> "Prior to implementation of Project activities that would demolish the agriculture buildings used for sheltering bovines, a qualified biologist shall conduct a preconstruction survey April 1 through August 31 to determine the presence or absence of roosting bats. If the survey does not identify the presence of occupied roosts, no further action is necessary."

Reliable detection of western mastiff bat roosts requires acoustic monitoring.[54] Because MM BIO-1 does not require acoustic monitoring, and because it fails to establish standards (minimum qualifications) for the "qualified biologist," MM BIO-1 does not ensure that bat roosts would be successfully located prior to demolition of the agriculture buildings.

MM BIO-1 incorporates the following mitigation for the removal of bat roosts from the Project site:

> "The removal of the roosting sites shall occur during the time of day when the roost is unoccupied. The loss of each roost will be compensated for by the construction and installation of two bat boxes suitable to the bat species and colony size excluded from the original roosting site. The bat boxes shall be installed in the vicinity prior to removal of the original day/maternity roost sites… Performance standards will be developed based on the results of the bat survey consistent with CDFW recommendations such that no residual significant impacts would remain."

Western mastiff bats roost in crevices and may occupy the roost at all times of day (i.e., all individuals may not exit the roost at night). This makes it difficult (or impossible) to determine whether a roost is unoccupied. As a result, preventing impacts to roosting bats requires installation of exclusion devices that remain in place for at least 7 days prior to removal of the roost.[55] Because MM BIO-1 does not identify methods for confirming the roost is unoccupied, and because MM BIO-1 does not require installation of exclusion devices, Project impacts to bat roosts remain potentially significant.

[55] Bat Conservation International [website]. 2021. Bats in Homes & Buildings. Available at: <https://www.batcon.org/about-bats/bats-in-homes-buildings/>. (Accessed 21 Dec 2021).

The DEIR provides no evidence that western mastiff bats use artificial roosts (e.g., bat boxes). Less than five percent of bat species have been documented to use artificial roosts, and most species that use artificial roosts are vespertilionids (the western mastiff bat is a molossid).[56] As a result, the ability of artificial roosts to mitigate impacts to occupied roosts has had limited success, especially in providing habitat for displaced maternity colonies. Johnston et al. (2004) concluded that freestanding bat houses likely fail to provide the thermal stability that bats seek in a roost, and that they are particularly inadequate for very large colonies.[57] MM BIO-1 fails to identify how bat boxes would be monitored and maintained, or where they could be installed without being impacted by the Project. In addition, MM BIO-1 improperly defers performance standards for the mitigation and it does not require contingency measures should the bat boxes fail to successfully replace roosts removed from the Project site. As a result, there are no assurances that MM BIO-1 would mitigate significant impacts to the western mastiff bat.

Western Pond Turtle

According to MM BIO-1: "[w]ithin 14 days prior to the onset of construction activities, a qualified biologist shall conduct pre-construction surveys for western pond turtle within all areas that fall within 100 feet of any suitable aquatic and upland nesting habitat for this species (stock/retention ponds)." Rathbun et al. (2002) examined the distances pond turtles moved away from aquatic habitat for refuge, nesting, and resting. Mean maximum travel distances were 49.7 meters (163 feet), 93.7 meters (307 feet), and 12.0 meters (39 feet), respectively.[58] However, western pond turtles have been reported ranging as far as 500 meters (1,640 feet) from a watercourse to find suitable nesting or over-wintering habitat.[59] As a result, a survey that is confined to areas within 100 feet of "suitable aquatic and upland nesting habitat" does not ensure reliable detection of pond turtles that may be impacted by the Project.

MM BIO-1 then states the following: "[i]f western pond turtles are observed in the construction area at any time during construction, the on-site biological monitor shall be notified and construction in the vicinity of the sighting shall be halted until such a time as a turtle has been removed from the construction zone and relocated by an approved biologist." The DEIR fails to establish procedures for pond turtle nests (with eggs or hatchlings), which are unlikely to remain viable if simply moved to another site. In addition, the DEIR fails to identify where turtles might be relocated, and what criteria would be evaluated to select appropriate receptor sites. This is important because moving turtles from one population to another can introduce disease or cause other negative impacts to animals at the release site (e.g., due to competition with translocated

Van Abbema (ed.), Conservation, Restoration, and Management of Tortoises and Turtles, An International Conference WCS Turtle Recovery Program and the New York Turtle and Tortoise Society, New York.

15

animals).[60] Furthermore, translocated turtles are likely to die if habitat at the release site is not high quality. Germano and Bishop (2008) concluded "[i]f the release habitat is not of high quality, then the chances of a positive outcome are low even when all other factors are taken into consideration. Although we could not evaluate habitat quality in the publications we reviewed, poor or unsuitable habitat was one of the most often reported reasons for translocation failure."[61] MM BIO-1 does not establish success criteria for turtle relocation. However, even if turtles are successfully moved out of the construction zone, MM BIO-1 would not mitigate the Project's significant impact on pond turtle habitat.

MM BIO-2

MM BIO-2 states:

> "The Project Applicant shall complete an initial BUOW take avoidance survey no less than 14 days prior to initiating ground disturbance activities. Implementation of avoidance and minimization measures (e.g., eliminating actions that reduce burrowing owl forage and burrowing surrogates (e.g., ground squirrel), or introduce/ facilitate burrowing owl predators) would be triggered by positive owl presence on the site where Project activities would occur. The development of avoidance and minimization approaches would be evaluated by monitoring burrowing owls (if present on-site)."

This mitigation measure is vague and confusing. The DEIR must identify the specific avoidance and minimization measures that the Applicant would need to implement if burrowing owls are present on the site. In addition, the DEIR needs to identify: (a) the monitoring requirements, (b) how monitoring would dictate the avoidance and minimization approaches, and (c) the parties responsible for selecting the appropriate avoidance and minimization measures.

Per the terms of the settlement agreement, if burrowing owls occur at a development site that is not viable long-term habitat for burrowing owls, the developer must make provisions for the relocation of the owls in a manner that is consistent with CDFW guidelines and protocols.[62] Not only does MM BIO-2 fail to require adherence to the burrowing owl measures established in the settlement agreement, but it also fails to discuss how impacts to burrowing owls would be avoided or minimized if owls at the site are year-round residents. If burrowing owls would be evicted from their burrows to enable construction activities, MM BIO-2 must require implementation of a Burrowing Owl Exclusion Plan that is approved by CDFW.[63]

Habitat loss is the primary threat to burrowing owls.[64] As a result, CDFW and the scientific community have concluded that compensatory habitat (with an equivalent or greater habitat area)

[64] *Ibid.*

is needed to mitigate for permanent habitat loss.[65] The DEIR does not require compensatory habitat, even if burrowing owls are detected during the preconstruction survey. Consequently, MM BIO-2 does not ensure Project impacts on the burrowing owl would be mitigated to less-than-significant levels.

Scott Cashen, M.S.
Senior Wildlife Biologist

Scott Cashen has 28 years of professional experience in natural resources management. During that time he has worked as a field biologist, forester, environmental consultant, and instructor of Wildlife Management. Mr. Cashen focuses on CEQA/NEPA compliance issues, endangered species, scientific field studies, and other topics that require a high level of scientific expertise.

Mr. Cashen has knowledge and experience with numerous taxa, ecoregions, biological resource issues, and environmental regulations. As a biological resources expert, Mr. Cashen is knowledgeable of the various agency-promulgated guidelines for field surveys, impact assessments, and mitigation. Mr. Cashen has led field investigations on several special-status species, including ones focusing on the yellow-legged frog, red-legged frog, desert tortoise, steelhead, burrowing owl, California spotted owl, northern goshawk, willow flycatcher, Peninsular bighorn sheep, red panda, and various forest carnivores.

Mr. Cashen is a recognized expert on the environmental impacts of renewable energy development. He has been involved in the environmental review process of over 100 solar, wind, biomass, and geothermal energy projects. Mr. Cashen's role in this capacity has encompassed all stages of the environmental review process, from initial document review through litigation support. Mr. Cashen provided expert witness testimony on several of the Department of the Interior's "fast-tracked" renewable energy projects. His testimony on those projects helped lead agencies develop project alternatives and mitigation measures to reduce environmental impacts associated with the projects.

Mr. Cashen was a member of the independent scientific review panel for the Quincy Library Group project, the largest community forestry project in the United States. As a member of the panel, Mr. Cashen was responsible for advising the U.S. Forest Service on its scientific monitoring program, and for preparing a final report to Congress describing the effectiveness of the Herger-Feinstein Forest Recovery Act of 1998.

AREAS OF EXPERTISE

- CEQA, NEPA, and Endangered Species Act compliance issues
- Comprehensive biological resource assessments
- Endangered species management
- Renewable energy development
- Scientific field studies, grant writing and technical editing

EDUCATION

M.S. Wildlife and Fisheries Science - The Pennsylvania State University (1998)
Thesis: *Avian Use of Restored Wetlands in Pennsylvania*
B.S. Resource Management - The University of California, Berkeley (1992)

PROFESSIONAL EXPERIENCE

Litigation Support / Expert Witness

Mr. Cashen has served as a biological resources expert for over 125 projects subject to environmental review under the California Environmental Quality Act (CEQA) and/or the National Environmental Policy Act (NEPA). As a biological resources expert, Mr. Cashen reviews CEQA/NEPA documents and provides his clients with an assessment of biological resource issues. He then submits formal comments on the scientific and legal adequacy of the project's environmental documents (e.g., Environmental Impact Report). If needed, Mr. Cashen conducts field studies to generate evidence for legal testimony, or he can obtain supplemental testimony from his deep network of species-specific experts. Mr. Cashen has provided written and oral testimony to the California Energy Commission, California Public Utilities Commission, and U.S. district courts. His clients have included law firms, non-profit organizations, and citizen groups.

Project Management

Mr. Cashen has managed several large-scale wildlife, forestry, and natural resource management projects. Many of the projects have required hiring and training field crews, coordinating with other professionals, and communicating with project stakeholders. Mr. Cashen's experience in study design, data collection, and scientific writing make him an effective project manager, and his background in several different natural resource disciplines enable him to address the many facets of contemporary land management in a cost-effective manner.

Forestry

Mr. Cashen has five years of experience working as a consulting forester on projects throughout California. Mr. Cashen has consulted with landowners and timber operators on forest management practices; and he has worked on a variety of forestry tasks including selective tree marking, forest inventory, harvest layout, erosion control, and supervision of logging operations. Mr. Cashen's experience with many different natural resources enable him to provide a holistic approach to forest management, rather than just management of timber resources.

REPRESENTATIVE EXPERIENCE

- Lead Consultant - CalFire fuels treatment projects *(SD and Riverside Counties)*
- Lead Consultant and supervisor of harvest activities – San Diego Gas and Electric Bark Beetle Tree Removal Project *(San Diego)*
- Crew Leader - Hillslope Monitoring Program *(CalFire: throughout California)*
- Consulting Forester – Forest inventories and timber harvest projects *(various clients throughout California)*

Grant Writing and Technical Editing

Mr. Cashen has prepared and submitted over 50 proposals and grant applications. Many of the projects listed herein were acquired through proposals he wrote. Mr. Cashen's clients and colleagues have recognized his strong scientific writing skills and ability to generate technically superior proposal packages. Consequently, he routinely prepares funding applications and conducts technical editing for various clients.

EXHIBIT C

SMITH ENGINEERING & MANAGEMENT

December 21, 2021

Mr. Aidan Marshall
Adams Broadwell Joseph & Cardozo
601 Gateway Boulevard, Suite 1000
South San Francisco, CA 94080-7037

Subject: South Ontario Logistics Center Specific Plan Project DEIR (SCH 2021010318) P21025

Dear Mr. Marshall:

Per your request, I reviewed the Draft Environmental Impact Report (the "DEIR") for the South Ontario Logistics Center Specific Plan Project (the "Project") in the City of Ontario (the "City"). My review is with respect to transportation and circulation considerations.

My qualifications to perform this review include registration as a Civil and Traffic Engineer in California, over 50 years professional consulting practice in these fields and both preparation and review of the traffic and transportation components of numerous environmental documents prepared under the California Environmental Quality Act ("CEQA"). My professional resume is attached hereto.

The City Has Adopted Thresholds of Significant Impact That Are Inconsistent With the Intent of SB 743 and With OPR Guidance

With regard to VMT, the City has set a very lenient VMT significant impact threshold of the City's average VMT per Served Person (SP) at 2040 General Plan Build-out. This threshold is a relatively high VMT level of 36.20 VMT per SP. However, the intent of SB 743 in requiring VMT as the principal measure of transportation impact was *to reduce VMT and thereby reduce air pollution and greenhouse gas emissions.* The Governor's Office of Planning and Research

TRAFFIC • TRANSPORTATION • MANAGEMENT
5311 Lowry Road, Union City, CA 94587 tel: 510.489.9477 fax: 510.489.9478

("OPR"), the agency that oversees implementation of CEQA and CEQA guidelines, in guidance circulated in December 2018[1] *recommends* a significance threshold set at 85 percent of the average VMT per service population VMT in the Lead Agency's jurisdictional area, although leaving discretion to the lead agency. If that guidance had been followed by the City, the threshold would be 30.77 VMT per SP. Setting a more lenient VMT significance threshold such as the City has does not conform to and undermines the legislative intent of SB 743 of *reducing VMT* and suggests that the City is content to perpetrate the high VMT per SP that prevails in the area at the present time. So the analysis starts out with a defective threshold of significance. In setting the VMT significance threshold at the projected average VMT per SP, the City appears to be abusing its discretion.

The Project Exceeds Even the Lenient VMT Guidelines Adopted By the City

The actual VMT per SP projected for the Project is 38.65 VMT per SP, clearly above even the City's lenient significance threshold of 36.20 VMT per SP. The DEIR and its Appendix I present reasoned arguments why the overage cannot be effectively mitigated and why the condition must be regarded as a significant and unavoidable impact. But the notations that the Project exceeds the threshold by only 6.77 percent is a partial justification for findings of overriding considerations is unreasonable given the fact that if the City had adopted the more rigorous significance threshold consistent with OPR guidance and the legislative intent of SB 743, the threshold would be exceeded by 25.61 percent).

The Project Is Expected To Fail To Mitigate VMT Impacts to Less Than Significance

Seemingly questioning their own decision to claim that the Project met the Low VMT Area which would have exempted the Project from more detailed VMT analysis, the DEIR's transportation analysts conducted a Project-specific VMT analysis which they claim is for 'informational purposes only'. This analysis indicates that the Project would generate 24.44 VMT per service population in 2020 and 23.76 VMT per service population in the 2040 cumulative scenario. Since the City's adopted threshold of significant VMT impact is its own estimated average of 26.5 VMT per service population, the finding of the Project-specific analysis is that there is no significant VMT impact. However, had the City followed OPR guidance and set its VMT significance threshold 15 percent below the existing average, that threshold would have been 22.53 VMT per service population instead of 26.5 VMT. With the threshold set at that level consistent with OPR guidance, the Project would be found to have significant VMT impact at both the 2020 and 2040 cumulative levels. Consequently, the findings of the

TRAFFIC • TRANSPORTATION • MANAGEMENT
5311 Lowry Road, Union City, CA 94587 tel: 510.489.9477 fax: 510.489.9478

DEIR are inconsistent with the legislative intent of SB 743 which established VMT as the metric for review of traffic impacts and the matter must be subject to further review.

The Project Must Implement All Feasible Measures To Mitigate or Minimize Significant VMT Impacts. It Has Not Done So.

As noted above the actual VMT per SP projected for the project is 38.65, clearly above the City's lenient significance threshold and the DEIR and its Appendix I present reasoned arguments why the overage cannot be effectively mitigated for the Project as a whole directly and why the condition must be regarded as a significant and unavoidable impact. One of the major reasons, in addition to the low density suburban and rural character of the area, the sparsity of transit service, the lack of mixed use in the Project and surrounding area and broad distribution of workforce residences is the fact that the eventual occupants of the Project industrial park and large industrial warehouse buildings and the nature of their operations is unknown, hence the susceptibility to Transportation Demand Management ("TDM") measures is in substantial doubt. Since CEQA requires implementation of all feasible mitigation measures, as the nature and operational plans of individual occupancies of portions of the Project become known, the City must be diligent in enforcing the conditions of Mitigation Measure TRANS-1 so that each occupant does the best they can to minimize, to the extent practical, excess VMT above the significance threshold. Mitigation Measure TRANS-1 states as follows.

> MM TRANS-1 At the time of Certificate of Occupancy for future tenants, the future tenant shall demonstrate implementation of reasonable and feasible VMT reduction measures to the satisfaction of the City of Ontario Planning Director. Measures to be considered include, but are not limited to VMT measures 1, 6 and 7 as described in EIR Appendix I2.

While this is well and good, there are other creative mitigation opportunities that the City and its consultants have not pursued. One example would be to impose annual excess VMT penalty fees with the proceeds going to fund increased transit services in the existing or new route corridors that appear likely to be most productive in attracting new riders and thereby reduce overall VMT in the City. The theory here is that using Project funds to productively reduce VMT somewhere in the City is better than squandering funds in futile and unproductive attempts to reduce VMT at the Project level. Another example would be using 'excess VMT fees' to create and maintain Park-and-Ride facilities near major interchanges or major transit stops.

The Project Must Comply With the TOP Mobility Element As Well As the San Bernardo County CMP. Noncompliance Would Constitute A Significant CEQA Impact

TRAFFIC • TRANSPORTATION • MANAGEMENT
5311 Lowry Road, Union City, CA 94587 tel: 510.489.9477 fax: 510.489.9478

According to Appendix G of the State CEQA Guidelines, a project would normally have a significant effect on the environment if the project would:

1) Conflict with a program, plan, ordinance, or policy addressing the circulation system, including transit, roadway, bicycle, and pedestrian facilities. This is the first of 4 conditions involving impact in the Transportation category. The others involve VMT, Increased Hazards and Deficient Emergency Access.

The City's General Plan ("TOP") includes a Mobility Element. The Mobility Element states that LOS E or better must be maintained at all road intersections in peak hours. San Bernardino County also has a Congestion Management Plan ("CMP") applicable to some City and surrounding area roadways. The CMP also requires meeting certain LOS standards. The adjacent City of Chino and Caltrans also have adopted LOS standards. Under Appendix G CEQA Guidelines, these plans must be complied with, including the LOS standards, or there would be a significant environmental impact under CEQA.

The Appendix I Transportation Impact Study includes a conventional traffic LOS study. The DEIR narrative states that this material is provided for information purposes, implying that it is not subject to comment under CEQA. However, given the foregoing, this statement is incorrect. In order to substantiate the DEIR's determination that the Project would not conflict with a program, plan, ordinance, or policy addressing the circulation system, the Appendix I LOS analysis, mitigation and timeliness of mitigation implementation must be subject to CEQA review.

Mitigation Measures To Comply With the TOP Mobility Element May Not Be Implemented In a Timely Manner, Hence Constituting a Failure To Mitigate Under CEQA

The Appendix I study discloses a plethora of locations where, without mitigation, the Project would significantly impact intersection LOS and hence not conform to the Mobility Element or other relevant transportation plans and policies. In the Existing + Project Condition, a total of 15 intersections impacted by the Project are identified. At the 2024 cumulative scenario with build-out of both phases of the Project, 21 impacted intersections are identified. By the 2040 cumulative scenario, 41 intersections are impacted by the Project. Everything is supposedly mitigated. Some would be by direct Project action on internal street segments or planned half-widths of streets bounding the Project's perimeter. However, when the opposite half-width gets built if not already constructed is uncertain. Some would be by payments to the City's Development Impact Fees, some of which gets shared with the County. But since the City has discretion when to implement specific local improvements covered by those fees, and since they

TRAFFIC • TRANSPORTATION • MANAGEMENT
5311 Lowry Road, Union City, CA 94587 tel: 510.489.9477 fax: 510.489.9478

depend on streams of DIF paid by other projects, there is no guarantee that the improvements will be made in a timely manner (2024 or close to it). Some will be made through County Measure I sales tax funds supplemented by County shares of City DIF funds. But again, there is no guarantee when the County will implement specific improvements, or whether enough other anticipated DIF funds will be realized. The Measure I sales tax program runs through 2040 although it could issue bonds against future revenues to advance construction ahead of revenue collection. But there is no guarantee of timeliness of mitigation. The DEIR and Appendix I do not even attempt to put a schedule on mitigation actions to locations with LOS inconsistencies with the Mobility Element and the related policies of the County, Chino and Caltrans.

Given this situation, the City must change the finding on DEIR's determination that the Project would not conflict with a program, plan, ordinance, or policy addressing the circulation system from "no significant impact" to "significant and unavoidable" or provide a convincing schedule of finance and construction of the mitigation improvements disclosed that demonstrates the timeliness of mitigation.

Conclusion

Given all of the above, the DEIR must be substantially revised and recirculated in draft status.

Sincerely,

Smith Engineering & Management
A California Corporation

Daniel T. Smith Jr., P.E.
President

PROFESSIONAL EXPERIENCE

Smith Engineering & Management, 1993 to present. President.
DKS Associates, 1979 to 1993. Founder, Vice President, Principal Transportation Engineer.
De Leuw, Cather & Company, 1968 to 1979. Senior Transportation Planner.
Personal specialties and project experience include:

Litigation Consulting. Provides consultation, investigations and expert witness testimony in highway design, transit design and traffic engineering matters including condemnations involving transportation access issues; traffic accidents involving highway design or traffic engineering factors; land use and development matters involving access and transportation impacts; parking and other traffic and transportation matters.

Urban Corridor Studies/Alternatives Analysis. Principal-in-charge for State Route (SR) 102 Feasibility Study, a 35-mile freeway alignment study north of Sacramento. Consultant on I-280 Interstate Transfer Concept Program, San Francisco, an AA/EIS for completion of I-280, demolition of Embarcadero freeway, substitute light rail and commuter rail projects. Principal-in-charge, SR 238 corridor freeway/expressway design/environmental study, Hayward (Calif.) Project manager, Sacramento Northeast Area multi-modal transportation corridor study. Transportation planner for I-80N West Terminal Study, and Harbor Drive Traffic Study, Portland, Oregon. Project manager for design of surface segment of Woodward Corridor LRT, Detroit, Michigan. Directed staff on I-80 National Strategic Corridor Study (Sacramento-San Francisco), US 101-Sonoma freeway operations study, SR 92 freeway operations study, I-880 freeway operations study, SR 152 alignment studies, Sacramento RTD light rail systems study, Tasman Corridor LRT AA/EIS, Fremont-Warm Springs BART extension plan/EIR, SRs 70/99 freeway alternatives study, and Richmond Parkway (SR 93) design study.

Area Transportation Plans. Principal-in charge for transportation element of City of Los Angeles General Plan Framework, shaping nations largest city two decades into 21'st century. Project manager for the transportation element of 300-acre Mission Bay development in downtown San Francisco. Mission Bay involves 7 million gsf office/commercial space, 8,500 dwelling units, and community facilities. Transportation features include relocation of commuter rail station; extension of MUNI-Metro LRT; a multi-modal terminal for LRT, commuter rail and local bus; removal of a quarter mile elevated freeway; replacement by new ramps and a boulevard; an internal roadway network overcoming constraints imposed by an internal tidal basin; freeway structures and rail facilities; and concept plans for 20,000 structured parking spaces. Principal-in-charge for circulation plan to accommodate 9 million gsf of office/commercial growth in downtown Bellevue (Wash.). Principal-in-charge for 64 acre, 2 million gsf multi-use complex for FMC adjacent to San Jose International Airport. Project manager for transportation element of Sacramento Capitol Area Plan for the state governmental complex, and for Downtown Sacramento Redevelopment Plan. Project manager for Napa (Calif.) General Plan Circulation Element and Downtown Riverfront Redevelopment Plan, on parking program for downtown Walnut Creek, on downtown transportation plan for San Mateo and redevelopment plan for downtown Mountain View (Calif.), for traffic circulation and safety plans for California cities of Davis, Pleasant Hill and Hayward, and for Salem, Oregon.

Transportation Centers. Project manager for Daly City Intermodal Study which developed a $7 million surface bus terminal, traffic access, parking and pedestrian circulation improvements at the Daly City BART station plus development of functional plans for a new BART station at Colma. Project manager for design of multi-modal terminal (commuter rail, light rail, bus) at Mission Bay, San Francisco. In Santa Clarita Long Range Transit Development Program, responsible for plan to relocate system's existing timed-transfer hub and development of three satellite transfer hubs. Performed airport ground transportation system evaluations for San Francisco International, Oakland International, Sea-Tac International, Oakland International, Los Angeles International, and San Diego Lindberg.

Campus Transportation. Campus transportation planning assignments for UC Davis, UC Berkeley, UC Santa Cruz and UC San Francisco Medical Center campuses; San Francisco State University; University of San Francisco; and the University of Alaska and others. Also developed master plans for institutional campuses including medical centers, headquarters complexes and research & development facilities.

Special Event Facilities. Evaluations and design studies for football/baseball stadiums, indoor sports arenas, horse and motor racing facilities, theme parks, fairgrounds and convention centers, ski complexes and destination resorts throughout western United States.

Parking. Parking programs and facilities for large area plans and individual sites including downtowns, special event facilities, university and institutional campuses and other large site developments; numerous parking feasibility and operations studies for parking structures and surface facilities; also, resident preferential parking .

Transportation System Management & Traffic Restraint. Project manager on FHWA program to develop techniques and guidelines for neighborhood street traffic limitation. Project manager for Berkeley, (Calif.), Neighborhood Traffic Study, pioneered application of traffic restraint techniques in the U.S. Developed residential traffic plans for Menlo Park, Santa Monica, Santa Cruz, Mill Valley, Oakland, Palo Alto, Piedmont, San Mateo County, Pasadena, Santa Ana and others. Participated in development of photo/radar speed enforcement device and experimented with speed humps. Co-author of Institute of Transportation Engineers reference publication on neighborhood traffic control.

Bicycle Facilities. Project manager to develop an FHWA manual for bicycle facility design and planning, on bikeway plans for Del Mar, (Calif.), the UC Davis and the City of Davis. Consultant to bikeway plans for Eugene, Oregon, Washington, D.C., Buffalo, New York, and Skokie, Illinois. Consultant to U.S. Bureau of Reclamation for development of hydraulically efficient, bicycle safe drainage inlets. Consultant on FHWA research on effective retrofits of undercrossing and overcrossing structures for bicyclists, pedestrians, and handicapped.

EXHIBIT D

SETTLEMENT AND GENERAL RELEASE AGREEMENT

This Settlement and General Release Agreement ("Agreement") is made on the Effective Date defined herein and is by and between petitioners and appellants Endangered Habitats League, Inc. ("EHL") and Sierra Club, Inc. ("Sierra Club") (collectively "Petitioners"), and respondent City of Ontario ("Ontario" or "City"), a municipality organized under the laws of the State of California, all three of whom are collectively referred to as the "Parties," in connection with the settlement of any and all claims, demands, causes of action, obligations, damages, and liabilities of any kind that have arisen between the Parties.

RECITALS

A. On or about February 9, 1998, EHL commenced legal action against Ontario entitled Endangered Habitats League, Inc. v. City of Ontario et al., San Bernardino County Superior Court Case No. RCV 32616 (the "Action"). On March 13, 1998, Sierra Club joined EHL in filing a first amended petition for writ of mandate in the Action.

B. In the Action, Petitioners contested Ontario's approval in January 1998 of a general plan amendment (the "General Plan Amendment"), zoning changes and certification of a final environmental impact report ("Final EIR") involving 8,200 acres of land to the south of Ontario's current city limits and within Ontario's "sphere of influence," also referred to as Annexation Area 163 ("Annexation Area 163") as shown in the solid red-bordered, yellow shaded portion of the attached Exhibit "A." The Petitioners alleged that Ontario's actions and approvals on these matters, inter alia, violated the California Environmental Quality Act ("CEQA") and planning and zoning laws, including inconsistency with Ontario's existing General Plan ("General Plan"). Petitioners also alleged that Ontario violated Water Code sections 10910-10914 by not obtaining and disclosing pertinent public water system matters in the Final EIR. Ontario disputes all of Petitioners' contentions.

C. On or about March 16, 1999, San Bernardino County Superior Court Judge Jeffrey King denied Petitioners' first amended petition for writ of mandate in the Action. On or about April 8, 1999, Judge King issued a judgment and order to that effect.

D. On or about May 11, 1999, Petitioners filed a notice of appeal from Judge King's judgment and order in the Action. That appeal, No. E024964, is currently before the California Court of Appeal, Fourth District, Division 2 (the "Appellate Action").

E. Since the Petitioners filed their notice of appeal, the Parties have engaged in extensive settlement negotiations regarding the Appellate Action.

F. The purpose of this Agreement is to settle and release fully and completely all claims that Petitioners had, have, or may have against Ontario regarding: (1) the Action, (2) the Appellate Action, and (3) any present or future litigation involving development in Annexation Area 163, which conform to the terms of this Agreement, and make certain provisions for the further mitigation of environmental impacts attributable to Ontario's approval of the 1998 General Plan Amendment or future general plan amendments contemplated by this Agreement, as discussed herein.

RVPUB\SMA\623437 1

G. Ontario has previously committed in the Final EIR prepared for the annexation of Annexation Area 163 and elsewhere to a comprehensive effort to protect the environment and maximize the conservation value of land set aside in Annexation Area 163. To that end, through the Final EIR and elsewhere (see Exhibit "B" attached hereto), Ontario has committed to achieving the following: (1) acquiring 145 acres within Annexation Area 163 as a Waterfowl and Raptor Conservation Area; (2) acquiring 160 acres of land or easements within the Chino Basin area to provide wetland and foraging habitat for waterfowl; and (3) coordinating with other governmental entities and making their best efforts in the Habitat Area to attempt to create an inter-jurisdictional plan pursuant to Senate Bill 831.

DEFINITIONS

"Advisory Committee" as used in this Agreement shall mean an advisory committee of stakeholders formed by the Parties pursuant to paragraph 5, below.

"Developable Acres" as used in this Agreement shall mean the actual net area to be developed, excluding only Publicly Dedicated Property. There are approximately 5,259 Developable Acres in Annexation Area 163 based on the current General Plan.

"Ecologically Functional Units" as used in this Agreement shall mean habitat with high or medium biological value or potentially high or medium biological value capable of sustaining species over the long term as a result of their size, location, conductivity, and/or edge effects as determined by a qualified biologist.

"Effective Date" as used in this Agreement shall mean the date on which the request for dismissal of the Appellate Action is filed with the court as provided in paragraph 19.

"Habitat Area" as used in this Agreement shall mean the area within the red and black-dashed border shown in Exhibit A, attached hereto, or other areas which the Land Trust finds to have a biologically functional relationship to waterfowl, Burrowing Owl or other raptors, Delhi Sands flower-loving fly, or other wildlife of the Chino Basin.

"Land Trust" as used in this Agreement shall mean a land trust, conservancy or other non-profit corporation or non-profit entity which is created or selected by the Parties to carry out the responsibilities, goals and objectives pertaining to mitigation of environmental impacts, as set forth in this Agreement, and any further responsibilities to which the Parties may mutually agree at a later time, and which shall be responsible for managing the mitigation as described in paragraphs 2 and 4, with oversight by the Parties.

"Livable Communities Policies" as used in this Agreement shall mean policies: (1) promoting a balance of land uses, "walkable" communities with mixed use community centers, pedestrian amenities with parks, trails and open spaces; and (2) encouraging more employment and related opportunities in proximity to residential development and mixed use activity clusters to allow potential opportunities for public transit and effective traffic circulation between residential and employment areas. The Parties agree that the current General Plan for Annexation Area 163 contains these policies as set forth in this definition.

"Mitigation Fee" as used in this Agreement shall mean a fee of two thousand dollars ($2,000) imposed on a per-acre basis on Developable Acres to be used for mitigation for potential future environmental impacts that may occur from development in Annexation Area 163. The Mitigation Fee amount may be revised upward by Ontario on its own initiative or at the request of any of the Parties or the Land Trust, but Ontario is not obligated at any time to change the Mitigation Fee amount. Ontario may revise the Mitigation Fee downward only if, and to the extent, it replaces any Mitigation Fee shortfall with separate funds.

"Publicly Dedicated Property" shall mean property dedicated to Ontario or any other public entity for schools, fire stations, public parks, public roads and streets, libraries, water well sites, or sewer treatment plants, or other comparable property dedicated or acquired for public uses or public purposes.

"Termination Date" as used in this Agreement shall mean the date on which Ontario determines in its sole and absolute discretion that full build out of all Developable Acres within Annexation Area 163 has occurred.

AGREEMENT AND RELEASE

NOW, THEREFORE, in consideration of the mutual covenants, promises and undertakings set forth herein, Petitioners and Ontario agree as follows:

1. Each recital set forth above is incorporated herein by reference and made a part of this Agreement.

2. The Parties agree that this Agreement is intended to address and provide mitigation for certain potential future environmental effects that could result from development occurring in Annexation Area 163. This Agreement is intended to cover potential environmental impacts in Annexation Area 163 to the Burrowing Owl, the Delhi Sands Flower-Loving Fly ("DSF"), raptor foraging and wildlife habitat, loss of open space, and actual and potential habitat and agricultural lands. This Agreement also covers other sensitive species, both listed and non-listed, that inhabit or may inhabit similar habitat in Annexation Area 163. To this end, the Parties agree to the measures ("Mitigation Measures") set forth below.

a. Ontario shall impose the Mitigation Fee on development of Developable Acres in Annexation Area 163 that requires discretionary approval or permitting from Ontario until the Termination Date. The Mitigation Fee shall be paid by the real property owner or developer on or before the time Ontario issues grading permits for development within Annexation Area 163. The Mitigation Fee shall not be required for discretionary approvals or permits issued under the Agricultural Overlay Ordinance.

b. Notwithstanding subparagraph (a) above, the City of Ontario will identify through CEQA review, and in consultation with DFG, lands occupied by Burrowing Owl and suitable as long-term habitat due to proximity to watercourses, flood control channels, proposed or active trails, or other planned or protected open space. In

such cases, Ontario will require avoidance of those lands necessary to maintain a viable territory and will require their maintenance for long-term habitat value through dedication in fee or grant of easement to the Land Trust. In determining the scope of the viable territory, the City may include contiguous lands which are permanently protected and suitably managed to maintain Burrowing Owl habitat. However, if the City determines that the application of the foregoing measures would result in an unconstitutional taking of private property under then-controlling judicial interpretations and the City's determination is substantiated by a written analysis from an independent expert in land use economics or other expert as appropriate under then-controlling judicial interpretations, who shall be selected by the City based upon the City's standard policies and practices for selecting experts with consideration of any input provided by the other parties, alternative measures for mitigating impacts on Burrowing Owl will be adopted in accordance with paragraph (c) below and through consultation with DFG. Any dedication made by a developer or other entity pursuant to the terms of this subsection may be in lieu of paying all or a portion of the Mitigation Fee set forth in subsection "a" above on those acres conserved, in accordance with this Paragraph.

c. Notwithstanding subsection "a" above, if Burrowing Owl individuals are found on a proposed development site and the site is not viable long-term habitat as determined by Ontario, the developer shall pay the Mitigation Fee and make provisions for the relocation of the Burrowing Owl individuals in a manner consistent with DFG guidelines and protocols.

d. The Parties acknowledge that habitat that benefits DSF can be expected to benefit Burrowing Owl, therefore up to 25% of the Mitigation Fee may be used for the recovery of DSF at Ontario's sole discretion. This percentage may change upon agreement of the Parties.

e. All Mitigation Fees collected shall be utilized for the purposes set forth in paragraphs 2 and 4(b), and may be used to: (1) purchase real property, conservation easements or other land use encumbrances with long-term conservation value for environmental impacts referenced in paragraphs 2 and 4; (2) enhance or restore lands with such values; (3) maintain and operate such lands; and (4) pay for related administrative duties. The amount dedicated to the administrative costs of such property shall not exceed ten percent (10%) of the total Mitigation Fees, unless approved by the Advisory Committee.

f. Real property or easements dedicated, conveyed or purchased to benefit wildlife, waterfowl, raptors and/or Burrowing Owls must have long-term conservation value for those species and must be managed by the Land Trust for their benefit. Such parcels must be located within the Habitat Area. Fee title, conservation easements, and/or long-term management agreements are appropriate legal mechanisms for advancing the environmental protections contemplated by this Agreement. Such property and easements shall be managed by the Land Trust. Examples of acceptable property are those adjacent to known habitat along flood

control channels (e.g., Cucamonga Creek), occupied or suitable lands within the Habitat Area, occupied or suitable uplands contributing to the functional value of wetlands and riparian habitat along the Santa Ana River or its tributaries, and habitat which is also beneficial to the DSF. Examples of unacceptable property are those that would otherwise be purchased by another entity or group as open space mitigation for environmental impacts. At the discretion of the Land Trust, the Mitigation Fee may be used to restore or enhance such property to contribute to long-term conservation values.

3. The Mitigation Fees shall be imposed until the Termination Date. Subject to Ontario's right to retain up to 25% of any Mitigation Fees collected to promote the recovery of DSF (see paragraph 2(d) above), any Mitigation Fees paid to Ontario shall be placed in their entirety in a separate, interest-bearing account managed by Ontario until the Land Trust is created, at which time all funds in the account shall be managed by the Land Trust, less fees retained by Ontario. Ontario shall be reimbursed for its actual and reasonable costs associated with any required annual accounting activities of the fund or any other required management costs.

4. In order to enhance the biological impact mitigation imposed as part of the Final EIR, the City may amend the General Plan, subject to appropriate CEQA review and other applicable legal requirements, to modify provisions for the 145-acre onsite Waterfowl and Raptor Conservation Area ("WRCA") in the manner described herein. In lieu of establishing the on-site WRCA, in whole or part, as provided in the Final EIR, the City may make the following alternative provisions for mitigation.

a. The City shall determine the area to be removed from the WRCA and for each such acre shall provide funding at the rate of forty thousand dollars ($40,000) per acre for mitigation of wildlife impacts outside of Annexation Area 163 ("Offsite Mitigation"). For this purpose, the City shall establish an impact fee or other mechanism for generating revenue. The City may include in this mechanism the generation of funding, at the same rate, to cover preservation of the 160 acres of offsite mitigation lands specified in the Final EIR, for a total of up to 305 acres of Offsite Mitigation. Responsibility for payment shall be borne by development within Annexation Area 163 under the 1998 General Plan Amendment. The funding mechanism shall be established before issuance by the City of any grading permit for any such development. Payment of a proportionate share of the Mitigation Fee shall be a prerequisite to any disturbance of an affected development site which requires a grading permit. The city shall collect the mitigation funding and make it available for Offsite Mitigation purposes at a rate equal to the proportionate share of development of Developable Acres. Funds collected by the City shall be managed by the Land Trust, and prior to establishment of the Land Trust, shall be handled by the City as set forth in paragraph 3.

b. The Land Trust shall be the entity responsible for acquiring and administering the Offsite Mitigation as well as the other properties addressed in this Agreement. In addition to the provisions of paragraph 5, below, concerning operation of the

Land Trust, the following goals and objectives shall govern implementation of the Offsite Mitigation by the Land Trust.

i. The Land Trust activities should emphasize preservation of wildlife values similar to those which will be directly impacted by development of Annexation Area 163, with particular emphasis on habitat for Burrowing Owl and other raptors, waterfowl, and riparian species.

ii Habitat values can be protected through acquisition of real property in fee, easements, or other appropriate legal mechanisms for long-term protection, as well as through restoration, enhancement, and maintenance of habitat values on land otherwise protected from development. Provision should be made for long-term maintenance of habitat values on sites protected by the Land Trust.

iii. Offsite Mitigation lands should be within the Habitat Area or in nearby areas where biological values bear a functional relationship to wildlife of the Habitat Area.

iv. To the maximum extent practicable, Offsite Mitigation areas should be areas of contiguous acreage and comply with the definition of Ecologically Functional Units set forth above.

c. Petitioners will not oppose amendments to the General Plan and/or Final EIR carried out in accordance with this paragraph 4 and will not initiate or join any litigation challenging the implementation of the Offsite Mitigation in accordance with this paragraph. In any such litigation, EHL agrees to provide an amicus brief in support of Ontario's position electing to move a portion or all of the WRCA off site and in implementing the Offsite Mitigation program. Provisions not to initiate or join in any litigation challenging the Offsite Mitigation program will be included in letters to be provided by Pomona Valley Audubon Society and TriCounty Conservation League. This provision is in addition to the requirements set forth in paragraph 12.

d. Prior to its formal actions to amend the General Plan to provide for Offsite Mitigation and to establish a funding mechanism for that purpose, Ontario shall, in addition to all required public notice and participation requirements of CEQA, notify Petitioners of these proposed actions.

5. The Parties shall form the Advisory Committee within 90 days of the Effective Date. The Advisory Committee shall be composed of two representatives appointed by Ontario, two representatives appointed by Petitioners, and one representative appointed by the already named representatives. The Advisory Committee shall oversee creation or selection of the Land Trust. The Land Trust shall be charged with carrying out the responsibilities described in this Agreement concerning mitigation of environmental impacts. The Land Trust shall be accorded flexibility in carrying out its duties; provided, however, that the Land Trust shall act in a fiscally responsible and professional manner in connection with all of its activities under this Agreement. The Advisory Committee shall attempt to select an existing land trust or conservation entity to

conduct the activities and responsibilities set forth for the Land Trust in this Agreement. Such existing land trust or conservation entity will preferably be local to the area and experienced in acquiring and managing conservation or mitigation property. If an existing land trust or conservation entity cannot be selected within a reasonable period of time, the Parties may oversee the creation of a land trust. Upon final approval of the Land Trust by the Advisory Committee, the Advisory Committee shall cease to exist and any responsibilities given to it by this Agreement shall be immediately assumed by the Board of Directors of the Land Trust. The Land Trust and its functions may be merged with or relinquished to any other program specifically designed to protect the environment at any time so as to most efficiently and comprehensively achieve the goals of this Agreement. If the Land Trust is merged with or relinquished to any other program at a time when the Advisory Committee no longer exists, such merger or relinquishment shall be subject to the Parties' approval.

6. If the Land Trust cannot, does not or can no longer carry out its responsibilities under this Agreement in conformance with the requirements, goals and objectives listed above, the Parties shall, at the request of any Party, reconvene the Advisory Committee to identify causes of the nonperformance and prescribe remedial changes. Such changes may include reformation or termination of the Land Trust, replacement of it with another similar entity, or transfer of its responsibilities to the City of Ontario. Any successor entity, whether it be another land trust or conservation entity, or Ontario itself, shall be responsible for carrying out the requirements, goals and objectives for the Land Trust set forth in this Agreement.

7. For every residential, commercial, industrial or other development project in Annexation Area 163 requiring discretionary approval or permitting, Ontario shall require the real property owner or developer to conduct a biological habitat assessment and when appropriate, biological surveys pursuant to formally adopted protocols, by qualified biologists or pursuant to any subsequently adopted Habitat Conservation Plan or a similar planning mechanism as part of a subsequent CEQA environmental review process. Where appropriate, these assessments shall determine whether species listed as threatened or endangered or of special concern after this Agreement has been fully executed are present on the real property proposed to be developed.

8 If changing pedestrian use, mixed use, or compact community design attributable to a particular project causes average daily vehicle trips in Annexation Area 163 to substantially increase beyond those identified in the General Plan and Final EIR, and significant new environmental impacts would thereby result as determined by Ontario, Ontario shall require supplemental environmental review prior to approving the project.

9. Any specific plans approved by Ontario in Annexation Area 163 shall be consistent with the General Plan and the purposes of "Livable Communities Policies" as defined in this Agreement.

10. As specific plans are submitted to Ontario regarding Annexation Area 163, Ontario agrees to allow Petitioners and others the opportunity to consult with Ontario regarding feeder routes from activity centers to transit stations in Annexation Area 163, including any funding proposals to address regional transportation needs. The actual location of such feeder routes shall be determined by Ontario in its sole discretion as afforded by law.

11. Nothing in this Agreement shall be construed to permit real property owners and developers in Annexation Area 163 to disregard the development conditions set forth in the General Plan as it may be amended from time to time, the Final EIR, and related Ontario City Council findings.

12. a. In exchange for the commitments set forth herein, Petitioner EHL and its officers and directors hereby release and forever discharge Ontario and its predecessors, successors, assigns, officers, directors, shareholders, employees, designated agents, designated representatives, attorneys, insurers, and reinsurers and any person claiming by or through any of them ("Released Parties") from any and all of Petitioner EHL's claims, demands, liabilities, obligations, causes of action, damages, judgments, payments, attorneys' fees and costs, both known and unknown, which Petitioner EHL may now have or might hereinafter have against Released Parties involving the Final EIR and/or implementation of the General Plan Amendment, zoning changes, specific plans, tract maps, subdivision maps, site plan approvals and any other development-related approvals made by Ontario, regarding Annexation Area 163 which authorize a use or uses of land which is listed in Table 3-3 of the General Plan Amendment (attached as Exhibit "C") and which is consistent with this Agreement, which arose out of, relate to or are the subject of the Action and the Appellate Action, or which were asserted or which could have been asserted in the Action or the Appellate Action. By carrying out the actions specified in this paragraph 12, Petitioner EHL will make known its support for the terms of this Agreement and the City's development of Annexation Area 163 in accordance with this Agreement.

i. With respect to any future litigation which challenges a project within Annexation Area 163 on grounds of inadequate mitigation of environmental impacts, EHL will, upon request of Ontario, and subject to the funding provisions stated hereinafter, prepare and submit for filing in Superior Court an amicus brief supporting the adequacy of the mitigation measures in the Final EIR as certified in January 1998, and as modified pursuant to this Agreement, in conjunction with the provisions of this Agreement. EHL shall bear the cost of any such amicus brief which is filed in connection with an action brought by an organization whose primary purpose is conservation. For any lawsuit filed by any other person or organization, the obligations of EHL respecting an amicus brief shall apply only if funding adequate for preparing and filing the brief is provided by or through Ontario.

ii. With respect to any proposed development project or specific plan within Annexation Area 163, EHL will, within 30 days of receiving a request from the City, send the letter attached as Exhibit "D" to any person, organization or group challenging a project on environmental grounds.

b. In exchange for the commitments set forth herein, Petitioner Sierra Club, Inc., and its officers and directors hereby release and forever discharge the Released Parties from any and all of this Petitioner's claims, demands, liabilities, obligations, causes of action,

RVPUB\SMA\623437 8

damages, judgments, payments, attorneys' fees and costs, both known and unknown, which were asserted or could have been asserted in the Action or the Appellate Action.

c. With respect to any future litigation which challenges a project within Annexation Area 163 on grounds of inadequate mitigation of environmental impacts, the Land Trust will, at the request of Ontario, prepare and submit for filing in Superior Court an amicus brief supporting the adequacy of the mitigation measures in the Final EIR as certified in January 1999.

d. If, in the future, any one or more of the Petitioners, or any of their predecessors, successors, assigns, officers, directors, shareholders, employees, designated agents, designated representatives, insurers, or reinsurers or any person claiming by or through any of them, files in any court of law a claim, demand, liability, obligation, cause of action, claim of damage or any other form of claim: (1) (A) challenging the City's approval of a general plan amendment, zoning change, specific plan, tract map, subdivision map, site plan or any other development project within Annexation Area 163, or (B) challenging the receipt of any such development approval by an individual developer, property owner, or public agency within Annexation Area 163, or such developer's, owner's, or agency's construction or other activities which have been permitted to proceed under such approval; and (2) (A) any such claim, etc., (i) challenges compliance of the City approval with requirements of the California Environmental Quality Act, (ii) contends that the approval authorizes a use or uses of land not listed in Table 3-3 of the General Plan Amendment (attached as Exhibit "C"), or (iii) fails to require mitigation of impacts on habitat and agricultural values in accordance with this agreement, or (B) such claim contends that an individual development project within Annexation Area 163 is not in compliance with the requirements set forth in this Agreement, then the measures set forth in remainder of this paragraph shall be followed. The City shall continue to collect the Mitigation Fees and Offsite Mitigation fees for the challenged action/project. However, any such fees collected shall not be placed in the interest-bearing account discussed in Paragraphs 3 and 4 of this Agreement nor forwarded to the Land Trust. Instead, the City shall place any such Mitigation Fees and Offsite Mitigation fees collected pursuant to the terms of this subsection into a separate interest-bearing escrow account ("Escrow Account") administered by the City. Mitigation Fees and Offsite Mitigation funds so collected shall remain in the Escrow Account pending judicial or other resolution of the challenge. If judicial or other resolution of the challenge determines that mitigation measures other than those set forth in this Agreement must be implemented, funds contained in the Escrow Account may, at the discretion of the City, be redirected for use in implementing such new or different mitigation measures. If the City does not redirect the funds as described, or if any such challenge is unsuccessful, funds in the Escrow Account shall be distributed according to the provisions of Paragraphs 2, 3 and 4 of this Agreement. In any event, Ontario shall be reimbursed from the escrow proceeds for its actual and reasonable costs associated with any required annual accounting activities of the Escrow Account or any other required management costs.

e. The releases from litigation contained in this Paragraph shall not apply, and Petitioners shall retain the right to bring suit against Ontario or any of the afore-named entities, for any proposed project in Annexation Area 163 which an arbitrator determines pursuant to paragraph 17 deviates substantially from the purposes of the "Livable Communities Policies" as defined above, or which an arbitrator determines pursuant to paragraph 17 deviates

substantially from the mitigation provisions of this Agreement as set forth in paragraphs 2 through 5 above.

13. a. Petitioner EHL, on behalf of its predecessors, successors, assigns, officers, directors, shareholders, employees, designated agents, designated representatives, attorneys, insurers, and reinsurers and any person claiming by or through any of them agrees and covenants that it will not institute or join in any way, including the filing of amicus briefs, any new lawsuit which is based on any claims, demands, liabilities, obligations, causes of action, damages, judgments, payments, attorneys' fees and costs, both known and unknown, which Petitioner EHL may now have or might hereinafter have against Ontario involving: (i) the Final EIR and/or implementation of the General Plan Amendment, zoning changes, specific plans, tract maps, subdivision maps, site plan approvals and any other development-related approvals made by Ontario, consistent with this Agreement, which claims, demands, etc. arose out of, relate to or are the subject of the Action and the Appellate Action or which were or could have been asserted in the Action or Appellate Action and are released or resolved by this Agreement, or are in derogation of this Agreement, and (ii) for a period of 30 years from Ontario's approval of the General Plan Amendment (January 7, 1998), or until the Termination Date of this Agreement, whichever occurs first, specific plans, tract maps, subdivision maps, site plan approvals or any other land use decision by Ontario regarding Annexation Area 163 which authorize a use or uses of land which is listed in Table 3-3 of the General Plan Amendment (attached as Exhibit "C") and which is consistent with this Agreement, unless an arbitrator determines pursuant to paragraph 17 that such land use decision is not consistent with this Agreement. Ontario, on behalf of itself, its respective past and present City Council members, mayors, predecessors, successors, assigns, officers, directors, shareholders, employees, designated agents, designated representatives, attorneys, insurers, and reinsurers and any person claiming by or through any of them do hereby fully, finally, and forever release and discharge Petitioner EHL and its respective predecessors, successors, assigns, officers, directors, shareholders, employees, designated agents, designated representatives, attorneys, insurers, and reinsurers and any person claiming by or through any of them from any and all of Ontario's claims arising from the facts, actions, omissions or events which arose out of or relate to the Action.

b. Petitioner Sierra Club, Inc., on behalf of its predecessors, successors, assigns, officers, directors, shareholders, employees, designated agents, designated representatives, attorneys, insurers, and reinsurers and any person claiming by or through any of them agrees and covenants that it will not institute or join in any way, including the filing of amicus briefs, any new lawsuit which is based on claims, demands, liabilities, obligations, causes of action, damages, judgments, payments, attorneys' fees and costs, both known and unknown, which were or could have been asserted in the Action or Appellate Action and are released or resolved by this Agreement. Ontario, on behalf of itself, its respective past and present City Council members, mayors, predecessors, successors, assigns, officers, directors, shareholders, employees, designated agents, designated representatives, attorneys, insurers, and reinsurers and any person claiming by or through any of them do hereby fully, finally, and forever release and discharge Petitioner Sierra Club, Inc., and its respective predecessors, successors, assigns, officers, directors, shareholders, employees, designated agents, designated representatives, attorneys, insurers, and reinsurers and any person claiming by or through any of them from any and all of Ontario's claims which have been or could have been asserted on the basis of the Action or the Appellate Action.

RVPUB\SMA\623437 10

14. The Parties acknowledge that nothing in this Agreement is intended to or shall operate as a limit upon the Ontario's City Council's legislative discretion and right to amend, adopt, supercede and modify those land use, planning, zoning and development standards to be applied within Annexation Area 163. Without limiting the generality of the foregoing, Petitioners acknowledge that, except as otherwise provided in this Agreement, Ontario has the right, without modifying or releasing Petitioners from any of their covenants or obligations hereunder, to amend the General Plan as the Ontario City Council may deem, in its legislative discretion, appropriate, desirable, and/or necessary; provided, however, that Ontario shall comply with all statutorily and judicially required prerequisites to amendment of the General Plan, and, provided further, any amendment of the General Plan and any ordinances, procedures or agreements for implementing the General Plan shall provide for full and timely implementation of paragraphs 2 through 5 of this Agreement concerning mitigation of environmental impacts as specified therein.

15. The Parties represent and warrant that they have not assigned or transferred, or purported to assign or transfer, and shall not hereafter assign or transfer, any obligations, liabilities, demands, claims, costs, expenses, debts, controversies, damages, actions, and causes of action released pursuant to this Agreement. The Parties also agree to indemnify and hold one another harmless against any obligation, liability, demand, claim, cost, expense (including but not limited to attorneys' fees incurred), debt, controversy, damage, action or cause of action based on, arising out of or in connection with any such transfer or assignment or purported transfer or assignment.

16. This Agreement shall in no way affect or limit Ontario's right and ability to approve real property development or other projects outside of Annexation Area 163 now or in the future.

17. Any dispute or controversy arising out of, under, or in connection with this Agreement and any amendments thereto, or the breach thereof, shall be submitted to binding arbitration in accordance with the following procedures: A Party desiring arbitration shall give written notice to the other Party of the controversy to be submitted to arbitration. The Parties shall agree to an arbitrator within 15 days thereafter or shall cause an arbitrator to be appointed pursuant to the California Arbitration Act, sections 1280 through 1294.2 of the Code of Civil Procedure. The matter shall be submitted to the arbitrator chosen by the Parties within 60 days, and the arbitrator shall decide the matter within 15 days of the conclusion of the arbitration. The Parties to the arbitration shall each pay an equal share of the arbitrator's fees. The Parties agree to bear their own costs of arbitration, including attorneys' fees. Any statute of limitations applicable to any cause of action submitted to the arbitrator shall be tolled from the date the demand for arbitration is made until the date the arbitrator reaches a final decision.

18. With regard to the matters being released herein, Petitioners waive the provisions of Section 1542 of the California Civil Code, and any other similar statute, rule or case law. Section 1542 provides as follows:

> A general release does not extend to claims which the creditor does not know or expect to exist in his favor at the time of executing a

release, which if known by him must have materially affected the settlement with the debtor.

19. Within ten (10) business days of receipt of a final version of the Agreement, Petitioners shall fully execute the Agreement and direct and cause their attorneys of record to fully execute a request for dismissal with prejudice of the Appellate Action in its entirety, and return these fully executed documents to Ontario. Within two (2) business days of receipt of the fully executed Agreement and request for dismissal, Ontario shall fully execute the Agreement and file the request for dismissal.

20. The Parties shall bear their own respective costs and attorneys' fees in the Action and Appellate Action, including the cost bill currently pending before the San Bernardino County Superior Court, Case No. RCV 32616.

21. Nothing in the Agreement shall be construed as an admission of any type by any Party.

22. This Agreement shall be binding upon and for the benefit of the Parties and their respective successors, devisees, affiliates, representatives, assigns, officers, directors, agents and employees wherever the context requires or admits.

23. Each of the Parties affirmatively represents that it has been represented throughout by attorneys at law of its own choosing. Each Party has read the Agreement and has had the terms used herein and the consequences thereof explained by its attorneys of choice. The Agreement is freely and voluntarily executed and given by each Party after having been apprized of all relevant information and data furnished by its attorneys of choice. Each party in executing the Agreement does not rely upon any inducements, promises or representations made by any other Party except as set forth herein.

24. This Agreement constitutes the entire agreement between the Parties for the settlement and release of all Petitioners' claims, demands, liabilities, obligations, causes of action, damages, judgments, payments, attorneys' fees and costs, both known and unknown, which Petitioners may now have or might hereinafter have against Ontario involving the Final EIR and/or implementation of the General Plan Amendment and zoning changes, or future development projects in Annexation Area 163 consistent with this Agreement which arose out of, relate to or are the subject of the Action and the Appellate Action and Ontario's claims arising from the facts, actions, omissions or events which arose out of or relate to the Action and supersedes all prior or contemporaneous agreements and understandings between them or anyone or more of them. It is expressly understood and agreed that this Agreement may not be altered, amended, modified or otherwise changed in any respect whatsoever except by writing duly executed by authorized representatives of the Parties.

25. This Agreement shall in all respects be interpreted and enforced and governed by and under the laws of the State of California.

26. Except as provided in this paragraph, if any term of this Agreement be rendered unlawful by state or federal judicial or state or federal legislative action, by action of a state or

federal wildlife agency or by action of the United States Army Corps of Engineers or the United States Bureau of Reclamation, that provision shall be severed and the remaining terms shall continue to be valid and fully enforceable. The foregoing severance provision shall not apply to the provisions of paragraphs 2 and 3 which establish the Mitigation Measures and require payment of mitigation fees, nor to the provisions of paragraph 4 which establish the Offsite Mitigation and require payment of impact fees. If the cited provisions of paragraphs 2, 3, or 4 are rendered unlawful, or if implementation of any mitigation provision of those paragraphs is rendered unlawful by state or federal judicial or state or federal legislative action, by action of a state or federal wildlife agency or by action of the United States Army Corps of Engineers or the United States Bureau of Reclamation, the Parties shall attempt jointly to identify substitute provisions for achieving the purposes of this Agreement. If the Parties are unable to agree upon a mutually acceptable reformation of the Agreement, it shall be terminated in its entirety.

27. Each Party has cooperated in the drafting and preparation of this Agreement. The Agreement shall not be construed against any Party on the basis that such Party drafted the Agreement or any provision thereof.

28. Each of the undersigned signing on the behalf of a party warrants that he or she is authorized to sign for and by such party.

29. The Parties may execute duplicate originals of this Agreement or any documents they are required to sign or furnish pursuant to this Agreement.

Subject: Biological Mitigation – SOI General Plan Amendment EIR

Dear Mr. Silver:

This is to clarify the City's commitment to acquire land as mitigation for biological resources in the New Model Colony area (formerly Sphere of Influence). Following outlines our understanding of mitigation measures adopted by the EIR for the Sphere of Influence General Plan Amendment:

1. Intent to acquire a minimum of 160 acres of land in the El Prado Basin for wetlands and foraging habitat for waterfowl to offset the discontinued use of dairy manure water retention basins (Policy 18.1, SOI General Plan, p. 6-23; EIR p. 5.8-16).

2. Intent to acquire land to establish an on-site "Wildlife Habitat" or WRCA in the areas adjacent to the Chino Basin Flood Control Ponds located to the south of Chino Avenue, west of Archibald Avenue, north of Schaefer and east of Whispering Lakes Lane consisting of approximately 145 acres adjacent to the 85 acres of existing county-owned detention basins (Policy 18.1.1 SOI General Plan p. 6-23; EIR p. 5.8-16).

Implementation of the above measures is in addition to conditions outlined in the draft settlement currently in negotiation between the City and the Sierra Club/Endangered Habitat League. Lands to be acquired will be managed by a conservancy similar to language discussed in settlement.

ONTARIO SPHERE OF INFLUENCE GENERAL PLAN AMENDMENT

3-21

Exhibit "C"

Date

Name of group challenging project
Address
City

Re: Proposed _____Project *[or Specific Plan]* in Ontario

Dear _____:

We write concerning the *[_____ project or specific plan]* which is being proposed in the *[area of]* the City of Ontario. We understand that the__*[group name]* may oppose this project on grounds that it would create environmental impacts [*optional: designate some specific impacts at issue*] that would not be adequately mitigated. We want to make you aware of the Endangered Habitat League's historic interest and involvement in development issues affecting this area and the reasons which have led us not to oppose this *[project or specific plan]*.

In 1998 the Endangered Habitats League filed a lawsuit which challenged the City of Ontario's approval of a general plan amendment and related environmental impact report for annexation and urbanization of 8,200 acres of primarily farm land south of the City. The area included the site of the proposed *[project or specific plan]*. Issues raised by the litigation included impacts on wildlife, open space, and farmlands and mitigation of those impacts. The San Bernardino County Superior Court upheld the City's approvals, and the plaintiffs appealed.

Before the appeal was decided, the City and Endangered Habitats League jointly worked out a program for substantially augmenting existing City provisions for mitigation of impacts on wildlife and open space values as well as farm lands. The centerpiece of the plan was institution of a land trust program for acquiring, enhancing and protecting, and maintaining in perpetuity lands in the area which provide the wildlife or farming values that existed in the annexation area. The program is funded by mitigation fees imposed by the City as a condition of development approval in the annexation area. Build-out of this 8,200-acre area over the years is expected to generate in excess of $10,000,000. It will be used to secure long-term protection of habitat and farm lands that would otherwise be developed or to enhance habitat values of existing protected open space.

This mitigation plan was incorporated into an agreement to settle the litigation. The settlement agreement binds the City to require payment of the development

Exhibit "D"

mitigation fees and carry out the mitigation program throughout the time the 8,200 acres is under development. The agreement also reflects the belief of the Endangered Habitats League then and now that the development anticipated by the amended general plan, when carried out in combination with the mitigation fee program and other provisions of the settlement agreement, provides mitigation which is both appropriate and sufficient in the context of this urban edge area.

For these reasons, we urge you to make the same determination that the Endangered Habitats League has made in support of the terms of the settlement agreement, and therefore not oppose the *[_____project or specific plan]*.

Sincerely,

[name of Endangered Habitats League official]

Letter O2 Adams Broadwell Joseph & Cardozo

January 3, 2022

Response O2-a

This comment is an introductory statement from the Californians Allied for a Responsible Economy (CARECA), which describes and summarizes the South Ontario Logistics Center Project with accompanying SB 330 Replacement Site. No response is required.

Response O2-b

This comment generally describes CARECA's concerns with the Draft EIR and its technical appendices, including the conclusions reached in the Draft EIR regarding impacts to air quality, public health, greenhouse gas (GHG), energy, transportation, and biological resources. Responses to the specifically identified concerns and issues in subsequent comments are provided in Responses O2-c through O2-xxx below.

Response O2-c

This comment introduces CARECA and its representative members, and asserts CARECA's interest in enforcing environmental laws. No response is required.

Response O2-d

This comment provides a discussion of CEQA's requirements in the view of the commenter. The comment asserts that the Draft EIR fails to comply with the requirements of CEQA and lacks substantial evidence to support the proposed findings of the Draft EIR. Responses to the specifics identified in this comment are provided in Responses O2-e through O2-xxx below.

Response O2-e

The City disagrees with the assertion that the Draft EIR does not include an accurate and complete Project description. The comment contains no specific examples in support of this assertion. Section 3.0, *Project Description*, of the Draft EIR provides a description of the Project sufficient to meet CEQA's informational requirements. Since the comment does not identify the alleged grounds for its assertion that the Draft EIR's Project description fails under CEQA, no further response can be provided.

Response O2-f

The City disagrees with the assertion that the Draft EIR does not disclose whether the Project will require backup generators and must analyze the use of generators. The Project proposes the development of industrial speculative warehouse buildings and the end users are not known at this time. It should be noted that the Project is anticipated to be built out over several years (Project development would be determined by the landowner and/or developer based upon real estate market conditions) and only a Development Plan application is proposed for Phase 1. Phase 2 is only programmatically planned, and no specific development is proposed at this time. As the end users of the Project have not been identified, it is not known if backup generators would be needed for any of the potential buildings. Backup generators

would only be used in the event of a power failure and would not be part of the Project's normal daily operations. If backup generators are required, the end user would be required to obtain a permit from the South Coast Air Quality Management District (SCAQMD) prior to installation. Emergency backup generators must meet SCAQMD's Best Available Control Technology (BACT) requirements and comply with SCAQMD Rule 1470 (Requirements for Stationary Diesel-Fueled Internal Combustion and Other Compression Ignition Engines), which would minimize emissions. As the end users and future tenants of the proposed Project are unknown, the need for emergency backup generators is speculative. Under CEQA Guidelines Section 15384, argument, speculation, unsubstantiated opinion or narrative, evidence that is not credible, and evidence of social and economic impacts does not constitute substantial evidence.

The comment also requests that all backup generators be required to use non-diesel fuel. As the proposed Project involves speculative warehouse buildings and the end users are unknown, prohibiting specific fuels for backup generators is not feasible, because it is unknown what the specific needs of an end user would be. Although the potential use of emergency backup generators is speculative, Mitigation Measure MM AQ-2 has been revised to mitigation requiring applicants to explore the potential for generators to use non-diesel fuel will be added to the Final EIR.

MM AQ-2. Only electric-powered/zero emissions off-road equipment (e.g., yard trucks/hostlers, forklifts, indoor material handling equipment, etc.) shall be utilized on-site for daily warehouse and business operations. The project developer/facility owner shall disclose this requirement to all tenants/business entities prior to the signing of any lease agreement. In addition, the limitation to use only electric-powered/zero emissions off-road equipment shall be included in all leasing agreements.

Prior to issuance of a Business License for a new tenant/business entity, the project developer/facility owner and tenant/business entity shall provide to the City of Ontario Planning Department and Business License Department a signed document (verification document) noting that the project development/facility owner has disclosed to the tenant/business entity the requirement to use only electric-powered/zero emissions equipment for daily operations. This verification document shall be signed by authorized agents for the project developer/facility owner and tenant/business entities. In addition, if applicable, the tenant/business entity shall provide documentation (e.g., purchase or rental agreement) to the City of Ontario Planning Department and Business License Department to verify, to the City's satisfaction, that any off-road equipment utilized will be electric-powered or produce zero emissions.

<u>Prior to the issuance of building permits, the City of Ontario Building Department shall confirm that if emergency generators are proposed, the Project applicant shall explore non-diesel options. If non-diesel generators are determined to not be feasible, the Project applicant shall provide written justification to be approved by the City's Building Department.</u>

Response O2-g

The City disagrees with the assertion that the Draft EIR fails to adequately analyze, quantify, and mitigate the Project's potentially significant impacts. The comment contains no specific examples in support of this assertion. Since the comment does not identify the alleged grounds for its assertion, no further response can be provided.

Response O2-h

This comment correctly states that the Draft EIR concluded that the Project's operational emissions associated with Phase 1, Phase 2, and Project Buildout would be significant and unavoidable. However, the City disagrees with the commenter's claim that the Draft EIR has not identified all feasible mitigation to reduce air quality and GHG impacts. While this specific comment does not identify or propose feasible mitigation, see Response O2-i, below for a discussion of additional mitigation measures.

Response O2-i

The City disagrees with the assertion that the Draft EIR has not identified all feasible mitigation and suggests additional mitigation including 1) the use of fuel-efficient mobile sources, 2) requiring on-road heavy duty trucks to be model year 2010 or newer, and 3) requiring all heavy-duty vehicles entering or operating on the Project site to be zero-emission beginning in 2030. It should be noted that these suggested mitigation measures are already part of the existing regulatory environment and would not be considered mitigation under CEQA. For example, CARB already regulates truck emissions with the Advanced Clean Truck Regulation, the Mobile Source Strategy (including the low-NOX engine emissions standard), the Sustainable Freight Action Plan, and the Emissions Reduction Plan for Ports and Goods Movement, among others.

Despite these strategies, CARB acknowledges that it will take time for zero- and near-zero emission (ZE and NZE) vehicles to become commercially available and to penetrate the market. For example, CARB's EMission FACtor (EMFAC) 2021 model provides detailed vehicle registration information and estimates the official emissions inventories of on-road mobile sources, vehicle population, and vehicle miles traveled (VMT) in California. The EMFAC2021 data for South Coast portion of San Bernardino County shows that in 2024 (the Project's opening year), approximately 85 percent of heavy trucks would still be powered by diesel and 91 percent of the VMT would occur from diesel trucks. Electric vehicles would make up approximately 0.29 percent of the heavy-duty fleet and 0.25 percent of the heavy truck VMT. For 2030, the EMFAC data shows that 81 percent of heavy trucks would be diesel-powered and that 88 percent of the heavy truck VMT would be from diesel trucks. Therefore, as CARB data anticipates that the vast majority of trucks to be diesel-powered in the Project opening year and in 2030, it would not be feasible to require all heavy-duty vehicles entering or operating on the Project site to be zero-emission beginning in 2030.

ZE and NZE truck technologies include battery-electric trucks, fuel cell trucks, dual-mode (hybrid) electric trucks with all-electric range and, potentially, other technologies. While heavy duty ZE vehicles are available, they are not commercially available yet in great numbers in the classifications needed to serve the future users of this site a mere seven years from now. The majority of ZE and NZE emissions trucks

are limited in range of less than 100 miles per charge and require hours to charge.[14] These trucks are better suited to operate in urban areas for stop-and-go driving for fleets that operate locally and have predictable daily use and return to base to be charged.[15] Longer range, heavy duty ZE vehicles currently are limited in availability.[16] To require a project to use ZE heavy duty trucks when the nature of the trips is unknown these types of technologies is not feasible because they are not widely available, and it is unknown when or if they will become widely available in the future. As such, it is not feasible to require ZE and NZE trucks because future tenants/operators are currently unknown. As the timeline for ZE and NZE incorporation into the fleet is not known and the end users and truck fleets are not known, the additional mitigation is not feasible, and assumptions on the available of ZE and NZE vehicles would be speculative at best. CEQA Guidelines § 15041 specifically requires all mitigation to be feasible and fully enforceable, and all feasible mitigation must be imposed by lead agencies.

Furthermore, it should be noted that the Draft EIR determined that the Project's Localized Significance Thresholds (LSTs) would be less than significant (refer to Draft EIR pages 4.2-32 and pages 4.2-39 through 4.2-40) and health risk impacts would be less than significant (refer to Draft EIR pages 4.2-36 through 4.2-38), which indicates that the regional increases shown in Draft EIR Tables 4.2-9, 4.2-11, and 4.2-12 are over counting truck emissions since not all these trips are in reality new to the air basin.

Although as noted above, ZE and NZE trucks are not commercially available at this time, current state regulations would accelerate availability of this technology in future years. CARB's Advanced Clean Truck Regulation requires truck manufacturers to transition from diesel trucks and vans to electric zero-emission trucks beginning in 2024 and by 2045, every new truck sold in California is required to be zero-emission. CARB's Mobile Source Strategy takes an integrated planning approach to identify the level of transition to cleaner mobile source technologies needed to achieve all of California's targets by increasing the adoption of zero emission vehicle (ZEV) buses and trucks. A key measure in the Mobile Source Strategy is the low NOX emission standards that reduces NOX emissions by 90 percent.[17] The Sustainable Freight Action Plan which improves freight system efficiency, utilizes near-zero emissions technology, and deployment of ZEV trucks. The Sustainable Freight Action Plan applies to all trucks accessing the Project site and may include existing trucks or new trucks that are part of the Statewide goods movement sector. CARB's Emissions Reduction Plan for Ports and Goods Movement identifies measures to improve goods movement efficiencies such as advanced combustion strategies, friction reduction, waste heat recovery, and electrification of accessories.

Regarding the use of model year 2010 trucks or newer, the CARB Truck and Bus Regulation requires trucks to be upgraded to 2010 or new model year engines. The Truck and Bus regulation has been in effect since December 2008 and final deadline for the last replacement phase of the regulation is January 1, 2023, before operation of the initial Project phase is anticipated. Based on data from CARB, most heavy-duty trucks entering the Project site will meet or exceed 2010 model year emission standards in 2024 as all trucks registered in California are required meet or exceed such standards by 2023. Specifically, according to CARB EMFAC inventories, approximately 50 percent of all instate heavy-heavy duty trucks met the 2010

[17] California Air Resources Board, *Heavy Duty Low NO_x*, https://ww2.arb.ca.gov/our-work/programs/heavy-duty-low-nox.

engine standard in 2019, 59 percent in 2020, 62 percent in 2021. Additionally, 65 percent and 90 percent of trucks are projected to meet the 2010 engine standard in 2022 and 2023 respectively.[18]

Regarding the suggested requirement for trucks to be zero-emissions beginning in 2030, as discussed above, the CARB Advanced Clean Truck Regulation requires truck manufacturers to transition from diesel trucks and vans to electric zero-emission trucks beginning in 2024 and by 2045, every new truck sold in California is required to be zero-emission. It is not feasible for the Project or City of Ontario to effectively regulate trucks from entering the property that are otherwise permitted to operate in California and access other properties in the County, region, and State. Even if the County were to apply such a restriction, it would cause warehouse operators using older truck fleets to travel to other facilities in the SCAB where the restriction does not apply, thereby resulting in no improvement to regional air quality. Therefore, the commenter's suggested mitigation measures are already addressed as part of the regulatory environment or are not feasible. No further analysis is necessary.

Response O2-j

Refer to Response O2-f regarding emergency backup generators. As noted above, the Project proposes speculative warehouse buildings, and the end users are not known. Therefore, for the purposes of full disclosure the worst-case scenario that includes cold storage was analyzed.

Response O2-k

Refer to Response O2-i. As noted above, the mitigation measures identified in the comment are already addressed by existing regulation that the Project would be required to comply with. The Draft EIR's air quality analysis uses CARB's EMFAC emissions data, which incorporate these regulations into the emissions inventories and rates. As noted in the response above, the suggested mitigation measures are part of existing regulations that the Project is already required to comply with. Therefore, these measures do not represent CEQA mitigation and would not reduce emissions below what has been evaluated in the Draft EIR.

Response O2-l

The comment generally cites the CEQA Guidelines requirements for the analysis of GHG emissions and notes the requirements for considering a timeframe and for reflecting evolving scientific knowledge and regulatory schemes. GHG emissions and impacts were fully analyzed within Draft EIR Section 4.6. The Draft EIR's GHG analysis quantifies the Project's GHG emissions and analyzes the emissions against the City's screening threshold. The City adopted a Climate Action Plan (CAP) that establishes a screening threshold of 3,000 MTCO2e per year. According to the CAP, projects that exceed the threshold would need either to use the "Screening Tables" in the CAP or quantify GHG emissions and provide additional mitigation that achieves a 25 percent emissions reduction. The Screening Tables provide a menu of options that both ensures implementation of the reduction strategies and flexibility. The Draft EIR evaluates the Project in accordance with the City's CAP. However, as noted in the Draft EIR, the City is currently updating its CAP and the potential timeframes for approval and adoption of the City CAP update

[18] California Air Resources Board, *EMFAC2017, An Update to California On-Road Mobile Source Emissions Inventory*, November 9, 2017. Available at: https://ww3.arb.ca.gov/msei/downloads/emfac2017_workshop_11_09_2017_final.pdf, accessed January 17, 2022.

are unknown. Once approved, the CAP may implement performance standards and GHG emissions reduction targets differing from the current CAP. There is the potential that even after achieving more than 100 points on the current Screening Tables, the Project may conflict with as-yet-unknown performance standards and GHG emissions reduction targets implemented under the anticipated CAP updates, and thereby result in GHG emissions that would be considered to represent a significant impact on the environment. Additionally, it should be noted that due to the State's post-2020 GHG emissions reduction targets, the City CAP's 25 percent emissions reduction threshold is also no longer a viable option. Therefore, even with the implementation of MM AQ-2 through MM AQ-5 and MM GHG-1, the Project's impact on GHG emissions was conservatively determined to be significant and unavoidable.

Response O2-m

The comment summarizes California Assembly Bill (AB) 32, the thresholds identified in the City's CAP, and also summarizes California Senate Bill (SB) 32. The comment does not specifically address the Draft EIR. However, as noted above in Response O2-l, the City's CAP is currently being updated to address the State's SB 32 reduction targets. As such, although the Project would achieve 100 points on the City's screening tables, the Draft EIR conservatively identifies all feasible mitigation and determines that the Project's GHG impacts would be significant and unavoidable.

Response O2-n

Refer to Responses O2-l and O2-m. As discussed in the Draft EIR, the Project would not conflict with the applicable GHG reduction plans (as required by the CEQA Appendix G checklist and CEQA Guidelines Section 15064.4(b)(3)). The Draft EIR evaluates consistency with the City's CAP, the Southern California Association of Governments (SCAG) Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS) goals, as well as the CARB Scoping Plan. The City disagrees with the assertion that the Draft EIR relies solely on the CARB 2017 Scoping Plan as the relevant GHG significance threshold. Additionally, the comment incorrectly states that the Draft EIR relies on achieving 100 points on the City's CAP Checklist for determining consistency with the CARB 2017 Scoping Plan. Consistency with the City's CAP, SCAG RTP/SCS, and CARB Scoping Plan are each evaluated separately with a detailed policy consistency analysis (refer to Draft EIR Table 4.6-8 through Table 4.6-11). Despite consistency with the applicable plans, the Draft EIR conservatively determines that GHG impacts would remain significant and unavoidable despite the implementation of all feasible mitigation.

Response O2-o

Refer to Responses O2-l and O2-m. As noted above, the City has adopted 3,000 MTCO2e/year as a screening threshold and 100 points on the Consistency Checklist for projects exceeding the screening threshold. The Draft EIR conservatively determines that although the Project would be required to comply with State and City requirements and implement all feasible mitigation measures that would ensure that the Project maintains reductions consistent with the States post-2020 GHG targets (refer to Draft EIR Impact Discussion 4.6-2), impacts would remain significant and unavoidable as the City's CAP currently does not address post-2020 reduction targets and the CAP update has not been adopted yet.

Specifically, Draft EIR page 4.6-22 notes that 71 percent of emissions are from mobile sources. As noted on Draft EIR page 4.6-35, several of the State's plans and policies would contribute to post-2020 reductions in mobile source emissions from the Project. These include the CARB's Advanced Clean Truck Regulation, Executive Order N-79-20, CARB's Mobile Source Strategy, CARB's Sustainable Freight Action Plan, and CARB's Emissions Reduction Plan for Ports and Goods Movement. CARB's Advanced Clean Truck Regulation was approved in June 2020 requiring truck manufacturers to transition from diesel trucks and vans to electric zero-emission trucks beginning in 2024. By 2045, every new truck sold in California is required to be zero-emission. The Advanced Clean Truck Regulation accelerates the transition of zero-emission medium-and heavy-duty vehicles from Class 2b to Class 8. Also, refer to Response O2-i regarding the various mobile source emissions reduction programs that would affect the Project's emissions.

Furthermore, the majority of the GHG reductions from the Scoping Plan would result from continuation of the Cap-and-Trade Regulation. AB 398 (2017) extends the State's Cap-and-Trade program through 2030 and the Scoping Plan provide a comprehensive plan for the State to achieve its GHG targets through a variety of regulations enacted at the State level. Additional reductions are achieved from electricity sector standards (i.e., utility providers to supply 60 percent renewable electricity by 2030 and 100 percent renewable by 2045), doubling the energy efficiency savings at end uses, additional reductions from the Low Carbon Fuel Standard (LCFS), implementing the short-lived GHG strategy (e.g., hydrofluorocarbons), and implementing the Mobile Source Strategy and Sustainable Freight Action Plan.

Response O2-p

The comment summarizes CEQA requirements for mitigation in the view of the commenter. Responses to the specifics are provided in Response O2-q, below.

Response O2-q

The City disagrees with the assertion that MM GHG-1 only applies to components of the Project with permit applications preceding the adoption of the 2014 CAP. The 2014 CAP was adopted on December 16, 2014 and is currently in effect. MM GHG-1 states that applications on file prior to adoption of the updates to the 2014 CAP must achieve 100 points from the Screening Tables. Project applications received after adoption of the CAP update would be required to comply with the latest CAP in effect, which in this case, would be the 2014 CAP. As the comment incorrectly interprets MM GHG-1, the conclusion that MM GHG-1 is not binding enforceable mitigation is also incorrect. Therefore, MM GHG-1 is binding and serves as enforceable mitigation. However, in order to provide clarification MM GHG-1 will be revised in the Final EIR as follows:

MM GHG-1. All <u>project</u> ~~Project~~ development proposals ~~with building permit applications on file with the City prior to approval and adoption of updates to the December 16, 2014 CAP~~ shall implement Screening Table Measures that achieve at least 100 points per the Screening Tables. The City shall verify that Screening Table Measures achieving the 100-point performance standard are incorporated in development plans prior to the issuance of building permit(s) and/or site plans (as applicable). The City shall verify implementation of the selected Screening Table Measures prior to the issuance of Certificate(s) of

Occupancy. At the discretion of the City, measures that provide GHG reductions equivalent to GHG emissions reductions achieved via the Screening Table Measures may be implemented. Multiple development proposals may, at the discretion of the City, be allowed to collectively demonstrate achievement of at least 100 points per the Screening Tables.

Response O2-r

The City disagrees with the assertion that MM GHG-1 improperly defers mitigation. In *Oakland Heritage Alliance v. City of Oakland* (2011) 195 Cal.App.4th 844, the court held that the lead agency does not have to commit to any particular mitigation measure as long as it commits to mitigate impacts. Additionally, the details of exactly how mitigation will be achieved can properly be deferred pending completion of a future study as long as significant impact determinations and formulation of mitigation measures occur before project approval. The GHG reductions measures selected on the City's checklist and required by MM GHG-1 must be implemented prior to the issuance of Project permits. MM GHG-1 has been designed to be flexible since Project development would occur over two phases with Phase 2 occurring on a programmatic level. The mitigation is tied to the City's CAP, which is a qualified GHG reduction plan and establishes project-level thresholds in order to achieve the State's GHG reduction targets and to determine significance under CEQA.

Response O2-s

The City disagrees with the assertion that the Draft EIR fails to calculate the reductions from mitigation. Draft EIR Table 4.6-7 includes both unmitigated and mitigated emissions.

Response O2-t

Refer to Response O2-s. Emissions reductions are quantified in Draft EIR Table 4.6-7. This comment incorrectly states that the emissions reduction of MM GHG-1 is undefined. As noted in Draft EIR pages 4.6-13 and 4.6-28, as well as in the CAP Appendix B (CEQA Thresholds and Screening Tables), the point values correspond to the minimum emissions reduction from each feature. Projects that garner a total of 100 points or greater would not require quantification of project specific emissions and consistent with CEQA Guidelines, such projects would be determined to have a less than significant individual and cumulative impact for GHG emissions.[19] The City's CAP addresses GHG emissions reduction in concert with State reduction efforts and includes specific local requirements that will substantially lessen the cumulative problem. Compliance with the CAP fulfills the CEQA Guidelines Section 15130(a)(3) and 15183.5 description of mitigation.[20] The CAP provides community wide GHG emissions reduction target, reduction measures that new development projects must follow to meet the City's reduction target, community wide inventories that provide quantitative facts and analysis of how the CAP measures meet the reduction target, as well as an implementation, monitoring, and update program to ensure the reduction target is met.

[19] City of Ontario, *Community Climate Action Plan, Appendix B Greenhouse Gas Emissions CEQA Thresholds and Screening Tables*, December 2014.
[20] Ibid.

Response O2-u

Refer to Response O2-o. Additionally, the comment states that all feasible mitigation was not included in the Draft EIR and references a list of mitigation measures provided in Exhibit A to the comment letter. These measures were considered below and have been either incorporated into the Draft EIR, deemed infeasible, determined not be required by CEQA, or would not reduce impacts.

• Requiring off-road construction equipment to be zero-emission, where available, and all diesel-fueled off-road construction equipment, to be equipped with CARB Tier IV-compliant engines or better, and including this requirement in applicable bid documents, purchase orders, and contracts, with successful contractors demonstrating the ability to supply the compliant construction equipment for use prior to any ground-disturbing and construction activities.	Construction emissions are below SCAQMD thresholds. Therefore, mitigation requiring Tier 4 equipment is not required. Additionally, CalEEMod/OFFROAD emissions rates incorporate equipment turnover which results in incrementally cleaner fleets (i.e., more Tier 4 equipment) in future years.
• Prohibiting off-road diesel-powered equipment from being in the "on" position for more than 10 hours per day.	This measure is not quantifiable and may not be realistic or feasible. Construction equipment is used and actively operating for a full day to maximize efficiency. Limiting the workday can inadvertently result in greater overall emissions, since additional workdays could be required and resulting in additional equipment startup emissions and additional worker trip emissions.
• Requiring on-road heavy-duty haul trucks to be model year 2010 or newer if diesel-fueled.	Construction emissions are below SCAQMD thresholds. Additionally, the CARB Truck and Bus Regulation requires all trucks to meet 2010 model year or newer standards by January 1, 2023. The CARB Truck and Bus Regulations are already incorporated into the EMFAC emissions rate data used to calculate the Project's mobile source emissions.
• Providing electrical hook ups to the power grid, rather than use of diesel-fueled generators, for electric construction tools, such as saws, drills and compressors, and using electric tools whenever feasible.	There is no impact/threshold exceedance to necessitate this. However, this is standard practice where feasible.
• Limiting the amount of daily grading disturbance area.	There is no impact/threshold exceedance to necessitate this. Construction and ground disturbance would be conducted in an efficient manner to minimize cost and schedule. Construction would comply with SCAQMD rules, including Rule 402 and 403, which prohibit nuisances and reduce dust (Draft EIR Standard Condition SC AQ-1).

• Prohibiting grading on days with an Air Quality Index forecast of greater than 100 for particulates or ozone for the project area.	The emissions analysis for the Project determined that regional and localized emissions would not exceed SCAQMD thresholds. Therefore, the Project would not have the potential to influence localized pollutant concentrations and implementation of this measure is not necessary.
• Forbidding idling of heavy equipment for more than two minutes.	Construction emissions are below SCAQMD thresholds. Therefore, limiting idling to two minutes would not be required to reduce an impact. Project would comply with the 5-minute limit per CARB regulation/state law (California Code of Regulations, Title 13, Division 3, Article 1, Chapter 10, Section 2449 [General Requirements for In-Use Off-Road Diesel-Fueled Fleets]).
• Keeping onsite and furnishing to the lead agency or other regulators upon request, all equipment maintenance records and data sheets, including design specifications and emission control tier classifications.	Construction emissions are below SCAQMD thresholds. Therefore, this measure would not be required.
• Conducting an on-site inspection to verify compliance with construction mitigation and to identify other opportunities to further reduce construction impacts.	Construction emissions are below SCAQMD thresholds, and no mitigation is required. Therefore, compliance verification is not required. CARB's In-Use Off-Road Diesel Vehicle Regulation ensures equipment meets standards. Only compliance with SCAQMD rules required as standard condition.
• Using paints, architectural coatings, and industrial maintenance coatings that have volatile organic compound levels of less than 10 g/L.	Construction emissions are below SCAQMD thresholds and MM AQ-1 would be required per CEQA. MM AQ-1 requires architectural coatings to meet this 10 g/L standard.
• Providing information on transit and ridesharing programs and services to construction employees.	Construction emissions are below SCAQMD thresholds and no mitigation measures are required to reduce construction mobile source emissions.
• Providing meal options onsite or shuttles between the facility and nearby meal destinations for construction employees.	Construction emissions are below SCAQMD thresholds and no mitigation measures are required to reduce construction mobile source emissions.
• Requiring that all facility-owned and operated fleet equipment with a gross vehicle weight rating greater than 14,000 pounds accessing the site meet or exceed 2010 model-year emissions equivalent engine standards as currently defined in California Code of Regulations Title 13, Division 3, Chapter 1, Article 4.5, Section 2025. Facility	This is a construction measure on the Attorney General's best practices list. Construction emissions are below SCAQMD thresholds and no mitigation measures are required to reduce construction mobile source emissions. Trucks with a gross vehicle weight rating greater than 14,000 pounds accessing the site

operators shall maintain records on-site demonstrating compliance with this requirement and shall make records available for inspection by the local jurisdiction, air district, and state upon request.	must meet or exceed 2010 model-year emissions equivalent engine standards by January 1, 2023.
• Requiring all heavy-duty vehicles entering or operated on the project site to be zero-emission beginning in 2030.	This measure is not required because construction emissions would not exceed SCAQMD thresholds. The project is a speculative warehouse and the end user's fleet is currently unknown. The CARB Advanced Clean Trucks Rule requires electric truck sales starting in 2024, with the goal of every new truck sold in California to be zero-emission by 2045.
• Requiring on-site equipment, such as forklifts and yard trucks, to be electric with the necessary electrical charging stations provided.	MM AQ-2 requires on-site equipment to be electrically powered.
• Requiring tenants to use zero-emission light- and medium-duty vehicles as part of business operations.	The Project is a speculative warehouse and the end user's fleet is currently unknown. The CARB Advanced Clean Trucks Rule requires electric truck sales starting in 2024, with the goal of every new truck sold in California to be zero-emission by 2045.
• Forbidding trucks from idling for more than two minutes and requiring operators to turn off engines when not in use.	Project would comply with the 5-minute limit per CARB regulation/state law. Implementation of this measure is not quantifiable because CalEEMod does not allow for the adjustment of idle times.
• Posting both interior- and exterior-facing signs, including signs directed at all dock and delivery areas, identifying idling restrictions and contact information to report violations to CARB, the air district, and the building manager.	MM AQ-5 requires signage stating that drivers turn off engines when not in use, identifying the State's 5-minute idling limit (California Code of Regulations, Title 13, Division 3, Article 1, Chapter 10, Section 2485 [Airborne Toxic Control Measure to Limit Diesel-Fueled Commercial Motor Vehicle Idling]), and including telephone numbers of the building facilities manager and CARB to report violations.
• Installing and maintaining, at the manufacturer's recommended maintenance intervals, air filtration systems at sensitive receptors within a certain radius of facility for the life of the project.	Installing air filtration systems at sensitive receptors is not required because impacts at sensitive receptors are less than significant. The Project would not result in an exceedance of the SCAQMD's Localized Sensitive Thresholds or an exceedance of health risk thresholds.
• Installing and maintaining, at the manufacturer's recommended maintenance intervals, an air monitoring station proximate to sensitive receptors and the facility for the life of the project, and making the resulting data publicly available in	CARB currently operates the Ontario Monitoring Station and the Upland Monitoring Station located approximately 2.9 miles north and 8 miles north of the Project site, respectively. As the Project emissions modeling did not exceed SCAQMD's Localized Sensitive

real time. While air monitoring does not mitigate the air quality or greenhouse gas impacts of a facility, it nonetheless benefits the affected community by providing information that can be used to improve air quality or avoid exposure to unhealthy air.	Thresholds, the Project would not affect the ambient air quality in the area. This measure is not required per CEQA and would not reduce the Project's operational emissions.
• Constructing electric truck charging stations proportional to the number of dock doors at the project.	The Project would comply with all 2019 CALGreen Title 24 electric vehicle infrastructure requirements. Therefore, this is already incorporated into the Draft EIR calculations.
• Constructing electric plugs for electric transport refrigeration units at every dock door, if the warehouse use could include refrigeration.	The Project would comply with all 2019 CALGreen Title 24 electric vehicle infrastructure requirements. Therefore, this is already incorporated into the Draft EIR calculations.
• Constructing electric light-duty vehicle charging stations proportional to the number of parking spaces at the project.	The Project would include electric vehicle charging stations as required per building code requirements (Title 24).
• Installing solar photovoltaic systems on the project site of a specified electrical generation capacity, such as equal to the building's projected energy needs.	Draft EIR Table 4.2-8 and Table 4.-3 show that the majority of the Project's emissions are from mobile sources. California Title 24 Standards require buildings to be designed to have 15 percent of the roof area solar ready. Additionally, solar photovoltaic panels are an option for compliance with SCAQMD Rule 2305 (Warehouse Indirect Source Rule). The Project would be required to earn Warehouse Actions and Investments to Reduce Emissions (WAIRE) points, which include solar, to reduce emissions.
• Requiring all stand-by emergency generators to be powered by a non-diesel fuel.	As discussed in Response O2-f, future tenants of the proposed Project are unknown at the time of this writing; therefore, the need for emergency backup generators is speculative. However, MM AQ-6 has been added to the Final EIR to require any proposed emergency generators to be powered by a non-diesel fuel.
• Requiring facility operators to train managers and employees on efficient scheduling and load management to eliminate unnecessary queuing and idling of trucks.	This measure would not result in a quantifiable reduction in emissions. However, facility operators are financially incentivized to maximize efficiency.
• Requiring operators to establish and promote a rideshare program that discourages singlO2-occupancy vehicle trips and provides financial	This measure is already required per MM AQ-4.

incentives for alternate modes of transportation, including carpooling, public transit, and biking.	
• Meeting CalGreen Tier 2 green building standards, including all provisions related to designated parking for clean air vehicles, electric vehicle charging, and bicycle parking.	The Project would comply with CALGreen, but Tier 1. Tier 2 voluntary measures are not assumed in the analysis. These voluntary measures would not substantially reduce the Project's impacts which occur primarily from mobile sources. MM AQ-4 requires a Transportation Demand Management (TDM) program that would promote bicycling and walking, provide on-site car share amenities, promote carpool/vanpool, etc. to reduce mobile source emissions.
• Achieving certification of compliance with LEED green building standards.	As noted above, the majority of emissions are from mobile sources. Improvements to energy efficiency that would occur with LEED would not reduce the Project's mobile source emissions. The current (2019) Title 24 is 30 percent more efficient than the 2016 version, mainly due to lighting efficiency.
• Providing meal options onsite or shuttles between the facility and nearby meal destinations.	MM AQ-4 requires a TDM program to minimize vehicle trips.
• Posting signs at every truck exit driveway providing directional information to the truck route.	The Project is in close proximity to the State Route (SR) 83 with direct access to major arterials. This measure would not reduce mobile source emissions.
• Improving and maintaining vegetation and tree canopy for residents in and around the project area.	The Project would include landscaping consistent with City design requirements.
• Requiring that every tenant train its staff in charge of keeping vehicle records in diesel technologies and compliance with CARB regulations, by attending CARB-approved courses. Also require facility operators to maintain records on-site demonstrating compliance and make records available for inspection by the local jurisdiction, air district, and state upon request.	Reductions from implementation of this measure are not quantifiable. However, facility operators are financially incentivized to maximize efficiency and would be required by law to comply with CARB regulations.
• Requiring tenants to enroll in the United States Environmental Protection Agency's SmartWay program, and requiring tenants to use carriers that are SmartWay carriers.	EPA's SmartWay program helps companies advance supply chain sustainability by measuring, benchmarking, and improving freight transportation efficiency. Enrollment in the EPA's Smart Way program is not incorporated as mitigation because emissions reductions are not quantifiable. However, facility operators are financially incentivized to maximize efficiency.

• Providing tenants with information on incentive programs, such as the Carl Moyer Program and Voucher Incentive Program, to upgrade their fleets.	The Carl Moyer Program provides grant funding for cleaner-than-required engines, equipment, and other sources of air pollution. As noted in Draft EIR page 4.2-10, under SCAQMD Rule 2305 (Warehouse Indirect Source Rule) warehouse operators are required to implement emissions reduction measures, including fleet upgrades.

Response O2-v

The comment summarizes CEQA requirements and case law in the view of the commenter regarding evaluating health effects from criteria pollutants. The comment does not specifically raise an issue with the analysis in the Draft EIR, and no further response is required. However, health effects from criteria pollutants were addressed on Draft EIR pages 4.2-33 to 4.2-35.

Response O2-w

The comment summarizes CEQA case law in the view of the commenter regarding health effects from toxic air contaminant (TAC) exposure. The comment summarizes the Draft EIR's health risk assessment and notes that the Draft EIR determined that health effects from TAC exposure would be less than significant. This comment does not specifically raise an issue with the analysis in the Draft EIR. Therefore, no further response is required.

Response O2-x

According to SCAQMD methodology, health effects from carcinogenic air toxics are usually described in terms of individual cancer risk. Additionally, the cancer risk is expressed in the SCAQMD thresholds[21] as "incremental cancer risk." Individual cancer and incremental cancer risk are the likelihood that a person continuously exposed to concentrations of TACs over a lifetime will contract cancer based on the use of standard risk assessment methodology. The comment incorrectly applies the SCAQMD's 10 in one million cancer risk threshold as a cumulative threshold. The SCAQMD's 10 in one million threshold is an incremental threshold and it is, therefore, inappropriate to combine construction and operational risk levels and compare to the SCAQMD's threshold as presented in the comment. The method of simply adding the construction and operational risk levels as conducted in the comment is also incorrect because both risk levels assume that the exposure duration starts in the first trimester. The calculated health risk is based on a lifetime TAC exposure that accounts for different age sensitivity factors for age bins (i.e., third trimester, 0-2, 2-16, and 16-30 years). The younger age bins include a higher age sensitivity factor that increases risk. As construction of Phase 1 would be complete before operations, it would be impossible for a receptor to be exposed to both construction and operational emissions both starting in the third trimester. The construction and operational health risk calculations each conservatively assume that exposure would start at the third trimester. Therefore, the commenter's approach of adding the

[21] SCAQMD, *South Coast AQMD Air Quality Significance Thresholds*, April 2019.

construction and operational risk levels presented in the Draft EIR together overestimates risk because the age sensitivity factors are double counted.

Given the short-term construction schedule of approximately one year, Project construction would not result in a long-term (e.g., 30 or 70 years) source of TAC emissions. The SCAQMD CEQA Air Quality Handbook does not recommend analysis of TACs from short-term construction activities associated with land use development projects. A construction health risk assessment is not required by SCAQMD and no guidance for health risk assessments for construction has been adopted by SCAQMD or the City. Although SCAQMD's CEQA guidance does not require a health risk assessment for short-term construction emissions, a construction health risk assessment was conservatively prepared for the Project and provided in the Draft EIR. As analyzed in Draft EIR pages 4.2-35 and 4.2-36, Project construction activities, including TACs from equipment exhaust would not expose sensitive receptors to substantial pollutant concentrations. Project-related TAC impacts during construction would be less than significant, and no mitigation measures would be required.

Although as discussed above, conducting a construction health risk assessment is not required and combining construction and operational risk is not required by the SCAQMD, a more appropriate conservative approach would be to assume an exposure duration for construction to start at the first trimester and for operational exposure to conservatively begin at age 2.

However, for informational purposes, using the approach of combining construction and operations described above would result in a construction risk of 8.80 in one million and an operational risk of 0.84 in one million for a combined risk of 9.64 in one million, which is below the 10 in one million threshold. This risk calculations were conducted consistent with California OEHHA methodology. Therefore, even when combining construction and operational, health risks would remain below SCAQMD thresholds.

Response O2-y

The City disagrees with the assertion that the Draft EIR does not address consistency with all applicable plans, programs, and policies. The General Biological Assessment (GBA) states that there is no Habitat Conservation Plan, Natural Community Conservation Plan, or other Approved, Local, Regional, or State Habitat Conservation Plan that the Project site falls under. The Project site would be subject to the Ontario Plan and the City's Municipal Code. The Ontario Plan has incorporated policies and measures for potential impacts associated with the Annexation Area 163, as required by the Settlement Agreement. Since the Project is consistent with the Ontario Plan and the Ontario Plan includes the requirements set forth in the Settlement Agreement, it is not necessary for the GBA to include a discussion of the Settlement Agreement.

Response O2-z

The City disagrees with the assertion that the Draft EIR fails to adequately establish the biological resources baseline. The GBA discloses the existing conditions and results of the field surveys in Section 3.0 of the GBA. These existing conditions are reiterated in Section 4.3.1, Environmental Setting, of the Draft EIR. The GBA included a biological assessment of the Project site that includes field surveys that were conducted to document existing habitat conditions, obtain plant and animal species information, view the

surrounding uses, assess the potential for State and federal waters, assess potential for wildlife movement corridors, and assess for the presence of critical habitat constituent elements. Field surveys included habitat assessments for sensitive species for which potential habitat was found to be present on the site. Since the comment does not identify the alleged grounds for its assertion that the Draft EIR fails to establish the biological resources baseline, no further response can be provided.

Response O2-aa

The Settlement Agreement states that focused protocol surveys are required "if a [habitat] assessment determines there is potential habitat for sensitive species." The GBA found that the Project site potentially supported suitable habitat for tricolored blackbird, grasshopper sparrow, great blue heron, yellow rail, California horned lark, merlin, burrowing owl, western pond turtle, western mastiff bat, and California glossy snake; however, due to the disturbed nature of the Project site, the presence and occurrence of these species would be reduced. Because of the reduced likelihood of occurrence, the GBA and the Draft EIR includes recommendations in the form of mitigation measures for each sensitive animal species that has the potential to occur on the Project site (see revised MM BIO-1 as presented in Section 3.0, Revisions to the Draft EIR, of this Final EIR). The recommendations for tricolored blackbird, grasshopper sparrow, great blue heron, yellow rail, California horned lark, and merlin demonstrate compliance with the federal MBTA and Fish and Game Code Sections 3503 and 3503.5 to the satisfaction of the City of Ontario. Protocol surveys were completed for the burrowing owl. Preconstruction surveys, as recommended under MM BIO-1, to be conducted in accordance with adopted protocol were recommended for the western pond turtle, western mastiff bat, and California glossy snake to determine the presence or absence of the species and to avoid any direct take. Therefore, each sensitive species for which potential habitat was found to be present on the site is adequately covered by protocol guidelines and MM BIO-1.

Response O2-bb

The City disagrees with the assertion that the Draft EIR fails to adequately describe burrowing owl use of the Project site.

The GBA found potential habitat for the burrowing owl is present on the Project site. Focused, protocol burrowing owl surveys determined the absence of burrowing owl and burrowing owl evidence.

The Staff Report on Burrowing Owl Mitigation from the CDFG states the following:

> *"Non-breeding season (1 September to 31 January) surveys may provide information on burrowing owl occupancy, but do not substitute for breeding season surveys because results are typically inconclusive. Burrowing owls are more difficult to detect during the non-breeding season and their seasonal residency status is difficult to ascertain. Burrowing owls detected during non-breeding season surveys may be year-round residents, young from the previous breeding season, pre-breeding territorial adults, winter residents, dispersing juveniles, migrants, transients or new colonizers. In addition, the numbers of owls and their pattern of distribution may differ during winter and breeding seasons. However, on rare occasions, non-breeding season surveys may be warranted*

(i.e., if the site is believed to be a wintering site only based on negative breeding season results)."

From interpreting this information, burrowing owl surveys shall not be required during the non-nesting season. The Project site is not a wintering site for burrowing owls and therefore was not warranted for non-breeding season surveys. The biological baseline is more accurate during the breeding season when the surveys were completed. No evidence of burrowing owl was found on-site during the breeding season, and non-breeding season survey results are typically inconclusive. In addition, no burrowing owls have been historically recorded near the Project site since 2006. Therefore, focused surveys during the non-breeding season are not required. Further, the implementation of MM BIO-2 would require an avoidance survey no less than 14 days prior to initiating ground disturbance activities before construction starts. Pursuant to MM BIO-2, the development of avoidance and minimization approaches would be evaluated by monitoring the owls if they are present on-site.

Response O2-cc

The City disagrees with the assertion that the Draft EIR fails to evaluate essential habitat for burrowing owls on the future development areas.

As impacts to burrowing owl habitat have been reduced to less than significant levels, no additional mitigation measures are required. However, MM BIO-2 has been revised for clarification and to include the commenter's requested mitigation language (indicated in bold underline for additions and strikethrough to deletions):

MM BIO-2. Burrowing Owl Surveys. Phase 1: Prior to issuance of a demolition or grading permit for any ground disturbing activity, a qualified biologist shall conduct a pre-construction presence/absence survey for burrowing owls within ~~The Project Applicant shall complete an initial BUOW take avoidance survey no less than~~ 14 days prior to initiating ground disturbance activities. Surveys shall be conducted consistent with the procedures in outlined in the "California Department of Fish and Wildlife (CDFW) 2012 Staff Report on Burrowing Owl Mitigation." If the species is absent, no additional mitigation will be required. ~~Implementation of avoidance and minimization measures (e.g., eliminating actions that reduce burrowing owl forage and burrowing surrogates (e.g., ground squirrel), or introduce/facilitate burrowing owl predators) would be triggered by positive owl presence on the site where Project activities would occur. The development of avoidance and minimization approaches would be evaluated by monitoring burrowing owls (if present on-site). BUOW may re-colonize a site after only a few days. Time lapses between Project activities trigger subsequent take avoidance surveys including but not limited to a final survey conducted within 24 hours prior to ground disturbance.~~

If burrowing owl(s) are observed onsite during the pre-construction clearance survey;

- Prior to disturbance of the occupied burrows, suitable and unoccupied replacement burrows shall be provided at a ratio of 2:1 within designated off-site conserved lands to be identified through coordination with CDFW and the City in which the burrowing

owl(s) is(are) detected. A qualified biologist shall confirm that the artificial burrows are currently unoccupied and suitable for use by owls.

- Until suitable replacement burrows have been provided/confirmed within the off-site conserved lands to be identified through coordination with CDFW and the City of Ontario, no disturbance shall occur within 50 meters (approximately 160 feet) of occupied burrows during the nonbreeding season (September 1 through January 31) or within 75 meters (approximately 250 feet) during the breeding season (February 1 through August 31).
- Occupied burrows should not be disturbed during the nesting season (February 1 through August 31) unless a qualified biologist approved by CDFW verifies through non-invasive methods that either: 1) the birds have not begun egg-laying and incubation; or 2) that juveniles from the occupied burrows are foraging independently and are capable of independent survival.
- If burrowing owls are present at the time that the occupied burrows are to be disturbed, then the owls shall be excluded from the site following the 2012 CDFG Staff Report.

Phase 2 and SB 330 Replacement Site: Prior to any site-specific development, potential future residential development would be required to conduct site-specific biological resource surveys, including an arborist report, as part of the City's standard discretionary review process, including compliance with CEQA and applicable local, state, and federal regulations.

See Response O2-y regarding the Settlement Agreement.

Response O2-ee

The City disagrees with the assertion that the Draft EIR fails to adequately survey for Swainson's Hawk. The GBA report states that the Swainson's Hawk is not known to occur within the Project area but potential foraging habitat for this species is present on the Project site. The Project site consists of an active dairy farm and agricultural fields. Ongoing dairy and agricultural operations include implementation of rodent control programs, which include the removal of rodent burrows and use of rodenticides. Based upon the level of ongoing disturbance and implementation of rodent control programs, the site would be considered low-quality foraging habitat for raptors; therefore, impacts to raptor foraging habitat would be considered less than significant. The measures included in MM BIO-1 are intended to reduce potential impacts to foraging raptors to a less than significant level. Although the agriculture fields and stock/retention ponds may provide foraging habitat for special-status raptors, it is not expected to be valuable, as the lands are actively maintained and in use. This loss of potential foraging habitat would not make a cumulatively considerable contribution to the regional decline of raptors; therefore, replacement of foraging habitat would not be required.

According to the CDFW Staff Report Regarding Mitigation for Impacts to Swainson's Hawk, projects should be assessed to determine whether take of nests or foraging habitat surrounding nests will be impacted.

There have been two historical sightings of this species within 4.56 miles of the Project site and the agricultural habitat is considered potentially suitable foraging habitat. Therefore, the GBA recommends implementation of MM BIO-1, which requires pre-construction nesting bird surveys to identify nests onsite and within the vicinity of the site which will determine whether the disturbance of the onsite foraging habitat would result in the take of nesting hawks. No additional mitigation or surveys are required.

Response O2-ff

The City disagrees with the assertion that the Draft EIR fails to accurately characterize potential for Western Spadefoot habitat. Due to the nature of the Project site habitat, this species does not have any potential to occur. The onsite stock ponds collect waste from livestock and dairy activities. The stock ponds do not contain water throughout the year and are routinely dredged to remove waste and sediment. The stock ponds are designed to hold water for no more than 72 hours; therefore, the ponds do not provide a suitable source of open water necessary for western spadefoot larvae to develop. According to the California Amphibian and Reptile Species of Special Concern it was estimated that the minimum time for larval development is 14 days and on average lasts 58 days (Thomson et al. 2016). The stock/retention ponds in the Project area are not sufficient breeding grounds for this species.

All historical sightings within a 5-mile radius for this species exist within or adjacent to woodland habitats and slopes of the Angeles National Forest, Chino Hills State Park, and the Cleveland National Forest. The Project area contains agricultural fields with no native trees. No sightings of this species occur within 4.49 miles, and there is no woodland habitat or slopes within miles of the Project site. Therefore, this species is not present.

Response O2-gg

The City disagrees with the assertion that the Draft EIR failed to consult all available biological resources databases to establish the environmental setting. The GBA utilizes the CNDDB to determine the potential occurrence of special status species. The GBA also utilizes the United States Fish and Wildlife Service (USFWS) Endangered Species Lists, the California Native Plant Society (CNPS) Rare Plant Inventory, regional Natural Communities Conservation Plans or Habitat Conservation Plans, regional Multi-Species Habitat Conservation Plans (MSHCPs), and federal critical habitat maps to determine whether sensitive species have the potential to occur on or within the vicinity of the Project site. The long-billed curlew, mountain plover, white-faced ibis, northern harrier, ferruginous hawk, white-tailed kite, and loggerhead shrike have not been historically documented within miles of the Project area and no suitable nesting habitat for the species occurs within Project boundaries.

Response O2-hh

The City disagrees with the assertion that the Draft EIR fails to accurately describe ponded water on the Project Site. The Draft EIR and GBA state that approximately 19 acres of dry stock/retention ponds and channels occur within the Project site. The GBA includes images that show the stock pond channels to be wet; however, the GBA also states that the ponds do not contain water throughout the year. The onsite stock ponds collect waste from livestock and dairy activities. The stock ponds do not contain water

throughout the year and are routinely dredged to remove waste and sediment. The stock ponds are designed to hold water for no more than 72 hours. Therefore, the ponds are dry and do not provide a permanent, reliable source of open water necessary for breeding/nesting habitat for species. Furthermore, the source of water for these man-made features are not a "natural flow" as required by the CDFW Lake and Streambed Alteration Program, so the stock ponds are not considered jurisdictional under the CDFW. The stock ponds are isolated features that are not tributary to traditional navigable waters, and therefore are not considered Waters of the United States. Further, discharges to the man-made stock ponds are not considered waters or wetlands of the State subject to permit requirements under the Clean Water Act or Porter-Cologne since they are artificially constructed.

Response O2-ii

The City disagrees with the assertion that the Draft EIR fails to identify potential jurisdictional waters. The Draft EIR and GBA state that approximately 19 acres of stock/retention ponds and channels occur within the Project site. According to the Web Soil Survey, these features do not occur on hydric soils. The ponded features identified in the comment occur on Chino silt loam and Grangeville fine sandy loam. The Chino silt loam series and the Grangeville fine sandy loam series are identified as containing minor components that are hydric. However, the Project site lacks remnant fan components and depressions representing these series, and there are no indicators of hydric soils (Natural Resources Conservation Service). Based on these conditions, hydric soils do not occur. These features also do not qualify as wetlands. The California Water Boards defines a wetland as having three requirements: "(1) the area has continuous or recurrent saturation of the upper substrate caused by groundwater, or shallow surface water, or both; (2) the duration of such saturation is sufficient to cause anaerobic conditions in the upper substrate; and (3) the area's vegetation is dominated by hydrophytes or the area lacks vegetation." The features do not meet these requirements. Furthermore, the new features do not qualify as jurisdictional waters. Refer to the GBA discussion on State and Federal Jurisdictional Drainages. Lastly, the additional features identified in the letter only hold water for brief periods of time during rainfall. As with the other stock ponds, these features are dry and do not qualify as wetlands, jurisdictional waters, or suitable habitat for species. See Response O2-hh above for more detail.

Response O2-jj

The City disagrees with the assertion that the Draft EIR fails to adequately analyze the Project's impacts on biological resources. The GBA provides recommendations to avoid potential impacts to each sensitive species that have the potential to occur on the Project site. The recommendations are included in the Draft EIR as mitigation measures to be implemented to reduce the impacts to sensitive species to less than significant. As stated in the Draft EIR, with implementation of MM BIO-1 and BIO-2, impacts would be reduced to less than significant. Therefore, the analysis provided in the GBA and the Draft EIR include the necessary information to evaluate the Project against the significance thresholds. The City disagrees with the assertion that the Draft EIR mitigation would not sufficiently mitigate those (unspecified) impacts as the Draft EIR describes the impacts and also the mitigation measures required to reduce the impacts to less than significant.

Response O2-kk

The City disagrees with the assertion that the Draft EIR fails to disclose impacts on waterfowl. The Draft EIR and GBA discusses potential suitable or foraging habitat for several waterfowl species. The Draft EIR acknowledges impacts on waterfowl under Section 4.3.5 Project Impacts and Mitigation. The waterfowl species with suitable nesting or foraging habitat onsite are included under sensitive animals and nesting birds. With implementation of MM BIO-1, impacts to these species are reduced to less than significant. The onsite stock ponds collect waste from livestock and dairy activities. The stock ponds do not contain water throughout the year and are routinely dredged to remove waste and sediment. The stock ponds are designed to hold water for no more than 72 hours. The ponds on site are man-made, dry, and do not provide a permanent, reliable source of open water necessary for breeding/nesting habitat for waterfowl species. The Ontario Plan supports the protection of high value habitat areas by establishing habitat conservation areas and complying with State and federal regulations regarding protected species. Since the Project site does not support high value habitats for waterfowl species but is within the Annexation Area 163, the developer will pay the mitigation fee of $4,320 per net acre. Therefore, no further compensatory mitigation measures are required.

Response O2-ll

The City disagrees with the assertion that the Draft EIR fails to mitigate habitat loss. Draft EIR Section 4.3.5 Project Impacts and Mitigation includes discussions of the impacts expected to occur to habitat and sensitive species, along with mitigation measures to reduce these impacts. The Ontario Plan supports the protection of high value habitat areas by establishing habitat conservation areas and complying with state and federal regulations regarding protected species. The Project site consists of an active dairy farm and agricultural fields. The Project site is disturbed, and onsite habitats are highly degraded. No sensitive species were observed during field surveys. The site does not provide suitable nesting/breeding habitat for tricolored blackbird. The onsite stock ponds do not provide a permanent source of open water necessary for western pond turtle. Focused burrowing owl surveys found that the species is not present on the site. Based upon the level of ongoing disturbance and implementation of rodent control programs, the site would be considered low-quality foraging habitat for raptors. The site does not provide valuable habitat.

The DEIR references MM BIO-1 and MM BIO-2 as being the predominant mitigation measures to reduce significant impacts to sensitive species. The Ontario Plan DEIR states that Ontario will consult with CDFG about which lands are occupied by burrowing owl and are suitable as long-term habitat. If the site is not viable as long-term habitat, the developer shall pay the mitigation fee and make provisions for relocation of owls. Since no owls occur on the project site, the developer shall pay the mitigation fee of $4,320 per net acre. No further compensatory mitigation measures are required.

Response O2-mm

See Response O2-y.

Response O2-nn

The City disagrees with the assertion that MM BIO-1 is ineffective. It should be noted that the vegetation removal component of MM BIO-1 is recommended as part of the CDFW's recommended mitigation to lessen Project-related impacts. See Response S1-g of the CDFW letter. The Ontario Plan states that projects that would directly impact vegetation that could be used by migratory birds would be required to comply with the federal MBTA. In addition to complying with the federal MBTA, the Project would implement MM BIO-1, which provides recommendations to ensure that impacts to nesting birds is less than significant. Furthermore, according to the California Natural Diversity Data Base (CNDDB), tricolored blackbird colonies have been recorded within the vicinity of the Project site. Tricolored blackbirds require open accessible water, a secure substrate in which to place their nests, and suitable nearby foraging areas that provide adequate food sources for breeding. If any one of these required elements is missing, the species will not breed in that location. Although the GBA prepared for the Project found that suitable habitat for this species occurs on the Project site; breeding habitat is contingent upon the onsite waste filled stock ponds. However, the onsite stock ponds do not contain water throughout the year; therefore, the ponds do not provide a reliable source of open water necessary for breeding/nesting habitat. The species' preferred foraging habitats include agricultural crops such as rice, alfalfa, irrigated pastures, and ripening or cut grain fields, as well as annual grasslands, cattle feedlots, and dairies. Therefore, the site does provide potentially suitable foraging habitat for tricolored blackbird.

The site was not occupied by tricolored blackbird individuals or colonies at the time of the GBA. Further, suitable breeding/nesting habitat does not occur on the site. As such, protocol surveys are not warranted. Furthermore, the tricolored blackbird is not a federally listed species. Tricolored blackbird is a state listed species and a California Endangered Species Act (CESA) incidental Take Permit (ITP) is only required to be obtained from CDFW for potential "take" of the species. "Take" is defined by Fish and Game Code Section 86 as "hunt, pursue, catch, capture, or kill, or attempt to hunt, pursue, catch, capture, or kill." There is no occupied tricolored blackbird habitat on the site. Therefore, the project is not expected to result in "take" of tricolored blackbird.

Measures included in MM BIO-1 are intended to avoid permanent direct impacts to nesting birds, which includes tricolored blackbird, year-round. Therefore, no further mitigation is required.

Response O2-oo

The City disagrees with the assertion that MM BIO-1 would not mitigate impacts to the western pond turtle, western mastiff bat, or California glossy snake. As noted on pages 4.3-21 and 4.3-22 of the Draft EIR, MM BIO-1 includes measures specific to the three listed species. Implementation of MM BIO-1 would reduce the potential for the species to inhabit the Project site.

Response O2-pp

The City disagrees with the assertion that MM BIO-1 lacks specificity to ensure bird nests are actually detected. As noted within MM BIO-1, the recommendations would be performed by a qualified biological monitor and qualified biologist, thus ensuring that the surveys and removal efforts are done to a professional standard.

Response O2-qq

The GBA prepared for the Project included a literature review and field survey of the project site and surrounding areas. The Prado Dam 7.5' USGS topographic quadrangle and eight surrounding quadrangles were used to identify sensitive species in the California Natural Diversity Data Base (CNDDB). According to the CNDDB, the nearest recorded occurrence of western pond turtle lies approximately 3.7 miles to the southeast of the project area within the Santa Ana River floodplain. Further, the species was not observed during the general biological assessment field survey. The onsite stock ponds collect waste from livestock and dairy activities. The stock ponds do not contain water throughout the year and are routinely dredged to remove waste and sediment. The stock ponds are designed to hold water for no more than 72 hours; therefore, the ponds do not provide a permanent source of open water necessary for the species. Although the GBA determined that the onsite stock ponds may potentially provide suitable habitat for western pond turtle, it is unlikely that this species occurs within the project area. The proposed mitigation measure MM BIO-1 was intended to ensure that no impacts to the species occurs in the unlikely event that western pond turtle is found onsite. Based on CDFW's recommendation, MM BIO-1, specific to the Western pond turtle, will be revised to the following:

MM BIO-1. The following measures shall be implemented for the indicated species, prior to commencement of ground disturbance at the Project site:

…

Western pond turtle

Within the breeding season (May-July) prior to the onset of construction activities, a CDFW-approved qualified biologist shall conduct pre-construction trapping surveys, following U.S. Geological Survey trapping protocol, for western pond turtle within all areas of any suitable aquatic habitat for this species (e.g., retention and treatment ponds). If western pond turtles are observed or trapped during the pre-construction survey, the Project Proponent shall either avoid impacts to western pond turtle aquatic and terrestrial habitat or shall prepare for CDFW review and approval, a translocation plan identifying proposed protocol for trapping and relocating turtles, including identifying potential, appropriate receiver sites to relocate western pond turtles to. If no western pond turtles are observed during the pre-construction survey, then construction activities may begin. If construction is delayed or halted for more than 30 days, another pre-construction survey for western pond turtle shall be conducted. Within seven days of the pre-construction survey, a report of findings from the survey shall be submitted to the CDFW. During construction, a qualified biological monitor who has been approved by the CDFW to relocate western pond turtles shall be onsite to ensure that no western pond turtles are harmed. If western pond turtles are observed in the construction area at any time during construction, the onsite biological monitor shall be notified and construction in the vicinity of the sighting shall be halted until such a time as a turtle has been removed from the construction zone and relocated by an approved biologist. If a sighting occurs during construction, the biologist shall prepare a report of the event and submit it to CDFW.

~~Within 14 days prior to the onset of construction activities, a qualified biologist shall conduct pre-construction surveys for western pond turtle within all areas that fall within 100 feet of any suitable aquatic and upland nesting habitat for this species (stock/retention ponds). If western pond turtles are observed during the pre-construction survey, the California Department of Fish and Wildlife shall be contacted. If no Western pond turtles are observed during the preconstruction survey, then construction activities may begin. If construction is delayed or halted for more than 30 days, another pre-construction survey for western pond turtle shall be conducted. Within seven days of the pre-construction survey, a report of findings from the survey shall be submitted to the California Department of Fish and Wildlife.~~

~~During construction, a qualified biological monitor who has been approved by the California Department of Fish and Wildlife to relocate western pond turtles shall be on-site to ensure that no western pond turtles are harmed. If western pond turtles are observed in the construction area at any time during construction, the on-site biological monitor shall be notified and construction in the vicinity of the sighting shall be halted until such a time as a turtle has been removed from the construction zone and relocated by an approved biologist. If a sighting occurs during construction, the biologist shall prepare a report of the event and submit it to CDFW.~~

Revision of MM BIO-1, as specified above will ensure that no take of western pond turtle will result from project implementation. CDFW's recommendation that the project should create suitable, breeding, and foraging habitat at a minimum 2:1 replacement to impact ratio if western pond turtle are found during pre-construction surveys is not necessary due to the fact that the onsite stock ponds to be impacted by the Project do not provide habitat necessary for the species, as described above. As previously stated, it is unlikely that the species will be found onsite during pre-construction trapping surveys and the proposed mitigation measure is merely precautionary.

Response O2-rr

See Response O2-ee.

Response O2-ss

The City disagrees with the assertion that MM BIO-1 fails to identify minimum qualifications for a monitor and the variables that would be monitored. As noted within MM BIO-1, the recommendations would be performed by a qualified biological monitor and qualified biologist, thus ensuring that the surveys and removal efforts are done to a professional standard.

Response O2-tt

See Response O2-qq. The City disagrees with the assertion that MM BIO-1 are ineffective for the California glossy snake.

Response O2-uu

The City disagrees with the assertion that MM BIO-1 fails to include reliable detection of western mastiff bat roosts. MM BIO-1 states that a qualified biologist shall conduct a pre-construction survey to determine the presence or absence of roosting bats. Methods to identify the presence of bats could include acoustic monitoring, a combination of visual surveys of bats (structure inspections), inspection for suitable habitat, bat sign, exit counts, or use of ultrasonic detectors (e.g., Anabat, etc.). Nevertheless, the second bullet of MM BIO-1 regarding the Western mastiff bat includes additional protection and compensatory measures in the case that bat species are documented.

Response O2-vv

See Response O2-uu.

Response O2-ww

As discussed in MM BIO-1 of the Draft EIR, prior to implementation of the Project, a qualified biologist shall conduct a pre-construction survey to determine the presence or absence of roosting bats. If occupied roosts are identified by special-status bat species, the bats shall be safely flushed from the sites where roosting habitat is planned to be removed prior to maternity roosts occupation and prior to the onset of construction activities. The removal of the roosting sites shall occur during the time of day when the roost is unoccupied, and the loss of each roost will be compensated for by the construction and installation of two bat boxes suitable to the bat species and colony size excluded from the original roosting site. The bat boxes shall be installed in the vicinity prior to removal of the original day/maternity roost sites. The specifications of the bat boxes will be based upon the species of bat and the size of the colony to be affected by the Project, upon consultation with a qualified biologist. Therefore, through implementation of MM BIO-1, an alternative habitat will be created for the potentially discoverable bat species and would reduce the impacts to the bat species and colony to less than significant levels.

Response O2-xx

See Response O2-uu. MM BIO-1 would be properly implemented as required by the City and as part of the Mitigation Monitoring and Reporting Program. Therefore, there are assurances that MM BIO-1 would mitigate potentially significant impacts to the western mastiff bat to less-than-significant levels. The City did not defer mitigation and has stated within MM BIO-1 in the Draft EIR the mitigation measures required to mitigate potentially significant impacts.

Response O2-yy

See Response O2-qq. The onsite stock ponds to be impacted by the Project do not provide habitat necessary for the species, as described above. As previously stated, it is unlikely that the species will be found onsite during pre-construction trapping surveys and the proposed mitigation measure is merely precautionary.

Response O2-zz

See Response O2-qq.

Response O2-aaa

See Response O2-cc.

Response O2-bbb

See Response O2-y.

Response O2-ccc

The City disagrees with the assertion that MM BIO-2 fails to discuss how impacts to burrowing owls would be avoided or minimized if owls at the site are year-round residents. As stated on page 4.3-19 of the Draft EIR, several field surveys were conducted to determine the presence of BUOW foraging on or adjacent to the site. There were no direct BUOW identifications observed during the focused BUOW breeding season surveys. Further, BUOW often occur in less than optimal and/or disturbed conditions. Therefore, MM BIO-2 would only be implemented if it were later determined that active nests of BUOW would be lost as a result of site preparation. It is speculative to assume that the owls would be year-round residents when the focused surveys prepared for the Project have shown that there is no evidence of the BUOW. Nonetheless, as stated in Response S1-f of this Final EIR, MM BIO-2 has been revised for clarification and to include the CDFW's requested mitigation language.

Response O2-ddd

The City disagrees with the assertion that the Draft EIR fails to adequately evaluate cumulative impacts on biological resources. CEQA Guidelines Section 15130(b)(4) requires a summary of the expected environmental effects to be produced by cumulative projects. CEQA Guidelines Section 15130(b)(5) requires a reasonable analysis of the cumulative impacts of the relevant projects. The Draft EIR states that the Project impacts would be less than cumulatively significant by implementation of mitigation measures to reduce impacts to sensitive species to less than significant levels.

The mitigation measures (MM BIO-1 and MM BIO-2) implement vegetation removal, pre-construction surveys, buffers around nests for nesting birds, and relocation of sensitive species prior to the commencement of ground disturbance, as well as a BUOW take avoidance survey no less than two weeks prior to the start of ground-disturbing activities. The habitat onsite, as previously mentioned, is not of high value or quality. It is an active dairy farm with agricultural fields which is continuously disturbed for agricultural purposes. Therefore, no sensitive habitat exists that should be mitigated for (refer to Appendix C of the Draft EIR). The mitigation fee of $4,320 per net acre shall be paid since the Project site is within Annexation Area 163. Therefore, no further compensatory mitigation is required.

Response O2-eee

The City disagrees with the assertion that the cumulative impacts to habitat are potentially significant. The comment letter asserts that since the cumulative impact to agricultural resources is significant and unavoidable, the cumulative impact to agricultural habitat would also be significant and unavoidable. This is false; the cumulative impact to agricultural resources is different than the cumulative impact loss of agricultural habitat would have on sensitive wildlife. The habitat onsite is of poor quality and frequently disturbed. No sensitive or significant habitat types exist on the Project site (refer to Appendix C of the

Draft EIR). Thus, cumulative impacts are addressed through the payment of the Mitigation Fee for all projects located within the NMC to ensure that cumulative impacts are less than significant, and no further mitigation would be required.

Response O2-fff

The City disagrees with the assertion that the Draft EIR fails to disclose that the Project stie contains raptor foraging habitat. The Draft EIR discusses the scarcity and low value of potential foraging habitat for raptors on the Project site. Although open fields are valuable foraging habitat, as described in Appendix C of the Draft EIR, the Project site does not provide habitat that is unique, scarce in the region, or particularly valuable for raptors. As previously stated, the site is a dairy farm with ongoing dairy and agricultural operations including implementation of rodent control programs, which include the removal of rodent burrows and use of rodenticides. The fields are low value and should not require compensatory mitigation.

Response O2-ggg

The City disagrees with the assertion that the loss of NMC agricultural lands for foraging due to the Project would be significant and would require mitigation. The comments from the CDFW differ on a case-by-case basis for each project (refer to Response O2-ee above for additional detail). Although the comments for a different site state that the loss of NMC agricultural lands is significant and should be mitigated for, this Project site has very poor foraging habitat for raptors due to current rodent management practices (refer to Appendix C of the Draft EIR). Payment of the Mitigation Fee would ensure that the proposed Project is in compliance with the Ontario Plan and would mitigate for impacts to loss of habitat.

Response O2-hhh

The City disagrees with the assertion that the Draft EIR defers mitigation as it relates to VMT impacts. MM TRANS-1 would be properly implemented as required by the City and as part of the Mitigation Monitoring and Reporting Program, as enforced by the Planning Director. Therefore, there are assurances that reductions in commute VMT through feasible TDM measures would be provided by the Project, and would be implemented as part of future Certificates of Occupancy for future tenants as described in MM TRANS-1. Therefore, the City did not defer mitigation and has stated within MM TRANS-1 in the Draft EIR the mitigation measures required to mitigate potentially significant impacts.

As referred to in MM TRANS-1, the following is a list of VMT measures that would be considered, but are not limited to, to reduce VMT impacts, and they would be implemented to the satisfaction of the Planning Director: [22]

- Measure 1: Increase Diversity of Land Uses (LUT-3). Having different types of land uses near one another can decrease VMT since trips between land use types are shorter and may be accommodated by non-auto modes of transportation. For example, when residential areas are in the same neighborhood as retail and office buildings, a resident does not need to travel outside of the neighborhood to meet his/her trip needs.

[22] South Ontario Logistics Center Vehicle Miles Traveled (VMT) Analysis. (2021). Page 7-8.

- Measure 2: Provide Pedestrian Network Improvements (SDT-1). Providing on-site pedestrian access network to link areas of the Project to the off-site pedestrian network encourages people to walk for short trips instead of drive. This mode shift results in people driving less for nearby trips (typically less than ¼ mile and no greater than ½ mile) and thus a reduction in VMT.
- Measure 3: Provide Traffic Calming Measure (SDT-2). Providing traffic calming measures encourages people to walk or bike instead of using a passenger car. This mode shift would result in a decrease in VMT. Traffic calming features may include marked crosswalks, count-down signal timers, curb extensions, speed tables, raised crosswalks, raised intersections, median islands, tight corner radii, roundabouts or mini-circles, on-street parking, planter strips with street trees, chicanes/chokers, and others.
- Measure 4: Implement Car-Sharing Program (TRT-9). Implementing a car-sharing program would allow individuals to have on-demand access to a shared fleet of vehicles on an as-needed basis. User costs are typically determined through mileage or hourly rates, with deposits and/or annual membership fees.
- Measure 5: Increase Transit Service Frequency and Speed (TST-4). This measure serves to reduce transit-passenger travel time through more reduced headways and increased speed and reliability. This makes transit service more attractive and may result in a mode shift from auto to transit which reduces VMT.
- Measure 6: Encourage Telecommuting and Alternative Work Schedule (TRT-6). Encouraging telecommuting and alternative work schedules reduces the number of commute trips and therefore VMT traveled by employees. Alternative work schedules could take the form of staggered starting times, flexible schedules, or compressed workweeks.
- Measure 7: Provide Ride-Sharing Programs (TRT-3). This strategy focuses on encouraging carpooling and vanpooling, but its ultimate implementation is limited similarly as Measure 6 above.

Response O2-iii

See Response O2-hhh. As noted above, the mitigation measures identified in the comment are already addressed by existing regulation that the Project would be required to comply with. As stated on page 4.13-28 of Section 4.13, Transportation and Traffic, of the Draft EIR, the effectiveness of the above-noted TDM measures (see Response O2-hhh for the seven measures), would be dependent on the buildings' occupants, which are unknown at this time. Because land use context is relevant to the potential application and effectiveness of the TDM measures, the reductions are not guaranteed and the Draft EIR found that the Project's impact on VMT would be considered significant and unavoidable. Therefore, mitigation has not been deferred, and the significance determination was properly stated to be significant and unavoidable, even with implementation of the possible TDM measures as listed above.

Response O2-jjj

See Response O2-hhh and O2-jjj. The City disagrees with the assertion that the Draft EIR has not identified all feasible mitigation for VMT reduction. Reductions in commute VMT through feasible TDM measures such as those described previously will be provided by the Project. Inclusion of such VMT reduction

measures in areas that are characteristically suburban in context are noted to be limited to a maximum VMT reduction of 10%. However, as future Project design features and building tenants are not yet known, reductions in VMT related to the above TDM measures cannot be accurately estimated or guaranteed. Therefore, the Project's transportation impact based on VMT should conservatively be considered significant and unavoidable.

Response O2-kkk

SB743 requires that automobile delay, as described solely by LOS of similar measures of vehicular capacity or traffic congestion, shall not be considered a significant impact on the environment. Therefore, vehicle delay is no longer considered a significant impact under CEQA. Specifically, PRC §21099(b)(2) states that: "Upon certification of the guidelines by the Secretary of the Natural Resources Agency pursuant to this section, automobile delay, as described solely by level of service or similar measures of vehicular capacity or traffic congestion shall not be considered a significant impact on the environment pursuant to this division, except in locations specifically identified in the guidelines, if any." As summarized in Section 4.13, Traffic and Transportation, of the Draft EIR, with respect to consistency with the City of Ontario General Plan level of service policies, with recommended improvements the Project's effects on operational level of service will be consistent with applicable local agency policies. Furthermore, the Project would be consistent with the plan, programs, goals and policies of the Mobility Element by enhancing transportation networks and for vehicles and bicycle facilities, safely accommodating pedestrian walkways and providing easy access to the Project site via public transportation. The Project's circulation system has been designed consistently with the City's Traffic and Transportation Guidelines and existing transportation system. Additionally, the Project would comply with the City's DIF program which would require a payment of fees to ensure that the regional circulation and/or arterial expansions planned by the City and County (i.e., Congestion Management Plan [CMP]) keep pace with the projected population increases or other identified roadway deficiencies. Therefore, the Project would not conflict with the relevant goals, policies, and ordinances, addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities. Impacts would be less than significant.

Response O2-lll

See Response O2-kkk. The Project would be consistent with the plan, programs, goals and policies of the Mobility Element by enhancing transportation networks and for vehicles and bicycle facilities, safely accommodating pedestrian walkways and providing easy access to the Project site via public transportation. The Project's circulation system has been designed consistently with the City's Traffic and Transportation Guidelines and existing transportation system. Additionally, the Project would comply with the City's DIF program which would require a payment of fees to ensure that the regional circulation and/or arterial expansions planned by the City and County (i.e., CMP) keep pace with the projected population increases or other identified roadway deficiencies. Any improvements that are identified in the Traffic Study and not identified as being constructed by the project would not have a definitive schedule as future improvements would be completed based on priority/need for both the City and County facilities. The Draft EIR and Traffic Study contain adequate information to determine that the Project would not conflict with a program, plan, ordinance, or policy addressing the circulation system, and recirculation is not required.

Response O2-mmm

The comment summarizes the Draft EIR as well as CEQA requirements and case law in the view of the commenter. Responses to the specific comments are provided in Responses O2-nnn through O2-qqq below.

Response O2-nnn

The City disagrees with the assertion that the Draft EIR does not address the energy significance thresholds in CEQA Guidelines Appendix G. The energy analysis and associated thresholds are provided on Draft EIR pages 7-4 through 7-6. The analysis specifically responds to the guidance for energy analysis in the State CEQA Guidelines Appendix F, which requires a determination on if a project would increase the need for new energy supplies. As such, the comparison to regional consumption is provided for that purpose. Additionally, the Draft EIR discloses the Project's electricity consumption, natural gas consumption, and transportation fuel consumption. The analysis determined that the Project energy consumption would not be inefficient or wasteful as the Project will be required by the CALGreen Code to comply with the Title 24 Building Energy Efficiency Standards (Nonresidential) published by the California Energy Commission which contain stringent mandatory standards for mechanical systems, lighting (indoor and outdoor), and appliances to minimize energy use. Additionally, the Project includes MM AQ-2 through AQ-5, which will have the additional effect of reducing Project vehicle fuel consumption by requiring electrical cargo handling equipment, electrical hookups at loading bays for cold storage, a TDM program to reduce single-occupant vehicle trips and encourage public transit, and idling limitations. No evidence is provided in the comment or otherwise that the Project would result in a wasteful or inefficient use of energy. Therefore, no further analysis is required.

Response O2-ooo

The City disagrees with the assertion that the Draft EIR does not evaluate the Project's consistency with the listed plans. The plans listed in the comment are not applicable plans that the Project can demonstrate compliance with. For example, the Integrated Energy Policy Report (IEPR) and State of California Energy Plan are Statewide plans that assess energy issues and identify action at the State level. These plans are used to inform state policies and are implemented through the building codes, Renewable Portfolio Standards (RPS), and various others.

The City also disagrees with the assertion that Title 24, Part 6, Energy Efficiency Standards and California Green Building Standards is a plan for energy efficiency. As noted in Draft EIR page 7-6 (as well as throughout Draft EIR Section 4.6), the Project would be required to comply with the mandatory energy efficiency measures in the Title 24 Energy Efficiency Standards and the California Green Building Standards Code. As these are building standards that are codified in the California Code of Regulations, the energy efficiency standards are mandatory and as such, the Project must comply.

The comment also identifies AB 1493, RPS, and Clean Energy and Pollution Reduction Act. The AB 1493 Pavley Regulations and Fuel Efficiency Standards are a regulatory program designed to encourage the use of cleaner low-carbon transportation fuels in California and encourage the production of those fuels. CARB is directly responsible for regulating mobile and transportation source emissions in the State. California's

RPS sets continuously escalating renewable energy procurement requirements for the State's load-serving entities. Specifically, The RPS would ensure that energy comes from renewable sources incrementally until 2045, at which point it must be 100 percent renewable. Clean Energy and Pollution Reduction Act of 2015 (SB 350) establishes clean energy, clean air, and GHG reduction goals, including reducing GHG to 40 percent below 1990 levels by 2030 and to 80 percent below 1990 levels by 2050. These are State regulatory programs that would reduce the Project's energy and fuel consumption. As these are regulatory programs, the Project would benefit from program implementation and would not conflict with any of these. None of these programs identified in the comment are State or local plans for renewable energy or energy efficiency that the Project would conflict with. Therefore, no further analysis is required.

Response O2-ppp

The comment identifies energy policies from The Ontario Plan (TOP). As noted in the comment, consistency with these policies is discussed in the Draft EIR. The TOP policies listed in the comment focus on energy conservation, green development, building and site design, fuel efficient and alternative energy vehicles, and renewable energy generation. Although Project consistency with TOP policies are evaluated in the Draft EIR, the following discussion addresses the policies specifically identified in the comment. As shown below, the Project would not conflict with TOP energy policies.

TOP Policies	Project Consistency
• *ER3-1 Conservation Strategy*. We require conservation as the first strategy to be employed to meet applicable energy-saving standards.	The Project will be required by the California Green Building Standards Code to comply with the Title 24 Building Energy Efficiency Standards (Nonresidential) published by the California Energy Commission which contain stringent mandatory standards for mechanical systems, lighting (indoor and outdoor), and appliances to minimize energy use.
• *ER3-2 Green Development*– Communities. We require the use of best practices identified in green community rating systems to guide the planning and development of all new communities.	As noted above, the Project will comply with the California Green Building Standards Code and the Title 24 Building Energy Efficiency Standards, which represent the best practices for new development.
• *ER3-3 Building and Site Design*. We require new construction to incorporate energy efficient building and site design strategies, which could include appropriate solar orientation, maximum use of natural daylight, passive solar and natural ventilation.	The Project would comply with City building and site design requirements. Additionally, the Project would implement all California Green Building Standards Code and the Title 24 Building Energy Efficiency Standards, which include building envelope requirements for solar orientation and natural daylight and ventilation. Additionally, solar photovoltaic panels are an option for compliance with SCAQMD Rule 2305 (Warehouse Indirect Source Rule). The Project would be required to earn WAIRE points, which include solar, to reduce emissions and would further reduce energy consumption.

TOP Policies	Project Consistency
• *ER3-4 Green Development*– Public Buildings. We require all new and substantially renovated City buildings in excess of 10,000 square feet achieve a LEED Silver Certification standard, as determined by the U.S. Green Building Council.	This policy applies to City buildings and therefore does not apply to the Project.
• *ER3-5 Fuel Efficient and Alternative Energy Vehicles and Equipment*. We purchase and use vehicles and equipment that are fuel efficient and meet or surpass state emissions requirements and/or use renewable sources of energy.	MM AQ-2 requires the use of electrical off-road equipment such as forklifts and hostlers/yard trucks. All trucks and vehicles accessing the project site would be required to meet state standards and comply with state programs, including CARB's Mobile Source Strategy, CARB's Emissions Reduction Plan for Ports and Goods Movement, and CARB's Advanced Clean Truck Regulation. Therefore, this is already addressed in the Draft EIR.
• *ER3-6 Generation*- Renewable Sources. We promote the use of renewable energy sources to serve public and private sector development.	California Title 24 Standards require buildings to be designed to have 15 percent of the roof area solar ready. Additionally, solar photovoltaic panels are an option for compliance with SCAQMD Rule 2305 (Warehouse Indirect Source Rule). The project would be required to earn WAIRE points, which include solar, to reduce emissions and would further reduce energy consumption.

Response O2-qqq

Refer to Responses O2-nnn, O2-ooo, and O2-ppp, above. The Draft EIR energy analysis on Draft EIR pages 7-4 through 7-6 address the goals in the State CEQA Guidelines Appendix F. As discussed in the Draft EIR and in the responses above, the Project would comply with various standards and regulations regarding energy efficiency such as the California Green Building Standards Code and the Title 24 Building Energy Efficiency Standards. Additionally, the Project would benefit from numerous State and regional programs that would improve building and transportation efficiency such as the State's RPS, SB 350, CARB's Mobile Source Strategy, CARB's Emissions Reduction Plan for Ports and Goods Movement, CARB's Advanced Clean Truck Regulation, and SCAQMD's Warehouse Indirect Source Rule (Rule 2305). These energy efficiency programs would minimize the Project's energy consumption, thereby decreasing overall per capita consumption, reliance on fossil fuels, and increasing reliance on renewable energy sources.

For example, the energy efficiency standards in the California Green Building Standards Code and the Title 24 Building Energy Efficiency Standards would improve building energy efficiency. MM AQ-2 requires the use of electrical off-road equipment such as forklifts and hostlers/yard trucks, which reduces fossil fuel consumption. Mobile source emissions would be minimized as all trucks and vehicles accessing the Project site would be required to meet State standards and comply with State programs, including CARB's Mobile Source Strategy, CARB's Emissions Reduction Plan for Ports and Goods Movement, and CARB's Advanced Clean Truck Regulation. As noted on Draft EIR page 4.6-35, the Advanced Clean Truck Regulation requires

truck manufacturers to transition from diesel trucks and vans to electric zero-emission trucks beginning in 2024. By 2045, every new truck sold in California is required to be zero-emission. Regarding increasing reliance on renewable energy sources, the State's RPS would ensure that energy comes from renewable sources incrementally until 2045, at which point it must be 100 percent renewable. Additionally, California Title 24 Standards require buildings to be designed to have 15 percent of the roof area solar ready. Solar photovoltaic panels are an option for compliance with SCAQMD Rule 2305 (Warehouse Indirect Source Rule). The Project would be required to earn WAIRE points, which include solar, to reduce emissions and would further reduce energy consumption.

Response O2-rrr

The City disagrees with the assertion that the Draft EIR violates CEQA by claiming that because local policy discourages mitigation of a certain type of environmental impact (agricultural impacts), mitigation of that impact is infeasible. The comment asserts that the Draft EIR must propose and describe mitigation measures to minimize the significant environmental effects identified. As noted on page 4.1-12 of Section 4.1, Agriculture and Forestry Resources, of the Draft EIR, the conversion of agricultural lands and loss of Prime Farmland resulting from the Project have already been considered and addressed in the TOP EIR, including a Statement of Overriding Considerations adopted in January 2010 as part of the City's TOP EIR approval. As further discussed in the EIR, the conversion of existing agricultural uses to urban uses would be consistent with the TOP, and the continuation of agricultural uses would be incongruous with the continuing urbanization in the City, as evident in the lack of "Agricultural" Land Use designations under the adopted Land Use Plan. Furthermore, as pursuant to CEQA Guidelines Section 15364, feasibility should take into account economic, environmental, legal, social, and technological factors. See City of Del Mar v. City of San Diego (1982) 133 Cal.App.3d 410, 417. Therefore, "agencies may conclude that a mitigation measure…is impractical or undesirable from a policy standpoint and reject it as feasible on that ground." The commenter does not provide substantial evidence as to why the commenter believes that the potential mitigation measures that were deemed infeasible in the Draft EIR should be consisted to be feasible. Substantial evidence is provided on pages 4.1-13 through 4.1-16 of the Draft EIR to support the finding that no feasible mitigation measures were identified to substantially lessen the Project's significant impacts related to agricultural resources to a less-than-significant level.

Response O2-sss

The City disagrees with the assertion that the Draft EIR refused to consider mitigation of agricultural impacts. The commenter is incorrect, as pages 4.1-13 through 4.1-16 of the Draft EIR details mitigation measures that were considered, but ultimately rejected as infeasible, to reduce impacts to a less-than-significant level. The commenter further asserts that agricultural impacts must be mitigated, and that the City's approach undermines State policy of preserving agricultural land (e.g., the California Land Conservation Act of 1965). As noted on page 4.1-8 of the Draft EIR, the Williamson Act enables counties and cities to designate agricultural preserves and offer preferential taxation to agricultural landowners based on the land's income-producing value, and in return, the landowner is required to sign the Williamson contract to not develop the land for a minimum of 10 years. Page 4.1-17 of the Draft EIR acknowledges that the Project site, as well as the SB330 Replacement Site, contain land with active Williamson Act Contracts. Any land held in a Williamson Act contract will have to be filed for nonrenewal

and the contract will have to be allowed to expire before any development occurs on it. Since the adoption of TOP, notices of nonrenewal of Williamson Act contracts have been filed by property owners of a large portion of the agricultural preserve property within Ontario Ranch. The filing of nonrenewal notices by the property owners is reflective of the lack of a long-term commitment to agricultural uses in this area. For the remaining active contracts, buildout of TOP would most likely require the cancellation or nonrenewal of these contracts. Furthermore, the cancellation of any site with an active Williamson Act contract would be required to comply with the provisions and requirements identified at Government Code (GC) §51280 et seq. The City would be required to make the required statutory findings (GC §51282(a)). The landowner would be required to pay the requisite cancellation fee. Therefore, as concluded in the Draft EIR, while the implementation of the Project itself would constitute a significant and unavoidable impact, the City and landowners are transitioning land uses away from agricultural uses, which would support the trend of continuing urbanization in the City. The Project would be consistent with the findings of the City's TOP EIR and Land Use Plan. See also Response O2-rrr above.

Response O2-ttt

The City disagrees with the assertion that the Draft EIR violates CEQA as it does not determine whether mitigation measures are actually technically feasible, and that the Draft EIR does not provide sufficient information to determine whether mitigation of agricultural impacts can be achieved. As stated on page 4.1-13 of the Draft EIR, the transition of existing agricultural uses and farmland to non-agricultural uses is an unavoidable effect of implementing the TOP, which would result in significant and unavoidable impacts on agricultural resources in the City. As stated in Response O2-sss, pages 4.1-13 through 4.1-16 of the Draft EIR details mitigation measures that were considered, but ultimately rejected as infeasible, to reduce impacts to a less-than-significant level. Therefore, the Draft EIR does not violate CEQA's informational requirements. See also Responses O2-rrr and O2-sss above.

Response O2-uuu

This comment requests that the City revise the discussion on agricultural mitigation measures based on the reasonings provided above. See Responses O2-rrr, O2-sss, and O2-ttt above.

Response O2-vvv

The commenter is correct in that the Statement of Overriding Considerations will be presented in a separate document that will be transmitted to the decision-makers for approval. This comment also requests that the Statement of Overriding Considerations must find that the Project's significant, unavoidable impacts outweigh the Project's benefits to the community, particularly as it relates to providing employment opportunities for highly trained workers. Section 21081(a)(3) of the CEQA Guidelines specifically states, "specific economic, legal, social, technological, or other considerations, including considerations for the provision of employment opportunities for highly trained workers, make infeasible the mitigation measures or alternatives identified in the environmental impact report." As stated in Response O2-rrr and on page 4.1-10 of the Draft EIR, Ontario's future development emphasizes mixed-use, commercial, industrial, and residential projects rather than supporting the continuation of agricultural uses, which are becoming less economically viable. The Project, consistent with the TOP, would support development of land in an economically productive way that would serve the growing

population. As it applies to the Project and as stated in the TOP EIR, agriculture development within the City would burden the San Bernardino County region with air quality issues resulting from methane, water quality pollution, and hazardous emissions. Therefore, the Draft EIR has considered economic, legal, social, technological, and other considerations when considering the impacts of the Project. Lastly, as stated on page 4.11-10 and -11 of Section 4.11, Population and Housing, of the Draft EIR, Project construction would generate temporary employment opportunities, including short-term design, engineering, and construction jobs, all of which would include some skilled and managerial positions. The Project would also develop a business park and industrial uses, which could result in employment opportunities for highly trained workers. Therefore, the Draft EIR includes the Project's benefits that outweigh the environmental costs, all of which would be reflected in the statement of overriding considerations.

Response O2-www

The City disagrees with the assertion that a revised Draft EIR must be prepared and circulated. As determined in the responses to this comment letter above, the Draft EIR fully complies with CEQA and need not be revised and recirculated. See Response O2-vvv regarding the statement of overriding considerations.

Response O2-xxx

This comment serves as a conclusion to the comment letter. Detailed responses are provided in Responses O2-a through O2-www above.

3.0 REVISIONS TO THE DRAFT EIR

Introduction

In accordance with the CEQA Guidelines Section 15132 (a), this section of the FEIR provides changes to the DEIR that have been made to clarify, correct, or supplement the information provided in that document. This section contains revisions to the DEIR based upon (1) additional or revised information required to prepare a response to a specific comment; (2) applicable updated information that was not available at the time of DEIR publication; and/or (3) typographical errors. This section also includes additional mitigation measures to fully respond to commenter concerns as well as provide additional clarification to mitigation requirements included in the DEIR.

These changes and additions are due to recognition of inadvertent errors or omissions, and to respond to comments received on the DEIR during the public review period. The changes described in this section do not add significant new information to the DEIR that would require recirculation of the DEIR. More specifically, CEQA requires recirculation of a DEIR only when "significant new information" is added to a DEIR after public notice of the availability of the DEIR has occurred (refer to California Public Resources Code [PRC] Section 21092.1 and CEQA Guidelines Section 15088.5), but before the EIR is certified. Section 15088.5 of the CEQA Guidelines specifically states:

> *New information added to an EIR is not 'significant' unless the EIR is changed in a way that deprives the public of a meaningful opportunity to comment upon a substantial adverse environmental effect of the project or a feasible way to mitigate or avoid such an effect (including a feasible project alternative) that the project's proponents have declined to implement. 'Significant new information' requiring recirculation includes, for example, a disclosure showing that:*
>
> - *A new significant environmental impact would result from the project or from a new mitigation measure proposed to be implemented.*
> - *A substantial increase in the severity of an environmental impact would result unless mitigation measures are adopted to reduce the impact to a level of insignificance.*
> - *A feasible project alternative or mitigation measure considerably different from others previously analyzed would clearly lessen the significant environmental impacts of the project, but the project's proponents decline to adopt it.*
> - *The draft EIR was so fundamentally and basically inadequate and conclusory in nature that meaningful public review and comment were precluded.*

CEQA Guidelines Section 15088.5 also provides that "[re]circulation is not required where the new information added to the EIR merely clarifies or amplifies or makes insignificant modifications in an adequate EIR... A decision not to recirculate an EIR must be supported by substantial evidence in the administrative record." As demonstrated in this FEIR, the changes presented in this section do not constitute new significant information warranting recirculation of the DEIR as set forth in CEQA Guidelines Section 15088.5. Rather, the DEIR is comprehensive and has been prepared in accordance with CEQA.

As explained below, none of the changes adds any new significant information and recirculation is not required.

The responses to comments contain material and revisions that will be added to the text of the FEIR. City of Ontario staff has reviewed this material and determined that none of this material constitutes the type of significant new information that requires recirculation of the DEIR for further public comment under CEQA Guidelines Section 15088.5. None of this new material indicates that the project will result in a significant new environmental impact not previously disclosed or analyzed in the DEIR. Additionally, none of this material indicates that there would be a substantial increase in the severity of a previously identified environmental impact that will not be mitigated, or that there would be any of the other circumstances requiring recirculation described in Section 15088.5.

Changes made to the DEIR are identified here in strikeout text to indicate deletions and in underlined text to signify additions.

3.1 DEIR REVISIONS IN RESPONSE TO WRITTEN COMMENTS

The following text has been revised in response to comments received on the DEIR.

Executive Summary

The Draft EIR Executive Summary (Section 1.0) is hereby revised to incorporate the minor revisions to mitigation measures noted below.

Section 3.0, Project Description

1. *Figure 3-4, Regional Map*, on Page 3-4 has been added:
2. *Figure 3-5, SB 330 Replacement Site Aerial View*, on Page 3-4 has been added:
3. *Figure 3-6, City of Ontario Proposed Housing Strategy Map*, on Page 3-5 has been added:

The last paragraph on Page 3-4 and first paragraph on Page 3-5 under Subsection 3.2.1, Housing Accountability Act, is revised as follows:

The "Project" addressed in this EIR addresses the potential impacts associated with relocating residential density from the Project site to the SB330 Replacement Site, pursuant to, the Housing Crisis Act of 2019 (Government Code §6300). SB330 requires in part, that where a development project results in reducing the number of housing units allowed under existing zoning, the city must concurrently rezone other parcels such that there is no "net loss" of the total allowable housing development in the city.

As further discussed in Subsection 3.5, Approvals Requested as Part of the Project, a General Plan Amendment is proposed to change the site's land use designations from Low-Medium Density Residential and Business Park to approximately 35.2 acres of Business Park (0.6 FAR) and 184.2 acres of Industrial (0.55 FAR) land uses. The General Plan Amendment would, therefore, eliminate the Low-Medium Density land use designation, thereby theoretically eliminating 1,352 units (as determined by the City's density determinations to be 8.5 dwelling units per acre). In compliance with SB 330, this EIR evaluated the

elimination of 1,352 units and determined that based on SB 330 Exceptions for lack of water and sewer to serve a residential project and the no net loss of residential capacity, the Project is consistent with the Department of Community Development and Housing (HCD) exception findings. The proposed Project site does not have sufficient water or wastewater facilities to serve a residential project. As explained in Section 3.4.1.2, of the Draft EIR, at present there is no water or sewer infrastructure that could serve residential units because the land has been used for agricultural purposes with water provided by on-site wells and sewer provided by septic systems. The Project Applicant is working on projects both approved and under review that span the length of Eucalyptus Avenue to the north, Merrill Avenue to the south, Euclid Avenue to the east, and Grove Avenue to the west (Ontario Ranch Business Park Specific Plan – Approved; Ontario Ranch Business Park Specific Plan Amendment – Under review; and, South Ontario Logistics Center – Subject Project), with a combined estimated cost of $144,331,000 (see Table 3-2, Project Cost Estimate by Project Area). The total estimated cost includes individual streets, lengths of pipe, storm drain, sewer, water, streetlights, curbing, paving, signals, power/fiber, and more. This cost would be financially infeasible for the 1,352 units presently allowed under the current residential General Plan designation and therefore the cost of such improvements would make residential development on the site financially infeasible (see Government Code Section 66589.5(d)(2) cited above).

Table 3-2: Project Cost Estimate by Project Area

Project Name	Cost Estimate
Ontario Ranch Business Park Phase 1 (Specific Plan - Approved)	$72,151,000
South Ontario Logistics Center (Specific Plan – Subject Project, Under Review)	$59,780,000
Ontario Ranch Business Park Phase 2 (Specific Plan Amendment, Under Review)	$12,400,000
TOTAL	$144,331,000

In order to demonstrate "no net loss of residential capacity," the Project will be required to demonstrate increased residential zoning capacity on a "SB330 Replacement Site" by 1,352 units to off-set the Project site loss of zoning capacity (Low Medium Density, 5.1 to 11 dwelling units per acre). In tandem with the City's adoption of the 6th Cycle Housing Element, scheduled to go before the City Council for their consideration in February 2022, the City is also adopting an Affordable Housing Overlay zone and applying this zone to all parcels in the sites inventory that are south of Riverside Drive or are zoned MU-2 along Holt Boulevard. Relevant to the Project, the Affordable Housing Overlay zone will establish a minimum density of 20 dwelling units per acre for all development (regardless of Policy Plan designation or underlying zoning district), and increase the maximum density from 25 to 30 units per acre for parcels that are designated in the Policy Plan for Medium Density Residential ("MDR") when an affordable housing project is proposed with at least 25 percent of proposed units are restricted for lower income house holds. The creation of the Affordable Housing Overlay zone and increased maximum density of 5 dwelling units per acre will increase residential capacity on 473.7 acres of such parcels currently designated MDR, by 2,368 dwelling units. On December 20, 2021, the Planning Commission reviewed and recommended to the February 15, 2022, City Council hearing for approval a General Plan Amendment (File No. PGPA21-004) for the Housing Element update to the Policy Plan (General Plan) component of The Ontario Plan, to address State mandates regarding the Regional Housing Needs Allocation ("RHNA"), as well as to modify the Policy Plan Land Use Plan (Exhibit LU-01) to establish a Zone Change (File No. PZC21-002). The Project EIR addresses the potential impacts associated with relocating residential density from the Project site to

the SB330 Replacement Sites located north of the Project site, along Grove Avenue, pursuant to SB330. With the City adoption of the 6th Cycle Housing Element and associated Affordable Housing Overlay zone, no net loss of residential capacity will occur as a result of the Project. The SB 330 Replacement Site is located approximately 0.3 miles north of the Project site and is generally bound by Cucamonga Avenue to the west, East Riverside Drive to the north, Walker Avenue to the east, and Edison Avenue to the south. Existing land uses surrounding the approximate 473-acre SB330 Replacement Site boundary include agricultural uses, nurseries, truck/trailer storage, and single-family residential. According to the City's Land Use Plan, land use within the SB330 Replacement Site includes residential, general commercial, and neighborhood commercial, as well as open space park land.[5]

Footnote 5: City of Ontario. Land Use Map. (2010). Retrieved from: https://www.ontarioplan.org/wp-content/uploads/sites/4/2021/05/TOPLUP_Map24x3610_6_20210524_V_1.pdf.

Section 4.2, Air Quality

1. The third paragraph on Page 4.2-15 is revised as follows:

As previously stated in *Section 3.0, Project Description*, Project operations assume an opening year of 2023 for Phase 1 and 2024 for Phase 2, with the entire Project fully occupied in 2024. The development would include eight buildings totaling up to 5,333,518 SF of business park and industrial development. Phase 1, comprised of Planning Areas (PA) 1 and 2, would allow approximately 3,174,518 SF of industrial and business park uses. Phase 1 consists of the construction of Buildings 1 through 8 as numbered in the Conceptual Site Plan and includes the Development Plan. This phase may be developed in several subphases in response to market demands and according to the logical and orderly completion of infrastructure improvements (refer to *Figure 3-22, Conceptual Phasing Plan*). No specific development proposals have been identified for the Phase 2 area, consisting of Planning Areas 3, 4 and 5. Because construction of Phase 2 could occur concurrently with operation of Phase 1, impacts from a hypothetical overlapping scenario are also analyzed.

2. After the first full paragraph and before the heading "Project Buildout (Phase 1 + Phase 2)" on Page 4.2-26, the following is added:

Overlapping Construction + Operation (Phase 1 Operation with Phase 2 Construction)

Phase 1 Operations

Primary sources of operational criteria pollutants from Phase 1 would be from motor vehicle use and area sources.

- **Area Source Emissions and Energy Source Emissions**. Area source emissions and energy source emissions are based on land use and the area of the buildings. Phase 1 air quality modeling is based on 601,128 square feet of business park, 334,315 square feet of refrigerated warehouse, and 2,237,337 square feet of unrefrigerated warehouse.
- **Mobile Source Emissions.** Project-generated vehicle emissions are based on the trip generation within the Project Traffic Impact Analysis (see *Appendix I*) and incorporated into CalEEMod as recommended by the SCAQMD. Per the Project Traffic Impact Analysis, Phase 1

of the Project would generate a total of 7,288 daily trips; 5,830 passenger vehicle trips from employees and 1,458 trips from trucks (2-axle, 3-axle, and 4+ axle delivery trucks) (*Appendix I*).

- **Transport Refrigeration Units (TRU) Emissions.** Based on 125 trucks accessing refrigerated warehouse with TRUs per day.
- **Off-Road Equipment Emissions**. Modeling assumed 12 forklifts per building (total 96), each operating eight hours per day loading and unloading goods. Off-road emissions also include one hostler/yard truck per building (total eight), each operating four hours per day moving trailers.

Phase 2 Construction

Construction-generated emissions associated the Project were calculated using the CARB-approved CalEEMod computer program, which is designed to model emissions for land use development projects, based on typical construction requirements. See *Appendix B1* for more information regarding the construction assumptions used in this analysis.

Predicted maximum daily emissions from overlapping Phase 2construction with Phase 1 operations are summarized in *Table 4.2-12a*: Emissions from Overlapping Phase 1 Operation and Phase 2 Construction.

Table 4.2-12a - Emissions from Overlapping Phase 1 Operation and Phase 2 Construction

Sources	Pollutants (pounds per day)					
	VOC	NOX	CO	SO_2	PM_{10}	$PM_{2.5}$
Unmitigated Emissions						
Phase 1 Operations[1]	100.47	386.27	390.69	2.10	132.86	42.19
Phase 2 Construction (2024)[2]	130.58	75.54	107.97	0.42	24.86	7.96
Total Unmitigated Overlapping Emissions	**231.05**	**461.81**	**498.66**	**2.52**	**157.72**	**50.15**
SCAQMD Operational Threshold	55	55	550	150	150	55
Exceeds Threshold	**Yes**	**Yes**	No	No	**Yes**	No
Mitigated Emissions						
Phase 1 Operations[1]	82.28	295.28	272.12	1.91	125.83	36.37
Phase 2 Construction (2024) [2]	36.66	75.54	107.97	0.42	24.86	7.96
Total Mitigated Overlapping Emissions	**118.94**	**370.82**	**380.09**	**2.33**	**150.69**	**44.33**
SCAQMD Operational Threshold	55	55	550	150	150	55
Exceeds Threshold	**Yes**	**Yes**	No	No	**Yes**	No

1. Refer to Draft EIR Table 4.2-9 (Phase 1 – Maximum Daily Operation Emissions).
2. Refer to Draft EIR Table 4.2-10 (Phase 2 – Maximum Daily Construction-Related Emissions). Note that Phase 2 construction would occur in 2023 and 2024. This table provides the maximum daily emissions, which would occur in 2024.

As shown in *Table 4.2-12a - Emissions from Overlapping Phase 1 Operation and Phase 2 Construction*, Project emissions from the operation of Phase 1 combined with concurrent construction of Phase 2 could result in maximum worst case daily emissions of VOC, NOx, and PM10 in excess of applicable SCAQMD thresholds (in accordance with SCAQMD recommendations, emissions form overlapping scenarios should be compared to the more stringent operational significance thresholds). Overlapping emissions of CO, SOx, and PM2.5 would not exceed applicable thresholds

Mitigation measures would be required to reduce emissions to the maximum extent feasible. **MM AQ-1** requires the Project to use "Super-Compliant" low VOC paints to reduce maximum daily VOC emissions from surface coating phase of construction. The majority of NO_X emissions during operation of Phase 1 are from on-road mobile sources; however, emissions from on-road motor vehicles are controlled by State and Federal standards and the Project has no control over these standards. **MM AQ-2** through **MM AQ-5** have been identified to reduce operational NO_X emissions from Project mobile sources. **MM AQ-2** requires the use of electrical off-road equipment such as forklifts and hostlers/yard trucks. **MM AQ-3** requires electrical hookups at loading bays for cold storage. **MM AQ-4** requires the implementation of a Transportation Demand Management (TDM) program to reduce single-occupant vehicle trips and encourage public transit. Additionally, **MM AQ-5** prohibits idling when engines are not in use. Even with implementation of applicable mitigation measures, emissions of VOC, NOx, and PM10 during overlapping operation and construction would remain in excess of applicable thresholds; therefore, impacts would be significant and unavoidable, similar to impacts for project buildout, discussed below.

3. The first paragraph following the "Project Buildout (Phase 1 + Phase 2)" subheading on Page 4.2-26 is revised as follows:

   Long-term operational emissions attributable to the total Project are summarized in *Table 4.2-12b: Project Buildout (Phase 1 and Phase 2) – Maximum Daily Operation Emissions*.

4. Table 4.2-12 on Page 4.2-27 is revised as follows:

   Table 4.2-12b: Project Buildout – Total Maximum Daily Operation Emissions

5. The first paragraph on Page 4.2-27 is revised as follows:

   As indicated in *Table 4.2-12b*, total operation emissions for Project at buildout would exceed SCAQMD thresholds for VOC, NO_X, PM_{10} and $PM_{2.5}$. The majority of the Project's VOC emissions are from consumer products and cannot be reduced below the SCAQMD threshold with mitigation. The majority of NO_X, PM_{10}, and $PM_{2.5}$ emissions are from mobile sources. **MM AQ-2** through **MM AQ-5** have been identified to reduce operational emissions from mobile sources. **MM AQ-2** requires the use of electrical off-road equipment such as forklifts and hostlers/yard trucks. **MM AQ-3** requires electrical hookups at loading bays for cold storage. **MM AQ-4** requires the implementation of a Transportation Demand Management (TDM) program to reduce single-occupant vehicle trips and encourage public transit. Additionally, **MM AQ-5** prohibits idling when engines are not in use. *Table 4.2-12b: Project Buildout – Total Maximum Daily Operation Emissions* shows that despite the implementation of **MM AQ-2** through **MM AQ-5**, NO_X, PM_{10}, and $PM_{2.5}$, emissions would remain above the SCAQMD's thresholds; therefore, impacts would be significant and unavoidable.

6. Mitigation Measure MM AQ-2 is amended on Page 4.2-29 as follows:

   MM AQ-2 Only electric-powered/zero emissions off-road equipment (e.g., yard trucks/hostlers, forklifts, indoor material handling equipment, etc.) shall be utilized on-site for daily

warehouse and business operations. The project developer/facility owner shall disclose this requirement to all tenants/business entities prior to the signing of any lease agreement. In addition, the limitation to use only electric-powered/zero emissions off-road equipment shall be included in all leasing agreements.

Prior to issuance of a Business License for a new tenant/business entity, the project developer/facility owner and tenant/business entity shall provide to the City of Ontario Planning Department and Business License Department a signed document (verification document) noting that the project development/facility owner has disclosed to the tenant/business entity the requirement to use only electric-powered/zero emissions equipment for daily operations. This verification document shall be signed by authorized agents for the project developer/facility owner and tenant/business entities. In addition, if applicable, the tenant/business entity shall provide documentation (e.g., purchase or rental agreement) to the City of Ontario Planning Department and Business License Department to verify, to the City's satisfaction, that any off-road equipment utilized will be electric-powered or produce zero emissions.

Prior to the issuance of building permits, the City of Ontario Building Department shall confirm that if emergency generators are proposed, the Project applicant shall explore non-diesel options. If non-diesel generators are determined to not be feasible, the Project applicant shall provide written justification to be approved by the City's Building Department.

7. Mitigation Measure MM AQ-5 on Page 4.2-30 is revised as follows:

MM AQ-5 All truck access gates and loading docks within the Project site shall have a sign posted that states:

- Truck drivers shall turn off engines when not in use
- Truck drivers shall shut down the engine after five minutes of continuous idling operation once the vehicle is stopped, the transmission is set to "neutral" or "park," and the parking brake is engaged.
- Telephone numbers of the building facilities manager and CARB to report Violations
- Truck travel is restricted to identified truck routes only

In addition, signage shall be installed to direct trucks to the appropriate designated truck routes.

Section 4.3, Biological Resources

1. Mitigation Measure MM BIO-1, specific to the Western pond turtle, on Page 4.3-22 is revised as follows:

MM BIO-1 The following measures shall be implemented for the indicated species, prior to commencement of ground disturbance at the Project site:

…

Western pond turtle

- Within the breeding season (May-July) prior to the onset of construction activities, a CDFW-approved qualified biologist shall conduct pre-construction trapping surveys, following U.S. Geological Survey trapping protocol, for western pond turtle within all areas of any suitable aquatic habitat for this species (e.g., retention and treatment ponds). If western pond turtles are observed or trapped during the pre-construction survey, the Project Proponent shall either avoid impacts to western pond turtle aquatic and terrestrial habitat or shall prepare for CDFW review and approval, a translocation plan identifying proposed protocol for trapping and relocating turtles, including identifying potential, appropriate receiver sites to relocate western pond turtles to. If no western pond turtles are observed during the pre- construction survey, then construction activities may begin. If construction is delayed or halted for more than 30 days, another pre-construction survey for western pond turtle shall be conducted. Within seven days of the pre-construction survey, a report of findings from the survey shall be submitted to the CDFW. During construction, a qualified biological monitor who has been approved by the CDFW to relocate western pond turtles shall be onsite to ensure that no western pond turtles are harmed.

- If western pond turtles are observed in the construction area at any time during construction, the onsite biological monitor shall be notified and construction in the vicinity of the sighting shall be halted until such a time as a turtle has been removed from the construction zone and relocated by an approved biologist. If a sighting occurs during construction, the biologist shall prepare a report of the event and submit it to CDFW.

- ~~Within 14 days prior to the onset of construction activities, a qualified biologist shall conduct pre-construction surveys for western pond turtle within all areas that fall within 100 feet of any suitable aquatic and upland nesting habitat for this species (stock/retention ponds). If western pond turtles are observed during the pre-construction survey, the California Department of Fish and Wildlife shall be contacted. If no Western pond turtles are observed during the preconstruction survey, then construction activities may begin. If construction is delayed or halted for more than 30 days, another pre-construction survey for western pond turtle shall be conducted. Within seven days of the pre-construction survey, a report of findings from the survey shall be submitted to the California Department of Fish and Wildlife.~~

- ~~During construction, a qualified biological monitor who has been approved by the California Department of Fish and Wildlife to relocate western pond turtles shall be on-site to ensure that no western pond turtles are harmed. If western pond~~

~~turtles are observed in the construction area at any time during construction, the on-site biological monitor shall be notified and construction in the vicinity of the sighting shall be halted until such a time as a turtle has been removed from the construction zone and relocated by an approved biologist. If a sighting occurs during construction, the biologist shall prepare a report of the event and submit it to CDFW.~~

2. Mitigation Measure MM BIO-2 on Page 4.3-22 is revised as follows:

MM BIO-2. **Burrowing Owl Surveys.** Phase 1: Prior to issuance of a demolition or grading permit for any ground disturbing activity, a qualified biologist shall conduct a pre-construction presence/absence survey for burrowing owls within ~~The Project Applicant shall complete an initial BUOW take avoidance survey no less than~~ 14 days prior to initiating ground disturbance activities. Surveys shall be conducted consistent with the procedures in outlined in the "California Department of Fish and Wildlife (CDFW) 2012 Staff Report on Burrowing Owl Mitigation." If the species is absent, no additional mitigation will be required. ~~Implementation of avoidance and minimization measures (e.g., eliminating actions that reduce burrowing owl forage and burrowing surrogates (e.g., ground squirrel), or introduce/facilitate burrowing owl predators) would be triggered by positive owl presence on the site where Project activities would occur. The development of avoidance and minimization approaches would be evaluated by monitoring burrowing owls (if present on-site). BUOW may re-colonize a site after only a few days. Time lapses between Project activities trigger subsequent take avoidance surveys including but not limited to a final survey conducted within 24 hours prior to ground disturbance.~~

If burrowing owl(s) are observed onsite during the pre-construction clearance survey;

- Prior to disturbance of the occupied burrows, suitable and unoccupied replacement burrows shall be provided at a ratio of 2:1 within designated off-site conserved lands to be identified through coordination with CDFW and the City in which the burrowing owl(s) is(are) detected. A qualified biologist shall confirm that the artificial burrows are currently unoccupied and suitable for use by owls.
- Until suitable replacement burrows have been provided/confirmed within the off-site conserved lands to be identified through coordination with CDFW and the City of Ontario, no disturbance shall occur within 50 meters (approximately 160 feet) of occupied burrows during the nonbreeding season (September 1 through January 31) or within 75 meters (approximately 250 feet) during the breeding season (February 1 through August 31).
- Occupied burrows should not be disturbed during the nesting season (February 1 through August 31) unless a qualified biologist approved by CDFW verifies through non-invasive methods that either: 1) the birds have not begun egg-laying

and incubation; or 2) that juveniles from the occupied burrows are foraging independently and are capable of independent survival.

- If burrowing owls are present at the time that the occupied burrows are to be disturbed, then the owls shall be excluded from the site following the 2012 CDFG Staff Report.

Phase 2 and SB 330 Replacement Site: Prior to any site-specific development, potential future residential development would be required to conduct site-specific biological resource surveys, including an arborist report, as part of the City's standard discretionary review process, including compliance with CEQA and applicable local, state, and federal regulations.

Section 4.4, Cultural Resources

1. Mitigation Measure MM CUL-1 on Page 4.4-22 is revised as follows:

MM CUL-1 Prior to issuance of a building grading permit, every effort shall be made to relocate the following buildings:

- Boersma House – 14746 S. Grove Avenue
- Dairy/Milk Parlor (Boersma) – adjacent to above address
- Borba House – 7955 Eucalyptus Avenue

The buildings shall be offered at no cost for those who can relocate off-site. Advertisements notifying the public of the opportunity to relocate the buildings shall be placed for a minimum of 45 days: on-site with temporary signage, in at least 3 local publications (newspapers, magazines, local organization newsletters), and on local bulletin boards (realtor's offices, local business). Applicant shall notify a minimum of 3 non-profit heritage organizations in writing of the building.

Section 4.6, Greenhouse Gases

1. Mitigation Measure MM GHG-1 on Page 4.6-23 is revised as follows:

MM GHG-1 All project ~~Project~~ development proposals ~~with building permit applications on file with the City prior to approval and adoption of updates to the December 16, 2014 CAP~~ shall implement Screening Table Measures that achieve at least 100 points per the Screening Tables. The City shall verify that Screening Table Measures achieving the 100-point performance standard are incorporated in development plans prior to the issuance of building permit(s) and/or site plans (as applicable). The City shall verify implementation of the selected Screening Table Measures prior to the issuance of Certificate(s) of Occupancy. At the discretion of the City, measures that provide GHG reductions equivalent to GHG emissions reductions achieved via the Screening Table Measures may be implemented. Multiple development proposals may, at the discretion of the City, be allowed to collectively demonstrate achievement of at least 100 points per the Screening Tables.

Section 4.7, Hazards and Hazardous Materials

1. Mitigation Measure MM HAZ-1 on Page 4.7-23 is revised as follows:

MM HAZ-2 Following drainage of the on-site ponds, the Project Applicant shall conduct a limited Phase II subsurface assessment of sediments to evaluate the sediments for chemical risks to human health and the environment. If contamination from dairy and animal-related wastes is encountered at a level above Environmental Screening Levels (ESLs) for non-residential uses, the appropriate environmental agency (Regional Water Quality control Board, Department of Toxic Substance Control, South Coast Air Quality Management District) shall be notified. Any contamination identified as a result of such testing/sampling shall be investigated, and removed or remediated to the satisfaction of the environmental agency with evidence provided to the City, such that there are no residual significant impacts following mitigation. Prior to allowing the commencement of any soil removal or hauling activities at the Proposed Project, the City will review and/or evaluate potential air quality impacts (criteria pollutants and toxic air contaminants from equipment exhaust, earthmoving, and other on-site remedial activities, as applicable) to verify that impacts are properly assessed and disclosed in accordance with CEQA.

Section 4.9, Land Use and Planning

1. Page 4.9-27, language following Table 4.9-4 is added as follows:

The Project is consistent with the Housing Element of the Policy Plan (General Plan) component of The Ontario Plan, as the Project site is not one of the properties in the Available Land Inventory contained in Table A-3 (Available Land by Planning Area) of the Housing Element Technical Report Appendix. The General Plan Amendment (GPA) is proposed to change the Project site's land use designations from Low-Medium Density Residential and Business Park to approximately 35.2 acres of Business Park (0.6 FAR) and 184.2 acres of Industrial (0.55 FAR) land uses. The GPA would, therefore, eliminate the low-medium density land use designation, thereby theoretically eliminating 1,352 units (as determined by the City's density determinations to be 8.5 dwelling units per acre). In compliance with SB 330, the EIR evaluated the elimination of 1,352 units and determined that based on SB 330 Exceptions for lack of water and sewer to serve a residential project and the no net loss of residential capacity, the Project is consistent with HCD exception findings. The proposed Project site does not have sufficient water or wastewater facilities to serve a residential project. As explained in Section 3.4.1.2, of the Draft EIR, at present there is no water or sewer infrastructure that could serve residential units because the land has been used for agricultural purposes with water provided by on-site wells and sewer provided by septic systems. The Project Applicant is working on projects both approved and under review that span the length of Eucalyptus Avenue to the north, Merrill Avenue to the south, Euclid Avenue to the east, and Grove Avenue to the west (Ontario Ranch Business Park Specific Plan – Approved; Ontario Ranch Business Park Specific Plan Amendment – Under review; and, South Ontario Logistics Center – Subject Project), with a combined estimated cost of $144,331,000 (see Table 3-2, Project Cost Estimate by Project Area). The total estimated cost includes individual streets, lengths of pipe, storm drain, sewer, water, streetlights, curbing, paving, signals, power/fiber, and more. This cost would be financially infeasible for the 1,352 units presently allowed under the current residential General Plan designation and therefore the cost of such

improvements would make residential development on the site financially infeasible (see Government Code Section 66589.5(d)(2) cited above).

In order to demonstrate "no net loss of residential capacity," the Project will be required to demonstrate increased residential zoning capacity on a "SB330 Replacement Site" by 1,352 units to off-set the Project site loss of zoning capacity (Low Medium Density, 5.1 to 11 du/ac). In tandem with the City's adoption of the 6th Cycle Housing Element, scheduled to go before the City Council for their consideration in February 2022, the City is also adopting an Affordable Housing Overlay zone and applying this zone to all parcels in the sites inventory that are south of Riverside Drive or are zoned MU-2 along Holt Boulevard. Relevant to the Project, the Affordable Housing Overlay zone will establish a minimum density of 20 dwelling units per acre for all development (regardless of Policy Plan designation or underlying zoning district), and increase the maximum density from 25 to 30 units per acre for parcels that are designated in the Policy Plan for Medium Density Residential ("MDR") when an affordable housing project is proposed with at least 25 percent of proposed units are restricted for lower income households. The creation of the Affordable Housing Overlay zone and increased maximum density of 5 dwelling units per acre will increase residential capacity on 473.7 acres of such parcels currently designated MDR, by 2,368 dwelling units. On December 20, 2021, the Planning Commission reviewed and recommended to the February 15, 2022, City Council hearing for approval a General Plan Amendment (File No. PGPA21-004) for the Housing Element update to the Policy Plan (General Plan) component of The Ontario Plan, to address State mandates regarding the Regional Housing Needs Allocation ("RHNA"), as well as to modify the Policy Plan Land Use Plan (Exhibit LU-01) to establish a Zone Change (File No. PZC21-002). The Project EIR addresses the potential impacts associated with relocating residential density from the Project site to the SB330 Replacement Sites located north of the Project site, along Grove Avenue, pursuant to SB330. With the City adoption of the 6th Cycle Housing Element and associated Affordable Housing Overlay zone, no net loss of residential capacity will occur as a result of the Project. The SB 330 Replacement Site is located approximately 0.3 miles north of the Project site and is generally bound by Cucamonga Avenue to the west, East Riverside Drive to the north, Walker Avenue to the east, and Edison Avenue to the south. Existing land uses surrounding the approximate 473-acre SB330 Replacement Site boundary include agricultural uses, nurseries, truck/trailer storage, and single-family residential. According to the City's Land Use Plan, Land use within the SB330 Replacement Site includes residential, general commercial, and neighborhood commercial, as well as open space park land.[1]

 **Model Is Setup For Calculation of Average CONCentration Values.

   --  DEPOSITION LOGIC  --
 **NO GAS DEPOSITION Data Provided.
 **NO PARTICLE DEPOSITION Data Provided.
 **Model Uses NO DRY DEPLETION.  DRYDPLT  =  F
 **Model Uses NO WET DEPLETION.  WETDPLT  =  F

 **Model Uses URBAN Dispersion Algorithm for the SBL for  1009 Source(s),
   for Total of    1 Urban Area(s):
   Urban Population =   2035210.0 ;  Urban Roughness Length =  1.000 m

 **Model Uses Regulatory DEFAULT Options:
         1. Stack-tip Downwash.
         2. Model Accounts for ELEVated Terrain Effects.
         3. Use Calms Processing Routine.
         4. Use Missing Data Processing Routine.
         5. No Exponential Decay.
         6. Urban Roughness Length of 1.0 Meter Assumed.

 **Other Options Specified:
         ADJ_U*   - Use ADJ_U* option for SBL in AERMET
         CCVR_Sub - Meteorological data includes CCVR substitutions
         TEMP_Sub - Meteorological data includes TEMP substitutions

 **Model Assumes No FLAGPOLE Receptor Heights.

 **The User Specified a Pollutant Type of:  PM_10

 **Model Calculates  2 Short Term Average(s) of:   1-HR  24-HR
     and Calculates PERIOD Averages

 **This Run Includes:   1009 Source(s);       1 Source Group(s); and     160
Receptor(s)

                with:      0 POINT(s), including
                           0 POINTCAP(s) and      0 POINTHOR(s)
                 and:   1009 VOLUME source(s)
                 and:      0 AREA type source(s)
                 and:      0 LINE source(s)
                 and:      0 RLINE/RLINEXT source(s)
                 and:      0 OPENPIT source(s)
                 and:      0 BUOYANT LINE source(s) with      0 line(s)

 **Model Set To Continue RUNning After the Setup Testing.

 **The AERMET Input Meteorological Data Version Date:  16216
```

```
 **Output Options Selected:
          Model Outputs Tables of PERIOD Averages by Receptor
          Model Outputs Tables of Highest Short Term Values by Receptor (RECTABLE
Keyword)
          Model Outputs External File(s) of High Values for Plotting (PLOTFILE
Keyword)
          Model Outputs Separate Summary File of High Ranked Values (SUMMFILE
Keyword)

 **NOTE:  The Following Flags May Appear Following CONC Values:  c for Calm Hours
                                                                 m for Missing
Hours
                                                                 b for Both Calm
and Missing Hours

 **Misc. Inputs:  Base Elev. for Pot. Temp. Profile (m MSL) =   198.00 ;  Decay
Coef. =    0.000     ;  Rot. Angle =     0.0
                  Emission Units = GRAMS/SEC                                 ;
Emission Rate Unit Factor =   0.10000E+07
                  Output Units   = MICROGRAMS/M**3

 **Approximate Storage Requirements of Model =      3.9 MB of RAM.

 **Input Runstream File:          aermod.inp

 **Output Print File:             aermod.out

 **Detailed Error/Message File:   SOL_construction_r.err

 **File for Summary of Results:   SOL_construction_r.sum

- - - - - - - - - - - - - - - - - - - -

 **Model Is Setup For Calculation of Average CONCentration Values.

   --  DEPOSITION LOGIC  --
 **NO GAS DEPOSITION Data Provided.
 **NO PARTICLE DEPOSITION Data Provided.
 **Model Uses NO DRY DEPLETION.  DRYDPLT  =  F
 **Model Uses NO WET DEPLETION.  WETDPLT  =  F

 **Model Uses URBAN Dispersion Algorithm for the SBL for  4624 Source(s),
   for Total of    1 Urban Area(s):
   Urban Population =   2035210.0 ;  Urban Roughness Length =  1.000 m

 **Model Uses Regulatory DEFAULT Options:
        1. Stack-tip Downwash.
        2. Model Accounts for ELEVated Terrain Effects.
        3. Use Calms Processing Routine.
        4. Use Missing Data Processing Routine.
        5. No Exponential Decay.
        6. Urban Roughness Length of 1.0 Meter Assumed.

 **Other Options Specified:
        ADJ_U*   - Use ADJ_U* option for SBL in AERMET
        CCVR_Sub - Meteorological data includes CCVR substitutions
        TEMP_Sub - Meteorological data includes TEMP substitutions

 **Model Assumes No FLAGPOLE Receptor Heights.

 **The User Specified a Pollutant Type of:  PM_10
```

```
 **Model Calculates  2 Short Term Average(s) of:   1-HR  24-HR
     and Calculates PERIOD Averages

 **This Run Includes:   4624 Source(s);       1 Source Group(s); and     458
Receptor(s)

                with:      0 POINT(s), including
                           0 POINTCAP(s) and      0 POINTHOR(s)
                 and:   4624 VOLUME source(s)
                 and:      0 AREA type source(s)
                 and:      0 LINE source(s)
                 and:      0 RLINE/RLINEXT source(s)
                 and:      0 OPENPIT source(s)
                 and:      0 BUOYANT LINE source(s) with      0 line(s)

 **Model Set To Continue RUNning After the Setup Testing.

 **The AERMET Input Meteorological Data Version Date:  16216

 **Output Options Selected:
          Model Outputs Tables of PERIOD Averages by Receptor
          Model Outputs Tables of Highest Short Term Values by Receptor (RECTABLE
Keyword)
          Model Outputs External File(s) of High Values for Plotting (PLOTFILE
Keyword)
          Model Outputs Separate Summary File of High Ranked Values (SUMMFILE
Keyword)

 **NOTE:  The Following Flags May Appear Following CONC Values:  c for Calm Hours
                                                                 m for Missing Hours
                                                                 b for Both Calm and
Missing Hours

 **Misc. Inputs:  Base Elev. for Pot. Temp. Profile (m MSL) =   198.00 ;  Decay
Coef. =    0.000     ;  Rot. Angle =     0.0
                  Emission Units = GRAMS/SEC                                ;
Emission Rate Unit Factor =   0.10000E+07
                  Output Units   = MICROGRAMS/M**3

 **Approximate Storage Requirements of Model =      5.5 MB of RAM.

 **Input Runstream File:          aermod.inp

 **Output Print File:             aermod.out

 **Detailed Error/Message File:   SOL_operations_rev2.err
```

Attachment A

Mitigation Monitoring and Reporting Program

South Ontario Logistics Center Specific Plan

SECTION 1: AUTHORITY

This environmental Mitigation Monitoring and Reporting Program (Program) has been prepared pursuant to Section 21081.6 of the *California Environmental Quality Act* (CEQA) (Public Resources Code Section 21000 et seq.), and CEQA Guidelines (14 Cal. Code Regs. Section 15000 et seq.) Sections 15091(d) and 15097, to ensure implementation of and provide for the monitoring of mitigation measures required of the South Ontario Logistics Center (Project), as set forth in the Final Environmental Impact Report (EIR) prepared for the Project. This report will be kept on file in the offices of the CEQA Lead Agency, the City of Ontario (City).

As noted in the EIR, the Project has been designed to avoid sensitive resources, as reflected in Project design plans and in Project Design Features. The EIR also addresses the potential environmental impacts of the Project, and, where appropriate, recommends mitigation measures to avoid or substantially lessen significant environmental impacts. The Program detailed in the matrix table below is designed to monitor and ensure implementation of all mitigation measures that are adopted for the Project.

The City is the Lead Agency for the Project and assumes ultimate enforcement responsibilities for implementation of all mitigation measures listed in this Program. The City may assign responsibility for implementation or monitoring to appropriate designees such as a construction manager or third-party monitor. However, as the Lead Agency, the City remains responsible for ensuring that implementation of the mitigation measures occurs in accordance with this Program. In some cases, the City is required to secure permits or approvals from third-party agencies in order to implement a mitigation measure. In these cases, the City is responsible for verifying that such permits or approvals have been obtained in accordance with the conditions stipulated in the mitigation measure. The City's existing planning, engineering, operations, and procurement review and inspection processes will be used as the basic foundation for the Program procedures and will also serve to provide the documentation for the reporting program.

SECTION 2: MONITORING SCHEDULE

Prior to construction, while detailed design plans are being prepared by City staff or its agents, City staff will be responsible for ensuring compliance with mitigation monitoring applicable to the Project construction, development, and design phases. Once construction has begun and is underway, monitoring of the mitigation measures associated with construction will be included in the responsibilities of City staff, who shall prepare or cause to be prepared periodic monitoring reports as appropriate. Regulatory agencies will have to harmonize CEQA mitigation with regulatory permit conditions and monitoring/reporting as part of the regulatory permitting process and will likely require submittal of formal monitoring reports. Once construction has been completed, the City will monitor the project as specified in the mitigation measures or as otherwise deemed necessary. At minimum, the City will prepare a mitigation monitoring status report prior to commencing construction, prior to commencing operations, within 90 days of commencing operations, and following completion of the first full year of operations.

SECTION 3: SUPPORT DOCUMENTATION

Findings and related documentation supporting the findings involving modifications to mitigation measures shall be maintained in the Project file with the Mitigation Monitoring and Reporting Program and shall be made available to the public upon request.

SECTION 4: FORMAT OF MITIGATION MONITORING MATRIX

The mitigation monitoring matrix on the following pages identifies the environmental issue areas for which monitoring is required, the required mitigation measures, the time frame for monitoring, and the responsible implementing and monitoring agencies.

SECTION 5: DEFINITIONS

The following list provides definitions for acronyms used in the mitigation monitoring and reporting program.

Acronyms/Abbreviation	*Description*
ACM	Asbestos-Containing Materials
AG	Agriculture and Forestry
AQ	Air Quality
AST	Aboveground Storage Tank
BIO	Biological Resources
BUOW	Burrowing Owl
CAP	Climate Action Plan
CARB	California Air Resources Board
CDFW	California Department of Fish and Wildlife
CEQA	California Environmental Quality Act
City	City of Ontario
County	County of San Bernardino
County Coroner	San Bernardino County Coroner
CRMP	Construction Risk Management Plan
CUL	Cultural Resources
DTSC	Department of Toxic Substances Control
EIR	Environmental Impact Report
EPA	Environmental Protection Agency
ESA	Environmental Site Assessment
ESL	Environmental Screening Levels
GEO	Geology and Soils
GHG	Greenhouse Gas
HABS	Historic American Buildings Survey
HAZ	Hazards and Hazardous Materials
HSP	Health and Safety Plan
ICC	International Code Council
MM	Mitigation Measure
NAHC	Native American Heritage Commission
PPMV	Parts Per Million Volume
PRC	Public Resources Code
PRMP	Paleontological Resource Monitoring Plan
SBCFD	San Bernardino County Fire Protection District
SCAQMD	South Coast Air Quality Management District
SMP	Soil Management Plan
State	State of California
TCR	Tribal Cultural Resources
TDM	Travel Demand Management
TPH	Total Petroleum Hydrocarbons
TRANS	Traffic and Transportation
VMT	Vehicle Miles Travelled
VOC	Volatile Organic Compound

Mitigation Measures	Responsibility for Implementation	Timing	Responsibility for Monitoring	Monitor (Signature Required) (Date of Compliance)
AGRICULTURE AND FORESTRY				
MM AG-1: Deed disclosure – In order to reduce conflicts issued between sensitive receptors and agricultural uses, all property owners in the South Ontario Logistics Center Specific Plan shall be provided with a deed disclosure or similar notice approved by the City Attorney regarding the proximity and nature of neighboring agricultural uses. This disclosure shall be applied at the tentative map stage to the affected properties, or otherwise prior to finalizing the sale or rental agreement of any property. The written disclosure shall be supplied to the property purchaser or renter by the vendor or vendor's agent. The content and text of the disclosure shall be approved by the City Attorney and shall include language to inform new residents that existing agricultural uses may create nuisances such as flies, odors, dust, night-light, and chemical spraying.	Project Applicant	Prior to the approval of tentative tract map	City Attorney	
AIR QUALITY				
MM AQ-1: The Project shall utilize "Super-Compliant" low VOC paints which have been reformulated to exceed the regulatory VOC limits (i.e., have a lower VOC content than what is required) put forth by SCAQMD's Rule 1113 for all architectural coatings. Super-Compliant low VOC paints shall be no more than 10g/L of VOC. Prior to issuance of a building permit, the Ontario Building Department shall confirm that plans specify that all architectural coatings will be super-compliant low VOC paints.	Project Applicant	Prior to issuance of a building permit	Ontario Building Department	
MM AQ-2: Only electric-powered/zero emissions off-road equipment (e.g., yard trucks/hostlers, forklifts, indoor material handling equipment, etc.) shall be utilized on-site for daily warehouse and business operations. The project developer/facility owner shall disclose this requirement to all tenants/business entities prior to the signing of any lease agreement. In addition, the limitation to use only electric-powered/zero emissions off-road equipment shall be included in all leasing agreements. Prior to issuance of a Business License for a new tenant/business entity, the project developer/facility owner and tenant/business entity shall provide to the City of Ontario Planning Department and Business License Department a signed document (verification document) noting that the project development/facility owner has disclosed to the tenant/business	Project Developer	Prior to issuance of a Business License	City of Ontario Planning Department and Business License Department	

Mitigation Measures	Responsibility for Implementation	Timing	Responsibility for Monitoring	Monitor (Signature Required) (Date of Compliance)
entity the requirement to use only electric-powered/zero emissions equipment for daily operations. This verification document shall be signed by authorized agents for the project developer/facility owner and tenant/business entities. In addition, if applicable, the tenant/business entity shall provide documentation (e.g., purchase or rental agreement) to the City of Ontario Planning Department and Business License Department to verify, to the City's satisfaction, that any off-road equipment utilized will be electric-powered or produce zero emissions. Prior to the issuance of building permits, the City of Ontario Building Department shall confirm that if emergency generators are proposed, the Project applicant shall explore non-diesel options. If non-diesel generators are determined to not be feasible, the Project applicant shall provide written justification to be approved by the City's Building Department.				
MM AQ-3: All truck/dock bays that serve cold storage facilities within the proposed buildings shall be electrified to facilitate plug-in capability and support use of electric standby and/or hybrid electric transport refrigeration units. All site and architectural plans submitted to the City of Ontario Planning Department shall note all the truck/dock bays designated for electrification. Prior to the issuance of a Certificate of Occupancy, the City of Ontario Building Department shall verify electrification of the designated truck/dock bays.	Project Applicant	Prior to the issuance of a Certificate of Occupancy	City of Ontario Building Department	
MM AQ-4: Prior to issuance of occupancy permits, the Project operator shall prepare and submit a Transportation Demand Management (TDM) program detailing strategies that would reduce the use of single occupant vehicles by employees by increasing the number of trips by walking, bicycle, carpool, vanpool and transit. The TDM shall include, but is not limited to the following: • Provide a transportation information center and on-site TDM coordinator to educate residents, employers, employees, and visitors of surrounding transportation options; • Promote bicycling and walking through design features such as showers for employees, self-service bicycle repair area, etc. around the Project site.	Project Operator	Prior to the issuance of a Certificate of Occupancy	City of Ontario	

Mitigation Measures	Responsibility for Implementation	Timing	Responsibility for Monitoring	Monitor (Signature Required) (Date of Compliance)
• Provide on-site car share amenities for employees who make only occasional use of a vehicle, as well as others who would like occasional access to a vehicle of a different type than they use day-to-day; • Promote and support carpool/vanpool/rideshare use through parking incentives and administrative support, such as ride-matching service; and • Incorporate incentives for using alternative travel modes, such as preferential load/unload areas or convenient designated parking spaces for carpool/vanpool users.				
MM AQ-5: All truck access gates and loading docks within the Project site shall have a sign posted that states: • Truck drivers shall turn off engines when not in use • Truck drivers shall shut down the engine after five minutes of continuous idling operation once the vehicle is stopped, the transmission is set to "neutral" or "park," and the parking brake is engaged. • Telephone numbers of the building facilities manager and CARB to report Violations • <u>Truck travel is restricted to identified truck routes only In addition, signage shall be installed to direct trucks to the appropriate designated truck routes.</u>	Project Applicant	Prior to the issuance of a Certificate of Occupancy	City of Ontario	
BIOLOGICAL RESOURCES				
MM BIO-1: The following measures shall be implemented for the indicated species, prior to commencement of ground disturbance at the Project site: Tricolored blackbird, Grasshopper sparrow, Great blue heron, Swainson's hawk, Yellow rail, California horned lark, Merlin: • Vegetation removal is recommended to be conducted outside of the nesting season for migratory birds to avoid direct impacts.	Project Applicant Qualified Biologist	Prior to ground disturbing activities During Construction	Qualified Biologist CDFW	

Mitigation Measures	Responsibility for Implementation	Timing	Responsibility for Monitoring	Monitor (Signature Required) (Date of Compliance)
• If vegetation removal will occur during the migratory bird nesting season, between February 1 and September 15, pre-construction nesting bird surveys shall be performed within three days prior to vegetation removal. • If active nests are found during nesting bird surveys, they shall be flagged. A 250 foot buffer shall be fenced around songbird nests and a 500-foot buffer shall be fenced around raptor nests. • A biological monitor shall visit the site once a week during ground disturbing activities to ensure all fencing is in place and no sensitive species are being impacted. California glossy snake: • Three days prior to any ground disturbing activities or vegetation removal, a qualified biological monitor should conduct a pre-construction survey to identify any sensitive biological resources. Any sensitive reptilian species that may be present within the Project area shall be relocated outside of the impact areas. • Biological monitors shall be on-call to relocate any reptile or amphibian that is encountered during construction activities. Western mastiff bat • Prior to implementation of Project activities that would demolish the agriculture buildings used for sheltering bovines, a qualified biologist shall conduct a pre-construction survey April 1 through August 31 to determine the presence or absence of roosting bats. If the survey does not identify the presence of occupied roosts, no further action is necessary. • If day roosts or maternity roosts occupied by special-status bat species are documented within construction areas, the bats shall be safely flushed from the sites where roosting habitat is planned to be removed prior to the month of May (maternity roosts are generally occupied from May to August) and prior to the onset of construction activities. The removal of the roosting sites shall occur during the time of day when the roost is unoccupied. The loss of each roost will be compensated for by the construction and installation of two bat				

Mitigation Measures	Responsibility for Implementation	Timing	Responsibility for Monitoring	Monitor (Signature Required) (Date of Compliance)
boxes suitable to the bat species and colony size excluded from the original roosting site. The bat boxes shall be installed in the vicinity prior to removal of the original day/maternity roost sites. A detailed program for bat flushing, roosting site removal, and installation of bat boxes shall be developed in consultation with a qualified biologist. The specifications of the bat boxes must be based upon the species of bat and the size of the colony to be affected by the Project. The Bat Management Plan for excluding bats must be developed by the qualified biologist in consultation with CDFW to ensure mortality to bats does not occur. The Bat Management Plan will be based upon the species of bat, number of roosts, and the size of the colony to be affected by the Project. Performance standards will be developed based on the results of the bat survey consistent with CDFW recommendations such that no residual significant impacts would remain. Western pond turtle: • Within the breeding season (May-July) prior to the onset of construction activities, a CDFW-approved qualified biologist shall conduct pre-construction trapping surveys, following U.S. Geological Survey trapping protocol, for western pond turtle within all areas of any suitable aquatic habitat for this species (e.g., retention and treatment ponds). If western pond turtles are observed or trapped during the pre-construction survey, the Project Proponent shall either avoid impacts to western pond turtle aquatic and terrestrial habitat or shall prepare for CDFW review and approval, a translocation plan identifying proposed protocol for trapping and relocating turtles, including identifying potential, appropriate receiver sites to relocate western pond turtles to. If no western pond turtles are observed during the pre-construction survey, then construction activities may begin. If construction is delayed or halted for more than 30 days, another pre-construction survey for western pond turtle shall be conducted. Within seven days of the pre-construction survey, a report of findings from the survey shall be submitted to the CDFW. During construction, a qualified biological monitor who has been approved by the CDFW to relocate western pond turtles shall be on-site to ensure that no				

Mitigation Measures	Responsibility for Implementation	Timing	Responsibility for Monitoring	Monitor (Signature Required) (Date of Compliance)
western pond turtles are harmed. ~~Within 14 days prior to the onset of construction activities, a qualified biologist shall conduct pre-construction surveys for western pond turtle within all areas that fall within 100 feet of any suitable aquatic and upland nesting habitat for this species (stock/retention ponds). If western pond turtles are observed during the pre-construction survey, the California Department of Fish and Wildlife shall be contacted. If no Western pond turtles are observed during the pre-construction survey, then construction activities may begin. If construction is delayed or halted for more than 30 days, another pre-construction survey for western pond turtle shall be conducted. Within seven days of the pre-construction survey, a report of findings from the survey shall be submitted to the California Department of Fish and Wildlife.~~ • If western pond turtles are observed in the construction area at any time during construction, the on-site biological monitor shall be notified and construction in the vicinity of the sighting shall be halted until such a time as a turtle has been removed from the construction zone and relocated by an approved biologist. If a sighting occurs during construction, the biologist shall prepare a report of the event and submit it to CDFW. • ~~During construction, a qualified biological monitor who has been approved by the California Department of Fish and Wildlife to relocate western pond turtles shall be on-site to ensure that no western pond turtles are harmed. If western pond turtles are observed in the construction area at any time during construction, the on-site biological monitor shall be notified and construction in the vicinity of the sighting shall be halted until such a time as a turtle has been removed from the construction zone and relocated by an approved biologist. If a sighting occurs during construction, the biologist shall prepare a report of the event and submit it to CDFW.~~				
MM BIO-2: Burrowing Owl Surveys. Phase 1: Prior to issuance of a demolition or grading permit for any ground disturbing activity, a qualified biologist shall conduct a pre-construction presence/absence survey for burrowing owls within ~~The Project Applicant shall complete an~~	Project Applicant	Prior to ground disturbing activities	Qualified Biologist	

Mitigation Measures	Responsibility for Implementation	Timing	Responsibility for Monitoring	Monitor (Signature Required) (Date of Compliance)
~~initial BUOW take avoidance survey no less than~~ 14 days prior to initiating ground disturbance activities. Surveys shall be conducted consistent with the procedures is outlined in the "California Department of Fish and Wildlife (CDFW) 2012 Staff Report on Burrowing Owl Mitigation." If the species is absent, no additional mitigation will be required. ~~Implementation of avoidance and minimization measures (e.g., eliminating actions that reduce burrowing owl forage and burrowing surrogates (e.g., ground squirrel), or introduce/ facilitate burrowing owl predators) would be triggered by positive owl presence on the site where Project activities would occur. The development of avoidance and minimization approaches would be evaluated by monitoring burrowing owls (if present on-site). BUOW may re-colonize a site after only a few days. Time lapses between Project activities trigger subsequent take avoidance surveys including but not limited to a final survey conducted within 24 hours prior to ground disturbance.~~ If burrowing owl(s) are observed on-site during the pre-construction clearance survey; • Prior to disturbance of the occupied burrows, suitable and unoccupied replacement burrows shall be provided at a ratio of 2:1 within designated off-site conserved lands to be identified through coordination with CDFW and the City in which the burrowing owl(s) is(are) detected. A qualified biologist shall confirm that the artificial burrows are currently unoccupied and suitable for use by owls. • Until suitable replacement burrows have been provided/confirmed within the off-site conserved lands to be identified through coordination with CDFW and the City of Ontario, no disturbance shall occur within 50 meters (approximately 160 feet) of occupied burrows during the nonbreeding season (September 1 through January 31) or within 75 meters (approximately 250 feet) during the breeding season (February 1 through August 31). • Occupied burrows should not be disturbed during the nesting season (February 1 through August 31) unless a qualified biologist approved by CDFW verifies through non-invasive methods that either: 1) the birds have not begun egg-laying and incubation; or 2)				

Mitigation Measures	Responsibility for Implementation	Timing	Responsibility for Monitoring	Monitor (Signature Required) (Date of Compliance)
that juveniles from the occupied burrows are foraging independently and are capable of independent survival. • If burrowing owls are present at the time that the occupied burrows are to be disturbed, then the owls shall be excluded from the site following the 2012 CDFG Staff Report. Phase 2 and SB 330 Replacement Site: Prior to any site-specific development, potential future residential development would be required to conduct site-specific biological resource surveys, including an arborist report, as part of the City's standard discretionary review process, including compliance with CEQA and applicable local, state, and federal regulations.				
CULTURAL RESOURCES				
MM CUL-1: Prior to issuance of a building grading permit, every effort shall be made to relocate the following buildings: • Boersma House – 14746 S. Grove Avenue • Dairy/Milk Parlor (Boersma) – adjacent to above address • Borba House – 7955 Eucalyptus Avenue The buildings shall be offered at no cost for those who can relocate off-site. Advertisements notifying the public of the opportunity to relocate the buildings shall be placed for a minimum of 45 days: on-site with temporary signage, in at least 3 local publications (newspapers, magazines, local organization newsletters), and on local bulletin boards (realtor's offices, local business). Applicant shall notify a minimum of 3 non-profit heritage organizations in writing of the building.	Project Applicant	Prior to issuance of a building grading permit	City of Ontario	
MM CUL-2: Full documentation, including as-built drawing of elevations, architectural details, floor plan and site plan, and photographs following HABS standards, of the historic resource shall be submitted to the Planning Department for review and approval and subsequent release to the Ovitt Family Community Library, Model Colony History Room prior to issuance of demolition building permit. One archival and one non-archival copy submitted to the Planning Department is required.	Project Applicant	Prior to issuance of a building grading permit	City of Ontario Planning Department	
MM CUL-3: A mitigation fee pursuant to Section 7.01.030 of the Ontario Development Code shall be paid to the Planning Department prior to issuance of any building permit. The mitigation fee is equal to 10%	Project Applicant	Prior to issuance of a building grading permit	City of Ontario Planning Department	

Mitigation Measures	Responsibility for Implementation	Timing	Responsibility for Monitoring	Monitor (Signature Required) (Date of Compliance)
(moderate) or 20% (high) of the price per square foot construction cost as established in the most current ICC Building Valuation Data. The applicable percentage is determined by the level of integrity of the resource. The fee amount will be provided by the Planning Department at the time of payment.				
MM CUL-4: A determination whether items within or on the resource should be salvaged shall be made by the Planning Department. The applicant shall be responsible for the removal, relocation and donation of such items selected for salvaging. An inventory of salvaged items shall be provided by the applicant to the Planning Department prior to be to issuance of demolition permit.	Project Applicant	Prior to issuance of a demolition permit	City of Ontario Planning Department	
MM CUL-5: Develop a historic context report for significant persons in the dairy farm industry such as the Borba family.	Project Applicant	Prior to issuance of a building grading permit	City of Ontario	
MM CUL-6: Prior to the issuance of any grading permits for the Project site, a Cultural Awareness Training Program shall be provided to all construction managers and construction personnel prior to commencing any ground disturbance work at the Project sites. The training shall be prepared and conducted by a Qualified Archaeologist to the satisfaction of the City Planning Department. The training may be discontinued when ground disturbance is completed. Construction personnel shall not be permitted to operate equipment within the construction area unless they have attended the training. A copy of the training transcript and/or training video, as well as a list of the names of all personnel who attended the training and copies of the signed acknowledgment forms shall be submitted to the City Planning Department for their review and approval.	Project Applicant	Prior to issuance of a grading permit	City of Ontario Planning Department	
GEOLOGY AND SOILS				
MM GEO-1: Periodic paleontological spot checks would be conducted when excavation exceeds depths of five feet to determine if older, paleontologically sensitive sediments are present. If present, monitoring would be implemented. Prior to the start of construction, a paleontological resource monitoring plan (PRMP) would be prepared and implemented. The Project's PRMP would implement the following procedures:	Project Applicant	Prior to the start of construction	City of Ontario	

Mitigation Measures	Responsibility for Implementation	Timing	Responsibility for Monitoring	Monitor (Signature Required) (Date of Compliance)
• A trained and qualified paleontological monitor would perform spot-check and/or monitoring of any excavations on the Project that have the potential to impact paleontological resources in undisturbed native sediments below five feet in depth. The monitor would have the ability to redirect construction activities to ensure avoidance of adverse impacts to paleontological resources. • The Project paleontologist may re-evaluate the necessity for paleontological monitoring after examination of the affected sediments during excavation, with approval from Lead Agency and Client representatives. • Any potentially significant fossils observed shall be collected and recorded in conjunction with best management practices and Society of Vertebrate Paleontology professional standards. • Any fossils recovered during mitigation shall be deposited in an accredited and permanent scientific institution for the benefit of current and future generations. • A report documenting the results of the monitoring, including any salvage activities and the significance of any fossils, shall be prepared and submitted to the appropriate personnel.				
GREENHOUSE GAS				
MM GHG-1: All project ~~Project~~ development proposals ~~with building permit applications on file with the City prior to approval and adoption of updates to the December 16, 2014 CAP~~ shall implement Screening Table Measures that achieve at least 100 points per the Screening Tables. The City shall verify that Screening Table Measures achieving the 100-point performance standard are incorporated in development plans prior to the issuance of building permit(s) and/or site plans (as applicable). The City shall verify implementation of the selected Screening Table Measures prior to the issuance of Certificate(s) of Occupancy. At the discretion of the City, measures that provide GHG reductions equivalent to GHG emissions reductions achieved via the Screening Table Measures may be implemented. Multiple development proposals may, at the discretion of the City, be allowed to collectively demonstrate achievement of at least 100 points per the Screening Tables.	Project Applicant	Prior to the issuance of occupancy permits	City of Ontario	

Mitigation Measures	Responsibility for Implementation	Timing	Responsibility for Monitoring	Monitor (Signature Required) (Date of Compliance)
HAZARDS				
MM HAZ-1: Prior to the issuance of grading permits, the Project Applicant shall conduct further testing for the presence of methane on the Project site, in accordance with DTSC methane assessment guidelines. The Project Applicant shall prepare a methane gas soil survey and implement grading activity recommendations to the satisfaction of the City Building Department. This survey and recommendation shall include a post-construction soil gas investigation and installation of methane gas mitigation systems where post-grading methane levels exceed 5,000 parts per million volume (ppmv), should any such levels occur.	Project Applicant	Prior to the issuance of grading permits	City Building Department	
MM HAZ-2: Following drainage of the on-site ponds, the Project Applicant shall conduct a limited Phase II subsurface assessment of sediments to evaluate the sediments for chemical risks to human health and the environment. If contamination from dairy and animal-related wastes is encountered at a level above Environmental Screening Levels (ESLs) for non-residential uses, the appropriate environmental agency (Regional Water Quality control Board, Department of Toxic Substance Control, South Coast Air Quality Management District) shall be notified. Any contamination identified as a result of such testing/sampling shall be investigated, and removed or remediated to the satisfaction of the environmental agency with evidence provided to the City, such that there are no residual significant impacts following mitigation. Prior to allowing the commencement of any soil removal or hauling activities at the Proposed Project, the City will review and/or evaluate potential air quality impacts (criteria pollutants and toxic air contaminants from equipment exhaust, earthmoving, and other on-site remedial activities, as applicable) to verify that impacts are properly assessed and disclosed in accordance with CEQA.	Project Applicant	Following drainage of the on-site ponds	City of Ontario	
MM HAZ-3: Soil Management Plan. Prior to issuance of a grading permit, the Project Applicant shall retain a qualified environmental consultant to prepare a Soil Management Plan (SMP) that details procedures and protocols for on-site management of soils containing potentially hazardous materials. The SMP would be implemented during grading activities on-site to ensure that soils containing residual levels of	Project Applicant	Prior to the issuance of grading permits	City of Ontario	

Mitigation Measures	Responsibility for Implementation	Timing	Responsibility for Monitoring	Monitor (Signature Required) (Date of Compliance)
hydrocarbons or arsenic are properly identified, monitored, and managed on-site, and include the following: • A certified hazardous waste hauler shall remove all potentially hazardous soils. In addition, sampling of soil shall be conducted during excavation to ensure that all petroleum hydrocarbon and arsenic impacted soils are removed, and that ESLs for non-residential uses are not exceeded. Excavated materials shall be transported per California Hazardous Waste Regulations to a landfill permitted by the State to accept hazardous materials. • Any subsurface materials exposed during construction activities that appear suspect of contamination, either from visual staining or suspect odors, shall require immediate cessation of excavation activities. Soils suspected of contamination shall be tested for potential contamination. If contamination is found to be present per the DTSC Screening Levels for industrial/commercial land use (DTSC- SLi) and the EPA Regional Screening Levels for industrial/commercial land use (EPA- RSLi), it shall be transported and disposed of per state regulations to an appropriately permitted landfill. • The SMP shall include a Health and Safety Plan (HSP) that addresses potential safety and health hazards and includes the requirements and procedures for employee protection. Each contractor will be required to have their own HSP tailored to their particular trade that addresses the general Project safety requirements. The HSP shall also outline proper soil handling procedures and health and safety requirements to minimize worker and public exposure to hazardous materials during construction. • The SMP shall be prepared and executed in accordance with South Coast Air Quality Management District Rule 1166, Volatile Organic Compound Emissions from Decontamination of Soil. The SMP shall require the timely testing and sampling of soils so that contaminated soils can be separated from inert soils for proper disposal. The SMP shall specify the testing parameters and sampling frequency. Anticipated testing includes total petroleum				

Mitigation Measures	Responsibility for Implementation	Timing	Responsibility for Monitoring	Monitor (Signature Required) (Date of Compliance)
hydrocarbons (TPH), volatile organic compounds (VOCs), and semi-volatile organic compounds (SVOCs). During excavation, SCAQMD Rule 1166 requires that soils identified as contaminated shall be sprayed with water or another approved vapor suppressant or covered with sheeting during periods of inactivity of greater than an hour, to prevent contaminated soils from becoming airborne. Under SCAQMD Rule 1166, contaminated soils shall be transported from the Project site by a licensed transporter and disposed of at a licensed storage/treatment facility to prevent contaminated soils from becoming airborne or otherwise released into the environment. • All SMP measures shall be printed on the construction documents, contracts, and Project plans prior to issuance of grading permits.				
MM HAZ-4: Construction period testing. Construction at the Project site shall be conducted under a Project-specific Construction Risk Management Plan (CRMP) to protect construction workers, the general public, and the environment from subsurface hazardous materials previously identified and to address the possibility of encountering unknown contamination or hazards in the subsurface. The CRMP shall summarize soil and groundwater analytical data collected on the Project sites during past investigations and during site investigation activities; delineate areas of known soil and groundwater contamination if applicable; and identify soil and groundwater management options for excavated soil and groundwater, in compliance with local, state, and federal statutes and regulations. The CRMP shall: • Provide procedures for evaluating, handling, storing, testing, and disposing of soil and groundwater during Project excavation and dewatering activities, respectively. • Require the preparation of a Project-specific HSP that identifies hazardous materials present, describes required health and safety provisions and training for all workers potentially exposed to hazardous materials in accordance with State and Federal worker	Project Applicant	Prior to the issuance of construction and demolition permits	County of San Bernardino	

Mitigation Measures	Responsibility for Implementation	Timing	Responsibility for Monitoring	Monitor (Signature Required) (Date of Compliance)
safety regulations, and designates the personnel responsible for HSP implementation. • Require the preparation of a contingency plan that shall be applied should previously unknown hazardous materials be encountered during construction activities. The contingency plan shall include provisions that require collection of soil and/or groundwater samples in the newly discovered affected area by a qualified environmental professional prior to further work, as appropriate. The analytical results of the sampling shall be reviewed by the qualified environmental professional and submitted to the appropriate regulatory agency. The environmental professional shall provide recommendations, as applicable, regarding soil/waste management, worker health and safety training, and regulatory agency notifications, in accordance with local, state, and federal requirements. Work shall not resume in the area(s) affected until these recommendations have been implemented under the oversight of the County or regulatory agency, as appropriate. • Designate personnel responsible for implementation of the CRMP. The CRMP shall be submitted to the County for review and approval prior to the issuance of construction and demolition permits. This measure would reduce the hazards and hazardous materials impact to a less-than-significant level.				
MM HAZ-5: Prior to the commencement of any construction related site activities (clearing, demolition, grading etc.), all ASTs shall be removed. ASTs storing diesel shall be disposed of by a State of California licensed contractor and in compliance with the required SBCFD Hazardous Materials Division regulations for tank removals. For stained soils in the vicinity of diesel containing ASTs, as identified in the Phase I ESA dated October 11, 2018, soil samples shall be collected, as directed by the SBCFD inspector, for chemical analysis at a laboratory licensed by the State of California. If contaminated soils are encountered, a soil management plan shall be prepared to manage the stained soils during redevelopment.	Project Applicant	Prior to construction activities	City of Ontario	

Mitigation Measures	Responsibility for Implementation	Timing	Responsibility for Monitoring	Monitor (Signature Required) (Date of Compliance)
MM HAZ-6: Prior to the issuance of a demolition permit for any buildings or structures on-site, the Project Applicant shall conduct a comprehensive ACM survey to identify the locations and quantities of ACM in above-ground structures. The Project Applicant shall retain a licensed or certified asbestos consultant to inspect buildings and structures on-site. The consultant's report shall include requirements for abatement, containment, and disposal of ACM, if encountered, in accordance with SCAQMD Rule 1403.	Project Applicant	Prior to the issuance of a demolition permit	City Building Department	
TRAFFIC AND TRANSPORTATION				
MM TRANS-1: At the time of Certificate of Occupancy for future tenants, the future tenant shall demonstrate implementation of reasonable and feasible VMT reduction measures to the satisfaction of the City of Ontario Planning Director. Measures to be considered include, but are not limited to VMT measures 1, 6 and 7 as described in EIR Appendix I2.	Project Applicant	Prior to the issuance of occupancy permits	City of Ontario Planning Director	
TRIBAL CULTURAL RESOURCES				
MM TCR-1: Prior to the commencement of any ground disturbing activity at the Project site, the Project Applicant shall retain a Native American Monitor approved by the Gabrieleno Band of Mission Indians-Kizh Nation – the tribe that consulted on this Project pursuant to Assembly Bill A52 (the "Tribe" or the "Consulting Tribe"). A copy of the executed contract shall be submitted to the City of Ontario Planning and Building Department prior to the issuance of any permit necessary to commence a ground-disturbing activity. The Tribal monitor will only be present on-site during the construction phases that involve ground-disturbing activities. Ground disturbing activities are defined by the Tribe as activities that may include, but are not limited to, pavement removal, potholing or auguring, grubbing, tree removals, boring, grading, excavation, drilling, and trenching, within the project area. The Tribal Monitor will complete daily monitoring logs that will provide descriptions of the day's activities, including construction activities, locations, soil, and any cultural materials identified. The on-site monitoring shall end when all ground-disturbing activities on the Project Site are completed, or when the Tribal Representatives and Tribal Monitor have indicated that all upcoming ground-disturbing activities at the Project Site have little to no potential for impacting Tribal Cultural Resources.	Project Applicant	Prior to the commencement of any ground disturbing activity	Native American Monitor approved by the Gabrieleno Band of Mission Indians-Kizh Nation	

Mitigation Measures	Responsibility for Implementation	Timing	Responsibility for Monitoring	Monitor (Signature Required) (Date of Compliance)
Upon discovery of any Tribal Cultural Resources, construction activities shall cease in the immediate vicinity of the find (not less than the surrounding 100 feet) until the find can be assessed. All Tribal Cultural Resources unearthed by project activities shall be evaluated by the qualified archaeologist and Tribal monitor approved by the Consulting Tribe. If the resources are Native American in origin, the Consulting Tribe will retain it/them in the form and/or manner the Tribe deems appropriate, for educational, cultural and/or historic purposes. If human remains and/or grave goods are discovered or recognized at the Project Site, all ground disturbance shall immediately cease, and the county coroner shall be notified per Public Resources Code Section 5097.98, and Health & Safety Code Section 7050.5. Human remains and grave/burial goods shall be treated alike per California Public Resources Code section 5097.98(d)(1) and (2). Work may continue on other parts of the Project Site while evaluation and, if necessary, mitigation takes place (CEQA Guidelines Section 15064.5[f]). If a non-Native American resource is determined by the qualified archaeologist to constitute a "historical resource" or "unique archaeological resource," time allotment and funding sufficient to allow for implementation of avoidance measures, or appropriate mitigation, must be available. The treatment plan established for the resources shall be in accordance with CEQA Guidelines Section 15064.5(f) for historical resources and PRC Sections 21083.2(b) for unique archaeological resources. Preservation in place (i.e., avoidance) is the preferred manner of treatment. If preservation in place is not feasible, treatment may include implementation of archaeological data recovery excavations to remove the resource along with subsequent laboratory processing and analysis. Any historic archaeological material that is not Native American in origin shall be curated at a public, non-profit institution with a research interest in the materials, such as the Natural History Museum of Los Angeles County or the Fowler Museum, if such an institution agrees to accept the material. If no institution accepts the archaeological material, it shall be offered to a local school or historical society in the area for educational purposes.				

RESOLUTION NO. _____

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF ONTARIO, CALIFORNIA, APPROVING FILE NO. PGPA19-004, AN AMENDMENT TO THE LAND USE ELEMENT OF THE POLICY PLAN (GENERAL PLAN), REVISING EXHIBIT LU-01 (OFFICIAL LAND USE PLAN) AND EXHIBIT LU-03 (FUTURE BUILDOUT), AFFECTING PROPERTY BORDERED BY EUCALYPTUS AVENUE TO THE NORTH, MERRILL AVENUE TO THE SOUTH, CAMPUS AVENUE TO THE WEST, AND GROVE AVENUE TO THE EAST, FROM APPROXIMATELY 157.1 ACRES OF LOW-MEDIUM DENSITY RESIDENTIAL (5.1-11 DWELLING UNITS PER ACRE) AND APPROXIMATELY 62.4 ACRES OF BUSINESS PARK (0.6 FAR) TO APPROXIMATELY 184.2 ACRES OF INDUSTRIAL (0.55 FAR) AND APPROXIMATELY 35.2 ACRES OF BUSINESS PARK (0.6 FAR), AND MAKING FINDINGS IN SUPPORT THEREOF—APNS: 1054-071-01, 1054-071-02, 1054-081-03, 1054-091-01, 1054-091-02, 1054-101-01, 1054-101-02, 1054-231-01, 1054-231-02, 1054-241-01, 1054-241-02, 1054-321-01, 1054-321-02, 1054-311-01, 1054-311-02, 1054-051-01, 1054-051-02, 1054-061-01, 1054-061-02, 1054-251-01, 1054-251-02, 1054-301-01, AND 1054-301-02. (SEE ATTACHMENTS 1 AND 2) (PART OF THE GENERAL PLAN AMENDMENT CYCLE ONE FOR THE 2022 CALENDAR YEAR.

WHEREAS, Grove Land Venture, LLC has filed an Application for the approval of a General Plan Amendment, File No. PGPA19-004, as described in the title of this Resolution (hereinafter referred to as "Application" or "Project"); and

WHEREAS, the City of Ontario adopted the Policy Plan (General Plan) as part of The Ontario Plan in January 2010. Since the adoption of The Ontario Plan, the City has evaluated Exhibits LU-01: Official Land Use Plan and LU-03: Future Buildout further and is proposing modifications; and

WHEREAS, the proposed changes to Exhibit LU-01 Official Land Use Plan include changes to land use designations of certain properties shown on Exhibit A to make the land use designations of these properties consistent with the proposed South Ontario Logistics Center Specific Plan as well as the surrounding land uses (Chino Airport to the south) and proposed and approved land use designations and specific plans along the same corridor (Business Park (0.6 FAR) adjacent to Eucalyptus Avenue and Industrial (0.55 FAR) adjacent to Merrill Avenue; Ontario Ranch Business Park Specific Plan to the west; Merrill Commerce Center and West Ontario Commerce Center to the east); and

WHEREAS, Policy Plan Exhibit LU-03 (Future Buildout) specifies the expected buildout for the City of Ontario, incorporating the adopted land use designations. The proposed changes to Exhibit LU-01 (Official Land Use Plan) will require that Exhibit LU-03 (Future Buildout) is modified to be consistent with Exhibit LU-01 (Official Land Use Plan), as depicted on Exhibit B, attached; and

WHEREAS, the Application is a project pursuant to the California Environmental Quality Act (Public Resources Code Section 21000 et seq.) ("CEQA"); and

WHEREAS, Ontario Development Code Table 2.02-1 (Review Matrix) grants the City Council the responsibility and authority to review and act on the subject Application; and

WHEREAS, the Project is located within the Airport Influence Area of Ontario International Airport, which encompasses lands within parts of San Bernardino, Riverside, and Los Angeles Counties, and is subject to, and must be consistent with, the policies and criteria set forth in the Ontario International Airport Land Use Compatibility Plan ("ALUCP"), which applies only to jurisdictions within San Bernardino County, and addresses the noise, safety, airspace protection, and overflight impacts of current and future airport activity; and

WHEREAS, the project site is also located within the Airport Influence of Chino Airport and must be consistent with policies and criteria set forth within the 2011 California Airport Land Use Planning Handbook published by the California Department of Transportation, Division of Aeronautics, which addresses the noise, safety, airspace protection, and overflight impacts of current and future airport activity; and

WHEREAS, to address the requirements of SB330, the approval of General Plan Amendment, File PGPA19-004, is contingent upon City Council approval of General Plan Amendment, File No. PGPA21-004, for the Housing Element update to the Policy Plan (General Plan) component of The Ontario Plan, to address State mandates regarding the Regional Housing Needs Allocation ("RHNA"), as well as to modify the Policy Plan Land Use Plan (Exhibit LU-01) to establish a Zone Change (File No. PZC21-002); and

WHEREAS, City of Ontario Development Code Division 2.03 (Public Hearings) prescribes the manner in which public notification shall be provided and hearing procedures to be followed, and all such notifications and procedures have been completed; and

WHEREAS, on January 25, 2022, the Planning Commission of the City of Ontario conducted a hearing to consider the South Ontario Logistics Center Specific Plan Environmental Impact Report (State Clearinghouse No. 2021010318), including the adoption of a Mitigation Monitoring and Reporting Plan and a Statement of Overriding Considerations, and concluded said hearing on that date, voting to issue Resolution No. PC22-004 recommending the City Council approve the Application; and

WHEREAS, as the first action on the Project, on March 1, 2022, the City Council approved a Resolution adopting the South Ontario Logistics Center Specific Plan Environmental Impact Report (State Clearinghouse No. 2021010318), including the adoption of a Mitigation Monitoring and Reporting Plan and a Statement of Overriding Considerations; and

WHEREAS, on March 1, 2022 the City Council of the City of Ontario conducted a hearing to consider the Project, and concluded said hearing on that date; and

WHEREAS, all legal prerequisites to the adoption of this Resolution have occurred.

NOW, THEREFORE, IT IS HEREBY FOUND, DETERMINED, AND RESOLVED by the City Council of the City of Ontario, as follows:

SECTION 1. ***Environmental Determination and Findings.*** As the decision-making body for the Project, the City Council has reviewed and considered the information contained in the South Ontario Logistics Center Specific Plan Environmental Impact Report ("EIR") (State Clearinghouse No. 2021010318), the Mitigation Monitoring and Reporting Program ("MMRP"), and a Statement of Overriding Considerations, prepared for the project, and supporting documentation. Based upon the facts and information contained in the EIR, MMRP, and Statement of Overriding Considerations and supporting documentation and administrative record, including all written and oral evidence presented to the City Council, the City Council finds as follows:

(1) The South Ontario Logistics Center Specific Plan EIR, MMRP, Statement of Overriding Considerations, and administrative record have been completed in compliance with CEQA, the State CEQA Guidelines and the City of Ontario Local CEQA Guidelines; and

(2) The South Ontario Logistics Center Specific Plan EIR, MMRP, and Statement of Overriding Considerations contain a complete and accurate reporting of the environmental impacts associated with the Project and reflects the independent judgment of the City Council.

SECTION 2. ***Ontario International Airport Land Use Compatibility Plan ("ALUCP") Compliance.*** The California State Aeronautics Act (Public Utilities Code Section 21670 et seq.) requires that an Airport Land Use Compatibility Plan be prepared for all public use airports in the State; and requires that local land use plans and individual development proposals must be consistent with the policies set forth in the adopted Airport Land Use Compatibility Plan.

(1) On April 19, 2011, the City Council of the City of Ontario approved and adopted the Ontario International Airport Land use Compatibility Plan ("ALUCP"), establishing the Airport Influence Area for Ontario International Airport ("ONT"), which encompasses lands within parts of San Bernardino, Riverside, and Los Angeles Counties, and limits future land uses and development within the Airport Influence Area, as they relate to noise, safety, airspace protection, and overflight impacts of current and future airport activity. As the decision-making body for the Project, the City Council has reviewed and considered the facts and information contained in the Application and supporting documentation against the ALUCP compatibility factors, including [1] Safety Criteria (ALUCP Table 2-2) and Safety Zones (ALUCP Map 2-2), [2] Noise Criteria (ALUCP Table 2-3) and Noise Impact Zones (ALUCP Map 2-3), [3] Airspace protection Zones (ALUCP Map 2-4), and [4] Overflight Notification Zones (ALUCP Map 2-5). As a result, the City Council, therefore, finds and determines that the Project, when implemented in conjunction with the conditions of approval, will be consistent with the policies and criteria set forth within the ALUCP.

(2) Chino Airport is owned and operated by the County of San Bernardino and is situated within the boundaries of the City of Chino, immediately south of Ontario. Portions of the City of Ontario are impacted by aircraft operations at Chino Airport. The adopted ALUCP for Chino Airport was approved in 1991 and does not reflect the most recently adopted 2005 Airport Master Plan. Also, the existing Chino Airport Land Use Compatibility Plan does not reflect the 2011 Caltrans Airport Land Use Planning Handbook. Public Utilities Code Section 21670.1(c) requires local jurisdictions under the "alternative process" to "rely upon" the California Airport Land Use Planning Handbook (Handbook) published by the California Department of Transportation (Caltrans), Division of Aeronautics in October 2011, for preparing Compatibility Plans and to utilize the Handbook's height, land use, noise, safety, and density criteria. Although the City of Ontario does not have the formal responsibility under the "alternative process" to prepare a compatibility plan for Chino Airport, the City of Ontario has completed an Airport Land Use Compatibility Assessment that analyzes Chino Airport's impacts on Ontario, consistent with policies and criteria set forth within the Caltrans 2011 California Airport Land Use Planning Handbook. The City of Ontario is currently working towards completing an Airport Land Use Compatibility Plan for portions of the City that are impacted by aircraft operations at Chino Airport. The proposed Project is located within the Airport Influence Area of Chino Airport and was evaluated and found to be consistent with the California Airport Land Use Planning Handbook and the City of Ontario's Chino Airport Land Use Compatibility Assessment. As the decision-making authority for the Project, the City Council has reviewed and considered the facts and information contained in the Application and supporting documentation against the ALUCP compatibility factors, including Safety, Noise, Airspace Protection, Overflight. As a result, the City Council, therefore, finds and determines that the Project, will be consistent with the policies and criteria set forth within the California Airport Land Use Planning Handbook and the City of Ontario's Chino Airport Land Use Compatibility Assessment.

SECTION 3. ***Concluding Facts and Reasons.*** Based upon the substantial evidence presented to the City Council during the above-referenced hearing, and upon the specific findings set forth in Sections 1 and 2, above, the City Council hereby concludes as follows:

(a) **LU2-1 Land Use Decisions.** We minimize adverse impacts on adjacent properties when considering land use and zoning requests.

Compliance: The proposed General Plan Amendment closely coordinates with land use designations in the surrounding area and will not increase adverse impacts on adjacent properties. The Project site is located within the Chino Airport Influence Area and is impacted by Safety Zones 1, 3 and 6. The Safety Zone policies and criteria provide restrictions that limit the height and placement of buildings, lot coverage, concentration of people, the storage of hazardous materials, and excludes or limits sensitive land uses (residential, schools, day care centers, hospitals, etc.). The Project site is also impacted by existing aircraft traffic patterns from Runway 3-21, where aircraft fly directly over the Project site while making Touch-and-Go landings. State law requires that local jurisdictions "rely upon" the compatibility guidance provided by the California Airport Land Use Planning Handbook (published by the Caltrans, Division of Aeronautics) for

establishing compatible land uses. The existing General Plan Low-Medium Density Residential land designation is considered an incompatible land use within the Safety Zones and prohibits residential land uses within Safety Zone 1, limits residential density to one dwelling unit per 2-acre lot in Safety Zone 3 and limits 300 people per acre within Safety Zone 6; therefore staff is in support of the proposed General Plan Amendment. In addition, the State Division of Aeronautics prohibits the development of new incompatible land uses surrounding existing airports, and as such, the proposed project would create land use consistency with Chino Airport and satisfy the criteria set forth in the Handbook.

(b) **LU4-1 Commitment to Vision.** We are committed to achieving our Vision but realize that it may take time and several interim steps to get there.

Compliance: The proposed land use designation change from Low-Medium Density Residential (5.1 to 11 dwelling units per acre) and Business Park (0.6 FAR), to Industrial (0.55 FAR) and Business Park (0.6 FAR) will provide consistency between the TOP Policy Plan Land Use Plan and the proposed South Ontario Logistics Center Specific Plan and will result in a logical land use pattern in and around the affected areas. The entire corridor of parcels located south of Eucalyptus Avenue, north of Merrill Avenue, east of Euclid Avenue, and west of the Cucamonga Creek Channel are envisioned by the City to be an industrial and business park corridor that serves as a buffer between the airport land use to the south (within the City of Chino), and the future commercial, residential, and mixed-use land uses to be located north of Eucalyptus Avenue.

(c) **LU5-7 ALUCP Consistency with Land Use Regulations**. We comply with state law that requires general plans, specific plans, and all new development be consistent with the policies and criteria set forth within an Airport Land Use Compatibility Plan for any public use airport.

Compliance: The proposed project is located within Overflight Zones of ONT. A consistency determination was completed, and the proposed project is consistent with the policies and criteria of the ONT ALUCP. The Project site is also located within the Chino Airport Influence Area (AIA) and is impacted by Safety Zones 1, 3 and 6. The Safety Zone policies and criteria provide restrictions that limit the height and placement of buildings, lot coverage, concentration of people, the storage of hazardous materials, and excludes or limits sensitive land uses (residential, schools, day care centers, hospitals, etc.). The Project site is also impacted by existing aircraft traffic patterns from Runway 3-21, where aircraft fly directly over the Project site while making Touch-and-Go landings. State law requires that local jurisdictions “rely upon” the compatibility guidance provided by the California Airport Land Use Planning Handbook (published by the Caltrans, Division of Aeronautics) for establishing compatible land uses. The existing General Plan Low-Medium Density Residential land designation is considered an incompatible land use within the Safety Zones and prohibits residential land uses within Safety Zone 1, limits residential density to one dwelling unit per 2-acre lot in Safety Zone 3 and limits 300 people per acre within Safety Zone 6. The proposed General Plan amendment from Business Park and Low-Medium Density Residential to Industrial and Business Park would create land use consistency with Chino Airport and satisfy the criteria set forth in the California Airport Land Use Planning Handbook.

(d) **S4-6 Airport Noise Compatibility.** We utilize information from Airport Land Use Compatibility Plans to prevent the construction of new noise sensitive land uses within airport noise impact zones.

Compliance: The Project site is located within the 55-60 dB CNEL noise contour for Chino Airport. Sensitive land uses (e.g., schools, residences) would be prohibited within the 55-60 dB CNEL noise contour. Allowed uses include warehouse, light manufacturing, ancillary office/commercial, and professional office uses; therefore, no significant impacts are anticipated.

(1) The proposed General Plan Amendment would not be detrimental to the public interest, health, safety, convenience, or general welfare of the City;

(2) The Land Use Element is a mandatory element of a General Plan, which pursuant to Government Code Section 65358, is allowed up to four general plan amendments per calendar year. This General Plan Amendment is the first amendment to the Land Use Element during the 2022 calendar year, consistent with state law.

(3) The project is consistent with the Housing Element of the Policy Plan (General Plan) component of The Ontario Plan, as the project site is not one of the properties in the Available Land Inventory contained in Table A-3 (Available Land by Planning Area) of the Housing Element Technical Report Appendix.

Senate Bill 330 ("SB 330") – Housing Accountability Act (Government Code Section 65589.5 et seq.) (SB 330) was passed by the California Legislature, signed by the Governor, and became effective on January 1, 2020. The bill is the result of the Legislature's extensive findings regarding the California "housing supply crisis" with "housing demand far outstripping supply."

SB 330 amends Government Code Sections 65589.5, adds Government Code Sections 65940, 65943 and 65950, and repeals and readopts Sections 65906.5, 65913.10 and 65941.1. To summarize, no city may disapprove a residential housing development project for low- to moderate-income households (as defined therein) unless it makes a finding that the housing development project "would have a specific, adverse impact upon the public health or safety, and there is no feasible method to satisfactorily mitigate or avoid the specific adverse impact without rendering the development unaffordable to low- and moderate-income households…" such as where the housing development project is proposed on land "which does not have adequate water or wastewater facilities to serve the project." (Government Code Section 65589.5(d)(2), (4)).

In addition, the legislation adds Chapter 12 to Division 1 of Title 7 of the Government Code (Section 66300 et seq.) that applies to "affected cities," which are identified as cities in urbanized areas as determined by the most recent census. In accordance with SB 330, the Department of Community Development and Housing ("HCD") has prepared a list of affected cities and has determined that Ontario is an "affected city." Therefore, pursuant to Government Code section 66300(b)(1)(A) and (b):

(b) (1) Notwithstanding any other law except as provided in subdivision (i), with respect to land where housing is an allowable use, an affected city shall not enact a development policy, standard, or condition that would have any of the following effects:

(A) Changing the general plan land use designation, specific plan land use designation, or zoning of a parcel or parcels of property to a less intensive use or reducing the intensity of land use within an existing general plan land use designation, specific plan land use designation, or zoning district below what was allowed under the land use designation and zoning ordinances of the affected county or affected city, as applicable, as in effect on January 1, 2018…"

except when approved by HCD or when the following exception is set out in Government Code Section 66300(i)(1) applies:

(i) (1) This section does not prohibit an affected county or an affected city from changing a land use designation or zoning ordinance to a less intensive use if the city or county concurrently changes the development standards, policies, and conditions applicable to other parcels within the jurisdiction to ensure that there is no net loss in residential capacity.

The General Plan Amendment is proposed to change the Project site's land use designations from Business Park (0.6 FAR) and Low-Medium Density Residential (5.1-11 du/ac) to Business Park (0.6 FAR) and Industrial (0.55 FAR) land uses. The General Plan Amendment will allow development of up to 919,048 square feet of business park and 4,414,470 square feet of industrial, for a maximum development of 5,333,518 square feet. The General Plan Amendment would, therefore, eliminate the low-medium density housing designation, thereby theoretically eliminating 1,352 units (as determined by the City's density determinations to be 8.5 dwelling units per acre [du/ac.]). In compliance with SB330, the EIR evaluated the elimination of 1,352 units and determined that based on SB 330 Exceptions for lack of water and sewer to serve a residential project and the no net loss of residential capacity, the Project is consistent with HCD exception findings. The Project site does not have sufficient water or wastewater facilities to serve a residential project. As explained in Section 3.4.1.2, of the Draft EIR, at present there is no water or sewer infrastructure that could serve residential units because the land has been used for agricultural purposes with water provided by on-site wells and sewer provided by septic systems. The Project Applicant is working on projects both approved and under review that span the length of Eucalyptus Avenue to the north, Merrill Avenue to the south, Euclid Avenue to the east, and Grove Avenue to the west (Ontario Ranch Business Park Specific Plan – Approved; Ontario Ranch Business Park Specific Plan Amendment – Under review; and, South Ontario Logistics Center – Subject Project), with a combined estimated cost of $144,331,000 (see Table 1, Project Cost Estimate by Project Area, below). The total estimated cost includes individual streets, lengths of pipe, storm drain, sewer, water, streetlights, curbing, paving, signals, power/fiber, and more. This cost would be financially infeasible for the 1,352 units presently allowed under the current residential General Plan designation and therefore the cost of such improvements would make residential development on the site financially infeasible (see Government Code Section 66589.5(d)(2) cited above).

Table 1: Project Cost Estimate by Project Area	
Project Name	***Cost Estimate***
Ontario Ranch Business Park Phase 1 (Specific Plan - Approved)	$72,151,000
South Ontario Logistics Center (Specific Plan – Subject Project, Under Review)	$59,780,000
Ontario Ranch Business Park Phase 2 (Specific Plan Amendment, Under Review)	$12,400,000
Total	**$144,331,000**

In order to demonstrate "no net loss of residential capacity," the Project will be required to demonstrate increased residential zoning capacity on a "SB330 Replacement Site" by 1,352 units to off-set the Project site loss of zoning capacity (Low Medium Density, 5.1 to 11 du/ac). In tandem with the City's adoption of the 6th Cycle Housing Element, the City is also adopting an Affordable Housing Overlay zone and applying this zone to all parcels in the sites inventory that are south of Riverside Drive or are zoned MU-2 along Holt Boulevard. Relevant to the Project, the Affordable Housing Overlay zone will establish a minimum density of 20 dwelling units per acre for all development (regardless of Policy Plan designation or underlying zoning district), and increase the maximum density from 25 to 30 units per acre for parcels that are designated in the Policy Plan for Medium Density Residential ("MDR") when an affordable housing project is proposed with at least 25 percent of proposed units are restricted for lower income households. The creation of the Affordable Housing Overlay zone and increased maximum density of 5 dwelling units per acre will increase residential capacity on 473.7 acres of such parcels currently designated MDR, by 2,368 dwelling units. On December 20, 2021, the Planning Commission reviewed and recommended City Council for approval a General Plan Amendment (File No. PGPA21-004) for the Housing Element update to the Policy Plan (General Plan) component of The Ontario Plan, to address State mandates regarding the Regional Housing Needs Allocation ("RHNA"), as well as to modify the Policy Plan Land Use Plan (Exhibit LU-01) to establish a Zone Change (File No. PZC21-002). The Project EIR addresses the potential impacts associated with relocating residential density from the Project site to the SB330 Replacement Sites located north of the Project site, along Grove Avenue, pursuant to SB330. With the City adoption of the 6th Cycle Housing Element and associated Affordable Housing Overlay zone, no net loss of residential capacity will occur as a result of the Project.

(4) During the amendment of the general plan, opportunities for the involvement of citizens, California Native American Indian tribes (Government Code Section 65352.3), public agencies, public utility companies, and civic, education, and other community groups, through public hearings or other means were implemented consistent with Government Code Section 65351.

SECTION 4. ***City Council Action.*** Based upon the findings and conclusions set forth in Sections 1 through 3, above, the City Council hereby APPROVES the proposed General Plan Amendment, as depicted in Attachment 1 (Policy Plan Land Use Plan (Exhibit LU-01) Revision) and Attachment 2 (Future Buildout (Exhibit LU-03) Revision) of this Resolution.

SECTION 5. ***Indemnification.*** The Applicant shall agree to defend, indemnify and hold harmless, the City of Ontario or its agents, officers, and employees from any claim, action or proceeding against the City of Ontario or its agents, officers or employees to attack, set aside, void, or annul this approval. The City of Ontario shall promptly notify the applicant of any such claim, action, or proceeding, and the City of Ontario shall cooperate fully in the defense.

SECTION 6. ***Custodian of Records.*** The documents and materials that constitute the record of proceedings on which these findings have been based are located at the City of Ontario City Hall, 303 East "B" Street, Ontario, California 91764. The custodian for these records is the City Clerk of the City of Ontario.

SECTION 7. ***Certification to Adoption.*** The City Clerk shall certify to the adoption of the Resolution.

PASSED, APPROVED, AND ADOPTED this 1st day of March 2022.

Notes

1 Historically, citywide buildout levels do not achieve the maximum allowable density/intensity on every parcel and are, on average, lower than allowed by the Policy Plan. Accordingly, the buildout projections in this Policy Plan do not assume buildout at the maximum density or intensity and instead are adjusted downward. To view the buildout assumptions, access the Methodology report.

2 Acres are given as adjusted gross acreages, which do not include the right-of-way for roadways, flood control facilities, or railroads.

3 Assumed Density/Intensity includes both residential density, expressed as units per acre, and non-residential intensity, expressed as floor area ratio (FAR), which is the amount of building square feet in relation to the size of the lot.

4 Projections of population by residential designation are based on a persons-per-household factor that varies by housing type. For more information, access the Methodology report.

5 To view the factors used to generate the number of employees by land use category, access the Methodology report.

6 Acreages and corresponding buildout estimates for these designations do not reflect underlying land uses within the Business Park, Industrial and Commercial Overlays. Estimates for these areas are included within the corresponding Business Park, Industrial and General Commercial categories.

ORDINANCE NO. _____

AN ORDINANCE OF THE CITY COUNCIL OF THE CITY OF ONTARIO, CALIFORNIA, APPROVING FILE NO. PSP19-001, THE SOUTH ONTARIO LOGISTICS CENTER SPECIFIC PLAN, TO ESTABLISH LAND USE DISTRICTS, DEVELOPMENT STANDARDS, DESIGN GUIDELINES, AND INFRASTRUCTURE IMPROVEMENTS FOR THE POTENTIAL DEVELOPMENT OF UP TO 5,333,518 SQUARE FEET OF INDUSTRIAL AND BUSINESS PARK LAND USES ON 219.39 ACRES OF LAND GENERALLY BORDERED BY EUCALYPTUS AVENUE ON THE NORTH, MERRILL AVENUE ON THE SOUTH, GROVE AVENUE ON THE EAST, AND CAMPUS AVENUE ON THE WEST, AND MAKING FINDINGS IN SUPPORT THEREOF—APNS: 1054-071-01, 1054-071-02, 1054-081-03, 1054-091-01, 1054-091-02, 1054-101-01, 1054-101-02, 1054-231-01, 1054-231-02, 1054-241-01, 1054-241-02, 1054-321-01, 1054-321-02, 1054-311-01, 1054-311-02, 1054-051-01, 1054-051-02, 1054-061-01, 1054-061-02, 1054-251-01, 1054-251-02, 1054-301-01, AND 1054-301-02.

WHEREAS, Grove Land Venture, LLC ("Applicant") has filed an Application for the approval of a Specific Plan, File No. PSP19-001, as described in the title of this Ordinance (hereinafter referred to as "Application" or "Project"); and

WHEREAS, the Application applies to approximately 219.4 acres of land, bounded by Eucalyptus Avenue to the north, Merrill Avenue to the south, Grove Avenue on the east, and Campus Avenue on the west, within the Business Park (0.6 FAR) and Low-Medium Density Residential (5.1-11 du/ac) land use designations, and is presently improved with agriculture/dairy and single-family residential uses; and

WHEREAS, the property to the north of the Project site is within the SP(AG) zoning district and is currently developed with agricultural uses and a dairy farm. The property to the east is within the Merrill Commerce Center Specific Plan and is currently vacant. The property to the south of the project site is located within the City of Chino and is developed with the Chino Airport. The property to the west of the project site is located within the SP(AG) zoning district and is developed with agricultural and dairy uses; and

WHEREAS, the South Ontario Logistics Center Specific Plan establishes a comprehensive set of design guidelines and development regulations to guide and regulate site planning, landscape, and architectural character, and ensuring that excellence in community design is achieved during project development. In addition, the Specific Plan will establish the procedures and requirements to approve new development within the project site to ensure The Ontario Plan (“TOP”) goals and policies are achieved; and

WHEREAS, the South Ontario Logistics Center Specific Plan consists of approximately 219.4 acres of land, which includes the potential development of up to 5,333,518 square feet of business park and industrial development; and

WHEREAS, a request for approval of a General Plan Amendment (File No. PGPA19-004) to change the land use designations shown on the Land Use Plan Map (Exhibit LU-1) for 219.4 acres of land from Low-Medium Density Residential (5.1-11 du/ac) and Business Park (0.6 FAR) to Industrial (0.55 FAR) and Business Park (0.6 FAR), and modify the Future Buildout Table (Exhibit LU-03) to be consistent with the land use designation changes has also been submitted as part of the proposed South Ontario Logistics Center Specific Plan; and

WHEREAS, the land use intensity of the South Ontario Logistics Center Specific Plan anticipated in the five planning areas is consistent with TOP. The Specific Plan is proposing a maximum 0.6 Floor Area Ratio (FAR) within the Business Park land use designation (Planning Areas 1 and 3) located along the northern portion of the Specific Plan area. Planning Area 1 is 23.65 acres in size and can be potentially developed with 618,076 square feet of business park development. Planning Area 3 is 11.52 acres in size and can potentially be developed with 300,972 square feet of business park development. In addition, buildings within the Business Park land use area that front onto a public right-of-way shall not exceed a 125,000 square-foot building footprint. The Specific Plan is proposing a maximum 0.55 FAR within the Industrial land use designation (Planning Areas 2, 4, and 5) located along the southern portion of the Specific Plan. Planning Area 2 is 106.71 acres in size and can potentially be developed with 2,556,442 square feet of industrial development. Planning Area 4 is 60.06 acres in size and can potentially be developed with 1,438,914 square feet of industrial development. Planning area 5 is 17.45 acres in size and can potentially be developed with 419,114 square feet of industrial development. The proposed FARs for each of the Planning Areas is consistent with the Policy Plan Land Use designations for Business Park and Industrial; and

WHEREAS, the South Ontario Logistics Center Specific Plan has been prepared in conformance with the goals and policies of the City of Ontario Policy Plan (General Plan). The policy (General Plan) analysis in the Appendix “Policy Plan (General Plan) Consistency,” of the Specific Plan describes the manner in which the South Ontario Logistics Center Specific Plan complies with the Policy Plan goals and policies applicable to the South Ontario Logistics Center Specific Plan; and

WHEREAS, the South Ontario Logistics Center Specific Plan does not conflict with the Land Use Policies of the General Plan (Policy Plan component of TOP) and will provide for development, in a manner consistent with the General Plan. The policy (General Plan) analysis in the Appendix “Policy Plan (General Plan) Consistency,” of the Specific Plan describes the manner in which the South Ontario Logistics Center Specific Plan complies with the Policy Plan goals and policies applicable to the South Ontario Logistics Center Specific Plan; and

WHEREAS, an Environmental Impact Report (“EIR”) (State Clearinghouse No. 2021010318), including the adoption of a Mitigation Monitoring and Reporting Program and a Statement of Overriding Considerations have been prepared in accord with the California Environmental Quality (CEQA), the State CEQA Guidelines and the City of Ontario Guidelines to address the environmental effects of the Specific Plan (South Ontario Logistics Center); and

WHEREAS, Ontario Development Code Table 2.02-1 (Review Matrix) grants the City Council the responsibility and authority to review and act on the subject Application; and

WHEREAS, the Project has been reviewed for consistency with the Housing Element of the Policy Plan component of The Ontario Plan, as State Housing Element law (as prescribed in Government Code Sections 65580 through 65589.8) requires that development projects must be consistent with the Housing Element, if upon consideration of all its aspects, it is found to further the purposes, principals, goals, and policies of the Housing Element; and

WHEREAS, the Project is located within the Airport Influence Area of Ontario International Airport, which encompasses lands within parts of San Bernardino, Riverside, and Los Angeles Counties, and is subject to, and must be consistent with, the policies and criteria set forth in the Ontario International Airport Land Use Compatibility Plan ("ALUCP"), which applies only to jurisdictions within San Bernardino County, and addresses the noise, safety, airspace protection, and overflight impacts of current and future airport activity; and

WHEREAS, the project site is also located within the Airport Influence of Chino Airport and must be consistent with policies and criteria set forth within the 2011 California Airport Land Use Planning Handbook published by the California Department of Transportation, Division of Aeronautics, which addresses the noise, safety, airspace protection, and overflight impacts of current and future airport activity; and

WHEREAS, to address the requirements of SB330, the approval of the South Ontario Logistics Center Specific Plan is contingent upon City Council approval of General Plan Amendment, File No. PGPA21-004, for the Housing Element update to the Policy Plan (General Plan) component of The Ontario Plan, to address State mandates regarding the Regional Housing Needs Allocation ("RHNA"), as well as to modify the Policy Plan Land Use Plan (Exhibit LU-01) to establish a Zone Change (File No. PZC21-002); and

WHEREAS, City of Ontario Development Code Division 2.03 (Public Hearings) prescribes the manner in which public notification shall be provided and hearing procedures to be followed, and all such notifications and procedures have been completed; and

WHEREAS, on January 25, 2022, the Planning Commission of the City of Ontario conducted a hearing to consider the Project, and concluded said hearing on that date, voting to issue Resolution No. PC22-006 recommending the City Council approve the Application; and

WHEREAS, on March 1, 2022, the City Council of the City of Ontario conducted a hearing to consider the Project, and concluded said hearing on that date; and

WHEREAS, all legal prerequisites to the adoption of this Resolution have occurred.

NOW, THEREFORE, IT IS HEREBY FOUND, DETERMINED, AND ORDAINED by the City Council of the City of Ontario, as follows:

SECTION 1. ***Environmental Determination and Findings.*** As the decision-making body for the Project, the City Council has reviewed and considered the information contained in Environmental Impact Report (EIR), Mitigation Monitoring and Reporting Program and a Statement of Overriding Considerations prepared for the project and supporting documentation. Based upon the facts and information contained in the EIR (SCH# 2021010318) and supporting documentation, the City Council finds as follows:

(1) The South Ontario Logistics Center Specific Plan EIR, Mitigation Monitoring and Reporting Program and a Statement of Overriding Considerations contains a complete and accurate reporting of the environmental impacts associated with the Project; and

(2) The South Ontario Logistics Center Specific Plan EIR, Mitigation Monitoring and Reporting Program and a Statement of Overriding Considerations was completed in compliance with CEQA and the Guidelines promulgated thereunder; and

(3) The South Ontario Logistics Center Specific Plan EIR, Mitigation Monitoring and Reporting Program, and a Statement of Overriding Considerations reflects the independent judgment of the City Council; and

SECTION 2. ***Ontario International Airport Land Use Compatibility Plan ("ALUCP") Compliance.*** The California State Aeronautics Act (Public Utilities Code Section 21670 et seq.) requires that an Airport Land Use Compatibility Plan be prepared for all public use airports in the State; and requires that local land use plans and individual development proposals must be consistent with the policies set forth in the adopted Airport Land Use Compatibility Plan.

(1) On April 19, 2011, the City Council of the City of Ontario approved and adopted the Ontario International Airport Land use Compatibility Plan ("ALUCP"), establishing the Airport Influence Area for Ontario International Airport ("ONT"), which encompasses lands within parts of San Bernardino, Riverside, and Los Angeles Counties, and limits future land uses and development within the Airport Influence Area, as they relate to noise, safety, airspace protection, and overflight impacts of current and future airport activity. As the decision-making body for the Project, the City Council has reviewed and considered the facts and information contained in the Application and supporting documentation against the ALUCP compatibility factors, including [1] Safety Criteria (ALUCP Table 2-2) and Safety Zones (ALUCP Map 2-2), [2] Noise Criteria (ALUCP Table 2-3) and Noise Impact Zones (ALUCP Map 2-3), [3] Airspace protection Zones (ALUCP Map 2-4), and [4] Overflight Notification Zones (ALUCP Map 2-5). As a result, the City Council, therefore, finds and determines that the Project, when implemented in conjunction with the conditions of approval, will be consistent with the policies and criteria set forth within the ALUCP; and

(2) Chino Airport is owned and operated by the County of San Bernardino and is situated within the boundaries of the City of Chino, immediately south of Ontario. Portions of the City of Ontario are impacted by aircraft operations at Chino Airport. The adopted ALUCP for Chino Airport was approved in 1991 and does not reflect the most recently adopted 2005 Airport Master Plan. Also, the existing Chino Airport Land Use Compatibility Plan does not reflect the 2011 Caltrans Airport Land Use Planning Handbook. Public Utilities Code Section 21670.1(c) requires local jurisdictions under the "alternative process" to "rely upon" the California Airport Land Use Planning Handbook (Handbook) published by the California Department of Transportation (Caltrans), Division of Aeronautics in October 2011, for preparing Compatibility Plans and to utilize the Handbook's height, land use, noise, safety, and density criteria. Although the City of Ontario does not have the formal responsibility under the "alternative process" to prepare a compatibility plan for Chino Airport, the City of Ontario has completed an Airport Land Use Compatibility Assessment that analyzes Chino Airport's impacts on Ontario, consistent with policies and criteria set forth within the Caltrans 2011 California Airport Land Use Planning Handbook. The City of Ontario is currently working towards completing an Airport Land Use Compatibility Plan for portions of the City that are impacted by aircraft operations at Chino Airport. The proposed Project is located within the Airport Influence Area of Chino Airport and was evaluated and found to be consistent with the California Airport Land Use Planning Handbook and the City of Ontario's Chino Airport Land Use Compatibility Assessment. As the decision-making authority for the Project, the City Council has reviewed and considered the facts and information contained in the Application and supporting documentation against the ALUCP compatibility factors, including Safety, Noise, Airspace Protection, Overflight. As a result, the City Council, therefore, finds and determines that the Project, will be consistent with the policies and criteria set forth within the California Airport Land Use Planning Handbook and the City of Ontario's Chino Airport Land Use Compatibility Assessment.

SECTION 3. ***Concluding Facts and Reasons.*** Based upon the substantial evidence presented to the City Council during the above-referenced hearing, and upon the specific findings set forth in Section 1 through 3, above, the City Council hereby concludes as follows:

(1) The approximately 219.4-acre South Ontario Logistics Center Specific Plan is suitable for business park and industrial development and is consistent with the goals, policies, plans and exhibits of the Vision, Policy Plan (General Plan), and City Council Priorities components of The Ontario Plan. The proposed land uses in the proposed districts will also be in harmony in terms of access, size, and compatibility with existing land use in the surrounding area; and

(2) The proposed South Ontario Logistics Center Specific Plan is in conformance with the Land Use Policies and Goals of the Policy Plan and will provide standards and guidelines for the harmonious development within the districts, in a manner consistent with the Policy Plan. The Specific Plan is proposing business park and industrial type development for the approximately 219.4-acre site, which is what is proposed to be mandated by the land use plan of the Policy Plan, therefore, the proposed industrial uses will be in conformance with the policies and goals of the Policy Plan; and

(3) During the South Ontario Logistics Center Specific Plan review, opportunities for the involvement of citizens, California Native American Indian tribes (Government Code Section 65352.3.), public agencies, public utility companies, and civic, education, and other community groups, through public hearings or other means were implemented consistent with California Government Code Section 65351; and

(4) The project is consistent with the Housing Element of the Policy Plan (General Plan) component of The Ontario Plan, as the project site is not one of the properties in the Available Land Inventory contained in Table A-3 (Available Land by Planning Area) of the Housing Element Technical Report Appendix.

Senate Bill 330 ("SB 330") – Housing Accountability Act (Government Code Section 65589.5 et seq.) (SB 330) was passed by the California Legislature, signed by the Governor, and became effective on January 1, 2020. The bill is the result of the Legislature's extensive findings regarding the California "housing supply crisis" with "housing demand far outstripping supply."

SB 330 amends Government Code Section 65589.5 adds Government Code Sections 65940, 65943 and 65950, and repeals and readopts Sections 65906.5, 65913.10 and 65941.1. To summarize, no city may disapprove a residential housing development project for low- to moderate-income households (as defined therein) unless it makes a finding that the housing development project "would have a specific, adverse impact upon the public health or safety, and there is no feasible method to satisfactorily mitigate or avoid the specific adverse impact without rendering the development unaffordable to low- and moderate-income households…" such as where the housing development project is proposed on land "which does not have adequate water or wastewater facilities to serve the project." (Government Code Section 65589.5(d)(2), (4)).

In addition, the legislation adds Chapter 12 to Division 1 of Title 7 of the Government Code (Section 66300 et seq.) that applies to "affected cities," which are identified as cities in urbanized areas as determined by the most recent census. In accordance with SB 330, the Department of Community Development and Housing ("HCD") has prepared a list of affected cities and has determined that Ontario is an "affected city." Therefore, pursuant to Government Code section 66300(b)(1)(A) and (b):

> *(b) (1) Notwithstanding any other law except as provided in subdivision (i), with respect to land where housing is an allowable use, an affected city shall not enact a development policy, standard, or condition that would have any of the following effects:*
>
> *(A) Changing the general plan land use designation, specific plan land use designation, or zoning of a parcel or parcels of property to a less intensive use or reducing the intensity of land use within an existing general plan land use designation, specific plan land use designation, or zoning district below what was allowed under the land use designation and zoning ordinances of the affected county or affected city, as applicable, as in effect on January 1, 2018…"*

except when approved by HCD or when the following exception is set out in Government Code Section 66300(i)(1) applies:

(i) (1) This section does not prohibit an affected county or an affected city from changing a land use designation or zoning ordinance to a less intensive use if the city or county concurrently changes the development standards, policies, and conditions applicable to other parcels within the jurisdiction to ensure that there is no net loss in residential capacity.

The General Plan Amendment ("GPA") is proposed to change the Project site's land use designations from Business Park (0.6 FAR) and Low-Medium Density Residential (5.1-11 du/ac) to Business Park (0.6 FAR) and Industrial (0.55 FAR) land uses. The General Plan Amendment will allow development of up to 919,048 square feet of business park and 4,414,470 square feet of industrial, for a maximum development of 5,333,518 square feet. The GPA would, therefore, eliminate the low-medium density housing designation, thereby theoretically eliminating 1,352 units (as determined by the City's density determinations to be 8.5 dwelling units per acre [du/ac.]). In compliance with SB330, the EIR evaluated the elimination of 1,352 units and determined that based on SB 330 Exceptions for lack of water and sewer to serve a residential project and the no net loss of residential capacity, the Project is consistent with HCD exception findings. The Project site does not have sufficient water or wastewater facilities to serve a residential project. As explained in Section 3.4.1.2, of the Draft EIR, at present there is no water or sewer infrastructure that could serve residential units because the land has been used for agricultural purposes with water provided by on-site wells and sewer provided by septic systems. The Project Applicant is working on projects both approved and under review that span the length of Eucalyptus Avenue to the north, Merrill Avenue to the south, Euclid Avenue to the east, and Grove Avenue to the west (Ontario Ranch Business Park Specific Plan – Approved; Ontario Ranch Business Park Specific Plan Amendment – Under review; and, South Ontario Logistics Center – Subject Project), with a combined estimated cost of $144,331,000 (see Table 1, Project Cost Estimate by Project Area, below). The total estimated cost includes individual streets, lengths of pipe, storm drain, sewer, water, streetlights, curbing, paving, signals, power/fiber, and more. This cost would be financially infeasible for the 1,352 units presently allowed under the current residential General Plan designation and therefore the cost of such improvements would make residential development on the site financially infeasible (see Government Code Section 66589.5(d)(2) cited above).

Table 1: Project Cost Estimate by Project Area	
Project Name	***Cost Estimate***
Ontario Ranch Business Park Phase 1 (Specific Plan - Approved)	$72,151,000
South Ontario Logistics Center (Specific Plan – Subject Project, Under Review)	$59,780,000
Ontario Ranch Business Park Phase 2 (Specific Plan Amendment, Under Review)	$12,400,000
Total	**$144,331,000**

In order to demonstrate "no net loss of residential capacity," the Project will be required to demonstrate increased residential zoning capacity on a "SB330 Replacement Site" by 1,352 units to off-set the Project site loss of zoning capacity (Low Medium Density, 5.1 to

11 du/ac). In tandem with the City's adoption of the 6th Cycle Housing Element, the City is also adopting an Affordable Housing Overlay zone and applying this zone to all parcels in the sites inventory that are south of Riverside Drive or are zoned MU-2 along Holt Boulevard. Relevant to the Project, the Affordable Housing Overlay zone will establish a minimum density of 20 dwelling units per acre for all development (regardless of Policy Plan designation or underlying zoning district), and increase the maximum density from 25 to 30 units per acre for parcels that are designated in the Policy Plan for Medium Density Residential ("MDR") when an affordable housing project is proposed with at least 25 percent of proposed units are restricted for lower income households. The creation of the Affordable Housing Overlay zone and increased maximum density of 5 dwelling units per acre will increase residential capacity on 473.7 acres of such parcels currently designated MDR, by 2,368 dwelling units. On December 20, 2021, the Planning Commission reviewed and recommended to City Council for approval a General Plan Amendment (File No. PGPA21-004) for the Housing Element update to the Policy Plan (General Plan) component of The Ontario Plan, to address State mandates regarding the Regional Housing Needs Allocation ("RHNA"), as well as to modify the Policy Plan Land Use Plan (Exhibit LU-01) to establish a Zone Change (File No. PZC21-002). The Project EIR addresses the potential impacts associated with relocating residential density from the Project site to the SB330 Replacement Sites located north of the Project site, along Grove Avenue, pursuant to SB330. With the City adoption of the 6th Cycle Housing Element and associated Affordable Housing Overlay zone, no net loss of residential capacity will occur as a result of the Project.

SECTION 4. ***City Council Action.*** Based upon the findings and conclusions set forth in Sections 1 through 3, above, the City Council hereby APPROVES the herein described Specific Plan, attached hereto as "Attachment A," and incorporated herein by this reference.

SECTION 5. ***Notice of Determination Filing.*** Within 5 days following final application approval, The Applicant shall provide the Notice of Determination ("NOD") filing fee and applicable Department of Fish and Wildlife mitigation fee to the City of Ontario Planning Department. Required fees shall be paid by check, made payable to the "Clerk of the Board of Supervisors", which shall be forwarded to the San Bernardino County Clerk of the Board of Supervisors, along with all applicable environmental forms/notices, pursuant to the requirements of the California Environmental Quality Act ("CEQA"). Failure to provide required fees within the above-specified time will result in an extension to the statute of limitations for the filing of a CEQA lawsuit against the Project, from 30 days to 180 days.

SECTION 6. ***Final Documents.*** Within 30 days following approval of this Ordinance, the Applicant shall provide the following to the City:

(1) Five bound copies of the final Specific Plan document; and

(2) One complete, unbound copy of the final Specific Plan document; and

(3) One CD containing a complete Microsoft Word copy of the final Specific Plan document, including all required revisions; and

(4) Five CDs, each containing a complete PDF copy of the final Specific Plan document, including all required revisions; and

(5) One CD containing a complete electronic website version of the final Specific Plan document, including all required revisions.

SECTION 7. ***Indemnification.*** The Applicant shall agree to defend, indemnify and hold harmless, the City of Ontario or its agents, officers, and employees from any claim, action or proceeding against the City of Ontario or its agents, officers or employees to attack, set aside, void, or annul this approval. The City of Ontario shall promptly notify the applicant of any such claim, action, or proceeding, and the City of Ontario shall cooperate fully in the defense.

SECTION 8. ***Custodian of Records.*** The documents and materials that constitute the record of proceedings on which these findings have been based are located at the City of Ontario City Hall, 303 East "B" Street, Ontario, California 91764. The custodian for these records is the City Clerk of the City of Ontario.

SECTION 9. ***Severability.*** If any section, sentence, clause or phrase of this Ordinance or the application thereof to any entity, person or circumstance is held for any reason to be invalid or unconstitutional, such invalidity or unconstitutionality shall not affect other provisions or applications of this Ordinance which can be given effect without the invalid provision or application, and to this end the provisions of this Ordinance are severable. The People of the City of Ontario hereby declare that they would have adopted this Ordinance and each section, sentence, clause or phrase thereof, irrespective of the fact that any one or more section, subsections, sentences, clauses or phrases be declared invalid or unconstitutional.

SECTION 10. ***Effective Date.*** This Ordinance shall become effective 30 days following its adoption.

SECTION 11. ***Publication and Posting.*** The Mayor shall sign this Ordinance and the City Clerk shall certify as to the adoption and shall cause a summary thereof to be published at least once, in a newspaper of general circulation in the City of Ontario, California within 15 days following the adoption. The City Clerk shall post a certified copy of this ordinance, including the vote for and against the same, in the Office of the City Clerk, in accordance with Government Code Section 36933.

PASSED, APPROVED, AND ADOPTED this ____ day of _____ 2022.

Sewer Subarea Master Plan (SSAMP)

1.0 INTRODUCTION

The South Ontario Logistics Center Specific Plan (this "Specific Plan") is one of the initial industrial specific plans implementing the vision outlined by the City of Ontario for the Ontario Ranch area (formerly New Model Colony). The Ontario Ranch area covers 8,200 acres of the former 14,000-acre San Bernardino Agricultural Preserve, which was historically used for dairy or cattle farming by descendants of Dutch, French Basque, Portuguese, and Mexican families.

The Agricultural Preserve was divided in 1999, with portions incorporated into the three adjacent cities of Chino, Chino Hills, and Ontario. The City of Ontario named its portion the *New Model Colony* after the original *Model Colony of Ontario* established by the Chaffey Brothers, William and George Jr., in 1882. The original Model Colony was founded on innovative land development principles that included the distribution of water rights with land purchases (Mutual Water Company), a grand boulevard (Euclid Avenue), and an agricultural college (Chaffey College, established 1885).

Within Ontario Ranch, the City of Ontario promotes innovative land development principles to continue the legacy of the Model Colony. The land use plan for Ontario Ranch provides for housing, commercial and industrial areas, parks, a lake, a golf course, and trail and bike links. Specific plans are required to guide development in Ontario Ranch to ensure the City objectives are achieved.

On January 26, 2010, the City of Ontario adopted The Ontario Plan, which serves as its new business plan and includes a long-term vision and principle-based policy plan, essentially functioning as the General Plan for the city, including Ontario Ranch.

1.1 Purpose and Intent of the Specific Plan

The South Ontario Logistics Center Specific Plan provides zoning regulations for development of the project site by establishing permitted land use, development standards, infrastructure requirements, and implementation requirements for development. A comprehensive set of design guidelines and development regulations are included to guide and regulate site planning, architectural character, and landscape within the community, ensuring that excellence in community design is achieved during project development. The Specific Plan establishes the procedures and requirements to approve new development within the project site.

The purpose of the Specific Plan is to:

1. Provide a planning framework that responds to the physical and market driven aspects of future development opportunities;
2. Specify adequate and coordinated infrastructure, utilities, and public services for this area of the Ontario Ranch;
3. Promote compatible uses and interfaces with adjacent properties;

4. Ensure the appropriate location and intensity of uses through new development parameters; and
5. Conform with State laws and local ordinances and policies for the preparation of the Specific Plan.

The objectives of the Specific Plan are to:

1. Create a professional, well-maintained, and attractive environment for the development of a multi-purpose business park, light industrial and warehousing/logistics complex.
2. Provide the entitlements and framework for the development of at least 5.3 million square feet of business park and light industrial uses.
3. Provide employment opportunities for community residents.
4. Facilitate the construction of utilities, roads, and other major infrastructure that are sufficiently sized to adequately serve the Specific Plan area.
5. Expand Ontario's industrial uses in proximity to local airports and regional transportation networks.
6. Create an economic engine to drive future growth in Ontario Ranch, spur infrastructure improvements in the area and implement the Specific Plan vision.

1.2 Project Description

This Specific Plan is the regulatory document for the South Ontario Logistics Center, accommodating up to 5,333,518 square feet of business park and general industrial uses on approximately 219 gross acres of land. The Specific Plan addresses consistency with The Ontario Plan; provides a development plan identifying land uses, circulation, infrastructure, streetscape, and landscape plans; establishes allowable uses and development standards for reviewing individual projects; presents design guidelines to create a visually attractive environment; summarizes the development review process; and specifies provisions for administration and implementation of the Specific Plan.

The South Ontario Logistics Center is envisioned to contain business park and industrial buildings supported by public roads and utility infrastructure systems, private driveways, parking lots, truck courts, lighting, landscaping, signage, and other functional and decorative features. The business park uses in smaller buildings are positioned along Eucalyptus Avenue while industrial uses in larger warehouse-style buildings comprise the balance of the site. As designed, building users are expected to be a mixture of local, national, and international businesses that bring job opportunities and economic growth to Ontario. A summary of the land uses is as follows:

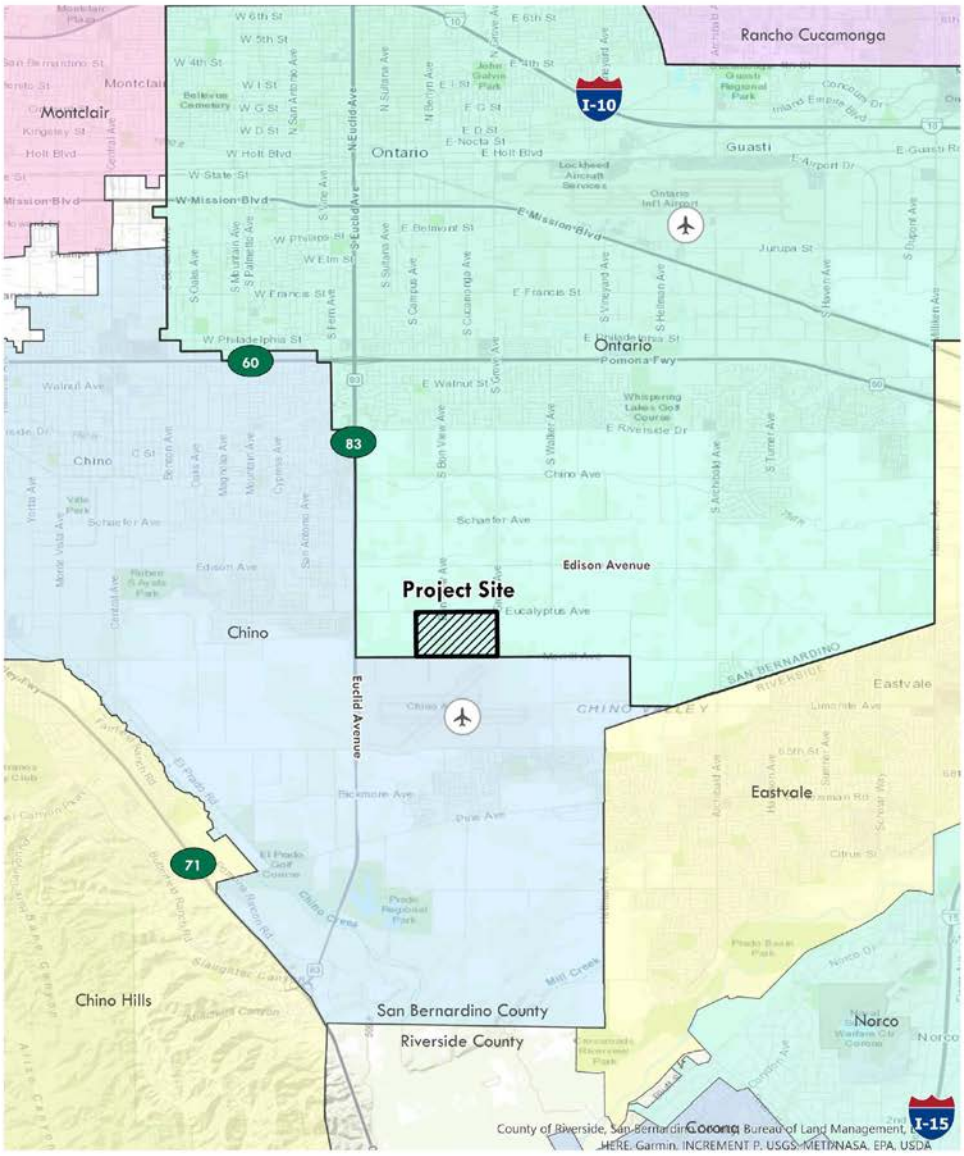

Table 1.0 Land Use Summary

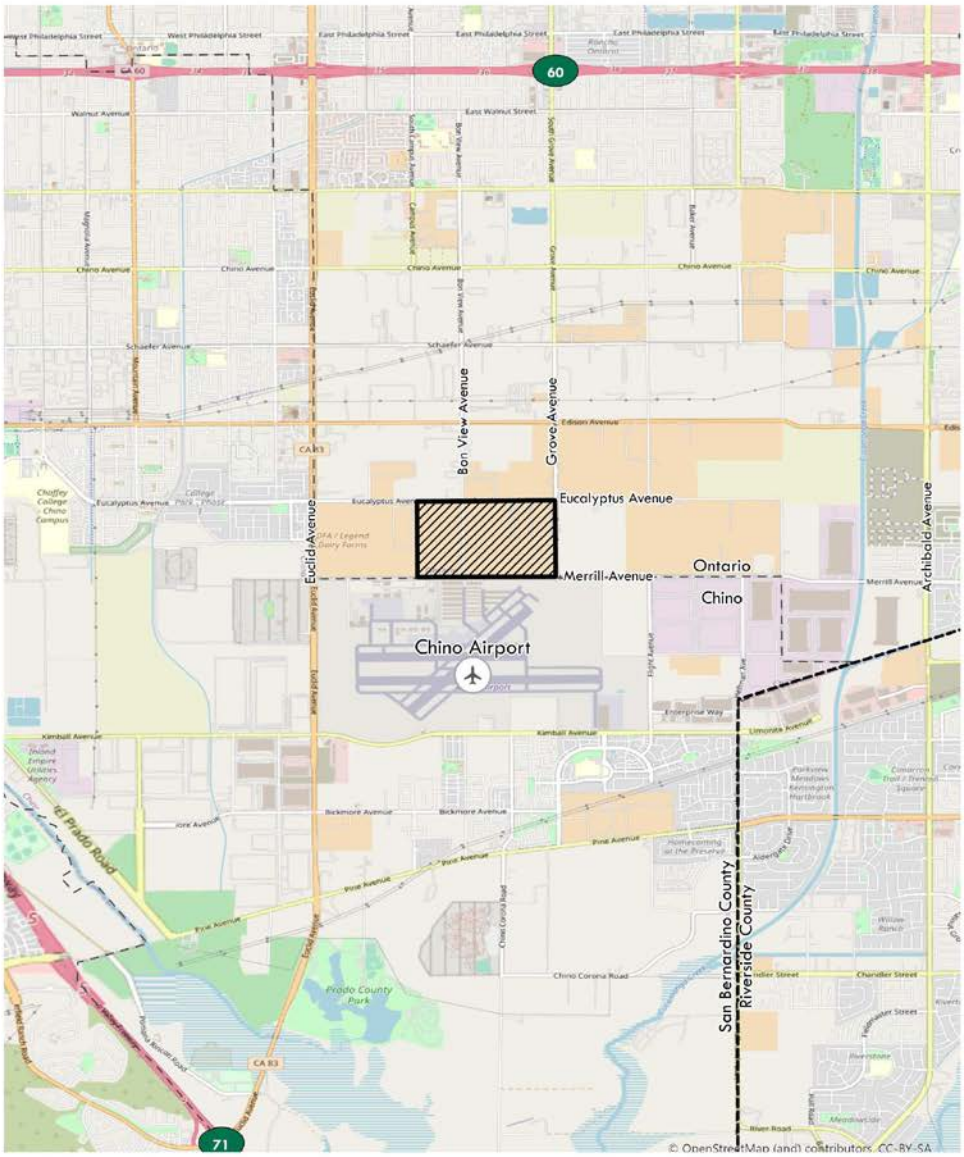
Land Use Designation	Acreage	Maximum Building Square Footage
Business Park Planning Areas	35.17 AC	919,048 SF
Industrial – General Planning Areas	184.22 AC	4,414,470 SF
Total	219.39 AC	**5,333,518 SF**

Location and Specific Plan Boundary



The Specific Plan area is located in the southwestern portion of the city of Ontario within the community called Ontario Ranch (Figure 1.1, Regional Map). The site is approximately 0.80 miles east of State Route 83 (CA-83); 2.97 miles south of State Route 60 (CA-60); 4.5 miles west of Interstate 15 (I-15); and 7.5 miles north of State Route 91 (CA-91) (Figure 1.2, Vicinity Map). The Specific Plan area encompasses 23 parcels bounded by Eucalyptus Avenue on the north, Grove Avenue on the east, Merrill Avenue on the south, Campus Avenue on the west, and consists of the following Assessor Parcel Numbers (APNs): 1054-071-01, -02; 1054-081-03; 1054-091-01, -02; 1054-101-01, -02; 1054-231-01, -02; 1054-241-01, -02; 1054-321-01, -02; 1054-311-01, -02; 1054-051-01, -02; 1054-061-01, -02; 1054-251-01, -02, 1054-301-01, -02. (Figure 1.3, Specific Plan Boundary).

Specific Plan Boundary

South Ontario Logistics Center Specific Plan **Figure 1.3**

Employment Generation

At build-out, the South Ontario Logistics Center is anticipated to create hundreds of jobs in warehousing, logistics, light manufacturing, and administration. Actual job creation depends on the type of land uses ultimately developed, as a wide range of office, business park, and industrial uses are permitted. For example, e-commerce uses such as internet merchant fulfillment would yield more jobs than a distribution warehouse since many e-commerce companies employ labor-intensive picking and packing operations. Employment opportunities will range from entry level to highly skilled labor, adding to Ontario's competitive advantage in the region. South Ontario Logistics Center will also provide expanded opportunities for start-up businesses.

Infrastructure Framework

In cooperation with adjacent property owners and developers, the Specific Plan will help establish the necessary framework to enable the continued growth and development of Ontario Ranch. The Specific Plan identifies master planned domestic water, recycled water, sewer, storm drain and fiber optic infrastructure.

Community Compatibility

The Specific Plan land use plan designates the northern frontage along Eucalyptus Avenue as Business Park, which provides for smaller scale buildings with less intense uses. The Industrial designation is applied to the remainder of the Specific Plan area, which is adjacent to the Chino Airport across Merrill Avenue.

1.3 Specific Plan Requirements

The range of topics addressed in a specific plan is left to the discretion of the decision-making body. However, all specific plans must, at a minimum, address the following:

1. The distribution, location, and extent of the uses of land, including open space, within the area covered by the plan.
2. The proposed distribution, location, and extent and intensity of major components of public and private transportation, sewage, water, drainage, solid waste disposal, energy, and other essential facilities proposed to be located within the area covered by the plan and needed to support the land uses described in the plan.
3. Standards and criteria by which development will proceed, and standards for the conservation, development, and utilization of natural resources, where applicable.
4. A program of implementation measures including regulations, programs, public works projects, and financing measures necessary to carry out the above identified items.

1.4 Authority and Scope of the Specific Plan

The Ontario Plan requires approval of a Specific Plan for development within Ontario Ranch to guide development of the project site, ensure unified districts and neighborhoods, and implement the City's goals and policies. The City of Ontario has zoned the project site SP (Specific Plan) Zoning District with an AG (Agriculture) Overlay District. This Specific Plan provides zoning regulations to govern development of

the site and shall take precedence over the City of Ontario Development Code. However, in instances where the Specific Plan is silent, the Development Code shall prevail.

The California Government Code (Title 7, Division 1, Chapter 3, Article 8, Sections 65450 through 65457) grants the City the authority to adopt a specific plan by ordinance (a regulatory plan) or resolution (a policy driven plan). This Specific Plan is a regulatory document, providing land use and design guidance adopted by ordinance.

As a regulatory plan, this document serves as zoning law for the land within the Specific Plan area. Development plans, site plans, and tentative tract and parcel maps must be consistent with this Specific Plan and The Ontario Plan. The topics covered in this Specific Plan include land use, infrastructure, development standards, design guidelines, and implementation measures. The minimum requirements of a specific plan are established by California Government Code Sections 65450 through 65457 and City of Ontario Code Sections 9-1.2100 to 9-1.2125.

No local public works project may be approved, no tentative map or parcel map for which a tentative map was not required may be approved, and no zoning ordinance may be adopted or amended within an area covered by a specific plan unless it is consistent with the adopted specific plan (California Government Code Section 65455). The California Government Code also requires compatibility with local, regional and other planning measures. For example, the Specific Plan must be consistent with any applicable comprehensive airport land use plan (ALUP) (California Government Code Section 65302.3). After adoption, any identification of inconsistency must be followed by amendment of either the existing plans and regulations or the specific plan itself. Failure to correct inconsistencies can result in the inability to enforce specific plan regulations and policies.

1.5 Other Governing Documents

In addition to this Specific Plan, which includes a Land Use Plan, Infrastructure Plan, Development Regulations, Design Guidelines, and an Implementation Plan tailored to the South Ontario Logistics Center, the following documents also contain applicable information:

- The Ontario Policy Plan (which serves as the City's State mandated General Plan) that includes City-wide policies pertaining to land use, housing, mobility, safety, environmental resources, parks & recreation, community economics, community design, and social resources.
- The City of Ontario Development Code, which governs over topics on which this Specific Plan's development regulations are silent. (Where the requirements of this Specific Plan differ from the requirements of the Ontario Development Code, this Specific Plan takes precedence.)
- The South Ontario Logistics Center Development Agreement, which specifies methods for the financing, acquisition, and construction of infrastructure systems and provides assurance that development of the property may proceed subject to Ontario's rules and regulations in effect at the time of this Specific Plan's approval.
- The Airport Land Use Compatibility Plans for Ontario International Airport (ONT) and Chino Airport. The City of Ontario is currently preparing an Airport Land Use Compatibility Plan for Chino Airport which relies on the California Airport Land Use Planning Handbook published by Caltrans Division of Aeronautics, that

is expected to be adopted in 2021. The Chino Airport Land Use Compatibility Plan will establish policies and criteria for the four types of compatibility impacts which include safety, noise, airspace protection, and overflight. Projects within the Specific Plan boundary shall be required to be consistent with the policies and criteria of the Airport Land Use Compatibility Plans for Ontario International Airport and Chino Airport.

- The Mitigation Monitoring and Reporting Program (MMRP) that is part of the South Ontario Logistics Center's Environmental Impact Report (EIR) prepared in compliance with the California Environmental Quality Act. The MMRP stipulates measures that are required to be implemented to mitigate the environmental effects of the commerce center's construction and operation.

1.6 California Environmental Quality Act Compliance

The Specific Plan is a discretionary project and is subject to the requirements of the California Environmental Quality Act (CEQA). Pursuant to State and local CEQA guidelines, an Environmental Impact Report (EIR) addressing the impacts associated with the development of a project must be considered and certified by the City prior to approval of a Specific Plan.

To address potential environmental impacts, it is anticipated that an EIR will be prepared. The EIR will analyze the potential environmental impacts of the adoption and implementation of the Specific Plan and any concurrently processed permits. The EIR for the Specific Plan will be helpful in dealing with concurrently processed implementing projects (such as development within the Specific Plan and/or related infrastructure provision) and subsequent activities within the Specific Plan area. With a detailed analysis of the Specific Plan and associated development, many subsequent activities, such as grading permits or other development permits, could be found to be within the scope of the project described in the EIR, and no further environmental documents would be required.

1.7 Organization of this Specific Plan

The Specific Plan is organized by chapter as follows:

1. **Introduction.** This chapter states the purpose and intent of the Specific Plan, introduces the proposed project, summarizes specific plan requirements, and explains the scope and authority of the Specific Plan and its compliance with CEQA.

2. **Existing Conditions.** This chapter explains the baseline conditions for the project site including current and surrounding land uses, airport influence, circulation, utilities, and environmental conditions.

3. **Development Plan.** This chapter establishes the overall development concept for the Specific Plan including the land use plan, infrastructure plans for water, sewer, drainage, and circulation, and the provision of public services such as fire, police, and solid waste disposal.

4. **Land Use and Development Regulations.** This chapter establishes the land use designations and regulations for the Specific Plan. Upon adoption of this Specific Plan, the land use and development standards within this chapter serve as the legal zoning for the Specific Plan area.

5. **Design Guidelines.** This chapter provides direction for site planning, architecture, and landscape design in the Specific Plan area.

6. **Administration and Implementation.** This chapter provides requirements for development review and administration of the Specific Plan including amendment procedures and implementation priorities.

7. **The Ontario Plan Consistency.** This chapter describes the Specific Plan's conformance with The Ontario Plan.

2.0 EXISTING CONDITIONS

The following sections document the conditions prior to the adoption of this Specific Plan, including land uses, airport influence areas, Williamson Act contracts, land use designations, circulation, and environmental conditions.

2.1 Existing and Surrounding Land Uses

The Specific Plan area is occupied by agricultural uses, including a dairy farm, row crops, and vacant land. Approximately six residences that house the dairy owner and workers are also located within the Specific Plan area. Dairy farming and agriculture have been the primary uses of the property since the 1930s or earlier.

Figure 2.1 shows the existing uses in the vicinity, which include:

- North across Eucalyptus Avenue: dairy farm and agricultural row crops
- South across Merrill Avenue: Chino Airport (City of Chino)
- East across Grove Avenue: dairy farm and agricultural row crops
- West across Campus Avenue: dairy farm and agricultural row crops

The Ontario Plan designates the surrounding areas in Ontario Ranch for business park, commercial, and residential uses.

2.2 Airport Influence Areas

Ontario International Airport Influence Area

The Ontario International Airport Land Use Compatibility Plan (ONT ALUCP) was adopted by the Ontario City Council on April 19, 2011. The intent of a compatibility plan is to avoid conflicts between airport operations and surrounding land uses. The Specific Plan area is not within the safety, noise impact, or airspace protection zones of the ONT ALUCP; however, it is within the Airport Influence Area, as is the entire City of Ontario. While a Real Estate Transaction Disclosure policy is not required for non-residential land, developers or tenants may purchase a Natural Hazard Disclosure report that would indicate that the property is in an Airport Influence Area.

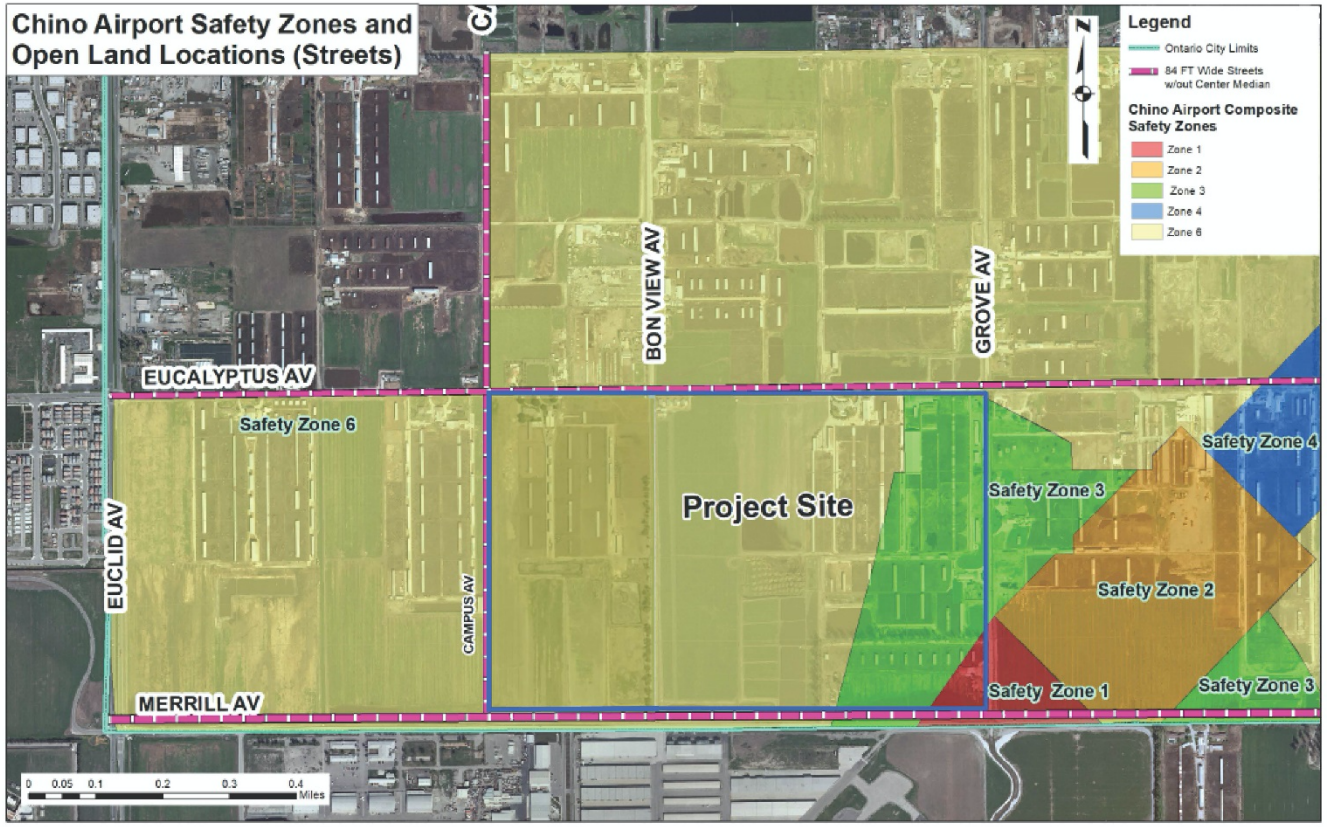
Chino Airport Overlay Zone

The Specific Plan area is within Safety Zone 1, 3 and 6 of the Chino Airport Overlay (Generic Safety Zones for General Aviation Airports from the Caltrans Division of Aeronautics – California Airport Land Use Planning Handbook) as shown in Figure 2.2 Airport Influence Areas.

The following open land and occupancy limit requirements shall apply in Chino Airport Safety Zones, as established by the Chino Airport Compatibility Plan.

Zone 1: No buildings shall be located in Safety Zone 1.
Zone 3: At least 15% of the zone shall remain as open land* and occupancy shall be limited to 100 people per acre on average and a maximum of 300 people in any one acre.

Zone 6: At least 10% of the zone shall remain as open land* or an open area every ¼ mile to ½ mile is required; occupancy shall be limited to 300 people per acre on average and a maximum of 1,200 people in any one acre.



* Open land is defined as areas at least 300 feet long by 75 feet wide (about 0.5 acre) that are relatively level and free of tall vertical objects such as structures, overhead lines/wires, and large trees and poles greater than 4 inches in diameter and taller than 4 feet above the ground. Parking lots can be considered as acceptable open lands. In the Specific Plan area, surrounding roads (Eucalyptus, Campus and Merrill Avenues), drive aisles, and truck parking lots can be considered as acceptable open lands in urbanized settings.

Existing Surrounding Land Uses

South Ontario Logistics Center Specific Plan **Figure 2.1**

Airport Influence Areas

South Ontario Logistics Center Specific Plan

Figure 2.2

2.3 Williamson Act Contracts

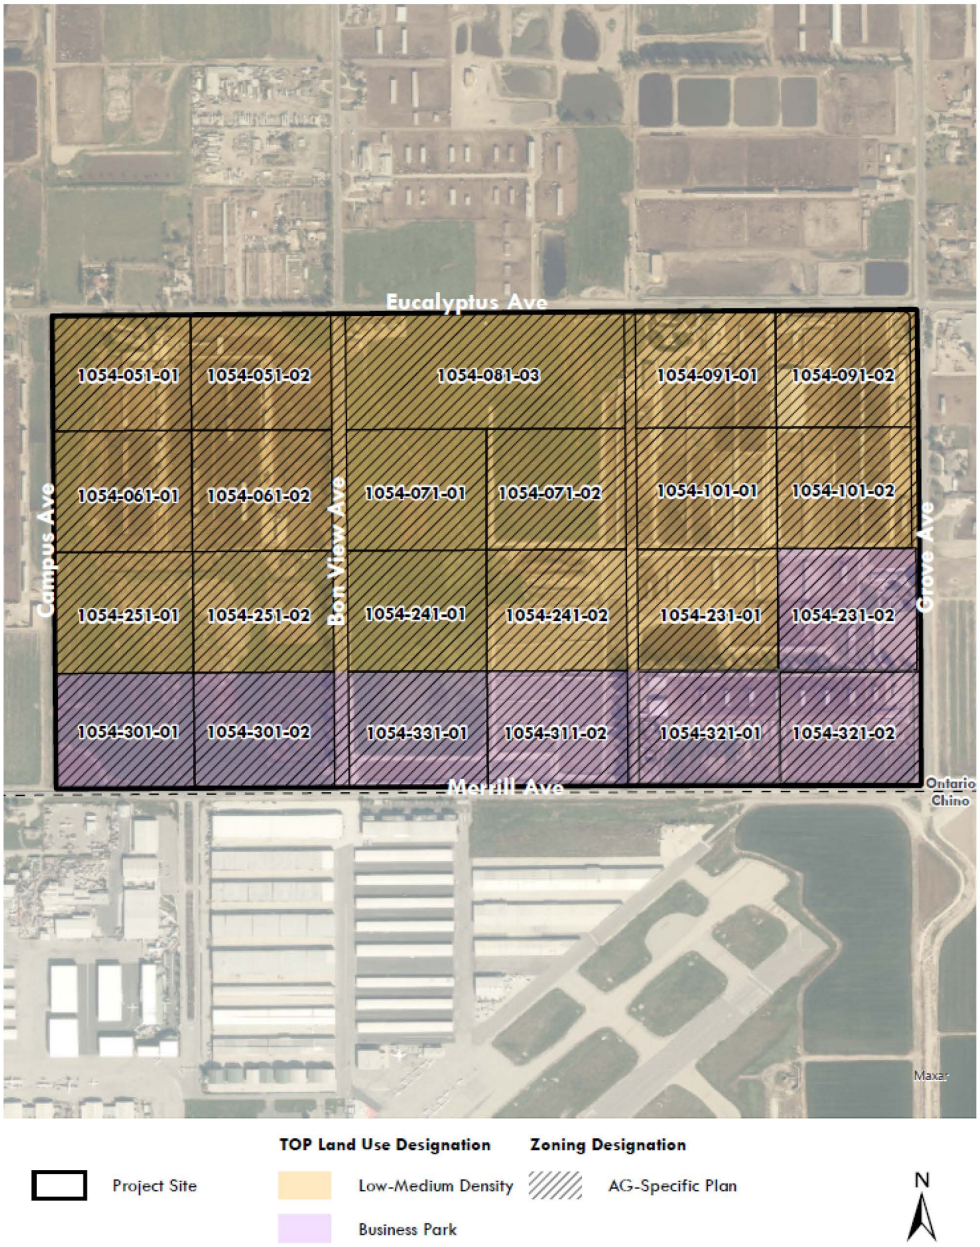
The California Land Conservation Act of 1965, commonly referred to as the Williamson Act, enables local governments to enter into contracts with private landowners for the purpose of restricting specific parcels of land to agricultural or related open space use. In return, landowners receive property tax assessments that are much lower than normal because they are based upon farming and open space uses as opposed to full market value. The motivation for the Williamson Act is to promote voluntary land conservation, particularly farmland conservation. At the time this Specific Plan was prepared (2021), there is an active Williamson Act Contract (Contract #72-392) on APN 1054-051-01, 02 and 1054-061-01, 02. However, a notice of non-renewal was recorded, starting the process to terminate this Contract. As one of the discretionary actions associated with the South Ontario Logistics Specific Plan, these existing Williamson Act Contracts will be cancelled. Cancellation would comply with provisions and requirements identified at Government Code (GC) §51280 et seq. The City would be required to make the required statutory findings (GC §51282(a)). The landowner would be required to pay the requisite cancellation fee.

2.4 Existing Ontario Plan and Zoning Land Use Designations

The Ontario Plan existing land use designations and existing zoning map designations for the Specific Plan area (prior to adoption of the South Ontario Logistics Center Specific Plan) are shown in Figure 2.3.

The Ontario Plan existing land use designations are:

- Business Park (0.6 Floor Area Ratio (FAR))
  Assessor Parcel Number (APN): 1054-231-02; 1054-321-01, -02; 1054-311-02; 1054-331-01; 1054-301-01, -02.



- Low-Medium Density Residential (5.1 – 11 dwelling units per acre)
  APN: 1054-071-01, -02; 1054-081-03; 1054-091-01, -02, 1054-101-01, -02; 1054-231-01; 1054-241-01, -02, 1054-252-01, -02, 1054-061-01, -02, 1054-051-01,-02.

- Chino Airport Overlay
  APN: 1054-101-02; 1054-231-01, -02; 1054-311-02, 1054-321-01, -02 and portions of 1054-091-02; 1054-101-01; 1054-241-02; 1054-311-01

The project includes an application for a General Plan Amendment to change the land use designations to Industrial and Business Park, as discussed in Chapter 3, Development Plan.

The existing zoning designation is SP (Specific Plan) Zoning District with an AG (Agriculture) Overlay District. The AG Overlay indicates that the land can continue to be used for agricultural uses, but the SP District designation requires approval of a specific plan by the City for urban development of the project site.

Existing TOP Land Use and Zoning

South Ontario Logistics Center Specific Plan **Figure 2.3**

2.5 Existing Circulation

The Specific Plan area is located approximately three miles south of State Route 60 via State Route 83 (Euclid Avenue), which is located west of the Specific Plan area, as shown in Figure 1.1 and Figure 1.2 .

Vehicular circulation in the Specific Plan area is provided by Eucalyptus Avenue on the north, Merrill Avenue on the south, Grove Avenue on the east, and Campus Avenue on the west.

Grove, Eucalyptus, Campus and Merrill Avenues do not provide fully dedicated rights-of-way as specified in The Ontario Plan and lack major street and parkway improvements.

Bon View Avenue is a fully dedicated street but lacks street and parkway improvements.

The site currently takes access from multiple drive entrances off Grove Avenue and Eucalyptus Avenue. There are no site access points from Merrill and Bon View Avenues due to dirt berms along these property lines.

There is an existing unused dedicated paper street (Cucamonga Avenue) that runs north/south through the center of the site that will be vacated.

There are no traffic signals located at the street intersections bordering the site.

No sidewalks exist adjacent to the site.

2.6 Existing Environmental Conditions

Topography

The topography of the site is moderately flat, sloping from the northeast to the southwest with approximately a 17-foot drop in elevation.

Geology, Soils, and Seismicity

A geotechnical feasibility study included boring to depths of 20 to 30± feet and trenching to depths of 5 to 10± feet. Manure was present at the ground surface at two of the trenches with thicknesses of 4½ to 5± inches. Highly organic topsoil materials were encountered at some of the boring and trench locations, which consisted of silty fine sands and contained manure and/or other fibrous organic material. A 6±-inch-thick surficial layer of aggregate base was observed at the ground surface at one of the borings.

Artificial fill soils were encountered beneath the AB layer and at the ground surface at one of the boring locations, extending to depths of 2½ to 3± feet. The fill soils consisted of medium dense fine sand with trace silt, fine gravel, and AC fragments. Native alluvial soils were encountered at the ground surface or beneath the fill, topsoil, and manure at all of the boring and trench locations. The near-surface alluvium generally consisted of loose to medium dense fine sands and silty fine sands to fine sandy silts, extending to depths of 4½ to 8½± feet below ground surface. Beneath these soils, the borings encountered stiff to very stiff clayey silts, silty clays, and sandy clays with occasional layers of medium dense silty sands, sandy silts, and clayey sands, extending to at least the maximum depth explored of 30± feet below existing site grades. Free water was not encountered during the drilling of any of the borings.

The subject site is located in an area that is subject to strong ground motions due to earthquakes. Research of available maps indicates that the Specific Plan area is not located within an Alquist-Priolo Earthquake Fault Zone. Furthermore, no evidence of faulting was identified during the geotechnical investigation. Therefore, the possibility of significant fault rupture on the site is considered low.

The potential for other geologic hazards such as seismically induced settlement, lateral spreading, tsunamis, inundation, seiches, flooding, and subsidence affecting the site is considered low. Research of the San Bernardino County Land Use Services website indicates that the subject site is not located within a zone of liquefaction susceptibility. Based on the mapping performed by San Bernardino County and the conditions encountered at the boring locations, liquefaction is not considered to be a design concern for development within the Specific Plan area.

Hydrology

Storm runoff from the site generally drains from north to south. Onsite detention areas are located in the central and southerly portions of the site.

The site surface drains southerly to a dirt swale located adjacent to Merrill Avenue, then westerly to a set of four corrugated steel pipes, then southerly to an earthen channel adjacent to Euclid Avenue.

Areas north of the project site drain southerly towards Eucalyptus Avenue and then westerly towards Euclid Avenue. Eucalyptus Avenue is not fully improved, so it is possible that offsite flows from the north enter the project site.

According to Federal Emergency Management Agency (FEMA) Flood Insurance Rate Maps, the project site is not located within a flood hazard zone.

Biological Resources

The Specific Plan area generally represents low biological resource value due to highly disturbed site conditions and historic dairy/agricultural use, resulting in low biological diversity. The entire site has been disturbed by agricultural use and no native habitat was present.

There is limited vegetation on the majority of the site; the vegetation that exists is generally non-native grasses and weeds. Project site contains approximately 94 acres of agriculture fields. These fields are currently fallow. The agriculture fields are disturbed and dominated by non-native species of grasses and plants. Species observed include Avenasp., Bromussp., Russian thistle (Salsola tragus) and alfalfa (Medicago sativa).

The site contains approximately 107.45 acres of disturbed agriculture infrastructure. These areas contain no native habitat and are currently used for containing livestock. These areas are mostly developed with agricultural use structures or residential buildings. Vegetation within these areas consists of non-native ornamental plant species.

The project site contains approximately 19.0 acres of areas stock/retention ponds and channels. These ponds and channels are man-made and fed by wells. The ponds are dry and dominated by upland species such as bromus and Russan thistle, but the stock pond drainage channels contain grasses such as Burmda (Cynodon dactylon) and curly dock (Rumex crispus).

2.7 Existing Ground Water Wells

In compliance with the Chino Basin Water Master's Well Procedure for Developers, a well use/destruction plan and schedule for all existing private/agricultural wells shall be submitted to the City of Ontario for approval prior to the issuance of permits for any construction activity. If a private well is actively used for water supply, the Developer shall submit a plan to abandon such well and connect users to the City's

water system (residential to the domestic water system and agricultural to the recycled water system) when available. Wells shall be destroyed/abandoned per the California Water Resource Guidelines and require permitting from County Health Department. The locations of existing wells are shown in Figure 2.4, “Existing Ground Water Wells”. A copy of such permit and Form DWR 188 Well Completion Form shall be provided to the Development Engineering Department and the Utilities Engineering Department prior to issuance of grading and/or building permits. If the Developer proposes temporary use of an existing agricultural well for purposes other than agriculture, such as grading, dust control, etc., the developer shall make a formal request to the City of Ontario for such use prior to issuance of permits for any construction activity. Upon approval, the Developer shall enter into an agreement with the City of Ontario and pay any applicable fees as set forth by the agreement.

Existing Ground Water Wells

South Ontario Logistics Center Specific Plan **Figure 2.4**

3.0 DEVELOPMENT PLAN

This chapter provides the framework to guide development of the South Ontario Logistics Center Specific Plan. The chapter presents the proposed planning areas, infrastructure plans, and public services to support the project.

3.1 Land Use Plan

The Specific Plan consists of five Planning Areas accommodating a variety of industrial-serving commercial, low-intensity office, technology, light manufacturing, and warehouse/distribution uses that are compatible with the site's location within Safety Zone 1, 3 and 6 of the Chino Airport Influence Area. Chino Airport Runway 21 Runway Protection Zone and CFR Part 77 height restriction of the Chino Airport. The Land Use Plan implements the vision of The Ontario Plan by providing opportunities for employment in manufacturing, distribution, and research and development at intensities designed to meet the demand of current and future market conditions. A list of allowable uses by Planning Area is presented in Chapter 4 (Land Use and Development Standards).

Figure 3.1a (Land Use Plan) identifies the location of the land use designations for the proposed Project area. The Specific Plan zoning mirrors the TOP Land Use Districts and is identified along with the five Planning Areas in Figure 3.1b.

BP (Business Park) Zoning District: The BP zoning district accommodates industrial-serving commercial, low intensity office uses, and certain light industrial uses. Development within this district is typically multi-tenant in nature; however, single-tenant buildings are not precluded.

IG (Industrial - General) Zoning District: The IG zoning district accommodates storage and warehousing uses located in larger buildings on larger sites. Uses may include e-commerce, high cube warehouses, or distribution. A wide range of manufacturing and assembly uses are also permitted in this district.

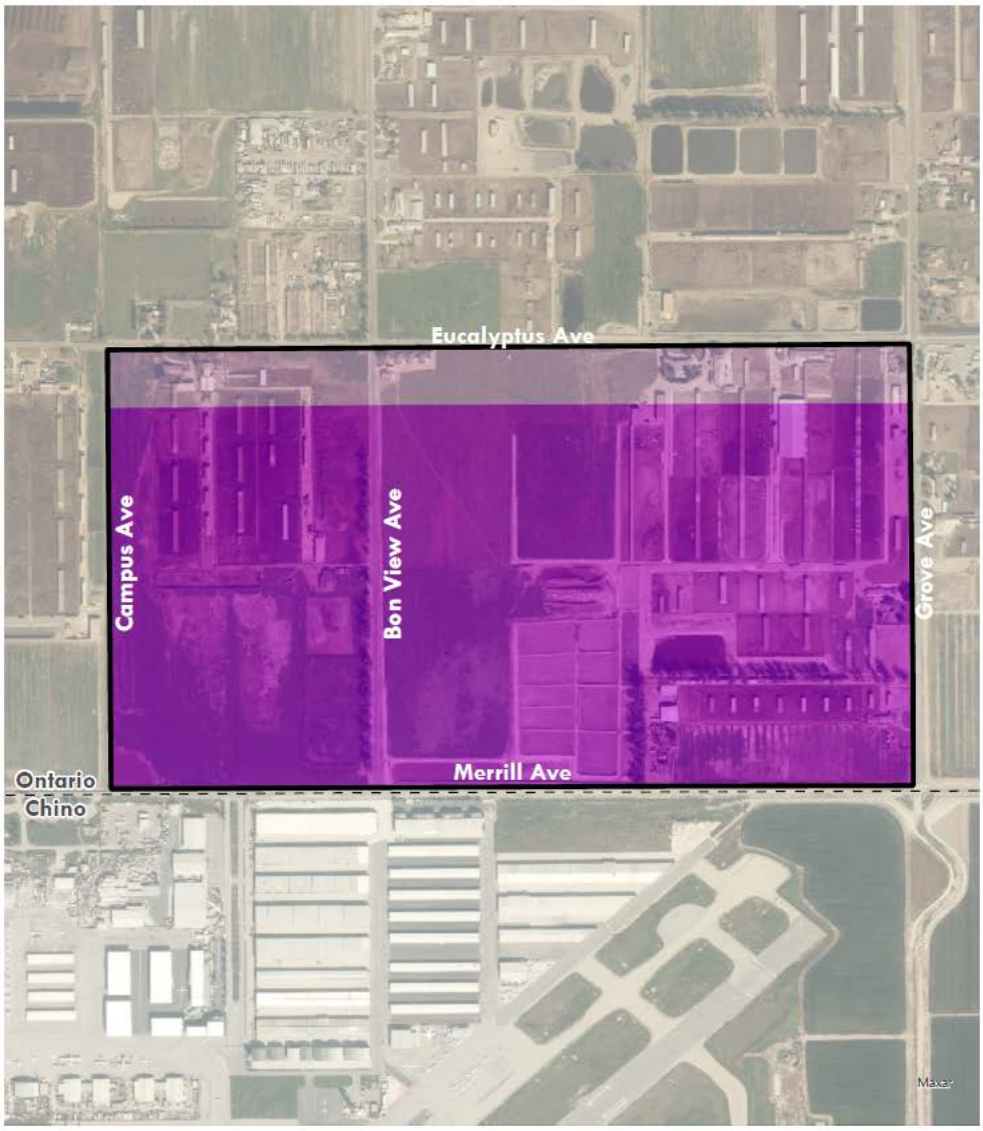


Table 3.1 provides the maximum allowable gross building area for each Planning Area at its associated floor area ratio. Development standards (found in Chapter 4), such as setbacks, parking, landscaping, infrastructure, and site design, may reduce the maximum gross square footage.

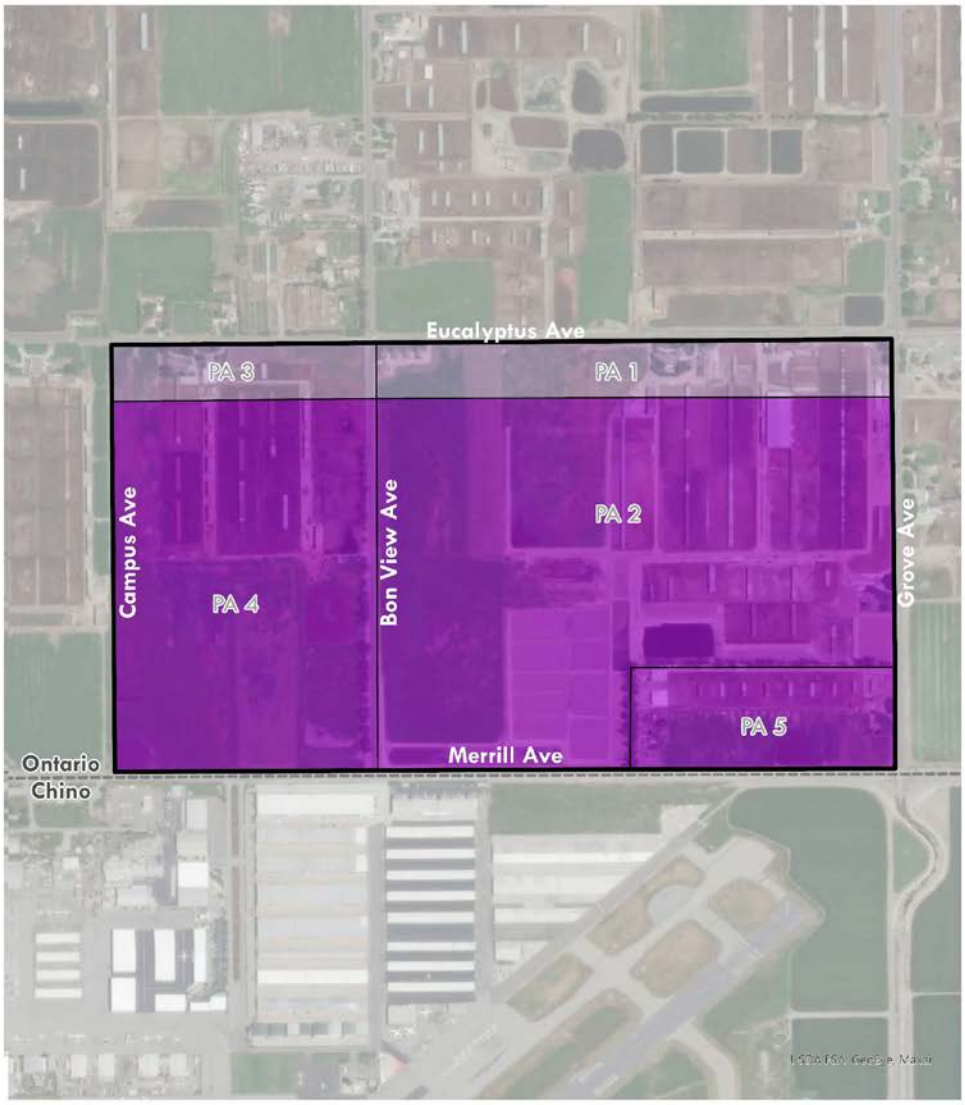
Table 3.1 Maximum Specific Plan Build-Out

Planning Area	Maximum Floor Area Ratio[1]	Site Acreage	Maximum Building Square Footage
Planning Area 1: Business Park	0.60	23.65	618,076 SF
Planning Area 3: Business Park	0.60	11.52	300,972 SF
Planning Area 2: Industrial - General	0.55	106.71	2,556,442 SF
Planning Area 4: Industrial -General	0.55	60.06	1,438,914 SF
Planning Area 5: Industrial – General	0.55	17.45	419,114 SF
TOTAL		**219.39**	**5,333,518**

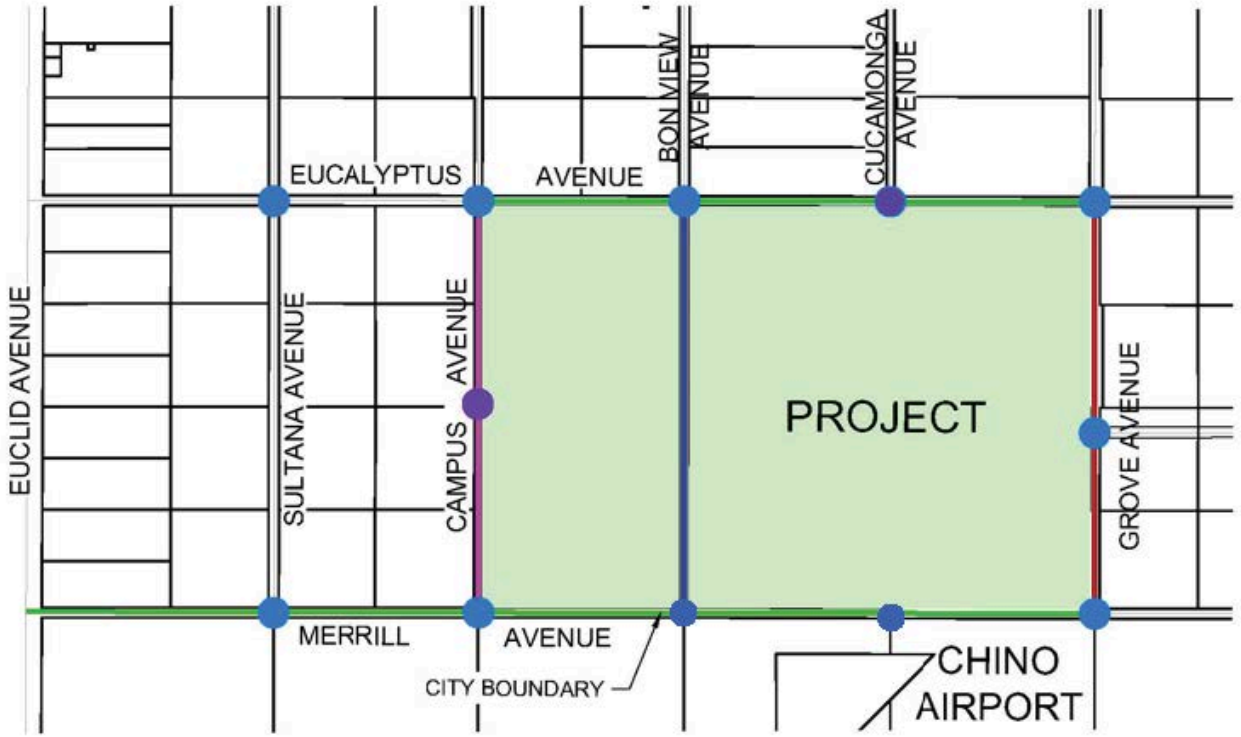


Note:
1. Provided the General Plan Amendment application submitted in conjunction with this Specific Plan to designate PAs 1 and 3 as Business Park and PAs 2,4, and 5 as Industrial – General is approved.

TOP Land Use Plan

South Ontario Logistics Center Specific Plan **Figure 3.1a**

Proposed Specific Plan Land Use Plan



South Ontario Logistics Center Specific Plan **Figure 3.1b**

3.2 Street Plan

The Street Plan (Figure 3.2) facilitates movement of vehicles, pedestrians and cyclists within the Specific Plan area, consistent with the City of Ontario's Roadway Classification System, shown in Figure 3.3.

Figures 3.4 and 3.4a presents typical street cross sections for Grove, Eucalyptus, Merrill, Bon View, and Campus Avenues. Preliminary improvement responsibilities are indicated in the cross sections; however, final fair share responsibilities for street improvements shall be as determined in a Development Agreement with the City. Conceptual streetscape design is presented in Chapter 5 (Design Guidelines). Road surface, sidewalk, and trail improvements within the Specific Plan area shall be approved by the City's Engineering Department.

3.2.1 Grove Avenue

Grove Avenue is located along the eastern boundary of the Specific Plan area and is designated as an Other Principal Arterial in The Ontario Plan's Functional Roadway Classification Plan. Grove Avenue is designed with a 124-foot wide right-of-way, a 28-foot wide center median, and 28-foot wide pavement from median to curb face. The existing street right-of-way varies; therefore, a varied street dedication of 10 to 29 feet is required. An additional 20 feet dedication for the following neighborhood edge is required.

The Grove Avenue streetscape design illustrated in Chapter 5, Design Guidelines, specifies 20-foot wide parkways that include a five-foot wide sidewalk and 20-foot wide landscape buffer setbacks. The east side also includes an eight-foot wide decomposed granite multipurpose trail. Together, the parkways and landscape buffer setbacks create 40-foot wide neighborhood edges as specified in the *Ontario Ranch Colony Streetscape Master Plan*.

3.2.2 Eucalyptus Avenue

Eucalyptus Avenue is located along the northern boundary of the Specific Plan area, providing east/west access to the site. Eucalyptus Avenue is designated by the Functional Roadway Classification Plan as a four-lane Collector Street. The Specific Plan specifies an 108-foot wide right-of-way with 84 feet of pavement including curb/gutter. An additional 23ft dedication for the neighborhood edge is required.

The Eucalyptus Avenue streetscape design presented in Chapter 5, Design Guidelines, for the south side of the street adjacent to the project site specifies a 12-foot wide parkway including a seven-foot wide curb-adjacent landscaped area and a five-foot wide sidewalk. A five-foot wide Class II on-street bike lane at the edge of the street on the south side is proposed. The north side provides an eight-foot wide on-site multipurpose trail within a 23-foot wide landscape buffer setback. Together, the parkway and landscape buffer setback create a 35-foot wide neighborhood edge, as described in the *Ontario Ranch Colony Streetscape Master Plan*. A 21-foot dedication will be required for Eucalyptus Avenue.

3.2.3 Merrill Avenue

Merrill Avenue is designated as a four-lane Collector Street in the Functional Roadway Classification Plan and provides east-west access to the project's southern boundary. The centerline of this street forms the boundary between the City of Ontario to the north and the City of Chino to the south. The Specific Plan specifies a 98-foot wide right-of-way and 74 feet of pavement including curb and gutter for Merrill Avenue. An additional 23ft dedication for the neighborhood edge is required on the north side.

The Merrill Avenue streetscape design presented in Chapter 5, Design Guidelines, for the north side of the street includes an eight-foot wide Class II on-street bike lane at the edge of the street, a seven-foot wide curb-adjacent landscaped area, a five-foot wide sidewalk and an eight-foot wide multipurpose trail is located within a 23-foot wide landscape buffer setback. Together, these improvements establish a 35-

foot wide neighborhood edge, as specified in the *Ontario Ranch Streetscape Master Plan*. A 21-foot street dedication will be required for Merrill Avenue.

3.2.4 Bon View Avenue

Bon View Avenue is designated as a Local Industrial with a 66-foot wide right-of-way and 48 feet of pavement including curb and gutter. The Bon View Avenue right-of-way exists and no dedication is required.

The Bon View Avenue streetscape presented in Chapter 5, Design Guidelines, specifies 9-foot wide parkways including a five-foot wide sidewalk.

3.2.5 Campus Avenue

Campus Avenue is located along the western boundary of the Specific Plan area, providing west access to the site. Campus Avenue is designated as a Minor Arterial Street per the Functional Roadway Classification Plan. The Specific Plan specifies a 108-foot wide right-of-way and will require a 29-foot half-width dedication and a 12-foot parkway including the sidewalk. An additional 23 foot dedication for the neighborhood edge is required.

The Campus Avenue streetscape presented in Chapter 5, Design Guidelines, specifies a 12-foot parkway with a 5’ sidewalk and an 8’ multipurpose trail as part of the 35-foot Neighborhood Edge on the east side, while the western side includes a five-foot wide Class II on-street bike lane at the edge of the street.

3.2.6 Local Circulation

Final site planning and off-site design shall be subject to City approval. In addition to the typical street section described and depicted, additional right-of-way and geometric enhancements such as additional left turn and right turn lanes, including but not limited to those at intersections, may be required to adequately mitigate impacts identified in the Traffic Impact Analysis/Specific Plan EIR. Local roadway circulation shall accommodate trucks with a double trailer combination wheelbase of 67 feet (known as the WB-67 design vehicle).

Driveways shall conform to access requirements of the City of Ontario Traffic and Transportation Design Guidelines and be to the satisfaction of the City Engineer. Driveway locations, specifically those that are in proximity to master-planned or future traffic signals, shall be located so as not to interfere with queues as projected in the Traffic Impact Analysis for the Specific Plan. The use of surrounding roads, drive aisles and truck parking lots to address the open land requirement for the Chino Airport Overlay zone is discussed in Chapter 2 (Section 2.2: Airport Influence Areas).

Fair share responsibilities for street improvements will be addressed in a Development Agreement with the City.

3.2.7 Traffic Control Devices

Traffic signs regulating, warning, and/or guiding traffic on public roads shall conform to the California Manual on Uniform Traffic Control Devices (MUTCD), latest edition. Traffic-control signs, whether on public or private property, shall conform to the California MUTCD.

3.2.8 Truck Routes

The City of Ontario designates and maintains a network of truck routes that provide for the effective transport of goods while minimizing negative impacts on local circulation and noise-sensitive land uses (Figure 3.5). Merrill Avenue, which runs along the southern boundary of the Specific Plan area, is a designated truck route from Euclid Avenue to Archibald Avenue. PCC pavement shall be installed per City Standard 1207 at signalized intersections along truck routes.

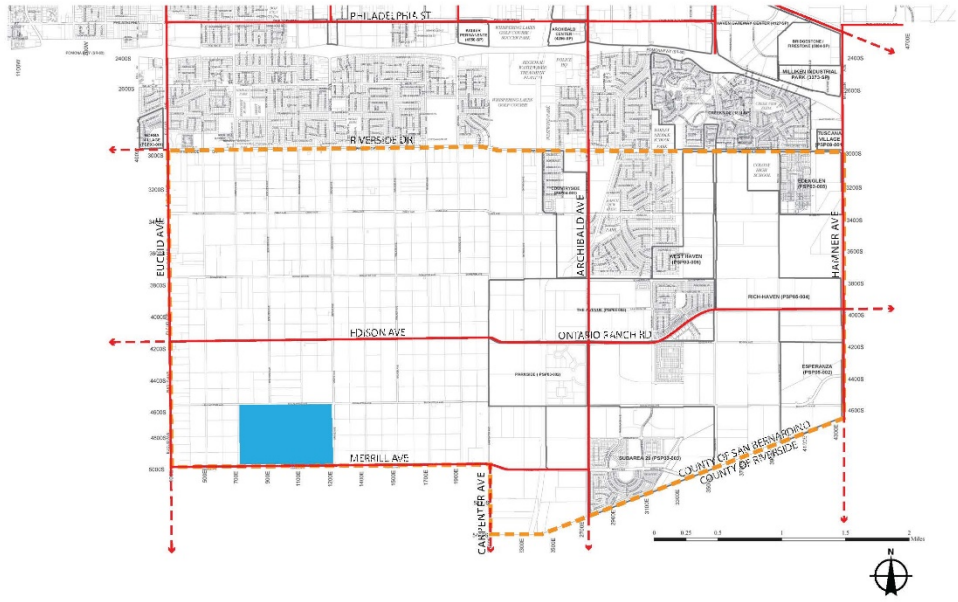
3.2.9 Pedestrian Circulation

Sidewalks will be provided along both sides of the street to improve safety and the pedestrian experience, connect the various parts of the Specific Plan area, and expand access to nearby land uses. Sidewalks shall be five-feet wide, constructed of concrete, and installed in conjunction with adjacent roadway improvements.

3.2.10 Trails and Bike Paths

Trails and bicycle paths provide an additional mode of circulation in and around the Specific Plan area.

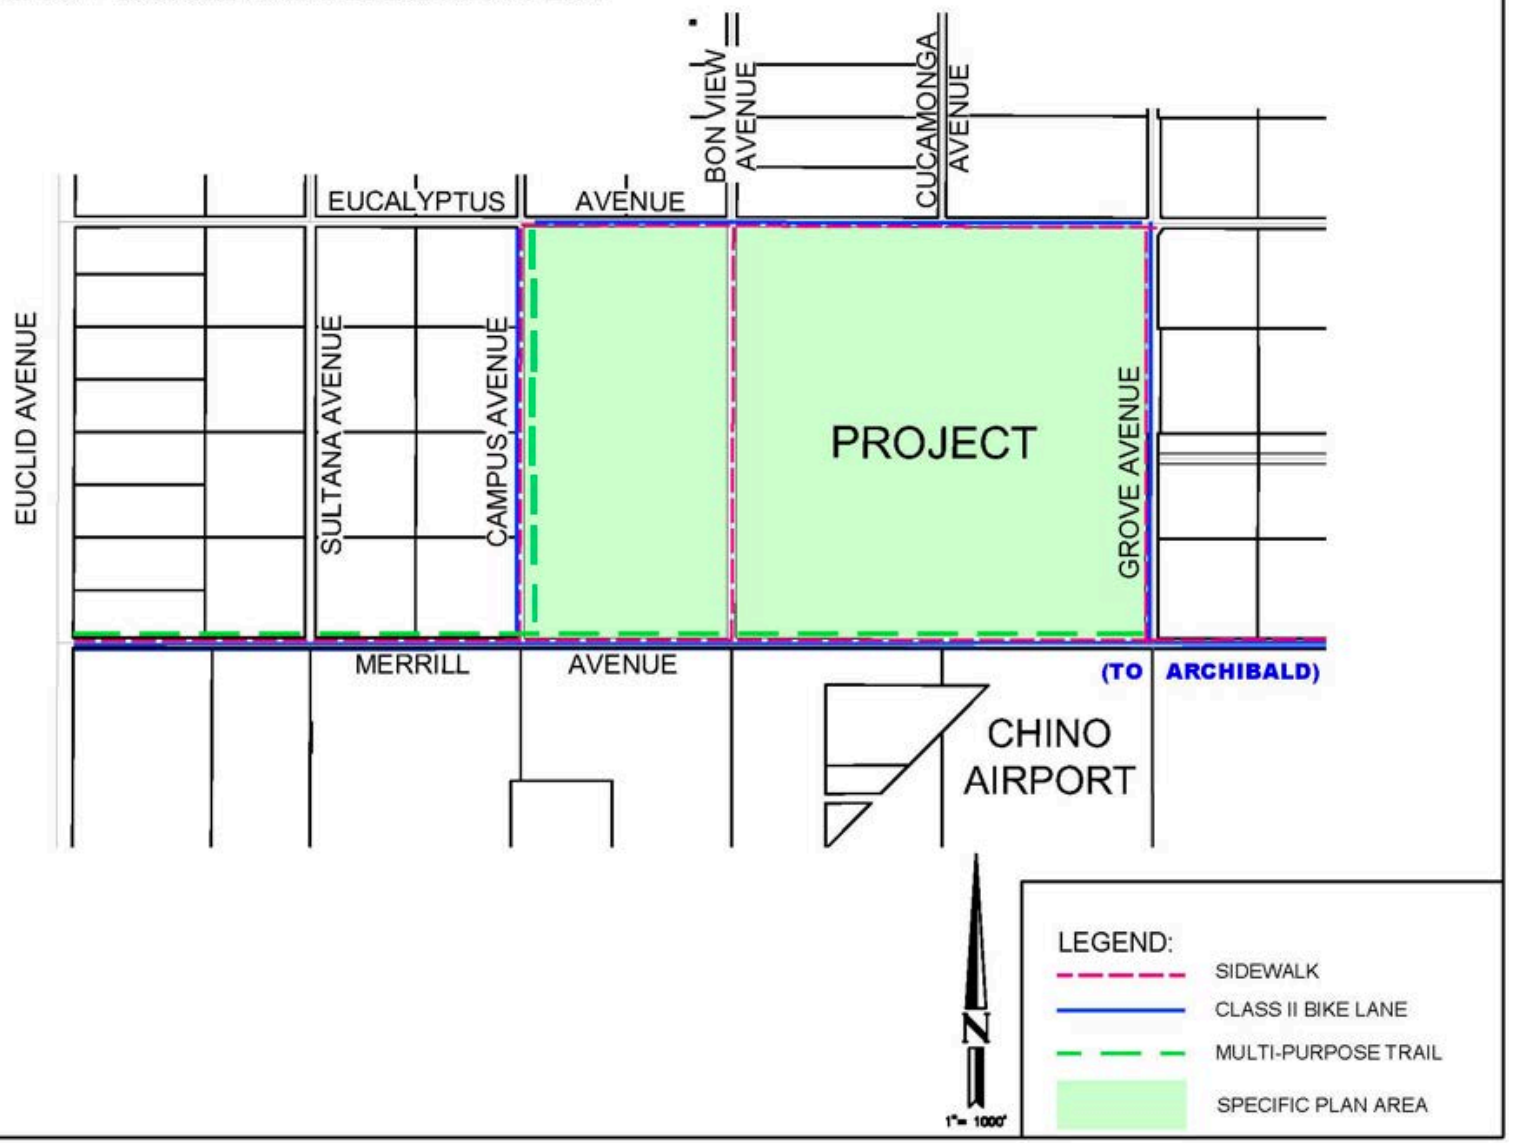
The Ontario Plan Mobility Element specifies a Class II bikeway on the north side of Merrill Avenue, south side of Eucalyptus and on the west side of Campus Avenue. A Class II bikeway is defined as a dedicated (striped) lane along the street, with no parking allowed in the bike lane. This bike lane provides linkages to the City's bike path system (Figure 3.6).



Eight-foot wide multipurpose trails are provided on the east side of Grove Avenue, east side of Campus, the north side of Eucalyptus Avenue and the north side of Merrill Avenue (Figure 3.6).

The Specific Plan's trail and bikeway improvements shall be installed in conjunction with street improvements. The City reserves the right to implement bike lanes on Eucalyptus at the discretion of the Traffic and Transportation Division.

3.2.11 Transit



Transit options provide an alternative mode of transportation for motorists and a primary mode for the transit-dependent. The City is coordinating with regional transit agencies to implement Bus Rapid Transit (BRT) service to target destinations and along corridors, including Euclid Avenue west of the Specific Plan area.

Truck Routes

South Ontario Logistics Center Specific Plan **Figure 3.5**

FIGURE 3.6 - BICYCLE AND PEDESTRIAN PLAN

3.3 Potable Water Plan

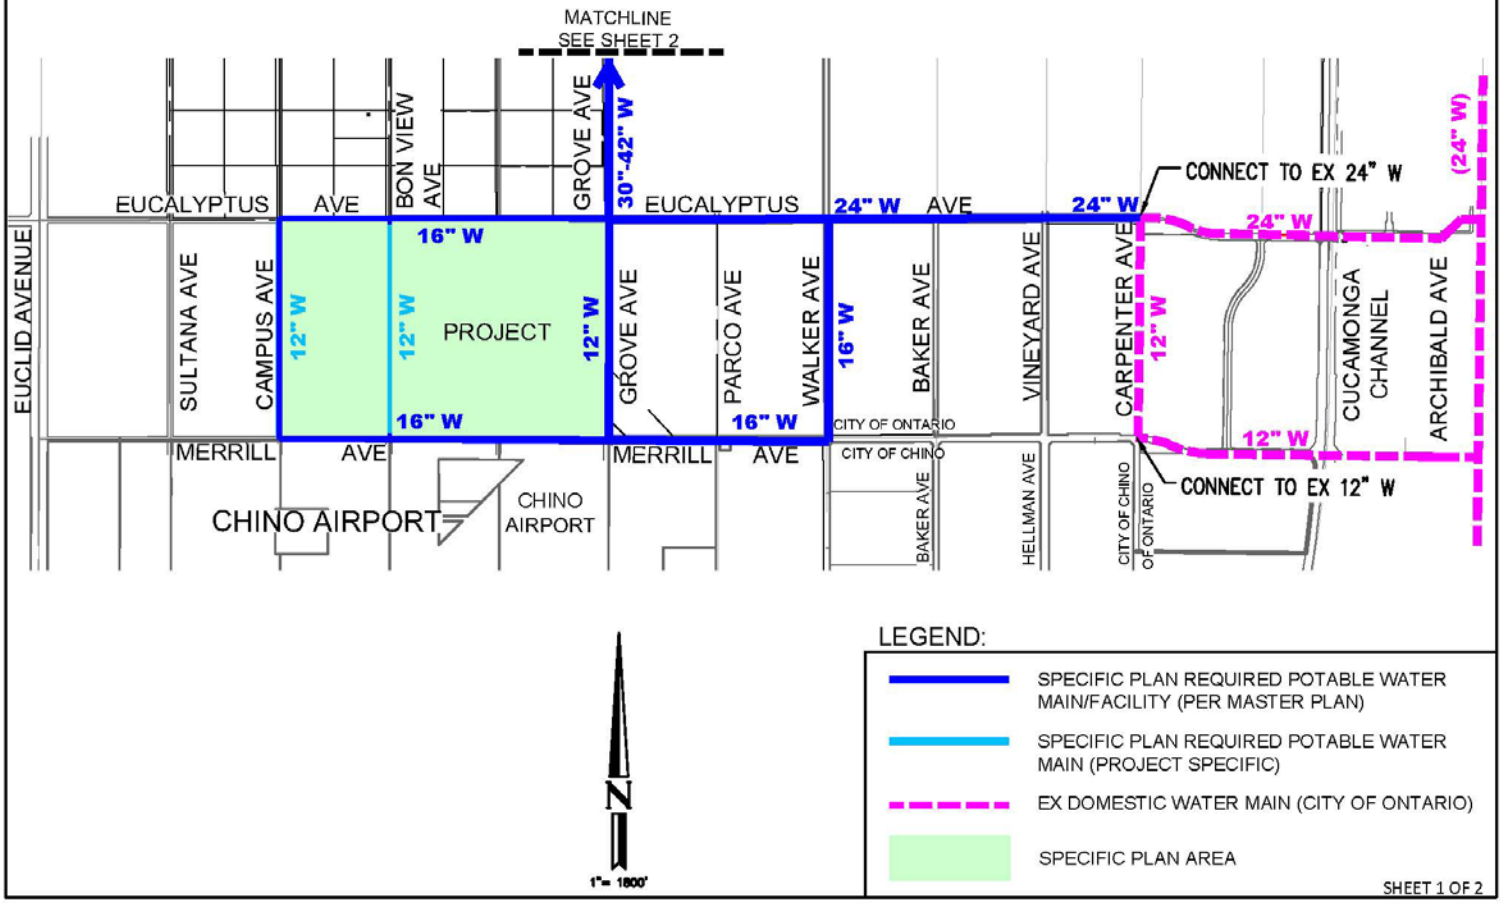
Water service to the Specific Plan area will be provided by the City of Ontario. Potable water is provided by imported water from the Water Facilities Authority (WFA), Chino Basin Desalter Authority (CDA) and groundwater from the Chino Basin, extracted via the City's wells. The WFA was formed in 1980 as a Joint Powers Authority by the Cities of Chino, Chino Hills, Ontario and Upland, and the Monte Vista Water District. It was formed to construct and operate water treatment facilities that provide a supplemental supply of potable water to its member agencies.

Currently there are no City potable water mains or City potable water infrastructure in the vicinity of the Specific Plan Area. Potable Water System Improvements for the Specific Plan area (Figure 3.7a & Figure 3.7b) require the planning, design, and construction of the 925 Pressure Zone (PZ) Phase 2 West Backbone, which includes: Extending the 24-inch potable water main in Eucalyptus Avenue from Carpenter Avenue to Grove Avenue; installing a 30-inch to 42-inch potable water main in Grove Avenue connecting from the 24-inch potable water main in Eucalyptus Avenue and extending to Chino Avenue; installing an 18-inch potable water main in Chino Avenue connecting from the 30-inch to 42-inch potable water main in Grove Avenue and extending to connect to the end point of an existing 18-inch potable water main on the west side of the Cucamonga Channel; installing a 42-inch potable water main in Grove Avenue that ended at Chino Avenue and extending to Philadelphia Street; installing a 42-inch potable water main in Philadelphia Street connecting from the 42-inch potable water main in Grove Avenue and extending to Cucamonga Avenue; installing a 42-inch potable water main in Cucamonga Avenue connecting from the 42-inch potable water main in Philadelphia Street and extending to Bon View Avenue Reservoir site and to the Reservoir. At the time this Specific Plan was prepared, the alignment of the 42-inch water line between Chino Avenue and the water reservoir site had not been finalized and is subject to change. This Specific Plan will be required to participate in the future Phase 2 Water System Improvements north of Chino Avenue, as detailed in the development agreement with the City.

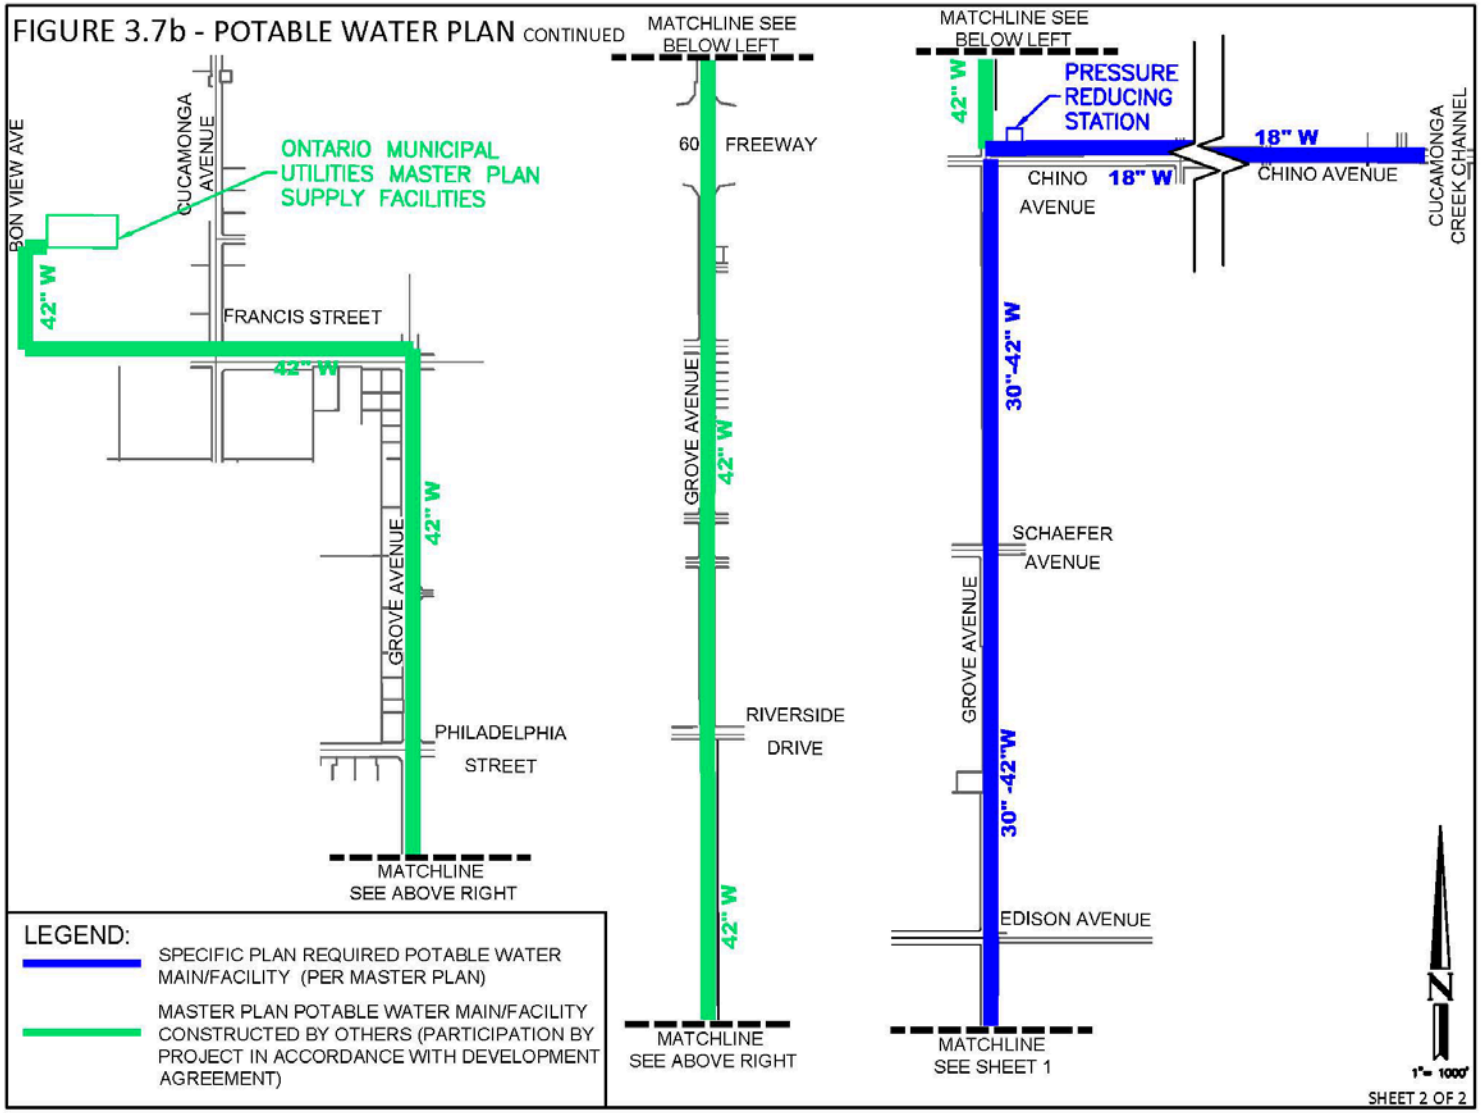
In addition to the 925 Pressure Zone (PZ) Phase 2 West Backbone, the Specific Plan area requires the planning, design, and construction of a Secondary Industrial 16-inch Loop between the 925 Pressure Zone (PZ) Phase 2 West Backbone and the Specific Plan area which includes: installing a 16-inch potable water main in Eucalyptus Avenue connecting to the 30-inch to 42-inch 925 Pressure Zone (PZ) Phase 2 West Backbone main in Grove Avenue and extending to Campus Avenue; installing a 12-inch potable water main in Campus Avenue connecting from the 16-inch potable water main in Eucalyptus Avenue and extending to Merrill Avenue; installing a 16-inch potable water main in Merrill Avenue connecting from the 12-inch potable water main in Campus Avenue and extending to Walker Avenue; installing a 16-inch potable water main in Walker Ave from the 16-inch potable water main at Merrill Avenue and extending northernly to connect to the existing 24-inch potable water main at Eucalyptus Avenue.

The Specific Plan area also requires the planning, design, and construction of the Adjacent Potable Water System, which includes: installing a 12-inch potable water main in Bon View Avenue connecting to the 16inch potable water main in Eucalyptus Avenue and extending to connect to the 16-inch potable water main in Merrill Avenue; and, installing a 12-inch potable water main in Grove Avenue connecting to the

16-inch potable water main in Eucalyptus Avenue and extending to connect to the 16-inch potable water main in Merrill Avenue.

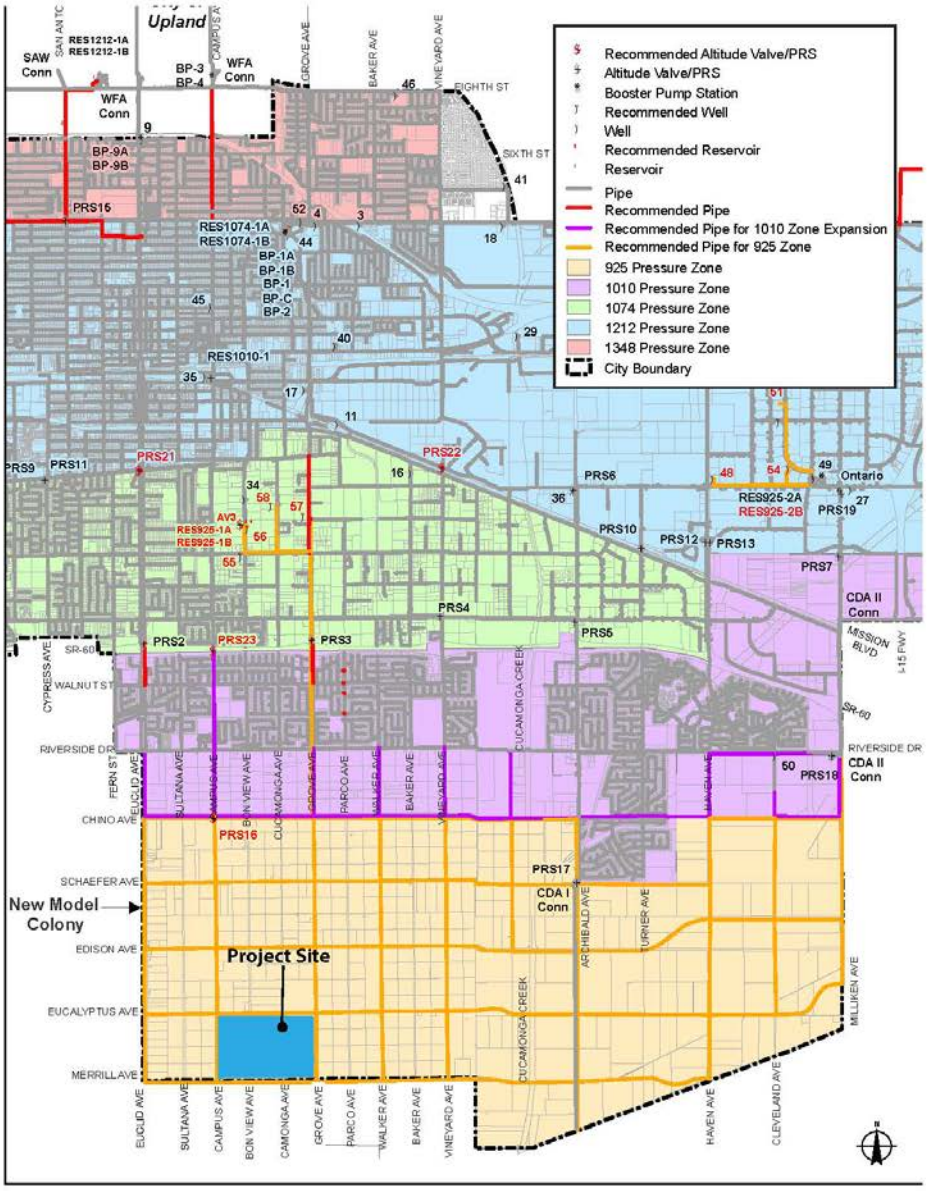


At minimum, the full Potable Water Infrastructure shown on Figure 3.7a and 3.7b shall be completed as Part of Phase 1 of the Specific Plan, which includes 925 Pressure Zone (PZ) Phase 2 West Backbone, the Secondary Loop, and the Adjacent Potable Water System



Water mains required to serve the project will need to be constructed prior to or concurrent with on-site water improvements. Within the project site, a network of 2-inch water lines for domestic water service and 8- to 10-inch water lines for fire service water will be installed. The on-site water system includes connections to the water main in Eucalyptus Avenue to serve PA-1 and to the main in Merrill Avenue to serve PA-2.

Until the ultimate pipeline network for Ontario Ranch has been completed, there may be instances where construction of improvements to serve a project may not meet the required fire flow demands. Therefore, projects within the Specific Plan area may be required to construct additional pipelines not indicated in the Master Plan or upsize master planned pipelines to meet Fire Department fire flow requirements and/or Water Master Plan criteria. The developer shall submit a hydraulic analysis to the City for review and approval to demonstrate adequate fire flow and adherence to Potable Water Master Plan criteria.



The overall water infrastructure plan to serve the City of Ontario is shown on Figure 3.8. The City's ultimate domestic water system consists of five pressure zones. Most of Ontario Ranch (including the Specific Plan area) is located within the 925 Pressure Zone. The sizing and alignment of potable water lines shall follow the current approved City of Ontario water system plan. Transmission line locations are subject to change, based on City conducted and approved hydraulic analysis. Required potable water infrastructure is subject to change based upon findings of the approved hydraulic study and master plan updates.

SHEET 2 OF 2

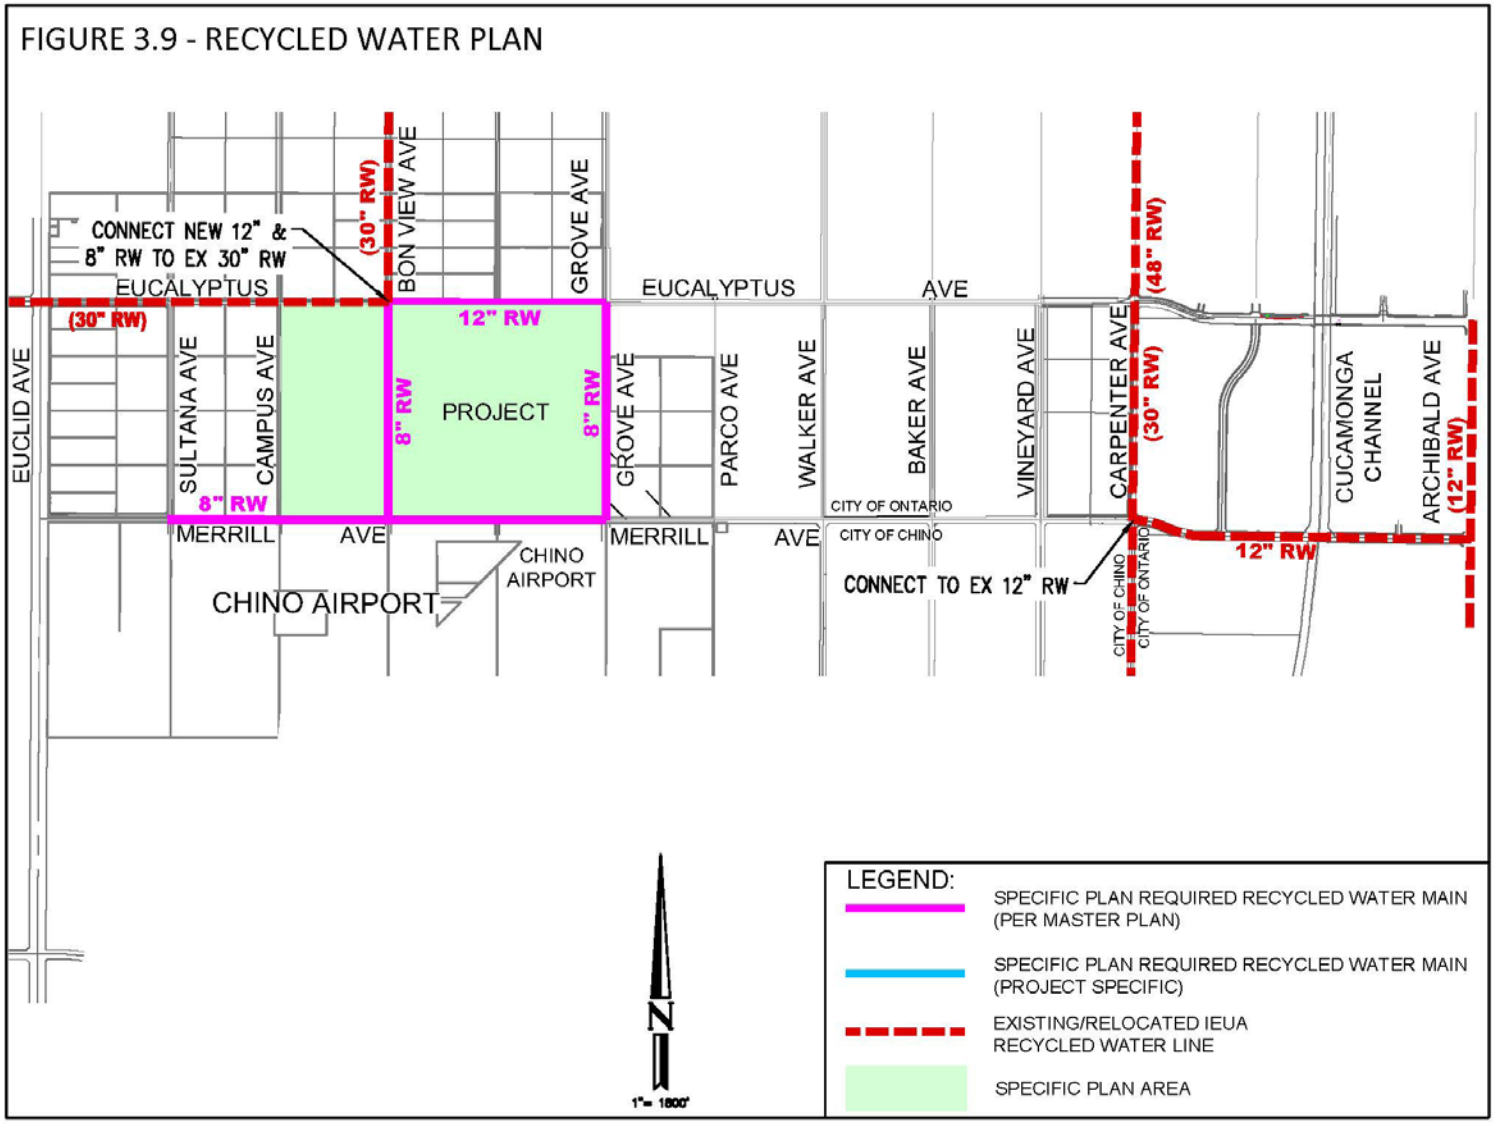
City of Ontario Ultimate Water System

South Ontario Logistics Center Specific Plan **Figure 3.8**

Size and location of waterlines subject to change based on current approved Master Plan as well as City conducted and approved hydraulic analysis.

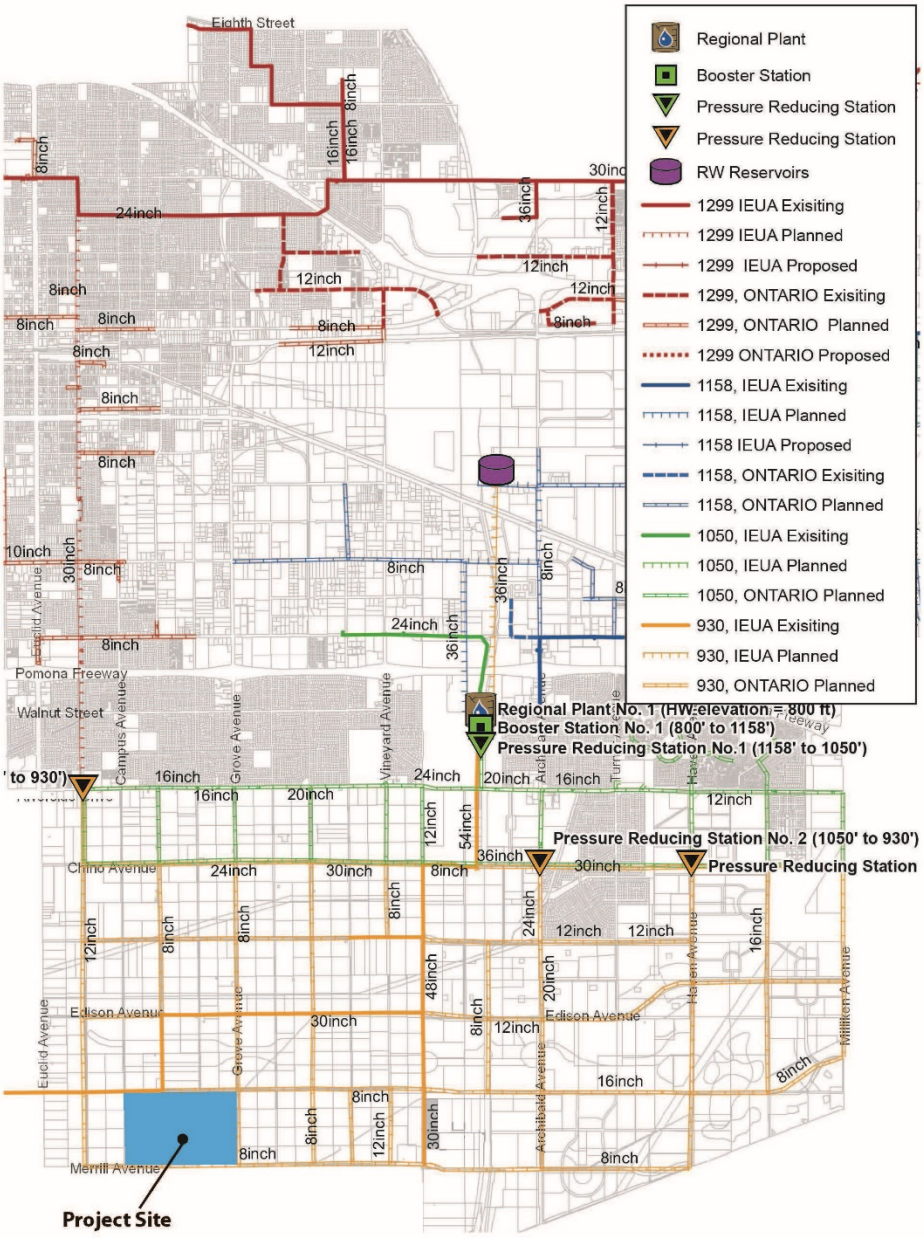
3.4 Recycled Water Plan

The City of Ontario Ordinance 2689 requires all new development in Ontario Ranch to connect to and use recycled water for all approved uses, including but not limited to landscape irrigation. Prior to use of recycled water, approval from the City of Ontario and State Water Resources Control Board (SWRCB) is required. Interim connection to potable water is not allowed.



Currently there are no City recycled water mains or City recycled water infrastructure in the vicinity of the Specific Plan Area. Recycled Water is provided to the City of Ontario by the Inland Empire Utility Agency (IEUA) from its four wastewater reclamation plants. The entire Specific Plan area is within the City's master planned 930 Pressure Zone. Recycled Water Infrastructure Improvements for the Specific Plan area (Figure 3.9) require the planning, design, and construction of 930 Pressure Zone (PZ) Recycled Water Master Plan mains, which includes: installing a 12-inch recycled water main in Eucalyptus Avenue connecting to the 8-inch recycled water main in Grove Avenue and extending to connect to the IEUA 30-inch recycled water main in Eucalyptus Avenue at Bon View Avenue; installing an 8-inch recycled water main in Bon-View Avenue to connect to the IEUA 30-inch recycled water main in Eucalyptus Avenue and extending to connect to the 8-inch recycled water main in Merrill Avenue; installing an 8-inch recycled water main in Merrill Avenue connecting to the 8-inch recycled water main in Sultana Avenue and extending to connect to the 8-inch recycled water main in Grove Avenue; installing an 8-inch recycled water main in Grove Avenue connecting to the 8-inch recycled water main in Merrill Avenue and extending to connect to the 12-inch recycled water main in Eucalyptus Avenue.

The layout and construction of planned developments within the Specific Plan area may require a project specific 8-inch recycled water main in Campus Avenue, connecting to the 8-inch recycled water main in Merrill Avenue, and extending to the 30-inch RW main in Eucalyptus Avenue. It may also require an 8-inch recycled water main in Merrill Avenue, connecting to the 8-inch recycled water main at Campus Avenue and Sultana Avenue.



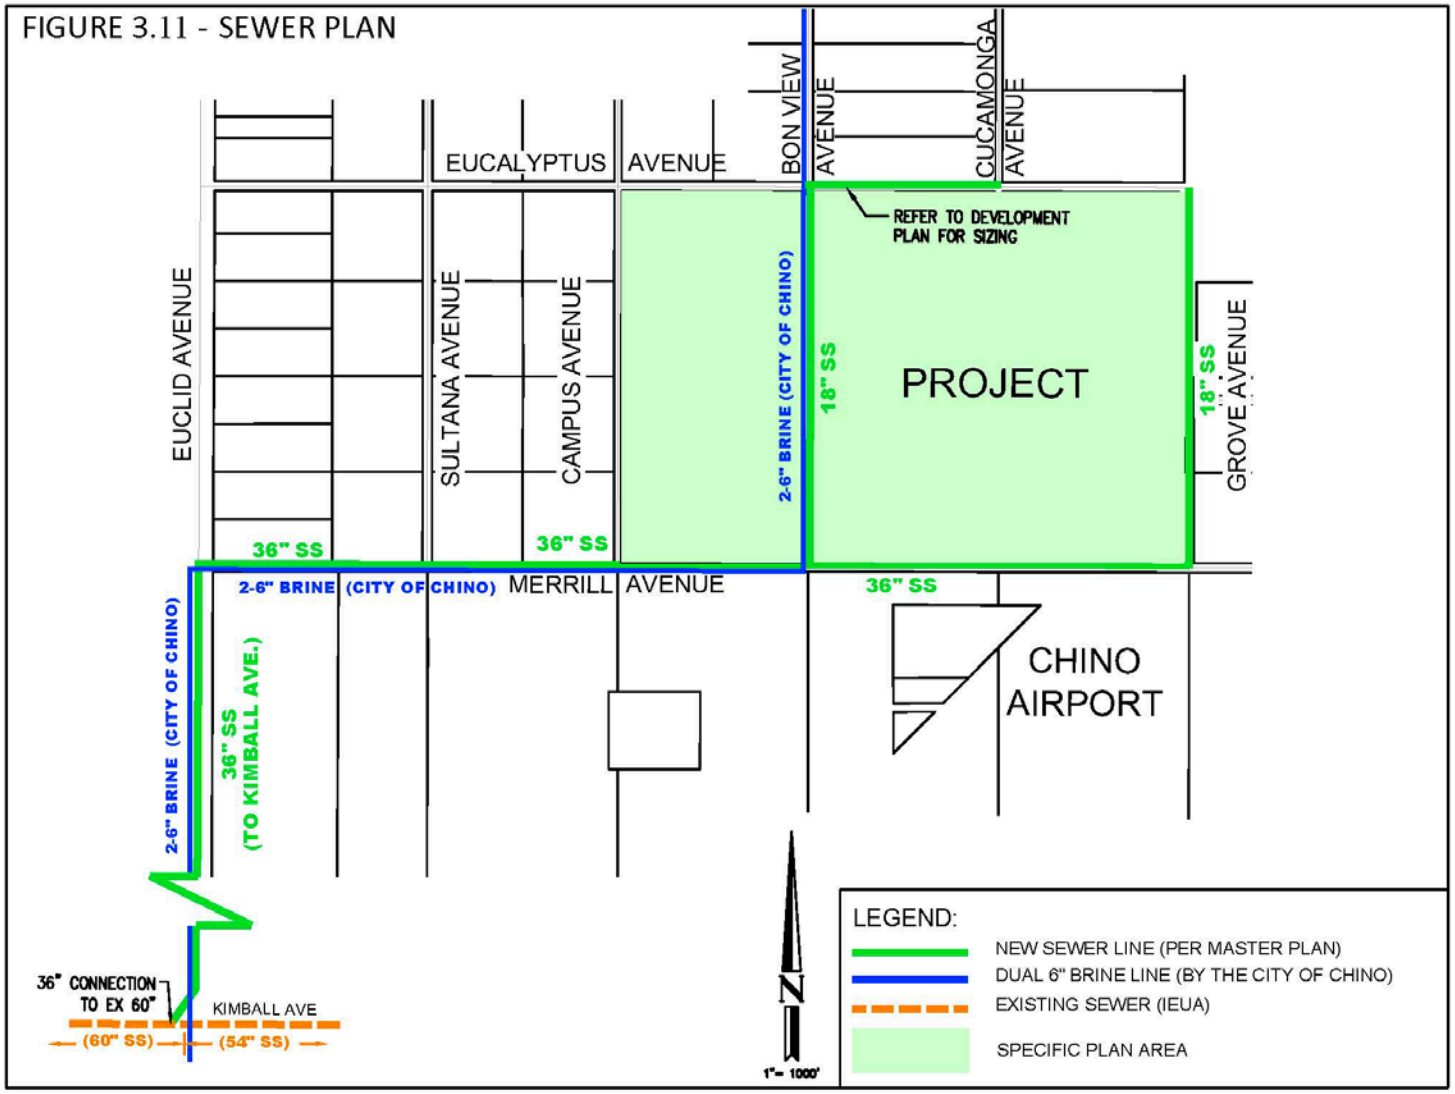
The future recycled water system to serve the City of Ontario is shown on Figure 3.10. The sizing and alignment of existing and proposed recycled water lines are shown in the exhibit.

Sizing and alignment of the recycled water lines will be consistent with the City of Ontario Recycled Water System Master Plan and/or a City approved hydraulic analysis.

FIGURE 3.9 - RECYCLED WATER PLAN

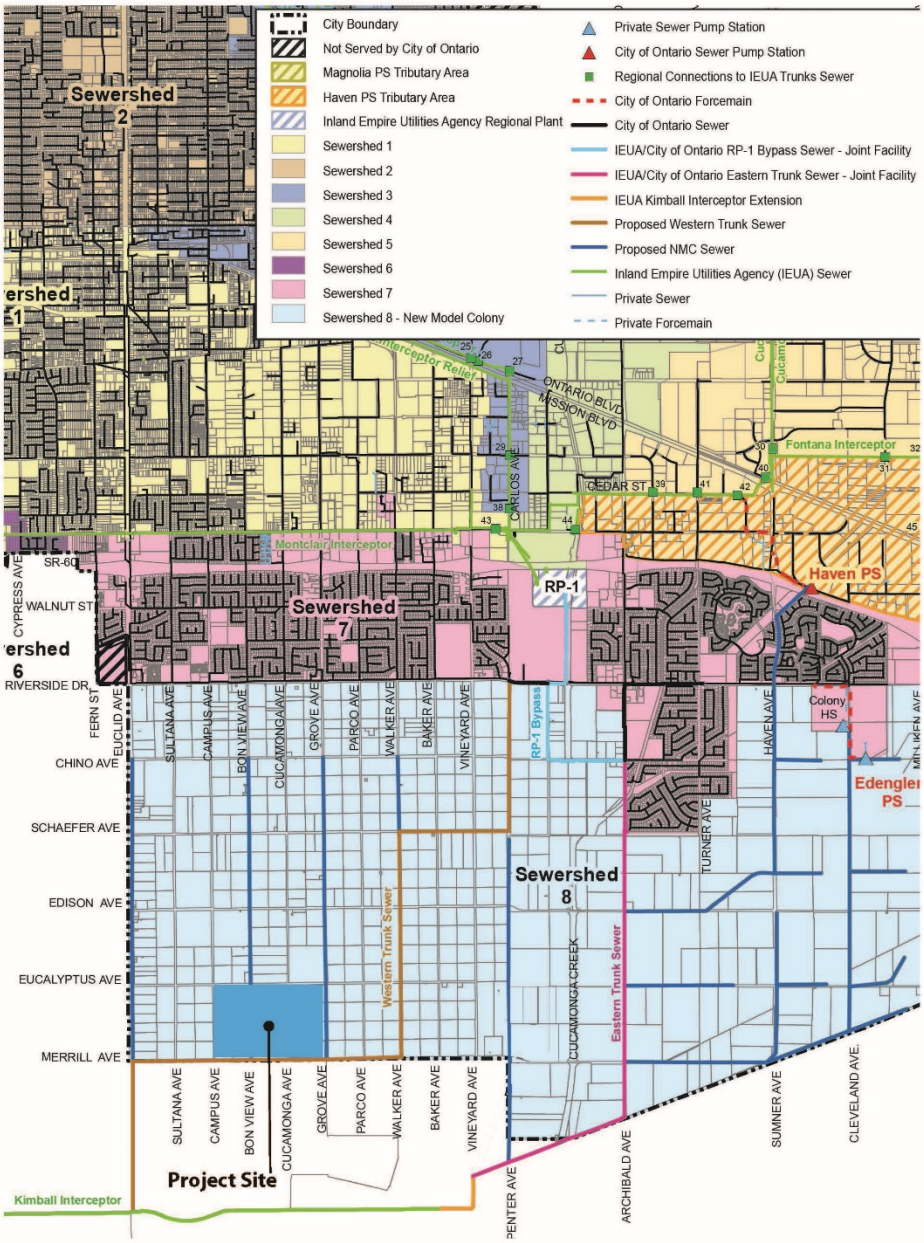
City of Ontario Future Recycled Water System

South Ontario Logitics Center Specific Plan **Figure 3.10**



3.5 Sewer Plan

Regional wastewater treatment services are provided to the City of Ontario and its neighboring agencies by the Inland Empire Utilities Agency (IEUA). Several regional trunk sewers collect sewage generated in the city and transport it to IEUA's Regional Plant No.1 and Regional Plant No.5 for treatment. The City of Ontario's sewer service area is divided into eight sewersheds, primarily based on the outlet points where the City's system ties into the IEUA downstream facility. Ontario Ranch is located in Sewer shed 8.



There are no sewer mains located within the broader vicinity of the Specific Plan area; therefore, the Specific Plan includes a network of new public sewer mains (Figure 3.11), consistent with the City of Ontario's Ultimate Sewer System Plan (Figure 3.12). A 36-inch sewer main will connect to an existing IEUA interceptor trunk main sewer located in Kimball Avenue to the south, run north in Euclid Avenue to Merrill Avenue, then stays a 36-inch sewer main east to Grove Avenue. The IEUA interceptor trunk sewer main is 54-inches east of Euclid and 60-inches west of Euclid Avenue. An 18-inch sewer main would run from Merrill Avenue north within Bon View Avenue and Grove Avenue to Eucalyptus Avenue. A sewer main will run within Eucalyptus Avenue, from a point west of Grove Avenue to Bon View Avenue where it will connect to the 18-inch sewer main within Bon View Avenue. The size of the Eucalyptus Avenue sewer main will be determined during development plan preparation for PA1 and PA2.

The ultimate sizing and alignment of sewer infrastructure shall be consistent with the City of Ontario ultimate sewer system plan and/or a City conducted and approved hydraulic analysis.

A Sewer Sub-Area Master Plan (SSAMP) shall be prepared for each tract map and development within the Specific Plan.

SPECIFIC PLAN AREA

City of Ontario Ultimate Sewer System

South Ontario Logistics Center Specific Plan **Figure 3.12**

3.6 Conceptual Grading Plan

The topography of the site is moderately flat, sloping from the northeast to the southwest with approximately a 17-foot drop in elevation across the Specific Plan area.

The grading activities for the Specific Plan area will generally consist of clearing and grubbing, demolition of existing structures, and moving surface soils to construct building pads, driveways and streets.

Conceptual grading and earthwork analysis indicate the project can be balanced onsite. Earthwork will include approximately 425,912 cubic yards (CY) of cut and 425,912 CY of fill with 272,777 CY of over-excavation. Geotechnical and/or environmental conditions encountered during grading operations may impact final earthwork calculations. Grading plans for each development project within the Specific Plan area shall be reviewed and approved by the City of Ontario prior to the issuance of grading permits. Grading plans and activities shall conform to the City's grading ordinance and dust and erosion control requirements.

All landscaped areas within the Specific Plan area shall be graded as shallow swales and designed to accept runoff water from impervious surfaces. Water quality retention basins, trenches, etc., (the exact location of which will be determined at the time of Water Quality Management Plan (WQMP) approval for individual implementing projects) will have a maximum side slope of 3:1.

3.7 Dry Utilities Plan

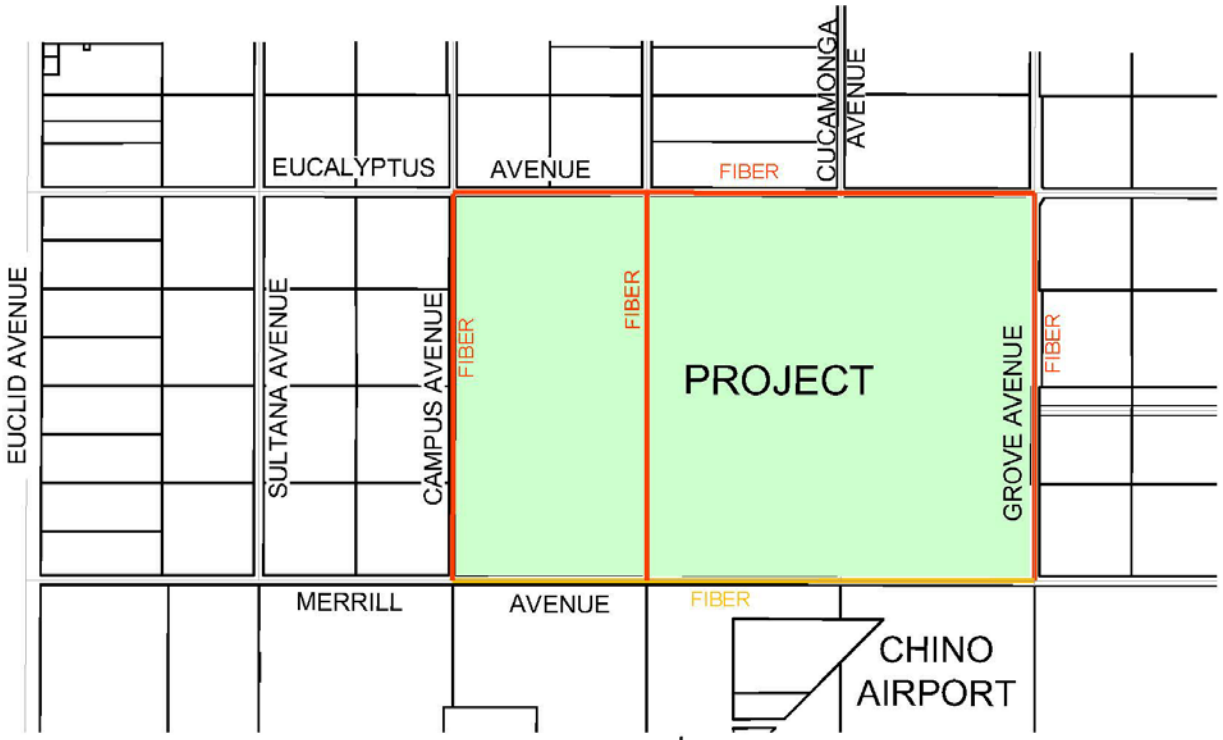
Utility services provided to the site shall be installed underground in accordance with City of Ontario guidelines.

Communication System

According to the City of Ontario 2013 Fiber Optic Master Plan, the fiber optic infrastructure, including approximately 23 miles of backbone fiber south of Riverside Drive, is an investment in a long-term capital asset using newly constructed and existing conduit to provide high speed communication links to key locations throughout the city. Developments within Ontario Ranch are required to install and provide fiber conduit to all improved lots. Proposed on-site facilities will be placed underground within a duct and structure system that will be installed by the developer. Pursuant to the City's Fiber Optic Master Plan, the fiber optic network will be owned and operated by the City and as such maintenance of the installed system will be the responsibility of the City and/or Special District fiber optic entity and not the developer. The Specific Plan area will be connected to the City's system as shown on Figure 3.13.

Natural Gas

Southern California Gas Company maintains 3" and 12" mains in Eucalyptus Avenue, a 12" main Grove Avenue and 2" mains located east and west of the site in Merrill Avenue. There mains are available to provide service to the project site. Gas mains will be installed to the individual development projects by the Gas Company, as necessary.



Electrical

Southern California Edison will provide electricity to the Specific Plan area from existing facilities in the vicinity. New lines within the Specific Plan area shall be installed according to City of Ontario requirements.

Cable

Charter does not maintain any facilities with the vicinity of the proposed project site. A main extension would be required if services are desired.

FIGURE 3.13 - FIBER OPTIC PLAN

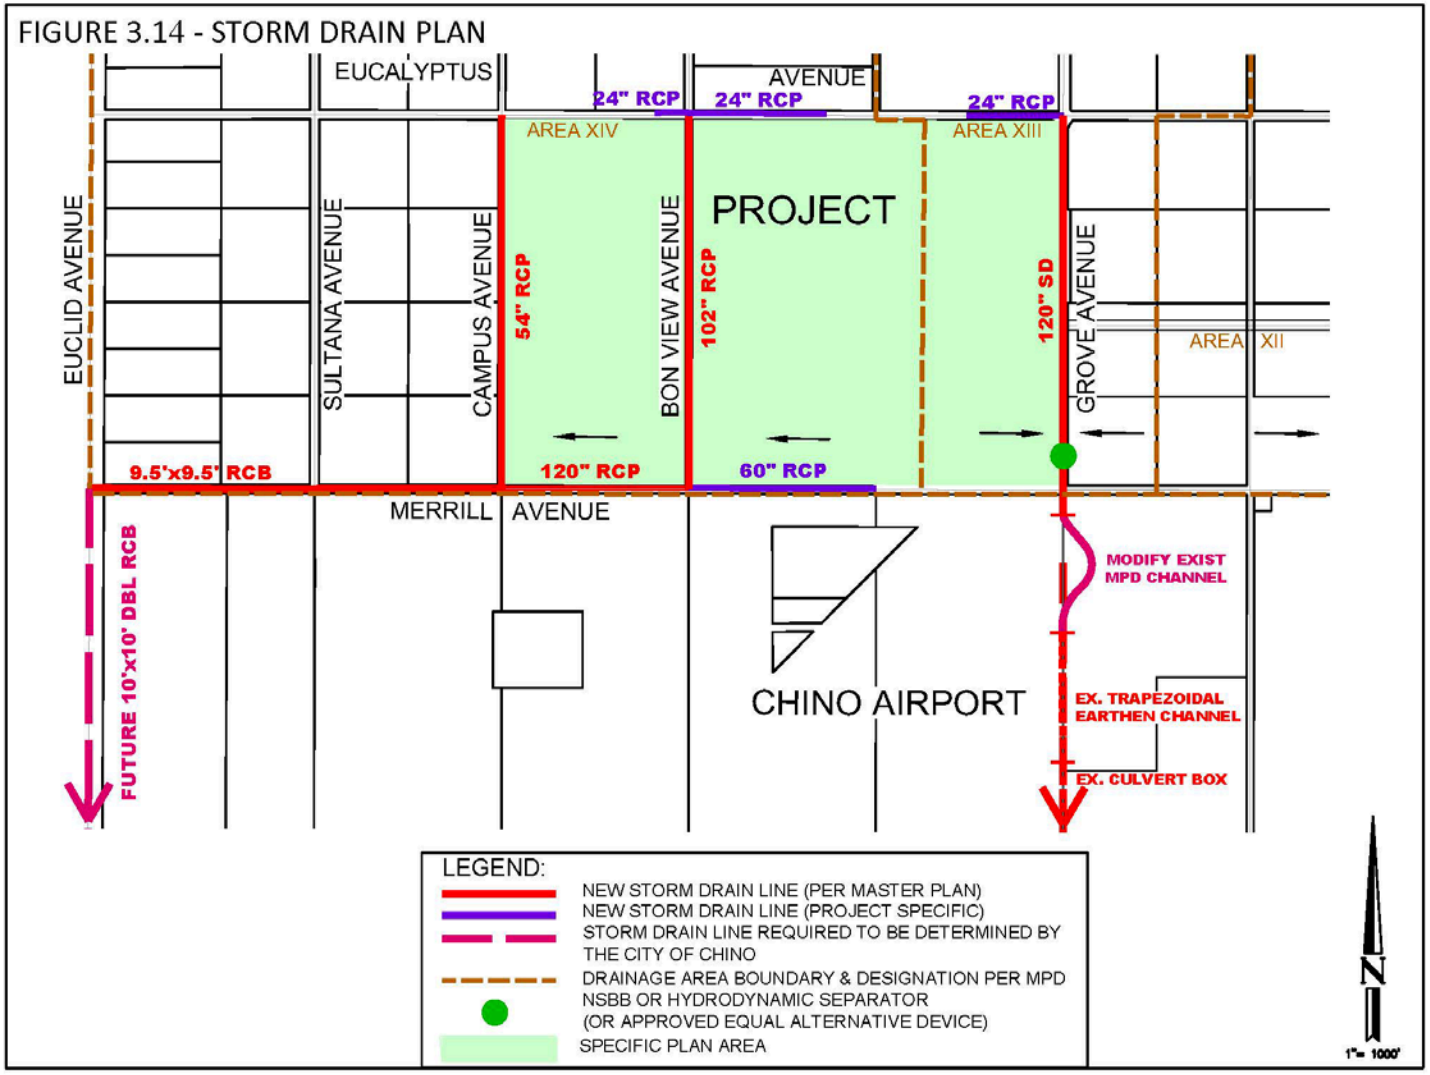
3.8 Storm Drainage Plan

The Specific Plan area storm drain improvements (Figure 3.14) are consistent with the facilities specified in Drainage Area XIV of the City of Ontario Planned Drainage Facilities (Figure 3.15).

Catch basins located throughout the site will collect runoff. On-site storm drain systems will convey runoff to the following facilities:

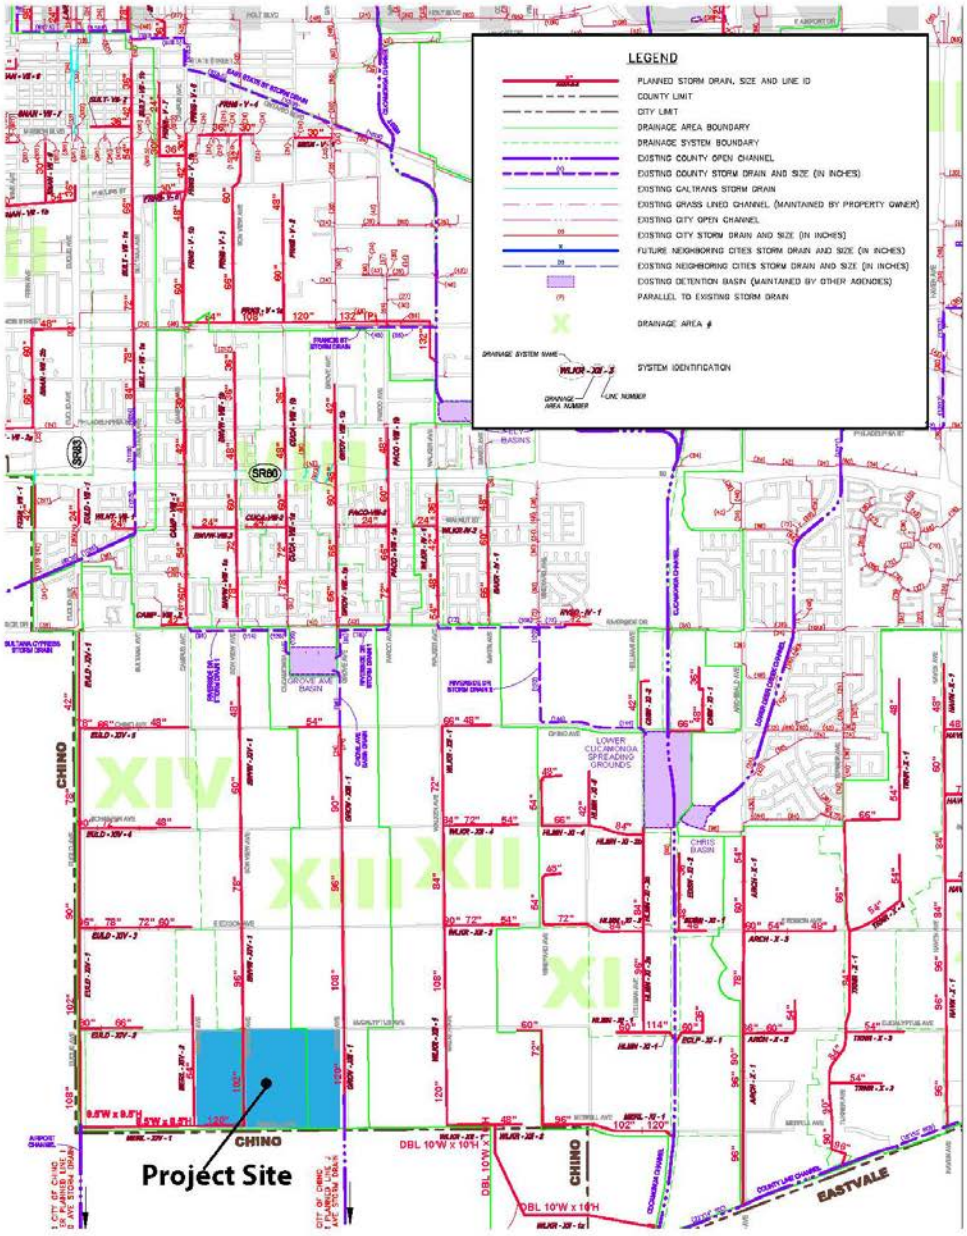
- 120-inch storm drain in Grove Avenue leading south to existing facilities via modification of an existing channel.
- 102-inch reinforced concrete pipe in Bon View Avenue.
- 60-inch reinforced concrete pipe in Merrill Avenue adjacent to the Specific Plan area, which will transition to a 120-inch reinforced concrete pipe running west to a reinforced concrete box at Euclid Avenue.
- 54-inch storm drain in Campus Avenue which connects to the future storm drain in Merrill Avenue.
- 10' x 10' storm drain in Euclid connecting to the Prado flood control basin.

Additional on-site drain improvements would include storm water detention/ retention/ water quality basins, which would capture, treat, and/or gradually release storm water into the downstream public storm drain systems. Onsite storm water treatment would incorporate underground chambers installed within each building's parking area.



Development within this specific plan shall be responsible to construct the ultimate storm drain improvements if they are not installed at time of development.

Each storm drain in Campus Avenue, Bon View Avenue, Grove Ave and Merrill Avenue will be equipped with a hydrodynamic separator, or series of hydrodynamic separators to satisfy the statewide trash mandate. Each device will be approved by and listed on the Certified Full Capture System List of Trash Treatment Control Devices of the State Water Resources Control Board (SWRCB).



NPDES Compliance

The grading and drainage of the Specific Plan area will be designed to retain/infilter, harvest, and re-use or biotreat surface runoff to comply with the current requirements of the San Bernardino County NPDES Stormwater Program's Water Quality Management Plan (WQMP) for significant new development projects. The objective of the WQMP for this project is to minimize the detrimental effects of urbanization on the beneficial uses of receiving waters, including effects caused by increased pollutants and changes in hydrology. These effects may be minimized through the implementation of site designs that reduce runoff and pollutant transport by minimizing impervious surfaces and maximizing on-site infiltration, employing Source Control Best Management Practices (BMP's), or using on-site structural Treatment Control BMP's where the infeasibility of installing Low Impact Development BMP's is demonstrated.

All Priority Land Use (PLU) areas within the Specific Plan Area shall comply with the statewide Trash Provisions adopted by State Water Resources Control Board (SWRCB) and trash requirements in the most current San Bernardino County Area-Wide MS4 Permit.

City of Ontario Planned Drainage Facilities

South Ontario Logistics Center Specific Plan **Figure 3.15**

New development within the Specific Plan area will utilize a variety of Low Impact Development site drainage designs to manage stormwater, including but not limited to retention/infiltration basins, trenches and swales, and above ground and/or below ground bio-treatment systems. Development projects within the Specific Plan area will comply with the latest Low Impact Development guidelines and incorporate features including but not limited to:

- Landscape designs that promote water retention and incorporation of water conservation elements such as use of native plants and drip irrigation systems;
- Permeable surface designs in areas with low traffic;
- Parking lots that drain to landscaped areas to provide retention and infiltration, or bio-treatment where infiltration is infeasible;
- Limited soil compaction during grading operations within landscaped storm water infiltration areas of not more than 80 percent compaction.

Prior to the issuance of a grading or construction permit, a Storm Water Pollution Prevention Plan (SWPPP), Erosion & Sediment Control Plan sheets, and a WQMP shall be prepared and approved. The SWPPP and Erosion & Sediment Control Plan Sheets shall identify and detail all appropriate BMP's to be implemented or installed during construction of the project, and the WQMP shall describe all post-construction BMP's designed to address water quality and quantity of runoff for the life of the project.

3.9 Public Services

This sub-section addresses public services within the Specific Plan area, including police, fire and solid waste disposal services.

3.9.1 Police

The City of Ontario will provide police services to the Specific Plan area. The closest police station is located approximately five miles north of the Specific Plan area at 2500 S. Archibald Avenue, just south of SR-60. This station is also the City of Ontario Police Department headquarters.

3.9.2 Fire

The City of Ontario will provide fire protection services to the Specific Plan area. The Ontario Fire Department currently has eight stations, which are staffed with eight four-person paramedic engine companies and two four-person truck companies. The closest operational fire station, Station 2, is located at 544 W. Francis Street, approximately four miles north of the Specific Plan area.

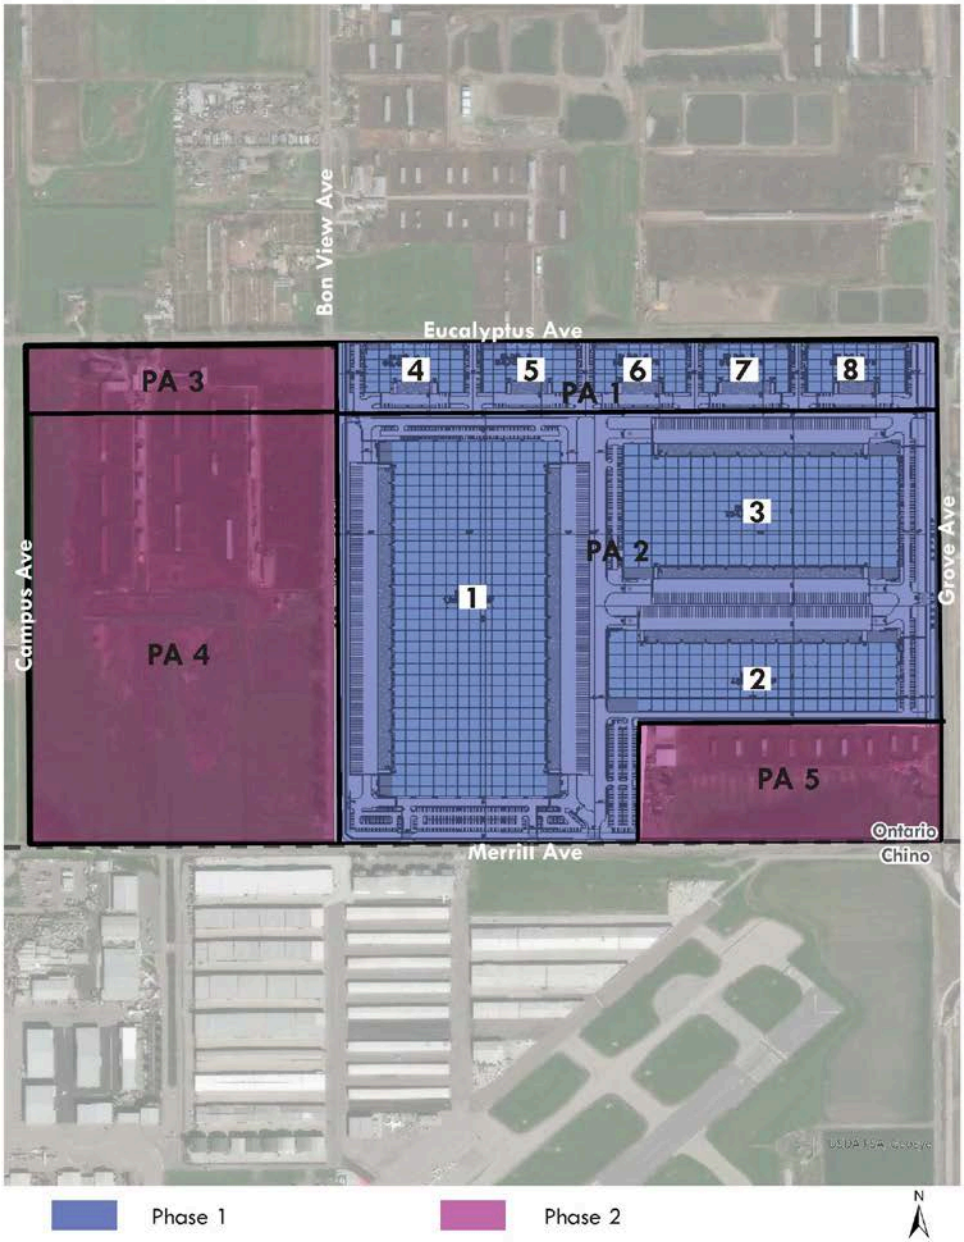
3.9.3 Solid Waste Disposal

The City of Ontario will provide solid waste services to the Specific Plan area. The City offers a full array of commercial and industrial services designed to meet the business community's needs. Solid waste facilities follow the "Solid Waste Department Refuse and Recycling Planning Manual." The Manual establishes the City of Ontario's requirements for refuse and recycling storage and access for service, as well as addresses the City's recycling goals. The Mid-Valley Landfill is the nearest County of San Bernardino landfill located at 2390 N. Alder Avenue in the City of Rialto, approximately 20 miles northeast of the Specific Plan area.

3.10 Phasing Plan

Development phasing of the Specific Plan area will be determined by the landowner and/or developer based upon real estate market conditions. Phasing sequencing is subject to change over time to respond to various market and local factors and as such, individual phases may overlap or develop concurrently. Phasing will occur as appropriate levels of infrastructure are provided. Infrastructure improvements, as required and approved by the City Engineer to support the development, shall be installed by the developer.

Figure 3.16, Conceptual Phasing Plan, describes two general phases of development for South Ontario Logistics Center.



Phase 1: Phase 1 consists of the construction of Buildings 1 through 8 as numbered in the Conceptual Site Plan and includes the Development Plan (PAs 1 and 2). This phase may be developed in several sub-phases in response to market demands and according to the logical and orderly completion of infrastructure improvements.

Phase 2: Phase 2 consists of the balance of the Project site (PAs 3, 4, and 5) .

Specific Plan backbone infrastructure shall be installed by the project developer, in accordance with the applicable City-adopted infrastructure plan for the area, as well as the provisions of this Specific Plan and an approved Development Agreement. Final grading and infrastructure improvements will be completed in accordance with the approved Development Agreement and City Engineer approval. Fair share responsibilities for improvements shall be addressed in a Development Agreement with the City of Ontario.

All the Specific Plan required infrastructure can be found in Section 3.3 (Figure 3.7 and 3.7a) for Potable Water, Section 3.4 (Figure 3.9) for Recycled Water, Section 3.5 (Figure 3.11) for the Sewer Plan, Section 3.7 (Figure 3.13) for the Fiber Optic Plan, and Section 3.8 (Figure 3.14) for the Storm Drain Plan. Phasing will be determined per separate Development Agreement.

Conceptual Phasing Plan

South Ontario Logistics Center Specific Plan **Figure 3.16**

4.0 LAND USE AND DEVELOPMENT STANDARDS

This chapter identifies allowable uses and development standards including building height, setbacks, lot coverage, parking, and landscape within the Specific Plan area. These regulations are intended to create a harmonious relationship among development within the Specific Plan area and with surrounding land uses as well as to protect the health, safety, and general welfare of the community.

4.1 General Provisions

Upon adoption of this Specific Plan, the allowable land uses and development standards within this document become the governing zoning for new construction, additions, or remodels within the Specific Plan area. However, in reviewing individual projects requiring discretionary approval, additional conditions may be applied by the approving body to accomplish the goals and objectives of this Specific Plan.

4.2 Allowable Uses

Table 4.1 (Allowable Uses) provides the land uses, activities, and facilities allowed within the Specific Plan's BP (Business Park) and IG (Industrial - General) Zoning Districts discussed in Chapter 3. These uses include a variety of industrial-serving commercial, low-intensity office, technology, light manufacturing, and warehouse/distribution uses that are compatible with the site's location within Safety Zone 6 of the Chino Airport. The letters/symbols used in Table 4.1 shall have the following meanings:

"P" - Permitted Land Uses

A Permitted Use (P) is permitted by right and may be established as the primary use of a building without the need for discretionary approval. Permitted Uses are subject to the development standards and guidelines applicable to the zoning district in which the use is located.

"C" - Conditionally Permitted Land Uses

A Conditionally Permitted Use (C) is permitted upon issuance of a Conditional Use Permit (CUP) pursuant to Section 4.02.015 of the Ontario Development Code and City processing procedures.

"A" - Administratively Permitted Land Uses

An Administratively Permitted Use (A) is permitted upon issuance of an Administrative Use Permit (AUP) pursuant to Section 4.03.015 of the Ontario Development Code and City processing procedures.

"—" - Prohibited Land Uses

A land use indicated with a "—" symbol is prohibited within the zoning district.

Land Uses Not Listed

A land use not listed in Table 4.1 shall be considered a prohibited land use. For land uses similar to those listed in Table 4.1, but not expressly stated in this Specific Plan, the City of Ontario Planning Director or his/her designee shall have the authority to make a determination of the applicability of similar land uses.

Notes:
1. Excluding Commercial Crop Production of Marijuana
2. P=Permitted, C= Conditionally Permitted, A=Administratively Permitted, "—"=Prohibited
3. Refer to the Specific Plan EIR and Ontario International Airport Land Use Compatibility Plan (ONT ALUCP) for additional development criteria and policies that may affect allowable land uses.

4.3 Conceptual Site Plan

The conceptual site plan for the South Ontario Logistics Center Specific Plan is presented in Figure 4.1. Under this conceptual plan, Planning Area 1 (Business Park Zoning District) is developed with five buildings totaling 464,820 square feet (SF) and Planning Area 2 (Industrial – General Zoning District) is developed with three buildings totaling 2,462,135 SF (Table 4.2). Cumulatively, the eight buildings depicted in the conceptual site plan provide 2,926,955 SF of development.

The conceptual site plan reflects current market trends, site conditions, and planned infrastructure. However, the conceptual site plan may be modified provided it does not exceed the maximum building area presented in Table 3.1 and complies with this Specific Plan and applicable provisions of the City of Ontario Development Code.

Table 4.2 Conceptual Site Plan

Planning Area	SP Zoning District	Site Acreage	Proposed Conceptual Building Square Footage
1	BP	23	464,820 SF
2	IG	107.34	2,462,135 SF
TOTAL		**130.34**	**2,926,955 SF**

Conceptual Site Plan

South Ontario Logistics Center Specific Plan

Figure 4.1

4.4 Development Standards

Table 4.3 (Development Standards) provides a summary of the development standards applicable to the land uses, structures, and related improvements located within the Specific Plan area. Refer to the Ontario Development Code for any standard not addressed in Table 4.3.

Table 4.3 Development Standards

Development Standard	Zoning District	
	BP	IG
Minimum Lot Area	10,000 sq ft	20,000 sq ft
Minimum Lot Dimensions		
1. Lot Width	100 ft	100 ft
2. Lot Depth	100 ft	100 ft
Maximum Floor Area Ratio	0.60	0.55
Maximum Building Footprint [1]	125,000 sq ft	N/A
Minimum Landscape Setback		
1. Grove Avenue	20 ft	20 ft
2. Eucalyptus Avenue	23 ft	N/A
3. Merrill Avenue	N/A	23 ft
4. Bon View Avenue	10 ft	10 ft
5. Interior Side	N/A	N/A
6. Interior Rear	N/A	N/A
Minimum Building Setback [2]		
1. Grove Avenue	20 ft	20 ft
2. Eucalyptus Avenue	23 ft	N/A
3. Merrill Avenue	N/A	23 ft
4. Campus Ave	10ft	10ft
5. Bon View Avenue	10 ft	10 ft
6. Interior Side	10 ft	10 ft
7. Interior Rear	10 ft	10 ft
Minimum Parking Space and Drive Aisle Separations[3,4,7]		
1. Parking Space or Drive Aisle to Street Property Line	20 ft	10 ft
2. Parking Space or Drive Aisle to Interior Property Line	5 ft	5 ft
3. Parking Space to Buildings, Walls, and Fences	Areas adjacent to public entries and office areas: 10 ft Areas adjacent to other building areas: 5 ft Within screened loading and storage yard areas: 0 ft	
4. Drive Aisles to Buildings, Walls, and Fences	5ft	5ft
5. Drive Aisles within Screened Loading and Storage Yard Areas	0 ft	0 ft

Table 4.3 Development Standards

Development Standard	Zoning District	
	BP	IG
Maximum Building Height [5,6]	45 ft	55 ft
Minimum Landscape Coverage	15%	10%
Walls, Fences, and Hedges	Per Ontario Development Code Division 6.02 (Walls, Fences, and Obstructions) and Section 5.5 (Buffering and Screening) of the Design Guidelines in Chapter 5.	

Notes:

1. Maximum building footprint limit is applicable only to buildings that front onto a public right-of-way.
2. Setback areas shall be measured from the property line and shall be landscaped.
3. Within yard areas fully screened by a decorative wall, there shall be no minimum drive aisle or parking space setback required, unless adjacent to residentially zoned properties.
4. The minimum separation area between a building, wall, or fence and a parking space or drive aisle shall be fully landscaped. The separation area may include pedestrian walkways, as necessary; however, a minimum 5-foot wide planter area shall be maintained between a building wall and a pedestrian walkway. The minimum separation dimension shall not include any area devoted to vehicle overhang.
5. Architectural projections, mechanical equipment, and focal elements may be allowed to exceed the maximum height up to 25 percent above the prescribed height limit.
6. The maximum building height and floor area ratio may be restricted pursuant to the Ontario International Airport Land Use Compatibility Plan (ONT ALUCP) and The Chino Airport Land Use Compatibility Plan. Refer to the ALUCP for properties affected by airport safety zones for additional development criteria and policies that may affect allowable land uses.
7. The use of surrounding roads, drive aisles and truck parking lots to address the open land requirement for the Chino Airport Overlay zone is discussed in Chapter 2 (Section 2.2, Airport Influence Areas).

Table 4.4 (Off-Street Parking and Loading Design Standards) establishes the design standards for off-street parking in the Specific Plan area. Refer to the Ontario Development Code for any parking-related standard not addressed in Table 4.4.

Table 4.4: Off-Street Parking and Loading Design Standards

Development Standard	Requirement
Parking space dimensions	
1. Standard parking	9 feet wide by 18 feet long
2. Tractor trailer parking	12 feet wide by 45 feet long
3. At grade loading space	12 feet wide by 18 feet long
Minimum aisle width for 90-degree parking	24 feet
Maximum gradient at parking space	5 percent measured in any direction
Dock-high loading facilities	

Table 4.4: Off-Street Parking and Loading Design Standards

Development Standard	Requirement
1. Dock high door loading space	12 feet wide by 45 feet long with 14-foot minimum vertical clearance measured from finished surface of loading dock.
2. Truck maneuvering area	Meet the minimum practical turning radius of a 53-foot semi-trailer/tractor combination.

Table 4.5 (Required Number of Parking and Loading Spaces) specifies the number of parking spaces that must be provided according to land use. For a use not specified in the table, refer to the Ontario Development Code, Table 6.03-1, Off-Street Parking Requirements.

Table 4.5: Required Number of Parking and Loading Spaces

Land Use	Number of Required Spaces
Multi-tenant business park	Per 1,000 square feet of gross floor area: • 3 spaces • Required parking for "general office" when exceeding 10% of gross floor area • One tractor trailer parking space per 4 dock-high loading doors
General office when exceeding 10 percent of building gross floor area	4 spaces per 1,000 square feet of gross floor area of office use
Industrial speculative building	Per 1,000 square feet of gross floor area: • Up to 50,000 square feet: 1.85 spaces • 50,001 – 100,000 square feet: 1 space • 100,001 square feet and over: 0.5 space • One tractor trailer parking space per 4 dock-high loading doors. • Plus required parking for "general business offices" and other associated uses, when those uses exceed 10 percent of the building gross floor area.
Manufacturing	1.85 spaces per 1,000 square feet of gross floor area • plus one tractor trailer parking space per 4 dock-high loading doors. • Plus required parking for "general business offices" and other associated uses, when those uses exceed 10 percent of the building floor area.
Restaurant (including outdoor seating area up to 25 percent of gross floor area)	• Under 2,000 square feet: 5 spaces per 1,000 square feet of gross floor area • More than 2,000 square feet: 10 spaces per 1,000 square feet of gross floor area
Warehousing and distribution (including associated office use if less than 10 percent of building gross floor area)	• First 20,000 square feet: 1 space per 1,000 square feet of gross floor area • Additional square feet: 0.5 space per 1,000 square feet of additional gross floor area

	• Plus one tractor trailer parking space per 4 dock-high loading doors • Plus required parking for "general office" and other associated uses when exceeding 10 percent of the building gross floor area

Sufficient off-street loading and unloading spaces shall be provided on each development site, and adequate provisions and space shall be made for maneuvering freight vehicles and handling freight. Loading activity, including turnaround and maneuvering, shall be made on site. Buildings, structures, and loading facilities shall be designed and placed on the site so that vehicles, whether rear loading or side loading, may be loaded or unloaded at any loading dock, door, or area without extending beyond the property line.

5.0 DESIGN GUIDELINES

This chapter identifies conceptual themes for site planning, architecture, and landscape design within the Specific Plan area. The guidelines are intended to ensure a cohesive and attractive development that meets the following objectives:

1. Demonstrates high-quality development that complements and integrates into the community and adds value to the city.
2. Creates a functional and sustainable development that ensures South Ontario Logistics Center is regionally competitive and appropriate within the Ontario Ranch community.
3. Illustrates the distinctive characteristics of its two zoning districts: Business Park (BP) District (Planning Area 1 and 3) and Industrial - General (IG) District (Planning Area 2, 4 and 5).
4. Establishes criteria for building design and materials, landscape design, and site design that provide guidance to developers, builders, architects, landscape architects, and other professionals preparing plans for construction.
5. Provides guidance to City staff and the Planning Commission in the review and evaluation of future development projects in the South Ontario Logistics Center Specific Plan area.
6. Incorporates construction and landscape design standards that promote energy and water conservation strategies.
7. Implements the goals and policies of The Ontario Plan and the intent of the Ontario Development Code.

5.1 Site Design

Site design within Planning Area 1 and 3 (BP District) and Planning Area 2, 4 and 5 (IG District) shall incorporate the following design features.

Key provisions include:

1. Provide a well-organized site plan that emphasizes pedestrian connectivity and attractive landscape areas for the public through the location and arrangement of buildings, circulation, and parking areas.
2. Orient buildings towards street frontages to create an inviting public perimeter.
3. Provide visible pedestrian access to buildings from the street, parking areas, and perimeter sidewalks through signage, prominent architectural features, and landscape design.
4. Employ enhanced paving, accent trees, and other landscape features that highlight major building entries.
5. Design drive aisles to minimize impact to pedestrians, provide adequate stacking space, and prevent queuing of vehicles onto public streets.

6. Locate visitor and short-term parking areas at the front and sides of buildings near primary building entrances.
7. Create small parking clusters through the design and placement of landscape areas, drive entrances, and/or buildings to avoid large, visually dominant parking lots.
8. Locate loading and storage areas away from streets when feasible, ensure adequate space for vehicle backing and maneuvering on-site, and provide adequate parking for loading vehicles so normal traffic flow is not impeded.
9. Screen parking areas and loading docks facing the street using landscape buffers planted with screen trees and drought-tolerant vegetation.
10. Orient and screen elements such as trash enclosures, loading bay doors, and service docks to minimize their visibility.
11. Locate service entrances to avoid conflict with front entries.
12. Place electrical rooms and transformers away from front entries and street views.

5.2 Architectural Design

The building design, materials, colors, and textures establish its theme and character. Architecture shall be compatible and complementary with other buildings within the Specific Plan area; however, design diversity is encouraged to provide visual interest. Although development within Planning Area 1 and 3 (BP District) and Planning Area 2, 4 and 5 (IG District) differ in building height and scale, similar design concepts apply as follows.

Key provisions include:

1. Ensure scale, massing, fenestration, materials, and colors are consistent with the building's architectural style and compatible with the overall design in the Specific Plan area.
2. Avoid blank walls by providing articulation on building elevations visible from the public right-of-way through elements such as cornices, parapets, expression lines, and changes in materials and/or colors.
3. Provide the greatest level of articulation on the front facades that are visible from the public rights-of-way and the main entrances.
4. Design entry features as a significant aspect of a building's overall composition through massing, detailing, architectural treatments, and/or special materials and colors.
5. Employ recessed or covered building entrances to provide shade and visual relief.
6. Design office buildings, business parks, and office areas of industrial or warehouse buildings with an emphasis on the use of windows, architectural details, and building articulation.
7. Integrate the design of industrial/warehouse office areas into the overall building composition so they create powerful architectural statements and not visually disjointed "add-ons".
8. Employ a minimum of four different colors, materials, and/or textures on each building.
9. Avoid terminating a change in material or color at a building edge; instead, select a logical termination point in relation to the architectural features or massing.
10. Paint exposed downspouts, service doors, and mechanical screens the same color as the adjacent wall.
11. Elevations to the front of buildings across Eucalyptus Ave shall be additionally enhanced due to residential land use designation across the street.

Planning Area 1 Architectural Design Examples

Planning Area 2 Architectural Design Examples

5.3 Landscape Design

Conceptual landscape plans encourage durable landscape materials and designs that enhance the aesthetics of structures, create and define public and private spaces, and provide shade and environmental benefits. The following guidelines ensure that intersection sight lines and pedestrian safety are preserved. Landscaping plans within the Specific Plan area shall comply with the City of Ontario "Landscape Development Guidelines", the "Standard Drawings" and "Traffic and Transportation Guidelines" for sight-distance.

Key provisions include:

1. Landscape and irrigate all areas of the site not covered by buildings, structures, paving, or impervious surfaces.
2. Design and grade projects to direct storm runoff from building roofs and paved areas into swaled landscape areas for retention/infiltration. Landscape areas may be used for storm water basins and swales at no greater than 50 percent of the available landscape area and may not obstruct the mature root zone of required tree locations.
3. Provide shade for expanses of paving, building walls, roofs, and windows with irrigated shade trees located in appropriate areas where space permits to reduce the impacts of heat gain.
4. Design parking lot landscaping to reduce associated heat buildup, improve aesthetics, and integrate with on-site landscape and adjacent streetscape.
5. Use landscaping to aid in the screening and buffering of mechanical equipment, trash collection areas, loading docks, and outside storage areas from public view.
6. Coordinate utilities with landscape plans by showing utilities on plans to ensure placement clear of required tree locations. Utilities such as backflow devices and transformers shall be screened using landscaping that provides at least 75 percent coverage. Backflow devices and transformers shall be located at least five feet from hardscape to ensure space for landscape screening.
7. Prepare landscape plans that meet the requirements of the Landscape Development Guidelines and provide for the efficient use of water. Plants shall be selected and planted based upon their adaptability to the climate and topographical conditions of the project site.
8. Select drought-tolerant plants such as colorful shrubs and groundcovers, ornamental grasses and succulents, evergreen and deciduous trees, and species native to Southern California or naturalized to the local arid climate.
9. Incorporate water conservation features in landscape and irrigation plans.
10. Place a landscape planter island every ten parking spaces within parking lots. Planter islands shall be at least five feet in width exclusive of curbs and the same length as the abutting parking space. Planter islands shall include at least one tree, appropriate shrubs, and groundcover. Parking areas located behind screen walls shall not be subject to this provision.
11. Provide a minimum dimension of five feet exclusive of curbs for all landscape areas, except for vine pockets.

12. Space living plant materials less than or equal to the mature plant diameter. Non-living ornamental landscape materials may comprise a maximum of five percent of the landscape area requirements and shall be permeable.

5.3.1 Streetscapes

Streetscape design creates an aesthetically pleasing view for pedestrians, cyclists, and motorists, screens parking and loading areas from the public right-of-way, and integrates the development into the surrounding community. The following streetscape designs are conceptual only; final grading, plantings, and tree locations shall be determined on a project-by-project basis.

5.3.1.1 Grove Avenue Streetscape

Grove Avenue features a 28-foot wide landscaped median, 7-foot wide parkways, 5’ wide sidewalk, within a 40’ neighborhood edge and a 20-foot wide landscape setbacks. An 8’ multipurpose trail is located on the east side. (Figure 5.1). Tree species along Grove Avenue include *Platanus acerifolia* ‘Bloodgood’ in the parkway, alternating Cercis occidentalis and Platanus acerfolia ‘Bloodgood’ groups behind the sidewalk and Pinus eldarica and Cercis occientalis in the median.

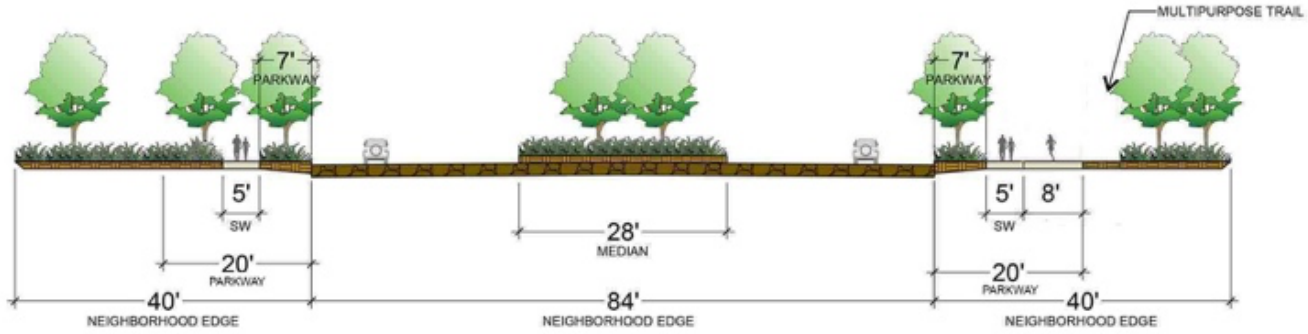

FIGURE 5.1: **GROVE AVENUE CONCEPTUAL STREETSCAPE**

5.3.1.2 Eucalyptus Avenue Streetscape

The typical Eucalyptus Avenue section will feature a 12-foot wide parkway and 23-foot wide landscape setback to create a 35-foot Neighborhood Edge. The parkway will include a 7-foot wide curb-adjacent landscape strip generally planted with trees and groundcover and a five-foot wide sidewalk. An eight-foot

wide multi-purpose trail is located on the north side. A five-foot wide on-street Class II bike lane is located on the south side. Tree species along Eucalyptus Avenue will include Pistache trees in the parkway and behind the sidewalk alternating with groups of Podocarpus gracilior trees. The Neighborhood Edge creates a buffer along the Specific Plan boundary as well as a visual statement (Figure 5.2).

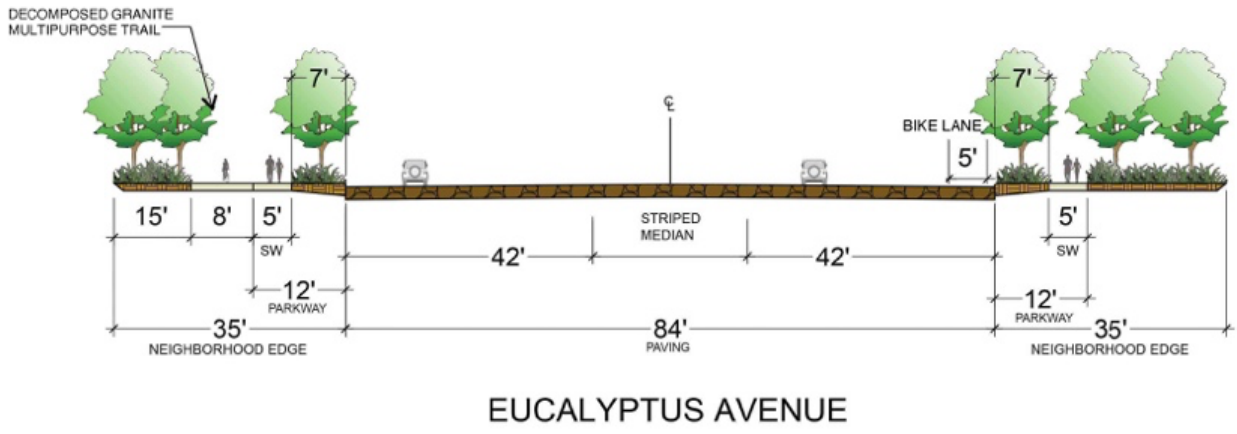

FIGURE 5.2: **EUCALYPTUS AVENUE CONCEPTUAL STREETSCAPE**

5.3.1.3 Merrill Avenue Streetscape

The typical Merrill Avenue section on the north side of the street will feature an eight-foot wide on-street Class II bike lane, 12-foot wide parkway, eight-foot wide multi-purpose trail and 23-foot wide landscape setback. The parkway will include a seven-foot wide curb-adjacent landscape strip and a five-foot wide sidewalk. Tree species along Merrill Avenue will include Quercus agrifolia in the parkway and behind the sidewalk alternating with Cercis canadensis 'Forest Pansy.' The parkway and landscape setback will combine to form the 35-foot Neighborhood Edge buffer

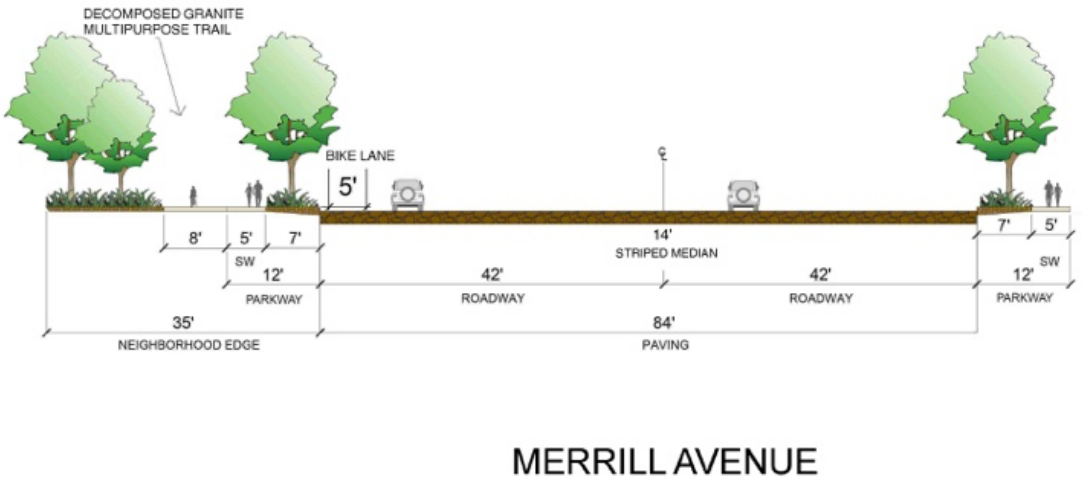

FIGURE 5.3: **MERRILL AVENUE CONCEPTUAL STREETSCAPE**

*5.3.1.4 **Bon View Avenue Streetscape***

The Bon View Avenue section features 9-foot wide parkways with an 4-foot wide curb-adjacent landscape strip planted with trees and groundcover and a five-foot wide sidewalk (Figure 5.4). Tree species along Bon View Avenue include Chinese Pistache and Coast Live Oak.

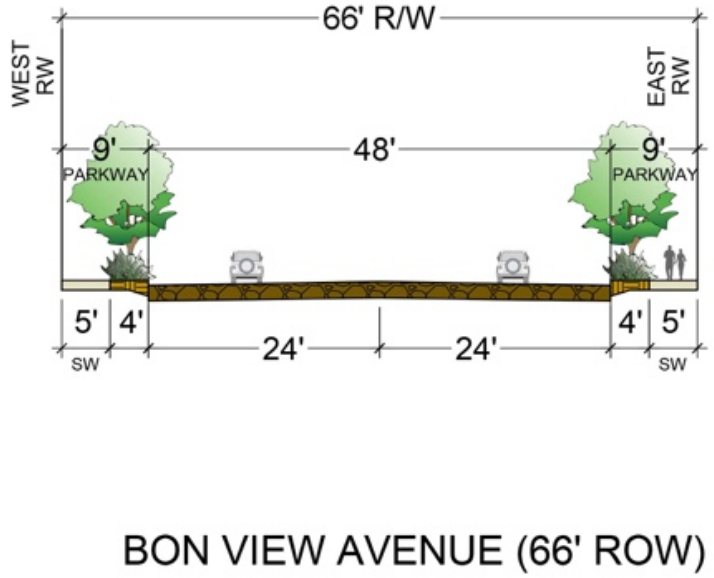

FIGURE 5.4: **BON VIEW AVENUE CONCEPTUAL STREETSCAPE**

5.3.1.5 Campus Avenue Streetscape

The Campus Avenue section features a 15-foot wide landscape setback to create a 35-foot Neighborhood Edge (Figure 5.5). The east side of Campus Avenue includes a 12-foot parkway with a 5’ sidewalk and an 8’ multipurpose trail as part of the 35-foot Neighborhood Edge, while the western side includes a five-foot wide Class II on-street bike lane at the edge of the street. The Neighborhood Edges include a 7-foot wide curb-adjacent landscape strip that will be planted with trees and groundcover. Tree species along Campus Avenue include Drake Elm, Tulip Trees, and African Sumacs.

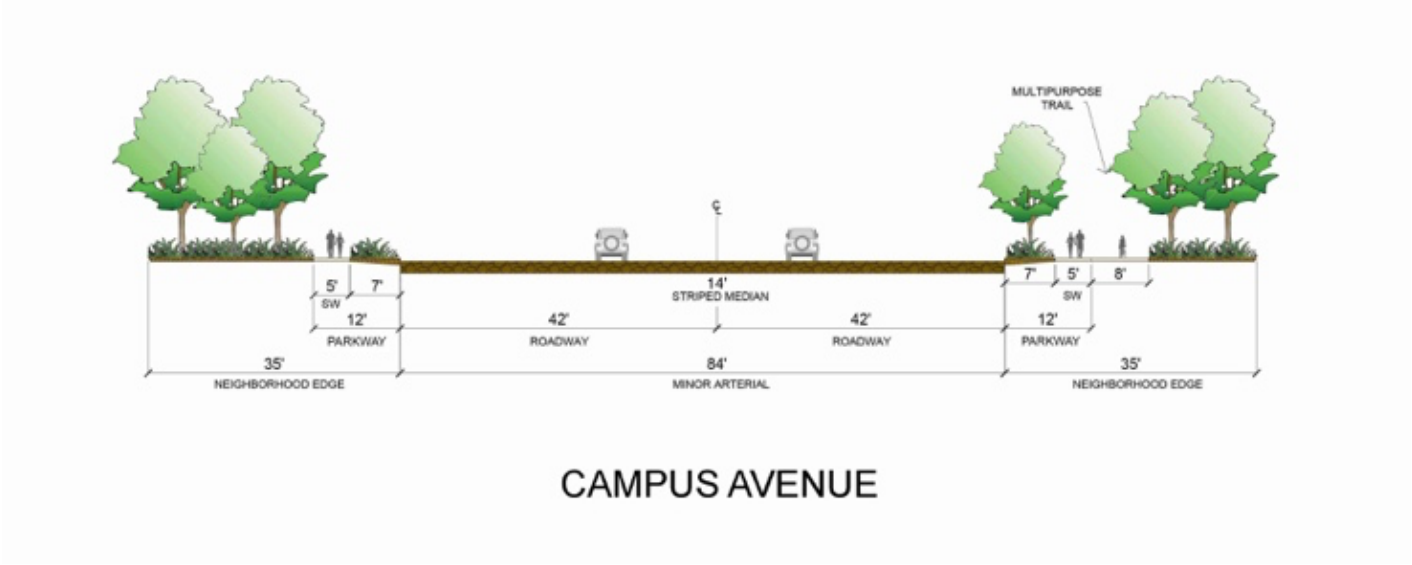

FIGURE 5.5: **CAMPUS AVENUE CONCEPTUAL STREETSCAPE**

5.3.2 Project Entries

The Specific Plan area includes multiple shared vehicular driveways accessible from Grove, Eucalyptus, Merrill, Campus and Bon View Avenues. Figure 5.6 presents a typical conceptual entry design featuring enhanced paving; a landscaped setback with flowering accent trees, canopy trees, and drought-tolerant landscaping; a multipurpose trail; sidewalk; and landscaped parkway with street trees.

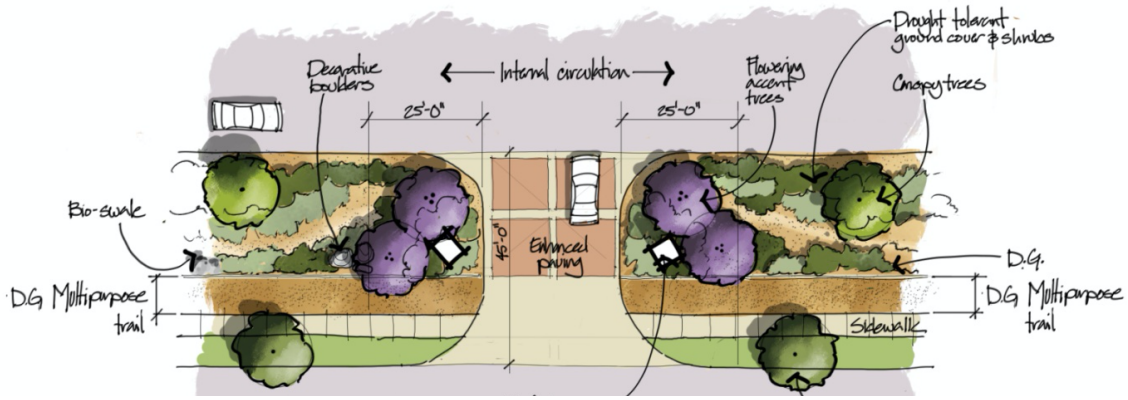

FIGURE 5.6: **CONCEPTUAL VEHICULAR ENTRY**

5.3.3 Plant Palette

The Plant Palette shown in Table 5.1 establishes a base palette for the Specific Plan area and includes a variety of groundcovers, shrubs, ornamental grasses, and evergreen and deciduous trees. The selection complements the design theme of the Specific Plan area and features water-efficient, drought-tolerant species native or adapted to the region. Similar plant materials may be substituted for the species listed in Table 5.1 if the alternative plants are appropriate to the climate and enhance the thematic setting.

Table 5.1: Plant Palette

Botanical Name	Common Name	Use
Chilopsis linearis	Desert Willow	Tree
Chitalpa tashkentensis	Chitalpa	Tree
Cinnamomum camphora	Camphor Tree	Tree
Cupressus sempervirens	Italian Cypress	Tree
Heteromeles arbutifolia	Toyon	Tree
Juniperus s. 'Skyrocket'	Skyrocket Juniper	Tree
Koelreuteria bipinnata	Chinese Flame Tree	Tree
Lagerstroemia i. 'Muskogee'	Crape Myrtle	Tree

Table 5.1: Plant Palette

Botanical Name	Common Name	Use
Magnolia g. 'Samuel Sommer'	Magnolia	Tree
Magnolia g. 'Little Gem'	Magnolia	Tree
Olea europaea	Olive	Tree
Pinus canariensis	Canary Island Pine	Tree
Pinus eldarica	Afghan Pine	Tree
Pistacia chinensis	Chinese Pistache	Tree
Platanus acerifolia	London Plane	Tree
Platanus racemosa	California Sycamore	Tree
Quercus agrifolia	Coast Live Oak	Tree
Schinus molle	California Pepper	Tree
Tristania conferta	Brisbane Box	Tree
Washingtonia filifera	California Fan Palm	Tree
Phoenix dactylifera	Date Palm	Tree
Acca sellowiana	Pineapple Guava	Shrub
Buxus j. 'Green Beauty'	Japanese Boxwood	Hedge
Callistemon 'Little John'	Dwarf Bottle Brush	Shrub
Carissa macrocarpa 'Tuttle'	Natal Plum	Shrub
Cistus 'Sunset Pink'	Sunset Pink Rockrose	Shrub
Dianella 'Little Rev'	Dwarf Dianella	Shrub
Dianella tasmanica	Dianella	Shrub
Dodonaea viscosa 'Purpurea'	Hopseed Bush	Shrub
Eleagnus pungens	Silverberry	Shrub
Leucophyllum f. 'Green Cloud'	Texas Ranger	Shrub
Ligustrum j. texanum	Texas Privet	Shrub
Pittosporum tobira 'Variegata'	Variegated Mock Orange	Hedge
Pittosporum t. 'Wheeleri'	Wheeler's Dwarf	Shrub
Rhaphiolepis i. 'Clara'	Indian Hawthorn	Hedge
Rhaphiolepis i. 'Springtime'	Indian Hawthorn	Hedge
Rhamnus californica	Coffeeberry	Shrub
Rhamnus c. 'Mound San Bruno'	Dwarf Coffeeberry	Shrub
Rosmarinus o. 'Tuscan Blue'	Rosemary	Shrub
Salvia c. 'Allen Chickering'	Allen Chickering Sage	Shrub
Salvia greggii	Autumn Sage	Shrub
Salvia leucantha	Mexican Sage	Shrub
Westringia fruticosa	Coast Rosemary	Shrub
Xylosma congestum	Shiny Xylosma	Hedge
Agave 'Blue Flame'	Blue Flame Agave	Accent
Aloe maculata	Soap Aloe	Accent
Aloe petricola	Stone Aloe	Accent
Aloe polyphylla	Spiral Aloe	Accent
Aloe striata	Coral Aloe	Accent
Echeveria 'Ruffles'	Ruffles Echeveria	Accent
Hesperaloe parviflora	Red Yucca	Accent
Acacia redolens 'Low Boy'	Dwarf Acacia	Groundcover

Table 5.1: Plant Palette

Botanical Name	Common Name	Use
Baccharis p. 'Pigeon Point'	Dwarf Coyote Bush	Groundcover
Baccharis p. 'Centennial'	Coyote Bush	Groundcover
Carex pansa	California Meadow Sedge	Grass
Carex tumulicola	Foothill Sedge	Grass
Festuca mairei	Altas Fescue	Grass
Festuca o. 'Glauca'	Blue Fescue	Grass
Lonicera j. 'Halliana'	Hall's Honeysuckle	Groundcover
Muhlenbergia capillaris	Pink Muhly	Grass
Myoporum parvifolium	Myoporum	Groundcover
Rosa 'Flower Carpet' - Red	Red Flower Carpet Rose	Groundcover
Rosmarinus o. 'Huntington Carpet'	Prostrate Rosemary	Groundcover
Salvia 'Bee's Bliss'	Bee's Bliss Sage	Groundcover
Senecio mandraliscae	Blue Fingers	Groundcover
Sesleria autumnali	Moor Grass	Grass
Trachelopspermum jasminiode	Star Jasmine	Groundcover
Distictus buccinatoria	Blood-Red Trumpet Vine	Vine

5.4 Walls and Fences

Walls and fences are important design features intended to both complement building and landscape architecture and provide functional elements. Any proposed entry gates shall be reviewed by the City of Ontario Traffic and Transportation Division prior to installation, and shall be permitted only if approved.

Key provisions include:

1. Provide attractive, durable, and complementary wall and fencing materials consistent with the building design.
2. Offset and architecturally treat long expanses of wall surfaces every 100 feet with material changes, pilasters and posts, staggered walls, or landscape treatments to prevent visual monotony.
3. Soften the appearance of fencing with plants that reach the height of the wall or fence at maturity.
4. Construct sliding gates visible from a public street with tubular steel, vertical steel pickets, or high-density perforated metal screening painted to match or complement adjacent walls. Interior gates not visible to public view may be galvanized steel or chain link.
5. Prohibit chain link fencing visible from public street rights of way.

5.5 Buffering and Screening

To alleviate the unsightly appearance of loading and service areas, buffering and screening design features shall be used to enhance the overall development. Entry gates shall be reviewed and approved by the City of Ontario Traffic and Transportation Division prior to installation.

5.5.1 Parking Lots

1. Buffer parking lots adjacent to and visible from public streets using a combination of architectural wing walls, buildings, decorative screen walls, evergreen hedges, and landscape buffers.
2. Use plants for screening that are a minimum of three feet tall at the time of installation.

5.5.2 Loading and Service Areas (Truck Courts)

1. Screen loading docks and truck parking areas visible from Grove Avenue, Eucalyptus Avenue, Merrill Avenue and Bon View Avenue and Campus Avenue. Screening may include portions of buildings, landscaping, evergreen hedges, and/or decorative walls.
2. Incorporate gated/screened entrances to loading areas into the overall architectural design of the development.
3. Design walls and fencing to be a minimum of eight feet high and a maximum of 14 feet high, as measured from finished grade, to screen truck courts and hide views of the top of loading bays or trailers.
4. Utilize buildings, architectural wing walls, and/or landscaping to screen service areas.
5. Screen ground- and roof-mounted mechanical equipment from public view. Ground-mounted equipment shall be screened with decorative walls or landscaping. Building architecture shall be designed to screen roof-mounted equipment.
6. Ensure refuse containers are easily accessible by service vehicles yet screened from public view within the building's façade or within a walled enclosure.
7. Obtain a use permit for outdoor storage, which shall be limited to predefined areas. Storage areas shall be screened from public view by decorative walls or landscaping with a minimum height of eight feet and a maximum height of 14 feet. The height of outdoor storage shall not-exceed the height of screening.

Loading and Service Area Example

5.6 Lighting

Site lighting provides illumination for operations, safety, security, and ambiance in parking lots, loading dock areas, pedestrian walkways, building entrances, signage, and architectural and landscape features.

Key provisions include:

1. Choose lighting fixtures that complement the building architecture and promote consistency throughout the Planning Areas.
2. Install ground- or low-mounted fixtures to provide safety and convenience along pedestrian walkways, entrances, activity areas, steps, ramps, and special features.
3. Allow building-mounted accent lighting for general illumination provided there is no light spill or distraction onto roadways or adjacent properties. Plain shoebox or unshielded wall packs are not permitted.
4. Direct exterior lighting fixtures downward to avoid unnecessary light spill and glare.
5. Limit pole-mounted, building-mounted, or tree-mounted lighting fixtures to no more than 30 feet high to minimize light spill and glare.
6. Shield and direct pole-mounted lights away from public streets.
7. Ensure exterior lighting is consistent with the Chino Airport Land Use Compatibility Plan.
8. Design parking lot lighting plans to avoid placing fixtures in required tree locations.

5.7 Signage

Approval of a comprehensive sign program shall be required for development within the Specific Plan area. A sign program facilitates integration of signs with the overall site and building design to create a unified visual statement and provide for flexible application of sign regulations in the design and display of multiple signs.

Key provisions include:

1. Install entry monument signage to identify the South Ontario Logistics Center. Entry monuments shall be designed in accordance with City of Ontario Traffic and Transportation Guidelines for monument placement.
2. Employ signage to identify a center and tenants within a center, direct vehicular traffic, and provide on-site way-finding for pedestrians.
3. Employ signage within industrial sites to give direction to loading and receiving, visitor parking, and other special uses.
4. Provide a unifying sign theme in developments with multiple users.
5. Coordinate signage with the building design, materials, colors, size, and placement.
6. Design signage with backlit or internally illuminated individual channel letters. Can-type box signs with translucent backlit panels are discouraged.
7. Avoid covering significant architectural elements with signage.
8. Position flush-mounted signs with respect to architectural features and align with signs on other buildings to maintain a pattern.
9. Place street address signs perpendicular to approaching vehicular traffic.
10. Ensure signage located within a landscape planter is not blocked or damaged by plant materials.
11. Conserve energy by utilizing an automatic illumination shut-off mechanism when businesses are closed.
12. Construct signs from high-quality materials and avoid exposed wiring, ballasts, conduits, fasteners, raceways, or similar hardware.

Signage Examples

5.8 Sustainable Design Strategies

South Ontario Logistics Center is committed to sustainable design strategies that integrate principles of environmental stewardship into the design and construction process. Appropriate strategies shall be determined for each project within the Specific Plan area.

5.8.1 Sustainable Construction & Technology Concepts

1. Design and construct energy-efficient buildings to reduce air, water, and land pollution and environmental impacts from energy production and consumption.
2. Employ passive design including skylights, building orientation, landscaping, and strategic colors to improve building energy performance.
3. Reduce the heat island effect by providing shade structures and trees that produce large canopies. In addition, choose roof and paving materials that possess a high level of solar reflectivity.
4. Use recycled and other environmentally-friendly building materials wherever possible.
5. Incorporate skylights into at least two percent of warehouse/distribution building roof area to provide natural light and reduce electric lighting demand.
6. Use energy-efficient LED (or similar) products.
7. Provide interior or exterior bicycle storage consistent with the California Green Building Standards Code.
8. Use drought-tolerant landscaping with drip irrigation and include plantings such as trees, shrubs, groundcovers and/or vines. Optional amenities include benches, trellises, thematic fencing, and decorative walkways.
9. Employ high-performance dual-pane window glazing in office storefronts.

5.8.2 Water Quality

1. Design landscape areas with retention/infiltration swales and basins, or employ bio-treatment when infiltration is infeasible, as required by the San Bernardino County MS4 Permit and Water Quality Management Plan.
2. Select native and drought-tolerant plants to reduce water demand.
3. Integrate permeable pavement and perforated curbs throughout the project area as feasible to allow stormwater to enter planter areas, assist with filtration, and control runoff.
4. Use captured runoff to augment irrigation systems whenever possible.
5. Employ irrigation systems that respond to changing weather conditions, irrigate by hydro zone, and use micro-irrigation techniques.

6. Use recycled water to irrigate landscape areas and for other appropriate uses. The use of recycled water for certain purposes is required by the City of Ontario Recycled Water Master Plan.

Sustainable Design Examples

6.0 IMPLEMENTATION

This chapter summarizes the development process for implementation of the South Ontario Logistics Center Specific Plan and provides for the orderly development of the Specific Plan area.

6.1 Applicability

The provisions, standards, and guidelines contained within this Specific Plan provide the regulations for land use and development within South Ontario Logistics Center. The Specific Plan supersedes the development standards and regulations of the Ontario Development Code unless stated otherwise in this document. Whenever the provisions and development standards of the Specific Plan conflict with those of the Ontario Development Code, the Specific Plan shall take precedence. Where the Specific Plan is silent, the Ontario Development Code shall apply.

Definition of Terms

The terms used within the Specific Plan shall mean the same as defined in the Ontario Development Code, unless otherwise noted.

6.2 Severability

The Specific Plan serves as the implementation tool for the City's Policy Plan (General Plan). In the event that any provision of this Specific Plan or its application to any person or circumstance is held to be invalid or unconstitutional by any court of competent jurisdiction, such portion shall be deemed separate, distinct and independent, and shall not affect the validity of the remaining provisions of this Specific Plan or applications thereof, which can be implemented without the invalid provision or application.

6.3 Interpretation

If an issue, condition, or situation occurs that is not sufficiently covered or provided for in this Specific Plan, those that are applicable for the most similar issue, condition, or situation shall be used. Unless otherwise provided, any ambiguity concerning the content or application of the Specific Plan shall be resolved by the City of Ontario Planning Director in a manner consistent with the goals, policies, objectives, and intent established in the Specific Plan.

6.4 Consistency with Other Plans and Regulations

This sub-section discusses consistency of the Specific Plan with The Ontario Plan, Airport Land Use Compatibility Plans, the California Building Code, and CEQA.

6.4.1 Consistency with The Ontario Plan

No land use, activity, or facility shall be permitted that is inconsistent with the objectives, policies, general land uses, and programs of The Ontario Plan, as amended.

The South Ontario Logistics Center entitlement applications include a General Plan Amendment to change the site's land use designations from Low Medium Density Residential to Business Park and Industrial - General to be consistent with this Specific Plan.

6.4.2 Consistency with Airport Land Use Compatibility Plans

Projects located within the Specific Plan area are subject to the restrictions and provisions of the Airport Land Use Compatibility Plans prepared for Ontario International Airport and Chino Airport.

6.4.3 Consistency with California Building Code

Projects located within the Specific Plan area must comply with the State of California Building Code as adopted and implemented by the City of Ontario.

6.4.4 Consistency with CEQA

The City of Ontario is defined as the lead agency under the California Environmental Quality Act (CEQA) based upon its authority to approve this Specific Plan. Concurrent with approval of this Specific Plan, the City Council will be required to certify the associated Environmental Impact Report (EIR), including a Mitigation Monitoring and Reporting Program to ensure that all approved EIR mitigation measures are implemented. The Planning Director shall be responsible for confirming that mitigation measures have been implemented through each project's approved plans.

6.5 Specific Plan Revisions

It is recognized that modifications to the text or exhibits of this Specific Plan may be warranted in the future to accommodate unforeseen conditions or events. Revisions shall be processed in a manner prescribed by the City of Ontario Planning Department pursuant to the provisions in this section.

6.5.1 Minor Modifications to the Specific Plan

Minor modifications to the Specific Plan shall be processed administratively without the submission of a formal Specific Plan Amendment application and shall not require a public hearing or review by the Planning Commission. The Planning Director shall have the authority to review and make a determination of approval, approval with conditions, or denial of a request for minor modification to the Specific Plan. The Planning Director may, at his/her discretion, refer any such request to the Planning Commission or City Council.

Minor modifications are defined as:

1. Expansions or reductions to a Planning Area boundary or acreage, provided that the total acreage within each affected Planning Area is not modified by more than 20 percent.
2. An increase in maximum building area for single- and multi-tenant buildings of up to 20 percent, provided that the maximum square footage for the Planning Area established by this Specific Plan is not exceeded.
3. A modification of up to 20 percent of a project's required minimum lot area, minimum lot dimensions, or setbacks if compatible with the surrounding land uses and consistent with the overall design character of the South Ontario Logistics Center.
4. Additions, deletions, or modifications to Table 4.1, Allowable Uses, which lists the permitted and conditionally permitted uses in the Specific Plan area, provided the Planning Director determines the changes to be consistent with the objectives and intent of the Specific Plan.
5. Minor modification of conceptual design criteria for architectural features and materials, landscape treatments, lighting, signage, and sustainable design strategies.
6. Revisions to roadway alignment when the change results in centerline shift of less than 250 feet.
7. Revisions to infrastructure facility sizing and precise location for dry utilities, water, sewer, and storm drainage improvements subject to approval of the City Engineer.
8. Changes to the Phasing Plan, provided infrastructure is available to serve the phase as determined by the City Engineer.
9. Revisions to exhibits in the Specific Plan that do not substantially change its intent or character.
10. Modifications of a similar nature to those listed above, which are deemed minor by the Planning Director and conform to the purpose and intent of this Specific Plan and The Ontario Plan.

6.5.2 Specific Plan Amendments

Proposed changes to this Specific Plan that do not meet the criteria for a Minor Modification shall be subject to a formal Specific Plan Amendment application process pursuant to Section 4.01.035 of the Ontario Development Code and California Government Code Section 65450, et seq.

If the proposed amendment requires supplemental environmental analysis pursuant to CEQA, the applicant shall adhere to the City's adopted procedures and CEQA Guidelines.

6.6 Subdivision Maps

Development within the Specific Plan area may require the processing of tentative and final tract or parcel maps and/or lot line adjustments or mergers. Subdivision maps and lot changes shall be reviewed and approved pursuant to Section 4.02.085 of the Ontario Development Code and other applicable City codes

and regulations, California Government Code Section 66410 et seq. (Subdivision Map Act), as well as the provisions of this Specific Plan.

6.7 Development and Land Use Review Procedures

Review procedures for development and land use within the Specific Plan area shall be as provided in this Specific Plan and in accordance with the Ontario Development Code.

6.7.1 Development Plan Review

Development proposed within the Specific Plan area shall be subject to Development Plan review pursuant to Section 4.02.025 of the Ontario Development Code. The review is intended to ensure compliance with the provisions of this Specific Plan, protect the integrity and character of the physical composition of the City, and encourage high quality development.

6.7.2 Conditional Use Permit

A Conditional Use Permit shall be required for uses deemed "conditionally permitted" in Table 4.1 (Allowable Uses). Applications for a Conditional Use Permit shall be processed pursuant to Section 4.02.015 of the Ontario Development Code.

6.7.3 Administrative Use Permit

An Administrative Use Permit shall be required for uses deemed "administratively permitted" in Table 4.1 (Allowable Uses). Applications for an Administrative Use Permit shall be processed pursuant to Section 4.03.015 of the Ontario Development Code.

6.7.4 Appeals

Appeals of decisions of the Development Advisory Board, Zoning Administrator, Planning Director, or the Planning Commission regarding implementation of this Specific Plan may be made by the applicant or other aggrieved party pursuant to Division 2.04 of the Ontario Development Code.

6.8 Development Agreement

Approval of a statutory development agreement authorized pursuant to California Government Code Section 65864 et seq. shall be required by this Specific Plan. The Development Agreement shall include, but not be limited to, methods for financing, acquisition, and construction of necessary infrastructure. The Development Agreement shall be fully executed prior to recordation of the first Final Map.

6.9 Specific Plan Phasing

Implementation of this Specific Plan is anticipated to occur in two phases, as discussed in Chapter 3.10, Phasing Plan:

Phase 1: Phase 1 consists of the construction of Buildings 1 through 8 as numbered in the Conceptual Site Plan. This phase may be developed in several sub-phases in response to market demands and according to the logical and orderly completion of infrastructure improvements.

Phase 2: Phase 2 consists of the development of PAs 3, 4, & 5.

These phases may be developed as sub-phases and may occur either sequentially or concurrently with one another.

All the Specific Plan required infrastructure can be found in Section 3.3 (Figure 3.7 and 3.7a) for Potable Water, Section 3.4 (Figure 3.9) for Recycled Water, Section 3.5 (Figure 3.11) for the Sewer Plan, Section 3.7 (Figure 3.13) for the Fiber Optic Plan, and Section 3.8 (Figure 3.14) for the Storm Drain Plan. Phasing will be determined per separate Development Agreement.

6.9.1 Phasing Objectives

Development phasing shall meet the following objectives:

1. The orderly build-out of the project based upon market and economic conditions;
2. The provision of adequate parking, infrastructure, and public facilities concurrent with the development of each phase; and
3. The protection of the public health, safety, and welfare.

6.9.2 Findings for Modification of the Phasing Plan

The Planning Director shall have the authority to approve modification of the Phasing Plan, subject to the following findings:

1. The modification is consistent with the Policy Plan (General Plan);
2. The modification will not adversely affect the implementation of the Specific Plan;
3. The modification will not be detrimental to public health, safety, and general welfare; and
4. The modification will not delay the construction of infrastructure improvements necessary to serve the development.

6.10 Financing of Public Improvements

The financing of the construction, operation, and maintenance of public infrastructure improvements, facilities, and services within the Specific Plan area shall be provided through a combination of mechanisms. Final determination of the scope of improvements, maintenance responsibilities, and funding sources shall be specified in the approved Development Agreement, executed prior to recordation of the first Final Map.

Financing options may include, but are not limited to, the following:

1. Private capital investment by the project developer, the property owner(s), or a Property Owners Association.
2. Private capital investment by a consortium of property owners and/or developers of the project and/or surrounding area.
3. Community Facilities District (CFD) established pursuant to the Mello-Roos Community Facilities District Act of 1982, or other special district, to provide funding for the construction of public facilities or the provision of public services. City Council approval shall be a prerequisite for use of special district financing mechanisms.
4. Development Impact Fee (DIF) credits to be applied for infrastructure completed by the project developer.
5. Enhanced Infrastructure Financing District to fund infrastructure development through tax increment financing pursuant to Senate Bill 628.
6. Community Revitalization and Investment Authorities (CRIA) to fund infrastructure development through tax increment financing pursuant to Assembly Bill 2.

6.11 Maintenance Plan

Final determination of maintenance responsibilities for the public and private improvements constructed in association with this Specific Plan shall be specified in the approved Development Agreement, which shall be executed prior to recordation of the first Final Map. However, it is anticipated that maintenance shall be generally shared by three entities as described below and outlined in Table 6.1, Maintenance Responsibilities.

6.11.1 City of Ontario, Community Facilities District & Other Special District

The establishment of a community facilities district, landscape and lighting district, or other special district to fund the maintenance of public facilities shall be at the City's discretion. It is anticipated that public maintenance shall include the following:

1. Right-of-way for public streets within the Specific Plan area (Grove Avenue, Eucalyptus Avenue, Merrill Avenue, Campus Ave and Bon View Avenue) shall be dedicated to the City of Ontario per

the provisions of this Specific Plan (Chapter 3, Development Plan) and as approved by the City Engineer.

2. Landscape improvements and public streetlights within the public right-of-way shall be maintained through a landscape and lighting district or other special maintenance district established by the City.
3. The City shall maintain off-site infrastructure improvements, including water, sewer, and storm drainage facilities.
4. The City shall maintain NPDES facilities located within the curb-to-curb area of public streets. Operation and maintenance requirements for NPDES stormwater runoff source control and treatment control Best Management Practices shall be identified in the approved Water Quality Management Plan for the project.

6.11.2 Property Owners Association

A Property Owners Association (POA) may be established for the maintenance of common areas, including such improvements as on-site landscape areas and parking and drive aisles within South Ontario Logistics Center. It is anticipated that improvements maintained by the POA would include the following:

1. Driveways;
2. On-site open spaces, landscape areas, common areas, parking lots, and walkways;
3. Landscaping within setback/landscape buffer areas along Campus Avenue;
4. NPDES facilities within landscape setbacks and on-site common areas;
5. Property identification signage and architectural elements located within the landscape buffer;
6. Fencing and walls, including graffiti removal; and
7. Water, sewer, recycled water facilities and storm drainage facilities located on-site and constructed by the developer are considered privately owned and to be maintained by the property owners or the Property Owner Associations. The Property Owners Association(s) shall maintain permanent on-site water quality basins, trenches, swales and biotreatment filters required by the San Bernardino County MS4 Permit and Water Quality Management Plan.

Table 6.1: Maintenance Responsibilities

Area of Responsibility	City or Special District	Property Owners or POA	Utility
Master Planned Roadways: Grove Avenue, Eucalyptus Avenue, Merrill Avenue, Campus Ave and Bon View Avenue			
Curb-to-curb improvements	☐		
Bon View- landscaping within the public right-of-way (parkways)		☐	

Table 6.1: Maintenance Responsibilities

Area of Responsibility	City or Special District	Property Owners or POA	Utility
Behind the curb improvements - landscaping within the public right-of-way (parkways) and sidewalks and neighborhood edge	☐		
Other Improvements			
Traffic Signals and Traffic Control Signs on public streets	☐		
Street lights in the public right-of-way	☐		
Drive aisles		☐	
On-site parking areas		☐	
Common open space		☐	
Landscaping within setback/landscape buffer areas		☐	
Monument signage		☐	
Walls and fences		☐	
Stormwater drainage/water quality control facilities within the curb-to-curb area of public streets and Merrill and Bon View public storm drain proposed behind the curb	☐		
Stormwater drainage/water quality control facilities behind the curb		☐	
Water, recycled water, and sewer infrastructure in the public right-of-way	☐		
Dry utilities: electricity, natural gas, communication systems			☐
City of Ontario Fiber Optic Conduit (in Ontario Ranch Streets)	☐		

6.12 Additional Entitlement Requirements

Currently, there are no existing City utilities, nor any improvement plans for City utilities in the vicinity of the Specific Plan area. Several miles of new infrastructure are required to provide City utility services to the Specific Plan area. In order to ensure orderly expansion of the City Utility Systems and other City infrastructure, the following additional entitlement requirements are imposed upon all subdivision maps and developments within the Specific Plan area.

6.12.1 Conceptual Design Report

Prior to approval of any entitlement applications (subdivision maps, Development Plan Reviews, etc.), a conceptual design report shall be prepared and submitted to the Development Agency Engineering Department and the Utilities Engineering Department for review and approval of the extent of all public improvements required for the project. The study shall identify existing and future rights-of-ways (ROW) and infrastructure improvements and establish all vertical and horizontal alignments for each utility. The report shall include cross-sections, profiles, and any supporting details needed to demonstrate that utilities can be adequately accommodated in the public ROW. The study shall account for all utility conflicts, right-of-way variations, existing obstructions, and the timing of utility installation. Utilities cannot be located along an alignment that conflicts with existing conditions (e.g. electrical poles, private property, etc.) unless the applicant accepts the responsibility of modifying the existing conditions (e.g. undergrounding, relocation, ROW acquisition, etc.).

6.12.2 Preliminary Design Report

As a condition of entitlement (subdivision map, Development Plan Review, etc.) within the Specific Plan area and prior to submittal of Infrastructure Improvements Plans, a Preliminary Design Report (PDR) for all public infrastructure shall be submitted and approved by the Development Agency Engineering Department and the Utilities Engineering Department. The PDR shall include the following:

Conceptual Design Compliance: A discussion modifying or confirming the conceptual design established in the project's Conceptual Design Report shall be included. The study shall confirm all rights-of-ways (ROW), infrastructure improvements, and vertical and horizontal alignments for each utility.

Street Cross Sections and Profiles: Street cross sections and profiles shall be provided for each public street, private street and Public Utility Easement (PUE) containing a public utility and at any points along the alignments where the ROW varies. The cross sections shall show the location and size of each utility and shall annotate the property/ROW lines, the type of finished surface material, the distance of each utility from centerline, the depth from finished surface to top of pipe, and the distance between utilities (outside wall to outside wall).

Constructability Review: The report shall include a discussion of the constructability issues along the proposed alignment and identify the recommended construction methods that may be utilized. The study shall perform field investigation (field survey and potholing) in order to identify potential utility conflicts, right-of-way variations, existing obstructions, and constructability issues created by the timing of utility installation.

Supporting Details: The PDR shall include any supporting details needed to demonstrate that utilities can be adequately accommodated in the public ROW, including the placement of large appurtenances, clearance from existing obstructions, etc.

30% Design Drawings: The PDR findings shall be incorporated into a 30% design plan set and included in the PDR.

Western Trunk Sewershed Scope: In order to qualify for Development Impact Fees (DIF) and to assure that the Western Trunk Sewer (WTS) is designed to serve its entire Sewer Master Plan Tributary Area, the PDR shall include the WTS and all the Master Plan Trunk Sewers connecting to the WTS. The PDR shall include: the WTS from the Kimball Interceptor to the Whispering Lakes Pump Station at Riverside Drive and Carpenter Avenue; the Euclid Trunk Sewer from the WTS in Merrill Avenue to Chino Avenue; the Bon View Trunk Sewer from the WTS in Merrill Avenue to Chino Avenue; the Grove Trunk Sewer from the WTS in Merrill Avenue to Chino Avenue; and the Walker Trunk Sewer from the WTS in Schaeffer Avenue to Chino Avenue.

Horizontal and Vertical Alignment Studies: Horizontal and vertical alignment studies shall demonstrate the entire sewershed and subsewersheds can be sewered.

Sewer Sizing Hydraulic Calculations: Sewer sizing hydraulic calculations shall demonstrate the proposed trunk sewer designs can accommodate the Master Plan Flows to meet the Master Plan Design Criteria.

6.12.3 Utilities Systems Map (USM)

Prior to approval of any entitlement application (subdivision maps, Development Plan Reviews, etc.), as part of the entitlement application a Conceptual Utilities Systems Map (USM) shall be prepared and submitted to the Development Agency Engineering Department and the Utilities Engineering Department for review and approval. The USM is a summary plan sheet exhibit that shows all the public offsite infrastructure requirements and demands for the Development Project (and/or Subdivision), the onsite private infrastructure improvements, and the interaction between the public and private utilities systems. As a Condition of Approval for the Development Project (and/or Subdivision), the Conceptual Utilities Systems Map shall be updated into a Final Utilities Systems Map to reflect the changes that occur between entitlement and Final Plan and Permit Approval. Reference the Ontario Municipal Utilities Company Utilities Engineering Department's Utilities Systems Map (USM) Requirements for details.

6.12.4 Integrated Waste Management Report (IWMR) and Solid Waste Handling Plan (SWHP)

Prior to approval of any entitlement application (subdivision maps, Development Plan Reviews, etc.), as part of the entitlement application a Conceptual Integrated Waste Management Report (IWMR) and a Conceptual Solid Waste Handling Plan (SWHP) shall be prepared and submitted to the Development Agency Engineering Department and the Utilities Engineering Department for review and approval. The SWHP summary plan sheet exhibit that demonstrates the project site's design conformance with the Integrated Waste Department's requirements, including the requirements for Sizing of Storage, Location of Collection Areas, Accessibility for Collection Vehicles, and Collection of Sorted/Diverted Waste Types. The IWMR is a report that presents project specific information that is not able to be demonstrated within the Solid Waste Handling Plan, including discussions on: project solid waste operations; project compliance with all applicable laws, statues, policies, and requirements; and, conformance with all the Integrated Waste Department's requirements, including the requirements for Sizing of Storage, Location of Collection Areas, Accessibility for Collection Vehicles, and Collection of Sorted/Diverted Waste Types. As a Condition of Approval for the Development Project (and/or Subdivision), the Conceptual SWHP and the a Conceptual IWMR shall be updated into a Final SWHP and Final IWMR to reflect the changes that occur between entitlement and Final Plan and Permit Approval. The SWHP and IWMR may be required to be updated from whenever there are new occupants, new uses or changes to existing uses, Tenant Improvements, Business Licenses, and Certificates of Occupancy. Reference the Ontario Municipal Utilities Company Utilities Engineering Department's Integrated Waste Management Report (IWMR) and Solid Waste Handling Plan (SWHP) Requirements for details.

7.0 GENERAL PLAN CONSISTENCY

California Government Code (Title 7, Division 1, Chapter 3, Article 8, Section 65440-65457) permits the adoption and administration of Specific Plans as an implementation tool for elements contained within a jurisdiction's local General Plan. Approval of this Specific Plan is based on the finding that the regulations, guidelines, and programs contained within this Specific Plan are consistent with The Ontario Plan. The Ontario Plan establishes the direction and vision for the City of Ontario and provides a single comprehensive document to shape its future. The Ontario Plan provides for policies to accommodate change over its 30-year lifespan. The Ontario Plan consists of a six-part Component Framework: 1) Vision, 2) Governance Manual, 3) Policy Plan, 4) City Council Priorities, 5) Implementation, and 6) Tracking and Feedback. The following sections demonstrate the South Ontario Logistics Center Specific Plan implements the goals and policies of the City's Policy Plan (General Plan).

7.1 Land Use Element

GOAL LU1:	**A community that has a spectrum of housing types and price ranges that match the jobs in the City and that make it possible for people to live and work in Ontario and maintain a quality of life.**

Policy LU1-2 Sustainable Community Strategy

We integrate state, regional, and local Sustainable Community/Smart Growth principles into the development and entitlement process.

The Specific Plan encourages the efficient use of energy resources in design, product selection, and operational techniques. The Design Guidelines in Chapter 5 address lighting, bicycle parking, sustainable landscaping, and sustainable design strategies. Landscape provisions require the use of drought-resistant vegetation and shade trees to conserve water and reduce heat islands. The sustainable design strategies include design and construction of energy efficient buildings to reduce air, water, and land pollution and environmental impacts from energy production and consumption. Protecting water quality, reducing runoff, and reducing water demand for landscaping are promoted in the Development Plan in Chapter 3 through the recycled water plan and storm drainage facilities source control and treatment practices.

Policy LU1-3 Adequate Capacity

We require adequate infrastructure and services for all development.

The Specific Plan establishes a Phasing Plan that is coordinated with affected infrastructure providers and ensures that uses on the project site are adequately served. The Specific Plan requires infrastructure development to occur in a timely manner. Potable and recycled water, sewer, fiber optic communications, and storm drain infrastructure improvements that ultimately serve the Specific Plan area are addressed in Chapter 3, Development Plan. Infrastructure and services will be consistent with City of Ontario infrastructure master plans and the approved development agreement.

GOAL LU2: Compatibility between a wide-range of uses.

Policy LU2-3 Hazardous Uses

We regulate the development of industrial and similar uses that use, store, produce or transport toxic substances, air emissions, other pollutants or hazardous materials.

Uses within the Specific Plan are required to comply with federal, state, and local regulations pertaining to the use, storage, disposal, and transport of hazardous materials, toxic substances, and other pollutants.

Policy LU2-6 Infrastructure Compatibility

We require infrastructure to be aesthetically pleasing and in context with the community character.

The Specific Plan design guidelines (Chapter 5) support high-quality development that complements the desired community character. Landscaped areas separate parking areas to keep parking lots from being the dominant visual element of the site. The Specific Plan also establishes landscape setback requirements (Chapter 4, Land Use and Development Standards) and conceptual streetscape design (Chapter 5, Design Guidelines) along all roadways within the Specific Plan area to create safe and attractive streets for pedestrians, cyclists, and motorists and ensure a cohesive pattern of development.

Policy LU2-9 Methane Gas Sites

We require sensitive land uses and new uses on former dairy farms or other methane-producing sites to be designed to minimize health risks.

The Specific Plan incorporates into its Implementation Plan (Chapter 6) requirements for development to comply with the mitigation measures identified in the project environmental impact report, including those for soil remediation and proper venting to address the potential existence of methane gases within the Specific Plan area.

GOAL LU5: Integrated airport systems and facilities that minimize negative impacts to the community and maximize economic benefits.

Policy LU5-7 ALUCP Consistency with Land Use Regulations

We comply with state law that requires policy plan/general plans, specific plans, and all new development be consistent with the policies and criteria set forth within an Airport Land Use Compatibility Plan for any public use airport.

The Specific Plan area is within the Ontario International Airport Influence Area and the Chino Airport Influence Area. The Specific Plan discusses compliance with the ALUCP requirements for the Ontario Airport and the Chino Airport in Chapter 2, Section 2.2, Airport Influence Areas.

7.2 Community Design Element

GOAL CD1: A dynamic, progressive city containing distinct neighborhoods and commercial districts that foster a positive sense of identity and belonging among residents, visitors, and businesses.

Policy CD1-2 Growth Areas

We require development in growth areas to be distinctive and unique places within which there are cohesive design themes.

The Specific Plan design guidelines (Chapter 5, Design Guidelines) and development standards (Chapter 4, Land Use and Development Standards) ensure high quality, cohesive, attractive, and appropriately-scaled development that complements and integrates into the Ontario Ranch community and adds value to the City.

GOAL CD2: A high level of design quality resulting in public spaces, streetscapes, and developments that are attractive, safe, functional, and distinct.

Policy CD2-1 Quality Architecture

We encourage all developments to convey visual interest and character through:

- Building volume, massing, and height to provide appropriate scale and proportion;
- A true architectural style which is carried out in plan, section, and elevation through all aspects of the building and site design and appropriate for its setting;
- Exterior building materials that are visually interesting, high quality, durable, and appropriate for the architectural style.

The Specific Plan design guidelines (Chapter 5) ensure that: 1) scale, massing, fenestration, materials, and colors are consistent with the building's architectural style and compatible with the overall design in the Specific Plan area; 2) articulation is provided through elements such as cornices, parapets, expression lines, and changes in materials and/or colors; 3) use of a variety of colors, materials, and/or textures on each building is appropriate to the architectural features or massing.

Policy CD2-5 Streetscapes

We design new and, when necessary, retrofit existing streets to improve walkability, bicycling and transit integration, strengthen connectivity, and enhance community identify through improvements to the public right-of-way such as sidewalks, street trees, parkways, curbs, street lighting, and street furniture.

Chapter 3, Section 3.2, Street Plan, addresses connectivity, street improvements, pedestrian and bicycle plans, and transit. In Chapter 5, Section 5.3, Landscape Design, the Specific Plan identifies street improvements and streetscape including parkways, street trees, sidewalks, landscape buffers, and street lighting for Grove Avenue, Eucalyptus Avenue, Merrill Avenue, and Bon View Avenue within the Specific Plan area, which are consistent with the Circulation Element of The Ontario Plan. The Specific Plan streetscape design creates an aesthetically pleasing view for pedestrians, cyclists, and motorists, screens parking and loading areas from the public right-of-way, and visually integrates the development into the surrounding Ontario Ranch community.

Policy CD2-6 Connectivity

We promote development of local street patterns and pedestrian networks that create and unify neighborhoods, rather than divide them, and create cohesive and continuous corridors, rather than independent "islands".

The Specific Plan creates an efficient street system by providing convenient connections with adjacent land uses in compliance with the vision of The Ontario Plan Circulation Element. The design of Specific Plan street sections (Chapter 3.2: Street Plan) and streetscape (Chapter 5.3, Landscape Design) provides road improvements including sidewalks, trails and bikeways to promote connectivity and supplement vehicular transportation.

Policy CD2-7 Sustainability

We collaborate with the development community to design and build neighborhoods, streetscapes, sites, outdoor spaces, landscaping and buildings to reduce energy demand through solar orientation, maximum use of natural daylight, passive solar and natural ventilation, building form, mechanical and structural systems, building materials and construction techniques.

The Specific Plan is committed to sustainable design strategies that integrate principles of environmental stewardship into the design, construction, and operation process. The Specific Plan incorporates sustainability principles into its design guidelines (Chapter 5.8, Sustainable Design Strategies), such as drought tolerant landscaping, skylights in warehouse/distribution buildings to provide natural light and reduce lighting demand, high performance dual pane glazing in office storefronts, and LED products for energy efficient site lighting. Design strategies include the design and construction of energy efficient buildings to reduce air, water, and land pollution and environmental impacts from energy production and consumption. The use of recycled water to irrigate landscape is required by the Specific Plan's Recycled Water Plan (Chapter 3.4), consistent with the City of Ontario Recycled Water Master Plan.

Policy CD2-9 Landscape Design

We encourage durable landscaping materials and designs that enhance the aesthetics of structure, create and define public and private spaces, and provide shade and environmental benefits.

Consistent with the vision for Ontario Ranch as outlined in the Ontario Ranch Streetscape Master Plan, the Specific Plan (Chapter 5.3, Landscape Design) provides for landscaped setbacks and landscaped parkways adjacent to bike lanes and sidewalks, defining these public spaces. The landscaped setbacks and parkways include drought-tolerant plants featuring colorful shrubs and groundcovers, ornamental grasses and

succulents, evergreen and deciduous trees, and species native to Southern California or naturalized to the arid climate to promote durable plant materials. The plant selection complements the design theme of the Specific Plan area. Parking lot landscaping reduces associated heat buildup, improves aesthetics, and integrates into onsite landscape design and adjacent streetscapes. Swaled landscape areas retain/infiltrate stormwater run-off to improve water quality and promote groundwater recharge. Shade trees thoughtfully located near expanses of paving, building walls, roofs, and windows reduce the impacts of heat gain.

Policy CD2-11 Entry Statements

We encourage the inclusion of amenities, signage, and landscaping at the entry to neighborhoods, commercial centers, mixed use areas, industrial developments, and public places that reinforce them as uniquely identifiable places.

The Specific Plan establishes design guidelines to ensure high-quality development and a sense of place. As discussed in Chapter 5.3, Landscape Design, Grove, Eucalyptus, Merrill and Bon View Avenues feature landscaped setbacks that provide attractive entries into the site. Entry monument signage is predominantly placed to identify the South Ontario Logistics Center.

Policy CD2-12 Site and Building Signage

We encourage the use of sign programs that utilize complementary materials, colors, and themes. Project signage should be designed to effectively communicate and direct users to various aspects of the development and complement the character of the structure.

The Specific Plan (Chapter 5.7, Signage) requires approval of a comprehensive sign program to address parcel identification, building identification and directional signage within the Specific Plan area. A comprehensive sign program will integrate project signage with the overall design of the site and structures to create a unified visual statement. A comprehensive sign program provides flexible application of sign regulations to provide incentive and latitude in the design and display of multiple signs. Industrial uses on the site will also be appropriately signed to give direction to loading and receiving, visitor parking, and other special uses.

GOAL CD3:	**Vibrant urban environments that are organized around intense buildings, pedestrian and transit areas, public plazas, and linkages between and within developments that are conveniently located, visually appealing, and safe during all hours.**

Policy CD3-1 Design

We require that pedestrian, vehicular, bicycle, and equestrian circulation on both public and private property be coordinated and designed to maximize safety, comfort, and aesthetics.

The Specific Plan (Chapter 3.2, Street Plan) coordinates street, sidewalk, trail, and bikeway designs to serve onsite land uses and extend access to the surrounding area in compliance with The Ontario Plan Mobility Element. The Specific Plan specifies street improvements for Grove Avenue, Eucalyptus Avenue, Merrill Avenue, and Bon View Avenue. The Specific Plan streetscape design (Chapter 5.3, Landscape Design) provides an aesthetically pleasing view for pedestrians, cyclists, and motorists, screens parking and loading areas from the public right-of-way, and integrates the development into the surrounding community.

Policy CD3-5 Paving

We require sidewalks and road surfaces to be of a type and quality that contributes to the appearance and utility of streets and public places.

The Specific Plan development standards (Chapter 4, Land Use and Development Standards) require that design and materials for sidewalks and road surfaces within the Specific Plan area be approved by the City's Engineering Department. Specific Plan design guidelines (Chapter 5) encourage the use of enhanced paving to mark major building entries and paving materials that possess a high level of solar reflectivity to reduce the heat island effect.

GOAL CD5: A sustained level of maintenance and improvement of properties, buildings and infrastructure that protects the property values and encourages additional public and private investment.

Policy CD5-1 Maintenance of Buildings and Property

We require all public and privately owned buildings and property (including trails and easements) to be properly and consistency maintained.

The Specific Plan includes a Maintenance Responsibility Matrix in Chapter 6, Implementation, identifying the parties responsible for maintenance of roadways, parkways, trails, sidewalks, common areas, walls and monuments, infrastructure, and utilities within the Specific Plan area. Privately owned buildings will be maintained as specified by the Property Owners Association (Chapter 6.11.2).

Policy CD5-2 Maintenance of Infrastructure

We require the continued maintenance of infrastructure.

The Specific Plan includes a Maintenance Responsibility Matrix in Chapter 6, Implementation, identifying the parties responsible for maintenance of roadways, parkways, trails, sidewalks, common areas, walls and monuments, infrastructure, and utilities within the Specific Plan area.

7.3 Mobility Element

GOAL M1: A system of roadways that meets the mobility needs of a dynamic and prosperous Ontario.

Policy M1-1 Roadway Design and Maintenance

We require our roadways to:

- Comply with federal, state, and local design and safety standards.
- Meet the needs of multiple transportation modes and users.
- Handle the capacity envisioned in the Functional Roadway Classification Plan.
- Endeavour to maintain a peak hour Level of Service (LOS) E or better at all intersections.
- Be compatible with the streetscape and surrounding land uses.
- Be maintained in accordance with best practices and our Right-of-Way Management Plan

The Specific Plan complies with the Functional Roadway Classification Plan of the Mobility Element and, therefore, aims to comply with federal, state, and local design and safety standards; meet the needs of multiple transportation modes and users; and maintain a Level of Service of E or better at all intersections addressed in the project environmental impact report. The Specific Plan site design strives to minimize the effects of truck traffic on nearby uses.

Policy M1-2 Mitigation of Impacts

We require development to mitigate its traffic impact.

The Specific Plan requires in Chapter 1.6, California Environmental Quality Act Compliance, and in Chapter 6.4.4, Consistency with CEQA, that projects within the Specific Plan area comply with all mitigation measures, conditions, and project design features identified in the project environmental impact report. Chapter 5.1, Site Design, provides guidelines to ensure buildings, structures, and loading facilities are designed so loading and unloading activities occur on-site without extending beyond the property line.

GOAL M2: A system of trails and corridors that facilitate and encourage bicycling and walking.

Policy M2-1 Bikeway Plan

We maintain our Multipurpose Trails & Bikeway Corridor Plan to create a comprehensive system of on- and off-street bikeways that connect residential areas, businesses, schools, parks, and other key destination points.

The Specific Plan includes a Circulation Plan in Chapter 3 to provide connectivity to the trails and bikeway corridors identified in the Ontario Multipurpose Trails and Bikeway Corridor Plan, including installation of a Class II Bikeway along Merrill Avenue and multipurpose trails along Grove, Eucalyptus, and Merrill Avenues.

Policy M2-3 Pedestrian Walkways

We require walkways that promote safe and convenient travel between residential areas, businesses, schools, parks, recreation areas, and other key destination points.

The Specific Plan street sections and streetscape designs (Chapter 3.2, Street Plan and Chapter 5.3, Landscape Design) provide for construction of five-foot wide public pedestrian sidewalks for Grove Avenue, Eucalyptus Avenue, Merrill Avenue, and Bon View Avenue to connect with existing and planned pedestrian circulation systems. Pedestrian sidewalks are separated from vehicular travel lanes by a landscaped parkway. The Specific Plan area street improvements are consistent with the City's Ontario Ranch Streetscape Master Plan.

GOAL M3: A public transit system that is a viable alternative to automobile travel and meets basic transportation needs of the transit dependent.

Policy M3-2 Transit Facilities at New Development

We require new development to provide transit facilities, such as bus shelters, transit bays and turnouts, as necessary.

The Specific Plan discusses in Chapter 3.2.11, Transit, that the City is coordinating with regional transit agencies to implement Bus Rapid Transit (BRT) service to target destinations and along corridors.

GOAL M4: An efficient flow of goods through the City that maximizes economic benefits and minimizes negative impacts.

Policy M4-1 Truck Routes

We designate and maintain a network of City truck routes that provide for the effective transport of goods while minimizing negative impacts on local circulation and noise-sensitive land uses, as shown in the Truck Routes Plan.

The Specific Plan is designed to enable easy access to the truck route network and to encourage its industrial users to implement effective goods movement strategies. The Land Use and Circulation Plans for the Specific Plan area (Chapter 3, Development Plan) are designed to focus trucks on the designated Merrill Avenue truck route. The design guidelines in Chapter 5.1, Site Design, stipulate buildings, structures, and loading facilities be designed to ensure that loading and unloading activities and maneuvering of freight vehicles occurs on-site without extending beyond the property line.

7.4 Environmental Resources Element

GOAL ER1: A reliable and cost effective system that permits the City to manage its diverse water resources and needs.

Policy ER1-3 Conservation

We require conservation strategies that reduce water usage.

The Specific Plan incorporates water conservation strategies into its development plan and design guidelines. The use of recycled water to irrigate landscape areas is required consistent with the City of Ontario Recycled Water Master Plan (Chapter 3, Development Plan). Landscape and irrigation plans are encouraged to use water conservation features such as drought-tolerant plant species native or adapted to the region and drip irrigation (Chapter 5, Design Guidelines). The Specific Plan encourages the design and construction of energy efficient buildings to reduce air, water, and land pollution and environmental impacts from energy production and consumption.

Policy ER1-5 Groundwater Management

We protect groundwater quality by incorporating strategies that prevent pollution, require remediation where necessary, capture and treat urban run-off, and recharge the aquifer.

In Chapter 3.8, Storm Drainage Plans, the Specific Plan stipulates that prior to issuance of grading or construction permits, a Storm Water Pollution Prevention Plan (SWPPP) be prepared and approved by the City. The SWPPP will identify and detail appropriate Best Management Practices (BMPs) to prevent pollutant discharge into storm drain systems and natural drainages and aquifers. In addition to the preparation of a SWPPP, a WQMP will be prepared and approved that will enforce long-term BMPs to prevent pollutant discharges into storm drain systems for the life of the project. Chapter 5.8.2, Water Quality, requires the provision of on-site landscape swales to collect and treat stormwater run-off.

Policy ER1-6 Urban Run-off Quantity

We encourage the use of low impact development strategies to intercept run-off, slow the discharge rate, increase infiltration, and ultimately reduce discharge volumes to traditional storm drain systems.

The Specific Plan (Chapter 3.8, Storm Drainage Plan) incorporates low impact development strategies including landscape designs that promote water retention; permeable surface designs in parking lots and areas with low traffic; parking lots that drain to landscaped areas to provide treatment, retention, or infiltration; and limited soil compaction during grading.

Policy ER1-7 Urban Run-off Quality

We require the control and management of urban run-off, consistent with Regional Water Quality Control Board regulations.

In Chapter 3.8, Storm Drainage Plan, the Specific Plan specifies that prior to issuance of grading or construction permits, a Water Quality Management Plan (WQMP) is required to minimize stormwater runoff and provide on-site opportunities for groundwater recharge integrated into project design and amenities. The grading and drainage of the Specific Plan area will be designed to retain/infilter, harvest & re-use or biotreat surface runoff to comply with the current requirements of the San Bernardino County NPDES Stormwater Program's WQMP for significant new development projects.

Policy ER1-8 Wastewater Management

We require the management of wastewater discharge and collection consistent with waste discharge requirements adopted by the Regional Water Quality Control Board.

In Chapter 3.5, Sewer Plan, the Specific Plan provides for design of a wastewater system consistent with City and Regional Water Quality Control Board requirements. The Specific Plan includes a network of new public sewer mains consistent with the City of Ontario's Ultimate Sewer System Plan.

GOAL ER3:	**Cost-effective and reliable energy system sustained through a combination of low impact building, site and neighborhood energy conservation and diverse sources of energy generation that collectively helps to minimize the region's carbon footprint.**

Policy ER3-1 Conservation Strategy

We require conservation as the first strategy to be employed to meet applicable energy-saving standards.

The Specific Plan incorporates energy-saving conservation strategies into its design guidelines (Chapter 5) by addressing lighting, bicycle parking, sustainable landscaping, and energy efficiency. Sustainable design strategies (Chapter 5.8) include design and construction of energy efficient buildings to reduce air, water, and land pollution and environmental impacts from energy production and consumption.

Policy ER3-3 Building and Site Design

We require new construction to incorporate energy efficient building and site design strategies, which could include appropriate solar orientation, maximum use of natural daylight, passive solar and natural ventilation.

The Specific Plan's Sustainable Design Strategies (Chapter 5.8) include the use of passive design to improve building energy performance through skylights, building orientation, landscaping, and use of select colors.

GOAL ER4: Improved indoor and outdoor air quality and reduced locally generated pollutant emissions.

Policy ER4-4 Indoor Air Quality

We comply with State Green Building Codes relative to indoor air quality.

The Specific Plan requires development projects in the Specific Plan area to comply with the State of California Building Code as adopted and implemented by the City. The Specific Plan's Sustainable Design Strategies (Chapter 5.8) include the design and construction of energy efficient buildings to reduce air, water, and land pollution.

GOAL ER5: Protected high value habitat and farming and mineral resources extraction activities that are compatible with adjacent development.

Policy ER5-2 Entitlement and Permitting Process

We comply with state and federal regulations regarding protected species.

The Specific Plan acknowledges that development projects within the Specific Plan area shall comply with the mitigation measures of the project environmental impact report.

7.5 Safety Element

7.5.1

GOAL S1: Minimized risk of injury, loss of life, property damage and economic and social disruption caused by earthquake-induced and other geologic hazards.

Policy S1-1 Implementation of Regulations and Standards

We require that all new habitable structures be designed in accordance with the most recent California Building Code adopted by the City, including provisions regarding lateral forces and grading.

The Specific Plan requires development projects to comply with the State of California Building Code as adopted and implemented by the City.

Policy S1-2 Entitlement and Permitting Process

We follow state guidelines and the California Building Code to determine when development proposals must conduct geotechnical and geological investigations.

The Specific Plan acknowledges that projects within the Specific Plan area shall comply with state guidelines and the California Building Code. Research of available maps indicates that the Specific Plan site is not located within an Alquist-Priolo Earthquake Fault Zone. Furthermore, there was no visible evidence of faulting during geotechnical investigation.

GOAL S2: Minimized risk of injury, loss of life, property damage and economic and social disruption caused by flooding and inundation hazards.

Policy S2-1 Entitlement and Permitting Process

We follow State guidelines and building code to determine when development proposals require hydrological studies prepared by a State-certified engineer to assess the impact that the new development will have on the flooding potential of existing development down-gradient.

The Specific Plan acknowledges that projects within the Specific Plan area shall comply with applicable mitigation measures of the project environmental impact report, state guidelines, and the California Building Code regarding flooding and inundation hazards.

GOAL S3: Reduced risk of death, injury, property damage and economic loss due to fires, accidents and normal everyday occurrences through prompt and capable emergency response.

Policy S3-8 Fire Prevention through Environmental Design

We require new development to incorporate fire prevention consideration in the design of streetscapes, sites, open spaces and buildings.

The Specific Plan acknowledges that projects within the Specific Plan area shall comply with the City's development review process, which provides for review by the City's Fire Department and potential redesign to incorporate fire prevention design elements within streetscapes, sites, open spaces, and buildings.

GOAL S4: An environment where noise does not adversely affect the public's health, safety, and welfare.

Policy S4-1 Noise Mitigation

We utilize the City's Noise Ordinance, building codes and subdivision and development codes to mitigate noise impacts.

The Specific Plan acknowledges that projects within the Specific Plan area shall comply with mitigation measures of the project environmental impact report, the City's noise ordinance, subdivision and development codes, and the California Building Code to mitigate noise impacts.

GOAL S5: Reduced risk of injury, property damage and economic loss resulting from windstorms and wind-related hazards.

Policy S5-2 Dust Control Measures

We require the implementation of Best Management Practices for dust control at all excavation and grading projects.

The Specific Plan acknowledges that projects within the Specific Plan area shall comply with mitigation measures of the project environmental impact report, the construction management plan, and subdivision and development codes regarding dust control.

GOAL S6: Reduced potential for hazardous materials exposure and contamination.

Policy S6-9 Remediation of Methane

We require development to assess and mitigate the presence of methane, per regulatory standards and guidelines.

The Specific Plan acknowledges that projects within the Specific Plan area shall comply with mitigation measures of the project environmental impact report.

GOAL S7: Neighborhoods and commercial and industrial districts that are kept safe through a multi-faceted approach of prevention, suppression, community involvement, and a system of continuous monitoring.

Policy S7-4 Crime Prevention through Environmental Design (CPTED)

We require new development to incorporate CPTED in the design of streetscapes, sites, open spaces and buildings.

The Specific Plan acknowledges that projects within the Specific Plan area shall comply with the City's development review process, which provides for review by the City's Police Department and potential redesign to incorporate crime prevention design elements in streetscapes, sites, open spaces, and buildings. Parcel lighting (Chapter 5.6, Lighting) addresses illumination of parking lots, loading dock areas, pedestrian walkways, building entrances, signage, and architectural and landscape features. A key provision includes the installation of ground or low mounted fixtures to provide for safety and convenience along pedestrian walkways, entrances, activity areas, steps, ramps, and special features. Chapter 5.1, Site Design, also encourages delineation of pedestrian access to on-site buildings from adjacent streets and parking areas by marking building entrances with signage, prominent architectural features, and/or landscaping features.

7.6 Community Economics Element

GOAL CE1: A complete community that provides for all incomes and stages of life.

Policy CE1-1 Jobs-Housing Balance

We pursue improvement to the Inland Empire's balance between jobs and housing by promoting job growth that reduces the regional economy's reliance on out-commuting.

The Specific Plan anticipates the creation of jobs in warehousing, logistics, light manufacturing, and administration within the Specific Plan area, which helps improve the region's jobs-housing balance. Actual job creation depends on the type of land uses ultimately developed on the site as a wide-range of commercial, office, and industrial uses are permitted in the Specific Plan. The Land Use Plan (Chapter 3.1)

implements the vision of The Ontario Plan by providing opportunities for employment in manufacturing, distribution, research and development, service, and supporting retail at intensities designed to meet the demand of current and future market conditions.

Policy CE1-5 Business Attraction

We proactively attract new and expanding businesses to Ontario in order to increase the City's share of growing sectors of the regional and global economy.

In Chapter 3.1, Land Use Plan, the Specific Plan provides for the construction of over 3.1 million square feet of business park and industrial development in compliance with City and regional planning goals and strategies that facilitate goods movement throughout the SCAG region.

GOAL CE2: A City of distinctive neighborhoods, districts, and corridors, where people choose to be.

Policy CE2-1 Development Projects

We require new development and redevelopment to create unique, high-quality places that add value to the community.

The Specific Plan contains design guidelines in Chapter 5 to guide future development consistent with the vision for Ontario Ranch. The guidelines ensure high quality, cohesive and attractive development that complements and integrates into the community and adds value to the City. The Specific Plan also establishes landscape setbacks along the roadways within the Specific Plan area to create safe and attractive streets for pedestrians, cyclists, and motorists.

Policy CE2-2 Development Review

We require those proposing new development and redevelopment to demonstrate how their projects will create appropriately unique, functional and sustainable places that will compete well with their competition within the region.

The Specific Plan establishes a land use plan (Chapter 3.1) and design guidelines (Chapter 5) addressing site design, building design, and landscape design that ensure high-quality, functional and sustainable development that is regionally competitive and appropriate for the Ontario Ranch community.

Policy CE2-5 Private Maintenance

We require adequate maintenance, upkeep, and investment in private property because proper maintenance on private property protects property values.

The Specific Plan includes a Maintenance Responsibility Matrix (Chapter 6.11) identifying the public, private, or utility providers responsible for maintenance of roadways, parkways, trails, sidewalks, common areas, walls and monuments, infrastructure, and utilities within the Specific Plan area. A Property Owners Association will be established for the maintenance of on-site common areas, including such improvements as landscape areas and drive aisles.

Policy CE2-6 Public Maintenance

We require the establishment and operation of maintenance districts or other vehicles to fund the long-term operation and maintenance of the public realm whether on private land, in rights-of-way, or on publicly-owned property.

The Specific Plan includes a Maintenance Responsibility Matrix (Chapter 6.11) identifying the public, private, or utility providers responsible for maintenance of roadways, parkways, trails, sidewalks, common areas, walls and monuments, infrastructure, and utilities within the Specific Plan area. Right-of-way for public streets and infrastructure improvements within the Specific Plan area shall be dedicated to the City of Ontario for maintenance purposes. Landscape improvements and public streetlights within the public right-of-way shall be maintained through a landscape and lighting district or other special maintenance district established by the City. Dry utilities such as electricity, natural gas, and communication systems will be maintained by the appropriate utility company.
