4.2-23 through 4.2-24.)

SC AQ-1 Prior to the issuance of grading permits, the City Engineer shall confirm that the Grading Plan, Building Plans and Specifications require all construction contractors to comply with South Coast Air Quality Management District’s (SCAQMD’s) Rules 402 and 403 to minimize construction emissions of dust and particulates.

The measures include, but are not limited to, the following:

- Portions of a construction site to remain inactive longer than a period of three months will be seeded and watered until grass cover is grown or otherwise stabilized.

- All on-site roads will be paved as soon as feasible or watered periodically or chemically stabilized.
- All material transported off-site will be either sufficiently watered or securely covered to prevent excessive amounts of dust.
- The area disturbed by clearing, grading, earthmoving, or excavation operations will be minimized at all times.
- Where vehicles leave a construction site and enter adjacent public streets, the streets will be swept daily or washed down at the end of the workday to remove soil tracked onto the paved surface.

2. *BIOLOGICAL RESOURCES* BIOLOGICAL RESOURCES

a. *Sensitive Species*

Threshold: Would the Project have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service?

Finding: Less than significant with mitigation. (Draft EIR, p. 4.3-22.)

Explanation: **Specific Plan-Phase I**

Construction

A substantial adverse effect to special-status species would occur if the Project would:

1) Reduce the population size or reduce the area of occupied habitat of a rare, threatened, or endangered species; or

2) Reduce the population size or reduce the area of occupied habitat of a locally uncommon species.

A substantial adverse effect on a special-status wildlife species occurs if the Project would:

1) Increase predation of a species, leading to population reduction;

2) Reduce habitat availability sufficiently to affect potential reproduction; or

3) Reduce habitat availability sufficiently to constrain the distribution of a species and not allow for natural changes in distributional patterns over time.

Implementation of the Project site would cover a 219.39-acre area containing four habitat types, including agriculture fields, disturbed

agriculture infrastructure, stock/retention ponds and channels, and eucalyptus woodland.

Sensitive Animals

The General Biological Assessment indicated that seven wildlife species could potentially inhabit the Project site due to suitable habitat or foraging opportunities present on-site. The Tricolored blackbird, Grasshopper sparrow, Great blue heron, Swainson's hawk, California glossy snake, Western Pond Turtle, Western mastiff bat, Yellow rail, California horned lark, and Merlin have the potential to be on-site due to suitable habitat for foraging and nesting purposes. Therefore, implementation of the **Mitigation Measure (MM) BIO-1** will require the removal of suitable vegetation be conducted during the off-season and that any nesting surveys occur prior to construction start in accordance with local and state policy and regulations (refer to **MM BIO-1** below). With implementation of **MM BIO-1**, the potential for a species to inhabit the site is reduced to less than significant.

Nesting Birds

Migratory non-game native bird species are protected under the federal MBTA. Additionally, §§3503, 3503.5, and 3513 of the CFGC prohibit take of all birds and their active nests. The Project site contains non-native structures, grasses, shrubs and trees including 3.64 acres of Eucalyptus woodland that can support nesting songbirds or raptors and can be used by nesting songbirds or raptors during the nesting bird season of February 1 to September 15. **MM BIO-1** will require that nesting bird surveys be conducted prior to construction start to reduce impacts to nesting birds to less than significant levels.

Burrowing Owl

BUOW is a CDFW Species of Special Concern. There is potential habitat for this species to be present on the Project site. Owl survival can be adversely affected by disturbance (e.g., foraging habitat loss) even when impacts to individual birds and nest/burrows are avoided. Therefore, construction activity shall be conducted in accordance to the recommended restricted construction activity dates and setback distances by level of disturbance for the BUOW (Scobie and Faminow 2000 in 03/7/12 CDFW BUOW Staff Report) and are provided below in *Table 4.3-2, CDFW Recommended Restricted*

Activity Dates and Setback Distances by Level of Disturbance for BUOW.[2]

Several field surveys were conducted to determine the presence of BUOW foraging on or adjacent to the site. Results of the observations recorded during the April-July 2019 focused BUOW breeding season surveys indicated that there were no direct BUOW identifications. None of the potential burrows inspected during the survey were determined to be currently occupied by BUOW based on absence of individual BUOW or signs (feathers, pellets, fecal material, prey remains, etc.) at or near burrow entrances/aprons. Despite the fact that the site has been exposed to long-standing disturbances, BUOW often occur in less than optimal and/or disturbed conditions. If it were later determined that active nests of BUOW would be lost as a result of site-preparation, it could result in significant adverse impacts and would be in conflict with CDFW Code §3503.5, 3511, and 3515. Therefore, implementation of **MM BIO 2** would require an avoidance survey no less than 14 days prior to initiating ground disturbance activities before construction starts. With the implementation of **MM BIO-2**, impacts would be less than significant.

Overall, implementation of **MM BIO-1** and **MM BIO-2** would reduce unknown potential impacts to less than significant levels. (Draft EIR, pp. 4.3-18 through 4.3-19.)

Specific Plan-Future Development Areas
Construction and Operations

Refer to Phase I discussion above. The General Biological Survey and BUOW Focused surveys were conducted for the entire Project site which includes both Phase I and future development areas. Therefore, **MM BIO-1** and **MM BIO-2** are applicable to both phases. **MM BIO-1** and **MM BIO-2** would ensure that impacts would be reduced to less than significant levels during buildout of the entire Specific Plan area.

SB330 Replacement Site
Construction and Operations

According to the City's TOP Plan, Section ER5 Biological, Mineral & Agricultural Resources, rare and/or endangered species that have the potential to occur in Ontario include Delhi Sands Flower Loving

[2] Ecological Sciences. (2020). *Focused Burrowing Owl Surveys*. Page 6. Accessed April 22, 2021, Available as Appendix C3

Fly and San Bernardino Kangaroo Rat. However, habitat for these species is of poor quality and/or is limited to isolated pockets. The SB330 Replacement Site contains existing residential and agricultural uses, which could potentially contain suitable habitat for the Delhi Sands Flower Loving Fly and San Bernardino Kangaroo Rat including other sensitive species. The Project, however, does not propose development of the SB330 Replacement Site. Instead, the Project proposes a rezoning of the area to increase the maximum allowed housing unit density. This action would neither include nor require physical disturbance of the SB330 Replacement Site. Furthermore, development of the SB330 Replacement Site was evaluated as part of the City's TOP EIR, and the proposed rezoning would have no additional significant impacts beyond that evaluated in the City's TOP EIR, because this action does not propose any specific construction of new structures or redevelopment of the SB330 Replacement Site other than what was evaluated in the City's TOP EIR (the rezoning does not change the development footprint nor the general nature of land uses for this area). Any future development would be subject to applicable local, state and federal environmental regulations, including the City's discretionary review process. Site-specific biological assessments would be conducted prior to any approval or development of potential future residential uses. With compliance with the City's standard discretionary review process and existing local, state, and federal regulations, no significant impacts are anticipated. Refer to **MM BIO-1** and **MM BIO-2**.

Conclusion

The General Biological Assessment conducted by HES concluded that Project implementation would have only a minor risk to candidate, sensitive, or special status species listed in federal, state, regional, and local plans, policies, or regulations. Mitigation measures **MM BIO-1** and **MM BIO-2** are also proposed in order to further reduce potential impacts to a less than significant level. (Draft EIR, pp. 4.3-19 through 4.3-20.)

MM BIO-1 The following measures shall be implemented for the indicated species, prior to commencement of ground disturbance at the Project site:

<u>Tricolored blackbird, Grasshopper sparrow, Great blue heron, Swainson's hawk, Yellow rail, California horned lark, Merlin</u>:

- Vegetation removal is recommended to be conducted outside of the nesting season for migratory birds to avoid direct impacts.
- If vegetation removal will occur during the migratory bird nesting season, between February 1 and September 15, pre-construction nesting bird surveys shall be performed within three days prior to vegetation removal.
- If active nests are found during nesting bird surveys, they shall be flagged. A 250-foot buffer shall be fenced around songbird nests and a 500-foot buffer shall be fenced around raptor nests.
- A biological monitor shall visit the site once a week during ground disturbing activities to ensure all fencing is in place and no sensitive species are being impacted.

California glossy snake:

- Three days prior to any ground disturbing activities or vegetation removal, a qualified biological monitor should conduct a preconstruction survey to identify any sensitive biological resources. Any sensitive reptilian species that may be present within the Project area shall be relocated outside of the impact areas.
- Biological monitors shall be on-call to relocate any reptile or amphibian that is encountered during construction activities.

Western mastiff bat:

- Prior to implementation of Project activities that would demolish the agriculture buildings used for sheltering bovines, a qualified biologist shall conduct a preconstruction survey April 1 through August 31 to determine the presence or absence of roosting bats. If the survey does not identify the presence of occupied roosts, no further action is necessary.
- If day roosts or maternity roosts occupied by special-status bat species are documented within construction areas, the bats shall be safely flushed from the sites where roosting habitat is planned to be removed prior to the month of May (maternity roosts are generally occupied from May to August) and prior to the onset of construction activities. The removal of the roosting sites shall occur during the time of day when the roost is unoccupied. The loss of each roost will be compensated for by the construction and installation of two bat boxes suitable to the bat species and colony size excluded from the original roosting site. The bat boxes shall be installed in the vicinity prior to removal of the original day/maternity roost sites. A detailed program for bat flushing, roosting site removal, and installation of bat boxes shall be developed in consultation with a qualified biologist. The

specifications of the bat boxes must be based upon the species of bat and the size of the colony to be affected by the Project. The Bat Management Plan for excluding bats must be developed by the qualified biologist in consultation with CDFW to ensure mortality to bats does not occur. The Bat Management Plan will be based upon the species of bat, number of roosts, and the size of the colony to be affected by the Project. Performance standards will be developed based on the results of the bat survey consistent with CDFW recommendations such that no residual significant impacts would remain.

Western pond turtle:

- Within the breeding season (May-July) prior to the onset of construction activities, a CDFW-approved qualified biologist shall conduct pre-construction trapping surveys, following U.S. Geological Survey trapping protocol, for western pond turtle within all areas of any suitable aquatic habitat for this species (e.g., retention and treatment ponds). If western pond turtles are observed or trapped during the pre-construction survey, the Project Proponent shall either avoid impacts to western pond turtle aquatic and terrestrial habitat or shall prepare for CDFW review and approval, a translocation plan identifying proposed protocol for trapping and relocating turtles, including identifying potential, appropriate receiver sites to relocate western pond turtles to. If no western pond turtles are observed during the pre- construction survey, then construction activities may begin. If construction is delayed or halted for more than 30 days, another pre-construction survey for western pond turtle shall be conducted. Within seven days of the pre-construction survey, a report of findings from the survey shall be submitted to the CDFW. During construction, a qualified biological monitor who has been approved by the CDFW to relocate western pond turtles shall be onsite to ensure that no western pond turtles are harmed.
- If western pond turtles are observed in the construction area at any time during construction, the onsite biological monitor shall be notified and construction in the vicinity of the sighting shall be halted until such a time as a turtle has been removed from the construction zone and relocated by an approved biologist. If a sighting occurs during construction, the biologist shall prepare a report of the event and submit it to CDFW.

MM BIO-2 **Burrowing Owl Surveys**. Phase 1: Prior to issuance of a demolition or grading permit for any ground disturbing activity, a qualified biologist shall conduct a pre-construction presence/absence survey

for burrowing owls within 14 days prior to initiating ground disturbance activities. Surveys shall be conducted consistent with the procedures in outlined in the "California Department of Fish and Wildlife (CDFW) 2012 Staff Report on Burrowing Owl Mitigation." If the species is absent, no additional mitigation will be required.
If burrowing owl(s) are observed onsite during the pre-construction clearance survey;

- Prior to disturbance of the occupied burrows, suitable and unoccupied replacement burrows shall be provided at a ratio of 2:1 within designated off-site conserved lands to be identified through coordination with CDFW and the City in which the burrowing owl(s) is(are) detected. A qualified biologist shall confirm that the artificial burrows are currently unoccupied and suitable for use by owls.
- Until suitable replacement burrows have been provided/confirmed within the off-site conserved lands to be identified through coordination with CDFW and the City of Ontario, no disturbance shall occur within 50 meters (approximately 160 feet) of occupied burrows during the nonbreeding season (September 1 through January 31) or within 75 meters (approximately 250 feet) during the breeding season (February 1 through August 31).
- Occupied burrows should not be disturbed during the nesting season (February 1 through August 31) unless a qualified biologist approved by CDFW verifies through non-invasive methods that either: 1) the birds have not begun egg-laying and incubation; or 2) that juveniles from the occupied burrows are foraging independently and are capable of independent survival.
- If burrowing owls are present at the time that the occupied burrows are to be disturbed, then the owls shall be excluded from the site following the 2012 CDFG Staff Report.

Phase 2 and SB 330 Replacement Site: Prior to any site-specific development, potential future residential development would be required to conduct site-specific biological resource surveys, including an arborist report, as part of the City's standard discretionary review process, including compliance with CEQA and applicable local, state, and federal regulations.

b. ***Wildlife Movement***

Threshold: Would the Project interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established

native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?

Finding: Less than significant with mitigation. (Draft EIR, p. 4.3-24.)

Explanation: **Specific Plan – Phase I**

Construction

The Project site is not located within a designated wildlife corridor or linkage. The Project site is currently developed with man-made structures and is surrounded by development and/or existing agricultural and livestock land uses. The site is separated from regional wildlife movement corridors associated with the Prado Damn Flood Control Basin and Santa Ana River. Therefore, the Project site does not function as a wildlife movement corridor.

However, due to the predominately agricultural land uses, Project construction could potentially disturb or destroy active migratory bird nests. Specifically, Project development may affect the eggs and young of the tricolored blackbird, grasshopper sparrow, great blue heron, Swainson's hawk, yellow rail, California horned lark, and merlin. Disturbing these birds and their nests would be in violation of the MBTA and would result in a significant environmental effect. In order to avoid direct impacts, the Project would implement **MM BIO-1** which would require that vegetation removal be conducted outside of the nesting season for migratory birds to avoid direct impacts and that a pre-construction nesting bird survey would be performed within three days prior to vegetation removal. Therefore, with mitigation incorporated, impacts would be reduced to a less than significant level. (Draft EIR, p. 4.3-24.)

Specific Plan – Future Development Areas
Construction and Operations
Refer to discussion above. The General Biological Assessment analyzed the whole Project area and therefore, impacts would also be mitigated to a less than significant level with implementation of **MM BIO-1**. (Draft EIR, p. 4.3-26.)

3. CULTURAL RESOURCES

a. *Archaeological Resources*

Threshold: Would the Project cause a substantial adverse change in the significance of State CEQA Guidelines, section 15064.5?

Finding: Less than significant with mitigation. (Draft EIR, p. 4.4-22.)

Explanation: The California Historical Resource Information System (CHRIS) records search identified a total of 19 cultural resources investigation that have been previously conducted within a one-mile mile radius buffer around the Project Area, with two studies adjacent to the Project Area (see Table 1 of Appendix D1 of the DEIR). Since

completion of the cultural resources report, additional archaeological resources were found at two locations near the Project site.

Despite actions taken to ensure that all cultural resources are identified prior to construction, including record searches and on-site field surveying, there remains a possibility that undiscovered, buried archaeological resources might be encountered during grading activities. If discovered, impacts to those resources would be potentially significant. In order to minimize any potential impact to the environment, impacts to archaeological resources are considered potentially significant and MMs are required to ensure the proper treatment of undiscovered archaeological resources that may be encountered during grading. The application of **MM CUL-6** and **MM TCR-1** would reduce the impacts to less than significant levels.

Following the completion of construction of the Project and disturbances to the site, Project operation will not include further ground disturbing activities, and is not anticipated to cause a substantial or adverse change in the significant of an archaeological resource since construction will be completed and MMs applied. Therefore, impacts will be less than significant. (Draft EIR, pp. 4.4-22 through 4.4-23.)

SB330 Replacement Site

Construction and Operations

The proposed increase in residential density is not anticipated to have any new or substantially more severe environmental impacts than what was evaluated in the City's TOP EIR. There will be no physical disturbance of the grounds after construction and the Project will comply with all relevant local, state, and federal policies and regulations. Any potential future residential development would be subject to the City's standard discretionary review process and CEQA compliance, including conducting site-specific cultural resource assessments. The local area is known to contain significant cultural resources, and as such the City anticipates construction monitoring for any new development. **MM CUL-6** and **MM TCR-1** would apply to any new development in the SB330 Replacement Site area. With implementation of **MM CUL-6** below and **MM TCR-1**, and in consideration of compliance with the City's standard discretionary review and CEQA compliance process for new development, no significant impacts are anticipated. (Draft EIR, pp. 4.4-23 through 4.4-24.)

MM CUL-6 Prior to the issuance of any grading permits for the Project site, a Cultural Awareness Training Program shall be provided to all construction managers and construction personnel prior to commencing any ground disturbance work at the Project sites. The training shall be prepared and conducted by a Qualified Archaeologist to the satisfaction of the City Planning Department.

The training may be discontinued when ground disturbance is completed. Construction personnel shall not be permitted to operate equipment within the construction area unless they have attended the training. A copy of the training transcript and/or training video, as well as a list of the names of all personnel who attended the training and copies of the signed acknowledgment forms shall be submitted to the City Planning Department for their review and approval.

MM TCR-1 Prior to the commencement of any ground disturbing activity at the Project site, the Project Applicant shall retain a Native American Monitor approved by the Gabrieleno Band of Mission Indians-Kizh Nation – the tribe that consulted on this Project pursuant to Assembly Bill (AB) 52 (the "Tribe" or the "Consulting Tribe"). A copy of the executed contract shall be submitted to the City of Ontario Planning and Building Department prior to the issuance of any permit necessary to commence a ground-disturbing activity. The Tribal monitor will only be present on-site during the construction phases that involve ground-disturbing activities. Ground disturbing activities are defined by the Tribe as activities that may include, but are not limited to, pavement removal, potholing or auguring, grubbing, tree removals, boring, grading, excavation, drilling, and trenching, within the Project area. The Tribal Monitor will complete daily monitoring logs that will provide descriptions of the day's activities, including construction activities, locations, soil, and any cultural materials identified. The on-site monitoring shall end when all ground-disturbing activities on the Project site are completed, or when the Tribal Representatives and Tribal Monitor have indicated that all upcoming ground-disturbing activities at the Project site have little to no potential for impacting Tribal Cultural Resources.

Upon discovery of any Tribal Cultural Resources, construction activities shall cease in the immediate vicinity of the find (not less than the surrounding 100 feet) until the find can be assessed. All Tribal Cultural Resources unearthed by Project activities shall be evaluated by the qualified archaeologist and Tribal monitor approved by the Consulting Tribe. If the resources are Native American in origin, the Consulting Tribe will retain it/them in the form and/or manner the Tribe deems appropriate, for educational, cultural and/or historic purposes. If human remains and/or grave goods are discovered or recognized at the Project Site, all ground disturbance shall immediately cease, and the county coroner shall be notified per PRC § 5097.98, and Health and Safety Code § 7050.5. Human remains and grave/burial goods shall be treated alike per California

PRC § 5097.98(d)(1) and (2). Work may continue on other parts of the Project site while evaluation and, if necessary, mitigation takes place (CEQA Guidelines § 15064.5[f]). If a non-Native American resource is determined by the qualified archaeologist to constitute a "historical resource" or "unique archaeological resource," time allotment and funding sufficient to allow for implementation of avoidance measures, or appropriate mitigation, must be available. The treatment plan established for the resources shall be in accordance with CEQA Guidelines § 15064.5(f) for historical resources and PRC § 21083.2(b) for unique archaeological resources.

Preservation in place (i.e., avoidance) is the preferred manner of treatment. If preservation in place is not feasible, treatment may include implementation of archaeological data recovery excavations to remove the resource along with subsequent laboratory processing and analysis. Any historic archaeological material that is not Native American in origin shall be curated at a public, non-profit institution with a research interest in the materials, such as the Natural History Museum of Los Angeles County or the Fowler Museum, if such an institution agrees to accept the material. If no institution accepts the archaeological material, it shall be offered to a local school or historical society in the area for educational purposes.

4. GEOLOGY AND SOILS

b. *Paleontological Resources*

Threshold: Would the Project directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?

Finding: Less than significant with mitigation. (Draft EIR, p. 4.5-21.)

Explanation: **Specific Plan – Phase I/Future Development Areas**

Construction and Operations

The Project site currently operates with agricultural uses and is frequently disturbed by human and machine activity. A paleontological resource assessment was prepared for the Project to review the susceptibility of subsurface geologic units to provide paleontological resources as well as review records for fossil localities near the Project site. No paleontological resources or unique geologic formations were identified on the Project site during the field survey. A records search within a one-mile radius of the

Project site did not yield any fossil localities and there were no fossil localities identified within the Project site boundaries.

The geologic units underlying the Project site are mapped entirely as younger Quaternary alluvium (Qyfa) dating from the late Holocene to Pleistocene. While these deposits typically do not contain significant vertebrate fossils within the uppermost layers, it is likely they are underlain in the area by older Quaternary deposits at relatively shallow but unknown depth. The Project would require remedial grading to remove all existing undocumented fill soils and near-surface alluvial soils. Preliminarily, the over excavations within the building areas are recommended to extend to a depth of at least four to six feet below existing grades and three to four feet below proposed building pad subgrade elevations. The over excavation should also extend to a depth of at least two to three feet below bearing grade within the influence zones of any new foundations. These recommendations are subject to review and may be revised based on the results of the design-level geotechnical investigation. Excavation extending more than 10 feet below surface has the potential to impact the paleontologically sensitive older Quaternary sediments. MCC recommends the Project site be considered low to moderately sensitive to have the potential for construction activities of the Project to impact underlying paleontological resources.

Although no significant paleontological resources are expected to occur, the Project proponents would utilize the services of a Project paleontologist in the case of any inadvertent discoveries. The provisions described in **MM GEO-1** would further reduce the impact of the Project on paleontological resources or unique geologic features to less than significant impact levels with mitigation incorporated.

Because fossils may be present at depths greater than 10 feet below the existing ground surface, paleontological spot checking/monitoring in these areas is required. **MM GEO-1** would require a paleontological monitor to ensure that any paleontological finds are properly collected and recorded, and that construction is relocated to assess the find for significance. With the implementation of **MM GEO-1**, potential impacts associated with paleontological resources would be less than significant. Therefore, no significant unavoidable adverse impacts relating to paleontological resources have been identified.

SB330 Replacement Site
Construction and Operations

Similar to the Specific Plan site, potential future development of the SB330 Replacement Site could result in impacts to paleontological resources. However, no specific development is proposed at this time, and the impacts would be similar to those evaluated as part of the City's TOP EIR. Any potential future development within the SB330 Replacement Site area would be subject to the City's standard discretionary review process, including the OMC and CEQA compliance. The proposed rezoning allows for a slight increase in residential density, which is not anticipated to result in any new or substantially more severe environmental impact than was evaluated in the City's TOP EIR. In consideration of the above, and with implementation of **MM GEO-1**, a less than significant impact is anticipated . **MM GEO-1** will be applied to the SB330 Replacement Site. Although no significant paleontological resources are expected to occur, the proposed project proponents would utilize the services of a project paleontologist in the case of any inadvertent discoveries. The provisions described in **MM GEO-1** would further reduce the impact of the potential development of the SB330 Replacement Site on paleontological resources or unique geologic features to less than significant impact levels with mitigation incorporated.

Conclusion

Although no significant paleontological resources are expected to occur for the Project site, and if proposed development of the SB330 Replacement Site were to occur, they would be subject to project proponents which would utilize the services of a project paleontologist in the case of any inadvertent discoveries. The provisions described in **MM GEO-1,** below**,** would further reduce the impact of the Project and SB330 Replacement Site development on paleontological resources or unique geologic features to less than significant impact levels with mitigation incorporated. (Draft EIR, pp. 4.5-21 through 4.5-23.)

MM GEO-1 Periodic paleontological spot checks would be conducted when excavation exceeds depths of five feet to determine if older, paleontologically sensitive sediments are present. If present, monitoring would be implemented. Prior to the start of construction, a paleontological resource monitoring plan (PRMP) would be prepared and implemented. The Project's PRMP would implement the following procedures:

- A trained and qualified paleontological monitor would perform spot-check and/or monitoring of any excavations on the Project that have the potential to impact paleontological resources in undisturbed native sediments below five feet in depth. The monitor would have the ability to redirect construction activities to ensure avoidance of adverse impacts to paleontological resources.
- The Project paleontologist may re-evaluate the necessity for paleontological monitoring after examination of the affected sediments during excavation, with approval from Lead Agency and Client representatives.
- Any potentially significant fossils observed shall be collected and recorded in conjunction with best management practices and Society of Vertebrate Paleontology professional standards.
- Any fossils recovered during mitigation shall be deposited in an accredited and permanent scientific institution for the benefit of current and future generations.
- A report documenting the results of the monitoring, including any salvage activities and the significance of any fossils, shall be prepared and submitted to the appropriate personnel.

5. HAZARDS AND HAZARDOUS MATERIALS

a. *Hazardous Materials*

Threshold: Would the Project create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?

Finding: Less than significant with mitigation. (Draft EIR, p. 4.7-16.)

Explanation: **Specific Plan – Phase I and Future Development Areas**

Construction

Construction activities would include the use of materials such as fuels, lubricants, and greases in construction equipment and coatings used in construction. According to the City's Fire Department Hazardous Materials standards, the materials used would be in small quantities or stored in such a manner as to reduce any safety hazards. The use of these materials would be temporary and short-term or single-use in nature and would cease upon completion of the proposed Project's construction phase. Project construction workers would also be required to conduct the safe

handling of hazardous materials use as proposed in **Mitigation Measure (MM) HAZ-4**.

Project construction would involve the use, storage, transport, and disposal of hazardous materials and would therefore be required to conform to existing laws and regulations. Compliance with applicable laws and regulations concerning hazardous materials would ensure that all potentially hazardous materials are used and handled in an appropriate manner and would minimize the potential for safety impacts. Therefore, hazards to the public or the environment arising from the routine transport, use, or disposal of hazardous materials during Project construction would be less than significant.

Grading Activities

Grading activities conducted during Project construction would lead to the disturbance of on-site soils. There is the potential for the discovery of contamination during grading activities due to potential for chemical constituents to accumulate in the ponds and become trapped in the sediment (i.e., pesticides, heavy metals, or chemicals). The handling and transport of these materials and exposure to contaminated soils for workers and the surrounding environment could result in a significant impact. Contaminated soils encountered during grading would be required to be removed and disposed of off-site in accordance with all applicable regulatory guidelines. **MM HAZ-2** would further reduce these risks. Site grading also requires the removal of ASTs, where areas of staining were observed, and septic tanks prior to site development. A demolition permit from San Bernardino County Building & Safety Division will be required to remove the septic tank(s). **MM HAZ-5** would be applied to these activities prior to the commencement of construction activities.

The historic and current use of the Project site as a dairy-production farm may produce methane gas in the subsurface from animal wastes. **MM HAZ-1** would be applied in order to minimize risks associated with the risk of methane encountered on the Project site.

Demolition

Demolition of buildings and equipment on Project site has the potential to expose and disturb ACMs, PCBs, LBP, and mercury. Site buildings were constructed prior to bans on ACMs, PCBs, and LBP coming into effect. Such releases could pose significant risks to

persons living and working in and around the Project site, as well as to Project construction workers. Before demolition, a comprehensive ACM survey would be conducted to identify the locations and quantities of ACM in above-ground structures as part of **MM HAZ-6**. **MM HAZ-6** would be incorporated to reduce the risk from ACMs. Survey of existing structures prior to demolition would assist in characterizing the potential exposure and further prevent impacts from the potential release of these materials. The removal of hazardous materials, such as PCBs, mercury-containing light ballast, and mold, shall be completed in accordance with applicable regulations pursuant to 40 CFR 761 (PCBs), 40 CFR 273 (mercury-containing light ballast), and 29 CFR 1926 (molds) by workers with the HAZWOPER training, as outlined in 29 CFR 1910.120 and 8 CCR 5192. The removal of LBP material shall be implemented in accordance with CCR, Title 8 §1532.1, the CFR (Title 40, Part 745, and Title 29, Part 1926), the U.S. EPA's Lead Renovation, Repair and Painting Program Rules and Residential Lead-Based Paint Disclosure Program, and §§402/404 and 403, and Title IV of the Toxic Substances Control Act (TSCA).

The potential for the exposure of construction workers to ACMs, PCBs, LBP, or mercury is a potentially significant impact. Survey of existing on-site structures prior to their demolition would be required to characterize the potential exposure and further prevent impacts from the potential release of these materials. (Draft EIR, pp. 4.7-16 through 4.7-18.)

SB330 Replacement Site
Construction and Operations

The SB330 Replacement Site is characterized by agricultural and urban development consisting of single-family residential units, agricultural plots, vacant land, and some commercial uses. The SB330 Replacement Site had not been previously subject to a Phase I ESA. Once development is proposed, it will undergo the same processes as noted for the Project site.

Similar to the Project site, potential future development of the SB330 Replacement Site could result in impacts related to the routine transport, use, or disposal of hazardous materials. However, no specific development is proposed at this time, and the impacts would be similar to those evaluated as part of the City's TOP EIR. Any potential future development within the SB330 Replacement Site

area would be subject to the City's standard discretionary review process and existing local, state, and federal regulations as described under Regulatory Framework above, including the City Municipal Code and CEQA compliance. The proposed rezoning allows for a slight increase in residential density, which is not anticipated to result in any new or substantially more severe environmental impact than was evaluated in the City's TOP EIR. **MM HAZ-1** through **MM HAZ-6** would also apply to the SB330 Replacement Site. In consideration of the above, and with implementation of **MM HAZ-1** through **MM HAZ-6**, a less than significant impact is anticipated would occur. (Draft EIR, pp. 4.7-18 through 4.7-19.)

MM HAZ-1 Prior to the issuance of grading permits, the Project Applicant shall conduct further testing for the presence of methane on the Project site, in accordance with DTSC methane assessment guidelines. The Project Applicant shall prepare a methane gas soil survey and implement grading activity recommendations to the satisfaction of the City Building Department. This survey and recommendation shall include a post-construction soil gas investigation and installation of methane gas mitigation systems where post-grading methane levels exceed 5,000 parts per million volume (ppmv), should any such levels occur.

MM HAZ-2 Following drainage of the on-site ponds, the Project Applicant shall conduct a limited Phase II subsurface assessment of sediments to evaluate the sediments for chemical risks to human health and the environment. If contamination from dairy and animal-related wastes is encountered at a level above Environmental Screening Levels (ESLs) for non-residential uses, the appropriate environmental agency (Regional Water Quality control Board, Department of Toxic Substance Control, South Coast Air Quality Management District) shall be notified. Any contamination identified as a result of such testing/sampling shall be investigated, and removed or remediated to the satisfaction of the environmental agency with evidence provided to the City, such that there are no residual significant impacts following mitigation. Prior to allowing the commencement of any soil removal or hauling activities at the Proposed Project, the City will review and/or evaluate potential air quality impacts (criteria pollutants and toxic air contaminants from equipment exhaust, earthmoving, and other on-site remedial activities, as applicable) to

verify that impacts are properly assessed and disclosed in accordance with CEQA.

MM HAZ-3 **Soil Management Plan**. Prior to issuance of a grading permit, the Project Applicant shall retain a qualified environmental consultant to prepare a Soil Management Plan (SMP) that details procedures and protocols for on-site management of soils containing potentially hazardous materials. The SMP would be implemented during grading activities on-site to ensure that soils containing residual levels of hydrocarbons or arsenic are properly identified, monitored, and managed on-site, and include the following:

- A certified hazardous waste hauler shall remove all potentially hazardous soils. In addition, sampling of soil shall be conducted during excavation to ensure that all petroleum hydrocarbon and arsenic impacted soils are removed, and that ESLs for non-residential uses are not exceeded. Excavated materials shall be transported per California Hazardous Waste Regulations to a landfill permitted by the State to accept hazardous materials.
- Any subsurface materials exposed during construction activities that appear suspect of contamination, either from visual staining or suspect odors, shall require immediate cessation of excavation activities. Soils suspected of contamination shall be tested for potential contamination. If contamination is found to be present per the DTSC Screening Levels for industrial/commercial land use (DTSC- SLi) and the U.S. EPA Regional Screening Levels for industrial/commercial land use (EPA- RSLi), it shall be transported and disposed of per state regulations to an appropriately permitted landfill.
- The SMP shall include a Health and Safety Plan (HSP) that addresses potential safety and health hazards and includes the requirements and procedures for employee protection. Each contractor will be required to have their own HSP tailored to their particular trade that addresses the general Project safety requirements. The HSP shall also outline proper soil handling procedures and health and safety requirements to minimize worker and public exposure to hazardous materials during construction.
- The SMP shall be prepared and executed in accordance with South Coast Air Quality Management District Rule 1166, Volatile Organic Compound Emissions from Decontamination of Soil. The SMP shall require the timely testing and sampling of soils so that contaminated soils can be separated from inert soils for proper disposal. The SMP shall specify the testing parameters and

sampling frequency. Anticipated testing includes total petroleum hydrocarbons (TPH), volatile organic compounds (VOCs), and semi-volatile organic compounds (SVOCs). During excavation, SCAQMD Rule 1166 requires that soils identified as contaminated shall be sprayed with water or another approved vapor suppressant or covered with sheeting during periods of inactivity of greater than an hour, to prevent contaminated soils from becoming airborne. Under SCAQMD Rule 1166, contaminated soils shall be transported from the Project site by a licensed transporter and disposed of at a licensed storage/treatment facility to prevent contaminated soils from becoming airborne or otherwise released into the environment.

- All SMP measures shall be printed on the construction documents, contracts, and Project plans prior to issuance of grading permits.

MM HAZ-4 **Construction period testing**. Construction at the Project site shall be conducted under a Project-specific Construction Risk Management Plan (CRMP) to protect construction workers, the general public, and the environment from subsurface hazardous materials previously identified and to address the possibility of encountering unknown contamination or hazards in the subsurface. The CRMP shall summarize soil and groundwater analytical data collected on the Project sites during past investigations and during site investigation activities; delineate areas of known soil and groundwater contamination if applicable; and identify soil and groundwater management options for excavated soil and groundwater, in compliance with local, state, and federal statutes and regulations.

The CRMP shall:

- Provide procedures for evaluating, handling, storing, testing, and disposing of soil and groundwater during Project excavation and dewatering activities, respectively.
- Require the preparation of a Project-specific HSP that identifies hazardous materials present, describes required health and safety provisions and training for all workers potentially exposed to hazardous materials in accordance with State and Federal worker safety regulations, and designates the personnel responsible for HSP implementation.
- Require the preparation of a contingency plan that shall be applied should previously unknown hazardous materials be encountered during construction activities. The contingency plan shall include provisions that require collection of soil and/or

groundwater samples in the newly discovered affected area by a qualified environmental professional prior to further work, as appropriate. The analytical results of the sampling shall be reviewed by the qualified environmental professional and submitted to the appropriate regulatory agency. The environmental professional shall provide recommendations, as applicable, regarding soil/waste management, worker health and safety training, and regulatory agency notifications, in accordance with local, state, and federal requirements. Work shall not resume in the area(s) affected until these recommendations have been implemented under the oversight of the County or regulatory agency, as appropriate.

- Designate personnel responsible for implementation of the CRMP. The CRMP shall be submitted to the County for review and approval prior to the issuance of construction and demolition permits. This measure would reduce the hazards and hazardous materials impact to a less-than-significant level.

MM HAZ-5 Prior to the commencement of any construction related site activities (clearing, demolition, grading etc.), all ASTs shall be removed. ASTs storing diesel shall be disposed of by a State of California licensed contractor and in compliance with the required SBCFD Hazardous Materials Division regulations for tank removals. For stained soils in the vicinity of diesel containing ASTs, as identified in the Phase I ESA dated October 11, 2018, soil samples shall be collected, as directed by the SBCFD inspector, for chemical analysis at a laboratory licensed by the State of California. If contaminated soils are encountered, a soil management plan shall be prepared to manage the stained soils during redevelopment.

MM HAZ-6 Prior to the issuance of a demolition permit for any buildings or structures on-site, the Project Applicant shall conduct a comprehensive ACM survey to identify the locations and quantities of ACM in above-ground structures. The Project Applicant shall retain a licensed or certified asbestos consultant to inspect buildings and structures on-site. The consultant's report shall include requirements for abatement, containment, and disposal of ACM, if encountered, in accordance with SCAQMD Rule 1403.

b. ***Accident or Upset***

Threshold: Would the Project create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?

Finding: Less than significant with mitigation. (Draft EIR, p. 4.7-22.)

Explanation: **Specific Plan – Phase I and Future Development Areas**

Construction

The construction of new developments such as the Project site could result in hazards to the public or the environment through the accidental upset or release of hazardous materials caused by accidental spillage of hazardous materials used during construction phases, or as a result of the exposure of contaminated soil during grading activities. Database searches did not reveal any USTs. The Project site itself is not on a Cortese list. The closest UST that is listed is a site 0.22 miles away, located at the Chino Road Yard at 7000 Merrill Avenue, which is currently under military evaluation and the status remains inactive. Additionally, the Project site has not been cited or issued violation notices by any environmental regulatory agency for improper use or disposal of hazardous materials.

Compliance with applicable laws and regulations concerning hazardous materials would ensure that all potentially hazardous materials are used and handled in an appropriate manner and would minimize the potential for safety impacts. For example, all spills or leakage of petroleum products during construction activities are required to be immediately contained, the hazardous material identified, and the material remediated in compliance with applicable regulations, such as RCRA, for the clean-up and disposal of that contaminant. All contaminated waste would be required to be collected and disposed of at an appropriately licensed disposal or treatment facility under SCAQMD Rule 1166. Furthermore, strict adherence to all emergency response plan requirements set forth by San Bernardino County Fire Protection District would be required through the duration of the Project construction phase. Project construction workers would also be required to conduct safe handling of hazardous materials as proposed in **MM HAZ-4**. Implementation of **MM HAZ-1** through **MM HAZ-6** will further reduce the potential for accidental upset conditions by conducting additional site investigations to quantify, manage and mitigate hazardous materials conditions on the site. As a result, with the implementation of MMs, impacts would be less than significant.

SB330 Replacement Site

Construction and Operations

Rezoning the SB330 Replacement Site is not anticipated to have any new or substantially more severe impacts than addressed under the City's TOP EIR, or that would occur under current zoning, because the uses will be substantially the same as that evaluated in the City's TOP EIR. These potential impacts are anticipated to be similar to that described above for the Project site. Rezoning the SB330 Replacement Site to provide slightly greater residential density is not anticipated to result in any new or substantially more severe

pollutants than would occur under current zoning. The SB330 Replacement site would be subject to **MM HAZ-1** through **MM HAZ-6**, as well as other applicable local, state, and federal regulations as described in the DEIR, including the City's standard discretionary review process, the City's municipal code, and CEQA compliance. In consideration of the above, a less than significant impact is anticipated. (Draft EIR, pp. 4.7-22 through 4.7-23.)

c. ***Waste Sites***

Threshold: Would the Project be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?

Finding: Less than significant with mitigation. (Draft EIR, p. 4.7-25.)

Explanation: **Specific Plan – Phase I and Future Development Areas**

Construction and Operations

The Project site contains approximately 19.0 acres of areas with stock/retention ponds and channels. These ponds and channels are man-made and fed by wells. The ponds are dry and dominated by upland species. However, as an agricultural facility with designated/influent or solid wastes, this can pose a significant threat to water quality (dairy waste ponds). Therefore, with implementation of **MM HAZ-2**, the Project site shall have a Phase II subsurface assessment performed of the sediments after the ponds have been drained. If the Phase II subsurface assessment detects chemical risks to human health and the environment due to sediments in the ponds, the Project applicant is required to prepare a soils management plan, and any engineering or administrative controls or long-term operations and maintenance plan that is required by DTSC. The Project site was not identified on the Waste Discharge System database as a site that would pose a significant threat to water quality. Furthermore, this site is not listed to have any Cortese List items. The nearest active facility to the Project site listed under the DTSC Cortese List is located approximately 5 miles north. Lastly, according to the SWRCB Geotracker for leaking underground storage tanks, the Project site is approximately half a mile north from an open Cleanup Program Site dedicated to remediation. Therefore, with incorporation of **MM HAZ-2**, the Project site would not create a significant impact to the public environment.

SB330 Replacement site

Construction and Operations

The SB330 Replacement Site is characterized by agricultural and urban development consisting of single-family residential units, agricultural plots, and some commercial uses. The SB330 Replacement Site had not been previously subject to Phase I

Environmental Site Assessment. The present hazardous conditions of the SB330 Replacement Site are unknown, but because no new development has occurred, the existing structures have not been formally evaluated. The nearest facility to the SB330 Replacement Site listed under the DTSC Cortese List is located approximately 2 miles north. The SB330 Replacement Site is not near any other waste listed facilities.

Conclusion

Neither the Project site nor the SB330 Replacement Site contains sites that are listed on the Cortese List pursuant to Government Code §65962.5. With mitigation incorporated, a less than significant impact will occur. (Draft EIR, pp. 4.7-25 through 4.7-26.)

6. TRIBAL CULTURAL RESOURCES

a. *Tribal Cultural Resources*

Threshold: Would the Project cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is: (i) Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code section 5020.1(k); or (ii) A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in Public Resources Code section 5024.1?

Finding: Less than significant with mitigation. (Draft EIR, p. 4.14-12.)

Explanation: MCC's search of the California Register of Historic Resources (CRHR) yielded negative results regarding the presence of tribal cultural resources. Since completion of the cultural resources report, additional archaeological resources were found at two locations near the Project site. Therefore, the Project site is considered archaeologically sensitive and could cause a substantial adverse change to a tribal cultural resource listed or eligible in the CRHR, should such resources be discovered during grading. Further, as required by **MM TCR-1** a Qualified Archaeologist would consult with local experts and Native American Representatives for the preparation of a treatment plan, respectively, if significant unknown cultural resources are discovered during construction mass grading and trenching activities.

Implementation of the proposed Project could result in disturbance or destruction of unknown buried tribal cultural resources that were not identified during previous studies or site evaluation. **MM CUL-6** and **MM TCR-1** include provisions that will ensure the protection of any unknown or inadvertently discovered archaeological resources and human remains, or other cultural significant resources. All such finds would be required to be treated in accordance with all CEQA requirements and all other applicable laws and regulations. With implementation of these measures, impacts in this regard would be less than significant.

SB330 Replacement Site

The proposed increase in residential density is not anticipated to have any new or substantially more severe environmental impacts than was evaluated in the City's TOP EIR. Any potential future residential development would be subject to the City's standard discretionary review process and CEQA compliance, including conducting site-specific cultural resource assessments. The local area is known to contain significant cultural resources, and as such the City anticipates construction monitoring for any new development. **MM CUL-6** and **MM TCR-1** would apply to any new development in the SB330 Replacement Site area. With implementation of **MM CUL-1** and **MM TCR-1**, and in consideration of compliance with the City's standard discretionary review and CEQA compliance process for new development, no significant impacts are anticipated.

Conclusion

Buildout of the Project and the future buildout of the SB330 Replacement Site would not cause a substantial adverse change to a tribal cultural resource listed or eligible in the CRHR with proper mitigation implemented. All such finds would be required to be treated in accordance with all CEQA requirements and all other applicable laws and regulations. With implementation of these measures, impacts in this regard would be less than significant. (Draft EIR, pp. 4.14-12 through 4.14.-13.)

E. FINDINGS REGARDING SIGNIFICANT AND UNAVOIDABLE IMPACTS THAT CANNOT BE MITIGATED TO A LESS THAN SIGNIFICANT LEVEL

The City Council hereby finds that, despite the incorporation of Mitigation Measures identified in the EIR and in these Findings, the following environmental impacts cannot be fully mitigated to a less than significant level and a Statement of Overriding Considerations is therefore included herein:

1. AGRICULTURE AND FORESTRY RESOURCES

a. *Farmland Conversion*

Threshold: Would the Project convert Primate Farmland, Unique Farmland, or Farmland of Statewide significance, as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?

Finding: Significant and unavoidable. (Draft EIR, p. 4.1-10.)

Explanation: **Specific Plan-Phase 1/Future Development Areas**

Construction and Operations

The Project proposes to convert the existing Prime Farmland, Grazing Land, and Other Land on-site into a 219.39-acre business park and industrial/warehousing usage. Impacts to the agricultural lands as a result of such conversion is considered to be a significant and unavoidable impact for which the City Council adopted a Statement of Overriding Considerations in January 2010, as part of the City's TOP EIR approval, pursuant to State CEQA Guidelines § 15093. Likewise, the implementation of the Land Use Plan of TOP would potentially convert all acres of the City's Important Farmland to non-farmland uses, including residential, commercial, mixed-use, public, open space, and industrial. The City does not have any prohibitions that prevent the transition of agricultural land uses to urban land uses. While existing agricultural uses would be allowed to persist, the Land Use Plan does not designate these areas for agricultural land uses.

The Proposed Land Use Plan Map in the TOP EIR identifies the Specific Plan – Phase 2 Area, west of Bon View Avenue, within a Southern California Land Foundation (SoCALF) Preserve overlay. Although the intent of the SoCALF Preserves is to preserve Important Farmland, the SoCALF Preserves do not guarantee that Important Farmland would not be converted to non-agricultural uses within the City. The Overlay Zoning provides for agricultural uses within the City on an interim basis, until such time that urban development consistent with TOP occurs. TOP's primary focus from converting agricultural land is to develop land in an economically productive way that would serve the growing population. Ontario's future development emphasizes mixed-use, commercial, industrial, and residential projects rather than supporting the continuation of agricultural uses, which are becoming less economically viable. The Project would be consistent with TOP as it would support development of land in an economically productive way that would serve the growing population but would convert Prime Farmland and the SoCALF Preserve for urban uses. Therefore, Project implementation would result in potentially significant and unavoidable impacts related to conversion of Prime Farmland to non-

agricultural use. Note, as stated previously, the City has previously adopted a Statement of Overriding Considerations for significant and unavoidable impacts to agricultural lands with full buildout of TOP, which allows the decision-making body of the City to approve a project despite one or more unmitigated significant environmental impacts identified in the FEIR.

SB330 Replacement Site

Construction and Operations

Portions of the 473-acre SB330 Replacement Site along Grove Avenue consist of approximately 80 acres of Prime Farmland. These areas historically and currently are used for agricultural purposes. According to the CIFF, the SB330 Replacement Site mostly contains Other Land within its boundaries, which are not agriculturally significant. Construction and operation of the SB330 Replacement Site would convert Prime agricultural land to urban uses. However, conversion of agricultural land was already addressed in the City's TOP EIR to be aligned with the City's Land Use Plan, therefore accounting for the removal of agricultural land to no longer be economically infeasible. The rezoning of the SB330 Replacement Site has no additional impacts that were not already evaluated in the TOP EIR, as there is no change in the development area. Therefore, consistent with Findings of the City's TOP EIR, rezoning of the SB330 Replacement Site would result in potentially significant impacts related to conversion of Prime Farmland to non-agricultural use. This impact is significant, unavoidable, and unmitigable.

Conclusion

As stated above, the City is focusing on developing land in an economically productive way that would serve the growing population. Thus, the City's future development emphasizes mixed-use, commercial, industrial, and residential projects rather than supporting the continuation of agricultural uses, which are becoming less economically viable. Development and implementation of TOP would have significant impacts on agricultural resources in the City. With the development of the Project site and SB330 Replacement Site, a significant and unavoidable impact will occur. (Draft EIR, pp. 4.1-10 through 4.1-11.)

MM AG-1 **Deed disclosure** – In order to reduce conflicts issued between sensitive receptors and agricultural uses, all property owners in the South Ontario Logistics Center Specific Plan shall be provided with a deed disclosure or similar notice approved by the City Attorney regarding the proximity and nature of neighboring agricultural uses. This disclosure shall be applied at the tentative map stage to the affected properties, or otherwise prior to finalizing the sale or rental agreement of any property. The written disclosure shall be supplied to the property purchaser or renter by the vendor or vendor's agent.

The content and text of the disclosure shall be approved by the City Attorney and shall include language to inform new residents that existing agricultural uses may create nuisances such as flies, odors, dust, night-light, and chemical spraying.

In accordance with the findings of the TOP EIR mitigation measures implemented, there are no feasible mitigation measures that would reduce the Project's significant impacts regarding agricultural conversion to levels that would be less than significant. According to the TOP EIR findings, while the City maintains a Right-to-Farm ordinance, use of farm equipment and odors associated with dairy farming in the Ontario Ranch area is not compatible with densities proposed in the City's Land Use Plan. Furthermore, several mitigation measures to reduce the impacts of TOP on agriculture were considered; however the agriculture development within the City burdened the San Bernardino County region with air quality issues resulting from methane, water quality pollution, and hazardous emissions. None of the mitigation measures considered by the City would feasibly be able to reduce the significant impacts to levels less than significant and impacts would remain significant and unavoidable. The measures considered are discussed further below. Furthermore, conversion of agricultural lands and loss of Prime Farmland resulting from the Project have already been considered and addressed in the TOP EIR.

The Specific Plan build-out area is designated for urban development pursuant to the TOP. Existing agricultural uses are in various stages of converting to urban uses that are consistent with the TOP. As the agricultural uses diminish, so too are the necessary support uses such as feed stores, agricultural equipment sales and rentals, and manure services. In addition, as described previously, dairy farming has become less and less viable in the City's region. The dairy industry in the County has consistently and sharply declined since 2000, and incentives to convert to urban uses are increasing. Existing agricultural uses within the City are becoming economically unsustainable and represent land uses that are increasingly incongruous with continuing urbanization of the City. Transition of existing agricultural uses and farmland to non-agricultural uses is an unavoidable effect of implementing the TOP. The TOP EIR considered various mitigation measures that could reduce impacts to agricultural resources but concluded that there are no feasible mitigation measures that would reduce the loss of agriculture to levels that would be less than significant. TOP EIR mitigation measures that were considered and rejected are described below.

Ontario Plan EIR Mitigation Measure: Retention of On-Site Agricultural Uses. Retention of agricultural uses within the City would create or maintain islands of agricultural uses within an urbanized setting, exacerbating potential land use conflicts and land use incompatibilities. Moreover, TOP does not envision long-term use of City properties for agricultural purposes. This is evidenced in the adopted Land Use Plan, which does not establish or maintain any "Agricultural" Land Use designations within the City. Preservation of agricultural land uses would therefore conflict with the adopted Land Use Plan. The "Retention of On-Site Agricultural Uses" mitigation strategy would require comprehensive amendment of the Policy Plan.

Additionally, economic viability of agricultural uses in the City has declined as a result of losing many of the necessary support services. Increasing urbanization, rising land

values, and relatively high operational costs have also put City agricultural and dairy farming uses at a competitive disadvantage in regional markets. Ultimately, the long-term viability of agriculture within the City is limited due to the increasing land values, increased water costs, higher labor costs, higher property taxes, competition from other parts of the state, and the growing urbanization of the area. Based on the preceding, retention of on-site agricultural uses is considered economically infeasible.

Ontario Plan EIR Mitigation Measure: Replacement of Agricultural Resources Off-Site. Replacement of agricultural resources at an off-site location would require the Project applicant to purchase off-site replacement acreage not designated as Farmland and improve or restore it to Farmland status. Creation of additional Farmland in the City is contrary to the Land Use Plan policies and vision as summarized previously and would require comprehensive amendment of the Policy Plan. The potential to provide off-site mitigation for the loss of agricultural land and agricultural uses was considered but rejected as infeasible in the Policy Plan EIR. Using another area within the Project site area for mitigation of impacts related to the Project would result in the same issues as previously described in consideration of on-site mitigation. Therefore, similar to the reasons why on-site mitigation is not feasible, off-site mitigation within the Project site is also infeasible. In addition, off-site mitigation within the region is also considered infeasible due to the decreasing economic vitality of agriculture in the Project area and southern California and increased urbanization pressures on existing agricultural lands.

Further, the creation of new Farmland-status properties outside the City is beyond the Lead Agency and Project applicant control. The Farmland status at any site would be assigned through the California Department of Conservation Farmland Mapping and Monitoring Program Important Farmland Series mapping protocol. Moreover, creation of new Farmland-status properties at extra-jurisdictional locations could result in land use conflicts at the interface of agricultural uses and urban uses similar to those the City has experienced and seeks to avoid through implementation of the Land Use Plan.

Additionally, the “Replacement of Agricultural Resources Off-Site” mitigation strategy would likely result in potentially adverse environmental impacts including, but not limited to, impacts to biological resources, hydrology/water quality, air quality, greenhouse gas emissions, and land use and planning. In this regard, the mitigation strategy would likely result in increased, rather than diminished environmental impacts. Based on the preceding, replacement of agricultural resources at off-site locations is considered infeasible.

Ontario Plan EIR Mitigation Measure: Relocation of Prime Farmland Topsoil. Relocation of Farmland topsoil would entail removal of the top 12 to 18 inches of topsoil from Farmland properties and the placement of this soil at sites that have lesser quality soil. This would promote creation of new or additional Farmland status properties in the City, rather than provide for their transition to urban uses. This would be contrary to the Land Use Plan policies and vision as summarized previously and would require comprehensive amendment of the Policy Plan. Neither the City nor Project applicant has indicated that such amendment is warranted or desired, and neither has initiated such action.

Further, creation of new Farmland-status properties by means of imported Farmland topsoil is beyond the Lead Agency and Project applicant's control. The Farmland status

at any site would be assigned through the California Department of Conservation Farmland Mapping and Monitoring Program Important Farmland Series mapping protocol. Moreover, creation of new Farmland-status properties at extra-jurisdictional locations could result in land use conflicts at the interface of agricultural uses and urban uses similar to those the City has experienced and seeks to avoid through implementation of the Land Use Plan.

Additionally, excavation and relocation of topsoil would likely result in potentially adverse environmental impacts affecting biological resources, hydrology/water quality, air quality, greenhouse gas emissions, and land use and planning. Based on the preceding, relocation of Prime Farmland topsoil is considered infeasible.

Ontario Plan EIR Mitigation Measure: Establishment of Conservation Easement or Preserves. Establishment of conservation easements or preserves is contrary to the Land Use Plan policies and vision providing for transition of agricultural uses to urban uses. This mitigation strategy would require comprehensive amendment to the Policy Plan. The City has not indicated that such amendment is warranted or desired and has initiated no such action. At the Project site, establishment of agricultural conservation easements or preserves would negate the Project, resulting in a No-Build condition. Based on the preceding, the "Establishment of Conservation Easement or Preserves" mitigation strategy is considered infeasible.

Ontario Plan EIR Mitigation Measure: Payment in Lieu or Transfer of Development Rights. The Southern California Association of Governments (SCAG) provides the following summary of description and application of Transfer of Development Rights (TDR) programs:

TDR "is a device by which the development potential of a site is severed from its title and made available for transfer to another location. The owner of a site within a transfer area retains property ownership, but not approval to develop. The owner of a site within a receiving area may purchase transferable development rights, allowing a receptor site to be developed at a greater density."

TDR is most commonly used to preserve agricultural lands, but it can also be used for preserving natural, open space. TDR programs can vary depending on the need of the local jurisdiction but in general there are a few common factors that contribute to the success of a TDR program. These include having a donor site with development constraints, appropriate zoning regulations, and infrastructure requirements.

The Project site is not currently entitled for development absent an adopted Specific Plan, and it is unclear what, if any, development rights would be transferred under a TDR program. Further, there is no designated or contemplated receiving area to accept these development rights. Moreover, a TDR program would preserve agricultural uses at the Project site rather than further planned transition of agricultural uses to non-agricultural uses as envisioned under TOP. This would be contrary to the Land Use Plan policies and vision as summarized previously.

The City has not implemented a TDR Program. Implementation of a TDR program would require amending the City Development Code and comprehensive amendment of TOP. Neither the City nor Project applicant has indicated that such amendments are warranted or desired, and neither has initiated such actions. Based on the preceding, implementation of a "Transfer of Development Rights Program" mitigation strategy is considered infeasible.

The City has considered but rejected the collection of fees for off-site mitigation of agricultural impacts. Neither the City nor the adjoining counties have adopted fee programs. Absent viable programs in the region, the imposition of fees would not serve to mitigate the impacts of the Project. Furthermore, an off-site fee mitigation program would not avoid the loss of farmland; would not minimize the effect of the Project; would not repair, rehabilitate, or restore the affected farmland; and, absent a viable fee program, would not replace affected farmland with substitute farmland. Thus, such a program would not actually mitigate or substantially lessen the significant impact of the Project, per State CEQA Guidelines § 15370. The same factors that make on-site mitigation infeasible would apply off-site in the region as well. The challenges to continued agricultural production in the Chino Basin area, also challenge agriculture throughout southern California.

Off-site mitigation would require the City to purchase replacement acreage for Important Farmland currently not in use elsewhere in California and restore it as viable farmland. However, distant mitigation would not reduce impacts because these mitigation parcels could have no bearing or relationship on the loss of agricultural lands within the City or the County. In addition, experience indicates a program consisting of the required purchase of agricultural easements on other land or through fee programs for the acquisition of agricultural easements would be of limited utility or benefit. Such a program is inherently dependent upon voluntary agreements by farm owners to sell such easements on their property for an agreed price, which, within the City, is largely driven by TOP land use designations, population growth, urbanization of the surrounding area, and the limited supply of suitable farmland. In remote areas not planned for development in the near-term, owners may be more willing to sell such an easement at a reasonable price but within the region much of the land is already subject to development pressure. As a result, the most likely result would be a "patchwork" of easements, with some owners more willing than others to sell them, potentially creating a more dispersed development pattern and loss of viability of farmland over time, which would not serve as a feasible measure to mitigate the loss of farmland by the Project. Neither the City nor the County have adopted programs for the acquisition of off-site agricultural easements. Consequently, for the reasons previously outlined, it is determined that off-site mitigation of agricultural resources is neither feasible nor effective in mitigating such impacts.

Overall, no feasible mitigation measures have been identified to substantially lessen the Project's significant impacts related to the loss of Prime Farmland and conversion of farmland to non-agricultural use. This finding is consistent with the finding in TOP EIR

that there are no feasible mitigation measures to reduce impacts on Important Farmland or the conversion of agricultural land to non-agricultural uses, and thus impacts would be significant and unavoidable. (Draft EIR, pp. 4.1-12 through 4.1-16.)

b. ***Agricultural Zoning***

Threshold: Would the Project conflict with existing zoning for agricultural use, or a Williamson Act contract?

Finding: Significant and unavoidable. (Draft EIR, p. 4.1-16.)

Explanation: **Specific Plan-Phase I/Future Development Areas**

Construction and Operations

The Project site is currently zoned Specific Plan with an Agricultural Overlay, according to the City's Zoning Map. It also contains an operational dairy farm and other structures and equipment associated with agricultural use. Construction of this Project will remove the agricultural land, converting it to Business Park and Industrial General uses.

When the City annexed all of the land within the Ontario Ranch area, including the Specific Plan area, it was zoned Specific Plan, with an Agricultural Overlay Zoning District (Section F of Division 5.01 of the Ontario Development Code). The Overlay Zoning provides for agricultural uses within the City on an interim basis, until such time that urban development consistent with TOP occurs. The operation of the on-site dairy and row crops and the urban development that is proposed by the Specific Plan are consistent with this ordinance. The Specific Plan will not conflict with the Agricultural Overlay Zoning, and impacts related to a conflict with the overlay will not occur.

According to the City's Williamson Act Contracts Status Update, the Project site contains eight parcels under Williamson Act contracts. These parcels encompass approximately 74 acres of land and will expire as of the year 2027. According to TOP EIR, a number of Williamson Act contracts exist within the City that have yet to expire. As stated previously, any land held in a Williamson Act contract will have to be filed for nonrenewal and the contract will have to be allowed to expire before any development occurs on it. Since the adoption of TOP, notices of nonrenewal of Williamson Act contracts have been filed by property owners of a large portion of the agricultural preserve property within Ontario Ranch. The filing of nonrenewal notices by the property owners is reflective of the lack of a long-term commitment to agricultural uses in this area. For the remaining active contracts, buildout of TOP would most likely require the cancellation or nonrenewal of these contracts. The current use of these contracts would slow the rate of conversion from agricultural to nonagricultural land, but it would not prevent the conversion. Since the Project has active Williamson Act contracts, implementation of the Proposed Land Use Plan for TOP would conflict with these

contracts and cause a significant impact unless the contracts are canceled prior to development. With **MM AG-1** applied, in order to reduce conflicts issued between sensitive receptors and agricultural uses, all property owners in the South Ontario Logistics Center Specific Plan shall be provided with a notice approved by the City Attorney regarding the proximity and nature of neighboring agricultural uses. This disclosure shall be applied to the affected properties, or otherwise prior to finalizing the sale or rental agreement of any property. The written disclosure shall be supplied to the property purchaser or renter by the vendor or vendor's agent. The content and text of the disclosure shall be approved by the City Attorney and shall include language to inform new residents that existing agricultural uses may create nuisances.

SB330 Replacement Site

Construction and Operations

Rezoning of the SB330 Replacement Site would affect lands that are zoned agricultural and could affect lands with Williamson Act contracts (depending on the specific site for future residential development, as no site-specific development is proposed for the SB330 Replacement Site as part of this Project). Therefore, impacts would be significant and unavoidable, although the loss of agricultural land was addressed in the City's TOP EIR and discussed in the Statement of Overriding Considerations adopted for the current TOP. As stated above, the impact is significant and unavoidable, even with the implementation of **Mitigation Measure AG-1**.

Conclusion

Both the Project site and SB330 Replacement Site contain land with active Williamson Contracts. Each site will be developed on land with agricultural usage. The impact would be significant and unavoidable, although consistent with impacts addressed in the City's TOP EIR and for which were addressed in the City's previously adopted Statement of Overriding Considerations. (Draft EIR, pp. 4.1-16 through 4.1-18.)

c. ***Conversion of Farmland or Forestland***

Threshold: Would the Project involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland, to non-agricultural use or conversion of forest land to non-forest use?

Finding: Significant and unavoidable. (Draft EIR, 4.1-19.)

Explanation: **Specific Plan Phase I/Future Development Areas**

Construction and Operations

The development of the Project will result in the conversion of the existing agricultural uses that include over 150 acres of Prime

Farmland to an urban or non-agricultural use. The development of the Specific Plan, which is consistent with TOP, would occur as part of a wider pattern of development in the Ontario Ranch area and other agricultural land would likely be converted to non-agricultural use as allowed by TOP land use designations. The conversion of agricultural lands to nonagricultural uses was analyzed in the TOP EIR, which determined that there would be no agricultural land use designations in the City. The City does not have any prohibitions that prevent the transition of agricultural land uses to urban land uses. While existing agricultural uses would be allowed to persist, the proposed land use plan for the City designates these areas for nonagricultural land uses provided that equivalent Important Farmland is preserved elsewhere, or funds associated with the 1988 Park Bond Act are returned. Therefore, these existing agricultural uses would be converted to nonagricultural uses upon buildout of TOP. Furthermore, although the intent of the SoCALF Preserves was to preserve Important Farmland in perpetuity in this area of the City, the preserves do not guarantee that Important Farmland would not be converted to nonagricultural uses. Important farmland outside of these preserves may be converted to nonagricultural uses without requiring the County to repay the funding to the state or relocating the farmland elsewhere in the San Bernardino County Agricultural Land Preserve. Development and implementation of the Project would have significant and unavoidable impacts on agricultural resources in the Project area.

The Specific Plan could promote and encourage urban growth by contributing to the urban development of other nearby agricultural lands. Development proposals for substantial portions of the area around the site are pending, and development of the Specific Plan could facilitate the conversion of other farmland within the Project vicinity through the extension of public infrastructure and increases in land values. The majority of properties surrounding the site are currently utilized for agricultural operations; however, there is encroaching land development consistent with TOP.

Although implementation of the Specific Plan would result in the conversion of agricultural land to other uses, it is occurring consistently with the previously identified policies in the TOP EIR. Thus, consistent with the findings of the TOP EIR and which were acknowledged in a previously adopted Statement of Overriding Considerations, Project impacts related to other changes in the environment which, due to their location or nature, could result in conversion of farmland to non-agricultural would be significant and unavoidable.

SB330 Replacement Site
Construction and Operations

No portion of the SB330 Replacement Site is designated as a SoCALF Preserve. However, development and implementation of the SB330 Replacement Site would have significant and unavoidable impacts on agricultural resources in the Project area, consistent with what was previously disclosed in the TOP EIR.

Conclusion

Altering the land from agricultural development will promote further growth and future development within the City, increasing economic prosperity. However, this conversion from agricultural land to business park and industrial will have significant and unavoidable impacts. (Draft EIR, pp. 4.1-19 through 4.1-20.)

2. AIR QUALITY

a. *Air Quality Plans and Air Quality Standards*

Threshold: Would the Project conflict with or obstruct implementation of the applicable air quality plan; violate any air quality standard or contribute substantially to an existing or projected air quality violation?

Finding: Significant and unavoidable. (Draft EIR, p. 4.2-16.)

Explanation**:** The Project is located within the South Coast Air Basin (SoCAB or SCAB), which is under the jurisdiction of the SCAQMD. The SCAQMD is required, pursuant to the Federal Clean Air Act (FCAA), to reduce emissions of criteria pollutants for which the SoCAB is in nonattainment. To reduce such emissions, the SCAQMD drafted the 2016 Air Quality Management Plan (AQMP). The 2016 AQMP establishes a program of rules and regulations directed at reducing air pollutant emissions and achieving state (California) and national air quality standards. The 2016 AQMP is a regional and multi-agency effort including the SCAQMD, the CARB, the SCAG, and the U.S. EPA. The plan's pollutant control strategies are based on the latest scientific and technical information and planning assumptions, including SCAG's 2016 Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS), updated emission inventory methodologies for various source categories, and SCAG's latest growth forecasts. SCAG's latest growth forecasts were defined in consultation with local governments and with reference to local general plans. The Project is subject to the SCAQMD's AQMP.

Specific Plan – Phase 1

Consistency Criterion No. 1

As shown in Table 4.2-8 of the DEIR, Phase 1 of the Project would not exceed construction emission standards with the implementation of **MM AQ-1**. After **MM AQ-1** is implemented, the maximum mitigated emissions are the following: 51.79 VOC, 99.13 CO, 0.59, 36.76 PM10,10.97 PM2.5. These emissions are the reduced result of **MM AQ-1** through "super-compliant" low VOC paints.

However, as identified in Table 4.2-9 of the DEIR, Phase 1 operational emissions would exceed the SCAQMD operational threshold of 55 for VOC and 55 for NOX. **MM AQ-2** through **AQ-5** are included to reduce operation emissions to the greatest amount feasible; however even with mitigation, VOC and NOX emissions would remain above the SCAQMD thresholds of 55 for each. The Project VOC and NOx emissions would be 82.28 and 295.28, respectively. Therefore, Phase 1 of the Project would potentially contribute to an existing air quality violation. Thus, the Project is not consistent with the first criterion.

Consistency Criterion No. 2

The AQMP contains air pollutant reduction strategies based on SCAG's latest growth forecasts, and SCAG's growth forecasts were defined in consultation with local governments and with reference to local general plans. Phase 1 of the Project would result in a change of land use designations not reflected in the AQMP. Therefore, Phase 1 of the Project is conservatively assumed to generate emissions not reflected within the current 2016 AQMP regional emissions inventory for the SCAB and is considered to be inconsistent with the AQMP. Thus, Phase 1 of the Project is not consistent with the second criterion.

Future Development Areas – Phase 2

Consistency Criterion No. 1

As shown in Table 4.2-10 of the DEIR, Phase 2 of the Project would not exceed construction emission standards with the implementation of **MM AQ-1**, which would reduce VOC emissions to 36.66, far below the 75 VOC emission limit. However, as identified in Table 4.2-11 of the DEIR, Phase 2 operational emissions would exceed the SCAQMD operational threshold for VOC (55) and NOX (55). **MM AQ-2** through **MM AQ-5** are included to reduce operation emissions to the greatest amount feasible, however even with mitigation, VOC and NOX emissions would remain above the SCAQMD threshold at a total of 57.43 emissions for VOC and 154.4 emissions for NOX. Therefore, Phase 2 of the Project would potentially contribute to an existing air quality violation. Thus, the Project is not consistent with the first criterion.

Consistency Criterion No. 2

Similar to Phase 1, Phase 2 of the Project would also result in a change of land use designations not reflected in the AQMP. Therefore, Phase 2 of the Project is also conservatively assumed to generate emissions not reflected within the current 2016 AQMP regional emissions inventory for the SCAB and is considered to be inconsistent with the AQMP. Thus, Phase 2 of the Project is not consistent with the second criterion.

Project Buildout (Phase 1 + Phase 2)

Phase 1 and Phase 2 individually were not consistent with the AQMP. Therefore, Project Buildout (Phase 1 + Phase 2) would also not be consistent with criterion 1 and criterion 2.

Conclusion

Implementation of the Project would result in air pollutant emissions that exceed SCAQMD's operational emission thresholds following completion of Phase 1 and at Project Buildout. Although **Mitigation Measures AQ-1** through **AQ-5** would reduce project emissions by the greatest feasible amount, Project emissions levels would remain significant and would contribute to the nonattainment designations in the SoCAB. Therefore, the Project would be inconsistent with the AQMP, resulting in a significant and unavoidable impact despite the implementation of mitigation.

In addition, in accordance with South Coast AQMD Rule 2305 (refer to South Coast Air Quality Management District under Section 4.2.2 Regulatory Setting) the Project operator would be required to pay a mitigation fee if the Project does not generate enough WAIRE Points. The Project operator may be required to implement additional emission reduction strategies. Conservatively, this EIR is not taking credit for these potential reductions. Compliance with proposed Rule 2305 would reduce emissions below what is currently analyzed. (Draft EIR, pp. 4.2-16 through 4.2-19.)

b. ***Cumulatively Considerable Pollutant Emissions***

Threshold: Would the Project result in a cumulatively considerable net increase of any criteria pollutant for which the Project region is non-attainment under an applicable state or federal ambient air quality standard?

Finding: Significant and unavoidable. (Draft EIR, pp. 4.2-21 through 4.2-27.)

Explanation: **Specific Plan – Phase I**

Operations

Long-term operational emissions attributable to the Project are summarized in Table 4.2-9 of the DEIR. Primary sources of operational criteria pollutants are from motor vehicle use and area sources.

As indicated in Table 4.2-9 of the DEIR, operation of Phase 1 would exceed SCAQMD thresholds for VOC and NOX. The majority of the Project's VOC emissions are from consumer products. For analytical purposes, consumer products include cleaning supplies, aerosols, and other consumer products. As such, the Project Applicant cannot meaningfully control the use of consumer products by future building users via mitigation. On this basis, it is concluded that Project operational-source VOC emissions cannot be reduced below the SCAQMD threshold.

The majority of the Project's NOX emissions are from mobile sources. Mitigation measures would be required to reduce emissions

to the maximum extent feasible; however, emissions of motor vehicles are controlled by State and Federal standards, and the Project has no control over these standards. MM AQ-2 through **AQ-5** have been identified to reduce operational NOX emissions from Project mobile sources. **MM AQ-2** requires the use of electrical off-road equipment such as forklifts and hostlers/yard trucks. **MM AQ-3** requires electrical hookups at loading bays for cold storage. **MM AQ-4** requires the implementation of a TDM program to reduce single-occupant vehicle trips and encourage public transit. Additionally, **MM AQ-5** prohibits idling when engines are not in use. Table 4.2-9 of the DEIR shows that with the implementation of **MM AQ-2** through **MM AQ-5**, NOX emissions would remain above the SCAQMD's thresholds, therefore impacts would be significant and unavoidable. (Draft EIR, pp. 4.2-24 through 4.2-27.)

Future Development Areas - Phase 2

Operations

Long-term operational emissions attributable to the Project are summarized in Table 4.2-11 of the DEIR. Primary sources of operational criteria pollutants are from motor vehicle use and area sources.

As indicated in Table 4.2-11 of the DEIR, operation of Phase 2 would exceed SCAQMD thresholds for VOC and NOX. Similar to Phase 1, the majority of the Phase 2's VOC emissions are from consumer products. For analytical purposes, consumer products include cleaning supplies, aerosols, and other consumer products. As such, the Project Applicant cannot meaningfully control the use of consumer products by future building users via mitigation. On this basis, it is concluded that Project operational-source VOC emissions cannot be reduced below the SCAQMD threshold.

Similar to Phase 1, the majority of the Phase 2's NOX emissions are from mobile sources. Mitigation measures would be required to reduce emissions to the maximum extent feasible; however, emissions of motor vehicles are controlled by State and Federal standards and the Project has no control over these standards. **MM AQ-2** through **AQ-5** have been identified to reduce operational NOX emissions from Project mobile sources. **MM AQ-2** requires the use of electrical off-road equipment such as forklifts and hostlers/yard trucks. **MM AQ-3** requires electrical hookups at loading bays for cold storage. **MM AQ-4** requires the implementation of a TDM program to reduce single-occupant vehicle trips and encourage public transit. Additionally, **MM AQ-5** prohibits idling when engines are not in use. Table 4.2-11 of the DEIR shows that with the implementation of **MM AQ-2** through **MM AQ-5**, NOX emissions would remain above the SCAQMD's thresholds; therefore, impacts would be significant and unavoidable. (Draft EIR, pp. 4.2-24 through 4.2-26.)

Overlapping Construction + Operation (Phase 1 Operation with Phase 2 Construction)

Phase 1 Operations

Primary sources of operational criteria pollutants from Phase 1 would be from motor vehicle use and area sources.

- **Area Source Emissions and Energy Source Emissions**. Area source emissions and energy source emissions are based on land use and the area of the buildings. Phase 1 air quality modeling is based on 601,128 square feet of business park, 334,315 square feet of refrigerated warehouse, and 2,237,337 square feet of unrefrigerated warehouse.
- **Mobile Source Emissions**. Project-generated vehicle emissions are based on the trip generation within the Project Traffic Impact Analysis (see Appendix I of the DEIR) and incorporated into CalEEMod as recommended by the SCAQMD. Per the Project Traffic Impact Analysis, Phase 1 of the Project would generate a total of 7,288 daily trips; 5,830 passenger vehicle trips from employees and 1,458 trips from trucks (2-axle, 3-axle, and 4+ axle delivery trucks) (Appendix I of the DEIR).
- **Transport Refrigeration Units (TRU) Emissions**. Based on 125 trucks accessing refrigerated warehouse with TRUs per day.
- **Off-Road Equipment Emissions**. Modeling assumed 12 forklifts per building (total 96), each operating eight hours per day loading and unloading goods. Off-road emissions also include one hostler/yard truck per building (total eight), each operating four hours per day moving trailers.

Phase 2 Construction

Construction-generated emissions associated the Project were calculated using the CARB-approved CalEEMod computer program, which is designed to model emissions for land use development projects, based on typical construction requirements. See Appendix B1 of the DEIR for more information regarding the construction assumptions used in this analysis.

Predicted maximum daily emissions from overlapping Phase 2 construction with Phase 1 operations are summarized in Table 4.2-12a: Emissions from Overlapping Phase 1 Operation and Phase 2 Construction of the Final EIR.

Project emissions from the operation of Phase 1 combined with concurrent construction of Phase 2 could result in maximum worst case daily emissions of VOC, NOx, and PM10 in excess of applicable SCAQMD thresholds (in accordance with SCAQMD recommendations, emissions form overlapping scenarios should be compared to the more stringent operational significance

thresholds). Overlapping emissions of CO, SOx, and PM2.5 would not exceed applicable thresholds

Mitigation measures would be required to reduce emissions to the maximum extent feasible. **MM AQ-1** requires the Project to use "Super-Compliant" low VOC paints to reduce maximum daily VOC emissions from surface coating phase of construction. The majority of NOX emissions during operation of Phase 1 are from on-road mobile sources; however, emissions from on-road motor vehicles are controlled by State and Federal standards and the Project has no control over these standards. **MM AQ-2** through **MM AQ-5** have been identified to reduce operational NOX emissions from Project mobile sources. **MM AQ-2** requires the use of electrical off-road equipment such as forklifts and hostlers/yard trucks. **MM AQ-3** requires electrical hookups at loading bays for cold storage. **MM AQ-4** requires the implementation of a Transportation Demand Management (TDM) program to reduce single-occupant vehicle trips and encourage public transit. Additionally, **MM AQ-5** prohibits idling when engines are not in use. Even with implementation of applicable mitigation measures, emissions of VOC, NOx, and PM10 during overlapping operation and construction would remain in excess of applicable thresholds; therefore, impacts would be significant and unavoidable, similar to impacts for project buildout, discussed below. (Final EIR, pp. 3-3 through 3-6.)

Project Buildout (Phase 1 + Phase 2)

Operations

Long-term operational emissions attributable to the total Project are summarized in Table 4.2-12b of the Final EIR. (Final EIR, p. 3-6.) Total operation emissions for Project at buildout would exceed SCAQMD thresholds for VOC, NOX, PM10 and PM2.5. The majority of the Project's VOC emissions are from consumer products and cannot be reduced below the SCAQMD threshold with mitigation. The majority of NOX, PM10, and PM2.5emissions are from mobile sources. **MM AQ-2** through **MM AQ-5** have been identified to reduce operational emissions from mobile sources. **Mitigation Measure AQ-2** requires the use of electrical off-road equipment such as forklifts and hostlers/yard trucks. **Mitigation Measure AQ-3** requires electrical hookups at loading bays for cold storage. **Mitigation Measure AQ-4** requires the implementation of a TDM program to reduce single-occupant vehicle trips and encourage public transit. Additionally, **MM AQ-5** prohibits idling when engines are not in use. Table 4.2-12b of the FEIR shows that despite the implementation of **MM AQ-2** through **MM AQ-5**, NOX, PM10, and PM2.5, emissions would remain above the SCAQMD's thresholds; therefore, impacts would be significant and unavoidable. (Final EIR, p. 3-6.)

3. CULTURAL RESOURCES

a. *Historical Resources*

Threshold: Would the Project cause a substantial adverse change in the significance of a historical resource pursuant to State CEQA Guidelines, section 15064.5?

Finding: Significant and unavoidable. (Draft EIR, p. 4.4-20.)

Explanation: **Specific Plan-Phase 1/Future Development Areas**

Construction and Operation

Under CEQA, a project has a significant impact on a historical resource if it "would result in the physical demolition, destruction, relocation, or alteration of the resource or its immediate surroundings such that the significance of an historical resources would be materially impaired" (State CEQA Guidelines §15064.5(b)(1)). Material impairment would occur if the Project would result in demolition or material alteration of those physical characteristics that convey the resource's historical significance (State CEQA Guidelines §15064.5(b)(2)).

Potential historical resources in the Project study area consist of the Borba main house, the manager's house, the Boersma house, the Borba main dairy barn/milking parlor, the Borba auxiliary dairy barn/milking parlor, the Boersma dairy barn/milking parlor, four single-family residences, an older barn, and structures associated with a dairy farm operation. Potential historical resources were evaluated to determine if they are considered historically significant resources. Consistent with the direction provided by the City, the assessment of the Project site's historical resources found significance of the dairy farm or its structures as they are recognized likely eligible for listing on the local inventory. As proposed, these buildings would be demolished to facilitate development of the Project.

Therefore, impacts would be potentially significant (impacts to residences and/or dairy properties) and mitigation would be required. The application of **MM CUL-1** through **MM CUL-5** that are in place for demolition of historic resources within the City and impact reducing Project features, would extend to the development and operations of the future development areas.

SB330 Replacement Site

Construction and Operations

The City's TOP EIR evaluated development of the SB330 Replacement Site. The Project proposes a slight increase in residential zoning capacity pursuant to SB330. However, the Project does not change the development area evaluated in the City's TOP EIR. In addition, the Project does not propose development of the SB330 Replacement Site. This action would neither include nor

require physical disturbance of the SB330 Replacement Site. Any future development would be subject to applicable local, State and federal environmental regulations, including the City's discretionary review process. Site-specific historic resource assessments as part of the City's CEQA and discretionary review process would be conducted prior to any site-specific development of potential future residential housing. Furthermore, development of the SB330 Replacement Site was evaluated as part of the City's TOP EIR, and the proposed rezoning would have no additional significant impacts beyond that evaluated in the City's TOP EIR.

MM CUL-1 Prior to issuance of a building grading permit, every effort shall be made to relocate the following buildings:

- Boersma House – 14746 S. Grove Avenue
- Dairy/Milk Parlor (Boersma) – adjacent to above address
- Borba House – 7955 Eucalyptus Avenue

The buildings shall be offered at no cost for those who can relocate off-site. Advertisements notifying the public of the opportunity to relocate the buildings shall be placed for a minimum of 45 days: on-site with temporary signage, in at least 3 local publications (newspapers, magazines, local organization newsletters), and on local bulletin boards (realtor's offices, local business). Applicant shall notify a minimum of 3 non-profit heritage organizations in writing of the building.

MM CUL-2 Full documentation, including as-built drawing of elevations, architectural details, floor plan and site plan, and photographs following Historic American Buildings Survey (HABS) standards, of the historic resource shall be submitted to the Planning Department for review and approval and subsequent release to the Ovitt Family Community Library, Model Colony History Room prior to issuance of demolition building permit. One archival and one non-archival copy submitted to the Planning Department is required.

MM CUL-3 A mitigation fee pursuant to § 7.01.030 of the Ontario Development Code shall be paid to the Planning Department prior to issuance of any building permit. The mitigation fee is equal to 10% (moderate) or 20% (high) of the price per square foot construction cost as established in the most current International Code Council (ICC) Building Valuation Data. The applicable percentage is determined by the level of integrity of the resource. The fee amount will be provided by the Planning Department at the time of payment.

MM CUL-4 A determination whether items within or on the resource should be salvaged shall be made by the Planning Department. The applicant shall be responsible for the removal, relocation and donation of such

items selected for salvaging. An inventory of salvaged items shall be provided by the applicant to the Planning Department prior to be to issuance of demolition permit.

MM CUL-5 Develop a historic context report for significant persons in the dairy farm industry such as the Borba family.

4. GREENHOUSE GAS EMISSIONS

a. *Emissions Generation*

Threshold: Would the Project generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?

Finding: Significant and unavoidable. (Draft EIR, p. 4.6-16.)

Explanation: Construction associated with the Project would result in direct emissions of CO2, N2O, and CH4 from construction equipment and the transport of materials and construction workers to and from the Project Site. Construction-related emissions are only temporary and would cease once construction is complete. Construction GHG emissions are typically summed and amortized over the lifetime of the Project (assumed to be 30 years), then added to the operational emissions .

Operational or long-term emissions occur over the life of the Project. GHG emissions would result from direct emissions such as Project generated vehicular traffic, on-site combustion of natural gas, and operation of any landscaping equipment. Operational GHG emissions would also result from indirect sources, such as off-site generation of electrical power, the energy required to convey water to, and wastewater from the Project, the emissions associated with solid waste generated from the Project, and any fugitive refrigerants from air conditioning or refrigerators.

Specific Plan – Phase 1

Construction

As shown in Table 4.6-2 of the DEIR, Phase 1 would result in the generation of approximately 3,298.72 MTCO2e over the course of construction. The amortized Project construction emissions would be 109.86 MTCO2e per year.

Operations

Operational GHG emissions associated with the Phase 1 are summarized in Table 4.6-3 of the DEIR. Along with the emissions calculated by CalEEMod, Table 4.6-3 of the DEIR also includes emissions from transport refrigeration units (TRU). Table 4.6-3 of the DEIR shows that the unmitigated Project would generate approximately 46,341 MTCO2e per year.

Mitigation measures have been identified in Section 4.2 (Air Quality) of the DEIR that would reduce GHG emissions to the maximum extent feasible and are shown in Table 4.6-3 of the DEIR under "mitigated." **Mitigation Measure AQ-2** requires the use of electrical off-road equipment such as forklifts and hostlers/yard trucks that would also reduce GHG emissions from combustion engines. **Mitigation Measure AQ-3** requires electrical hookups at loading bays for cold storage to reduce GHG emissions from TRUs. **Mitigation Measure AQ-4** requires the implementation of a TDM program to reduce single occupant vehicle trips and encourage transit, reducing GHG emissions from passenger vehicles. **Mitigation Measure AQ-5** prohibits idling when engines are not in use to reduce GHG emissions from trucks.

With the implementation of **MMs AQ-2** through **AQ-5**, Phase 1 would generate approximately 44,526 MTCO2e annually from both construction and operations. It should be noted that emissions of motor vehicles are controlled by State and Federal standards and the Project has no control over these standards.

Phase 1 of the Project will comply with the City's Community CAP. Since emissions from Phase 1 of the Project exceed the 3,000 MTCO2e threshold, the Project is presumed to have a potentially significant GHG emissions impact. To ensure that the Project reduces emissions by the maximum amount feasible, MM GHG-1 would require that the Project incorporate project design features to achieve a minimum score of 100 points on the Screening Tables. As stated in the Community CAP, Projects that achieve a minimum score of 100 points or provide additional mitigation that achieves a 25 percent reduction are considered less than significant.

At the time of this analysis, the City's CAP update is underway. However, potential timeframes for approval and adoption of the City CAP update are unknown. Once approved, the CAP may implement performance standards and GHG emissions reduction targets differing from the current CAP. There is the potential that even after achieving more than 100 points on the current Screening Tables, the Project may conflict with as-yet-unknown performance standards and GHG emissions reduction targets implemented under the anticipated CAP updates, and thereby result in GHG emissions that would be considered to represent a significant impact on the environment. Therefore, even with the implementation of **MM AQ-2** through **MM AQ-5** and **MM GHG-1**, this Project impact is conservatively considered significant and unavoidable.

Future Development Areas – Phase 2
Construction
The total GHG emissions generated during construction of Phase 2 are combined and are shown in Table 4.6-4, Phase 2 Construction-Related Greenhouse Gas Emissions of the DEIR. The Phase 2

would result in the generation of approximately 2,602.90 MTCO2e over the course of construction. The amortized Project construction emissions would be 86.76 MTCO2e per year.

Operations
Total GHG emissions associated with the Phase 2 are summarized in Table 4.6-5, Phase 2 - Operational GHG Emissions of the DEIR. Along with the emissions calculated by CalEEMod, Table 4.6-5 of the DEIR also includes emissions from transport refrigeration units (TRU). Table 4.6-5 of the DEIR shows that the unmitigated Project would generate approximately 33,406 MTCO2e per year.

Mitigation measures have been identified in Section 4.2 (Air Quality) of the DEIR that would also reduce GHG emissions to the maximum extent feasible and are shown in Table 4.6-5 of the DEIR under "mitigated." **MM AQ-2** requires the use of electrical off-road equipment such as forklifts and hostlers/yard trucks to that would reduce GHG emissions from combustion engines. **MM AQ-3** requires electrical hookups at loading bays for cold storage to reduce GHG emissions from TRUs. **MM AQ-4** requires the implementation of a TDM program to reduce single occupant vehicle trips and encourage transit, reducing GHG emissions from passenger vehicles. **MM AQ-5** prohibits idling when engines are not in use to reduce GHG emissions from trucks.

With the implementation of **MM AQ-2** through **AQ-5** Phase 2 would generate approximately 26,562 MTCO2e annually from both construction and operations. It should be noted that emissions of motor vehicles are controlled by State and Federal standards and the Project has no control over these standards.

Phase 2 of the Project will also comply with the City's Community CAP. Since emissions from Phase 2 of the Project exceed the 3,000 MTCO2e threshold, the Project is presumed to have a potentially significant GHG emissions impact. To ensure that the Project reduces emissions by the maximum amount feasible, **MM GHG-1** would require that the Project incorporate project design features to achieve a minimum score of 100 points on the Screening Tables. As stated in the Community CAP, projects that achieve a minimum score of 100 points or provide additional mitigation that achieves a 25 percent reduction are considered less than significant.

At the time of this analysis, the City's CAP update is underway. However, potential timeframes for approval and adoption of the City CAP update are unknown. Once approved, the CAP may implement performance standards and GHG emissions reduction targets differing from the current CAP. There is the potential that even after achieving more than 100 points on the current Screening Tables, the

Project may conflict with as-yet-unknown performance standards and GHG emissions reduction targets implemented under the anticipated CAP updates, and thereby result in GHG emissions that would be considered to represent a significant impact on the environment. Therefore, even with the implementation of **MM AQ-2** through **AQ-5** and **MM GHG-1**, this Project impact is conservatively considered significant and unavoidable.

Project Buildout (Phase 1 + Phase 2)

Construction

Project Buildout would result in the generation of approximately 5,902 MTCO2e over the course of construction. The amortized Project construction emissions would be 197 MTCO2e per year.

Operations

Total GHG emissions associated with the Project Buildout are summarized in Table 4.6-7 of the DEIR. Along with the emissions calculated by CalEEMod, Table 4.6-7 of the DEIR also includes emissions from TRU. Table 4.6-7 of the DEIR shows that the unmitigated Project would generate approximately 33,406 MTCO2e per year.

Mitigation measures have been identified in Section 4.2 (Air Quality) of the DEIR that would also reduce GHG emissions to the maximum extent feasible and are shown in Table 4.6-7 of the DEIR under "mitigated." **Mitigation Measure AQ-2** requires the use of electrical off-road equipment such as forklifts and hostlers/yard trucks that would reduce GHG emissions from combustion engines. **Mitigation Measure AQ-3** requires electrical hookups at loading bays for cold storage to reduce GHG emissions from TRUs. **Mitigation Measure AQ-4** requires the implementation of a TDM program to reduce single occupant vehicle trips and encourage transit, reducing GHG emissions from passenger vehicles. **Mitigation Measure AQ-5** prohibits idling when engines are not in use to reduce GHG emissions from trucks.

With the implementation of **MM AQ-2** through **MM AQ-5** the Project would generate approximately 26,562 MTCO2e annually from both construction and operations of Phase 1 and Phase 2. It should be noted that emissions of motor vehicles are controlled by State and Federal standards and the Project has no control over these standards.

Project Buildout will comply with the City's Community CAP. Since Project emissions exceed the 3,000 MTCO2e threshold, the Project is presumed to have a potentially significant GHG emissions impact. To ensure that the Project reduces emissions by the maximum amount feasible, **MM GHG-1** would require that the Project incorporate project design features to achieve a minimum score of 100 points on the Screening Tables. As stated in the Community

CAP, projects that achieve a minimum score of 100 points or provide additional mitigation that achieves a 25 percent reduction are considered less than significant.

At the time of this analysis, the City's CAP update is underway. However, potential timeframes for approval and adoption of the City CAP update are unknown. Once approved, the CAP may implement performance standards and GHG emissions reduction targets differing from the current CAP. There is the potential that even after achieving more than 100 points on the current Screening Tables, the Project may conflict with as-yet-unknown performance standards and GHG emissions reduction targets implemented under the anticipated CAP updates, and thereby result in GHG emissions that would be considered to represent a significant impact on the environment. Therefore, even with the implementation of **MM AQ-2** through **MM AQ-5** and **MM GHG-1**, this Project impact is conservatively considered significant and unavoidable. (Draft EIR, pp. 4.6-16 through 4.6-24.)

MM GHG-1 would require that the Project incorporate project design features to achieve a minimum score of 100 points on the Screening Tables. As stated in the Community CAP, projects that achieve a minimum score of 100 points or provide additional mitigation that achieves a 25 percent reduction are considered less than significant. However, at the time of this analysis, the City's CAP update is underway and the potential timeframes for approval and adoption of the City CAP update are unknown. Once approved, the CAP may implement performance standards and GHG emissions reduction targets differing from the current CAP. There is the potential that even after achieving more than 100 points on the current Screening Tables, the Project may conflict with as-yet-unknown performance standards and GHG emissions reduction targets implemented under the anticipated CAP updates, and thereby result in GHG emissions that would be considered to represent a significant impact on the environment. Therefore, even with the implementation of **MM AQ-2** through **AQ-5** and **MM GHG-1,** this Project impact is conservatively considered significant and unavoidable. (Draft EIR, p. 4.6-25.)

MM GHG-1 Project development proposals with building permit applications on file with the City prior to approval and adoption of updates to the December 16, 2014 CAP shall implement Screening Table Measures that achieve at least 100 points per the Screening Tables. The City shall verify that Screening Table Measures achieving the 100-point performance standard are incorporated in development plans prior to the issuance of building permit(s) and/or site plans (as applicable). The City shall verify implementation of the selected Screening Table Measures prior to the issuance of Certificate(s) of Occupancy. At the discretion of the City, measures that provide GHG reductions equivalent to GHG emissions reductions achieved via the Screening Table Measures may be implemented. Multiple

development proposals may, at the discretion of the City, be allowed to collectively demonstrate achievement of at least 100 points per the Screening Tables.

b. ***Emission Reduction Plans***

Threshold: Would the Project conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emission of greenhouse gases?

Finding: Significant and unavoidable. (Draft EIR, p. 4.6-26.)

Explanation: **Specific Plan – Phase 1, Future Development Areas – Phase 2, SB330 Replacement Site**

City of Ontario Community Climate Action Plan

The primary purpose of the City's Community CAP is to design a feasible strategy to reduce GHG emissions generated by community activities that is consistent with statewide Scoping Plan GHG reduction efforts. The City has identified a series of reduction measures to be implemented by the City. These reduction measures include programs that improve building energy efficiency, increase use of public and active transit, and decrease vehicle miles traveled (VMT), increase use of alternative-fueled vehicles, increase use of renewable energy, reduce water consumption, and reduce waste.

Table 4.6-8 of the DEIR evaluates the consistency of the proposed Project to the applicable measures of the Community CAP. As discussed in Table 4.6-8 of the DEIR, the proposed Project would be consistent with all applicable measures. By using energy more efficiently, harnessing renewable energy to power buildings, recycling waste, and enhancing access to sustainable transportation modes, the City can keep dollars in local economy, create new green jobs, and improve community quality of life. As shown in Table 4.6-8 of the DEIR, the Project would not conflict with the goals of the Community CAP.

The CAP Appendix B, Greenhouse Gas Emissions CEQA Thresholds and Screening Tables (CAP Screening Tables) establishes a points system that assigns values for each GHG emissions mitigation design element or operational program feature incorporated into a given development project. The CAP Screening Tables point values correspond to the minimum GHG emissions reduction expected from each feature. Projects with features that yield at least 100 Screening Table points are considered consistent with the reduction quantities anticipated in the City's CAP. Such projects would be determined to have a less than significant individual and cumulative GHG emissions impact. Table 4.6-9 of the DEIR identifies potential design features and their associated scores. The City is also considering additional design features but have not yet been assigned point values. The applicant may work with the City

to determine point values for additional design features with goal of achieving a minimum of 100 points. Table 4.6-9 of the DEIR shows that the proposed Project has the potential to achieve 100 points on the CAP's screening tables.

As noted above, implementation of **MM GHG-1** would require future development accommodated under the proposed Project to be designed to achieve at least 100 points on the City's GHG Screening Threshold Table. This measure would ensure that future Project development is consistent with the City's Community CAP and would reduce impacts to less than significant. However, there is the potential for the Project to generate GHG emissions that would result in significant impacts on the environment, and it is therefore conservatively considered to be a significant and unavoidable impact.

Conclusion

The Project would be consistent with applicable plan goals. In addition, the Project would include several sustainable design features as required by **MM GHG-1** that would help reduce GHG emissions.

Regarding goals for 2050 under Executive Order S-3-05, at this time it is not possible to quantify the emissions savings from future regulatory measures, as they have not yet been developed; nevertheless, it can be anticipated that operation of the proposed Project would benefit from the implementation of current and potential future regulations (e.g., improvements in vehicle emissions, SB 100/renewable electricity portfolio improvements, etc.) enacted to meet an 80 percent reduction below 1990 levels by 2050.

The majority of the GHG reductions from the Scoping Plan would result from continuation of the Cap-and-Trade regulation. Assembly Bill 398 (2017) extends the state's Cap-and-Trade program through 2030 and the Scoping Plan provide a comprehensive plan for the state to achieve its GHG targets through a variety of regulations enacted at the state level. Additional reductions are achieved from electricity sector standards (i.e., utility providers to supply 60 percent renewable electricity by 2030 and 100 percent renewable by 2045), doubling the energy efficiency savings at end uses, additional reductions from the LCFS, implementing the short-lived GHG strategy (e.g., hydrofluorocarbons), and implementing the Mobile Source Strategy and Sustainable Freight Action Plan.

Several of the State's plans and policies would contribute to a reduction in mobile source emissions from the Project. These include the CARB's Advanced Clean Truck Regulation, Executive Order N-

79-20, CARB's Mobile Source Strategy, CARB's Sustainable Freight Action Plan, and CARB's Emissions Reduction Plan for Ports and Goods Movement. CARB's Advanced Clean Truck Regulation was approved in June 2020 requiring truck manufacturers to transition from diesel trucks and vans to electric zero-emission trucks beginning in 2024. By 2045, every new truck sold in California is required to be zero-emission. The Advanced Clean Truck Regulation accelerates the transition of zero-emission medium-and heavy-duty vehicles from Class 2b to Class 8.

Executive Order N-79-20 establishes the goal for all new passenger cars and trucks, as well as all drayage/cargo trucks and off-road vehicles and equipment, sold in California, will be zero-emission by 2035 and all medium and heavy-duty vehicles will be zero-emission by 2045. It also directs CARB to develop and propose rulemaking for passenger vehicles and trucks, medium-and heavy-duty fleets where feasible, drayage trucks, and off-road vehicles and equipment "requiring increasing volumes" of new ZEVs "towards the target of 100 percent."

CARB's Mobile Source Strategy which includes increasing ZEV buses and trucks and their Sustainable Freight Action Plan which improves freight system efficiency, utilizes near-zero emissions technology, and deployment of ZEV trucks. This Plan applies to all trucks accessing the Project site and may include existing trucks or new trucks that are part of the statewide goods movement sector. CARB's Emissions Reduction Plan for Ports and Goods Movement identifies measures to improve goods movement efficiencies such as advanced combustion strategies, friction reduction, waste heat recovery, and electrification of accessories. While these measures are not directly applicable to the Project, any commercial activity associated with goods movement would be required to comply with these measures as adopted. As such, the Project would not interfere with their implementation.

The Project would not obstruct or interfere with efforts to increase ZEVs or state efforts to improve system efficiency. As discussed above, **MM AQ-2** through **AQ-5** as identified in the Project's Air Quality Assessment would reduce mobile source emissions and would support the State's transition to ZEVs by requiring electrical hookups at all cold storage loading bays, promoting the use of alternative fuels and clean fleets, requiring electric vehicle charging stations and/or infrastructure to support the future installation of truck charging stations. The Project would also benefit from

implementation of the State programs for ZEVs and goods movement efficiencies that reduce future GHG emissions from trucks.

The Project's long-term operational GHG emissions would exceed City's threshold of 3,000 $MTCO_2e$ per year despite the implementation of **MM AQ-2** through **AQ-5** (refer to *Section 4.2, Air Quality*), as well as **MM GHG-1**, which requires the Project to achieve a minimum of 100 points on the CAP Screening Threshold Checklist. Achieving 100 points ensures that the Project would not impede California's statewide GHG reduction goals for 2030 and 2050, but the potential Project GHG emissions remain a significant and unavoidable impact. (Draft EIR, pp. 4.6-37 through 4.6-39.)

5. TRANSPORTATION AND TRAFFIC

a. *VMT*

Threshold: Would the Project conflict or be inconsistent with CEQA Guidelines sections 15064.3, subdivision (b)?

Finding: Significant and unavoidable. (Draft EIR, p. 4.13-21.)

Explanation: **Specific Plan Phase I/Future Development Areas**

Project Screening

Consistent with City Guidelines, projects that meet certain screening thresholds based on their location and project type may be presumed to result in a less than significant transportation impact. Consistent with the screening criteria recommended in OPR's Technical Advisory, the City of Ontario utilizes the following project screening thresholds :

- Low VMT Area Screening
- Low Trip Generating Uses Screening
- Transit Priority Area (TPA) Screening
- Project Type Screening

A land use project need only meet one of the above screening thresholds to be presumed to result in a less than significant impact under CEQA, pursuant to SB 743.

Low VMT Area Screening

The City Guidelines state that projects located within a low VMT-generating area may be presumed to have a less than significant impact absent substantial evidence to the contrary. The SBCTA

screening tool was utilized to determine low VMT areas. The screening tool uses the sub-regional San Bernardino Transportation Analysis Model (SBTAM) to measure VMT performance within individual traffic analysis zones (TAZ's) within the region. Parcels containing the proposed Project were selected and the screening tool was run for the Origin/Destination (OD) VMT per service population (SP) measure of VMT. Based on the Screening Tool results (see Appendix I2 for VMT Screening Tool Analysis), the Project resides within TAZ 53653401 and that TAZ was shown to not be within a low VMT generating zone based on the OD method of calculating VMT. Thus, the Low VMT Area screening threshold is not met.

Low Trip Generating Uses Screening

The City Guidelines indicate that small development projects generating fewer than 110 daily vehicle trips or less may be presumed to have a less than significant impact, subject to discretionary approval by the City. Trips generated by the Project's proposed land uses have been estimated based on trip generation rates collected by the ITE Trip Generation Manual, 10th Edition, 2017. Based on information contained in the Project's LOS based traffic study (see Appendix I2, VMT Analysis, Low Trip Generating Uses Screening), the Project is anticipated to generate more than 110 daily trips. The Low Trip Generating Uses screening threshold is not met.

Transit Priority Area (TPA) Screening

Consistent with guidance identified in the City Guidelines, projects located within a TPA (i.e., within ½ mile of an existing "major transit stop" or an existing stop along a "high-quality transit corridor") may be presumed to have a less than significant impact absent substantial evidence to the contrary. The Project site is not located within ½ mile of an existing major transit stop or an existing stop along a high-quality transit corridor. The TPA screening threshold is not met.

Project Type Screening

The City Guidelines identify that local serving retail less than 50,000 square feet or other local serving essential services (e.g., daycare centers, public schools, medical/dental office buildings, etc.) are presumed to have a less than significant impact absent substantial evidence to the contrary. In addition, small projects anticipated to generate low traffic volumes and by association low GHG emissions

are also assumed to cause a less than significant impact. The Project consists of industrial and business park uses, which do not typically consist of local-serving or essential services. The Project Type screening threshold is not met.

Project Generated VMT

The City Guidelines state that projects not screened through the steps above should complete VMT analysis and forecasting through the SBTAM model to determine if they have a significant VMT impact. The first step in the analysis is to calculate project generated VMT and compare it to the City's adopted impact threshold. SBTAM is a useful tool to calculate VMT as it considers interaction between different land uses based on socio-economic data such as population, employment, and other factors. It was also the tool used to establish the City's impact threshold, so it is the appropriate tool to conduct the analysis to ensure an apples-to-apples comparison of project generated VMT to the adopted threshold.

Project generated VMT has been calculated using the most current version of SBTAM, which was updated recently by SBCTA as part of the development of their recommended VMT guidelines. Adjustments in socio-economic data (SED) (i.e., population, households, and employment) have been made to a separate TAZ to reflect the Project's proposed land uses (i.e., employment). A separate TAZ is used to isolate project generated VMT from other land uses in the model.

At the time of this analysis future tenants are not known. Therefore, to perform a more conservative analysis, industrial land uses were assumed. Because the tenants of the Project's buildings are not yet known, the number of jobs that the Project would generate cannot be precisely determined; therefore, for purposes of this analysis, employment estimates were calculated using employment density factors of 0.65 employees/thousand square feet (TSF) for non-office portions and 2.86 employees/TSF for office portions of industrial and business park uses consistent with the City's General Plan Buildout Methodology document . Based on these employment generation rates, the Project is expected to generate approximately 5,664 jobs. Project-generated VMT using the OD trip matrix from SBTAM was calculated for both the base year model (2016) and cumulative year model (2040), and linear interpolation was used to determine the Project's baseline (2020) VMT. The base year model and cumulative

year model were then run inclusive of the Project's employment estimate.

The City has chosen the OD method of calculating VMT for purposes of establishing its impact threshold. The OD method of calculating VMT includes all vehicle trips and trip purposes (i.e., passenger cars and heavy trucks). Project generated VMT using the OD trip matrix from SBTAM was calculated for both the base year model (2016) and cumulative year model (2040), and linear interpolation was used to determine the Project's baseline (2020) VMT. The VMT value was then normalized by dividing by the Project's SP, which in this case is the number of Project employees.

The City of Ontario has selected a threshold based on the General Plan Buildout VMT performance in the City. More specifically, the City Guidelines state that a significant impact would occur if the project VMT per SP exceeds the citywide average for SP under General Plan Buildout Conditions.

Table 4.13-3 of the DEIR presents a comparison between baseline project generated VMT per SP to the City's impact threshold. The baseline project generated VMT per SP is 38.65 or 6.77% above the City's threshold; therefore, a significant impact would occur.

It is also recognized that as the Project area and city develop as envisioned under the City of Ontario Policy Plan, new residential, commercial/retail, and industrial development would be implemented. These actions could collectively alter transportation patterns, improve the City's jobs/housing ratio, diminish VMT/SP, and support implementation of new or alternative TDM measures. There are no means however to quantify any VMT reductions that could result. Additionally, the effectiveness of the TDM strategies that have potential to reduce the Project VMT/SP are dependent on as yet unknown final Project building tenant(s); and as noted above, "VMT reductions from TDM strategies cannot be guaranteed in most cases."

SB330 Replacement Site

Consistent with SBCTA Guidelines, VMT reduction strategies would be considered to address future project generated VMT that exceeds the City's threshold as part of the City's CEQA and discretionary review process for the potential future development on the SB330 Replacement Site. TDM strategies for the purpose of reducing VMT impacts will be determined for each potential future development

Project on the SB330 Replacement Site. In addition, a VMT analysis will be performed in accordance with City guidelines.

As noted previously, a specific development project is not currently proposed for the reallocation of 1,352 dwelling units displaced by the proposed Project. However, information cited in both the Technical Advisory and City Guidelines describe that a project's land use context, location and design characteristics all play a role in the resulting amount of VMT generated by an individual land use project. As the proposed Project would include the reallocation of 1,352 low to moderate density residential dwelling units to a mixed-use corridor with higher density residential that would offer improved access to transit, there are numerous aspects of the proposed change that would reduce VMT compared to the "No Project" condition.

The Technical Advisory and City Guidelines each provide evidence that land use projects located within a transit priority area (TPA) or close to a high-quality transit corridor would tend to generate low VMT when compared to typical suburban residential areas characterized by dispersed, low-density, single-use, automobile dependent land use patterns. In addition to proximity to transit, higher density projects located within walking distance of a diverse mix of land uses (e.g., shopping, office, government services, etc.) also generates lower VMT when compared to typical dispersed suburban development. The proximity of complementary land uses combined with safe and convenient bike and pedestrian networks are proven to reduce the need for automobile dependent travel and therefore a reduction in VMT. The Project's reallocation of 1,352 low to moderate density residential dwelling units to a higher density transit-oriented corridor that includes a diverse mix of uses would result in lower net VMT when compared to standard low to moderate density residential development.

In addition, future land use development projects associated with the reallocation of the 1,352 units along the Grove Avenue Corridor will be required to follow standard development review process. In other words, future implementing projects associated with the reallocated 1,352 dwelling units along the Grove Avenue Corridor will need to evaluate site access driveways, parking, operational safety, and other factors as directed by the City Traffic Engineer.

In summary, the proposed Project includes the reallocation of 1,352 low to moderate density residential units to the Grove Avenue Corridor. The reallocated units will be located in a planned higher

density transit-oriented corridor that includes a diverse mix of uses, and due to these factors, is anticipated to generate lower VMT as compared to the lower density development plan assumed for the Project's current location. As such, the Project's potential transportation impact based on VMT is less than significant.

Conclusion

In summary, the Project was found to exceed the City's adopted VMT threshold by 6.77%. Reductions in commute VMT through feasible TDM measures such as those described previously would be provided by the Project, and would be implemented as part of future Certificates of Occupancy for future tenants as noted in **MM TRANS-1**. Inclusion of such VMT reduction measures in areas that are characteristically suburban in context are noted to be limited to a maximum VMT reduction of 10%. However, as future Project design features and building tenants are not yet known, reductions in VMT related to the above TDM measures cannot be accurately estimated or guaranteed.

The reallocated 1,352 dwelling units will be located in a planned higher density transit-oriented corridor that includes a diverse mix of uses, and due to these factors, is anticipated to generate lower VMT as compared to the lower density development plan assumed for the Project's current location. As such, the Project's potential transportation impact based on VMT is less than significant.

Even though certain TDM measures may reduce VMT impacts from the Specific Plan site, and even though the higher density residential zoning at the SB330 Replacement Site is anticipated to reduce VMT, these VMT reductions are difficult to quantify and cannot be guaranteed. The VMT analysis determined that the Project's impact on VMT would be considered significant and unavoidable. Furthermore, VMT is not quantifiable for the SB 330 Replacement site at this time in the absence of specific development proposals, and therefore impacts are considered to be significant and unavoidable. As stated previously, any future development on the SB 330 Replacement Site will be subject to project-specific discretionary process review pursuant to State CEQA Guidelines to determine VMT-related impacts. (Draft EIR, pp. 4.13-21 through 4.13-30.)

MM TRANS-1 At the time of Certificate of Occupancy for future tenants, the future tenant shall demonstrate implementation of reasonable and feasible VMT reduction measures to the satisfaction of the City of Ontario Planning Director. Measures to be considered include, but are not

limited to VMT measures 1, 6 and 7 as described in EIR Appendix I2.

F. CUMULATIVE IMPACTS

Regarding the Project's potential to result in cumulative impacts, the City hereby finds as follows:

1. AESTHETICS

Construction of the Project site would result in alterations to the scenic vistas views. However, while construction activities on the Project site would modify foreground views as observed by some viewers, construction is temporary and considering the existing nature of the Project site, developed nature of surrounding areas, and the current partially obscured views from existing off-site development, the changes the construction activities would represent are not considered to be substantial. Upon completion of construction on the Project site, the new structure would be a new permanent visual element in the environment. The new structures and operations associated with the Project would change the foreground views of the San Gabriel Mountains as observed from viewers looking north, across the site; however, most views are already obscured, limited, and short-in duration so views, as seen to the north, would not be significantly adversely affected. The SB330 Replacement Site would not substantially change the overall character of this area, nor would it alter views of any scenic vista in comparison to current zoning. The proposed Project and all related projects are required to adhere to City and State regulations designed to reduce and/or avoid impacts related to aesthetics. With compliance with these regulations, cumulative impacts related to aesthetics would be less than significant. (Draft EIR, pp. 7-1 through 7-2.)

2. AGRICULTURE AND FORESTRY RESOURCES

The cumulative study area for agriculture includes the County of San Bernardino. Throughout the County of San Bernardino, numerous related projects exist that would result in the additional conversion of agricultural land, including Prime Farmland and Important Farmland, to nonagricultural uses. Important Farmland in San Bernardino County has continually declined and all of the prime agricultural land in the southern area of Ontario is planned for development by TOP. Continued conversion of agricultural lands to urban uses would substantially reduce overall agricultural productivity in the City and the region. According to the TOP EIR, agricultural land within the Ontario Ranch area has the potential to be converted to non-agricultural uses, upon buildout of TOP and the Specific Plan overlay. This was identified as a significant cumulative impact in TOP EIR. Implementation of the proposed Project would contribute to the reduction of agricultural resources in the region and cumulatively contribute to the loss of agricultural resources. Although the proposed conversion is consistent with the projected decline in agricultural productivity of the region, the Ontario Ranch area, and the Project site, the Project would result in a cumulatively considerable impact to agricultural resources, which Section 4.1.8 below provides further discussion on the proper mitigation measures applied based off TOP and the City's EIR. The City's TOP EIR and the TOP CEQA Findings determined that implementation of the TOP would result in individual and cumulative significant and unavoidable impacts to various resources including agricultural resources. (Draft EIR, p. 4.1-21.)

3. AIR QUALITY

Regional

In accordance with SCAQMD's methodology, any project that produces a significant project-level regional air quality impact in an area that is in nonattainment contributes to the cumulative impact. Cumulative projects in the local area include new development and general growth in the project area. The greatest source of emissions in the SoCAB is mobile sources. Due to the extent of the area potentially impacted from cumulative project emissions (i.e., the SoCAB), SCAQMD considers a project cumulatively significant when project-related emissions exceed the SCAQMD regional emissions thresholds.

Construction

The SoCAB is designated nonattainment for O3 and PM2.5 under both the California and federal standards and nonattainment for PM10 and lead (Los Angeles County only) under the federal standards. Ozone is created by chemical reactions between NOX and volatile organic compounds; thus, NOX and VOCs are precursor to O3. Construction of cumulative projects will further degrade the regional and local air quality. The project would not make a cumulative considerable contribution to PM2.5 or PM10, but air quality from VOCs would potentially be impacted during construction activities. However, as discussed under Impact 4.2-2, implementation of MM AQ-1 would reduce project-related construction emissions to below the SCAQMD regional significance thresholds on a project and cumulative basis. Therefore, the proposed project's contribution to cumulative air quality impacts would not be cumulatively considerable with incorporation of mitigation.

Operation

For operational air quality emissions, any project that does not exceed or can be mitigated to less than the daily regional threshold values is not considered by SCAQMD to be a substantial source of air pollution and does not add significantly to a cumulative impact. Operation of Phase 1 of the project, after incorporation of mitigation would still result in emissions in excess of the SCAQMD regional emissions thresholds for VOC and NOX. Operation of the Project at Buildout would result in emissions that exceed SCAQMD's thresholds for VOC, NOX, PM10 and PM2.5. Therefore, the air pollutant emissions associated with the proposed project would be cumulatively considerable and therefore significant.

Localized

Under SCAQMD guidance, projects that exceed the project-specific significance threshold of 10 in in-a a-million are considered to be cumulatively considerable (SCAQMD 2003). Per the MATES IV study, the proposed project is in an area that has an estimated cancer risk of about 898.83 in a million. Project- related construction activities would result a cancer risk of 8.80 in a million to the MER. Development and operation of the proposed project would result in adding an additional cancer risk of 1.39 in a million to the MER, which would be below 10 in a million. As a result, the project would not cumulatively contribute to the overall elevated levels of DPM in the SoCAB. Therefore, the project's contribution to health risk impacts in the SoCAB is less than significant with mitigation incorporated. (Draft EIR, pp. 4.2-44 through 4.2-45.)

4. BIOLOGICAL RESOURCES

The cumulative study area for biological resources includes the southwestern San Bernardino County region. This area consists of a variety of land uses that includes

agricultural, residential, commercial, and industrial uses. The agricultural areas may include sensitive habitats which may contain special-status plants, migratory bird species, and jurisdictional resources. However, as discussed above the Project would implement mitigation measures to reduce impacts to the identified species to less than significant levels. Therefore, the Project would result in a less than significant contribution to cumulative impacts to these resources, and impacts would be less than cumulatively significant.

Project development would not involve the removal of critical habitat and is not expected to make a considerable contribution to the decline of wildlife species. The Project would remove potential raptor foraging habitat through development of the warehousing and business park structures. Although the existing agriculture may provide foraging habitat for raptors, it is not expected to be valuable, as the lands are actively maintained to minimize use by small mammals (prey for raptors) and active ground squirrel management programs are continually implemented. This loss of potential raptor foraging habitat would not make a cumulatively considerable contribution to the regional decline of raptors.

Mitigation has been incorporated into the project that would avoid direct impacts to nine sensitive wildlife species: the tricolored blackbird, grasshopper sparrow, great Great blue heron, swainson's Swainson's hawk, yellow rail, California horned lark, and merlin. Therefore, the mitigation measures for the proposed project would mitigate the potential of the Project to cumulatively combine with other projects; and the Specific Plan would not contribute to the cumulative loss of any special status wildlife species.

According to the several field surveys, none of the potential burrows identified on the Project site were determined to be currently occupied by BUOW. **MM BIO-2** would be implemented to further reduce potential BUOW impacts to less than significant levels.

The western mastiff bat has potential to roost at the Project site. The proposed Project has the potential to impact the western mastiff bat population by the removal of potential roosting/nursery habitat. However, the Project will fully mitigate its impacts through MM BIO-1, thereby avoiding Project impacts and avoiding the Project's contribution to cumulative impacts on bat species.

The western mastiff bat has potential to roost at the Project site. The proposed Project has the potential to impact the western mastiff bat population by the removal of potential roosting/nursery habitat. However, the Project will fully mitigate its impacts through **MM BIO-1**, thereby avoiding Project impacts and avoiding the Project's contribution to cumulative impacts on bat species.

The types of birds potentially affected are common to the region and the number of individuals would be limited given the type of vegetation proposed for removal (agriculture, ornamental plantings). Based on the types of species and expected limited number of nesting pairs potentially affected, development of the project would not make a cumulatively considerable contribution to the regional decline of native nesting bird populations. However, because native birds are protected by MBTA, mortality to a single native bird due to the project would be in violation of both laws; the Migratory Bird Treaty Act and the Endangered Species Act. Therefore, cumulative impacts related to nesting birds would be less than cumulatively significant.

The General Biological Assessment also indicated that the Project would not impact CDFW jurisdictional waters and riparian habitats. Thus, the Project would not make a cumulatively considerable contribution to the regional decline of jurisdictional waters.

Furthermore, according to the Arborist report, no trees of significance are located within Project boundaries, as such, the Project will not conflict any local policies or ordinances protecting biological resources. Lastly, the Project will not conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan. Therefore, cumulative impacts related to local policies and ordinances, as well as other approved habitat conservation plans, would be less than cumulatively significant. (Draft EIR, pp. 4.3-28 through 4.3-29.)

5. CULTURAL RESOURCES

Cultural resources impacts are site specific and generally do not combine to result in cumulative impacts. In the immediate vicinity of the Project site, no significant cultural resources were identified that could combine with the effects of the Project to result in a cumulatively significant impact to cultural resources. However, cultural resources investigations would be required for other projects before the City of Ontario would permit ground disturbances or demolition or substantial alteration of existing structures. Such investigations would identify resources on the affected Project sites that are or appear to be eligible for listing on the NRHP or CRHR. Such investigations would also recommend mitigation measures to protect and preserve cultural resources. The Project includes mitigation measures to ensure proper identification, treatment, and preservation of cultural resources on the Project. Therefore, cumulative impacts to cultural resources would be less than significant.

The Project could result in potential site-specific impacts to currently unknown archaeological and cultural resources discovered during grading and trenching activities. Other projects within the cumulative study area also have the potential to result in damage and/or loss to these resources. The combination of the Project as well as past, present, and reasonably foreseeable projects in the City and County would be required to comply with all applicable state, federal, County, and local regulations concerning preservation, salvage, or handling of cultural resources, including compliance with required mitigation. Similar to the Project, these projects also would be required to implement and conform to mitigation measures, which would be likely to reduce impacts to less than significant. Although in the process of development, some known or unknown resources may be lost, it is not anticipated that these impacts would be cumulatively considerable. In addition, implementation of **Mitigation Measures MM CUL-1** through **MM CUL-6** and **MM TCR-1** would reduce Project-specific impacts to a less than significant level. Therefore, the Project's contribution to cumulative impacts would be less than significant. (Draft EIR, pp. 4.4-25 through 4.4-26.)

6. ENERGY

Quantifying and/or analyzing energy consumption by cumulative projects in the area would be speculative in nature, as the proposed land use types, intensities, and sizes of projects are unknown at this time. However, each cumulative project would require separate discretionary approval and CEQA assessment, which would address potential energy consumption impacts and identify necessary mitigation measures, where appropriate.

Construction equipment would comply with the latest United States Environmental Protection Agency and California Air Resources Board engine emission standards designed to reduce pollutants and minimize unnecessary fuel consumption. Energy use during construction of the Project would not result in wasteful, inefficient or unnecessary consumption of energy and would not require expanded energy supplies or the construction of new infrastructure. The operational phase of the Project would consume energy as part of building operations and transportation activities. Compliance with **Mitigation Measures MM AQ-2** through **AQ-5** will have the additional effect of reducing Project vehicle fuel consumption. The proposed Project's contribution to impacts related to the inefficient, wasteful, and unnecessary consumption of energy would not be cumulatively considerable. (Draft EIR, pp. 7-5 through 7-6.) Thus, the project and identified cumulative projects are not anticipated to result in a significant cumulative impact.

7. GEOLOGY AND SOILS

Geology and soils impacts are site-specific and generally do not combine to result in cumulative impacts. Like the Project, future development projects would be required to comply with applicable state and local building regulations, including the most recent CBC. Site-specific geologic hazards would be addressed in each project's geotechnical investigation. Although the rezoning of the dwelling units to the SB330 Replacement Site would allow for the development of additional housing units, these developments are not necessitated or proposed by the Project. Further, future developments would be required to comply with environmental analysis and review. Therefore, no significant cumulative impact would occur.

Additionally, other projects in the area would involve ground disturbance and could damage paleontological resources that could be buried in those project sites. As with the Project, other projects would require site specific paleontological analysis that could lead to mitigation requiring monitoring and recovery, identification, and curation of any resources discovered. Cumulative impacts to paleontological resources would be less than significant, and Project contribution would not be cumulatively considerable. (Draft EIR, p. 4.5-23.)

8. GREENHOUSE GAS EMISSIONS

Project-related GHG emissions are not confined to a particular air basin but are dispersed worldwide. Therefore, impacts are not Project-specific impacts, but the proposed Project's contribution to cumulative GHG impact. Incorporation of mitigation would contribute in minimizing emissions, although implementation of the proposed Project would still result in net annual emissions that exceed the GHG emissions significance threshold of 3,000 MTCO2e/yr under the City's CAP. Therefore, Project-related GHG emissions and their contribution to global climate change would be cumulatively considerable, and GHG emissions impacts would be significant. (Draft EIR, p. 4.6-39.)

9. HAZARDS AND HAZARDOUS MATERIALS

The area considered for cumulative impacts is the City of Ontario and related projects. Hazards and hazardous waste impacts are typically unique to each site and do not usually contribute to cumulative impacts. Cumulative development projects would be required to assess potential hazardous materials impacts on the development site prior to grading. The Project and other cumulative projects would be required to comply with laws and regulations governing hazardous materials and hazardous wastes used and generated

as described previously. Therefore, cumulative impacts related to hazards and hazardous materials would be less than significant after regulatory compliance.

The areas considered for cumulative airport-related hazards impacts are the AIAs of the ONT and Chino airports. Some Projects may be proposed within the safety compatibility zones of the ONT and Chino AIAs, and thus could expose the nearby population to potential hazards such as aircraft crashes. Airport land use planning agencies for the ONT and Chino airports regulate development within their safety compatibility zones. Projects proposed within safety compatibility zones would be required to comply with each safety zone's respective land use regulations set forth by the affected agencies. After regulatory compliance, cumulative impacts would be less than significant. (Draft EIR, p. 4.7-29.)

10. HYDROLOGY AND WATER QUALITY

Hydrology and Drainage

Cumulative projects within the Chino Creek Watershed would increase impervious areas and increase stormwater runoff rates. However, all projects within the watershed would be required to comply with all regulative framework and prepare and implement WQMPs that include provisions for the capture and infiltration of runoff or the temporary detention of stormwater runoff in HCOC areas so that post-development runoff discharges do not exceed pre-development runoff rates, in accordance with the NPDES MS4 permit. Thus, no significant cumulative drainage impacts would occur, and Project drainage impacts would not be cumulatively considerable.

Water Quality

Cumulative projects have the ability to generate pollutants during project construction and operation. All construction projects that disturb one acre or more of land would be required to prepare and implement SWPPPs in order to obtain coverage under the statewide GCP. All projects within the watershed would also be required to prepare and implement WQMPs specifying BMPs, including LID measures, that would be applied during project design and project operation to minimize water pollution from project operation. Furthermore, all future development would be required to comply with applicable local, state and federal requirements, as part of the City's discretionary review process. This includes compliance with the City's municipal code, which specifically addresses water quality (Municipal Code Article 5, Construction Requirements). Thus, no significant cumulative water quality impacts would occur, and project water quality impacts would not be cumulatively considerable. (Draft EIR, p. 4.8-29.)

11. LAND USE AND PLANNING

The geographic context for this cumulative analysis includes the City in relation to the City's General Plan. Cumulative development would result in substantial changes to existing land use patterns through conversion of agricultural and dairy lands into urban uses pursuant to the General Plan land use designations. Cumulative development would also be subject to site-specific environmental and planning reviews that would address consistency with adopted General Plan goals, objectives, and policies, as well as with the City's Development Code and Airport Land Use Compatibility Plan policies. As part of environmental review, projects would be required to provide mitigation for any inconsistencies with the General Plan and environmental policies that would result in adverse physical environmental effects. The cumulative projects as a whole would result

in a more intensely developed built environment than currently exists, as it currently exists as an underutilized portion of land and would be required to be consistent with local General Plan policies.

As explained below, the Project would eliminate the low-moderate density housing designation, thereby theoretically eliminating 1,352 units (as determined by the City's density determinations to be 8.5 units per acre). The calculation is based on 159.04 acres of low/medium density residential land with the Specific Plan area. Although the Project would remove the authorization for 1,352 low-medium density residential units at a density of 8.5 dwelling units per acre, an affected city may change a land use designation if there is a concurrent change to development standards applicable to other parcels within the city so that there is no net loss of residential capacity. Here, the Project would include a concurrent General Plan Amendment and Zone Change to increase density elsewhere in the City to achieve no net loss of unit capacity per SB330. This would account for the loss of the potential for residential development on the Project site and conform to the requirements of SB330. The provision of replacement housing potential in the SB330 Replacement Site was found to create no inconsistencies with existing land use programs or regulations. The SB330 Replacement Site was also not identified as an existing community and would therefore not experience a separation through the implementation of the SB330 Replacement Site.

Cumulative projects could include General Plan amendments and/or zone changes, modifications to existing land uses. However, such amendments do not necessarily represent an inherent negative effect on the environment, particularly if the proposed changes involve changes in types and intensity of uses, rather than eliminating application of policies that were specifically adopted for the purpose of avoiding or mitigating environmental effects. Past and present cumulative projects do not involve amendments that would eliminate application of policies that were adopted for the purpose of avoiding or mitigating environmental effects. Determining whether any future project might include such amendments and determining the cumulative effects of any such amendments would be speculative since it cannot be known what applications that are not currently filed might request. Thus, it is expected that the land uses of cumulative projects would be consistent with policies that avoid an environmental effect; therefore, cumulatively considerable impacts from cumulative projects related to policy consistency would be less than significant. (Draft EIR, pp. 4.9-29 through 4.9-30.)

12. MINERAL RESOURCES

The Project site and SB330 Replacement Site are within the City and its Sphere of Influence is designated Mineral Resource Zones (MRZ)-3, which is defined as areas where the significance of mineral deposits cannot be determined from available data. Only areas in the far north of the City have been designated as areas where significant mineral deposits are present or there is a likelihood of their presence, and development should be controlled. Therefore, the development of the Project site would not result in the loss of availability of known mineral resources or locally important mineral resource recovery sites. (Draft EIR, p. 7-7.) No cumulative impact would occur.

13. NOISE

Construction Noise

Project-related construction activities would not result in a substantial temporary increase in ambient noise levels. Construction noise impacts would be periodic and temporary and

would cease upon completion of construction activities. The Project would contribute to other proximate construction Project noise impacts if construction activities were conducted concurrently. However, based on the noise analysis above, the Project's construction-related noise impacts would be less than significant.

Construction activities at other planned and approved projects near the Project site would be required to comply with applicable City rules related to noise. Activities would take place during daytime hours on the days permitted by the applicable Municipal Code, and projects requiring discretionary City approvals would be required to evaluate construction noise impacts, comply with the City's standard conditions of approval, and implement mitigation, if necessary, to minimize noise impacts. Construction noise impacts are by nature localized. Based on the fact that noise dissipates as it travels away from its source, noise impacts would be limited to the Project site and immediate vicinity. Therefore, Project construction would not result in a cumulatively considerable contribution to significant cumulative impacts, assuming such a cumulative impact existed, and impacts in this regard would not be cumulatively considerable.

Operational Noise

Cumulative Off-Site Traffic Noise

Cumulative noise impacts describe how much noise levels are projected to increase over existing conditions with the development of the proposed Project and other foreseeable projects. Cumulative noise impacts would occur primarily as a result of increased traffic on local roadways due to buildout of the Project and other projects in the vicinity. Cumulative increases in traffic noise levels were estimated by comparing the Existing and Future Without Project scenarios to the Future Plus Project scenario. The traffic analysis considers cumulative traffic from future growth assumed in the transportation model, as well as cumulative projects.

A project's contribution to a cumulative traffic noise increase would be considered significant when the combined effect exceeds perception level (i.e., auditory level increase) threshold. The following criteria is used to evaluate the combined and incremental effects of the cumulative noise increase.

- **Combined Effect**. The cumulative with Project noise level ("Cumulative With Project") would cause a significant cumulative impact if a 3.0 dB increase over "Existing" conditions occurs and the resulting noise level exceeds the applicable exterior standard at a sensitive use. Although there may be a significant noise increase due to the proposed Project in combination with other related projects (combined effects), it must also be demonstrated that the Project has an incremental effect. In other words, a significant portion of the noise increase must be due to the proposed Project.
- **Incremental Effects**. The "Cumulative With Project" causes a 1.0 dBA increase in noise over the "Cumulative Without Project" noise level.

A significant impact would result only if both the combined and incremental effects criteria have been exceeded. Noise by definition is a localized phenomenon and reduces as distance from the source increases. Consequently, only the proposed Project and growth due to occur in the general area would contribute to cumulative noise impacts.

Table 4.10-17, Cumulative Plus Project Conditions Predicted Traffic Noise Levels – Project Buildout of the DEIR, identifies the traffic noise effects along roadway segments in the Project vicinity for "Existing," "Cumulative Without Project," and "Cumulative With Project," conditions, including incremental and net cumulative impacts.

A significant cumulative traffic noise increase would be identified if project traffic were calculated to contribute more than 1 dBA under Cumulative Plus Project conditions to a significant traffic noise increase over existing conditions. That is, if a cumulative traffic noise increase of greater than the 3 dBA significance threshold of perceptibility is calculated, and the relative contribution from project traffic is calculated to contribute more than 1 dBA to this cumulative impact, it would be considered cumulatively considerable. As shown in Table 4.10-17 of the DEIR, one roadway segment (Eucalyptus Avenue between Bon View Avenue and Grove Avenue) would experience a cumulative traffic noise increase greater than 3 dBA and would also exceed the 1 dBA incremental increase threshold. However, this area is designated in the TOP as medium density residential and has a normally acceptable noise compatibility level between 60 to 65 CNEL. As shown in Table 4.10-17 of the DEIR, future traffic noise with project at Eucalyptus Avenue, between Bon View Avenue and Grove Avenue, would reach 62.8 CNEL and is within the normally acceptable range. Standard construction attenuates exterior to interior noise by approximately 25 dBA , which would reduce interior noise levels to 37.8 dBA, below the 45 dBA interior noise standard. Additionally, based on TOP requirements, future residential development in an area with normally acceptable noise levels are required to include air conditioning, this which is already required by current building code. Therefore the cumulative traffic noise at this roadway segment would be less than significant.

The proposed Project's contribution to noise levels would not be cumulatively considerable.

Cumulative Stationary Noise

Stationary noise sources associated with the Project would result in an incremental increase in non-transportation noise sources in the Project vicinity. However, as discussed above, operational noise caused by the Project would be less than significant. Additionally, due to Project site's distance to sensitive receptors, cumulative stationary noise impacts would not occur. Similar to the proposed Project, other planned and approved projects would be required to mitigate for stationary noise impacts at nearby sensitive receptors, if necessary. As stationary noise sources are generally localized, there would be a limited potential for other projects to contribute to cumulative noise impacts.

No known past, present, or reasonably foreseeable projects would combine with the operational noise levels generated by the Project to increase noise levels above acceptable standards because each project must comply with applicable City regulations that limit operational noise. Therefore, the Project, together with other projects, would not create a significant cumulative impact.

Given that noise dissipates as it travels away from its source, operational noise impacts from on-site activities and other stationary sources would be limited to the Project site and the immediate vicinity. Thus, cumulative operational noise impacts from related projects, in conjunction with Project-specific noise impacts, would not be cumulatively significant. (Draft EIR, pp. 4.10-32 through 4.10-36.

14. POPULATION AND HOUSING

The area considered for cumulative impacts is the County of San Bernardino. Impacts are analyzed using General Plan projections in SCAG's 2020-2045 RTP/SCS Growth Forecast. Development of the Project in conjunction with the related cumulative project list in Table 4-1, Related Approved and Pending Projects in Section 4.0 of the DEIR, would not result in cumulative citywide population and/or housing impacts, as business park projects would further improve the jobs-housing balance in the region. This would encourage alignment with objectives set by SCAG's RTP/SCS as it would increase job opportunity in an area that is predominantly residential. Furthermore, the Project would be consistent with the goals set forth in TOP by providing long-term employment opportunities associated with the buildout of the Business Park and Industrial uses on site. Related projects would be reviewed by the City, and development would be required to be consistent with adopted state and City development standards, regulations, plans, and policies to minimize the effect of the increase in population on physical impacts on the environment. Additionally, the indirect effect of Project employment on housing and population growth in the City has been anticipated in TOP, and therefore in regional housing and population forecasts. As such, the Project would not contribute to cumulatively adverse growth impacts. Upon approval, the Project would improve the jobs-housing balance in the County of San Bernardino which is notably considered a housing-rich area. Therefore, the Project combined with related projects would not result in cumulatively considerable impacts to population and housing as no substantial new unplanned growth would occur. (Draft EIR, p. 4.11-14.)

15. PUBLIC SERVICES

Fire Project Services

The cumulative study area for fire protection services is the City of Ontario. Future development projects are anticipated to occur throughout the City, specifically in the Ontario Ranch area, including the proposed Project. As indicated in the City's TOP, development of the Ontario Ranch Area would generate a proportional increase in demand for additional fire protection and emergency medical services. The City is in the process of constructing two new fire stations with one proposed in the Ontario Ranch Area that would help accommodate cumulative increases to fire protection services in the southern portion of the City including the Project area.

Implementation of the Project would increase the demand for fire protection services through the incorporation of additional people on-site in addition to the cumulative development of projects within the City. Thus, a periodic review process would ensure that adequate service would be maintained throughout the City and would add staffing and equipment as necessary. The OFD can presently serve the Project site without the need for additional fire facilities with payment of Development Impact fees. In addition, the Project would result in a transfer of residential unit capacity from the Project site to the SB330 Replacement Site designated along the Grove Avenue Corridor. Thus, the Project would not result in an overall net increase in City population and is likely in fact to result in a slight reduction in overall City population due to higher density residential development tending to have fewer occupants per dwelling unit.

Since the Project would be consistent with the buildout assumptions of the TOP and other applicable plans and regulations, payment of fees, and transfer of residential units capacity to the SB330 Replacement Site, implementation of the Project would not result

in a cumulatively considerable increase in the need for fire and emergency response facilities or personnel.

Police Project Services

Similarly, future development projects are anticipated to occur within the City. This overall development would generate a proportional increase in calls for police services. All future cumulative projects would be reviewed by OPD staff prior to issuance of any development permit to ensure adequate security measures are provided for each site-specific development in the City, including this Project. It is anticipated that future development would result in the need of additional sworn officers and equipment, but with payment of fees, implementation of the Project would not create a cumulatively considerable need for new or expanded police stations. Therefore, cumulative impacts associated with the implementation of the Project would be less than significant.

Schools, Parks, and Other Public Services

The Project is not anticipated to cumulatively increase the need for school, park, and other public services in the City. The anticipated increase demands for public services for schools, parks, and other public services within the City was accounted for in the City's General Plan and analyzed in TOP EIR, which accounts for the cumulative growth in the City. In addition, cumulative development projects would pay the required development fees that would be appropriately allocated, in this case, to schools and parks. In addition, the TOP concluded that additional library services would not be required with buildout of the TOP. Therefore, cumulative impacts associated with schools, parks, and other public services from the Project would be less than cumulatively significant. (Draft EIR, pp. 4.12-15 through 4.12-16.)

16. RECREATION

The Project site would be developed with an industrial use, and no new residents or housing would be introduced to the area. Buildout of the Project would not directly induce population growth or increase demand on parks and recreational resources, and therefore impacts would be less than significant. There will be a slight increase in residential density as a result of the SB330 Replacement Site, but it is not anticipated to require construction of additional recreational facilities to serve the SB330 Replacement Site beyond that envisioned in the City's TOP EIR. Furthermore, any future development, such as the Project, would be required to comply with the City's standard discretionary review process, including provision of adequate on-site recreational amenities, as well as payment of applicable DIF fees to offset impacts to recreational facilities. (See Draft EIR, pp. 7-7 through 7-8.) Thus, no cumulative impacts would occur.

17. TRANSPORTATION

Cumulative traffic impacts are addressed in the Project Traffic Analysis (Appendix I1 of the DEIR). The Project's contribution to operational level of service deficiencies would be fully addressed through implementing the recommended measures and providing construction or funding for the identified improvements (note that operational level of service is no longer a significant impact under CEQA per SB743). There were no other LOS cumulative effects identified or cumulatively considerable contributions to significant cumulative impacts for the Project. The project's VMT analysis (Appendix I2 of the DEIR) provides an analysis of the Project's cumulative impacts on VMT. Cumulative analysis is based on the Project's effect on VMT using total VMT within the City (boundary method).

The VMT analysis concludes that Citywide VMT increases with the Project resulting in a significant and unavoidable cumulative VMT impact. Even with implementation of reasonable and feasible VMT reduction measures (per **MM TRANS-1**), the VMT analysis concludes that Citywide VMT increases from the Project will result in a significant and unavoidable cumulative VMT impact. (Draft EIR, p. 4.13-33.)

18. TRIBAL CULTURAL RESOURCES

Cumulative impacts to TCRs would occur when the impacts of the Project, in conjunction with other projects and development in the region, result in multiple and/or cumulative impacts to TCRs in the area. No previously recorded fossil localities are located within one-mile radius of the Project area, and no sacred sites are documented within the Project site. Since completion of the cultural resources report, additional archaeological resources were found at two locations near the Project site. Therefore, it is possible that buried prehistoric artifacts or TCRs could be present within the area. The proposed Project includes mitigation to ensure proper identification, treatment, and preservation of TCRs. Implementation of these measures would reduce the potential for the Project's adverse impacts on TCRs. Each future project considered for approval by the City would be required to include mitigation measures to protect resources if they are uncovered during grading activities. The Project would not combine with other projects in the region to create a cumulative impact to TCRs. Therefore, cumulative impacts to TCRs would be less than significant. (Draft EIR, pp. 4.14-14 through 4.14-15.)

19. UTILITIES AND SERVICE SYSTEMS

Wastewater Treatment

The area considered for cumulative impacts to wastewater treatment is IEUA's RP-5 service area. The area considered for cumulative impacts to wastewater conveyance systems is the OR area. Future growth in the OR, in accordance with the Ontario Plan, would result in increases in wastewater flow. These include increases in residential, commercial, and industrial effluent. Expansion and/or capacity upgrades to the existing sewer collection lines would be required due to the change in land use in the OR. The Sewer Master Plan projects daily wastewater generation in line with land use changes associated with the Ontario Plan. The sewer master plan presents preliminary sizes, alignments and construction cost estimates needed to mitigate existing drainage deficiencies and support future build-out conditions (AKM 2012a). Sewer collection system expansions would be based on the Sewer Master Plan and would be constructed with development in the OR. Through the use of connection fees and agreements, the IEUA is able to maintain and expand its wastewater collection system as necessary and is able to ensure that new developments pay their fair-share costs associated with increased demand. Therefore, there would be no significant cumulative impacts on wastewater collection.

The City wastewater effluent in the OR is directed mainly to RP-5. The 2035 projected quantities of wastewater that need to be treated at RP-5 is 18.4 mgd, an increase of 9.4 mgd from current production rates (IEUA 2018). The 20-year IEUA's CIP includes expanding the capacity of RP-5 to 22.5 mgd. The CIP also developed a capacity fee charged to new development to fund the needed capacity. Furthermore, IEUA annually prepares a wastewater treatment master plan and flow projections for all its contracting agencies, including Ontario. The IEUA improvement plan is sequenced considering the rate of development to ensure adequate treatment capacity exists at time of building

permits but is phased to eliminate premature construction of unneeded capacity. Assuming the proposed plant expansions would be completed prior to increased urban development and the treatment of water at these plants would continue to meet the water quality standards of the Santa Ana RWQCB, there would be no significant cumulative impacts on wastewater treatment. (Draft EIR, p. 4.15-8.)

Water Supply

The area considered for cumulative water supply impacts is the City of Ontario. Other projects in the service area would increase water demands. The City forecasts that it will have sufficient water supplies in its service area over the 2020 to 2040 period (see "Water Demand" under Impact 4.15-3). Other projects of certain sizes and types would be required to have water supply assessments prepared to show reliability of water supplies for the project, considering normal, single dry, and multiple dry years over a 20-year horizon. Cumulative impacts would be less than significant, and project impacts would not be cumulatively considerable. (Draft EIR, p. 4.15-21.)

Storm Water Drainage Facilities

Cumulative projects in the Santa Ana River basin hydrologic units could increase impervious areas and thus increase local runoff rates at those project sites. However, other projects in the region would be required to capture and infiltrate runoff, and many other projects in the region would be required to limit post-development runoff discharges to no greater than pre-development runoff rates, in accordance with the NPDES MS4 permit. Thus, no significant cumulative drainage impact would occur, and project drainage impacts would not be cumulatively considerable. (Draft EIR, p. 4.15-23.)

Solid Waste

The area considered for cumulative impacts is the area serviced by the Badlands and the El Sobrante landfills. Collectively, Badlands and El Sobrante landfills have a remaining disposal capacity of approximately 160 million cubic yards and El Sobrante landfill has a disposal capacity beyond the 15-year horizon, as required by AB 939. Thus, there is sufficient landfill capacity in the region for the cumulative increase in solid waste disposal. Cumulative impacts would be less than significant, and project impacts would not be cumulatively considerable. (Draft EIR, p. 4.15-29.)

20. WILDFIRE

The project site is not within Very High FHSZ zone and is within a Local Responsibility Areas (LRA) zone. (Draft EIR, p. 7-9.) Cumulative projects near the project site would also be located within LRA zone, and therefore no impact would occur. Moreover, future projects, such as this project, would be required to comply with applicable local and state requirements, including applicable provisions of the City's Municipal Code related to fire safety and emergency access. (See Draft EIR, p. 7-9.) The project would not result in significant wildfire hazard impacts following conformance with applicable local and state requirements. (Draft EIR, p. 7-9.) Thus, cumulative impacts would be less than significant.

G. ALTERNATIVES TO THE PROPOSED PROJECT

The City Council hereby declares that it has considered and rejected as infeasible the alternatives identified in the EIR and described below. Section 15126.6 of the State CEQA Guidelines requires an EIR to describe a range of reasonable alternatives to the Project,

or to the location of the Project, which could feasibly achieve most of its basic objectives, but would avoid or substantially lessen any of the significant effects identified in the EIR analysis. An EIR is not required to consider every conceivable alternative to a proposed project. Rather, an EIR must consider a reasonable range of alternatives that are potentially feasible; an EIR is not required to consider alternatives that are infeasible. In addition, an EIR should evaluate the comparative merits of the alternatives. Therefore, this section sets forth the potential alternatives to the Project analyzed in the EIR and evaluates them in light of the objectives of the Project, as required by CEQA.

Key provisions of the State CEQA Guidelines relating to the alternatives' analysis (§ 15126.6 et seq.) are summarized below (DEIR at pp. 5-1 through 5-2.):

- [T]he discussion of alternatives shall focus on alternatives to the Project or its location which are capable of avoiding or substantially lessening any significant effects of the Project, even if these alternatives would impede to some degree the attainment of the Project objectives or would be more costly." (§ 15126.6[b]).
- "The specific alternative of 'no project' shall also be evaluated along with its impact." (§ 15126.6[e][1])
- "The no project analysis shall discuss the existing conditions at the time the notice of preparation is published, or if no notice of preparation is published, at the time environmental analysis is commenced, as well as what would be reasonably expected to occur in the foreseeable future if the project were not approved, based on current plans and consistent with available infrastructure and community services. If the environmentally superior alternative is the 'no project' alternative, the EIR shall also identify an environmentally superior alternative among the other alternatives." (§ 15126.6[e][2])
- "The range of alternatives required in an EIR is governed by a 'rule of reason' that requires the EIR to set forth only those alternatives necessary to permit a reasoned choice. The alternatives shall be limited to ones that would avoid or substantially lessen any of the significant effects of the project." (§ 15126.6[f])
- "Among the factors that may be taken into account when addressing the feasibility of alternatives are site suitability, economic viability, availability of infrastructure, general plan consistency, other plans or regulatory limitations, jurisdictional boundaries…, and whether the proponent can reasonably acquire, control or otherwise have access to the alternative site (or the site is already owned by the proponent)" (§ 15126.6[f][1]).
- "Only locations that would avoid or substantially lessen any of the significant effects of the project need be considered for inclusion in the EIR." (§ 15126.6[f][2][A])
- "An EIR need not consider an alternative whose effect cannot be reasonably ascertained and whose implementation is remote and speculative." (§ 15126.6[f][3])

1. RATIONALE FOR SELECTING POTENTIALLY FEASIBLE ALTERNATIVES

The alternatives must include a no-project alternative and a range of reasonable alternatives to the Project if those reasonable alternatives would attain most of the Project

objectives while substantially lessening the potentially significant Project impacts. The range of alternatives discussed in an EIR is governed by a "rule of reason," which the State CEQA Guidelines § 15126.6(f)(3) defines as:

> . . . set[ting] forth only those alternatives necessary to permit a reasoned choice. The alternatives shall be limited to ones that would avoid or substantially lessen any of the significant effects of the project. Of those alternatives, the EIR need examine in detail only the ones that the lead agency determines could feasibly attain most of the basic objectives of the project. The range of feasible alternatives shall be selected and discussed in a manner to foster meaningful public participation and informed decision-making.

Among the factors that may be taken into account when addressing the feasibility of alternatives (as described in the State CEQA Guidelines § 15126.6(f)([1]) are environmental impacts, site suitability, economic viability, availability of infrastructure, general plan consistency, other plans or regulatory limitations, jurisdictional boundaries, and whether the Project proponent could reasonably acquire, control, or otherwise have access to an alternative site. An EIR need not consider an alternative whose effects could not be reasonably identified, and whose implementation is remote or speculative.

For purposes of this analysis, the Project alternatives are evaluated to determine the extent to which they attain the basic Project objectives, while significantly lessening any significant effects of the Project.

2. ALTERNATIVES CONSIDERED AND REJECTED DURING THE SCOPING/PROJECT PLANNING PROCESS

Section 15126.6(c) of the State CEQA Guidelines specifies that an EIR should (1) identify alternatives that were considered by the lead agency but were eliminated from detailed consideration because they were determined to be infeasible during the scoping process; and (2) briefly explain the reasons underlying the lead agency's determination. Among the factors that may be used to eliminate alternatives from detailed consideration in an EIR are: (i) failure to meet most of the basic project objectives; (ii) infeasibility; and/or (iii) inability to avoid significant environmental impacts.

The following is a discussion of the land use alternative considered during the scoping and planning process and the reasons why it was not selected for detailed analysis in the EIR.

a. Alternative Site

CEQA requires that the discussion of alternatives focus on alternatives to the project or its location that are capable of avoiding or substantially lessening any significant effects of the project. The key question and first step in the analysis is whether any of the significant effects of the project would be avoided or substantially lessened by putting the project in another location. Only locations that would avoid or substantially lessen any of the significant effects of the project need be considered for inclusion in the EIR (State CEQA Guidelines § 15126[5][B][1]). In addition, an alternative site need not be considered when implementation is "remote and speculative," such as when the alternative site is beyond the control of a project applicant.

There are no suitable alternative sites within the control of the Project applicant. In the event land could be purchased of suitable size and developmental characteristics, based on the known general conditions in the southern portion of the City, an alternative site would likely have similar impacts after mitigation as the Project. Given the size and nature of the Project and the Project objectives, it would be impractical and infeasible to propose the Project on an alternate site in the area with fewer environmental impacts.

Additionally, other land in the vicinity of the Project site or within the southern portion of the City are similarly used for agricultural purposes and include agricultural soils. The loss of prime farmland would still occur with an alternative site. Given the size and type of the proposed development, a similarly sized project and use elsewhere in the SCAB would result in the same project-level and cumulative air quality and GHG emission impacts. VMT is not likely to be changed by a different location of the Project. Also, an alternative site would have similar traffic impacts in other jurisdictions that would be significant and unavoidable because the City cannot guarantee implementation of improvements outside of its jurisdiction. Therefore, analysis of an alternative site for the proposed 5,333,518 square feet of warehouse and office uses is neither meaningful nor necessary, because the significant impacts resulting from the Project would not be avoided or substantially lessened by its implementation. (Draft EIR, pp. 5-4 through 5.5)

Finding: The City Council rejects the Alternative Site alternative, on the following grounds, each of which individually provides sufficient justification for rejection of this alternative: (1) the alternative does not avoid any significant and unavoidable impacts, (2) the alternative would likely not further reduce any of the proposed project's significant impacts; and (3) the alternatives are technically, financially, and legally infeasible given that there are no suitable alternative sites within the control of the Project applicant. Therefore, the Alternative Site alternative is eliminated from further consideration.

3. ALTERNATIVES SELECTED FOR FURTHER ANALYSIS

Based on the Project objectives listed above in Section II, F, the following three alternatives have been determined to represent a reasonable range of alternatives which have the potential to feasibly attain most of the basic objectives of the Project, but which may avoid or substantially lessen any of the significant effects of the Project. These alternatives are analyzed in detail in the following sections.

- **Alternative 1: No Project/No Build Alternative**
- **Alternative 2: No Project/Existing General Plan Alternative**
- **Alternative 3: Reduced Intensity Alternative**

a. Alternative 1: No Project/No Build Alternative

Description: State CEQA Guidelines § 15126.6(e) of the State CEQA Guidelines requires analysis of the No Project Alternative. In accordance with the State CEQA Guidelines, the No Project/No Build Alternative for a development project on an identifiable property consists of the circumstance under which the Project does not proceed as provided by State CEQA Guidelines § 15126.6(e)(3)(B). Section 15126.6(e)(3)(B) provides that, "In certain instances, the no project alternative means 'no build' wherein the existing environmental setting is maintained." Under this alternative, the Project would not be developed, and no new development would occur, however,

the existing conditions would remain in operation. An SB330 site would not be required under this alternative.

The Project site contains an operational dairy farm, single-family residential structures, dairy barns, a storage structure, feed storage barns, and numerous livestock corrals. The dairy, structures, and single-family residential uses would remain. Accordingly, the No Project/No Build Alternative provides a comparison between the environmental impacts of the Project as compared to the current environmental conditions, resulting from not approving or denying the Project. (Draft EIR, p. 5-5.)

Impacts: **Agriculture and Forestry Resources**

The No Project/No Build Alternative would continue the existing dairy uses on the Project site. Implementation of the No Project/No Build Alternative would avoid the significant and unavoidable impacts to agricultural resources that would occur from implementation of the proposed Project and impacts would be reduced compared to the proposed Project.

Air Quality

Under the No Project/No Build Alternative, no new development would occur, and no construction or demolition activities and related emissions would occur. In addition, by maintaining existing dairy and residential uses throughout the Project area, an increase in traffic operational related air emissions would not occur. Therefore, overall air quality impacts would be reduced, and the significant and unavoidable construction-related nitrogen oxides (NOx) and operational-related volatile organic compounds (VOC) and NOx emission impacts would be eliminated. Further, this alternative would remain consistent with the Air Quality Management Plan (AQMP). No impacts related to air quality would occur by the No Project/No Build Alternative and impacts would be reduced compared to the proposed Project.

Biological Resources

The No Project/No Build Alternative would continue the existing agriculture and residential uses on the Project site. No grading or development would occur under this alternative and there would be no potential impacts to sensitive wildlife species, and migratory and nesting birds that may be present on the Project site. Therefore, the No Project/No Build Alternative would avoid all on and off-site disturbances and impacts to biological resources would not occur. Therefore, impacts under this alternative would be reduced compared to the proposed Project.

Cultural Resources

The No Project/No Build Alternative would continue the existing agriculture and residential uses on the Project site. No grading or development would occur under this alternative and there would be no potential impacts to subsurface archaeological resources that may exist beneath the ground surface. Although no impacts to historical resources would occur under the

proposed Project, this alternative would reduce impacts to archaeological resources compared to the proposed Project.

Geology and Soils

No new construction activities, including demolition and grading, would occur under the No Project/No Build Alternative. Therefore, there would be no potential for additional workers, building and structures to experience seismic ground shaking, liquefaction, lateral spreading, subsidence, or collapse within the Specific Plan area. However, the buildings and structures that exist on the Project site were built before current seismic safety codes; therefore, this alternative, by retaining older buildings and structures, could expose some people to greater hazards from strong ground shaking than the proposed Project. Additionally, the proposed Project's impacts to geology and soils were determined to be less than significant. This alternative would not result in impacts to paleontological resources since no grading would occur. Overall, the geologic hazard impacts from this alternative would be less than significant, and slightly less in comparison to the proposed Project.

Greenhouse Gas Emissions

Under the No Project/No Build Alternative, no new development would occur, and no construction, demolition, or operational activities would generate GHG emissions. This alternative would not increase GHG emissions by 71,088 MTCO2e, unlike the proposed Project. Therefore, the No Project/No Build Alternative would not exceed the SCAQMD bright line threshold.

Hazards and Hazardous Materials

Because no development would occur under the No Project/No Build Alternative, no impacts related to hazards or hazardous materials would occur. The dairy farming uses on the property would remain in place on-site. Although this alternative would avoid the Project's potential effects related to hazards and hazardous materials, no cleanup of contaminated soils that exist on the property would occur as a result of the property's redevelopment. Remediation of on-site contamination is a benefit of the proposed Project that would not be realized under this alternative. Therefore, hazard impacts would be greater compared to the proposed Project.

Hydrology and Water Quality

Existing water quality conditions, groundwater supplies, drainage patterns, and runoff water amounts would remain "as is" under this alternative because no new development would occur. This alternative would not introduce new sources of water pollutants from either the construction or operation phases of development to the Project site, because no new development would occur. Additionally, this alternative would not require off-site storm drain facility improvements required by the proposed Project. However, this alternative would not include installation of new low-impact development (LID), source control, site design, and treatment control best management practices (BMPs) to minimize runoff and water pollution,

which would occur under the proposed Project. The storm water leaving the site would not be filtered and would continue to contain sediment and other potential pollutants associated with the dairy, agricultural, and residential uses. The beneficial water quality improvements that would occur under the proposed Project would not occur and impacts would be greater compared to the proposed Project.

Land Use and Planning

The No Project/No Build Alternative would continue the existing agriculture and residential uses, and the City's existing Policy Plan land use and zoning designations for the Project site would remain unchanged. The Project site is located within an Agricultural Overlay Zoning District, which provides for agricultural uses within the City, until such time that urban development consistent with the Policy Plan occurs. The operation of the existing on-site dairy operation is consistent with this ordinance. Therefore, like the proposed Project, the No Project/No Build Alternative would result in a less than significant impact and would be similar in comparison to the proposed Project.

Noise

The No Project/No Build Alternative would not result in construction and, therefore, would not generate any noise associated with construction. Mobile-source and stationary noise volumes would be lower under this alternative compared to the proposed Project, given the lack of urban development and associated vehicular traffic noise; noise from industrial warehousing uses; heating, ventilation, and air conditioning (HVAC) equipment; and other noise sources. Therefore, impacts would be less than significant and reduced compared to the proposed Project.

Population and Housing

Employment growth would not occur under the No Project/No Build Alternative because no new businesses, or other infrastructure would be constructed. Employees on the Project site would remain as is under this alternative, resulting in no impact to population and housing. However, the proposed Project was determined to be within the growth projections for the area and impacts to population and housing were determined to be less than significant. Therefore, population and housing impacts would be less than significant and similar to the proposed Project.

Public Services

The existing number of residents and workers on the Project site would remain under the No Project/No Build Alternative. Therefore, there would be no increase in demand for fire or police services. Although the proposed Project's impacts related to fire and police services were determined to be less than significant, the public services impacts would be slightly reduced under this alternative compared to the proposed Project.

Transportation

Under this alternative, no new employees or industrial warehouse uses would be introduced on the Project site. The existing daily trips would remain at current conditions and all roadway segments and intersections would maintain existing levels of service (LOS) and vehicle miles travelled (VMT). Therefore, impacts would be reduced to a less than significant level under this alternative and the significant and unavoidable traffic impacts that are anticipated to occur from the proposed Project would be eliminated. Impacts under this alternative would be reduced compared to the proposed Project.

Tribal Cultural Resources

The No Project/No Build Alternative would continue the existing agriculture and residential uses on the Project site. No grading or development would occur under this alternative and there would be no potential impacts to subsurface tribal cultural resources that may exist beneath the ground surface. Therefore, the No Project/No Build Alternative would avoid site disturbances on the Project site and the Project's potential impacts to tribal cultural resources would not occur. Impacts under this alternative would be reduced compared to the proposed Project.

Utilities and Service Systems

Because no new development and employee increases would occur under the No Project/No Build Alternative, the existing on-site water well and septic systems would continue to be used, and no water or wastewater infrastructure would be constructed. No additional demand for regional water supplies would occur, and no additional wastewater would be conveyed to the regional wastewater treatment facilities. Therefore, the impacts related to water supplies and wastewater would be reduced compared to the Project and less than significant.

Similarly, no additional drainage infrastructure would be developed by the No Project/No Build Alternative, and runoff in the Project area would remain in its current condition and would not connect to or require capacity in the regional storm water system. Solid waste generation would remain the same as existing conditions and increases in solid waste generation would not occur with the No Project/No Build Alternative. Therefore, impacts to utilities and service systems would be reduced compared to the proposed Project and less than significant impact. (Draft EIR, pp. 5-5 through 5-9.)

Attainment of Project Objectives**: Ability to Reduce Impacts**

The No Project/No Build Alternative would eliminate the significant and unavoidable impacts related to agriculture, air quality, greenhouse gas emissions, and traffic that would occur from implementation of the proposed Project. This alternative would also reduce impacts related to biological resources, cultural resources, geology and soils, noise, public services, tribal cultural resources, and utility and service systems. Impacts related to hazards and hazardous materials and hydrology and water quality would be greater under this alternative; impacts to population and housing and land use would be similar compared to the proposed Project.

Ability to Achieve Project Objectives

Implementation of the No Project/No Build Alternative means that new development is assumed to not occur on the Project site, and none of the Project objectives would be achieved under this alternative. The No Project/No Build Alternative would not create a professional, well-maintained and attractive environment for the development of a multi-purpose business park, industrial and warehousing/office space complex (Objective 1); provide the entitlements and framework for the development of approximately 5.4 million square feet of business park and industrial general (Objective 2); provide employment opportunities for community residents (Objective 3); facilitate the construction of utilities, roads, and other major infrastructure investments that will be sufficiently sized to adequately serve the Specific Plan area (Objective 4); expand the City's industrial uses in proximity to local airports and regional transportation networks (Objective 5); nor would it create an economic engine to drive future growth in the Project area, spur infrastructure improvements in the area and implement the Specific Plan vision (Objective 6). (Draft EIR, p. 5-9.)

Finding: The City Council rejects Alternative 1: No Project/No Build Alternative, on the following grounds, each of which individually provides sufficient justification for rejection of this alternative: (1) the alternative fails to meet any of the Project objectives and would not provide any of the Project benefits that would occur with the implementation of the proposed Project, including creating a professional, well-maintained and attractive environment for development; and (2) the alternative would result in increased impacts relating to hazards and hazardous materials, and hydrology and water quality.

b. Alternative 2: No Project/Existing General Plan Alternative

Description: State CEQA Guidelines § 15126.6(e) requires that an EIR evaluate and analyze the impacts of the "No-Project" Alternative. When the Project is the revision of an existing land use or regulatory plan, policy or ongoing operation, the no-project alternative is the continuation of the plan, policy, or operation into the future. Therefore, under the No Project/Existing General Plan Alternative, the current general plan land uses, and zoning would remain in effect. Development in accordance with the existing general plan and zoning would occur. Furthermore, an SB330 site would not be required under this alternative. The City's Policy Plan designates the Project site for development of Business Park at a maximum 0.6 FAR and Low-Medium Density Residential at 5.1-11 dwelling units per acre (du/acre). The existing land use designations would allow approximately 1,646,568 square feet of Business Park and 1,352 dwelling units at 8.5 du/acre. This alternative would generate 2,889 employees and 5,404 residents. This proposed alternative is anticipated to generate a total of 5,550 actual trip-ends per day, with 659 AM peak hour trips. (Draft EIR, pp. 5-9 through 5-10.)

Impacts: **Agriculture and Forestry Resources**

The No Project/Existing General Plan Alternative would have the same development area as the proposed Project. The existing dairy farming uses would be removed from the Project site. Therefore, implementation of the No Project/Existing General Plan Alternative would result in the same significant and unavoidable impacts to agricultural resources that would occur from implementation of the proposed Project. Thus, impacts under this alternative would be the same compared to the proposed Project.

Air Quality

The No Project/Existing General Plan Alternative would reduce the amount of employment generating building square footage and would result in a decrease in the number of employees by 2,775. This alternative would result in 1,352 dwelling units and 5,404 residents. Overall, there would be a decrease in total building square footage. The No Project/Existing General Plan Alternative would result in a decrease in vehicle trips when compared to the proposed Project, and is anticipated to generate a total of 5,550 actual trip-ends per day, with 659 AM peak hour trips. Therefore, construction and operation related air quality emissions would decrease. Overall, impacts would be less than the proposed Project, but the impacts would remain significant and unavoidable.

Biological Resources

The No Project/Existing General Plan Alternative would have the same overall impact area as the proposed Project. Impacts to sensitive wildlife species, and migratory and nesting birds would continue to occur, and mitigation measures would be implemented to reduce impacts to such resources to a less than significant level. Therefore, impacts would be similar to compared to the proposed Project.

Cultural Resources

The No Project/Existing General Plan Alternative would result in a similar potential to adversely affect any undiscovered archaeological resources on the Project site as the proposed Project. However, like the proposed Project mitigation measures would be required to reduce potential impacts to less than significant. Therefore, impacts to cultural resources from the No Project/Existing General Plan Alternative would be similar to those associated with the proposed Project.

Geology and Soils

Grading and development of the Project area would still occur under the No Project/Existing General Plan Alternative, and therefore, impacts to geology and soils would be similar to those that would be generated from the proposed Project. The new structures under this alternative would still result in additional persons and structures in the Project area that would be subject to risks associated with seismic ground shaking and geologic hazards. Therefore, the No Project/Existing General Plan Alternative would be required to meet the same regulatory requirements as the proposed Project. This alternative would result in a similar potential to impact paleontological resources during grading as the proposed Project.

Therefore, impacts to geology and soils would be less than significant and similar to the proposed Project.

Greenhouse Gas Emissions

The No Project/Existing General Plan Alternative would reduce the amount of employment generating building square footage and would result in a decrease of the number of employees by 2,775. This alternative would result in 1,352 dwelling units and 5,404 residents. Overall, there would be a decrease in total building square footage. Additionally, this alternative would result in a decrease in the number of vehicle trips when compared to the proposed Project, and is anticipated to generate a total of 5,550 actual trip-ends per day, with 659 AM peak hour trips. Therefore, greenhouse gas emissions will decrease when compared to the proposed Project. However, impacts would remain significant and unavoidable.

Hazards and Hazardous Materials

The No Project/Existing General Plan would develop the Project site for business park and office space, which would have less potential to use hazardous wastes on-site. However, the use and storage of hazardous materials would be regulated by the same federal, state, and local laws and permitting requirements as would be done by the proposed Project. In addition, this alternative would include cleanup of contaminated soils that exist on the site during construction activities and would be required to implement the same type of mitigation measures that are included in Section 4.8, Hazards and Hazardous Materials. However, this alternative would place residences within Safety Zone III, Traffic Pattern/Overflight Zone of the Chino Airport. Airport Land Use Commission (ALUC) review of all residential development exceeding two du/ac is required to determine consistency. Due to the increased risk of aircraft accident within this zone, restrictions on residential development may be imposed. Therefore, impacts with respect to Chino Airport's Airport Land Use Compatibility Plan (ALUCP) would be greater compared to the proposed Project. Like the proposed Project, this alternative would also result in less than significant impacts with implementation of mitigation measures.

Hydrology and Water Quality

Under the No Project/Existing General Plan Alternative, the area of impervious surfaces would be similar compared to the proposed Project. Therefore, this alternative would result in similar runoff and potential for impacts to drainage, erosion, and water quality. Like the proposed Project, this alternative would introduce new sources of water pollutants from construction and operation activities. Additionally, this alternative would be required to include storm drain facility improvements, LID, source control, site design, and treatment control BMPs. Therefore, the No Project/Existing General Plan Alternative would result in impacts to hydrology and water quality that are similar to those that would occur from the proposed Project. Overall, hydrology and water quality impacts would be less than significant.

Land Use and Planning

Under the No Project/Existing General Plan Alternative, the development on-site would conform with the general plan and zoning code and would not require any general plan amendment or zone change. Therefore, impacts would be reduced compared to the proposed Project, and impacts were determined to be less than significant. Relative to Senate Bill (SB) 330, the No Project/Existing General Plan Alternative would retain the current residential land use, but as described in Utilities and Service Systems, below, residential development is not feasible on the Project site; therefore, impacts would be similar to the proposed Project.

Noise

The No Project/Existing General Plan Alternative would reduce the amount of employment generating building square footage and would decrease of the number of employees by 2,775. This alternative would result in 1,352 dwelling units and 5,404 residents. Overall, there would be a decrease in total building square footage. Additionally, this alternative would result in a decrease in the number of vehicle trips when compared to the proposed Project. Therefore, construction and operational noise impacts would be less under this alternative.

Population and Housing

The No Project/Existing General Plan Alternative would increase employees and residents on the Project site. Under this alternative, the population, housing, and employment at buildout would be consistent with the City's growth projections identified in Southern California Association of Governments' (SCAG) Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS). However, growth associated with the proposed Project was also within growth projections. Overall, impacts to population and housing would remain less than significant with this alternative and similar to the proposed Project.

Public Services

The No Project/Existing General Plan Alternative would introduce new residents at the Project site which would increase the demand for public services, including fire, police, schools, and parks. The proposed Project would have no impact on schools or parks and less than significant impacts to fire and police services. This alternative would result in slightly greater impacts to public services compared to the proposed Project.

Transportation

Under the No Project/Existing General Plan Alternative, transportation impacts would be decreased when compared to the proposed Project due to the decrease in vehicle trips associated with business park, office spaces, and residential uses. This alternative would result in the decrease of the number of vehicle trips, as the number of employees would be reduced by 2,775. The Project under this alternative is anticipated to generate a total of 5,550 actual trip-ends per day, with 659 AM peak hour trips, resulting in a decrease of 6,896 daily trips and 332 peak hour trips when compared to the proposed Project. However, similar roadway improvements would be

necessary for project implementation. Therefore, impacts that could occur by the No Project/Existing General Plan Alternative would be similar to those associated with the proposed Project.

Tribal Cultural Resources

The No Project/Existing General Plan Alternative would result in a similar potential to adversely affect tribal cultural resources on the Project site as the proposed Project. However, like the proposed Project, mitigation measures would be required to reduce potential impacts to less than significant. Therefore, impacts that could occur by the No Project/Existing General Plan Alternative would be similar to those associated with the proposed Project.

Utilities and Service Systems

The No Project/Existing General Plan Alternative would result in greater impacts to utilities and service systems due to the increase in water demand and sewer generation associated with development of business park, office uses, and residential development allowed by the General Plan. This increase in water demand and sewer generation and the extensive length and amount of water and sewer infrastructure that is required to serve the site and the proposed Project would render the No Project/Existing General Plan Alternative infeasible due to lack of market demand for the low-medium density residential units and business park. Residential uses would not be feasible due to the cost of the infrastructure that would be funded in whole or in part by the residential development depending on development phasing, and the current City and New Model Colony development impact fee structure, which are greater than could be absorbed by home pricing in the area (ORBP EIR). (Draft EIR, pp. 5-10 through 5-13.)

Attainment of Project Objectives: **Ability to Reduce Impacts**

The No Project/Existing General Plan Alternative would result in reduced impacts to air quality, greenhouse gas emissions, and noise. This alternative will have greater impacts compared to the proposed Project related to hazards and hazardous materials, public services, and utilities and service systems. Impacts related to agricultural and forestry resources, biological resources, cultural resources, geology and soils, hydrology and water quality, land use and planning, population and housing, transportation and tribal cultural resources would be similar compared to the proposed Project.

Ability to Achieve Project Objectives

Implementation of the No Project/Existing General Plan Alternative would not meet four of the six Project objectives. For example this alternative would not create a professional, well-maintained and attractive environment for the development of a multi-purpose business park, industrial and warehousing/office space complex (Objective 1); provide the entitlements and framework for the development of approximately 5.4 million square feet of business park and industrial general (Objective 2); expand the City's industrial uses in proximity to local airports and regional transportation

networks (Objective 5); nor would it create an economic engine to drive future growth in the Project area, spur infrastructure improvements in the area and implement the Specific Plan vision (Objective 6). This alternative would provide employment opportunities for community residents (Objective 3) and facilitate the construction of utilities, roads, and other major infrastructure investments that will be sufficiently sized to adequately serve the Specific Plan area (Objective 4). (Draft EIR, pp. 5-13 through 5-14.)

Finding: The City Council rejects Alternative 2: No Project/Existing General Plan Alternative, on the following grounds, each of which individually provides sufficient justification for rejection of this alternative: (1) the alternative fails to meet four of the six Project objectives because it would not create a professional, well-maintained and attractive environment for the development of a multi-purpose business park, light industrial and warehousing/logistics complex, nor create an economic engine for future growth; (2)the alternative fails to avoid or reduce the Project's significant and unavoidable impacts relating to agriculture and forestry resources, air quality, and greenhouse gas emissions; (3) the alternative would result in increased impacts relating to hazards and hazardous materials, and public services; and (4) the alternative is infeasible.

c. Alternative 3: Reduced Intensity Alternative

Description: A 25 percent reduction in building area of the proposed industrial warehousing and business park uses is considered under the Reduced Intensity Alternative. Under this alternative, a total of 4,059,443 square feet of business park, industrial and warehouse uses, a reduction of 1,353,148 square feet, would be developed, with 3,253,017 square feet of warehouse and 806,426 square feet of business park uses. The development impact area would generally remain the same as the proposed Project. This alternative would generate approximately 4,248 employees. Access to the site would be similar to the proposed Project with a proportional reduction in the number of parking spaces. (Draft EIR, p. 5-14.)

Impacts: **Agriculture and Forestry Resources**

The Reduced Intensity Alternative would develop the Project site for the same type of business park, industrial and warehousing uses and have the same impact area. The existing dairy farming uses would be removed from the Project site. Therefore, implementation of the Reduced Intensity Alternative would result in the same significant and unavoidable impacts to agricultural resources that would occur from implementation of the proposed Project. Thus, impacts under this alternative would be the same compared to the proposed Project.

Air Quality

The Reduced Intensity Alternative would develop the Project site for the same type of business park, industrial and warehousing uses, but with less intensity than the proposed Project. Therefore, a reduced volume of construction activities and the related emissions would occur, resulting in

an elimination of the significant and unavoidable construction-related air quality impact from the exceedance of NOx emissions. In addition, the reduced amount of square footage that would be developed by this alternative would result in less stationary source emissions from equipment on-site and less transportation-related air emissions than the proposed Project. Therefore, overall air quality impacts would be reduced in comparison to the proposed Specific Plan. However, the volume of VOC and Nox emissions from operational vehicular and truck trips generated by the Reduced Intensity Alternative would remain significant and unavoidable due to the volume of vehicular and truck trips that would occur from operation of 4,059,443 sf industrial warehousing space and business park use. After mitigation measures, the proposed Project would generate a maximum of 140 pounds per day of VOC and 450 pounds per day of NOx, which would be reduced to approximately 105 and 337.5 pounds per day with mitigation, respectively. The SCAQMD threshold for VOC and NOx is 55. Therefore, significant and unavoidable impacts due to exceedance of VOC and NOx emissions would continue to occur. Impacts under this alternative would be reduced compared to the proposed Project but would remain significant and unavoidable.

Biological Resources

The Reduced Intensity Alternative would reduce the amount of building area and associated parking stalls proposed for the Project site. However, the development would continue to cover the same impact area as the Project site. Impacts to sensitive wildlife species, and migratory and nesting birds would continue to occur, and mitigation measures would be implemented to reduce impacts to such resources to a less than significant level. Therefore, impacts would be similar to compared to the proposed Project.

Cultural Resources

The Reduced Intensity Alternative would result in a similar potential to adversely affect any undiscovered archaeological resources on the Project site as the proposed Project, despite the reduction in building area and associated surface parking. However, like the proposed Project, mitigation measures would be required to reduce potential impacts to less than significant. Therefore, impacts to cultural resources from the Reduced Intensity Alternative would be similar to those associated with the proposed Project.

Geology and Soils

Grading and development of the Project area would still occur under the Reduced Intensity Alternative, and therefore, impacts to geology and soils would be similar to those that would be generated from the proposed Project. The new structures under this alternative would still result in additional persons and structures in the Project area that would be subject to risks associated with seismic ground shaking and geologic hazards. Therefore, the Reduced Intensity Alternative would be required to meet the same regulatory requirements as the proposed Project. This alternative

would result in a similar potential to impact paleontological resources during grading, as the proposed Project. Therefore, impacts to geology and soils would be less than significant, which is the same as the proposed Project.

Greenhouse Gas Emissions

The Reduced Intensity Alternative would develop the Project site for industrial warehousing uses less densely than the proposed Project. Therefore, a reduced volume of construction activities and associated GHG emissions would occur. In addition, the reduced square footage would result in less stationary source emissions from equipment on-site, and less traffic-related GHG emissions than the proposed Project. The proposed Project would result in a net increase of 71,088.28 MTCO2e per year, which would be reduced by approximately 25 percent to 53,316.21 MTCO2e per year under the Reduced Intensity Alternative. This alternative would still result in significant and unavoidable GHG impacts, since it would exceed the bright-line threshold of 3,000 MTCO2e per year and reductions measures would not result in less than significant emissions. Therefore, the development and operation of 4,059,443 sf industrial warehousing and business park space would require implementation of the same GHG reduction features that are required for the proposed Project; impacts would be reduced compared to the proposed Project.

Hazards and Hazardous Materials

The Reduced Intensity Alternative would develop the Project site for business park and industrial warehousing uses, and therefore the same type of hazardous materials typically used for construction and operation of the proposed Project would be used under the Reduced Intensity Alternative. Similarly, the use and storage of hazardous materials would be regulated by the same federal, state, and local laws and permitting requirements as would be done by the proposed Project. In addition, this alternative would include cleanup of contaminated soils that exist on the site during construction activities and would be required to implement the same type of mitigation measures that are included in Section 4.8, Hazards and Hazardous Materials of the Draft EIR. Therefore, like the proposed Specific Plan, this alternative would also result in less than significant impacts with implementation of mitigation measures and impacts that would occur by the Reduced Intensity Alternative would be similar compared to the proposed Project.

Hydrology and Water Quality

The Reduced Intensity Alternative would reduce the total building square footage; however, the area of impervious surfaces would be similar compared to the proposed Project. Therefore, this alternative would result in similar runoff and potential for impacts to drainage, erosion, and water quality. Like the proposed Project, this alternative would introduce new sources of water pollutants from construction and operation activities. Additionally, this alternative would be required to include storm drain facility improvements, LID, source control, site design, and treatment control

BMPs. Therefore, the Reduced Intensity Alternative would result in impacts to hydrology and water quality that are similar to those that would occur from the proposed Project. Overall, hydrology and water quality impacts would be less than significant.

Land Use and Planning

The Reduced Intensity Alternative would require a general plan amendment and zone change to implement the Specific Plan. This alternative would have the same type of consistency with the SCAG RTP/SCS policies, the City's General Plan, the City's Development Code, and consistency with airport plans. Therefore, like the proposed Project, the Reduced Intensity Alternative would result in a less than significant impact related to land use and would be similar compared to the proposed Project.

Noise

Construction and operation noise impacts would be reduced under the Reduced Intensity Alternative because this alternative would decrease the development area by 1,353,148 sf. Although construction of this alternative would generate the same peak noise volumes and similar type and volume of construction noise as the proposed Project, the length of time of construction and the associated noise would be marginally shorter. Operational noise would also be reduced under this alternative as traffic-generated and stationary noise sources would decrease in relation to the reduction in industrial warehousing square footage. Noise impacts from the Reduced Intensity Alternative would be less than significant with implementation of mitigation measures and reduced compared to the proposed Project.

Population and Housing

Under the Reduced Development Intensity Alternative, buildout would result in an approximate 25 percent reduction in employees on site. Under this alternative, the population, housing, and employment at buildout would be consistent with the City's growth projections identified in SCAG's RTP/SCS. However, growth associated with the proposed Project was also within growth projections. The Reduced Development Intensity Alternative would provide fewer employment opportunities. Overall, impacts to population and housing would remain less than significant with this alternative and similar to the proposed Project.

Public Services

The Reduced Intensity Alternative would reduce buildout of the industrial and business park portions of the Project area by 25 percent compared to the proposed Project. This would reduce the number of employees on the Project site in relation to the reduction in industrial warehousing and business park square footage. However, as with the proposed Project, this alternative is not anticipated to result in new residences that could demand new services, and would include design features to lessen the need for services. Impacts therefore would be less than significant. Overall, the need

for public services would be reduced under this alternative compared to the proposed Project.

Transportation

Construction and operation-related traffic and truck trips would be reduced under the Reduced Intensity Alternative because this alternative would decrease the industrial and business park development area by 1,353,148 square feet. The daily trips would be reduced in relation to the reduction of the building area, which would reduce volumes on all roadway segments and intersections. As a result, under this alternative, there would be 8,376 daily trips, with 875 AM peak hour trips. However, due to the existing VMT in the traffic study area and the volume of traffic that would be generated by the 4,059,443 sf industrial warehousing space and business park use that would be developed under the Reduced Intensity Alternative, this alternative would still require implementation of the mitigation measures that involve roadway improvements. As a result, traffic volumes generated from this alternative would be less, however, impacts from implementation of the Reduced Intensity Alternative would also be significant and unavoidable.

Tribal Cultural Resources

The Reduced Intensity Alternative would result in a similar potential to adversely affect any tribal cultural resources on the Project site as the proposed Project, despite the reduction in building area and associated surface parking. However, like the proposed Project, mitigation measures would be required to reduce potential impacts to less than significant. Therefore, impacts that could occur by the Reduced Intensity Alternative would be similar to those associated with the proposed Project.

Utilities and Service Systems

The Reduced Intensity Alternative would reduce buildout of the Project site by 1,353,148 sf compared to the proposed Project. This would reduce the number of employees on the Project site in relation to the reduction in industrial warehousing and business park square footage and would also reduce the demand for utilities and service systems.

The demand for regional water supplies and generation of wastewater would be approximately 25 percent less than the proposed Project. Thus, the impacts related to water supplies and wastewater would be less than the significant impacts that would occur from implementation of the proposed Specific Plan. Similarly, solid waste generation would be less than the proposed Project and require less landfill capacity. Therefore, impacts to utilities and service system would be less under this alternative than significant impacts that would occur from implementation of the proposed Project. (Draft EIR, pp. 5-14 through 5-18.)

Attainment of Project Objectives:

Ability to Reduce Impacts

The Reduced Intensity Alternative would result in reduced impacts related to air quality, greenhouse gas emissions, noise, public service, transportation, and utilities and service systems due to the reduction in square footage and associated vehicular trips. However, significant and unavoidable impacts related to agricultural resources, air quality, greenhouse gas emissions, and transportation would continue to occur from implementation of this alternative. Impacts related to agricultural resources, biological resources, cultural resources, geology and soils, hazardous and hazardous materials, hydrology and water quality, land use and planning, population and housing, and tribal cultural resources would be similar to the proposed Project.

Ability to Achieve Project Objectives

Implementation of the Reduced Intensity Alternative would achieve the Project objectives, but not to the extent as would be achieved by the proposed Project. The Reduced Intensity Alternative would create a professional, well-maintained and attractive environment for the development of a multi-purpose business park, industrial and warehousing/office complex (Objective 1); provide employment opportunities for community residents (Objective 3); facilitate the construction of utilities, roads, and other major infrastructure investments that will be sufficiently sized to adequately serve the Specific Plan area (Objective 4); expand the City's industrial uses in proximity to local airports and regional transportation networks (Objective 5); and create an economic engine to drive future growth in the Project area, spur infrastructure improvements in the area and implement the Specific Plan vision (Objective 6). However, the reduction of 1,353,148 square feet would attract fewer or smaller businesses and less employment opportunities to area residents. In addition, the smaller development would provide less flexibility to meet the needs of an ever-changing business market. In addition, given the extraordinary infrastructure cost, including off-site improvements and required fees, a 25 percent reduction in density is not considered financially viable for the applicant. This alternative would not fully meet Objective 2 to provide the entitlements and framework for the development of approximately 5.4 million square feet of business park and industrial general uses. (Draft EIR, p. 5-18.)

Finding: The City Council rejects Alternative 3: Reduced Intensity Alternative, on the following grounds, each of which individually provides sufficient justification for rejection of this alternative: (1) the alternative would not achieve the project benefits to the extent the proposed Project does since a reduction in intensity would generate less job opportunities in the City; (2) the alternative fails to avoid or reduce the Project's significant and unavoidable impacts relating to agriculture, air quality, greenhouse gas emissions, and transportation; and (3) the alternative is infeasible.

4. ENVIRONMENTALLY SUPERIOR ALTERNATIVE

An EIR must identify an "environmentally superior" alternative and where the No Project Alternative is identified as environmentally superior, the EIR is then required to identify as environmentally superior an alternative from among the others evaluated. Based on the analysis contained within the Draft EIR, the Reduced Intensity Alternative has been identified as the "environmentally superior" to the proposed Project.

Reduced Intensity Alternative

The Reduced Intensity Alternative has been identified as the environmentally superior alternative because it would result in reduced impacts related to air quality, greenhouse gas emissions, noise, public service, transportation, and utilities and service systems due to the reduction in square footage and associated vehicular trips. However, significant and unavoidable impacts related to agricultural resources, air quality, greenhouse gas emissions, and transportation would continue to occur from implementation of this alternative. Impacts related to agricultural resources, biological resources, cultural resources, geology and soils, hazardous and hazardous materials, hydrology and water quality, land use and planning, population and housing, and tribal cultural resources would be similar to the proposed Project.

CEQA does not require the lead agency (the City of Ontario) to choose the environmentally superior alternative. Instead, CEQA requires the City to consider environmentally superior alternatives, weigh those considerations against the environmental impacts of the proposed Project, and make findings that the benefits of those considerations outweigh the harm. "Among the factors that may be used to eliminate alternatives from detailed consideration in an EIR are: (i) failure to meet most of the basic project objectives, (ii) infeasibility, or (iii) inability to avoid significant environmental impacts" (CEQA Guidelines §15126.6[c]). (Draft EIR, pp. 5-18 through 5-19.)

H. ADDITIONAL CEQA CONSIDERATIONS

1. Significant Irreversible Changes due to the Proposed Project

Section 15126.2(c) of the State CEQA Guidelines requires that an EIR describe any significant irreversible environmental changes that would be caused by the proposed project should it be implemented. Specifically, the State CEQA Guidelines state:

"Uses of nonrenewable resources during the initial and continued phases of the project may be irreversible since a large commitment of such resources makes removal or nonuse thereafter unlikely. Primary impacts and, particularly, secondary impacts (such as highways improvement which provides access to a previously inaccessible area) generally commit future generations to similar uses. Also, irreversible damage can result from environmental accidents associated with the project. Irretrievable commitments of resources should be evaluated to assure that such current consumption is justified."

Generally, a project would result in significant irreversible environmental changes if:

- The primary and secondary impacts would generally commit future generations to similar uses;
- The project would involve a large commitment of nonrenewable resources;

- The project would involve uses in which irreversible damage could result from any potential environmental accidents associated with the project; or
- The proposed irretrievable commitments of nonrenewable resources are not justified (e.g., the project involves the wasteful use of energy).

In the case of the proposed Project, its implementation would involve a land use, development, and implementation framework to support up to 5,333,518 square feet of business park, warehouse and ancillary office space with the City of Ontario. Significant irreversible changes that would be caused by implementation of the Project would be:

- Construction activities that would entail the commitment of nonrenewable and/or slowly renewable energy resources; human resources; and natural resources such as lumber and other forest products, sand and gravel, asphalt, steel, copper, lead, other metals, water, and fossil fuels.
- Operation that would require the use of natural gas and electricity, petroleum-based fuels, fossil fuels, and water. The commitment of resources required for the operation of the Project would limit the availability of such resources for future generations or for other uses during the life of the Project.
    - Increased traffic on area roadways (see Section 4.13, Transportation of the DEIR);
    - Emissions of air pollutants associated with operations (see Section 4.2, Air Quality of the DEIR); and
    - Consumption of non-renewable energy associated with operation of the Specific Plan due to the use of automobiles, lighting, heating and cooling systems, and appliances (See Section 7, Energy and Section 4.6, Greenhouse Gas Emissions of the DEIR).
- An increased commitment of social services and public maintenance services (e.g., police, fire, sewer, and water services) would also be required. The energy and social service commitments would be long-term obligations in view of the low likelihood of returning the land to its original condition once it has been developed.
- Employment growth related to Project implementation would increase vehicle trips over the long term. Emissions associated with such vehicle trips would continue to contribute to the SCAB's nonattainment designations for ozone, particulate matter (PM10 and PM2.5), under the California and National Ambient Air Quality Standards (AAQS), and nonattainment for nitrogen dioxide (NO2) under the California AAQS.

Given the low likelihood that the land would revert to lower intensity uses or to its current form, the Project would generally commit future generations to these environmental changes. However, the Project is committed to sustainable design strategies that integrate principles of environmental stewardship into the design and construction process. Appropriate strategies would be determined for each phase of the Specific Plan area. Strategies include, but are not limited to:

Sustainable Construction & Technology Concepts

- Design and construct energy-efficient buildings to reduce air, water, and land pollution and environmental impacts from energy production and consumption.
- Employ passive design including skylights, building orientation, landscaping, and strategic colors to improve building energy performance.
- Reduce the heat island effect by providing shade structures and trees that produce large canopies. In addition, choose roof and paving materials that possess a high level of solar reflectivity.
- Use recycled and other environmentally-friendly building materials wherever possible.
- Incorporate skylights into at least two percent of warehouse/distribution building roof area to provide natural light and reduce electric lighting demand.
- Use energy-efficient light-emitting diode (LED) (or similar) products.
- Provide interior or exterior bicycle storage consistent with the California Green Building Standards Code.
- Use drought-tolerant landscaping with drip irrigation and include plantings such as trees, shrubs, groundcovers and/or vines. Optional amenities include benches, trellises, thematic fencing, and decorative walkways.
- Employ high-performance dual-pane window glazing in office storefronts.

Water Quality

- Utilize landscape areas including retention/infiltration swales and basins, or employ bio-treatment when infiltration is infeasible, as required by the San Bernardino County Municipal Separate Storm Sewer System Permit and Water Quality Management Plan.
- Select native and drought-tolerant plants to reduce water demand.
- Integrate permeable pavement and perforated curbs throughout the Project area as feasible to allow stormwater to enter planter areas, assist with filtration, and control runoff.
- Use captured runoff to augment irrigation systems whenever possible.
- Employ irrigation systems that respond to changing weather conditions, irrigate by hydro zone, and use micro-irrigation techniques.
- Use recycled water to irrigate landscape areas and for other appropriate uses. The use of recycled water for certain purposes is required by the City Recycled Water Master Plan.

The commitment of resources to the Project is not unusual or inconsistent with projects of this type and scope. However, once these commitments are made, it is improbable that the Project area would revert back to its current condition. Thus, the Project would result in significant irreversible changes to the environment throughout the lifespan of the structures. (Draft EIR, pp. 6-1 through 6-3.)

2. Growth-Inducing Impacts of the Proposed Project

Pursuant to §§ 15126(d) and 15126.2(d) of the State CEQA Guidelines, this section is provided to examine ways in which the Project could foster economic or population growth, or the construction of additional housing, either directly or indirectly, in the

surrounding environment. To address this issue, potential growth-inducing effects will be examined through analysis of the following questions:

- Would this project remove obstacles to growth, e.g., through the construction or extension of major infrastructure facilities that do not presently exist in the project area, or through changes in existing regulations pertaining to land development?
- Would this project result in the need to expand one or more public services to maintain desired levels of service?
- Would this project encourage or facilitate economic effects that could result in other activities that could significantly affect the environment?
- Would approval of this project involve some precedent-setting action that could encourage and facilitate other activities that could significantly affect the environment?

Please note that growth-inducing effects are not to be construed as necessarily beneficial, detrimental, or of little significance to the environment. This issue is presented to provide additional information on ways in which this Project could contribute to significant changes in the environment, beyond the direct consequences of developing the land use concept examined in the preceding sections of the DEIR.

1. ***Would this project remove obstacles to growth, e.g., through the construction or extension of major infrastructure facilities that do not presently exist in the project area, or through changes in existing regulations pertaining to land development?***

The removal of a physical obstacle to growth, such as the construction or extension of major infrastructure facilities that are not presently in the area, would be considered a potentially growth inducing impact. The Project would include various new infrastructure improvements on-site and off-site, including water, wastewater, storm drain facilities, roadway improvements, and dry utilities (natural gas, electricity, telecommunications).

Implementation of the Project would require the construction and improvement of roadways and extension of major infrastructure into areas off-site that will facilitate additional planned growth pursuant to TOP. Although the infrastructure improvements are planned for in the City's master plans, the improvements would allow further development to occur within the Ontario Ranch area. Therefore, the Project would remove obstacles to growth to accommodate the demands of this Project at full buildout, which could allow for future development in the area once adequate infrastructure is in place and would be considered growth inducing.

2. ***Would this project result in the need to expand one or more public services to maintain desired levels of service?***

Generally, as the City continues to develop, it requires further commitment of public services in the form of fire and police protection and series, and other public facilities. Implementation of the Specific Plan would be consistent with the TOP for Business Park and Industrial uses as well as permitted FARs. Thus, fire service needs for the Project and surrounding area have been anticipated in the development of the planned fire service facilities. Therefore, fire protection and emergency services to the Project would be accommodated within the City's new and existing fire service facilities, and buildout of

the Project would not result in a significant impact on the ability to maintain adequate level of fire protection service to the area. Regarding Police Services, the Ontario Police Department (OPD) has prepared for growth of the Ontario Ranch area, where the Project site is located, and is expected to have adequate facilities and personnel to serve the proposed development. The OPD would continue to add staff and equipment on an as-needed basis in order to accommodate the incremental increasing demands from buildout of land uses, as was identified in the TOP. Furthermore, buildout of the Project would not require construction of additional police facilities to maintain adequate police protection service. Regarding schools, development in the Specific Plan buildout area in accordance with TOP would require payments to the corresponding school district for the construction of new schools. Each school district that serves the City charges a different amount for development impact fees, which is usually dependent on the student generation rates for that district. Lastly, the construction and operation of the Project site would not result in a substantial increase in demand for these services such that a significant deterioration of the existing facilities would occur, or such that new facilities would be required. Regardless of any added level of use to existing libraries or other public facilities, the Project applicant would be required to pay its fair share of development Impact fees to help offset incremental impacts to libraries by helping fund capital improvements and expenditures.

3. Would this project encourage or facilitate economic effects that could result in other activities that could significantly affect the environment?

During Project construction, a number of design, engineering, and construction-related jobs would be created. However, construction related jobs would not result in a significant population increase because they would be filled by workers in the region and the construction phase would be temporary. The proposed Project would result in the creation of approximately 5,664 new long-term jobs. The majority of new jobs that would be created by implementation of the Specific Plan would be positions that do not require a specialized workforce, and this type of workforce exists in the City and surrounding areas. Thus, it is anticipated that new jobs would primarily be filled by people within Ontario and the surrounding communities and would not induce an unanticipated influx of new labor into the region. Although the proposed Project would result in new permanent employment opportunities and stimulate economic activity, it would meet future employment demands anticipated in SCAG's regional growth projections.

As the number of employees in the Specific Plan area grows, these employees would seek shopping, entertainment, auto maintenance, and other economic opportunities in the surrounding area. This would facilitate economic goods and services and could, therefore, encourage the creation of new businesses and/or the expansion of existing businesses to address these economic needs. However, the increase in opportunities for employees would not create substantial growth inducement because growth could be accommodated within regional and local projections, and jobs would be filled by the local workforce.

With respect to the SB330 aspect of the Project, there would be no substantial net change in population or employment, other than a slight increase in population due to replacing the lower density residential zoning at the Project site with higher density zoning at the SB330 Replacement Site.

Overall, the Project would not encourage or facilitate economic effects that could significantly affect the environment. Therefore, this is not considered a significant growth-inducing impact.

4. Would approval of this project involve some precedent-setting action that could encourage and facilitate other activities that could significantly affect the environment?

The Project consists of General Plan Amendment (GPA), Specific Plan, Development Plan, Tentative Parcel Map(s), and a Development Agreement to allow for a business park and industrial development on 23 parcels covering approximately 219.39 acres in the City. The development would include eight concrete tilt-up buildings totaling up to 5,333,518 SF of business park, warehouse, and ancillary office space. The Project is proposed in two phases. Phase 1, comprised of Planning Areas (PA) 1 and 2, would allow approximately 3,174,518 SF of industrial and business park uses.

Although the requirement of the GPA may be considered a precedent-setting action, the impacts of subsequent similar actions would require environmental analysis and associated mitigation to ensure that such subsequent impacts would not significantly affect the environment. Pressures to develop other land in the surrounding area would derive from regional economic conditions and market demands for housing, commercial, and industrial land uses that are not directly or indirectly influenced by zoning actions on a particular property. Therefore, approval of the Project would not involve a precedent-setting action that could be applied to the surrounding properties and thereby encourage or facilitate growth that would not otherwise occur.

Environmental Impacts of Induced Growth

Implementation of the Project would provide development to accommodate regional and City forecasted employment demands. All physical environmental effects from construction of development have been analyzed in all technical sections of the DEIR. For example, activities such as excavation, grading, and construction as required for the proposed industrial warehousing and office uses were analyzed throughout the DEIR, including Sections 4.2, Air Quality; 4.6, Greenhouse Gas Emissions; 4.10, Noise; and 4.13, Transportation. Therefore, construction and operation of the proposed Project has been analyzed in the DEIR and would be adequately mitigated either through implementation of PPPs and/or mitigation measures contained within Section 4.0 of the DEIR. (Draft EIR, pp. 6-3 through 6-6.)

SECTION V. STATEMENT OF OVERRIDING CONSIDERATIONS

CEQA requires decision makers to balance the benefits of the proposed Project against its unavoidable environmental risks when determining whether to approve the project. If the benefits of the project outweigh the unavoidable adverse effects, those effects may be considered “acceptable” (State CEQA Guidelines § 15093[a]). CEQA requires the agency to support, in writing, the specific reasons for considering a project acceptable when significant impacts are infeasible to mitigate. Such reasons must be based on substantial evidence in the FEIR or elsewhere in the administrative record (State CEQA Guidelines § 15093 [b]). The agency’s statement is referred to as a Statement of Overriding Considerations.

The following provides a description of the project's significant and unavoidable adverse impact and the justification for adopting a statement of overriding considerations.

A. SIGNIFICANT AND UNAVOIDABLE IMPACTS

The City identifies the following significant unavoidable adverse impacts of the Project, which would continue to be applicable upon implementation of the proposed project:

Agriculture and Forestry Resources

- Impact 4.1-1: Would the Project convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland) as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?
- Impact 4.1-2: Would the Project conflict with existing zoning for agricultural use, or a Williamson Act contract?
- Impact 4.1-5: Would the Project involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland, to non-agricultural use or conversion of forest land to non-forest use?

Air Quality

- Impact 4.2-1: Would the Project conflict with or obstruct implementation of the applicable air quality plan?
- Impact 4.2-2: Would the Project result in a cumulatively considerable net increase of any criteria pollutant for which the Project region is non-attainment under an applicable state or federal ambient air quality standard?

Cultural Resources

- Impact 4.4-1: Would the Project cause a substantial adverse change in the significance of a historical resource pursuant to §15064.5?

Greenhouse Gas Emissions

- Impact 4.6-1: Would the Project generate GHG emissions, either directly or indirectly, that could have a significant impact on the environment?
- Impact 4.6-2: Would the Project conflict with an applicable plan, policy, or regulation of an agency adopted for the purpose of reducing GHG emissions?

Transportation and Traffic

- Impact 4.13-2: Would the Project conflict or be inconsistent with CEQA Guidelines Section 15064.3, subdivision (b)?

B. PROJECT BENEFITS IN SUPPORT OF THE STATEMENT OF OVERRIDING CONSIDERATIONS

The following section describes the benefits of the proposed Project that outweigh the project's unavoidable adverse effects and provides specific reasons for considering the Project acceptable even though the FEIR has indicated that there will be nine significant and unavoidable project impacts if the mitigation measures for Impacts 4.1-1, 4.1-2, 4.1-5, 4.2-1, 4.2-2, 4.4-1, 4.6-1, 4.6-2, and 4.13-2, are implemented. Accordingly, this Statement of Overriding Considerations regarding potentially significant adverse environmental impacts resulting from the proposed Project, as set forth below, has been prepared. Pursuant to CEQA Guidelines § 15093(c), the Statement of Overriding Considerations will be included in the record of the Project approval and will also be noted in the Notice of Determination. Each of the benefits identified below provides a separate and independent basis for overriding the significant environmental effects of the proposed Project.

Having reduced the potential effects of the proposed Project through all feasible mitigation measures as described previously herein, and balancing the benefits of the proposed Project against its potential unavoidable adverse impacts, the City finds that the following legal requirements and benefits of the proposed Project individually and collectively outweigh the potentially significant unavoidable adverse impacts for the following reasons:

1. Implements the Objectives Established for the Proposed Project

The Project objectives include creating a professional, well-maintained, and attractive environment for development; providing entitlements and framework for development of business park and light industrial uses; providing employment opportunities for community residents; facilitating the construction of utilities, roads, and other major infrastructure; expanding Ontario's industrial uses in proximity to local airports and regional transportation networks; and creating an economic engine to drive future growth and spur improvements in the area.

2. Provides Employment Opportunities

The Project would provide for high-quality industrial uses within the City and the TOP area and would increase employment opportunities for City and area residents. The proposed Project would include eight warehouse buildings totaling a maximum development of 5,333,518 square feet of warehouse and office uses and would generate 5,459 employment opportunities.

3. Provides Substantial Infrastructure Improvements

The Project will be responsible for the construction of area-wide infrastructure construction within the Ontario Ranch area, including roadway, water, and sewer and storm drains as set forth in the DEIR and South Ontario Logistics Center Specific Plan. The Project would construct improvements and infrastructure consistent with the TOP and the City's various master plans for roadways and sewers, among others.

4. Consistency with the Regional Goals in the RTP/SCS

SCAG's 2020-2045 RTP/SCS was adopted September 3, 2020. The RTP/SCS identifies that land use strategies that focus on new housing and job growth in areas served by high quality transit and other opportunity areas would be consistent with a land use development pattern that supports and complements the proposed transportation network. The overarching strategy in the 2020-2045 RTP/SCS is to provide for a plan that allows the southern California region to grow in more compact communities in existing urban areas; provide neighborhoods with efficient and plentiful public transit and abundant and safe opportunities to walk, bike, and pursue other forms of active transportation; and preserve more of the region's remaining natural lands.

The proposed Project would create an economic engine to drive future growth in Ontario Ranch, spur infrastructure improvements in the area, and would allow for the development of urban uses on currently underutilized land. The implementation of the proposed Project would facilitate the construction of roads and other major infrastructure investments that will ensure that mobility accessibility for people and goods would be maximized. The Specific Plan would expand Ontario's industrial uses in proximity to local airports and regional networks, and the vehicular and pedestrian improvements called for in the Specific Plan would be implemented and maintained to meet the needs of employees and visitors. Additionally, all modes of public and commercial transit throughout the Project area would be required to follow safety standards set by state, regional, and local regulations. The proposed Specific Plan would preserve and ensure access to the local public transportation near the Project site. The proposed project would improve and maintain local and area-serving transportation systems to maximize efficiency and productivity. Moreover, the proposed Project would incorporate energy efficiency and sustainability strategies.

5. Consistency with the City's Community Climate Action Plan

The Project will implement GHG emissions reduction measures specified in the DEIR and will comply with the City's adopted Climate Action Plan, which strives to achieve GHG reductions City-wide that comply with the State's reduction requirements. The primary purpose of the City's Community CAP is to design a feasible strategy to reduce GHG emissions generated by community activities that is consistent with statewide Scoping Plan GHG reduction efforts. The GHG emissions reduction target established under the CAP is 30 percent under year 2020 business-as-usual (BAU) levels. To meet this goal and to supplement statewide initiatives, the City has identified a series of reduction measures to be implemented by the City before 2020. These reduction measures include programs that improve building energy efficiency, increase use of public and active transit and decrease VMT, increase use of alternative-fueled vehicles, increase use of renewable energy, reduce water consumption, and reduce waste.

Table 4.6-8 in the DEIR evaluates the consistency of the proposed Project to the applicable measures of the Community CAP. As discussed in the Table, the proposed Project would be consistent with the applicable measures. Additionally, the Project would be consistent with the CAP Appendix B, Greenhouse Gas Emissions CEQA Thresholds and Screening Tables (CAP Screening Tables), which establishes a points system that assigns values for each GHG emissions mitigation design element or operational program feature incorporated into a given development project. The CAP Screening Tables point

values correspond to the minimum GHG emissions reduction expected from each feature. Projects with features that yield at least 100 Screening Table points are considered consistent with the reduction quantities anticipated in the City's CAP.

6. Remediates On-site Contamination

The Project would remediate existing site conditions, which consist of historic agricultural and dairy-related uses that contributed to on site contamination.

C. Conclusion

The City Council of Ontario has balanced the Project's benefits against the significant unavoidable impacts. The City Council finds that the proposed Project's benefits, which aim to meet the goals and policies of the City of Ontario General Plan (TOP), outweigh the Project's significant unavoidable impacts, and these impacts, therefore, are considered acceptable in the light of the Project's benefits. The City Council finds that each of the benefits described above is an overriding consideration, independent of the other benefits, that warrants approval of the Project notwithstanding the Project's significant unavoidable impact.

SECTION VI. MITIGATION MONITORING AND REPORTING PLAN

Pursuant to Public Resources Code section 21081.6, the City Council hereby adopts the Mitigation Monitoring and Reporting Plan attached to this Resolution as Exhibit A. Implementation of the Mitigation Measures contained in the Mitigation Monitoring and Reporting Program is hereby made a condition of approval of the Project. In the event of any inconsistencies between the mitigation measures as set forth herein and the Mitigation Monitoring and Reporting Plan, the Mitigation Monitoring and Reporting Plan shall control.

SECTION VII. PROJECT APPROVAL

Based upon the entire record before it, including the EIR, Findings of Fact, Statement of Overriding Considerations, and all written and oral evidence presented, City Council hereby approves the proposed Project.

SECTION VIII.STAFF DIRECTION

A Notice of Determination shall be filed with the County of San Bernardino within five (5) working days of final Project approval

PASSED, APPROVED, AND ADOPTED this 1st day of March 2022.

1.0 INTRODUCTION

The City of Ontario (City), as the Lead Agency, has prepared this Final Environmental Impact Report (FEIR) in accordance with the California Environmental Quality Act (CEQA) as amended (Public Resources Code [PCR] §§ 21000 et seq.) and CEQA Guidelines (California Code of Regulations [CCR] §§ 15000 et seq.).

According to the CEQA Guidelines Section 15132, the FEIR shall consist of:

(a) The Draft Environmental Impact Report (DEIR) or a revision of the Draft;

(b) Comments and recommendations received on the DEIR either verbatim or in summary;

(c) A list of persons, organizations, and public agencies comments on the DEIR;

(d) The responses of the Lead Agency to significant environmental points raised in the review and consultation process; and

(e) Any other information added by the Lead Agency.

This document contains responses to comments received on the DEIR for the South Ontario Logistics Center Specific Plan (Project) during the public review period, which began November 15, 2021 and closed January 3, 2022. This document has been prepared in accordance with CEQA and the CEQA Guidelines and represents the independent judgment of the Lead Agency. Pursuant to CEQA Guidelines Section 15132, this document, in conjunction with the circulated DEIR, comprise the FEIR.

1.1 ORGANIZATION OF THE FEIR

This document is organized as follows:

- ***Section 1, Introduction***. This section describes CEQA requirements and content of this FEIR.
- ***Section 2, Response to Comments***. This section provides a list of agencies and interested persons commenting on the DEIR; copies of comment letters received during the public review period, and individual responses to written comments. To facilitate review of the responses, each comment letter has been reproduced and assigned a number. Individual comments have been numbered for each letter and the letter is followed by responses with references to the corresponding comment number.
- ***Section 3, Revisions to the Draft EIR***. This section contains revisions to the DEIR text and figures as a result of the comments received by agencies and interested persons as described in Section 2 of this FEIR, and/or errors and omissions discovered subsequent to release of the DEIR for public review.

1.2 CEQA REQUIREMENTS FOR A FEIR

As described in CEQA Guidelines Sections 15088, 15089, 15090 and 15132, the Lead Agency must evaluate comments received on the DEIR and prepare written responses and consider the information contained in a FEIR before approving a project.

CEQA Guidelines Section 15204(a) outlines parameters for submitting comments, and reminds persons and public agencies that the focus of review and comment of DEIRs should be:

> *…on the sufficiency of the document in identifying and analyzing possible impacts on the environment and ways in which significant effects of the project might be avoided or mitigated. Comments are most helpful when they suggest additional specific alternatives or mitigation measures that would provide better ways to avoid or mitigate the significant environmental effects. At the same time, reviewers should be aware that the adequacy of an EIR is determined in terms of what is reasonably feasible. …CEQA does not require a lead agency to conduct every test or perform all research, study, and experimentation recommended or demanded by commenters. When responding to comments, lead agencies need only respond to significant environmental issues and do not need to provide all information requested by reviewers, as long as a good faith effort at full disclosure is made in the EIR.*

CEQA Guidelines Section 15204(c) further advises, "Reviewers should explain the basis for their comments, and should submit data or references offering facts, reasonable assumptions based on facts, or expert opinion supported by facts in support of the comments. Pursuant to Section 15064, an effect shall not be considered significant in the absence of substantial evidence." Section 15204(d) also states, "Each responsible agency and trustee agency shall focus its comments on environmental information germane to that agency's statutory responsibility." Section 15204(e) states, "This section shall not be used to restrict the ability of reviewers to comment on the general adequacy of a document or of the lead agency to reject comments not focused as recommended by this section."

State CEQA Guidelines §15088 recommends that where a response to comment makes important changes in the information contain in the text of the DEIR, that the Lead Agency either revise the text of the DEIR or include marginal notes showing that information. The FEIR for the Project has been prepared in accordance with CEQA. CEQA Guidelines §15132 indicates that the contents of a FEIR shall consist of:

- "The Draft EIR or a revision of the draft;
- Comments and recommendations received on the Draft EIR either verbatim or in summary;
- A list of persons, organizations, and public agencies commenting on the Draft EIR;
- The responses of the Lead Agency to significant environmental points raised in the review and consultation process; and
- Any other information added by the Lead Agency."

The City has evaluated comments on environmental issues from persons who reviewed the DEIR and has prepared a written response, pursuant to CEQA Guidelines §15088(a). Pursuant to CEQA Guidelines §15088(b), the City provided written responses to comments to any public agency that commented on the DEIR, at least ten (10) days prior to the City Council consideration of certifying the EIR as adequate under CEQA. Written responses to comments will also be provided to non-public agency individuals, organizations, and entities that commended on the DEIR. In addition, the FEIR will be made available to the general public at the City's Planning Division office and on the City's website a minimum of 10 days prior to the City Council public hearing.

The FEIR, along with other relevant information and public testimony at the Planning Commission and City Council public hearings, will be considered by the City's Council.

1.3 CLARIFICATIONS, AMPLIFICATIONS AND MODIFICATIONS TO THE DEIR

Section 3.0, Revisions to the Draft EIR, details the proposed changes to the DEIR. In response to public comments, text changes have been made to DEIR sections to clarify and amplify the analysis or mitigation measures, and to make insignificant modifications to the DEIR. This information does not rise to the level of significant new information as the resulting impact analysis and alternatives considered remain essentially unchanged, and no new or more severe impacts have been identified. These changes do not warrant DEIR recirculation pursuant to California Public Resources Code §21092.1 and CEQA Guidelines §15088.5.

CEQA Guidelines §15088.5 describes when an EIR requires recirculation prior to certification, stating in part:

"(a) A lead agency is required to recirculate an EIR when significant new information is added to the EIR after public notice is given of the availability of the Draft EIR for public review under Section 15087 but before certification. As used in this section, the term "information" can include changes in the project or environmental setting as well as additional data or other information. New information added to an EIR is not "significant" unless the EIR is changed in a way that deprives the public of a meaningful opportunity to comment upon a substantial adverse environmental effect of the project or a feasible way to mitigate or avoid such an effect (including a feasible project alternative) that the project's proponents have declined to implement. "Significant new information" requiring recirculation include, for example, a disclosure showing that:

(1) A new significant environmental impact would result from the project or from a new mitigation measure proposed to be implemented.

(2) A substantial increase in the severity of an environmental impact would result unless mitigation measures are adopted that reduce the impact to a level of insignificance.

(3) A feasible project alternative or mitigation measure considerably different from others previously analyzed would clearly lessen the environmental impacts of the project, but the project's proponents decline to apply it.

(4) The Draft EIR was so fundamentally and basically inadequate and conclusory in nature that meaningful public review and comment were precluded (Mountain Lion Coalition v. Fish and Game Com. (1989) 214 Cal.App.3d 1043).

(b) Recirculation is not required where the new information added to the EIR merely clarifies or amplifies or makes insignificant modifications in an adequate EIR."

As discussed herein and as elaborated upon in the respective Response to Comments, none of the clarifications or changes made in the Errata reflect a new significant environmental impact, a "substantial increase" in the severity of an environmental impact for which mitigation is not proposed, or a new

feasible alternative or mitigation measure that would clearly lessen significant environmental impacts but is not adopted, nor do the Errata reflect a "fundamentally flawed" or "conclusory" DEIR. In all cases, as discussed in individual responses to comments, master responses and DEIR Errata, these minor clarifications and modifications do not identify new or substantially more severe environmental impacts that the City has not committed to mitigate. Here, the public has not been deprived of a meaningful opportunity to comment upon a substantial adverse environmental effect of the Project or an unadopted feasible Project alternative or mitigation measure. Instead, the information added supports the existing analysis and conclusions, and responds to inquiries made from commenters. Therefore, this FEIR is not subject to recirculation prior to certification.

2.0 RESPONSE TO COMMENTS

CEQA Guidelines Section 15088(a) states that: "The lead agency shall evaluate comments on environmental issues received from persons who reviewed the Draft EIR and shall prepare a written response. The Lead Agency shall respond to comments that were received during the noticed comment period and any extensions and may respond to late comments." In accordance with these requirements, this section of the FEIR provides the City of Ontario's responses to each of the comments on the DEIR received during the public comment period.

Comment letters and specific comments are given letters and numbers for reference purposes. Where sections of the DEIR are excerpted in this document, the sections are shown indented. Changes to the DEIR text are shown in underlined text for additions and strikeout for deletions.

The following is a list of agencies and persons that submitted comments on the DEIR during the public review period.

2.1 LIST OF DEIR COMMENTS

Comments have been numbered as shown below, with responses to each comment following the respective comment letter.

Subject: Draft Environmental Impact Report for the South Ontario Logistics Center Specific Plan Project (PSP19-001/PGPA19-004) - SCH 2021010318

Dear Ms. Vaughn:

The California Department of Fish and Wildlife (CDFW) received the Draft Environmental Impact Report (DEIR) from the City of Ontario (City) for the South Ontario Logistics Center Specific Plan Project (Project) pursuant the California Environmental Quality Act (CEQA) and CEQA Guidelines.[1]

Thank you for the opportunity to provide comments and recommendations regarding those activities involved in the Project that may affect California fish and wildlife. Likewise, we appreciate the opportunity to provide comments regarding those aspects of the Project that CDFW, by law, may be required to carry out or approve through the exercise of its own regulatory authority under the Fish and Game Code. a

CDFW ROLE
CDFW is California's Trustee Agency for fish and wildlife resources, and holds those resources in trust by statute for all the people of the State. (Fish & G. Code, §§ 711.7, subd. (a) & 1802; Pub. Resources Code, § 21070; CEQA Guidelines § 15386, subd. (a).) CDFW, in its trustee capacity, has jurisdiction over the conservation, protection, and management of fish, wildlife, native plants, and habitat necessary for biologically sustainable populations of those species. (*Id.*, § 1802.) Similarly, for purposes of CEQA, CDFW is charged by law to provide, as available, biological expertise during public agency environmental review efforts, focusing specifically on projects and related activities that have the potential to adversely affect fish and wildlife resources.
CDFW is also submitting comments as a Responsible Agency under CEQA. (Pub. Resources Code, § 21069; CEQA Guidelines, § 15381.) CDFW expects that it may need to exercise regulatory authority as provided by the Fish and Game Code. As proposed,

[1] CEQA is codified in the California Public Resources Code in section 21000 et seq. The "CEQA Guidelines" are found in Title 14 of the California Code of Regulations, commencing with section 15000.

Conserving California's Wildlife Since 1870

for example, the Project may be subject to the extent implementation of the Project as proposed may result in "take" as defined by State law of any species protected under the California Endangered Species Act (CESA) (Fish & G. Code, § 2050 et seq.), the Project proponent may seek related take authorization as provided by the Fish and Game Code.

PROJECT DESCRIPTION SUMMARY

The Project includes the development of 23 parcels that currently have various agricultural uses, including a dairy farm, row crops, six owner and worker residents, and vacant land. The Project will consist of the construction of eight warehouse buildings (maximum of 5,333,518 square feet of warehouse and office uses) on 219.39 acres. The location is in the southwest portion of the City of Ontario and is bound by Eucalyptus Avenue to the north, Campus Avenue to the west, Merrill Avenue to the south, and Grove Avenue to the east.

cont'd a

COMMENTS AND RECOMMENDATIONS

CDFW offers the comments and recommendations below to assist the City in adequately identifying and/or mitigating the Project's significant, or potentially significant, impacts on state special-status fish and wildlife (biological) resources.

State Special-Status Reptiles

According to the DEIR, a mitigation measure (MM BIO-1) will be implemented to lessen the impacts to special-status reptile species (western pond turtle) that have the potential to occur within the Project as follows:

> ***MM BIO-1*** *Within 14 days prior to the onset of construction activities, a qualified biologist shall conduct pre-construction surveys for western pond turtle within all areas that fall within 100 feet of any suitable aquatic and upland nesting habitat for this species (stock/retention ponds). If western pond turtles are observed during the pre-construction survey, the CDFW shall be contacted. If no western pond turtles are observed during the preconstruction survey, then construction activities may begin. If construction is delayed or halted for more than 30 days, another pre-construction survey for western pond turtle shall be conducted. Within seven days of the pre-construction survey, a report of findings from the survey shall be submitted to the CDFW.*
>
> *During construction, a qualified biological monitor who has been approved by the CDFW to relocate western pond turtles shall be on-site to ensure that no western pond turtles are harmed. If western pond turtles are observed in the construction area at any time during construction, the on-site biological monitor shall be notified and construction in the vicinity of the sighting shall be halted until such a time as a turtle has been removed from the construction zone and relocated by an*

b

approved biologist. If a sighting occurs during construction, the biologist shall prepare a report of the event and submit it to CDFW.

CDFW agrees that surveys should be performed for western pond turtles; however, it is not clear on what a "preconstruction survey" for nearly 19.0 acres of stock/retention ponds and channels entails (e.g., seining, water withdrawal) and how this will ensure individuals are avoided. Also, CDFW would like to understand more regarding the relocation effort (e.g., location, type of habitat, species baseline data for the proposed relocation site, granted landowner permission). If western pond turtles are present on site, then, as currently designed, the Project would remove habitat for the species and therefore impact the species. Relocation alone may not be sufficient to offset the potentially remaining significant impact. Based on the status of the species and continuing loss of habitat in the vicinity, CDFW considers mitigation appropriate to ensure potentially significant impacts are mitigated to less than significant. CDFW recommends that the City include the following measures within the FEIR prior to certification.

cont'd
b

MM BIO-X (Added) *Within the breeding season (May-July) prior to the onset of construction activities, a CDFW-approved qualified biologist shall conduct pre-construction trapping surveys, following U.S. Geological Survey trapping protocol, for western pond turtle within all areas of any suitable aquatic habitat for this species (e.g., retention and treatment ponds). If western pond turtles are observed or trapped during the pre-construction survey, the Project Proponent shall either avoid impacts to western pond turtle aquatic and terrestrial habitat or shall prepare for CDFW review and approval, a translocation plan identifying proposed protocol for trapping and relocating turtles, including identifying potential, appropriate receiver sites to relocate western pond turtles to. If no western pond turtles are observed during the pre-construction survey, then construction activities may begin. If construction is delayed or halted for more than 30 days, another pre-construction survey for western pond turtle shall be conducted. Within seven days of the pre-construction survey, a report of findings from the survey shall be submitted to the CDFW. During construction, a qualified biological monitor who has been approved by the CDFW to relocate western pond turtles shall be onsite to ensure that no western pond turtles are harmed. If western pond turtles are observed in the construction area at any time during construction, the onsite biological monitor shall be notified and construction in the vicinity of the sighting shall be halted until such a time as a turtle has been removed from the construction zone and relocated by an approved biologist. If a sighting occurs during construction, the biologist shall prepare a report of the event and submit it to CDFW.*

If western pond turtle(s) is/are identified, the Project Proponent shall mitigate impacts to western pond turtle by creating suitable, breeding, and foraging habitat at a

minimum 2:1 replacement to impact ratio a CDFW-approved location within southwest San Bernardino County. Habitat shall be conserved in perpetuity via conveyance of a conservation easement to a CDFW-approved conservation entity and a management fund (endowment) shall be established by the Applicant consisting of an interest-bearing account with the amount of capital necessary to generate sufficient interest and/or income to fund all monitoring, management, and protection of the conservation area(s), including but not limited to, reasonable administrative overhead, biological monitoring, invasive species and trash removal, fencing and signage replacement and repair, law enforcement measures, long-term management reporting (as described below), and other actions designed to maintain and improve the habitat of the conserved land(s), in perpetuity. A Property Analysis Record, or substantially equivalent analysis, shall be conducted to determine the management needs and costs described above, which then will be used to calculate the capital needed for the management of the fund. Except for uses appropriate to a habitat conservation area, the public shall not have access to the mitigation area(s), and no activities shall be permitted within the site, except maintenance of habitat, including the removal of nonnative plant species, trash, and debris, and the installation of native plant materials.

cont'd
b

State Special-Status Avian Species

Within the biological assessment report for the Project, the western boundary was delineated at Bon View Avenue; however, according to the DEIR (3.1 Project Location and Setting), the Project is bound by Campus Avenue to the west (refer to Appendices Figure 1 and Figure 2). Further, the Project is described as consisting of 23 parcels, of which the Assessor Parcel Numbers (APNs) are listed (refer to Table 1 in the Appendices or in the DEIR as Table 3-1*)* along with Figure 3 in the Appendices for more details. CDFW asks that the City review the DEIR and ensure that the western boundary is consistent throughout the entire DEIR and appendices for the FEIR.

c

CDFW also believes that this omitted portion of the Project (e.g., the western portion between Bon View Avenue and Campus Avenue), or 74 acres, may be associated with Proposition 70 funding. The Chino Agricultural Preserve (herein referred to as the Dairy Preserve) was 17,000 acres of dairy and agriculture that encompassed portions of the Cities of Chino and Ontario. The Dairy Preserve was formed in 1968 under the auspices of the California's Williamson Act - a 1965 law that was intended to preserve California farmland. In 1988, voters passed Proposition 70, the California, Wildlife, Coastal, and Park Land Conservation Act (Act) to fund bonds for "the acquistion, development, rehabitation, protection, or restoration of park, wildlife, coastal, and natural lands in California, including **lands supporting unique or endangered plants and animals (emphasis added)**". San Benardino County was awarded a $20 million grant under

Proposition 70, to be applied towards the acquisition of dairy properties for the purpose of preserving agricultural heritage. The County of San Bernardino acquired nine dairy properties with the grant money in the early 1990s that included 366.6 acres, with approximately 201.3 acres within the City of Ontario. By 1997, half of the dairies that had been operating in the Dairy Preserve at its peak had left. In 1999, the City of Ontario annexed nearly 8,200 acres and the City of Chino claimed another 7,000 acres from the remaining acres in the Dairy Preserve.

With the economic downturn of 2007, the County of San Bernardino recognized the shifting markets within the Dairy Preserve and relocated its Proposition 70 land holdings to a more sustainable location through state legislation. SB 1124 authorized the sell or exchange of the originally acquired dairy properties purchased with Proposition 70 grant funds, under the condition that the County of San Bernardino preserve all lands and conservation easements acquired as the replacement properties in perpetuity for agricultural preservation, including agricultural and wildlife education or wildlife habitat, or for open space and conservation. Given the complexity of the funding and legistlation changes, CDFW would like more information and transparency regarding how the funds are being appropriated to their intented purposes (e.g., wildlife/burrowing owl land or open space conservation) included in the FEIR.

cont'd c

The DEIR (Section 4.3.5 Project Impacts and Mitigation Section *Burrowing Owl Survey*) states that burrowing owl surveys were conducted during the breeding season in 2019 (Ecological Sciences, Inc.) by "walking parallel transects (where feasible) through suitable habitat over the entire survey area [i.e., the Project site and within a 150-meter (500 feet) buffer area where feasible or at least by visual means]". No burrowing owl or their sign were detected.

Regardless, a mitigation measure (MM BIO-2) was included to lessen the impacts to burrowing owl as follows:

d

> **MM BIO-2** *The Project Applicant shall complete an initial BUOW take avoidance survey no less than 14 days prior to initiating ground disturbance activities. Implementation of avoidance and minimization measures (e.g., eliminating actions that reduce burrowing owl forage and burrowing surrogates (e.g., ground squirrel), or introduce/ facilitate burrowing owl predators) would be triggered by positive owl presence on the site where Project activities would occur. The development of avoidance and minimization approaches would be evaluated by monitoring burrowing owls (if present on-site). BUOW may re-colonize a site after only a few days. Time lapses between Project activities trigger subsequent take avoidance surveys including but not limited to a final survey conducted within 24 hours prior to ground disturbance.*

In southern California, burrowing owls are partial migrants, with some individuals migrating in winter, while others within the same breeding population remaining relatively sedentary. Conservation of migratory birds requires an understanding of habitat, behavior and threats faced by birds during breeding, wintering, and migration. However, although migratory birds are protected under international treaties, the distribution of stopovers and pathways used by migrating birds is poorly understood.

CDFW believes that burrowing owl(s) may use the Project for breeding, wintering, foraging, and/or migration stopovers. Because burrowing owls detected may be year-round residents, breeding adults, young from the previous breeding season, pre-breeding territorial adults, winter residents, dispersing juveniles, migrants, transients or new colonizers, burrowing owl residency status can be difficult to ascertain. Further, disease, predation, drought, high rainfall or site disturbance may preclude presence of burrowing owls in any given year. Thus, CDFW recommends that additional focused burrowing owl surveys of the Project site and appropriate buffer are warranted given the following: 1) the entire site was not surveyed; 2) it has been over two years since surveys were performed; 3) non-breeding season surveys should be conducted if exclusion methods are contemplated; and 4) the Project contains suitable habitat with known occurrences adjacent or within close proximity. Once more comprehensive and current data is gathered, CDFW recommends it be used to assess not only breeding, but wintering and migratory stopover habitat for burrowing owls within the Project. *cont'd* d

While CDFW appreciates the inclusion of minimization measures specific to burrowing owls that are directly referenced from the suggested buffers contained within the Burrowing Owl 2012 Staff Report (Table 4.3-2 CDFW Recommended Restricted Activity Dates and Setback Distances by Level of Disturbance for burrowing owl), the DEIR should also discuss site-specific and regionally significant and cumulative impacts, as well as mitigation. If habitat on the Project site is occupied by burrowing owls, CDFW considers impact to the habitat to be a substantial adverse and potentially significant impact based on location and species status in the area and limited remaining habitat for burrowing owls. CDFW recommends permanent conservation of occupied burrowing owl habitat that provides for nesting, foraging, wintering, and/or dispersal (i.e., during breeding and non-breeding seasons) comparable to, or better than, that of the Project. e

Finally, CDFW has provided comments to the City on several projects where impacts to burrowing owls have occurred or potentially occurred. Specifically, the City prepared a master plan for the Dairy Preserve that spans over 20 years (was formerly known as the New Model Colony (NMC) and is currently referred to as the Ontario Ranch). The General Plan Amendment and associated Final DEIR for the Sphere of Influence for the NMC (January 1998) assessed the impacts on biological resources of the conversion of the NMC from agricultural uses to develop urban and suburban uses. Subsequent to the f

adoption of the DEIR, a lawsuit was filed against the City by the Endangered Habitats League, Inc. and Sierra Club challenging the City's CEQA compliance and approval of the General Plan Amendment. A settlement agreement was reached and agreed to by all parties that set forth revised mitigation measures for potential impacts in the NMC (referred to as Annexation Area 163). Because state law requires that local jurisdictions update the DEIR General Plans every 10 years, an Ontario Plan Draft DEIR (DEIR SCH # 2008101140) was prepared by the Planning Center (April 2009) and finalized in July 2009. Measures from the settlement agreement were detailed within the Ontario Plan DEIR Section 5 *Environmental Analysis.* To date, CDFW is not aware of any lands that have been set aside, managed, and/or conserved for the benefit of burrowing owls that have been, and continue to be, impacted by development.

While the Project is just adjacent to the NMC boundary, under Section 15355 of the CEQA Guidelines, cumulative effects refers to "two or more individual effects which, when considered together, are considerable or which compound or increase other environmental impacts". Physical changes caused by a project can contribute incrementally to cumulative effects that are significant, even if individual changes resulting from a project are limited. The City must determine whether the cumulative impact is significant, as well as whether an individual effect is "cumulatively considerable." This means "the incremental effects of an individual project are significant when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects" (Guidelines Section 15064(h)(1)). This is particulaly true when past and continual impacts are not adequately mitigated for. Therefore, CDFW is once again strongly advising the City to maintain an interactive mapping and current inventory of burrowing owl occurrences, ensure adequate land is available and conserved **before** owls are passively relocated, and provide compensation for loss of all aspects of habitat types used (e.g., foraging, wintering, migratory stopovers, and breeding).

cont'd f

CDFW requests that the following mitigation measure be added to the burrowing owl section of the FEIR as follows:

> ***MM BIO-X (Added)*** *The Project Proponent shall conduct surveys for burrowing owls across all suitable breeding, wintering, and foraging habitat with the Project area. If burrowing owls are identified, the Project Proponent shall either avoid all impacts on-site or conserve non-impacted occupied habitat onsite and/or conserve occupied burrowing owl habitat off-site at a minimum total 2:1 ratio of conserved to impacted habitat. Coordination with the California Department of Fish and Wildlife (CDFW) shall occur to mitigate for the loss of habitat through the acquisition, conservation, and management of in-kind habitat. Lands conserved shall include* 1) *sufficiently large acreage with fossorial mammals present; 2) permanent protection through a conservation easement for the purpose of conserving burrowing owl habitat and*

prohibiting activities incompatible with burrowing owl use; 3) development and implementation of a mitigation land management plan to address long-term ecological sustainability and maintenance of the site for burrowing owls; and 4) funding for the maintenance and management of mitigation land through the establishment of a long-term funding mechanism such as an endowment (CDFW, 2012).

cont'd f

For other state special-status avian species that have been identified as having the potential to occur within the Project (tricolored blackbird, grasshopper sparrow, great blue heron, Swainson's hawk, yellow rail, California horned lark, and merlin), CDFW recommends implementation of a mitigation measure (MM BIO-1) to lessen Project related impacts as stated below.

MM BIO-1 *Prior to commencement of ground disturbance, establish the following:*

- *Vegetation removal is recommended to be conducted outside of the nesting season for migratory birds to avoid direct impacts.*
- *If vegetation removal will occur during the migratory bird nesting season, between February 1 and September 15, pre-construction nesting bird surveys shall be performed within three days prior to vegetation removal.*
- *If active nests are found during nesting bird surveys, they shall be flagged. A 250-foot buffer shall be fenced around songbird nests and a 500-foot buffer shall be fenced around raptor nests.*
- *A biological monitor shall visit the site once a week during ground disturbing activities to ensure all fencing is in place and no special-status species are being impacted.*

g

While this avoidance measure may benefit certain special-status species (e.g., horned larks, grasshopper sparrow), many of the other potential special-status species listed are not known to nest within the type of habitat within the Project (Swainson's hawk, great blue heron) and/or are seasonal migrants that because of geographical range or habitat requirements would not be expected to reproduce (e.g., merlin). Conversely, these same species, as well as others (bald eagle, golden eagle, and American peregrine falcon) have the potential to forage within the Project.

h

The Ontario Ranch DEIR concluded that the loss of farmland would only become less than significant with the collection of mitigation fees to fund replacement habitat and must have long-term conservation value for raptors. Similarly, the City of Chino concluded that impacts within the Preserve Specific Plan could not be mitigated for the cumulative loss of agricultural and open space below a level of significance for the direct loss of raptor foraging and migratory habitat (Preserve Specific Plan Statement of Overriding Conditions).

CDFW is concerned that similar projects that have undergone prior environmental review could come to substantially different conclusions regarding the significance of impacts related to the loss of raptor foraging habitat. CDFW believes the loss of these areas for foraging, individually and cumulatively, is significant and should be mitigated. Thus, CDFW recommends the DEIR reassess its findings for the continued loss of raptor habitat and provide appropriate mitigation in the form of habitat acquisition and preservation. CDFW recommends the City integrate into the DEIR the following measure: cont'd h

> ***MM BIO-X (Added)*** *If surveys determine that the Project supports special-status raptors, the Project Proponent shall mitigate the loss through the perpetual conservation and management of foraging habitat, approved by CDFW, at a minimum 1:1 ratio.*

The tricolored blackbird, a state threatened species, has been documented within the vicinity of the Project (ebird, California Natural Diversity Database [CNDDB]). Nesting tricolored blackbirds are known to prefer marsh (emergent cattails [*Typha* spp.] and bulrush [*Scirpus* spp.]) habitat but will also use upland breeding substrates (e.g., milk thistle (*Silybum marianum*), cheeseweed mallow (*Malva parviflora*), mustard (*Brassica* spp.), bull thistle (*Circium vulgare),* prickly lettuce (*Lactuca serriola*), sandbar willow (*Salix exigua*), as well as cultivated fields of triticale and fava beans (*Vicia fava)* (Beedy and Hamilton 1999). Tricolored blackbirds also forage in agricultural landscapes known to support large insect populations, including alfalfa (*Medicago sativa*), sunflowers (*Helianthus* spp.), and rice (*Oryza sativa*). These areas can sustain nearby tricolored blackbird colonies, and individuals have been observed to travel up to 5 km between their nests and suitable foraging substrates even in highly urbanized environments (e.g., a colony in Riverside County in 2014). Further, most tricolored blackbirds forage over a wide area, possibly due to an inability to acquire sufficient resources at one colony site for the entire breeding season, prospecting among colonies to assess availability of nesting and foraging resources or access to mates, and/or the availability of multiple proximate nesting locations allows the species to compensate for early-season nesting failures and variation in habitat and forage conditions over time (Beedy and Hamilton 1997). i

Given the Project and the adjacent lands contains suitable foraging and breeding habitat for tricolored blackbirds, CDFW recommends the DEIR include the following measure to require focused surveys and should tricolored blackbirds be observed nesting or foraging, appropriate mitigation.

> ***MM BIO-X (Added)*** *The Project Proponent shall conduct surveys for tricolored blackbird across all suitable breeding and foraging habitat with the Project area. If tricolored blackbirds are identified, the Project Proponent shall avoid all occupied habitat onsite. If onsite avoidance is infeasible, the Project Proponent shall apply for an incidental take permit (ITP) with California Department of Fish and Wildlife (CDFW) and shall mitigate for the loss of all habitat through the acquisition, conservation, and*

management of in-kind habitat at a minimum 3:1 ratio, or as approved by the final ITP. Habitat shall be conserved in perpetuity via conveyance of a conservation easement to a CDFW-approved conservation entity and a management fund (endowment) shall be established by the Project Proponent consisting of an interest-bearing account with the amount of capital necessary to generate sufficient interest and/or income to fund all monitoring, management, and protection of the conservation area(s), including but not limited to, reasonable administrative overhead, biological monitoring, invasive species and trash removal, fencing and signage replacement and repair, law enforcement measures, long-term management reporting, and other actions designed to maintain and improve the habitat of the conserved land(s), in perpetuity. A Property Analysis Record, or substantially equivalent analysis, shall be conducted to determine the management needs *and costs described above, which then will be used to calculate the capital needed for the management of the fund. Except for uses appropriate to a habitat conservation area, the public shall not have access to the mitigation area(s), and no activities shall be permitted within the site, except maintenance of habitat, including the removal of nonnative plant species, trash, and debris, and the installation of native plant materials.*

cont'd i

California Endangered Species Act

CDFW is responsible for ensuring appropriate conservation of fish and wildlife resources including threatened, endangered, and/or candidate plant and animal species, pursuant to the CESA. CDFW recommends that a CESA ITP be obtained if the Project has the potential to result in "take" (California Fish and Game Code Section 86 defines "take" as "hunt, pursue, catch, capture, or kill, or attempt to hunt, pursue, catch, capture, or kill") of State-listed CESA species, either through construction or over the life of the project. It is the policy of the state to conserve, protect, enhance, and restore State-listed CESA species and their habitats.

CDFW encourages early consultation, as significant modification to the proposed Project and avoidance, minimization, and mitigation measures may be necessary to obtain a CESA ITP. The California Fish and Game Code requires that CDFW comply with CEQA for issuance of a CESA ITP. CDFW therefore recommends that the DEIR addresses all Project impacts to listed species and specifies a mitigation monitoring and reporting program that will meet the requirements of CESA.

j

ENVIRONMENTAL DATA

CEQA requires that information developed in environmental impact reports and negative declarations be incorporated into a database which may be used to make subsequent or supplemental environmental determinations. (Pub. Resources Code, § 21003, subd. (e).) Accordingly, please report any special status species and natural communities detected during Project surveys to the California Natural Diversity Database. Information can be submitted online or via completion of the CNDDB field survey form at the following link:

k

https://wildlife.ca.gov/Data/CNDDB/Submitting-Data. The completed form can be mailed electronically to CNDDB at the following email address: CNDDB@wildlife.ca.gov. The types of information reported to CNDDB can be found at the following link: https://wildlife.ca.gov/Data/CNDDB/Plants-and-Animals. cont'd k

FILING FEES

The Project, as proposed, would have an impact on fish and/or wildlife, and assessment of filing fees is necessary. Fees are payable upon filing of the Notice of Determination by the Lead Agency and serve to help defray the cost of environmental review by CDFW. Payment of the fee is required in order for the underlying project approval to be operative, vested, and final. (Cal. Code Regs, tit. 14, § 753.5; Fish & G. Code, § 711.4; Pub. Resources Code, § 21089.). l

CONCLUSION

CDFW appreciates the opportunity to comment on the DEIR for the South Ontario Logistics Center Specific Plan Project (SCH No. 2021010318) and recommends that the City address the CDFW's comments prior to certifying the DEIR. If you should have any questions pertaining to the comments provided in this letter, please contact Kim Romich, Senior Environmental Scientist, at Kimberly.Romich@wildlife.ca.gov. m

Letter S1 California Department of Fish and Wildlife

December 23, 2021

Response S1-a

Comment is noted. No response is required.

Response S1-b

The General Biological Assessment (GBA) prepared for the Project included a literature review and field survey of the Project site and surrounding areas. The *Prado Dam* 7.5' USGS topographic quadrangle and eight surrounding quadrangles were used to identify sensitive species in the California Natural Diversity Data Base (CNDDB). According to the CNDDB, the nearest recorded occurrence of western pond turtle lies approximately 3.7 miles to the southeast of the Project area within the Santa Ana River floodplain. Further, the western pond turtle was not observed during the field survey. The onsite stock ponds collect waste from livestock and dairy activities. The stock ponds do not contain water throughout the year and are routinely dredged to remove waste and sediment. The stock ponds are designed to hold water for no more than 72 hours; therefore, the ponds do not provide a permanent source of open water necessary for the species. Although the GBA determined that the onsite stock ponds may potentially provide suitable habitat for western pond turtle, it is unlikely that this species occurs within the project area. The proposed mitigation measure MM BIO-1 was intended to ensure that no impacts to the species occurs in the unlikely event that western pond turtle is found onsite. Based on CDFW's recommendation and as noted in Section 3.0, *Revisions to the DEIR,* of this Final EIR, MM BIO-1 will be revised to the following (indicated in bold underline for additions and strikethrough to deletions):

MM BIO-1 The following measures shall be implemented for the indicated species, prior to commencement of ground disturbance at the Project site:

…

Western pond turtle

Within the breeding season (May-July) prior to the onset of construction activities, a CDFW-approved qualified biologist shall conduct pre-construction trapping surveys, following U.S. Geological Survey trapping protocol, for western pond turtle within all areas of any suitable aquatic habitat for this species (e.g., retention and treatment ponds). If western pond turtles are observed or trapped during the pre-construction survey, the Project Proponent shall either avoid impacts to western pond turtle aquatic and terrestrial habitat or shall prepare for CDFW review and approval, a translocation plan identifying proposed protocol for trapping and relocating turtles, including identifying potential, appropriate receiver sites to relocate western pond turtles to. If no western pond turtles are observed during the pre-construction survey, then construction activities may begin. If construction is delayed or halted for more than 30 days, another pre-construction survey for western pond turtle shall be conducted. Within seven days of the pre-construction survey, a report of findings from the survey shall be submitted to the CDFW. During construction, a qualified biological monitor who has been approved by

the CDFW to relocate western pond turtles shall be onsite to ensure that no western pond turtles are harmed.

If western pond turtles are observed in the construction area at any time during construction, the onsite biological monitor shall be notified and construction in the vicinity of the sighting shall be halted until such a time as a turtle has been removed from the construction zone and relocated by an approved biologist. If a sighting occurs during construction, the biologist shall prepare a report of the event and submit it to CDFW.

~~Within 14 days prior to the onset of construction activities, a qualified biologist shall conduct pre-construction surveys for western pond turtle within all areas that fall within 100 feet of any suitable aquatic and upland nesting habitat for this species (stock/retention ponds). If western pond turtles are observed during the pre-construction survey, the California Department of Fish and Wildlife shall be contacted. If no Western pond turtles are observed during the preconstruction survey, then construction activities may begin. If construction is delayed or halted for more than 30 days, another pre-construction survey for western pond turtle shall be conducted. Within seven days of the pre-construction survey, a report of findings from the survey shall be submitted to the California Department of Fish and Wildlife.~~

~~During construction, a qualified biological monitor who has been approved by the California Department of Fish and Wildlife to relocate western pond turtles shall be on-site to ensure that no western pond turtles are harmed. If western pond turtles are observed in the construction area at any time during construction, the on-site biological monitor shall be notified and construction in the vicinity of the sighting shall be halted until such a time as a turtle has been removed from the construction zone and relocated by an approved biologist. If a sighting occurs during construction, the biologist shall prepare a report of the event and submit it to CDFW.~~

The revised MM BIO-1, as specified above, will ensure that no take of western pond turtle will result from Project implementation. CDFW's recommendation that the Project should create suitable, breeding, and foraging habitat at a minimum 2:1 replacement to impact ratio if western pond turtle are found during pre-construction surveys is not necessary due to the fact that the onsite stock ponds to be impacted by the Project do not provide habitat necessary for the species, as described above. As previously stated, it is unlikely that the species will be found onsite during pre-construction trapping surveys and the proposed mitigation measure is merely precautionary.

Response S1-c

Development is only proposed on the ±130-acre site that is located north of Merrill Avenue, south of Eucalyptus Avenue, east of Bon View Avenue, and west of Grove Avenue (Phase 1). The additional parcels to the west of Bon View Avenue are associated with Phase 2 of Project development, and there is no specific development proposed at this time on those parcels. As stated on page 3-3 of Section 3.0, *Project Description,* of the Draft EIR, there is an active Williamson Contract (Contract #72-392) on APN 1054-051-01, 02 and 1054-061-01, 02. As there is no development proposed on the Phase 2 parcels,

the surveys were not completed west of Bon View Avenue. See Response S1-d below regarding revisions to MM BIO-2.

Regarding the funding and legislation changes, the Draft EIR is not required, under the CEQA Guidelines, to provide information regarding funding for conservation as the funds would not result in an environmental impact. The Project would implement the stated mitigation measures to ensure that there would be no direct impacts to the sensitive species. Additional information related to the agricultural lands and preservation through the Williamson Contract are provided in Section 4.1, *Agriculture and Forestry*, of the Draft EIR.

Response S1-d

A reliance letter was prepared by Ecological Sciences, Inc. on January 14, 2022 confirming there is no change in the existing site conditions compared to the time of the initial burrowing owl surveys prepared in 2019 (see Attachment S1). Therefore, the conditions as analyzed in the Draft EIR are accurate.

Response S1-e

The City disagrees with the assertion in that the Draft EIR does address site-specific and regionally significant and cumulative impacts, as well as providing mitigation where necessary to reduce impacts to a less than significant level. As stated on page 4.3-19 of the Draft EIR, the site-specific analysis states that the observations during the BUOW surveys indicated there were no direct BUOW identifications, and none of the potential burrows inspected were determined to be occupied. However, the Project would implement Mitigation Measure BIO-2 to require an avoidance survey, and avoidance and minimization approaches would be evaluated by monitoring the burrowing owls if they are present on-site. Therefore, as there were no indications of burrowing owls, and with implementation of MM BIO-2, the Draft EIR is not required to address permanent conservation of occupied burrowing owl habitat. Regarding regionally significant and cumulative impacts, as stated on page 4.3-27 of the Draft EIR, the cumulative study area for biological resources includes the southwestern San Bernardino County region. As further stated therein, the Project would implement mitigation measures to reduce impacts to the identified species, including the BUOW, to less than significant levels. Therefore, the Project would result in a less than significant contribution to cumulative impacts to these resources, and impacts would be less than cumulatively significant. Therefore, the Draft EIR adequately analyzes site-specific and regionally significant and cumulative impacts, as well as mitigation.

Response S1-f

See Response S1-e. As impacts to burrowing owl habitat have been reduced to less than significant levels, no additional mitigation measures are required. However, MM BIO-2 has been revised for clarification and to include the commenter's requested mitigation language (indicated in bold underline for additions and strikethrough to deletions):

MM BIO-2. Burrowing Owl Surveys. Phase 1: Prior to issuance of a demolition or grading permit for any ground disturbing activity, a qualified biologist shall conduct a pre-construction presence/absence survey for burrowing owls within ~~The Project Applicant shall complete~~

~~an initial BUOW take avoidance survey no less than~~ 14 days prior to initiating ground disturbance activities. Surveys shall be conducted consistent with the procedures in outlined in the "California Department of Fish and Wildlife (CDFW) 2012 Staff Report on Burrowing Owl Mitigation." If the species is absent, no additional mitigation will be required. ~~Implementation of avoidance and minimization measures (e.g., eliminating actions that reduce burrowing owl forage and burrowing surrogates (e.g., ground squirrel), or introduce/facilitate burrowing owl predators) would be triggered by positive owl presence on the site where Project activities would occur. The development of avoidance and minimization approaches would be evaluated by monitoring burrowing owls (if present on-site). BUOW may re-colonize a site after only a few days. Time lapses between Project activities trigger subsequent take avoidance surveys including but not limited to a final survey conducted within 24 hours prior to ground disturbance.~~

If burrowing owl(s) are observed onsite during the pre-construction clearance survey;

- Prior to disturbance of the occupied burrows, suitable and unoccupied replacement burrows shall be provided at a ratio of 2:1 within designated off-site conserved lands to be identified through coordination with CDFW and the City in which the burrowing owl(s) is(are) detected. A qualified biologist shall confirm that the artificial burrows are currently unoccupied and suitable for use by owls.
- Until suitable replacement burrows have been provided/confirmed within the off-site conserved lands to be identified through coordination with CDFW and the City of Ontario, no disturbance shall occur within 50 meters (approximately 160 feet) of occupied burrows during the nonbreeding season (September 1 through January 31) or within 75 meters (approximately 250 feet) during the breeding season (February 1 through August 31).
- Occupied burrows should not be disturbed during the nesting season (February 1 through August 31) unless a qualified biologist approved by CDFW verifies through non-invasive methods that either: 1) the birds have not begun egg-laying and incubation; or 2) that juveniles from the occupied burrows are foraging independently and are capable of independent survival.
- If burrowing owls are present at the time that the occupied burrows are to be disturbed, then the owls shall be excluded from the site following the 2012 CDFG Staff Report.

Phase 2 and SB 330 Replacement Site: Prior to any site-specific development, potential future residential development would be required to conduct site-specific biological resource surveys, including an arborist report, as part of the City's standard discretionary review process, including compliance with CEQA and applicable local, state, and federal regulations.

Furthermore, subsequent to the adoption in 1998 of the Sphere of Influence (SOI) General Plan and EIR, a lawsuit was filed against the City of Ontario (City) by the Endangered Habitats League, Inc., and the

Sierra Club, challenging the City's CEQA compliance and approval of the SOI General Plan Amendment. A Settlement Agreement was reached and agreed to by all parties that set forth revised mitigation measures for potential impacts in the New Model Colony (referred to as Annexation Area 163 in the agreement) to the burrowing owl, the DSFLF, raptor foraging and wildlife habitat, loss of open space, actual and potential habitat and agricultural land, and sensitive (listed and nonlisted) species. These measures will be in effect until all the developable acres in the New Model Colony (Ontario Ranch) reach full buildout, as determined by the City.

Since the Settlement Agreement, the City has established a habitat mitigation fee to cover potential environmental impacts to the Burrowing Owl, the Delhi Sands Flower-loving Fly, raptor foraging, loss of open space, and agricultural lands. Mitigation fees have been collected by the City and have been deposited into a trust fund to be used for the acquisition, restoration, rehabilitation, and maintenance of lands deemed to have long-term conservation value. In 2010, the Ontario City Council approved the selection of the Riverside Land Conservancy (today known as River and Land Conservancy) as the administrator of the habitat mitigation fees and to create a habitat program pursuant to the requirements of the Settlement Agreement between the City of Ontario, the Endangered Habitats League, Inc., and the Sierra Club. However, due to the economic downturn shortly after 2010, the contract between the City and the Riverside Land Conservancy was never ratified. It was anticipated that once development in Ontario Ranch began to commence, the City would ratify the contract.

In 2022, the City will be going out with a Request for Proposals (RFP) to select a non-profit land trusts and/or organization specializing in habitat conservation. The selected non-profit and/or organization will be responsible for the administration of the habitat mitigation fees and create a habitat program pursuant to the requirements of the Settlement Agreement between the City of Ontario, the Endangered Habitats League, Inc., and the Sierra Club. In partnership with the California Department of Fish and Wildlife, the City will work with the selected non-profit and/or organization to maintain an interactive mapping and current inventory of the burrowing owl occurrences and in the selection of adequate lands for passive relocation.

Response S1-g

The Draft EIR includes MM BIO-1 to reduce Project impacts to State special-status avian species (tricolored blackbird, grasshopper sparrow, great blue heron, Swainson's hawk, yellow rail, California horned lark, and merlin) to a less than significant level. The Draft EIR's MM BIO-1 already contains the CDFW's recommended measures.

Response S1-h

The Project site consists of an active dairy farm and agricultural fields. Ongoing dairy and agricultural operations include implementation of rodent control programs, which include the removal of rodent burrows and use of rodenticides. Based upon the level of ongoing disturbance and implementation of rodent control programs, the site would be considered low-quality foraging habitat for raptors; therefore, impacts to raptor foraging habitat would be considered less than significant. The measures included in MM BIO-1 are intended to reduce potential impacts to foraging raptors to a less than significant level.

Although the agriculture fields and stock/retention ponds may provide foraging habitat for special-status raptors, it is not expected to be valuable, as the lands are actively maintained and in use. This loss of potential foraging habitat would not make a cumulatively considerable contribution to the regional decline of raptors; therefore, replacement of foraging habitat would not be required.

Response S1-i

According to the California Natural Diversity Data Base (CNDDB), tricolored blackbird colonies have been recorded within the vicinity of the Project site. Tricolored blackbirds require open accessible water, a secure substrate in which to place their nests, and suitable nearby foraging areas that provide adequate food sources for breeding. If any one of these required elements is missing, the species will not breed in that location. Although the GBA prepared for the Project found that suitable habitat for this species occurs on the Project site; breeding habitat is contingent upon the onsite waste filled stock ponds. However, the onsite stock ponds do not contain water throughout the year; therefore, the ponds do not provide a reliable source of open water necessary for breeding/nesting habitat. The species' preferred foraging habitats include agricultural crops such as rice, alfalfa, irrigated pastures, and ripening or cut grain fields, as well as annual grasslands, cattle feedlots, and dairies. Therefore, the site does provide potentially suitable foraging habitat for tricolored blackbird.

The site was not occupied by tricolored blackbird individuals or colonies at the time of the GBA. Further, suitable breeding/nesting habitat does not occur on the site. As such, protocol surveys are not warranted. Furthermore, the tricolored blackbird is not a federally listed species. Tricolored blackbird is a State-listed species, and a California Endangered Species Act (CESA) incidental Take Permit (ITP) is only required to be obtained from CDFW for potential "take" of the species. "Take" is defined by Fish and Game Code Section 86 as "hunt, pursue, catch, capture, or kill, or attempt to hunt, pursue, catch, capture, or kill." There is no occupied tricolored blackbird habitat on the site. Therefore, the Project is not expected to result in "take" of tricolored blackbird.

Measures included in MM BIO-1 are intended to avoid permanent direct impacts to nesting birds, which includes tricolored blackbird, year-round. Therefore, no further mitigation is required.

Response S1-j

See Response S1-i related to the CDFW's proposed mitigation measure. See also Response S1-I regarding the tricolored blackbird.

MM BIO-1 in the Draft EIR requires vegetation removal conducted outside of the nesting season and to ensure no sensitive species are impacted, thereby avoiding permanent direct impacts to nesting birds, which includes tricolored blackbird, year-round. Therefore, no further mitigation is required.

Response S1-k

Comment is noted. No further response is required.

Response S1-l

Comment is noted. No further response is required.

Response S1-m

Comment is noted. No further response is required.

Attachment S1– CDFW Reliance Letter for Burrowing Owl

ECOLOGICAL SCIENCES, inc.

January 14, 2022

Norah Jaffan
EPD Solutions
2355 Main Street, Suite 100
Irvine CA 92614

SUBJECT: Results of Updated Biological Information Review and Site Reconnaissance, ±130-acre South Ontario Logistics Center, City of Ontario, San Bernardino County, California

Dear Norah:

This summary letter presents findings of an updated biological information review and site reconnaissance completed by Ecological Sciences, Inc. on a ±130-acre site located north of Merrill Avenue, south of Eucalyptus Avenue, east of Bon View Avenue, and west of Grove Avenue. The site occurs on the "Prado Dam" California USGS 7.5-minute quadrangle map, Township 2 South, Range 7 West. Results of this updated biological analysis are intended to provide the applicant with supplementary biological information as it relates to potential habitat to support the special-status burrowing owl (*Athene cunicularia*) for use in further evaluating environmental compliance and permitting decisions in support of the proposed project.

Ecological Sciences biologists conducted a reconnaissance-level survey to characterize current on-site conditions and to generally evaluate their potential to support BUOW on January 9, 2022. The purpose of the present survey was to generally assess current site conditions in 2022 relative to those present in 2019. No additional focused BUOW surveys were conducted as a part of this general biological update primarily due to seasonal timing (i.e., outside breeding season). Ecological Sciences initially conducted focused BUOW breeding season surveys in April-July 2019 (report titled *Results of a Focused Burrowing Owl Surveys, ±130-acre South Ontario Logistics Center Site, City of Ontario, San Bernardino County, California, October 16, 2019*). No direct BUOW observations were recorded in 2019. In addition, no burrows inspected during the surveys were determined to be currently occupied by BUOW based on absence of BUOW observations and sign (feathers, pellets, fecal material, prey remains, etc.) at or near potential burrow entrances/aprons.

In 2019, the subject site was characterized primarily as an active dairy operation. The site contained several single-family residences, multiple dairy-related structures (sheds, corrals, etc.), feeding preparation areas, numerous waste ponds/basins, cultivated/disced areas, manure spreading areas, and debris dumping areas. The ruderal/disturbed areas supported mostly invasive, non-native annual species. Manure, associated with the ongoing dairy operation, was present throughout most of the site. Cattle feeding areas were barren ground covered in manure and mud. Weather conditions during the January 2022 reconnaissance-level survey included 1-6 mph breeze, 20% cloud cover, and air temperatures of approximately 59-68° F.

Based on habitat survey results in January 2022, existing site conditions are entirely consistent with those present in 2019 and have not significantly changed since the 2019 focused BUOW surveys.

Comment Letter S2

Comment Letter - S2

From: MATHEW, JACOB K@DOT
To: Alexis Vaughn
Cc: Clark, Rosa F@DOT
Subject: South Ontario Logistics Center Specific Plan
Date: Monday, December 27, 2021 3:07:44 PM

Hi Alexis,
Thank you for providing us the Draft EIR for the South Ontario Logistic Center Specific Plan (Project), located north of Merrill Avenue, south of Eucalyptus Avenue and west of Grove Avenue in the City of Ontario. As we've requested earlier, in order to accurately evaluate the extent of potential impacts of the project to the operational characteristics of the existing State facilities by the project area, we offer the following comments:

1. Provide Traffic Impact Study for this location. The Traffic Impact Analysis shall be prepared in accordance to the local jurisdiction's Traffic Impact Study guidelines and the Highway Capacity Manual (HCM).
2. Provide traffic safety reviews as a stand-alone report for proposed land use projects and plans affecting the State Highway System.

a

These recommendations are preliminary and summarize our review of materials provided for our evaluation. If you have any questions regarding this email, please contact me.

Thanks,
JACOB K MATHEW

Letter S2 Jacob K. Mathew, Department of Transportation (Caltrans)
January 4, 2022

Response S2-a

Comment noted. The Traffic Impact Analyses (TIA) and associated appendices were provided to Caltrans for review on November 15, 2021. Additionally, the TIA was posted to the City's website on November 15, 2021, at the following URL:

https://www.ontarioca.gov/Planning/Reports/EnvironmentalImpact.

As such, all requested documents have been provided to Caltrans for review.

A TIA (Appendix I1 of the Draft EIR) was prepared for the Project in accordance with the City's most recent Traffic and Transportation Guidelines (adopted June 2020), which documents the City's traffic analysis methodology, traffic safety, and impact thresholds. The TIA has been prepared in accordance with the 6th Edition Highway Capacity Manual (HCM) and the San Bernardino County Congestion Management Program (CMP) Guidelines for CMP Traffic Impact Analysis Reports, and through consultation with City of Ontario staff during the TIA scoping process. Additionally, the TIA is based on Southern California Association of Governments (SCAG) 2020 Regional Transportation Plan (RTP) Model. The Project's vehicle miles traveled (VMT) analysis (Appendix I2 of the EIR) is based on the San Bernardino County Transportation Authority (SBCTA) Guidelines, which include a Countywide Senate Bill (SB) 743 VMT Implementation Study. Trips generated by the Project's proposed land uses have been estimated based on trip generation rates collected by the Institution of Transportation Engineers (ITE) Trip Generation Manual, 10th Edition (2017) and the High-Cube Warehouse Trip Generation Study.

The TIA was prepared in accordance with Caltrans endeavors to maintain a target Level of Service (LOS) at the transition between LOS C and LOS D on State Highway System (SHS) facilities. The TIA addresses traffic safety reviews for the proposed land uses for the Project and the surrounding projects and plans affecting the nearby SHS. The Project will be consistent with all program plans, ordinances, or policies, addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities, as described in Impact 4.13-1 of the Draft EIR.

Hello Alexis,

Thank you for transmitting the above reference project to ALUC for review.

While the project is located outside the jurisdictions of the Riverside County ALUC, it is important to note that the ALUC has prepared an airport land use compatibility plan for the Chino Airport, which includes properties on both sides of the Riverside County and San Bernardino County sides of the boundary line. This plan identifies the City property located within Zones A, B1, D, and E of the Chino Municipal Airport Land Use Compatibility Plan. You can find the plan criteria at the following website http://www.rcaluc.org/Plans/New-Compatibility-Plan [rcaluc.org].

a

The inevitable corollary of continued encroachment of urbanization in the vicinity of an airport, unless open areas are planned in advance, is a continual reduction in the number and size of open areas where an aircraft may safely land without endangering the populace.

If you have any questions, please feel free to contact me.

Letter L1 Riverside County Airport Land Use Commission

November 23, 2021

Response L1

Comment Noted. Page 4.9-11 of Section 4.9, *Land Use and Planning*, of the Draft EIR acknowledges the Project site's location within the Chino Airport Influence Area. The Project's compliance with the Airport Land Use Compatibility Plan for the Chino Airport is discussed in Chapter 2, Section 2.2, Airport Influence Areas of the Project's Specific Plan.

Subject: RE: [REVIEW REQUIRED] Admin Draft EIR for ORBP II

Hi Alexis,

I don't see anything in regards to the trash services. The should have a section demonstrating how the project will meet recycling and organics regulations AB 341, AB 1826. And SB 1383. a

Ben

Letter L2 City of Ontario, Integrated Waste Department, Municipal Utilities Company
December 22, 2021

Response L2-a

The Draft EIR addresses solid waste and the Project's compliance with applicable regulations related to solid waste in Section 4.15, Utilities and Service Systems. Specifically, PPP SW-2 of page 4.15-26 states that the Project will store and collect recyclable materials in compliance with AB 341. As stated on page 4.15-28, the Project would also implement the requirements of the City's Integrated waste Department's Refuse & Recycling Planning Manual on refuse and recycling storage and access for service. The Project would comply with Chapter 3 of the Ontario Municipal Code, which requires that the Project comply with all applicable State and federal laws. AB 1826 requires businesses to recycle their organic waste, and that local jurisdictions must implement an organic waste recycling program to divert organic waste generated by businesses. SB 1383 requires counties to take the lead on planning for necessary organic waste recycling and food recovery capacity to divert organic waste from landfills into recycling activities and food recovery organizations. The City's Solid Waste Department offers the Food waste Recycling Program to provide food waste collection services to assist businesses in complying with AB 1826 and SB 1383. Therefore, the Draft EIR does include a section demonstrating how the Project would meet the recycling and organics regulations listed in the comment.

Draft Environmental Impact Environmental Impact Report (EIR) for the Proposed South Ontario Logistics Center Specific Plan Project (Proposed Project) (SCH No.: 2021010318)

South Coast Air Quality Management District (South Coast AQMD) staff appreciates the opportunity to comment on the above-mentioned document. The City of Ontario is the California Environmental Quality Act (CEQA) Lead Agency for the Proposed Project. The following comments on the Draft EIR include recommended revisions to the CEQA regional construction air quality analysis for impacts from cleanup activities, CEQA air quality impacts analysis for overlapping construction and operational activities, air dispersion modeling parameters, new air quality mitigation measures, and a discussion of South Coast AQMD permits that the Lead Agency should include in the Final EIR.

Based on the Draft EIR, the Proposed Project consists of construction and operation of 5,333,518 square feet of industrial and business park uses on a 219-acre site that is located on southwest corner of Eucalyptus Avenue and South Grove Avenue within the City of Ontario. The Proposed Project site is currently used for agricultural/diary operations and developed with croplands, barns, storage structures, retention ponds, and two above ground fuel storage tanks[1]. The Proposed Project is surrounded by agricultural uses to the north, east, and west, and the Chino Airport to the south. Based on the Draft EIR, existing sensitive receptors are located 150 feet east of proposed Phase 1 development and 85 feet north of proposed Phase 2 development[2]. a

The Proposed Project will be implemented in two phases. Phase 1 will allow for the development of up to 3,172,780 square feet of industrial uses in Planning Areas 1 and 2[3] and is analyzed at the project level in the Draft EIR. Phase 2 would allow for the future potential development of Planning Areas 3 through 5 and would result in additional 2,160,738 square feet of industrial uses; Phase 2 is analyzed at the programmatic level in the Draft EIR[4]. Construction of Phase 1 is anticipated to begin in 2022 and will be completed 2023[5]. Phase 2 construction will follow, beginning in 2023 with completion by 2024[6]. For analyses purposes, the Lead Agency assumed both phases would be built out by 2024. Once operational, the Proposed Project at buildout is

[1] Draft EIR. Project Description. Page 3-4.
[2] *Ibid.* Page 4.2-5.
[3] *Ibid*. Executive Summary. Page 1-4.
[4] *Ibid*.
[5] *Ibid*. Appendix B1 Air Quality Emissions Model Data. CalEEMod Output Files PDF pages 327 and 407.
[6] *Ibid*.

anticipated to generate 12,446 trip-ends per day, 2,438 of which would be made by light-, medium-and heavy-heavy-duty trucks[7]. Planning Areas 2, 4, and 5 are anticipated to include refrigerated logistics uses[8]. As such, the Lead Agency assumed a total of 230 trucks with transportation refrigeration units (TRUs)[9]. cont'd a

Based on a review of the Draft EIR and supporting technical documents, South Coast AQMD staff has five main comments. A summary of these comments is provided as follows with additional details provided in the attachment. b

1. CEQA Regional Construction Air Quality Impacts Analysis: In the Draft EIR, the Lead Agency discussed a need to excavate and dispose contaminated soil at the Proposed Project but did not quantify emissions from soil removal and hauling activities. The Lead Agency should quantify those emissions in the Final EIR.

2. CEQA Air Quality Impacts Analysis for Overlapping Construction and Operational Activities: In the Draft EIR, the Lead Agency discussed the possibility that Phase 1 and Phase 2 may be built out sequentially, but sequential development is not a condition for the Proposed Project. It is possible that Phase 1 and Phase 2 may be built out concurrently. Therefore, air quality impacts from overlapping operational activities in Phase 1 and construction activities in Phase 2 should be evaluated in the Final EIR. c

3. Air Dispersion Modeling Parameters: The air dispersion modeling performed in the Draft EIR did not use a uniform Cartesian grid and instead placed 458 discrete receptors within the modeling domain. The Lead Agency should provide additional information to justify this modeling parameter in the Draft EIR. Additionally, the Lead Agency found idling emission rates for trucks, but utilized a lower idling emission rate for modeling purposes within AERMOD. This may have underestimated the concentrations; therefore, the Lead Agency should use the higher idling emission rate in the Final EIR or provide additional information to justify a lower emission rate is appropriate to use. d

4. Additional Recommended Air Quality Mitigation Measures: In the Draft EIR, operation of the Proposed Project is found to have significant and unavoidable air quality impacts from VOC, NOx, PM10, and PM2.5 emissions. The Lead Agency should include additional mitigation measures to identify clean operational trucks that are already available and in-use, require their uses by the opening date for Phase 1 in 2023, include considerations of potential cleaner technologies that will become feasible and available during the lifetime of the Proposed Project (buildout year 2024 or later), develop a process for periodic technology assessment with performance standards, ensure future buildout at the Proposed Project does not exceed what was previously evaluated in the Draft EIR, and clearly mark truck routes with trailblazer signs to ensure truck travel avoids traversing by existing sensitive receptors. e

[7] Draft EIR. Appendix I1 Traffic Analysis. PDF pages 3160 to 3162.
[8] *Ibid*. Technical Air Quality Files. "SOL_HRA Emission Calcs".
[9] *Ibid*.

5. Responsible Agency and South Coast AQMD Permits: If the Proposed Project will require the use of stationary equipment such as emergency generator(s) and fire pump(s), permit(s) from South Coast AQMD will be required. Removal or change in location of existing stationary source equipment may also require permit modifications. The Final EIR should include a discussion of stationary equipment that will require South Coast AQMD permits and identify South Coast AQMD as a CEQA Responsible Agency for the Proposed Project. f

Pursuant to California Public Resources Code Section 21092.5(a) and CEQA Guidelines Section 15088(b), South Coast AQMD staff requests that the Lead Agency provide South Coast AQMD staff with written responses to all comments contained herein prior to the certification of the Final EIR. In addition, issues raised in the comments should be addressed in detail giving reasons why specific comments and suggestions are not accepted. There should be good faith, reasoned analysis in response. Conclusory statements unsupported by factual information will not suffice (CEQA Guidelines Section 15088(c)). Conclusory statements do not facilitate the purpose and goal of CEQA on public disclosure and are not meaningful, informative, or useful to decision makers and to the public who are interested in the Proposed Project. Further, if the Lead Agency makes the finding that the recommended new air quality mitigation measures are not feasible, the Lead Agency should describe the specific reasons supported by substantial evidence for rejecting them in the Final EIR (CEQA Guidelines Section 15091). g

South Coast AQMD staff is available to work with the Lead Agency to address any air quality questions that may arise from this comment letter. Please contact Alina Mullins, Air Quality Specialist, at amullins@aqmd.gov, should you have any questions or wish to discuss the comments.

Sincerely,

Lijin Sun

South Coast AQMD Staff's Summary of Air Quality Analysis and Health Risk Assessment in the Draft EIR

In the Air Quality Analysis Section of the Draft EIR, the Lead Agency quantified the Proposed Project's maximum daily construction emissions. The Lead Agency considered two different construction phases: Phase 1 and Phase 2. The Lead Agency compared the Proposed Project's construction emissions to South Coast AQMD's recommended regional air quality CEQA significance thresholds. Based on the analysis, the Lead Agency found that emissions from both Phase 1 and Phase 2 construction activities would be less than significant with implementation of mitigation measures (MM) AQ-1, which requires use of low VOC architectural coatings with no more than 10g/L of VOC[10].

The Lead Agency also considered three different operational phases: Phase 1 operations, Phase 2 operations, and Project Buildout (combined operations from Phases 1 and 2). Based on the analysis, the Lead Agency found that all three operational phases would result in significant regional operational air quality impacts from VOC and NOx emissions[11]. Project Buildout would also result in significant air quality impacts from PM10 and PM2.5 emissions[12]. MMs AQ-2 through AQ-5 require the following: contractual specifications to use electric-powered off-road equipment during operations (e.g. forklifts and yard trucks); electric plug-ins at truck bays for cold storage warehousing; preparation and implementation of a transportation demand management program; and postage of idling restriction signage[13]. However, the Lead Agency found that air quality impacts from the Proposed Project's three operational phases would remain significant and unavoidable for VOC and NOx emissions during Phases 1, 2, and Project Buildout, and for PM10 and PM2.5 at Project Buildout[14]. h

In the Draft EIR, the Lead Agency also quantified the Proposed Project's localized construction and operational emissions and compared them to the applicable South Coast AQMD's localized significance thresholds for both Phases 1 and 2. Based on the analysis, the Lead Agency found that the Proposed Project's localized construction air quality impacts would be less than significant for Phases 1 and 2[15]. Localized operational air quality impacts during Phases 1 and 2 would also be less than significant with implementation of MM AQ-2, which requires all off-road operational equipment be electric or zero-emission[16]. Additionally, the Lead Agency calculated cancer risks from Proposed Project's construction and operational activities in Phase 1 and found that the maximum cancer inhalation risk would be of 8.8 in one million and 1.39 in one[17], respectively, both of which would be below South Coast AQMD's CEQA significance threshold of 10 in one million for cancer risk[18]. Phase 2 construction and operational activities

4

were found to result in the same cancer risk of 8.8 in one million and 1.39 in one million, respectively[19]. Finally, the Draft EIR discussed South Coast AQMD Rules 2305 and 316[20]. cont'd h

South Coast AQMD staff's detailed comments on the Draft EIR are provided as follows.

1. **CEQA Regional Construction Air Quality Impacts Analysis**

Based on a review of the Air Quality Section of the Draft EIR, South Coast AQMD staff found that the Lead Agency quantified the Proposed Project's regional construction emissions from demolition and building activities but did not quantify emissions from soil removal and hauling activities[21].

In the Hazards and Hazardous Materials Section of the Draft EIR, the Lead Agency explained that based on historical site usage (i.e. agriculture and dairy farming), the Proposed Project site may have soil contamination[22]. According to Mitigation Measure (MM) HAZ-2 and -3, the Proposed Project will be required to conduct a Phase II subsurface soil assessment and develop a Soil Management Plan (SMP) prior to receiving a grading permit, which will include procedures for soil excavation, handling, monitoring, and disposal protocols[23]. i

Soil removal and hauling activities will likely involve the use of heavy-duty, diesel-fueled trucks and generate mobile source emissions. The Lead Agency should use good faith, best efforts to provide information on the scope, types, and duration of any reasonably foreseeable soil removal and hauling activities. Therefore, South Coast AQMD staff recommends that the Lead Agency quantify emissions from removing and hauling contaminated soil and include those emissions in the Proposed Project's regional construction emissions profile to be compared to South Coast AQMD's regional air quality CEQA significance thresholds for construction to determine the level of significance in the Final EIR. If those emissions are not included in the Final EIR, the Lead Agency should provide reasons for not including them supported by substantial evidence in the record. If the reason for not including them in the Final EIR is because soil removal and disposal measures in the SMP have not been fully developed or approved prior to the certification of the Final EIR, the Lead Agency should commit to evaluating the air quality impacts from soil removal and hauling activities through a CEQA process when the measures become known and prior to allowing the commencement of any soil removal and hauling activities at the Proposed Project.

2. **CEQA Air Quality Impacts Analysis for Overlapping Construction and Operational Activities**

Based on a review of the Air Quality Analysis in the Draft EIR, South Coast AQMD staff found that Phase 1 and Phase 2 may be developed sequentially[24]. However, the Lead Agency did not include a condition requiring sequential development. This could lead to a possible development scenario where construction activities in Phase 2 overlap with operational activities from Phase 1 (e.g., some components of the Phase 1 will be operational in year 2023 while components of j

[19] Draft EIR. *Ibid*. Pages 4.2-35 to 4.2-41.
[20] *Ibid*. Page 4.2-10.
[21] Draft EIR. Appendices. CalEEMod Summer and Winter Runs. Trips and VMT
[22] *Ibid*. Section 4.7 Hazards and Hazardous Materials. Pages 4.7-20 to 4.7-24.
[23] *Ibid.*
[24] *Ibid*. Page 3-28.

5

Phase 2 are under construction until year 2024). Since the air quality analysis conservatively assumes that construction of the Proposed Project will occur over three years from 2022 to 2024, it is reasonably foreseeable that construction and operation may overlap[25]. If an overlapping construction and operation scenario is reasonably foreseeable at the time the Draft EIR was prepared, to conservatively analyze a worst-case impact scenario, South Coast AQMD staff recommends that the Lead Agency use its best efforts to identify the overlapping construction and operational years and development components, combine construction emissions (including emissions from demolition) with operational emissions, and compare the combined emissions to South Coast AQMD's air quality CEQA *operational* thresholds of significance to determine the level of significance in the Final EIR. If the air quality analysis from overlapping construction and operational activities is not included in the Final EIR, the Lead Agency should provide reasons for not including the analysis supported by substantial evidence in the record. cont'd j

3. Air Dispersion Modeling Parameters

To analyze the Proposed Project's localized air quality impacts during operation, the Lead Agency performed project-specific air dispersion modeling in the Draft EIR. South Coast AQMD staff recommends that the Lead Agency revise the modeling parameters based on the following comments.

Receptor Grid

a) Upon review of the air dispersion modeling files, South Coast AQMD staff found that the Lead Agency did not use a uniform Cartesian grid and instead placed 458 discrete receptors within the modeling domain. This placement may not have identified the maximum impacted receptors. Therefore, South Coast AQMD staff recommends that the Lead Agency use a uniform Cartesian grid with a spacing of 100 meters or less for all distances less than 1,000 feet or provide additional information to demonstrate that the maximum off-site concentrations are identified with placement of discrete receptors in the Final EIR. k

Emission Rates from Idling

b) Upon review of the technical air quality modeling files, South Coast AQMD staff found that the Lead Agency quantified the emission rates anticipated from trucks that will be idling at the Proposed Project[26]. However, the truck idling emission rates identified by the Lead Agency were not consistent with those used to model the Proposed Project's concentrations in AERMOD; the idling emission rates utilized in AERMOD were much lower. For example, for the volume source "Idle - Building 1 Loading Docks - East" the truck idling emission rate that the Lead Agency identified in the technical air quality analysis was "8.34E-07"[27], but the truck idling emission rate used in AERMOD for the same volume source was "9.23E-15"[28]. This could have underestimated concentrations from truck idling during the Proposed Project's operations and the associated health risks. Therefore, South Coast AQMD staff recommends that the Lead Agency revise the truck l

[25] Draft EIR. Project Description. Page 3-27.
[26] *Ibid.* Appendix B2 Health Risk Assessment.
[27] *Ibid*. PDF page 663.
[28] *Ibid.* AERMOD Input. SOL Operations Rev2.ADI. PDF page 940.

idling emission rates in the air dispersion model or provide additional information to support that the use of the lower idling emission rates is appropriate in the Final EIR. cont'd l

4. Additional Recommended Air Quality Mitigation Measures

In the Draft EIR, the Lead Agency found that the Proposed Project would result in significant and unavoidable air quality impacts from VOC, NOx, PM10, and PM2.5 emissions during operation. CEQA requires that the Lead Agency consider mitigation measures to minimize significant adverse impacts (CEQA Guidelines Section 15126.4) and that all feasible mitigation measures that go beyond what is required by law be utilized to minimize or eliminate any significant adverse impacts. South Coast AQMD staff recommends that the Lead Agency consider including the following operational air quality mitigation measures in the Final EIR to further reduce the Proposed Project's significant and unavoidable air quality impacts during operation.

Technology is transforming the goods transport and movement sector at a rapid pace. Zero-emissions (ZE) or near-zero emissions (NZE) cargo handling equipment and trucks are already commercially available and in-use. Therefore, the Lead Agency should use good-faith efforts to identify the available types of ZE or NZE trucks in the Final EIR and require their uses by the opening date for Phase 1 in 2023.

Clean trucks will become increasingly more feasible and commercially available as technology advances. If using ZE or NZE technologies is not feasible today, it could become feasible in a reasonable period of time during the Proposed Project's buildout schedule which was conservatively analyzed to begin in 2024 but may extend beyond 2024 (CEQA Guidelines Section 15364). Therefore, it is recommended that the Lead Agency include considerations of potential cleaner technologies that will become feasible and available during the lifetime of the Proposed Project and develop a process with performance standards to require and/or accelerate the deployment of the lowest emission technologies and the utilization of ZE or NZE heavy-duty trucks during operation (CEQA Guidelines Section 15126.4(a)). The Lead Agency can and should develop the following performance standards or any other comparable standards in the Final EIR. m

- Develop a minimum amount of ZE or NZE heavy-duty trucks that the Proposed Project must use each year during operation to ensure adequate progress. Include this requirement in the Proposed Project's business development agreement(s), and contracts with operator(s).
- Establish a warehouse contractor(s), tenant(s), or operator(s) selection policy that prefers contractor(s), tenant(s), or operator(s) who can supply and use ZE or NZE heavy-duty trucks during operation. Include this policy in the Request for Proposal, procurement documents, and purchase order(s) for selecting contractor(s), tenant(s), or operator(s).
- Establish a policy to select and use warehouse-servicing vendors that use ZE or NZE heavy-duty trucks. Include this policy in the vendor contracts and business agreements.
- Establish a purchasing policy to purchase and receive materials from warehouse-servicing vendors that use ZE or NZE heavy-duty trucks to deliver materials. Include this policy in the procurement documents and purchase orders with vendors.

- Develop a target-focused and performance-based process and timeline to implement the use of ZE heavy-duty trucks during operation that is consistent with the timeline and requirement for warehouse activities under South Coast AQMD Rule 2305.
- Develop a project-specific process and criteria for periodically assessing progress in implementing the use of ZE heavy-duty trucks during operation.

Additional air quality mitigation measures to further reduce the Proposed Project's operational air quality impacts from mobile sources and design considerations that the Lead Agency should consider in the Final EIR may include the followings:

- The Lead Agency should limit the daily number of trucks allowed at the Proposed Project to levels that were analyzed in the Final EIR (2,438 daily truck tips). If higher daily truck volumes are anticipated to visit the site, especially as the Proposed Project is continued to be built out to 2024 and beyond, the Lead Agency should commit to re-evaluating the increase in daily truck trips from the Proposed Project through CEQA to determine if a higher number daily truck volumes would result a more severe air quality and health risk impacts than previously analyzed in the Final EIR prior to allowing a higher activity level.

- In the Draft EIR, the Lead Agency explains that the Proposed Project's truck routes will be limited to Merrill Avenue, Euclid Avenue, and Archibald Avenue[29]. These routes were used to model the Proposed Project's diesel particulate matter concentrations from trucks during operation[30]. South Coast AQMD staff recommends that the Lead Agency clearly mark truck routes with trailblazer signs to ensure truck travel utilizes these routes analyzed in the Draft EIR and avoids traversing past existing sensitive receptors (e.g. residents).

cont'd m

5. Responsible Agency and South Coast AQMD Permits

If implementation of the Proposed Project requires the use of stationary equipment, including but is not limited to, emergency generator(s) and emergency fire pump(s), permits from South Coast AQMD are required. The Final EIR should include a discussion on stationary equipment that will require South Coast AQMD permits and identify South Coast AQMD as a Responsible Agency for the Proposed Project. Additionally, the Proposed Project is currently developed with two above-ground storage tanks. The Lead Agency should consult with South Coast AQMD Engineering and Permitting staff to see if removal or relocation of these tanks will require modifications to permits for the tanks from South Coast AQMD. Any assumptions used in the Final EIR will be used as the basis for permit conditions and limits for the Proposed Project. The 2015 revised Office of Environmental Health Hazard Assessment (OEHHA) methodology is being used by South Coast AQMD for determining operational health risks for permitting applications and also for all CEQA projects where South Coast AQMD is the Lead Agency. Please contact South Coast AQMD's Engineering and Permitting staff at (909) 396-3385 for questions on permits. For more general information on permits, please visit South Coast AQMD's webpage at: http://www.aqmd.gov/home/permits.

n

[29] Draft EIR. Project Description. Page 3-11.
[30] *Ibid*. Technical Air Quality Files. AERMOD Run "SOL_operations_rev2".

Letter L3 South Coast Air Quality Management District

December 29, 2021

Response L3-a

Comment is introductory and general in nature. No further action needed.

Response L3-b

Excavated materials will be transported off-site. See additional discussion under response to comment L3-i.

Response L3-c

The Draft EIR evaluated impacts based on, amongst other data, the assumption, as stated on page 4.2-15 of the Draft EIR, "…that construction of Phase 1 would occur from mid-2022 to mid-2023 and the construction of Phase 2 would occur from mid-2023 to mid-2024". Thus, the City has analyzed sequential construction of Phase 1 with Phase 2 in the EIR.

The commenter's recommendation to combine overlapping construction emissions with operational emissions is not consistent with other SCAQMD guidance documents, recommendations, and impact analyses. For example, neither the SCAQMD's CEQA Air Quality Handbook, Guidance Document for Addressing Air Quality Issues in General Plans and Local Planning, or Air Quality Significance Thresholds imply or explicitly recommend combining emissions from distinct construction and operational activities into a single lump sum emissions total. Rather, each of these documents discusses potential sources, mitigation measures, and thresholds of significance for construction and operational emissions separately.

It should be noted that specific details regarding development of the parcels in Phase 2 are not known at this time. The DEIR's air quality analysis assumed construction of Phase 2 would begin in 2023. In addition, the analysis assumed all Phase 2 parcels would be developed at the same time, and that construction activities associated with all Phase 2 parcels would overlap. Actual development would be subject to market conditions. It is possible that only one of the parcels in Phase 2 could be developed beginning in 2023, or that construction could start later than 2023, which would affect emissions estimates. It is not possible to know the specific timing and characteristics of potential future projects occurring in the planning area and, therefore, evaluating potential combined emissions scenarios would be speculative and would not provide meaningful information or analyses.

Nonetheless, the Final EIR will include the following discussion on impacts from the potential overlapping of Phase 1 operational activities with Phase 2 construction activities:

Table 4.2-12a - Emissions from Overlapping Phase 1 Operation and Phase 2 Construction

Sources	Pollutants (pounds per day)					
	VOC	NOX	CO	SO_2	PM_{10}	$PM_{2.5}$
Unmitigated Emissions						
Phase 1 Operations[1]	100.47	386.27	390.69	2.10	132.86	42.19
Phase 2 Construction (2024)[2]	130.58	75.54	107.97	0.42	24.86	7.96
Total Unmitigated Overlapping Emissions	**231.05**	**461.81**	**498.66**	**2.52**	**157.72**	**50.15**
SCAQMD Operational Threshold	55	55	550	150	150	55
Exceeds Threshold	**Yes**	**Yes**	No	No	**Yes**	No
Mitigated Emissions						
Phase 1 Operations[1]	82.28	295.28	272.12	1.91	125.83	36.37
Phase 2 Construction (2024) [2]	36.66	75.54	107.97	0.42	24.86	7.96
Total Mitigated Overlapping Emissions	**118.94**	**370.82**	**380.09**	**2.33**	**150.69**	**44.33**
SCAQMD Operational Threshold	55	55	550	150	150	55
Exceeds Threshold	**Yes**	**Yes**	No	No	**Yes**	No

1. Refer to Draft EIR Table 4.2-9 (Phase 1 – Maximum Daily Operation Emissions).
2. Refer to Draft EIR Table 4.2-10 (Phase 2 – Maximum Daily Construction-Related Emissions). Note that Phase 2 construction would occur in 2023 and 2024. This table provides the maximum daily emissions, which would occur in 2024.

As shown in **Table 4.2-12a - Emissions from Overlapping Phase 1 Operation and Phase 2 Construction** of the Final EIR, project emissions from the operation of Phase 1 combined with concurrent construction of Phase 2 could result in maximum worst-case daily emissions of VOC, NOx, and PM10 in excess of applicable SCAQMD thresholds. Overlapping emissions of CO, SOx, and PM2.5 would not exceed. Even with implementation of applicable mitigation measures described in the Draft EIR, mitigated emissions of VOC, NOx, and PM10 would remain in excess of applicable thresholds.

Comparing the results summarized on Table 4.2-12a of the Final EIR, with the total Project buildout emissions as reported in DEIR Table 4.2-12 demonstrates that emissions for all six criteria pollutants studied are less during the overlapping scenario than at Project buildout. PM2.5 impacts from the overlapping scenario are less than significant, while long-term operational impacts exceed thresholds. Therefore, the temporary impacts from the overlapping Phase 1 operations / Phase 2 construction are less than those predicted to occur with Project buildout. As such, DEIR Table 4.2-12 presents the worst-case maximum daily emissions from the Project (i.e., exceedances of the ROG, NO_X, PM_{10}, and PM_{25} regional daily mass emissions thresholds). The DEIR identifies all feasible mitigation to reduce construction and operational impacts. Combining Phase 2 construction with Phase 1 operations (i.e., the phases that would potentially overlap) would not result in a new threshold exceedance, would not make additional mitigation feasible, and a new impact would not occur.

Response L3-d

The commenter is correct that the air dispersion modeling performed in support of the Draft EIR used discrete receptors, and a discrepancy in idling emission rates from trucks in the EIR documentation. As discussed in detail below (see responses to comments L3-k and L3-l below). As discussed therein, the City contends the use of discrete receptors is justified and disagrees with the assertion that the modeling underestimated project emissions from idling.

Response L3-e

See detailed response to comment L3-m below.

Response L3-f

Comment is general in nature. See related response to comment L3-n below.

Response L3-g

Comment is general in nature. No further action needed.

Response L3-h

Comment is general in nature. No further action needed.

Response L3-i

The comment summarizes statements in the Draft EIR regarding the potential for soil contamination to be present on the Project site. The comment also summarizes Mitigation Measures (MM) HAZ-2 and -3 requiring the performance of a Phase II subsurface soil assessment and development of a Soil Management Plan (SMP) prior to receiving a grading permit. Because the presence of impacted soils is speculative at this time, the Draft EIR could not reasonably contain detailed data regarding the potential compound(s) of concern, the lateral or vertical extent of any impacted material, and the need for removal and disposal. Therefore, specific soil removal and disposal measures cannot reasonably be known at this time, and the City mandated that the SMP developed after certification of the Final EIR, pursuant to MM HAZ-2, include disposal protocols.

The City agrees to include a commitment to require the evaluation of the air quality impacts from soil removal and hauling activities when the protocols become known and prior to allowing the commencement of any soil removal and hauling activities at the Proposed Project. See revisions to MM HAZ-2 in Chapter 3 of the Final EIR and reproduced below.

MM HAZ-2 Following drainage of the on-site ponds, the Project Applicant shall conduct a limited Phase II subsurface assessment of sediments to evaluate the sediments for chemical risks to human health and the environment. If contamination from dairy and animal-related wastes is encountered at a level above Environmental Screening Levels (ESLs) for non-residential uses, the appropriate environmental agency (Regional Water Quality control Board, Department of Toxic Substance Control, South Coast Air Quality Management District) shall be notified. Any contamination identified as a result of such testing/sampling shall be investigated, and removed or remediated to the satisfaction of the environmental agency with evidence provided to the City, such that there are no residual significant impacts following mitigation. Prior to allowing the commencement of any soil removal or hauling activities at the Proposed Project, the City will review and/or evaluate potential air quality impacts (criteria pollutants and toxic air contaminants from equipment

exhaust, earthmoving, and other on-site remedial activities, as applicable) to verify that impacts are properly assessed and disclosed in accordance with CEQA.

Response L3-j

See detailed response to comment L3-c above.

Response L3-k

The City agrees with the comment summary that the modeling performed to analyze impacts from the proposed Project did not use a uniform Cartesian grid and instead placed 458 discrete receptors within the modeling domain. The City disagrees with the assertion this method may not have identified the maximum impacted receptor(s) and that the analyses be revised. The choice to use discrete receptors was simply to increase the efficiency of the computer modeling and includes discrete receptors at 50-meter intervals (more refined than the suggested 100 meter spacing) covering a 1,000-meter by 1,000-meter area.

Response L3-l

The City acknowledges the discrepancy noted in the comment. Copies of the AERMOD modeling files contained in the Appendix to the Draft EIR do not accurately reflect those upon which the City relied in determining impacts. The results in the Draft EIR are from AERMOD modeling runs that match the emission rates identified by the City, which were inadvertently omitted from the Draft EIR Appendix. Therefore, dispersion modeling results used to calculate impacts disclosed in the Draft EIR are consistent and accurate and do not underestimate impacts. Replacement pages are identified in the Errata section of the Final EIR.

Response L3-m

The Draft EIR identifies potentially significant levels of emissions during construction and operation of the proposed Project. The Draft EIR also includes a number of Plans, Programs, and Policies, standard conditions, and Mitigation Measures to reduce impacts from the proposed Project. The City disagrees that the suggested performance standards must be adopted in the Final EIR

The City designed the five air quality mitigation measures to require strategies which can reasonably be seen as feasible at the time Project operations are expected to begin. Especially, MM AQ-2 through MM AQ-5 have been identified to reduce operational emissions from mobile sources. MM AQ-2 requires the use of electrical off-road equipment such as forklifts and hostlers/yard trucks. MM AQ-3 requires electrical hookups at loading bays for cold storage. MM AQ-4 requires the implementation of a Transportation Demand Management (TDM) program to reduce single-occupant vehicle trips and encourage public transit. Additionally, MM AQ-5 prohibits idling when engines are not in use.

The six suggested measures contained in the comment related to ZE or NZE vehicles are not feasible to implement, because the availability of vehicles equipped with such technology in 2024 is speculative. Even with adoption of CARB's Advanced Clean Truck Rule, CARB acknowledges that it will take time for zero- and near-zero emission (ZE and NZE) vehicles to become commercially available and to penetrate

the market. For example, CARB's EMission FACtor (EMFAC) 2021 model provides detailed vehicle registration information and estimates the official emissions inventories of on-road mobile sources, vehicle population, and vehicle miles traveled (VMT) in California. The EMFAC2021 data for South Coast portion of San Bernardino County shows that in 2024 (the Project's opening year), approximately 85 percent of heavy trucks would still be powered by diesel and 91 percent of the VMT would occur from diesel trucks. Electric vehicles would make up approximately 0.29 percent of the heavy-duty fleet and 0.25 percent of the heavy truck VMT. The EMFAC data shows that penetration of ZE and NZE vehicles into commercial fleets will be slow. For example, for 2030, the model predicts that 81 percent of heavy trucks would be diesel-powered and that 88 percent of the heavy truck VMT would be from diesel trucks. Therefore, as CARB data anticipates that the vast majority of trucks of trucks to be diesel-powered in the Project opening year and in 2030, it would not be feasible to develop numeric targets, to establish preferential occupancy policies, or require purchasing policies applicable to future, unknown tenants.

The Final EIR does not need to specify the technology choices by which emissions reductions from the operations of future, unknown tenants will be achieved. South Coast AQMD Rule 2305 establishes performance standards applicable to future tenants and offers flexible compliance options, allowing each future operator at the proposed Project site to adopt the feasible strategies applicable to their operations. Although compliance with proposed Rule 2305 could reduce emissions below what is currently analyzed, conservatively, the EIR did not take credit for these potential additional reductions.

The City disagrees with the suggestion that the Final EIR should include a limit on the daily number of trucks allowed at the Proposed Project to levels that were analyzed in the Final EIR (2,438 daily truck tips) and require re-evaluating impacts through CEQA should daily truck trips from the Proposed Project be anticipated to exceed those levels. The EIR is based on a set of realistic, but conservative, set of assumptions regarding the magnitude of potential activities resulting from the proposed Project, including truck trip estimates. As stated on page 4.13-12 of the Draft EIR, "From a trip generation perspective, these land use assumptions are conservative in that trip generation would likely be overstated as opposed to understated." Therefore, the City does not anticipate truck trips to exceed those, and future re-evaluation is not necessary.

The City agrees to include a commitment to require Project operators to "…mark truck routes with trailblazer signs to ensure truck travel utilizes these routes analyzed in the Draft EIR….". See revisions to MM AQ-5 in Chapter 3 of the Final EIR and reproduced below:

MM AQ-5. All truck access gates and loading docks within the Project site shall have a sign posted that states:

- Truck drivers shall turn off engines when not in use.
- Truck drivers shall shut down the engine after five minutes of continuous idling operation, once the vehicle is stopped, the transmission is set to "neutral" or "park," and the parking brake is engaged.
- Telephone numbers of the building facilities manager and CARB to report Violations.
- <u>Truck travel is restricted to identified truck routes only.</u>

In addition, signage shall be installed to direct trucks to the appropriate designated truck routes.

Response L3-n

Refer to Response O2-f for Comment Letter O2. The proposed Project is being developed for as-of-yet unknown future tenants, to fulfill their specific, but speculative business needs. As such, and in accordance with CEQA guidelines, the Draft EIR did not anticipate the installation and operation of diesel emergency generators, fire pumps, or other equipment needing permits from the SCAQMD. Thus, the City disagrees that the SCAQMD should be listed as a responsible agency.

Re: Notice of Availability of a Draft EIR: South Ontario Logistics Center Specific Plan (State Clearinghouse #2021010318)

Dear Ms. Vaughn:

This letter is in response to the Notice of Availability of a draft EIR for the South Ontario Logistics Center Specific Plan, made available on November 15, 2021. The City's comments are outlined below:

Planning — a

1) The project description for the EIR references a DA which has not been included. Additional information should be provided, that shows how the DA effects the timing, design, conditions, fees (entitlement, DIF and construction) and/or mitigation of the project. Is the DA available for review along with the EIR, or at least the deal points so we have understanding of the DA's impact to the project and adjacent jurisdictions? The EIR needs to address this issue.

2) On page 3-41 or another page, Figure 3-6, or another figure, should be revised to clearly display existing land uses adjacent to the Project Area and located in the City of Chino. — b

3) On page 4-5, Table 4-1, City of Chino –The project listed below should be added to the EIR so that the documents projections/analyses have greater accuracy. — c

   a. Eagle's Nest V and VI airport hangar project proposed to be developed on the Chino Airport along the southern portion of Merrill Avenue, west of the Grove/Merrill intersection. The project currently proposes 155,299-square feet of hangar space with 7,528-square feet of office mezzanine.

Land Development/Engineering — d

4) The City would like to collaborate and review infrastructure-related improvements (WQMP, drainage, potable water demand, sewer, etc.) that have downstream and potential off-site impacts to the City of Chino. Additionally, mitigation items may already exist on other EIR's for other Ontario projects, and a clear matrix showing overlap and methods to construct should be implemented.

Traffic / Transportation — e

5) **Continue Cooperation of Transportation Circulation Related Efforts**
The Cities of Chino and Ontario routinely meet to discuss transportation and other infrastructure related interests that have impacts to both agencies. While this TIA does analyze appropriate

13220 Central Avenue, Chino, California 91710
Mailing Address: P.O. Box 667, Chino, California 91708-0667
(909) 334-3250 • (909) 334-3720 Fax
Web Site: www.cityofchino.org

intersections for the project, the City of Chino will continue to collaborate with the City of Ontario on the ultimate design and construction of roadways, traffic controls and infrastructure to accommodate both the local traffic impacts and the regional traffic impacts as this region continues to develop. A high priority for the City of Chino is the management of commercial traffic as industrial development continues in the region. The City of Chino would like to continue our collaboration on the established truck routes and look for opportunities to strengthen those routes ensuring trucks stay on route and can effectively use them. *cont'd* e

6) **Merrill Avenue**
The TIA recommends the construction of the half width section along the project frontage. While this is a standard practice and often a requirement for most developments, with the south side of the project frontage located along the Chino Airport controlled by San Bernardino County, it is recommended that the full ultimate width of Merrill Avenue along the project frontage be built as part of this project as it is unlikely that San Bernardino County will have a project in the near term that will facilitate such improvements which will be advantageous for future circulation in the area as identified in the TIA. The City of Chino would like to continue our collaboration efforts with the City of Ontario on accomplishing this goal. f

7) **Intersection #52 Vineyard/Hellman/Merrill**
In reference to Exhibit 3-20, this intersection's traffic inaccurately shows no traffic in the existing condition inbound or outbound on the south leg. In 2019, this may have been the case during the traffic count collection as the segment was under construction. However, now that construction has finished, this segment is open and has traffic, the 0 trips shown in Exhibit 3-20 are inaccurate and need to be updated to more accurately reflect current conditions. g

8) **Intersection #47 Grove/Merrill**
In Table 3-1, the traffic control at this intersection inaccurately states it is AWS controlled. Earlier in 2021, the intersection was improved with a traffic signal and has 2-EB lanes and 1-WB lane with EB left turn pockets. The SB movement is a single combo left-right lane. These existing traffic controls should be updated which may impact the LOS analysis of the existing and future analysis scenarios. h

9) **Intersection #54 Carpenter/Merrill**
Similarly, this intersection was recently improved to be traffic signal controlled which is inaccurately identified in the various analysis scenarios of the TIA. This improvement should be updated in the TIA to accurately show current and future conditions. i

Letter L4 City of Chino

January 4, 2022

Response L4-a

The Development Agreement (DA) prepared for the Draft EIR is discussed within Section 3.0, *Project Description* of the Draft EIR. The DA follows the improvements identified within the Specific Plan and will not include any new physical construction or any new significant impact that was not already analyzed and addressed within the Draft EIR.

Response L4-b

Figure 4.9-1, *Surrounding Land Uses Map*, of the Draft EIR, identifies existing surrounding land uses adjacent to the Project site and existing surrounding land uses located in the City of Chino.

Response L4-c

As stated on page 112 of the Traffic Impact Analysis (TIA), provided in Appendix I of the Draft EIR, the cumulative project list was prepared through consultation with planning and engineering staff from the City of Ontario. The cumulative projects listed are those that would generate traffic and would contribute traffic to Project area intersections. The neighboring jurisdictions such as the City of Chino were contacted to include key projects in their respective cities that would generate traffic and would contribute traffic to Project area intersections. Additionally, page 122 of the TIA describes the model growth for the Project. Through a conservative analysis approach and in conjunction with the addition of cumulative projects that are not consistent with the General Plan, additional growth has also been applied on a movement-by-movement basis, where applicable, to estimate reasonable traffic volume forecasts. Therefore, the additional growth would account for any potential cumulative projects that are not located on the project list. Furthermore, according to the Initial Study prepared for the City of Chino's Eagle's Nest V and VI airport hangar project, buildout of the hangar project would result in a less than significant to no impact to traffic and transportation.[2] Therefore, buildout of the Eagle's Nest V and VI airport hangar project would not result generate increased traffic volumes, nor contribute traffic to its area's intersections. Based on the reasons above, cumulative impacts from nearby cumulative projects, including those either planned, under environmental review, approved, or under construction, as well as an applied growth factor, were accounted for in the cumulative analyses for the Draft EIR.

Response L4-d

Section 4.8, *Hydrology and Water Quality*, of the Draft EIR, analyzes and discusses infrastructure related improvements relating to drainage, potable water demand, sewer, etc., for the Project and surrounding area and includes. The Draft EIR identifies plans, programs, and policies which will be implemented upon buildout of the Project to further reduce runoff to the surrounding area. As discussed on page 4.8-17 through 4.8-18 of the Draft EIR, an extensive drainage plan would be in place which includes on-site storm drains, culverts, catch basins and detention basins. The basins would be designed to lessen the flow of

[2] City of Chino, Initial Study for the Eagle's Nest V and VI Aviation Business Park Project. September 2020. Retrieved from: http://p1cdn4static.civiclive.com/UserFiles/Servers/Server_10382578/File/City%20Hall/Departments/Community%20Development/Environmental%20Documents/Eagle's%20Nest%20Project/Eagles%20Nest%20V%20and%20VI%20IS_MND%20with%20Attachments.pdf

post-development runoff to pre-development conditions, and would be designed to treat runoff for pollutants, pursuant to SWRCB regulations. Furthermore, a preliminary Water Quality Management Plan (WQMP), provided in Appendix G2 of the Draft EIR, has been created for this Project. The preliminary WQMP has incorporated combined Low Impact Development (LID) treatment, source control Best Management Practices (BMPs), and treatment control BMPs. Through implementation of these BMPs, mitigation volume will be contained, thus, operational water quality impacts would be less than significant. Furthermore, the Project would comply with all State, county, and local regulations regarding stormwater runoff during construction and operational phases of the Project. Therefore, water quality standards and waste discharge requirements would not be exceeded, and surface water and groundwater quality would not be degraded. Downstream and potential off-site impacts to the City of Chino would be less than significant, and no mitigation is required.

Response L4-e

Comment noted. No further response required.

Response L4-f

In accordance with the City of Ontario's Master Plan of Streets and Highways, the City plans on building Merrill Avenue the full width, including the Chino (south) side, but only to the curb and gutter. The City will not build sidewalks or landscape the south side or put other Chino utilities under the street. The City only intends on paving so there is a full drivable width for two lanes in each direction.

Response L4-g

As stated on page 70 of the TIA, traffic counts were collected in January 2019. Due to the closures associated with COVID-19, a growth rate per year for movements were utilized to conservatively reflect 2021 conditions. Pursuant to CEQA Guidelines Section 15125(a)(3), the existing conditions baseline shall not include hypothetical conditions. Therefore, as the counts were taken prior to the completion of the inbound and outbound on the south leg, the traffic count once the improvement was completed is speculative. Furthermore, the TIA's future and cumulative scenarios correctly account for planned roadway improvements. Lastly, under SB 743, level of service (LOS) is no longer utilized for determining significance for transportation impacts under CEQA. Therefore, no update is required. However, the City of Ontario will continue to coordinate improvements and projects with the City of Chino.

Response L4-h

See Response L4-g as it applies to traffic counts and LOS.

Response L4-i

See Response L4-g as it applies to traffic counts and LOS.

Subject: Comments on South Ontario Logistics Center Specific Plan EIR (SCH NO. 2021010318)

Dear Ms. Vaughn,

Thank you for the opportunity to comment on the Environmental Impact Report (EIR) for the proposed South Ontario Logistics Center Specific Plan. Please accept and consider these comments on behalf of Golden State Environmental Justice Alliance (GSEJA). Also, GSEJA formally requests to be added to the public interest list regarding any subsequent environmental documents, public notices, public hearings, and notices of determination for this project. Send all communications to Golden State Environmental Justice Alliance P.O. Box 79222 Corona, CA 92877. a

1.0 Summary

The project proposes the construction and operation of an industrial Specific Plan area and the upzoning of a replacement residential site in accordance with requirements of SB 330. Buildout of the Specific Plan would result in 5,333,518 square feet (sf) of business park and industrial uses on approximately 219 acres. Pursuant to SB330 requirements, the project proposes to create an Overlay District on an "SB330 Replacement Site" to increase the residential zoning capacity by 1,352 units, which will offset the "loss" of residential zoning capacity within the Project site. In order for this Overlay District to be approved, a Zone Change and General Plan Amendment are required.

2.1 Project Piecemealing

The EIR does not accurately or adequately describe the project, meaning "the whole of an action, which has a potential for resulting in either a direct physical change in the environment, or a reasonably foreseeable indirect physical change in the environment" (CEQA § 15378). The project proposed by the South Ontario Logistics Center Specific Plan is a piecemealed portion of a larger overall project to be developed within the larger REDA Industrial Center in the project vicinity.

CEQA § 15165 - Multiple and Phased Projects requires that "Where individual projects are, or a phased project is, to be undertaken and where the total undertaking comprises a project with significant environmental effect, the Lead Agency shall prepare a single program EIR for the ultimate project as described in Section 15168." The EIR misleads the public and decision makers by circumventing adequate and accurate environmental analysis for the whole of the action - construction and operation of all REDA Industrial Center buildings as a whole. A program EIR must be prepared which accurately represents the whole of the action without piecemealing the project into separate, smaller development projects or development areas to present unduly low environmental impacts. The Notice of Completion/Availability for the Ontario Ranch Business Park Specific Plan (proposed 1,905,027 sf of warehouse and office uses) located adjacent to the east of the proposed SOLC SP area was published on February 13, 2020 also submitted by the project applicant/sponsor REDA for the proposed SOLC SP. Additionally, the Notice of Completion/Availability for the West Ontario Commerce Center Specific Plan (development of 555,505 square feet of Business Park use and 2,350,005 square feet of Industrial use with a total development of 2,905,510 square feet) located to the west of the proposed SOLC SP area was published in March 2018 also submitted by the project applicant/sponsor REDA for the proposed SOLC SP. Other new, proposed, or existing industrial development on sites adjacent to the north, east, and south of the proposed project site and within the vicinity of the site are also under control of the proposed project applicant.

b

It must be noted that this is especially vital as the Ontario Ranch Business Park Specific Plan area is located adjacent to the east of the proposed South Ontario Logistics Center Specific Plan area, which was determined to result in significant and unavoidable impacts to Air Quality, Greenhouse Gas Emissions, Transportation/Traffic, and Agricultural and Forestry Resources[1]. Additionally, the West Ontario Commerce Center SP was determined to result in cumulatively considerable significant impacts to Air Quality, Greenhouse Gas Emissions, Transportation/Traffic, Cultural

[1] Ontario Ranch Business Park SP EIR https://files.ceqanet.opr.ca.gov/251693-3/attachment/A_hDeg6ojeL8TfpJf-2RP2u6jLb1XkwYyMq-TwO3y2NdMvOO7ArB1g4kpj_IAWLA2MiuvrzvIKSrKrJD0

Resources, and Agricultural Resources[2]. The EIRs for Ontario Ranch Business Park SP, West Ontario Commerce Center SP, and South Ontario Logistics Center SP exclude a meaningful analysis that includes all proposed development. The EIR must be revised to comply with CEQA § 15165 by preparing a Program EIR pursuant to CEQA § 15168. It is especially clear that the overall larger Industrial Center in the project vicinity is already planned and piecemealed as the Project Description states that "all off-site improvements identified for this Project have already been addressed in prior CEQA documents (such as the Ontario Ranch Business Park Final EIR (approved October 2020) and Merrill Commerce Center Specific Plan Final EIR (approved November 2020)) or are part of the City's planned regional infrastructure system, for which the Project will participate in funding. Off-site improvements for these prior CEQA documents consisted of asphalt demolition, fine grading, utility trenching, asphalt paving, finishing and landscaping."

b cont'd

3.0 Project Description

The EIR does not include the proposed South Ontario Logistics Center Specific Plan (SOLC SP) document as an attachment for public review. The SOLC SP would include permitted uses and development standards such as maximum height, floor area ratio, parking requirements, and other items that contribute directly to the analysis of environmental impacts. The EIR must be revised and recirculated to include the SOLC SP document for public review in order to comply with CEQA's requirements for adequate informational documents and meaningful disclosure (CEQA § 15121 and 21003(b)). It is clear that the SOLC SP exists because Figure 3-5: Airport Influence Areas states the source is Figure 2.2: Airport Influence Areas of the SOLC SP. The SOLC SP is utilized as a reference in the EIR. Incorporation by reference (CEQA § 15150 (f)) is not appropriate as the SOLC SP contributes directly to analysis of the problem at hand.

c

The EIR does not provide meaningful information or analysis regarding the proposed SB330 Replacement Site. Figure 3-3: SB 330 Replacement Site depicts what the public and decision makers can only assume are the existing onsite land uses at the proposed site. The site is described to have The Ontario Plan/Zoning designation of low-medium residential density throughout the EIR. However, Figure 3-3 depicts a large number of parcels that have designations of Low Density Residential, Low-Medium Density Residential, Medium Density Residential, General Commercial, Neighborhood Commercial, and Open Space - Non Recreation. The EIR does not provide the APN(s) of the proposed SB330 Replacement Site, so the public and decision makers are unable to determine which of the depicted sites are included as part of the proposed The Ontario Plan/Zoning changes. The EIR must be revised to clearly and accurately depict the existing and

d

[2] West Ontario Commerce Center SP EIR https://www.ontarioca.gov/sites/default/files/Ontario-Files/Planning/Reports/environmental-reports/wocc_specific_plan_eir.pdf

proposed The Ontario Plan/Zoning changes to the SB330 Replacement Site. The EIR labels the proposed site as a singular "Site" instead "Sites," which is misleading as Figure 3-3 depicts a large number of proposed parcels that comprise the proposed 473 acre SB330 Replacement Site.

Additionally, the Project Description states that the SB330 Replacement Site is "also being evaluated for substantial additional density (beyond what is required for this Project's SB330 compliance) as part of the City's The Ontario Plan (TOP) 2050 Update EIR and also as part of the City's Housing Element Update EIR." However, review of the City's Housing Element Update and EIR indicate that the SB330 Replacement Site is not included as part of the housing strategy or proposed for rezoning. The EIR is misleading to the public and decision makers and must be recirculated with this statement removed.

Further, the EIR is internally inconsistent and utilizes conflicting language in varying sections of analysis when discussing the proposed The Ontario Plan/Zoning changes. Some sections label the changes as a "rezoning" while the Project Description states the project requires approval of the SB330 Replacement Site Overlay District (General Plan Amendment and Zone Change). Typical application of an Overlay District does not make changes to the underlying General Plan land use and Zoning designations. An Overlay District will necessitate additional changes to The Ontario Plan/Zoning designations to implement the increased densities. Applying an Overlay District does not meet the "no net loss" requirements of SB 330. Further, the EIR is inadequate as an informational document since it does not give a description or details of the Overlay District, such as permitted density. The EIR does not state whether an existing Overlay District will be applied or a new Overlay District will be created. The EIR must be revised to include this information and meet requirements of SB 330 by changing the The Ontario Plan/Zoning designations to accommodate "no net loss" of housing capacity instead of applying an Overlay District that will require additional changes to The Ontario Plan/Zoning designations to implement the increased densities in order to comply with CEQA's requirements for adequate informational documents and meaningful disclosure (CEQA § 15121 and 21003(b)).

cont'd d

Further, it is also notable that the EIR does not include a floor plan, grading plan, or elevations for any of the buildings. The basic components of a Planning Application include a site plan, floor plan, conceptual grading plan, and elevations. The site plan provided in Figure 3-12 does not provide any detailed information such as the earthwork quantity notes. The EIR has excluded the proposed floor plans, details from the grading plan, and elevations from public review, which does not comply with CEQA's requirements for adequate informational documents and meaningful disclosure (CEQA § 15121 and 21003(b)). Incorporation by reference (CEQA § 15150 (f)) is not appropriate as the floor plan, grading plan, building elevations, and detailed site plan contribute

e

directly to analysis of the problem at hand. The EIR must be revised to include all application items for review, analysis, and comment by the public and decision makers. cont'd e

4.2 Air Quality

The CalEEMod modeling includes unsubstantiated manual changes to the default individual construction phase lengths. For Phase 1, the demolition phase was reduced 80%, from the default value of 200 to 40 days; the site preparation phase was reduced 58%, from the default value of 120 to 50 days; the grading phase was reduced 74%, from the default value of 310 to 80 days; the building construction phase was reduced by 96%, from the default value of 3,100 to 113 days. The CalEEMod User s Guide requires any changes to model defaults be justified[3]. According to the User Entered Comments & Non-Default Data" table, the justification response is: "Anticipated Construction Schedule. Building Construction, Paving, and Architectural Coating sub-phases are anticipated to overlap. Demolition - includes demo of both phase 1 and phase 2 areas, estimated using GIS and aerial imagery Grading - Site Balanced, no import/export of soil." f

For Phase 2, the site preparation phase was reduced 16%, from the default value of 60 to 50 days; the grading phase was reduced 48%, from the default value of 155 to 80 days; the building construction phase was reduced by 91%, from the default value of 1,550 to 128 days; and the paving phase and architectural coating phase were both reduced 18%, from the default value of 110 to 90 days. The CalEEMod User s Guide requires any changes to model defaults be justified. According to the User Entered Comments & Non-Default Data" table, the justification response is: "Anticipated Construction Schedule. Building Construction, Paving, and Architectural Coating sub-phases are anticipated to overlap. Demo occurs during phase 1 Grading - Site Balanced, No import/export of soil."

The EIR does not provide any supporting evidence, such as information from a licensed Engineer on a grading plan that this grading schedule is possible. Additionally, the EIR states that "Earthwork will include approximately 425,912 cubic yards (CY) of cut and 425,912 CY of fill with 272,777 CY of over- excavation," which indicates that 272,777 CY of over-excavated materials will be transported off-site and necessitate increased hauling trips during the grading phase. The EIR does not specify if 272,777 CY is the total required export/import material for both phases or if this number only applies to one phase. There is no meaningful supporting evidence given for changes to the construction phases for both Phase 1 and Phase 2, or that the anticipated construction schedule is possible. As a result, the revised individual construction phase lengths are unsubstantiated. g

[3] CalEEMod User Guide http://www.caleemod.com/

While the EIR states the overall length of project construction would be approximately 12 months, the EIR does not disclose the revised individual construction phase lengths, which does not comply with CEQA's requirements for meaningful disclosure. These unsubstantiated changes are an issue as changes to individual construction phase lengths improperly reduce the amount of construction emissions. Thus, by including unsubstantiated reductions to the default individual construction phase lengths, the model underestimates the project's construction-related emissions and should not be relied upon to determine the significance of the project's air quality impacts. h

The CalEEMod modeling also includes unsubstantiated manual changes to the default operational off-road equipment hours the equipment is used per day. The hours per day of equipment use was reduced from 8 hours per day to 4 hours per day. There is no justification given for this manual reduction. The model underestimates the project's emissions and should not be relied upon to determine the significance of the project's Air Quality impacts. i

The EIR does not include for analysis relevant environmental justice issues in reviewing potential impacts, including cumulative impacts from the proposed project. This is especially significant as the surrounding community is highly burdened by pollution. According to CalEnviroScreen 4.0[4], CalEPA's screening tool that ranks each census tract in the state for pollution and socioeconomic vulnerability, the industrial Specific Plan census tract (6071001903) ranks worse than 99% of the rest of the state overall in pollution burden. The surrounding community, including Lyle High School, bears the impact of multiple sources of pollution and is more polluted than average on every pollution indicator measured by CalEnviroScreen. For example, the project census tract ranks in the 77th percentile for ozone burden, the 93rd percentile for PM 2.5 burden, and the 57th percentile for diesel particulate matter; all of these environmental factors are typically attributed to heavy truck activity in the area. The census tract ranks in the 100th percentile for drinking water, which indicates that it ranks with the worst quality drinking water in the state. The census tract also bears more impacts from cleanup sites than 80% of the state and more solid waste impacts than 99% of the state. j

Further, the census tract is a diverse community including 37% Asian-American, 29% Hispanic, and 4.9% African-American residents, which are especially vulnerable to the impacts of pollution. The community has a high rate of low educational attainment, meaning 53% of the census tract over age 25 has not attained a high school diploma, which is an indication that they may lack health insurance or access to medical care. Medical care is vital for this census tract as it ranks in the 29th percentile for incidence of cardiovascular disease and 49th percentile for babies k

[4] CalEnviroScreen 4.0 https://oehha.ca.gov/calenviroscreen/report/calenviroscreen-40

born at a low birth weight. The community also has a high rate of linguistic isolation, meaning 69% of the census tract speaks little to no English.

The SB330 Replacement Site census tract (6071001905) ranks worse than 95% of the rest of the state overall in pollution burden. The surrounding community, including sensitive receptors such as Dickey Elementary School, Liberty Elementary School, Woodcrest Junior High School, and residences, bears the impact of multiple sources of pollution and is more polluted than average on every pollution indicator measured by CalEnviroScreen. For example, the census tract ranks in the 80th percentile for ozone burden, the 96th percentile for PM 2.5 burden, and the 61st percentile for diesel particulate matter; all of these environmental factors are typically attributed to heavy truck activity in the area. Additionally, the SB330 Replacement Site census tract is a diverse community including 55% Hispanic, 17% Asian-American, and 3% African-American residents, which are especially vulnerable to the impacts of pollution. The community has a high rate of low educational attainment, meaning 52% of the census tract over age 25 has not attained a high school diploma, which is an indication that they may lack health insurance or access to medical care. Medical care is vital for this census tract as it ranks in the 68th percentile for incidence of cardiovascular disease, 43rd percentile for asthma, and 46th percentile for low birth weight babies. The community also has a high rate of linguistic isolation, meaning 76% of the census tract speaks little to no English. cont'd k

The EIR sources OEHHA Guidelines as the methodology for the construction and operational health risk assessments (HRA). The HRA is misleading as it does not provide detailed modeling scenario input factors required by the OEHHA Guidance Manual for Preparation of Health Risk Assessments[5]. For example, there is no information given regarding residential, school child, or worker age bins, if a 30 year or 70 year risk analysis was utilized, inhalation/breathing rates, etc. Notably, OEHHA's 2015 Guidance Manual for Preparation of Health Risk Assessments state that, "together, the 9-, 30-, and 70-year cancer risk calculations provide a useful presentation of cancer risk and the relationship to duration of residency and, thus, exposure to a facility's emissions." The EIR must be revised to include modeling scenarios for all residential, school child, and worker cancer risk calculations in order to provide a useful presentation of cancer risk in accordance with the OEHHA guidelines.

4.3 Biological Resources

According to Appendix C, burrowing owl focused surveys were conducted on April 15, May 11, June 16, and July 6, 2019. The surveys occurred more than two years prior to the EIR's analysis l

[5] OEHHA 2015 Guidance Manual for Preparation of Health Risk Assessments
https://oehha.ca.gov/media/downloads/crnr/2015guidancemanual.pdf

and will be further outdated during project construction. The industrial SP site must be surveyed again in order to present an accurate, current environmental setting in accordance with the other portions of the EIR.

Appendix C sources the Department of Fish and Game's 2012 Staff Report on Burrowing Owl Mitigation [6] as the methodology. The 2012 Report provides further instructions regarding burrowing owls. For example, it requires to "Conduct at least one visit covering the entire potential project/activity area including areas that will be directly or indirectly impacted by the project." Figure 4: Project and Buffer Areas within Appendix C depict that only the southeastern portion of Phase 2 was surveyed. The western portion of Phase 2 that extends from Bon View Avenue to Campus Avenue was not surveyed. The 500 ft buffer survey area should also be taken from the furthest western limits of the Phase 2 area. The EIR must be recirculated to include a revised and updated burrowing owl survey that complies with DFG's 2012 Staff Report on Burrowing Owl Mitigation.

cont'd

4.7 Hazards and Hazardous Materials

The Chino ALUCP prepared by Riverside County (RC Chino ALUCP) is used as basis of the Chino Airport Overlay created by The Ontario Plan[7]. The EIR utilizes the 1991 San Bernardino County ALUCP, which is not useful and does not reflect the updated Chino Airport Master Plan according to The Ontario Plan. The Ontario Plan bases the Chino Airport Overlay on the Riverside County Chino ALUCP, which "requires coordination with the Chino Airport authority to determine appropriate land uses, maximum population density, maximum site coverage, and height restrictions until such time as an updated ALUCP is adopted by San Bernardino County and accepted by the City." The EIR must be revised to utilize the latest available data and the same standard of background data used by The Ontario Plan.

m

According to the RC Chino ALUCP[8], the industrial SP area is within Safety Zones C, D, and E and Aircraft Departure Accident Risk Intensity Contours for takeoffs to the West and Northwest. The RC Chino ALUCP requires "the following usage intensity criteria shall apply within Compatibility Zone D: An average of 150 people per acre shall be allowed on a site and up to 450 people shall be allowed to occupy any single acre of the site." The EIR must be revised to demonstrate compliance with this requirement and all requirements of the RC Chino ALUCP in order to be consistent with The Ontario Plan and Chino Airport Overlay.

4.9 Land Use and Planning

The EIR does not provide meaningful information or analysis regarding the proposed SB330 Replacement Site. Figure 3-3: SB 330 Replacement Site depicts what the public and decision makers can only assume are the existing onsite land uses at the proposed site. The site is described to have The Ontario Plan/Zoning designation of low-medium residential density throughout the EIR. However, Figure 3-3 depicts a large number of parcels that have designations of Low Density Residential, Low-Medium Density Residential, Medium Density Residential, General Commercial, Neighborhood Commercial, and Open Space - Non Recreation. The EIR does not provide the APN(s) of the proposed SB330 Replacement Site, so the public and decision makers are unable to determine which of the depicted sites are included as part of the proposed The Ontario Plan/Zoning changes. The EIR must be revised to clearly and accurately depict the existing and proposed The Ontario Plan/Zoning changes to the SB330 Replacement Site. The EIR labels the proposed site as a singular "Site" instead "Sites," which is misleading as Figure 3-3 depicts a large number of proposed parcels that comprise the proposed 473 acre SB330 Replacement Site. n

Table 4.9-3: Consistency with SCAG's 2020-2045 RTP/SCS Goals finds that the project is consistent with all goals of Connect SoCal, resulting in less than significant impacts. However, the EIR does not provide any meaningful supporting evidence within SCAG's 2020-2045 Connect SoCal RTP/SCS to support this conclusion, in violation of CEQA's requirements for meaningful disclosure (CEQA § 21003(b)). Due to errors in modeling and modeling without supporting evidence, as noted throughout this comment letter, and the EIR's determination that the project will have significant and unavoidable impacts to Air Quality, Greenhouse Gas Emissions, and VMT, the proposed project is directly inconsistent with Goal 5 to reduce greenhouse gas emissions and improve air quality, Goal 6 to support healthy and equitable communities, and Goal 7 to adapt to a changing climate. The EIR must be revised to include finding of significance due to inconsistency with the 2020-2045 RTP/SCS Connect SoCal document. o

Table 4.9-4: Consistency with the City of Ontario General Plan (TOP) does not provide a consistency analysis for all applicable TOP goals and policies. The EIR must be revised to include a consistency analysis with all TOP goals and policies, including the following:

Policy LU5-7 *ALUCP Consistency with Land Use Regulations.* We comply with state law that requires general plans, specific plans and all new development be consistent with the policies and criteria set forth within an Airport Land Use Compatibility Plan for any public use airport. p

Policy ER4-1 *Land Use.* We reduce GHG and other local pollutant emissions through compact, mixed use, and transit-oriented development and development that improves the regional jobs-housing balance.

Policy ER4-6 *Particulate Matter*. We support efforts to reduce particulate matter to meet State and Federal Clean Air Standards.

Policy CE2-4 *Protection of Investment*. We require that new development and redevelopment protect existing investment by providing architecture and urban design of equal or greater quality.

Policy CE3-1 *Fiscal Impact Disclosure*. We require requests for City Council action to disclose the full fiscal impacts, including direct and indirect costs.

Policy CE3-2 *General Plan Amendments*. We require those proposing General Plan amendments to disclose reasonably foreseeable impacts through a fiscal analysis.

Policy ER5-1 *Habitat Conservation Areas.* We support the protection of biological resources through the establishment, restoration and conservation of high quality habitat areas.

Policy ER5-2 *Entitlement and Permitting Process.* We comply with state and federal regulations regarding protected species.

cont'd p

Additionally, the EIR improperly finds consistency with several policies. Policy LU1-7 requires "future amendments to our Land Use Plan to be accompanied by analyses of fiscal impacts." The EIR concludes the project is consistent with the policy because "An Economic/Fiscal Impact Analysis has been prepared for the Project and is available for review at the City of Ontario Planning Department." However, the report is not included as an attachment for public review, which does not comply with CEQA's requirements for meaningful disclosure and incorporation by reference. Incorporation by reference (CEQA § 15150 (f)) is not appropriate as the report contributes directly to analysis of the problem at hand and determines consistency with The Ontario Plan. The EIR must be revised to include the report as an attachment for public review.

q

Further, the EIR concludes the project is consistent with Policy LU1-2 and CE2-2 based upon specific provisions (Design Guidelines and Land Use Plan) within the SOLC SP document. However, the SOLC SP document is not included as an attachment for public review, which does not comply with CEQA's requirements for meaningful disclosure and incorporation by reference. Incorporation by reference (CEQA § 15150 (f)) is not appropriate as the SOLC SP document contributes directly to analysis of the problem at hand and determines consistency with The Ontario Plan. The EIR must be revised to include the SOLC SP document as an attachment for public review.

r

The EIR concludes the project is consistent with Policy M1-2, which requires "development to mitigate its traffic impacts" and ER4-3, which reduces "GHG emissions in accordance with regional, state and federal regulations." These findings of consistency are improper and misleading as the project will result in significant and unavoidable impacts to Traffic and

s

Greenhouse Gas Emissions. The EIR must be revised to state this in its consistency analysis and make a finding of inconsistency. cont'd s

The EIR concludes the project is consistent with Policy M1-1, which requires roadways to "Maintain a peak hour Level of Service (LOS) E or better at all intersections." Appendix I - Traffic Analysis finds that the 2040 horizon year with project traffic scenario will result in LOS E or F at 45 intersections analyzed as part of the study area. It must be noted that only 18 of the affected intersections are located wholly within the City of Ontario. The remaining 27 intersections are located under jurisdiction of Chino Hills, Chino, Caltrans, and Eastvale. Appendix I recommends mitigation requiring "fair share" payments to mitigate impacts to less than significant levels. An assessment of fees is appropriate when linked to a specific mitigation program. (*Anderson First Coalition v. City of Anderson* (2005) 130 Cal.App.4th 1173, *Save our Peninsula Comm. v. Monterey County Bd. Of Supers.* (2001) 87 Cal.App.4th 99, 141.) Payment of fees is not sufficient where there is no evidence mitigation will actually result. (*Gray v. County of Madera* (2008) 167 Cal.App.4th 1099,1122.) The assessment of fees here is not adequate as there is no evidence mitigation will actually result. The improvements required are not part of an existing DIF/TUMF program and therefore are not planned to occur at all or by any certain date. Additionally, 27 intersections with deficient LOS are located outside of the City of Ontario. They are under the control of Chino Hills, Chino, Caltrans, and Eastvale. Any roadway improvements recommended or fees paid to mitigate impacts for these locations are beyond the control of the lead agency and evidence that these improvements will be completed or approved by the other jurisdictions has not been provided. Notably, Appendix I concludes that after the proposed mitigation, insufficient LOS will still occur at six intersections and one within the City of Ontario and one within Ontario and Eastvale: t

1. Grove Av. & Schaefer Av. LOS E (AM)
2. Grove Av. & Edison Av LOS E (PM)
3. Vineyard Av. & Edison Av. LOS E (PM)
4. Archibald Av. & Riverside Dr. LOS E (AM and PM)
5. Archibald Av. & Ontario Ranch Rd. LOS E (AM and PM)
6. Archibald Av. & Merrill Av. LOS E (AM and PM)
7. Hamner Av. & Ontario Ranch Rd. LOS E (PM) Ontario and Eastvale

The EIR has not demonstrated compliance with Policy M1-1. The EIR must be revised and recirculated for public review to state the significant impacts to LOS, which are not consistent with The Ontario Plan, and make a finding of inconsistency.

Page 12

4.11 Population and Housing

The EIR calculates the industrial SP area's operational employment generation by utilizing a calculation from Appendix J of the The Ontario Plan EIR[9]. The EIR concludes the industrial SP area will generate 5,459 employees during project operations. However, the EIR utilizes the default assumptions in square footage of land uses from Appendix J rather than project-specific square footage of warehousing, office, etc within the industrial SP. The EIR must be revised to utilize project-specific square footage for each land use category in order to accurately and adequately analyze the employment generated by the industrial SP. This is vital as the VMT analysis relies upon this calculation because it also utilizes this methodology but finds the project will generate 5,664 employees, rendering the EIR internally inconsistent. u

SCAG's 2020-2045 RTP/SCS Connect SoCal Demographics and Growth Forecast[10] notes that Ontario will add 55,400 jobs between 2016 - 2045. The industrial SP project represents 9.8% of Ontario's employment growth from 2016 - 2045. SCAG's Growth Forecast notes that Ontario's population will increase by 96,900 residents between 2016 - 2045. The industrial SP project represents 5.6% of Ontario's population growth from 2016 - 2045. A single project accounting for nearly 10% of the projected employment and over 5% of projected population within Ontario over 29 years represents a significant amount of growth. The EIR must be revised to include this analysis, and also provide a cumulative analysis discussion of projects approved since 2016 and projects "in the pipeline" to determine if the industrial SP project will exceed SCAG's employment and/or population growth forecast. This is vital as the industrial SP project requires Land Use and Zoning amendments to proceed and by nature the project's growth exceeds any established projections and represents unplanned growth. As noted, a cumulative analysis is also necessary as the project is part of the overall larger REDA industrial center within the project vicinity. v

Additionally, the EIR must provide demographic and geographic information on the location of qualified workers to fill these positions in order to provide an accurate environmental analysis. The EIR must also be revised to provide a detailed construction worker population and employment analysis. w

4.13 Transportation and Traffic

The project's VMT impacts are misrepresented by the SBTAM model. The industrial Specific Plan area TAZ (53653401) is bound by Eucalyptus Avenue to the north, Grove Avenue to the east, x

[9] The Ontario Plan Appendix J https://www.ontarioplan.org/wp-content/uploads/sites/4/2016/05/32253.pdf
[10] SCAG Connect SoCal Demographics and Growth Forecast adopted September 3, 2020 https://scag.ca.gov/sites/main/files/file-attachments/0903fconnectsocal_demographics-and-growth-forecast.pdf?1606001579

Merrill Avenue to the south, and Campus Avenue to the west. The TAZ is comprised entirely of vacant or agricultural land. The proposed industrial Specific Plan area is unique in that TAZ 53653401 contains no warehouse or industrial buildings. As noted in the Project Description, agricultural worker housing is provided onsite, resulting in an even lower existing TAZ VMT. The VMT analysis does not adequately or accurately represent the VMT impacts of the proposed project and the EIR must be revised to reflect this. The operational nature of industrial/warehouse uses involves high rates of truck/trailer VMT due to traveling from large regional distribution centers to smaller industrial parks and then to their final delivery destinations. Table 4.2 Trip Summary of the Air Quality Appendix CalEEMod output sheets indicates that Phase 1 will generate approximately 7,232 average daily trips and 55,168,411 annual VMT (55,168,411 / 365 days = 151,146 daily total VMT) and Phase 2 will generate approximately 5,214 average daily trips and 36,257,668 annual VMT (36,257,668 / 365 days = 99,336 daily total VMT). This results in a combined 12,446 average daily trips; 91,426,079 annual VMT; and 250,482 daily VMT. These are exponentially higher than the VMTs reported for each analysis group in the TAZ. The project's truck/trailer activity is unable to utilize public transit or active transportation and it is misleading to the public and decision makers to exclude the truck/trailer activity from VMT analysis. The EIR must be revised to reflect a quantified VMT analysis that includes truck/trailer activity to adequately and accurately analyze the potentially significant project transportation impacts. The EIR also does not account for cumulative impacts to VMT or transportation due to project piecemealing in the project vicinity of the greater REDA Logistics Center.

cont'd
x

5.0 Alternatives

The EIR is required to evaluate a reasonable range of alternatives to the proposed project which will avoid or substantially lessen any of the significant effects of the project (CEQA § 15126.6.) The three alternatives chosen for analysis include the CEQA required "No Project" alternative and only two other alternatives - Existing General Plan Project and Reduced Intensity Project. The EIR does not evaluate a reasonable range of alternatives as only two alternatives beyond the required No Project alternative are analyzed. The EIR does not include an alternative that meets the project objectives and also eliminates all of the project's significant and unavoidable impacts. The EIR must be revised to include analysis of a reasonable range of alternatives and foster informed decision making (CEQA § 15126.6). This could include alternatives such as development of the project site with a project that has reduced the intensity to a degree that will result in avoidance of all the proposed project's significant and unavoidable impacts while also meeting the project objectives.

y

6.0 Additional CEQA Considerations

The EIR concludes that the project will not encourage or facilitate economic effects that could result in other activities that could significantly affect the environment. However, the EIR does not provide the project's objectives for analysis with regard to growth-inducing impacts. One of the project's objectives is to "Create an economic engine to drive future growth in the Project area, spur infrastructure improvements in the area, and implement the Project vision." The Connect SoCal analysis within the Land Use and Planning section clarifies the project seeks to drive future growth in the "project area" to be defined as driving future growth " in the City and also the County." The EIR must be revised to include these statements for analysis in order for the EIR to be internally consistent and provide an adequate, accurate analysis. This is vital as other development projects within the larger overall REDA industrial area were approved by the lead agency even though they were also determined to result in significant and unavoidable environmental impacts. Based on this, it is clear that prior piecemealed projects and the proposed SOLC SP project have encouraged and facilitated economic effects that resulted in other activities that have significantly affected the environment. z

7.0 Effects Found Not to be Significant

7.2 Energy

The State of California lists three approved compliance modeling softwares[11] for non-residential buildings: CBECC-Com, EnergyPro, and IES VE. Appendix B4 provides a spreadsheet-based modeling analysis of energy impacts, which is not one of the listed approved softwares. The modeling provided in the EIR does not comply with the 2019 Building Energy Efficiency Standards and under reports the project's potentially significant GHG and Energy impacts to the public and decision makers. Since the EIR did not accurately or adequately model the Energy impacts in compliance with Title 24, a finding of significance must be made. A revised EIR with modeling in one of the approved software types must be prepared and circulated for public review in order to adequately analyze the project's potentially significant environmental impacts. aa

Conclusion

For the foregoing reasons, GSEJA believes the EIR is flawed and an amended EIR must be prepared for the proposed project and recirculated for public review. Golden State Environmental Justice Alliance requests to be added to the public interest list regarding any subsequent environmental documents, public notices, public hearings, and notices of determination for this bb

[11] 2019 Building Energy Efficiency Standards Approved Computer Compliance Programs, California Energy Commission. https://www.energy.ca.gov/programs-and-topics/programs/building-energy-efficiency-standards/2019-building-energy-efficiency-2

project. Send all communications to Golden State Environmental Justice Alliance P.O. Box 79222 Corona, CA 92877.

Letter O1 Golden State Environmental Justice Alliance

December 22, 2021

Response O1-a

Comment noted. No response is required.

Response O1-b

The City disagrees with the assertion that the proposed South Ontario Logistics Center Specific Plan (Project) "is a piecemealed portion of a larger overall project," which the commenter incorrectly calls the "REDA Industrial Center." The Project was never a reasonably foreseeable result of any prior-approved development, and the Project's use, financing, and entitlement processing are independent from any other development. Thus, the Project does not constitute a piecemealed portion of a larger development.

An EIR can only analyze possible future actions that are a reasonably foreseeable consequence of the project that the EIR studies. Here, the Project was never a reasonably foreseeable consequence of any previous project, including the projects referenced by the commenter, i.e., the West Ontario Commerce Center Specific Plan (WOCC); the Ontario Ranch Business Park Specific Plan (ORBP); and the Merrill Commerce Center Specific Plan (MCC), the latter of which was a project developed by Prologis (an entity with no connection or association with the Applicant). The City approved the WOCC in July 2018 and the ORBP in October 2020. The City issued this Project's Notice of Preparation in December 2020.

A project is not a piecemealed portion of a larger development if the project has independent utility or serves an independent purpose, and it is not dependent on or compelled by the completion of another development. The SOLC Project has been designed and is being processed by the City as an independent project, and can move forward independent of any other project in Ontario.

As the commenter notes, the Draft EIR states that "all off-site improvements identified for this Project have already been addressed in prior CEQA documents . . . or are part of the City's planned regional infrastructure system, for which the Project will participate in funding." (Draft EIR, p. 3-8.) These offsite improvements include "asphalt demolition, fine grading, utility trenching, asphalt paving, finishing and landscaping." (Ibid.) That the Project will utilize these offsite improvements does not make it dependent upon any other development because: (1) the Project's conditions of approval require the Project to bear the independent, fair-share cost of these improvements; and (2) these improvements would be constructed by the Project to the extent needed even if no other development were built because the Project has independent utility.

Finally, it should be noted that the Draft EIR specifically includes the WOCC, the ORBP, and the MCC developments in its cumulative impact analysis. (Draft EIR, pp. 4-2, 4-4 to 4-5; Appendix I [Traffic Impact Analysis Report].) The cumulative impacts analysis ensures that all applicable past, present, and probable future developments are appropriately analyzed for environmental impacts that may not be individually significant but may be cumulatively significant. In summary, no analysis was "piecemealed." No additional analysis beyond that provided in the Draft EIR and this Final EIR is required.

Response O1-c

Comment noted. The City disagrees with this assertion, in that the Draft EIR provides adequate analysis of the contents within the Specific Plan and directly analyzes all potential impacts from implementation of the Specific Plan. Specific assertions are addressed in the responses below.

Response O1-d.1

The City disagrees with the assertion that the Draft EIR fails to "provide meaningful information and analysis regarding the proposed SB 330 Replacement Site." No discrepancy exists as the text of the Draft EIR consistently describes the SB 330 Replacement Site as having six land use designations, the same six designations that are shown in Figure 3-3. (Draft EIR, pp. 3-35, 4.1-5, 4.9-5, 4.9-13, 4.11-1.)

Second, the City disagrees with the assertion that the public and decision-makers cannot determine from the Draft EIR what parcels in the SB 330 Replacement Site will be subject to a residential density increase. Under CEQA, an adequate project description need only include an aerial and regional map of the project location. (Guidelines, §15124(a).) Figure 3-3 of the Draft EIR satisfies CEQA by depicting the boundaries of the SB 330 Replacement Site, which will be subject to the Overlay District. Section 4.9, *Land Use and Planning*, of the Draft EIR further describes the boundaries of the SB 330 Replacement Site as being "bound by Cucamonga Avenue to the west, East Riverside Drive to the north, Comet Avenue to the east, and Edison Avenue to the south." (Draft EIR, p. 4.9-1.) The Draft EIR's description of the SB 330 Replacement Site is therefore adequate. In response to this comment, two additional maps have been added to the Final EIR: *Figure 3-4, Regional Map*, depicting both the Project Site and SB 330 Replacement Site, and *Figure 3-5, SB330 Replacement Site Aerial Vicinity Map*, map of the SB 330 Replacement Site showing APNs. Recirculation of the Draft EIR is not required because these additions merely clarify information already provided and does not constitute new information. (Guidelines, § 15088.5(b).)

Response O1-d.2

The City disagrees with the assertion that the SB 330 Replacement Site is "also being evaluated for substantial additional density (beyond what is required for this Project's SB 330 compliance) as part of the City's The Ontario Plan (TOP) 2050 Update EIR and also as part of the City's Housing Element Update EIR." (Draft EIR, p. 3-1.) In fact, the City's Draft Housing Element Update clearly shows multiple land use designation changes throughout the SB 330 Replacement Site, all of which significantly increase residential density above and beyond what is proposed as part of this Project. The land use changes are shown in the City's Proposed Housing Strategy and Land Use Scenario – Draft interactive map (Housing Strategy Map), which is available on the City's website.[3] The Draft EIR's reference to the City's proposed land use changes for the SB 330 Replacement Site is adequate. In response to this comment, an excerpt of the City's Housing Strategy Map showing the SB 330 Replacement Site has been added to the Final EIR as *Figure 3-6, City of Ontario Housing Strategy Map*.

[3] City of Ontario. Proposed Housing Strategy and Land Use Scenario Map Draft. (2022). Retrieved from: https://www.arcgis.com/apps/webappviewer/index.html?id=0208aaa14e5f4d71b0bcde77c1deda57.

Response O1-d.3

The City disagrees with the assertion that the Draft EIR "utilizes conflicting language" in its discussion of how the Overlay District will be applied to the SB 330 Replacement Site. The only way to apply the Overlay District to the SB 330 Replacement Site is through a rezoning, which is stated in the Draft EIR: "The Project also includes rezoning of the SB 330 Replacement Site through use of an Overlay District." (Draft EIR, p. 3-6.)

Response O1-d.4

The City disagrees with the assertion that the Draft EIR fails to acknowledge that application of the Overlay District to the SB 330 Replacement Site will also require changes to TOP and Zoning Code. In fact, the Draft EIR explicitly and consistently addresses this issue: "In order for this Overlay District to be approved, a Zone Change and [General Plan Amendment] will be implemented by the City in order to effectively rezone the site to accommodate increased residential density to ensure compliance with SB 330." (Draft EIR, pp. 1-5, 3-1, 3-3, 3-6.)

Response O1-d.5

The City disagrees with the assertion that the Draft EIR does not adequately describe the Overlay District. Contrary to these claims, the Draft EIR clearly states that "the Project will create an Overlay District" (Draft EIR, pp. 3-1, 4.1-5; emphasis added), and it also states that the Overlay District will increase the residential zoning capacity of the SB 330 Replacement Site "by 1,352 dwelling units or an overall increase of approximately 37% in dwelling units for this 473-acre area." (Id., pp, 3-3.) In response to the comment, additional information is added to Section 3.0, *Revisions to the Draft EIR*, of this Final EIR and replicated below. Recirculation of the Draft EIR is not required because these additions merely clarify information already provided and does not constitute new information. (Guidelines, § 15088.5(b).)

In order to demonstrate "no net loss of residential capacity," the Project will be required to demonstrate increased residential zoning capacity on a "SB330 Replacement Site" by 1,352 units to off-set the Project site loss of zoning capacity (Low Medium Density, 5.1 to 11 du/ac). In tandem with the City's adoption of the 6th Cycle Housing Element, scheduled to go before the City Council for its consideration in February 2022, the City is also adopting an Affordable Housing Overlay zone and applying this zone to all parcels in the sites inventory that are south of Riverside Drive or are zoned MU-2 along Holt Boulevard. Relevant to the Project, the Affordable Housing Overlay zone will establish a minimum density of 20 dwelling units per acre for all development (regardless of Policy Plan designation or underlying zoning district), and increase the maximum density from 25 to 30 units per acre for parcels that are designated in the Policy Plan for Medium Density Residential ("MDR") when an affordable housing project is proposed with at least 25 percent of proposed units are restricted for lower-income households. The creation of the Affordable Housing Overlay zone and increased maximum density of 5 dwelling units per acre will increase residential capacity on 473.7 acres of such parcels currently designated MDR, by 2,368 dwelling units. On December 20, 2021, the Planning Commission reviewed and recommended to the February 15, 2022, City Council hearing for approval a General Plan Amendment (File No. PGPA21-004) for the Housing Element update to the Policy Plan (General Plan) component of The Ontario Plan, to address State mandates regarding the Regional Housing Needs Allocation ("RHNA"), as well as to modify the Policy Plan

Land Use Plan (Exhibit LU-01) to establish a Zone Change (File No. PZC21-002). The Project EIR addresses the potential impacts associated with relocating residential density from the Project site to the SB330 Replacement Sites located north of the Project site, along Grove Avenue, pursuant to SB330. With the City adoption of the 6th Cycle Housing Element and associated Affordable Housing Overlay zone, no net loss of residential capacity will occur as a result of the Project. The SB 330 Replacement Site is located approximately 0.3 miles north of the Project site and is generally bound by Cucamonga Avenue to the west, East Riverside Drive to the north, Walker Avenue to the east, and Edison Avenue to the south. Existing land uses surrounding the approximate 473-acre SB330 Replacement Site boundary include agricultural uses, nurseries, truck/trailer storage, and single-family residential. According to the City's Land Use Plan, Land use within the SB330 Replacement Site includes residential, general commercial, and neighborhood commercial, as well as open space park land.

Response O1-e

Comment noted. The City disagrees with this assertion in that the Draft EIR provides inadequate analysis of the contents within the Specific Plan as it relates to floor plan, grading plan, or elevations for the proposed buildings. The intent of the Draft EIR is to provide sufficient information on the potential environmental impacts of the Project to allow the City to make an informed decision regarding approval of the Project. The intent and purpose of the Project is to provide zoning regulations for development of the Project site by establishing permitted land use, development standards, infrastructure requirements, and implementation requirements for development. A comprehensive set of design guidelines and development regulations are included to guide and regulate site planning, architectural character, and landscape within the community, ensuring that excellence in community design is achieved during project development.

Because the purpose of a specific plan is to provide development regulations and serve as design guidelines for an entire project site, floor plans and building elevations are not typically included as part of a specific plan. As such, the Draft EIR, as an informational document evaluating the potential environmental impacts of the Project, does not include floor plans or building elevations. The Specific Plan establishes the procedures and requirements to approve new development within the Project site and does not serve as land entitlement approval for each development project on-site. The Project is considered under a Legislative Action Application by the City of Ontario. Any new development within the Specific Plan area would be required to submit a discretionary permit/action application and obtain approval from the City.

Section 3.0, *Project Description*, of the Draft EIR discusses the conceptual grading plan and earthwork analysis (see pages 3-16 and 3-17). The information provided in Section 3.0 regarding grading plan and earthwork analysis are adequate analysis of the contents within the Specific Plan, and no revisions or recirculation of the EIR is required.

Response O1-f

Comment noted. The use of non-default values is common practice, and the comments provided through the CalEEMod outputs in Appendix B of the Draft EIR substantiate the uses of non-default values. Further,

as noted in the CalEEMod User's Guide, CalEEMod provides default data if site-specific information is not available and encourages the use of site-specific data if it is provided.[4]

Response O1-g

The City disagrees with the assertion that information from a licensed Engineer is necessary to support the grading plan as presented in the Draft EIR or to verify that the grading schedule is possible. Grading estimates were provided by Thienes Engineering, licensed engineers, who prepared the Concept Plan and are preparing the Development Plan. Furthermore, the term over-excavation was chosen by the project engineer, to describe excavation that goes beyond the depth required, which may be necessary if the site-specific soil conditions at the desired level do not have sufficient stability or load-bearing capacity to support the proposed structures. Once any stability concerns are addressed, the soil removed during over-excavation is returned and recompacted to meet the final design depth. Therefore, the City disagrees with the assertion that over-excavated materials will be transported off-site.

Response O1-h

The City disagrees with the commenter's assertion that "…the EIR states the overall length of project construction would be approximately 12 months….". The Draft EIR clearly states "The duration of construction activities associated with Phase 1 of the Project is estimated to last approximately twelve months" and "The duration of construction activities associated with Phase 2 of the Project were modeled to last approximately twelve months." [Draft EIR, pages 4.2-20 and 4.2-22]. And as stated on page 4.2-15 of the Draft EIR, "It is assumed that construction of Phase 1 would occur from mid-2022 to mid-2023 and the construction of Phase 2 would occur from mid-2023 to mid-2024", meaning construction would last total 24 months. Furthermore, construction phase (e.g., demolition, site preparation, etc.) lengths are provided within the CalEEMod outputs provided in Appendix B of the Draft EIR. Thus, the comment is incorrect.

As shown in the Draft EIR [page 4.2-12], the applicable significance thresholds for criteria pollutant analyses in the South Coast Air Basin are based on the maximum daily emissions. Thus, the length of construction does not directly impact the determination of significance of a project's air quality impacts, and the City disagrees with the assertion that reductions to the default construction phase lengths underestimates the Project's emissions.

Response O1-i

The off-road equipment included in the operational emissions inventory are eight "yard trucks," used intermittently to move trailers around the yard. Given that moving trailers is not a continuous task, the City believes four hours per day per yard truck is a reasonable and appropriately conservative assumption. This estimate was provided by the project engineer, Thienes Engineering, and verified by the applicant, both of whom have extensive experience in site grading and construction. The City disagrees with the assertion that the model underestimates Project emissions from these sources of air pollutants.

[4] CalEEMod User Guide. (2021). Retrieved from: http://www.aqmd.gov/docs/default-source/caleemod/user-guide-2021/01_user-39-s-guide2020-4-0.pdf?sfvrsn=6, page 1.

Response O1-j

The City disagrees that the EIR must include analysis of potential environmental justice issues, as Environmental Justice is not listed amongst the "Environmental Factors Potentially Affected" in Appendix G, Environmental Checklist Form, to the CEQA Guidelines.[5] The remainder of the comment presents data from CalEPA's CalEnviroScreen which the City does not dispute. The City disagrees with the assertion that additional risk analyses are needed. Given the short-term construction schedule of approximately one year, Project construction would not result in a long-term (e.g., 30 or 70 years) source of toxic air contaminant (TAC) emissions. The SCAQMD CEQA Air Quality Handbook does not recommend analysis of TACs from short-term construction activities associated with land use development projects. A construction health risk assessment (HRA) is not required by SCAQMD and no guidance for HRAs for construction has been adopted by SCAQMD or the City. Although SCAQMD's CEQA guidance does not require an HRA for short-term construction emissions, a construction HRA was conservatively prepared for the Project and provided in the Draft EIR. As analyzed in Draft EIR pages 4.2-35 and 4.2-36, Project construction activities, including TACs from equipment exhaust would not expose sensitive receptors to substantial pollutant concentrations. Project-related TAC impacts during construction would be less than significant, and no mitigation measures would be required.

The operational HRA results contained in the Draft EIR are calculated for the recommended 30-year residential exposure, in accordance with OEHHA's 2015 Air Toxics Hot Spots Program *Guidance Manual for Preparation of Health Risk Assessments* (Guidance Manual) which states "…the 30-year exposure duration is recommended for use as the basis for estimating cancer risk at the MEIR [Maximally Exposed Individual Resident] in all HRAs. Population-wide impacts should use the 70-year exposure duration."[6] The 30-year exposure used in the Draft EIR for operations is consistent with OEHHA guidance because it "…assume[s] exposure begins in the last trimester of pregnancy and progresses through the exposure duration of interest…"[7] Assessment of risk in the Project-specific HRA for each of the age bins was based on OEHHA's recommended assumptions for exposure variables such as age sensitivity factor (ASF), breathing rate, and body mass. According to OEHHA, HRAs performed for 30 years in accordance with these assumptions "…are thus protective of children."[8] Therefore, the HRA appropriately assesses and reports lifetime risk for the 30-year exposure scenario at the MEIR, which includes ASFs and other child-specific factors known to increase operational risk values as compared to adult exposure parameters. Adult worker and school child exposure scenarios, which are defined as experiencing fewer exposure hours per day and fewer total years of exposure than a 30-year residential scenario, would result in lower lifetime cancer risk values.

Response O1-k

The OEHHA guidelines state "The intent in developing this Guidance Manual is to provide HRA procedures for use in the Air Toxics Hot Spots Program or for the permitting of existing, new, or modified stationary

[5] Title 14. Natural Resources. (2018). Retrieved from: http://files.resources.ca.gov/ceqa/docs/2018_CEQA_FINAL_TEXT_122818.pdf.
[6] Air Toxics Hot Spots Program. (2015). Pages 2-4 and 2-5. Retrieved from: https://oehha.ca.gov/media/downloads/crnr/2015guidancemanual.pdf.
[7] Ibid
[8] Ibid.

sources."[9] The HRA contained in the Draft EIR is not intended to meet the prescribed requirements of the Air Toxics Hot Spots Program or for the permitting of existing, new, or modified stationary sources (since, for example, emissions studied in the Draft EIR are primarily from mobile sources, which are not stationary sources subject to permitting). Thus, the City disagrees that the EIR must be revised in strict accordance with the Guidance Manual to be used as a meaningful measure of potential impacts under CEQA. As stated above, the 30-year residential exposure scenario is recommended by OEHHA, and the methodology upon which the HRA is based produces analyses that are protective of children. Therefore, no revisions are warranted.

Response O1-l

Development is only proposed on the ±130-acre site that is located north of Merrill Avenue, south of Eucalyptus Avenue, east of Bon View Avenue, and west of Grove Avenue (Phase 1). A reliance letter has been prepared by Ecological Sciences, Inc. confirming there is no change in the existing site conditions compared to the time of the initial burrowing owl surveys prepared in 2019.

The remaining portion of the Specific Plan (Phase 2) as well as the SB 330 Replacement Site, are only programmatically analyzed in the Draft EIR, and future development located outside of the proposed development on Phase 1 would have to conduct biological surveys and burrowing owl surveys prior to site-specific development. MM BIO-2 of the Draft EIR has revised for clarification based on a comment received on the Draft EIR from the California Department of Fish and Wildlife (see Comment S1 of this Final EIR). Changes to MM BIO-2 are provided in Section 3.0, *Revisions to the Draft EIR* of this Final EIR and are replicated below. Changes are indicated in bold underline for additions and strikethrough to deletions:

MM BIO-2. **Burrowing Owl Surveys. Phase 1:** Prior to issuance of a demolition or grading permit for any ground disturbing activity, a qualified biologist shall conduct a pre-construction presence/absence survey for burrowing owls within ~~The Project Applicant shall complete an initial BUOW take avoidance survey no less than~~ 14 days prior to initiating ground disturbance activities. Surveys shall be conducted consistent with the procedures in outlined in the "California Department of Fish and Wildlife (CDFW) 2012 Staff Report on Burrowing Owl Mitigation." If the species is absent, no additional mitigation will be required. ~~Implementation of avoidance and minimization measures (e.g., eliminating actions that reduce burrowing owl forage and burrowing surrogates (e.g., ground squirrel), or introduce/facilitate burrowing owl predators) would be triggered by positive owl presence on the site where Project activities would occur. The development of avoidance and minimization approaches would be evaluated by monitoring burrowing owls (if present on-site). BUOW may re-colonize a site after only a few days. Time lapses between Project activities trigger subsequent take avoidance surveys including but not limited to a final survey conducted within 24 hours prior to ground disturbance.~~

[9] Air Toxics Hot Spots Program. (2015). Page 1-2;Retrieved from: https://oehha.ca.gov/media/downloads/crnr/2015guidancemanual.pdf;

If burrowing owl(s) are observed onsite during the pre-construction clearance survey;

- Prior to disturbance of the occupied burrows, suitable and unoccupied replacement burrows shall be provided at a ratio of 2:1 within designated off-site conserved lands to be identified through coordination with CDFW and the City in which the burrowing owl(s) is(are) detected. A qualified biologist shall confirm that the artificial burrows are currently unoccupied and suitable for use by owls.
- Until suitable replacement burrows have been provided/confirmed within the off-site conserved lands to be identified through coordination with CDFW and the City of Ontario, no disturbance shall occur within 50 meters (approximately 160 feet) of occupied burrows during the nonbreeding season (September 1 through January 31) or within 75 meters (approximately 250 feet) during the breeding season (February 1 through August 31).
- Occupied burrows should not be disturbed during the nesting season (February 1 through August 31) unless a qualified biologist approved by CDFW verifies through non-invasive methods that either: 1) the birds have not begun egg-laying and incubation; or 2) that juveniles from the occupied burrows are foraging independently and are capable of independent survival.
- If burrowing owls are present at the time that the occupied burrows are to be disturbed, then the owls shall be excluded from the site following the 2012 CDFG Staff Report.

Phase 2 and SB 330 Replacement Site: Prior to any site-specific development, potential future residential development would be required to conduct site-specific biological resource surveys, including an arborist report, as part of the City's standard discretionary review process, including compliance with CEQA and applicable local, state, and federal regulations.

Response O1-m

The Project site is located within the Airport Influence area of Chino Airport and was reviewed to be consistent with policies and criteria set forth within the 2011 California Airport Land Use Planning Handbook published by the California Department of Transportation, Division of Aeronautics per City of Ontario requirements.

Prior to Final Project Plan approvals (including but not limited to: Site Plans, Building Plans, Landscape Plans, Utility Plans, and Roadway Plans), the Applicant or successor(s) in interest shall document compliance with applicable provisions of the City of Ontario's Airport Land Use Compatibility Plan for Chino Airport and correlating provisions of the South Ontario Logistics Specific Plan.[10] Overflight Deed Notices will be provided for any properties identified in the Compatibility Plan as subject routine aircraft

[10] City of Ontario. Airport Land Use Compatibility Plan. (2011). Retrieved from: https://www.ontarioplan.org/wp-content/uploads/sites/4/pdfs/ALUCP_FULL.pdf.

overflight(s), as part of the TTM conditions of approval and as part of the City's standard development review process.[11] Therefore, no revisions are warranted.

Response O1-n

Refer to Response O1-d.

Response O1-o

Comment noted. The City disagrees with this assertion in that the EIR provides adequate consistency analysis that focuses on the broad policy-oriented goals of the 2020-2045 RTP/SCS. The consistency analysis serves to determine the Project's consistency with the 2020-2045 RTP/SCS. The Project is consistent with the 2020-2045 RTP/SCS Goals 5, 6, and 7.

2020-2045 RTP/SCS Goal 5 aims to reduce greenhouse gas (GHG) emissions and improve air quality. The Project is consistent with Goal 5because the reduction of energy use, improvement of air quality, and promotion of more environmentally sustainable development would be encouraged through the existing and proposed alternative transportation modes, sustainable building and landscaping design techniques, and other best management practices for structures and non-structures. Further, the Specific Plan area is within walking distance of the Eucalyptus and Euclid Omnitrans Bus Route 83. Omnitrans Bus Route 83 directly connects the site to the cities of Chino and Upland and to several stops in the City of Ontario, as well as the Chino Transit Center and Ontario Civic Center Transfer Station.

2020-2045 RTP/SCS Goal 6 aims to support healthy and equitable communities. The Project is consistent with Goal 6 as it would be constructed to comply with the current building codes, State and federal requirements, including Green Building Standards.

2020-2045 RTP/SCS Goal 7 to adapt to a changing climate and support an integrated regional development pattern and transportation network. The Project is consistent with Goal 7 as it would construct new roads, infrastructure, and buildings to support uses consistent with the 2020-2045 RTP/SCS and consistent with current building codes, State and federal requirements including Green Building Standards. In addition, as discussed in Goal 5, the Project would be located within walking distance of public transit, thereby reducing the potential use of vehicles.

Response O1-p

Per CEQA Guidelines Sections 15131 and 15384, CEQA analysis addresses a project's potential impacts on the physical environment; economic or social issues of a project are not treated as significant effects on the environment, or as substantial evidence if they do not contribute to or are not caused by physical impacts on the environment. Therefore, General Plan Policies CE3-1 and CE3-2 are not necessary to be addressed as part of this EIR. These policies may be considered by the City Council as part of Project deliberations.

[11] California Airport Land Use Planning Handbook. (2011). Page 4-14. Retrieved from: https://dot.ca.gov/-/media/dot-media/programs/aeronautics/documents/californiaairportlanduseplanninghandbook-a11y.pdf.

The consistency analysis in the Draft EIR will be expanded to show consistency with the following goals and policies:

ER5-1 Habitat Conservation Areas. We support the protection of biological resources through the establishment, restoration and conservation of high-quality habitat areas.

> **Consistent:** The Specific Plan would be implemented in compliance with federal, State, and regional regulations related to protected species and biological resources. Therefore, the Project is consistent with Policy ER5-1.

LU5-7: ALUCP Consistency with Land Use Regulations. We comply with state law that requires general plans, specific plans and all new development be consistent with the policies and criteria set forth within an Airport Land Use Compatibility Plan for any public use airport.

> **Consistent:** The Specific Plan area is within the Ontario International Airport Influence Area and the Chino Airport Influence Area. As mentioned above, both Chino and Ontario International Airports have established Airport Land Use Compatibility Plans promoting compatibility with surrounding land uses. As the Project would be required to be compliant with the plans, the Project would be consistent with Policy LU5-7.

ER4-1: Land Use. We reduce GHG and other local pollutant emissions through compact, mixed use, and transit-oriented development and development that improves the regional jobs-housing balance.

> **Consistent:** As stated in Section 4.11, *Population and Housing,* of the Draft EIR, the Project would provide an increase in employment-generating uses on the Project site, which would assist in the jobs to housing regional balance. Therefore, the Specific Plan is consistent with General Plan Policy ER4-1.

ER4-6: Particulate Matter. We support efforts to reduce particulate matter to meet State and Federal Clean Air Standards.

> **Consistent:** As stated in Section 4.2, *Air Quality,* of the Draft EIR, the Project would be implemented in compliance with all SCAQMD rules related to the reduction of particulate matter, and would meet both State and federal clean air standards. Therefore, the Project is consistent with General Plan Policy ER4-6.

CE2-4: Protection of Investment. We require that new development and redevelopment protect existing investment by providing architecture and urban design of equal or greater quality.

> **Consistent:** The Specific Plan design guidelines and development standards ensure high quality, cohesive, attractive, and appropriately-scaled development that complements and integrates into the Ontario Ranch community and adds value to the City. Therefore, the Project is consistent with Policy CE2-4.

ER5-2: Entitlement and Permitting Process. We comply with state and federal regulations regarding protected species.

> **Consistent:** The Specific Plan would be implemented in compliance with federal, State, and regional regulations related to protected species. Therefore, the Specific Plan is consistent with General Plan Policy ER5-2.

Response O1-q

Refer to Attachment O1, Ontario Ranch Economic Benefit Analysis and Key Fiscal Revenue Summary, as it addresses the entire industrial corridor and not just the Project.

Response O1-r

See Response O1-c.

Response O1-s

The City disagrees with this assertion in that the EIR provides adequate findings of consistency with respect to traffic and GHG emissions impacts.

General Plan Policy M1-2: Mitigation of Impacts requires development to mitigate its traffic impacts. The Project is consistent with General Plan Policy M1-2 as it would comply with all mitigation measures, conditions, and project design features identified in the Draft EIR. As stated in 4.13, Transportation and Traffic, of the Draft EIR, the Project would exceed the City's adopted vehicle miles traveled (VMT) threshold and would result in a significant and unavoidable impact. MM TRANS-1 requires the incorporation of reasonable and feasible VMT reduction measures as part of future Certificates of Occupancy of future tenants of the Specific Plan area. Implementation of MM TRANS-1 would ensure the Project is consistent with General Plan Policy M1-2.

General Plan Policy ER4-3 aims to reduce GHG emissions in accordance with regional, State, and federal regulations. The Project is consistent with General Plan Policy ER4-3 as it would be constructed in accordance with California Green Building Standards Code; including but not limited to, using energy-efficient LED products, choosing roof and paving materials that possess a high level of solar reflectivity, and employing high-performance dual-pane window glazing in office storefronts. As such, the Project would help reduce GHG emissions in accordance with regional, State, and federal regulations and be consistent with General Plan Policy ER4-3.

Response O1-t

The City disagrees with this assertion, in that the EIR provides adequate analysis of the application of the City's Development Impact Fee (DIF) program to mitigate deficient level of service (LOS) intersections.

One of the General Plan Policy M1-2 Roadway Design and Maintenance requirements requires roadways to maintain a peak hour Level of Service (LOS) E or better at all intersections. The Project would comply with the Functional Roadway Classification Plan of the Mobility Element which aims to comply with federal, State, and local design and safety standards, meet the needs of multiple transportation modes and users, and maintain a LOS of E or better at all intersections addressed in the Draft EIR. The Project would be required to comply with the City's DIF program, which helps fund transportation improvements. The City's DIF includes regional improvements to comply with Measure I. If roadway improvements are not included in the DIF program, the Project would be required to provide funding on a fair share basis where appropriate, as determined by the City. These fees shall be collected by the City, with the proceeds solely used as part of a funding mechanism aimed at ensuring that regional highways and arterial

expansions keep pace with the projected population increases. Therefore, the Project is consistent with General Plan Policy M1-2.

Response O1-u

The default assumption in square footages of land uses from the TOP EIR (which would result in 5,664 employees) were used rather than the Project-specific square footages (which would result in 5,459 employees) to allow for Project flexibility due to the speculative nature of the future tenants. The analysis conservatively assumed a mix of non-office and office uses to generate a higher employment number and VMT analysis.

Response O1-v

Comment noted. The City disagrees with this assertion, in that the EIR provides adequate analysis of unplanned population growth resulting from the Project implementation. The EIR determines that the Project would not introduce new population or housing to the Project site as the development would include business park and industrial uses, which would result in jobs for residents in the surrounding area. As stated in Section 4.11, *Population and Housing*, of the Draft EIR, the Project's construction and operations will result in up to 5,333,518 square feet of industrial/warehouse, business park, and ancillary office space, which has the potential to result in 5,459 jobs.

The construction phase of the development would generate temporary employment opportunities, including short-term design, engineering, and construction jobs. Construction related jobs would not result in a significant population increase because they are expected to be filled by persons within the local economy. Further, the forecast increase in Project employment is well within SCAG's forecast employment increase for the City of 55,400 and the forecast employment increase for the County of 273,000 by 2045. Implementation of the Project would increase jobs in the City, which would have the potential to increase the demand for housing in the City and surrounding areas. As previously stated, the proposed increase in 5,333,518 square feet of business park and industrial uses has the potential to result in 5,459 jobs. The San Bernardino Council of Governments (SBCOG) region is housing-rich. The Project would produce more jobs and therefore would support the improvements designated by SCAG in pursuit of an improved jobs-housing-balance for the County. Because the region is housing-rich, it is expected that jobs at the Project site would be drawn from the local and regional labor force. However, even if the Project increase in employees added equivalent population to the Project site, growth of 5,459 residents would be well within the growth projections assumed for the City and the region, specifically, 96,900 by 2045 in the City and 674,000 by 2045 in the County (see Table 4.11-2, SCAG Projections – City of Ontario and County of San Bernardino County) and not result in unplanned population growth.

Cumulative impacts are analyzed using General Plan projections in SCAG's 2020-2045 RTP/SCS Growth Forecast. Development of the Project in conjunction with the related cumulative project list in Table 4-1, Related Approved and Pending Projects in Section 4.0 of the EIR, would not result in cumulative citywide population and/or housing impacts, as business park projects would further improve the jobs-housing balance in the region. This would encourage alignment with objectives set by SCAG's RTP/SCS as it would increase job opportunity in an area that is predominantly residential.

Response O1-w

See Response O1-v. CEQA does not require that an EIR provide demographic and geographic on qualified workers. As discussed on page 4.11-10 of the Draft EIR, construction phase of the development would generate temporary employment opportunities, including short-term design, engineering, and construction jobs. Construction related jobs would not result in a significant population increase because they are expected to be filled by persons within the local economy. Because many of the employment opportunities are expected to be filled by persons within the local economy and the unemployment rate is approximately 7.2 percent within the jurisdictions in the Project vicinity of the Riverside-San Bernardino-Ontario Metropolitan Area as of May 2021. Therefore, future occupancy and qualified workers are not part of the SOLC SP's intent and purpose and cannot be determined.

Response O1-x

The City disagrees with the assertion that the VMT impacts are misrepresented by the SBTAM model. The VMT analysis was prepared consistent with the City of Ontario's adopted VMT guidelines and thresholds as adopted by City Council in June 2020 (File No.: SB 743 VMT Thresholds). The City's resolution states that SBTAM is the appropriate tool to use when preparing a VMT analysis. As SBTAM was utilized to formulate and establish the City's adopted VMT impact threshold it is appropriate for land use projects follow the methodologies used to establish these thresholds.[12]

In addition, the City disagrees with the assertion that the VMT analysis does not adequately or accurately represent the VMT impacts of the Project. As part of the preparation of the VMT analysis, 5,664 new industrial/warehouse employees were added to the Project's TAZ to ensure the inclusion of the Project's industrial warehouse uses; therefore, the analysis includes the additional traffic from both passenger cars and trucks associated with the Project's proposed land uses. Furthermore, as noted in the VMT analysis, the City's VMT analysis guidelines require the calculation of total VMT as derived from the SBTAM model's origin/destination (OD) trip matrices. These matrices include internal to internal (II), internal to external (IX), and external to internal (XI) vehicle trips for all vehicle types (i.e., passenger car and commercial vehicles).

Lastly, the City disagrees with the assertion that the VMT results reported in the Project's air quality analysis is exponentially higher than the VMT reported for each analysis group in the TAZ. The VMT analysis reported an average daily VMT of 221,751, which is very similar to the average daily VMT of 250,482 reported by the Project's air quality analysis. In addition, it is not uncommon for there to be differences between the VMT values calculated for a project from the SBTAM model compared to those estimated by CalEEMod. For example, CalEEMod typically utilizes rates published by the Institute of Transportation Engineers (ITE) as a method of estimating vehicle trip generation. Although a reasonable approximation of vehicle trips for purposes of emissions estimation, a regional travel demand model such as SBTAM utilizes a different set of factors to estimate vehicle trips, mode split, internal interaction between other uses within the same TAZ, interaction with other land uses in nearby TAZ's, etc. Therefore, the SBTAM model does not look at an individual project's trip generation in a vacuum. As such, the total

[12] Technical Advisory on Evaluating Transportation Impacts in CEQA. 2018. Page 30-31. Retrieved from: https://opr.ca.gov/docs/20180416-743_Technical_Advisory_4.16.18.pdf

number of trips assigned to a single development project may be slightly different when comparing between the SBTAM model and CalEEMod. In addition, the trip lengths for each vehicle type from the SBTAM model are derived through a number of factors that cannot be accounted for in CalEEMod. Conversely, CalEEMod applies various estimated "average" trip lengths that may not be reflective of the geographic context and proximity to transportation features and complementary land uses. Therefore, overall, some differences between the two modeling tools should be expected. In terms of the VMT analysis, it is important to note that consistent with OPR's recommendations in the Technical Advisory, the VMT analysis should be prepared utilizing the same methods and tools used by the lead agency to establish its VMT impact threshold. In this case, the City of Ontario used SBTAM to establish its impact threshold, therefore, SBTAM is the appropriate tool to estimate the Project-generated VMT for purposes of capering to the City's adopted impact threshold. Therefore, the analysis does not need to be revised. The VMT analysis, consistent with the City Guidelines, does analyze the Project's cumulative effect on VMT and the results of this analysis does state that there is an increase in total VMT in the "With Project" condition as compared to the "No Project" condition.

Response O1-y

The City disagrees with this assertion, in that the EIR provides adequate analysis of alternatives that meets the project objectives. These alternatives are analyzed in Section 5.0, *Alternatives*, and include analyses of the no project/no build alternative, no project/existing general plan alternative, and reduced intensity alternative. Therefore, the Draft EIR analyzes a reasonable range of alternatives.

Response O1-z

The City disagrees with this assertion, in that the EIR provides adequate analysis of growth-inducing impacts, pursuant to Sections 15126(d) and 15126.2(d) of the CEQA Guidelines, under the EIR Section 6.2 Growth-Inducing Impacts of the Proposed Project. Furthermore, the Draft EIR addresses growth in Section 4.11, *Population and Housing*, of the Draft EIR. See Response O1-b regarding piecemealing.

Response O1-aa

The City disagrees with the assertion that the Draft EIR must use one of three approved compliance modeling software for non-residential buildings and that the EIR does not comply with the 2019 Building Energy Efficiency Standards. The software listed by the California Energy Commission (CEC) are to be utilized for performance approach (energy budget) method of compliance for the 2019 Energy Standards and are to be used for demonstrating performance compliance. As stated in the CalEEMod User's Guide, CalEEMod utilizes widely accepted methodologies for estimating emissions combined with default data. The sources for the methodologies include studies commissioned by the California Energy Commission (CEC) and also utilize energy conservation standards subject to Title 24.[13] The energy analysis and associated thresholds are provided on Draft EIR pages 7-4 through 7-6. The analysis specifically responds to the guidance for energy analysis in the State CEQA Guidelines Appendix F, which requires a determination on if a project would increase the need for new energy supplies. The analysis is used to

[13] CalEEMod User's Guide. (2021). Retrieved from: http://www.aqmd.gov/docs/default-source/caleemod/user-guide-2021/01_user-39-s-guide2020-4-0.pdf?sfvrsn=6.

disclose the amount of energy that the Project would require, and is not utilized to demonstrate compliance for performance. Additionally, the Draft EIR discloses the Project's electricity consumption, natural gas consumption, and transportation fuel consumption and determined that the Project's energy consumption would not be inefficient or wasteful as the Project will be required by the CALGreen Code to comply with the Title 24 Building Energy Efficiency Standards (Nonresidential) published by the CEC, which contain stringent mandatory standards for mechanical systems, lighting (indoor and outdoor), and appliances to minimize energy use. Therefore, the Project used the appropriate model to calculate and disclose the Project's energy use, and also demonstrated that the Project would be required to comply with the CALGreen Code and Title 24.

Response O1-bb

This comment concludes the letter. No response is required.

Memorandum

To:	City of Ontario
From:	DPFG
Project:	Ontario Ranch
Date:	June 10, 2020
Subject:	Economic Benefit Analysis and Key Fiscal Revenue Summary

Real Estate Development Associates ("REDA") along with Cap Rock, Prologis and San Bernardino County (collectively referred to as "Developers") have developed/are in the process of developing 21.6 million square feet of industrial space and business park ("Project") covering an area of approximately 1,100 acres within the New Model Colony ("NMC") area in the City of Ontario ("City"). In order to support discussions with the City, REDA has requested Development Planning and Financing Group, Inc. ("DPFG") to prepare this Memo, Economic Benefit Analysis and the Key Fiscal Revenue Summary.

Below is a summary of the proposed land uses for the Project which is estimated to be constructed over a period of eight years.

Land Use: Non-Residential	**SF**
Industrial Space (Various Developers)	18,777,342
Business Park (Various Developers)	2,913,139
Total	**21,690,481**

On an average annual basis over the eight-year construction period, it is estimated that the Project will generate:

- 2,051 total jobs (direct, indirect and induced jobs).
- $123.5 million in labor income.
- $317.7 million of economic output.

Over the eight-year construction period, it is estimated the Project will generate:

- $988.4 million in cumulative labor income.
- $2.54 billion of cumulative economic output.

Upon completion, on an annual ongoing basis, it is estimated that the Project will generate:

- 33,946 total jobs (direct, indirect and induced jobs).
- $1.74 billion in labor income.
- $3.6 billion of economic output.

At build-out, the Project will generate the following recurring annual income to the City's General Fund.

Recurring Revenues:	At Build-out
▪ Property Taxes	$ 4,890,973
▪ Property Tax in Lieu of MVLF	1,770,249
▪ On-site Sales and Use Tax (Uline)	5,000,000
▪ On-site Sales and Use Tax (Other)	12,769,097
▪ Off-site Sales and Use Tax	593,043
▪ Public Safety Tax Prop 172	106,994
▪ Business License Tax	391,502
▪ Franchise Fees	152,577
Total Recurring Revenues	**$ 25,674,435**

The report is organized as follows:

- Exhibit A – Economic Benefit Analysis and supporting exhibits
- Exhibit B – Key Fiscal Revenue Summary and supporting exhibits
- Exhibit C – DPFG's Statement of Qualification

(a) The weighted average of TRAs was calculated by the distribution of acreage among the TRAs within the Project.

(b) In addition to other ad valorem charges imposed by various local agencies, land owners in California are required to pay annual property taxes of 1% on the assessed value of their property pursuant to Proposition 13.

Each County in California is divided into tax rate areas ("TRA"). After the basic 1% property tax is collected by the county, the tax is allocated to various local agencies based on each agency's share of the basic tax within the property's applicable TRA. This exhibit shows the share of the basic tax applicable to the Project's TRA.

DPFG
DEVELOPMENT PLANNING & FINANCING GROUP, INC.

Exhibit C

DPFG is a national real estate consulting firm that represents land developers and builders on many land use related matters. The firm specializes in providing land development and financing solutions in the local market for its clients which include, but are not limited to, to the following areas:

Consulting Milestones:

- Completed over 275 Fiscal Impact Analysis Reviews and Reports.
- Completed over 2,500 Land Secured Public Financings with over $16 billion in bonds.
- Negotiated over 350 School Mitigation Agreements.
- Completed over 70 Public Facilities Financing Reports.
- Completed over 600 Project Cash Flows, Valuation and Feasibility Analysis.
- Completed over 4,000 Disclosure Analysis Reviews and Reports.
- Completed over 100 Redevelopment projects.
- Restructured over 100 Land Secured Public Financing Districts.
- Completed over 4,000 Property Tax Appeals nationwide.
- Look Back Diagnostic findings reached over $125 million.

The Senior Management Team at DPFG has over **306 years** of combined real estate experience in performing the firm's core services and other general real estate consulting services as follows:

John Foreman – President and CEO	37 Years Experience
Chris Austin – Managing Principal	18 Years Experience
Chris Cole – Managing Principal	16 Years Experience
Chris Lightburne – Managing Principal	30 Years Experience
Peter Piller – Managing Principal	33 Years Experience
Maik Aagaard – Managing Principal	14 Years Experience
Lucy Gallo – Managing Principal	18 Years Experience
Rick Rosenberg – Managing Principal	38 Years Experience
Sunit Patel – Principal	14 Years Experience
Chris Hall – Director	11 Years Experience
Kelly Restelli – Senior Manager	10 Years Experience
Mary Lu - Senior Manager	12 Years Experience
Eric Quinlan – Manager	14 Years Experience
Joey Lujan – Manager	8 Years Experience
Marc Santos – Manager	12 Years Experience

DPFG has over 60 other professionals that are at work with the Senior Management Team to help process and solve their client's jobs and problems.

Re: Comments on the Draft Environmental Impact Report for the South Ontario Logistics Center Specific Plan (SCH No. 2021010318)

Dear Ms. Vaughn:

We are writing on behalf of Californians Allied for a Responsible Economy ("CARECA"), to provide comments on the Draft Environmental Impact Report ("DEIR") prepared by the City of Ontario ("City") for the South Ontario Logistics Center Specific Plan (SCH No. 2021010318) ("Project"). The proposed Project site is on a total of 219.39-acre site bound by Eucalyptus Avenue to the north, Campus Avenue to the west, Merrill Avenue to the south, and Grove Avenue to the east. a

The proposed Project consists of a General Plan Amendment, Specific Plan, Development Plan Review, Tentative Parcel Maps, and a Development Agreement to allow for the development of an industrial and business park encompassing 23 parcels totaling 219.39 acres in the City of Ontario, San Bernardino County, California. The Project is proposed in two phases. Phase 1, comprised of Planning Areas ("PAs") 1 and 2, would allow approximately 3,174,518 sf of industrial and business park uses. Phase 1 consists of the construction of Buildings 1 through 8 and includes the Development Plan for PAs 1 and 2. The EIR also evaluates, at a programmatic level, potential future development of Phase 2, comprised of three future planning areas (no specific development proposals have been identified for the Phase 2 area). Furthermore, pursuant to the Housing Accountably Act, or

5826-004j

printed on recycled paper

Senate Bill 330 (SB330), the Project will create an Overlay District on an "SB330 Replacement Site" to increase the residential zoning capacity by 1,352 units, which will offset the loss of residential zoning capacity within the Project site. In order for this Overlay District to be approved, a Zone Change and General Plan Amendment are required.

cont'd a

We reviewed the DEIR and its technical appendices with the assistance of air quality and health risk experts Matt Hagemann, P.G, C.Hg. and Paul E. Rosenfeld, PhD from Soil / Water / Air Protection Enterprise ("SWAPE").[1] We also received technical assistance from biological resources expert Scott Cashen,[2] and transportation expert Dan Smith.[3] The City must separately respond to these technical comments.

Based upon our review of the DEIR and supporting documentation, we conclude that the DEIR fails to comply with the requirements of CEQA. As explained more fully below, the DEIR fails to provide an accurate environmental baseline upon which to measure the Project's reasonably foreseeable impacts on biological resources. The consequences of these defects are far-reaching and require the City to revise the DEIR. The DEIR does not accurately disclose potentially significant air quality, public health, GHG, energy, transportation, and biological resources impacts. As a result of its shortcomings, the DEIR lacks substantial evidence to support its conclusions and fails to properly mitigate the Project's significant environmental impacts. The City also fails to adopt all feasible mitigation to lessen the effect of impacts deemed significant and unavoidable. The City cannot approve the Project until the errors and omissions in the DEIR are remedied, and a revised DEIR is recirculated for public review and comment which fully discloses and mitigates the Project's potentially significant environmental and public health impacts.

b

I. STATEMENT OF INTEREST

CARECA is an unincorporated association of individuals and labor organizations that may be adversely affected by the potential public and worker health and safety hazards, and the environmental impacts of the Project. The

c

[1] Mr. Hagemann's and Dr. Rosenfeld's technical comments and curricula vitae are attached hereto as **Exhibit A**.
[2] Mr. Cashen's technical comments and curricula vitae are attached hereto as **Exhibit B**.
[3] Mr. Smith's technical comments and curricula vitae are attached hereto as **Exhibit C**.
5826-004j

coalition includes Ontario residents Ricardo Cuevas, Irvin Cruise, Luis Garcia, Jaime Paredes, John Fierro, the District Council of Ironworkers, and Southern California Pipe Trades District Council 16, along with their members, their families, and other individuals who live and work in the City of Ontario.

CARECA advocates for protecting the environment and the health of their communities' workforces. CARECA seeks to ensure a sustainable construction industry over the long-term by supporting projects that offer genuine economic and employment benefits, and which minimize adverse environmental and other impacts on local communities. CARECA members live, work, recreate, and raise their families in the City of Ontario and surrounding communities. Accordingly, they would be directly affected by the Project's environmental and health and safety impacts. Individual members may also work on the Project itself. They will be first in line to be exposed to any health and safety hazards that exist onsite.

In addition, CARECA has an interest in enforcing environmental laws that encourage sustainable development and ensure a safe working environment for its members. Environmentally detrimental projects can jeopardize future jobs by making it more difficult and more expensive for business and industry to expand in the region, and by making the area less desirable for new businesses and new residents. Indeed, continued environmental degradation can, and has, caused construction moratoriums and other restrictions on growth that, in turn, reduce future employment opportunities.

cont'd c

II. LEGAL BACKGROUND

CEQA has two basic purposes, neither of which the DEIR satisfies. First, CEQA is designed to inform decision makers and the public about the potential, significant environmental effects of a project.[4] CEQA requires that an agency analyze potentially significant environmental impacts in an EIR.[5] The EIR should not rely on scientifically outdated information to assess the significance of impacts, and should result from "extensive research and information gathering," including consultation with state and federal agencies, local officials, and the interested public.[6] To be adequate, the EIR should evidence the lead agency's good faith effort

d

[4] CEQA Guidelines, § 15002, subd. (a)(1).
[5] *See* Pub. Resources Code, § 21000; CEQA Guidelines, § 15002.

5826-004j

at full disclosure.[7] The EIR has been described as "an environmental 'alarm bell' whose purpose it is to alert the public and its responsible officials to environmental changes before they have reached ecological points of no return."[8] "Thus, the EIR protects not only the environment but also informed self-government."[9]

Second, CEQA directs public agencies to avoid or reduce environmental damage when possible by requiring alternatives or mitigation measures.[10] The EIR serves to provide public agencies and the public in general with information about the effect that a proposed project is likely to have on the environment and to "identify ways that environmental damage can be avoided or significantly reduced."[11] If a project has a significant effect on the environment, the agency may approve the project only upon a finding that it has "eliminated or substantially lessened all significant effects on the environment where feasible," and that any unavoidable significant effects on the environment are "acceptable due to overriding concerns" specified in CEQA section 21081.[12]

cont'd
d

As these comments will demonstrate, the DEIR fails to comply with the requirements of CEQA and may not be used as the basis for approving the Project. It fails in significant aspects to perform its function as an informational document that is meant "to provide public agencies and the public in general with detailed information about the effect which a proposed project is likely to have on the environment" and "to list ways in which the significant effects of such a project might be minimized."[13] The DEIR also lacks substantial evidence to support the City's proposed findings that the Project's significant impacts are mitigated to the fullest extent feasible.

III. THE PROJECT DESCRIPTION IS INADEQUATE

e

The DEIR does not meet CEQA's requirements because it fails to include an accurate and complete Project description, rendering the entire analysis inadequate.

[7] CEQA Guidelines, § 15151; *see also Laurel Heights Improvement Assn. v. Regents of University of California* ("*Laurel Heights I*") (1988) 47 Cal.3d 376, 406.
[8] *County of Inyo v. Yorty* (1973) 32 Cal.App.3d 795, 810.
[9] *Citizens of Goleta Valley v. Bd. of Supervisors* (1990) 52 Cal.3d 553, 564 (citations omitted).
[10] CEQA Guidelines, § 15002, subd. (a)(2)-(3); *Berkeley Keep Jets Over the Bay Com. v. Bd. of Port Comrs.,* 91 Cal.App.4th at 1354.

[12] *Id.*, subd. (b)(2)(A)-(B).
[13] *Laurel Heights I, supra,* 47 Cal.3d at pg. 391.
5826-004j

California courts have repeatedly held that "an accurate, stable and finite project description is the *sine qua non* of an informative and legally sufficient EIR."[14] CEQA requires that a project be described with enough particularity that its impacts can be assessed.[15] Without a complete project description, the environmental analysis under CEQA is impermissibly limited, thus minimizing the project's impacts and undermining meaningful public review.[16] Accordingly, a lead agency may not hide behind its failure to obtain a complete and accurate project description.[17]

CEQA Guidelines section 15378 defines "project" to mean "the whole of an action, which has a potential for resulting in either a direct physical change in the environment, or a reasonably foreseeable indirect physical change in the environment."[18] "The term 'project' refers to the activity which is being approved and which may be subject to several discretionary approvals by governmental agencies. The term project does not mean each separate governmental approval."[19] Courts have explained that a complete description of a project must "address not only the immediate environmental consequences of going forward with the project, but also all "*reasonably foreseeable* consequence[s] of the initial project."[20] "If a[n]…EIR…does not adequately apprise all interested parties of the true scope of the project for intelligent weighing of the environmental consequences of the project, informed decisionmaking cannot occur under CEQA and the final EIR is inadequate as a matter of law."[21]

cont'd e

A. The DEIR Fails to Disclose Whether the Project Will Require Backup Generators

f

An EIR must include an analysis of the environmental effects of a proposed future expansion or other future action at a project site if: (1) it is a reasonably foreseeable consequence of the initial project; and (2) the future expansion or action

[14] *Stopthemillenniumhollywood.com v. City of Los Angeles* (2019) 39 Cal.App.5th 1, 17; *Communities for a Better Environment v. City of Richmond* ("*CBE v. Richmond*") (2010) 184 Cal.App.4th 70, 85–89; *County of Inyo v. City of Los Angeles* (3d Dist. 1977) 71 Cal.App.3d 185, 193.

5826-004j

will be significant in that it will likely change the scope or nature of the initial project or its environmental effects.[22]

The DEIR states that the Project includes refrigerated storage.[23] A cold storage warehouse has the ability to keep temperature sensitive items in a temperature-controlled environment, which requires a constant energy supply to power refrigeration. Cold storage warehouses thus commonly utilize backup generators.[24] Backup generators commonly rely on fuels such as natural gas or diesel,[25] and thus can significantly impact air quality, GHG emissions, and public health through toxic diesel particulate ("DPM") emissions.[26] Since the Project will include cold storage, it is reasonably foreseeable that the Project would require on-site backup generators. Therefore, the DEIR must disclose whether the Project will use generators, and, if so, analyze the effects of the Project's use of generators. The DEIR's failure to provide any information about the use of generators causes the DEIR to fail as an informational document.

This demand for reliable back-up power has health impacts of its own. Of particular concern are health effects related to emissions from diesel back-up engines. Diesel particulate matter (DPM) has been identified as a toxic air contaminant, composed of carbon particles and numerous organic compounds, including over forty known cancer-causing organic substances. The majority of DPM is small enough to be inhaled deep into the lungs and make them more susceptible to injury. Much of the back-up power produced during PSPS events is expected to come from engines regulated by CARB and California's 35 air pollution control and air quality management districts (air districts)").
5826-004j

IV. THE DEIR FAILS TO ADEQUATELY ANALYZE, QUANTIFY, AND MITIGATE THE PROJECT'S POTENTIALLY SIGNIFICANT IMPACTS

An EIR must fully disclose all potentially significant impacts of a project, and implement all feasible mitigation to reduce those impacts to less than significant levels. The lead agency's significance determination with regard to each impact must be supported by accurate scientific and factual data.[27] An agency cannot conclude that an impact is less than significant unless it produces rigorous analysis and concrete substantial evidence justifying the finding.[28]

Moreover, the failure to provide information required by CEQA is a failure to proceed in the manner required by law.[29] Challenges to an agency's failure to proceed in the manner required by CEQA, such as the failure to address a subject required to be covered in an EIR or to disclose information about a project's environmental effects or alternatives, are subject to a less deferential standard than challenges to an agency's factual conclusions.[30] In reviewing challenges to an agency's approval of an EIR based on a lack of substantial evidence, the court will "determine de novo whether the agency has employed the correct procedures, scrupulously enforcing all legislatively mandated CEQA requirements."[31] g

Even when the substantial evidence standard is applicable to agency decisions to certify an EIR and approve a project, reviewing courts will not 'uncritically rely on every study or analysis presented by a project proponent in support of its position. A clearly inadequate or unsupported study is entitled to no judicial deference.'"[32]

A. The DEIR Fails to Adequately Analyze and Mitigate Air Quality Impacts

i. The DEIR Fails to Require All Feasible Air Quality Mitigation

The DEIR concludes that the Project's operational emissions associated with Phase 1, Phase 2, and Project Buildout would be significant and unavoidable.[33] But while there is substantial evidence demonstrating that the Project's criteria air pollutant emissions would result in a significant air quality impact, the DEIR's conclusion that these impacts are "significant and unavoidable" is unsupported. CEQA prohibits public agencies from approving a project as proposed if there are any feasible alternative or feasible mitigation measures that would substantially lessen or avoid any significant effect the project would have on the environment.[34] h

Here, while the DEIR includes Mitigation Measures AQ-1 through AQ-5, as well as GHG-1, the DEIR fails to implement *all* feasible mitigation to reduce air quality and GHG impacts to the greatest extent feasible, as required by CEQA. SWAPE reviewed the Project and proposes numerous feasible air quality mitigation measures not considered by the DEIR.[35]

For instance, MM AQ-2 requires the lease agreements with future warehouse/business tenants to use only electric-powered/zero emissions off-road equipment. This lease requirement can be expanded to require use of fuel-efficient mobile sources, which cause the bulk of the Project's emissions. SWAPE suggests requiring on-road heavy-duty haul trucks to be model year 2010 or newer if diesel-fueled. Or the lease agreement can require all heavy-duty vehicles entering or operated on the project site to be zero-emission beginning in 2030. A lease agreement can require tenants to use zero-emission light- and medium-duty vehicles as part of business operations. Requiring provisions like these in lease agreements are within the agency's and Applicant's powers, and would help reduce mobile source emissions. The City must consider the feasibility of these proposed mitigation measures in a revised DEIR. i

[33] DEIR, pg. pg. 4.2-22.
[34] Pub. Res. Code § 21002.
[35] SWAPE, pp. 9-11.
5826-004j

The Project includes refrigerated storage, which has higher air quality impacts than unrefrigerated storage.[36] Cold storage warehouses commonly utilize backup generators.[37] Backup generators commonly rely on fuels such as natural gas or diesel,[38] and thus can significantly impact air quality, GHG emissions, and public health through toxic diesel particulate ("DPM") emissions.[39] As mitigation for these impacts, SWAPE proposes requiring all stand-by emergency generators to be powered by a non-diesel fuel. This measure would substantially reduce DPM emissions. j

In addition to backup generators, cold storage involves the use of transport refrigeration units, and consumes more electricity than unrefrigerated storage. The DEIR thus must consider a mitigation measure limiting how much of the Project can be used for cold storage, which would reduce the Project's significant air quality impacts.

The DEIR did not evaluate these mitigation measures and others listed in SWAPE's comments. Therefore, the DEIR's conclusion that the Project's air quality impacts are significant and unavoidable is unsubstantiated. To comply with CEQA, the City must adopt these measures to the extent feasible, or provide evidence that the measures are not feasible. k

B. The DEIR Fails to Adequately Analyze and Mitigate Greenhouse Gas Impacts

i. The Greenhouse Gas Analysis Relies on Inapplicable Thresholds, in Violation of CEQA

Under the CEQA Guidelines, a lead agency must analyze a project's impacts on GHG emissions.[40] The Guidelines provide that "[i]n determining the significance of impacts, the lead agency may consider a project's consistency with the State's long-term climate goals or strategies, **provided that substantial evidence supports the agency's analysis** of how those goals or strategies address the project's incremental contribution to climate change and its conclusion that the project's incremental contribution is not cumulatively considerable."[41] The Guidelines explicitly mandate that the "analysis should consider a timeframe that is appropriate for the project… The agency's analysis also must reasonably reflect evolving scientific knowledge and state regulatory schemes."[42] Here, the City's analysis does not consider the appropriate timeframe and updated regulatory scheme, and thus lacks substantial evidence to support its conclusions. l

In 2006, California passed Assembly Bill 32, the California Global Warming Solutions Act of 2006. AB 32 instructed the California Air Resources Board ("CARB") to develop and enforce regulations for the reporting and verification of statewide GHG emissions. AB 32 also directed CARB to set a GHG emissions limit based on 1990 levels, to be achieved by 2020. It set a timeline for adopting a scoping plan for achieving GHG reductions in a technologically and economically feasible manner. CARB's 2008 Scoping Plan, developed to implement AB 32, set a GHG reduction target of 15 percent below "current" (2005-2008) levels to local communities by the year 2020. m

To meet this 2020 emissions reduction goal, the City adopted the Community Climate Action Plan ("CAP") in November 2014. The primary purpose of the City's CAP was to achieve consistency with the 2008 Scoping Plan's 2020 GHG reduction target.[43] As part of the CAP, the City published a guidance document titled "Greenhouse Gas Emissions, CEQA Thresholds and Screening Tables" ("Screening

[40] 14 C.C.R §15064.4
[41] 14 CCR § 15064.4 (b)(3). [emphasis added]
[42] 14 C.C.R §15064.4(b)
[43] DEIR, pg. 4.6-12
5826-004j

Tables"). As part of this guidance, the City determined that, if GHG emissions of a given project exceed 3,000 MTCO2e/yr, then project emissions would need to be reduced by 25 percent when compared to year 2008 emissions levels. Alternatively, the Project would need to achieve a minimum of 100 points pursuant to measures identified in the Screening Tables. The Screening Tables include a variety of measures to choose from, including building energy efficiency, water conservation, and VMT reduction.

In 2016, the Legislature passed Senate Bill 32, which codifies a 2030 GHG emissions reduction target of 40 percent below 1990 levels. On December 14, 2017, CARB adopted a second update to the Scoping Plan. The 2017 Scoping Plan details how the State will reduce GHG emissions to meet the 2030 target codified by SB 32. The 2017 Scoping Plan explains that CAPs that meet emission reduction goals for 2020 must be updated in order to meet the state's 2030 climate goals:

> Numerous local governments in California have already adopted GHG emissions reduction goals for year 2020 consistent with AB 32. CARB advises that local governments also develop community-wide GHG emissions reduction goals necessary to reach 2030 and 2050 climate goals. […] The recommendation for a community-wide goal expands upon the reduction of 15 percent from "current" (2005-2008) levels by 2020 as recommended in the 2008 Scoping Plan.[44]

cont'd m

For this Project, the DEIR claims that it is consistent with all applicable plans, including the 2017 Scoping Plan.[45] The DEIR specifically states that due to compliance with the CAP, the Project would not impede Scoping Plan's statewide GHG reduction goals for 2030 and 2050:

> The Project's long-term operational GHG emissions would exceed City's threshold of 3,000 MTCO2e per year despite the implementation of MM AQ-2 through MM AQ-5 (refer to Section 4.2, Air Quality), as well as MM GHG-1, which requires the Project to achieve a minimum of 100 points on the CAP

n

[44] CARB, California's 2017 Climate Change Scoping Plan (November 2017), pg. 100, available at https://ww2.arb.ca.gov/sites/default/files/classic/cc/scopingplan/scoping_plan_2017.pdf.
[45] DEIR, pg. 4.6-32 ("impacts related to consistency with the Scoping Plan would be less than significant"), 4.6-35 ("the Project would be consistent with applicable plan goals")

Screening Threshold Checklist. Achieving 100 points ensures that the Project would not impede California's statewide GHG reduction goals for 2030 and 2050, but the potential Project GHG emissions remain a significant and unavoidable impact.[46]

The DEIR lacks substantial evidence to support its reliance on consistency with the 2017 Scoping Plan as a relevant GHG threshold, as the CAP was only designed to achieve GHG reduction goals for 2020, not 2030 or 2050. As excerpted above, the 2017 Scoping Plan states that CAPs that meet the 2020 goals should be updated to meet the more stringent 2030 goals. Thus, meeting the CAP's threshold of 3,000 MTCO2e per year does not demonstrate consistency with the 2017 Scoping Plan. Nor does achieving 100 points on the CAP Screening Threshold Checklist. cont'd n

As a result, the DEIR lacks a meaningful threshold against which to measure the significance of the Project's GHG impacts. The City must formulate, in a revised EIR, updated significance thresholds that meet the 2030 and 2050 GHG reduction targets, and assess the significance of the Project's GHG emissions against those thresholds. Mitigation measures should then be required to ensure impacts do not exceed these more stringent thresholds. The revised DEIR must support the revised thresholds and mitigation with substantial evidence. o

ii. The DEIR's Greenhouse Gas Mitigation is Inadequate

EIRs must mitigate significant impacts through measures that are "fully enforceable through permit conditions, agreements, or other legally binding instruments."[47] Deferring formulation of mitigation measures is generally impermissible.[48] If identification of specific mitigation measures is impractical until a later stage in the Project, specific performance criteria must be articulated and further approvals must be made contingent upon meeting these performance criteria.[49] Mitigation that does no more than allow approval by a county department without setting enforceable standards is inadequate.[50] p

[46] *Id.*, pg. 4.6-36.
[47] CEQA Guidelines, § 15126.4, subd. (a)(2).
[48] *Sundstrom v. County of Mendocino* (1988) 202 Cal.App.3d 296, 308-309; Pub. Resources Code, § 21061.
[49] *Gentry v. City of Murrieta* (1995) 36 Cal.App.4th 1359, 1393; *Quail Botanical*, *supra*, 29 Cal.App.4th at pg. 1604, fn. 5.
[50] *Endangered Habitats League, Inc. v. County of Orange,* (2005) 131 Cal.App.4th 777, 794.
5826-004j

Here, the Project's greenhouse gas mitigation measure, MM GHG-1, would require that "Project development proposals with building permit applications on file with the City prior to approval and adoption of updates to the December 16, 2014 CAP shall implement Screening Table Measures that achieve at least 100 points per the Screening Tables."[51] It is not explained in the DEIR why this mitigation measure only applies to components of the Project with permit applications preceding the adoption of the 2014 CAP. And it is not apparent that any of the Project would be governed by MM GHG-1, as the Project application is only dated June 12, 2019, and development proposals for Phase 2 and the SB330 Replacement Site are not likely already on file with the City.[52] Therefore, MM GHG-1 is not binding, enforceable mitigation that would mitigate the Project's greenhouse gas impacts. q

MM GHG-1 also improperly defers mitigation. In *Golden Door Properties, LLC v. County of San Diego* ("*Golden Door II*")[53], the court concluded the GHG emission mitigation measure contained in a CAP violates CEQA because it "lacks objective criteria to ensure the [agency]'s exercise of that discretion will result in GHG reduction that is real, permanent, quantifiable, verifiable, enforceable, and additional." The court also held the measure violated CEQA because it improperly deferred mitigation. The court discusses the flawed mitigation in the following passage:

> Here, the final EIR merely proposes a generalized goal of no net increase in greenhouse gas emissions and then sets out a handful of cursorily described mitigation measures for future consideration that might serve to mitigate the 898,000 metric tons of emissions resulting from the Project. No effort is made to calculate what, if any, reductions in the Project's anticipated greenhouse gas emissions would result from each of these vaguely described future mitigation measures. Indeed, the perfunctory listing of possible mitigation measures set out in Mitigation Measure 4.3-5e are nonexclusive, undefined, untested and of unknown efficacy. The only criteria for "success" of the ultimate mitigation plan adopted is the subjective judgment of the City Council, which presumably will make its decision outside of any public process a year after the Project has been approved. r

[51] DEIR, pg. 4.6-23.
[52] Legislative Action Application Form, File No. PSP19-001, PGPA19-004.
[53] (2020) 50 Cal.App.5th 467, 525.
5826-004j

The instant Project's greenhouse gas measure, MM GHG-1, is similarly flawed, providing:

> Project development proposals with building permit applications on file with the City prior to approval and adoption of updates to the December 16, 2014, CAP shall implement Screening Table Measures that achieve at least 100 points per the Screening Tables. […] **Multiple development proposals may, at the discretion of the City, be allowed to collectively demonstrate achievement of at least 100 points per the Screening Tables**. [emphasis added]

MM GHG-1 defers development of specific mitigation measures until after project approval. This practice is legally adequate when these future mitigation measures are held to enforceable standards. However, the bolded text in the excerpt above makes this mitigation effectively nonbinding: if the City has discretion as to how many projects can collectively demonstrate 100 points of mitigation, nothing stops the City from distributing these points across a large number of projects which do not collectively reduce their GHG impacts. As in *Golden Door II*, the success of this mitigation relies too heavily on the subjective judgment of the City.

cont'd r

The court in *Golden Door II* also criticized the agency's failure to calculate what reductions would result from the city's vaguely described future mitigation measures. The vague measures included "Add/improve heat exchangers" and "Initiate carbon sequestration, capture and export." Another mitigation measure proposes "Replac[ing] stationary, non-emergency diesel internal combustion engines."[54] MM GHG-1 is similarly flawed: the CAP's Screening Table measures are also vaguely described. For instance, "using moderate water using plants" is worth 3 points, and "using low water using plants" is worth 4 points.[55] The difference between moderate- and low-water using plants is undefined, and thus left to the discretion of the City. *Golden Door II* determined such mitigation is impermissibly deferred mitigation.

s

[54] 184 Cal.App.4th 92
[55] City of Ontario, Greenhouse Gas Emissions CEQA Thresholds and Screening Tables, pg. 18, available at https://www.ontarioca.gov/sites/default/files/Ontario-Files/Planning/Applications/Community%20Climate%20Action%20Plan%20-%20Appendix%20B.pdf.
5826-004j

Additionally, although each mitigation measure on the CAP Screening Tables is given a point value, this point value does not correspond to the actual reduction in emissions for a specific project. For instance, although "water efficient landscaping" can be worth up to 8 points for commercial/industrial developments, the actual GHG reduction from water efficient landscaping would vary depending on how much land a project would otherwise require for landscaping. The actual emissions reduction of MM GHG-1 is thus undefined, violating the holding of *Golden Door II*. As a result, the DEIR fails as an informational document, and lacks substantial evidence to conclude that the Project's significant GHG impacts will be actually mitigated. MM GHG-1 must be revised to quantify emissions reductions, demonstrate efficacy, and be fully enforceable. t

iii. The DEIR Fails to Require All Feasible Greenhouse Gas Mitigation

The DEIR concludes that the Project's net annual GHG emissions associated with Phase 1, Phase 2, and Project Buildout would be significant and unavoidable.[56] CEQA prohibits public agencies from approving a project as proposed if there are any feasible alternative or feasible mitigation measures that would substantially lessen or avoid any significant effect the project would have on the environment.[57]

The DEIR fails to adopt all feasible mitigation for GHG emissions, in violation of CEQA. The DEIR adopts MM GHG-1, which would require that the Project incorporate project design features to achieve a minimum score of 100 points on the City's Community CAP Screening Tables.[58] The City acknowledges that this mitigation would not reduce the Project's impacts to a less-than-significant level: u

> [A]t the time of this analysis, the City's CAP update is underway and the potential timeframes for approval and adoption of the City CAP update are unknown. Once approved, the CAP may implement performance standards and GHG emissions reduction targets differing from the current CAP. There is the potential that even after achieving more than 100 points on the current Screening Tables, the Project may conflict with as-yet-unknown performance standards and GHG emissions reduction targets implemented under the anticipated CAP updates, and thereby result in GHG emissions that would be

[56] DEIR, pp. 4.6-18, 4.6-20, 4.6-22.
[57] Pub. Res. Code § 21002.
[58] DEIR, pg. 4.6-22.
5826-004j

considered to represent a significant impact on the environment. Therefore, even with the implementation of MM AQ-2 through MM AQ-5 and MM GHG-1, this Project impact is conservatively considered significant and unavoidable.[59]

The City is correct that achieving more than 100 points on the Screening Tables will not likely reduce impacts to a less-than-significant level. However, the City does not make clear that, not only does the Project conflict with "as-yet-unknown performance standards and GHG emissions reduction targets," but it conflicts with current GHG emissions reduction targets. As discussed earlier, the City's CAP was not designed to meet the 2030 emissions reduction goals. As a result, merely achieving 100 points on the Screening Tables does not represent the full extent of feasible mitigation measures available to reduce GHG impacts. Therefore, the City must adopt more stringent mitigation requirements in a revised EIR. In addition to the mitigation measures listed in the Screening Tables, SWAPE's comments provide a list of mitigation measures the City should consider when revising the DEIR.[60]

cont'd u

C. The DEIR Fails to Adequately Disclose, Analyze, and Mitigate Potentially Significant Health Risk Impacts from DPM Emissions

A lead agency's significance determination must be supported by accurate scientific and factual data.[61] An agency cannot conclude that an impact is less than significant unless it produces rigorous analysis and concrete substantial evidence justifying the finding.[62]

These standards apply to an EIR's analysis of public health impacts of a Project. In *Sierra Club v. County of Fresno*, the California Supreme Court affirmed CEQA's mandate to protect public health and safety by holding that an EIR fails as an informational document when it fails to disclose the public health impacts from air pollutants that would be generated by a development project.[63] In *Sierra Club*, the Supreme Court held that the EIR for the Friant Ranch Project—a 942-acre master-planned, mixed-use development with 2,500 senior residential units, 250,000 square feet of commercial space, and open space on former agricultural

5826-004j

land in north central Fresno County—was deficient as a matter of law in its informational discussion of air quality impacts as they connect to adverse human health effects.[64] As the Court explained, "a sufficient discussion of significant impacts requires not merely a determination of whether an impact is significant, but some effort to explain the nature and magnitude of the impact."[65] The Court concluded that the County's EIR was inadequate for failing to disclose the nature and extent of public health impacts caused by the project's air pollution. As the Court explained, the EIR failed to comply with CEQA because after reading the EIR, "the public would have no idea of the health consequences that result when more pollutants are added to a nonattainment basin."[66] CEQA mandates discussion, supported by substantial evidence, of the nature and magnitude of impacts of air pollution on public health.[67]

cont'd
V

Furthermore, in *Berkeley Keep Jets Over the Bay Com. v. Bd. of Port Comrs.* ("*Berkeley Jets*"), the Court of Appeal held that an EIR must analyze the impacts from human exposure to toxic substances.[68] In that case, the Port of Oakland approved a development plan for the Oakland International Airport.[69] The EIR admitted that the Project would result in an increase in the release of TACs and adopted mitigation measures to reduce TAC emissions, but failed to quantify the severity of the Project's impacts on human health.[70] The Court held that mitigation alone was insufficient, and that the Port had a duty to analyze the health risks associated with exposure to TACs.[71] As the CEQA Guidelines explain, "[t]he EIR serves not only to protect the environment but also to demonstrate to the public that it is being protected."[72]

W

[64] *Id.* at 507–508, 518–522.

5826-004j

The failure to provide information required by CEQA makes meaningful assessment of potentially significant impacts impossible and is presumed to be prejudicial.[73] Challenges to an agency's failure to proceed in the manner required by CEQA, such as the failure to address a subject required to be covered in an EIR or to disclose information about a project's environmental effects or alternatives, are subject to a less deferential standard than challenges to an agency's factual conclusions.[74]

cont'd
W

Here, the DEIR determines that the proposed Project would result in a less-than-significant health risk impact based on quantified construction-related and mobile-source health risk assessments ("HRAs").[75] The DEIR estimates that the Project would result in construction-related and mobile-source operational cancer risks of 8.80- and 1.39-in one million, respectively.[76] The DEIR concludes these impacts are below the South Coast Air Quality Management District ("SCAQMD") threshold of 10 in one million.[77]

The DEIR's approach masks the true health risks of this Project by failing to evaluate the *cumulative* lifetime cancer risk as a result of Project construction and operational emissions together. Since the Project's construction and operational emissions will be felt by sensitive receptors cumulatively, disclosing the cumulative lifetime cancer risk is necessary to comply with CEQA's informational requirements. As in *Sierra Club*, the City's disclosure of the Project's health risk impacts is deficient as a matter of law because it fails to adequately connect emissions to the adverse human health effects.[78] Furthermore, in as in *Berkeley Jets*, the DEIR fails to adequately quantify the impacts from human exposure to toxic substances.[79]

X

The importance of analyzing the *cumulative* cancer risk, in order to adequately illustrate the health impacts of a project, is explained in guidance from the Office of Environmental Health Hazard Assessment ("OEHHA"), the

[73] *Sierra Club v. State Bd. Of Forestry* (1994) 7 Cal.4th 1215, 1236–1237.

[76] DEIR, pp. 4.2-36, 4.2-3
[77] DEIR, pg. 4.2-36
[78] *Id.* at 507–508, 518–522.
[79] 91 Cal.App.4th at 1369–1371.
5826-004j

organization responsible for providing guidance on conducting HRAs in California.[80] OEHHA guidance provides, "the excess cancer risk is calculated separately for each age grouping and then summed to yield cancer risk at the receptor location."[81] Here, the DEIR's HRAs fail to sum each age bin to evaluate the total cancer risk over the course of the Project's total construction and operation. As a result, the DEIR fails to evaluate the cumulative lifetime cancer risk from Project construction and operation together.

The City's failure to discuss the Project's cumulative cancer risk results in a failure to identify a potentially significant health risk impact. SWAPE's comments shows that when the construction and operational cancer risks are combined, the SCAQMD significance threshold is exceeded.

DEIR Cumulative Cancer Risk	
HRA	**Cancer Risk** (in one million)
Construction	8.80
Mobile-Source Operation	1.39
Total	10.19
SCAQMD Threshold	**10**
Exceeds?	**Yes**

SWAPE Comments, pg.4.

As a result of this analytical error, the DEIR's significance finding is not supported by substantial evidence. And the failure to disclose a potentially significant impact makes the DEIR deficient as an informational document. The City must implement all feasible mitigation to reduce health risk impacts to a less-than-significant level.[82]

D. The DEIR Fails to Adequately Establish the Environmental Setting for Biological Resources and Fails to Adequately Disclose, Analyze, and Mitigate Potentially Significant Impacts on Biological Resources

i. The DEIR Fails to Address Consistency with All Applicable Plans, Programs, and Policies

Appendix G of the CEQA Guidelines requires disclosure of conflicts with local policies or ordinances protecting biological resources, and provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan. In Section 4.3.2, the DEIR lists the various regulations the Project must comply with. However, the DEIR fails to disclose that the Project site is subject to a settlement agreement ("the Settlement Agreement") that contains goals and policies which pertain to protecting biological resources on the Project site.[83] y

In 2001, the City, Endangered Habitats League, and Sierra Club signed a settlement agreement related to the City's adoption of the Final EIR for the Ontario Sphere of Influence (aka "SOI," "New Model Colony" or "NMC") General Plan Amendment. The New Model Colony area encompasses the Project site.[84] The General Plan Amendment prepared the NMC area for a range of urban and suburban uses, including residential, commercial, business park, industrial, and open space. Most of the NMC was then, and still is, in agricultural use.[85] The Ontario Plan (the City's general plan) DEIR explains:

> A Settlement Agreement was reached and agreed to by all parties that set forth revised mitigation measures for potential impacts in the NMC (referred to as Annexation Area 163 in the agreement) to the burrowing owl, the DSFLF, raptor foraging and wildlife habitat, loss of open space, actual and potential habitat and agricultural land, and sensitive (listed and nonlisted)

[83] Endangered Habitats League, Inc. v. City of Ontario et al. Settlement and General Release Agreement (November 28, 2001), attached hereto as **Exhibit D**.
[84] DEIR, pg. 3-4 ("The Project area is located within the City's Ontario Ranch area (formerly known as New Model Colony)").

species. These measures will be in effect until all of the developable acres in the NMC reach full buildout, as determined by the City. Further, a land trust, conservancy, or nonprofit corporation or nonprofit entity will be created or selected to carry out the responsibilities, goals, and objectives of the mitigation as set forth in the settlement agreement.[86]

The terms of the Settlement Agreement, which will be discussed in more detail throughout these comments, apply to this Project because the DEIR acknowledges that the NMC area encompasses the Project site, and the NMC area has not been fully built out. By failing to disclose the Settlement's applicability to this Project, the DEIR fails to meet CEQA's informational requirements. And without analyzing consistency with these requirements, the DEIR lacks substantial evidence to conclude impacts to biological resources are less than significant. And as will be discussed below, the DEIR's mitigation fails to comply with the terms of the Settlement Agreement. As a result, the DEIR must be revised.

cont'd y

ii. The DEIR Fails to Adequately Establish the Biological Resources Baseline

CEQA requires that a lead agency include a description of the physical environmental conditions in the vicinity of the Project as they exist at the time environmental review commences.[87] As numerous courts have held, the impacts of a project must be measured against the "real conditions on the ground."[88] The description of the environmental setting constitutes the baseline physical conditions by which a lead agency may assess the significance of a project's impacts.[89] Use of the proper baseline is critical to a meaningful assessment of a project's environmental impacts.[90] An agency's failure to adequately describe the existing setting contravenes the fundamental purpose of the environmental review process, which is to determine whether there is a potentially substantial, adverse change compared to the existing setting.

z

[86] *Id.* [emphasis added]
[87] CEQA Guidelines, § 15125, subd. (a).
[88] *Save Our Peninsula Com. v. Monterey Bd. of Supervisors* (2001) 87 Cal.App.4th 99, 121-22; *City of Carmel-by-the Sea v. Bd. of Supervisors* (1986) 183 Cal.App.3d 229, 246.

5826-004j

Baseline information on which a lead agency relies must be supported by substantial evidence.[91] The CEQA Guidelines define "substantial evidence" as "enough relevant information and reasonable inferences from this information that a fair argument can be made to support a conclusion."[92] "Substantial evidence shall include facts, reasonable assumptions predicated upon facts, and expert opinion supported by facts ... [U]nsubstantiated opinion or narrative [and] evidence which is clearly inaccurate or erroneous ... is not substantial evidence."[93]

cont'd z

a. The City's 2001 Settlement with Endangered Habitats League and Sierra Club Requires Protocol Surveys

The Settlement Agreement requires biological surveys conducted for proposed development projects in the NMC area. These surveys must be conducted pursuant to formally adopted protocols:

> For every residential, commercial, industrial or other development project in Annexation Area 163 requiring discretionary approval or permitting, Ontario shall require the real property owner or developer to **conduct a biological habitat assessment and when appropriate, biological surveys pursuant to formally adopted protocols**, by qualified biologists or pursuant to any subsequently adopted Habitat Conservation Plan or a similar planning mechanism as part of a subsequent CEQA environmental review process.[94]

aa

The Settlement Agreement imposes a binding requirement for projects in the NMC area to undertake protocol-level surveys. The Settlement Agreement states that protocol surveys must be conducted under certain circumstances. The Ontario Plan Draft EIR, in its discussion of the Settlement Agreement, clarifies that focused protocol surveys are required "if a [habitat] assessment determines that there is potential habitat for sensitive species."[95] Specifically, the Ontario Plan states:

---

[91] *Id.* at 321 (stating "an agency enjoys the discretion to decide [...] exactly how the existing physical conditions without the project can most realistically be measured, subject to review, as with all CEQA factual determinations, for support by substantial evidence"); *see Vineyard Area Citizens for Responsible Growth, Inc. v. City of Rancho Cordova* (2007) 40 Cal.4th 412, 435.
[92] CEQA Guidelines §15384.
[93] Pub. Resources Code § 21082.2(c).
[94] Settlement Agreement, pg. 7.
[95] Ontario Plan EIR, pg. 5.4-7.
5826-004j

> [C]urrent City procedure is to require a habitat assessment to determine existing habitat and biological resources on proposed development sites. If the assessment determines that there is potential habitat for sensitive species, focused protocol surveys are required. If potential DSFLF habitat is present, two-year (consecutive) protocol surveys per the USFWS Interim General Survey Guidelines for the Delhi Sands flower-loving fly are required.[96]

cont'd aa

Here, the City conducted a biological habitat assessment, but failed to conduct focused, protocol surveys for each present or potentially present species, despite meeting the standard for protocol surveys described in the settlement agreement. The City conducted protocol surveys for burrowing owls, but failed to conduct protocol surveys for the other species the DEIR determined have potential habitat on the Project site. And as will be discussed below, there are more species with potential habitat on the Project site than the DEIR discloses. As a result, the City's failure to conduct protocol surveys for all applicable species violates the terms of the Settlement Agreement.

b. The DEIR Fails to Adequately Describe Burrowing Owl Use of the Site

bb

California Department of Fish and Wildlife ("CDFW") guidance provides that "essential habitat" for burrowing owls includes nesting, foraging, wintering, and dispersal habitat.[97] Thus, CDFW commented on the Project's Notice of Preparation ("NOP") that "[b]urrowing owl surveys should be conducted at various times in the year and the data used to access the cumulative loss to not only breeding, but wintering and migratory stopover habitat."[98] Mr. Cashen similarly explains that an accurate assessment of Project-level and cumulative impacts to burrowing owls requires baseline data on burrowing owl use of the Project site during both the

[96] *Id.*
[97] California Department of Fish and Game. 2012. Staff Report on Burrowing Owl Mitigation, p. 24.
[98] CDFW, Comments re: Notice of Preparation of a Draft Environmental Impact Report South Ontario Logistics Center Specific Project State Clearinghouse No. 2021010318 (February 22, 2021) pg. 4.
5826-004j

breeding and non-breeding seasons.[99] However, the City failed to conduct surveys during the non-breeding season (i.e., during migration and winter).[100] Therefore, the City fails to adequately describe the biological baseline regarding burrowing owls.

The City might argue that this failure is inconsequential because MM BIO-2 calls for take avoidance surveys 14 days before initiating ground disturbance activities. But these surveys would not evaluate the cumulative loss of wintering and migratory stopover habitat because they are focused on take avoidance. Thus, MM BIO-2 does not remedy the failure to describe the biological baseline.

cont'd bb

The DEIR's failure to describe the environmental setting is even greater for the Project's *future development areas*. The DEIR claims that "BUOW Focused surveys were conducted for the entire Project site which includes both Phase I and future development areas."[101] This claim is contradicted by the DEIR's burrowing owl survey report, which clearly states that the surveys were limited to the 130 acres that would be developed during Phase 1 of the Project, and that "the additional acreage [within the specific plan boundary] was not included in this focused BUOW study."[102] As a result, the DEIR fails to adequately evaluate any aspect of essential habitat for burrowing owls (nesting, foraging, wintering, and dispersal habitat) on the future development areas.[103]

cc

The City's approach also conflicts with the Settlement Agreement, which requires protocol surveys "if a [habitat] assessment determines that there is potential habitat for sensitive species."[104] The DEIR states that there is potential habitat for this species to be present on the fallow agricultural fields on the Project site.[105] Therefore, the Settlement Agreement requires protocol surveys on the whole site.

[105] DEIR, pg. 4.3-6.
5826-004j

c. The DEIR Fails to Adequately Survey for Swainson's Hawk

The DEIR's biological assessment determines that the Project site provides potential habitat for the Swainson's hawk (a threatened species), and that Swainson's hawks may be present at the Project site.[106] As discussed above, the Settlement Agreement requires a protocol survey when there is potential habitat. However, a protocol-level survey was not conducted for this species: the City only conducted a reconnaissance visit, and requires a pre-construction survey in MM BIO-1.

The City might argue that MM BIO-1 provides for a protocol study: "If vegetation removal will occur during the migratory bird nesting season, between February 1 and September 15, pre-construction nesting bird surveys shall be performed within three days prior to vegetation removal." But this mitigation measure lacks any requirement these surveys follow the necessary protocols recommended by scientific authorities, thereby failing to ensure their effectiveness.

Mr. Cashen explains that Swainson's hawk nests are especially difficult to survey, and thus are only effective if they closely follow certain protocols.[107] He and CDFW recommend project proponents implement the Swainson's hawk survey protocol developed by the Swainson's Hawk Technical Advisory Committee.[108] Without this protocol survey, the DEIR fails to describe baseline physical conditions by which the City can assess the significance of the Project's impacts.[109] Without an accurate baseline, the City's analysis and mitigation regarding Swainson's hawk are not based on substantial evidence. The DEIR must conduct protocol level surveys for Swainson's hawk, and disclose the findings in a revised EIR that is recirculated for public review.

ee

d. The DEIR Fails to Accurately Characterize Potential for Western Spadefoot Habitat

The City's biological resources report provides the following assessment of the potential for the western spadefoot to occur at the Project site: "[v]ernal pools are

ff

[106] DEIR, Appendix C1 (General Biological Assessment), pg. 10.
[107] Cashen, pg. 2.
[108] *Id.*
[109] CEQA Guidelines, § 15125, subd. (a).
5826-004j

essential for breeding and egg laying. No habitat for this species present. Not present."[110] Mr. Cashen explains that this information is inconsistent with the biology of the species.[111] Western spadefoots are not limited to vernal pools for breeding and egg laying: they breed and lay their eggs in a variety of permanent and temporary pools, including pools that occur in highly disturbed environments (e.g., roadside ditches and stock ponds).[112] The Project site contains at least 19 acres of stock/retention ponds and channels.[113] As a result, western spadefoots have the potential to occur at the Project site. The City's conclusion thus lacks evidentiary support. Also, because western spadefoots have potential habitat on the Project site, protocol surveys are required by the Settlement Agreement. And because the DEIR does not incorporate mitigation for impacts on this species, the Project's impacts remain potentially significant. Due to the far-reaching consequences of this inadequate environmental setting, the DEIR must be revised and recirculated.

cont'd ff

e. The City Failed to Consult All Available Biological Resources Databases to Establish the Environmental Setting

The City relied on California Natural Diversity Data Base ("CNDDB") for determining occurrence likelihoods of special-status species. The City failed to consult other major databases such as eBird and iNaturalist. Mr. Cashen reviewed these databases, and found that the DEIR fails to address all the special-status bird species that have been detected at, or that have the potential to occur at, the Project site. These include the long-billed curlew, mountain plover, white-faced ibis, northern harrier, ferruginous hawk, white-tailed kite, and loggerhead shrike.[114]

gg

5826-004j

Sole reliance on CNDDB is not supported by substantial evidence. The California Department of Fish and Wildlife cautions that sole reliance on CNDDB is inappropriate as a basis for narrowing a list of potentially occurring species:

> "We work very hard to keep the CNDDB and the Spotted Owl Database as current and up-to-date as possible given our capabilities and resources. However, we cannot and do not portray the CNDDB as an exhaustive and comprehensive inventory of all rare species and natural communities statewide. Field verification for the presence or absence of sensitive species will always be an important obligation of our customers…"[115]

The Ontario Plan EIR identified additional species that are potentially present on the Project site:

> The following sensitive species have been observed in the City of Ontario, and suitable habitat for each of these species is present in the City: **great egret (Ardea alba), great blue heron (Ardea Herodias), snowy egret (Egretta thula), sharp-shinned hawk (Accipiter striatus), tricolored blackbird (Agelaius tricolor), doublecrested cormorant (Phalacrocorax auritus), Cooper's hawk (Accipiter cooperi), burrowing owl, Loggerhead shrike (Lanius ludovicianus), and long-billed curlew (Numenius americanus**). Several additional species have been observed for which there is suitable foraging habitat in the City, but there is limited or no suitable nesting habitat: **ferruginous hawk, mountain plover (Charadrius montanus), northern harrier (Circus cyaneus), white-tailed kite (Elanus leucurus), merlin (Falco columbarius), prairie falcon (Falco mexicanus), Peregrine falcon, and white-faced ibis**. Several sensitive bat species are considered to have possible roosting opportunities in the City, and are listed above in Table 5.4-2.[116] [emphasis added]

cont'd gg

This passage shows that there are several species present in the area that are not discussed or analyzed in the DEIR. And as discussed above, reliance on CNDDB is not substantial evidence for concluding these species are not present. Therefore, the

[115] California Department of Fish and Wildlife, About the CNDDB – Disclaimer, https://wildlife.ca.gov/Data/CNDDB/About.
[116] Ontario Plan EIR, Section 5.4, pg. 5.4-26.
5826-004j

DEIR should have disclosed the potential for these species to be present, and analyzed the Project's impacts on them. As it stands, the DEIR's environmental baseline – and the conclusions relying on that baseline – are incomplete.

cont'd gg

f. The DEIR Fails to Accurately Describe Ponded Water on the Project Site

According to the DEIR, the Project site contains approximately 19 acres of stock/retention ponds and channels, but "the ponds are dry."[117] Whether the ponds are dry implicates the presence of potential habitat. However, the DEIR's claim is not supported by substantial evidence. Two of the site photographs in the biological resources report show ponded water in a stock pond and stock pond channel.[118] And Mr. Cashen's comments contain time lapse imagery from Google Earth showing ponded water at various locations throughout the Project site during every year between 2002 and 2021. An accurate, consistent characterization of the ponded water on the Project site is necessary to evaluate impacts on wildlife habitat, as well meet jurisdictional requirements.

hh

g. The DEIR Fails to Identify Potential Jurisdictional Waters

The DEIR states that the Project site contains approximately 19 acres of stock/retention ponds and channels.[119] The DEIR states that they are not considered Waters of the United States, nor considered jurisdictional under the CDFW Lake and Streambed Alteration Program. But Mr. Cashen's comments demonstrate that in addition to the 19 acres of stock/retention ponds and channels identified by the DEIR, there are several areas within the Project site that periodically contain ponded water.[120] Figures 1 and 2 below show that these aquatic features are distinct from the stock/retention ponds and channels discussed in the DEIR. As a result, the DEIR's environmental setting is inaccurate.

These aquatic features occur on hydric soils and therefore may qualify as wetlands.[121] The Ontario Plan EIR also states that such features (dairy manure water retention basins, irrigation ponds, livestock watering, and man-made lakes) might be jurisdictional.[122] Because the City has not conducted a wetland delineation, there is no substantial evidence supporting the City's determination that the Project would have no adverse effects on State protected wetlands. The DEIR should be revised to provide a more complete survey of wetland conditions in the project area.

[121] Soil Survey Staff, Natural Resources Conservation Service, United States Department of Agriculture. Web Soil Survey. Available at: <http://websoilsurvey.sc.egov.usda.gov/>. (Accessed 20 Dec 2021).
[122] Ontario Plan EIR, pg. 5.4-25.
5826-004j

iii. The DEIR Fails to Adequately Analyze the Project's Impacts on Biological Resources

The DEIR acknowledges that "[t]he Tricolored blackbird, Grasshopper sparrow, Great blue heron, Swainson's hawk, California glossy snake, Western Pond Turtle, Western mastiff bat, Yellow rail, California horned lark, and Merlin have the potential to be on-site due to suitable habitat for foraging and nesting purposes."[123] But the DEIR fails to actually describe how these species might be impacted by the Project (e.g., direct mortality during construction, habitat loss, disturbance caused by noise and human activity, etc.).[124] The DEIR thus fails to satisfy the basic purpose of an EIR, which is to inform decision makers and the public about the potential, significant environmental effects of a project.[125]

As a result, the DEIR does not provide the necessary information to evaluate the Project against significance thresholds listed in the DEIR. These thresholds are: jj

> A substantial adverse effect to special-status species would occur if the Project would:
>
> 1) Reduce the population size or reduce the area of occupied habitat of a rare, threatened, or endangered species; or
> 2) Reduce the population size or reduce the area of occupied habitat of a locally uncommon species.
>
> A substantial adverse effect on a special-status wildlife species occurs if the Project would:
>
> 1) Increase predation of a species, leading to population reduction;
> 2) Reduce habitat availability sufficiently to affect potential reproduction; or
> 3) Reduce habitat availability sufficiently to constrain the distribution of a species and not allow for natural changes in distributional patterns over time.[126]

The DEIR's approach of merely stating how probable it is for a particular species to be present on the Project site does not address all of these thresholds. This approach precludes understanding of the Project's potentially significant

[123] DEIR, pg. 4.3-18.
[124] Cashen, pg. 6.
[125] CEQA Guidelines, § 15002, subd. (a)(1).
[126] DEIR, pg. 4.3-17.
5826-004j

impacts and whether the DEIR's mitigation would sufficiently mitigate those (unspecified) impacts to less-than significant levels. Currently, the City lacks substantial evidence that impacts on special-status species are less than significant. The DEIR must be revised. cont'd jj

a. The DEIR Fails to Disclose Impacts on Waterfowl kk

The Project site provides habitat for numerous waterfowl (and waterbird) species.[127] The Final EIR for the Ontario Sphere of Influence General Plan Amendment concluded that impacts to waterfowl habitat in the NMC would be significant before mitigation measures were implemented. Impacts were determined to be less than significant after implementation of Mitigation Measures BR-1 and BR-2.[128] Mitigation Measure BR-1 modified the General Plan to require the creation of new waterfowl habitat and specified a mitigation ratio of 2:1 for each acre of such habitat lost. Mitigation Measure BR-2 stipulated that the City shall create a Waterfowl and Raptor Conservation Area ("WRCA"), and included requirements and definitions for it.[129] The City prepared the NMC Final EIR as a program-level EIR with the intent that later environmental analysis of specific plans and individual development projects would be tiered from this document.[130]

Here, the DEIR fails to analyze impacts on waterfowl. And the DEIR does not require implementation of either of the above mitigation measures. As a result, the Project would have significant, unmitigated impacts on habitat for waterfowl.

iv. The DEIR Fails to Mitigate Habitat Loss ll

The DEIR does not incorporate mitigation for habitat loss, which is the primary threat to the special-status species that may occur at the Project site.[131] The NOP comment letter issued by CDFW states: "[f]or unavoidable impacts, onsite habitat restoration and/or enhancement, and preservation should be evaluated and discussed in detail. Where habitat preservation is not available onsite, offsite land

[127] Cashen, pg. 8.
[128] *See* City of Ontario. 2009. The Ontario Plan Draft EIR. pg. 5.4-29.
[129] *Id.*, pg. 5.4-4.
[130] NMC Final EIR, pg. 1-1, 1-4; CDFW Comments re: Notice of Preparation of a Draft Supplemental Environmental Impact Report Ontario Plan (TOP) 2050 Project (August 19, 2021), available at https://files.ceqanet.opr.ca.gov/271618-1/attachment/z-71n4BI_-fGcSaU0zSQWOnkMqakfB0KGOrcWLPkFsMdTHc8q_PiFxU4LcuTu5X0JfaWkqxRBFPQ6oeW0.
[131] Cashen, pg. 7.
5826-004j

acquisition, management, and preservation should be evaluated and discussed in detail."[132] But the DEIR does not provide this evaluation and discussion, nor it does provide analysis demonstrating that the Project's impacts on habitat would be less than significant. Regarding burrowing owls, CDFW's NOP comment letter states that compensatory mitigation should be provided if burrowing owl habitat is impacted by the Project.[133] But MM BIO-1 and 2 do not require any compensatory mitigation for burrowing owls.

Should the City argue that development of compensatory mitigation is not feasible at this time, the City should note that CDFW has previously provided examples of compensatory mitigation measures in comments on previous Specific Plans in the City of Ontario. For instance, CDFW's comments on the Merrill Commerce Center Specific Plan, which also is located in the NMC, recommended feasible compensatory mitigation measures tricolored blackbirds,[134] burrowing owls,[135] raptors,[136] bats,[137] and western pond turtle habitat, and other species.[138] In response to these comments, the City actually revised some of its mitigation to include compensatory mitigation. This demonstrates that compensatory mitigation is necessary and feasible to mitigate habitat loss impacts in the NMC.

cont'd
ll

For these reasons, the DEIR does not adequately mitigate the Project's potentially significant impacts on special-status species.

v. The DEIR Fails to Mitigate the Project's Impacts in Accordance with the Settlement Agreement and General Plan

mm

As summarized by the Ontario Plan DEIR, the Settlement for the Ontario Plan Amendment requires the following:

[132] DEIR, Appendix A, CDFW NOP comments, pg. 8.
[133] DEIR, Appendix A, CDFW NOP comments.
[134] Merrill Commerce Center Specific Plan Project Final EIR - SCH No. 2019049079, Comments and Responses, pg. 3-32, available at https://www.ontarioca.gov/sites/default/files/Ontario-Files/Planning/Documents/CEQA/Merrill%20Commerce%20Center/Merrill%20Commerce%20Center%20Specific%20Plan%20Final%20EIR%2001.2021.pdf.
[135] *Id.*, pg. 3-41 to 3-44.
[136] *Id.*, pg. 3-52.
[137] *Id.*, pg. 3-36.
[138] *Id.*, pg. 3-28, 3-29.
5826-004j

- Prior to issuance of grading permits, Ontario shall impose a $4,320 per net acre mitigation fee on proposed developments in Annexation Area 163 that require discretionary approval or permitting from the City.
- Ontario, in consultation with CDFG, will identify, through CEQA review, lands occupied by burrowing owl and suitable as long-term habitat. The City will require avoidance of those lands to maintain a viable territory and require long-term maintenance through dedication in fee or grant of easement to the Land Trust. If the site is not viable long-term habitat, the developer shall pay the mitigation fee and make provisions for relocation of the owls.
- Since habitat that benefits DSFLF can be expected to benefit burrowing owl, up to 25 percent of the mitigation fee maybe used by the City for DSFLF recovery.
- All mitigation fees collected shall be used for the above-described purposes and may be used to purchase property, conservation easements, or other land with long-term conservation value for the environmental impacts; enhance/restore lands with such values; maintain and operates these lands; and pay for related administrative costs (not to exceed 10 percent of the total fees).
- Land/easements dedicated, conveyed, or purchased to benefit wildlife, waterfowl, raptors, and/or burrowing owl must have long-term conservation value for those species and must be managed by the Land Trust. The parcels must be in the habitat area designated as part of the settlement agreement. Unacceptable properties are those that would otherwise be purchased by another entity or group as open space mitigation for environmental impacts.[139]

cont'd
mm

As previously discussed, these mitigation measures are supposed to remain in effect until all of the developable acres in the NMC reach full buildout.[140] But the DEIR's environmental analysis and mitigation make no reference to these requirements. The DEIR fails to require payment of the $4,320 mitigation fee, and fails to include any of the compensatory mitigation measures listed above. The DEIR's mitigation measures do not require protocol surveys for all species with potentially present habitat. As a result, the DEIR fails to mitigate the impacts identified in the DEIR and the New Model Colony Program EIR.

[139] Ontario Plan EIR, pg. 5.4-7.
[140] City of Ontario. 2009. The Ontario Plan Draft EIR. p. 5.4-4.
5826-004j

vi. MM BIO-1 is Ineffective Mitigation

MM BIO-1 provides that vegetation removal is recommended to be conducted outside of the nesting season for migratory birds to avoid direct impacts. Mr. Cashen explains that removal of vegetation during the "off-season" would minimize direct impacts on nesting birds, but it would not mitigate the permanent loss of nesting habitat, nor would it mitigate impacts to birds that use the Project site for "foraging purposes." Furthermore, it would not mitigate impacts to the western pond turtle, western mastiff bat, or California glossy snake. These are unmitigated significant impacts, requiring the DEIR to be revised and recirculated. nn oo

MM BIO-1 requires pre-construction nesting bird surveys within three days prior to vegetation removal, if vegetation removal will occur during the migratory bird nesting season. This measure lacks the specificity needed to ensure bird nests are actually detected. Specifically, MM BIO-1 fails to establish standards for (a) the nest searching techniques, (b) minimum level of effort (i.e., survey hours per unit area), and (c) qualifications of the individual conducting the surveys. As explained in Mr. Cashen's comments, the ability to successfully locate nests in the Project area is dependent on these three variables.[141] This mitigation measure is thus impermissibly vague, as a mitigation plan is only sufficient if it identifies methods that will be used to mitigate the impact and sets out standards that the agency commits to meet.[142] pp

MM BIO-1 does not require protocol-level surveys for Swainson's hawk nests prior to vegetation removal. Mr. Cashen's comments show it would not be possible for the surveyor to implement the survey protocol within the 3-day timeframe established in MM BIO-1.[143] As a result, MM BIO-1 does not ensure Swainson's hawk nests would be detected, and thus, that Project impacts on the Swainson's hawk would be reduced to less-than-significant levels. This provision is legally flawed because it does not comply with the terms of the Settlement, and its effectiveness is remote and speculative.[144] qq

[141] Cashen, pg. 12.
[142] *Sierra Club v. County of Fresno* (2018) 6 CA5th 502, 524; *Preserve Wild Santee v. City of Santee* (2012) 210 CA4th 260, 281 (plan for active habitat management did not describe anticipated management actions or include standards or guidelines for actions that might be taken).
[143] Cashen, pg. 13.
[144] *Federation of Hillside & Canyon Ass'n v. City of Los Angeles* (2000) 83 CA4th 1252, 1260.
5826-004j

MM BIO-1 states that a 250-foot buffer shall be fenced around songbird nests and a 500-foot buffer shall be fenced around raptor nests. The DEIR fails to provide evidence that these buffers would be sufficient to prevent indirect impacts to nesting birds. Mr. Cashen explains that scientific authorities recommend a buffer of at least one kilometer (3,281 feet) or 1/2 mile.[145] Thus, the City's mitigation is legally flawed because its efficacy is not apparent and there is no evidence in the record showing it will be effective in remedying the identified environmental problem.[146] MM BIO-1's buffer zones must be expanded, or the DEIR must be revised to include facts and analysis supporting the effectiveness of the 250- and 500- foot buffers.[147] rr

MM BIO-1 states "[a] biological monitor shall visit the site once a week during ground disturbing activities to ensure all fencing is in place and no sensitive species are being impacted." But Mr. Cashen explains that MM BIO-1 fails to identify minimum qualifications for the monitor and the variables that would be monitored to determine whether sensitive species are being impacted by construction activities. This mitigation measure is thus impermissibly vague, as it fails to identify methods that will be used to mitigate the impact, and identify standards that the agency commits to meet.[148] Mr. Cashen also explains that there is no scientific basis to support the weekly monitoring frequency.[149] The DEIR thus fails to support this mitigation with substantial evidence or fulfill CEQA's informational requirements. ss

MM BIO-1 purports to mitigate impacts on California glossy snake:

> "Three days prior to any ground disturbing activities or vegetation removal, a qualified biological monitor should conduct a preconstruction survey to identify any sensitive biological resources. Any sensitive reptilian species that may be present within the Project area shall be relocated outside of the impact areas." tt

[145] Cashen, pg. 13.
[146] *King v. Gardiner Farms, LLC v. County of Kern* (2020) 45 CA5th 814, 866 (EIR discussion of mitigation measure that has uncertain effect must identify and explain the uncertainty in measure's effectiveness and the reasons for that uncertainty).
[147] *Sierra Club v. County of Fresno* (2018) 6 CA5th 502, 522.
[148] *Id.* at 524; *Preserve Wild Santee v. City of Santee* (2012) 210 CA4th 260, 281 (plan for active habitat management did not describe anticipated management actions or include standards or guidelines for actions that might be taken).
[149] Cashen, pg. 13.
5826-004j

But relocation of snakes outside of the impact areas does not mitigate the Project's potentially significant impact on habitat for the California glossy snake. And BIO-1 cannot claim, with substantial evidence, to mitigate direct impacts on individual snakes because most reptile translocation projects are unsuccessful.[150] Also, because the California glossy snake is active only at night and hides underground in daytime,[151] a standard visual survey would be unsuccessful in locating California glossy snakes that could be impacted by construction activities. Thus, MM BIO-1's measures are ineffective. Mr. Cashen explains that the ineffectiveness of this type of mitigation is exacerbated by the DEIR's failure to establish: (a) the survey methods, (b) potential receptor sites, and (c) procedures for handling and releasing snakes to maximize survivorship. This mitigation measure is thus impermissibly vague, as it fails to identify methods that will be used to mitigate the impact and set out standards that the agency commits to meet.[152] Additional details are necessary to substantiate the effectiveness of this mitigation.

cont'd tt

MM BIO-1 states that a preconstruction survey will be conducted to detect roosting bats in the Project site's agricultural buildings. But Mr. Cashen explains that reliable detection of western mastiff bat roosts requires acoustic monitoring.[153] Because MM BIO-1 does not require acoustic monitoring, and because it fails to establish standards (minimum qualifications) for the "qualified biologist" conducting the survey, MM BIO-1 does not ensure that bat roosts would be successfully located prior to demolition of the agriculture buildings. Thus, the effects of this mitigation measure are not supported by substantial evidence.

uu

MM BIO-1 incorporates the following mitigation for the removal of bat roosts from the Project site:

> "The removal of the roosting sites shall occur during the time of day when the roost is unoccupied. The loss of each roost will be compensated for by the construction and installation of two bat boxes suitable to the bat species and colony size excluded from the original roosting site. The bat boxes shall be installed in the vicinity prior to removal of the original day/maternity roost

[153] Cashen, pg. 14; Merrill Commerce Center Specific Plan FEIR, pg. 3-35 (recommending acoustic monitoring).
5826-004j

> sites… Performance standards will be developed based on the results of the bat survey consistent with CDFW recommendations such that no residual significant impacts would remain."

Mr. Cashen's comments show that because MM BIO-1 does not (1) identify methods for confirming roosts are unoccupied, (2) require installation of exclusion devices for at least 7 days prior to removal of the roosts (3) identify how bat boxes would be located, monitored, and maintained, (4) adopt performance standards, or (5) require contingency measures should the bat boxes fail, Project impacts to bat roosts remain potentially significant. As a result, this mitigation is too undefined for the City to conclude it is effective.[154] cont'd VV

Also, the DEIR provides no evidence that western mastiff bats (the species potentially present on the Project site) use artificial roosts (e.g., bat boxes). Mr. Cashen explains that very few bat species have been documented to use artificial roosts.[155] His comments demonstrate that the ability of artificial roosts to mitigate impacts to occupied roosts has had limited success. Because a reviewing court will not defer to a lead agency's determination that mitigation measures will work when their efficacy is not apparent and there is no evidence in the record showing they will be effective in remedying the identified environmental problem, this mitigation is legally inadequate.[156] WW

In addition, the bat mitigation improperly defers performance standards for the mitigation. As a result, there are no assurances that MM BIO-1 would mitigate significant impacts to the western mastiff bat.[157] In *Preserve Wild Santee v. City of Santee* ("*Preserve Wild Santee*"), the city impermissibly deferred mitigation where the EIR did not state why specifying performance standards for mitigation measures "was impractical or infeasible at the time the EIR was certified."[158] This XX

[154] *Preserve Wild Santee v. City of Santee* (2012) 210 CA4th 260, 281 (plan for active habitat management did not describe anticipated management actions or include standards or guidelines for actions that might be taken).
[155] Cashen, pg. 14-15.
[156] *King v. Gardiner Farms, supra*, 45 CA5th at 866 (EIR discussion of mitigation measure that has uncertain effect must identify and explain the uncertainty in measure's effectiveness and the reasons for that uncertainty).
[157] Cashen, pg. 15.
[158] 210 Cal.App.4th 260, 281.
5826-004j

constitutes both a lack of substantial evidence and an informational defect. Here, the DEIR is legally inadequate because it does not explain why it cannot specify performance standards for mastiff bat mitigation. cont'd xx

MM BIO-1 provides: "[w]ithin 14 days prior to the onset of construction activities, a qualified biologist shall conduct pre-construction surveys for western pond turtle within all areas that fall within 100 feet of any suitable aquatic and upland nesting habitat for this species (stock/retention ponds)." Mr. Cashen's comments show that western pond turtles travel as far as *500 meters* from a watercourse to find suitable nesting or over-wintering habitat.[159] As a result, a survey that is confined to areas within 100 feet of "suitable aquatic and upland nesting habitat" does not ensure reliable detection of pond turtles that may be impacted by the Project. Thus, the DEIR's mitigation is not supported by substantial evidence. yy

MM BIO-1 provides: "[i]f western pond turtles are observed in the construction area at any time during construction, the on-site biological monitor shall be notified and construction in the vicinity of the sighting shall be halted until such a time as a turtle has been removed from the construction zone and relocated by an approved biologist." Mr. Cashen's comments demonstrate that the success of this mitigation is heavily dependent on the procedures and performance standards governing the mitigation – the feasibility of relocating turtles and turtle nests is highly uncertain. But MM BIO-1 fails to specify any such procedures and standards, in violation of CEQA.[160] Additionally, even if turtles are successfully moved out of the construction zone, MM BIO-1 would not mitigate the Project's significant impact on pond turtle habitat. zz

vii. MM BIO-2 is Ineffective Mitigation

MM BIO-2 states:

"The Project Applicant shall complete an initial BUOW take avoidance survey no less than 14 days prior to initiating ground disturbance activities. Implementation of avoidance and minimization measures (e.g., eliminating actions that reduce burrowing owl forage and burrowing surrogates (e.g., ground squirrel), or introduce/ facilitate burrowing owl predators) would be aaa

[159] Cashen, pg. 15.
[160] *King v. Gardiner Farms, supra*, 45 CA5th at 866; *Preserve Wild Santee*, 210 Cal.App.4th 260, 281.
5826-004j

> triggered by positive owl presence on the site where Project activities would occur. The development of avoidance and minimization approaches would be evaluated by monitoring burrowing owls (if present on-site)."

This mitigation measure is impermissibly vague. Mr. Cashen observes that the DEIR fails to identify the specific avoidance and minimization measures that the Applicant would need to implement if burrowing owls are present on the site.[161] In addition, the DEIR fails to identify: (a) the monitoring requirements, (b) how monitoring would dictate the avoidance and minimization approaches, and (c) the parties responsible for selecting the appropriate avoidance and minimization measures. As in *Preserve Wild Santee,* the City impermissibly defers mitigation because the DEIR does not state why specifying these details is impractical or infeasible.[162] The DEIR is inadequate because "'[t]he success or failure of mitigation efforts ... may largely depend upon management plans that have not yet been formulated, and have not been subject to analysis and review within the EIR.'"[163]

cont'd aaa

As mentioned earlier, MM BIO-2 is inconsistent with the terms of the Settlement Agreement. Per the terms of the Agreement, if burrowing owls occur at a development site that is not viable long-term habitat for burrowing owls, the developer must make provisions for the relocation of the owls in a manner that is consistent with CDFW guidelines and protocols.[164] Because MM BIO-2 fails to require relocation in a manner consistent with CDFW guidelines, it violates the Settlement Agreement.

bbb

MM BIO-2 also fails to discuss how impacts to burrowing owls would be avoided or minimized if owls at the site are year-round residents. If burrowing owls would be evicted from their burrows to enable construction activities, MM BIO-2 must require implementation of a Burrowing Owl Exclusion Plan that is approved by CDFW.[165]

ccc

[161] Cashen, pg. 16.
[162] 210 Cal.App.4th 260, 281.
[163] 210 Cal.App.4th 260, quoting *Communities for a Better Environment v. City of Richmond* (2010) 184 Cal.App.4th 70, 92, quoting *San Joaquin Raptor Rescue Center v. County of Merced* (2007) 149 Cal.App.4th 645 670.
[164] Settlement Agreement, pp. 3 and 4.
[165] California Department of Fish and Game. 2012. Staff Report on Burrowing Owl Mitigation. Appendix E.
5826-004j

Mr. Cashen explains that CDFW and the scientific community have concluded that compensatory habitat (with an equivalent or greater habitat area) is needed to mitigate for permanent habitat loss.[166] But the DEIR does not require compensatory habitat – even if burrowing owls are detected during the preconstruction survey. Consequently, MM BIO-2 does not ensure Project impacts on the burrowing owl would be mitigated to less-than-significant levels. The DEIR must be revised and recirculated. *cont'd* ccc

viii. The DEIR Fails to Adequately Evaluate Cumulative Impacts on Biological Resources

The DEIR's analysis of cumulative impacts fails to comply with CEQA Guidelines § 15130(b)(4) (which requires a summary of the expected environmental effects to be produced by cumulative projects) and CEQA Guidelines § 15130(b)(5) (which requires a reasonable analysis of the cumulative impacts of the relevant projects). The DEIR concludes that due to implementation of mitigation measures MM BIO-1 and -2, cumulative impacts would be less than significant.[167] But this conclusion is not supported by substantial evidence.[168] ddd

First, the mitigation measures in the DEIR are limited to actions designed to avoid or minimize direct take of individual animals. The measures do not mitigate the Project's residual impacts or its contribution to habitat loss. Mr. Cashen's review of scientific literature shows that habitat loss is a primary threat to the special-status species analyzed in the DEIR.[169] Because the DEIR does not incorporate compensatory habitat as a required mitigation measure, the Project's contribution to significant cumulative impacts remains cumulatively considerable.

Second, substantial evidence shows that cumulative impacts to habitat are potentially significant, especially given the scarcity of habitat for the special-status species that may occur at the Project site. Indeed, the Agriculture and Forestry Resources section of the DEIR concludes that the Project would result in a cumulatively considerable impact to agricultural resources, and that the impact eee

5826-004j

would be significant and unavoidable. If the cumulative impact to agricultural resources would be significant and unavoidable, the cumulative impact to agricultural *habitat* also would be significant and unavoidable.

cont'd eee

Third, the DEIR fails to disclose that the Project site contains raptor foraging habitat:

> "The Project would remove potential raptor foraging habitat through development of the warehousing and business park structures. Although the existing agriculture may provide foraging habitat for raptors, it is not expected to be valuable, as the lands are actively maintained to minimize use by small mammals (prey for raptors) and active ground squirrel management programs are continually implemented. This loss of potential raptor foraging habitat would not make a cumulatively considerable contribution to the regional decline of raptors."[170]

This determination conflicts with the Final EIR for the NMC General Plan Amendment. The NMC FEIR explains that windrows and open fields are valuable foraging habitat for raptors. And because windrows and open fields are associated with agricultural operations, preservation of those areas would provide mitigation for the loss of raptor habitat.[171] Conversely, the NMC FEIR concludes, conversion of the NMC from agricultural uses to developed urban and suburban uses would have a significant impact on raptor habitat.[172]

fff

This determination also conflicts with the Ontario Plan EIR, which explains that agricultural fields in the NMC are valuable foraging habitat for raptors:

> "The open water areas of dairy runoff retention ponds, reservoirs, drainages, and low areas subject to flooding are the preferred locations for migratory birds in the NMC…The 1996 Envicom surveys found 49 species in the NMC areas. Nearly half (21 species) were found in open water and wet areas. Numerous raptor species are attracted to windrows, including red-tailed hawk (*Buteo jamaicensis*), American kestrel (*Falco spaverius*), and white-tailed kite (*Elanus leucurus*) (EIP 1999). **Raptors use agricultural fields**

[170] DEIR, pg. 4.3-27.
[171] NMC Final DEIR, pg. 5.8-14.
[172] *See* City of Ontario. 2009. The Ontario Plan Draft EIR. p. 5.4-4; NMC Final EIR, pg. 5.8-13 to 5.8-15.
5826-004j

> **as foraging habitat**, where small rodents or birds are most likely to be visible. The raptors may perch on trees in windrows, and on utilities poles and transmission lines overlooking open fields or may soar over the fields to forage. In open fields, ferruginous hawks (*Buteo regalis*) may roost on the ground where vegetation is low."[173] [emphasis added]

The Project site contains all of the features (i.e., open water areas, windrows, and utility poles and transmission lines overlooking open fields) that attract raptors. And although the DEIR claims the Project site is managed to minimize small mammals, the Project site in fact continues to provide prey for raptors. According to the Applicant's burrowing owl survey report: "[m]ammal species directly observed, or of which sign was detected, included California ground squirrel (*Spermophilus beecheyi*), desert cottontail (*Sylvilagus auduboni*), and pocket gopher (*Thomomys bottae*)."[174] Thus, loss of the Project site would result in loss of valuable foraging habitat for raptors.

cont'd
fff

Fourth, CDFW's comments on the Merrill Commerce Center Specific Plan state that CDFW believes the loss of NMC agricultural lands for foraging, individually and cumulatively, is significant and should be mitigated:

> CDFW is concerned that similar projects that have undergone prior environmental review (i.e., Ontario Ranch [aka the NMC Final EIR] and PSP) could come to substantially different conclusions regarding the significance of impacts related to the loss of raptor foraging habitat. CDFW believes the loss of these areas for foraging, individually and cumulatively, is significant and should be mitigated. Thus, the Project DEIR should reassess its findings for the continued loss of raptor habitat within the Dairy Preserve, and provide appropriate mitigation in the form of habitat acquisition and preservation. Therefore, CDFW advises the City to integrate into the DEIR the following measure:
>
> 4.8.9 If surveys determine that the Project supports special-status raptors, the Applicant shall mitigate the loss through the perpetual conservation

ggg

[173] Ontario Plan Draft EIR, pg. 5.4-13.
[174] DEIR, Appendix C3, p. 11.
5826-004j

> and management of foraging habitat, approved by CDFW, at a minimum 1:1 ratio.[175]

Since the circumstances of this Project are the same to those of the Merrill Commerce Center Specific Plan, the City should revise its significance finding, and adopt the recommended mitigation.

cont'd ggg

Overall, the City's cumulative impacts discussion fails to meet CEQA's informational standards, and is not supported by substantial evidence.

E. The DEIR Fails to Adequately Analyze and Mitigate the Project's Transportation Impacts

i. The DEIR's Mitigation of VMT Impacts is Nonbinding and Improperly Deferred

The DEIR determines that the Project's VMT impacts will be significant and unavoidable. Reductions in commute VMT through feasible TDM measures would be implemented as part of future Certificates of Occupancy for future tenants, as noted in MM TRANS-1. However, the DEIR states that as future Project design features and building tenants are not yet known, reductions in VMT from implementation of MM TRANS-1 cannot be accurately estimated or guaranteed.[176] MM TRANS-1 provides:

hhh

> At the time of Certificate of Occupancy for future tenants, the future tenant shall demonstrate implementation of reasonable and feasible VMT reduction measures to the satisfaction of the City of Ontario Planning Director. Measures to be considered include, but are not limited to VMT measures 1, 6 and 7 as described in EIR Appendix I2.[177]

MM TRANS-1 is nonbinding and improperly deferred.

[175] Merrill Commerce Center Specific Plan Project Final EIR - SCH No. 2019049079, Comments and Responses, pg. 3-52.
[176] DEIR, pg. 4.13-30.
[177] *Id.*, pg. 1-28.
5826-004j

In *City of Hayward v. Board of Trustees of the California State University*,[178] the court considered whether a project's TDM program constituted improperly deferred mitigation. The project was a master plan to guide development of a college campus for the next 20–30 years. The master plan anticipated a significant increase in traffic and parking demand. Because the master plan covered a long-range development program and was based on projections of growth that may or may not occur, the lead agency fashioned mitigation that would allow it to retain the flexibility to select specific mitigation measures in the future. The EIR consequently designated, as mitigation measure "TRANS 1a," the requirement that the lead agency "prepare a comprehensive TDM Implementation Plan that includes steps necessary to plan for, fund, implement, and monitor the effectiveness of the measures outlined in the Master Plan TDM section." The TDM incorporated in the EIR detailed a range of sustainable transit policies that can be utilized to reduce single-occupancy. The TDM set minimum performance goals of reducing the percentage of single driver vehicle trips onto campus from the existing 79 percent to 64 percent, and increasing present transit use by 50 percent. The TDM also included a detailed monitoring program. The EIR concluded that while implementation of these mitigation measures will reduce the level of significance, the traffic and parking impacts will remain significant and unavoidable. iii

The court held that the TDM program was not improperly deferred, because the lead agency committed to perform the feasible mitigation measures included in the TDM:

> While the Trustees have not committed to implementation of any particular measure that is specified in the TDM plan, the TDM is not illusory. The plan enumerates specific measures to be evaluated, it incorporates quantitative criteria and it sets specific deadlines for completion of the parking and traffic study and timelines for reporting to the city on the implementation and effectiveness of the measures that will be studied. The monitoring program which is an integral part of the plan ensures that the public will have access to the information necessary to evaluate compliance with the Trustees' obligations.

The instant Project is similar to the project in *Hayward* in that (1) it is an EIR for a long-term development, (2) the mitigation measure allows for flexibility in selecting TDM measures due to the uncertainty of future development, and (3) the

[178] (2012) 207 Cal.App.4th 446.
5826-004j

EIRs conclude impacts will remain significant and unavoidable. However, this Project's mitigation, MM TRANS-1, lacks the quantitative criteria and monitoring program of the project in *Hayward*. As a result, this mitigation is nonbinding, and improperly defers mitigation.

cont'd iii

ii. The DEIR Fails to Adopt All Feasible Mitigation for VMT Impacts

CEQA prohibits public agencies from approving a project as proposed if there are any feasible alternative or feasible mitigation measures that would substantially lessen or avoid any significant effect the project would have on the environment.[179] The DEIR's VMT mitigation, MM TRANS-1, does not include all feasible mitigation measures.

Transportation expert Dan Smith discusses VMT mitigation approaches not considered in the DEIR. One approach he recommends would be to impose annual excess VMT penalty fees, with the proceeds going to fund increased transit services in the existing or new route corridors that appear likely to be most productive in attracting new riders, and thereby reduce overall VMT in the City. Another approach would be using excess VMT penalty fees to create and maintain Park-and-Ride facilities near major interchanges or major transit stops. These are feasible mitigation measures that would help reduce the Project's significant VMT impacts. Therefore, the DEIR must be revised to include consideration of these measures.

jjj

iii. The Project Fails to Comply with Local Land Use Policies in Violation of CEQA

Public Resources Code § 21099, enacted by SB 743, provides that Level of Service ("LOS") impacts are not considered significant environmental impacts under CEQA. However, the statute specifies in Sections 21099(b)(4) that "[t]his subdivision does not preclude the application of local general plan policies, zoning codes, conditions of approval, thresholds, or any other planning requirements pursuant to the police power or any other authority." Further, § 21099(e) provides: "[t]his section does not affect the authority of a public agency to establish or adopt thresholds of significance that are more protective of the environment."

kkk

[179] Pub. Res. Code § 21002.
5826-004j

The City's General Plan ("TOP") includes a Mobility Element. The Mobility Element states that LOS E or better must be maintained at all road intersections in peak hours. San Bernardino County also has a Congestion Management Plan ("CMP") applicable to some City and surrounding area roadways. The CMP also requires meeting certain LOS standards. The adjacent City of Chino and Caltrans also have adopted LOS standards.

Appendix G of the CEQA Guidelines provides that a project would normally have a significant effect on the environment if the project would "[c]onflict with a program, plan, ordinance, or policy addressing the circulation system, including transit, roadway, bicycle, and pedestrian facilities."[180] Since CEQA does not preclude local land use plans from using LOS as a significance threshold, and Appendix G requires that inconsistency with local plans constitutes a significant effect on the environment, the City must analyze and mitigate the Project's LOS.

The DEIR's Transportation Impact Study in Appendix I includes a conventional traffic LOS study. But the DEIR narrative states that this material is provided for information purposes, implying that it is not subject to comment under CEQA. However, given the foregoing, this statement is incorrect. In order to substantiate the DEIR's determination that the Project would not conflict with a program, plan, ordinance, or policy addressing the circulation system, the Appendix I LOS analysis and mitigation must be subject to CEQA review.

cont'd
kkk

a. Mitigation Measures to Comply with the TOP Mobility Element May Not be Implemented in a Timely Manner, Hence Constituting a Failure to Mitigate Under CEQA

The DEIR's Appendix I study identifies locations where, without mitigation, the Project would significantly impact intersection LOS and hence not conform to the Mobility Element or other relevant transportation plans and policies. In the Existing + Project Condition, a total of 15 intersections impacted by the Project are identified. In the 2024 cumulative scenario with build-out of both phases of the Project, 21 impacted intersections are identified. By the 2040 cumulative scenario, 41 intersections are impacted by the Project.

lll

[180] DEIR, pg. 4.13-8.
5826-004j

Mr. Smith explains that while the Appendix I study purports to mitigate these impacts, the study lacks evidence substantiating that these road improvements can or will be implemented in a timely manner.[181] He explains that although some improvements can be made by direct Project action, some improvements are funded by payment of Development Impact Fees ("DIF") to the City. But since the City has discretion when to implement specific local improvements covered by DIF fees, there is no guarantee that the improvements will be made in time to mitigate the Project's impacts. Clear, enforceable criteria for spending Development Impact Fees on the Project's improvements is required for mitigation of the Project's traffic impacts to be considered effective.

cont'd
lll

Further, Mr. Smith states that because funding depends in part on streams of DIF paid by other projects, there is no guarantee whether enough other anticipated DIF funds will be realized.[182] The DEIR must substantiate whether this funding will be sufficient to implement the necessary mitigation measures.[183]

As a result, the City lacks substantial evidence to conclude that the Project would not conflict with a program, plan, ordinance, or policy addressing the circulation system. The City must, in a revised EIR, commit to enforceable standards and scheduling for the implementation of improvements.

F. The DEIR Fails to Analyze Energy Impacts

The DEIR states that the Project's energy impact is not significant. Pursuant to CEQA Guidelines § 15128, the DEIR only briefly explains why in-depth discussion of this impact was not provided.[184] Although the Project is estimated to consume 267,476 gallons of gasoline and 349,054 gallons of diesel fuel over the entire construction period, the DEIR reasons that this impact is insignificant because "the construction fuel demands would account for 0.04% of the San Bernardino County annual gasoline consumption and 0.14% of San Bernardino County annual diesel fuel consumption."[185] Consumption would not be wasteful because "[c]onstruction equipment would comply with the latest United States

mmm

[181] Smith, pg. 4.
[182] *Id.*, pg. 5.
[183] *Napa Citizens for Honest Government v. Board of Supervisors* (2001) 91 Cal.App.4th 342 (the court of appeal found that a pre-existing traffic fee program failed to provide the "mitigation cover" to avoid a determination that a project impact may be cumulatively significant).
[184] DEIR, pg. 7-1.
[185] *Id.*, pg. 7-5.
5826-004j

Environmental Protection Agency and California Air Resources Board engine emission standards designed to reduce pollutants and minimize unnecessary fuel consumption." And while operations would consume approximately 24,111,453 kWh/year of electricity and 21,637,730 kBTU/year of natural gas, the operational demand only "would result in an 0.16% increase in electricity consumption and 0.04% increase in natural gas consumption for the County of San Bernardino."[186] Consumption would not be wasteful because the "Project [when operational] would be required to comply with California Building Energy Efficiency Standards (Title 24)."

cont'd mmm

CEQA provides that when the basis for an EIR's finding that an impact is less than significant is not apparent from the facts and circumstances, the EIR must explain the reasons for the finding. An unsubstantiated conclusion that an impact is not significant, without supporting information or explanatory analysis, is insufficient; the reasoning supporting the determination of insignificance must be disclosed.[187] The caselaw provides that the key factor is not the length of the EIR's analysis, but whether the analysis provides enough detail for the public to discern the analytic basis for the agency's determination.[188]

Here, the DEIR does not provide enough detail for the public to discern the basis for the City's conclusion. To begin with, the DEIR's analysis, summarized above, does not address the significance thresholds in Appendix G of the California Environmental Quality Act (CEQA) Guidelines. According to the Guidelines, a project will normally have a significant adverse environmental impact on energy if it will:

nnn

- Result in a potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation.
- Conflict with or obstruct a State or local plan for renewable energy or energy efficiency.

[186] *Id.*
[187] *City of Maywood v. Los Angeles Unif. Sch. Dist.* (2012) 208 CA4th 362, 393; *Protect the Historic Amador Waterways b. Amador Water Agency* (2004) 116 CA4th 1099, 1111.
[188] *Id.,* 116 CA4th 1099.
5826-004j

The City's analysis does not contain enough information for the public to discern whether the Project's energy consumption would be wasteful. The City states that Project would be required to comply with Title 24 Efficiency Standards. But caselaw provides that an EIR should not rely solely on compliance with Title 24 standards to mitigate operational and construction energy impacts, and should not assume that mitigation for greenhouse gas emissions will serve as a substitute for an analysis of energy use impacts.[189] Even if compliance with Title 24 standards was sufficient evidence to conclude a project would not be wasteful, caselaw provides that a finding of compliance with Title 24 must be supported by substantial evidence.[190] Therefore, the City's bare conclusion that the Project will not be wasteful is unsupported by substantial evidence. Also, since the City does not discuss features of the Project that would avoid energy waste, the DEIR fails as an informational document.

cont'd nnn

The City's analysis does not contain enough information for the public to discern whether the Project would conflict with or obstruct a state or local plan for renewable energy or energy efficiency. The Project would include eight concrete tilt-up buildings totaling up to 5,333,518 SF of business park, warehouse and ancillary office space, consuming approximately 24,111,453 kWh/year of electricity. The construction and operations of the Project thus implicate numerous state plans for renewable energy or energy efficiency. These include the Integrated Energy Policy Report ("IEPR"), the State of California Energy Plan, Title 24, Part 6, Energy Efficiency Standards and California Green Building Standards, AB 1493 Pavley Regulations and Fuel Efficiency Standards, California's Renewable Portfolio Standard ("RPS"), Clean Energy and Pollution Reduction Act of 2015 (SB 350). The DEIR fails to evaluate the Project's consistency with any of these plans. The DEIR does not disclose any facts showing why consistency with these plans is guaranteed. The DEIR's conclusion thus lacks substantial evidence, and the DEIR fails as an informational document.

[189] *Ukiah Citizens for Safety First v. City of Ukiah* (2016) 248 CA4th 256, 264; *Cal. Clean Energy Comm. v. City of Woodland* (2014) 225 CA4th 173, 208.
[190] *Spring Valley Lake Ass'n v. City of Victorville* (2016) 248 CA4th 91, 103.
5826-004j

The construction and operations of the Project also implicate local plans for renewable energy or energy efficiency. The TOP includes the following energy policies:

- ER3-1 *Conservation Strategy.* We require conservation as the first strategy to be employed to meet applicable energy-saving standards.
- ER3-2 *Green Development– Communities.* We require the use of best practices identified in green community rating systems to guide the planning and development of all new communities.
- ER3-3 *Building and Site Design.* We require new construction to incorporate energy efficient building and site design strategies, which could include appropriate solar orientation, maximum use of natural daylight, passive solar and natural ventilation.
- ER3-4 *Green Development– Public Buildings.* We require all new and substantially renovated City buildings in excess of 10,000 square feet achieve a LEED Silver Certification standard, as determined by the U.S. Green Building Council.
- ER3-5 *Fuel Efficient and Alternative Energy Vehicles and Equipment.* We purchase and use vehicles and equipment that are fuel efficient and meet or surpass state emissions requirements and/or use renewable sources of energy.
- ER3-6 *Generation- Renewable Sources.* We promote the use of renewable energy sources to serve public and private sector development.

The DEIR briefly discusses the Project's consistency with these policies in its Land Use and Planning section. However, the DEIR's discussion is conclusory, and simply mirrors the language of the policies. For instance, the DEIR claims the Project is consistent with ER3-3 because "the Project's Sustainable Design Strategies include the use of passive design to improve building energy performance through skylights, building orientation, landscaping, and use of select colors." This conclusory discussion provides no information to the public about whether and how the Project will actually comply with ER3-3. The DEIR fails as an informational document and fails to substantiate its conclusions with substantial evidence.

ppp

5826-004j

In addition, Appendix F of the CEQA Guidelines states that the means of achieving the goal of energy conservation include the following:

- Decreasing overall per capita energy consumption;
- Decreasing reliance on fossil fuels such as coal, natural gas, and oil; and
- Increasing reliance on renewable energy sources.

The DEIR fails to explain how the Project, which consumes large amounts of energy during construction and operation, would assist in decreasing per capita energy consumption, decreasing reliance on fossil fuels, and increasing reliance on renewable energy. The City's analysis does not provide enough detail for the public to discern the analytic basis for the agency's determination.[191]

Overall, due to the large amount of energy the Project's operation and construction will require, and due to the DEIR's failure to show energy impacts will be less than significant, the DEIR must be revised to include a full energy analysis.

qqq

G. The DEIR Fails to Require Mitigation for the Project's Significant Agricultural Impacts

The DEIR states that the Project's conversion of Prime Farmland, Unique Farmland, or Farmland of Statewide Importance is a significant and unavoidable impact.[192] The DEIR also states that the Project would conflict with existing zoning for agricultural use or a Williamson Act contract. And the Project would involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland, to nonagricultural use or conversion of forest land to non-forest use.

The DEIR claims that no feasible mitigation measures have been identified to substantially lessen the Project's significant impacts related to the loss of Prime Farmland and conversion of farmland to non-agricultural use. The DEIR discusses

rrr

[191] *Ukiah Citizens for Safety First v. City of Ukiah* ("*Ukiah Citizens*") (2016) 248 Cal.App.4th 256, 264-65 (energy impact analysis requires clarification and technical information regarding project-related energy usage and conservation features); *Spring Valley Lake Association v. City of Victorville* ("*Spring Valley*") (2016) 248 Cal.App.4th 91, 103 (CEQA doc must show factual basis of its assumptions that both energy use and greenhouse gas emissions will be reduced).
[192] DEIR, pg. 1-11.
5826-004j

six types of mitigation measures, and concludes that none of them are feasible.[193] These measures include deed disclosure, retention of on-site agricultural uses, replacement of agricultural uses offsite, relocation of prime farmland topsoil, establishment of conservation easement or preserves, and payment in lieu or transfer of development rights. However, the DEIR generally fails to actually address the technical feasibility of these mitigation measures. Instead, the DEIR reasons that because agriculture in the City is declining and is becoming economically unsustainable, mitigating impacts to agriculture is undesirable. "Ontario's future development emphasizes mixed-use, commercial, industrial, and residential projects rather than supporting the continuation of agricultural uses, which are becoming less economically viable."[194]

For example, the DEIR states that establishment of conservation easements is infeasible because it is contrary to the City's policies and vision providing for transition of agricultural uses to urban uses.[195] The DEIR states relocation of prime farmland topsoil is infeasible because it "would promote creation of new or additional Farmland status properties in the City, rather than provide for their transition to urban uses."[196]

The City's approach is to claim that because local policy discourages mitigation of a certain type of environmental impact (agricultural impacts), mitigation of that impact is infeasible. This approach violates basic principles of CEQA – that an EIR propose and describe mitigation measures to minimize the significant environmental effects identified in the EIR.[197] And when it approves a project, the agency must adopt any feasible mitigation measures identified in the EIR that would mitigate or avoid the project's significant environmental impacts.[198]

The City's refusal to consider mitigation of agricultural impacts also conflicts with Appendix G of the CEQA Guidelines, which provides that agricultural impacts are significant environmental impacts, and that such impacts must be mitigated. The City's approach also undermines state policy of preserving agricultural land.[199]

5826-004j

For instance, Civil Code § 815 is a legislative declaration that preservation of agricultural lands "is among the most important environmental assets of California." cont'd sss

The City's approach also violates CEQA's informational requirements by failing to determine whether mitigation measures are actually technically feasible. The DEIR does not provide decisionmakers with sufficient information to determine whether, regardless of a mitigation measure's consistency with local policy, mitigation of agricultural impacts can be achieved. ttt

Overall, the City must revise its discussion of agricultural mitigation measures. Because these measures were incorrectly analyzed for their consistency with the City's policy preferences, the DEIR fails as an informational document, and the City's conclusion that mitigation is infeasible is not supported by substantial evidence. As a result, the City's conclusion that agricultural impacts are significant and unavoidable is also not supported by substantial evidence. uuu

H. The Statement of Overriding Consideration Must Consider Whether the Project Provides Employment Opportunities for Highly Trained Workers

The City concluded in the DEIR that the Project will have significant and unavoidable environmental impacts on agriculture, air quality, greenhouse gas emissions, and transportation.[200] Therefore, in order to approve the Project, CEQA requires the City to adopt a statement of overriding considerations, providing that the Project's overriding benefits outweigh its environmental harm.[201] An agency's determination that a project's benefits outweigh its significant, unavoidable impacts "lies at the core of the lead agency's discretionary responsibility under CEQA."[202] vvv

Protection Policy Act, 7 U.S.C., § 4201, et seq.; *see also* Gov. Code, § 815 et seq. (encouraging preservation of agricultural land through conservation easements).
[200] DEIR, pg. 5-3.
[201] CEQA Guidelines, § 15043.
[202] *Laurel Heights Improvement Assn. v. Regents of University of California* (1988) 47 Cal.3d 376, 392.
5826-004j

The City must set forth the reasons for its action, pointing to supporting substantial evidence in the administrative record.[203] This requirement reflects the policy that public agencies must weigh a project's benefits against its unavoidable environmental impacts, and may find the adverse impacts acceptable only if the benefits outweigh the impacts.[204] Importantly, a statement of overriding considerations is legally inadequate if it fails to accurately characterize the relative harms and benefits of a project.[205]

In this case, the City must find that the Project's significant, unavoidable impacts outweigh the Project's benefits to the community. CEQA specifically references employment opportunities for highly trained workers as a factor to be considered in making the determination of overriding benefits.[206] Currently, there is not substantial evidence in the record showing that the Project's significant, unavoidable impacts are outweighed by benefits to the community. For example, there is no evidence in the record that the Applicant has made any commitments to employ graduates of state approved apprenticeship programs or taken other steps to ensure employment of highly trained and skilled craft workers on Project construction, an action contemplated by CEQA Section 21081. Absent substantial evidence in the record demonstrating that the Project's benefits outweigh its environmental costs, the City would not fulfill its obligations under CEQA if it adopted a statement of overriding considerations and approved the Project.

cont'd
VVV

We urge the City to prepare and circulate a revised DEIR which identifies the Project's potentially significant impacts, requires all feasible mitigation measures and analyzes all feasible alternatives to reduce impacts to a less than significant level. If a Statement of Overriding Considerations is adopted for the Project, we urge the City to consider whether the Project will result in employment opportunities for highly trained workers.

5826-004j

V. CONCLUSION

The DEIR is inadequate and must be withdrawn. We urge the City to prepare and circulate a revised DEIR which accurately sets for the existing environmental setting, discloses all of the Project's potentially significant impacts, and requires all feasible mitigation measures to reduce the Project's significant environmental and public health impacts. We thank you for the opportunity to provide these comments on the DEIR.

Subject: Comments on the South Ontario Logistics Center Specific Plan (SCH No. 2021010318)

Dear Ms. Caro,

We have reviewed the November 2021 Draft Environmental Impact Report ("DEIR") for the South Ontario Logistics Center Specific Plan ("Project") located in the City of Ontario ("City"). The Project proposes to construct up to 3,172,780-SF of industrial and business park uses, as well as allow for the potential future development of 2,160,738-SF of industrial and business park uses, totaling a maximum allowable development area of 5,333,518-SF on the approximately 200-acre site.

Our review concludes that the DEIR fails to adequately evaluate the Project's air quality, health risk, and greenhouse gas impacts. As a result, emissions and health risk impacts associated with construction and operation of the proposed Project are underestimated and inadequately addressed. An updated EIR should be prepared to adequately assess and mitigate the potential air quality, health risk, and greenhouse gas impacts that the project may have on the surrounding environment.

Air Quality

Failure to Implement All Feasible Mitigation to Reduce Emissions

The DEIR concludes that the Project's operational emissions associated with Phase 1, Phase 2, and Project Buildout would be significant-and-unavoidable (p. 4.2-22, Table 4.2-9; p. 4.2-25, Table 4.2-11; p. 4.2-27, Table 4.2-12). Specifically, the DEIR concludes that the operational VOC and NO_X emissions associated with Phase 1 of the Project would exceed the applicable SCAQMD thresholds (see excerpt below) (p. 4.2-22, Table 4.2-9).

Table 4.2-9: Phase 1 - Maximum Daily Operation Emissions

2

Finally, the DEIR concludes that operational VOC, NO_x, PM_{10}, and $PM_{2.5}$ emissions associated with Project Buildout would exceed the applicable SCAQMD thresholds (see excerpts below) (p. 4.2-27, Table 4.2-12).

Table 4.2-12: Project Buildout – Total Maximum Daily Operation Emissions

Sources	Pollutants (pounds per day)

Notes: Highest winter or summer. Emissions totals may not equal 100 percent due to rounding. **Bold** = Exceedance.

As a result, the DEIR concludes that the Project's operational criteria air pollutant emissions would be significant-and-unavoidable (p. 4.2-27). However, while we agree that the Project's criteria air pollutant emissions would result in a significant air quality impact, the DEIR's conclusion that these impacts are "significant and unavoidable" is incorrect. According to CEQA Guidelines § 15096(g)(2):

> "When an EIR has been prepared for a project, the Responsible Agency shall not approve the project as proposed if the agency finds any feasible alternative or feasible mitigation measures within its powers that would substantially lessen or avoid any significant effect the project would have on the environment."

As you can see, an impact can only be labeled as significant and unavoidable after all available, feasible mitigation is considered. Here, while the DEIR includes Mitigation Measures ("MM(s)") AQ-1 through AQ-5, as well as GHG-1, the DEIR fails to implement *all* feasible mitigation (p. 4.2-28 – 4.2-30, 4.6-23). Therefore, the DEIR's conclusion that the Project's air quality impacts are significant-and-unavoidable is unsubstantiated. To reduce the Project's air quality impacts to the maximum extent possible, additional feasible mitigation measures should be incorporated, such as those suggested in the section of this letter titled "Feasible Mitigation Measures Available to Reduce Emissions." Thus, the Project should not be approved until an updated EIR is prepared, incorporating all feasible mitigation to reduce emissions to less-than-significant levels.

Diesel Particulate Matter Health Risk Emissions Inadequately Evaluated

The DEIR concludes that the proposed Project would result in a less-than-significant health risk impact based on quantified construction-related and mobile-source health risk analyses ("HRA(s)") (p. 4.2-35 - 4.2-38). Specifically, the DEIR estimates that the Project would result in construction-related and mobile-source operational cancer risks of 8.80- and 1.39-in one million, respectively (p. 4.2-36, 4.2-38).

However, the DEIR's evaluation of the Project's potential health risk impacts, as well as the subsequent less-than-significant impact conclusion, is incorrect. The State of California Department of Justice recommends the preparation of a quantitative HRA pursuant to the Office of Environmental Health Hazard Assessment ("OEHHA"), the organization responsible for providing guidance on conducting HRAs in California, as well as local air district guidelines. [1] OEHHA released its most recent *Risk Assessment Guidelines: Guidance Manual for Preparation of Health Risk Assessments* in February 2015. According to OEHHA guidance, "the excess cancer risk is calculated separately for each age grouping and then summed to yield cancer risk at the receptor location." [2] However, while the DEIR includes two HRAs evaluating the health risk impacts to nearby, existing receptors as a result of Project construction and operation, the DEIR fails to evaluate the *cumulative* lifetime cancer risk as a result of Project construction and operation together. Thus, the DEIR's HRAs fail to sum each age bin to evaluate the total cancer risk over the course of the Project's total construction and operation. This is incorrect and, as such, an updated analysis should quantify the entirety of the Project's construction and operational health risks and then sum them to compare to the SCAQMD threshold of 10 in one million, as referenced by the DEIR (p. 4.2-36).

Failure to Identify a Potentially Significant Health Risk Impact

As previously described, the DEIR estimates that the maximum incremental cancer risk posed to nearby, existing sensitive receptors as a result of Project construction and operation would be 8.80 and 1.39 in one million, respectively, neither of which individually exceed the SCAQMD significance threshold of 10 in one million (p. 4.2-36). However, as previously discussed, the DEIR should have evaluated the *cumulative* cancer risk of Project construction and operational. In order to correctly evaluate the Project's health risk impact, we summed the DEIR's construction-related and operational cancer risk estimates and found that the resulting cancer risk exceeds the SCAQMD threshold of 10 in one million (see table below).

DEIR Cumulative Cancer Risk

HRA	Cancer Risk (in one million)
Construction	8.80
Mobile-Source Operation	1.39
Total	10.19
SCAQMD Threshold	**10**
Exceeds?	**Yes**

As demonstrated in the table above, the resulting cumulative cancer risk estimate exceeds the SCAQMD threshold of 10 in one million, thus indicating a potentially significant health risk impact not previously identified or addressed by the DEIR. As such, the DEIR is required under CEQA to implement all feasible

[1] "Warehouse Projects: Best Practices and Mitigation Measures to Comply with the California Environmental Quality Act." State of California Department of Justice, *available at*: https://oag.ca.gov/sites/all/files/agweb/pdfs/environment/warehouse-best-practices.pdf, p. 6.
[2] "Guidance Manual for preparation of Health Risk Assessments." OEHHA, February 2015, *available at:* https://oehha.ca.gov/media/downloads/crnr/2015guidancemanual.pdf p. 8-4

mitigation to reduce impacts to a less-than-significant level. According to CEQA Guidelines § 15096(g)(2):

> "When an EIR has been prepared for a project, the Responsible Agency shall not approve the project as proposed if the agency finds any feasible alternative or feasible mitigation measures within its powers that would substantially lessen or avoid any significant effect the project would have on the environment."

As you can see, the proposed Project should not be approved until all feasible mitigation has been considered and incorporated where feasible, such as those suggested in the section of this letter titled "Feasible Mitigation Measures Available to Reduce Emissions." As such, the DEIR fails to identify and adequately mitigate the Project's significant health risk impact, and the less-than-significant impact conclusion should not be relied upon.

Greenhouse Gas

Failure to Adequately Evaluate Greenhouse Gas Impacts

The DEIR concludes that the Project's net annual greenhouse ("GHG") emissions associated with Phase 1, Phase 2, and Project Buildout would be significant-and-unavoidable (p. 4.6-18, 4.6-20, 4.6-22). Specifically, the DEIR concludes that Phase 1 of the Project would result in net annual unmitigated and mitigated GHG emissions of 46,341.29- and 44,526.34-metric tons of carbon dioxide equivalents per year ("MT CO_2e/year"), which exceeds the City's CAP threshold of 3,000 MT CO_2e/year (see excerpt below) (p. 4.6-11, Table 4.6-3).

Table 4.6-3: Phase 1 - Operational GHG Emissions

Source	MTCO$_2$e Per Year

[1] Unmitigated off-road equipment includes emissions from diesel powered forklifts and yard trucks/hostlers
[2] Mitigated off-road equipment includes the energy emissions necessary to power electric forklifts and yard trucks/hostlers as required by mitigation measure AQ- 2

After the implementation of MM AQ-2 through MM AQ-5, as well as MM GHG-1, the DEIR concludes that the Project's GHG emissions would be significant-and-unavoidable, stating:

> "Since the majority (71 percent) of emissions are from mobile sources and neither the Project Applicant nor the City have regulatory authority to control tailpipe emissions, no feasible mitigation measures exist that would reduce the Project's impacts with respect to mobile operational emissions to less than significant levels. While the Project has some control over GHG emissions (refer to MM AQ-2 through MM AQ-5), the majority of emissions are beyond the Project's control. MM GHG-1 would require that the Project incorporate project design features to achieve a minimum score of 100 points on the Screening Tables. As stated in the Community CAP, projects that achieve a minimum score of 100 points or provide additional mitigation that achieves a 25 percent reduction are considered less than significant. However, at the time of this analysis, the City's CAP update is underway and the potential timeframes for approval and adoption of the City CAP update are unknown. Once approved, the CAP may implement performance standards and GHG emissions reduction targets differing from the current CAP. There is the potential that even after achieving more than 100 points on the current Screening Tables, the Project may conflict with as-yet-unknown performance standards and GHG emissions reduction targets implemented under the anticipated CAP updates, and thereby result in GHG emissions that would be considered to represent a significant impact on the environment. Therefore, even with the implementation of MM AQ-2 through MM AQ-5 and

> MM GHG-1, this Project impact is conservatively considered significant and unavoidable" (p. 4.6-22).

However, the DEIR's GHG analysis, as well as the subsequent significant-and-unavoidable impact conclusion, is incorrect for two reasons.

First, while we acknowledge that the Project includes implementing a minimum of 100 points per the City's CAP Screening Tables as a formal mitigation measure, we recommend that individual design features be included as formal mitigation measures. According to the Association of Environmental Professionals' ("AEP") *CEQA Portal Topic Paper* on Mitigation Measures:

> "While not 'mitigation', a good practice is to include those project design feature(s) that address environmental impacts in the mitigation monitoring and reporting program (MMRP). Often the MMRP is all that accompanies building and construction plans through the permit process. If the design features are not listed as important to addressing an environmental impact, it is easy for someone not involved in the original environmental process to approve a change to the project that could eliminate one or more of the design features without understanding the resulting environmental impact."[3]

As demonstrated above, design features that are not formally included as mitigation measures may be eliminated from the Project's design altogether. Thus, as the specific reduction features are not formally included as mitigation measures in the DEIR, we cannot guarantee that they would be implemented, monitored, and enforced on the Project site. As such, until the specific reduction measures are included as mitigation measures, the Project's GHG analysis should not be relied upon to determine Project significance.

Second, as discussed above, the DEIR concludes that the proposed Project's GHG emissions would be significant-and-unavoidable (p. 4.6-22). However, while we agree that the Project would result in a significant GHG impact, the DEIR's conclusion that this impact is "significant and unavoidable" is incorrect. As previously stated, according to CEQA Guidelines § 15096(g)(2):

> "When an EIR has been prepared for a project, the Responsible Agency shall not approve the project as proposed if the agency finds any feasible alternative or feasible mitigation measures within its powers that would substantially lessen or avoid any significant effect the project would have on the environment."

As you can see, an impact can only be labeled as significant-and-unavoidable after all available, feasible mitigation is considered. Here, while the DEIR implements MM GHG-1, as well as AQ-1 through AQ-5, the DEIR fails to implement *all* feasible mitigation (p. 4.2-28 – 4.2-30, 4.6-23). Therefore, the DEIR's conclusion that Project's GHG emissions would be significant-and-unavoidable is unsubstantiated. To reduce the Project's GHG impacts to the maximum extent possible, additional feasible mitigation

[3] "CEQA Portal Topic Paper Mitigation Measures." AEP, February 2020, *available at:* https://ceqaportal.org/tp/CEQA%20Mitigation%202020.pdf, p. 6.

measures should be incorporated, such as those suggested in the section of this letter titled "Feasible Mitigation Measures Available to Reduce Emissions." Thus, the Project should not be approved until an updated EIR is prepared, incorporating all feasible mitigation to reduce emissions to less-than-significant levels.

Feasible Mitigation Measures Available to Reduce Emissions

The DEIR's analysis demonstrates that the Project would result in significant air quality and GHG impacts that should be mitigated further. Furthermore, our updated analysis indicates that the Project would result in a significant health risk impact. In an effort to reduce the Project's emissions, we identified several mitigation measures that are applicable to the proposed Project. Feasible mitigation measures can be found in the Department of Justice Warehouse Project Best Practices document.[4] Therefore, to reduce the Project's emissions, consideration of the following measures should be made:

- Requiring off-road construction equipment to be zero-emission, where available, and all diesel-fueled off-road construction equipment, to be equipped with CARB Tier IV-compliant engines or better, and including this requirement in applicable bid documents, purchase orders, and contracts, with successful contractors demonstrating the ability to supply the compliant construction equipment for use prior to any ground-disturbing and construction activities.
- Prohibiting off-road diesel-powered equipment from being in the "on" position for more than 10 hours per day.
- Requiring on-road heavy-duty haul trucks to be model year 2010 or newer if diesel-fueled.
- Providing electrical hook ups to the power grid, rather than use of diesel-fueled generators, for electric construction tools, such as saws, drills and compressors, and using electric tools whenever feasible.
- Limiting the amount of daily grading disturbance area.
- Prohibiting grading on days with an Air Quality Index forecast of greater than 100 for particulates or ozone for the project area.
- Forbidding idling of heavy equipment for more than two minutes.
- Keeping onsite and furnishing to the lead agency or other regulators upon request, all equipment maintenance records and data sheets, including design specifications and emission control tier classifications.
- Conducting an on-site inspection to verify compliance with construction mitigation and to identify other opportunities to further reduce construction impacts.
- Using paints, architectural coatings, and industrial maintenance coatings that have volatile organic compound levels of less than 10 g/L.
- Providing information on transit and ridesharing programs and services to construction employees.
- Providing meal options onsite or shuttles between the facility and nearby meal destinations for construction employees.

[4] "Warehouse Projects: Best Practices and Mitigation Measures to Comply with the California Environmental Quality Act." State of California Department of Justice.

- Requiring that all facility-owned and operated fleet equipment with a gross vehicle weight rating greater than 14,000 pounds accessing the site meet or exceed 2010 model-year emissions equivalent engine standards as currently defined in California Code of Regulations Title 13, Division 3, Chapter 1, Article 4.5, Section 2025. Facility operators shall maintain records on-site demonstrating compliance with this requirement and shall make records available for inspection by the local jurisdiction, air district, and state upon request.
- Requiring all heavy-duty vehicles entering or operated on the project site to be zero-emission beginning in 2030.
- Requiring on-site equipment, such as forklifts and yard trucks, to be electric with the necessary electrical charging stations provided.
- Requiring tenants to use zero-emission light- and medium-duty vehicles as part of business operations.
- Forbidding trucks from idling for more than two minutes and requiring operators to turn off engines when not in use.
- Posting both interior- and exterior-facing signs, including signs directed at all dock and delivery areas, identifying idling restrictions and contact information to report violations to CARB, the air district, and the building manager.
- Installing and maintaining, at the manufacturer's recommended maintenance intervals, air filtration systems at sensitive receptors within a certain radius of facility for the life of the project.
- Installing and maintaining, at the manufacturer's recommended maintenance intervals, an air monitoring station proximate to sensitive receptors and the facility for the life of the project, and making the resulting data publicly available in real time. While air monitoring does not mitigate the air quality or greenhouse gas impacts of a facility, it nonetheless benefits the affected community by providing information that can be used to improve air quality or avoid exposure to unhealthy air.
- Constructing electric truck charging stations proportional to the number of dock doors at the project.
- Constructing electric plugs for electric transport refrigeration units at every dock door, if the warehouse use could include refrigeration.
- Constructing electric light-duty vehicle charging stations proportional to the number of parking spaces at the project.
- Installing solar photovoltaic systems on the project site of a specified electrical generation capacity, such as equal to the building's projected energy needs.
- Requiring all stand-by emergency generators to be powered by a non-diesel fuel.
- Requiring facility operators to train managers and employees on efficient scheduling and load management to eliminate unnecessary queuing and idling of trucks.
- Requiring operators to establish and promote a rideshare program that discourages single-occupancy vehicle trips and provides financial incentives for alternate modes of transportation, including carpooling, public transit, and biking.

- Meeting CalGreen Tier 2 green building standards, including all provisions related to designated parking for clean air vehicles, electric vehicle charging, and bicycle parking.
- Achieving certification of compliance with LEED green building standards.
- Providing meal options onsite or shuttles between the facility and nearby meal destinations.
- Posting signs at every truck exit driveway providing directional information to the truck route.
- Improving and maintaining vegetation and tree canopy for residents in and around the project area.
- Requiring that every tenant train its staff in charge of keeping vehicle records in diesel technologies and compliance with CARB regulations, by attending CARB approved courses. Also require facility operators to maintain records on-site demonstrating compliance and make records available for inspection by the local jurisdiction, air district, and state upon request.
- Requiring tenants to enroll in the United States Environmental Protection Agency's SmartWay program, and requiring tenants to use carriers that are SmartWay carriers.
- Providing tenants with information on incentive programs, such as the Carl Moyer Program and Voucher Incentive Program, to upgrade their fleets.

These measures offer a cost-effective, feasible way to incorporate lower-emitting design features into the proposed Project, which subsequently, reduce emissions released during Project construction and operation. Furthermore, as discussed above, we recommend incorporating the GHG reduction measures from the City's Screening Tables for industrial and commercial developments as formal mitigation measures.[5] An updated EIR should be prepared to include all feasible mitigation measures, as well as include updated air quality, health risk, and GHG analyses to ensure that the necessary mitigation measures are implemented to reduce emissions to below thresholds. The updated EIR should also demonstrate a commitment to the implementation of these measures prior to Project approval, to ensure that the Project's significant emissions are reduced to the maximum extent possible.

Disclaimer

SWAPE has received limited discovery regarding this project. Additional information may become available in the future; thus, we retain the right to revise or amend this report when additional information becomes available. Our professional services have been performed using that degree of care and skill ordinarily exercised, under similar circumstances, by reputable environmental consultants practicing in this or similar localities at the time of service. No other warranty, expressed or implied, is made as to the scope of work, work methodologies and protocols, site conditions, analytical testing results, and findings presented. This report reflects efforts which were limited to information that was reasonably accessible at the time of the work, and may contain informational gaps, inconsistencies, or otherwise be incomplete due to the unavailability or uncertainty of information obtained or provided by third parties.

Matthew F. Hagemann, P.G., C.Hg., QSD, QSP

Geologic and Hydrogeologic Characterization
Investigation and Remediation Strategies
Litigation Support and Testifying Expert
Industrial Stormwater Compliance
CEQA Review

Education:

M.S. Degree, Geology, California State University Los Angeles, Los Angeles, CA, 1984.
B.A. Degree, Geology, Humboldt State University, Arcata, CA, 1982.

Professional Certifications:

California Professional Geologist
California Certified Hydrogeologist
Qualified SWPPP Developer and Practitioner

Professional Experience:

Matt has 30 years of experience in environmental policy, contaminant assessment and remediation, stormwater compliance, and CEQA review. He spent nine years with the U.S. EPA in the RCRA and Superfund programs and served as EPA's Senior Science Policy Advisor in the Western Regional Office where he identified emerging threats to groundwater from perchlorate and MTBE. While with EPA, Matt also served as a Senior Hydrogeologist in the oversight of the assessment of seven major military facilities undergoing base closure. He led numerous enforcement actions under provisions of the Resource Conservation and Recovery Act (RCRA) and directed efforts to improve hydrogeologic characterization and water quality monitoring. For the past 15 years, as a founding partner with SWAPE, Matt has developed extensive client relationships and has managed complex projects that include consultation as an expert witness and a regulatory specialist, and a manager of projects ranging from industrial stormwater compliance to CEQA review of impacts from hazardous waste, air quality and greenhouse gas emissions.

Positions Matt has held include:

- Founding Partner, Soil/Water/Air Protection Enterprise (SWAPE) (2003 – present);
- Geology Instructor, Golden West College, 2010 – 2104, 2017;
- Senior Environmental Analyst, Komex H2O Science, Inc. (2000 -- 2003);

- Executive Director, Orange Coast Watch (2001 – 2004);
- Senior Science Policy Advisor and Hydrogeologist, U.S. Environmental Protection Agency (1989–1998);
- Hydrogeologist, National Park Service, Water Resources Division (1998 – 2000);
- Adjunct Faculty Member, San Francisco State University, Department of Geosciences (1993 – 1998);
- Instructor, College of Marin, Department of Science (1990 – 1995);
- Geologist, U.S. Forest Service (1986 – 1998); and
- Geologist, Dames & Moore (1984 – 1986).

Senior Regulatory and Litigation Support Analyst:

With SWAPE, Matt's responsibilities have included:

- Lead analyst and testifying expert in the review of over 300 environmental impact reports and negative declarations since 2003 under CEQA that identify significant issues with regard to hazardous waste, water resources, water quality, air quality, greenhouse gas emissions, and geologic hazards. Make recommendations for additional mitigation measures to lead agencies at the local and county level to include additional characterization of health risks and implementation of protective measures to reduce worker exposure to hazards from toxins and Valley Fever.
- Stormwater analysis, sampling and best management practice evaluation at more than 100 industrial facilities.
- Expert witness on numerous cases including, for example, perfluorooctanoic acid (PFOA) contamination of groundwater, MTBE litigation, air toxins at hazards at a school, CERCLA compliance in assessment and remediation, and industrial stormwater contamination.
- Technical assistance and litigation support for vapor intrusion concerns.
- Lead analyst and testifying expert in the review of environmental issues in license applications for large solar power plants before the California Energy Commission.
- Manager of a project to evaluate numerous formerly used military sites in the western U.S.
- Manager of a comprehensive evaluation of potential sources of perchlorate contamination in Southern California drinking water wells.
- Manager and designated expert for litigation support under provisions of Proposition 65 in the review of releases of gasoline to sources drinking water at major refineries and hundreds of gas stations throughout California.

With Komex H2O Science Inc., Matt's duties included the following:

- Senior author of a report on the extent of perchlorate contamination that was used in testimony by the former U.S. EPA Administrator and General Counsel.
- Senior researcher in the development of a comprehensive, electronically interactive chronology of MTBE use, research, and regulation.
- Senior researcher in the development of a comprehensive, electronically interactive chronology of perchlorate use, research, and regulation.
- Senior researcher in a study that estimates nationwide costs for MTBE remediation and drinking water treatment, results of which were published in newspapers nationwide and in testimony against provisions of an energy bill that would limit liability for oil companies.
- Research to support litigation to restore drinking water supplies that have been contaminated by MTBE in California and New York.

- Expert witness testimony in a case of oil production-related contamination in Mississippi.
- Lead author for a multi-volume remedial investigation report for an operating school in Los Angeles that met strict regulatory requirements and rigorous deadlines.
- Development of strategic approaches for cleanup of contaminated sites in consultation with clients and regulators.

Executive Director:

As Executive Director with Orange Coast Watch, Matt led efforts to restore water quality at Orange County beaches from multiple sources of contamination including urban runoff and the discharge of wastewater. In reporting to a Board of Directors that included representatives from leading Orange County universities and businesses, Matt prepared issue papers in the areas of treatment and disinfection of wastewater and control of the discharge of grease to sewer systems. Matt actively participated in the development of countywide water quality permits for the control of urban runoff and permits for the discharge of wastewater. Matt worked with other nonprofits to protect and restore water quality, including Surfrider, Natural Resources Defense Council and Orange County CoastKeeper as well as with business institutions including the Orange County Business Council.

Hydrogeology:

As a Senior Hydrogeologist with the U.S. Environmental Protection Agency, Matt led investigations to characterize and cleanup closing military bases, including Mare Island Naval Shipyard, Hunters Point Naval Shipyard, Treasure Island Naval Station, Alameda Naval Station, Moffett Field, Mather Army Airfield, and Sacramento Army Depot. Specific activities were as follows:

- Led efforts to model groundwater flow and contaminant transport, ensured adequacy of monitoring networks, and assessed cleanup alternatives for contaminated sediment, soil, and groundwater.
- Initiated a regional program for evaluation of groundwater sampling practices and laboratory analysis at military bases.
- Identified emerging issues, wrote technical guidance, and assisted in policy and regulation development through work on four national U.S. EPA workgroups, including the Superfund Groundwater Technical Forum and the Federal Facilities Forum.

At the request of the State of Hawaii, Matt developed a methodology to determine the vulnerability of groundwater to contamination on the islands of Maui and Oahu. He used analytical models and a GIS to show zones of vulnerability, and the results were adopted and published by the State of Hawaii and County of Maui.

As a hydrogeologist with the EPA Groundwater Protection Section, Matt worked with provisions of the Safe Drinking Water Act and NEPA to prevent drinking water contamination. Specific activities included the following:

- Received an EPA Bronze Medal for his contribution to the development of national guidance for the protection of drinking water.
- Managed the Sole Source Aquifer Program and protected the drinking water of two communities through designation under the Safe Drinking Water Act. He prepared geologic reports, conducted

public hearings, and responded to public comments from residents who were very concerned about the impact of designation.

- Reviewed a number of Environmental Impact Statements for planned major developments, including large hazardous and solid waste disposal facilities, mine reclamation, and water transfer.

Matt served as a hydrogeologist with the RCRA Hazardous Waste program. Duties were as follows:

- Supervised the hydrogeologic investigation of hazardous waste sites to determine compliance with Subtitle C requirements.
- Reviewed and wrote "part B" permits for the disposal of hazardous waste.
- Conducted RCRA Corrective Action investigations of waste sites and led inspections that formed the basis for significant enforcement actions that were developed in close coordination with U.S. EPA legal counsel.
- Wrote contract specifications and supervised contractor's investigations of waste sites.

With the National Park Service, Matt directed service-wide investigations of contaminant sources to prevent degradation of water quality, including the following tasks:

- Applied pertinent laws and regulations including CERCLA, RCRA, NEPA, NRDA, and the Clean Water Act to control military, mining, and landfill contaminants.
- Conducted watershed-scale investigations of contaminants at parks, including Yellowstone and Olympic National Park.
- Identified high-levels of perchlorate in soil adjacent to a national park in New Mexico and advised park superintendent on appropriate response actions under CERCLA.
- Served as a Park Service representative on the Interagency Perchlorate Steering Committee, a national workgroup.
- Developed a program to conduct environmental compliance audits of all National Parks while serving on a national workgroup.
- Co-authored two papers on the potential for water contamination from the operation of personal watercraft and snowmobiles, these papers serving as the basis for the development of nation-wide policy on the use of these vehicles in National Parks.
- Contributed to the Federal Multi-Agency Source Water Agreement under the Clean Water Action Plan.

Policy:

Served senior management as the Senior Science Policy Advisor with the U.S. Environmental Protection Agency, Region 9.

Activities included the following:

- Advised the Regional Administrator and senior management on emerging issues such as the potential for the gasoline additive MTBE and ammonium perchlorate to contaminate drinking water supplies.
- Shaped EPA's national response to these threats by serving on workgroups and by contributing to guidance, including the Office of Research and Development publication, Oxygenates in Water: Critical Information and Research Needs.
- Improved the technical training of EPA's scientific and engineering staff.
- Earned an EPA Bronze Medal for representing the region's 300 scientists and engineers in negotiations with the Administrator and senior management to better integrate scientific

principles into the policy-making process.
- Established national protocol for the peer review of scientific documents.

Geology:

With the U.S. Forest Service, Matt led investigations to determine hillslope stability of areas proposed for timber harvest in the central Oregon Coast Range. Specific activities were as follows:

- Mapped geology in the field, and used aerial photographic interpretation and mathematical models to determine slope stability.
- Coordinated his research with community members who were concerned with natural resource protection.
- Characterized the geology of an aquifer that serves as the sole source of drinking water for the city of Medford, Oregon.

As a consultant with Dames and Moore, Matt led geologic investigations of two contaminated sites (later listed on the Superfund NPL) in the Portland, Oregon, area and a large hazardous waste site in eastern Oregon. Duties included the following:

- Supervised year-long effort for soil and groundwater sampling.
- Conducted aquifer tests.
- Investigated active faults beneath sites proposed for hazardous waste disposal.

Teaching:

From 1990 to 1998, Matt taught at least one course per semester at the community college and university levels:

- At San Francisco State University, held an adjunct faculty position and taught courses in environmental geology, oceanography (lab and lecture), hydrogeology, and groundwater contamination.
- Served as a committee member for graduate and undergraduate students.
- Taught courses in environmental geology and oceanography at the College of Marin.

Matt is currently a part time geology instructor at Golden West College in Huntington Beach, California where he taught from 2010 to 2014 and in 2017.

SOIL WATER AIR PROTECTION ENTERPRISE
2656 29th Street, Suite 201
Santa Monica, California 90405
Attn: Paul Rosenfeld, Ph.D.
Mobil: (310) 795-2335
Office: (310) 452-5555
Fax: (310) 452-5550
Email: prosenfeld@swape.com

Paul Rosenfeld, Ph.D.

Chemical Fate and Transport & Air Dispersion Modeling

Principal Environmental Chemist

Risk Assessment & Remediation Specialist

Education

Ph.D. Soil Chemistry, University of Washington, 1999. Dissertation on volatile organic compound filtration.

M.S. Environmental Science, U.C. Berkeley, 1995. Thesis on organic waste economics.

B.A. Environmental Studies, U.C. Santa Barbara, 1991. Thesis on wastewater treatment.

Professional Experience

Dr. Rosenfeld has over 25 years' experience conducting environmental investigations and risk assessments for evaluating impacts to human health, property, and ecological receptors. His expertise focuses on the fate and transport of environmental contaminants, human health risk, exposure assessment, and ecological restoration. Dr. Rosenfeld has evaluated and modeled emissions from oil spills, landfills, boilers and incinerators, process stacks, storage tanks, confined animal feeding operations, industrial, military and agricultural sources, unconventional oil drilling operations, and locomotive and construction engines. His project experience ranges from monitoring and modeling of pollution sources to evaluating impacts of pollution on workers at industrial facilities and residents in surrounding communities. Dr. Rosenfeld has also successfully modeled exposure to contaminants distributed by water systems and via vapor intrusion.

Dr. Rosenfeld has investigated and designed remediation programs and risk assessments for contaminated sites containing lead, heavy metals, mold, bacteria, particulate matter, petroleum hydrocarbons, chlorinated solvents, pesticides, radioactive waste, dioxins and furans, semi- and volatile organic compounds, PCBs, PAHs, creosote, perchlorate, asbestos, per- and poly-fluoroalkyl substances (PFOA/PFOS), unusual polymers, fuel oxygenates (MTBE), among other pollutants. Dr. Rosenfeld also has experience evaluating greenhouse gas emissions from various projects and is an expert on the assessment of odors from industrial and agricultural sites, as well as the evaluation of odor nuisance impacts and technologies for abatement of odorous emissions. As a principal scientist at SWAPE, Dr. Rosenfeld directs air dispersion modeling and exposure assessments. He has served as an expert witness and testified about pollution sources causing nuisance and/or personal injury at sites and has testified as an expert witness on numerous cases involving exposure to soil, water and air contaminants from industrial, railroad, agricultural, and military sources.

Professional History:

Soil Water Air Protection Enterprise (SWAPE); 2003 to present; Principal and Founding Partner
UCLA School of Public Health; 2007 to 2011; Lecturer (Assistant Researcher)
UCLA School of Public Health; 2003 to 2006; Adjunct Professor
UCLA Environmental Science and Engineering Program; 2002-2004; Doctoral Intern Coordinator
UCLA Institute of the Environment, 2001-2002; Research Associate
Komex H_2O Science, 2001 to 2003; Senior Remediation Scientist
National Groundwater Association, 2002-2004; Lecturer
San Diego State University, 1999-2001; Adjunct Professor
Anteon Corp., San Diego, 2000-2001; Remediation Project Manager
Ogden (now Amec), San Diego, 2000-2000; Remediation Project Manager
Bechtel, San Diego, California, 1999 – 2000; Risk Assessor
King County, Seattle, 1996 – 1999; Scientist
James River Corp., Washington, 1995-96; Scientist
Big Creek Lumber, Davenport, California, 1995; Scientist
Plumas Corp., California and USFS, Tahoe 1993-1995; Scientist
Peace Corps and World Wildlife Fund, St. Kitts, West Indies, 1991-1993; Scientist

Presentations:

Rosenfeld, P.E., "The science for Perfluorinated Chemicals (PFAS): What makes remediation so hard?" Law Seminars International, (May 9-10, 2018) 800 Fifth Avenue, Suite 101 Seattle, WA.

Rosenfeld, P.E., Sutherland, A; Hesse, R.; Zapata, A. (October 3-6, 2013). Air dispersion modeling of volatile organic emissions from multiple natural gas wells in Decatur, TX. *44th Western Regional Meeting, American Chemical Society.* Lecture conducted from Santa Clara, CA.

Sok, H.L.; Waller, C.C.; Feng, L.; Gonzalez, J.; Sutherland, A.J.; Wisdom-Stack, T.; Sahai, R.K.; Hesse, R.C.; **Rosenfeld, P.E.** (June 20-23, 2010). Atrazine: A Persistent Pesticide in Urban Drinking Water. *Urban Environmental Pollution*. Lecture conducted from Boston, MA.

Feng, L.; Gonzalez, J.; Sok, H.L.; Sutherland, A.J.; Waller, C.C.; Wisdom-Stack, T.; Sahai, R.K.; La, M.; Hesse, R.C.; **Rosenfeld, P.E.** (June 20-23, 2010). Bringing Environmental Justice to East St. Louis, Illinois. *Urban Environmental Pollution.* Lecture conducted from Boston, MA.

Rosenfeld, P.E. (April 19-23, 2009). Perfluoroctanoic Acid (PFOA) and Perfluoroactane Sulfonate (PFOS) Contamination in Drinking Water From the Use of Aqueous Film Forming Foams (AFFF) at Airports in the United States. *2009 Ground Water Summit and 2009 Ground Water Protection Council Spring Meeting*, Lecture conducted from Tuscon, AZ.

Rosenfeld, P.E. (April 19-23, 2009). Cost to Filter Atrazine Contamination from Drinking Water in the United States" Contamination in Drinking Water From the Use of Aqueous Film Forming Foams (AFFF) at Airports in the United States. *2009 Ground Water Summit and 2009 Ground Water Protection Council Spring Meeting*. Lecture conducted from Tuscon, AZ.

Wu, C., Tam, L., Clark, J., **Rosenfeld, P**. (20-22 July, 2009). Dioxin and furan blood lipid concentrations in populations living near four wood treatment facilities in the United States. Brebbia, C.A. and Popov, V., eds., *Air Pollution XVII: Proceedings of the Seventeenth International Conference on Modeling, Monitoring and Management of Air Pollution*. Lecture conducted from Tallinn, Estonia.

Rosenfeld, P. E. (October 15-18, 2007). Moss Point Community Exposure To Contaminants From A Releasing Facility. *The 23rd Annual International Conferences on Soils Sediment and Water.* Platform lecture conducted from University of Massachusetts, Amherst MA.

Rosenfeld, P. E. (October 15-18, 2007). The Repeated Trespass of Tritium-Contaminated Water Into A Surrounding Community Form Repeated Waste Spills From A Nuclear Power Plant. *The 23rd Annual International*

Conferences on Soils Sediment and Water. Platform lecture conducted from University of Massachusetts, Amherst MA.

Rosenfeld, P. E. (October 15-18, 2007). Somerville Community Exposure To Contaminants From Wood Treatment Facility Emissions. The *23rd Annual International Conferences on Soils Sediment and Water*. Lecture conducted from University of Massachusetts, Amherst MA.

Rosenfeld P. E. (March 2007). Production, Chemical Properties, Toxicology, & Treatment Case Studies of 1,2,3-Trichloropropane (TCP). *The Association for Environmental Health and Sciences (AEHS) Annual Meeting*. Lecture conducted from San Diego, CA.

Rosenfeld P. E. (March 2007). Blood and Attic Sampling for Dioxin/Furan, PAH, and Metal Exposure in Florala, Alabama. *The AEHS Annual Meeting.* Lecture conducted from San Diego, CA.

Hensley A.R., Scott, A., **Rosenfeld P.E.,** Clark, J.J.J. (August 21 – 25, 2006). Dioxin Containing Attic Dust And Human Blood Samples Collected Near A Former Wood Treatment Facility. *The 26th International Symposium on Halogenated Persistent Organic Pollutants – DIOXIN2006*. Lecture conducted from Radisson SAS Scandinavia Hotel in Oslo Norway.

Hensley A.R., Scott, A., **Rosenfeld P.E.,** Clark, J.J.J. (November 4-8, 2006). Dioxin Containing Attic Dust And Human Blood Samples Collected Near A Former Wood Treatment Facility. *APHA 134 Annual Meeting & Exposition.* Lecture conducted from Boston Massachusetts.

Paul Rosenfeld Ph.D. (October 24-25, 2005). Fate, Transport and Persistence of PFOA and Related Chemicals. Mealey's C8/PFOA. *Science, Risk & Litigation Conference.* Lecture conducted from The Rittenhouse Hotel, Philadelphia, PA.

Paul Rosenfeld Ph.D. (September 19, 2005). Brominated Flame Retardants in Groundwater: Pathways to Human Ingestion, *Toxicology and Remediation PEMA Emerging Contaminant Conference*. Lecture conducted from Hilton Hotel, Irvine California.

Paul Rosenfeld Ph.D. (September 19, 2005). Fate, Transport, Toxicity, And Persistence of 1,2,3-TCP. *PEMA Emerging Contaminant Conference.* Lecture conducted from Hilton Hotel in Irvine, California.

Paul Rosenfeld Ph.D. (September 26-27, 2005). Fate, Transport and Persistence of PDBEs. *Mealey's Groundwater Conference.* Lecture conducted from Ritz Carlton Hotel, Marina Del Ray, California.

Paul Rosenfeld Ph.D. (June 7-8, 2005). Fate, Transport and Persistence of PFOA and Related Chemicals. *International Society of Environmental Forensics: Focus On Emerging Contaminants*. Lecture conducted from Sheraton Oceanfront Hotel, Virginia Beach, Virginia.

Paul Rosenfeld Ph.D. (July 21-22, 2005). Fate Transport, Persistence and Toxicology of PFOA and Related Perfluorochemicals. *2005 National Groundwater Association Ground Water And Environmental Law Conference*. Lecture conducted from Wyndham Baltimore Inner Harbor, Baltimore Maryland.

Paul Rosenfeld Ph.D. (July 21-22, 2005). Brominated Flame Retardants in Groundwater: Pathways to Human Ingestion, Toxicology and Remediation. *2005 National Groundwater Association Ground Water and Environmental Law Conference.* Lecture conducted from Wyndham Baltimore Inner Harbor, Baltimore Maryland.

Paul Rosenfeld, Ph.D. and James Clark Ph.D. and Rob Hesse R.G. (May 5-6, 2004). Tert-butyl Alcohol Liability and Toxicology, A National Problem and Unquantified Liability. *National Groundwater Association. Environmental Law Conference*. Lecture conducted from Congress Plaza Hotel, Chicago Illinois.

Paul Rosenfeld, Ph.D. (March 2004). Perchlorate Toxicology. *Meeting of the American Groundwater Trust*. Lecture conducted from Phoenix Arizona.

Hagemann, M.F., **Paul Rosenfeld, Ph.D.** and Rob Hesse (2004). Perchlorate Contamination of the Colorado River. *Meeting of tribal representatives*. Lecture conducted from Parker, AZ.

Paul Rosenfeld, Ph.D. (April 7, 2004). A National Damage Assessment Model For PCE and Dry Cleaners. *Drycleaner Symposium. California Ground Water Association*. Lecture conducted from Radison Hotel, Sacramento, California.

Rosenfeld, P. E., Grey, M., (June 2003) Two stage biofilter for biosolids composting odor control. *Seventh International In Situ And On Site Bioremediation Symposium Battelle Conference* Orlando, FL.

Paul Rosenfeld, Ph.D. and James Clark Ph.D. (February 20-21, 2003) Understanding Historical Use, Chemical Properties, Toxicity and Regulatory Guidance of 1,4 Dioxane. *National Groundwater Association. Southwest Focus Conference. Water Supply and Emerging Contaminants*.. Lecture conducted from Hyatt Regency Phoenix Arizona.

Paul Rosenfeld, Ph.D. (February 6-7, 2003). Underground Storage Tank Litigation and Remediation. *California CUPA Forum*. Lecture conducted from Marriott Hotel, Anaheim California.

Paul Rosenfeld, Ph.D. (October 23, 2002) Underground Storage Tank Litigation and Remediation. *EPA Underground Storage Tank Roundtable*. Lecture conducted from Sacramento California.

Rosenfeld, P.E. and Suffet, M. (October 7- 10, 2002). Understanding Odor from Compost, *Wastewater and Industrial Processes. Sixth Annual Symposium On Off Flavors in the Aquatic Environment. International Water Association*. Lecture conducted from Barcelona Spain.

Rosenfeld, P.E. and Suffet, M. (October 7- 10, 2002). Using High Carbon Wood Ash to Control Compost Odor. *Sixth Annual Symposium On Off Flavors in the Aquatic Environment. International Water Association*. Lecture conducted from Barcelona Spain.

Rosenfeld, P.E. and Grey, M. A. (September 22-24, 2002). Biocycle Composting For Coastal Sage Restoration. *Northwest Biosolids Management Association*. Lecture conducted from Vancouver Washington..

Rosenfeld, P.E. and Grey, M. A. (November 11-14, 2002). Using High-Carbon Wood Ash to Control Odor at a Green Materials Composting Facility. *Soil Science Society Annual Conferenc*e. Lecture conducted from Indianapolis, Maryland.

Rosenfeld. P.E. (September 16, 2000). Two stage biofilter for biosolids composting odor control. *Water Environment Federation.* Lecture conducted from Anaheim California.

Rosenfeld. P.E. (October 16, 2000). Wood ash and biofilter control of compost odor. *Biofest.* Lecture conducted from Ocean Shores, California.

Rosenfeld, P.E. (2000). Bioremediation Using Organic Soil Amendments. *California Resource Recovery Association*. Lecture conducted from Sacramento California.

Rosenfeld, P.E., C.L. Henry, R. Harrison. (1998). Oat and Grass Seed Germination and Nitrogen and Sulfur Emissions Following Biosolids Incorporation With High-Carbon Wood-Ash. *Water Environment Federation 12th Annual Residuals and Biosolids Management Conference Proceedings*. Lecture conducted from Bellevue Washington.

Rosenfeld, P.E., and C.L. Henry. (1999). An evaluation of ash incorporation with biosolids for odor reduction. *Soil Science Society of America*. Lecture conducted from Salt Lake City Utah.

Rosenfeld, P.E., C.L. Henry, R. Harrison. (1998). Comparison of Microbial Activity and Odor Emissions from Three Different Biosolids Applied to Forest Soil. *Brown and Caldwell.* Lecture conducted from Seattle Washington.

Rosenfeld, P.E., C.L. Henry. (1998). Characterization, Quantification, and Control of Odor Emissions from Biosolids Application To Forest Soil. *Biofest.* Lecture conducted from Lake Chelan, Washington.

Rosenfeld, P.E, C.L. Henry, R. Harrison. (1998). Oat and Grass Seed Germination and Nitrogen and Sulfur Emissions Following Biosolids Incorporation With High-Carbon Wood-Ash. Water Environment Federation 12th Annual Residuals and Biosolids Management Conference Proceedings. Lecture conducted from Bellevue Washington.

Rosenfeld, P.E., C.L. Henry, R. B. Harrison, and R. Dills. (1997). Comparison of Odor Emissions From Three Different Biosolids Applied to Forest Soil. *Soil Science Society of America*. Lecture conducted from Anaheim California.

Teaching Experience:

UCLA Department of Environmental Health (Summer 2003 through 20010) Taught Environmental Health Science 100 to students, including undergrad, medical doctors, public health professionals and nurses. Course focused on the health effects of environmental contaminants.

National Ground Water Association, Successful Remediation Technologies. Custom Course in Sante Fe, New Mexico. May 21, 2002. Focused on fate and transport of fuel contaminants associated with underground storage tanks.

National Ground Water Association; Successful Remediation Technologies Course in Chicago Illinois. April 1, 2002. Focused on fate and transport of contaminants associated with Superfund and RCRA sites.

California Integrated Waste Management Board, April and May, 2001. Alternative Landfill Caps Seminar in San Diego, Ventura, and San Francisco. Focused on both prescriptive and innovative landfill cover design.

UCLA Department of Environmental Engineering, February 5, 2002. Seminar on Successful Remediation Technologies focusing on Groundwater Remediation.

University Of Washington, Soil Science Program, Teaching Assistant for several courses including: Soil Chemistry, Organic Soil Amendments, and Soil Stability.

U.C. Berkeley, Environmental Science Program Teaching Assistant for Environmental Science 10.

Academic Grants Awarded:

California Integrated Waste Management Board. $41,000 grant awarded to UCLA Institute of the Environment. Goal: To investigate effect of high carbon wood ash on volatile organic emissions from compost. 2001.

Synagro Technologies, Corona California: $10,000 grant awarded to San Diego State University.
Goal: investigate effect of biosolids for restoration and remediation of degraded coastal sage soils. 2000.

King County, Department of Research and Technology, Washington State. $100,000 grant awarded to University of Washington: Goal: To investigate odor emissions from biosolids application and the effect of polymers and ash on VOC emissions. 1998.

Northwest Biosolids Management Association, Washington State. $20,000 grant awarded to investigate effect of polymers and ash on VOC emissions from biosolids. 1997.

James River Corporation, Oregon: $10,000 grant was awarded to investigate the success of genetically engineered Poplar trees with resistance to round-up. 1996.

United State Forest Service, Tahoe National Forest: $15,000 grant was awarded to investigating fire ecology of the Tahoe National Forest. 1995.

Kellogg Foundation, Washington D.C. $500 grant was awarded to construct a large anaerobic digester on St. Kitts in West Indies. 1993

Deposition and/or Trial Testimony:

In the Circuit Court Of The Twentieth Judicial Circuit, St Clair County, Illinois
Martha Custer et al., Plaintiff vs. Cerro Flow Products, Inc., Defendants
Case No.: No. 0i9-L-2295
Rosenfeld Deposition, 5-14-2021
Trial, October 8-4-2021

In the Circuit Court of Cook County Illinois
Joseph Rafferty, Plaintiff vs. Consolidated Rail Corporation and National Railroad Passenger Corporation d/b/a AMTRAK,
Case No.: No. 18-L-6845
Rosenfeld Deposition, 6-28-2021

In the United States District Court For the Northern District of Illinois
Theresa Romcoe, Plaintiff vs. Northeast Illinois Regional Commuter Railroad Corporation d/b/a METRA Rail, Defendants
Case No.: No. 17-cv-8517
Rosenfeld Deposition, 5-25-2021

In the Superior Court of the State of Arizona In and For the Cunty of Maricopa
Mary Tryon et al., Plaintiff vs. The City of Pheonix v. Cox Cactus Farm, L.L.C., Utah Shelter Systems, Inc.
Case Number CV20127-094749
Rosenfeld Deposition: 5-7-2021

In the United States District Court for the Eastern District of Texas Beaumont Division
Robinson, Jeremy et al *Plaintiffs*, vs. CNA Insurance Company et al.
Case Number 1:17-cv-000508
Rosenfeld Deposition: 3-25-2021

In the Superior Court of the State of California, County of San Bernardino
Gary Garner, Personal Representative for the Estate of Melvin Garner vs. BNSF Railway Company.
Case No. 1720288
Rosenfeld Deposition 2-23-2021

In the Superior Court of the State of California, County of Los Angeles, Spring Street Courthouse
Benny M Rodriguez vs. Union Pacific Railroad, A Corporation, et al.
Case No. 18STCV01162
Rosenfeld Deposition 12-23-2020

In the Circuit Court of Jackson County, Missouri
Karen Cornwell, *Plaintiff,* vs. Marathon Petroleum, LP, *Defendant.*
Case No.: 1716-CV10006
Rosenfeld Deposition. 8-30-2019

In the United States District Court For The District of New Jersey
Duarte et al, *Plaintiffs,* vs. United States Metals Refining Company et. al. *Defendant.*
Case No.: 2:17-cv-01624-ES-SCM
Rosenfeld Deposition. 6-7-2019

In the United States District Court of Southern District of Texas Galveston Division
M/T Carla Maersk, *Plaintiffs,* vs. Conti 168., Schiffahrts-GMBH & Co. Bulker KG MS "Conti Perdido" *Defendant.*
Case No.: 3:15-CV-00106 consolidated with 3:15-CV-00237
Rosenfeld Deposition. 5-9-2019

In The Superior Court of the State of California In And For The County Of Los Angeles – Santa Monica
Carole-Taddeo-Bates et al., vs. Ifran Khan et al., Defendants
Case No.: No. BC615636
Rosenfeld Deposition, 1-26-2019

In The Superior Court of the State of California In And For The County Of Los Angeles – Santa Monica
The San Gabriel Valley Council of Governments et al. vs El Adobe Apts. Inc. et al., Defendants
Case No.: No. BC646857
Rosenfeld Deposition, 10-6-2018; Trial 3-7-19

In United States District Court For The District of Colorado
Bells et al. Plaintiff vs. The 3M Company et al., Defendants
Case No.: 1:16-cv-02531-RBJ
Rosenfeld Deposition, 3-15-2018 and 4-3-2018

In The District Court Of Regan County, Texas, 112th Judicial District
Phillip Bales et al., Plaintiff vs. Dow Agrosciences, LLC, et al., Defendants
Cause No.: 1923
Rosenfeld Deposition, 11-17-2017

In The Superior Court of the State of California In And For The County Of Contra Costa
Simons et al., Plaintiffs vs. Chevron Corporation, et al., Defendants
Cause No C12-01481
Rosenfeld Deposition, 11-20-2017

In The Circuit Court Of The Twentieth Judicial Circuit, St Clair County, Illinois
Martha Custer et al., Plaintiff vs. Cerro Flow Products, Inc., Defendants
Case No.: No. 0i9-L-2295
Rosenfeld Deposition, 8-23-2017

In United States District Court For The Southern District of Mississippi
Guy Manuel vs. The BP Exploration et al., Defendants
Case: No 1:19-cv-00315-RHW
Rosenfeld Deposition, 4-22-2020

In The Superior Court of the State of California, For The County of Los Angeles
Warrn Gilbert and Penny Gilber, Plaintiff vs. BMW of North America LLC
Case No.: LC102019 (c/w BC582154)
Rosenfeld Deposition, 8-16-2017, Trail 8-28-2018

In the Northern District Court of Mississippi, Greenville Division
Brenda J. Cooper, et al., *Plaintiffs,* vs. Meritor Inc., et al., *Defendants*
Case Number: 4:16-cv-52-DMB-JVM
Rosenfeld Deposition: July 2017

In The Superior Court of the State of Washington, County of Snohomish
Michael Davis and Julie Davis et al., Plaintiff vs. Cedar Grove Composting Inc., Defendants
Case No.: No. 13-2-03987-5
Rosenfeld Deposition, February 2017
Trial, March 2017

In The Superior Court of the State of California, County of Alameda
Charles Spain., Plaintiff vs. Thermo Fisher Scientific, et al., Defendants
Case No.: RG14711115
Rosenfeld Deposition, September 2015

In The Iowa District Court In And For Poweshiek County
Russell D. Winburn, et al., Plaintiffs vs. Doug Hoksbergen, et al., Defendants
Case No.: LALA002187
Rosenfeld Deposition, August 2015

In The Circuit Court of Ohio County, West Virginia
Robert Andrews, et al. v. Antero, et al.
Civil Action N0. 14-C-30000
Rosenfeld Deposition, June 2015

In The Iowa District Court For Muscatine County
Laurie Freeman et. al. Plaintiffs vs. Grain Processing Corporation, Defendant
Case No 4980
Rosenfeld Deposition: May 2015

In the Circuit Court of the 17th Judicial Circuit, in and For Broward County, Florida
Walter Hinton, et. al. Plaintiff, vs. City of Fort Lauderdale, Florida, a Municipality, Defendant.
Case Number CACE07030358 (26)
Rosenfeld Deposition: December 2014

In the County Court of Dallas County Texas
Lisa Parr et al, *Plaintiff*, vs. Aruba et al, *Defendant.*
Case Number cc-11-01650-E
Rosenfeld Deposition: March and September 2013
Rosenfeld Trial: April 2014

In the Court of Common Pleas of Tuscarawas County Ohio

Subject: Comments on the Draft Environmental Impact Report for the South Ontario Logistics Center Specific Plan Project

Dear Mr. Marshall:

This letter contains my comments on the Draft Environmental Impact Report ("DEIR") prepared by the City of Ontario ("City") for the South Ontario Logistics Center Specific Plan Project ("Project"). Grove Land Venture, LLC ("Applicant") is proposing development of up to 5,333,518 square feet of business park and industrial uses on approximately 219 acres of land in the southwest portion of the City.

I am an environmental biologist with 28 years of professional experience in wildlife biology and natural resources management. I have served as a biological resources expert for over 150 projects in California. My experience and scope of work in this regard has included assisting various clients with evaluations of biological resource issues, reviewing environmental compliance documents prepared pursuant to the California Environmental Quality Act ("CEQA") and the National Environmental Policy Act ("NEPA"), and submitting written comments in response to CEQA and NEPA documents. My work has included the preparation of written and oral testimony for the California Energy Commission, California Public Utilities Commission, and Federal courts. My educational background includes a B.S. in Resource Management from the University of California at Berkeley, and a M.S. in Wildlife and Fisheries Science from the Pennsylvania State University. A copy of my current curriculum vitae is attached hereto.

The comments herein are based on my review of the environmental documents prepared for the Project, a review of scientific literature pertaining to biological resources known to occur in the Project area, consultations with other biological resource experts, and the knowledge and experience I have acquired during my 28-year career in the field of natural resources management.

1

ENVIRONMENTAL SETTING

Burrowing Owl

"Essential Habitat" for burrowing owls includes nesting, foraging, wintering, and dispersal habitat.[1] As a result, an accurate assessment of Project-level and cumulative impacts to burrowing owls requires baseline data on burrowing owl use of the Project site during both the breeding and non-breeding seasons. Contrary to California Department of Fish and Wildlife ("CDFW") guidance,[2] the Applicant did not conduct surveys to ascertain burrowing owl use of the Project site during the non-breeding season (i.e., during migration and winter).[3]

The DEIR claims: "BUOW Focused surveys were conducted for the entire Project site which includes both Phase I and future development areas."[4] The DEIR's claim is false: the burrowing owl ("BUOW") survey report clearly states that the surveys were limited to the 130 acres that would be developed during Phase 1 of the Project, and that "the additional acreage [within the specific plan boundary] was not included in this focused BUOW study."[5]

Swainson's Hawk

Swainson's hawk nests are extremely difficult to locate during certain times of the year and even the most experienced surveyor will miss them.[6] As a result, the CDFW recommends project proponents implement the Swainson's hawk survey protocol developed by the Swainson's Hawk Technical Advisory Committee.[7] The protocol is designed to "maximize the potential for locating nesting Swainson's hawks, and thus reducing the potential for nest failures as a result of project activities/disturbances."[8]

In 2001, the City, Endangered Habitats League, and Sierra Club signed a settlement agreement related to the City's adoption of the Final EIR for the Ontario Sphere of Influence (New Model Colony) General Plan Amendment. The settlement agreement requires biological surveys pursuant to formally adopted protocols for proposed development projects in the New Model Colony ("NMC") area (which encompasses the Project site).[9] The purpose of these surveys is to determine whether species listed as threatened, endangered, or of special concern are present at a proposed project site prior to CEQA review of that project.[10] Although the Applicant's biological resources consultant concluded that the Project site provides potential habitat for the Swainson's hawk (a threatened species), and that Swainson's hawks may be present at the

2

Project site, protocol-level surveys were not conducted.[11] This violates the terms of the settlement agreement and precludes the public's ability to understand the severity of Project impacts on the Swainson's hawk.

Wetlands and Other Jurisdictional Waters

According to the DEIR, the Project site contains approximately 19 acres of stock/retention ponds and channels, but "the ponds are dry."[12] This information is inconsistent with the photographs in the Applicant's biological resources report and with Google Earth imagery. Two of the site photographs in the biological resources report show ponded water in a stock pond and stock pond channel.[13] Time lapse imagery available from Google Earth shows ponded water at various locations throughout the Project site during every year between 2002 and 2021.

The DEIR argues the stock/retention ponds and channels at the Project site are not Waters of the United States, nor are they considered jurisdictional under the CDFW Lake and Streambed Alteration Program.[14] According to the DEIR:

> "The man-made ponds and channels are not connected to a natural stream, nor do they divert natural flow from any river, stream or lake. The stock ponds are not considered jurisdictional under the CDFW Lake and Streambed Alteration Program. The program states: "An entity shall not substantially divert or obstruct the natural flow of, or substantially change or use any material from the bed, channel, or bank of, any river, stream, or lake, or deposit or dispose of debris, waste, or other material containing crumbled, flaked, or ground pavement where it may pass into any river, stream, or lake…". Therefore, the stock ponds on the Project site are not a "natural flow" of a stream, river, or lake, and would not be considered jurisdictional by CDFW."[15]

The DEIR has misinterpreted CDFW's jurisdiction. Section 1602 of California Fish and Game Code prohibits an entity from substantially diverting or obstructing the natural flow of an aquatic feature, but it is not limited to aquatic features that were created "naturally."[16] This is reflected in the City's General Plan EIR, which recognized: "[t]he NMC contains dairy manure water retention basins, irrigation ponds, livestock watering, and man-made lakes. In addition, fields under cultivation or left fallow accumulate surface waters in ponds or ditches. The CDFG [now CDFW] may have jurisdiction over these water bodies, but they are not expected to come under [federal] jurisdiction."[17]

[15] *Ibid.*
[16] CDFW's jurisdiction within altered or artificial waterways is dependent on the value of those waterways to fish and wildlife. *See* California Department of Fish and Wildlife. 2021. LSA Questions and Answers [webpage]. Available at: <https://wildlife.ca.gov/Conservation/Environmental-Review/LSA/Q-and-A>. (Accessed 19 Dec 2021).
[17] City of Ontario. 2009. The Ontario Plan Draft EIR. p. 5.4-29.

3

In addition to being potentially jurisdictional under California Fish and Game Code, the aquatic features at the Project site may qualify as wetlands or other waters of the state under the jurisdiction of the State Water Resources Control Board (which has broader jurisdiction than the U.S. Army Corps of Engineers' jurisdiction under the federal Clean Water Act).[18] The DEIR fails to address whether the aquatic features at the Project site are waters of the state. According to the State Water Resources Control Board, artificial wetlands may qualify as waters of the state, and "[i]f an aquatic feature meets the wetland definition, the burden is on the applicant to demonstrate that the wetland is not a water of the state."[19]

In addition to the 19 acres of stock/retention ponds and channels, there are several areas within the Project site that periodically contain ponded water (Figures 1 through 3, below). These aquatic features occur on hydric soils and therefore may qualify as wetlands.[20] Because the Applicant has not conducted a wetland delineation, there is no evidence supporting the City's determination that the Project would have no adverse effects on State protected wetlands.

Figure 3. Ponded area in the southwest corner of the Project site. Imagery dated February 2020.

5

Western Spadefoot

The Applicant's biological resources report provides the following assessment of the potential for the western spadefoot to occur at the Project site: "[v]ernal pools are essential for breeding and egg laying. No habitat for this species present. Not present."[21] This information is inconsistent with the biology of the species. Western spadefoots are not limited to vernal pools for breeding and egg laying: they breed and lay their eggs in a variety of permanent and temporary pools, including pools that occur in highly disturbed environments (e.g., roadside ditches and stock ponds).[22] As a result, western spadefoots have the potential to occur at the Project site, and because the DEIR does not incorporate mitigation, Project impacts on the species remain potentially significant.

Other Special-Status Species

The DEIR fails to address all of the special-status bird species that have been detected at, or that have the potential to occur at, the Project site. These include the long-billed curlew, mountain plover, white-faced ibis, northern harrier, ferruginous hawk, white-tailed kite, and loggerhead shrike.[23] Development of the Project would have potentially significant impacts on habitat for these species, and thus, they must be analyzed in the DEIR.

PROJECT IMPACTS

The DEIR provides the following analysis of the Project's impacts on special-status animal species:

> "The Tricolored blackbird, Grasshopper sparrow, Great blue heron, Swainson's hawk, California glossy snake, Western Pond Turtle, Western mastiff bat, Yellow rail, California horned lark, and Merlin have the potential to be on-site due to suitable habitat for foraging and nesting purposes. Therefore, implementation of MM BIO-1 will require the removal of suitable vegetation be conducted during the off-season and that any nesting surveys occur prior to construction start in accordance with local and state policy and regulations (refer to MM BIO-1 below). With implementation of MM BIO-1, the potential for a species to inhabit the site is reduced to less than significant."[24]

There are several problems with the DEIR's analysis. First, the DEIR fails to identify how these 10 species might be impacted by the Project (e.g., direct mortality during construction, habitat loss, disturbance caused by noise and human activity, etc.). This precludes understanding of the

[24] DEIR, p. 4.3-18.

6

Project's potentially significant impacts and whether MM BIO-1 would sufficiently mitigate those (unspecified) impacts to less-than significant levels.

Second, the DEIR fails to provide the context needed to evaluate the significance thresholds listed in the DEIR. For example, it impossible to evaluate whether the Project would "reduce habitat availability sufficiently to constrain the distribution of a species and not allow for natural changes in distributional patterns over time"[25] because the DEIR provides no information on the current distribution of each species and the availability of its habitat.

Third, removal of vegetation during the "off-season" would minimize direct impacts on nesting birds, but it would not mitigate the permanent loss of nesting habitat, nor would it mitigate impacts to birds that use the Project site for "foraging purposes." Furthermore, it would not mitigate impacts to the western pond turtle, western mastiff bat, or California glossy snake.

Fourth, the DEIR does not incorporate mitigation for habitat loss, which is the primary threat to the special-status species that may occur at the Project site.[26] The Notice of Preparation ("NOP") comment letter issued by the CDFW states: "[f]or unavoidable impacts, onsite habitat restoration and/or enhancement, and preservation should be evaluated and discussed in detail. Where habitat preservation is not available onsite, offsite land acquisition, management, and preservation should be evaluated and discussed in detail."[27] The DEIR does not provide this evaluation and discussion, nor it does provide analysis demonstrating the Project's impacts on habitat would be less than significant. For these reasons, the DEIR does not adequately mitigate the Project's potentially significant impacts on special-status animals.

Burrowing Owl

The DEIR states:

> "If it were later determined that active nests of BUOW would be lost as a result of site preparation, it could result in significant adverse impacts and would be in conflict with CDFW Code §3503.5, 3511, and 3515.16 Therefore, implementation of MM BIO-2 would require an avoidance survey no less than 14 days prior to initiating ground disturbance activities before construction starts. With the implementation of MM BIO-2, impacts would be less than significant."[28]

The DEIR's conclusion is not supported by evidence. The primary threat to burrowing owls in California is the loss of breeding, wintering, and migratory stopover habitat.[29] CDFW's NOP comment letter explicitly states that compensatory mitigation should be provided if burrowing

7

owl habitat is impacted by the Project.[30] MM BIO-2 does not require compensatory mitigation, and as a result, it does not mitigate the Project's potentially significant impacts on the burrowing owl.

Waterfowl Habitat

The Project site provides habitat for numerous waterfowl (and waterbird) species.[31] The Final EIR for the Ontario Sphere of Influence (New Model Colony) General Plan Amendment concluded that impacts to waterfowl habitat would be significant before mitigation measures were implemented. Impacts were determined to be less than significant after implementation of Mitigation Measures BR-1 and BR-2.[32] Mitigation Measure BR-1 modified the General Plan to require the creation of new waterfowl habitat and specified a mitigation ratio of 2:1 for each acre of such habitat lost. Mitigation Measure BR-2 stipulated that the City shall create a Waterfowl and Raptor Conservation Area, and included requirements and definitions for it.[33] The DEIR does not require implementation of either of these mitigation measures. As a result, the Project would have significant, unmitigated impacts on habitat for waterfowl (and waterbirds).

Edge Effects

The DEIR provides the following analysis of edge effects:

> "Edge effects (including lighting, noise, trash/debris, urban and stormwater run-off, toxic materials, exotic plant and animal infestation, dust, trampling, and unauthorized recreation) shall be minimized by landscaping, elevation difference, minimization of effects, and compensatory mitigation. Therefore, impacts will be less than significant, and no further mitigation will be required."[34]

Whereas landscaping and elevation difference may reduce stormwater runoff, there is no evidence that these two variables would (or could) mitigate the other edge effects listed in the DEIR. In addition, the DEIR fails to identify what design variables or mitigation measures would result in "minimization of effects." Finally, compensatory mitigation does not justify the determination that edge effects would be less than significant because the DEIR does not incorporate compensatory mitigation as a required mitigation measure. For these reasons, the City's determination that edge effects would be less than significant is not supported by evidence.

[34] DEIR, p. 4.3-19.

8

Cumulative Impacts

The DEIR's analysis of cumulative impacts fails to comply with CEQA Guidelines. Contrary to CEQA Guidelines §15130(b)(1), the DEIR does not provide: (1) a list of past, present, and probable future projects producing related or cumulative impacts; or (2) a summary of projections contained in an adopted general plan or related planning document, or in a prior environmental document which has been adopted or certified, which described or evaluated regional or areawide conditions contributing to the cumulative impact. In addition, the DEIR fails to comply with CEQA Guidelines § 15130(b)(4) (which require a summary of the expected environmental effects to be produced by cumulative projects) and CEQA Guidelines § 15130(b)(5) (which require a reasonable analysis of the cumulative impacts of the relevant projects).

The DEIR provides no real analysis of cumulative impacts. For example, the DEIR provides no information on the amount of habitat that would be affected by cumulative impacts in relation to the amount of habitat that would remain unaffected. Instead, the DEIR merely makes a series of conclusory statements that are not supported by scientific evidence or analysis. First, the DEIR states:

> "The cumulative study area for biological resources includes the southwestern San Bernardino County region. This area consists of a variety of land uses that includes agricultural, residential, commercial, and industrial uses. The agricultural areas may include sensitive habitats which may contain special-status plants, migratory bird species, and jurisdictional resources. However, as discussed above the Project would implement mitigation measures to reduce impacts to the identified species to less than significant levels. Therefore, the Project would result in a less than significant contribution to cumulative impacts to these resources, and impacts would be less than cumulatively significant."[35]

This determination is not justified because the mitigation measures in the DEIR are limited to actions designed to avoid or minimize direct take of individual animals. The DEIR does not incorporate mitigation for the Project's residual impacts or its contribution to habitat loss. Cumulative impacts to habitat are potentially significant, especially given the scarcity of habitat for the special-status species that may occur at the Project site. Indeed, the Agriculture and Forestry Resources chapter of the DEIR concludes that the Project would result in a cumulatively considerable impact to agricultural resources, and that the impact would be significant and unavoidable. If the cumulative impact to agricultural resources would be significant and unavoidable, the cumulative impact to agricultural habitat also would be significant and unavoidable.

Second, the DEIR states:

> "The Project would remove potential raptor foraging habitat through development of the warehousing and business park structures. Although the existing agriculture may provide foraging habitat for raptors, it is not expected to be valuable, as the lands are actively maintained to minimize use by small mammals (prey for

[35] DEIR, p. 4.3-27.

9

> raptors) and active ground squirrel management programs are continually implemented. This loss of potential raptor foraging habitat would not make a cumulatively considerable contribution to the regional decline of raptors."[36]

This determination conflicts with the Final EIR for the New Model Colony General Plan Amendment (hereafter "NMC Final EIR"). The NMC Final EIR concluded that conversion of the NMC from agricultural uses to developed urban and suburban uses would have a significant impact on raptor habitat.[37]

The City's General Plan EIR states:

> "The open water areas of dairy runoff retention ponds, reservoirs, drainages, and low areas subject to flooding are the preferred locations for migratory birds in the NMC…The 1996 Envicom surveys found 49 species in the NMC areas. Nearly half (21 species) were found in open water and wet areas. Numerous raptor species are attracted to windrows, including red-tailed hawk (*Buteo jamaicensis*), American kestrel (*Falco spaverius*), and white-tailed kite (*Elanus leucurus*) (EIP 1999). Raptors use agricultural fields as foraging habitat, where small rodents or birds are most likely to be visible. The raptors may perch on trees in windrows, and on utilities poles and transmission lines overlooking open fields or may soar over the fields to forage. In open fields, ferruginous hawks (*Buteo regalis*) may roost on the ground where vegetation is low."[38]

The Project site contains all of the variables (i.e., open water areas, windrows, and utility poles and transmission lines overlooking open fields) that attract raptors. Although the DEIR claims the Project site is managed to minimize small mammals, the Project site continues to provide prey for raptors. According to the Applicant's burrowing owl survey report: "[m]ammal species directly observed, or of which sign was detected, included California ground squirrel (*Spermophilus beecheyi*), desert cottontail (*Sylvilagus auduboni*), and pocket gopher (*Thomomys bottae*)."[39] The DEIR provides no evidence that there is a surplus raptor habitat elsewhere in the area subject to cumulative effects (i.e., southwestern San Bernardino County), or that the habitat at the Project site is not valuable to raptor populations. To the contrary, if there is already a regional decline of raptor populations (as stated in the DEIR), all remaining habitat is critical to preventing further declines.

Third, the DEIR states:

> "Mitigation has been incorporated into the Project that would avoid direct impacts to nine sensitive wildlife species: the tricolored blackbird, grasshopper sparrow, Great blue heron, Swainson's hawk, yellow rail, California horned lark, and merlin. Therefore, the mitigation measures for the proposed Project would mitigate the potential of the Project to cumulatively combine with other projects;

[38] *Ibid*, p. 5.4-13.
[39] DEIR, Appendix C3, p. 11.

> and the Specific Plan would not contribute to the cumulative loss of any special status wildlife species."[40]

The DEIR once again ignores the Project's direct impacts on habitat for sensitive wildlife species. Scientific literature clearly states that habitat loss is a primary threat to the special-status species analyzed in the DEIR.[41] Because the DEIR does not incorporate compensatory habitat as a required mitigation measure, the Project's contribution to significant cumulative impacts remains cumulatively considerable.

MITIGATION

Compliance with the General Plan Amendment and Associated Settlement Agreement

The NMC Final EIR incorporated mitigation measures for waterfowl and waterfowl habitat; raptors and raptor habitat; and the Delhi Sands Flower-Loving Fly Ontario Recovery Unit.[42] Subsequent to the adoption of the NMC Final EIR, a lawsuit was filed against the City by the Endangered Habitats League, Inc. and Sierra Club challenging the City's CEQA compliance and approval of the General Plan Amendment. A settlement agreement was reached and agreed to by all parties that set forth revised mitigation measures for potential impacts in the NMC (referred to as Annexation Area 163).[43] These revised mitigation measures are supposed to remain in effect until all of the developable acres in the NMC reach full buildout.[44] The DEIR does not require the Applicant to implement the (original and revised) biological resource mitigation measures in the NMC Final EIR. Furthermore, I searched the California Protected Areas Database and could not find evidence that habitat mitigation fees have been used to purchase property, conservation easements, or other land with long-term conservation value per the terms of the settlement agreement.[45]

MM BIO-1

Tricolored Blackbird, Grasshopper Sparrow, Great Blue Heron, Swainson's Hawk, Yellow Rail, California Horned Lark, and Merlin

MM BIO-1 requires pre-construction nesting bird surveys within three days prior to vegetation removal if vegetation removal will occur during the migratory bird nesting season. This measure lacks the specificity needed to ensure bird nests are detected prior to vegetation removal. Specifically, MM BIO-1 fails to establish standards for the: (a) nest searching techniques, (b) minimum level of effort (i.e., survey hours per unit area), and (c) qualifications of the individual conducting the surveys. As explained below, the ability to successfully locate nests in the Project area is dependent on these three variables.

Several of the birds that have the potential to nest at the Project site are ground-nesting species (e.g., grasshopper sparrow, California horned lark, yellow rail, black-necked stilt, and killdeer, among others). Most ground-nesting birds construct nests that are inconspicuous and thus extremely hard to find unless special techniques are implemented.[46] Because MM BIO-1 does not require implementation of those techniques, it provides no assurances that the Project would avoid take of nesting birds.

Many biologists lack experience with nesting bird surveys and thus fail to devote the level of effort needed to locate all bird nests. Locating all nests within the 130-acre Phase 1 Project site would require a considerable level of effort. Because MM BIO-1 does not establish standards for the survey effort (e.g., minimum number of survey hours per unit area), it does not ensure all bird nests that may be affected by the Project would be located prior to vegetation removal.

The success of any nest-searching method depends on the surveyor's knowledge of where birds nest, how nesting birds behave, and the best time of day to search for nests.[47] Attaining this knowledge requires training and experience.[48] Because MM BIO-1 fails to establish standards (minimum qualifications) for the person that would conduct the nesting bird surveys, it does not ensure that person would have the qualifications needed to successfully locate all nests within the Project area prior to vegetation removal.

MM BIO-1 does not require protocol-level surveys for Swainson's hawk nests prior to vegetation removal. In addition, it would not be possible for the surveyor to voluntarily

implement the survey protocol within the 3-day timeframe established in MM BIO-1.[49] As a result, MM BIO-1 does not ensure Swainson's hawk nests would be detected, and thus, that Project impacts on the Swainson's hawk would be reduced to less-than-significant levels

MM BIO-1 states that a 250-foot buffer shall be fenced around songbird nests and a 500-foot buffer shall be fenced around raptor nests. The DEIR fails to provide evidence that these buffers would be sufficient to prevent indirect impacts to nesting birds. Suter and Joness (1981) surveyed 74 raptor researchers to derive recommendations for nest site protection.[50] Based on the survey results, Suter and Joness (1981) recommended a buffer distance of at least one kilometer (3,281 feet) to prevent raptors from abandoning their nests in response to construction and similar noisy, extended activities. This recommendation is comparable to CDFW's recommendation that no new disturbances, habitat conversions, or other project-related activities should occur within 1/2 mile of an active Swainson's hawk nest.[51]

Monitoring is critical to validating the adequacy of a nest buffer. Although MM BIO-1 states "[a] biological monitor shall visit the site once a week during ground disturbing activities to ensure all fencing is in place and no sensitive species are being impacted," it fails to identify: (a) minimum qualifications for the monitor, and (b) the variables that would be monitored to determine whether sensitive species are being impacted by construction activities. Furthermore, there is no scientific basis for the assumption that a nesting bird can tolerate an inadequate nest buffer for one week (i.e., the proposed interval of construction monitoring), especially without adverse effects to reproductive success and productivity. This issue is compounded by the absence of success standards, adaptive management triggers, and monitoring and reporting requirements for MM BIO-1.

California Glossy Snake

MM BIO-1 states:

> "Three days prior to any ground disturbing activities or vegetation removal, a qualified biological monitor should conduct a preconstruction survey to identify any sensitive biological resources. Any sensitive reptilian species that may be present within the Project area shall be relocated outside of the impact areas."

Relocation of snakes outside of the impact areas does not mitigate the Project's potentially significant impact on habitat for the California glossy snake. In addition, it may not prevent significant impacts to individual snakes because most reptile translocation projects are unsuccessful.[52] This issue is exacerbated by the DEIR's failure to establish: (a) the survey

methods, (b) potential receptor sites, and (c) procedures for handling and releasing snakes to maximize survivorship. Because the California glossy snake is active only at night and hides underground in daytime,[53] a standard visual survey would be unsuccessful in locating California glossy snakes that could be impacted by construction activities.

Western Mastiff Bat

MM BIO-1 states:
