	Adjacent Properties	The adjoining properties to the north, northeast, and east are depicted as undeveloped land. The adjoining property to the south is depicted as agricultural land. The adjoining properties to the west are depicted as having agricultural and undeveloped land with various structures.
2012	**Property**	No building development is depicted on the Topographic map.
	Adjacent Properties	No building development is depicted on the Topographic map.

4.4.4 Aerial Photograph Review

Hillmann obtained and reviewed an "EDR Aerial Photo Decade Package Report" from EDR containing historic aerial photography of the Property and adjoining properties. In addition, Hillmann reviewed historic aerial photographs of the Property online at www.historicaerials.com. The following interpretation of land usage was made by review of the aerial photographs:

YEAR(S)	DESCRIPTION	
1938	**Property**	The Property appears to be used as agricultural land with a small structure in the northwestern corner, and undeveloped land.
	Adjacent Properties	The adjoining property to the north appears to be used as agricultural land with a small structure in the southwestern corner, and undeveloped land. The adjoining property to the northeast, east, south, and west appear to be used as agricultural land.
1948	**Property**	The Property appears to be used as agricultural land for orchards and vineyards with a small structure in the northwestern corner, and undeveloped land. A well appears to be in the central portion along the western border.
	Adjacent Properties	The adjoining property to the north appears to be used as agricultural land and undeveloped land with a small structure in the southwestern corner. The adjoining properties to the northeast, south, and west appear to be developed with agricultural land. The adjoining property to the east appears to be undeveloped land.
1953, 1959, 1966, 1967	**Property**	The Property appears to be used as agricultural land for orchards and vineyards with undeveloped land on the northern portion of the Property. A well appears to be in the central portion along the western border.
	Adjacent Properties	The adjoining properties to the north and east appear to be undeveloped land. The adjoining property to the northeast appears to be undeveloped land and agricultural land. The adjoining properties to the south and west appear to be agricultural land.
1975	**Property**	The Property appears to be used as agricultural and vacant land.
	Adjacent Properties	The adjoining properties to the north, south, and west appear to be agricultural land. The adjoining properties to the northeast and east appear to be undeveloped land.
1985	**Property**	The Property appears to be a dairy on the northern portion of the Property and agricultural land on the southern portion of the Property.
	Adjacent Properties	The adjoining properties to the north appear to be vacant land. The adjoining properties to the north, northeast, east, and south appear to be agricultural land. The adjoining properties to the west appear to be vacant land and a residential home.
1989, 1990	**Property**	The Property appears to be a dairy on the northern portion of the Property and agricultural land on the southern portion of the Property.
	Adjacent Properties	The adjoining properties to the north appear to be residential homes under construction. The adjoining properties to the northeast, east, and south appear as agricultural land. The adjoining properties to the west appear with one residential home and vacant land.
1994	**Property**	The Property appears to be a dairy under development and agricultural land.
	Adjacent Properties	The adjoining properties to the north appear to be residential homes under development and single and residential homes already built. The adjoining properties to the northeast, east, and south appear to be agricultural land. The adjoining properties to the west appear to be agricultural land, vacant lots, and small residential homes.
2002	**Property**	The Property appears to be a dairy and agricultural land.
	Adjacent Properties	The adjoining properties to the north appear to be residential homes. The adjoining property to the northeast appears to be a school under development. The adjoining properties to the east and south appear to be used as agricultural land. The adjoining properties to the west appear to be a mix of agricultural land and vacant lots.

2005, 2006	**Property**	The Property appears to be a dairy and agricultural land.
	Adjacent Properties	The adjoining properties to the north appear to be residential homes. The adjoining property to the northeast appears to be a school. The adjoining properties to the east and south appear to be agricultural land. The adjoining properties to the west appear to be a mix of agricultural land and vacant lots.
2009, 2010, 2012	**Property**	The Property appears to be a dairy and agricultural land.
	Adjacent Properties	The adjoining properties to the north appear to be residential homes. The adjoining property to the northeast appears to be a school. The adjoining properties to the east appear to be residential homes under construction. The adjoining property to the south appears to be vacant land. The adjoining properties to the west appear to be a mix of agricultural land and vacant lots.

4.4.5 Petroleum/Natural Gas Well Review

Hillmann reviewed historical record sources for evidence of historic petroleum and/or natural gas wells at the Property. In addition, Hillmann conducted a search of the property location on the Division of Oil, Gas & Geothermal Resources Well Finder database (http://maps.conservation.ca.gov/doggr/index.html). No record of any historical petroleum/natural gas wells at the Property was identified.

4.4.6 Historical Records Data Failure

Historic land use data prior to 1896 was not readily available at the time of the assessment. The Property was determined by this assessment to have been first developed with a commercial building dating back to 1924. It is Hillmann's opinion that no significant data gaps were encountered.

4.4.7 Summary of Historic Use Research

The Property appears to have first been used as agricultural orchards in 1938 until a dairy was constructed on the northern portion of the Property in 1985. The dairy was listed as Northview Dairy and currently remains on the northern portion of the Property. By 2009, the southern portion of the Property changed from crops and orchards to undeveloped land. The Property currently resembles this configuration.

The adjoining properties appear to have been undeveloped until orchards were planted on the northeastern adjoining property. By 1975, the orchards were taken out and the land was vacant until more orchards were planted again in 1994. In 2002, Colony High School was under construction and fully built by 2005. The adjoining properties to the north appeared to be undeveloped land until 1975 when it was used for agricultural purposes. By 1985, the properties were under construction for residential homes which were fully built by 2005. The adjoining properties to the east first appeared as agricultural land in 1938 and remained until it was redeveloped with residential homes. The southern adjoining property first appeared as agricultural land in 1938 until it was turned into undeveloped land in 2006. The adjoining properties to the west first appear as agricultural land in 1938 until a residential home was built on the southern portion of the site. By 1985, the northern portion of the properties was converted

into vacant land until Fremontia Horticultural was present on the western adjoining properties in 2005.

5.0 SITE RECONNAISSANCE

5.1 Methodology and Limiting Conditions

The site reconnaissance consisted of visual and/or physical observations of the Property and improvements, adjoining properties as viewed from the Property boundaries and the surrounding area based on visual observations from adjacent public thoroughfares. Building exteriors were observed at ground level, unless otherwise indicated. Where applicable, Hillmann accessed and observed representative areas of building interiors to the extent they were made safely accessible with the cooperation of the site escort.

The site reconnaissance was conducted by Mr. Jonathan McConnell on July 12, 2016. Weather conditions at the time of the assessment included a temperature of approximately 77 degrees F and clear skies. Hillmann was escorted by Mr. Daryl Koops, Dairy Owner, with Northview Dairy.

5.1.1 Significant Inaccessible Areas

No significant areas were excluded from Hillmann's visual inspection.

5.2 General Site Setting

5.2.1 Site and Vicinity Characteristics

The Property consists of four rectangular and square shaped parcels on the south side of East Riverside Drive, between South Haven Avenue and Mill Creek Road. The Property is currently occupied by a dairy on the northern portion and vacant land on the southern portion. The total Property area is approximately 104.77 acres. The Property is located in a suburban developed area characterized by a mix of single and multi-family homes, plant nurseries, dairies, and a high school.

5.2.2 Topographic Characteristics

The terrain of the Property appeared to be relatively flat. No natural surface bodies of water were observed.

5.2.3 General Description of Structures

The Property is improved with approximately one 2,500 SF milk barn, one 3,000 SF equipment barn, and three homes of varying sizes. The property currently has five buildings located throughout the property. It was said that they were developed at the time of construction. The buildings are comprised of three houses, one milk processing facility, and a storage building. The first home located at 10601 is approximately 2,200 SF, the dairy processing facility is approximately 1,800 SF, the other home along of Riverside Drive is approximately 1,400 SF, the storage building is approximately 3,300 SF and the home on Haven Ave is approximately 1,300 SF. The buildings are set on a slab-on-grade foundation and have a roll on roof. The interior consists of typical home usages, equipment rooms, machinery, and maintenance rooms.

5.2.4 Sources of Heating and Cooling

Heating or cooling systems were present at the Property at the time of the assessment. All buildings with the exception of the dairy processing facility and storage building have a HVAC system that appeared to be fueled by natural gas at the time of the assessment.

5.2.5 Potable Water Source/Sewage Disposal System

The Property is currently not serviced by the municipal water and sewer systems. The water on the property comes from a well and grey water is recycled and used for livestock. The black water goes into septic systems throughout the property at each of the three homes.

5.2.6 Current Use(s) of the Property

The Property is currently used as a Dairy Farm. Hillmann did observe a leaching pond, several storage tanks, and a wastewater discharge area at the time of the site visit. The homes are currently occupied by family members of the owner. The storage building is used for farming equipment and contents storage. The sheds around the property are used for feed storage and farming equipment. Cattle pens are on the northern and central portion of the property with the reclamation pond towards the south then leaching ponds following.

5.2.7 Past Use(s) of the Property

No obvious indication of past Property usage likely to have involved the use, treatment, storage, disposal or generation of hazardous substances or petroleum products was observed at the time of the site visit. Please refer to Section 4.4 for findings of historical site use research.

5.2.8 Current Use(s) of the Adjoining Properties

The following describes adjacent and abutting properties:

Dir	Street Address	Description
N	2999 S. Haven St, 2943 Alder Creek Dr, 3551 – 3591 San Lorenzo River Rd., 3637 – 3655 San Lorenzo Rd., 2942 Tuolumne Pl	Residential homes and a preschool
NE	3850 E. Riverside Drive	Colony High School
E	3933, 3934 E. Bethany Way., 3936 E. Millcreek Paseo, 3936, 3933 E. Colony Paseo, 3250 S. Westmont Lane	Residential homes
S	No address assigned: APN: 0218-161-09-0000	Vacant land
W	13210 Haven Avenue	Plant nursery and vacant land

No visual observations indicative of a potential environmental concern were noted of the adjoining properties.

5.2.9 Past Use(s) of the Adjoining Properties

No indication of past uses of the adjoining properties was noted at the time of the site visit. Please refer to Section 4.4 for the findings of historical site use research.

5.2.10 Current/Past Uses of Surrounding Area

The Property is located in suburban area of Ontario, California. The vicinity of the Property consists of a mix of single and multi-family homes, plant nurseries, dairies, and a high school. No indications of past Property uses that differ substantially from current conditions were observed at the time of the site visit.

5.3 Interior & Exterior Observations

5.3.1 Storage/Usage of Hazardous Substances and Petroleum Products

The facility at the Property stored various hazardous materials including diesel fuel which was stored on the property in a large tank on front of the Property next to the milk barn. There was one large underground storage tank (UST) stored on the northern portion of the Property containing reclaimed water, one large UST stored on the western portion of the Property on Haven Ave said to be containing water for livestock, three large USTs were stored on the central portion of the Property containing molasses and old beer for livestock feed. In addition, several herbicides, lubricant containers, and other maintenance containers stored in manufacturer containers were observed on the Property. These features have the potential to represent an environmental concern to the Property and should be removed and disposed of in connection with site development activities.

5.3.2 Drums

Several drums were observed at the Property. All drums were observed to contain diesel fuel. There were no signs of leaking or spills near or around the drums. These features do not appear to represent an environmental concern to the Property but should be removed and disposed of in connection with site development activities.

5.3.3 Other Hazardous Substances/Petroleum Products

Storage of acid cleaners, zinc sulfate monohydrate powder, hydraulic fluid, used oil, and lubricants were all found within various storage areas around the Property.

5.3.4 Unidentified Substance Containers

No unidentified substance containers were observed on the Property at the time of the site visit.

5.3.5 Storage Tanks

Several unregulated underground storage tanks (USTs) and aboveground storage tanks (ASTs) were identified on the subject Property. Three USTs of approximately 8,000-gallon capacity each stored molasses on the Property. In addition, one 8,000-gallon UST containing beer used for feed for livestock, two 5,000-gallon UST of water, and one 5,000-gallon UST of reclaimed water were identified. One 1,000-gallon AST containing diesel fuel stored on a trailer was observed on the Property.

5.3.6 Polychlorinated Biphenyls (PCBs)

Three (3) pole-mounted transformers were present within the north and eastern side of the Property. No leaking or surface staining was observed around the vicinity of the transformers. The transformers do not represent a REC in relation to the Property.

5.3.7 Odors

Strong, unusual or pungent odors were noted on the Property all around the cattle pens and around the ponds. This is likely due to the off gases from decomposing fecal matter.

5.3.8 Pools of Liquid

One large pool of water was observed at the southern end of the dairy which is used as a leaching pond. The water reclamation and drainage is done through a series of piping and a screening of the water to remove fecal matter. The fecal matter is recycled by the owner for landscaping uses by a third party company. The pond appeared to be made of concrete material and appeared to not be lined. From the screening pond the liquid goes into the leaching ponds in the southern most portion of the Property.

5.3.9 Interior Stains or Corrosion

De minimis staining was observed on the pavement and soil in various locations at the Property. No interior stains or corrosion were noted at the Property. These features do not represent an environmental concern to the Property.

5.3.10 Interior Drains/Sumps

No floor drains or sump pits were noted at the Property.

5.3.11 Exterior Pits/Ponds/Lagoons

No evidence of exterior pits, ponds or lagoons was identified on the Property in connection with waste treatment or disposal, except as noted in section 5.3.8.

5.3.12 Stained Soil, Pavement/Stressed Vegetation

Significant soil staining was observed in the vicinity of the operational and unused air compressors along the northeastern exterior wall of the garage.

5.3.13 On-Site Solid Waste Dumping/Fill Material

Three locations of solid waste dumping was noted within a City of Ontario Assessor's Map. On the central portion of the Property, three locations of buried tree stumps, concrete rip rap, and buried construction debris are noted.

5.3.14 Wastewater

Water was observed to being drained from pipes into a leaching pond. The leaching pond has the potential to be an environmental concern due to elevated levels of contaminants.

5.3.15 Septic Systems

One (1) septic maintenance service was observed for a septic tank on the Property of the main house on the north. Hillmann was notified that the site had additional septic systems for the other two houses.

5.3.16 Wells

One (1) water well was observed on the north central portion of the Property at the time of the site visit. Well water is only used as a water supply was pumped into an above ground storage tank (AST) for potable water and cattle on the Property.

6.0 INTERVIEWS

6.1 Interviews with Past and Present Owners and Occupants

Type	Name; Affiliation/Title	Summary
Property Owner	Mr. John Schafer, Senior Vice President, Richland Ventures, Inc.	Mr. John Schafer was provided with an environmental questionnaire with instructions to have it completed by a party knowledgeable of the Property. Pertinent information, where obtained, is referenced in the appropriate sections of the report.
Property Occupants	Not applicable	Hillmann was not allowed to interview individual building occupants.
Past Owners, Occupants, Operators	Not applicable	Past owners/occupants of the Property were not available for interview at the time of the assessment.
Owners/Occupants of Adjacent or Nearby Properties	Not applicable	The Property was not an abandoned property with evidence of unauthorized uses or uncontrolled access; therefore, interviews with adjacent or nearby property owners or occupants were not conducted.

6.2 Interviews with State and/or Local Government Officials

Written and on-line requests for environmental records of the Property from State and Local governmental agencies are detailed in Section 4.2.2.

7.0 NON-ASTM SCOPE CONCERNS

In accordance with our contract agreement, Hillmann has conducted preliminary evaluations of the following "Non-ASTM Scope Considerations" that are outside of the requirements of the ASTM E1527-13 standard:

7.1 Asbestos-Containing Material (ACM)

Considering the dates of construction of the existing buildings, asbestos containing materials (ACM) may be present at the Property. Suspected ACM observed during a preliminary visual screening included roofing materials, plaster walls, drywall, ceiling tiles, cove base, adhesive, and stucco in the dairy facility and houses. It is possible that additional quantities of suspect ACM may exist in enclosed areas or areas not accessed during the assessment. It is emphasized that this limited screening does not constitute a comprehensive asbestos survey of the premises and is meant only to provide a preliminary evaluation regarding the potential presence of ACM at the Property.

7.2 Lead-Based Paint

Considering the dates of construction of the dairy facility and houses, lead-based paint does not seem to be present at the Property. In general, interior painted surfaces within the space were observed to be in fair condition. It is emphasized that this limited screening does not constitute a comprehensive lead-based paint survey of the premises and is meant only to provide a preliminary evaluation regarding the potential presence of LBP at the Property.

7.3 Radon

According to data compiled by the USEPA, as summarized by the EDR Radius Map Report with GeoCheck, the Property is located in an area with a moderate potential for radon concentrations that exceed current USEPA action guidelines. The County of San Bernardino is classified as a Zone 2 or 'moderate risk' area for radon. Accordingly, radon is unlikely to represent an environmental concern to the Property.

7.4 Mold

During the assessment, Hillmann conducted a preliminary inspection of the accessed areas of the building for evidence of excessive or amplified mold growth, or for conditions favorable for mold growth. No obvious evidence of excessive or amplified mold growth, or conditions favorable for mold growth, was observed on the Property during the site assessment.

7.5 Wetlands

Based on a review of the EDR Radius Map Report with GeoCheck, no NWI mapped wetlands were indicated at the Property.

It is emphasized that the absence of NWI mapped wetland areas indicated by the EDR report does not necessarily rule out the potential presence of regulated wetland areas on or immediately

adjoining the Property. A wetland delineation should be sought from a qualified firm if a more comprehensive determination regarding the presence or absence of wetlands on or adjacent to the Property is warranted.

8.0 ENVIRONMENTAL PROFESSIONAL STATEMENT

I declare that, to the best of my professional knowledge and belief, I meet the definition of *Environmental Professional* as defined in §312.10 of 40 CFR 312. I have the specific qualifications based on education, training and experience to assess a *property* of the nature, history and setting of the subject *property*. Hillmann has developed and performed all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

QUESTIONNAIRES/USER PROVIDED INFORMATION

HILLMANN
CONSULTING

ENVIRONMENTAL DUE DILIGENCE – USER QUESTIONNAIRE

For Landowner Liability Protections (LLPs) offered by the Small Business Liability Relief and Brownfields Revitalization Act of 2001 (the "Brownfields Amendments"), the *report user* must provide the following information (if available) to the environmental professional. As per the Brownfields Amendments, failure to provide this information could result in a determination that "all appropriate inquiry" is not complete. Please complete the following questionnaire and provide any of the referenced information (if available) to Hillmann.

Respondent Name:	JOHN H. SCHAFER
Company/Affiliation:	BUYER REPRESENTATIVE
Address:	3161 MICHELSON DR., A 425, IRVINE, CA 92612
Response Date:	7-11-16

1. Environmental Cleanup Liens
Are you aware of any environmental cleanup liens against the property that are filed or recorded under federal, tribal, state or local law?

Yes ☐ *No* ☑

2. Activity and Land Use Limitations
Are you aware of any AULs, such as engineering controls, land use restrictions or institutional controls that are in place at the site and/or have been filed or recorded in a registry under federal, tribal, state or local law?

Yes ☐ *No* ☑

3. Specialized Knowledge or Experience
Do you have any specialized knowledge or experiences related to the property, nearby properties, or are you involved in the same line of business as the current or former occupants of the property or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business?

Yes ☐ *No* ☑

4. Purchase Price vs. Fair Market Value
Does the purchase price being paid for this property reasonably reflect the fair market value of the property?

Yes ☑ *No* ☐

HILLMANN
CONSULTING

5. Commonly Known or Reasonably Ascertainable Information
Are you aware of commonly known or reasonably ascertainable information about the property that would help the environmental professional to identify conditions indicative of releases or threatened releases?

Yes □ *No* ☒

5a. Do you know the past uses of the property?

Yes □ *No* ☒

5b. Do you know of specific chemicals that are present or were once were present at the property?

Yes □ *No* ☒

5c. Do you know of spills or other chemical releases that have taken place at the property?

Yes □ *No* ☒

5d. Do you know of any environmental cleanups that have taken place at the property?

Yes □ *No* ☒

6. Obviousness of the Presence or Likely Presence of Contamination
As the user of this ESA, based on your knowledge and experience related to the property are there any obvious indicators that point to the presence or likely presence of contamination at the property?

Yes ☒ *No* □

HILLMANN
CONSULTING

Instructions: Please answer each question. Check "D/K" if you don't know, or otherwise lack sufficient knowledge of the Property to answer the question.

	PREVIOUS INVESTIGATIONS	
1.	Have any previous environmental investigations (e.g.- Phase I Environmental Site Assessment, soil/groundwater testing, radon testing, asbestos survey, tank closure/removal reports, etc.) been performed at the Property?	☑ Yes ☐ No ☐ D/K
2.	If yes, what concerns were indicated or recommendations made? *(please provide a copy of all previous environmental reports)* None. Fuel Tanks Removed & Groundcont. Fixed	
	PROPERTY USAGE	
3.	To the best of your knowledge, is the Property or any adjoining property currently occupied or formerly occupied for industrial purposes? If yes, please elaborate:	Property: ☐ Yes ☒ No ☐ D/K Adj. Property: ☐ Yes ☐ No ☐ D/K
4.	Is the property or any adjoining property currently used, or have they ever been used, as a gasoline filling station, dry cleaning facility, automotive service/repair shop, auto body repair shop, commercial printing facility, photo development laboratory shop, junkyard, landfill, or as a waste treatment, storage disposal, recycling or processing facility? If yes, please elaborate:	Property: ☐ Yes ☒ No ☐ D/K Adj. Property: ☐ Yes ☐ No ☐ D/K
5.	Have any hazardous substances or petroleum products, unidentified waste materials, tires, automotive or industrial batteries, or any other waste materials been dumped above grade, buried and/or burned on the property?	☐ Yes ☒ No
	BULK STORAGE TANKS	
6.	Are there currently, or have there been previously, any registered or unregistered above ground or underground storage tanks located at the Property? *If YES, please provide number, size, age of tanks, permits, closure reports, regulatory agency correspondence, and related information.*	Current Tanks: ☒ Yes ☐ No ☐ D/K Previous Tanks: ☐ Yes ☐ No ☐ D/K
7.	Are there currently, or have there been previously, any vent pipes, or access ways indicating a fill pipe protruding from the ground on the property or adjacent to any structure located on the property?	Current: ☐ Yes ☒ No ☐ D/K Previous: ☐ Yes ☐ No ☐ D/K
8.	Are there currently, or have there been previously, any leakage of hazardous substances or petroleum products from above ground or underground storage tank systems at the Property?	Current: ☐ Yes ☒ No ☐ D/K Previous: ☐ Yes ☐ No ☐ D/K

HILLMANN
CONSULTING

	SPILLS, RELEASES, WASTES	
9.	Are there currently, or have there been previously, any waste discharges on or adjacent to the property, other than storm water or into a municipal sanitary sewer system? If yes, please elaborate:	Current: ☐ Yes ☒ No ☐ D/K Previous: ☐ Yes ☐ No ☐ D/K
10.	Are there currently, or have there been previous, any septic systems, dry wells or leach fields on the property? If yes, please elaborate: 3 Septic Tanks Adjoining the Homes	Current: ☑ Yes ☐ No ☐ D/K Previous: ☐ Yes ☐ No ☐ D/K
11.	Are there currently, or have there been previously, any flooring, drains or walls located within the facility that are, or have been, stained by substances (or, in the case of drains, used for) other than water or are emanating foul odors? If yes, please elaborate:	Current: ☐ Yes ☒ No ☐ D/K Previous: ☐ Yes ☐ No ☐ D/K
12.	Are there currently, or have there been previously, any spills or releases of hazardous substances or petroleum products within the building(s) or on the exterior of the Property?	Current: ☐ Yes ☒ No ☐ D/K Previous: ☐ Yes ☐ No ☐ D/K
13.	Has any non-native and/or contaminated fill material been deposited on the Property?	☐ Yes ☒ No ☐ D/K
14.	Have any current or former property occupants generated hazardous wastes or other wastes (such as waste oil, or medical wastes) that required non-conventional storage, handling and/or disposal methods? *If YES, please indicate type of waste and the name of the waste handling contractor:*	☐ Yes ☒ No ☐ D/K
	TRANSFORMERS/HYDRAULIC EQUIPMENT	
15.	Are any power transformers, capacitors or hydraulic equipment present at the Property? If yes, please elaborate: 3 Distribution Transformers Pole Mounted	☒ Yes ☒ No ☐ D/K
16.	If power transformers are present, who owns them? Southern Calif Edison	☒ Yes ☐ No ☐ D/K
17.	If hydraulic equipment is present, indicate age of equipment and name/telephone # of service contractor:	☐ Yes ☐ No ☐ D/K
	REGULATORY DISCLOSURE	
18.	Have there been any environmental liens or governmental notification or involvement relating to past or current use or disposal of hazardous substances with respect to the property of any facility or structure located on the property?	☐ Yes ☒ No ☐ D/K

HILLMANN
CONSULTING

19.	If the property is served by a private well or non-public water system, have contaminants been identified in the well or system that exceed guidelines applicable to the water system, or has the well been designated as contaminated by any government environmental/health agency? *(If not applicable, please check NO)*	☐ Yes ☒ No ☐ D/K
20.	Is there any environmental litigation, administrative action or cleanup action involving the property related to a release or threatened release of any hazardous substance or petroleum product?	☐ Yes ☒ No ☐ D/K
21.	Are you aware of testing of any environmental media (soil, groundwater, surface water, etc.) at the property which identified levels of contaminants in excess of regulatory standards and/or cleanup guidelines?	☐ Yes ☒ No ☐ D/K
	ENVIRONMENTAL/BUILDING CONDITIONS

SUBJECT: REMOVAL OF FOUR UNDERGROUND STORAGE TANKS AT 10601 RIVERSIDE DRIVE, ONTARIO

The Department has received the sample results and/or closure report submitted by A & E INC dated March 7, 1996 and reviewed June 23, 1999. After review of the reports prepared by you or your agent, it has been determined that the extent of contamination or lack thereof would indicate that no further investigation is warranted at this time.

It is important to note that this can not be construed as a release of liability for the site or declaration that the site is free from contamination. Should further projects or environmental investigations reveal additional contaminants site you will be responsible and held liable for the investigation and remedial actions.

If you have any questions, please call (909) 387-3082.

Executive Summary

a) On February 16, 1996, A&E removed four underground storage tanks (USTs) from the Northview Dairy Farm, at 10601 Riverside Drive, in the County of San Bernardino, California (Appendix A, Figures A1 and A2). Two of the USTs had each had a capacity of 4,000 gallons and had been used to store gasoline. The other two USTs had each had a capacity of 6,000 gallons and had been used to store diesel-fuel. There were three dispenser units and only small amounts of plumbing associated with the USTs (Appendix A, Figure A3).

b) A&E saw no visual evidence of contamination in the soil surrounding the USTs and noticed no significant unnatural odors in those soils. A&E observed that each of the USTs was in excellent condition when removed from the ground.

c) A&E collected a total of 10 soil samples from beneath the ends of the USTs and the dispenser unit area. The laboratory analyzed the sample for various fuel components (gasoline, diesel-fuel, BTEX, MTBE, and/or lead) and reported no detection of any of the fuel-related compounds in any of the 10 soil samples, except for a small and insignificant amount of lead in one of the samples.

d) A&E concludes that there was no significant contamination of the subsurface soils by any of the USTs, or their related plumbing. A&E recommends that this case be closed with no further work required.

1. INTRODUCTION

A&E Inc. presents in this report, and on behalf of its client, Mr. Frank Hilarides and the Northview Dairy, its observations and evaluation of field and laboratory data generated from the removal of four underground storage tanks. The tanks were located at the dairy facility at 10601 Riverside Drive in the unincorporated part of San Bernardino, California (Appendix A, Figure A1).

2. GEOLOGY

a) The site is shown on the USGS Guasti Quadrangle Map at an approximate elevation of 980 feet above mean sea level. It is shown approximately 1.1 miles westerly of a small extension of the Jurupa Mountains, and approximately 6 miles southeast of the closest extension of the San Bernardino Mountains. The site is in an area where the surface drainage appears to be towards the south.

b) According to a soil survey conducted by the Soil Conservation Service, of the United States Department of Agriculture, the soil at the subject site is classified as Delhi fine sand from the Delhi Series. According to the survey, the soil is granitic material of alluvial fans. The soil typically is excessively drained with very slow run-off. The soil consists of fine sand with a small silt content.

c) There is a groundwater well at the site approximately 50 feet northeast of the UST area. Groundwater was last measured at a depth of approximately 190 feet below surface elevation.

3. UST REMOVAL ACTIVITIES

The UST removal consisted of two distinct activities: the field work and laboratory analysis. A&E used procedures required by the Chino Valley Fire Department (CVFD), the San Bernardino County Fire Department (SBCFD), and the County of San Bernardino Department of Environmental Health Services (SBEH), to perform those activities. The field work to remove the USTs occurred on February 22 and 23, 1996. The Chino Valley Fire Department permit is shown in Appendix B. The SBEH approved plans are shown in Appendix C.

3.1 **FIELD**

a) On February 22, 1996, Maness Environmental Services performed the preliminary field work for the removal of the four USTs at the subject site. There was some remaining liquid in the four USTs, which was evaluated as gasoline, diesel-fuel, and/or water. The contents of the UST were pumped out by vacuum truck. The truck was owned and operated by Foss Environmental. Foss pumped a total of approximately 2025 gallons of fuels and water from the USTs. The fluid was transported to the treatment facility of Demenno Kerdoon, in Compton, California. The fluid was transported under hazardous-waste manifest, No. 95543181 (Appendix D, Hazardous-Waste Transportation Manifest) and Generator's US EPA ID No. CAL000009126.

b) The gasoline USTs were then de-gasses by Maness. When the internal atmosphere of all of the USTs were each recorded as 0%. They were then triple-rinsed by Maness and the rinseates then vacuumed from the USTs by Foss. The rinseate was transported to the treatment facility of Crosby and Overton as non-hazardous waste under the same Generator's number.

c) On Friday, February 23, 1996, at approximately 08:30 a.m., Inspector David Jensen of the CVFD, and Inspector Curtis Armstrong, of the SBCFD arrived at the site. At 09:00 a.m. Maness again measured the combustibility of the internal atmosphere of each of the USTs. The atmospheres each registered as 0% on the LEL meter and dry ice was then placed in the USTs. The USTs were then removed from the ground using a crane and under the watchful eyes of both inspectors Jensen and Armstrong. The USTs were inspected by A&E as they were removed from the ground. The two USTs that had been used to store gasoline were loaded on to a truck a hauled to the disposal facility of American Metal Recycling, Inc. (Appendix E, Tank Disposal Certificate).

d) The two USTs that had been used to store diesel-fuel were kept at the site. Both of the USTs were going to be used by the dairy for storage of feed-stock for animals at the dairy. Authorization for use of the USTs as storage vessels for the feed-stock was given by the County of San Bernardino Fire Department. The letter of authorization is shown in Appendix F.

e) A&E collected ten soil samples for laboratory analysis under the direction and witness of Inspector Armstrong. One soil sample was collected at a depth of two feet below each end of each of the USTs (8 total), one sample was collected from a depth of approximately 18 inches below the diesel-fuel dispenser unit, and one from approximately 18 inches beneath the area of the two gasoline dispenser units (Appendix A, Figure A3).

f) A&E collected the soil samples in pre-cleaned brass tubes. The tubes were driven into soil collected from the bottom of the excavations by the backhoe (as directed by Inspector Armstrong). The ends of the tubes were then lined with aluminum foil and capped with plastic end-caps. Each sample was then put in a cooler for transportation to a laboratory facility. A&E delivered them, under chain-of-custody (Appendix G, Laboratory Test Results and Chain-of-Custody), to the laboratory facility of Jones Environmental Laboratory, located in Fullerton, California. The laboratory facility of Jones Environmental Laboratory has been certified by the Department of Health Services of the State of California.

g) After the samples were collected the excavation was filled with the previously excavated material. The excavation area is unpaved at this time.

3.2 LABORATORY

A&E submitted the soil samples collected from the site to the laboratory and had each of those samples collected beneath the USTs that had stored diesel fuel, and the related plumbing and dispenser unit analyzed by the following EPA test methods:

- 8015M for Total Extractable Petroleum Hydrocarbons, as diesel fuel (TEPH)
- 8020 for the volatile aromatic compounds Benzene, Toluene, Ethylbenzene, and Xylenes (BTEX)

A&E submitted the soil samples collected from the site to the laboratory and had each of those samples collected beneath the USTs that had stored gasoline, and the related plumbing and dispenser units by the following EPA test methods:

- 8015M for Total Volatile Petroleum Hydrocarbons, as gasoline (TVPH)
- 8020 for the volatile aromatic compounds Benzene, Toluene, Ethylbenzene, and Xylenes (BTEX), and for Methyl Tert-Butyl Ether (MTBE).
- 6010 for TTLC Lead (Pb)

4. RESULTS

4.1 FIELD

a) The native soil at the site was a silty sand. It was moderately dense, damp to moist, and medium brown in color. There was no apparent staining of the soil, or significant volumes of unnatural odors in the soil.

b) A&E inspected each of the USTs as they were removed from the ground. Most of the identification tags were not recoverable. Each of the USTs appeared to be in excellent condition with no significant corrosion or holes.

4.2 LABORATORY

The laboratory reported no detected concentrations of diesel-fuel or gasoline in any of the 10 samples analyzed. The laboratory also reported no detected concentrations of benzene, toluene, ethylbenzene, xylenes, or methyl tert-butyl ether in any of the ten soil samples. The laboratory reported a small concentration of lead in one of the samples, however, that reported concentration was well within normal ranges for soil. The laboratory reports are shown in Appendix F, and are summarized in Table 1.

5. CONCLUSIONS

A&E believes that there has been no significant release of fuels to the subsurface soil at the subject site. The field observations and the laboratory reports indicated that the USTs, the plumbing, and the dispenser units did not leak, and that there was no significant release of fuel to the soil from over-spill.

6. RECOMMENDATIONS

A&E recommends that this site be closed with no further work required.

Table 1
Summary of Laboratory Test Results

Sample ID	Depth	Diesel-fuel (mg/Kg)	Gasoline (mg/Kg)	Volatile Aromatic Compounds (ug/Kg)				MTBE (mg/Kg)	Lead mg/L
				Benzene	Toluene	Ethylbenzene	Xylenes

CHINO VALLEY FIRE DEPARTMENT
PERMIT

CHINO VALLEY INDEPENDENT FIRE DISTRICT

FIRE PROTECTION STANDARDS

REMOVAL OF UNDERGROUND FUEL STORAGE

The 1988 Uniform Fire Code, Section 79.115, "Abandonment and Status of Tanks", states:

The removal of underground fuel storage tanks is required after being out of service for a period of one year, and the following guidelines shall be used:

1. The applicant shall obtain a permit from the Fire Prevention Division.

2. An inspection, approval and permit from the San Bernardino County Environmental Health Services is required. A site plan shall be provided to the Fire Prevention Division prior to removal showing the tank location, tank size and contents of the tank(s) to be removed.

3. The removal of all residual liquids, solids or sludges shall be accomplished prior to removal.

4. The hole created by the removal of the tank shall be properly filled (check with the local Building Department on possible compaction requirements). If the hole must be left uncovered, a temporary barrier shall be provided around the perimeter to prevent injuries or falls into the hole.

5. The tank shall be made inert by using 15 pounds of dry ice for each 1,000 gallons tank capacity and eliminating all ignition sources in the area.

6. An inspection by the Fire Prevention Division is required and shall include obtaining the U.L. label.

7. The proper disposal of the tank is required per San Bernardino County Environmental Health Services and Department of Transportation.

8. Abandonment in place is not permitted unless approved in writing by the Fire Marshal and San Bernardino County Environmental Health Services.

NOTE: The State of California has determined that tanks used for the storage of any hazardous or flammable substance shall be considered hazardous waste when all contents have been removed.
All storage tanks shall be hauled as hazardous waste, accompanied by a state hazardous waste manifest, and taken to a licensed treatment, storage and disposal facility (TSDF) or the tanks are triple rinsed on site and the rinsate manifested and hauled to a licensed TSDF. The tank then can be recycled as nonhazardous.
For information on licensed TSDFs that can accept nonhazardous tanks, contact the State of California Department of Health Services, Toxic Substances Control at (800) 358-5342.

ANDRE LAMONTAGNE
A & C INC.
17111 GOLDENWEST SUITE B4
HUNTINGTON BEACH, CA 92647

SUBJECT: RE-USE OF UNDERGROUND STORAGE TANKS

Dear Mr. Lamontagne,

Regarding our conversation on the 21st about the underground storage tanks for diesel fuel situated on the property of Northview Dairy, located at 10601 Riverside Drive in the unincorporated county area south of Ontario:

Once the tanks have been uncorked, with the San Bernardino County Fire Department Hazardous Materials Management Field Services personnel in attendance as required, and with removal criteria met, i.e., triple rinse, etc.; provisional control of the tanks then passes to and becomes complete control under the auspices of the property/tank(s) owner.

Our conversation meets the requirement of California Code of Requirements Title 23, Division 3, Chapter 16, Article 7, Section 2672 (b)(4):

"An owner of an underground storage tank or any part thereof that is destined for a specific re-use shall advise the local agency, within the time frame specified by that agency, of:

(A) The name of the new owner (NA)
(B) Name of the new operator (NA)
(C) The location of use; and - noted
(D) Nature of use - noted

for notification of the LIA (local implementing agency), Hazardous Materials Management of the Fire Department.

Sincerely,

MICHAEL D. RUDDLESTON, Fire Prevention Supervisor
San Bernardino County Fire Department

SUBJECT: REMOVAL OF FOUR UNDERGROUND STORAGE TANKS AT 10601 RIVERSIDE DRIVE, ONTARIO

The Department has received the sample results and/or closure report submitted by A & E INC dated March 7, 1996 and reviewed June 23, 1999. After review of the reports prepared by you or your agent, it has been determined that the extent of contamination or lack thereof would indicate that no further investigation is warranted at this time.

It is important to note that this can not be construed as a release of liability for the site or declaration that the site is free from contamination. Should further projects or environmental investigations reveal additional contaminants site you will be responsible and held liable for the investigation and remedial actions.

If you have any questions, please call (909) 387-3082.

Dear Frank

As you can see the project came in under budget (the subtotal), although just barely However, the over-all cost of the project was more than the proposal. That of course was due to the large amount of product that was in the USTs upon our arrival As well, The China Valley Fire Department did require some additional lead tests that were not anticipated A&E thanks you for providing us with the work and if we can be of any further assistance please call me at (714) 847-3436 Thank you

Sincerely,

Andre LaMontagne

Certificate of Treatment/Recycling

ISSUED TO: Matthews Water

FOR

MANIFEST NUMBER 95543181 DATE RECEIVED 2/22/96

The aqueous waste received on the above manifest will be treated to standards mandated by the FEDERAL CLEAN WATER ACT and to effluent requirements established by the Sanitation Districts of Los Angeles County. Waste Treatment and recycling is performed under permits granted to DeMENNO/KERDOON, a California corporation, by the California Department of Health Services, in coordination with the Environmental Protection Agency, in accordance with the provisions of the Resource Conservation and Recovery Act (RCRA) of 1976, together with applicable federal and state regulations including but not limited to waste discharge requirements established by the Sanitation Districts of Los Angeles County.

When the above described waste material is accepted by DeMENNO/Kerdoon and treated/recycled and the aqueous phase discharged for further treatment by the Sanitation Districts, the certificate holder's responsibility for the waste material is eliminated under both RCRA and Proposition 65. Upon request, DeMENNO/KERDOON will issue this certificate that all waste material has been handled in accordance with applicable permits and the certificate holder's liability has been terminated.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Hillmann Environmental Co. were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Certified Sanborn Results:

Certification # A66B-4CAF-9360

PO # NA

Project C3-6603

UNMAPPED PROPERTY

This report certifies that the complete holdings of the Sanborn Library, LLC collection have been searched based on client supplied target property information, and fire insurance maps covering the target property were not found.

Sanborn® Library search results

Certification #: A66B-4CAF-9360

The Sanborn Library includes more than 1.2 million fire insurance maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow and others which track historical property usage in approximately 12,000 American cities and towns. Collections searched:

- ☑ Library of Congress
- ☑ University Publications of America
- ☑ EDR Private Collection

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1922 through 2013. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 660 feet of the target property.

A summary of the information obtained is provided in the text of this report.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

State- and tribal - equivalent CERCLIS

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 05/02/2016 has revealed that there is 1 ENVIROSTOR site within approximately 1 mile of the target property.

Lower Elevation	Address	Direction / Distance	Map ID	Page
CHAFFEY HIGH SCHOOL Facility Id: 36000007	***EDISON AVENUE / HAVE***	***S 1/2 - 1 (0.999 mi.)***	***12***	***20***

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected

listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there is 1 EDR Hist Auto site within approximately 0.125 miles of the target property.

Site 1 of 5 in cluster A

Actual:
789 ft.

WDS:

Facility ID:	Santa Ana River 365124001
Facility Type:	Agricultural - Facility that treats and/or disposes of the wastes associated with confined and concentrated animal feeding, confined animal feeding, confined animal holding, confined and concentrated aquatic animal production facilities, and aquaculture. the treatment and/or disposal of agricultural return water is included in this category.
Facility Status:	Active - Any facility with a continuous or seasonal discharge that is under Waste Discharge Requirements.
NPDES Number:	CAG018001 The 1st 2 characters designate the state. The remaining 7 are assigned by the Regional Board
Subregion:	8
Facility Telephone:	Not reported
Facility Contact:	FRANK HILARIDES
Agency Name:	HILARIDES FRANK
Agency Address:	10601 RIVERSIDE DR
Agency City,St,Zip:	ONTARIO 917612602
Agency Contact:	FRANK HILARIDES
Agency Telephone:	Not reported
Agency Type:	Private
SIC Code:	241
SIC Code 2:	Not reported
Primary Waste Type:	Nonhazardous Solid Wastes/Influent or Solid Wastes that contain nonhazardous putrescible and non putrescible solid, semisolid, and liquid wastes (E.G., garbage, trash, refuse, paper, demolition and construction wastes, manure, vegetable or animal solid and semisolid waste).
Primary Waste:	STORMS
Waste Type2:	N
Waste2:	Stormwater Runoff
Primary Waste Type:	Nonhazardous Solid Wastes/Influent or Solid Wastes that contain nonhazardous putrescible and non putrescible solid, semisolid, and liquid wastes (E.G., garbage, trash, refuse, paper, demolition and construction wastes, manure, vegetable or animal solid and semisolid waste).
Secondary Waste:	Solid Wastes
Secondary Waste Type:	Nonhazardous Solid Wastes/Influent or Solid Wastes that contain nonhazardous putrescible and non putrescible solid, semisolid, and liquid wastes (E.G., garbage, trash, refuse, paper, demolition and construction wastes, manure, vegetable or animal solid and semisolid waste).
Design Flow:	0
Baseline Flow:	0
Reclamation:	No reclamation requirements associated with this facility.
POTW:	The facility is not a POTW.
Treat To Water:	Moderate Threat to Water Quality. A violation could have a major adverse impact on receiving biota, can cause aesthetic impairment to a significant human population, or render unusable a potential domestic or municipal water supply. Awsthetic impairment would include nuisance from a waste treatment facility.
Complexity:	Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best

NORTHVIEW DAIRY (Continued) **S103439150**

management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Cost Recovery Closeout Memo
Completed Date: 08/16/2012
Comments: Closeout memo for Revised PEA Determination re: change in Site boundaries; NFA

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Preliminary Endangerment Assessment Workplan
Completed Date: 01/18/2006
Comments: Field Work Scheduled for 1/12/06 and 1/13/06

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Preliminary Endangerment Assessment Report
Completed Date: 07/03/2006
Comments: DTSC issued a No Further Action determination based on a Preliminary Environmental Assessment Report.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Preliminary Endangerment Assessment Report
Completed Date: 06/06/2007
Comments: DTSC received notice on 5/25/2007, that site boundaries had changed. Based on a site visit on 5/23/2007, and information provided, DTSC issued a No Further Action determination for the additional site areas.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Cost Recovery Closeout Memo

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 03/07/2016

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 03/07/2016

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 03/07/2016

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

State- and tribal - equivalent CERCLIS

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites
Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

HIST FTTS INSP: FIFRA/TSCA Tracking System Inspection & Enforcement Case Listing
A complete inspection and enforcement case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants
The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historic Gas Stations
EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

EDR Hist Cleaner: EDR Exclusive Historic Dry Cleaners

EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 07/30/2013
Date Data Arrived at EDR: 08/19/2013
Date Made Active in Reports: 10/03/2013

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes

USGS TOPOGRAPHIC MAP

Target Property Map:	5620426 GUASTI, CA
Version Date:	2012
South Map:	5640930 CORONA NORTH, CA
Version Date:	2012

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

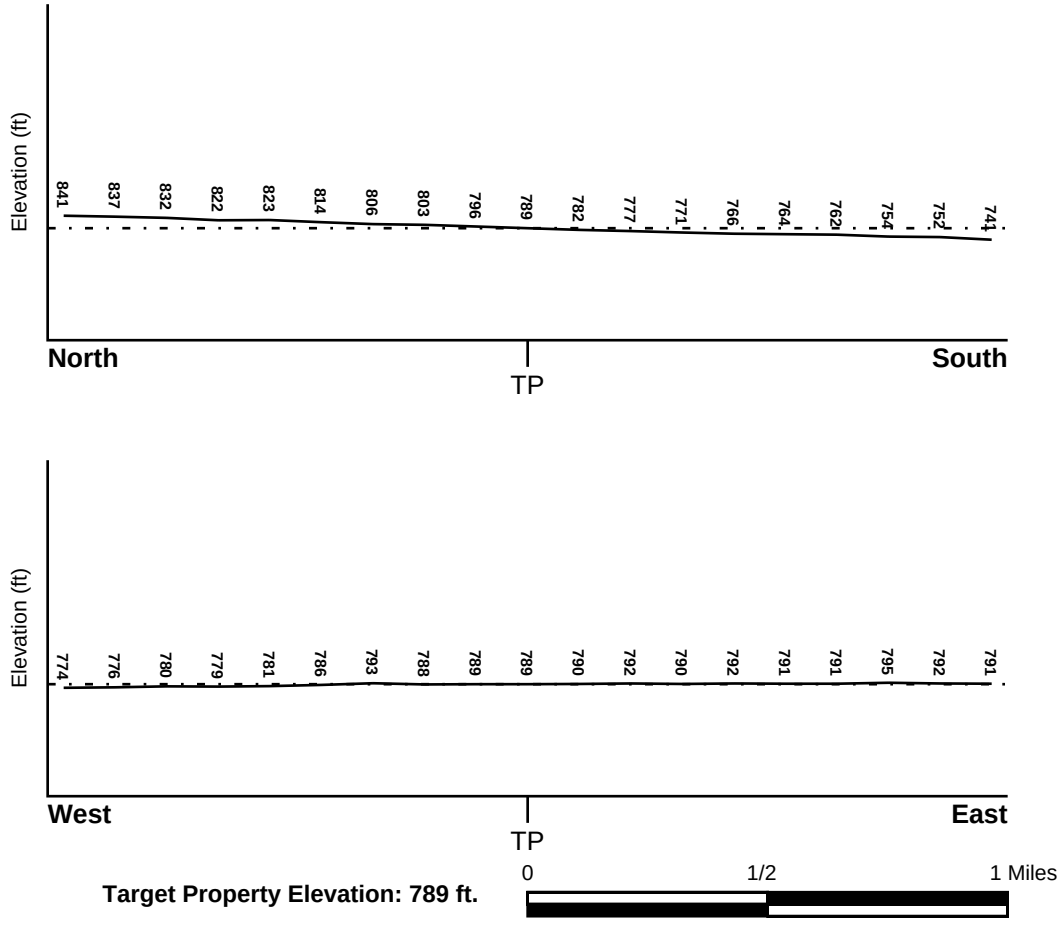
1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).



TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General South

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Target Property County	FEMA Flood Electronic Data
SAN BERNARDINO, CA	YES - refer to the Overview Map and Detail Map

Flood Plain Panel at Target Property: 06071C - FEMA DFIRM Flood data

Additional Panels in search area: 06065C - FEMA DFIRM Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
GUASTI	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Location Relative to TP:	1/2 - 1 Mile ENE
Site Name:	Milliken San Ldfl
Site EPA ID Number:	CAD980695076
Groundwater Flow Direction:	Southwest
Measured Depth to Water:	200 feet to 240 feet.
Hydraulic Connection:	Information is not available about the hydraulic connection between aquifer(s) underlying the site.
Sole Source Aquifer:	No information about a sole source aquifer is available
Data Quality:	Information based on site-specific subsurface investigations is documented in the CERCLIS investigation report(s)

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
Not Reported		

* ©1996 Site--specific hydrogeological data gathered by CERCLIS Alerts, Inc., Bainbridge Island, WA. All rights reserved. All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: DELHI

Soil Surface Texture: fine sand

Hydrologic Group: Class A - High infiltration rates. Soils are deep, well drained to excessively drained sands and gravels.

Soil Drainage Class: Somewhat excessively drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	18 inches	fine sand	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 141 Min: 42	Max: 7.3 Min: 5.6
2	18 inches	59 inches	sand	Granular materials (35 pct. or less passing No. 200), Fine Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 141 Min: 42	Max: 7.8 Min: 6.1

Soil Map ID: 2

Soil Component Name: Hanford

Soil Surface Texture: sandy loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	11 inches	sandy loam	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 42 Min: 14	Max: 7.8 Min: 6.1
2	11 inches	59 inches	fine sandy loam	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 42 Min: 14	Max: 7.8 Min: 5.6

Soil Map ID: 3

Soil Component Name: TUJUNGA

Soil Surface Texture: gravelly loamy sand

Hydrologic Group: Class A - High infiltration rates. Soils are deep, well drained to excessively drained sands and gravels.

Soil Drainage Class: Somewhat excessively drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2011 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory
Source: Department of Fish & Game
Telephone: 916-445-0411

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

SOUTH COAST AIR QUALITY MANAGEMENT DISTRICT

INSTRUCTIONS FOR REQUESTING RECORDS

(California Public Records Act, Govt. Code Sections 6250-6276.48)

1. In order to expedite your request, requests for records should be in writing. Requests will be processed in the order in which they are received. A Public Records Request Form can be faxed to you by calling (909) 396-3700 and following the menu options. A form is also available on the A.Q.M.D.'s web page at http://www.aqmd.gov. Select the "Contact Us" menu, followed by the "Public Records" menu. Requests may be submitted by facsimile to (909) 396-3330, or by email to PublicRecordsRequests@aqmd.gov.

2. Requests must be for records prepared, owned, used, or retained by the District (Gov. Code Sec. 6252(e)). Requests should be for clearly identifiable records. If necessary, the District will assist the requestor in making a request that describes reasonably identifiable records (Gov. Code Sec. 6253.1). Copies will not be provided if disclosure would infringe upon a copyright, trade secret, or is otherwise exempt in accordance with state law.

3. A search for facility records can only be conducted by one or all of the following:

   Facility Name, Address, or Identification Number;

   Facility Application Number, or Permit to Operate Number; or

   Facility Notice of Violation/Notice to Comply Number.

4. You will be notified by mail within ten (10) days whether your request seeks copies of disclosable public records prepared, owned, used, or retained by this agency. In most cases, your request will be completed within 3-4 weeks.

5. If the search for records finds the records voluminous, you will be notified of the approximate number of pages and/or length of time it will take to process your request.

6. If the records you requested have been marked confidential by the source of the record, you will be notified and given the option of continuing with the District's trade secret process.

7. If your request is to review records, rather than receive copies, the District will notify you once the records are gathered, and arrangements will be made for your review.

8. The charge for the direct cost of duplication is as follows: Paper Copies, $0.15/page each over 10 pages (first 10 pages are free); Copied CD's or Copied Diskettes, no charge; and Copied Audio Tapes, $5.00 each. When records are requested in electronic format, the requestor shall bear the cost of producing a copy of the record, including the cost to construct the record and the cost of programming and computer services necessary to produce a copy of the record when either of the following applies: (1) the District would be required to produce a copy of an electronic record and the record is one that is produced only at otherwise regularly scheduled intervals, or (2) the request would require data compilation, extraction, or programming to produce the record. (Gov. Code Sec. 6253.9(b)). The transfer of gathered electronic records onto CD or Diskette typically cost $10.00 each. An invoice will accompany your records when completed.

9. For further clarification please refer to the California Public Records Act (California Gov. Code Sec. 6250 et seq.) and/or the District's Guidelines for Implementing the California Public Records Act. The Guidelines are available in the lobby of the District Headquarters or on the District's web site at www.aqmd.gov.

If you have questions pertaining to the submittal of a Public Records Act request, you may contact the Public Records Unit, **(909) 396-3700, Tuesday through Friday, 7:00 a.m. to 5:30 p.m. Our Fax number is (909) 396-3330. Our email address is PublicRecordsRequests@aqmd.gov.**

Dear Mr. Alburn:

We have received your Public Records Act Request for records from the Department of Toxic Substances Control.

After a thorough review of our files we have found that no such records exist at this office pertaining to the sites/facilities referenced above.

We would like to inform you about Envirostor, a database that provides information and documents on over 5,000 DTSC cleanup sites. EnviroStor can be accessed at: http://www.envirostor.dtsc.ca.gov/public. Also, a computer is available in the Central Files of each DTSC Regional Office for use by community members to view EnviroStor.

If you have any questions, would like further information regarding your request or would like an appointment to visit Sacramento's Central Files, please contact me at (916) 255-3758.

Sincerely,

Theresa M. Vigil

(California Public Records Act, Govt. Code Sections 6250-6276.48)

1. In order to expedite your request, requests for records should be in writing. Requests will be processed in the order in which they are received. A Public Records Request Form can be faxed to you by calling (909) 396-3700 and following the menu options. A form is also available on the A.Q.M.D.'s web page at http://www.aqmd.gov. Select the "Contact Us" menu, followed by the "Public Records" menu. Requests may be submitted by facsimile to (909) 396-3330, or by email to PublicRecordsRequests@aqmd.gov.

2. Requests must be for records prepared, owned, used, or retained by the District (Gov. Code Sec. 6252(e)). Requests should be for clearly identifiable records. If necessary, the District will assist the requestor in making a request that describes reasonably identifiable records (Gov. Code Sec. 6253.1). Copies will not be provided if disclosure would infringe upon a copyright, trade secret, or is otherwise exempt in accordance with state law.

3. A search for facility records can only be conducted by one or all of the following:

   Facility Name, Address, or Identification Number;

   Facility Application Number, or Permit to Operate Number; or

   Facility Notice of Violation/Notice to Comply Number.

4. You will be notified by mail within ten (10) days whether your request seeks copies of disclosable public records prepared, owned, used, or retained by this agency. In most cases, your request will be completed within 3-4 weeks.

5. If the search for records finds the records voluminous, you will be notified of the approximate number of pages and/or length of time it will take to process your request.

6. If the records you requested have been marked confidential by the source of the record, you will be notified and given the option of continuing with the District's trade secret process.

7. If your request is to review records, rather than receive copies, the District will notify you once the records are gathered, and arrangements will be made for your review.

8. The charge for the direct cost of duplication is as follows: Paper Copies, $0.15/page each over 10 pages (first 10 pages are free); Copied CD's or Copied Diskettes, no charge; and Copied Audio Tapes, $5.00 each. When records are requested in electronic format, the requestor shall bear the cost of producing a copy of the record, including the cost to construct the record and the cost of programming and computer services necessary to produce a copy of the record when either of the following applies: (1) the District would be required to produce a copy of an electronic record and the record is one that is produced only at otherwise regularly scheduled intervals, or (2) the request would require data compilation, extraction, or programming to produce the record. (Gov. Code Sec. 6253.9(b)). The transfer of gathered electronic records onto CD or Diskette typically cost $10.00 each. An invoice will accompany your records when completed.

9. For further clarification please refer to the California Public Records Act (California Gov. Code Sec. 6250 et seq.) and/or the District's Guidelines for Implementing the California Public Records Act. The Guidelines are available in the lobby of the District Headquarters or on the District's web site at www.aqmd.gov.

If you have questions pertaining to the submittal of a Public Records Act request, you may contact the Public Records Unit, **(909) 396-3700, Tuesday through Friday, 7:00 a.m. to 5:30 p.m. Our Fax number is (909) 396-3330. Our email address is PublicRecordsRequests@aqmd.gov.**

Public Records Act Number: 1-070616-05

Dear Mr. Alburn:

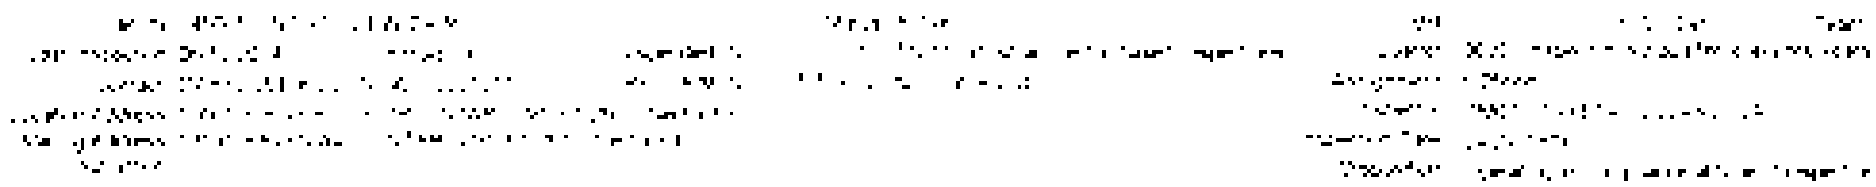
We have received your Public Records Act Request for records from the Department of Toxic Substances Control.

After a thorough review of our files we have found that no such records exist at this office pertaining to the sites/facilities referenced above.

We would like to inform you about Envirostor, a database that provides information and documents on over 5,000 DTSC cleanup sites. EnviroStor can be accessed at: http://www.envirostor.dtsc.ca.gov/public. Also, a computer is available in the Central Files of each DTSC Regional Office for use by community members to view EnviroStor.

If you have any questions, would like further information regarding your request or would like an appointment to visit Sacramento's Central Files, please contact me at (916) 255-3758.

Sincerely,



Theresa M. Vigil

YEARS OF EXPERIENCE:

With Hillmann: 25 years

Total: 25 years

PROFESSIONAL EXPERIENCE:

Mr. Baker is the Vice President of Operations at Hillmann, responsible for business operations, fiscal management and field staff management. Mr. Baker performs and manages staff for IAQ evaluations and mold and moisture assessments. He responds and coordinates restoration response following disasters, fires, pipe breaks, etc. He is responsible for management of industrial hygiene services on over 2,000,000 square feet of asbestos abatement projects, and provides project management on asbestos abatement projects. Mr. Baker is an ASTM Qualified Environmental Professional for the performance of Phase I and Phase II Environmental Site Assessments. He writes remedial specifications and Operation & Maintenance (O&M) Programs for commercial and residential buildings and co-wrote Standard Operating Procedure for heavy construction contractors working in naturally occurring asbestos.

He also coordinates, conducts and performs quality assurance of various environmental surveys including asbestos, lead in water, lead in paint, radon and mold in industrial, commercial and residential properties.

As a LEED AP, Mr. Baker provides green building services toward LEED accreditation in the Sustainable Sites, Water Efficiency, Energy & Atmosphere, Materials & Resources, Indoor Environmental Quality and Innovation & Design categories. He prepares sustainable strategies to enhance indoor environments including moisture management, hazardous materials compliance, indoor air quality management, pollutant source control and ventilation effectiveness. Mr. Baker also implements systems maintenance practices, water conservation programs and energy efficient building operation plans to reduce environmental impacts.

Representative experience includes:

Tishman Speyer Properties, Various locations nationwide: Hillmann has been providing the complete environmental program for Tishman Speyer's properties since 1987. Our services include phase I environmental site assessments, asbestos surveys, air monitoring, bid administration, O&M programs, industrial hygiene and indoor air quality programs. The estimated contract value is $1,000,000 annually. Mr. Baker functions as a Project Principal, Project Manager and Environmental Assessor. This project is ongoing.

Citigroup – Complete Environmental Program, Various locations nationwide: Mr. Baker is the Project Principal, Project Manager and Environmental Assessor for this contract on which Hillmann has been providing complete environmental program including Phase I environmental site assessments, asbestos and lead surveys, air monitoring, bid administration and O&M programs, industrial hygiene and indoor air quality programs, geology services, radon testing and hazardous materials assessments. Estimated cost to date: $8,250,000. This project is ongoing.

J.C. Penney Company, Inc., Various locations nationwide: Since 1994, Hillmann has been providing complete environmental consulting for J.C. Penney including: Phase I & II ESA's, IAQ, Mold, Asbestos, Lead, Water testing, from identification through testing through remediation. Mr. Baker's role included Project Manager and Environmental Assessor responsibilities. Estimated cost to date: $2,000,000. This project is ongoing.

Verizon Environmental Services, Various locations nationwide: Since 1996, Hillmann has been providing Verizon with asbestos and lead investigations, abatement design, air monitoring and mold and water sampling and emergency response services including IAQ, noise, confined space, characterization, and ventilation evaluation. Mr. Baker functions as Project Manager on this contract. Estimated cost to date: $12,600,000. This project is ongoing.

National Labor Relations Board, Washington, DC: Mr. Baker is the Project Manager for this project. Hillmann provides Indoor Air Quality Testing nationwide and Disaster Recovery from Hurricane Katrina in New Orleans. Cost to date: $20,000.

Howard County Public Schools, Howard County MD: Mr. Baker is the Project Principal and Project Manager on this contract for which Hillmann provides abatement oversight, design, and limited sampling services. A total of 57 projects were completed in 26 different schools without incident. The contract was completed in 2007. Cost: $83,000.

Fairfax County Public Schools, Fairfax County, VA: As Project Principal and Project Manager for this contract, Mr. Baker provided oversight and management for this asbestos, lead and mold consulting as well as various Indoor Air Quality projects. A total of 236 projects were completed in over 50 different school/center/office buildings without incident. The contract was completed in 2006. Cost: $125,000 annually.

St. Anselm's Abbey and School, Washington, DC: Mr. Baker is responsible for Project Management and Field Technician Services on this ongoing asbestos and lead investigation contract. Cost: $5,000.

Diocese of Arlington, Fairfax & Arlington Counties, VA: Mr. Baker is the Project Principal and Project Manager overseeing asbestos, IAQ, lead and mold consulting services. Over 150 projects have been completed in 39 different buildings. The Diocese is a continuous client since 1989. Cost: $500,000

Maryland Aviation Association, BWI Airport Area, MD: Hillmann performed Phase I and Phase II site assessments at various properties for potential purchases. These services were provided on an on-going basis under term contracts from 2002 until April, 2010. Mr. Baker functioned as Project Principal / Project Manager overseeing its execution. Cost: $13,000.

Tyson's Corner Center, McLean, VA: Hillmann is providing asbestos and lead surveys and remediation oversight, UST services, IAQ and mold services, and Phase I environmental site assessments for this ongoing contract. Mr. Baker functions as the Project Principal, Project Manager and Field Technician. Cost: $400,000. This project is ongoing.

Tishman Speyer Properties: Subsurface Investigation and Soil Segregation on a City Block, Washington, DC: Hillmann was retained to perform subsurface investigations and soil segregation on a city block slated for construction. Several Phase II subsurface investigations were conducted on the site to determine environmental impacts to soil and groundwater. Subsurface investigations were conducted with both direct push and hollow stem auger technology. Analytical results indicated soil and groundwater contamination from metals and PAH compounds. Hillmann performed the process of advancing borings within the footprint of the planned excavation to pre-classify soils for regulatory disposal. Our team was then responsible for complete oversight of the segregation and disposal of impacted soil. Based on semi-volatile compounds identified in the soil from past use, Hillmann designed an injection program whereby a reagent was introduced into the excavation footprint. The injection program was 100% successful in removing all compounds above regulatory criteria. Metals were successfully removed and all residual PAH compounds remediated with a no further action letter received from the regulating agency. Mr. Baker serves as Project Principal, Project Manager and Environmental Assessor for this project, which completed in 2009. Cost $147,000.

Wexford Development, LLC, Various locations nationwide: Hillmann provides complete environmental consulting for this client including Phase I & II ESA's, UST removal, IAQ, mold, asbestos, lead, and water testing. Mr. Baker functions as a Project Principal, Project Manager and Environmental Assessor in its execution. Cost: $154,000. This project is ongoing.

Coca-Cola Bottling Co., Various facilities in MA, NY, NJ, MD, VA and DC: Hillmann is providing asbestos surveys, bid administration, design and monitoring, and in-house support of the environmental program. Mr. Baker, acted as a Project Principal and Project Manager in its execution. This contract completed in 2003. Cost: $30,000.

Fairfax County Risk Management, VA: Hillmann provided indoor air quality and industrial hygiene sampling in Fairfax County, VA for a 5-year term contract beginning November 2001 through March 2006. Mr. Baker was the Project Principal and Project Manager on the contract. Cost: $50,000 annually.

General Growth Properties, Various nationwide facilities: National service agreement for phase I site assessments and hazardous materials surveys, including asbestos surveys and investigations, project monitoring, mold work, bulk sampling and analysis. Mr. Baker is the Project Principal and Project Manager on the contract. This project is ongoing. Cost: $250,000.

National Guard Bureau – various maintenance shops in MA, RI, ME, NH, VT, PA and VA: Hillmann provided complete baseline industrial hygiene surveys covering an indoor air quality evaluation, a noise survey, a ventilation survey and personal air sampling of selected operations. The testing and assessment parameters included: Temperature, Relative Humidity, Carbon Dioxide, Carbon Monoxide, Lighting, Audiodosimetry, Sound Level Measurements, Ventilation System, Welding Fumes, Total hydrocarbons, Airborne Fibers, Wipes, Lead, Asbestos, Ergonomics, PPE, Safety, House Keeping and Safety and OH Programs. Mr. Baker functioned as a Project Manager on the contract, which completed in 2007. Cost: $150,000.

Washington Hilton, Washington, DC: Hillmann has been providing Hotel management with asbestos consulting services since June 2005 in the form of a full building asbestos survey, asbestos abatement oversight and air monitoring, bid administration and remedial design. Various remedial designs and abatement operations are performed for construction and operations and maintenance purposes. Hillmann designed and oversaw the abatement of 10,000 square feet of friable textured ceiling material from a conference level hallway. The abatement was phased to allow the continuous operation of the various meeting and ballrooms. Mr. Baker functioned as the Project Principal and Project Manager for this contract, which was completed in 2008. Cost: $100,390.

RESOLUTION NO. _____

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF ONTARIO, CALIFORNIA, APPROVING FILE NO. PSPA22-001, AN AMENDMENT TO THE RICH-HAVEN SPECIFIC PLAN TO BRING THE SPECIFIC PLAN INTO COMPLIANCE WITH THE ONTARIO PLAN POLICY PLAN (GENERAL PLAN) LAND USE PLAN THAT INCLUDES: [1] THE REDUCTION OF LOW-MEDIUM DENSITY RESIDENTIAL LAND USE ACREAGE FROM 102.1 ACRES TO 24.5 ACRES; [2] INCREASE THE MEDIUM DENSITY RESIDENTIAL LAND USE ACREAGE FROM 96.7 ACRES TO 113.4 ACRES; [3] INCREASE THE LIGHT INDUSTRIAL LAND USE ACREAGE FROM 49.4 ACRES TO 116.5 ACRES; [4] A REDUCTION TO THE MIXED-USE OVERLAY LAND USE ACREAGE FROM 29.4 ACRES TO 20.5 ACRES; [5] A REDUCTION TO THE REGIONAL COMMERCIAL LAND USE ACREAGE FROM 74 ACRES TO 58.4 ACRES; [6] INCREASE THE MIXED-USE STANDALONE RESIDENTIAL OVERLAY LAND USE ACREAGE FROM 141.9 ACRES TO 144.1 ACRES; [7] INCREASE THE OPEN SPACE – NON-RECREATION LAND USE ACREAGE FROM 38.2 ACRES TO 55 ACRES; AND [8] VARIOUS CHANGES TO THE SPECIFIC PLAN LAND USE MAP (PLANNING AREAS), DEVELOPMENT STANDARDS, EXHIBITS, AND TEXT MODIFICATION, TO REFLECT THE PROPOSED LAND USES, GENERALLY LOCATED BY RIVERSIDE DRIVE, COLONY HIGH SCHOOL AND THE SCE SUBSTATION TO THE NORTH, HAMNER AVENUE/MILL CREEK AVENUE TO THE EAST, OLD EDISON AVENUE TO THE SOUTH, AND HAVEN AVENUE TO THE WEST, AND MAKING FINDINGS IN SUPPORT THEREOF—APNS: 0218-161-14, 0218-016-06, 0218-016-10, 0218-016-11, 0218-016-19, 0218-016-15, 0218-016-07, 0218-016-18, 0218-203-08, 0218-016-14, 0218-016-12, 0218-016-13, 0218-203-07, 0218-203-04, 0218-203-03, 0218-203-05, 0218-203-06, 0218-211-39, 0218-211-01, 0218-211-21, 0218-211-36, 0218-211-37 AND 0218-211-15.

WHEREAS, RICHLAND DEVELOPERS, INC AND BROOKCAL ONTARIO, LLC ("Applicant") has filed an Application for the approval of a Specific Plan Amendment (SPA), File No. PSPA22-001, as described in the title of this Resolution (hereinafter referred to as "Application" or "Project"); and

WHEREAS, the Application applies to 584.9 gross acres of land located within the Rich-Haven Specific Plan, which is generally bounded by Riverside Drive, Colony High School and the SCE substation to the north, Hamner Avenue/Mill Creek Avenue to the east, Old Edison Road to the south, and Haven Avenue to the west. The Rich-Haven Specific Plan is presently improved with a combination of SCE Easements, vacant agricultural and dairy farms, and residential subdivisions; and

WHEREAS, the properties to the north of the Rich-Haven Specific Plan are within the Creekside Specific Plan, Civic and Specific Plan Agricultural Overlay Zoning District, and are developed with a flood control channel, Colony High School, and the SCE Mira Loma Substation. The properties to the east are within the Edenglen Specific Plan, Civic and the Specific Plan Agricultural Overlay Zoning District, and are developed with Colony High School, a Residential Subdivision, the SCE Mira Loma Substation and industrial warehouse and commercial uses within the City of Eastvale. The properties to the south are within the Esperanza Specific Plan and the Specific Plan Agricultural Overlay Zoning District and are developed with agricultural and dairy farms. The properties to the west are within the West Haven Specific Plan and the Avenue Specific Plan and are developed with residential subdivisions and commercial land uses; and

WHEREAS, to achieve consistency with the TOP 2050 Official Land Use Plan (Figure LU-01), the SPA proposes to amend the following land uses:

(1) Change 61.5 acres of Low Medium Density Residential (5.1 – 12 du/ac) to 16.7 acres of Medium Density Residential (11.1- 25 du/ac) and 44.8 acres of Light Industrial; and

(2) Change 17.3 acres of Mixed-Use Stand-Alone Residential Overlay and 5 acres of Mixed-Use Overlay to 22.3 acres of Light Industrial; and

WHEREAS, the new industrial land use designation was established by TOP to create a land use buffer between the SCE Mira Loma Substation and existing/future residential development; and

WHEREAS, the SPA includes the restructuring of planning areas that would reduce the number of subareas to align with the proposed land uses; and

WHEREAS, the proposed Planning Areas 2C, 3C and 5A are located adjacent to Residential Planning areas. To minimize impacts from future industrial development to the adjacent residential land uses the SPA included additional industrial design standards and setback requirements; and

WHEREAS, the SPA included minimum industrial building and landscape setback requirements for interior property lines common with residential land uses. A minimum 100-foot building setback is required from a residential property line that includes a 40-foot landscape setback to allow for the installation of a double row of trees. Also, a 10-foot landscape setback is required between the building and drive-aisle. The landscape setbacks will allow for the planting of multiple rows of trees between the residential properties and any proposed industrial building. The objective is to create an urban forest within the required landscaped setback areas and plant large evergreen trees to provide the maximum amount of screening year-round; and

WHEREAS, the SPA includes separate industrial design standards that include orienting truck courts away from residential areas to minimize noise impacts; enhanced second story elevations facing residential; and limiting vehicular activity and evening hours of operation on drive aisles adjacent to residential land uses; and

WHEREAS, the SPA proposes to reduce the existing residential acreage by 77.8 acres. To maintain the total number of existing 7,194 residential dwelling units allocated within the Rich Haven Specific Plan the amendment will reassign units to different Planning Areas; and

WHEREAS, the SPA includes updates to the light industrial development standards and land use matrix, updates to the existing residential and mixed-use development standards and land use matrix, updates to various exhibits reflecting the restructuring of planning areas, along with text/map changes to reflect the proposed land use designation changes. All changes and additions to the Specific Plan (exhibits, tables, and development standards) are contained within the revised Specific Plan document, and are highlighted in red; and

WHEREAS, the Rich Haven Specific Plan has been prepared in conformance with the goals and policies of the City of Ontario Policy Plan (General Plan). Section 9 of the Specific Plan, “General Plan Consistency”, describes the manner in which the Rich Haven Specific Plan complies with the Policy Plan goals and policies applicable to the Rich Haven Specific Plan; and

WHEREAS, the Rich Haven Specific Plan does not conflict with the Land Use Policies of the General Plan (Policy Plan component of TOP) and will provide for development, in a manner consistent with the General Plan. The policy (General Plan) analysis in the Appendix “Policy Plan (General Plan) Consistency,” of the Specific Plan describes the manner in which the Rich Haven Specific Plan complies with the Policy Plan goals and policies applicable to the Rich Haven Specific Plan; and

WHEREAS, an Environmental Impact Report (“EIR”) (State Clearinghouse No. 2022100425), including the adoption of a Mitigation Monitoring and Reporting Program and a Statement of Overriding Consideration have been prepared in accord with the California Environmental Quality (CEQA), the State CEQA Guidelines and the City of Ontario Guidelines to address the environmental effects of the Specific Plan Amendment; and

WHEREAS, Ontario Development Code Table 2.02-1 (Review Matrix) grants the City Council the responsibility and authority to review and act on the subject Application; and

WHEREAS, the Project has been reviewed for consistency with the Housing Element of the Policy Plan component of The Ontario Plan, as State Housing Element law (as prescribed in Government Code Sections 65580 through 65589.8) requires that development projects must be consistent with the Housing Element, if upon consideration of all its aspects, it is found to further the purposes, principals, goals, and policies of the Housing Element; and

WHEREAS, the Project is located within the Airport Influence Area of Ontario International Airport, which encompasses lands within parts of San Bernardino, Riverside, and Los Angeles Counties, and is subject to, and must be consistent with, the policies and criteria set forth in the Ontario International Airport Land Use Compatibility Plan ("ALUCP"), which applies only to jurisdictions within San Bernardino County, and addresses the noise, safety, airspace protection, and overflight impacts of current and future airport activity; and

WHEREAS, during the Rich Haven Specific Plan Amendment review, opportunities for the involvement of citizens, California Native American Indian tribes (Government Code Section 65352.3.), public agencies, public utility companies, and civic, education, and other community groups, through public hearings or other means were implemented consistent with California Government Code Section 65351; and

WHEREAS, City of Ontario Development Code Division 2.03 (Public Hearings) prescribes the manner in which public notification shall be provided and hearing procedures to be followed, and all such notifications and procedures have been completed; and

WHEREAS, on May 23, 2023, the Planning Commission of the City of Ontario conducted a hearing to consider the Environmental Impact Report, Mitigation Monitoring and Reporting Program, and Statement of Overriding Considerations, and the Project, and concluded said hearing on that date, voting to issue Resolution Nos. PC23-042 and PC23-043, recommending the City Council adopt the Final Environmental Impact Report, Mitigation Monitoring and Reporting Program, and Statement of Overriding Considerations, and approve the Application; and

WHEREAS, as the first action on the Project, on June 20, 2023, the City Council approved a resolution adopting a Final Environmental Impact Report, Mitigation Monitoring and Reporting Program, and Statement of Overriding Considerations, each prepared pursuant to CEQA, the State CEQA Guidelines, and the City of Ontario Local CEQA Guidelines, and concluded said hearing on that date; and

WHEREAS, on June 20, 2023, the City Council of the City of Ontario conducted a hearing to consider the Project, and concluded said hearing on that date; and

WHEREAS, all legal prerequisites to the adoption of this Resolution have occurred.

NOW, THEREFORE, IT IS HEREBY FOUND, DETERMINED, AND RESOLVED by the City Council of the City of Ontario, as follows:

SECTION 1. ***Housing Element Compliance.*** Pursuant to the requirements of California Government Code Chapter 3, Article 10.6, commencing with Section 65580, as the decision-making body for the Project, the City Council finds that based upon the facts and information contained in the Application and supporting documentation, at the time of Project implementation, the project is consistent with the Housing Element of the Policy Plan (General Plan) component of The Ontario Plan, as the project site is not one of the properties in the Housing Element Sites Inventory contained in Tables B-1 and B-2 of the Housing Element Technical Report.

SECTION 2. ***Environmental Determination and Findings.*** As the decision-making body for the Project, the City Council has reviewed and considered the information contained in Environmental Impact Report (EIR), Mitigation Monitoring and Reporting Program and a Statement of Overriding Considerations prepared for the project and supporting documentation. Based upon the facts and information contained in the EIR (State Clearinghouse No. 2022100425) and supporting documentation, the City Council finds as follows:

(1) The Rich Haven Specific Plan Amendment EIR, Mitigation Monitoring and Reporting Program and a Statement of Overriding Considerations contains a complete and accurate reporting of the environmental impacts associated with the Project; and

(2) The Rich Haven Specific Plan Amendment EIR, Mitigation Monitoring and Reporting Program and a Statement of Overriding Considerations was completed in compliance with CEQA and the Guidelines promulgated thereunder; and

(3) The Rich Haven Specific Plan Amendment EIR, Mitigation Monitoring and Reporting Program, and a Statement of Overriding Considerations reflects the independent judgment of the City Council; and

SECTION 3. ***Airport Land Use Compatibility Plan ("ALUCP") Compliance.*** The California State Aeronautics Act (Public Utilities Code Section 21670 et seq.) requires that an Airport Land Use Compatibility Plan be prepared for all public use airports in the State; and requires that local land use plans and individual development proposals must be consistent with the policies set forth in the adopted Airport Land Use Compatibility Plan.

(1) On April 19, 2011, the City Council of the City of Ontario approved and adopted the Ontario International Airport Land use Compatibility Plan, establishing the Airport Influence Area for Ontario International Airport, which encompasses lands within parts of San Bernardino, Riverside, and Los Angeles Counties, and limits future land uses and development within the Airport Influence Area, as they relate to noise, safety, airspace protection, and overflight impacts of current and future airport activity. As the decision-making body for the Project, the City Council has reviewed and considered the facts and information contained in the Application and supporting documentation against the ONT ALUCP compatibility factors, including [1] Safety Criteria (ONT ALUCP Table 2-2) and Safety Zones (ONT ALUCP Map 2-2), [2] Noise Criteria (ONT ALUCP Table 2-3) and Noise Impact Zones (ONT ALUCP Map 2-3), [3] Airspace protection Zones (ONT ALUCP Map 2-4), and [4] Overflight Notification Zones (ONT ALUCP Map 2-5). As a result, the City Council, therefore, finds and determines that the Project, is consistent with the policies and criteria set forth within the ONT ALUCP; and

SECTION 4. ***Concluding Facts and Reasons.*** Based upon the substantial evidence presented to the City Council during the above-referenced hearing, and upon the specific findings set forth in Section 1 through 3, above, the City Council hereby concludes as follows:

(1) ***The proposed Specific Plan, or amendment thereto, is consistent with the goals, policies, plans and exhibits of the Vision, Policy Plan (General Plan), and City Council Priorities components of The Ontario Plan.*** The proposed Rich-Haven Specific Plan amendment will provide land use consistency with The Ontario Plan Policy Plan (General Plan). The proposed amendments will accommodate the construction of future residential, industrial, and commercial developments and eliminate sensitive land uses within the southeast portion of the Rich-Haven Specific Plan which is consistent with goals, policies, plans and City Council priorities of The Ontario Plan.

(2) ***The proposed Specific Plan, or amendment thereto, would not be detrimental to the public interest, health, safety, convenience, or general welfare of the City.*** The proposed Rich-Haven Specific Plan amendment will provide land use consistency with The Ontario Plan Policy Plan (General Plan). The proposed Specific Plan Amendment will not be detrimental to the public interest, health, safety, convenience, or general welfare of the City. The land use changes will provide a combination of residential, mixed-use, commercial, and light industrial uses within the Rich-Haven Specific Plan, which is consistent with the type and intensity of development specified in The Ontario Plan.

(3) ***In the case of an application affecting specific property(ies), the proposed Specific Plan, or amendment thereto, will not adversely affect the harmonious relationship with adjacent properties and land uses.*** The proposed amendments will accommodate the construction of future residential, industrial, and commercial developments. The amendment will also eliminate residential sensitive land uses within the southeast portion of the Rich-Haven Specific Plan and establish a light industrial land use buffer between residential land uses and the existing SCE Mira Loma Substation in order to establish a harmonious relationship between the existing surrounding land uses and planned uses within the southeast quadrant of the specific plan.

(4) ***In the case of an application affecting specific property(ies), the subject site is physically suitable, including, but not limited to, parcel size, shape, access, and availability of utilities, for the request and anticipated development.*** The subject site is physically suitable to accommodate future residential, commercial, mixed use and light industrial land uses. The Rich-Haven Specific Plan amendment includes development standards to facilitate the proposed land uses, which will be developed with adequate lot sizes, access, and utilities to serve the project site.

SECTION 5. ***City Council Action.*** Based upon the findings and conclusions set forth in Sections 1 through 4, above, the City Council hereby APPROVES the herein described Specific Plan Amendment, attached hereto as “Attachment A,” and incorporated herein by this reference.

SECTION 6. ***Notice of Determination Filing.*** Within 5 days following final application approval, The Applicant shall provide the Notice of Determination (“NOD”) filing fee and applicable Department of Fish and Wildlife mitigation fee to the City of Ontario Planning Department. Required fees shall be paid by check, made payable to the "Clerk of the Board of Supervisors", which shall be forwarded to the San Bernardino County Clerk of the Board of Supervisors, along with all applicable environmental forms/notices, pursuant to the requirements of the California Environmental Quality Act (“CEQA”). Failure to provide required fees within the above-specified time will result in an extension to the statute of limitations for the filing of a CEQA lawsuit against the Project, from 30 days to 180 days.

SECTION 7. ***Final Documents.*** Within 30 days following approval of this Ordinance, the Applicant shall provide the following to the City:

(1) Two bound copies of the final Specific Plan Amendment document; and

(2) One CD containing a complete Microsoft Word copy of the final Specific Plan Amendment document, including all required revisions and a complete PDF copy of the final Specific Plan document, including all required revisions.

SECTION 8. ***Indemnification.*** The Applicant shall agree to defend, indemnify and hold harmless, the City of Ontario or its agents, officers, and employees from any claim, action or proceeding against the City of Ontario or its agents, officers or employees to attack, set aside, void, or annul this approval. The City of Ontario shall promptly notify the applicant of any such claim, action, or proceeding, and the City of Ontario shall cooperate fully in the defense.

SECTION 9. ***Custodian of Records.*** The documents and materials that constitute the record of proceedings on which these findings have been based are located at the City of Ontario City Hall, 303 East "B" Street, Ontario, California 91764. The custodian for these records is the City Clerk of the City of Ontario.

PASSED, APPROVED, AND ADOPTED this 20th day of June 2023.

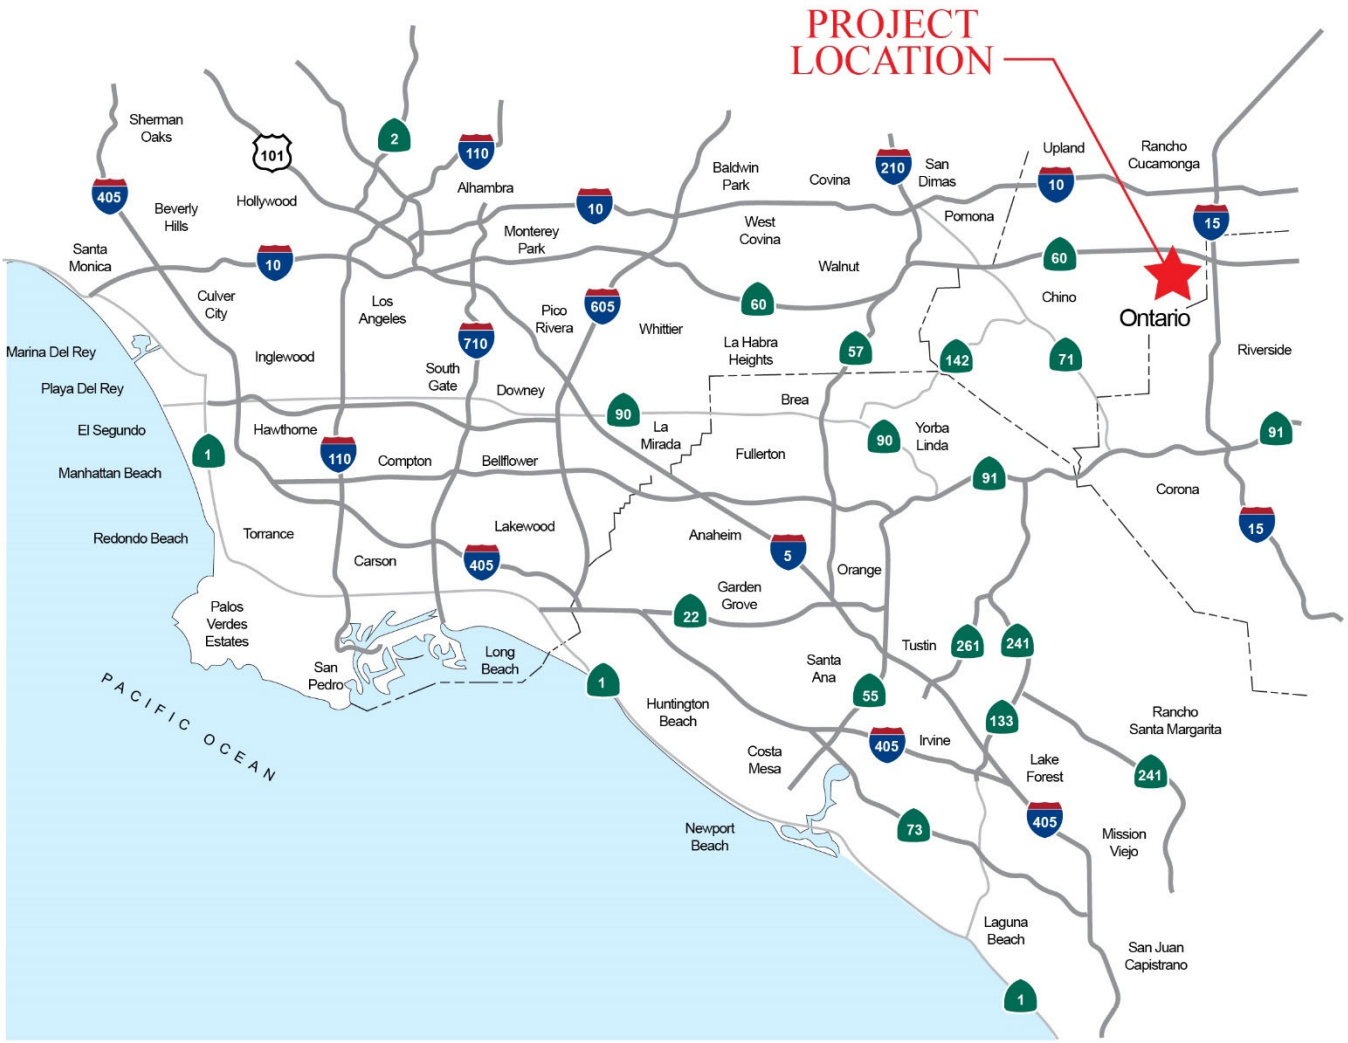
SECTION 1 - INTRODUCTION

The Rich-Haven Specific Plan applies to approximately ~~584.2~~584.9 gross acres of land in the southern portion of the City of Ontario, within the Ontario Ranch, (previously referred to as the New Model Colony - NMC). The Rich-Haven Specific Plan must be consistent with the planning guidelines of the City's The Ontario Plan, adopted by the City of Ontario in 2010 ~~or~~ and as amended in 2022.

The Ontario Plan (TOP) establishes the direction and vision for the City of Ontario, providing a single guidance system that will shape the Ontario community for the future. The Plan provides for policies to accommodate chance over 30-year period. The Ontario Plan consists of a six-part Component Framework: 1) Vision, 2) Governance Manual, 3) Policy Plan, 4) City Council Priorities, 5) Implementation, and 6) Tracking and Feedback.



The Rich-Haven Specific Plan defines a development that can be financed, marketed, and absorbed within a reasonable time frame. At ~~584.2~~584.9 ~~-~~gross acres, Rich-Haven will be developed as a cohesive community, incorporating a series of well-integrated neighborhoods, including residential, regional commercial, commercial, mixed use, light industrial and community facility land uses. Upon adoption, the Rich-Haven Specific Plan will be implemented through the development standards, design guidelines, and land use plan contained within this document. Development within the Rich-Haven Specific Plan area that is consistent with this Plan and the City's TOP will not require subsequent specific plans or environmental review, as the planning requirements for consistent development will have already been satisfied.

The Rich-Haven Specific Plan is a regulatory document prepared pursuant to California Government Code, Title 7, Division 1, Chapter 3, Article 8, and Sections 65450 through 65457, and serves as the regulating zoning document for the property within the Specific Plan area.

1.1 LOCATION AND SETTING

The Rich-Haven Specific Plan is located in southwestern San Bernardino County, within the City of Ontario. The City of Ontario is located approximately 40 miles east of downtown Los Angeles, 20 miles west of San Bernardino, and 30 miles northeast of Orange County. The project site is located west of Interstate 15 (I-15), and south of State Route 60 (SR-60), within the 8,200-acre Ontario Ranch. The Rich-Haven Specific Plan area is located in the southeast portion of The Ontario Plan (TOP). The TOP land use designations for the project area are Low Density Residential, Low-Medium Density Residential, Medium Density Residential, Industrial, Mixed-Use, Open Space~~-~~ ~~-~~Non Recreation and Open Space~~-~~ ~~Parkland~~Recreation.

The project site is bounded to the north by Riverside Drive and the property line for Colony High School and the Southern California Edison substation. Haven Avenue bounds the project to the west. Mill Creek Avenue and Hamner Avenue form the eastern boundaries and Old Edison Road forms the boundary to the south. The Esperanza Specific Plan is located to the south of the eastern half of the site. See Figure 1-1, *Regional Map*, and Figure 1-2, *Local Map*.

RICH-HAVEN SPECIFIC PLAN
LOCAL VICINITY MAP
FIGURE 1-2

1.2 SPECIFIC PLAN PURPOSE AND OBJECTIVES

The Rich-Haven Specific Plan serves to implement the City's TOP Policy Plan (General Plan) for the project site and provides zoning regulations for the development of the project site by establishing permitted land uses, development standards, design guidelines, infrastructure requirements, and implementation requirements for development. The Rich-Haven Specific Plan includes the potential development of up to 7,194 dwelling units, a maximum ~~990,902~~ 925,002 square feet of commercial/office uses and a maximum of ~~1,183,525~~ 2,767,148 square feet of light industrial uses.

The City's TOP overall vision for the Ontario Ranch is to create a self-sustaining place of diversity, extending into Ontario's existing fabric of development. The City's TOP also envisions each neighborhood and commercial center within the Ontario Ranch as a place uniquely identifiable for its residents, employees, and visitors, united through an area-wide network of greenways, trails, open spaces, amenities, and infrastructure.

The Rich-Haven Specific Plan provides the specific regulations necessary to meet and enhance the City's TOP's vision and goals. To do so, the Rich-Haven Specific Plan establishes its own vision, objectives, and policies, and provides regulations and standards pertaining to the density, permitted, conditional, and prohibited uses, implementation, and design of Rich-Haven.

The vision for Rich-Haven is to "*create a vibrant community with a mixture of uses all connected through a series of trails providing opportunities for people to live, work and play.*" In order to actualize this vision, a series of objectives are provided to augment the NMC-wide objectives and policies identified within the City's TOP. These objectives and policies are as follows:

Livable Neighborhood Development

- Incorporate Traditional Neighborhood Design guiding principles during the design phase to provide for opportunities to achieve the project's vision statement, including:
  - **Central Focus**. To create a community with a central focus that combines commercial, civic, cultural, and recreational uses.
  - **Connections**. To provide a series of sidewalks and trails connecting community parks, civic uses, employment areas, mixed-use and transit stops designed to be pedestrian friendly to avoid unnecessary automobile trips.
  - **Traditional Street Network**. To design a hierarchy of streets connected in a grid network with a variety of routes for pedestrians and vehicles, as well as creating a visually favorable and comfortable environment for pedestrians and bicyclists.
  - **Main Street Environment**. To design commercial/retail areas to a human scale with storefronts oriented to the street providing a "Main Street" atmosphere for strolling and shopping, all within walking distance from most homes.

- **Public Spaces**. To create plazas, parks, and community gathering places placed within centralized areas providing synergy between adjacent land uses.

- **Identifiable Neighborhoods**. To design neighborhoods around a discernable center, which may include a small park, square, school or mixed-use center, within a five-minute walking distance.

- **Mix of Housing**. To provide neighborhoods with a range of household types: a variety of single-family detached homes, attached units for young families, and live/work units for small at-home businesses.

- Design a mixed-use environment to ensure compatible uses that are cohesive and integrate a diversity of residential neighborhoods, with a range of commercial uses, and supporting open spaces.
- Utilize transportation, utility, and greenways/open space networks to establish clear edges and boundaries.
- Accommodate residential, commercial, open space, public, and other uses in accordance with the generalized distribution of uses depicted within the City's TOP Land Use Plan.
- Implement elements that will ensure walkability throughout the Project Area to discourage automobile dependency and encourage walking, biking, and other forms of transportation. This is achieved through the incorporation of subarea greenways and pedestrian connections and through sensitive site design of mixed-use development.
- Implement technological advances within residential communities, including internet access, to allow residents to shop and work from home and to decrease reliance on automobiles.
- Provide opportunity for at least one major public plaza/square as a centerpiece of community activities, including events and celebrations, outdoor performances, community meetings, picnics, farmers markets, and similar functions.
- Establish a clearly defined "edge" for the City's TOP area, where appropriate, that avoids the use of walls and creation of a "walled" enclave.
- Incorporate electrical transmission corridors and similar elements to form "edges" for residential neighborhoods and centers and/or accommodate public greenways/trails/corridors.

Residential District

- Create a livable community with neighborhoods designed at a human scale and oriented for pedestrian access to mixed-use, educational, and recreational uses.
- Provide for a range and diversity of housing products (detached single-family, detached and attached condominiums, and townhomes) that respond to a variety of homeownership needs and desires.
- Design residential projects to complement the character of adjacent neighborhoods.
- Encourage interaction among residents through the provision of an organized, simple, and "neo-traditional" system of streets, pathways, and entries to allow residents to walk or bike to parks, recreation, and public facilities (including schools).
- Promote outdoor activity and casual social contact among residents and neighbors by designing neighborhoods around a central park where they can gather.
- Provide a focal point of activity within each residential planning area that may include a park, school, common area, or public meeting facility.
- Encourage architectural styles and traditional design elements that reflect the historic and eclectic mixture of architecture, reflective of the greater Ontario area.
- Increase densities adjacent to commercial centers.
- Establish clear defined "edges" and "entries" that contribute to the neighborhood identity.
- Avoid the use of walls to separate residential areas from arterials and other high traffic volume streets by expanded landscape setbacks, frontage roads, and other appropriate techniques.
- Include clustered multi-family housing within the Residential District, in order to create a diverse range of housing products and opportunities, while still in keeping with the overall low-density residential designation.
- Locate higher-density residential uses that provide population to support adjacent regional commercial centers.
- Provide sufficient on-site recreational amenities within higher density developments.
- Include community oriented uses such as public meeting rooms, plazas and courtyards, and similar uses.
- Establish visual and physical links among the individual multi-family developments to create a cohesive and continuous corridor.
- Design building elevations to promote visual interest.
- Provide linkages between community service facilities, multi-family corridors, and residential neighborhoods.

Regional Commercial/Mixed-Use District

- Accommodate a diversity of large scale retail, community and neighborhood shopping, office, medical research, entertainment, hotel/motel, dining, housing, cultural, public, and similar uses that will serve the project area and neighboring Planning Areas.
- Function with a high level of activity and/or employment.
- Accommodate development of multi-family housing, mixed-use buildings that incorporate housing and retail/office, and live/work facilities.
- Accommodate single-use buildings and mixed-use structures containing a variety of uses from residential over retail or office-to-office over retail.
- Encourage traditional, mixed-use design of commercial buildings, by requiring a lower maximum floor area ration (FAR) for single-use buildings, and a higher maximum FAR for mixed-use buildings.
- Develop plaza areas and other amenities to provide places of social interaction.
- Include one or more public "squares" to serve as gathering places.
- Incorporate modulated building volumes, mass, height, and articulated facades to create individual spaces.
- Site a portion of the buildings on peripheral streets to provide connectivity to adjacent uses.
- Orient buildings towards the local streets whenever possible to create an urban edge and sense of arrival and place.
- Include sidewalks of sufficient width to accommodate pedestrian activity and outdoor restaurants, newsstands, and other uses.
- Create visual interest through the opening of streets and sidewalks/plazas towards building elevations.
- Incorporate landscaping to enhance the environment.
- Visually integrate parking structures to continue the intended design character of the district.
- Incorporate multi-family housing to create a cohesive and continuous corridor.
- Ensure an appropriate mix of uses (residential and commercial) that are compatible.
- Encourage pedestrian access and ease of use within the mixed-use area by designing pedestrian and bike paths.
- Create a "Main Street" environment with buildings designed to a human scale where pedestrian activity is not overwhelmed by automobile traffic.
- Utilize urban design to create a "Gateway" or portal to the Ontario Ranch.

Industrial District

- Incorporate transitions and/or buffers between commercial/mixed-use and industrial areas and adjacent residential areas.
- To contribute to the regional jobs to housing balance by providing employment opportunities while minimizing development impacts on surrounding neighborhoods.
- To create a high-quality industrial park development that attracts an array of businesses and provides employment opportunities within proximity to area residents.
- Provide safe and efficient access/circulation routes for the distribution/transportation of goods.

Circulation

- Provide a circulation system designed to promote pedestrian activity through a network of off-street pedestrian walkways linking each neighborhood to parks, mixed-use commercial, and residential uses.
- Design a hierarchy of streets connected in a grid network with a variety of routes for pedestrians and vehicles, creating a visually attractive, enhanced, and comfortable environment for pedestrians and bicyclists.
- Design streets to incorporate landscaped parkways and pedestrian walkways separated from the street to enhance safety and enjoyment of residents and visitors.
- Provide opportunities for transit connections and alternative modes of transportation.

Recreation/Trails

- Provide new recreational opportunities for residents through the development of a series of public and private parks.
- Provide a series of pedestrian trails connecting community parks, civic uses, mixed-use, and transit stops designed to be pedestrian friendly to avoid unnecessary automobile trips.
- Incorporate off-street multi-use trails within the Southern California Edison easements.
- Incorporate a system of on- and off-street bicycle pathways with access from the residences to mixed-use areas.
- Use landscaping and streetscape materials that are low maintenance in recreation and trail areas.
- Provide a system of on-street bikeways integrated throughout the project to provide access to schools, parks, and commercial uses.

- ❖ Provide new recreational opportunities for residents through the development of a series of parks ranging in size.

Community Facilities

- ❖ Incorporate existing major utilities into the overall fabric of the community.
- ❖ Provide opportunities for incorporation of community facilities (e.g. schools, fire station) as identified by the various agencies.

1.3 LAND USE PLAN OVERVIEW

The Rich-Haven Specific Plan proposes a land use plan that includes a mixture of uses, and is based on Traditional Neighborhood Design principles and concepts, including pedestrian and bicycle connectivity, a traditional grid street network, and a variety of housing types and architectural styles. The land use plan provides a logical extension of commercial and residential uses and a transitional Light Industrial buffer adjacent to existing utility facilities and industrial/warehouse land uses.

The Specific Plan area is separated into a Residential District encompassing approximately ~~271.3~~ 218.7 gross acres, ~~and~~ Regional Commercial/Mixed-Use~~/Light Industrial~~ District~~s~~ encompassing approximately ~~312.9~~ 230.9 gross acres, and Light Industrial District encompassing approximately 135.3 gross acres. The Residential District is planned to include low-, low medium-, and medium ~~-, and high~~-density residential units, park and open space areas, and a public park~~ and a fire station site~~. A variety of uses, as identified within Section 5, *Development Regulations* and allowed by the City's TOP, are proposed within the Regional Commercial/ Mixed-Use District. Together, the Residential District, ~~and~~ the Regional Commercial/Mixed-Use District and Light Industrial District include a project-wide total of a maximum of 7,194 dwelling units, a maximum of ~~990,902~~925,002 square feet of commercial/office uses and a maximum of ~~1,183,525~~2,767,148 square feet of industrial uses.

1.3.1 Residential District

The Rich-Haven Residential District includes approximately ~~271.3~~218.7 gross acres within Specific Plan Planning Areas 1A, 1B, 1C, 2B, 3A and 3B ~~4C, and F~~and ~~5D through 5~~. This District provides for a variety of housing types at low and medium densities, and a total of ~~1,833~~2,393 dwelling units. In addition to housing, the Residential District also includes approximately 27.0 acres of public parks and 20.0 acres of open space within the Southern California Edison parcel.

Housing units planned within the Residential District are oriented around park and open space amenities, fostering identifiable sub-neighborhoods and enhanced opportunities for people to meet and recreate. Some residential neighborhoods may be gated with private streets. Integrated throughout the Residential District is a series of trails and sidewalk systems providing connectivity and opportunities to utilize alternative modes of transportation to the public park, Regional Commercial/Mixed-Use District, and the greater Ontario area.

1.3.2 Regional Commercial/ Mixed-Use District

The Regional Commercial/Mixed-Use District includes approximately ~~256.9~~230.9 gross acres within Specific Plan Planning Areas ~~6, 7B, 8 and 9~~ 4A, 4B, 5B, 6B, 7,8, 9, 10A and 10B. This District is envisioned per the City's TOP as a highly active area with a variety of uses that are responsive to market demands, including commercial, office, residential, medical office, and research, as well as other uses identified in Section 5, *Development*

Regulations. In total, a maximum of ~~4,843~~4,801 dwelling units and a maximum of ~~990,902~~925,002 ~~-~~square feet of regional commercial uses are planned within this District. Residential uses shall include both mixed-use, multi-family attached residential as well as stand-alone residential neighborhoods, accommodated for through a "Stand Alone Residential Overlay".

To provide developers with the opportunity to respond to changes in the market, the ultimate mix of uses developed within the Regional Commercial/Mixed-Use District is flexible.

1.3.3 Light Industrial Land Use District

The Industrial District includes approximately ~~56.0~~135.3 ~~-~~gross acres within Specific Plan Planning Areas 2C, 3C, 5A, 5C and 6A ~~7A~~. This District is envisioned per the City's TOP as a transitional area with a potential for a variety of uses that are responsive to market demands, including uses allowed within the Regional Commercial/Mixed Use District and Industrial uses identified in Section 5, *Development Regulations.* In total, a maximum of ~~1,183,525~~2,767,148 square feet of Light Industrial uses are allowed within this District.

To provide developers with the opportunity to respond to changes in the market, the ultimate mix of uses developed within the Industrial Land Use District is flexible.

1.4 SPECIFIC PLAN AUTHORITY AND REQUIREMENTS

1.4.1 AUTHORITY

The California Government Code establishes the authority for a legislative body to adopt an ordinance or resolution requiring that a specific plan be prepared. As with General Plans, the Planning Commission must hold a public hearing before the planning agency can recommend the adoption of a specific plan. The City Council may then adopt a specific plan by ordinance.

The Specific Plan is regulatory in nature, and serves as zoning law for the properties involved. Development plans, site plans, and tentative tract and parcel maps must be consistent with both this Rich-Haven Specific Plan and the City of Ontario's TOP. The scope of subjects covered in the Specific Plan is the same as that of the City's TOP to the extent that the subject under consideration involves the Ontario Ranch portion of the City of Ontario.

The Rich-Haven Specific Plan is established through the authority granted to the City of Ontario by the California Government Code, Title 7, Division 1, Chapter 3, Article 8, Sections 65450 through 65457 (Specific Plans).

1.4.2 REQUIREMENTS

The California Government Code, Article 8, Sections 65450 et seq., establishes the minimum requirements and review procedures for specific plans, requiring that a specific plan include text and diagrams that specify all of the following in detail:

- The distribution, location, and extent of the uses of land, including open space, within the area covered by the plan.
- The proposed distribution, location, and extent and intensity of major components of public and private transportation, sewage, water, drainage, solid waste disposal, energy, and other essential facilities proposed to be located within the area covered by the plan, and needed to support the land uses described in the plan.
- Standards and criteria by which development will proceed, and standards for the conservation, development, and utilization of natural resources, where applicable.
- A program of implementation measures including regulations, programs, public works projects, and financing measures necessary to carry out the project.

1.4.3 DEVELOPMENT APPROVAL COMPONENTS

Rich-Haven's development approval process is as follows:

SPECIFIC PLAN – The Rich-Haven Specific Plan is a regulatory document that establishes the zoning, land use designations, densities, and design guidelines for the entire Specific Plan Project Area. The Rich-Haven Specific Plan will implement the City's TOP, as amended by this Specific Plan proposal. The Specific Plan will be considered by the Planning Commission and City Council and will be adopted by Ordinance. Subsequent tract or parcel maps and site development plans must be in compliance with the adopted Specific Plan.

ENVIRONMENTAL IMPACT REPORT – The Rich-Haven Specific Plan is a discretionary project and is subject to the requirements of the California Environmental Quality Act (CEQA). As part of the approval process for the Specific Plan, an Environmental Impact Report must be considered and certified by the City prior to approval of the Specific Plan.

SUBDIVISION MAPS – A series of subdivision maps will be reviewed and approved by the City of Ontario for the residential components of the project area that will include information on lot layout and dimensions, roads, grading, easements, and slope. Subsequent to approval by the City, final maps will be prepared that will become the legal recorded documents that will establish legal parcels. Development in the Regional Commercial, Mixed-Use and Light Industrial Districts of this Specific Plan ~~(Planning Areas 6, 7, 8, and 9)~~ will require approval of parcel subdivision and/or condominium maps by the City of Ontario for residential, mixed-use, light industrial and commercial plans.

DEVELOPMENT PLAN REVIEW – Development of individual planning areas within the Rich-Haven Specific Plan will be subject to the Development Plan Review process consistent with the City of Ontario's Development Code.

DEVELOPMENT AGREEMENT – Unless done in a coordinated manner and with adequate fiscal planning, development projects within Ontario Ranch are likely to present a challenge in their implementation because of the lack of existing public facilities, including streets, sewer, transportation, drinking water, school, and utility facilities. California law has established a mechanism for ensuring the adequate provision of such facilities, while at the same time providing assurances to applicants that, upon approval of the project, the applicants can proceed with their projects. Approval of this Specific Plan without a development agreement may result in a waste of resources, escalate housing prices for the consumer, and discourage investment in and commitment to comprehensive planning, as envisioned by the City, which seeks to make maximum efficient utilization of resources at the least economic cost to the public.
Therefore, a statutory development agreement, authorized pursuant to California Government Code sections 65864 et seq., shall be required in conjunction with the approval of this Specific Plan. For the abovementioned reasons, the development agreement for this Specific Plan shall include, among other things, methods for financing

acquisition and construction of infrastructure, acquisition and development of adequate levels of parkland and schools, as well as the provision of adequate housing opportunities for various segments of the community consistent with the regional housing needs assessment. Such development agreement shall have been fully approved before the issuance of the first building permit for this project.

1.4.4 RELATIONSHIP TO THE ONTARIO PLAN, AIRPORT LAND USE COMPATIBILITY PLANS AND ZONING

On ~~January 26th~~August 16, ~~2010~~2022, the City of Ontario adopted The Ontario Plan (TOP) which serves as the City's new business plan and includes a long term Vision and a principle based Policy Plan (General Plan).

The City's Policy Plan, which acts as the City's General Plan, designates the project site for the following land uses:

- Low Density Residential (2.1-5.0 dwelling units per acre) – Planning Area~~s~~ 1A~~, 1B, 1C, 1D, 1E and 1F~~.
- Low Medium Residential (5.1- 11.0 dwelling units per acre) – Planning Areas 1B ~~4A, 4B, 4C and 4D.~~
- Medium Density Residential (11.1-25.0 dwelling units per acre) – Planning Area~~s 5A~~, ~~5B, 5C, and 5D~~ 1C, 2B, 3A and 3B.
- Mixed Use (14.0-50.0 dwelling units per acre for residential and maximum 0.7 FAR for commercial/office) – Planning Areas ~~6A, 6B, 7B, 8A, 8B, 9A and 9B~~ 4A, 4B, 5B,7, 9 and 10A.
- General Commercial (maximum 0.4 FAR) – Planning Area 6B, 8 and 10B.
- Industrial (maximum 0.55 FAR) – Planning Areas 2C, 3C, 5A, 5C and 6A ~~7A~~.
- Open Space: Parkland – Planning Area ~~3~~ 2A .
- Open Space: Non-Recreation – Planning Areas SCE 1 and portions of 3A, 3C, 4B, 5A, 5B and 6A ~~2 and 5E~~.

Section 9 – (TOP Residential, Mixed Use and Light Industrial Use Consistency Tables) provides a summary of the minimum and maximum number of units allowed within each Residential Planning Area ~~(PA 1, 4 and 5)~~ and shows that the Rich Haven Specific Plan Land Use Plan is consistent with the assigned TOP Land Use Designation.

The Mixed Use Planning Areas ~~(6A, 6B, 7B, 6D, 7B, 8A, 8B, 9A and 9B)~~ TOP ~~Land Use designated~~ designates ~~areas~~ within the Rich Haven Specific Plan allow for a combination of Regional Commercial, Mixed-Use Overlay and a Stand-Alone Residential Overlay uses. Projects within these areas shall be required to maintain a Residential density range of 14.0 – 50 du/ac and shall not exceed 0.7 Floor Area Ratio for any commercial/office use to be consistent with City's TOP policies. Light Industrial projects shall not exceed 0.55 Floor Area Ratio to be consistent with City's TOP policies. The Consistency Tables within Section 9 includes a detailed breakdown of how each Mixed Use and Light Industrial Planning Area is consistent with the TOP.

The Rich-Haven Specific Plan is located within the Airport Influence Area (AIA) of the Ontario International Airport ~~and Chino Airport~~ and required to be consistent with ~~both~~ the Ontario Airport Land Use Compatibility Plan~~s~~.

1.4.5 CEQA COMPLIANCE

An Environmental Impact Report (EIR) has been prepared for the project to analyze significant environmental impacts of the project, discuss feasible alternatives, and recommend feasible mitigation measures in compliance with the provisions of the California Environmental Quality Act (CEQA). This EIR has analyzed the entire Rich-Haven Specific Plan area and addresses potential impacts associated with development of the Specific Plan area. The EIR includes recommended mitigation measures and will analyze implementing actions for development. The EIR has been prepared to fulfill the requirements for environmental documentation for most subsequent discretionary and ministerial applications for development within the Rich-Haven Specific Plan.

~~Subsequently, addendums to The Ontario Plan Environmental Impact Report were prepared for the annexation of Planning Areas 9A and 9B into the Rich Haven Specific Plan and for land use changes to Planning Areas 1, 7 and 9.~~

The Rich-Haven Specific Plan (RHSP) was approved by the City of Ontario in 2015, with subsequent Specific Plan Amendments approved in 2016, 2018, and 2021. The current (2021) Rich-Haven Specific Plan ("2021 Specific Plan") comprises approximately 584 acres located west of Interstate 15 (I-15), and south of State Route 60 (SR-60). The 2021 Specific Plan Area lies within the 8,200-acre Ontario Ranch area, in the southeast portion of The Ontario Plan (TOP). The 2021 Specific Plan Area is bounded generally by Riverside Drive to the north, "Old" East Edison Avenue [alignment] to the south, Mill Creek Avenue and Hamner Avenue to the east, and Haven Avenue to the west. Location of the 2021 Specific Plan is presented at Figure 2.1-1. The location of the 2022 RHSP Specific Plan Amendment evaluated in this Initial Study (IS) is coincident with the 2021 Specific Plan.

The 2021 Specific Plan entitlements allow for development of up to 7,194 dwelling units (all residential types), up to 990,902 square feet of commercial/office space, up to 1,183,525 square feet of light industrial uses, approximately 27 acres of public parkland, and approximately 20 acres of Southern California Edison (SCE) Parcel open space and SCE Easements. The 2022 RHSP Specific Plan Amendment (2022 Specific Plan Amendment, Project) evaluated in this Initial Study (IS) proposes a new amendment of the RHSP as described herein.

Under the proposed 2022 RHSP Specific Plan Amendment, the Specific Plan Area would be developed with up to 7,194 dwelling units, up to 925,002 square feet of commercial space, and up to 2,767,148 square feet of light industrial uses. Other existing RHSP land uses, e.g., public parkland, Southern California Edison (SCE) Parcel open space and SCE Easements would not be substantively affected under the 2022 RHSP Specific Plan

Amendment. This evaluates potential environmental impacts of buildout of the Specific Plan Area in total that would result from the 2022 RHSP Specific Plan Amendment.

1.5 SPECIFIC PLAN ORGANIZATION

The Rich-Haven Specific Plan is organized into the following sections:

INTRODUCTION – This section includes an overview of the Specific Plan, an overview of the Development Plan, identifies the Specific Plan's authority and requirements, and also includes a glossary of terms.

EXISTING CONDITIONS – Provides the location of the property, the surrounding land uses, and discusses environmental opportunities and constraints of the site.

LAND USE – Contains the overall design concepts that define the community as well as the neighborhoods, regional commercial, mixed-use and light industrial areas.

INFRASTRUCTURE AND SERVICES – Establishes circulation improvements, identifies development criteria for the community facilities, and provides master planned and conceptual infrastructure requirements for water, wastewater, storm drainage, and dry utilities in the Specific Plan Area.

DEVELOPMENT REGULATIONS – Sets forth the land use designations, development standards and regulations and describes the development plan of the Specific Plan area for residential~~,~~ commercial, mixed-use and light industrial uses.

DESIGN GUIDELINES – Sets forth the Design Programs and provides requirements for development, including site planning, architecture, landscaping and signage.

ADMINISTRATION AND IMPLEMENTATION – Sets forth administrative procedures for implementing the mixed-use implementation mechanisms, modification, and procedures for amending the Specific Plan, and establishes the implementation, phasing, financing, improvement responsibilities, and subsequent Design Review submittal requirements.

THE ONTARIO PLAN CONSISTENCY – The City of Ontario Policy Matrix describes the relationship of the Rich-Haven Specific Plan to the policy requirements of the City's TOP.

1.6 GLOSSARY OF TERMS

The meaning and constructions of words, phases, title, and terms shall be the same as provided in the City of Ontario Development Code unless otherwise provided herein.

Ancillary use: A use which is incidental or supplementary to a primary permitted use.

Area, gross: A unit of land measure, including easements, existing and future rights-of-way and other future dedications.

Area, net: A unit of land measure, not including the area within the established rights-of-way of a public or private street, or any other area dedicated or required to be dedicated in the future for a public use.

Conditional Use Permit (CUP): A zoning instrument used primarily to review the location, site development, or operation of certain land uses. A conditional use permit is granted at the discretion of the Planning Commission or Zoning Administrator and is not the automatic right of the applicant or landowner.

Daily Vehicle Trips: The number of vehicle trips per a specific use during an average day.

Development Advisory Board (DAB): A board in the City as established by the City Council charged with the responsibility for the review and approval of development plans.

Dwelling unit, single family: An attached or detached building not to contain more than one kitchen and which, regardless of the form of ownership, is not designed to accommodate more than one household.

Dwelling unit, multi-family: One or more rooms designed, occupied, or intended for occupancy as separate living quarters, with cooking, sleeping, and sanitary facilities provided within the same unit for the exclusive use of the household.

Floor area ratio (FAR): The total building square footage on a given lot, divided by the lot area of the same lot. Building square footage includes all structures on the lot, including accessory structures.

Height, building: The vertical dimension of a building or any other structure, measured from the highest point of the roof to adjacent grade within five feet of the building immediately below the point of measurement, not including chimneys, antennas, elevators, or other appurtenant structures.

Home occupation: An occupation conducted by the occupant of a dwelling as a secondary use in which there is no display, no stock-in-trade, no commodity sold on the premises, no person employed other than residents of the dwelling, and no mechanical equipment used except for that necessary for housekeeping purposes.

Light Industrial: The Light Industrial Specific Plan area, accommodates lighter manufacturing and assembly activities, storage and warehousing activities and other similar uses developed at a maximum intensity of 0.55 FAR. This land use district is intended to serve as a buffer between heavier industrial uses and commercial, residential, parks and schools.

Lane: A public or private way permanently reserved as a secondary means of access to abutting property.

Live/Work: A dwelling unit that acts as both a residence and a place of commercial activity, where the residential use is the primary use, and the commercial activity is the secondary use.

Mixed use: Horizontal mixed use includes a variety of uses adjacent to each other from commercial to office, etc. Vertical mixed use includes a mixture of uses vertically stacked on one parcel or building from office over commercial to residential over commercial.

Open Space/Non-Recreation: Any parcel or area of land or water essentially unimproved and set aside, dedicated, designated, or reserved for public or private use.

Setback, front yard: The horizontal distance between the front property line and a line parallel thereto at the nearest point of a structure on the site.

Setback, rear yard: The horizontal distance between the nearest part of a main building and the nearest point of the rear property line.

Setback, side yard: The horizontal distance between the side property line and a line parallel thereto at the nearest point of a structure on the site.

Street, arterial: A street with signals at important intersections and stop signs on the side streets, that collects and distributes traffic to and from other arterial streets, and moves regional traffic.

Street, collector: A street that collects traffic from local streets and connects with arterial streets. Collector streets may be signalized under certain conditions.

Street, local: A street designed to provide vehicular access to abutting property.

Trip Allocation: The number of average daily trips for individual planning areas.

Trip Budget: The total average daily vehicular trips generated by use located within the project.

Use: The purposes for which a site or a structure is arranged, designed, intended, constructed, or erected.

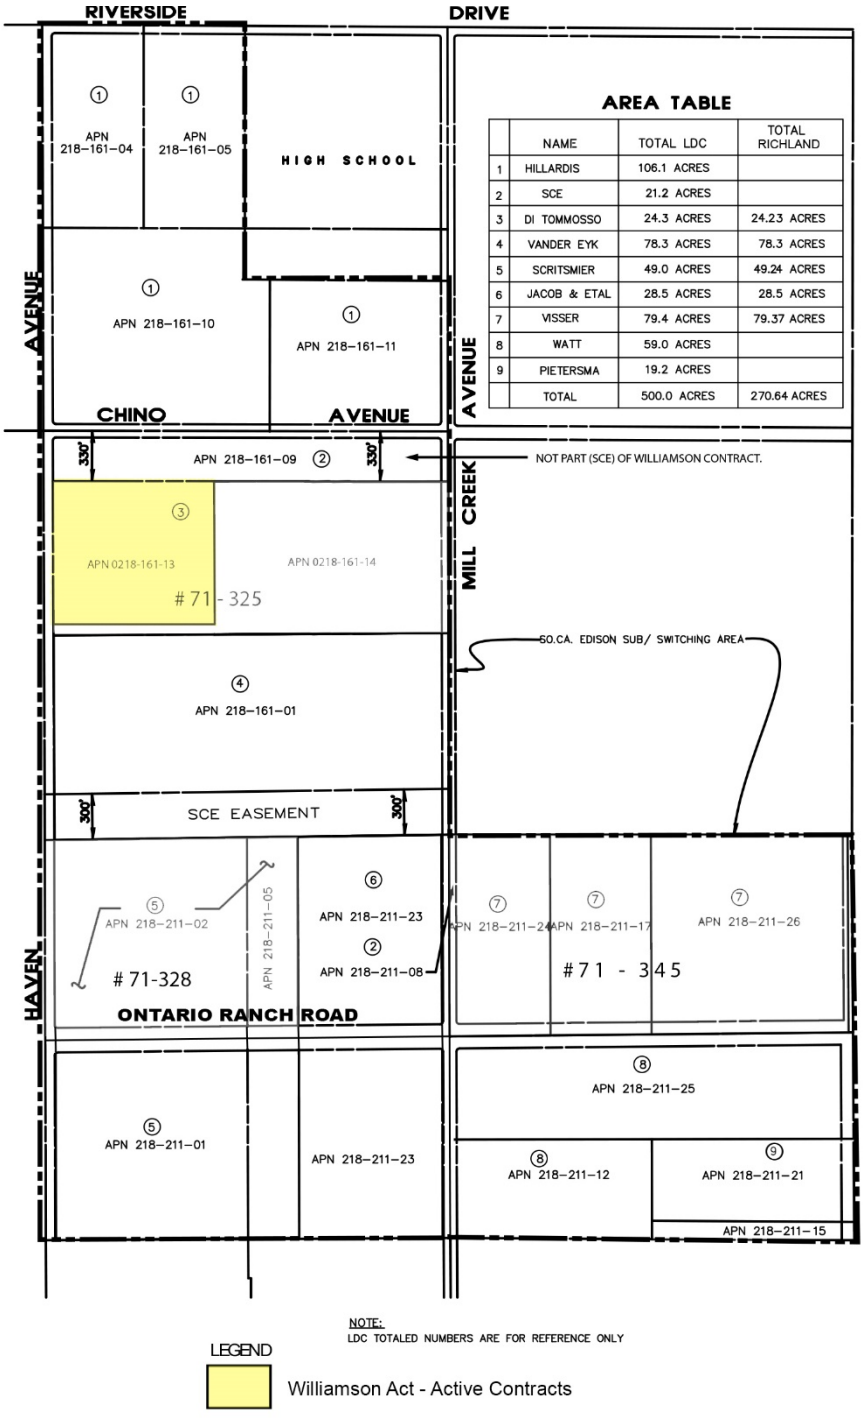
This page intentionally left blank

SECTION 2 - EXISTING CONDITIONS

This section of the Rich-Haven Specific Plan discusses the existing physical natural and man-made conditions of the Rich-Haven Specific Plan area at the time of the preparation of the Specific Plan, including existing land uses, infrastructure and improvements, topography, geology, and vegetation and wildlife.

2.1 OWNERSHIP/WILLIAMSON ACT CONTRACTS

Within the Specific Plan area, one private property owner has property currently under Williamson Act contracts. See Figure 2-1, Ownership Map.

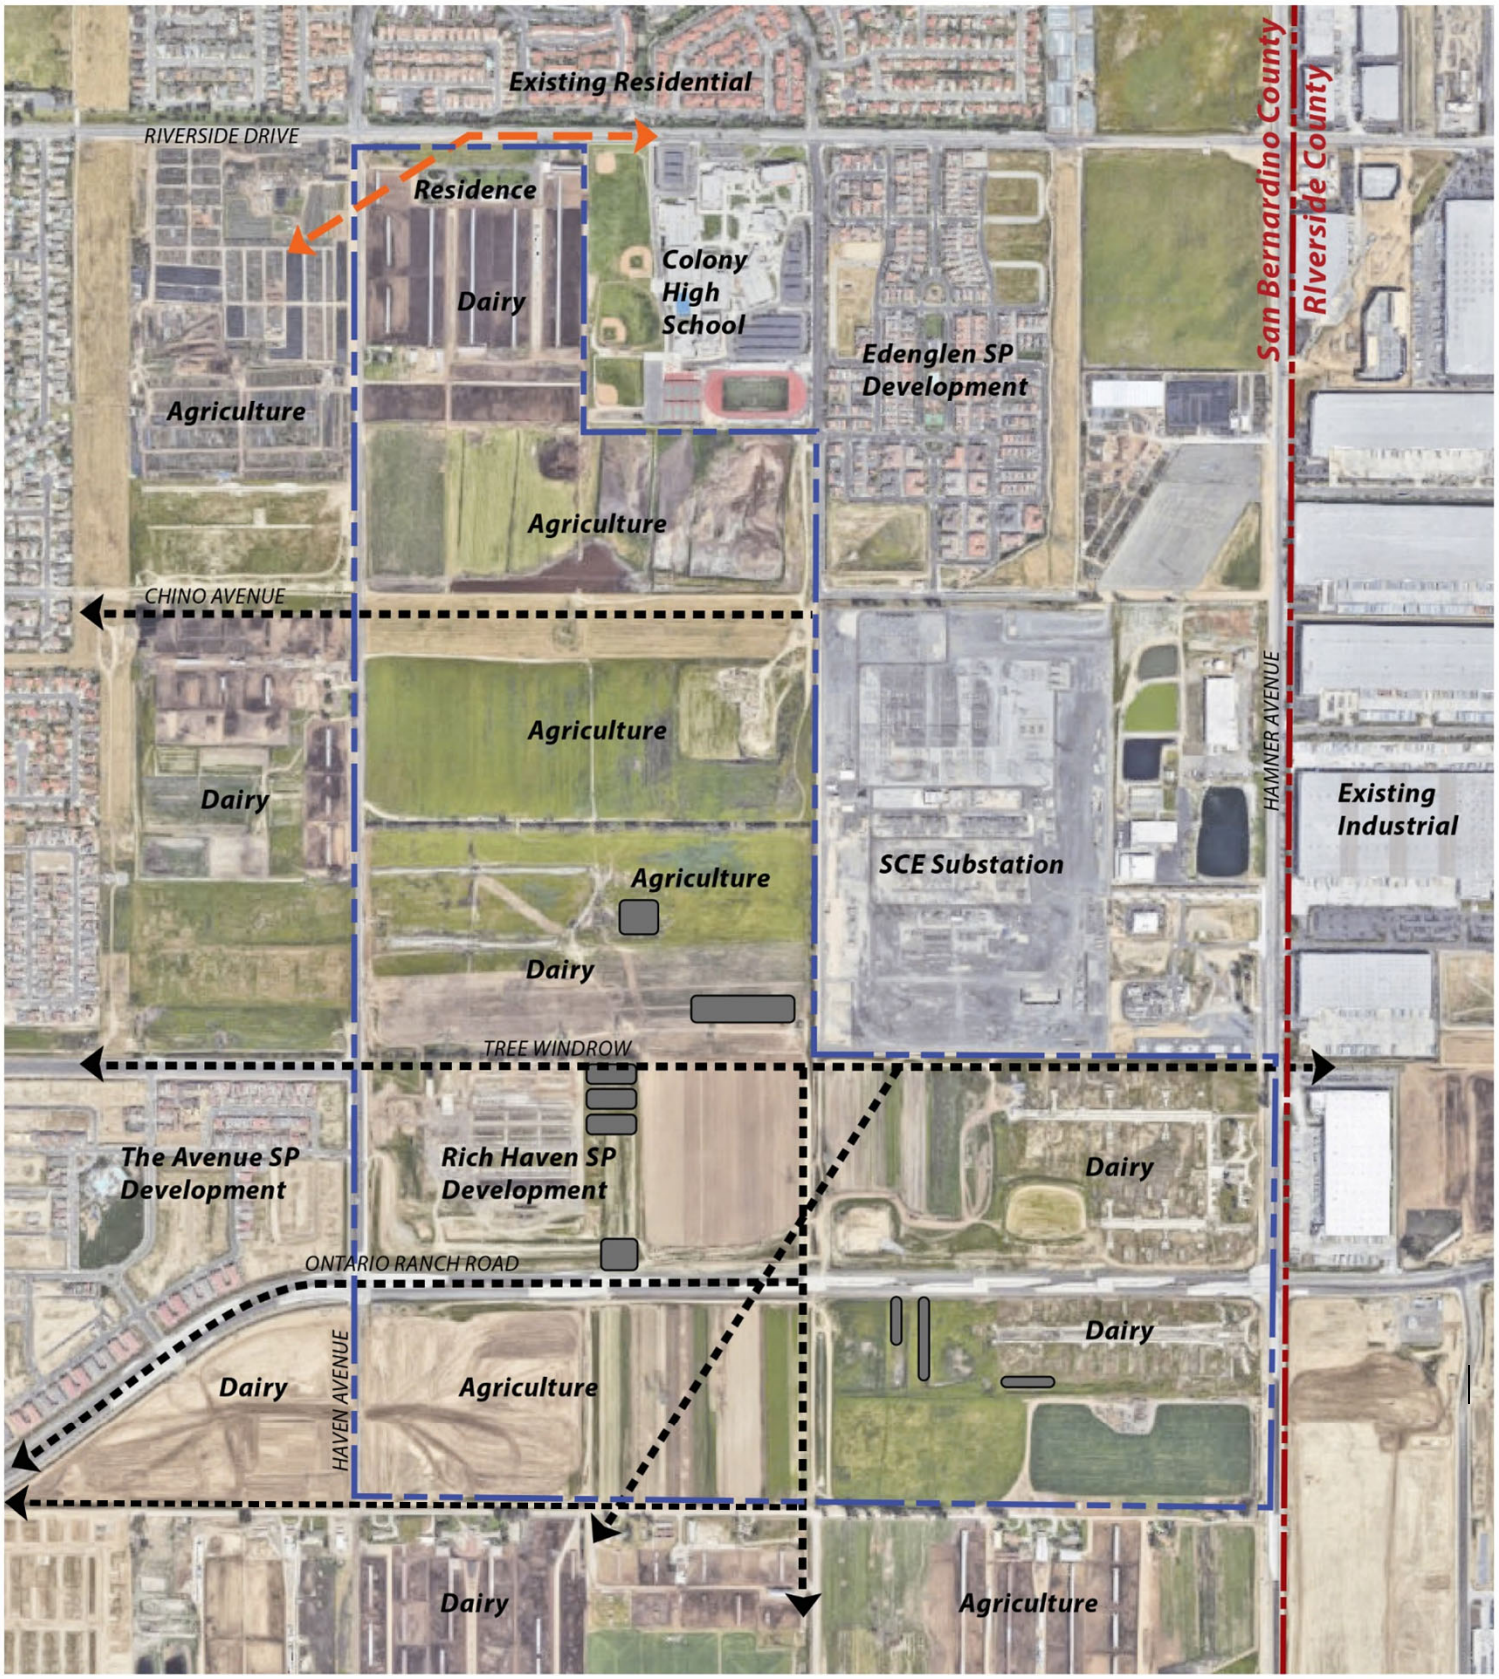


2.2 LAND USES

2.2.1 ON-SITE LAND USES

The Rich-Haven project site is presently used for agricultural purposes, including the raising of livestock, however the southern portion of the project site along Ontario Ranch Road is transitioning to commercial and residential development with the ongoing implementation of the Rich Haven Specific Plan. Fallow and cultivated fields are present, with multiple dry basins and windrows throughout the central portion of the site. Additionally, Southern California Edison (SCE) easements containing power transmission lines cross the site in an east to west direction directly south of the Chino Avenue alignment (mid-way between Chino Avenue and Ontario Ranch Road) and directly south of Ontario Ranch Road. Transmission lines also run north/south along the east side of Mill Creek Avenue, and northeast to southwest diagonally across the site near the intersection of Mill Creek Avenue and Ontario Ranch Road. See Figure 2-2, *Existing Conditions.*

2.2.2 SURROUNDING LAND USES



Existing land uses in the vicinity include residential development to the north, and Colony High School to the northeast. A Southern California Edison (SCE) Substation is located adjacent to the project on the east, separating the site from existing industrial uses to the east of the Substation. Both active and fallow agricultural lands, including dairy farms, are present to the west and south of the project area. To the west, east, and south, new development is proposed for the adjacent existing agricultural areas.

RICH-HAVEN SPECIFIC PLAN

SURROUNDING PROPOSED LAND USES

FIGURE 2-3

Projects proposed in the immediate area include the West Haven Specific Plan area, directly to the west of the project across Haven Avenue, designated low- and medium-density residential, and an elementary school. The Edenglen Specific Plan area is adjacent to the project on the northeast side, and also proposes low and medium-density residential areas. The Esperanza Specific Plan located adjacent to the southern portion of the project and includes a mixture of residential uses and a school. Residential low and medium-density and Neighborhood Commercial uses are also designated in The Avenue Specific Plan consistent with the City's TOP for the lands generally to the southeast of the Rich-Haven Specific Plan. See Figure 2-3, *Surrounding Land Uses.*

2.2.3 ONTARIO AIRPORT INFLUENCE AREA SECTION

The Rich Haven Specific Plan is located within the Ontario Airport Influence Area and shall be subject to the Ontario International Airport and Land Use Compatibility Plan (ONT ALUCP) for additional requirements.

~~Existing conditions and impacts include:~~

- ~~**Safety Zones –** The project site is located outside the ONT ALUCP Safety Zones. Refer to *ONT ALUCP.*~~

- ~~**Noise Impact Zones –** Portions of the Rich Haven SP are located within the 60-65 dB CNEL Noise Impact Zone. New Residential land uses within the 60-65 dB CNEL noise impact zone must incorporate exterior-to-interior noise level reduction (NLR) design features and be capable of attenuating exterior noise to 45 dB interior noise level. Acoustical data documenting that the structure will be designed to comply with the criteria must be provided. Refer to *ONT ALUCP.*~~

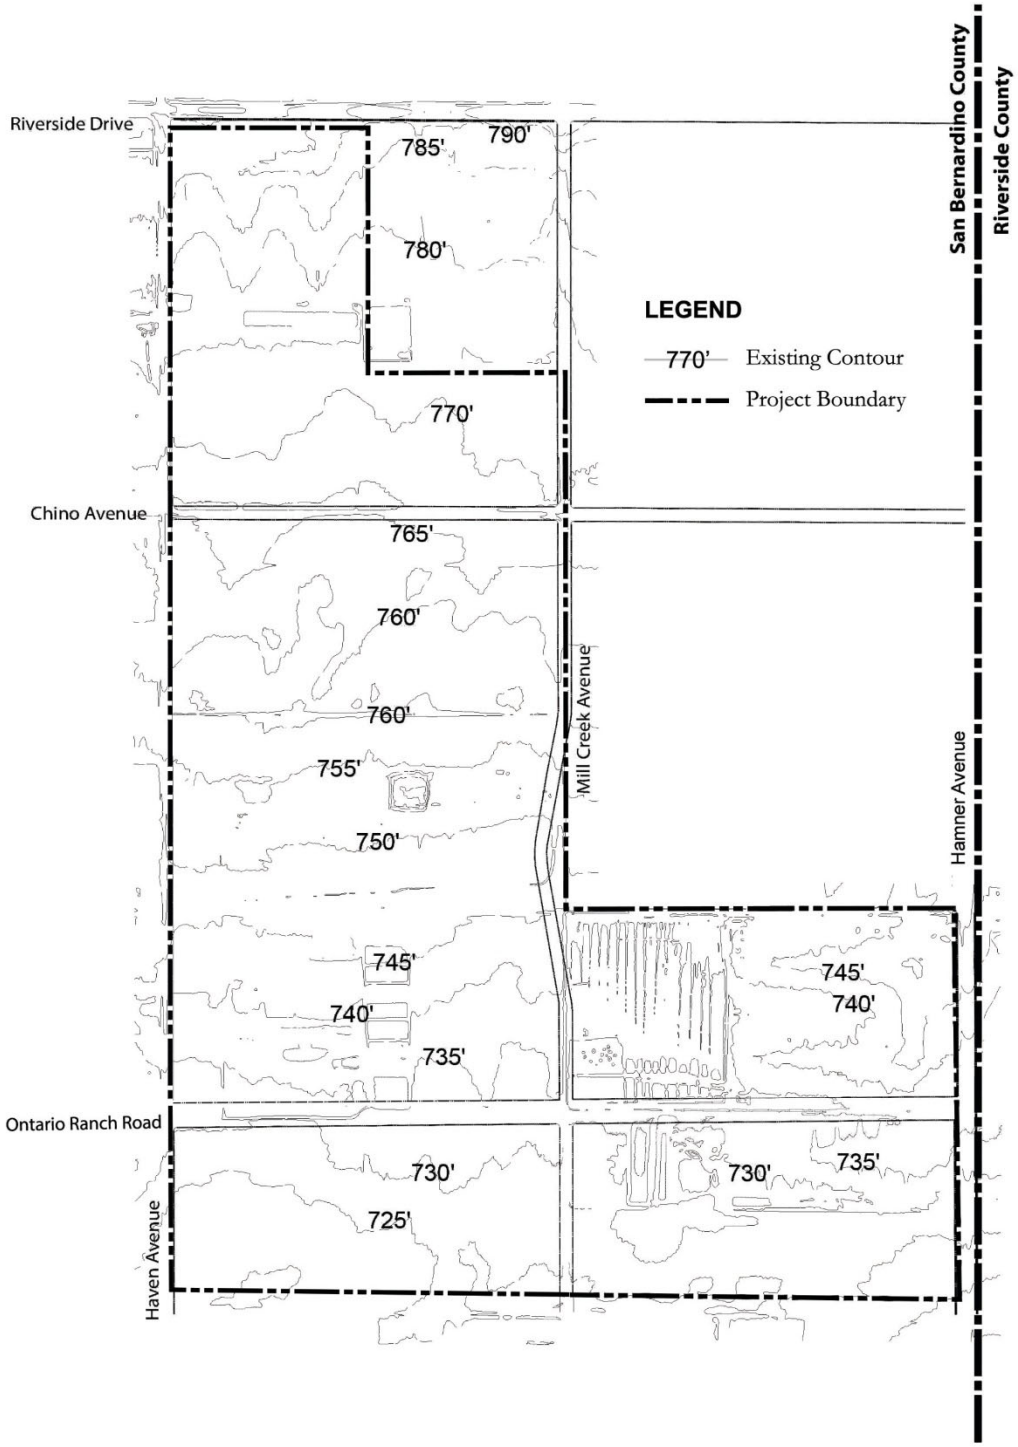
- ~~**Airspace Protection Zones –** Allowable structure heights for the project site are greater than 200 feet.~~
  - ~~**Policy A1b of the ONT ALUCP** states: The FAA requires that it be notified about any proposal to construct or alter a structure that would be taller than 200 feet above the ground level regardless of the structure's proximity to ONT or any other airport. Refer to *ONT ALUCP.*~~

- ~~**Overflight Notification Zones –** Portions of the project site are located within a Recorded Overflight Notification Zone and the following is required. Refer to *ONT ALUCP:*~~
  - ~~New Residential land uses are required to have a Recorded Overflight Notification appearing on the Property Deed and Title incorporating the following language: (NOTICE OF AIRPORT IN VICINITY: This property is presently located in the vicinity of an airport, within what is known as an airport influence area. For that reason, the property may be subject to~~

some of the annoyances or inconveniences associated with proximity to airport operations (for example: noise, vibration, or odors.) Individual sensitivities to those annoyances can vary from person to person. You may wish to consider what airport annoyances, if any, are associated with the property before you complete your purchase and determine whether they are acceptable to you.)

- Portions of the project site are located within Real Estate Transaction Disclosure Notification Zone and the following is required:
  - The applicant is required to meet the Real Estate Transaction Disclosure in accordance with California Codes (Business and Professions Code Section 11010-11024). New residential subdivisions within an Airport Influence Area are require to file an application for a Public Report consisting of a Notice of Intention (NOI) and a completed questionnaire with the Department of Real Estate and include the following language within the NOI:

- ***NOTICE OF AIRPORT IN VICINITY****: This property is presently located in the vicinity of an airport, within what is known as an airport influence area. For that reason, the property may be subject to some of the annoyances or inconveniences associated with proximity to airport operations (for example: noise, vibration, or odors.) Individual sensitivities to those annoyances can vary from person to person. You may wish to consider what airport annoyances, if any, are associated with the property before you complete your purchase and determine whether they are acceptable to you.*



2.3 EXISTING IMPROVEMENTS

Roadway and utility infrastructure improvements within and adjacent to the Rich-Haven project are expanding to accommodate the implementation of several Specific Plans that surround the project site and to accommodate approved development projects within the Rich-Haven project area. Riverside Drive, portions of Mill Creek, Chino Avenue, Haven Avenue and Ontario Ranch Road have been constructed to their ultimate design and improvements will continue to be expanded as future development occurs around and within the project area.

Remaining structures associated with the current agricultural and dairy uses of the site are present mainly in the northwest and southeast portions of the project area. Dairy ponds are also present in active and abandoned dairy properties. See Figure 2-2, *Existing Land Uses.*

2.4 TOPOGRAPHY

Like the rest of the Ontario Ranch, the Rich-Haven Specific Plan area is relatively flat, located in the central portion of the Chino Basin. Ground elevations in the Ontario Ranch vary from 780 to 630 feet above sea level, and, like the area at large, the Rich-Haven Specific Plan Area is relatively flat with an average slope of approximately two percent (2%). See Figure 2-4*, Site Topography*.

NOT TO SCALE

RICH-HAVEN SPECIFIC PLAN
SITE TOPOGRAPHY

FIGURE 2-4

2.5 CIRCULATION AND ACCESS

The Ontario Ranch is served by two freeways, State Route 60 to the north and Interstate 15 to the east, and one state highway, Euclid Avenue (SR-83) to the west. Euclid Avenue (SR-83) is a major divided arterial, with four to six lanes.

The Rich-Haven Specific Plan is directly accessed by arterial and collector roads that pass through and adjacent to the site, including Riverside Drive to the north, Haven Avenue to the west and Hamner Avenue to the east. Riverside Drive is a three-lane primary arterial with an existing 60-foot right-of-way. Haven Avenue is a two-lane major arterial with an existing 60-foot right-of-way. Hamner Avenue is a four lane major arterial with an existing 80-foot right-of-way. Mill Creek Avenue is unimproved south of the Colony High School, and is a rural dirt road as it passes the project site.

Chino Ave is unimproved and currently proposed to be a two lane modified collector between Haven Avenue and Hamner. Various internal roads have been constructed with recent development of several residential projects withing the specific plan area, including Tracts 20081 and 20134. Additional internal roads are anticipated to be constructed in the near future with the ongoing residential developments within the area. In some cases, existing Agricultural operations are currently being served by private dirt roads.~~Chino Avenue is unimproved and is currently designated as a four-lane collector street. Few other internal roadways exist, with the exception of unimproved dirt roads serving the site's agricultural operations. The existing Ontario Ranch Road roadway alignment to the south of the project site is proposed to be realigned through a portion of the Rich-Haven Specific Plan.~~

2.6 INFRASTRUCTURE AND UTILITIES

See Figure 2-5 for existing onsite and surrounding electric, communications, wells, and gas lines locations.

2.6.1 WATER

The Rich-Haven Specific Plan area is located within the Chino Groundwater Basin, and water demand from the Rich-Haven Specific Plan is currently served by private wells, as the Ontario Ranch area currently does not have a water distribution infrastructure system. The Chino Groundwater Basin, the primary source of groundwater for the City of Ontario, has an estimated storage capacity of 13 million acre-feet and a current storage of approximately 7.5 million acre-feet.

The project site is located within the 1010 and 925 Pressure Zones of the City's water delivery system. Existing infrastructure near the project within the 1010 Pressure Zone includes 12-inch water main within Archibald Avenue and Turner Avenue to the west of the project, and both a 10-inch and a 12-inch water main within Riverside Drive, adjacent

to the project to the north. The 925 Pressure Zone includes an existing 16-inch high-pressure water main along a portion of the east side of Hamner Avenue, within the County of Riverside, owned by Jurupa Community Services District. There is a City of Ontario existing water line in Hamner Avenue which has an existing 24"/30" water main.

In compliance with the Chino Basin Water Master's Well Procedure for Developers, a well use/destruction plan and schedule for all existing private/agricultural wells shall be submitted to the City of Ontario for approval prior to the issuance of permits for any construction activity. If a private well is actively used for water supply, the Developer shall submit a plan to abandon such well and connect users to the City's water system (residential to the domestic water system and agricultural to the recycled water system) when available. Wells shall be destroyed/abandoned per the California Water Resource Guidelines and require permitting from the County Health Department.

A copy of such permit and Form DWR 188 Well Completion Form shall be provided to the Development Engineering Department and the Utilities Engineering Department prior to issuance of grading and/or building permits. If the Developer proposes temporary use of an existing agricultural well for purposes other than agriculture, such as grading, dust control, etc., the developer shall make a formal request to the City of Ontario for such use prior to issuance of permits for any construction activity. Upon approval, the Developer shall enter into an agreement with the City of Ontario and pay any applicable fees as set forth by the agreement.

2.6.2 SEWER

Wastewater from the project site is currently disposed of through private septic systems. An existing 10-inch sewer line is located within Riverside Drive, although, it does not service the site. The Eastern Trunk Sewer line is also located in the vicinity of the project, running north to south, to the west of the Rich-Haven project site in Archibald Avenue.

Four wastewater treatment plants are in the vicinity of the Ontario Ranch: RP1 to the north, RP2 to the North, Carbon Canyon Wastewater Treatment Plant (CCWTP) to the southwest, and RP5 also to the southwest. Sewage will ultimately be conveyed to RP5 from the Rich-Haven Specific Plan area through the Eastern Trunk Sewer line to the Kimball Interceptor.

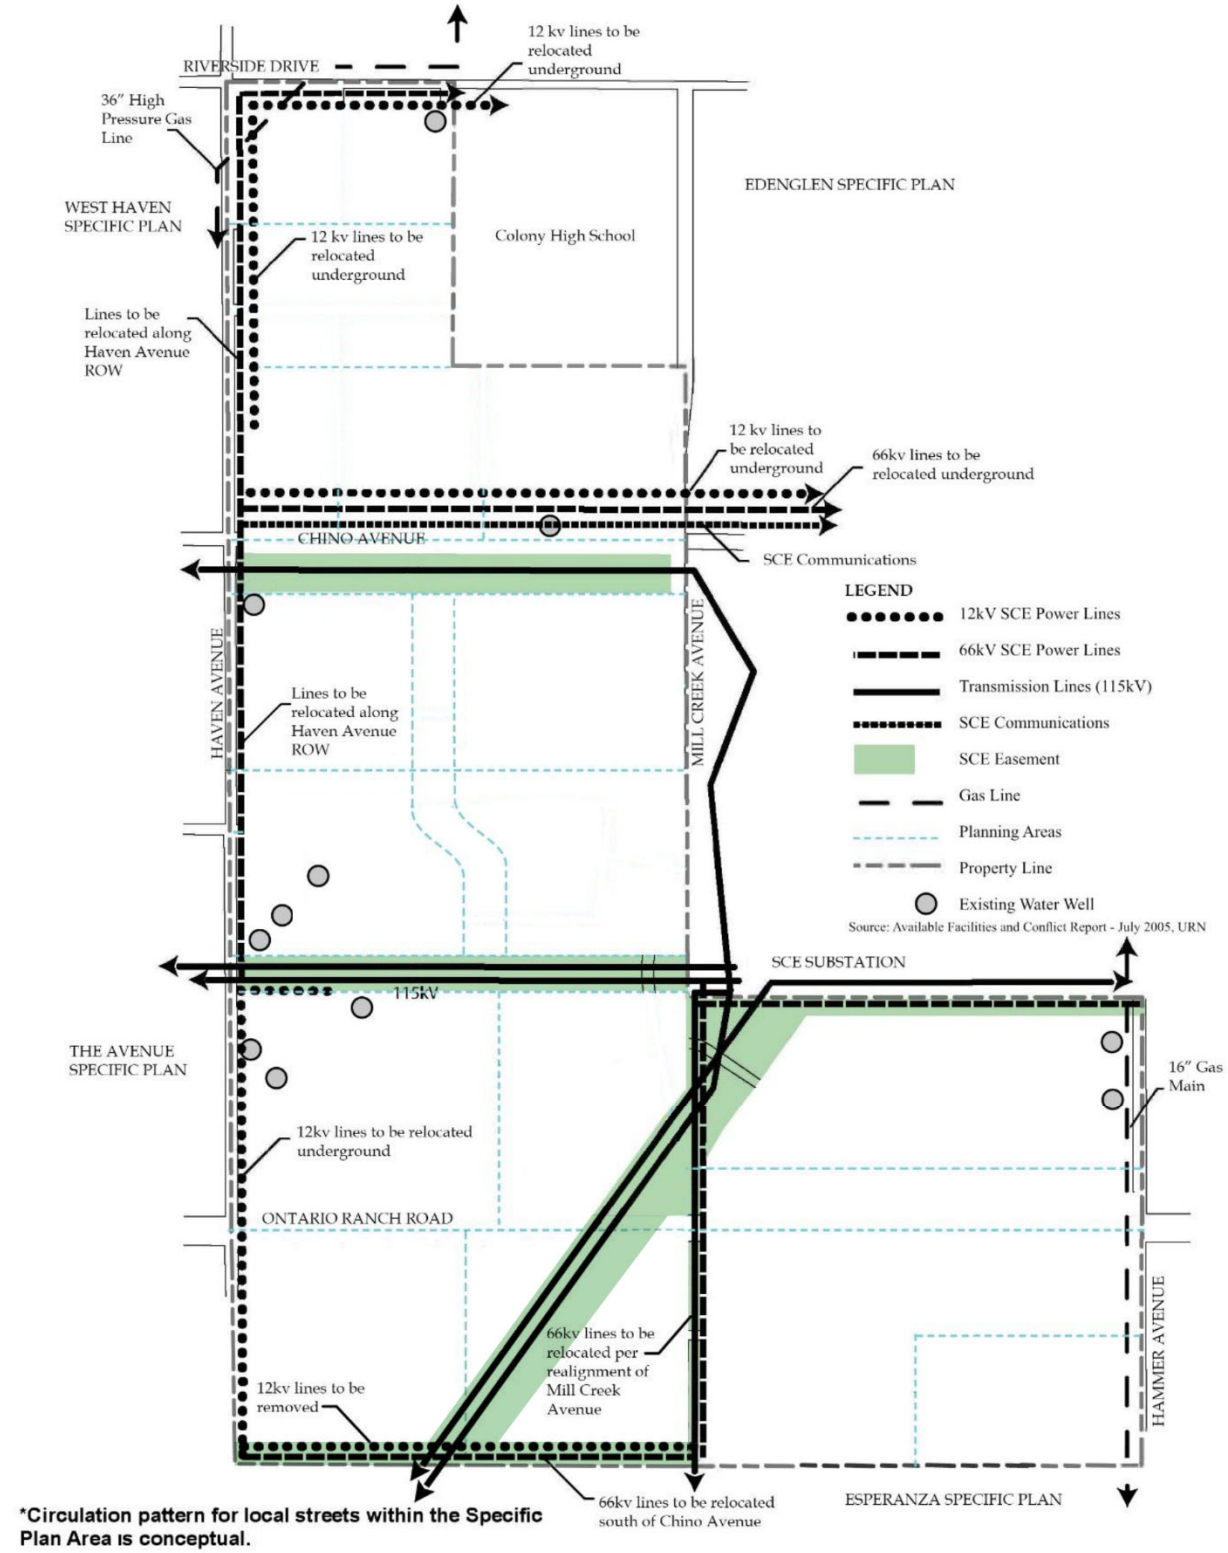
2.6.3 STORM DRAINAGE

The major improved drainage facility affecting the Rich-Haven Specific Plan is the Cucamonga Creek Channel, which runs parallel to Archibald Avenue, west of the project site. Cucamonga Creek Channel is a major north-to-south rectangular concrete line channel, carrying storm water from the mountains to the Santa Ana River.
Lower Deer Creek Channel feeds into the Cucamonga Creek Channel, by way of the Chris Basin, a county-owned groundwater recharge basin west of the project site. Lower Deer Channel also conveys flows from a very small portion of the eastern half of the Ontario Ranch area.

Drainage facilities on-site include unimproved basins and open earthen swales along area roadways. Because of the existing agricultural uses, normal rainfall does not cause runoff. Ground waters within the NMC, as a whole, contain high concentrations of salt, attributable to historic agricultural activities such as dairy farming. The high organic content of on-site soils has contributed incrementally to the degradation of surface and groundwater quality.

2.6.4 ELECTRIC

Currently, the project site is located within the service territory of the Southern California Edison Company (SCE). SCE facilities located within and adjacent to the project area consist of a substation, 500 kV, 220kV, 115kV, 66kV, and 12kV lines, and SCE Communications lines. See Figure 2-5*, Existing On-Site Facilities.*



Electric power transmission lines associated with the adjacent Southern California Edison (SCE) Substation transverse the site. Electric power 115kv transmission lines are present within a 330-foot wide SCE easement, crossing the site east to west.

Electric power 115kv transmission lines are also present between Chino Avenue and Ontario Ranch Road within a 300-foot SCE easement, which also crosses the site east to

west. In a 355-foot-wide SCE easement running northeast to southwest near the intersection of Mill Creek Avenue and Ontario Ranch Road, 115kv transmission lines cross the site as they follow Mill Creek Avenue north. These lines connect to north-to-south 115kv transmission lines along the east side of Mill Creek Avenue, ultimately connecting to the SCE Substation.

In addition to the 115kv transmission lines, there are existing 66kv, 12kv, and SCE communications lines that transverse the site. Electric power 66kv and 12kv lines exist along the north side of the existing old Ontario Ranch Road roadway alignment running east to west. Electric power 66kv, 12kV, and communication lines are located along the north side of Chino Avenue running east to west. Along the east side of Haven Avenue electric power 66kv and 12kv lines exist running north to south. Electric power 66kv lines exist along the east side of Mill Creek Avenue running north to south. Electric power 66kv, 12kV, and communication lines are located along the north side of Chino Avenue running east to west as well as, along northern portion of property between Mill Creek Avenue and Hamner Avenue. All existing facilities with 34.5kV or less will be underground in accordance to City ordinance.

Until the development of the tract at the Southern boundary, Edison Avenue shall remain in place with low maintenance landscaping between Edison Avenue right-of-way and the perimeter block wall for the community. At full build out, Edison Avenue shall be removed and replaced with a new maintenance access road per SCE requirements. This road may serve a dual purpose as a pedestrian trail. New permanent landscaping shall be installed between the property boundary and community perimeter block wall. All trees used in land shall be per SCE height requirements.

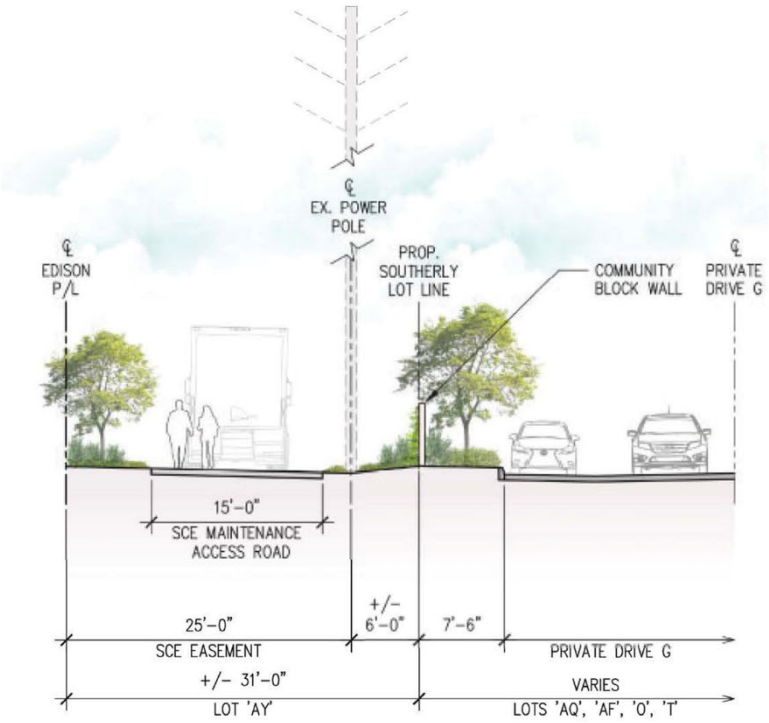
Southern Boundary

Proposed Interim Condition Typical Section



- Edison Avenue roadway remains in place until Southern tract developes
- Low maintenance temporary landscaping between Edison Avenue and community perimeter block wall

Southern Boundary

Proposed Future Built-Out Condition

- Edison Avenue roadway removed
- New maintenance access road installed per SCE requirements
- New permanent landscaping installed between property line and community perimeter block wall
- Trees shall be per SCE height requirements

RICH-HAVEN SPECIFIC PLAN

PA 4B & 5B-SOUTHERN BOUNDARY CONDITION-INTERIM & BUILD-OUT

FIGURE 2-6

2.6.5 NATURAL GAS

Southern California Gas Company (The Gas Company) provides natural gas service to the area. The Gas Company has an existing 36" high pressure main extending through the site at the northwest corner of the project along a gas easement that continues extending east along Riverside Drive and turns north at about 1,000 feet before the extension of Mill Creek Avenue. There is a four-inch main that extends in an east/west direction along Riverside Drive and parallels the 36" high-pressure main along Riverside Drive for about 800 feet. A three-inch main is located on the west side of Haven Avenue and extends in a north/south direction and continues south to existing Ontario Ranch Road, transitioning east for about 1,200 feet. In addition, a 16" main extends in a north/south direction along the west side of Hamner Avenue.

2.6.6 COMMUNICATIONS SYSTEMS

Currently, Verizon provides telephone service within the project area. Verizon has existing underground facilities located on the east side of Haven Avenue that transition to overhead lines just south of Riverside Avenue to Chino Avenue, where the lines cross over to the west side of Haven Avenue terminating approximately 1,200 feet south.

SBC has existing underground telephone lines on the east side of Hamner Avenue extending in a north/south direction.

Charter Spectrum and Frontier have existing overhead facilities on the south side of Riverside Drive.

2.6.7 SOLID WASTE

The Ontario Municipal Utilities Company (OMUC) currently, by request, provides solid waste collection and disposal services to the Ontario Ranch.

2.7 GEOLOGY AND SOILS

A Preliminary Geotechnical Investigation for a majority of the project was prepared by Petra in September 2005 and revealed from subsurface investigation that the project site is underlain by Quaternary-age alluvial deposits to the maximum depth explored (51.5 feet below ground surface). A relatively thin layer of artificial fill mantles the ground surface throughout the entire site. Surface layers of manure, generally six to 12-inches thick were observed within existing cattle pens at the dairy farms, in addition to stockpiles of manure, some several feet high, within the dairies and the pig farm.

2.7.1 SEISMICITY

The project site is located within the Southern California area, dominated by northwest-trending faults associated with the San Andreas system. No active or potentially active faults are known to extend through the site. Several active or potentially active faults are in close proximity and include the Chino-Central Avenue fault approximate 7 mile to the northeast, the San Jose fault 10 miles to the southeast, Cucamonga fault 11 miles to the south, Whittier fault and Glen Ivy fault 11 miles to the northeast, and the San Andreas fault 19 miles to the southwest.

2.8 VEGETATION & WILDLIFE

Little or no naturally occurring vegetation is present on the project site, due to its historic dairy and agricultural use. Existing vegetation within dairy lands include cattle pastures, while agricultural uses consist of cultivated and fallow fields, in addition to windrows along internal, unimproved roadways.

This page intentionally left blank

SECTION 3 - LAND USE

This section of the Rich-Haven Specific Plan discusses the land uses proposed within the Rich-Haven development. Land uses include the residential, commercial, mixed-use, retail, office, light industrial, parks and open space, and community facility components planned for Rich-Haven.

3.1 COMMUNITY DESIGN

The Rich-Haven Specific Plan is envisioned as a high quality residential and mixed-use community, designed with reference to "Traditional Neighborhood Design" principles. Rich-Haven is organized into ~~two~~three Districts, a Residential District, ~~and~~ a Regional Commercial/Mixed-Use District and a Light Industrial District. Each district is designed around Planning Areas, which form smaller neighborhoods. ~~Each Planning Area can contain a variety of residential and/or commercial product types, but will be organized around one common internal street system. Rich-Haven's Residential District contains Planning Areas 1 through, 5F, and the Regional Commercial/Mixed-Use District is comprised of Planning Areas 6, 7, 8 and 9.~~

3.1.1 TRADITIONAL NEIGHBORHOOD DESIGN

To best create Rich-Haven's distinct Residential District and plan for a well-integrated Regional Commercial/Mixed-Use District, the Rich-Haven Specific Plan proposes numerous Traditional Neighborhood Design (TND) principles. The application of TND principles can simultaneously give Rich-Haven identity as well as better connect it to the rest of the Ontario Ranch. The TND principles to be implemented at Rich-Haven include:

- **CONNECTIONS –** Rich-Haven is designed to provide both internal and external connectivity, providing connections between Rich-Haven's own land use components and between Rich-Haven and surrounding future and existing developments. Sidewalks, linear parks and bike trails will internally connect Rich-Haven's residential areas, neighborhood parks, community facilities, proposed public parks, and the retail, commercial, and office uses of the Regional Commercial/Mixed-Use District. Additionally, Rich-Haven's Land Use Plan includes a segment of the SCE Corridor Trail System, which extends through all of the Ontario Ranch, connecting Rich-Haven's residents with important uses and amenities outside of Rich-Haven.

  Connectivity within Rich-Haven is also achieved by designing the community at a walkable scale and density, similar to those of traditional neighborhoods. This allows non-drivers, such as children, seniors, and those with disabilities to be active and independent.

  TRADITIONAL STREET NETWORK – The Rich-Haven Land Use Plan is designed around a hierarchy of streets, connected by a grid network with a variety of routes for pedestrians and vehicles. The Rich-Haven street grid extends through both the Residential and Regional Commercial/Mixed-Use Districts. Traditional street

networks are visually favorable and comfortable environment for pedestrians, bicyclists, and Rich-Haven's residents at large.

- **INCORPORATION OF NEIGHBORHOOD AND COMMUNITY INSTITUTIONS –** The Rich-Haven Specific Plan proposes a public park site within the Rich-Haven community. Inclusion of a school site helps to define Rich-Haven as a cohesive and complete community, and draws on the traditional organization of a community around a neighborhood school. Other community facilities, including a fire station, will also be located within the Residential District.

- **IDENTIFIABLE NEIGHBORHOODS –** Identifiable neighborhoods can make Rich-Haven more attractive to residents and employers by increasing a "sense of community" and belonging. This document's Design Guidelines stress the use of defined neighborhood edges and entrances within the Residential District to make this District's neighborhoods more distinct and identifiable. Within the Regional Commercial/Mixed-Use District, neighborhoods will be identifiable through other means, as the normally defined edges between adjacent uses are intentionally blurred to create a well-integrated mixed-use neighborhood. The mix of residential and commercial uses within the Regional Commercial/Mixed-Use District can itself provide neighborhood identity.

- **MIX OF HOUSING TYPES –** A variety of housing types and varying architectural styles are proposed within Rich-Haven, in order to address varying housing needs caused by the different lifestyles of families, singles, students, executives, retirees, and empty nesters.

- **PUBLIC SPACES –** Rich-Haven's residential neighborhoods are organized around a number of small parks and open space areas. These public spaces provide opportunities for neighbors to meet and socialize, and children to play, within a safe and visible environment. The Regional Commercial/Mixed-Use District will also be organized around common public facilities including central parks, plazas, and paseos.

- **MAIN STREET ENVIRONMENT –** The Regional Commercial/Mixed-Use District may include retail, commercial, office and residential uses, along with well-incorporated central parks, plazas, and paseos, designed to a human scale. Creation of a Main Street environment aids in keeping pedestrian activity from being overwhelmed by automobile traffic. A vital "town center" atmosphere will offer the opportunity for higher-density residential uses to be within a five-minute walk of all goods and services offered in the heart of each mixed-use neighborhood. These higher-density units will provide for a more vibrant Main Street environment.

3.2 LAND USE PLAN

The Rich-Haven Land Use Plan outlines how land uses, dwelling units, and commercial square footage are allocated within the community's two Districts. The Land Use Plan is organized into 109 Planning Areas, with Planning Areas 1A, 1B, 1C, 2B, 3A, and 3B ~~through 5~~ comprising of the Residential District, and Planning Areas ~~6, 7, 8 and 9~~ 4A, 4B, 5B, 6B, 7, 8, 9, 10 A and 10B comprising the Regional Commercial/Mixed-Use District. The Light Industrial District comprises of Planning Areas 2C, 3C, 5A, 5C and 6A. In total, the Land Use Plan proposes a maximum of 7,194 dwelling units (including all residential dwelling unit types), a maximum of ~~990,902~~925,002 square feet of commercial/office space, a maximum of ~~1,183,525~~2,767,148 square feet of industrial space, 27 acres of public parkland, approximately 20.0 acres SC Edison Parcel open space~~, a 1.5 acre fire station site,~~ along with additional private parklands and Edison Easements.

Figure 3-1, *Specific Plan Land Use Plan*, and Table 3-1, *Land Use Plan Summary*, describe how these uses and dwelling units are allocated within the ~~two~~ three districts and ~~9~~ 21 Planning Areas of the Rich-Haven Specific Plan.

3.2.1 RESIDENTIAL DISTRICT

Rich-Haven's Residential District includes approximately ~~271.3~~218.7 acres organized into ~~5~~ 6 Planning Areas, each planned around local parks and open space. In total, the Residential District includes ~~1,833~~2,393 dwelling units, approximately 27.0 acres of public park and 20.0 acres of open space within the Southern California Edison parcel.

Rich-Haven's Residential District Planning Areas include a variety of housing products that respond to a variety of homeownership needs and desires. These housing products may include detached single-family, detached and attached condominiums, townhomes, and live/work units. Clustered multi-family housing may be included throughout the District, including its lower density neighborhoods. In general, the density of the District's neighborhoods increase from north to south, with:

- Planning Area 1A up to 5.0 dwelling units per acre,
- Planning Areas 1B, ~~4A, 4B, 4C, 5B and 5D up to 12.0~~ up to 11.0 dwelling units per acre,
- Planning Areas 1C, 2B, 3A and 3B~~, 5A, and 5C~~ up to 25.0 dwelling units per acre.

* Circulation pattern for local streets within Specific Plan Area to be established at Tentative Tract Map submittal.

** Residential development along the frontage of Haven Avenue within Planning Areas ~~5A, 5C~~3A and ~~6A~~ 4A and residential development along the frontage of Ontario Ranch Road within Planning Area~~s 6A~~ 4A, 4B and 5B~~and 7~~ shall average a density of 18 to 25 dwelling units per acre to support Bus Rapid Transit (BRT) along Haven Avenue.

*** After full dedication of Master Plan streets and neighborhood edges, residential development within ~~Planning Areas 6A + 9A~~Stand Alone Residential Overlay ~~and residential development within Planning Areas 6B + 9B~~ shall meet a minimum net density of 14 dwelling units per acre. The minimum density in Planning Areas ~~6A + 9A and Planning Areas 6B + 9B~~ can be averaged between ~~the~~ two areas, which ~~and~~ shall be established at Tentative Tract submittal for each Planning Area.

**** Planning Area 6B~~7B~~ shall have a minimum depth of 300 feet along Ontario Ranch Road measured from the back of the ROW and Neighborhood Edge.

RICH HAVEN SPECIFIC PLAN

LAND USE PLAN

FIGURE 3-1

Revised Table

Planning Area [3, 4, 5]	Land Use	Gross Acreage	Dwelling Units [1] Maximum	Residential Density [2]	Commercial/ Office Maximum Square Footage	Light Industrial Maximum Square Footage
1A	Low Density Residential	25.5	128	5.0	-	-
1B	Low Medium Density Residential	24.5	270	11.0	-	-
1C	Medium Density Residential	60.6	1,055	17.4	-	-
SCE 1	Edison Parcel	20.0	-	-	-	-
2A	Public Park	27.0	-	-	-	-
2B	Medium Density Residential	8.1	190	23.5	-	-
2C	Light Industrial	23.4	-	-	-	560,617
3A	Medium Density Residential Open Space-Non Recreation	36.1 8.3	560	15.5	-	-
3B	Medium Density Residential	8.6	190	22.1	-	-
3C	Light Industrial Open Space-Non Recreation	21.4 8.5	-	-	-	512,701
4A	Stand Alone Residential Overlay	45.0	1,099	24.4	-	-
4B	Regional Commercial Stand Alone Residential Overlay Open Space-Non Recreation	5.0 35.2 0.4	1,150	32.7	166,182	-
5A	Light Industrial Open Space-Non Recreation	21.3 3.7	-	-	-	502,805
5B	Regional Commercial Stand Alone Residential Overlay Open Space-Non Recreation	5.0 26.6 7.5	1,150	43.2	83,820	-
5C	Light Industrial	1.0	-	-	-	7,500
6A	Light Industrial Open Space-Non Recreation	49.4 6.6	-	-	-	1,183,525
6B	Regional Commercial	25.1	-	-	300,000	-
7	Mixed Use Overlay	20.5	552	26.9	162,500	-
8	Regional Commercial	20.5	-	-	162,500	-
9	Stand Alone Residential Overlay	20.4	300	14.7	-	-
10A	Stand Alone Residential Overlay	16.9	550	32.5	-	-
10B	Regional Commercial	2.8	-	-	50,000	-
Total		**584.9**	**7,194**	**-**	**925,002**	**2,767,148**

NOTES:

1. ALL RESIDENTIAL DWELLING UNITS SHOWN IN LAND USE SUMMARY ARE MAXIMUMS.

2. RESIDENTIAL DENSITIES AREA CALCULATED USING RESIDENTIAL ACREAGES ONLY, THEREFORE OPEN SPACE- NON RECREATION ACREAGES ARE NOT INCLUDED.

3. WITHIN THE SPECIFIC PLAN DOCUMENT, REFERENCES TO PLANNING AREA ARE ONLY 1 THROUGH 10. SUB-PLANNING AREAS SUCH AS 1A, 1B, ETC. ARE DESIGNATED TO HELP ADDRESS OWNERSHIP PATTERNS AND ARE NOT INTENDED TO BE USED FOR DENSITY TRANSFER.

4. RESIDENTIAL DEVELOPMENT ALONG THE FRONTAGE OF HAVEN AVENUE WITHIN PLANNING AREAS 3A AND 4A SHALL AVERAGE A DENSITY OF 18 TO 25 DWELLING UNITS PER ACRE TO SUPPORT BUS RAPID TRANSIT (BRT) ALONG HAVEN AVENUE.

5. RESIDENTIAL DEVELOPMENT WITHIN PLANNING AREAS 4A, 4B, ~~5A~~5B, 7, 9 AND 10A SHALL MEET A MINIMUM NET DENSITY OF 14 DWELLING UNITS PER TOP ADJUSTED GROSS ACREAGE. THE MINIMUM 14 DWELLINGS PER ACRE MAY BE AVERAGED OVER A SINGLE PLANNING AREA SUBJECT TO PLANNING DIRECTOR REVIEW AND APPROVAL AND SHALL BE CODIFIED WITHIN A DEVELOPMENT AGREEMENT.

RICH HAVEN SPECIFIC PLAN

LAND USE SUMMARY

TABLE 3-1

Consistent with the City's TOP, the Rich-Haven Specific Plan encourages residential neighborhoods designed around Traditional Neighborhood Design (TND) principles, planned to include multiple pedestrian routes, bikeways, and multi-use trails, neo-traditional street-grid systems, a diversity of housing types, and the integration of public facilities into the community fabric.

The land use plan for the Rich-Haven Residential District responds by including park and open space amenities throughout, including linear parks and SCE parcel/easement areas that provide pedestrian and bikeway connectivity. The internal backbone streets proposed within the District are planned on a traditional grid system, creating a visually attractive street network that connects well both internally, between the Residential and Regional Commercial/Mixed-Use Districts, and between Rich-Haven and its surrounding development. Additionally, the Residential District includes a variety of housing types, with a gradient increase in density from the north to the south, and may include gated neighborhoods. Finally, the Residential District is designed to include community facilities and public institutions, including a proposed public park and fire station site.

3.2.2 REGIONAL COMMERCIAL/MIXED-USE DISTRICT

The Regional Commercial/Mixed-Use District includes approximately ~~256.9~~ 230.9 gross acres within Planning Areas ~~6, 7B, 8, and 9~~4A, 4B, 5B, 6B, 7, 8, 9, 10A and 10B. This District is envisioned as a highly active area with a variety of commercial uses, including retail, office, residential, medical, research, entertainment and other comparable uses identified in Section 5, *Development Regulations.* As a true mixed-use district, residential uses are also to be included in areas with the overlays. In total, a maximum of ~~4,843~~4,801 dwelling units and a maximum of ~~990,902~~925,002 square feet of regional and local commercial uses are planned within this District. Additionally, the Regional Commercial/Mixed-Use District includes appropriate required acreage of private parklands, ~~a 1.5 acrefire station site~~ and additional open space found within the existing Southern California Edison easements.

Residential uses allowed within the Regional Commercial/Mixed-Use District include high-density attached residential / mixed-use, as well as standalone residential neighborhoods~~,~~ accommodated through a "Stand Alone Residential Overlay". The Stand Alone Residential Overlay is identified on the Land Use Plan Figure 3-1 and may include gated residential neighborhoods. Within this overlay area, residential uses are permitted without being vertically mixed with commercial uses, and may include single-family detached residential units. Stand Alone Residential Development within the Mixed Use Areas (Planning Areas ~~6A + 9A, 6B + 9B, 7, 8A and 8B~~4A, 4B, 5B, 9 and 10A) are required to be developed at a minimum average density of 14 units per TOP adjusted Gross Acreage, consistent with the City's TOP. Compliance with the TOP's minimum density shall be established with Tentative Tract Map submittal.

The community design concept to be implemented within the Regional Commercial/Mixed-Use District is one of a Main Street environment, with uses seamlessly integrated and designed at a pedestrian friendly scale. Like the Residential District, the Regional Commercial/Mixed-Use District will be designed with a high level of connectivity, both between its own land use components, between the District and the rest of Rich-Haven, and between Rich-Haven and the rest of the Ontario Ranch. The integration of common public spaces, including plazas, paseos and small park areas will be included in the design of this District, and a mix of housing products will provide a diversity of opportunities for the District's residents, further executing the Traditional Neighborhood Design Principles encouraged by the City's TOP.

Commercial development within Planning Area ~~7B~~ 6B is proposed to extend along Ontario Ranch Road between Mill Creek Avenue and Hamner Avenue incorporating a minimum of 25.1 gross acres. There is no maximum area allowed to be within Planning Area ~~7B~~6B. ~~Additional mixed use development above the 25.1 acre minimum will be reduced from the remaining acres within Planning Area 7A.~~

The design concept to be implemented within Planning Area ~~7B~~ 6B is intended to encourage retail, office, medical office and restaurant uses to establish a commercial/mixed use character along Ontario Ranch Road with a pedestrian friendly scale and a high level of connectivity to the balance of the Regional Commercial/Mixed Use development components, the residential development and the rest of the Ontario Ranch. Within Planning Area ~~7B~~6B, a minimum of 100,000 square feet and a maximum of 300,000 square feet of retail/office, medical office and/or retail uses are allowed.

3.2.3 LIGHT INDUSTRIAL LAND USE DISTRICT

The Light Industrial Land Use District includes approximately ~~56.0~~135.3 gross acres within Planning Areas ~~7A~~2C, 3C, 5A, 5C and 6A. This District is intended to allow for large scale industrial and warehouse uses to provide a transition to the SCE substation and similar industrial uses to the east of the project site. A maximum of ~~1,183,525~~2,767,148 square feet of industrial uses are planned within this District.

The TOP and Specific Plan Land Use Plans designates the land use on SCE easement area within the Industrial District as "Open Space – Non Recreational". In Planning Areas 3C (portions abutting Light Industrial), 5A, and ~~7A~~6A, when adequately screened, this land use designation allows for truck, trailer and vehicle parking that is compatible with the adjacent Light Industrial uses.

3.3 COMMUNITY FACILITIES

A variety of community facilities are included within the Rich-Haven Specific Plan Land Use Plan, including private parks and open space, a proposed public park site, a fire station site, and a network of greenbelts and landscaped neighborhood edges.

3.3.1 PARKS

A series of private parks will be provided throughout the Rich-Haven community, in both the Residential and Regional Commercial/Mixed-Use Districts. Linear parks are proposed within the Edison easements, and a series of private parks are proposed within each of the community neighborhoods or districts. Refer to Figure 3-1, *Land Use Plan*, for general individual private park locations.

The Policy Plan (Policy PR1-5) has established a standard of 5-acres of parklands (public and private) per 1,000 residents, with a minimum of 2-acres of developed private park space per 1,000 residents (Policy PR1-16). The proposals within the Rich-Haven Land Use Plan will include enough parkland to meet the minimum ratio of 2-acres per 1,000 residents. The remaining acreage of parkland required will be accommodated through the payment of in-lieu park fees.

A portion of the required park area may be provided within the SCE Easement. Any easement area will be required to be improved and maintained by the Master Development and/or Homeowners Association in order to receive park credit. Refer to Section 5.4.1.13 of the Development Regulations.

Additionally, a 27.0-acre public park area will be located in Planning Area ~~3~~2A. Access to this park will be provided along Haven Avenue and internal streets.

3.3. 2 FIRE STATION

A potential 1.5-acre fire station pad is allowed within the Regional Commercial/Mixed-Use District. The fire station would serve surrounding areas, and be located in the southern portion of the Specific Plan area, potentially within Planning Area ~~7~~5C. See Figure 3-1 for approximate location.

3.3. ~~3~~2 GREENBELTS AND LANDSCAPED NEIGHBORHOOD EDGES

Greenbelts

Greenbelts throughout the Rich-Haven Specific Plan encompass a network of easements belonging to Southern California Edison (SCE) ~~with exception to Planning Area 2 fee-owned rights-of-way~~. These greenbelts crisscross the Ontario Ranch, are to be jointly used as a trails and bikeways system and identified as the SCE Corridor Trail connecting the various neighborhoods of the Ontario Ranch.

The greenbelts extend across the Rich-Haven Specific Plan area in ~~three~~ two places; ~~east to west along the southern side of the proposed Chino Avenue;~~ east to west between Twinkle and Hamner Avenue to the south of Rich-Haven Planning Areas ~~5~~3A; and extending diagonally to the southwest across the proposed Mill Creek (Cleveland) Avenue. See Figure 4-3*, Trails and Bikeways Plan*.

Access to the SCE trails will be provided through the various residential areas of the Rich-Haven development, providing pedestrian and bicycle accessibility between residential areas, parks, schools, and shopping and town centers. The corridor will include a multi-use pathway, fencing, signage, and landscaping, and will be accessible to wheelchairs, bicycles, and pedestrians. The multi-use pathway will also provide access for maintenance equipment and vehicles.

Landscape Neighborhood Edges

Landscape neighborhood edges will be located along the internal backbone roadway system of the Specific Plan and include expanded parkways.

This page intentionally left blank

SECTION 4 - INFRASTRUCTURE AND SERVICES

This section of the Rich-Haven Specific Plan discusses the proposed infrastructure and public services that will support Rich-Haven's residential, commercial, mixed use and light industrial districts. Infrastructure discussed herein includes the construction of master planned facilities. Public services include schools, parks, fire, law enforcement, library, telephone and technology wiring, natural gas, electricity, and solid waste disposal. A discussion of project grading is also provided.

General Notes

1. Master planned utilities serving and surrounding ~~the~~ each project site development, as identified in the approved respective Master Plan, shall be constructed prior to issuance of first occupancy.
2. All development and corresponding utilities shall be constructed and be consistent with the NMC Construction Agreement.
3. Public Utilities construction shall be avoided within private alleys; where city has limited access.
4. Public Utilities construction (especially water lines) shall be avoided beneath roundabouts/traffic circles.
5. All signalized intersections and approaches on designated truck routes shall be concrete.

4.1 CIRCULATION PLAN

The Circulation Plan for the Rich-Haven Specific Plan will provide effective movement of automobiles and trucks as well as pedestrians, bicyclists, and transit. The Rich-Haven Specific Plan will be served by a system of new and varied parkway, arterial, and collector roadways to be improved per City's The Ontario Plan (TOP) and current Master Plan of Streets and Highways, and, through proposed local backbone streets to be constructed as part of the project site development. Improvements will be constructed for Haven Avenue, Ontario Ranch Road, Hamner Avenue, Chino Avenue, and Mill Creek Avenue, which run through or border the project site.

Within the Specific Plan area, local backbone streets will provide efficient movement of vehicles and pedestrians. Roadways will be designed to meet current and approved design standards. Figure 4-1~~B~~, *Conceptual Circulation Plan*, illustrates backbone on-site roadway circulation, access points, potential roundabout locations, signalized intersections, and non-signalized access points. Access points are from Hamner Avenue to the east, and Haven Avenue to the west of the project site, as noted in figure 4-1. The location of final access points and round-about locations will be determined at time of the tentative tract mapping in the residential areas and site plan review in commercial areas. The traffic study will verify the need for additional right-of-way at critical intersections to accommodate left and right turn lanes.

The minimum design speeds to be used for centerline curve radii, super-elevation, corner sight distance, vertical and horizontal alignment and sight distance, are listed below:

- Ontario Ranch Road:	50 mph	- Haven Avenue:	45 mph
- Chino Avenue:	40 mph	- Mill Creek Avenue:	40 mph

- Riverside Drive: 45 mph - Hamner Avenue: 50 mph

4.1.1 STREET NETWORK

The proposed Rich-Haven street network is based on the existing underlying grid system of improved and unimproved streets, adjacent to and within the project site~~.~~, ~~A~~and will be consistent with the City's Master Plan of Streets and Highways. See *Street Cross Sections*, *Figure 4-2A through 4-2E*. The developer(s) of the Rich-Haven Specific Plan area will be responsible for all off-site improvements for the entire project frontage or as otherwise indicated. Phasing of the improvements will be implemented as required by the City Engineer and pursuant to the mitigation measures identified in the Environmental Impact Report (EIR) and/or the Conditions of Approval established on the approved tentative tract maps for the project. Additionally, bus turnouts and shelters, to serve the future residents, shall be provided on arterial and collector roadways prescribed by the City.

The following is a description of the streets to be improved within the Rich-Haven Specific Plan and NMC L.L.C. associated improvements:

HAMNER AVENUE – Bounding the project at the east, Hamner Avenue is designated as a divided Other Principal Arterial with eight lanes and a minimum right-of-way of 140 feet. Access to Hamner Avenue via driveways from residential units and on-street parking will be prohibited. Vehicular access locations to the proposed development from Hamner Avenue will be allowed at controlled locations identified on the Land Use Plan. Additional access locations may be approved by the City Engineer to provide for safe and efficient traffic distribution for the intended mix of land uses. The developer shall be responsible for those improvements to Hamner Avenue as determined by the City Engineer and pursuant to the mitigation measures identified in the EIR and/or to the Conditions of Approval established on the approved tentative tract maps for the project. Bus turnouts will be required to the satisfaction of the City of Ontario and Omnitrans. Proposed traffic signals along Hamner Avenue are shown in Figure 4-1.

Hamner Avenue is a designated truck route. Ontario Ranch designated truck routes will direct truck traffic along arterial roadways and out of residential areas.

HAVEN AVENUE – Located on the western boundary of the project site, Haven Avenue is classified by the Mobility Element of Policy Plan (Figure M-2 Functional Roadway Classification Plan) as a proposed Other Principal Arterial, with four travel lanes and a double row of parkway trees. Haven Avenue, as it borders the project site, is proposed at a minimum right-of-way of 124 feet with multi-purpose trail. Right of way areas with parkways and sidewalks are also proposed. Access to this street via driveways from residential units and on-street parking will be prohibited. The developer shall be responsible for those improvements to Haven Avenue as determined by the City Engineer and pursuant to the mitigation measures identified in the EIR and/or to the Conditions of Approval established on the approved tentative tract maps for the project. Bus turnouts

will be required to the satisfaction of the City of Ontario and Omnitrans. Proposed traffic signals along Haven Avenue are shown in Figure 4-1.

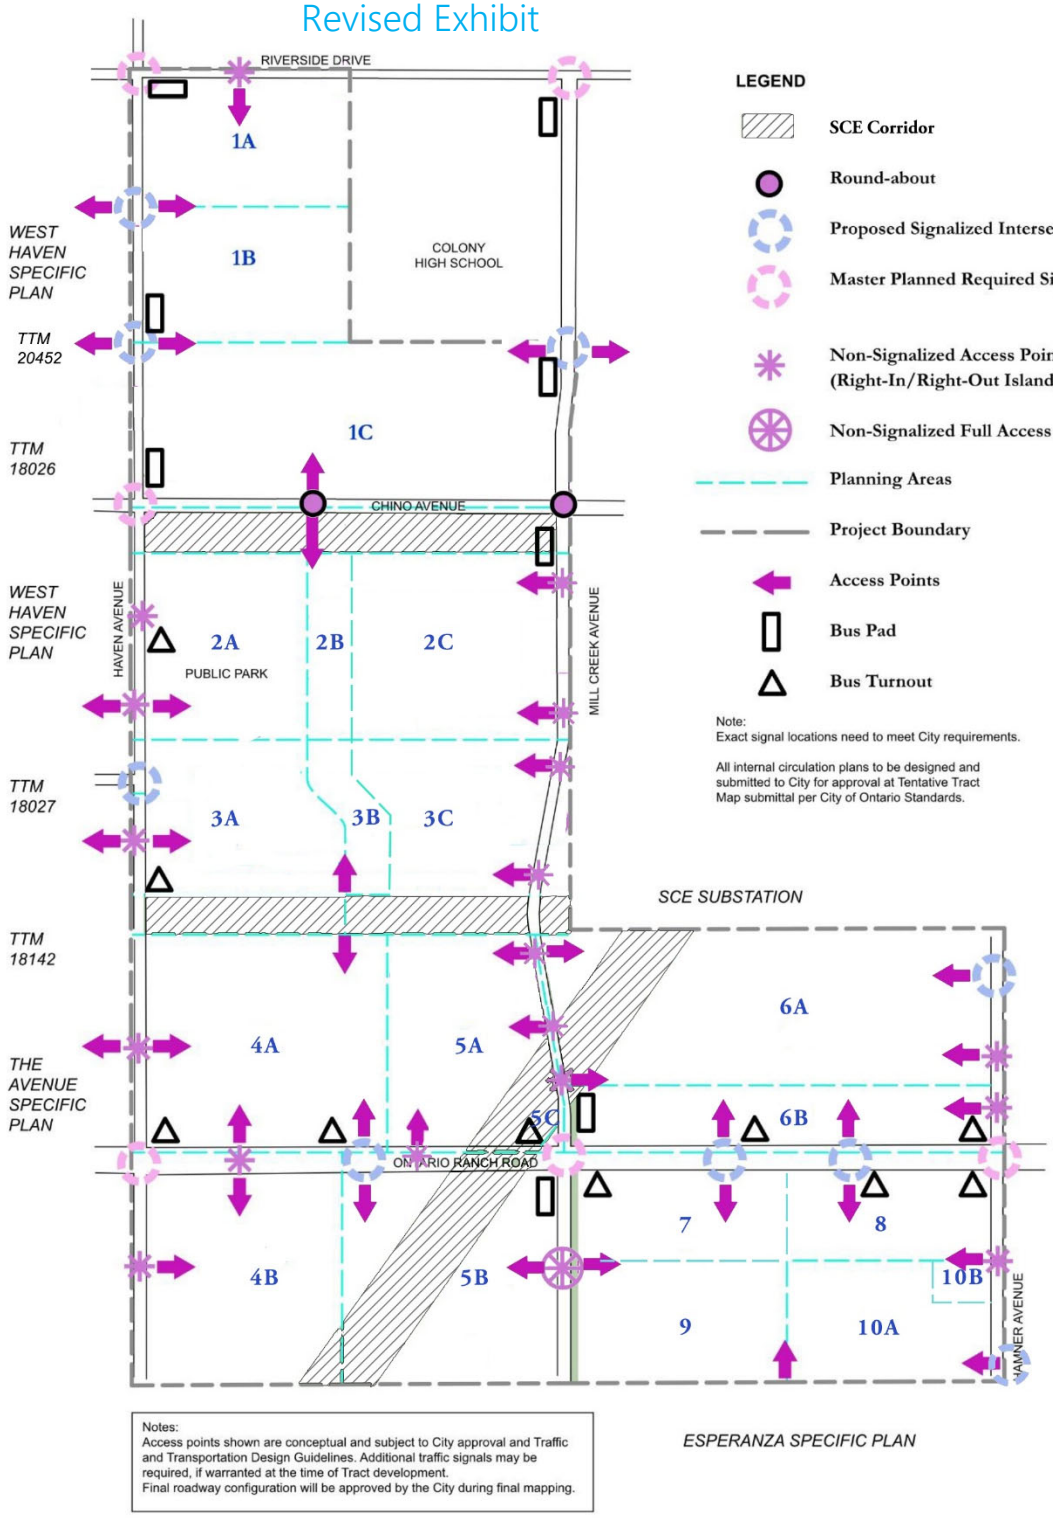
ONTARIO RANCH ROAD – Bounding and crossing the site along the south, Ontario Ranch Road is classified the Mobility Element of Policy Plan (Figure M-2 Functional Roadway Classification Plan) as an Other Principal Arterial, with eight travel lanes at build-out, and a minimum right-of-way of 160 feet. The right of way area is proposed with landscaped buffers/parkways, sidewalks and an 8-foot multipurpose trail on the south side between Mill Creek Avenue and Hamner Avenue within the Rich-Haven Specific Plan. Access to this street via driveways from residential units and on-street parking will be prohibited. Ontario Ranch Road connects the project site to Hamner Avenue to the east, the rest of the Ontario Ranch to the west and the City of Chino further to the west. To the east of the project is the Cantu-Galeano Ranch Road/I-15 Interchange. The developer shall be responsible for those improvements to Ontario Ranch Road as determined by the City Engineer and pursuant to the mitigation measures identified in the EIR and/or to the Conditions of Approval established on the approved tentative tract maps for the project. Bus turnouts will be required to the satisfaction of the City of Ontario and Omnitrans. Proposed traffic signals along Ontario Ranch Road are shown in Figure 4-1.

Ontario Ranch Road is a designated truck route. Ontario Ranch designated truck routes will direct truck traffic along arterial roadways and out of residential areas.

RIVERSIDE DRIVE – Bounding the site on the north, Riverside Drive is designated as a Minor Arterial with a 108-foot right-of-way with a landscape buffer along its neighborhood edge. A sidewalk and parkway is also proposed within the right of way area, as well as an 8-foot multipurpose trail on the north side between Haven Avenue and Mill Creek Avenue and curb adjacent 5-foot bike lanes on both sides of the street. Access to this street via driveways from residential units and on-street parking will be prohibited. The developer shall be responsible for those improvements to Riverside Drive as determined by the City Engineer and pursuant to the mitigation measures identified in the EIR and/or to the Conditions of Approval established on the approved tentative tract maps for the project. Bus turnouts will be required to the satisfaction of the City of Ontario and Omnitrans. Proposed traffic signals along Riverside Drive are shown in Figure 4-1.

CHINO AVENUE – Crossing the site from east to west, Chino Avenue is identified as a modified Collector Street the Mobility Element of Policy Plan (Figure M-2 Functional Roadway Classification Plan), to be improved to one~~two~~ travel lane~~s~~ in each direction with a minimum 88-foot right-of-way, which includes raised median between Haven Avenue and Mill Creek Avenue and two roundabouts, ~~a~~ parkway, sidewalk on the south side, 8 foot multipurpose trail on the north side between Haven Avenue and Mill Creek Avenue and curb adjacent 5-foot bike lanes on both sides of the street. Access to this street via driveways from residential units and on-street parking will be prohibited. The developer shall be responsible for those improvements to Chino Avenue as determined by the City Engineer and pursuant to the mitigation measures identified in the EIR and/or to the Conditions of Approval established on the approved tentative tract maps for the project.

Bus pads~~turnouts~~ will be required to the satisfaction of the City of Ontario and Omnitrans. Proposed traffic Signals along Chino Avenue are shown in Figure 4-1.



MILL CREEK AVENUE – Bisecting the site from north to south, Mill Creek Avenue is identified as a Collector Street the Mobility Element of Policy Plan (Figure M-2 Functional Roadway Classification Plan), to be improved to four lanes, with a minimum 88-foot right-of-way. For the portion of Mill Creek Avenue between Ontario Ranch Road and Chino Avenue, proposed minimum right of way is 83-feet. Right of way areas are also proposed that consist of raised median in select locations to provide traffic directing measures at industrial project driveways, a sidewalk, an adjacent parkway, an 8 foot multipurpose trail on the west side between Chino Avenue, and Ontario Ranch Road ~~and curb adjacent 5-foot bike lanes on both sides of the street~~. Access to this street via driveways from residential units and on-street parking will be prohibited. The roadway will be realigned ~~to the west starting approximately 50 feet south of the existing high school and continuing south beyond the project area~~along the frontage of the Mira Loma Substation. The ultimate alignment of Mill Creek Avenue will be determined as part of the Master Infrastructure Improvements to be determined by the City and NMC, LLC. The developer shall be responsible for those improvements to Mill Creek Avenue as determined by the City Engineer and pursuant to the mitigation measures identified in the EIR and/or to the Conditions of Approval established on the approved tentative tract maps for the project. Bus turnouts will be required to the satisfaction of the City of Ontario and Omnitrans. Proposed traffic signals for Mill Creek Avenue are shown in Figure 4-1.

LOCAL BACKBONE STREETS – Connecting the above regional backbone roadways, the project's local backbone streets will connect the project's various components and provide for safe and efficient vehicular circulation. Internal project access points will be taken from Haven Avenue on the west side of the project, Mill Creek Avenue and Hamner Avenue on the east side, while another access point will occur along Hamner Avenue. ~~The internal streets within the Regional Commercial/Mixed-Use District will form a central loop off of Ontario Ranch Road.~~ Alternative internal street connections may be allowed subject to the approval of the City Engineer. See Figure 4-2E, Street Cross Sections.

LOCAL NEIGHBORHOOD/PRIVATE STREETS – Local Neighborhood/Private Streets that carry neighborhood related traffic and be constructed with a 60-foot right-of-way, which includes a minimum 12-foot landscaped parkway with sidewalk. Themed Streets will have an additional 5-foot wide lettered lot along the theme street edge, located adjacent to ROW. To be maintained by HOA. See Figure 4-2E, Street Cross Sections.

COMMON DRIVES – Common Drives will be constructed with a 20-foot minimum right-of-way. Common Drives will contain a minimum 20-foot travel lane and 24-foot travel lane for emergency access roads. A 30-foot minimum distance is required between buildings on each side of the common drive. Final alley design shall be subject to review and approval by the planning, engineering, and fire departments. See Figure 4-2E, Street Cross Sections.

FIGURE 4-2E

4.1.2 TRAFFIC CALMING

The Rich-Haven Land Use Plan is designed on a traditional grid and with a hierarchy of streets, offering a variety of routes for pedestrians and vehicles. Traditional street networks can result in a visually favorable and comfortable environment for pedestrians, bicyclists, and Rich-Haven's residents at large. Traffic calming measures incorporated within the Rich-Haven Specific Plan development will include round-abouts and curb-bulbouts. See Figure 4-1~~B~~, *Conceptual Circulation Plan* for locations of proposed round-abouts. Additional traffic calming measures include the incorporation of landscaped parkways and medians to add interest in the street, encouraging drivers to slow their travel speed and observe the surroundings.

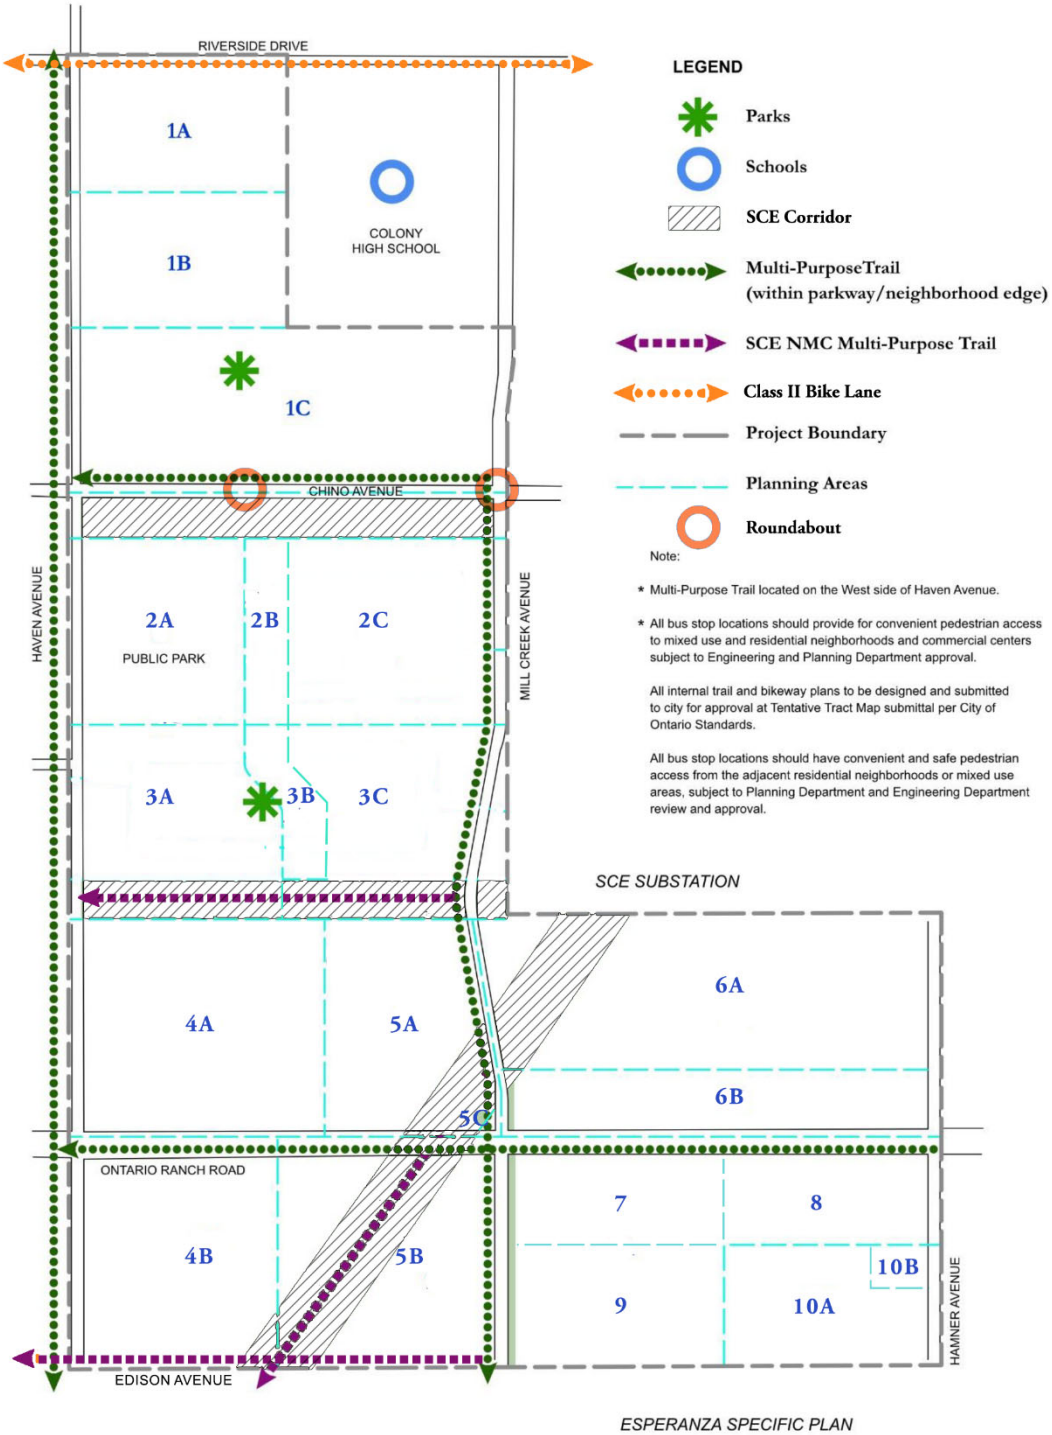
Additionally, within the Regional Commercial/Mixed-Use District, on-street parallel parking will be used to control the speed of traffic in and near pedestrian zones. Angled parking may also be used at the discretion of the City Engineer.

4.1.3 PEDESTRIAN AND BICYCLE CIRCULATION

The Rich-Haven Specific Plan is consistent with and implements the Multipurpose Trails and Bikeway Corridor within the Mobility Element of the Policy Plan (Figure M-3).

In addition to the hierarchical street grid, which can increase available routes, the Rich-Haven Specific Plan proposed pedestrian trails and bikeways plan will be interconnected with the Ontario Ranch multi-purpose trail system, which includes a comprehensive network of greenways, pedestrian paths, and bike trails. See Figure 4-3*, Trails and Bikeway Plan.*

Internal project streets will be constructed with sidewalks, providing pedestrian access and inter-connectivity between the project's Residential and Regional Commercial/Mixed-Use Districts. The pedestrian system will also allow for easy pedestrian access to Rich-Haven's proposed approximately 27.0-acre public park site and



several smaller private parks, Colony High School, and proposed elementary school sites within the West Haven Specific Plan and Esperanza Specific Plan.

Multi-purpose trails and sidewalks connect with a network that flows throughout the Ontario Ranch, connecting Rich-Haven with schools and other proposed residential areas in the region. Directional signage will be provided to facilitate movement to and from crosswalks and trail connections. Within the Residential District, the pedestrian sidewalks on cul-de-sac streets will connect to the Multi-purpose trails and Bikeway Corridor Plan trails within the linear parks. Internal paseos, sidewalks, and pathway connections will be incorporated into the Regional Commercial/Mixed-Use District to connect with residential areas and multi-purpose trails.

Additionally, Ontario Ranch multi-purpose trails are designated within proposed parkways along Haven Avenue, Ontario Ranch Road, Chino Avenue, Mill Creek Avenue and Riverside Drive. These multi-purpose will be accessed from the project directly, or through the multi-purpose trails within the SCE parcel/easements. Bike racks will be provided as per City standards.

As part of the City's Master Plan of Trails, the SCE Corridor Trail will be extended within the linear park areas located within the SCE easements, as shown within Figure 4-3, *Trails and Bikeway Plan*. Access to the SCE Corridor Trail will be provided throughout the Specific Plan area at key points to provide safe accessibility to the multi-purpose trails and opportunities to utilize alternate modes of transportation between the residential and commercial uses and to the greater NMC.

On-street curb adjacent 5-foot bike lanes will be provided on both sides on Riverside Drive, and Chino Avenue ~~and Mill Creek Avenue~~.

NOT TO SCALE

RICH-HAVEN SPECIFIC PLAN
TRAILS AND BIKEWAY PLAN
FIGURE 4-3

4.1.4 TRANSIT

Public transit in the City of Ontario is currently provided by Omnitrans, which does not presently provide regular fixed route transit services inside the Ontario Ranch area. Bus turnouts and shelters, to serve the future residents, shall be provided on arterial and collector roadways prescribed by Omnitrans and approved by the City, as per Figure-3 found in Ontario Ranch East Proposed Bus Facilities plan.

In addition, the Riverside Transit Authority (RTA) service area boundaries are located to the east of Planning Areas 7 and 8, along Hamner Avenue. Currently, service by RTA will not be provided within the Rich-Haven Specific Plan Area.

4.2 WATER MASTER PLAN

Rich-Haven's Water Master Plan shall conform to the City of Ontario's Water Master Plan and will include both domestic (potable) and recycled water infrastructure. Water service will be provided by the City of Ontario as identified within the Water Master Plan. The NMC Construction Agreement (Phases 1a-1e) water facilities are proposed to include two reservoirs, four wells, a treatment plant, and potable and recycled water lines. All Master Planned potable water infrastructure surrounding the Specific Plan shall be the responsibility of the NMC Developers' consortium and/or the Rich Haven Developer(s). In addition, the Master Planned domestic and recycled water main lines ~~serving~~ surrounding and within the Specific Plan, as identified in the most currently approved Water Master Plan Update shall be constructed prior to issuance of the first certificate of occupancy.

Water, recycled water, and sewer utilities may be designated as "public utilities" if located within public or private streets. All public utilities within private streets shall be designed per City standards and contained within acceptable easements. The CC&Rs shall contain language that requires all proposed work by the HOA within said easements to be plan checked and inspected by the City, including applicable fees. Generally, utilities will not be accepted as public within alleys, parking areas, or driveways. Utilities within commercial and industrial parking lots and loading areas will be designated as private. The extent to which said utilities would be accepted, as public utilities shall be determined, at the full discretion of the City, during final design plan review.

4.2.1 DOMESTIC WATER

The ultimate utility sizing and alignment shall follow the most currently approved Master Plan.

In the interim scenario in Ontario Ranch, when the ultimate master planned pipeline network has not been completed, there may be instances whereby just constructing the master planned pipeline improvements to serve the project may not meet the required fire flow demands. Therefore, the proposed project may be required to construct additional pipelines whether specifically called out in the Master Plan or not; or upsize

master planned pipelines in order to meet the necessary fire flow requirements per Fire Department and/or the criteria as provided for in the Water Master Plan. Developer shall submit a hydraulic analysis to the City for review/approval to demonstrate adequate fire flow protection requirements.

REGIONAL DOMESTIC WATER PLAN

The Rich Haven Specific Plan falls into two pressure zones, with the portion of the project north of Chino Avenue falling within the 1010 Pressure Zone, and the portion of the project south of Chino Avenue falling within the 925 Pressure Zone. See Figure 4-4A *Master Planned Domestic Water Plan, please refer to The City's Master Plan for specific sizing and alignment*.

1010 Pressure Zone. New domestic water mains to be constructed as part of the development of Rich-Haven include a 24-inch main from the 1010 Pressure Zone reservoir north of the project site to Riverside Drive and Hamner Avenue, a 24-inch domestic main in Archibald between Ontario Ranch Road and the Pressure Reducing Station at Schaefer Avenue, an 18-inch main in Riverside Drive from Hamner Avenue to Haven Avenue, an 18-inch main in Chino Avenue from Haven Avenue to Vineyard Avenue, the designated Master Plan domestic water line along Haven Avenue between Riverside and Chino Avenues. In addition, the 24-inch main in Hamner Avenue and Riverside Drive reduces down to a 12-inch main to Chino Avenue and heads west along Chino Avenue to Mill Creek Avenue ultimately connecting to the existing 12-inch water main within Mill Creek Avenue.

Smaller 12-inch water mains will be constructed adjacent to the project site that ultimately connects to the regional water system in Riverside Drive, Haven Avenue, and Hamner Avenue.

925 Pressure Zone NMC Builder's Loop. New domestic water mains to be constructed as part of the NMC Builder's Loop include a 24-inch to 42-inch main in Hamner Avenue from the 925 Pressure Zone reservoir to Eucalyptus Avenue, a 24-inch main in Eucalyptus Avenue from Hamner Avenue to Archibald Avenue, a 24-inch main in Archibald Avenue from Eucalyptus Avenue to Ontario Ranch Road, and a 24-inch main in Archibald Avenue from Ontario Ranch Road to the Pressure Reducing Station #17 at Schaefer Avenue.

Within the 925 Pressure Zone, 12-inch water mains will be constructed in Haven Avenue, Mill Creek Avenue, and Ontario Ranch Road and ultimately connect to the regional NMC Builder's Loop. Additionally, a 12-inch water main will be constructed within Chino Avenue from Haven Avenue to Mill Creek, and an 18-inch water main from Mill Creek to Hamner Avenue. Within the project site, a network of minimum 8-inch water lines will be installed. The proposed on-site public water system sizing is subject to the recommendations and approval of the required hydraulic analysis.

NMC Builders is currently constructing the first series of master planned domestic water main lines per the construction agreement with the City. The 925 PZ alignment is from

Riverside Drive PRS #18, then easterly in Riverside, southerly in Milliken, westerly in Eucalyptus, and northerly in Archibald to Schaefer PRS #17. Proposed Rich Haven Specific Plan development shall connect to the above mentioned series of domestic water lines via 2 separate points of connection. The above mentioned alignment shall be fully operational prior to first occupancy.

CONCEPTUAL DOMESTIC WATER PLAN

Local backbone domestic water mains to be constructed as part of the Rich-Haven Specific Plan project will include 8-inch to 12-inch water mains throughout the local backbone street system. Additionally, the Chino Basin Water master Water Quality Map identifies the Rich Haven area within an optimum water quality zone and requires that the owner/developer dedicate a total of two wells within the Specific Plan area to the City of Ontario for production of potable water. The owner/developer of Planning Area 5 has identified a well location site within the greenbelt in the area east of Mill Creek Avenue. A second well location site within the Specific Plan area shall be located within Planning Areas 1 or 8 as approved by the City. Master planned domestic water main lines serving the surrounding area and within the Specific Plan, as identified in the most currently approved Water Master Plan Update, shall be constructed prior to issuance of first occupancy.

Within the project site, a network of minimum 8-inch water lines will be installed. The proposed on-site public water system sizing is subject to the recommendations and approval of the required hydraulic analysis. All water mains and wells internal to the Rich-Haven Specific Plan project, will be provided by the merchant builder. In-tract water system design will be provided at the time of subdivision. Offsite water improvements to serve the Specific Plan will be implemented according the most current version of the City's Water Master Plan. See Figure 4-4B, Conceptual Domestic Water Plan.

Eleven existing wells have been identified within the Rich-Haven Specific Plan project site.

In compliance with the Chino Basin Water Master's Well Procedure for Developers, a well use/destruction plan and schedule for all existing private/agricultural wells shall be submitted to the City of Ontario for approval prior to the issuance of permits for any construction activity. If a private well is actively used for water supply, the Developer shall submit a plan to abandon such well and connect users to the City's water system (residential to the domestic water system and agricultural to the recycled water system) when available. Wells shall be destroyed/abandoned per the California Water Resource Guidelines and require permitting from the County Health Department. A copy of such permit shall be provided to the Engineering and Public Works Agency prior to issuance of grading and/or building permits.

4.2.2 RECYCLED WATER

The ultimate utility sizing and alignment shall follow the most currently approved Master Plan.

REGIONAL RECYCLED WATER PLAN

Recycled Water will be provided by City of Ontario. The Rich Haven SP development shall connect to the forthcoming NMC Builders' first phase of recycled water pipeline, generally described as follows: (#1) From IEUA's RP-1, southerly to Riverside Drive, easterly to Archibald, southerly in Archibald to Merrill (including the Pressure Reducing Station at Archibald & Chino Avenue); and (#2) Ontario Ranch Road, between Archibald and Hamner. The above mentioned NMC Builders recycled water pipeline shall be fully operational prior to first occupancy. The Specific Plan area is located within two pressure zones. The portion of the project north of Chino Avenue will be served by the 1050 Pressure Zone and the area south of Chino Avenue will be served by the 930 Pressure Zone. A range of recycled water lines will be constructed both on-site and off-site to service the project. There will be 8-inch to 24-inch lines constructed within the 1050 Pressure Zone, and 8-inch to 24-inch lines within the 930 Pressure Zone. Master Planned domestic and recycled water main lines serving the surrounding area and within the Specific Plan, as identified in the most currently approved Water Master Plan Update, shall be constructed prior to issuance of first occupancy. Offsite recycled water improvements to serve the Specific Plan will be implemented according the most current version of the City's Recycled Water Master Plan.

LOCAL BACKBONE RECYCLED WATER PLAN

The Rich Haven Specific Plan shall comply with City Ordinance 2689 and make use of recycled water for all approved uses, including but not limited to irrigation of parks, schools, street landscaping, recreational trails, HOA maintained on-site common areas and commercial/industrial landscaping. An engineering report approved by the City and the California Department of Public Health is required prior to the use of recycled water.

The local backbone recycled water system will be built with 8-inch to 12-inch lines throughout the backbone street system. In-tract recycled water system design will be provided at the time of subdivision. See Figure 4-5A, *Master Planned Recycled Water Plan, please refer to The City's Master Plan for specific sizing and alignment*.

Recycled water will be used in the Rich Haven Specific Plan area for irrigation of parks, schools, street landscaping, recreational trails, parkways, common area residential landscaping and commercial/industrial landscaping. See Figure 4-5B Conceptual *Recycled Water Plan Areas* for locations of recycled water use. Locations of common residential landscaping areas will be determined at the time of the Tentative Tract Map.

An Engineer's Report approved by the City and the Department of Health is required prior to the use of recycled water in the Rich-Haven development. There may be an interim period where recycled water supply does not have adequate pressure depending on the timing of development and construction of a regional booster station.

Master planned recycled water main lines serving surrounding and within the Specific Plan, as identified in the most currently approved Water Master Plan Update shall be constructed prior to issuance of first occupancy.

Additional backbone recycled water improvements shall include:

- In-tract system of recycled water lines;
- Haven Ave. pipeline, between southerly property limits to Chino Ave.;
- Pressure Reducing Station @ Haven Ave. and Chino Ave.;
- Riverside Drive pipeline between Haven Ave. and Cucamonga Creek; and
- Pipeline between Riverside Drive and IEUA's RP-1 facility
- Haven Avenue pipeline between Chino Avenue and Riverside Drive.

Please note that the recycled water system, in Rich Haven, is in two separate pressure zones (1050 pressure zone = north of Chino Ave. and, 930 pressure zone = south of Chino Ave.)

It should be noted that NO recycled water can be used on single family single lot ownership properties. And there shall be a clear physical separation between potable and recycled water systems such as a wall, fence, sidewalk, or mow strip. Common areas are to use recycled water and either maintained by HOA or CFD, and shall be In a ROW or within a lettered lot.

4.3 SEWER MASTER PLAN

The ultimate utility sizing and alignment shall follow the most currently approved Master Plan. Sewer service for the Rich-Haven Specific Plan will be provided by the City of Ontario. Rich-Haven's Sewer Master Plan shall comply with the Sewer Master Plan, which is designed as a gravity sewer system that generally drains to the west and east from the central spine road. The areas located between Haven Avenue and Mill Creek Avenue should flow into Haven Avenue trunk sewer, while flows generally east of the spine road will flow to the Mill Creek Avenue trunk sewer. Within the project site a network of minimum 8-inch sewer lines will be installed. The proposed on-site public sewer system sizing is subject to the recommendations and approval of the required sewer analysis.

REGIONAL SEWER PLAN

The Specific Plan area is within three separate Master Plan Trunk Sewer Tributary Areas and six Master Plan Trunk Sewers. Regional sewer improvements include:

a. The Mill Creek Avenue Trunk Sewer with a proposed 12-inch line within Mill Creek north of Chino Avenue transitioning to 15-inch sewer line from Ontario Ranch Road south to Eucalyptus Avenue and then a 21-inch lines south to Bellegrave Avenue;
b. The Merrill/Bellegrave Trunk Sewer with a 24-inch line in Bellegrave/Merrill Avenue from Mill Creek Avenue to Celebration Avenue transitioning to a 27-inch line to Archibald Avenue to connect to the Eastern Trunk Sewer;
c. The South Haven Trunk Sewer with a 15-inch line in Haven Avenue from south of Ontario Ranch Road to Merrill/Bellegrave Avenue;
d. The North Haven Trunk Sewer with a 21-inch line in Haven Avenue from Riverside Drive to Ontario Ranch Road; and,
e. The Ontario Ranch Road trunk Sewer with a 27-inch line in Ontario Ranch Road from Haven Avenue to Turner Avenue transitioning to a 30-inch line to Archibald to connect to the Eastern Trunk Sewer.
f. An additional 21-inch sewer line will be constructed in Haven Avenue from the Haven Pump Station north of the project site to Riverside Drive.

Wastewater in these facilities will be conveyed from the Eastern Trunk Sewer south to the Inland Empire utility Agency's Kimball Interceptor in Kimball Avenue, which will then convey waste water west to Regional Plant 5. See figure 4-6A, Master Planned Sewer Plan, please refer to The City's Master Plan for specific sizing and alignment. Offsite sewer improvements to serve the Specific Plan, and/or capacity improvements such as the potential purchase of additional capacity in the Eastern Trunk Sewer, will be implemented according to the most current version of the City's Sewer Master Plan and required sewer analysis.

LOCAL BACKBONE SEWER PLAN

In order to serve residential and commercial uses, the merchant builder will install 8-inch to 10-inch sewer mains within the local backbone street system. In-tract sewer system design will be provided at the time of subdivision processing. See Figure 4-6B, *Conceptual Sewer Plan*. Within the project site, a network of a minimum of 8-inch sewer lines will be installed. The proposed on-site public sewer system sizing is subject to the recommendations and approval of the required sewer analysis.

4.4 DRAINAGE MASTER PLAN

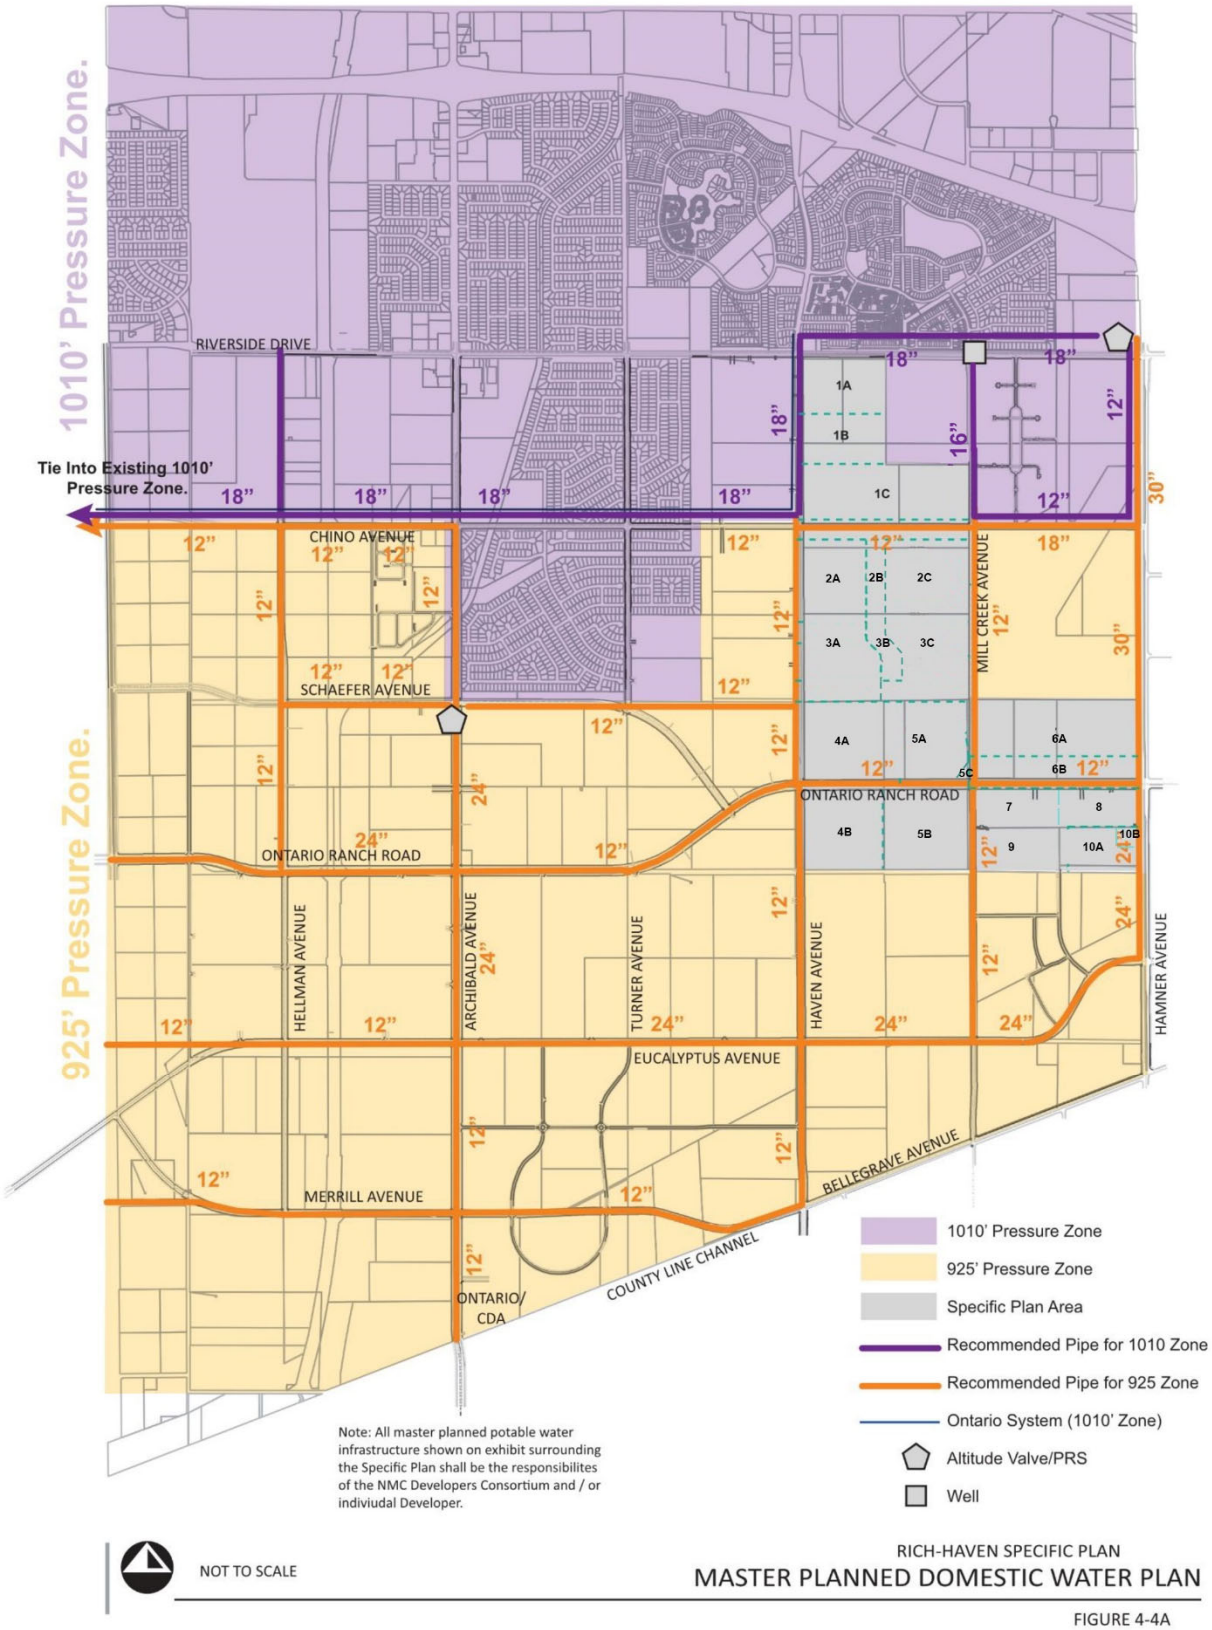
REGIONAL BACKBONE DRAINAGE PLAN

The Master Plan of Drainage proposes multiple storm drain facilities that will serve the Rich Haven project site. Within Hamner Avenue a 36-inch to 54-inch storm drain will be constructed from north of Ontario Ranch Road to Bellegrave Avenue, a 72-inch to a 10' x 8' box storm drain in Mill Creek Avenue from Chino Avenue to Bellegrave Avenue, a 48-inch to 96-inch storm drain in Haven Avenue from Riverside Avenue to Bellegrave Avenue, and a 48-inch to 72-inch storm drain that generally runs north-south Colony High School and connects to the proposed Haven Avenue storm drain. Additionally, there will be a 48" storm drain in Ontario Ranch Road starting at Haven Avenue and running approximately 1/3 of the way towards Mill Creek and a 54" storm drain in Ontario Ranch Road running from halfway between Haven Avenue and Mill Creek Avenue through until it connects with a 48" drain East of Mill Creek. All storm drains serving the project site will drain

south to the County Line Channel and ultimately to the Cucamonga Creek Channel. See Figure 4-7A, Master Planned Drainage Plan, please refer to the City's Master Plan for specific sizing and alignment. Offsite drainage improvements to serve the Specific Plan will be implemented according the most current version of the City's Drainage Master Plan.

STORMWATER QUALITY MEASURES

The grading and drainage of the Rich Haven Specific Plan area shall be designed to retain, infilter, and/or biotreat surface runoff to the maximum extent practicable, in order to comply with the requirements of the current San Bernardino County NPDES Stormwater Program's MS4 Permit and Water Quality Management Plan (WQMP) for priority development projects. The objective of the WQMP for this project is to minimize the detrimental effects of urbanization on the beneficial uses of receiving waters, including effects caused by increased pollutants and changes in hydrology. These effects shall be minimized through the implementation of on-site and off-site Low Impact Development (LID) Site Design Best Management Practices (BMPs) that reduce runoff and pollutant transport by minimizing impervious surfaces, maximizing on-site infiltration, and specifically retain/in-filter or biotreat the 85th percentile storm event. In addition, non-structural and structural Source Control Best Management Practices (BMPs), —shall also be implemented and documented in the project's approved Water Quality Management Plan(s) to reduce pollutant generation and transport from the project site.



Prior to the issuance of a grading or construction permit, each development project within this Specific Plan area which disturbs >1 acre of land shall prepare a Storm Water Pollution Prevention Plan (SWPPP and shall obtain coverage under the California State Water Resources Control Board's (State Water Board) current "General Permit to Discharge Storm Water Associated with Construction Activity" and the current Area-wide Urban Storm Water Runoff (Regional NPDES) Permit. The SWPPP will identify and detail all appropriate Best Management Practices (BMPs) to be implemented or installed during construction of the project and permit coverage shall be evidenced by the issuance of a Waste Discharger's Identification number.

In addition to the preparation of a SWPPP for construction-related activities, and as part of the approval of any grading plans within the Specific Plan Area, project applicants will be required to submit a Water Quality Management Plan (WQMP) on the current SB County model template form, available at: http://www.sbcounty.gov/dpw/land/npdes.asp. The WQMP shall identify and detail all on-site and off-site Low Impact Development Site Design BMPs, Source Control BMPs, and Treatment Control BMPs to be implemented or installed within the project, in order to reduce storm water pollutants and site runoff.

All Priority Land Use (PLU) areas within the Specific Plan Area shall comply with the statewide Trash Provisions adopted by the State Water Resources Control Board (SWRCB) and trash requirements in the most current San Bernardino County Area-Wide MS4 Permit.

LOCAL BACKBONE DRAINAGE PLAN

The local storm drain system will convey flows within the project streets to a series of culverts, with pipe sizes ranging from 24-inches to 108-inches. It should be noted that storm drainpipe sizes are conceptual. Final design will be determined upon submittal of individual tentative tract maps and associated hydrology studies. See Figure 4-7B, *Conceptual Drainage Plan*.

Note: All master planned potable water infrastructure shown on exhibit surrounding the Specific Plan shall be the responsibilites of the NMC Developers Consortium and / or indiviudal Developer.

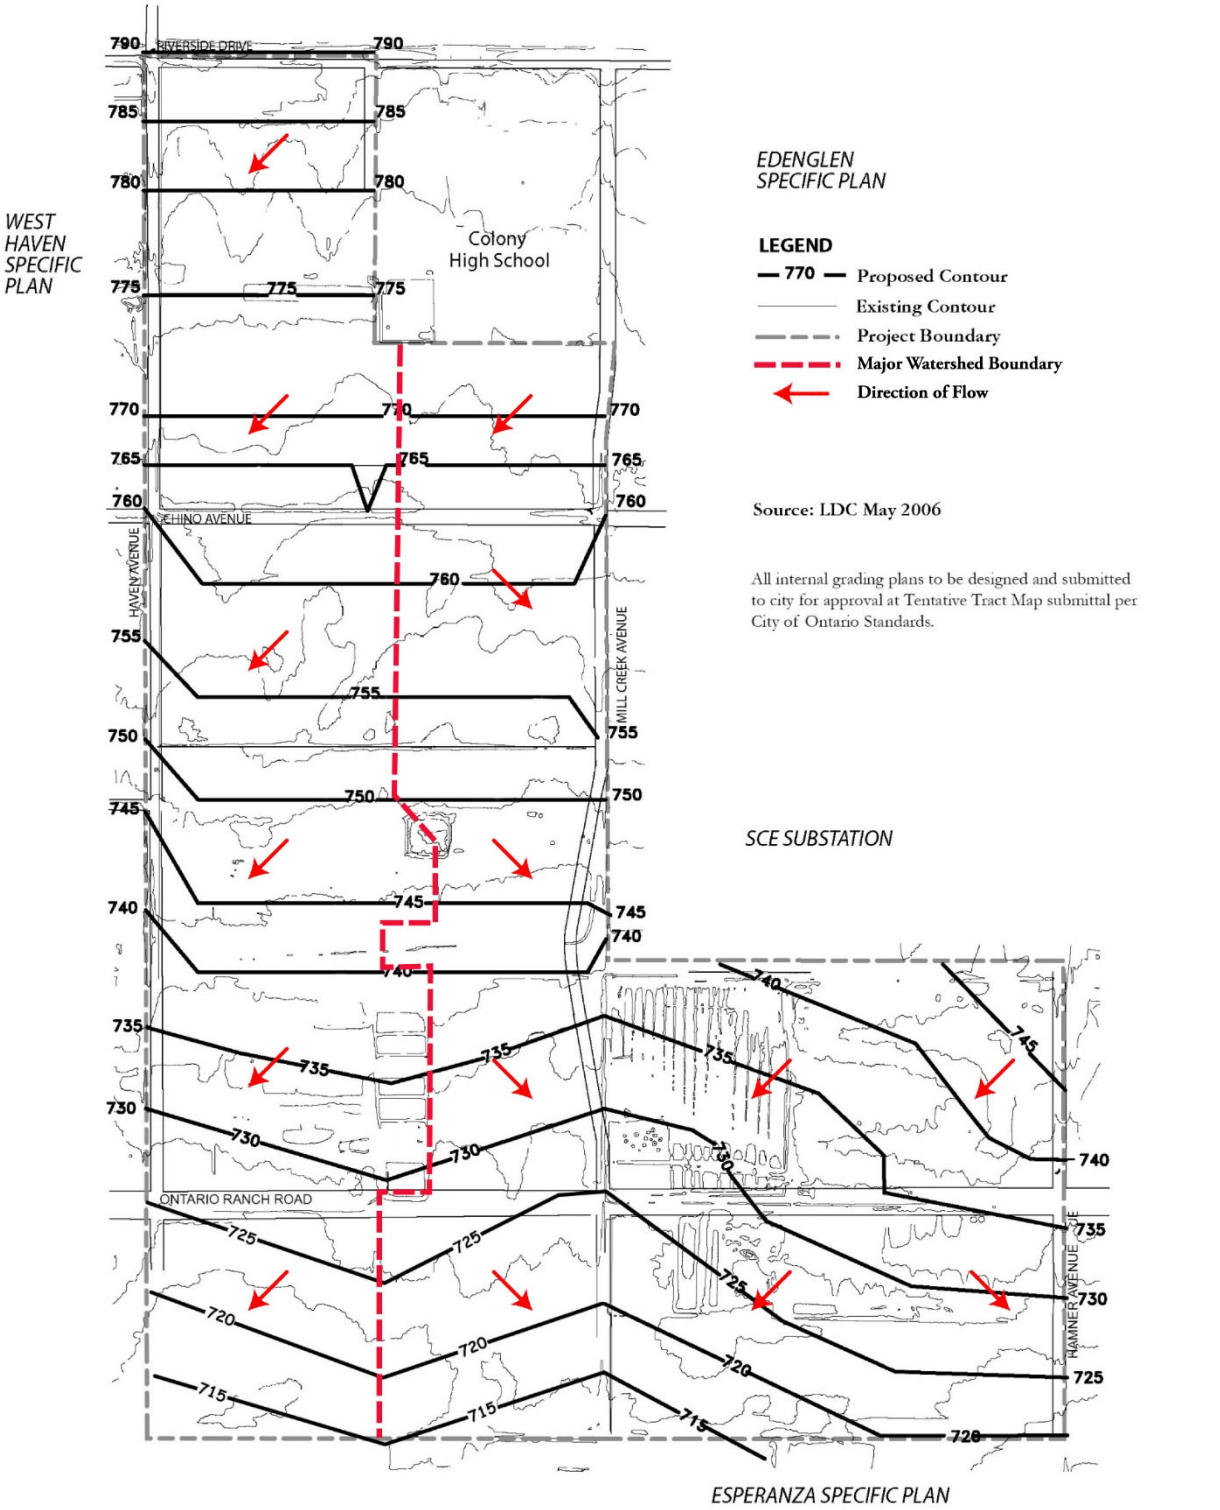
4.5 GRADING PLAN

The existing topography of the project site is relatively flat, and the Rich-Haven grading plan will use the existing grade and elevations wherever possible. The grading plan will include the excavation of any remaining agricultural soils unsuitable for development, clearing of any existing vegetation, demolition of existing structures, and the creation of building pads. ~~Where slope conditions are present, the property line shall be located at the top of the slope~~. Exposed retaining walls facing roadways shall be no greater that six-feet in height, and where feasible, be built of decorative materials consistent with the theme of the neighborhood. See Figure 4-8, *Grading Plan*.

Grading plans will be reviewed and approved by the City of Ontario prior to the issuance of grading permits. All grading plans and activities will comply with the City grading ordinance, dust and erosion control requirements, and NPDES requirements.

The City of Ontario is in the process of adopting a protocol to assess the potential for methane generation on proposed building sites in areas previously used for certain agricultural practices such as dairies. It is anticipated that prior to issuance of a grading permit, a methane site assessment would be conducted and submitted to the City, with additional testing required during grading if required by the assessment. If testing indicates that mitigation is required, designs would be submitted to the City as part of building permit review and approval. Section 8, *Administration and Implementation,* of this Specific Plan includes more detail of the anticipated protocol.



4.6 SERVICES

4.6.1 SCHOOLS

The Rich-Haven project site is within the jurisdiction of the Mountain View School District, serving grades K-8, and the Chaffey Joint Union School District, serving grades 9 through 12. Nearby Mountain View District grade schools include Creek View Elementary to the north, Ranch View School to the west, and Grace Yokley School to the northwest. Chaffey Joint Union's Colony High School is located adjacent to the project on the northeast. Surrounding proposed school facilities include an elementary school to the west within the West Haven Specific Plan area and south within the Esperanza Specific Plan area and to the west in The Avenue Specific Plan area.

The following are the estimated student population for the Rich-Haven Specific Plan area (based on student generation numbers, City of Ontario) under the Specific Plan:

Grades K-5	Grades 6-8	Grades 9-12
Generation factor .38/DU	Generation factor .22/DU	Generation factor .20/DU
.38 x 7,194 = 2,734	**.22 x 7,194 = 1,583**	**.20 x 7,194 = 1,439**

MASTER PLANNED Fiber Optic Plan

FIGURE 4-9

4.6.2 PARKS

The City of Ontario has an established standard of 5 acres of park and recreation area for every 1,000 residents for regional parks, with a minimum of 2 acres of open park areas per 1,000 residents. The City has also established three standard park sizes: Private Parks of a minimum of 0.25-acres and serving a one-quarter mile radius; Public Neighborhood Parks of 10 to 20 acres and servicing a one-half mile radius; and Public Community Parks of twenty acres or more, servicing a two mile radius.

Within the Rich-Haven Specific Plan area a minimum requirement for open park areas is 2 acres per 1,000 residents, which can include hardscape urban plazas within the Regional Commercial/Mixed-Use District and SCE easements. Portions of the SCE easements may be allocated towards local park credit in the event they are improved and maintained to the appropriate standards. Refer to Section 5, Development Standards. Parks in excess of 2 acres per 1,000 residents may be eligible for "regional" classification under the City's 5 acre/1,000 residents.

The Rich-Haven Specific Plan Land Use Plan identifies three conceptual locations for private parks within the Residential District and four within the Regional Commercial/Mixed-Use District of the project. These parks may include picnic areas, tot lots, trails, and open play fields. The private park requirement may be met within any residential development, attached or detached. Fees will be paid to fulfill the balance of the City's park requirements (the remaining 3-acres per 1,000 residents).

The Rich Haven Specific Plan includes a 27 acre public park identified as Planning Area ~~3~~2A. It is located along Haven Avenue south of Chino Drive and the SCE Easement that parallels Chino Drive.

4.6.3 FIRE

The Ontario Fire Department provides fire and emergency medical service (EMS) for the Ontario Ranch from existing fire stations. The response capability consists of eight paramedic engine companies, and two truck (ladder) companies and 2 Battalion Supervisors, totaling 42 emergency personnel on duty 24 hours per day, 7 days a week.

The closest fire station to the proposed project site is Ontario Fire Station No. ~~6~~9, located ~~northwest~~ southwest of the project site at ~~2931 E. Philadelphia~~2661 E Grand Pk St. The Department's current response time from Station No. ~~6~~ 9 to the proposed site exceeds current emergency response goals. The department has a goal to achieve an average response time to all emergency calls within 8 minutes. To be consistent with the City's TOP Policy Plan, fire protection services planned for the NMC planning area will be subject to this goal.

A potential 1.5-acre fire station pad is proposed in the Regional Commercial / Mixed-Use District as part of the Rich-Haven Specific Plan, which will serve Rich-Haven and adjacent

neighborhoods. Final location will be reviewed and approved by the Ontario Fire Department.

4.6.4 LAW ENFORCEMENT

The Rich Haven Specific Plan will be within the jurisdiction of the City of Ontario Police Department, which currently operates one main and three satellite stations. The nearest police station to the Rich-Haven project site is at Archibald Avenue and Walnut Avenue.

4.6.5 LIBRARY

The City of Ontario Library is part of the Inland Library System, a public library cooperative of library branches in San Bernardino, Riverside, and Inyo Counties. The City currently has a main library and a branch library at Colony High School.

4.6.6 FIBER OPTICS

The proposed backbone street fiber optics (conduits, tracer wire, and fiber) will be placed underground within a duct and structure system to be installed by the Master Developer in a joint trench, as Illustrated in Figure 4-9. . In-tract fiber and conduit shall be installed by the Developers per the in-tract fiber optic design guidelines. Maintenance of the installed system will be the responsibility of the City/Special District. Development of the Project requires the installation by the Developers of all fiber optic infrastructure and peripheral equipment necessary to service the Project as a stand-alone development. See Figure 4-9.

4.6.7 NATURAL GAS

The Gas Company will provide natural gas service to the project site. The Gas Company as necessary will install natural gas mains within the Rich-Haven site, with possible integration with existing 3-inch and 6-inch mains within Riverside Drive, Hamner Avenue, and Ontario Ranch Road. The 36-inch High Pressure main located within the northwestern corner will remain.

4.6.8 ELECTRICITY

SCE will provide electrical service to the project site from existing facilities in the Ontario Ranch area; any new facilities will be located underground, and be owned and operated by the City of Ontario.

SCE facilities located within and adjacent to the project area consist of 115kV, 66kV, 12kV, and communications. Facilities less than 34.5kV will be located underground in the event that they are located adjacent to any streets proposed to be improved in conjunction with site improvements. See Figure 2-5*, Existing On-Site Facilities.*

SCE has a number of easements within and adjacent to the project area. The easement extending along the north side of the existing Ontario Ranch Road will be vacated as part of the project concurrently with removal of the existing 12kV lines. The existing 66kV lines will be relocated along the Ontario Ranch Road to the north. The SCE existing 66kV lines located along Haven Avenue will be relocated outside the project area and within the Haven Avenue right-of-way.

As part of the project, Mill Creek Avenue will be realigned to the west. With the realignment of Mill Creek Avenue, existing 115kV SCE towers located along Mill Creek Avenue may require to be relocated to the north of Ontario Ranch Road, in addition to the potential for the relocation of 115kV and 66kV lines located to the south of Ontario Ranch Road.

4.6.9 SOLID WASTE

Solid waste and recyclables in the City of Ontario are collected by the Ontario Municipal Utilities Company (OMUC) and transported to the Burtec West Valley Materials Recovery Facility in the City of Fontana. Refuse is ultimately landfilled at the El Sobrante Landfill in Riverside County. The development shall follow the Solid Waste Department Refuse and Recycling Planning Manual for the City of Ontario. The community trash enclosures may be utilized within the Specific Plan development depending on the types of architectural layouts.
The following shall apply:

i) Commercial – Developer shall comply with Municipal Code Sec. 6-3.314 Commercial Storage Standards, and Sec. 6-3.601 Business Recycling Plan.

ii) Apartment – For apartments using commercial bin service developer shall comply with Municipal Code Sec. 6-3.314 Commercial Storage Standards and Sec 6-3.601 Business Recycling Plan.

iii) Residential – For curbside automated container service developer shall comply with Municipal Code Sec. 6-3.308.9(a) and (d), Residential Receptacles, Placement.

iv) Recycling Requirements – Developer shall comply with Municipal Code, Article 6. Recycling Requirements for Specified Business Activity, Sec. 6-3.601 Business Recycling Plan, and Sec. 6-3.602 Construction and Demolition Recycling Plan.

v) Site Improvement Plans shall follow the City of Ontario refuse collections standards. All project sites shall be designed to meet all the Integrated Waste Department's requirements, including the requirements for Sizing of Storage, Location of Collection Area, Accessibility for Collection Vehicles, and Collection of Sorted/Diverted Waste Types.

The City of Ontario will assess development fees to new developments to pay for the necessary expansion of solid waste collection services.

This page intentionally left blank

SECTION 5 - DEVELOPMENT REGULATIONS

5.1 Introduction

The provisions contained herein will regulate design and development within the Rich-Haven Specific Plan. This section has been prepared in accordance with California Government Code Section 65450, et seq., and the City of Ontario Development Code.

The Development regulations outlined in this section of the Specific Plan set forth the standards for development of all uses within the community. Regulations are proposed for residential, commercial, office, mixed use, light industrial and open space uses. Individual planning areas are defined by density and have been included in accordance with the goals and objectives of this document.

The following General Development Standards apply to all uses within the Rich-Haven Specific Plan.

5.2 General Provisions

5.2.1 DEFINITION OF TERMS

The meaning of words, phrases, titles, and terms shall be the same as provided in the City of Ontario Development Code unless specifically provided herein.

5.2.2 APPLICABILITY

The Rich-Haven Specific Plan is a regulatory plan, which, upon adoption by ordinance, will constitute the zoning of the property. Development plans or agreements, tract or parcel maps, precise development plans, or any other action requiring ministerial or discretionary approval for the subject property must be consistent with the approved Specific Plan. Actions deemed to be consistent with the Specific Plan shall be judged to be consistent with the City of Ontario's TOP Policy Plan (General Plan) as mandated in California Government Code, Section 65454. Should the regulations contained herein differ from the regulations of the City of Ontario Development Code, the regulations of the Specific Plan shall take precedence. Where the Rich-Haven Specific Plan is silent, City Code shall apply. These regulations shall reinforce the specific site planning, architectural design, and landscape guidelines contained in Section 6, *Design Guidelines*, of the Rich-Haven Specific Plan.

5.2.3 SEVERABILITY

In the event that any regulation, condition, program, portion, or policy of this Specific Plan or the application thereof to any person or circumstance is held to be invalid or unconstitutional by any court of competent jurisdiction, such portions shall be deemed separate, distinct, and independent provisions and shall not affect the validity of the remaining provisions of this Specific Plan or applications thereof which can be implemented without the invalid provision or application.

5.2.4 ADMINISTRATION

The Rich-Haven Specific Plan is adopted by ordinance and will serve as the implementation tool for the City's TOP Policy Plan as well as the zoning for the project site. The Specific Plan Development Regulations as outlined herein address general provisions, permitted uses, and development standards for the land uses within the project site.

5.2.5 METHODS AND INTERPRETATION

Development within the Rich-Haven Specific Plan shall be implemented through the approval by the City of Ontario of parcel maps, tract maps, and development permits. The administration process described herein provides for the mechanisms for review and approval of development projects within Rich-Haven consistent with the Specific Plan objectives.

Unlisted Uses

Any land use proposal not specifically covered by the provisions contained herein shall be subject to the City of Ontario Development Code.

Boundaries

The boundaries and acreage of the individual planning areas or portions thereof are approximate. Precise boundaries and acreages will be established in conjunction with the subdivision map or site development plan for each planning area or portions thereof within the project. Minor boundary and acreage variations (15% maximum deviation) shall be permitted without an amendment to this Specific Plan, subject to review by the Planning Director for conformance with the intent of the Specific Plan.

5.3 GENERAL SITE DEVELOPMENT CRITERIA

The following general site development criteria shall apply to all land development proposed within the Rich-Haven Specific Plan.

5.3.1 TOP ADJUSTED GROSS ACREAGE

Development area acreages are based upon TOP Adjusted Gross Acreages. The TOP Adjusted Gross Acreage is defined as the existing parcel size before removing the required dedication.

5.3.2 GRADING

Development within the project site shall utilize grading techniques as approved by the City of Ontario. Grading concepts shall respond to the Design Guidelines included in this Specific Plan and the grading section of the development plan, and shall be subject to a grading permit issued by the City of Ontario. Methane remediation may be required, subject to a remediation protocol developed by the City of Ontario (see discussion in Sections 4.5, *Grading*, and 8.6, *Methane Remediation*, herein).

5.3.3 SUBSEQUENT BUILDING MODIFICATION

Subsequent building modification by homeowners and/or builders, including additions and/or projections into setback areas permitted by the Specific Plan, shall match the architectural style of the primary unit and shall be constructed of the same materials and colors as the primary unit and/or in context with the overall Design Guidelines.

5.3.4 TECHNOLOGY

All homes and businesses shall accommodate the most modern technology for computer internet access, phone, fax, and television via the "Ontario Fiber Optic Conduct". Broadband fiber optics cable will be installed on all peripheral streets per the approved Broadband Master Plan. The homebuilder will provide broadband to the homes.

5.3.5 UTILITIES

All new and existing public utility distribution lines of less than 34.5kV shall be subsurface throughout the Rich-Haven Specific Plan, in accordance with City ordinance.

Water, recycled water, sewer, and storm drain utilities may be designated as "public utilities" if located within public streets. All public utilities within private streets shall be designed per City standards and contained within applicable easements. The CC&R's shall contain language that requires all proposed work by the HOA within said easements to be plan checked and inspected by the City, including applicable fees. Generally, utilities will not be accepted within alleys, parking areas and driveways, although they may be

permitted subject to review and approval by the engineering and public works departments. Utilities within commercial parking lots and loading areas will be designated as private. The extent to which said utilities will be accepted as public utilities shall be determined, at the full discretion of the City, during final design plan review.

5.3.6 DEVELOPMENT INTENSITY

The Rich-Haven Land Use Plan allocates a total number of units to each residential Planning Area as indicated in Table 3-1, *Land Use Plan Summary,* included in Section 3, *Land Use*, of this Specific Plan. Variations in the number and type of dwelling units within each residential planning area may occur at the time of final design of the neighborhood depending upon the residential project identified for development. Increases in allocation of residential units up to a maximum of fifteen percent (15%) are permitted among the residential planning areas within the Specific Plan provided the total number of units established for the Specific Plan area is not exceeded. The maximum number of residential dwelling units permitted within the Specific Plan shall be 7,194 dwelling units.

Provisions for transfer of residential units between Planning Areas is outlined in Section 8, *Administration and Implementation*, of this Specific Plan.

Note: Section 5.3.7 was intentionally omitted as part of the Rich Haven Specific Plan Amendment (File # PSPA16-001).

5.3.8 MIXED-USE OVERLAY

Mixed-Use projects are specifically allowed in Planning Areas 4A, 4B, 5B, 7, 9 and 10A ~~6, 7, 8 and 9~~ of this Specific Plan. Mixed-use projects may be horizontal or vertical mixed-use. Vertical mixed-use projects may consist of office or residential over retail/commercial/ hospitality uses or residential over office or retail/commercial/hospitality uses. When proposing a vertically Mixed-Use residential project, Podium or Wrap Apartments/Condominiums development standards shall be used.

5.3.9 LIVE/WORK

"Live/Work" is a mixed-use building type that is designed to accommodate non-residential work areas in addition to, or combined with, living quarters. The residential and commercial spaces are clearly identified and separated and all uses are in compliance with applicable government codes. Live/Work units, although suitable for home occupation uses, have specialized workspaces that can accommodate more intensive work activities than would be appropriate for an exclusive residential building. Live/Work opportunities shall be limited to the Regional Commercial/Mixed-Use District of the Specific Plan (Planning Areas ~~6, 7, 8 and 9~~ 4B, 5B, 6B, 7, 8 and 10B) and may develop in one of three scenarios: 1) live/work may be included in a vertical mixed-use setting with residential units located over retail/commercial/office; 2) live/work may also occur in multi-family live/work buildings such as townhomes and lofts, and would be a stand-alone multi-family workspace; or 3) live/work may also occur in single-family cottage products. Refer to Section 5.10 of this chapter for performance standards related to Live/Work uses.

5.4 RESIDENTIAL DISTRICT DEVELOPMENT STANDARDS

5.4.1 RESIDENTIAL PERFORMANCE STANDARDS

The following Performance Standards shall apply to all residential uses within the Residential District of this Specific Plan (Planning Areas 1A, 1B, 1C, 2B, 3A, and 3B ~~5C D~~) and High Density Residential uses within the Stand Alone Residential Overlay of the Regional Commercial/Mixed-Use District (Planning Areas 4A, 4B, 5B, 9 and 10A).

5.4.1.1 Mixture of Housing Types

Within each residential Planning Area and the Stand Alone Residential Overlay Zone in the Regional Commercial/Mixed-Use District, a mix of housing floor plans is required as shown below. This requirement is not applicable to multi-family for-rent product.~~:~~

Number of Dwelling Units:	Number of Differing Floor Plans:
5 –10	As required by Planning Commission
11 – 25	2
26 – 50	3
51 – 75	3
76 – 100	4
Over 100	4; +1 additional floor plan with 4 elevations for each additional 50 units exceeding 100

5.4.1.2 Projections into Required Yards

Residential roof overhangs and decorative architectural features such as fireplaces, bay windows, niches, and similar elements may project a maximum of two feet into any required front or side yard setback, five feet into rear yard. Structural features such as exposed staircases may encroach a maximum of five feet into any required rear yard setback. Porches and balconies, including post and columns, may project into yards as prescribed within the following prototypes.

5.4.1.3 Lot Coverage

Lot coverage includes the main structure, garages, and accessory structures, and excludes driveways and areas devoted to recreational uses.

5.4.1.4. Building Height

i. Primary Structure: The building height of single-family detached homes may not exceed two stories plus an attic of less than five hundred (500) square feet, with a maximum height of 35 feet.

ii. Primary Structure: The building height of multi-family residential units may not exceed three stories, with a maximum height of 35 feet in the Residential District, and five stories and 55 feet in the Regional Commercial/Mixed-Use District.

iii. Primary Structure: The Stand-Alone Residential Overlay within Planning Areas ~~6, 7, 8 and 9~~4A, 4B, 5B, 9 and 10A may exceed the three-story limit, subject to Planning Department review and approval.

iv. Architectural features such as, but not limited to, weather vanes, chimneys, etc. as are appropriate to the architectural style of the home may extend in height five feet (5') above the stated building height of the Primary Structure for low and medium density units.

v. Accessory structures are limited to one story or 14 feet.

5.4.1.5 Lot Width

Lot width shall be measured at the front yard property line for main residences. Lot width on a cul-de-sac or knuckle shall be measured at the front yard setback. A ten per cent (10%) admin exception for lot widths shall be permitted consistent with the Development Code.

5.4.1.6 Front Porches

The minimum depth of a porch shall be 7 feet, with an area of 70 square feet of clear space. The porch depth may be reduced to 5 feet, where appropriate to mass and scale of the building, subject to Planning Department review and approval.

5.4.1.7 Standards for Non-Residential Uses

Development standards for non-residential uses located within residential districts shall comply with the City of Ontario Development Code.

5.4.1.8 Dairy Separation Requirements for Residential Uses

The following separation requirements from existing dairies/feed lots shall apply to new residential development or structures used for public assembly purposes from existing dairies/feed lots.

A minimum 100' separation shall be required between a new residential, commercial or industrial development or structure used for public assembly and an existing animal feed trough, corral/pen or an existing dairy/feed lot including manure stockpiles and related wastewater detention basins. The 100-foot separation requirement may be satisfied by an off-site easement acceptable to the Planning Director with adjacent properties, submitted with the initial final map and recorded prior to or concurrent with the final map.

5.4.1.9 Walls, Fencing and Landscaping

The criteria for walls, fences and landscaping shall be as follows:

i. Maximum wall height in Traffic Safety Site Areas and/or front corner side yard areas shall be 3-feet.

ii. Maximum wall height at all other locations on lot shall be 6-feet, except as required for sound attenuation.

iii. Maximum height of exposed portions of retaining walls shall be 3-feet.

iv. Front yard landscaping and irrigation shall be provided by the Developer/Builder for all single-family products (Planning Areas ~~1-~~ ~~5~~1A, 1B, 1C, 2B, 3A and 3B and Stand Alone Residential Overlay within Planning Areas ~~6, 7, 8 and 9~~4A, 4B, 5B, 9 and 10A).

~~iv.~~v. The maximum wall height permitted between residential and light industrial shall be 8-feet. Any wall higher than 8-feet shall be subject to approval by the Planning Director.

~~v.~~vi. Privacy walls may be increased to 8 foot maximum on retaining side if there is retaining condition required (retaining 3' maximum portion), subject to approval from the Planning Director.

5.4.1.10 Residential Permitted Uses

a. Single-family detached residences and two family residences (duplex).
b. Single-family attached residence.
c. Townhomes.
d. Cluster and courtyard homes.
e. Attached and detached condominiums.
f. Guest house/second unit in accordance with the City of Ontario Development Code.
g. Public parks, community centers, and similar facilities.
h. Home Occupation in accordance with the City of Ontario Development Code.
i. Residential Community Care Facility (6 or less).
j. Public School K-12 in accordance with the City Development Code.
k. Police Store front/ Sub Station.
l. Fire Station/Emergency Services.
m. Satellite Dishes/Ham Radio Antennas in compliance with the City of Ontario Development Code.
n. Day Care Facilities serving up to 7 children (per State guidelines).
o. Recreational Facilities ancillary to a permitted use.
p. Amusement Temporary (Carnival, etc.) in accordance with the City of Ontario Development Code.
q. Temporary Structures (construction office, community information and subdivision sales office, etc.) in accordance with the City of Ontario Development Code.
r. Animal regulations in accordance with the City of Ontario Development Code.
s. Home schools.

t. Open space and conservation areas.

u. Parking lots in conjunction with a permitted or conditionally permitted use

v. Signs in accordance with the signage regulations and guidelines within this Specific Plan.

x. RV parking in accordance with the City of Ontario Development Code. No RV storage in front or side street side yard. No RV street parking for more than 72 hours.

y. Model homes and temporary related signage, sales, and parking facilities.

5.4.1.11 Residential Uses Subject to a Conditional Use Permit,

a. Senior Center.

b. Senior Housing.

c. Assisted Living/Congregate Care in accordance with the City of Ontario Development Code.

d. Convalescent Facility.

e. Live/Work Units – Refer to Section 5.5.10, Live/Work Development Standards.

f. Places of public assembly (including places of worship).

g. Residential Day Care Facilities serving up to 14 children (per State guidelines).

h. Public safety facilities.

i. Public utilities.

j. Bed and Breakfast in accordance with the City of Ontario Development Code.

k. Tennis and Swim Club.

l. Private School K-12 in accordance with the City of Ontario Development Code.

m. Mobile/Manufactured Homes in accordance with the City of Ontario Development Code.

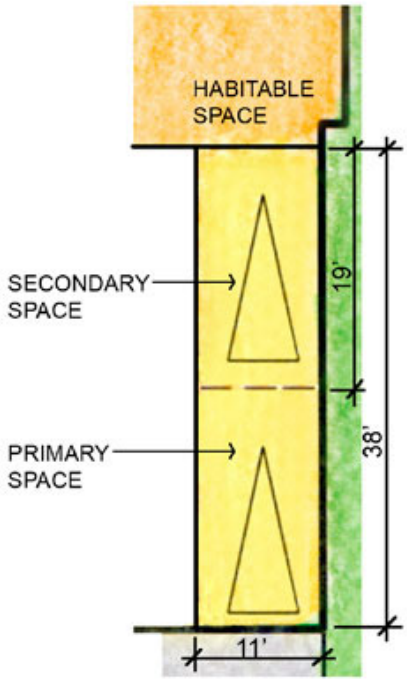
n. Agricultural operations.

5.4.1.12 Parking

a. Parking shall be provided in accordance with the City of Ontario Development Code, except as specifically provided herein.

b. Residential uses shall provide two spaces within an enclosed garage per dwelling unit, for all one- and two-family (i.e. duplex) residential structures.

~~b.~~c. 18-foot aprons in front of single car garage shall count as a required parking space.



~~c.~~d. Residential dwellings with three or more attached residential units are subject to the following parking requirements:

i. One-bedroom units require 1.75 parking spaces per unit, with at least 1 space in a garage or carport.

ii. Two-bedroom units require 2 parking spaces per unit, with at least 1 space in a garage or carport.

iii. Three or more bedroom units require 2.5 spaces, with at least 2 spaces in a garage or carport.

iv. Tandem configurations measuring 11 feet by 38 feet are permitted for covered or enclosed spaces where both spaces serve the same residence. A maximum of 25% of the required covered spaces may be tandem, for multi-family projects with densities over 12 DU/AC and single family detached projects with lots or exclusive use areas below 3,000 SF. A reduction to a minimum depth of 34 feet may be allowed per Planning Director approval for a percentage units.

TANDEM PARKING

v. Carports shall be a minimum of 9' in width and 18' in depth.

vi. One car garage shall be a minimum of 10' in width and 20' in depth.

vii. ~~In~~ For multi-family ~~triplex units, 0.4 per unit of additional visitor and guest parking space is required.~~community, with density equal to or greater than 25 du/ac, the parking requirement will be as follows:

Unit Type	Resident	Guest	Total
Studio Unit	1.0	0.4	1.4
One Bedroom Unit	1.2	0.4	1.6
Two Bedroom Unit	1.5	0.4	1.9
Three Bedroom Unit	2.0	0.4	2.4
Senior Housing	0.5	0.1	0.6

~~v.~~viii. Community recreation and leasing centers shall provide additional parking for administrative staff beyond the parking requirement for the community.

~~vi. In multi-family projects, resident parking may be reduced for units within 300 feet of the Ontario Ranch Road ROW and for units~~

~~(including live work units) that face onto Ontario Ranch Road according to the following table:~~

~~Studio Unit~~	~~1.0 space per unit + required guest parking~~
~~One Bedroom Unit~~	~~1.25 space per unit + required guest parking~~
~~Two Bedroom Unit~~	~~1.5 space per unit + required guest parking~~
~~Three Bedroom Unit~~	~~2.0 space per unit + required guest parking~~
~~Senior Housing~~	~~0.5 space per unit + required guest parking~~

~~vii.~~ix. A minimum of 75% of the required residential parking for units that qualify for reduced parking requirements must be within a garage or carport. Guest parking for these units shall be provided in accordance with the City of Ontario Development Code.

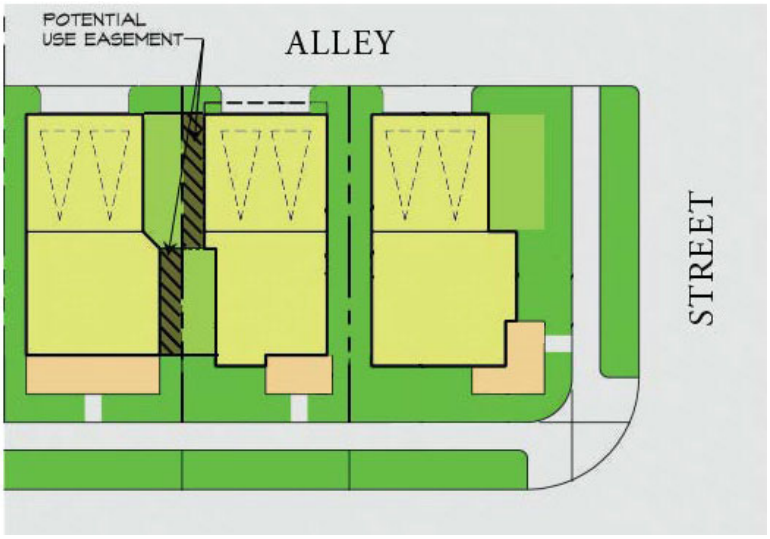
~~viii.~~x.

~~ix.~~ Surface parking is permitted within SCE easements subject to approval from the utility provider. This surface parking may not be included towards meeting minimum resident and guest parking requirement~~s.~~

5.4.1.13 Common Open Space

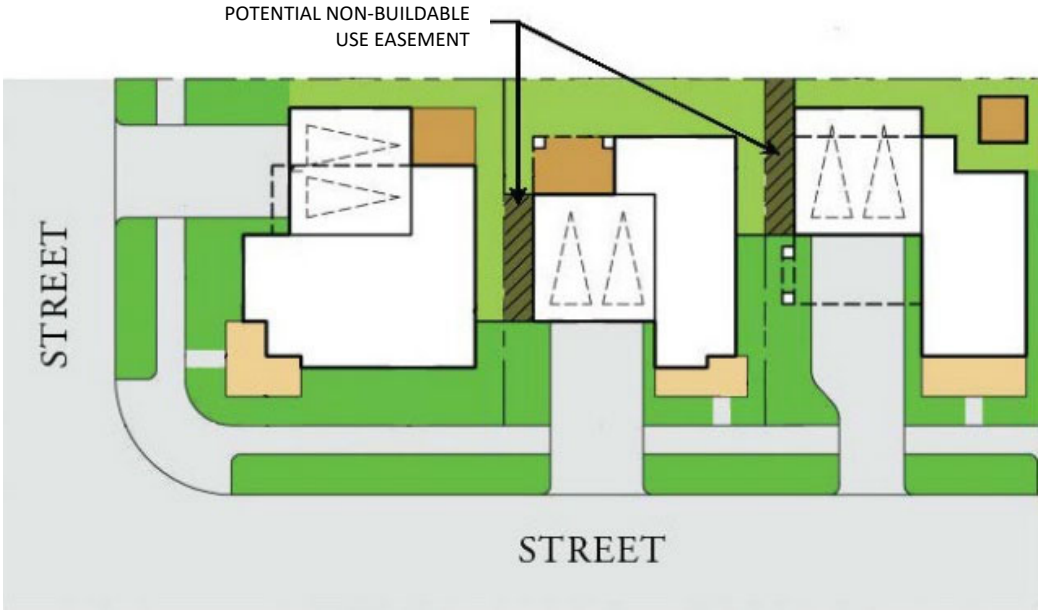
Residential projects shall comply with the following common open space requirements to fulfill open park area requirements in accordance with Section 4.6.2, Parks herein. In addition to common open space requirements in this section, residential units are required to have private open space, in accordance with development standards for the given prototype. Refer to Section 5.4.2, Residential Prototypes herein.

The minimum amount of open park area required of any residential projects shall be determined by the following:



(# of dwelling units) x (occupancy factor) x (0.002) = Area of park and/or public plaza to be permanently established.

This standard fulfills the 2-ac./1000 population open park area requirements for Rich-Haven. This open space requirement may be met within any development containing residential components, attached or detached, or by satisfying the in-lieu park development impact fee as approved by the City. Fees will be paid to fulfill the balance of the City's parks requirement.



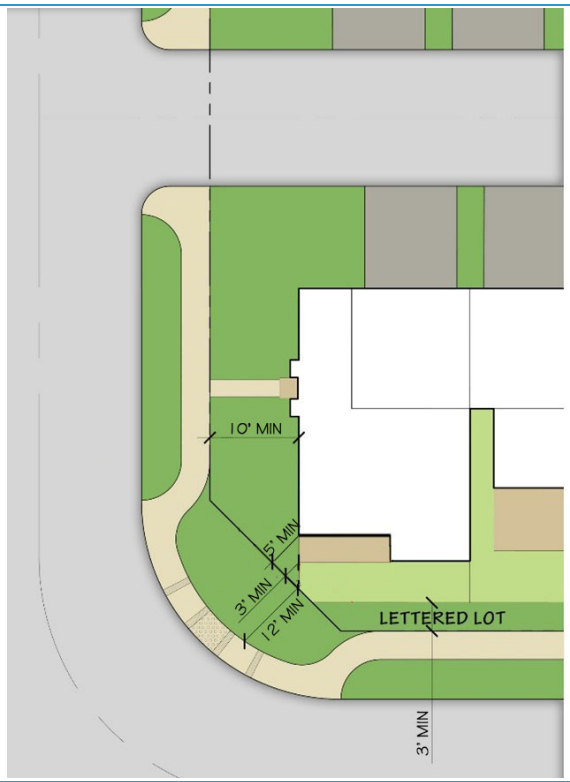
For residential projects, private open space may be provided in at least one third (1/3) of high-density residential units across the entire project to create architectural variety. When private open space is not provided, an equivalent amount of common open space will be provided outside. This space will not count towards public/park open space requirements.

5.4.1.14 Use and Benefit Easements

In order to optimize usable yard area, decrease the visual impact of the garage from the street or otherwise provide a better quality of life some single family detached home types may utilize "use and benefit easements." The "use and benefit easements" shall be recorded on the subject property's deed and shall be described in the Covenants, Conditions, and Restrictions of the respective homeowner's association.

SFD ALLEY LOAD EXAMPLE

SFD CONVENTIONAL EXAMPLE



5.4.1.15 Corner Setbacks at City Modified Bends

In order to optimize private open space and provide increased planting areas for landscaping, the public sidewalk shall be realigned to be curb adjacent between the beginning and end of the inside curve (see photo example below). This will allow for pedestrian and ADA accessible ramps.

The city standard detail for a Modified Bend will only be modified to realign the sidewalk location to allow for increased landscaping within the right of way (ROW) and the adjacent lettered lot/common landscape area. The curb radius and ROW corner cut off dimensions will remain per the current City standard.

Buildings will maintain a minimum setback of ~~three~~five (~~3~~5) feet from property line (ROW). Courtyard walls and Privacy walls within the corner cut-off are allowed on the property line as long as a minimum 12-foot planting area is maintained between the wall and the back of the realigned sidewalk within the cut-off area. (See graphic standards following).

Corner Setbacks at City Modified Bends:

- ~~Meets 3' State~~5’ ~~B~~building setback at corner cutoff~~.~~
- ~~Request exception for 5-foot landscape lot at corner cutoff.~~ 3’ patio setback
- ~~Provides~~ 12' minimum for landscaping between wall and sidewalk~~.~~

5.4.2 RESIDENTIAL PROTOTYPES

Prototypes specify building type, orientation, lot size, and configuration. There are fourteen prototypes in the following section. Seven are single-family configurations and seven are multi-family or attached configurations, some containing more than one alternative. The use of multiple prototypes is required to achieve the desired variety across the community. Additional prototypes may be proposed or existing prototypes amended, subject to Planning Department review and approval. The list of prototypes has been included here for reference.

1. Conventional 7,200 SF Single Family Detached
2. Conventional 4,500 SF Single Family Detached
3. Conventional 2,700 SF Single Family Detached
4. Two-Pack or "Z" Lot Single Family Detached
5. Alley Loaded Single Family Detached
6. Courtyard Single Family Detached Lots
7. Cluster Single Family Detached
8. Cluster Single Family Detached (No Driveways)
9. Duplex/Triplex
10. Row Town Homes
11. Courtyard Town Homes
12. Tuck Under Town Homes
13. Tuck Under Apartments/Condominiums
14. Wrap Apartments/Condominiums
15. Podium Apartments/Condominiums

The following standards illustrate and provide the lot development criteria for each prototype.

5.4.2.1 Development Standards, Conventional 7,200 SF Single Family Detached

5.4.2.1.1 Lot Criteria:

Minimum Area:	7,200 SF
Maximum Lot Coverage:	55%

5.4.2.1.2 Lot Dimensions:

Standard Lot:	Minimum Width @ Front PL[4]:	60’
	Minimum Depth:	100’
Corner Lot:	Minimum Width @ Front PL[4]:	65’
	Minimum Depth:	100’

5.4.2.1.3 Building Setbacks[1]:

Front Setbacks	
Living Area:	18’
Porch / Balcony:	15’
Garage - Front Loaded:	20’ (Garage door to back of sidewalk)
Garage - Side Loaded:	10’ (Side of garage to back of sidewalk)
Side Setbacks	
Living Area / Accessory Structure	
Interior PL:	5’
Corner PL:	10’
Porch / Balcony	
Interior PL:	3’
Corner PL:	7’
Garage	
Interior PL:	5’
Corner PL (Front Loaded, No Side Access):	10’ (Side of garage to back of sidewalk)
Corner PL (Side Access with Driveway):	18’ (Garage door to back of sidewalk)
Rear Setbacks	
Living Area:	15’
Garage (Single Story Plate Line):	5’
Garage (Two Story Plate Line):	15’
Patio Cover:	5’
Second Story Deck / Balcony:	10’
Accessory Structure:	5’

5.4.2.1.4 Building Height[2]:

Primary Structure:	35’
Accessory Structure:	14’
Projections / Architectural Features:	3’ above primary structure, or 10% of the building height
Wall, Fence and Hedge Height	
Front or Corner Side Yard:	3’
All other locations:	6’
Retaining Walls:	3’

1. All setbacks and building separations are minimums and shall be measured from the property line unless otherwise noted.
2. Building heights shown are maximum dimensions.
3. Building separations are to be measured between main walls.
4. Lots within cul-de-sac, standard knuckles or modified configurations shall provide a minimum 35’ lot width at front property line and shall meet the minimum lot width established for the product type at the building setback. All minimum side and rear yard setbacks shall be maintained at all times.

CONVENTIONAL 7,200 SF SINGLE FAMILY DETACHED
*Building footprints are conceptual. Actual floor plans may differ.

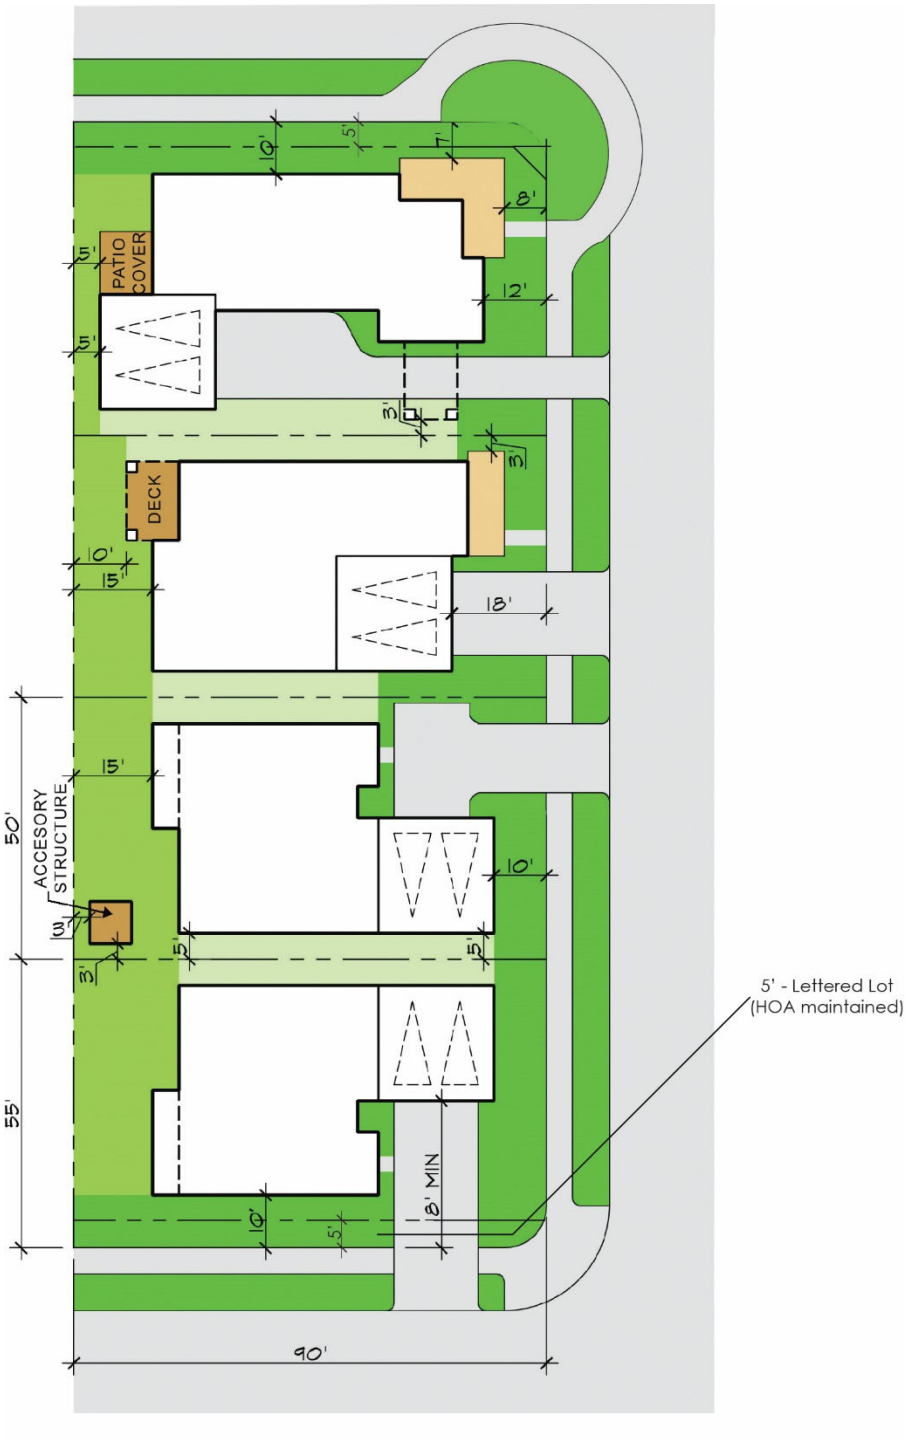
5.4.2.2 Development Standards, Conventional 4,500 SF Single Family Detached

5.4.2.2.1 Lot Criteria:

Minimum Area:	4,500 SF
Maximum Lot Coverage:	55%

5.4.2.2.2 Lot Dimensions:

Standard Lot:	Minimum Width @ Front PL[4]:	50’
	Minimum Depth:	90’
Corner Lot:	Minimum Width @ Front PL[4]:	55’
	Minimum Depth:	90’



5.4.2.2.3 Building Setbacks[1]:

Front Setbacks	
Living Area:	12’
Porch / Balcony:	8’
Garage - Front Loaded:	18’ (Garage door to back of sidewalk)
Garage - Side Loaded:	10’ (Side of garage to back of sidewalk)
Side Setbacks	
Living Area	
Interior PL:	5’
Corner PL:	10’
Porch / Balcony	
Interior PL:	3’
Corner PL:	7’
Garage	
Interior PL:	5’
Corner PL (Front Loaded, No Side Access):	10’ (Side of garage to back of sidewalk)
Corner PL (Side Access with Driveway):	18’ (Garage door to back of sidewalk)
Accessory Structure:	3’
Rear Setbacks	
Living Area:	15’
Garage (Single Story Plate Line):	5’
Garage (Two Story Plate Line):	15’
Patio Cover:	5’
Second Story Deck / Balcony:	10’
Accessory Structure:	3’

5.4.2.2.4 Building Height[2]:

Primary Structure:	35’
Accessory Structure:	14’
Projections / Architectural Features:	3’ above primary structure, or 10% of the building height
Wall, Fence and Hedge Height	
Front or Corner Side Yard:	3’
All other locations:	6’
Retaining Walls:	3’

1. All setbacks and building separations are minimums and shall be measured from the property line unless otherwise noted.
2. Building heights shown are maximum dimensions.
3. Building separations are to be measured between main walls.
4. Lots within cul-de-sac, standard knuckles or modified configurations shall provide a minimum 35’ lot width at front property line and shall meet the minimum lot width established for the product type at the building setback. All minimum side and rear yard setbacks shall be maintained at all times.

CONVENTIONAL 4,500 SF SINGLE FAMILY DETACHED
*Building footprints are conceptual. Actual floor plans may differ.

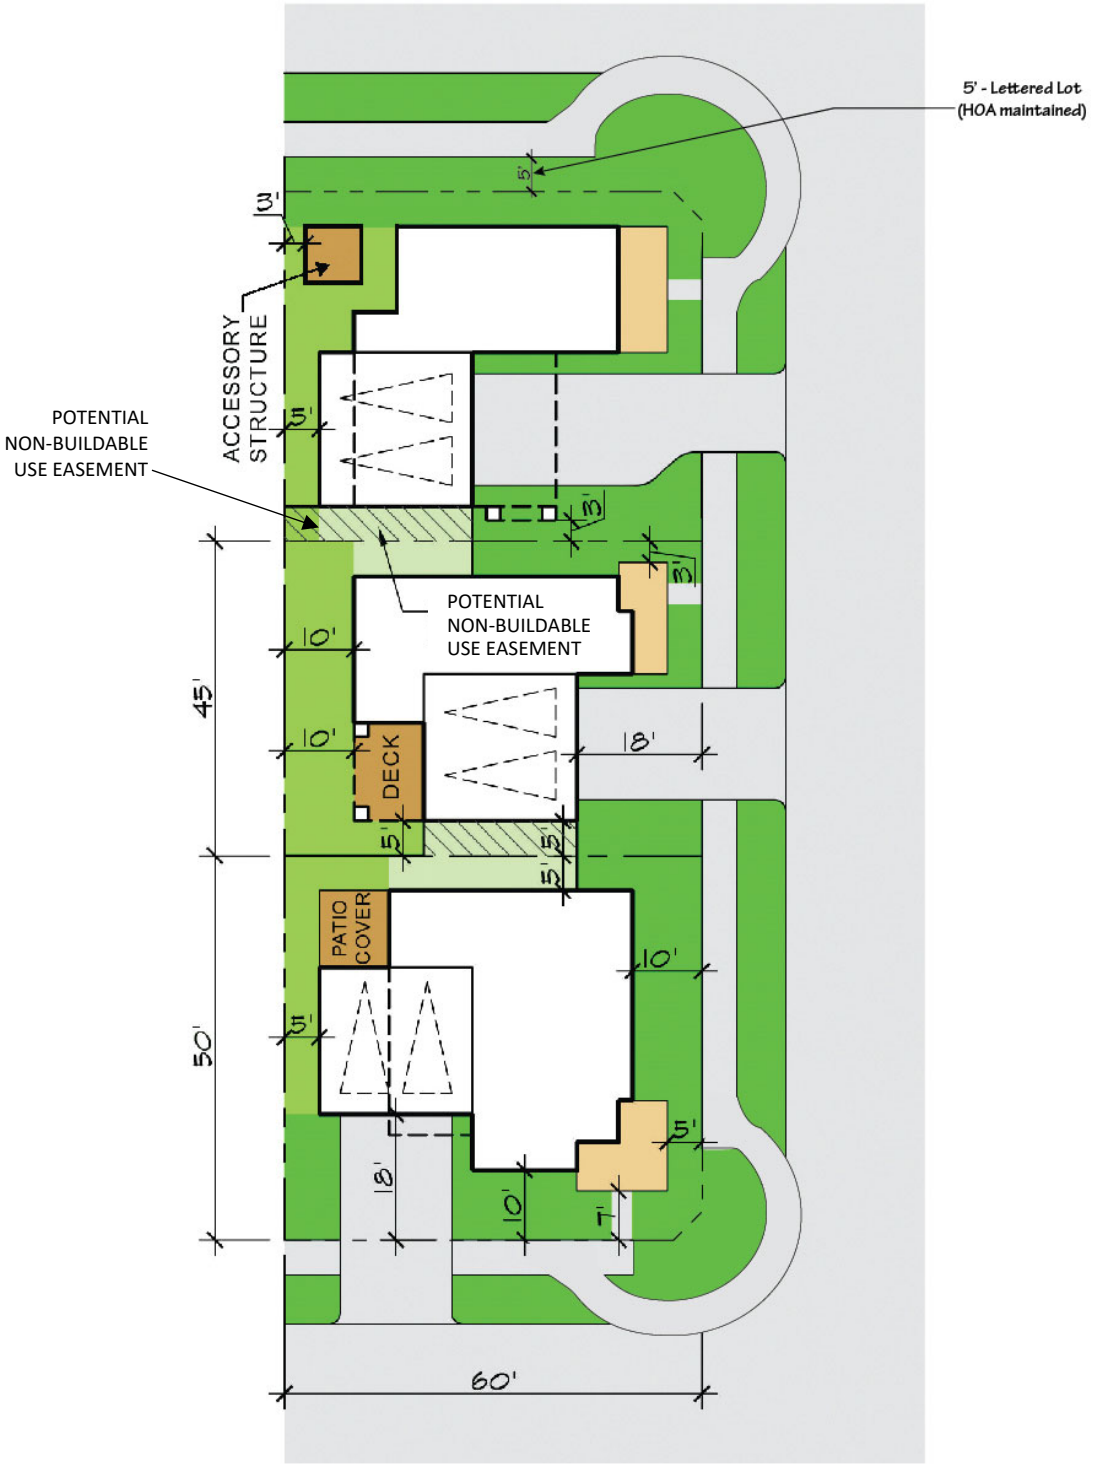
5.4.2.3 Development Standards, Conventional 2,700 SF Single Family Detached

5.4.2.3.1 Lot Criteria:

Minimum Area:	2,700 SF
Maximum Lot Coverage:	55%

5.4.2.3.2 Lot Dimensions:

Standard Lot:	Minimum Width @ Front PL[4]:	45’
	Minimum Depth:	60’
Corner Lot:	Minimum Width @ Front PL[4]:	50’
	Minimum Depth:	60’



5.4.2.3.3 Building Setbacks[1]:

Front Setbacks	
Living Area:	10’
Porch / Balcony:	5’
Garage - Front Loaded	
From Public or Private Street:	18’ (Garage door to back of sidewalk)
From Common Drive or Alley:	5’ (Garage door to back of curb)
Garage - Side Loaded:	10’ (Side of garage to back of sidewalk)

Rear Setbacks	
Living Area:	10’
Garage (Single Story Plate Line):	5’
Garage (Two Story Plate Line):	10’
Patio Cover:	5’
Second Story Deck / Balcony:	10’
Accessory Structure:	3’

5.4.2.3.4 Building Height[2]:

Primary Structure:	35’
Accessory Structure:	14’
Projections / Architectural Features:	3’ above primary structure, or 10% of the building height
Wall, Fence and Hedge Height	
Front or Corner Side Yard:	3’
All other locations:	6’
Retaining Walls:	3’

1. All setbacks and building separations are minimums and shall be measured from the property line unless otherwise noted.
2. Building heights shown are maximum dimensions.
3. Building separations are to be measured between main walls.
4. Lots within cul-de-sac, standard knuckles or modified configurations shall provide a minimum 35’ lot width at front property line and shall meet the minimum lot width established for the product type at the building setback. All minimum side and rear yard setbacks shall be maintained at all times.

CONVENTIONAL 2,700 SF SINGLE FAMILY DETACHED
*Building footprints are conceptual. Actual floor plans may differ.

5.4.2.4 Development Standards, Two-Pack OR "Z" Lot Single Family Detached

5.4.2.4.1 Lot Criteria:

Minimum Area:	2,800 SF
Maximum Lot Coverage:	55%

5.4.2.4.2 Lot Dimensions:

Standard Lot:	Minimum Width @ Front PL[4]:	40'
	Minimum Depth:	72'
Corner Lot:	Minimum Width @ Front PL[4]:	45'
	Minimum Depth:	72'

5.4.2.4.3 Building Setbacks[1]:

Front Setbacks	
Living Area:	10'
Porch / Balcony:	5'
Garage - Front Loaded	
From Public or Private Street:	18' (Garage door to back of sidewalk)
From Common Drive or Alley:	5' (Garage door to back of curb)
Side Setbacks	
Living Area	
Interior PL:	4'
Corner PL:	10'
Porch / Balcony	
Interior PL:	3'
Corner PL:	7'
Garage	
Interior PL:	4'
Corner PL (Front Loaded, No Side Access):	10' (Side of garage to back of sidewalk)

Accessory Structure:	3'
Rear Setbacks	
Living Area:	10'
Garage (Single Story Plate Line):	4'
Garage (Two Story Plate Line):	10'
Patio Cover:	5'
Second Story Deck / Balcony:	10'
Accessory Structure:	3'

5.4.2.4.4 Building Height[2]:

Primary Structure:	35'
Accessory Structure:	14'
Projections / Architectural Features:	3' above primary structure, or 10% of the building height
Wall, Fence and Hedge Height	
Front or Corner Side Yard:	3'
All other locations:	6'
Retaining Walls:	3'

1. All setbacks and building separations are minimums and shall be measured from the property line unless otherwise noted.
2. Building heights shown are maximum dimensions.
3. Building separations are to be measured between main walls.
4. Lots within cul-de-sac, standard knuckles or modified configurations shall provide a minimum 35' lot width at front property line and shall meet the minimum lot width established for the product type at the building setback. All minimum side and rear yard setbacks shall be maintained at all times.
5. Permanent structures or utility lines are not allowed with the potential use easements.

TWO-PACK OR "Z" LOT SINGLE FAMILY DETACHED
*Building footprints are conceptual. Actual floor plans may differ.

5.4.2.5 Development Standards, Alley Loaded Single Family Detached

For Common Lot or Single Lot Subdivisions, perimeter setbacks shall be measured from street right of way or property line. Minimum building separations shall apply for all interior conditions.

5.4.2.5.1 Lot Criteria:

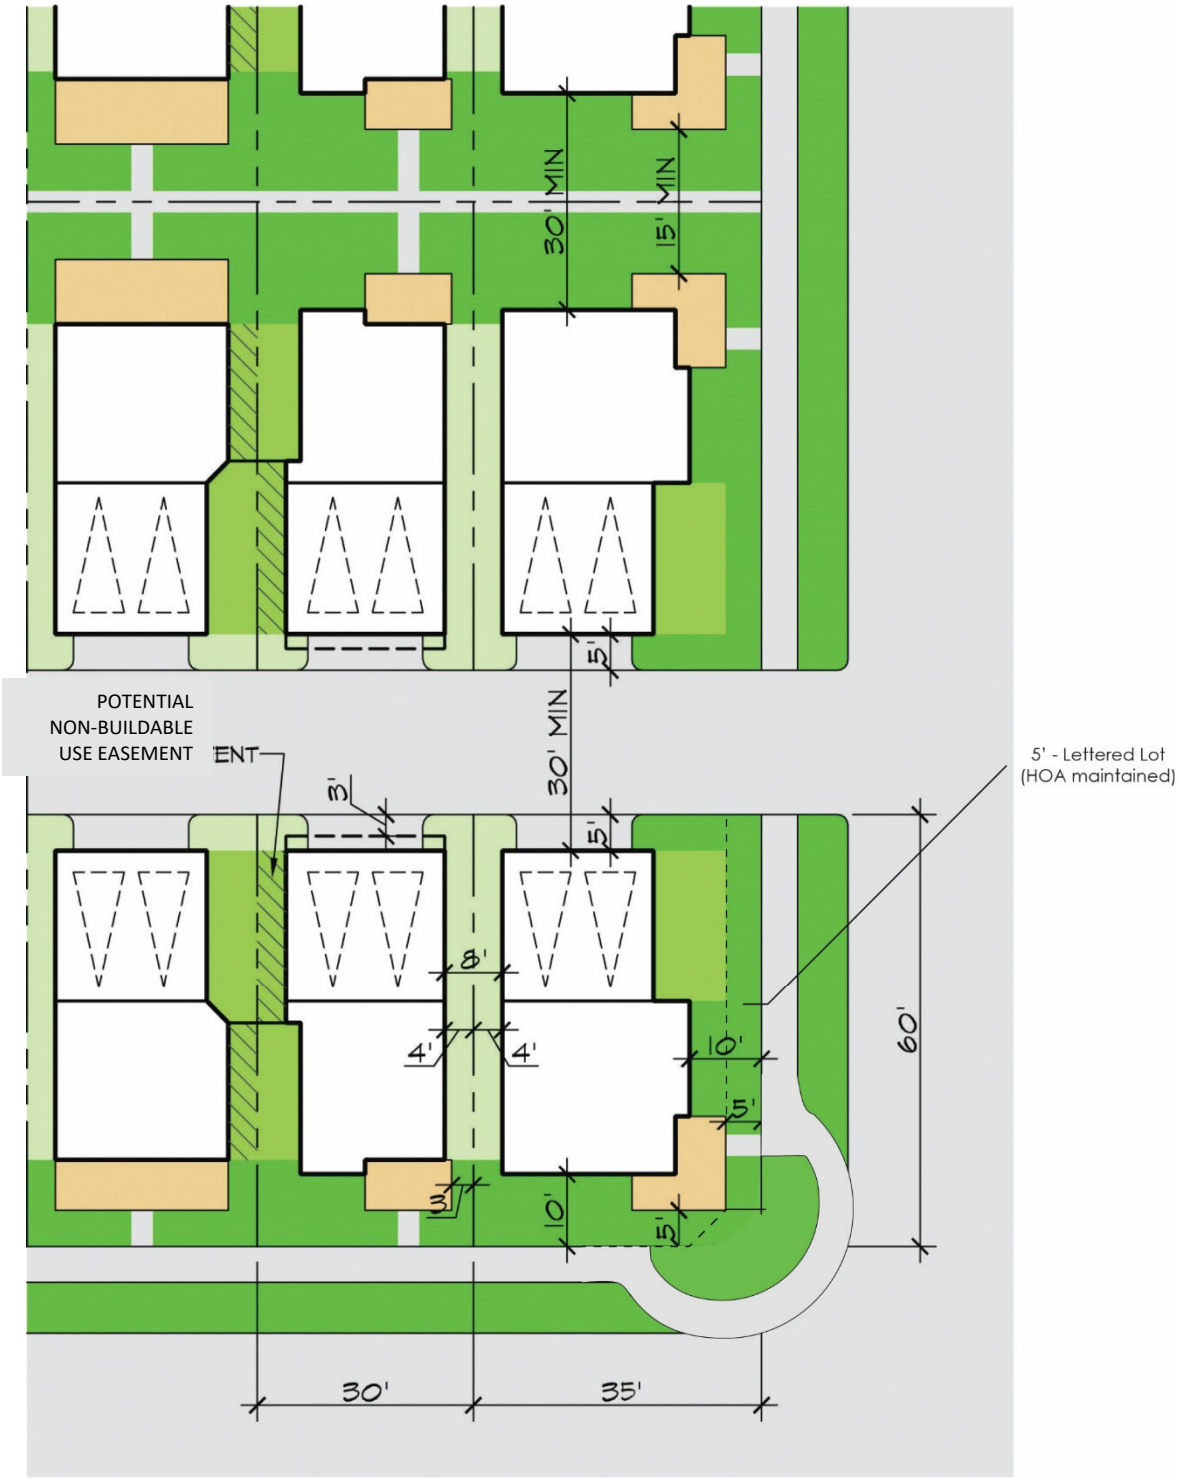
Minimum Area:	1,800 SF
Maximum Lot Coverage:	55%

5.4.2.5.2 Lot Dimensions:

Standard Lot:	Minimum Width @ Front PL[4]:	30’
	Minimum Depth:	60’
Corner Lot:	Minimum Width @ Front PL[4]:	35’
	Minimum Depth:	60’

5.4.2.5.3 Building Setbacks[1, 3]:

Front Setbacks (Street Frontage)	
Living Area:	10’
Porch / Balcony:	5’
Building Separation (Greenbelt or Paseo Frontage)	
Front to Front:	30’
Front to Side:	25’
Covered Porch to Covered Porch:	15’
Side Setbacks	
Living Area / Accessory Structure	
Interior PL:	4’
Corner PL:	10’
Porch / Balcony	
Interior PL:	3’
Corner PL:	5’
Garage	
Interior PL:	4’
Garage Separation (Door to Door):	30’
Building Separation (Side to Side):	8’
Rear Setbacks	
Living Area, Second Story Deck, Balcony:	3’
Garage (From Common Drive or Alley):	5’
Garage Separation (Door to Door)	30’
Patio Cover:	5’
Accessory Structure:	3’



5.4.2.5.4 Building Height[2]:

Primary Structure:	35’
Accessory Structure:	14’
Projections / Architectural Features:	3’ above primary structure, or 10% of the building height
Wall, Fence and Hedge Height	
Front or Corner Side Yard:	3’
All other locations:	6’
Retaining Walls:	3’

5.4.2.5.4 Private Open Space:

The ground floor of each home shall have a minimum contiguous area of 150 sq. ft. with no dimension less than 10 feet in any direction. Refer to the Setbacks above.

1. All setbacks and building separations are minimums and shall be measured from the property line unless otherwise noted.
2. Building heights shown are maximum dimensions.
3. Building separations are to be measured between main walls.
4. Lots within cul-de-sac, standard knuckles or modified configurations shall provide a minimum 35’ lot width at front property line and shall meet the minimum lot width established for the product type at the building setback. All minimum side and rear yard setbacks shall be maintained at all times.
5. Permanent structures or utility lines are not allowed with the potential use easements.

ALLEY LOADED SINGLE FAMILY DETACHED

5.4.2.6 Development Standards, Courtyard Single Family Detached

For Common Lot or Single Lot Subdivisions, perimeter setbacks shall be measured from street right of way or property line. Minimum building separations shall apply for all interior conditions.

5.4.2.6.1 Lot Criteria:

Minimum Area:	2,000 SF
Maximum Lot Coverage:	65%
Maximum Units per Cluster:	6

These standards shall also apply where the cluster homes are plotted with less than six (6) units.

5.4.2.6.2 Lot Dimensions:

Standard Lot:	Minimum Width:	45’
	Minimum Depth:	55’
Street Adjacent:	Minimum Width:	50’
	Minimum Depth from Street PL:	55’

5.4.2.6.3 Building Setbacks[1, 3]:

Front Setbacks

Living Area from Street:	10’
Porch / Balcony from Street:	5’
Building Separation	
Front to Front:	30’
Front to Side:	25’
Covered Porch to Covered Porch:	15’

Side Setbacks

Interior PL (Living Area/Porch/Balcony/Side of Garage):	4’
Living Area Adjacent to Street (Corner Lot):	10’
Building Separation (Side to Side):	8’

Rear Setbacks

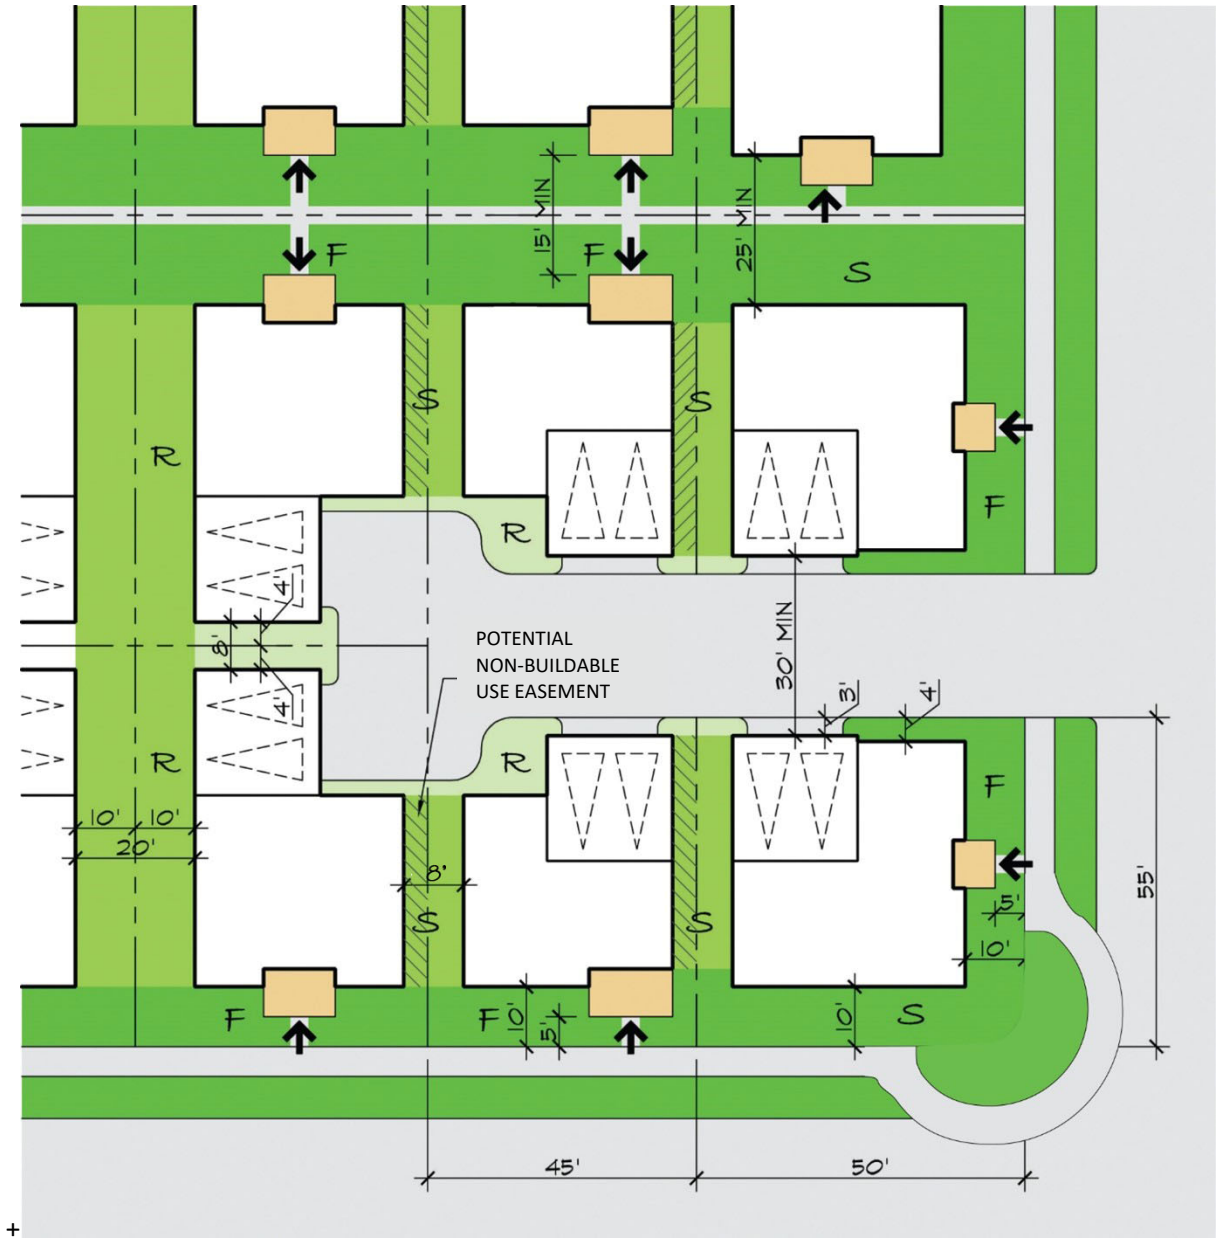
Interior PL:	10’
Building Separation (Rear to Rear):	20’
Building Separation (Rear to Side):	14’

Garage Setbacks

Front Loaded from Public or Private Street:	18’ (Garage door to back of sidewalk)
Side Load from Public or Private Street:	10’ (Side of garage to back of sidewalk)
Garage from Alley or Common Drive:	3’
Building Separation (Door to Door, Door to Living Area):	30’

5.4.2.6.4 Building Height[2]:

Primary Structure:	35’
Accessory Structure:	14’
Projections / Architectural Features:	3’ above primary structure, or 10% of the building height



Wall, Fence and Hedge Height

Front or Corner Side Yard:	3’
All other locations:	6’
Retaining Walls:	3’

5.4.2.6.5 Private Open Space:

The ground floor of each home shall have a minimum contiguous area of 150 sq. ft. with no dimension less than 10 feet in any direction. Refer to the Setbacks above.

1. All setbacks and building separations are minimums and shall be measured from the property line unless otherwise noted.
2. Building heights shown are maximum dimensions.
3. Building separations are to be measured between main walls.
4. Permanent structures or utility lines are not allowed with the potential use easements.

COURTYARD SFD

*Building footprints are conceptual. Actual floor plans may differ.

*Private lanes shall be enhanced with pavers, colored concrete or similar decorative material and approved by the Planning Director. Builders are encouraged to enhance driveways using decorative materials, or scored natural concrete.

*Pervious pavers may be used as a decorative feature of the courtyard paving to provide storm water infiltration.

5.4.2.7 Development Standards, Cluster Single Family Detached

For Common Lot or Single Lot Subdivisions, perimeter setbacks shall be measured from street right of way or property line. Minimum building separations shall apply for all interior conditions.

5.4.2.7.1 Lot Criteria:

Minimum Area:	2,000 SF
Maximum Lot Coverage:	65%
Maximum Units per Cluster:	8

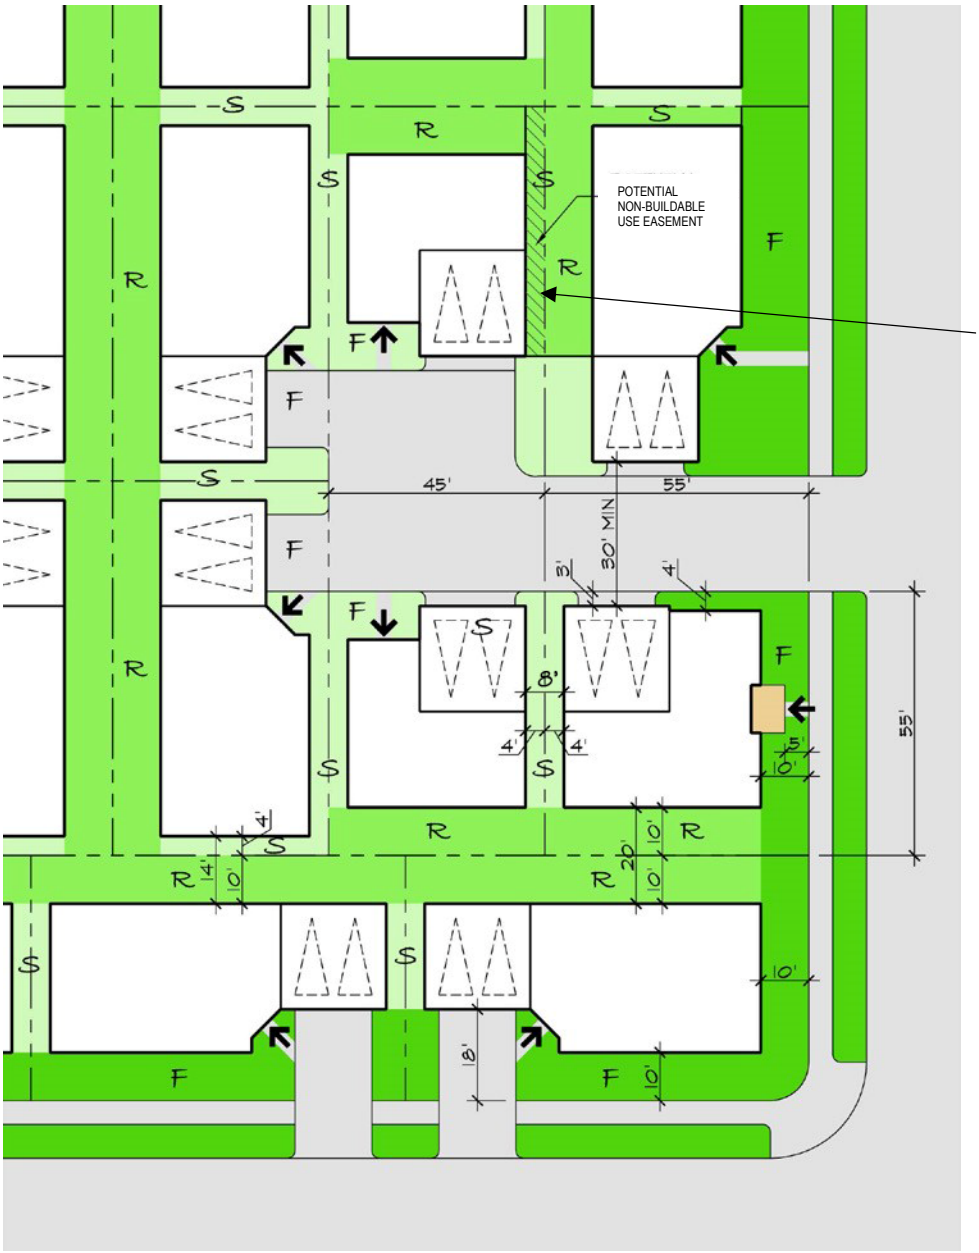
These standards shall also apply where the cluster homes are plotted with less than six (6) units.

5.4.2.7.2 Lot Dimensions:

Standard Lot:	Minimum Width:	42’
	Minimum Depth:	60’
Street Adjacent:	Minimum Width:	47’
	Minimum Depth from Street PL:	60’

5.4.2.7.3 Building Setbacks[1, 3]:

Front Setbacks	
Living Area from Street:	10’
Living Area from common drive aisle [5]	5’
Porch / Balcony from Street:	5’
Porch/Balcony from common drive aisle [5]	5’
Building Separation	
Front to Front:	40’ to living
Front to Side:	35’
Covered Porch to Covered Porch:	36’
Side Setbacks	
Interior PL (Living Area/Porch/Balcony/Side of Garage):	~~5’~~4’
Living Area Adjacent to Street (Corner Lot):	10’
Building Separation (Side to Side):	~~10’~~8’
Accessory Structure [4]	3’
Rear Setbacks	
Interior PL:	5’*
Building Separation (Rear to Rear):	10’
Building Separation (Rear to Side):	10’
Accessory Structure [4]	3’
Garage Setbacks	
Front Loaded from Public or Private Street:	18’ (Garage door to back of sidewalk)
Side Load from Public or Private Street:	10’ (Side of garage to back of sidewalk)
Garage from Alley or Common Drive:	18’ (50% driveways may be reduced to 5’)
Building Separation (Door to Door, Door to Living Area):	40’

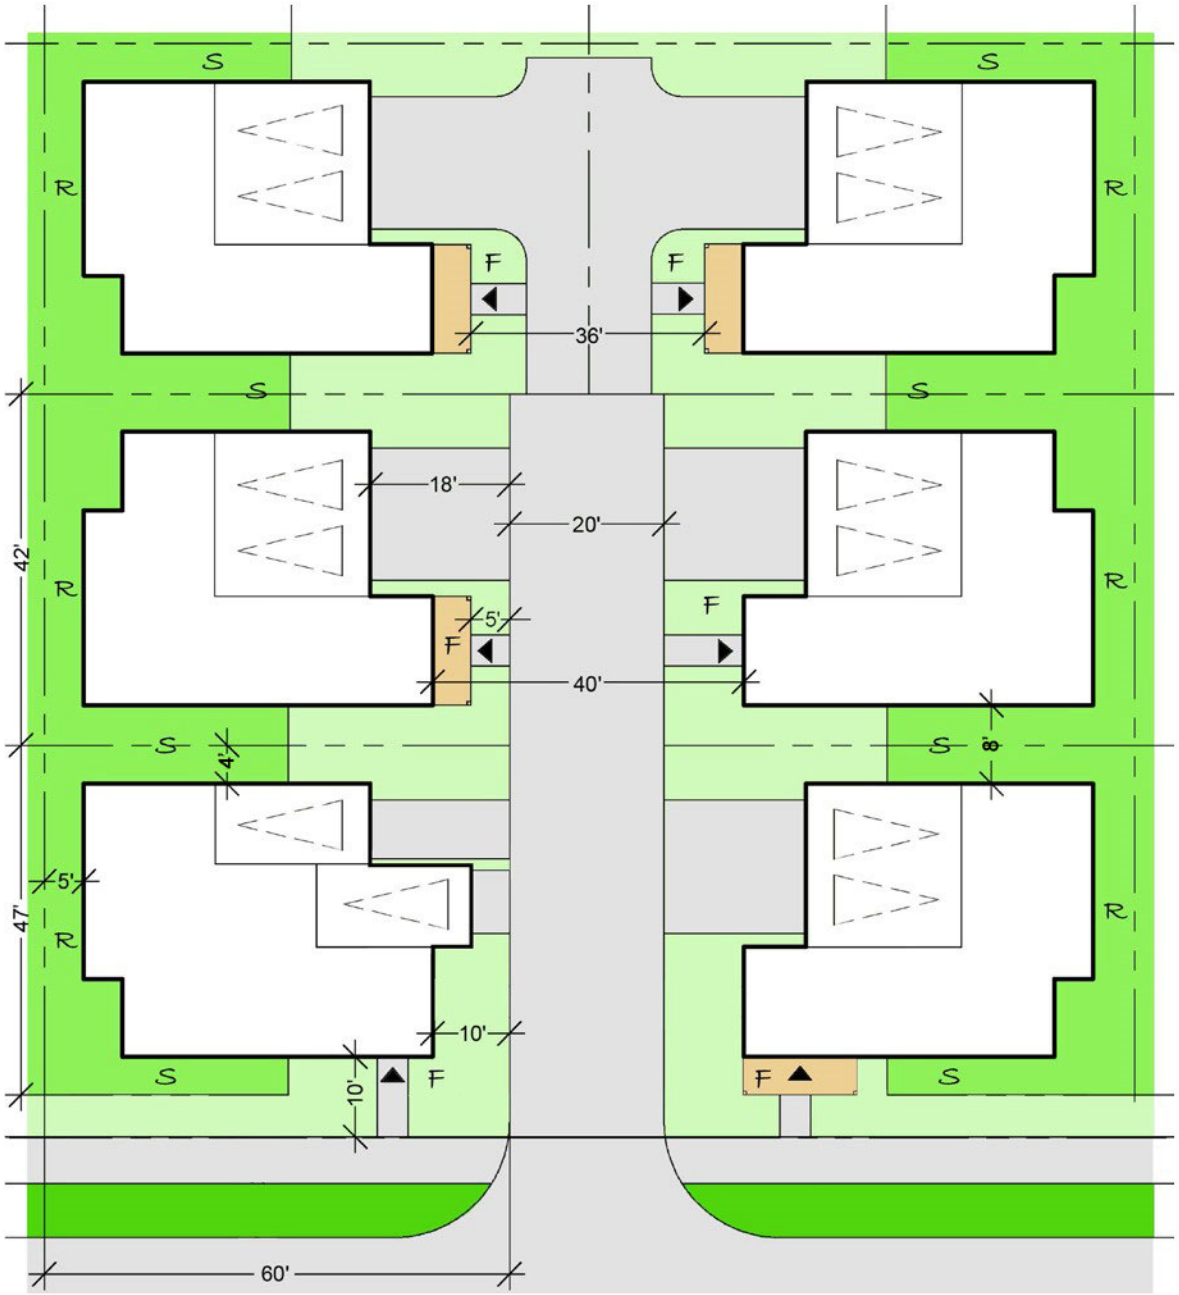


5.4.2.7.4 Building Height[2]:

Primary Structure:	35’
Accessory Structure:	14’
Projections / Architectural Features:	3’ above primary structure, or 10% of the building height
Wall, Fence and Hedge Height	
Front or Corner Side Yard:	3’
All other locations:	6’
Retaining Walls:	3’

5.4.2.7.5 Private Open Space:

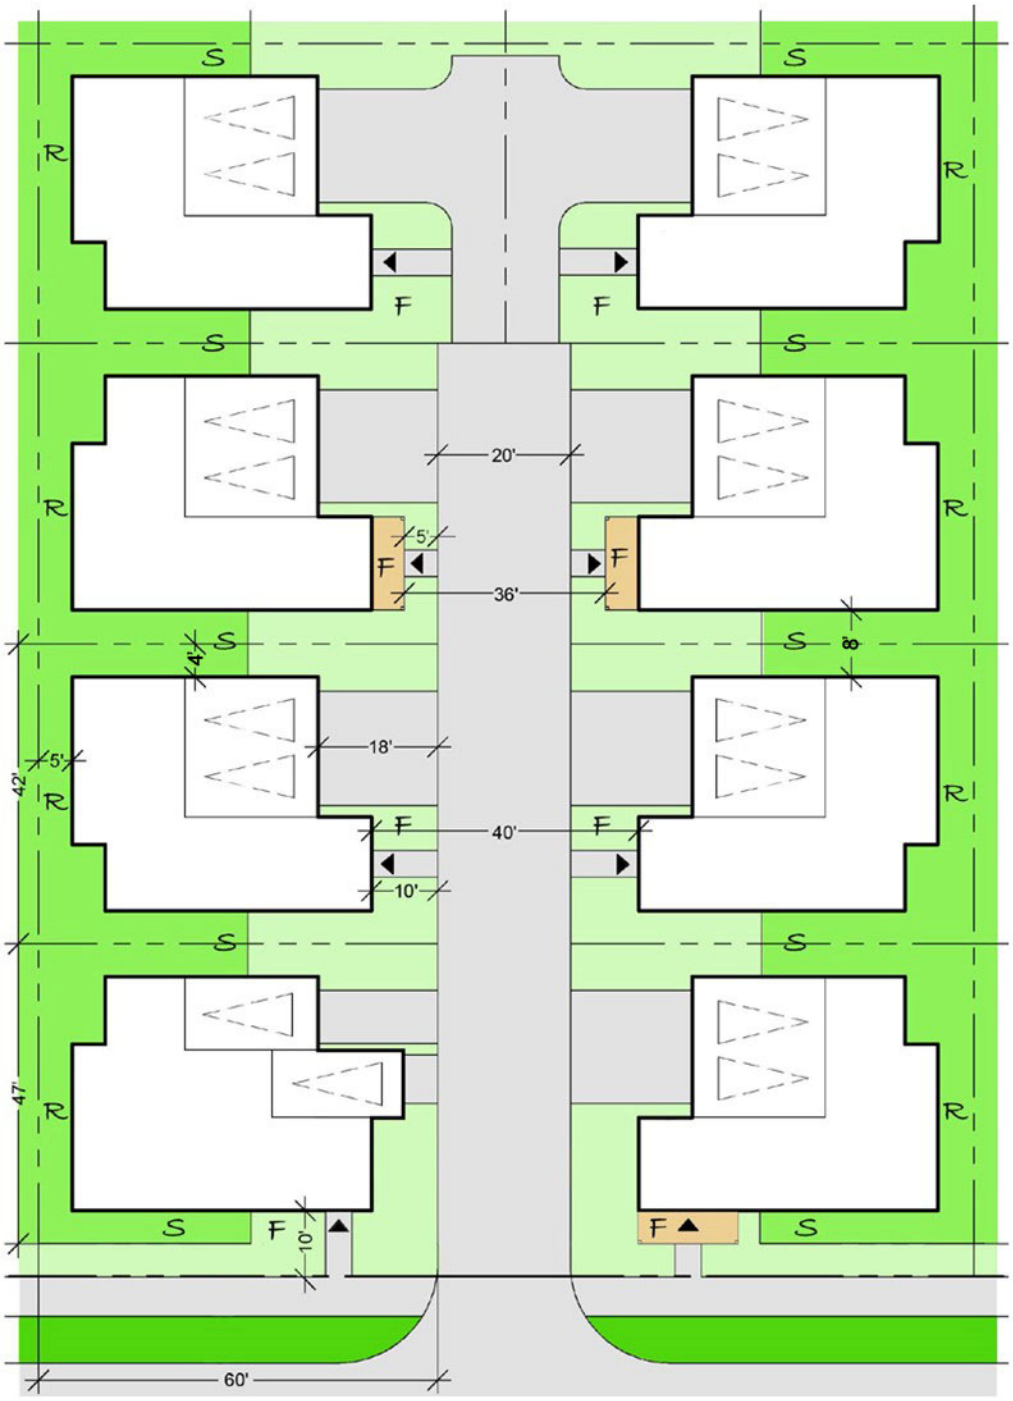
*The ground floor of each home shall have a minimum contiguous area of 150 sq. ft. with no dimension less than 10 feet in any direction. Refer to the Setbacks above.



1. All setbacks and building separations are minimums and shall be measured from the property line unless otherwise noted.
2. Building heights shown are maximum dimensions.
3. Building separations are to be measured between main walls.
4. Accessory structures shall maintain a 3 FT setback from property line. Permanent structures shall not be permitted within use easement area.
5. Common drive aisle is defined by project ingress/egress to each cluster pack and does not include the cluster pack drive aisle for garage access.
6. Permanent structures or utility lines are not allowed with the potential use easements.

CLUSTER SFD – Alt. 1

*Building footprints are conceptual. Actual floor plans may differ.



*Private lanes shall be enhanced with pavers, colored concrete or similar decorative material and approved by the Planning Director. Builders are encouraged to enhance driveways using decorative materials or scored natural concrete.

Living Area Adjacent to Street (Corner Lot):	10’
Porch/Balcony Adjacent to Street (Corner Lot):	5’
Building Separation (Side to Side):	8’
Front Door to Front Door:	25’

Rear Setbacks

Living Area, Second Story Deck, Balcony:	5’
Patio Cover:	5’

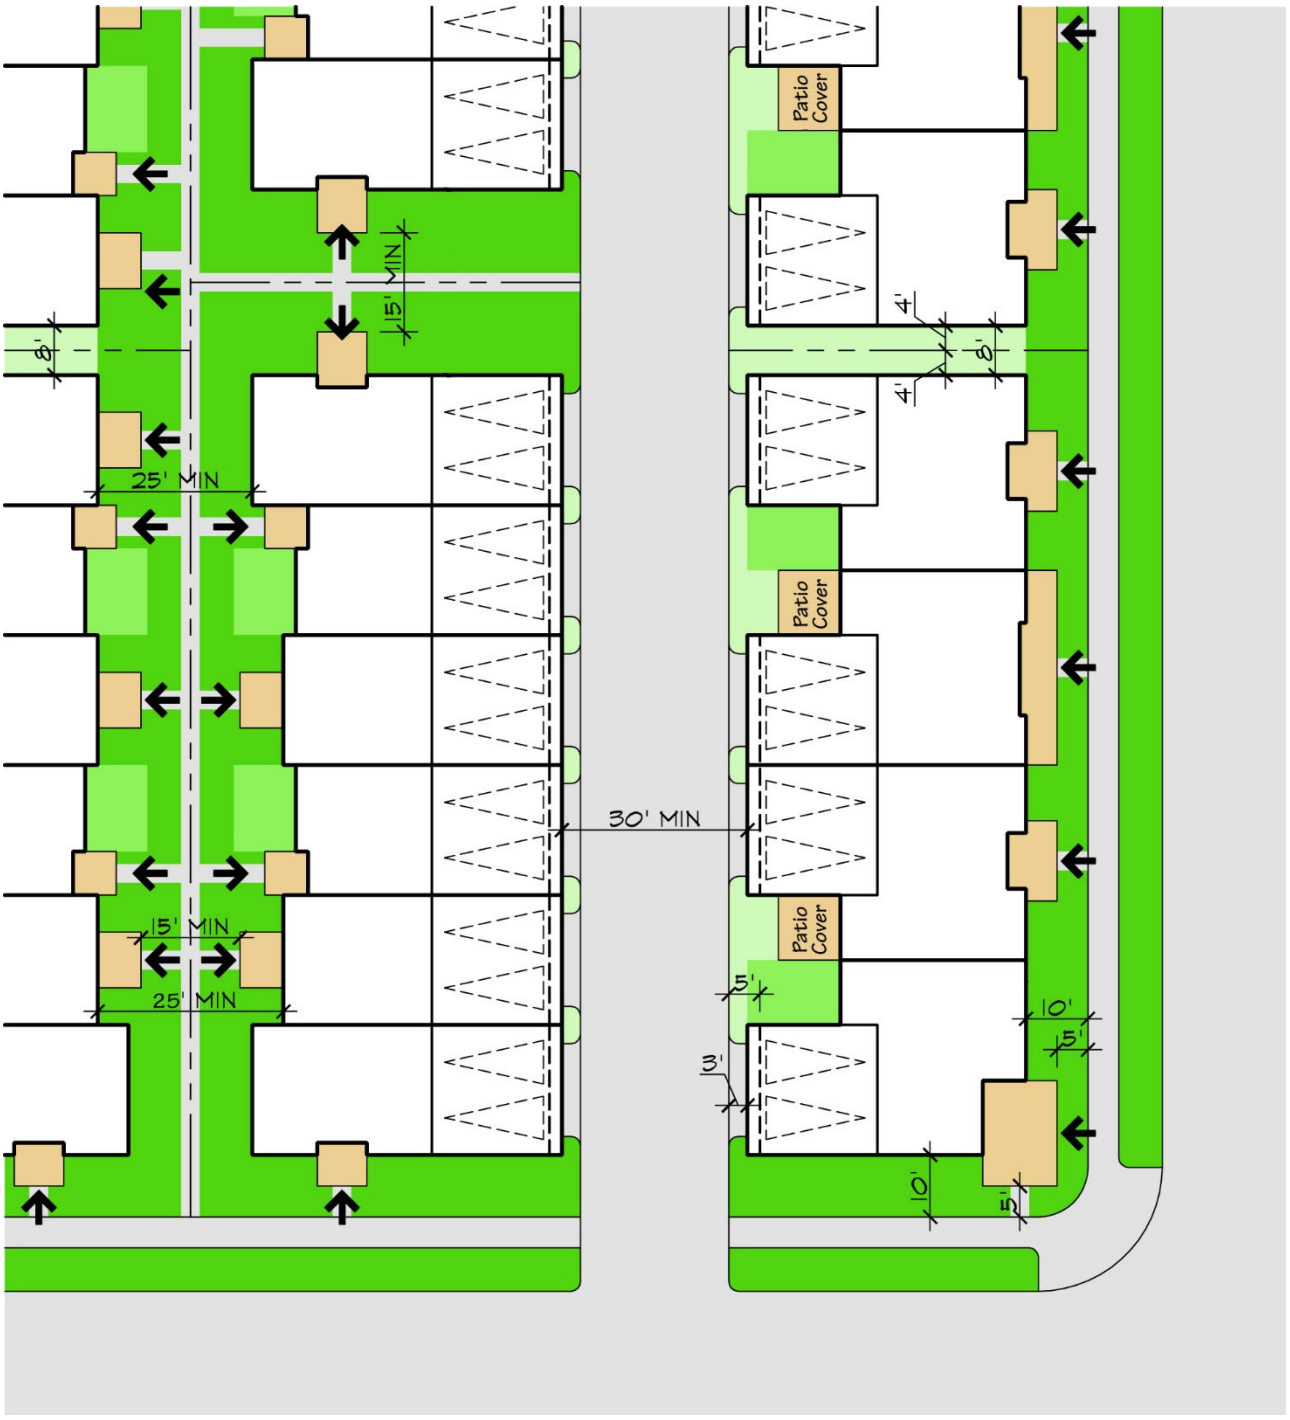
Garage Setbacks

Garage Door at Street (With Driveway):	18’ (Garage door to back of sidewalk)
Side of Garage at Street (No Driveway):	10’ (Side of garage to back of sidewalk)
Garage at Alley or Common Drive:	3’
Building Separation (Door to Door):	30’

5.4.2.~~9~~10.3 Building Height[2]:

Primary Structure:	35’
Accessory Structure:	14’
Projections / Architectural Features:	3’ above primary structure, or 10% of the building height

Wall, Fence and Hedge Height



Front or Corner Side Yard:	3’
All other locations:	6’
Retaining Walls:	3’

5.4.2.~~9~~10.4 Parking[4]: Refer to Section 5.4.1.12 for parking requirements.

5.4.2.~~9~~10.5 Private Open Space:

Each home shall have a minimum cumulative private open space area of 140 sq. ft. Upper floor decks and balconies may only be counted towards the private open space requirement when they have a minimum contiguous area of 35 sq. ft. and have no dimension less than 5 feet in any direction. Refer to the Setbacks above.

1. All setbacks and building separations are minimums and shall be measured from the property line unless otherwise noted.
2. Building heights shown are maximum dimensions.
3. Building separations are to be measured between main walls.
4. Lots within cul-de-sac, standard knuckles or modified configurations shall provide a minimum 35’ lot width at front property line and shall meet the minimum lot width established for the product type at the building setback. All minimum side and rear yard setbacks shall be maintained at all times.
5. Common drive aisle is defined by project ingress/egress and does not include the drive aisle for garage access.

ROW TOWN HOMES – Alt 2

*Building footprints are conceptual. Actual floor plans may differ.

5.4.2.~~10~~11 Development Standards, Courtyard Town Homes

5.4.2.~~10~~11.1 Lot Criteria:

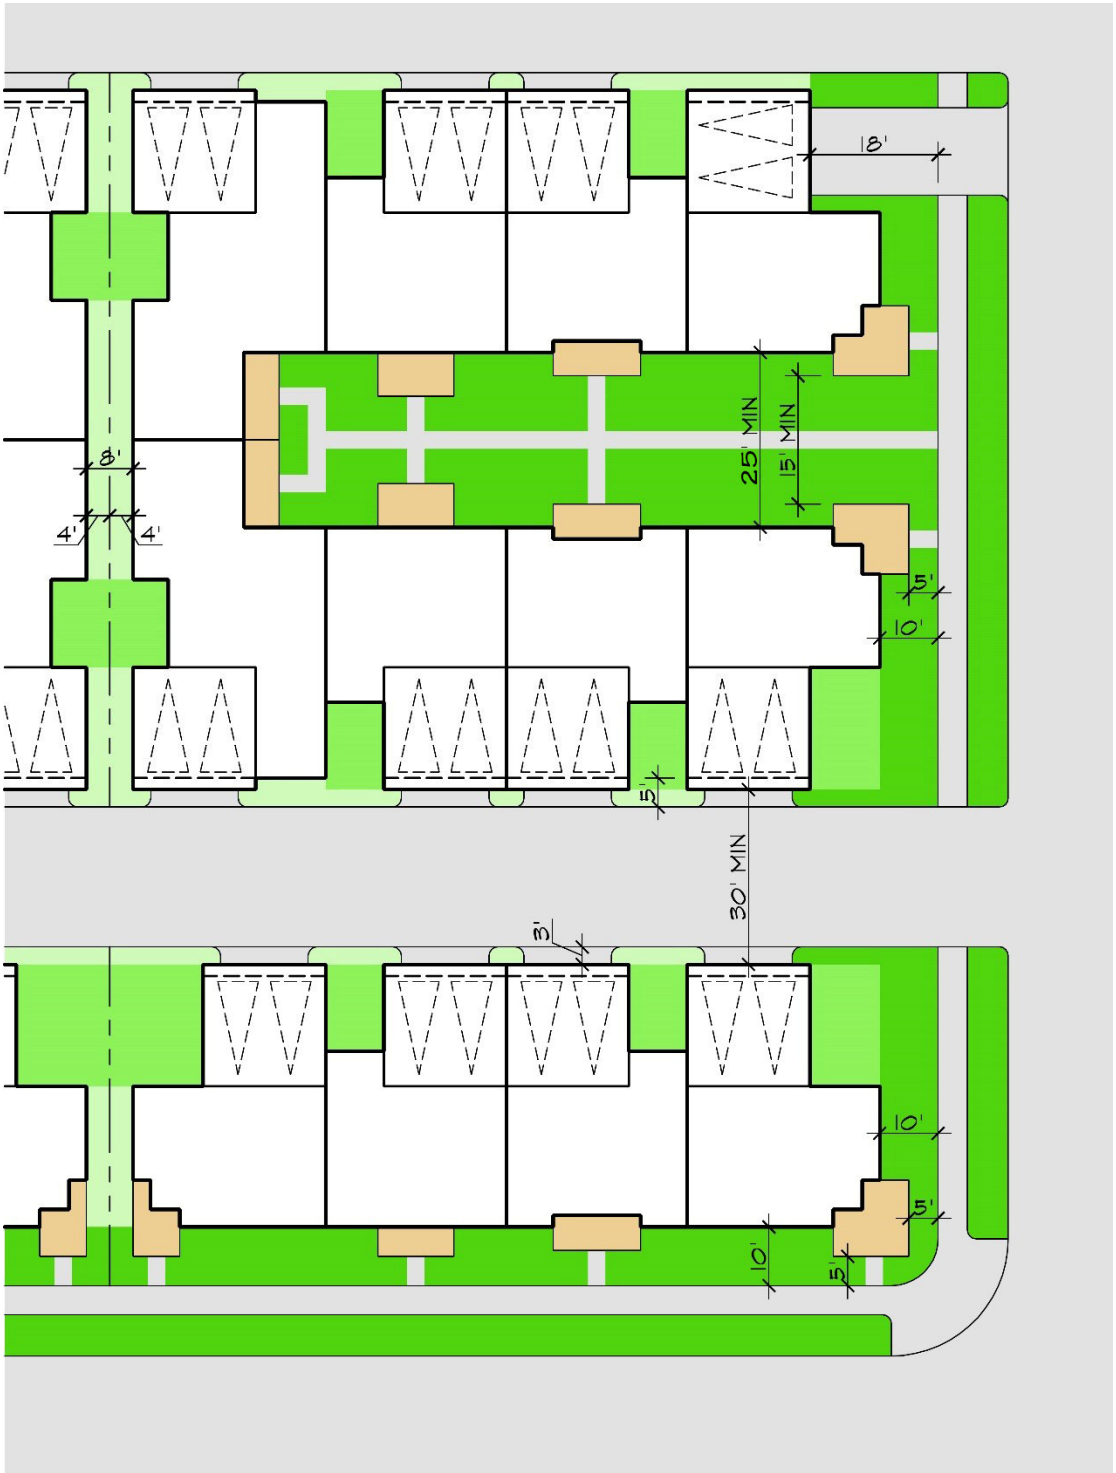
Minimum Area:	1,800 SF (per unit)
Maximum Lot Coverage:	60%
Maximum Units per Building:	16 (or as established by the approved Development Plan for Medium Density Residential uses)

5.4.2.~~10~~11.2 Building Setbacks[1, 3]:

Front Setbacks	
Living Area:	10’
Living Area from common drive aisle [5]	5’
Porch / Balcony:	5’
Porch / Balcony from common drive aisle [5]	5’
Building Separation (Greenbelt or Paseo Frontage)	
Front to Front:	25’
Front to Side:	25’
Covered Porch to Covered Porch:	15’
Side Setbacks	
Living Area	
Interior PL:	4’
Corner PL (Adjacent to Street):	10’
Porch/Balcony Adjacent to Street (Corner Lot):	5’
Building Separation (Side to Side):	8’
Rear Setbacks	
Living Area Rear Yard	10’
Living Area (from alley or common drive)	5’
Patio Cover:	5’
Garage Setbacks	
Garage Door at Street:	18’ (Garage door to back of sidewalk)
Side of Garage at Street:	10’ (Side of garage to back of sidewalk)
Garage at Alley or Common Drive:	3’
Building Separation	
Door to Door at Alley or Common Drive:	30’
Side to Side:	8’
Rear to Rear	15’

5.4.2.~~10~~11.3 Building Height[2]:

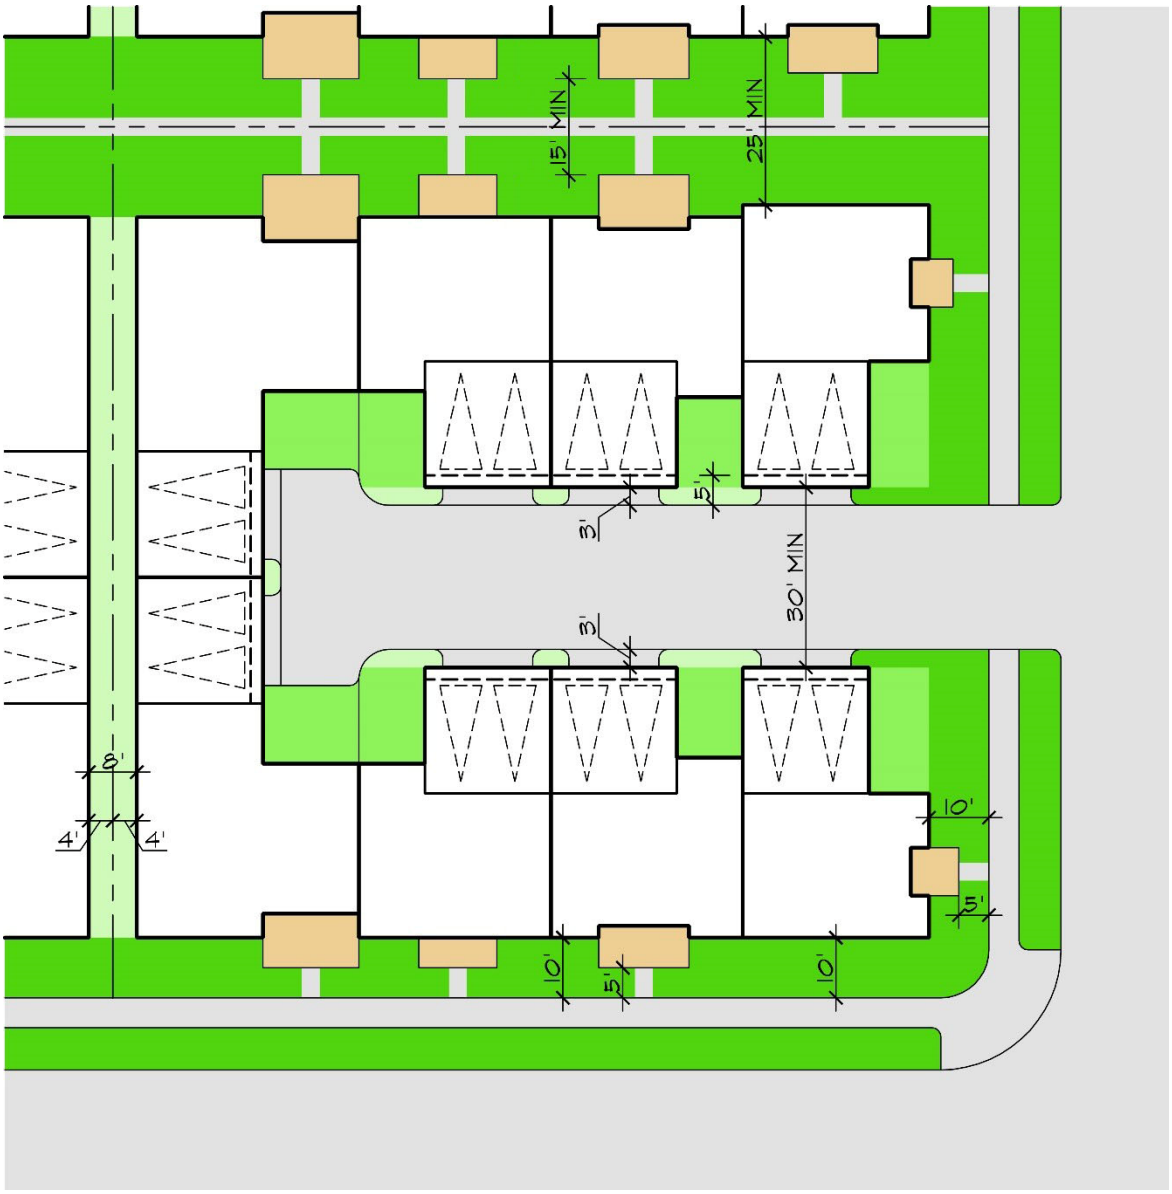
Primary Structure:	35’
Accessory Structure:	14’
Projections / Architectural Features:	3’ above primary structure, or 10% of the building height)



5.4.2.~~10~~11.4 Parking[4]:

Refer to Section 5.4.1.12 for parking requirements.

5.4.2.~~10~~11.5 Private Open Space:



Each home shall have a minimum cumulative private open space area of 140 sq. ft. Upper floor decks and balconies may only be counted towards the private open space requirement when they have a minimum contiguous area of 35 sq. ft. and have no dimension less than 5 feet in any direction. Refer to the Setbacks above.

1. All setbacks and building separations are minimums and shall be measured from the property line unless otherwise noted.
2. Building heights shown are maximum dimensions.
3. Building separations are to be measured between main walls.
4. Lots within cul-de-sac, standard knuckles or modified configurations shall provide a minimum 35’ lot width at front property line and shall meet the minimum lot width established for the product type at the building setback. All minimum side and rear yard setbacks shall be maintained at all times.
5. Common drive aisle is defined by project ingress/egress and does not include the courtyard drive aisle for garage access.

5.4.2.~~11~~12.1	**Lot Criteria**	
	Minimum Area:	1,400 SF (per unit)
	Maximum Lot Coverage:	60%
	Maximum Units per Building:	24
	(or as established by the approved Development Plan for High Density Residential uses)	
5.4.2.~~11~~12.2	**Building and Remote Parking Setbacks[1, 4]:**	
	~~Living Area~~Front:	10’
	Porch / Balcony:	5’
	Side:	10’
	Garage:	5’
	Garage Frontage onto Street:	Prohibited
	From Interior PL Adjacent to Detached Residential:	25’
	From SCE PL / Easements:	15’
	Building from Street:	20’
	Parking, Drive Isle & Driveway from Street:	10’
5.4.2.~~11~~12.3	**Setbacks at Alley, Common Drive, or Adjacent to Remote Parking[1]:**	
	Living Area:	5’
	Garage & Carport:	~~5’3~~5’
	Porch / Balcony:	3’
5.4.2.~~11~~12.4	**Building Separation[1, 3]:**	
	Front to Front:	~~30’~~25’
	Front to Side:	~~25’~~20’
	Front to Rear:	Prohibited
	Porch to Porch:	15’
	Side to Side:	15’
	Side to Porch:	15’
	Garages	
	Door to Door:	30’
	Side to Side (Including Remote Parking):	15’
5.4.2.~~11~~12.5	**Building Height[2]:**	
	Primary Structure:	~~35’45~~55’ / ~~3~~4-story
	Accessory Structure:	14’ / 1-story
	Projections / Architectural Features:	3’ above primary structure, or 10% of the building height
5.4.2.~~11~~12.6	**Parking[4]:**	
	Refer to Section 5.4.1.12 for parking requirements.	

1. All setbacks and building separations are minimums and shall be measured from the property line unless otherwise noted.
2. Building heights shown are maximum dimensions.
3. Building separations are to be measured between main walls.
4. Parking stalls perpendicular to the street shall be screened by landscaping, berms, or decorative walls that match the architectural style of the nearest development. Screening shall be a minimum height of 36” (to ensure concealment of vehicle grills).
5. Tuck Under Rental Townhomes provided for an improved mix of dwelling unit types do not need to conform to the Development Standards Section 5.4.2.11 for Courtyard Townhomes

5.4.2.~~11~~12.7 Private Open Space:

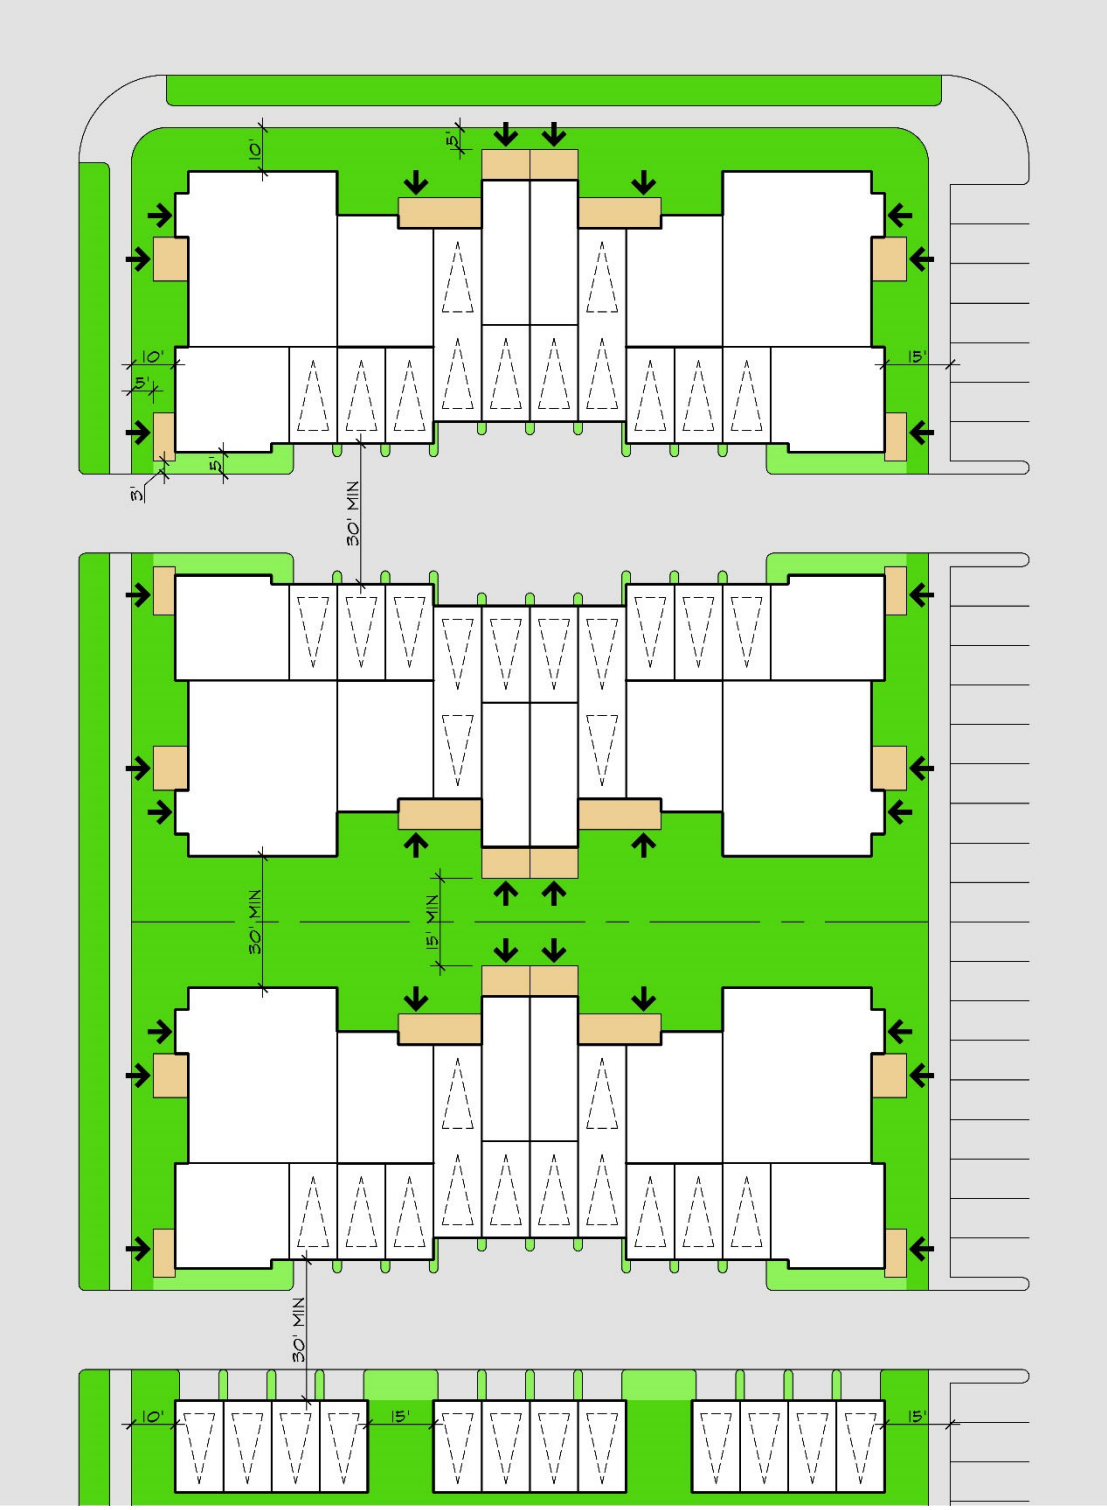
Ground floor units shall have a minimum cumulative private open space area of ~~150~~ 140 sq. ft. Upper floor decks and balconies may only be counted towards this private open space requirement when they have a minimum contiguous area of 40 sq. ft. and have no dimension less than 5 feet in any direction.

Upper floor units with no ground floor living area (i.e. carriage units and stacked flats) shall have a minimum contiguous area of 40 sq. ft. with no dimension less than 5 feet in any direction.

Stand-alone multi-family developments over 18 du/ac, shall have private outdoor living space with a minimum contiguous area of 40 sq. ft. for each unit, with no dimension less than 5 feet in any direction qualified by one of the following:

- Courtyard (front, rear or interior open to the sky)
- Front Porch
- 2nd story balcony (no encroachment into rear setback)
- Rooftop deck

5.4.2.~~11~~12.8 Common Open Space:

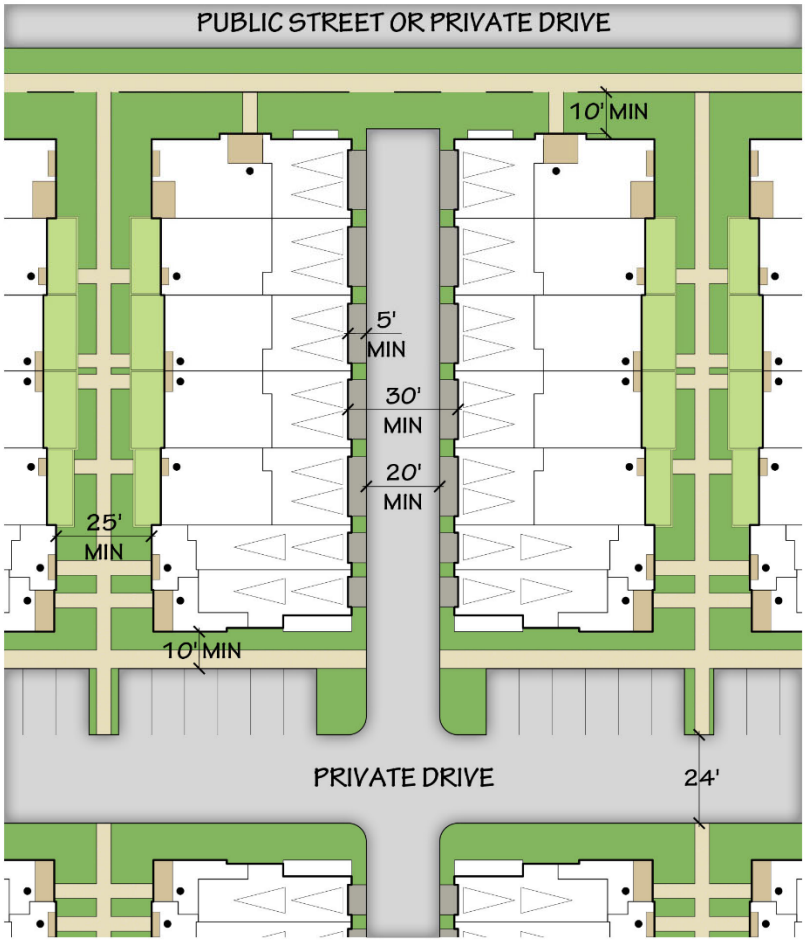


A minimum of 250 sq. ft. of common open space shall be provided per unit as follows:

Common open space shall require a minimum contiguous area of 300 sq. ft. with no dimension less than 15 feet in any direction. Hardscape courtyard and plaza areas shall require a minimum contiguous area of 400 sq. ft., with no dimension less than 20 feet in any direction, to qualify as common open space.

Common open space may include but is not limited to landscaping, plazas, picnic areas, pools and spas, court games, gyms, gardens, tot lots, paseos, trails or other recreational facilities/uses.

Common and private open spaces are to be permanently maintained in an orderly fashion.



Required common open space may not be satisfied by the utilization of parking areas, driveways, service areas, or unusable slopes (slopes greater than or equal to 3:1). Greenbelts, and on-site circulation improvements including bicycle and walking paths may be counted toward common open space requirements.

5.4.2.~~12~~13 Development Standards, Tuck Under Apartments/Condominiums

5.4.2.~~12~~13.1 Lot Criteria:

Maximum Lot Coverage:	60%
Maximum Units per Building:	24

(or as established by the approved Development Plan for High Density Residential uses)

5.4.2.~~12~~13.2 Lot Dimensions:

Minimum Project Area:	3.0 acres
Minimum Lot Width:	N/A
Minimum Lot Depth:	N/A

5.4.2.~~12~~13.3 Building and Remote Parking Setbacks[1, 4]:

From Ontario Ranch Road (30' neighborhood edge):	0' from neighborhood edge (30' from R.O.W.)
From Mill Creek (18' neighborhood edge):	10' from neighborhood edge (28' from R.O.W.)
From Interior Property Line adjacent to Detached Residential:	10' to bldg. 5' to remote parking/detached garage 0' to carport
From Haven (14' neighborhood edge):	0' from neighborhood edge (14' from R.O.W.)
From SCE Property Line/Easements:	0' to bldg. (5)
From Private or Local Street:	0' from neighborhood edge
Allowable Porch/Balcony/Architectural Projections:	5' maximum encroachment into setbacks
From Alley, Common Drive, or Adjacent to Remote Parking:	0'

5.4.2.~~12~~13.4 Building Separation[1, 3]:

Front to Front:	25'
Front to Side:	20'
Porch to Porch:	15'
Side to Side:	10'
Side to Porch:	10'

5.4.2.~~12~~13.5 Building Height[2]:

Primary Structure:	45' / 3-story
Accessory Structure:	1 story/ 14'
Projections/Architectural Features:	3' above Primary Structure

5.4.2.~~12~~13.6 Parking[4]:

Refer to Section 5.4.1.12 for parking requirements

1. All setbacks and building separations are minimums and shall be measured from the property line unless otherwise noted.
2. Building heights shown are maximum dimensions.
3. Building separations are to be measured between main walls.
4. Parking stalls perpendicular to the street shall be screened by landscaping, berms, or decorative walls that match the architectural style of the nearest development. Screening shall be a minimum height of 36" (to ensure concealment of vehicle grills).

5.4.2.~~12~~13.7 Private Open Space:

Ground floor units shall have a minimum cumulative private open space area of 75 sq. ft. Upper floor decks and balconies may only be counted towards this private open space requirement when they have a minimum contiguous area of 40 sq. ft. and have no dimension less than 5 feet in any direction.

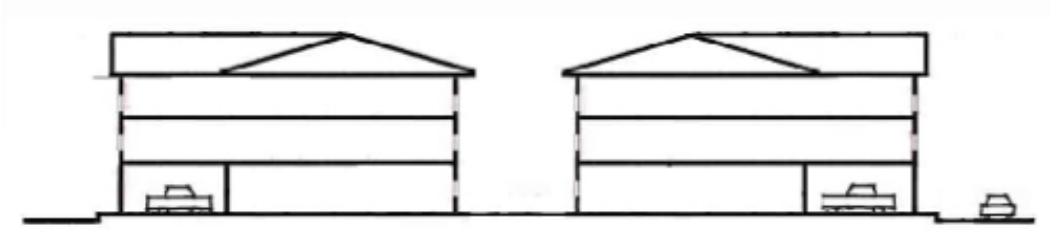
Upper floor units with no ground floor living area (i.e. carriage units and stacked flats) shall have a minimum contiguous area of 40 sq. ft. with no dimension less than 5 feet in any direction.

Stand-alone multi-family developments over 18 du/ac, shall have private outdoor living space with a minimum contiguous area of 40 sq. ft. for each unit, with no dimension less than 5 feet in any direction qualified by one of the following:

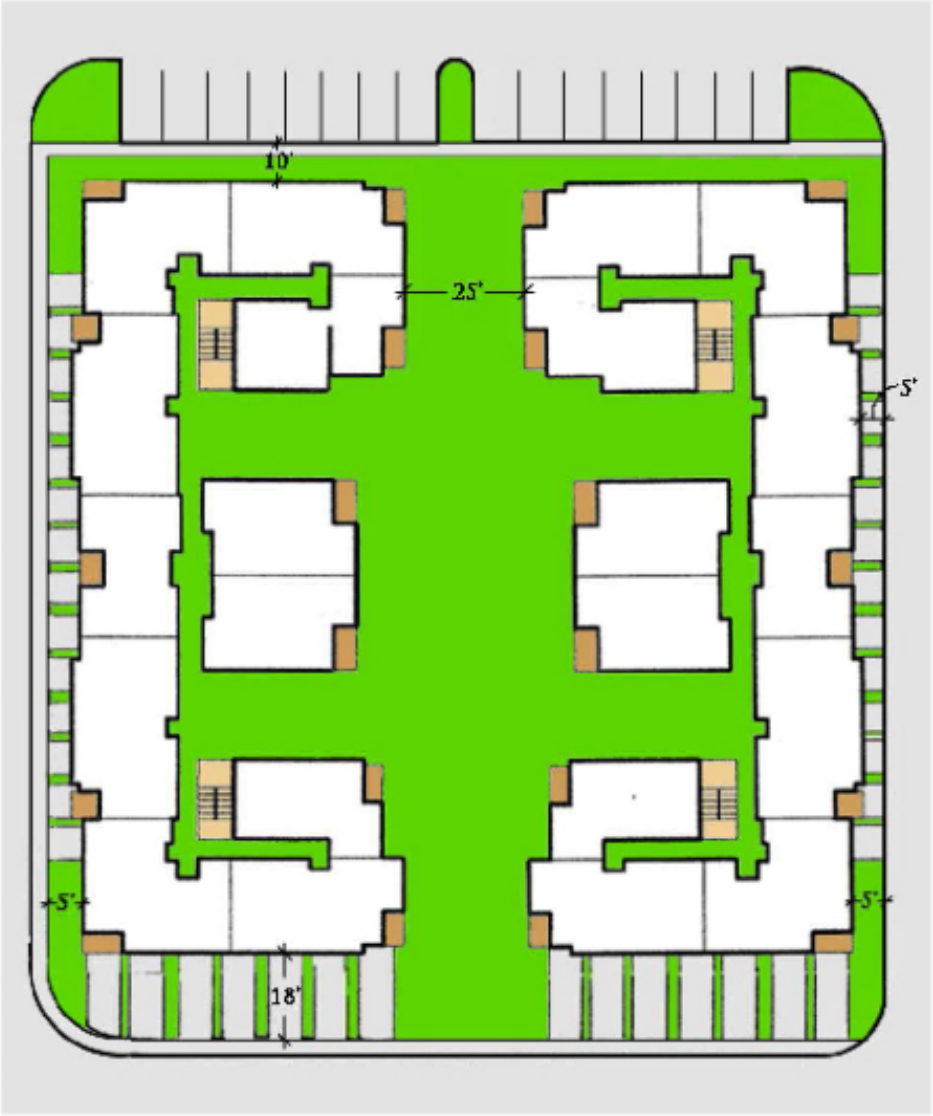
- Courtyard (front, rear or interior open to the sky)
- Front Porch
- 2nd story balcony (no encroachment into rear setback)
- Rooftop deck

Private open space may be provided in at least one third (1/3) of high-density residential units across the entire project to create architectural variety. When private open space is not provided, an equivalent amount of common open space will be provided outside. This space will not count toward public/park open space requirements.

5.4.2.~~12~~13.8 Common Open Space:



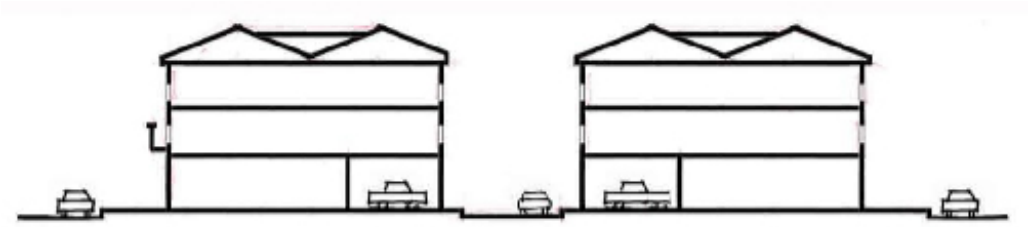
A minimum of 250 sq. ft. of common open space shall be provided per unit as follows:



Common open space shall require a minimum contiguous area of 300 sq. ft. with no dimension less than 15 feet in any direction. Hardscape courtyard and plaza areas shall require a minimum contiguous area of 400 sq. ft., with no dimension less than 20 feet in any direction, to qualify as common open space.

Common open space may include but is not limited to landscaping, plazas, picnic areas, pools and spas, court games, gyms, gardens, tot lots, paseos, trails or other recreational facilities/uses.

Common and private open spaces are to be permanently maintained in an orderly fashion.



Required common open space may not be satisfied by the utilization of parking areas, driveways, service areas, or unusable slopes (slopes greater than or equal to 3:1). Greenbelts, and on-site circulation improvements including bicycle and walking paths may be counted toward common open space requirements.

5.4.2.~~14~~15 Development Standards, Podium Apartments/Condominiums

5.4.2.~~14~~15.1 Lot Criteria:

Maximum Lot Coverage:	60%
Maximum Units per Building:	24

(or as established by the approved Development Plan for High Density Residential uses)

5.4.2.~~14~~15.2 Lot Dimensions:

Minimum Project Area:	3.0 acres
Minimum Lot Width:	N/A
Minimum Lot Depth:	N/A

5.4.2.~~14~~15.3 Building and Remote Parking Setbacks[1, 4]:

From Ontario Ranch Road (35' neighborhood edge):	15' from neighborhood edge (50' from R.O.W.)
From Mill Creek (18' neighborhood edge):	10' from neighborhood edge (28' from R.O.W.)
From Interior Property Line adjacent to Detached Residential:	25'
From Haven (14' neighborhood edge):	10' from neighborhood edge (24' from R.O.W.)
From SCE Property Line/Easements:	15'
From Private or Local Street:	10' from neighborhood edge
Allowable Porch/Balcony/Architectural Projections:	5' maximum encroachment into setbacks
From Alley, Common Drive, or Adjacent to Remote Parking:	10'

5.4.2.~~14~~15.4 Building Separation[1, 3]:

Front to Front:	30'
Front to Side:	25'
Porch to Porch:	15'
Side to Side:	15'
Side to Porch:	15'

5.4.2.~~14~~15.5 Building Height[2]:

Primary Structure:	65' / 5-story
Accessory Structure:	1 story/ 14'
Projections/Architectural Features:	3' above Primary Structure

5.4.2.~~14~~15.6 Parking[4]:

Refer to Section 5.4.1.12 for parking requirements

1. All setbacks and building separations are minimums and shall be measured from the property line unless otherwise noted.
2. Building heights shown are maximum dimensions.
3. Building separations are to be measured between main walls.
4. Parking stalls perpendicular to the street shall be screened by landscaping, berms, or decorative walls that match the architectural style of the nearest development. Screening shall be a minimum height of 36" (to ensure concealment of vehicle grills).

5.4.2.~~14~~15.7 Private Open Space:

Ground floor units shall have a minimum cumulative private open space area of 150 sq. ft. Upper floor decks and balconies may only be counted towards this private open space requirement when they have a minimum contiguous area of 40 sq. ft. and have no dimension less than 5 feet in any direction.

Upper floor units with no ground floor living area (i.e. carriage units and stacked flats) shall have a minimum contiguous area of 40 sq. ft. with no dimension less than 5 feet in any direction.

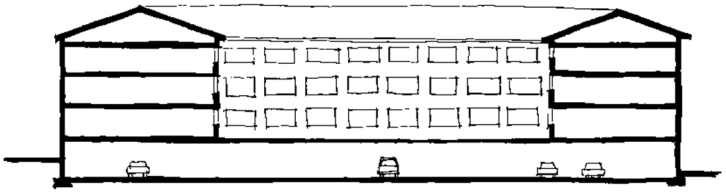
Multi-family projects over 18 du/ac, shall have private outdoor living space for a percentage of the units, with a minimum contiguous area of 40sq. ft. for each unit with no dimension less than 5 feet in any direction qualified by one of the following:

- Courtyard (front, rear or interior open to the sky)
- Front Porch
- 2nd story balcony (no encroachment into rear setback)
- Rooftop deck

Private open space shall be provided for at least one third (1/3) of multi-family residential units of the project. This also helps create architectural variety. When private open space is not provided, an equivalent amount of common open space will be provided outside. This space will not count toward public/park open space requirements.

5.4.2.~~14~~15.8 Common Open Space:

A minimum of 250 sq. ft. of common open space shall be provided per unit as follows:



Common open space shall require a minimum contiguous area of 300 sq. ft. with no dimension less than 15 feet in any direction. Hardscape courtyard and plaza areas shall require a minimum contiguous area of 400 sq. ft., with no dimension less than 20 feet in any direction, to qualify as common open space.

All required open space shall be useable hard or softscaping. Hardscaping, including community pools and courtyard/plaza space, may not comprise more than 60 percent of common open space requirements.

Common open space may include but is not limited to landscaping, plazas, picnic areas, pools and spas, court games, gyms, gardens, tot lots, paseos, trails or other recreational facilities/uses.

Common and private open spaces are to be permanently maintained in an orderly fashion.

Required common open space may not be satisfied by the utilization of parking areas, driveways, service areas, or unusable slopes (slopes greater than or equal to 3:1). Greenbelts, and on-site circulation improvements including bicycle and walking paths may be counted toward common open space requirements.

PODIUM APARTMENTS/CONDOMINIUMS

This page intentionally left blank.

5.5 REGIONAL COMMERCIAL/MIXED-USE DISTRICT DEVELOPMENT STANDARDS

Applies to Planning Areas ~~6, 7B, 8 and 9~~4A, 4B, 5B, 6B, 7, 8, 9, 10A and 10B

The purpose of the Regional Commercial/Mixed-Use District and complementary Stand Alone Residential Overlay is to foster dynamic neighborhoods. The cooperative development of the Regional Commercial District and Stand Alone Residential Overlay generates mixed-use neighborhoods with the potential to integrate diverse uses into a single land use concept, allowing for seamless relationships between compatible uses. This district, and corresponding overlay, provides for complementary regional commercial, mixed-use, and integrated residential opportunities. This place making district enables a main street environment with feasible commercial opportunities where pedestrian activity is as important to the streetscape as vehicular activity; a place where the town center atmosphere is a short walk for residents to enjoy the goods and services within the heart of the Regional Commercial District.

The City of Ontario Development Code defines Mixed-Use (MU).
The intent of the Regional Commercial/Mixed Use District is to go beyond this definition, to address Mixed-use as the horizontal or vertical mixing of mutually-supporting retail, service, office, hospitality, and high density residential uses connected to each other within a walkable environment.

Portions of Planning Area~~s 6, 7B, 8~~ 7 ~~and 9~~ may be developed as a Mixed-Use enclave~~s~~ that create~~s~~ a vital and attractive environment for residents, visitors, and employees in a higher-density active, urban environment.

5.5.1 APPLICABILITY

According to the City's TOP, the creation of mixed-use, commercial, and public spaces that emphasize pedestrian activity is a fundamental premise of the Land Use Plan. Development within Planning Areas ~~6, 7B, 8 and 9~~ 4A, 4B, 5B, 6B, 7, 8, 9, 10A and 10B, the regional commercial mixed-use area, will be designed to promote community activity. Major public places (square, plazas, promenades, etc.) will be incorporated to accommodate connectivity, events, and enhance pedestrian activity and connectivity.

Buildings will be sited in close relation to common sidewalks and public places, with parking strategically located to balance retailer and user needs with pedestrian connectivity.

The Land Use Plan provides an incentive for the development of mixed use projects by granting a story bonus and corresponding increase in the maximum floor area ratio from 0.5:1 for commercial/office uses to 2.0:1 for mixed use buildings. In order to secure the additional density bonus and height, the applicant shall follow the development standards and design guidelines associated with the Regional Commercial/Mixed Use District of this Specific Plan and incorporate traditional neighborhood principles.

Notwithstanding Development Code, the Regional Commercial/Mixed Use development regulations and design guidelines contained herein shall apply to new construction of commercial or mixed-use projects within the Regional Commercial/Mixed Use District. New construction of "commercial only" projects may utilize either the Regional Commercial/Mixed-Use regulations of this Specific Plan, or the commercial and professional office zoning designations contained within the Development Code, *Commercial and Professional Districts*. Declaration of zoning regulations utilized shall take place upon project application. Residential development within the Regional Commercial/Mixed-Use District zone may occur as part of a horizontal or vertical mixed use project, or as a "residential only" project within the Stand Alone Residential Overlay. See Figure 3-1, *Land Use Plan*. All residential development within the Regional Commercial/Mixed Use District or Stand Alone Residential Overlay shall be subject to the regulations, design guidelines, and development standards of this Specific Plan.

5.5.2 DEFINITION OF TERMS

The meaning of words, phrases, titles, and terms shall be the same as provided in the City of Ontario Development Code, unless specifically provided herein and those as identified within Section 1, Introduction of this document.

5.5.3 MIX OF USES

The Land Use Plan for the Regional Commercial/Mixed Use District provides standards and concepts for the development of high activity economic employment centers that are supported by residents of the area and the greater region. Specific uses shall be selected in response to market demands. Any permitted mix or combination of uses can be provided within a single structure, parcel, or leasehold in the Regional Commercial / Mixed Use District.

The Regional Commercial/Mixed Use District allows for a seamless transition between pure commercial and pure residential uses. Defined edges of adjacent uses are intentionally blurred to foster a dynamic urban environment. Transitions between private residential neighborhoods within the Stand Alone Residential Overlay and active

public/commercial spaces should portray the sense of a cohesive community without walls, fences, or sharp edges.

Though independent from the residential planning areas, Regional Commercial/Mixed Use District development should be abutted by, and integrated with, higher density housing and amenities to create a cohesive district.

The Regional Commercial/Mixed Use District allows for a wide spectrum of commercial uses (neighborhood to regional scale), retail commercial, office and professional, public and quasi-public, medium to very-high density residential, and hospitality uses. Commercial uses that are neighborhood serving in scale, and generate pedestrian activity are encouraged along interior pedestrian and vehicular circulation corridors.

Total commercial development (integrated, stand alone, or commercial only) within the Planning Areas 4B, 5B, 6B, 7, 8, and 10B~~6, 7B, 8 and 9~~, Regional Commercial/Mixed Use District may not exceed ~~1,039,200~~925,002 ~~-~~square feet, based on the trip budget maximum identified within the Ontario Ranch Transportation Implementation Plan.

Horizontal and vertical mixture of uses are permitted and encouraged within the Regional Commercial/Mixed Use District. Vertical mixed-uses are building configurations with commercial, office or service/community on the lower level, and office and/or residential on upper levels. While development of a mixed-use nature is preferred, and allowed by right, mixed-use development is not a required project component within the Regional Commercial/Mixed Use District.

Residential projects are allowed by right, as part of the Mixed-Use or Stand-Alone Residential Overlays, either in single family detached or multi-family configurations. The Stand Alone Residential Overlay allows for higher density residential neighborhoods in an urban setting.

Live/Work, within Stand-Alone Residential or Mixed-Use Overlays, is an appropriate transitional use between primarily commercial and primarily residential areas within the district, and allowed by right, anywhere in the District and Stand Alone Residential Overlay. But, Live/Work uses are not required.

5.5.4 DEVELOPMENT CAPACITY

Commercial, residential, and service uses in any configuration are limited by development and design standards of this section, and specific development capacities established by trip generation allotments. The Rich-Haven Land Use Plan allocates a total number of units to each residential Planning Area as indicated in Table 3-1, *Land Use Plan Summary*, included in Section 3 of this Specific Plan. Variations in the number, type, and intensity of residential dwelling units and commercial uses may occur at the time of final design of the planning area depending upon the project and development timing.

5.5.5 OPEN PARK AREA (COMMON OPEN SPACE)

Residential projects and residential uses within mixed-use buildings/projects shall comply with the following common open space requirements to fulfill open park area requirements in accordance with Section 4.6.2, Parks herein. In addition to common open space requirements in this section, residential units are required to have private open space. These standards are discussed, by product type, in Section 5.4.

The minimum amount of open park area required of any residential components within the Regional Commercial/Mixed Use District or Stand Alone Residential Overlay shall be determined by the following:

(Number of dwelling units) x (occupancy factor) x (0.002) = Area (acres) of park and/or public plaza to be permanently established. Occupancy factors to be applied at Tentative Tract Map submittal, for each development proposal.

This standard fulfills the 2-acres/1000 population open park area requirements for Rich-Haven. This open space requirement may be met within any mixed-use development containing residential components, attached or detached, or by satisfying the in-lieu park development impact fee as approved by the City. Fees will be paid to fulfill the balance of the City's parks requirement.

Mixed-Use development, commercial or residential uses, shall be organized around or in conjunction with common public facilities including parks, plazas, paseos, and other open space features. Open space and landscaping plans should incorporate spaces of varying size, locations, and uses to serve the full gamut of uses within the Regional Commercial/Mixed Use District.

5.5.5.1 MIXED-USE BUILDING COMPUTATION OF MAXIMUM AREA OF PARK TO BE DEDICATED

Open park area in residential components, except for residential paseos, shall require a minimum contiguous area of 200 sq. ft. with no dimension less than 10 feet in any direction. Hardscape plaza areas within Regional Commercial/Mixed-Use areas shall require a minimum contiguous area of 400 sq. ft., with no dimension less than 20 feet in any direction, to qualify as open park area.

Required open park area may not be satisfied by the utilization of parking areas, driveways, service areas, or unusable slopes (slopes greater than or equal to 3:1). Greenbelts, and on-site circulation improvements including bicycle and walking paths may be counted toward open park area requirements.

Common open space may include but is not limited to landscaping, plazas, picnic areas, pools and spas, court games, gyms, gardens, tot lots, paseos, and trails.

5.5.6 DESIGN

All new development in the Regional Commercial/Mixed Use District is subject to the architectural and design criteria in the Design Guidelines for Mixed-Use Development.

5.5.7 COMMERCIAL COMPONENT

This section sets forth the permitted use regulations for commercial uses, as stand-alone buildings or as part of a mixed-use building/development within Planning Areas 4B, 5B, 6B, 7, 8, and 10B~~6, 7B, 8 and 9~~ of the Rich-Haven Specific Plan. ~~-~~The primary use of commercial areas within Rich-Haven can be either regional or neighborhood commercial services. Permitted uses for Regional Commercial and Mixed Use development within the Mixed Use District are shown in the table below.

Should the regulations contained herein differ from the regulations of the City of Ontario Development Code, the regulations of the Specific Plan shall take precedence. Where the Rich-Haven Specific Plan is silent, City Code shall apply.

5.5.7.1 PERMITTED USES

All the following uses are permitted as defined in the City of Ontario Development Code. The zoning code is structured to allow permitted uses to occur as accessory uses or as permitted use. Therefore, a department store that contains a super market and pharmacy would be permitted, whether in the same building or as individual buildings. As such, permitted commercial uses within the Regional Commercial/Mixed-Use District land use shall be consistent with those uses defined by the City of Ontario Development Code.

Table Legend: X = Permitted, -- = Not Permitted

PERMITTED USES	Regional Commercial	Mixed Use
Antique shop	X	X
Appliance store	X	--
Art supply store	X	X
Automotive minor repair, as ancillary use only (i.e. brakes, tires, electrical)	X	--
Automotive Parts/Supply	X	--
Bakery retail	X	X
Banks/Credit unions	X	X
Barber/beauty shop	X	X
Beauty supply store	X	X
Book store	X	X
Business management	X	X

PERMITTED USES	Regional Commercial	Mixed Use
Camera supply store	X	X
Catering establishment	X	X
Clothing and accessory store	X	X
Coffee House/Café	X	X
Commercial sports facilities such as batting cages, indoor golf, etc.	X	--
Computer and home electronics retail	X	X
Computer, electronics home repair	X	X
Cutlery	X	X
Dance hall/Studio hall	X	X
Delicatessen/cafeteria	X	X
Department Store	X	--
Discount/Variety store	X	--
Dry Cleaners (commercial off-site cleaning operations only)	X	X
Dry Cleaners (Commercial)	X	X
Family entertainment centers	X	X
Florist shop	X	X
Furniture sales	X	
General merchandise/retail store	X	X
General offices for: advertising agency, economic consultant, insurance companies, escrow companies, interior decorator, real estate, public utilities, personnel agency, management consultant, collection agency	X	X
Government offices	X	X
Garden Supply/Hardware store	X	X
Health Clubs	X	X
Health/Specialty food store	X	X
Hobby supply store	X	--
Home appliance store	X	X
Hospital	X	X
Ice cream parlor	X	X
Ice skating rinks/in-line or roller hockey rinks	X	--
Jewelry store	X	X
Jewelry, watch and clock repair	X	X
Locksmith/key shop	X	X
Luggage and leather goods	X	X
Medical Clinic/Healthcare Center/ Emergency care facility	X	--
Movies theatres	X	--
Music and Video stores	X	X
Nursery school or child care center	X	X
Office supplies and equipment	X	X
Other financial services	X	X
Personal service shops	X	X

PERMITTED USES	Regional Commercial	Mixed Use
Pet and pet supply stores	X	--
Photocopy services	X	X
Photography studio	--	X
Plant nurseries (retail)	X	--
Police Station	X	X
Fire Station	X	--
Private clubs, lodge halls, union halls	X	X
Private/non-profit cultural facilities such as, but not limited to, art galleries, music halls, museums	X	X
Produce stands	X	--
Professional offices for: architect, accountant, attorney, chiropractor, contractor, dentist, doctor, engineer, optometrist, land planner, and other similar professions	X	X
Recreational equipment sales	X	X
Residential Units (apartments and for sale units)		X
Restaurant, family sit down full service, specialty and fast food refer to Section 5.5.8.8 of this chapter	X	X
Shoe store, repair	X	X
Sporting goods store	X	X
Sports related research facility	X	X
Stationary & gift shops	X	X
Super Market	X	--
Travel agencies	X	X
Warehouse/Club store	X	--

PERMITTED USES SUBJECT TO A CONDITIONAL USE PERMIT	Regional Commercial	Mixed Use
Banks, and Credit unions with drive-thru in accordance with the City of Ontario Development Code and Section 5.5.8.5 herein	X	--
Billiard parlor/Pool hall	X	--
Bowling alleys	X	--
Car wash-full service	X	--
Car wash-self-service as an ancillary use	X	--
Drug store/pharmacy with drive-thru in accordance with the City Development Code and Section 5.5.8.8 herein	X	--
Gas station in accordance the City Development Code	X	--
Hotels	X	X
Kiosks/carts	X	--

PERMITTED USES SUBJECT TO A CONDITIONAL USE PERMIT	Regional Commercial	Mixed Use
Laundromat (coin operated)	X	X
Liquor store	X	X
Live performance facility, night club	X	X
Live/Work, subject to the provisions of Section 5.6, herein	--	X
On-site alcoholic beverage sales establishment including bars, taverns, cocktail lounges (when not an integral part of a restaurant)	X	X
Places of worship including but not limited to churches, temples, mosques or synagogues	X	X
Public utilities	X	X
Schools, Colleges, Universities, Professional Schools	X	X
Self Storage[2]	X	--
Swim club	X	--
Helistop/Heliport/Helipad[1]	X	X
Tennis club	X	--
Video Arcade	X	X
Virtual-Reality facilities	X	X
Wireless Facilities	X	X

ACCESSORY USES AND STRUCTURES	
Accessory uses and structures are permitted when customarily associated with and subordinate to a permitted use on the same site and would include:	
a. Enclosed, screened outdoor storage	
b. Maintenance facilities and structures	
c. Satellite Dishes (In compliance with the City of Ontario Development Code.)	

TEMPORARY USES AND INTERIM USE
Temporary uses are subject to the City of Ontario Development Code and include the following:
a. Amusement (i.e. circuses, carnivals etc.)
b. Christmas Tree, Pumpkin, and similar lots
c. Outdoor displays
d. Parking lot sales
e. Street/Craft fairs and Farmer Markets
f. Temporary Structures
g. Agricultural Operations

UNLISTED USES
Those uses not specifically listed are subject to a determination of use by the Planning Director as either permitted, permitted subject to a conditional use permit or prohibited consistent with the purpose of the land designation of this District and the Specific Plan. Decisions of the Director are appeal able to the Planning Commission.

1. The Planning Commission shall be the approving authority for any Helistop/Heliport/Helipad use. California State and FAA approvals are also required prior to operating the facility.
2. Only within Planning Area 5B, Floor Area Ratio limits (FAR) limits will not apply to Self-Storage and shall follow the City's development code standards.

5.5.8 REGIONAL COMMERCIAL, AND COMMERCIAL USES WITHIN MIXED USE DEVELOPMENT STANDARDS

The following standards provide the lot development criteria for commercial uses within Planning Areas 4B, 5B, 6B, 7, 8, and 10B~~6, 7B, 8 and 9~~. Refer also to General Standards in Section 5.3.

Minimum Lot Size/Area: Minimum lot size shall be large enough to accommodate the proposed use, meet all Development Standards, and cumulatively meet commercial thresholds as specified within the Specific Plan.

Floor Area Ratio (Calculated based on gross site acreage)	
Minimum Retail/Office	0.2:1
Maximum Retail/Office	0.5:1
Minimum Landscape Coverage	15%, all setback from right-of-way areas shall be landscaped.
Building Setbacks (minimum)	
From Hamner Avenue Right-Of-Way	35 feet[4] [5]
From Ontario Ranch Road Right-Of-Way	35 feet[4] [5]
From Mill Creek Avenue Right-Of-Way	18 feet[4]
From Private or Local Street	15 feet[2]
From Interior Property Line Adjacent to Residential	0 feet
(Stand Alone Residential) Overlay District	25 feet
From detached residential on adjacent property	25 feet
From SCE Property Line/Easements	10 feet
Building to Building	0 feet if attached; free standing buildings shall maintain a setback of 2/3 the height of the building, or 25', whichever is less.
Allowable Porch/Balcony Encroachment into Setback	5 feet
Parking Setbacks[3] (minimum)	
From Hamner Avenue Right-Of-Way	35 feet
From Ontario Ranch Road Right-Of-Way	35 feet
From Mill Creek Avenue Right-Of-Way	18 feet
From Private or Local Street	10 feet
From detached residential on adjacent property	5 feet
From SCE Property Line/Easements	0 feet
Building Height (Maximum)	
Single Use Structure	75 feet
Architectural Projections (including towers, focal elements, cupolas, etc.)	85 feet

Porte-cocheres	35 feet

(1) Per the City of Ontario Development Code. Commercial parking standards still apply.
(2) Refer to Section 7, Landscape Design Guidelines for further setback/design requirements.
(3) Parking stalls perpendicular to street shall be screened by landscaping, berms, or decorative walls that match architectural style of nearest development. Screening shall mature to a minimum height of 36" (to screen car grilles)
(4) Buildings shall be set back to the Neighborhood Edge or to the given setback from R.O.W., whichever is more restrictive. Where a Neighborhood Edge condition does not exist, setbacks from R.O.W. shall govern.
(5) One and two-story buildings may encroach 10 feet and drive-thru lanes may encroach up to 12 feet into the neighborhood edge subject to Planning Department review and approval.

5.5.8.1 Circulation

Serving as a commercial retail destination with neighborhood elements, Rich-Haven Specific Plan shall have street frontage monumentation announcing the major entrance to the development from Ontario Ranch Road. Within Rich-Haven Specific Plan major vehicular access to commercial elements and residential areas shall be clearly designated and intuitive, supplemented with special paving, landscaping and signage. Intersection nodes, where both vehicular and primary pedestrian activities occur, may feature enhanced paving to signify the mix of these activities. Parking should be oriented toward specific tenants and away from the street, with clearly marked pedestrian pathways to building entrances.

A strong pedestrian connection should be provided between the commercial area and the residential neighborhoods ~~within Planning Areas 6, 7, 8 and 9,~~ to enhance the walk-ability of the development.

5.5.8.2 Parking Standards

The following standards apply for required off-street parking of stand-alone commercial uses based on gross interior floor area within the Regional Commercial/Mixed-Use District:

Restaurant	1 per 100 sq. ft.
Fast Food drive-thru	1 per 75 sq. ft.
Retail	1 per 250 sq. ft.
Banking	1 per 250 sq. ft.
Medical	1 per 250 sq. ft.
Office	1 per 250 sq. ft.
Day Care	1 per 500 sq. ft.

All other uses not identified in the table shall conform to The City of Ontario Development Code.

Speed humps or other devices may be used to control vehicular traffic speeds in and near pedestrian zones. Double loaded parking aisles may be either 90-degree or angled. Parking drive aisles shall be a minimum of 25 feet for 90-degree or 2-way angled parking. Drive aisle may be reduced to 20 feet wide for

one-way angled parking. A dashed line along main travel routes is recommended to provide a street appearance. Walkways within the parking fields are required to have scored concrete, stamped concrete or paver treatment to integrate pedestrian paths of travel.

Standard parking stalls shall be no less than 9 feet wide by 18 feet deep.

Refer to Mixed-Use/Commercial Landscape Design Guidelines, section 7.8.

5.5.8.2.1 Loading

All large commercial uses, except medical, require one loading space unless otherwise noted. Refer to Loading and Service Design, of the Regional Commercial/Mixed Use District Design Guidelines for further loading requirements. Appropriate queuing, six to eight car stacking, for drive-thru banks and pharmacies shall be provided.

On-street loading spaces shall have appropriate loading, time/day signage for the space and shall be in addition to required parking for the mixed-use building/tenant.

5.5.8.2.2 Shared Parking Programs

Where opportunities exist for shared parking between uses with staggered peak parking demands, owners and developers should make every possible effort to take advantage of this opportunity to reduce total number of parking spaces within each site or parcel. The intent of a shared parking program is to reduce land devoted to parking, thereby providing for open spaces, walkways or other amenities. The parking standards may be reduced, up to a 40% reduction, based on a shared parking reduction study as outlined within the Specific Plan.

5.5.8.2.3 SCE Easement Parking

Surface Parking is permitted within SCE easements subject to approval from utility provider. This surface parking may not be included towards meeting minimum resident, guest or commercial parking requirements.

5.5.8.3 Pedestrian Orientation and Connectivity

Fostering pedestrian activity along interior circulation corridors is critical to the interactive, urban nature of the Regional Commercial/Mixed Use District. Interior circulation corridors, with commercial and mixed-use frontages shall have appropriate planting and paving features to accommodate pedestrian activity.

Shaded courtyards or plazas are encouraged to be incorporated into building layout and design to provide comfortable pedestrian spaces. Such courtyards may feature elements that enhance the pedestrian experience such as fountains, trellises, umbrellas, shade trees, comfortable tables, chairs and

benches, kiosks, etc. Please refer to Section 7.8, Mixed-Use/ Commercial Landscape Design Guidelines.

5.5.8.4 Patio Dining

Outdoor seating, in conjunction with business, is encouraged to enliven the street scene along commercial edges. Patio dining areas may be either connected or separated from building face. If separated, the space between seating area and building face must be a minimum of 8 feet to allow pedestrian traffic. In all cases, the seating area must have an internal minimum dimension of 5' clear. There is a maximum 20-foot encroachment onto park/paseo or urban edge/setback areas. Along Ontario Ranch Road, patio dining may encroach a maximum of 10 feet. Patio areas may be enclosed by the tenant by open rail compatible with the architecture of the building, hedges or other suitable separation. Please also refer to Section 6.5.4.1, Patio Dining.

5.5.8.5 Drive-thru Facilities

A drive-through facility shall be operated only as (a) part of a restaurant which also has an indoor dining area, (b) a banking facility or (c) a drug Store, and in such locations provided for such uses within the Regional Commercial/Mixed-Use District, subject to satisfying the requirements listed below.

All drive-through facilities shall be subject to the following performance standards:

a. Separation from Sensitive Land Uses

1. A drive-through facility shall be separated from any single-family residential development or single-family residential district by no less than 300 feet. A drive-through facility within a Regional Commercial/Mixed Use District shall be separated from any "stand alone" multi-family building by no less than 150 feet. This standard may be modified, particularly for non-restaurant drive-through uses if mitigation measures satisfactory to the City are presented in the overall design program.

2. The drive-through facility shall be architecturally treated with service and delivery "back of house" areas visually screened from residential development with a reverse corner design in addition to a wall, landscaping, or other screening features, or by other natural or constructed barriers, such as other commercial or mixed-use development.

b. Minimum Site or Part of Center or Development Complex

A restaurant with drive-through facilities shall have a minimum one/half acre land area (legal lot or tax parcel) or shall be part of a commercial center or larger development complex of at least one acre.

c. Setbacks

Buildings shall orient toward the street. The building shall maintain a 15 foot landscaped setback from the property line. Design elements, such as trellises, may encroach into the setback when well integrated with the landscape. Landscaped berms shall screen the parking lot and drive through aisle.

All structures, parking areas, drive-through stacking and exit lanes, intercom system, trash enclosure, etc., shall be set back a minimum of 20 feet from any property line, or if part of a commercial center or larger development complex, 20 feet or more from any perimeter property line of the center or complex.

Site design shall minimize pedestrian/vehicle conflicts by creating opportunities for courtyards, plazas, outdoor dining, and landscaped pathways that promote safe and convenient pedestrian movement.

d. Aesthetics

All structures, signs and related facilities shall be subject to architectural design criteria established for this Specific Plan, and subject to design review by the City Planning Department to ensure the integrity of the overall design program in the Regional Commercial/Mixed-Use District. All development shall be visually compatible to surrounding uses in form, materials, colors, and scale.

In addition, all signs are subject to the Sign Criteria established as part of this Specific Plan and Design Guidelines.

e. Circulation

Drive-through restaurants shall have a drive-through lane that measures a minimum of 144 feet in length from entry to pick-up window, accommodating 6 vehicles. The lane shall not enter from the street. The lane shall have a minimum width of 11 feet on straight section and 12 feet on curved section. Drive-through lanes shall be screened through building orientation, landscaping, low screen walls, hedges, or trelliswork.

1. Vehicle conflicts with pedestrians and bicycles shall be minimized.

2. All drive-thru facilities shall be consistent with The City of Ontario Development Code.

3. The project applicant may be required to prepare and submit to the City as part of the initial application a traffic circulation study. The study shall address: 1) the function of the internal street(s) or driveway(s) that serve the subject parcel for bypass, parking access and drive-thru queuing; 2) the placement, design, and adequacy of the vehicle queuing aisle; 3) the on-site circulation, parking lot design and pedestrian/bicycle safety for the parking supporting the use; and 4) additional information as requested by the City Engineer. The traffic circulation study shall identify potential adverse impacts and include measures for mitigating such impacts.

4. There shall be no curb cuts for driveways to any individual drive-through parcel from any City thoroughfares. All circulation to and from drive-through parcels shall be contained within a larger commercial or mixed-use project, with points of access to City thoroughfares via established curb cuts approved in the Specific Plan. Adequate sight distance shall be provided for exiting from the drive-through parcel to the internal circulation routes within the commercial or mixed-use center.

5. Appropriate cueing, six to eight car stacking, for drive-thru banks and pharmacies shall be provided.

f. Parking

1. One parking space shall be provided for each 75 square feet of gross interior, non-food preparation, floor area for each restaurant drive-through use. Up to 8 spaces in the drive-through queue (8 x 25' minimum = 200') may be applied towards meeting the parking standard. One parking space shall be provided for each 250 square feet of gross interior floor area for each banking or drug store use.

2. All parking areas shall comply with development standards of this Specific Plan.

3. Parking shall be restricted to customers and employees only for restaurant drive-through parcels. The parking restrictions shall be posted in the parking lots and enforced by the restaurant management.

g. Restrooms

Access to bathroom facilities located within the restaurant development shall be from within the structure, with no direct access from the parking area.

h. Noise

1. Noise levels from the drive-through facilities shall not exceed the City noise standards.
2. The project applicant shall provide the plans and specifications for any potential noise sources, such as intercom system, trash compactor, etc. Plans shall include measures to mitigate any potential adverse impact from such noise sources.
3. Speaker boxes of any point to point intercom system shall be oriented away from residential development and other sensitive receptors located in the general area of the drive-through facility.
4. Outdoor maintenance and cleaning activities shall be limited if determined necessary by the City to achieve compatibility with surrounding land uses.
5. The on-site manager shall not permit any loud music, noise or other sounds by means of phonograph, radio, or other broadcasting apparatus or device, and shall not permit fighting, quarreling, loitering, or loud noise or other nuisance which disturbs the quiet and peace of the premises or the neighborhood. Outdoor music as part of an outdoor dining area shall be allowed subject to City approved noise thresholds, between the hours of 9 am to 9 pm, with speakers oriented away from residential uses.
6. Generally speaking, drive-through operations for any use shall be limited to the hours of 6:30 am to 11:30 pm, unless mitigation measures are provided to the City's satisfaction to address potential noise impacts on adjacent uses. Deliveries shall be limited to hours of operation.

I. Light and Glare

1. A wall or hedge along the outer perimeter of the parking area(s) and drive-through lane(s), except for areas of ingress and egress, may be required if determined necessary by the City to prevent unwanted light and glare. The height, design and specific location of such

barrier shall be subject to architectural criteria established within the Specific Plan Design Guidelines.

2. All lighting fixtures shall be designed, installed and maintained so as to direct light only onto the subject parcel.

3. All lighting in the parking lot(s) and drive-through area(s) shall comply with the provisions of the City of Ontario Lighting Code. No motion sensor lighting shall be allowed within any areas exposed to residential uses.
4. All lighting shall be subject to a 30-day lighting level review period, during which time illumination levels shall be evaluated and adjusted where determined necessary by the City.

j. Maintenance

1. The site shall be maintained in a litter free condition and no undesirable odors shall be generated on the site. The on-site manager shall make all reasonable efforts to see that the trash or litter originating from the use is not deposited on adjacent properties. Trash enclosures and bins shall be enclosed on all sides to suppress odors and prevent spillage of materials. Employees shall be required daily to pick up trash or litter originating from the site within 150 feet of the perimeter of the property. Graffiti shall be removed within 48 hours.

2. The project applicant shall prepare and submit a litter control plan and a recycling plan to the City, if not part of an overall recycling plan established for the commercial or mixed-use project.

3. The on-site manager of the use shall take whatever steps are deemed necessary to assure the orderly conduct of employees, patrons, and visitors on the premises.

4. A copy of the above maintenance standards and any applicable Planning staff Conforming Use Permit conditions shall be posted alongside the necessary business licenses and be visible at all time to employees.

k. Special Notice Requirements: Drive-through facilities located in areas designated within the Specific Plan, conforming to the above standards, shall be ~~reviewed and approved by City Planning staff by issuance of a Conforming Use Permit~~permitted.

Drive-thru uses which do not comply with those locations shown in the Specific Plan or that substantially vary from the guidelines noted above

shall be subject to a Conditional Use Permit process through the City of Ontario, including any public noticing and/or hearing processes required through such process. Any notice of any public hearing on a proposed drive-through facility or a physical modification of an existing drive through facility shall be given to the blind, aged, and disabled communities, in order that they may participate in the hearing.

l. ***Additional Conditions:*** The above performance standards constitute the minimum deemed necessary under general circumstances and in most cases to prevent adverse effects from drive-through facilities. Other and further standards may be required as conditions of approval defined by City Planning staff to ensure that such uses are in accord with the intent of the Specific Plan and in concert with the integrity of the commercial or mixed-use project.

m. ***Discontinuation of Use:*** If any drive-through facility approved pursuant to this Part is discontinued for a period of 12 months or longer, the Conforming Use or Conditional Use Permit for such use shall be void. Subsequent uses shall be reviewed and approved under the same criteria, as may be amended from time to time. If such parcels are (a) within the originally established "Conforming Use Areas" or (b) on a site granted a Conditional Use Permit and, in the opinion of the City Planning Department, such subsequent use is deemed less impacting than the originally approved Conditional Use, then such uses shall be afforded the Confirming Use Permit process for their project approvals.

Discontinuation of use for a period of 12 months or longer of any drive-through facility approved pursuant to this Part for, the Conforming Use or Conditional Use Permit (CUP) for such use shall be void. Please refer to City of Ontario CUP process.

5.5.9 ~~REGIONAL COMMERCIAL/~~MIXED-USE DEVELOPMENT STANDARDS

The following are the development standards for Mixed-Use projects proposed within Planning Area~~s 6, 7B, 8A~~7~~ and 9~~. Refer also to Section 5.3 for Residential Development Standards. ~~The northwest corner of~~ Planning Area ~~8A~~7, adjacent to Mill Creek Avenue and Ontario Ranch Road is designated as mixed-use and would allow for the development of a 4-story wrap or podium residential product type, including ground floor retail interfacing with commercial development to the east within Planning Area ~~8A~~6B.

Minimum Lot Size/Area: Minimum lot size shall be large enough to accommodate the proposed use, meet all Development Standards, and cumulatively meet commercial thresholds as specified within the Specific Plan.

Maximum Floor Area Ratio

Mixed Use Buildings[(1)]	2.0:1

Minimum Landscape Coverage	15%, all setback from right-of-way areas shall be landscaped.
Building Setbacks (minimum)	
From Hamner Avenue Right-Of-Way	35 feet[4] [5]
From Ontario Ranch Road Right-Of-Way	35 feet[4] [5]
From Mill Creek Avenue Right-Of-Way	18 feet[4]
From Private or Local Street	10 feet[2]
From Interior Property Line	0 feet
From Interior Property Line adjacent to Residential District (Stand Alone Residential)	25 feet
From SCE Property Line/Easements	15 feet
Building to Building	0 feet, free standing buildings shall maintain a setback of 2/3 the height of the building, or 25', whichever is less.
Allowable Porch/Balcony Encroachment into Setback	5 feet
Parking Setbacks[3] (minimum)	
From Hamner Avenue Right-Of-Way	35 feet
From Ontario Ranch Road Right-Of-Way	35 feet
From Mill Creek Avenue Right-Of-Way	18 feet
From Private or Local Street	10 feet
From Interior Property Line	5 feet
From Interior Property Line adjacent to Residential District (Stand Alone Residential)	5 feet
From SCE Property Line/Easements	0 feet
Building Height (Maximum)	
Vertical Mixed Use	75 feet
Architectural Projections (including towers, focal elements, cupolas, etc.)	Up to 10 feet above the height of the building; projections shall not be habitable space.
Porte-cocheres	35 feet
Structured Parking	Structured parking for mixed-use buildings may not exceed the height of the adjacent building, which it serves.

[1] Per the City of Ontario Development Code. Commercial parking standards still apply. For residential units, parking standards within Section 5.4.1.12 of the Specific Plan shall apply.
[2] Refer to Sections 7.6.7, 7.6.9, and 7.6.10 for further setback/design requirements.
[3] Parking stalls perpendicular to street shall be screened by landscaping, berms, or decorative walls that match architectural style of the development. Screening shall mature to a minimum height of 36" (to screen car grilles)

(4) Buildings shall be set back to the Neighborhood Edge or to the given setback from R.O.W., whichever is more restrictive. Where a Neighborhood Edge condition does not exist, setbacks from R.O.W. shall govern.
(5) One and two-story buildings may encroach 10 feet into the neighborhood edge subject to Planning Department review and approval.

5.5.9.1 Retail/Shop Space "Veneer"

To achieve a desired commercial frontage on pedestrian corridors, retail/shop space veneers on residential buildings may be incorporated, and are encouraged, on the first story level. Retail service stores are the intended occupant for retail/shop space veneers, creating an incubator space for small independent businesses such as, but not limited to, travel agencies, hair salons, personal services, dry cleaners, art galleries, wine tasting venues, and similar pedestrian serving commercial ventures. Restaurants and incidental food usages such as coffee or juice bars and sandwich shops are also allowed and encouraged. Refer to the table in Section 5.5.7.1 for the full list of permitted uses.

A minimum shop depth of 25 feet is required, with building entries fronting onto streets, private drives, interior circulation corridors, pedestrian corridors, or plazas. Heavy service uses are not allowed in retail veneer spaces, therefore, separate delivery entrances to these shops are not required. Retail veneer is specifically not a live/work product. Therefore, direct residential entrance to these retail shops is not permitted. Residential unit entrances and associated parking spaces shall be separate from retail veneer entrances and parking. Vertical mixed-use buildings in a retail veneer/residential configuration are encouraged to provide building separations for pedestrian plazas or walkways connecting to the residential neighborhoods. These separations are encouraged to be no greater than 500 feet apart. Retail/shop space veneers must meet development standards in this section, design guidelines, and all applicable building codes.

5.5.9.2 Circulation

Serving as a commercial retail destination with neighborhood elements, Rich-Haven Specific Plan shall have street frontage monumentation announcing the major entrance to the development from Ontario Ranch Road at Hamner Ave. Within Rich-Haven Specific Plan major vehicular access to commercial elements and residential areas shall be clearly designated and intuitive, supplemented with special paving, landscaping and signage. Intersection nodes, where both vehicular and primary pedestrian activities occur, may feature enhanced paving to signify the mix of these activities. Parking should be oriented toward tenant customer access and away from the street, with clearly marked pedestrian pathways to building entrances.

A strong pedestrian connection should be provided between the mixed-use area and the residential neighborhoods ~~within Planning Areas 6A, 6D, 7B, 8A, 8B, 9A and 9B,~~ to enhance the walkability of the development.

5.5.9.3 Parking Standards

The following standards apply for required off-street parking of mixed-use uses based on gross interior floor area within the Regional Commercial/Mixed-Use District:

Restaurant	1 per 100 sq. ft.
Fast Food drive-thru	1 per 75 sq. ft.
Retail	1 per 250 sq. ft.
Banking	1 per 250 sq. ft.
Medical	1 per 250 sq. ft.
Office	1 per 250 sq. ft.
Day Care	1 per 500 sq. ft.

All other uses not identified in the table shall conform to Off-Street Parking and Loading Standards of the City of Ontario Development Code.

In mixed-use areas, on-street parallel and/or angled parking may be used to satisfy the project parking requirement. Speed humps or other devices may also be used to control vehicular traffic speeds in and near pedestrian zones. Double loaded parking aisles may be either 90-degree or angled. Parking drive aisles shall be a minimum of 25 feet for 90-degree or 2-way angled parking. Drive aisle may be reduced to 20 feet wide for one-way angled parking. A dashed line along main travel routes is recommended to provide a street appearance. Walkways within the parking fields are required to have scored concrete, stamped concrete or paver treatment to integrate pedestrian paths of travel.

Standard parking stalls shall be no less than 9 feet wide by 18 feet deep.

Refer to Mixed-Use/Commercial Landscape Design Guidelines, section 7.8.

5.5.9.3.1 Loading

All large commercial tenants, except medical, require one loading space unless otherwise noted. Refer to Loading and Service Design, of the Regional Commercial/Mixed Use District Design Guidelines for further loading requirements. Appropriate queuing, six to eight car stacking, for drive-thru banks and pharmacies shall be provided.

Mixed-use buildings/tenants are encouraged to employ shared loading areas and on-street parallel parking as loading spaces. On-street loading spaces shall have appropriate loading, time/day signage for the space and shall be in addition to required parking for the mixed-use building/tenant.

5.5.9.3.2 Shared Parking Programs

Where opportunities exist for shared parking between uses with staggered peak parking demands, owners and developers should make every possible effort to take advantage of this opportunity to reduce total number of parking spaces within each site or parcel. The intent of a shared parking program is to reduce land devoted to parking, thereby allowing increased densities in mixed-use areas or providing for open spaces, walkways or other amenities. The parking standards may be reduced, up to a 40% reduction, based on a shared parking reduction study as outlined within the Specific Plan.

5.5.9.4 Pedestrian Orientation and Connectivity

Fostering pedestrian activity along interior circulation corridors is critical to the interactive, urban nature of the Regional Commercial/Mixed Use District. Interior circulation corridors, with commercial and mixed-use frontages shall have appropriate planting and paving features to accommodate pedestrian activity.

Shaded courtyards or plazas are encouraged to be incorporated into building layout and design to provide comfortable pedestrian space. Such courtyards may feature elements that enhance the pedestrian experience such as fountains, trellises, umbrellas, shade trees, comfortable tables, chairs and benches, kiosks, etc. Please refer to Section 7.8, Mixed-Use Landscape Design Guidelines.

5.5.9.5 Streetscape Interaction

Along major pedestrian walkways (greater than 300 linear feet of mixed-use frontage) and plazas that are adjacent to adequate customer parking and commercially viable, it is encouraged that the linear street frontage, excluding driveways and pedestrian connections, be designed to accommodate pedestrian-oriented neighborhood service uses including retail, office, or other community service uses. The minimum depth of these uses shall be 25 feet. Residential parking is permitted behind this use.

5.5.9.6 Patio Dining

Outdoor seating, in conjunction with business, is encouraged to enliven the street scene along commercial edges. Patio dining areas may be either connected or separated from building face. If separated, the space between

seating area and building face must be a minimum of 8 feet to allow pedestrian traffic. In all cases, the seating area must have an internal minimum dimension of 5' clear. A maximum encroachment of 20 feet is allowed onto park/paseo or urban edge/setback areas. Along Ontario Ranch Road, patio dining may encroach a maximum of 10 feet into these setback areas. Patio areas may be enclosed by the tenant by open rail compatible with the architecture of the building, hedges or other suitable separation. Please also refer to Section 6.5.4.1, Patio Dining.

5.5.9.7 Drive-thru Facilities

Please refer to Section 5.5.8.5 for Drive-thru Facility development standards.

5.5.10 LIVE/WORK

Intended Character: The "Live/Work" designation is a residential building type that accommodates non-residential work areas adjacent to or below residential living areas, having specialized work-spaces that can accommodate more intensive work activities than appropriate for an exclusive residential building. Live/Work is allowed and encouraged in single family detached, and multi-family attached, with orientation to streets at transitional locations between pure commercial and pure residential areas. The Live/Work standards for the Rich-Haven Specific Plan assume no employees for Live/work uses. Live/Work is an appropriate transitional use between primarily commercial and primarily residential areas within the Regional Commercial/Mixed Use District.

5.5.10.1 Applicability, Live/Work

The standards provided herein apply to single-family attached home type or alley-loaded single family uses within Planning Areas 4A, 4B, 5B, 9, and 10A ~~6A, 7, 8 and 9~~ within the Regional Commercial/Mixed Use District. Refer to Table 5-1, *Site Development Standards Summary* and applicable residential development standards within Section 5.4. The following standards are intended to supplement the standards provided within Section 5.4.

5.5.10.2 Live/Work Permitted Occupational Standards

This section is a supplement to Sub-sections 5.4.3, 5.4.4, 5.5.3, and 5.5.7.1 permitted uses, and all commercial activities specified herein shall be restricted to the ground floor of each dwelling unit, with exception to the Vertical Mixed Use Building, where uses can be included on the second level. Free-standing commercial buildings are to use appropriate commercial building standards and not the live/work standards.

Live Work Permitted Uses

a. Home Occupations

As defined within the City Development Code

b. Artist and Craft Activities

Activities of artists and crafts persons working in low-impact media or processes (e.g., painters, graphic artists, potters, carvers, musicians.)

c. Cottage Production Activities

Production of goods or services involving low impacts and no employees (e.g., jewelry making, garment making, small leather goods, printing, computer or small goods repair, media production and recording studios.)

d. Service Activities

Office or service work with few or no impacts, no employees, (e.g., software developers, analysts, writers, accountants, secretarial services, personal services such as hair stylists, music teachers, tutors, doctors, therapists, child daycare, contract workers, telecommuters, office bases for off-site services such as building and landscape contractors, sales representatives.)

e. Public Access Businesses

Public Access Businesses typically have frequent one-on-one interaction with individual client groups who meet in home offices. Examples of these types of permitted uses are:

1. Architect/Landscape Architect/Engineer/Land Planner
2. Interior Decorator or Designer
3. Fine Arts Studio and Sales/Ceramics and Pottery Studio and Sales/Clothing Design Studio and Sales
4. Graphic Design Studio and Sales
5. Photography Studio/Portraiture and Sales
6. Planning Consultant
7. Attorney/consultant
8. Income Tax Service/Escrow Service/Insurance Agency
9. Internet Service Provider/Webmaster
10. Consulting and Business Service
11. Music or Dance Instruction (tutor)
12. Real Estate Developer/Specialty Contractor
13. Licensed Small-family child-Care Home
14. Personal Fitness Training
15. Tutor

f. Mobile Businesses

Mobile businesses typically involve a significant time away from the office where work is either acquired or performed at the client's residence or place of business. Examples of these types of permitted uses are:

1. Pick-up and Delivery Service
2. Cleaning Service
3. Pool Maintenance
4. Building Contracting
5. Gardening and Landscape Service
6. Electronic and Computer Equipment Repair and Fix-it Service
7. Catering Service
8. Flower Arranging and Plant Service
9. Specialty Food Products and Delivery

Live Work Permitted Uses

g. Other Permitted Businesses

Notwithstanding the specific permitted uses outlined above, the Planning Director may authorize other uses using reasonable discretion, as long as such other uses are not otherwise precluded by law. The Planning Director may authorize other uses using reasonable discretion, as long as such other uses are not otherwise precluded by law. The Planning Director will consider the effect on the project, and will not approve a use that has a materially adverse impact on other units in the condominium project, or surrounding neighborhood. The Director's decision may be appealed to the Planning Commission or the Director may refer the request to the Planning Commission as a Conditional Use Permit.

Live/Work Prohibited Uses

Prohibited uses are those uses that are not compatible with the permitted uses for the project, as well as all uses which are contrary to any city development code of other governmental condition of approval for the project. The following uses are expressly prohibited:

1. Medical/Dental Office
2. Chiropractic/Acupuncture Service
3. Massage/Acupressure Service
4. Veterinarian/Kennel/Animal Care Facility
5. Tattoo or Body Piercing Service
6. Fortuneteller
7. Banquet Facility
8. Adult Business
9. Recycling Center
10. Sales, repair or maintenance of vehicles, including automobiles, boats, motorcycles, aircraft, trucks, or recreational vehicles, provided that light maintenance of resident owned vehicles shall be allowed so long as such maintenance is conducted entirely within the interior of a garage.
11. Trade or Private School
12. Religious Institution
13. Any use that regularly or periodically generates vibrations, excessive noise, heat or smell, which affects any other condominium units within the project, as determined by the Planning Director; or surrounding properties, as determined by the City of Ontario Planning Director
14. Other uses that the Planning Director reasonably determines would detract from the overall image of the project or which might adversely affect the value of the individual condominiums within the project.

5.5.10.3 Live/Work Development Standards

Live/Work is the blend of residential and working components within a single dwelling. The development standards found in Section 5.4 set forth the base criteria. The following standards are written to give further standards on the commercial aspects of the building, and also the interaction between living and working areas.

5.5.10.3.1 Orientation

Most of the residential living quarters are anticipated to be located above the ground floor; however, if properly designed to mitigate conflicts concerning livability and privacy, ground floor or partial ground floor living quarters are allowed.

5.5.10.3.2 Entries and Private Outdoor Space

There should be direct pedestrian access from the front street to each individual business.

Direct pedestrian access from the business to the residential unit is also encouraged.

Residential units may be accessed from the fronting street or from the rear or side of the building.

5.5.10.3.3 Living Quarters and Work Space

Living quarters are permitted above the work space, to the side or in back (toward garage) of the work space. A minimum square footage of living area per residential unit shall be 400 sq. ft. Work space shall have a minimum square footage of 200 sq. ft. and a maximum square footage of 800 sq. ft.

5.5.10.3.4 Parking and Storage

All parking required for the workspace shall be provided for on-site, at the rear of the units or underground. Live/Work units are required to provide an additional .25 visitor spaces/unit, which may be located on-street. This requirement is in addition to the parking requirements of Section 5.4.

Garbage container storage areas, heating and mechanical equipment, and off-street parking and loading facilities must be located at the rear of the units.

5.5.10.3.5 Loading

Mixed-use and Live/Work settings are encouraged to employ shared loading areas and on-street parallel parking as loading spaces. On-street loading spaces shall have appropriate loading, time/day signage for the space and shall be in addition to required parking for the mixed-use building/tenant.

Otherwise, no loading or unloading is permitted in the public right-of-way. No loading or unloading activities shall interfere with parking or vehicular access. Loading areas, where provided, shall not be visible from the public street.

Loading activities serving live/work uses shall be limited to 9:00 a.m. to 5:00 p.m. on weekdays and 9:00 a.m. to noon on weekends.

5.5.10.3.6 Signage

Signage is intended to promote and enhance on-site businesses, maintain a quality neighborhood, provide direction for pedestrian and vehicular circulation, support a residential living environment and retain the character of the local neighborhood. No free-standing or monument signage is allowed for live/-work uses.

A signage program shall be prepared by the merchant builder and submitted for review and approval by the City of Ontario. See Section 6.5.5 Signage Guidelines for signage program.

5.5.10.4 Live/Work Performance Standards

5.5.10.4.1 Business License

A business license must be obtained for all live/work activities. Licenses will define:

a. Permitted number of employees
b. Business hours of operation
c. Potential public safety concerns, nuisances such as noise, vibrations etc.

5.5.10.4.2 Review Procedures

If the use requires City approval, then the application for live/work commercial uses shall be reviewed and approved by ~~the~~ both the Builder and Master Associations before submittal to the City.

5.5.11 STAND ALONE RESIDENTIAL OVERLAY

5.5.11.1 Development Standards

Stand Alone Residential Overlay developments within the Regional Commercial/Mixed-Use District shall comply with the Residential Development Standards outlined in the Residential District. Refer to the applicable tables in Section 5.4 for Stand Alone Residential Overlay development standards.

5.6 LIGHT INDUSTRIAL DEVELOPMENT STANDARDS

Applies to Planning Areas 2C, 3C, 5A, 5C and 6A~~7A~~

The purpose of the Light Industrial district is to create a high-quality industrial environment that is compatible with the Rich-Haven specific plan development area and the City's TOP (The Ontario Plan). This district provides for uses that will be complementary to adjacent SCE Substation and Planning Area 7B which includes regional commercial. (See Section 5.5 - Regional Commercial/Mixed-Use District Development Standards).

5.6.1 APPLICABILITY

The development regulations contained herein provide specific land use development standards for the project. Regulations address both general and specific standards for Light Industrial development. Application of the following regulations is intended to encourage the most appropriate use of the land, ensure the highest quality of development, and protect the public health, safety, and general welfare.

Whenever the provisions and development standards contained herein conflict with those contained in the City of Ontario

Development Code, the provisions of the Rich-Haven Specific Plan shall take precedence. Where the Rich-Haven Specific Plan is silent, City codes shall apply. These regulations shall reinforce specific site planning, architectural design, and landscape design guidelines contained in Section 6, "Design Guidelines" of the Rich-Haven Specific Plan.

All architectural and landscape improvements shall be consistent with the Design Guidelines contained in Section 6 of the Rich-Haven Specific Plan, "Design Guidelines." All architectural and landscape plans shall be submitted to the City of Ontario for approval.

5.6.2 DEFINITION OF TERMS

The meaning and construction of words, phrases, titles, and terms shall be the same as provided in the City of Ontario Development Code Article 2, "Definitions," unless otherwise specifically provided for herein.

The definition of architectural and design terms shall be the same as those provided in the City of Ontario Glossary of Design Terms which follows the City of Ontario Development Code.

5.6.3 DEVELOPMENT CAPACITY

Light Industrial uses in any configuration are limited by development and design standards of this section. The Rich-Haven Land Use Plan allocates a total maximum of ~~1,183,525~~2,767,148 square feet of light industrial use in Planning Areas 2C, 3C, 5A, 5C and 6A~~7A~~. (See Section 3, Land Use Summary, Table 3-1). Variations in the number, type, and intensity of Industrial buildings may occur at the time of final design ~~of Planning areas 4A, 5B, 6B, 6C, and 7A~~ depending upon the project and development timing.

5.6.4 PERMITTED USES

The following table establishes the uses which are permitted within the Light Industrial District of Rich-Haven Specific Plan. The following symbols used in the table represent the following:

P Permitted Use
C Conditional Use Permit required
A Ancillary Use (allowed in conjunction with a primary permitted use)

Ancillary uses will be reviewed concurrently with each land use proposal.

PERMITTED USES

Land Use Types	Light Industrial
AGRICULTURAL USES	
COMMERCIAL GROWING ESTABLISHMENT *(Activities typically include, but not are not limited to the commercial growing of produce by row, field, tree, and crop production. Also included is agricultural research. Marijuana cultivation not allowed per city ordinance)*	P
WHOLESALE AND RETAIL PLANT NURSERIES *(Activities typically include, but are not limited to, sales of indoor and outdoor plants, including, but not limited to, trees, shrubs, groundcovers, and grass sod, as well as seeds, pots and potting supplies, and growing supplies).*	P
COMMUNITY GARDENS, URBAN FARMS, AND RELATED USES	A
KENNELS AND CATTERIES	P
CONSTRUCTION	
CONTRACTORS: *(limited to businesses whose primary activity is performing specific activities involved in building construction, engineering and capital improvement projects, or the preparation of sites for construction)*	
Completely within a building	P
With Outdoor Storage (screened for public view)	P
RESIDENTIAL USES	
CARETAKER'S UNIT - AREA DEVOTED TO USE NOT TO EXCEED 1,000 SQUARE FEET.	A
WHOLESALE TRADE	
DURABLE GOODS - GENERAL	
Motor Vehicles and Motor Vehicle Parts and Supplies	P

Land Use Types	Light Industrial
Sporting and Recreational Goods and Supplies	P
Toy and Hobby Goods and Supplies	P
Recyclable Materials (includes wholesale activity only; refer to NAICS 562920 (Material Recovery Facilities) for recovery/processing (recycling) activities)	C
Jewelry, Watches, Precious Stones, and Precious Metals	P
DURABLE GOODS - LIMITED	
Furniture and Home Furnishings	P
Professional and Commercial Equipment and Supplies	P
Household Appliances, and Electrical and Electronic Goods	P
Hardware and Plumbing, and Heating Equipment and Supplies	P
NON-DURABLE GOODS *(excluding industrial gases, petroleum bulk stations and terminals, and fireworks and explosives merchant wholesalers)*	P
RETAIL TRADE	
INTERNET FULFILLMENT/WAREHOUSING/DISTRIBUTION (E-COMMERCE)	P
NONSTORE RETAILERS	
Electronic (internet) Shopping and Auctions, and Mail-Order Houses *Houses (includes direct business to consumer internet retail sales, auction houses, and/or mail order retail sales)*	P
Vending Machine Operators	P
OTHER DIRECT SELLING ESTABLISHMENTS	P
INDUSTRIAL RETAIL SALES *(retail of goods and/or product either manufactured, warehoused or wholesaled on-site)*	
Maximum 15% of building floor area or 8,000 square feet, whichever is less)	A
Over 15% of building floor area or 8,000 square feet	C
INSTITUTIONAL USES	
EDUCATIONAL FACILITIES *(Universities, Colleges, and Vocational Training)*	
• Technical and Trade School	C
Business Schools and Computer and management Training	C
Other Schools and Institutions:	
Fine Arts Schools (nonacademic instruction, including music, dance, performing arts, drama, photography, ceramics, painting and sculpture)	
• GFA less than 2,000 SF	P
• GFA 2,000 SF or more	C
Sports and Recreation Instruction (cheerleading, gymnastics, and martial arts)	
• GFA less than 10,000 SF	P
• GFA 10,000 SF or more	C
Industrial Clinics	P
Religious Facilities - Religious assembly and places of worship.	C

Land Use Types	Light Industrial
Public Utility/Service structure	C
Automobile Driving School	C
Other Schools of Instruction (public speaking, survival training, and speed reading)	C
Water Systems - Water wells, water storage, treatment and filtration facilities.	C
HEALTH CARE AND SOCIAL ASSISTANCE	
AMBULATORY HEALTH CARE SERVICES	
Offices of Physicians and Dentists, Other Health Practitioners, Outpatient Centers, Laboratory Testing Services, Home Healthcare Services, and Community Clinics *(excludes massage establishments—see NAICS 812199)*	P
Other Ambulatory Health Care Services	
Ambulance Services	P
All Other Ambulatory Health Care Services:	
• Blood and Organ Banks	P
• All Other Miscellaneous Ambulatory Health Care Services (limited to blood pressure screening, health screening, hearing testing, industrial clinics, pace- maker monitoring, physical fitness evaluation, and smoking cessation program services)	P
SOCIAL ASSISTANCE	
Community Food and Housing, Emergency and Other Relief Services	
Community Food Services (limited to food banks, meal delivery programs, and fixed and mobile soup kitchens)	C
Child Day Care Services	
Child Day Care Centers (Employer Provided Services)	P
ARTS, ENTERTAINMENT AND RECREATION	
AMUSEMENT, GAMBLING, AND RECREATION INDUSTRIES	
Other Amusement and Recreation Industries	
Fitness and Recreational Sports Centers (limited to health clubs and gyms, fitness and sports training facilities, tennis clubs, swim clubs and other similar activities and facilities)	
• GFA Less than 10,000 SF	P
• GFA 10,000 SF or more	C
All Other Amusement and Recreation Industries, limited to the following (NAICS 713990):	
• Batting Cages -- Indoor	C
• Batting Cages -- Outdoor	C
Shooting and Archery Ranges and Galleries — Indoor Only	C
Simulated Racing (limited to go-carts, radio controlled vehicles and other similar facilities)	C
Simulated Shooting Games — Indoor Only (limited to laser tag and paint ball)	C
Skating Rinks and Parks (indoor only)	C
COMMERCIAL USES	
REPAIR AND MAINTENANCE	
Motor Vehicle Repair and Maintenance *(Note: See Motor Vehicle Storage (NAICS 493190) for vehicle storage requirements)*	

Land Use Types	Light Industrial
Auto Repair (Minor) - Activities include, but are not limited to automotive and light truck repair; retail sales of goods and services for automobiles and light trucks; and the cleaning and washing of automobiles and light trucks. Uses typically include, but are not limited to, repair of brakes, tires, electrical, etc. and car washes.	P
Automotive Glass Replacement Shops (limited to stationary and mobile services)	P
Automotive Oil Change and Lubrication Shops	P
Auto Repair (Major) - In addition to the types of repair operations included as part of Automobile and Light Truck Repair - Major, activities typically include, but are not limited to, automotive body work, painting, and installation of major accessories; automobile customizing; engine and transmission repair/rebuild and towing facilities.	C
All Other Automotive Repair and Maintenance	
• Emissions Testing (test only facilities)	P
• Rustproofing and Undercoating Shops	P
• Spray-On Bedliner Installation Shops	P
Plug-In Electric Vehicle (PEV) Charging Facilities (ancillary to an allowed land use)	P
Commercial and Industrial Machinery and Equipment *(except Automotive and Electronic) Repair and Maintenance)*	P
Personal and Household Goods Repair and Maintenance	
Home and Garden Equipment and Appliance Repair and Maintenance - Computers, home electronics and small home appliances. Electrical equipment, Furniture refinishing/re-upholstery. Lawnmower and garden equipment.	P
Reupholsters and Furniture Repair	P
Other Personal and Household Goods Repair and Maintenance -- Without Retail Sales *(limited to garment alteration and repair, gun repair, jewelry repair, key duplicating, musical instrument repair and tailor shops)*	P
Boat Repair and Maintenance Services (no retail sales of new boats)	P
Motorcycle Repair and Maintenance Services (no retail sales of new motorcycles)	P
Death Care Services	
Funeral Parlors and Mortuary Services (excludes funeral establishments)	P
Dry cleaning and Laundry Services	
Linen and Uniform Supply	
• Linen Supply	P
• Industrial Launderers	P
Other Personal Services	
Personal Fitness Trainer	P
Battery/Energy Storage and Interconnect to SCE (as an ancillary use)	C
Battery/Energy Storage exclusively to serve project energy use	P
PUBLIC ADMINISTRATION	
JUSTICE, PUBLIC ORDER, AND SAFETY ACTIVITIES	
Police Protection (limited to stations, substations and storefront facilities)	P

Land Use Types	Light Industrial
Fire Protection	P
PUBLIC UTILITY/SERVICE STRUCTURE	C
COMMUNICATION USES	
RADIO AND TELEVISION BROADCASTING STUDIOS *(Activities typically include, but are not limited to, broadcasting and other information relay services accomplished primarily through the use of electronic and telephonic mechanisms. Uses typically include, but are not limited to, television and radio studios)*	
Motion Picture and Video Industries *(except Motion Picture and Video Exhibition -- movie theaters)*	P
Sound (Audio) Recording Facilities	P
BROADCASTING *(except Internet—see Other Information Services)*	P
Radio Stations	P
Television Broadcast Studios	P
DATA PROCESSING, HOSTING AND RELATED SERVICES	P
OTHER INFORMATION SERVICES	
Internet Publishing and Broadcasting	P
REAL ESTATE, RENTAL AND LEASING	
RENTAL AND LEASING SERVICES	
Automotive Equipment Rental and Leasing	
Truck, Utility Trailer, and Recreational Vehicle Rental and Leasing	P
Office Ancillary to a Primary Industrial Use (less than 10%)	P
ADMINISTRATIVE AND SUPPORT, AND WASTE MANAGEMENT AND REMEDIATION SERVICES	
ADMINISTRATIVE AND SUPPORT SERVICES	
Office Administrative Services and Facilities Support Services *(limited to services provided for others on a contract or fee basis)*	A
Business Support Services	
Business Service Centers:	
• Private Mail Centers, and Postal Services and Supplies	C
• Other Business Service Centers (limited to mailbox rental, photocopying, duplicating, blueprinting, mailing services, document copying services, facsimile services, word processing services, on-site PC rental services, and office product sales)	P
Services to Buildings and Dwellings *(limited to exterminating and pest control, janitorial, landscaping, carpet and upholstery cleaning, building exterior and chimney cleaning, power washing, gutter cleaning, light building maintenance, parking lot cleaning and swimming pool maintenance services)*	P
Other Support Services *(limited to packaging and labeling services, convention and trade show organizers, and document shredding services)*	P
Remediation and Other Waste Management Services	
Material Recovery Facilities (MRFs) (consists of the removal of recyclable materials from a waste stream):	
• Electronic Equipment Recycling	C

Land Use Types	Light Industrial
WATER SYSTEMS - WATER WELLS, WATER STORAGE, TREATMENT AND FILTRATION FACILITIES.	C
EATING AND DRINKING PLACES & FOOD SERVICES	
Special Food Services	
Food Service Contractors	P
Caterers	P
Mobile Food Services	P
Food Bank or Meal Delivery Services	C
Drinking Places	
Alcoholic Beverage Sales for On-Premises Consumption as a Primary Business Activity (such as bars, cocktail lounges, nightclubs, taverns, and other similar facilities)	
• GFA less than 10,000 SF	C
• GFA 10,000 SF or more	C
Alcoholic Beverage Sales for On-Premises Consumption as an Ancillary Business Activity (such as ancillary to restaurants)	C
Eating Establishments *(Activities typically include, but are not limited to, the retail sale from the premises of food or beverages prepared for on-premises consumption. Uses typically include, but are not limited to):*	
• Full-service restaurants, serving ready-to-eat food and beverages for on-site consumption.	P
• Fast-food restaurants, serving ready-to-eat food and beverages for on-site or off-site consumption, without drive-through facilities.	P
Cafeterias and Buffets	P
Snack and Nonalcoholic Beverage Bars	P
MANUFACTURING	
FOOD MANUFACTURING:	
General *(but excluding animal slaughtering and processing and seafood product preparation and packaging)*	P
Limited *(including bread, tortilla, snack foods, roasted nuts and peanut butter, coffee and tea, flavoring syrup and concentrate, seasoning and dressing, spice and extract, and all other miscellaneous food manufacturing)*	P
APPAREL MANUFACTURING	P
COMPUTER AND HOME ELECTRONIC MANUFACTURING	P
BAKERY (INDUSTRIAL)	C
ELECTRICAL COMPONENTS	P
FURNITURE AND RELATED PRODUCTS MANUFACTURING	P
HOME APPLIANCE AND EQUIPMENT MANUFACTURING	P
GLASS (AND GLASS PRODUCT) MANUFACTURING	C
PETROLEUM AND COAL PRODUCTS MANUFACTURING	C
TRANSPORTATION EQUIPMENT MANUFACTURING	P
BATTERY/ENERGY STORAGE AND INTERCONNECT TO SCE (AS AN ANCILLARY USE)	C
BATTERY/ENERGY STORAGE EXCLUSIVELY TO SERVE PROJECT ENERGY USE	P

Land Use Types	Light Industrial
WOOD PRODUCT MANUFACTURING	P
INSTRUMENT MANUFACTURING (NAVIGATIONAL, MEASURING, ETC.)	P
LEATHER PRODUCT MANUFACTURING (EXCLUDING TANNING AND FINISHING):	
Footwear manufacturing	P
Other Leather and Allied Product Manufacturing *(limited to manufacturing of luggage, handbags, purses, personal leather goods and other leather products)*	P
TEXTILE PRODUCT MILLS *(transform fabric into product, except apparel)*	P
BEVERAGE AND TOBACCO PRODUCT MANUFACTURING:	
Beverage manufacturing	
Soft Drink, Bottled Water and Ice Manufacturing	C
Alcoholic Beverage Manufacturing, including breweries, wineries and distilleries, and related tasting rooms. Facilities with tasting rooms require a CUP:	
• GFA less than 10,000 SF	P
• GFA 10,000 or More SF	C
ARTISAN CRAFTS *(made by hand) such as glassworks, jewelry, and pottery)*	P
PAPER MANUFACTURING:	
Converted paper Product Manufacturing	C
CHEMICAL MANUFACTURING *(excludes pesticides and fertilizers)*	
Pharmaceutical and Medicine Manufacturing *(excludes biological product manufacturing—see NAICS 325414, below)*	C
Soap, Cleaning Compound, and Toilet Preparation Manufacturing	C
PLASTICS AND RUBBER PRODUCTS MANUFACTURING	
Plastics Product Manufacturing	C
Rubber Product Manufacturing	C
FABRICATED METAL PRODUCT MANUFACTURING	
Primary Metal Manufacturing	C
Cutlery and Hand Tool Manufacturing	C
Architectural and Structural Metals Manufacturing	C
Hardware Manufacturing	C
Spring and Wire Product Manufacturing	C
Machine Shops, Turned Product, and Screw, Nut and Bolt Manufacturing	P
Coating (e.g., anodizing, electroplating, etc.), Engraving, Heat Treating, and Allied Activities	

Land Use Types	Light Industrial
Painting, Powder Coating and Polishing Metal and Metal Products for the Trade	C
Other Fabricated Metal Product Manufacturing	
Ball and Roller Bearing Manufacturing	P
MACHINERY MANUFACTURING	
MACHINERY MANUFACTURING *(Activities typically include, but are not limited to, the mechanical or chemical transformation of raw or semi-finished materials or substances into new products, including manufacture of products; assembly of component parts (including required packaging for retail sale); blending of materials such as lubricating oils, plastics, and resins; and treatment and fabrication operations. Examples of activities include the following)*	
MISCELLANEOUS MANUFACTURING *(Jewelry, office supplies, sporting goods, toys, etc.)*	P
PRINTING AND RELATED ACTIVITIES	P
WAREHOUSE/STORAGE & TRANSPORTATION	
Warehouse/Distribution Facility *(Activities typically include, but are not limited to, warehousing, storage, freight handling, shipping, trucking services; storage)*	P
Completely within a building	P
Outdoor Storage Accessory to an Allowed Use	A
Outdoor Storage as the Primary Use with screening	C
Refrigerated Warehousing and Storage	P
Battery/Energy Storage and Interconnect to SCE (as an ancillary use)	C
Battery/Energy Storage exclusively to serve project energy use	P
POSTAL SERVICE *(Limited to US Postal Service and contract services. See "Private Mail Centers and Postal Services and Supplies" (NAICS 561431) for commercial mail services)*	P
OTHER	
Trailers and trailer storage	P
~~Any use deemed similar to permitted uses by the Planning Director~~	~~P~~
UNLISTED USES	
Those uses not specifically listed are subject to a determination by the Planning Director as either permitted, permitted subject to a conditional use permit or prohibited consistent with the purpose if the land designation if this District and the Specific Plan. Decisions of the Director are appeal able to the Planning Commission.	

General Note, refer to Ontario ALUCP for additional development criteria and policies that may affect building heights, allowable FAR, and allowable land uses.

5.6.5 GENERAL DEVELOPMENT STANDARDS

The following general site development criteria shall apply to all development projects within the Rich-Haven Specific plan area.

5.6.5.1 Gross Acres

Except as otherwise indicated, gross acres for all development areas are measured to the center line of streets.

5.6.5.2 Grading

Development within the project site shall utilize grading techniques as approved by the City of Ontario. Grading concepts shall respond to the design guidelines included in the Rich-Haven Specific Plan.

5.6.5.3 Building Modification

Building additions and/or alterations permitted by the Rich-Haven Specific Plan shall match the architectural style of the primary unit and shall be constructed of the same materials, details, and colors as the primary unit.

5.6.5.4 Utilities

All new and existing public utility distribution lines of 34.5 kV or less shall be subsurface throughout the project.

5.6.5.5 Technology

All businesses shall accommodate modern telecommunications as defined by the Fiber Optic Master Plan and in accordance with the City of Ontario Structured Wiring Standards (Ontario Municipal Code).

5.6.5.6 Solid Waste/Recycling

Development within the project shall comply with City of Ontario requirements for the provision and placement of solid waste and recycling receptacles.

5.6.5.7 Traffic

All traffic signs regulating, warning, and/ or guiding traffic on public or private roads shall conform to the California MUTCD, latest edition.

5.6.6 LIGHT INDUSTRIAL DEVELOPMENT STANDARDS

This section includes the development standards for Light Industrial uses that establish the minimum criteria for the development of Industrials within the Planning Areas 2C, 3C, 5A, 5C and 6A ~~7A~~ specified within the Rich-Haven Specific Plan.
Refer to the Rich-Haven Specific Plan EIR for additional development criteria and policies that may affect but not be limited to the restriction of allowable land uses, the allowable Floor Area Ratio (FAR), overall site design, building heights and so on.

5.6.6.1 Light Industrial Development Standards

Industrial developments within the Rich Haven Specific Plan Industrial District shall comply with the Development Standards outlined below.

LIGHT INDUSTRIAL DEVELOPMENT STANDARDS

SITE REQUIREMENTS	
Minimum Site Area:	1 Acre (43,560 SF)
Floor Area Ratio:	0.55 (Max. Allowed)
Minimum Landscape Coverage:	10%
BUILDING REQUIREMENTS	
Minimum Building Setbacks: (1,2)	
• From Hamner Avenue	35’
• From Mill Creek Avenue	~~18’~~20’
• Commercial Mixed Use District	10’
• Interior Property Lines	0’
Parking & Drive Aisle Setbacks:	
• From Hamner Avenue	35’
• From Mill Creek Avenue	18’
• Interior Property Lines	0’
• Adjacent to Commercial Mixed Use District	10’
• Adjacent to Building Office Elements	10’
• Adjacent to Solid Building Wall	5’
• Primary Drive Aisle to Building	10’
• Secondary Drive Aisle (back alley) to Building	5’
Maximum Building Height:	
• Main Structure	55’
• Architectural Projections and Focal Elements Such As Towers, Cupolas, and other Appurtenances.(3)	65’
Maximum Building Area:	
• Industrial Uses	~~1,183,525 sf~~2,767,148

Walls, Fences, and Hedges	Per - Walls, Fences, and Obstructions of the Ontario Development Code Requirements.
ADJACENT TO RESIDENTIAL	
Building Setback from Property Line	100’
Perpendicular Parking Setback from Property Line	34’
Building Setback from Parking and Drive Aisle	10’
Landscape Buffer Width at PL without Parking	40’
Landscape Buffer Width at PL with Parking	34’
Minimum Screen Wall Height	8’
Maximum Screen Wall Height	14’
Maximum Light Height	14’

(1) All setback areas shall be landscaped.

(2) All setbacks are measured from the public right-of-way to habitable area not architectural appurtenance or projection. An architectural projection is defined as an element that articulates the building elevation such as eaves, window and door pop out surrounds, bay windows, pot shelves, chimneys, enhanced window sills, shutter details, window trim, balconies, pedestrian colonnades and other similar elements. Such elements may project a maximum of 3 feet into required setback areas.

(3) Architectural element only not to be used for signage, subject to Planning Director approval.

~~(3)~~

5.6.6.2 Signage Standards

All signage within the boundaries of the Rich-Haven Specific Plan shall conform to the City's Development Code and shall require a signage program.

5.6.6.3 Lighting

The design of lighting fixtures shall be approved by the City as part of the City's Development Plan Review.

5.6.6.4 Required Number of Parking and Loading Spaces

Off-street parking facilities in Industrial uses are to be provided for each use per City of Ontario Development Code.

Surface parking within the SCE Easement may be included towards meeting required City Parking subject to Planning Department review and Planning Director approval.

Surface Parking is permitted within SCE easements subject to approval from utility provider. This surface parking may be included towards meeting minimum parking requirements.

SECTION 6 - DESIGN GUIDELINES

INTRODUCTION 6.1

It is the intent of these guidelines to provide guidance and a framework for development of highly livable residential neighborhoods offering a variety of planning concepts, densities and home sizes. In addition, a unique, vibrant mixed-use district will serve the homes within the Rich-Haven Specific Plan area, as well as the surrounding communities.

These guidelines will further serve to implement the objectives, policies and principles of the City's TOP by drawing upon the rich architectural diversity, quality and history of Ontario's established neighborhoods. The scale, character, charm and authenticity of the City's historic districts will be interpreted and integrated into 21st Century forms and lifestyles. The palette of landscape materials, street fixtures & furniture, walls and monumentation will reinforce the unity of vision woven throughout the Rich-Haven Specific Plan area and tie the diverse districts and neighborhoods into a cohesive, livable, timeless community. Residential Guidelines can be found in Section 6.2 of this document. High Density Residential Design Guidelines can be found in Section 6.3. Regional Commercial/Mixed-Use Design Guidelines can be found in Section 6.5 of this document.

6.1.1 COMMUNITY DESIGN OBJECTIVES

- Secure the long-term vitality of the City's TOP by implementing its objectives, policies and principles.
- Create a land use concept that weaves a mixed use component into the community fabric.
- Create a community of cohesive neighborhoods that provide a wide variety of architectural configurations and housing prototypes.
- Create a palette of landscape materials, features and details that blend diverse architectural elements into cohesive neighborhoods.
- Create a hierarchy of pedestrian and vehicular circulation within the community.
- Utilize the existing easements for open space and trails.
- Provide safe and convenient pedestrian links from residential areas to school, park and commercial sites that serve the community.
- Provide the opportunity for diverse, pedestrian oriented recreation areas to serve as local parks.
- Create a palette of architectural styles and community features that evoke traditional, timeless qualities.
- Utilize architectural massing to define private yard areas.
- Create neighborhoods where residential entries and living areas dominate the primary street scene.

6.1.2 ARCHITECTURAL PHILOSOPHY

While the overall goal is one of architectural harmony, variety is an important objective, and is strongly encouraged. Quality is crucial in working towards architectural harmony. Quality if manifested in, but not limited to, materials, design and construction.

The function of the architectural portion of this supplement is to provide detailed guidance regarding the level of design, variety and quality is required of the architecture for these neighborhoods. Should there be a conflict between these guidelines and City ordinances, the more stringent shall govern.

The architectural parameters outlined in this section apply to all lots. Architecture shall have full architectural treatment on all four sides, regardless of orientation (a.k.a. 360º architecture). Additional enhancements shall be provided at corner lots and critical edges. Refer to Section 6.2.1.7 for specific criteria.

RESIDENTIAL DESIGN GUIDELINES 6.2

GENERAL DESIGN ELEMENTS & OBJECTIVES 6.2.1

The primary goal for the Rich-Haven community is to create homes with a balance of form, massing and scale that respects the critical relationship within and between the individual neighborhoods and the overall Rich-Haven community. The following principles establish the essential characteristics that will promote and support these goals:

6.2.1.1 A palette of styles, materials and details shall convey timeless qualities.

- Overarching architectural themes combine compatible historic architectural characters to create aesthetic harmony within and between neighborhoods.
- Use authentic exterior finish material and detailing.
- Windows and doors shall be positioned authentically and sensitively.
- Principal windows with recesses, surrounds, enhanced headers/sills, window groupings, or other decorative features for shadow, depth, and detail are required on all front elevations and elevations adjacent to a critical edge (see Section 6.2.1.7 for additional requirements at critical edges.)
- Use colors appropriate for the architectural style, with traditional colors for doors, windows, shutters, decorative iron and tile work, awnings, stucco, roofs and enriched materials. Permitted roof materials are limited to concrete or clay barrel tile, flat concrete or slate tile, simulated wood shakes and asphalt shingles (on Federalist, Cape Cod or similar style where shingles were traditionally appropriate).

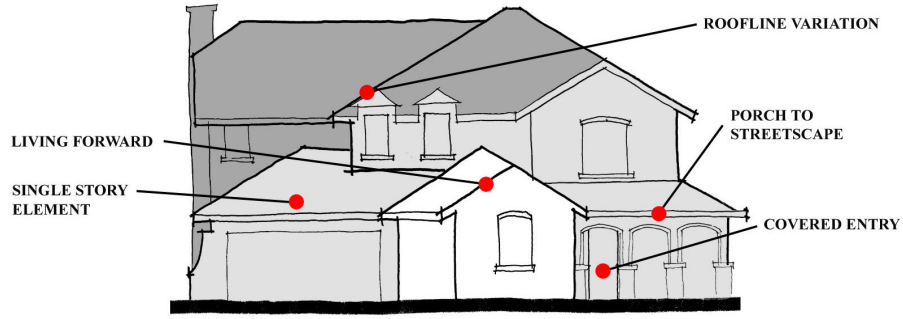
Covered porch with distinctive gable end treatment.

Forecourt door to walled patio area on an attached product personalizes and accentuates entry.

Recessed entry, roof articulated with dormer window above.

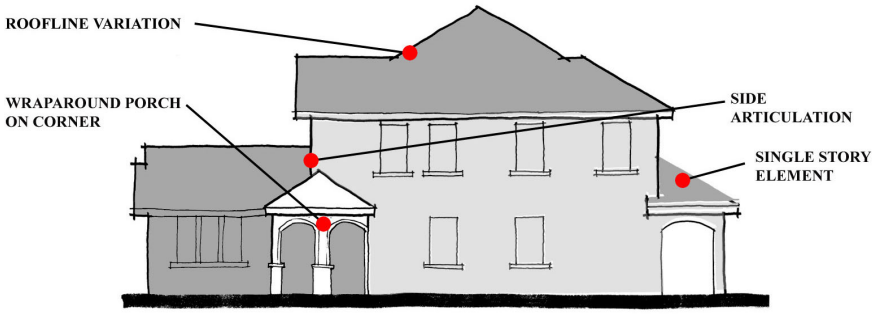
6.2.1.2 Homes shall orient to the street and be plotted with care and sensitivity to their environs.

- Individually site each home, taking into consideration adjacent plan types and yard orientations, landscaping, views and other adjacent features.
- Sensitively combine one & two story profiles within each home as well as within each neighborhood.
- Variable front setbacks may take into account: covered porches, porte-cocheres or other roofed features, not just the garage or habitable space.
- No two identical single-family plans shall be plotted next to each other. In the case of two plans side by side, one shall be reversed and each shall offer different elevations, details and color schemes.



6.2.1.3 Individual residential entry statements shall be emphasized.

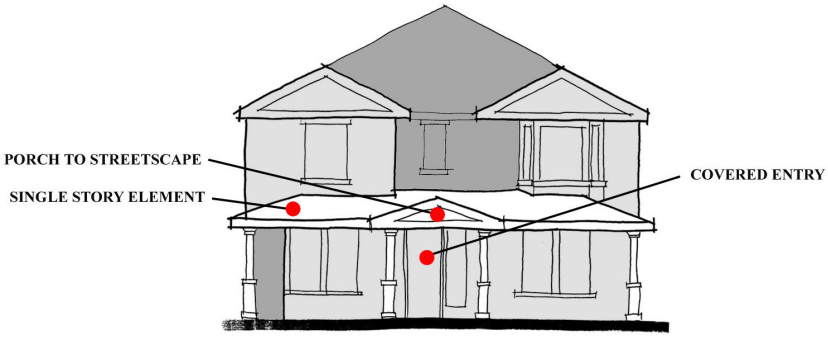
- Architectural designs shall utilize plan forms that emphasize the entry to each home by creatively and harmoniously combining porches, balconies and massing.
- Wing walls, buttresses, patio walls and/or gates, forecourt doors and covered walkways are all appropriate features to accentuate entries.
- All residences shall have their addresses illuminated as close to the front door as possible and the address numbers painted on the curb with white reflective paint on a black background.
- Where secondary access is provided via alleys or common drives, illuminated addresses shall be provided on or near the garage or gate serving the residence.



6.2.1.4 Scaled massing and roof forms, either symmetrical or asymmetrical, shall be appropriate to each architectural style.

- A minimum of three front façade breaks of horizontal and/or vertical orientation, each a minimum of 2' from the adjacent mass, shall be required.
- The rear elevations shall incorporate one façade break of at least 2' to create visual interest both individually and collectively as a neighborhood.
- Roof pitches shall be reinforce the intended architectural style. Where an architectural style dictates a steeper roof pitch, it is acceptable to limit that steeper pitch to accent roofs and not the entire home.
- Each architectural style shall exhibit historically accurate roof forms, i.e. gables, hips, sheds, or combinations thereof.
- Eaves and rakes shall be dependent on the architectural style to which they are applied.
- Dormers, where style dictates, are appropriate.
- Each architectural style has its own distinctive massing characteristics that shall be respected and reflected in its execution. A Federalist Colonial home is symmetrical reflecting its austere and traditional social roots whereas a Santa Barbara style home can be more relaxed and asymmetrical. Every style is not appropriate for every plan form and attempts to force a style upon an inappropriate plan form shall be prohibited.

CONVENTIONAL- ACCESS MASSING



FRONT ELEVATION
CONVENTIONAL ACCESS

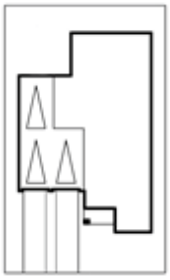
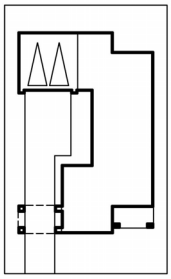
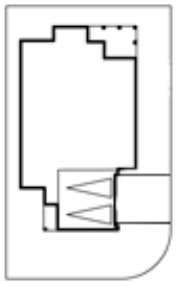
CONVENTIONAL ACCESS

ALLEY-ACCESS MASSING

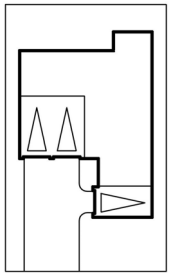


FRONT ELEVATION
ALLEY ACCESS





SIDE ELEVATION
ALLEY ACCESS



Detached, deep recessed garage.

Landscape strip centered on driveway.

Tandem

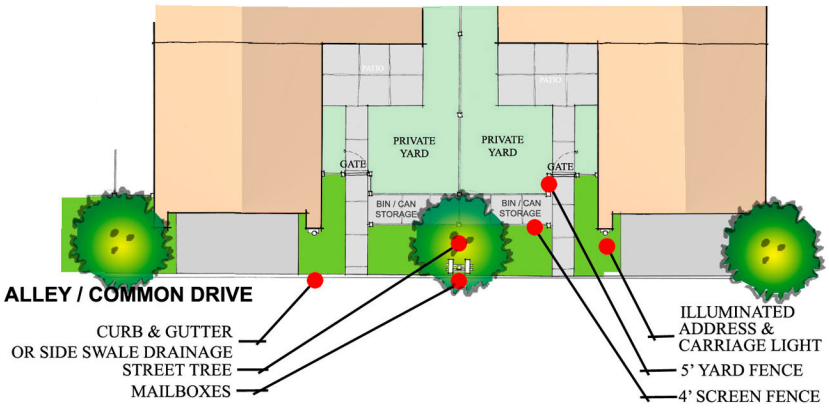
Deep Recessed

Corner Lot w/ Side Access

Side Load and/or Split

6.2.1.5 The garage door shall be de-emphasized in order to enrich the visual impact of the community.

- Proper treatment of the garage is critical in creating a sense of variety and quality.
- The number of homes with Garage Forward or Shallow-Recessed garage configurations shall be limited to 25% per builder project.
- On homes with Garage Forward or Shallow-Recessed garage configurations, garage doors shall be recessed or surrounded by pop-outs of 12" minimum.
- Pairs of single garage doors are encouraged.
- A 2' offset of one to two of three front-facing garage bays is required.
- Tandem arrangements are encouraged, as well as Swing In conditions.
- Attached homes having front entry garages adjacent to one another along interior lot lines require a 2' offset of garage faces.
- "Hollywood-Style" driveways, e.g. driveways with a 30" landscape strip centered on an 8' wide driveway, are encouraged. Locating a planter with sufficient area for a vine to trail onto a garage is also appropriate.
- Each driveway shall have either a pattern of scoring lines or enriched material to create a pleasing texture and design compatible with the architectural style.
- Innovative garage locations and configurations are encouraged - a minimum of one plan per conventional front loaded neighborhood is to have at least one of the following garage configurations:



1. ***Shallow-Recessed*** garages are recessed at least 5' from the habitable portion of the home.
2. ***Medium-Recessed*** garages are recessed at least 7' from the habitable portion of the home.
3. ***Side Load and/or Split*** garages are accessed 90 degrees from the street and drive cut, or a separate one or two car Garage is loaded 90 degrees from the third car space.
4. ***Deep-Recessed*** garages are located at the rear of the home, thus creating an opportunity for a porte-cochere and/or a "Hollywood-Style" landscape strip to enrich the driveway.
5. ***Corner Lot w/ Side Access*** garages are entered from the side of a home plotted on a corner lot, usually away from the home's entry. Using this condition, usually an alternate of a standard front loaded condition, enhances the side elevation of the home and creates a more articulated side elevation. ("Hollywood Style" driveway shown)
6. ***Tandem*** garages can also have a pull through condition with an additional garage door opposite the main garage door to allow passage through the garage to either the rear lot of the home or to an additional garage at the rear of the home.
7. See Section 6.3.4 for detached carports and parking structures at ***High Density Configurations.***

6.2.1.6 Alleys and common drives provide a number of useful design opportunities:

- Additional access ways serve as the capillaries of the community vehicular circulation system.
- They help to reduce the visual and traffic impact of garages on the primary street scene.
- They can help to reduce the visual impact of community walls.
- They can enhance the perception of community scale.
- They often serve as the residents' "front door"

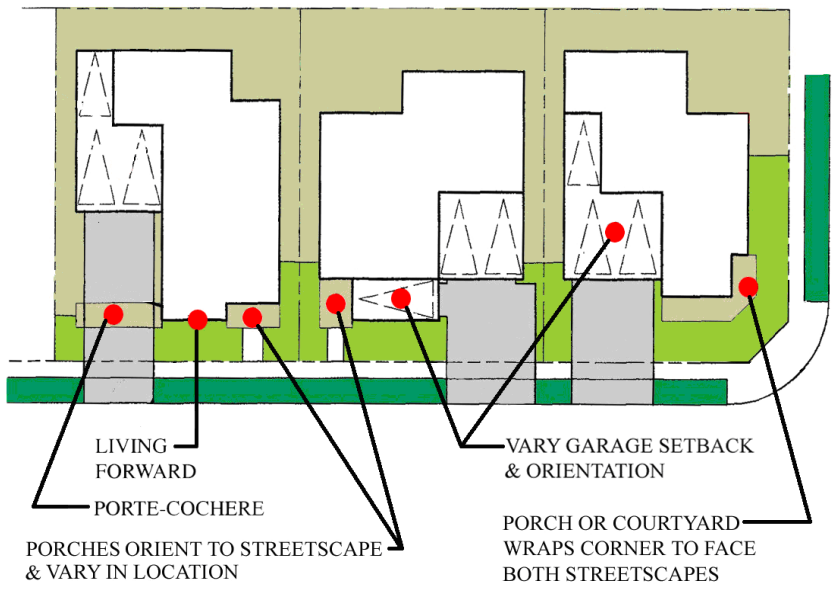
In order to optimize these opportunities, proposed alley or common drive programs should meet or exceed the following design objectives:

- Provide full architectural elevation enhancement along alleys and common drives.
- Provide addresses, mailboxes, guest parking, street signage, etc. to enhance the residential character of alleys and common drives.
- All residences shall have their addresses illuminated on or near the garage or gate serving the residence.
- Provide adequate landscape opportunities along alleys and common drives.
- Vary the height and location of walls and fences to add visual interest to alleys and common drives.
- No center swale drainage.
- Provide adequate home and street lighting along alleys and common drives.
- Provide adequate storage and/or screening for storage of trash and recyclables.

Pedestrian gate for side access at Common Drive with window treatment and landscaping on first floor.

Full architectural treatment with opportunities for low walls and landscaping as screening on common drives.

Mailboxes and trash screening



Deck

Wrap Around Porch

Porch

6.2.1.7 Corner lots and critical edges shall receive special attention by providing architectural and/or landscape enhancements.

- Variety is crucial to the success of Rich-Haven's streetscape, and enhanced architectural edge patterns are imperative in achieving that variety. Many lots in Rich-Haven are located on critical edges and/or front the street on two or even three sides. These elevations require additional architectural enhancements, varied setbacks, and building breaks that might normally be reserved for front elevations.
- More than 50% of corner lots must be plotted with a single story home, assuming a one story home is offered as a standard home. If not, a one story element of a two story home must be plotted adjacent to the more traveled street.
- Enhanced architecture shall be oriented to the street so that interactive elements along critical edges create a human scale and are consistent with the architectural style of the house. Interactive elements are those that orient the home to the street and engage it with the neighborhood. (Please see the table on the next page for appropriate locations of interactive elements) These elements include, but are not limited to the following:
    1. porches
    2. wrap around porches (at corners and critical edges)
    3. verandahs
    4. porte cocheres
    5. balcones
    6. decks
    7. porticos
    8. trellises
    9. arbors
    10. courtyards

- The quality design and orientation of interactive elements provide "eyes on the street" and contribute to pedestrian safety, a sense of place and activity, and neighborhood socialization. As a guideline, each house plan in a collection must contain at least one interactive element at the street elevation, with corner homes and homes on critical edges to have an additional interactive element on the side or rear elevation adjacent to that edge. The following locations shall be considered a critical edge:
  1. Neighborhood Entries
  2. Theme Streets
  3. Paths, Parks, Open Spaces and School Sites
  4. Roundabouts and Theme Intersections
  5. Alleys and Common Drives

Locating Interactive Elements	Porches	Wrap Around Porches (at corner conditions)	Verandahs or Patios	Porte-Cocheres	Balconies	Decks	Porticos	Trellises	Arbors	Courtyards
Neighborhood Entries	X	X	X	X	X	X	X	X	X	X
Theme Streets	X	X	X	X	X	X	X	X	X	X
Paths, Parks, Open Spaces and School Sites			X		X	X		X	X	X
Roundabouts and Theme Intersections		X	X		X	X		X	X	X
Alleys and Common Drives	X	X	X		X	X		X	X	X

Wrap material, gable end treatment and window detailing to side elevation where required.

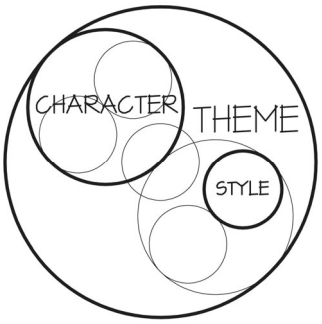
- Any elevation adjacent to a critical edge shall require additional architectural enhancement along with the required interactive elements. Refer to Section 6.2.4 for details appropriate for each architectural style. Architectural enhancements at critical edges shall meet or exceed the following:
  1. The use of additional finish materials and/or colors other than monochromatic stucco as appropriate for the architectural style, such as stone, brick, or siding.
  2. Window and Door enhancements of divided light patterns and trim or recesses appropriate for the architectural style
  3. Varied setbacks and building breaks.

6.2.2 ARCHITECTURAL CONFIGURATIONS

An architectural configuration is defined by the placement of the residential entry, orientation of the garage, and respective density. Prototypes are attached or detached product types relative to a specific architectural configuration. The use of multiple configurations and prototypes is required to achieve the desired variety across the community. Additional prototypes may be proposed or existing prototypes amended, subject to Planning Department review and approval. For detailed requirements and conditions specific to each prototype, refer to Section 5.4.2. The list of prototypes has been repeated below for reference.

- Conventional 7,200 SF Single Family Detached
- Conventional 4,500 SF Single Family Detached
- Conventional 2,700 SF Single Family Detached
- Two-Pack or "Z" Lot Single Family Detached
- Alley Loaded Single Family Detached
- Courtyard Single Family Detached Lots
- Cluster Single Family Detached
- Duplex/Triplex
- Row Town Homes
- Courtyard Town Homes
- Tuck Under Town Homes
- Tuck Under Apartments/Condominiums
- Wrap Apartments/Condominiums
- Podium Apartments/Condominiums

6.2.2.1 General Design Elements and Objectives



The following principles apply to all residential product types within Rich-Haven, regardless of lot size and architectural style:

- Create off set or articulated wall planes for front and rear elevations.
- Create the opportunity for front & rear single story elements or, in the case of higher density prototypes, reduce or 'step-down' the massing at key focal areas and intersections.
- Utilize roof hips, dormers, staggered gables, etc. to vary roof forms and create visual interest.
- Create the opportunity for usable outdoor spaces with front porches, courtyards, decks or balconies.
- Diversify the orientation and placement of porches, residential entries, and garages.
- Provide full architectural treatment & finish to any elevation facing a public street, park, or open space.
- For single family detached prototypes, a variation of at least 5'-0" in lot width or building frontage shall define a prototype.
- Consider dedicated plans or elevations for key entry, corner, or end locations. Corner plans or elevations could include multiple or "wrap around" porches, alternate garage locations/access, etc.
- All trash enclosures shall meet or exceed the City's requirements in addition to the following:
    1. Trash enclosures that are viewable from public areas should be adequately screened and constructed of materials complementary to the adjacent architecture.
    2. Trash enclosures, parking areas and service areas should be screened from adjacent residential neighborhoods.
    3. Where possible, trash enclosures should be:
        - Located to provide convenient access to residents and service providers. Attention should be paid to the proximity of adjacent residential entries, balconies, patios and yard areas.
        - Adjacent to main or major entries, but not as their "focal point."
    4. Screening may occur in the form of masonry walls, landscaping, trellises and/or other landscape or hardscape elements subject to City approval. Screening shall also mitigate overhead views from residents of adjacent buildings. The proposed height of the screen shall be adequate to fully obscure the view of the service area.
    5. All project sites shall be designed to meet all the Integrated Waste Department's requirements, including the requirements for Sizing of Storage, Location of Collection Area, Accessibility for Collection Vehicles, and Collection of Sorted/Diverted Waste Types.

This page intentionally left blank

ARCHITECTURAL THEMES

6.2.3

Overarching architectural themes combine compatible historic characters to create harmony within and between neighborhoods. Each character is defined by its historic influences and common features, but has distinct architectural styles associated with it. This architectural hierarchy of a style within a character within a theme is shown in the diagram at right. Rich-Haven has three diverse architectural themes that are based on the successful and dominant historic styles found in Ontario: Spanish, European and American.

6.2.3.1 Use of Architectural Themes

In ***Low Density neighborhoods***, the use of multiple themes with a range of styles is required. This approach creates variety in the massing, scale, proportions and materials, which is appropriate to the scale of the street scene. It also reflects the diversity found in the city's historic neighborhoods.

Small Lot, Medium Density and High Density neighborhoods shall utilize only one architectural theme of compatible architectural styles and characters. This approach creates the compatibility necessary to address the intensity, scale, and massing associated with medium and high-density prototypes in these neighborhoods.

6.2.3.2 Architectural Compatibility

Styles may be compatible with multiple themes when they have one or more of the following criteria in common:

- ***Styles have common historic influences.*** Characters that evolved from similar eras and regions of the world will have similar characteristics. For example, the European Cottage and the Tudor/English Country characters both originated from Western Europe and are characterized by steeper roof pitches, stone or brick accents and multi-paned windows and are therefore both part of the European theme.
- ***Styles utilize similar materials.*** Styles that grew from a variety of eras and regions can still have similar materials. For example, the Craftsman Bungalow character and the American Traditional character have different influences, but both will have flat tile roofs, siding and/or shingle feature walls, and may have brick accents; they are therefore both part of the American theme.

6.2.3.3 Architectural Compatibility Matrix

Selection of architectural styles for development shall be based on compatibility. Compatible architectural styles are identified on the following matrix.

Specific Plan Architectural Characters

COMPATIBILITY	ARCHITECTURAL STYLES	Early California		Spanish Eclectic		European Cottage		English Country		Craftsman Bungalow				American Traditional				Ranch		
		Spanish Colonial	Monterey	Mediterranean	Mission	French Eclectic	Richardsonian Romanesque	Tudor	Stick	Craftsman (Arts & Crafts)	Mediterranean Bungalow	California Bungalow	Colonial (East Coast) Bungalow	American Foursquare	Colonial	Dutch Colonial	Neoclassical	Western Farmhouse	California Ranch	Vernacular Bungalow
	THEMES																			
	Spanish	X	X	X	X						X	X						X	X	X
	European	X		X		X	X	X	X	X	X		X			X				
	American	X	X		X	X			X	X	X	X	X	X	X	X	X	X	X	X

- In the matrix, "X" denotes compatibility of the architectural style with a given theme.
- For common features that define the architectural styles listed in this matrix not found in these guidelines, refer to the City of Ontario's Historic Preservation Program and "A Field Guide to American Houses" by Virginia and Lee McAlester.
- This is not intended to be an all-inclusive list, but a reference for selecting compatible architectural characters and styles.
- Other styles may be considered at the discretion of the Planning Department.
- Proposed styles must meet the requirements of Section 6.2.4 and be detailed to a level equal to the examples shown therein.
- It is strongly recommended that if a different style is submitted, graphic examples of the historic style be provided for review prior to submittal.

ARCHITECTURAL CHARACTERS

6.2.4

The use of historic styles in residential architecture has been popular over the years and reinforces the timeless qualities of the community and its neighborhoods. This approach is encouraged within Rich-Haven, based on the following criteria:

Hierarchy of Architectural Elements – Details are critical to the success of an elevation at recreating a historic style. Each detail or element outlined falls under one of two types:

- **Required items** are critical to the elevation to achieve a specific character.
- **Selected items** will help to better define the character. These elements are more distinct and create differentiation between the Styles within the same Character. Not all elements are appropriate for all designs. Applicants must work with City staff to determine which elements are most appropriate for a given elevation.

Use of Architectural Elements – The level of architectural detailing necessary to achieve the architectural Character is relative to the scale of a home or residential building. The use of Required and Selected elements shall be scaled based on the width of the architectural frontage. Refer to the table at right to determine the percentage of Required items and the minimum number of Selected items required that will apply to the elevation (front, side or rear) that is fronting a street or critical edge. The minimum number of Selected Architectural items may be chosen from any architectural category (Materials & Details, Entries & Porches, etc.).

Architectural Quality – To promote the use of quality architectural details, two of the Required Architectural items may be substituted for one Selected Architectural item. Required Landscape and Hardscape items may not be substituted. Selected Landscape and Hardscape items enhance the minimum Required landscape, and are not appropriate as a substitute for them.

Do Not Mix Elements from Different Styles on One Elevation – Avoid mismatching elements from one style with another, e.g. No Gothic columns with Craftsman architecture on the same home.

- Refer to the City of Ontario's Historic Preservation Program and "A Field Guide to American Houses" by Virginia and Lee McAlester for common features characteristic of a given style not found in these guidelines.
- Each style shall offer the Required Elements as described in its associated Architectural Character. However, the elevation shall exhibit the unique characteristics of its particular Style, being certain to include the requisite number of Architectural and Landscape Selected items.

Authentic Architectural Treatment – There shall be a consistent level of authenticity, regardless of the chosen style.

- All elements must be appropriate for the proposed elevation and are subject to approval by the City of Ontario.
- Additional or alternate Selected items may be required to create enough differentiation between styles within the same Character and Theme.

Architectural Frontage	Required Architectural Items	Selected Architectural Items	Selected Landscape Items	Selected Hardscape Items
Fifty Feet or Greater (≥50')	100%	4	2	2
Forty Feet or Greater (40' - 49')	90%	4	2	2
Thirty Feet or Greater (30' - 39')	80%	3	1	1
Less than Thirty Feet (<30')	70%	3	1	1

- Refer to Section 6.2.1.7 for additional criteria on Corner Lots and Critical Edges.
- High Intensity Attached prototypes are subject to 75% of required architectural items.

Historic Background

The Early California character is reminiscent of some of the earliest houses in the United States, located in formerly Spanish Territories. This rural character includes the Spanish Colonial and Monterey styles. Early California homes are defined by rustic details and simple forms that define a central courtyard. These humble homes in remote outposts often began as only one room, and grew over time. The few decorative details can be found in the porches and balconies, window and door treatments, and courtyards.

Landscape in the Early California character tends to be minimal in design and focused on efficient useable space. Landscape design emphasizes planes, geometric shapes, and formal layouts.
Planting is Mediterranean or California Native and consists of generally drought-tolerant plant material.

6.2.4.1 Early California Character

6.2.4.1.1 Architectural Styles

Early California styles include, but are not limited to:

- Spanish Colonial
- Monterey

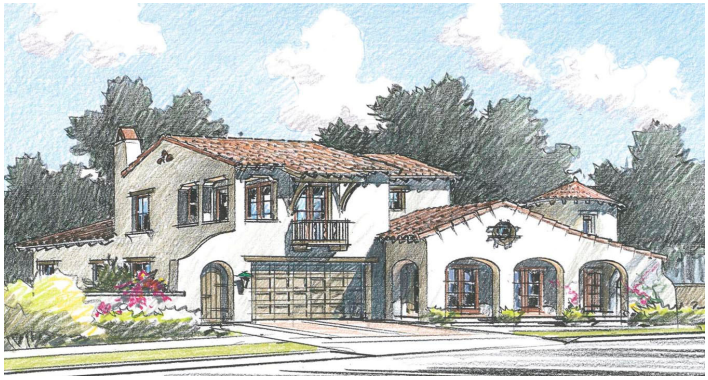
6.2.4.1.2 Architectural Massing & Proportion

Required:

- Boxy and simple massing, can be symmetrical or asymmetrical.
- Proportions were more horizontal and humble than vertical and imposing.

Selected:

- Plan designed around an interior courtyard.
- Rambling floor plans with separate roof forms for each element.



6.2.4.1.3 Architectural Materials & Details

Required:

- Stucco with smooth to light lace texture – specialty textures to be reviewed by City staff.
- Trim can be either stucco or timber.
- Simple, expressive detailing devoid of excessive ornamentation.
- Simple wrought iron work in balconies, window grilles, handrails, doors, gates, hardware and fences.

Selected:

- First and second stories can be of different materials as seen in the Monterey style, utilizing a combination of brick and stucco or stucco and siding.
- Heavy timber detailing (beams, out-lookers, posts) in either wood or wood-like foam.
- Simple rustic shutters.

Conventional Single Family Detached prototype depicting the Early California style.

6.2.4.1.4 Entries & Porches

Required:

- Long narrow porches or recessed front door.
- Porch roof supported by heavy timber posts or large stucco columns.
- Decorative light fixtures, wall and/or ceiling hung.

Selected:

- Square columns are preferred over round, but all columns are encouraged.
- Entry Courtyards with relationship to interior spaces.

Walled Entry Courtyard.

6.2.4.1.5 Doors & Windows

Required:

- Multi panel doors with little or no glass and sidelights or transoms.
- Windows are vertically oriented.
- Raised Panel entry doors.
- Recessed feature window and door openings.

Selected:

- Roofed or open balconies with either wood, wrought iron or wood rails.
- Arched top doors.
- Gates.

Heavy Timber deck.

Arched feature window.

Porch with heavy timber detailing.

Simple Massing with Modest Wrought Iron Accents at Balcony and entry Awnings.

Heavy timber Deck Overlooking Entry Courtyard below

Simple roof forms with exposed rafter tails, porch with shed roof.

Contrasting dark brown fascia and window trim with pale stucco body and red "S" tile roof.

Low pitched gabled roof forms with simple pipe detailing at gable ends.

6.2.4.1.6 Roof Forms & Materials

Required:

- Predominantly gable and shed roof forms, with minimal hips.
- Open eaves, not boxed.
- Fascia may either be stucco or wood.
- Clay or concrete – Barrel or "S".
- Low-pitched roofs (3:12 – 5:12).
- Simple gable end accents of stucco or tile vents.

Selected:

- Eaves often with simple, rustic rafter tails.
- Boosted tiles add to authenticity.
- Extended eaves over windows with heavy timber bracing or brackets.
- Board and batten or siding at gable ends can be seen in the Monterey style.

6.2.4.1.7 Color

Required:

- Stucco - White, Eggshell or other light earth tones.
- Roof Tile – Earthy reds, browns and terra cotta tones.

Selected:

- Trim (Wood) – Earth toned dark.
- Trim (Stucco) – Darker than stucco, lighter than wood trim.
- Entry Doors and other Accents – Bright accent colors to be consistent with historic precedent.

6.2.4.1.8 Landscape

Required:

- Plant types shall be chosen from the Community Plant Matrix (Section 7.7).
- Front yard landscape is required to be installed by the builder (Section 5.4.1.9).
- Front yards shall include a minimum of one 24" box tree
- Plant Color Palette shall coincide with designated Planning Area requirement (Section 6.4).
- Tree quantities shall be per guidelines set forth by the City of Ontario.
- Trees shall be installed at a minimum 24" box size.
- A minimum of 5 different shrub species shall be used.
- Shrub/groundcover areas other than lawn areas shall contain 75% shrub, 25% groundcover coverage with 5 gallon shrubs spaced at 3' O.C., and 1 gallon shrubs spaced at 2' O.C~~., and flatted groundcovers spaced at 12" O.C~~.
- Vines shall be attached to all public facing property walls sized at 1 gallon and spaced 10'-15' O.C. maximum.
- Shrub/groundcover areas other than lawn shall be top-dressed with a 3" deep layer of shredded wood fiber mulch.
- Lawns shall be sodded.
- Automatically controlled irrigation system conforming to all water conservation Ordinances set forth by the City of Ontario.
- Simple landscape layouts utilizing defined edges.

Selected:

- Tree quantities to exceed minimum requirements.
- Additional plant species over the minimum to include flowering trees and/or shrubs and annuals.
- Tree sizing to exceed the minimum 24" box size.
- Variety of shrub sizing to include 15% - 15 gallon, 65% - 5 gallon, and 20% - 1 gallon shrubs.
- Shrub/groundcover areas, other than lawn areas, to contain 100% shrub coverage with mulch between shrubs at time of planting.

6.2.4.1.9 Hardscape

Required:

- Defined logical hardscape to all front doors and private yard entries.
- Paving material shall be concrete (broom finish) or decomposed Granite.
- Colors and finishes shall be compatible and/or harmonious with adjacent architecture.

Selected:

- Enhanced concrete finish to be sandblasted, acid etched, and/or integrally colored.
- 3' high maximum decorative landscaping walls and pilasters of smooth or fine stucco plaster finish.
- Details and accents to include clay pots and wrought iron ornamentation.

- Multiple paving materials and/or finishes.

Historic Background

The Spanish Eclectic character is influenced by Italian, Moorish, Gothic, Byzantine and Renaissance detailing found in Spain and Portugal. This character includes the Mediterranean and Mission styles. It is enhanced with more elaborate ornamentation as seen in Mexico than its more modest Early California precedents. The entire history of Old and New World Spanish architecture influences this character's unusually rich and varied decorative treatments. The Spanish Eclectic character gained popularity and validation primarily after the Panama-California Exposition in San Diego in 1915. Bertram Goodhue adapted the richness of Spanish architecture in Latin America, going beyond the California "Mission" style, and demonstrated that this character could withstand academic and professional scrutiny and be worthy of its own place in architectural history.

Landscaping for the Spanish Eclectic character introduces rich hardscape materials and details, as well as a varied and ornamental planting palette. Layouts can be either formal or informal and utilize clay tile paving and decorative ceramic tile inserts. Planting is used for its form and color as well as its function and provides colorful accents throughout the living space.

6.2.4.2 Spanish Eclectic Character

6.2.4.2.1 Architectural Styles

Spanish Eclectic styles include, but are not limited to:

- Mediterranean
- Mission

6.2.4.2.2 Architectural Massing & Proportion

Required:

- Asymmetrical massing.
- Often combining one story elements on a two story home.
- Most commonly L-shaped or rambling floor plan.

Selected:

- Round turret or tower elements.

6.2.4.2.3 Architectural Materials & Details

Required:

- Stucco with smooth to light lace texture – specialty textures to be reviewed by staff.
- Trim can be either stucco, cut stone or timber.
- Ornate low-relief carvings, highlighting arches, columns and window surrounds.
- Decorative wrought iron in balconets, window grilles, handrails, doors, gates, hardware and fences.

Selected:

- Shutters with appropriate decorative wrought iron hardware such as shutter dogs, straps, clavos and/or hinges.
- Sculpted wing walls.
- Clay tile (or other materials, similar in appearance) vents, guardrail in-fills and/or screens.
- Niches or stucco recesses.
- Ceramic tile insets, coping or edges.

Conventional Manor Home prototype (triplex with front and side garage access) depicting the Spanish Eclectic style.

6.2.4.2.4 Entries & Porches

Required:

- Arcaded porches or recessed front door.
- Porch roof supported by large columns with arches (half round, elliptical or eyebrow) between columns.
- Decorative light fixtures, wall and/or ceiling hung.

Selected:

- Square columns are preferred over round, but all columns are encouraged.
- Entry Courtyards.

6.2.4.2.5 Doors & Windows

Required:

- Multi panel doors with little or no glass and sidelights or transoms.
- Windows are vertically oriented.
- Raised Panel entry doors often emphasized by columns, pilasters, or patterned tiles.
- Arched and recessed feature window, of half round, parabolic or elliptical shape.

Selected:

- Roofed or open balconies with either wood, wrought iron or wood rails.
- Arched top doors.
- Gates.

Round turret or tower with recessed front door.

Porch of large stucco columns with arches.

Recessed entry and windows, decorative wrought iron detailing at awnings.

Arched recessed porch and shaped parapets.

Recessed windows, wrought iron balcony accent and arcade.

Round turret with arched entry door.

Low pitched gabled roof with simple recess at gable ends and cementitious window and door surrounds.

"S" tile roof with open eaves accentuated by decorative eave treatment and tile venting.

Tight rake with no exposed fascia, recessed feature window and decorative chimney cap.

6.2.4.2.6 Roof Forms & Materials

Required:

- Predominantly gables with occasional hips and parapets.
- 12" or tight eaves.
- Tight rakes, often with no fascia exposed.
- Fascia may either stucco or wood.
- Clay or concrete – Barrel or "S".
- Low-pitched roofs (3:12 – 5:12).
- Decorative gable end treatments of stucco recesses, tile vents and/or wrought iron accents.

Selected:

- Rakes with scalloped detailing.
- Eaves with decorative stucco profile or corbels.
- Elaborate chimney caps.
- Extended eaves over windows with decorative bracing or brackets.
- Shaped dormers or parapets.

6.2.4.2.7 Color

Required:

- Stucco - White, Eggshell or other light earth tones.
- Roof Tile – Earthy reds, browns and terra cotta tones.

Selected:

- Trim (Wood) – Earth toned dark.
- Trim (Stucco) – Darker than stucco, lighter than wood trim.
- Entry Doors and other Accents – Bright accent colors to be consistent with historic precedent.

6.2.4.2.8 Landscape

Required:

- Plant types shall be chosen from the Community Plant Matrix (Section 7.7).
- Front yard landscape is required to be installed by the builder (Section 5.4.1.9).
- Front yards shall include a minimum of one 24" box tree
- Plant Color Palette shall coincide with designated Planning Area requirement (Section 6.4).
- Tree quantities shall be per guidelines set forth by the City of Ontario.
- Trees shall be installed at a minimum 24" box size.
- A minimum of 5 different shrub species shall be used.
- Shrub/groundcover areas other than lawn areas shall contain 75% shrub, 25% groundcover coverage with 5 gallon shrubs spaced at 3' O.C., and 1 gallon shrubs spaced at 2' O.C.~~, and flatted groundcovers spaced at 12" O.C~~.
- Vines shall be attached to all public facing property walls sized at 15 gallon and spaced 25' O.C. maximum.
- Shrub/groundcover areas other than lawn shall be top dressed with a 3" deep layer of shredded wood fiber mulch.
- Lawn areas shall be sodded.
- Automatically controlled irrigation system conforming to all water conservation Ordinances set forth by the City of Ontario.
- Simple landscape layouts utilizing defined edges.

Selected:

- Additional plant species over the minimum to include flowering trees and/or shrubs and annuals.
- Tree sizing to exceed the minimum 24" box size.
- Variety of shrub sizing to include 15% - 15 gallon, 65% - 5 gallon, and 20% - 1 gallon shrubs.
- Shrub/groundcover areas, other than lawn areas, to contain 100% shrub coverage with groundcover between shrubs at time of planting.

Smooth stucco pilasters with ceramic tile detailing.

6.2.4.2.9 Hardscape

Required:

- Defined logical hardscape to all front doors and private yard entries.
- Paving material shall be concrete (broom finish) or clay tile.
- Colors and finishes shall be compatible and/or harmonious with adjacent architecture.

Selected:

- Integral colored concrete paving with stamped tile pattern.
- 3' high maximum decorative landscaping walls and pilasters of smooth or fine stucco plaster finish.
- Details and accents to include clay pots, and/or ornamental tiles.
- Multiple paving materials and/or finishes.

Historic Background

The European Cottage character captures natural elements and rustic materials found in medieval Europe and the United Kingdom. This character includes the French Eclectic and Richardsonian Romanesque styles. Characterized by an asymmetrical, romantic farmhouse or informal gentrified form, the character is dependent on steeply hipped and/or gabled roofs. Tower elements or sculptured swooping walls at the front elevation break up the façade to create an absence of a visually stiff cross gable. The impression offered by this character is one of timeless charm and human scale.

Landscape associated with European Cottage architecture primarily utilizes natural building materials, and informal layouts. Landscape generally consists of colorful plantings, flowering borders, vines, and deciduous trees.

6.2.4.3 European Cottage Character

6.2.4.3.1 Architectural Styles

European Cottage Styles include, but are not limited to:

- French Eclectic.
- Richardsonian Romanesque.

6.2.4.3.2 Architectural Massing & Proportion

Required:

- Asymmetrical massing.
- Vertical proportions, smaller openings.

Selected:

- Round Tower.

6.2.4.3.3 Architectural Materials & Details

Required:

- Trim can be either stucco, wood or clad foam/simulated wood and/or stone.
- Stucco, brick or stone exterior material combinations.

Selected:

- Shutters are predominately featured, along with appropriate iron hardware. Shutter shape to match shape of window. The use of rectangular shutters with arched top windows (and vice versa) is prohibited.
- Recessed stucco accents (pigeoniers, arched openings, etc.) with smooth stucco finish.
- Sculpted stucco walls.
- Wood siding accents.
- Wrought iron or cast stone balusters.
- Juliet style balconies of wood and/or wrought iron.

Alley Loaded Single Family Detached prototype depicting the European Cottage style.

6.2.4.3.4 Entries & Porches

Required:

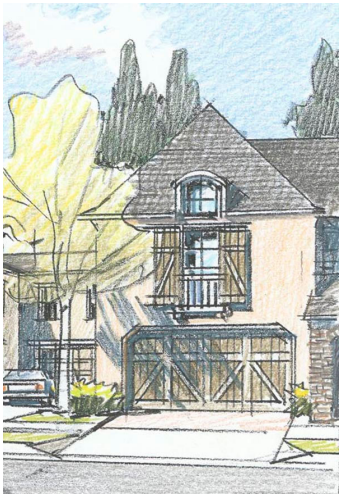
- Recessed entry can be arched and/or have quoins and pediments.

Selected:

- Porches can be defined by stone columns or multi-columned wood posts.
- Decorative light fixtures can be ceiling or wall mounted.

6.2.4.3.5 Doors & Windows

Required:



- Extensive use of multi-paned glass doors (French doors).
- Single entry door, can be accented with transom or side-lights.
- Windows are vertically oriented with multi-paned accents (diamond or rectangular pattern).

Selected:

- Shallow arched windows as accents.
- Stained glass accent windows.
- Recessed or bay window as feature.
- Pot-shelves or window boxes at focal windows.

Recessed entry door with multi-paned windows and decorative light fixtures.

Windows are placed in alignment. Garage door is enhanced and recessed with shadow line even though it is located forward in plan.

Use of multi-paned dormer and bay windows.

Massing can be simple, steep roof pitch with a focus on a recessed entry and multi-paned windows.

Steep roof pitches with articulated massing and gable end venting as accents.

Siding accent at gable end, use of pot shelves and Juliet balconies to activate the street scene.

Light stucco with contrasting dark window trims and roof colors.

6.2.4.3.6 Roof Forms & Materials

Required:

- Gable, hip and Dutch gable roof forms.
- Front facing gables as dominant element.
- 8:12 pitch at accent roofs.
- Gable end venting in various styles.

Selected:

- Wide variety of roof dormer forms that break the fascia, continuing the wall plane below.
- Minimal overhangs – approximately 8" with boxed eaves.
- Slate, faux shingle/shake and/or asphalt shingles are appropriate.
- Accentuated with "bell cast" or flared roof treatments at the eave.
- Metal accent roofs at bay windows or turret.
- Half stucco chimneys with stone or brick on the lower portion.

6.2.4.3.7 Color

Required:

- White or off-white, tan or light gray earth tones.
- Trim colors typically contrast base color.

6.2.4.3.8 Landscape

Required:

- Plant types to be chosen from the Community Plant Matrix (Section 7.7).
- Front yard landscape is required to be installed by the builder (Section 5.4.1.9).
- Front yards shall include a minimum of one 24" box tree
- Plant Color Palette to coincide with designated Planning Area requirement (Section 6.4).
- Tree quantities shall be per guidelines set forth by the City of Ontario.
- Trees to be installed at a minimum 24" box size.
- A minimum of 5 different shrub species shall be used.
- Shrub/groundcover areas other than lawn areas to contain 75% shrub, 25% groundcover coverage with 5-gallon shrubs spaced at 3' O.C., and 1-gallon shrubs spaced at 2' O.C~~., and flatted groundcovers spaced at 12" O.C~~.
- Vines shall be attached to all public facing property walls sized at 15 gallon and spaced 25' O.C. maximum.
- Shrub/groundcover areas other than lawn shall be top dressed with a 3" deep layer of shredded wood fiber mulch.
- Lawn areas shall be sodded.
- Automatically controlled irrigation system conforming to all water conservation Ordinances set forth by the City of Ontario.
- Informal landscape layouts.

Selected:

- Additional plant species over the minimum to include flowering trees or shrubs, trees or shrubs with colored foliage, and annuals.
- Tree sizing to exceed the minimum 24" box size.
- Variety of shrub sizing to include 15% - 15 gallon, 65% - 5 gallon, and 20% - 1 gallon shrubs.
- Shrub/groundcover areas, other than lawn areas, to contain 100% shrub coverage with groundcover between shrubs at time of planting.
- Flowering borders of shrubs and perennials.

6.2.4.3.9 Hardscape

Required:

- Defined logical hardscape to all front doors and private yard entries.
- Paving materials to be concrete (broom finish), decomposed Granite, Flagstone, or Cobble.
- Colors and finishes compatible and/or harmonious with adjacent architecture.

Selected:

- Enhanced concrete finish to be sandblasted, acid etched or integrally colored with stamped Flagstone or Cobble pattern.
- 3' high maximum decorative landscaping walls and pilasters with stacked stone or cobble stone veneer.
- Details and accents to include clay pots, flower boxes, wood arbors, and/or wood trellises.

- Multiple paving materials and/or finishes.

Historic Background

The Craftsman Bungalow character evolved from the late 19th century English Arts & Crafts movement as a reaction against the Industrial Revolution. This movement emphasized the harmonious relationship between Nature and Man, in contradiction to the Victorian era that preceded it. California architects like Bernard Maybeck and Greene & Greene continued developing this movement with their intricate details, characterized by the use of hand finished materials, rusticated texture and Asian influence.

The Craftsman variation of the Bungalow became increasingly popular with first time home buyers in the early 20th century. They were charming, modest and the answer to homebuyers looking for inexpensive yet stylish homes. They could be constructed from kits purchased through catalogues or built by local contractors with stock plans. The Craftsman Bungalow character includes the Craftsman, Mediterranean Bungalow, California Bungalow, and Colonial Bungalow styles.

Craftsman landscape design focuses on an artistic use of natural, built, and recycled materials including stone, brick, artistic tile, and wood. Planting emphasizes form, accent, and integration with arts and crafts elements, and can take on both formal and informal arrangements.

6.2.4.4 Craftsman Bungalow Character

6.2.4.4.1 Architectural Styles

Craftsman Bungalow Styles include, but are not limited to:

- Craftsman (Arts & Crafts)
- Mediterranean Bungalow
- California Bungalow
- Colonial (East Coast) Bungalow

6.2.4.4.2 Architectural Massing & Proportion

Required:

- Asymmetrical massing, usually one but occasionally two stories.
- Horizontal massing with deep overhangs.

6.2.4.4.3 Architectural Materials & Details

Required:

- Stucco body with gable end and body accents in combinations of wood shingles, siding, board and batten.
- Wood porch rails.

Selected:

- Simple and large gable end vents.
- Exposed rafter tails, usually decorative.
- Smooth stucco, lapped siding or shingles.
- Foundation or wainscot accent using stone (usually river rock) or brick.
- Stone or brick with rag finished grout.

Alley Loaded Single Family Detached prototype depicting the Craftsman Bungalow style.

6.2.4.4.4 Entries & Porches

Required:

- Wide and deep front porches in partial or full front massing.
- Exposed wood post and beam detailing with battered stone or brick pilaster base.
- Horizontally oriented 1x4 guard/porch rails.

6.2.4.4.5 Doors & Windows

Required:

- Divided or undivided glass or multi-panel solid with side lights or transoms.

Selected:

- Windows with multi-paned upper sash.
- Wood or wood-like trim surrounds.
- Grouped or bands of windows.

Articulated and asymmetrical two-story massing, extensive shingle siding, large porch, and appropriate geometry for divided lights and multi-paned glass.

Exposed wood columns with battered stone base at porch.

Covered porch with paneled wood siding and wood trims.

Tapered posts with brick bases, grouped windows and wood detailing.

Entry door with side lights, shingle siding and wood posts with brick bases.

Low slope gabled roofs with large overhangs.

Low slope roof with large, exaggerated overhangs with wood supports and fascia.

6.2.4.4.6 Roof Forms & Materials

Required:

- Low-pitched gabled roofs with the occasional shed.
- 3:12 – 4:12 roof pitch.
- Flat concrete or slate-type tile.

Selected:

- Extended eaves – 18" minimum overhang, accentuated with exposed and decorative rafter tails.
- Sculpted fascia often extends past adjacent rafter tails.
- Exposed attic vents at gable ends.
- Gabled or shed dormers.
- Triangle knee bracing on gable ends.
- Additional stick-work in gables.
- False beams under gables.

6.2.4.4.7 Color

Required:

- Wide variety from light to dark with contrasting or complementary trim.

Dark Earth tones with wood gable end and heavy timber accents.

6.2.4.4.8 Landscape

Required:

- Plant types to be chosen from the Community Plant Matrix (Section 7.7).
- Front yard landscape is required to be installed by the builder (Section 5.4.1.9).
- Front yards shall include a minimum of one 24" box tree
- Plant Color Palette to coincide with designated Planning Area requirement (Section 6.4).
- Tree quantities shall be per guidelines set forth by the City of Ontario.
- Trees to be installed at a minimum 24" box size.
- A minimum of 5 different shrub species shall be used.
- Shrub/groundcover areas other than lawn areas to contain 75% shrub, 25% groundcover coverage with 5-gallon shrubs spaced at 3' O.C., and 1-gallon shrubs spaced at 2' O.C~~., and flatted groundcovers spaced at 12" O.C~~.
- Vines shall be attached to all public facing property walls sized at 15 gallon and spaced 25' O.C. maximum.
- Shrub/groundcover areas other than lawn shall be top dressed with a 3" deep layer of shredded wood fiber mulch.
- Lawn areas shall be sodded.
- Automatically controlled irrigation system conforming to all water conservation Ordinances set forth by the City of Ontario.

Selected:

- Additional plant species over the minimum to include flowering trees and/or shrubs, and annuals.
- Accent plants with sculptural forms and unique qualities.
- Tree sizing to exceed the minimum 24" box size.
- Variety of shrub sizing to include 15% - 15 gallon, 65% - 5 gallon, and 20% - 1 gallon shrubs.
- Shrub/groundcover areas, other than lawn areas, to contain 100% shrub coverage with groundcover between shrubs at time of planting.

6.2.4.4.9 Hardscape

Required:

- Defined logical hardscape to all front doors and private yard entries.
- Paving materials to be Concrete (broom finish), decomposed Granite, Flagstone, or Brick.
- Colors and finishes compatible and/or harmonious with adjacent architecture.

Selected:

- Enhanced concrete finish to be sandblasted, acid etched, or integrally colored with stamped flagstone or brick pattern.
- 3' high maximum decorative landscaping walls and pilasters with brick or stone veneer and caps.
- 3' high maximum ornamental wood fencing with artistic designs.
- Details and accents to include glazed or stone pots, wood arbors, and/or hand-painted ceramic tile.
- Multiple paving materials and/or finishes.

Historic Background

The American Traditional character evolved from the first homes built in the New England Colonies and the plantation homes of the South. This character includes the American Foursquare, Colonial, Dutch Colonial, and Neoclassical styles. As lifestyles evolved from the one story saltbox, the need for more space and specific room functions was necessary, leading to the addition of second stories, dormers in gabled roofs and wings of smaller continuous gable forms. Details of this character demonstrate the Colonial Revival influence with the use of brick veneer and/or wood siding.

Landscape related to Traditional architecture lends itself to efficiency and durability while incorporating natural building materials and flowering accents. Planting styles originated from Colonial America and reflect pastoral landscape elements such as large evergreen and deciduous trees and large sweeps of lawn.

6.2.4.5 American Traditional Character

6.2.4.5.1 Architectural Styles

American Traditional styles include, but are not limited to:

- American Foursquare
- Colonial
- Dutch Colonial
- Neoclassical

6.2.4.5.2 Architectural Massing & Proportion

Required:

- Symmetrical facades.
- Two-story massing.

6.2.4.5.3 Architectural Materials & Details

Required:

- Predominantly stucco sand finish.

Selected:

- Accents of brick, horizontal siding and/or shingle.

Alley Loaded Manor Home Triplex prototype depicting the Traditional style.

Alley Loaded Single Family Detached prototype depicting Traditional style.

6.2.4.5.4 Entries & Porches

Required:

- Centered porch typically expressed as a projecting pediment with classical columns and front facing gable end roof.

Selected:

- Can utilize large stucco pillars, most often 4 in number, supporting a covered gallery of lighter wooden columns or open deck above.
- Open railing at porch or gallery/deck above.

6.2.4.5.5 Doors & Windows

Required:

- Wood paneled front door.
- Evenly spaced multi-paned windows with wood or wood-like trim.

Selected:

- Louvered shutters.
- Semi-circular front door or elliptical transom light above.

Paneled front door with arched transom above, classical columns supporting gabled porch roof.

Multi-paned windows with shutters and lap siding.

Multi-paned window in hipped dormer, extensive use of shingle siding.

One story massing with windows grouped to mimic French doors with side lights, gable end treated with vent.

Symmetrical proportions and window placement with classical portico element at entry.

Very simple and straight forward massing is successful with quality materials like wood paneling and brick veneer, colors contrast with bright white trims.

Massing can be more articulated with materials appropriate to each mass, combining stucco, siding and brick on one elevation.

6.2.4.5.6 Roof Forms & Materials

Required:

- Front to back gable or hipped roof as primary roof form with secondary front facing gables or shed elements.
- Flat concrete or composition tile.
- 5:12 to 7:12 pitches with overhangs from 12" to 24".

Selected:

- Dutch gable or gambrel roof.
- Gable end venting.
- Dormers.
- Masonry chimneys.
- Wide band, frieze trim or dentils at eave.

6.2.4.5.7 Color

Required:

- White with dark accents or light color with white accents.

Barn shaped roof with coloring similar to siding is accented with bright white trim and dark shutters, use of large multi-paned French doors and windows.

6.2.4.5.8 Landscape

Required:

- Plant types to be chosen from the Community Plant Matrix (Section 7.7).
- Front yard landscape is required to be installed by the builder (Section 5.4.1.9).
- Front yards shall include a minimum of one 24" box tree
- Plant Color Palette to coincide with designated Planning Area requirement (Section 6.4).
- Tree quantities shall be per guidelines set forth by the City of Ontario.
- Trees to be installed at a minimum 24" box size.
- A minimum of 5 different shrub species shall be used.
- Shrub/groundcover areas other than lawn areas to contain 75% shrub, 25% groundcover coverage with 5-gallon shrubs spaced at 3' O.C., and 1 gallon shrubs spaced at 2' O.C.~~, and flatted groundcovers spaced at 12" O.C~~.
- Vines shall be attached to all public facing property walls sized at 15 gallon and spaced 25' O.C. maximum.
- Shrub/groundcover areas other than lawn shall be top-dressed with a 3" deep layer of shredded wood fiber mulch.
- Lawn areas shall be sodded.
- Automatically controlled irrigation system conforming to all water conservation Ordinances set forth by the City of Ontario.
- Large sweeping lawns.

Selected:

- Additional plant species over the minimum to include flowering trees and/or shrubs, and annuals.
- Accent plants with sculptural forms.
- Tree sizing to exceed the minimum 24" box size.
- Variety of shrub sizing to include 15% - 15 gallon, 65% - 5 gallon, and 20% - 1 gallon shrubs.
- Shrub/groundcover areas, other than lawn areas, to contain 100% shrub coverage with groundcover between shrubs at time of planting.

6.2.4.5.9 Hardscape

Required:

- Defined logical hardscape to all front doors and private yard entries.
- Paving materials to be Concrete (broom finish), decomposed Granite, Flagstone, or Brick.
- Colors and finishes compatible and/or harmonious with surrounding architecture.

Selected:

- Enhanced concrete finish to be sandblast, acid etch, or integral colored and stamped flagstone or brick pattern.
- 3' high maximum decorative landscaping walls and pilasters with brick or stone veneer and caps.
- 3' high maximum decorative fencing to be vertical wood picket or vertical tubular steel picket with ornamentation.
- Details and accents to include wood or iron trellises, and/or iron, brass, or aluminum ornamentation.
- Multiple paving materials and/or finishes.

Historic Background

Early California ranchers developed the first California adaptation of the Ranch styles in response to their lifestyle, available materials and environmental considerations. The Ranch character includes the Western Farmhouse, California Ranch, and Vernacular Bungalow styles. The one story profile of these homes was influenced from a variety of architectural styles from Craftsman to Spanish Colonial architecture. However, the detailing of these styles was simplified when adapted to the Ranch character. Especially popular in the 1950's and 60's, the Ranch Character is characterized by an asymmetrical plan, a low-pitched roof with moderate overhangs, and ribbon windows.

Landscape in the Ranch Character centers on efficiency, durability, and useful space. Layouts can be formal or informal, but are usually minimal in design. Planting is placed to serve a specific purpose, and often produces edible fruit, flowers, or foliage.

6.2.4.6 Ranch Character

6.2.4.6.1 Architectural Styles

Ranch styles include, but are not limited to:

- Western Farmhouse
- California Ranch
- Vernacular Bungalow

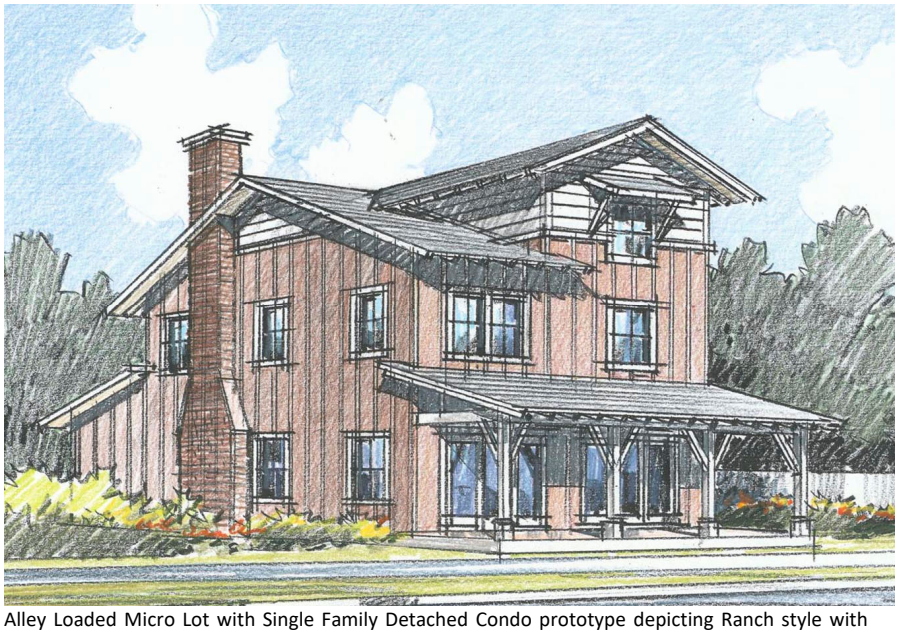
6.2.4.6.2 Architectural Massing & Proportion

Required:

- Asymmetrical plan with wide street frontage with attached garage or carport.
- Simple rectilinear forms and detailing.
- One-story massing/strong horizontal emphasis.

Selected:

- Many plans were U-shaped to emphasize interior/exterior relationships.
- Open plan blending interior & exterior spaces.



6.2.4.6.3 Architectural Materials & Details

Required:

- Simple, Minimalist posts and trims.

Selected:

- Board & batten or horizontal siding.
- High brick foundations/wainscots.
- Exposed truss ceilings.

Alley Loaded Micro Lot with Single Family Detached Condo prototype depicting Ranch style with exposed rafter tails, board and batten and lap siding.

6.2.4.6.4 Entries & Porches

Required:

- Long and continuous porches along front and/or rear facades, typically an extension of the main roof or utilizing a lower pitch that breaks into the main roof plane.
- Simple wood column and railing details.

6.2.4.6.5 Doors & Windows

Required:

- Wide, sliding glass doors leading out to a patio.
- Orderly window placement– without recesses.

Selected:

- Ribbon windows.
- Shutters.
- Barn door garage doors.

Simple post and beam porch breaks up two story mass.

Loaded Single Family Detached prototype with simple windows and lap siding.

Simple post and beam support at porch.

Ribbon windows.

Simple repetitive windows with minimal treatment, can have shutters.

Long horizontal gable roof, with extensive use of lap siding and brick accent at chimney.

Muted tones with bright white trim and darker accent at shutters.

Pale tones with bright white trim, use of stucco and board and batten siding break up two story massing.

Simple one story massing with long continuous porch articulating entire front façade.

6.2.4.6.6 Roof Forms & Materials

Required:

- Long horizontal gable roofs of 4:12 pitch.
- Flat concrete or shake tiles.

Selected:

- Minimum 24" overhangs.
- Brick chimney.
- Exposed rafter beams.
- Dormers.

6.2.4.6.7 Color

Required:

- Muted tones with brighter trim and accents.

Long continuous porch that breaks into main roof, muted stucco tones.

6.2.4.6.8 Landscape

Required:

- Plant types to be chosen from the Community Plant Matrix (Section 7.7).
- Front yard landscape is required to be installed by the builder (Section 5.4.1.9).
- Front yards shall include a minimum of one 24" box tree
- Plant Color Palette to coincide with designated Planning Area requirement (Section 6.4).
- Tree quantities shall be per guidelines set forth by the City of Ontario.
- Trees to be installed at a minimum 24" box size.
- A minimum of 5 different shrub species shall be used.
- Shrub/groundcover areas other than lawn areas to contain 75% shrub, 25% groundcover coverage with 5-gallon shrubs spaced at 3' O.C., and 1-gallon shrubs spaced at 2' O.C.~~, and flatted groundcovers spaced at 12" O.C.~~
- Vines shall be attached to all public facing property walls sized at 15 gallon and spaced 25' O.C. maximum.
- Shrub/groundcover areas other than lawn shall be top-dressed with a 2" deep layer of shredded wood fiber mulch.
- Lawn areas shall be sodded.
- Automatically controlled irrigation system conforming to all water conservation Ordinances set forth by the City of Ontario.

Selected:

- Tree quantities to exceed minimum requirements
- Additional plant material over the minimum to include flowering trees and/or shrubs, and annuals.
- Tree sizing to exceed the minimum 24" box size.
- Variety of shrub sizing to include 15% - 15 gallon, 65% - 5 gallon, and 20% - 1 gallon shrubs.
- Shrub/groundcover areas, other than lawn areas, to contain 100% shrub coverage with groundcover between shrubs at time of planting.

6.2.4.6.9 Hardscape

Required:

- Defined logical hardscape to all front doors and private yard entries.
- Paving materials to be Concrete (broom finish), decomposed Granite, Concrete Pavers, Brick, or Cut Stone.
- Colors and finishes compatible and/or harmonious with surrounding architecture.

Selected:

- Enhanced concrete finish to be sandblasted, acid etched, or integrally colored and stamped cut stone pattern.
- 3' high maximum decorative landscaping walls and pilasters with brick or cultured stone veneer and caps.
- 3' high maximum decorative wood fencing with horizontal members or split rail fence design.
- Details and accents to include wood or iron trellises and/or wrought iron ornamentation.
- Multiple paving materials and/or finishes.

Historic Background

One of the many revival characters prevalent in Southern California, English Country homes recall the architecture of the English countryside. This character includes the Tudor and Stick styles. This picturesque and romantic style of steeply pitched roofs and half-timbered gables became popular in the 1920's. Variations in one and two story shapes with asymmetrical facades are embellished with brick veneer.

English Country architecture lends itself to natural building materials in a more refined state such as brick and cut stone. Planting is arranged both formal and informal, but lines and edges are always well defined with hedges or a strong change in material.

6.2.4.7 English Country Character

6.2.4.7.1 Architectural Styles

English Country styles include, but are not limited to:

- Tudor
- Stick

6.2.4.7.2 Architectural Massing & Proportion

Required:

- Informal, asymmetrical massing.
- Angularity & verticality.

Selected:

- Cantilevered second floor pop-outs.

6.2.4.7.3 Architectural Materials & Details

Required:

- Simulated wood or stucco trim around windows and doors, usually heavy.
- Stucco walls featuring brick or stone elements.
- Siding or half-timber accents.

Selected:

- Extensive use of brick or stone exterior finish.

Single Family Detached depicting English Country style with exterior brick and wood finish.

6.2.4.7.4 Entries & Porches

Required:

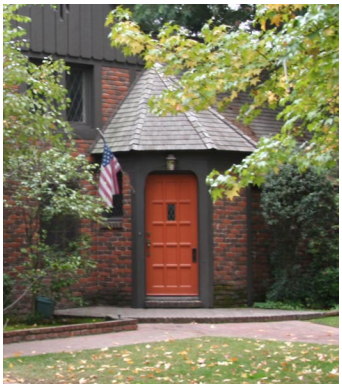
- Decorative light fixtures, either wall mounted or pendant.
- Covered entry, either by recess, alcove, tower or small front porch.

Selected:

- Simple posts and railings.

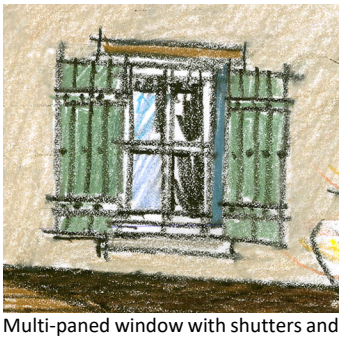
6.2.4.7.5 Doors & Windows

Required:



- Multi-paned windows.
- Articulated doors, often with multi-paned windows.
- Various window shutter shapes and forms.

Selected:

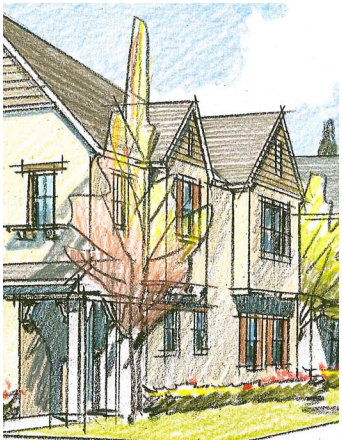


- Diamond or other specialty pattern multi-paned feature window.
- Stained glass as an accent window or in entry door.
- Entry door with diamond pattern accent window.

Covered Front porch with extensive use of brick veneer.

Turret at entry, contrasting brick veneer inlayed with half-timber detailing.

Multi-paned window with shutters and wood trim.



Covered Entry with decorative light fixture.

Recessed entry with enhanced brick detailing and multi-paned windows.

Dormer with lap siding accents, contrasting light and dark earth tones.

Attached product with articulated roof massing and cantilevered pop outs.

Cantilevered second floor pop-outs with siding accents at gable ends.

6.2.4.7.6 Roof Forms & Materials

Required:

- Flat concrete tile with slate or shake type appearance.
- Steep pitched gables, ends treated with half-timber detailing, trusses or substantial amounts of siding.
- 6:12 to 8:12 pitches.

Selected:

- Dormers.
- Tight rakes with extended 12” eaves.
- Large central chimneys of brick or stone.

6.2.4.7.7 Color

Required:

- Light earth tone base colors with contrasting trim colors.
- Dark window trims.

Steep pitched roof with half-timbered gabled end in contrasting colors.

6.2.4.7.8 Landscape

Required:

- Plant types to be chosen from the Community Plant Matrix (Section 7.7).
- Front yard landscape is required to be installed by the builder (Section 5.4.1.9).
- Front yards shall include a minimum of one 24" box tree
- Plant Color Palette to coincide with designated Planning Area requirement (Section 6.4).
- Tree quantities shall be per guidelines set forth by the City of Ontario.
- Trees to be installed at a minimum 24" box size.
- A minimum of 5 different shrub species shall be used.
- Shrub/groundcover areas other than lawn areas to contain 75% shrub, 25% groundcover coverage with 5-gallon shrubs spaced at 3' O.C., and 1-gallon shrubs spaced at 2' O.C~~., and flatted groundcovers spaced at 12" O.C~~.
- Vines shall be attached to all public facing property walls sized at 15 gallon and spaced 25' O.C. maximum.
- Shrub/groundcover areas other than lawn shall be top-dressed with a 2" deep layer of shredded wood fiber mulch.
- Lawn areas shall be sodded.
- Automatically controlled irrigation system conforming to all water conservation Ordinances set forth by the City of Ontario.
- Strong defined landscape edges.

Selected:

- Additional plant species over the minimum to include flowering trees and/or shrubs, and annuals.
- Accent plants with sculptural forms and unique qualities.
- Tree sizing to exceed the minimum 24" box size.
- Variety of shrub sizing to include 15% - 15 gallon, 65% - 5 gallon, and 20% - 1 gallon shrubs.
- Shrub/groundcover areas, other than lawn areas, to contain 100% shrub coverage with groundcover between shrubs at time of planting.

6.2.4.7.9 Hardscape

Required:

- Defined logical hardscape to all front doors and private yard entries.
- Paving materials to be Concrete (broom finish), Concrete Pavers, Flagstone, Cut Stone, or Brick.
- Colors and finishes compatible and/or harmonious with surrounding architecture.

Selected:

- Enhanced concrete finish to be sandblasted, acid etched, or integrally colored and stamped flagstone or cut stone pattern.
- 3' high maximum decorative landscaping walls and pilasters with brick or stone veneer and caps.
- Details and accents to include classic style limestone or concrete pots and statuary.
- Metal ornamentation made from iron, brass, bronze, or aluminum.
- Multiple paving materials and/or finishes.

New Page

Historic Background

The Transitional character is derived from one parent Traditional Architectural Styles like Spanish, Bungalow, Farmhouse, Ranch, Cottage, etc. It's a blending of classic styles with clean contemporary elements. This style embraces and reinterprets elements from the Traditional style for a "old made new" updated look. Transitional theme is characterized by simplified geometry, and massing. Courtyards and indoor-outdoor relationship with large openings and floor to ceiling windows are features of this style.

Landscape in the Transitional character tends to be minimal in design and focused on efficient useable space. Landscape design emphasizes planes, geometric shapes, and informal layouts.
Planting is Native and consists of generally drought-tolerant plant material.

6.2.4.8 Transitional

6.2.4.8.1 Architectural Styles

Transitional Styles include, but are not limited to:

- Transitional Spanish
- Transitional Farmhouse
- Transitional Colonial

6.2.4.8.2 Architectural Massing & Proportion

Required:

- Boxy and simple massing, can be symmetrical or asymmetrical.
- Proportions are more horizontal and humbler than vertical and imposing.
- Simple plan with uncomplicated roof.

Selected:

- Plan designed with interior or exterior courtyard.
- Asymmetrical shape with cross-gables and side wings.
- Covered porches.

6.2.4.8.3 Architectural Materials & Details

Required based on parent architectural style:

- Smooth or light sand finish plaster – specialty textures to be reviewed by City staff.
- Clean cut, smooth finish stone.
- Modern siding material
- Trim can be either metal or timber.
- Simple, expressive detailing devoid of ornamentation.
- Simple timber or metal in balconies, handrails, doors, gates, hardware and fences.

Selected:

- Slate profile or standing seam metal roofing.
- Metal cladding, corten steel and exposed concrete or split-faced block on walls as surprise element.
- Simple timber shutters.

Conventional Single FamilPy Detached prototype depicting the Transitional Spanish style.

New Page

6.2.4.8.4 Entries & Porches

Required:

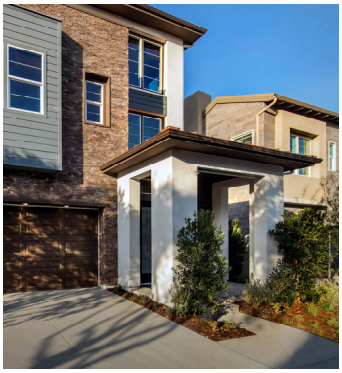
- Porches with bold clean form.
- Porch roof supported by timber or metal posts.
- Simple light fixtures, wall and/or ceiling hung.

Selected:

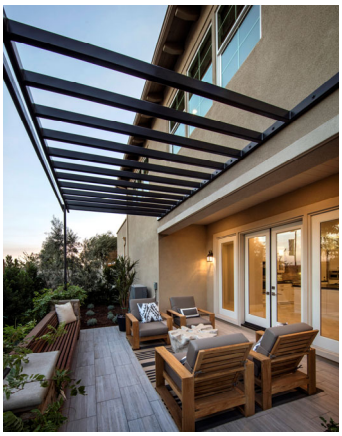
- Entry Courtyards with relationship to interior spaces.

6.2.4.8.5 Doors & Windows

Required:



- Windows and doors painted or stained to match the color palette of the structure.
- Windows are vertically oriented.
- Single hung windows at front elevation.
- Solid wood entry door, windows allowed.



Selected:

- Folding glass doors and retractable windows.
- All window and door ratios consistent throughout the house.
- Exterior shutters well-proportioned to the size of the opening.

Entry porch with door on accent wall

Feature window projection.

Covered entry porch with low-pitched roof

Porch with simple metal detailing.

Simple asymmetrical massing and forms

Contrasting materials and textures for various massing elements

New Page

Simple roof forms with standing seam metal roof.

Simple well-proportioned windows.

Low pitched gabled roof forms with open eaves.

6.2.4.8.6 Roof Forms & Materials

Required:

- Predominantly gable and shed roof forms, with minimal hips.
- Open eaves, not boxed.
- Fascia may either be metal or wood.
- Flat tile, concrete or asphalt shingle, Slate tile or standing seam metal roof.
- Low and high pitched roofs based on parent architectural style (3:12 – 8:12).
- Simple gable end accents or vents.

Selected:

- Accent parapet.
- Eaves often with simple rafter tails.
- Extended eaves over windows and patio openings with timber or metal bracing or brackets.
- Board and batten or siding at gable ends can be seen in the Transitional Farmhouse style.

6.2.4.8.7 Color

Required:

- Plaster –White, Eggshell or other light earth tones.
- Roof – Earthy reds, browns for Transitional Spanish and Grey tones for Transitional Farmhouse.

Selected:

- Trim – painted and contrasting to wall color.
- Entry Doors and other Accents – White, colored or mill finish depending on the scheme.

New Page

6.2.4.8.8 Landscape

Required:

- Plant types shall be chosen from the Community Plant Matrix (Section 7.7).
- Front yard landscape is required to be installed by the builder (Section 5.4.1.9).
- Front yards shall include a minimum of one 24" box tree
- Plant Color Palette shall coincide with designated Planning Area requirement (Section 6.4).
- Tree quantities shall be per guidelines set forth by the City of Ontario.
- Trees shall be installed at a minimum 24" box size.
- A minimum of 5 different shrub species shall be used.
- Shrub/groundcover areas other than lawn areas shall contain 75% shrub, 25% groundcover coverage with 5 gallon shrubs spaced at 3' O.C., and 1 gallon shrubs spaced at 2' O.C.
- Vines shall be attached to all public facing property walls sized at 1 gallon and spaced 10'-15' O.C. maximum.
- Shrub/groundcover areas other than lawn shall be top-dressed with a 3" deep layer of shredded wood fiber mulch.
- Lawns shall be sodded.
- Automatically controlled irrigation system conforming to all water conservation Ordinances set forth by the City of Ontario.
- Simple landscape layouts utilizing defined edges.

Selected:

- Tree quantities to exceed minimum requirements.
- Additional plant species over the minimum to include flowering trees and/or shrubs and annuals.
- Tree sizing to exceed the minimum 24" box size.
- Variety of shrub sizing to include 15% - 15 gallon, 65% - 5 gallon, and 20% - 1 gallon shrubs.
- Shrub/groundcover areas, other than lawn areas, to contain 100% shrub coverage with mulch between shrubs at time of planting.

6.2.4.8.9 Hardscape

Required:

- Defined logical hardscape to all front doors and private yard entries.
- Paving material shall be concrete (broom finish) or decomposed Granite.
- Colors and finishes shall be compatible and/or harmonious with adjacent architecture.

Selected:

- Enhanced concrete finish to be sandblasted, acid etched, and/or integrally colored.
- 3' high maximum decorative landscaping walls and pilasters of smooth or fine stucco plaster finish.
- Details and accents to include clay pots and wrought iron ornamentation.
- Multiple paving materials and/or finishes.

New Page

Historic Background

The Mid-century Modern Architectural style is from mid-twentieth century, becoming popular after the Second World War. The designers in 1940s and 1950s created this progressive style as a catalyst for social change after the war. The style also inspired art and furniture design of that era. Mid-century homes in Palm Springs, California are the famous examples of this style realized in residential architecture in America. This is a minimalist style emphasizing flat planes, open floor plans with elevation changes and large windows that connect with nature.

Landscaping for the Mid-century Modern style stays true to the surrounding landscape with native plants and hardscape materials. Layouts are usually informal although formality may be introduced to enhance natural or architectural elements. Just like the architecture, landscape also includes clean lines. Planting is used for its form, texture and color. Water features, sculptures and large rocks are sometimes added for interest.

6.2.4.9 Mid-century Modern

6.2.4.9.1 Architectural Styles

Mid-century Modern styles include, but are not limited to:

- Desert Mid-century
- Ranch-style Mid-century
- Split-level Mid-century

6.2.4.9.2 Architectural Massing & Proportion

Required:

- Horizontal proportions.
- Asymmetrical massing.
- Primarily one story home with occasional two story elements.
- Most commonly L-shaped, rectilinear floor plan.
- Simple geometry and clean lines.
- Large openings.

Selected:

- Plan designed around an interior courtyard.
- Rambling floor plans with separate roof forms for each element.

6.2.4.9.3 Architectural Materials & Details

Required:

- Concrete block or Stucco with smooth to light lace texture – specialty textures to be reviewed by staff.
- No ornamentation or decorative add-ons.

Selected:

- Trim, where applicable, can be either painted wood or metal.
- Board and batten.
- Brick, concrete or stone accent walls.

Conventional Home prototype (Single Family Detached with front entry and side garage access) depicting the Mid-century Modern style.

New Page

6.2.4.9.4 Entries & Porches

Required:

- Front door with roof overhang or tucked under second story.
- Porch roof supported metal or wooden columns.
- Minimalist Mid-century light fixtures, wall and/or ceiling hung.

Selected:

- Brick or stone cladding accent.
- Courtyard or atrium entry.

6.2.4.9.5 Doors & Windows

Required:

- Large single pane ribbon windows, floor to ceiling glass.
- Vertically hung secondary windows.
- Windows set flush with exterior wall.
- Simple wooden door with or without transom or sidelights .

Selected:

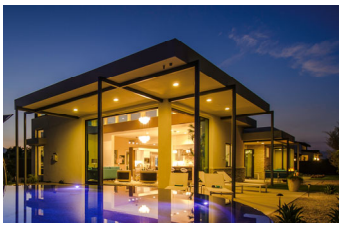
- Roofed or open balconies with roof overhangs or low pitched roofs.
- Metal and wood gates.

Floor to ceiling windows and doors connecting indoor-outdoor spaces.

Entry gate with contrasting accent wall and vertical element.

Entry with roof overhang accentuating horizontal planes.

Entry porch with accent color door and metal column support.



Concrete block vertical element and low pitched butterfly roof.

Horizontal windows under roof overhang and vertically oriented secondary windows.

New Page

Low pitched roof with overhang and windows and doors flush with exterior wall.

Metal columns supporting low-pitched roof over backyard porch.

Low-pitched roofs behind a parapet

6.2.4.9.6 Roof Forms & Materials

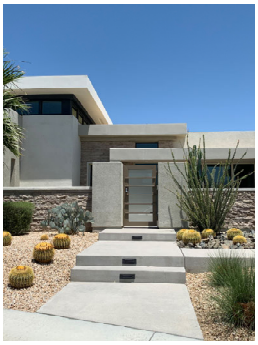
Required:

- Low-pitched hip roofs or shed roofs.
- 12" overhangs.
- Tight rakes, often with no fascia.
- Asphalt shingles
- Low-pitched roofs (2:12 – 3:12).

Selected:

- Roof forms behind a parapet.
- Clean and simple eaves and rakes with no detailing.
- Extended eaves over windows and balconies with simple bracing or brackets.

6.2.4.9.7 Color



Required:

- Stucco - White, Eggshell or other light earth tones.
- Roof Tile – light colors complimenting overall color scheme.

Selected:

- Entry Doors and other Accents – to be consistent with the overall color scheme.
- True to material colors for stone, brick, concrete and other accents.

New Page

Minimalist Native landscaping with prominent horizontal planes

6.2.4.9.8 Landscape

Required:

- Plant types shall be chosen from the Community Plant Matrix (Section 7.7).
- Front yard landscape is required to be installed by the builder (Section 5.4.1.9)
- Front yards shall include a minimum of one 24" box tree.
- Plant Color Palette shall coincide with designated Planning Area requirement (Section 6.4).
- Tree quantities shall be per guidelines set forth by the City of Ontario.
- Trees shall be installed at a minimum 24" box size.
- A minimum of 5 different shrub species shall be used.
- Shrub/groundcover areas other than lawn areas shall contain 75% shrub, 25% groundcover coverage with 5 gallon shrubs spaced at 3' O.C., and 1 gallon shrubs spaced at 2' O.C.
- Vines shall be attached to all public facing property walls sized at 15 gallon and spaced 25' O.C. maximum.
- Shrub/groundcover areas other than lawn shall be top dressed with a 3" deep layer of shredded wood fiber mulch.
- Lawn areas shall be sodded.
- Automatically controlled irrigation system conforming to all water conservation Ordinances set forth by the City of Ontario.
- Simple landscape layouts utilizing defined edges.

Selected:

- Additional plant species over the minimum to include flowering trees and/or shrubs and annuals.
- Tree sizing to exceed the minimum 24" box size.
- Variety of shrub sizing to include 15% - 15 gallon, 65% - 5 gallon, and 20% - 1 gallon shrubs.
- Shrub/groundcover areas, other than lawn areas, to contain 100% shrub coverage with groundcover between shrubs at time of planting.

6.2.4.9.9 Hardscape

Required:

- Defined logical hardscape to all front doors and private yard entries.
- Paving material shall be concrete (broom finish) or clay tile.
- Colors and finishes shall be compatible and/or harmonious with adjacent architecture.

Selected:

- Integral colored concrete paving with stamped tile pattern.
- 3' high maximum decorative landscaping walls and pilasters of smooth or fine stucco plaster finish.
- Details and accents to include clay pots, and/or ornamental tiles.
- Multiple paving materials and/or finishes.

6.3 HIGH DENSITY RESIDENTIAL DESIGN GUIDELINES

The primary goal for High Density residential elements within the Rich-Haven ~~Regional Commercial,~~ Mixed-Use and Stand Alone Residential Overlay District is to infuse the dynamic commercial mixed-use neighborhood with residential and pedestrian assets while providing for a range of housing types. The following principles establish the essential characteristics that will promote the support these goals.

High Density Residential components of a Mixed-Use project are intended as an extension of a dense, urban fringe project. However they are intended to capture the flavor of an all American small town lifestyle in terms of its neighborhood character and architectural charm. The architecture of these residential projects should be designed to reinforce the overall community design concept. The following design guidelines apply to high-density residential development within Planning Areas ~~6A, 7, 8 and 9~~ 4A, 4B, 5B, 7, 9 and 10A.

6.3.1 GENERAL DESIGN ELEMENTS & OBJECTIVES

6.3.1.1 Architectural Styles

- Variety in architectural style and treatment is encouraged within and between residential product types.
- High-density single-family residential product shall follow the architectural character and plotting requirements as defined in the Residential Design Guideline section of this chapter.
- High intensity attached residential products are only subject to 75% of required items per character.

6.3.1.2 Mixture of Housing Types

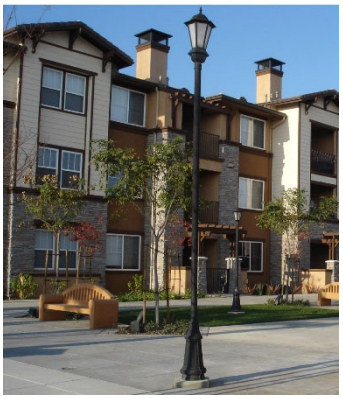
- Interesting residential streetscapes shall be designed.
- In a given high density planning area, no more than 150 units shall be of the same prototype, unless varied with different elevational styles and/or massing.

6.3.1.3 Projections into Required Yards

- Building articulation is encouraged as it fosters greater variety along the streetscape.
- Architectural projections may encroach a maximum of 2 feet into required front, rear or side setback areas.
- An architectural projection is defined as an element that articulates the building elevation such as media niches, bay windows, chimneys, balconies, porches, and other similar elements. Encroachments may be supported by a foundation.

ARCHITECTURAL COMPONENTS 6.3.2

6.3.2.1 Building Facades



- The scale of buildings shall be broken down through the use of varied building massing and forms on a single structure.
- Buildings shall incorporate offsets both horizontally and vertically, minimizing expansive uninterrupted wall planes.
- No more than one third (1/3) of the front façade may comprise a single wall plane.
- Horizontal or vertical offsets shall be 2' minimum.

6.3.2.2 Roof Forms

- Roof treatments shall be consistent with the architectural style of the building.
- Variety in roof forms, ridge heights and direction of gables is required in order to avoid monotonous roof lines along master planned streets and paseos.
- Roof slopes and overhangs shall be consistent with the architectural style of the building.
- Broken roof pitches extending over porches, patios or other similar features are encouraged where appropriate to the architectural style.

6.3.2.3 Roof Materials

- A variety of roof materials is encouraged throughout the High Density development in order to avoid a monotonous roof-scape appearance.
- Roof materials shall be compatible with the architectural style of the residence as indicated on the architectural checklist for each style.
- Fascia may be either stucco, wood, or tile. If wood is used, it shall be stained or painted.
- Skylights are permitted, but shall be designed as an integral part of the roof. White "bubble" skylights are not permitted. Skylight framing material shall be bronze anodized or colored to match the adjacent roof.
- Permitted roof materials are limited to concrete or clay barrel tile, flat concrete or slate tile, simulated wood shakes and asphalt shingles (on Federalist, Cape Cod or similar style where shingles were traditionally appropriate).
- Copper or metal details and accents may be used on a limited basis. When used, they shall have a matte finish to minimize glare.

Varied building massing and form in a single structure.

6.3.3 ARCHITECTURAL FEATURES & ACCENTS

6.3.3.1 Windows

Principal windows, with recess, surround, enhanced header/sill, window grouping, or other decorative features for shadow, depth and detail, are required on all elevations. Features such as 12" deep pot-shelf with roof element and corbels can define principal windows and greatly enhance elevations.

All other windows and openings shall be trimmed or otherwise treated.

- Stucco trim elements, when used, shall be sand or smooth finish on the first floor.
- Trim elements with 1 ½" reveal on small decorative windows are encouraged.
- Trim shall be of different color or material than principal wall treatment.

6.3.3.2 Garage Doors

- All garage doors on front elevations shall be recessed 12" or be surrounded with 12" minimum pop-outs.
- Door lights, when used, shall be appropriate to the architectural style of the building.
- On court streets, drive aisles, or common drives, the face of garage doors shall be recessed a minimum of 6" or be surrounded with 6" minimum pop-outs.

6.3.3.3 Front Doors and Entries

- Entries for direct access prototypes shall provide a focal point to each residential unit and shall be sun protected with overhangs, recesses, porches, or trellises.
- Common entries shall be well articulated and identifiable for pedestrian and vehicular users.

6.3.3.4 Courtyards

- Courtyards are encouraged and, when used, shall appear as an extension of the architecture of the main building.
- Courtyard walls shall be finished to match the building and may be embellished with stone, ceramic tiles, steps, recesses, cut-outs, or wrought iron accents as appropriate to the architectural style of the building.
- Courtyard walls shall not exceed 3.5' in height and shall be setback from sidewalks a minimum of 3' to allow for landscaping.

6.3.3.5 Balconies

- Balconies shall be designed to be in scale and proportion with the architecture of the adjoining building.
- Covered or trellised balconies are preferred.
- Scuppers or internal drains are required on all balconies for drainage.
- Balcony supports shall be proportional to porch size.
- Balconies may encroach into setbacks a maximum of 36 inches.

6.3.3.6 Chimneys

- Chimneys, when provided, shall be compatible in design, material, and color with the adjoining building.
- Chimneys caps shall be compatible with the architecture of the building. Vents
- 'B' type vents for gas appliances, water heaters, and heating units shall be painted to match the adjacent material. Such elements shall be located to minimize visual impact to building elevations.

6.3.3.7 Exterior Stairs

- Exterior stairs must be designed as an integral part of the architecture. Stairs are included in the setback calculation and must remain within the building envelope, as defined by an outermost wall and/or roof.
- Stair guardrail design must be consistent with the architecture of the building.

6.3.3.8 Awnings

- Awnings must be designed as an integral part of the architecture.
- Unacceptable awning treatments include: metal louvers (except Bermuda style shutters, or those consistent with architectural style) or untreated fabric. Project names, texts, or logos are acceptable as decorative awning treatments, however not as primary signage.

6.3.3.9 Mechanical Equipment

- No mechanical equipment (air conditioning/heating units, etc.) shall be mounted on, or attached to, any sloped roof. Mechanical equipment, when mounted on flat roofs, must be completely screened by parapet walls at least as tall as the equipment screened.
- Ground mounted air conditioning units must be screened by walls at least 6" higher than the unit(s) and located away from pedestrian paths and project amenities.
- Mechanical devices such as exhaust fans, vents, and pipes shall be painted to match adjacent roof surfaces.

6.3.3.10 Meters

- Natural gas meters shall be grouped and screened behind walls or hedges. Builders shall contact the gas company for minimum clearances.
- Electrical meters located on exterior street elevations shall be ganged and located behind doors. Builders shall contact the power company for minimum clearances.
- Screen walls and electrical enclosures shall be designed integral to the project's architecture.

6.3.3.11 Solar Panels

- Panels shall be mounted directly to a sloped roof plane and be integral to the roof design.
- Roof mounted solar panel equipment shall be similar to the roof in color and appearance and have a reflectivity value of 20% or less.
- Non-camouflaged solar panel equipment shall be located behind parapet walls of equal height to the equipment.
- Frames shall be colored to compliment the roof. Mill finish aluminum frames are prohibited.
- Support solar equipment shall be enclosed and screened from view.

6.3.3.12 Satellite Dishes

- All antenna and satellite dishes visible from any public or private street, sidewalk, open space or adjacent lot must be submitted for review and is subject to the CCR's and all federal regulations.

6.3.3.13 Gutters and Downspouts

- Exposed gutters and downspouts, when used, shall be colored to match/compliment the surface to which they are attached.

ACCESSORY STRUCTURES 6.3.4

6.3.4.1 Clubhouse and Recreation Buildings

- Clubhouses, recreation buildings, and other support buildings shall match the architectural style and detailing of the residential buildings.

6.3.4.2 Storage Buildings

- Storage buildings must have the same level of architectural detailing as the residential buildings within the project.

6.3.4.3 Detached Garages

- Detached garages must use a similar roof treatment and building material as the residential buildings they serve.
- Six-car detached garage structures are preferred as a maximum.
- Detached garage structures with more than six parking spaces shall have a minimum 2' garage door offset within the length of the structure.

6.3.4.4 Carports

- Design, including materials, roofing, screening and color, shall match project style and design.
- Carport length shall not exceed the width of 8 parking spaces.

6.3.4.5 Parking Structures

- Parking structure facades, where exposed to streets or to project active common open space areas, shall be compatible with building architecture; preferably building architecture should wrap in front of the garage.
- Pedestrian access to parking structures shall be clearly delineated.
- Pedestrian entryways shall be separated from auto circulation, where feasible.
- Pedestrian access for tenants, residents, and guests, where applicable, shall be combined in the same entry.
- Parking spaces, open or enclosed, shall be no less than 9 feet wide by 19 feet deep. Compact parking shall be allowed at dimensions of 8 feet wide by 15 feet deep, and not comprise more than 25% of the total parking spaces.
- Elevators/stairways/exits shall be clearly marked for ease of pedestrian use.
- Reserved/Guest parking, as applicable, shall be marked on the stall or by placard.
- Tandem parking configurations are allowed for tenants, t may include one standard and one compact stall.

6.3.4.6 Trash Enclosures

- Trash enclosures shall be constructed of concrete masonry units finished similar to buildings in the development.
- All trash enclosures shall have opaque metal gates that are designed consistent with the development.
- Each trash enclosure shall have a lighted access that meets federal accessibility standards.
- All project sites shall be designed to meet all the Integrated Waste Department's requirements, including the requirements for Sizing of Storage, Location of Collection Area, Accessibility for Collection Vehicles, and Collection of Sorted/Diverted Waste Types.

~~NEIGHBORHOOD CRITERIA~~

~~The community of Rich Haven is a composition of 8 planning areas with 3 unique residential districts and one mixed use district.~~
~~Each district is defined by an overall architectural theme. Densities increase from North to South with the lowest densities in Rich Haven North and the highest densities in the Mixed Use District. Refer to Figure 3.1 Land Use Plan for Planning Area Allocations.~~

~~Rich Haven North~~

~~Planning Areas: 1a – 1c~~
~~Primary Architectural Theme: Spanish~~
~~Minimum Number of Floor Plans: 3 per model complex~~
- ~~Select a minimum of one style from the Primary Character:~~
  - ~~Spanish Eclectic Character~~
- ~~Additional styles shall be selected from the following Secondary Characters:~~
  - ~~American Traditional Character~~
  - ~~Early California Character~~
  - ~~English Country Character~~

~~Note: The Developer/Builder can propose a change in Architectural style theme to the Planning Department director for approval, including additional Architectural styles not currently included in the Architectural Compatibility Matrix 6.2.3.3~~
~~For potentially compatible styles refer to the Architectural Compatibility Matrix in Section 6.2.3.3.~~

~~Landscape Palette:~~
- ~~Street Tree: Quercus Ilex, Holly Oak~~
- ~~Plant Palette: See Community Plant Matrix, Section 7.7~~
- ~~Planting color scheme: Warm – Red, orange, and yellow flowering plants. Foliage can be dark green, medium green, yellow-green, or grey.~~

~~Rich Haven Central~~

~~Planning Areas: 2~~**~~B~~** ~~through 4a – 4c~~
~~Primary Architectural Theme: American~~
~~Minimum Number of Floor Plans: 3 per model complex~~
- ~~Select a minimum of one style from the Primary Character:~~
  - ~~American Traditional Character~~
- ~~Additional styles shall be selected from the following Secondary Characters:~~
  - ~~Craftsman Bungalow Character~~
  - ~~Spanish Eclectic Character~~

~~Note: The Developer/Builder can propose a change in Architectural style theme to the Planning Department director for approval, including additional Architectural styles not currently included in the Architectural Compatibility Matrix 6.2.3.3~~
~~For potentially compatible styles refer to the Architectural Compatibility Matrix in Section 6.2.3.3.~~

Number of Dwelling Units	Number of Differing Floor Plans and Elevations
5-10	As required by Planning Commission
11-25	2
26-50	3
51-75	3
76-100	4
Over 100	4; +1 additional floor plan with 4 elevations for each additional 50 units exceeding 100

PLAN/ELEVATION MIXES

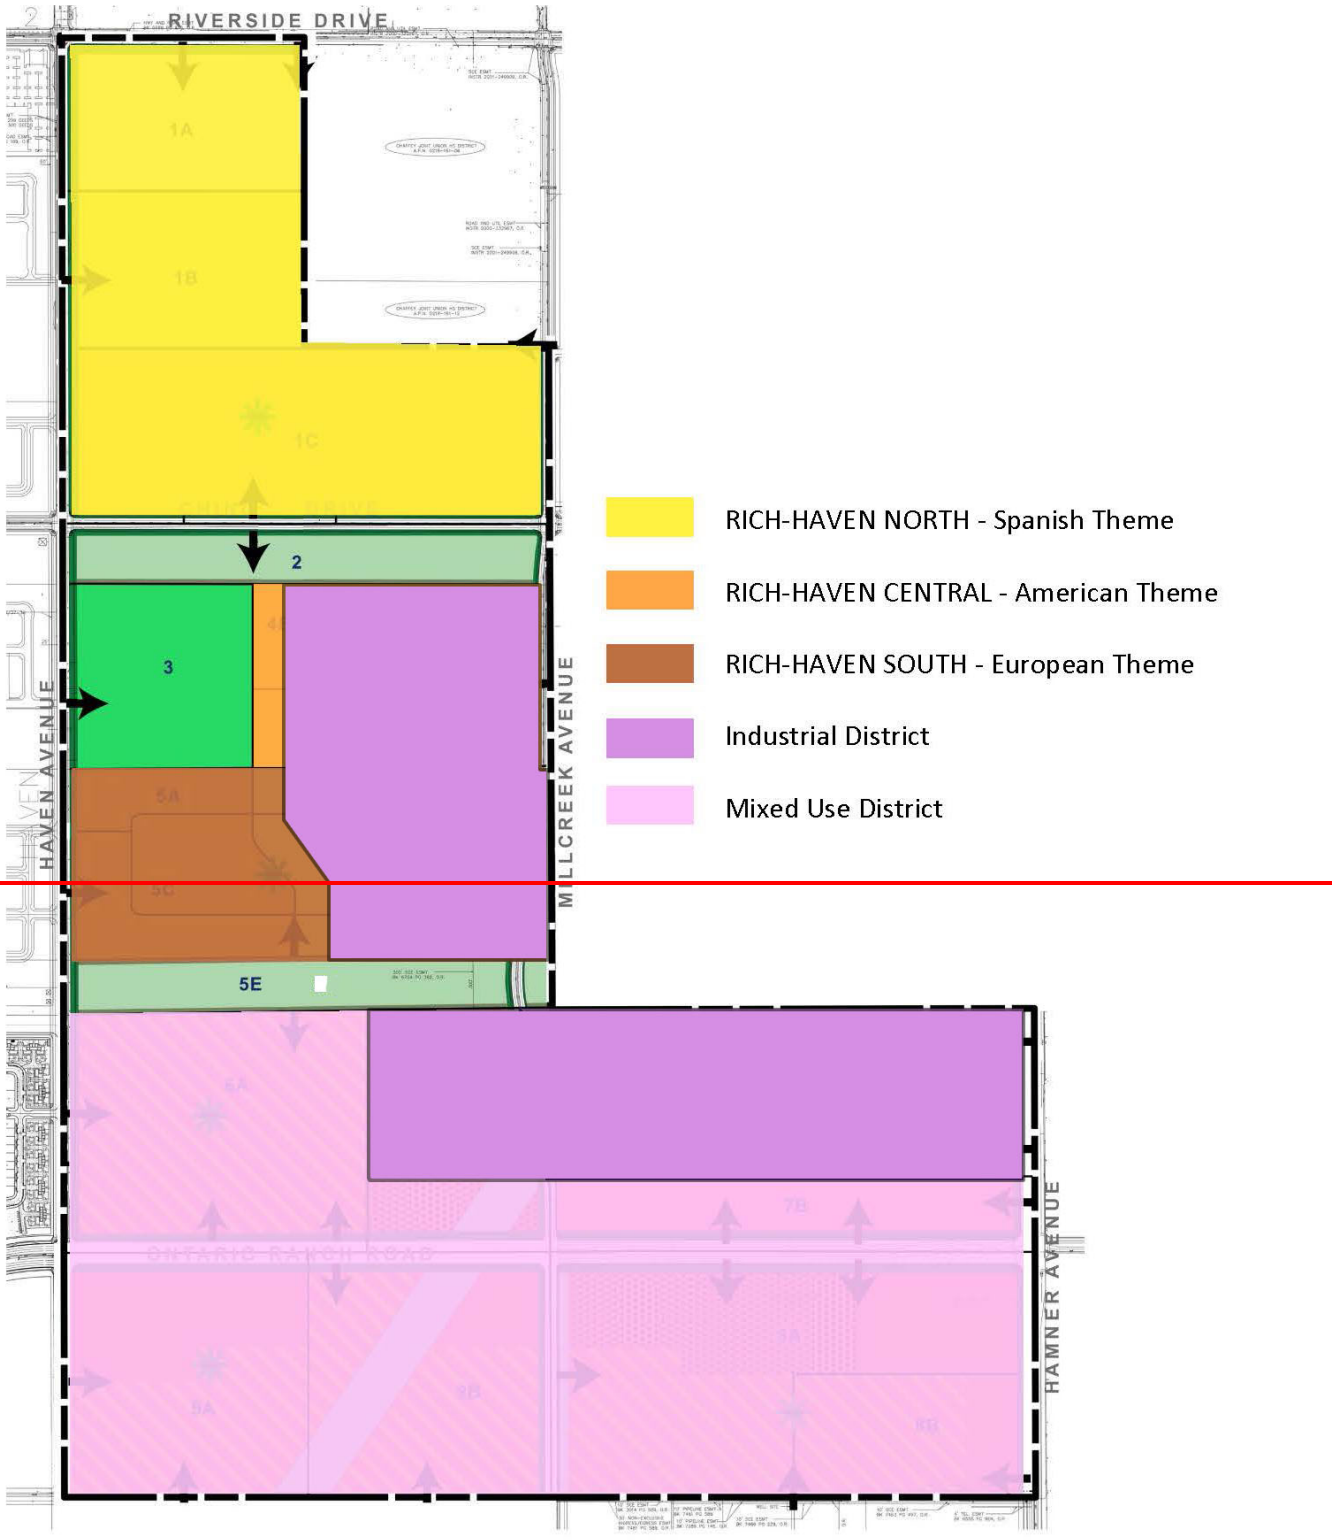
Landscape Palette:
- Street Tree: Podocarpus gracilior – Fern Pine (tree standard)
- Plant Palette: See Community Plant Matrix, Section 7.7
- Planting color scheme: Warm – Red, orange, and yellow flowering plants. Foliage can be dark green, medium green, yellow-green or grey.

Rich-Haven South

Planning Areas: 5ACD
Primary Architectural Theme: European
Minimum Number of Floor Plans: 3 per model complex
- Select a minimum of one style from the Primary Character:
- English Country Character
- Additional styles shall be selected from the following Secondary Characters:
- French Eclectic Style
- Richardsonian Romanesque Style
- Craftsman (Arts & Crafts) Style
- Mediterranean Bungalow Style

Note: The Developer/Builder can propose a change in Architectural style theme to the Planning Department director for approval, including additional Architectural styles not currently included in the Architectural Compatibility Matrix 6.2.3.3
For potentially compatible styles refer to the Architectural Compatibility Matrix in Section 6.2.3.3.

Landscape Palette:
- Street Tree: Koelreuteria Paniculata, Goldenrain Tree
- Plant Palette: See Community Plant Matrix , Section 7.7
- Planting color scheme: Cool – Blue, Lavender, Peach, and White flowering plants. Foliage can be dark green, medium green, or grey.



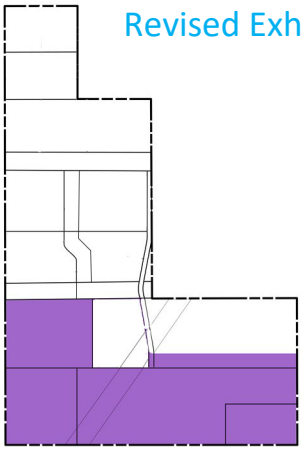
Neighborhood Design Criteria Each planning area, or neighborhood, within these districts is distinguished by architectural configurations and prototypes, along with its adjacency to various amenities and public uses including parks, open space, and schools.

Architectural Design Criteria Within each district the themes, groups or styles work together to mimic the historic districts of Old Ontario, including College Park and Armsley Square. To maintain compatibility, each district has an architectural and landscape character designated, identified as a Primary Character, with additional Architectural Design Criteria available from Section 6.2.3.3

Architectural Compatibility – The designated Architectural Design Criteria have been selected using the Architectural Compatibility Matrix (found in Section 6.2.3.3 of this document) to provide differentiation among neighborhoods. Other styles may be considered for substitution at the discretion of the Planning Department based on the matrix and the Architectural Compatibility criteria outlined in Section 6.2.3.2.

~~**Prototypes and Floor Plan Criteria** - Refer to Section 5 of this Specific Plan for development regulations and further explanation of uses, parking, setbacks, etc. for all neighborhoods. Please refer to the table entitled "Plan/Elevation Mixes" for additional requirements on plan and elevation mixes.~~

~~Delete Exhibit~~



~~Delete Exhibit~~

6.5 REGIONAL COMMERCIAL/MIXED-USE DESIGN GUIDELINES

~~6.5~~

Regional Commercial/Mixed-Use guidelines apply to Planning Areas ~~6A, 6D, 7B, 8 and 9~~4B, 5B, 6B, 7, 8, and 10B. Refer to Section 6.3 for High Density residential guidelines, which apply to the Stand-Alone Residential Overlay and residential components within Planning Areas ~~6, 7B, 8 and 9~~4A, 4B, 5B, 9 and 10A.

Revised Exhibit

It is the intent of these guidelines to provide guidance and a frame-work for development of vibrant and viable Regional Commercial Mixed-Use services, including office/professional, hospitality, retail, commercial, civic, quasi-public, and high density residential uses.

The Regional Commercial/Mixed-Use district provides for immediate office/professional/service needs of the Rich-Haven neighborhoods and the greater regional areas. In addition, the Regional Commercial/Mixed-Use District may have the capacity to provide day-to-day commercial retail services, truly enabling this area to serve as a "community gathering place" where residents may stop and linger while enjoying a cup of coffee, reading the newspaper, or socializing with their neighbors in a pleasant pedestrian environment.

These guidelines will further serve to implement the goals, policies and principles of the City's TOP by drawing upon the rich architectural diversity, quality and history of Ontario's established neighborhoods. Architecture of all commercial buildings, mixed-use or single use, shall complement the overall traditional community image of the Rich-Haven Specific Plan. The intent is to allow for a variety of building size, types, configuration, and uses to coexist while providing sufficient architectural direction to ensure a unified, cohesive development.

6.5.1 COMMUNITY DESIGN OBJECTIVES

- Secure the long-term vitality of The Ontario Plan by implementing its objectives, policies and principles.
- Create a Mixed-Use land use concept that seamlessly transitions high density living into commercial/service activities.
- Create a community of cohesive land uses, which provide for a wide variety of architectural configurations and housing prototypes.
- Create a palette of landscape materials, features and details that blend diverse architectural elements into cohesive neighborhoods.
- Create a palette of way finding signage that infuses the community with character and reinforces the viability of mixed land uses.
- Create a hierarchy of pedestrian and vehicular circulation within the community.
- Provide safe and convenient pedestrian links from residential areas to school, park and commercial sites that serve the community.
- Create a palette of architectural styles and community features that evoke traditional, timeless qualities.
- Utilize architectural massing to define use and public/private spaces.
- Create mixed-use neighborhoods where interactive architecture dominates the primary street scene.

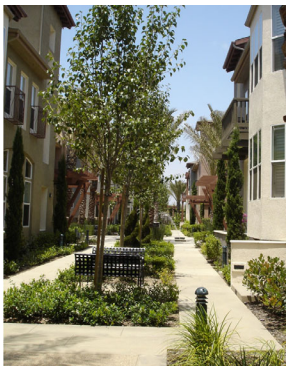
6.5.2 ARCHITECTURAL PHILOSOPHY

The purpose of the Regional Commercial/Mixed-Use land use is to foster dynamic neighborhoods. This place making land use enables a main street environment where bustling pedestrian activity is as important to the streetscape as vehicular activity; a place where the town center atmosphere is a short walk for residents to enjoy the goods and services at the heart of the mixed use district. Commercial components stand alone or mixed-use elements, within the Regional Commercial/Mixed-Use district should reflect an architectural style reminiscent of small-town American town centers. Architectural execution of this style is described in subsequent sections.

6.5.3 GENERAL DESIGN ELEMENTS & OBJECTIVES

~~6.5.3~~

A palette of styles, massing, materials, and details shall convey a timeless sense of place.

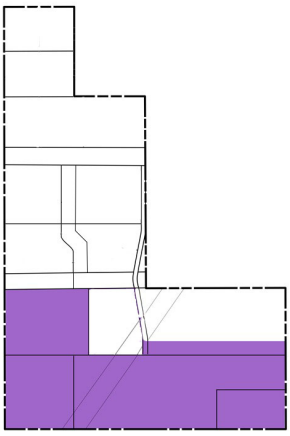


- Use appropriate finish materials and detailing.
- Vary vertical/horizontal scale and massing within and between buildings.
- Visual massing/style breaks between commercial/retail and residential uses are encouraged.
- Roof styles and materials shall be architecturally and aesthetically compatible, not uniformly consistent, among and between buildings/uses.
- Architectural styles shall be authentic; mixing of details between styles is allowed where details are complementary.

Visual breaks between commercial and residential uses

Active architecture shall orient toward Edison Avenue and primary auto and pedestrian circulation corridors.

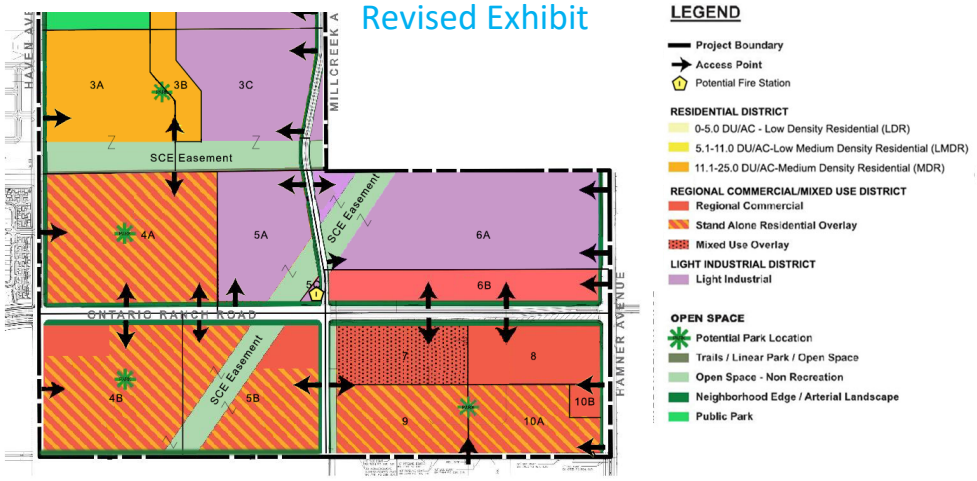
- Offset wall planes should be used, where appropriate, as an integral part of the building design.
- Building offsets or recesses should be used to accentuate building entries and form pedestrian nodes.
- Windows and doors shall be positioned sensitively to engage public spaces while maintaining privacy.
- Articulation of tenant entries for pedestrian identification should be achieved through wall plane offsets, architectural detailing and color schemes.
- Signage, monumentation, and landscaping shall supplement pedestrian corridor and plaza spaces created by articulated architecture.



Pedestrian linkages

Pedestrian linkages shall be active, useable transition spaces between uses.

- Hard distinct edges between uses are discouraged.
- Signage, paving, landscaping shall visually identify pedestrian linkages/corridors.
- Pedestrian circulation shall be continuous from residential to commercial/regional sections of the district.
- Articulation can include, but is not limited to:
  1. Vertical and horizontal offsets
  2. Color blocking
  3. Appropriate use of detail elements.



Revised Exhibit

The primary goal for the Rich Haven Regional Commercial /Mixed-Use District is to create a dynamic environment for the interaction of vibrant commercial, retail, regional services and high density residential neighborhoods. Sensitive spatial and architectural form, massing, and

transitions are critical to the relationship between compatible uses. The following principles establish the essential characteristics that will promote the support these goals.

Revised Exhibit

REGIONAL COMMERCIAL / MIXED-USE LAND USE PLAN

Neighborhood Design Criteria:

- Visual and practical interaction of mutually supporting commercial and residential uses.
- Integration of open space and pedestrian linkages with regional commercial tenant needs
- Foster clustering of high-density residential buildings to create smaller “neighborhoods” within planning area.
- Maximize architecture along theme streets
- Limit direct garage access along theme streets
- Provide Community entry at Haven and Theme Street
- Provide theme street intersection treatment
- Provide pedestrian link to neighborhoods and High School site to north.

6.5.4 ARCHITECTURAL COMPONENTS

~~6.5.4~~

Quality architectural and aesthetic design of a project has its foundations in the primary forms of the buildings. Guidelines for the following component intend to cultivate varied and interesting architecture while allowing room for creativity and project stylization.

Articulation through the use of color blocking and detail elements

Building Form and Mass

Building forms shall be simple and well-proportioned resulting in a balanced composition of elements.

- Layering of wall planes and volumes should provide a rhythm of dynamic building shadows.
- Building massing shall consist of a mix of building heights to provide visual interest to the commercial area.
- Tower elements and other vertical/prominent building features should be used to accentuate key elements such as building entries, pedestrian nodes, plazas or courtyards.
- Taller buildings shall have greater articulation.

Modulation and variation of building masses between adjacent buildings is encouraged. Three and four story elevations should have varied massing and architecture, both in height and depth, along the façade. The preference is for the project to feel less like a set of monolithic structures and more like a collection of distinct building in the eclectic style of the district. This can be accomplished though massing, color blocking, wall plane breaks, and variations in architectural styling and façade treatment.

Building mass shall be proportional to the tenant use to create obvious and identifiable delineation between uses.

Materials and Colors

Materials and colors should be applied to create cohesive and authentic architectural styles and streetscapes.

- All surface treatments or materials should be designed to appear as an integral part of the design, not merely an application.
- All materials should wrap architectural elements in their entirety, on primary elevations and where exposed to primary public spaces.
- Material changes should occur at inside corners.
- Materials applied to any elevations shall turn the corner of the building a minimum of 8', or to a logical termination point in relation to architectural features or massing.
- Highly reflective surfaces/materials, including colored glass and highly polished materials, are not allowed.
- Rough cut, rustic appearances through the use of stone, brick, or siding are encouraged. Only finished materials are allowed, no exposed or untreated concrete masonry units, unless consistent with the architectural style.

Exterior Design

Buildings shall have articulation along auto and pedestrian corridors to generate pedestrian scaling and visual interest along the streetscape.

- No single building shall have a singular wall plane or building height on the primary elevation.
- Front wall planes of commercial/mixed-use buildings, including retail/shop space veneer configurations, shall be articulated.
- Articulation can include, but is not limited to:
    1. Vertical and horizontal offsets.
    2. Color blocking.
    3. Appropriate use of detail elements.

- Mixed-Use buildings, multi-tenant shop buildings with more than one ground floor tenant: no more than sixty six percent (66%) of the front elevation may consist of a single contiguous wall plane on a tenant by tenant basis

  OR

- On an overall building, a cumulative total of no more than sixty six percent (66%) of the front elevation may have the same setback dimension; with no more than forty percent (40%) of the elevation comprising a continuous wall plane.

- Massing of large expanses of street exposure or pedestrian corridor exposure walls are encouraged to be visually broken down through the use of architectural features and treatments, and color changes, including but not limited to, pilasters, trellis elements, decorative light fixtures, and material inlays, murals, graphics, or other visual variations.

Primary exposures/elevations shall be appropriately detailed and articulated consistent with the architectural style and character of the development, as established by these guidelines.

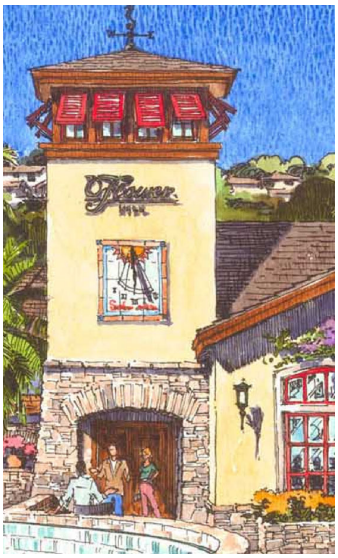
- First-story pedestrian scale character and commercial retail exposure is crucial to business viability. In-line retail/commercial/service space shall be designed for the optimization of space, exposure, and aesthetic articulation.

Architectural massing and style among buildings shall be compatible.

- No two adjacent mixed-use buildings shall have identical architectural appearance, or use of materials, or color palette unless pairing is integral feature of project design theme.
- Combinations and composition shall be varied, although massing may be comparable.
- Some repeat materials may be used; however, they may not be used with the same color palette unless architectural pairing is integral feature of project design theme.
- Offset wall planes should be used, where appropriate, as an integral part of the building design.
- Projections, overhangs and recesses may be used to provide shadow articulations, and scale to building elevations.
- Building offsets or recesses may be used to accentuate building entries and form pedestrian nodes.
- At least 40% of the ground floor of the primary exposure of an in-line/shop-space/free standing show use, excluding restaurant pads, shall be devoted to transparent windows and/or doors.
- Big-box tenants shall use appropriate glass frontage, subject to tenant by tenant review and approval.

Offset Wall Planes

Variety in massing and articulation emphasizes pedestrian scale.



- Primary exposure of commercial buildings greater than one story should suggest the presence of a “usable” second story and shall reduce the impact of higher volumes through the use of details consistent with the architectural style.

Variety in building height

Secondary exposure of commercial buildings greater than one story shall provide an appropriate level of articulation to engage the street-scene.

- Articulation can be achieved through the use of wall plane offsets, break of parapet lines, details such as windows and shutters, material inlays, and color or texture changes.
- Secondary exposures shall be architecturally compatible, though not as detailed, with primary exposures.

Tower Elements

Roof Form and Slope

Building height shall be varied to provide visual interest to the commercial center as viewed from community streets, open space, or other public spaces.

- Variety in roof forms, ridge heights and direction of gables is required.
- Tower elements or other prominent building features should be used to accentuate key elements such as building entries, pedestrian nodes, plazas, or courtyards.
- Form and materials should be integrated with the overall character of the development.
- Although the majority of commercial roof area may be flat, visible elevations should be treated with sloping roof elements, including hips or gable forms (as appropriate to the primary architectural style), or parapet treatments.
- Roof pitch shall be in proportion to the design of the building and in conformance with code regulations for the roof material.
- Secondary roof elements that accentuate special features may have more gentle or extreme slopes, as consistent with the primary architectural style.
- Architecturally exposed roof materials shall consist of flat, barrel, or "S" concrete or slate tiles or shakes.
- Metal roofs are permitted as feature elements consistent with the architectural style.
- Fascia elements should be consistent with the primary architectural style.

6.5.4.1 Architectural Features and Accents

Buildings and/or Tenant Entries

Entries shall be visually appealing and identifiable to users.

Each commercial building and/or tenant shall provide well-articulated, identifiable path of entry for pedestrian and vehicular users from the site into the buildings themselves.

- Commercial/retail entryways shall be clearly identifiable from the perceived "face" of the building so as not to confuse or mislead patrons.
- Landscape, hardscape, and architectural design elements for the project site and building entries shall work together to create a sense of arrival.
- Appropriate signage and lighting shall be provided for emphasis.
- Mixed-use buildings should incorporate design features such as porches, bays, balconies, arcades, street-level windows, and second story windows where feasible.

Patio Dining

Outdoor seating is encouraged to enliven the street-scene along mixed-use edges.

- Outdoor business activity is permitted in the interior circulation ROW only if additional public sidewalk is provided greater that the required 8 foot width.
- Seating areas shall be 5 feet in minimum dimension from the store/building front. Edge of seating area shall be a minimum of 8 feet from the ROW/landscape.
- Seating areas shall have a maximum 20 foot encroachment onto park/paseo areas.
- Patio areas may be enclosed by the tenant using an open rail compatible to the architecture of the building, or hedges, or other suitable separation.
- Patio areas do not require railing or enclosure.

Storefront Windows

Accenting of display windows on the first floor is a strong tool for the articulation of store frontage. Display windows shall be at pedestrian eye level to stimulate street-scene interest and promote viable business.

- A minimum of 40% glazing is required on all multi-tenant commercial buildings and the commercial base of a multi-story mixed-use building.
- Window treatments, where feasible are encouraged. Exterior window treatments include, but are not limited to:
  1. Recessing/surrounds of not less than 6".
  2. Trim elements
  3. Headers and sills
  4. Awnings (cloth, metal, or trellises)
  5. Shutters (proportional to window where consistent with the architectural style).
  6. Mullion patterns, as appropriate to the architectural style.

Character is infused into architecture through the use of details, special features, and accents.

Creativity and articulation at the human scale will help engender a stronger sense of place in the Regional Commercial/Mixed-Use District along pedestrian and auto corridors.

6.5.4.2 Storefront Windows

- Awnings, when provided should be designed consistent with the architectural style and color palette of the main structure.
- Unacceptable awning treatments include: metal louvers (except Bermuda style shutters) or untreated fabric. Project names, texts, or logos are acceptable as decorative awning treatments, however not as primary signage.

Exterior Lighting

Exterior lighting fixtures shall be compatible with the architectural style of the building, and proportional in size to the scale of the building.

6.5.4.3 Accessory Elements

Loading and Service Design

Site design shall specifically address the needs of pick-up, delivery, and service vehicles related to commercial/retail uses.

- Service entrances and vehicles shall be sited such that they do not interfere with owners/tenants/customer access.
- Appropriate on-site service vehicle parking/turnouts shall be provided in an efficient, non-obtrusive location appropriate to the scale and needs of the project.
- Loading vehicles, when parked, shall not impede normal traffic flow.
- Service and storage areas shall be effectively screened from public view.
- Screening shall be by fences or walls with aesthetically compatible landscaping, and/or comparable materials that effectively obscure loading/service areas.
- Loading zones, where adjacent to residential development (30 feet or closer), shall be partially roofed to dampen sound and screened from pedestrian view of the area.
- Enclosed service areas or service alleys serving multiple tenants need screen only access points of the service area.

Exterior Storage

- Storage buildings are discouraged.

Trash Enclosures

Trash enclosures and other service elements should be screened from view.

- Solid walls or fences compatible with the building architecture and enclosed with opaque metal gates shall be used for screening.
- No refuse collection or storage areas shall be located between a street and the front of a building.
- Refuse collection areas shall be designed to contain all refuse generated onsite between collections.
- All project sites shall be designed to meet all the Integrated Waste Department's requirements, including the requirements for Sizing of Storage, Location of Collection Area, Accessibility for Collection Vehicles, and Collection of Sorted/Diverted Waste Types.

Gutters and Downspouts

- Gutters and downspouts shall be internally routed, with a continuous paved path to storm drain system, or use decorative exposed gutters and downspouts.

Mechanical Equipment

- All mechanical equipment including satellite equipment shall be screened from site by the use of parapets, decorative screens of compatible color, style, and material, or other appropriate architectural features.
- Devices are to be located in unobtrusive locations and care shall be taken to screen view from public thoroughfares at the pedestrian level.
- Where ground mounted, these devices shall be buffered by landscape or screening. All equipment must be shown on submitted plans as part of the Design Review process.

Meters

- All electrical meters shall be located on the rear or side elevation of a pure retail buildings and interior to an architectural feature compatible with the architectural style of the mixed-use or pad restaurant building and subject to all applicable building codes.
- Natural gas meters shall be grouped and screened by walls, on a secondary or rear elevation of the building.
- Electrical meters located on exterior street elevations shall be ganged and located behind doors.
- Screening electrical meters behind doors in not required where meters are located in screened service areas or in “back of house” areas not intended for general public access and service courts.
- Builders should contact the utility provider for minimum clearances.
- Screen walls and electrical enclosures should be designed integral to the primary commercial building’s architecture.

6.5.5 SIGNAGE GUIDELINES

The purpose of these sign guidelines is to promote an overall "sense of place" through signage that is architecturally integrated and visually interesting while conforming to applicable code requirements.

6.5.5.1 Signage Design Objectives

- To identify the project with elements that convey a distinct character which enhances the collective architectural them and "story".
- To incorporate an environmental communication system categorized into five groups of sign types: identity, direction, information, regulation, and special amenities.
- To ensure the efficient circulation of vehicle traffic within the site.
- To clearly identify vehicular entry points and to direct vehicles to designated parking areas.
- To enhance the pedestrian experience through the design of way finding components: directories, directional signage and destination identifiers.
- To establish the tenant sign criteria to serve as the basis of the leaseholder submittal process for the review and approval of tenant sign proposals.

6.5.5.2 Definitions

Sign – Any arrangement of letters, numeral, or design superimposed or painted on, suspended from, or incised into a surface and used as an outdoor display or notice, pictorial or otherwise, for the purpose of delineating identity, advertising available services and/or products, or for providing instructions and/or direction and/or information.

Advertising Sign – Those which direct attention to the goods or services sold, leased, or otherwise provided and made available, which shall include the name of the leasehold premises and may include names or sub-tenancies located thereon.

Awning Sign – A message integrated into the surface of an architectural awning structure mounted parallel to the building façade.

Blade Sign – A wall-mounted projecting or canopy-suspended sign at the pedestrian level adjacent to a building entry.

Pylon Sign – Those which are vertically freestanding, providing site and major tenant identification oriented to principal vehicle thoroughfares and entries.

Monument Sign – Those which are horizontally freestanding, integrated into the landscape, providing primary or secondary identification of single tenants.

Multi-Face Sign – Those having more than one face, each of which fronts

Permanent Sign – Those of substantial, durable materials and finishes intended for long-term use.

Temporary Sign – Those intended for short duration, normally during the planning and construction phase of development or for temporary events.

Sign Area – Shall be the sum of the areas enclosed within parallelograms drawn around each letter and/or pictorial or architectural embellishment. Where letters or embellishments are connected, as in script writing, the parallelograms shall encompass each group connected. Where a frame or backing for the letters, embellishments, etc., constitutes an integral part of the sign, the total area enclosed shall be considered.

Façade – The exterior wall of a building exclusive of projecting signs, columns, pilasters, canopies, marquees, decorations, or the like.

Parapet – That portion of the exterior wall of a building occurring above the roof.

Marquee – A rigid canopy extending outwards from the building façade, generally over the main entrance or along a principal façade.

6.5.5.3 General Sign Design & limits

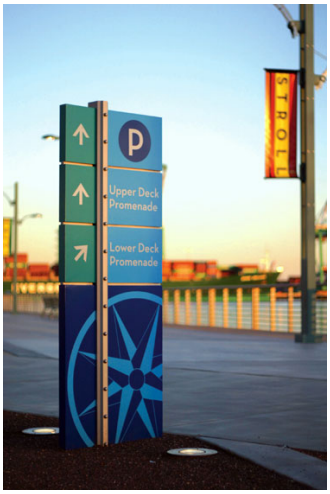
- Tenant sign size and quantity must be compatible with architectural scale and structure as determined by the Owner and conform to City of Ontario Sign Code as determined by the Planning Department.
- The dimensions and shape of sign panels or elements mounted on building facades or marquees shall be scaled proportionately to the architecture.
- Double or multi-face signs shall count as one (1) unit when computing number of signs allowed.
- The area of one (1) face shall be used in computing area of double or multi-faced signs.
- Sign elements shall not project more than 2’-0” beyond the lease line unless reviewed and approved by the Owner.
- All projecting blade signs must maintain a minimum 8’-0” clearance height above grade.

6.5.5.4 Identity Signs

- Primary project identity signs shall be situated at appropriate locations and may be any of the following: an entry-spanning gateway sign, entry flanking monument sign or double-sided pylon sign. The project identity signage should be creatively interesting and visually engaging.
- Secondary project or tenant identity signs are typically ground-mounted monument signs. The design of the monument sign shall be in keeping with the character established for the project with variations to include individual tenant identities.
- Commercial tenant identity wall signage shall adhere to the criteria set forth within the Commercial Sign Design Guidelines to be established and implemented as part of a comprehensive sign program for each project. The design of commercial tenant signage shall be in keeping with the character established for the project with variations to include individual tenant identities.
- Retail tenant identity signs shall adhere to individual national identity/corporate branding standards and remain in keeping with the character established for the project.
- Residential Development identity signs shall adhere to the criteria set forth within the Residential Sign Design Guidelines contained within the comprehensive sign program for each project. The design of the residential identity sign shall be in keeping with the character established for the project with variations to include individual tenant identities.
- Code-required identity signs are required for restrooms, telephones, fire extinguishers, elevators, escalators and stairs within the project. All code-required identity signs throughout the project shall incorporate the appropriate international symbols as established by the Society of Environmental Graphic Design (SEGD).

6.5.5.5 Directional Signs

- Direction signs shall be located at any vehicular or pedestrian decision point within the leaseholder project.
- Vehicular direction signs shall clearly direct to destination anchors within the leaseholder project and to on-premise parking areas.
- Vehicular direction signs shall be consistent in size, shape and design throughout the leaseholder project.
- Typography on vehicular direction signs should be legible and have enough contrast to be read from an appropriate windshield viewing distance.
- Vehicular direction signs shall incorporate reflective vinyl copy for night-time illumination.
- Vehicular signs should have no more than three messages per sign.
- All direction signs throughout the project should incorporate the appropriate identity symbol as established by the Society for Environmental Graphic Design (SEGD) and comply with all state, local and federal regulations.

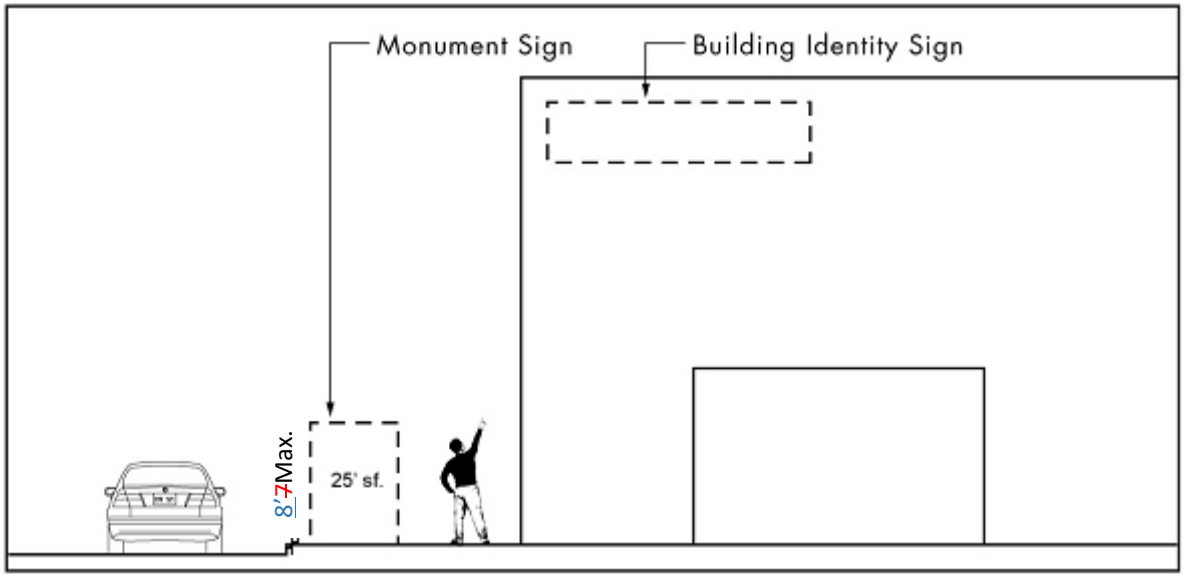


6.5.5.6 Information Signs

- Wall-mounted or freestanding directories are appropriate within a mixed-use district.
- Parking information signs should be located at parking entrances for mixed-use structured parking.

6.5.5.7 Regulation Signs

- Regulatory signs that may be required within the project include: non-smoking no parking, do not enter, no dogs, no skateboarding, and accessibility-related (ADA) signs.
- Vehicle regulatory signs including stop, yield, do not enter, wrong way, speed limit, no parking and one way are intended to impose legal obligations and/or restrictions on all traffic. It is essential, therefore, that their use be authorized by the public body or official having jurisdiction, and that signs conform with the Manual on Uniform Traffic Control Devices. A traffic engineering consultant is required to verify location of regulation signs on public right-of-way.
- Signs within the project must be in compliance with the following local and national guidelines:
    1. CalDAG 96 – Combined ADA and CA Title 24
    2. AASHTO Part 1 Guidelines for Supplemental signs
    3. MUTCD – Manual of Uniform Traffic Control Devices
    4. City of Ontario Municipal Code, except where modified by this document.
    5. San Bernardino County ordinances, except where modified by this document.



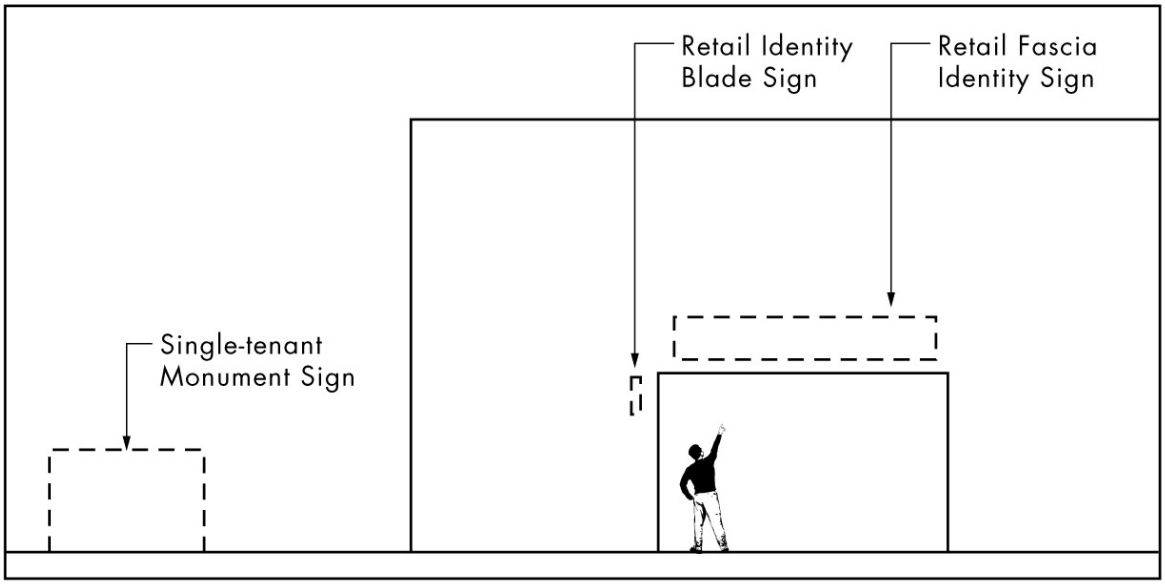
6.5.5.8 Amenities

- Project banners may be incorporated on architectural features and light fixtures. The design and application of banner elements shall be subject to approval by Owner.

6.5.5.9 Commercial Sign Design Guidelines

- Commercial project leaseholders are allotted a total of one and a half (~~1~~1.5) square foot of signage per linear foot of frontage for building signs.
- Commercial project leaseholders are allowed the following signs:
    1. Building Identity Sign
    2. Monument Sign (as allocated and approved by Owner)
    3. Placement of Identity on an Information Sign
- Environmental graphics color palettes should be compatible with the architectural design of the buildings.

COMMERCIAL SIGN DIAGRAM
Note: Sign area based on 1 square foot per l lineal foot of frontage



6.5.5.10 Retail Sign Design Guidelines

- Retail project leaseholders are allotted a total of one and a half (~~1~~1.5) square foot of signage per linear foot of frontage for building signs.
- Retail project leaseholders are encouraged to incorporate the following signs into their project:
  1. Retail Fascia Identity Sign
  2. Retail Blade Identity Sign (required 8'-0" clearance above grade)
  3. Single-tenant Monument Sign (where applicable)
  4. Building Awnings
  5. Multi-Tenant Pylon Signs
- Environmental graphics color palettes should be bold and vibrant within the Retail project.

6.5.5.11 Residential Sign Design Guidelines

- Residential developments are allotted a total of one (1) square foot of signage per linear foot of street frontage for building signs.
- Residential developments are encouraged to incorporate the following signs into their project:
    1. Fascia Identity Sign (into residential lobbies)
    2. Building/Tenant Address System
- Environmental graphics color palettes should be harmonious with the architecture and integrate bold accent colors.

6.5.5.12 Fabrication & Installation

It is intended that all finished work be of the highest quality to pass eye-level examination and scrutiny.

General Fabrication Specification

- Construct all work to eliminate burrs, dents, cutting edges and sharp corners.
- Finish welds on exposed surfaces to be imperceptible in the finished work.
- Surfaces which are intended to be flat shall be without dents, bulges, oil canning, gaps or other physical deformities.
- Except where approved otherwise by the Owner, conceal all fasteners.
- Make access panels tight-fitting, light-proof and flush with adjacent surfaces.
- Carefully follow manufacturer's recommended fabrication procedures regarding expansion/contraction, fastening and restraining of acrylic plastic.
- Exercise care to assure that painted, polished and plated surfaces are unblemished in the finished work.

Non-Permitted Sign Construction

The following construction methods are not permitted:

- Letters with exposed fastening and unfinished edges (unless architecturally consistent).
- Paper, cardboard, Styrofoam or untreated cloth.
- Signs employing flashing, flickering, rotating or moving lights (except as approved by owner).

6.5.5.13 Sign Maintenance

All signs shall be kept in "like new" condition and shall be promptly restored to such condition if damaged or otherwise marred. Copy and text employed on signs shall be kept accurate and current.

6.5.5.14 Sign Location

All signs shall be contained within the premises to which applicable and shall be so oriented as to preclude hazardous obstructions to person and/or vision of pedestrians and/or vehicle operators. All sign locations to be submitted in elevation and plan view for Owner approval per the Comprehensive Sign Program for each project.

6.5.5.15 Temporary Signs

Temporary signs may be authorized at the discretion of the Owner on leased premises during the period of initial planning and construction. For continued use subsequent to the first 60-days of leasehold operations justification in the form of written definition of intended permanent sign program shall be submitted to the Owner for consideration and disposition.

- Temporary signs should reflect the project design or brand to generate excitement for the project.
- Branded Construction Fence or Storefront Barricade may be used as a communication devise to generate excitement for the project.
- Leasing Signs shall be allowed upon approval by Owner.
- Sandwich Board signs which are architecturally consistent with the project shall be allowed upon approval by Owner.
- Other Environmental Graphics may be utilized upon approval by Owner.

6.5.5.16 Sign Illumination

All sign elements must be internally and/or externally illuminated. Hot spots and light leaks are not permitted and must be repaired by the Leaseholder. All illuminated signs shall be fabricated, installed, and comply with national/local building and electrical codes and shall bear the U.L. label. All signs shall conceal all identification labels and U.L. labels to conform to U.L. codes. All conductors, transformers, cabinets, housing and other equipment shall be concealed and/or incorporated into storefront and/or sign components.

- To protect the visual environment, all leaseholders' light fixtures in regards to brightness and glare, shall be subject to approval by Owner.

Leaseholders' primary sign, secondary sign (if applicable) and canopy signs shall remain illuminated during business hours as designated by the owner. Lighting in these zones are required to be circuited and switched separately from other store fixtures on the leaseholders' panel and controlled by a time-clock. Leaseholder shall provide a disconnect switch at sign transformer or near electrical junction box per the Comprehensive Sign Program.

SECTION 6.6 LIGHT INDUSTRIAL DESIGN GUIDELINES

Industrial design guidelines apply to Planning Area 2C, 3C, 5A, 5C and 6A~~7A~~. The following Design Guidelines have been developed to ensure a quality, cohesive design structure for Industrial development in Rich-Haven. They will provide the City with the necessary assurances that the Specific Plan will develop in accordance with the design quality and character proposed in this section.

Key design elements will contribute significantly to the visual order and consistency of the entire Specific Plan area and provide a quality development. The fundamental elements of these common features; site design, architectural design, and sustainable standards are established by these Design Guidelines. Landscape design guidelines can be found in Section 7.9 for industrial land uses.

The design guidelines are intended to be flexible and illustrative in nature, with the capability of responding to unanticipated conditions, the market and design trends.

6.6.1 COMMUNITY DESIGN OBJECTIVES

- To secure the long-term vitality of the General Plan by implementing its objectives, policies and principles.
- To provide the City with the necessary assurances that the Specific Plan area will develop in accordance with the design quality and character proposed herein.
- To serve as design criteria for developers, builders, engineers, architects, landscape architects and other professionals in preparing plans for construction.
- To lend guidance to the City staff, Planning Commission and City Council in the review and evaluation of future development projects in the Specific Plan area.
- To provide for the development of industrial facilities which utilize the site's prime location to Ontario Airport.
- To create a high quality industrial development that attracts an array of businesses and provides employment opportunities to area residents.
- To provide industrial uses within the project boundaries which are compatible with surrounding uses.
- To develop a flexible plan that meets the needs of an ever-changing business market, while assuring compliance with high development standards.

- To provide a plan for roadways, infrastructure, and utilities to support on-site land uses as the project evolves.
- To create features and details that blend with diverse architectural styles and elements.
- To create a hierarchy of pedestrian and vehicular circulation.
- To create a palette of architectural styles and that evoke timeless qualities.
- To encourage creativity and innovation, as well as consistent quality in the implementation of these guidelines.

6.6.2 INDUSTRIAL DESIGN PHILOSOPHY

These Design Guidelines will ensure that the Specific Plan community is an environment that reflects the vision embodied in the following concepts:

- Develop a quality, cohesive design concept and identity for the Rich-Haven area. Incorporate Industrial uses into the fabric of the community by placing importance on perimeter edges that integrate with adjacent uses and the rest of the community.
- The architectural image of the Specific Plan will be perceived primarily from the public realm. Therefore, building massing, scale and roof forms, as the primary design components, require articulation in their architectural expression as they relate to the publicly visible areas.
- Establish design standards that ensure lasting value for industrial developments. Utilize colors, materials, textures, features and other design elements that are timeless in their character to ensure an overall design philosophy that will not become dated.

6.6.3 SITE DESIGN

Industrial developments in the Rich-Haven Specific Plan will allow for employment opportunities to be created for the City of Ontario and surrounding region. Residents of Ontario Ranch will have the ability to access employment not only by automobile but also via pedestrian multi-purpose trails from the surrounding residential neighborhoods.

Industrial uses should continue the pedestrian friendly character of the area and implement appropriate site planning, architectural and landscape design techniques to be complimentary to the adjacent land uses.

Site design should facilitate the intended functions of developed and open space areas and provide for appropriate interactions between buildings, activity areas, vehicular access, parking, pedestrian paths and bicycle travel.

The following concepts are intended to facilitate site design quality within the Rich-Haven Specific Plan.

6.6.3.1 BUILDING ORIENTATION

- Provide a well-organized site plan that emphasizes pedestrian connectivity and attractive landscape areas for the public through the location and arrangement of buildings, circulation, and parking areas.
- Buildings should be oriented to provide for an aesthetically pleasing streetscape edge along publicly visible edges including Mill Creek Avenue and Hamner Avenue.
- Building sides which are oriented to visible edges should provide more architectural detail and interest such as color blocking, material changes, windows, building wall offsets, pop-outs and architectural accent features to avoid long expanses of monotonous, blank, untreated walls. (See Photo 7.1).
- Orient buildings towards street frontages to create an inviting public perimeter. Enhanced elevations shall be provided for buildings that front Hamner Ave and Mill Creek Ave.
- Provide visible pedestrian access to buildings from the street, parking areas, and perimeter sidewalks through signage, prominent architectural features, and landscape design.
- Create employee break areas within setback areas with trellis structures, create park like amenity for employees
- Locate loading and storage areas away from streets when feasible, ensure adequate space for vehicle backing and maneuvering on-site, and provide adequate parking for loading vehicles so normal traffic flow is not impeded.
- Orient and screen elements such as trash enclosures, loading bay doors, and service docks to minimize their visibility.
- Locate service entrance to prevent conflict with front entry.
- Place electrical rooms and transformers away from front entries and street views.

6.6.3.2 PARKING LOTS

- Parking is encouraged to be located to the side and rear of the building, when available. Landscape buffers should be provided to screen parking lot areas that are visible from perimeter streets. (See Photo 7.2).
- Parking lots should be designed to minimize impact to pedestrian walkways and service access. Large parking lots should be avoided, however if necessary, a landscaped pedestrian walkway

should be provided for safe access to buildings.

- Site entries shall compliment the architectural development by utilizing enhanced pavement treatment in vehicular areas, accent trees, and color planting. Enhanced paving shall extend from the back of the approach apron, into the site, to the first intersecting drive aisle or parking space.

- A theme wall/entry monument may be installed at the major project entries.

- Parking areas shall provide trees within the vehicular use areas at a ratio of one tree for every 10 parking stalls. The trees shall consist of 24" and 36" box sized trees.

- Locate visitor and short-term parking areas at the front and sides of buildings near primary building entrances.

- Organize landscaped areas, drive entrances, and/or buildings to create separate parking areas to prevent the parking lot from being the dominant visual element.

- Screen parking areas and loading docks facing the street using landscape buffers planted with screen trees and drought tolerant vegetation.

- SCE easement utilized for industrial parking or activity shall be completely screened from the public right of way, residential land uses and trails by a decorative block wall or other form of screening consistent with the design guidelines and require Planning Director review and approval.

Photo 7.1 - Example of main building accents oriented towards street and entry

Photo 7.2 - Example of an Industrial edge along a perimeter street such as Hamner Avenue

6.6.3.3 LOADING STORAGE & REFUSE AREAS

- Loading docks and storage areas should be oriented away from adjacent streets. Any visual impact to public views should be screened through the use of walls, berms and/or landscaping. Adequate room should be provided for trucks maneuvering or waiting to unload. Attractive and durable materials shall be used for the design of visible screening walls that is complimentary to the primary building design.

- Refuse areas, containers and equipment shall be easily accessed by service vehicles but screened from view of the streets, parking lots, and connecting walkways through the use of walls, berms and/or landscaping. Screening details should incorporate elements that are compatible with the architecture style of the building. Equipment and enclosures shall not be located near pedestrian walkways. Roof-mounted equipment shall be screened by the roof/parapet.

- Screen walls should be 14ft high. Lower screen wall heights may be permitted through a line of sight study. Landscaping should be incorporated to visually soften the appearance of walls.

- No required parking or loading facilities shall be located in any required landscape setback.

- Driveways and parking areas should be separated from adjacent sidewalks or landscaped areas by a curb not less than six inches high.

6.6.4 ARCHITECTURAL DESIGN

The architectural design guidelines for industrial buildings will respond to the general characteristics of the surroundings as well as to the overall thematic vision of the Rich-Haven Specific Plan area. They are intended to provide well designed, attractive, high quality buildings through the use of the following design elements, features and principles.

6.6.4.1 SCALE AND MASSING

- The general scale and massing of an industrial building is large and monolithic. Due to the nature and purpose of these buildings, this is unavoidable, however, design techniques can be used to mitigate and soften the appearance. These design features are especially important where the building is highly visible from the public realm.

- Building height variations, architectural projections, pop-outs, stepping of floors, accent detailing, material change and color variety are ~~encouraged~~ required to compliment the surrounding industrial land uses. Massing elements shall relate to the architecture style of the building and should be proportional and visually pleasing.

- Avoid blank walls by providing articulation on building elevations visible from a public right-of-way through elements such as cornices, parapets, expression lines, and changes in materials and/or colors.

- For larger buildings that are visible from adjacent public streets, they shall include architectural treatments to avoid long expanses of untreated walls, and break up building massing, through the use of building height changes, projections, changes in color, building material ~~or~~ and texture ~~or similar architectural treatments~~.

- Typical ground-mounted equipment (such as transformers and heating units) should be screened by landscaping where they would otherwise be within public view.

- Where long, linear walls or fences are needed, a combination of wall/fence with dense landscaping shall be provided.

- The mass of new structures, as visible from public streets, should be softened by landscaping or lessened by small-scale elements such as windows, panels, entrances, and other detail features to avoid monotony in design (See Photo 7.3).

- Ensure scale, massing, fenestration, materials, and colors are consistent with the building's architectural style and compatible with the overall design in the Specific Plan area.

- Provide the greatest level of articulation on the front facades that are visible from the public rights-of-way and at the main entrances.

6.6.4.2 ROOF FORM AND MATERIALS

- Roof forms if visible, should be simple and avoid a massive appearance. Buildings shall use height variations to breakup the roofline and create a more interesting visual appearance (SEE 6.6.4.5 Base & Top Treatments).

- Roofing materials should be durable yet compatible to the building's architectural style.

6.6.4.3 ENTRY DESIGN

- Entries and windows are encouraged to face streets and pedestrian walkways. Primary building entries shall be easily identified through the massing of the building. Greater height can be used to highlight and accentuate entries in the form of tower elements, tall voids, a central mass or an entry plaza. Secondary entries may use smaller building masses to communicate their locations.

- Design office buildings, business parks, and office areas of industrial or warehouse buildings with an emphasis on the use of windows, architectural details, and building articulation.

- Integrate the design of industrial/warehouse office areas into the overall building composition so they create powerful architectural statements and not visually disjointed "add-ons".

- Major vehicular and pedestrian entries to the site from the public street system should be readily visible. Major entries to planning areas, other than truck entries should be marked by accent pavement with accent trees and other enhanced landscape features.

- Design entry features as a significant aspect of a building's overall composition through massing, detailing, architectural treatments, and/or special materials and colors.

- Employ recessed or covered building entrances to provide shade and visual relief.

6.6.4.4 DESIGN FLEXIBILITY

- Building design should be flexible in order to adjust to various future market demands. Parcel sizes should be flexible and vary in size to accommodate a variety of building types.

Photo 7.3 - Example of building and landscape treatments to soften views from the public right of way

6.6.4.5 BASE & TOP TREATMENTS

- Building design should encourage the use of base and top treatments to help balance the "weight" of the building visually. Bases should appear to "ground" the building, while tops create a defined edge to the roofline. Base treatments may include changes in texture or material and enriched landscaping. Top treatments may also include changes in texture or material, and may also include cornices or roof overhangs.

6.6.4.6 MATERIAL CHANGES

- Avoid the false appearance of lightweight veneers by hiding material changes through careful detailing. Material changes should not occur at external corners, but may occur at "reverse" or interior corners or as a "return."

6.6.4.7 COLOR

- Employ a minimum of four different colors, materials, and~~/or~~ textures on each building.
- For larger building surfaces colors should be muted and softer colors used. Accent colors may include brighter and darker colors. Color blocking can be used to break up large monotonous wall planes in conjunction with wall offsets and pop-outs.
- Avoid terminating a change in material or color at a building edge; instead, select a logical termination point in relation to the architectural features or massing.
- Paint exposed downspouts, service doors, and mechanical screens the same color as the adjacent wall. Exposed downspouts are not permitted on elevations that front onto a street.

6.6.4.8 LIGHT INDUSTRIAL ADJACENT TO RESIDENTIAL

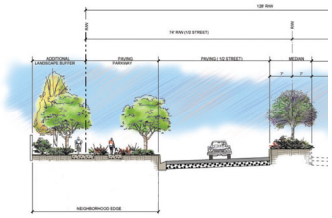
- To minimize noise impacts orient truck courts away from residential areas.
- Enhance second story elevations facing residential with, but not limited to, glazing, canopies, building articulation or niches, color blocking, etc.
- Limit activity and evening hours of operation on drive aisles adjacent to residential.

This page intentionally left blank

SECTION 7 - LANDSCAPE PLAN

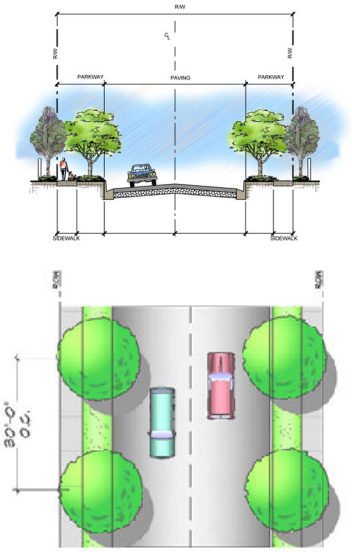
7.1 MASTER LANDSCAPE PLAN

7.1.1 COMMUNITY VISION



The landscape design concept for Rich-Haven is to create open spaces and lifestyle opportunities for a community that evokes traditional and timeless qualities. The emphasis in the landscape design is on community and neighborhood, focusing on the individuals and their interaction with their livable surroundings. Using innovative design to focus the street scene on entries and living areas, as opposed to garages and property walls, emphasizes neighborhood scale within the community. Importance is placed on connectivity and linkages between homes, parks, schools, retail and employment. A variety of park types and sizes provide for a wide array of activities to various community groups and users. Incorporating design elements such as clear sightlines, pedestrian lighting, and a separation of pedestrian from vehicular circulation impresses a premium on safety and individual security. Landscape elements selected will establish a community with a landscape that incorporates the diverse and traditional styles of the neighborhood and community architecture, yet share a common palette and streetscape pattern that unify neighborhoods and the community at large.

7.2 COMMUNITY STREET SCENE



7.2.1 COMMUNITY ARTERIALS

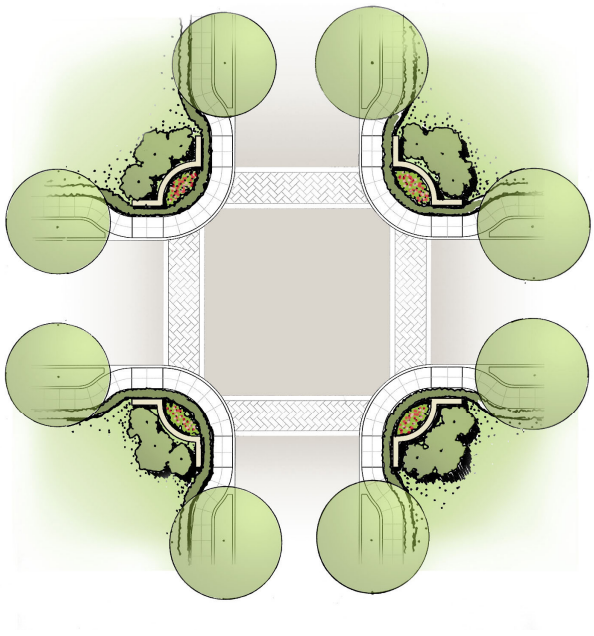
See Master Planned Circulation Plan (Figure 4-1A) for arterial locations as they apply to the Rich-Haven community.

Landscape guidelines concerning major community arterials in the Ontario Ranch are addressed by the City of Ontario in the Ontario Ranch Streetscape Master Plan. Street tree, under-story tree, and shrub palettes have been determined by the City of Ontario and shall be complied with where applicable within the Rich-Haven community.

7.2.2 NEIGHBORHOOD STREETSCAPE

7.2.2.1 Residential Theme Streets

Residential Theme Streets are those significant residential streets that are commonly designed to be used as 'separator' streets between residential neighborhoods, and therefore are usually faced by two different home types. These streets will be designed to connect and unify various neighborhoods and planning areas through the use of community theme elements such as unified street trees, lighting fixtures, directional signage, and construction materials.



Also, residential Theme Streets will act as primary pedestrian corridors in addition to vehicle corridors. These streets will be designed with a differentiating street trees/parkway planting treatment or a widened landscape edge to provide convenient and safe pedestrian circulation throughout the Rich-Haven community.

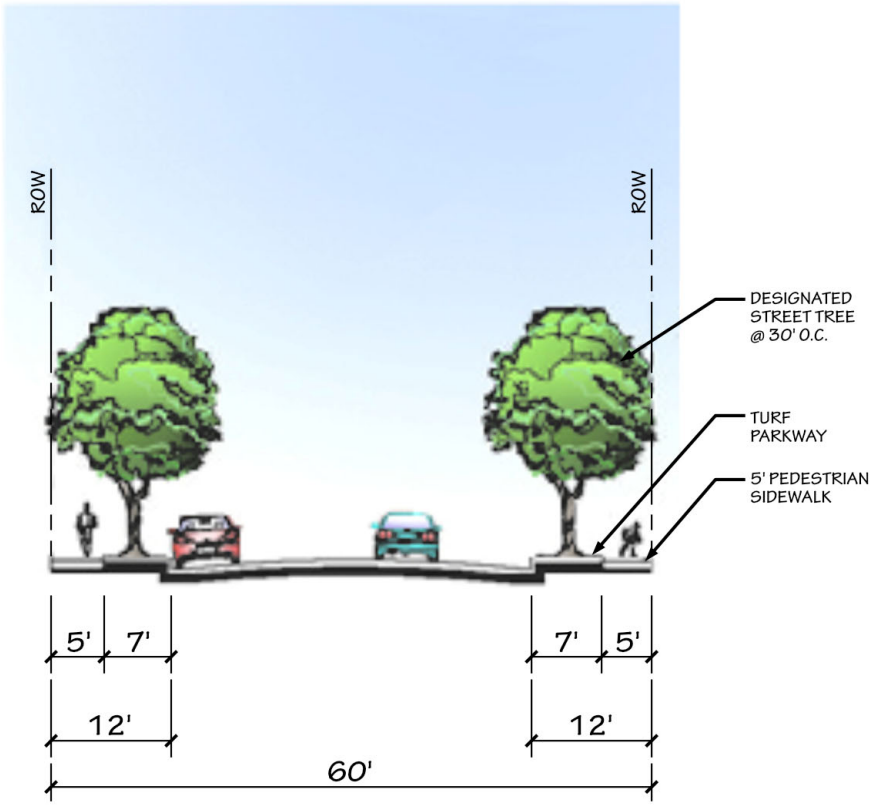
- Street Trees shall be spaced at 30' O.C. When feasible, utilities and other obstructions shall be located outside of an 8' clear space 30' on center reserved for street trees.
- Street Trees shall be installed at 24" box size minimum.
- Street Trees located closer than 5' of walks, walls, or other hardscape shall have a linear root barrier installed per manufacturer's recommendation.
- Street Trees shall align on both sides of the street in a soldier course wherever possible subject to site conditions.
- The number of trees per street shall be based on 1 Street Tree per 30' of linear street measured between beginnings of curves at intersections. The number of street trees shall only be reduced from this amount with permission from the City of Ontario.
- Parkways between sidewalk and roadside curb shall be planted with low water using groundcover, turf or approved equal.
- For all trees proposed in turf areas, a minimum 7' area clear of turf, and in parks a 10' area clear of turf, measured from the outside diameter of the tree trunk, shall be maintained to prevent damage from lawn maintenance equipment. Trees in parkway turf area shall have a turf free, groundcover only section the length and width to equal the parkway size.
- Street light fixtures shall be consistent, decorative in nature, and selected from the City of Ontario's approved street light fixtures.
- Sidewalks shall be scored with a 24" x 24" score pattern.
- Turf shall only be used where play or pedestrian use is expected; such as parks, play areas or limited areas in parkways for access from street parking to avoid excessive water use.

7.2.2.2 Theme Street Intersections

Monumentation at the Local Theme Streets shall consist of ornamental walls with the following criteria:

- Walls shall be 2'-6" in height and be located outside sight triangles calculated per City of Ontario guidelines.
- Design shall be simple and timeless in nature and be symbiotic with the surrounding architectural styles. Walls will be finished in an antique brick veneer or stone veneer. Suggested finishing techniques include sandblasted concrete and mortar wash over stone.
- Color shall match or be in harmony with the surrounding neighborhood architecture.
- Landscape associated with walls shall be selected to provide an accent in color and/or form.
- Landscape shall not exceed 24" high within sight triangles calculated per City of Ontario guidelines.
- Specimen type trees shall be chosen to accent the corner monumentation shall be multi-trunk, with unique branching, flowers or fall color.

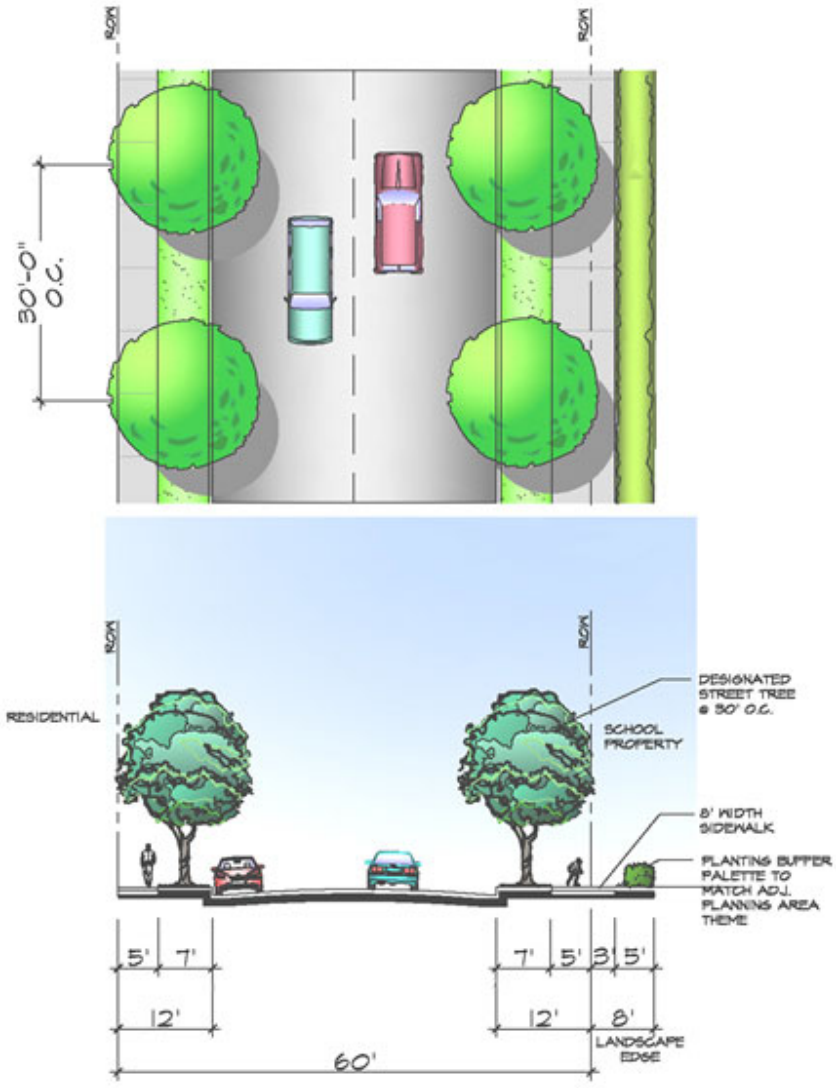
Plan View – Local Theme Street Wall Locations



Example Theme Street Wall Elevation

~~THEME STREET IDENTIFICATION~~

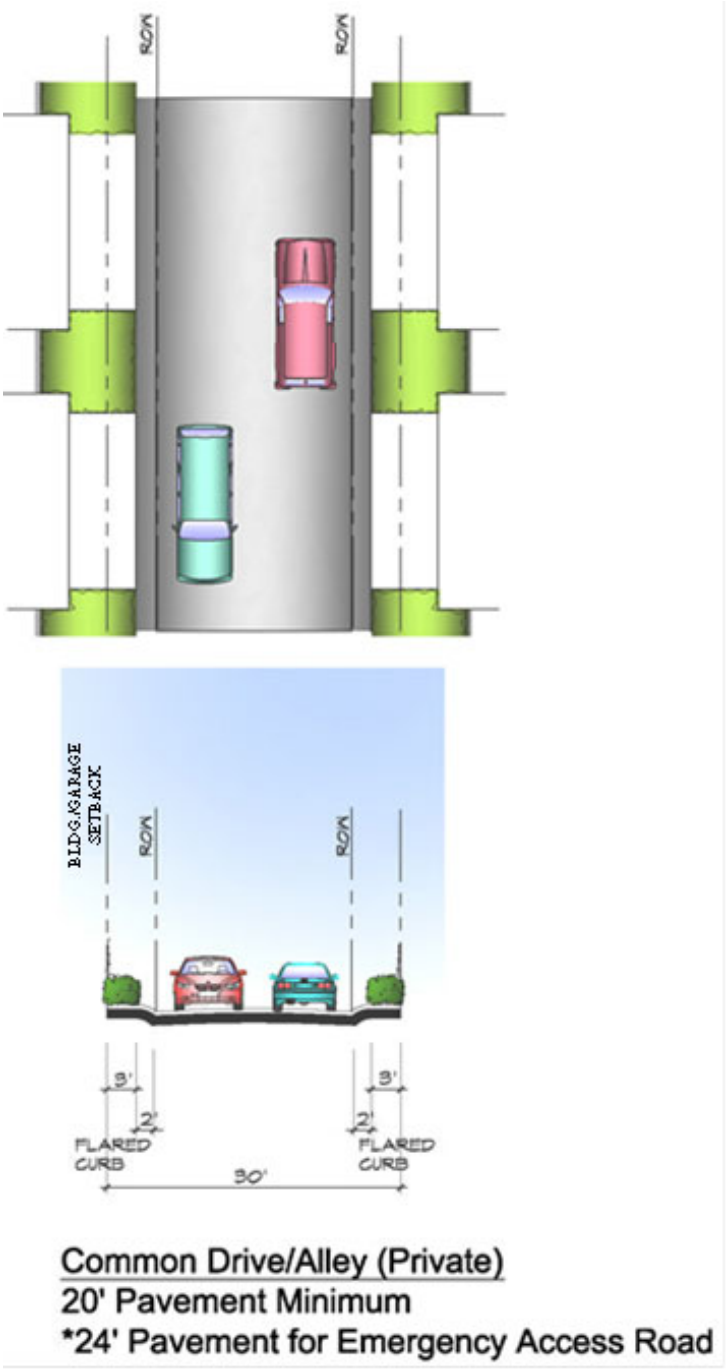
~~FIGURE 7.1~~



7.2.2.3 Local Neighborhood Streets

- Local Neighborhood Streets unify and identify smaller neighborhoods and/or housing types within the Community. Primary identifiers include a common street tree type and similar hardscape materials.
- See Planning Area Landscape criteria (Section 6.4) for street tree designation on local neighborhood streets.
- Street trees shall be installed at 24" box size minimum at 30' O.C.
- Street Trees located within 5' of walks, walls, or other hardscape shall have a linear root barrier installed per manufacturer's recommendation.
- Parkways between sidewalk and roadside curb shall be planted with low water using groundcover, turf or approved equal.

Local Neighborhood Street
Parking Permitted



- Where a Local Neighborhood Street exists adjacent to School Property, there shall be an additional 8’ landscape edge provided on the School side to allow for a widened sidewalk and landscape buffer.

Local Street Next to School
Parking Permitted

7.2.2.4 Common Drive/Alley

- Landscape materials and details shall soften and enhance essential service and vehicular access, creating a utility oriented residential street type. Shrubs and vines shall be used in conjunction with screen wall and fence types to provide a cohesive circulation element for alley-loaded product types.

Common Drive/Alley (Private)
20' Pavement Minimum
*24' Pavement for Emergency Access Road

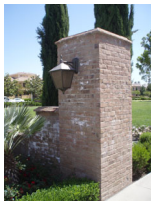
7.2.3 COMMUNITY INTERSECTIONS ~~7.2.3~~

The City of Ontario, Ontario Ranch Streetscape Master Plan defines improvement requirements at intersections of City maintained primary and secondary arterials. In addition, the Streetscape Master Plan categorizes Major and Secondary Gateways and Intersections within the Ontario Ranch. These Design Standards and Guidelines for the intersection of streets shall be complied with.

7.3 ENTRIES AND MONUMENTATION

7.3.1 COMMUNITY MONUMENTATION

The Ontario Ranch Streetscape Master Plan defines guidelines for size, materials, and placement of monumentation at Major and Secondary Gateways and Intersections within the public right-of-way. All monumentation designs are subject to approval by the City of Ontario. And, all monuments shall be placed in accordance with City of Ontario Traffic and Transportation Design Guidelines for Monument Placement.



7.3.2 NEIGHBORHOOD MONUMENTATION

7.3.2.1 Community Entries

Neighborhood monumentation will exist primarily at intersections associated with Residential Theme Streets, Community entries, Neighborhood entries, and at residential area parks.

Community Entries are defined as those junctions where Residential Theme Streets intersect with major City of Ontario arterials, yet are not defined as Major Intersections per the Ontario Ranch Streetscape Plan. Community Entries shall consist of ornamental walls subject to the following criteria:

- Walls shall be maximum 6’-0” in height and be located outside sight triangles calculated per City of Ontario guidelines.
- Design shall be simple and timeless in nature and be symbiotic with the surrounding architectural styles. Walls will be finished in an antique brick veneer or stone veneer. Suggested finishing techniques include sandblasted concrete and mortar wash over stone.
- Color shall match or be in harmony with the surrounding neighborhood architecture.
- Landscape associated with walls shall be selected to provide an accent in color and/or form.
- Landscape shall not exceed 24” height within sight triangles calculated per City of Ontario guidelines.
- Signage lettering will be wrought iron, brass, brushed aluminum, or similar high quality material.
- Ornamentation will be wrought iron, brass, stained wood, or similar high quality material.
- Other than decorative lanterns, monument lighting will be screened from pedestrian and vehicular traffic view.
- Community Entry monumentation is subject to City of Ontario approval.

Example Community Entry
Elevation

Where Private Development Entries coincide with Theme Street intersections, Guidelines for Private Development Entries shall prevail.

7.3.2.3 Neighborhood Entries

Monumentation at Neighborhood Entries shall consist of ornamental walls and signage subject to the following criteria:

- Walls shall be a minimum 2'- 6" in height and a maximum of 4'-0" in height, and be located outside sight distance triangles as calculated by City of Ontario criteria.
- Design shall be simple and timeless in nature and be harmonious with adjacent architectural styles.
- Walls will be finished in an antique brick mix veneer or stone veneer. Concrete wall and pilaster caps will be permitted. Suggested finishing techniques include sandblasted concrete and mortar wash over stone.
- Signage will be wrought iron, brass, aluminum, tile mosaic, or recessed lettering in light sandblasted concrete.
- Ornamentation to be wrought iron, brass, wood, or similar high quality material.
- Other than decorative lanterns, monument lighting shall be screened from pedestrian view
- Landscape associated with walls shall be selected to provide an accent in color and/or form.
- Landscape shall not exceed 24" high within sight triangles calculated per City of Ontario guidelines.
- Neighborhood monumentation is subject to approval by the City of Ontario.

Example Neighborhood Signage

7.3.2.4 Park Monumentation

At a minimum, monument signs will be placed at the primary entrances of community parks. These signs will be subject to the following criteria:

- Monumentation is strongly encouraged to include pilasters, arbors, and other design elements to create an entry statement or gateway into the park.
- Signage walls shall be 3'-5' in height and located outside sight distance triangles as calculated by City of Ontario criteria.
- Designs shall be simple yet strong in form and be harmonious with surrounding neighborhood architectural styles.
- Park names shall be embedded in light sandblasted concrete or on tile mosaic. Embedded letters filled with black or bronze enamel is permitted.
- Walls will be finished in an antique brick mix veneer or a stone veneer. Pre-cast or poured-in-place concrete wall caps and pilaster caps are permitted. Suggested finishing techniques include sandblasted concrete and mortar wash over stone.
- Additional walls without signage may be used throughout the park as a design element, but shall be consistent in material and theme throughout the individual park.
- Other than decorative lanterns, monument lighting shall be screened from pedestrian view.
- Park Monumentation is subject to approval by the City of Ontario.

Example Park Entry

7.4 PARKS AND OPEN SPACE

The parks contained within the residential development areas of the Rich Haven Specific Plan will be designed to provide a variety of uses and activities within the overall community. Each park will consider the unique opportunities of its location and provide complimentary facilities to suit the neighborhood setting. The parks will be developed as a "system" rather than an open space "island", providing facilities, activities and open space to the surrounding neighborhoods.

Safety and visibility will be incorporated within the park system design. Design principles include maintaining clear site lines, adequate lighting, and elimination of "hiding spaces". All parks shall be equipped with necessary maintenance and convenience facilities such as benches, trash receptacles, restrooms, ash urns, and bicycle racks.

All parks shall meet ADA guidelines in terms of accessibility.

All Parks shall be irrigated with Recycled Water.

All parks, open space areas, greenbelts, parkways and parking lots shall consider, where feasible, incorporating the latest Low Impact Design (LID) Best Management Practices for storm water collection and infiltration as discussed in Section 4.4 of this Specific Plan. These methods shall include: pervious pavement, engineered soil (amended soil), vegetated swales, retention/infiltration basins and trenches, dry wells and bio-treatment basins and structures, where infiltration is infeasible. Landscape design will need to coordinate with Civil engineer in planning and implementation of all these methodologies.

7.4.1 RESIDENTIAL DISTRICT PARKS ~~7.4.1~~

7.4.1.1 General Design Elements and Objectives

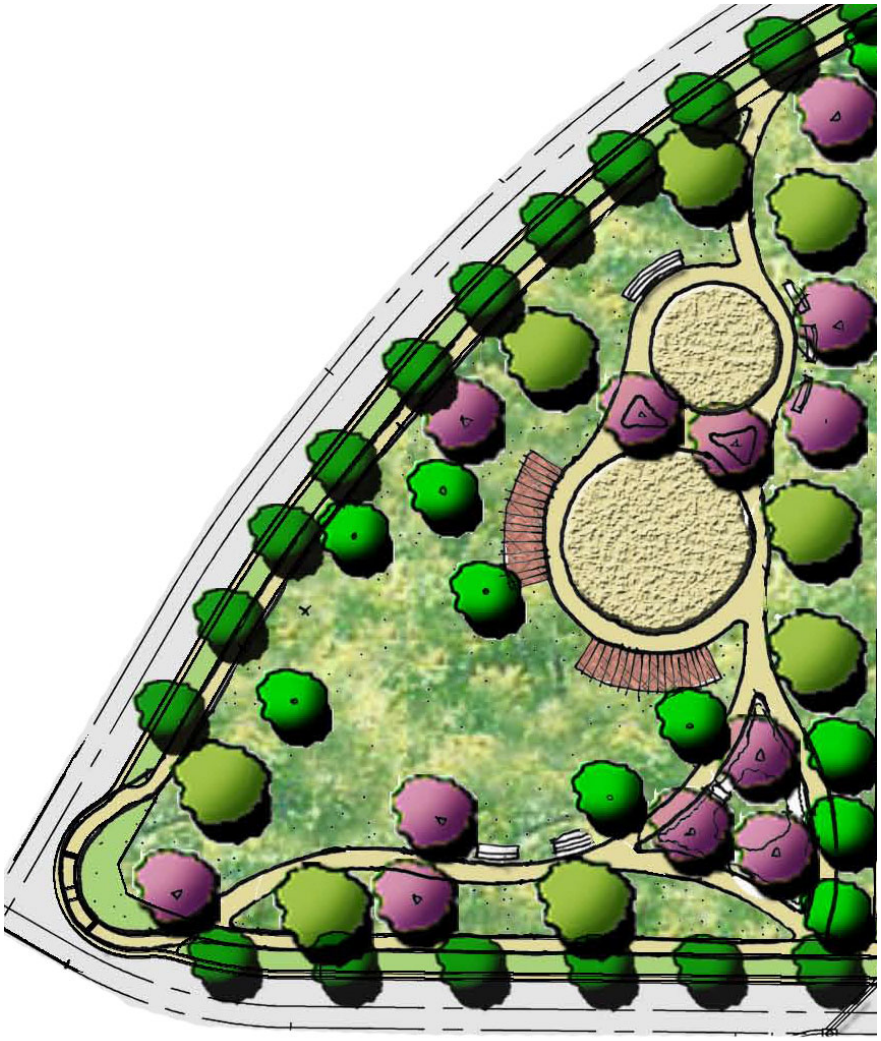
Suggested program elements for Residential District parks may include some or all of these elements:

ACTIVE

- Basketball court
- Sand Volleyball
- Turf field with clearance for pick-up games (football, soccer, softball, etc.)
- Perimeter walking/jogging trail
- Tot Lot (5-12 years)
- Tot Lot (ages 2-5) w/ play structure
- Open turf play field
- Softball backstop

PASSIVE

- Shade Trees and open lawn area.
- Picnic Tables
- Solid cover shade overheads
- Benches
- Gazebo structure
- Pavilion structure with barbecues and tables suitable for parties
- Individual solid cover shade structures with tables beneath
- Rose, flower or native plant garden
- Giant Chess Board



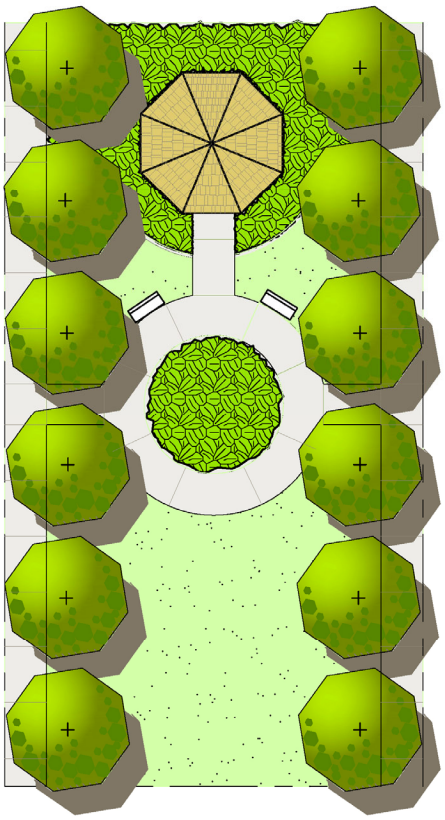
General requirements:

- At least 80% of the site should be generally level. Open field areas shall be at a minimum 2% minimum grade.
- Play areas shall meet all federal and local ADA guidelines and requirements in terms of accessibility.
- Installed play equipment shall meet all current American Society for Testing and Materials (ASTM) standards regarding play equipment, play surfacing, and fall absorbency.
- Installed play equipment shall meet all current Consumer Product Safety Commission (CPSC) guidelines for public playground safety, including but not limited to, fall zone clearances, critical heights, and assembly guidelines.
- ADA compliant restrooms shall be provided.
- Bike racks shall be provided.
- Trash receptacles and ash urns shall be provided.
- Wherever possible, Residential District Park areas should be finish graded to accept street runoff water and serve a dual purpose as stormwater runoff spreading and infiltration areas, as well as recreational areas.

Residential Park Concept

Park design is conceptual in nature. Final designs shall be reviewed and approved by the City of Ontario.

- Clear and effective sightlines shall be maintained from surrounding roadways and throughout the park.
- Clearly delineated crosswalks shall be provided to connect surrounding amenities to adjacent use areas.
- On-site parking and a formal pick-up/drop-off area near the major entry point shall be provided.
- Parks shall have clearly delineated crosswalks to set them off from surrounding amenities to adjacent areas.
- Security lighting shall be provided around the park at 100' minimum spacing with 70-watt bulbs on minimum 14' high poles.



POCKET/LINEAR PARKS 7.4.2

Small Pocket/Linear Parks will be incorporated into the design of neighborhoods in order to both soften the built environment and provide open natural spaces for residents to experience and enjoy.

Example Pocket/Linear Park

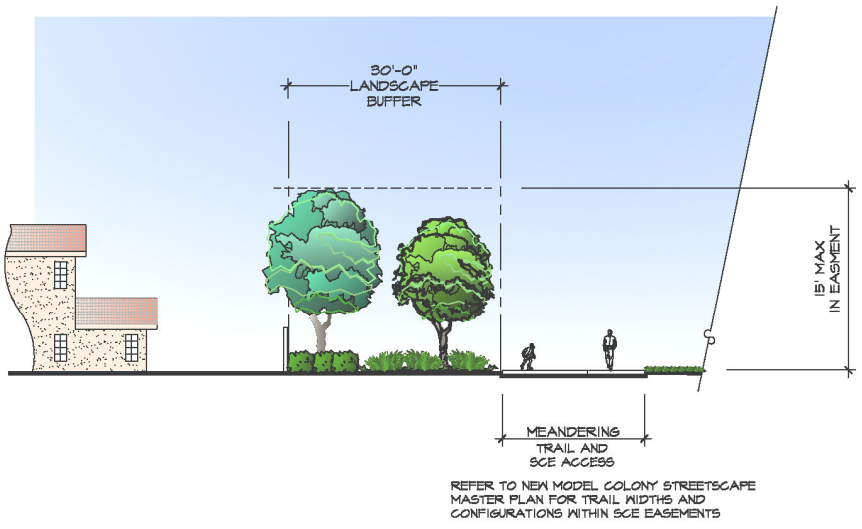
- The pocket/linear park program may contain formal or informal layouts. They also will contain walkways and trails.
- Pocket/linear parks are exempt from the requirement to contain restroom facilities.
- Pocket/linear parks shall contain maintenance and convenience furnishings such as benches, trash receptacles, and ash urns.
- Built pergolas, arbors, gazebos, and walls are encouraged design features. Open lattice or solid roofs are allowed on overhead structures.
- Security lighting in the form of bollard lighting or decorative post lighting is encouraged.
- Pocket/Linear Parks shall be a minimum of 30' in width and 0.25 acres in size.
-

Landscape within the Southern California Edison easements is subject to SCE requirements and review. All landscape plans shall be submitted and approved by SCE before implementation.

See the City of Ontario, Ontario Ranch Streetscape Master Plan for more guidelines concerning SCE Easements in the Rich-Haven project area.

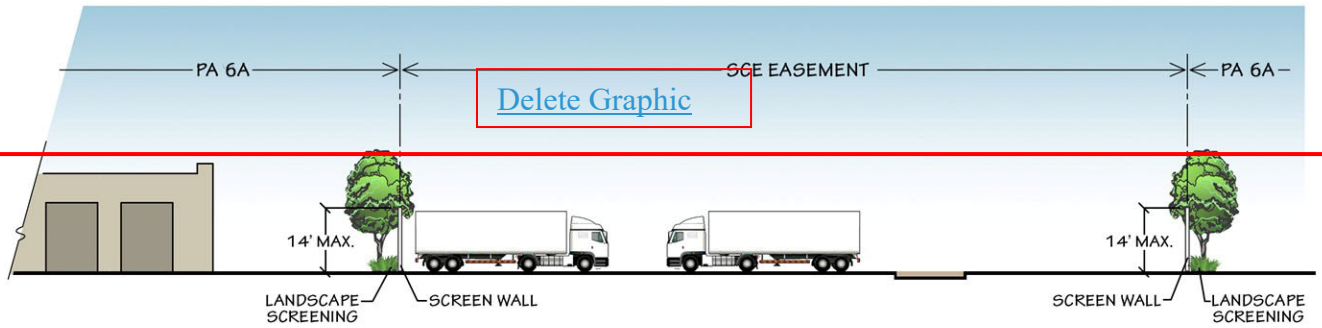
7.4.3 SCE EASEMENTS

7.4.3.1 SCE Requirements



- Landscape design will follow current local and regional SCE guidelines concerning use of hardscape materials, planting materials, irrigation equipment, and clearances.

7.4.3.2 Design



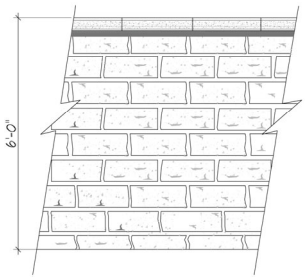
- SCE easements will be designed as linear green spaces.
- It is expected and encouraged that SCE maintenance access will also be designed to be used by the community for pedestrian and bicycle use.
- Community Gardens shall be considered as a design element in SCE easements.

7.4.3.3 Screening

- Where use of an SCE Easement is deemed unsightly, a 30' minimum area shall be used to buffer and screen the use from adjacent areas.
- Provide a separation for trails and landscape from SCE easements with a minimum 24" high block garden wall or 12" high curb and dense hedge material to prevent blowing dust, soil and tumble weeds from damaging trail and landscape.

SCE EASEMENT EDGE/PATH

~~SCE EASEMENT IN PA 7~~

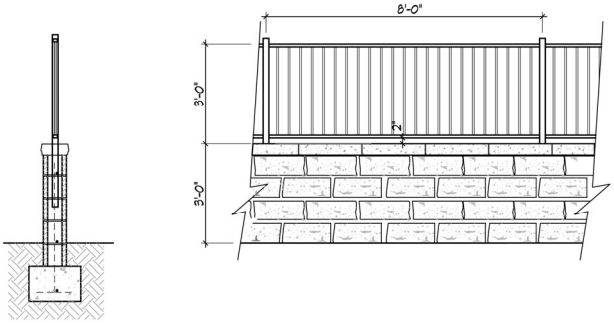


7.5 COMMUNITY WALLS AND FENCES

7.5.1 RESIDENTIAL DISTRICT WALL AND FENCE TYPES

Community Walls will be set back and de-emphasized wherever possible. Where walls are determined necessary, the requirements listed herein will apply. The spacing of pilasters and wall offsets shall be subject to City of Ontario Planning Department review and approval. (See Figure 7.2)

7.5.1.1 Solid Walls

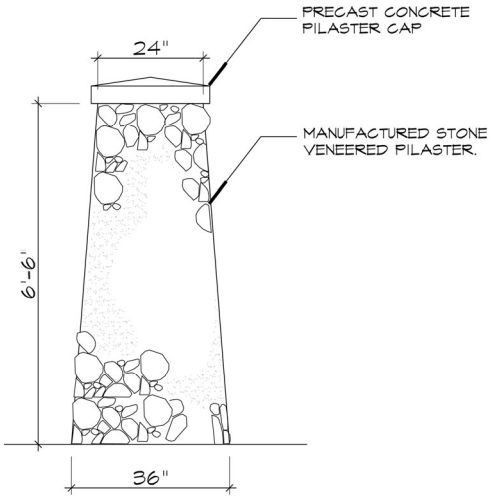


- Solid walls shall not exceed 8' in height unless expressly required in a sound study conducted by a qualified acoustic engineer. Walls that exceed 6' in height are subject to approval by the planning department.
- Walls facing and/or viewed by public spaces shall be decorative in nature consisting of split face block, stone or brick veneer, or plaster.
- Wall caps shall be either precast concrete, concrete block, or plaster stucco finish. Mortar caps are not allowed.
- Wall materials and color shall match or be in harmony with adjacent architectural features.

Typical Wall Elevation

7.5.1.2 View Fencing

- View fencing may be implemented where property walls abut park, open space, or where views are deemed appropriate.
- View fencing shall consist of 3' high maximum wrought iron, tubular steel, or glass over 3' high decorative block wall.
- Steel fencing shall be black in color and appropriately treated to prevent rust.



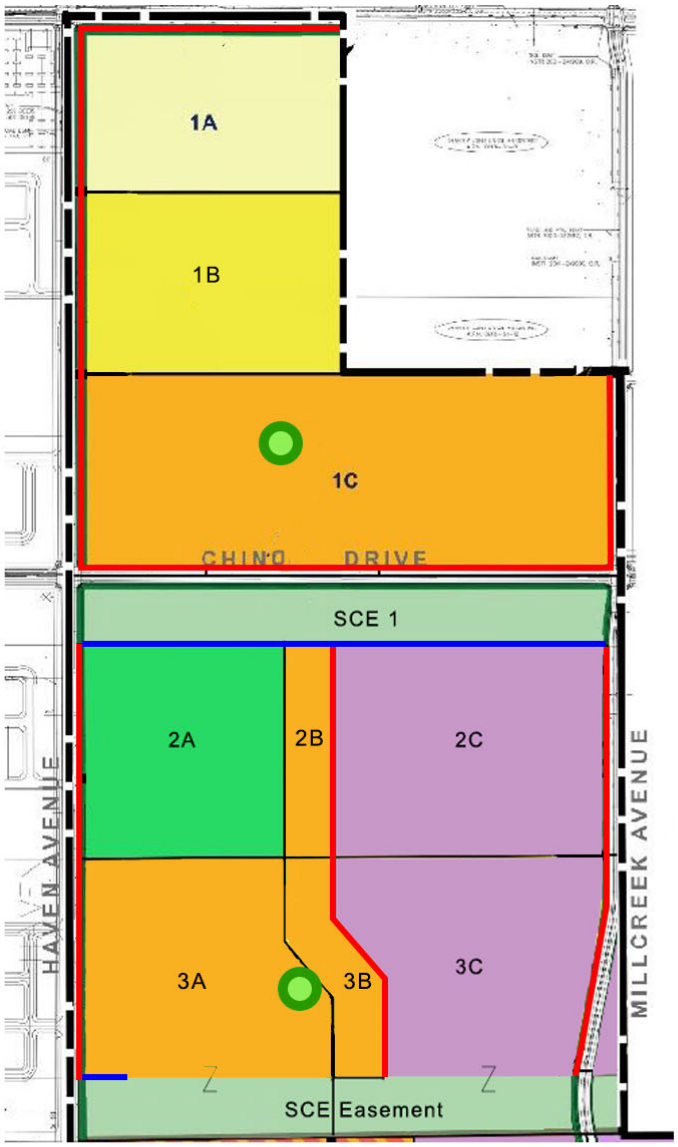
Typical View Fence Elevation

7.5.1.3 Private Homeowner Lot Fencing

- Private fencing between homeowner lots shall be 6’ high.
- Private fencing shall be of solid wall or view fence construction subject to section 7.5.1.1 and 7.5.1.2.
- Interior side residential walls, not exposed to public view, may consist of precision face block with a cap consistent in color with any adjacent walls.

7.5.1.4 Pilasters

- Decorative pilasters shall be used on walls adjacent to or viewable from public areas.
- Pilasters shall be decorative in nature consisting of split face block, stone or brick veneer, or plaster.
- Pilaster materials and color shall match or be in harmony with adjacent architectural features.
- The spacing of pilasters and wall offsets shall be subject to City of Ontario Planning Department and review.



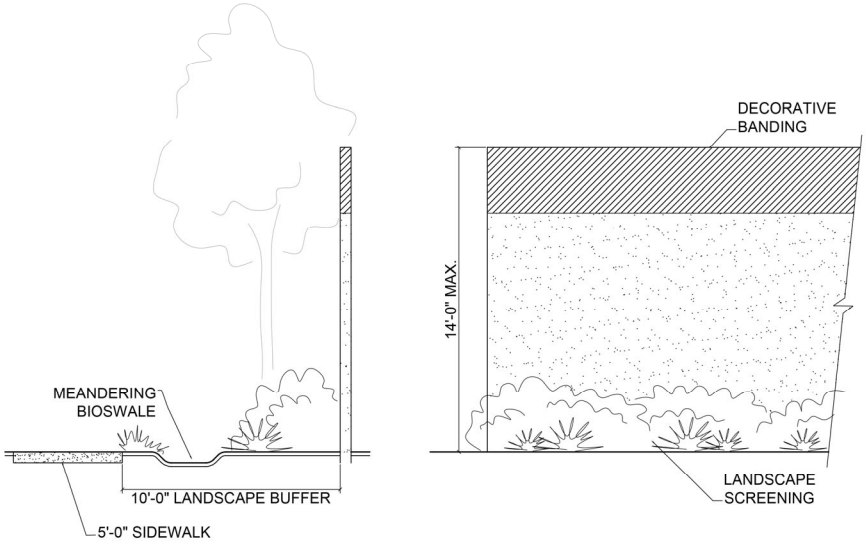
Example Pilaster Elevation

7.5.1.5 Retaining Walls

- Retaining walls shall not exceed 5 feet above rough grade and must be set 5’ clear from rear and side property lines.
- Retaining walls that terrace must include a 3’ clear planting area between walls and/or hardscape.
- Retaining walls must be screened with substantial planting.
- Retaining walls must be properly waterproofed and drained.
- Retaining walls facing or viewable from public areas shall decorative in nature consisting of split face block, brick or stone veneer, or plaster.

Residential District
Community Wall
Figure 7. 2

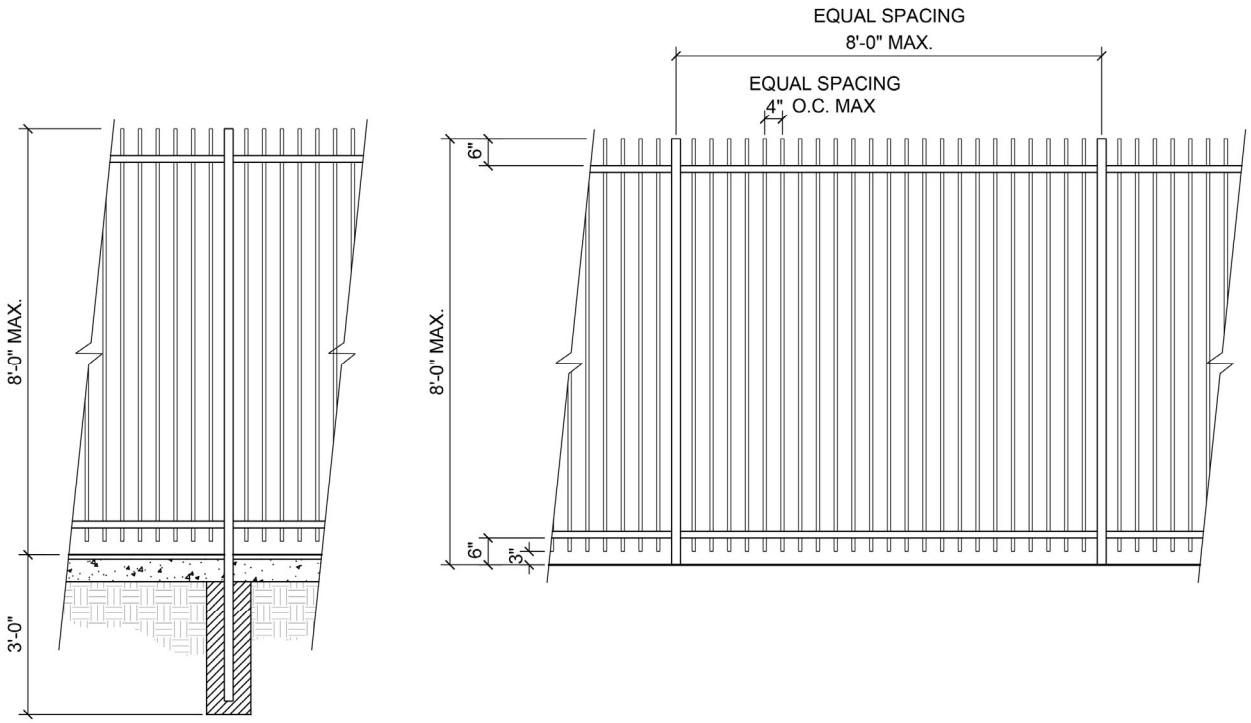
Breaks may occur in walls shown to accommodate local neighborhood entries, walks, and trails subject to City of Ontario approval.



Revised Exhibit

7.5.2 INDUSTRIAL DISTRICT WALL AND FENCE TYPES ~~7.5.2~~

7.5.2.1 Solid Walls



- Solid walls shall not exceed 14’ in height unless expressly required in a sound study conducted by a qualified acoustic engineer.
- Walls facing and/or viewed by the public spaces shall be decorative in nature. Approved materials include concrete tilt-up walls with a decorative banding or finish detailing, split face block or stucco.
- Walls in excess of 50 feet long shall include a decorative pilaster or horizontal plane break every 100 feet.
- Wall materials and colors shall match or be in harmony with adjacent buildings or architectural features.

TYPICAL SOLID WALL ELEVATION

7.5.2.2 Perimeter Fencing

- Perimeter fencing may be implemented along SCE easements, compatible land uses or where visual access is deemed appropriate.
- Perimeter fencing shall consist of 6’ to 8’ high tubular steel or aluminum fencing with or without vertical pickets.
- Perimeter fencing shall be black in color and appropriately treated to prevent rust. Alternative colors may be approved subject to approval by the Planning Director.

TYPICAL PERIMETER FENCE ELEVATION

7.6 GENERAL LANDSCAPE

~~7.6~~

7.6.1 IRRIGATION GUIDELINES

- All planting areas shall be irrigated with an automatic irrigation system.
- Parks, parkways, HOA landscaped areas, and other common areas shall be irrigated with recycled water. See Section 4.2.2 for recycled water system.
- ~~LMD~~ HOA areas are to be controlled with a central control irrigation system.
- Trees shall have a bubbler system on a dedicated bubbler valve.
- Drip systems are permitted.
- Above grade Backflow Preventers shall be located in planting areas, protected with locking enclosures, and screened with plant material.
- Irrigation systems shall be zoned for exposure (south and west exposures together, north and east exposures together), topography, and varying water requirements (hydro-zones) of plant material.
- Turf shall be zoned separately from shrub and groundcover systems.

7.6.2 UTILITY PLACEMENT

- Various utility boxes shall be grouped together as much as possible.
- Utility boxes shall be placed in landscape easements and shrub/groundcover areas. Utility boxes shall not be placed in lawn areas unless absolutely necessary.
- Utility boxes shall not be placed closer than 50 feet to street corners or intersections measured from the beginning of curve.
- Above grade utility boxes shall be screened with planting to the extent possible to allow required access and clearance.

7.6.3 SLOPES

- Slopes shall be irrigated separately from flat areas on dedicated valves.
- All landscape slopes 3:1 or greater to have jute matting installed and all slopes2:1 ~~Slopes shall be covered with jute mesh per manufacturer's recommendations and specifications~~or greater to have erosion control blankets with a 3 year durability installed.
- Slopes shall be planted with trees, shrubs, and groundcover to cover 100% of the slope at maturity to help prevent slope erosion.
- Turf shall only be used on slopes with a grade equal to or flatter than 4.1.

7.6.4 STREET ENDS AND ALLEYS

- Where street ends or alleys do not terminate in housing, a trailhead, or a park, the terminus shall be treated with landscape screening or a focal point as appropriate.

7.8 REGIONAL COMMERCIAL / MIXED-USE LANDSCAPE DESIGN GUIDELINES

~~7.8~~

7.8.1 COMMUNITY VISION

~~7.8.1~~

To create a distinct and unified landscape character for the Regional Commercial/Mixed-Use District that will provide visual cohesiveness, pedestrian connections and functional spaces throughout the different districts and streetscapes.

Soft and hard landscape design is to give character and define the hierarchy of open spaces within this mixed-use area using the following principles:

- The provision of an open space network that includes passive space, social space, activity areas and facilities. Consideration should be given to the orientation of such areas with regard to sunlight and shade
- Using plant species and trees at an appropriate scale to define, identify, separate and enclose space
- The encouragement of visual links and view corridors throughout the neighborhood
- Creating a balance between lush community landscapes while considering the needs for commercial visibility
- Co-ordination and appropriate scale of street furnishings, signage and lighting
- The use of materials to stimulate the senses through texture, smell, color and contrast
- Safety through visibility and pathways located where they are overlooked by buildings
- The use of landmarks, public art and focal points at entrances/key buildings
- The use of materials to define pedestrian dominated areas and slow traffic
- To screen utility equipment, loading and trash collection areas.
- Adequate aftercare and maintenance of all areas

These Landscape Design and Development Guidelines provide design criteria for the Rich Haven Regional Commercial Mixed-Use District as a whole including Planning Areas 4A, 4B, 5B, 6B, 7, 8, 9, 10A and 10B~~6, 7, 8 and 9~~.

Also provided within the Landscape Palate Matrix is a list of additional planting materials that will give a more urban feel to this mixed-use area.

7.8.1.1 PA ~~6, 7, 8 and 9~~4A, 4B, 5B, 6B, 7, 8, 9, 10A and 10B "Urban" Parks

The Planning Areas 4A, 4B, 5B, 6B, 7, 8, 9, 10A and 10B ~~6, 7, 8 and 9~~ parks will be located at the south end of the project within the Mixed-Use District. Where the aforementioned Parks in Planning Areas 1A, 1B, 1C, 2B, 2C, 3A, 3B and 3C lend themselves to a more informal and pastoral arrangement, the ~~Planning Areas 6A, 6D, 7B, 8A, 8B, 9A, and 9B~~Mixed-Use District parks have~~s~~ an opportunity for a more formal village green style park. With a strong axial design, this park would be divided into different areas. This park would provide facilities and varied activities to all user groups, and contain more specialized elements such as themed gardens, a bandstand and / or community gathering facilities.

Suggested program elements include:

ACTIVE

- Tot lot (ages 2-5)
- Tot lot (ages 5-12)
- Play lawn
- Lighted dancing/party square with bandstand
- Pools
- Clubhouse

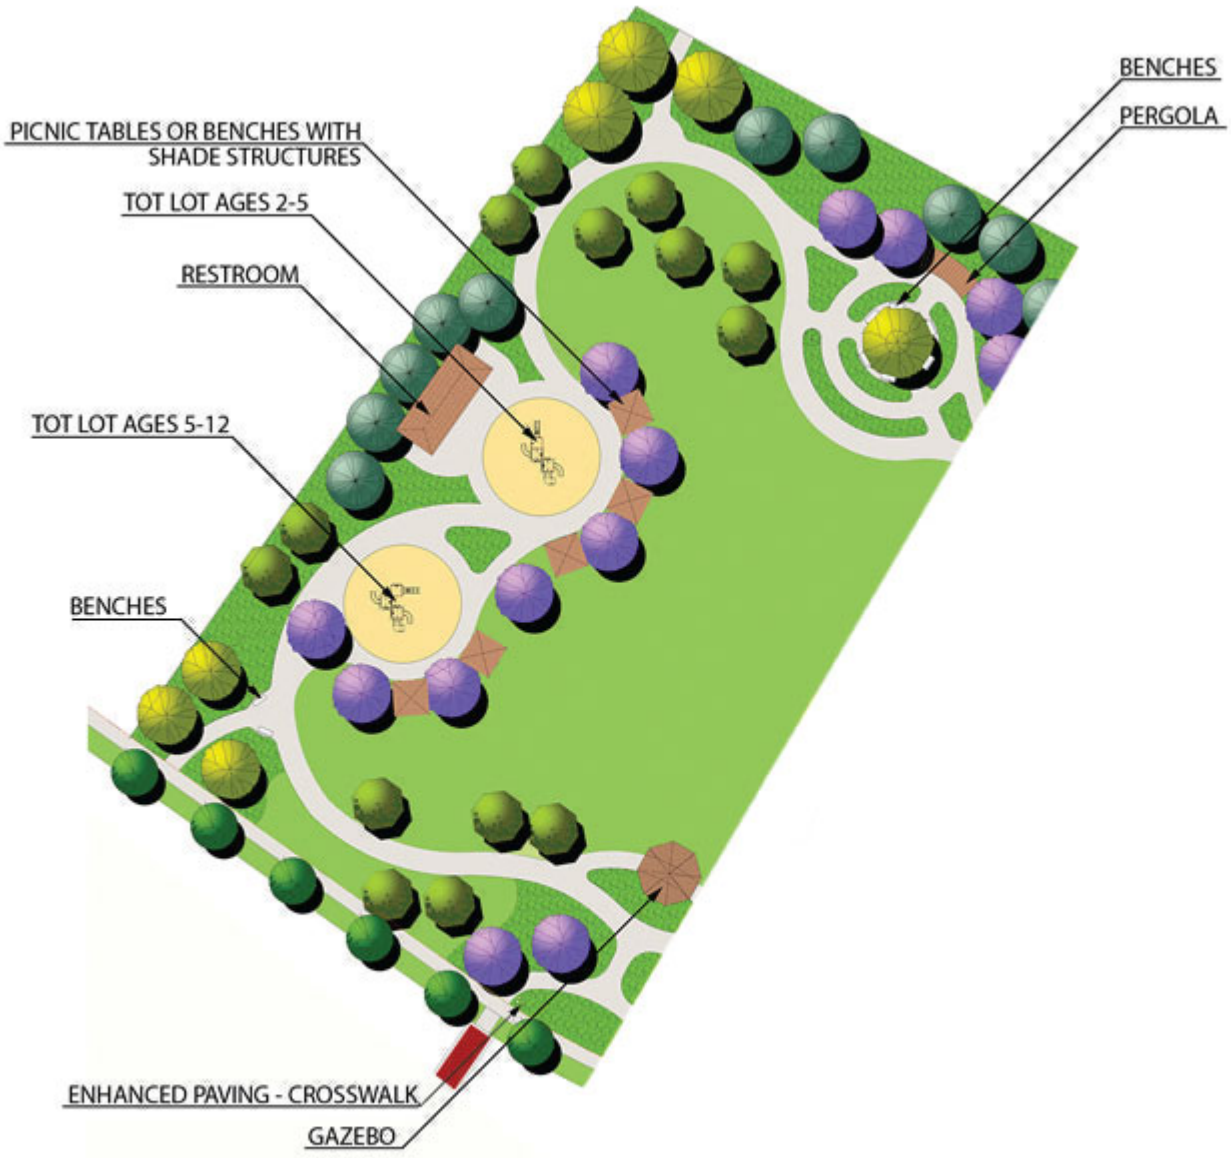
PASSIVE

- Rose Garden
- Native Plant Garden
- Annual/Perennial Flower Garden
- Giant Chess Board
- Gazebo structure
- Benches

General requirements:

- At least 80% of the site should be generally level. Open field areas shall be at a minimum 2% grade.
- Play areas shall meet all federal and local ADA guidelines and requirements in terms of accessibility.
- Installed play equipment shall meet all current American Society for Testing and Materials (ASTM) standards regarding play equipment, play surfacing, and fall absorbency.
- Installed play equipment shall meet all current Consumer Product Safety Commission (CPSC) guidelines for public playground safety, including but not limited to, fall zone clearances, critical heights, and assembly guidelines.
- ADA compliant restrooms shall be provided.
- Bike racks shall be provided.
- Trash receptacles and ash urns shall be provided.
- Security lighting shall be provided around the park at 100' minimum spacing with 70-watt bulbs on minimum 14' high poles.
- Clear and effective sightlines shall be maintained from surrounding roadways and throughout the park.

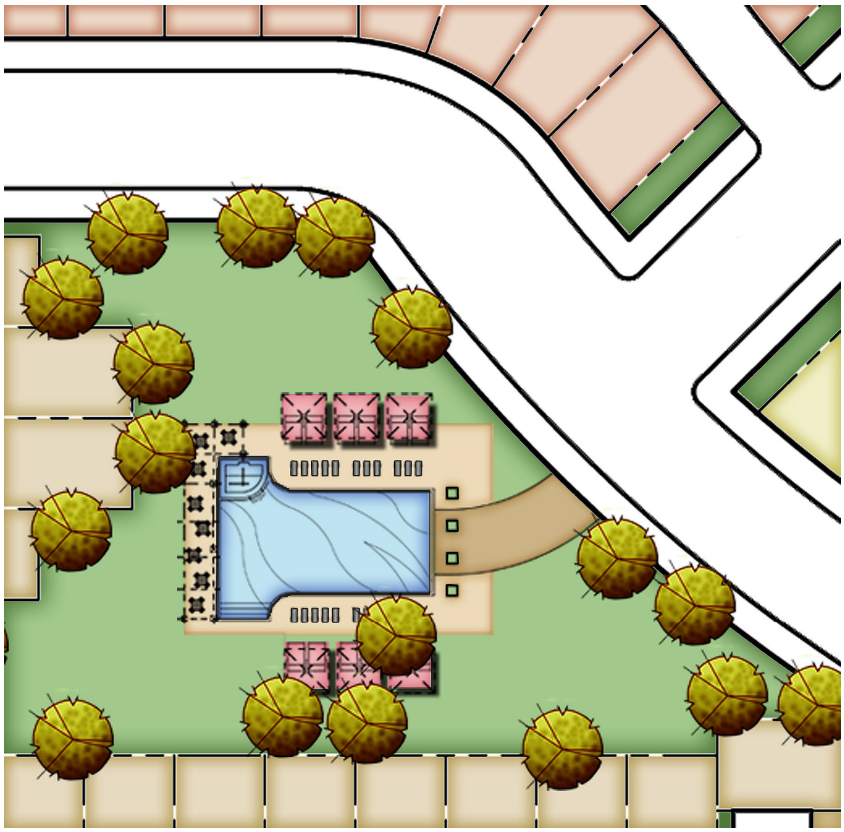
~~7.8.2~~



7.8.2 COMMUNITY PARKS (NON-PUBLIC)

7.8.2.1 General Design Elements and Objectives

- Community parks provide focal points at the entries, and an attractive frontage for surrounding buildings.
- Community Parks include active recreation areas of 5 acres or more.
- These parks are the main recreation areas for the mixed use neighborhoods and provide a buffer between residential and mixed used development.
- Facilities will provide for a broad range of uses and activities, by all segments of the neighborhood population.
- Trees help define and enclose space and furnishing co-ordinate with that in other parks and with the overall architectural style.
- The active recreation area should include lighted playing fields and courts.
- Community Park should provide some on-site parking and formal pick-up/drop-off area.
- Design shall provide a play area near the main hub of park.
- Security lighting shall be provided throughout the park.
- Maintain clear and effective sightlines to make park visible from surrounding roadways.
- Wherever possible, Community Park areas should be finish graded to accept street runoff water and serve a dual purpose as stormwater runoff spreading and infiltration areas, as well as recreational areas.

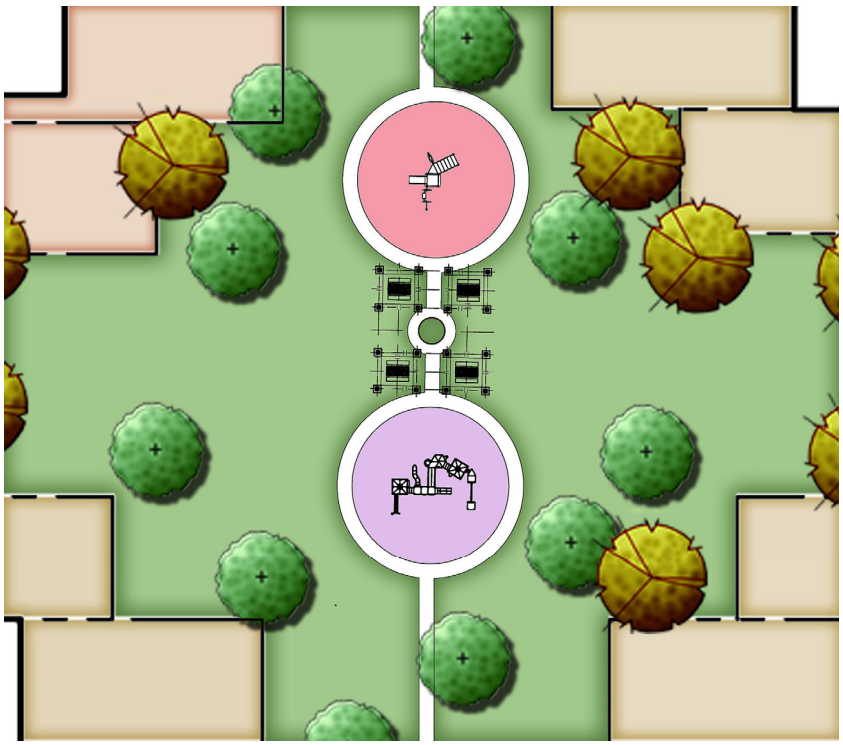


BENCHES
PERGOLA
PICNIC TABLES OR BENCHES WITH SHADE STRUCTURES
TOT LOT AGES 2-5
RESTROOM
TOT LOT AGES 5-12
BENCHES
ENHANCED PAVING - CROSSWALK
GAZEBO

7.8.3 POOL AREAS ~~7.8.3~~

7.8.3.1 General Design Elements and Objectives

- Located within easy access of residential units, facilities include a pool, restroom building, cabanas, lounge chairs, shade structures, tables and chairs.
- Planting in this area provides a buffer to adjacent residences.

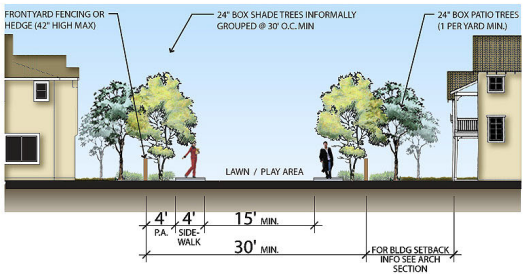


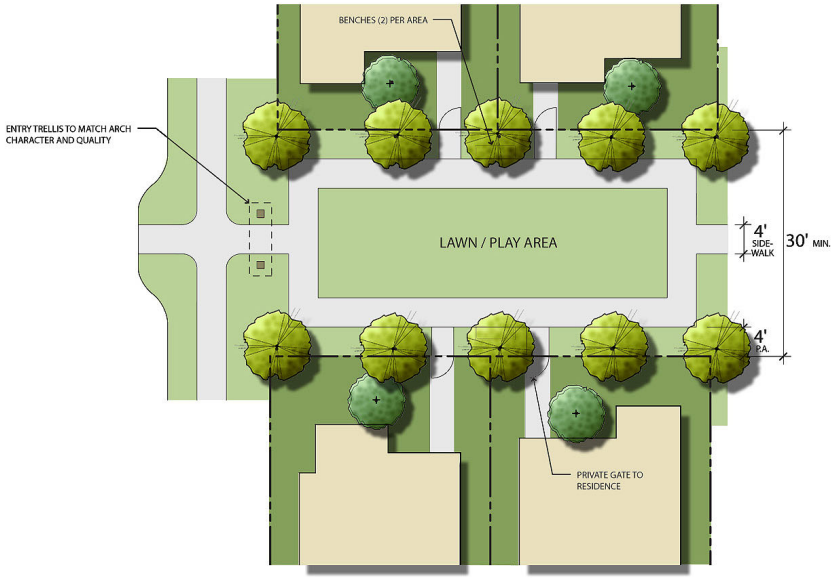
TYPICAL PARK AMENITIES

7.8.4 TOT LOTS

7.8.4.1 General Design Elements and Objectives

- The tot lot is located in easily accessible areas away from traffic.
- Trees are used to help provide structure and shade while shaded seating areas enable comfortable supervision.
- Play equipment is to cater for a range of ages and be installed with a colorful safety surface.

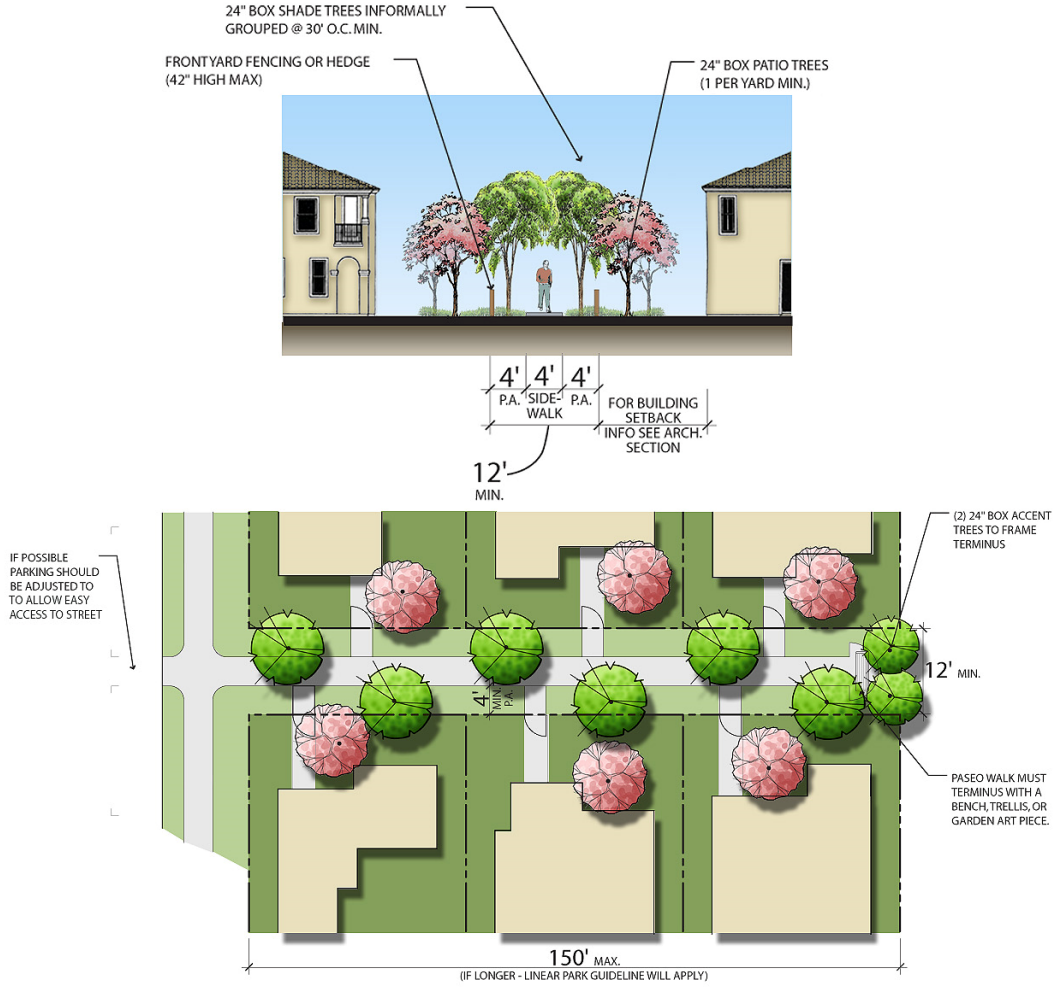




7.8.5 PASEO GARDENS ~~7.8.5~~

7.8.5.1 General Design Elements and Objectives

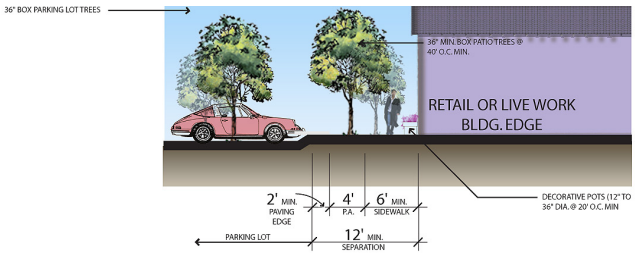
- This space acts as a buffer between commercial districts and residential areas
- It is intended to provide a semi private space for activity, play or relaxation for residents
- The entry and end points are defined by a trellis
- The sidewalk parts to provide circulation to adjacent housing and rejoins to enable direct circulation
- Benches are located along sidewalks
- Landmarks and public art help to provide a sense of place and character.



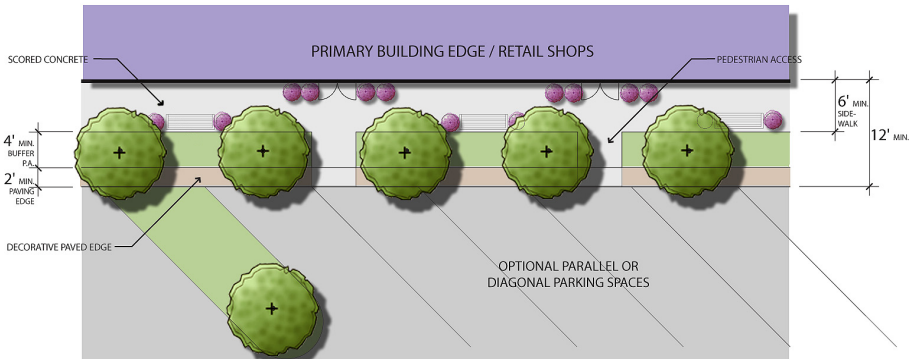
7.8.6 PASEOS

7.8.6.1 General Design Elements and Objectives

- Paseos provide a safe and informal greeting zone for residents and attractive access from the houses
- They end in a terminus with a focal point framed by trees
- Paseos provide safe and informal passive play areas
- Paseo lighting should balance scale, safety and glare. It should be integrated into the paseo design. It may be provided by free standing fixtures, integrated into the adjacent buildings, or both



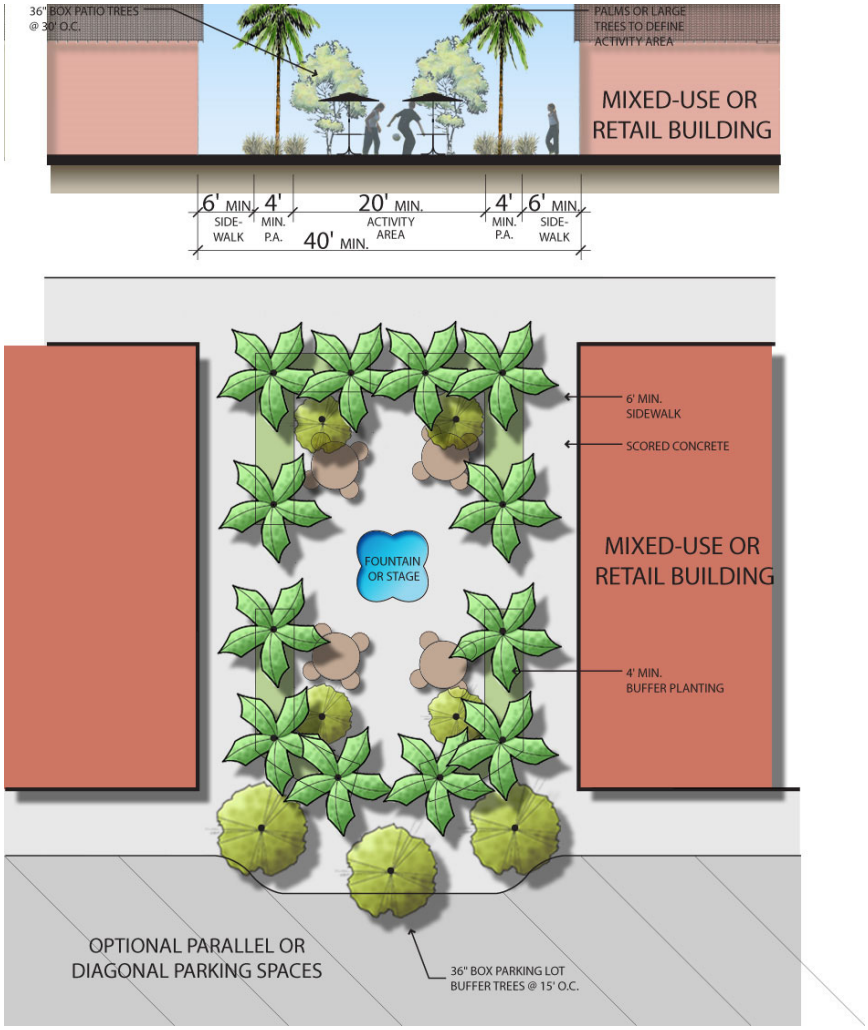
7.8.7 PARKING/SHOPPING INTERFACE



~~7.8.7~~

7.8.7.1 General Design Elements and Objectives

- The intent is to provide a safe and comfortable pedestrian experience and reduce the presence of the parking area from shoppers with buffer planting
- These areas are intended to be used predominantly for circulation, but rest areas are also provided for people watching
- Adequate seating and resting areas are to be provided within this zone
- Various functions are defined with use of enhanced paving (interlocking pavers, brick, stone, or stamped concrete)
- A 2' decorative paving edge is to be used in direct/primary store front openings
- The overall dimension from curb to building can be reduced from 12' to 8' when adjacent to a building, but not a direct/primary store front
- Pedestrian paved surfaces should typically be scored concrete with colored stamped concrete or paved accents
- Planters and furniture should be located as to not block building entries or prohibit ADA access
- Furnishings are coordinated throughout the project

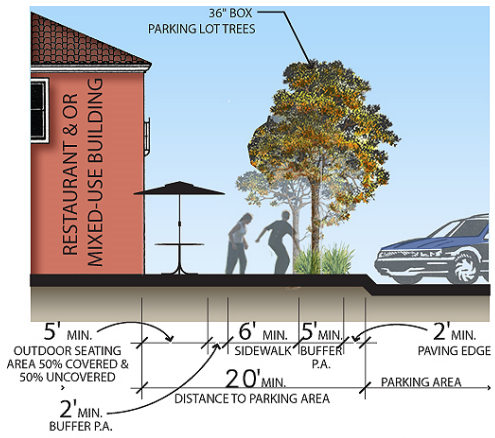


7.8.8 RETAIL PLAZAS

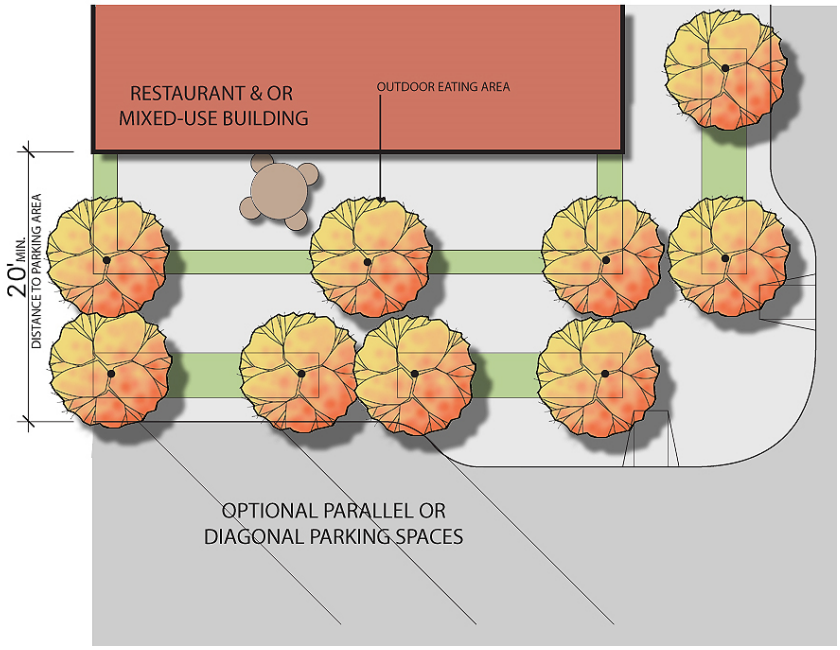
7.8.8.1 General Design Elements and Objectives

- Plazas are intended to provide active and passive pedestrian spaces that encourage user interaction.
- Fountains, stages, public art, and game tables are not a requirement, but are appropriate in these areas.
- Both shaded and open seating areas should be included.
- Refer to Section 6.3.4.3 for patio dining guidelines.
- Plaza design should consider their use during holiday and specialty sales festivals, and community events.

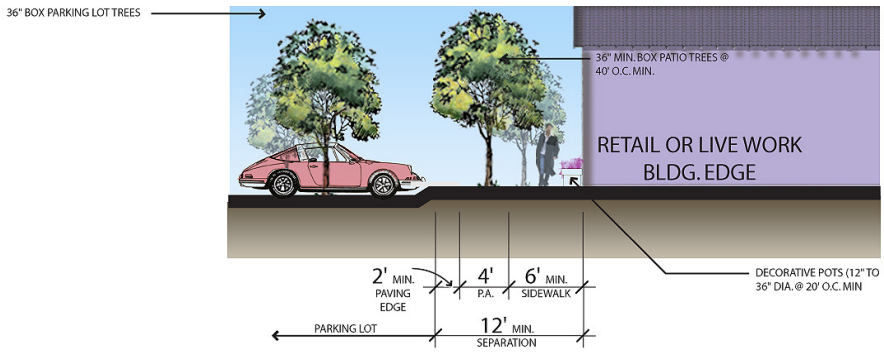
7.8.9 RESTAURANTS/OUTDOOR EATING AREAS ~~7.8.9~~

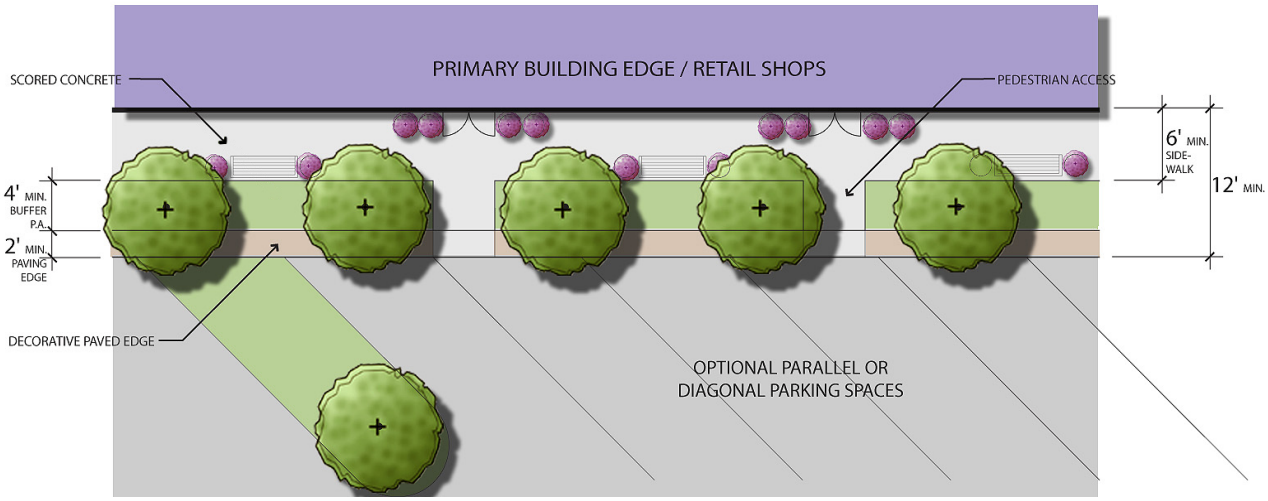


7.8.9.1 General Design Elements and Objectives



- These are intended to provide shaded and non-shaded dining areas.
- Shade devices such as awnings or umbrellas should be provided especially in West or South facing exposures.
- Planting should provide a comfort barrier, but also allow for people watching.
- The 2'-wide minimum plant barrier can be substituted with a rail; less the 2' wide.

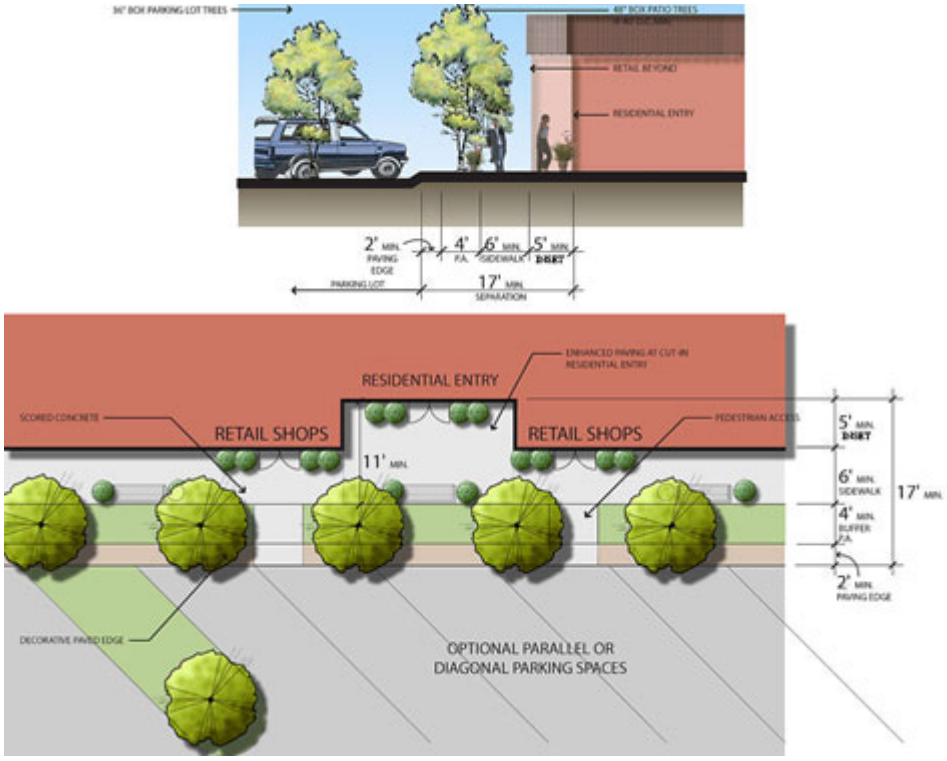




7.8.10 BUILDING EDGE/RETAIL SHOPS

7.8.10.1 General Design Elements and Objectives

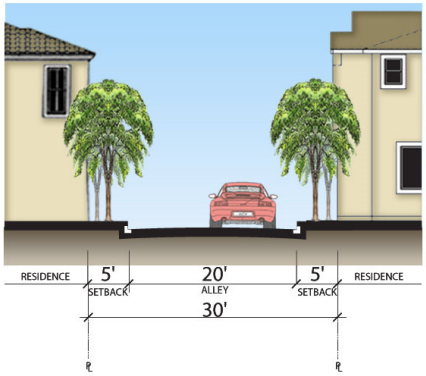
- This area is intended to be used predominantly for circulation, but rest areas are also provided for people watching
- Planting creates a buffer zone between the parking lot and promenade
- Furnishings are coordinated throughout the project

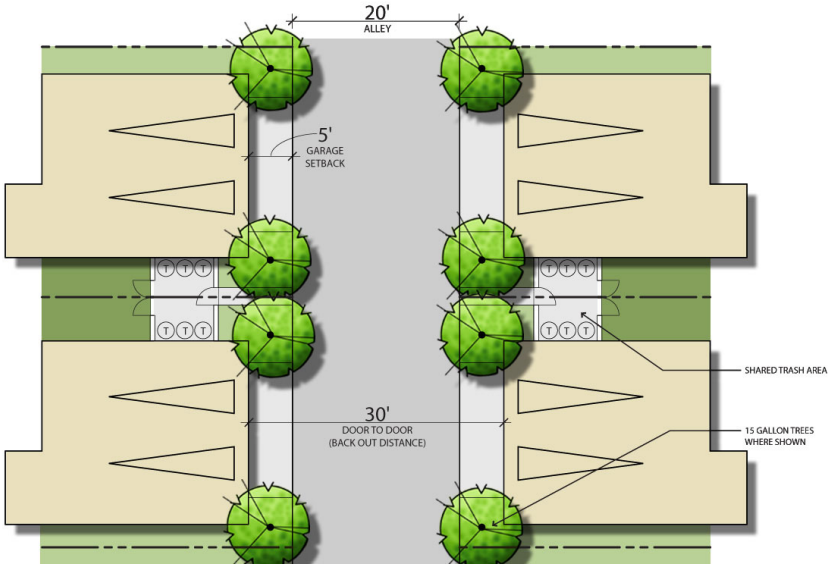


7.8.11 PARKING/RESIDENTIAL ENTRY ~~7.8.11~~

7.8.11.1 General Design Elements and Objectives

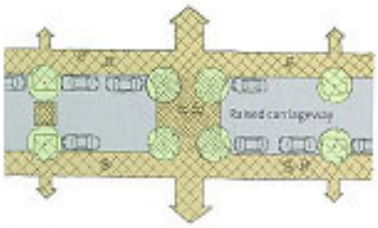
- The intention is to define residential entryways with enhanced paving and planting to create a mini courtyard while allowing the space to continue functioning as a promenade.



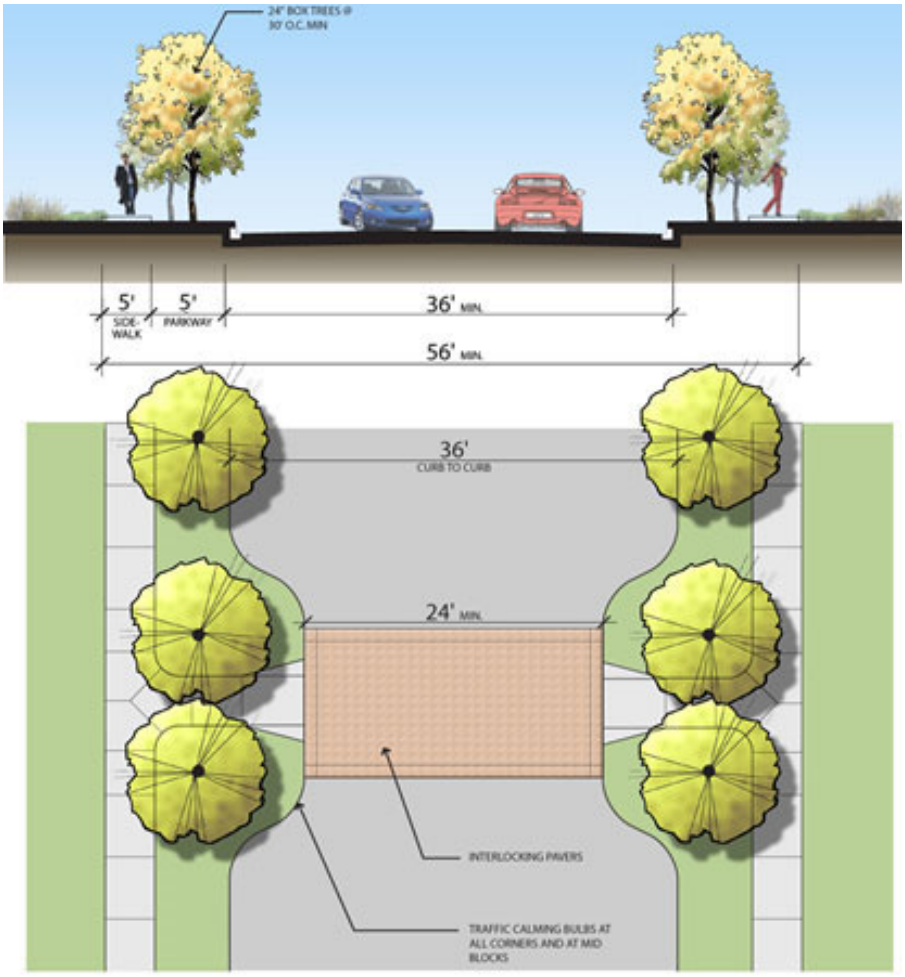


7.8.12 COMMON DRIVE

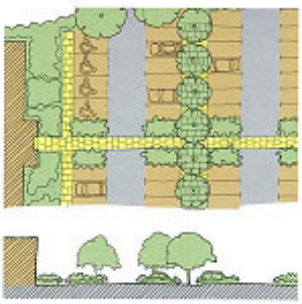
7.8.12.1 General Design Elements and Objectives



- The intent is to provide access for vehicles and trash storage and removal in an attractive space that encourages neighbor interaction.
- The drive shall be 24’ wide where common drives provide emergency access.
- Garage to garage distance shall not be less than 30’.
- Living space facing a common drive shall allow for a minimum 5’ landscape setback measured from the curb or sidewalk (if any).
- Low patio walls shall allow for a minimum 3’ landscape setback measured from the curb or sidewalk (if any).

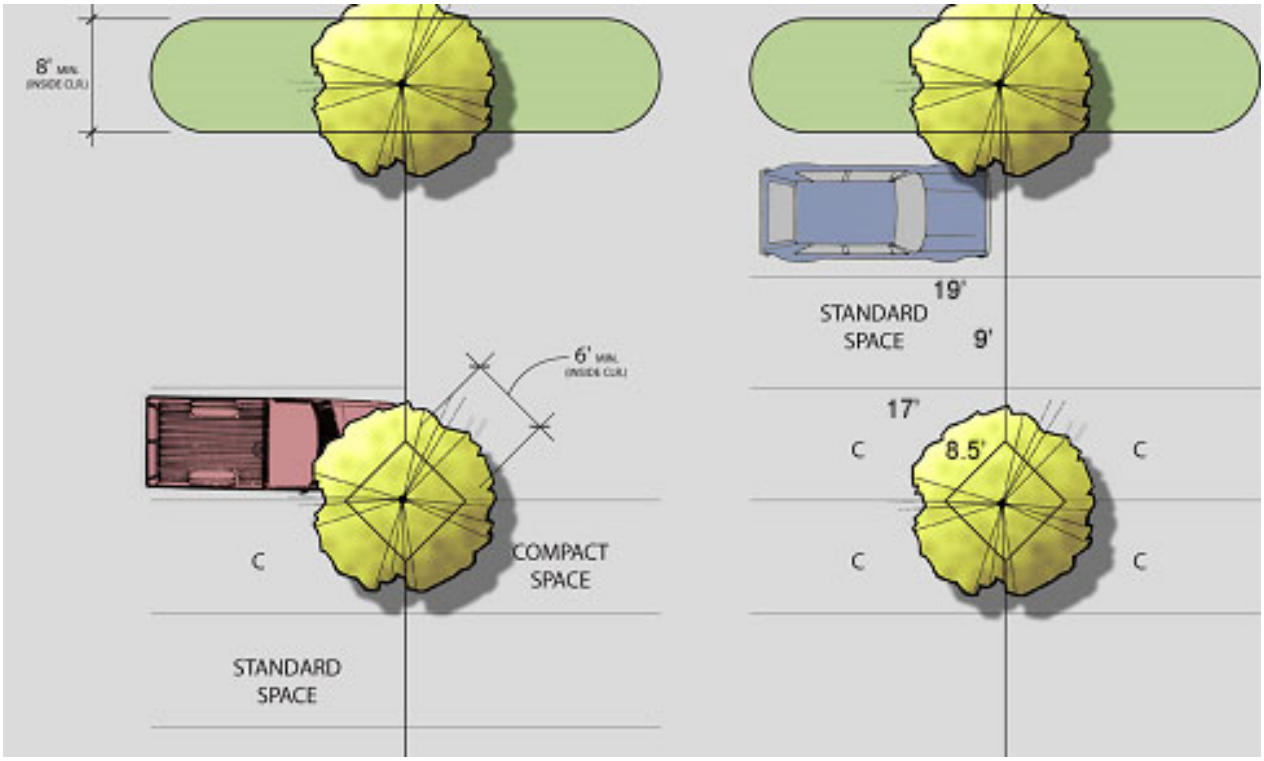


7.8.13 RESIDENTIAL LOCAL STREETS (PRIVATE) ~~7.8.13~~



7.8.13.1 General Design Elements and Objectives

- The intent is to calm traffic and make a safer neighborhood.
- Interlocking pavers define the pedestrian right of way and slow vehicles.
- Bulb outs bring the street to a comfortable crossing width.



7.8.14 PARKING/LANDSCAPED ISLANDS

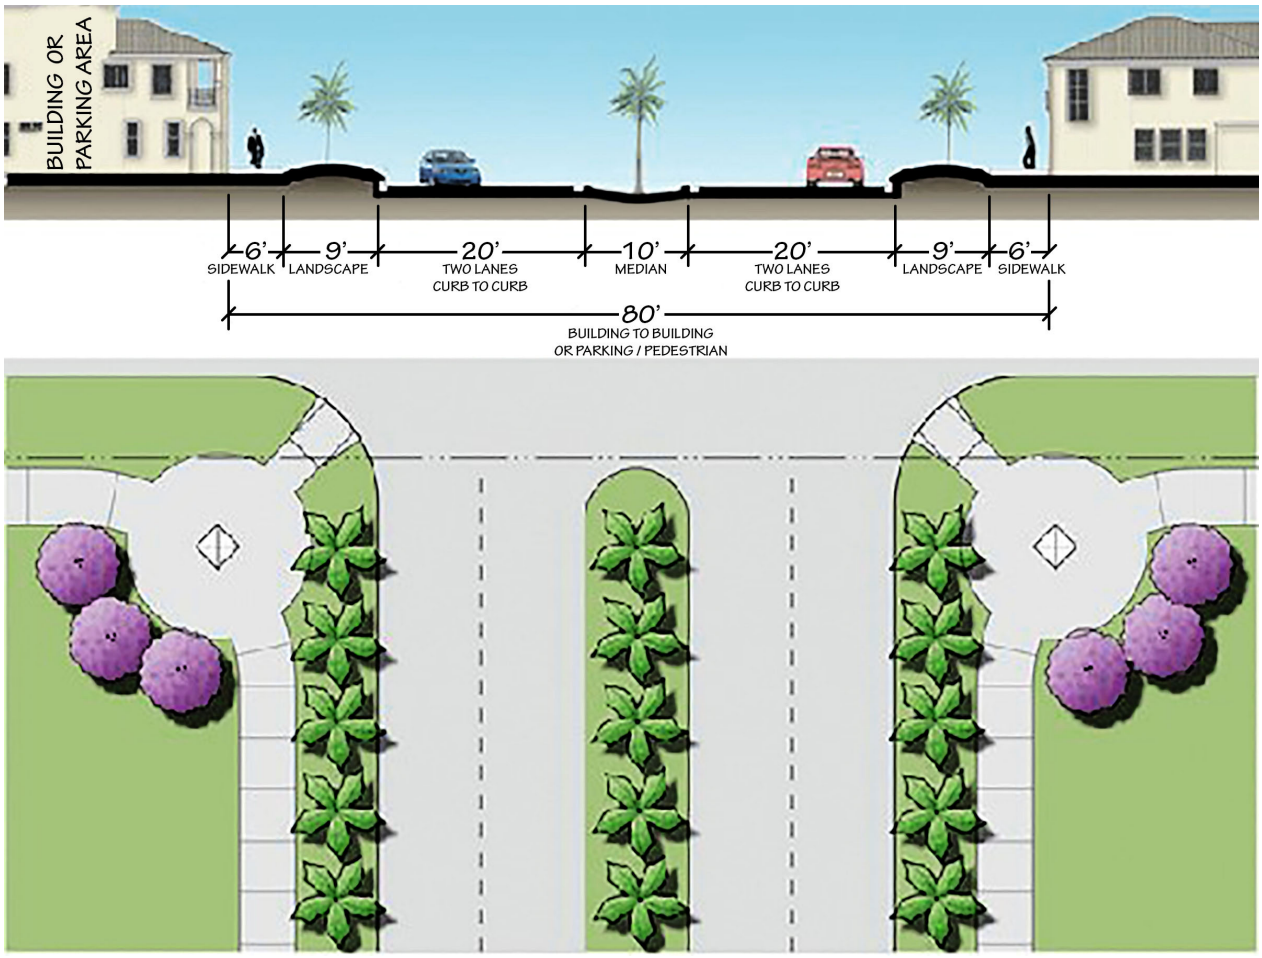
7.8.14.1 General Design Elements and Objective

- Canopy trees screen parking lots from the street while allowing views into the districts and buildings.
- Vertical trees, such as Italian Cypress and Palms, should be combined to promote safety and visibility from major boulevards.
- Planting materials should be of a robust/hardy nature.

7.8.15 ENTRY TRAFFIC PLAZA ~~7.8.15~~

7.8.15.1 General Design Elements and Objectives

- The intention is to provide efficient circulation through the one way road system.
- Traffic Plazas also provide good opportunity to create an entry statement.



7.8.16 PROJECT ENTRY

7.8.16.1 GENERAL DESIGN ELEMENTS AND OBJECTIVES

- The intention is to provide an enhanced entry experience while using large scale plant material to denote entries significance.
- Large bold plant materials are to be used at main intersections and entrances.
- Image below subject to Engineering Department approval.

7.9 INDUSTRIAL LANDSCAPE DESIGN GUIDELINES

This section describes the minimum landscape requirements that shall be followed in the design of all public and private improvements within industrial uses in the specific plan. All proposed landscaping shall promote the aesthetic character and value of the Rich-Haven Specific Plan area.

7.9.1 GENERAL PROVISIONS

- The landscape design shall meet the requirements of the City of Ontario Landscape Development Standards as outlined within the Ontario Development Code and Traffic and Transportation Design Guidelines for sight-distance requirements.

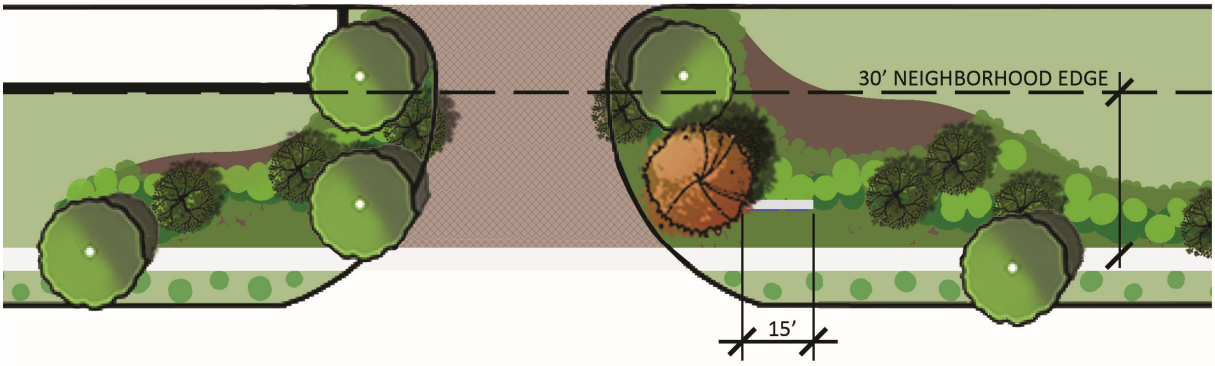
- The landscape design shall incorporate a mix of container size trees and shall comply with the following minimum percentages:
  - 5% of trees shall be 48" box size.
  - 10% of trees shall be 36" box size.
  - 30% of trees shall be 24" box size.

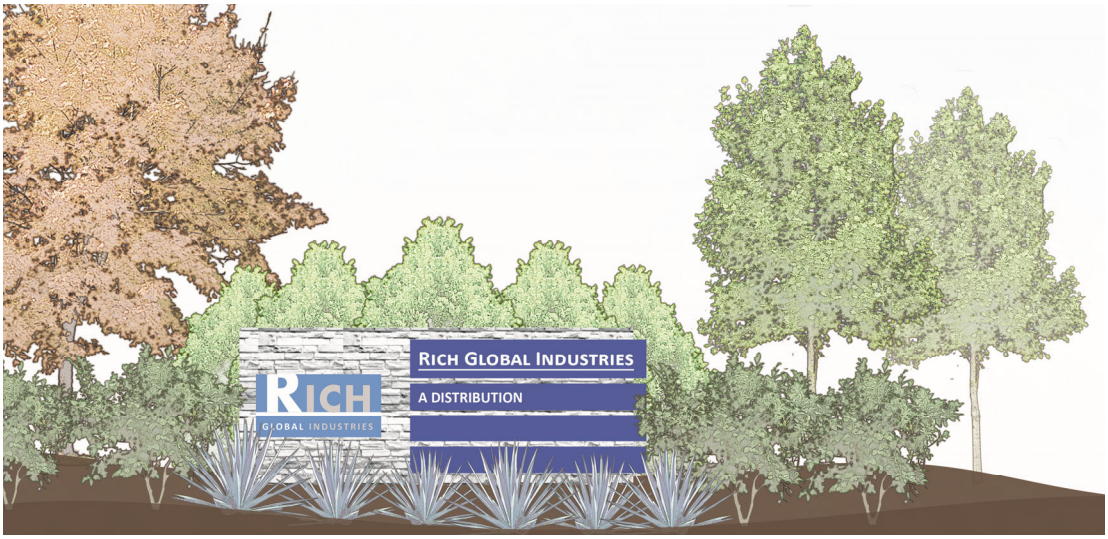
Photo 7.4 - Example of typical screen wall with landscaping

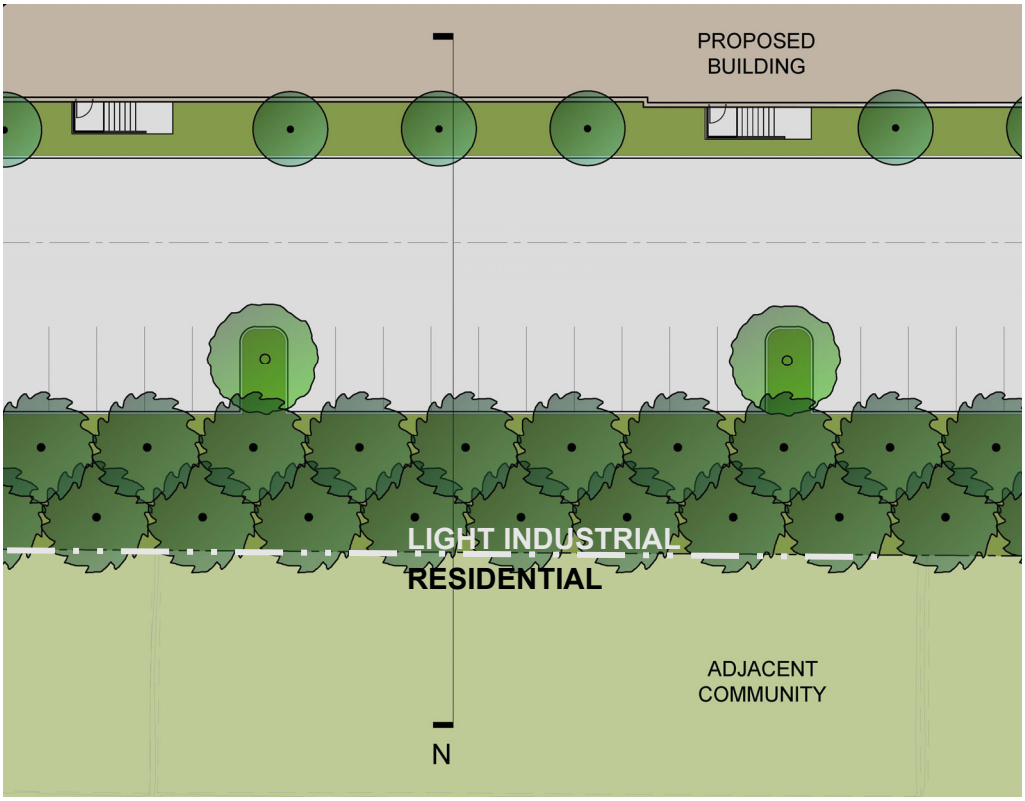
- The use of drought tolerant plants is strongly encouraged (See Photo 7.5).

Photo 7.5 - Example of Industrial building and drought tolerant landscaping

Exhibit 7.1 Example Project Entry Drives







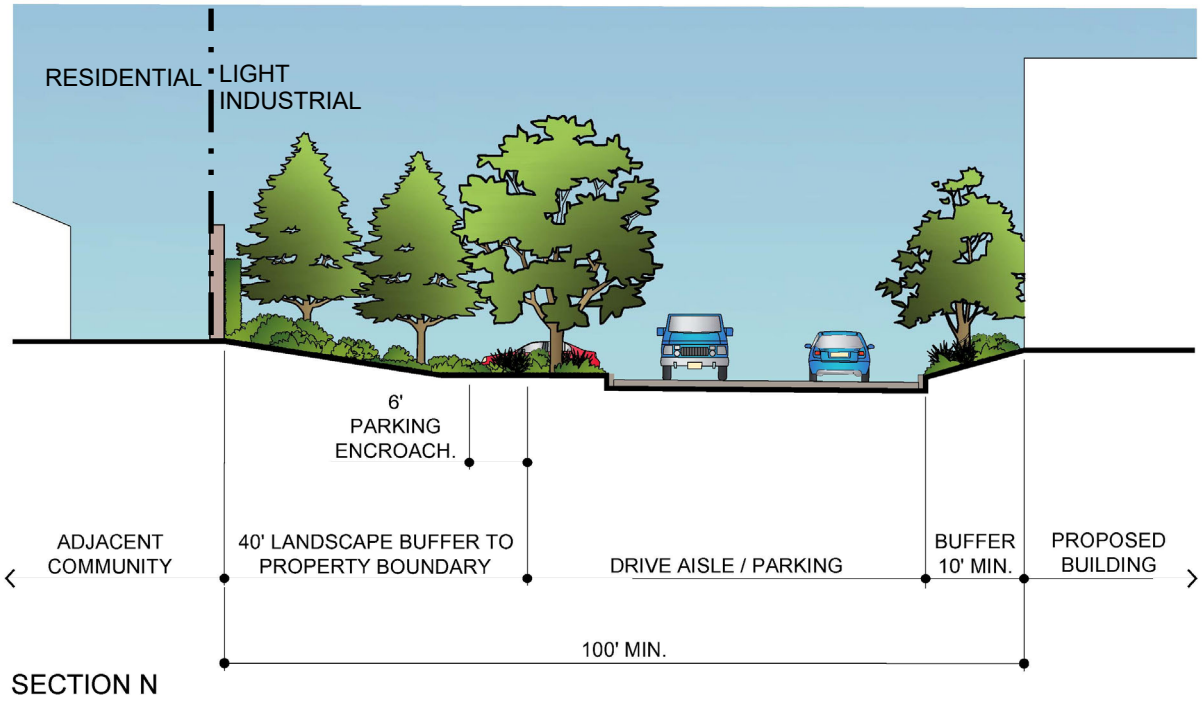


Exhibit 7.2 Example Project Entry Monument

New Exhibits

Exhibit 7.3 Industrial-Residential Edge Condition

- Urban forest style landscaped setback area between, planted with large evergreen trees.

- Plants shall be grouped into designated 'hydro-zones' with similar irrigation requirements.

- All detention basins shall receive container plants and a hydroseed application of low water using plants that can also tolerate seasonal water inundation.

- Rock riprap material shall be installed where stormwater drain lines connect to infiltration areas or wherever paved area drainage surface flows directly into depressed landscape areas, via curb cuts or other surface conveyances.

- Trees and landscape design for Master Planned streets such as Mill Creek Avenue and Hamner Avenue, shall meet the requirements of the Ontario Ranch Streetscape Master Plan.

- All utility equipment such as backflow units, electrical transformers, fire detector checks, and fire check valves shall be screened with evergreen shrubs and should be painted a dark green color.

- Compacted decomposed granite (DG) material may be incorporated at accent areas such as project entry drives and other focal areas, but limited to a max of 5% of the landscape area. Large accent boulders may be incorporated into DG areas.

- Low water type of plants including California natives and succulents that thrive in the area's micro-climate shall be incorporated.

- Project entry drives and corner intersection areas shall receive an "intensified" landscape treatment consisting of, but not limited to colorful ground cover and shrubs, and flowering accent trees.

- Parking stalls facing public streets shall include a 36" high hedge adjacent to parking area.

- Landscape shall be irrigated with automatic irrigation systems.

- Irrigation systems shall incorporate smart weather- based or moisture sensor irrigation controller(s) for water conservation.

- Design of low flow drip irrigation systems, where appropriate.

- Irrigation backflow units shall be specified in a theft proof lockable protective steel cage enclosures.

- Irrigation controllers shall be in a theft proof enclosure or inside the building's electrical room.

7.9.2 LANDSCAPE STANDARDS

- All landscape area planters shall have a minimum inside dimension of 5’ feet wide, plus the required curbs.
- Provide parking lot trees in planter islands at the ratio of one tree for every 10 parking spaces.
- All 2:1 slopes and greater shall be installed with permanent rolled erosion control product (RECP netting), typical.
- A layer of mulch within all landscaped areas shall be provided to retain soil moisture and mitigate soil erosion. Compacted decomposed granite material is an acceptable alternative if Southern California native plants (Coastal Sage Scrub or Chaparral plant communities) are used to a maximum of 5% of the landscape area. Planting plans shall show plant spacing no greater than the maximum mature width.
- All slopes 3:1 or greater shall be stabilized with spreading erosion control ground cover.
- Foundation shrubs shall be incorporated at base of building to minimize scale of building (min. 5 gal. size at 36” max. spacing).
- Project entry drives may incorporate enhanced vehicular decorative paving, which may consist of colored concrete with a stamped pattern or score-line grid pattern at 45 degree angle or similar.
- A 24” clearance from back of parking lot curb to parking lot screen hedge shall be provided for car bumper overhang. Mulch over weed abatement filter fabric shall be provided within this area.
- Provide durable perimeter screening trees for shade and windbreaks.
- Provide 36” high strappy leaf shrubs to screen utilities such as backflow devices. Use taller evergreen shrubs to screen the sides of transformer units and include maximum 12” high groundcovers in areas to access utilities.
- Landscape shall define and accent entries, pedestrian walkways and architectural features. Landscape shall be attractive and appropriate to define and complement the space and use.
- Entry monuments shall be designed in accordance with City of Ontario Traffic and Transportation Guidelines for monument placement.
- The Landscaping Plan shall comply with City Standard drawings and Traffic and Transportation Guidelines for sight-distance.

7.9.3 PERIMETER STREETSCAPE DESIGN

Streetscape design guidelines establish a hierarchy for the landscape development along the surrounding roadways, as well as establish a framework for consistency of design. Two roadways surround the project site as follows:

- Mill Creek Avenue to the west
- Hamner Avenue to the East

Landscape development surrounding this project will help to set the character, while maintaining consistency with the City of Ontario's pedestrian pathway system as illustrated in the "Trails and Open Space System" section of the Ontario Ranch Streetscape Master Plan.

7.9.4 WALLS AND FENCES

The following section is intended to encourage design quality, as walls and fences are an important component to ensuring a safe and secure environment within the Rich-Haven Specific Plan.

- Walls at loading areas shall be at least fourteen feet in height, or as approved by the City in response to screening loading activities from off-site views from the adjacent public right-of-way.
- Chain link fencing shall be permitted for use in interior truck courts, in non-public viewing areas. Chain link fencing may not be used along public views.
- Walls fronting on streets may be constructed of concrete tilt up or masonry materials such as split face or slump stone (See Photo 7.4).
- Tubular Steel fencing shall be permitted along certain areas if they are not required to be screened from public views.
- Entry monuments shall be designed and located in accordance with City of Ontario Traffic and Transportation Guidelines for monument placement.
- Any proposed entry gates shall be reviewed by the Traffic and Transportation Division, and permitted only if approved.

7.9.5 SITE LIGHTING

The following section addresses illumination of on-site areas for purposes of safety, security, and nighttime ambience, including lighting for parking areas, pedestrian walkways, graphics and signage, architectural and landscape features, shipping and loading areas, and any additional exterior areas.

- Streetlights shall conform, both in type and location, to the Standards of the City of Ontario at the time of installation.
- A comprehensive lighting plan shall be prepared and approved in conjunction with the site plans submitted for approval to the DAB. In addition, all plans shall be reviewed and approved by the Ontario Police Department.
- Exterior lighting should be located and designed to minimize direct glare beyond the parking lot.
- The design of lighting fixtures shall be consistent throughout individual planning areas, and shall be compatible with the architectural style of the building within each development.
- Lighting sources shall be shielded, or diffused in order to avoid glare to pedestrians and motorists. Lighting fixtures should be selected and located to confine the area of illumination to within the site boundaries.
- Architectural lighting of building facades is encouraged to enhance and emphasize the buildings identity.

7.9.6 SUSTAINABLE DESIGN STRATEGIES

Sustainable practices can lessen the environmental impacts of development in many ways through the use of certain design techniques. These techniques can include reduced pervious surfaces, improved water detention and conservation, preservation of habitat areas, water- efficient irrigation, and improved pedestrian and bicycle amenities which reduce reliance on smog-generating vehicles. This Specific Plan encourages the implementation of sustainable design strategies referenced below with the goal to reduce Greenhouse Gas Emissions.

7.9.6.1 SITE PLANNING

- Incorporate “green” practices in developing buildings and infrastructure.
- Wherever possible, design and grade the project to direct 2-year storm event runoff from building roofs and paved areas, into landscaped swales/areas for capture and retention/infiltration. In particular, open space, parks, landscaped setback areas and trails

are to be used for this purpose. Include deciduous trees to shade paved areas and building walls on south and west.

- Stabilize slopes to limit erosion as part of the Stormwater Management Plan and erosion control plan.

7.9.6.2 ENERGY EFFICIENCY

Where feasible and appropriate, the following energy conservation strategies are encouraged:

- Passive design strategies can dramatically affect building energy performance. These measures include building shape and orientation, passive solar design, and the use of natural lighting.
- Develop strategies to provide natural lighting to reduce reliance on artificial lighting.
- Install high-efficiency lighting systems with advanced lighting controls.
- Use a properly sized and energy-efficient heat/ cooling system in conjunction with a thermally efficient building shell.
- Promote the use of light-colored roofing with a high solar reflectance in order to reduce the heat island effect from roofs.
- Include deciduous trees to shade paved areas and building walls on the south and west sides.

7.9.6.3 MATERIALS EFFICIENCY

- Sustainable construction materials and products are encouraged to have characteristics such as reused and recycled content, zero or low off gassing of harmful air emissions, zero or low toxicity, sustainably harvested materials, high recyclability, durability, longevity, and local production. Such products promote resource conservation and efficiency. Using recycled-content products also helps develop markets for recycled materials that are being diverted from California's landfills, as mandated by the Integrated Waste Management Act.
- Encourage the use of low VOC paints and wallpapers.
- Encourage the use of low VOC Green Label carpet.
- Consider using recycle base, crushed concrete base, recycle content asphalt, shredded tires in base and asphalt in roads, parking areas and drive aisles, if feasible and economically viable.

- Design with adequate space to facilitate recycling collection and to incorporate a solid waste management program that prevents waste generation.

7.9.6.4 WATER EFFICIENCY

- Strive to minimize wastewater by using ultra low- flush toilets, low-flow shower heads and other water conserving fixtures.

- Encourage the use of recirculating systems for centralized hot water distribution.

- Smart irrigation controller which automatically adjusts the frequency and/or duration of irrigation events in response to changing weather conditions for all landscaped areas are required.

- Drip irrigation, bubblers, micro-irrigation or other low precipitation irrigation or water conserving technology shall supply water for irrigation.

- Encourage the use of recycled water to irrigate landscape areas throughout the project. The non-potable irrigation system shall be designed to meet all applicable standards of the California Regional Water Quality Control Board, California Department of Health, San Bernardino County Health Department, City of Ontario Department of Water and Power, and Ontario Municipal Code.

7.9.6.5 OCCUPANT AND HEALTH SAFETY

- Choose construction materials and interior finish products with zero or low emissions to improve indoor air quality as feasible.

- Provide adequate ventilation and a high-efficiency, in-duct filtration system. Heating and cooling systems that ensure adequate ventilation and proper filtration can have a dramatic and positive impact on indoor air quality.

- Provide effective drainage from the roof and surrounding landscape.

- Encourage building systems to control humidity.

- Provide outdoor employee break areas with shade structure or shade trees on the west and south sides as feasible.

7.9.6.6 LANDSCAPE DESIGN

- Use low or medium water use and native plant materials where appropriate. Minimize turf areas in order to promote water conservation. Limit the use of turf to areas which experience

high functional use and are needed to accommodate outdoor activities. Only use warm-season turf varieties which are suited to the climate.

- Provide plant materials that are well suited to the solar orientation and shading of buildings.
- Group plants according to water use, slope aspect and sun/shade requirements. Irrigate each hydro-zone on a separate valve using high-efficiency irrigation techniques.
- Use wood or shredded bark mulch and soil amendments to retain soil moisture.
- Incorporate native vegetation into the plant palette for Rich-Haven.

SECTION 8 - ADMINISTRATION AND IMPLEMENTATION

8.1 ADMINISTRATION

The City of Ontario shall administer the provisions of the Rich-Haven Specific Plan in accordance with the State of California Government Code, Subdivision Map Act, the City's General Plan, The Ontario Plan (TOP), and the Development Code.

8.1.1 ADOPTION

The Rich-Haven Specific Plan shall be adopted by ordinance in accordance with the City's TOP.

8.1.2 ENFORCEMENT

The Rich-Haven Specific Plan serves as the implementation tool for the City's TOP and zoning for the Specific Plan area. The Specific Plan addresses permitted uses, development standards, and community design guidelines.

The City shall enforce the provisions of this Specific Plan in the same manner that the City enforces the provisions of the Development Code.

Permitted and conditional uses included, as part of the Specific Plan, shall be compatible with permitted and conditional uses established within the Development Code for residential, commercial, and industrial uses.

8.1.3 INTERPRETATION

The development standards and regulations contained in this Specific Plan shall replace and supplement the standards contained in the Development Code, except where specifically provided in the Specific Plan. Whenever the provisions contained in the Specific Plan conflict with the Development Code, the provisions of this Specific Plan shall prevail. Any ambiguity concerning the content or application of the Rich-Haven Specific Plan shall be resolved by the Planning Director or designee. Such interpretations shall take into account the stated goals and intent of the Specific Plan.

8.1.4 SEVERABILITY

If any portion of these regulations is declared to be invalid or ineffective in whole or in part, such decision shall not affect the validity of the remaining portions thereof. The legislative body hereby declares that they would have enacted these regulations and each portion thereof irrespective of the fact that any one or more portions be declared invalid or ineffective.

8.1.5 RESIDENTIAL UNIT TRANSFER

Figure 3-1, *Specific Plan Land Use Plan*, and Table 3-1, *Specific Plan Land Use Summary*, sets forth the planning area identification, total residential acreage, density, and total dwelling units planned for each of the Planning Areas. Residential unit transfer allows for the redistribution of residential units and associated daily trip budget allocations from one Planning Area to another, within the Specific Plan. If the number of units developed within a Planning Area is below the maximum number of designated units, the remainder of those units may be transferred to another residential Planning Area within the Specific Plan. Such transfers may be approved administratively by the City of Ontario upon a determination by the Planning Director or designee that the transfer meets all of the following criteria:

a. The total number of residential units within the Specific Plan boundary shall not exceed the allowed maximum of 7,194 dwelling units. The allowed maximum of 7,194 dwelling units is based on the assumption that the Non-Residential (Commercial/Industrial) units are developed at the Minimum Non-Residential Square Footage (SF) quantities. If Non-Residential Square Footage or Residential Units are going to be adjusted, then dwelling units and non-residential square footages shall be exchanged at a rate to not change overall proposed water and sewer demands.

b. A landowner may transfer unused residential units and associated allocated daily vehicle trips from any previously approved Residential Planning Area(s) to a proposed Planning Area(s) as unused residential units, eligible for residential unit transfer. When a development application is submitted to the City for a Planning Area(s), the developer must submit with the application a project residential unit reconciliation summary that identifies units previously declared eligible for residential unit transfer and the total number of projected future residential units remaining to be developed in the balance of the project.

c. The number of excess residential units identified for transfer from one Planning Area to another Planning Area(s) may not exceed 15% of the total residential units in the receiving Planning Area, as identified in Table 3-1, *Specific Plan Land Use Summary*.

d. Unit transfers within the Regional Commercial/Mixed-Use District shall be subject to an agreement between those landowners within the Regional Commercial/Mixed-Use District identifying approval of the developer or major landowner of the transferring planning area.

e. There would be no significant adverse effect or projected demands on parks, schools, infrastructure, or community facilities:

i. Water and Sewer Technical Studies shall be prepared to study how the transfers change the quantity and locations of sewer and water demands and how those changes impact the Water and Sewer Master Plan Systems and local sewer and water systems.

ii. If unit transfers result in net changes to the overall projected water demands or the water demands are transferred between the 1010PZ and 925PZ, then the developer initiating the changes shall be responsible for processing an Amendment to the Water Master Plan as part of the entitlement process of Implementation.

iii. If unit transfers result in net changes to the overall projected sewer demands or the sewer demands are transferred between different Master Plan Trunk Sewer Tributary Areas, then the developer initiating the changes shall be responsible for processing an Amendment to the Sewer Master Plan as part of the entitlement process of Implementation.

f. Grading would remain in substantial conformance with the approved Specific Plan.

g. No new significant environmental issues would result.

NOTE: SECTION 8.1.6 WAS INTENTIONALLY OMITTED AS PART OF THE RICH HAVEN SPECIFIC PLAN AMENDMENT (FILE # PSPA16-001).

8.1.7 SPECIFIC PLAN CONSISTENCY, MODIFICATIONS, AND AMENDMENTS

Development proposals within the Rich-Haven Specific Plan area shall be deemed consistent if proposals meet the permitted uses, standards and guidelines within this Specific Plan.

8.1.7.1 Substantial Conformance and Minor Modifications

Minor modifications to the Rich-Haven Specific Plan shall not require a Specific Plan Amendment, and shall be subject to a "substantial conformance" determination, an administrative mechanism by which minor modifications to the Specific Plan which do not result in significant impacts and are consistent with the intent of the Plan, shall be permitted without a formal amendment process. The City of Ontario Planning Director shall make determinations of substantial conformance.

Minor modifications that meet the above "substantial conformance" determination may include, but are not limited to, modifications necessary to comply with Final Conditions of Approval or modifications affecting infrastructure, public services and facilities, landscape palette, and other issues except those affecting project financing and development regulations. The following minor modifications to the Rich-Haven Specific Plan shall not require a Specific Plan Amendment, and shall be subject to the substantial conformance determination procedure set forth above:

- Change in utility and/or public service provider or location;
- Change in roadway alignment, width, or improvements;
- A residential density transfer between any individual planning areas within the Specific Plan Area, including between Districts, as long as the number of dwelling units and associated daily vehicle trips transferred out of the Regional Commercial/Mixed-Use District are included in the Trip Budget Allocation, the maximum number of daily trips for the project is not exceeded, and residential transfer of units to the Residential District are in compliance with Section 8.1.5, *Residential Unit Transfer*.
- An adjustment of any planning area boundary within the Residential District not to exceed 15% of the acreage within that planning area boundary, as identified within Figure 3-1, *Specific Plan Land Use Plan*, and Table 3-1, *Specific Plan Land Use Summary*.
- Variation in the number and type of dwelling units within each planning area boundary may occur at the time of final design depending on the residential product identified for development with the Residential District.
- Minor changes to landscape materials, wall materials, wall alignment, entry design, and streetscape design which are consistent with the design criteria set forth in Section 7, *Landscape Plan*, of the Rich-Haven Specific Plan.

- ❖ Minor changes to the architectural or landscape design guidelines, which are intended to be conceptual in nature and flexible in implementation.
- ❖ Modification of any design element in this Specific Plan that improves circulation, reduces grading, improves drainage, or improves infrastructure.

The Minor Modifications described and listed above are not conclusive. Any Minor Modification that is deemed by the Planning Director to be in substantial conformance with the purpose and intent of the Specific Plan shall be permitted.

8.1.7.2 Specific Plan Amendments

Development proposals that do not meet the above Specific Plan consistency requirements, or that are not found to be in substantial conformance with the Specific Plan, shall require a Specific Plan Amendment. The applicant may request amendments to the Rich-Haven Specific Plan at any time pursuant to Section 65453(a) of the Government Code.

An amendment to the Specific Plan will require review and approval by the City of Ontario Development Advisory Board, Planning Commission, and City Council. Such amendments are governed by California Government Code, Section 65500, and require an application and fee to be submitted to the City of Ontario Planning Department, stating in detail the reasons for the proposed amendment.

In the event the proposed amendment requires supplemental environmental analysis pursuant to the California Environmental Quality Act (CEQA), the applicant(s) will be responsible for associated fees for the preparation of necessary CEQA documentation.

8.1.8 APPEALS

An appeal from any determination, decision, or requirement of City staff, Development Advisory Board, or the Planning Commission shall be made in conformance to the appeal procedures established by the Ontario Development Code.

8.2 IMPLEMENTATION

The Rich-Haven Specific Plan is implemented through City approval of parcel map(s), tract map(s), and site development plans. Any development proposals shall be subject to the review procedures established in this Specific Plan. Implementation of the Rich-Haven Specific Plan development regulations is intended to encourage the most appropriate use of the land, ensure the highest quality of development, and protect the public health, safety, and general welfare.

8.2.1 DEVELOPMENT PERMIT

Development projects within the Rich-Haven Specific Plan area shall be subject to the Development Plan Review process established in the City of Ontario Development Code. Adoption of the Rich-Haven Specific Plan by the City of Ontario includes adoption of the design guidelines contained within the Specific Plan and which provide direction for the design of development projects within the Plan area. The design guidelines are intended to be flexible in nature while establishing basic evaluation criteria for review by the City of projects during the design review process.

The Development Permit process constitutes a design review of project architecture, site plans, and landscape plans. Development permits are approved with conditions of approval.

8.2.2 SUBDIVISION MAPS

Tentative maps shall be prepared and filed with the Planning Department in accordance with the City of Ontario Development Code. Approval by the City Council of Final Tract Map(s) and/or Parcel Maps within the Rich-Haven Specific Plan area shall be required in order to create legal lots for residential, commercial and industrial development. Tentative Tract and/or Parcel Maps will be reviewed and approved pursuant to applicable provisions of the Development Code and shall be consistent with this Specific Plan.

A vesting tentative map may instead be filed in accordance with the provisions of the Development Code. A vesting tentative map shall be filed in the same form, shall have the same content, accompanying data and reports, and shall be processed in the same manner described for tentative maps.

8.2.3 SUBSEQUENT DEVELOPMENT ENTITLEMENTS

8.2.3.1 Development Agreements (DA)

Development Agreements for planning areas may be executed between the City and the Developer in order to set forth the terms, conditions, and obligations of all parties signatory to the contract. California Government Code, Section 65864, et seq., and the procedures for Development Agreements, adopted by the City of Ontario, provide the authority for the Development Agreement.

8.2.3.2 Conditional Use Permits (CUP)

Conditional Use Permits shall be required for land use classifications typically having unusual site development features or operating characteristics requiring special consideration so that they may be designed, located, and operated compatibly with uses on adjoining properties and in the surrounding area. Conditional Use Permits must be first granted by the Zoning Administrator or Planning Commission before a use is allowed within a particular district.

~~CUP performance standards herein for drive-thru facilities (Section 5.3.8.8) constitute the minimum deemed necessary under general circumstances and in most cases to prevent adverse effects from drive through facilities. Other and further standards may be required as conditions of approval defined by City Planning staff to ensure that such uses are in accord with the intent of the Specific Plan and in concert with the integrity of the commercial or mixed-use project.~~

8.2.4 ADDITIONAL ENTITLEMENT REQUIREMENTS

In order to ensure orderly expansion of the City Utility Systems and other City Infrastructure, the following Additional Entitlement Requirements are imposed upon all Subdivision Maps and Developments within the Specific Plan area.

8.2.4.1 Conceptual Design Report

Prior to approval of any entitlement application (Subdivision Maps, Development Plan Reviews, etc.), a conceptual design report shall be prepared and submitted to the Development Engineering Department and the Utilities Engineering Department for review and approval for the established extent of all public improvements required for the project. The study shall identify existing and future rights-of-ways (ROW) and infrastructure improvements and establish all vertical and horizontal alignments for each utility. The report shall include cross-sections, profiles, and any supporting details needed to demonstrate that utilities can be adequately accommodated in the public ROW. The study shall account for all utility conflicts, right-of-way variations, existing obstructions, and the timing of utility installation. This shall also include Water Sub-Area Master Plans

(WSAMP) and Sewer Sub-Area Master Plans (SSAMP) to assure compliance with all Master Plan Design Criteria, including Hydraulic Design Criteria. Utilities cannot be located along an alignment that conflicts with existing conditions (e.g. electrical poles, private property, etc.) unless that applicant is accepting the responsibility of modifying the existing conditions (e.g. undergrounding, relocation, ROW acquisition, etc.).

8.2.4.2 Preliminary Design Report

As a condition of entitlements (Subdivision Maps, Development Plan Reviews, etc.) within the Specific Plan and prior to submittal of Infrastructure Improvements Plans, a Preliminary Design Report (PDR) for all public infrastructure shall be submitted and approved by the Development Engineering Department and the Utilities Engineering Department. The PDR shall include the following:

Conceptual Design Compliance: A discussion modifying or confirming the conceptual design established with the Project's Conceptual Design Report. The study shall confirm all rights-of-ways (ROW), infrastructure improvements, and vertical and horizontal alignments for each utility.

Street Cross Sections and Profiles: Street Cross Sections and Profiles shall be provided for each public street, private street and Public Utility Easement (PUE) containing a public utility and at any points along the alignments where the ROW varies. The cross sections shall show the location and size of each utility and shall annotate the property/ROW lines, the type of finished surface material, the distance of each utility from centerline, the depth from finished surface to top of pipe, and the distance between utilities (outside wall to outside wall).

Constructability Review: The report shall include a discussion of the constructability issues along the proposed alignment and identify the recommended construction methods that may be utilized. The study shall perform field investigation (field survey and potholing) in order to identify potential utility conflicts, right-of-way variations, existing obstructions, and constructability issues created by the timing of utility installation.

Supporting Details: The PDR shall include any supporting details needed to demonstrate that utilities can be adequately accommodated in the public ROW, including the placement of large appurtenances, clearance from existing obstructions, etc.

30% Design Drawings: The PDR findings shall be incorporated into a 30% design plan set.

8.2.4.3 Utilities Systems Map (USM)

Prior to approval of any entitlement application (Subdivision Maps, Development Plan Reviews, etc.), as a part of the entitlement application a Conceptual Utilities Systems Map (USM) shall be prepared and submitted to the Development Engineering Department and the Utilities Engineering Department for review and approval. The USM is a summary plan sheet exhibit that shows all the public offsite infrastructure requirements and demands for the Development Project (and/or Subdivision), the onsite private infrastructure improvements, and the interaction between the public and private utilities systems. As a Condition of Approval for the Development Project (and/or Subdivision), the Conceptual Utilities Systems Map shall be updated into a Final Utilities Systems Map to reflect the changes that occur between entitlement and Final Plan and Permit Approval. Reference the Ontario Municipal Utilities Company Utilities Engineering Department's Utilities Systems Map (USM) Requirements for details.

8.2.4.4 Integrated Waste Management Report (IWMR) and Solid Waste Handling Plan (SWHP)

Prior to approval of any entitlement application (Subdivision Maps, Development Plan Reviews, etc.), as a part of the entitlement application a Conceptual Integrated Waste Management Report (IWMR) and a Conceptual Solid Waste Handling Plan (SWHP) shall be prepared and submitted to the Development Engineering Department and the Utilities Engineering Department for review and approval. The Conceptual SWHP will include an exhibit that demonstrates the project site's design conformance with the Integrated Waste Department's requirements, including the requirements for Sizing of Storage, Location of Collection Areas, Accessibility for Collection Vehicles, and Collection of Sorted/Diverted Waste Types. The Conceptual IWMR is a report that presents project specific information that is not able to be demonstrated within the Solid Waste Handling Plan, including discussions on: project solid waste operations; project compliance with all applicable laws, statues, policies, and requirements; and, conformance with all the Integrated Waste Department's requirements, including the requirements for Sizing of Storage, Location of Collection Areas, Accessibility for Collection Vehicles, and Collection of Sorted/Diverted Waste Types. As a Condition of Approval for the Development Project (and/or Subdivision), the Conceptual SWHP and the Conceptual IWMR shall be updated into a Final SWHP and Final IWMR to reflect the changes that occur between entitlement and Final Plan and Permit Approval. The SWHP and IWMR may be required to be updated whenever there are new occupants, new uses or changes to existing uses, Tenant Improvements, Business Licenses, and Certificates of Occupancy. Reference the Ontario Municipal Utilities Company - Utilities Engineering Department's Integrated Waste Management Report (IWMR) and Solid Waste Handling Plan (SWHP) Requirements for details.

8.3 PHASING

Development within the Rich-Haven Specific Plan area is expected to occur in phases. The first phase of development is anticipated to occur along Ontario Ranch Road. Subsequent development phases will extend northerly with the extension of master planned roadways and utility improvements. The following minimum criteria shall be met for each Subdivision and Development of each Phase:

i. For Domestic Water, all the Master Plan, the Regional and Local Infrastructure identified in Section 4 and the Conceptual Domestic Water Plan for the Water Pressure Zone within the Phase shall be completed as a part of infrastructure requirements of the Phase. Also, any domestic water infrastructure necessary to provide primary looping, secondary looping and, satisfy all the hydraulic criteria and the fire flow shall be completed as a part of the infrastructure requirements of the Phase.
ii. For Recycled Water, all the Master Plan, the Regional and Local Infrastructure identified in Section 4 and the Conceptual Recycled Water Plan for the Recycled Water Pressure Zone within the Phase shall be completed as a part of the infrastructure requirements of the Phase. Also, any recycled water infrastructure necessary to provide primary looping, secondary looping and, satisfy all the hydraulic criteria shall be completed as a part of the infrastructure requirements of the Phase.
iii. For Sewer, all the Master Plan, the Regional and Local Infrastructure identified in Section 4 and the Conceptual Sewer Plan for the Master Plan Sewer Tributary Area within the Phase and upstream of that shall be completed as a part of the infrastructure requirements of the Phase. Also, any sewer infrastructure necessary to meet all the hydraulic criteria shall be completed as a part of the infrastructure requirements of the Phase.

8.3.1 COMMUNITY FACILITIES AND SERVICES

The timing for installation of community facilities, including park and trail facilities, and payment of impact fees for public services for the Specific Plan will be determined as part of the City's approval process in accordance with the provisions of the existing City fee ordinance. Community facilities, such as bike routes, will be developed in conjunction with construction of public improvements. Those portions of the Neighborhood Parks, paseos, and open space areas adjacent to individual developments within each Planning Area will be constructed to provide amenities as development progresses.

8.4 PROJECT FINANCING

The financing of construction, operation, and maintenance of public improvements and facilities (the "facilities"), and public service will include funding through a combination of financing mechanisms. Final determination as to the facilities to be constructed and as to maintenance responsibilities – whether publicly or privately maintained, will be made prior to recordation of the final maps. In order for the project to be fiscally self-sufficient, the following financing options can be considered for implementation:

Facilities and Services:

- Private capital investment for the construction of facilities.
- Community Facilities District (CFD) established pursuant to the Mello-Roos Community Facilities District Act of 1982, or other special district, to provide funding for the construction of a variety of public facilities and the provision of public services.

Operation and Maintenance:

- By individual private property owner.
- By private property owners or Home Owners Association.
- By Community Facilities District (CFD) established pursuant to the Mello-Roos Community Facilities District Act of 1982, or other special district.

City Council approval is a prerequisite for the implementation of any and all special district financing mechanism. The use of the Mello-Roos Community Facilities District Act of 1982 [the "Act") to finance public facilities and services will be at the City's sole discretion. Moreover, the use of the Act must be consistent with the City's adopted goals and policies concerning the use of the act.

8.5 MAINTENANCE RESPONSIBILITIES

During the course of maintenance of public utilities (including storm drain) within private and public streets, the City will pave the streets and restore landscaping per City standards. Restoration of any enhancements above and beyond City standards, including but not limited to architectural, hardscaping and landscaping enhancements shall be the responsibility of the HOA or other entity maintaining those enhancements. This applies to all areas where public utilities are located including but not limited to public and private streets, gated communities, alleys, etc.

Improvements constructed within the Rich-Haven Specific Plan will be maintained through a combination of public and private entities as described below and shown within Table 8-4, *Maintenance Responsibilities*, and:

8.5.1 PROJECT FINANCING

The financing of construction, operation and maintenance of public improvements and facilities ("facilities"), and public services will include funding through a combination of financing mechanisms. Final determination as to the facilities to be constructed and maintenance responsibilities – whether publicly or privately maintained, will be made prior to recordation of the final maps. In order for the project to be fiscally self-sufficient, the following financing options can be considered for implementation:

Facilities and Services:

- Private capital investment for the construction of facilities.
- Community Facilities District (CFD) established pursuant to the Mello-Roos Community Facilities District Act of 1982, or other special district, to provide funding for the construction of a variety of public facilities and the provision of public services.

Operation and Maintenance:

- By individual private property owner.
- By private Property Owners Association or Homeowners Association.
- By Community Facilities District (CFD) established pursuant to the Mello-Roos Community Facilities District Act of 1982, or other special district.

City Council approval is a prerequisite for the implementation of any and all special district financing mechanisms. The use of the Mello-Roos Community Facilities District Act of 1982 (the "Act") to finance public facilities and services will be at the City's sole discretion. Moreover, the use of the Act must be consistent with the City's adopted goals and policies concerning the use of the Act.

8.6 METHANE REMEDIATION

The City of Ontario is in the process of adopting protocol to assess the potential for methane generation on proposed building sites in areas previously used for certain agricultural practices. The preliminary protocol requires the following, which may be modified after approval of a final protocol:

- Prior to issuance of a grading permit, a methane site assessment shall be prepared to determine whether the property was ever used as a dairy, poultry ranch, hog ranch, livestock feed operation, manure stockpile site, manure burial site, agricultural pond, or for any other purpose that might result in the deposition of materials which could produce significant methane. The report will provide recommendations as to which areas should be tested after grading and which areas that should be exempt from methane testing, based upon historic site usage.
- The assessment report shall be submitted to the City of Ontario for review and approval. Areas identified in the assessment, which indicate a potential for methane generation, shall be tested 30 days after rough grading has been completed. Testing would occur on a weekly basis for four weeks.

  After testing, recommendations for methane mitigation measures are made on a lot-by-lot basis depending on the concentrations detected in the soil gas probes. Mitigation designs would be submitted to the City of Ontario, along with the result of the methane testing, for review and approval as part of building permit issuance.

Table 8-4
Maintenance Responsibilities

	City and/or Special District	Private Homeowners Association (HOA)	Private Homeowners/ Commercial/Industrial Property Owners	Utility Entity
Master Plan Roadways *(Riverside Drive, Haven Avenue, Milliken Avenue, Mill Creek Avenue, Chino Avenue, Ontario Ranch Road*)	√			
Interior Project Streets *(curb to curb Primary Entry Street, Secondary Entry Streets, Neighborhood Streets, and street lights)*	√			
Parkway of Master Plan Roadways *(curb to perimeter walls including landscape, sidewalks, street lights)*	√			
Parkways of Interior Project Streets[1] *(landscaping, sidewalks)*		√		
Interior Tract Graffiti Removal		√		
Private interior yard walls			√	
Private Recreational Areas		√		
Monument Signs and Master Plan Roadways	√			
Monument signs within tract entry		√		
Traffic Signals	√			

	City and/or Special District	Private Homeowners Association (HOA)	Private Homeowners/ Commercial/Industrial Property Owners	Utility Entity
Traffic Control Signs	√		√	
Alleys		√		
Community Trail (SCE Corridor Trail)	√			
Off-site and In-Tract water, sewer, and storm drain improvements *(Only those facilities in public roads and those in private streets within public utilities easements that meet public improvement design criteria)*	√			
On-site water, sewer, and storm drain improvements *(improvements that are: private, laterals, and lines behind meters and/or DCDAs, improvements serving only one lot/parcel, not within public or private roads, not within public utility easements, or not meeting public improvement design criteria)*		√	√	
Neighborhood Park *(5 acres or more)*	√			
Pocket/Linear Park		√		
Residential/Urban Parks		√		
Front Yard Landscaping Areas *(Planning Areas 1A, 1B, 1C, 2B,3A,& 3B)~~, 4, & 5 & 5D)~~)*		√		
Landscaping and Common Areas *(Planning Areas ~~6, 6D,7, 8 and 9~~4A, 4B, 5B, 5C, 6B, 7,8, 9, 10 A and 10B)*			√	
Community Theme Wall and Entry Monuments *(outside face for Graffiti removal)*	√			
Community Theme Wall and Entry Monuments *(structural integrity and face repair)*		√		
Community Neighborhood Entries *(within Neighborhood edges on Master Plan Roadways)*	√			
Driveway & Parking Areas (including landscaping) Serving Commercial Property		√		
Private Streets in Gated Communities		√		
Alley Landscaping and Lighting		√		
Electricity				√
Natural Gas				√
Communications Systems	√			√
Police	√			
Fire	√			
NPDES Facilities (Off-site)/WQMP[2]		√		
NPDES Facilities on private property		√		

1. Include restoration work following public street repairs.
2. Only those facilities in public roads, public right-of-way and/or easements, to be maintained through an Encroachment Agreement with the City of Ontario.

8.7 MITIGATION MONITORING

Pursuant to Public Resources Code (PRC) Section 21081.6, a summary of conditions of project approval shall be prepared to mitigate or avoid significant effects on the environment. An approved Mitigation Monitoring Program shall insure that the project and all future development within the project area comply with all applicable environmental mitigation and permit requirements. The final approved Mitigation Monitoring program shall be attached as an appendix to this Specific Plan upon EIR certification.

Rich Haven SECTION 9

Revised Section

9.1 General Plan Consistency

California Government Code (Title 7, Division 1, Chapter 3, Article 8, Section 65450-65457) permits the adoption and administration of specific plans as an implementation tool for elements contained in the local general plan. Policy plans must demonstrate consistency in regulations, guidelines, and programs with the goals and policies set forth in the general plan. The Rich Haven Specific Plan has been prepared in conformance with the goals and policies of the City of Ontario Policy Plan. The policy analysis in ***Table 9-1, "Policy Plan Consistency,"*** describes the manner in which the Rich Haven Specific Plan complies with The Ontario Plan (TOP) policies applicable to the project.

PLAN POLICY	SPECIFIC PLAN CONSISTENCY
LAND USE ELEMENT	
GOAL LU-1: A community that has a spectrum of housing types and price ranges that match the jobs in the City and that make it possible for people to live and work in Ontario and maintain a quality of life.	
LU-1.1 Strategic Growth. We concentrate growth in strategic locations that help create place and identity, maximize available and planned infrastructure, foster the development of transit, and support the expansion of the active and multimodal transportation networks throughout the City.	The Specific Plan outlines a pedestrian sidewalk and multi-use trail network connecting neighborhoods to open space and adjacent future commercial land uses.
LU-1.2 Sustainable Community Strategy. We integrate state, regional, and local Sustainable Community/Smart Growth principles into the development and entitlement process.	Sustainable Community/Smart Growth principles are incorporated into the Rich Haven Land Use Plan. Pedestrian sidewalks and bicycle paths to be constructed as part of the project throughout the community provide connectivity among residential planning areas and schools to help reduce vehicle trips and miles traveled. The design of residential areas incorporates tree-lined parkways providing shade for pedestrians and parked cars. Safe and efficient pedestrian and bicycle connectivity is provided throughout the project. The Rich Haven architectural design guidelines allow for a variety of architectural styles that respond to local climate conditions. Some styles allow the incorporation of flat roofs that facilitate the use of solar collectors. All new construction will utilize design features, fixtures, appliances, and heating and cooling controls to conserve energy and water. The landscape concept for

PLAN POLICY	SPECIFIC PLAN CONSISTENCY
	Rich Haven incorporates a plant palette of drought tolerant materials and requirements that the development implement planting and irrigation systems designed to conserve water. Park and recreation areas will include shaded areas, bicycle racks, and other amenity features to encourage pedestrian and other non-vehicular activities.
LU-1.3 Adequate Capacity. We require adequate infrastructure and services for all development.	The Rich Haven Specific Plan establishes an infrastructure and public facilities plan to ensure that adequate roadways and public utilities including sewer, water, and drainage facilities along with schools, parks, and other public facilities are provided to serve the project.
LU-1.4 Multimodal Mobility. We require development and urban design, where appropriate, that reduces reliance on the automobile and capitalizes on active transportation, transit, electric vehicles, and multimodal transportation opportunities	The Rich Haven Specific Plan requires the construction of Class 1 Bike Paths, which are an integral element to creating accessibility and mobility within Rich Haven. The Specific Plan requires locations and construction of bus turnouts that may be required within the project to be coordinated with and constructed to the satisfaction of the City of Ontario and Omnitrans.
LU-1.6 Complete Community. We incorporate a variety of land uses and building types in our land use planning efforts that result in a complete community where residents at all stages of life, employers, workers, and visitors have a wide spectrum of choices of where they can live, work, shop and recreate within Ontario.	Rich Haven provides for development of up to ~~1,833~~7,194 ~~-~~residential dwelling units in a variety of residential single-family detached and multi-family attached housing types oriented toward open space amenities.

PLAN POLICY	SPECIFIC PLAN CONSISTENCY
GOAL LU-2: Compatibility between a wide range of uses and resultant urban patterns and forms.	
LU-2.6 Infrastructure Compatibility. We require infrastructure to be aesthetically pleasing and in context with the community character.	Arterial streets within Rich Haven will be uniformly landscaped in an aesthetically pleasing manner with 8-10-foot-wide landscaped parkways on each side of the street and 16 -26 foot wide landscaped medians in each street. A planting buffer area varying in width from 40-50 feet in width will be provided adjacent to sidewalks within the project adjacent to all arterial roadways. Decorative project monuments will be constructed at key project entries providing community identification and establishing a sense of arrival and a welcoming feeling for the community.
LU-2.9 Methane Gas Sites. We require sensitive land uses and new uses on former dairy farms or other methane-producing sites be designed to minimize health risks.	The project will comply with appropriate mitigation measures identified in the project EIR for soil remediation and proper venting to address the potential existence of methane gases within the project.
GOAL LU-4: Development that provides short-term value only when the opportunity to achieve our Vision can be preserved.	
LU-4.3 Infrastructure Timing. We require that the necessary infrastructure and services be in place prior to or concurrently with development.	Approval of the Rich Haven Specific Plan [L SEP] is accompanied by an application for approval of a development agreement. The development agreement shall include, but not be limited to, methods for financing, acquisition, and construction of infrastructure, acquisition, and development of adequate levels of parkland and schools, as well as the provision of adequate housing opportunities for various

PLAN POLICY	SPECIFIC PLAN CONSISTENCY
	segments of the community consistent with the City's regional housing needs assessment. The Rich Haven development agreement shall be fully approved before the issuance of the first building permits for the project.
GOAL LU-5: Integrated airport systems and facilities that minimize negative impacts to the community and maximize economic benefits.	
LU-5.2 Airport Planning Consistency. We coordinate with airport authorities to ensure The Ontario Plan is consistent with state law, federal regulations, and/or adopted master plans, and airport land use compatibility plans for ONT and Chino Airport.	The Specific Plan will comply with the ALUCP requirements for Ontario Airport (ONT) and Chino Airport as outlined in Rich Haven Specific Plan Section 3-4.
LU-5.7 ALUCP Consistency with Land Use Regulations. We comply with state law that requires general plans, specific plans, and all new development to be consistent with the policies and criteria set forth within an Airport Land Use Compatibility Plan for any public-use airport.	The Specific Plan will comply with the ALUCP requirements for Ontario Airport (ONT) and Chino Airport as outlined in Rich Haven Specific Plan Section 3-4.
HOUSING ELEMENT	
GOAL H-2 Diversity of types of quality housing that are affordable to a range of household income levels, accommodate changing demographics, and support and reinforce the economic sustainability of Ontario.	
H-2.4 Ontario Ranch. We support a premier lifestyle community in the Ontario Ranch, distinguished by diverse housing, highest design quality, and cohesive and highly amenitized neighborhoods.	The Specific Plan allows for the development of up to ~~893~~ 7,194 residential dwelling units comprised of a variety of single-family detached and multi-family attached homes. Residential land use areas are linked by a network of street- separated sidewalks and bicycle trails connecting all neighborhoods to parks and schools. Residential development is designed to address

PLAN POLICY	SPECIFIC PLAN CONSISTENCY
	a variety of lifestyles and economic segments of the marketplace, such as singles, families, executives and "empty nesters."
H-2.5 Housing Design. We require architectural excellence through adherence to City design guidelines, thoughtful site planning, environmentally sustainable practices, and other best practices.	The Specific Plan includes architectural design guidelines to encourage development of diverse neighborhoods with the use of varied architectural styles articulated with elements true to the architectural characteristics of each style.
GOAL H-5 A full range of housing types and community services that meet the special housing needs for all individuals and families in Ontario, regardless of income level, age, or other status.	
H-5.2 Family Housing. We support the development of larger rental apartments that are appropriate for families with children, including, as feasible, the provision of services, recreation, and other amenities.	The Specific Plan allows for the development of condominium and multi-family home types designed to accommodate families with children. The Specific Plan requires that all condominium and multi-family developments within the project provide private recreational areas and/or pocket parks for residents of the development.
PARKS AND RECREATION ELEMENT	
GOAL PR-1: A system of safe and accessible parks that meets the needs of the community.	
PR-1.5 Acreage Standard. We strive to provide 5 acres of parkland (public and private) per 1,000 residents.	The project will comply with the City requirement for the payment of an in-lieu fee in amount equivalent to three acres of parkland per 1,000 residents to fund the development of public parks and the requirement that

PLAN POLICY	SPECIFIC PLAN CONSISTENCY
	each new development provide park acreage on-site equivalent to 2 acres per 1,000 residents. The Specific Plan includes the provision of private pocket parks in each Planning Area.
PR-1.6 Private Parks. We expect development to provide a minimum of 2 acres of developed private park space per 1,000 residents.	The Specific Plan includes the provision of private pocket parks in each Planning Area with a total acreage provided equivalent to 2 acres of developed private park per 1,000 residents.
PR-1.9 Phased Development. We require parks be built in new communities before a significant proportion of residents move in.	Development within the Specific Plan is required to be reviewed and approved pursuant to the City's Subdivision Ordinance, which requires the approval of tentative and final subdivision maps for the project. Conditions of approval associated with the City's approval of tentative subdivision maps will provide for the timing of construction of parks as part of the development.
PR-1.11 Environmental Function of Parks. We require new parks to meet environmental management objectives.	The Specific Plan requires all new development to be reviewed and approved pursuant to the provisions of the City's Subdivision Ordinance and Development Plan Review process, which provides for review by the City's Planning Department which may require the development to incorporate environmental management objectives into the design of parks.
PR-1.12 Trails. We promote connections between parks and local trails including those managed by other public agencies.	The Specific Plan is designed for bicycle and pedestrian accessibility provided throughout the community through a network of off-street bike and pedestrian trails within Vineyard and Riverside Avenues. These

PLAN POLICY	SPECIFIC PLAN CONSISTENCY
	trails are connected to a Class I bike path system located within Archibald Avenue, Ontario Ranch Road, and Haven Avenue. Connectivity to this network of off-street trails from all residential Planning Areas is provided through the local street system.
PR-1.14 Multi-family Residential Developments. We require that new multi-family residential developments of five or more units provide recreational facilities or open space, in addition to paying adopted impact fees.	The Specific Plan requires that all condominium and multi-family developments within the project provide private recreational areas and/or pocket parks for residents of the development in addition to the payment by the developer of adopted impact fees.
ENVIRONMENTAL RESOURCES ELEMENT	
GOAL ER-1: A reliable and cost-effective system that permits the City to manage its diverse water resources and needs.	
ER-1.3 Conservation and Sustainable Water Supply. We work with regional water providers and users to conserve water and ensure sustainable local water supplies as more frequent droughts reduce long term local and regional water availability.	The Specific Plan requires all public and common area landscaping within the project to utilize plant materials listed on the approved Specific Plan Landscape Plant Matrix, which is comprised of drought tolerant and California Friendly plant materials. The Specific Plan requires that irrigation systems for both public and private landscaped areas be designed to be as water-efficient as possible and includes the following minimum requirements. • All irrigation systems shall have automatic controllers designed to properly water plant materials given the

PLAN POLICY	SPECIFIC PLAN CONSISTENCY
	site's soil conditions, and irrigation systems for all public landscapes shall have automatic rain shut-off devices. • Drip irrigation is ~~not~~ permitted within ~~LMD~~ CFD landscape areas. • Spray systems shall have low volume matched-precipitation heads. • All ~~LMD~~ CFD areas are to be controlled with central control irrigation systems, and all trees are to be irrigated utilizing a flush grade bubbler system on a separate valve. All ~~LMD~~ CFD areas shall be designed to City Standard Specifications.
ER-1.5 Water Resource Management. Environmental justice areas are prioritized as we coordinate with local agencies to protect water quality, prevent pollution, address existing contamination, and remediate contaminated surface water and groundwater.	The Specific Plan requires that the developer obtain approval of a Storm Water Pollution Prevention Plan (SWPPP) prior to issuance of grading or construction permits. The SWPPP will be prepared to comply with California State Water Resources Control Board's current "General Permit to Discharge Storm Water Associated With Construction Activity" and current "Area Wide Urban Storm Water Runoff (Regional NPDES) Permit." The SWPPP will identify and detail all appropriate Best Management Practices (BMP's) to be implemented or installed during construction of the project. In addition to the preparation of a SWPPP for construction-related activities, and as part of the approval of any grading plans for the project, the

PLAN POLICY	SPECIFIC PLAN CONSISTENCY
	developer is required to submit a Water Quality Management Plan (WQMP) on the regional model form provided by the City. The WQMP shall identify and detail all Site Design BMP's, Source Control BMP's and Treatment Control BMP's to be implemented or installed as part of the project in order to reduce storm water pollutants and site runoff.
ER-1.6 Urban Run-off Quantity. We encourage the use of low impact development strategies, including green infrastructure, to intercept run-off, slow the discharge rate, increase infiltration, and ultimately reduce discharge volumes to traditional storm drain systems.	The Specific Plan requires that grading and drainage for the project be designed to retain, infilter, and/or biotreat surface runoff to the maximum extent practicable, in order to comply with the requirements of the current San Bernardino County NPDES Stormwater Program's MS4 Permit and Water Quality Management Plan (WQMP) for priority development projects. These effects shall be minimized through the implementation of on-site and off-site Low Impact Development (LID) Site Design Best Management Practices (BMPs) that reduce runoff and pollutant transport by minimizing impervious surfaces, maximizing on-site infiltration, and specifically retain/infilter or biotreat the 85th percentile storm event. In addition, non-structural and structural Source Control Best Management Practices (BMPs), shall also be implemented and documented in the project's approved Water Quality Management Plan(s) to reduce pollutant generation and transport from the project site. Participation in an alternative regional or watershed-based Treatment Control BMP is

PLAN POLICY	SPECIFIC PLAN CONSISTENCY
	regulated by the requirements of the San Bernardino County MS4 Urban Runoff Permit and the SB County Water Quality Management Plan Technical Guidance Document.
ER-1.7 Urban Run-off Quality. We require the control and management of urban run-off, consistent with Regional Water Quality Control Board regulations.	The Specific Plan requires that the project comply with the most recent requirements of the San Bernardino County NPDES Storm Water Program's Quality Management (WQMP) for significant new development projects. A final WQMP is required to be submitted by the developer for approval by the City prior to the issuance of any grading and construction permits for the project.
ER-1.8 Wastewater Management. We require the management of wastewater discharge and collection consistent with waste discharge requirements adopted by the Regional Water Quality Control Board.	The Specific Plan requires the construction of a wastewater system consistent with City requirements and also requires that the project obtain approval of a WQMP for the project prior to the issuance of any grading or construction permit.
GOAL ER-3: Cost-effective and reliable energy system sustained through a combination of low impact buildings, site and neighborhood energy conservation, and diverse sources of energy generation that collectively helps to minimize the region's carbon footprint.	
ER-3.1 Conservation Strategy. We require conservation as the first strategy to be employed to meet applicable energy-saving standards.	The Specific Plan requires all public and common area landscaping within the project to utilize plant materials listed on the approved Specific Plan Landscape Plant Matrix, which is comprised of drought tolerant and California Friendly plant materials. The Specific Plan

PLAN POLICY	SPECIFIC PLAN CONSISTENCY
	requires that irrigation systems for both public and private landscaped areas be designed to be as water-efficient as possible. The Specific Plan requires the construction of separate water mains for the use of recycled water in public and common areas of the project. The Specific Plan includes architectural styles that respond to local climate conditions and allow for the incorporation of flat roofs that facilitate the use of solar collectors. All new construction will utilize fixtures, appliances, and heating and cooling controls to conserve water and energy.
ER-3.2 Green Development– Communities. We encourage the use of the LEED Neighborhood Development rating system, or similar mechanism, to guide the planning and development of all new communities.	The Specific Plan includes architectural guidelines, which allow for a variety of styles that respond to local climate conditions. Some styles allow the incorporation of flat roofs that facilitate the use of solar collectors. All new construction will utilize design features, fixtures, appliances, and heating and cooling controls to conserve energy and water. The landscape concept for Rich Haven incorporates a plant palette and a planting and irrigation system designed to conserve water. Park and recreation areas will include shaded areas, bicycle racks, and other amenity features to encourage pedestrian and other non-vehicular activities.
ER-3.3 Building and Site Design. We require new construction to incorporate energy efficient building and site design strategies, which could include appropriate solar orientation, maximum use of natural daylight, passive solar, and natural ventilation.	The Specific Plan includes architectural design guidelines, which allow for styles that respond to local climate conditions. Some styles allow for flat roofs that facilitate the use of solar collectors.

PLAN POLICY	SPECIFIC PLAN CONSISTENCY
GOAL ER-4: Improved indoor and outdoor air quality and reduced locally generated pollutant emissions.	
ER-4.4 Indoor Air Quality. We will comply with State Green Building Codes relative to indoor air quality. We seek funding to improve indoor air quality for households with poor indoor air quality, with priority for lower income households in environmental justice areas.	All development within the Specific Plan will be required to comply with the State Green Building Code as implemented by the City.
GOAL ER-5 Protected high value habitat and farming and mineral resource extraction activities that are compatible with adjacent development.	
ER-5.2 Entitlement and Permitting Process. We comply with state and federal regulations regarding protected species.	The project will comply with all mitigation measures identified in the project EIR with regard to biological resources
ER-5.3 Right to Farm. We support the right of existing farms to continue their operations within the Ontario Ranch.	The Specific Plan requires a minimum 100-foot wide agricultural buffer be provided by the development between any new residential structure and any existing animal feed trough, corral/pen or an existing dairy/feed lot.
ER-5.4 Transition of Farms. We protect both existing farms and sensitive uses around them as agricultural areas transition to urban uses.	The Specific Plan requires a minimum 100-foot wide agricultural buffer be provided by the development between any new residential structure and any existing animal feed trough, corral/pen or an existing dairy/feed lot.

PLAN POLICY	SPECIFIC PLAN CONSISTENCY
COMMUNITY ECONOMICS ELEMENT	
GOAL CE-1: A complete community that provides for all incomes and stages of life.	
CE-1.6 Diversity of Housing. We collaborate with residents, housing providers, and the development community to provide housing opportunities for every stage of life; we plan for a variety of housing types and price points to encourage the development of housing supportive of our efforts to attract business in growing sectors of the community while being respectful of existing viable uses.	The Specific Plan allows for the development of up to ~~1,833~~7,194 residential dwelling units comprised of a variety of single-family detached and multi-family attached homes. A network of street-separated sidewalks and Multipurpose Trails connecting all neighborhoods to parks and schools links residential land use areas. Residential development is designed to address a variety of lifestyles and economic segments of the marketplace, such as singles, families, executives and "empty nesters."
GOAL CE-2: A City of distinctive neighborhoods, districts, corridors, and centers where people choose to be.	
CE-2.1 Development Projects. We require new development and redevelopment to create unique, high-quality places that add value to the community.	The Specific Plan includes architectural and landscape design guidelines.
CE-2.2 Development Review. We require those proposing new development and redevelopment to demonstrate how their projects will create appropriately unique, functional, and sustainable places that will compete well with their competition within the region.	The Specific Plan requires all new development to be reviewed and approved pursuant to the provisions of the City's Subdivision Ordinance and Development Plan Review process which provides for review by the City's Planning Department which may require the development to demonstrate how the project will create appropriately unique, functional and sustainable places.

PLAN POLICY	SPECIFIC PLAN CONSISTENCY
CE-2.5 Private Maintenance. We require adequate maintenance, upkeep, and investment in private property because proper maintenance on private property protects property values.	The Specific Plan includes a Maintenance Responsibility Matrix defining the private responsibilities for maintenance of private roadways, parkways, trails, common areas, parks, yards, walls, and monuments within the project.
CE-2.6 Public Maintenance. We require the establishment and operation of maintenance districts or other vehicles to fund the long-term operation and maintenance of the public realm whether on private land, in rights-of-way, or on publicly-owned property.	The Specific Plan includes a Maintenance Responsibility Matrix defining the responsible public entities, including special districts, for maintenance of roadways, sidewalks, traffic signals, off site and on site public water, sewer, and storm drain infrastructure facilities.
SAFETY ELEMENT	
GOAL S-1: Minimized risk of injury, loss of life, property damage, and economic and social disruption caused by earthquake-induced and other geologic hazards.	
S-1.1 Implementation of Regulations and Standards. We require that all new habitable structures be designed in accordance with the most recent California Building Code adopted by the City, including provisions regarding lateral forces and grading.	All development within the Specific Plan will be required to comply with the State of California Building Code as adopted and implemented by the City.
GOAL S-3: Reduced risk of death, injury, property damage and economic loss due to fires, accidents and normal everyday occurrences through prompt and capable emergency response.	
S-3.8 Fire Prevention through Environmental Design. We require new development to incorporate fire prevention consideration in the design of	The Specific Plan requires new development to be reviewed and approved pursuant to the City's

PLAN POLICY	SPECIFIC PLAN CONSISTENCY
streetscapes, sites, open spaces, and buildings.	Subdivision Ordinance and Development Plan Review process, allowing for the Fire Department review, and requiring the incorporation of any required fire prevention design elements in streetscapes, open spaces and buildings.
GOAL S-4: An environment where noise does not adversely affect the public's health, safety, and welfare.	
S-4.1 Noise Mitigation. We utilize the City's Noise Ordinance, building codes, and subdivision and development codes to mitigate noise impacts.	
GOAL S-5: Minimize the risk of injury, property damage, and economic loss resulting from windstorms and wind-related hazards.	
S-5.1 Dust Control Measures. We require the implementation of Best Management Practices for dust control at all excavation and grading projects.	Construction within the Specific Plan will comply with a City approved construction management plan and all mitigation measures identified in the project EIR with regard to dust control.
GOAL S-6: Reduced potential for hazardous materials exposure and contamination.	
S-6.9 Remediation of Methane. We require development to assess and mitigate the presence of methane, per regulatory standards and guidelines.	The project will comply with all mitigation measures identified as part of the project EIR for soil remediation and proper venting to address the potential existence of methane gases within the project.
GOAL S-7: Residential neighborhoods, commercial areas, and industrial districts that are kept safe through a multi-faceted approach of prevention, suppression, and community involvement in public safety.	
S-7.4 Crime Prevention through Environmental Design (CPTED). We require new development to incorporate CPTED in the design of streetscapes, sites,	The Specific Plan requires all new development to be reviewed and approved pursuant to the provisions of

PLAN POLICY	SPECIFIC PLAN CONSISTENCY
open spaces, and buildings.	the City's Subdivision Ordinance and Development Plan Review process which provides for review by the City's Police Department, which may require the development to incorporate CPTED in the design of streetscapes, sites, open spaces and buildings.
MOBILITY ELEMENT	
GOAL M-1: A system of roadways that meets the mobility needs of a dynamic and prosperous Ontario.	
M-1.1 Roadway Design and Maintenance. We require our roadways to: • Comply with federal, state, and local design and safety standards; • Meet the needs of multiple transportation modes and users; • Handle the capacity envisioned in the City of Ontario Master Plan of Streets and Highways; • Be maintained in accordance with best practices; • Be compatible with the streetscape and surrounding land uses; and • Promote the efficient flow of all modes of traffic through the implementation of intelligent transportation systems and travel demand management strategies.	The Specific Plan requires the construction of a network of Master Plan Roadways designed consistent with the requirements of the City's Functional Roadway Classification Plan and the New Model Colony Streetscape Master Plan. The roadway system is designed to maintain a peak hour Level of Service (LOS) E or better at all intersections as discussed in the project EIR. Site design, source control, and treatment BMP's for the project are required to be submitted by the developer for approval by the City prior to issuance of permits for the project.
GOAL M-2: A system of trails and corridors that facilitate and encourage active modes of transportation.	

PLAN POLICY	SPECIFIC PLAN CONSISTENCY
M-2.3 Pedestrian Walkways. We require streets to include sidewalks and visible crosswalks at major intersections where necessary to promote safe and comfortable mobility between residential areas, businesses, schools, parks, recreation areas, and other key destination points.	The Specific Plan includes a plan for construction of an off-street pedestrian circulation system comprised of an interconnected, paved sidewalk system within all roadway rights-of-ways, separated from vehicular travel lanes by a landscaped parkway. The Rich Haven pedestrian system provides connectivity among residential neighborhoods to the pocket parks and the elementary school within Rich Haven.
GOAL M-3: A public transit system that is a viable alternative to automobile travel and meets basic transportation needs of the transit-dependent.	
M-3.2 Alternative Transit Facilities at New Development. We require new development adjacent to an existing or planned transit stop to contribute to the creation of transit facilities, such as bus shelters, transit bays and turnouts, and bicycle facilities, such as secure storage areas.	The Specific Plan requires the developer of the project to coordinate with the local mass transit provider, Omnitrans, to accommodate adequate area for any bus turnouts within the Master Plan Roadways as required by Omnitrans.
COMMUNITY DESIGN ELEMENT	
GOAL CD-1: A dynamic, progressive city containing distinct and complete places that foster a positive sense of identity and belonging among residents, visitors, and businesses.	
CD-1.2 Place Types. We establish Place Types in urban, mixed use, and transit-oriented areas to foster the City's identity as a premier community and require new development within each Place Type to incorporate prescribed urban patterns, forms, and placemaking priorities.	The Specific Plan includes design guidelines to guide the physical character of all future residential development and all community and neighborhood features, including the overall landscape treatment within the project. The proposed community character

PLAN POLICY	SPECIFIC PLAN CONSISTENCY
	establishes a unified aesthetic treatment and design theme. The community vision for Rich Haven is based upon the architectural and landscape influences found in Ontario and throughout Southern California. The architectural styles and landscape concept chosen for the community have been selected in order to be reflective of older neighborhoods of historic Ontario as well as to accommodate innovative transitional influences. Together, the architectural styles and landscape concept are designed to create a neighborhood character for Rich Haven that will be sustainable over time.
CD-1.5 View Corridors. We require all major north-south streets be designed and redeveloped to feature views of the San Gabriel Mountains, which are part of the City's visual identity and a key to geographic orientation. Such views should be free of visual clutter, including billboards and may be enhanced by framing with trees.	The major north south streets in Rich Haven are designed to frame the views of the San Gabriel Mountains. The Specific Plan requires the construction of extensive landscaping on both sides of each street and in the median of each street. All new utility lines will be placed underground.
GOAL CD-2: A high level of design quality resulting in neighborhoods, commercial areas, public spaces, parks, and streetscapes that are attractive, safe, functional, human- scale, and distinct.	
CD-2.1 Quality Building Design and Architecture. We encourage all development projects to convey visual interest and character through: • Building volume, massing, and height to provide context-appropriate scale and proportion; • A true architectural style which is carried out in plan, section, and	The Specific Plan includes design guidelines to guide the construction of the project by requiring building massing to address the street and the pedestrian experience, the use of selected architectural styles to be implemented in a comprehensive manner throughout each neighborhood around all building elevations, and

PLAN POLICY	SPECIFIC PLAN CONSISTENCY
elevation through all aspects of the building and site design and appropriate for its setting; and • Exterior building materials that are articulated, high quality, durable, and appropriate for the architectural style.	the use of building materials and architectural features and elements which are true to each selected style.
CD-2.2 Neighborhood Design. We create distinct residential neighborhoods that promote a sense of community and identity by emphasizing access, connectivity, livability, and social interaction through such elements as: • A pattern of smaller, walkable blocks that promote activity, safety, and access to nearby amenities and services; • Varied parcel sizes and lot configurations to accommodate a diversity of housing types; • Traffic calming measures to slow traffic and promote walkability while maintaining acceptable traffic flows and emergency evacuation access; • Floor plans that encourage views onto the street and de-emphasize the visual and physical dominance of garages (introducing the front porch as the "outdoor living room"), as appropriate; and • Landscaped parkways, with sidewalks separated from the curb and designed to maximize safety, comfort, and aesthetics for all users.	The Rich Haven Specific Plan is designed as a walk-able community of traditional residential neighborhoods organized around a simple grid street system offering a variety of home types within an open space setting. Residents can walk or bike to parks and schools via an interconnected network of sidewalks and trails throughout the community. Traditional site planning elements, varied residential product design and architecture, well-landscaped streets and enhanced entries combine to create welcoming neighborhoods within the community with aesthetic and functional harmony. Streets are linked together in a grid pattern with sidewalks separated from the street by landscaped parkways providing a simple and understandable system for pedestrian and vehicular travel connecting neighborhoods, open space amenities, public facilities, and recreational areas. A variety of housing types, including detached single-family homes, attached single-family homes, and multifamily homes are planned for Rich Haven, all of which are located close to schools, parks, and open space amenities. Residential development standards and design

PLAN POLICY	SPECIFIC PLAN CONSISTENCY
	guidelines contained in the Specific Plan ensure that homes are designed at a human scale emphasizing architecture fronting the street. Residential development standards are designed to minimize views of garage doors through use of alternating garage configurations. Traffic calming features incorporated into neighborhood streets include a traditional grid pattern with sidewalks separated by landscaping on either side of the street, and the use of intersection chokers and roundabouts where appropriate.
CD-2.5 Streetscapes. We design new and, when necessary, retrofit existing streets to improve walkability, bicycling and transit integration, strengthen connectivity, and enhance community identity through improvements to the public right-of-way such as sidewalks, street trees, parkways, curbs, street lighting and street furniture.	The Specific Plan is designed with a comprehensive street system to accommodate the safe and efficient movement of automobiles as well as bike trails and a multi-purpose trail to accommodate bicycle and pedestrian mobility and connectivity throughout the community. Streets are designed as a grid system of short blocks allowing for various access points and travel routes. Streets are designed with sidewalks separated from the street to create an inviting environment for walking. Streets connect neighborhoods, parks and schools through a variety of travel paths. Bicycle accessibility is provided throughout the community through a network of off-street multi- purpose trails within Vineyard Avenue and Riverside Avenue which connect to a Class II bike path and Multipurpose Trail. Connectivity to this network of off street bike trails from all residential Planning Areas

PLAN POLICY	SPECIFIC PLAN CONSISTENCY
	is provided through the local street system.
CD-2.6 Connectivity. We promote development of local street patterns, multimodal networks, and connected public spaces that create and unify neighborhoods, rather than divide them, and create cohesive and continuous corridors, rather than independent "islands" through the following means: • Local street networks that provide access both between subdivisions and within neighborhoods and discourage through traffic; • A local street system that is logical and understandable for the user. A grid system is preferred to avoid circuitous and confusing travel paths between internal neighborhood areas and adjacent arterials and to provide adequate emergency and evacuation access; and • Pedestrian and bicycle networks that provide convenient access to neighborhoods and nearby destinations, such as schools, parks, other public spaces, commercial areas, and transit stops.	Off-street pedestrian circulation is available throughout Rich Haven by means of the interconnected, paved sidewalk system within the roadway right-of-way, separated from travel lanes by a landscaped parkway and within off-street Multipurpose Trails. The Rich Haven pedestrian system provides connectivity among residential neighborhoods to pocket parks and the elementary school within Rich Haven. Streets are designed in a simple grid system with short blocks promoting a sense of small neighborhoods.
CD-2.7 Sustainability. We collaborate with the development community to design and build neighborhoods, streetscapes, sites, outdoor spaces, landscaping, and buildings to reduce energy demand through solar orientation, maximum use of natural daylight, passive solar and natural ventilation, building form, mechanical and structural systems, building materials, and construction techniques.	Sustainable Community/Smart Growth principles are incorporated into the Rich Haven Land Use Plan. The sustainable goals for the project as stated in the Specific Plan include the following: 1. Encourage walking and other non-vehicular modes of travel. 2. Provide pedestrian connectivity throughout the project.

PLAN POLICY	SPECIFIC PLAN CONSISTENCY
	3. Provide shaded outdoor areas. 4. Encourage the use of architectural elements designed to reduce interior heat gain. 5. Encourage the use of recycled, recyclable, and environmentally friendly building materials. 6. Require the use of low energy glass, low water plumbing features, and energy efficient appliances. 7. Encourage the use of drought tolerant landscaping and water efficient irrigation methods. Pedestrian and bicycle connectivity is provided among residential planning areas, schools, and parks helping to reduce vehicle trips and miles traveled. The design of residential areas incorporates tree-lined parkways providing shade for pedestrians and parked cars. Safe and efficient pedestrian and bicycle connectivity is provided throughout the project through a network of off-street bicycle trails, multi- use trails, and sidewalks. The Rich Haven architectural design guidelines allow for a variety of styles that respond to local climate conditions. Some styles allow the incorporation of flat roofs that facilitate the use of solar collectors. All new construction will utilize design features, fixtures, appliances, and heating and cooling controls to

PLAN POLICY	SPECIFIC PLAN CONSISTENCY
	conserve energy and water. The landscape concept for Rich Haven incorporates a drought tolerant plant palette and requires planting and irrigation systems designed to conserve water. Park and recreation areas will include shaded areas, bicycle racks, and other amenity features to encourage pedestrian and other non-vehicular activities.
CD-2.8 Safe Design. We incorporate defensible space design into new and existing developments to ensure the maximum safe travel and visibility on pathways, corridors, and open space and at building entrances and parking areas by avoiding physically and visually isolated spaces, maintaining visibility and accessibility, and using lighting.	Residential development standards and design guidelines contained within the Specific Plan require home designs with fronts of homes, not garages, oriented toward the street to ensure that "eyes are on the street" in each neighborhood. Residences are oriented around open space, parks, and trails. Parking areas and garages are located to the rear of residences to avoid dominance of the streetscape by automobiles and to enhance a pedestrian environment on all streets.
CD-2.9 Landscape Design. We encourage durable, sustainable, and drought-tolerant landscaping materials and designs that enhance the aesthetics of structures, create and define public and private spaces, and provide shade and environmental benefits.	The landscape concept for Rich Haven incorporates the use of durable landscaping materials, a drought tolerant plant palette, and a planting and irrigation system designed to conserve water. Park and recreation areas will include shaded areas, bicycle racks, and other amenity features to encourage pedestrian and other non-vehicular activities. All materials utilized in private and public common areas will be durable landscaping materials.

PLAN POLICY	SPECIFIC PLAN CONSISTENCY
CD-2.11 Entry Statements. We encourage the inclusion of amenities, signage, and landscaping at the entry to neighborhoods, commercial centers, mixed use areas, industrial developments, and public places that reinforce them as uniquely identifiable places.	Signage and landscaping will be provided at neighborhood entries within Rich Haven. Community and neighborhood entry monumentation is required by the Specific Plan and is designed to establish a hierarchy for each Planning Area of the community. At key entries a monumentation program will be utilized to help identify the community as well as convey a sense of arrival and a welcoming feel for both vehicular and pedestrian traffic. These monuments and "gateways" are to be designed with durable, lasting materials approved by the City of Ontario. The "gateways" leading into the community of Rich Haven will be elegant in appearance, classic in form, evoking the sense of arrival.
CD-2.12 Site and Building Signage. We encourage the use of sign programs that utilize complementary materials, colors, and themes. Project signage should be designed to effectively communicate and direct users to various aspects of the development and complement the character of the structures.	The Specific Plan requires the developer of Rich Haven to obtain approval by the City of a Master Sign Program to address project entries, neighborhood identification and way finding signage within the project.
GOAL CD-3: Vibrant urban environments that are organized around intense buildings, pedestrian and transit areas, public plazas, and linkages between and within developments that are conveniently located, visually appealing and safe during all hours.	
CD-3.1 Unique Identity. We promote development that heightens the unique character and identity of each Place Type by requiring compatible land uses and land planning, site design, and building design that promotes an active	The Specific Plan includes architecture and landscape design guidelines to enrich the community landscape and architectural style for Rich Haven. The design

PLAN POLICY	SPECIFIC PLAN CONSISTENCY
public realm.	guidelines are organized to define the basic landscape design principles for the project, to guide the implementation of the "design vision," and to ensure the design integrity of the project. All landscape plans, streetscape plans, and graphic designs with regard to community identity, neighborhood identity, or entry monumentation within the project are required to conform to the landscape design guidelines as set forth in the Specific Plan and are subject to review and approval by the City of Ontario. The landscaping proposed for Vineyard, Riverside, Chino, and Hellman Avenues shall be designed in accordance with the City's New Model Colony Streetscape Master Plan.
CD-3.3 Complete and Connected Network. We require that pedestrian, vehicular, and bicycle circulation on both public and private property be coordinated to provide connections internally and externally to adjacent neighborhoods and properties (existing and planned) through a system of local roads and trails that promote walking and biking to nearby destinations (including existing and planned parks, commercial areas, and transit stops) and are designed to maximize safety, comfort, and aesthetics.	The Specific Plan is designed for bicycle and pedestrian accessibility throughout the community through a network of off-street bike and pedestrian trails within Vineyard and Riverside Avenues. Connectivity to this network of off street trails from all residential Planning Areas is provided through the local street system.
CD-3.5 Active Frontages. We create lively pedestrian streetscapes by requiring primary building, business, and residential entrances, outdoor dining, and storefronts be located on ground floors adjacent to sidewalks or public spaces and designed to maximize safety, comfort, aesthetics, and the intended functionality (as defined by the Place Type).	The Specific Plan includes architectural design guidelines, which promote street facing front entries and architectural elements visible from adjacent streets, sidewalks, and parks within the project.
GOAL CD-5: A sustained level of maintenance and improvement of properties, buildings, and infrastructure that protects the	

PLAN POLICY	SPECIFIC PLAN CONSISTENCY
property values and encourages additional public and private investments.	
CD-5.1 Maintenance of Buildings and Property. We require all public and privately-owned buildings and property (including trails and easements) to be properly and consistently maintained.	The Specific Plan includes a Maintenance Responsibility Matrix defining the public, private, and utility entities responsible for maintenance of roadways, parkways, trails, sidewalks, common areas, parks, yards, walls and monuments, traffic signals, infrastructure, and utilities within the project.
CD-5.2 Maintenance of Infrastructure. We require the continual maintenance of infrastructure.	The Specific Plan includes a Maintenance Responsibility Matrix defining the responsible entities for continual maintenance of roadways, sidewalks, traffic signals, off site and on site public water, sewer, and storm drain infrastructure facilities.
SOCIAL RESOURCE ELEMENT	
GOAL SR-2: A range of educational and training opportunities for residents and workers of all ages and abilities that improves their life choices and provides a skilled workforce for our businesses.	
SR-2.4 Access to Schools. We work with local and regional partners to improve the safety in and around schools and to improve access for citizens of all ages and abilities to schools and community services, such as after school and other programs.	

9.2 The Ontario Plan Consistency tables

9.2.1 RESIDENTIAL

TOP Land Use Designation	Specific Plan – Land Use/Planning Area	TOP Adjusted Acreage	Gross Acreage	Residential Units (Minimum)	Residential Units (Maximum)	Specific Plan Units Proposed	Specific Plan Proposed Gross Density (du/ac)

CITY OF ONTARIO *Agenda Report* **June 20, 2023**	**SECTION:** **PUBLIC HEARINGS**
Department: Planning Prepared By: Edmelynne V Hutter Staff Member Presenting: Scott Murphy, Executive Director Community Development Reviewed By: Kimberly Ruddins, Rudy Zeledon Approved By:	Submitted To: Council/OHA Approved: _____ Continued To: _____ Denied: _____ Item No: 31

SUBJECT: **A PUBLIC HEARING TO CONSIDER AN AMENDMENT TO THE COUNTRYSIDE SPECIFIC PLAN**

RECOMMENDATION: That the City Council consider and adopt:

A. A Resolution adopting an Addendum to the Countryside Specific Plan Environmental Impact Report (State Clearinghouse No. 2004071001); and
B. A Resolution adopting an Amendment to the Countryside Specific Plan (File No. PSPA22-002).

THE FOLLOWING COUNCIL GOALS ARE BEING ACHIEVED:
Invest in the Growth and Evolution of the City's Economy
Focus Resources in Ontario's Commercial and Residential Neighborhoods
Invest in the City's Infrastructure (Water, Streets, Sewers, Parks, Storm Drains and Public Facilities)
Ensure the Development of a Well Planned, Balanced, and Self-Sustaining Community in Ontario Ranch

FISCAL IMPACT: Adoption of the Countryside Specific Plan Amendment would result in both short and long-term fiscal impacts to the City. Short-term impacts include infrastructure improvements to serve future residential developments. The cost of these improvements is included in the Nexus Study and Development Impact Fees previously adopted by the City Council. The developer will be required to install improvements or pay the Development Impact Fees associated with the various improvements. Long-term fiscal impacts include the ongoing operations and maintenance services (police, fire, maintenance, etc.) necessary to serve the future developments. To address this impact, the developer will be required to form and/or join a Community Facilities District to cover the additional public service costs. No Original Model Colony dollars will be used to fund the future Ontario Ranch development.

BACKGROUND & ANALYSIS: The Project site is comprised of 23.2 acres of land located on the west side of Archibald Avenue, approximately 875 feet south of the intersection of Riverside Drive and

Archibald Avenue, within Planning Area 1 – Neighborhood 2 of the Countryside Specific Plan. The properties to the north and east are zoned MDR-18 (Medium Density Residential – 11.1 – 18.0 dwelling units per acre) and developed with multiple family apartments. The properties to the south and west are zoned Countryside Specific Plan and developed with single-family detached homes. The Project site is currently used for agriculture activities and is improved with farm equipment storage buildings and livestock enclosures. The Project site is generally flat and drains to the southwest portion of the site.

The Countryside Specific Plan (File No. PSP04-001) was approved, and the related Environmental Impact Report (Final Environmental Impact Report; State Clearinghouse No. 2004071001) was certified by the City Council on April 18, 2006. The Countryside Specific Plan, adopted on May 2, 2006, established the land use designations, development standards, and design guidelines on 178 gross acres of land, which included the potential development of 819 dwelling units and approximately 9.4 acres of paseos and parks throughout the Specific Plan Area.

On August 16, 2022, the City Council certified The Ontario Plan 2050 Update Supplemental Environmental Impact Report in conjunction with The Ontario Plan 2050 (File No. PGPA20-002) General Plan update. Within The Ontario Plan 2050 and Supplemental Environmental Impact Report, the Project site land use was designated and analyzed as Low Medium Density Residential (LMDR): 5.1 to 11.0 du/ac and Medium Density Residential (MDR): 11.1 to 25.0 dwelling units per acre. The previous land use designation was Low Density Residential (LDR): 2.1 to 5.0 dwelling units per acre.

On June 9, 2022, the Applicant, RD Ontario LLC, submitted applications for a Specific Plan Amendment (File No. PSPA22-002) and Tentative Tract Map No. 20536 (File No. PMTT22-021) to facilitate the construction of 265 single-family and multiple-family dwellings on the Project site.

Specific Plan Amendment - The Specific Plan Amendment proposes to revise the Countryside Specific Plan to increase the overall Planning Area 1 residential density from 6.32 to 7.64 dwelling units per net acres, with the overall dwelling unit count increasing from 442 to 601 dwelling units. As part of The Ontario Plan 2050 Update, the land use designation for the Project Site was changed from Low Density Residential (2.1 to 5 dwelling units per acre) to Low Medium Density Residential (5.1 to 11 dwelling units per acre) and Medium Density Residential (11.1 to 25 dwelling units per acre). The Specific Plan Amendment proposes to update the land use designation of Planning 1 Neighborhood 2 to implement The Ontario Plan 2050 Policy Plan land use designations and adjust the total unit count to reflect the increase in densities. Currently, Planning Area 1- Neighborhood 2 regulations allow development of 106 dwelling units. The Specific Plan Amendment will increase the allowable dwelling units from 106 dwelling units to 265 dwelling units, consistent with the densities identified in The Ontario Plan 2050 Update. The Specific Plan Amendment would also allow development of three new residential types: Cluster Court 3, Row Townhomes, and Residential Dwelling 3,000. These new residential types would accommodate the residential density requirements.

Planning Area 1 - Neighborhood 2 reallocates dwelling units into three subareas, Neighborhood 2A, 2B and 2C. Development in Neighborhood 2A is planned for a new Cluster Court 3 (8-Plex)

residential type, with 83 units at a density of 13.17 dwelling units per acre, with vehicle access from a common drive, Neighborhood 2B is planned for Row Townhomes (6-Plex) residential type, with 126 units at a density of 17.92 dwelling units per acre, with vehicle access from a common alley, and Neighborhood 2C is planned for single-family detached dwellings, with minimum 3,000 square feet lot areas providing for 56 units at a density of 8.75 dwelling units per acre.

All changes and additions to the Specific Plan (exhibits, tables, development standards and design guidelines) are contained within the revised Specific Plan document accompanying this report. All additions to the Specific Plan have been highlighted in blue with underline and all deletions have been highlighted in red with a strikethrough.

On May 1, 2023, the Development Advisory Board conducted a Public Hearing on Tentative Tract Map No. 20536 and recommended that the Planning Commission approve the Tentative Tract Map.

On May 23, 2023, the Planning Commission conducted a Public Hearing on Tentative Tract Map No. 20536 and the Specific Plan Amendment. During the course of the hearing, the Planning Commission approved Tentative Tract Map No. 20536 and recommended that the City Council approve the Specific Plan Amendment.

AIRPORT LAND USE COMPATIBILITY PLAN COMPLIANCE: The California State Aeronautics Act (Public Utilities Code Section 21670 et seq.) requires that an Airport Land Use Compatibility Plan be prepared for all public use airports in the State; and requires that local land use plans and individual development proposals must be consistent with the policies set forth in the adopted Airport Land Use Compatibility Plan.

On April 19, 2011, the City Council approved and adopted the Ontario International Airport Land Use Compatibility Plan, establishing the Airport Influence Area for Ontario International Airport, which encompasses lands within parts of San Bernardino, Riverside, and Los Angeles Counties, and limits future land uses and development within the Airport Influence Area, as they relate to noise, safety, airspace protection, and overflight impacts of current and future airport activity. As the decision-making body for the Project, the Planning Commission has reviewed and considered the facts and information contained in the Application and supporting documentation against the Ontario International Airport Land Use Compatibility Plan compatibility factors, including [1] Safety Criteria (Ontario International Airport Land Use Compatibility Plan Table 2-2) and Safety Zones (Ontario International Airport Land Use Compatibility Plan Map 2-2), [2] Noise Criteria (Ontario International Airport Land Use Compatibility Plan Table 2-3) and Noise Impact Zones (Ontario International Airport Land Use Compatibility Plan Map 2-3), [3] Airspace protection Zones (Ontario International Airport Land Use Compatibility Plan Map 2-4), and [4] Overflight Notification Zones (Ontario International Airport Land Use Compatibility Plan Map 2-5). As a result, the City Council finds and determines that the Project, when implemented in conjunction with the conditions of approval, will be consistent with the policies and criteria set forth within the Ontario International Airport Land Use Compatibility Plan.

HOUSING ELEMENT COMPLIANCE: The Project is consistent with the Housing Element of the Policy Plan (general plan) component of The Ontario Plan, as the Project site is not one of the properties in the Housing Element Sites contained in Tables B-1 and B-2 (Housing Element Sites

Inventory) of the Housing Element Technical Report.

ENVIRONMENTAL REVIEW: The Project analyzed under the Addendum to Countryside Specific Plan Environmental Impact Report (State Clearinghouse No. 2004071001, certified by the City Council on April 18, 2006) (Certified Environmental Impact Report) consists of increasing the allowed number of dwelling units within Planning Area 1 Neighborhood 2 of the Countryside Specific Plan, subdividing the Project site for condominium purposes and includes 141 numbered lots, 27 lettered lots, onsite and offsite improvements such as private streets, private drives, sidewalks, landscaping, utilities infrastructure and utilities connections.

The Application is a project pursuant to the California Environmental Quality Act (Public Resources Code Section 21000 et seq.) and an Addendum has been prepared to determine possible environmental impacts. Although the proposed Project could have a significant effect on the environment, because all potentially significant effects have been analyzed adequately in an earlier Certified Environmental Impact Report and have been avoided or mitigated pursuant to that earlier Certified Environmental Impact Report, including revisions or mitigation measures that are imposed on the proposed Project, nothing further is required. The Project will introduce no new significant environmental impacts beyond those previously analyzed in the Certified Environmental Impact Report, and all mitigation measures previously adopted by the Environmental Impact Report, are a condition of project approval and are incorporated in the Addendum.

CITY OF ONTARIO PLANNING DEPARTMENT

PLANNING COMMISSION AGENDA REPORT

May 23, 2023

303 East B Street, Ontario, California 91764 Phone: 909.395.2036 / Fax: 909.395.2420

FILE NOS: PSPA22-002 & PMTT22-021

SUBJECT: A public hearing to consider [1] an Amendment to the Countryside Specific Plan, for the following changes: [i] Divide Neighborhood 2 into different subsets: Neighborhood 2A, 2B, and 2C; [ii] increase the unit count in Planning Area 1 from 442 units to 601 units and density from 5.56 du/ac to 7.74 du/ac; [iii] change Planning Area 1 uses to include Attached Homes and eliminating the RD 6000-square-foot lot size; and [iv] various text changes to be consistent with TOP 2050 Policy Plan; and [2] a Tentative Tract Map No. 20536, subdividing 23.2 acres of land for condominium purposes, into 141 numbered lots and 27 lettered lots to facilitate the development of 265 dwellings, located approximately 875 feet south of the intersection of Riverside Drive and Archibald Avenue, within the Planning Area 1 Neighborhood 2 of the Countryside Specific Plan. (APNs: 0218-111-60, 0218-111-61) **submitted by RB Ontario LLC. City Council action is required for File No. PSPA22-021.**

PROPERTY OWNER: Barth Family Trust; Trustees: Robert B. Barth and Yang K. Barth

RECOMMENDED ACTION: That the Planning Commission consider and [1] recommend the City Council approve an Addendum to the Countryside Specific Plan Environmental Impact Report (State Clearinghouse No. 2004071001), [2] recommend the City Council approve File No. PSPA22-002 a Specific Plan Amendment, and [3] approve File No. PMTT22-021 (Tentative Tract Map 20536), pursuant to the facts and reasons contained in the staff report and attached Resolutions, and subject to the conditions of approval appended to the attached Resolutions as "Attachment A."

Figure 1: Project Location

PROJECT SETTING: The Project site is comprised of 23.2 acres of land located on the west side of Archibald Avenue, approximately 875 feet south of the intersection of Riverside Drive and Archibald

Case Planner:	Edmelynne V. Hutter

Avenue, within Planning Area 1 – Neighborhood 2 of the Countryside Specific Plan (see Figure 1: Project Location). The properties to the north and east are zoned MDR-18 (Medium Density Residential – 11.1 – 18.0 DU/ac) and developed with multiple family apartments. The properties to the south and west are zoned Countryside Specific Plan and developed with single-family detached homes. The Project site is currently used for agriculture activities and is improved with farm equipment storage buildings and livestock enclosures. The Project site is generally flat and drains to the southwest portion of the site. The existing surrounding land uses, zoning, and Policy Plan (general plan) and specific plan land use designations are summarized in the "Surrounding Zoning & Land Uses" table located in the Technical Appendix of this report (see Exhibit D—Existing Site Photographs, attached).

PROJECT ANALYSIS:

(1) Background — The Countryside Specific Plan (File No. PSP04-001) was approved, and the related Environmental Impact Report ("Certified EIR"; State Clearinghouse No. 2004071001) was certified by the City Council on April 18, 2006. The Countryside Specific Plan, adopted on May 2, 2006, established the land use designations, development standards, and design guidelines on 178 gross acres of land, which included the potential development of 819 dwelling units and approximately 9.4 acres of paseos and parks throughout the Specific Plan Area.

On August 16, 2022, the City Council certified The Ontario Plan 2050 Update Supplemental Environmental Impact Report ("SEIR") in conjunction with The Ontario Plan 2050 ("TOP 2050") (File No. PGPA20-002) General Plan update. Within the TOP 2050 and SEIR, the Project site land use was designated and analyzed as Low Medium Density Residential (LMDR): 5.1 to 11.0 du/ac and Medium Density Residential (MDR): 11.1 to 25.0 du/ac. The previous land use designation was Low Density Residential (LDR): 2.1 to 5.0 du/ac.

On June 9, 2022, the Applicant submitted applications for a Specific Plan Amendment ("SPA") (File No. PSPA22-002) and Tentative Tract Map No. 20536 (File No. PMTT22-021) to facilitate the construction of 265 single-family and multiple-family dwellings on the Project site.

On May 1, 2023, the Development Advisory Board (DAB) conducted a Public Hearing on Tentative Tract Map 20536 (File No. PMTT22-02) and recommended the Planning Commission approve the Project.

(2) Amendment to Countryside Specific Plan ("SPA") (File No. PSPA22-002) — To accommodate the proposed Tentative Tract map application, the SPA proposes to amend the Countryside Specific Plan to increase the overall residential density from 6.32 to 7.64 dwelling units per net acres with the overall dwelling unit count from 442 to 601 dwelling units (see Exhibit A—Countryside Specific Plan Land Use Map and Exhibit B – Countryside Specific Plan Land Use Summary, attached). As part of TOP 2050 Update,

the land use designation for the Project Site was changed from Low Density Residential (2.1 to 5 du/ac) to Low Medium Density Residential (5.1 to 11 du/ac) and Medium Density Residential (11.1 to 25 du/ac). The SPA proposes to update the land use designation of Planning 1 Neighborhood 2 to implement TOP Policy Plan land use designations and adjust the total unit count to reflect the increase in densities. Currently, Planning Area 1-Neighborhood 2 (RD- 6,000 residential type) regulations allow development of 106 dwelling units designed under RD 6,000 residential type standards. The SPA will replace Neighborhood 2 residential types with a mixture of Cluster Court, Row Townhomes, and RD 3,000 residential types, increasing the allowable dwelling units from 106 dwelling units to 265 dwelling units, consistent with the densities identified in The Ontario Plan 2050 Update.

Planning Area 1 - Neighborhood 2 reallocates dwelling units into three subareas, Neighborhood 2A, 2B and 2C. Development in Neighborhood 2A is planned for Row Townhome (6-Plex) residential type, with 83 units at a density of 13.17 du/ac, Neighborhood 2B planned for a new Cluster Court 3 (8-Plex) residential type, with 126 units at a density of 17.92 du/ac with vehicle access from a common drive, and Neighborhood 2C planned for single-family detached dwellings, with minimum 3,000 square feet lot areas providing for 56 units at a density of 8.75 du/ac.

All changes and additions to the Specific Plan (exhibits, tables, development standards and design guidelines) are contained within the revised Specific Plan document accompanying this report. All additions to the Specific Plan have been highlighted in red and all deletions have been highlighted in red with a strikethrough.

Approval of the related Tentative Tract Map, discussed below, is contingent upon the approval of the proposed Specific Plan Amendment and related Addendum to the Countryside Specific Plan Environmental Impact Report (State Clearinghouse No. 2004071001, certified by the City Council on April 18, 2004).

(3) Tentative Tract Map — The proposed Project would subdivide two existing agricultural parcels into 141 numbered lots and 27 lettered lots (see Exhibit C: Tentative Tract Map). The numbered lots would accommodate 56 single-family detached parcels, 83 Cluster Court 3 single-family detached parcels, and 126 attached Row Townhome units on two parcels. The proposed lettered lots would accommodate park land, private recreation area, private drives, and private alleys. The tentative tract map also includes dedication of easements for reciprocal access, neighborhood edges, utilities, solid waste collection and public services. Tentative Tract Map approval is contingent on City Council approval of the proposed SPA.

(a) Site Design — The Project site is rectangular in shape with the proposed parcels and private drives in a grid pattern. Residential parcels will border the Project perimeter with the exception of the north half of the west perimeter where an existing park will be expanded into the Project site. The subdivision is designed with 24 feet wide private drives throughout and will provide direct access to single family driveways or

common alleys for the Cluster Court 3 and Row Townhome dwelling units. Lot C, proposed as the subdivision's recreational center, is centrally located north of Private Drive 'J' and near the entry drive from Archibald Avenue.

(b) Site Access/Circulation — The Project will provide vehicle access from Archibald Avenue to the east, Welsummer Avenue to the south and Lewiston Street to the west. Interior Private Drives 'B', 'C', 'D' and 'F' create a loop road for the subdivision. Private Drives 'G', 'H', 'I' and 'J' intersect the loop road and create smaller residential blocks as well as provide access to a future recreational amenity.

Multipurpose trails are planned along the east project edge on Archibald Avenue and along the north Project boundary, in compliance with the Countryside Specific Plan. Interior 4-feet-wide pedestrian sidewalks would be provided along the Private Drives.

(c) Landscaping — The Tentative Tract Map will require right-of-way improvements (street, curb, gutter, sidewalk, and parkway) along the surrounding streets. The on-site and off-site landscape improvements will assist toward creating safe paths and areas for pedestrians to access the Project site.

(d) Signage — All Project signage is required to comply with sign regulations provided in Ontario Development Code Division 8.1. Prior to the issuance of a Building Permit for the installation of any new on-site signage, the Applicant is required to submit Sign Plans for Planning Department review and approval.

(e) Utilities (drainage, sewer) — Public utilities (water and sewer) are available to serve the Project. Furthermore, the Applicant has submitted a Preliminary Water Quality Management Plan ("PWQMP"), which establishes the Project's compliance with storm water discharge/water quality requirements. The PWQMP includes site design measures that capture runoff and pollutant transport by minimizing impervious surfaces and maximizes low impact development ("LID") best management practices ("BMPs"), such as retention and infiltration, biotreatment, and evapotranspiration. The PWQMP proposes the use of the Mill Creek Wetland BMP, as planned in the NMC Builders, LLC, Stormwater Treatment Allocation Distribution Table, for stormwater retention and treatment. Any overflow drainage will be conveyed to the public street by way of parkway drains and culverts.

(4) Williamson Act Contract — The Project Site has an active Land Conservation Contact (LLC# 72-384). Agricultural lands under a Williamson Act Contract are governed by the California Land Conservation Act of 1965, also known as the Williamson Act. Upon annexation of the agriculture preserve, the City of Ontario assumed responsibility for administration of the Land Conservation Contracts which existed in the Ontario Ranch area. The City adopted the Agricultural Overlay Zoning District, or a "Right-to-Farm" Ordinance, that would allow existing agricultural uses within Ontario Ranch to continue for as long as the landowner desired.

A Land Conservation Contract (LCC) has a minimum term of ten (10) years. However, this term is automatically renewed each year for an additional year, thereby keeping the term of the contract to a period of ten years. This perpetual contract continues until the administering entity (County or City) or the owner files a Notice of Non-renewal, which will then terminate the contract at the end of its remaining term, usually nine (9) years. When a Non-renewal is filed, the property tax assessment gradually reverts to being computed based upon full market value rather than use. There are no penalties associated with Non-renewals.

Property owners desiring to remove the use restrictions imposed by their LCC prior to the expiration of the contracts' term (after a Non-renewal is filed) may petition to have the LCC cancelled. Specific criteria must be met, a cancellation fee must be paid, and the reasonable cost of processing the petition must be paid before contracts can be cancelled. The cancellation fee normally equals twelve and one-half (12.5%) percent of the property's current full market value.

At this time the Property owner does not wish to cancel the LCC on the property, until the entitlements for the Project have been approved and the final sale of the property is complete. The Applicant will be required to submit an LCC application for the non-renewal and cancellation of LCC number 72-84, which will require Planning Commission and City Council review and approval. Final tract map recordation and the issuance of a grading permit cannot be approved until the LCC is cancelled.

PUBLIC NOTIFICATION: The subject application was advertised as a public hearing in at least one newspaper of general circulation in the City of Ontario (the Inland Valley Daily Bulletin newspaper). In addition, the Project site was posted with one or more large public notification signs and notices were mailed to all owners of real property located within a minimum of 300 feet of the exterior boundaries of the property that is the subject of the hearing, as shown on the records of the County Assessor.

CORRESPONDENCE: As of the preparation of this Agenda Report, Planning Department staff has not received any written or verbal communications from the owners or occupants of properties surrounding the Project site or from the public in general, regarding the subject application.

AGENCY/DEPARTMENT REVIEWS: Each City agency/department has been provided the opportunity to review and comment on the subject application and recommend conditions of approval to be imposed upon the application. At the time of the Agenda Report preparation, recommended conditions of approval were provided and are appended to the attached Resolutions as "Attachment A."

AIRPORT LAND USE COMPATIBILITY PLAN (ALUCP) COMPLIANCE: The California State Aeronautics Act (Public Utilities Code Section 21670 et seq.) requires that an Airport Land Use Compatibility Plan be prepared for all public use airports in the State; and requires

that local land use plans and individual development proposals must be consistent with the policies set forth in the adopted Airport Land Use Compatibility Plan.

On April 19, 2011, the City Council of the City of Ontario approved and adopted the ONT ALUCP, establishing the Airport Influence Area for Ontario International Airport, which encompasses lands within parts of San Bernardino, Riverside, and Los Angeles Counties, and limits future land uses and development within the Airport Influence Area, as they relate to noise, safety, airspace protection, and overflight impacts of current and future airport activity. As the decision-making body for the Project, the Planning Commission has reviewed and considered the facts and information contained in the Application and supporting documentation against the ONT ALUCP compatibility factors, including [1] Safety Criteria (ONT ALUCP Table 2-2) and Safety Zones (ONT ALUCP Map 2-2), [2] Noise Criteria (ONT ALUCP Table 2-3) and Noise Impact Zones (ONT ALUCP Map 2-3), [3] Airspace protection Zones (ONT ALUCP Map 2-4), and [4] Overflight Notification Zones (ONT ALUCP Map 2-5). As a result, the Planning Commission, therefore, finds and determines that the Project, when implemented in conjunction with the conditions of approval, will be consistent with the policies and criteria set forth within the ONT ALUCP.

COMPLIANCE WITH THE ONTARIO PLAN: The proposed Project is consistent with the principles, goals and policies contained within the Vision, Governance, Policy Plan (general plan), and City Council Priorities components of The Ontario Plan ("TOP"). More specifically, the goals and policies of TOP that are furthered by the proposed Project are as follows:

(1) City Council Goals.

- Invest in the Growth and Evolution of the City's Economy
- Focus Resources in Ontario's Commercial and Residential Neighborhoods
- Invest in the City's Infrastructure (Water, Streets, Sewers, Parks, Storm Drains and Public Facilities)
- Ensure the Development of a Well Planned, Balanced, and Self-Sustaining Community in the New Model Colony

(2) Vision.

Distinctive Development:

- Commercial and Residential Development

➢ Development quality that is broadly recognized as distinctive and not exclusively tied to the general suburban character typical of much of Southern California.

(3) Governance.

Decision Making:

- Goal G1: Sustained decision-making that consistently moves Ontario towards its Vision by using The Ontario Plan as a framework for assessing choices.

  - G 1-2. Long-term Benefit. We require decisions to demonstrate and document how they add value to the community and support the Ontario Vision.

(4) Policy Plan (General Plan)

Land Use Element:

- Goal LU-1 Balance: A community that has a spectrum of housing types and price ranges that match the jobs in the City and that make it possible for people to live and work in Ontario and maintain a quality of life.

  - LU-1.1 Strategic Growth. We concentrate growth in strategic locations that help create place and identity, maximize available and planned infrastructure, foster the development of transit, and support the expansion of the active and multimodal transportation networks throughout the City.

  - LU-1.3 Adequate Capacity. We require adequate infrastructure and services for all development.

  - LU-1.6 Complete Community. We incorporate a variety of land uses and building types in our land use planning efforts that result in a complete community where residents at all stages of life, employers, workers, and visitors have a wide spectrum of choices of where they can live, work, shop and recreate within Ontario.

- Goal LU-2 Compatibility: Compatibility between a wide range of uses and a resultant urban patterns and forms.

  - LU-2.6 Infrastructure Compatibility. We require infrastructure to be aesthetically pleasing and in context with the community character.

- Goal LU-3 Flexibility: Staff, regulations and processes that support and allow flexible response to conditions and circumstances in order to achieve the Vision.

  - LU-3.1 Development Standards. We maintain clear development standards which allow flexibility to achieve our Vision and provide objective standards that ensure predictability and deliver the intended physical outcomes.

Housing Element:

- Goal H-2 Housing Supply & Diversity: Diversity of types of quality housing that are affordable to a range of household income levels, accommodate changing demographics, and support and reinforce the economic sustainability of Ontario.

➢ H-2.4 Ontario Ranch. We support a premier lifestyle community in the Ontario Ranch, distinguished by diverse housing, highest design quality, and cohesive and highly amenitized neighborhoods.

➢ H-2.5 Housing Design. We require architectural excellence through adherence to City design guidelines, thoughtful site planning, environmentally sustainable practices, and other best practices.

Community Economics Element:

- Goal CE-1 Complete Community: A complete community that provides for all incomes and stages of life.

➢ CE-1.6 Diversity of Housing. We collaborate with residents, housing providers, and the development community to provide housing opportunities for every stage of life; we plan for a variety of housing types and price points to encourage the development of housing supportive of our efforts to attract business in growing sectors of the community while being respectful of existing viable uses.

- Goal CE-2 Placemaking: A City of distinctive neighborhoods, districts, corridors, and centers where people choose to be.

➢ CE-2.1 Development Projects. We require new development and redevelopment to create unique, high-quality places that add value to the community.

➢ CE-2.2 Development Review. We require those proposing new development and redevelopment to demonstrate how their projects will create appropriately unique, functional, and sustainable places that will compete well with their competition within the region.

➢ CE-2.4 Protection of Investment. We require that new development and redevelopment protect existing investment by providing architecture and urban design of equal or greater quality.

➢ CE-2.5 Private Maintenance. We require adequate maintenance, upkeep, and investment in private property because proper maintenance on private property protects property values.

Safety Element:

- Goal S-1 Seismic & Geologic Hazards: Minimized risk of injury, loss of life, property damage, and economic and social disruption caused by earthquake-induced and other geologic hazards.

➢ S-1.1 Implementation of Regulations and Standards. We require that all new habitable structures be designed in accordance with the most recent California Building Code adopted by the City, including provisions regarding lateral forces and grading.

➢ S-1.2 Entitlement and Permitting Process. We follow state guidelines and the California Building Code to determine when development proposals must conduct geotechnical and geological investigations.

▪ Goal S-4 Noise Hazards: An environment where noise does not adversely affect the public's health, safety, and welfare.

➢ S-4.1 Noise Mitigation. We utilize the City's Noise Ordinance, building codes, and subdivision and development codes to mitigate noise impacts.

Mobility Element:

▪ Goal M-1 Roadway System: A system of roadways that meets the mobility needs a dynamic and prosperous Ontario.

➢ M-1.1 Roadway Design and Maintenance. We require our roadways to:

- Comply with federal, state, and local design and safety standards;
- Meet the needs of multiple transportation modes and users;
- Handle the capacity envisioned in the City of Ontario Master Plan of Streets and Highways;
- Be maintained in accordance with best practices;
- Be compatible with the streetscape and surrounding land uses; and
- Promote the efficient flow of all modes of traffic through the implementation of intelligent transportation systems and travel demand management strategies.

➢ M-1.4 Complete Streets. We work to provide a complete, balanced, context-aware, multimodal transportation network that meets the needs of all users of streets, roads, and highways, including motorists, pedestrians, bicyclists, children persons with disabilities, seniors, movers of commercial goes, and uses of public transportation. We prioritize implementation of complete streets improvements in environmental justice areas to facilitate opportunities to use active transportation systems.

Community Design Element:

▪ Goal CD-1 Image & Identity: A dynamic, progressive city containing distinct and complete places that foster a positive sense of identity and belonging among residents, visitors, and businesses.

➢ CD-1.1 City Identity. We take actions that are consistent with the City being a leading urban center in Southern California while recognizing, enhancing, and preserving the character of our existing viable neighborhoods.

➢ CD-1.2 Place Types. We establish Place Types in urban, mixed use, and transit-oriented areas to foster the City's identity as a premier community and require new development within each Place Type to incorporate prescribed urban patterns, forms, and placemaking priorities.

➢ CD-1.3 Existing Neighborhoods. We require the existing character of viable residential and non-residential neighborhoods be preserved, protected, and enhanced.

▪ Goal CD-2 Design Quality: A high level of design quality resulting in neighborhoods, public spaces, parks, and streetscapes that are attractive, safe, functional, human-scale, and distinct.

➢ CD-2.1 Quality Building Design and Architecture. We encourage all development projects to convey visual interest and character through:

- Building volume, massing, and height to provide context-appropriate scale and proportion;
- A true architectural style which is carried out in plan, section, and elevation through all aspects of the building and site design and appropriate for its setting; and
- Exterior building materials that are articulated, high quality, durable, and appropriate for the architectural style.

➢ CD-2.2 Neighborhood Design. We create distinct residential neighborhoods that promote a sense of community and identity by emphasizing access, connectivity, livability, and social interaction through such elements as:

- A pattern of smaller, walkable blocks that promote activity, safety, and access to nearby amenities and services;
- Varied parcel sizes and lot configurations to accommodate a diversity of housing types;
- Traffic calming measures to slow traffic and promote walkability while maintaining acceptable traffic flows and emergency evacuation access;
- Floor plans that encourage views onto the street and de-emphasize the visual and physical dominance of garages (introducing the front porch as the "outdoor living room"), as appropriate; and
- Landscaped parkways, with sidewalks separated from the curb and designed to maximize safety, comfort, and aesthetics for all users.

➢ CD-2.5 Streetscapes. We design new and, when necessary, retrofit existing streets to improve walkability, bicycling and transit integration, strengthen connectivity,

and enhance community identity through improvements to the public right-of-way such as sidewalks, street trees, parkways, curbs, street lighting and street furniture.

- CD-2.6 Connectivity. We promote development of local street patterns, multimodal networks, and connected public spaces that create and unify neighborhoods, rather than divide them, and create cohesive and continuous corridors, rather than independent "islands" through the follow means:

  - Local street networks that provide access to both between subdivisions and within neighborhoods and discourage through traffic;
  - A local street system that is logical and understandable for the user. A grid system is preferred to avoid circuitous and confusing travel paths between internal neighborhood areas and adjacent arterials and to provide adequate emergency and evacuation access; and
  - Pedestrian and bicycle networks that provide convenient access to neighborhoods and nearby destinations, such as schools, parks, and other public spaces, commercial areas, and transit stops;

- CD-2.7 Sustainability. We collaborate with the development community to design and build neighborhoods, streetscapes, sites, outdoor spaces, landscaping, and buildings to reduce energy demand through solar orientation, maximum use of natural daylight, passive solar and natural ventilation, building form, mechanical and structural systems, building materials, and construction techniques.

- CD-2.8 Safe Design. We incorporate defensible space design into new and existing developments to ensure the maximum safe travel and visibility on pathways, corridors, and open space and at building entrances and parking areas by avoiding physically and visually isolated spaces, maintaining visibility and accessibility, and using lighting.

- CD-2.9 Landscape Design. We encourage durable, sustainable, and drought-tolerant landscaping materials and designs that enhance the aesthetics of structures, create and define public and private spaces, and provide shade and environmental benefits.

- CD-2.10 Parking Areas. We require all development, including single-family residential, to minimize the visual impact of surface, structured, and garage parking areas visible from the public realm in an aesthetically pleasing, safe and environmentally sensitive manner. Examples include:

  - Surface parking: Shade trees, pervious surfaces, urban run-off capture and infiltration, and pedestrian paths to guide users through the parking field;
  - Structured parking: facade articulation, screening, appropriate lighting, and landscaping; and

- Garage parking: providing access to single-family residential garages through alley access, recessing garages from the frontage to emphasize front doors or active living spaces.

➢ CD-2.11 Entry Statements. We encourage the inclusion of amenities, signage, and landscaping at the entry to neighborhoods, commercial centers, mixed use areas, industrial developments, and public places that reinforce them as uniquely identifiable places.

➢ CD-2.12 Site and Building Signage. We encourage the use of sign programs that utilize complementary materials, colors, and themes. Project signage should be designed to effectively communicate and direct users to various aspects of the development and complement the character of the structures.

➢ CD-2.13 Entitlement Process. We work collaboratively with all stakeholders to ensure a high degree of certainty in the efficient review and timely processing of all development plans and permits.

- Goal CD-5 Protection of Investment: A sustained level of maintenance and improvement of properties, buildings, and infrastructure that protects the property values and encourages additional public and private investments.

➢ CD-5.1 Maintenance of Buildings and Property. We require all public and privately-owned buildings and property (including trails and easements) to be properly and consistently maintained.

➢ CD-5.2 Maintenance of Infrastructure. We require the continual maintenance of infrastructure.

HOUSING ELEMENT COMPLIANCE: The Project is consistent with the Housing Element of the Policy Plan (general plan) component of The Ontario Plan, as the Project site is not one of the properties in the Housing Element Sites contained in Tables B-1 and B-2 (Housing Element Sites Inventory) of the Housing Element Technical Report.

ENVIRONMENTAL REVIEW: The Project analyzed under the Addendum to Countryside Specific Plan Environmental Impact Report (State Clearinghouse No. 2004071001, certified by the City Council on April 18, 2006) ("Certified EIR") consists of subdividing the Project site for condominium purposes and includes 141 numbered lots, 27 lettered lots, onsite and offsite improvements such as private streets, private drives, sidewalks, landscaping, utilities infrastructure and utilities connections.

The Application is a project pursuant to the California Environmental Quality Act (Public Resources Code Section 21000 et seq.) ("CEQA") and an Addendum has been prepared to determine possible environmental impacts. Although the proposed Project could have a significant effect on the environment, because all potentially significant effects have

been analyzed adequately in an earlier Certified EIR, and have been avoided or mitigated pursuant to that earlier Certified EIR, including revisions or mitigation measures that are imposed on the proposed Project, nothing further is required. The Project will introduce no new significant environmental impacts beyond those previously analyzed in the Certified EIR, and all mitigation measures previously adopted by the Environmental Impact Report, are a condition of project approval and are incorporated in the Addendum.

TECHNICAL APPENDIX:

Surrounding Zoning and Land Use:

	Existing Land Use	*Policy Plan Designation*	*Zoning Designation*	*Specific Plan Land Use*
Site:	Agriculture	Medium Density Residential (MDR; 11.1 – 25.0 du/ac); Low Medium Density Residential (LMDR; 5.1 – 11.0 du/ac)	Countryside Specific Plan (Planning Area 1)	Neighborhood 2 [RD-6,000]
North:	Multiple Family Residential	Medium Density Residential (MDR; 11.1 – 25.0 du/ac)	MDR-18 (Medium Density Residential - 11.1 – 18.0 du/ac)	N/A
South:	Single Family Residential, Agriculture	Low Density Residential (LDR; 2.1 – 5.0 du/ac)	Countryside Specific Plan (Planning Area 2)	Neighborhood 4 [RD-5,000]
East:	Multiple Family Residential	Medium Density Residential (MDR; 11.1 – 25.0 du/ac)	MDR-18 (Medium Density Residential - 11.1 – 18.0 du/ac)	N/A
West:	Single Family Residential, Recreation	Low Density Residential (LDR; 2.1 – 5.0 du/ac)	Countryside Specific Plan (Planning Area 1)	Neighborhood 1 [RD-5,500]

RESOLUTION NO. PC23-039

A RESOLUTION OF THE PLANNING COMMISSION OF THE CITY OF ONTARIO RECOMMENDING THAT CITY COUNCIL APPROVE AN ADDENDUM TO THE COUNTRYSIDE SPECIFIC PLAN ENVIRONMENTAL IMPACT REPORT, PURSUANT TO THE REQUIREMENTS OF THE CALIFORNIA ENVIRONMENTAL QUALITY ACT, AS AMENDED, FOR FILE NOS. PSPA22-002 AND PMTT22-021

WHEREAS, RB ONTARIO LLC (hereinafter referred to as "Applicant") has filed Applications for the approval of a Specific Plan Amendment, File No. PSPA22-002, which amendments to the Countryside Specific Plan to increase the number of allowable dwellings, include Cluster Court 3 residential type, and update associated text and exhibits; and Tentative Tract Map No. 20536, File No. PMTT22-021, to subdivide the 23.2-acre Project site into 141 numbered lots and 27 lettered lots to facilitate development of single- and multiple-family residential units located on the west side of Archibald Avenue approximately 875 feet south of Riverside Drive in the City of Ontario, California (hereinafter referred to as "Application" or "Project"); and

WHEREAS, the Countryside Specific Plan Environmental Impact Report (State Clearinghouse No. 2004071001) was certified on April 18, 2006 (hereinafter referred to as "Certified EIR"), in which development and use of the Project site was discussed; and

WHEREAS, the Planning Director of the City of Ontario has prepared and approved for attachment to the certified Environmental Impact Report, an Addendum to the Certified EIR (hereinafter referred to as "EIR Addendum") in accordance with the requirements of the California Environmental Quality Act of 1970, together with State and local guidelines implementing said Act, all as amended to date (collectively referred to as "CEQA"); and

WHEREAS, the EIR Addendum concluded that implementation of the Project could result in a number of significant effects on the environment that were previously analyzed in the Certified EIR, and that the Certified EIR identified mitigation measures that would reduce each of those significant effects to a less-than-significant level; and

WHEREAS, pursuant to State CEQA Guidelines Section 15164(a), a lead agency shall prepare an addendum to a previously certified EIR if some changes or additions are necessary to a project, but the preparation of a subsequent or supplemental EIR is not required; and

WHEREAS, the City determined that none of the conditions requiring preparation of a subsequent or supplemental EIR would occur from the Project, and that preparation of an Addendum to the Certified EIR was appropriate; and

WHEREAS, on May 1, 2023, the Development Advisory Board conducted a hearing to considered the EIR Addendum relative to the Tentative Tract Map request, and concluded said hearing on that date, voting to issue Decision No. DAB23-026, recommending the Planning Commission approve the EIR Addendum; and

WHEREAS, the City of Ontario is the lead agency on the Project, and the Planning Commission is the recommending authority for the proposed Specific Plan Amendment and the decision-making body for the proposed Tentative Tract Map; and

WHEREAS, the approval of the proposed Tentative Tract Map is contingent on City Council approval of the Specific Plan Amendment and associated EIR Addendum; and

WHEREAS, the Planning Commission has reviewed and considered the EIR Addendum for the Project, has concluded that none of the conditions requiring preparation of a subsequent of supplemental EIR have occurred, and intends to take actions on the Project in compliance with CEQA and state and local guidelines implementing CEQA; and

WHEREAS, the EIR Addendum for the Project is on file in the Planning Department, located at 303 East B Street, Ontario, CA 91764, and available for inspection by any interested person at that location and are, by this reference, incorporated into this Resolution as if fully set forth herein; and

WHEREAS, all legal prerequisites to the adoption of this Resolution have occurred.

NOW, THEREFORE, IT IS HEREBY FOUND, DETERMINED, AND RESOLVED by the Planning Commission of the City of Ontario, as follows:

SECTION 1: ***Environmental Determination and Findings.*** As the recommending authority for the Specific Plan Amendment and the decision-making body for the Tentative Tract Map, the Planning Commission has reviewed and considered the information contained in the administrative record for the Project. Based upon the facts and information contained in the administrative record, including all written and oral evidence presented to the Planning Commission, the Planning Commission finds as follows:

(1) The environmental impacts of this project were reviewed in conjunction with an Addendum to Countryside Specific Plan Environmental Impact Report (State Clearinghouse No. 2004071001; certified by the Ontario City Council on April 18, 2006, in conjunction with File No. PSP04-001); and

(2) The EIR Addendum and administrative record have been completed in compliance with CEQA, the State CEQA Guidelines, and the City of Ontario Local CEQA Guidelines; and

(3) The City's "Guidelines for the Implementation of the California Environmental Quality Act (CEQA)" provide for the use of a single environmental assessment in situations where the impacts of subsequent projects are adequately analyzed. This Application introduces no new significant environmental impacts; and

(4) All previously adopted mitigation measures shall be a condition of project approval, as they are applicable to the Project, and are incorporated herein by this reference; and

(5) The EIR Addendum contains a complete and accurate reporting of the environmental impacts associated with the Project, and reflects the independent judgment of the Planning Commission; and

(6) There is no substantial evidence in the administrative record supporting a fair argument that the project may result in significant environmental impacts.

SECTION 2: ***Additional Environmental Review Not Required.*** Based on the Addendum, all related information presented to the Planning Commission, and the specific findings set forth in Section 1, above, the Planning Commission finds that the preparation of a subsequent or supplemental Environmental Impact Report is not required for the Project, as the Project:

(1) Does not constitute substantial changes to the Certified EIR that will require major revisions to the Certified EIR due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects; and

(2) Does not constitute substantial changes with respect to the circumstances under which the Certified EIR was prepared, that will require major revisions to the Certified EIR due to the involvement of new significant environmental effects or a substantial increase in the severity of the previously identified significant effects; and

(3) Does not contain new information of substantial importance that was not known and could not have been known with the exercise of reasonable diligence at the time the Certified EIR was certified/adopted, that shows any of the following:

(a) The project will have one or more significant effects not discussed in the Certified EIR; or

(b) Significant effects previously examined will be substantially more severe than shown in the Certified EIR; or

(c) Mitigation measures or alternatives previously found not to be feasible would in fact be feasible and would substantially reduce one or more significant effects of the Project, but the City declined to adopt such measures; or

(d) Mitigation measures or alternatives considerably different from those analyzed in the Certified EIR would substantially reduce one or more significant effects on the environment, but which the City declined to adopt.

SECTION 3: ***Planning Commission Action.*** Based upon the findings and conclusions set forth in Sections 1 and 2, above, the Planning Commission hereby recommends the City Council finds, that based upon the entire record of proceedings before it, and all information received, that there is no substantial evidence that the Project will constitute substantial changes to the Certified EIR, and does hereby recommends the City Council adopt the EIR Addendum, attached hereto as "Attachment A," and incorporated herein by this reference.

SECTION 4: ***Indemnification.*** The Applicant shall agree to defend, indemnify and hold harmless, the City of Ontario or its agents, officers, and employees from any claim, action or proceeding against the City of Ontario or its agents, officers or employees to attack, set aside, void, or annul this approval. The City of Ontario shall promptly notify the applicant of any such claim, action, or proceeding, and the City of Ontario shall cooperate fully in the defense.

SECTION 5: ***Custodian of Records.*** The documents and materials that constitute the record of proceedings on which these findings have been based are located at the City of Ontario City Hall, 303 East "B" Street, Ontario, California 91764. The custodian for these records is the City Clerk of the City of Ontario.

SECTION 6: ***Certification to Adoption.*** The Secretary shall certify to the adoption of the Resolution.

- - - - - - - - - - - - - -

The Secretary Pro Tempore for the Planning Commission of the City of Ontario shall certify as to the adoption of this Resolution.

I hereby certify that the foregoing Resolution was duly and regularly introduced, passed and adopted by the Planning Commission of the City of Ontario at a regular meeting thereof held on the 23rd day of May 2023, and the foregoing is a full, true and correct copy of said Resolution, and has not been amended or repealed.

Richard Gage

Addendum to Countryside Specific Plan Environmental Impact Report

(Addendum to follow this page)

The Addendum is attached to the City Council Resolution

RESOLUTION NO. PC23-040

A RESOLUTION OF THE PLANNING COMMISSION OF THE CITY OF ONTARIO, CALIFORNIA, RECOMMENDING CITY COUNCIL APPROVAL OF FILE NO. PSPA22-002, A SPECIFIC PLAN AMENDMENT FOR THE FOLLOWING CHANGES: [I] DIVIDE PLANNING AREA 1 NEIGHBORHOOD 2 INTO DIFFERENT SUBSETS: NEIGHBORHOODS 2A, 2B, AND 2C; [II] INCREASE THE PLANNING AREA 1 UNIT COUNT FROM 442 UNITS TO 601 UNITS AND DENSITY FROM 5.56 DU/AC TO 7.74 DU/AC; [III] CHANGE PLANNING AREA 1 USES TO INCLUDE ATTACHED HOMES AND ELIMINATING THE RD 6000-SQUARE-FOOT LOT SIZE; AND [IV] VARIOUS TEXT CHANGES TO BE CONSISTENT WITH THE ONTARIO PLAN 2050 POLICY PLAN, AND MAKING FINDINGS IN SUPPORT THEREOF—APNS: 0218-111-60 AND 0218-111-61

WHEREAS, RB ONTARIO LLC (hereinafter referred to as "Applicant") has filed an Application for the approval of a Specific Plan Amendment, File No. PSPA22-002, as described in the title of this Resolution (hereinafter referred to as "Application" or "Project"); and

WHEREAS, the Application applies to 23.2 acres of land generally located on the west side of Archibald Avenue, approximately 875 feet south of Riverside Drive, within the Countryside Specific Plan, and is presently improved with agricultural uses; and

WHEREAS, the properties to the north and east of the Project site are within the MDR-18 (Medium Density Residential – 11.1 – 18.0 du.ac) and are developed with multiple family dwellings. The properties to the south and west are within Planning Area 1 of the Countryside Specific Plan, and are developed with single-family detached dwellings; and

WHEREAS, on May 2, 2006, the City Council adopted Ordinance No. 2828, approving the Countryside Specific Plan (File No. PSP04-001), establishing a master plan for the development of 178 acres of land, inclusive of the Project site; and

WHEREAS, the Countryside Specific Plan has been amended over the years to reflect updated policies in The Ontario Plan and market conditions; and

WHEREAS, the Project request consists of dividing Planning Area 1-Neighborhood 2 into different subsets (Neighborhoods 2A, 2B and 2C), increasing the unit count in Planning Area 1 from 442 units to 601 units and increasing the density from 5.56 dwelling units/acre to 7.74 dwelling units/acre, changing Planning Area 1-Neighboorhood 2 uses to include Attached Homes, eliminating the RD-6000-square-foot

lot size, and various text changes to be consistent with The Ontario Plan 2050 Policy Plan; and

WHEREAS, the Countryside Specific Plan Environmental Impact Report (State Clearinghouse No. 2004071001) was certified on April 18, 2006 (hereinafter referred to as "Certified EIR"), in which development and use of the Project site was discussed; and

WHEREAS, the Planning Director of the City of Ontario prepared and approved for attachment to the certified Environmental Impact Report, an Addendum to the Certified EIR (hereinafter referred to as "EIR Addendum") in accordance with the requirements of the California Environmental Quality Act of 1970, together with State and local guidelines implementing said Act, all as amended to date (collectively referred to as "CEQA"); and

WHEREAS, the environmental impacts of this project were thoroughly analyzed in the EIR Addendum, which concluded that implementation of the Project could result in a number of significant effects on the environment that were previously analyzed in the Certified EIR, and that the Certified EIR identified mitigation measures that would reduce each of those significant effects to a less-than-significant level; and

WHEREAS, the City's "Local Guidelines for the Implementation of the California Environmental Quality Act (CEQA)" provide for the use of a single environmental assessment in situations where the impacts of subsequent projects are adequately analyzed; and

WHEREAS, the Application is a project pursuant to the California Environmental Quality Act — Public Resources Code Section 21000 et seq. — (hereinafter referred to as "CEQA") and an EIR Addendum has been prepared to determine possible environmental impacts; and

WHEREAS, Ontario Development Code Table 2.02-1 (Review Matrix) grants the Planning Commission the responsibility and authority to review and make recommendations on the subject Application; and

WHEREAS, the Project has been reviewed for consistency with the Housing Element of the Policy Plan component of The Ontario Plan 2050, as State Housing Element law (as prescribed in Government Code Sections 65580 through 65589.8) requires that development projects must be consistent with the Housing Element, if upon consideration of all its aspects, it is found to further the purposes, principals, goals, and policies of the Housing Element; and

WHEREAS, the Project is located within the Airport Influence Area of Ontario International Airport, which encompasses lands within parts of San Bernardino, Riverside, and Los Angeles Counties, and is subject to, and must be consistent with, the policies

and criteria set forth in the Ontario International Airport Land Use Compatibility Plan (hereinafter referred to as "ALUCP"), which applies only to jurisdictions within San Bernardino County, and addresses the noise, safety, airspace protection, and overflight impacts of current and future airport activity; and

WHEREAS, City of Ontario Development Code Division 2.03 (Public Hearings) prescribes the manner in which public notification shall be provided and hearing procedures to be followed, and all such notifications and procedures have been completed; and

WHEREAS, as the first action on the Project, on May 23, 2023, the Planning Commission issued a Resolution recommending the City Council adopt the EIR Addendum, finding that the proposed Project introduces no new significant environmental impacts and applying all previously adopted mitigation measures to the Project, which were incorporated by reference; and

WHEREAS, on May 23, 2023, the Planning Commission of the City of Ontario conducted a hearing to consider the Project, and concluded said hearing on that date; and

WHEREAS, all legal prerequisites to the adoption of this Resolution have occurred.

NOW, THEREFORE, IT IS HEREBY FOUND, DETERMINED, AND RESOLVED by the Planning Commission of the City of Ontario, as follows:

SECTION 1: ***Environmental Determination and Findings.*** As the recommending authority for the Project, the Planning Commission has reviewed and considered the information contained in the Addendum, the initial study, and the administrative record for the Project, including all written and oral evidence provided during the comment period. Based upon the facts and information contained in the Addendum, the initial study, and the administrative record, including all written and oral evidence presented to the Planning Commission, the Planning Commission finds as follows:

(1) The environmental impacts of the Project were reviewed in conjunction with an Addendum to Countryside Specific Plan Environmental Impact Report (State Clearinghouse No. 2004071001; certified by the Ontario City Council on April 18, 2006, in conjunction with File No. PSP04-001); and

(2) The EIR Addendum and administrative record have been completed in compliance with CEQA, the State CEQA Guidelines, and the City of Ontario Local CEQA Guidelines; and

(3) The City's "Guidelines for the Implementation of the California Environmental Quality Act (CEQA)" provide for the use of a single environmental assessment in situations where the impacts of subsequent projects are adequately analyzed. This Application introduces no new significant environmental impacts; and

(4) All previously adopted mitigation measures shall be a condition of project approval, as they are applicable to the Project, and are incorporated herein by this reference; and

(5) The EIR Addendum contains a complete and accurate reporting of the environmental impacts associated with the Project, and reflects the independent judgment of the Planning Commission; and

(6) There is no substantial evidence in the administrative record supporting a fair argument that the project may result in significant environmental impacts.

SECTION 2: ***Subsequent or Supplemental Environmental Review Not Required.*** Based on the EIR Addendum, all related information presented to the Planning Commission, and the specific findings set forth in Section 1, above, the Planning Commission finds that the preparation of a subsequent or supplemental Certified EIR is not required for the Project, as the Project:

(1) Does not constitute substantial changes to the Certified EIR that will require major revisions to the Certified EIR due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects; and

(2) Does not constitute substantial changes with respect to the circumstances under which the Certified EIR was prepared, that will require major revisions to the Certified EIR due to the involvement of new significant environmental effects or a substantial increase in the severity of the previously identified significant effects; and

(3) Does not contain new information of substantial importance that was not known and could not have been known with the exercise of reasonable diligence at the time the Certified EIR was certified/adopted, that shows any of the following:

(a) The Project will have one or more significant effects not discussed in the Certified EIR; or

(b) Significant effects previously examined will be substantially more severe than shown in the Certified EIR; or

(c) Mitigation measures or alternatives previously found not to be feasible would in fact be feasible and would substantially reduce one or more significant effects of the Project, but the City declined to adopt such measures; or

(d) Mitigation measures or alternatives considerably different from those analyzed in the Certified EIR would substantially reduce one or more significant effects on the environment, but which the City declined to adopt.

SECTION 3: ***Housing Element Compliance.*** Pursuant to the requirements of California Government Code Chapter 3, Article 10.6, commencing with Section 65580, as the recommending authority for the Project, the Planning Commission finds that based upon the facts and information contained in the Application and supporting documentation, at the time of Project implementation, the project is consistent with the Housing Element of the Policy Plan (General Plan) component of The Ontario Plan, as the project site is not one of the properties in the Housing Element Sites Inventory contained in Tables B-1 and B-2 of the Housing Element Technical Report.

SECTION 4: ***Airport Land Use Compatibility Plan ("ALUCP") Compliance.*** The California State Aeronautics Act (Public Utilities Code Section 21670 et seq.) requires that an Airport Land Use Compatibility Plan be prepared for all public use airports in the State; and requires that local land use plans and individual development proposals must be consistent with the policies set forth in the adopted Airport Land Use Compatibility Plan.

On April 19, 2011, the City Council of the City of Ontario approved and adopted the Ontario International Airport Land use Compatibility Plan, establishing the Airport Influence Area for Ontario International Airport, which encompasses lands within parts of San Bernardino, Riverside, and Los Angeles Counties, and limits future land uses and development within the Airport Influence Area, as they relate to noise, safety, airspace protection, and overflight impacts of current and future airport activity. As the recommending authority for the Project, the Planning Commission has reviewed and considered the facts and information contained in the Application and supporting documentation against the ONT ALUCP compatibility factors, including [1] Safety Criteria (ONT ALUCP Table 2-2) and Safety Zones (ONT ALUCP Map 2-2), [2] Noise Criteria (ONT ALUCP Table 2-3) and Noise Impact Zones (ONT ALUCP Map 2-3), [3] Airspace protection Zones (ONT ALUCP Map 2-4), and [4] Overflight Notification Zones (ONT ALUCP Map 2-5). As a result, the Planning Commission, therefore, finds and determines that the Project, when implemented in conjunction with the conditions of approval, will be consistent with the policies and criteria set forth within the ONT ALUCP; and

SECTION 5: ***Concluding Facts and Reasons.*** Based upon the substantial evidence presented to the Planning Commission during the above-referenced hearing,

and upon the specific findings set forth in Sections 1 through 4, above, the Planning Commission hereby concludes as follows:

(1) ***The proposed Specific Plan, or amendment thereto, is consistent with the goals, policies, plans and exhibits of the Vision, Policy Plan (General Plan), and City Council Priorities components of The Ontario Plan.*** The proposed Specific Plan Amendment is consistent with the Vision, Policy Plan (General Plan), and City Council Priorities components of The Ontario Plan 2050, in that the Specific Plan Amendment contributes towards the legislative framework for the implementation of The Ontario Plan components, guiding growth and development within the Project area to achieve optimum results from the City's physical, economic, environmental, and human resources.

(2) ***The proposed Specific Plan, or amendment thereto, would not be detrimental to the public interest, health, safety, convenience, or general welfare of the City.*** The development standards and guidelines established by the proposed Specific Plan Amendment have been created with the intent to safeguard and further the public interest, health, safety, convenience, and/or general welfare, and to ensure that the purposes of The Ontario Plan 2050 and the proposed Specific Plan Amendment, are maintained.

(3) ***In the case of an application affecting specific properties, the proposed Specific Plan, or amendment thereto, will not adversely affect the harmonious relationship with adjacent properties and land uses.*** The location of the proposed Specific Plan Amendment, and the proposed conditions under which future developments will be constructed and maintained, is consistent with the Policy Plan component of The Ontario Plan 2050 and the City's Development Plan, and, therefore, will not adversely affect the harmonious relationship with adjacent properties and land uses.

(4) ***In the case of an application affecting specific properties, the subject site is physically suitable, including, but not limited to, parcel size, shape, access, and availability of utilities, for the request and anticipated development.*** The proposed Specific Plan Amendment has been reviewed by all City departments, which have established that the project site is physically suitable for the anticipated development in terms of parcel size, shape, and availability of utilities.

SECTION 6: ***Planning Commission Action.*** Based upon the findings and conclusions set forth in Sections 1 through 5, above, the Planning Commission hereby RECOMMENDS THE CITY COUNCIL APPROVE the herein described Application, as presented and attached hereto as "Attachment A," and incorporated herein by this reference.

SECTION 7: ***Indemnification.*** The Applicant shall agree to defend, indemnify and hold harmless, the City of Ontario or its agents, officers, and employees from any claim, action or proceeding against the City of Ontario or its agents, officers or employees to attack, set aside, void, or annul this approval. The City of Ontario shall promptly notify the applicant of any such claim, action, or proceeding, and the City of Ontario shall cooperate fully in the defense.

SECTION 8: ***Custodian of Records.*** The documents and materials that constitute the record of proceedings on which these findings have been based are located at the City of Ontario City Hall, 303 East "B" Street, Ontario, California 91764. The custodian for these records is the City Clerk of the City of Ontario.

SECTION 9: ***Certification to Adoption.*** The Secretary shall certify to the adoption of the Resolution.

- - - - - - - - - - - - - -

The Secretary Pro Tempore for the Planning Commission of the City of Ontario shall certify as to the adoption of this Resolution.

I hereby certify that the foregoing Resolution was duly and regularly introduced, passed and adopted by the Planning Commission of the City of Ontario at a regular meeting thereof held on the 23rd day of May 2023, and the foregoing is a full, true and correct copy of said Resolution, and has not been amended or repealed.

File No. PSPA22-002
Countryside Specific Plan Amendment

(Specific Plan Amendment document to follow this page)

The Countryside Specific Plan Amendment is attached to the City Council Resolution

RESOLUTION NO. _____

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF ONTARIO, CALIFORNIA, APPROVING AN ADDENDUM TO THE COUNTRYSIDE SPECIFIC PLAN ENVIRONMENTAL IMPACT REPORT, PURSUANT TO THE REQUIREMENTS OF THE CALIFORNIA ENVIRONMENTAL QUALITY ACT, AS AMENDED, FOR FILE NO PSPA22-002.

WHEREAS, RB ONTARIO LLC (hereinafter referred to as "Applicant") has filed an Application for the approval of a Specific Plan Amendment, File No. PSPA22-002, which consists of amendments to the Countryside Specific Plan to increase the number of allowable dwellings, include Cluster Court 3, Row Townhomes and RD 3000 residential types, and update associated text and exhibits, to facilitate development of single- and multiple-family residential units located on the west side of Archibald Avenue approximately 875 feet south of Riverside Drive, in the City of Ontario, California (hereinafter referred to as "Application" or "Project"); and

WHEREAS, the Countryside Specific Plan Environmental Impact Report (State Clearinghouse No. 2004071001) was certified on April 18, 2006 (hereinafter referred to as "Certified EIR"), in which development and use of the Project site was discussed; and

WHEREAS, the Planning Director of the City of Ontario has prepared and approved for attachment to the certified Environmental Impact Report, an Addendum to the Certified EIR (hereinafter referred to as "EIR Addendum") in accordance with the requirements of the California Environmental Quality Act of 1970, together with State and local guidelines implementing said Act, all as amended to date (collectively referred to as "CEQA"); and

WHEREAS, the EIR Addendum concluded that implementation of the Project could result in a number of significant effects on the environment that were previously analyzed in the Certified EIR, and that the Certified EIR identified mitigation measures that would reduce each of those significant effects to a less-than-significant level; and

WHEREAS, pursuant to State CEQA Guidelines Section 15164(a), a lead agency shall prepare an addendum to a previously certified EIR if some changes or additions are necessary to a project, but the preparation of a subsequent or supplemental EIR is not required; and

WHEREAS, the City determined that none of the conditions requiring preparation of a subsequent or supplemental EIR would occur from the Project, and that preparation of an Addendum to the Certified EIR was appropriate; and

WHEREAS, on May 23, 2023, the Planning Commission of the City of Ontario conducted a hearing to consider the Addendum and concluded said hearing on that date, voting to issue Resolution No. PC23-039 recommending that the City Council conclude that none of the conditions requiring preparation of a subsequent or supplemental EIR

have occurred, and further recommending that the City Council take actions on the Project in compliance with CEQA and state and local guidelines implementing CEQA; and

WHEREAS, the City of Ontario is the lead agency on the Project, and the City Council is the decision-making authority for the requested approval to construct and otherwise undertake the Project; and

WHEREAS, the City Council has reviewed and considered the EIR Addendum for the Project, has concluded that none of the conditions requiring preparation of a subsequent or supplemental EIR have occurred, and intends to take actions on the Project in compliance with CEQA and state and local guidelines implementing CEQA; and

WHEREAS, the EIR Addendum for the Project are on file in the Planning Department, located at 303 East B Street, Ontario, CA 91764, are available for inspection by any interested person at that location and are, by this reference, incorporated into this Resolution as if fully set forth herein; and

WHEREAS, all legal prerequisites to the adoption of this Resolution have occurred.

NOW, THEREFORE, IT IS HEREBY FOUND, DETERMINED, AND RESOLVED by the City Council of the City of Ontario, as follows:

SECTION 1. ***Environmental Determination and Findings.*** As the decision-making authority for the Project, the City Council has reviewed and considered the information contained in the administrative record for the Project. Based upon the facts and information contained in the administrative record, including all written and oral evidence presented to the City Council, the City Council finds as follows:

(1) The environmental impacts of this project were reviewed in conjunction with an Addendum to Countryside Specific Plan Environmental Impact Report (State Clearinghouse No. 2004071001, certified by the Ontario City Council on April 18, 2006) in conjunction with File No. PSPA22-002; and

(2) The EIR Addendum and administrative record have been completed in compliance with CEQA, the State CEQA Guidelines, and the City of Ontario Local CEQA Guidelines; and

(3) The City's "Guidelines for the Implementation of the California Environmental Quality Act (CEQA)" provide for the use of a single environmental assessment in situations where the impacts of subsequent projects are adequately analyzed. This Application introduces no new significant environmental impacts; and

(4) All previously adopted mitigation measures shall be a condition of project approval, as they are applicable to the Project, and are incorporated herein by this reference; and

(5) The EIR Addendum contains a complete and accurate reporting of the environmental impacts associated with the Project, and reflects the independent judgment of the City Council; and

(6) There is no substantial evidence in the administrative record supporting a fair argument that the project may result in significant environmental impacts.

SECTION 2. ***Additional Environmental Review Not Required.*** Based on the Addendum, all related information presented to the City Council, and the specific findings set forth in Section 1, above, the City Council finds that the preparation of a subsequent or supplemental Environmental Impact Report is not required for the Project, as the Project:

(1) Does not constitute substantial changes to the Certified EIR that will require major revisions to the Certified EIR due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects; and

(2) Does not constitute substantial changes with respect to the circumstances under which the Certified EIR was prepared, that will require major revisions to the Certified EIR due to the involvement of new significant environmental effects or a substantial increase in the severity of the previously identified significant effects; and

(3) Does not contain new information of substantial importance that was not known and could not have been known with the exercise of reasonable diligence at the time the Certified EIR was certified/adopted, that shows any of the following:

(a) The project will have one or more significant effects not discussed in the Certified EIR; or

(b) Significant effects previously examined will be substantially more severe than shown in the Certified EIR; or

(c) Mitigation measures or alternatives previously found not to be feasible would in fact be feasible and would substantially reduce one or more significant effects of the Project, but the City declined to adopt such measures; or

(d) Mitigation measures or alternatives considerably different from those analyzed in the Certified EIR would substantially reduce one or more significant effects on the environment, but which the City declined to adopt.

SECTION 3. ***City Council Action.*** Based upon the findings and conclusions set forth in Sections 1 and 2, above, the City Council hereby finds that based upon the entire record of proceedings before it, and all information received, that there is no substantial evidence that the Project will constitute substantial changes to the Certified EIR, and does hereby approve the EIR Addendum, attached hereto as "Attachment A," and incorporated herein by this reference.

SECTION 4. ***Indemnification.*** The Applicant shall agree to defend, indemnify and hold harmless, the City of Ontario or its agents, officers, and employees from any claim, action or proceeding against the City of Ontario or its agents, officers or employees to attack, set aside, void, or annul this approval. The City of Ontario shall promptly notify the applicant of any such claim, action, or proceeding, and the City of Ontario shall cooperate fully in the defense.

SECTION 5: ***Custodian of Records.*** The documents and materials that constitute the record of proceedings on which these findings have been based are located at the City of Ontario City Hall, 303 East "B" Street, Ontario, California 91764. The custodian for these records is the City Clerk of the City of Ontario.

PASSED, APPROVED, AND ADOPTED this 20th day of June 2023.

Addendum to Countryside Specific Plan Environmental Impact Report

(Addendum to follow this page)

Supplemental Environmental Checklist

CITY OF ONTARIO PLANNING DEPARTMENT

303 East B Street, Ontario, California 91764 Phone: 909.395.2036 / Fax: 909.395.2420

1. Project Title/File No.: Barth Farms/PMTT22-021 & PSPA22-002

2. Lead Agency: City of Ontario, 303 East B Street, Ontario, California 91764, (909) 395-2036

3. Contact Person: Edmelynne Hutter, Senior Planner, 909-395-2429, ehutter@ontarioca.gov

4. Project Sponsor: The Landmark Company, 555 N. El Camino Real #A285, San Clemente California 92672, (858)610-0600

5. Project Location: The project site is located in southwestern San Bernardino County, within the City of Ontario. The City of Ontario is located approximately 40 miles from downtown Los Angeles, 20 miles from downtown San Bernardino, and 30 miles from Orange County. As illustrated on Figures 1 and 2, below, the project site is located on Assessor Parcel Numbers (APN): 0218-111-60 & 61, which is comprised of 23.1 acres of land generally located south of State Route 60 (SR-60), and west of Interstate 15 (I-15).

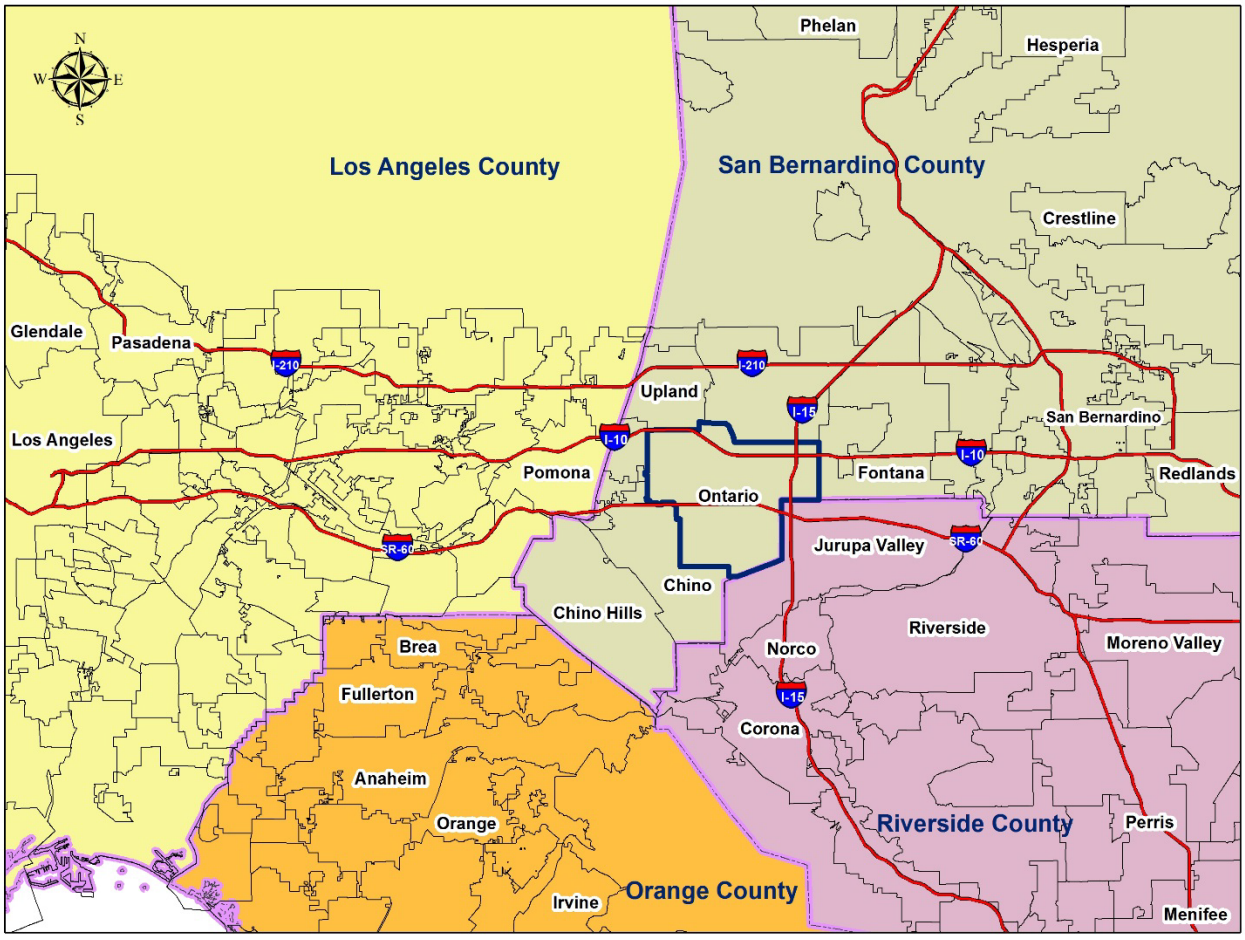

Figure 1: REGIONAL LOCATION MAP

Figure 2: Aerial Site Photograph

6. Policy Plan (General Plan) Designation: Existing: Countryside Specific Plan - Residential Development (RD) 6,000 square foot lots. The Ontario Plan (TOP) - Medium Density Residential (MDR; 11.1 to 25 du/ac) for northern parcel of project site and Low-Medium Density Residential (LMDR; 5.1-11.0 dwelling units/acre (du/ac)) for southern parcel of project site. Proposed: Medium Density Residential (MDR; 11.1 to 25 du/ac).

7. Zoning Designation: Existing: Countryside Specific Plan. Proposed: Countryside Specific Plan.

8. Description of Project: The project proposes the following entitlements:

    1. Specific Plan Amendment (SPA, File No. PSPA22-002) to the Countryside SP Neighborhood 2 from RD – 6,000 (6,000 square foot lots) with 106 units to Neighborhood 2A Single Family Cluster Detached (83 units), Neighborhood 2B Row Townhomes (126 units), and Neighborhood 2C (56 units) RD-3,000, for a combined total of 265 units. A private recreation area is proposed between Neighborhoods 2A, 2B, and 2C;
    2. Tentative Tract Map (File No. PMTT22-021) to subdivide a 23.2 acre site into 265265 lots, for development of 83 cluster single family detached, 126 townhouses, and 56 single family detached houses.

9. Project Setting: The project site consists of approximately 23.1 acres of land within southern Ontario. The site is generally rectangular in shape and is surrounded by residential establishment. The vacant site was historically used for agriculture uses, including row crop production and a nursery. The site is surrounded to the north by medium density residential housing and neighborhood commercial development, low density residential development to the south, neighborhood commercial and medium density residential development to the east and low density residential units to the west.

10. Project Background: On April 18, 2006, the Ontario City Council adopted the Countryside Specific Plan (SP) and certified the Environmental Impact Report (EIR) (SCH number 2004071001). The Countryside SP is comprised of "Residential - Low Density" land use designation and proposed a variety of housing types within a traditional neighborhood setting designed around a network of paseos, parks, and bicycle trails. The SP anticipated the development of approximately 819 residential units on approximately 178 acres and consists of eight neighborhoods of varying densities. Approximately 10.11 acres of the SP was proposed to be set aside as open space. The Countryside SP Certified EIR is incorporated by reference and available at the City of Ontario, 303 East B Street, Ontario, California 91764.

    On August 16, 2022, the Ontario City Council adopted The Ontario Plan (TOP) 2050 and certified the Supplemental EIR (SEIR) (SCH Number 2021070364). TOP 2050 is an update to TOP to guide the City's development and conservation for the next 30 years through 2050 with particular emphasis on conducting technical refinements to the Policy Plan to comply with state-required mandates; bring long-term growth and fiscal projections into alignment with current economic conditions; and advance the Tracking and Feedback system and Implementation Plan. TOP 2050 Certified SEIR is incorporated by reference and available at the City of Ontario, 303 East B Street, Ontario, California 91764.

11. Surrounding Land Uses:

	Existing Land Use	General Plan Designation	Zoning Designation	Specific Plan Land Use
Site:	Farming/ Nursery	LMDR/ MDR	RD-6,000	RD-6,000
North:	Multi-Family Residential	NC/ MDR	MDR-18/CC	NA
South:	Single Family Detached Residential, Farming	LDR	RD-5,000	RD-5,000
East:	Multi-Family Residential	NC/LDR	MDR-18/CN	NA
West:	Single Family Detached Residential, Park	LDR	RD-5,500	RD-5,500

12. Other public agencies whose approval is required (e.g., permits, financing approval or participation agreement): State Water Resources Control Board for General Construction Stormwater Activity Permit.

13. Have California Native American tribes traditionally and culturally affiliated with the project

area requested consultation pursuant to Public Resources Code section 21080.3.1?
☒Yes ☐ No

If "yes", has consultation begun? ☐ Yes ☐ No ☒ Completed

NEW SIGNIFICANT ENVIRONMENTAL EFFECTS OR SUBSTANTIALLY MORE SEVERE SIGNIFICANT ENVIRONMENTAL EFFECTS COMPARED TO THOSE IDENTIFIED IN THE PREVIOUS CEQA DOCUMENT.

The environmental factors checked below were determined to be new significant environmental effects or to be previously identified effects that have a substantial increase in severity either due to a change in project, change in circumstances or new information of substantial importance, as indicated by the checklist and discussion on the following pages.

☐ Aesthetics	☐ Agriculture/Forestry Resources	☐ Air Quality
☐ Biological Resources	☐ Cultural Resources	☐ Geology / Soils
☐ Greenhouse Gas Emissions	☐ Hazards & Hazardous Materials	☐ Hydrology/Water Quality
☐ Land Use / Planning	☐ Mineral Resources	☐ Noise
☐ Population / Housing	☐ Public Services	☐ Recreation
☐ Transportation	☐ Utilities / Service Systems	☐ Mandatory Findings of Significance
☐ Tribal Cultural Resources	☐ Wildfire	☐ Energy

DETERMINATION (To be completed by the Lead Agency)

On the basis of this initial evaluation:

☐ No substantial changes are proposed in the project and there are no substantial changes in the circumstances under which the project will be undertaken that will require major revisions to the previous approved ND or MND or certified EIR due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects. Also, there is no "new information of substantial importance" as that term is used in CEQA Guidelines Section 15162(a)(3). Therefore, the previously adopted ND or MND or previously certified EIR adequately discusses the potential impacts of the project without modification.

☒ No substantial changes are proposed in the project and there are no substantial changes in the circumstances under which the project will be undertaken that will require major revisions to the previous approved ND or MND or certified EIR due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects. Also, there is no "new information of substantial importance" as that term is used in CEQA Guidelines Section 15162(a)(3). Therefore, the previously adopted ND, MND or previously certified EIR adequately discusses the potential impacts of the project; however, minor changes require the preparation of an ADDENDUM.

☐ Substantial changes are proposed in the project or there are substantial changes in the circumstances under which the project will be undertaken that will require major revisions to the previous ND, MND or EIR due to the involvement of significant new environmental effects or a substantial increase in the severity of previously identified significant effects, or there is "new information of substantial importance," as that term is used in CEQA Guidelines Section 15162(a)(3). However, all new potentially significant environmental effects or substantial increases in the severity of previously identified significant effects are clearly reduced to below a level of significance through the incorporation of mitigation measures agreed to by the project applicant. Therefore, a SUBSEQUENT MND is required.

☐ Substantial changes are proposed in the project or there are substantial changes in the circumstances under which the project will be undertaken that will require major revisions to the previous environmental document due to the involvement of significant new environmental effects or a substantial increase in the severity of previously identified significant effects, or there is "new information of substantial importance," as that term is used in CEQA Guidelines Section 15162(a)(3). However, only minor changes or additions or changes would be necessary to make the previous EIR adequate for the project in the changed situation. Therefore, a SUPPLEMENTAL EIR is required.

☐ Substantial changes are proposed in the project or there are substantial changes in the circumstances under which the project will be undertaken that will require major revisions to the previous environmental document due to the involvement of significant new environmental effects or a substantial increase in the severity of previously identified significant effects, or there is "new information of substantial importance," as that term is used in CEQA Guidelines Section 15162(a)(3). Therefore, a SUBSEQUENT EIR is required.

EVALUATION OF ENVIRONMENTAL IMPACTS

1. A finding of "No New Impact/No Impact" means that the potential impact was fully analyzed and/or mitigated in the prior CEQA document and no new or different impacts will result from the proposed activity. A brief explanation is required for all answers except "No New Impact/No Impact" answers that are adequately supported by the information sources a lead agency cites in the parentheses following each question. A "No New Impact/No Impact" answer is adequately supported if the referenced information sources show that the impact simply does not apply to projects like the one involved (e.g., the project falls outside a fault rupture zone). A "No New Impact/No Impact" answer should be explained where it is based on project-specific factors as well as general standards (e.g., the project will not expose sensitive receptors to pollutants, based on a project-specific screening analysis).

2. A finding of "New Mitigation is Required" means that the project may have a new potentially significant impact on the environment or a substantially more severe impact than analyzed in the previously approved or certified CEQA document and that new mitigation is required to address the impact.

3. A finding of "New Potentially Significant Impact" means that the project may have a new potentially significant impact on the environment or a substantially more severe impact than analyzed in the previously approved or certified CEQA document that cannot be mitigated to below a level of significance or be avoided.

4. A finding of "Reduced Impact" means that a previously infeasible mitigation measure is now available, or a previously infeasible alternative is now available that will reduce a significant impact identified in the previously prepared environmental document.

5. All answers must take account of the whole action involved, including off-site as well as on-site, cumulative as well as project-level, indirect as well as direct, and construction as well as operational impacts.

6. Earlier analyses may be used where, pursuant to the tiering, program EIR, or other CEQA process, an effect has been adequately analyzed in an earlier EIR or negative declaration. Section 15063(c)(3)(D). In this case, a brief discussion should identify the following:

    a. Earlier Analyses Used. Identify and state where they are available for review.

    b. Impacts Adequately Addressed. Identify which effects from the above checklist were within the scope of and adequately analyzed in an earlier document pursuant to applicable legal standards, and state whether such effects were addressed by mitigation measures based on the earlier analysis. Describe the mitigation measures which were incorporated or refined from the earlier document and the extent to which they address site-specific conditions for the proposed action.

    c. Infeasible Mitigation Measures. Since the previous EIR was certified or previous ND or MND was adopted, discuss any mitigation measures or alternatives previously found not to be feasible that would in fact be feasible or that are considerably different from those previously analyzed and would substantially reduce one or more significant effects of the project, but the project proponents decline to adopt the mitigation measures or alternatives.

    d. Changes in Circumstances. Since the previous EIR was certified or previous ND or MND was adopted, discuss any changes in the project, changes in circumstances under which the project is undertaken and/or "new information of substantial importance" that cause a change in conclusion regarding one or more effects discussed in the original document.

7. Lead agencies are encouraged to incorporate into the checklist references to information sources for potential impacts (e.g., general plans, zoning ordinances). Reference to a previously prepared or outside document should, where appropriate, include a reference to the page or pages where the statement is substantiated.

8. Supporting Information Sources. A source list should be attached, and other sources used or individuals contacted should be cited in the discussion.

9. This is only a suggested form, and lead agencies are free to use different formats; however, lead agencies should normally address the questions from this checklist that are relevant to a project's environmental effects in whatever format is selected.

10. The explanation of each issue should identify:

a. the significance criteria or threshold, if any, used to evaluate each question;

b. differences between the proposed activity and the previously approved project described in the approved ND or MND or certified EIR; and

c. the previously approved mitigation measure identified, if any, to reduce the impact to less than significance.

Issues	*New Potentially Significant Impact*	*New Mitigation is Required*	*No New Impact / No Impact*	*Reduced Impact*
1. AESTHETICS. Except as provided in Public Resources Code section 21099, would the project:				
a) Have a substantial adverse effect on a scenic vista?	☐	☐	☒	☐
b) Substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway?	☐	☐	☒	☐
c) In non-urbanized areas, substantially degrade the existing visual character or quality of public views of the site and its surroundings? (Public views are those that are experienced from publicly accessible vantage point). If the project is in an urbanized area, would the project conflict with applicable zoning and other regulations governing scenic quality?)	☐	☐	☒	☐
d) Create a new source of substantial light or glare which would adversely affect day or nighttime views in the area?	☐	☐	☒	☐
2. AGRICULTURE AND FOREST RESOURCES. In determining whether impacts to agricultural resources are significant environmental effects, lead agencies may refer to the California Agricultural Land Evaluation and Site Assessment Model (1997) prepared by the California Dept. of Conservation as an optional model to use in assessing impacts on agriculture and farmland. In determining whether impacts to forest resources, including timberland, are significant environmental effects, lead agencies may refer to information compiled by the California Department of Forestry and Fire Protection regarding the state's inventory of forest land, including the Forest and Range Assessment Project and the Forest Legacy Assessment project; and forest carbon measurement methodology provided in Forest protocols adopted by the California Air Resources Board. Would the project:				
a) Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?	☐	☐	☒	☐
b) Conflict with existing zoning for agricultural use, or a Williamson Act contract?	☐	☐	☒	☐
c) Conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code section 12220(g)), timberland (as defined by Public Resources Code section 4526), or timberland zoned Timberland Production (as defined by Government	☐	☐	☒	☐

Issues	*New Potentially Significant Impact*	*New Mitigation is Required*	*No New Impact / No Impact*	*Reduced Impact*
Code section 51104(g))?				
d) Result in the loss of forest land or conversion of forest land to non-forest use?	☐	☐	☒	☐
e) Involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland, to non-agricultural use or conversion of forest land to non-forest use?	☐	☐	☒	☐
3. AIR QUALITY. Where available, the significance criteria established by the applicable air quality management district or air pollution control district may be relied upon to make the following determinations. Would the project:				
a) Conflict with or obstruct implementation of the applicable air quality plan?	☐	☐	☒	☐
b) Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard?	☐	☐	☒	☐
c) Expose sensitive receptors to substantial pollutant concentrations?	☐	☐	☒	☐
d) Result in other emissions (such as those leading to odors) adversely affecting a substantial number of people?	☐	☐	☒	☐
4. BIOLOGICAL RESOURCES. Would the project:				
a) Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?	☐	☐	☒	☐
b) Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?	☐	☐	☒	☐
c) Have a substantial adverse effect on state or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?	☐	☐	☒	☐
d) Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?	☐	☐	☒	☐
e) Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?	☐	☐	☒	☐
f) Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan?	☐	☐	☒	☐

Issues	*New Potentially Significant Impact*	*New Mitigation is Required*	*No New Impact / No Impact*	*Reduced Impact*
5. CULTURAL RESOURCES. Would the project:				
a) Cause a substantial adverse change in the significance of a historical resource pursuant to § 15064.5?	☐	☐	☒	☐
b) Cause a substantial adverse change in the significance of an archaeological resource pursuant to § 15064.5?	☐	☐	☒	☐
c) Disturb any human remains, including those interred outside of dedicated cemeteries?	☐	☐	☒	☐
6. ENERGY. Would the project:				
a) Result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation?	☐	☐	☒	☐
b) Conflict with or obstruct a state or local plan for renewable energy or energy efficiency?	☐	☐	☒	☐
7. GEOLOGY AND SOILS. Would the project:				
a) Directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury or death involving:				
i) Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publication 42.	☐	☐	☒	☐
ii) Strong seismic ground shaking?	☐	☐	☒	☐
iii) Seismic-related ground failure, including liquefaction?	☐	☐	☒	☐
iv) Landslides?	☐	☐	☒	☐
b) Result in substantial soil erosion or the loss of topsoil?	☐	☐	☒	☐
c) Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction or collapse?	☐	☐	☒	☐
d) Be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code, creating substantial direct or indirect risks to life or property?	☐	☐	☒	☐
e) Have soils incapable of adequately supporting the use of septic tanks or alternative wastewater disposal systems where sewers are not available for the disposal of wastewater?	☐	☐	☒	☐
f) Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?	☐	☐	☒	☐
8. GREENHOUSE GAS EMISSIONS. Would the project:				

Issues	*New Potentially Significant Impact*	*New Mitigation is Required*	*No New Impact / No Impact*	*Reduced Impact*
a) Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?	☐	☐	☒	☐
b) Conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emission of greenhouse gases?	☐	☐	☒	☐
9. HAZARDS AND HAZARDOUS MATERIALS. Would the project:				
a) Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?	☐	☐	☒	☐
b) Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?	☐	☐	☒	☐
c) Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?	☐	☐	☒	☐
d) Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?	☐	☐	☒	☐
e) For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard or excessive noise for people residing or working in the project area?	☐	☐	☒	☐
f) Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?	☐	☐	☒	☐
g) Expose people or structures, either directly or indirectly, to a significant risk of loss, injury or death involving wildland fires?	☐	☐	☒	☐
10. HYDROLOGY AND WATER QUALITY. Would the project:				
a) Violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or ground water quality?	☐	☐	☒	☐
b) Substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin?	☐	☐	☒	☐
c) Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would:				
i) Result in substantial erosion or siltation on- or off-site;	☐	☐	☒	☐
ii) Substantially increase the rate or amount of	☐	☐	☒	☐

Issues	New Potentially Significant Impact	New Mitigation is Required	No New Impact / No Impact	Reduced Impact
surface runoff in a manner which would result in flooding on- or offsite;				
iii) Create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff; or	☐	☐	☒	☐
iv) Impede or redirect flood flows?	☐	☐	☒	☐
d) In flood hazard, tsunami, or seiche zones, risk release of pollutants due to project inundation?	☐	☐	☒	☐
e) Conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan?	☐	☐	☒	☐
11. LAND USE AND PLANNING. Would the project:				
a) Physically divide an established community?	☐	☐	☒	☐
b) Cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect?	☐	☐	☒	☐
12. MINERAL RESOURCES. Would the project:				
a) Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?	☐	☐	☒	☐
b) Result in the loss of availability of a locally important mineral resource recovery site delineated on a local general plan, specific plan or other land use plan?	☐	☐	☒	☐
13. NOISE. Would the project result in:				
a) Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?	☐	☐	☒	☐
b) Generation of excessive groundborne vibration or groundborne noise levels?	☐	☐	☒	☐
c) For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?	☐	☐	☒	☐
14. POPULATION AND HOUSING. Would the project:				
a) Induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of road or other infrastructure)?	☐	☐	☒	☐
b) Displace substantial numbers of existing people or housing, necessitating the construction of	☐	☐	☒	☐

Issues	*New Potentially Significant Impact*	*New Mitigation is Required*	*No New Impact / No Impact*	*Reduced Impact*
replacement housing elsewhere?				
15. PUBLIC SERVICES. Would the project:				
a) Result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the public services:				
i) Fire protection?	☐	☐	☒	☐
ii) Police protection?	☐	☐	☒	☐
iii) Schools?	☐	☐	☒	☐
iv) Parks?	☐	☐	☒	☐
v) Other public facilities?	☐	☐	☒	☐
16. RECREATION.				
a) Would the project increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?	☐	☐	☒	☐
b) Does the project include recreational facilities or require the construction or expansion of recreational facilities which have an adverse physical effect on the environment?	☐	☐	☒	☐
17. TRANSPORTATION. Would the project:				
a) Conflict with a program plan, ordinance or policy addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities?	☐	☐	☒	☐
b) Conflict or be inconsistent with CEQA Guidelines section 15064.3, subdivision (b)?	☐	☐	☒	☐
c) Substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?	☐	☐	☒	☐
d) Result in inadequate emergency access?	☐	☐	☒	☐
18. TRIBAL CULTURAL RESOURCES. Would the project cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is:				
a) Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code	☐	☐	☒	☐

Issues	*New Potentially Significant Impact*	*New Mitigation is Required*	*No New Impact / No Impact*	*Reduced Impact*
section 5020.1(k), or				
b) A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code section 5024.1. In applying the criteria set forth in subdivision (c) of Public Resources Code section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe.	☐	☐	☒	☐
19. UTILITIES AND SERVICE SYSTEMS. Would the project:				
a) Require or result in the relocation or construction of new or expanded water, wastewater treatment or storm water drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects?	☐	☐	☒	☐
b) Have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry and multiple dry years?	☐	☐	☒	☐
c) Result in a determination by the wastewater treatment provider which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?	☐	☐	☒	☐
d) Generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals?	☐	☐	☒	☐
e) Comply with federal, state, and local management and reduction statutes and regulations related to solid waste?	☐	☐	☒	☐
20. WILDFIRE. If located in or near state responsibility areas or lands classified as very high fire hazard severity zones, would the project:				
a) Substantially impair an adopted emergency response plan or emergency evacuation plan?	☐	☐	☒	☐
b) Due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby expose project occupants to, pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire?	☐	☐	☒	☐
c) Require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment?	☐	☐	☒	☐
d) Expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes?	☐	☐	☒	☐
21. MANDATORY FINDINGS OF SIGNIFICANCE. (State CEQA Guidelines section 15065(a).)				

Issues	*New Potentially Significant Impact*	*New Mitigation is Required*	*No New Impact / No Impact*	*Reduced Impact*
a) Does the project have the potential to substantially degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, substantially reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory?	☐	☐	☒	☐
b) Does the project have the potential to achieve short-term environmental goals to the disadvantage of long-term environmental goals?	☐	☐	☒	☐
c) Does the project have impacts that are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current project, and the effects of probable future projects.)	☐	☐	☒	☐
d) Does the project have environmental effects which will cause substantial adverse effects on human beings, either directly or indirectly?	☐	☐	☒	☐

EXPLANATION OF ISSUES

1. AESTHETICS. Would the project:

a. Have a substantial adverse effect on a scenic vista?

Discussion of Effects: The Initial Study for this Project determined no significant impacts within the area of aesthetics. The Initial Study of the Countryside Specific Plan (Countryside SP) Certified EIR indicated the project site does not contain any scenic vistas nor is the site located within or adjacent to a State-designated scenic highway and partial views of the San Gabriel Mountains to the north would be maintained. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Initial Study to the Countryside SP EIR.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Countryside SP Certified EIR. No changes or additions to the Certified EIR analyses are necessary.

b. Substantially damage scenic resources, including, but not limited to, trees, rock outcroppings and historic buildings within a state scenic highway?

Discussion of Effects: The City of Ontario is served by three freeways: I-10, I-15, and SR-60. I-10 and SR-60 traverse the northern and central portion of the City, respectively, in an east to west direction. I-15 traverses the northeastern portion of the City in a north–south direction. These segments of I-10, I-15, and SR-60 have not been officially designated as scenic highways by the California Department of Transportation. As outlined in the Initial Study of the Countryside SP

Certified EIR the project site is not located within or adjacent to a State-designated scenic highway and has no historic buildings, or other scenic resources. Therefore, it will not result in adverse environmental impacts.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Countryside SP Certified EIR. No changes or additions to the Countryside SP Certified EIR analyses are necessary.

c. Substantially degrade the existing visual character or quality of the site and its surroundings?

Discussion of Effects: The Initial Study of the Countryside SP Certified EIR determined no significant impacts within the area of aesthetics. Development of the residential component of the project would be compatible with the existing residential subdivisions and would not degrade the existing visual character or quality of the site or surrounding areas. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Initial Study to the Countryside SP EIR.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Countryside SP Certified EIR. No changes or additions to the Countryside SP Certified EIR analyses are necessary.

d. Create a new source of substantial light or glare that would adversely affect day or nighttime views in the area?

Discussion of Effects: The Initial Study for of the Countryside SP Certified EIR determined no significant impacts within the area of aesthetics. The proposed development will introduce new sources of light and glare through the construction of new homes, however they will be required to comply with the requirements of the Ontario Municipal Code and would not substantially affect day or nighttime views. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Initial Study to the Countryside SP EIR.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Countryside SP Certified EIR. No changes or additions to the Countryside SP Certified EIR analyses are necessary.

2. AGRICULTURE AND FOREST RESOURCES. In determining whether impacts to agricultural resources are significant environmental effects, lead agencies may refer to the California Agricultural Land Evaluation and Site Assessment Model prepared by the California Department of Conservation as an optional model to use in assessing impacts on agriculture and farmland. In determining whether impacts to forest resources, including timberland, are significant environmental effects, lead agencies may refer to information compiled by the California Department of Forestry and Fire Protection regarding the state's inventory of forest land, including the Forest and Range Assessment Project and the Forest Legacy Assessment project; and forest carbon measurement methodology provided in Forest Protocols adopted by the California Air Resources Board. Would the project:

a. Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?

Discussion of Effects: The project site is Neighborhood 2 of the Countryside SP. As outlined in the Countryside SP Certified EIR, Neighborhood 2 encompasses 23.2 acres designated as Prime Farmland. The conversion of Prime Farmland to nonagricultural uses from implementation of the Countryside SP was evaluated in the Countryside SP Certified EIR as significant and unavoidable and there was no feasible mitigation identified. The City Council adopted a Statement of Overriding Considerations addressing the impact (City Council Resolution No. 2006-013).

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Countryside SP Certified EIR. No changes or additions to the Countryside SP Certified EIR analysis is necessary.

b. Conflict with existing zoning for agricultural use, or a Williamson Act contract?

Discussion of Effects: As outlined in the Countryside SP Certified EIR, Neighborhood 2 is within Williamson Act properties, contract no. 72-384, which encompasses 23.2 acres. The applicant has not filed plans for immediate cancellation of the existing Williamson Act contracts, but a Notice of Nonrenewal will be filed for contract number 72-384, which comprises Neighborhood 2. Any cancellation would be performed in accordance with Government Code Section 51282, subdivision (a). The development of residential uses on property that is under Williamson Act contract would conflict with the Act and this conflict would be significant and unavoidable. The conflict between proposed residential development uses and the Williamson Act and cancellation of these contracts from implementation of the Countryside SP was evaluated in the Countryside SP Certified EIR as significant and unavoidable and there was no feasible mitigation identified. The City Council adopted a Statement of Overriding Considerations addressing the impact (City Council Resolution No. 2006-013).

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Countryside SP Certified EIR. No changes or additions to the Countryside SP Certified EIR analysis is necessary.

c. Conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code section 12220(g)), timberland (as defined by Public Resources Code section 4526), or timberland zoned Timberland Production (as defined by Government Code section 51104(g)?

Discussion of Effects: At the time the Countryside SP EIR was prepared, impacts to forest land or timberland were not included in the CEQA Guidelines Appendix G checklist and therefore it did not identify any significant impacts related to forest or timberland. The Project would not result in the rezoning of forest land, timberland, or timberland zoned Timberland Production because such land use designations do not exist within the City of Ontario. Therefore, no impacts to forest or timberland are anticipated.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Countryside SP Certified EIR. No changes or additions to the Countryside SP Certified EIR analyses are necessary.

d. Result in the loss of forest land or conversion of forest land to non-forest use?

Discussion of Effects: At the time the Countryside SP EIR was prepared, impacts to forest land or timberland were not included in the CEQA Guidelines Appendix G checklist and therefore it did not identify any significant impacts related to forest or timberland. Per the Ontario Plan 2050 (TOP 2050) Certified SEIR, there is currently no land in the City of Ontario that qualifies as forest land as defined in Public Resources Code section 12220(g). Neither TOP nor the City's Zoning Code provide designations for forest land. Consequently, the proposed Project would not result in the loss or conversion of forest land.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Countryside SP Certified EIR. No changes or additions to the Countryside SP Certified EIR analyses are necessary.

e. Involve other changes in the existing environment, which, due to their location or nature, could individually or cumulatively result in loss of Farmland to non-agricultural use or conversion of forest land to non-forest use?

Discussion of Effects: As previously discussed, the project site encompasses 23.2 acres designated as Prime Farmland. The conversion of Prime Farmland to nonagricultural uses from implementation of the Countryside SP was evaluated in the Countryside SP Certified EIR as significant and unavoidable and there was no feasible mitigation identified. Additionally, there is currently no land in the City of Ontario that qualifies as forest land as defined in Public Resources Code Section 12220(g). Neither TOP nor the City's Zoning Code provide designations for forest land. Consequently, to the extent that the proposed Project would result in changes to the existing environment, those changes would not impact forest land.

Mitigation Required: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Countryside SP Certified EIR. No changes or additions to the Countryside SP Certified EIR analyses are necessary.

3. AIR QUALITY. Where available, the significance criteria established by the applicable air quality management or air pollution control district may be relied upon to make the following determinations. Would the project:

a. Conflict with or obstruct implementation of the applicable air quality plan?

Discussion of Effects: The subject site was previously analyzed in the TOP 2050 Certified SEIR. The project site's northern parcel is designated as Medium Density Residential (MDR) and the southern parcel is designated as Low Medium Density Residential (LMDR), in TOP 2050, which allows for a combined total of 217-484 dwelling units on the 23.2-acre site. As the proposed project includes 265 units, it is consistent with these TOP land use designations and the associated number of dwelling units, for which impacts were evaluated in the TOP 2050 Certified SEIR. As outlined in the TOP 2050 Certified SEIR, buildout of TOP 2050 would be consistent with the AQMP under the first criteria, however, air pollutant emissions associated with buildout of TOP 2050 would cumulatively contribute to the nonattainment designations in the South Coast Air Basin (SoCAB) and TOP 2050 would be inconsistent with the AQMP. Mitigation Measures from TOP that would reduce impacts associated with inconsistency with the South Coast AQMD that are applicable to the project and shall be implemented include:

Mitigation Measure 3-1: Prior to discretionary approval by the City of Ontario for development projects subject to CEQA (California Environmental Quality Act) review (i.e., nonexempt projects), project applicants shall prepare and submit a technical assessment evaluating potential project construction-related air quality impacts to the City of Ontario Planning Department for review and approval. The evaluation shall be prepared in conformance with South Coast Air Quality Management District (South Coast AQMD) methodology for assessing air quality impacts. If construction-related criteria air pollutants are determined to have the potential to exceed the South Coast AQMD-adopted thresholds of significance [a technical assessment was prepared as part of the Countryside SP Certified EIR indicating peak construction activities would exceed SCAQMD thresholds], the City of Ontario building department shall require feasible mitigation measures to reduce air quality emissions. Potential measures shall be incorporated as conditions of approval for a project and may include:

- Require fugitive dust control measures that exceed South Coast Air Quality Management District's Rule 403, such as:
  - Requiring use of nontoxic soil stabilizers to reduce wind erosion.
  - Applying water every four hours to active soil disturbance activities.
  - Tarping and/or maintaining a minimum of 24 inches of freeboard on trucks hauling dirt, sand, soil, or other loose materials.
- Using construction equipment rated by the United States Environmental Protection Agency as having Tier 4 interim or higher exhaust emission limits.
- Ensuring construction equipment is properly serviced and maintained to the manufacturer's standards.
- Limiting nonessential idling of construction equipment to no more than five consecutive minutes.
- Using Super-Compliant VOC paints for coating of architectural surfaces whenever possible. A list of Super-Compliant architectural coating manufacturers can be found on the South Coast Air Quality Management District's website at: http//www/aqmd.gov/prdas/brochures/Super-Copmliant_AIM.pdf.

These identified measures shall be incorporated into all appropriate construction documents (e.g., construction management plans) submitted to the City and shall be verified by the City's Planning Department.

Mitigation Measure 3-2: The City of Ontario shall evaluate new development proposals within the City and require all developments to include access or linkages to alternative modes of transportation, such as transit stops, bike paths, and/or pedestrian paths (e.g., sidewalks).

Mitigation Measure AQ-1: Prior to discretionary approval by the City of Ontario for development projects subject to CEQA (California Environmental Quality Act) review (i.e., nonexempt projects), project applicants shall prepare and submit a technical assessment evaluating potential project construction-related air quality impacts to the City of Ontario Planning Department for review and approval. The evaluation shall be prepared in conformance with South Coast Air Quality Management District (South Coast AQMD) methodology for assessing air quality impacts. If operational-related criteria air pollutants are determined to have the potential to exceed the South Coast AQMD-adopted thresholds of significance [a technical assessment was prepared as part of the Countryside SP Certified EIR indicating daily operations would exceed SCAQMD thresholds], the City of Ontario Planning Department shall require that applicants for new development projects incorporate mitigation measures to reduce air pollutant emissions during operational

activities. Possible mitigation measures to reduce long-term emissions could include, but are not limited to the following:

- For site-specific development that requires refrigerated vehicles, the construction documents shall demonstrate an adequate number of electrical service connections at loading docks for plug-in of the anticipated number of refrigerated trailers to reduce idling time and emissions.
- Applicants for manufacturing and light industrial uses shall consider energy storage and combined heat and power in appropriate applications to optimize renewable energy generation systems and avoid peak energy use.
- Site-specific developments with truck delivery and loading areas and truck parking spaces shall include signage as a reminder to limit idling of vehicles while parked for loading/unloading in accordance with California Air Resources Board Rule 2845 (13 CCR Chapter 10 section 2485).
- Provide changing/shower facilities as specified in Section A5.106.4.3 of CALGreen (Nonresidential Voluntary Measures).
- Provide bicycle parking facilities per Section A4.106.9 of CALGreen (Residential Voluntary Measures).
- Provide preferential parking spaces for low-emitting, fuel-efficient, and carpool/van vehicles per Section A5.106.5.1 of the CALGreen (Nonresidential Voluntary Measures).
- Provide facilities to support electric charging stations per Section A5.106.5.3 and A5.106.5.2 of the CALGreen (Nonresidential Voluntary Measures; Residential Voluntary Measures).
- Applicant-provided appliances shall be Energy Star-certified appliances or appliances of equivalent energy efficiency (e.g., dishwashers, refrigerators, closes washers and dryers). Installation of Energy Star-certified or equivalent appliances shall be verified by the City during plan check.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the TOP 2050 Certified SEIR. No changes or additions to the TOP 2050 Certified SEIR analyses are necessary.

b. Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard?

Discussion of Effects: The subject site was previously analyzed in the TOP 2050 Certified SEIR. The project site's northern parcel is designated as Medium Density Residential (MDR) and the southern parcel is designated as Low Medium Density Residential (LMDR), in TOP 2050, which allows for a combined total of 217-484 dwelling units on the 23.2-acre site. As the proposed project includes 265 units, it is consistent with these TOP land use designations and the associated number of dwelling units, for which impacts were evaluated in the TOP 2050 Certified SEIR. As outlined in the TOP 2050 Certified SEIR, buildout of TOP 2050 would generate short-term emissions that would exceed South Coast AQMD's regional significance thresholds and cumulatively contribute to the nonattainment designations of the SoCAB and would be significant and unavoidable. TOP 2025 Mitigation Measures 3-2 and AQ-1 [above] would reduce air pollutant emissions to the extent feasible.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the TOP 2050 Certified SEIR. No changes or additions to the TOP 2050 Certified SEIR

analyses are necessary.

c. Expose sensitive receptors to substantial pollutant concentrations?

Discussion of Effects: The Countryside SP Certified EIR determined toxic or carcinogenic air pollutants are not expected to occur in any meaningful amounts in conjunction with operation of the proposed land uses within the project site and no mitigation is required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Countryside SP Certified EIR.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Countryside SP Certified EIR. No changes or additions to the Countryside SP Certified EIR analyses are necessary.

d. Result in other emissions (such as those leading to odors adversely affecting a substantial number of people)?

Discussion of Effects: The Initial Study for of the Countryside SP Certified EIR determined no impacts as the project does not propose and would not facilitate uses that are significant sources of objectionable odors. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Initial Study to the Countryside SP Certified EIR.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Countryside SP Certified EIR. No changes or additions to the Countryside SP Certified EIR analyses are necessary.

4. BIOLOGICAL RESOURCES. Would the project:

a. Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?

Discussion of Effects: The subject site was previously analyzed in the Countryside SP Certified EIR and categorized as entirely denuded/developed land with intensive disturbance resulting from a variety of land uses associated with the project site including row crops, residential and commercial activities and roads. According to the Countryside SP Certified EIR, no special-status botanical species were present nor any suitable habitat that would support them. No threatened or endangered species have been reported to occur within the project site, however some sensitive species such as loggerhead shrike (*Lanius ludovicianus*) and burrowing owl (*Athene cunicularia*), as well as migratory avian species and raptors, which may use portions of the site and adjacent areas during the breeding season are protected under the Migratory Bird Treaty Act (MBTA.) The loss of a special-status avian species, an occupied nest, or substantial interference with roosting and foraging opportunities for migratory Species of Special Concern or raptors as a result of construction or demolition activities, would constitute a potentially significant impact. However, this impact would be reduced to a less than significant level with implementation of Mitigation Measures BIO-1(a)-SP and BIO-4-SP, that are applicable to the project. A project-specific Delhi Sands Flower-Loving Fly (DSF) Habitat Suitability Assessment was prepared by ELMT Consulting, Inc. in December 2022. As outlined in this report, the project site is mapped by the US

Department of Agriculture (USDA) Natural Resources Conservation Service (NRCS) as sporting Delhi fine sand soils in a band running north to south on the western and eastern boundary of the project site with the middle of the site supporting Hilmar loamy fine sand. However, since the project site has been continuously farmed for several decades with a variety of crops and disked between rotation of crops with the disking across the band of Delhi Sand soils at a 90-degree angle, the band of Delhi Sand soils that may have historically been present on the site has been thoroughly integrated into the larger areas of clay soils found on the site. Due to these historic and ongoing land uses, no undisturbed native plant community exist on the site. Due to the long-standing regime of crop rotation and disking, the small bands of Delhi Sand soils that was mapped as historically occurring on the site, has been thoroughly mixed with the clay soils and clean Delhi Sands are no longer present. The site is considered unsuitable habitat for DSF. Therefore, no adverse impacts to special status species are anticipated.

Mitigation Measure BIO-1(a)-SP: To ensure that avian Species of Concern, protected migratory species (e.g., Migratory Bird Treaty Act), or raptor species are not injured or disturbed by construction in the vicinity of nesting habitat, the project applicant shall implement the following measures:

- When feasible, all tree removal shall occur between August 30 and February 15 to avoid the breeding season of any raptor species that could be using the area, and to discourage hawks from nesting in the vicinity of an upcoming construction area. This period may be modified with the authorization of the California Department of Fish and Game (CDFG) [now California Department of Fish and Wildlife, CDFW]; or if it is not feasible to remove trees outside this window then, prior to the beginning of mass grading, including grading for major infrastructure improvements, during the period between February 15 and August 30, all trees and potential burrowing owl habitat within 250 feet of any grading or earthmoving activities shall be surveyed for active raptor nests or burrows by a qualified biologist no more than 30 days prior to disturbance. If active raptor nests or burrows are found, and the site is within 250 feet of potential construction activity, a fence shall be erected around the tree or burrow(s) at a distance of up to 250 feet, depending on the species, from the edge of the canopy to prevent construction disturbance and intrusions on the nest area. The appropriate buffer shall be determined by the City in consultation with CDFG [now CDFW].
- No construction vehicles shall be permitted within restricted areas (i.e., raptor protection zones), unless directly related to the management or protection of legally protected species.
- In the event that a nest is abandoned, despite efforts to minimize disturbance, and if the nestlings are still alive, the developer shall contact CDFG [CDFW] and, subject to CDFG [CDFW] approval fund the recovery and hacking (controlled release of captive reared young) of the nestling(s).
- If legally protected species nest is located in a tree designated for removal, the removal shall be deferred until after August 30, or until the adults and young of the year are no longer dependent on the nest site as determined by a qualified biologist.

Mitigation Measure BIO-2(a)-SP: Prior to any groundbreaking within the Specific Plan Area, mitigation fees shall be paid to a land conservancy selected to oversee habitat land acquisition in accordance with the settlement agreement between the City, Sierra Club, and Endangered Habitat League.

Mitigation Measure BIO-4-SP: The project applicant, in consultation with the California

Department of Fish and Game (CDFG) [now CDFW], shall conduct a pre-construction survey within the phases of the project site that are scheduled for construction activities. The survey shall be conducted by a qualified biologist to determine if western burrowing owls are occupying the project site. The survey shall be conducted no more than three weeks prior to grading of the project site.

If the above survey does not identify burrowing owls on the project site, then no further mitigation would be required. However, should western burrowing owls be found on the project site, the following measures shall be required:

The applicant shall avoid all potential western burrowing owl burrows that may be disturbed by project construction during the breeding season between February 15 and August 30 (the period when nest burrows are typically occupied by adults with eggs or young). Avoidance shall include the establishment of a 300-foot diameter non-disturbance buffer zone around any occupied burrows. The buffer zone shall only occur outside of the breeding season (September 1 through February 14).

Based on approval by the CDFG [CDFW], preconstruction and non-breeding season exclusion measures may be implemented to preclude burrowing owl occupation of the project site prior to project-related disturbance, such as grading). Burrowing owls may be passively excluded from burrows in the construction area by placing one-way doors in the burrows according to current CDFG [CDFW] protocol. The one-way doors must be in place for a minimum of three days. All burrows that may be occupied by burrowing owls, regardless of whether they exhibit signs of occupation, must be cleared. Burrows that have been cleared through the use of one-way doors shall then be closed or backfilled to prevent owls from entering the burrow. The one-way doors shall not be used more than two weeks before construction to ensure that owls do not re-colonize the area of construction.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Countryside SP Certified EIR. No changes or additions to the Countryside SP Certified EIR analyses are necessary.

b. Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?

Discussion of Effects: The project site was previously analyzed in the Countryside SP Certified EIR and does not contain any riparian habitat or other sensitive natural community identified by the California Department of Fish & Game [CDFW] or U.S. Fish & Wildlife Service. Therefore, no adverse environmental impacts are anticipated.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified Countryside SP EIR. No changes or additions to the Countryside SP Certified EIR analysis are necessary.

c. Have a substantial adverse effect on federally protected wetlands as defined by Section 404 of the Clean Water Act (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?

Discussion of Effects: The project site was previously analyzed in the Countryside SP Certified EIR and no wetland habitat is present. Therefore, project implementation would have no impact on these resources.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Countryside SP Certified EIR. No changes or additions to the Countryside SP Certified EIR analysis is necessary.

d. Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?

Discussion of Effects: The project site was previously analyzed in the Countryside SP Certified EIR and contains row crops and a nursery property that are bounded on all four sides by development. As a result, there are no wildlife corridors connecting this site to other areas. Therefore, no adverse environmental impacts are anticipated.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Countryside SP Certified EIR. No changes or additions to the Countryside SP Certified EIR analysis is necessary.

e. Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?

Discussion of Effects: The project site was previously analyzed in the Countryside SP Certified EIR which concluded that the implementation of the Specific Plan, in accordance with the mitigation measures contained within the Countryside SP EIR, would ensure that the proposed project would be in substantial conformance with the local applicable policies protecting biological resources. The applicable mitigation measures from the Countryside SP Certified EIR for the proposed project site are outlined above and with implementation, no adverse environmental impacts are anticipated.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Countryside SP Certified EIR. No changes or additions to the Countryside SP Certified EIR analysis is necessary.

f. Conflict with the provisions of an adopted Habitat Conservation Plan (HCP), Natural Community Conservation Plan (NCCP), or other approved local, regional, or state habitat conservation plan?

Discussion of Effects: The project site was previously analyzed in the Countryside SP Certified EIR and as outlined in the Initial Study, the project site is not located within an adopted HCP, NCCP or other approved habitat conservation plan. The project site is not located within the DSF HCP, a 19-acre area near the intersection of Greystone Drive and the eastern City boundary. As a result, no adverse environmental impacts are anticipated.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and

addressed in the Countryside SP Certified EIR. No changes or additions to the Countryside SP Certified EIR analysis is necessary.

5. CULTURAL RESOURCES. Would the project:

a. Cause a substantial adverse change in the significance of a historical resource as defined in Section 15064.5?

Discussion of Effects: The project site was previously analyzed in the Countryside SP Certified EIR and no historic or potentially historic resources were identified within the project site, as part of the Barth Farms property. Per the Cultural Resources Assessment (BCR Consulting, LLC., December 2022) of the project site, no cultural resources of any kind (including historic-period or prehistoric archaeological resources, or historic-period architectural resources) were identified. Therefore, no significant impact related to historical resources is anticipated.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Countryside SP Certified EIR. No changes or additions to the Countryside SP Certified EIR analysis is necessary.

b. Cause a substantial adverse change in the significance of an archaeological resource pursuant to Section 15064.5?

Discussion of Effects: Per the Countryside SP Certified EIR, although an intensive pedestrian field survey was not conducted for Neighborhood 2 of the project site, the entire SP area has been subject to substantial disturbance over lengthy periods of time, as a result of livestock movement, livestock waste collection and disposal, agriculture, and other development that would have displaced potential surface and subsurface archaeological resources. Therefore, potential impacts to archaeological resources are not anticipated. Per the Cultural Resources Assessment (BCR Consulting, LLC., December 2022) an intensive pedestrian field survey of the project site was conducted and no cultural resources of any kind (including historic-period or prehistoric archaeological resources, or historic-period architectural resources) were identified. Therefore, no significant impact related to archaeological resources are anticipated. Per the Countryside SP Certified EIR, despite the lack of documented resources in the vicinity, the possibility of discovering archaeological remains during excavation for future projects within the Specific Plan area cannot be completely discounted. No provisions exist for the recovery of previously unknown archaeological resources as a result of ground-disturbing activities associated with site preparation and construction and therefore mitigation measures CUL-2 (a-c)-SP are applicable to the project and would reduce impacts to unknown archaeological resources to a less than significant level.

Mitigation Measure CUL-2(a)-SP: Prior to site preparation or grading activities, construction personnel shall be informed of the potential for encountering unique archaeological resources. This shall include the provision of written materials to familiarize personnel with the range of resources that might be expected, the type of activities that may result in impacts, and the legal framework of cultural resources protection. All construction personnel shall be instructed to stop work in the vicinity of a potential discovery until a qualified archaeologist assess the significance of the find and implements appropriate measures to protect or scientifically remove the find. Construction personnel shall also be informed that unauthorized collection of archaeological resources is prohibited.

Mitigation Measure CUL-2(b)-SP: Prior to site preparation and grading activities, the

applicant shall retain a qualified (SOPA certified) archaeologist to monitor earth-disturbing activities. The frequency of monitoring shall occur at the discretion of the archaeologist, based upon site condition or other relevant factors. The archaeologist shall also be available on-call to assess any potential resources that may be exposed or discovered when the archaeologist is not present.

Mitigation Measure CUL-2(c)-SP: For any potential archaeological resource uncovered during construction, a qualified archaeologist shall first determine whether it is a "unique archaeological resource" under Public Resources Code Section 21083.2(g). If the archaeological resource is determined to be a "unique archaeological resource," the archaeologist shall formulate a mitigation plan in consultation with the campus that satisfies the requirements of Section 21083.2 of CEQA. If the archaeologist determines that the archaeological resources is not a unique archaeological resource, the archaeologist may record the site and submit the recordation form to the California Historic Resources Information System South Central Coastal Information Center. The archaeologist shall prepare a report of the results of any study prepared as part of a mitigation plan, following accepted professional practice. Copies of the report shall be submitted to the University and to the California Historic Resources Information System San Bernardino Archaeological Information Center.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Countryside SP Certified EIR. No changes or additions to the Countryside SP Certified EIR analysis is necessary.

c. Disturb any human remains, including those interred outside of dedicated cemeteries?

Discussion of Effects: Per the Countryside SP Certified EIR, no archaeological materials, including human burials, have been discovered in the Countryside Specific Plan Area. However, archaeological contexts are known in the general New Model Colony (Ontario Ranch) area, and the potential still exists for such resources to be present in the Countryside Specific Plan Area. Excavation during project related construction activities would have the potential to disturb unknown/undiscovered human remains. Human burials, in addition to being potential archaeological resources, have specific provisions for treatment in Section 5097 of the California Public Resources Code (P.R.C). Disturbing human remains could violate the health code, as well as destroy the resource, which would result in a potentially significant impact. As such, mitigation measure MM CUL-4-SP is proposed to reduce this impact to a less-than-significant level.

Mitigation Measure CUL-4-SP: In the event of the discovery of a burial, human bone, or suspected human bone, all excavation or grading in the vicinity of the find shall halt immediately, the area of the find shall be protected, and the University immediately shall notify the San Bernardino County Coroner of the find and comply with the provisions of P.R.C. Section 5097 with respect to Native American involvement, burial treatment, and re-burial, if necessary.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Countryside SP Certified EIR. No changes or additions to the Countryside SP Certified EIR analysis is necessary.

6. ENERGY. Would the project:

a. Result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation?

Discussion of Effects: At the time the Countryside SP Certified EIR was prepared, impacts related to wasteful, inefficient, or unnecessary consumption of energy resources was not included in the CEQA Guidelines Appendix G checklist and therefore it did not identify any significant impacts related to wasteful, inefficient, or unnecessary consumption of energy. The subject site was previously analyzed in the TOP 2050 Certified SEIR. The TOP 2050 designates the project site's northern parcel as Medium Density Residential (MDR) and the southern parcel is designated as Low Medium Density Residential (LMDR), which allows for a combined total of 217-484 dwelling units on the 23.2-acre site. As the proposed project includes 265 units, it is consistent with these TOP land use designations and the associated number of dwelling units, for which impacts were evaluated in the TOP 2050 Certified SEIR. As outlined in the TOP 2050 Certified SEIR, regulatory compliance (e.g., Building Energy Efficiency Standards, CALGreen, Renewable Portfolio standard (RPS), and Corporate Average Fuel Economy (CAFE) standards) will increase building energy efficiency and vehicle fuel efficiency and reduce building energy demand and transportation-related fuel usage. Additionally, the TOP 2050 includes policies related to land use and transportation planning and design, energy efficiency, public and active transit, and renewable energy generation that will contribute to minimizing building and transportation-related energy demands overall and demands on nonrenewable sources of energy. Implementation of the policies in TOP 2050 and Community Climate Action Plan (CCAP) policies, in conjunction with regulatory requirements would endure that energy demand associated with growth under TOP 2050 would not be inefficient, wasteful, or unnecessary. As no significant energy impacts were identified, no mitigation measures are warranted.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the TOP 2050 Certified SEIR. No changes or additions to the TOP 2050 Certified SEIR analyses are necessary.

b. Conflict with or obstruct a state or local plan for renewable energy or energy efficiency?

Discussion of Effects: At the time the Countryside SP Certified EIR was prepared, impacts related to wasteful, inefficient, or unnecessary consumption of energy resources was not included in the CEQA Guidelines Appendix G checklist and therefore it did not identify any significant impacts related to wasteful, inefficient, or unnecessary consumption of energy. The subject site was previously analyzed in the TOP 2050 Certified SEIR. The project site's northern parcel is designated as Medium Density Residential (MDR) and the southern parcel is designated as Low Medium Density Residential (LMDR), in TOP 2050, which allows for a combined total of 217-484 dwelling units on the 23.2-acre site. As the proposed project includes 265 units, it is consistent with these TOP land use designations and the associated number of dwelling units, for which impacts were evaluated in the TOP 2050 Certified SEIR. As outlined in the TOP 2050 Certified SEIR, the state's electricity grid is transitioning to renewable energy under California's RPS Program. Renewable sources of electricity include wind, small hydropower, solar, geothermal, biomass, and biogas. The statewide RPS requirements do not directly apply to individual development projects, but to utilities and energy providers such as Southern California Edison (SCE), whose compliance with RPS requirements would contribute to the State of California objective of transitioning to renewable energy. The land uses in the TOP 2050 would comply with the current and future iterations of the Building Energy Efficiency Standards and CALGreen. Furthermore, TOP 2050 includes Environmental Resources Element policies (AR3-1, ER3-2, ER3-3, ER3-4, ER3-5 and ER3-6) and Safety Element policies (S9-1, S9-2, and S9-3) which would support the statewide goal of transitioning the electricity grid to renewable sources and employ best practices regarding energy-saving

standards. The TOP 2050 would not conflict with or obstruct implementation of California's RPS program.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the TOP 2050 Certified SEIR. No changes or additions to the TOP 2050 Certified SEIR analyses are necessary.

7. GEOLOGY & SOILS. Would the project:

a. Expose people or structures to potential substantial adverse effects, including the risk of loss, injury or death involving:

i. Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publication 42.

Discussion of Effects: Per the Countryside SP Certified EIR, the project site is located outside the Fault Rupture Hazard Zone (formerly Alquist-Priolo zone) and is approximately 6 miles from the nearest fault line, the Chino-Central Avenue Fault. The project site, however, is in a seismically active region and seismic hazards must be taken into account in the design and construction of the residential structures proposed in the SP. As determined by the Preliminary Geotechnical Evaluation (LGC Geotechnical, Inc., April 2022) for this Project, the subject site is not located within an Alquist-Priolo Earthquake Fault Zone and no faults were identified on the site during the site evaluation. The possibility of damage due to ground rupture is considered low since no active faults are known to cross the site. The Countryside SP Certified EIR concluded that implementation of mitigation measures MM G-1 and MM GEO-1-SP would reduce impacts from seismic hazards to less than significant levels. Mitigation measures MM G-1 and MM GEO-1-SP that are applicable to the project and shall be implemented include:

> Mitigation Measure G-1: The City shall develop (pull together from existing materials) a Grading and Geotechnical Investigation Standards manual which will be available to developers and consultants in order to ensure the minimum proper soils engineering and engineering geologic study for all sites where grading will occur. Together these standards and policies should effectively mandate proper studies before development approval, in which grading, foundations, and slope stability would be analyzed and any potential hazards identified. Mitigation of the potential hazards would occur through the proper application of recommendations arising from these studies. Topics shall include but not necessarily be limited to soils engineering and foundations, slope stability, erosion, liquefaction/dynamic settlement, shallow groundwater, and fault location/ activity. This manual shall be available at the permit stage prior to initial feasibility and design studies in order to enhance (streamline) the development review and environmental review processes.
>
> Mitigation Measure GEO-1-SP: A final design geotechnical report shall be prepared for the proposed development to provide structure-specific geotechnical recommendations. The final report shall address all issues initially covered int eh Preliminary Geotechnical Report. Final recommendations on earthwork, spread footings with slabs-on-grade, reinforced mat foundations, post-tensioned mats, friction piles, cathedral retaining (basement) walls, and measures to address soil corrosion shall be identified. The final report shall specify foundation recommendations to ensure issues associated with underlying soils are

addressed. Construction of the project shall comply with all recommendations in the final geotechnical report.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified Countryside SP EIR. No changes or additions to the Countryside SP Certified EIR analysis is necessary.

ii. Strong seismic ground shaking?

Discussion of Effects: As determined by the Preliminary Geotechnical Evaluation (LGC Geotechnical, Inc., April 2022) for this Project, no faults were identified on the site during the site evaluation. The possibility of damage due to ground rupture is considered low since no active faults are known to cross the site. The main seismic hazard that may affect the site is ground shaking from one of the active regional faults. The subject site will likely experience strong seismic ground shaking during its design life. The Countryside SP Certified EIR concluded that implementation of mitigation measures MM G-1 and MM GEO-1-SP would reduce impacts from seismic hazards to less than significant levels.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Countryside SP Certified EIR. No changes or additions to the Countryside SP Certified EIR analysis is necessary.

iii. Seismic-related ground failure, including liquefaction?

Discussion of Effects: As identified in the Countryside SP Certified EIR, groundwater saturation of sediments is required for earthquake induced liquefaction. In general, groundwater depths shallower than 50 feet to the surface can cause the highest liquefaction susceptibility. The risk of liquefaction in the immediate project area is low due to a depth to groundwater of greater than 100 feet below ground (fbg). Therefore, the liquefaction potential within the project area is minimal. Implementation of The Ontario Plan strategies, Uniform Building Code and Ontario Municipal Code would reduce impacts to a less than significant level.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Countryside SP Certified EIR. No changes or additions to the Certified Countryside SP Certified EIR analysis is necessary.

iv. Landslides?

Discussion of Effects: Per the Preliminary Geotechnical Evaluation (LGC Geotechnical, Inc., April 2022), regional geologic mapping and local topographic expressions do not indicate the presence of large-scale landslides within or adjacent to the project area. Therefore, the project would not expose people or structures to potential adverse effects, including the risk of loss, injury, or death involving landslides due to the relatively flat topography of the project site making the chance of landslides remote. Implementation of The Ontario Plan strategies, Uniform Building Code and Ontario Municipal Code would reduce impacts to a less than significant level.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Countryside SP Certified EIR. No changes or additions to the Countryside SP

Certified EIR analysis is necessary.

b. Result in substantial soil erosion or the loss of topsoil?

Discussion of Effects: Soil erosion and loss of topsoil has been previously analyzed by the Countryside SP Certified EIR and found to be less than significant. All construction activity for this Project will comply with Chapter 29 of the CBC, which regulates excavation activities and construction of foundations and retaining walls, as well as Chapter 70 of the CBC, which regulates grading activities, including drainage and erosion control. Compliance with City permit and CBC requirements would minimize effects from erosion. The proposed project would also be implemented in accordance with SOI GPA Policies 21.2.1, 22.1.3 and 22.1.6 (SOI GPA EIR MM G-1). The noted policies and MM G-1 both address erosion impacts through investigation, monitoring, and mitigation, and are designed to reduce potentially substantial adverse effects resulting from soil erosion during all phases of project development, implementation, and operation. In addition, project-specific measures MM GEO-2(a)-SP, MM GEO-2(b)-SP, and MM GEO-2(c)-SP from the Countryside SP Certified EIR are applicable and shall be implemented to ensure that specific construction-related erosion risks are further reduced.

> Mitigation Measure GEO-2(a)-SP: Erosion control shall be employed and maintained on all vacant areas of the project site that have been graded.
>
> Mitigation Measure GEO-2(b)-SP: The project applicant shall submit a Notice of Intent (NOI) to the State Water Resources Control Board (SWRCB) for coverage under the Statewide General Construction Activity Stormwater Permit and shall comply with all applicable requirements, including the preparation of a Stormwater Pollution Prevention Plan (SWPPP). A copy of the NOI shall be submitted to the City prior to issuance of a grading permit.
>
> Mitigation Measure GEO-2(c)-SP: An erosion control plan shall be reviewed and approved by the City of Ontario prior to issuance of grading permits.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Countryside SP Certified EIR. No changes or additions to the Countryside SP Certified EIR analysis is necessary.

c. Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction or collapse?

Discussion of Effects: As outlined in the Countryside SP Certified EIR, slope instability is not expected to pose constraints on development because the SP area is relatively flat. The Project will not create greater landslide potential impacts than were identified in the Countryside SP Certified EIR. In addition, the Project would not result in the location of development on a geologic unit or soil that is unstable, or that would become unstable because as previously discussed, the potential for liquefaction and landslides associated with the project is less than significant. The Preliminary Geotechnical Evaluation (LGC Geotechnical, Inc., April 2022) also concludes project site soils are not generally susceptible to liquefaction due to the lack of groundwater in the upper 50 feet, isolated dry sand settlement is estimated to be 1-inch or less, and site soils are anticipated to have very low expansion potential. The Preliminary Geotechnical Evaluation indicates that the recommendations contained therein are considered preliminary and should be confirmed upon

completion of grading and earthwork operations. With implementation of The Ontario Plan strategies, Uniform Building Code, Ontario Municipal Code, and Mitigation Measure GEO-1-SP would reduce impacts to a less than significant level.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Countryside SP Certified EIR. No changes or additions to the Countryside SP Certified EIR analysis is necessary.

d. Be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial risks to life or property?

Discussion of Effects: According to the Countryside SP Certified EIR, the majority of Ontario, including the project site, is located on alluvial and eolian soil deposits. These types of soils are not considered to be expansive. The Preliminary Geotechnical Evaluation (LGC Geotechnical, Inc., April 2022) also concludes project site soils are anticipated to have very low expansion potential. With implementation of The Ontario Plan strategies, Uniform Building Code, Ontario Municipal Code, and Mitigation Measure GEO-1-SP would reduce impacts to a less than significant level.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Countryside SP Certified EIR. No changes or additions to the Countryside SP Certified EIR analysis is necessary.

e. Have soils incapable of adequately supporting the use of septic tanks or alternative wastewater disposal systems where sewers are not available for the disposal of wastewater?

Discussion of Effects: Per the Countryside SP Certified EIR, the area is served by the local sewer system and the use of septic tanks or alternative waste disposal systems is not proposed. There will be no impact to the sewage system. There would be no impact related to having soils incapable of inadequately supporting septic tanks or alternative waste disposal systems.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Countryside SP Certified EIR. No changes or additions to the Countryside SP Certified EIR analysis is necessary.

f. Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?

Discussion of Effects: Per the Countryside SP Certified EIR, potential disturbance or damage to undocumented archaeological resources, undocumented paleontological resources, or human remains could occur and would be reduced to less than significant levels through implementation of Mitigation Measure MM CUL-3(c)-SP.

Mitigation Measure CUL-3(c)-SP: For any potential paleontological resource uncovered during construction, a qualified paleontologist shall first determine whether it is a "unique resource". If the paleontological resource is determined to be a "unique resource," the paleontologist shall formulate a mitigation plan in consultation with the City that satisfies the requirements off the Conformable Mitigation Guidelines of the Society of Vertebrate Paleontology (News Bulletin Number 163, January 1995). If the paleontologist determines

that the paleontological resource is not a unique resource, the paleontologist may record the site and submit the recordation form to the Natural History Museum of San Bernardino County. The paleontologist shall prepare a report of the results of any study prepared as part of a mitigation plan, following accepted professional practice. Copies of the report shall be submitted to the City of Ontario and to the Natural History Museum of San Bernardino County.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Countryside SP Certified EIR. No changes or additions to the Countryside SP Certified EIR analysis is necessary.

8. GREENHOUSE GAS EMISSIONS. Would the project:

a. Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?

Discussion of Effects: The subject site was previously analyzed in the TOP 2050 Certified SEIR. The project site's northern parcel is designated as Medium Density Residential (MDR) and the southern parcel is designated as Low Medium Density Residential (LMDR), in TOP 2050, which allows for a combined total of 217-484 dwelling units on the 23.2-acre site. As the proposed project includes 265 units, it is consistent with these TOP land use designations and the associated number of dwelling units, for which impacts were evaluated in the TOP 2050 Certified SEIR. As outlined in the TOP 2050 Certified SEIR, the Greenhouse Gas (GHG) evaluation was prepared in accordance with the requirements of CEQA to determine if significant GHG impacts are likely to occur from future development accommodated by TOP 2050. With implementation of the CCAP, the city would achieve the Executive Order (EO) S-03-05 GHG emissions reduction targets, resulting in an 80 percent decrease in GHG emissions in the city by 2050 from existing conditions, and would make substantial progress toward the State's carbon neutrality goals under EO B-55-18. The TOP 2050, which includes the CCAP, would reduce GHG emissions impacts compared to the TOP 2010, and impacts would be less than significant.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the TOP 2050 Certified SEIR. No changes or additions to the TOP 2050 Certified SEIR analyses are necessary.

b. Conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gases?

Discussion of Effects: The subject site was previously analyzed in the TOP 2050 Certified SEIR. The project site's northern parcel is designated as Medium Density Residential (MDR) and the southern parcel is designated as Low Medium Density Residential (LMDR), in TOP 2050, which allows for a combined total of 217-484 dwelling units on the 23.2-acre site. As the proposed project includes 265 units, it is consistent with these TOP land use designations and the associated number of dwelling units, for which impacts were evaluated in the TOP 2050 Certified SEIR. As outlined in the TOP 2050 Certified SEIR, future development under the TOP 2050 would be consistent with applicable plans adopted for the purpose of reducing GHG emissions, including California Air Resources Board's (CARB) Scoping Plan and Southern California Association of Governments (SCAG) Connect SoCal. Implementation of TOP 2050 would not obstruct implementation of the CARB Scoping Plan or interfere with SCAG's ability to implement the regional strategies in Connect SoCal and impacts are less than significant.

Mitigation Required: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the TOP 2050 Certified SEIR. No changes or additions to the TOP 2050 Certified SEIR analyses are necessary.

9. HAZARDS & HAZARDOUS MATERIALS. Would the project:

a. Create a significant hazard to the public or the environment through the routine transport, use or disposal of hazardous materials?

Discussion of Effects: Per the Countryside SP Certified EIR, due to the current and historic uses of the site, including extensive dairy and agricultural operations, the potential exists for hazardous materials to be encountered over the entirety of the site. Specific Plan build out would result in grading of approximately 178 acres of land and demolition of various existing structures. Disturbance of soils and demolition of structures could result in the exposure of construction workers, residential occupants, or parkland/paseo users to health or safety risks if contaminated structures, soils, and/ or groundwater are encountered during construction or maintenance. Exposure to contaminated structures, soil, or groundwater could occur from any of the following: 1) asbestos-containing materials and lead-based paints in on-site structures, pipes, etc.; 2) pesticides/herbicides in the soil; 3) chlorinated solvent plume in the groundwater beneath the site; 4) soil contamination from polychlorinated biphenyl (PCB) in areas with transformers; 5) petroleum hydrocarbon (TPH)-contaminated areas of soil adjacent to above-ground storage tanks (ASTs) on the site; or 6) unknown contaminants not previously identified. The Countryside SP Certified EIR included Mitigation Measure MM HM-1, that requires completion of a Phase I Environmental Site Assessment (ESA) for all areas on-site to screen the site for further contamination potential. A Phase I ESA and Shallow Soil Sampling (Stantec, December 2022) was conducted for the proposed project site (Neighborhood 2) in compliance with Mitigation Measure MM HM-1. As the site was used for agriculture, application of pesticide and herbicide was anticipated and the potential for accumulation of organochloride pesticide (OCPs) and heavy metals (lead and arsenic) that are common with herbicide application in shallow soils. A shallow soils assessment indicated all OCPs, lead, and arsenic that were detected were below all applicable screening levels. The project site also has empty fuel tanks, waste oil drums, and an approximately 500-gallon diesel fuel storage tank. A shallow soil sampling was conducted to evaluate the potential release to the subsurface in these areas. There were no detections of TPH or volatile organic compounds (VOCs). Therefore, OCPs, arsenic, lead, TPH and VOCs are not considered a concern at the site and no further investigation or need for remediation is necessary. The proposed Project would not result in the routine handling, use, or disposal of hazardous materials, with the limited exception of standard household cleaning products inside residences, chlorine and filters used in pools, and the limited application of pesticides associated with residential landscaping and maintenance practices. As outlined in the Countryside SP Certified EIR, the standard conditions of approval for the City of Ontario include compliance with all applicable federal, State, and local regulations pertaining to the handling, storing, applying, and disposing of all pest control, herbicide, insecticide, and other similar substances as well as compliance by the applicant to certify that all deleterious materials, particularly organic residue from dairy, farming, or agricultural activity, have been removed, properly disposed of, and will not impact the development during the project's life. Further in the event of a disaster or an incident requiring complex coordination, pre-selected and trained hazardous materials personnel, in conjunction with City and County firefighters, would respond to any hazardous materials incident or illegal hazardous waste disposal complaint. Therefore, no significant long-term operational emissions hazard to the public, including any nearby school, or the environment is anticipated through the routine transport, use, or disposal of hazardous materials associated with the operation of residential development.

Mitigation: This impact would be less than significant per the Countryside SP Certified EIR and Phase I ESA and Shallow Soil Sampling (Stantec, December 2022) and no additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Countryside SP Certified EIR. No changes or additions to the Countryside SP Certified EIR analysis is necessary.

b. Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?

Discussion of Effects: The proposed Project does not include the use of hazardous materials or volatile fuels. In addition, there are no known stationary commercial or industrial land uses within close proximity to the subject site, which use/store hazardous materials to the extent that they would pose a significant hazard to visitors/occupants to the subject site, in the event of an upset condition resulting in the release of a hazardous material. As outlined above under threshold 9.a. above, per the Countryside SP Certified EIR, Specific Plan build out would result in grading of approximately 178 acres of land and demolition of various existing structures. Disturbance of soils and demolition of structures could result in the exposure of construction workers, residential occupants, or parkland/paseo users to health or safety risks if contaminated structures, soils, and/ or groundwater are encountered during construction or maintenance. The Countryside SP Certified EIR included Mitigation Measure MM HM-1, that requires completion of a Phase I ESA for all areas on-site to screen the site for further contamination potential. A Phase I ESA and Shallow Soil Sampling (Stantec, December 2022) was conducted for the proposed project site (Neighborhood 2) in compliance with Mitigation Measure MM HM-1 and confirmed that all OCPs, lead, and arsenic that were detected were below all applicable screening levels and there were no detections of TPH or VOCs. Therefore, OCPs, arsenic, lead, TPH and VOCs are not considered a concern at the site and no further investigation or need for remediation is necessary. The proposed Project would not result in the routine handling, use, or disposal of hazardous materials, with the limited exception of standard household cleaning products inside residences, chlorine and filters used in pools, and the limited application of pesticides associated with residential landscaping and maintenance practices. As outlined in the Countryside SP Certified EIR, the standard conditions of approval for the City of Ontario include compliance with all applicable federal, State, and local regulations pertaining to the handling, storing, applying, and disposing of all pest control, herbicide, insecticide, and other similar substances as well as compliance by the applicant to certify that all deleterious materials, particularly organic residue from dairy, farming, or agricultural activity, have been removed, properly disposed of, and will not impact the development during the project's life. Further in the event of a disaster or an incident requiring complex coordination, pre-selected and trained hazardous materials personnel, in conjunction with City and County firefighters, would respond to any hazardous materials incident or illegal hazardous waste disposal complaint. Therefore, no significant long-term operational emissions hazard to the public, including any nearby school, or the environment is anticipated through the routine transport, use, or disposal of hazardous materials associated with the operation of residential development.

Mitigation: This impact would be less than significant per the Countryside SP Certified EIR and Phase I ESA and Shallow Soil Sampling (Stantec, December 2022) and no additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Countryside SP Certified EIR. No changes or additions to the Countryside SP Certified EIR analysis is necessary.

c. Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances,

or waste within one-quarter mile of an existing or proposed school?

Discussion of Effects: Per the Countryside SP Certified EIR, the SP area is located within one-quarter mile of Ranch View Elementary School, which is located directly southeast of the proposed project site at 3300 Old Archibald Ranch Road. Construction and operation of the proposed project would develop residential units in a planned community and would not include the processing or storage any acutely hazardous materials. A Phase I ESA and Shallow Soil Sampling (Stantec, December 2022) was conducted for the proposed project site (Neighborhood 2) and concluded there are no contaminated soils or otherwise hazardous materials. As outlined in the Countryside SP Certified EIR, the standard conditions of approval for the City of Ontario include compliance with all applicable federal, State, and local regulations pertaining to the handling, storing, applying, and disposing of all pest control, herbicide, insecticide, and other similar substances as well as compliance by the applicant to certify that all deleterious materials, particularly organic residue from dairy, farming, or agricultural activity, have been removed, properly disposed of, and will not impact the development during the project's life. Further in the event of a disaster or an incident requiring complex coordination, pre-selected and trained hazardous materials personnel, in conjunction with City and County firefighters, would respond to any hazardous materials incident or illegal hazardous waste disposal complaint. Therefore, no significant long-term operational emissions hazard to the public, including any nearby school, or the environment is anticipated with the operation of residential development. As such, the proposed project would have less than significant impacts on the adjacent school.

Mitigation: This impact would be less than significant per the Countryside SP Certified EIR and Phase I ESA and Shallow Soil Sampling (Stantec, December 2022) and no additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Countryside SP Certified EIR. No changes or additions to the Countryside SP Certified EIR analysis is necessary.

d. Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?

Discussion of Effects: Per the California Environmental Protection Agency (Cal EPA) website calepa.ca.gov/sitecleanup/corteselist/ the following data resources provide information regarding facilities or sites identified as meeting the "Cortese List" requirements: List of Hazardous Waste and Substances sites from the California Department of Toxic Substances Control (DTSC) EnviroStor database, list of leaking underground storage tank sites from the State Water Board's GeoTracker database, list of solid waste disposal sites identified by the Water Board with waste constituents above hazardous waste levels outside the waste management unit, list of active Cease and Desist Orders (CDO) and Cleanup and Abatement Orders (CAO) from the list from the State Water Board, and list of hazardous waste facilities subject to corrective action pursuant to Section 25187.5 of the Health and Safety Code identified by DTSC. Per the Phase I ESA and Shallow Soil Sampling (Stantec, December 2022), Neighborhood 2, the proposed project site, is not listed on the hazardous materials site compiled pursuant to Government Code Section 65962.5. Therefore, the project would not create a hazard to the public or the environment and no impact is anticipated.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Countryside SP Certified EIR. No changes or additions to the Countryside SP Certified EIR analysis is necessary.

e. For a project located within the safety zone of the airport land use compatibility plan for ONT or Chino Airports, would the project result in a safety hazard for people residing or working in the project area?

Discussion of Effects: As outlined in the Initial Study of the Countryside SP Certified EIR, the southern boundary of the SP area is approximately 2.5 miles northwest of the Chino Airport. In addition, the SP area is not located within 2 miles of the Ontario International Airport. Therefore, the project would not result in a safety hazard for people residing or working in a safety zone of an airport land use compatibility plan.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Countryside SP Certified EIR. No changes or additions to the Countryside SP Certified EIR analysis is necessary.

f. For a project within the vicinity of a private airstrip, would the project result in a safety hazard for people residing or working in the project area?

Discussion of Effects: The closest airports and/or airstrips to the project site are the Chino Airport and the Ontario International Airport, there are no other airports or private airstrips in the vicinity of the project site. Therefore, the project would not result in a safety hazard for people residing or working in the vicinity of a private airstrip.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Countryside SP Certified EIR. No changes or additions to the Countryside SP Certified EIR analysis is necessary.

g. Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?

Discussion of Effects: The City's Safety Element, as contained within TOP 2050, includes policies and procedures to be administered in the event of a disaster. TOP seeks interdepartmental and inter-jurisdictional coordination and collaboration to be prepared for, respond to and recover from every day and disaster emergencies. In addition, the project will comply with the requirements of the Ontario Fire Department and all City requirements for fire and other emergency access. Because the project is required to comply with all applicable City codes, any impacts would be reduced to a less than significant level.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the TOP 2050 Certified SEIR. No changes or additions to the TOP 2050 Certified SEIR analyses are necessary.

h. Expose people or structures to a significant risk of loss, injury or death involving wildland fires, including where wildlands are adjacent to urbanized areas or where residences are intermixed with wildlands?

Discussion of Effects: According to the Countryside SP Certified EIR, additional development of the projects area could increase exposure of people and structures to a risk of loss, injury, or death involving wildland fires due to its proximity to undeveloped land. Eucalyptus trees adjacent to the SP area are a source of fuel for wildland fires, and fuel management of these

eucalyptus stands has been limited due to lack of urban development in the area. The proposed project could place additional residential units in close proximity to the eucalyptus stands, a known fire hazard. If a wildland fire were to occur, the proposed project would increase the number of persons and residences threatened by such an event. However, the adjacent Cucamonga Creek Channel could serve as a fire brake. In addition, the expansion of the access and circulation within the projects area to include paseos and paved roads would also serve as fire brakes while improving the ability of the City to respond to a fire and reduce the potential hazard of wildland fires to people or structures. The mitigation measures in the Countryside SP Certified EIR applicable to the proposed project and shall be implemented to reduce impacts to less than significant are HM-5(a)-SP through HM-5(d)-SP, as outlined below.

> Mitigation Measure HM-5(a)-SP: Landscaping around development areas adjacent to open space shall minimize dense vegetation immediately adjacent to structural development. Specifically, 12 to 18 inches of bare ground shall be kept between structures and grasses or other vegetation.
>
> Mitigation Measure HM-5(b)-SP: In order to maintain a fire break between the undeveloped areas and structures, fuel management setbacks shall be 10 feet from each side of a road and 30 feet from structures.
>
> Mitigation Measure HM-5(c)-SP: Grass and low-to-ground vegetation (e.g., weeds) in proximity to structures shall be kept no more than 6 inches high.
>
> Mitigation Measure HM-5(d)-SP: Design of residential structures shall incorporate appropriate fire suppression systems into building design, which may include fire sprinkler systems, tempered or multiple pane windows, and fire-retardant materials for roofs, exterior walls and siding.

Mitigation: With implementation of mitigation measures MM HM-5(a-d)-SP, this impact would be less than significant per the Countryside SP Certified EIR and no additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Countryside SP Certified EIR. No changes or additions to the Countryside SP Certified EIR analysis are necessary.

10. HYDROLOGY & WATER QUALITY. Would the project:

a. Violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or ground water quality?

Discussion of Effects: Per the Countryside SP Certified EIR, implementation of Best Management Practices (BMPs) identified in both the Water Quality Management Plan (WQMP) and the Storm Water Pollution Prevention Plan (SWPPP) and in accordance with the NPDES permit will provide facilities and programs designed to control contaminants in urban runoff from entering the local and regional surface drainage systems and contributing to water quality degradation. Therefore, with the incorporation of mitigation measures applicable to the project (MM WQ-1 through WQ-8) and compliance with applicable permit requirements, all impacts related to water quality would be reduced to less than significant.

> Mitigation Measure WQ-1: Prior to the issuance of grading permits, project developers shall submit a final drainage plan for each proposed project for review and approval by the City Engineer.

Mitigation Measure WQ-2: Prior to the issuance of grading permits, project developers shall ensure that coordination between the City of Ontario and the San Bernardino County Flood Control District has been undertaken to demonstrate the ability of the project to meet County flood control requirements.

Mitigation Measure WQ-3: Prior to the issuance of building permits, project developers shall submit to the City Engineer proof of payment of the City's drainage fees, as applicable.

Mitigation Measure WQ-5: Prior to moving construction equipment on a site within the Sphere of Influence, project developers shall provide evidence to the City Engineer that a National Pollutant Discharge Elimination System (NPDES) permit has been obtained from the State Water Resources Control Board (SWRCB). Once obtained, the NPDES permit shall be retained on the construction site throughout the construction period, and a copy shall be filed with the City Engineer.

Mitigation Measure WQ-6: During construction of individual projects, the City Engineer shall ensure compliance with all terms and conditions outlined in the NPDES permit, including the implementation of Best Management Practices (BMPs) consistent with the California Stormwater Quality Association's Construction Handbook.

Mitigation Measure WQ-7: Prior to issuance of grading permits, project developers shall prepare a Storm Water Pollution Prevention Plan (SWPPP) for individual proposed projects. These plans shall be submitted to the City Engineer for review and comment prior to implementing any SWPPP provisions or starting any construction activity. A copy of the SWPPP shall be held by the construction contractor(s) on the construction site throughout development of each project. The City Engineer will monitor and enforce the provisions of the SWPPP.

Mitigation Measure WQ-8: During operation of facilities within the Sphere of Influence, the individual project owners and operators shall ensure that all pest control, herbicide, insecticide and other similar substances used as part of maintenance of project features are handled, stored, applied, and disposed of by those conducting facility maintenance in a manner consistent with all applicable federal, state and local regulations. The City Engineer shall monitor and enforce this provision.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Countryside SP Certified EIR. No changes or additions to the Countryside SP Certified EIR analysis is necessary.

b. Substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin?

Discussion of Effects: The subject site was previously analyzed in the TOP 2050 Certified SEIR. The project site's northern parcel is designated as Medium Density Residential (MDR) and the southern parcel is designated as Low Medium Density Residential (LMDR), in TOP 2050, which allows for a combined total of 217-484 dwelling units on the 23.2-acre site. As the proposed project includes 265 units, it is consistent with these TOP land use designations and the associated number of dwelling units, for which impacts were evaluated in the TOP 2050 Certified SEIR. As outlined in the TOP 2050 Certified SEIR, with implementation of City policies that promote Low Impact Development (LID) and infiltration for new development projects and compliance with the Chino Basin Watermaster's safe yield restrictions, the potential for the project to substantially decrease

groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin is less than significant.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the TOP 2050 Certified SEIR. No changes or additions to the TOP 2050 Certified SEIR analyses are necessary.

c. Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would:

i. Result in substantial erosion or siltation on- or off-site;

Discussion of Effects: The project will result in altered on-site drainage patterns due to grading activities and changes in land use. However, the project has been previously analyzed by the Countryside SP Certified EIR and it is not anticipated to substantially alter the existing drainage pattern of the area, including the alteration of the course of a stream or river, in such a manner that would result in substantial erosion or siltation, flooding, or the exceedance of existing or planned stormwater drainage systems. Furthermore, all construction activities will take place under implementation of a Storm Water Pollution Prevention Plan (SWPPP) developed in compliance with the General Construction Activities Permit requirements, the Best Management Practices included in the SWPPP, and a stormwater monitoring program would reduce any impacts to below a level of significance. No streams or streambeds are present on the site and no changes in erosion off-site are anticipated.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Countryside SP Certified EIR. No changes or additions to the Countryside SP Certified EIR analysis is necessary.

ii. Substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or offsite;

Discussion of Effects: Per the Countryside SP Certified EIR, implementation of the proposed project would not result in exacerbation of localized flooding due to construction of proposed storm drain improvements necessary to serve the site and adherence to the requirements of the NPDES permit and the WQMP. In order to ensure adequate drainage improvements, all features of the proposed system would be designed and constructed in accordance with the standards set by the City of Ontario and the San Bernardino County Flood Control District. In addition, plans for grading, drainage, and erosion control would be reviewed by the City Engineer prior to issuance of grading permits (Ontario SOI GPA EIR mitigation measure MM WQ-1). In addition, Ontario SOI GPA EIR mitigation measure MM WQ-2 would ensure that coordination between the City and San Bernardino County Flood Control District occurs to ensure the project meets the County flood control requirements. Therefore, with inclusion of the project features designed to minimize drainage, this impact would be less than significant with no further mitigation needed.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Countryside SP Certified EIR. No changes or additions to the Countryside SP Certified EIR analysis is necessary.

iii. Create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff; or

Discussion of Effects: Per the Countryside SP Certified EIR, proposed onsite storm drain improvements for the project site would consist of 24-inch pipes, minimum, which would collect and discharge storm water via 48-inch and 72-inch pipes to the Cucamonga Creek Channel and Deer Creek Channel. Both channels drain into the Cucamonga Basin, which is a completed detention basin and groundwater recharge facility designed to accommodate stormwater flows from the region, including the project site. It is not anticipated that the project would create or contribute runoff water that would exceed the capacity of existing or planned stormwater drainage systems or create or contribute stormwater runoff pollutants during construction and/or post-construction activity. In addition, the developer must submit to the City Engineer proof of payment of the City's drainage fees, as applicable prior to issuance of building permits (mitigation measure WQ-3). Because regional and project-site flood control facilities are available to accommodate the project's increased runoff and project-specific mitigation measure MM HYD-3-SP would ensure consistency with the City's Master Plan of Drainage, impacts are less than significant.

Mitigation Measure HYD-3-SP: All new storm drain infrastructure on site shall be consistent with the City's Master Plan of Drainage, or otherwise formal amendments or deviations shall be made via coordination and approval from the City.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Countryside SP Certified EIR. No changes or additions to the Countryside SP Certified EIR analysis is necessary.

iv. Impede or redirect flood flows?

Discussion of Effects: Per the Countryside SP Certified EIR, implementation of the proposed project would not result in exacerbation of localized flooding due to construction of proposed storm drain improvements necessary to serve the site and adherence to the requirements of the NPDES permit and the WQMP. Therefore, this impact is less than significant.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Countryside SP Certified EIR. No changes or additions to the Countryside SP Certified EIR analysis is necessary.

d. In flood hazard, tsunami, or seiche zones, risk release of pollutants due to project inundation?

Discussion of Effects: Per the Countryside SP Certified EIR, the proposed project would not place housing or structures within a 100-year flood hazard area. Further, the TOP 2050 Certified SEIR states that there are no large bodies of water that would result in a seiche during seismic activity. Additionally, the reservoirs/aboveground water tanks within the City are enclosed, thereby minimizing the possibility of a seiche. The project site is inland and approximately 30 miles from the ocean and is not at risk of flooding due to tsunamis. Therefore, the impacts associated with the release of pollutants due to inundation would be less than significant.

Mitigation: No additional mitigation required. The Project will not result in any new,

increased or substantially different impacts, other than those previously considered and addressed in the Countryside SP Certified EIR and the TOP 2050 Certified SEIR. No changes or additions to the Countryside SP Certified EIR or the TOP 2050 Certified SEIR analysis is necessary.

e. Conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan?

Discussion of Effects: Per the TOP 2050 Certified SEIR, adherence to the State Construction General Permit, implementation of the SWPPP, and adherence to the City's Erosion and Sediment Control Plan requirements would ensure that surface and groundwater quality are not adversely impacted during construction. Projects approved under TOP 2050 would be required to comply with the Santa Ana River Basin Plan and to control pollutants in discharges of stormwater from preconstruction activities under the NPDES permit through preparation of a WQMP identifying BMPs for prevention of stormwater pollution during the post-construction phase, including site-design, source-control, and/or treatment BMPs. Therefore, the project would not obstruct or conflict with the Basin Plan or any groundwater management plan and impacts would be less than significant.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the TOP 2050 Certified SEIR. No changes or additions to the TOP 2050 Certified SEIR analyses are necessary.

11. LAND USE & PLANNING. Would the project:

a. Physically divide an established community?

Discussion of Effects: Per the Countryside SP Certified EIR, the Project site was originally identified as part of the ultimate development of the New Model Colony (NMC) area and development of the Countryside SP would not physically divide a planned community. No adverse impacts are anticipated.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Countryside SP Certified EIR. No changes or additions to the Countryside SP Certified EIR analysis are necessary.

b. Conflict with applicable land use plan, policy or regulation of agencies with jurisdiction over the project (including, but not limited to general plan, airport land use compatibility plan, specific plan, or development code) adopted for the purpose of avoiding or mitigating an environmental effect?

Discussion of Effects: Although the proposed project involves an amendment to the Countryside SP for Neighborhood 2 from RD – 6,000 (6,000 square foot lots) with 106 units to Townhomes (126 units), Cluster Single Family Detached (83 units), and Single Family Detached (56 units), for a combined total of 265 units it was previously analyzed in the TOP 2050 Certified SEIR. The project site's northern parcel is designated as Medium Density Residential (MDR) and the southern parcel is designated as Low Medium Density Residential (LMDR), which allows for a combined total of 217-484 dwelling units on the 23.2-acre site. As the proposed project includes 265 units, it is consistent with these TOP land use designations and the associated number of dwelling units, for which impacts were evaluated in the TOP 2050 Certified SEIR. As outlined in the TOP 2050 Certified SEIR, one of the purposes of TOP 2050 is to adequately plan and accommodate

future growth. Implementation of TOP 2050 accommodates population growth through land use designations, goals, and policies that provide a vision and guide growth in the City. TOP 2050 accommodates future growth by providing for infrastructure and associated public services to accommodate the projected growth of the City. While buildout in accordance with TOP 2050 would substantially increase both population and employment in the City, impacts would be less than significant. The proposed project will not conflict with the TOP or other plans, policies, or regulations.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the TOP 2050 Certified SEIR. No changes or additions to the TOP 2050 Certified SEIR analyses are necessary.

c. Conflict with any applicable habitat conservation plan or natural community conservation plan?

Discussion of Effects: The project site was previously analyzed in the Countryside SP Certified EIR and as outlined in the Initial Study, the project site is not located within an adopted HCP, NCCP or other approved habitat conservation plan. The project site is not located within the DSF HCP, a 19-acre area near the intersection of Greystone Drive and the eastern City boundary. As a result, no adverse environmental impacts are anticipated.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Countryside SP Certified EIR. No changes or additions to the Countryside SP Certified EIR analysis are necessary.

12. MINERAL RESOURCES. Would the project:

a. Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?

Discussion of Effects: The Initial Study of the Countryside SP Certified EIR determined the Project site is located within a mostly developed area surrounded by urban land uses and is not known to contain any mineral resources. Therefore, no impacts are anticipated.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Countryside SP Certified EIR. No changes or additions to the Countryside SP Certified EIR analysis are necessary.

b. Result in the loss of availability of a locally important mineral resource recovery site delineated on a local general plan, specific plan or other land use plan?

Discussion of Effects: The Initial Study of the Countryside SP Certified EIR determined the site is not known to contain any mineral resources and no impact to mineral resources are anticipated.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Countryside SP Certified EIR. No changes or additions to the Countryside SP Certified EIR analysis are necessary.

13. NOISE. Would the project result in:

a. Exposure of persons to or generation of noise levels in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?

Discussion of Effects: As outlined in the Countryside SP Certified EIR, upon completion of the project, noise levels within the project site would be dominated by vehicular traffic on the surrounding roadways. Future exterior noise levels at the residential units planned along the surrounding roadways (including Archibald Avenue, between Riverside Drive and Chino Avenue) of the project site would exceed the City's 65 dBA Community Noise Equivalent Level (CNEL) standard for outdoor activity areas. Future noise levels associated with the surrounding roadways would not exceed the City's 45 dBA CNEL interior noise standards for residential uses. Noise impacts associated with noise generated as a result of additional traffic from the proposed project's operation, for both on- and off-site, are considered potentially significant. However, implementation of mitigation measures MM N-1 through MM N-4 would reduce impacts to less than significant levels.

Mitigation Measure N-1: Prior to the issuance of building permits for the planning area in the Sphere of Influence area, an Acoustical Analysis Report shall be submitted to the City Engineer by the project developer. The report shall describe the cumulative effect of road noise on surrounding land uses and recommend mitigation measures, if necessary, to attenuate that noise. If necessary, the City shall establish a noise attenuation fee program that requires developers in the Sphere of Influence area to make a fair share contribution to noise mitigation along some of roads surrounding the Sphere of Influence. The City of Ontario shall evaluate the need for such a fee program and establish participation guidelines prior to the issuance of grading permits.

Mitigation Measure N-2: Prior to the issuance of building permits for the planning areas in the Sphere of Influence area, an Acoustical Analysis Report shall be submitted to the City Building Official and Planning Director by the project developer. The Report shall describe in detail the interior and exterior noise levels for residential uses on the site and the specific design and mitigation features to ensure compliance with the City's noise criteria of 65 dBA CNEL for outdoor living areas and 45 dBA CNEL for habitable rooms.

Mitigation Measure N-3: Prior to the issuance of building permits for planning areas in the Sphere of Influence area, the required location of noise barriers on the project site shall be detailed in the Acoustical Analysis Report. The Report shall specify the height, location, and types of barriers capable of achieving the desired mitigation affect.

Mitigation Measure N-4: Prior to the issuance of building permits for the planning areas in the Sphere of Influence area, the Acoustical Analysis Report shall identify those residential lots that may require mechanical ventilation to achieve interior noise standards. When the operable doors and windows are open for homes facing roadways, interior 45 dBA CNEL interior noise limit for these units may be exceeded. Therefore, a "windows closed" condition may be required for these units. Any proposed mechanical ventilation must meet the requirements of the Uniform Building Code (UBC) standard. It should be noted that the windows facing some roadways may be openable windows, but the homeowners would have the option to close the windows and still obtain adequate ventilation through the use of mechanical ventilation system. This mechanical ventilation system shall supply two air changes per hour to each habitable room, including 20 percent (one-fifth) fresh make-up air obtained directly from the outdoors. The fresh air inlet duct shall be of sound

attenuating construction and shall consist of a minimum of 10 feet of straight or curved duct or 6 feet plus one sharp 90-degree bend. The City Building Official shall ensure that the Acoustical Analysis Report identifies any requirements for mechanical ventilation for the individual onsite residential units.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Countryside SP Certified EIR. No changes or additions to the Countryside SP Certified EIR analysis is necessary.

b. Exposure of persons to or generation of excessive groundborne vibration or groundborne noise levels?

Discussion of Effects: As outlined in the Countryside SP Certified EIR, the proposed Countryside Specific Plan will be constructed in several phases, over the course of several years, so not all of the neighborhoods would be under construction at one time. With the addition of sensitive receptors (new housing units) within close proximity to active construction, the potential for exposure to excessive vibration levels may exceed the Federal Transit Administration 85 VdB threshold at certain locations where new residential dwelling units are located within the project site. This is the case where the southern portion of Neighborhood 2 construction will occur in very close proximity to the northern existing residences in Neighborhoods 5 and 7. The Countryside SP Certified EIR concluded that because sensitive receptors (future residential units) may be in close proximity to active construction, there is a possibility that they would be exposed to groundbourne vibration levels that exceed 85 VdB, which is considered a significant and unavoidable construction-related (temporary) impact. However, mitigation measures were included in the Countryside SP Certified EIR to reduce these potential impacts as much as possible and are applicable to the project.

Mitigation Measure N-6: Construction on the Sphere of Influence site shall be limited to the hours of 7:00 A.M. to 7:00 P.M. Monday through Saturday, and shall be prohibited on Sundays and federal holidays.

Mitigation Measure N-8: Stockpiling and/or vehicle staging areas shall be located as far as practical from existing residential units on and off the proposed project site.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified Countryside SP Certified EIR. No changes or additions to the Countryside SP Certified EIR analysis is necessary.

c. A substantial permanent increase in ambient noise levels in the project vicinity above levels existing without the project?

Discussion of Effects: The Countryside SP Certified EIR determined impacts related to exposure of on- and off-site sensitive noise receptors to a substantial permanent increase in off-site ambient noise levels would be less than significant with incorporation of mitigation measures N-1 through N-5. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Initial Study to the Countryside SP Certified EIR.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and

addressed in the Countryside SP Certified EIR. No changes or additions to the Countryside SP Certified EIR analysis is necessary

d. A substantial temporary or periodic increase in ambient noise levels in the project vicinity above levels existing without the project?

Discussion of Effects: As outlined in the Countryside SP Certified EIR, noise levels generated from construction activities would result in temporary increase in ambient noise levels of over 5 dBA at the existing noise-sensitive receptors outside of and adjacent to the SP, and for a prolonged period of time as the SP construction would be completed in phases, considered a significant impact. Mitigation Measure MM NOI-1-SP is required to reduce construction noise, however even with the incorporation of MM NOI-1-SP, construction of development in the SP would result in a substantial and significant periodic increase in ambient noise levels in the project vicinity above existing levels and the impact would be significant and unavoidable. The project shall implement MM NOI-1-SP from the Countryside SP Certified EIR to reduce potential impacts from construction noise to the greatest extent feasible. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Initial Study to the Countryside SP Certified EIR.

Mitigation Measure NOI-1-SP: The project contractor(s) shall implement, but not be limited to, the following best management practices:

- Outdoor construction work on the project shall be limited to the hours of 7:00 A.M. to 7:00 P.M. on weekdays and Saturdays. No construction activities shall occur on Sundays or federal holidays.
- All construction equipment with a high noise generating potential, including all equipment powered by internal combustion engines, shall be muffled or controlled.
- All stationary noise generating equipment, such as compressors, shall be located as far as possible from existing houses.
- Machinery, including motors, shall be turned off when not in use.
- Mobile equipment shall not be allowed to run idle near existing residences.
- Neighbors within 200 feet of major construction areas shall be notified of the construction schedule in writing, prior to construction; the project sponsor shall designate a "disturbance coordinator" who shall be responsible for responding to any local complaints regarding construction noise: the coordinator (who may be an employee of the developer or general contractor) shall determine the cause of the complaint and shall require that reasonable measures warranted to correct the problem be implemented; a telephone number of the noise disturbance coordinator shall be conspicuously posted at the construction site fence and on the notification sent to neighbors adjacent to the site.
- Temporary noise barriers shall be installed where feasible and appropriate between the project construction areas and existing and future residences. Barriers shall be at least 10 feet in height.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Countryside SP Certified EIR. No changes or additions to the Countryside SP Certified EIR analysis are necessary.

e. For a project located within the noise impact zones of the airport land use compatibility plan for ONT and Chino Airports, would the project expose people residing or working in the project area to excessive noise levels?

Discussion of Effects: The Initial Study of the Countryside SP Certified EIR determined the southern boundary of the Specific Plan area is approximately 2.5 miles northwest of the Chino Airport and not within 2 miles of the Ontario International Airport and is not located within the study-area noise contours of any airport or airstrip. As a result, no impacts from excessive noise levels related to airport operations would occur.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Countryside SP Certified EIR. No changes or additions to the Countryside SP Certified EIR analysis are necessary.

f. For a project within the vicinity of a private airstrip, would the project expose people residing or working in the project area to excessive noise levels?

Discussion of Effects: The Initial Study of the Countryside SP Certified EIR determined the southern boundary of the Specific Plan area is approximately 2.5 miles northwest of the Chino Airport and not within 2 miles of the Ontario International Airport. As a result, no impacts from excessive noise levels related to airport operations would occur.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Countryside SP Certified EIR. No changes or additions to the Countryside SP Certified EIR analysis are necessary.

14. POPULATION & HOUSING. Would the project:

a. Induce substantial population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of road or other infrastructure)?

Discussion of Effects: The subject site was previously analyzed in the TOP 2050 Certified SEIR. The project site's northern parcel is designated as Medium Density Residential (MDR) and the southern parcel is designated as Low Medium Density Residential (LMDR), which allows for a combined total of 217-484 dwelling units on the 23.2-acre site. As the proposed project includes 265 units, it is consistent with these TOP land use designations and the associated number of dwelling units, for which impacts were evaluated in the TOP 2050 Certified SEIR. As outlined in the TOP 2050 Certified SEIR, one of the purposes of TOP 2050 is to adequately plan and accommodate future growth. Implementation of TOP 2050 accommodates population growth through land use designations, goals, and policies that provide a vision and guide growth in the City. TOP 2050 accommodates future growth by providing for infrastructure and associated public services to accommodate the projected growth of the City. While buildout in accordance with TOP 2050 would substantially increase both population and employment in the City, impacts would be less than significant.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the TOP 2050 Certified SEIR. No changes or additions to the TOP 2050 Certified SEIR analyses are necessary.

b. Displace substantial numbers of existing housing, necessitating the construction of replacement housing elsewhere?

Discussion of Effects: As outlined in the Countryside SP EIR, build out of the SP area would

result in replacement of existing dairy operations, agricultural fields, and nursery with residential uses and would displace at least five on-site housing units. However, this displacement is not considered substantial. Less than significant impacts related to the displacement of housing and population would occur.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Countryside SP Certified EIR. No changes or additions to the Countryside SP Certified EIR analysis are necessary.

c. Displace substantial numbers of people, necessitating the construction of replacement housing elsewhere?

Discussion of Effects: As outlined in the Countryside SP EIR, build out of the SP area would result in replacement of existing dairy operations, agricultural fields, and nursery with residential uses and would displace at least five on-site housing units. However, this displacement is not considered substantial. Less than significant impacts related to the displacement of housing and population would occur.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Countryside SP Certified EIR. No changes or additions to the Countryside SP Certified EIR analysis are necessary.

15. PUBLIC SERVICES. Would the project:

a. Result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the public services:

i. Fire protection?

Discussion of Effects: The site is in a developed area currently served by the Ontario Fire Department and was previously analyzed by the Countryside SP Certified EIR. The Project will not require the construction of any new facilities or alteration of any existing facilities or cause a decline in the levels of service, which could cause the need to construct new facilities. The project is subject to the City's development impact fee program which funds fire services. with payment of development impact fees, less than significant impacts are anticipated.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Countryside SP Certified EIR. No changes or additions to the Countryside SP Certified EIR analysis are necessary.

ii. Police protection?

Discussion of Effects: The site is in a developed area currently served by the Ontario Police Department and was previously analyzed by the Countryside SP Certified EIR. The Project will not require the construction of any new facilities or alteration of any existing facilities or cause a decline in the levels of service, which could cause the need to construct new facilities. The

project is subject to the City's development impact fee program which funds police services. With payment of development impact fees, less than significant impacts are anticipated.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Countryside SP Certified EIR. No changes or additions to the Countryside SP Certified EIR analysis are necessary.

iii. Schools?

Discussion of Effects: The Countryside SP Certified EIR has determined impacts to school to be potentially significant. However, implementation of Mitigation Measure PS-1-SP would reduce this impact to a less-than-significant level.

> Mitigation Measure PS-1-SP: Consistent with current requirements, the developer shall pay statutory school fees in effect at the time of issuance of building permits to the MVD (Mountain View School District) and CJUHSD (Chaffey Joint Union High School District) for school facilities, thus ensuring that the new development would bear its fair share of the cost of housing additional students generated.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Countryside SP Certified EIR. No changes or additions to the Countryside SP Certified EIR analysis are necessary.

iv. Parks?

Discussion of Effects: The site is in a developed area, currently served by the City of Ontario. The Project will not require the construction of any new public facilities or alteration of any existing facilities. A private recreation area is proposed between Neighborhoods 2A, 2B, and 2C. To maintain the current level of service for parks in the City, the City requires payment of specific development impact fees (DIF) for recreational facilities. With payment of development impact fees, less than significant impacts are anticipated.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Countryside SP Certified EIR. No changes or additions to the Countryside SP Certified EIR analysis are necessary.

v. Other public facilities?

Discussion of Effects: The site is in a developed area, currently served by the City of Ontario. The Project will not require the construction of any new facilities or alteration of any existing facilities. The City uses development impact fees collected at building permit issuance to provide funding for general public facilities. With payment of development impact fees, less than significant impacts are anticipated.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Countryside SP Certified EIR. No changes or additions to the Countryside SP Certified EIR analysis are necessary.

16. RECREATION. Would the project:

a. Increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?

Discussion of Effects: Per the Countryside SP Certified EIR, implementation of the proposed project would include the development of residential units in a previously non-residential area. The adopted and certified Specific Plan Area includes the development of a total of approximately 5.75 acres of parkland in three key areas in and around the project site. These parks would be informal play areas and passive recreational opportunities for residents and would be served by the landscaped paseos. A private recreation area is included in the proposed project, between Neighborhoods 2A, 2B, and 2C. To maintain the current level of service for parks in the City, the City requires payment of specific development impact fees (DIF) for recreational facilities. With payment of development impact fees, less than significant impacts are anticipated.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Countryside SP Certified EIR. No changes or additions to the Countryside SP Certified EIR analysis are necessary.

b. Does the project include recreational facilities or require the construction or expansion of recreational facilities that have an adverse physical effect on the environment?

Discussion of Effects: As stated above, with payment of development impact fees, less than significant impacts are anticipated.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Countryside SP Certified EIR. No changes or additions to the Countryside SP Certified EIR analysis are necessary.

17. TRANSPORTATION. Would the project:

a. Conflict with a program plan, ordinance or policy addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities?

Discussion of Effects: As determined in the VMT Assessment, a review of the Project description did not identify any disruption to existing bicycle, pedestrian nor transit facilities; the proposed Project provides consistency related to regional active transportation plans, transit plans, and other mobility infrastructure plans in the New Model Colony (Ontario Ranch) area. New transit trips are anticipated to be generated by the Project, but the Project would not modify transit stop locations or change transit headways. Additional transit ridership demand could increase boarding and alighting activity at existing bus stops and transit terminals located near the Project site. The Project is consistent with the adopted plans regarding bicycle and pedestrian infrastructure and is not expected to decrease the performance or safety of these facilities. Therefore, the Project is considered to have a less-than-significant impact on active transportation and on public transit.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Countryside SP Certified EIR. No changes or additions to the Countryside SP Certified EIR analysis are necessary.

b. Conflict or be inconsistent with CEQA Guidelines section 15064.3, subdivision (b)?

Discussion of Effects: At the time the Countryside SP Certified EIR was prepared, impacts related to vehicle miles traveled (VMT) was not included in the CEQA Guidelines Appendix G checklist and therefore it did not identify any significant impacts related to VMT. As determined in the VMT Assessment, the Project is consistent with CEQA Guidelines section 15064.3, subdivision (b) regarding policies to reduce VMT. The TOP 2050 Model forecast of total daily VMT/SP is the required method for estimating VMT. The proposed Project is forecast to reduce Home-Based Production (HB) VMT per resident, Origin/Destination (OD) VMT per Service Population (VMT/SP) and Boundary VMT/SP as compared to the approved project, and is forecast to produce VMT/SP below the City's impact thresholds; therefore, this project is anticipated to result in a less-than-significant transportation impact.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Countryside SP Certified EIR. No changes or additions to the Countryside SP Certified EIR analysis are necessary.

c. Substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?

Discussion of Effects: As determined in the VMT Assessment, the Project would not substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment). The City of Ontario has adopted engineering standards to ensure consistency in the geometric design of their mobility facilities. Additionally, all plans undergo an extensive review process at the City to ensure consistency with these adopted standards. This impact is considered less than significant.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Countryside SP Certified EIR. No changes or additions to the Countryside SP Certified EIR analysis are necessary.

d. Result in inadequate emergency access?

Discussion of Effects: As determined in the VMT Assessment, the Project would not result in inadequate emergency access. The Project is proposing improvements at intersections consistent with the Ontario Plan Circulation Element Buildout, therefore increasing the capacity of the network, as identified in the Level of Service (LOS) assessment. With the proposed improvements, the Project is anticipated to provide roadway capacity sufficient to support emergency evacuation scenarios even with the increased density. Therefore, this impact is considered less than significant.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Countryside SP Certified EIR. No changes or additions to the Countryside SP Certified EIR analysis are necessary.

18. TRIBAL CULTURAL RESOURCES. Would the project cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and

scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is:

a. Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code section 5020.1(k)?

Discussion of Effects: The project site was previously analyzed in the Countryside SP Certified EIR and no historic or potentially historic resources were identified within the project site, as part of the Barth Farms property. Per the Cultural Resources Assessment (BCR Consulting, LLC., December 2022) of the project site, no cultural resources of any kind (including historic-period or prehistoric archaeological resources, or historic-period architectural resources) were identified. Therefore, no significant impact related to historical resources is anticipated.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Countryside SP Certified EIR. No changes or additions to the Countryside SP Certified EIR analysis is necessary.

b. A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code section 5024.1. In applying the criteria set forth in subdivision (c) of Public Resources Code section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe.

Discussion of Effects: Per the Countryside SP Certified EIR, although an intensive pedestrian field survey was not conducted for Neighborhood 2 of the project site, the entire SP area has been subject to substantial disturbance over lengthy periods of time, as a result of livestock movement, livestock waste collection and disposal, agriculture, and other development that would have displaced potential surface and subsurface archaeological resources. Therefore, potential impacts to archaeological resources are not anticipated. Per the Cultural Resources Assessment (BCR Consulting, LLC., December 2022) an intensive pedestrian field survey of the project site was conducted and no cultural resources of any kind (including historic-period or prehistoric archaeological resources, or historic-period architectural resources) were identified. The results of the Sacred Lands File Search, through the NAHC, did not indicate known Tribal Cultural Resources (TCR) within the project site boundary. Therefore, no significant impact related to Tribal Cultural Resources are anticipated. The City initiated consultation with the following Native American tribes in October 2022, pursuant to AB 52 and/or SB 18: Agua Caliente Band of Cahuilla Indians, Gabrieleño Band of Mission Indians – Kizh Nation, Gabrielino Tongva Indians of California, Fort Yuma Quechan Tribe, Yuhaaviatam of San Manuel Nation (formerly known as the San Manuel Band of Mission Indians) and none had comment or requested to consult further. Per the Countryside SP Certified EIR, despite the lack of documented resources in the vicinity, the possibility of discovering archaeological remains during excavation for future projects within the Specific Plan area cannot be completely discounted. No provisions exist for the recovery of previously unknown archaeological resources as a result of ground-disturbing activities associated with site preparation and construction and therefore mitigation measures CUL-2 (a-c)-SP are applicable to the project and would reduce impacts to unknown archaeological resources to a less than significant level.

Mitigation: Refer to mitigation measure CUL-2 (a-c)-SP above.

19. UTILITIES AND SERVICE SYSTEMS. Would the project:

a. Require or result in the relocation or construction of new or expanded water, wastewater treatment or storm water drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects?

Discussion of Effects: Per the Countryside SP Certified EIR, implementation of the proposed project would not require nor result in the construction of new or expanded water treatment facilities, the construction of which could cause significant environmental effects. The Countryside SP Certified EIR included Mitigation Measure UTIL-1-SP which required the developer of the first phases of development in the SP to prepare a Subarea 5 Sewer Plan in accordance with the New Model Colony (NMC) Sewer Master Plan, which discusses how the project will be served, how the area will be connected to the City's backbone system, and the area's impact on downstream facilities. Sewer improvements to serve the proposed project will be required to be constructed in accordance with the Subarea 5 Sewer Plan. In addition, the proposed project would not substantially increase electric power and natural gas demands beyond available supply. The project-generated demand for electricity and natural gas would be negligible in the context of overall demand within the City of Ontario and the state, and thus is not anticipated to require substantial upgrades or expansion of existing electricity systems. Implementation of MM UTIL-3-SP would further reduce impacts to less-than- significant levels. The Project will not have an impact on telecommunications facilities. Therefore, these impacts are less-than-significant.

> Mitigation Measure UTIL-3-SP: Project design and construction shall be coordinated with Southern California Edison and Southern California Gas Company, and improvements provided if necessary, in order to ensure that connections are adequate and capacity is available to accommodate estimate demand for gas and electric utilities.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Countryside SP Certified EIR. No changes or additions to the Countryside SP Certified EIR analysis are necessary.

b. Have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry and multiple dry years?

Discussion of Effects: The subject site was previously analyzed in the TOP 2050 Certified SEIR. The project site's northern parcel is designated as Medium Density Residential (MDR) and the southern parcel is designated as Low Medium Density Residential (LMDR), in TOP 2050, which allows for a combined total of 217-484 dwelling units on the 23.2-acre site. As the proposed project includes 265 units, it is consistent with these TOP land use designations and the associated number of dwelling units, for which impacts were evaluated in the TOP 2050 Certified SEIR. As outlined in the TOP 2050 Certified SEIR, the 2020 Urban Water Management Plan (UWMP) states that there are sufficient water supplies through 2045 to meet project demands in normal years, single dry years, and multiple dry years through 2045 and there are sufficient water supplies to meet the demand for TOP 2050 buildout.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the TOP 2050 Certified SEIR. No changes or additions to the TOP 2050 Certified SEIR analysis are necessary.

c. Result in a determination by the wastewater treatment provider which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?

Discussion of Effects: As stated in the Countryside SP Certified EIR, implementation of the proposed project would not increase wastewater generation such that existing and planned treatment facilities would be inadequate to serve the project's projected demand in addition to the provider's existing commitments. As part of previous New Model Colony (NMC) planning efforts, wastewater treatment requirements were assessed for future buildout to determine what infrastructure would be necessary. As a result, a new treatment plant RP-5 was proposed to accommodate wastewater demands of the NMC ultimate land uses and was constructed in 2003. The proposed project will be served by the RP-5 treatment plant. This is considered a less-than-significant impact.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Countryside SP Certified EIR. No changes or additions to the Countryside SP Certified EIR analysis are necessary.

d. Generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals?

Discussion of Effects: Per the Countryside SP Certified EIR, the approximate 4.5 tons per day (tpd) generated by the proposed project would represent 0.05 percent of daily tonnage to the El Sobrante Landfill. As discussed, the Solid Waste Department for the City of Ontario has indicated that the proposed project would dispose of solid waste at this landfill and capacity would be adequate for approximately 30 years. In addition, mitigation measure Mitigation Measure UTIL-2-SP would ensure that a project-related solid waste plan is prepared to ensure that an acceptable amount of project-related solid waste is diverted from landfills. Implementation of this mitigation measure would ensure that impacts are reduced to a less-than-significant level.

> Mitigation Measure UTIL-2-SP: Prior to issuance of building permits for the first project component, the Applicant shall submit a Solid Waste Management Plan to the City's Recycling Coordinator. This plan shall discuss how the project will implement source reduction and recycling methods in compliance with existing City programs. Additionally, this plan shall include how the project will address the construction and demolition-generated waste from the site. These methods shall include, but shall not be limited to, the following:
> - Provision of recycling bins for glass, aluminum, and plastic for visitors and employees of the proposed project
> - Provision of recycling bins for glass, aluminum, plastic, wood, steel, and concrete for construction workers during construction phases
> - Bins for cardboard recycling during construction
> - Scrap wood recycling during construction
> - Green waste recycling of landscape materials

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Countryside SP Certified EIR. No changes or additions to the Countryside SP Certified EIR analysis are necessary.

e. Comply with federal, state, and local management and reduction statutes and regulations related to solid waste?

Discussion of Effects: Per the Countryside SP Certified EIR, this Project complies with federal, state, and local statues and regulations regarding solid waste. Therefore, no impacts are anticipated.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Countryside SP Certified EIR. No changes or additions to the Countryside SP Certified EIR analysis are necessary.

20. MANDATORY FINDINGS OF SIGNIFICANCE.

a. Does the project have the potential to degrade the quality of the environment, substantially reduce the habitat or a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory?

Discussion of Effects: As outlined above under *Biological Resources*, no special-status botanical species were present nor any suitable habitat that would support them. No threatened or endangered species have been reported to occur within the project site, however some sensitive bird species and migratory avian species and raptors may use portions of the site and adjacent areas during the breeding season and are protected under the Migratory Bird Treaty Act (MBTA.) However, this potential impacts to birds and their nests are reduced to a less than significant with implementation of Mitigation Measures BIO-1(a)-SP and BIO-4-SP, that are applicable to the project. The proposed Project does not have the potential to reduce wildlife habitat, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, or reduce the number or restrict the range of a rare or endangered plant or animal. As outlined above under *Cultural Resources*, Per the Cultural Resources Assessment (BCR Consulting, LLC., December 2022) of the project site, no cultural resources of any kind (including historic-period or prehistoric archaeological resources, or historic-period architectural resources) were identified. The project would not eliminate important examples of the major periods of California history or prehistory. Therefore, less than significant impacts resulting from the Project are anticipated.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Countryside SP Certified EIR. No changes or additions to the Countryside SP Certified EIR analysis are necessary.

b. Does the project have the potential to achieve short-term environmental goals to the disadvantage of long-term environmental goals?

Discussion of Effects: The Project does not have the potential to achieve short-term environmental goals to the disadvantage of long-term environmental goals.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Countryside SP Certified EIR. No changes or additions to the Countryside SP Certified EIR analysis is necessary.

c. Does the project have impacts that are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current project, and the effects of probable future projects.)

Discussion of Effects: As outlined in the Countryside SP Certified EIR, buildout of the SP would result in cumulative impacts that are significant and unavoidable to the following: the loss of Prime Farmland and cancellation of Williamson Act contracts, air quality from construction and operational emissions of criteria pollutants, and regional loss of habitat for sensitive species and raptor foraging habitat.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Countryside SP Certified EIR. No changes or additions to the Countryside SP Certified EIR analysis is necessary.

d. Does the project have environmental effects that will cause substantial adverse effects on human beings, either directly or indirectly?

Discussion of Effects: As outlined in the analysis above, the Project does not have environmental effects that will cause substantial adverse effects on human beings, either directly or indirectly.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Countryside SP Certified EIR. No changes or additions to the Countryside SP Certified EIR analysis is necessary.

EARLIER ANALYSES

(Earlier analyses may be used where, pursuant to the tiering, program EIR, or other CEQA process, one or more effects have been adequately analyzed in an earlier EIR or Negative Declaration. Section 15063(c)(3)(D)):

1) Earlier Analyzes Used. Identify earlier analyzes used and state where they are available for review.

a) Countryside Specific Plan Certified EIR

b) The Ontario Plan 2050 Certified SEIR

c) The Ontario Plan 2050

d) City of Ontario Zoning

All documents listed above are on file with the City of Ontario Planning Department, 303 East "B" Street, Ontario, California 91764, (909) 395-2036.

2) Impacts Adequately Addressed. Identify which effects from the above checklist were within the scope of, and adequately analyzed in, an earlier document pursuant to applicable legal standards.

All effects from the above checklist were within the scope of, and adequately analyzed in, the Countryside Specific Plan Certified EIR and The Ontario Plan 2050 (TOP 2050) Certified SEIR.

Delhi Sands Flower-Loving Fly Habitat Suitability Assessment

The undersigned certify that the statements furnished in this report and exhibits present data and information required for this biological evaluation, and the facts, statements, and information presented is a complete and accurate account of the findings and conclusions to the best of our knowledge and beliefs.

Travis J. McGill
Director

Thomas J. McGill, Ph.D.
Managing Director

December 2022

Executive Summary

This report contains the findings of a habitat suitability assessment for the Delhi Sands flower-loving fly (*Rhaphiomidas terminatus abdominalis*; DSF), a federally endangered species, for an approximately 23-acre Project Site located within Assessor Parcel Numbers (APNs) 0218-111-60 and -61, west of Archibald Avenue, north of Chino Avenue, and south of the State Route 60 in the City of Ontario, San Bernardino County, California. The purpose of this assessment was to examine the existing conditions on the proposed Project site and determine if the site supported clean Delhi Sand soils capable of supporting DSF. The habitat suitability assessment fieldwork was conducted by Thomas J. McGill, Ph.D. (ELMT Consulting) on October 31, 2022.

The project site is mapped by the United States Department of Agriculture (USDA) Natural Resources Conservation Service (NRCS) Soil Survey as supporting Delhi fine sand soils in band running north to south on the western and eastern boundary of the project site. The middle of the project site has been mapped as supporting Hilmar loamy fine sandy. Since the project site has been continuously farmed for several decades with a variety of crops and disked between rotation of crops with disking across the band of Delhi Sand soils occurring at a 90-degree angle, the band of Delhi Sands that may have historically been present has been thoroughly integrated the into the larger areas of clay soils found on the site. Due to these historic and current land uses, no undisturbed native plant communities exist on the site. The site supports one (1) land cover type that is classified as disturbed. Due to the long-standing regime of crop rotation and disking, the small bands of Delhi Sand soils that were mapped as historically occurring on the site, no longer occur, having been thoroughly mixed into the clay soils that surround the band of Delhi Sand soils. No clean Delhi Sands are present, and the site is considered unsuitable habitat for DSF.

Section 1 Introduction

ELMT Consulting (ELMT) conduced a Delhi Sands Flower-loving Fly (DSF) Habitat Suitability Assessment for an approximately 23-acre Project Site located within APNs 0218-111-60 and -61, in the City of Ontario, San Bernardino County, California. Thomas J. McGill, Ph.D., inventoried the project site to determine the suitability ratings of the Delhi Sands habitats on October 31, 2022. This assessment was conducted to determine the extent to which the soils on the project site support clean Delhi fine sand soils capable of providing suitable habitat for DSF, quantify the amount of such habitat, and determine the general location and distribution of such soils within the project site boundaries.

1.1 PROJECT LOCATION

The project site is generally located west of Interstate 15 and south of State Route 60, east of State Route 83, and north of the State Route 91 in the City of Ontario, San Bernardino County, California. The site is depicted on Guasti quadrangle of the United States Geological Survey's (USGS) 7.5-minute map series within Section 10 of Township 2 South, Range 7 West (Exhibit 1, *Site Vicinity*). Specifically, the project site is located immediately west of Archibald Avenue, north of Chino Avenue, south of Riverside Drive, and east of the Cucamonga Creek Channel within APNs 0218-111-60 and -61 (Exhibit 2, *Project Site*).

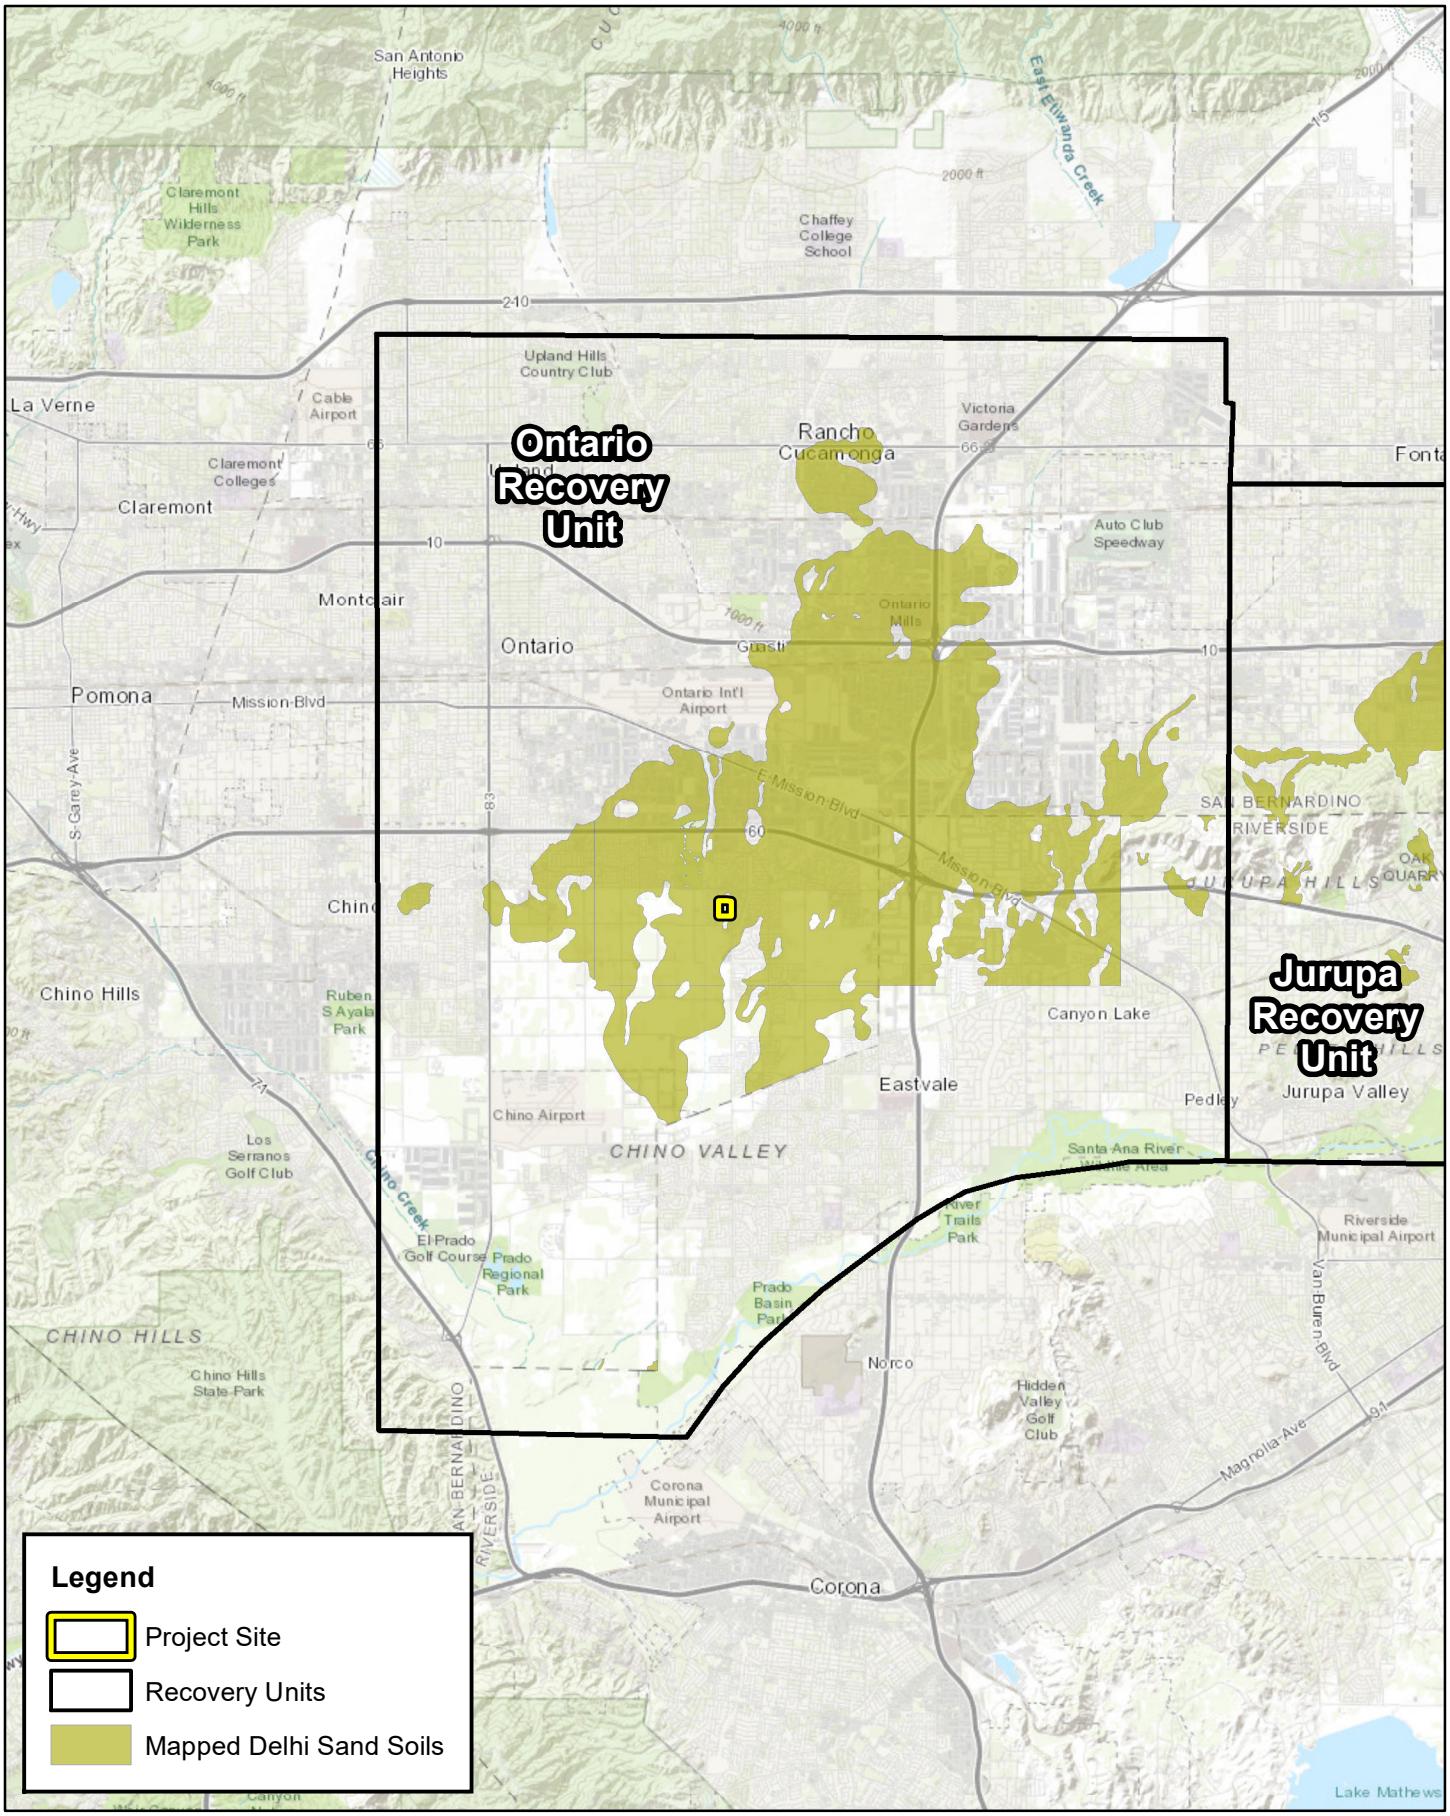
Section 2 Background



It has been generally acknowledged that DSF can be found to occur in Delhi sand soils, particularly clean dune formations composed of Aeolian sands. Conversely, soils and sands deposited by fluvial processes from the surrounding alluvial fans do not support DSF. These alluvial soils are composed of course sands, cobble and gravel (Tujunga soils) or coarse sands, silts and clays (Cieneba soils). In this part of San Bernardino County, the separation of soil types has been lost due to the mixing and cross contamination from years of agricultural activities, development, and other man-made disturbances.

Depending on the extent of mixing and contamination, some areas formally mapped as Delhi sand soils no longer have potential to support DSF populations. Conversely, some areas formally mapped as Cieneba soils may now supported wind deposited Delhi sand soils and have potential to support DSF. Six DSF experts (Ken Osborne, Greg Ballmer, Rudy Matoni, Karin Cleary-Rose, Alison Anderson and Tom McGill) used this criterion, the relative abundance of clean Delhi sand soils versus the amount of Cienba or other alluvial soils, to rate the suitability of the habitat to support DSF (Michael Brandman Associates, 2003). Soils high in gravel and alluvial materials, or high in fine materials such as silts and clays, were rated low, while soils that appear to be high in Aeolian deposited sands were rated high. This qualitative assessment of DSF habitat was further refined by considering the relative degree of soil compaction. Alluvial soils have a tendency to solidify to a hard surface pavement, while Aeolian soils are easier to penetrate and provide good substrate for DSF.

Although it has been common to attribute the presence of four common plant species California buckwheat (*Eriogonum fasciculatum*), California croton (*Croton californicus*), deer weed (*Acmispon glaber*), and telegraph weed (*Heterotheca grandiflora*) as indicators of habitat suitability, for the assessment, vegetation composition was not given much weight in making this habitat evaluation. These dominant plant species, and plant species composition of habitats, may not be directly relevant to larval development (due to likely predatory or parasitic nature of DSF larvae) (Osborne, et al. 2003). The known immature life histories of the nine asiloid fly families, including that to which the DSF is classified, are primarily predatory and/or parasitic on other invertebrate species (mainly insects) and the presence or absence of plant species appears not to be relevant to the life history of these flies.

Land with suitable DSF habitat includes only those areas with open, clean and unconsolidated Delhi Series soils that have not been permanently altered by residential, commercial, or industrial development, or other human actions. Areas known to contain Delhi sand soils and/or to be occupied by DSF have been divided by USFWS into three recovery units (Colton, Jurupa, and Ontario Recovery Units (USFWS, 1997)). These recovery units are defined as large geographic areas based on geographic proximity, similarity of habitat, and potential genetic exchange.

The project site is located within the Ontario Recovery Unit (Exhibit 2, *DSF Recovery Units*). The Project Site was originally in an agricultural preserve in south portion of the City of Ontario but I now surround by residential development on all four sides.

ARCHIBALD AVENUE PROJECT

DSF Recovery Units

ELMT CONSULTING

Exhibit 7801

Section 3 Methodology

The criteria discussed in detail below were used to rate the relative abundance of clean Delhi sand soils verses the amount of Cieneba Tujunga, or other alluvial soils, to rate the suitability of the habitat to support DSF. Soils high in gravel and alluvial materials, or high in fine materials such as silts and clays, were rated low, while soils that appear to be high in Aeolian deposited sands were rated high. This qualitative assessment of DSF habitat was further refined by considering the relative degree of soil compaction. Alluvial soils have a tendency to solidify to a hard surface pavement, while Aeolian soils are loose sandy soils that are easier to penetrate and provide good substrate for DSF.

3.1 SOIL

Onsite and adjoining soils were researched prior to the field visit using the United States Department of Agricultural (USDA) Natural Resources Conservation Survey (NRCS) Soil Survey for San Bernardino County, California. In particular, the USDA NRCS was reviewed to determine the location of mapped Delhi fine sand soils on or within the immediate vicinity of the project site. The project site is underlain by Delhi fine sand and Hilmar loamy fine sand soils (refer to Exhibit 4, *Soils*).

3.2 VEGETATION

Vegetative resources and surrounding land uses were also assessed as part of determining baseline conditions by walking meander transects and recording all species observed and adjacent land uses. Common plant species observed during the field investigation were identified by visual characteristics and morphology in the field and recorded in a field notebook. Unusual and less-familiar plants were photographed in the field and identified in the laboratory using taxonomic guides. Taxonomic nomenclature used in this study follows the 2012 Jepson Manual (Hickman 2012). In this report, scientific names are provided immediately following common names of plant species (first reference only).

3.3 HABITAT SUITABILITY ASSESSMENT

The scope of the updated habitat suitability assessment was to determine the continued presence and distribution of consolidated and unconsolidated soils and to further evaluate the quality of Delhi Sands across the site as it pertains to DSF. ELMT biologist Tom McGill surveyed the project site on October 31, 2022.

The habitat suitability assessment consisted of a visual and tactile inspection of all areas on the project site that contain Delhi sand soils. The soils within the project site are mapped as Delhi fine sands (Exhibit 3, *Soils*). The site was evaluated for the quality or purity of Delhi Sands and for its potential to support DSF. Areas were assigned one or more ratings ranging between 1 and 5, with 5 being the best quality and most suitable habitat:

1. Soils dominated by heavy deposits of alluvial material including coarse sands and gravels with little or no Delhi sand soils and evidence of soil compaction. Developed areas, non-Delhi sands

soils with high clay, silt, and/or gravel content. Delhi sands extensively and deeply covered by dumping of exotic soils, rubble, trash or organic debris. *Unsuitable.*

2. Delhi sand soils are present, but the soil characteristics include a predominance of alluvial materials (Tujunga Soils and Hilmar loamy sand), or predominance of other foreign contamination. Sever and frequent disturbance (such as maintenance yard or high use roadbed). *Very Low Quality*.

3. Although not clean, sufficient Delhi sand soils are present to prevent soil compaction. Moderately contaminated Delhi sands. Delhi sands with moderate to high disturbance (such as annual disking). Sufficient Delhi sands are present to prevent soil compaction (related to contamination by foreign soils). Some sandy soils exposed on the surface due to fossorial animal activity. *Low Quality*.

4. Abundant clean Delhi sand soils with little or no foreign soils (such as alluvial material, Tujunga soils or Hilmar loamy sand) present. Moderate abundance of exposed sands on the soil surface. Low vegetative cover. Evidence of moderate degree of fossorial animal activity by vertebrates and invertebrates. May represent high quality habitat with mild or superficial disturbance. *Moderate Quality*.

5. Sand dune habitat with clean Delhi sand soils. High abundance of exposed sands on the soil surface. Low vegetative cover. Evidence (soil surface often gives under foot) of high degree of fossorial animal activity by vertebrates and invertebrates. Sand associated plant and arthropod species may be abundant. *High Quality*.

It should be noted that habitat qualities often vary spatially within a site so that conditions on a site fall within a range of qualities. Further, overall habitat quality is affected by the overall habitat value of a site.

Section 4 Results

4.1 EXISTING CONDITIONS

The proposed project site is an undeveloped property in the City of Ontario. The site is bounded to the north, west, south, and east by existing development. The site has been actively farmed for several with a variety of crops and disked between rotation of crops. No native vegetation exists on the project site. The current crop in place during the assessment was wheat.

The project site is mapped by the as supporting Delhi fine sand soils in band running north to south on the western and eastern boundary of the project site. The project site has been subject to a variety of anthropogenic impacts for several decades due to farming of the site, including crop rotation, disking, irrigation and use of fertilizers, herbicides and insecticides. There is no indication of a band of intact band of clean Delhi Sand soils.

4.2 SUITABILITY ASSESSMENT

Dr. McGill examined of the soil quality on the project site on October 31, 2022, using the referenced DSF habitat suitability scale (Ballmer, Osborne, McGill 2003). Although a small portion of the project site is mapped by NRCS as supporting Delhi Sand soils, farming of the site, combined with disking the band of Delhi Sand soils at a 90-degree angle, has thoroughly mixed what Delhi Sands that may have historically existed on the project site, with the much larger areas of clay soils found on either side of the central band of Delhi Sand soils. Due to these historic and ongoing land uses, no undisturbed native plant communities exist on the site. The site supports one (1) land cover type that is classified as disturbed. It is evident that the long-standing regime of crop rotation and disking that the small band of Delhi Sand soils mapped within the center of the site, has been thoroughly mixed with the clay soils that surround this small band. No clean Delhi Sands are present and the site is considered unsuitable habitat for DSF (refer to Exhibit 5, *DSF Habitat Suitability*).

Exhibit 7806

Section 5 Summary and Conclusion

A small band of Delhi Sand soil was assessed on October 31, 2022, using the referenced DSF habitat suitability scale (Ballmer, Osborne, McGill 2003), to determine the band provided intact, clean Delhi Sand soils capable of supporting a population of DSF. Although the project site is mapped by NRCS as sporting Delhi Sand soils, farming of the site, combined with the disking of the band of Delhi Sand soils at a 90-degree angle has thoroughly mixed what Delhi Sands that may have historically on the site with the much larger areas of clay soils found on either side of the central band of Delhi Sand soils. Due to these historic and ongoing land uses, no undisturbed native plant community exist on the site. The small band of Delhi Sand soils that was mapped as historically occurring on the site, has been thoroughly mixed with the clay soils and clean Delhi Sands are no longer present. The site is considered unsuitable habitat for DSF and was assigned a habitat suitability rating of 1.

MANAGEMENT SUMMARY

BCR Consulting LLC (BCR Consulting) is under contract to RB Ontario LLC to complete a Cultural Resources Assessment of Assessor Parcel Number 0218-111-60 Project (the project) located in the City of Ontario (City), San Bernardino County, California. A cultural resources records search, intensive-level pedestrian field survey, Native American Heritage Commission (NAHC) Sacred Lands File Search, and vertebrate paleontological resources overview were conducted for the project in partial fulfillment of the California Environmental Quality Act (CEQA). The records search results revealed that 11 previous cultural resource studies have taken place, and five cultural resources have been identified within the half-mile research radius. None of the previous studies have assessed the project site for cultural resources and no cultural resources have been identified within its boundaries. No cultural resources of any kind were identified during the field survey. Therefore, no significant impact related to historical resources is anticipated and no further investigations are recommended for the proposed project unless:

- The proposed project is changed to include areas that have not been subject to this cultural resource assessment;
- Cultural materials are encountered during project activities.

The current study attempted to determine whether significant archaeological deposits were present on the proposed project site. Although none were yielded during the records search and field survey, ground-disturbing activities have the potential to reveal buried deposits not observed on the surface. Prior to the initiation of ground-disturbing activities, field personnel should be alerted to the possibility of buried prehistoric or historic cultural deposits. In the event that field personnel encounter buried cultural materials, work in the immediate vicinity of the find should cease and a qualified archaeologist should be retained to assess the significance of the find. The qualified archaeologist shall have the authority to stop or divert construction excavation as necessary. If the qualified archaeologist finds that any cultural resources present meet eligibility requirements for listing on the California Register or the National Register of Historic Places (National Register), plans for the treatment, evaluation, and mitigation of impacts to the find will need to be developed. Prehistoric or historic cultural materials that may be encountered during ground-disturbing activities include:

- historic-period artifacts such as glass bottles and fragments, cans, nails, ceramic and pottery fragments, and other metal objects;
- historic-period structural or building foundations, walkways, cisterns, pipes, privies, and other structural elements;
- prehistoric flaked-stone artifacts and debitage (waste material), consisting of obsidian, basalt, and or cryptocrystalline silicates;
- groundstone artifacts, including mortars, pestles, and grinding slabs;
- dark, greasy soil that may be associated with charcoal, ash, bone, shell, flaked stone, groundstone, and fire affected rocks;
- human remains.

Findings were negative during the Sacred Lands File search with the NAHC (see Appendix C). The City will initiate Assembly Bill (AB) 52 Native American Consultation for the project. Since the City will initiate and carry out the required Native American Consultation, the results of the consultation are not provided in this report. However, this report may be used during

the consultation process, and BCR Consulting staff is available to answer questions and address concerns as necessary.

According to CEQA Guidelines, projects subject to CEQA must determine whether the project would "directly or indirectly destroy a unique paleontological resource". The Paleontological Overview provided in Appendix D has recommended that:

> The geologic units underlying the project area are mapped primarily as alluvial fan deposits from the Holocene and late Pleistocene epochs (Morton and Miller, 2006). Pleistocene alluvial units are considered to be highly paleontologically sensitive. The Western Science Center does not have localities within the project area or within a 1 mile radius; however, WSC does have localities in similarly mapped localities across Southern California.
>
> Any fossil specimen from the Assessor Parcel Number 0218-111-60 Project would be scientifically significant. Excavation activity associated with the development of the project area would impact paleontologically sensitive Pleistocene alluvial units, and it is the recommendation of the Western science Center that a paleontological resource mitigation program be put in place to monitor, salvage, and curate any recovered fossils associated with the study area.

If human remains are encountered during any project activities, State Health and Safety Code Section 7050.5 states that no further disturbance shall occur until the County Coroner has made a determination of origin and disposition pursuant to Public Resources Code Section 5097.98. The County Coroner must be notified of the find immediately. If the remains are determined to be prehistoric, the Coroner will notify the NAHC, which will determine and notify a Most Likely Descendant (MLD). With the permission of the landowner or his/her authorized representative, the MLD may inspect the site of the discovery. The MLD shall complete the inspection within 48 hours of notification by the NAHC.

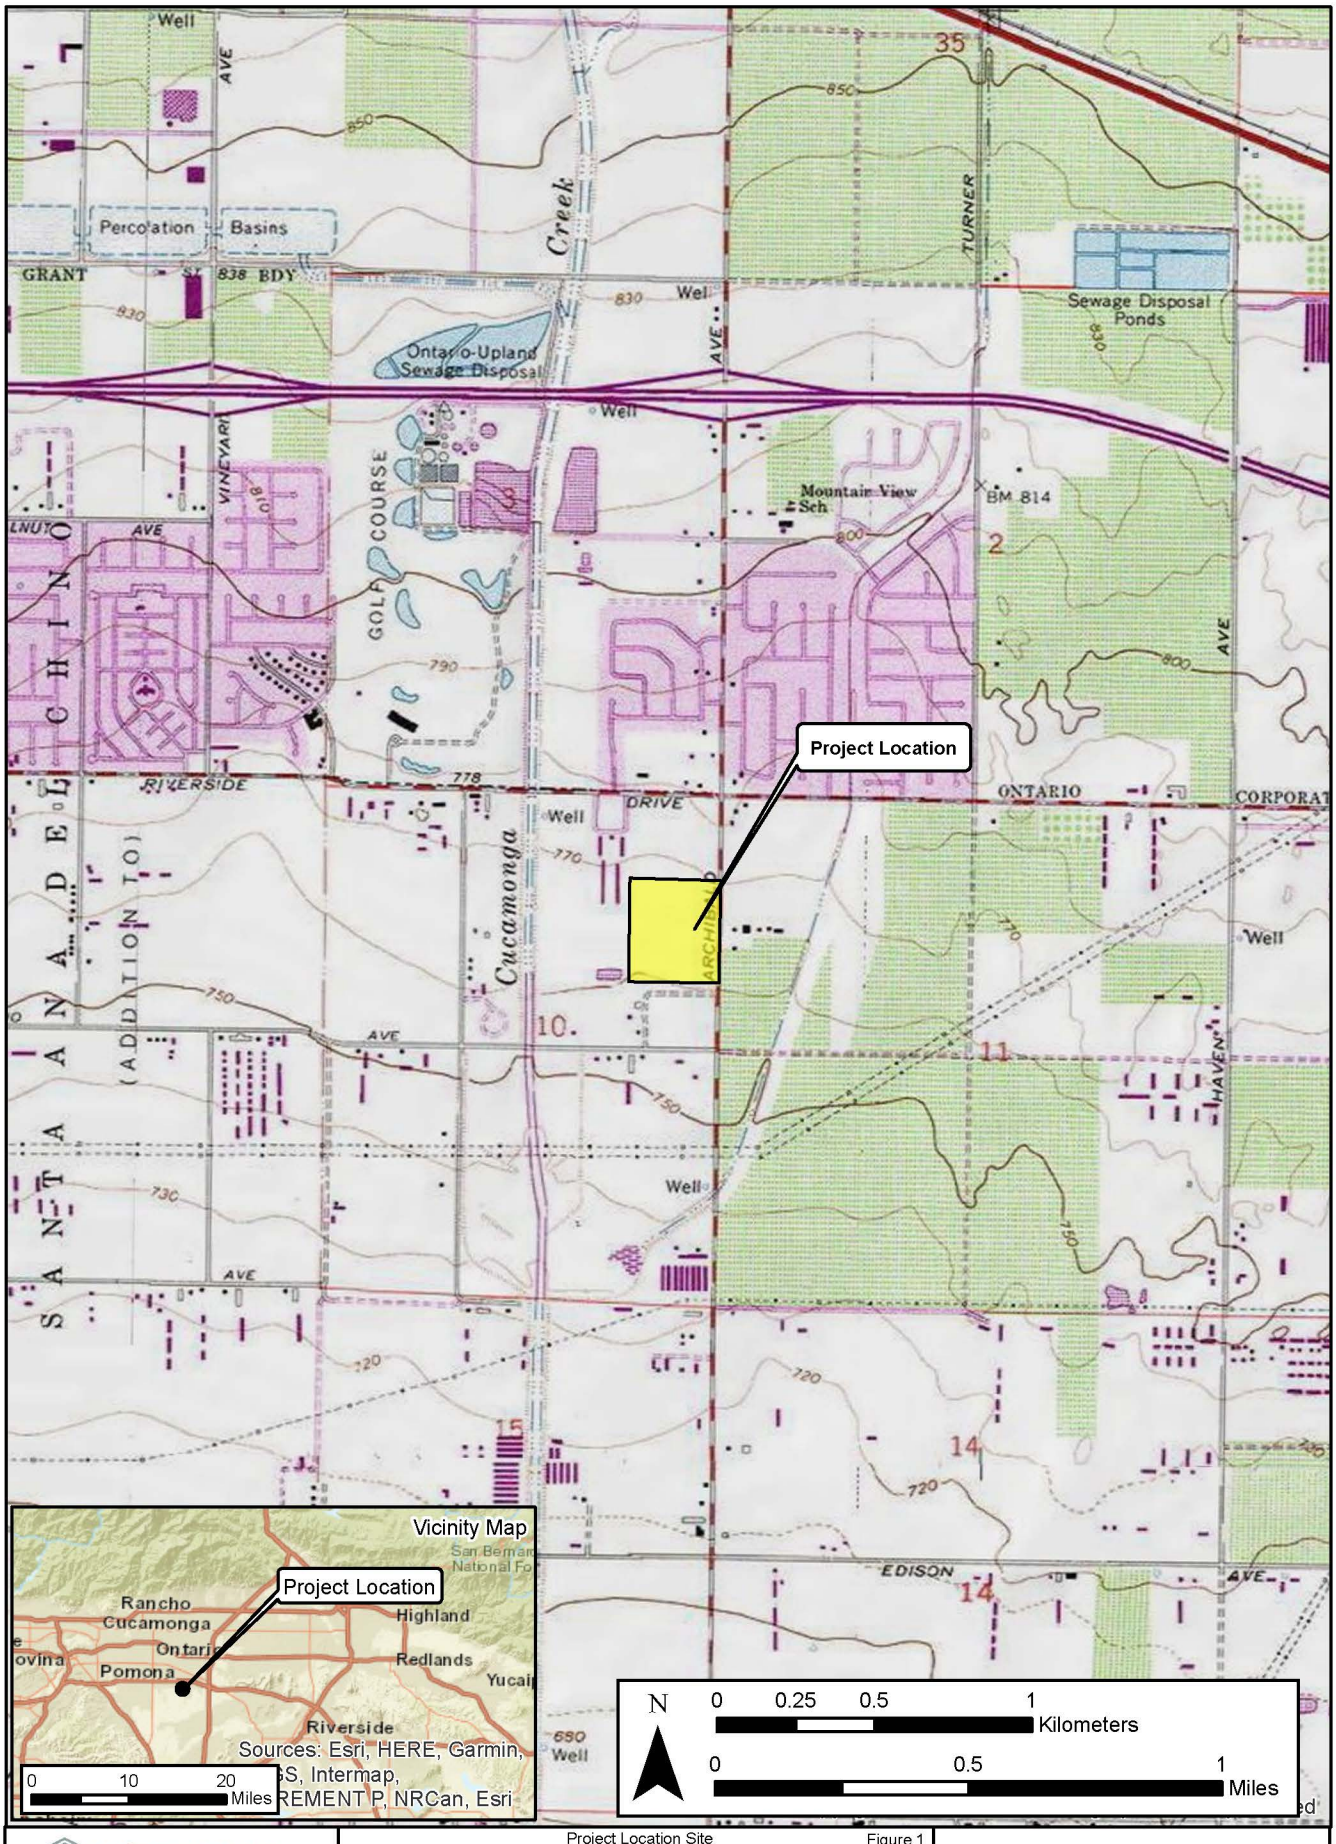
INTRODUCTION

BCR Consulting LLC (BCR Consulting) is under contract to RB Ontario LLC to complete a Cultural Resources Assessment of Assessor Parcel Number 0218-111-60 Project (project) in the City of Ontario (City), San Bernardino County, California. The project occupies approximately 23 acres and is bounded by residential properties to the west, south, and north and Archibald Avenue borders the project site to the east. A cultural resources records search, intensive pedestrian field survey, vertebrate paleontological resources overview, and Sacred Lands File search with the Native American Heritage Commission (NAHC) were conducted for the project in partial fulfillment of the California Environmental Quality Act (CEQA). The project site is located in Section 10 of Township 2 South, Range 7 West, San Bernardino Baseline and Meridian. It is depicted on the United States Geological Survey (USGS) *Guasti, California* (1981) 7.5-minute topographic quadrangle (Figure 1).



Regulatory Setting

The California Environmental Quality Act. CEQA applies to all discretionary projects undertaken or subject to approval by the state's public agencies (California Code of Regulations 14(3), § 15002(i)). Under CEQA, "A project with an effect that may cause a substantial adverse change in the significance of a historical resource is a project that may have a significant effect on the environment" (Cal. Code Regs. tit. 14(3), § 15064.5(b)). State CEQA Guidelines section 15064.5(a) defines a "historical resource" as a resource that meets one or more of the following criteria:

- Listed in, or eligible for listing in, the California Register of Historical Resources (California Register)
- Listed in a local register of historical resources (as defined at Cal. Public Res. Code § 5020.1(k))
- Identified as significant in a historical resource survey meeting the requirements of § 5024.1(g) of the Cal. Public Res. Code
- Determined to be a historical resource by a project's lead agency (Cal. Code Regs. tit. 14(3), § 15064.5(a))

A historical resource consists of "Any object, building, structure, site, area, place, record, or manuscript which a lead agency determines to be historically significant or significant in the architectural, engineering, scientific, economic, agricultural, educational, social, political, military, or cultural annals of California…Generally, a resource shall be considered by the lead agency to be 'historically significant' if the resource meets the criteria for listing in the California Register of Historical Resources" (Cal. Code Regs. tit. 14(3), § 15064.5(a)(3)).

The significance of a historical resource is impaired when a project demolishes or materially alters in an adverse manner those physical characteristics of a historical resource that convey its historical significance and that justify its eligibility for the California Register. If an impact on a historical or archaeological resource is significant, CEQA requires feasible measures to minimize the impact (State CEQA Guidelines § 15126.4 (a)(1)). Mitigation of significant impacts must lessen or eliminate the physical impact that the project will have on the resource. Section 5024.1 of the Cal. Public Res. Code established the California Register. Generally, a resource is considered by the lead agency to be "historically significant" if the resource meets

the criteria for listing in the California Register (Cal. Code Regs. tit. 14(3), § 15064.5(a)(3)). The eligibility criteria for the California Register are similar to those of the National Register of Historic Places (National Register), and a resource that meets one or more of the eligibility criteria of the National Register will be eligible for the California Register.

The California Register program encourages public recognition and protection of resources of architectural, historical, archaeological, and cultural significance, identifies historical resources for state and local planning purposes, determines eligibility for state historic preservation grant funding and affords certain protections under CEQA. Criteria for Designation:

1. Associated with events that have made a significant contribution to the broad patterns of local or regional history or the cultural heritage of California or the United States.
2. Associated with the lives of persons important to local, California or national history.
3. Embodies the distinctive characteristics of a type, period, region or method of construction or represents the work of a master or possesses high artistic values.
4. Has yielded, or has the potential to yield, information important to the prehistory or history of the local area, California or the nation.

In addition to meeting one or more of the above criteria, the California Register requires that sufficient time has passed since a resource's period of significance to "obtain a scholarly perspective on the events or individuals associated with the resources." (CCR 4852 [d][2]). Fifty years is normally considered sufficient time for a potential historical resource, and in order that the evaluation remain valid for a minimum of five years after the date of this report, all resources older than 45 years (i.e. resources from the "historic-period") will be evaluated for California Register listing eligibility, or CEQA significance. The California Register also requires that a resource possess integrity. This is defined as the ability for the resource to convey its significance through seven aspects: location, setting, design, materials, workmanship, feeling, and association.

Finally, CEQA requires that significant effects on unique archaeological resources be considered and addressed. CEQA defines a unique archaeological resource as any archaeological artifact, object, or site about which it can be clearly demonstrated that, without merely adding to the current body of knowledge, there is a high probability that it meets any of the following criteria:

1. Contains information needed to answer important scientific research questions and there is a demonstrable public interest in that information.
2. Has a special and particular quality such as being the oldest of its type or the best available example of its type.
3. Is directly associated with a scientifically recognized important prehistoric or historic event or person.

CEQA Guidelines Section 15064.5 Appendix G includes significance criteria relative to archaeological and historical resources. These have been utilized as thresholds of significance here, and a project would have a significant environmental impact if it would:

a) cause a substantial adverse change in the significance of a historical resource as defined in section 10564.5;

b) Cause a substantial adverse change in the significance of an archaeological resource pursuant to Section 10564.5;

c) Disturb any human remains, including those interred outside of formal cemeteries.

Tribal Cultural Resources. The Legislature added requirements regarding tribal cultural resources for CEQA in Assembly Bill 52 (AB 52) that took effect July 1, 2015. AB 52 requires consultation with California Native American tribes and consideration of tribal cultural resources in the CEQA process. By including tribal cultural resources early in the CEQA process, the legislature intended to ensure that local and Tribal governments, public agencies, and project proponents would have information available, early in the project planning process, to identify and address potential adverse impacts to tribal cultural resources. By taking this proactive approach, the legislature also intended to reduce the potential for delay and conflicts in the environmental review process. To help determine whether a project may have such an effect, the Public Resources Code requires a lead agency to consult with any California Native American tribe that requests consultation and is traditionally and culturally affiliated with the geographic area of a Proposed Project. Since the City will initiate and carry out the required AB52 Native American Consultation, the results of the consultation are not provided in this report. However, this report may be used during the consultation process, and BCR Consulting staff are available to answer questions and address comments as necessary.

Paleontological Resources. CEQA provides guidance relative to significant impacts on paleontological resources, indicating that a project would have a significant impact on paleontological resources if it disturbs or destroys a unique paleontological resource or site or unique geologic feature. Section 5097.5 of the California Public Resources Code specifies that any unauthorized removal of paleontological remains is a misdemeanor. Further, California Penal Code Section 622.5 sets the penalties for damage or removal of paleontological resources. CEQA documentation prepared for projects would be required to analyze paleontological resources as a condition of the CEQA process to disclose potential impacts. Please note that as of January 2018 paleontological resources are considered in the geological rather than cultural category. Therefore, paleontological resources are not summarized in the body of this report. A paleontological overview completed by the Western Science Center is provided as Appendix D.

City of Ontario. The City has adopted the Ontario Development Code that establishes historic preservation activities and requirements. Properties may be designated at the local level as Historic Landmarks or Districts. Unless there is evidence for extraordinary importance, only properties over 50 years of age are eligible for inclusion. A property that meets one or more of the following criteria is eligible to be placed on the City's List of Historic Landmarks and Districts if:

1. It meets the criteria for listing in the NRHP; or
2. it meets the criterion for listing in the CRHR; or
3. it meets one of more of the following criteria:
   A. It exemplifies or reflects special elements of the City's history;
   B. It is identified with persons or events significant in local, state, or national history;
   C. It is representative of the work of a notable builder, designer, architect, or artist;
   D. It embodies distinguishing characteristics of a style, type, period, or method of construction;
   E. It is noteworthy example of the use of indigenous materials or craftsmanship;
   F. It embodies elements that represent a significant structural, engineering, or architectural achievement or innovation;
   G. It has a unique location, a singular physical characteristic, or is an established and familiar visual feature of a neighborhood, community of the City; or
   H. It is one of the few remaining examples in the City, region, state, or nation possessing distinguishing characteristics of an architectural or historical type or specimen.
   I. It has yielded or is likely to yield information important to the City's history or prehistory.

Landmarks and Districts listed in the National Register or the California Register are automatically listed as City Historic Landmarks and Districts. A City Landmark and/or District must also possess integrity.

NATURAL SETTING

The project is located in the Pomona Valley, which is bounded on the west by the San Jose Hills, on the south by the Chino Hills, on the north by the foothills of the San Gabriel Mountains (USGS 1981), and on the east by La Sierra and the Jurupa Mountains. Local rainfall ranges from 5 to 15 inches annually (Jaeger and Smith 1971:36-37). The area containing the project site exhibits a very gradual southerly slope, which lies on a flood plain that feeds the Santa Ana River approximately five miles to the south (USGS 1981). The native biology of the region is difficult to reconstruct due to weed abatement, development of agriculture, and municipal, and industrial impacts. However, the project site is situated in the Upper Sonoran Life Zone, which is locally present between approximately 500 and 5,000 feet AMSL. This zone typically comprises cismontane valleys and low mountain slopes dominated by mixed coastal sage scrub and chaparral vegetation communities (Williams 2008).

CULTURAL SETTING

Prehistoric Context

The project site is located within the traditional boundaries of the Gabrielino (Bean and Smith 1978; Kroeber 1925). The Gabrielino probably first encountered Europeans when Spanish explorers reached California's southern coast during the 15th and 16th centuries (Bean and Smith 1978; Kroeber 1925). The first documented encounter, however, occurred in 1769 when Gaspar de Portola's expedition crossed Gabrielino territory (Bean and Smith 1978). Other brief encounters took place over the years, and are documented in McCawley 1996 (citing numerous sources). The Gabrielino name has been attributed by association with the Spanish mission of San Gabriel, and refers to a subset of people sharing speech and customs with

other Cupan speakers (such as the Juaneño/Luiseño/Ajachemem) from the greater Takic branch of the Uto-Aztecan language family (Bean and Smith 1978). Gabrielino villages occupied the watersheds of various rivers (locally including the Santa Ana) and intermittent streams. Chiefs were usually descended through the male line and often administered several villages. Gabrielino society was somewhat stratified and is thought to have contained three hierarchically ordered social classes which dictated ownership rights and social status and obligations (Bean and Smith 1978:540-546). Plants utilized for food were heavily relied upon and included acorn-producing oaks, as well as seed-producing grasses and sage. Animal protein was commonly derived from rabbits and deer in inland regions, while coastal populations supplemented their diets with fish, shellfish, and marine mammals (Boscana 1933, Heizer 1968, Johnston 1962, McCawley 1996). Dog, coyote, bear, tree squirrel, pigeon, dove, mud hen, eagle, buzzard, raven, lizards, frogs, and turtles were specifically not utilized as a food source (Kroeber 1925:652).

History

Historic-era California is generally divided into three periods: the Spanish or Mission Period (1769 to 1821), the Mexican or Rancho Period (1821 to 1848), and the American Period (1848 to present).

Spanish Period. The first European to pass through the area is thought to be a Spaniard called Father Francisco Garces. Having become familiar with the area, Garces acted as a guide to Juan Bautista de Anza, who had been commissioned to lead a group across the desert from a Spanish outpost in Arizona to set up quarters at the Mission San Gabriel in 1771 near what today is Pasadena (Beck and Haase 1974). Garces was followed by Alta California Governor Pedro Fages, who briefly explored the region in 1772. Searching for San Diego Presidio deserters, Fages had traveled through Riverside to San Bernardino, crossed over the mountains into the Mojave Desert, and then journeyed westward to the San Joaquin Valley (Beck and Haase 1974).

Mexican Period. In 1821, Mexico overthrew Spanish rule and the missions began to decline. By 1833, the Mexican government passed the Secularization Act, and the missions, reorganized as parish churches, lost their vast land holdings, and released their neophytes (Beattie and Beattie 1974).

American Period. The American Period, 1848–Present, began with the Treaty of Guadalupe Hidalgo. In 1850, California was accepted into the Union of the United States primarily due to the population increase created by the Gold Rush of 1849. The cattle industry reached its greatest prosperity during the first years of the American Period. Mexican Period land grants had created large pastoral estates in California, and demand for beef during the Gold Rush led to a cattle boom that lasted from 1849–1855. However, beginning about 1855, the demand for beef began to decline due to imports of sheep from New Mexico and cattle from the Mississippi and Missouri Valleys. When the beef market collapsed, many California ranchers lost their ranchos through foreclosure. A series of disastrous floods in 1861–1862, followed by a significant drought further diminished the economic impact of local ranching. This decline combined with ubiquitous agricultural and real estate developments of the late 19th century, set the stage for diversified economic pursuits that continue to this day (Beattie and Beattie 1974; Cleland 1941).

Ontario. Ontario, California was founded as a township in September 1882 by George and William B. Chaffey, named after their home of Ontario, Canada. The brothers purchased 6,218 acres of land with water rights and set aside 640 acres for the community of Ontario. Half of the initial 640 acres was deeded to the Chaffey Agricultural College as an endowment. On December 10, 1891, Ontario was incorporated as a city under the California Constitution with a City Council-City Manager form of government. In 1903, Ontario was proclaimed a "Model Irrigation Colony" by an Act of Congress. Ontario had many modern innovations, many of which still show their value today. An impressive two-hundred feet wide and eight miles long, Euclid Avenue (on the National Register List of Historic Places) was the stately back-bone of the colony.

Provisions for an electric railway, water rights for each landowner, a local educational institution, electric lights, one of the first long distance telephone lines, and public access to water and transportation set a new standard for rural communities and irrigation practices and ensured the success of the Model Colony. Water originating from the nearby San Gabriel Mountains was readily available. In addition to accessible water, climate conditions in Ontario were similar to those in the Mediterranean with dry, hot summers and cool, moist winters as regular occurrences. Ontario first developed as an agricultural community, largely, but not exclusively, devoted to the citrus industry. In addition to oranges, the production of peaches, walnuts, lemons, olives and grapes were also important to the growth of Ontario and neighboring cities (City of Ontario; Galvin & Associates 2004:7).

In 1923, airplane enthusiasts Waldo Waterman and Archie Mitchell established Latimer Field. From that point on, Ontario became an aviation town. Urban growth pushed the fliers east until they took up their permanent residence located at the Ontario World Airport. During WWII, this airport was a busy training facility for pilots. After WWII, construction boomed in Ontario as the city's growth more than doubled by the end of the 1950s. In 1954, four new schools were built, with land for three more being purchased. That same year, the Interstate 10 opened for public use, diminishing or altering commercial traffic through Ontario. The downtown area found competition in neighborhood shopping centers that featured large parking lots and national brand chain stores (Rounds 1999:125-126).

As the citrus industry declined, large tracts of orange groves gave way to new housing for settlers to the region. Following the 1960s and 1970s, the city's population had grown from 46,617 to 87,300 residents as Ontario expanded its boundaries eastward to encompass Guasti and the large tracts of vineyards beyond it (Rounds 1999:130). Ontario has become a diversified community with approximately 173,000 residents in 2015. Although the City boundaries have been extended from 0.38 square miles in 1891 to almost 50 square miles today, Ontario's Historic Downtown still retains the original subdivision pattern established by the Chaffey brothers (City of Ontario 2018).

The dry, arid climate made Ontario amenable to several agricultural products. While irrigation innovations brought abundant water to Ontario for its booming citrus industry, the cultivation of grape vineyards and wineries enjoyed similar success in the area. Secondo Guasti, an Italian immigrant who arrived in California in 1883, saw promise in the sandy sediment and subsurface water supply of the area south of Cucamonga and Ontario. Together with several other Italians,

Guasti purchased 2,000 acres of land for $60,000 to establish the Italian Vineyard Company (The Ontario City Library 2017:74; Rounds 1999:88). Guasti township, an unincorporated community comprising 1,200 mostly Italian and Mexican immigrants who worked on the vineyards and wine-making processes, was concurrently established. Secondo Guasti funded the construction of a fire station, a school, markets and shops, a dairy and farms, rows of clapboard houses for workers, and much more to be utilized by the community. Guasti's winery operation was modern by contemporary standards, with grapes being mechanically crushed and transported by conveyors, pumps, and hoses. In 1908 a narrow-gauge railroad brought grapes to the crusher, and in 1909 a refrigeration plant was installed to control fermentation temperatures. At its peak, the Italian Vineyard Company was renowned as the largest vineyard in the world, comprising nearly 5,000 acres of vineyards (Hees 2015).

Vineyards and wineries persisted as a specialty of the area through the first half of the 1900s. Even during the years of Prohibition, the vineyards continued to produce grapes for sacramental wine or home winemaking. Over the course of the ensuing decades, the vineyard workforces diversified from Italian immigrant labor to include Mexicans, Asians, and African Americans. Secondo Guasti passed away in 1927, leaving the company to his son Secondo II before his death in 1934. The Italian Vineyard Company's winery site was sold to Garrett & Company in 1945, then to the Biane family in 1957 who operated Brookside Winery on-site until the 1980s (Ontario City Library 2017: 73, 75). The success of vineyards and their production in the first half of the twentieth century would not carry over to the latter half. At its peak in the 1940s, the region contained 60 wineries and over 45,000 acres of vineyards (Weeks 2008: 49). By the 1950s, profits for the region's sweet wine began to decline as national tastes began to favor dry table wines. New, more profitable wineries began springing up along California's northern coastal regions that were more favorable to drier varieties of wine (Rounds 1999:128).

PERSONNEL

David Brunzell, M.A., RPA acted as the Project Manager and Principal Investigator for the current study. Mr. Brunzell also compiled the technical report and performed the cultural resources record searches through the South-Central Coastal Information Center (SCCIC). BCR Consulting Field Director Joseph Orozco, M.A., R.P.A., Crew Chief Timothy Blood, M.S., and Staff Archaeologist Doug Kazmier, B.A. completed the field survey. Mr. Blood also contributed to the technical report. The paleontological overview (provided in Appendix D) was completed by Professional Paleontologist Brittney Elizabeth Stoneburg, Collections Manager for the Western Science Center.

METHODS

Research

Mr. Brunzell completed an archaeological records search using SCCIC records at California State University, Fullerton for the current project. This archival research reviewed the status of all recorded historic and prehistoric cultural resources, and survey and excavation reports completed within the project site boundaries and within a half-mile radius of it. Additional resources reviewed included the National Register of Historic Places (National Register), the California Register, and documents and inventories published by the California Office of Historic Preservation. These include the lists of California Historical Landmarks, California

Points of Historical Interest, Listing of National Register Properties, and the Inventory of Historic Structures.

Field Survey

An intensive-level cultural resources field survey of the project site was conducted on October 31, 2022. The survey was conducted by walking parallel transects spaced approximately 15 meters apart across the accessible project site. Soil exposures were carefully examined for evidence of cultural resources. Digital photographs were taken at various points within the project site. A hand-held global positioning system (GPS) unit was available for mapping purposes, and detailed notes were taken to record field conditions and any discoveries.

RESULTS

Research

Data from the SCCIC revealed that 11 previous cultural resource studies have taken place, and five cultural resources have been recorded within one half-mile of the project site. The project site has never previously been assessed for cultural resources, and no cultural resources have been previously identified within its boundaries. The records search results are summarized in Table A and a complete bibliography is provided in Appendix A.

Table A. Cultural Resources and Reports Within One Half-Mile of the Project Site

USGS 7.5 Min Quad	Cultural Resources Within One Half-Mile of Project	Studies Within One Half-Mile
Guasti (1981)	P-36-13241: Hist.-Period Residence (1/2 Mile NW) P-36-13242: Hist.-Period Residence (1/2 Mile NW) P-36-13243: Hist.-Period Residence (1/2 Mile NW) P-36-13244: Hist.-Period Residence (1/4 Mile W) P-36-25440: Hist.-Period Transmission Line (1/4 Mile S)	SB-317, 655, 800, 1029, 4150, 4171, 4174, 4675, 5424, 5976, 7968

Limited additional land-use research was performed to help characterize potential for the project site to contain any historic-period resources. Aerial photos show that the buildings, structures, and facilities that occupy the project site were constructed between 1985 and 1994 (United States Department of Agriculture 1985, 1994). Since the buildings are less than 45 years old, they are not historic in age and do not warrant further consideration under CEQA, or as a City landmark or District. Research has not yielded any evidence for historic or prehistoric resources located within the project site boundaries.

Field Survey

During the field survey BCR Consulting personnel carefully inspected the project site, and identified no cultural resources within its boundaries. Surface visibility was averaged approximately 40 percent within the project site. Ground disturbances were severe and resulted from a variety of natural and artificial factors, including pavement installation and modular building and agricultural development, as well as mechanical weed abatement, surface erosion, and adjacent road and residential construction. No historic-period or prehistoric cultural resources of any kind were identified within the project site boundaries.

RECOMMENDATIONS

BCR Consulting conducted a cultural resources assessment of Assessor Parcel Number 0218-111-60 located in the City of Ontario, San Bernardino County, California. No cultural resources of any kind (including historic-period or prehistoric archaeological resources, or historic-period architectural resources) were identified. Therefore, no significant impact related to historical resources is anticipated and no further investigations are recommended unless:

- The proposed project is changed to include areas that have not been subject to this cultural resource assessment;
- Cultural materials are encountered during project activities.

The current study attempted to determine whether significant archaeological deposits were present on the proposed project site. Although none were yielded during the records search and field survey, ground-disturbing activities have the potential to reveal buried deposits not observed on the surface. Prior to the initiation of ground-disturbing activities, field personnel should be alerted to the possibility of buried prehistoric or historic cultural deposits. In the event that field personnel encounter buried cultural materials, work in the immediate vicinity of the find should cease and a qualified archaeologist should be retained to assess the significance of the find. The qualified archaeologist shall have the authority to stop or divert construction excavation as necessary. If the qualified archaeologist finds that any cultural resources present meet eligibility requirements for listing on the California Register or the National Register of Historic Places (National Register), plans for the treatment, evaluation, and mitigation of impacts to the find will need to be developed. Prehistoric or historic cultural materials that may be encountered during ground-disturbing activities include:

- historic-period artifacts such as glass bottles and fragments, cans, nails, ceramic and pottery fragments, and other metal objects;
- historic-period structural or building foundations, walkways, cisterns, pipes, privies, and other structural elements;
- prehistoric flaked-stone artifacts and debitage (waste material), consisting of obsidian, basalt, and or cryptocrystalline silicates;
- groundstone artifacts, including mortars, pestles, and grinding slabs;
- dark, greasy soil that may be associated with charcoal, ash, bone, shell, flaked stone, groundstone, and fire affected rocks;
- human remains.

Findings were negative during the Sacred Lands File search with the NAHC (see Appendix C). The City will initiate Assembly Bill (AB) 52 Native American Consultation for the project. Since the City will initiate and carry out the required Native American Consultation, the results of the consultation are not provided in this report. However, this report may be used during the consultation process, and BCR Consulting staff is available to answer questions and address concerns as necessary.

According to CEQA Guidelines, projects subject to CEQA must determine whether the project would “directly or indirectly destroy a unique paleontological resource”. The Paleontological Overview provided in Appendix D has recommended that:

The geologic units underlying the project area are mapped primarily as alluvial fan deposits from the Holocene and late Pleistocene epochs (Morton and Miller, 2006). Pleistocene alluvial units are considered to be highly paleontologically sensitive. The Western Science Center does not have localities within the project area or within a 1 mile radius; however, WSC does have localities in similarly mapped localities across Southern California.

Any fossil specimen from the Assessor Parcel Number 0218-111-60 Project would be scientifically significant. Excavation activity associated with the development of the project area would impact paleontologically sensitive Pleistocene alluvial units, and it is the recommendation of the Western science Center that a paleontological resource mitigation program be put in place to monitor, salvage, and curate any recovered fossils associated with the study area.

If human remains are encountered during any project activities, State Health and Safety Code Section 7050.5 states that no further disturbance shall occur until the County Coroner has made a determination of origin and disposition pursuant to Public Resources Code Section 5097.98. The County Coroner must be notified of the find immediately. If the remains are determined to be prehistoric, the Coroner will notify the NAHC, which will determine and notify a Most Likely Descendant (MLD). With the permission of the landowner or his/her authorized representative, the MLD may inspect the site of the discovery. The MLD shall complete the inspection within 48 hours of notification by the NAHC.

Re: Assessor Parcel Number 0218-111-60 Project (RBO2201), San Bernardino County

Dear Mr. Brunzell:

A record search of the Native American Heritage Commission (NAHC) Sacred Lands File (SLF) was completed for the information you have submitted for the above referenced project. The results were negative. However, the absence of specific site information in the SLF does not indicate the absence of cultural resources in any project area. Other sources of cultural resources should also be contacted for information regarding known and recorded sites.

Attached is a list of Native American tribes who may also have knowledge of cultural resources in the project area. This list should provide a starting place in locating areas of potential adverse impact within the proposed project area. I suggest you contact all of those indicated; if they cannot supply information, they might recommend others with specific knowledge. By contacting all those listed, your organization will be better able to respond to claims of failure to consult with the appropriate tribe. If a response has not been received within two weeks of notification, the Commission requests that you follow-up with a telephone call or email to ensure that the project information has been received.

If you receive notification of change of addresses and phone numbers from tribes, please notify me. With your assistance, we can assure that our lists contain current information.

If you have any questions or need additional information, please contact me at my email address: Cameron.vela@nahc.ca.gov.

Sincerely,

Cameron Vela

APPENDIX D

PALEONTOLOGICAL OVERVIEW

WESTERN SCIENCE CENTER

November 15th, 2022

BCR Consulting, LLC
Joseph Orozco
505 W. 8th St.
Claremont, CA 91711

Dear Mr. Orozco,

This letter presents the results of a record search conducted for the Assessor Parcel Number 0218-111-60 Project located in the city of Ontario, San Bernardino County, CA. The project site is located north of Chino Avenue, south of East Riverside Drive, and west of South Archibald Avenue, on Township 2 South, Range 7 West, on Section 10 of the *Guasti, CA* USGS 7.5 minute quadrangle.

The geologic units underlying the project area are mapped primarily as alluvial fan deposits from the Holocene and late Pleistocene epochs (Morton and Miller, 2006). Pleistocene alluvial units are considered to be highly paleontologically sensitive. The Western Science Center does not have localities within the project area or within a 1 mile radius; however, WSC does have localities in similarly mapped localities across Southern California.

Any fossil specimen from the Assessor Parcel Number 0218-111-60 Project would be scientifically significant. Excavation activity associated with the development of the project area would impact the paleontologically sensitive Pleistocene alluvial units, and it is the recommendation of the Western Science Center that a paleontological resource mitigation program be put in place to monitor, salvage, and curate any recovered fossils associated with the study area.

If you have any questions, or would like further information, please feel free to contact me at bstoneburg@westerncentermuseum.org.

Sincerely,

Brittney Elizabeth Stoneburg, MSc
Collections Manager

FEHR PEERS

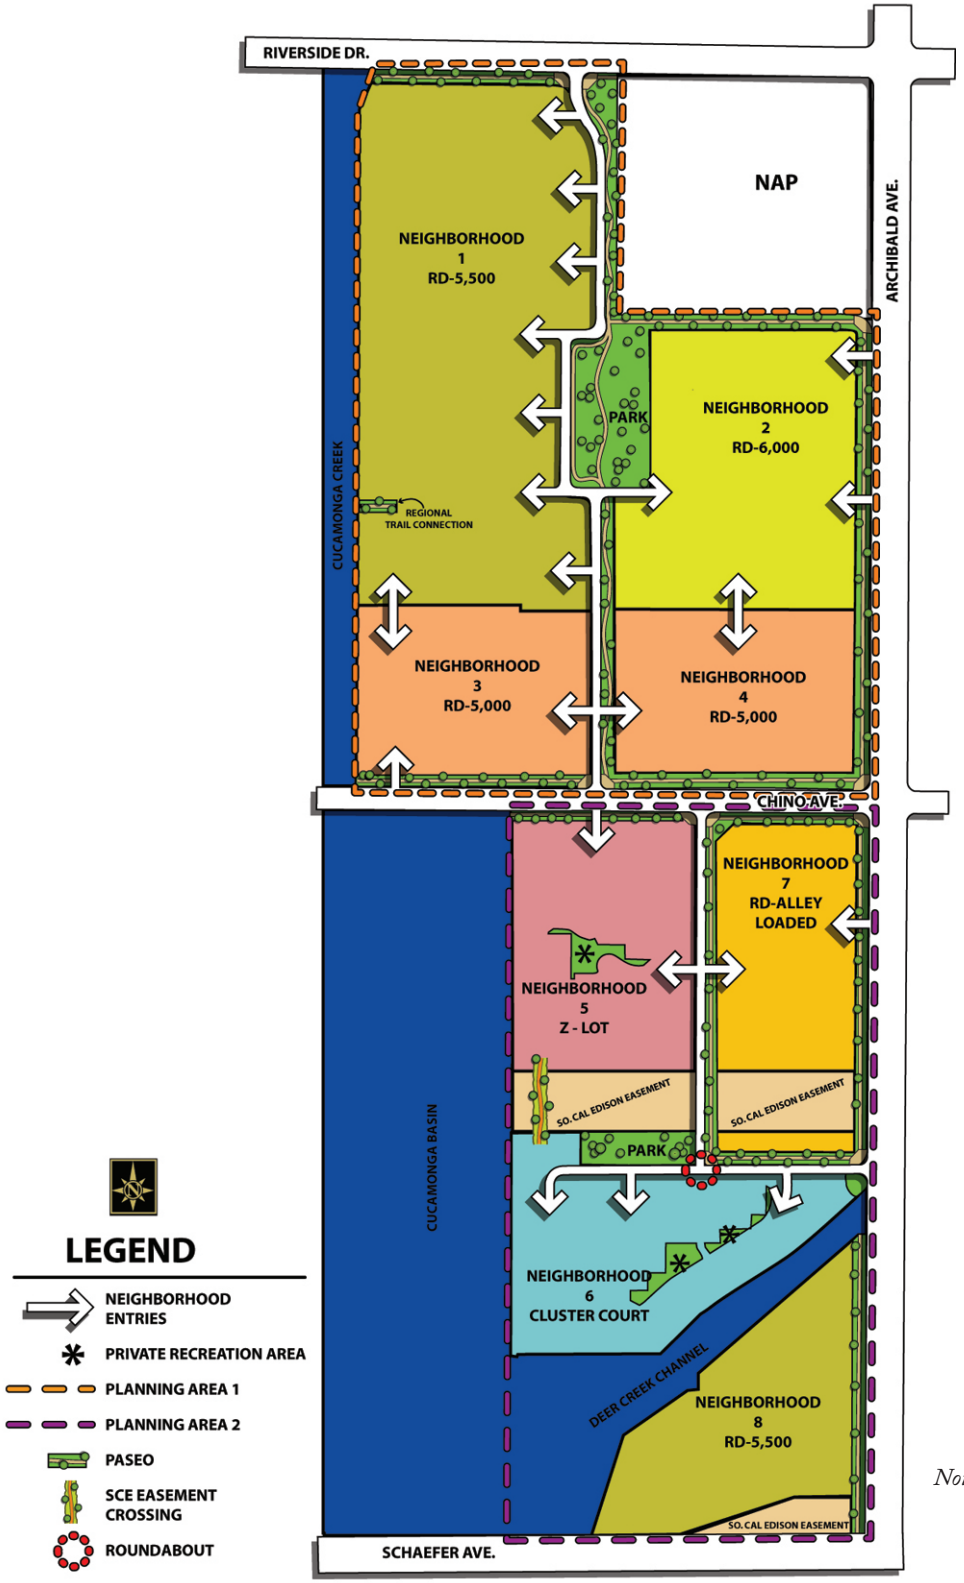
Memorandum

Date: April 24, 2023

To: Jeff Ragland, The Landmark Company

From: Paul Herrmann, P.E.
Biling Liu
Raymond Poss

Subject: Countryside Specific Plan (Neighborhood 2 Development) Project Vehicle Miles Traveled (VMT) Assessment and Impact Determination



OC22-0942

Fehr & Peers has completed a Vehicle Miles Traveled (VMT) Assessment and impact determination for the Countryside Specific Plan Amendment Project (Project) located in the New Model Colony area of Ontario, California. This VMT analysis is consistent with requirements of Senate Bill 743 (SB 743), the Office of Planning and Research's (OPR's) *Technical Advisory on Evaluating Transportation Impacts in CEQA* (2018), and the City of Ontario's adopted VMT Impact Analysis Resolution (No. 2020-071). The assessment concludes that the Project would result in a less-than-significant transportation impact.

The remainder of this memorandum is divided into six sections: Project Description, Analysis Approach, Traffic Modeling Methodology, VMT Estimates, Active Transportation and Public Transit Review, and Transportation Impact Analysis.

Project Description

The City of Ontario approved the Countryside Specific Plan (Specific Plan) and certified the associated *Countryside Specific Plan Final Environmental Impact Report* in March of 2006. The Approved Specific Plan is part of the Ontario New Model Colony. The Project area is bounded by the Carmel at the Colony Apartments to the North, Archibald Avenue to the West, and Colonial Ave to the West. **Figure 1** shows the approved Specific Plan land use map. The approved Specific Plan allows up to 825 Single Family Dwelling Units (SF DUs).

Note: Roundabout location and dimensions to be determined as part of tentative tract map approval.

Exhibit 10
Land Use Plan

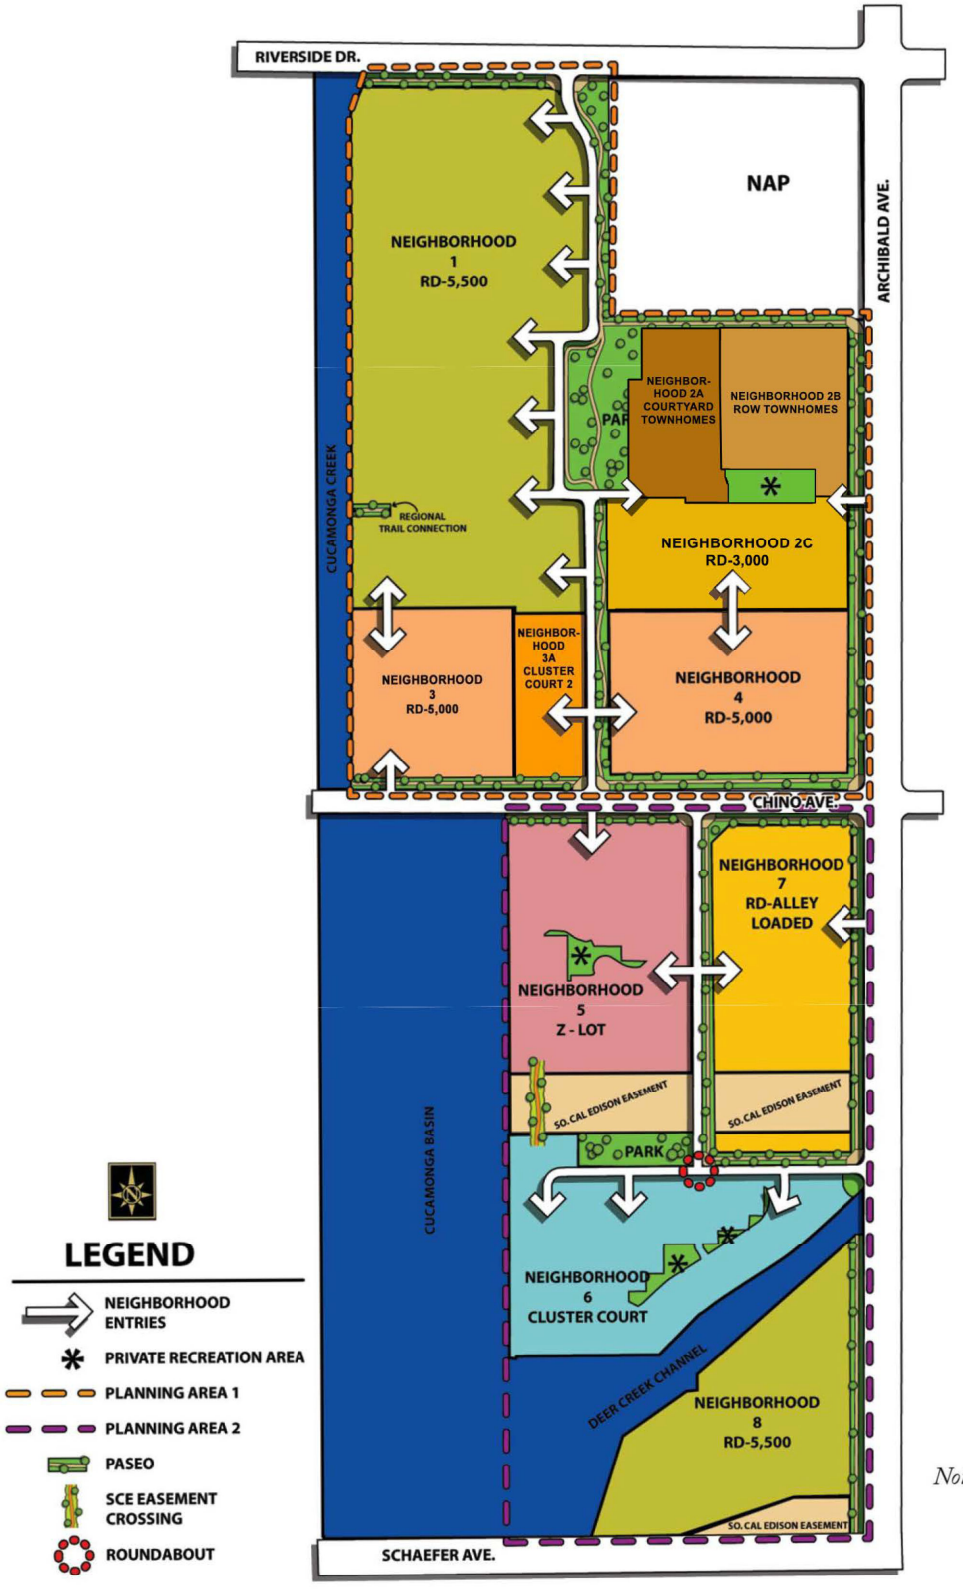
Figure 2 shows the proposed Specific Plan land use plan. The Project proposes to expand neighborhood 2 in the Planning Area 2 from 106 SF DUs to 82 SF DUs and 192 Multi-Family (MF) DUs. This increases the development yield of the Approved Specific Plan area from 825 DUs to 993 DUs. These changes are outlined in **Table 1** below.

Table 1: Approved and Proposed Land Use Plan

Area	Approved Plan	Proposed Plan	
	SF DUs	SF DUs	MF DUs
Neighborhood 2	106	82	192
Specific Plan Total	**825**	**801**	**192**
Total DUs	**825**	**993**	

Analysis Approach

The proposed Specific Plan is an amendment to an approved Environmental Impact Report (EIR), so a plan-to-plan comparison was prepared to compare the VMT forecasts for the proposed Specific Plan to the adopted Specific Plan. The adopted Specific Plan covers Planning Areas 1 and 2. The proposed Specific Plan includes amendments to Neighborhood 2 of Planning Area 1. For an 'apples-to-apples' comparison, VMT was estimated for Neighborhood 2 under the adopted and proposed specific plans, and VMT was estimated for the entire Countryside Specific Plan area under the adopted and proposed specific plans.



Traffic Modeling Methodology

The Ontario Plan (TOP) Model was utilized to estimate VMT for the Project. The TOP Model began as the San Bernardino Traffic Analysis Model (SBTAM)[1] and was updated for use in the City's General Plan Update EIR adopted in 2022. The roadway network and socio-economic data within the City of Ontario were updated to be consistent with the TOP EIR scenario modeling for Base Year (2019) and General Plan Buildout (2050). Outside of the City of Ontario, this model assumes datasets consistent with the 2016 Southern California Association of Governments (SCAG)

[1] SBTAM is a derivative of the SCAG regional travel demand forecasting model and underwent a subarea model development to add detail and refinement within San Bernardino County.

Revised Graphic

Countryside

Note: Roundabout location and dimensions to be determined as part of tentative tract map approval.

Exhibit 10
Land Use Plan Revised Graphic

Regional Transportation Plan and Sustainable Communities Strategy (RTP/SCS) with a base year of 2012 and future year of 2040[2]. As recommended in the SBTAM model documentation, model assignment parameters were set to run up-to five loops with a minimum convergence criterion[3] of 0.01.

VMT Analysis Methodology

There are multiple ways to estimate VMT for a residential project. Total VMT gives an estimate of the total travel, while VMT per person measures the efficiency of travel. VMT for residential projects is typically presented in the following ways:

- Total VMT and VMT per Service Population[4] (VMT/SP) from the project, using Origin/Destination (OD) method which tracks all trips starting and ending at the project
- Home-Based Production (HB) VMT and HB VMT per resident from the project, using the Production/Attraction (PA) method which tracks all resident trips produced by the project
- Total VMT and VMT/SP within a designated boundary, such as within City limits or 5-mile radius, using the Boundary method which measures effect of the project on VMT within a given area

The City of Ontario's VMT Resolution requires use of SBTAM to forecast total daily VMT/SP to estimate VMT per the following thresholds of significance:

- A significant impact would occur if the project VMT/SP (for the land use plan) exceeds the Citywide average for service population under General Plan Buildout Conditions (using the OD method)
- A significant impact would occur if the project caused total daily VMT/SP within the City to be higher than the no project alternative under cumulative conditions (using the Boundary method)

For purposes of this assessment, HB VMT and HB VMT per resident was also estimated using the PA method to provide additional information for the decision makers.

VMT and VMT per person estimates were calculated using these three methodologies using the City's recommended VMT assessment tool, the TOP Model. There are limitations in the TOP Model, which is a typical four-step travel demand forecasting model. The model steps, which convert person trips to vehicle

[2] Please note that SBTAM does not have an available dataset consistent with the SCAG 2020 RTP/SCS. At the time of this analysis, SBTAM was in the process of being updated with the SCAG 2020 RTP/SCS data, but the data was not available. This analysis uses the most current, available SBTAM model version consistent with the City of Ontario's VMT Impact Resolution.

trips, limit the ability to separate trips by trip purpose (e.g. residential-based trips or work-based trips) while also accounting for all modal trips, as noted further below.

Origin/Destination (OD) VMT

The OD method for calculating VMT sums all weekday VMT generated by trips with at least one trip end in the study area and tracks those trips to their estimated origins/destinations. The OD method is completed after the final loops of assignment in the travel demand model (after person trips have been converted to total vehicle trips). Origins are all vehicle trips that start in a specific traffic analysis zone, and destinations are all vehicle trips that end in a specific traffic analysis zone. OD VMT is typically presented as total VMT or as total VMT/SP.

The OD method accounts for trips that begin or end outside of the travel demand model. OD trip matrices do not separate trips by trip purpose, and therefore VMT cannot be calculated by Home-Based-Work (HBW) attraction VMT per employee or HB production VMT per resident, but only by total VMT. It should also be noted that, although VMT includes trips to/from the City that originate or are destined to locations outside of the model area, those trip lengths are artificially truncated at the model boundary.

Production/Attraction (PA) VMT

The PA method for calculating VMT sums all weekday VMT generated by HB production and HBW attraction trips with at least one trip end in the study area by trip purpose. The PA method tracks trips with at least one trip end in the analysis area to/from their ultimate destination unless that destination is outside of the model boundary area. Productions are land use types that generate trips (residences), and attractions are land use types that attract trips (employment). Productions and attractions are converted from person trips to vehicle trips for the purposes of calculating VMT. PA VMT can be presented as HB VMT per Resident or HBW VMT per Employee.

The PA method allows project VMT to be evaluated based on trip purpose which is consistent with OPR recommendations in the Technical Advisory. For example, a single-use project such as an office building

[3] Convergence criteria refers to the acceptable difference in the traffic volumes produced by different loops of the vehicle assignment. A convergence criteria of 0.01 indicates that the model is producing similar outputs with an allowance of 1% difference between each loop. This criterion is outlined in the model documentation as the recommended convergence criteria for the model.

[4] Service Population (SP) is the sum of population and employment.

could be analyzed based only on the commute VMT, or HBW attraction VMT per employee; and a residential project could be analyzed based on the HB production VMT per resident.

PA matrices do not include external trips that have one trip end outside of the model boundary (IX-XI trips), airport traveler trips, or truck trips, and therefore do not include those trips in the VMT estimates. This is not consistent with the OPR recommendations that suggest full accounting of VMT should be completed.

Boundary Method VMT

The boundary method is the sum of all weekday VMT (volume on each roadway segment times the segment length) on a roadway network within a designated boundary. Boundary method VMT estimates VMT by multiplying the number of trips on each roadway segment by the length of each segment. This approach consists of all trips, including those trips that do not begin or end in the designated boundary and is another way to summarize VMT. This is the only VMT method that captures the effect of cut-through and/or displaced traffic.

Boundary VMT can be presented as total VMT or as total VMT/SP. The boundary utilized in the assessment below is the Ontario City Limits Boundary per the requirements of the City's VMT Resolution. To provide additional information, a 5- and 10-mile radius boundary is also presented.

VMT Estimates

Both OD and PA Project-level VMT estimates for the two specific plan alternatives were performed using the Adopted General Plan Buildout (2050) scenario of the TOP model using the Socio-Economic Data (SED) input data shown in **Table 2**. The original SED in the Project TAZs were referenced to estimate persons per household assumptions for the Project. Land uses were coded into a separate TAZ to represent the Project.

Table 2: Land Use and VMT Data Summary

Land Use	Adopted Specific Plan		Proposed Specific Plan	
	Neighborhood 2	Full Plan	Neighborhood 2	Full Plan
SF DUs	106	825	82	801
MF DUs	0	0	192	192
Total DUs	106	825	274	993
Total Population	404	3,143	825	3,564
HB VMT	6,410	49,869	11,051	54,502
HB VMT/Resident	15.87	15.87	13.40	15.29
OD VMT	12,771	83,535	23,071	93,843
OD VMT/SP	31.61	26.58	27.69	26.33
Citywide SP		705,054		705,475
Citywide Boundary VMT		8,512,227		8,511,538
Citywide Boundary VMT/SP		12.07		12.06
5-Mile Boundary VMT		12,561,684		12,560,402
5-Mile SP		742,736		743,157
5-Mile Boundary VMT/SP		16.91		16.90
10-Mile Boundary VMT		40,421,127		40,420,884
10-Mile SP		2,178,603		2,179,024
10-Mile Boundary VMT/SP		18.55		18.55

Notes:
1. DUs = Dwelling Units.
2. SF = Single Family.
3. MF = Multi-Family.
4. HB VMT = Home-Based Production VMT.
5. OD VMT = Origin/Destination VMT.
6. SP = Service Population; the sum of population and employment.

Source: TOP Model, 2022

As shown in **Table 2**, the following VMT metrics are reduced (e.g. VMT is reduced) when comparing the proposed plan to the approved plan for both Neighborhood 2 isolated and for the full plan:

- HB VMT per resident
- OD VMT/SP
- Boundary VMT/SP within City limits, 5-mile radius and 10-mile radius

However, due to the increase in total housing units, the total OD VMT estimated for the proposed Specific Plan is higher with the Proposed Project.

The proposed Project was also compared to the City thresholds of significance:

- The Project OD VMT/SP (27.69) and the full specific plan OD VMT/SP (26.33) do not exceed the Citywide average OD VMT/SP (29.42) under General Plan Buildout Conditions
- The Project did not cause total daily VMT/SP (12.06) within the City to be higher than the no project alternative (12.07) under cumulative conditions (using the City Limit Boundary)

The proposed Project is forecast to reduce HB VMT per resident, OD VMT/SP and Boundary VMT/SP as compared to the approved project, and is forecast to produce VMT/SP below the City's impact thresholds; therefore, this project is anticipated to result in a **less-than-significant** transportation impact.

Active Transportation and Public Transit Review

Potential impacts to public transit, pedestrian facilities and travel, and bicycle facilities and travel were evaluated to determine if the Project conflicts with adopted policies, plans, or programs regarding public transit, bicycle, or pedestrian facilities, or otherwise decreases the performance[5] or safety of such facilities.

In general, the New Model Colony Area has been undergoing major re-development over the past decade as it shifts from agricultural to residential land uses. There are limited active transportation facilities and

[5] Per the OPR Technical Advisory, decrease of performance does not include increase in users.

transit service in undeveloped areas. Bicycle and pedestrian facilities are proposed as part of the Ontario General Plan and Bicycle Master Plan on most roadways throughout the New Model Colony area.

Bicycle Facilities Review

There are four bicycle facility classifications recognized by the City of Ontario and are classified as follows:

Class I Bikeways (Bike Paths)

Class I bicycle facilities are bicycle trails or paths that are off-street and separated from automobiles. They are a minimum of eight feet in width for two-way travel and include bike lane signage and designated street crossings where needed. A Class I Bike Path may parallel a roadway (within the parkway) or may be a completely separate right-of-way that meanders through a neighborhood or along a flood control channel or utility right-of-way.

Class II Bikeways (Bike Lanes)

Class II bicycle facilities are striped lanes that provide bike travel and can be either located next to a curb or parking lane. If located next to a curb, a minimum width of five feet is recommended. However, a bike lane adjacent to a parking lane can be four feet in width. Bike lanes are exclusively for the use of bicycles and include bike lane signage, special lane lines, and pavement markings.

Class III Bikeways (Bike Routes)

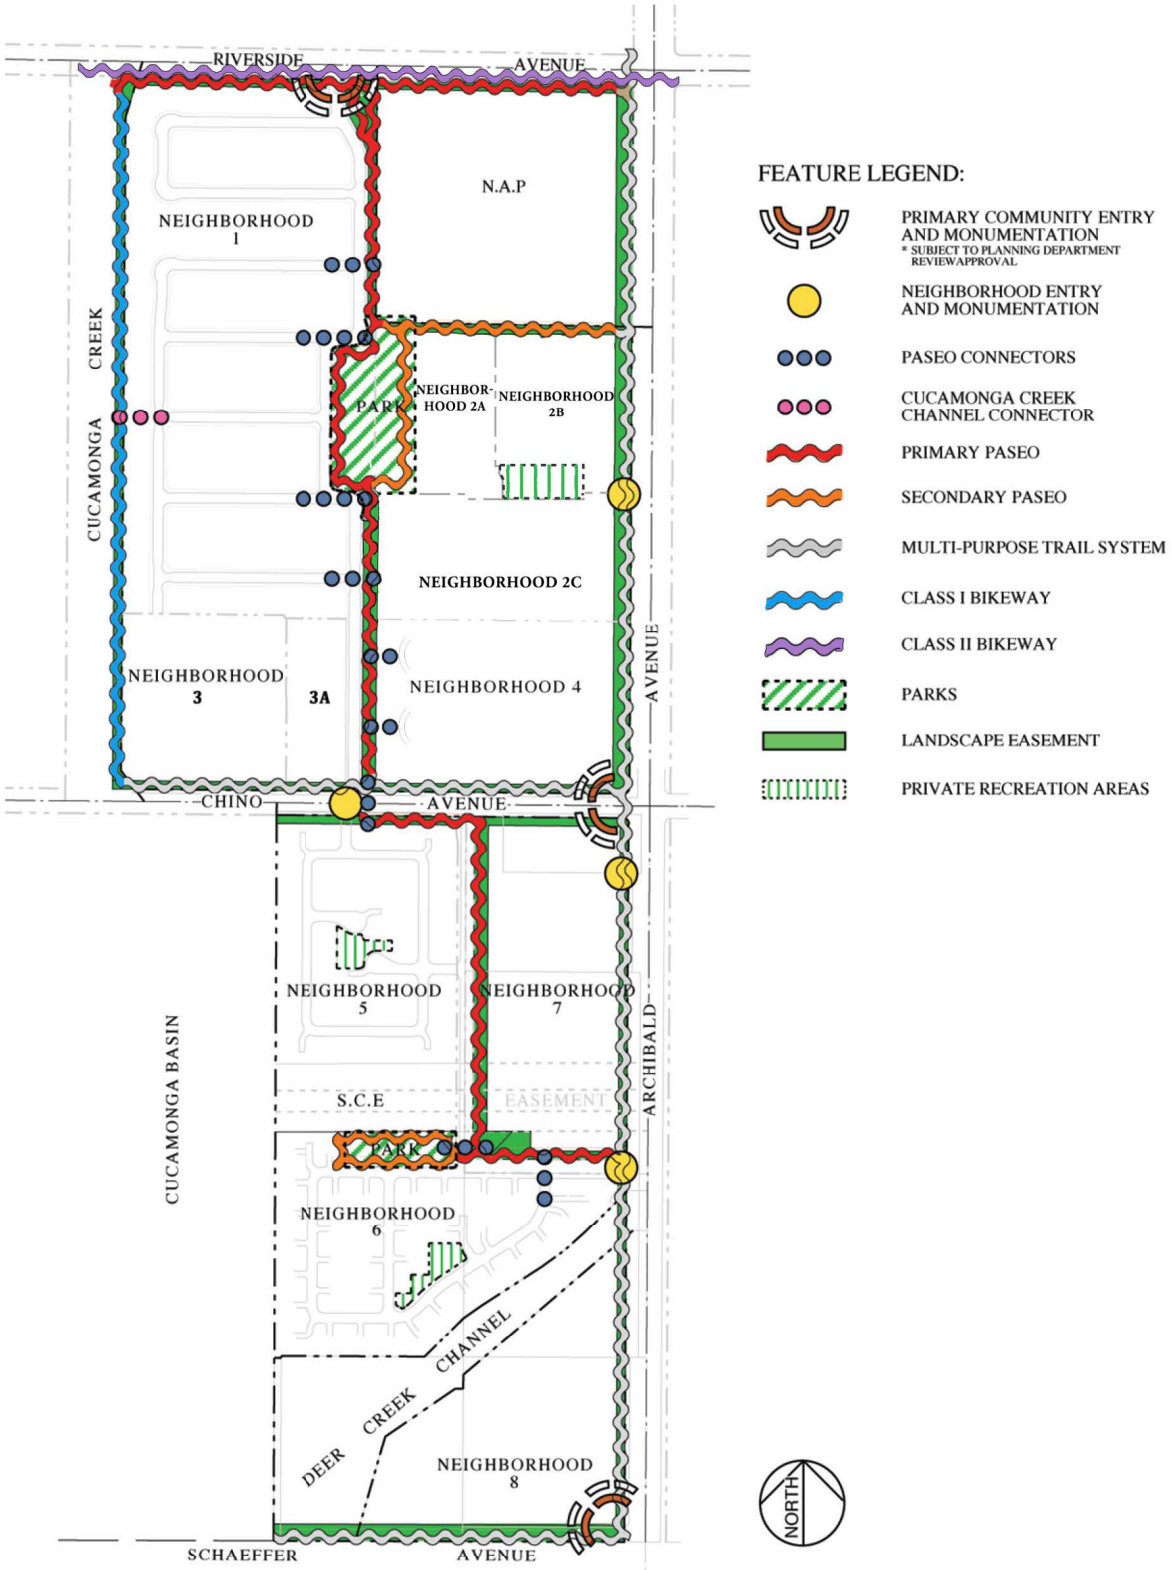
Class III Bikeways are streets providing for shared use by motor vehicles and bicyclists. While bicyclists have no exclusive use or priority, signage both by the side of the street and stenciled on the roadway surface alerts motorists to bicyclists sharing the roadway space and denotes that the street is an official bike route.

Class IV Bikeways (Cycle Tracks)

Class IV bicycle facilities, sometimes called cycle tracks or separated bikeways, provide a right-of-way designated exclusively for bicycle travel adjacent to a roadway and are protected from vehicular traffic via separations (e.g. grade separation, flexible posts, inflexible physical barriers, on-street parking). California Assembly Bill 1193 (AB 1193) legalized and established design standards for Class IV bikeways in 2015.

Existing and proposed bicycle facilities in the study area are shown in **Figure 3**. Adjacent to the Project Site, a Class I bike path is proposed along Archibald. Within the Project limits, a Class I multi-purpose bike trail is provided adjacent to Colonial Avenue between Riverside Drive and just south of Darien Street. This

trail is proposed to extend to Chino Avenue to connect with additional proposed trails on Chino Avenue and adjacent to kinglet Avenue and Dolomite Street to connect with Archibald Avenue. Another Class I facility is proposed on Schaefer Avenue between the Deer Creek Channel and Archibald Avenue.



Pedestrian Facilities Review

Pedestrian facilities include sidewalks, crosswalks, pedestrian signals, and multi-use trails. The portions of the New Model Colony area that have already been re-developed have accessible pedestrian facilities. At existing signalized intersections, adjacent to and within the Project site, crosswalks and pedestrian push-button actuated signals are provided. At existing unsignalized intersections, adjacent to and within the Project site, striped crosswalks are generally provided. Under the assumption that pedestrian facilities will continue to be constructed as the New Model Colony area develops, the Project will be part of a safe and efficient pedestrian network.

The Project proposes to develop a network of paved sidewalks separated from vehicular travel lanes by landscaped parkway throughout the Project site. Sidewalks are proposed on the Project-side of Archibald Avenue. A multi-purpose bike and pedestrian paseo is proposed along the perimeter of the Project and connecting to the Cucamonga Creek Channel.

Revised Graphic

Countryside

Revised Graphic

Exhibit 11
Parks and Paseo Concept

Public Transit Review

There are bus and regional rail service options available in the City of Ontario. Since the New Model Colony and Ontario Ranch areas are mostly undeveloped at this time, limited routes and transit options are available near the Project site. It is anticipated that new routes will be proposed to support the future development, but those routes have not been identified at this time. Existing transit routes in the study area are shown on **Figure 4**.

Bus Service

Omnitrans

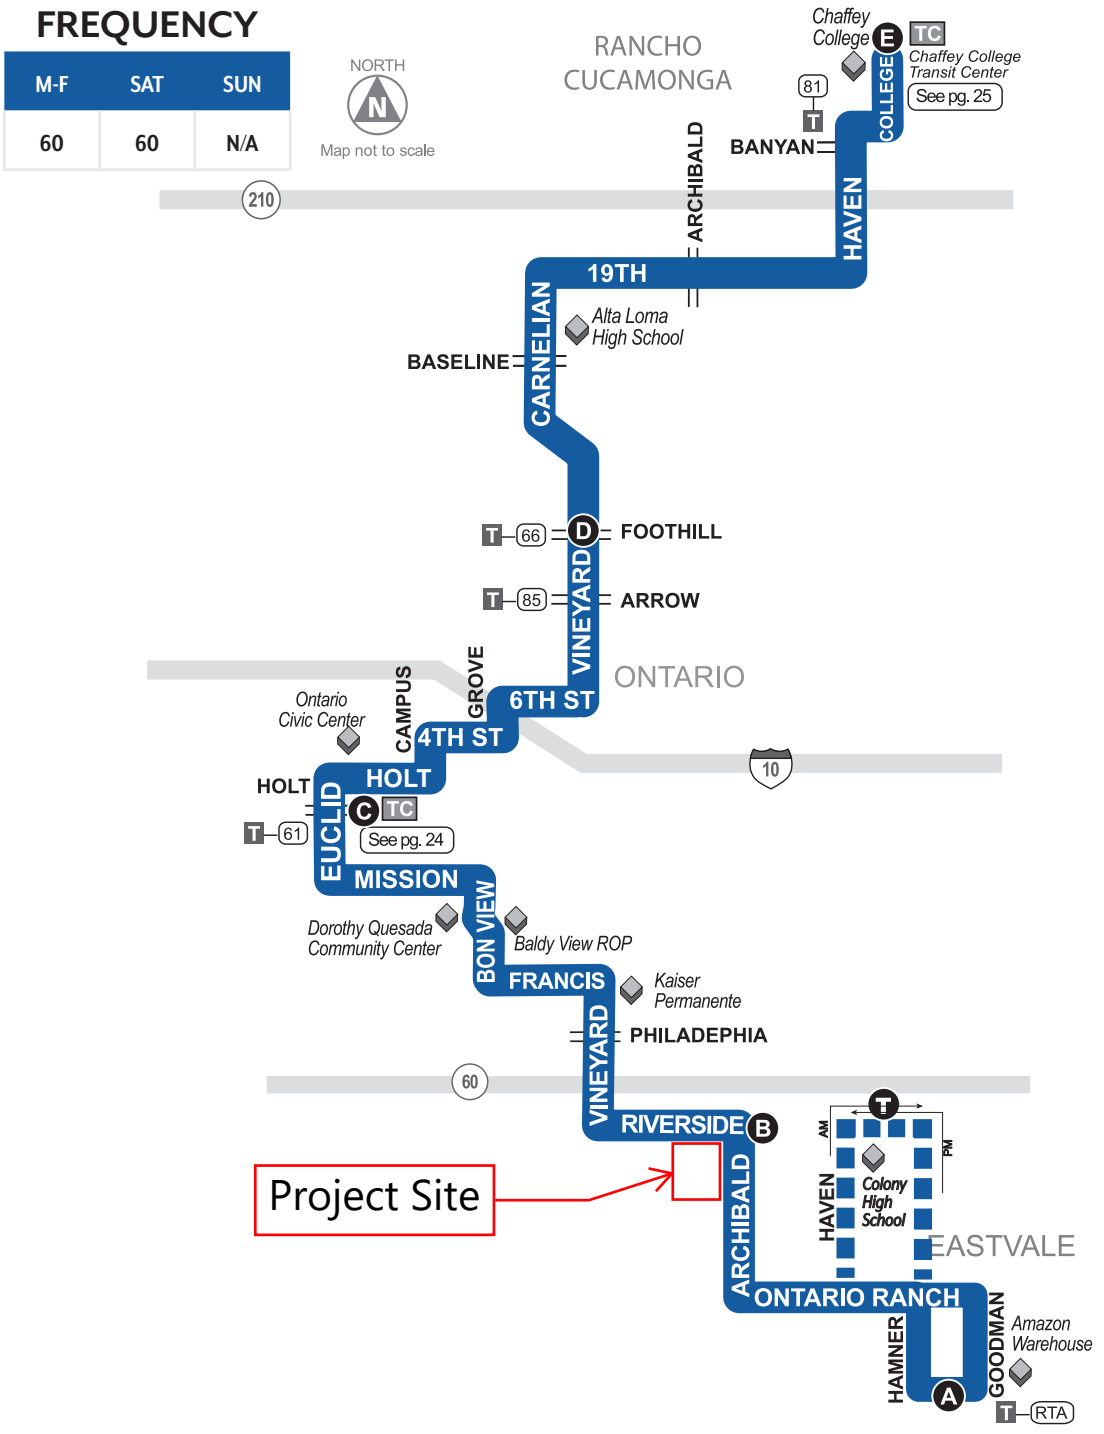
Omnitrans provides local and express services to San Bernardino County, which includes the City of Ontario. The only Omnitrans route that provides service near the Project site is Route 87 north and east of the Project site. The closest bus stop is at Riverside Drive and Archibald Avenue.

Route 87 operates Monday to Saturday between 4:35 AM and 9:50 PM with one-hour headways and provides service to Rancho Cucamonga and Eastvale through the Ontario Ranch area along Riverside Drive and Archibald Avenue

Rail Service

Metrolink

Commuter train service in the City of Ontario is provided by Metrolink, which provides service throughout the Southern California region. The Ontario-East Metrolink Station is located near the corner of Mission Boulevard and Haven Avenue, approximately 3.4 miles northeast of the Project site. The Metrolink railroad runs east-west through the middle of the city, with grade separations at Milliken and Haven Avenues. This same rail line is occasionally used by freight trains when the Union Pacific Railroad line (running east-west south of the I-10 freeway) is closed or restricted for limited periods. Local freight train traffic in the city includes switches on various spur lines serving the industrial areas at the southern section of the city.



Riverside Line links downtown Riverside to Union Station in downtown Los Angeles with a stop at the Ontario Train Station. There are five morning trains and one afternoon train to Union Station on weekdays. There are five afternoon trains from Ontario to Riverside on weekdays.

Amtrak

Amtrak is a passenger railroad service that provides medium and long-distance inter-city rail service throughout the United States. Locally, a station is provided northwest of the Project on the corner of Euclid Avenue at Holt Boulevard. Two lines are available at the Ontario Station.

Sunset Limited Line provides intercity rail service three times per week between Los Angeles and New Orleans, Louisiana, with California stops in Los Angeles, Pomona, Ontario and Palm Springs. The service is available at the Ontario Train Station at 10:54 PM from Los Angeles.

Texas Eagle Line provides intercity rail service three times per week between Los Angeles and Chicago, Illinois, with California stops in Los Angeles, Pomona, Ontario and Palm Springs. The service is available at the Ontario Train Station at 10:54 PM from Los Angeles.

Transportation Impact Analysis

This assessment answers the following four questions from Appendix G. For purposes of this EIR, a project would normally have a significant effect on the environment if the project would:

T-1 Conflict with a program, plan, ordinance, or policy addressing the circulation system, including transit, roadway, bicycle, and pedestrian facilities.
T-2 Conflict or be inconsistent with CEQA Guidelines § 15064.3, subdivision (b) regarding policies to reduce vehicle miles travelled (VMT).
T-3 Substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment).
T-4 Result in inadequate emergency access.

T-1 Assessment

A review of the Project description did not identify any disruption to existing bicycle, pedestrian nor transit facilities; the proposed Project provides consistency related to regional active transportation plans, transit plans, and other mobility infrastructure plans in the New Model Colony area. New transit trips are anticipated to be generated by the Project, but the Project would not modify transit stop locations or change transit headways. Additional transit ridership demand could increase boarding and alighting activity at existing bus stops and transit terminals located near the Project site. The Project is consistent with the adopted plans regarding bicycle and pedestrian infrastructure and is not expected to decrease

the performance or safety of these facilities. Therefore, the Project is considered to have a **less-than-significant** impact on active transportation and on public transit.

T-2 Assessment

The Project is consistent with CEQA Guidelines section 15064.3, subdivision (b) regarding policies to reduce VMT. The TOP 2050 Model forecast of total daily VMT/SP is the required method for estimating VMT. The proposed Project is forecast to reduce HB VMT per resident, OD VMT/SP and Boundary VMT/SP as compared to the approved project, and is forecast to produce VMT/SP below the City's impact thresholds; therefore, this project is anticipated to result in a **less-than-significant** transportation impact.

T-3 Assessment

The Project would not substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment). The City of Ontario has adopted engineering standards to ensure consistency in the geometric design of their mobility facilities. Additionally, all plans undergo an extensive review process at the City to ensure consistency with these adopted standards. This impact is considered **less than significant**.

T-4 Assessment

The Project would not result in inadequate emergency access. The Project is proposing improvements at intersections consistent with the Ontario Plan Circulation Element Buildout, therefore increasing the capacity of the network, as identified in the Level of Service (LOS) assessment[6]. With the proposed improvements, the Project is anticipated to provide roadway capacity sufficient to support emergency evacuation scenarios even with the increased density. Therefore, this impact is considered **less than significant**.

Conclusion

The Project proposes increased density as compared to the approved plan and/or what is zoned in the City's General Plan. Densification in urban areas is a strategy promoted by the State to reduce VMT. VMT estimates were prepared to provide comparisons between approved and proposed which indicate that the proposed Project has a lower VMT/SP. The Project's forecast VMT is also lower than the City's threshold of significance. Therefore, the Project is more efficient from a VMT perspective and is anticipated to result in a **less-than-significant** transportation impact. The Project is also anticipated to

[6] Countryside Specific Plan Amendment (Neighborhood 2 Development) Traffic Study, LLG, November 23 2022.

result in a **less-than-significant** impact related to consistency with regional plans, design, and emergency evacuation.

TRAFFIC STUDY

COUNTRYSIDE SPECIFIC PLAN AMENDMENT (NEIGHBORHOOD 2 DEVELOPMENT)

Ontario, California

November 23, 2022

1.0 INTRODUCTION

1.1 Senate Bill 743

Senate Bill (SB) 743 (2013), codified in Public Resources Code section 21099, changed the methodology for analyzing transportation impacts under the California Environmental Quality Act (CEQA). SB 743 directed the Office of Planning and Research (OPR) to prepare proposed revisions to the CEQA Guidelines establishing new criteria for determining the significance of transportation impacts. The Secretary of the Natural Resources Agency subsequently certified CEQA Guideline 15064.3, establishing vehicle miles traveled (VMT) as the most appropriate metric to evaluate a project's transportation impacts. Upon certification of the new Guideline, automobile delay, as measured by "level of service" and other similar metrics, is no longer considered a significant impact on the environment under CEQA. (Public Resources Code 21099(b)(2).) However, the amendments to the Public Resources Code and the Guidelines did not relieve a public agency of the requirement to analyze a project's potentially significant transportation impacts related to air quality, noise, safety, or other secondary impacts associated with transportation. (Pub. Res. Code 21099(b)(3).) Consequently, this study has been commissioned to provide an evidentiary basis for analyzing the secondary impacts of the project associated with transportation and as detailed more fully below, the project's consistency with the City's General Plan, known as The Ontario Plan 2050 (TOP 2050).

1.2 Traffic Study

This Traffic Study addresses the potential traffic and circulation needs associated with the proposed amendment to the current (2008) Countryside Specific Plan (CSP) (herein after referred to as Project) in the City of Ontario. The Countryside Specific Plan was approved by the City of Ontario in April 2006, with subsequent Specific Plan Amendments approved in June 2006 and August 2008. The Countryside Specific plan comprises approximately 178 acres of land that is located westerly of Interstate 15 (I-15), and southerly of State Route 60 (SR-60). The Specific Plan area lies within the 8,200-acre Ontario Ranch, in the southcentral portion of The Ontario Plan (TOP). The proposed Project within the Countryside Specific Plan includes an amendment related to Planning Area 1, Neighborhood 2, which now allows for the development of up to 106 single-family detached homes (RD – 6,000 SF lots). The Project would consist of the development of 274 residential unit within Neighborhood 2.

This report documents the findings and recommendations of a traffic study conducted by Linscott, Law & Greenspan, Engineers (LLG) to determine the nature and extent of the traffic that would be associated with the Project and consider whether any roadway network improvements would be required to ensure the Project's consistency with the TOP 2050.

1.2.1 *Scope of Work*

The traffic analysis evaluates the existing operating conditions at twelve (12) key study intersections within the Project vicinity, estimates the trip generation potential of the proposed Project and forecasts future operating conditions without and with the additional traffic generated by the proposed Project. Where necessary, roadway and/or intersection improvements are identified. The Scope of Work for this traffic study, which is included in ***Appendix A***, was developed in conjunction with City of Ontario staff.

The Project site has been visited and an inventory of adjacent area roadways and intersections was performed. Existing peak hour traffic information has been collected at twelve (12) key study intersections for use in the preparation of intersection level of service calculations. Information concerning cumulative projects (planned and/or approved) in the vicinity of the proposed Project has been researched at the City of Ontario and City of Chino. Based on our research, there are twenty-one (21) cumulative projects in the City of Ontario and City of Chino. These twenty-one (21) planned and/or approved cumulative projects were considered in the cumulative traffic analysis for this Project.

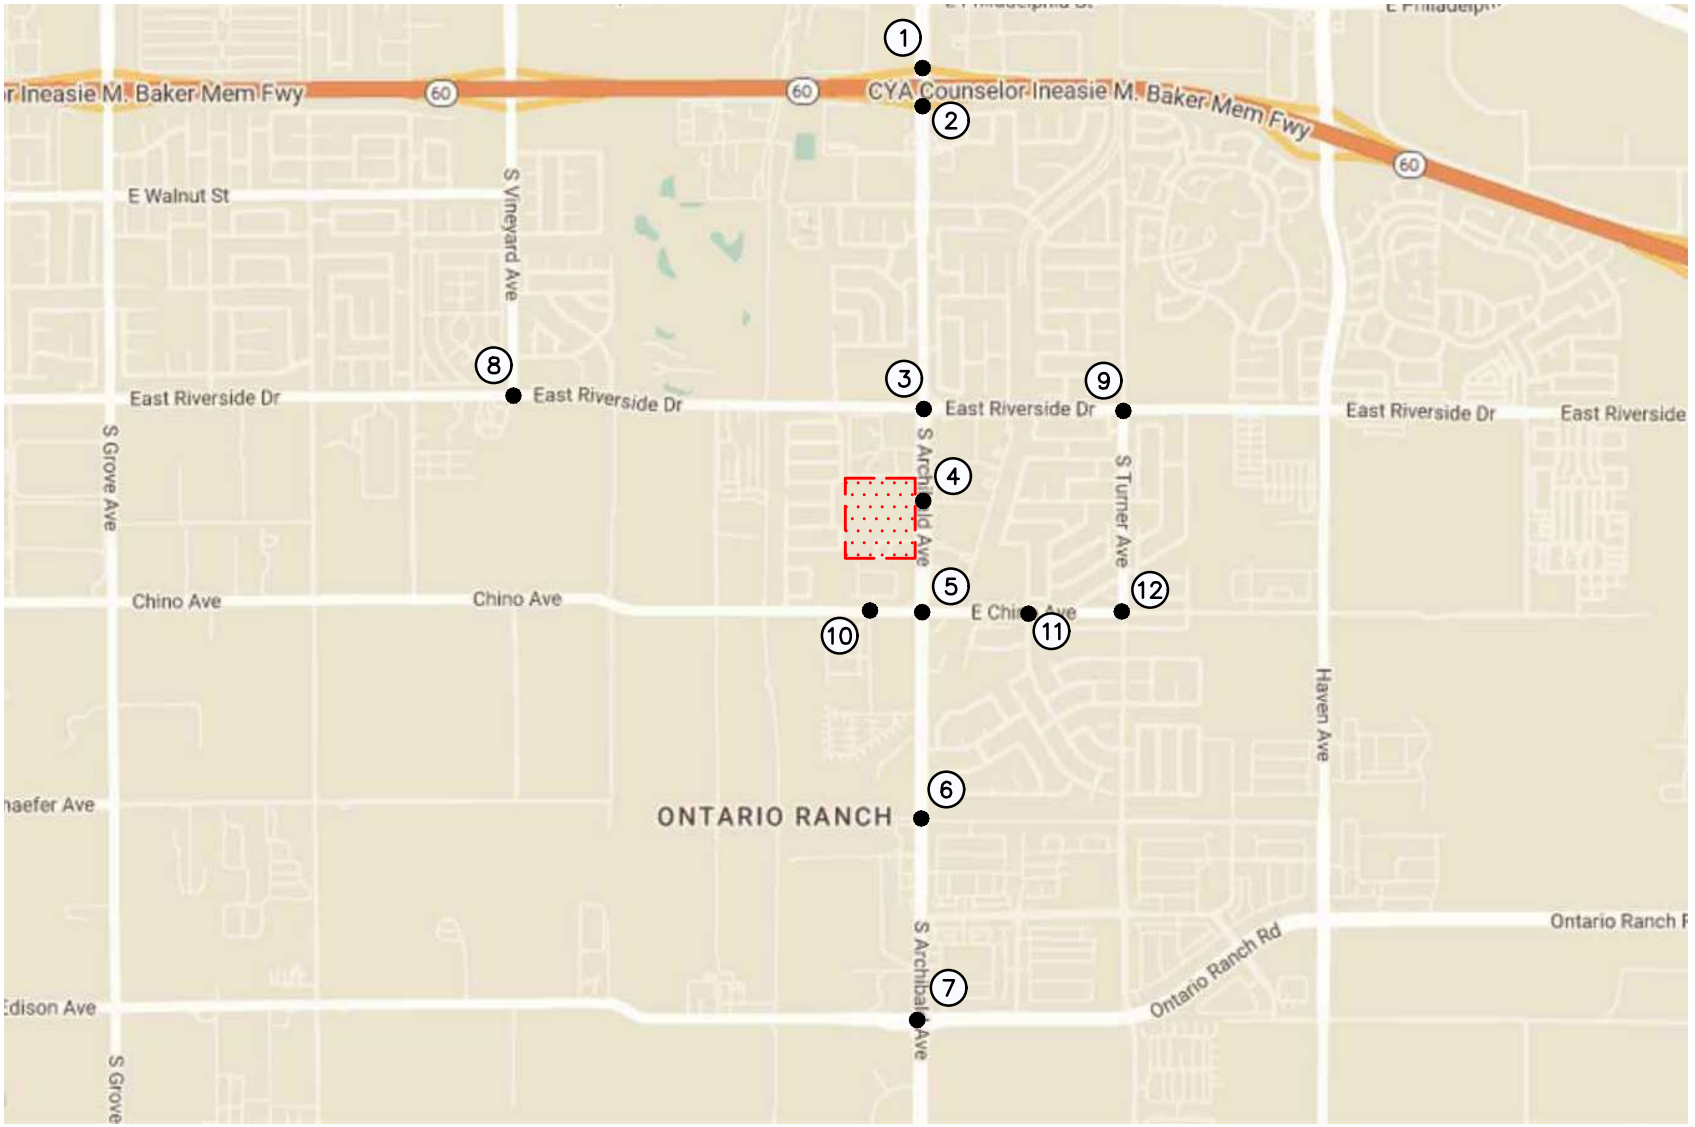
This traffic report analyzes existing and future weekday AM peak hour and PM peak hour traffic conditions for a near-term (Year 2026) and long-term (Year 2050) traffic setting upon completion of the proposed Project. Peak hour traffic forecasts for the Year 2026 horizon year have been projected by increasing existing traffic volumes by an annual growth rate of 2.0% per year and adding traffic volumes generated by twenty-one (21) cumulative projects. Long-term (Year 2050) traffic projections were derived from The Ontario Plan 2050 (TOP 2050) Model by San Bernardino County Traffic Analysis Model (SBTAM).

1.3 Study Area

The twelve (12) study intersections were selected for evaluation based on the requirements of the City of Ontario (i.e. “50 peak hour trip criterion”), as well as proximity to the Project site. The twelve (12) existing key study intersections listed below provide local access to the study area and define the extent of the boundaries for this traffic impact investigation. The jurisdictions where the study intersections are located are identified as well:

Key Intersection	Jurisdiction
1. Archibald Avenue at SR-60 WB Ramps	Caltrans/Ontario
2. Archibald Avenue at SR-60 EB Ramps	Caltrans/Ontario
3. Archibald Avenue at Riverside Drive	Ontario
4. Archibald Avenue at Citrine Hills/Project Driveway	Ontario
5. Archibald Avenue at Chino Avenue	Ontario
6. Archibald Avenue at Schaefer Avenue	Ontario
7. Archibald Avenue at Ontario Ranch Road	Ontario
8. Vineyard Avenue at Riverside Drive	Ontario
9. Turner Avenue at Riverside Drive	Ontario
10. Kinglet Avenue at Chino Avenue	Ontario
11. Old Archibald Avenue at Chino Avenue	Ontario
12. Turner Avenue at Chino Avenue	Ontario

Figure 1-1 presents a Vicinity Map, which illustrates the general location of the proposed Project and depicts the study locations and surrounding street system. The Level of Service (LOS) investigations at these key locations were used to evaluate the potential traffic-related impacts associated with area growth, cumulative projects and the proposed Project. When necessary, this report recommends roadway network improvements and/or circulation enhancements that may be required to accommodate future traffic volumes and restore/maintain an acceptable Level of Service and/or accommodate added traffic volumes generated by the Project.



Included in this Traffic Study are:

- Existing traffic counts,
- Estimated Project traffic generation/distribution/assignment,
- Estimated cumulative projects traffic generation/distribution/assignment,
- AM and PM peak hour capacity analyses for existing conditions,
- AM and PM peak hour capacity analyses for existing plus Project conditions,
- AM and PM peak hour capacity analyses for near-term (Year 2026) conditions without and with Project traffic,
- AM and PM peak hour capacity analyses for long-term (Year 2050) conditions without and with Project traffic,
- Caltrans Off-Ramp queueing assessment,
- Turn pocket queueing assessment at signalized intersections,
- Area Traffic Improvements and Circulation Enhancements, and
- Site Access and Internal Circulation

1.4 Traffic Analysis Scenarios

The following scenarios are those for which volume/capacity calculations have been performed at the twelve (12) key intersections for near-term (Year 2026) and long-term (2050) conditions:

(a) Existing traffic;
(b) Existing plus Project conditions;
(c) Traffic in (b) plus recommended improvements (as required);
(d) Existing traffic plus ambient growth to the Year 2026 plus cumulative Project traffic;
(e) Traffic in (d) plus Project conditions;
(f) Traffic in (e) plus recommended improvements (as required);
(g) Long-term (Year 2050) Buildout traffic;
(h) Traffic in (g) plus Project conditions; and
(i) Traffic in (h) plus recommended improvements (as required).

2.0 PROJECT DESCRIPTION

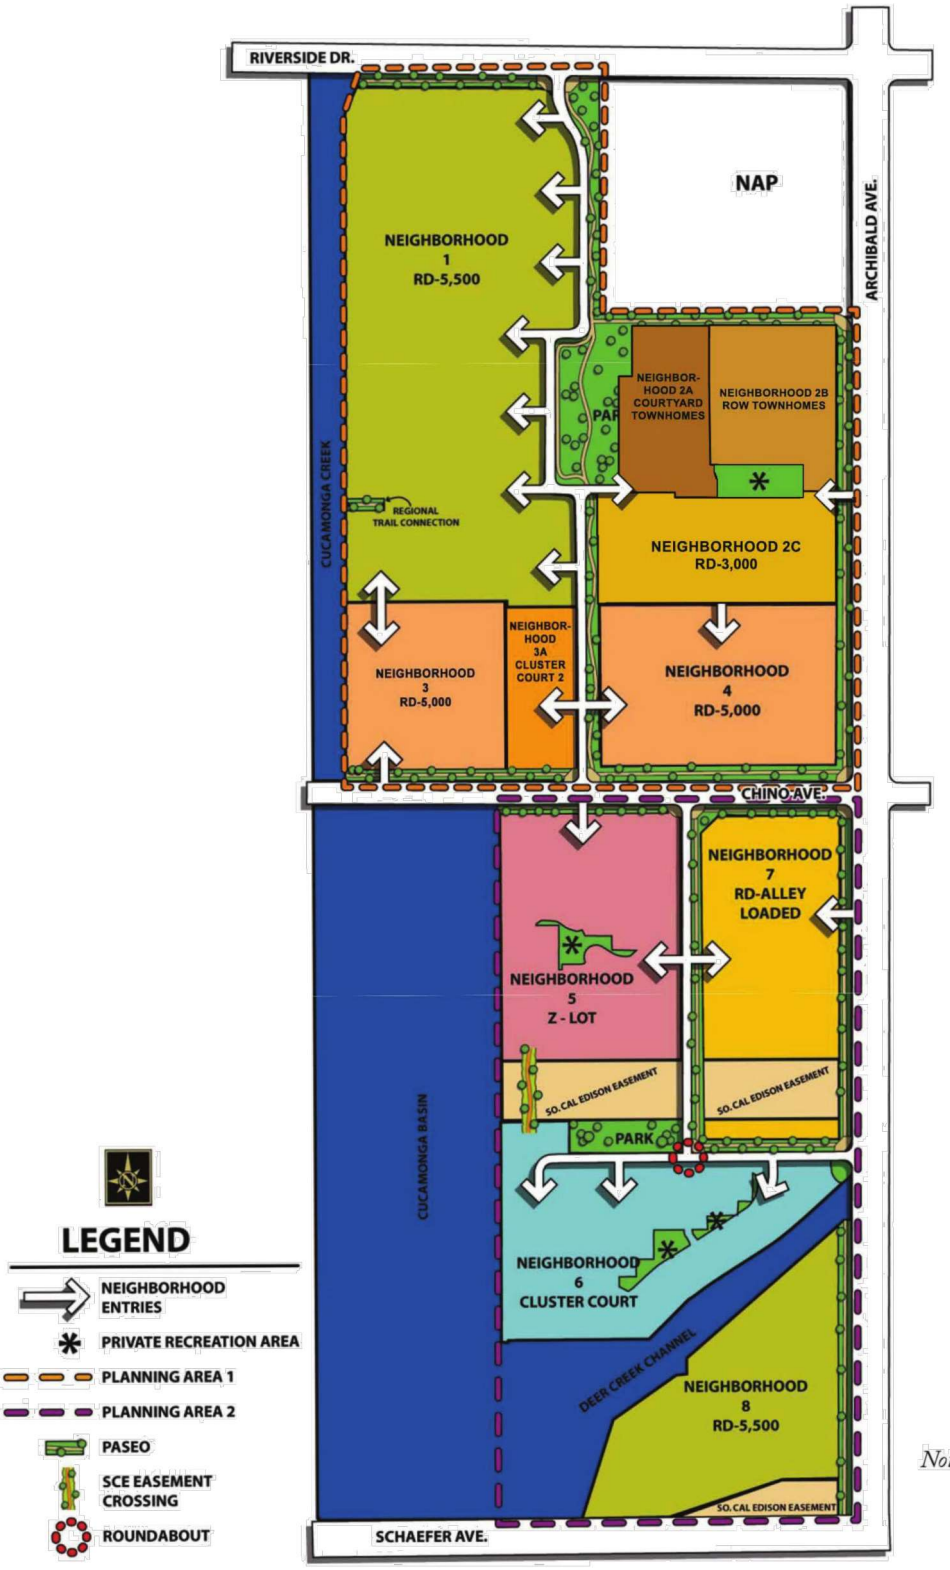
The Countryside Specific Plan (CSP) was approved by the City of Ontario in April 2006, with subsequent Specific Plan Amendments approved in June 2006 and August 2008. The Countryside Specific Plan comprises approximately 178 acres of land that is located westerly of Interstate 15 (I-15), and southerly of State Route 60 (SR-60). The Specific Plan area lies within the 8,200-acre Ontario Ranch, in the southcentral portion of The Ontario Plan (TOP). The Specific Plan is located south of Riverside Drive, east of the Cucamonga Creek Channel and Basin, west of Archibald Avenue, and north of Schaefer Avenue; Chino Avenue bisects the Specific Plan, resulting in Planning Area 1 to the north and Planning Area 2 to the south.

The 2008 Specific Plan allows for the development of up to 825 single family detached residential units within nine (9) neighborhoods. The 2022 Specific Plan Amendment concept provides for a maximum of 993 dwelling units (single family detached and attached residential types) within eleven (11) neighborhoods. The proposed Project within the Countryside Specific Plan includes an amendment related to Planning Area 1, Neighborhood 2, which now allows for the development of up to 106 single-family detached homes (RD – 6,000 SF lots).

Planning Area 1 – Neighborhood 2: Proposed Project

The Project would consist of the development of 274 residential unit within Neighborhood 2 that would consist of 96 Courtyard townhomes within Neighborhood 2A, 96 Row Townhomes within Neighborhood 2B and an additional 82 single-family detached homes within Neighborhood 2C. It is our understanding that the Project evaluated herein is consistent with the land uses shown in the adopted 2050 TOP. The Proposed Specific Plan Land Use designation for the Project is illustrated at ***Figure 2-1***.

The Project Site Plan (TTM No. 20536), prepared by X Engineering & Consulting, Inc., is illustrated ***Figure 2-2***, and the Project Land Use Summary is shown in ***Table 2-1***. A review of *Table 2-1* indicates that the Specific Plan Amendment (SPA) related to Neighborhood 2 would amend the 2008 Specific Plan and allow for a maximum of 274 dwelling units instead of 106 dwelling units as now allowed/entitled.



The Project is expected to be constructed and open in the next couple years or so by Year 2026 but is dependent on several factors, including the timing of Project approval. Project funding, market conditions and/or the current environment which could delay Project completion. The Project, like most other proposed development, have experienced delays. As such, subject to confirmation by the Project Applicant, Year 2026 will be utilized to assess the Project's anticipated traffic impacts within a near-term traffic setting upon completion and full buildout/occupancy of the proposed residential development.

2.1 Site Access

As shown in *Figure 2-2*, access to the Project site, as currently proposed and allowed in the 2008 Specific Plan, will be provided via one (1) full access signalized driveway on Archibald Avenue opposite the Citrine Hills residential development, with secondary "cross access" provided through the adjacent residential communities as planned in the Countryside Specific Plan. It is noted that Archibald Avenue at Citrine Hills is currently unsignalized. The secondary access point would provide vehicular, pedestrian and bicycle connectivity to the south to access Chino Avenue. The Project Master Circulation Plan is presented at ***Figure 2-3***. From a review of the current of the adjacent neighborhoods to the south, it is assumed that secondary vehicular access from Chino Avenue would be provided via the intersection of Chino Avenue and Kinglet Avenue through the area of Neighborhood 4 that is now developed.

2.2 Pedestrian and Bicycle Circulation

The Project would construct bicycle and pedestrian access improvements within the Project site and frontage consistent with the Specific Plan Pedestrian and Bicycle Trails plan, are illustrated in ***Figure 2-4.***

Note: Roundabout location and dimensions to be determined as part of tentative tract map approval.

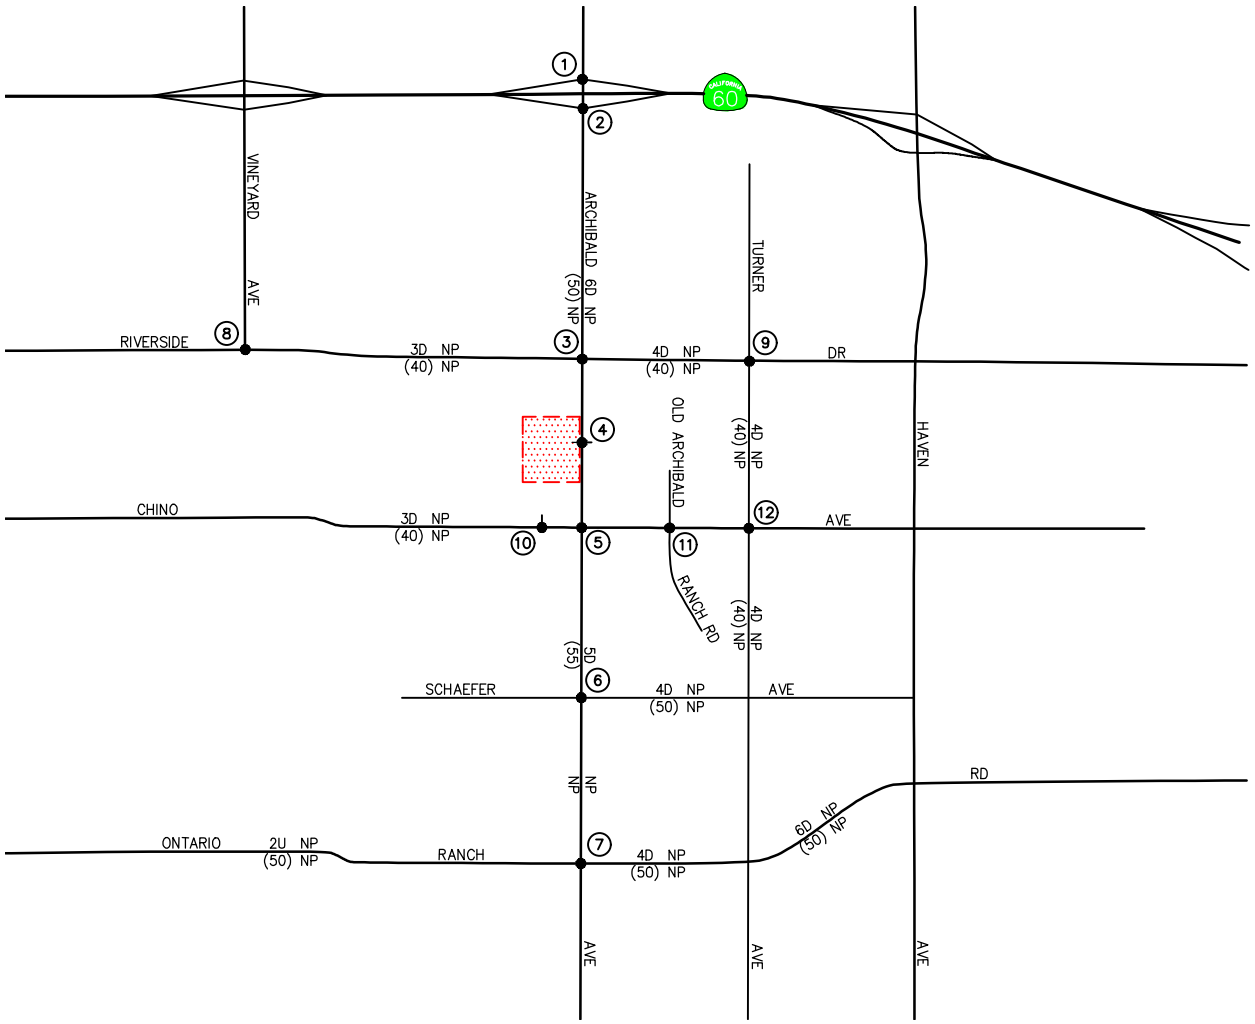
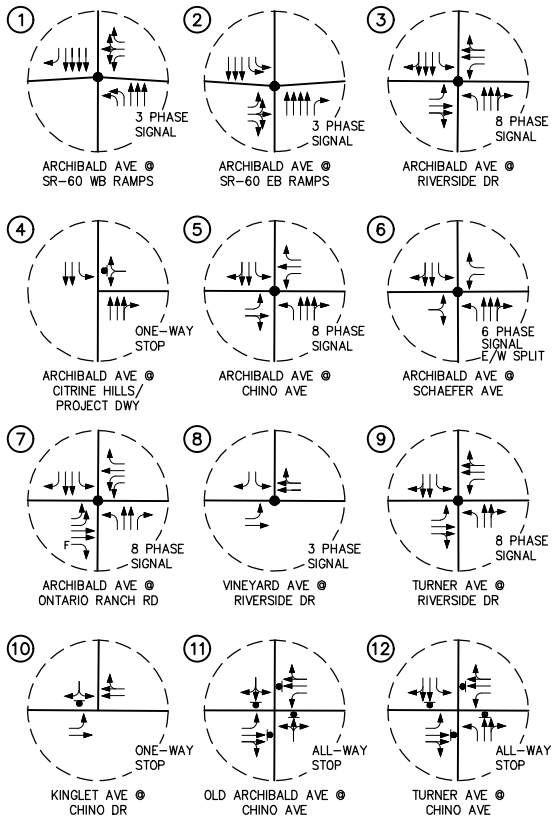
3.0 EXISTING CONDITIONS

State-Route 60 (SR-60) provides primary regional access to the proposed Project site via the freeway interchange at Archibald Avenue. Local access is provided via the intersections of Archibald Avenue at Riverside Drive and Archibald Avenue at Chino Avenue. The principal local network of streets serving the Project site consists of Archibald Avenue, Riverside Drive, Chino Avenue, and Ontario Ranch Road. The following discussion provides a brief synopsis of these key area streets.

3.1 Existing Street Network



Archibald Avenue is a six-lane divided roadway north of Riverside Drive, and a five-lane divided roadway south of Riverside Drive, oriented in the north-south direction. Parking is generally not permitted on either side of the roadway within the vicinity of the Project. The posted speed limit on Archibald Avenue is 45 miles per hour (mph) north of Riverside Drive, and 55 mph south of Riverside Drive, within the vicinity of the project. Traffic signals control the study intersections of Archibald Avenue at SR-60 EB Ramps, SR-60 WB Ramps, Riverside Drive, Chino Avenue, Schaefer Avenue, and Ontario Ranch Road. Archibald Avenue is classified as a principal arterial in *The Ontario Plan*.



Riverside Drive is a four-lane divided roadway east of Archibald Avenue, and a three-lane divided roadway west of Archibald Avenue, oriented in the east-west direction. The posted speed limit on this roadway is 40 mph west of Archibald Avenue and 50 mph east of Archibald Avenue. Parking is generally not permitted on either side of the roadway within the vicinity of the Project. Traffic signals control the study intersections of Riverside Drive at Vineyard Avenue, Archibald Avenue and Turner Avenue. Riverside Drive is classified as a minor arterial in *The Ontario Plan*.

Chino Avenue is a four-lane divided roadway east of Archibald Avenue and a three-lane divided roadway west of Archibald Avenue, oriented in the east-west direction. Parking is generally not permitted on either side of the roadway within the vicinity of the Project. The posted speed limit on Chino Avenue is 40 mph within the vicinity of the project. Traffic signals control the study intersection of Chino Avenue at Archibald Avenue. Chino Avenue is classified as a collector street in *The Ontario Plan*.

Ontario Ranch Road is a four-lane divided roadway east of Archibald Avenue, and a two-lane divided roadway west of Archibald Avenue, oriented in the east-west direction. The posted speed limit on Ontario Ranch Road is 50 mph. Parking is generally not permitted on either side of the roadway within the vicinity of the Project. Traffic signals control the study intersections of Ontario Ranch Road at Archibald Avenue. Ontario Ranch Road is classified as a principal arterial in *The Ontario Plan.*

Figure 3-1 presents an inventory of the existing roadway conditions for the arterials and intersections evaluated in this report. This figure identifies the number of travel lanes for key arterials, as well as intersection configurations and controls for the key area study intersections. ***Figure 3-2*** presents the City of Ontario Master Plan of Streets.

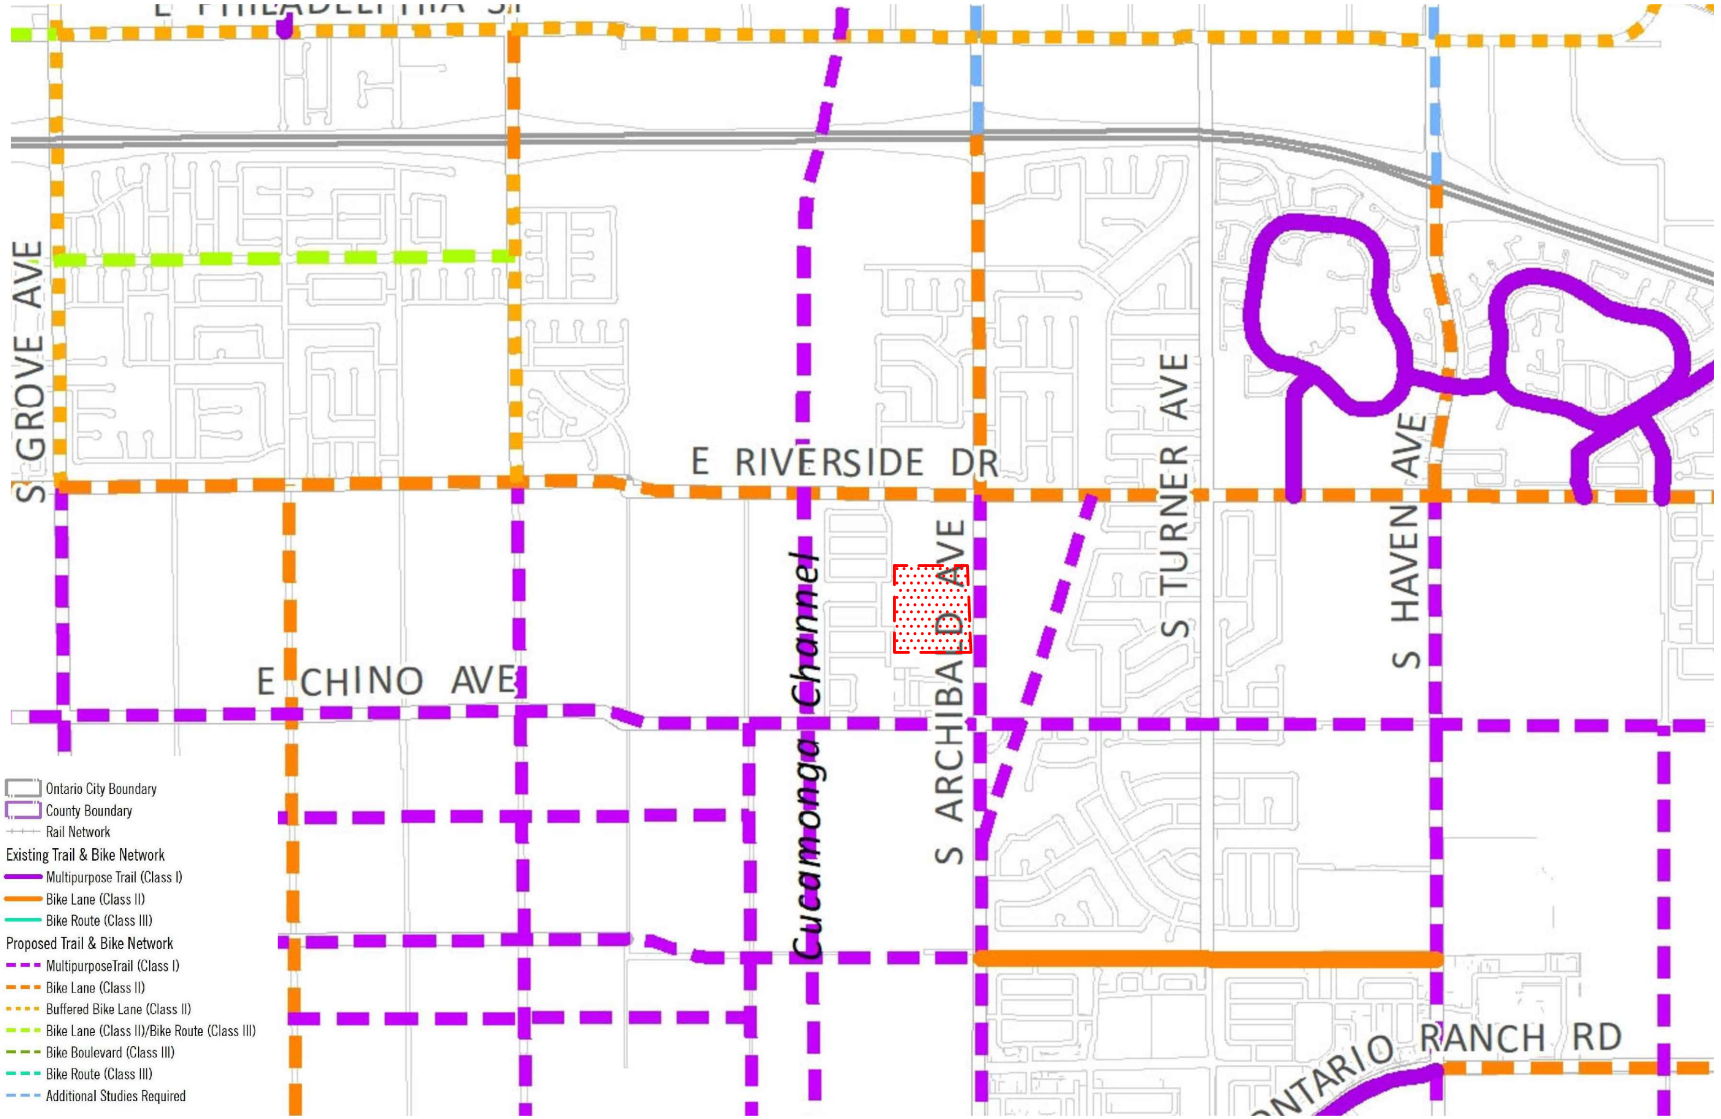
3.2 City of Ontario Multipurpose Trails and Bikeways

Figure 3-3 presents the City of Ontario Multipurpose Trails and Bikeways. Review of *Figure 3-3* indicates that within the vicinity of the proposed Project, Class I bike lanes (multipurpose trail) are proposed along Archibald Avenue (south of Riverside Drive), Vineyard Avenue (south of Riverside Drive), Chino Avenue, Haven Avenue, and along the Cucamonga Channel. Class II bike lanes are proposed along Riverside Drive, Archibald Avenue (north of Riverside Drive), and Ontario Ranch Road. Class II buffered bike lanes are proposed along Vineyard Avenue (north of Riverside Drive).

3.3 Public Transit

Public transit bus service is provided in the Project area by Omnitrans, a public transportation agency in San Bernardino County. ***Figure 3-4*** presents the OmniTrans transit system map. Review of *Figure 3-4* indicates that one (1) bus route operates within the vicinity of the Project site along Archibald Avenue and Riverside Drive:

- **Omnitrans Route 87 (Eastvale to Rancho Cucamonga):** Route 87 is a local bus route serving the Cities of Eastvale, Ontario, and Rancho Cucamonga. The major routes of travel include Ontario Ranch Road, Archibald Avenue, and Riverside Drive. Nearest to the project site are bus stops along Riverside Drive at the intersection of Archibald Avenue, as well as along Archibald Avenue south of the Project site. Route 87 operates on approximate 60-minute headways during weekdays and weekends.



3.4 Existing Traffic Volumes

Twelve (12) key study intersections have been identified as the locations at which to evaluate existing and future traffic operating conditions. Some portion of potential Project-related traffic will pass through each of these intersections and their analysis will reveal the expected relative effect of the Project. These key intersections were selected for evaluation based on coordination with City of Ontario staff.

Existing AM and PM peak hour traffic volumes for the twelve (12) existing key study intersections evaluated in this report were collected by *Counts Unlimited* in September 2022. ***Figures 3-5*** and ***3-6*** illustrate the existing AM and PM peak hour traffic volumes at the twelve (12) key study intersections evaluated in this report, respectively. The traffic volumes illustrated in *Figures 3-5* and *3-6* are comprised of passenger vehicles, large 2-axle trucks, 3-axle trucks and 4+-axle trucks. The truck traffic turning movements were converted to passenger car equivalents (P.C.E.'s) using SANBAG approved factors. P.C.E. factors of 1.5, 2.0 and 3.0 were utilized for large 2-axle trucks, 3-axle trucks and 4+-axle trucks, respectively. ***Appendix B*** contains copies of the existing traffic counts.

3.5 Existing Intersection Operating Conditions

In conformance with the City of Ontario guidelines and San Bernardino County CMP requirements, AM peak hour and PM peak hour operating conditions were evaluated using the methodology outlined in the *Highway Capacity Manual 6th Edition (HCM 6)* for signalized and unsignalized

intersections. It is noted that the HCM operations method of analysis is also utilized by Caltrans when calculating LOS.

3.5.1 *Highway Capacity Manual 6 (HCM6) Method of Analysis (Signalized Intersections)*

In conformance with City of Ontario requirements, AM and PM peak hour operating conditions for the key study intersections were evaluated using the HCM operations method of analysis. Based on the HCM operations method of analysis, level of service for signalized intersections and approaches is defined in terms of control delay, which is a measure of the increase in travel time due to traffic signal control, driver discomfort, and fuel consumption. Control delay includes the delay associated with vehicles slowing in advance of an intersection, the time spent stopped on an intersection approach, the time spent as vehicles move up in the queue, and the time needed for vehicles to accelerate to their desired speed. LOS criteria for traffic signals are stated in terms of the control delay in seconds per vehicle. The LOS thresholds established for the automobile mode at a signalized intersection are shown in ***Table 3-1***.

3.5.2 *Highway Capacity Manual 6 (HCM 6) Method of Analysis (Unsignalized Intersections)*

The HCM unsignalized methodology for stop-controlled intersections was utilized for the analysis of the unsignalized intersections. LOS criteria for unsignalized intersections differ from LOS criteria for signalized intersections as signalized intersections are designed for heavier traffic and therefore a greater delay. Unsignalized intersections are also associated with more uncertainty for users, as delays are less predictable, which can reduce users' delay tolerance.

Two-way stop-controlled intersections are comprised of a major street, which is uncontrolled, and a minor street, which is controlled by stop signs. Level of service for a two-way stop-controlled intersection is determined by the computed or measured control delay. The control delay by movement, by approach, and for the intersection as a whole is estimated by the computed capacity for each movement. LOS is determined for each minor-street movement (or shared movement) as well as major-street left turns. The worst side street approach delay is reported. LOS is not defined for the intersection as a whole or for major-street approaches, as it is assumed that major-street through vehicles experience zero delay. The HCM control delay value range for two-way stop-controlled intersections is shown in ***Table 3-2***.

All-way stop-controlled intersections require every vehicle to stop at the intersection before proceeding. Because each driver must stop, the decision to proceed into the intersection is a function of traffic conditions on the other approaches. The time between subsequent vehicle departures depends on the degree of conflict that results between the vehicles and vehicles on the other approaches. This methodology determines the control delay for each lane on the approach, computes a weighted average for the whole approach, and computes a weighted average for the intersection as a whole. Level of service (LOS) at the approach and intersection levels is based solely on control delay. The HCM control delay value range for all-way stop-controlled intersections is shown in *Table 3-2*.

TABLE 3-1
LEVEL OF SERVICE CRITERIA FOR SIGNALIZED INTERSECTIONS (HCM 6)[1]

Level of Service (LOS)	Control Delay Per Vehicle (seconds/vehicle)	Level of Service Description
A	$\leq$ 10.0	LOS A describes operations with a control delay of 10 s/veh or less and a volume-to-capacity ratio no greater than 1.0. This level is typically assigned when the volume –to-capacity ratio is low and either progression is exceptionally favorable or the cycle length is very short. If it is due to favorable progression, most vehicles arrive during the green indication and travel through the intersection without stopping.
B	> 10.0 and $\leq$ 20.0	LOS B describes operations with a control delay between 10 and 20 s/veh and a volume-to-capacity ratio no greater than 1.0. This level is typically assigned when the volume – to-capacity ratio is low and either progression is highly favorable or the cycle length is short. More vehicles stop than with LOS A.
C	> 20.0 and $\leq$ 35.0	LOS C describes operations with a control delay between 20 and 35 s/veh and a volume-to-capacity ratio no greater than 1.0. This level is typically assigned when progression is favorable or the cycle length is moderate. Individual *cycle failures* (i.e. one or more queued vehicles are not able to depart as a result of insufficient capacity during the cycle) may begin to appear at this level. The number of vehicles stopping is significant, although many vehicles still pass through the intersection without stopping.
D	> 35.0 and $\leq$ 55.0	LOS D describes operations with a control delay between 35 and 55 s/veh and a volume-to-capacity ratio no greater than 1.0. This level is typically assigned when the volume-to-capacity ratio is high and either progression is ineffective or the cycle length is long. Many vehicles stop and individual cycle failures are noticeable.
E	> 55.0 and $\leq$ 80.0	LOS E describes operations with a control delay between 55 and 80 s/veh and a volume-to-capacity ratio no greater than 1.0. This level is typically assigned when the volume-to-capacity ratio is high, progression is unfavorable and the cycle length is long. Individual cycle failures are frequent.
F	$\geq$ 80.0	LOS F describes operations with a control delay exceeding 80 s/veh or a volume-to-capacity ratio greater than 1.0. This level is typically assigned when the volume-to-capacity ratio is very high, progression is very poor and the cycle length is long. Most cycles fail to clear the queue.

TABLE 3-2

LEVEL OF SERVICE CRITERIA FOR UNSIGNALIZED INTERSECTIONS[2]

Level of Service (LOS)	Highway Capacity Manual Delay Value (sec/veh)	Level of Service Description
A	≤ 10.0	Little or no delay
B	> 10.0 and ≤ 15.0	Short traffic delays
C	> 15.0 and ≤ 25.0	Average traffic delays
D	> 25.0 and ≤ 35.0	Long traffic delays
E	> 35.0 and ≤ 50.0	Very long traffic delays
F	> 50.0	Severe congestion

2 Source: *Highway Capacity Manual 6th Edition*, Chapter 20: Two-Way Stop-Controlled Intersections and Chapter 21: All-Way Stop-Controlled Intersections.

3.5.3 *Level of Service (LOS) Standards and Thresholds*

City of Ontario Criteria

According to the City of Ontario General Plan Infrastructure Element indicates that Level of Service (LOS) D is to be used for the sizing of roadway segments, while LOS E should be maintained at intersections. This criterion would apply to all twelve (12) of the study locations.

Caltrans Criteria

Caltrans District 8 has established that LOS D is the operating standard for all Caltrans facilities. Caltrans has determined that all state-owned facilities that operate below LOS D should be identified and improved to an acceptable LOS. The *Caltrans Traffic Impact Study Guidelines dated December 2002* does state that if an existing state-owned facility operates at less than LOS D, the existing service level should be maintained. The Caltrans criterion would apply to the following two (2) study locations under their jurisdiction:

1. Archibald Avenue at SR-60 WB Ramps (Caltrans/Ontario)
2. Archibald Avenue at SR-60 EB Ramps (Caltrans/Ontario)

3.5.4 *Existing Level of Service Results*

Table 3-3 summarizes the existing peak hour service level calculations for the twelve (12) key study intersections based on existing traffic volumes and current street geometry. Review of *Table 3-3* indicates that one intersection, Archibald Avenue at Citrine Hills (#4), currently operates at unacceptable LOS during the AM peak hour. It is noted that this intersection is expected to be signalized as a part of the development of the Project. The remaining study intersections currently operate at an acceptable level of service during the AM and PM peak hours.

Appendix C presents the Delay/LOS calculation worksheets for the key study intersections.

TABLE 3-3
EXISTING PEAK HOUR LEVELS OF SERVICE

Key Intersections	Time Period	City/ Jurisdiction	Control Type	Delay (sec/veh)	LOS

- ∅ = Phase

4.0 TRAFFIC FORECASTING METHODOLOGY

In order to estimate the traffic characteristics of the proposed Project, a multi-step process has been utilized. The first step is trip generation, which estimates the total arriving and departing traffic on a peak hour and daily basis. The traffic generation potential is forecast by applying the appropriate vehicle trip generation equations or rates to the Project development tabulation.

The second step of the forecasting process is trip distribution, which identifies the origins and destinations of inbound and outbound Project traffic. These origins and destinations are typically based on demographics and existing/anticipated travel patterns in the study area.

The third step is traffic assignment, which involves the allocation of Project traffic to study area streets and intersections. Traffic assignment is typically based on minimization of travel time, which may or may not involve the shortest route, depending on prevailing operating conditions and travel speeds. Traffic distribution patterns are indicated by general percentage orientation, while traffic assignment allocates specific volume forecasts to individual roadway links and intersection turning movements throughout the study area.

With the forecasting process complete and Project traffic assignments developed, the effect of the proposed Project's added traffic is isolated by comparing operational (LOS) conditions at selected key intersections using expected future traffic volumes with and without forecast Project traffic. The need for site-specific and/or cumulative local area traffic improvements can then be evaluated.

5.0 PROJECT TRAFFIC CHARACTERISTICS

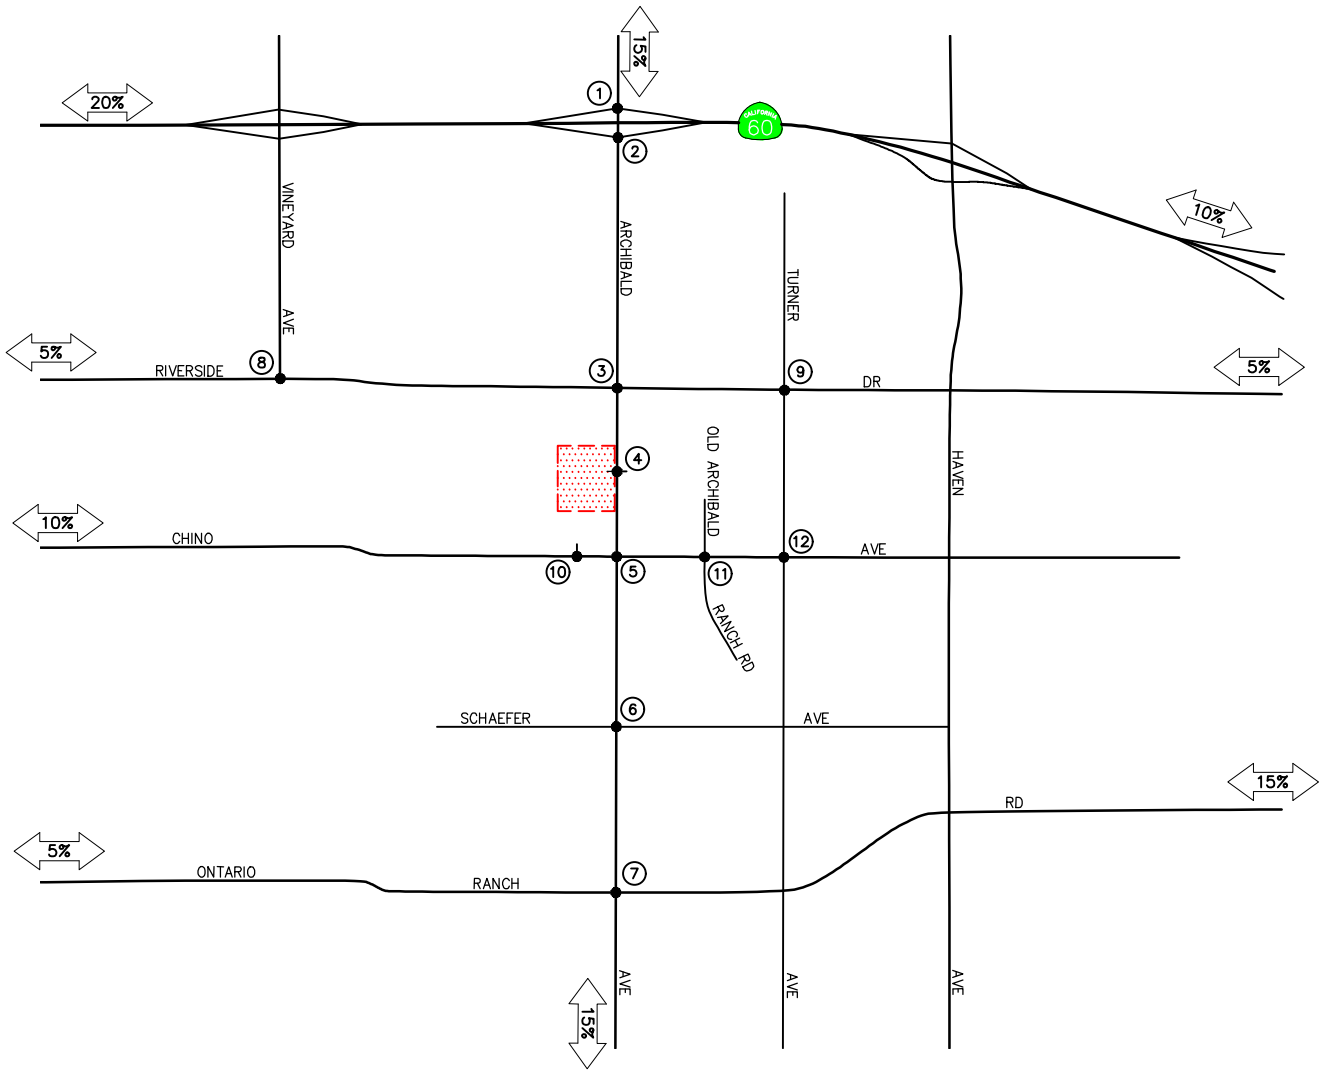
5.1 Project Trip Generation

The trip generation potential of the Entitled Land Use, as allowed in the 2008 Specific Plan, and the Project, as proposed in the 2022 Specific Plan Amendment, has been estimated using trip rates contained in the 11th Edition of *Trip Generation,* published by the Institute of Transportation Engineers (ITE), [Washington, D.C., 2021].

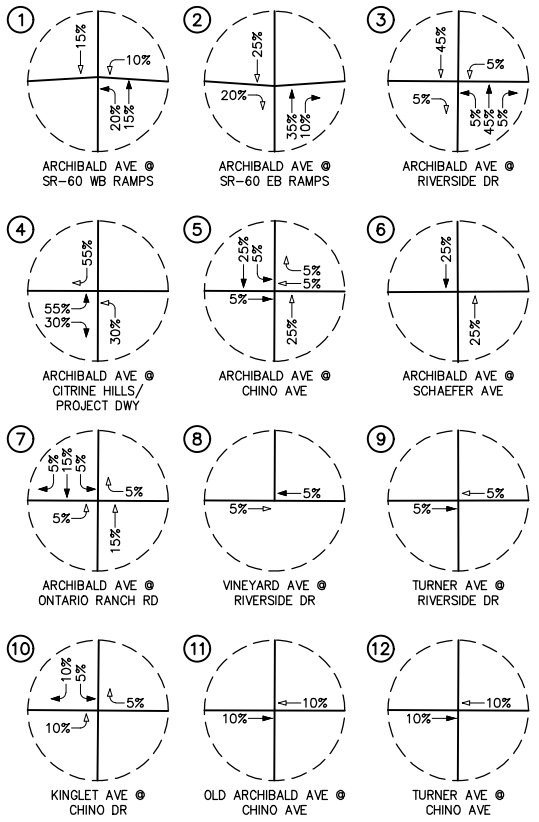
Table 5-1 summarizes the trip generation rates used in forecasting the vehicular trips generated by the Entitled Land Use and the proposed Project and also presents the Project's forecast peak hour and daily traffic volumes. As shown in the upper portion of *Table 5-1,* ITE Land Use 210: Single Family Detached Housing and/or ITE Land Use 215: Single Family Attached Housing trip rates will be used to forecast the trip generation potential of the Entitled Land Use and proposed Project.

For the Entitled Land Use, a review of the middle portion of this table indicates that 106 single family detached homes generates 1,000 daily trips, with 74 trips (19 inbound, 55 outbound) produced in the AM peak hour and 100 trips (63 inbound, 37 outbound) produced in the PM peak hour on a typical weekday.

The lower half of *Table 5-1* indicates that the proposed Project is forecast to generate 2,155 daily trips, with 149 trips (43 inbound, 106 outbound) produced in the AM peak hour and 187 trips (111 inbound, 76 outbound) produced in the PM peak hour on a typical weekday.



A comparison of the proposed Project's trip generation to that of the Entitled Land Use indicates that the Project will result in 1,155 more daily trips, 75 more AM peak hour trips and 87 more PM peak hour trips.



5.2 Project Trip Distribution and Assignment

Figure 5-1 illustrates the general, directional traffic distribution pattern for the proposed Project, while ***Table 5-2*** presents a tabular summary of the traffic distribution pattern. Project traffic volumes both entering and exiting the Project site have been distributed and assigned to the adjacent street system based on the following considerations:

- location of site access points in relation to the surrounding street system,
- the site's proximity to major traffic carriers and regional access routes,
- physical characteristics of the circulation system such as lane channelization and presence of traffic signals that affect travel patterns,
- presence of traffic congestion in the surrounding vicinity, and
- ingress/egress availability at the Project site.

The anticipated AM and PM peak hour traffic volumes associated with the proposed Project are presented in ***Figures 5-2*** and ***5-3***, respectively. The traffic volume assignments presented in *Figures 5-2* and *5-3* reflect the traffic distribution characteristics shown in *Figure 5-1* and the traffic generation forecast presented in the lower portion of *Table 5-1*.

5.3 Existing With Project Traffic Conditions

The Existing With Project traffic conditions have been generated based upon existing conditions and estimated traffic generated from the proposed Project.

These forecast traffic conditions have been prepared to assess if circulation enhancements would be necessary to offset the effect of added Project-related traffic upon the circulation system as it currently exists. This traffic volume scenario and the related intersection capacity analyses will identify the roadway improvements necessary to accommodate the Project, if any.

Figures 5-4 and ***5-5*** present projected AM and PM peak hour traffic volumes at the twelve (12) key study intersections with the addition of the trips generated by the proposed Project to existing traffic volumes, respectively.

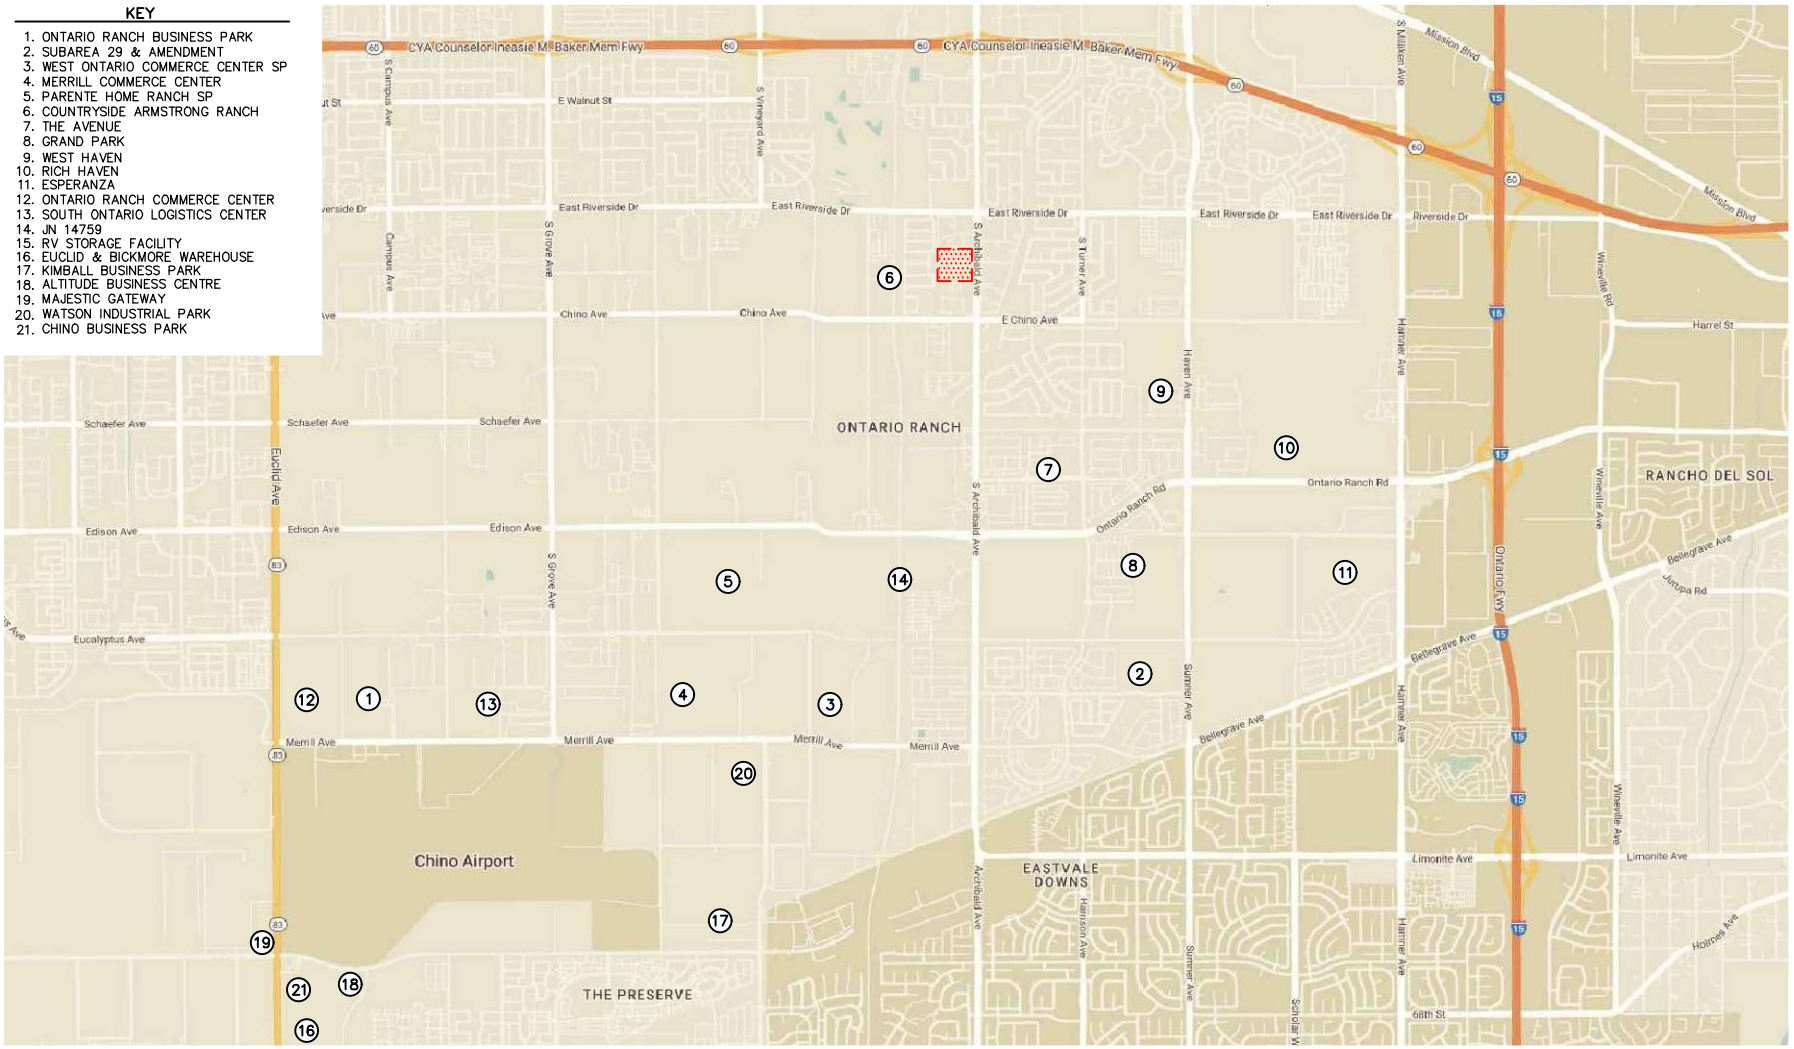
6.0 FUTURE TRAFFIC CONDITIONS

6.1 Ambient Traffic Growth

Horizon year, background traffic growth estimates have been calculated using an ambient growth factor. The ambient traffic growth factor is intended to include unknown and future related projects in the study area, as well as account for regular growth in traffic volumes due to the development of projects outside the study area in other jurisdictions. The future growth in traffic volumes has been calculated at two percent (2%) per year. Applied to the Year 2022 existing traffic volumes, this factor results in a 8% growth in existing volumes to the near-term horizon Year 2026.

6.2 Cumulative Projects Description and Location



In order to make a realistic estimate of future on-street conditions prior to implementation of the proposed Project, the status of other known development projects (cumulative projects) in the vicinity of the proposed Project has been researched at the City of Ontario and the City of Chino. With this information, the potential impact of the proposed Project can be evaluated within the context of the cumulative impact of all ongoing development. Based on our research, there are fifteen (15) cumulative projects in the City of Ontario and six (6) cumulative projects in the City of Chino within the vicinity of the Project site. These twenty-one (21) planned and/or approved cumulative projects have been included as part of the cumulative background setting.

Table 6-1 provides the location and a brief description for each of the twenty-one (21) cumulative projects. ***Figure 6-1*** graphically illustrates the location of the cumulative projects. These cumulative projects are expected to generate vehicular traffic, which may affect the operating conditions of the key study intersections.

6.3 Cumulative Projects Trip Generation and Assignment

Table 6-2 presents the trip generation potential for all twenty-one (21) cumulative projects. As shown, the cumulative projects are forecast to generate a total of 248,305 daily trips, with 18,381 trips (10,510 inbound and 7,871 outbound) forecast during the AM peak hour and 22,614 trips (10,608 inbound and 12,006 outbound) forecast during the PM peak hour.

Distribution patterns for each of the cumulative projects were developed based on the location of the trip attractors, type of land use, the site's proximity to major traffic carriers and freeways and previously completed traffic studies. The AM and PM peak hour traffic volumes associated with the twenty-one (21) cumulative projects in Year 2026 are presented in ***Figures 6-2*** and ***6-3***, respectively.

6.4 Year 2026 Traffic Conditions

Figures 6-4 and ***6-5*** present the Year 2026 Without Project AM and PM peak hour cumulative traffic volumes at the twelve (12) key study intersections, respectively. Please note that the cumulative traffic volumes represent the accumulation of existing traffic, ambient growth traffic and cumulative projects traffic.

Figures 6-6 and ***6-7*** illustrate the Year 2026 forecast AM and PM peak hour traffic volumes with the inclusion of the trips generated by the proposed Project, respectively.

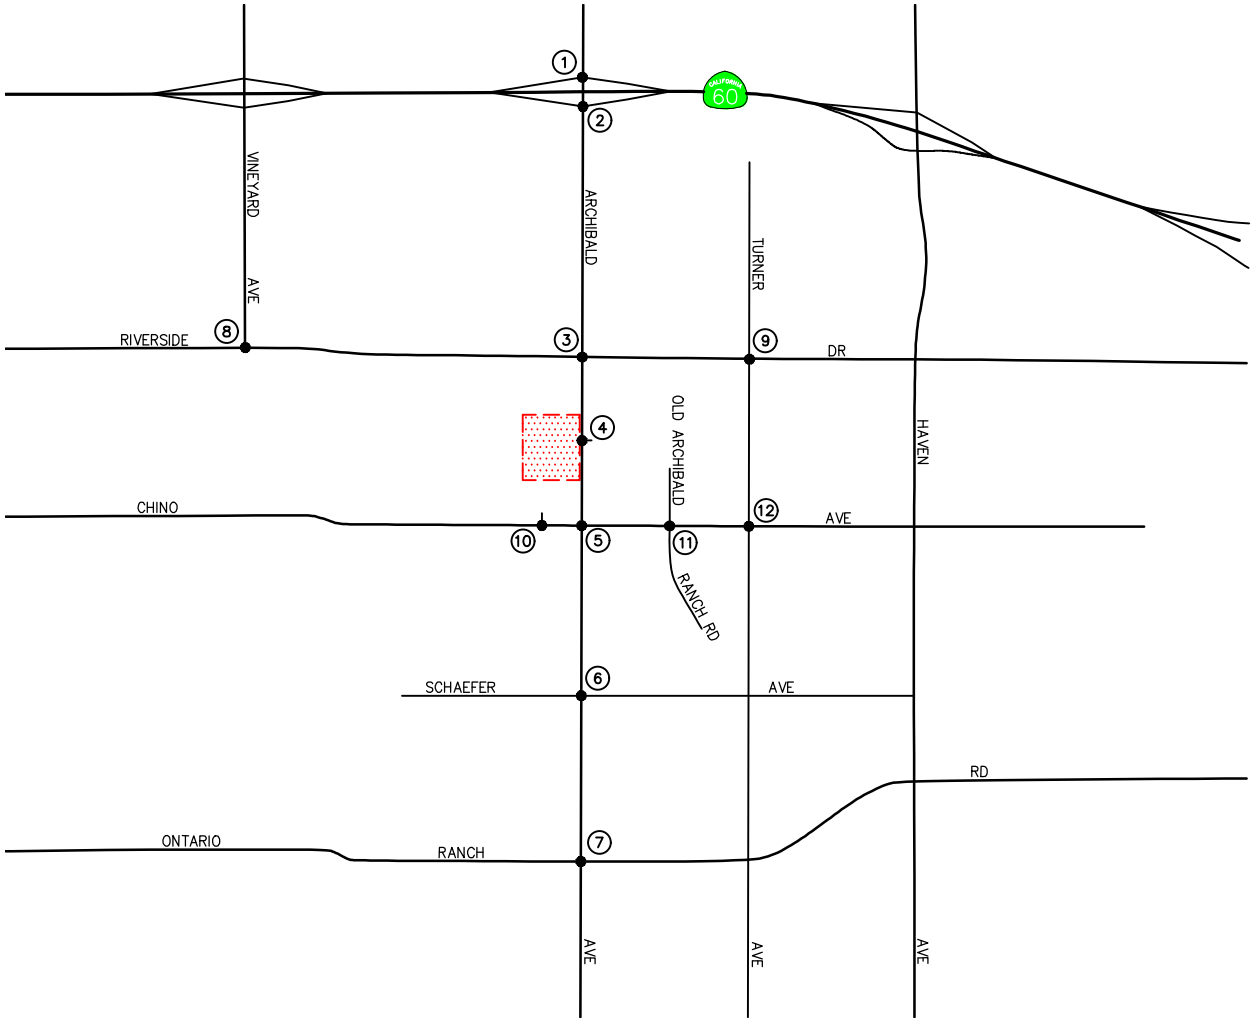
6.5 Year 2050 Traffic Conditions

Long-term (Year 2050) traffic volume forecasts for this traffic analysis were determined through utilization of The Ontario Plan 2050 (TOP 2050) Model by San Bernardino County Traffic Analysis Model (SBTAM) developed by SANBAG. The future Year 2050 traffic volumes were post-processed based on the relationship of SBTAM TOP's Year 2019 base year validation model run output to the base year ground traffic counts. The projected volume was reviewed carefully and adjustments were applied as warranted based on local conditions and professional judgment. Copies of the traffic model post-processing worksheets for Year 2050 are contained in ***Appendix D***.

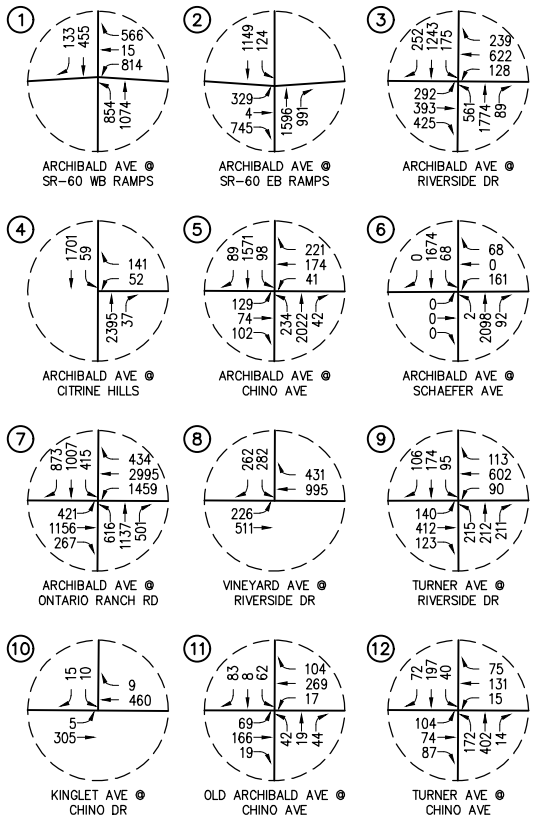
6.5.1 *Volume Adjustment*

Using the SBTAM TOP 2050, projected traffic volumes were obtained for each intersection. The first step is to obtain the approach and departure volumes from the model for each leg of the analyzed intersections. The next step is to determine the difference between the base year peak hour model volumes and the build-out peak hour model volumes. This "difference" represents the projected growth in traffic on each approach from the base year to the build-out using the SBTAM.

6.5.2 *B-turn Methodology*



The base year turning movement counts for each intersection must be converted to approach and departure volumes for each leg of the intersection. Once the base counts are in this format, the difference between the build-out model and base model are then added to the base year counts for each corresponding approach and departure volume. This step provides the adjusted volumes that will be used to determine the build-out turning movement volumes. The next process in the forecasting of future turning volumes applies the B-turn methodology. The B-turn methodology is generally described in the *"National Cooperative Highway Research Program Report (NCHRP) 255: Highway Traffic Data for Urbanized Area Project Planning and Design", Chapter 8*. The B-turn method uses the base year turning percentages (from traffic counts) and proceeds through an iterative computational technique to produce a final set of future year turning volumes. The computations involve alternatively balancing the rows (approaches) and the columns (departures) of a turning movement matrix until an acceptable convergence is obtained. Future year link volumes are fixed using this method and the turning movements are adjusted to match. The results must be checked for reasonableness and manual adjustments are sometimes necessary.



Projected volumes were carefully reviewed and adjustments were applied as warranted based on local conditions and professional engineering judgment. Please note that the post-processing methodology utilized in this report is consistent with SCAG/SANBAG requirements.

6.6 Year 2050 Traffic Volumes

The anticipated AM and PM peak hour traffic volumes, at the key study intersections, associated with Year 2050 Without Project traffic conditions are presented in ***Figures 6-8*** and ***6-9***, respectively.

Figures 6-10 and ***6-11*** illustrate the Year 2050 With Project traffic conditions during the AM peak hour and PM peak hour, respectively.

7.0 PEAK HOUR INTERSECTION CAPACITY ANALYSIS

7.1 Existing With Project Traffic Analysis

Table 7-1 summarizes the peak hour level of service results at the twelve (12) key study intersections for Existing traffic conditions. The first column (1) of HCM//LOS values in *Table 7-1* presents a summary of existing AM and PM peak hour traffic conditions (which were also presented in *Table 3-3*). The second column (2) lists Existing With Project traffic conditions. The third column (3) indicates whether the traffic associated with the Project will exceed the LOS thresholds defined in this report. The fourth column (4) indicates the anticipated LOS with planned and/or recommended improvements, if any.

7.1.1 *Existing With Project Traffic Conditions*

Review of columns (2) and (3) of *Table 7-1* indicates that all twelve (12) key study intersections are forecast to operate at acceptable LOS with the addition of Project generated traffic to existing traffic.

Appendix C presents the Existing With Project Delay/LOS calculations for the key study intersections for the AM peak hour and PM peak hour.

TABLE 7-1
EXISTING PEAK HOUR INTERSECTION CAPACITY ANALYSIS SUMMARY

Key Intersection	Minimum Acceptable LOS	Time Period	(1) Existing Traffic Conditions		(2) Existing With Project Traffic Conditions		(3) Exceeds LOS Thresholds	(4) Existing With Project Traffic Conditions With Improvements	
			Delay (s/v)	LOS	Delay (s/v)	LOS	Yes/No	Delay (s/v)	LOS
1. Archibald Avenue at SR-60 WB Ramps	D	AM	23.4	C	23.5	C	No	--	--
		PM	18.5	B	18.7	B	No	--	--
2. Archibald Avenue at SR-60 EB Ramps	D	AM	15.9	B	15.9	B	No	--	--

		PM	28.1	C	28.5	C	No	--	--
6. Archibald Avenue at Schaefer Avenue	E	AM	7.3	A	7.3	A	No	--	--
		PM	6.9	A	6.9	A	No	--	--
7. Archibald Avenue at Ontario Ranch Road	E	AM	37.3	D	37.4	D	No	--	--
		PM	35.5	D	35.6	D	No	--	--

Notes:

- s/v = seconds per vehicle (delay)
- LOS = Level of Service, please refer to *Tables 3-1* and *3-2* for the LOS definitions
- **Bold Delay/LOS values** indicate adverse service levels based on the LOS standards mentioned in this report

[10] Represents anticipated LOS with the proposed installation of a traffic signal at this intersection/Project Driveway.

TABLE 7-1 (CONTINUED)
EXISTING PEAK HOUR INTERSECTION CAPACITY ANALYSIS SUMMARY

Key Intersection		Minimum Acceptable LOS	Time Period	(1) Existing Traffic Conditions		(2) Existing With Project Traffic Conditions		(3) Exceeds LOS Thresholds	(4) Existing With Project Traffic Conditions With Improvements	
				Delay (s/v)	LOS	Delay (s/v)	LOS	Yes/No	Delay (s/v)	LOS
8.	Vineyard Avenue at Riverside Drive	E	AM	22.7	C	22.7	C	No	--	--
			PM	28.5	C	28.7	C	No	--	--
9.	Turner Avenue at Riverside Drive	E	AM	34.8	C	34.8	C	No	--	--
			PM	23.6	C	23.6	C	No	--	--
10.	Kinglet Avenue at Chino Avenue	E	AM	11.6	B	11.7	B	No	--	--
			PM	11.0	B	10.9	B	No	--	--
11.	Old Archibald Avenue at Chino Avenue	E	AM	11.4	B	11.5	B	No	--	--
			PM	8.7	A	8.7	A	No	--	--
12.	Turner Avenue at Chino Avenue	E	AM	12.9	B	12.8	B	No	--	--
			PM	9.8	A	9.9	A	No	--	--

Notes:

- s/v = seconds per vehicle (delay)
- LOS = Level of Service, please refer to *Tables 3-1* and *3-2* for the LOS definitions
- **Bold Delay/LOS values** indicate adverse service levels based on the LOS standards mentioned in this report

7.2 Year 2026 Traffic Analysis

Table 7-2 summarizes the weekday AM peak hour and PM peak Level of Service results at the twelve (12) key study intersections for the Year 2026. The second column (2) of *Table 7-2* lists projected cumulative traffic conditions (existing plus ambient plus cumulative projects traffic) based on existing intersection geometry, while the third column (3) presents forecast Year 2026 cumulative conditions with the addition of Project traffic. The fourth column (4) of *Table 7-2* indicates whether the traffic associated with the Project will exceed the LOS thresholds defined in this report. The fifth column (5) indicates the anticipated LOS with planned and/or recommended improvements, if any.

7.2.1 *Year 2026 Without Project Traffic Conditions*

Review of column (2) of *Table 7-2* indicates that six (6) of the twelve (12) key study intersections are forecast to operate adversely with the addition ambient traffic growth and related projects traffic based on the LOS standards specified in this report. The remaining key study intersections are forecast to continue to operate at LOS D or better during the weekday AM and PM peak hours with the addition of ambient traffic growth and cumulative project traffic.

Appendix E presents the Year 2026 Without Project Delay/LOS calculations for the key study intersections for the AM peak hour and PM peak hour.

7.2.2 *Year 2026 With Project Traffic Conditions*

Review of columns (3) and (4) of *Table 7-2* indicates that traffic associated with the proposed Project will have an effect on the LOS at five (5) of the twelve (12) intersections, thus necessitating intersection improvements based on the City's LOS standards. These intersections include Archibald Avenue at SR-60 EB Ramps (#2), Archibald Avenue at Riverside Drive (#3), Archibald Avenue at Chino Avenue (#5), Archibald Avenue at Ontario Ranch Road (#7), and Vineyard Avenue at Riverside Drive (#8).

Relative to Archibald Avenue at Citrine Hills/Project Driveway (#4), although this intersection is forecast to operate at LOS F without the Project, a five-phase traffic signal will be installed at the intersection as a project design feature which will improve the overall service levels at the intersection.

As shown in column (5) of *Table 7-2*, the implementation of planned and/or recommended improvements (detailed in *Section 9.0*) at the four (4) intersections of Archibald Avenue at SR-60 EB Ramps (#2), Archibald Avenue at Riverside Drive (#3), Archibald Avenue at Chino Avenue (#5), and Vineyard Avenue at Riverside Drive (#8) will improve the service levels to an acceptable LOS based on the City's LOS standards. The intersection of Archibald Avenue at Ontario Ranch Road (#7) is forecast to continue to operate adversely with the implementation of planned and/or recommended improvements, however, the improvements offset the Project's cumulative effects on traffic under near-term (Year 2026) traffic conditions.

Appendix E presents the Year 2026 With Project Delay/LOS calculations for the key study intersections for the AM peak hour and PM peak hour.

TABLE 7-2
YEAR 2026 PEAK HOUR INTERSECTION CAPACITY ANALYSIS SUMMARY

Key Intersection	Minimum Acceptable LOS	Time Period	(1) Existing Traffic Conditions		(2) Year 2026 Without Project Traffic Conditions		(3) Year 2026 With Project Traffic Conditions		(4) Exceeds LOS Thresholds	(5) Year 2026 With Project Traffic Conditions with Improvements	
			Delay (s/v)	LOS	Delay (s/v)	LOS	Delay (s/v)	LOS	Yes/No	Delay (s/v)	LOS
1. Archibald Avenue at	D	AM	23.4	C	29.3	C	30.5	C	No	--	--
SR-60 WB Ramps		PM	18.5	B	37.9	D	40.7	D	No	--	--
2. Archibald Avenue at	D	AM	15.9	B	30.6	C	31.5	C	No	18.7	B

		PM	8.7	A	9.7	A	9.8	A	No	--	--
12. Turner Avenue at Chino Avenue	E	AM	12.9	B	11.9	B	11.9	B	No	--	--
		PM	9.8	A	10.9	B	10.9	B	No	--	--

Notes:

- s/v = seconds per vehicle (delay)
- LOS = Level of Service, please refer to *Tables 3-1* and *3-2* for the LOS definitions
- **Bold Delay/LOS values** indicate adverse service levels based on the LOS standards mentioned in this report

7.3 Year 2050 Traffic Analysis

Table 7-3 summarizes the weekday AM peak hour and PM peak Level of Service results at the twelve (12) key study intersections for the Year 2050 scenario. The structure of this table is similar to that of *Table 7-2.* The second column (2) lists forecast Year 2050 traffic conditions based on existing intersection geometry and/or planned improvements/traffic control, but without any traffic generated from the proposed Project. The third column (3) presents forecast Year 2050 traffic conditions with the addition of traffic generated by the Project. The fourth column (4) indicates whether the traffic associated with the Project will exceed the LOS thresholds previously mentioned. The fifth column (5) indicates the anticipated level of service with recommended improvements to accommodate long-term (Year 2050) traffic volumes.

7.3.1 *Year 2050 Without Project Traffic Conditions*

Review of column (2) of *Table 7-3* indicates that six (6) of the twelve (12) key study intersections are forecast to operate adversely under Year 2050 Without Project traffic conditions based on the LOS standards specified in this report. The remaining key study intersections are forecast to continue to operate at LOS D or better during the weekday AM and PM peak hours under Year 2050 Without Project traffic conditions. ***Appendix F*** presents the Year 2050 Without Project Delay/LOS calculations for the key study intersections for the AM peak hour and PM peak hour.

7.3.2 *Year 2050 With Project Traffic Conditions*

Review of columns (3) and (4) of *Table 7-3* indicates that traffic associated with the proposed Project will have an effect on the LOS at five (5) of the twelve (12) intersections, thus necessitating intersection improvements based on the City's LOS standards. These intersections include Archibald Avenue at SR-60 EB Ramps (#2), Archibald Avenue at Riverside Drive (#3), Archibald Avenue at Chino Avenue (#5), Archibald Avenue at Ontario Ranch Road (#7), and Vineyard Avenue at Riverside Drive (#8).

Relative to Archibald Avenue at Citrine Hills/Project Driveway (#4), although this intersection is forecast to operate at LOS F without the Project, a five-phase traffic signal will be installed at the intersection as a project design feature which will improve the overall service levels at the intersection.

As shown in column (5) of *Table 7-3*, the implementation of planned and/or recommended improvements (detailed in *Section 9.0*) at the four (4) intersections of Archibald Avenue at SR-60 EB Ramps (#2), Archibald Avenue at Riverside Drive (#3), Archibald Avenue at Chino Avenue (#5), and Vineyard Avenue at Riverside Drive (#8) will improve the service levels to an acceptable LOS based on the City's LOS standards. The intersection of Archibald Avenue at Ontario Ranch Road (#7) is forecast to continue to operate adversely with the implementation of planned and/or recommended improvements, however, the improvements offset the Project's cumulative effects on traffic under long-term (Year 2050) traffic conditions.

Appendix F presents the Year 2050 With Project Delay/LOS calculations for the key study intersections for the AM peak hour and PM peak hour.

TABLE 7-3

YEAR 2050 PEAK HOUR INTERSECTION CAPACITY ANALYSIS SUMMARY

Key Intersection	Minimum Acceptable LOS	Time Period	(1) Existing Traffic Conditions		(2) Year 2050 Without Project Traffic Conditions		(3) Year 2050 With Project Traffic Conditions		(4) Exceeds LOS Thresholds	(5) Year 2050 With Project Traffic Conditions with Improvements

- **Bold Delay/LOS values** indicate adverse service levels based on the LOS standards mentioned in this report

8.0 INTERSECTION QUEUING ANALYSIS

8.1 Caltrans Off-Ramp Queueing Analysis

The *Caltrans Interim Land Development and Intergovernmental Review (LDIGR) Safety Review Practitioners Guidance*, dated July 2020, provides direction on a simplified safety analysis approach that reduces the risk to all road users and that focuses on multi-modal conflict analysis as well as access management issues. District traffic safety staff are encouraged to consider the proposed Project's potential influence on safety on state roadways, including the following factors:

- Increased presence of pedestrians and bicyclists
- Degradation of the walking and bicycling environment and experience
- New pedestrian and bicyclist connection desires
- Multimodal conflict points, especially at intersections and project access locations
- Change in traffic mix such as an increase in bicyclists or pedestrians where features such as shoulders or sidewalks may not exist or are inconsistent with facility design (sidewalks, bike and multi-user paths, multimodal roadways, etc.)
- Increased vehicular speeds
- Transition between free flow and metered flow
- Increased traffic volumes
- Queuing at off-ramps resulting in slow or stopped traffic on the mainline or speed differentials between adjacent lanes
- Queuing exceeding turn pocket length that impedes through-traffic

The proposed Project does not take direct access from a State facility; however, an evaluation of the Project's potential impacts on queuing at Caltrans intersections was prepared in order to determine if the Project would cause, or contribute towards, slowing or stopped traffic on freeway mainline travel lanes, off-ramps, and State highway lanes that could result in unsafe speed differentials between adjacent lanes.

As such, a Caltrans queueing analysis was conducted for the freeway off-ramps at the intersections of Archibald Avenue at SR-60 WB Ramps (#1) and Archibald Avenue at SR-60 EB Ramps (#2) using the Highway Capacity Manual (HCM) 95th percentile queue methodology for signalized intersections. The queuing analysis was based on the forecast weekday AM and PM intersection turning movement volumes utilized in the level of service analyses. The existing lane configurations and storage lengths were determined based on a review of aerial maps of the subject intersections obtained from Google Earth and on field reviews conducted by LLG Engineers. An average vehicle length of 25 feet is assumed for purposes of this analysis.

8.1.1 *Existing with Project Caltrans Queueing Analysis*

Table 8-1 presents the queueing analyses results for the two (2) Caltrans study intersections. Column (1) presents the queuing results for existing AM and PM peak hour traffic conditions. Column (2) presents the results for Existing With Project traffic conditions. Column (3) presents the anticipated queueing results for with planned and/or recommended improvements, if any.

Review of columns (1) and (2) of *Table 8-1* indicates that the two (2) study intersections have queues that are adequately accommodated by the existing storage provided for Existing With Project traffic conditions. *Appendix C* presents the Existing and Existing With Project queueing calculations for the key study intersections for the AM peak hour and PM peak hour.

8.1.2 *Year 2026 Caltrans Queueing Analysis*

Table 8-2 presents the queueing analyses results for the two (2) Caltrans study intersections. Column (1) presents the queuing results for Year 2026 AM and PM peak hour traffic conditions. Column (2) presents the results for Year 2026 With Project traffic conditions. Column (3) presents the anticipated queueing results for with planned and/or recommended improvements, if any.

Review of columns (1) and (2) of *Table 8-2* indicates that the two (2) study intersections have queues that are adequately accommodated by the existing storage provided for Year 2026 With Project traffic conditions. *Appendix E* presents the Year 2026 Without Project and Year 2026 With Project calculations for the key study intersections for the AM peak hour and PM peak hour.

8.1.3 *Year 2050 Caltrans Queueing Analysis*

Table 8-3 presents the queueing analyses results for the two (2) Caltrans study intersections. Column (1) presents the queuing results for Year 2050 AM and PM peak hour traffic conditions. Column (2) presents the results for Year 2050 With Project traffic conditions. Column (3) presents the anticipated queueing results for with planned and/or recommended improvements, if any.

Review of columns (1) and (2) of *Table 8-3* indicates that the two (2) study intersections have queues that are adequately accommodated by the existing storage provided for Year 2050 With Project traffic conditions. *Appendix F* presents the Year 2050 Without Project and Year 2050 With Project calculations for the key study intersections for the AM peak hour and PM peak hour.

TABLE 8-1

EXISTING PEAK HOUR CALTRANS OFF-RAMP QUEUING ANALYSIS

Key Intersections	Storage Provided (feet)	(1) Existing Traffic Conditions				(2) Existing with Project Traffic Conditions				(3) Existing with Project Traffic Conditions with Improvements

[16] Although the anticipated queue exceeds the striped storage, the spillover queue can be accommodated within the off-ramp.

8.2 City of Ontario Turn Pocket Queueing Analysis

A vehicle queueing analysis was conducted at each signalized study intersection in addition to the intersection level of service analyses. The queueing analysis was prepared for the left-turn and right-turn pockets at each signalized intersection and was based on the Highway Capacity Manual (HCM) 95th percentile queue methodology for signalized intersections.

The queuing analysis was based on the forecast weekday AM and PM intersection turning movement volumes utilized in the level of service analyses. The existing lane configurations and storage lengths were determined based on a review of aerial maps of the subject intersections obtained from Google Earth and on field reviews conducted by LLG Engineers. An average vehicle length of 25 feet is assumed for purposes of this analysis.

8.2.1 *Existing with Project Turn Pocket Queueing Analysis*

Table 8-4 presents the queueing analyses results for the nine (9) signalized study intersections. Column (1) presents the queuing results for existing AM and PM peak hour traffic conditions. Column (2) presents the results for Existing With Project traffic conditions. Column (3) presents the anticipated queueing results for with planned and/or recommended improvements, if any.

Review of columns (1) and (2) of *Table 8-4* indicates that five (5) out of the nine (9) signalized study intersections have queues which exceed the provided storage for Existing With Project traffic conditions. However, for all of the deficient approaches/intersections, the proposed Project either does not contribute to or adds less than one (1) vehicle to the queue, and therefore it has been concluded that improvements related to queueing are not required for Existing With Project traffic conditions.

Appendix C presents the Existing and Existing With Project queueing calculations for the key study intersections for the AM peak hour and PM peak hour.

8.2.2 *Year 2026 Turn Pocket Queueing Analysis*

Table 8-5 presents the queueing analyses results for the nine (9) signalized study intersections. Column (1) presents the queuing results for Year 2026 AM and PM peak hour traffic conditions. Column (2) presents the results for Year 2026 With Project traffic conditions. Column (3) presents the anticipated queueing results for with planned and/or recommended improvements, if any.

Review of columns (1) and (2) of *Table 8-5* indicates that seven (7) out of the nine (9) signalized study intersections have queues which exceed the provided storage for Year 2026 With Project traffic conditions. However, for a number of deficient approaches, the proposed Project either does not contribute to or adds less than one (1) vehicle to the queue, and therefore it has been concluded that improvements are not required for those approaches. As such, the following four (4) intersections/approaches require improvements related to queuing:

- No. 1: Archibald Avenue at SR-60 WB Ramps
  - Northbound Left-Turn
- No. 2: Archibald Avenue at SR-60 EB Ramps
  - Northbound Right-Turn
- No. 3: Archibald Avenue at Riverside Drive
  - Northbound Left-Turn
  - Westbound Left-Turn
- No. 7: Archibald Avenue at Schaefer Avenue
  - Southbound Left-Turn
  - Southbound Right-Turn
  - Eastbound Left-Turn
  - Westbound Right-Turn

Review of column (3) of *Table 8-5* indicates that the implementation of planned and/or recommended improvements (detailed in *Section 9.0*) at the intersections of Archibald Avenue at SR-60 EB Ramps (#2), Archibald Avenue at Riverside Drive (#3), and Archibald Avenue at Ontario Ranch Road (#7) will offset the Project's cumulative effects and help improve the queues under near-term (Year 2026) traffic conditions.

The deficient queues for the northbound left-turn at Archibald Avenue at SR-60 WB Ramps (#1) is considered unavoidable since lengthening the turn pocket is considered infeasible. As such, improvements at this location are not recommended.

It should be noted that although the intersections of Archibald Avenue at Chino Avenue (#5), and Vineyard Avenue at Riverside Drive (#8) does not require improvements related to queueing, the implementation of planned and/or recommended improvements at the intersection will help improve the queues at the intersections.

Appendix E presents the Year 2026 Without Project and Year 2026 With Project calculations for the key study intersections for the AM peak hour and PM peak hour.

8.2.3 *Year 2050 Turn Pocket Queueing Analysis*

Table 8-6 presents the queueing analyses results for the nine (9) signalized study intersections. Column (1) presents the queuing results for Year 2050 AM and PM peak hour traffic conditions. Column (2) presents the results for Year 2050 With Project traffic conditions. Column (3) presents the anticipated queueing results for with planned and/or recommended improvements, if any.

Review of columns (1) and (2) of *Table 8-6* indicates that eight (8) out of the nine (9) signalized study intersections have queues which exceed the provided storage for Year 2050 With Project traffic conditions. However, for a number of deficient approaches, the proposed Project either does not contribute to or adds less than one (1) vehicle to the queue, and therefore it has been concluded that improvements are not required for those approaches. As such, the following five (5) intersections/approaches require improvements related to queuing:

- No. 1: Archibald Avenue at SR-60 WB Ramps
  - Northbound Left-Turn
- No. 2: Archibald Avenue at SR-60 EB Ramps
  - Northbound Right-Turn
- No. 3: Archibald Avenue at Riverside Drive
  - Northbound Left-Turn
  - Westbound Left-Turn
- No. 5: Archibald Avenue at Chino Avenue
  - Southbound Left-Turn
- No. 7: Archibald Avenue at Schaefer Avenue
  - Southbound Left-Turn
  - Southbound Right-Turn
  - Eastbound Left-Turn
  - Westbound Right-Turn

Review of column (3) of *Table 8-6* indicates that the implementation of planned and/or recommended improvements (detailed in *Section 9.0*) at the intersections of Archibald Avenue at SR-60 EB Ramps (#2), Archibald Avenue at Riverside Drive (#3), Archibald Avenue at Chino Avenue (#5), and Archibald Avenue at Ontario Ranch Road (#7) will offset the Project's cumulative effects and help improve the queues under long-term (Year 2050) traffic conditions.

The deficient queues for the northbound left-turn at Archibald Avenue at SR-60 WB Ramps (#1) is considered unavoidable since lengthening the turn pocket is considered infeasible. As such, improvements at this location are not recommended.

It should be noted that although the intersection of Vineyard Avenue at Riverside Drive (#8) does not require improvements related to queueing, the implementation of planned and/or recommended improvements at the intersection will help improve the queues at the intersection.

Appendix F presents the Year 2050 Without Project and Year 2050 With Project calculations for the key study intersections for the AM peak hour and PM peak hour.

Westbound Right-Turn	160	154	Yes	55	Yes	156	Yes	61	Yes	--	--	--	--

[17] Movement consists of dual left-turn lanes.

[18] Although the anticipated queue exceeds the striped storage, the spillover queue can be accommodated within the transition area of the turn pocket.

[19] The proposed Project will include the installation of a five-phase traffic signal at the intersection of Archibald Avenue at Citrine Hills and restriping the intersection to accommodate a northbound left-turn pocket into the Project site.

[26] Movement consists of dual left-turn lanes.

[27] Although the anticipated queue exceeds the striped storage, the spillover queue can be accommodated within the transition area of the turn pocket.

[28] Year 2026 with Project traffic conditions with improvements includes modifying the traffic signal to accommodate a free-right turn in the northbound direction.

[29] Year 2026 with Project traffic conditions with improvements includes the construction of a second left-turn lane. It is assumed that the storage for each lane is consistent with the existing storage.

[30] Year 2026 with Project traffic conditions with improvements includes the construction of a southbound and eastbound right-turn lane.

[31] The proposed Project will include the installation of a five-phase traffic signal at the intersection of Archibald Avenue at Citrine Hills and restriping the intersection to accommodate a northbound left-turn pocket into the Project site.

32 Although the anticipated queue exceeds the striped storage, the spillover queue can be accommodated within the transition area of the turn pocket.

33 Although the anticipated queue exceeds the striped storage, the spillover queue can be accommodated upstream of the turn pocket.

34 Year 2026 with Project traffic conditions with improvements includes the construction of a second left-turn lane. It is assumed that the storage for each lane is consistent with the existing storage.

35 Year 2026 with Project traffic conditions with improvements includes modifying the traffic signal to accommodate a free-right turn in the northbound direction.

36 Movement consists of dual left-turn lanes.

37 Right-turn is a free movement.

41 Movement consists of dual left-turn lanes.

42 Year 2050 with Project traffic conditions with improvements includes modifying the traffic signal to accommodate a free-right turn in the northbound direction.

43 Year 2050 with Project traffic conditions with improvements includes the construction of a second left-turn lane. It is assumed that the storage for each lane is consistent with the existing storage.

44 Year 2050 with Project traffic conditions with improvements includes the construction of a southbound and eastbound right-turn lane.

45 The proposed Project will include the installation of a five-phase traffic signal at the intersection of Archibald Avenue at Citrine Hills and restriping the intersection to accommodate a northbound left-turn pocket into the Project site.

Westbound Right-Turn	460	442	Yes	**682**	**No**	444	Yes	**700**	**No**	396	Yes	**592**	**No**

[46] Year 2050 with Project traffic conditions with improvements includes the construction of an eastbound right-turn lane.

[47] Although the anticipated queue exceeds the striped storage, the spillover queue can be accommodated upstream of the turn pocket.

[48] Year 2050 with Project traffic conditions with improvements includes the construction of a second left-turn lane. It is assumed that the storage for each lane is consistent with the existing storage.

[49] Year 2050 with Project traffic conditions with improvements includes modifying the traffic signal to accommodate a free-right turn in the northbound direction.

[50] Movement consists of dual left-turn lanes.

[51] Right-turn is a free movement.

Eastbound Left-Turn	100	219	Yes[55]	171	Yes[55]	219	Yes[55]	181	Yes[55]	--	--	--	--
Westbound Left-Turn	100	121	Yes[55]	228	Yes[55]	121	Yes[55]	237	Yes[55]	--	--	--	--

[52] Consistent with *The Ontario Plan (TOP)*, Year 2050 Buildout traffic conditions includes the extension of Vineyard Avenue south of Riverside Drive.

[53] Year 2050 with Project traffic conditions with improvements includes the construction of a second left-turn lane. It is assumed that the storage for each lane is consistent with the existing storage.

[54] Year 2050 with Project traffic conditions with improvements includes the construction of a southbound, eastbound, and westbound right-turn lane.

[55] Although the anticipated queue exceeds the striped storage, the spillover queue can be accommodated upstream of the turn pocket.

9.0 AREA-WIDE TRAFFIC IMPROVEMENTS

For the intersections where projected traffic volumes are expected to result in poor operating conditions, this report recommends (identifies) improvements, which change the intersection geometry to increase capacity. These capacity enhancing improvements usually involve roadway widening and/or restriping to reconfigure or add lanes to various approaches of a key intersection. The proposed improvements are expected to offset the impact of future traffic and improve Levels of Service to an acceptable range and/or to pre-Project conditions.

Transportation improvements throughout San Bernardino County are funded through a combination of direct implementation of recommended improvements by the Project, fair share contributions or development impact fee programs. Identification and timing of needed improvements is generally determined through local jurisdictions based upon a variety of factors.

9.1 Project Specific Improvements

The following Project design features are to be implemented in conjunction with development of the proposed Project to ensure adequate access and egress to the site is provided and have been included in Existing With Project, Year 2026 With Project and Year 2050 With Project traffic conditions:

- No. 4 – Archibald Avenue at Citrine Hills/Project Driveway: Construct west leg and provide one shared eastbound left-turn/through/right-turn lane and one inbound lane. Widen and/or restripe to provide an exclusive northbound left-turn lane. Install a five-phase traffic signal.

9.2 Year 2050 Planned Improvements

The following improvements are planned to be implemented by The City of Ontario by Year 2050 traffic conditions and have been included as part of the background traffic conditions:

- No. 8 – Vineyard Avenue at Riverside Drive: Construct south leg and provide one exclusive northbound left-turn lane, a northbound shared through/right lane, and one receiving lane. Restripe the southbound right-turn lane to a shared through/right lane. Widen and/or restripe to provide an exclusive westbound left-turn lane. Modify the existing traffic signal to incorporate eight-phase operation.

9.3 Recommended Improvements

9.3.1 *Existing With Project Recommended Improvements*

The results of the intersection level of service analyses for Existing With Project peak hour traffic conditions indicate that the twelve (12) study intersections are forecast to continue to operate at acceptable service levels. As there are no deficiencies, no traffic improvements are required under this traffic scenario.

9.3.2 *Year 2026 With Project Recommended Improvements*

The following improvements listed below have been identified to either improve the service levels to an acceptable LOS or to offset the effect of cumulative traffic and Project traffic, for Year 2026 With Project traffic conditions:

- No. 2 – Archibald Avenue at SR-60 EB Ramps: Construct a third departure lane on the freeway on-ramp. Modify the existing traffic signal to include a free movement for the northbound right-turn. These improvements are subject to the approval of the Caltrans.

- No. 3 – Archibald Avenue at Riverside Drive: Widen and/or restripe the south leg to provide a second northbound left-turn lane. Widen and/or restripe the north leg to provide an exclusive southbound right-turn lane. Widen and/or restripe the west leg to provide a second eastbound left-turn lane, a third eastbound through lane, an exclusive eastbound right-turn lane, and a third westbound departure lane. Widen and/or restripe the east leg to provide a third westbound through lane and a third eastbound departure lane. Modify the existing traffic signal and provide an eastbound right-turn overlap phase. These improvements are subject to the approval of the City of Ontario.

- No. 5 – Archibald Avenue at Chino Avenue: Widen and/or restripe the north leg to provide a third southbound through lane. Widen and/or restripe the south leg to provide a third southbound departure lane. Modify the existing traffic signal as needed. These improvements are subject to the approval of the City of Ontario.

- No. 7 – Archibald Avenue at Ontario Ranch Road: Restripe the south leg to provide a second northbound left-turn lane, a third northbound through lane, and a third southbound departure lane. Widen and/or restripe the north leg to provide a second southbound left-turn lane, a third southbound through lane, and a third northbound departure lane. Widen and/or restripe the west leg to provide two additional eastbound through lanes and three additional westbound departure lanes. Widen and/or restripe the east leg to provide three additional westbound through lanes and two additional eastbound departure lanes. Modify the existing traffic signal and provide a northbound free-right turn, a southbound right-turn overlap phase, and a westbound right-turn overlap phase. These improvements are subject to the approval of the City of Ontario.

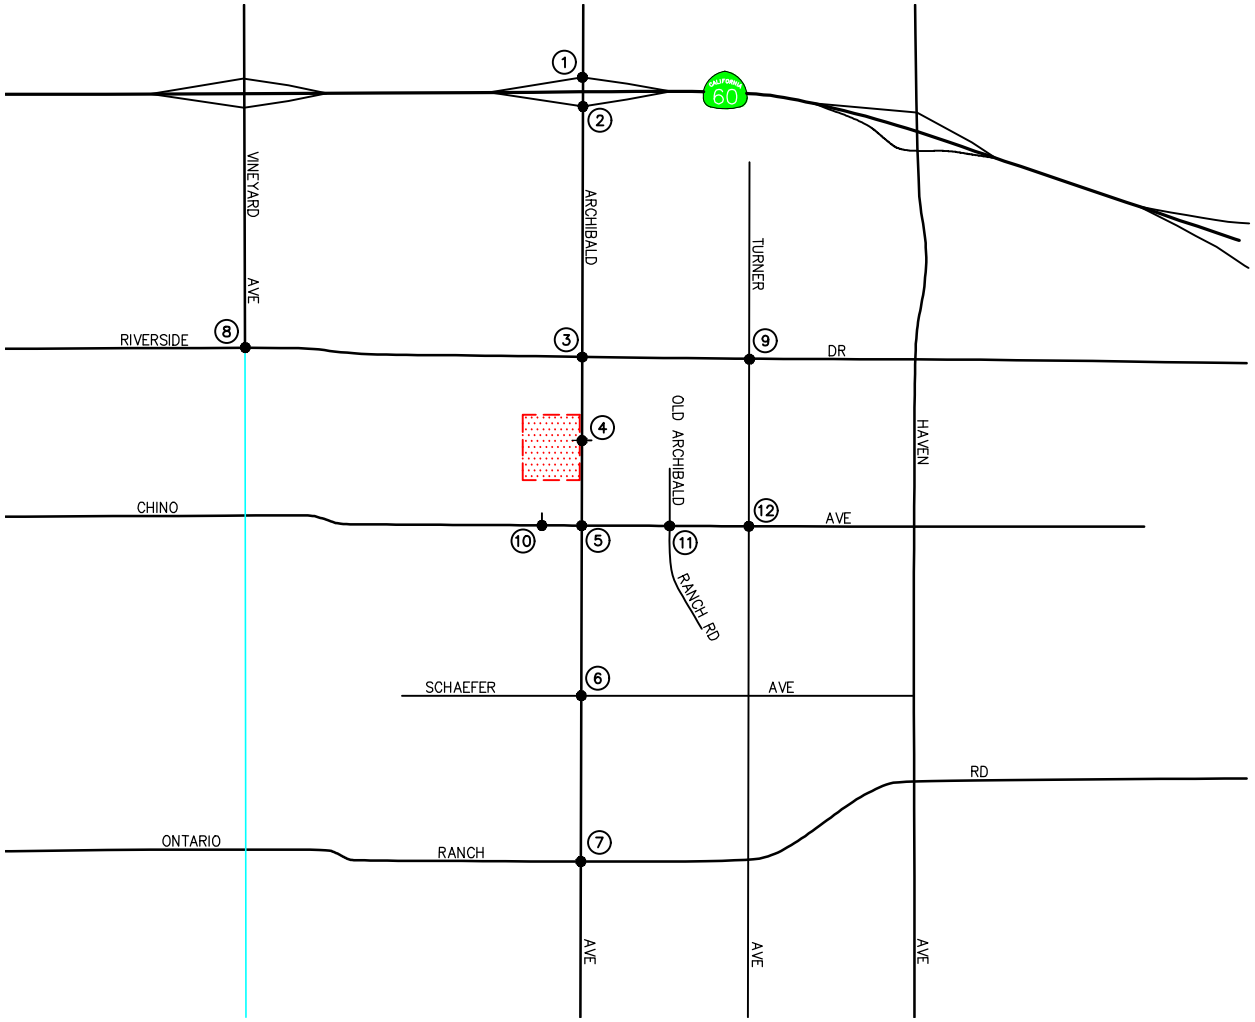
- No. 8 – Vineyard Avenue at Riverside Drive: Widen and/or restripe the north leg to provide a second southbound left-turn lane. Widen and/or restripe the east leg to provide a second eastbound departure lane. Modify the existing traffic signal as needed. These improvements are subject to the approval of the City of Ontario.

9.3.3 *Year 2050 With Project Recommended Improvements*

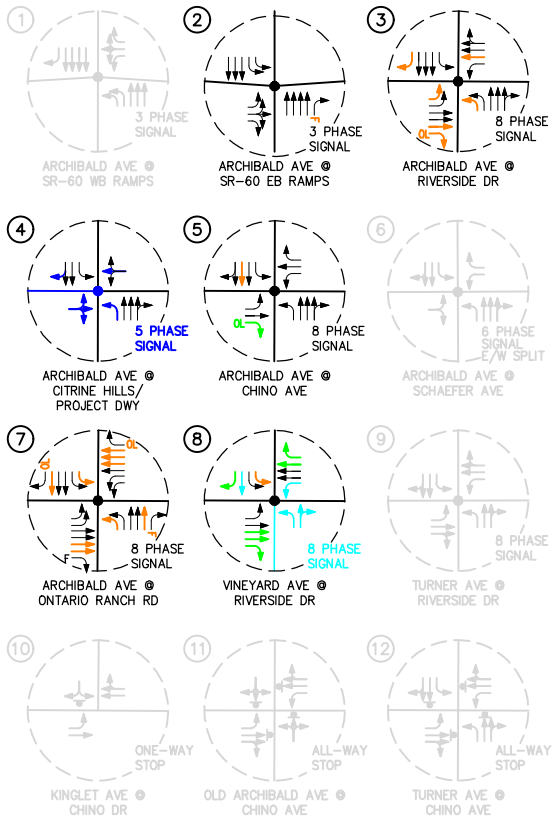
The following improvements listed below have been identified to either improve the service levels to an acceptable LOS or to offset the effect of cumulative traffic and Project traffic, for Year 2050 With Project traffic conditions:

- No. 2 – Archibald Avenue at SR-60 EB Ramps: *(Same as those identified in Section 9.3.2)* Construct a third departure lane on the freeway on-ramp. Modify the existing traffic signal to include a free movement for the northbound right-turn. These improvements are subject to the approval of the Caltrans.

- No. 3 – Archibald Avenue at Riverside Drive: *(Same as those identified in Section 9.3.2)* Widen and/or restripe the south leg to provide a second northbound left-turn lane. Widen and/or restripe the north leg to provide an exclusive southbound right-turn lane. Widen and/or restripe the west leg to provide a second eastbound left-turn lane, a third eastbound through lane, an exclusive eastbound right-turn lane, and a third westbound departure lane. Widen and/or restripe the east leg to provide a third westbound through lane and a third eastbound departure lane. Modify the existing traffic signal and provide an eastbound right-turn overlap phase. These improvements are subject to the approval of the City of Ontario.



- No. 5 – Archibald Avenue at Chino Avenue: Widen and/or restripe the north leg to provide a third southbound through lane. Widen and/or restripe the south leg to provide a third southbound departure lane. Widen and/or restripe the west leg to provide an exclusive eastbound right-turn lane. Modify the existing traffic signal and provide an eastbound right-turn overlap phase. These improvements are subject to the approval of the City of Ontario.



- No. 7 – Archibald Avenue at Ontario Ranch Road: *(Same as those identified in Section 9.3.2)* Restripe the south leg to provide a second northbound left-turn lane, a third northbound through lane, and a third southbound departure lane. Widen and/or restripe the north leg to provide a second southbound left-turn lane, a third southbound through lane, and a third northbound departure lane. Widen and/or restripe the west leg to provide two additional eastbound through lanes and three additional westbound departure lanes. Widen and/or restripe the east leg to provide three additional westbound through lanes and two additional eastbound departure lanes. Modify the existing traffic signal and provide a northbound free-right turn, a southbound right-turn overlap phase, and a westbound right-turn overlap phase. These improvements are subject to the approval of the City of Ontario.

- No. 8 – Vineyard Avenue at Riverside Drive: Widen and/or restripe the north leg to provide a second southbound left-turn lane and an exclusive southbound right-turn lane. Widen and/or restripe the west leg to provide two eastbound through lanes, an exclusive eastbound right-turn lane, and a third westbound departure lane. Widen and/or restripe the east leg to provide a third westbound through lane, an exclusive westbound right-turn

lane, and two additional eastbound departure lanes. Modify the existing traffic signal to provide an eight-phase signal. These improvements are subject to the approval of the City of Ontario.

Figure 9-1 graphically illustrates the recommended improvements for Year 2026 With Project and Year 2050 With Project traffic conditions.

10.0 PROJECT FAIR SHARE ANALYSIS

The transportation improvements associated with the development of the proposed Project were determined based on the future conditions analysis with and without the proposed Project. The key study locations forecast to operate at adverse levels of service are discussed below. As such, the proposed Project's "fair-share" of the recommended traffic improvements has been calculated for the key study locations that are forecast to operate at adverse levels of service in the Year 2026 and Year 2050 traffic conditions.

10.1 Year 2026 With Project Traffic Conditions

Table 10-1 presents the AM and PM peak hour Project fair share percentage at the key study intersections that are forecast to operate at adverse levels of service in the Year 2026 With Project traffic conditions. As presented in *Table 10-1*, the first column (1) presents a total of all intersection peak hour movements for existing conditions. The second column (2) presents Project traffic. The third column (3) presents future Year 2026 traffic conditions with Project traffic. The fourth column (4) represents the Project's fair share based on the following formula:

- Project Fair Share (4) = Column (2)/[Column (3) – Column (1)]*100

The Project fair share percentage (worse time period impacted) for the five (5) intersections forecast to operate at adverse levels of service for the Year 2026 With Project traffic conditions are shown below:

- 2. Archibald Avenue at SR-60 EB Ramps 3.99%
- 3. Archibald Avenue at Riverside Drive 3.44%
- 5. Archibald Avenue at Chino Avenue 2.45%
- 7. Archibald Avenue at Ontario Ranch Road 0.46%
- 8. Vineyard Avenue at Riverside Drive 1.09%

10.2 Year 2050 With Project Traffic Conditions

Table 10-2 presents the AM and PM peak hour Project fair share percentage at the key study intersections that are forecast to operate at adverse levels of service in the Year 2050 With Project traffic conditions and is similar in set up to *Table 10-1.*

The Project fair share percentage (worse time period impacted) for the five (5) intersections forecast to operate at adverse levels of service for the Year 2050 With Project traffic conditions are shown below:

- 2. Archibald Avenue at SR-60 EB Ramps 3.27%
- 3. Archibald Avenue at Riverside Drive 2.35%
- 5. Archibald Avenue at Chino Avenue 1.66%
- 7. Archibald Avenue at Ontario Ranch Road 0.43%
- 8. Vineyard Avenue at Riverside Drive 0.38%

TABLE 10-1

YEAR 2026 WITH PROJECT TRAFFIC CONDITIONS INTERSECTION FAIR SHARE CONTRIBUTION

	Key Intersection	Impacted Time Period	(1) Existing Traffic	(2) Project Traffic	(3) Year 2026 With Project Traffic	(4) Project Fair Share Responsibility

11.0 SITE ACCESS AND INTERNAL CIRCULATION EVALUATION

11.1 Site Access

Access to the Project site, as currently proposed and allowed in the 2008 Specific Plan, will be provided via one (1) full access signalized driveway on Archibald Avenue opposite the Citrine Hills residential development, with secondary "cross access" provided through the adjacent residential communities as planned in the Countryside Specific Plan. It is assumed that secondary vehicular access from Chino Avenue would be provided via the intersection of Chino Avenue and Kinglet Avenue through the area of Neighborhood 4 that is now developed.

Tables 7-1, 7-2, and 7-3 summarize the intersection operations for the primary access off Archibald Avenue at Citrine Road/Project Driveway (#4), as well as the secondary access off Kinglet Avenue at Chino Avenue (#10), for Existing With Project, Year 2026 With Project and Year 2050 With Project traffic conditions upon completion of the proposed Project. Review of *Tables 7-1, 7-2 and 7-3* shows that Archibald Avenue at Citrine Road/Project Driveway (#4) and Kinglet Avenue at Chino Avenue (#10) are both forecast to operate at acceptable LOS C or better during the AM and PM peak hours.

A queueing evaluation for Archibald Avenue at Citrine Road/Project Driveway (#4) was also completed to validate the storage requirements of the proposed Project. ***Table 11-1*** presents the queueing results at the Project driveway based on Year 2050 With Project traffic conditions. Review of *Table 11-1* indicates that the provided storage for the northbound left-turn and the eastbound left/through/right turn are adequate to accommodate the anticipated queues. *Appendix F* presents the Year 2050 With Project queuing calculations for the key study intersections for the AM peak hour and PM peak hour.

11.2 Internal Circulation

Access to the Project site for small service/delivery trucks (i.e. UPS and FedEx), trash trucks, and fire trucks will be provided via the Project driveway along Archibald Avenue, which has been evaluated in this report. Our evaluation of the circulation shown on the Project site plan was performed using the *Turning Vehicle Templates*, developed by Jack E. Leisch & Associates and *AutoTURN for AutoCAD* computer software that simulates turning maneuvers for various types of vehicles.

Figures 11-1, 11-2, and ***11-3*** illustrate the turning movements required of an SU-30 truck, a trash truck, and a fire truck as it accesses the project site, respectively. Overall, the turning maneuvers for an SU-30 truck, a trash truck, and a fire truck are considered adequate.

11.3 Sight Distance Evaluation

At intersections and/or project driveways, a substantially clear line of sight should be maintained between the driver of a vehicle waiting at the crossroad and the driver of an approaching vehicle. Adequate time must be provided for the waiting vehicle to either cross all lanes of through traffic, cross the near lanes and turn left, or turn right, without requiring through traffic to radically alter

their speed. A sight distance evaluation has been performed for project driveway along Archibald Avenue.

The Sight Distance Evaluation prepared for the project driveways are based on the criteria and procedures set forth by the California Department of Transportation (Caltrans) in the State's *Highway Design Manual (HDM)*. Corner sight distance was utilized for the evaluation. Corner sight distance is defined in the Caltrans HDM to be the distance required by the driver of a vehicle, traveling at a given speed, to maneuver their vehicle and avoid an object without radically altering their speed. Line of sight for corner sight distance is to be determined from a 3½ foot height at the location of the driver of a vehicle on a minor road to a 4¼ foot object height in the center of the approaching lane of the major road.

Based on the criteria set forth in Table 405.1A of the Caltrans HDM and a posted speed limit of 55 mph on Archibald Avenue, a corner sight distance of 526 feet for right-turning vehicles is required. ***Figure 11-4*** presents the results of the sight distance evaluation at the Project driveway based on the application of the corner sight distance criteria. The figure illustrates the limited use areas. As shown, the sight lines at the proposed Project driveway are expected to be adequate as long as obstructions within the sight triangles are minimized.

PROJECT DRIVEWAY QUEUING ANALYSIS

Key Intersections	Storage Provided (feet)	(1) Year 2050 with Project Traffic Conditions			
		AM Peak Hour		PM Peak Hour	
		Max. Queue/ Min. Storage Required	Adequate Storage (Yes/No)	Max. Queue/ Min. Storage Required	Adequate Storage (Yes/No
4. Archibald Avenue at Citrine Hills/Project Driveway[56]					
Northbound Left-Turn	100	25	Yes	50	Yes
Eastbound Left/Through/Right	115	97	Yes	89	Yes

[56] The proposed Project will include the installation of a five-phase traffic signal at the intersection of Archibald Avenue at Citrine Hills and restriping the intersection to accommodate a northbound left-turn pocket into the Project site.

12.0 SUMMARY OF FINDINGS AND CONCLUSIONS

- ***Project Location*** – The Countryside Specific Plan comprises approximately 178 acres of land that is located westerly of Interstate 15 (I-15), and southerly of State Route 60 (SR-60). The Specific Plan area lies within the 8,200-acre Ontario Ranch, in the southcentral portion of The Ontario Plan (TOP). The Specific Plan is located south of Riverside Drive, east of the Cucamonga Creek Channel and Basin, west of Archibald Avenue, and north of Schaefer Avenue; Chino Avenue bisects the Specific Plan, resulting in Planning Area 1 to the north and Planning Area 2 to the south.

- ***Project Description*** - The 2008 Specific Plan allows for the development of up to 825 single family detached residential units within nine (9) neighborhoods. The 2022 Specific Plan Amendment concept provides for a maximum of 993 dwelling units (single family detached and attached residential types) within eleven (11) neighborhoods. The proposed Project within the Countryside Specific Plan includes an amendment related to Planning Area 1, Neighborhood 2, which now allows for the development of up to 106 single-family detached homes (RD – 6,000 SF lots).

  The Project would consist of the development of 274 residential unit within Neighborhood 2 that would consist of 96 Courtyard townhomes within Neighborhood 2A, 96 Row Townhomes within Neighborhood 2B and an additional 82 single-family detached homes within Neighborhood 2C. It is our understanding that the Project evaluated herein is consistent with the land uses shown in the adopted 2050 TOP.

  The Project is expected to be constructed and open in the next couple years or so by Year 2026 but is dependent on several factors, including the timing of Project approval. Project funding, market conditions and/or the current environment which could delay Project completion. The Project, like most other proposed development, have experienced delays. As such, subject to confirmation by the Project Applicant, Year 2026 will be utilized to assess the Project's anticipated traffic impacts within a near-term traffic setting upon completion and full buildout/occupancy of the proposed residential development.

  Access to the Project site, as currently proposed and allowed in the 2008 Specific Plan, will be provided via one (1) full access signalized driveway on Archibald Avenue opposite the Citrine Hills residential development, with secondary "cross access" provided through the adjacent residential communities as planned in the Countryside Specific Plan. It is noted that Archibald Avenue at Citrine Hills is currently unsignalized. The secondary access point would provide vehicular, pedestrian and bicycle connectivity to the south to access Chino Avenue. From a review of the current of the adjacent neighborhoods to the south, it is assumed that secondary vehicular access from Chino Avenue would be provided via the intersection of Chino Avenue and Kinglet Avenue through the area of Neighborhood 4 that is now developed.

  The Project would construct bicycle and pedestrian access improvements within the Project site and frontage consistent with the Specific Plan Pedestrian and Bicycle Trails plan.

- ***Study Scope*** – The twelve (12) study intersections were selected for evaluation based on the requirements of the City of Ontario (i.e. "50 peak hour trip criterion"), as well as proximity to the Project site. The twelve (12) existing key study intersections listed below provide local access to the study area and define the extent of the boundaries for this traffic impact investigation. The jurisdictions where the study intersections are located are identified as well:

Key Intersection	Jurisdiction
13. Archibald Avenue at SR-60 WB Ramps	Caltrans/Ontario
14. Archibald Avenue at SR-60 EB Ramps	Caltrans/Ontario
15. Archibald Avenue at Riverside Drive	Ontario
16. Archibald Avenue at Citrine Hills/Project Driveway	Ontario
17. Archibald Avenue at Chino Avenue	Ontario
18. Archibald Avenue at Schaefer Avenue	Ontario
19. Archibald Avenue at Ontario Ranch Road	Ontario
20. Vineyard Avenue at Riverside Drive	Ontario
21. Turner Avenue at Riverside Drive	Ontario
22. Kinglet Avenue at Chino Avenue	Ontario
23. Old Archibald Avenue at Chino Avenue	Ontario
24. Turner Avenue at Chino Avenue	Ontario

This traffic report analyzes existing and future weekday AM peak hour and PM peak hour traffic conditions for a near-term (Year 2026) and long-term (Year 2050) traffic setting upon completion of the proposed Project. Peak hour traffic forecasts for the Year 2026 horizon year have been projected by increasing existing traffic volumes by an annual growth rate of 2.0% per year and adding traffic volumes generated by twenty-one (21) cumulative projects. Long-term (Year 2050) traffic projections were derived from The Ontario Plan 2050 (TOP 2050) Model by San Bernardino County Traffic Analysis Model (SBTAM).

- ***Existing Traffic Conditions*** – Eleven (11) of the twelve (12) study intersections currently operate at an acceptable level of service during the AM and PM peak hours. The intersection of Archibald Avenue/Citrine Hills currently operates at unacceptable LOS F during the AM peak hour.

Project Trip Generation – For the Entitled Land Use, a review of the middle portion of this table indicates that 106 single family detached homes generates 1,000 daily trips, with 74 trips (19 inbound, 55 outbound) produced in the AM peak hour and 100 trips (63 inbound, 37 outbound) produced in the PM peak hour on a typical weekday.

The proposed Project is forecast to generate 2,155 daily trips, with 149 trips (43 inbound, 106 outbound) produced in the AM peak hour and 187 trips (111 inbound, 76 outbound) produced in the PM peak hour on a typical weekday.

A comparison of the proposed Project's trip generation to that of the Entitled Land Use indicates that the Project will result in 1,155 more daily trips, 75 more AM peak hour trips and 87 more PM peak hour trips.

- ***Related Projects Traffic Characteristics*** – Twenty-one (21) related projects located within the City of Ontario and City of Chino were considered as part of the cumulative background setting. The cumulative projects are forecast to generate a total of 248,305 daily trips, with 18,381 trips (10,510 inbound and 7,871 outbound) forecast during the AM peak hour and 22,614 trips (10,608 inbound and 12,006 outbound) forecast during the PM peak hour.

- ***Existing With Project Traffic Conditions*** – The results of the traffic analysis indicates that the addition of proposed Project-generated traffic will not require improvements at any of the twelve (12) key study intersections.

- ***Year 2026 With Project Traffic Conditions*** – The results of the traffic analysis indicates that traffic associated with the proposed Project will have an effect on the LOS at five (5) of the twelve (12) intersections, thus necessitating intersection improvements based on the City's LOS standards. These intersections include Archibald Avenue at SR-60 EB Ramps (#2), Archibald Avenue at Riverside Drive (#3), Archibald Avenue at Chino Avenue (#5), Archibald Avenue at Ontario Ranch Road (#7), and Vineyard Avenue at Riverside Drive (#8). The remaining key study intersections are forecast to operate at an acceptable LOS or remain the same with the addition of Project generated traffic.

  Key Intersection

  2. Archibald Avenue at SR-60 EB Ramps
  3. Archibald Avenue at Riverside Drive
  5. Archibald Avenue at Chino Avenue
  7. Archibald Avenue at Ontario Ranch Road
  8. Vineyard Avenue at Riverside Drive

  The implementation of planned and/or recommended improvements at the four (4) intersections of Archibald Avenue at SR-60 EB Ramps (#2), Archibald Avenue at Riverside Drive (#3), Archibald Avenue at Chino Avenue (#5), and Vineyard Avenue at Riverside Drive (#8) will improve the service levels to an acceptable LOS based on the City's LOS standards. The intersection of Archibald Avenue at Ontario Ranch Road (#7) is forecast to continue to operate adversely with the implementation of planned and/or recommended improvements, however, the improvements offset the Project's cumulative effects on traffic under near-term (Year 2026) traffic conditions.

- ***Year 2050 With Project Traffic Conditions*** – The results of the traffic impact analysis indicates that traffic associated with the proposed Project will have an effect on the LOS at five (5) of the twelve (12) intersections, thus necessitating intersection improvements based on the City's LOS standards. These intersections include Archibald Avenue at SR-60 EB Ramps (#2), Archibald Avenue at Riverside Drive (#3), Archibald Avenue at Chino Avenue (#5), Archibald Avenue at Ontario Ranch Road (#7), and Vineyard Avenue at Riverside Drive (#8).

Relative to Archibald Avenue at Citrine Hills/Project Driveway (#4), although this intersection is forecast to operate at LOS F without the Project, a five-phase traffic signal will be installed at the intersection as a project design feature which will improve the overall service levels at the intersection. The remaining key study intersections are forecast to operate at LOS D or better during the weekday AM and PM peak hours with the addition of Project traffic.

Key Intersection
Archibald Avenue at SR-60 EB Ramps
Archibald Avenue at Riverside Drive
Archibald Avenue at Chino Avenue
Archibald Avenue at Ontario Ranch Road
Vineyard Avenue at Riverside Drive

The implementation of planned and/or recommended improvements (detailed in *Section 9.0*) at the four (4) intersections of Archibald Avenue at SR-60 EB Ramps (#2), Archibald Avenue at Riverside Drive (#3), Archibald Avenue at Chino Avenue (#5), and Vineyard Avenue at Riverside Drive (#8) will improve the service levels to an acceptable LOS based on the City's LOS standards. The intersection of Archibald Avenue at Ontario Ranch Road (#7) is forecast to continue to operate adversely with the implementation of planned and/or recommended improvements, however, the improvements offset the Project's cumulative effects on traffic under long-term (Year 2050) traffic conditions.

- ***Existing with Project Caltrans Queuing Analysis–*** The results of the Existing with Project Caltrans Queuing Analysis indicates that the two (2) study intersections have queues that are adequately accommodated by the existing storage provided for Existing With Project traffic conditions.
- ***Year 2026 Caltrans Queuing Analysis–*** The results of the Existing with Project Caltrans Queuing Analysis indicates that the two (2) study intersections have queues that are adequately accommodated by the existing storage provided for Year 2026 With Project traffic conditions.
- ***Year 2050 Project Caltrans Queuing Analysis–*** The results of the Existing with Project Caltrans Queuing Analysis indicates that the two (2) study intersections have queues that are adequately accommodated by the existing storage provided for Year 2050 With Project traffic conditions.
- ***Existing with Project Turn Pocket Queuing Analysis*** – The results of the Existing with Project Turn Pocket Queuing Analysis *4* indicates that five (5) out of the nine (9) signalized study intersections have queues which exceed the provided storage for Existing With Project traffic conditions. However, for all of the deficient approaches/intersections, the proposed Project either does not contribute to or adds less than one (1) vehicle to the queue, and therefore it has been concluded that improvements related to queueing are not required for Existing With Project traffic conditions.
- ***Year 2026 Turn Pocket Queuing Analysis–*** The results of the Existing with Project Turn Pocket Queuing Analysis indicates that seven (7) out of the nine (9) signalized study intersections have

queues which exceed the provided storage for Year 2026 With Project traffic conditions. However, for a number of deficient approaches, the proposed Project either does not contribute to or adds less than one (1) vehicle to the queue, and therefore it has been concluded that improvements are not required for those approaches. As such, the following four (4) intersections/approaches require improvements related to queuing:

- No. 1: Archibald Avenue at SR-60 WB Ramps
  - Northbound Left-Turn
- No. 2: Archibald Avenue at SR-60 EB Ramps
  - Northbound Right-Turn
- No. 3: Archibald Avenue at Riverside Drive
  - Northbound Left-Turn
  - Westbound Left-Turn
- No. 7: Archibald Avenue at Schaefer Avenue
  - Southbound Left-Turn
  - Southbound Right-Turn
  - Eastbound Left-Turn
  - Westbound Right-Turn

The implementation of planned and/or recommended improvements (detailed in *Section 9.0*) at the intersections of Archibald Avenue at SR-60 EB Ramps (#2), Archibald Avenue at Riverside Drive (#3), and Archibald Avenue at Ontario Ranch Road (#7) will offset the Project's cumulative effects and help improve the queues under near-term (Year 2026) traffic conditions.

- ***Year 2050 Turn Pocket Queuing Analysis***– The results of the Year 2050 Turn Pocket Queuing Analysis indicates that eight (8) out of the nine (9) signalized study intersections have queues which exceed the provided storage for Year 2050 With Project traffic conditions. However, for a number of deficient approaches, the proposed Project either does not contribute to or adds less than one (1) vehicle to the queue, and therefore it has been concluded that improvements are not required for those approaches. As such, the following five (5) intersections/approaches require improvements related to queuing:

  - No. 1: Archibald Avenue at SR-60 WB Ramps
    - Northbound Left-Turn
  - No. 2: Archibald Avenue at SR-60 EB Ramps
    - Northbound Right-Turn
  - No. 3: Archibald Avenue at Riverside Drive
    - Northbound Left-Turn
    - Westbound Left-Turn
  - No. 5: Archibald Avenue at Chino Avenue
    - Southbound Left-Turn

- No. 7: Archibald Avenue at Schaefer Avenue
  - Southbound Left-Turn
  - Southbound Right-Turn
  - Eastbound Left-Turn
  - Westbound Right-Turn

The implementation of planned and/or recommended improvements (detailed in *Section 9.0*) at the intersections of Archibald Avenue at SR-60 EB Ramps (#2), Archibald Avenue at Riverside Drive (#3), Archibald Avenue at Chino Avenue (#5), and Archibald Avenue at Ontario Ranch Road (#7) will offset the Project's cumulative effects and help improve the queues under long-term (Year 2050) traffic conditions.

- ***Project Specific Improvements -*** The following Project design features are to be implemented in conjunction with development of the proposed Project to ensure adequate access and egress to the site is provided and have been included in Existing With Project, Year 2026 With Project and Year 2050 With Project traffic conditions:
  - No. 4 – Archibald Avenue at Citrine Hills/Project Driveway: Construct west leg and provide one shared eastbound left-turn/through/right-turn lane and one inbound lane. Widen and/or restripe to provide an exclusive northbound left-turn lane. Install a five-phase traffic signal.

- ***Year 2050 Planned Improvements -*** The following improvements are planned to be implemented by The City of Ontario by Year 2050 traffic conditions and have been included as part of the background traffic conditions:
  - No. 8 – Vineyard Avenue at Riverside Drive: Construct south leg and provide one exclusive northbound left-turn lane, a northbound shared through/right lane, and one receiving lane. Restripe the southbound right-turn lane to a shared through/right lane. Widen and/or restripe to provide an exclusive westbound left-turn lane. Modify the existing traffic signal to incorporate eight-phase operation.
- ***Existing With Project Recommended Intersections Improvements*** – The results of the intersection level of service analyses for Existing With Project peak hour traffic conditions indicate that the twelve (12) study intersections are forecast to continue to operate at acceptable service levels. As there are no deficiencies, no traffic improvements are required under this traffic scenario.

- ***Year 2026 With Project Recommended Intersections Improvements*** – The following improvements listed below have been identified to either improve the service levels to an acceptable LOS or to offset the effect of cumulative traffic and Project traffic, for Year 2026 With Project traffic conditions:
  - No. 2 – Archibald Avenue at SR-60 EB Ramps: Construct a third departure lane on the freeway on-ramp. Modify the existing traffic signal to include a free movement for the northbound right-turn. These improvements are subject to the approval of the Caltrans.

- No. 3 – Archibald Avenue at Riverside Drive: Widen and/or restripe the south leg to provide a second northbound left-turn lane. Widen and/or restripe the north leg to provide an exclusive southbound right-turn lane. Widen and/or restripe the west leg to provide a second eastbound left-turn lane, a third eastbound through lane, an exclusive eastbound right-turn lane, and a third westbound departure lane. Widen and/or restripe the east leg to provide a third westbound through lane and a third eastbound departure lane. Modify the existing traffic signal and provide an eastbound right-turn overlap phase. These improvements are subject to the approval of the City of Ontario.

- No. 5 – Archibald Avenue at Chino Avenue: Widen and/or restripe the north leg to provide a third southbound through lane. Widen and/or restripe the south leg to provide a third southbound departure lane. Modify the existing traffic signal as needed. These improvements are subject to the approval of the City of Ontario.

- No. 7 – Archibald Avenue at Ontario Ranch Road: Restripe the south leg to provide a second northbound left-turn lane, a third northbound through lane, and a third southbound departure lane. Widen and/or restripe the north leg to provide a second southbound left-turn lane, a third southbound through lane, and a third northbound departure lane. Widen and/or restripe the west leg to provide two additional eastbound through lanes and three additional westbound departure lanes. Widen and/or restripe the east leg to provide three additional westbound through lanes and two additional eastbound departure lanes. Modify the existing traffic signal and provide a northbound free-right turn, a southbound right-turn overlap phase, and a westbound right-turn overlap phase. These improvements are subject to the approval of the City of Ontario.

- No. 8 – Vineyard Avenue at Riverside Drive: Widen and/or restripe the north leg to provide a second southbound left-turn lane. Widen and/or restripe the east leg to provide a second eastbound departure lane. Modify the existing traffic signal as needed. These improvements are subject to the approval of the City of Ontario.

- ***Year 2050 With Project Recommended Intersections Improvements*** The following improvements listed below have been identified to either improve the service levels to an acceptable LOS or to offset the effect of cumulative traffic and Project traffic, for Year 2050 With Project traffic conditions:

  - No. 2 – Archibald Avenue at SR-60 EB Ramps: *(Same as those identified in Section 9.3.2)* Construct a third departure lane on the freeway on-ramp. Modify the existing traffic signal to include a free movement for the northbound right-turn. These improvements are subject to the approval of the Caltrans.

  - No. 3 – Archibald Avenue at Riverside Drive: *(Same as those identified in Section 9.3.2)* Widen and/or restripe the south leg to provide a second northbound left-turn lane. Widen and/or restripe the north leg to provide an exclusive southbound right-turn lane. Widen and/or restripe the west leg to provide a second eastbound left-turn lane, a third eastbound through lane, an exclusive eastbound right-turn lane, and a third westbound

departure lane. Widen and/or restripe the east leg to provide a third westbound through lane and a third eastbound departure lane. Modify the existing traffic signal and provide an eastbound right-turn overlap phase. These improvements are subject to the approval of the City of Ontario.

- No. 5 – Archibald Avenue at Chino Avenue: Widen and/or restripe the north leg to provide a third southbound through lane. Widen and/or restripe the south leg to provide a third southbound departure lane. Widen and/or restripe the west leg to provide an exclusive eastbound right-turn lane. Modify the existing traffic signal and provide an eastbound right-turn overlap phase. These improvements are subject to the approval of the City of Ontario.

- No. 7 – Archibald Avenue at Ontario Ranch Road: *(Same as those identified in Section 9.3.2)* Restripe the south leg to provide a second northbound left-turn lane, a third northbound through lane, and a third southbound departure lane. Widen and/or restripe the north leg to provide a second southbound left-turn lane, a third southbound through lane, and a third northbound departure lane. Widen and/or restripe the west leg to provide two additional eastbound through lanes and three additional westbound departure lanes. Widen and/or restripe the east leg to provide three additional westbound through lanes and two additional eastbound departure lanes. Modify the existing traffic signal and provide a northbound free-right turn, a southbound right-turn overlap phase, and a westbound right-turn overlap phase. These improvements are subject to the approval of the City of Ontario.

- No. 8 – Vineyard Avenue at Riverside Drive: Widen and/or restripe the north leg to provide a second southbound left-turn lane and an exclusive southbound right-turn lane. Widen and/or restripe the west leg to provide two eastbound through lanes, an exclusive eastbound right-turn lane, and a third westbound departure lane. Widen and/or restripe the east leg to provide a third westbound through lane, an exclusive westbound right-turn lane, and two additional eastbound departure lanes. Modify the existing traffic signal to provide an eight-phase signal. These improvements are subject to the approval of the City of Ontario.

- ***Project Site Evaluation -*** Access to the Project site, as currently proposed and allowed in the 2008 Specific Plan, will be provided via one (1) full access signalized driveway on Archibald Avenue opposite the Citrine Hills residential development, with secondary "cross access" provided through the adjacent residential communities as planned in the Countryside Specific Plan. It is assumed that secondary vehicular access from Chino Avenue would be provided via the intersection of Chino Avenue and Kinglet Avenue through the area of Neighborhood 4 that is now developed.

  A queueing evaluation for Archibald Avenue at Citrine Road/Project Driveway (#4) was also completed to validate the storage requirements of the proposed Project. The provided storage

for the northbound left-turn and the eastbound left/through/right turn are adequate to accommodate the anticipated queues.

- ***Internal Circulation Evaluation -*** Access to the Project site for small service/delivery trucks (i.e. UPS and FedEx), trash trucks, and fire trucks will be provided via the Project driveway along Archibald Avenue, which has been evaluated in this report. Our evaluation of the circulation shown on the Project site plan was performed using the *Turning Vehicle Templates*, developed by Jack E. Leisch & Associates and *AutoTURN for AutoCAD* computer software that simulates turning maneuvers for various types of vehicles.

  Overall, the turning maneuvers for an SU-30 truck, a trash truck, and a fire truck are considered adequate.

- ***Sight Distance Evaluation -*** At intersections and/or project driveways, a substantially clear line of sight should be maintained between the driver of a vehicle waiting at the crossroad and the driver of an approaching vehicle. Adequate time must be provided for the waiting vehicle to either cross all lanes of through traffic, cross the near lanes and turn left, or turn right, without requiring through traffic to radically alter their speed. A sight distance evaluation has been performed for project driveway along Archibald Avenue.

  Based on the criteria set forth in Table 405.1A of the Caltrans HDM and a posted speed limit of 55 mph on Archibald Avenue, a corner sight distance of 526 feet for right-turning vehicles is required. The sight lines at the proposed Project driveway are expected to be adequate as long as obstructions within the sight triangles are minimized.

RESOLUTION NO.

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF ONTARIO, CALIFORNIA, APPROVING FILE NO. PSPA22-002, A SPECIFIC PLAN AMENDMENT FOR THE FOLLOWING CHANGES: [1] DIVIDE PLANNING AREA 1 NEIGHBORHOOD 2 INTO DIFFERENT SUBAREAS: NEIGHBORHOODS 2A, 2B, AND 2C; [2] INCREASE THE PLANNING AREA 1 UNIT COUNT FROM 442 UNITS TO 601 UNITS AND DENSITY FROM 5.56 DU/AC TO 7.74 DU/AC; [3] CHANGE PLANNING AREA 1 USES TO INCLUDE ATTACHED HOMES AND ELIMINATING THE RD 6000-SQUARE-FOOT LOT SIZE; AND [4] VARIOUS TEXT CHANGES TO BE CONSISTENT WITH THE ONTARIO PLAN 2050 POLICY PLAN, AND MAKING FINDINGS IN SUPPORT THEREOF—APN: 0218-111-60 AND 0218-111-61

WHEREAS, RB ONTARIO LLC (hereinafter referred to as "Applicant") has filed an Application for the approval of a Specific Plan Amendment, File No. PSPA22-002, as described in the title of this Resolution (hereinafter referred to as "Application" or "Project"); and

WHEREAS, the Application applies to 23.2 acres of land generally located on the west side of Archibald Avenue, approximately 875 feet south of Riverside Drive, within the Countryside Specific Plan, and is presently improved with agricultural uses; and

WHEREAS, the properties to the north and east of the Project site are within the MDR-18 (Medium Density Residential – 11.1 – 18.0 du.ac) and are developed with multiple family dwellings. The properties to the south and west are within Planning Area 1 of the Countryside Specific Plan, and are developed with single-family detached dwellings; and

WHEREAS, on May 2, 2006, the City Council adopted Ordinance No. 2828, approving the Countryside Specific Plan (File No. PSP04-001), establishing a master plan for the development of 178 acres of land, inclusive of the Project site; and

WHEREAS, the Countryside Specific Plan has been amended over the years to reflect updated policies in The Ontario Plan and market conditions; and

WHEREAS, the Project request consists of dividing Planning Area 1-Neighborhood 2 into different subsets (Neighborhoods 2A, 2B and 2C), increasing the unit count in Planning Area 1 from 442 units to 601 units and increasing the density from 5.56 dwelling units/acre to 7.74 dwelling units/acre, changing Planning Area 1-Neighboorhood 2 uses to include Attached Homes, eliminating the RD-6000-square-foot lot size, and various text changes to be consistent with The Ontario Plan 2050 Policy Plan; and

WHEREAS, the Countryside Specific Plan Environmental Impact Report (State Clearinghouse No. 2004071001) was certified on April 18, 2006 (hereinafter referred to as "Certified EIR"), in which development and use of the Project site was discussed; and

WHEREAS, the Planning Director of the City of Ontario prepared and approved for attachment to the certified Environmental Impact Report, an Addendum to the Certified EIR (hereinafter referred to as "EIR Addendum") in accordance with the requirements of the California Environmental Quality Act of 1970, together with State and local guidelines implementing said Act, all as amended to date (collectively referred to as "CEQA"); and

WHEREAS, the environmental impacts of this project were thoroughly analyzed in the EIR Addendum, which concluded that implementation of the Project could result in a number of significant effects on the environment that were previously analyzed in the Certified EIR, and that the Certified EIR identified mitigation measures that would reduce each of those significant effects to a less-than-significant level; and

WHEREAS, the City's "Local Guidelines for the Implementation of the California Environmental Quality Act (CEQA)" provide for the use of a single environmental assessment in situations where the impacts of subsequent projects are adequately analyzed; and

WHEREAS, the Application is a project pursuant to the California Environmental Quality Act — Public Resources Code Section 21000 et seq. — (hereinafter referred to as "CEQA") and an EIR Addendum has been prepared to determine possible environmental impacts; and

WHEREAS, Ontario Development Code Table 2.02-1 (Review Matrix) grants the City Council the responsibility and authority to review and act on the subject Application; and

WHEREAS, the Project has been reviewed for consistency with the Housing Element of the Policy Plan component of The Ontario Plan, as State Housing Element law (as prescribed in Government Code Sections 65580 through 65589.8) requires that development projects must be consistent with the Housing Element, if upon consideration of all its aspects, it is found to further the purposes, principals, goals, and policies of the Housing Element; and

WHEREAS, the Project is located within the Airport Influence Area of Ontario International Airport, which encompasses lands within parts of San Bernardino, Riverside, and Los Angeles Counties, and is subject to, and must be consistent with, the policies and criteria set forth in the Ontario International Airport Land Use Compatibility Plan (hereinafter referred to as "ALUCP"), which applies only to jurisdictions within San Bernardino County, and addresses the noise, safety, airspace protection, and overflight impacts of current and future airport activity; and

WHEREAS, City of Ontario Development Code Division 2.03 (Public Hearings) prescribes the manner in which public notification shall be provided and hearing procedures to be followed, and all such notifications and procedures have been completed; and

WHEREAS, on May 23, 2023, the Planning Commission of the City of Ontario conducted a hearing to consider the EIR Addendum and the Project, and concluded said hearing on that date, voting to issue Resolution No. PC23-039, recommending the City Council adopt the EIR Addendum, and voting to issue Resolution No. PC23-040, recommending the City Council approve the Application; and

WHEREAS, as the first action on the Project, on June 20, 2023, the City Council issued a Resolution adopting the EIR Addendum, finding that the proposed Project introduces no new significant environmental impacts and applying all previously adopted mitigation measures to the Project, which were incorporated by reference; and

WHEREAS, on June 20, 2023, the City Council of the City of Ontario conducted a hearing to consider the Project, and concluded said hearing on that date; and

WHEREAS, all legal prerequisites to the adoption of this Resolution have occurred.

NOW, THEREFORE, IT IS HEREBY FOUND, DETERMINED, AND RESOLVED by the City Council of the City of Ontario, as follows:

SECTION 1: ***Housing Element Compliance.*** Pursuant to the requirements of California Government Code Chapter 3, Article 10.6, commencing with Section 65580, as the decision-making body for the Project, the City Council finds that based upon the facts and information contained in the Application and supporting documentation, at the time of Project implementation, the project is consistent with the Housing Element of the Policy Plan (General Plan) component of The Ontario Plan, as the project site is not one of the properties in the Housing Element Sites Inventory contained in Tables B-1 and B-2 of the Housing Element Technical Report.

SECTION 2: ***Airport Land Use Compatibility Plan ("ALUCP") Compliance.*** The California State Aeronautics Act (Public Utilities Code Section 21670 et seq.) requires that an Airport Land Use Compatibility Plan be prepared for all public use airports in the State; and requires that local land use plans and individual development proposals must be consistent with the policies set forth in the adopted Airport Land Use Compatibility Plan.

On April 19, 2011, the City Council of the City of Ontario approved and adopted the Ontario International Airport Land Use Compatibility Plan, establishing the Airport Influence Area for Ontario International Airport, which encompasses lands within parts of San Bernardino, Riverside, and Los Angeles Counties, and limits future land uses and development within the Airport Influence Area, as they relate to noise, safety, airspace protection, and overflight impacts of current and future airport activity. As the decision-making body for the Project, the City Council has reviewed and considered the facts and information contained in the Application and supporting documentation against the ONT ALUCP compatibility factors, including [1] Safety Criteria (ONT ALUCP Table 2-2) and Safety Zones (ONT ALUCP Map 2-2), [2] Noise Criteria (ONT ALUCP Table 2-3) and Noise Impact Zones (ONT ALUCP Map 2-3), [3] Airspace protection Zones (ONT ALUCP Map 2-4), and [4] Overflight Notification Zones (ONT ALUCP Map 2-5). As a result, the City Council, therefore, finds and determines that the Project, when implemented in

conjunction with the conditions of approval, will be consistent with the policies and criteria set forth within the ONT ALUCP; and

SECTION 3: ***Concluding Facts and Reasons.*** Based upon the substantial evidence presented to the City Council during the above-referenced hearing, and upon the specific findings set forth in Sections 1 and 2, above, the City Council hereby concludes as follows:

(1) ***The proposed Specific Plan, or amendment thereto, is consistent with the goals, policies, plans and exhibits of the Vision, Policy Plan (General Plan), and City Council Priorities components of The Ontario Plan.*** The proposed Specific Plan Amendment is consistent with the Vision, Policy Plan (General Plan), and City Council Priorities components of The Ontario Plan 2050, in that the Specific Plan Amendment contributes towards the legislative framework for the implementation of The Ontario Plan components, guiding growth and development within the Project area to achieve optimum results from the City's physical, economic, environmental, and human resources.

(2) ***The proposed Specific Plan, or amendment thereto, would not be detrimental to the public interest, health, safety, convenience, or general welfare of the City.*** The development standards and guidelines established by the proposed Specific Plan Amendment have been created with the intent to safeguard and further the public interest, health, safety, convenience, and/or general welfare, and to ensure that the purposes of The Ontario Plan 2050 and the proposed Specific Plan Amendment, are maintained.

(3) ***In the case of an application affecting specific properties, the proposed Specific Plan, or amendment thereto, will not adversely affect the harmonious relationship with adjacent properties and land uses.*** The location of the proposed Specific Plan Amendment, and the proposed conditions under which future developments will be constructed and maintained, is consistent with the Policy Plan component of The Ontario Plan 2050 and the City's Development Plan, and, therefore, will not adversely affect the harmonious relationship with adjacent properties and land uses

(4) ***In the case of an application affecting specific properties, the subject site is physically suitable, including, but not limited to, parcel size, shape, access, and availability of utilities, for the request and anticipated development.*** The proposed Specific Plan Amendment has been reviewed by all City departments, which have established that the project site is physically suitable for the anticipated development in terms of parcel size, shape, and availability of utilities.

SECTION 4: ***City Council Action.*** Based upon the findings and conclusions set forth in Sections 1 through 3, above, the City Council hereby APPROVES the herein described Application.

SECTION 5: ***Indemnification.*** The Applicant shall agree to defend, indemnify and hold harmless, the City of Ontario or its agents, officers, and employees from any claim, action or proceeding against the City of Ontario or its agents, officers or employees

to attack, set aside, void, or annul this approval. The City of Ontario shall promptly notify the applicant of any such claim, action, or proceeding, and the City of Ontario shall cooperate fully in the defense.

SECTION 6: ***Custodian of Records.*** The documents and materials that constitute the record of proceedings on which these findings have been based are located at the City of Ontario City Hall, 303 East "B" Street, Ontario, California 91764. The custodian for these records is the City Clerk of the City of Ontario.

The City Clerk of the City of Ontario shall certify as to the adoption of this Resolution.

PASSED, APPROVED, AND ADOPTED this 20th day of June 2023.

AMENDMENTS

File No. PSPA06-063
City Council Ordinance Number: 2830 *Adopted June 20, 2006*
This amendment changed the land use designation for Neighborhood 7 from conventional single-family product on a minimum lot size of 5,000 sq ft to a single-family alley loaded product on a minimum lot size of 2,925 sq ft. The unit count, however, is maintained as allocated under the approved Specific Plan.

Section 1. Introduction

1.1 Community Vision

The Countryside Specific Plan, located within the Ontario Ranch of the City of Ontario, is a proposal for development of a planned community designed to blend with and become a part of the overall existing larger community of Ontario. The vision for Countryside is to create a livable community combining safe and pleasant neighborhoods, designed at a human scale, within walking distance to parks and surrounding commercial and recreational facilities.

The vision for Countryside implements key design objectives found in established, traditional neighborhoods in Ontario and throughout other older, established neighborhoods in California, including:

- Provision of pedestrian and bicycle mobility.
- Opportunities for neighborhood interaction through provision of informal parks, gathering areas and a network of paseos and sidewalks.
- Connectivity among neighborhoods and the surrounding commercial and recreational land uses.
- Provision for a range of housing types.
- Exceptional architectural and landscape design.

1.2 Project Summary

The Countryside Specific Plan is comprised of 178 acres of land designated as Planning Subarea 5 within the Ontario Ranch of the City of Ontario. The regional location of the Countryside Specific Plan area is illustrated in Exhibit 1, "Regional Context Map" and is further described in the "Project Vicinity Map," Exhibit 2.

Planning Subarea 5 is located south of Riverside Drive, east of the Cucamonga Creek Channel and the Cucamonga Basin, west of Archibald Avenue and north of Schaefer Avenue as illustrated on the "Project Location Map," Exhibit 3. The Countryside Specific Plan ~~is a proposal by~~ for Meritage Homes ~~hereinafter referred to as the project applicant,~~ was adopted on April 18, 2006, amended June 20, 2006 and August, 2008 for the development of up to ~~819~~ 825single family detached residential dwelling units within ~~eight~~ nine distinctive residential neighborhoods offering a variety of housing types within a livable community setting. The current amendment proposes development of up to 984 single family detached and attached homes distributed in eleven neighborhoods. Countryside provides for connectivity of all residential neighborhoods to centrally located parks and to surrounding commercial and recreational facilities through a network of pedestrian sidewalks, bicycle trails, and landscaped paseos.

Approximately 119 acres of Countryside are controlled by the applicant and other development entities and proposed for development of a variety of housing types. The remaining 59.03 acres comprising Countryside are included in the Specific Plan pursuant to the City of Ontario General Plan requirement to comprehensively plan for the entire Planning Subarea 5. Ownerships within the Countryside Specific Plan are illustrated on the "Ownership Map," Exhibit 4.

1.3 Project Setting

The Countryside Specific Plan includes all of Planning Subarea 5 of the City of Ontario Ontario Ranch. Countryside is comprised of two planning areas. Planning Area 1, consisting of 95.6 gross acres, is bounded by Riverside Drive on the north, Archibald Avenue on the east, Chino Avenue on the south, and the Cucamonga Creek Channel on the west.

Countryside

Planning Area 2, consisting of 82.43 gross acres, is bounded by Chino Avenue on the north, Archibald Avenue on the east, Schaefer Avenue on the south, and the Cucamonga Basin on the west.

The City of Ontario General Plan Amendment for the Ontario Ranch designates Subarea 5 (Specific Plan Area) for Residential Low Density land use with a maximum density of 4.6 dwelling units per gross acre and a maximum development capacity of 819 dwelling units. The General Plan Amendment further requires that a Specific Plan be approved for all development within the Specific Plan Area in accordance with the policies adopted for Planning Subarea 5. The project setting for Countryside is illustrated on Exhibit 5, "Project Setting."

1.4 Project Description

The Countryside Specific Plan is a comprehensive plan for the development of a residential community of up to ~~825~~984 single family detached and attached residential dwelling units. A central feature of the community is a network of landscaped paseos linking parks around which residential uses will be developed. The paseos offer connectivity throughout the entire community providing a network of multipurpose pedestrian and bicycle paths within the paseos and connecting to the community's local street system. Residents of Countryside will be able to walk or bike to adjacent commercial uses located east of the Specific Plan Area and to recreational uses located north and northwest of the Specific Plan Area.

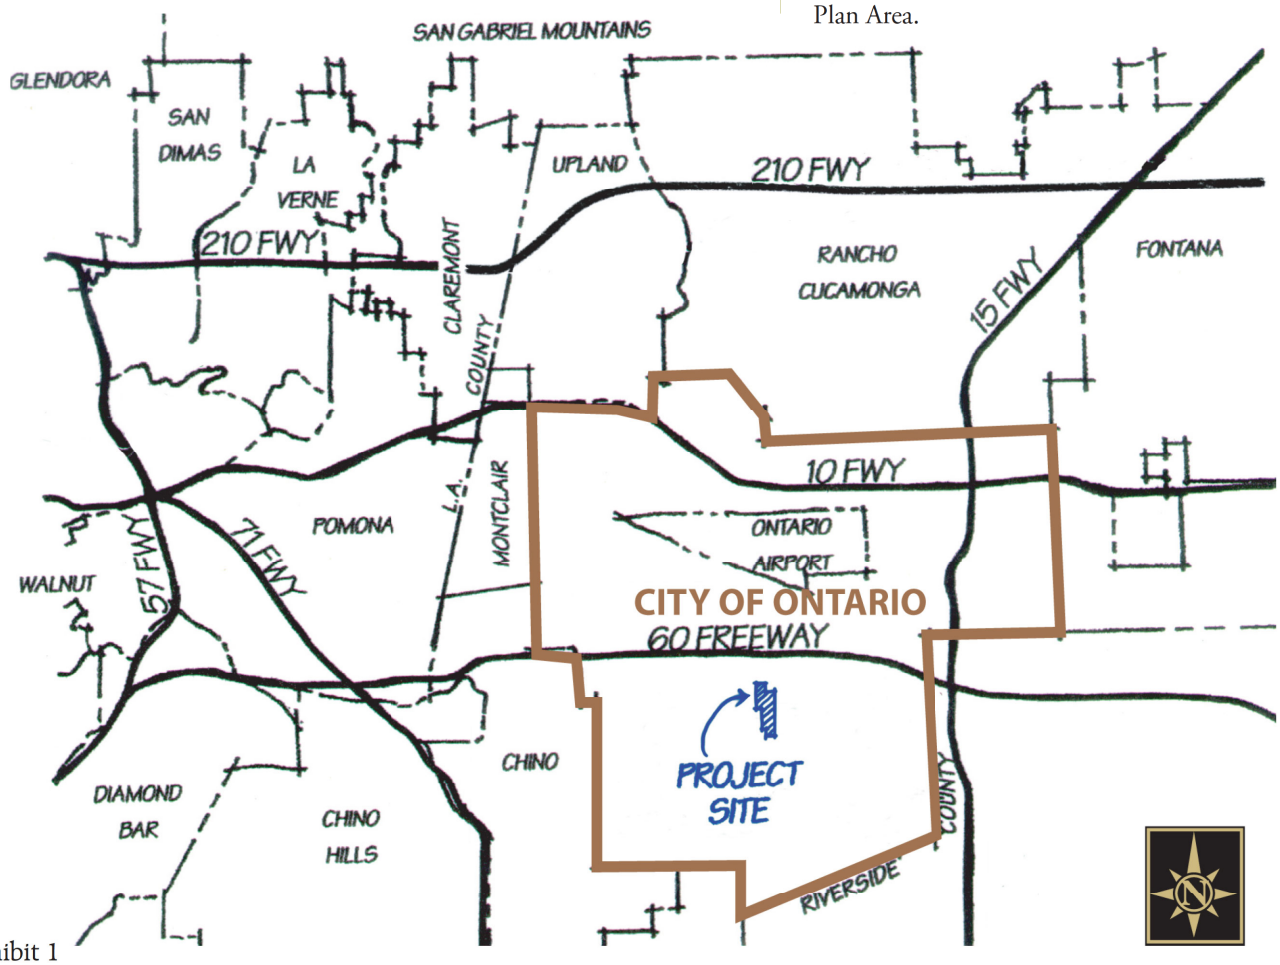

Exhibit 1
Regional Context Map

1.4.1 Residential

Residential land use comprises ~~129.47~~128.74 net acres of Countryside offering a variety of residential housing types including conventional single family detached homes on lots ranging from ~~5,000~~3,000 square feet to ~~6,000~~5,500 square feet, single family detached, cluster court homes with minimum ~~3,000~~ 2,000 square foot lots, single family detached Z-Lot homes on lots with minimum 3,500 square foot lots, ~~and~~ single family detached alley loaded homes with minimum lot sizes of 2,275 square feet, and attached row townhomes with minimum unit size of 1,500 square feet. Up to ~~819~~ 825 detached residential dwelling units are permitted for development within Planning Subarea 5, pursuant to the Ontario Ranch General Plan Amendment, Countryside Specific Plan and subsequent Specific Plan Amendments. The current amendment proposes up to 159 additional single family detached and attached homes.

1.4.2 Parks

Countryside includes the development of ~~5.61~~ 6.82 acres of parks within the Specific Plan Area. Two public parks will be improved as active recreational areas with open play areas, picnic tables, and informal gathering areas.

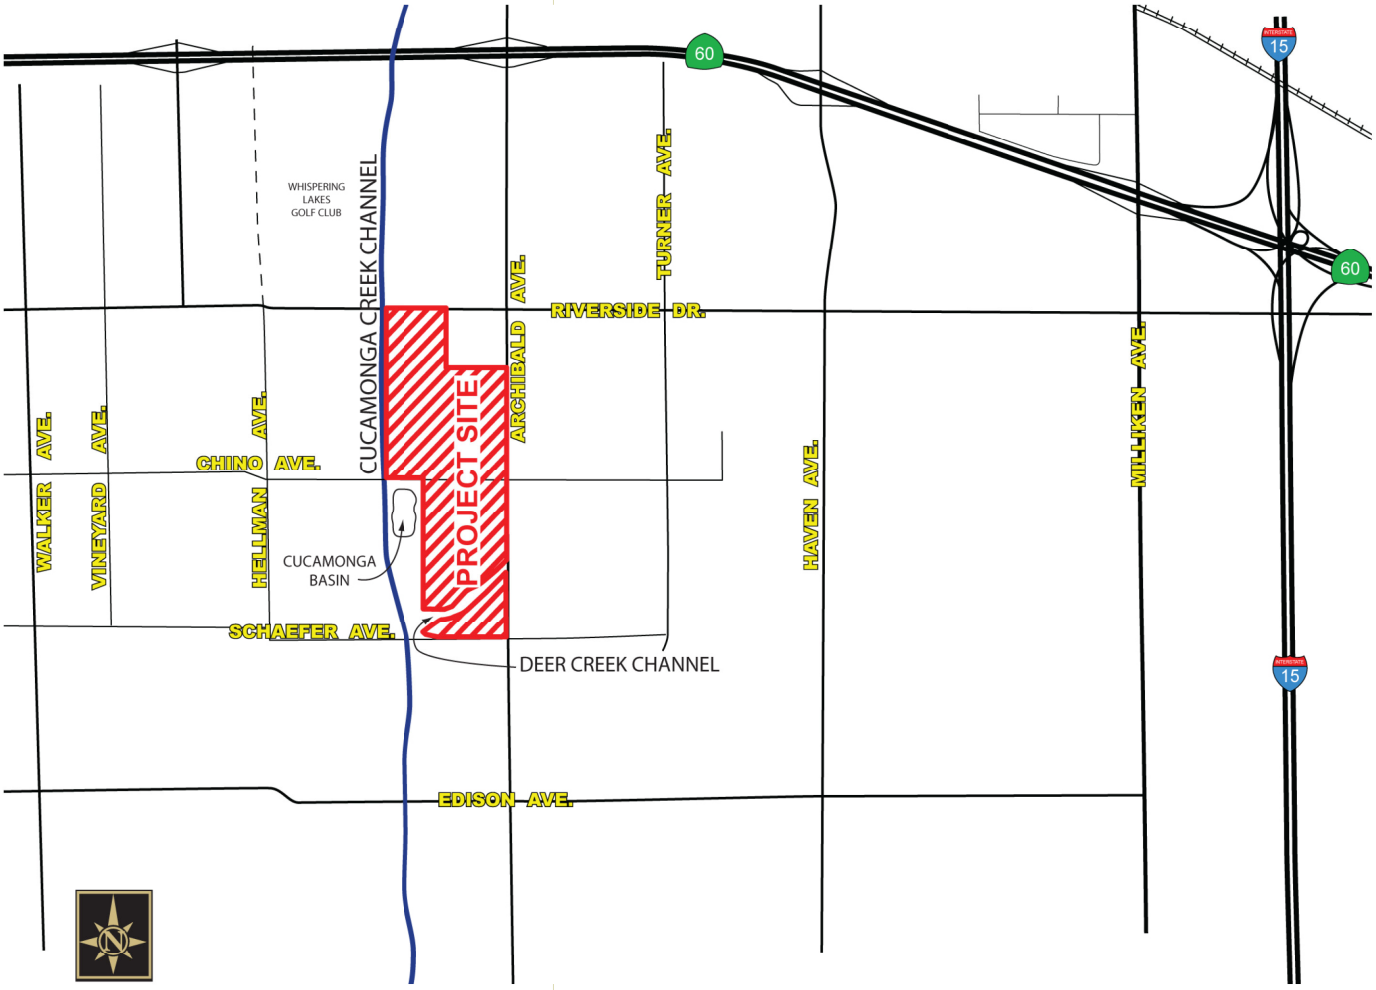

Exhibit 2
Project Vicinity Map

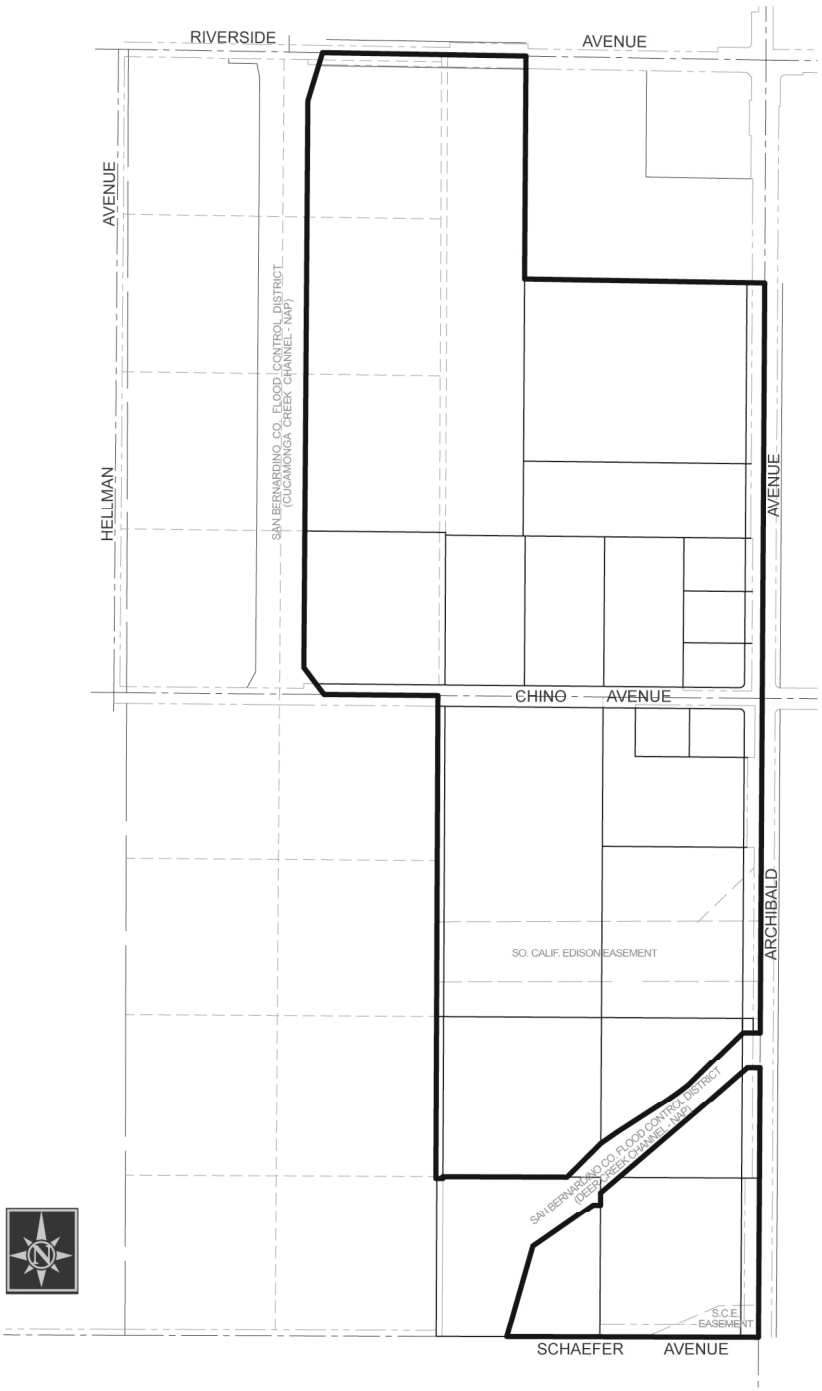

Exhibit 3
Project Location Map

In addition, private recreation areas will be provided in Neighborhoods 2, 5 and 6, to be developed with pools, spas and passive recreational facilities.

1.4.3 Paseos and Trails

A signature feature of the Countryside Specific Plan is the provision of an 3.78 acre landscaped paseo system through the community. The paseo system links each neighborhood within Countryside to parks, providing pedestrian and bicycle connectivity to planned and existing trails located within the public rights-of-way adjacent to Countryside, and to facilities surrounding the Specific Plan Area.

The City of Ontario has adopted a master plan for bikeways connecting the Specific Plan Area to existing bikeways within the remainder of the City. As part of the development of Countryside, off-street bike and pedestrian trails will be developed as part of the improvement of Archibald Avenue, Chino Avenue and Schaefer Avenue connecting Countryside to the existing and planned City of Ontario bikeway system consistent with the General Plan.

The developer of Countryside will construct a bike trail within the Cucamonga Creek right-of-way adjacent to the Specific Plan Area. As part of the Countryside project, a 30-foot wide trail connec-tion will be provided through the project to allow pedestrian and bicycle access to the City trail.

1.4.4 Enhanced Parkways

Enhanced parkways will be developed in addition to the right-of-way improvements of all master plan streets adjacent to Countryside. Archibald Avenue will be improved with 45-feet of enhanced parkway to include an 8-foot wide off-street multipurpose trail within the public right

of way and neighborhood edge, and a 5-foot wide sidewalk within the public right of way. Riverside Drive and Schaefer Avenue will be improved with a 23-foot wide landscaped parkway adjacent to the sidewalk. Chino Avenue will be improved with an 18-foot wide landscaped parkway adjacent to the sidewalk.

1.5 Purpose and Objectives

1.5.1 Purpose

The Countryside Specific Plan comprehensively plans for residential and recreational land uses within the Specific Plan Area. The Countryside Specific Plan establishes the zoning for the Specific Plan Area and defines the development regulations, requirements, and design guidelines governing development of the Specific Plan Area. The Countryside Specific Plan establishes the procedures and requirements to approve development within the Specific Plan Area to insure that the City of Ontario Ontario Ranch General Plan Amendment is implemented.

1.5.2 Objectives

The General Plan Amendment establishes policies and objectives as guiding principles for development of Planning Subarea 5 as summarized below:

- To provide neighborhoods distinct from each other, with public and private amenities, linked by a network of pedestrian trails.
- To create a community sense of place, walkability and livability.
- To provide a mix of housing types in response to evolving market demands.
- Residential development incorporating:
- Short blocks that promote ease of access and neighborhood activity.
- Use of variable setback, reduced garage emphasis, and architecture forward.
- Landscaped parkways separating sidewalks from the street.
- Establish clearly defined edges and entries that contribute to a distinct neighborhood identity.
- Promote development of local street patterns that create and unify neighborhoods, rather than divide them.
- Establish a pattern of blocks that promote access and neighborhood activity.

The Countryside Specific Plan addresses the General Plan Amendment Policies and Objectives as follows:

- Plans for a quality residential community comprised of eight distinctive marketable neighborhoods of varying density and lot sizes within the Specific Plan Area, supported by open space and recreational uses.
- Establishes appropriate relationships among new residential neighborhoods as well as with existing adjacent land uses.
- Develops linkages and connectivity between the residential uses planned for Countryside with the retail commercial, service commercial, and public recreational facilities within close proximity to Countryside.
- Creates an environment encouraging interaction among its residents through an organized yet simple system of streets, entries, and paseos allowing residents to either walk or bike to open space, recreation, and public facilities.
- Utilizes residential and landscape design guidelines and development regulations designed to orient residential neighborhoods to park and open space uses and promote development of traditional streetscapes to encourage neighborhood interaction.
- Develops a pedestrian and bicycle oriented circulation system comprised of off-street and on-street bicycle trails and off-street pedestrian walkways linking each neighborhood to open space, recreational areas, and the surrounding community.

- Provides for the development of ~~5.61~~6.82 acres of public and private parks and 3.78 acres of landscaped paseos, connecting the community internally and providing informal gathering areas for residents.
- Provides for the comprehensive planning, financing, and construction of infrastructure to serve the Specific Plan Area through the use of private and public funding mechanisms and participation in the City's adopted fee programs.

1.6 Authority of the Specific Plan

State of California Government Code, Title 7, Division 1, Chapter 3, Article 8, Section 65450-57 grants authority to cities to adopt specific plans for purposes of implementing the goals and policies of their General Plans. The Government Code specifies that specific plans may be adopted either by resolution or by ordinance and that the specific plan is required to be consistent with the General Plan. The Government Code sets forth the minimum requirements and review procedures for specific plans including provision of a land use plan, infrastructure and public services plan, criteria and standards for development, and implementation measures. The Government Code also states that specific plans may address any other subjects which, in the judgment of the city, are necessary or desirable for implementation of the General Plan.

The City of Ontario has prezoned the Specific Plan Area as "SP" (Specific Plan Ag Preserve). The General Plan includes policies requiring that a specific plan be approved for the Specific Plan Area to implement the "SP" zone.

The Countryside Specific Plan is designed to meet the requirements of the State of California Government Code and the City of Ontario General Plan. The City of Ontario will adopt the Countryside Specific Plan by ordinance establishing the zoning regulations for the development of the Specific Plan Area. The requirements of the Countryside Specific Plan shall take precedence over the City of Ontario Zoning Ordinance. In instances where the Specific Plan is silent, the City of Ontario Zoning Ordinance shall prevail.

1.7 Development Approval Components

The adoption of the Countryside Specific Plan is the first step in a process leading to the development of the Specific Plan Area. The components of the development approval process for Countryside are discussed as follows:

1.7.1 Specific Plan

The Countryside Specific Plan, when adopted, will serve as a legal document which implements the General Plan land use designation of "Residential-Low Density" and will serve as the zoning for the Specific Plan Area. The Specific Plan will serve as a "blueprint" for development by establishing the distribution of land use and the criteria for development of each land use as set forth herein. The Specific Plan establishes the development requirements and guidelines to be applied to each phase of development within the Specific Plan Area.

1.7.2 Subdivision Maps

Tentative Tract Maps for the development of Neighborhoods 1, 5 and 6 will be reviewed and approved by the City concurrently with or subsequent to the approval of the Countryside Specific Plan. Tentative Tract Maps for Countryside are prepared pursuant to the applicable provisions of the State of California Subdivision Map Act (Government Code Section 66410 through 66499),

the City of Ontario Subdivision Ordinance, and consistent with the applicable provisions contained within the Countryside Specific Plan. Tentative tract maps, approved in conjunction with or subsequent to the Specific Plan, will provide for development by the applicant of Neighborhoods 1, 5 and 6 consisting of 77 gross acres. Additional subdivision maps for Neighborhoods 2, 3, 3A, 4, 7 and 8 will be submitted for City review and approval pursuant to the requirements of the Countryside Specific Plan.

1.7.3 Development Agreement Required

Unless done in a coordinated manner and with adequate fiscal planning, development projects within the Ontario Ranch are likely to present a challenge in their implementation because of the lack of existing public facilities including street, sewerage, transportation, drinking water, school and utility facilities. California law has established a mechanism for ensuring the adequate provision of such facilities while at the same time providing assurances to applicants that, upon approval of the project, the applicants can proceed with their projects. Approval of this Specific Plan without a development agreement may result in a waste of resources, escalate the cost of housing to the consumer, and discourage investment in and commitment to comprehensive planning as envisioned by the City, which seeks to make maximum efficient utilization of resources at the least economic cost to the public.

Therefore, a statutory development agreement, authorized pursuant to California Government Code sections 65864 et seq., shall be required as part of the approval of this Specific Plan. For the above-mentioned reasons, the development agreement for this Specific Plan shall include, among other things, methods for financing acquisition and construction of infrastructure, acquisition and development of adequate levels of parkland, and schools, as well as the provision of adequate housing opportunities for various segments of the community consistent with the regional housing needs assessment. Such development agreement shall have been fully approved before the issuance of the first building permit for this project.

1.8 Relationship of the Specific Plan to the City of Ontario General Plan

California Government Code (Title 7, Division 1, Chapter 3, Article 8, Section 65450-65457) permits the adoption and administration of a specific plan as an implementation tool for elements contained in the local general plan. Specific plans must demonstrate consistency in regulations, guidelines, and programs with the goals and policies set forth in the general plan.

The City's Ontario Ranch General Plan Amendment sets forth the following topics to address the state mandated general plan elements:

- Community Development
- Infrastructure and Public Services
- Aesthetic, Cultural, Open Space, and Recreational Resources
- Natural Resources
- Hazards

The Countryside Specific Plan is consistent with the goals, objectives, and policies of the General Plan as described in Section 8, "General Plan Consistency."

1.9 CEQA Compliance

An Environmental Impact Report (EIR) has been prepared by the City of Ontario for the Countryside Specific Plan in accordance with the California Environmental Quality Act (CEQA) and City requirements to provide a detailed analysis of potential environmental impacts associated with the development of Countryside. The EIR prepared for the Countryside Specific Plan addresses the potential impacts associated with the project at a programmatic level for the entire Specific Plan Area and at a project level for Neighborhoods 1, 5 and 6. The EIR includes recommended mitigation measures to reduce potential significant impacts to a less than significant level. The EIR has been prepared to fulfill the requirement for environmental determinations for most subsequent discretionary and ministerial applications for development within the Countryside Specific Plan.

1.10 Severability

If any regulation, condition, program, or portion of the Countryside Specific Plan is held invalid or unenforceable, such portions shall be deemed separate, distinct, and independent provisions and the invalidity of such portions or provisions shall not affect the validity and enforceability of the remaining portions and provisions therein.

Section 2. Existing Conditions

This section describes the existing land uses and physical site conditions on and around the Specific Plan Area.

2.1 Existing Land Use

The Specific Plan Area has historically been used for agricultural and dairy farming purposes and still contains structures and facilities associated with these activities. Notices of non-renewal of Williamson Act contracts have been filed on all properties currently under the Williamson Act within Countryside ~~with the exception of property located within Neighborhood 2~~, as illustrated on Exhibit 6, "Williamson Act Status."

The Specific Plan Area is bounded by existing residential and recreational land uses to the north, existing single and multifamily residential, vacant land and commercial land uses to the east, the Cucamonga Creek Channel and Basin to the west and vacant agricultural land to the south. Existing land uses within the Specific Plan Area and surrounding the Specific Plan are illustrated on Exhibit 7, "Existing and Surrounding Land Uses."

The majority of the Specific Plan Area is in active agricultural use, including active dairy farms, horse training ranches, calf rearing operations, row crops, and packing houses. A limited number of single-family residential units and outbuildings, associated with those activities, exist along Riverside Drive, Archibald Avenue, and Chino Avenue. Several hundred feet of eucalyptus tree windrows, approximately 50-feet tall, are located in the east-central portion of the Specific Plan Area.

2.2 Topography

The Specific Plan Area is located on gently sloping undeveloped terrain with a relatively uniform slope as illustrated on Exhibit 8, "Existing Site Topography." The existing ground on the northerly half of the Specific Plan Area slopes southerly away from Riverside Drive at an approximate 2% grade. The southerly half of the Specific Plan Area slopes southerly from Chino Avenue at approximately 1%.

2.3 Surrounding Land Uses

Land uses adjacent to the Countryside Specific Plan area include:

North:
Existing Single Family Homes and Westwind Park

Northwest:
Whispering Lakes Golf Course

West:
Cucamonga Creek and Cucamonga Basin Flood Control Facilities

South:
Vacant Land and Agricultural Operations

East:
Multifamily and Single Family Residential Homes and Commercial Uses

The City of Ontario General Plan designates the undeveloped areas located to the south and west of the Countryside Specific Plan area as "Residential – Low Density." Surrounding land use characteristics are illustrated on Exhibit 7, "Existing and Surrounding Land Uses."

Countryside

Revised Graphic

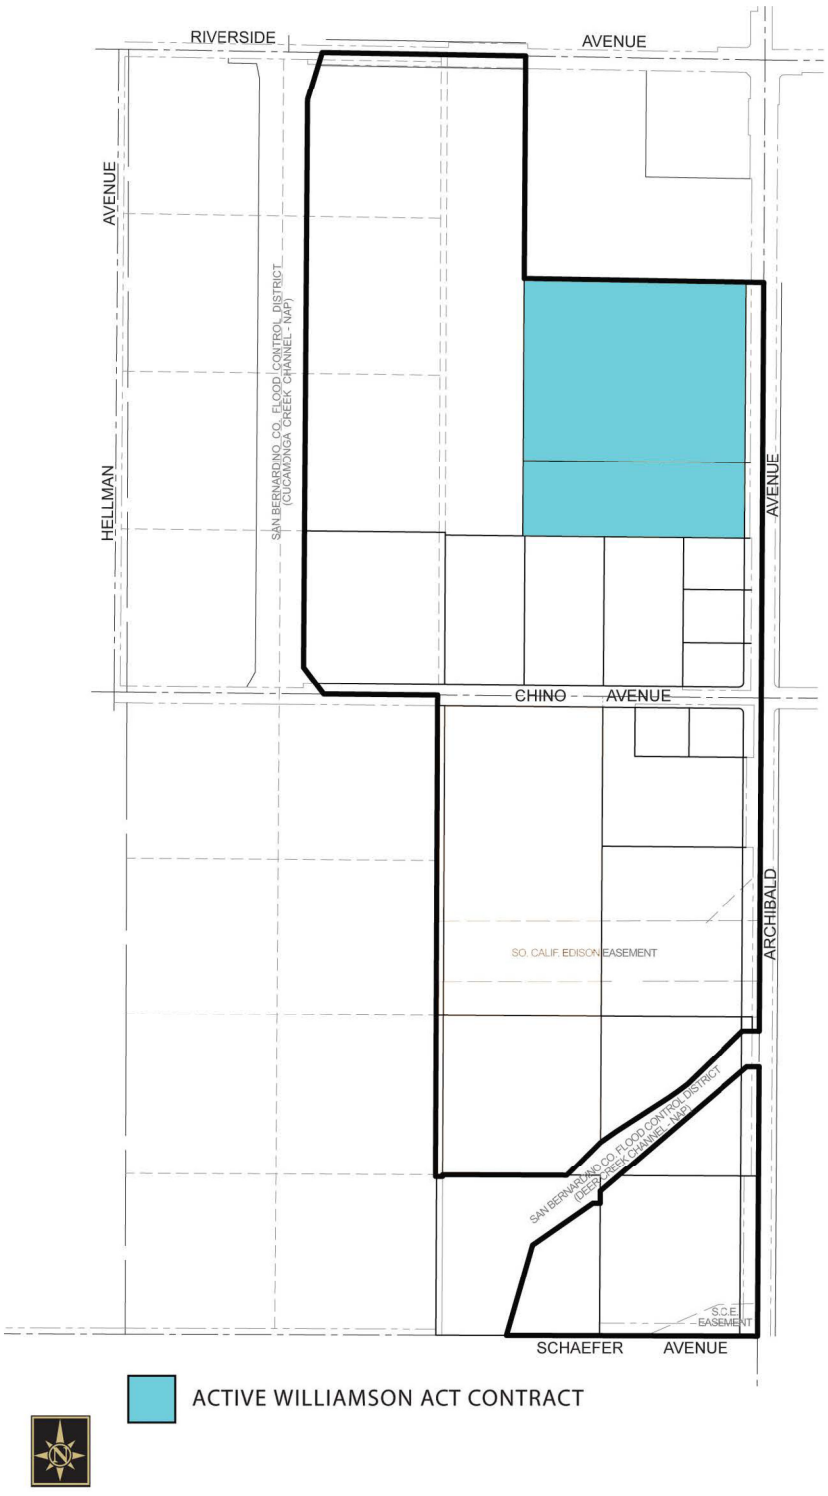

Exhibit 6
Williamson Act Status

Revised Graphic

2.4 General Plan Land Use and Zoning

The City of Ontario General Plan designates Planning Subarea 5, the Countryside Specific Plan Area, as "Residential-Low Density" with a maximum development capacity of 819 single family residential units at a maximum density of 4.6 dwelling units per gross acre.

The Specific Plan Area is prezoned as "SP" (Specific Plan Ag Preserve). The General Plan includes policies requiring that a specific plan be approved for the Specific Plan Area in order to implement the SP zone.

2.5 Existing Access and Circulation

Regional access to the Specific Plan Area is provided from State Route 60, the Pomona Freeway, located one mile north of the Specific Plan Area and from Interstate 15 located approximately one and one-half miles east of the Specific Plan Area. Access to the Specific Plan Area is provided from arterial streets adjacent to the Countryside Specific Plan area. Riverside Drive abuts the Specific Plan Area on the north and is currently improved with four travel lanes extending from Archibald Avenue westerly to, and beyond, Cucamonga Creek Channel. Archibald Avenue abuts the Specific Plan Area on the east and is currently improved with two southbound and three northbound travel lanes extending from Riverside Drive to Schaefer Avenue. Chino Avenue bisects the Countryside Specific Plan area and is currently improved with two travel lanes between Archibald Avenue to the Cucamonga Creek Channel. Schaefer Avenue abuts the Specific Plan Area on the south and is not improved adjacent to the Specific Plan Area.

Exhibit 7

Existing and Surrounding Land Uses

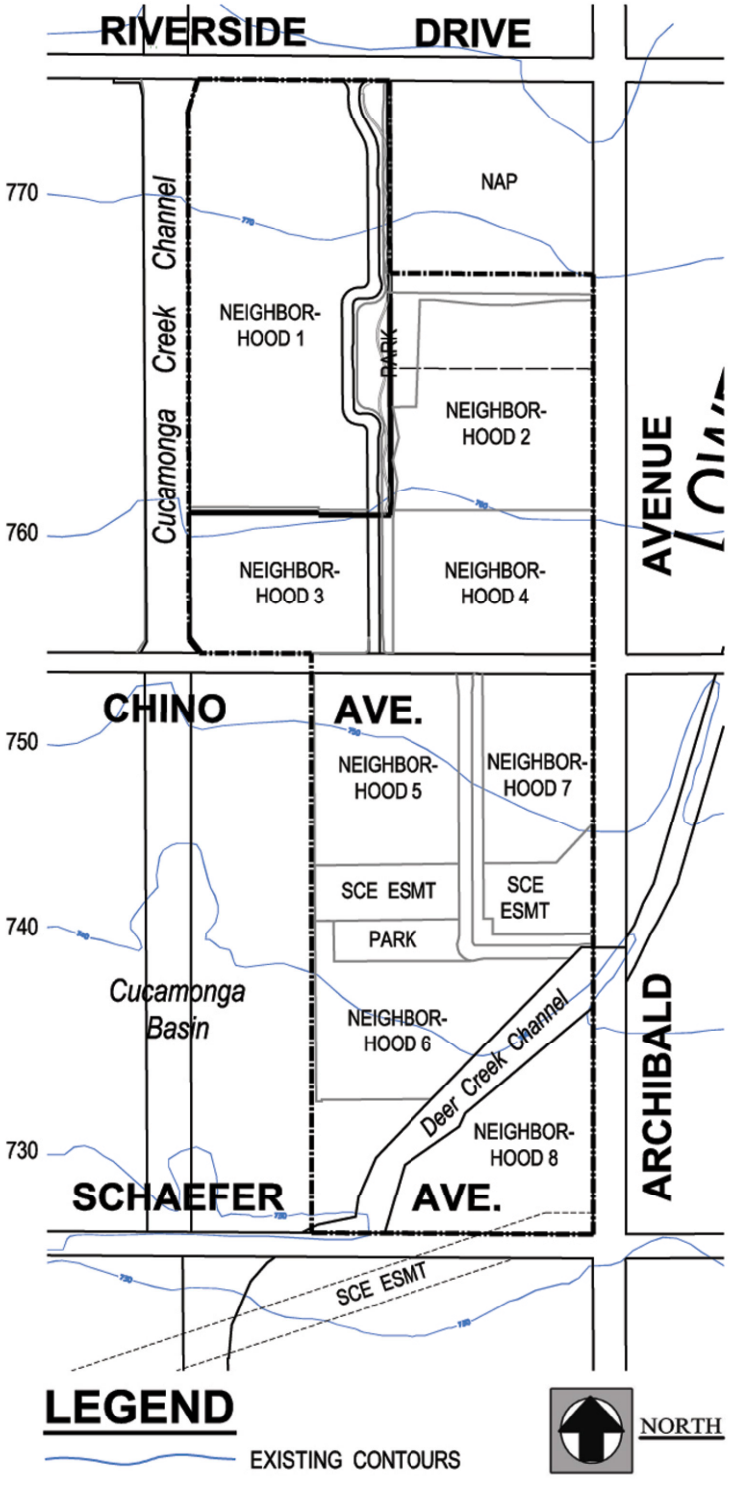

Exhibit 8
Existing Site Topography

2.6 Existing Infrastructure and Utilities

Existing infrastructure and utility lines within and surrounding the Specific Plan Area are described below and are illustrated on Exhibit 9, "Existing Infrastructure."

2.6.1 Water

Planning Area 1 of the Specific Plan Area is within the Phillips Pressure Zone of the City of Ontario water distribution system. Existing storage facilities for the Phillips Pressure Zone are located near State Street and Campus Avenue and near the intersection of Milliken Avenue and Interstate 10. There are two existing water distribution mains located adjacent to the Specific Plan Area; a 10-inch main is located in Riverside Drive and a 12-inch main is located in Archibald Avenue. Planning Area 2 of the Specific Plan Area is within the City's Francis Pressure Zone.

The existing water main located in Riverside Drive adjacent to the Specific Plan Area provides water to the existing residential development at the southwest corner of Riverside Drive and Archibald Avenue, adjacent to the Specific Plan Area. The water main in Archibald Avenue serves the existing residential and commercial sites to the east of Archibald Avenue. On-site residential uses within the Specific Plan Area are served by private wells. There are two existing wells on the Specific Plan Area. One is located in the northeast corner of the project within Neighborhood 1 and the second is located west of Archibald Avenue within Neighborhood 6. The City's Water Master Plan identifies new water facilities necessary to serve the Specific Plan Area.

2.6.2 Sewer

Wastewater disposal within the Specific Plan Area is currently provided through septic tanks and subsurface disposal fields. Prior to grading operations, existing septic tanks and subsurface disposal fields will need to be abandoned in accordance with Department of Health Services requirements. A 15-inch sewer main currently exists in Archibald Avenue which carries wastewater flows from the existing development, located south of Riverside Drive and adjacent to Archibald Avenue, to a sewer lift station located at the northeast corner of Schaefer Avenue and Archibald Avenue. The existing lift station pumps the wastewater from existing residential development, located easterly of the Specific Plan Area. The lift station pumps the waste water via an existing 10-inch force main northerly in Archibald Avenue, westerly in Riverside Drive and northerly adjacent to the Cucamonga Creek Channel to Regional Plant 1 (RP1). RP1 treats the wastewater from the entire City of Ontario located outside of the Ontario Ranch and portions of the surrounding cities of Montclair, Upland, Rancho Cucamonga and Fontana.

An existing 12-inch sewer line is also located in Riverside Drive. The existing sewer mains located in Riverside Drive adjacent to the Specific Plan Area provide sanitary sewer service to the existing residential development at the southwest corner of Riverside Drive and Archibald Avenue, adjacent to the Specific Plan Area. The City's Sewer Master Plan identifies new facilities necessary to serve the Specific Plan Area.

2.6.3 Storm Drainage

The Specific Plan Area is bordered on the west by the Cucamonga Creek Channel, a major rectangular concrete lined channel and the Cucamonga

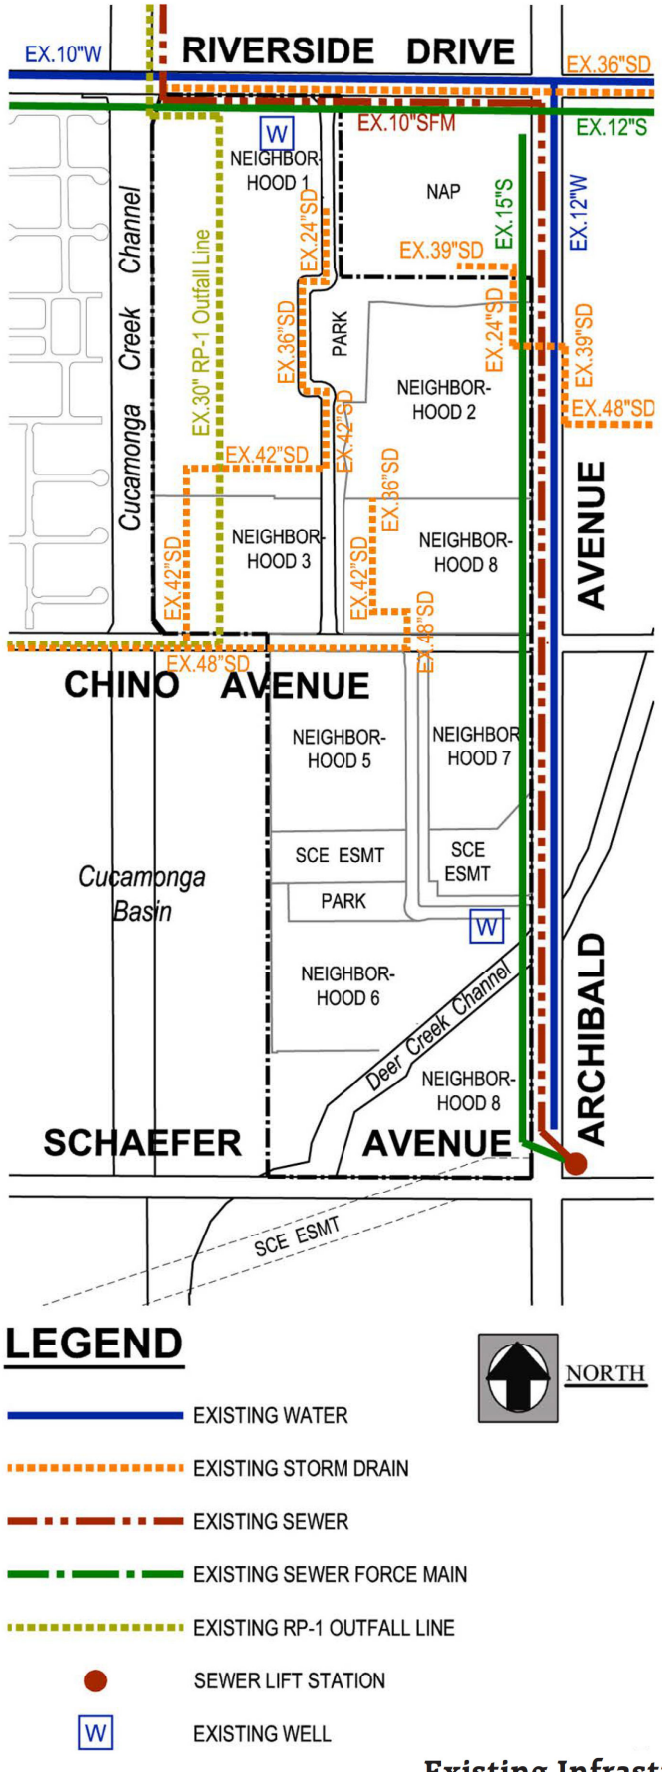

Exhibit 9
Existing Infrastructure

Basin, a regional flood control facility serving Ontario. The Deer Creek Channel is a concrete lined flood control channel, which crosses the southerly portion of the Specific Plan Area.

Riverside Drive intercepts storm flows from the developed property to the north of the Specific Plan Area. An existing 36-inch storm drain in Riverside Drive discharges this flow into the Cucamonga Creek Channel. An existing 24-inch storm drain located in Archibald Avenue collects the storm water run-off from the adjacent developed parcels of land near the southwest corner of Archibald Avenue and Riverside Drive and discharges it easterly into the Deer Creek Channel.

Storm water run-off from the Specific Plan Area is generally by sheet flow to the south where it is intercepted by Chino Avenue for Planning Area 1 and by the Cucamonga Creek Channel for Planning Area 2. Chino Avenue slopes gently to the west, and storm water is carried along the north side of the street to the Cucamonga Creek Channel where it is intercepted. During storms which create larger amounts of runoff, storm water may sheet flow over Chino Avenue into one of the Lower Cucamonga Basins, which were designed for storm water detention and ground water recharge.

2.6.4 Utilities

2.6.4.1 Electricity

Electricity is provided to the Specific Plan Area by Southern California Edison (SCE). SCE has some overhead facilities in the area servicing the farms and dairies. The development of the Countryside Specific Plan will increase electrical power requirements, and SCE will develop the required distribution system.

2.6.4.2 Natural Gas

The Southern California Gas Company (SCG) provides natural gas service to the Specific Plan Area. Existing gas lines are located in Riverside Drive and Archibald Avenue.

2.6.4.3 Communication Systems

Telephone service is provided by Verizon. Currently, telephone service is provided to the existing adjacent developments and to the dairies and farms currently occupying the Specific Plan Area.

2.6.5 Wells

There are two known existing wells within the Specific Plan Area. Upon development of the well site areas, these wells, or any other wells found on the property, will be abandoned per California Department of Water Resources Health Guidelines and the City of Ontario Guidelines. In addition, a well use/destruction plan, as approved by the City, and schedule for all existing wells will be required. If a private well is actively used for water supply, the Developer shall submit a plan, for City approval, to abandon the well and connect users to the City's water system (residential to the domestic water system and agricultural to the recycled water system) when available. If a water connection is not available an alternated source will be proposed by the developer and approved by the City.

2.6.6 Recycled Water

A portion of the RP-1 Outfall line owned by the Inland Empire Utilities Agency, IEUA, lies within the Specific Plan area. The RP-1 Outfall line extends from Riverside Drive to Chino Avenue approximately 430 feet east of the Cucamonga Creek Channel. Any issues regarding the protection of, or proposed relocation of the RP-1 Outfall line within the Specific Plan area will be coordinated through IEUA. The relocation of the RP-1 Outfall

will require the approval of IEUA. The City's Recycled Water Master Plan identifies new facilities necessary to serve the Specific Plan Area.

2.7 Physical Site Conditions

This section describes the existing physical site conditions identified in the EIR prepared for the Ontario Ranch General Plan Amendment. As part of the preparation of the Countryside EIR, more detailed information will be provided regarding these site conditions.

2.7.1 Geology and Soils

The City of Ontario General Plan EIR identifies the Specific Plan Area as underlain by Pleistocene age (older than 12,000 years) and Holocene age (less than 12,000 years old) alluvial deposits. The youngest surficial deposit is eolian sands (Qhs), comprising wind-blown sands having fine to medium sized grains. These loose sands form sheets and low dune deposits that have been stabilized by vegetation. These deposits are exposed in the eastern portion of the Ontario Ranch area and extend westward to an area defined generally by a diagonal line extending from Harrison Avenue in Riverside County on the south to Vineyard Avenue on the north.

It is expected that most of these materials will be uncemented and subject to consolidation when saturated under structural loads. Erosion potential is considered high. Foundation and backfill suitability should be satisfactory with proper over-excavation, mixing with a finer grained binder material, and compaction.

In August 2003, Petra Geotechnical prepared a report of potential methane issues associated with previous onsite calf ranch operations within Neighborhood 1. In March 2004, a similar report on potential methane issues was prepared for Neighborhoods 5 and 6. The reports will be evaluated in the project EIR regarding any potential significant concentrations of methane due to the historic ranch operations on the Specific Plan Area.

Petra Geotechnical recommended that these areas be tested for methane concentrations following completion of grading operations for the proposed residential development. Remaining areas formerly used for pasture croplands were not considered as potential methane generation areas and did not require additional testing.

The Specific Plan Area contains delhi series soils, as mapped by the United States Department of Agriculture, Soil Conservation Service in 1971 and 1980. Delhi series soils have been used for agriculture, primarily for grapes and citrus, since the 1800's.

2.7.2 Seismicity

The General Plan EIR identified numerous earthquake faults within a 50-mile radius of the Specific Plan Area. Major mapped faults include, but are not limited to, the Chino, Whittier-North Elsinore, and Cucamonga Faults. For the "maximum probable earthquake" (MPE), defined as the 100-year event, normally considered in the design of non-critical structures, the values range from about 0.13 to 0.20 g (i.e., the unit force of gravity). In the design of certain critical or important facilities such as hospitals and dams, the "maximum credible earthquake" (MCE) event is considered. For the three faults, the MCE should yield an estimated peak horizontal acceleration in the range of 0.33 to 0.52 g.

A zone of concentrated, relatively low magnitude seismicity extends to the southwest from the San

Jacinto fault zone (Rialto-Colton branch) along what is referred to an "inferred fault near Fontana." Where the "inferred fault" (Fontana trend) stops, this zone of microseismicity continues in a southwesterly to westerly direction terminating in the Sphere of Influence area. It is expected that the MPE for this fault structure could produce horizontal accelerations in the range of 0.3 to 0.5 g. More distant faults are capable of larger earthquakes with a higher probability of occurrence. The San Andreas fault is expected to generate a MCE events every 150 to 200 years, yielding a peak horizontal ground acceleration of approximately 0.21 to 0.26 g.

2.7.3 Hydrology

Since most of the Specific Plan Area is presently in agricultural use, only a limited portion of the Specific Plan Area is now covered with impervious surfaces. Normal rainfall to the area is, therefore, able to percolate through on site soils and does not result in high volumes of surface runoff, as typically associated with urban areas. During periods of heavy rainfall, when ground surfaces are saturated, surface runoff is collected in the existing storm drains, culverts, and retention basins located within the Specific Plan Area.

With the exception of major flood control channels such as the Cucamonga Creek Channel and Deer Creek Channel, intended primarily to carry urban runoff originating from those developed areas located to the north of the Specific Plan Area, the existing storm drain system surrounding the Specific Plan Area is generally unimproved and consists primarily of open earthen swales along area roadways or curbed roadway surfaces.

Ground waters within and surrounding the Specific Plan Area as a whole contain high concentrations of salt attributable to historic agricultural activities such as dairy farming. The high organic content of on-site soils has contributed incrementally to the degradation of surface and ground water quality. Removal of the organic materials which constitute by-products of those dairy operations and compliance with National Pollution Discharge Elimination System (NPDES) and other storm water permit requirements will beneficially impact regional water quality.

2.7.4 Vegetation

The Specific Plan Area has been extensively used for agricultural operations, including both dairy use and the cultivation of row crops. Those areas not in active agricultural production are occupied by rural residential housing, farm buildings, and other ancillary facilities. The natural vegetation and soils conditions that once occurred throughout the Specific Plan Area have been significantly altered through human uses.

Section 3. Land Use

The Countryside Specific Plan is a proposal for development of a comprehensively planned community of residential and open space uses on 178.03 gross acres. The "Land Use Plan" for Countryside, as depicted in Exhibit 10 and further described in Table 1, "Countryside Specific Plan Statistical Summary," and Table 2, "Land Use Summary" is designed to respond to both on-site and off-site conditions, as well as anticipated market conditions. Countryside will provide a strong community identity for residents and visitors through a comprehensive community landscape theme, signage, varied architecture, and other community elements. Countryside also provides for the necessary infrastructure and public facilities to support project development.

3.1 Residential Use

Residential land uses within Countryside comprise approximately ~~129.47~~128.74 net acres. Countryside will provide for the development of up to ~~825~~984 single family detached and atttached residential units. Residential land use areas are contained within eight distinctive neighborhoods linked by a network of landscaped paseos connecting all the neighborhoods to centrally located parks in both Planning Area 1 and Planning Area 2.

3.1.1 Variety of Housing Types

Countryside provides a variety of conventional low density single family detached residential products as well as higher density single family detached Z-Lot residential, alley loaded, ~~and~~ motor court cluster, and row townhome residential products. Altogether a total of ~~825~~984 residential units will be developed at an overall density of ~~6.32~~7.64 dwelling units per net acre.

Planning Area 1	Gross Acres (1)
Neighborhood 1	41.77
Neighborhood 2A	7.84
Neighborhood 2B	9.46
Neighborhood 2C	7.22
Neighborhood 3	9.37
Neighborhood 3A	4.79
Neighborhood 4	15.14
Subtotal Planning Area 1:	**95.60**
Planning Area 2	
Neighborhood 5 (2)	18.73
Neighborhood 6	16.93
Neighborhood 7 (2)	20.23
Neighborhood 8 (2)	16.85
Deer Creek Channel	9.69
Subtotal Planning Area 2:	**82.43**
Total:	**178.03**

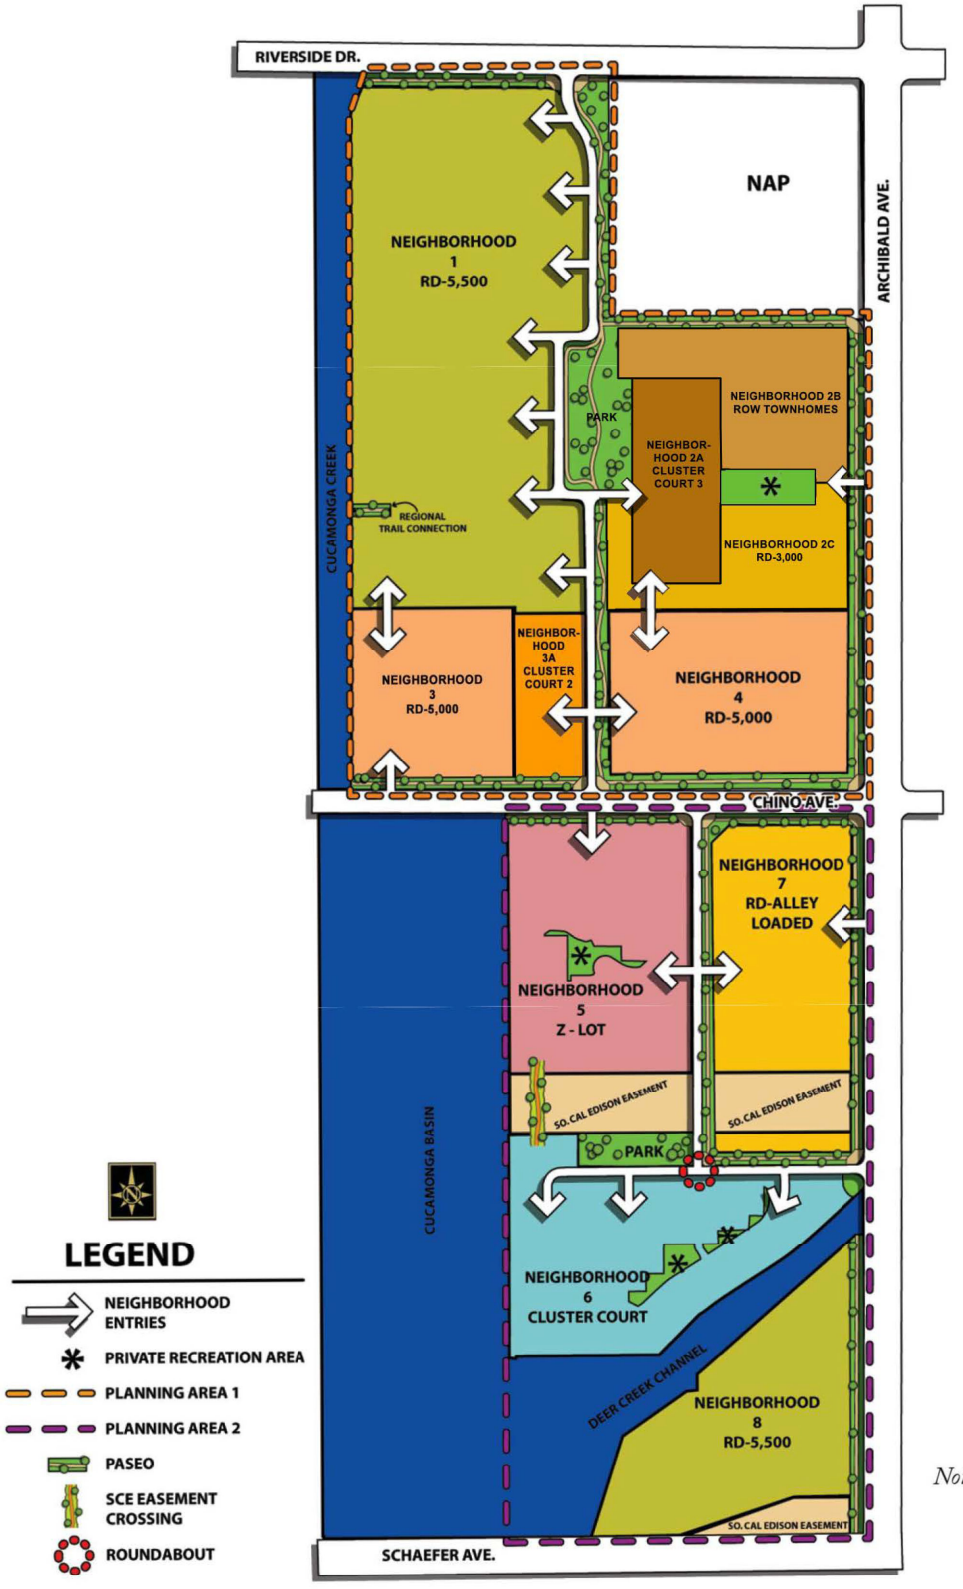
Notes: (1) Gross acres measured to centerline of street/property boundary.

(2) Includes SCE Easement.

Table 1

Countryside Specific Plan Statistical Summary

3.1.1.1 RD – 5,000 Square Foot Lots



The Specific Plan allows for development of up to 112 dwelling units with minimum lot sizes of 5,000 square feet at an average density of 5.42 dwelling units per net acre. The 5,000 square foot lots will be developed in Neighborhoods 3 and 4.

3.1.1.2 RD – 5,500 Square Foot Lots

The Specific Plan allows for development of up to 271 dwelling units with minimum lot sizes of 5,500 square feet at an average density of 5.84 dwelling units per net acre. The 5,500 square foot lots will be constructed in Neighborhoods 1 and 8.

Revised Graphic

Table 2
Land Use Summary

Countryside

3.1.1.3 RD – ~~6,000~~ 3,000 Square Foot Lots

The Specific Plan allows for the development of up to ~~106~~ 56 dwelling units on minimum lot sizes of ~~6,000~~ 3,000 square feet at a density of ~~5.18~~8.75 dwelling units per net acre. The ~~6,000~~3,000 square foot lots will be developed in Neighborhood 2C.

3.1.1.4 RD - Z-Lot Residential

The Specific Plan allows for the development of up to 98 residential dwelling units in a Z-Lot housing type on minimum lot sizes of 3,500 square feet at a density of 7.68 dwelling units per net acre. This product type will be developed in Neighborhood 5. As part of the development of this neighborhood, a private recreational amenity will also be developed to serve the residents.

3.1.1.5 RD – Cluster Court Residential

The Specific Plan allows for the development of up to 141 single family detached cluster court style residential dwelling units on minimum lot sizes of 3,000 square feet at a density of 9.51 dwelling units per net acre. This product type will be developed in Neighborhood 6. As part of the development of this neighborhood, a private rec-reational amenity will also be developed to serve the residents.

3.1.1.6 RD – Alley Loaded Residential

The Specific Plan allows for the development of up to 60 single family detached alley loaded residential dwelling units on minimum lot sizes of 2,925 square feet at a density of 5.35 units per net acre. This product type will be developed in Neighborhood 7. As part of the development of this neighborhood, a private recreational amenity will also be developed to serve the residents.

3.1.1.7 RD – Cluster Court 2 Residential

The Specific Plan allows for the development of up to 37 single family detached cluster court style residential dwelling units on minimum lot sizes of 3,000 square feet at a density of 11.71 dwelling units per net acre. This product type will be developed in Neighborhood 3A. As part of the development of this neighborhood, a private rec-reational amenity will also be developed to serve the residents.

3.1.1.8 RD – Row Townhomes

The Specific Plan allows for the development of up to 126 row townhome style residential dwelling units with a square footage range of 1,500 square feet to 1,700 square feet and a density of 17.92 dwelling units per net acre. This product type will be developed in Neighborhood 2B. As part of this neighborhood, a 0.99 acre park will also be developed for the residents.

3.1.1.9 RD – Cluster Court 3 Residential

The Specific Plan allows for the development of up to 83 cluster court style residential dwelling units on minimum lot sizes of 2,000 square feet and at a density of 13.17 dwelling units per net acre. This product type will be developed in Neighborhood 2A.

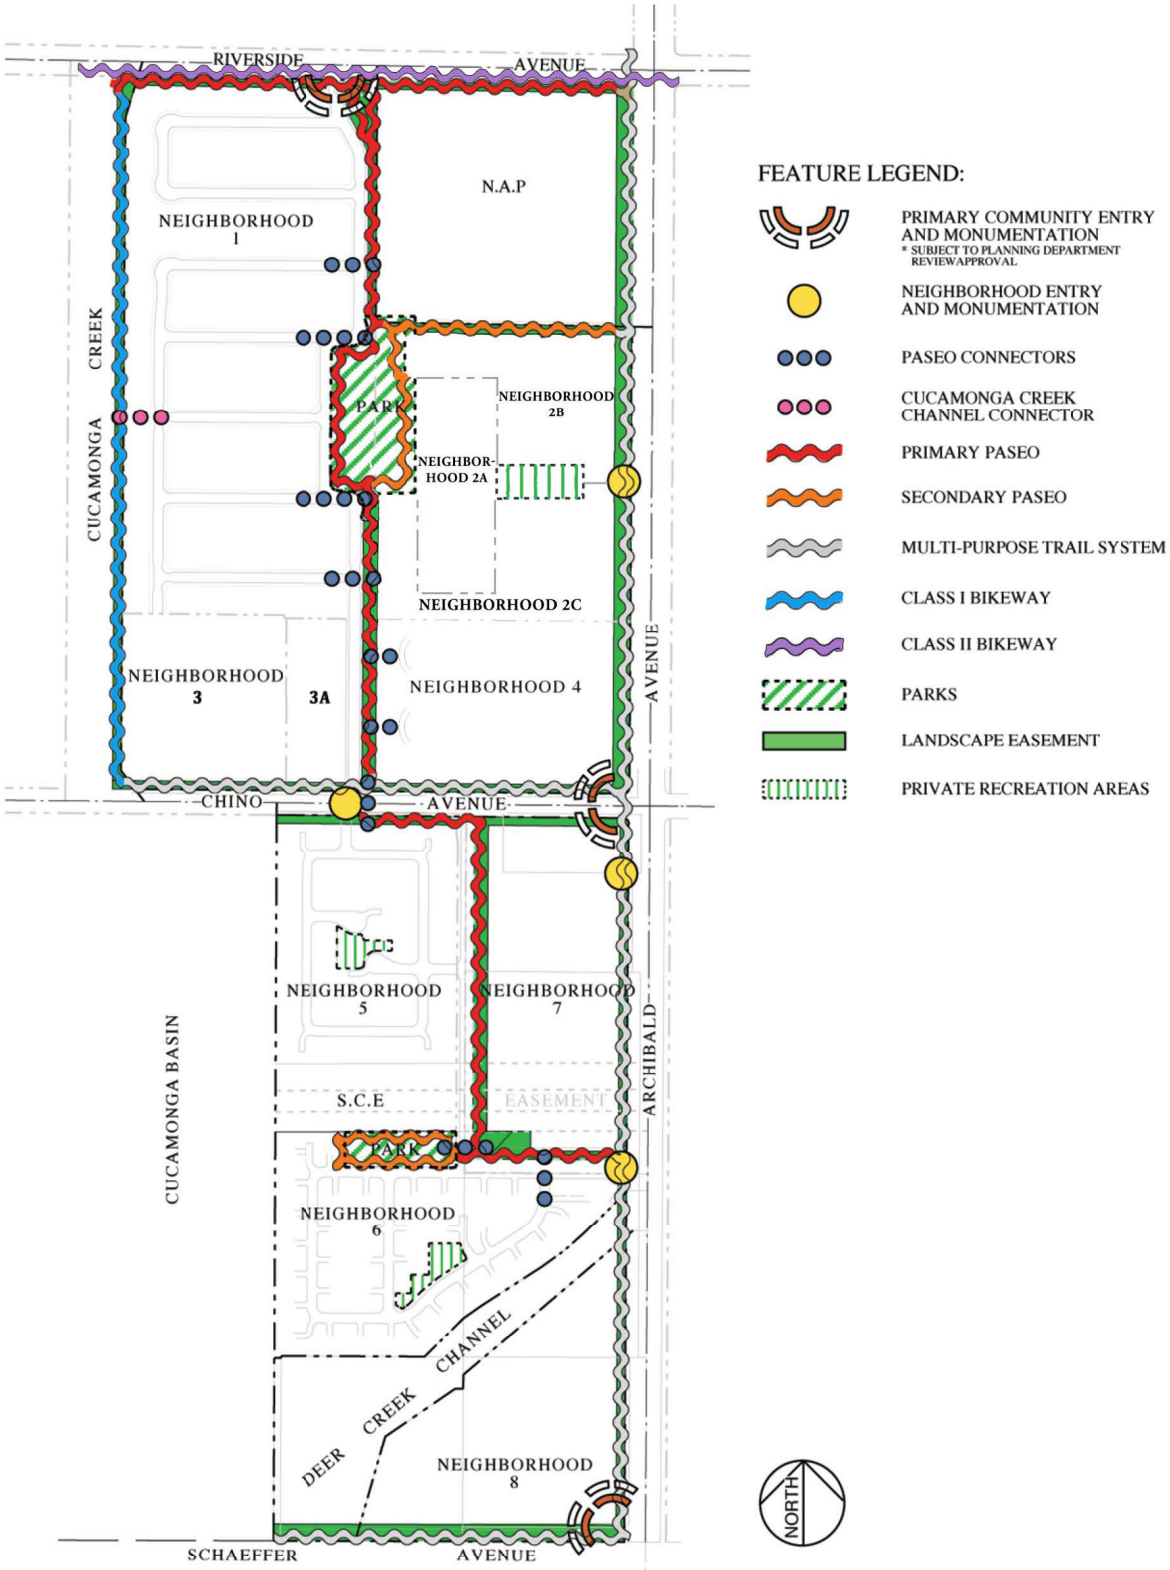
3.1.2 Traditional Neighborhood Design

Countryside offers a strong identity for residents and visitors through a traditional approach to street design, architecture, and landscape design elements. A traditional grid street design in residential neighborhoods includes gentle curves adding visual interest, enhancing the pedestrian orientation of neighborhoods. Sidewalks separated by a landscaped parkway promote pedestrian mobility and encourage opportunities for neighbors to meet and greet each other along the street.

The architecture of residences within Countryside will be designed to focus on human-scale details to enhance the pedestrian friendly character of the residential neighborhoods. Such features may include the use of front porches, railings, enhanced entries, a mix of materials and textures, and authentic detailing on elements such as windows and doors, columns, balconies, and lighting.

Innovative residential architecture and garage designs, as described below, will be utilized in order to bring architecture forward to the street and minimize the visual impact of garage doors on the street scene.

- Varying garage setback requirements.
- Split garages.
- Side-on garages.
- Tandem garages.
- Motor court residential design which hides garages from the street.
- Alley served garages.



3.2 Parks and Paseos

Approximately 3.78 acres within Countryside will be developed as a landscaped neighborhood paseo, providing connectivity within the community and a unifying element linking Planning Area 1 and Planning Area 2. A thirteen foot wide multi-use trail will meander through the paseo area winding through large shade trees and planting masses. The paseo will provide bicycle and pedestrian access to both local parks within the community and to Westwind Park and Whispering Lakes Golf Course to the north and north-west, commercial uses to the east, and public school facilities to the southeast. Two centrally located parks totaling 4.73 acres will be developed within each planning area of Countryside to provide informal play areas and passive recreational opportunities for residents. These parks will be served by the landscaped paseos leading pedestrians and bicyclists to a central focal point and providing for informal gathering spots for neighbors along the length of the paseo and within the park.

Private recreational amenities totaling ~~.88~~1.87 acres will be developed within Neighborhoods 2, 5 and 6 to be improved with active facilities such as swimming pools. These amenity areas could also include a small recreational building. Pocket parks will be provided in Neighborhood 7 for passive recreational activities. Exhibit 11, "Parks and Paseo Concept" illustrates the central parks and private recreation areas planned for Countryside.

Revised Graphic

Countryside

Revised Graphic

Exhibit 11
Parks and Paseo Concept

Section 4. Infrastructure and Services

The infrastructure, utilities and public services to be provided as part of the development of the Countryside Specific Plan are discussed in this section.

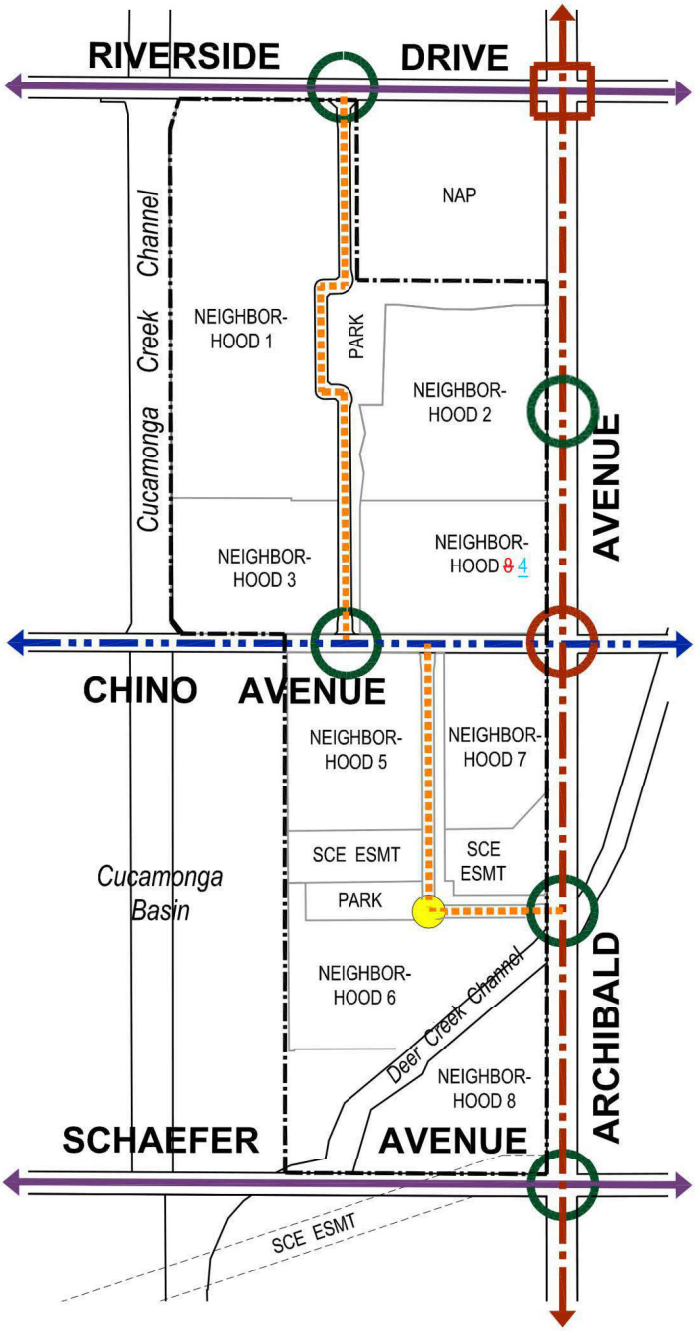
1.1 Circulation

The circulation plan for Countryside reinforces the concept of traditional neighborhood design. In addition to providing safe and efficient movement of vehicular traffic through the project, it also provides a safe environment for pedestrian movement and bicycle traffic reducing the reliance on the automobile as a means of travel. The "Master Circulation Plan," Exhibit 12 establishes the hierarchy and general location of roadways within Countryside.

The minimum design speeds to be used for centerline curve radii, superelevation, corner sight distance, vertical and horizontal alignment and sight distance, etc. are listed below:

Archibald Avenue	50 m.p.h.
Schaefer Avenue	45 m.p.h.
Chino Avenue	40 m.p.h.
Riverside Drive	45 m.p.h.

4.1.1 Streets



Countryside is bounded by three of the City of Ontario Master Plan streets that will provide access to and from the Specific Plan Area. Additional rights-of-way may be needed at critical intersections to accommodate additional left and right turn lanes. The NMC traffic study will verify the need. Within the Specific Plan Area, local and neighborhood streets of varying design will provide access and circulation through the community. Some neighborhoods will be served by private alleys located in the rear of these homes in order to maintain a traditional "architecture forward" streetscape for the community.

4.1.1.1 Archibald Avenue

Archibald Avenue abuts the Specific Plan Area on the east. Archibald Avenue is a designated Divided Arterial Parkway 1-2 street with a total right-of-way of 128-feet. The Archibald Avenue cross section between Riverside Drive and Chino Avenue will match the existing section. The existing cross section includes 80-feet of paved area with a 14-foot raised median. A 27-foot wide parkway will be provided on the west side. The 27-foot wide parkway will include a 5-foot meandering sidewalk separated from the street by a minimum of 7-feet of landscaped parkway along with the easterly 3-feet of the 8-foot ~~multi-use~~ multipurpose trail. A 19-foot wide landscaped neighborhood edge adjacent to the public right-of-way will be provided on the west side. The 19-foot wide parkway will include the westerly 5-feet of the 8-foot ~~multi-use~~ multipurpose trail and a 14-foot landscaped area between the trail and property line. The Archibald Avenue cross section between Chino Avenue and Schaefer Avenue will include 80-feet of paved area with a 15-foot raised median, 7-feet of the east side of the centerline and 8-feet on the west side of the centerline. A 27-foot wide parkway will be provided on the west side. The 27-foot wide parkway will include a 5-foot meandering sidewalk separated from the street by a minimum of 7-feet of landscaped parkway along with the easterly 3-feet of the 8-foot ~~multi-use~~ multipurpose trail. A 19-foot wide landscaped neighborhood edge adjacent to the public right-of-way will be provided on the west side. The 19-foot wide parkway will include the westerly 5-feet of the 8-foot ~~multi-use~~ multipurpose trail and a 14-foot landscaped area between the trail and property line. Parking will be prohibited on Archibald Avenue.

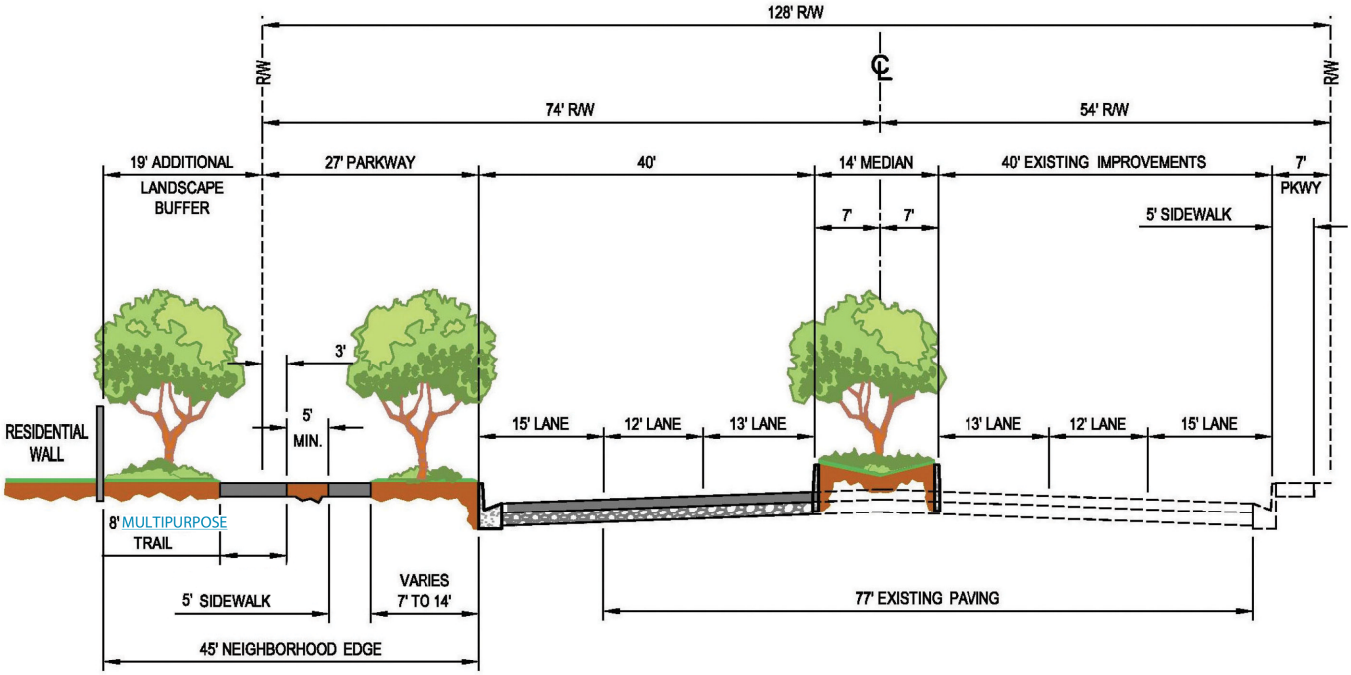
Exhibit 12
Master Circulation Plan Revised Graphic

The right-of-way improvements required for Archibald Avenue are illustrated in Exhibit 13, "Arterial Street Cross Sections – Archibald Avenue." The developer of Countryside will be responsible, at a minimum, for the improvement of the westerly half-width of right-of-way of Archibald Avenue between Riverside Drive and Schaefer Avenue and the full median improvements between Chino Avenue and Schaefer Avenue.

4.1.1.2 Riverside Drive

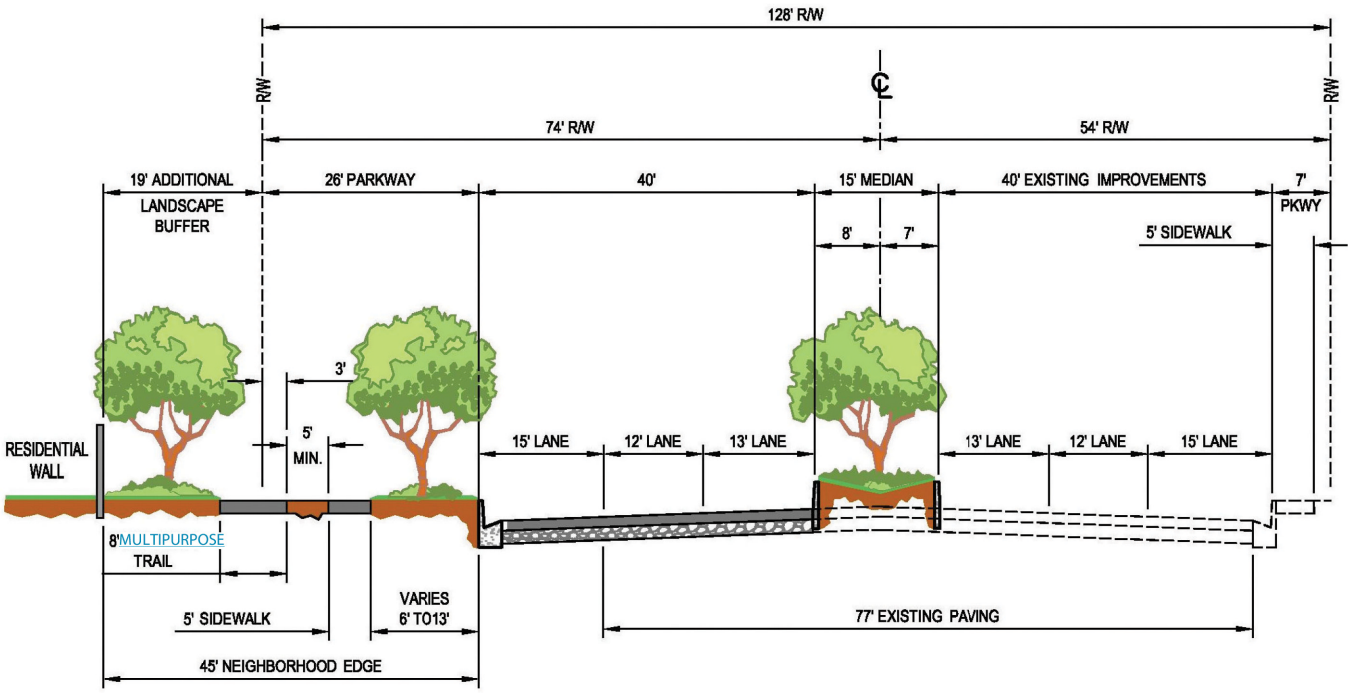
Riverside Drive is a designated Standard Arterial and bounds the Specific Plan Area on the north. Riverside Drive has a total right-of-way of 108-feet with 84-feet of paved area including Class II bike path, and a 12-foot parkway including a 5-foot sidewalk separated from the street by a 7-foot landscaped parkway. In addition to the dedicated right-of-way, a 23-foot wide landscaped buffer will be provided between the back of sidewalk and the residential community wall. Parking will be prohibited on Riverside Drive. Riverside Drive is illustrated on Exhibits 14, "Arterial Street Cross Section –Riverside Drive." The developer of Countryside will be responsible for the improvement of a minimum of one half width of Riverside Drive adjacent to the Specific Plan Area between the Cucamonga Creek Channel and the boundary of the existing residential development located easterly of the Specific Plan Area.

4.1.1.3 Schaefer Avenue



Schaefer Avenue abuts the Specific Plan Area on the south. Schaefer Avenue is a designated Collector Street with a total right-of-way of 108-feet with 84-feet of paved area and a 12-foot parkway on each side of the street to include a 5-foot sidewalk separated from the street by a 7-foot landscaped parkway. In addition to right-of-way improvements, a landscaped buffer of 23-feet in width will be developed between the sidewalk and the residential community wall. This buffer will include a multiputpose trail. Parking will be prohibited on Schaefer Avenue. The right-of-way improvements required for Schaefer Avenue are illustrated in Exhibit 15, "Arterial Street Cross Section – Schaefer Avenue." The developer of the residential area will be responsible, at a minimum, for the northerly one half width improvement of the right-of-way of Schaefer Avenue between Archibald Avenue and the easterly boundary of the Cucamonga Creek Channel, the landscaped buffer area adjacent to the residential area, and a fair share of the cost to construct a crossing at the Cucamonga Creek Channel.

4.1.1.4 Chino Avenue



Chino Avenue separates Planning Areas 1 and 2. Chino Avenue is a designated Collector Street with a total right-of-way of 88-feet with 64-feet of paved area and a 12-foot parkway on each side of the street to include a 5-foot sidewalk separated from the street by a 7 foot landscaped parkway. Adjacent to the right-of-way on Chino Avenue, an 18-foot wide landscaped buffer with multipurpose trail will be developed. Parking will be prohibited on Chino Avenue. The right-of-way improvements required for Chino Avenue are illustrated in Exhibit 16, "Collector Street Cross Section." The developer of Countryside will be responsible, at a minimum, for the full improvement of Chino Avenue from the Cucamonga Creek Bridge easterly to Archibald Avenue and may be responsible for the widening of the existing bridge on Cucamonga Creek.

4.1.1.5 Local Streets

Public local streets within Countryside are designed to distribute vehicular traffic from the public arterial streets adjacent to the Specific Plan Area into and through residential neighborhoods. Local Street A will have a total right of way of 60 feet with 40 feet of travel area and 10 foot wide

Riverside Drive to Chino Avenue

Exhibit 15

Arterial Street Cross Section – Schaefer Avenue

parkways on each side of the street including a 5 foot wide sidewalk separated from the street by a 5 foot wide landscaped parkway. Street B and other local streets within Countryside will have a total right-of-way of 60-feet with 36-feet of paved area and a 12-foot parkway to include a 5-foot sidewalk separated from the street by a 7-foot landscaped area. Parking is permitted on local streets. Local streets proposed for the Countryside Specific Plan are illustrated on Exhibit 17, "Local and Neighborhood Street Section."

4.1.1.6 Private Neighborhood Streets

Within Neighborhoods 2A, 2B, 2C, 5 and 6 private neighborhood streets are planned with a total paved width of 36-feet and 5-foot wide sidewalks separated from the street by a 4-foot wide landscaped parkway. Parking is permitted on the private neighborhood streets.

4.1.1.7 Private Drive Aisles and Alleys

Within Neighborhoods 2A, 2B, 5 and 6 private drive aisles are planned with a total paved width of 20-feet and a 5-foot wide landscaped parkway on one side. Parking is prohibited on the Private Drive Aisles. Within Neighborhood 7 private alleys are planned. Parking is prohibited on private alleys.

Private neighborhood streets, private drive aisles, and Private Alleys planned for Countryside are illustrated on Exhibit 18, "Private Street Sections."

4.1.2 Traffic Calming

The Countryside Specific Plan includes design features within residential neighborhoods to encourage drivers to proceed slowly and reduce traffic noise on streets contributing to safe and livable neighborhoods in which to walk, bike, and drive.

Traffic calming within Countryside is designed to address the following goals:

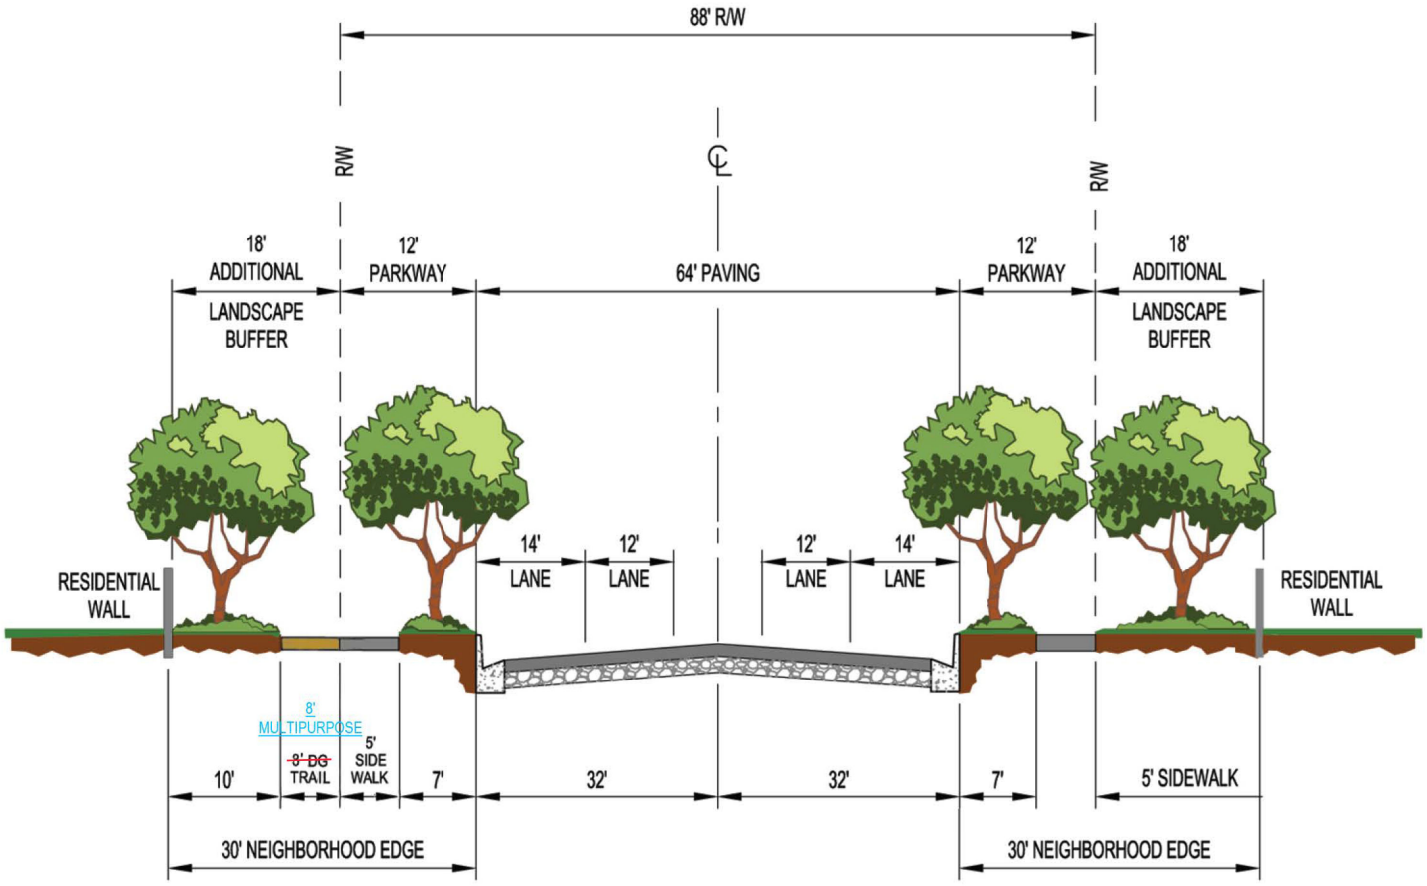
- Reduction in traffic speeds.
- Reduction in traffic related noise.
- A safe and pedestrian friendly circulation system to encourage walking.

The following design features will be implemented in the roadways within Countryside.

Local and Neighborhood Street Design

Local and neighborhood streets within Countryside are designed in a grid with landscaping on either side within parkways to add interest in the street encouraging drivers to slow their travel speed and observe their surroundings. Traffic speeds on local and neighborhood residential streets will be reduced by incorporating tapered intersections for local streets, as illustrated in Exhibit 19, "Local and Neighborhood Street Tapers."

Landscaping



Landscaping adjacent to streets within the Specific Plan Area will combine the use of shade trees, low shrubs, and groundcover adjacent to sidewalks to create a more intimate streetscape encouraging drivers to slow down and observe their surroundings. The landscape concept for Countryside is designed to contribute to a sense of the street system as a pedestrian protected area to promote slower traffic speeds.

Roundabouts

Roundabouts will be incorporated into street design wherever feasible as a traffic calming and traffic noise reduction device. The use of roundabouts rather than conventional all way stop intersections maintains traffic flow by requiring traffic entering

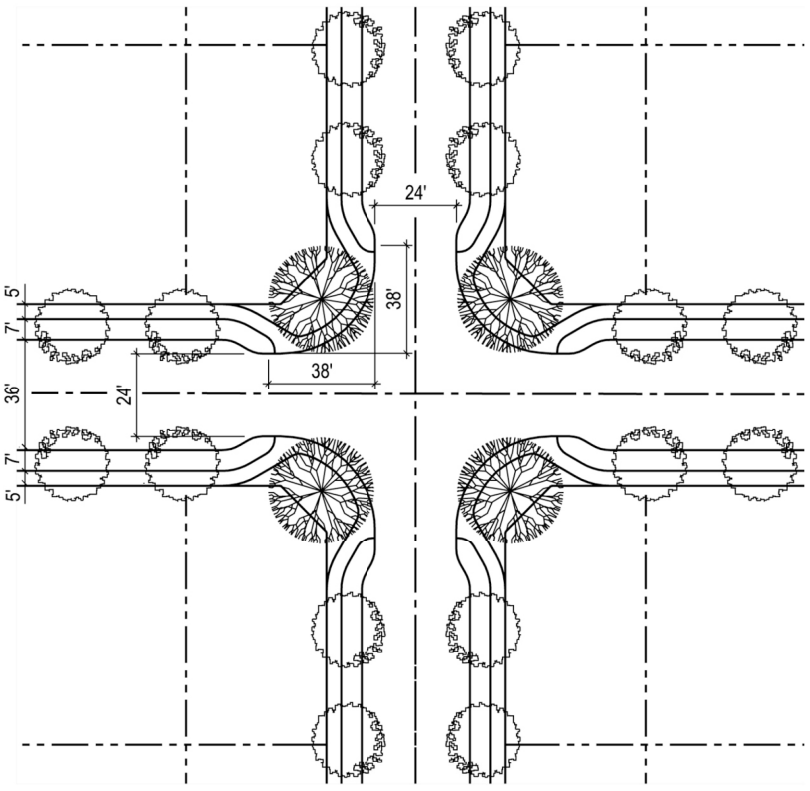
the roundabout to yield to traffic traveling within the roundabout. The lack of stop signs allows entering traffic to merge with the flow of traffic.

4.1.3 Pedestrian and Bicycle Circulation

Pedestrian and bicycle mobility are key elements to the Countryside land use plan. A landscaped paseo will be developed in a north-south alignment through Countryside offering pedestrian and bicycle accessibility between local parks within Countryside Planning Areas 1 and 2 from Riverside Drive to Schaefer Avenue. The paseo will connect to a multipurpose trail to be developed within the enhanced parkway on the westerly side of Archibald Avenue between Riverside Drive and Schaefer Avenue. Development of the Archibald Avenue trail will provide a link in the ~~City of Ontario Bikeway Master Plan~~Figure M-3 Multipurpose Trails and Bikeway Corridor Plan. The Countryside paseo network and the Archibald Avenue trail will provide connectivity between Countryside and commercial uses located to the east of the Specific Plan Area as well as to Westwind Park and Whispering Lakes Golf Course located to the north and northwest of the Specific Plan Area.



Off-street pedestrian circulation will be provided throughout Countryside through a network of sidewalks separated from vehicular travel lanes by a landscaped parkway. Pedestrian access points from sidewalks will be provided to the landscaped paseo through the local street system.

The developer will construct a bike trail within the right-of-way of the east side of the Cucamonga Channel, between Riverside Drive and Chino Avenue. The Countryside Specific Plan will provide a 30-foot wide connection within the Specific Plan Area to allow public access to this Cucamonga Channel trail.

The pedestrian and bicycle trail system for Countryside is illustrated in Exhibit 20, "Pedestrian and Bicycle Trails."

4.2 Water Master Plan

Domestic and recycled water for the Countryside Specific Plan will be provided by the City of Ontario. The Ontario Ranch Water Master Plan identifies new water facilities within the Phillips and Francis Zones. The improvements in the Phillips Zone include a reservoir at the southeast corner of the I-10 freeway and Milliken Avenue, an 18-inch transmission main from the reservoir to Riverside Drive, one groundwater well and recycled water lines. The improvements in the Francis Zone include a reservoir on Jurupa Street,

Note: Final taper design shall be subject to approval by the Engineering, Fire and Planning Departments.

Exhibit 19
Local and Neighborhood Street Tapers

Countryside

Revised Graphic

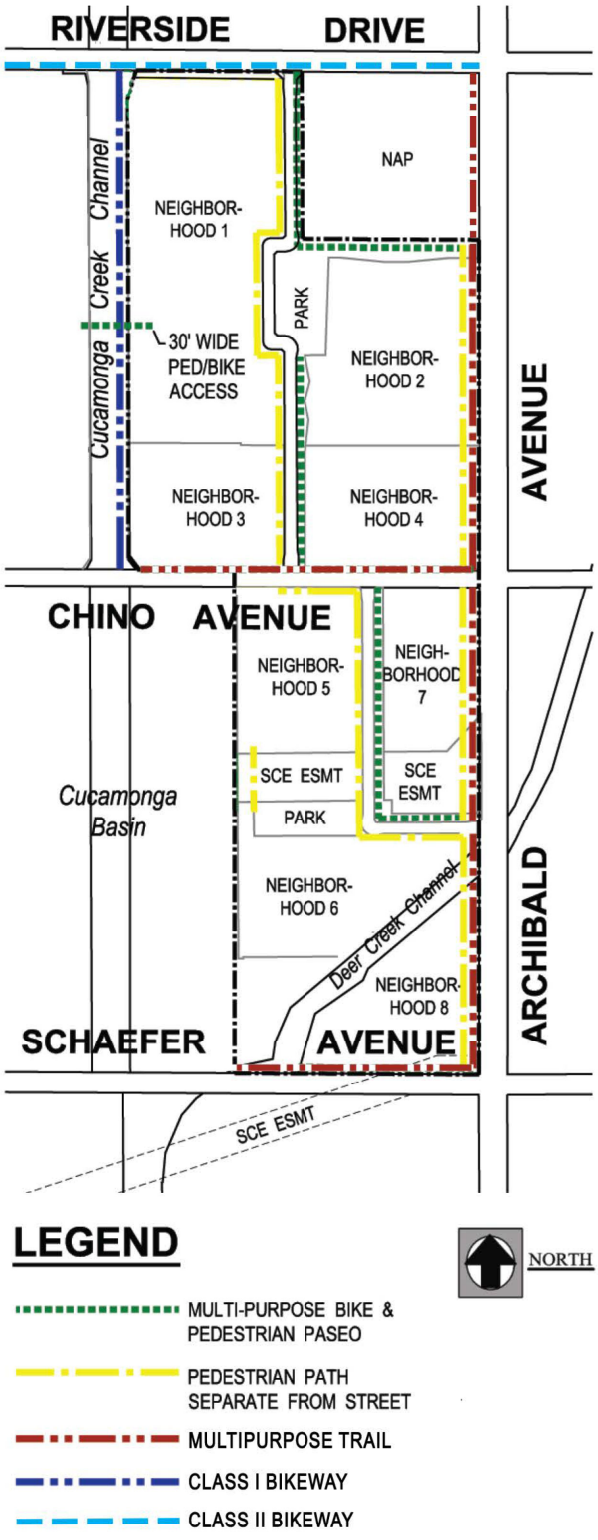


Exhibit 20
Pedestrian and Bicycle Trails Revised Graphic

two pressure reducing stations, an Ontario / CDA interconnect, a transmission main from the reservoir on Jurupa Street to Riverside Drive, a 30-inch main transitioning to a 24-inch main in Milliken Avenue from Riverside Drive to Merrill Avenue, 24-inch transmission lines in Merrill Avenue from Milliken Avenue to Archibald Avenue and within Archibald Avenue from Merrill Avenue to Edison Avenue, a 12-inch main in Archibald Avenue from Edison Avenue to Schaefer Avenue and recycled water mains. Construction of these Master Plan improvements is required to provide water service to the Countryside Specific Plan.

4.2.1 Domestic Water

Domestic water for the Countryside Specific Plan will be provided by the City of Ontario. Planning Area (PA1) lies within the Phillips Street Pressure Zone, also known as the 1010' Zone. PA1 will utilize an existing 10-inch water main in Riverside Drive and an existing 12-inch main in Archibald Avenue. New domestic water mains to be constructed as part of the development of Countryside PA1 will include an 18-inch main in Riverside Drive, between Mill Creek Avenue and Milliken Avenue; an 18-inch main in Mill Creek Avenue, connecting to the existing 16-inch water line at the southerly boundary of the high school and extending south to Chino Avenue, and an 18-inch main in Chino Avenue, between Mill Creek Avenue and the Cucamonga Creek Channel. Within the Specific Plan Area a network of 8-inch water lines will be installed. The on site water system will provide a loop system which will include connections to two different transmission mains.

Planning Area 2 (PA2) lies within the Francis Street Pressure Zone, also known as the 925' Zone. New domestic water mains to be constructed as part of the development of PA2

will include a 12-inch main in Chino Avenue, Archibald Avenue and Schaefer Avenue. Within the planning area, a network of 8-inch and 12-inch water lines will be installed. The on site water system will provide a loop system which will include connections to two different transmission mains. The master plan for domestic water for Countryside is illustrated on Exhibit 21, "Conceptual Domestic Water Master Plan."

4.2.2 Recycled Water

New recycled water lines, in conformance with the City's Recycled Water Master Plan, will be constructed as part of the development of Countryside. Inland Empire Utilities Agency (IEUA) will supply the recycled water from their facilities in Westwind Park, located north of Riverside Drive and east of Cucamonga Creek Channel.

Countryside Planning Area 1 (PA1) lies within the NMC Recycled Water 1050' Zone. New recycled water mains to be constructed as part of the development of PA1 will include a 30-inch main from Westwind Park to Riverside Drive, a 16-inch main in Riverside Drive to Archibald Avenue, a 20-inch main in Archibald Avenue from Riverside Drive to Chino Avenue and an 8-inch main in Chino Avenue from Archibald Avenue to the Cucamonga Creek Channel. Within the planning area, a network of 8-inch water lines or smaller as approved by the City, will be installed. The RP-1 Outfall Line, which is owned by the Inland Empire Utilities Agency, IEUA, extends across PA1 from Riverside Drive to Chino Avenue approximately 430 feet east of the Cucamonga Creek Channel. With the approval of IEUA, the RP-1 Outfall line will be relocated easterly within the proposed north/south collector street, with connections constructed at Riverside Drive and Chino Avenue to the satisfaction of IEUA. The proposed relocation of the RP-1 Outfall line is shown on Exhibit 22.

Countryside Planning Area 2 (PA2) lies within the NMC Recycled Water ~~900'~~ 930' Zone. New recycled water mains to be constructed as part of the devel-opment of PA2 will include a 10-inch main from Westwind Park to Riverside Drive, a 10-inch main in Riverside Drive to Archibald Avenue, a 10-inch main in Archibald Avenue from Riverside Drive to Schaefer Avenue, a 24-inch main in Archibald Avenue from Chino Avenue to Schaefer, a 30-inch main in Chino Avenue from Archibald Avenue to the Cucamonga Creek Channel and a 12-inch main in Schaefer Avenue from Archibald Avenue to the Cucamonga Creek Channel. Within the planning area, a network of 8-inch water lines or smaller as approved by the City, will be installed.

On site recycled water lines will be installed as required by the City Engineer and the Recycled Water Master Plan. The parks, paseos and landscape areas that will be irrigated with recycled water and the calculated recycled water demands are containcd in thc Countrysidc Watcr and Rccycled Hydraulic Analysis report. The City's goal is to maximize the use of recycled water, including but not limited to, irrigation of parks, schools, street landscaping, recreational trails, common area residential landscaping and landscaped edges abutting commercial and industrial development areas. The parks and landscaped areas to be irrigated with recycled water, along with the calculated recycled water demands for these areas, are described in the "Countryside Water and Recycled Water Hydrau-lic Analysis" on file at the City of Ontario.

There may be an interim period where recycled water supply does not have adequate pressure depending on the timing of development and construction of a regional booster station. If this is the case, the recycled water system will connect to the potable system initially, until such point that recycled water service is available.

Exhibit 22
Conceptual Recycled Water

The Master Plan for recycled water for Countryside is illustrated on Exhibit 22, "Conceptual Recycled Water."

4.3 Sewer Master Plan

Sewer service for the Countryside Specific Plan will be provided by the City of Ontario. The City's Sewer Master Plan identifies new sewer facilities extending along the easterly boundary of the Specific Plan Area in Archibald Avenue from Schaefer Avenue to Chino Avenue and in Chino Avenue to Hellman Avenue. Completion of these Master Plan improvements is required to provide sewer service to the Countryside Specific Plan. These Master Plan improvements will be constructed by Inland Empire Utilities Agency (IEUA) and are part of a sewer trunk main referred to as the Eastern Trunk Sewer. The Eastern Trunk sewer will extend southerly in Archibald Avenue from Chino Avenue to a connection with an existing sewer main in Kimball Avenue. On site sewer will be provided by 8-inch and 10-inch sewer systems ~~an 8-inch sewer system~~ draining to the 33-inch sewer main in Archibald Avenue or the 36-inch sewer main in Chino Avenue.

The Sewer Master Plan for the Countryside Specific Plan is illustrated on Exhibit 23, "Conceptual Sewer Master Plan."

4.4 Drainage

The City's Drainage Master Plan identifies new storm drain facilities to serve the Specific Plan Area.

The developer of Countryside will construct all required in-tract storm drain improvements necessary to serve the Specific Plan Area. The in-tract storm drain system will consist of minimum 24-inch pipes. Storm water from PA 1 will be collected and discharged into the Cucamonga Creek Channel. Storm water from areas southerly of Chino Avenue to PA 2 will be collected and discharged to the Deer Creek Channel.

The Drainage Master Plan for Countryside is illustrated in Exhibit 24, "Conceptual Storm Drain Master Plan." The size and location of storm drain facilities may be modified based on the approved final design.

4.4.1 NPDES Compliance

The grading and drainage of the Countryside Specific Plan area shall be designed to detain, filter and treat surface runoff, in a manner and combination which is practical, to comply with the most recent requirements of the San Bernardino County NPDES Storm Water Program's Quality Management (WQMP) for significant new development projects. The objective of the WQMP for this project is to minimize the detrimental effects of urbanization on the beneficial uses of receiving waters, including effects caused by increased pollutants and changes in hydrology. These effects may be minimized through the implementation of site designs that reduce runoff and pollutant transport by minimizing impervious surfaces and maximizing on-site infiltration, Source Control Best Management Practices (BMP's) and/or either on-site Structural Treatment Control BMP's, or participation in regional or watershed-based Treatment Control BMP's.

Prior to the issuance of a grading or construction permit, a Storm Water Pollution Prevention Plan (SWPPP) will be prepared. The SWPPP will be prepared to comply with the California State Water Resources Control Board's (State Water Board) current, "General Permit to Discharge Storm Water Associated With Construction Activity" and the current Area Wide Urban Storm Water Runoff (Regional NPDES Permit). The SWPPP will

Revised Graphic

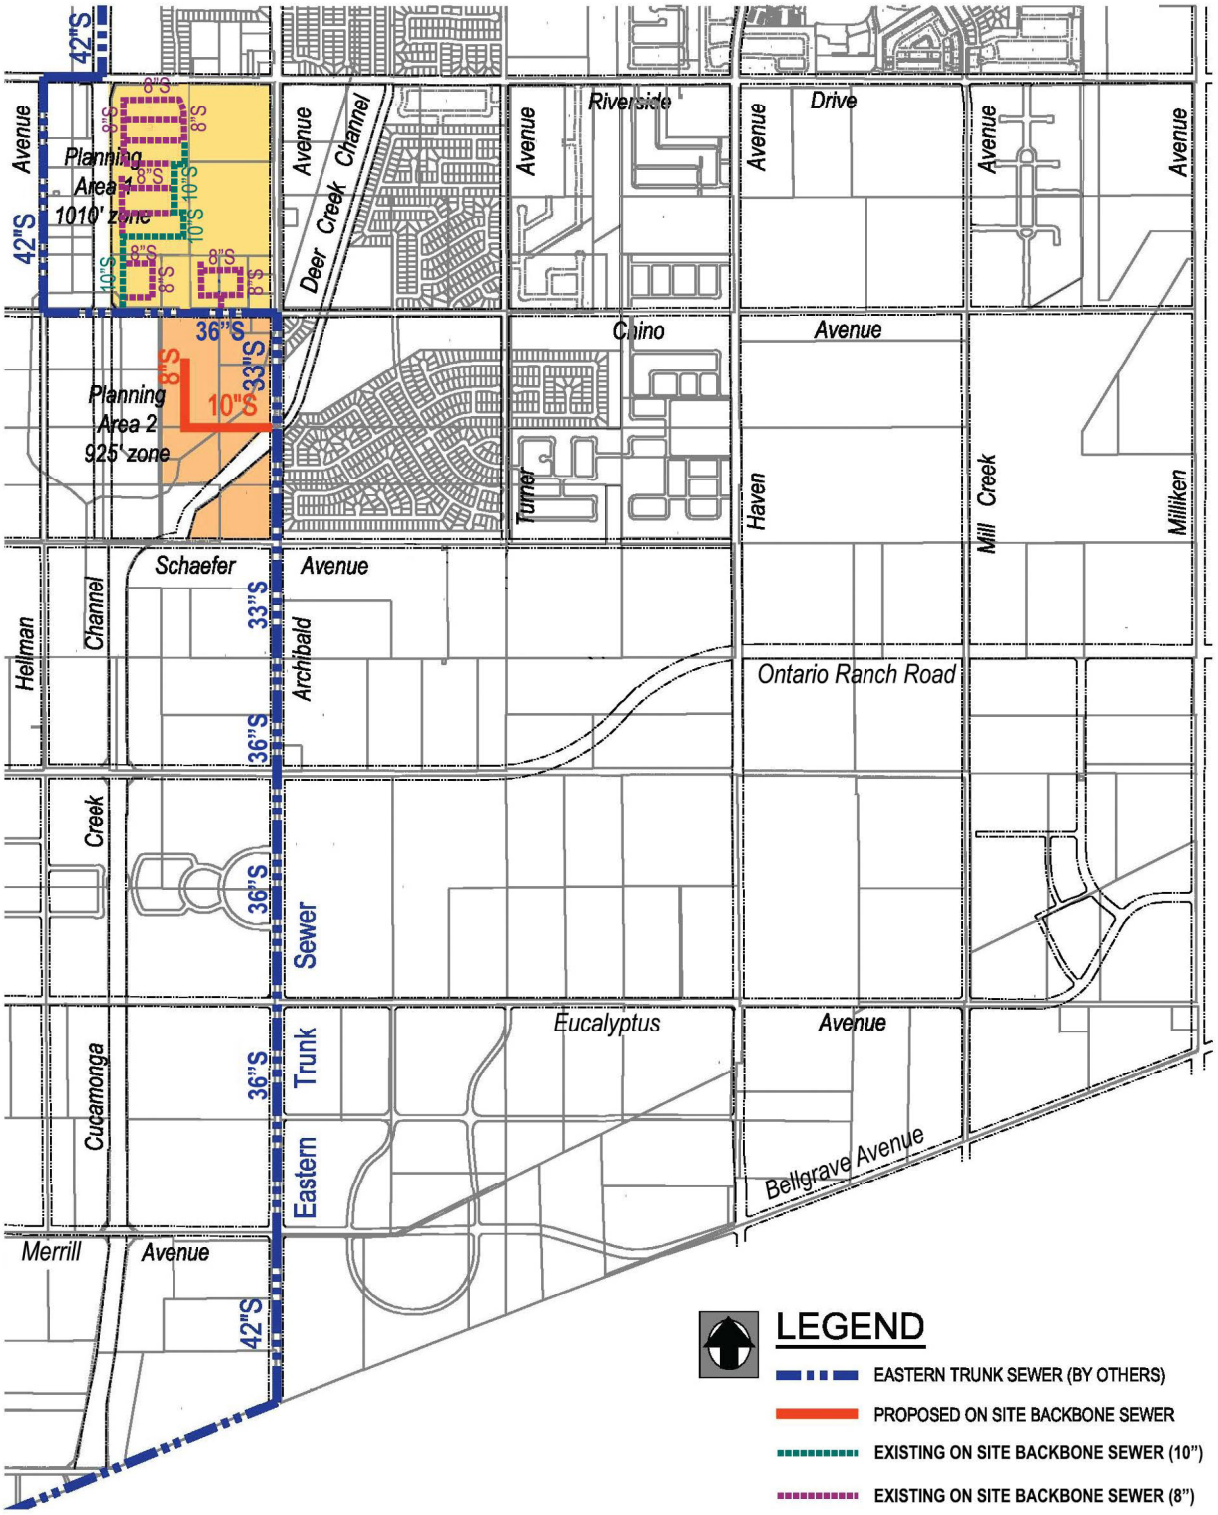

Exhibit 23

Conceptual Sewer Master Plan

Revised Graphic

8028

Revised Graphic

Countryside

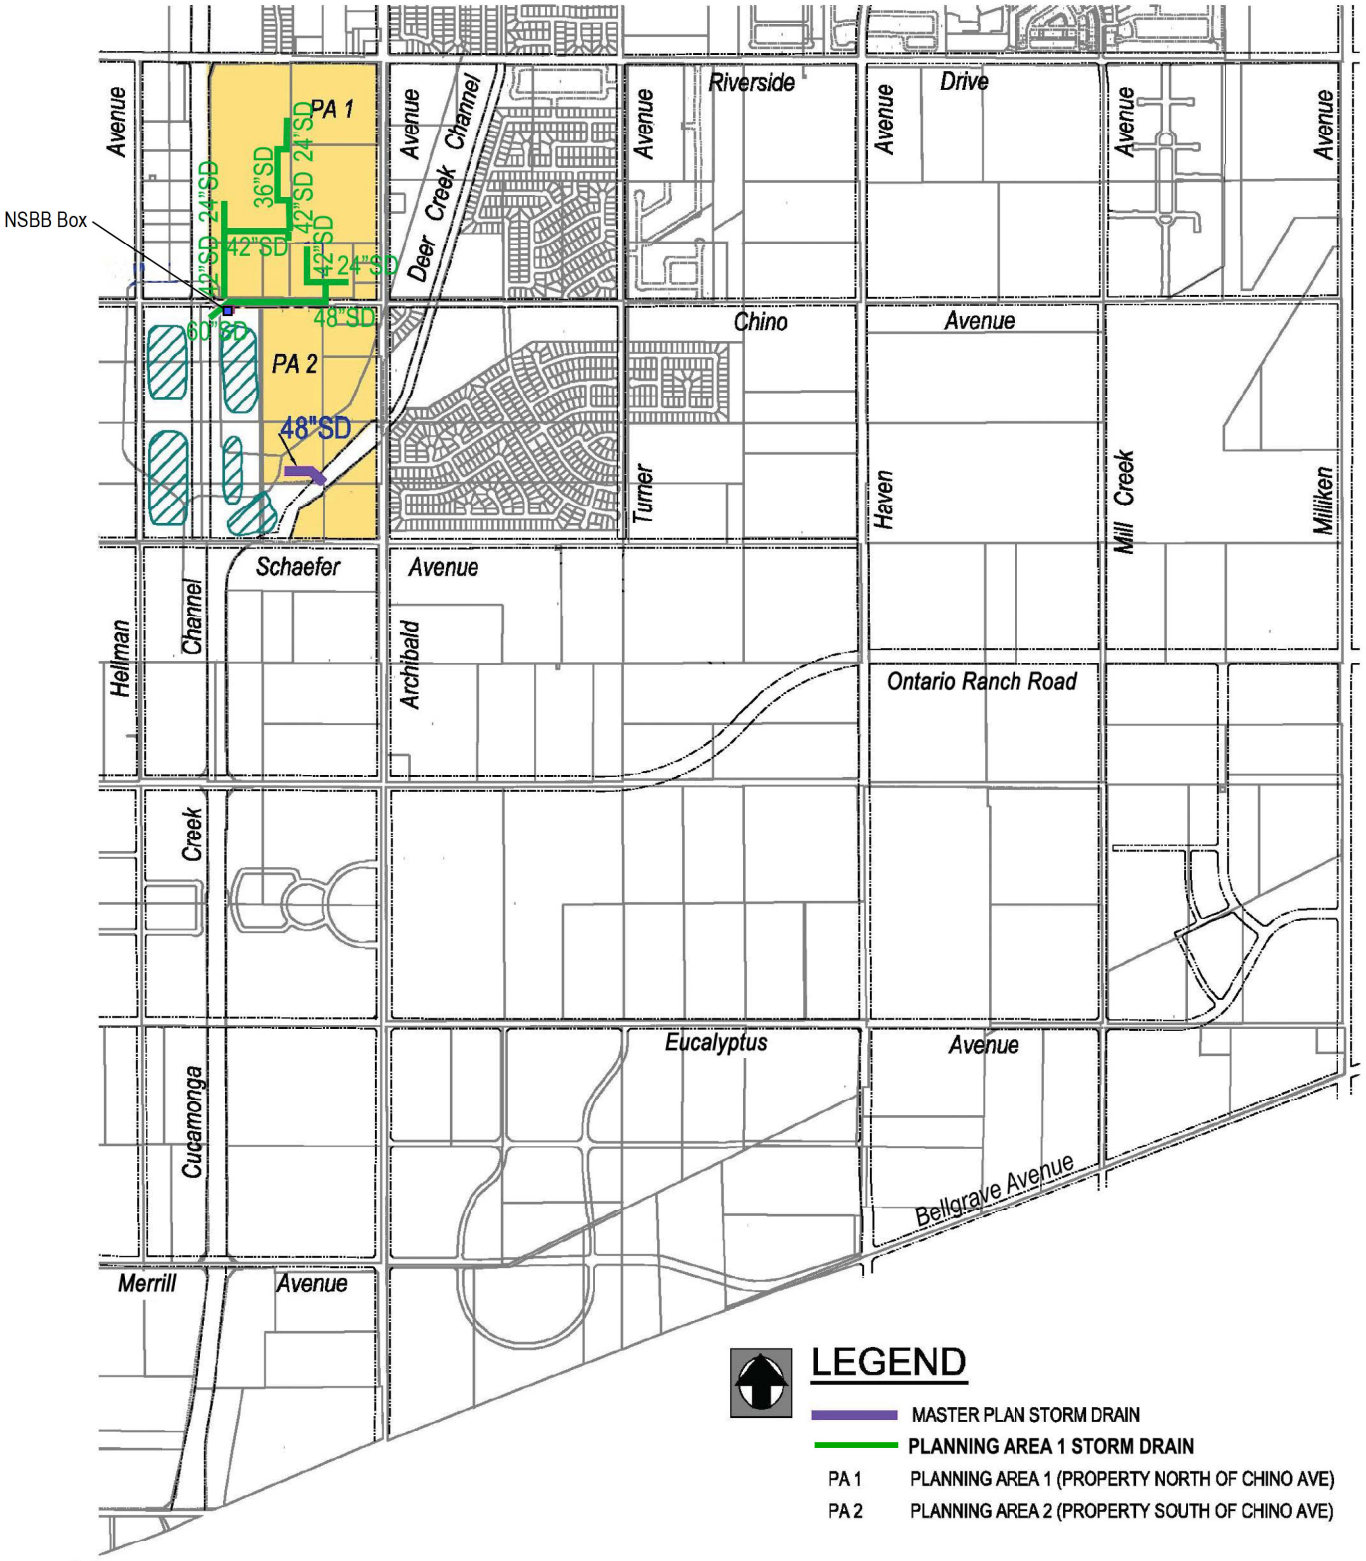

Exhibit 24

Conceptual Storm Drain Master Plan Revised Graphic

identify and detail all appropriate Best Management Practices (BMP's) to be implemented or installed during construction of the project.

In addition to the preparation of a SWPPP for construction-related activities, and as part of the approval of any grading plans within the Specific Plan Area, the applicant will be required to submit a Water Quality Management Plan (WQMP) on the regional model form provided by the City. The WQMP shall identify and detail all Site Design BMP's, Source Control BMP's and Treatment Control BMP's to be implemented or installed at the development site in order to reduce storm water pollutants and site runoff.

A ~~proposed~~ regional runoff treatment facility for the sub-watershed area that this project lies within is constructed ~~being considered for construction~~. This regional treatment facility ~~would be~~ is part of an overall solution for storm water treatment. ~~If an approved r~~Regional storm water treatment facility ~~is constructed, it~~ may serve as an alternative to completion of on-site treatment of all pollutants of concern. ~~If the regional storm water treatment facility is not completed and operational prior to construction of this project, all necessary on-site treatment control BMP's and/or temporary water control devices will be installed pursuant to the requirements of the current regional NPDES Permit and the approved Water Quality Management Plan for this project.~~

All Priority Land Use (PLU) areas within the specific plan area shall comply with the statewide trash provisions adopted by the State Water Resources Control Boards (SWRCB) and trash requirements in the most recent San Bernardino Area-wide MS4 Permit.

4.5 Schools

The Mountain View School District is the school district serving the K-8 school needs of the Countryside Specific Plan. Chaffey Joint Union High School District serves the 9-12 school needs of the Countryside Specific Plan. Colony High School is located east of the Specific Plan Area, at the corner of Riverside Drive and Mill Creek Avenue, and will serve the high school students generated from the project. Additional elementary and middle schools are needed to serve the needs of school age children within the Ontario Ranch Elementary school sites have been identified in Planning Subarea 4, located west of the Specific Plan Area, and in Subarea 18, located south of the Specific Plan Area. A middle school site has been identified in Planning Subarea 18, located south of the Specific Plan Area. The existing and planned school facilities, which will be available to serve Countryside, are illustrated in Exhibit 25, "School Locations." The developer of Countryside will be required to pay school fees as required by State of California.

4.6 Public Utilities

4.6.1 Telephone

Verizon is the current telephone service provider to the Specific Plan Area. Proposed on-site facilities will be placed underground.

4.6.2 Natural Gas

The Gas Company will provide natural gas to the Specific Plan Area. Gas mains will be installed to the Specific Plan Area by the Gas Company as necessary.

4.6.3 Electricity

Southern California Edison will provide electricity to the Specific Plan Area from existing facilities in the vicinity of the Specific Plan Area. Proposed new facilities to serve the project will be owned and operated by the City of Ontario and located underground. Relocation or undergrounding of existing overhead lines. New facilities to be placed underground.

4.6.4 Telecommunications

The City of Ontario will be providing OntarioNet, fiber-to-the-home. OntarioNet is a fiber optic telecommunications system capable of providing advanced Internet/data services to all homes and businesses within the Ontario Ranch. OntarioNet will provide community related services including: traffic management; online civic services; meter reading; educational services; and a variety of other community services. Based on the demographics of the Ontario Ranch and the traffic issues into Orange and Los Angeles Counties, the demand for telecommuting in the Ontario Ranch is anticipated to be significant. OntarioNet and the high speed data services it provides will allow residents of the Countryside Specific Plan to effectively telecommute to their jobs and in general provide a significant economic benefit to Ontario. The Head-End Facility will be provided at the Colony High School.

4.6.5 Solid Waste

The City of Ontario provides solid waste collection services for the City and will service the Specific Plan Area.

4.7 Grading Concept

The existing ground on the northerly half of the Specific Plan Area slopes southerly away from Riverside Drive at an approximate 2% grade. The southerly half of the Specific Plan Area slopes southerly, away from Chino Avenue, at approximately 1%. The grading operation for the Countryside Specific Plan will generally consist of the removal of any manure remaining from dairy operations, clearing and grubbing, demolition of existing structures, and moving of surface soils to construct building pads and streets. Grading within Countryside will provide for a balance of cut/fills for the site.

Where slope conditions are present, the property shall be located at the top of a slope. Dwelling units and structures adjacent to the slopes areas should be sited to:

- Use the natural ridgeline as a backdrop for structures.
- Use landscape plant materials as a backdrop; and
- Use structure to maximize concealment of cut slope.

If retaining walls are required, the following criteria shall be used:

- Exposed walls and fences facing roadways shall be no greater than 5-feet in height, except as necessary for acoustical purposes to satisfy the intent of the noise ordinance.
- Where retaining walls or fences face roadways, they shall be built, when feasible, of decorative materials consistent with the wall theme of the neighborhood.

Grading plans for each tract within Countryside will be reviewed and approved by the City of Ontario Building, Planning, and Engineering Departments prior to the issuance of grading permits. All grading plans and activities will conform to the City grading ordinance and dust and erosion control requirements.

The conceptual grading plan for Countryside is illustrated in Exhibit 26, "Conceptual Grading Plan."

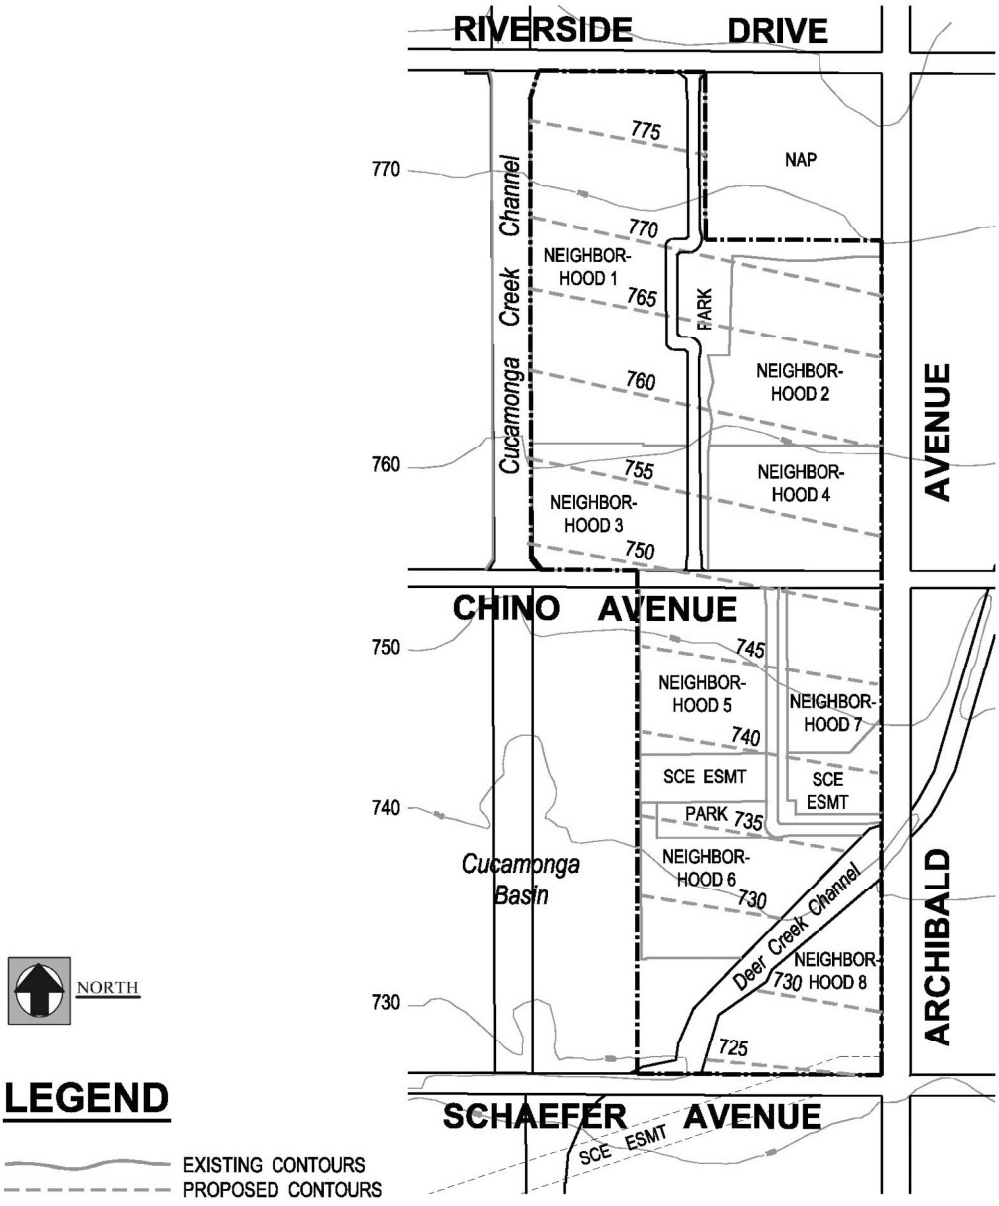

Exhibit 26
Conceptual Grading Plan

Section 5. Development Regulations

5.1 Introduction

The provisions contained herein will regulate design and development within the Countryside Specific Plan area. The regulations contained herein provide for the development of residential uses and landscaping.

5.2 Definition Of Terms

The meaning and construction of words, phrases, titles, and terms shall be the same as provided in the City of Ontario Development Code Article 2, "Definitions" unless otherwise specifically provided herein.

5.3 Applicability

The development regulations contained herein provide specific standards for land use development within the Countryside Specific Plan. Application of the following regulations is intended to encourage the most appropriate use of the land, ensure the highest quality of development, and protect the public's health, safety, and general welfare. The adoption of the Countryside Specific Plan by ordinance, supersedes otherwise applicable City of Ontario zoning regulations unless stated herein to the contrary. Whenever the provisions and development standards contained herein conflict with those contained in the City of Ontario Development Code, the provisions of the Countryside Specific Plan shall take precedence. Where the Specific Plan is silent, City codes shall apply. These regulations shall reinforce specific site planning, architectural design, and landscape design guidelines contained in Section 6, "Design Guidelines" of the Specific Plan.

5.4 Administration

The Countryside Specific Plan is adopted by ordinance and will serve as the implementation tool for the General Plan as well as the zoning for the Specific Plan Area. The Countryside Specific Plan addresses general provisions, permitted uses, development standards, and design guidelines.

5.5 Methods And Interpretation

Development within the Countryside Specific Plan shall be implemented through the approval by the City of Ontario of tract maps and development plans. The administration process described below provides for the mechanisms for review and approval of development projects within Countryside consistent with the Specific Plan objectives.

5.6 General Site Development Criteria

The following general site development criteria shall apply to all land development proposed in Countryside.

a) Gross Acres - Except as otherwise indicated, gross acres for all development areas are measured to the centerline of streets.

b) Grading - Development within the Specific Plan Area shall utilize grading techniques as approved by the City of Ontario. Grading concepts shall respond to the design guidelines included in the Specific Plan which guide the development of land use toward the goal of providing for a livable community with streets and entries designed for walking and resident interaction.

c) Building Modification - Additions and/or alterations permitted by this Specific Plan shall match the architectural style of the primary unit and shall be constructed of the same materials and colors as the primary unit.

d) Utility Lines - All new public utility distribution lines of less than 66 kV shall be subsurface throughout the planned community.

e) Technology - All homes shall accommodate the most modern technology for computer internet access, phone, fax, and television. Broadband fiber optics cable will be installed to all the properties per the approved Fiber Optic Master Plan.

f) Density -The Countryside Land Use Plan allocates a number of total number of units to each residential neighborhood as indicated in Table 2, "Land Use Summary" included in Section 3, "Land Use," of the Specific Plan. Variations in the number and type of dwelling units within each residential neighborhood may occur at the time of final design of the neighborhood depending upon the residential product identified for development. Changes in allocation of residential units up to a maximum of a net change of fifteen percent (15%) are permitted among the residential neighborhoods within the Specific Plan, provided that the total number of units established for the Specific Plan area is not exceeded.

g) Maximum Number of Dwelling Units - The maximum number of residential dwelling units permitted within the Countryside Specific Plan shall be ~~819~~984 dwelling units.

h) Streets - Local Streets within residential neighborhoods shall be public. Neighborhood streets within Neighborhoods 2, 5 and 6 shall be private.

i) Alleys and drive aisles within residential neighborhoods shall be private.

5.7 Residential Development Standards

5.7.1 General

This category includes the development of single family detached dwelling units. The purpose of the residential standards for single family detached housing is to establish the minimum criteria for the development of these product types on individual lots within the neighborhoods specified within Countryside.

5.7.2 Permitted Uses

a) Single family detached dwellings including live/work units and their accessory uses.

b) Public or private parks, recreational buildings, greenbelts, or open space.

c) Accessory uses to include the following:

- Garages.
- Granny Flats (i.e. Second Dwelling Units, in accordance the City's Development Code.)
- Home occupations.
- Swimming pools, spas, sports courts, and other similar outdoor recreational amenities.
- Patios and patio covers.
- Storage, garden structures, cabanas, and greenhouses.
- Monument signage.
- Model home and subdivision sales trailers; temporary construction parking, offices, and facilities; real estate signs, signage indicating future development and directional signage in accordance with the City's Development Code.
- Second story additions to existing single story dwelling units.
- Child care facilities/Day care facilities up to 7 children, in accordance with the City of Ontario Development Code.

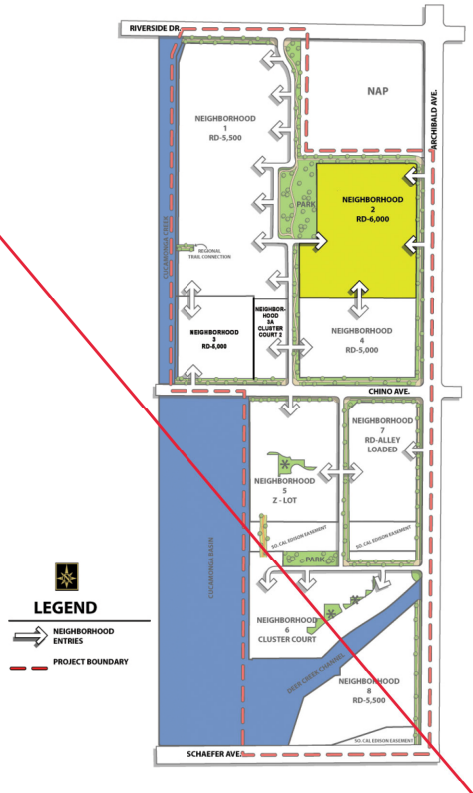
5.7.3 Conditionally Permitted Uses

a) Places of worship including but not limited to churches and synagogues.

b) Child Care facilities / Day Care facilities – serving 8-14 children.

5.7.4 Temporary Uses

a) Temporary uses shall be permitted pursuant to Article 13 of the City's Development Code.



5.7.5 Free Standing Satellite Dish / Antennas

a) Free standing satellite dishes and/or antennas are permitted pursuant to Article 32, Section 9.1.3289 of the City of Ontario Development Code.

Footnotes:

1. Architectural projections may project a maximum of 3-feet into required front, rear or side setback areas; however, in no case shall such projection be closer than 3-feet to any property line. An architectural projection is defined as an element that articulates the building elevation such as eaves, window and door pop out surrounds, media niches, bay windows, pot shelves, chimneys, enhanced window sills, shutter details, window trim, balconies and entry gates, and other similar elements.
2. The minimum depth of a porch shall be 7-feet. A minimum area of 70 square feet clear space is required.
3. When front entry garages are plotted adjacent to one another on adjoining lots, the front plane of one garage must be offset a minimum of 2-feet from the garage on the adjacent lot. Garages designed as non-forward facing garages shall be set back a minimum of 5-feet behind the main living area.
4. Side yard slopes may not encroach more than 50% into side yard setback areas.
5. Single story elements (Such as porches open on three sides, stairwells and porte cocheres) may project up to 3-feet into required yards. Porch elements with single story plate lines may project up to 6-feet into required corner side yard setback along residential streets; in no case shall such projection be closer than 5-feet from the back of sidewalk.
6. Solid masonry walls or wood fencing materials may be permitted on the front property line (or front parcel line in the case of RD-Cluster Court and RD-Cluster Court 2). Fences, walls, hedges or similar view obstructing structures or plants that reduce safe ingress or egress of vehicles or pedestrians shall not exceed 3-feet in height in any required front or corner side yard setback.
7. Walls may exceed 6-feet in height for noise attenuation purposes subject to an acoustical study and City approval.
8. Front facing garages located forward of a porch or front facing building elevation plane shall be set back a minimum of 20-feet from the back of sidewalk.
9. Side on garages permitted only on lots with a minimum width of 53-feet.
10. Maximum single porch width shall be 13' wide.
11. Limit of 1 Bay window alcove projection per home with single story plate line.
12. 5' Rear setback subject to Planning Director approval.
13. Z-lot dwellings, with forward garage floor plans, shall have a minimum of 3.5' interior side setback along the garage side elevation of the dwelling.

New Graphic

5.8 Landscape Standards

5.8.1 General Provisions

a) All landscape plans, streetscape plans and graphic designs with regard to the identity of Countryside, neighborhood identity or entry monumentation shall conform to the design guidelines and regulations as set forth herein and shall be subject to review and approval by the City of Ontario.

b) The Landscape/Streetscape improvements for the Countryside Specific Plan shall establish a landscape theme reminiscent of the regional landscape character of the surrounding area.

5.8.2 Landscape Standards

a) Landscaping within the Countryside Specific Plan shall be provided in accordance with the Design Guidelines for Streetscapes and Entries utilizing plant materials specified in Section 6, "Design Guidelines" established for the Countryside Specific Plan.

b) Boundary landscaping will be required adjacent to residential, commercial, and business park/ light industrial areas. Landscaping shall generally be placed along the entire property line.

c) Landscaping and irrigation systems, within the public rights-of-way of the Countryside Specific Plan area, shall be installed by the developer.

d) Freestanding perimeter walls and view fencing shall be provided within and at the perimeter of the Specific Plan Area. Such walls and fences will be constructed concurrently with the construction of improvements required for development of the neighborhoods of the Specific Plan.

e) Front yard landscaping and irrigation for RD-5,000, RD-5,500, and RD-~~6,000~~3,000 homes shall be installed by the builder and maintained by the homeowner. Front yard landscaping and irrigation for RD Z-Lot, Alley Loaded, RD Cluster Court, ~~and~~ RD Cluster Court 2 homes, RD Cluster Court 3 homes and RD Row Townhomes shall be installed by the builder and maintained by a Homeowners' Association (HOA). At a minimum, the builder shall install turf, trees and shrubs in the front yards of these areas.

f) Walls and Fencing

- Perimeter walls shall be constructed along the boundaries of Archibald Avenue, Riverside Drive, Chino Avenue and Schaefer Avenue a design consistent with the Wall and Fence Master Plan as discussed in Section 6, "Design Guidelines" and shall not exceed 6-feet in height from finished grade. Perimeter walls may exceed 6-feet in height if required for sound attenuation. Perimeter walls shall be constructed of either decorative masonry or other permanent, durable, low maintenance material approved by the City. Fencing utilized within the Specific Plan Area, such as split rail fencing, shall be constructed of durable materials with a wood like appearance and will be subject to approval by the City.
- Residential side and rear yard walls and fencing shall not exceed 6-feet in height from highest adjacent finished grade. Walls and fencing within the residential front yard setback area shall not exceed feet in height. Walls shall be of masonry decorative construction or other permanent low maintenance materials approved by the City. Front yard fences may be constructed of any durable materials with a wood like appearance, subject to approval by the City. View fencing may be of a decorative wrought iron or other durable material approved by the City.

g) All perimeter wall and fence materials throughout Countryside will be of uniform manufacture with colors specified for the overall design theme.

h) The developer will provide site inspection of all construction and installation of open space areas in accordance with City of Ontario requirements.

i) Non-toxic vegetation shall be utilized adjacent to all public open space areas.

5.9 Signage

A Master Sign Program shall be submitted by the developer(s) for Countryside and approved by the City of Ontario pursuant to Article 31 of the City's Development Code to address residential project entries, residential neighborhood identification signs, and way finding signs within Countryside. All other signs shall be subject to the approval of a sign permit pursuant to the City's Development Code. No project signs shall be permitted in the public right-of-way.

5.9.1 Master Sign Program Contents

All sign programs shall address, at a minimum, the following:

a) Permitted signs.

b) Prohibited signs.

c) The hierarchy of signage.

d) Definition of types of signs.

e) Locations and dimensions for monument signs, neighborhood identification signs, and public facilities signs.

f) Locations and dimensions of directional signage.

g) Provisions for size, location, and duration of display of temporary signs.

h) Permitted sign types, styles, construction materials, colors, and lettering styles.

i) Requirements for a sign permit application.

j) Procedures for obtaining approval of a sign permit.

k) Procedures for amendments to the sign program.

Section 6. Design Guidelines

6.1 Preface

These design guidelines define the fundamental techniques needed to create a great neighborhood in Countryside. It is the integration of good site-planning techniques, well defined architecture and attractive landscape architecture combined that creates a community of neighborhoods quality and character. The Design Guidelines include architecture and landscape criteria to implement the community of Countryside.

6.2 Vision Statement For Community

Vision for Countryside will be implemented by the following concepts:

1. To provide well designed, safe and pleasant neighborhoods in which to live.
2. To provide a range of diverse housing types.
3. To provide exceptional architectural and landscape design.
4. To provide a new neighborhood that becomes part of the overall fabric of the existing, larger community.

6.3 Architectural Design Criteria

6.3.1 Core Criteria

The following architectural core criteria have been created to assist in developing architectural styles that are economically feasible to the builder, as well as aesthetically appealing to the homebuyer.

- The home, not the garage, will remain the primary emphasis of the front elevation.
- A variety of compatible architectural styles.
- A degree of individuality in the neighborhoods.
- Detailing will remain true to the style.
- Colors will be used to reinforce architectural style.
- Roof forms will play a major role in defining the architectural style.

6.3.2 Design Character

The design character of the neighborhoods will be one of continuity, individuality and compatibility. These concepts bring about welcoming neighborhood designs that are embraced by the greater community. The architectural styles selected for Countryside have a historic background and context in keeping with the character of Ontario.

6.3.3 Design Intent

These guidelines are not intended to be overly restrictive or limiting, but to be helpful in achieving neighborhoods with a higher level of quality living.

6.3.4 Authenticity

The design criteria within these guidelines is offered to prevent "false front" architecture. The massing and detail character of the architectural styles should be as authentic to the selected styles as possible. The master developer designated styles are attractive and compatible with each other, while meeting the demands of modern-day, merchant-built homes.

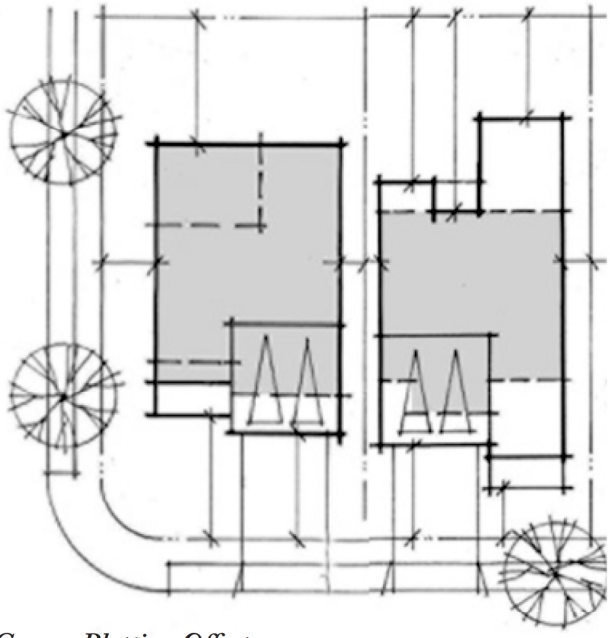
6.4 Design Fundamentals

The important elements of a good neighborhood below are greatly encouraged throughout the community:

1. Architecture forward.
2. Varied garage placement.
3. Eclectic variety of compatible architectural styles.
4. Variable lot setbacks.
5. Enhanced side elevations at primary corners or from highly visible public viewing locations such as parks.
6. Varied floor plans and elevations in single-family detached residential homes should be incorporated as follows. When a side elevation of a home faces the street or is adjacent to a common public walkway, the elevation will be detailed with architectural enhancements. Reverse floor plans and elevations are considered as a separate floor plan and/or elevation for purposes of implementing the table below.
7. Street tree program.
8. Plotting techniques.
9. Pedestrian connections.
10. Color: over time, the addition and deletion of color schemes create a unique feel.

NUMBER OF DWELLING UNITS	NUMBER OF DIFFERING FLOOR PLANS AND ELEVATIONS
5-10	As required by Planning Commission
11-25	2
26-50	3
51-75	3
76-100	4
Over 100	4; +1 additional floor plan with 4 elevations for each additional 50 units exceeding 100

6.5 Garage Treatments



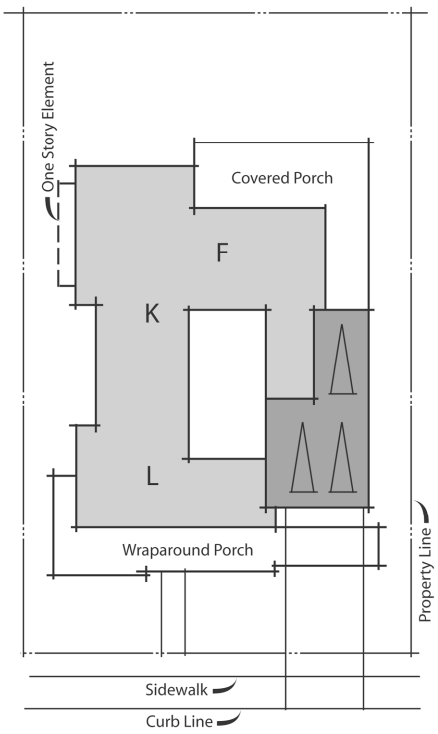
The home and front yard, rather than the garage, should be the primary emphasis of the front elevation. The number of homes with a front facing garages located forward of the porch or front building elevation plane should be limited to no more than 25% of the total number of units in each builder's plan package and shall be setback from the property line a minimum of 20-feet. It is the intent of the City to minimize garage visibility though techniques such as varying garage-door patterns and utilizing deep recessed door techniques, varying colors, splitting one large door into two single doors or using alternative garage configurations, such as corner garages, and full recess garages. Garage doors should match the style of the house.

6.5.1 Garage Wall-Plane Furr-out

Furr-out garage wall plane 12" to 18" for front loaded street facing garages when the garage door is at the minimum setback. No more than 25% of the homes plotted shall use this solution. With other garage configurations a range of 6" to 12" is recommended.

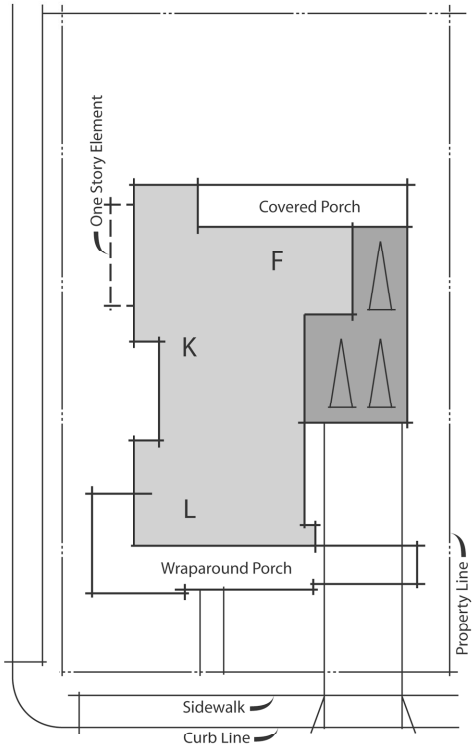
6.5.2 Porte-Cochère

A recessed garage plan with a porte-cochère creates an additional screened parking space and an occasional outdoor private space.



Garage Plotting Offsets

6.5.3 Three-Car Garage Treatment



When a plan has a three-car garage, the third car bay shall be offset 5'. Additionally, furr-out garage face wall at three bays at least 12". Three individual garage door bays are preferred over two. Front garage wall face cannot exceed 50% of the entire front façade of the home.

6.5.4 Garage Plotting Offsets

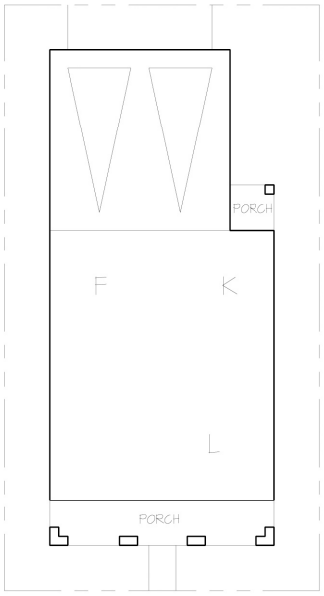
When houses are reversed plotted and the garages are adjacent to each other, a 2' offset between garage setbacks as illustrated in the diagram to the right.

Shallow-recess Garages

Mid-recess Garages

6.6 Garage Configurations

6.6.1 Shallow-recess Garages

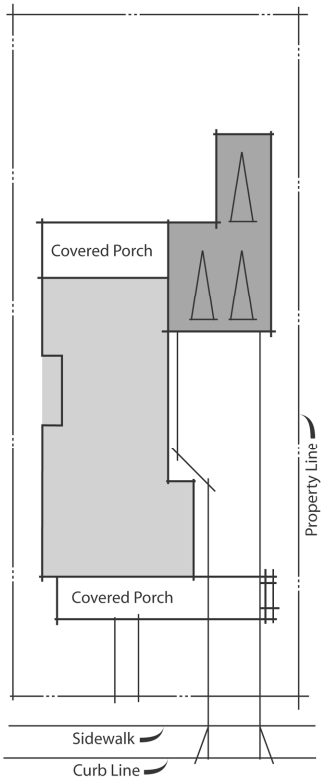


When garages are less than 20' behind property line, no garage face can be less than 3' behind the front building elevation plane or full porch (porch depth minimum is 7'-0").

6.6.2 Mid-recess Garages

Create plans that place garage at varied locations on the homesite.

6.6.3 Rear Loaded Garages

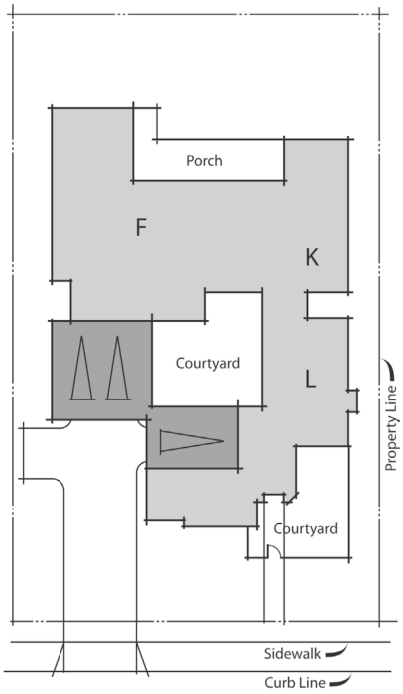


Garages served by an alley at the rear of a residential unit creates a more traditional streetscene with garage placement behind the building hidden from the street. Garage doors on rear loaded garages should be recessed a minimum of 8 inches.

Rear Loaded Garages

6.6.4 Deep-recess Garages

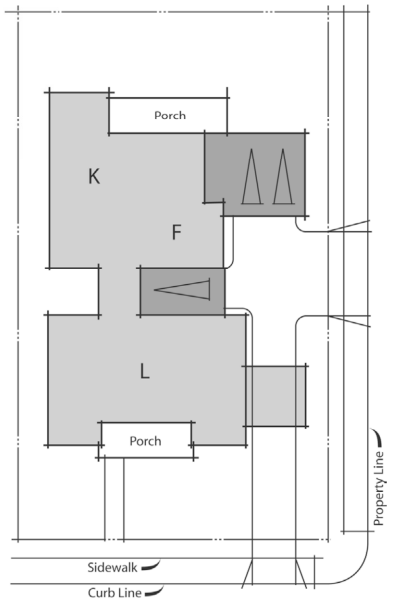
Set the garage back to the rear of the lot or detached. This achieves more living space toward the street and creates additional usable sideyard outdoor space.



Deep-recess Garages

Countryside

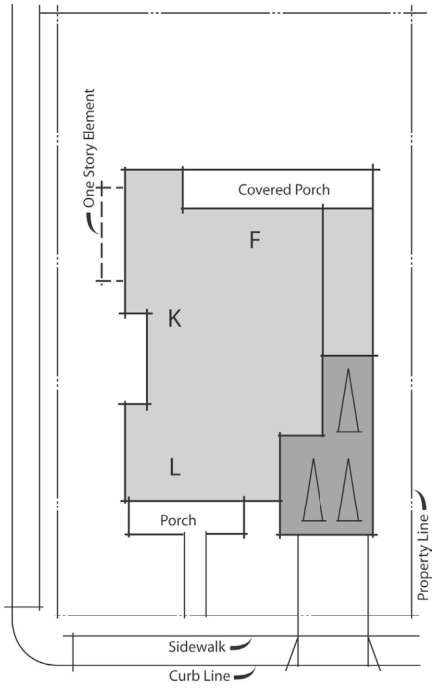
6.6.5 Side On Garages



Side On garages greatly reduce the impact of the garages on the streetscape. Side On garages are prohibited on homesites less than 53-feet wide and cannot be accessed from the side on corner lots.

Side On Garages

6.6.6 Corner-Lot Garages



This corner-lot garage treatment can be derived from a plan layout where only the garage changes from an interior-lot plan to a corner-lot plan. This allows for substantial street scene variation while the architecture wraps the exterior lot frontage.

Corner-Lot Garages

6.6.7 Forward Facing Garages

When garages are forward of the porch or front facing building elevation, a minimum driveway length of 20-feet shall be maintained from back of sidewalk (property line) to face of garage door. This configuration should be enhanced with front yard garden walls that begin at the back of the sidewalk.

Forward Facing Garages

6.7 Setback Fundamentals

To provide more interesting neighborhood streetscenes, variable frontyard setbacks are required and variable side yard setbacks are encouraged.

- Varied setbacks along streets
- Reverse plotting along streets
- Enhanced corner sideyard setbacks - see Product Criteria for more specific information
- Variable lot width programs are encouraged
- Corner lot criteria - see Architectural Massing below for more information

6.8 Architectural Massing

6.8.1 Corner Homesite Placement

At least one home plan per neighborhood shall be designed specifically for corner homesites or side-on condition homesites. This home shall require wrap-around architecture on the side facing the street.

Neighborhood quality will be exemplified by adding a home plan designed specifically as an end of the block home, or by enhancing a corner home with additional architectural details as found on the front elevation.

6.8.2 Roof Forms

Rows of homes seen from a distance or along arterial roads are perceived by their contrast against the skyline or background, where the dominant impact is the shape of the building and roof line. Rear elevations and roof planes should be articulated to minimize the visual impact of repetitious flat planes, and similar building silhouettes. Varied rear elevation forms should be provided.

6.9 Streetscape Massing and Plotting

Special architectural treatments (i.e.: feature-entry location, feature-window detail, etc.) shall be provided at street corners and other important focal points.

Front doors and living room windows shall orient toward and be visible from the street.

Buildings shall be designed to create varied setbacks or offsets.

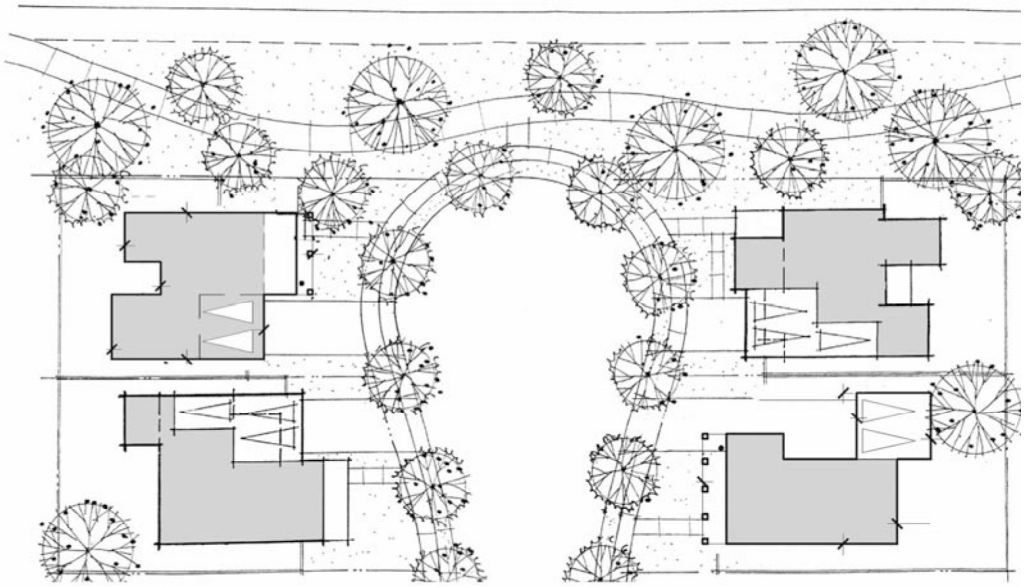
The architectural style chosen for each home or building should be compatible with its massing in order to avoid making the style seem applied or superficial. Authenticity to style is required.

Embellished elevations (upgraded materials, details, massing, etc.) are encouraged at areas of the building that face a public area or view such as a street or park. This applies to the front, side and rear elevations.

6.10 Colors And Materials

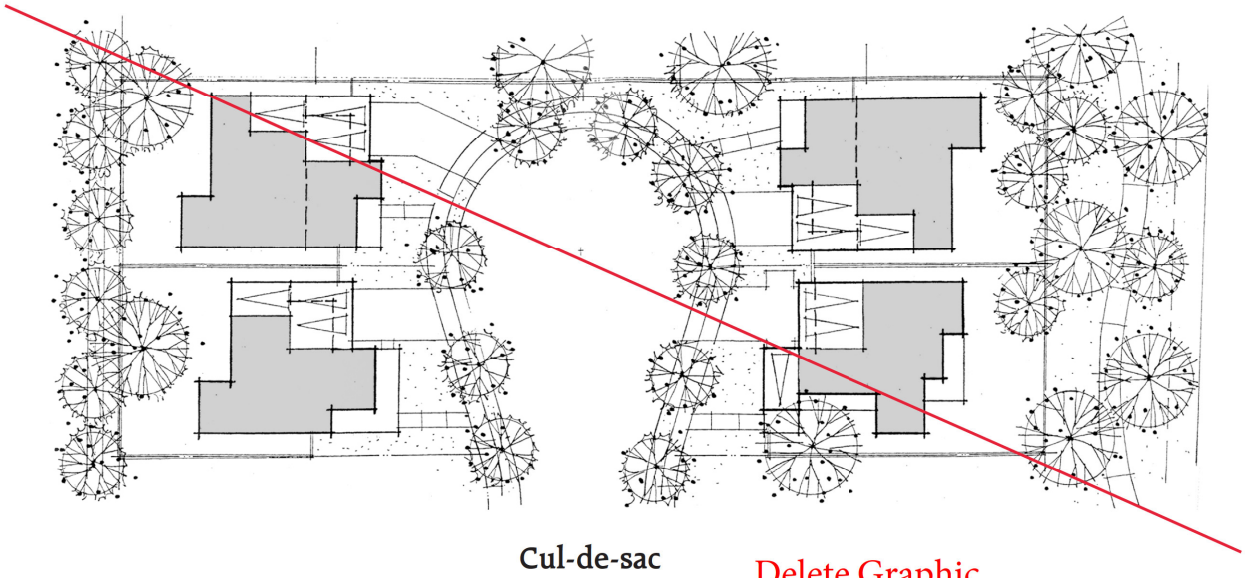
The colors and materials used at Countryside will reflect a general contextual theme of harmony and neighborhood character. The architectural style will contribute to this goal as each color palette chosen for each architectural style historic lineage shares this "common sense" approach to the use of materials and colors indigenous to the region. New interpretations of these classic combinations of materials and inherent colors are encouraged as they relate to a general feeling of neighborhood unity.

6.10.1 Criteria



A variety of natural looking materials and colors will provide the diversity required for visual interest while unifying the homes with their settings and creating a timeless appeal. The primary purpose of the architectural color palette selection is to avoid monotony and provide a variety of color schemes while still maintaining a common theme or unifying concept.

1. Each color scheme shall incorporate a minimum of three colors (or example, one body color, one trim color and one accent colors).
2. Each neighborhood shall have a minimum of three different roofing colors consistent with the architectural style of the home.
3. Individual color schemes must be appropriate to the architectural styles with a harmonious selection of accent materials, roof profiles and colors.
4. No adjacent single family detached home shall have the same color scheme. Color palettes that reflect traditional architectural themes are the basis for successful modern interpretations. Current color trends integrated within a historically referenced framework create dynamic, yet timeless color combinations.



6.11 Motorcourts

Motorcourts within Single Family Detached Cluster product areas shall be enhanced with decorative paving to create a pedestrian friendly travel area for access to rear units.

6.12 Architectural Styles

6.12.1 Introduction

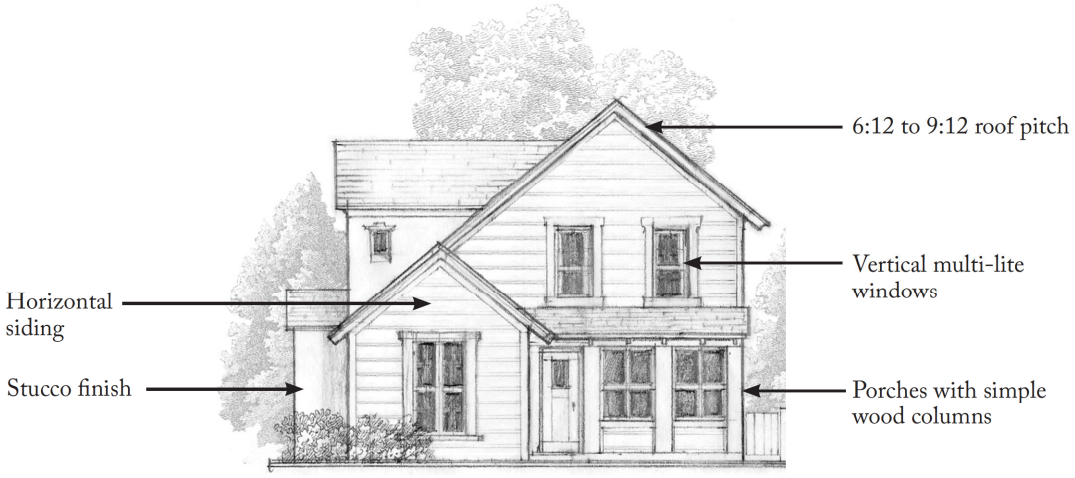
The style matrices developed on the following pages will provide the builder and their design consultants the tools to create architectural designs appropriate and authentic to each style without using architectural gimmicks or sacrificing the integrity of an architectural style or the implied historical heritage. Each master developer designated architectural style is defined by elements that are defined as "Common Features" that typically characterize each architectural style.

American Farmhouse

Colonial

Monterey

Craftsman



Spanish

Cottage

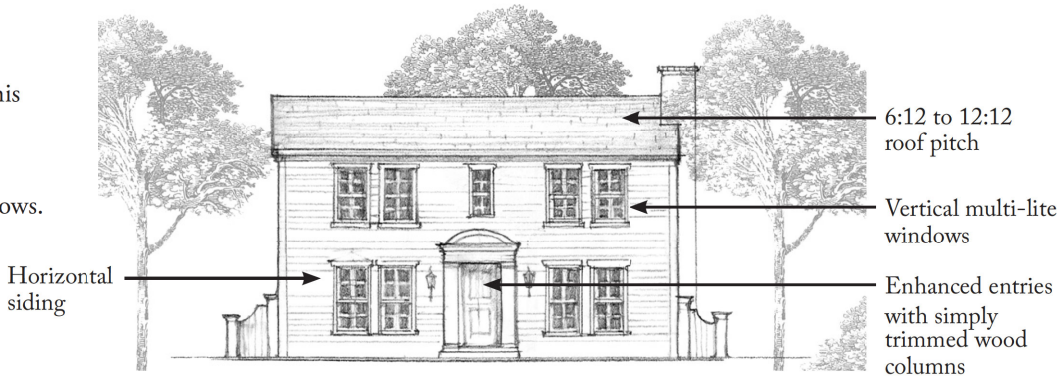
6.12.2 American Farmhouse

Some identifying features of this style are large porches and exterior surfaces covered with board and batten, clapboard or stucco.

Elements	Common Features
Form	• Simple plan form massing and simple roof
Roof	• 6:12 to 9:12 roof pitch • Front-to-back or side to side main gable roof • Architectural quality asphalt shingles or smooth, flat concrete tiles • 12” to 18” overhangs
Walls	• Light to medium sand finish stucco or blended siding and stucco • Use of board and batten in selected areas
Windows	• Vertical, multi-lite windows at front elevations and in high visibility, public view areas • Single paned windows on sides and rear elevations • White vinyl frame windows
Details	• Porches with simple wood columns or wood railings • Stucco finish or horizontal siding wrapped chimney • Min. 2” x 4” wood appearance window and door trim.
Colors	• White or dark field colors • Light earth tone bodies with contrasting cool or warm trims • White or dark color accent trims

Historical Example

Contemporary Example



Window Accents appropriate to Style

Post and Rail Porch

6.12.3 Colonial

Some identifying features of this style are slender columns with restrained capitals, clapboard siding, porticos, and bay windows.

Elements	Common Features
Form	• Simple plan form massing and simple roof
Roof	• 6:12 to 12:12 roof pitch • 12" to 24 inch overhangs • Front-to-back dominant gable roof • Architectural quality asphalt shingles or smooth, flat, concrete tiles • Front-to-back dominant gable roof with multiple intersecting gable roofs
Walls	• Light sand finish stucco or blended siding and stucco • Horizontal siding or smooth finish stucco
Windows	• Vertical multi-lite windows at front elevations and in high visibility, public view areas • Single paned windows on sides and rear elevations • Min. 2" x 4" wood appearance window and door trim • White vinyl frame windows • Style driven windows and door trim surrounds • Single hung windows wherever feasible
Details	• Enhanced entries with simply trimmed wood columns • Stucco finish or horizontal siding wrapped chimney • Shutters • Classical wood columns • Cornice gable end trim • Full porches with wood railings • Round attic vents • Brick accents • Shutters & layered header trim at front elevation • Brick veneer wainscot • Brick chimney wrap • Decorative, round attic vents • Brick accents and wainscot at first floor
Colors	• Pastels to cool colors with white trims • Dark color shutters • White trim & fascias

Historical Example

Contemporary Example

Colonial Form and Details

Forward Facing Gable

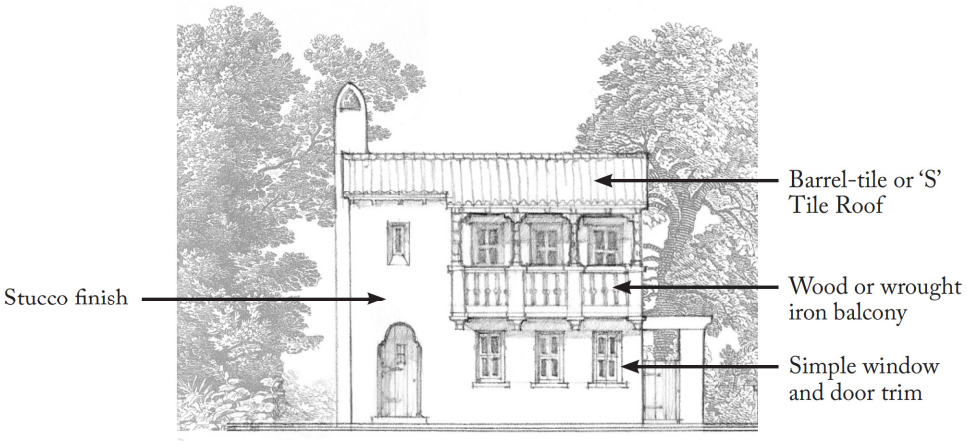
6.12.4 Craftsman

Some identifying features of this style are wide-gabled roofs, bricks or stone used on foundations, chimneys and railings, earth tone colors and heavy beams.

Elements	Common Features
Form	• Simple, two-story, boxed massing with vertical and horizontal breaks • Varied plan shapes
Roof	• 3.5:12 to 4.5:12 roof pitch • Architectural-quality asphalt shingles; flat, concrete tiles • Basic side-to-side or front-to-back gable roof with cross gables • Varied porch roofs – shed or gabled • 18" to 36" overhangs
Walls	• Blended siding and stucco • Light to medium sand finish • Smooth finish stucco with stone veneer base accent or plain texture shingle siding • Battered wall accents
Windows	• Vertically hung, upper mullioned windows at front elevation and in high visibility areas • Often ganged in pairs • Single pane windows at sides and rears • Single hung windows at front elevation where feasible
Details	• Entry porches with heavy, square (or battered) columns or posts on stone piers • Arts and Crafts style lighting fixtures • Shaped wood appearance header trim at windows and doors • Simple knee braces • Out-lookers • Styled columns • Battered columns • Blended stone and brick chimney • Layered wood trims at doors and windows • Stone and brick accents • Open eave overhangs with shaped roof rafter tails • Decorative ridge beams and purlins • Triangular knee braces
Colors	• Light, earth tone colors • Dark accents • Deep earth tones

Historical Example

Contemporary Example



Typical Column Detailing appropriate to Style

Enhanced Exterior Lighting Detail appropriate to Style

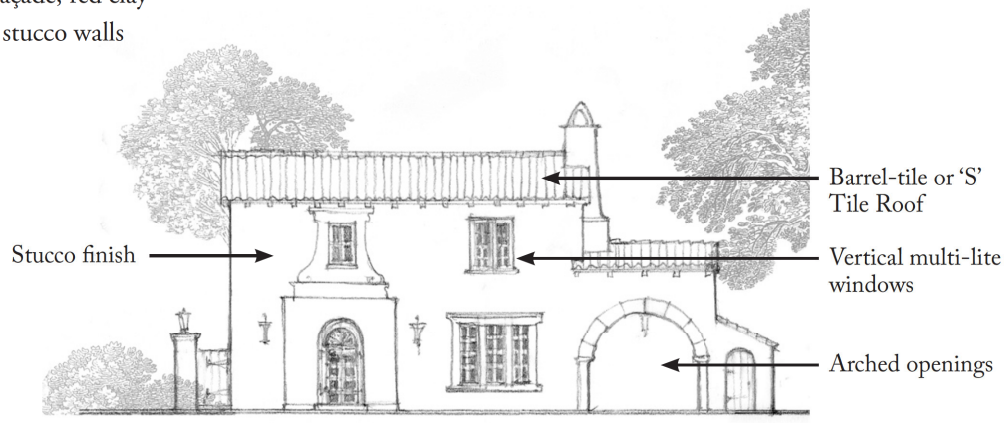
6.12.5 Monterey

This style is a fusion of Spanish details and Colonial form. Some identifying features are low pitched gable roofs with second story balconies that are usually cantilevered and covered by a principle roof.

Elements	Common Features
Form	• Simple-box plan form and/or with one-story break
Roof	• Main front-to-back gable roof at 4:12 to 7:12 and shed roof break over balcony at 3.5 to 4.5:12 roof pitch • 12" to 24" overhangs • Barrel or 'S'tile roofs
Walls	• Light sand finish • Vertical siding accents at upper or lower story • Smooth finish stucco
Windows	• Simplified Colonial-style window and door trim • Single pane windows at sides and rears • White or colored vinyl frame windows • Decorative door and window trim
Details	• Wrought iron or wood balcony and railing • Simple chimney top treatment • Round tile attic vents • Shutters
Colors	• Whites and painted brick • White or dark brown trims, balconies

Historical Example

Contemporary Example



Balcony Detailing appropriate to Style

Window and Shutter Detail

6.12.6 Spanish

Some identifying features of this style are large distinctive (sometimes arched) windows on the front façade, red clay roofs and light colored stucco walls

Elements	Common Features
Form	• Two-story massing with strong one-story element • Simply articulated, two-story boxed plan massing
Roof	• 4:12 to 5:12 roof pitch • 12" to 18" overhang or tight rake • Barrel or 'S' shape concrete tiles • Shed roof over porch • Simple hip or gabled roof with one intersecting gable
Walls	• Light sand finish or light lace finish stucco • Smooth finish stucco
Windows	• Vertically hung nine and twelve paned windows at front elevation and in high visibility areas • Often ganged in pairs • Single pane windows at sides and rears • White or color, vinyl clad windows • Recessed, arched, feature window, door entrance • Wood or precast columns & posts • White or color vinyl frame windows
Details	• Stucco over foam window and door trim • Arched stucco entry elements • Balconies and accent details • Exposed rafter tails at feature areas • Entry door design to complement style
Colors	• White tone body with bright accent trim • Dark brown trims

Historical Example

Contemporary Example

Simple Covered Entry with Arched Columns appropriate to Style

Entry Form, Window Type and Pot Shelf

6.12.7 Cottage

Some identifying features of this style are the picturesque architecture, the front facing gables with steep pitched roofs, and the vertical windows.

Elements	Common Features
Form	• Romantic and picturesque architecture • Simple volumes, front facing gables
Roof	• 12:12 roof pitch (MAX) • 12" to 18" overhang or tight rake • Flat concrete tiles • Inviting porch or entry gable • Large simple roof planes • Main Gable or Hipped Roof • Secondary sloped roof or high pitched roof
Walls	• Stucco finish • Decorative stone or brick veneer accents
Windows	• Vertically-hung windows • White or color wood accented framed windows • Shutters • Bay Windows • Focal Arched Window
Details	• Wood window and door trims • Entry door design to complement style • Front facing gables
Colors	• White tone body with white accent trim • White, off-white, light earth tone shades • Light or dark accent shades in contrast with field color

Simple Entry with Welcoming Porch

New Page

6.12.8 Mediterranean

Some identifying features of this style are stucco finish, arched windows on front façade, roof tiles and light colored walls.

Elements	Common Features
Form	• Asymmetrical and symmetrical massing • Courtyard • Well proportioned exterior openings
Roof	• Shallow roof pitches 4:12 to 8:12 • Simple hip or gable roof • 12" to 18" overhang or tight rake • Barrel or S-shape concrete tiles • Clean, uncomplicated roof solutions of hip or gables
Walls	• Stucco finish • Stone accent at entries and
Windows	• Vertically hung multi-paned • Color wood accented framed windows • Accent shutters
Details	• Closed or exposed eaves • Prominent entry • Wrought iron details • Wood window and door trims • Entry door design to complement style • Appropriately styled door hardware • Complementary outdoor lights
Colors	• Light shade body • Light or dark trims

6.12.8 Transitional

The massing, materials and details are based on the parent architectural style. Some identifying features of this style are clean lines and simplified architectural details, blending of modern and traditional materials, and oversized windows.

Elements	Common Features
Form	• Simple form • Symmetrical or asymmetrical massing
Roof	• Variable roof pitch • Predominant front facing gable with side facing gables • 12” to 18” overhang or tight rake • Flat or S-shape concrete tiles or metal standing seam • Asymmetrical forms
Walls	• Stucco finish, board and batten • Contrasting material such as wood siding or smooth stone
Windows	• Square or vertically proportioned • Color accented framed windows • Accent shutters
Details	• Simplified details • Wood window and door trims • Entry door design to complement style • Appropriately styled door hardware • Complementary outdoor lights
Colors	• Light shade body • Light or dark accent shades in contrast with body color

6.13 Design Guidelines For Landscape Architectural Character

The following design guidelines have been developed and organized to help define the basic landscape design principles for the Countryside Specific Plan. Careful attention has been given to creating an appropriate and appealing landscape architectural design, which will compliment and enhance the overall character of the Countryside Community. Observing these guidelines will help to assure the "design vision," and integrity, of this planned community.

All landscape plans, streetscape plans, and graphic designs with regard to community identity, neighborhood identity, or entry monumentation shall conform to the guidelines as set forth herein, and will be subject to review and approval by the City of Ontario.

6.14 Perimeter Streetscape Design

Streetscape design guidelines establish a hierarchy for the landscape development along the surrounding roadways, as well as establishing a framework for consistency of design within the community. Four major arterial roadways surround the Countryside Specific Plan area: Archibald Avenue to the East, Riverside Avenue to the North, Schaefer Avenue to the South, with Chino Avenue, running East/West, bisecting the Countryside Specific Plan Area. Landscape easements associated with these roadways have been defined, as noted in the City of Ontario Ontario Ranch General Plan Amendment.

Landscape development surrounding this community will help to set the character, while maintaining consistency with the City of Ontario's pedestrian pathway system illustrated in the Trails and Bikeways section of the Ontario Ranch General Plan Amendment.

6.15 Archibald Avenue

Archibald Avenue streetscape shall include the following as illustrated on Exhibit 27, "Conceptual Landscape Plan, and Exhibit 28, " Archibald Avenue Street Sections."

- A ~~2~~7-foot wide landscaped parkway and 5-foot buffer between the sidewalk and multipurpose trail planted with a single row of street trees per the City of Ontario Street Tree Master Plan.
- An 8-foot wide bikeway/pedestrian path along the west side of the street.
- A 5-foot wide sidewalk.
- An additional 19-foot wide landscaped buffer with a single row of street trees per the City of Ontario Street Tree Master Plan.
- A 14-foot wide landscaped median.
- Background trees and shrub masses planted in series of layers (foreground, midground, background) to help define borders and plant groupings while combining interesting foliage textures and color within the neighborhood edge.
- Monumentation as shown in the Conceptual Landscape Master Plan, Exhibit 27, "Conceptual Landscape Master Plan."

6.16 Riverside Drive and Schaefer Avenue

Riverside Drive & Schaefer Avenue streetscape shall include the following as illustrated on Exhibit 27, "Conceptual Landscape Master Plan" and Exhibits 29 " Riverside Drive Street Section" and Exhibit 30, "Schaefer Avenue Street Section."

- A ~~12~~ 7-foot wide landscaped parkway with a single row of street trees per the City of Ontario Street Tree Master Plan along both sides of the street.

- A 5-foot wide lineal sidewalk along both sides of the street.
- A landscape easement of 35-feet taken from face of curb to perimeter wall on both sides of the street.
- Background trees and shrub masses planted in series of layers (foreground, midground, background) to help define borders and plant groupings while combining interesting foliage textures and color within the neighborhood edge.
- Monumentation as shown in the Conceptual Landscape Master Plan, Exhibit 27, "Conceptual Landscape Master Plan."

6.17 Chino Avenue

The streetscape shall include the following as illustrated on Exhibit 31, "Chino Avenue Street Section."

- A 12-foot wide landscaped parkway with a single row of street trees per the City of Ontario Street Tree Master Plan along both sides of the street.
- A 5-foot wide lineal sidewalk along both sides of the street.
- A landscape easement of 30-feet taken from face of curb to perimeter wall on both sides of Chino Avenue.
- Background trees and shrub masses planted in series of layers (foreground, midground, background) to help define borders and plant groupings while combining interesting foliage textures and color.
- Monumentation as shown in the Conceptual Landscape Master Plan, Exhibit 27, "Conceptual Landscape Master Plan."

6.18 Interior Streetscape Design

Streetscape design within the interior of the Countryside Specific Plan community shall be consistent in character with the perimeter streetscapes. Connectivity from perimeter inward toward the centralized community open space/ park areas are of great importance, and should help to promote pedestrian circulation among community residences.

Where interior streetscapes interface with community parks and open space, special consideration shall be taken to integrate pedestrian circulation into these areas via a streetside pedestrian paseo system that links city sidewalk to active walking trails and open space areas as illustrated on Exhibit 27, "Conceptual Landscape Master Plan."

6.19 Primary Local Streets

Primary Local streetscapes shall include the following as illustrated in Exhibit 32, "Local and Neighborhood Street Sections Primary Local Streets – A & B."

- A 5 to 7-foot wide landscaped parkway with a single row of street trees per the City of Ontario Street Tree Master Plan along both sides of the street.
- A 5-foot wide lineal sidewalk along both sides of the street.
- Potential Neighborhood Monumentation as shown in the Conceptual Landscape Master Plan, Exhibit 27, "Conceptual Landscape Master Plan."

6.20 Private Neighborhood Streets and Alleys

Private Neighborhood streetscapes shall include the following as illustrated on Exhibit 33, "Private Neighborhood Street and Alley Sections."

- A 9-foot wide landscaped parkway with a single row of street trees per the City of Ontario Street Tree Master Plan along both sides of private neighborhood streets and a 5 foot wide landscaping easement along both sides of private alleys.
- A 5-foot wide lineal sidewalk along both sides of private neighborhood street.

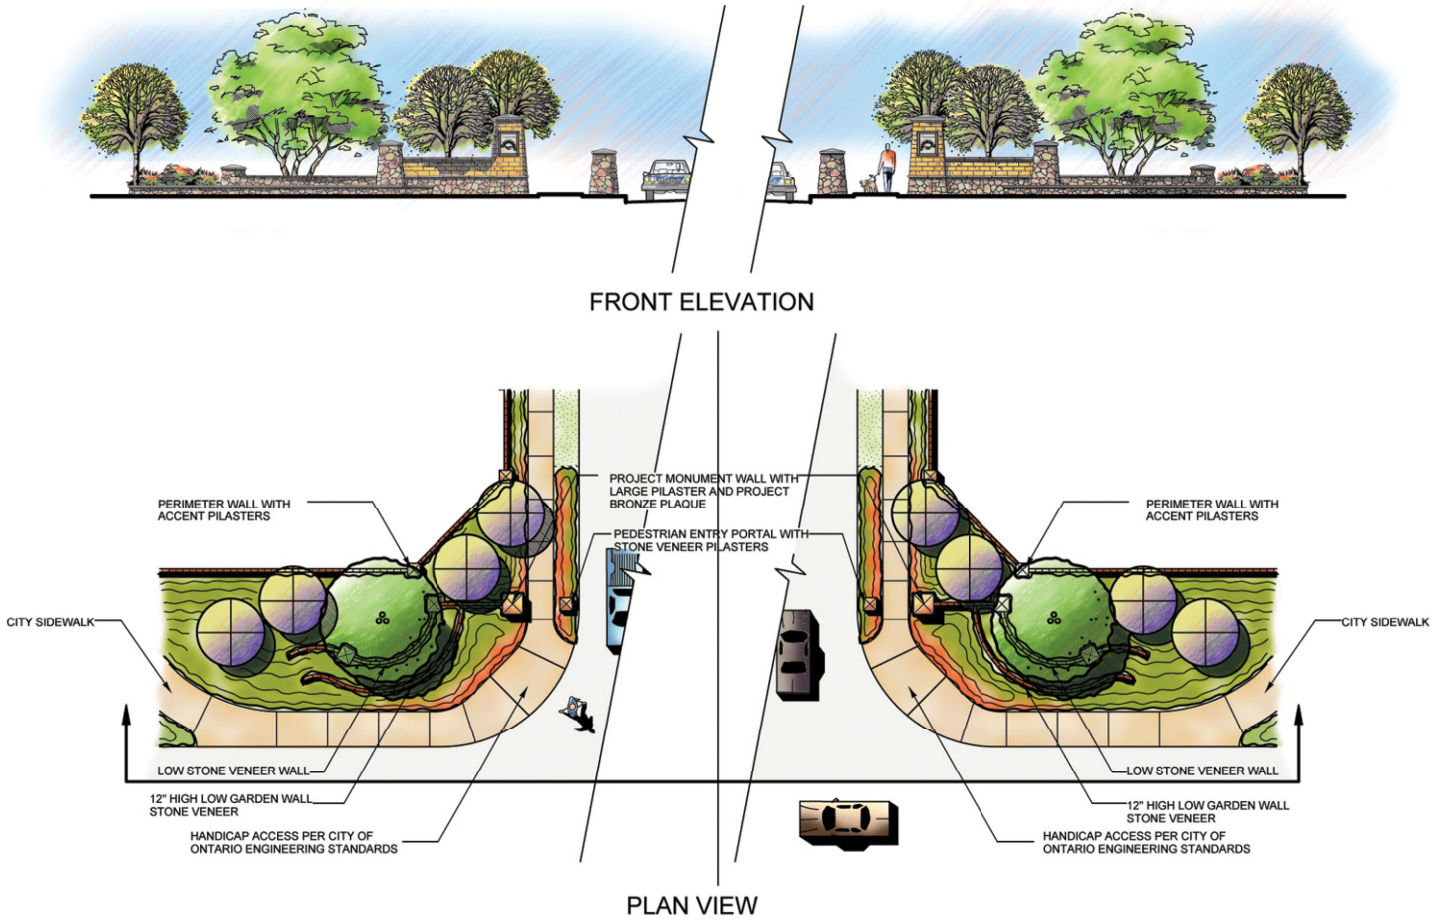
6.21 Entries and Monumentation

Entry monumentation for Countryside has been developed to provide a visual hierarchy from the community periphery into each distinct neighborhood. Special design consideration has be given to key entry points along the perimeter of the Community providing a sense of identity and a welcoming feeling for pedestrian, bicycle and vehicular traffic alike. Two basic monument treatments are used in the Countryside Specific Plan: the Primary Community Entry and Monumentation, and Neighborhood Entry and Monumentation.

6.22 Primary Community Entry and Monumentation

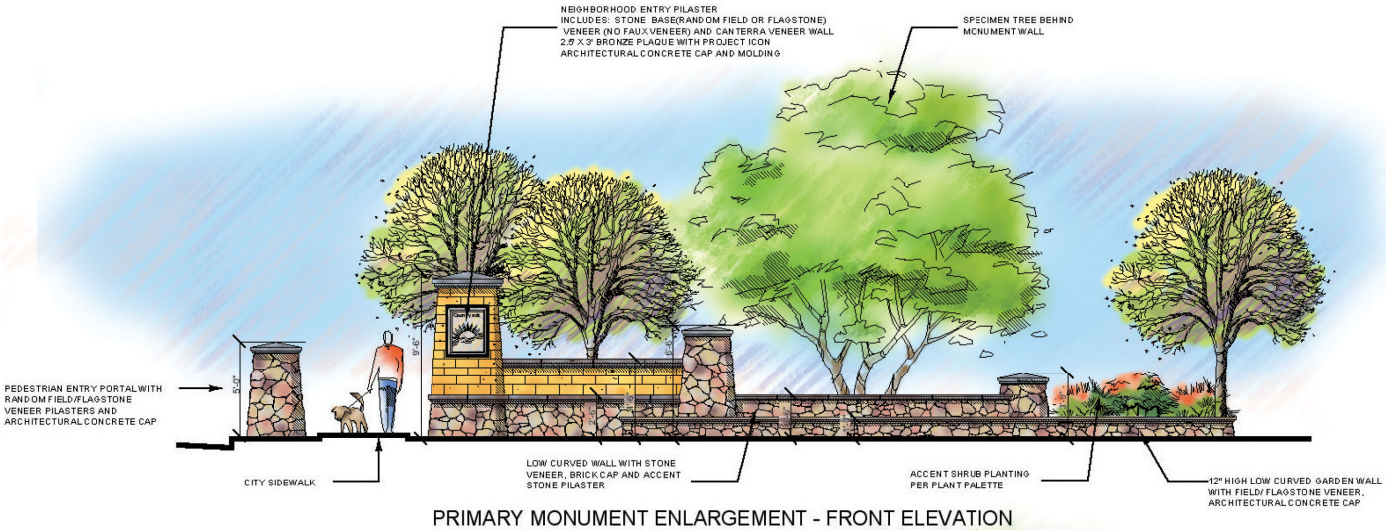
The Primary Community Entry and Monumentation shall include the following as illustrated on Exhibit 27, "Conceptual Landscape Master Plan" and Exhibit 34, "Primary Community Entry and Monumentation" and Exhibit 35, "Primary Entry and Monumentation Elevations."



- Freestanding curved monument walls at each corner with anchoring large entry pilaster.
- Identification field for potential sign lettering placement.
- Large pilaster with community logo/plaque.
- Architectural concrete caps, trim, and bases to help delineate each veneered material used.
- Short curved wall in front of main freestanding wall to create layering effect of monumentation.
- Use of "real" veneer materials rather than faux concrete veneers.
- Use of large specimen trees to flank each side of entry drive at site entry.
- Seasonal perennial flowering to allow for seasonal flowering interest throughout the year.
- Enhanced pedestrian paving at street crossing and at monument location as approved by the City Engineer.
- Accent trees and shrub masses planted in series of layers (foreground, midground, background) to help define borders and plant groupings while combining interesting foliage textures and color.
- Accent lighting of landscape/monumentation.

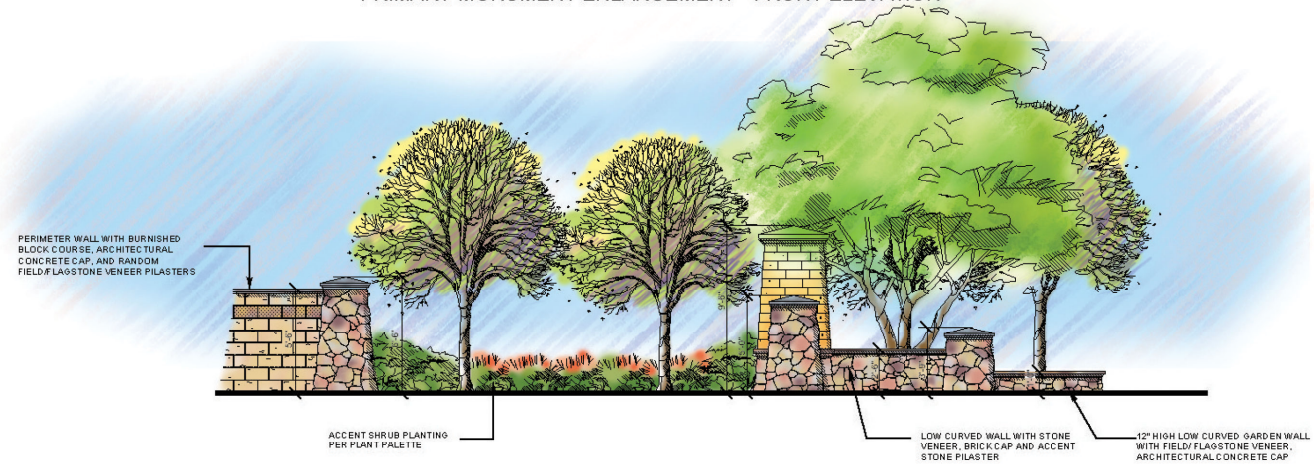
6.23 Neighborhood Entry and Monumentation

Neighborhood entries and monumentation should occur on interior corner entries within the Countryside Specific Plan Community. These entries should be used to help continue the landscape character theme into the "heart" of the community. Each neighborhood built within the Countryside Specific Plan will have the opportunity to identify their "in tract" project name/theme utilizing the neighborhood entry monumentation.



The Neighborhood Entry and Monumentation shall include the following as illustrated on Exhibit 27, "Conceptual Landscape Plan" and Exhibits 36 and 37, "Neighborhood Entry and Monumentation."

- Freestanding large entry pilaster set within the landscaped parkway. This pilaster should embody the same character as that of the Primary Community Entry Monument but is slightly reduced in scale to create a "pedestrian gateway" into each neighborhood. The logo/plaque identifying the Countryside Specific Plan community shall be set onto entry pilaster.
- Identification field for potential sign lettering placement on enhanced perimeter corner cut wall.
- Architectural concrete caps, trim, and bases to help delineate each veneered material used.
- Enhancement of corner cut wall and use of accent pilasters to anchor each side.



Exhibits 34

- Use of "real" veneer materials rather than faux concrete veneers.
- Seasonal perennial flowering to allow for seasonal flowering interest throughout the year.
- Enhanced pedestrian paving at street crossing and at monument location as approved by the City Engineer.
- Accent trees and shrub masses planted in series of layers (foreground, midground, background) to help define borders and plant groupings while combining interesting foliage textures and color.
- Accent lighting of landscape/monumentation.

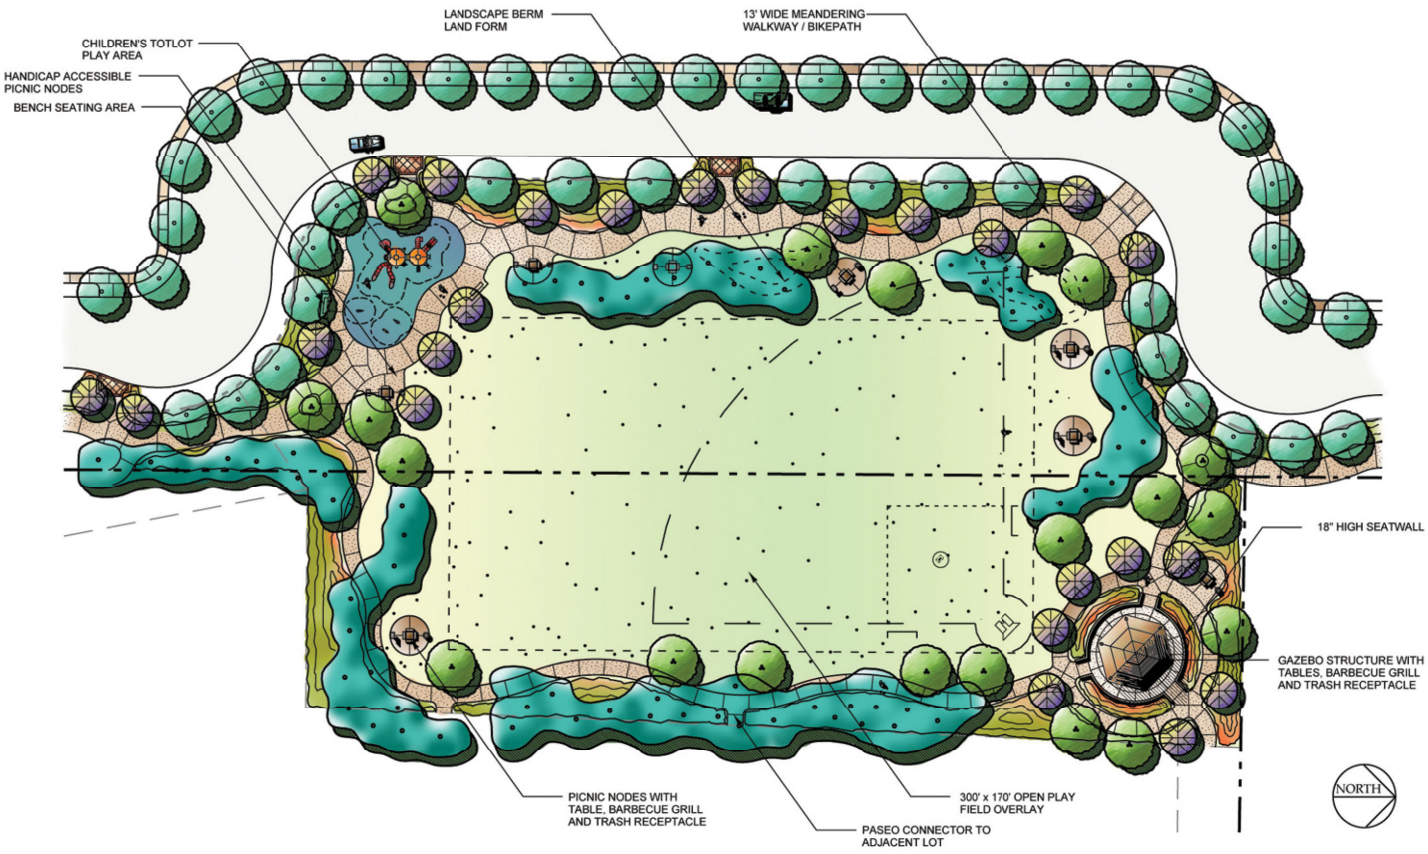
6.24 Parks , Paseos, And Private Recreation Areas

The Countryside Specific Plan will have two neighborhood parks, one centrally located within Planning Area 1 of the Specific Plan area, the other located adjacent to an Edison Utility Easement within Planning Area 2. These neighborhood parks will provide opportunities for community interaction and recreation while promoting neighborhood and community identity. Linking the two parks, and providing access from the surrounding neighborhoods, is a network of landscaped, tree-shaded pedestrian paseos. Within Neighborhoods 5 and 6 private recreational areas will be provided.

6.25 The Neighborhood Parks/ Private Recreation Areas

Each neighborhood park consists of the following as illustrated in Exhibit 27, "Conceptual Landscape Plan" and Exhibits 38 and 39, "Neighborhood Park Concepts."

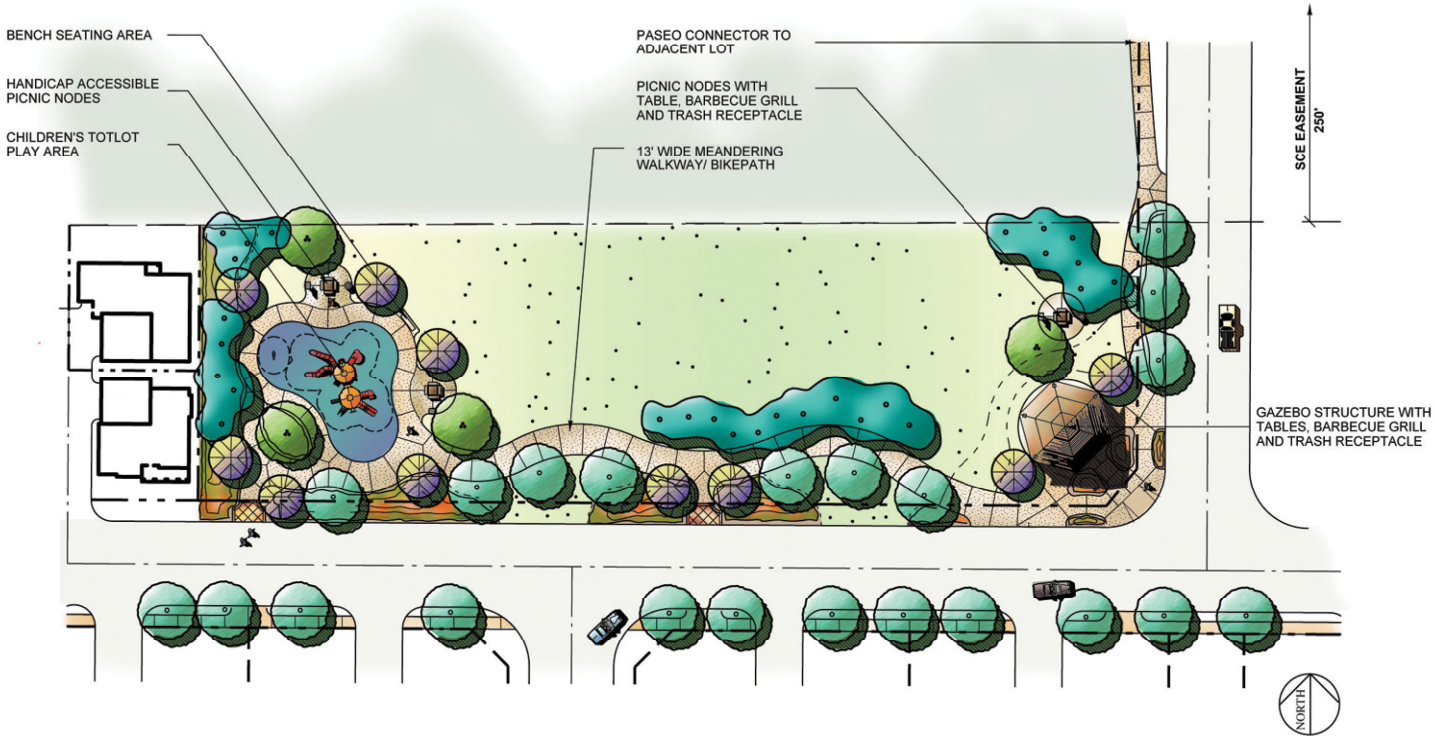
- Children's Tot Lot Play Area - Play structures and equipment should be staged to provide for separated use based on age, yet allow for the possibility of interaction. The Tot Lot should also follow ADA guidelines and provide access depending upon equipment selected. Seating areas shall be located near the Tot Lot to provide areas for parental supervision.
- Barbecue Picnic Facilities – Each park should provide individual barbecue picnic facilities scattered throughout a looped concrete walkway system. Barbecue facilities (minimum of 50%) should be located adjacent to the walkway system for ADA accessibility; the remaining percentage set in open turf areas. Each barbecue picnic facility shall provide a picnic table, freestanding barbecue, hot coal container, and trash receptacle.



These barbecue facilities can be placed on concrete or any other ADA acceptable surfacing. The design of each neighborhood park open space should take into account pedestrian circulation and the linkage into the surrounding community.

- Open Turf Areas - The open space turf areas should be arranged to accommodate passive play opportunities and small scale, unorganized group athletics and activities. No sports lighting should be permitted in the parks.

Landscaping - Landscaping within the each neighborhood park shall harmonize with the surrounding streetscapes. Large specimen trees should be used within the open turf areas to help provide shade and screening. Landform berming should be incorporated to provide interest and opportunities for screening. Accent trees should also be used at pedestrian entries and around the Tot Lot for color and seasonal interest.



- Large Group Shade Structure - A large shade structure shall be implemented into each park. This shade structure should be located within view of the community and is intended to serve as a group picnic facility. This group facility will include picnic tables, a minimum of two (2) freestanding barbecues, hot coal containers, and trash receptacles.

Each private recreation area to be provided as part of the development of Neighborhoods 2, 5 and 6

Exhibits 38

Neighborhood Park Concept - Planning Area 1

Exhibits 39

Neighborhood Park Concept - Planning Area 2

will be improved with a pool and recreation building offering restroom facilities and pool equipment. Where feasible, picnic areas and open turf play areas will also be provided. Private recreation areas within Neighborhoods 2, 5 and 6 are illustrated in Exhibit 27, "Conceptual Landscape Plan" and Exhibits 40-42, "Private Recreation Areas."

6.26 Paseo Trail System

Pedestrian circulation is highly encouraged within the Countryside Specific Plan. Landscape easements are provided along major roadways and are encouraged within the neighborhoods. Exhibits 43 through 45 illustrate the "Paseo Concepts and Plan" for Countryside.

- Paseo Trail System - A Paseo walkway system shall be designed to provide connections to adjacent neighborhoods as well as linking the community and giving access to the community perimeters.
- Entry points to the paseo shall have adequate signage.
- Landscaping - Landscaping along the Paseo Trail System should harmonize with the surrounding streetscapes.
- Meandering sidewalks a minimum width of 5'-0" are encouraged.
- Entry points shall have adequate directional signage.
- Seating nodes should be located along the paseo paths at regular intervals. These seating nodes should include a bench, trash receptacle, and enhanced landscaping to help accentuate each node.
- Bike racks and water fountains should be provided where feasible at strategic locations.
- The locations of drop off areas should be coordinated with the overall design of the parks.
- Decorative security lighting shall be incorporated into the paseo design at regular intervals along the pedestrian path and at seating nodes. Final lighting layout, foot candle requirements, and fixture selection is subject to the review and approval by the City of Ontario.
- Use of enhanced paving at paseo connections where pedestrian circulation crosses roadways is encouraged and may be permitted subject to approval by the City Engineer.
- Utilization of the Southern California Edison Corridor (SCE) for sidewalk/bikeways and interface w/ park walkway circulation is important. Final approval of paseo configuration and design will be approved by the City of Ontario and SCE.

6.27 Community Walls and Fencing

Walls are a major component in achieving an overall community theme within the Countryside Specific Plan. A strong cohesive appearance is achieved through the use of "community walls" and general overall wall guidelines.

All walls that adjoin community street scenes and are located along the boundary edges of the Paseo and to the opposite side of the SCE corridor shall be deemed "community walls." All wall and fencing designs and layout shall be approved by the City of Ontario prior to construction. The proposed location and types of walls and fencing proposed for Countryside are illustrated on Exhibit 46, "Wall and Fence Plan."

6.27.1 Community Walls

Community walls that bound the perimeter of the project should be decorative in nature. These walls should be constructed of split-face block masonry and be of a color that blends with the Countryside color palette. A decorative horizontal course of block shall be placed towards the top of the wall. It is recommended that decorative horizontal course contrast in texture from that of the split face wall. Decorative block course options

Exhibit 46

Wall and Fence Plan

include: burnished, colored precision, fluted, or shot blast textured block. Decorative accent pilasters spaced at equal intervals are highly encouraged and should match the wall design. At key community entries, where the community wall angles at a 45° angle, decorative veneered pilasters shall be constructed to help blend in with the Countryside monumentation. Exhibit 47, "Wall Details" illustrates the concept for Community Wall Design within Countryside.

6.27.2 Interior Walls

Where privacy or protection of common area views dictates, walls shall be constructed of precision block consistent in color with any adjacent wall. Reverse frontage walls and any wall return visible from the street shall be constructed of split-face block, and of a color that blends with the Countryside color palette. Decorative caps and the use of pilasters to help enhance the perimeter appeal of the walls are encouraged. Walls visible from the community streets may not be made of exposed or painted precision block or slumped block. Final approval of fencing design, including colors and styles are subject to City of Ontario design review processing.

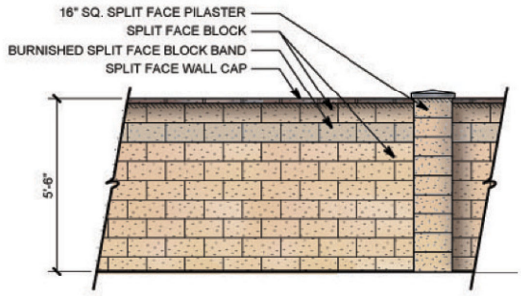
6.27.3 Exterior Walls Adjacent to Deer Creek Channel

Walls adjacent to the Deer Creek Channel shall be constructed of split-face block with open half-block course at bottom for clinging vine to grow through. Half-block openings shall coincide with the vine on center spacing noted in planting plans.

6.27.4 View Fencing

View fences shall be utilized to allow open views but not physical access in certain instances. View fences shall be 5'-6" high minimum and made of tubular steel construction. Tubular steel view fencing shall incorporate the use of pilasters designed to be consistent with the materials of the interior walls. View fencing locations and design will be subject to review and approval by the City of Ontario.

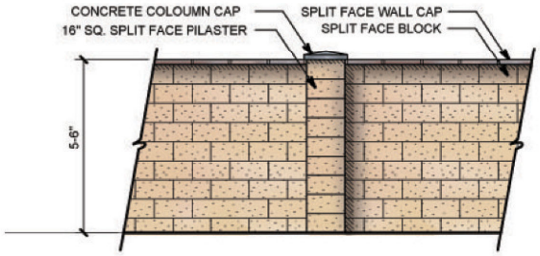
6.28 Outdoor Lighting



Lighting standards within Countryside shall be consistent in style, color, and materials in order to maintain uniformity throughout. Lighting should be subtle, providing a soft wash of light over illuminated objects such as monumentation. Hierarchy shall be established by using a variety of lighting fixtures and illumination levels based on lighting design intent. Lighting styles shall tie into architectural styles and provide sufficient illumination for the safety and well being of the community. Accent lighting of landscape and monumentation shall be incorporated into the areas.

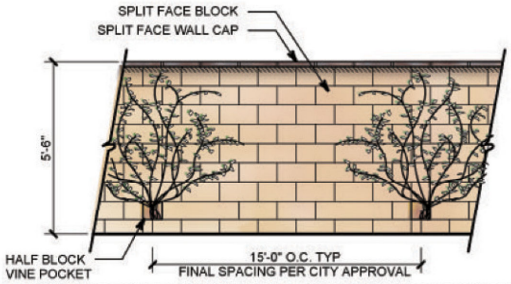
6.28.1 Entry Monuments

Avoid intensely bright or "hot" lighting of monuments; rather, each should be lit to provide a soft wash of light across the monument signage. Specimen trees should be uplit with several fixtures into the canopy to avoid creating dark sides of the trees.



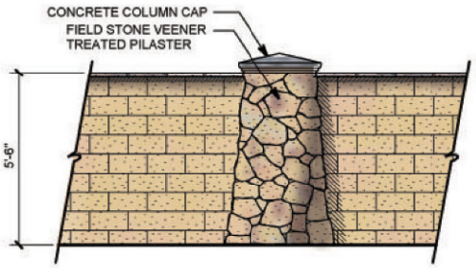
6.28.2 Community Parks/Paseo Lighting

Lighting of the pathways, tot lot, and select landscaped areas within the Parks and Paseo Trail System should be considered for safety and security. Utilization of a traditional Globe/Acorn Post mounted light fixture should be considered for both the park open space areas as well as interior street lighting fixtures. Keeping with the character of traditional materials, this will help to create a better sense of scale to the pedestrian.



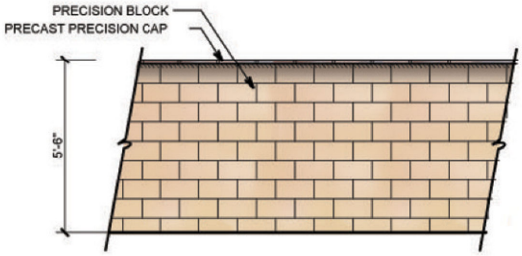
A SPLIT FACE WALL AND PILASTER

SINGLE SIDE SPLIT FACE BLOCK WALL ALONG PASEO PERIMETER. PILASTER SPACING AND WALL OFFSETS SHALL BE SUBJECT TO PLANNING DEPARTMENT REVIEW AND APPROVAL.)



B SPLIT FACE WALL AND PILASTER

INTERIOR PRIVACY WALLS LOCATED BETWEEN HOUSES AND ALONG THE STREET SIDE OF CORNER LOTS, TO BE SPLIT FACE MASONRY WITH DECORATIVE CAP. (USE SPLIT FACE ON 2 SIDES WHERE BOTH SIDES ARE VISIBLE FROM STREET. PILASTER SPACING AND WALL OFFSETS SHALL BE SUBJECT TO PLANNING DEPARTMENT REVIEW AND APPROVAL.)



C SPLIT-FACE BLOCK WALL WITH VINE POCKETS

D SPLIT-FACE BLOCK WALL WITH STONE VENEER PILASTER

TO BE USED ALONG NEIGHBORHOOD ENTRY CORNERS.

E PRECISION BLOCK WALL

INTERIOR PRIVATE BLOCK WALL IS TYPICALLY USED WHERE PRIVACY IS DESIRED AT PROPERTY LINE LOCATIONS WHERE NOT VISIBLE FROM PUBLIC VIEW. OVERALL WALL/FENCE HEIGHT SHALL BE 5'-6" FEET.

Exhibit 47

Wall Details

Countryside

6.29 Landscape Design

6.29.1 Public Landscapes

- Landscape plantings in public areas should reflect a commitment to both developing a "sense of place" and maintaining harmony with the Ontario Ranch.
- A landscape architect licensed in California and experienced and familiar with wrought tolerant landscaping shall be retained to prepare planting and irrigation plans for all public areas. Arrangement of plants should incorporate the concepts of mass planting; plants should be placed to allow them to grow to their natural sizes and forms, and sheared hedges should be kept to a minimum.

The plant palette at the end of this section offers suggested plants palette for Countryside and, while this list is by no means all inclusive, plantings in public areas should draw primarily from this palette for visual continuity throughout the Countryside Specific Plan Community.

6.29.2 Front Yard Landscapes

Plantings in front yards may vary substantially from the Countryside palette, but should retain some of the character and style of the public plantings. No more than ~~60~~25% of the total square footage of any front yard shall be lawn; the bal-ance shall be composed of shrubs and ground covers, with an emphasis on drought tolerant plant species. Turf areas shall be sized and shaped to optimize efficient irrigation. If turf is used in isolated areas such as driveway strips, subsurface irrigation or microspray heads shall be required to avoid overspray. Irregular shapes that cannot be irrigated efficiently shall be avoided.

6.29.3 Soil Testing

Soil samples shall be taken from several locations after the completion of rough grading operations, and a reputable soil testing laboratory shall perform an agronomic soils test. The test shall assess soil fertility needs for water-wise California native and Mediterranean plant types. No planting shall take place until the soil has been properly prepared based on the recommendations of the soils testing laboratory. Organic soil amendments shall be incorporated as necessary to achieve a recommended percolation rate of one inch per hour.

6.29.4 Slope Landscaping

All manufactured and cut/fill slopes which exceed 3-feet in height shall be planted with an effective mixture of ground cover, shrubs, and trees. Such slopes shall also be irrigated as necessary to ensure germination and establishment in conformance with the fuel modification guidelines of the City.

6.29.5 Interior Slopes: Residential Interior

- Interior slopes may be more ornamental in character than exterior slopes. They may have a somewhat broader range of plant materials than exterior slopes, but should still be chosen primarily from the Countryside plant palette are subject to the City of Ontario fuel modification restrictions and shall be irrigated in accordance with the provisions of Section 6.31 below.
- All manufactured and cut/fill slopes which exceed 3-feet in height shall be planted with an effective mixture of ground cover, shrubs, and trees. Such slopes shall also be irrigated as necessary to ensure germination and establishment in conformance with the fuel modification guidelines established by the City of Ontario.

6.30 Streetscape Landscaping

6.3.1 Streetscape Development Standards

- ~~Turf grass shall not exceed 30% of streetscape planting and shall be located adjacent to the sidewalk or curb line.~~
- All new plantings within Countryside shall draw substantially from the Countryside Plant Palette included in this document.
- All streetscape landscaping within Countryside will be implemented by the Developer in accordance with this Specific Plan.
- The Developer shall install all primary and secondary improvements concurrently with the construction of the roadway on which they front. Neighborhood intersections shall be constructed as each neighborhood street is built.
- The Developer shall provide site inspection of all construction and installation of entries and intersections in accordance with the City of Ontario requirements.

6.31 Irrigation Design

Irrigation for both public and private landscapes should be designed to be as water efficient as possible. All irrigation systems shall have automatic controllers designed to properly water plant materials given the site's soil conditions, and irrigation systems for all public landscapes shall have automatic rain shut-off devices. Drip irrigation is encouraged. Spray systems shall have low volume (gpm), matched precipitation heads.

All irrigation products specified shall achieve an irrigation operational distribution uniformity of 70% or greater in all turf areas and 80% in all other landscaped areas.

Turf areas shall be irrigated with equipment that has a precipitation rate of one (1) inch or less per hour as specified by the manufacturer. Stream rotator heads are preferred; use of standard spray heads shall be avoided. Non-turf shrub areas shall be irrigated with low volume micro spray or point application devices, where manufacturer's specification indicates output measured and expressed in gallons per hour (gph). Maximum flow shall be 60 gph (1 gpm) for each point.

6.32 Landscape Maintenance

- All public landscapes of master planned roadways (Riverside Drive, Archibald Avenue, Schaefer Avenue and Chino Avenue), including slopes, street trees, lighting, and irrigation systems, shall be maintained by the City of Ontario Landscape Maintenance District.
- Front yard landscapes shall be the responsibility of the homeowner or HOA who shall maintain the front yard landscape in a healthy condition at all times.
- All manufactured and cut/fill slopes which exceed 3-feet in height shall be planted with an effective mixture of groundcover, shrubs, and trees. Such slopes shall also be irrigated as necessary to ensure germination and establishment in conformance with the fuel modification guidelines of the City of Ontario.

Section 7. Implementation

The City of Ontario will adopt the Countryside Specific Plan by ordinance. Following approval by the City, the Countryside Specific Plan will serve as the implementation tool for the Ontario Ranch General Plan Amendment as well as the zoning for the Specific Plan Area. The Specific Plan addresses general provisions, permitted uses, development standards, and community design guidelines.

7.1 Methods and Interpretation

Development within the Countryside Specific Plan shall be implemented through the approval by the City of tentative and final tract maps and through development plans approved through the Development Plan Review process as established in Article 8, of the City of Ontario Comprehensive Development Code. The implementation process described below provides for the mechanisms for review and approval of development projects within the Countryside Specific Plan area.

7.2 Applicability

All development proposals within the Countryside Specific Plan shall be subject to the implementation procedures established herein and as established in Section 9-1.0425 of the City's Development Code. Whenever the provisions and development standards contained herein conflict with those contained in the City of Ontario Development Code, the provisions of the Countryside Specific Plan shall take precedence.

7.3 Interpretation

Unless otherwise provided, any ambiguity concerning the content or application of the Countryside Specific Plan shall be resolved by the City of Ontario Planning Director (Director) or his/her designee in a manner consistent with the goals, policies, purpose and intent established in this Specific Plan.

7.4 Implementation of Design Guidelines

Adoption of the Countryside Specific Plan by the City includes adoption of the design guidelines contained herein, which shall be the design criteria by which development projects within the Countryside Specific Plan area will be reviewed during Development Plan Review. The design guidelines are intended to be flexible in nature while establishing basic evaluation criteria for the review by the City of developer projects during Development Plan Review.

Any major deviation from the design guidelines within the Countryside Specific Plan shall require approval by the Planning Commission. The determination of a major deviation from the design guidelines shall be made by the Director.

7.5 Development Review Process

7.5.1 Subdivision Maps

All development proposals within the Countryside Specific Plan will require approval by the City of subdivision maps to subdivide parcels for development purposes. All tentative and final tract maps will be reviewed and approved pursuant to applicable provisions of the City of Ontario Subdivision Ordinance and consistent with the applicable

provisions of Land Use, Infrastructure, Design Guidelines, and Development Regulations contained within the Countryside Specific Plan.

7.5.2 Development Plan

All development projects within Countryside shall be subject to the Development Plan Review Process as established in Article 8 of the City's Development Code. Pursuant to these provisions, the Development Plan Review process constitutes a design review of project architecture, site plans, and landscape plans. Adoption of the Specific Plan by the City includes adoption of the design guidelines contained within the Specific Plan and which provide direction for the design of development projects within Countryside. Where the Countryside development regulations and design guidelines are silent, the applicable development regulations and design guidelines contained within the City's Development Code shall apply. The design guidelines are intended to be flexible in nature while establishing basic evaluation criteria for the review by the City of developer projects during design review.

All development project applications shall include a landscape and irrigation plan describing plant materials and their growth habits, plant size and spacing, methods of irrigation and landscaping maintenance, site plans, architectural elevations, floor plans, grading plans and other requirements as specified by the City.

7.6 Density Allocations

The Countryside Land Use Plan allocates density to each residential neighborhood. Variations in density allocations per neighborhood may occur at the time of final design of the neighborhood depending upon the residential product identified for development. Variations in allocation of density within the neighborhoods of the Countryside Specific Plan is permitted provided the density variation does not exceed a net of 15% and the maximum dwelling unit count of ~~825~~984 units established for the Specific Plan is not exceeded.

7.7 Specific Plan Modifications, Amendments, Variances, Conditional Use Permits

7.7.1 Minor Modifications

The following constitute minor modifications to the Specific Plan, not requiring a Specific Plan Amendment, and are subject to review and approval by the Director. The Director shall have the discretion to refer any such request for modification to the Planning Commission or the City Council.

a) Change in utility and/or public service provider.

b) A change of more than fifteen percent (15%) net to the number of units within an individual neighborhood provided the total number of units for the entire Specific Plan area does not exceed that established in the Specific Plan.

c) Adjustment of a neighborhood boundary provided the total acreage of the affected phase area does not increase or decrease by more than fifteen percent (15%) net of the total stated in the approved Specific Plan.

d) Minor changes to landscape materials, wall materials, wall alignment, entry design, and streetscape design which are consistent with the conceptual design set forth in the design guidelines contained within the Specific Plan.

e) Minor changes to the design guidelines, provided the design is consistent with the intent of the guideline.

f) Other modifications of a similar nature to those listed above, which are deemed minor by the Director, which are in keeping with the purpose and intent of the approved Countryside Specific Plan and which are in conformance with the General Plan.

7.7.2 Specific Plan Amendments

Amendments to the Countryside Specific Plan may be requested by the applicant or by the City at any time pursuant to Section 65453 (a) of the Government Code. Amendments shall be processed pursuant to the provisions of the Government Code for Specific Plan Amendments. In the event the proposed amendment requires supplemental environmental analysis pursuant to the California Environmental Quality Act (CEQA), the applicant(s) are responsible for preparing the necessary CEQA documentation.

7.7.3 Variances

Variances and Administrative Exceptions to the development regulations contained in the Countryside Specific Plan with respect to landscaping, screening, site area, site dimensions, yards and projections into yards, heights of structures, distances between buildings, open space and off-street parking and loading can be considered pursuant to Article 10, "Variances and Administrative Exceptions" of the City of Ontario Development Code.

7.7.4 Conditional Use Permits

Uses specified as conditionally permitted uses within Section 5, "Development Regulations," of the Countryside Specific Plan shall be reviewed and approved by the City pursuant to the requirements of Article 9, "Conditional Use Permits."

7.8 Appeals

Appeals from any determination of the Director shall be made to the Planning Commission. The applicant(s) or any other entity shall have the right to appeal the decision of the Planning Commission on any determination by filing an application on forms provided by the City of Ontario within ten (10) days following the final date of action for which an appeal is made. Appeals shall be processed consistent with the provisions of Article 5, "Appeals" of the City of Ontario Development Code.

7.9 Compliance with Mitigation Monitoring Plan

Certification of an Environmental Impact Report (EIR) shall be required prior to approval of the Countryside Specific Plan. Development within the Countryside Specific Plan area shall comply with all approved mitigation measures as described in the Mitigation Monitoring Program included as part of the Countryside EIR.

7.10 Project Financing

The financing of construction, operation and maintenance of public improvements and facilities (the "facilities"), and public services will include funding through a combination of financing mechanisms. Final determination as to the facilities to be constructed and as to maintenance responsibilities, whether publicly or privately maintained, will be made prior to recordation of the final maps. In order for the project to be fiscally self-sufficient, the following financing options can be considered for implementation:

- Private capital investment for the construction of facilities.
- Community Facilities District (CFD) established pursuant to the Mello-Roos Community

Facilities District Act of 1982, or other special district, to provide funding for the construction of a variety of public facilities and the provision of public services.

- Individual private property owner.
- Private property owners or Home Owners Association.
- Community Facilities District (CFD) established pursuant to the Mello-Roos Community Facilities District Act of 1982, or other special district.

City Council approval is a prerequisite for the implementation of any and all special district financing mechanisms. The use of the Mello-Roos Community Facilities District Act of 1982 (the "Act") to finance public facilities and services will be at the City's sole discretion. Moreover, the use of the Act must be consistent with the City's adopted goals and policies concerning the use of the act.

7.11 Project Phasing

Phasing of the Countryside Specific Plan will meet the following objectives:

- Orderly build-out of the community based upon market and economic conditions.
- Provision of adequate infrastructure and public facilities concurrent with development of each phase.
- Protection of public health, safety and welfare.
- Accommodation of continued agricultural operations within the proposed land use area.

7.11.1 Residential Development

The phasing of residential development areas will be determined by the developer. The development of residential uses will be implemented through the approval of tentative and final tract maps and development permits for each neighborhood as developed.

All or a portion of Neighborhood 1 will comprise the initial phase of development in Countryside through the implementation of Tentative Tract Map 16045. Open space amenities to include a portion of the local park and the development of the paseo within Neighborhood 1 will be constructed in conjunction with the development of residential phases. All or a portion of Neighborhoods 5 and 6 will comprise the second phase of development within Countryside. Development of Neighborhoods 3 and 4 will likely comprise the third phase of development of Countryside. Neighborhoods 2, 7 and 8 are the final phases of development of the Countryside Specific Plan. Appropriate levels of infrastructure and community facilities will be installed and public services will be available to serve each subsequent phase of residential development as it occurs.

7.11.2 Community Facilities and Services

The timing for installation of community facilities and payment of impact fees for public improvements and services for the Countryside Specific Plan will be determined as part of the City's approval of tentative tract maps in accordance with the provisions of the adopted City development impact fee ordinances. Community facilities, such as bike trails, will be developed in conjunction with construction of the public street improvements. Those portions of the paseo adjacent to individual tracts within each neighborhood will be constructed in a timely manner as development progresses.

7.12 Maintenance

The public and private improvements constructed within Countryside will be maintained through a combination of public and private entities as described in Table 4, "Maintenance Responsibilities."

1. All local streets within Neighborhoods 1, ~~2,~~ 3, 3A, 4, 7 and 8 within Countryside will be dedicated as public streets to the City of Ontario and will be maintained by the City.
2. All Neighborhood Streets, private alleys, and private drive aisles within Neighborhoods 2A, 2B, 2C, 3A, 5, 6 and 7 will be private and maintained by a homeowner's association(s).
3. Landscape improvements within the parkways, of master plan roadways and streetlights within Countryside shall be maintained either by the City or through a special maintenance district established by the City for the Ontario Ranch.
4. Parkway improvements within the right-of-way of local streets adjacent to residential areas and along private Neighborhood Streets, shall be maintained by homeowners associations.
5. Private recreational areas within Neighborhoods 2, 3A, 5 and 6 shall be maintained by homeowners associations.
6. All on-site master planned facilities, such as water, sewer, and storm drains within street rights-of-way, utility easements, and Water Quality Management Plan shall be privately constructed and maintained by the City. During the course of maintenance of the potable/ recycled water and sewer, storm drain systems, the City will pave the streets and restore the landscaping per City standards. This applies to all areas where public infrastructure is located (public/private streets, lanes/alleys, landscaping, easements, etc.) The HOA will be responsible to restore the streets and landscape areas to their original condition, specifically those areas which have architectural enhance-ments. Access easements across private streets shall be granted by the developer to the City for maintenance purposes.
7. Off-site infrastructure improvements such as water, sewer, and storm drain facilities will be dedicated to and maintained by the City.
8. Pocket parks and paseos will maintained either by a homeowner's association or by a special maintenance district.
9. NPDES facilities (including the dry wells) shall be privately constructed and maintained by the HOA including structures and connections to underground facilities.

7.13 Homeowner Association

Individual homeowner associations will be established for the maintenance of common area landscape improvements within the each single family residential development. Private improvements to be maintained by these homeowner associations include:

- Parkway improvements along local streets adjacent to residences.
- Courts and landscaping within the motor court residential areas.
- Walkways, recreational facilities, and common areas distinct to individual residential types and neighborhoods.
- On-site private NPDES interim detention basins and dry wells.
- Internal slopes fronting streets and slope areas in the rear of homes.
- All internal open spaces, parks, and common areas at neighborhood entries.
- Landscaping adjacent to private drive aisle and alley right of way.

Section 8.
General Plan Consistency

California Government Code (Title 7, Division 1, Chapter 3, Article 8, Section 65450-65457) permits the adoption and administration of specific plans as an implementation tool for elements contained in the local general plan. Specific plans must demonstrate consistency in regulations, guidelines, and programs with the goals and policies set forth in the general plan.

The Countryside Specific Plan has been prepared in conformance with the goals and policies of the City of Ontario General Plan. The "City of Ontario Ontario Ranch Specific Plan Policy Matrix" which follows, describes the manner in which the Specific Plan complies with the General Plan.

Note:
General Plan Consistency analyzed based on current City of Ontario General Plan.
In The Ontario General Plan 2050 update, the land use designation for the planning areas in the SPA is anticipated to be revised from Low Density (2.1-5 du/ac) to Low-Medium Density (5.1-11 du/ac) and Medium Density (11.1-25 du/ac).
The Specific Plan Policy Matrix will be revised to reflect consistency with the updated General Plan.

Countryside

Ontario Sphere of Influence
Specific Plan Policy Matrix

Following are policies from the Ontario SOI General Plan; they are intended to achieve the "vision" for the Sphere of Influence planning area as outlined in Chapter 2 of the SOI General Plan. The policy matrix is divided into five (5) parts, consisting of the five (5) elements of the SOI General Plan Amendment: I. Community Development; II Infrastructure; III Aesthetic, Cultural, Open Space, and Recreational Resources; IV Natural Resources and V Hazards. The following matrix is intended to determine the adequacy of the proposed Specific Plan in meeting the policies of the SOI General Plan. The checklist shall be completed and submitted with the Specific Plan application. Check if the Specific Plan fully complies or partially complies with each respective policy, or if not applicable. A complete explanation is required in instances whereby the proposed plan does not fully comply with a policy or if not applicable.

Policy		Fully Complies	Partially Complies	S.P Sec. No.	N/A
PART I: COMMUNITY DEVELOPMENT					
1.1 Role of Sphere of Influence General Plan					
1.1.1, 1.1.5	The proposed Specific Plan reflects the types, organization and distribution of land uses depicted on the Sphere of Influence General Plan Land Use Plan (Figure 3-5) and Development Capacity Table (Table 3-3). The Plan incorporates the minimum and does not exceed the maximum amount of development prescribed in Table 3-4 of the SOI General Plan, where applicable, including other uses such as greenways that are specified by the SOI General Plan policies, but not tabulated in Table 3-4	X		1.4 & 3	
Comments:					

Policy		Fully Complies	Partially Complies	S.P Sec. No.	N/A
1.1.4	The Proposed Specific encompasses subarea boundaries designated on Figure 3-6 of the Sphere of Influence General Plan and sufficient land to constitute a significant portion of a distinct and cohesive neighborhood or district, as depicted on Figure 3-7 of the Sphere of Influence General Plan.	X		1	
Comments:					
	Subarea boundaries may be modified on the basis of the following conditions (check all that apply if subarea boundaries are not entirely reflected by proposed Specific Plan): *Note adjustments to subarea boundaries shall be accompanied by an equivalent adjustment of the development capacity, maintaining the overall coverage densities depicted on the SOI General Plan Land Use Plan.* • to achieve unified districts and neighborhoods; • to account for defined market demands regarding the types and scale/acreage of development that should be accommodated; • to reflect the location of major roads, utility corridors and easements, flood control improvements, natural resource areas, and public properties; • to reflect property subdivisions and ownerships; and • to consider appropriate infrastructure and public service phasing.				X
Comments:	*The project applicant does not propose to modify the subarea boundary.*				
1.2	***Structure and Organization of Land Use:***				

Specific Plan Policy Matrix

Policy		Fully Complies	Partially Complies	S.P Sec. No.	N/A
1.2.1	The proposed plan provides for integrated development of distinct residential neighborhoods and major regional serving activity centers and corridors that are differentiated by their functional role, uses, and character. Each is conceived as a uniquely identifiable place, rather than a fragment of a continuous/undifferentiated urban area.	X		1 and 3	
Comments:					
1.2.2	The plan provides for a balance of land uses within each neighborhood and district in accordance with phasing policies of the NMC General Plan .	X		3 and 7	
Comments:					
1.2.3	The plan links neighborhoods, centers, and corridors by transportation, utility, and greenways/open space networks. These may also be used to establish clear boundaries between distinct neighborhoods and/or centers.	X		1, 3, and 4	
Comments:					
1.2.4	The plan includes major amenities that provide identity and enhances character including a large scale park ("Village Green"), lake / streams, and golf courses.				X
Comments:	*The Countryside Specific Plan is not located within a subarea designated for a village green, lake/stream or golf course .*				
1.2.5	The plan includes an educational campus as the "centerpiece" of community identity and organization.				X
Comments:	*The Countryside Specific Plan is not located within a subarea or designated for an educational campus .*				

Specific Plan Policy Matrix

Countryside

Policy	Fully Complies	Partially Complies	S.P Sec. No.	N/A
1.2.6 The plan includes elements that provide linkages and continuity with uses abutting the Sphere of Influence, including:				
• continuity and linkage of transportation and utility infrastructure	X		4	
• continuity of street trees and landscaped median along Euclid Avenue				X
• Pedestrian linkages to residential areas north of Riverside Drive	X		1,3 & 4	
• continuity of commercial centers at the Riverside Drive/ Euclid Avenue and Riverside Drive/Milliken Avenue intersections; and				X
• relationship to existing and planned land uses on the west side of Euclid Avenue (City of Chino), north side of Riverside Drive (City of Ontario), and east side of Milliken Avenue (Riverside County)--by the use of complementary and/or transitional land uses and densities and streetscape improvements.	X		1,3,4 & 6	
Comments:				
1.2.7 The Specific Plan establishes clearly defined "edges" for the Sphere of Influence, including landscape setbacks, transitional densities, and other suitable techniques that avoid the use of walls and creation of "walled" enclave.	X		3,4, and 6	
Comments:				
1.2.8 The Specific Plan includes measures to minimize potential impacts of environmental hazards including flooding, and noise. The Plan provides for the use of electrical, transmission corridors, flood channels, and similar elements to form "edges" for residential neighborhoods and centers and/ or accommodates public greenways / corridors.	X		3,4,and 6	
Comments:				

Specific Plan Policy Matrix

Policy		Fully Complies	Partially Complies	S.P Sec. No.	N/A
1.3	***Residential Neighborhoods***				
1.3.1	The Specific Plan accommodates single and multi-family housing, local serving commercial services (e.g., grocery stores, barber and beauty shops, small dining establishments, etc.), community and religious facilities, schools, parks, open spaces, and similar uses within "Residential Neighborhoods."	X		1 and 3	
Comments:					
1.3.2	The Specific Plan includes priority areas for executive housing as provided for in the SOI General Plan (refer to Figure 3-8, SOI General Plan). Of the target 500 acres of executive housing provided in the General Plan, 20% or 100 acres shall be provided in the areas north of Schaefer Avenue. The following standards must be met in establishing an area large enough to achieve a distinctive identity and critical mass for executive housing (check all that apply): • *Development with lots of 10,000 square feet or greater:* 80 contiguous acres minimum • *Development adjacent to a golf course:* 50 contiguous acres minimum • *Developments adjacent to a large open space, lake, park, or Village Green:* 20 contiguous acres minimum				X
Comments:	*The Countryside Specific Plan is not designated for the development of executive housing as described in the NMC General Plan .*				

Specific Plan Policy Matrix

Policy		Fully Complies	Partially Complies	S.P Sec. No.	N/A
1.3.3	The Plan accommodates a mix of land uses and a diversity of housing types and parcel sizes within each "Residential Neighborhood" with each designed to create a unified and distinct character. Each neighborhood may incorporate one or more planning subareas depicted in Figure 3-7 of the SOI General Plan. Refer to Figures 3-9 and 3-10 for examples on the use of Residential Neighborhoods.	X		1 and 3	
Comments:					
1.3.4	The Plan incorporates a focal point of activity and identity within each "Residential Neighborhood" that consolidates local serving retail and services, public meeting facilities, schools, parks, common areas (for community events, farmers markets, and other celebrations), religious facilities, and other pertinent uses.	X		1,3,4 & 6	
Comments:					
1.3.5	The plan incorporates supporting recreational, educational, retail, cultural, and institutional uses within each "Residential Neighborhood" based on appropriate service standards. *To the extent feasible, these uses shall be integrated in "Neighborhood Centers"*				X
Comments:	*The Countryside Specific Plan is not designated for Neighborhood Center land uses.*				
1.3.6	The Plan includes provisions to increase residential densities and reduce block sizes adjacent to "Neighborhood Centers" and other key activity centers, as appropriate				X
Comments:	*The Countryside Specific Plan is not designated for Neighborhood Center land uses.*				
1.3.7	The Plan includes provisions for greenways for pedestrians and biking that links housing with parks, "Neighborhood Centers," amenities, and adjacent neighborhood and activity centers	X		1,3, 4 & 6	

Specific Plan Policy Matrix

Policy		Fully Complies	Partially Complies	S.P Sec. No.	N/A
Comments:					
1.3.8	The Plan establishes clearly defined "edges" and "entries" that contribute to a distinct neighborhood identity (refer to Figures 3-11, 3-12, and 3-13 of the SOI General Plan)	X		4 and 6	
Comments:					
1.4	***Housing Diversity/Quality***				
1.4.1	The Plan accommodates single and multi-family housing, parks, and open spaces in areas designated as "Residential-Low Density" by the SOI General Plan.	X		1,3,4 & 6	
Comments:					
1.4.2	The Plan provides for a variety of housing types to serve the needs of residents, including large lot, estate, executive, affordable, live / work housing.		X	1 and 3	
Comments:					
1.4.3	The Plan provides for an overall average density of 4.6 units per gross acre in areas designated as "Residential-Low Density" by the SOI General Plan Land Use Plan, within which a variety of parcel sizes and housing types area allowed. Densities may be varied throughout a planning subarea, as long as the average density is not exceeded.	X		1 and 3	
Comments:					

Specific Plan Policy Matrix

Countryside

Policy		Fully Complies	Partially Complies	S.P Sec. No.	N/A
1.4.4	The plan provides design standards emphasizing neighborhood livability, and socialization, through such elements as (*refer to Figures 3-7, 3-9 and 3-14, SOI General Plan*):			3,4, and 6	
•	Establishment of a pattern of blocks that promotes access and neighborhood activity, while maintaining safety;	X			
•	use of variable setbacks and parcel sizes to accommodate a diversity of housing unit types and respond to changing market conditions and resident needs;	X			
•	minimizing the width of streets to slow traffic and promote "intimacy," while maintaining acceptable fire protection and traffic flows;	X			
•	orientation of housing toward the street and reducing the visual and physical dominance of garages (introducing the street frontage as the "outdoor living room"); and	X			
•	use of extensively landscaped parkways, with sidewalks separated from the curb.	X			
Comments:					
1.4.5	The Plan includes standards to achieve variable residential densities and housing types along a block where appropriate (e.g., single family attached units placed adjacent to duplexes, which could be adjacent to townhomes).	X		3 and 6	
Comments:					
1.4.6	The Plan includes provisions for small clusters of multi-family housing (generally, of a maximum of 2 - 5 acres) within areas designated as "Residential-Low Density" by the SOI General Plan Land Use Plan, that are integrated within the overall pattern of residential development, avoiding large scale, segregated concentrations of high density uses (refer to Figures 3-9 and 3-10 - SOI General Plan)	X		3	

Specific Plan Policy Matrix

Policy		Fully Complies	Partially Complies	S.P Sec. No.	N/A
Comments:					
1.4.7	The plan includes standards for multi-family housing in areas designated as "Residential Low Density" by the SOI General Plan Land Use Plan to convey a high level of visual quality and distinctive low density neighborhood including, but not limited to: • modulation of building volumes, masses, and heights and articulation of elevations to convey the sense of individual units or smaller structures (precluding "big stucco boxes"); • orientation of the building elevation and use of clear visual and physical linkages to the primary street frontage; • inclusion of visually well-defined entries that promote individual identity, while maintaining adequate security; • integration of balconies and stairways as distinctive architectural elements, rather than "appendages"; • inclusion of common open space and recreational facilities that are accessible to all residents (with requirements for on-going maintenance of these by residents); • use of landscaped setbacks along primary street frontages that maintains the predominant single family neighborhood character; and • linkage of the development with adjacent sites (avoiding "walled enclaves").	X		6	
Comments:					

Specific Plan Policy Matrix

Policy		Fully Complies	Partially Complies	S.P Sec. No.	N/A
1.4.8	The proposed plan includes provisions to avoid the use of walls to separate residential areas from arterial and other high traffic volume streets by the use of expanded landscaped setbacks, frontage roads with landscaped medians, natural drainage swales, and other appropriate techniques (refer to Figure 3-13, SOI General Plan). Where used, walls shall be attractively designed and landscaped and setbacks used to promote a high level of visual quality.	X		3,4 and 6	
Comments:					
1.4.9	The Plan includes measures addressing all of the use and development restrictions as specified by Referral Areas A, B, and C, and Safety Zones I, II, and III, and of the adopted Chino Airport Comprehensive Land Use Plan. This includes prohibited land uses, interior noise levels, maximum persons per acre, avigation easements, and non-hazardous operations and materials. In addition, a noise impact notification area shall be implemented for all land uses within two miles of the Chino Airport. These measures are consistent with Federal Aviation Administration (FAA) rules, will help protect the long-term operation of the Chino Airport, and will prevent the kind of aircraft noise and other impacts created by flight patterns such as have been experienced by the City around the Ontario International Airport.				X
Comments:	*The Countryside Specific Plan is not located within a two-mile proximity to the Chino Airport.*				
1.4.10	The proposed plan includes provisions for the implementation of a Noise Impact Notification Area (NINA) and a requirement for avigation easements for all schools within two miles of the Chino Airport.				X
Comments:	*The Countryside Specific Plan is not located within a two-mile proximity to the Chino Airport.*				
1.4.11	The plan includes provisions requiring residential units to be set back from power transmission line easements in accordance with the California Department of Education's limits for locating school sites.				X

Specific Plan Policy Matrix

Policy		Fully Complies	Partially Complies	S.P Sec. No.	N/A
Comments:	*The Countryside Specific Plan does not proposed development of a school. In addition, the residential units, within the Specific Plan, will be set back an appropriate distance from the power lines.*				
1.5	***Neighborhood Centers***				
1.5.1	The proposed plan accommodates local serving commercial (food and beverage sales, small retail shops, personal services, etc.), small restaurants, community/public meeting facilities, libraries, government facilities, cultural facilities, parks, schools (refer to Policy 1.6.1 below), religious facilities, public plazas and performance spaces, and similar uses in areas designated as "Neighborhood Center."				X
Comments:	*The NMC General Plan does not designate the subarea for "Neighborhood Centers".*				
1.5.2	The plan accommodates multi-family housing and mixed use structures that incorporate housing units above ground level retail shops, offices, or community facilities, in areas designated as "Neighborhood Center" by the SOI General Plan Land Use Plan.				X
Comments:	*The NMC General Plan does not designate the subarea for "Neighborhood Centers".*				
Density/Intensity The plan provides for the following densities/intensities for Neighborhood Centers (Policies 1.5.1 to 1.5.6): 1.5.3	The Plan includes provisions insuring neighborhood centers contain 50,000 to 100,000 square feet of local serving commercial uses for each 3,500 to 4,000 residential units.				X
Comments:	*The Countryside Specific Plan is not designated for the above listed land uses.*				
1.5.4	The Plan includes provisions for the development of commercial and public uses at intensities that allow for the use of surface parking, generally at a maximum floor area ratio of 0.35:1.				X

Specific Plan Policy Matrix

Policy		Fully Complies	Partially Complies	S.P Sec. No.	N/A
Comments:	*The Countryside Specific Plan is not designated for the above listed land uses.*				
1.5.5	The Plan includes provisions for the development of multi-family housing at a maximum overall average density of 12 units per gross acre.				X
Comments:	*The NMC General Plan designates the Countryside Specific Plan for Residential Low Density (4.6 DU/AC) land use.*				
1.5.6	The Plan includes provisions for the development of mixed use structures at a maximum floor area ratio of 1.5:1.				X
Comments:	*The Countryside Specific Plan is designated for Residential Low Density (4.6 DU/AC) land use.*				

Specific Plan Policy Matrix

Policy		Fully Complies	Partially Complies	S.P Sec. No.	N/A
Design and Development Principles for Neighborhood Centers (policies 1.5.7 to 1.5.13):					X
1.5.7	Provisions insuring "Neighborhood Centers" are designed and developed as pedestrian oriented "villages" including the following policies: (refer to Figures 3-10 and 3-16 - SOI General Plan) • integration of multiple uses into a cohesive place; • use of multiple building volumes, masses, and heights and extensively articulated facades; • siting of buildings around common pedestrian areas, plazas, and public open spaces; • development of public spaces that support casual gatherings, outdoor dining and retail, entertainment, artistic exhibitions and performances, community events, and similar functions; • establishment of a continuous or semi-continuous business frontage along pedestrian spaces and design of ground elevations to be "pedestrian-friendly" (extensive windows, projecting signage, lighting, etc.); • siting of a portion of development along the primary street frontage, with parking partially or fully screened by the buildings; • development of clearly defined walkways from parking areas (paving materials, landscape, signage, etc.); and • design of buildings and sites to complement adjacent low density residential areas.				
Comments:	*The NMC General Plan does not designate the Countryside Specific Plan for "Neighborhood Centers".*				
1.5.8	The Plan includes provisions insuring integration of public uses, such as community meeting rooms and auditoriums, with commercial uses in the designated "Neighborhood Centers".				X
Comments:	*The NMC General Plan does not designate the Countryside Specific Plan for "Neighborhood Centers".*				

Specific Plan Policy Matrix

Policy		Fully Complies	Partially Complies	S.P Sec. No.	N/A
1.5.9	The Plan includes provisions insuring linkages between multi-family residential development (single family attached, townhomes, or apartments) to "Neighborhood Centers". Include design standards insuring multi-family residential developments complement the "village" character in accordance with Policy 1.4.7.				X
Comments:	*The NMC General Plan does not designate the Countryside Specific Plan for "Neighborhood Centers".*				
1.5.10	The Plan includes provisions insuring "Neighborhood Centers" are developed as a low rise environment, 1 to 2 stories, except mixed use structures that may be developed to a maximum height of 3 stories.				X
Comments:	*The NMC General Plan does not designate the Countryside Specific Plan for "Neighborhood Centers".*				
1.5.11	The Plan includes provisions to promote the consolidation of school campuses within or linked to "Neighborhood Centers" sharing common facilities such as play fields, gymnasiums, auditoriums, and other facilities, where feasible.				X
Comments:	*The NMC General Plan does not designate the Countryside Specific Plan for "Neighborhood Centers".*				
1.5.12	The Plan includes provisions to Integrate public libraries and neighborhood parks with "Neighborhood Centers" and schools.				X
Comments:	*The NMC General Plan does not designate the Countryside Specific Plan for "Neighborhood Centers".*				
1.5.13	The Plan includes provisions to link "Neighborhood Centers" with adjacent residential areas by the use of greenways, pedestrian walkways, and bicycle paths.				X
Comments:	*The Countryside Specific Plan is not designated by the NMC General Plan for the above listed land uses.*				

Specific Plan Policy Matrix

Policy		Fully Complies	Partially Complies	S.P Sec. No.	N/A
1.6 Schools					
1.6.1	The plan includes provisions to accommodate the development of school administration, classrooms, athletic facilities, and supporting uses in areas designated as "Elementary," "Middle," and "High School" in addition to those accommodated in designated "Neighborhood Centers." *The number of schools depicted on the SOI General Plan Land Use Plan are based on the use of current (1997) school standards and may vary to reflect changes in these over the SOI's development period. Locations are conceptualized and may be varied, provided that the intent of the SOI General Plan policies for consolidation with parks, other schools, and community facilities are attained.*				X
Comments:	*The Countryside Specific Plan is not designated for development of a school site.*				
1.6.2	The plan provides schools to meet resident needs in accordance with pertinent School District standards.	X		4	
Comments:					
1.6.3	The plan meets the policy to distribute schools throughout the Sphere of Influence to promote accessibility from all "Residential Neighborhoods."				X
Comments:	*The Countryside Specific Plan will be accessible to a school site adjacent to the community.*				
1.6.4	The plan includes provisions to promote the consolidation of school campuses sharing common facilities such as play fields, gymnasiums, auditoriums, and other facilities, where feasible.				X
Comments:	*The NMC General Plan does not designate the Countryside Specific Plan for a school site.*				

Specific Plan Policy Matrix

Policy		Fully Complies	Partially Complies	S.P Sec. No.	N/A
1.6.5	The plan includes provisions to integrate public schools with other community-serving uses such as parks, libraries, public meeting rooms, day-care, and similar uses (**see Figure 3-10 - SOI GPA**).				X
Comments:	*The NMC General Plan does not designate the Countryside Specific Plan for a school site.*				
1.6.6	The plan includes provisions to link the public schools with adjacent housing, parks, and other schools by a pedestrian greenways network (see **Figure 3-10 – SOI GPA**).	X		3 and 4	
Comments:	*The NMC General Plan does not designate the Countryside Specific Plan for a school site.*				
1.6.7	The Plan includes provisions requiring educational facilities to be set back from power transmission line easements in accordance with the California Department of Education's limits for locating school sites.				X
1.7	***Multi-Family Residential Corridors and Centers***				
1.7.1	The plan accommodates multi-family residential units (small lot detached, single family attached, townhomes, and apartments) in areas designated as "Residential-Medium Density" and "Residential-High Density" by the SOI General Plan Land Use Plan.				X
Comments:	*The General Plan does not designate the Countryside Specific Plan for the above listed land uses.*				
1.7.2	The plan requires the inclusion of sufficient on-site recreational amenities in higher density developments to meet resident needs.	X		3 and 6	
Comments:					

Specific Plan Policy Matrix

Policy		Fully Complies	Partially Complies	S.P Sec. No.	N/A
1.7.3	The plan encourages the inclusion of community oriented uses such as public meeting rooms, plazas/courtyards, day-care facilities, and similar uses. These may be developed as single purpose buildings or incorporated with residential uses.	X		5	
Comments:					
1.7.4	The Plan accommodates an overall average density of 12 units per gross acre in areas designated as "Residential Medium Density" and 18 units per gross acre in areas designated as "Residential-High Density" by the SOI General Plan, within which a variety of parcel sizes and housing types would be allowed. Densities may be varied throughout a planning subarea, as long as the average density is not exceeded.				X
Comments:	*The General Plan designates the Countryside Specific Plan for Residential Low-Density uses (4.6 D.U./A.C.)*				
1.7.5	The Plan includes provisions to establish visual and physical linkages among individually developed multi-family sites to create a cohesive and continuous corridor, rather than independent "islands." This may be achieved through the fronting of buildings adjacent or in immediate proximity to the street, use of a consistent landscaped setback incorporating common street trees or other vegetation, minimization of side property setbacks to achieve building continuity (a common "building wall") along the street frontage, location of all parking to the rear of street-facing buildings, use of interconnecting pedestrian walkways, and similar techniques (see **Figure 3-17 in the SOI GPA**).				X
Comments:	*The General Plan Amendment does not designate the Countryside Specific Plan for the above listed land uses.*				
1.7.6	The Plan includes standards and guidelines to promote visual interest in the design of building elevations in accordance with Policy 1.4.7 (except for the use of extensive landscaped setbacks).	X		6	
Comments:					

Specific Plan Policy Matrix

Policy		Fully Complies	Partially Complies	S.P Sec. No.	N/A
1.7.7	The Plan includes provisions to link community serving facilities in multi-family corridors with adjacent residential neighborhoods.	X		3 and 4	
Comments:					
1.7.8	The Plan includes provisions insuring sidewalks are developed in multi-family corridors as per City Standards to facilitate and be attractive for pedestrian activity.	X		4	
Comments:					
1.7.9	The Plan includes provisions requiring residential units be set back from power transmission line easements in accordance with the California Department of Education's limits for locating school sites.				X
Comments:	*The Countryside Specific Plan is not proposing the development of a school site.*				
1.8	***Town Center***				
1.8.1	The plan includes provisions for the development of retail, commercial, professional offices, entertainment, art galleries, dining establishments, hotels, and similar uses in areas designated as "Town Center" by the SOI General Plan Land Use Plan.				X
Comments:	*The General Plan does not designate the Countryside Specific Plan for "Town Center" uses.*				
1.8.2	The Plan includes provisions requiring integration of multi-family housing (townhomes and apartments) with retail, office, and other uses within the Town Center.				X
Comments:	*The General Plan does not designate the Countryside Specific Plan for "Town Center" uses.*				

Specific Plan Policy Matrix

Policy		Fully Complies	Partially Complies	S.P Sec. No.	N/A
1.8.3	The Plan includes provisions for mixed-use buildings that integrate housing with retail commercial, office, and similar uses and special housing types (e.g., artist live/work facilities and home occupations) within the Town Center.				X
Comments:	*The General Plan does not designate the Countryside Specific Plan for "Town Center" uses.*				
1.8.4	The Plan includes provisions for government office, cultural uses (libraries, museums, performance venues, etc.), religious facilities, schools, recreational facilities, multi-modal transportation hub, and similar public and quasi-public uses, within the Town Center area.				X
Comments:	*The General Plan does not designate the Countryside Specific Plan for "Town Center" uses.*				
1.8.5	The Plan includes provisions for community meeting rooms, day-care facilities, and public and private plazas, courtyards, and open spaces within the Town Center area.				X
Comments:	*The General Plan does not designate the Countryside Specific Plan for "Town Center" uses.*				
1.8.6	The Plan accommodates development within the Town Center at building heights, generally, of 1 to 3 stories and a maximum floor area ratio of 0.5, except for mixed use structures that integrate housing with retail, office, public, and other uses that may be developed up to four stories and a floor area ratio of 2.0:1.				X
Comments:	*The General Plan does not designate the Countryside Specific Plan for "Town Center" uses.*				
1.8.7	The Plan accommodates free-standing residential uses at a maximum overall average density of 18 units per gross acre.				X
Comments:	*The General Plan does not designate the Countryside Specific Plan for "Town Center" uses.*				

Specific Plan Policy Matrix

Countryside

Policy		Fully Complies	Partially Complies	S.P Sec. No.	N/A
1.8.8	The Plan includes standards to integrate development of individual parcels to create a cohesive pedestrian oriented center. The following design considerations are included (as illustrated by **Figures 3-18** and **3-19 of the SOI GPA**): • integration of multiple buildings and uses into a cohesive development pattern; • siting of buildings to create a common/semi-continuous "building wall" directly fronting sidewalks, plazas, and other open spaces—areas may be excepted to incorporate courtyards and corridors; • location of parking to the rear of street facing structures, subterranean, or in structures; • use of multiple building volumes, masses, heights, and highly articulated facades to promote visual interest and convey the sense of individual storefronts/businesses; • use of vertical setbacks above the second level to reduce visual impacts along sidewalks and street frontages; • design of the ground floor of structures along the street frontage of commercial and mixed use buildings to enhance pedestrian activity (extensive windows, clearly defined entries, modulation of facades, outdoor patios and seating, etc.) (as illustrated by **Figures 3-20, 3-21,** and **3-22 of the SOI GPA**); • integration of consistent and well-designed building and public signage; • develop sidewalks and other public spaces to support casual gatherings, outdoor dining and retail, entertainment, arts exhibitions and performances, community events, and similar functions; and • incorporate streetscape amenities along the street frontages (benches, trees, planters, decorative paving, pedestrian oriented signage and lighting, trash receptacles, fountains, information kiosks, telephones, news racks, banners, public art, and similar elements).				X
Comments:	*The General Plan does not designate the Countryside Specific Plan for "Town Center" uses.*				

Specific Plan Policy Matrix

Policy		Fully Complies	Partially Complies	S.P Sec. No.	N/A
1.8.9	The plan incorporates at least one major public plaza/square as a centerpiece of community activity and identity of sufficient size to accommodate events and celebrations, outdoor performances, community meetings, picnics, farmers markets, and similar functions.				X
Comments:	*The General Plan does not designate the Countryside Specific Plan for "Town Center" uses.*				
1.8.10	The plan includes provisions to consolidate parking facilities, with retail uses located along the street frontage.				X
1.8.11	The Plan includes standards to site and design multi-family housing to create a cohesive and continuous corridor, rather than independent "islands" in accordance with Policy 1.7.5; and promote a high quality of design in accordance with Policy 1.4.7 (except for the use of extensive landscaped setbacks).				X
Comments:	*The General Plan does not designate the Countryside Specific Plan for "Town Center" uses.*				
1.8.12	The plan includes provisions to integrate a diversity of housing types within any block rather than a singular type (e.g., duplexes, townhomes, and courtyard units).	X		3	
Comments:	*The General Plan does not designate the Countryside Specific Plan for "Town Center" uses.*				
1.8.13	The plan includes provisions to integrate public meeting facilities and other community services with retail and other high activity uses.				X
Comments:	*The NMC General Plan does not designate the Countryside Specific Plan for community facilities and retail uses.*				
1.8.14	The design of internal local streets emphasizes pedestrian activity (15' plus width sidewalks) and reduces traffic speed using such techniques as reduced width, angled parking, landscaped "pullouts"/ chokers, or traffic circles.	X		4	

Specific Plan Policy Matrix

Policy		Fully Complies	Partially Complies	S.P Sec. No.	N/A
Comments:					
1.8.15	The plan includes provisions to establish clearly defined "entries" to the Town Center, including the use of signage, art (banners, sculptures, etc.) landscape, fountains, lighting, building massing, and other techniques.				X
Comments:	*The NMC General Plan does not designate the Countryside Specific Plan for the above uses.*				
1.8.16	The plan establishes pedestrian, bicycle, greenways, and other corridors that link the Town Center with adjacent "Residential Neighborhoods" and, if developed, educational campus.				X
1.9	***Regional Centers***				
1.9.1	The plan accommodates regional serving retail commercial, professional offices, entertainment, dining, hotel/motel, conference facilities, hospitals and supporting medical offices, research laboratories, and facilities, financial institutions, sports stadiums/arenas and facilities, and similar uses.				X
Comments:	*The NMC General Plan does not designate the Countryside Specific Plan for "Regional Center" uses.*				
1.9.2	The Plan accommodates multi-family housing, mixed uses that incorporate housing and retail/offices, and live/work facilities that is integrated with other regional serving uses.				X
Comments:	*The NMC General Plan does not designate the Countryside Specific Plan for "Regional Center" uses.*				
1.9.3	The Plan encourages the inclusion of community meeting rooms, day-care, and other public facilities.	X		5	
Comments:					

Specific Plan Policy Matrix

Policy		Fully Complies	Partially Complies	S.P Sec. No.	N/A
1.9.4	The Plan accommodates buildings at a height of 1 to 3 stories, with 4 stories allowed for mixed use structures. This would accommodate a maximum floor area ratio of 0.5:1 for commercial/office uses and 2.0:1 for mixed use buildings. Sports stadium/arena, hotel/conference facilities, and other "specialty" uses may require additional height.				X
Comments:	*The NMC General Plan does not designate the Countryside Specific Plan for "Regional Center" uses.*				
1.9.5	The Plan accommodates free-standing multi-family residential uses at an overall average density of 18 units per gross acre.				X
Comments:	*The NMC General Plan designates the Countryside Specific Plan for Residential Low Density (4.6 D.U./A.C.) land use.*				

Specific Plan Policy Matrix

Countryside

Policy		Fully Complies	Partially Complies	S.P Sec. No.	N/A
1.9.6	The Plan includes provisions to integrate development of individual parcels to create a cohesive center, which considers the (see **Figure 3-16, SOI General Plan**): • development of sidewalks, plazas, and other public spaces around which individual buildings and businesses are grouped and incorporate pedestrian oriented amenities (benches, public art, fountains, pedestrian scaled lighting and signage, and similar); • inclusion of one or more public "square" to serve as a gathering place for public activity and events; • use of modulated building volumes, masses, and heights and articulated facades to create the sense of individual businesses, rather than undifferentiated "boxes"; • integration of consistent and well-designed building and public signage; • siting of a portion of buildings on the site's peripheral streets to provide identity and connectivity with adjacent uses; • inclusion of sidewalks of sufficient width to accommodate pedestrian activity and outdoor restaurants, news stands, and other uses; • opening of the street and sidewalk/plaza facing building elevations to promote visual interest and pedestrian activity (extensive windows, clearly defined entries, and so on); • extensive use of landscape to enhance the environmental character; and • design of parking structures to be visually integrated with and continue the principal design character of commercial buildings.				X
Comments:	*The NMC General Plan does not designate the Countryside Specific Plan for "Regional Center" uses.*				
1.9.8	The Plan includes provisions to link Regional Centers with surrounding residential neighborhoods and centers through the street and highway network, distinctively paved pedestrian walkways and crosswalks, common "palette" of street trees and landscape and street furniture, well designed signage, and similar elements.				X

Specific Plan Policy Matrix

Policy		Fully Complies	Partially Complies	S.P Sec. No.	N/A
Comments:	*The NMC General Plan does not designate the Countryside Specific Plan for "Regional Center" uses.*				
1.10	***Community Centers***				
1.10.1	The Plan accommodates large scale retail commercial (e.g., garden supply, furniture warehouses, discount retail, "big box," and similar uses), professional offices, entertainment, dining, hotel and conference facilities, and similar uses in areas designated as "Community Commercial" by the SOI General Plan.				X
Comments:	*The NMC General Plan does not designate the Countryside Specific Plan for "Community Center" uses.*				
1.10.2	The Plan accommodates multi-family housing and live/work facilities that is integrated with other region serving uses.				X
Comments:	*The NMC General Plan does not designate the Countryside Specific Plan for "Community Center" uses.*				
1.10.3	The plan accommodates a community center of approximately 150,000 to 225,000 square feet of commercial uses for each 9,000 to 15,000 residents.				X
Comments:	*The NMC General Plan does not designate the Countryside Specific Plan for "Community Center" uses.*				
1.10.4	The plan includes provisions limiting buildings to 1 to 2 stories and a maximum floor area ratio of 0.35:1 with surface parking.				X
Comments:	*The NMC General Plan does not designate the Countryside Specific Plan for "Community Center" uses.*				
1.10.5	The plan includes provisions to accommodate free-standing residential uses at an overall average density of 18 units per gross acre.				X

Specific Plan Policy Matrix

Policy		Fully Complies	Partially Complies	S.P Sec. No.	N/A
Comments:	*The NMC General Plan designates the Countryside Specific Plan for Residential Low Density (4.6 D.U./A.C.) land use.*				
1.10.6	The plan includes provisions to integrate development of individual parcels to create a cohesive center considering the design and development principles defined by Policy 1.9.6.				X
Comments:	*The NMC General Plan does not designate the Countryside Specific Plan for "Community Center" uses.*				
1.10.7	The plan includes provisions to site and design development of multi-family housing to convey a high level of visual quality in accordance with Policy 1.4.7.				X
Comments:	*The NMC General Plan does not designate the Countryside Specific Plan for "Community Center" uses.*				
1.10.8	The plan includes provisions to link Community Centers with surrounding residential neighborhoods and centers through the street and highway network, distinctively paved pedestrian walkways and crosswalks, common "palette" of street trees and landscape and street furniture, well designed signage, and similar elements.				X
Comments:	*The NMC General Plan does not designate the Countryside Specific Plan for "Community Center" uses.*				
1.11	***Educational Campus***				
1.11.1	The plan accommodates educational, administrative, academic, vocational, medical, research, athletic, student housing, services, cultural (library, museum, performance, etc.), and other supporting uses.				X
Comments:	*The NMC General Plan does not designate the Countryside Specific Plan for educational campus uses.*				
1.11.2	The plan includes research and educational uses that reflect the agricultural history of the Sphere of Influence and promotes water fowl habitat restoration and management.				X

Specific Plan Policy Matrix

Policy		Fully Complies	Partially Complies	S.P Sec. No.	N/A
Comments:	*The NMC General Plan does not designate the Countryside Specific Plan for educational campus uses.*				
1.11.3	The plan includes provisions for public meeting rooms, auditoriums, concert facilities, museums, libraries, and recreational facilities (e.g., sports fields) that are accessible to and serve adjacent residential neighborhoods.				X
Comments:	*The NMC General Plan does not designate the Countryside Specific Plan for educational campus uses.*				
1.11.4	The Plan includes provisions to site and design development to convey a "campus" environment including the clustering of buildings on common plazas and courtyards, linkage of all areas by walkways, and extensive use of landscape.				X
Comments:	*The NMC General Plan does not designate the Countryside Specific Plan for educational campus uses.*				
1.11.5	The plan includes provisions to site buildings and design the campus to promote continuity with the development fabric of the adjacent Town Center and business parks (e.g., continuity of a "Main Street" and overall street pattern, location of administrative offices as a visual terminus for the Town Center, continuity of greenways, etc.). Avoid the establishment of a isolated, "walled" environment.				X
Comments:	*The NMC General Plan does not designate the Countryside Specific Plan for educational campus uses.*				
1.11.6	The plan includes provisions for walkways, bicycle paths, greenways, and other elements that link the campus with surrounding uses.	X		6.26	
Comments:	*The Countryside Specific Plan is not designated for the above uses.*				
1.12	***Business and Industrial Parks***				

Specific Plan Policy Matrix

Policy		Fully Complies	Partially Complies	S.P Sec. No.	N/A
1.12.1	The plan accommodates light manufacturing, research and development, technology development, medical, entertainment facilities and production, innovative technology production, and similar primary uses.				X
Comments:	*The NMC General Plan does not designate the Countryside Specific Plan for "Business and Industrial Park" use.*				
1.12.2	The plan accommodates limited supporting uses such as retail sales, product exhibition, galleries and arts exhibition, financial institutions, restaurants, health clubs, personal services, day-care, and professional offices.				X
Comments:	*The NMC General Plan does not designate the Countryside Specific Plan for "Business and Industrial Park" use.*				
1.12.3	The plan accommodates "high impact" entertainment and commercial recreation uses that are not suitable in commercial districts due to their noise, traffic, or other characteristics that may conflict with residential or commercial uses.				X
Comments:	*The NMC General Plan does not designate the Countryside Specific Plan for "Business and Industrial Park" use.*				
1.12.4	The plan accommodates live/work facilities for artists and professionals associated with other uses in the business park.				X
Comments:	*The NMC General Plan does not designate the Countryside Specific Plan for "Business and Industrial Park" use.*				
1.12.5	The plan discourages the development of extensive warehouse development.				X
Comments:	*The NMC General Plan does not designate the Countryside Specific Plan for "Business and Industrial Park" use.*				
1.12.6	The plan includes provisions limiting building heights at 1 to 3 stories and a maximum floor area ratio of 0.4:1.				X

Specific Plan Policy Matrix

Policy		Fully Complies	Partially Complies	S.P Sec. No.	N/A
Comments:	*The NMC General Plan does not designate the Countryside Specific Plan for "Business and Industrial Park" use.*				
1.12.7	The plan includes site and design provisions to establish a cohesive and integrated district considering the following (see **Figure 3-19 of the SOI GPA**): • development of a network of pedestrian walkways and plazas around buildings sited and concentrated to connect a site with abutting properties; • location of parking to the rear of buildings fronting pedestrian plazas or in structures; inclusion of restaurants, retail shops, services, and other "high activity" uses in the ground floor of structures facing pedestrian areas; • inclusion of restaurants, retail shops, services, and other "high activity" uses in the ground floor of structures facing pedestrian areas; • inclusion of design elements that visually tie individual buildings and sites together such as walkways, trellises, arcades, landscape, signage, and lighting; and • incorporation of monuments, signs, landscape, and other elements that clearly define entry points and activity locations.				X
Comments:	*The NMC General Plan does not designate the Countryside Specific Plan for "Business and Industrial Park" use.*				
1.12.8	The plan includes site and design provisions requiring business and industrial park projects to convey visual interest and character considering: • modulation of building volumes, masses, and heights to reduce bulk; • architectural treatment of all visible elevations; • use of consistent and well-designed building and site signage; and • incorporation of extensive landscape along street frontages, common open spaces, and parking lots.				X

Specific Plan Policy Matrix

Policy		Fully Complies	Partially Complies	S.P Sec. No.	N/A
Comments:	*The NMC General Plan does not designate the Countryside Specific Plan for "Business and Industrial Park" use.*				
1.13 Lake/Water Element					
1.13.1	The plan includes provisions for a lake and/or streams for visual and recreational use that are abutted by commercial, residential, and other appropriate uses.				X
Comments:	*The Countryside Specific Plan is not designated for the above uses.*				
1.13.2	The plan includes provisions to site and design development to take advantage of lake views and access including the location of buildings to "open onto" the lake and/or streams--for example, the Town Center's public plazas and outdoor restaurants should extend to the waterfront.				X
Comments:	*The Countryside Specific Plan is not designated for the above uses by the NMC General Plan.*				
1.13.2	The plan incorporates pedestrian walkways/promenades and public parks along the lake frontage.				X
Comments:	*The Countryside Specific Plan is not designated for the above uses by the NMC General Plan.*				
1.13.3	The plan provides visual "windows" to the lake from surrounding streets and public places.				X
Comments:	*The Countryside Specific Plan is not designated for the above uses by the NMC General Plan.*				
1.13.4	The plan links residential neighborhoods adjacent to the lake by a network of pedestrian walkways, greenways, and bike paths.				X
Comments:	*The Countryside Specific Plan is not designated for the above uses by the NMC General Plan.*				

Specific Plan Policy Matrix

Policy		Fully Complies	Partially Complies	S.P Sec. No.	N/A
1.14.1	The plan includes provisions for one or more golf courses (minimum of 150 acres each) with supporting club houses, retail services, and overnight accommodations within "Residential Neighborhoods."				X
Comments:	*The Countryside Specific Plan is not designated for the above uses by the NMC General Plan.*				
1.14	***Golf Course(s)***				
1.14.2	The plan includes provisions for neighborhood-oriented facilities, such as public meeting rooms, within the club house.				X
Comments:	*The NMC General Plan does not designate the Countryside Specific Plan for "Golf Course" uses.*				
1.14.3	The plan includes provisions for executive homes and other residential uses in concert with golf courses.				X
Comments:	*The NMC General Plan does not designate the Countryside Specific Plan for "Golf Course" uses.*				
1.14.4	The plan integrates golf courses with surrounding residential neighborhoods, orienting supporting facilities and housing to the course.				X
Comments:	*The NMC General Plan does not designate the Countryside Specific Plan for "Golf Course" uses.*				
1.14.5	The plan links adjacent residential neighborhoods to the golf course by a network of pedestrian walkways, greenways, and bike paths.				X
Comments:	*The NMC General Plan does not designate the Countryside Specific Plan for "Golf Course" uses.*				

Specific Plan Policy Matrix

Policy		Fully Complies	Partially Complies	S.P Sec. No.	N/A
1.14.6 The plan incorporate ponds and streams that assist in flood control and, as appropriate, are linked to the lake.					X
Comments:	*The NMC General Plan does not designate the Countryside Specific Plan for "Golf Course" uses.*				
1.14.7 The plan provides visual "windows" to the golf course(s) from surrounding streets and public places.					X
1.15 Major Community Park - "Village Green"					
1.15.1 Require that a minimum of 160 acres be designated by pertinent subarea Specific Plans for the development of a 'Village Green" that accommodates a diversity of active and passive recreational uses (athletic fields, picnic areas, performance venues, and botanical gardens), and that these lands be dedicated for this purpose through the development approval process.					X
Comments:	*The Countryside Specific Plan is not designated by the NMC General Plan for a "Village Green.*				
1.15.2 Require that the land acquisition and development of the "Village Green" be equitably funded by all development within the Sphere of Influence.					X
Comments:	*The Countryside Specific Plan is not designated by the NMC General Plan for a "Village Green".*				
1.15.3 Allow the acreage allocated for the development of a "Village Green" to contribute to the total parks and recreational requirement of 5 acres per thousand residents.					X
Comments:	*The Countryside Specific Plan is not designated by the NMC General Plan for a "Village Green" for the above uses.*				

Specific Plan Policy Matrix

Policy		Fully Complies	Partially Complies	S.P Sec. No.	N/A
1.15.4	The plan uses the "village green" as an organizational element for the siting and design of development, such as the orientation and linkage of multi-family housing and commercial uses to the park (e.g., restaurants "opening" to the park) (see **Figure 3-17 of the SOI GPA**)				X
Comments:	*The Countryside Specific Plan is not designated by the NMC General Plan for a "Village Green" for the above uses.*				
1.15.5	The plan links residential neighborhoods adjacent to the "village green" by a network of pedestrian walkways, greenways, and bike paths.				X
Comments:	*The Countryside Specific Plan is not designated by the NMC General Plan for a "Village Green" for the above uses.*				
1.15.6	The plan incorporates ponds and streams as part of the "village green", that are linked to the lake, as appropriate.				X
Comments:	*The Countryside Specific Plan is not designated by the NMC General Plan for a "Village Green" for the above uses.*				
1.16	***Greenways and Open Spaces***				
1.16.1	The plan includes provisions for greenway corridors containing pedestrian paths, bicycle trails, and other recreational/open space amenities.	X		3,4and 6	
Comments:					
1.16.2	The plan includes an area-wide greenway network that links all residential neighborhoods, activity centers, and amenities and directly connect to and abut parks and schools as nodes along its length.	X		3, 4 and 6	
Comments:					

Specific Plan Policy Matrix

Policy		Fully Complies	Partially Complies	S.P Sec. No.	N/A
1.16.3	The plan includes provisions for joint use of SCE easement-owned corridors, storm drainage, and other infrastructure rights-of-way for greenways, where feasible and compatible with the intended primary use.	X		3,4 and 6	
Comments:					
1.16.4	The plan includes provisions for joint use of SCE fee-owned rights-of-way for greenways, where feasible and compatible with SCE's secondary land use licensing program.	X		3,4and 6	
Comments:					
1.16.5	The plan includes provisions for drainage channels to be designed as an open space amenity, maintaining them as natural open landscaped swales where feasible. When concrete channels are used, consider the development of landscaped greenways along their length.	X		3 and 4	
Comments:					
1.16.6	The plan includes provisions for drainage detention basins to accommodate passive and active recreational uses during dry periods, locating these adjacent to and extending local park uses.				X
Comments:	*The City is the entity responsible for implementing this policy.*				
1.16.7	The plan includes provisions for principal roadways including Grove Avenue, Vineyard Avenue, Archibald Avenue, Haven Avenue, Euclid Avenue, Milliken Avenue, and Edison Avenue to be designed as "parkways" with expanded right-of-ways containing landscaped medians and frontages, pedestrian paths, and other elements.	X		4	
Comments:					

Specific Plan Policy Matrix

Policy		Fully Complies	Partially Complies	S.P Sec. No.	N/A
1.16.8	The plan incorporates extensive landscaping along street frontages in "urbanized" areas.	X		4 and 7	
Comments:					
1.16.9	The plan includes design provisions for public greenways and open spaces to ensure public safety through the avoidance of physically and visually isolated spaces, maintenance of visibility and accessibility, use of lighting, and other "defensible" space concepts.	X		3 and 6	
Comments:					
1.17	***Electrical Energy Transmission Corridors***				
1.17.1	The plan includes pedestrian and bicycle trails in electrical energy transmission corridors to link neighborhoods and districts.	X		3,4 and 6	
Comments:					
1.17.2	The plan accommodates such uses as parking lots, storage, commercial recreation, nurseries, greenways/trails, and complementary and compatible uses in electrical energy transmission corridors in areas designated as "Neighborhood Centers," "Community Commercial," "Town Center," and "Industrial/Business Parks" by the SOI General Plan.				X
Comments:	*The Countryside Specific Plan is not designated for the above listed uses by the NMC General Plan.*				
1.17.3	The plan accommodates development in electrical energy transmission corridors in areas abutting the Village Green, parks, lake, and other major open space/recreational amenities of uses that promote continuity with the amenity such as extensive landscape, tree farms and nurseries, buffers, and similar uses.				X

Specific Plan Policy Matrix

Policy		Fully Complies	Partially Complies	S.P Sec. No.	N/A
Comments:	*The Countryside Specific Plan is not designated for the above listed uses by the NMC General Plan.*				
1.17.4	The plan accommodates development in electrical energy transmission corridors in areas traversing "Residential Neighborhoods" of uses that serve as transitions among neighborhoods, pedestrian and biking trails, landscaped buffers, recreational facilities, and similar uses that are feasible and compatible with Southern California Edison's secondary land use licensing program. At the corridor's intersection with arterials and collectors, consider the accommodation of uses that support the primary residential activity (e.g. parking lots for churches), which shall be designated by the Specific Plan.	X		3, 4 and 6	
Comments:					
1.17.5	The plan includes provisions for development located in electrical energy transmission corridors be designed to complement, be compatible with, and promote continuity and cohesiveness with abutting land uses. They should not be designated to create "walls" or barriers among uses.	X		3 and 6	
Comments:					
1.17.6	The Plan includes provisions encouraging Southern California Edison Company and private owners to visually improve, respectively, fee-owned and easement-owned rights-of-way that are retained for electrical transmission purposes to ensure their compatibility with abutting uses. This should emphasize the incorporation of landscape, parklands, and greenways.	X		3, 4 and 6	
Comments:					
1.18	***Phasing***				

Specific Plan Policy Matrix

Policy		Fully Complies	Partially Complies	S.P Sec. No.	N/A
1.18.1	The plan includes a phasing plan to ensure adequate supporting public services, retail, parks, schools, and other uses are in place to support residential uses. These should establish increments of residential development that "trigger" and cannot be exceeded until the construction of appropriate improvements has been initiated. Standards for schools, infrastructure, and other public services should be determined in collaboration with pertinent service agencies. Standards for local serving retail, parks, and other uses should be confirmed by the City and reflect other policies contained in this Plan.	X		7	
Comments:					
1.18.2	A fiscal impact analysis for the proposed Specific Plan has been prepared describing annual costs and revenues associated with development phasing for at least a ten year period as input to the definition of land use balance thresholds and limits.	X			
Comments:	*To be prepared by City as part of project review*				
1.18.3	Require that developers commit to the provision of supporting uses and services through Development Agreements, Conditions of Development, bonds, and other appropriate techniques.	X			
Comments:	*Agreements separate from the specific plan will be executed by the developer with the City.*				
2.1	***Agriculture***				
2.1.1	The Plan includes provisions recognizing the right of operation including the choice of cultivation procedures, crops or livestock types, crop rotation and all other functions within the traditional scope of agricultural management decisions. These rights and choices shall be exercised in a manner which is consistent with applicable environmental and resource protection policies and regulations.	X			

Specific Plan Policy Matrix

Countryside

Policy		Fully Complies	Partially Complies	S.P Sec. No.	N/A
Comments:	*Per project EIR.*				
2.1.2	Adopt and enforce the provisions of the Right-to-Farm Ordinance and the State nuisance law (California Code Subsection 3482). Such an ordinance would require nonagricultural residents be made aware of the local agricultural operations, their practices, and the potential agriculturally related impacts (noise, odor, etc.). See **Appendix A, SOI GPA for** a "Right to Farm" Ordinance example. ***City Initiated, not required for SP's***				X
Comments:	*The City of Ontario is the responsible entity for adopting and enforcing provisions of a Right to Farm Ordinance.*				
2.2.1	The plan discourages the placement of new non-agricultural land uses in such a manner that agricultural fields or parcels become isolated or difficult to economically and conveniently farm.	X		3	
Comments:					
2.2.2	The Plan encourages the infilling of development in previously urbanized areas or immediately adjacent to existing urban development as an alternative to isolated, "leapfrog" projects	X			
Comments:	*Per Ontario Ranch General Plan Amendment.*				
2.2.3	The Plan discourages the premature parcelization of large holdings which are not infill or urban perimeter properties.				X
Comments:	*The proposed Countryside Specific Plan conforms with the NMC Master Plan of development as depicted in the General Plan Land Use Policy Map.*				
2.3.1	The plan includes provisions to limit premature introduction of urban uses into farming areas that may create the potential for conflict with continued agricultural use.				X

Specific Plan Policy Matrix

Countryside

Policy		Fully Complies	Partially Complies	S.P Sec. No.	N/A
Comments:	*The proposed Countryside Specific Plan conforms with the NMC Master Plan of development as depicted in the General Plan Land Use Policy Map.*				
2.3.2	The plan includes a Transitional Roadway Plan that minimizes farm product transport/farm equipment conflicts with urban use related transport. Said plan includes the following: • existing routes essential to the transportation of farm products through remaining agricultural areas and through non-agricultural areas as needed to access regional transportation routes; • prioritize those roads that will be first to convert to primarily serving urban uses; and • roadway signage and markings to inform drivers that farm transport vehicles and machinery may be using the roads.				X
Comments:	*The Countryside Specific Plan proposes a Land Use and Circulation Plan which allows agricultural transport needs.*				
2.3.3	The plan provides measures to prevent urban runoff flooding and silting from impacting agricultural operations.	X		4	
Comments:					
2.3.4	Inform new residents and property owners that existing agricultural uses may create nuisances such as flies, odors, dust, noise, night light, and chemical spraying.	X			
Comments:	*To be included in real estate sales package*				
2.3.5	The Plan includes provisions to protect agricultural lands from trespass, theft, vandalism, roaming dogs, and comparable impacts from urban uses.	X		3	
Comments:					

Specific Plan Policy Matrix

Policy		Fully Complies	Partially Complies	S.P Sec. No.	N/A
2.4.1	Oppose regulations that impact agricultural operations unless they are justified on the basis of sound environmental concerns.				X
Comments:	*The City of Ontario is the entity responsible for review and input on the types of regulations imparking agricultural operations.*				
2.4.2	Assist farmers and agricultural land owners in their efforts to understand and abide by regulations and to process applications for permits and licenses.				X
3.1	***Housing***				
3.1.1	Provide for the development of an estimated 20,396 single family and 10,792 multi-family dwelling units to sustain sound economic development (applies to entire 8,069 acre Sphere of Influence).				X
Comments:	*The City is the entity responsible for implementing the policy above.*				
3.1.2	Ensure that the densities and characteristics of residential projects fulfill the intent of applicable land use designations.	X		3	
Comments:					
3.2.1	The plan includes provisions for infrastructure needed to support anticipated residential development and ensures the proper integration of all services.	X		5 and 7	
Comments:					
3.2.2	Maintain internal consistency among the General Plan's elements to provide the necessary services and infrastructure for urban development.				X

Specific Plan Policy Matrix

Policy		Fully Complies	Partially Complies	S.P Sec. No.	N/A
Comments:	*The City is the entity responsible for implementing the policy above.*				
3.3.1	The plan allows flexibility in the type of units developed on vacant, residentially designated properties in master-planned communities and other planned developments.	X		5	
Comments:					
3.3.2	The plan includes a mix of housing types.	X		3 and 5	
Comments:					
3.3.3	The plan encourages the development of residential uses in association with compatible nonresidential uses (i.e. mixed-use).				X
Comments:	*The Countryside Specific Plan is not designated for mixed-use development, by the NMC General Plan.*				
3.3.4	The plan provides housing opportunities for upper-income residents by designating sites in selected areas for large-lot development or sites adjacent to significant amenities.	X		3	
Comments:					
3.4.1	The plan includes comprehensive design guidelines and development standards ensuring residential design that is functional, people and pedestrian-oriented, aesthetically pleasing, and contributes to a sense of community through the sensitive arrangement of buildings, open space (public and private), and circulation (vehicular and pedestrian).	X		5 and 6	
Comments:					

Specific Plan Policy Matrix

Policy		Fully Complies	Partially Complies	S.P Sec. No.	N/A
3.5.1	The plan includes provisions to integrate development with neighborhoods in a way that minimizes adverse impacts on privacy, noise levels, and traffic.	X		3,5 and 6	
Comments:					
3.5.2	The plan includes provisions for physical design elements of development (e.g., scale, street and circulation design, architectural elements) to complement and respect that of surrounding residential neighborhoods.	X		4,5 and 6	
Comments:					
3.5.3	Where the new development's site design characteristics and standards will differ from those within an adjacent neighborhood, use design features (street trees, sidewalk siting and materials, etc.) that are common in both the neighborhoods as measures to transition from the surrounding neighborhood to the new neighborhood.	X		3 and 6	
Comments:					
3.6 & 3.7 Affordable Housing					
3.6.1	Designate sufficient vacant land with maximum densities high enough to facilitate the development of housing affordable to lower-income households.				X
Comments:	*The City is the entity responsible for implementing the policy above.*				
3.7.1	The Plan includes the provisions for affordable to very low, low, and moderate income households.	X			

Specific Plan Policy Matrix

Policy		Fully Complies	Partially Complies	S.P Sec. No.	N/A
Comments:	*The plan will accommodate housing needs of moderate income households within the community. The developers of Countryside will participate in the inclusionary housing impact fee program adopted by the City and as established in the Development Agreement executed between the City and the developer for the Plan.*				
3.7.2	The plan implements housing programs that comply with the State of California Housing and Community Development requirements, and ensures compliance and attainment of the regional housing need assessment "affordable" unit target.				X
Comments:	*The City is the entity responsible for implementing the policy above.*				
3.8	***Housing for Special Needs***				
3.8.1	The plan includes provisions for multi-family units specifically designed for the elderly located near Neighborhood Centers that provide access to transit and pedestrian access to amenities, goods, and services (i.e., recreational areas, commercial districts, and medical services).				X
Comments:	*The Countryside Specific Plan is not located proximate to a Neighborhood Center.*				
3.8.2	The plan includes provisions for rental units specifically designed for students to be located near the educational campus area.				X
Comments:	*The Countryside Specific Plan is not located near or proximate to an educational campus.*				
PART II INFRASTRUCTURE AND PUBLIC SERVICE					
5.1	***Water Sources***				
5.1.3	Require Specific Plans and large development projects to prepare a water system planning study.				X

Specific Plan Policy Matrix

Policy		Fully Complies	Partially Complies	S.P Sec. No.	N/A
Comments:	*Specific plan incorporates City Master Plan recommendations for water*				
5.1.4	Consider requiring the planning and construction of a dual pipe system to supply reclaimed water throughout the Sphere of Influence.	X		4	
Comments:					
5.2.1	Require new development to construct and dedicate water supply facilities.	X		4	
Comments:					
5.2.2	Designate, preserve, and acquire land, as necessary, for water wells and storage facilities.	X		4.2	
Comments:	*Project will participate In City's Development Impact Fee Program to construct these facilities*				
5.3.1	The Plan requires improvements to the water supply facilities necessitated by new development be borne by the new development benefiting from the improvements, either through the payment of fees, or the actual construction of the improvements.	X		4 and 7	
Comments:					
6.1	***Wastewater System and Treatment***				
6.1.1	Enable the planning for and construction of a wastewater system to support new development, as shown in **Figure 4-11 of the SOI GPA**.	X			
Comments:	*The plan will comply with the City's Master Plan requirements for sewer improvements*				

Specific Plan Policy Matrix

Policy		Fully Complies	Partially Complies	S.P Sec. No.	N/A
6.2.1	The Plan requires new developments to connect to the sewer system.	X		7	
Comments:					
6.2.2	The Plan includes provisions requiring that sewer capacity and facilities are available before building permits are issued for new development.	X		7	
Comments:					
6.3.1	The Plan includes provisions requiring the costs of improvements to the existing wastewater collection facilities necessitated by new development be borne by the new development benefiting from the improvements; either through the payment of fees, or by the actual construction of the improvements.	X		7	
Comments:					
7.1	***Storm Drainage and Flood Control***				
7.1.2	Require Specific Plan and development projects to prepare a storm drainage planning study for the affected drainage area.				X
Comments:	*Per Project EIR.*				
7.1.4	Permit the joint use of detention basins for non-intensive recreational purposes, in accordance with City policy.				X
Comments:	*The Countryside Specific Plan does not propose the use of permanent detention basins.*				

Specific Plan Policy Matrix

Policy		Fully Complies	Partially Complies	S.P Sec. No.	N/A
7.1.5	Require that the refined backbone infrastructure plan will be used in the development process to ensure that each project will construct adequate drainage facilities. A detailed drainage master plan must be in place and must have San Bernardino County Flood Control District concurrence prior to any major development approval.	X			
Comments:	*The plan will comply with the City's Master Plan of Drainage.*				
7.1.6	Strategically locate detention basins to mitigate downstream drainage concern as development occurs. Siting of these facilities will take into consideration potential impacts to flight paths of the crosswind runways of the Chino Airport. Detention basins shall be located as required to bring storm water flows to a safe and acceptable level downstream of Merrill Avenue. However, basins shall not be located within Referral Areas A and B and Safety Zones I and II around the Chino Airport so as to prevent potentially significant wildlife hazards to aircraft operations.				X
Comments:	*The Countryside Specific Plan does not propose the development of permanent detention basins.*				
7.1.7	The plan includes provisions requiring development plans to be consistent with and implement the Master Plan of drainage for the area as finally adopted.	X		4	
Comments:					
7.2.1	The Plan requires new development to control surface run-off through onsite measures.	X		4	
Comments:					
7.2.2	The Plan requires new development to construct and dedicate flood control and storm drainage facilities.	X		4	
Comments:	*In-tract to be required as mitigation EIR and TTM.*				

Specific Plan Policy Matrix

Policy		Fully Complies	Partially Complies	S.P Sec. No.	N/A
7.2.3	Designate, preserve, and acquire land, as necessary, for storm drainage and flood control facilities.	X			
Comments:	*The plan complies with the City's Master Plan of drainage*				
7.2.6	The Plan requires developers of each proposed project to submit a final drainage plan for the City Engineer's review and approval.	X			
Comments:	*To be submitted as part of the tentative tract map submittal for the project to be included in EIR.*				
7.2.8	The plan requires developers to recommend measures which ensure that all structures located within the boundaries of the Sphere of Influence, subject to flooding from 100-year storm events, are constructed on a pad of earth elevated at least one foot above 100-year flood elevations. The recommended measures must be approved, monitored, and enforced by the City Engineer.	X			
Comments:	*Per project EIR.*				
7.2.9	The Plan requires developers to provide evidence to the City Engineer that a National Pollutant Discharge Elimination System (NPDES) permit has been obtained form the State Water Resources Control Board (SWRCB) prior to moving construction equipment onto a Sphere of Influence site. Once obtained, the NPDES permit shall be retained on the construction site throughout the construction period, and a copy shall be filed with the City Engineer.	X			
Comments:	*Per approval of Tentative Tract Maps for the project.*				
7.2.10	The plan includes provisions to ensure compliance with all the terms and conditions outlined in the National Pollutant Discharge Elimination System (NPDES) permit, including the implementation of Best Management Practices (BMPs).	X			

Specific Plan Policy Matrix

Policy		Fully Complies	Partially Complies	S.P Sec. No.	N/A
Comments:	*Per approval of Tentative Tract Maps for the project.*				
7.2.11	The Plan includes provisions requiring developers to prepare a Storm Water Pollution Prevention Plan (SWPPP) for individual proposed projects prior to the issuance of grading permits. These plans shall be submitted to the City Engineer for review and comment prior to implementing any SWPPP provisions or starting any construction activity. A copy of the SWPPP shall be held by the construction contractor(s) on the construction site throughout development of each project. The City Engineer will monitor and enforce the provisions of the SWPPP.	X			
Comments:	*Per approval of Tentative Tract Maps for the project.*				
8.1	***Schools***				
8.1.2	The Plan accommodates sufficient schools to meet School District criteria as shown in **Table 4-10 of the SOI GPA**. Based on these, the Land Use Plan's buildout will necessitate an estimated 20 elementary school sites, 5 middle school sites, and 3 high school sites within the total Sphere of Influence, with the number of schools in each planning subarea indicated in **Table 3-4 of the SOI GPA**. The required number of schools to be constructed may vary due to modifications of the school district's standards to account for demographic changes, the number and types of dwelling units, resident characteristics, and other pertinent criteria.	X		5	
Comments:					
8.1.3	Locate schools within a designated Neighborhood Center to the extent feasible, as illustrated in **Figures 3-8 and 3-9 of the SOI GPA**.				X
Comments:	*The SOI-GPA does not designate the Countryside Specific Plan for Neighborhood Center uses.*				

Specific Plan Policy Matrix

Policy		Fully Complies	Partially Complies	S.P Sec. No.	N/A
8.1.4	Encourage schools to be located as neighborhood focal points, with linkage to recreational uses, pedestrian paths, and bike ways, when locating schools in a Neighborhood Center is not feasible.				X
Comments:	*The SOI-GPA does not designate the Countryside Specific Plan for Neighborhood Center uses.*				
8.1.5	Encourage the consolidation or location of school campuses adjacent to one another, thereby enabling a joint use of recreational space, library, auditoriums, and other facilities.				X
Comments:	*The SOI-GPA does not designate the Countryside Specific Plan for campus uses.*				
8.1.6	Locate schools to avoid impacts attributable to Chino Airport. To ensure efficient accessibility of schools from residential neighborhoods, work with the California Department of Transportation, Division of Aeronautics, and Department of Education to permit schools to be developed at acceptable locations within the Airport's two-mile radius.				X
Comments:	*The Countryside Specific Plan is not located within a two (2) mile radius of the Chino Airport.*				
8.1.8	Encourage the school districts to design schools so that their periphery maintains an appropriate transition with adjoining residential neighborhoods; avoiding the use of walls, fences, and landscape which establish a visual barrier.				X
Comments:	*The City is the responsible entity for implementing the above policy.*				
8.1.11	Locate preschool and day-care facilities in appropriate areas throughout the Sphere of Influence to meet the needs of a growing population. Require specific planned areas to designate sites for day-care facilities.	X		5.7.3	X
Comments:	*Per Project EIR to be circulated by the City of Ontario.*				

Specific Plan Policy Matrix

Policy		Fully Complies	Partially Complies	S.P Sec. No.	N/A
9.1 Police Protection					
9.1.3	The plan identifies appropriate sites for the construction of a police station within the neighborhood Centers, Town Center, or other activity nodes.				X
Comments:	*The Countryside Specific Plan is not located in an area designated for neighborhood centers, town center or other activity nodes.*				
9.1.4	The plan encourages consolidation of public facilities, thereby creating mini civic centers comprised of police stations, libraries, fire stations, schools, parks, and administrative offices, etc.				X
Comments:	*The Countryside Specific Plan is not designated for public facilities in the General Plan.*				
9.2.1	The plan incorporates defensible space designs. These designs should help ensure maximum visibility and security for entrances, pathways, and corridors, as well as open space (both public and private) and parking lots/structures.	X		3 and 6	
Comments:					
9.2.2	The plan includes lighting provisions providing adequate exterior illumination to facilitate security surveillance around commercial, industrial, multi-family, and public structures.				X
Comments:	*The Countryside Specific Plan does not propose development of the above listed uses by the NMC General Plan.*				
10.1 Fire Protection and Emergency Medical Service					
10.1.2	Require that a total of three fire stations be incorporated within the Neighborhood centers, Town center, or other activity nodes.				X
Comments:	*The Countryside Specific Plan is not designated for public facilities in the NMC General Plan.*				

Specific Plan Policy Matrix

Policy		Fully Complies	Partially Complies	S.P Sec. No.	N/A
10.1.3	The plan encourages the consolidation of public facilities thereby creating mini civic centers comprised of police stations, libraries, fire stations, schools, parks, and administrative offices, etc.				X
Comments:	*The Countryside Specific Plan is not designated for public facilities in the NMC General Plan.*				
11.1 Circulation					
11.1.1	The plan promotes the timely development of the backbone circulation plan, as shown in **Figure 4-14 – SOI GPA** that is phased and based on projected needs generated by the implementation of the SOIGPA Land Use Plan and the surrounding uses.	X		4 and 7	
Comments:					
11.1.2	Develop a detailed master plan to phase the backbone transportation infrastructure in a logical manner. The master plan should address coordination with each of the Specific Plan's master planning efforts and funding mechanisms including cost sharing and future credits.	X		4 and 7	
Comments:					
11.1.3	Implement hierarchy of roadways and roadway classifications, as shown in **Figure 4-15, Figure 4-16, and Figure 4-17 of the SOI GPA**, that provides for efficient movement of regional through traffic and also protects the residential neighborhoods from intrusion of through traffic.	X		4 and 7	
Comments:					
11.1.4	Reserve adequate rights-of-way for roadways to implement the hierarchy of local roads within the Sphere of Influence that is consistent with the planned land uses.	X		3 and 4	

Specific Plan Policy Matrix

Policy		Fully Complies	Partially Complies	S.P Sec. No.	N/A
Comments:					
11.1.5	The plan establishes safe and efficient truck routes that minimize exposure to noise sensitive land uses and reduce other adverse impacts to adjacent land uses, (see **Figure 4-18 – SOI GPA**.)				X
Comments:	*The Countryside Specific Plan does not have designate truck routes within its boundaries.*				
11.1.6	The plan consider the development of high-capacity, regional traffic serving facilities in the east-west and north-south direction through the Sphere of Influence, such as Edison Avenue, Euclid Avenue, Archibald Avenue, and Milliken Avenue.	X		4	
Comments:					
11.1.7	The plan identifies appropriate intelligent transportation system (ITS) elements to be incorporated into the Sphere of Influence's transportation infrastructure. The ITS elements include such technologies as changeable message signs, closed circuit television, highway advisory radio, loop detectors, fiber optic communications connections, and links to regional traffic management centers.				X
Comments:	*The City is the responsible entity for implementing the policy above.*				
11.1.8	The plan incorporates a transitional Roadway Plan that minimizes agricultural vehicle-urban vehicle conflicts, minimizes agricultural vehicles impact on non-agricultural uses, and transitions the Sphere of Influence's roadways from agricultural oriented to urban oriented.	X		4	
Comments:					

Specific Plan Policy Matrix

Policy		Fully Complies	Partially Complies	S.P Sec. No.	N/A
11.1.9	The plan augments and implements the comprehensive Citywide Traffic Model within the Sphere of Influence area to reflect the Sphere of Influence land uses and the proposed circulation system.	X			
Comments:	*Per the project EIR traffic study.*				
11.2.1	The plan maintains a level of service not to exceed LOS D for intersections during the peak hours.	X			
Comments:	*Per the project EIR traffic study*				
11.2.2	The plan maintains a peak period level of service not to exceed LOS D for collector and arterial roadways.	X			
Comments:	*Per the project EIR traffic study*				
11.2.3	The plan maintains a peak period level of service not to exceed LOS C for residential streets.	X			
Comments:	*Per the project EIR traffic study*				
11.3.1	Coordinate with Riverside County and Caltrans to ensure the timely design and implementation of the Galena Interchange on the I-15 Freeway.				X
Comments:	*The City is the responsible entity for implementing the policy above.*				
11.3.2	Coordinate with Caltrans and monitor traffic growth around freeway interchanges to determine the need, timing, and design for ramp improvements and additional right-of-way needs at the Route 60 Freeway interchanges.				X

Specific Plan Policy Matrix

Policy		Fully Complies	Partially Complies	S.P Sec. No.	N/A
Comments:	*The City is the responsible entity for implementing the policy above.*				
11.3.3 Actively support the County of San Bernardino's Congestion Management Plan.					X
Comments:	*The City is the responsible entity for implementing the policy above.*				
11.3.4 Support and implement locally applicable portions of the Regional Mobility Plan and Air Quality Management Plan.					X
Comments:	*The City is the responsible entity for implementing the policy above.*				
11.3.5 Coordinate the development of the Sphere of Influence's circulation plan with adjacent jurisdictions and regional agencies, including City of Chino to the west and Riverside County to the east and south, for proper future connectivity and service to regional trips.					X
Comments:	*The City is the responsible entity for implementing the policy above.*				
11.3.6 Specific Plans for proposed developments within the SOI shall not be approved and adopted until such time as the San Bernardino County Congestion Management Program Traffic Impact Analysis (CMP TIA) for the Sphere of Influence General Plan Amendment has been completed and approved. This CMP TIA shall identify improvement measures to mitigate impacts of the traffic generated by the Sphere of Influence on transportation systems in the City of Ontario, the unincorporated San Bernardino County and all neighboring cities, which fall within the five-mile radius (designated impact area) of the Sphere of Influence boundaries, per CMP TIA guidelines.					X
Comments:	*Approved by SANBAG.*				

Specific Plan Policy Matrix

Policy		Fully Complies	Partially Complies	S.P Sec. No.	N/A
11.3.7	The Plan includes a separate traffic and circulation studies to: • Assess internal circulation system need and to develop a traffic circulation plan for the Specific Plan area; • Identify regional transportation infrastructure connectivity requirements; and • Identify specific traffic impacts related to the buildout of the Specific Plan on the surrounding areas (outside the Specific Plan) and to identify traffic improvement measures to mitigate these impacts.	X			
Comments:	*Per project EIR traffic study*				
11.3.8	Circulate all relevant traffic and circulation studies prepared for proposed Specific Plan developments within the Sphere of Influence area to all neighboring local jurisdictions that may be potentially impacted by the traffic generated from the buildout of the Specific Plan's land uses.	X			

Policy		Fully Complies	Partially Complies	S.P Sec. No.	N/A
11.3.9	For the following arterial segments outside the Sphere of Influence: • Euclid Avenue – Riverside Drive to Philadelphia Street • Grove Avenue – Saint Andrews Street to 4th Street • Vineyard Avenue – Riverside Drive to Route 60 • Archibald Avenue - Riverside Drive to Philadelphia Street • Haven Avenue – Creekside to Route 60; Mission Boulevard to Airport Drive • Milliken Avenue – Riverside Drive to Mission Boulevard Provide additional through-traffic lanes by: • widening the roads to accommodate the ultimate number of lanes designated in the General Plan; • modifying functional classification for arterials to accommodate additional traffic lanes; • restriping; and • using parking restrictions and other measures, where feasible.		X X			
Comments:	*Per project EIR traffic study recommendations.*				
11.4.1	Require each major development phase or Specific Plan to develop a master plan of streets and conduct a comprehensive traffic impact study, as appropriate.	X		4	
Comments:	*Per project EIR.*				
11.4.2	As condition of development for each planning area, require that proper connecting facilities and capacity be provided to the regional transportation system to minimize impacts to existing roadways.	X			

Specific Plan Policy Matrix

Policy		Fully Complies	Partially Complies	S.P Sec. No.	N/A
Comments:	*Per Project EIR traffic study*				
11.4.3	Require that development within the Sphere of Influence be consistent with the provisions of the County-wide Congestion Management Program.	X			
Comments:	*Per project EIR traffic study*				
11.4.4	The plan prohibits future development from providing backout driveways onto arterial roadways.	X		4	
Comments:					
11.4.5	The plan discourages future development from providing backout driveways onto collector roadways.	X		4	
Comments:					
11.4.6	The plan considers the use of alley ways (20-feet recommended width) to add flexibility to frontage designs and assist in the creation of more pedestrian oriented front areas.	X		3 and 4	
Comments:					
11.4.7	The plan promotes development of local street patterns that create and unify neighborhoods, rather than divide them, through the following means: • local street patterns should provide access between subdivisions within a neighborhood, with the exception of through traffic which should be directed onto major and secondary arterials; and • the local street system should be logical and understandable for the user. Creation of circuitous and confusing travel paths between internal neighborhood areas and adjacent arterials should be avoided.	X		3 and 4	

Specific Plan Policy Matrix

Policy		Fully Complies	Partially Complies	S.P Sec. No.	N/A
Comments:					
11.4.8	The plan includes measures requiring developers to provide all required onsite infrastructure and contribute their proportional share to offsite improvements. (I-30, I-31, and I-32)	X		3 and 7	
Comments:					
11.4.9	The plan includes an impact fee system in order to offset the cost of transportation required by new development.	X			
Comments:	*The developer will participate in the adopted Development Impact Fee program as required.*				
11.4.10	Consider whether it is appropriate to establish a transportation benefits district.				X
Comments:	*The City is the entity responsible for implementing the policy above.*				
11.5.1	The plan includes a comprehensive Transportation Mobility Plan to improve the movement of pedestrians, bicyclists, public transit, truck and automobile, freight, passenger rail, etc., within the Sphere of Influence.				X
Comments:					
11.5.2	The plan Integrates the Transportation Mobility Plan with the Congestion Management Planning process to identify and develop necessary transportation services, and assist land use and urban design decision making.				X
Comments:	*The City is the entity responsible for implementing the policy above.*				

Specific Plan Policy Matrix

Policy		Fully Complies	Partially Complies	S.P Sec. No.	N/A
11.5.3 The plan promotes a variety of transportation modes.		X		3 and 4	
Comments:	*The City is the entity responsible for implementing the policy above.*				
11.5.4 The plan explores the possibility of developing transit centers within the appropriate Specific Plan areas such as the Town Center, educational campus, and adjacent to the Regional Centers along Milliken Avenue and Euclid Avenue.					X
Comments:	*The Countryside Specific Plan is not designated for the above listed land uses by the NMC General Plan.*				
11.5.5 Analyze cost/benefit ratios in determining future publicly financed transportation improvements.					X
Comments:	*Per City Fiscal Impact Study.*				
11.5.6 Consult and coordinate with the various transit agencies in order to bring about improved transit service to the Sphere of Influence.					X
Comments:	*The City is the entity responsible for implementing the policy above.*				
11.5.7 Through coordination with transit agencies, the plan provide transit friendly design with the objective of maximizing the potential for transit use.		X		4	
Comments:					
11.5.8 The plan includes provisions requiring development to fund transit facilities, such as transit centers, bus shelters and turnouts, where feasible.		X		4	
Comments:					

Specific Plan Policy Matrix

Policy	Fully Complies	Partially Complies	S.P Sec. No.	N/A
11.5.9 The plan includes provisions requiring that development provide for transit-friendly features such as buildings located close to streets, bus amenities, etc.	X		3 and 4	
Comments:				
11.5.10 The plan encourages the development of connections with commuter rail stations in the vicinity of the Sphere of Influence.				X
Comments: *The City is the entity responsible for implementing the policy above.*				
11.6.1 The plan encourages nonresidential developments to provide employee incentives for using alternatives to the conventional single occupant automobile (i.e., carpools, vanpools, buses, bicycles, walking, telecommuting, etc.).				X
Comments: *The Countryside Specific Plan does not include non-residential land uses as designated by the NMC General Plan.*				
11.6.2 The plan supports national, state, and regional legislation directed at encouraging the use of carpools and vanpools.	X			
Comments: *The Countryside Specific Plan is not designated for non-residential land uses in the NMC General Plan .*				
11.6.3 The plan encourages the establishment of Transportation Management Associations (TMAs) within the commercial and industrial areas of the Sphere of Influence.				X
11.6.4 The plan promotes the use of alternative transportation modes to the single occupancy vehicle within the Sphere of Influence, such as carpooling, bus and rail transit and explore the feasibility of linking such systems with other regional transportation systems.				
Comments: *The City is the entity responsible for implementing the policies above.*				

Specific Plan Policy Matrix

Policy		Fully Complies	Partially Complies	S.P Sec. No.	N/A
11.6.5 The plan promotes ridesharing through publicity and provision of information to the public.					X
Comments:	*The City is the entity responsible for implementing the policy above.*				
11.6.6 The plan encourages the preservation and development of freight and passenger/commuter rail that occur or would occur in the region.					X
Comments:	*The City is the entity responsible for implementing the policy above.*				
11.6.7 The plan encourages a telecommunications center within the planning area to reduce vehicle miles traveled.					X
Comments:	*The City is the entity responsible for implementing the policy above.*				
11.6.8 Develop a program for traffic signal coordination and synchronization for the arterial street system in coordination with and connecting to the City's signal system.		X			
Comments:	*Per the recommendations of the project EIR traffic study*				
11.7.1 The plan requires parking to be consolidated along parkways, arterials, and pertinent collectors, eliminating the number of ingress and egress points. Prime candidate locations for consolidated parking are the "Neighborhood Centers", "Town Center", "Business Parks", and "Regional Centers". (I-7 and I-10)					X
Comments:	*The Countryside Specific Plan is not designated for the above listed land uses in the GPA.*				
11.7.2 The plan requires that sufficient and secure bicycle parking be provided in all parking areas.					X
Comments:	*The Countryside Specific Plan does not propose any non-residential land uses.*				

Specific Plan Policy Matrix

Policy		Fully Complies	Partially Complies	S.P Sec. No.	N/A
11.7.3	The plan promotes sharing of off-street parking facilities.				X
Comments:	*The Countryside Specific Plan does not propose any non-residential land uses.*				
PART III AESTHETIC, CULTURAL, OPEN SPACE & RECREATIONAL RESOURCES					
12.1 Parks & Open Space					
12.1.1	Provide a minimum 509 acres of parkland consisting of a mix of mini, neighborhood, community and "village green" facilities to achieve a standard of 5 acres of parkland per 1,000 residents. The actual park acreage may vary as a result of future modifications of the City standards.	X			
Comments:	*The project developers will participate in the development impact fee program as required for park fees.*				
12.1.2	Update the Parks and Bike Trail Master Plan to provide specific criteria and guidelines for the siting, design and programming of parks and recreational facilities. Consider the following when creating the criteria for acquiring or receiving dedicated parkland: • The usability of proposed parklands and the ease of accessibility for future users; and • Balance of passive and active recreational opportunities and facilities designed to meet the existing and future needs of all user groups.				X
Comments:	*The City is the entity responsible for implementing the policy above.*				

Countryside

Policy	Fully Complies	Partially Complies	S.P Sec. No.	N/A
12.1.3 The plan incorporate a comprehensive and unified parks and recreation plan that: • identifies mini, neighborhood, and community park sites in accordance with the service standards and updated Parks and Bike Trail Master Plan criteria; • integrates neighborhood parks with Neighborhood Centers and schools (see **Figure 5-2**); • links parks by pedestrian greenway and bike trail networks (see **Figure 5-3**); • incorporates passive and active recreational uses as specified in the Parks and Bike Trail Master Plan; and • defines a park acquisition and improvement financing plan. (I-3 and I-34)	X		3	
Comments:				
12.1.4 The plan encourages: • golf course site(s) be developed in the Sphere of Influence; • school and park facilities be located in a manner that permits shared use of auditoriums, playing fields, and so on; • public facilities (auditoriums, amphitheaters, day-care centers, public meeting rooms) be integrated into park design; and • drainage channels be developed as an open space amenity. (I-3, I-7, and I-47)				X
Comments: *The Countryside Specific Plan is not designated for the above land uses within the GPA. The City will be the responsible entity for developing open space amenities within the drainage channel adjacent to the Specific Plan Area.*				
12.1.5 The plan requires Subarea 22 (Town Center) Specific Plan to locate park(s) and/or public open space along the lake, if the lake is developed.				X
Comments: *The Countryside Specific Plan is not designated for the above listed land uses in the NMC General Plan .*				

Specific Plan Policy Matrix

Policy		Fully Complies	Partially Complies	S.P Sec. No.	N/A
12.1.6	The Plan require that Subarea 16 and Subarea 17 Specific Plans identify sites for the development of a linear "village green" park. The Village Green will act as a recreational focal point serving the entire Sphere of Influence. The Village Green shall incorporate a diversity of passive and active uses including athletic fields, picnic areas, botanical gardens, museums, and performance venues.				X
Comments:	*The Countryside Specific Plan is located within Planning Subarea 5 of the NMC General Plan .*				
12.1.7	The plan require that residential neighborhoods located next to a park provide pedestrian greenway and bike trails to the park.	X		3 and 4	
Comments:					
12.1.8	The plan encourages storm drainage detention basins to be designed to accommodate passive and active recreational uses during the dry periods (see **Figure 5-4 SOI GPA**).				X
Comments:	*The Countryside Specific Plan does not propose the use of permanent detention basins.*				
12.1.9	The plan requires the use of extensive landscaping along street frontages. Landscaping elements should include tree and plant specimens currently found within the Sphere of Influence. (I-7 and I-10)	X		4, 5 and 6	
Comments:					
12.1.10	The plan requires the dedication and development of future community and neighborhood park sites before a significant proportion of the new population to be served by the park exists. (I-7 and I-10)	X		7	

Specific Plan Policy Matrix

Policy		Fully Complies	Partially Complies	S.P Sec. No.	N/A
Comments:					
12.1.11	The plan requires that new multi-family residential developments of five or more units provide recreational or open space facilities onsite and contribute appropriate fees that aid in the public development of other facilities to offset additional demands generated by their resident population. (I-7 and I-10)	X			
Comments:	*Per Conditions of Approval of Tentative Tract Maps.*				
12.1.12	The plan requires that large-scale commercial developments, such as the Town Center, Community Centers, Regional Centers, provide open space facilities within the development for passive or active recreation or contribute fees for the public development of such uses. (I-7 and I-10)				X
Comments:	*The Countryside Specific Plan is not designated for the above listed in the NMC General Plan.*				
12.1.13	The plan encourages industrial and business parks to incorporate employee recreational facilities within their developments or contribute fees for the public development of such uses. (I-7 and I-10)				X
Comments:	*The Countryside Specific Plan is not designated for the above listed in the NMC General Plan.*				
12.1.14	The plan encourages agricultural industry representatives and local university(ies) to provide educational and recreational programs that reflect the Sphere of Influence's agricultural history. (I-50)				X
Comments:	*The City is the entity responsible for implementing the policy above.*				

Specific Plan Policy Matrix

Policy	Fully Complies	Partially Complies	S.P Sec. No.	N/A
13.1.1 The plan incorporates a comprehensive network of greenways, pedestrian paths, and bike trails (see **Figures 5-3 and 5-5 – SOI GPA**), linking the Town Center, educational campus (if developed), Regional Centers, Community Commercial, Neighborhood Centers, "Village Green," neighborhood parks, and schools. (I-7 and I-10)	X		4	
Comments:				
13.1.2 Require developments to link their internal trail system with the surrounding Sphere of Influence network.	X		3 and 4	
Comments:				
13.1.3 The plan encourages infrastructure rights-of-ways or easements to be designed and developed to accommodate trails and bikeways where feasible and where compatible with the intended primary use. (I-47)	X		3 and 4	
Comments:				
13.1.4 The plan includes provisions providing for joint use of SCE easement-owned rights-of-way for trails and bikeways where feasible and compatible with the intended primary use. (I-10 and I-47)	X		3 and 4	
Comments:				
13.1.5 The plan includes provisions providing for joint use SCE's fee-owned rights-of-way for trails and bikeways where feasible and compatible with SCE's secondary land use licensing program. (I-10 and I-47)	X		3 and 4	

Specific Plan Policy Matrix

Policy		Fully Complies	Partially Complies	S.P Sec. No.	N/A
Comments:					
13.1.6	Work with the surrounding jurisdictions to ensure trail connections between the Sphere of Influence and other regional recreational destinations or amenities. (I-51)				X
Comments:	*The City is the entity responsible for implementing the policies above.*				
14.1.1	The plan includes measures to extensively landscape Euclid Avenue, Grove Avenue, Vineyard Avenue, Archibald Avenue, Milliken Avenue, and Edison Avenue by the use of "enhanced parkways" with landscaped medians and rights-of-way (see **Figure 5-3 – SOI GPA**). (I-7 and I-10)	X		4 and 6	
Comments:					
14.1.2	The plan requires that comprehensive street tree and landscape plans be established to uniquely identify parkways, neighborhoods, centers, and districts. (I-7)	X		6	
Comments:	*Per City master plan of streetscapes*				
14.1.3	The plan requires that the landscaping within the public medians and rights-of-way as well as along the private developments' street frontage is well designed and properly maintained, minimizes water usage, and maximizes visual continuity while permitting individual expression. (I-25)	X		5 and 6	
Comments:					
14.1.4	The plan requires that the individual developments transition their landscaping with the neighboring properties' landscaping, thereby enhancing visual continuity along streets. (I-10)	X		6	

Specific Plan Policy Matrix

Policy		Fully Complies	Partially Complies	S.P Sec. No.	N/A
Comments:					
14.1.5	The plan requires that view corridors be provided from public places towards the San Gabriel Mountains, where possible. (I-7)	X		3	
Comments:					
15.1	***Historic and Cultural Resources***				
15.1.1	Validate the location of pending historical resources. (I-10)	X			
Comments:	*Per project EIR cultural resources study*				
15.1.2	The plan includes provisions requiring all development projects, including infrastructure construction, to conduct Phase I surveys and resource investigations in accordance with CEQA requirements to determine if additional cultural, historic, or archaeological resources are located within their area. If the development project involves the use of federal funds, conduct the study in accordance with federal requirements. File all site records, survey reports, etc. with the San Bernardino County Museum Archaeological Information Center. (I-10)	X			
Comments:	*Per project EIR*				

Policy		Fully Complies	Partially Complies	S.P Sec. No.	N/A
15.1.3	The plan includes provisions requiring all development projects to conduct Phase II evaluation studies (for archaeological resources and standing structures in accordance with CEQA requirements) if necessitated by the Phase I studies' findings. If the development project will involve the use of federal funds, conduct the study in accordance with federal requirements. File all site records, survey reports, etc. with the San Bernardino County Museum Archaeological Information Center. (I-10)	X			
Comments:	*Per project EIR*				
15.1.4	The plan includes provisions requiring development projects to propose avoidance or preservation plans for any archaeological or historic site, as necessary. (I-10)	X			
Comments:	*Per project EIR*				
15.1.5	The plan includes provisions require new development to be compatible with adjacent archaeological sites or historical structures in terms of buffering, scale, massing, and building materials, as necessary. (I-10)	X			
Comments:	*Per project EIR*				
15.1.6	Conduct an intensive archaeological field survey under the supervision of a Society of Professional Archaeologists (S.O.P.A.) certified archaeologist for each proposed project not previously surveyed within the past ten years. A technical report following format and content guidelines proposed by the Office of Historic Preservation must be completed. (I-10)	X			
Comments:	*Per project EIR*				

Specific Plan Policy Matrix

Policy		Fully Complies	Partially Complies	S.P Sec. No.	N/A
15.1.7	The plan includes provisions requiring that each project resulting in an adverse impact on a known significant resource prepare an appropriate planning approach to reduce the impact to a level of insignificance. (I-10)	X			
Comments:	*Per project EIR mitigation measures*				
15.1.8	The plan includes provisions requiring that a qualified archaeologist be retained in order to monitor the grading, identify any cultural resources that may be exposed, complete a preliminary evaluation of the resource, and recommend appropriate resource management for the treatment of the resource. (I-10)	X			
Comments:	*Per adopted mitigation monitoring program*				
16.1	***Libraries***				
16.1.1	The plan includes provisions requiring that library site(s) be developed within the Neighborhood Centers and Town Centers, and near transit facilities, bike paths, and pedestrian paths. (I-7)				X
Comments:	*The Countryside Specific Plan is not designated for the above listed in the NMC General Plan.*				
16.1.2	The plan encourages consolidation of public facilities thereby creating "mini civic centers" comprised of police station(s), library(ies), fire stations, schools, parks, and administrative offices, etc. (I-7)				X
Comments:	*The Countryside Specific Plan is not designated for the above listed in the NMC General Plan.*				

Specific Plan Policy Matrix

Policy		Fully Complies	Partially Complies	S.P Sec. No.	N/A
16.1.3	Construct a minimum of 61,107 square feet library facilities in order to provide the estimated 101,845 Sphere of Influence residents with adequate library facilities based on the City's current standard of 0.6 square feet per resident, or as modified to reflect technology. (I-10 and I-30)				X
Comments:	*The Countryside Specific Plan is not designated for the above listed in the NMC General Plan.*				
16.1.4	The plan encourages the installation of new technology including a fiber optic network for telecommunications. (I-22)	X		4	
Comments:					
16.1.5	The plan encourages the joint use of school libraries and public library facilities. (I-47)				X
Comments:	*The Countryside Specific Plan is not designated for the above listed in the NMC General Plan.*				
PART IV NATURAL RESOURCES					
17.1	***Aggregate Resources***				
17.1.1	Identify the locations of aggregate resources and coordinate their location with the appropriate land use designations. (I-19 and I-23)	X			
Comments:	*Per project EIR*				
18.1	***Biological Resources***				

Specific Plan Policy Matrix

Policy	Fully Complies	Partially Complies	S.P Sec. No.	N/A
18.1.1 Work with and encourage the Army Corps of Engineers, Chino Basin SAPA, and County Flood Control to retain a minimum of 160 acres of surface water in the El Prado Basin. This water shall serve as the habitat mitigation for waterfowl to offset the discontinued use of State mandated dairy manure water retention basins. (I-36 and I-47)				X
Comments: *Per Project EIR.*				
18.1.2 Ensure that development projects proposed for areas that support and retain waterfowl and raptor habitat: • incorporate fences, walls, vegetative cover, or other measures to buffer waterfowl areas from the built environment; • locate and design roads and utilities in such a manner that they will not conflict or impact habitat areas; and • permit only the following uses: ✣ educational and research facilities (excluding buildings); ✣ passive (non-motorized, non-consumptive) recreation; ✣ trails on public land(s) if located outside of a undeveloped buffer zone; ✣ fish and wildlife management activities; and ✣ flood control projects where no other viable methods are available to protect the public safety. (I-7 and I-10)				X
Comments: *Per Project EIR.*				

Specific Plan Policy Matrix

Policy	Fully Complies	Partially Complies	S.P Sec. No.	N/A
18.1.3 The plan includes measures to ensure that development projects that incorporate onsite mitigation for the loss of existing waterfowl and raptor habitat: • are reviewed by a City-approved biologist who conducts an onsite assessment to determine whether the mitigation is sufficient based upon the quality, location, or size of the area to be lost; • include a Biological Assessment Report that addresses the proposed project's impact on state and federally listed and candidate plants and animals; California Department of Fish and Game Special Animals; waterfowl or raptor habitat and any other special interest species or communities identified in the General Plan Analyses of Existing Conditions and Trends Report, or those hereafter named by state or federal trustee agencies; • assess project conformance to specific habitat objectives described above; • identify mitigation measures necessary to eliminate significant adverse impacts to sensitive biological resources; and • define a program for monitoring and evaluating the effectiveness of the specified mitigation measures. (I-7 and I-10)	X			
Comments: *Per project EIR biology study*				
18.1.4 Periodically update the Biological Habitat Map (see **Figure 6-5 – SOI GPA**) and data base to maintain current information regarding waterfowl and raptor habitat. (I-6 and I-41)				X
Comments: *The City of Ontario is the entity responsible for updating the Biological Habitat Map.*				
18.1.5 The plan includes sufficient technical data to enable an adequate assessment of the potential for impacts on biological resources. Such technical data shall include species lists, habitat use, acreage of habitat, and descriptions of any vegetation. (I-7 and I-10)	X			
Comments: *Per project EIR biology study*				

Specific Plan Policy Matrix

Policy		Fully Complies	Partially Complies	S.P Sec. No.	N/A
18.1.6	The plan assesses impacts on local biological resources and recommend appropriate mitigation measures, if necessary to account for specific development characteristics or site conditions that are not adequately addressed by the Sphere of Influence General Plan Environmental Impact Report. (I-7 and I-10)	X			
18.1.7	The plan includes provisions encouraging development plans take all reasonable measures to avoid creating significant impacts. (I-7 and I-10)	X			
Comments:	*Per project EIR*				
18.1.8	The plan includes provisions encouraging development plans take all reasonable measures to avoid altering the biological integrity. Reasonable measures may include but are not limited to vegetative restoration, control of alien plants and animals, and use of landscaping buffers. (I-7 and I-10)	X			
Comments:	*Per project EIR*				
18.1.9	The plan includes provisions for enhancing the ponded areas adjacent to the flood control channel (i.e., planting native trees to serve as buffers). (I-36)	X			
Comments:	*Per project EIR*				

Specific Plan Policy Matrix

Policy		Fully Complies	Partially Complies	S.P Sec. No.	N/A
18.1.10 The plan includes provisions requiring dedicated open space easements as a condition of approval for development projects proposed adjacent to waterfowl and raptor habitat areas that are voluntarily retained in the Sphere of Influence. These open space easements shall assure that the biological habitats are buffered and protected from degradation and shall be used only for passive recreational/educational purposes. (I-7 and I-10)		X			
Comments:	*Per project EIR*				
11.3.9 Ensure that development projects located adjacent to waterfowl or raptor habitat areas that are voluntarily retained in the Sphere of Influence: • Maintain a 100-foot buffer (minimum) from the edge of the habitat on the subject property; • maintain connection to other preserved habitats, where they exist; and • dedicate open space easements to the City, homeowner associations, or other responsible party. (I-7 and I-10)		X			
Comments:	*Per project EIR*				
18.1.12 Establish an onsite "Wildlife Habitat" or Waterfowl and Raptor Conservation Area (WRCA) in the areas adjacent to the Chino Basin Flood Control Ponds located to the south of Chino Avenue, west of Archibald Avenue, north of Scaefer and east of Whispering Lakes Lane consisting of approximately 145 acres adjacent to the 85 acres of existing county-owned detention basins. (I-6). *Refer to p. 6-27, SOIGPA for complete discussion on the two approaches to establishing the WRCA.*					X
Comments:	*Per Project EIR.*				

Specific Plan Policy Matrix

Policy	Fully Complies	Partially Complies	S.P Sec. No.	N/A
18.2 Recovery of Delhi sands flower-loving fly				
18.2.1 Monitor the efforts of the Department of Fish and Wildlife to study the recovery of the Federally listed Delhi sands flower-loving fly. Assess the impacts of recovery recommendations for development in the Sphere of Influence. (I-5 and I-47)	X			
Comments: *Per Project EIR.*				
18.2.2 The City shall cooperate with the U.S. Fish and Wildlife Service in the following ways to mitigate potential impact to the DSFLF: • cooperate with USFWS to ensure, through the Specific Plan Process, that potential recovery areas are appropriately mitigated; • establish a standard for buffers for protecting DSFLF restoration areas, in cooperation with USFWS; and • work with rights-of-way owners and USFWS to explore the possibility of creating DSFLF habitat within these undeveloped strips. (I-5 and I-47)	X			
Comments: *Per Project EIR.*				
18.3 Increased public awareness of local biological resources				
18.3.1 Sponsor or co-sponsor "balanced" educational programs that: • promote awareness of local biological resources; • inform about protection and preservation programs; • foster community attitudes and behaviors that help protect local plants and wildlife; and • encourage community involvement in protection programs. (I-50)				X
Comments: *The City is the entity responsible for implementing the Policy Matrix.*				

Specific Plan Policy Matrix

Policy		Fully Complies	Partially Complies	S.P Sec. No.	N/A
PART IV HAZARDS					
19.1 Geologic and Seismic Hazards					
19.1.1	The Plan includes requirements to validate the presence of unstable soils, areas of liquefaction potential, unique geological features, and shallow water tables.	X			
Comments:	*Per Project EIR.*				
19.2.1	Identifies the location and type of utilities within the area and identifies emergency procedures in case of breaks, rupture, or other disruption.	X			
Comments:	*Per Project EIR.*				
19.2.2	Identifies the location and type of utilities within the area and identify emergency procedures in case of breaks, rupture, other disruption.	X			
Comments:	*Per Project EIR.*				
19.3.1	Determine portions of the Sphere of Influence are subject to subsidence.	X			
Comments:	*Per Project EIR.*				
19.3.2	Update planning (including setbacks requirements), building (including design considerations), grading, and engineering requirements, as necessary, to protect life and property located near potential subsidence and fissure zones.				X
Comments:					

Specific Plan Policy Matrix

Policy		Fully Complies	Partially Complies	S.P Sec. No.	N/A
20.1 Protection from Fire Hazards					
20.1.1	Requires two viable points of ingress and egress from development projects.	X		3 and 4	
Comments:					
20.2.1	The Plan includes procedures to ensure that manure storage practices are not conducive to the generation of fires due to spontaneous combustion.	X			
Comments:	*Per Project EIR.*				
21.1 Dust, Wind and Blow Sand					
21.1.1	The Plan requires that structures be sited and designed to prevent adverse funneling of wind onsite and on adjacent properties.	X			
Comments:	*Per Project EIR.*				
21.2.1	The Plan requires provisions to construction for adherence to Soil Erosion Control Area or City-mandated dust control programs.	X			
Comments:	*Per Project EIR*				
21.2.2	The Plan requires that technical information and mitigation methods examples, regarding wind blown sand, available to the general public.	X			
Comments:	*Per Project EIR.*				

Specific Plan Policy Matrix

Policy		Fully Complies	Partially Complies	S.P Sec. No.	N/A
21.2.3	The Plan provides provisions to coordinate with other jurisdictions to maximize wind blown sand control planning.	X			
Comments:	*Per Project EIR.*				
22.1 Soils					
22.1.1	The Plan requires that geologic deposit technical information, erosion potential identification methods, and erosion control examples are made available to developers.	X			
Comments:	*Per Project EIR.*				
22.1.2	The Plan requires that soils engineering problem information, identification methods, and mitigation method examples are made available to developers.	X			
Comments:	*Per Project EIR.*				
22.1.3	The Plan includes provisions requiring proposed development projects to determine if the project would be located in or near areas with significant erosion potential or soil engineering problems. Require proposed project applications to include a detailed discussion regarding the types of soil and locations, erosion potential or soil engineering problems, and erosion control plans. Mitigation plans must address methods to be used during all phases of project development, implementation, and operation.	X			
Comments:	*Per Project EIR.*				
22.1.4	The Plan requires establishment and implementation of a procedure to be used to evaluate the suitability of developer proposed erosion control methods.	X			

Specific Plan Policy Matrix

Policy		Fully Complies	Partially Complies	S.P Sec. No.	N/A
Comments:	*Per Project EIR.*				
22.1.5	The Plan includes provisions requiring development applicants to certify that all deleterious materials, particularly organic residue from dairy, farming, or agricultural activity, have been removed, properly disposed, and will not impact the development during the project's life.	X			
Comments:	*Per Project EIR.*				
22.1.6	The Plan requires creation (pulled together from existing materials) of a Grading and Geotechnical Investigation Standards manual that will be available to developers and consultants in order to ensure the minimum proper soils engineering and engineering geologic study for all sites where grading will occur. Together these standards and policies should effectively mandate proper studies before development approval, in which grading, foundations, and slope stability would be analyzed and any potential hazards identified. Mitigation of the potential hazards would occur through the proper application of recommendations arising from these studies. Topics shall include but not necessarily be limited to soils engineering and foundations, slope stability, erosion, liquefaction/dynamic settlement, shallow groundwater, and fault location/activity. This manual shall be available at the permit stage prior to initial feasibility and design studies in order to enhance (streamline) the development review and environmental review processes.	X			
Comments:	*Per Project EIR.*				
22.2.1	Determine if the manure stockpiles have the potential to create a nuisance, structural, or groundwater contamination problems. If so, require proper mitigation.	X			
Comments:	*Per Project EIR.*				
23.1	***Hazardous Materials & Waste***				

Specific Plan Policy Matrix

Policy		Fully Complies	Partially Complies	S.P Sec. No.	N/A
23.1.1	Require phase I Environmental Assessments for the presence of hazardous materials prior to the demolition of any buildings or the construction of new development on any properties within the Sphere of Influence. If hazardous materials are found, implement measures for their safe removal or containment, meeting applicable regulatory standards, prior to demolition of affected structures and/or construction on the affected areas.	X			
Comments:	*Phase I study completed by developer.*				
23.1.3	Require projects to comply with policies set forth in the City of Ontario General Plan regarding the handling, transporting, treating generating and storage of hazardous materials.	X			
Comments:	*Per Project EIR.*				
24.1	***Noise***				
24.1.1	Monitor and update available data regarding the community's existing and projected ambient and stationary noise levels as show on **Figures 7-4 and 7-6 of the SOI GPA.**				X
Comments:	*The City is the entity responsible for implementing the policy above.*				
24.2.1	Site housing, health care facilities, schools, libraries, religious facilities, and other "noise sensitive" land uses in areas where existing or future noise levels are below an Ldn of 60 (dB(A) exterior and an Ldn of 45 dB(A) interior limits.				X
Comments:	*The City is the entity responsible for implementing the policy above.*				
24.2.2	The Plan permits the locations of commercial, industrial, and recreational uses in areas where the ambient noise levels exceed an Ldn of 60 dB(A), if they area able to reduce the interior noise levels to within the 45 dB(A) Ldn level.	X			

Specific Plan Policy Matrix

Policy		Fully Complies	Partially Complies	S.P Sec. No.	N/A
Comments:	*Per project EIR noise study*				
24.2.3	The Plan requires that • Dining and other high noise-generating entertainment uses in commercial areas are not located directly adjacent to any residences, schools, health-care facilities, or other noise sensitive" land uses; and • The entertainment and restaurant/bar uses' outdoor dining areas, waiting areas, entries, and kitchens are located in such a manner that the noise levels emanating from these uses are not discernible from ambient noise levels at a distance of fifty (50) feet from the establishment in which it is being conducted or within ten (10) feet of any residence (whichever is more restrictive).				X
Comments:	*The Countryside Specific Plan does not propose the above land uses, pursuant to the NMC General Plan.*				
24.2.4	The Plan requires that the facilities for active recreational uses that are likely to draw cheering crowds, elicit loud play, or have amplified game announcements (i.e., stadiums, soccer fields, tennis courts, basketball courts, etc) be located within the park's interior and away from surrounding residential and "noise sensitive" uses.				X
Comments:	*The Countryside Specific Plan does not propose the above land uses, pursuant to the NMC General Plan.*				

Policy		Fully Complies	Partially Complies	S.P Sec. No.	N/A
24.2.5 The Plan requires educational, recreational, commercial, and industrial land uses (including educational campuses, parks, stadiums, and public event facilities) be designed in such a manner that: • Locate and orient vehicle access points away from residential and/or noise sensitive parcels. • Locate loading and shipping facilities away from adjacent noise sensitive uses; • Incorporate structural building materials that mitigate sound transmission; • Minimize the use of outside speakers and amplifiers; • Configure interior spaces to minimize sound amplification and transmission; and • Incorporate fences, walls, landscaping and other noise buffers and barriers between incompatible uses, as appropriate.					X
Comments:	*The Countryside Specific Plan does not propose the above land uses pursuant to the NMC General Plan.*				
24.2.6 The Plan requires mixed-use buildings: • Be constructed soundly to prevent adverse noise transmission between differing uses or tenants located in the same commercial structure and individual dwelling units in multi-family residential structures; and • Designed for concurrent commercial and residential and uses to minimize to the greatest degree practicable (through design and construction techniques) the transfer or transmission of noise and vibration from the commercial land use to the residential land use,					X
Comments:	*The Countryside Specific Plan does not propose the above land uses.*				

Specific Plan Policy Matrix

Countryside

Policy	Fully Complies	Partially Complies	S.P Sec. No.	N/A
24.2.7 The Plan requires that, prior to the issuance of grading permits, an Acoustical Analysis Report be submitted to the City Engineer by the project developer. The report shall: • Describe the cumulative effect of road noise on surrounding land uses and recommend mitigation measures; • describe in detail the interior and exterior noise levels for residential uses on the site and the specific design and mitigation features to ensure compliance with the City's noise criteria of 65 dB(A) CNEL for outdoor living areas and 45dB(A) CNEL in habitable rooms; • specify the noise barriers' height, location, and types capable of achieving the desired mitigation affect; and • identify those residential lots that may require mechanical ventilation to achieve interior noise standards. When the operable doors and windows are open for homes facing these roadways, the interior 45 dB(A) CNEL interior noise limit for these units may be exceeded. Therefore, a "windows closed" condition may be required for these units. Any proposed mechanical ventilation must meet the requirements of the Uniform Building Code (UBC) standard. It should be noted that the windows facing some roadways may be openable windows, but the homeowners would have the option to close the windows and still obtain adequate ventilation through the use of a mechanical ventilation system. This mechanical ventilation system shall supply two air changes per hour to each habitable room, including 20 percent (one-fifth) fresh make-up air obtained directly form the outdoors. The fresh air inlet duct shall be of sound attenuating construction and shall consist of a minimum of ten feet of straight or curved duct or six feet plus one sharp 90 degree bend. The City Engineer shall ensure that the Acoustical Analysis Report identifies any requirements for mechanical ventilation for individual onsite residential units. (I-7 and I-10)	X			
Comments:	*Per project EIR Noise Study.*			

Specific Plan Policy Matrix

Policy		Fully Complies	Partially Complies	S.P Sec. No.	N/A
24.2.8	The Plan requires that all prospective owners and occupants of residential units be formally notified prior to purchase, lease, or rental, that certain units (without windows and doors closed), and outdoor areas could be subject to noise levels above City standards for residential uses. Such notification shall be in language approved by the City Planning Department, and shall be formalized in written Covenants, Conditions, and Restrictions (CC&Rs) recorded on the title of each residential lot in the project. In addition, each advertisement, solicitation, and sales brochure or other literature regarding the project shall contain the approved notification language. (I-7 and I-10)				X
Comments:	*Per Project EIR.*				
24.2.9	The Plan limits construction in the Sphere of Influence to the hours of 7:00 AM to 7:00 PM Monday through Saturday, and prohibited on Sundays and Federal holidays. (I-7 and I-10)	X			
Comments:	*Per City noise ordinance.*				
24.2.10	The Plan requires all project construction vehicles or equipment, fixed or mobile, be equipped with properly operating and maintained muffler. (I-7 and I-10)	X			
Comments:	*Per City noise ordinance.*				
24.2.11	The Plan requires that stockpiling and/or vehicle staging areas be located as far as practical from existing residential units on and off the Specific Plan Area. (I-7 and I-10)	X			
Comments:	*Per City requirements.*				
24.2.12	The Plan requires to, whenever feasible, schedule the noisiest construction operations to occur together to avoid continuing periods of the greatest annoyance. (I-7 and I-10)	X			

Specific Plan Policy Matrix

Countryside

Policy	Fully Complies	Partially Complies	S.P Sec. No.	N/A
25.1 Air Quality				
25.1.1 Continue to enforce the following: • During all construction activities, construction contractors shall use low emission mobile construction equipment where feasible to reduce the release of undesirable emissions. • During all construction activities, construction contractors shall encourage rideshare and transit programs for project construction personnel to reduce automobile emission. • During all grading and site disturbance activities, construction contractors shall water active sites at least twice a day, and clean construction equipment in the morning and/or evening to reduce particulate emissions and fugitive dust. • During all construction activities, construction contractors shall, as necessary, wash truck tires leaving the site to reduce the amount of particulate matter transferred to paved streets as required by SCAQMD Rule 403. • During all construction activities, construction contractors shall sweep on and offsite streets if silt is carried to adjacent public thoroughfares, as determined by the City Engineer to reduce the amount of particulate matter on public streets. • During all construction activities, construction contractors shall limit traffic speeds on all unpaved road surfaces to 15 miles per hour or less to reduce fugitive dust. • During grading and all site disturbance activities, at the discretion of the City Planner, construction contractors shall suspend grading operations during first and second stage smog alerts to reduce fugitive dust. • During grading and all site disturbance activities, at the discretion of the City Planner, construction contractors shall suspend all grading operations when wind speeds (including instantaneous gusts) exceed 25 miles per hour to reduce fugitive dust. • During all construction activities, the construction contractors shall maintain construction equipment engines by keeping them tuned.	X			

Policy	Fully Complies	Partially Complies	S.P Sec. No.	N/A
• During all construction activities, the construction contractors shall use low sulfur fuel for stationary construction equipment as required by AQMD Rules 431.1 and 431.2 to reduce the release of undesirable emissions. • During all construction activities, the construction contractors shall use existing onsite electrical power sources to the maximum extent practicable. Where such power is not available, the Contractor shall use clean fuel generators during the early stages of construction to minimize or eliminate the use of portable generators and reduce the release of undesirable emissions. • During all construction activities, the construction contractors shall use low emission, on site stationary equipment (e.g., clean fuels) to the maximum extent practicable to reduce emissions, as determined by the City Engineer. • During all construction activities, the construction contractors, in conjunction with the City Engineer, shall locate construction parking to minimize traffic interference on local roads. • During all construction activities, the construction contractors shall ensure that all trucks hauling dirt, sand, soil, or other loose materials are covered or should maintain at least two feet of freeboard (i.e., minimum vertical distance between top of the load and the top of the trailer) in accordance with the requirements of the California Vehicle Code Section 23114 to reduce spilling of material on area roads. (I-14)				
Comments:	*To included in project mitigations and/or conditions of approval on the tentative tract maps.*			

Specific Plan Policy Matrix
