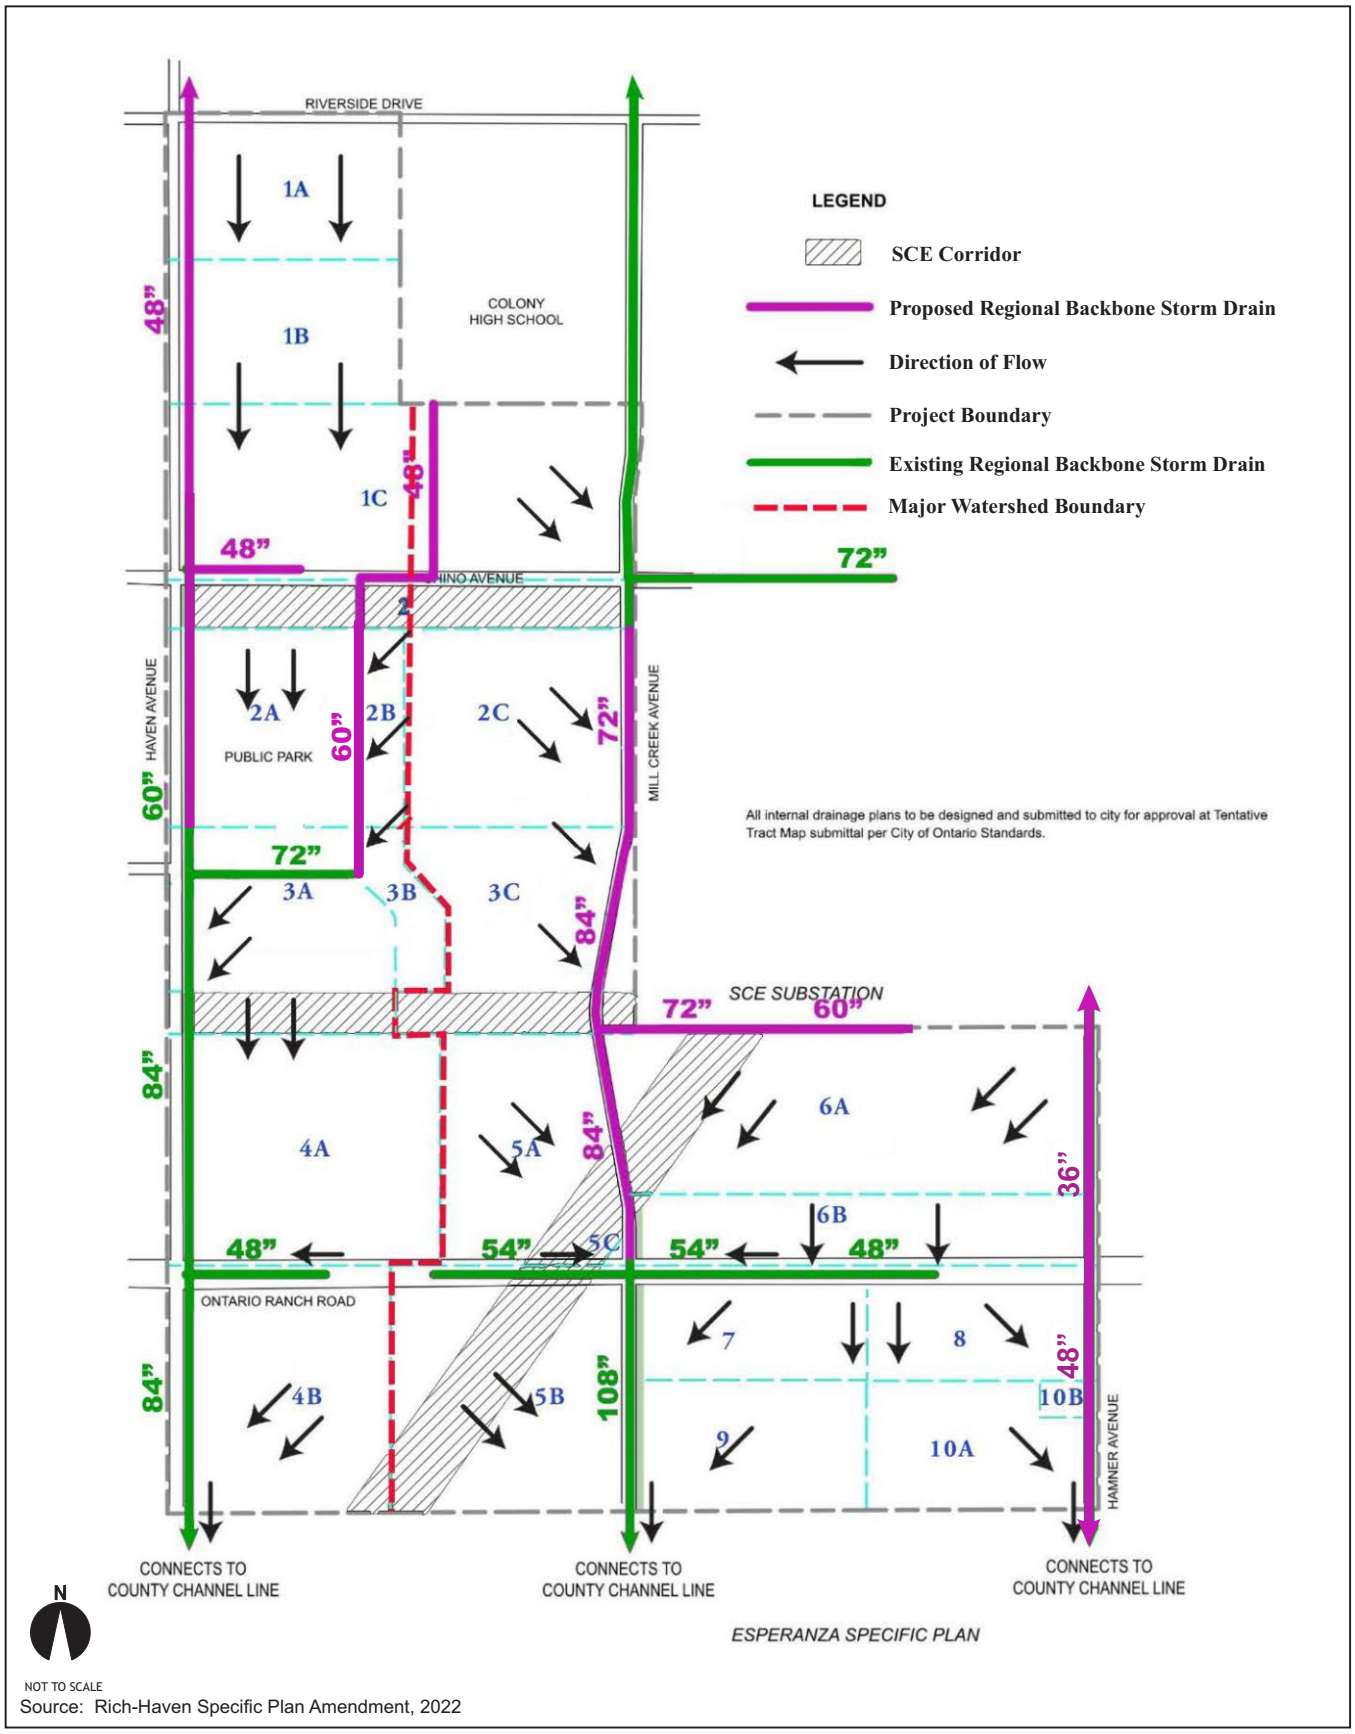
4.8.2.5 Project Stormwater Management System Improvements

The Project backbone storm drain system is illustrated at Figure 4.8-4. Ultimate sizing and alignment of storm drains within the Project site would be subject to review and approval by the City. See also: 2022 Specific Plan Amendment, Section 4, *Infrastructure and Services*. As concluded in the Project Hydrology Report, the Project would also be required to construct on-site stormwater detention facilities to ensure that capacities of receiving MPD storm drains are not exceeded. Please refer to Section 4.8.5, *Potential Impacts and Mitigation Measures.*



4.8.3 HYDROLOGY/WATER QUALITY POLICIES AND REGULATIONS

Applicable federal, state, and local policies and regulations that act to reduce potential hydrologic impacts and/or act to protect and preserve water quality are summarized below.

Source: City of Ontario Master Plan of Drainage

Figure 4.8-3
Planned Backbone Storm Drains

Source: Rich-Haven Specific Plan Amendment, 2022

Figure 4.8-4
Project Backbone Storm Drain System

4.8.3.1 Federal Water Pollution Control Act, Federal Clean Water Act (CWA)

The principal law governing pollution of the nation's surface waters is the Federal Water Pollution Control Act, or Clean Water Act (CWA), which was substantially revised by amendments in 1972 that created the bulk of the current statutory scheme. The CWA requires states to adopt water quality standards. To achieve its objectives, the CWA is based on the concept that all discharges into the nation's waters are unlawful, unless specifically authorized by a permit. The CWA states that discharge of pollutants into waters of the United States from any point source is unlawful unless the discharge complies with the National Pollution Discharge Elimination System (NPDES) permit.

The NPDES is a national program under Section 402 of the CWA. The CWA establishes the framework for regulating municipal and industrial (point sources) storm water discharges under the NPDES program. In California, the NPDES program is administered through the nine Regional Water Quality Control Boards, including the Santa Ana Regional Water Quality Control Board (SARWQCB).

Locally, the SARWQCB determines the City of Ontario's compliance with the water quality requirements of the CWA. The Board has adopted a Water Quality Control Plan for the Santa Ana Region (Basin Plan), which is discussed in greater detail subsequently within this Section.

Non-point pollution sources are also regulated by the SARWQCB through the General Construction Activity Storm Water NPDES permits, which are issued for storm water discharges. Construction activities subject to this general permit include clearing, grading, and disturbances to the ground such as stockpiling or excavation that result in soil disturbances. Storm water pollution prevention plans (SWPPPs) are required as part of the construction NPDES permitting process. SWPPPs typically include both structural and non-structural Best Management Practices (BMPs) to reduce water quality impacts.

4.8.3.2 State of California and San Bernardino County

At the federal level, the Clean Water Act allows the Environmental Protection Agency (EPA) to delegate its NPDES system permitting authority to states with an approved regulatory program. The Clean Water Act authorizes discharge of pollutants into waters of the State by issuance of NPDES permits. An NPDES permit has been issued by the California Regional Water Quality Control Board to San Bernardino County and local agencies. The City of Ontario is one of many cities included as a "co-permittee" in the NPDES permit issued to the County. The regulated entities must obtain coverage under an NPDES storm water permit and implement construction storm water pollution prevention plans (SWPPPs), and operational Water Quality Management Plans (WQMPs), both using best management practices (BMPs) that effectively reduce or prevent the discharge of pollutants into receiving waters.

The NPDES permit imposes various requirements of the discharger. Provided the discharger complies with such requirements, the discharger is considered compliant with the CWA and the Permit. Most requirements imposed by the Permit comprise BMPs, which are construction and operational discharge control practices and mechanisms deemed to comply with the CWA requirements.

Storm Water Pollution Prevention Plan (SWPPP) Required

In September 2009, the State Water Resources Control Board (SWRCB) issued an NPDES General Permit for the discharge of storm water associated with Construction Activities. Federal regulations promulgated by USEPA (40 CFR Parts, 9, 122, 123, and 124) expanded the NPDES storm water program to include storm water discharges from municipal separate storm sewer systems (MS4s) and construction sites that were smaller than those previously included in the program. The SWRCB issued a NPDES General Permit for the discharge of storm water associated with construction activities. The existing state NPDES Permit (Order No. 2009-0009-DWQ, General Permit No. CAS000002, Permit) addresses storm water discharges associated with construction activities. The Permit applies to all of California, which is inclusive of the City of Ontario and the Project site.

Requirements of this Permit include a mandate that all construction projects that disturb one acre or more of land area, shall obtain coverage under the statewide General Construction permit, obtain a Waste Discharger Identification Number and develop and implement a SWPPP. Under NPDES General Permit Section XIV, the SWPPP shall address these objectives: all pollutant sources shall be identified; BMPs shall be implemented to reduce or eliminate pollutants in storm water discharges and authorized non-storm water discharges from the construction site during construction; and a maintenance schedule for BMPs installed during construction shall be implemented. BMPs shall be described for control of discharges from waste handling and disposal areas and methods of on-site storage and disposal of construction materials and construction waste.

An effective combination of erosion and sediment control on all disturbed areas during the rainy season must be implemented. The SWPPP shall describe the erosion control practices. The SWPPP shall describe the BMPs to reduce pollutants in storm water discharges after Project construction. The beneficial uses of the receiving waters are protected through implementation of these BMPs.

Water Quality Management Plan (WQMP) Required

Consistent with provisions of the County's Urban Runoff (NPDES) Permit, the Project is also required to develop and implement a post-construction Water Quality Management Plan (WQMP) addressing potential operational storm water pollutant discharges over the life of the Project.

The WQMP requirements are articulated in the County's Urban Runoff (NPDES) Permit, and include such Low Impact Development (LID) measures as retention/infiltration basins, infiltration trenches/swales, pervious pavement, vegetated swales, drywells, underground storage, biotreatment and biofiltration, roof runoff controls, recessed grading in all landscaped areas, education programs, and maintenance practices. The NPDES permitting program also includes measures to reduce the release of pollutants such as sediment, construction materials, or accidental spillage of polluting materials

during construction. Consistent with provisions of the County's NPDES Permit, the City of Ontario requires implementation of development-specific SWPPPs and incorporation of BMPs that reduce storm water and urban runoff pollutant discharges to the waters of Southern California.

SWPPP Components

Typical SWPPP elements include:

- Introduction and Purpose
- Compliance Requirements and Certifications
- Facility Information/Pollution Prevention Team Members
- Site Map
- List of Significant Materials
- Potential Storm Water Pollutants and Sources
- Best Management Practices
- Summary of Pollutants, Sources, and BMPs
- Annual Comprehensive Site Evaluation
- Definitions
- State Notice of Intent Form and Instructions

SWPPP BMPs incorporated in the Project would likely include, but not be limited to:

Construction BMPs

- Silt Fences
- Check Dams
- Gravel Bag Berms and Checkdams in concentrated flow lines
- Street Sweeping and Vacuuming
- Storm Drain Inlet Protection
- Wind Erosion Control
- Stabilized Construction Entrance/Exit
- Entrance/Outlet Tire Wash

- Scheduling construction work around inclement weather
- Preservation of Existing Vegetation (wherever possible)
- Application of Soil Binders and Hydromulches, before forecasted storms
- Construction of Earth Berms and Dikes

Contingent on final designs of proposed uses within the Project site, the range of WQMP incorporated BMPs would likely include, but not be limited to:

Non-Structural BMPs

- Tenant Education
- Activity Restrictions
- Common Area Landscape Management
- Catch Basin Inspection
- Common Area Litter Control
- Private Street/Lot Sweeping
- Housekeeping of Loading Docks
- Employee Training
- BMP Maintenance

Structural BMPs

- Infiltration and Biofiltration Basins, Trenches, Swales
- Pervious Pavement
- Underground retention/infiltration storage facilities
- Control of Impervious Runoff
- Common Area Efficient Irrigation
- Common Area Runoff-Minimizing Landscape
- Wash Water Controls for Food Preparation Areas
- Covered Trash Container Areas
- Self-contained Areas for Washing/Steam Cleaning/Repair/Material Processing
- Outdoor Storage
- Energy Dissipators

- Catch Basin Stenciling
- Inlet Trash Racks

The Project would implement and comply with State of California and San Bernardino County water quality protection policies and mandates.

4.8.3.3 Porter-Cologne Water Quality Act

Section 303 of the federal Clean Water Act and the State Porter-Cologne Water Quality Act establish water quality objectives for ground and surface waters in the State. Protection and maintenance of surface water quality is the combined responsibility of the Regional Water Quality Control Board (RWQCB), water supply and wastewater management agencies, and City and County governments.

The RWQCB has purview over point and non-point sources of pollution. Point source water pollutants consist of controlled wastewater releases commonly generated by activities that use water to collect pollutants and transport them from the processing facility. When such wastewater discharges are proposed, the applicant must obtain a set of Waste Discharge Requirements from the RWQCB that control water pollution to a non-significant level from such point sources.

Non-point sources of water pollution consist of surface runoff from a site or area during or following a storm where the source of pollution cannot be traced to a specific location. Typical non-point water pollution sources consist of agricultural fields with sediment and fertilizers, construction sites with sediment and debris, and roads with oil, tire particles, and debris common to roads.

4.8.3.4 Santa Ana Regional Water Quality Control Board

Water Quality Control Plan (Basin Plan) for the Santa Ana Region

The Basin Plan describes existing water quality of conditions and establishes water quality goals and policies. The Basin Plan is also the basis for the Regional Board's

regulatory programs. The Basin Plan establishes water quality standards for all the ground and surface waters of the region. The term "water quality standards," as used in the federal Clean Water Act, includes both the beneficial uses of specific water bodies and the levels of quality which must be met and maintained to protect those uses. The Basin Plan includes an implementation plan describing the actions by the Regional Board and others that are necessary to achieve and maintain target water quality standards.

The primary goal of the Santa Ana Basin Plan is to protect the public health and welfare, while maintaining or enhancing water quality potential beneficial uses of the water. The Basin Plan reflects amendments approved by the State Water Resources Control Board, the California Office of Administrative Law, and/or the U.S. Environmental Protection Agency through 2005. The Basin Plan in its entirety can be reviewed at: http://www.waterboards.ca.gov/rwqcb8/water_issues/programs/basin_plan/index.shtml. The Project would be required to implement and comply with SARWQCB water quality protection policies and mandates.

4.8.3.5 City of Ontario

General Plan Goals and Policies

TOP Policy Plan, Environmental Resources Element and Safety Element establish Goals and Policies addressing hydrologic and water quality issues and concerns. Goals and policies implemented by the City support avoidance of flood hazards, protection against potential flooding impacts, establishment and maintenance of safe and efficient storm water management systems, and protection and maintenance of water quality.

City Municipal Code

The City of Ontario Flood Damage Prevention Program (FDPP) is codified at Ontario Municipal Code, Title 8, Chapter 13. The FDPP applies to all areas of special flood hazards, areas of flood-related erosion hazards and areas of mudflow hazards within the City. The FDPP includes standards for construction, for utilities, subdivisions,

manufactured homes, and floodways. Construction standards include requirements for anchoring, floodproofing, and minimum elevations of floors.

4.8.4 STANDARDS OF SIGNIFICANCE

Consistent with the standards of significance outlined in the *CEQA Guidelines*, hydrology/water quality impacts would be considered potentially significant if the Project would:

- Violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or ground water quality.

- Substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin.

- Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river, or through the addition of impervious surfaces, in a manner which would:

    - result in substantial erosion or siltation on- or off-site;

    - substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or offsite;

    - create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff; or

    - impede or redirect flood flows.

- Result in release of pollutants due to project inundation.

- Conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan.

4.8.5 POTENTIAL IMPACTS AND MITIGATION MEASURES

4.8.5.1 Introduction

The following discussions focus on topical areas and issues where it has been determined, pursuant to the EIR Initial Study/NOP processes, that the Project may result in or cause potentially significant hydrology/water quality impacts. Of the CEQA threshold considerations identified above at Section 4.8.4, and as substantiated in the Initial Study (EIR Appendix A), the Project's potential impacts under the following topics are determined to be less-than-significant, and are not further substantively discussed here:

- Potential to substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin.

- Potential to substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river, or through the addition of impervious surfaces, in a manner which would result in substantial erosion or siltation on- or off-site.[2]

All other CEQA topics concerning the Project's potential impacts to hydrology/water quality are discussed below. Please also refer to Initial Study Checklist Item X., *Hydrology and Water Quality*.

[2] Please refer also to related discussions presented at EIR Section 4.9, *Geology and Soils*.

4.8.5.2 Impact Statements

Potential Impact HYD-1: *Violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or ground water quality.*

Impact Analysis:

Project SWPPPs and Compliance with Regulatory Requirements Address Construction-Source Water Quality Impacts

During site preparation activities prior to construction, existing groundcover will be removed from the site, exposing the Project area to increased wind and water erosion potentials. Further, construction site runoff may carry increased loads of sediment, heavy metals and petroleum hydrocarbons (from machinery) which could degrade water quality. In accordance with NPDES requirements, the Project Development Contractors (Contractors) would be required to prepare a construction activities erosion control plan to alleviate potential sedimentation and storm water discharge contamination impacts of the Project.

Contractors shall also be responsible for compliance with the General Construction NPDES permit from the SARWQCB by filing a Notice of Intent to Commence Construction Activities. Under the General Construction Permit, discharge of materials other than storm water is prohibited. Contractors shall prepare, retain at the construction site, and implement Storm Water Pollution Prevention Plans (SWPPPs) that identify the sources of sediments and other pollutants that affect the quality of storm water discharge, and implement practices to reduce sediment and other pollutants to storm water discharge. The SWPPPs also identify both construction and post-construction BMPs to reduce sediments and other pollutants. BMPs mandated by the requisite NPDES permit typically include installation of filter fabric fences, sandbars and checkdams.

Construction BMPs for developments within the Project site would likely include, but not be limited to:

- Silt Fences;
- Check Dams;
- Gravel Bag Berms;
- Street Sweeping and Vacuuming;
- Sandbag Barriers;
- Storm Drain Inlet Protection;
- Wind Erosion Control;
- Stabilized Construction Entrance/Exit; and
- Entrance/Outlet Tire Wash.

Implementation of the SWPPPs and compliance with applicable NPDES and SARWQCB requirements will reduce potential construction-source water quality impacts to levels that would be less-than-significant.

Project WQMPs and Compliance with Regulatory Requirements Address Operational-Source Water Quality Impacts

Over the life of the Project uses, contaminants such as oil, fuel and grease that are spilled or left behind by vehicular traffic, collect and concentrate on paved surfaces. During storm events, these contaminants are washed into the storm drain system and may potentially degrade receiving water quality. Storm water runoff from paved surfaces within the developed Project site could carry a variety of urban wastes, including greases and oils and small amounts of metals which are common by-products of vehicular travel. In addition, storm runoff will likely contain residual amounts of fertilizers and plant additives washed off from landscaped areas within the Project site.

Recognizing the potential hazards of such urban runoff, the EPA has issued regulations which required municipalities to participate in the NPDES. As part of this program, San Bernardino County has received an NPDES permit for urban runoff. Compliance with

the provisions specified in the NPDES permit ensures proper management and disposal of urban runoff from the Project.

Contractors shall be responsible for obtaining a General Permit for storm water discharge from the SARWQCB, in accordance with the Notice of Intent instructions. Under the General Permit, discharge of materials other than storm water is prohibited. In support of the above requirements, contractors shall also develop and implement a development-specific Water Quality Management Plans (WQMPs) addressing all post-construction pollutant discharges. To the extent feasible, individual development proposals implemented within the Project site would employ permeable materials and landscaped areas to enhance on-site capture and absorption of stormflows. The Project would also provide for elimination/reduction of pollutant discharges, including capture and treatment of dry weather and first flush runoff in a manner consistent with City and SARWQCB policies and requirements. BMPs to be implemented under the WQMPs would likely include, but not be limited to the following:

Source Control/Non-Structural BMPs

- Education of Property Owners;
- Spill Contingency Plan;
- Employee Training/Education Program;
- Street Sweeping of Private Streets and Parking Lots;
- Common Areas Catch Basin Inspection;
- Landscape Planning;
- Hillside Landscaping;
- Roof Runoff Controls;
- Efficient Irrigation;
- Protection of Slopes and Channels;
- Storm Drain Signage;
- Inlet Trash Racks;
- Energy Dissipaters;
- Trash Storage Areas and Litter Control;

- Maintenance Bays and Docks Drainage Controls; and
- Outdoor Material Storage Area Drainage Controls.

Site Design/Structural BMPs

- Infiltration and Biofiltration Basins;
- Maximize Permeable Areas;
- Minimize Street, Sidewalk, and Parking Lot Aisle Widths;
- Minimize Impervious Hardscape Features;
- Maintain Natural Drainage Patterns;
- Incorporate Drought-Tolerant Landscaping;
- Perforated Pipes and Gravel Filtration Areas;
- On-site Vegetated Swales;
- Convey Runoff to Landscaping/Permeable Areas Prior to Discharge to Storm Drains;
- Drain Sidewalks and Walkways to Adjacent Landscape Areas; and
- Integration of Landscaping and Drainage Designs.

All individual development proposals within the Project site would be required to comply with all requirements of the City's MS4 Permit, as well as the Trash Mandate adopted by the SARWQCB. All storm water discharges from individual development proposals within the Project site would be required to comply with applicable provisions of the County's National Pollutant Discharge Elimination System (NPDES) permit. Consistent with SARWQCB and City requirements, waste materials will not be discharged to drainage areas, streambeds, or streams. Nor will spoil sites be located in areas that could result in spoil materials being washed into a water body.

Additionally, all development proposals within the Project site would be required to comply with Standard City Conditions of Approval including implementation of development-specific WQMPs, thereby avoiding/minimizing potential water quality impacts.

The City, as one element of its established development review processes would ensure NPDES Permit compliance concurrent with application(s) for development permits within the Project site.[3]

Implementation of the WQMPs and compliance with applicable NPDES and SARWQCB requirements will reduce potential operational-source water quality impacts to levels that would be less-than-significant.

As supported by the preceding discussions, the potential for the Project to violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or ground water quality is determined to be less-than-significant.

Level of Significance: Less-Than-Significant.

Potential Impact HYD-2: *Substantially alter the existing drainage pattern of the site or area in a manner that would substantially increase the rate or amount of runoff that would result in flooding on- or offsite; Substantially alter the existing drainage pattern of the site or area in a manner that would create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff.*

Impact Analysis: The Project overall drainage concept maintains the site's predominant north – south/northeast – southwest trending drainage pattern. Within the Project site, new development types proposed under the 2022 SPA would redefine hydrologic patterns when compared to assumptions of the 2012 City of Ontario's Master Plan of Drainage (MPoD).

[3] See: *City of Ontario – Engineering Department, National Pollutant Discharge Elimination System (NPDES) Requirements for New Development,* https://www.ontarioca.gov/sites/default/files/npdes_requirements_for_new_development_-_redevelopment.pdf

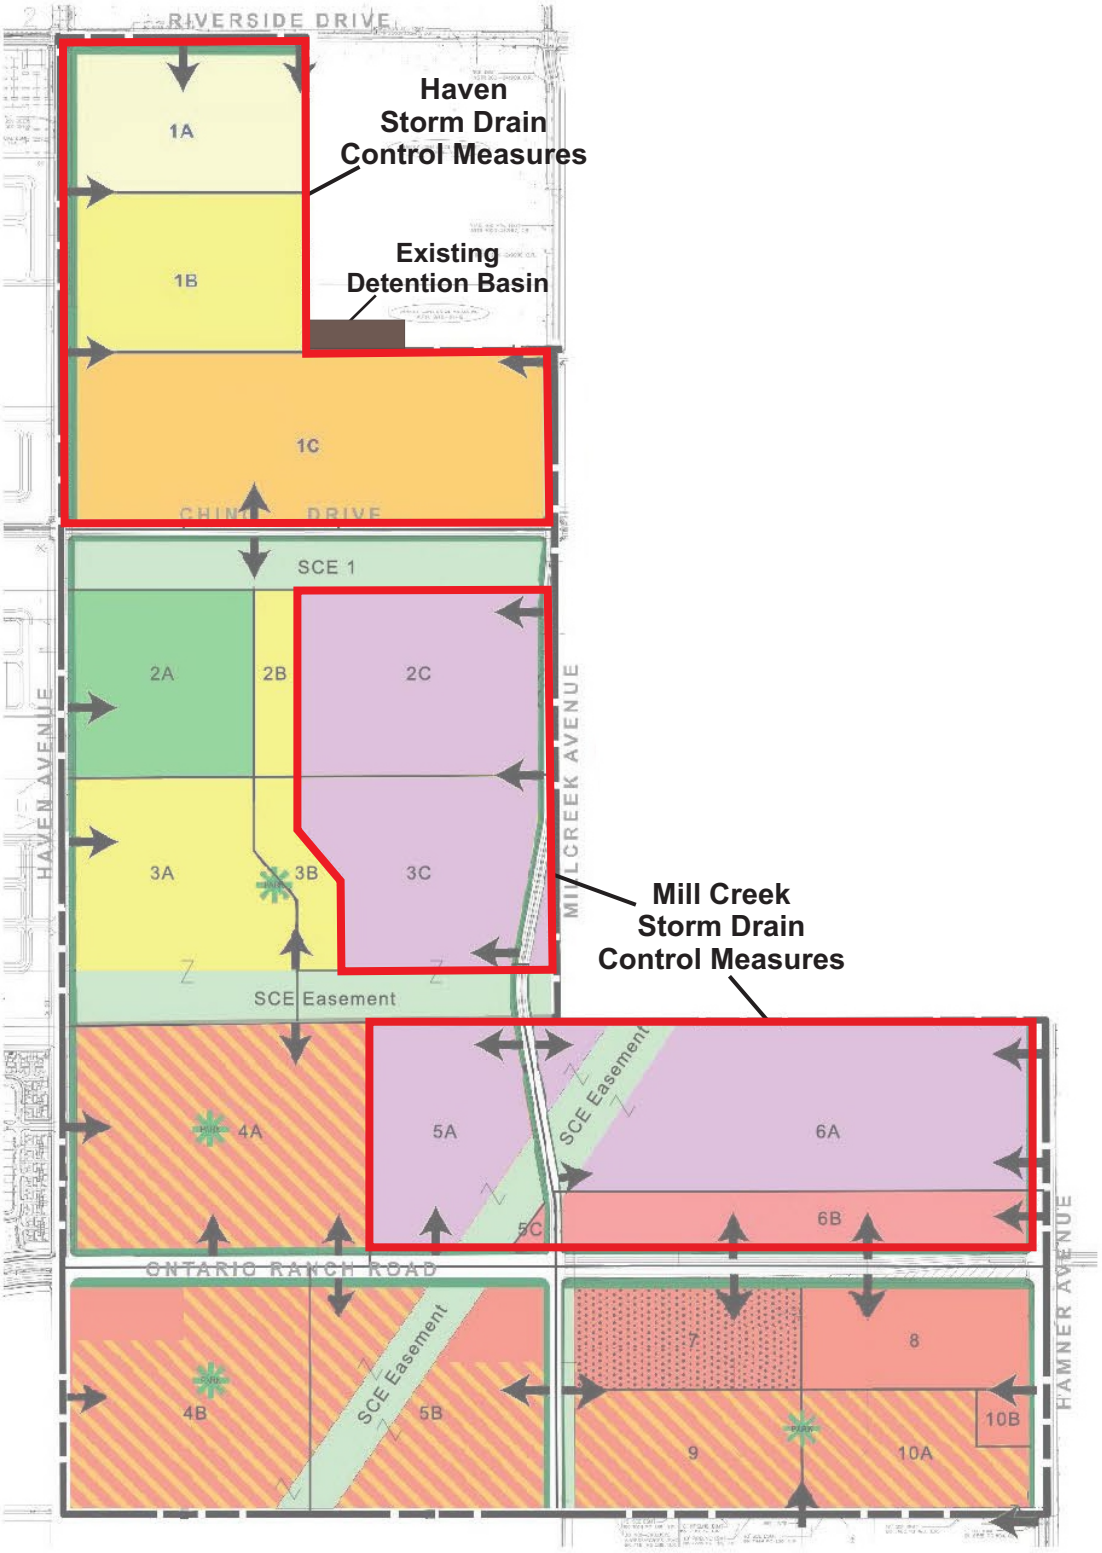
In this latter regard, the Project Hydrology Report concludes that under post-development conditions, peak stormwater flow rates from Specific Plan Planning Areas 1A, 1B, 1C, 2C, 3C, 5A, 6A, 6B could exceed capacities of the receiving MPD Haven and Mill Creek storm drains.[4] The Project could therefore create or contribute runoff water that would exceed the capacity of existing or planned stormwater drainage systems. This is a potentially significant impact. Stormwater flow discharges from the affected Planning Areas need to be reduced to ensure adequate storm water conveyance and flood protection along the mainlines upstream of the County Line Channel (Hydrology Report, p. 17).

Level of Significance: Potentially Significant.

Mitigation Measures: The Project Hydrology Report identifies mitigation to reduce potentially increased runoff resulting from Project development – represented here as Mitigation Measures 4.8.1 through 4.8.3. The Project Hydrology Report also notes that Planning Area and development-specific studies may be performed to demonstrate that no adverse impact to the storm drain system would result from proposed development. In these cases, the City may determine that no or alternative mitigation would be required.

4.8.1 *General: In conjunction with all development proposals within the Specific Plan Area, peak flow mitigation measures for each development shall be implemented such that discharges to receiving MPD storm drain mainlines do not exceed the maximum allowable flow rates identified at Project Hydrology Report, Appendix A, Exhibit 3. Ultimate design, location, and configuration of peak flow mitigation measures are site-and use-specific. Design, location, and configuration of peak flow mitigation measures shall be approved by the City as part of site plan review and approval processes.*

[4] Detailed analysis of developed stormflows and adequacy of serving MPD facilities is presented at Project Hydrology Report, pp. 14 – 19. Maximum allowable flow rates for serving MPD storm drain mainlines are identified at Project Hydrology Report, Appendix A, Exhibit 3.



4.8.2 Haven Storm Drain Mitigation: Measures (e.g., detention basins or similar) to control peak flows to the Haven Storm Drain shall be implemented to address increased stormwater discharges resulting from development of Planning Areas 1A, 1B, 1C, 2C, and 3C. Please refer to Figure 4.8-5. Locations for these measures shall be reviewed and approved by the City prior to final site plan approval(s) for development within Planning Areas 1A, 1B, 1C, 2C, and 3C.

4.8.3 Mill Creek Storm Drain Mitigation: Peak flow mitigation measures shall be implemented for stormwater discharges resulting from development of Planning Areas 2C, 3C, 5A, 6A, and 6B. Please refer to Figure 4.8-5. Locations for these measures shall be reviewed and approved by the City prior to final site plan approval(s) for development within Planning Areas 2C, 3C, 5A, 6A, and 6B.

Other Programs and Requirements Acting to Minimize Stormwater Impacts

Within the Project site, individual development proposals would be required incorporate all necessary drainage and stormwater management systems, and comply with all stormwater system design, construction, and operational requirements mandated through the City's established development review processes. In these regards, the individual development proposals within the Specific Plan Area would be required to comply with City Standard Conditions of Approval addressing hydrology and water quality concerns. These Conditions of Approval include:

- Standard Condition (SC) 3.66: A hydrology study and drainage analysis, prepared in accordance with the San Bernardino County Hydrology Manual and the City of Ontario's Standards and Guidelines, and signed by a Civil Engineer registered in the State of California, shall be submitted to the Engineering Department prior to Grading Plan approval. Additional drainage facilities may be required as a result of the findings of the study.

NOT TO SCALE

Source: Rich-Haven Specific Plan Amendment, 2022; Applied Planning, Inc.

Figure 4.8-5
Storm Drain Control Measures

- SC 3.68: Prior to Grading Plan approval and the issuance of a grading permit, an Erosion and Sediment Control Plan shall be submitted to, and approved by, the Engineering Department. The Erosion and Sediment Control Plan shall identify the Best Management Practices (BMPs) that will be implemented by the Project during construction in order to reduce the discharge of sediment and other pollutants into the City's storm drain system.

- SC 3.69: Prior to Grading Plan approval and the issuance of a grading permit, a completed Water Quality Management Plan (WQMP) shall be submitted to, and approved by, the Engineering Department. The WQMP shall be submitted using the San Bernardino County Stormwater Program's model template and shall identify all Post Construction, Site Design, Source Control, and Treatment Control Best Management Practices (BMPs), that will be incorporated into the Project, in order to minimize any potential adverse impacts to receiving waters. [5]

As discussed previously in this Section, the Project would not result in substantial additional sources of polluted runoff or otherwise adversely affect water quality.

In combination, implementation of Mitigation Measures 4.8.1 through 4.8.3, and mandated compliance with City Conditions of Approval and regulatory requirements act to preclude potentially adverse drainage and stormwater runoff impacts.

Based on the preceding, with application of mitigation, the potential for the Project to: substantially alter the existing drainage pattern of the site or area in a manner that would substantially increase the rate or amount of runoff that would result in flooding on- or offsite; or substantially alter the existing drainage pattern of the site or area in a manner that would create or contribute runoff water which would exceed the capacity of existing

[5] City of Ontario. "Standard Conditions of Approval for New Development, Applicable to 'Ontario Ranch'" pp. 13, 14. *City of Ontario, California*. http://www.ontarioca.gov/sites/default/files/Ontario-Files/Planning/Documents/20170418-standard_conditions_for_new_development.pdf

or planned stormwater drainage systems or provide substantial additional sources of polluted runoff is determined to be less-than-significant.

Level of Significance after Mitigation: Less-Than-Significant.

Potential Impact HYD-3: *Impede or redirect flood flows.*

Impact Analysis: As shown at Policy Plan Figure S-2, *Flood Hazards*, the Project site is located within a 500-year flood plain and is within the San Antonio Creek Dam Failure Inundation Area. The Project site does not, however, lie within a designated 100-year floodplain or other areas known to be subject to moving or high-velocity floodwaters. The Project does not propose or require facilities or operations that would otherwise impede or redirect flood flows. On this basis, the potential for the Project to impede or redirect flood flows is determined to be less-than-significant.

Level of Significance: Less-Than-Significant.

Potential Impact HYD-4: *Under a flood, tsunami, or seiche event, release pollutants due to project inundation.*

Impact Analysis: The Project site is not located within an area subject to tsunami, or seiche events. There is no potential for the Project to be adversely affected in these regards.

The Project site does, however, lie within a 500-year floodplain and is within the San Antonio Creek Dam Failure Inundation Area. There is, therefore, the potential for the Project generally to be subject to inundation under 500-year flood conditions or in the event of the San Antonio Creek Dam failure. Either of these are relatively low probability events. Catastrophic failure of the San Antonio Dam when it is at or near capacity could spread water two to four feet deep over the western and central parts of the City. However, the City has never experienced such an event.

TOP 2050 SEIR concluded that the probability of catastrophic failure of the San Antonio Dam is very low. Furthermore, the City of Ontario Fire Department maintains a list of emergency procedures to be followed in the event of a dam failure (TOP 2050 SEIR, p. 5.10-26). Because the likelihood of catastrophic failure of the San Antonio Dam is very low and the City is prepared in the event of such failure, impacts related to potential release of pollutants under dam failure conditions are considered less-than-significant.

Potential for release of pollutants under 500-year flood conditions or in the event of dam failure is minimized through the location, orientation, and construction of Project facilities consistent with City Building Code requirements and implementation of the Project stormwater management system improvements described in this Section. Additionally, the Project commercial and light industrial uses would be required to develop and implement Hazardous Materials Release Response Plans and Inventory (Business Plans) that specifically address storage and use of hazardous materials so as to minimize their potential release, containment of hazardous materials and related pollutants that may be released under emergency conditions, and measures to reduce potential effects of hazardous materials and related pollutants if released.

Based on the preceding, the potential for release of pollutants due to project inundation under a flood, tsunami, or seiche event is determined to be less-than-significant.

Level of Significance: Less-Than-Significant.

Potential Impact HYD-5: *Conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan.*

Impact Analysis: As discussed within this Section, the Project would implement water quality control measures consistent with City and SARWQCB requirements. The Project would there not result in potentially adverse water quality impacts and would not conflict with or obstruct implementation of a water quality control plan, in this instance, the Water Quality Control Plan for the Santa Ana Region.

The City of Ontario draws all of its groundwater supply from the Chino Basin. Since 1978, the basin has been managed via ongoing court adjudication in the 1978 judgment Chino Basin Municipal Water District vs. City of Chino et al. The Project does not propose or require direct withdrawal of groundwater. Neither would the Project adversely affect designated groundwater recharge areas or groundwater recharge facilities. To the extent practical, individual development proposals within the Project site would implement LID measures facilitating infiltration of treated stormwaters to the groundwater table.

It is also noted that eleven existing wells have been identified within the Project site. In compliance with the Chino Basin Water Master's Well Procedure for Developers, a well use/destruction plan and schedule for all existing private/agricultural wells shall be submitted to the City of Ontario for approval prior to the issuance of permits for any construction activity. If a private well is actively used for water supply, the Developer shall submit a plan to abandon such well and connect users to the City's water system (residential to the domestic water system and agricultural to the recycled water system) when available. Wells shall be destroyed/abandoned per the California Water Resource Guidelines and require permitting from the County Health Department. A copy of such permit shall be provided to the Engineering and Public Works Agency prior to issuance of grading and/or building permits.

Based on the preceding, the potential for the Project to conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan is determined to be less-than-significant.

Level of Significance: Less-Than-Significant.

4.9 GEOLOGY AND SOILS

4.9 GEOLOGY AND SOILS

Abstract

This Section addresses the potential for the Project to result in substantial geology or soils-related impacts. More specifically, this analysis presented here focuses on whether the Project would:

- *Directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury or death involving strong seismic ground shaking;*

- *Directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury or death involving seismic-related ground failure, including liquefaction;*

- *Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction or collapse;*

- *Be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial direct or indirect risks to life or property;*

- *Have soils incapable of adequately supporting the use of septic tanks or alternative wastewater disposal systems where sewers are not available for the disposal of wastewater; or*

- *Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature.*

As supported by the analysis presented in this Section, potential geology and soils impacts of the Project are determined to be less-than-significant with incorporation of proposed mitigation.

4.9.1 INTRODUCTION

This Section examines geologic characteristics and surface and subsurface soil conditions and evaluates potential related geology/soils impacts that would directly or indirectly result from the Project.

Geologic, soils, and geotechnical conditions affecting the subject site and Project are described and evaluated in: *Consolidated Geotechnical Report to Support the Environmental Impact Report for the Rich-Haven Specific Plan, City of Ontario, California* (LGC Geotechnical, Inc.) September 20, 2022. In summary, the Preliminary Project Geotechnical Report concludes that the subject site is suitable for development of the Project, provided that recommendations of the Report are implemented during Project design and construction. The Project Geotechnical Report is provided at EIR Appendix J.

It is also noted that the Project is required to conform to future final site- and design-specific geotechnical investigations that will be prepared for each increment of construction.

4.9.2 SETTING

Following are summary discussions of the Project's geologic setting, prevalent site soils, geotechnical considerations, and seismic design considerations.

4.9.2.1 Regional Geology

The Project site is located south of the San Gabriel Mountains within the broad alluvial plain of the Santa Ana River Basin within the Peninsular Ranges Geomorphic Province. Specifically, the Specific Plan area is located within the northern portion of the Perris Block, a geologic zone consisting of granitics overlain by sedimentary deposits that are bounded by active faults including the northwest-trending Whittier-Elsinore Fault Zone at the southwest and the northwest-trending San Jacinto Fault Zone at the northeast. The roughly rectangular Perris Block is transected by the southwest-trending Santa Ana River that passes several miles south of the site.

Regional geologic mapping and local topographic expressions do not indicate the presence of large-scale landslides within or adjacent to the Specific Plan area.

4.9.2.2 Existing Site Conditions

Site Geology

The Project site is underlain by Holocene to Pleistoceneage eolian (wind-blown) sedimentary deposits. The materials below the eolian deposits are young alluvial fan deposits. Soils generally consist of medium dense to dense sands with varying amounts of silt interbedded with thinner layers of stiff to very stiff fine-grained soils (i.e., silts and clays) to the maximum explored depth of approximately 50 feet below existing grade. Due to previous and current land uses, localized areas are underlain by near surface fill materials, topsoil, manure, etc.

Groundwater

Groundwater was not encountered to the maximum explored depth of approximately 50 feet below existing grade. Groundwater levels recorded in the area by California Department of Water Resources are at depths greater than 120 feet below the ground surface.

Localized perched groundwater was found at a depth of approximately 40 feet below existing grade in the southeastern portion of the site. In general, groundwater levels fluctuate with the seasons and local zones of perched groundwater may be present within the near-surface deposits due to local seepage or during rainy seasons. Groundwater conditions below the site may be variable, depending on numerous factors including seasonal rainfall, local irrigation and groundwater pumping, among others.

Field Infiltration Testing

Estimation of infiltration rates was performed in general accordance with guidelines set forth by the County of San Bernardino. The observed infiltration rates are considered representative of the site soils in the area of the proposed infiltration basins/systems.

Observed infiltration rates have been normalized to correct the three-dimensional flow that occurs within the field test to one-dimensional flow out of the bottom of the boring.

Eleven infiltration tests were conducted within the limits of the site, at depth of approximately 15 to 20 feet below existing grade. Infiltration rates ranged from approximately 0.6 inch/hr. to 7.0 inch/hr. for an average of approximately 2.6 inch/hr. These rates do not include a factor of safety. Infiltration tests are performed using relatively clean water free of particulates, silt, etc.

Faulting and Seismic Hazards

A fault is considered "active" if evidence of surface rupture in Holocene time (the last approximately 11,000 years) is present. Secondary effects of seismic shaking resulting from large earthquakes on the major faults in the Southern California region, which may affect the site, include ground lurching and shallow ground rupture, soil liquefaction, and dynamic settlement. These secondary effects of seismic shaking are a possibility throughout the Southern California region and are dependent on the distance between the site and causative fault and the onsite geology. The closest major active faults that could produce these secondary effects include the Chino-Central, San Jose, Elsinore, Sierra Madre and San Andreas Faults, among others.

The Specific Plan area is not located within a State of California Earthquake Fault Zone (i.e., Alquist-Priolo Earthquake Fault Act Zone) and no active faults are known to cross the site. The possibility of damage due to ground rupture is considered low since no active faults are known to cross the site.

Liquefaction and Dynamic Settlement

Liquefaction is a seismic phenomenon in which loose, saturated, granular soils behave similarly to a fluid when subject to high-intensity ground shaking. Liquefaction occurs when three general conditions coexist: 1) shallow groundwater; 2) low density noncohesive (granular) soils; and 3) high-intensity ground motion. Loose, saturated, near-surface, cohesionless soils exhibit the highest liquefaction potential, while dry, dense, cohesionless soils, and cohesive soils exhibit low to negligible liquefaction

potential. In general, cohesive soils are not considered susceptible to liquefaction. Effects of liquefaction on level ground include settlement, sand boils, and bearing capacity failures below structures. Furthermore, dynamic settlement of dry sands can occur above the groundwater table as the sand particles tend to settle and densify as a result of a seismic event.

According to the City of Ontario General Plan, the Project site is located in an area of "low to moderate" liquefaction susceptibility based only on soil type (sediments being less than 10,000 years old and unconsolidated). Additionally, site soils are generally not susceptible to liquefaction due to a lack of groundwater in the upper 50 feet and liquefaction potential is considered low to very low.

Lateral Spreading

Lateral spreading is a type of liquefaction induced ground failure associated with the lateral displacement of surficial blocks of sediment resulting from liquefaction in a subsurface layer. Once liquefaction transforms the subsurface layer into a fluid mass, gravity plus the earthquake inertial forces may cause the mass to move downslope towards a free face (such as a river channel or an embankment). Lateral spreading may cause large horizontal displacements and such movement typically damages pipelines, utilities, bridges, and structures. Due to the depth to groundwater, low potential for liquefaction and lack of nearby "free face" conditions, the potential for lateral spreading at the site is considered very low.

Expansion Potential

The CBC provides methodologies and guidelines for identification of expansive soils and establishes design standards which act to avoid potentially adverse effects of expansive soils on facilities. Section 1802.3 of the 2010 California Building Code directs expansive soil tendency be graded by its Expansion Index. A soil's Expansion Index is defined by its potential to swell when wet or saturated. The CBC mandates that "special [foundation] design consideration" be employed if the Expansion Index is 20, or greater.

Based on testing performed as part of the Geotechnical Report, site soils are anticipated to have a very low expansion potential (EI of 20 or less). Final expansion potential of site soils should be determined at the completion of grading. Results of expansion testing at finish grades will be utilized to confirm final foundation design recommendations.

4.9.3 SEISMIC DESIGN CONSIDERATIONS

The Project site and Southern California generally are subject to strong ground motions due to earthquakes with resulting damage to structures. However, it is not generally considered reasonable or feasible to design a structure that is entirely resistant to earthquake damage. Therefore, significant damage to structures may be unavoidable during large earthquakes. Proposed structures should, however, be designed to resist structural collapse and thereby provide reasonable protection from serious injury, catastrophic property damage and loss of life.

The California Building Code (CBC) provides earthquake design criteria and seismic design coefficients (CBC Seismic Design Parameters) that would be applicable to all development within the Project site.

The CBC Seismic Design Parameters are based on area soils profiles and proximity of known faults. Within the context of the CBC Seismic Design Parameters, seismic design(s) for the Project structures need to consider on-site soil conditions, occupancy, and the configuration of the structure including the structural system and height. Please refer to Project Geotechnical Report Section 2.6, *Seismic Design Criteria*.

4.9.4 GEOLOGY/SOILS/SEISMIC POLICIES AND REGULATIONS

Following are summary descriptions of geology/soils/seismic policies and regulations applicable to the Project. In many instances, compliance with existing policies and regulations eliminates, or substantially reduces, potential environmental effects.

4.9.4.1 City of Ontario Policy Plan (Policy Plan)

The Policy Plan, Safety Element Section S1, *Seismic and Geologic Hazards* establishes City-wide Goals and Policies that act to minimize potential structural damage and injury or loss of life due to earthquakes, other seismic, or adverse geologic/soils/slopes conditions.

4.9.4.2 City of Ontario Geotechnical/Seismic Design Review Processes

The City Planning, Building and Safety, and Engineering Departments implement General Plan Goals and Policies addressing geology, soils, and seismic conditions through established development permit review processes. To these ends, City staff ensures that site and development-specific geotechnical investigations are completed where appropriate, and that requirements and recommendations of these investigations are incorporated in construction plans, are followed through during construction processes, and are functionally complete before buildings are occupied and/or infrastructure systems or other improvements are accepted. In all instances, the City ensures that, at a minimum, applicable provisions of the CBC are incorporated throughout development design and implementation.

4.9.5 STANDARDS OF SIGNIFICANCE

Appendix G of the California Environmental Quality Act (CEQA) Guidelines indicates a Project will have a potentially significant geology and soils impact if it would:

- Directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury or death involving: rupture of a known earthquake fault; strong seismic ground shaking; seismic-related ground failure, including liquefaction; or landslides;

- Result in substantial soil erosion or the loss of topsoil;

- Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the Project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction or collapse;

- Be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial direct or indirect risks to life or property;

- Have soils incapable of adequately supporting the use of septic tanks or alternative waste water disposal systems where sewers are not available for the disposal of waste water; or

- Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature.

4.9.6 POTENTIAL IMPACTS AND MITIGATION MEASURES

4.9.6.1 Introduction

The following discussions focus on topical areas and issues where it has been determined pursuant to the EIR Initial Study/NOP processes, that the Project may result in or cause potentially significant geology or soils impacts. As substantiated in the Initial Study (EIR Appendix A), under the following topics, the Project was determined to have no impact or impacts would be less-than-significant. On this basis, the following topics are not further discussed here:

- Directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury or death involving rupture of a known earthquake fault;

- Directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury or death involving landslides;

- Result in substantial soil erosion or the loss of topsoil; or

- Have soils incapable of adequately supporting the use of septic tanks or alternative wastewater disposal systems where sewers are not available for the disposal of wastewater.

All other CEQA topics concerning the Project's potential geology and soils impacts are discussed below. Please refer also to Initial Study Checklist Item VII. *Geology and Soils*.

4.9.6.2 Impact Statements

Potential Impact GEO-1: *Directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury or death involving strong seismic ground shaking.*

Impact Analysis: The Project Geotechnical Report substantiates there are no active faults known within the Project site. The Project site is outside any Fault Rapture Hazard Zone (formerly Alquist-Priolo Zone). The Geotechnical Report determined that the risk of surface fault rupture is considered low. The Project does not propose actions or facilities that would otherwise exacerbate known or probable adverse earthquake fault conditions. Based on the preceding, the potential for the Project to directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury or death involving strong seismic ground shaking is considered less-than-significant.

Level of Significance: Less-Than-Significant.

Potential Impact GEO-2: *Directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury or death involving seismic-related ground failure, including liquefaction; or be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction or collapse.*

Impact Analysis: The Project Geotechnical Report substantiates that the potential at the site for landslides, lateral spreading, and/or liquefaction is low. However, existing near-surface soils include fill materials, topsoil, manure, etc. These loose and compressible soils are not suitable for development. As such, the Report presents recommendations for site improvements to preclude impacts in this regard. These recommendations include site preparation, earthwork, remedial grading depths, and foundation recommendations.

Compliance with the recommendations presented in the Project Geotechnical Report are required by Mitigation Measure 4.9.1, below.

Level of Significance: Potentially Significant.

Mitigation Measure:

4.9.1 *All proposed development within the Specific Plan Area shall, at a minimum, comply with recommendations and standards identified in the Preliminary Geotechnical Report at Section 4.0,* Recommendations. *If further recommendations are developed as part of future site- and design-specific geotechnical investigations they shall prevail.*

Level of Significance After Mitigation: Less-Than-Significant. The Project Geotechnical Report concluded that the Project site is acceptable for the proposed development, contingent on compliance with recommendations and performance standards identified in the Report.

Potential Impact GEO-3: *Be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), thereby creating substantial direct or indirect risks to life or property.*

Impact Analysis: The Project Geotechnical Report substantiates that onsite soils have a very low expansion potential. "Based on the results of previous laboratory testing by others and our recent laboratory testing, site soils are anticipated to have a 'Very Low' expansion potential [EI of 20 or less per ASTM D4829]" (Project Geotechnical Report, p. 10). As such, the potential for the Project to be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), thereby creating substantial direct or indirect risks to life or property is considered less-than-significant.

Level of Significance: Less-Than-Significant.

Potential Impact GEO-4: *Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature.*

Impact Analysis:

Paleontological Resources

The geologic unit underlying the Project site are mapped as young Eolian sand and dune deposits from the Holocene period. Eolian units are considered to be of some preservation value, but any material found is unlikely to be fossil material due to the relatively modern associated dates of the deposits. The Western Science Center does not have any localities within the Project site or within a one-mile radius. The Cultural Resources Assessment determined that significant impacts in this regard would be unlikely.[1]

Level of Significance [impacts to paleontological resources]**:** Less-Than-Significant.

Geological Features

With regard to unique geological features, the City has not established criteria for determining what comprises a unique geological feature. Other relevant agency criteria however indicates that a geological feature could be generally considered unique if it:

- Is the best example of its kind locally or regionally;
- Embodies the distinctive characteristics of a geologic principle that is exclusive locally or regionally;
- Provides a key piece of geologic information important in geology or geologic history;
- Is a "type locality" of a geological feature;
- Is a geologic formation that is exclusive locally or regionally;
- Contains a mineral that is not known to occur elsewhere in the County; or

[1] *Cultural Resources Assessment, Rich-Haven Specific Plan Areas of Change Project, City of Ontario, San Bernardino County, California* (BCR Consulting LLC) August 18, 2022; Appendix E, *Paleontological Resources Overview.*

- Is used repeatedly as a teaching tool.[2]

As presented in the Project Geotechnical Report: . . . "the subject site is underlain by Holocene- to Pleistocene- age eolian (wind-blown) sedimentary deposits. The materials below the eolian deposits are young alluvial fan deposits…soils generally consisted of medium dense to dense sands with varying amounts of silt interbedded with thinner layers of stiff to very stiff fine-grained soils (i.e., silts and clays) to the maximum explored depth of approximately 50 feet below existing grade…Due to previous/current land use as farming, localized areas are underlain by near surface fill materials, topsoil, manure, etc." (Project Geotechnical Report, p. 6).

These soil types are common within the City and Southern California, and do not comprise unique geological features as described above. The Project does not propose uses or activities that would indirectly contribute to or result in potentially adverse impacts to a unique geological feature.

Based on the preceding, the potential for the Project to directly or indirectly destroy a unique geological feature is considered less-than-significant.

Level of Significance [impacts to geological features]: Less-Than-Significant.

4.10 BIOLOGICAL RESOURCES

4.10 BIOLOGICAL RESOURCES

Abstract

This Section identifies and addresses potential impacts to biological resources resulting from the Project. More specifically, the analysis presented here examines whether the Project would:

- *Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service;*

- *Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service;*

- *Have a substantial adverse effect on state or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means;*

- *Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of wildlife nursery sites;*

- *Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance;*

- *Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan.*

As supported by the analysis presented in this Section, with application of proposed mitigation measures, the Project's potential impacts to biological resources are determined to be less-than-significant.

4.10.1 INTRODUCTION

Following are discussions of existing biological resources characteristic of the Project area, with focused consideration on species of special interest known to occur, or that could potentially occur on the Project site. Potential impacts to biological resources are identified, and mitigation of potentially significant impacts is proposed. Information presented in this Section is summarized and excerpted from: *Biological Report for the Rich Haven 2022 Specific Plan Amendment Project Site (*Harmsworth Associates) July 2022. The Project Biological Report is included in its entirety at EIR Appendix K.

4.10.2 SETTING

4.10.2.1 Overview

The Project site has a history of agricultural use, and has been extensively altered, with the entire area having been cleared, leveled, or otherwise reshaped at some point, which is evident from conditions on the site, and from comparing satellite imagery of the Project site over the last several decades. No discernible natural hills, rock formations, or natural drainages or water courses remain at the site. Disking occurs regularly on portions not currently in active agricultural use. Earth movement and stockpiling of soils occur in portions of the site.

4.10.2.2 Biologic Setting

The following discussions provide the existing biologic setting for the Project site.

Soils

Historically, the soils in the area are from the Delhi association and are nearly level to strongly sloping, somewhat excessively drained, very deep soils on alluvial fans in coarse-textured, wind-re-formed granitic material.

The Project site has a history of agricultural use, and site soils have been extensively altered and amended over time. Current soils are significantly altered compared with historic conditions. Soils mapping of the Project site is presented at Figure 4.10-1. The following soils are mapped as occurring within the Project area:

Delhi fine sand (Db)

This nearly level to strongly sloping soil is on alluvial fans that have been reworked by wind action. Typically, the upper 40 inches consist of pale-brown sand and fine sand - single grained, loose when dry. This soil is used for grapes, pasture plants, alfalfa and some citrus.

Hanford coarse sandy loam, 2 to 8 percent slopes (HcC)

This soil consists of well-drained and somewhat excessively drained soil on alluvial fans, and is derived from granitic materials. The upper 18 inches consist of grayish-brown and very dark grayish brown coarse sandy loam. This soil is used for irrigated citrus, truck crops, grapes, dryland grain, pasture and non-farm purposes.

Hilmar loamy fine sand (Hr)

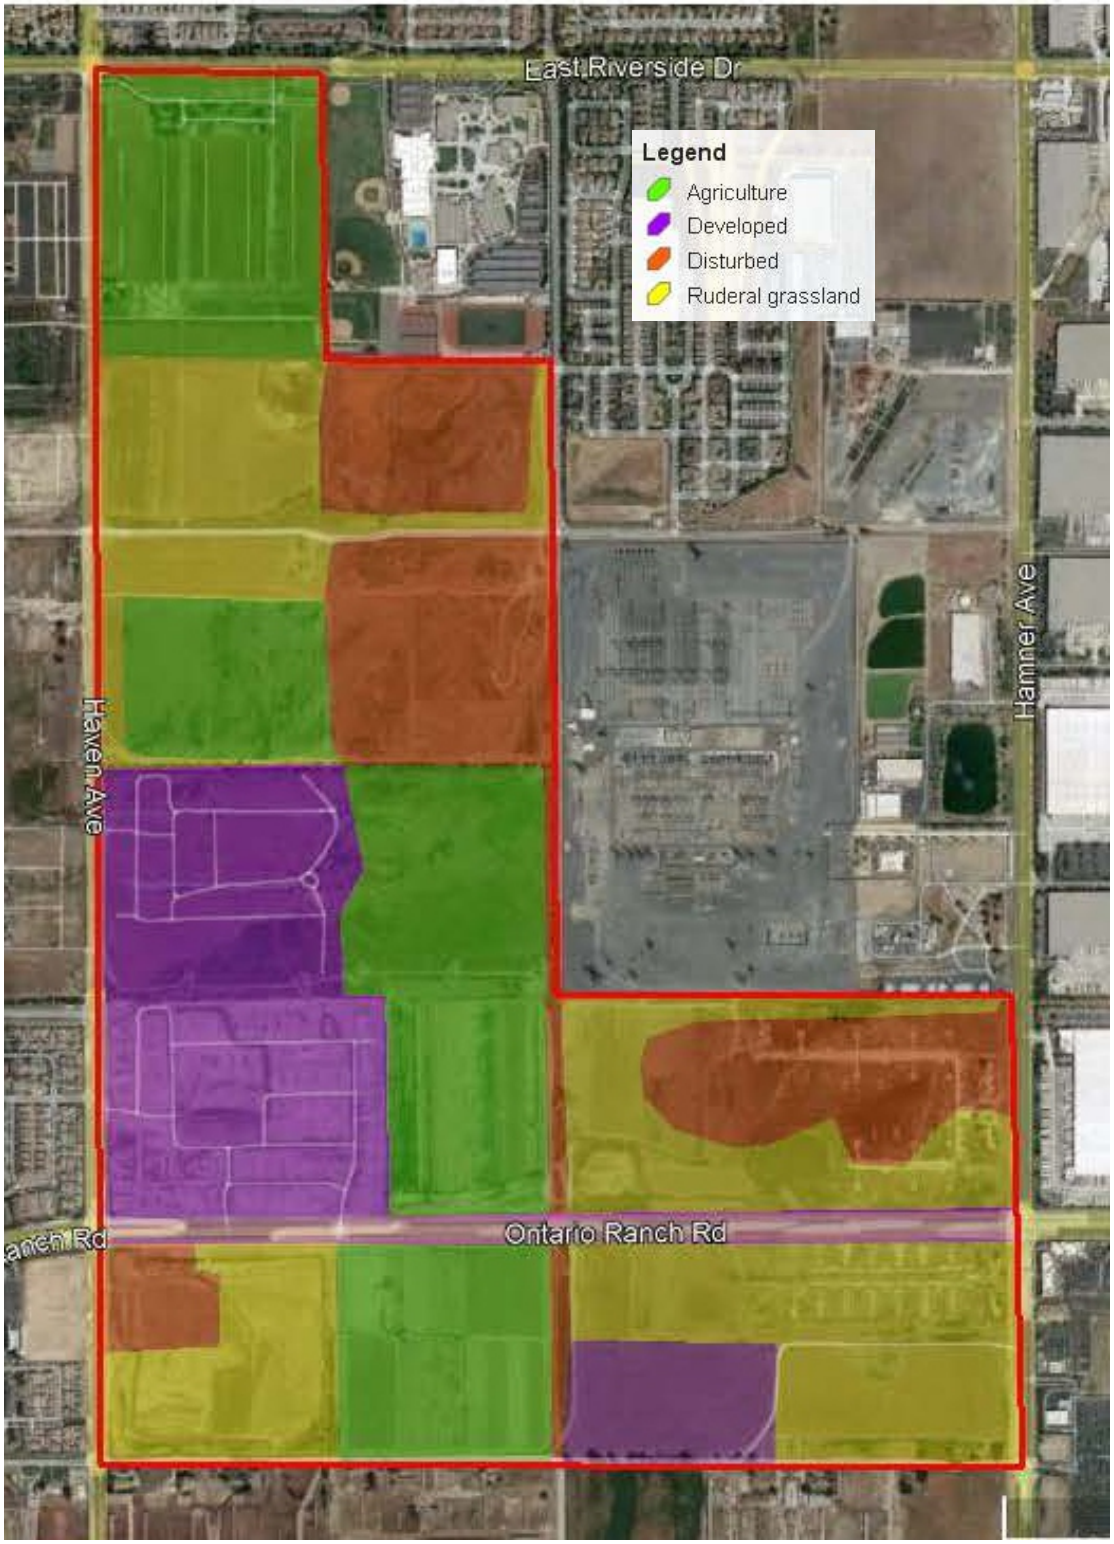
Hilmar loamy fine sand consists of moderately well-drained, nearly level to gently sloping soils that formed in alluvium from granitic sources. They occur on alluvial fans. Surface soils are sandy loam; light grayish-brown when dry, dark grayish brown when moist. Vegetation is mostly annual forbs and grasses. Soils may be used for dryland crops and pasture.

Source: Harmsworth Associates

Figure 4.10-1
Project Site Soils Map

Tujunga loamy sand, 0 to 5 percent slopes (TuB)

This gently to moderately sloping soil occurs on alluvial fans and on flood plains. This soil is developed in alluvium predominantly from granitic materials. The upper 36 inches consist of light-gray, gray when moist, loamy sand. This soil is used for dryland grain, pasture, range and, if protected from flooding, for irrigated truck crops.



Vegetation

The Project site has been significantly impacted due to years of disking, dumping, disturbance and agriculture. Currently, the site contains one vegetation community and three additional land types: Ruderal grassland, agriculture, disturbed, and developed. Project site vegetation is mapped at Figure 4.10-2.

Vegetation types within the site were mapped according to A Manual of California Vegetation (Sawyer et al. 2009) to the extent possible. Since this system focuses on native vegetation communities, many disturbed and man-made land covers do not fit cleanly into the system. The best fit possible was made to map and classify the onsite vegetation. The equivalent vegetation community under the old Holland classification system is also noted. Dirt roads and disturbed areas were mapped as the vegetation community which they occur.

Ruderal grassland

Ruderal is a low to medium growing herbaceous vegetation type dominated by annual grasses and forbs of Mediterranean origin. It is a type of non-native grassland community, mapped under the semi-natural herbaceous stands by Sawyer et al. Ruderal communities occurred in areas that were recently and frequently disturbed. Holland classified this habitat type as non-native grasslands.

N

NOT TO SCALE

Source: Harmsworth Associates

Figure 4.10-2
Project Site Vegetation Map

Within the Project site, the ruderal grassland is associated with areas of recent disking, old agriculture and frequent disturbances. The dominant species varied across this area, but the most abundant species were Menzies' fiddleneck (*Amsinckia menziesii*), wall barley (*Hordeum murinum*), common red sage (*Kochia scoparia*) and London rocket (*Sisymbrium irio*). Other species present included redstem filaree (*Erodium cicutarium*), cheeseweed (*Malva parviflora*), stinknet (*Oncosiphon piluliferum*) and summer mustard (*Hirschfeldia incana*).

Native species Spencer primrose (*Camissoniopsis micrantha*), bush sunflower (*Encelia californica*), and California buckwheat (*Eriogonum fasciculatum*) occurred at a few locations.

Within the areas mapped as ruderal grassland were a few Goodding's black willow (*Salix gooddingii*), Spanish false fleabane (*Pulicaria paludosa*), southern cattail (*Typha domingensis*), and fragrant flatsedge (*Cyperus odoratus*) that occurred in the old ponds and wet areas associated with former agriculture practices. A total of 179.7 acres of Ruderal grassland occurred on the Project site.

Agriculture

Agricultural areas can include irrigated row crops, exotic trees, fields not in current use, recently disked fields and glass-houses, in addition to sheds, temporary dwellings and other structures.

On the Project site, agriculture included dairy areas (with associated buildings and structures) and irrigated fields (that were very strongly dominated by wall barley). There were some old ponds and wet areas associated with agriculture practices. Within this area, there were also dirt piles, disturbed areas devoid of vegetation, and access roads. A total of 171.5 acres of Agriculture occurred onsite.

Disturbed

Disturbed areas include recently and frequently disked or graded areas lacking vegetation. On the Project site, the disturbed areas consisted of former agriculture areas and open areas that are devoid of vegetation. Within this area, there were also dirt

moving operations, stock-piling of soil and recently graded areas. A total of 110.1 acres of disturbed areas occurred onsite.

Developed

A significant portion of the site has been developed and was in active use by the residents. The developed areas are a mixture of residential structures, associated parks, and roads. Also included is an area in the southern portion of the site that is under active development for new homes. A total of 129.2 acres of developed areas occurred onsite.

Plant Species

Plant species at the Project site consisted of species associated with open and disturbed habitats. A total of 68 vascular plant species, representing 31 families, were detected at the Project site during the current surveys. Twenty-five species were native and the remaining 43 species were exotic or planted. The best represented family was Asteraceae (12 species). Please refer to Appendix B of the Project Biological Report for a full list of all plant species.

Wildlife Species

Wildlife at the Project site consisted of common species and species associated with open, disturbed habitats. The most abundant species detected during the site visits[1] were birds such as European starling (*Sturnus vulgaris*), white-crowned sparrow (*Zonotrichia leucophrys*), mourning dove (*Zenaida macroura*) and house finch (*Carpodacus mexicanus*). A total of 39 wildlife species were detected during the site visits, including three reptile, 32 bird, and four mammalian species. Please refer to Appendix D of the Project Biological Report for a full list of all wildlife species.

Migratory Corridors and Linkages

Habitat linkages provide connections between larger habitat areas that are separated by development. Wildlife corridors are similar to linkages but provide specific opportunities

[1] Vegetation mapping, habitat assessments and general botanical surveys were conducted on 21 February, 1 March, 28 and 30 May and 7 June 2022. Field surveys for wildlife and habitat assessment for special status wildlife species were conducted on 11 February, 10 and 24 March, 18 and 26 May, 2 and 26 June 2022. (Project Biological Resources Report, p. 7).

for animals to disperse or migrate between areas. A corridor can be defined as a linear landscape feature of sufficient width to allow animal movement between two comparatively undisturbed habitat fragments. Adequate cover is essential for a corridor to function as a wildlife movement area.

No wildlife corridors or linkages are known at the Project site. The site is open but much of the vicinity is already developed and it is unlikely that the site is of any significance to wildlife movement.

Jurisdictional Areas

The site does not contain any lakes, rivers, creeks, streambeds, wetlands, vernal pools, temporary rain pools or riparian areas. There are no areas onsite that are subject to the jurisdiction to the U.S. Army Corps of Engineers, the California Department of Fish and Wildlife or Regional Water Quality Control Board.

Some wet areas, shallow temporary ponds, and earthen detention basins did occur within the old and existing agricultural areas. These were all man-made and associated with agricultural activities. They were not associated with any natural drainages, creeks or wetlands and are not subject to the jurisdiction to the U.S. Army Corps of Engineers, the California Department of Fish and Wildlife or Regional Water Quality Control Board.

A formal jurisdictional delineation conducted in 2006 found no areas of the site subject to the jurisdiction to the U.S. Army Corps of Engineers, the California Department of Fish and Wildlife or Regional Water Quality Control Board (Project Biological Report, p. 17).

Special-Status Biological Resources

Special-Status Plants

There are no historic site records for any special status plant species onsite. Based on a review of CNDDB, the CNPS Inventory of Rare and Endangered Vascular Plants of California, and field surveys, a few special-status species were identified for additional analysis, although none are expected to occur onsite. Please refer also to Table 1 of the Biological Report.

No special-status plants were observed on the Project site during the 2022 site surveys. Due to the extensive historical and ongoing human use of the site, and the alteration of land features (rocky outcrops, hillsides, creeks, drainages etc.) that would typically provide refuge for rare plants and threatened plants amidst human activity, it is exceedingly unlikely that any special-status plants could occur on the Project site. Furthermore, the lack of any native-dominated plant cover, which would be the typical habitat for any potentially rare species in this area, suggests this is unlikely (Project Biological Report, p. 12).

Special-Status Wildlife

Three special-status wildlife species; California horned lark (*Eremophila alpestris actia*), loggerhead shrike (*Lanius ludovicianus*) and San Diego black-tailed jackrabbit (*Lepus californicus bennettii*); were observed on the Project site during the 2022 site surveys. Based on a review of CNDDB, published literature, and field surveys and assessments, a number of special-status wildlife species were identified as potentially occurring onsite, including some species with historic records from the Project vicinity. All special-status wildlife species with some potential to occur onsite are addressed in Table 3 of the Project Biological Report. The three special-status species detected and two additional special status species; Delhi Sands Flower-Loving Fly (*Rhaphiomidas terminatus abdominalis*) and burrowing owl (*Athene cunicularia*) are discussed further below.

California horned lark (*Eremophila alpestris actia*)

California horned larks occur in open areas with little or no ground cover, such as grassland or ruderal vegetation and disturbed areas within scrub habitats. A few California horned larks were observed foraging along dirt roads onsite several times in Spring 2022. No horned larks were detected during subsequent site visits, indicating that the larks were non-breeding wintering or migrating individuals. No nesting onsite was detected (Project Biological Report, p. 18).

Loggerhead shrike (*Lanius ludovicianus*)

Loggerhead shrikes occur in grassland, scrub and other open habitats with perching structures. Nests are placed in trees and shrubs. Two loggerhead shrikes were observed foraging onsite during the February site visit. No loggerhead shrikes were detected

during subsequent site visits, indicating that the shrikes were non-breeding wintering or migrating individuals. No nesting onsite is expected (Project Biological Report, p. 18).

San Diego black-tailed jackrabbit (*Lepus californicus bennettii*)
San Diego black-tailed jackrabbit occurs along the coastal side of the southern California mountain ranges. It primarily occurs in open grasslands, agricultural fields and sparse coastal scrub. Nests under bushes or shrubs that have shallow depressions. Two San Diego black-tailed jackrabbit were observed foraging onsite during the February site visit (Project Biological Report, p. 18).

Delhi Sands Flower-Loving Fly (*Rhaphiomidas terminatus abdominalis*)
The federally endangered Delhi Sands Flower-Loving Fly is restricted to the Delhi Sands formation, on ancient inland sand dunes. The Project site is located within the Ontario Recovery Unit of the Recovery Plan for Delhi Sands Flower-Loving Fly. Historically, much of the Project site supported Delhi fine sand, which is the soil type required for Delhi Sands Flower-Loving Fly occurrence.

However, the site has a history of agricultural use, and site soils have been extensively altered and amended over time. Current soils are significantly altered compared with historic conditions; and degraded from the perspective of supporting Delhi Sands Flower-Loving Fly.

Delhi Sands Flower-Loving Fly lay eggs in fine sand, where the larva develop over a 1 – 2 year period. Soil disturbances from agricultural and other activities likely kill the larva, which precludes the fly from these areas.

Delhi Sands Flower-Loving Fly require habitat with vegetation cover from absent (windblown sand) to sparse (less than 50% vegetation cover). Suitable vegetation includes telegraph weed (*Heterotheca grandiflora*), California buckwheat (*Eriogonum fasciculatum*), California croton (*Croton californicus*), annual bur-sage (*Ambrosia acanthicarpa*) and other native or non-native species. All of these plant species are either absent from the site or present in very low numbers and site vegetation is typically dense from non-native plant species (in most areas close to 100% vegetation cover).

Delhi Sands Flower-Loving Fly are unlikely to occur onsite for the following reasons:

- Soils are significantly altered and degraded;
- Soil disturbances from agricultural and other activities likely kill any fly larva;
- Suitable native vegetation species are absent from the site; and,
- Site vegetation is generally too dense to support flies.

[Project Biological Report, p. 19]

Burrowing owls (*Athene cunicularia*)

Burrowing owls occur in shortgrass prairies, grasslands, lowland scrub, agricultural lands (particularly rangelands), prairies, coastal dunes, desert floors, and some artificial, open areas as a yearlong resident. They require large open expanses of sparsely vegetated areas on gently rolling or level terrain with an abundance of active small mammal burrows. As a critical habitat feature, they require the use of rodent or other burrows for roosting and nesting cover. They can also use pipes, culverts, and nest boxes.

No burrowing owls or their sign were detected during the surveys and there was no evidence that any burrowing owls occur onsite. No onsite burrows showed any evidence of owl occupancy. Burrowing owls are presumed absent from the site.

Focused surveys for burrowing owl were conducted over the northern portions of the site in 2022 (VCS Environmental). No burrowing owls or their sign were detected during the surveys and there was no evidence that any burrowing owls occur onsite (Project Biological Report, p. 19).

4.10.3 EXISTING POLICIES AND REGULATIONS

Federal Endangered Species Act/California Endangered Species Act

The United States Congress passed the Federal Endangered Species Act (ESA) in 1973 to protect those species that are endangered or threatened with extinction. The State of California enacted a similar law, the California Endangered Species Act (CESA) in 1984. The State and Federal Endangered Species Acts are intended to operate in conjunction with the California Environmental Quality Act (CEQA) and the National Environmental Policy Act (NEPA) to help protect the ecosystems upon which endangered and threatened species depend. The United States Fish and Wildlife Service (USFWS) is responsible for implementation of ESA, while the CDFW implements CESA. During Project review, each agency is given the opportunity to comment on the potential for the Project to affect listed plants and animals.

State of California, Fish and Game Code Section 1600 *et seq.*

The CDFW has jurisdiction under Section 1600 *et seq.* of the California Fish and Game Code over fish and wildlife resources of the state. Under Section 1602, a private party must notify the CDFW if a project will "substantially divert or obstruct the natural flow or substantially change the bed, channel, or bank of any river, stream, or lake designated by the department, or use any material from the streambeds, except when the department has been notified pursuant to Section 1601." If an existing fish or wildlife resource may be substantially adversely affected by the activity, the CDFW may propose reasonable measures that will allow protection of those resources. If these measures are agreeable to the initiating party, they may enter into an agreement with the CDFW identifying the approved activities and associated mitigation measures.

4.10.3.1 Other Statutes, Codes, and Policies

In addition to ESA and CESA listings, plant and wildlife species receive consideration during the CEQA review processes, as discussed below.

Species of Special Concern

Species of Special Concern are generally defined as those California species whose numbers, reproductive success, or habitat may be threatened. Potential impacts to Species of Special Concern receive consideration under CEQA review.

CNPS-Listed Plants

The California Native Plant Society (CNPS) maintains a list of plant species native to California with minimal populations, limited distribution, or are otherwise threatened with extinction. This information is published in the Inventory of Rare and Endangered Vascular Plants of California. Potential impacts to populations of CNPS-listed plants receive consideration under CEQA review.

Raptors and Migratory Birds

Raptors (birds of prey), migratory birds, and other avian species are protected by state and federal laws. The federal Migratory Bird Treaty Act (MBTA) prohibits the killing, possessing, or trading of migratory birds except in accordance with regulations prescribed by the Secretary of Interior. Section 3503.5 of the California Fish and Game Code states that it is "unlawful to take, possess, or destroy any birds in the order Falconiformes or Strigiformes or to take, possess, or destroy the nest or eggs of any such bird except as otherwise provided by this code or any regulation adopted pursuant thereto." Potential impacts to raptors and migratory birds receive consideration under CEQA review.

4.10.4 STANDARDS OF SIGNIFICANCE

CEQA has identified the following significance thresholds relative to biological resources. If the Project would result in any one of the following, its impacts to biological resources would be considered significant.

- Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife (CDFW) or U.S. Fish and Wildlife Service (USFWS);

- Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations or by the CDFW or USFWS;

- Have a substantial adverse effect on federally protected wetlands as defined by Section 404 of the Clean Water Act through direct removal, filling, hydrological interruption, or other means;

- Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites;

- Conflict with any local policies or ordinances protecting biological resources, such as tree preservation policy or ordinance; or

- Conflict with provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan.

4.10.5 POTENTIAL IMPACTS AND MITIGATION MEASURES

4.10.5.1 Introduction

All CEQA topics concerning the Project's potential impacts to biological resources are discussed below. Please refer also to Draft EIR Appendix A, Initial Study Checklist Item IV., *Biological Resources*.

4.10.5.2 Impact Statements

Potential Impact BIO-1: *Substantially affect, either directly or through habitat modifications, any species identified as a candidate, sensitive, or special status species in local or regional plans, policies or regulations, or by the California Department of Fish and Wildlife (CDFW) or United States Fish and Wildlife Service (USFWS).*

Impact Analysis: Although no nesting birds were observed on-site, raptors (birds of prey), migratory birds, and other avian species are protected by the federal Migratory Bird Treaty Act (MBTA). Mitigation Measure 4.10.1 has been incorporated to ensure avoidance of any potential impacts, in accordance with MBTA requirements.

Additionally, although on-site activities have reduced the suitability of habitat to support special-status species known to occur in the general vicinity, the following special status-species may be affected by the Project:

- California horned lark;
- Loggerhead shrike;
- San Diego black-tailed jackrabbit; and
- Burrowing owl.

Although the California horned lark, Loggerhead shrike, and San Diego black-tailed jackrabbit are listed as state Species of Special Concern (SSC) in California, they are not federally or state listed as threatened or endangered. These species and their habitats are considered widespread and relatively common throughout coastal southern California. Due to the presence of suitable habitat throughout southern California and the widespread and common nature of these species, impacts of the Project on these species would not be considered significant. Potential nesting California horned larks and Loggerhead shrikes would be protected by Mitigation Measure 4.10.1.

Level of Significance before Mitigation: Potentially Significant.

Mitigation Measures:

4.10.1 *Avoidance of Nesting Migratory Birds: If possible, all vegetation removal activities shall be scheduled from August 1 to February 1, which is outside the general avian nesting season. This would ensure that no active nests would be disturbed and that removal could proceed rapidly. If vegetation is to be cleared during the nesting season, all suitable habitat will be thoroughly surveyed within 72 hours prior to clearing for the presence of nesting birds by a qualified biologist (Project Biologist). The Project Biologist shall be approved by*

the City and retained by the Applicant. The survey results shall be submitted by the Project Applicant to the City Planning Department. If any active nests are detected, the area shall be flagged and mapped on the construction plans along with a minimum 300-foot buffer, with the final buffer distance to be determined by the Project Biologist. The buffer area shall be avoided until, as determined by the Project Biologist, the nesting cycle is complete or it is concluded that the nest has failed. In addition, the Project Biologist shall be present on the site to monitor the vegetation removal to ensure that any nests, which were not detected during the initial survey, are not disturbed.

4.10.2 *Avoidance of Nesting Burrowing Owls: No more than 72 hours prior to any site disturbances, focused surveys for the burrowing owl shall be conducted. If absence of this species is confirmed, Project work can proceed. If, however, burrowing owl is located on site, the appropriate resource agencies (CDFW and USFWS) shall be contacted. The Project Applicant shall consult with the wildlife agencies regarding the most appropriate methods and timing for removal of owls. As necessary, owls will be actively evicted following agency approved protocols (i.e., placing a one-way door at the burrow entrance to ensure that owls cannot access the burrow once they leave). Any such active eviction shall occur outside of the breeding/nesting season. That is, active eviction shall be accomplished between September 1 and February 15. If more than 30 days has elapsed between owl eviction and completion of clearing and grubbing activities, a subsequent survey for the burrowing owl shall be conducted to ensure that owls have not re-populated the site. Any reoccupation by owls will require subsequent protocol active eviction.*

Level of Significance after Mitigation: With the implementation of Mitigation Measures 4.10.1 and 4.10.2, the Project's potential impacts to species identified as a candidate, sensitive, or special-status species are considered less-than-significant.

Potential Impact BIO-2: *Have a substantial adverse effect on riparian habitat or other sensitive natural community identified in local or California plans, policies or regulations or by the California Department of Fish and Wildlife (CDFW) or the United States Fish and Wildlife Service (USFWS); Have a substantial adverse effect on federally protected wetlands as defined by Section 404 of the Clean Water Act (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means.*

Impact Analysis: The site does not contain any lakes, rivers, creeks, streambeds, wetlands, vernal pools, or temporary rain pools. No other wetlands, riparian habitat or other sensitive communities exist within the Project site. Nor does the Project propose uses or activities that would substantially or adversely affect any other off-site wetlands or riparian areas.

Level of Significance before Mitigation: Less-Than-Significant.

Potential Impact BIO-3: *Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of wildlife nursery sites.*

Impact Analysis: No regional wildlife movement corridors have been identified in the City, most of which is ill suited for the purposes of wildlife movement (TOP SEIR, p. 5.4-33). No wildlife habitat linkages or movement corridors have been identified at the Project site (Project Biological Report, p. 30). Nor does the Project propose facilities or activities that would substantively and adversely affect any off-site designated wildlife habitat linkage or movement corridor. Impacts to potential nesting birds are addressed by Mitigation Measure 4.10.1, presented previously.

Based on the preceding, impacts to wildlife corridors, habitat linkages, or wildlife nursery sites that would occur as a result of the Project are determined to be less-than-significant.

Level of Significance: Less-Than-Significant.

Potential Impact BIO-4: *Conflict with any local policies or ordinances protecting biological resources, such as tree preservation policy or ordinance; Conflict with provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan.*

Impact Analysis: TOP 2050 supports protection of high value habitat areas (TOP 2050 Goal ER-5). The Project site has been significantly impacted due to years of disking, dumping, disturbance and agriculture. As a result of these historic disturbances and on-

going urbanization of the site per the 2021 Specific Plan, the Project site does not contain or support high value habitats or protected species. See also: Project Biological Report, pp. 12 – 19. The Project does not propose or require uses or operations that would adversely affect any off-site high value habitat areas.

City of Ontario Municipal Code Division 6.05—Landscaping establishes standards that would preserve existing protected trees where possible. City of Ontario Chapter 2: Parkway Trees (Parkway Tree Regulations) regulates the maintenance and removal of parkway trees, and establishes varieties, minimum size, methods, and locations for or relating to the preservation and planting of parkway trees.

There are no protected trees within the Project site. The Project does not propose or require uses or operations that would adversely affect any off-site protected trees. There are no parkway trees within the Project site. The Project does not propose or require uses or operations that would adversely affect any off-site parkway trees. As part of the City's standard development review process, the City would ensure that the final Specific Plan Landscape Plan and all development proposals within the Project conform to the Parkway Tree Regulations. There are no Natural Community Conservation Plans, or Regional, or State Habitat Conservation Plans regulating the Project or that would be adversely affected by the Project.

Based on the preceding, the potential for the Project to conflict with any local policies or ordinances protecting biological resources, such as tree preservation policy or ordinance; Conflict with provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan is considered less-than-significant.

Level of Significance: Less-Than-Significant.

4.11 CULTURAL RESOURCES/ TRIBAL CULTURAL RESOURCES

4.11 CULTURAL RESOURCES/ TRIBAL CULTURAL RESOURCES

Abstract

This Section examines the potential for implementation of the Project to impact cultural resources in the Project area. Specifically, this analysis seeks to determine whether the Project would result in any of the following:

- *Cause a substantial adverse change in the significance of a historical resource as defined in §15064.5.*

- *Cause a substantial adverse change in the significance of an archaeological resource pursuant to §15064.5.*

Cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code § 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is:

- *Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code section 5020.1(k), or*

- *A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code § 5024.1. In applying the criteria set forth in subdivision (c) of Public Resource Code § 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe.*

Information contained within this Section is based on Cultural Resources Assessment, Rich-Haven Specific Plan Areas of Change Project, City of Ontario, San Bernardino County, California *(BCR Consulting, Inc.) August 18, 2022 (Project Cultural Resources Assessment).*

The Project Cultural Resources Assessment is presented at EIR Appendix L. As supported by the analysis presented in this Section, as mitigated, the Project's potential to impact cultural resources is determined to be less-than-significant.

4.11.1 INTRODUCTION

Cultural resources can be of scientific, aesthetic, educational, archaeological, architectural, or historical significance to the community. The following discussion identifies and classifies the significance of prehistoric and/or historic cultural resources which may exist on the subject site, and assesses the Project's potential to impact such resources.

4.11.2 BACKGROUND

Prehistoric Context

The Project site is located within the traditional boundaries of the Gabrielino. The Gabrielino probably first encountered Europeans when Spanish explorers reached California's southern coast during the 15th and 16th centuries. The first documented encounter, however, occurred in 1769 when Gaspar de Portola's expedition crossed Gabrielino territory. Other brief encounters took place over the years. The Gabrielino name has been attributed by association with the Spanish mission of San Gabriel, and refers to a subset of people sharing speech and customs with other Cupan speakers (such as the Juaneño/Luiseño/Ajachemem) from the greater Takic branch of the Uto-Aztecan language family. Gabrielino villages occupied the watersheds of various rivers (locally including the Santa Ana) and intermittent streams. Chiefs were usually descended through the male line and often administered several villages. Gabrielino society was somewhat stratified and is thought to have contained three hierarchically ordered social classes which dictated ownership rights and social status and obligations. Plants utilized for food were heavily relied upon and included acorn-producing oaks, as well as seed-producing grasses and sage. Animal protein was commonly derived from rabbits and deer in inland regions, while coastal populations supplemented their diets with fish, shellfish, and marine mammals. Dog, coyote, bear, tree squirrel, pigeon, dove,

mud hen, eagle, buzzard, raven, lizards, frogs, and turtles were specifically not utilized as a food source.

History

Historic-era California is generally divided into three periods: the Spanish or Mission Period (1769 to 1821), the Mexican or Rancho Period (1821 to 1848), and the American Period (1848 to present).

Spanish Period. The first European to pass through the area is thought to be a Spaniard called Father Francisco Garces. Having become familiar with the area, Garces acted as a guide to Juan Bautista de Anza, who had been commissioned to lead a group across the desert from a Spanish outpost in Arizona to set up quarters at the Mission San Gabriel in 1771 near what today is Pasadena. Garces was followed by Alta California Governor Pedro Fages, who briefly explored the region in 1772. Searching for San Diego Presidio deserters, Fages had traveled through Riverside to San Bernardino, crossed over the mountains into the Mojave Desert, and then journeyed westward to the San Joaquin Valley.

Mexican Period. In 1821, Mexico overthrew Spanish rule and the missions began to decline. By 1833, the Mexican government passed the Secularization Act, and the missions, reorganized as parish churches, lost their vast land holdings, and released their neophytes.

American Period. The American Period, 1848–Present, began with the Treaty of Guadalupe Hidalgo. In 1850, California was accepted into the Union of the United States primarily due to the population increase created by the Gold Rush of 1849. The cattle industry reached its greatest prosperity during the first years of the American Period. Mexican Period land grants had created large pastoral estates in California, and demand for beef during the Gold Rush led to a cattle boom that lasted from 1849–1855. However, beginning about 1855, the demand for beef began to decline due to imports of sheep from New Mexico and cattle from the Mississippi and Missouri Valleys. When the beef market collapsed, many California ranchers lost their ranchos through

foreclosure. A series of disastrous floods in 1861–1862, followed by a significant drought, further diminished the economic impact of local ranching. This decline combined with ubiquitous agricultural and real estate developments of the late 19th century, set the stage for diversified economic pursuits that continue to this day.

Ontario. Ontario, California was founded as a township in September 1882 by George and William B. Chaffey, named after their home of Ontario, Canada. The brothers purchased 6,218 acres of land with water rights and set aside 640 acres for the community of Ontario. Half of the initial 640 acres was deeded to the Chaffey Agricultural College as an endowment. On December 10, 1891, Ontario was incorporated as a city under the California Constitution with a City Council-City Manager form of government. In 1903, Ontario was proclaimed a "Model Irrigation Colony" by an Act of Congress. Ontario had many modern innovations, many of which still show their value today. An impressive two-hundred feet wide and eight miles long, Euclid Avenue (on the National Register) was the stately back-bone of the colony. Provisions for an electric railway, water rights for each landowner, a local educational institution, electric lights, one of the first long distance telephone lines, and public access to water and transportation set a new standard for rural communities and irrigation practices and ensured the success of the Model Colony. Water originating from the nearby San Gabriel Mountains was readily available. In addition to accessible water, climate conditions in Ontario were similar to those in the Mediterranean with dry, hot summers and cool, moist winters as regular occurrences. Ontario first developed as an agricultural community, largely, but not exclusively, devoted to the citrus industry. In addition to oranges, the production of peaches, walnuts, lemons, olives and grapes were also important to the growth of Ontario and neighboring cities.

In 1923, airplane enthusiasts Waldo Waterman and Archie Mitchell established Latimer Field. From that point on, Ontario became an aviation town. Urban growth pushed the fliers east until they took up their permanent residence located at the Ontario World Airport. During WWII, this airport was a busy training facility for pilots. After WWII, construction boomed in Ontario as the City's growth more than doubled by the end of the '50s. In 1954, four new schools were built, with land for three more being purchased.

That same year, the Interstate 10 opened for public use, diminishing or altering commercial traffic through Ontario. The downtown area found competition in neighborhood shopping centers that featured large parking lots and national brand chain stores. As the citrus industry declined, large tracts of orange groves gave way to new housing for settlers to the region. Following the ’60s and ’70s, the City’s population had grown from 46,617 to 87,300 residents as Ontario expanded its boundaries eastward to encompass Guasti and the large tracts of vineyards beyond it. Ontario has become a diversified community with approximately 173,000 residents in 2015. Although the City boundaries have been extended from 0.38 square miles in 1891 to almost 50 square miles today, Ontario’s Historic Downtown still retains the original subdivision pattern established by the Chaffey brothers.

Local Dairies. Dairies within the Chino Valley followed three distinct phases: Free grazing of cattle (1900-1930), mechanization of milking (1931-1949), and scientific, large capacity dairies (Post-1950). The first phase from 1900 to 1930, was marked by the free grazing of cattle with dairies that were situated around the perimeter of population centers to service those areas. The second phase of dairies was spurred by the growing population and saw the transition from free grazing to dry-lot dairying that utilized mechanization in the milking process. Due to a combination of labor shortage caused by World War II and subsequent population increase throughout the ’50s and ’60s, dairies were forced to move onto smaller plots of land and utilize machinery. Technological advancements allowed for feeding and breeding techniques that produced larger herds which could be handled more efficiently by mechanization. The dairy industry in the Chino Valley had its peak in production during the ’80s, but as residential needs collided with agricultural land uses developers began to buy up the dairy properties and convert the land to residential subdivisions and other commercial and industrial uses.

4.11.3 EXISTING POLICIES AND REGULATIONS

4.11.3.1 Federal

National Historic Preservation Act

The National Historic Preservation Act (NHPA) requires federal agencies to consider the effects of their undertakings on historic properties. Historic properties are cultural resources (e.g., archeological sites, historic built environment features, or Native American sites) that are listed, or determined to be eligible for listing, on the National Register of Historic Places. The implementing regulations of this mandate, found in the Code of Federal Regulations (36 CFR 800), outline an involved consultation process known as the Section 106 process. The Section 106 process requires a project lead federal agency to consult with the State Historic Preservation Officer.

American Indian Religious Freedom Act

The American Indian Religious Freedom Act, passed in 1978, serves to protect and preserve the traditional religious rights of American Indians, Eskimos, Aleuts, and Native Hawaiians. Before the Act was passed, certain federal laws interfered with the traditional religious practices of many American Indians.

Native American Graves Protection and Repatriation Act of 1990

The Native American Graves Protection and Repatriation Act establishes a federal policy of respect for, and protection of, Native American religious practices. It also has provisions for allowing limited access to Native American religious sites. The Act provides for the repatriation of certain items from the federal government and certain museums to the native groups to which they once belonged. The Act defines "cultural items," "sacred objects," and "objects of cultural patrimony" and establishes a means for determining ownership of these items. However, the provisions for repatriation only apply to items found on federal lands.

Executive Order 13007 and Executive Order 13084

Executive Order 13007 requires federal agencies with land management responsibilities to allow access to and use of Indian sacred sites on public lands, and to avoid adversely affecting these sites. Executive Order 13084 reaffirms the government-to-government relationship between the federal government and recognized Indian tribes, and requires federal agencies to establish procedures for consultation with tribes. These executive orders only apply to projects that include federal undertakings.

4.11.3.2 State

CEQA and the California Register of Historical Resources

Historical resources are recognized as part of the environment under the California Environmental Quality Act (CEQA). The California Register of Historical Resources (California Register) is the authoritative guide for the State's historical resources, and properties included in the California Register are considered significant for the purposes of CEQA. The California Register includes resources listed, or formally determined eligible for listing, on the National Register of Historic Places, and some California State Landmarks and Points of Historical Interest. Properties of local significance designated under a local preservation ordinance (local landmarks or landmark districts), or that have been identified in a local historical resources inventory, may be eligible for listing in the California Register and are presumed to be significant resources for the purposes of CEQA unless a preponderance of evidence indicates otherwise (PRC § 5024.1, 14 CCR § 4850).

An archaeological site may be considered a historical resource if it is significant in the architectural, engineering, scientific, economic, agricultural, educational, social, political, military, or cultural annals of California (PRC § 5020.1(j)), or if it meets the criteria for listing on the California Register (14 CCR § 4850).

The *CEQA Guidelines* direct lead agencies to evaluate an archaeological site to determine if it meets the criteria for listing in the California Register. If it does, potential adverse impacts must be considered. If an archaeological site is not a historical resource, but

meets the definition of a "unique archaeological resource" as defined in PRC §21583.2, then it should be treated in accordance with the provisions of that section.

Substantial adverse change includes demolition, destruction, relocation, or alteration such that the significance of a historical resource would be impaired (PRC § 5020.1(q)). While demolition and destruction would constitute significant impacts, it is sometimes more difficult to assess when change, alteration, or relocation results in a substantial adverse change. The *CEQA Guidelines* provide that a project that alters those physical characteristics of historical resources that convey its significance (i.e., its character-defining features) can be considered to materially impair the resource's significance.

California Native American Graves Protection and Repatriation Act (2001)

The California Health and Safety Code, Division 7, Part 2, Chapter 5 (Sections 8010-8030) contains broad provisions for the protection of Native American cultural resources. The California Native American Graves Protection and Repatriation Act establishes policy to ensure that California Native American human remains and cultural items are treated with respect and dignity. The Act also provides the mechanism for disclosure and return of these items held by publicly-funded agencies and museums in California. Additionally, the Act outlines the mechanism by which California Native American tribes not recognized by the federal government may file claims for human remains and cultural items held in agencies or museums.

California Public Resources Code

The California Public Resources Code contains several sections applicable to the preservation of cultural resources and human remains. These sections detail procedures to be followed whenever Native American remains are found, and delineate the unauthorized disturbance or removal of archaeological, historical, paleontological resources, or human remains as an act punishable by law (Sections 5020, 5097.5, 5097.9-5097.996, 7050.5, 7051). As matter of law, the Project would comply with applicable provisions of the California Public Resources Code addressing preservation and protection of cultural resources and human remains.

California Code of Regulations

Under Title 14, Division 3, Section 4308, no person shall remove, injure, disfigure, deface, or destroy any object of archeological or historical interest or value.

Assembly Bill 52 (AB 52) Tribal Cultural Resources

Enacted as of July 1, 2015, AB 52 established a new category of resources under CEQA called "tribal cultural resources" that considers the tribal cultural values in addition to the scientific and archaeological values when determining impacts and mitigation. The Bill was built on the concept that California Native American tribes have the expertise "with regard to tribal history and practices" to identify significant cultural resources. To this end, AB 52 requires early consultation in the CEQA process to ensure that local and Tribal governments, public agencies, and project proponents have information available, early in the CEQA environmental review process, for the purpose of identifying and addressing potential adverse impacts to tribal cultural resources.

AB 52 requires that the lead agency contact (in writing) all culturally affiliated tribes that could be affected by a project, within 14 days of deeming a development application complete. The notice commences a 30-day period for the tribe to request consultation. Upon receipt of a request consultation, the lead agency has an additional 30 days to begin the consultation process. AB 52 states that the consultation concludes when either "1) the parties agree to measures to mitigate or avoid a significant effect, if a significant effect exists, on a tribal resource, or 2) a party, acting on good faith and after a reasonable effort, concludes that mutual agreement cannot be reached." AB 52 notes that the consultation can be ongoing throughout the CEQA process.

4.11.4 STANDARDS OF SIGNIFICANCE

Consistent with the standards of significance outlined in the *CEQA Guidelines*, Project-related impacts to cultural resources would be considered potentially significant if they cause or result in any of the following:

- Cause a substantial adverse change in the significance of a historical resource as defined in §15064.5;

- Cause a substantial adverse change in the significance of an archaeological resource pursuant to §15064.5;

- Disturb any human remains, including those interred outside of formal cemeteries; or

- Cause a substantial adverse change in the significance of a tribal cultural resource as defined in Public Resources Code 21074.

For the purposes of CEQA, an "important archaeological, historical, or paleontological resource" is defined as follows.

A) A resource listed in, or determined to be eligible by the State Historical Resources Commission, for listing in the California Register of Historical Resources.

B) A resource included in a local register of historical resources, or identified as significant in an historical resource survey, shall be presumed to be historically or culturally significant. Public agencies must treat any such resource as significant unless the preponderance of evidence demonstrates that it is not historically or culturally significant.

C) Any object, building, structure, site, area, place, record, or manuscript which a lead agency determines to be historically significant or significant in the architectural, engineering, scientific, economic, agricultural, educational, social, political, military, or cultural annals of California may be considered to be an historical resource, provided the lead agency's determination is supported by substantial evidence in light of the whole record. Generally, a resource shall be considered by the lead agency to be "historically significant" if the resource meets the criteria for listing on the California Register of Historical Resources, including the following:

1) A resource is associated with events that have made a significant contribution to the broad patterns of California's history and cultural heritage.

2) A resource is associated with the lives of persons important in our past.

3) A resource embodies the distinctive characteristics of a type, period, region, or method of construction, or represents the work of an important creative individual, or possesses high artistic values, or has yielded, or may be likely to yield, information important in prehistory or history.

City of Ontario Designation Criteria is as follows:

a. It exemplifies or reflects special elements of the City's history;

b. It is identified with persons or events significant in local, state, or national history;

c. It is representative of the work of a notable builder, designer, architect, or artist;

d. It embodies distinguishing architectural characteristics of a style, type, period, or method of construction;

e. It is a noteworthy example of the use of indigenous materials or craftsmanship;

f. It embodies elements that represent a significant structural, engineering, or architectural achievement or innovation;

g. It has a unique location, a singular physical characteristic, or is an established and familiar visual feature of a neighborhood, community or the City; or

h. It is one of the few remaining examples in the City, region, state, or nation possessing distinguishing characteristics of an architectural or historical type or specimen.

4.11.5 POTENTIAL IMPACTS AND MITIGATION MEASURES

4.11.5.1 Introduction

The following analysis is focused on areas where it has been determined that the Project may result in potentially significant impacts, based on the analysis included within the Initial Study. In this regard, as substantiated in the Initial Study, the Project's potential to disturb any human remains, including those interred outside of formal cemeteries was previously determined to be less-than-significant. Please refer to EIR Appendix A, Initial Study Checklist Items V., *Cultural Resources* and XVIII., *Tribal Cultural Resources*. All other potential cultural resources impacts of the Project are discussed below.

4.11.5.2 Impact Statements

Potential Impact CUL-1: *Cause a substantial adverse change in the significance of a historical resource pursuant to §15064.5.*

Impact Analysis: During the records search conducted for the Cultural Resources Assessment, five (5) potential historical resources were identified within the Project site. Potential resources included three (3) historical period residences and two (2) historical period transmission lines. These potential resources were evaluated for listing as "historically significant" as provided for at Section 5024.1 of the Cal. Public Res. Code. Generally, a resource is considered by the lead agency to be "historically significant" if the resource meets the criteria for listing in the California Register (Cal. Code Regs. tit. 14(3), § 15064.5(a)(3)). The eligibility criteria for the California Register are similar to those of the National Register of Historic Places (National Register), and a resource that meets one or more of the eligibility criteria of the National Register will be eligible for the California Register. The California Register program encourages public recognition and protection of resources of architectural, historical, archaeological, and cultural significance, identifies historical resources for state and local planning purposes, determines eligibility for state historic preservation grant funding and affords certain protections under CEQA. Criteria for Designation:

1. Associated with events that have made a significant contribution to the broad patterns of local or regional history or the cultural heritage of California or the United States.
2. Associated with the lives of persons important to local, California or national history.
3. Embodies the distinctive characteristics of a type, period, region or method of construction or represents the work of a master or possesses high artistic values.
4. Has yielded, or has the potential to yield, information important to the prehistory or history of the local area, California or the nation.

In addition to meeting one or more of the above criteria, the California Register requires that sufficient time has passed since a resource's period of significance to "obtain a scholarly perspective on the events or individuals associated with the resources." (CCR 4852 [d][2]). Fifty years is normally considered sufficient time for a potential historical resource, and in order that the evaluation remain valid for a minimum of five years after the date of this report, all resources older than 45 years (i.e., resources from the "historic-period") will be evaluated for California Register listing eligibility, or CEQA significance. The California Register also requires that a resource possess integrity. This is defined as the ability for the resource to convey its significance through seven aspects: location, setting, design, materials, workmanship, feeling, and association.

In the context of the above criteria, Table 4.11-1 presents the findings of the research and field surveys conducted as part of the Cultural Resources Assessment for each potential resource.

Table 4.11-1
Potential On-Site Cultural Resources

	Description	Findings
P-36-12621	Historical Period Residence	This residence was evaluated for inclusion on the California Register of Historical Resources, or as a City Historical Landmark. The residence fails to meet the eligibility criteria for any listing.

Table 4.11-1
Potential On-Site Cultural Resources

P-36-12622	Historical Period Residence	Field survey confirmed that this residence was previously demolished, and the site now contains modern condominiums. No further assessment necessary.
P-36-12623	Historical Period Residence	This residence was evaluated for inclusion on the California Register of Historical Resources, or as a City Historical Landmark. The residence fails to meet the eligibility criteria for any listing.
P-36-25440	Historical Period Transmission Line	Field survey and additional research determined that the portion of this line that crosses the Project site is not historic in age. No further assessment necessary.
P-36-26051	Historical Period Transmission Line	This transmission line was evaluated for inclusion on the California Register of Historical Resources, or as a City Historical Landmark. The transmission line fails to meet the eligibility criteria for any listing.

Source: *Cultural Resources Assessment, Rich-Haven Specific Plan Areas of Change Project, City of Ontario, San Bernardino County, California* (BCR Consulting, Inc.) August 18, 2022.

As shown above, none of the potential resources identified within the records search qualify as significant historical resources when evaluated against the criteria presented at Section 4.11.4, presented previously. As such, the Cultural Resources Assessment determined that the Project would have a less-than-significant impact on historical resources.

Level of Significance: Less-Than-Significant.

Potential Impact CUL-2: *Cause a substantial adverse change in the significance of an archeological resource pursuant to §15064.5.*

Impact Analysis: Although no archeological resources were identified as part of the Project Cultural Resources Assessment, ground-disturbing activities have the potential to reveal buried resources not observed during the field survey. Cultural materials that may be encountered during ground-disturbing activities could include:

- Historic-period artifacts such as glass bottles and fragments, cans, nails, ceramic and pottery fragments, and other metal objects;

- Historic-period structural or building foundations, walkways, cisterns, pipes, privies, and other structural elements;
- Prehistoric flaked-stone artifacts and debitage (waste material), consisting of obsidian, basalt, and or cryptocrystalline silicates;
- Groundstone artifacts, including mortars, pestles, and grinding slabs;
- Dark, greasy soil that may be associated with charcoal, ash, bone, shell, flaked stone, groundstone, and fire affected rocks;
- Human remains.

[Project Cultural Resources Assessment, p. iii]

Mitigation Measure 4.11.1 would ensure proper protocol is undertaken and a treatment plan is developed, should resources be discovered during ground-disturbing activities.

Level of Significance: Potentially Significant.

Mitigation Measure:

4.11.1 *Prior to the issuance of (a) grading permit(s) for development proposal(s) within the Specific Plan Area, the Applicant or successor(s) in interest shall provide a letter to the City of Ontario Building Department, or designee, from a qualified professional archeologist meeting the Secretary of Interior's Professional Qualifications for Archaeology as defined at 36 CFR Part 61, Appendix A stating that the archeologist has been retained to provide on-call services in the event archeological resources are discovered. The archeologist shall be present at the pre-grading conference to establish procedures for archeological resource surveillance. In the event a previously unrecorded archaeological deposit is encountered during construction, all activity within 50 feet of the area of discovery shall cease and the City shall be immediately notified. The archeologist shall be contacted to flag the area in the field and determine if the archaeological deposits meet the CEQA definition of historical (State CEQA Guidelines 15064.5(a)), unique archaeological resource (Public Resources Code 21083.2(g)), or Tribal Cultural Resource (Public Resources Code 21074 (a)). If the find is considered a "resource" the archaeologist shall pursue either protection in place or recovery, salvage*

and treatment of the deposits. A qualified archaeologist and a Native American Monitor of Gabrieleño Ancestry shall evaluate all archaeological resources unearthed by Project construction activities. If the resources are Native American in origin, they shall have the opportunity to consult with the City and/or Project developer on appropriate treatment and curation of these resources. If unique archaeological resources, or Tribal Cultural Resources cannot be preserved in place or left in an undisturbed state, recovery, salvage and treatment shall be required at the Applicant or successor(s) in interest's expense. Recovery, salvage and treatment protocols shall be developed in accordance with applicable provisions of Public Resource Code Section 21083.2 and State CEQA Guidelines 15064.5 and 15126.4. All recovered and salvaged resources shall be prepared to the point of identification and permanent preservation by the archaeologist. Resources shall be identified and curated into an established accredited professional repository. The archaeologist shall have a repository agreement in hand prior to initiating recovery of the resource. Excavation as a treatment option shall be restricted to those parts of the unique archaeological resource, or Tribal Cultural Resource that would be damaged or destroyed by the Project.

Level of Significance After Mitigation: Less-Than-Significant.

Potential Impact CUL-3: *Cause a substantial adverse change in the significance of a tribal cultural resource as defined at Public Resources Code section 21074.*

Impact Analysis: The City has contacted tribes on its most current AB 52 Consultation list. A request to initiate formal consultation regarding the Project site was subsequently received from the Gabrieleño Band of Mission Indians – Kizh Nation. Pending formal response from the Gabrieleño Band of Mission Indians – Kizh Nation potential impacts to Tribal Cultural Resources (TCRs) are presumed to be potentially significant. Based on previous similar environmental analyses conducted in the City, the following measures are recommended for incorporation. These measures establish monitoring protocols, and provisions for avoidance, protection, or curation of TCRs.

Level of Significance: Potentially Significant.

Mitigation Measures:

The following measures shall apply to all individual development proposals within the Specific Plan Area:

4.11.2 Project developer(s) shall retain a Native American Monitor of Gabrieleño Ancestry (Native American Monitor) that was consulted on this Project pursuant to Assembly Bill A52 - SB18 to conduct a Native American Indian Sensitivity Training for construction personnel prior to commencement of any excavation activities. The training session shall include a handout and focus on how to identify Native American resources encountered during earthmoving activities and the procedures followed if resources are discovered, the duties of the Native American Monitor of Gabrieleño Ancestry and the general steps the Monitor would follow in conducting a salvage investigation.

4.11.3 Project developer(s) shall retain a Native American Monitor of Gabrieleño Ancestry that was consulted on this Project pursuant to Assembly Bill A52 - SB18 to be on-site during all Project-related, ground-disturbing construction activities Such activities include: pavement removal, auguring, boring, grading, excavation, potholing, trenching, and/or grubbing of previously undisturbed native soils to a maximum depth of 30 feet below ground surface. A copy of the executed consultant contract shall be submitted to the City of Ontario Planning Department prior to the issuance of any grading permit (any ground-disturbing activity). At their discretion, a Native American Monitor of Gabrieleño Ancestry can be present during the removal of dairy manure to native soil, but not at developer expense.

4.11.4 A qualified archaeologist and a Native American Monitor of Gabrieleño Ancestry that was consulted on this Project pursuant to Assembly Bill A52 - SB18 shall evaluate all archaeological resources unearthed by Project construction activities. If the resources are Native American in origin, the Tribe shall coordinate with the developer regarding treatment and curation of these resources. Typically, the Tribe will request reburial or preservation for educational purposes. If archeological features are discovered, the archeologist shall report such findings to the Ontario Planning Director. If the archeological resources are found to be significant, the archeologist shall determine the

appropriate actions, in cooperation with the City that shall be taken for exploration and/or salvage in compliance with CEQA Guidelines Section 15064.5(f).

4.11.5 Prior to the start of ground disturbing activities, developer(s) shall arrange a designated site location within the footprint of the Project for the respectful reburial of Tribal human remains and/or ceremonial objects. All human skeletal material discoveries shall be reported immediately to the County Coroner. The Native American Monitor shall immediately divert work a minimum of 50 feet from the discovery site and place an exclusion zone around the burial.

4.11.6 If encountering human skeletal materials, the Native American Monitor shall notify the construction manager who shall contact the San Bernardino County Coroner. All construction activity shall be diverted while the San Bernardino County Coroner determines if the remains are Native American. The discovery shall be confidential and secure to prevent further disturbance. If Native American, the San Bernardino County Coroner shall notify the Native American Heritage Commission (NAHC) as mandated by state law who will then appoint a Most Likely Descendant. In the case where discovered human remains cannot be documented and recovered on the same day, the remains shall be covered with muslin cloth and a steel plate that can be moved by heavy equipment placed over the excavation opening to protect the remains. If this type of steel plate is not available, a 24-hour guard shall be posted outside working hours. The Tribe shall make every effort to recommend diverting the Project and keep the remains in situ and protected. If the Project cannot be diverted, it may be determined that burials will be removed. If data recovery is approved by the Tribe, documentation shall be taken which includes, at a minimum, detailed descriptive notes and sketches. Additional types of documentation shall be approved by the Tribe for data recovery purposes. Cremations will either be removed in bulk or means necessary to ensure complete recovery of all material. If the discovery of human remains includes four (4) or more burials, the location is considered a cemetery and a separate treatment plan shall be created. The Project developer shall consult with the Tribe regarding avoidance of all cemetery sites. Once complete, a final report of all activities shall be submitted to the NAHC.

4.11.7 There shall be no Scientific study or the utilization of any invasive diagnostics on any Native American human remains.

4.11.8 If the San Bernardino County Coroner determines the remains represent a historic non-Native American burial, the burial shall be treated in the same manner of respect with agreement of the San Bernardino County Coroner. Reburial will be in an appropriate setting. If the San Bernardino County Coroner determines the remains to be modern, the San Bernardino County Coroner shall take custody of the remains.

4.11.9 As directed by the Project Archaeologist in consultation with the Native American Monitor, each occurrence of human remains and associated funerary objects shall be stored using opaque cloth bags. All human remains, funerary objects, sacred objects and objects of cultural patrimony shall be removed to a secure container on site if possible. These items shall be retained and reburied within six months of recovery. The site of reburial/repatriation shall be on the Project site, but at a location agreed upon between the Tribe and developer(s) and protected in perpetuity. There shall be no publicity regarding any cultural materials recovered.

Level of Significance After Mitigation: Less-Than-Significant. Implementation of Mitigation Measures 4.11.2 through 4.11.9 ensures that TCRs would be avoided, or would be appropriately collected, documented, and curated. On this basis, with application of mitigation, the potential for the Project to cause a substantial adverse change in the significance of a tribal cultural resource as defined in Public Resources Code section 21074 would be less-than-significant.

4.12 UTILITIES & SERVICE SYSTEMS

4.12 UTILITIES & SERVICE SYSTEMS

Abstract

This Section of the EIR addresses the Project's potential impacts to utilities and service systems. Specifically, the utilities and service systems analysis examines whether the Project would:

- *Require or result in the relocation or construction of new or expanded water, wastewater treatment, or storm water drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects;*

- *Have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry and multiple dry years;*

- *Result in a determination by the wastewater treatment provider which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments;*

- *Generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals; or*

- *Comply with federal, state, and local management and reduction statutes and regulations related to solid waste.*

This EIR evaluates likely maximum impacts associated with all Project actions and operations including, but not limited to, construction and operation of utilities and service systems distribution and conveyance lines. Construction and operation of the Project utilities and service

systems distribution and conveyance lines described in this Section would not result in conditions or environmental impacts not already considered and addressed elsewhere in this EIR. Mitigation proposed in this EIR under other environmental topics would also address potential impacts associated with construction and operation of utilities and service systems. Other impacts associated with, or resulting from, construction of Project infrastructure improvements would be less-than-significant.

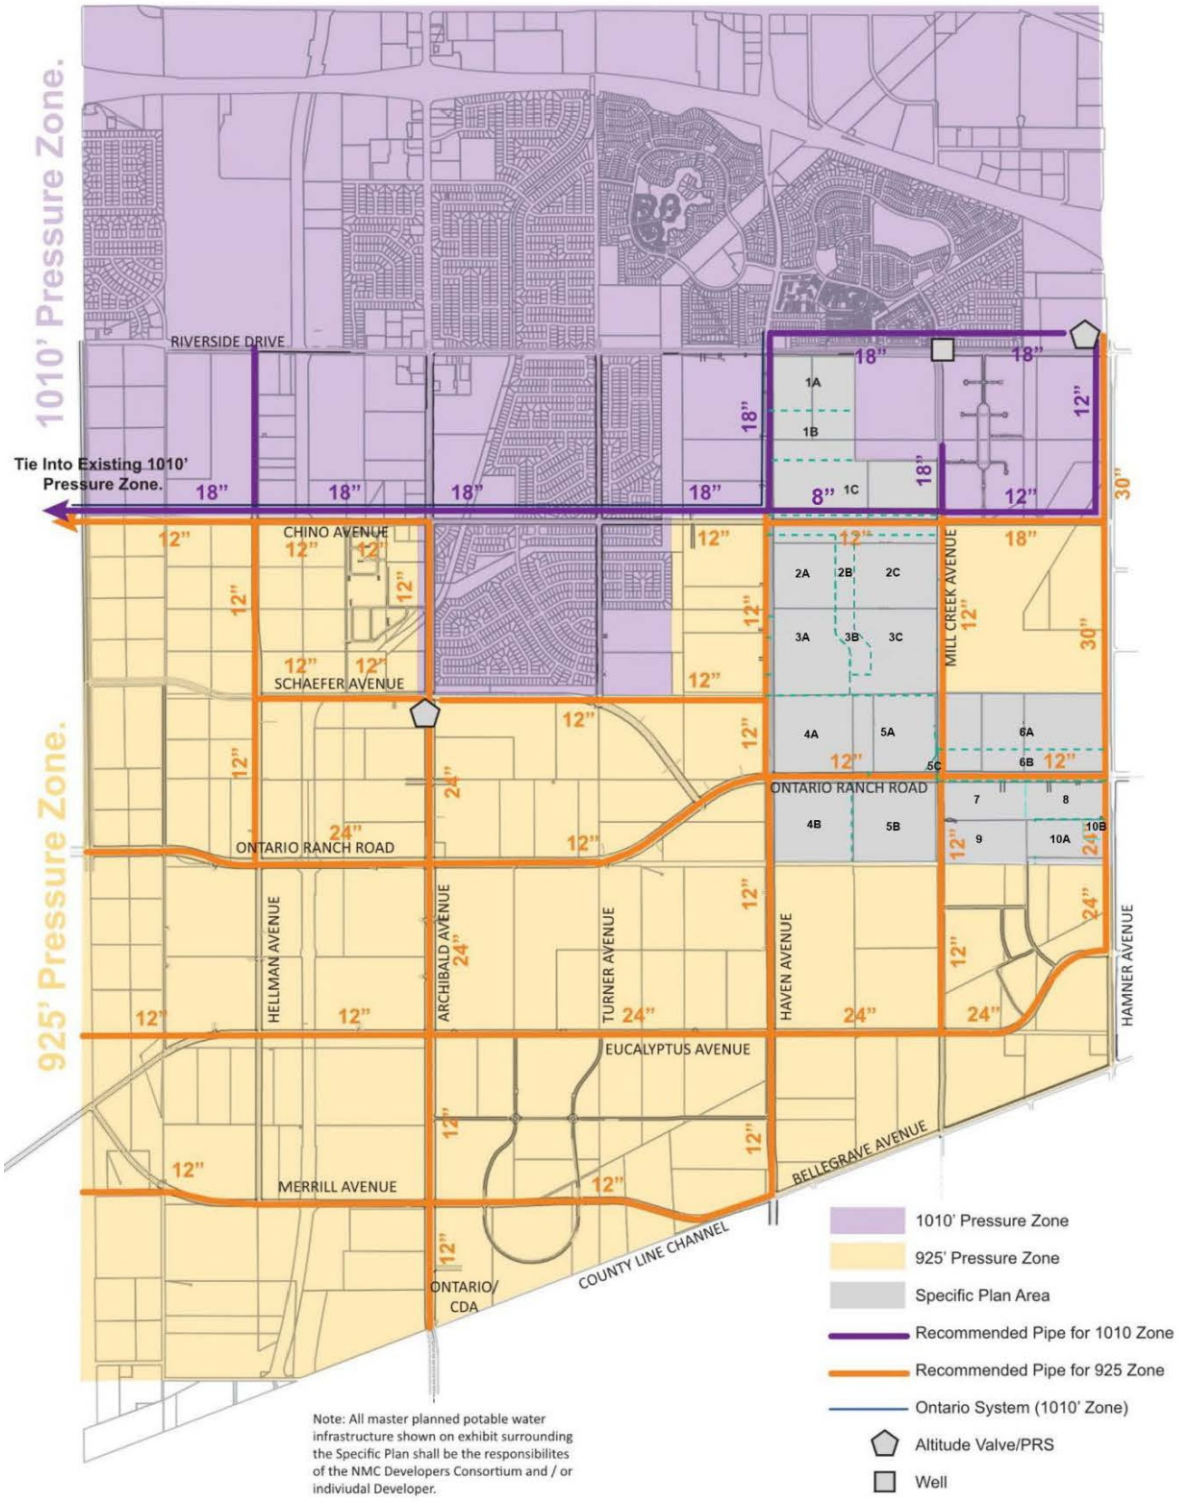
4.12.1 INTRODUCTION

For each of the utilities and service systems discussed, existing conditions are described, any improvements required to accommodate the Project are identified, and any resulting or associated impacts and required mitigation are discussed. The analysis is based on physical and operational attributes presented at EIR Section 3.0, *Project Description*; information presented in The Ontario Plan (TOP) 2050 Policy Plan and related environmental analyses; information provided by or available through the City of Ontario and County of San Bernardino; information presented in *Water Supply Assessment and Written Verification of Sufficient Water Supply, Rich-Haven Specific Plan Amendment No. 3* (Albert A. Webb Associates) March 18, 2021 (2021 WSA); and provisions of the *2022 Rich-Haven Specific Plan Amendment* (2022 Specific Plan Amendment).

TOP 2050 Policy Plan Policy LU-4.3 *Infrastructure Timing* requires that necessary infrastructure and services be in place prior to or concurrent with new development. The 2022 Specific Plan Amendment at Section 9.1 *General Plan Consistency* requires and substantiates consistency with TOP Policy Plan LU-4.3.

4.12.2 EXISTING CONDITIONS

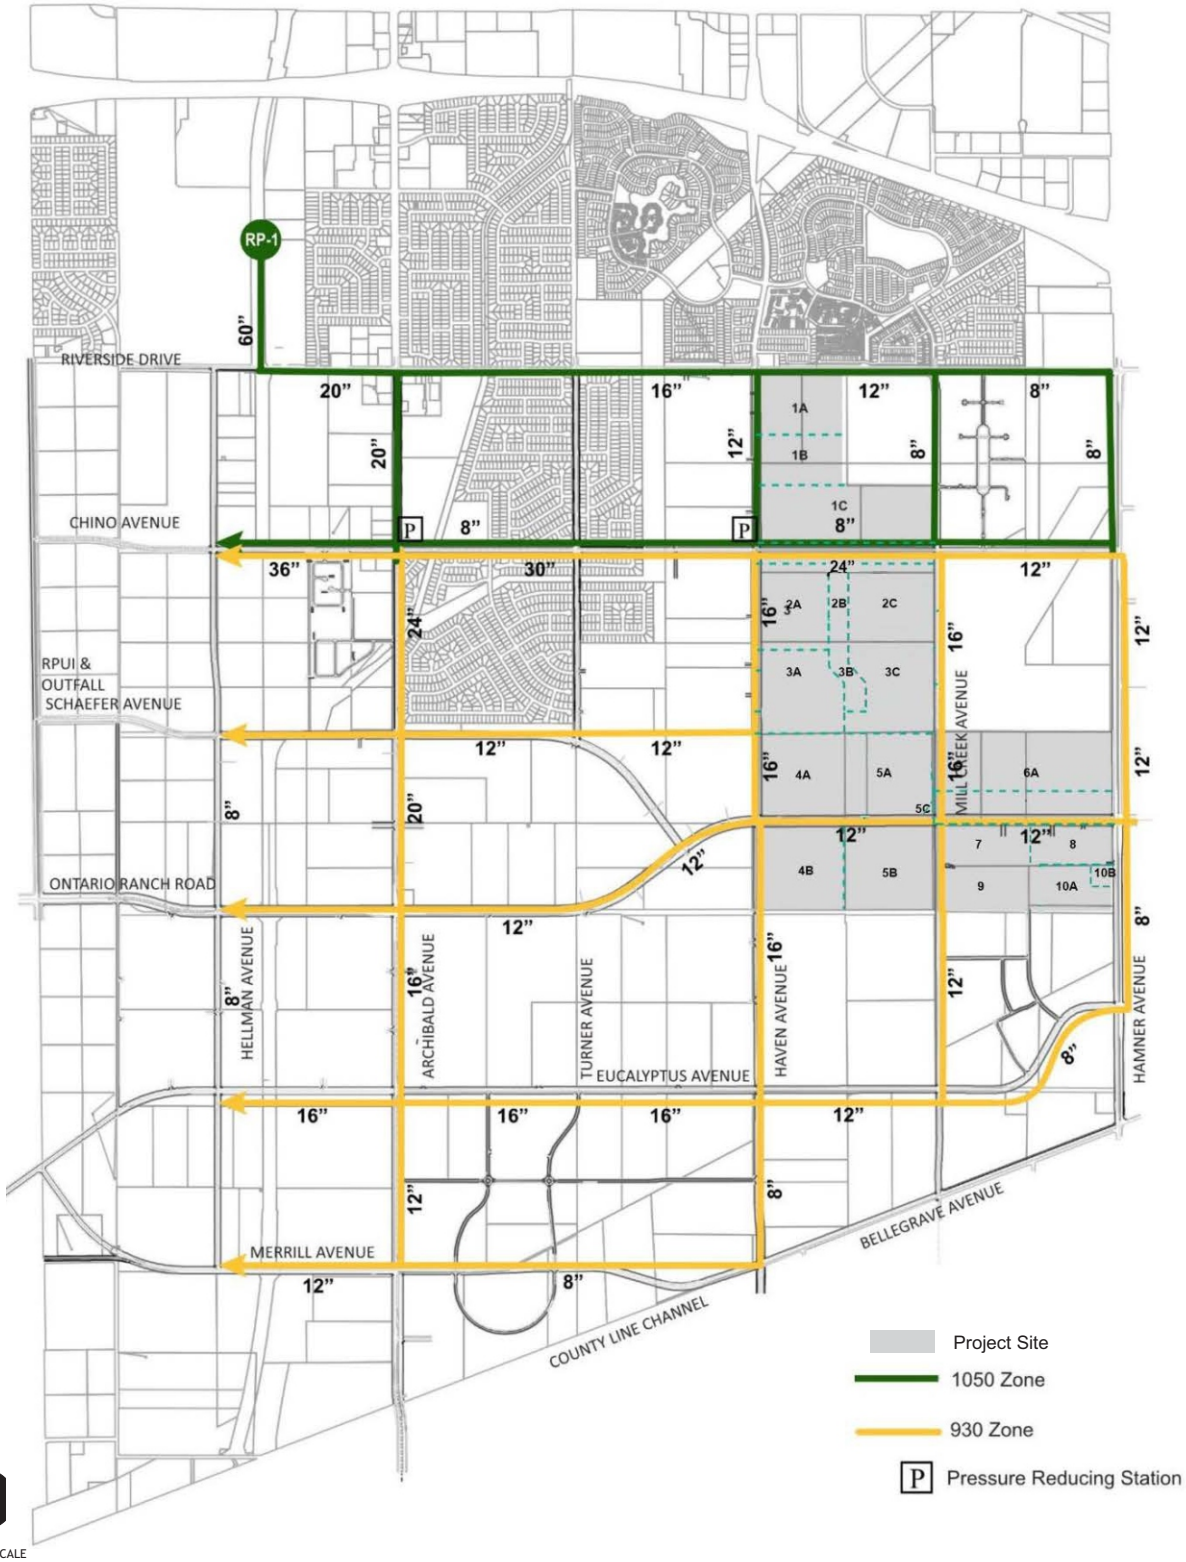
4.12.2.1 Water Supply and Water Service



On a City-wide basis, the Ontario Municipal Utilities Company (OMUC) provides water service to residents, businesses, and other users in the City of Ontario. OMUC would provide domestic water service to the Project area as part of its masterplan for service for Pressure Zones 1010, 925.

Water distribution system improvements for the City and context of the Project within the Pressure Zones 1010, 925 is presented at Figure 4.12-1. The City water master plan improvements have been designed to meet water service demands of the City under TOP 2050 Buildout Conditions (Buildout Conditions), including water service demands of the Project. Please refer also to related discussions presented in this Section under the discussion of potential water supply impacts. Water supply to the City of Ontario is derived from a combination of local and imported water, obtained primarily from four sources:

- Ontario wells and treatment in the Chino Groundwater Basin (Basin). The Basin is the primary source of water for the City, which currently receives approximately 70 to 80 percent of its water supply from this source;
- Chino Desalter Authority (CDA) wells and treatment in the Chino Groundwater Basin;
- Treated State Water Project from the Water Facilities Authority (WFA); and
- Recycled water from the Inland Empire Utilities Agency (IEUA), a member agency of the Metropolitan Water District of Southern California (MWD).



The City of Ontario 2020 Urban Water Management Plan (2020 UWMP) substantiates water supply adequacy to support the City under Buildout Conditions, including development proposed by the Project. The 2020 UWMP can be accessed at: https://www.ontarioca.gov/sites/default/files/Ontario-Files/Municipal-Utilities-Company/Final%20Draft%20Ontario%202020%20Ontario%20UWMP.pdf

Context of the Project within the City Master Planned Recycled Water System is presented at Figure 4.12-2. Recycled water supplied to the Project would be provided by OMUC. OMUC recycled water supplies are produced by IEUA from IEUA's four wastewater reclamation plants.

Pressure Zones 1010, 925

Source: Rich-Haven Specific Plan Amendment, 2022

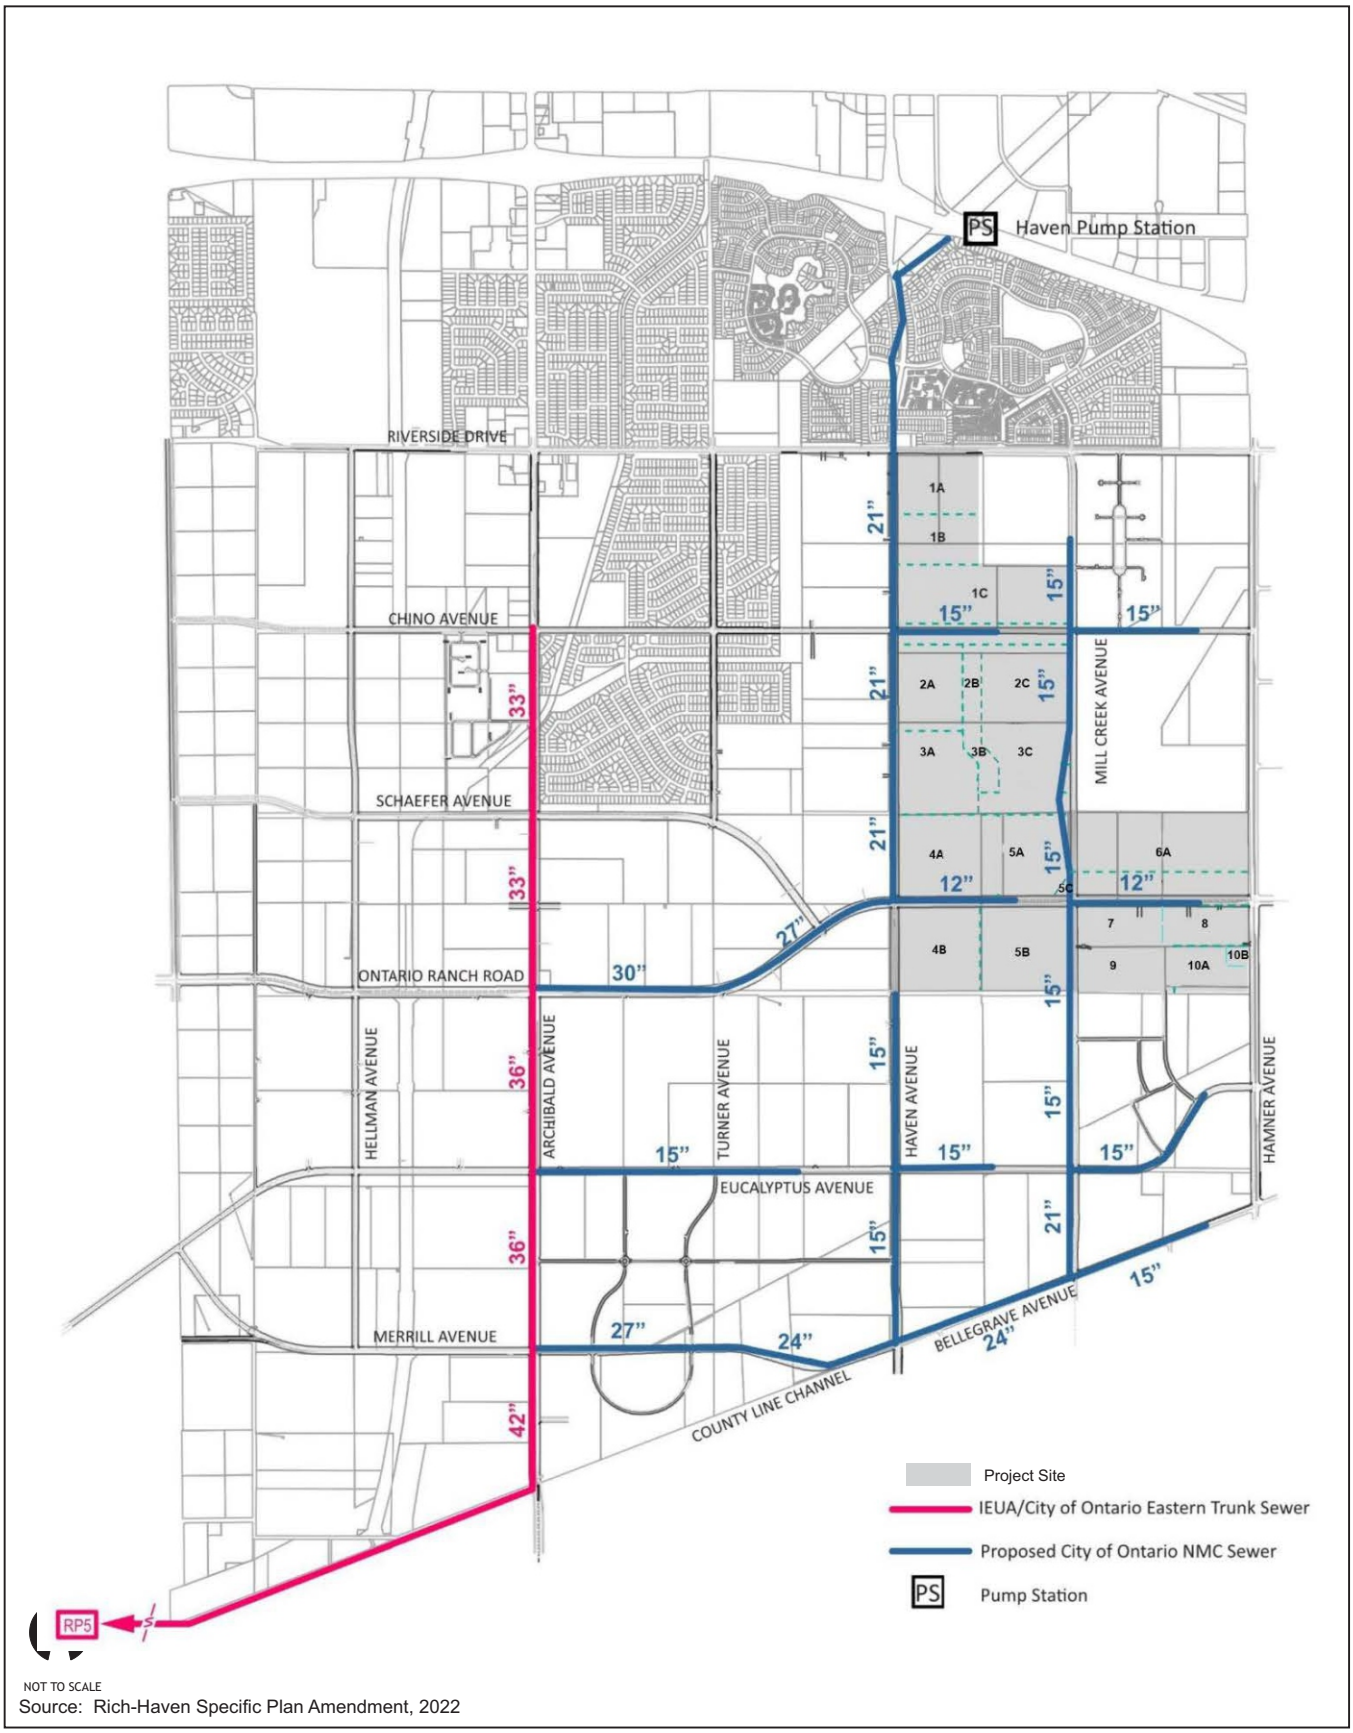

Figure 4.12-2
Project Location Within
Master Planned Recycled Water System

4.12.2.2 Wastewater Collection and Wastewater Treatment

Context of the Project within the City Master Planned Sewer System is presented at Figure 4.12-3. Developed areas of the City served by the municipal sewer system convey wastewater via regional trunk sewers to regional treatment plants operated by IEUA. Wastewater collection system improvements for the City and context of the Project within the system are reflected in the City of Ontario Ultimate Sewer System. The City sewer master plan improvements have been designed to meet wastewater conveyance demands of the City under City Buildout Conditions, including wastewater conveyance demands of the Project.

Wastewater generated within the City is treated at IEUA's Regional Water Recycling Plants No. 1 and 5. Regional Water Recycling Plant No. 1 has a capacity of 44 million gallons per day (mgd). Current average influent wastewater flows at Regional Water Recycling Plant No. 1 are approximately 28 mgd.[1] Regional Water Recycling Plant No. 5 has a capacity of 16.3 mgd, with daily average influent flows of 9 mgd.[2] IEUA treats wastewater at both plants to meet discharge requirements and Title 22 water quality standards for reuse as recycled water.

NOT TO SCALE

Source: Rich-Haven Specific Plan Amendment, 2022

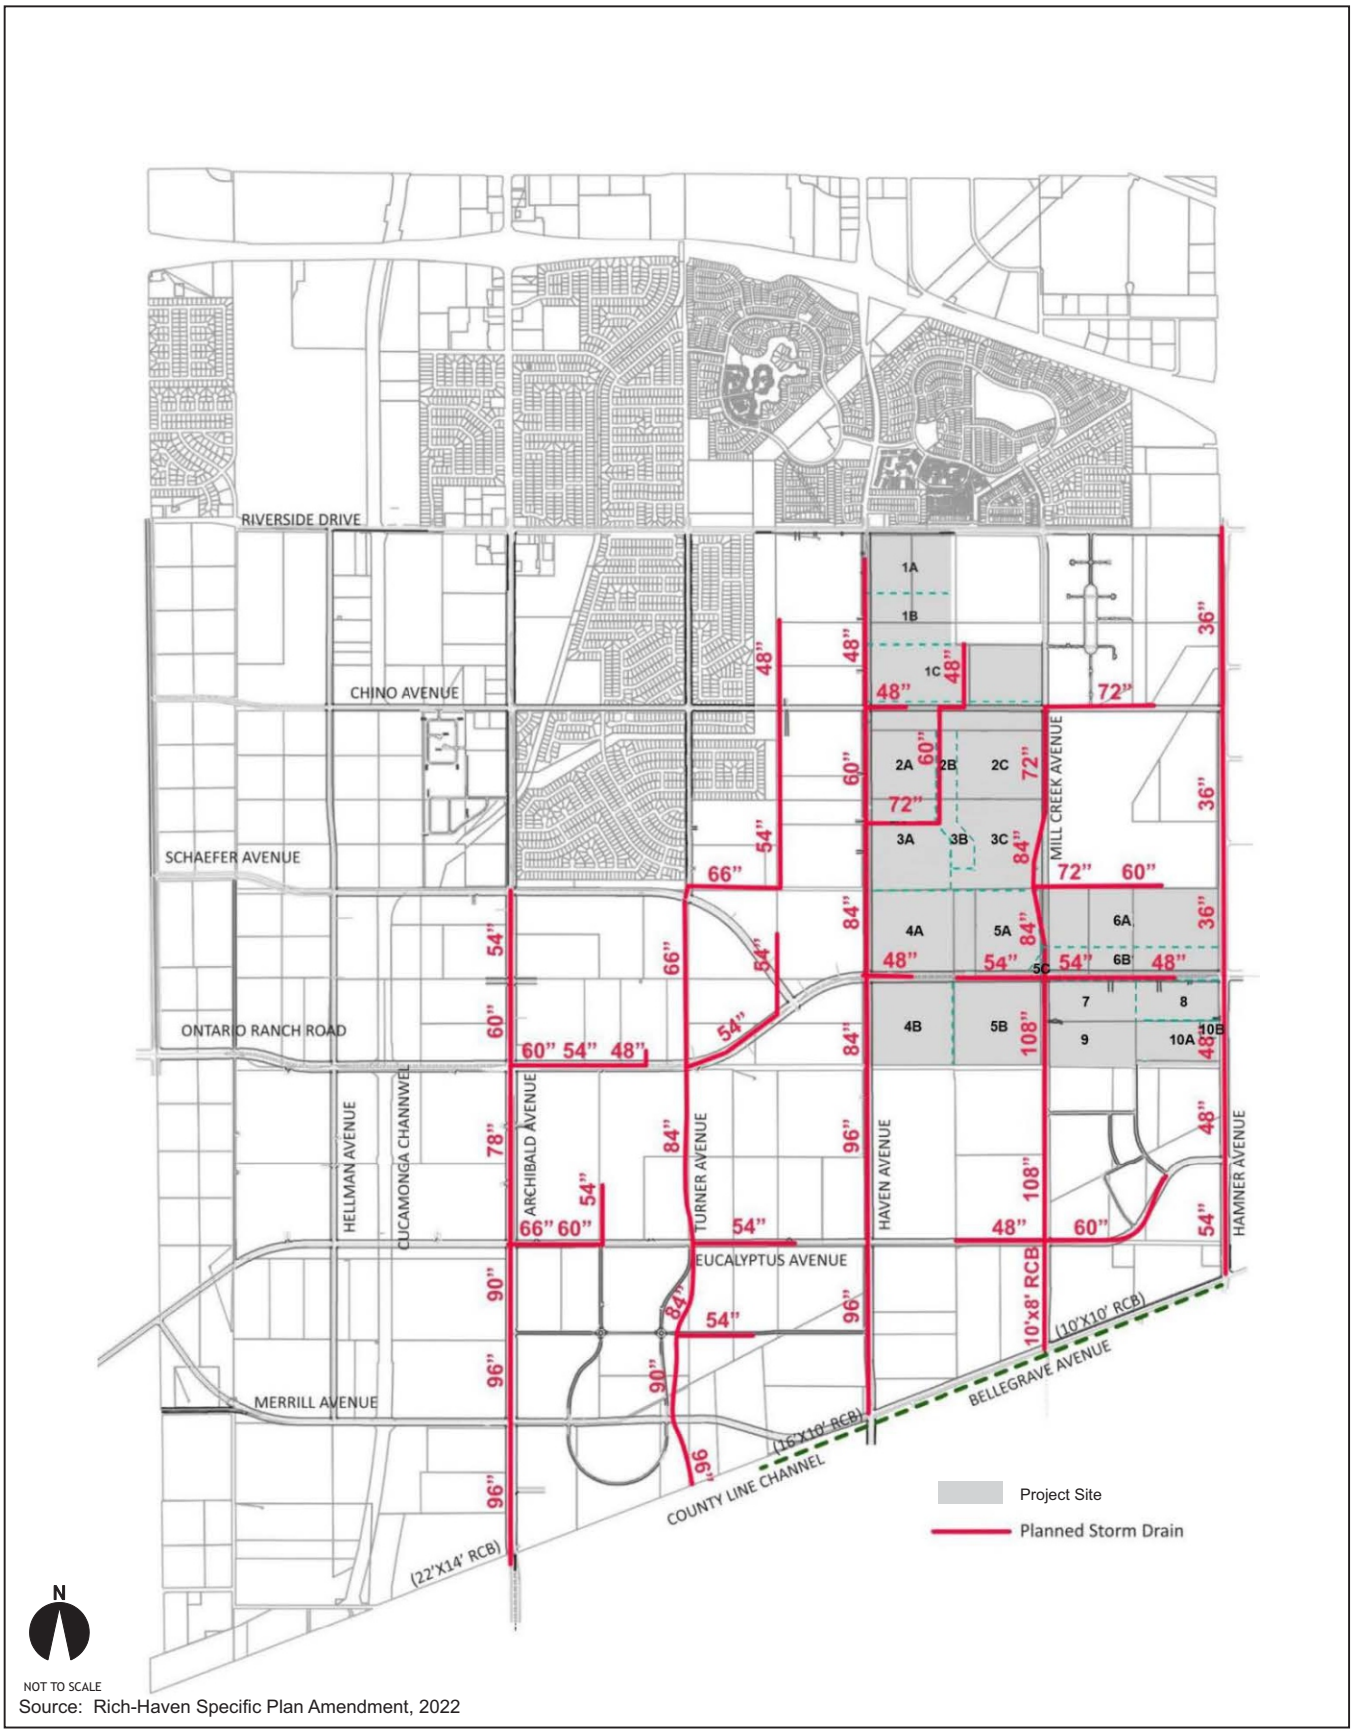
Figure 4.12-3
Project Location Within
Master Planned Sewer System

IEUA also operates the Non-Reclaimable Wastewater (NRW) System. Description of the NRW System is presented below.

> The NRW System conveys high strength wastewater and exports it to treatment facilities in Los Angeles and Orange counties for eventual discharge to the Pacific Ocean. Wastewater discharged to the NRW System consists mainly of industrial and groundwater treatment brines. Discharging to the NRW System instead of the Agency's treatment plants keeps salt out of the recycled water, ensuring that the Agency meets the Total Dissolved Solids (TDS) and total nitrogen limits listed in the National Pollutant Discharge Elimination System (NPDES) permits. This enables us to fully utilize recycled water, ensuring a reliable water supply for the region.
>
> The NRW System consists of three trunk lines: NRWS and Etiwanda Wastewater Line (EWL) on the Agency's north service area convey the wastewater to the County Sanitation Districts of Los Angeles County's sewer system; and the Inland Empire Brine Line (also known as the Santa Ana Regional Interceptor – SARI) in the Agency's south service area conveys the wastewater from the Santa Ana Watershed to the Orange County Sanitation District's sewer system.
>
> The highest and best use of the Brine Line is the removal of salts from the Watershed to keep them from degrading water quality within the Watershed, thereby allowing better use of groundwater resources and expanding the ability to reclaim water. The long-term goal of achieving salt balance within the region depends on the ability to remove salts from the watershed via the Brine Line. Further use of desalters depends on an economical means of salt disposal and ultimately will depend on an economically viable regional IE Brine Line.[3]

[3] ---. "Non-Reclaimable Wastewater System." Inland Empire Utilities Agency | Water Smart - Thinking in Terms of Tomorrow. www.ieua.org/water-sources/pretreatment-source-control/non-reclaimable-waste-system/. Accessed 01 Nov. 2022.

4.12.2.3 Storm Water Management



Context of the Project within the City Master Plan of Drainage (MPoD) is presented at Figure 4.12-4. The City stormwater management system master plan improvements have been designed to serve stormwater management demands of the City under Buildout Conditions. The Project would be required to construct on-site stormwater management systems to ensure that capacities of receiving MPoD storm drains are not exceeded. Please refer also to EIR Section 4.8, *Hydrology/Water Quality*, and Mitigation Measures 4.8.1 through 4.8.3.

4.12.2.4 Solid Waste Management

As discussed in TOP 2050 SEIR, household and business refuse, green waste, and recycling from Ontario are sent to the West Valley Materials Recovery Facility [MRF] in Fontana for processing, recycling, or landfilling. The MRF is operated by West Valley Recycling and Transfer, and is under the administration of the San Bernardino County Department of Public Health (TOP 2050 SEIR, p. 5.19-51). Permitted throughput of the MRF is 7,500 tons/day.[4]

An estimated 98 percent of the solid waste collected in the City is taken to either Badlands Sanitary Landfill or El Sobrante Landfill. El Sobrante Landfill in Corona is owned and operated by USA Waste of California, a subsidiary of Waste Management, Inc. The Badlands Sanitary Landfill in Moreno Valley is owned and operated by the Riverside County Department of Waste Resource (TOP 2050 SEIR, p. 5.19-51). Receiving landfill information is presented at Table 4.12-1.

Receiving Landfills Information

	Badlands Sanitary Landfill	El Sobrante Landfill
Total waste received in 2019 (tons)	885,708	3,387,857
Total waste received from Ontario in 2019 (tons)	47,574	218,454
Percentage of total waste from Ontario	5.4%	6.4%
Maximum permitted throughput (tons/day)	4,800	16,054
Average daily disposal rate in 2020 (tons/day)	2,813	10,995
Excess daily capacity (tons/day)	1,987	5,059
Remaining capacity (cubic yards)	15,748,799	143,977,170
Estimated closing date	2022*	2051
Totals	**9,655**	**12,168**

Sources: CalRecycle 2022, TOP 2050 SEIR.
Notes: *Although the estimated closure date for this landfill on the CalRecycle website is 2022, the Regional Water Quality Control Board (RWQCB) just issued new Waste Disposal Requirements for this landfill which increases its maximum disposal tonnage to 5,000 tons/day, expands the landfill capacity, and extends the closure date to 2073.

4.12.2.5 Dry Utilities (electric power, natural gas, telecommunications, fiber optic)

Electric power, natural gas, telecommunications, and fiber optic services are generally available to the Project site and surrounding areas. Utility purveyors currently providing services the Project area include:

- Southern California Edison (SCE) – Electric power;
- SoCalGas – Natural gas;
- Telecommunications – various private providers; and
- Fiber optic system – City of Ontario.

4.12.3 STANDARDS OF SIGNIFICANCE

Consistent with the standards of significance outlined in the *CEQA Guidelines*, public services impacts resulting from implementation of the Project could be considered potentially significant if they caused or resulted in any of the following:

- Require or result in the relocation or construction of new or expanded water, wastewater treatment, or storm water drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects;

- Have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry and multiple dry years;

- Result in a determination by the wastewater treatment provider which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments;

- Generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals; and

- Comply with federal, state, and local management and reduction statutes and regulations related to solid waste.

4.12.4 POTENTIAL IMPACTS AND MITIGATION MEASURES

4.12.4.1 Introduction

The following discussions focus on areas where it has been determined that the Project may result in potentially significant utilities and service systems impacts, pursuant to comments received through the NOP process, and based on the analysis presented within this Section and included within the EIR Initial Study. All CEQA checklist considerations addressing utilities and service systems were determined to have potentially significant impacts warranting further analysis, and are discussed below. Please also refer to Initial Study Checklist Item XIX. *Utilities and Service Systems*.

4.12.4.2 Impact Statements

Potential Impact UTIL-1: *Require or result in the relocation or construction of new or expanded water, wastewater treatment, or storm water drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects.*

Impact Analysis:

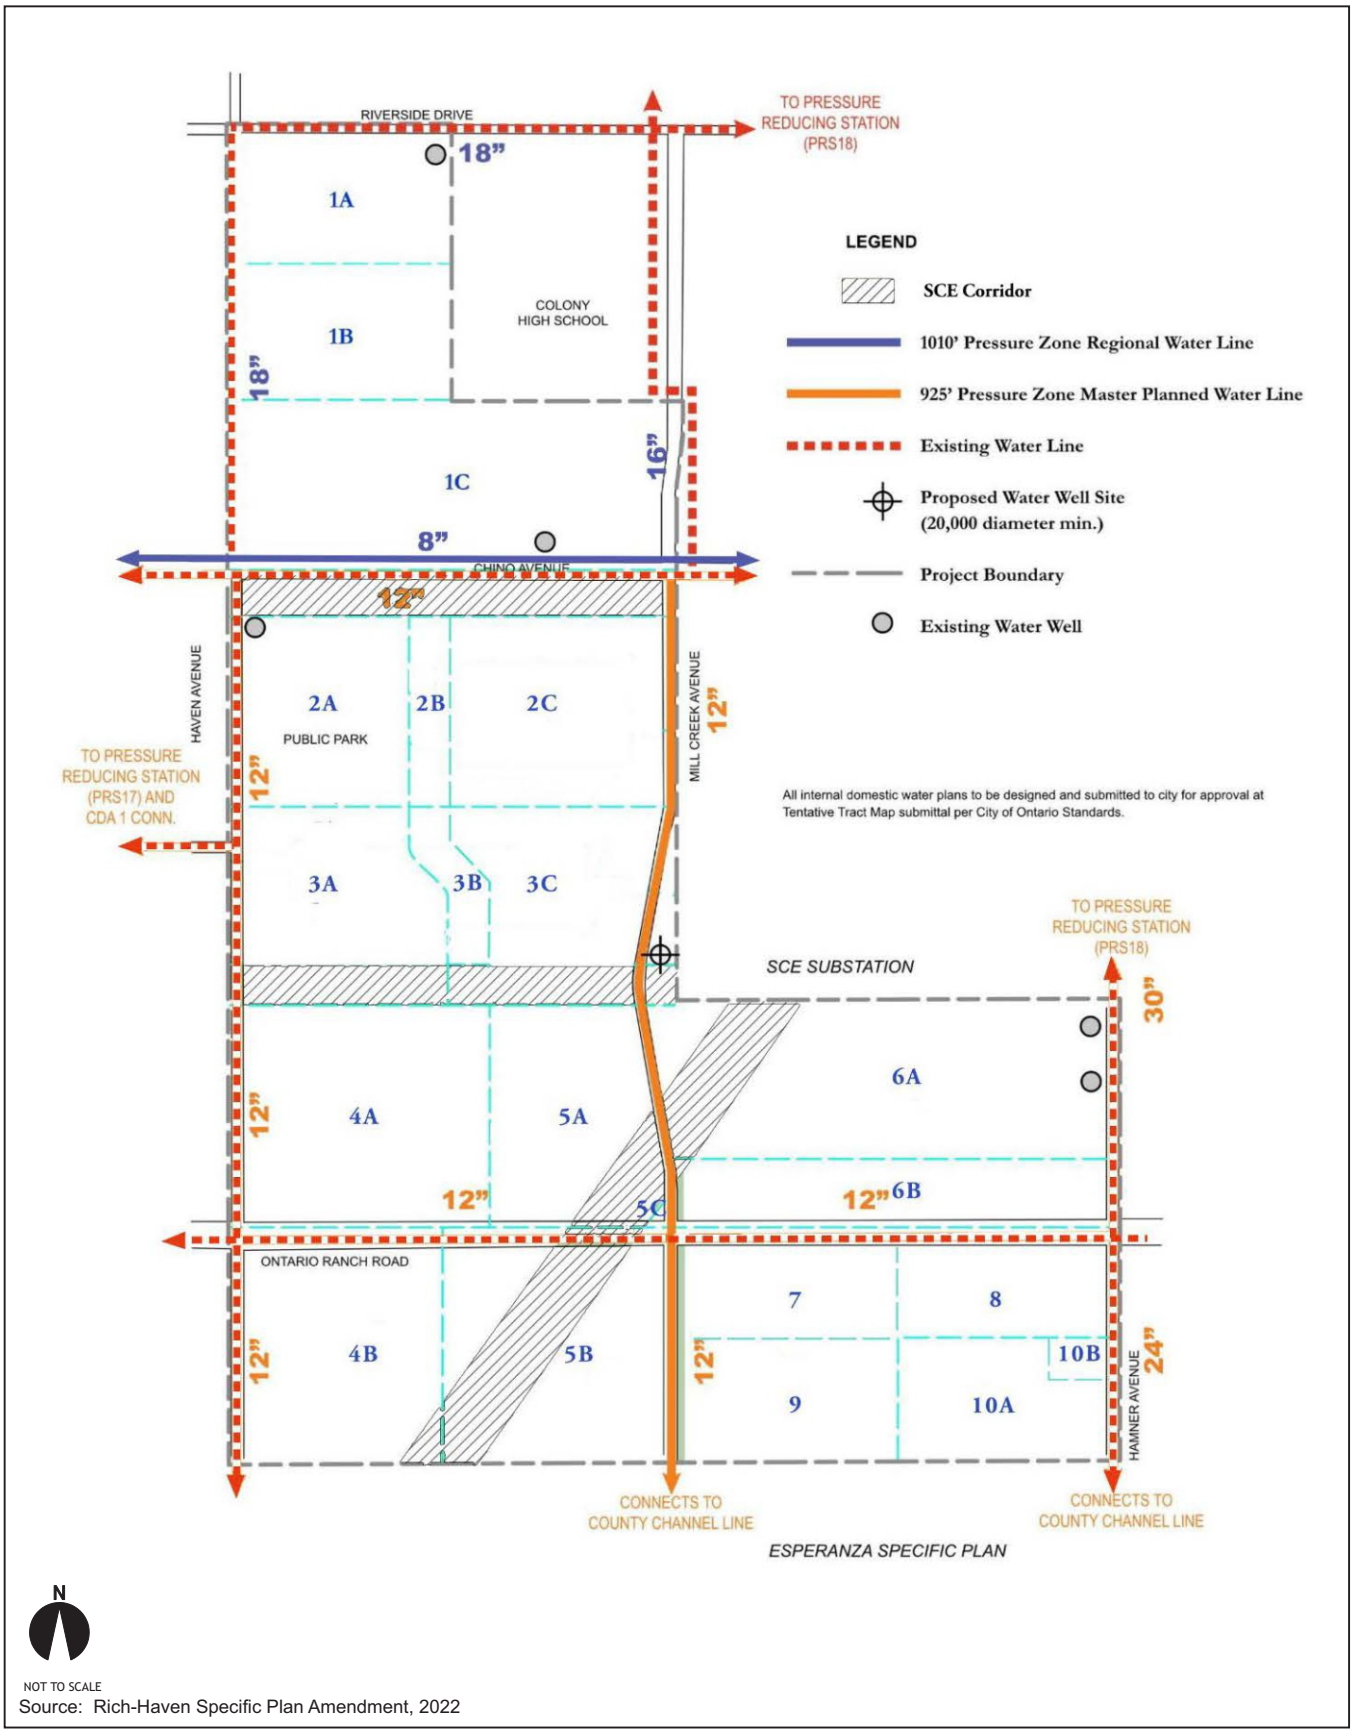
OVERVIEW

It is noted here that potential impacts resulting from construction and operation of City Master Plan infrastructure systems have been previously considered and addressed in *Initial Study and Mitigated Negative Declaration City of Ontario Infrastructure Master Plans* (City of Ontario) July 2012 (Infrastructure Master Plans MND). The Infrastructure Master Plans MND concluded that construction and operation of Master Plan infrastructure improvements would not result in significant impacts not already considered and addressed in correlating analyses in TOP 2010 EIR. TOP 2050 SEIR concluded that buildout of the City under TOP would not result in impacts not previously addressed in TOP 2010 EIR. Similarly, Master Plan infrastructure improvements constructed in support of the Project would not result in significant impacts not already considered and addressed in correlating analyses presented within the Infrastructure Master Plans MND; and by extension would not result in significant infrastructure systems impacts not already considered and addressed in correlating analyses presented within TOP 2050 SEIR.

Additionally, consistent with SB 610 requirements, a WSA was prepared and approved for the site's current (2021 Specific Plan) entitlements. The City of Ontario, Ontario Municipal Utilities Company (OMUC) has determined that based on the types and scopes of land uses reflected in the 2022 Specific Plan Amendment, and water demands of each of the 2022 Specific Plan Amendment land uses, water demands of the 2022 Specific Plan Amendment uses would be reduced when compared to water demands evaluated in the currently approved WSA. OMUC has determined that "[s]ince there was a WSA completed for the entire Rich Haven SP last year [2021], the Mill Creek Business Center Project [the proposed 2022 Specific Plan Amendment] would be allowed to refer to it in the CEQA documentation" (email communication from OMUC, January 31, 2022). No further WSA analysis is required. Please refer also to the discussion presented subsequently in this Section at Potential Impact UTIL-2.

WATER SERVICE PLAN, SEWER SERVICE PLAN, DRY UTILITIES PLAN

The Project infrastructure plans and improvements are summarized and illustrated in the following discussions. Detailed description of the Project infrastructure plans and improvements are presented at 2022 Specific Plan Amendment, Section 4, *Infrastructure and Services*. The 2022 Specific Plan Amendment is presented in its entirety at EIR Appendix B.



The Project would construct utilities distribution/conveyance systems necessary to serve the Project. Concept water service plans, sewer service plans, and dry utilities plans (electric power, natural gas, telecommunications, fiber optic) are summarized below and are described in detail in the 2022 Specific Plan Amendment.

Water Service

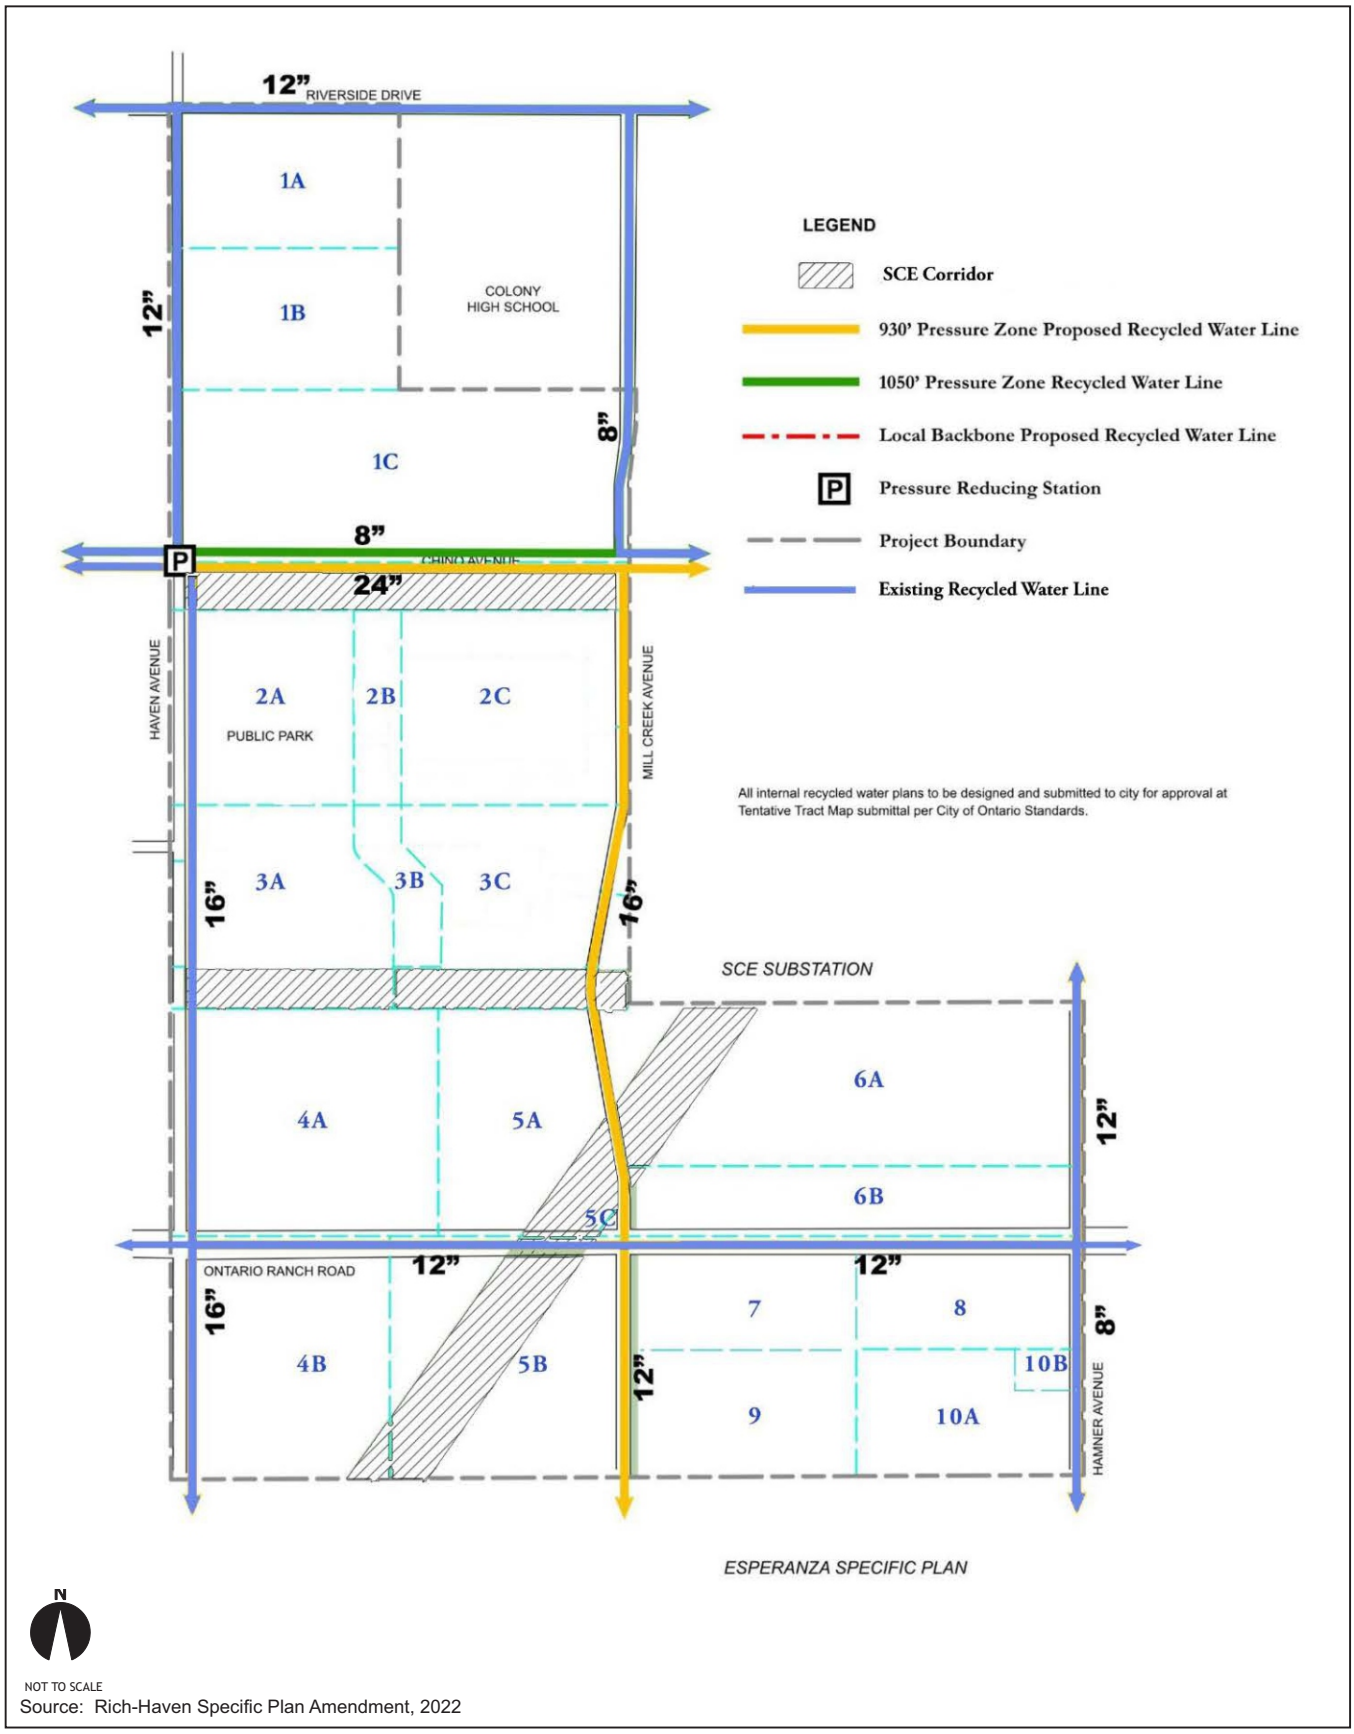
Potable Water Plan

The Project Potable Water Plan Concept is presented at Figure 4.12-5. Potable water services to the Project would be provided by the City of Ontario (Ontario Municipal Utilities Company, OMUC). Per the 2022 Specific Plan Amendment, "Rich-Haven's Water Master Plan shall conform to the City of Ontario's Water Master Plan and will include both domestic (potable) and recycled water infrastructure. Water service will be provided by the City of Ontario as identified within the Water Master Plan" (2022 Specific Plan Amendment, p. 4-14). The Project would be required to implement or contribute financially to the construction of area-serving potable water system improvements.

Impacts associated with construction of potable water system improvements would be no greater than or different than impacts of Project construction generally as addressed elsewhere in this EIR. Completion of serving potable water system improvements is required prior to issuance of Certificate(s) of Occupancy.

Source: Rich-Haven Specific Plan Amendment, 2022

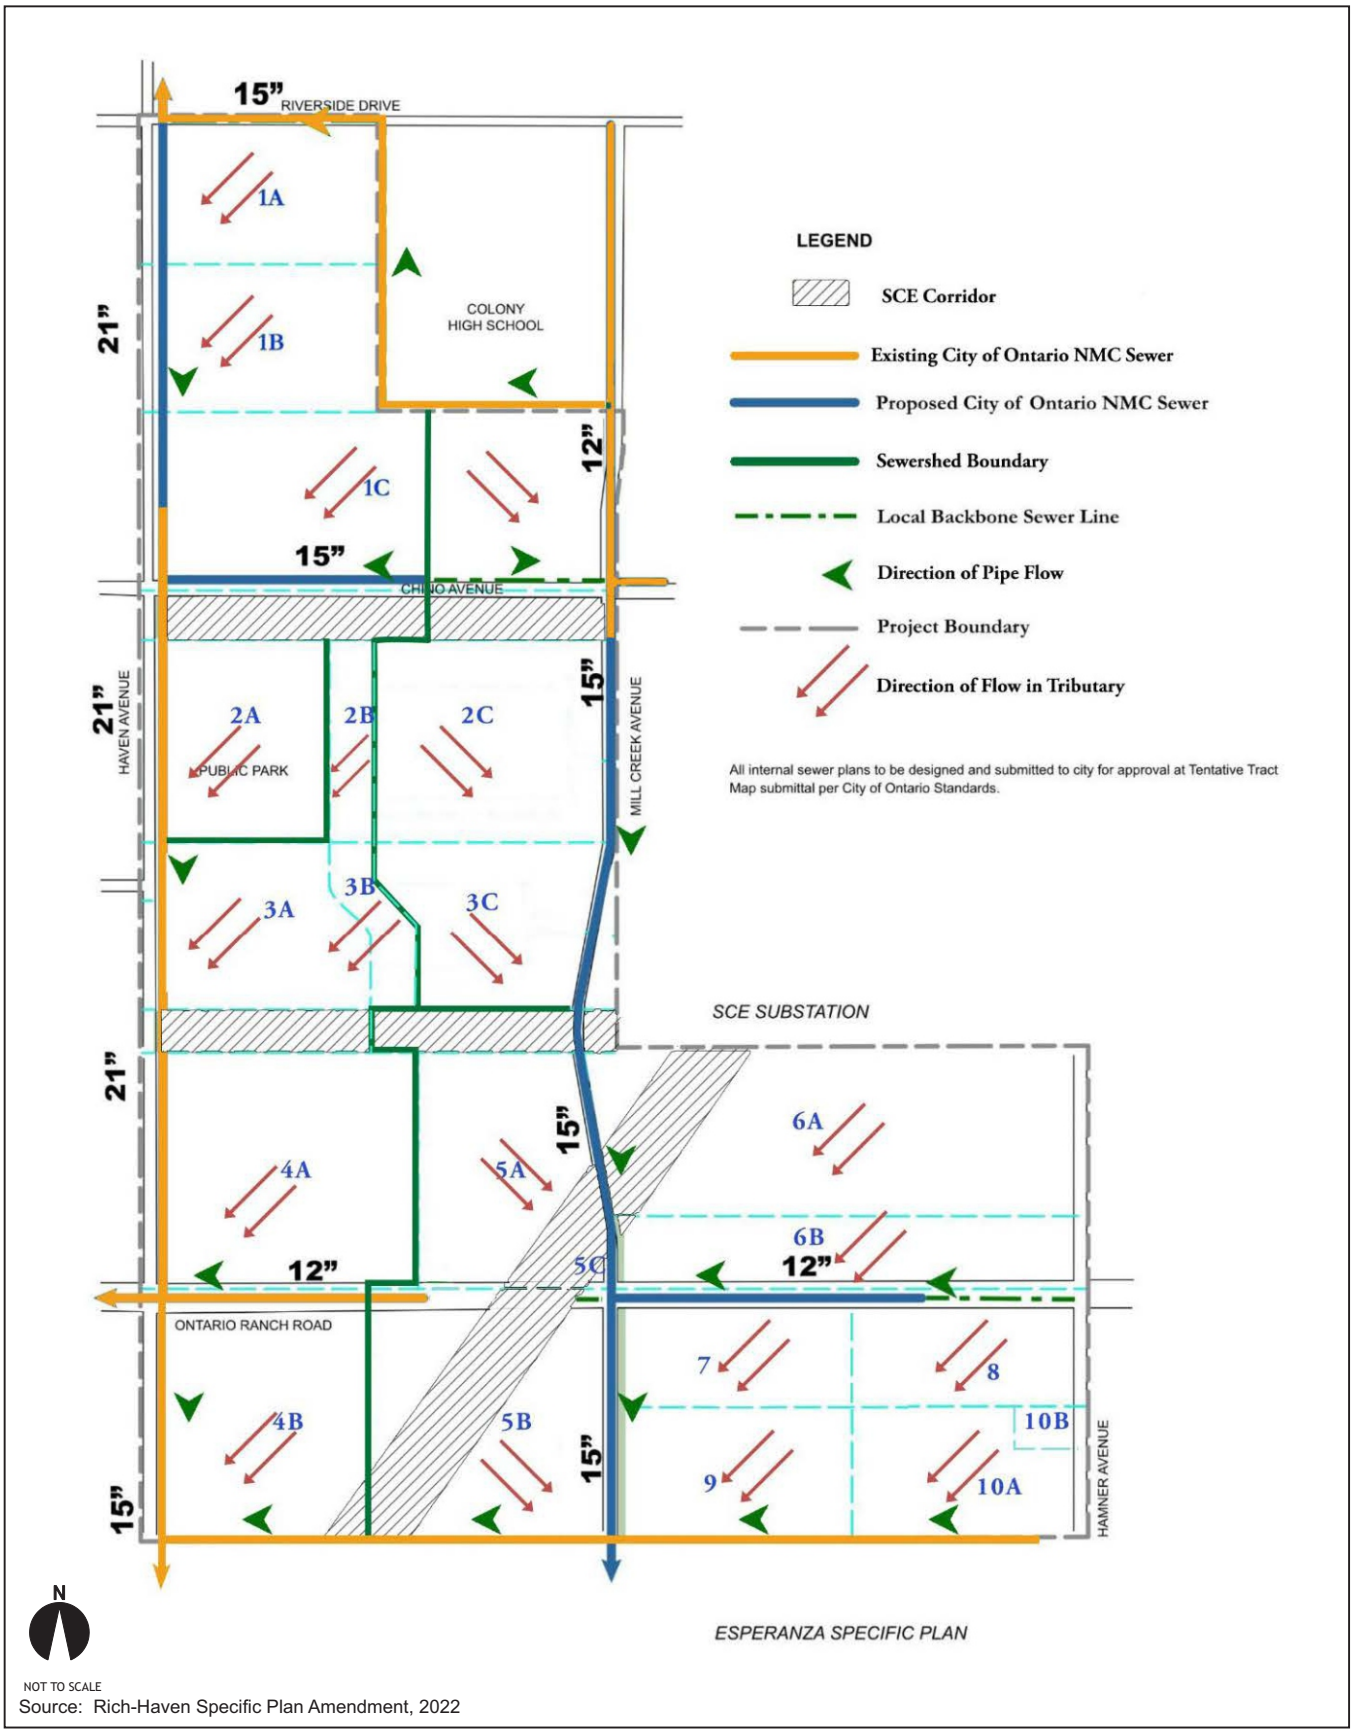
Figure 4.12-5
Potable Water Concept



Additionally, the Chino Basin Water Master Water Quality Map identifies the Project area within an optimum water quality zone and requires that the owner/developer dedicate a total of two wells within the Project area to the City of Ontario for production of potable water. The owner/developer of has identified a suitable potential well location site within the greenbelt in the area east of Mill Creek Avenue. This area shall be reserved for future location of well facilities as may be required by the City of Ontario. A second well location site within the Specific Plan area shall be located within Planning Areas 1 or 8 as approved by the City.

Recycled Water Plan

The Project Recycled Water Plan Concept is presented at Figure 4.12-6. Recycled water supplied to the Project would be provided by OMUC. OMUC recycled water supplies are produced by IEUA from IEUA's four wastewater reclamation plants. The Project would be required to implement or contribute financially to the construction of area-serving recycled water system improvements. Impacts associated with construction of recycled water system improvements would be no greater than or different than impacts of Project construction generally as addressed elsewhere in this EIR. Completion of serving recycled water system improvements is required prior to issuance of Certificate(s) of Occupancy.



Sanitary Sewer Plan

The Project Sanitary Sewer Plan Concept is presented at Figure 4.12-7. Sanitary sewer service to the Project site and surrounding area is provided by OMUC. OMUC conveys wastewater to IEUA for transmission to area-serving treatment facilities. The Project would be required to implement or contribute financially to the construction of area-serving sanitary sewer system improvements. Impacts associated with construction of sanitary sewer system improvements would be no greater than or different than impacts of Project construction generally as addressed elsewhere in this EIR. Completion of serving recycled water system improvements is required prior to issuance of Certificate(s) of Occupancy.

Source: Rich-Haven Specific Plan Amendment, 2022

Figure 4.12-6
Recycled Water Concept

NOT TO SCALE

Source: Rich-Haven Specific Plan Amendment, 2022

Figure 4.12-7
Sanitary Sewer Plan Concept

The Project would contribute flows to the adjacent master plan sewer system. A sewer study of the Project area would be submitted as part of the City's Development Review process in conjunction with development proposals within the 2022 Specific Plan Amendment Area.

Dry Utilities/Fiber Optics Plan

Electric power, natural gas, telecommunications, and fiber optic services are generally available to the Project site and surrounding areas of Ontario Ranch. The analysis presented here evaluates the likely maximum impacts attributable to implementation and operation of the Project Dry Utilities/Fiber Optics Plan. Utility purveyor currently available to service the Project area include:

- Southern California Edison (SCE) – Electric power;
- SoCalGas – Natural gas;
- Telecommunications – various private providers; and
- Fiber optic system – City of Ontario.

The Project does not propose dry utilities generation, storage, or supply facilities, the construction or relocation of which could cause potentially significant environmental effects.

Dry utility lines (e.g., natural gas lines, electric lines) would be installed within joint trenches within existing and proposed easements and rights-of-ways. Dry utilities would be installed underground in accordance with applicable purveyor standards and specifications and to the satisfaction of the City Engineer. The locations and configurations of utilities connections, transformers, switches, pull boxes, and manholes would be determined in conjunction with final Project designs and engineering.

Fiber optic lines would be installed on- and off-site in accordance with the City of Ontario's Master Plan standards. Backbone fiber optics components (conduits, hand holes, tracer wire, and fiber) will be placed underground within a duct and structure system to be installed in a joint trench within adjacent streets. Within the Specific Plan

Area, in-tract fiber and conduit will be installed per the City's in-tract fiber optic design guidelines (see: https://www.ontarioca.gov/sites/default/files/Ontario-Files/Information-Technology/2014-12-16_in-tract_designguidelines.pdf).

Wastewater Treatment

It is anticipated that wastewater generated by the Project would be conveyed to IEUA Regional Water Reclamation Plant No. 5 (IEUA Plant No. 5). Water Reclamation Plant No. 5 has a capacity of 16.3 mgd, with daily average influent flows of 9 mgd.[5] IEUA treats wastewater meet discharge requirements and Title 22 water quality standards for reuse as recycled water.

Estimated maximum Project wastewater demands have been evaluated by conservatively assuming that Project water demands and wastewater treatment demands would be equal. The Water Supply Assessment prepared and approved for the site's current (2021 Specific Plan) entitlements indicated that the maximum total water demand of the 2021 Specific Plan project (domestic water demand + recycled water demand) would total approximately 2,771 Acre Feet per Year (AFY) or 2.472 million gallons per day (mgpd).[6] The City of Ontario, Ontario Municipal Utilities Company (OMUC) has determined that water demands of the 2022 Specific Plan Amendment uses would be reduced when compared to water demands evaluated in the currently approved (2021) WSA (see EIR Appendix M, WSA).

Assuming that all water consumed by the Project would be discharged as wastewater, the total wastewater treatment demand of the Project is estimated at 2.472 mgpd. As indicated above, available treatment capacity at IEUA Plant No. 5 is approximately 7+ mgd (16.7 mgd capacity – 9 mgd average demand). The Project maximum 2.472 mgd wastewater treatment demand could be accommodated within IEUA Plant No. 5 available wastewater treatment capacity. Further, the Project proposes conventional

[5] ---. "Regional Water Recycling Plant No. 5." *Inland Empire Utilities Agency | Water Smart - Thinking in Terms of Tomorrow*. www.ieua.org/facilities/rp-5/. Accessed 02 Nov. 2022.

[6] *Water Supply Assessment and Written Verification of Sufficient Water Supply, Rich-Haven Specific Plan Amendment No. 3* (PSAP19-006) (Webb Associates) March 18, 2021, p.2-8, Table 2-6 *Summary Project Water Demand.*

residential, commercial, light industrial and community facilities uses, and would not generate wastewater that would require treatment processes or protocols not currently provided by IEUA.

Each individual development project within the Specific Plan area would be required to pay applicable sewer connection and service fees, which act to fund City improvement plans, operations, and maintenance.

Storm Water Management

The analysis presented at EIR Section 4.8, *Hydrology/Water Quality* evaluates the likely maximum hydrology/water quality impacts attributable to implementation and operation of the Project.

The Project would implement stormwater management improvements consistent with the City MPoD. On-site stormwater management systems would be developed concurrent with planning of individual development proposals within the Project site. Per Mitigation Measures 4.8.1 through 4.8.3, the Project would be required to construct on-site stormwater management systems to ensure that capacities of receiving MPoD storm drains are not exceeded. All proposed on-site stormwater management systems would be subject to review and approval by the City. Please refer also to EIR Section 3.0, *Project Description, Stormwater Management Plan*.

IMPACTS SUMMARY

Utilities and service systems distribution and conveyance lines serving the Project would be constructed pursuant to approved City Infrastructure Master Plans, and would be located within existing improved streets or otherwise disturbed properties, thereby limiting or avoiding potential impacts. Construction and operation of all Project utilities and service systems distribution and conveyance lines would conform with all City and purveyor standards and requirements, further limiting potential environmental effects.

This EIR evaluates likely maximum impacts associated with all Project actions and operations, including but not limited to construction and operation of utilities and service systems distribution and conveyance lines. Construction and operation of the Project utilities and service systems distribution and conveyance lines described in this Section would not result in conditions or environmental impacts not already considered and addressed elsewhere in this EIR.

Utilities distribution/conveyance systems lines proposed by the Project would conform to alignments presented in the City Master Plan Utilities/Service Systems Concepts. The Project utilities distribution/conveyance systems lines would provide capacities consistent with OMUC/City requirements. It is noted here that potential impacts resulting from construction and operation of City Master Plan infrastructure systems have been previously considered and addressed in *Initial Study and Mitigated Negative Declaration City of Ontario Infrastructure Master Plans* (City of Ontario) July 2012 (Infrastructure Master Plans MND). The Infrastructure Master Plans MND concluded that construction and operation of Master Plan infrastructure improvements would not result in significant impacts not already considered and addressed in correlating analyses in TOP 2010 EIR. TOP 2050 SEIR concluded that buildout of the City under TOP would not result in impacts not previously addressed in TOP 2010 EIR. Similarly, Master Plan infrastructure improvements constructed in support of the Project would not result in significant impacts not already considered and addressed in correlating analyses presented within the Infrastructure Master Plans MND; and by extension would not result in significant infrastructure systems impacts not already considered and addressed in correlating analyses presented within TOP 2050 SEIR.

Each individual development project within the Specific Plan area would be required to pay applicable utilities/service system connection and service fees, which act to offset the Project incremental demands on utilities and service systems. That is, connection and service fees paid by the Project developers would fund on-going utilities and service systems improvement plans, operations, and maintenance. Utilities and service systems improvements would be implemented so as to provide adequate service/capacity for each increment of development. The City would verify

service/capacity adequacies prior to issuance of Certificate(s) of Occupancy for the affected increment of development.

Ultimately, the City in consultation with affected utilities purveyors and service providers would determine when and in what manner utilities and service systems facilities would be constructed and/or upgraded to meet increasing demands of areawide development, including the incremental demands of the Project.

Based on the preceding, the potential for the Project to require or result in the relocation or construction of new or expanded water, wastewater treatment, storm water drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects is considered less-than-significant.

Level of Significance: Less-Than-Significant.

Potential Impact UTIL-2: *Have sufficient water supplies available to serve the Project and reasonably foreseeable future development during normal, dry, and multiple dry years.*

Impact Analysis: Water service to the Project would be provided by OMUC. OMUC's 2020 Urban Water Management Plan (2020 UWMP) was prepared in response to Water Code Sections 10610 through 10656 of the Urban Water Management Planning Act, and includes detailed information about City water demand, supply and reliability for the next 25 years. The 2020 UWMP substantiates that sufficient water supplies are available to meet City water demands under normal, single dry, and multiple dry years for the period 2020 – 2045 (2020 UWMP, Section 7.2.3 Water Service Reliability – *Supply and Demand Comparison)*.

Consistent with SB 610 requirements, a WSA was prepared and approved for the site's current (2021 Specific Plan) entitlements. The City of Ontario, Ontario Municipal Utilities Company (OMUC) has determined that based on the types and scopes of land uses reflected in the 2022 Specific Plan Amendment, and water demands of each of the

2022 Specific Plan Amendment land uses, water demands of the 2022 Specific Plan Amendment uses would be reduced when compared to water demands evaluated in the currently approved WSA. OMUC has made the following determination regarding necessity to prepare a new WSA for the currently proposed 2022 Specific Plan Amendment Project . . . "the Water Code allows for an existing WSA to be applied to a new proposed project if there is no substantial increase in water demand. Since there was a WSA completed for the entire Rich Haven SP last year [2021], the Mill Creek Business Center Project [the proposed 2022 Specific Plan Amendment] would be allowed to refer to it in the CEQA documentation" (email communication from OMUC, January 31, 2022). As requested, the previous 2021 WSA has been appended to this EIR (please refer to EIR Appendix M). No further WSA analysis is required.

Based on the preceding analysis, sufficient supplies to meet the anticipated demand for the Project exist. No new or expanded entitlements would be needed to serve the Project. Impacts in this regard are considered less-than-significant.

Level of Significance: Less-Than-Significant.

Potential Impact UTIL-3: *Result in a determination by the wastewater treatment provider which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments.*

Impact Analysis: As discussed previously in this Section, wastewater treatment services for the Project would be provided by IEUA. Sufficient residual treatment capacity exists at IEUA Regional Water Reclamation Plant No. 5 (IEUA Plant No. 5) to serve the Project's projected wastewater treatment demand in addition to IEUA current wastewater treatment demands. The Project proposes conventional warehouse and business park uses, and would not generate wastewater that would require treatment processes or protocols not currently provided by IEUA.

Each individual development proposal within the IEUA service area (including development proposals within the Project site) is required to pay applicable sewer connection and service fees, which act to fund wastewater treatment system

improvement plans, operations, and maintenance – thereby offsetting incremental wastewater treatment demands of new development.

Based on the preceding, the potential for the Project to result in a determination by the wastewater treatment provider which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments is less-than-significant.

Level of Significance: Less-Than-Significant.

Potential Impact UTIL-4: *Generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals.*

Impact Analysis: The City of Ontario Integrated Waste Department provides refuse collection services to the residents and businesses in the City of Ontario. The predominance of collected City refuse is transported for disposal at the Badlands Sanitary Landfill and/or El Sobrante Landfill. Receiving landfill statistical information is provided at previous Table 4.12-1. Solid waste would be generated by Project construction/demolition activities as well as Project operations. The Project is consistent with TOP 2050. TOP 2050 SEIR concluded that buildout of the City would not result in potentially significant solid waste management impacts (TOP 2050 SEIR, p. 1-66 et. al).

Additionally, the Project would be required to comply with the following, acting to minimize Project solid waste management demands, and ensure compliance with State or local solid waste management standards.

City of Ontario Construction & Demolition Recycling Plan (CDRP)

Pursuant to Ontario Municipal Ordinance (OMC) Sec. 6-3.602 Construction & Demolition Recycling Plan and the 2016 California Green Building Standards Code (CALGreen), all building and demolition permit applicants are required to prepare and submit a Construction & Demolition Recycling Plan (CDRP) and a Construction &

Demolition Recycling Plan (CDRP) Summary Report. OMC Sec. 6-3.602 and CALGreen require all construction and qualifying renovation and demolition projects to divert at least 65% of all generated waste materials. The Modified Project would be subject to (OMC) Sec. 6- 3.602 and CALGreen construction waste diversion mandates. The City oversees compliance with OMC Sec. 6-3.602 and CALGreen construction waste diversion mandates.

AB 939 - California Integrated Waste Management Act of 1989

Solid waste management is guided by the California Integrated Waste Management Act of 1989 (AB 939), which emphasizes resource conservation through reduction, recycling, and reuse of solid waste. AB 939 requires that localities conduct a Solid Waste Generation Study (SWGS) and develop a Source Reduction Recycling Element (SRRE), providing for a minimum 50 percent reduction in waste sent to landfills. Diversion rates are calculated and tracked by the California Integrated Waste Management Board (Board). Alternatively, the Board can determine that a jurisdiction's "good faith efforts" to implement comprehensive diversion programs have satisfied the requirement even if diversion levels are below 50 percent.

To reduce waste disposal, AB 939 requires every California city and county to divert 50 percent of its waste from landfills. Residential, commercial and governmental waste recycling programs in support of the SRRE have been implemented by the City.

The City is currently meeting or exceeding all AB 939 solid waste diversion targets. The Project would be required to comply with AB 939 as implemented by the City.

AB 341 - Commercial Recycling

Assembly Bill 341 mandates recycling for businesses producing four or more cubic yards of solid waste per week, and multifamily dwellings of five units or more. Under the law, business must separate recyclables from trash and then either subscribe to City of Ontario recycling services, self-haul their recyclables, or contract with a permitted private recycler. The Project would be subject to Assembly Bill 341 mandates.

AB 1826 - Commercial Organics Recycling

Under Assembly Bill 1826, businesses are required to arrange for organic recycling services. The Project would be subject to Assembly Bill 1826 mandates. The California Department of Resources Recycling and Recovery (CalRecycle) oversees both the mandatory commercial recycling program and the mandatory commercial organics recycling program. The City of Ontario supports both bills through public outreach, monitoring of recycling efforts, providing notification to non-compliant businesses, and periodic State reporting.

The Project would be required to comply with the above solid waste management statutes and regulations. The City and CalRecycle would oversee and monitor compliance with applicable solid waste management statutes and regulations.

SB 1383 - Organic Waste Management Requirements

SB 1383 establishes targets to achieve a 50 percent reduction in the level of the statewide disposal of organic waste from the 2014 level by 2020 and a 75 percent reduction by 2025. The law grants CalRecycle the regulatory authority required to achieve the organic waste disposal reduction targets and establishes an additional target that not less than 20 percent of currently disposed edible food is recovered for human consumption by 2025. The City is currently developing programs and strategies to address the requirements of SB 1383, the Project would be required to ultimately abide by those requirements.

Impacts to solid waste services and facilities from new development are addressed through the payment of development impact fees as outlined in the City of Ontario Development Impact Fee Calculation and Nexus Fee Schedules. With the payment of required development impact fees and compliance with existing solid waste regulations, the Project would not result in any new or substantially increased solid waste impacts not previously identified in TOP 2050 SEIR.

Based on the preceding, the Project would not generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure, or otherwise impair

the attainment of solid waste reduction goals would be less-than-significant. Additionally, the Project would comply with applicable solid waste management and reduction statutes and regulations. On this basis, the Project would result in less-than-significant solid waste management impacts.

Level of Significance: Less-Than-Significant.

Potential Impact UTIL-5: *Comply with federal, state, and local statutes and regulations related to solid waste.*

Impact Analysis: Solid waste management statutes and regulations applicable to the Project are summarized below.

City of Ontario Construction & Demolition Recycling Plan (CDRP)

Pursuant to Ontario Municipal Ordinance (OMC) Sec. 6-3.602 *Construction & Demolition Recycling Plan* and the 2016 California Green Building Standards Code (CALGreen), all building and demolition permit applicants are required to prepare and submit a Construction & Demolition Recycling Plan (CDRP) and a Construction & Demolition Recycling Plan (CDRP) Summary Report. OMC Sec. 6-3.602 and CALGreen require all construction and qualifying renovation and demolition projects to divert at least 65% of all generated waste materials. The Project would be subject to (OMC) Sec. 6-3.602 and CALGreen construction waste diversion mandates. The City oversees compliance with OMC Sec. 6-3.602 and CALGreen construction waste diversion mandates.

AB 939 - California Integrated Waste Management Act of 1989

Solid waste management is guided by the California Integrated Waste Management Act of 1989 (AB 939), which emphasizes resource conservation through reduction, recycling, and reuse of solid waste. AB 939 requires that localities conduct a Solid Waste Generation Study (SWGS) and develop a Source Reduction Recycling Element (SRRE), providing for a minimum 50 percent reduction in waste sent to landfills. Diversion rates are calculated and tracked by the California Integrated Waste Management Board (Board). Alternatively, the Board can determine that a jurisdiction's "good faith efforts"

to implement comprehensive diversion programs have satisfied the requirement even if diversion levels are below 50 percent.

To reduce waste disposal, AB 939 requires every California city and county to divert 50 percent of its waste from landfills. Residential, commercial and governmental waste recycling programs in support of the SRRE have been implemented by the City.

As noted above, the City is currently meeting or exceeding all AB 939 solid waste diversion targets. The Project would be required to comply with AB 939 as implemented by the City.

AB 341 - Commercial Recycling

Assembly Bill 341 mandates recycling for businesses producing four or more cubic yards of solid waste per week, and multifamily dwellings of five units or more. Under the law, business must separate recyclables from trash and then either subscribe to City of Ontario recycling services, self-haul their recyclables, or contract with a permitted private recycler. The Project would be subject to Assembly Bill 341 mandates.

AB 1826 - Commercial Organics Recycling

Under Assembly Bill 1826, businesses are required to arrange for organic recycling services. The Project would be subject to Assembly Bill 1826 mandates.

The California Department of Resources Recycling and Recovery (CalRecycle) oversees both the mandatory commercial recycling program and the mandatory commercial organics recycling program. The City of Ontario supports both bills through public outreach, monitoring of recycling efforts, providing notification to non-compliant businesses, and periodic State reporting.

The Project would be required to comply with the above solid waste management statutes and regulations. The City and CalRecycle would oversee and monitor compliance with applicable solid waste management statutes and regulations.

Based on the preceding, the potential for the Project to conflict with federal, state, and local statutes and regulations related to solid waste is less-than-significant.

Level of Significance: Less-Than-Significant.

5.0 OTHER CEQA CONSIDERATIONS

5.0 OTHER CEQA CONSIDERATIONS

This Section of the EIR addresses other environmental considerations and topics mandated under the California Environmental Quality Act (CEQA). These topics include Cumulative Impacts, Alternatives to the Project, Growth Inducement, Significant Environmental Effects of the Project, and Significant and Irreversible Environmental Changes.

5.1 CUMULATIVE IMPACT ANALYSIS

The *CEQA Guidelines* (*Guidelines*) require that an EIR identify any significant cumulative impacts associated with a project [*Guidelines*, Section 15130 (a)]. When potential cumulative impacts are not deemed significant, the document should explain the basis for that conclusion. Cumulative impacts are "two or more individual effects which, when considered together, are considerable or which compound or increase other environmental impacts." [*CEQA Guidelines*, Section 15355]. A legally adequate cumulative impact analysis comprises an analysis of a project viewed over time and in the context of other related past, present, and foreseeable probable future projects, whose impacts might compound or interrelate with those of the Project considered here.

CEQA notes that the discussion of cumulative impacts should be guided by standards of practicality and reasonableness [*Guidelines*, Section 15130 (b)]. Only those projects whose impacts might compound or interrelate with those of the Project under consideration require evaluation. CEQA does not require as much detail in the analysis of cumulative environmental impacts as must be provided for the Project alone.

The *Guidelines* identify two basic methods for satisfying the cumulative impacts analysis requirement: the list-of-projects methodology, and the summary-of-projections methodology. Because each environmental resource is affected by its surroundings in different manners, either of the two methodologies, or a combination of both, may be applied to the analysis of cumulative impacts to each resource. For example, because the approval process and construction phase of development typically takes at least one to two years, the list-of-projects method is likely to provide a more accurate projection of growth in the near term. This method may overstate potential cumulative impacts because the considered list-of-projects may include proposals that will never be developed. Similarly, because development proposals are rarely publicly known until within five (5) years of the expected development, the summary-of-projections method provides a more accurate projection of growth over the long term. This method may not accurately predict growth in any given year but aggregates various growth trends over the long term.

Consistent with direction provided in the *CEQA Guidelines,* related projects considered in these cumulative analyses are "only those projects whose impacts might compound or interrelate with those of the Project under consideration require evaluation." For each topical discussion, the cumulative impact area is identified. Related Projects considered in this analysis are listed at Table 5.1-1. Locations of Related Projects are presented at Figure 5.1-1. The City has determined that the listed Related Projects comprise the range and scope of potential development that could be implemented or operational within the context of the Project considered here.

Related Projects

5.1.1 Discussion of Cumulative Impacts

Section 15139(a) of the *Guidelines* notes that "an EIR shall discuss cumulative impacts of a project when the project's incremental effect is cumulatively considerable, as defined at *Guidelines* Section 15065(c). Where a lead agency is examining a project with an incremental effect that is not 'cumulatively considerable,' a lead agency need not consider that effect significant, but shall briefly describe its basis for concluding that the incremental effect is not cumulatively considerable." Potential cumulative impacts for each of the EIR Sections are presented here.

For certain other areas of consideration, Project impacts are substantiated to be less-than-significant or less-than-significant as mitigated (please refer to the Initial Study, EIR Appendix A). These topics include:

AESTHETICS. Potential to:

- Have a substantial adverse effect on a scenic vista.

- Substantially damage scenic resources, including, but not limited to trees, rocks, outcroppings, and historic buildings within a state scenic highway.

- In a non-urbanized area, substantially degrade the existing visual character or quality of public views of the site and its surroundings.

- Create a new source of substantial light or glare, which would adversely affect the day or nighttime views in the area.

AGRICULTURE AND FOREST RESOURCES. Potential to:

- Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use.

- Conflict with existing zoning for agricultural use, or a Williamson Act contract.

- Conflict with existing zoning for, or cause rezoning of, forest land, timberland, or timberland zoned Timberland Production.

- Result in the loss of forest land or conversion of forest land to non-forest use.

- Involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland, to non-agricultural use or conversion of forest land to non-forest use.

AIR QUALITY. Potential to:

- Result in other emissions (such as those leading to odors) adversely affecting a substantial number of people.

CULTURAL RESOURCES. Potential to:

- Disturb any human remains, including those interred outside of formal cemeteries.

GEOLOGY AND SOILS. Potential to:

- Directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury or death involving rupture of a known earthquake fault.

- Directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury or death involving landslides.

- Result in substantial soil erosion or the loss of topsoil.

- Have soils incapable of adequately supporting the use of septic tanks or alternative wastewater disposal systems where sewers are not available for the disposal of wastewater.

HAZARDS AND HAZARDOUS MATERIALS. Potential to:

- Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment.

- For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard or excessive noise for the people residing or working in the project area.

- Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan.

- Expose people or structures, either directly or indirectly, to a significant risk of loss, injury or death involving wildland fires.

HYDROLOGY AND WATER QUALITY. Potential to:

- Substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin.

- Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river, or through the addition of impervious surfaces, in a manner which would result in substantial erosion or siltation on- or off-site.

LAND USE AND PLANNING. Potential to:

- Physically divide an established community.

MINERAL RESOURCES. Potential to:

- Result in the loss of availability of a known mineral resource that would be of value to the region and to the residents of the state.

- Result in the loss of availability of a locally important mineral resource recovery site delineated on a local general plan, specific plan or other land use plan.

POPULATION AND HOUSING. Potential to:

- Induce substantial population growth in the area, either directly (e.g., by proposing new homes and businesses) or indirectly (e.g., through the extension of roads or other infrastructure).

- Displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere.

PUBLIC SERVICES. Potential to:

Result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities the construction of which could cause significant environmental impacts for any of the public services:

- Fire Protection
- Police Protection
- Schools
- Parks
- Other public facilities

RECREATION. Potential to:

- Increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial deterioration of the facility would occur or be accelerated.

- Include recreational facilities or require the construction or expansion of recreational facilities, which might have an adverse physical effect on the environment.

WILDFIRE. Potential to:

- Substantially impair an adopted emergency response plan or emergency evacuation plan.

- Exacerbate wildfire risks, and thereby expose project occupants to, pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire.

- Require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment.

- Expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes.

5.1.1.1 Land Use and Planning - Cumulative Impacts

The cumulative impact area when considering potential cumulative land use and planning issues includes areas that are currently under City jurisdiction, and subject to provisions of TOP 2050 Policy Plan (General Plan), City of Ontario Zoning Ordinance, and/or other City Special Planning Documents (e.g., Specific Plans). The analysis

presented here also considers the Project in the context of the land use/planning guidance included in the *2020–2045 Regional Transportation Plan/Sustainable Communities Strategy* (Connect SoCal 2020).

TOP 2050 Policy Plan Considerations

The 2022 Specific Plan Amendment Project land uses are consistent with the site's TOP 2050 Policy Plan Land Use Plan. The Project does not propose or require amendment of TOP 2050 Policy Plan Land Use Plan. Further, as substantiated at EIR Section 4.1, *Land Use and Planning*, land uses and development concepts proposed by the Project would not cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect.

Zoning Considerations

The existing Zoning designation of the Project site is "Specific Plan" as established by the current (2021) Rich-Haven Specific Plan. The Specific Plan zoning designation is maintained under the Project, though land use designations and configuration of Specific Plan land uses would be amended per the proposed 2022 Rich-Haven Specific Plan Amendment. The *2022 Rich-Haven Specific Plan Amendment* (2022 Specific Plan Amendment) is presented in its entirety at EIR Appendix B. If adopted by the City, the 2022 Specific Plan Amendment would comprise the zoning for the subject site, and would regulate all development within the site. Where the 2022 Specific Plan Amendment is silent, regulations and requirements of the City Development Code would prevail.

The proposed 2022 Specific Plan Amendment would establish land use plans, development standards, and design guidelines directing the ultimate buildout of the Project site. Land uses and development concepts reflected within the proposed 2022 Specific Plan Amendment can be feasibly implemented consistent with applicable provisions of TOP 2050 Policy Plan Land Use Element and City Development Code. Prior to issuance of building permits, the City would review the final development plans for individual developments within the Project site to ensure consistency with the 2022

Specific Plan Amendment land use plans, development standards, design guidelines; and where applicable, City Development Code requirements.

Other related projects within the cumulative impact area would be required to comply with requirements of necessary land use and planning discretionary actions and permits. Mitigation would be incorporated if necessary.

Based on the preceding discussion, the Project's potential contribution to cumulative land use and planning impacts is not considerable, and the cumulative effects of the Project are less-than-significant.

5.1.1.2 Transportation - Cumulative Impacts

The Project Vehicle Miles Traveled (VMT) Assessment cumulative impact area coincides with relevant Transportation Analysis Model Traffic Analysis Zones (TAZs).

Cumulative VMT Impacts

Within this analysis, evaluation of the Project VMT impacts is guided by *Technical Advisory on Evaluating Transportation Impacts in CEQA* (Technical Advisory) (Governor's Office of Planning and Research, OPR) December 2018. The Technical Advisory fulfills the state (SB 743) mandate that "OPR [is] to establish specific 'criteria for determining the significance of transportation impacts of projects' (Technical Advisory, p. 7).

The Technical Advisory notes that ". . . metrics such as VMT per capita or VMT per employee, i.e., metrics framed in terms of efficiency (as recommended below for use on residential and office projects), cannot be summed because they employ a denominator. A project that falls below an efficiency-based threshold that is aligned with long-term goals and relevant plans has no cumulative impact distinct from the project impact" (Technical Advisory, p. 6). As substantiated herein, the Project-level VMT impacts are less-than-significant per the City VMT Guidelines efficiency-based threshold. Per the Technical Advisory guidance, the Project cumulative VMT impacts would also be less-than-significant.

Other Transportation Topics

To ensure appropriate design and implementation of all Project circulation improvements, the final design of the Project site plan, to include locations and design of proposed driveways, shall be reviewed and approved by the City Traffic Engineer. In addition, representatives of the City's Police and Fire Departments will review the Project's plans regarding emergency access. Efficient and safe operations of the Project would be provided by on-site and localized circulation and intersection improvements to be developed as the Project individual site and building designs are finalized. The City would ensure that all on-site and localized circulation and intersection improvements would be designed and constructed consistent with applicable provisions of the 2022 Specific Plan Amendment and pursuant to City site plan and Building Permit review processes and requirements.

Traffic signing and striping would be implemented in conjunction with detailed Project construction plans. Sight distance at each project access point would be reviewed with respect to standard Caltrans and City of Ontario sight distance standards at the time of preparation of final grading, landscape, and street improvement plans.

It is also recognized that temporary and short-term traffic detours and traffic disruption could result during Project construction activities. These interim and transient impacts are considered potentially significant for the duration of Project construction activities. Management and control of construction traffic would be addressed through the preparation and submittal of a construction area traffic management plan, to be reviewed and approved by City prior to or concurrent with Project building plan review(s). The Project Construction Area Traffic Management Plan (Plan), also summarized within the EIR Project Description, would identify traffic controls for any street closures, detours, or other potential disruptions to traffic circulation during Project construction. The Plan would also be required to identify construction vehicle access routes, and hours of construction traffic.

The Project would generate passenger car trips and truck trips typical of the proposed uses. As part of established site and Building Permit review processes, the City would

require implementation of on-site truck and passenger car travel paths, signing, and traffic controls to ensure that conflicts between trucks and passenger cars are minimized or avoided. Trucks accessing the Project site would use designated truck routes, thereby avoiding or minimizing off-site passenger car/truck traffic conflicts. Land uses proximate to the Project site are planned for, or are developed with, urban uses similar to those proposed by the Project. These uses would generate urban traffic types similar to traffic generated by the Project and would not generate traffic that would be incompatible with the Project traffic types.

Other related projects within the cumulative impact area would similarly be required to demonstrate compliance with applicable circulation system programs, plans, ordinances, and policies, thereby minimizing potential cumulative impacts.

Based on the preceding, the Project's contribution to cumulative impacts related to increased circulation system hazards, incompatible uses, or inadequate emergency access are not considerable, and the cumulative effects of the Project are less-than-significant.

5.1.1.3 Air Quality - Cumulative Impacts

The cumulative impact area for air quality considerations is generally defined by the encompassing Air Basin and boundaries of the jurisdictional air quality management agency. In this case, the South Coast Air Basin (Basin) and the South Coast Air Quality Management District (SCAQMD), respectively. Project emissions within the context of SCAQMD's regional emissions thresholds provide an indicator of potential cumulative impacts within the jurisdictional Air Basin. Due to the defining geographic and meteorological characteristics of the Air Basin, criteria pollutant emissions that could cumulatively impact air quality would be, for practical purposes, restricted to the Air Basin. Accordingly, the geographic area encompassed by the Air Basin is the appropriate limit for this cumulative air quality analysis.

Construction-Source Air Quality Impacts

As discussed at EIR Section 4.3, *Air Quality*, even with application of mitigation, Project construction-source NO_x and CO emissions would exceed applicable SCAQMD regional

thresholds and would therefore be significant and unavoidable. Per SCAQMD criteria, significant Project-level impacts are also cumulatively considerable. The Basin encompassing the Project site is designated as non-attainment for ozone, PM_{10}, and $PM_{2.5}$ (VOC and NO_x are both ozone precursors; NO_x is a precursor to PM_{10}/$PM_{2.5}$). Project construction-source NO_x emissions threshold exceedances would result in a cumulatively considerable net increase in the criteria pollutant ozone for which the Project region is non-attainment. This is a cumulatively significant and unavoidable air quality impact.

Other related projects within the cumulative impact area would be required to minimize construction-source air pollutant emissions consistent with SCAQMD programs and strategies, thereby minimizing potential cumulative impacts. Mitigation would be implemented, if applicable.

Operational-Source Air Quality Impacts

Even with application of mitigation, Project operational-source VOC, NO_x, CO, PM_{10}, and $PM_{2.5}$ emissions would exceed applicable SCAQMD regional thresholds. The Basin encompassing the Project site is designated as non-attainment for ozone, PM_{10}, and $PM_{2.5}$ (VOC and NO_x are both ozone precursors; NO_x is a precursor to PM_{10}/$PM_{2.5}$). Project operational-source VOC, NO_x, PM_{10}, and $PM_{2.5}$ emissions threshold exceedances would result in a cumulatively considerable net increase in criteria pollutants (ozone and PM_{10}/$PM_{2.5}$) for which the Project region is non-attainment. These are cumulatively significant and unavoidable air quality impacts.

Other related projects within the cumulative impact area would be required to minimize operational-source air pollutant emissions consistent with SCAQMD programs and strategies, thereby minimizing potential cumulative impacts. Mitigation would be implemented, if applicable.

AQMP Consistency Impacts

Project construction-source and operational-source regional threshold emissions exceedances noted above are inconsistent with AQMP Consistency Criterion No. 1. On

this basis, the Project would conflict with the AQMP. This is a cumulatively significant air quality impact.

CO Hotspot Impacts

The potential for the Project to cause or result in potential CO hotspot impacts would be less-than-significant. Per SCAQMD criteria, less-than-significant impacts at the Project level are not cumulatively considerable. The potential for Project CO emissions to result in or cause cumulatively significant CO hotspot impacts is therefore considered less-than-significant.

Other related projects within the cumulative impact area would be required to minimize potential CO hotspot impacts consistent with SCAQMD programs and strategies, thereby minimizing potential cumulative impacts. Mitigation would be implemented, if applicable.

Health Risk Impacts

Potential carcinogenic and non-carcinogenic health risk impacts resulting from Project construction and operations would be less-than-significant. Per SCAQMD criteria, less-than-significant impacts at the Project level are not cumulatively considerable. The potential for Project air pollutant emissions to result in or cause cumulatively significant health risk impacts is therefore considered less-than-significant.

Other related projects within the cumulative impact area would be required to minimize potential health risk impacts consistent with SCAQMD programs and strategies, thereby minimizing potential cumulative impacts. Mitigation would be implemented, if applicable.

5.1.1.4 GHG Emissions/Global Climate Change - Cumulative Impacts

CEQA emphasizes that the effects of greenhouse gas emissions are cumulative and should be analyzed in the context of CEQA's requirements for cumulative impacts analysis (*CEQA Guidelines* Section 15130(f)). The Project Greenhouse Gas (GHG) Analysis is by nature a cumulative analysis. Because GHG emissions and climate change are global

issues, any approved project regardless of its location has the potential to contribute to a cumulative global accumulation of GHG emissions. The geographic context of the cumulative contributions to GHGs and climate change is worldwide. Practically however, lead agencies and responsible agencies are only able to regulate GHG emissions within their respective jurisdictions. Accordingly, for the purposes of this analysis, the cumulative impact area for GHG/Global Climate Change considerations is the City of Ontario and the encompassing SCAQMD jurisdictional area.

As discussed at EIR Section 4.4, *Greenhouse Gas Emissions*, even after application of mitigation, Project GHG emissions would exceed the SCAQMD GHG emissions screening level threshold of 3,000 $MTCO_2e$/year. On this basis, the Project could directly or indirectly generate GHG emissions that may have a significant impact on the environment. On this basis, the Project's potential to contribute considerably (either individually or cumulatively) to global climate change impacts through GHG emissions is therefore considered significant and unavoidable.

As also discussed in the EIR, the Project is consistent with TOP 2050, and GHG emissions modeling reflected in TOP 2050 – *2022 Community Climate Action Plan U*pdate (2022 CCAP Update). The 2022 CCAP Update provides guidance on how to analyze GHG emissions and determine significance during the CEQA review of proposed development projects within the City. The 2022 CCAP Update addresses GHG emissions reductions and is consistent with the requirements of AB 32, SB 32, and international efforts to reduce GHG emissions. The 2022 CCAP Update, requirements of AB 32, SB 32, and international efforts to reduce GHG emissions encompass and comprise the range and scope of "applicable plans, policies, or regulations adopted for the purpose of reducing the emissions of greenhouse gases." As substantiated in the EIR, with application of mitigation, the Project is determined to be consistent with the 2022 CCAP Update and by extension is also consistent with and supports other noted plans, policies, or regulations adopted for the purpose of reducing the emissions of greenhouse gases. The potential for the Project to conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gases is therefore considered less-than-significant.

Other related projects within the cumulative impact area would be required to minimize potential GHG emissions impacts consistent applicable plans, policies, or regulations adopted for the purpose of reducing GHG emissions, thereby minimizing potential cumulative GHG emissions impacts. Mitigation would be implemented, if applicable.

5.1.1.5 Energy - Cumulative Impacts

The geographic scope of cumulative energy impacts is limited to the energy provider service area(s). The analysis at EIR Section 4.5, *Energy*, substantiates that the Project would not conflict with or obstruct a state or local plan for renewable energy or energy efficiency. These plans and policies address development-level and cumulative impacts to energy resources. Project consistency with state and local plans for renewable energy and energy efficiency demonstrates that Project energy impacts would not be cumulatively considerable, and the Project cumulative energy impacts would be less-than-significant.

As with the Project, other related projects within the energy provider service areas would be required to demonstrate compliance with state and local plans for renewable energy and energy efficiency.

Based on the preceding, the Project's potential contribution to cumulative impacts regarding energy is not considerable, and the cumulative effects of the Project are determined to be less-than-significant.

5.1.1.6 Noise/Vibration - Cumulative Impacts

The cumulative impact area for noise/vibration considerations is generally defined as surrounding properties that could receive Project-generated noise/vibration (either construction or operational), and would also include roadway corridors affected by Project-related traffic and associated vehicular noise/vibration. Potential noise/vibration impacts of the Project are discussed at EIR Section 4.6, *Noise*.

Construction-Source Noise/Vibration

Project construction-source noise and vibration levels received at area land uses would be less-than-significant and on this basis are not cumulatively considerable.

Other related projects within the cumulative impact area would be required to mitigate construction-source noise and vibration impacts that could affect sensitive receptors, thereby minimizing potential cumulative construction-source noise impacts.

Operational Noise/Vibration - Area Sources

The Project's area-source operational noise levels would be less-than-significant. EIR mitigation measures would reduce potential vehicular-source noise impacts at the Project residential uses to levels that would be less-than-significant.

Further, Project operational-source noise in combination with ambient noise would not result in cumulatively significant noise impacts. In this latter regard, the peak mitigated Project operational-source noise levels when added to ambient conditions would not exceed the maximum acceptable day/night ambient condition.

Other related projects within the cumulative impact area would be required to mitigate operational area-source noise impacts that could affect sensitive receptors, thereby minimizing potential cumulative operational-source noise impacts.

Operational Noise - Mobile Sources

Cumulative effects of mobile-source noise are demonstrated by comparing noise levels under Existing Conditions (2022) without the Project, to noise levels with the completed Project under Horizon Year Conditions (2050). Cumulative mobile-source noise increases within the Study Area are summarized at Table 5.1-2. The modeled noise levels are based on cumulative traffic volumes presented in the Project Traffic Analysis. The Project Traffic Analysis cumulative traffic volumes include all traffic generated by the Related Projects listed at Table 5.1-1 as well as traffic that would result from regional ambient growth. from The Project Traffic Analysis is presented at EIR Appendix C. Applicable

noise thresholds for each roadway segment, reflecting ambient conditions and presence/absence of sensitive receptors is also identified.

Table 5.1-2
Cumulative Mobile-Source Noise Increases

Roadway	Segment	CNEL at Affected Property Line					Receiving Land Use Noise Sensitivity	Threshold
		Existing	2050 w/o Project	2050 w/ Project	Max. Cumulative Increase	Max. Project Increment

Source: *Rich-Haven Specific Plan 2022 Amendment, Noise and Vibration Analysis* (Urban Crossroads, Inc.) October 27, 2022.

For ease of reference, vehicular-source noise thresholds established in the Project Noise Impact Analysis (EIR Appendix G) and presented at EIR Section 4.6, *Noise* are restated below at Table 5.1-3.

Table 5.1-3
Vehicular-Source Noise Thresholds

Receiving Land Use	Baseline Condition(s)	Significance Threshold Criteria	
		Daytime	Nighttime
Noise-Sensitive	If ambient is < 60 dBA CNEL	≥ 5 dBA CNEL Project increase	
	If ambient is 60 - 65 dBA CNEL	≥ 3 dBA CNEL Project increase	
	If ambient is > 65 dBA CNEL	≥ 1.5 dBA CNEL Project increase	
Non Noise-Sensitive	if ambient is > 75 dBA CNEL	≥ 3 dBA CNEL Project increase	

Source: *Rich-Haven Specific Plan 2022 Amendment, Noise and Vibration Analysis* (Urban Crossroads, Inc.) October 27, 2022.

As indicated at Table 5.1-1, ambient noise levels along all Study Area roadway segments already exceed 65 dBA CNEL. Along these roadway segments, cumulative noise increases of 1.5 dBA CNEL or more, if received at sensitive land uses, would exceed applicable thresholds and would be considered cumulatively significant. Along roadway segments where ambient conditions exceed 70 dBA CNEL, cumulative noise increases of 3.0 dBA CNEL or more, if received at non-sensitive land uses, would exceed applicable thresholds and would be considered cumulatively significant.

Employing the above criteria, Study Area roadway segments affected by cumulatively significant vehicular-source noise impacts are indicated by ***bold italicized text***. As indicated at Table 5.1-1, along all Study Area roadway segments projected to experience cumulatively significant vehicular-source noise impacts, the Project contributions would be less than the 1.5 dBA threshold at sensitive land uses, and less than the 3.0 dBA CNEL threshold at non-sensitive land uses. On this basis, Project contributions to cumulative vehicular-source noise would not be cumulatively considerable and Project impacts would not be cumulatively significant.

5.1.1.7 Hazards/Hazardous Materials - Cumulative Impacts

The cumulative impact area when considering potential hazards and hazardous materials issues includes the area to be developed within the Project site, as well as off-site locations that might be affected by or contribute to hazards or hazardous conditions resulting from the Project and its operations. The cumulative hazards and hazardous

materials impact analysis evaluates the effects of Project construction and operations, and reflects long-term buildout conditions within the cumulative impact area.

As discussed at EIR Section 4.7, *Hazards/Hazardous Materials*, the Project does not propose uses or activities that would require substantial handling or use of hazardous materials, hazardous substances, or hazardous waste that could result in potential adverse effects. The EIR mitigation measures require remediation of any pre-existing hazardous conditions to levels that would be less-than-significant. The mitigation measures also ensure that subsequent development and operation of Project land uses would not create or result in potentially significant hazardous conditions. As mitigated, Project impacts related to hazards and hazardous materials would be less-than-significant.

Other related projects within the cumulative impact area would be required to comply with hazards/hazardous material regulatory requirements. Mitigation would be incorporated, if necessary.

Based on compliance with established policies and regulations, and implementation of the EIR mitigation measures, the Project's potential contribution to hazards/hazardous materials cumulative impacts is not considerable, and the cumulative effects of the Project are less-than-significant.

5.1.1.8 Hydrology/Water Quality - Cumulative Impacts

The cumulative impact area for hydrology/water quality impact considerations is generally defined as the area encompassed by the jurisdictional Regional Water Quality Control Board (RWQCB), in this case the Santa Ana Regional Water Quality Control Board (SARWQCB). Local oversight is also provided by the City of Ontario and San Bernardino County.

Development of the Project site would incrementally increase impervious surfaces within the cumulative impact area, with related potential increases in the rate and quantity of local storm water discharges. As discussed at EIR Section 4.8, *Hydrology and Water Quality*, the Project's potential hydrology/water quality impacts would be less-than-significant as

mitigated. In this regard, the Project would implement storm water management components, and structural and non-structural Best Management Practices, which collectively act to ensure that post-development storm water discharge rates are adequately conveyed within available system capacities.

The Project drainage concept would maintain the site's primary drainage patterns, and would implement drainage systems and detention areas to accept developed storm water discharges. The Project would implement all necessary drainage and storm water management systems, and would be required to comply with all storm water system design, construction, and operational requirements mandated under the City Municipal Code. The Project drainage and storm water management systems would also be required to comply within regulations established by other jurisdictional agencies including SARWQCB, San Bernardino County, and California Department of Water Resources. Additionally, consistent with established building code regulations, approved site-specific drainage studies reflecting precise pad locations, proposed drainage structures, detention facilities, etc., would be required prior to the issuance of building permits within the Project site.

Storm water management systems implemented by the Project, mandated compliance with City, SARWQCB, County, and State storm water management requirements and policies, collectively ensure that adequate storm water conveyance and treatment facilities would be provided to support development and operations of the Project.

Other related projects within the cumulative impact area would be required to comply stormwater management and water quality regulatory requirements. Mitigation would be incorporated, if necessary.

Based on the preceding, contribution to cumulative hydrology/water quality impacts is not considerable, and the cumulative effects of the Project are determined to be less-than-significant.

5.1.1.9 Geology and Soils - Cumulative Impacts

The Project site and all Southern California lie within a seismically active area, generally subject to earthquake hazards, and in this sense, Southern California is considered the cumulative impact area for geology and soils considerations. As discussed at EIR Section 4.9, *Geology and Soils*, Project impacts related to geology and soils would be less-than-significant as mitigated. The Project would not exacerbate any existing adverse geologic/soils conditions.

Other related projects within the cumulative impact area would be required to minimize geology/soils impacts consistent with City and CBC regulatory requirements, thereby minimizing potential cumulative geology/soils impacts. Mitigation would be implemented, if applicable.

Based on the preceding, the Project's potential contribution to cumulative impacts regarding geology and soils is not considerable, and the cumulative effects of the Project are determined to be less-than-significant.

5.1.1.10 Biological Resources - Cumulative Impacts

The cumulative impact areas for biological resources are generally defined by available habitat, species' range(s), physical constraints, and other limiting factors as discussed within the Project Biological Report, EIR Appendix K. Biological resources occurring, or potentially occurring within the Project site, and associated impacts and mitigation are summarized below.

Special-Status Plant Species

There are no historic site records for any special status plant species onsite. Based on a review of CNDDB, the CNPS Inventory of Rare and Endangered Vascular Plants of California, and field surveys, a few special-status species were identified for additional analysis, although none are expected to occur onsite. No special-status plants were observed on the Project site during the 2022 site surveys.

Special-Status Wildlife Species

The Project could result in potentially significant impacts to the burrowing owl. The EIR incorporates mitigation measures that would reduce potential impacts to the burrowing owl to levels that would be less-than-significant.

Nesting Birds

Project implementation could affect nesting birds that may be present at the time of Project construction activities. This is a potentially significant impact. The EIR incorporates mitigation measures that would reduce potential impacts to nesting birds to levels that would be less-than-significant.

Jurisdictional Areas, Riparian Habitat, Wetlands, or Other Sensitive Natural Community

The site does not contain any lakes, rivers, creeks, streambeds, wetlands, vernal pools, or temporary rain pools. No other wetlands, riparian habitat or other sensitive communities exist within the Project site. Nor does the Project propose uses or activities that would substantially or adversely affect any other off-site wetlands or riparian areas. The potential for the Project to have a substantial adverse effect on any jurisdictional areas, riparian habitat, federally protected wetlands, or other sensitive natural community is considered less-than-significant.

Wildlife Movement Corridors

The Project site is bounded by traveled roadways and developed or developing properties. The Project site does not represent a connecting link between significant habitat for wildlife areas. Based on its location within an urban context, the potential for the site to function as a significant wildlife movement corridor is considered low. Project impacts to wildlife movement corridors would be less-than-significant.

Local Policies or Ordinances Protecting Biological Resources; Habitat Conservation Plans

The Project site is not subject to any local policies or ordinances protecting biological resources. The Project would not conflict with provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local,

regional, or state habitat conservation plan. No significant impacts in this regard would occur.

Based on the preceding discussion, the Project's potential contribution to cumulative impacts regarding biological resources is not considerable, and the cumulative effects of the Project are determined to be less-than-significant.

5.1.1.11 Cultural Resources/Tribal Cultural Resources - Cumulative Impacts

The cumulative impact area for prehistoric, archaeological, and historic resources includes the City of Ontario and surrounding areas of San Bernardino County. As discussed at EIR Section 4.11, there are no known or probable significant historical resources within the Project site, or that would otherwise be adversely affected by the Project. On this basis, the potential for the Project to cause a substantial adverse change in the significance of historic resources as defined at CCR §15064.5 is considered less-than-significant.

The Project's other potential impacts to cultural resources/tribal cultural resources would be less-than-significant as mitigated.

Other related projects within the cumulative impact area would be required to minimize cultural resources/tribal cultural resources impacts consistent with City and State regulatory requirements, thereby minimizing potential cumulative cultural resources/tribal cultural resources impacts. Mitigation would be implemented, if applicable.

Based on the preceding, the Project's potential contributions to cumulative impacts regarding cultural resources/tribal cultural resources would not be considerable, and these cumulative effects would be less-than-significant.

5.1.1.12 Utilities and Service Systems - Cumulative Impacts

The cumulative impact area when considering potential cumulative utilities and service systems impacts comprises affected purveyor service areas including service sources/supplies, and service conveyance/distribution/treatment facilities.

As discussed at EIR Section 4.12, *Utilities & Service Systems,* the Project would implement all necessary on-site infrastructure improvements and would also construct area-serving off-site master plan infrastructure improvements. Utilities and service systems distribution and conveyance lines implemented by the Project would be constructed, operated, and maintained pursuant to purveyor requirements and consistent with applicable infrastructure master plans. Infrastructure improvements would be located within existing improved streets or otherwise disturbed properties, thereby limiting or avoiding potential environmental impacts.

This EIR evaluates likely maximum impacts associated with all Project actions and operations, including but not limited to construction and operation of utilities and service systems distribution and conveyance lines. Construction and operation of the Project utilities and service systems distribution and conveyance lines would not result in conditions or environmental impacts not already considered and addressed elsewhere in this EIR.

The EIR discussion of potential utilities and services impacts also substantiates the following:

- Water supplies would be available to serve the Project and reasonably foreseeable future development during normal, dry, and multiple dry years. Details in these regards are presented in the Project Water Supply Assessment (WSA), EIR Appendix M.

- There exists sufficient wastewater treatment capacity to serve the Project's projected demand in addition to the provider's existing commitments;

- Landfills serving the Project have sufficient permitted capacity to accommodate the Project's solid waste disposal needs; and

- The Project would comply with federal, state, and local statutes and regulations related to solid waste.

Other related projects within the cumulative impact area would be required to minimize utilities and services impacts consistent with City, State, and service purveyor requirements, thereby minimizing potential cumulative utilities and services impacts. Mitigation would be implemented, if applicable.

Based on the preceding, Project contributions to cumulative impacts regarding utilities and service systems would not be considerable, and the cumulative effects of the Project would be less-than-significant.

5.2 ALTERNATIVES ANALYSIS

CEQA Guidelines Section 15126.6 provides that an EIR must describe a range of reasonable alternatives to the Project, or to the location of the Project, which would feasibly attain the basic Project Objectives, but would avoid or substantially lessen any of the significant environmental effects of the proposal. As further presented in the *CEQA Guidelines*, an EIR need not consider every conceivable alternative, but rather, the discussion of alternatives and their relative merits and impacts should be provided in a manner that fosters informed decision-making and public participation. To this end, the *CEQA Guidelines* indicate that the range of alternatives selected for examination in an EIR should be governed by "rule of reason," and requires the EIR to set forth only those alternatives necessary to permit an informed decision.

Consistent with provisions of the *CEQA Guidelines*, the following analysis presents a reasonable range of alternatives to the Project that would potentially lessen its environmental effects while allowing for attainment of the basic Project Objectives. Supporting reasoning behind the selection of alternatives is presented together with a summary description of each alternative. Merits of the selected alternatives compared with the Project are described and evaluated.

The alternatives analysis concludes with identification of the environmentally superior alternative. If the environmentally superior alternative is the No Project Alternative, the *CEQA Guidelines* require that one of the remaining considered Alternatives be identified as the environmentally superior selection.

5.2.1 Alternatives Overview

Descriptions of, and the rationale underlying, the alternatives considered in this EIR are presented below. As provided for under CEQA, the ultimate rationale underlying the development and selection of alternatives to the Project is the reduction or avoidance of otherwise resulting significant environmental impacts, while allowing for attainment of the basic Project Objectives. Alternatives considered in detail include:

- No Project Alternative: No Build;
- No Project Alternative: Development per Existing Specific Plan Land Uses; and
- Reduced Intensity Alternative.

As provided for at *CEQA Guidelines* 15126.6(c), alternatives that were considered by the lead agency but were rejected as infeasible are also identified. These include:

- Alternative Sites;
- "No Threshold Exceedance" Alternative for Significant Air Quality Impacts; and
- "No Threshold Exceedance" Alternative for Significant GHG Impacts.

The above-listed Alternatives are described in greater detail at Section 5.2.2, *Description of Alternatives* and 5.2.3, *Alternatives Considered and Rejected*. To provide context for the subsequent consideration of Alternatives, significant Project impacts are summarized below, and the Project Objectives are restated.

5.2.1.1 Summary of Significant and Unavoidable Impacts

Significant Air Quality Impacts

EIR Section 4.3, *Air Quality*, details the Project's potential air quality impacts. As discussed in that Section, even after compliance with applicable regulations and requirements, and application of mitigation measures, the Project would result in the following significant and unavoidable air quality impacts:

- Even with application of mitigation, Project construction-source NO_x and CO emissions would exceed applicable SCAQMD regional thresholds and would therefore be significant and unavoidable. Per SCAQMD criteria, significant Project-level impacts are also cumulatively considerable. The Basin encompassing the Project site is designated as non-attainment for ozone, PM_{10}, and $PM_{2.5}$ (VOC and NO_x are both ozone precursors; NO_x is a precursor to $PM_{10}/PM_{2.5}$). Project construction-source NO_x emissions threshold exceedances would result in a cumulatively considerable net increase in the criteria pollutant ozone for which the Project region is non-attainment. This is a cumulatively significant and unavoidable air quality impact.

- Even with application of mitigation, Project operational-source VOC, NO_x, CO, PM_{10}, and $PM_{2.5}$ emissions would exceed applicable SCAQMD regional thresholds. The Basin encompassing the Project site is designated as non-attainment for ozone, PM_{10}, and $PM_{2.5}$ (VOC and NO_x are both ozone precursors; NO_x is a precursor to $PM_{10}/PM_{2.5}$). Project operational-source VOC, NO_x, PM_{10}, and $PM_{2.5}$ emissions threshold exceedances would result in a cumulatively considerable net increase in criteria pollutants (ozone and $PM_{10}/PM_{2.5}$) for which the Project region is non-attainment. These are cumulatively significant and unavoidable air quality impacts.

- Project construction-source and operational-source regional threshold emissions exceedances noted above are inconsistent with AQMP Consistency Criterion No. 1. On this basis, the Project would conflict with the AQMP. This is a cumulatively significant air quality impact.

Significant GHG Emissions Impacts

As discussed at EIR Section 4.4, *Greenhouse Gas Emissions*, even after application of mitigation, Project GHG emissions would exceed the SCAQMD GHG emissions screening level threshold of 3,000 $MTCO_2e$/year. On this basis, the Project could directly or indirectly generate GHG emissions that may have a significant impact on the environment. On this basis, the Project's potential to contribute considerably (either

individually or cumulatively) to global climate change impacts through GHG emissions is therefore considered significant and unavoidable.

5.2.1.2 Project Objectives

The primary goal of the Project is the development of the subject site with a productive mix of Specific Plan residential, commercial, light industrial and community facilities. Complementary Project Objectives include the following:

General

- Implement TOP 2050 Policy Plan Land Use Plan.
- Support TOP 2050 vision for urbanization of the Ontario Ranch area of the City.
- Implement a Specific Plan development supporting office/commercial and light industrial uses providing a broad range of long-term employment opportunities.
- Implement Specific Plan developments providing a broad range of additional construction employment opportunities.
- Establish new development that would further the City's near-term and long-range fiscal goals.
- Improve the regional jobs/housing balance.

Specific Plan Uses

Livable Neighborhood Development

- Incorporate Traditional Neighborhood Design guiding principles during the design phase to provide for opportunities to achieve the Project's vision statement, including:
    - Connections. To provide a series of sidewalks and trails connecting community parks, civic uses, employment areas, mixed-use and transit stops designed to be pedestrian friendly to avoid unnecessary automobile trips.
    - Traditional Street Network. To design a hierarchy of streets connected in a grid network with a variety of routes for pedestrians and vehicles, as well as creating a visually favorable and comfortable environment for pedestrians and bicyclists.

  - Main Street Environment. To design commercial/retail areas to a human scale with storefronts oriented to the street providing a "Main Street" atmosphere for strolling and shopping, all within walking distance from most homes.
  - Public Spaces. To create plazas, parks, and community gathering places placed within centralized areas providing synergy between adjacent land uses.
  - Identifiable Neighborhoods. To design neighborhoods around a discernable center, which may include a small park, square, school, or mixed-use center, within a five-minute walking distance.
  - Mix of Housing. To provide neighborhoods with a range of household types: a variety of single-family detached homes, attached units for young families, and live/work units for small at-home businesses.
- Design a mixed-use environment to ensure compatible uses that are cohesive and integrate a diversity of residential neighborhoods, with a range of commercial uses, and supporting open spaces.
- Utilize transportation, utility, and greenways/open space networks to establish clear edges and boundaries.
- Accommodate residential, commercial, open space, public, and other uses in accordance with the generalized distribution of uses depicted within the City's TOP Land Use Plan.
- Implement elements that will ensure walkability throughout the Project Area to discourage automobile dependency and encourage walking, biking, and other forms of transportation. This is achieved through the incorporation of subarea greenways and pedestrian connections and through sensitive site design of mixed-use development.
- Implement technological advances within residential communities, including internet access, to allow residents to shop and work from home and to decrease reliance on automobiles.
- Provide opportunity for at least one major public plaza/square as a centerpiece of community activities, including events and celebrations, outdoor performances, community meetings, picnics, farmers markets, and similar functions.
- Establish a clearly defined "edge" for the City's TOP area, where appropriate, that avoids the use of walls and creation of a "walled" enclave.

- Incorporate electrical transmission corridors and similar elements to form "edges" for residential neighborhoods and centers and/or accommodate public greenways/trails/corridors.

Residential District Objectives

- Create a livable community with neighborhoods designed at a human scale and oriented for pedestrian access to mixed-use, educational, and recreational uses.
- Provide for a range and diversity of housing products (detached single-family, detached and attached condominiums, and townhomes) that respond to a variety of homeownership needs and desires.
- Design residential projects to complement the character of adjacent neighborhoods.
- Encourage interaction among residents through the provision of an organized, simple, and "neo-traditional" system of streets, pathways, and entries to allow residents to walk or bike to parks, recreation, and public facilities (including schools).
- Promote outdoor activity and casual social contact among residents and neighbors by designing neighborhoods around a central park where they can gather.
- Provide a focal point of activity within each residential planning area that may include a park, school, common area, or public meeting facility.
- Encourage architectural styles and traditional design elements that reflect the historic and eclectic mixture of architecture, reflective of the greater Ontario area.
- Increase densities adjacent to commercial centers.
- Establish clear, defined "edges" and "entries" that contribute to neighborhood identity.
- Avoid the use of walls to separate residential areas from arterials and other high traffic volume streets by expanded landscape setbacks, frontage roads, and other appropriate techniques.
- Include clustered multi-family housing within the Residential District, in order to create a diverse range of housing products and opportunities, while still in keeping with the overall low-density residential designation.

- Locate higher-density residential uses that provide population to support adjacent regional commercial centers.
- Provide sufficient on-site recreational amenities within higher density developments.
- Include community-oriented uses such as public meeting rooms, plazas and courtyards, and similar uses.
- Establish visual and physical links among the individual multi-family developments to create a cohesive and continuous corridor.
- Design building elevations to promote visual interest.
- Provide linkages between community service facilities, multi-family corridors, and residential neighborhoods.

Regional Commercial/Mixed-Use District Objectives

- Accommodate a diversity of large-scale retail, community and neighborhood shopping, office, medical research, entertainment, hotel/motel, dining, housing, cultural, public, and similar uses that will serve the Project area and neighboring Planning Areas.
- Function with a high level of activity and/or employment.
- Accommodate development of multi-family housing, mixed-use buildings that incorporate housing and retail/office, and live/work facilities.
- Accommodate single-use buildings and mixed-use structures containing a variety of uses from residential over retail or office-to-office over retail.
- Encourage traditional, mixed-use design of commercial buildings, by requiring a lower maximum floor area ration (FAR) for single-use buildings, and a higher maximum FAR for mixed-use buildings.
- Develop plaza areas and other amenities to provide places of social interaction.
- Include one or more public "squares" to serve as gathering places.
- Incorporate modulated building volumes, mass, height, and articulated facades to create individual spaces.
- Site a portion of the buildings on peripheral streets to provide connectivity to adjacent uses.

- Orient buildings towards the local streets whenever possible to create an urban edge and sense of arrival and place.
- Include sidewalks of sufficient width to accommodate pedestrian activity and outdoor restaurants, newsstands, and other uses.
- Create visual interest through the opening of streets and sidewalks/plazas towards building elevations.
- Incorporate landscaping to enhance the environment.
- Visually integrate parking structures to continue the intended design character of the district.
- Incorporate multi-family housing to create a cohesive and continuous corridor.
- Ensure an appropriate mix of uses (residential and commercial) that are compatible.
- Encourage pedestrian access and ease of use within the mixed-use area by designing pedestrian and bike paths.
- Create a "Main Street" environment with buildings designed to a human scale where pedestrian activity is not overwhelmed by automobile traffic.
- Utilize urban design to create a "Gateway" or portal to the Ontario Ranch.

Industrial District Objectives

- Incorporate transitions and/or buffers between commercial/mixed-use and industrial areas and adjacent residential areas.
- Contribute to the regional jobs to housing balance by providing employment opportunities while minimizing development impacts on surrounding neighborhoods.
- Create a high-quality industrial park development that attracts an array of businesses and provides employment opportunities within proximity to area residents.
- Provide safe and efficient access/circulation routes for the distribution/transportation of goods.

Circulation Objectives

- Provide a circulation system designed to promote pedestrian activity through a network of off-street pedestrian walkways linking each neighborhood to parks, mixed-use commercial, and residential uses.
- Design a hierarchy of streets connected in a grid network with a variety of routes for pedestrians and vehicles, creating a visually attractive, enhanced, and comfortable environment for pedestrians and bicyclists.
- Design streets to incorporate landscaped parkways and pedestrian walkways separated from the street to enhance safety and enjoyment of residents and visitors.
- Provide opportunities for transit connections and alternative modes of transportation.

Recreation/Trails Objectives

- Provide new recreational opportunities for residents through the development of a series of public and private parks.
- Provide a series of pedestrian trails connecting community parks, civic uses, mixed-use, and transit stops designed to be pedestrian friendly to avoid unnecessary automobile trips.
- Incorporate off-street multi-use trails within the Southern California Edison easements.
- Incorporate a system of on- and off-street bicycle pathways with access from the residences to mixed-use areas.
- Use landscaping and streetscape materials that are low maintenance in recreation and trail areas.
- Provide a system of on-street bikeways integrated throughout the Project to provide access to schools, parks, and commercial uses.
- Provide new recreational opportunities for residents through the development of a series of parks ranging in size.

Community Facilities Objectives

- Incorporate existing major utilities into the overall fabric of the community.

- Provide opportunities for incorporation of community facilities (e.g., schools, fire station) as identified by affected agencies.

Please refer also to EIR Section 3.5, *Project Objectives*.

5.2.2 Description of Alternatives

Alternatives to the Project considered in this analysis include:

- No Project Alternative: No Build;
- No Project Alternative: Development per Existing Specific Plan Land Uses;
- Reduced Intensity Alternative.

Descriptions of the selected Alternatives are provided below.

5.2.2.1 No Project Alternatives

Overview

The *CEQA Guidelines* require that the EIR include in its evaluation of Alternatives a No Project Alternative. Within this analysis, two No Project scenarios are considered – "No Build" and "Development per Existing Specific Plan Land Uses."

No Project Alternative: No Build

The No Project Alternative: No Build scenario assumes the site remains in its current undeveloped condition. If this scenario were maintained, its comparative environmental impacts would replicate the existing conditions discussions for each of the environmental topics evaluated in this EIR; and comparative impacts of the Project would be as presented under each of the EIR environmental topics. A No Build condition would achieve none of the basic Project Objectives.

No Project Alternative: Development per Existing Specific Plan Land Uses

The No Project Alternative: Development per Existing Specific Plan Land Uses (Existing Specific Plan Land Uses) scenario represents foreseeable development of the subject site pursuant to the site's current Policy Plan Land Use designations. Table 5.2-1 compares

the composition and scope of uses under the Project with development that could result under the Existing Specific Plan Land Uses scenario.

5.2.2.2 Reduced Intensity Alternative

The Reduced Intensity Alternative focuses on a development scenario that would reduce the significant operational-source air quality impacts otherwise occurring under the Project.

Of the total operational-source emissions generated by the Project, approximately 77 percent (by weight) would be generated by Project mobile sources (traffic). An effective way to reduce the Project operational-source emissions would therefore be an Alternative that would reduce the total amount of traffic generated by the Project. Based on the reduction in total traffic, the Reduced Intensity Alternative would also reduce the scope and/or intensity of significant air quality impacts, and GHG emissions impacts that would otherwise result from implementation of the Project.

For purposes of the EIR Alternatives Analysis, the Reduced Intensity Alternative would implement the Project uses at an approximately 25 percent reduction in overall development intensity. The mix of land uses proposed by the Project would be proportionally maintained under the Reduced Intensity Alternative. Development under the Project and the Reduced Intensity Alternative is compared at Table 5.2-2.

Table 5.2-2
Site Development Comparison
Project and Reduced Intensity Alternative

	Project

5.2.3 Alternatives Considered and Rejected

5.2.3.1 Alternative Sites Considered and Rejected

As stated at *CEQA Guidelines* §15126.6 (f)(1)(2)(A), the "key question and first step in [the] analysis [of alternative locations] is whether any of the significant effects of the project would be avoided or substantially lessened by putting the project in another location. Only locations that would avoid or substantially lessen any of the significant effects of the project need be considered for inclusion in the EIR." *CEQA Guidelines* §15126.6 (f) (1) also provides that when considering the feasibility of potential alternative sites, the factors that may be taken into account include: "site suitability, economic viability, availability of infrastructure, general plan consistency, other plans or regulatory limitations, jurisdictional boundaries (projects with a regionally significant impact should consider the regional context), and whether the proponent can reasonably acquire, control, or otherwise have access to the alternative site (or the site is already owned by the proponent). None of these factors establishes a fixed limit on the scope of reasonable alternatives."

As discussed below, relocation of the Project would not avoid or substantially lessen the Project's significant environmental impacts. Further, there are no feasible alternative sites under control or likely control of the Applicant that would allow for relocation of the Project in a manner that could substantially reduce the Project's significant environmental impacts.

Significant Air Quality Impacts Not Substantially Reduced at Alternative Site

- Relocation to an Alternative Site would not likely achieve any measurable reduction in the Project's regional construction-source and operational-source air quality impacts and contributions to nonattainment conditions. AQMP inconsistencies tied to the Project significant air quality impacts similarly would not be reduced by relocation of the Project. Relocation of the Project anywhere within the South Coast Air Basin would not alter or diminish the significance of these impacts.

Significant GHG Emissions Impacts Not Substantially Reduced at Alternative Site

- GHG emissions impacts are, by definition, cumulative and global in their effects. Relocation of the Project would not alter or diminish the significance of its GHG emissions impacts.

Based on the preceding considerations, analysis of an Alternative Site as means of reducing the Project's significant environmental impacts was not further considered.

5.2.3.2 "No Threshold Exceedance" Alternative for Significant Air Quality Impacts Considered and Rejected

Operational-Source Emissions

In order to reduce Project operational-source air quality emissions to levels that would preclude exceedance of all SCAQMD thresholds, the Project scope would need to be reduced by approximately 92.4 percent[1] (this may achieve the most restrictive threshold [VOC] and all subordinate thresholds). At such a reduction in scope, the Project Objectives would not be realized in any meaningful sense. As such, potential alternatives with the specific goal of avoiding all significant operational-source air quality impacts

[1] Maximum daily operational-source VOC emissions at Project buildout [mitigated] = 730.53 lbs./day. VOC threshold = 55 lbs./day. Assuming roughly linear reduction necessary to meet threshold condition = 55/730.53 = 0.075 of maximum daily VOC emissions = 92.4 percent reduction in VOC emissions = 92.4 percent reduction in Project scope.

resulting from the Project were rejected from consideration, and are not further evaluated in this discussion.

Project operational-source emissions threshold exceedances would result in a cumulatively considerable net increase in criteria pollutants for which the Project region is non-attainment. For the same reasons noted above, there are no feasible means or alternatives to avoid this impact or reduce the impact to levels that would be less-than-significant. However, this impact and all operational-source air quality impacts would be diminished under the EIR Reduced Intensity Alternative.

Construction-Source Emissions

In order to reduce Project construction-source air quality emissions to levels that would preclude exceedance of all SCAQMD thresholds would require use of construction equipment or construction technologies that are not currently available or that would be available in the near-term. In this regard, use of alternative fuel construction equipment, including electric-powered equipment, is not feasible at this time as such equipment is not commercially available, and is not expected to be in the near-term. Alternatively, the duration of Project construction activities would need to be protracted by an estimated additional 67 percent of the current Project construction schedule.[2] This may achieve the most restrictive construction-source emissions threshold [NOx], but in so doing would only prolong the duration of air quality emissions, the duration of construction-source equipment noise, and the duration of general disturbances associated with construction activities. The Lead Agency has determined that the benefits of the Project's current construction schedule outweigh the potential benefit in a temporary decrease in air quality emissions that may be achieved through a protracted Project construction schedule. Moreover, accepted air quality modeling parameters do not provide for such an assumed extended construction period. For these reasons, there are no feasible means or alternatives to avoid this impact or reduce the impact to levels that would be less-than-significant.

[2] Maximum daily construction-source NOx emissions [mitigated] = 165.30 lbs./day. NOx threshold = 55 lbs./day. Assuming roughly linear reduction necessary to meet threshold condition = 55/165.30 = 0.33 of maximum daily NOx emissions = 67 percent reduction in VOC emissions = 67 percent extension of Project construction schedule.

5.2.3.3 "No Threshold Exceedance" Alternative for GHG Emissions Impacts Considered and Rejected

As discussed at EIR Section 4.4, *Greenhouse Gas Emissions*, quantified Project-source GHG emissions would exceed 3,000 $MTCO_2e$/year; and the Project cannot feasibly achieve the SCAQMD screening-level threshold of 3,000 $MTCO_2e$/year. The SCAQMD 3,000 $MTCO_2e$/year screening-level threshold is the most conservative metric available and is employed in this analysis in of GHG emissions significance. On this basis, Project GHG emissions have the potential to either directly or indirectly result in a significant impact on the environment.

The majority (approximately 72 percent) of the Project GHG emissions would be generated by Project vehicular sources. Responsibility and authority for regulation of vehicular-source emissions resides with the State of California (CARB, et al.). Neither the Applicant nor the Lead Agency can effect or mandate substantial reductions in vehicular-source GHG emissions, much less reductions that would achieve no net increase condition or achieve the SCAQMD screening-level 3,000 MTCO2e/year threshold. In effect, all Project traffic would need to be eliminated or be "zero GHG emissions sources" in order to achieve the SCAQMD threshold. There are no feasible means to or alternatives to eliminate all Project traffic, or to ensure that Project traffic would comprise zero GHG emissions sources. In terms of its practical application, this would constitute a "no build" condition.

The Project would however implement all feasible measures to reduce GHG emissions as outlined under the City of Ontario 2022 Community Climate Action Plan Update (2022 CCAP Update). Under the 2022 CCAP Update, mixed use developments that garner at least 100 Screening Table points would be consistent with the GHG emissions reduction targets in the City's 2022 CCAP Update. As substantiated at EIR Section 4.4, *Greenhouse Gas Emissions*, the Project would attain more than 100 Screening Table points. The Project is therefore determined to be consistent with the 2022 CCAP Update.

5.2.4 Comparative Impacts of Alternatives

For each environmental topic addressed in the EIR, the following analyses present an assessment of comparative impacts of Alternatives to the Project. At the conclusion of these discussions, Table 5.2-4 summarizes and compares relative impacts of the Project and the considered Alternatives.

5.2.4.1 Land Use and Planning - Comparative Impacts

In order to implement the Project approval of certain discretionary actions, consultation, and permitting would be required. The Project would comply with associated requirements incorporated therein. Potential land use and planning impacts of the Project would be less-than-significant. See also: EIR Section 4.1, *Land Use and Planning*.

No Project Alternative: No Build

Under this Alternative, existing land use/planning conditions would be maintained (see: EIR Section 4.1, *Land Use and Planning*, 4.1.2, *Setting*). This Alternative would realize no new development and would require no land use or planning discretionary actions or permits. In this respect, land uses and planning impacts would be decreased when compared to the Project. However, this Alternative would not support the City's long-range vision for the subject site, under which the site would be developed with Specific Plan Residential, Office/Commercial, Light Industrial, and Community Facilities Land Uses. Comparative Land Use and Planning impacts under this Alternative would be reduced when compared to the Project. Under both the Project and this Alternative, Land Use and Planning impacts would be less-than-significant.

No Project Alternative: Existing Specific Plan Land Uses

This scenario assumes development of the subject site consistent with the site's Existing (2021) Rich-Haven Specific Plan Land Use designations. This Alternative would not require amendment of the existing Rich-Haven Specific Plan, as proposed by the Project. It is noted here that the proposed 2022 Rich-Haven Specific Plan Amendment is consistent with TOP 2050 Policy Plan Land Use Plan, whereas the 2021 Rich-Haven Specific Plan is not. That is, for the 2021 Specific Plan to be maintained, it would require amendment of TOP 2050 Policy Plan Land Use Plan; in this respect, implications of Policy

Plan (General Plan) amendments are generally broader in scope and more fundamental when compared to an amendment of an existing Specific Plan. No Project Alternative would likely result in Land Use and Planning impacts equal to or greater than impacts of the Project.

Reduced Intensity Alternative

The Reduced Intensity Alternative would require amendment of Policy Plan Land Use designations similar to the Project. Other discretionary actions, consultations, and permitting required under the Reduced Intensity Alternative and the Project would be the same. Under either the Project or the Reduced Intensity Alternative, land use and planning impacts would be less-than-significant.

5.2.4.2 Transportation - Comparative Impacts

VMT impacts resulting from the Project would be individually and cumulatively less-than-significant. All other Project transportation impacts would also be less-than-than-significant. See also: EIR Section 4.2, *Transportation*.

No Project Alternative: No Build

VMT Impacts

This Alternative would maintain existing VMT conditions. This Alternative would result in decreased total VMT when compared to the Project. Because the intensity and scope of uses is diminished under this Alternative, the Service Population would also be decreased. On this basis, this Alternative may not substantially alter the VMT/SP ratio otherwise resulting from the Project. Under the Project and this Alternative, VMT impacts would be less-than-significant.

Other Transportation Topics

No new traffic would be generated, and no new or additional impacts related to other transportation topics would result under this Alternative. As with the Project, airport land use compatibility, traffic hazards, and emergency access impacts would be less-than-significant.

No Project Alternative: Existing Specific Plan Land Uses

VMT Impacts

When compared to the Project, this Alternative would likely result in comparable total development within the Specific Plan Area, though the types and configuration of uses would be amended under the Project. The Specific Plan Service Population would also likely be comparable. On this basis, this Alternative would not substantially alter the VMT/SP ratio otherwise resulting from the Project. Under the Project and this Alternative, VMT impacts would be less-than-significant.

Other Transportation Topics

As with the Project, required Study Area traffic improvements would be constructed or proportionally funded under this Alternative. As with the Project, airport land use compatibility impacts would be less-than-significant. It is assumed that like the Project, development of the subject site under the Reduced Intensity Alternative would incorporate those site adjacent and on-site circulation system improvements necessary to avoid or mitigate development-specific traffic impacts. As a matter of law, this Alternative would be required to comply with City ordinances addressing the Study Area circulation system. As with the Project, transportation systems improvements would be designed and implemented consistent with City and Manual on Uniform Traffic Control Devices (MUTCD) requirements. Under this Alternative, as with the Project, "other" transportation impacts would be less-than-significant.

Reduced Intensity Alternative

VMT Impacts

The Reduced Intensity Alternative would reduce Project development intensity, associated trip generation, and VMT by an estimated 25 percent. The reduction in Service Population would also likely be comparable.

The Reduced Intensity Alternative would result in reduced total VMT when compared to the Project. Because the intensity and scope of uses would be decreased under the

Reduced Intensity Alternative, the Service Population would also likely be decreased. The Reduced Intensity Alternative would therefore not substantially alter the VMT/SP ratio otherwise resulting from the Project.

Other Transportation Topics

Based on the 25 percent reduction in trip generation, the extent of Study Area traffic improvements required under this Alternative would likely be reduced when compared to the Project. Because the Reduced Intensity Alternative would generate less traffic than the Project, fair share fee responsibilities, (which are based on proportional traffic contributions), would be reduced when compared to the Project. Required DIF payments (which are based on development building areas) would also be reduced. It is assumed that, like the Project, development of the subject site under the Reduced Intensity Alternative would incorporate those site adjacent and on-site circulation system improvements necessary to avoid or mitigate development-specific traffic impacts.

As a matter of law, this Alternative would be required to comply with City ordinances addressing the Study Area circulation system. As with the Project, transportation systems improvements would be designed and implemented consistent with City and Manual on MUTCD requirements. Under this Alternative, as with the Project, "other" transportation impacts would be less-than-significant.

5.2.4.3 Air Quality - Comparative Impacts

Even with application of mitigation, Project construction-source NO_x and CO emissions would exceed applicable SCAQMD regional thresholds and per AQMD criteria would be significant. Per SCAQMD criteria, Project-level impacts that are significant are also cumulatively considerable. Project construction-source NO_x emissions threshold exceedances would result in a cumulatively considerable net increase in criteria pollutants (ozone) for which the Project region is non-attainment. These are cumulatively significant and unavoidable air quality impacts.

Even with application of mitigation, Project operational-source VOC, NO_x, CO, PM_{10}, and $PM_{2.5}$ emissions would exceed applicable SCAQMD regional thresholds and per AQMD

criteria would be significant. Per SCAQMD criteria, Project-level impacts that are significant are also cumulatively considerable. Project construction-source VOC, NO_x, PM_{10}, and $PM_{2.5}$ emissions threshold exceedances would result in a cumulatively considerable net increase in criteria pollutants (ozone and $PM_{10}/PM_{2.5}$) for which the Project region is non-attainment. These are cumulatively significant and unavoidable air quality impacts.

Project construction-source and operational-source emissions threshold exceedances noted above would impede air quality attainment strategies and goals outlined in the AQMP. On this basis, the Project is considered inconsistent with the AQMP. This is a significant and unavoidable impact. Per SCAQMD criteria, Project-level impacts that are significant are also cumulatively considerable.

All other Project air quality impacts would be less-than-significant, or less-than-significant as mitigated. See also: EIR Section 4.3, *Air Quality*.

No Project Alternative: No Build

Under this Alternative existing air quality conditions would be maintained (see: EIR Section 4.3, *Air Quality*, 4.3.3, *Setting*). This Alternative would realize no new development and would generate no additional air pollutant emissions. This Alternative would result in reduced air quality impacts when compared to the Project. No air quality impact mitigation would be implemented under this Alternative.

No Project Alternative: Existing Specific Plan Land Uses

Under this Alternative, similar construction activities and use of construction equipment would be similar to that occurring under the Project. The maximum daily area of disturbance would be the same under both scenarios. Construction-source emissions impacts under the Project and this Alternative would be comparable, and would be individually and cumulatively significant and unavoidable.

When compared to the Project, this Alternative would likely result in comparable total development within the Specific Plan Area, though the types and configuration of uses

would be amended under the Project. Operational-source emissions under this Alternative would be comparable to the Project operational-source emissions and would be individually and cumulatively significant and unavoidable.

Construction-source and operational-source emissions threshold exceedances under this Alternative would impede air quality attainment strategies and goals outlined in the AQMP. On this basis, this Alternative would be inconsistent with the AQMP. This is a significant and unavoidable impact. Per SCAQMD criteria, Project-level impacts that are significant are also cumulatively considerable.

All other air quality impacts under this Alternative would be less-than-significant, or less-than-significant as mitigated.

Reduced Intensity Alternative

Construction activities and use of construction equipment would be similar to the Project. The maximum daily area of disturbance would be the same under both scenarios. Construction-source emissions impacts under the Project and this Alternative would be comparable, and would be individually and cumulatively significant and unavoidable.

The 25 percent reduction in development intensity under the Reduced Intensity Alternative would translate roughly to a 25 percent reduction in operational-source air pollutant emissions when compared to the Project. Table 5.2-3 compares operational-source air pollutant emissions under the Project and Reduced Intensity Alternative.

Table 5.2-3
Project and Reduced Intensity Alternative
Operational-Source Emissions Comparison
(Pounds per Day, Maximum Total Summer/Winter Emissions)

Pollutant	SCAQMD Threshold	Project		Reduced Intensity Alternative	
		Emissions	Threshold Exceeded?	Emissions	Threshold Exceeded?
VOC	55	929.39	**YES**	697.04	**YES**
NOx	55	609.87	**YES**	457.40	**YES**
CO	550	4,032.65	**YES**	3,024.49	**YES**

Table 5.2-3
Project and Reduced Intensity Alternative
Operational-Source Emissions Comparison
(Pounds per Day, Maximum Total Summer/Winter Emissions)

Pollutant	SCAQMD Threshold	Project		Reduced Intensity Alternative	
		Emissions	Threshold Exceeded?	Emissions	Threshold Exceeded?
SOx	150	9.49	No	7.12	No
PM_{10}	150	300.66	**YES**	225.50	**YES**
$PM_{2.5}$	55	70.71	**YES**	53.03	No

Sources: Project operational-source emissions estimates from: *Rich-Haven Specific Plan, 2022 Amendment Air Quality Impact Analysis, City of Ontario* (Urban Crossroads, Inc.) November 8, 2022. No Project Alternative operational-source emissions estimates–Applied Planning, Inc.

As indicated at Table 5.2-3, when compared to the Project, operational-source emissions would be incrementally reduced for all pollutants under the Reduced Intensity Alternative. As with the Project, operational-source VOC, NO_x, CO, and PM_{10} emissions under the Reduced Intensity Alternative would exceed applicable SCAQMD regional thresholds. As with the Project, the Reduced Intensity Alternative's VOC, NO_x, and PM_{10} and regional threshold exceedances would contribute to existing Basin ozone and $PM_{10}/PM_{2.5}$ nonattainment conditions.

Construction-source and operational-source emissions threshold exceedances under this Alternative would impede air quality attainment strategies and goals outlined in the AQMP. On this basis, this Alternative would be inconsistent with the AQMP. This is a significant and unavoidable impact. Per SCAQMD criteria, Project-level impacts that are significant are also cumulatively considerable.

All other air quality impacts under this Alternative would be less-than-significant, or less-than-significant as mitigated.

All other air quality impacts under this Alternative would be diminished when compared to the project and would be less-than-significant, or less-than-significant as mitigated.

5.2.4.4 Greenhouse Gas/Global Climate Change - Comparative Impacts

Even with application of mitigation, Project GHG emissions would exceed the SCAQMD screening level threshold of 3,000 $MTCO_2e$/year. On this basis, Project GHG emissions would result in a significant and unavoidable environmental impact.

The Project would implement GHG emissions mitigation per the 2022 CCAP Update. Compliance with the 2022 CCAP Update ensures that the Project would not conflict with any applicable plan or strategy for controlling or reducing GHG emissions. Project impacts in this regard would be less-than-significant.

No Project Alternative: No Build

Under this Alternative, existing GHG emissions conditions would be maintained. This Alternative would realize no new development and would generate no additional GHG emissions. This Alternative would result in reduced GHG emissions impacts when compared to the Project. No GHG impact mitigation would be implemented under this Alternative.

No Project Alternative: Existing Specific Plan Land Uses

When compared to the Project, this Alternative would likely result in comparable total development within the Specific Plan Area, though the types and configuration of uses would be amended under the Project. GHG emissions under this Alternative would be comparable to the Project GHG emissions and would exceed the SCAQMD screening level threshold of 3,000 $MTCO_2e$/year. On this basis, GHG emissions under this Alternative would result in a significant and unavoidable environmental impact.

This Alternative would implement GHG emissions mitigation per the 2022 CCAP Update. Compliance with the 2022 CCAP Update ensures that this Alternative would not conflict with any applicable plan or strategy for controlling or reducing GHG emissions. Impacts of this Alternative in this regard would be less-than-significant.

Reduced Intensity Alternative

When compared to the Project, the Reduced Intensity Alternative would result in diminished GHG emissions due to the reduced scope of facilities, reductions in building/facility energy demands, and reduced trip generation. Assuming a reduction in GHG emissions comparable to the 25 percent reduction in scope under this Alternative, GHG emissions would total approximately 0.75 x of the Project GHG emissions, or 0.75 x 129,314.95 $MTCO_2e/yr.$ = 96,986.21 $MTCO_2e/yr.$

As with the Project, the GHG emissions generated by the Reduced Intensity Alternative would exceed the SCAQMD screening level threshold of 3,000 $MTCO_2e/yr.$ On this basis, GHG emissions generated by the Reduced Intensity Alternative would represent a significant and unavoidable environmental impact.

This Alternative would implement GHG emissions mitigation per the 2022 CCAP Update. Compliance with the 2022 CCAP Update ensures that this Alternative would not conflict with any applicable plan or strategy for controlling or reducing GHG emissions. Impacts of this Alternative in this regard would be less-than-significant.

5.2.4.5 Energy - Comparative Impacts

Project construction and operations would consume energy. Energy would be provided to the Project by existing sources. The Project would not require new sources of energy or construction of new energy producing facilities. The Project would comply with applicable energy conservation and energy efficiency regulations and policies and would achieve energy conservation and energy efficiencies surpassing regulatory requirements. Project energy consumption would be typical for the uses and scope of development proposed. The Project does not propose or require facilities or operations that would result in wasteful, inefficient or unnecessary consumption. On this basis, the Project would not result in or cause potentially significant environmental impacts due to wasteful, inefficient, or unnecessary consumption of energy resources. Neither would the Project conflict with or obstruct a state or local plan for renewable energy or energy efficiency. Potential energy impacts of the Project would therefore be less-than-significant. See also: EIR Section 4.5, *Energy.*

No Project Alternative: No Build

Under this Alternative, existing energy conditions would be maintained. This Alternative would realize no new development and would not result in increased energy demands. This Alternative would result in reduced energy impacts when compared to the Project. As with the Project, energy impacts would be less-than-significant.

No Project Alternative: Existing Specific Plan Land Uses

As with the Project, this Alternative would be provided energy from existing sources. It is assumed that this Alternative would comply with applicable energy conservation and energy efficiency regulations and policies; and that this Alternative would not implement facilities or operations that would result in wasteful, inefficient or unnecessary consumption. When compared to the Project, energy consumption would likely be comparable under this Alternative. As with the Project, energy impacts would be less-than-significant.

Reduced Intensity Alternative

The reduction in development scope under the Reduced Intensity Project Alternative would tend to reduce total energy demands and total energy consumption. As with the Project, the Reduced Intensity Alternative uses would be required to implement energy-efficient facilities, and to otherwise demonstrate effective energy use. Under the Reduced Intensity Alternative, proposed development would also be required to substantiate compliance with state or local plan for renewable energy or energy efficiency. Impacts would be similar to the Project.

5.2.4.6 Noise/Vibration - Comparative Impacts

Project construction-source noise/vibration levels received at area land uses would be less-than-significant. Measures recommended in the EIR would further reduce these already less-than-significant impacts.

Project operational-source noise/vibration levels received at area land uses would be less-than-significant. Measures recommended in the EIR would further reduce these already less-than-significant impacts.

Certain of the Project residential uses could be exposed to potentially significant vehicular-source noise levels. Mitigation included in the EIR would reduce this impact to levels that would be less-than-significant.

The Project would not expose people residing or working in the Project area to excessive aircraft or airport-source noise levels.

No Project Alternative: No Build

Under this Alternative, existing noise/vibration conditions would be maintained. This Alternative would realize no new development and would generate no additional noise or vibration. This Alternative would result in reduced noise and vibration levels when compared to the Project. No noise or vibration impact mitigation would be required or would be implemented under this Alternative.

No Project Alternative: Existing Specific Plan Land Uses

Under this Alternative, areas affected by construction activities and the types and operations of construction equipment employed would be substantially the same as would occur under the Project. Maximum received construction-source noise/vibration levels would be unchanged and would be less-than-significant.

This Alternative would not generate or result in operational area-source noise/vibration substantially different than would result from uses proposed by the Project. Under this Alternative and the Project, operational area-source noise/vibration impacts would be comparable and would be less-than-significant.

As with the Project, certain of the residential uses under this Alternative could be exposed to potentially significant vehicular-source noise levels. Mitigation would be included to reduce this impact to levels that would be less-than-significant.

As with the Project, this Alternative would not expose people residing or working in the area to excessive aircraft or airport-source noise levels.

Reduced Intensity Alternative

Under the Reduced Intensity Alternative, the types of construction activities and equipment employed would likely be similar to those associated with construction of the Project. Maximum received construction-source noise/vibration levels would be unchanged. As with the Project, construction-source noise/vibration levels received at area land uses would be less-than-significant.

The Reduced Intensity Alternative would not generate or result in operational area-source noise/vibration substantially different than would result from the Project. Under the Reduced Intensity Alternative and the Project, operational area-source noise/vibration impacts would be less-than-significant.

As with the Project, certain of the residential uses under this Alternative could be exposed to potentially significant vehicular-source noise levels. Mitigation would be included to reduce this impact to levels that would be less-than-significant.

As with the Project, this Alternative would not expose people residing or working in the area to excessive aircraft or airport-source noise levels.

5.2.4.7 Hazards/Hazardous Materials - Comparative Impacts

The Project would not implement uses or programs that would exacerbate any existing adverse hazards/hazardous materials conditions. Under the Project, existing hazards or potentially hazardous conditions affecting the subject site would be remediated and related impacts reduced to levels that would be less-than-significant. See also: EIR Section 4.7, *Hazards/Hazardous Materials.*

No Project Alternative: No Build

Under this Alternative, existing hazards/hazardous materials conditions would be maintained. This Alternative would realize no new development and would generate no additional hazards/hazardous materials impacts. Existing adverse hazards/hazardous conditions affecting the subject site and surrounding areas would persist. This Alternative may therefore result in increased hazards/hazardous conditions impacts

when compared to the Project. That is, under the Project, adverse hazards/hazardous conditions affecting the site would be comprehensively remediated as part of the Project development—such remediation would not occur under this Alternative. No hazards/hazardous materials impact mitigation would be implemented under this Alternative.

No Project Alternative: Existing Specific Plan Land Uses

As with the Project, existing hazards or potentially hazardous conditions affecting the subject site would be remediated and related impacts reduced to levels that would be less-than-significant. This Alternative use would not result in hazards and hazardous materials impacts different than those resulting from the Project. This Alternative would not implement uses or programs that would exacerbate any existing adverse hazards/hazardous materials conditions. As with the Project, potential hazards/hazardous materials impacts would be less-than-significant.

Reduced Intensity Alternative

As with the Project, existing hazards or potentially hazardous conditions affecting the subject site would be remediated and related impacts reduced to levels that would be less-than-significant. The Reduced Intensity Alternative land uses would be similar to the Project and would not result in hazards and hazardous materials impacts different than those resulting from the Project. The Reduced Intensity Alternative would not implement uses or programs that would exacerbate any existing adverse hazards/hazardous materials conditions. Potential hazards/hazardous materials impacts of the Reduced Intensity Alternative and the Project would be comparable and would be less-than-significant.

5.2.4.8 Hydrology and Water Quality - Comparative Impacts

The Project would implement all necessary on-site storm drain infrastructure improvements. The Project would implement mitigation measures to ensure that capacities of receiving MPoD storm drains would not be exceeded. The Project would implement a construction Storm Water Pollution Prevention Plan (SWPPP) and operational Water Quality Management Plan (WQMP) reducing potential water quality

impacts to levels that would be less-than-significant. On this basis, Project hydrology and water quality impacts would be less-than-significant as mitigated. See also: EIR Section 4.8, *Hydrology and Water Quality*.

No Project Alternative: No Build

Under this Alternative, existing hydrology/water quality conditions would be maintained. This Alternative would realize no new development and would generate no additional hydrology and water quality impacts. Existing adverse hydrology/water quality conditions affecting the subject site (e.g., lack of storm sewers, lack of storm water quality treatment systems, degraded water quality due to dairy farming operations) would persist. This Alternative may therefore result in increased hydrology and water quality impacts when compared to the Project. That is, under the Project, adverse hydrology and water quality conditions affecting the site and surrounding areas would be comprehensively addressed through implementation of the Project stormwater management systems. These stormwater management system improvements would not be implemented under this Alternative. No hydrology/water quality impact mitigation would be implemented under this Alternative.

No Project Alternative: Existing Specific Plan Land Uses

This Alternative would implement all necessary storm drain infrastructure improvements. The area subject to development with impervious surfaces under this Alternative and the Project would be comparable. This Alternative and Project would therefore result in comparable rates and quantities of post-development storm water runoff. This Alternative would be required to implement on-site storm water management systems, reducing impacts to storm drain capacities to levels that would be less-than-significant. This Alternative would be required to comply with applicable SWPPP and WQMP provisions, thereby reducing potential water quality impacts to levels that would be less-than-significant. Stormwater management systems implemented under this Alternative would act to improve existing hydrology and water quality conditions. Potential hydrology and water quality impacts of this Alternative and the Project would be comparable and would be less-than-significant as mitigated.

Reduced Intensity Alternative

The Reduced Intensity Alternative would implement all necessary storm drain infrastructure improvements. When compared to the Project, the area subject to development with impervious surfaces under the Reduced Intensity Alternative may be reduced. The Reduced Intensity Alternative may therefore result in reduced rates and quantities of post-development storm water runoff. The Reduced Intensity Alternative would be required to implement on-site storm water management systems, reducing impacts to storm drain capacities to levels that would be less-than-significant. The Reduced Intensity Alternative would be required to comply with applicable SWPPP and WQMP provisions, thereby reducing potential water quality impacts to levels that would be less-than-significant. Stormwater management systems implemented under the Reduced Intensity Alternative would act to improve existing hydrology and water quality conditions. Hydrology and water quality impacts of the Reduced Intensity Alternative and the Project would be comparable and would be less-than-significant as mitigated.

5.2.4.9 Geology and Soils - Comparative Impacts

The Project does not propose or require facilities or operations that would result in adverse geology/soils conditions, or exacerbate any existing adverse geology/soils conditions. Compliance with the California Building Code (CBC), the City of Ontario Building Code, measures and recommendations identified in the Project Geotechnical Studies, and Project mitigation would reduce potential geology and soils impacts of the Project to levels that would be less-than-significant. See also: EIR Section 4.9, *Geology and Soils*.

No Project Alternative: No Build

Under this Alternative, existing geology and soils conditions would be maintained. This Alternative would realize no new development and would result in no new or additional geology and soils impacts. This Alternative would result in reduced geology and soils impacts when compared to the Project. As with the Project, geology and soils impacts would be less-than-significant.

No Project Alternative: Existing Specific Plan Land Uses

It is assumed that this Alternative would not propose or require facilities or operations that would result in adverse geology/soils conditions, or exacerbate any existing adverse geology/soils conditions. As with the Project, this Alternative would be subject to requirements of the CBC, City of Ontario Building Code, site- and development-specific geotechnical studies, and any necessary mitigation measures. Geology and soils impacts under this Alternative would be similar to the Project and would be less-than-significant.

Reduced Intensity Alternative

The Reduced Intensity Alternative would implement the Project uses at a reduced scale within the same site developed under the Project. It is assumed that the Reduced Intensity Alternative would not propose or require facilities or operations that would result in adverse geology/soils conditions, or exacerbate any existing adverse geology/soils conditions. As with the Project, the Reduced Intensity Alternative would be subject to requirements of the CBC, City of Ontario Building Code, site- and development-specific geotechnical studies, and any necessary mitigation measures. Geology and soils impacts under this Alternative would be similar to the Project and would be less-than-significant.

5.2.4.10 Biological Resources - Comparative Impacts

As discussed at EIR Section 4.10, *Biological Resources*, the subject site in total is considered to be of limited biologic value in that it exhibits extensive disturbance due to current and former dairy farming, agricultural uses and existing urban development. These uses have substantially degraded the site in terms of its function as potential habitat. The Project site does not contain protected habitat, and does not function as valuable or unique habitat for any vegetation wildlife. It is further noted that development of the Project site is anticipated under the TOP 2050, and the Project site would not be preserved for biologic purposes in any case. Mitigation is included in the Project that reduces potential impacts to biological resources to levels that would be less-than-significant.

No Project Alternative: No Build

Under this Alternative, existing biological resources conditions would be maintained. This Alternative would realize no new development and would have no incremental effects on biological resources. This Alternative would result in reduced biological

resources impacts when compared to the Project. Biological resources impacts under this Alternative would be less-than-significant.

No Project Alternative: Existing Specific Plan Land Uses

Development realized under this Alternative would result in disturbance of the subject site similar to that occurring under the Project. Potential impacts to biological resources would also likely be similar to those of the Project. As with the Project, potential biological resources impacts would be less-than-significant as mitigated.

Reduced Intensity Alternative

The reduction in overall site development realized under the Reduced Intensity Alternative could result in a portion of the site remaining, for the time being, in an undeveloped condition. Realistically, however, potential impacts to biological resources would likely be similar to those of the Project, given the extent of construction activities and subsequent occupancies that would result from the site's development. Biological resources impacts under this Alternative would be similar to the Project and would be less-than-significant as mitigated.

5.2.4.11 Cultural Resources/Tribal Cultural Resources - Comparative Impacts

The Project incorporates mitigation that reduces potential impacts to cultural resources/tribal cultural resources to levels that would be less-than-significant. Tribal consultation is in process as required under *AB 52, Gatto. Native Americans: California Environmental Quality Act*. See also Section 4.11, *Cultural Resources/Tribal Cultural Resources*.

No Project Alternative: No Build

Under this Alternative, existing cultural resources/tribal cultural resources conditions would be maintained. This Alternative would realize no new development and would result in no new or additional cultural resources/tribal cultural resources impacts. This Alternative would result in reduced cultural resources/tribal cultural resources impacts when compared to the Project. No cultural resources/tribal cultural resources impact mitigation would be implemented under this Alternative.

No Project Alternative: Existing Specific Plan Land Uses

*S*ite disturbance and potential impacts to cultural resources would be similar to those of the Project. This Alternative would incorporate mitigation that would reduce potential impacts to cultural resources/tribal cultural resources to levels that would be less-than-significant. Cultural resources/tribal cultural resources impacts of this Alternative and the Project would be comparable and would be less-than-significant as mitigated.

Reduced Intensity Alternative

Site disturbance and potential impacts to cultural resources would be similar to those of the Project. This Alternative would incorporate mitigation that would reduce potential impacts to cultural resources/tribal cultural resources to levels that would be less-than-significant. Cultural resources/tribal cultural resources impacts of this Alternative and the Project would be comparable and would be less-than-significant as mitigated.

5.2.4.12 Utilities & Service Systems - Comparative Impacts

The Project would implement all necessary on-site and off-site utilities and service infrastructure system improvements. Project utilities and service systems impacts would be less-than-significant. See also: EIR Section 4.12, *Utilities & Service Systems.*

No Project Alternative: No Build

Under this Alternative, existing utilities and service systems conditions would be maintained. This Alternative would realize no new development and would result in no new or additional utilities and service systems impacts. This Alternative would result in reduced utilities and service systems impacts when compared to the Project. No utilities and service systems impact mitigation would be implemented under this Alternative.

No Project Alternative: Existing Specific Plan Land Uses

This Alternative would result in development intensities comparable to the Project. It is assumed that this Alternative would implement all necessary on-site and off-site utilities and service infrastructure system improvements. Utilities and service system impacts of this Alternative and the Project would be comparable and would be less-than-significant.

Reduced Intensity Alternative

The Reduced Intensity Alternative would result in development of similar land uses but at a lower intensity than the Project. It is assumed that the Reduced Intensity Alternative would implement all necessary on-site and off-site utilities and service infrastructure system improvements. Utilities and service systems impacts of this Alternative and the Project would be comparable and would be less-than-significant.

5.2.4.13 Comparative Attainment of Project Objectives

Comparative Attainment of Project Objectives is summarized for each of the Alternatives considered here. For ease of reference, the Project Objectives are reiterated below.

Project Objectives

The primary goal of the Project is the development of the subject site with a productive mix of Specific Plan residential, commercial, light industrial and community facilities. Complementary Project Objectives include the following:

General

- Implement TOP 2050 Policy Plan Land Use Plan.
- Support TOP 2050 vision for urbanization of the Ontario Ranch area of the City.
- Implement a Specific Plan development supporting office/commercial and light industrial uses providing a broad range of long-term employment opportunities.
- Implement Specific Plan developments providing a broad range of additional construction employment opportunities.
- Establish new development that would further the City's near-term and long-range fiscal goals.
- Improve the regional jobs/housing balance.

Specific Plan Uses

Livable Neighborhood Development

- Incorporate Traditional Neighborhood Design guiding principles during the design phase to provide for opportunities to achieve the Project's vision statement, including:
  - Connections. To provide a series of sidewalks and trails connecting community parks, civic uses, employment areas, mixed-use and transit stops designed to be pedestrian friendly to avoid unnecessary automobile trips.
  - Traditional Street Network. To design a hierarchy of streets connected in a grid network with a variety of routes for pedestrians and vehicles, as well as creating a visually favorable and comfortable environment for pedestrians and bicyclists.
  - Main Street Environment. To design commercial/retail areas to a human scale with storefronts oriented to the street providing a "Main Street" atmosphere for strolling and shopping, all within walking distance from most homes.
  - Public Spaces. To create plazas, parks, and community gathering places placed within centralized areas providing synergy between adjacent land uses.
  - Identifiable Neighborhoods. To design neighborhoods around a discernable center, which may include a small park, square, school, or mixed-use center, within a five-minute walking distance.
  - Mix of Housing. To provide neighborhoods with a range of household types: a variety of single-family detached homes, attached units for young families, and live/work units for small at-home businesses.
- Design a mixed-use environment to ensure compatible uses that are cohesive and integrate a diversity of residential neighborhoods, with a range of commercial uses, and supporting open spaces.
- Utilize transportation, utility, and greenways/open space networks to establish clear edges and boundaries.
- Accommodate residential, commercial, open space, public, and other uses in accordance with the generalized distribution of uses depicted within the City's TOP Land Use Plan.

- Implement elements that will ensure walkability throughout the Project Area to discourage automobile dependency and encourage walking, biking, and other forms of transportation. This is achieved through the incorporation of subarea greenways and pedestrian connections and through sensitive site design of mixed-use development.
- Implement technological advances within residential communities, including internet access, to allow residents to shop and work from home and to decrease reliance on automobiles.
- Provide opportunity for at least one major public plaza/square as a centerpiece of community activities, including events and celebrations, outdoor performances, community meetings, picnics, farmers markets, and similar functions.
- Establish a clearly defined "edge" for the City's TOP area, where appropriate, that avoids the use of walls and creation of a "walled" enclave.
- Incorporate electrical transmission corridors and similar elements to form "edges" for residential neighborhoods and centers and/or accommodate public greenways/trails/corridors.

Residential District Objectives

- Create a livable community with neighborhoods designed at a human scale and oriented for pedestrian access to mixed-use, educational, and recreational uses.
- Provide for a range and diversity of housing products (detached single-family, detached and attached condominiums, and townhomes) that respond to a variety of homeownership needs and desires.
- Design residential projects to complement the character of adjacent neighborhoods.
- Encourage interaction among residents through the provision of an organized, simple, and "neo-traditional" system of streets, pathways, and entries to allow residents to walk or bike to parks, recreation, and public facilities (including schools).
- Promote outdoor activity and casual social contact among residents and neighbors by designing neighborhoods around a central park where they can gather.

- Provide a focal point of activity within each residential planning area that may include a park, school, common area, or public meeting facility.
- Encourage architectural styles and traditional design elements that reflect the historic and eclectic mixture of architecture, reflective of the greater Ontario area.
- Increase densities adjacent to commercial centers.
- Establish clear, defined "edges" and "entries" that contribute to neighborhood identity.
- Avoid the use of walls to separate residential areas from arterials and other high traffic volume streets by expanded landscape setbacks, frontage roads, and other appropriate techniques.
- Include clustered multi-family housing within the Residential District, in order to create a diverse range of housing products and opportunities, while still in keeping with the overall low-density residential designation.
- Locate higher-density residential uses that provide population to support adjacent regional commercial centers.
- Provide sufficient on-site recreational amenities within higher density developments.
- Include community-oriented uses such as public meeting rooms, plazas and courtyards, and similar uses.
- Establish visual and physical links among the individual multi-family developments to create a cohesive and continuous corridor.
- Design building elevations to promote visual interest.
- Provide linkages between community service facilities, multi-family corridors, and residential neighborhoods.

Regional Commercial/Mixed-Use District Objectives

- Accommodate a diversity of large-scale retail, community and neighborhood shopping, office, medical research, entertainment, hotel/motel, dining, housing, cultural, public, and similar uses that will serve the Project area and neighboring Planning Areas.
- Function with a high level of activity and/or employment.

- Accommodate development of multi-family housing, mixed-use buildings that incorporate housing and retail/office, and live/work facilities.
- Accommodate single-use buildings and mixed-use structures containing a variety of uses from residential over retail or office-to-office over retail.
- Encourage traditional, mixed-use design of commercial buildings, by requiring a lower maximum floor area ration (FAR) for single-use buildings, and a higher maximum FAR for mixed-use buildings.
- Develop plaza areas and other amenities to provide places of social interaction.
- Include one or more public "squares" to serve as gathering places.
- Incorporate modulated building volumes, mass, height, and articulated facades to create individual spaces.
- Site a portion of the buildings on peripheral streets to provide connectivity to adjacent uses.
- Orient buildings towards the local streets whenever possible to create an urban edge and sense of arrival and place.
- Include sidewalks of sufficient width to accommodate pedestrian activity and outdoor restaurants, newsstands, and other uses.
- Create visual interest through the opening of streets and sidewalks/plazas towards building elevations.
- Incorporate landscaping to enhance the environment.
- Visually integrate parking structures to continue the intended design character of the district.
- Incorporate multi-family housing to create a cohesive and continuous corridor.
- Ensure an appropriate mix of uses (residential and commercial) that are compatible.
- Encourage pedestrian access and ease of use within the mixed-use area by designing pedestrian and bike paths.
- Create a "Main Street" environment with buildings designed to a human scale where pedestrian activity is not overwhelmed by automobile traffic.
- Utilize urban design to create a "Gateway" or portal to the Ontario Ranch.

Industrial District Objectives

- Incorporate transitions and/or buffers between commercial/mixed-use and industrial areas and adjacent residential areas.
- Contribute to the regional jobs to housing balance by providing employment opportunities while minimizing development impacts on surrounding neighborhoods.
- Create a high-quality industrial park development that attracts an array of businesses and provides employment opportunities within proximity to area residents.
- Provide safe and efficient access/circulation routes for the distribution/transportation of goods.

Circulation Objectives

- Provide a circulation system designed to promote pedestrian activity through a network of off-street pedestrian walkways linking each neighborhood to parks, mixed-use commercial, and residential uses.
- Design a hierarchy of streets connected in a grid network with a variety of routes for pedestrians and vehicles, creating a visually attractive, enhanced, and comfortable environment for pedestrians and bicyclists.
- Design streets to incorporate landscaped parkways and pedestrian walkways separated from the street to enhance safety and enjoyment of residents and visitors.
- Provide opportunities for transit connections and alternative modes of transportation.

Recreation/Trails Objectives

- Provide new recreational opportunities for residents through the development of a series of public and private parks.
- Provide a series of pedestrian trails connecting community parks, civic uses, mixed-use, and transit stops designed to be pedestrian friendly to avoid unnecessary automobile trips.
- Incorporate off-street multi-use trails within the Southern California Edison easements.

- Incorporate a system of on- and off-street bicycle pathways with access from the residences to mixed-use areas.
- Use landscaping and streetscape materials that are low maintenance in recreation and trail areas.
- Provide a system of on-street bikeways integrated throughout the Project to provide access to schools, parks, and commercial uses.
- Provide new recreational opportunities for residents through the development of a series of parks ranging in size.

Community Facilities Objectives

- Incorporate existing major utilities into the overall fabric of the community.
- Provide opportunities for incorporation of community facilities (e.g., schools, fire station) as identified by affected agencies.

No Project Alternative: No Build

This Alternative would realize none of the stated Project Objectives.

No Project Alternative: Existing Specific Plan Land Uses

This Alternative would likely realize the stated Project Objectives regarding design and implementation of Specific Plan Land Uses. To these ends, this Alternative would provide a mix of residential, commercial-office, light industrial and community facilities uses similar to the Project. However, uses would be configured and oriented in a manner differing from the Project.

This Alternative would however fail to achieve or would impede attainment the following Project Objectives:

- **Implement TOP 2050 Policy Plan Land Use Plan;** Support **TOP 2050 vision for urbanization of the Ontario Ranch area of the City**. This Alternative proposes land uses that are inconsistent with TOP 2050 Policy Plan Land Use Plan, and would require amendment of TOP Policy Plan Land Use Plan. This alternative

would therefore conflict with, rather than support, implementation of TOP 2050 Policy Plan.

Reduced Intensity Alternative

The Reduced Intensity Alternative would implement the proposed 2022 Specific Plan Amendment Land Uses and development concepts at an approximately 25 percent reduction in overall development intensity. Due to its comparative reduction in scope, the Reduced Intensity Alternative would likely impede or substantially restrict attainment of the following Project Objectives.

- **Implement a Specific Plan development supporting office/commercial and light industrial uses providing a broad range of employment opportunities.** *The comparative 25 percent reduction in development intensity under the Reduced Intensity Alternative would diminish the number and diversity of potential employment opportunities otherwise provided by the Project. The noted reduction in scope would also restrict potential synergy between uses at this location and other vicinity uses.*

- **Implement Specific Plan developments providing a broad range of additional construction employment opportunities.** *The comparative 25 percent reduction in development intensity under the Reduced Intensity Alternative would diminish the number and diversity of potential construction employment opportunities otherwise provided by the Project. The noted reduction in scope would also restrict potential synergy between uses at this location and other vicinity uses.*

- **Support TOP 2050 vision for urbanization of the Ontario Ranch area of the City.** *The comparative 25 percent reduction in development intensity under the Reduced Intensity Alternative would limit development potential of prime urban properties within the City. In this respect, the subject site is designated and anticipated for development types and intensities such as are proposed by the Project; is bounded by similar compatible urban development; and is served by all necessary services and utilities. The Reduced Intensity Alternative would fail to take advantage of these site attributes. Further, this Alternative*

would conflict with or impede TOP Policy Plan vision for urbanization of the Ontario Ranch area of the City. Potential contrary effects would include:

- *A reduction in residential, commercial-office, light industrial, and community facilities development opportunities otherwise available under the Project.*
- *A reduction in the range and variety of residential, commercial-office, light industrial developers and tenants that would be attracted to the City.*
- *Diminished potential for development of the site with uses and at an intensity the City considers to be the highest and best use for the subject property.*
- *Diminished fiscal benefits available to the City of Ontario.*
- *Diminished job creation. Related diminished potential for improvement of the regional jobs/housing balance condition.*
- *Diminished residential opportunities. This Alternative would reduce residential products types and the total quantity of available housing within the City. To these ends, this Alternative would conflict with residential goals, strategies, and opportunities outlines in TOP 2020 Housing Element. By reducing the potential for residential development there is also the potential for this Alternative to conflict with SB 330, Skinner. Housing Crisis Act of 2019.*[3]

5.2.5 Comparison of Alternatives

Table 5.2-4 summarizes, by topic, comparative impacts of the Project and the considered Alternatives.

[3] SB 330, until January 1, 2025, with respect to land where housing is an allowable use would prohibit a county or city, from enacting a development policy, standard, or condition, as defined, that would have the effect of (A) changing the land use designation or zoning of a parcel or parcels of property to a less intensive use or reducing the intensity of land use within an existing zoning district below what was allowed under the general plan or specific plan land use designation and zoning ordinances of the county or city as in effect on January 1, 2018.

Table 5.2-4
Summary of Potential Impacts, Alternatives Compared to Project, By Topic

EIR Topic: Project Impacts	No Project Alternative: No Build	No Project Alternative: Existing Specific Plan Land Uses	Reduced Intensity Alternative
Land Use and Planning			
Impacts would be less-than-significant.	Existing land use/planning conditions would be maintained. No discretionary actions, permits, or consultations would be required. Impacts in these regards would be reduced when compared to the Project impacts.	The scope of requested discretionary actions would be increased in that a Policy Plan Land Use Amendment would be required. Impacts would likely be greater than the Project.	Impacts would be similar to the Project impacts.
Transportation			
VMT impacts would be less-than-significant. Other transportation impacts would be less-than-significant.	This Alternative would maintain existing VMT conditions. This Alternative would result in decreased total VMT when compared to the Project impacts. Because the intensity and scope of uses is diminished under this Alternative, the Service Population would also be decreased. On this basis, this Alternative may not substantially alter the VMT/SP ratio otherwise resulting from the Project. Other transportation impacts would be less-than-significant.	Total VMT and VMT/SP impacts would likely be comparable to those of the Project. Other transportation impacts would be similar to those resulting from the Project.	Total VMT would be diminished. VMT/SP impacts would likely be comparable to those of the Project. Other transportation impacts would be similar to those resulting from the Project.
Air Quality			
Project construction-source NOx and CO emissions would exceed applicable SCAQMD regional thresholds and per AQMD criteria would be significant. Per SCAQMD criteria, development-level impacts that are significant are also cumulatively considerable. Project construction-source NO_x emissions threshold exceedances would result in a cumulatively considerable net increase in criteria pollutants (ozone) for which the region is non-attainment. These are cumulatively significant and unavoidable air quality impacts. Project operational-source VOC, NO_x, CO, CO, PM_{10}, and $PM_{2.5}$ emissions would	Existing air quality conditions would be maintained. This Alternative would realize no new development and would generate no additional air pollutant emissions. This Alternative would result in reduced air quality impacts when compared to the Project impacts.	Construction-source NOx and CO emissions under this Alternative would exceed applicable SCAQMD regional thresholds and per AQMD criteria would be significant. Per SCAQMD criteria, project-level impacts that are significant are also cumulatively considerable. Construction-source NO_x emissions threshold exceedances under this Alternative would result in a cumulatively considerable net increase in criteria pollutants (ozone) for which the region is non-attainment. This is a cumulatively significant and unavoidable air quality impact. Operational-source emissions under this Alternative would be comparable to the Project impacts. Operational-source exceedances of	Construction-source NOx and CO emissions under this Alternative would exceed applicable SCAQMD regional thresholds and per AQMD criteria would be significant. Per SCAQMD criteria, project-level impacts that are significant are also cumulatively considerable. Construction-source NO_x emissions threshold exceedances under this Alternative would result in a cumulatively considerable net increase in criteria pollutants (ozone) for which the region is non-attainment. This is a cumulatively significant and unavoidable air quality impact. Under this Alternative, operational-source VOC, NO_x, CO, and PM_{10} emissions contributions to Basin non-attainment conditions would decrease

Table 5.2-4
Summary of Potential Impacts, Alternatives Compared to Project, By Topic

EIR Topic: Project Impacts	No Project Alternative: No Build	No Project Alternative: Existing Specific Plan Land Uses	Reduced Intensity Alternative
exceed applicable SCAQMD regional thresholds and per AQMD criteria would be significant. Per SCAQMD criteria, Project-level impacts that are significant are also cumulatively considerable. Project operational-source VOC, NO_x, PM_{10}, and $PM_{2.5}$ emissions threshold exceedances would result in a cumulatively considerable net increase in criteria pollutants (ozone and $PM_{10}/PM_{2.5}$) for which the Project region is non-attainment. These are cumulatively significant and unavoidable air quality impacts. Construction-source and operational-source emissions threshold exceedances under the Project would impede air quality attainment strategies and goals outlined in the AQMP. On this basis, the Project would be inconsistent with the AQMP. This is a significant and unavoidable impact. Per SCAQMD criteria, Project-level impacts that are significant are also cumulatively considerable. Other air quality impacts would be less than-significant.		VOC, NO_x, CO, PM_{10}, and $PM_{2.5}$ emissions contributions to Basin non-attainment conditions would be comparable to the Project impacts. AQMP inconsistency impacts occurring under the Project would also result under this Alternative. Other air quality impacts would be similar to those resulting from the Project.	in severity and magnitude, but would remain cumulatively significant and unavoidable. Operational-source $PM_{2.5}$ emissions would be reduced below significance thresholds. AQMP inconsistency impacts occurring under the Project would also result under this Alternative. Other air quality impacts would be similar to those resulting from the Project.
Greenhouse Gas Emissions			
The Project's potential to contribute considerably (either individually or cumulatively) to global climate change impacts through GHG emissions is considered significant and unavoidable. The Project would implement GHG emissions mitigation per the 2022 CCAP Update. Compliance with the 2022 CCAP Update ensures that this Alternative would	Existing GHG emissions conditions would be maintained. This Alternative would realize no new development and would generate no additional GHG emissions. This Alternative would result in reduced GHG emissions impacts when compared to the Project impacts.	GHG emissions impacts under this Alternative would be comparable to the Project impacts. This Alternative would implement GHG emissions mitigation per the 2022 CCAP Update. Compliance with the 2022 CCAP Update ensures that this Alternative would not conflict with any applicable plan or strategy for controlling or reducing GHG emissions. Impacts	Total GHG emissions would be reduced when compared to the Project. However, the potential to contribute considerably (either individually or cumulatively) to global climate change impacts through GHG emissions would be significant and unavoidable. This Alternative would implement GHG emissions mitigation per the 2022 CCAP Update. Compliance with the 2022 CCAP Update

Table 5.2-4
Summary of Potential Impacts, Alternatives Compared to Project, By Topic

not conflict with any applicable plan or strategy for controlling or reducing GHG emissions. Impacts of this Alternative in this regard would be less-than-significant.		of this Alternative in this regard would be less-than-significant.	ensures that this Alternative would not conflict with any applicable plan or strategy for controlling or reducing GHG emissions. Impacts of this Alternative in this regard would be less-than-significant.
Energy			
Energy impacts would be less-than-significant.	Existing energy conditions would be maintained. This Alternative would realize no new development and would not result in increased energy demands. This Alternative would result in reduced energy impacts when compared to the Project impacts.	Energy impacts would be similar to the Project impacts.	Based on the reduction in development intensity, total energy demands and energy consumption impacts would likely be reduced when compared to the Project impacts.
Noise/Vibration			
Construction-source noise/vibration impacts would be less-than-significant. Operational-source noise/vibration impacts would be less-than-significant. Vehicular-source impacts that could affect certain of the Project residential uses would be less-than-significant as mitigated.	Existing noise/vibration conditions would be maintained. This Alternative would realize no new development and would generate no additional noise/vibration. This Alternative would result in reduced noise/vibration impacts when compared to the Project impacts. No noise/vibration impact mitigation would be implemented under this Alternative.	Construction-source noise/vibration impacts would be similar to the Project impacts. Operational-source noise/vibration impacts would be similar to the Project impacts. Vehicular-source noise/vibration impacts would be similar to the Project impacts.	Construction-source noise/vibration impacts resulting from construction of off-site master plan infrastructure improvements would be similar to the Project impacts. Operational-source noise/vibration impacts would be similar to the Project impacts. Vehicular-source noise/vibration impacts would be similar to the Project impacts.
Hazards/Hazardous Materials			
Hazards/hazardous materials impacts would be less-than-significant as mitigated.	Existing hazards/hazardous materials conditions would be maintained. This Alternative would realize no new development and would generate no additional hazards/hazardous materials impacts. Potential existing adverse hazards/hazardous conditions affecting the subject site would persist.	Hazards/hazardous materials impacts would be similar to the Project impacts.	Hazards/hazardous materials impacts would be similar to the Project impacts.
Hydrology/Water Quality			
Hydrology/water quality impacts would be less-than-significant as mitigated.	Existing hydrology/water quality conditions would be maintained This Alternative would realize no new development and would	Hydrology/water quality impacts would be similar to the Project impacts.	Hydrology/water quality impacts would be similar to the Project impacts.

Table 5.2-4
Summary of Potential Impacts, Alternatives Compared to Project, By Topic

EIR Topic: Project Impacts	No Project Alternative: No Build	No Project Alternative: Existing Specific Plan Land Uses	Reduced Intensity Alternative
	generate no additional hydrology and water quality impacts.		
Geology and Soils			
Geology and soils impacts would be less-than-significant as mitigated.	Existing geology and soils conditions would be maintained. This Alternative would realize no new development and would result in no new or additional geology and soils impacts. This Alternative would result in reduced geology and soils impacts when compared to the Project impacts.	Geology and soils impacts would be similar to the Project impacts.	Geology and soils impacts would be similar to the Project impacts.
Biological Resources			
Biological resources impacts would be less-than-significant as mitigated.	Existing biological resources conditions would be maintained. This Alternative would realize no new development and would have no incremental effects on biological resources. This Alternative would result in reduced biological resources impacts when compared to the Project impacts.	Biological resources impacts would be similar to the Project impacts.	Biological resources impacts would be similar to the Project impacts.
Cultural Resources/Tribal Cultural Resources			
Cultural resources/tribal cultural resources impacts would be less-than-significant as mitigated.	Existing cultural resources/tribal cultural resources conditions would be maintained. This Alternative would realize no new development and would result in no new or additional cultural resources/tribal cultural resources impacts. This Alternative would result in reduced cultural resources/tribal cultural resources impacts when compared to the Project impacts.	Cultural resources/tribal cultural resources impacts would be similar to the Project impacts.	Cultural resources/tribal cultural resources impacts would be similar to the Project impacts.
Utilities & Service Systems			
Impacts associated with Project infrastructure improvements would be less-than-significant. *Note:* Mitigation for potential impacts to area storm drain systems are addressed above under the topic: *Hydrology and Water Quality*.	Existing utilities and service systems conditions would be maintained. This Alternative would realize no new development and would result in no new or additional utilities and service systems impacts. This Alternative would result in reduced utilities and service systems impacts when compared to the Project impacts.	Utilities and service systems impacts would be similar to the Project impacts.	Utilities and service systems impacts would be similar to the Project impacts.

Table 5.2-4
Summary of Potential Impacts, Alternatives Compared to Project, By Topic

EIR Topic: Project Impacts	No Project Alternative: No Build	No Project Alternative: Existing Specific Plan Land Uses	Reduced Intensity Alternative
Relative Attainment of Project Objectives			
All Project Objectives would be attained.	Existing site conditions would be maintained. None of the Project land uses or development concepts would be implemented. None of the Project Objectives would be realized.	This Alternative would not support implementation of TOP 2050 Policy Plan Land Use Plan, and would require amendment of the Land Use Plan. This Alternative would not support development of the Ontario Ranch area of the City as envisioned under TOP 2050. Other project objectives would likely be achieved,	Due to the reduction in scope under this Alternative, the Reduced Intensity Alternative would impede or substantially restrict attainment of the following Project Objectives: • **Implement a Specific Plan development providing a broad range of employment opportunities.** *The comparative 25 percent reduction in development intensity under the Reduced Intensity Alternative would diminish the number and diversity of potential employment opportunities otherwise provided by the Project. The noted reduction in scope and would also restrict potential synergy between uses at this location and other vicinity uses.* • **Implement Specific Plan developments providing a broad range of additional construction employment opportunities.** *The comparative 25 percent reduction in development intensity under the Reduced Intensity Alternative would diminish the number and diversity of potential construction employment opportunities otherwise provided by the Project. The noted reduction in scope and would also restrict potential synergy between uses at this location and other vicinity uses.* • **Support TOP 2050 vision for urbanization of the Ontario Ranch area of the City.** *The comparative 25 percent reduction in development intensity under the Reduced Intensity Alternative would limit development potential of prime urban properties within the City. In this respect, the subject site is designated and anticipated for development types and intensities such as are proposed by the Project; is bounded by similar compatible urban development; and is served by all necessary*

Table 5.2-4
Summary of Potential Impacts, Alternatives Compared to Project, By Topic

EIR Topic: Project Impacts	No Project Alternative: No Build	No Project Alternative: Existing Specific Plan Land Uses	Reduced Intensity Alternative
			services and utilities. The Reduced Intensity Alternative would fail to take advantage of these site attributes. Further, this Alternative would conflict with or impede TOP Policy Plan vision for urbanization of the Ontario Ranch area of the City. Potential contrary effects would include: • *A reduction in residential, commercial-office, light industrial, and community facilities development opportunities otherwise available under the Project.* • *A reduction in the range and variety of residential, commercial-office, light industrial developers and tenants that would be attracted to the City.* • *Diminished potential for development of the site with uses and at an intensity the City considers to be the highest and best use for the subject property.* • *Diminished fiscal benefits available to the City of Ontario.* • *Diminished job creation. Related diminished potential for improvement of the regional jobs/housing balance condition.* • *Diminished residential opportunities. This Alternative would reduce residential products types and the total quantity of available housing within the City. To these ends, this Alternative would conflict with residential goals, strategies, and opportunities outlines in TOP 2020 Housing Element. By reducing the potential for residential development there is also the potential for this Alternative to conflict with* SB 330, *Skinner. Housing Crisis Act of 2019.*[4]

[4] SB 330, until January 1, 2025, with respect to land where housing is an allowable use would prohibit a county or city, from enacting a development policy, standard, or condition, as defined, that would have the effect of (A) changing the land use designation or zoning of a parcel or parcels of property to a less intensive use or reducing the intensity of land use within an existing zoning district below what was allowed under the general plan or specific plan land use designation and zoning ordinances of the county or city as in effect on January 1, 2018.

5.2.6 Environmentally Superior Alternative

No Project Alternative: No Build Eliminated from Consideration

As indicated at Table 5.2-4, the No Project Alternative**:** No Build would achieve none of the Project Objectives, and under certain topics, may increase the severity of, or create additional impacts not otherwise occurring under the Project. This Alternative is therefore eliminated from consideration as the "Environmentally Superior Alternative."

No Project Alternative: Existing Specific Plan Land Uses Eliminated from Consideration

As indicated at Table 5.2-4, the No Project Alternative: Existing Specific Plan Land Uses scenario would provide no significant reduction in environmental impacts when compared to the Project, and may increase the severity of, or create additional impacts not otherwise occurring under the Project. It is specifically noted that Land Use designations under this Alternative are inconsistent with TOP 2050, and this Alternative would require amendment of TOP 2050 Land Use Plan. This Alternative is therefore eliminated from consideration as the "Environmentally Superior Alternative."

Reduced Intensity Alternative Considerations

As also indicated at Table 5.2-4, the Reduced Intensity Alternative scenario would incrementally reduce certain of the Project's environmental impacts. Significant and unavoidable environmental impacts under the Project would persist under the Reduced Intensity Alternative, though the degree of these impacts would be diminished. Relative merits of the Reduced Intensity Alternative are summarized below:

Reduced Intensity Alternative Would Reduce but Would not Eliminate Significant Impacts

The Reduced Intensity Alternative would reduce, but not eliminate the Project's significant impacts regarding air quality and GHG emissions. More specifically:

- The magnitude of operational-source air quality impacts (VOC, NO_x, CO, PM_{10}) would be diminished but would remain significant and unavoidable. $PM_{2.5}$ emissions impacts would be reduced below significance thresholds.

- Total GHG emissions would be reduced. However, GHG emissions would still exceed the SCAQMD 3,000 $MTCO_2e$ screening threshold. Impacts in this regard would remain significant and unavoidable.

Reduced Intensity Alternative Would Marginalize Attainment of Project Objectives

Based on the reduction in overall development scope, the Reduced Intensity Alternative would broadly restrict attainment of all Project Objectives. Where quantifiable (e.g., additional sales tax revenues, job creation, incremental property tax revenues), this reduction in attainment of Objectives would be approximately 25 percent less than would be otherwise realized under the Project. Qualitatively, development of the subject site under the Reduced Intensity Alternative fails to optimize use of a significant vacant property, and is not considered by the Lead Agency to represent the highest and best use of the subject site.

Summary and Conclusions

Reduced Intensity Alternative Identified as the Environmentally Superior Alternative

In conclusion, the Reduced Intensity Alternative would result in potential incremental reduction in certain significant environmental impacts otherwise occurring under the Project, but would not eliminate these impacts. The Reduced Intensity Alternative would allow for limited attainment of the Project Objectives. On this basis, the Reduced Intensity Alternative is identified as the environmentally superior alternative.

Other Considerations

Countering its potential environmental benefits, the Reduced Intensity Alternative would broadly and substantially diminish attainment of the Project Objectives, with related diminishment of socio-economic benefits to the City and region. CEQA indicates that socioeconomic effects (while not lone determinants) are important considerations for

decision-makers in evaluating and considering EIR Alternatives. With respect to socioeconomics, the Project and the Reduced Intensity Alternative would each have beneficial effects for the area. Either of these scenarios would contribute to area employment and the City's overall tax base. However, as noted previously, because the scope and variety of land uses would be reduced by approximately 25 percent under the Reduced Intensity Alternative, the resulting effective realization of the Project Objectives, to include economic benefits to the City and region, would likely be similarly diminished.

Additionally, at an approximate 25 percent reduction in the Project's development scope, the Reduced Intensity Alternative would not recognize the site's value as one of the remaining undeveloped properties within the City; or take advantage of the site's available acreage and consequently would not result in development of the subject site in a manner considered to be its highest and best use.

5.3 GROWTH-INDUCING IMPACTS OF THE PROPOSED ACTION

5.3.1 Overview

CEQA Guidelines Section 15126.2 (e) *Growth-Inducing Impact of the Proposed Project* requires that an EIR:

> "Discuss the ways in which the proposed project could foster economic or population growth, or the construction of additional housing, either directly or indirectly, in the surrounding environment. Included in this are projects which would remove obstacles to population growth (a major expansion of a recycled water plant might, for example, allow for more construction in service areas). Increases in the population may tax existing community service facilities, requiring construction of new facilities that could cause significant environmental effects. Also discuss the characteristic of some projects which may encourage and facilitate other activities that could significantly affect the environment, either individually or cumulatively. It must not be assumed that growth in any area is

necessarily beneficial, detrimental, or of little significance to the environment."

Potential growth-inducing aspects and elements of the Project are discussed below and would include:

- Housing opportunities and population growth;
- Commercial-office, light industrial development and employment growth; and
- Economic stimulus/other.

5.3.2 Housing Opportunities and Population Growth

The Project would construct new housing and could therefore facilitate City population growth. The Project Land Uses, development concepts, and housing are consistent with TOP 2050. Population growth resulting from the Project would therefore not exceed TOP 2050 Policy Plan population forecasts for the subject site and the City. Project population and any associated growth are therefore reflected in TOP Policy Plan and impacts of such growth are considered and addressed in TOP 2050 SEIR. Project population and associated growth would not result in impacts not already considered and addressed in TOP 2050 SEIR.

5.3.3 Commercial-Office, Light Industrial Development and Employment Growth

The Project would construct new commercial-office and light industrial uses and could therefore facilitate City employment growth. In general terms, employment growth furthers growth via wages, salaries, and general fiscal benefits; increased demands for housing; and increased demands for consumer goods and services. The Project Land Uses and development concepts are consistent with TOP 2050. Project employment growth would therefore not exceed TOP 2050 Policy Plan employment forecasts for the subject site and the City. Project employment and any associated growth are therefore reflected in TOP Policy Plan and impacts of such growth are considered and addressed in TOP 2050 SEIR. Project employment growth would not result in impacts not already considered and addressed in TOP 2050 SEIR.

Economic Stimulus/Other

Construction and operation of the Project would act generally as economic stimulus for the City and region. As noted above, Project job creation would provide local and regional fiscal benefits and would contribute generally to increased demands for housing, goods, and services. Salaries and wages paid to employees, taxes, and other revenue streams generated by the Project would provide incentive for creation of second tier businesses with accompanying economic stimulus, which in turn would create third tier businesses, with accompanying economic stimulus, etc.

Economic stimulus and related growth resulting from the Project would create additional demands for City services. As noted previously, growth resulting from the Project is comprehensively reflected in TOP Policy Plan, and environmental impacts of this growth, including demands on City services are considered and addressed in TOP 2050 SEIR. Growth due to Project economic stimulus factors would not result in impacts not already considered and addressed in TOP 2050 SEIR.

Moreover, the Project Economic/Fiscal Impact Analysis substantiates that the Project would be self-supporting in terms of its fiscal impacts on City services, and would not result in undue or unaddressed demands for services. Further, the Project would be required to comply with TOP 2050 Policy Plan Policy LU-4.3 *Infrastructure Timing.* Policy LU-4.3 requires that necessary infrastructure and services be in place prior to or concurrent with new development. New development that may be facilitated by availability of infrastructure constructed by the Project would therefore not result in adverse impacts to infrastructure systems themselves or to customers served by those infrastructure systems.

The Project would not otherwise encourage or facilitate known or probable activities that could significantly and adversely affect the environment, either individually or cumulatively. To the satisfaction of the City, as-yet unknown activities or developments that may derive from the Project would be independently required to evaluate and address their potential environmental impacts.

Summary

The Project could induce growth through the construction of housing, commercial-office uses, light industrial uses, job creation, and economic stimulus. The Project land uses and associated development are consistent with and anticipated under TOP 2050. Growth inducement resulting from the Project would not exceed projections developed under TOP 2050. Any Project-induced growth would not result in environmental impacts not already considered and addressed in TOP 2050 SEIR.

The Project would not otherwise encourage and facilitate known or probable activities that could significantly affect the environment, either individually or cumulatively. To the satisfaction of the City, as-yet unknown activities or developments that may derive from the Project would be independently required to evaluate and address their potential environmental impacts.

5.4 SIGNIFICANT ENVIRONMENTAL EFFECTS

An EIR must identify any significant environmental effects that would result from the Project. (Pub. Resources Code, §21100, subd. (b)(2)(B).) Significant environmental effects of the Project are summarized below.

5.4.1 Significant Air Quality Impacts

EIR Section 4.3, *Air Quality*, details the Project's potential air quality impacts. As discussed in that Section, even after compliance with applicable regulations and requirements, and application of mitigation measures, the Project would result in the following significant and unavoidable air quality impacts:

- Project construction-source NOx and CO emissions would exceed applicable SCAQMD regional thresholds and per AQMD criteria would be significant. Per SCAQMD criteria, development-level impacts that are significant are also cumulatively considerable. Project construction-source NO_x emissions threshold exceedances would result in a cumulatively considerable net increase in criteria pollutants (ozone) for which the region is non-attainment. These is a cumulatively significant and unavoidable air quality impact.

- Project construction-source NOx and CO emissions would exceed applicable SCAQMD regional thresholds and per AQMD criteria would be significant. Per SCAQMD criteria, development-level impacts that are significant are also cumulatively considerable. Project construction-source NO_x emissions threshold exceedances would result in a cumulatively considerable net increase in criteria pollutants (ozone) for which the region is non-attainment. These is a cumulatively significant and unavoidable air quality impact.

- Project operational-source VOC, NO_x, CO, CO, PM_{10}, and $PM_{2.5}$ emissions would exceed applicable SCAQMD regional thresholds and per AQMD criteria would be significant. Per SCAQMD criteria, Project-level impacts that are significant are also cumulatively considerable. Project operational-source VOC, NO_x, PM_{10}, and $PM_{2.5}$ emissions threshold exceedances would result in a cumulatively considerable net increase in criteria pollutants (ozone and $PM_{10}/PM_{2.5}$) for which the Project region is non-attainment. These are cumulatively significant and unavoidable air quality impacts.

- Construction-source and operational-source emissions threshold exceedances under the Project would impede air quality attainment strategies and goals outlined in the AQMP. On this basis, the Project would be inconsistent with the AQMP. This is a significant and unavoidable impact. Per SCAQMD criteria, Project-level impacts that are significant are also cumulatively considerable.

5.4.2 Significant GHG Emissions Impacts

EIR Section 4.4, *Greenhouse Gas Emissions*, details the Project's potential GHG emissions impacts. As discussed in that Section, even after compliance with applicable regulations and requirements, and application of mitigation measures, Project GHG emissions would exceed the SCAQMD 3,000 $MTCO_2e$/year screening threshold. On this basis, the Project's potential to contribute considerably (either individually or cumulatively) to global climate change impacts through GHG emissions is considered significant and unavoidable.

5.5 SIGNIFICANT IRREVERSIBLE ENVIRONMENTAL CHANGES

The *CEQA Guidelines* § § 15126, subd. (c), 15126.2, subd. (c), 15127, require that for certain types or categories of projects, an EIR must address significant irreversible environmental changes that would occur should the Project be implemented. As presented at *CEQA Guidelines* §15127, the topic of Significant Irreversible Environmental Changes need be addressed in EIRs prepared in connection with any of the following activities:

> (a) The adoption, amendment, or enactment of a plan, policy, or ordinance of a public agency;
>
> (b) The adoption by a local agency formation commission of a resolution making determinations; or
>
> (c) A project which will be subject to the requirements for preparing of an environmental impact statement pursuant to the requirements of the National Environmental Policy Act of 1969, 42 U.S.C. 4321-4347.

The Project qualifies under *Guidelines* §15127 (a) in that an amendment to the current (2021) Rich-Haven Specific Plan is required in order to implement the Project. As such, this EIR analysis addresses significant irreversible environmental changes which could be involved in the proposed action should it be implemented [*Guidelines*, Sections 15126(e) and 15127]. An impact would fall into this category if:

- A project would involve a large commitment of nonrenewable resources;
- The primary and secondary impacts of a project would generally commit future generations to similar uses;
- A project involves uses in which irreversible damage could result from any potential environmental incidents associated with the project; or
- The proposed consumption of resources is not justified (e.g., the project results in wasteful use of energy).

With regard to the above considerations, various natural resources, in the form of construction materials and energy resources, would be used in the construction of the Project, but their use is not expected to result in shortfalls in the availability of these resources. Development of the site with the Project uses will commit the property to such uses for the foreseeable future, and thereby limit the site's prospective alternative uses. Notwithstanding, given the following, commitment of the site to uses proposed by the Project is considered appropriate.

- The Project site is currently zoned for Specific Plan development. The Project proposes Specific Plan development.
- The Project and the Project development intensities are consistent with development intensities envisioned under TOP 2050 Policy Plan Land Use designations.
- Urbanization of the subject site as proposed under the Project is a compatible infill continuation of urbanizing surrounding properties.

The Project presents no significant possibility of irreversible environmental damage "from any potential environmental incidents associated with the project." That is, the Project does not propose facilities or uses that would result in potentially significant environmental incidents. Moreover, all feasible mitigation is incorporated in the Project to reduce its potential environmental effects. As discussed herein, the Project would not result in or cause unwarranted or wasteful use of resources, including energy.

1.0 INTRODUCTION

1.0 INTRODUCTION

1.1 OVERVIEW

This document, combined with the Draft Environmental Impact Report (DEIR), constitutes the Final EIR for the Rich-Haven Specific Plan, 2022 Amendment Project (Project). The DEIR describes existing environmental conditions relevant to the proposal, evaluates the Project's potential environmental effects, and identifies mitigation measures to reduce or avoid the potentially significant impacts. The DEIR was circulated for a 45-day review period: February 24 through April 10, 2023.

1.2 CONTENT AND FORMAT

Subsequent to this introductory Section 1.0, Section 2.0 of this Final EIR presents revisions and errata corrections to the DEIR text. Responses to comments received on the DEIR are presented in Final EIR Section 3.0. The EIR Mitigation Monitoring Program is presented in Final EIR Section 4.0.

1.3 DRAFT EIR COMMENTERS

1.3.1 Overview

The complete list of Draft EIR commenters, along with copies of comment letters and responses to comments, is presented in Section 3.0 of this Final EIR. The following list identifies the comment letters received in regard to the Draft EIR:

- Governor's Office of Planning and Research, State Clearinghouse
- San Bernardino County, Department of Public Works
- South Coast Air Quality Management District
- Eric Belisle
- Vivian Or
- Kendra Reif

1.3.2 Presentation of Comments and Responses

All comment letters received in regard to the Draft EIR are included, along with corresponding responses, in their entirety in Final EIR Section 3.0, *Comments and Responses*.

1.4 LEAD AGENCY AND POINT OF CONTACT

The Lead Agency for the Project and EIR is the City of Ontario. Any questions or comments regarding the preparation of this document, its assumptions, or its conclusions, should be referred to:

City of Ontario
Planning Department
303 East "B" Street
Ontario, CA 91764
Contact Person: Lorena Mejia, Senior Planner

1.5 PROJECT SUMMARY

The following information is summarized from the Project Description in the Draft EIR. For additional detail in regard to Project characteristics and Project-related improvements, along with analyses of the Project's potential environmental impacts, please refer to Draft EIR Sections 3.0 and 4.0, respectively.

1.5.1 Project Location

The Project is located in the City of Ontario, within San Bernardino County. The Project site is located at the southeast corner of Haven Avenue and Riverside Drive.

1.5.2 Project Overview

Under the proposed 2022 RHSP Specific Plan Amendment, the Specific Plan Area would be developed with up to 7,194 dwelling units, up to 925,002 square feet of commercial space, and up to 2,767,148 square feet of light industrial uses.

1.5.3 Project Objectives

The broad vision of the 2022 Specific Plan Amendment is to create a community with a mixture of uses, connected through a series of trails, which provides opportunities for people to live, work and play. Supporting 2022 Specific Plan Amendment objectives are listed below.

General

- Implement TOP 2050 Policy Plan Land Use Plan.
- Support TOP 2050 vision for urbanization of the Ontario Ranch area of the City.
- Implement a Specific Plan development supporting office/commercial and light industrial uses providing a broad range of long-term employment opportunities.
- Implement Specific Plan developments providing a broad range of additional construction employment opportunities.
- Establish new development that would further the City's near-term and long-range fiscal goals.
- Improve the regional jobs/housing balance.

Specific Plan Uses

Livable Neighborhood Development

- Incorporate Traditional Neighborhood Design guiding principles during the design phase to provide for opportunities to achieve the Project's vision statement, including:
  - Connections. To provide a series of sidewalks and trails connecting community parks, civic uses, employment areas, mixed-use and transit stops designed to be pedestrian friendly to avoid unnecessary automobile trips.
  - Traditional Street Network. To design a hierarchy of streets connected in a grid network with a variety of routes for pedestrians and vehicles, as well as creating a visually favorable and comfortable environment for pedestrians and bicyclists.
  - Main Street Environment. To design commercial/retail areas to a human scale with storefronts oriented to the street providing a "Main Street" atmosphere for strolling and shopping, all within walking distance from most homes.

  - Public Spaces. To create plazas, parks, and community gathering places placed within centralized areas providing synergy between adjacent land uses.
  - Identifiable Neighborhoods. To design neighborhoods around a discernable center, which may include a small park, square, school, or mixed-use center, within a five-minute walking distance.
  - Mix of Housing. To provide neighborhoods with a range of household types: a variety of single-family detached homes, attached units for young families, and live/work units for small at-home businesses.
- Design a mixed-use environment to ensure compatible uses that are cohesive and integrate a diversity of residential neighborhoods, with a range of commercial uses, and supporting open spaces.
- Utilize transportation, utility, and greenways/open space networks to establish clear edges and boundaries.
- Accommodate residential, commercial, open space, public, and other uses in accordance with the generalized distribution of uses depicted within the City's TOP Land Use Plan.
- Implement elements that will ensure walkability throughout the Project Area to discourage automobile dependency and encourage walking, biking, and other forms of transportation. This is achieved through the incorporation of subarea greenways and pedestrian connections and through sensitive site design of mixed-use development.
- Implement technological advances within residential communities, including internet access, to allow residents to shop and work from home and to decrease reliance on automobiles.
- Provide opportunity for at least one major public plaza/square as a centerpiece of community activities, including events and celebrations, outdoor performances, community meetings, picnics, farmers markets, and similar functions.
- Establish a clearly defined "edge" for the City's TOP area, where appropriate, that avoids the use of walls and creation of a "walled" enclave.
- Incorporate electrical transmission corridors and similar elements to form "edges" for residential neighborhoods and centers and/or accommodate public greenways/trails/corridors.

Residential District Objectives

- Create a livable community with neighborhoods designed at a human scale and oriented for pedestrian access to mixed-use, educational, and recreational uses.
- Provide for a range and diversity of housing products (detached single-family, detached and attached condominiums, and townhomes) that respond to a variety of homeownership needs and desires.
- Design residential projects to complement the character of adjacent neighborhoods.
- Encourage interaction among residents through the provision of an organized, simple, and "neo-traditional" system of streets, pathways, and entries to allow residents to walk or bike to parks, recreation, and public facilities (including schools).
- Promote outdoor activity and casual social contact among residents and neighbors by designing neighborhoods around a central park where they can gather.
- Provide a focal point of activity within each residential planning area that may include a park, school, common area, or public meeting facility.
- Encourage architectural styles and traditional design elements that reflect the historic and eclectic mixture of architecture, reflective of the greater Ontario area.
- Increase densities adjacent to commercial centers.
- Establish clear, defined "edges" and "entries" that contribute to neighborhood identity.
- Avoid the use of walls to separate residential areas from arterials and other high traffic volume streets by expanded landscape setbacks, frontage roads, and other appropriate techniques.
- Include clustered multi-family housing within the Residential District, in order to create a diverse range of housing products and opportunities, while still in keeping with the overall low-density residential designation.
- Locate higher-density residential uses that provide population to support adjacent regional commercial centers.
- Provide sufficient on-site recreational amenities within higher density developments.
- Include community-oriented uses such as public meeting rooms, plazas and courtyards, and similar uses.

- Establish visual and physical links among the individual multi-family developments to create a cohesive and continuous corridor.
- Design building elevations to promote visual interest.
- Provide linkages between community service facilities, multi-family corridors, and residential neighborhoods.

Regional Commercial/Mixed-Use District Objectives

- Accommodate a diversity of large-scale retail, community and neighborhood shopping, office, medical research, entertainment, hotel/motel, dining, housing, cultural, public, and similar uses that will serve the Project area and neighboring Planning Areas.
- Function with a high level of activity and/or employment.
- Accommodate development of multi-family housing, mixed-use buildings that incorporate housing and retail/office, and live/work facilities.
- Accommodate single-use buildings and mixed-use structures containing a variety of uses from residential over retail or office-to-office over retail.
- Encourage traditional, mixed-use design of commercial buildings, by requiring a lower maximum floor area ration (FAR) for single-use buildings, and a higher maximum FAR for mixed-use buildings.
- Develop plaza areas and other amenities to provide places of social interaction.
- Include one or more public "squares" to serve as gathering places.
- Incorporate modulated building volumes, mass, height, and articulated facades to create individual spaces.
- Site a portion of the buildings on peripheral streets to provide connectivity to adjacent uses.
- Orient buildings towards the local streets whenever possible to create an urban edge and sense of arrival and place.
- Include sidewalks of sufficient width to accommodate pedestrian activity and outdoor restaurants, newsstands, and other uses.
- Create visual interest through the opening of streets and sidewalks/plazas towards building elevations.
- Incorporate landscaping to enhance the environment.

- Visually integrate parking structures to continue the intended design character of the district.
- Incorporate multi-family housing to create a cohesive and continuous corridor.
- Ensure an appropriate mix of uses (residential and commercial) that are compatible.
- Encourage pedestrian access and ease of use within the mixed-use area by designing pedestrian and bike paths.
- Create a "Main Street" environment with buildings designed to a human scale where pedestrian activity is not overwhelmed by automobile traffic.
- Utilize urban design to create a "Gateway" or portal to the Ontario Ranch.

Industrial District Objectives

- Incorporate transitions and/or buffers between commercial/mixed-use and industrial areas and adjacent residential areas.
- Contribute to the regional jobs to housing balance by providing employment opportunities while minimizing development impacts on surrounding neighborhoods.
- Create a high-quality industrial park development that attracts an array of businesses and provides employment opportunities within proximity to area residents.
- Provide safe and efficient access/circulation routes for the distribution/transportation of goods.

Circulation Objectives

- Provide a circulation system designed to promote pedestrian activity through a network of off-street pedestrian walkways linking each neighborhood to parks, mixed-use commercial, and residential uses.
- Design a hierarchy of streets connected in a grid network with a variety of routes for pedestrians and vehicles, creating a visually attractive, enhanced, and comfortable environment for pedestrians and bicyclists.
- Design streets to incorporate landscaped parkways and pedestrian walkways separated from the street to enhance safety and enjoyment of residents and visitors.

- Provide opportunities for transit connections and alternative modes of transportation.

Recreation/Trails Objectives

- Provide new recreational opportunities for residents through the development of a series of public and private parks.
- Provide a series of pedestrian trails connecting community parks, civic uses, mixed-use, and transit stops designed to be pedestrian friendly to avoid unnecessary automobile trips.
- Incorporate off-street multi-use trails within the Southern California Edison easements.
- Incorporate a system of on- and off-street bicycle pathways with access from the residences to mixed-use areas.
- Use landscaping and streetscape materials that are low maintenance in recreation and trail areas.
- Provide a system of on-street bikeways integrated throughout the Project to provide access to schools, parks, and commercial uses.
- Provide new recreational opportunities for residents through the development of a series of parks ranging in size.

Community Facilities Objectives

- Incorporate existing major utilities into the overall fabric of the community.
- Provide opportunities for incorporation of community facilities (e.g., schools, fire station) as identified by affected agencies.

1.5.4 Discretionary Actions

1.5.4.1 Lead Agency Discretionary Actions and Permits

CEQA Guidelines Section 15124 states in pertinent part that if "a public agency must make more than one decision on a project, all its decisions subject to CEQA should be listed…" Requested decisions, or discretionary actions, necessary to realize the Project would include:

- EIR Certification;
- Approval of the 2022 Specific Plan Amendment;
- Approval of Tentative Parcel/Tract Maps;
- Approval of Development Agreements; and
- Approval of Development Plans.

1.5.4.2 Other Agency Consultation and Permits

Anticipated consultation(s) and permits from agencies necessary to realize the Project would likely include, but are not limited to, the following:

- Permitting by/through the Regional Water Quality Control Board (RWQCB) pursuant to requirements of the City's National Pollutant Discharge Elimination System (NPDES) Permit.
- Permitting by/through the South Coast Air Quality Management District (SCAQMD) for certain equipment or land uses that may be implemented pursuant to the Project.
- Permitting (i.e., utility construction and connection permits) from affected utility purveyors, notably the City of Ontario, IEUA, and SCE.

Other ministerial permits necessary to realize all on- and off-site improvements related to the development of the Project.

2.0 REVISIONS AND ERRATA CORRECTIONS

2.0 REVISIONS AND ERRATA CORRECTIONS

2.1 INTRODUCTION

Based on the comments received on the Draft EIR (which are provided in full in Section 3.0 of this Final EIR), this Section presents revisions to the text of the Draft EIR. For text corrections, additional text is identified by **bold underlined text**, while deletions are indicated by ~~strikeout~~ font. All text revisions affecting mitigation measures have been incorporated into the Mitigation Monitoring Plan presented in Section 4.0 of this Final EIR. Text changes are presented under the chapter or topical section of the Draft EIR where they are located. The revisions and corrections provided here expand and clarify analyses previously provided, and do not constitute substantive new information. Conclusions of the Draft EIR are not affected by these revisions.

2.2 REVISIONS

2.2.1 Revisions to Draft EIR Section 4.11, Cultural Resources

Pursuant to discussions between the City and responding Native American Tribal Representatives, Mitigation Measures 4.11.1 through 4.11.9 are universally revised and replaced by new Mitigation Measures 4.11.1, 4.11.2, and 4.11.3, as follows. Results and conclusions of the EIR are not affected.

> ~~*4.11.1 Prior to the issuance of (a) grading permit(s) for development proposal(s) within the Specific Plan Area, the Applicant or successor(s) in interest shall provide a letter to the City of Ontario Building Department, or designee, from a qualified professional archeologist meeting the Secretary of Interior's Professional Qualifications for Archaeology as defined at 36 CFR Part 61, Appendix A stating that the archeologist has been retained to provide on-call services in the event archeological resources are discovered. The archeologist shall be present at the pre-*~~

~~*grading conference to establish procedures for archeological resource surveillance. In the event a previously unrecorded archaeological deposit is encountered during construction, all activity within 50 feet of the area of discovery shall cease and the City shall be immediately notified. The archeologist shall be contacted to flag the area in the field and determine if the archaeological deposits meet the CEQA definition of historical (State CEQA Guidelines 15064.5(a)), unique archaeological resource (Public Resources Code 21083.2(g)), or Tribal Cultural Resource (Public Resources Code 21074 (a)). If the find is considered a "resource" the archaeologist shall pursue either protection in place or recovery, salvage and treatment of the deposits. A qualified archaeologist and a Native American Monitor of Gabrieleño Ancestry shall evaluate all archaeological resources unearthed by Project construction activities. If the resources are Native American in origin, they shall have the opportunity to consult with the City and/or Project developer on appropriate treatment and curation of these resources. If unique archaeological resources, or Tribal Cultural Resources cannot be preserved in place or left in an undisturbed state, recovery, salvage and treatment shall be required at the Applicant or successor(s) in interest's expense. Recovery, salvage and treatment protocols shall be developed in accordance with applicable provisions of Public Resource Code Section 21083.2 and State CEQA Guidelines 15064.5 and 15126.4. All recovered and salvaged resources shall be prepared to the point of identification and permanent preservation by the archaeologist. Resources shall be identified and curated into an established accredited professional repository. The archaeologist shall have a repository agreement in hand prior to initiating recovery of the resource. Excavation as a treatment option shall be restricted to those parts of the unique archaeological resource, or Tribal Cultural Resource that would be damaged or destroyed by the Project.*~~

~~*4.11.2 Project developer(s) shall retain a Native American Monitor of Gabrieleño Ancestry (Native American Monitor) that was consulted on this Project pursuant to Assembly Bill A52 - SB18 to conduct a Native American Indian Sensitivity Training for construction personnel prior to commencement of any excavation activities. The training session shall include a handout and focus on how to identify*~~

~~*Native American resources encountered during earthmoving activities and the procedures followed if resources are discovered, the duties of the Native American Monitor of Gabrieleño Ancestry and the general steps the Monitor would follow in conducting a salvage investigation.*~~

~~*4.11.3 Project developer(s) shall retain a Native American Monitor of Gabrieleño Ancestry that was consulted on this Project pursuant to Assembly Bill A52 - SB18 to be on-site during all Project-related, ground-disturbing construction activities Such activities include: pavement removal, auguring, boring, grading, excavation, potholing, trenching, and/or grubbing of previously undisturbed native soils to a maximum depth of 30 feet below ground surface. A copy of the executed consultant contract shall be submitted to the City of Ontario Planning Department prior to the issuance of any grading permit (any ground-disturbing activity). At their discretion, a Native American Monitor of Gabrieleño Ancestry can be present during the removal of dairy manure to native soil, but not at developer expense.*~~

~~*4.11.4 A qualified archaeologist and a Native American Monitor of Gabrieleño Ancestry that was consulted on this Project pursuant to Assembly Bill A52 - SB18 shall evaluate all archaeological resources unearthed by Project construction activities. If the resources are Native American in origin, the Tribe shall coordinate with the developer regarding treatment and curation of these resources. Typically, the Tribe will request reburial or preservation for educational purposes. If archeological features are discovered, the archeologist shall report such findings to the Ontario Planning Director. If the archeological resources are found to be significant, the archeologist shall determine the appropriate actions, in cooperation with the City that shall be taken for exploration and/or salvage in compliance with CEQA Guidelines Section 15064.5(f).*~~

~~*4.11.5 Prior to the start of ground disturbing activities, developer(s) shall arrange a designated site location within the footprint of the Project for the respectful reburial of Tribal human remains and/or ceremonial objects. All human skeletal material discoveries shall be reported immediately to the County Coroner. The*~~

~~*Native American Monitor shall immediately divert work a minimum of 50 feet from the discovery site and place an exclusion zone around the burial.*~~

~~*4.11.6 If encountering human skeletal materials, the Native American Monitor shall notify the construction manager who shall contact the San Bernardino County Coroner. All construction activity shall be diverted while the San Bernardino County Coroner determines if the remains are Native American. The discovery shall be confidential and secure to prevent further disturbance. If Native American, the San Bernardino County Coroner shall notify the Native American Heritage Commission (NAHC) as mandated by state law who will then appoint a Most Likely Descendant. In the case where discovered human remains cannot be documented and recovered on the same day, the remains shall be covered with muslin cloth and a steel plate that can be moved by heavy equipment placed over the excavation opening to protect the remains. If this type of steel plate is not available, a 24 hour guard shall be posted outside working hours. The Tribe shall make every effort to recommend diverting the Project and keep the remains in situ and protected. If the Project cannot be diverted, it may be determined that burials will be removed. If data recovery is approved by the Tribe, documentation shall be taken which includes, at a minimum, detailed descriptive notes and sketches. Additional types of documentation shall be approved by the Tribe for data recovery purposes. Cremations will either be removed in bulk or means necessary to ensure complete recovery of all material. If the discovery of human remains includes four (4) or more burials, the location is considered a cemetery and a separate treatment plan shall be created. The Project developer shall consult with the Tribe regarding avoidance of all cemetery sites. Once complete, a final report of all activities shall be submitted to the NAHC.*~~

~~*4.11.7 There shall be no Scientific study or the utilization of any invasive diagnostics on any Native American human remains.*~~

~~*4.11.8 If the San Bernardino County Coroner determines the remains represent a historic non-Native American burial, the burial shall be treated in the same manner*~~

~~*of respect with agreement of the San Bernardino County Coroner. Reburial will be in an appropriate setting. If the San Bernardino County Coroner determines the remains to be modern, the San Bernardino County Coroner shall take custody of the remains.*~~

~~*4.11.9 As directed by the Project Archaeologist in consultation with the Native American Monitor, each occurrence of human remains and associated funerary objects shall be stored using opaque cloth bags. All human remains, funerary objects, sacred objects and objects of cultural patrimony shall be removed to a secure container on site if possible. These items shall be retained and reburied within six months of recovery. The site of reburial/repatriation shall be on the Project site, but at a location agreed upon between the Tribe and developer(s) and protected in perpetuity. There shall be no publicity regarding any cultural materials recovered.*~~

4.11.1 Retain a Native American Monitor Prior to Commencement of Ground-Disturbing Activities:

A. The project applicant/lead agency shall retain a Native American Monitor from or approved by the Gabrieleño Band of Mission Indians – Kizh Nation. The monitor shall be retained prior to the commencement of any "ground-disturbing activity" for the subject project at all project locations (i.e., both on-site and any off-site locations that are included in the project description/definition and/or required in connection with the project, such as public improvement work). "Ground-disturbing activity" shall include, but is not limited to, demolition, pavement removal, potholing, auguring, grubbing, tree removal, boring, grading, excavation, drilling, and trenching.[1]

B. A copy of the executed monitoring agreement shall be submitted to the lead agency prior to the earlier of the commencement of any

[1] Tribal monitoring shall cease once all ground disturbance activities have been completed with respect to the property or portion thereof. Example: Once excavation, grading, trenching, etc. have occurred tribal monitoring shall cease.

ground-disturbing activity, or the issuance of any permit necessary to commence a ground-disturbing activity.[2]

C. The monitor will complete daily monitoring logs that will provide descriptions of the relevant ground-disturbing activities, the type of construction activities performed, locations of ground-disturbing activities, soil types, cultural-related materials, and any other facts, conditions, materials, or discoveries of significance to the Tribe. Monitor logs will identify and describe any discovered TCRs, including but not limited to, Native American cultural and historical artifacts, remains, places of significance, etc., (collectively, tribal cultural resources, or "TCR"), as well as any discovered Native American (ancestral) human remains and burial goods. Copies of monitor logs will be provided to the project applicant/lead agency upon written request to the Tribe.

D. On-site tribal monitoring shall conclude upon the latter of the following (1) written confirmation to the Kizh from a designated point of contact for the project applicant/lead agency that all ground-disturbing activities and phases that may involve ground-disturbing activities on the project site or in connection with the project are complete; or (2) a determination and written notification by the Kizh to the project applicant/lead agency that no future, planned construction activity and/or development/construction phase at the project site possesses the potential to impact Kizh TCRs.

E. Upon discovery of any TCRs, all construction activities in the immediate vicinity of the discovery shall cease (i.e., not less than the surrounding 50 feet) and shall not resume until the discovered TCR has been fully assessed by the Kizh monitor and/or Kizh archaeologist. The Kizh will recover and retain all discovered TCRs in the form and/or manner the Tribe deems appropriate, in the Tribe's

[2] The extent of necessary personnel and hourly wage shall be subject to commercially reasonable standards. If there is a dispute as to scope of the necessary labor needs or wage rates, the City may arbitrate any such disputes in accordance with commercially reasonable standards.

sole discretion, and for any purpose the Tribe deems appropriate, including for educational, cultural and/or historic purposes.

4.11.2 Unanticipated Discovery of Human Remains and Associated Funerary Objects:

A. ***Native American human remains are defined in PRC 5097.98 (d)(1) as an inhumation or cremation, and in any state of decomposition or skeletal completeness. Funerary objects, called associated grave goods in Public Resources Code Section 5097.98, are also to be treated according to this statute.***
B. ***If Native American human remains and/or grave goods discovered or recognized on the project site, then all construction activities shall immediately cease. Health and Safety Code Section 7050.5 dictates that any discoveries of human skeletal material shall be immediately reported to the County Coroner and all ground-disturbing activities shall immediately halt and shall remain halted until the coroner has determined the nature of the remains. If the coroner recognizes the human remains to be those of a Native American or has reason to believe they are Native American, he or she shall contact, by telephone within 24 hours, the Native American Heritage Commission, and Public Resources Code Section 5097.98 shall be followed.***
C. ***Human remains and grave/burial goods shall be treated alike per California Public Resources Code section 5097.98(d)(1) and (2).***
D. ***Construction activities may resume in other parts of the project site at a minimum of 200 feet away from discovered human remains and/or burial goods, if the Kizh determines in its sole discretion that resuming construction activities at that distance is acceptable and provides the project manager express consent of that determination (along with any other mitigation measures the Kizh monitor and/or archaeologist deems necessary). (CEQA Guidelines Section 15064.5(f).)***

E. ***Preservation in place (i.e., avoidance) is the preferred manner of treatment for discovered human remains and/or burial goods. Any historic archaeological material that is not Native American in origin (non-TCR) shall be curated at a public, non-profit institution with a research interest in the materials, such as the Natural History Museum of Los Angeles County or the Fowler Museum, if such an institution agrees to accept the material. If no institution accepts the archaeological material, it shall be offered to a local school or historical society in the area for educational purposes.***

F. ***Any discovery of human remains/burial goods shall be kept confidential to prevent further disturbance.***

4.11.3 Procedures for Burials and Funerary Remains:

A. ***As the Most Likely Descendant ("MLD"), the Koo-nas-gna Burial Policy shall be implemented. To the Tribe, the term "human remains" encompasses more than human bones. In ancient as well as historic times, Tribal Traditions included, but were not limited to, the preparation of the soil for burial, the burial of funerary objects with the deceased, and the ceremonial burning of human remains.***

B. ***If the discovery of human remains includes four or more burials, the discovery location shall be treated as a cemetery and a separate treatment plan shall be created.***

C. ***The prepared soil and cremation soils are to be treated in the same manner as bone fragments that remain intact. Associated funerary objects are objects that, as part of the death rite or ceremony of a culture, are reasonably believed to have been placed with individual human remains either at the time of death or later; other items made exclusively for burial purposes or to contain human remains can also be considered as associated funerary objects. Cremations will either be removed in bulk or by means as necessary to ensure complete recovery of all sacred materials.***

D. ***In the case where discovered human remains cannot be fully documented and recovered on the same day, the remains will be covered with muslin cloth and a steel plate that can be moved by heavy equipment placed over the excavation opening to protect the remains. If this type of steel plate is not available, a 24-hour guard should be posted outside of working hours. The Tribe will make every effort to recommend diverting the project and keeping the remains in situ and protected. If the project cannot be diverted, it may be determined that burials will be removed.***

E. ***In the event preservation in place is not possible despite good faith efforts by the project applicant/developer and/or landowner, before ground-disturbing activities may resume on the project site, the landowner shall arrange a designated site location within the footprint of the project for the respectful reburial of the human remains and/or ceremonial objects.***

F. ***Each occurrence of human remains and associated funerary objects will be stored using opaque cloth bags. All human remains, funerary objects, sacred objects and objects of cultural patrimony will be removed to a secure container on site if possible. These items should be retained and reburied within six months of recovery. The site of reburial/repatriation shall be on the project site but at a location agreed upon between the Tribe and the landowner at a site to be protected in perpetuity. There shall be no publicity regarding any cultural materials recovered.***

G. ***The Tribe will work closely with the project's qualified archaeologist to ensure that the excavation is treated carefully, ethically and respectfully. If data recovery is approved by the Tribe, documentation shall be prepared and shall include (at a minimum) detailed descriptive notes and sketches. All data recovery data recovery-related forms of documentation shall be approved in advance by the Tribe. If any data recovery is performed, once complete, a final report shall be submitted to the Tribe and the***

NAHC. The Tribe does NOT authorize any scientific study or the utilization of any invasive and/or destructive diagnostics on human remains.

3.0 COMMENTS AND RESPONSES

3.0 COMMENTS AND RESPONSES

3.1 INTRODUCTION

The following Section presents written comments received pursuant to public review of the DEIR and provides responses to those comments as required by California Code of Regulations, title 14 (hereinafter, "*CEQA Guidelines*") Sections 15089, 15132, and 15088. Specifically, *CEQA Guidelines* Section 15088, subd. (a) requires that: "[t]he lead agency… evaluate comments on environmental issues received from persons who reviewed the draft EIR and . . . prepare a written response. The lead agency shall respond to comments received during the noticed comment period and any extensions and may respond to late comments." The DEIR was circulated for a 45-day review period: February 24 through April 10, 2023.

In summary, the City's written responses describe the disposition of significant environmental issues raised and any revisions to the Draft EIR made as a result of the comments. Additionally, the City's written responses provide a good faith, reasoned analysis of all environmental issues raised and cite to specific factual and legal support for the Draft EIR's conclusions.

3.1.1 Comments Received

The following Section presents a list of the comment letters received during the Draft EIR public review period. Comment letters have been generally organized by state agencies; county, city, and local agencies; utilities; and local organizations and individuals. Each letter has been assigned an identifying designation (generally an acronym or name abbreviation), and topical items within each letter have been numbered. Table 3-1 lists all DEIR commenters and the designation assigned to each. Commenter correspondence

and correlating responses are presented subsequently. Comments have been reproduced verbatim and without grammatical or typographical correction.

Rich-Haven Specific Plan, 2022 Amendment Project (File No. PSPA22-001)

Summary

SCH Number	2022100425
Lead Agency	City of Ontario
Document Title	Rich-Haven Specific Plan, 2022 Amendment Project (File No. PSPA22-001)
Document Type	EIR - Draft EIR
Received	2/24/2023
Present Land Use	Zoning: Specific Plan // General Plan: TOP 2050 - LDR, LMDR, MDR, OS-NR, OS-R, MU, IND, GC
Document Description	The Project proposes a new amendment of the 2021 Rich-Haven Specific Plan (RHSP) and would be developed with up to 7,194 dwelling units, up to 925,002 square feet of commercial space, and up to 2,767,148 square feet of light industrial uses..

RE: CEQA - NOTICE OF AVAILABILITY OF A DRAFT ENVIRONMENTAL IMPACT REPORT (FILE NO. PSPA22-001) RICH-HAVEN SPECIFIC PLAN, 2022 AMENDMENT PROJECT (SCH NO. 2022100425).

Dear Ms. Mejia:

Thank you for allowing the San Bernardino County Department of Public Works the opportunity to comment on the above-referenced project. **We received this request on February 28, 2023** and pursuant to our review, we have no comments.

We respectfully request to be included on the circulation list for all project notices, public reviews, or public hearings. In closing, I would like to thank you again for allowing the San Bernardino County Department of Public Works the opportunity to comment on the above-referenced project. Should you have any questions or need additional clarification, please contact the individuals who provided the specific comment, as listed above.

DPW-1

Sincerely,

Nancy Sansonetti

Comment DPW-1

Thank you for allowing the San Bernardino County Department of Public Works the opportunity to comment on the above-referenced project. We received this request on February 28, 2023 and pursuant to our review, we have no comments.

We respectfully request to be included on the circulation list for all project notices, public reviews, or public hearings. In closing, I would like to thank you again for allowing the San Bernardino County Department of Public Works the opportunity to comment on the above-referenced project. Should you have any questions or need additional clarification, please contact the individuals who provided the specific comment, as listed above.

Response DPW-1

DPW receipt of the Project EIR is acknowledged. DPW provided no comments on the EIR. DPW will be included on the circulation list for all Project notices, public reviews, or public hearings. Contact information provided by DPW is noted. Findings and conclusions of the EIR are not affected. No revisions to the EIR are proposed or required.

Draft Environmental Impact Report (Draft EIR) for the Proposed Rich-Haven Specific Plan 2022 Amendment (Proposed Project) File No. PSPA22-001 (SCH No. 2022100425)

South Coast Air Quality Management District (South Coast AQMD) staff appreciates the opportunity to comment on the above-mentioned document. The City of Ontario is the Lead Agency under the California Environmental Quality Act (CEQA) for the Proposed Project. The following comments recommended revisions to the health risk assessment analysis, overlapped construction and operational activities analysis, additional air quality and greenhouse gas mitigation measures, health risk reduction strategies, South Coast AQMD Rules 2305 and 316, and information on South Coast AQMD permits and responsible agency that the Lead Agency should include in the Final EIR. AQMD-1

South Coast AQMD Staff's Summary of Project Information in the Draft EIR
By way of background, the Rich-Haven Specific Plan was approved by the Lead Agency in 2015, with subsequent Specific Plan Amendments approved in 2016, 2018, and 2021.[1] The Lead Agency proposes the current 2021 Specific Plan, which comprises approximately 584 acres,[2] with the Rich-Haven Specific Plan 2022 Amendment (Proposed Project), resulting in the primary revisions[3] to: AQMD-2

- Maintain the total residential development of 7,194 dwelling units, with the residential units and densities would be reassigned
- Reduce commercial development by approximately 65,900 square feet, an approximately 6.7 percent reduction, with a maximum square foot of 925,002.[4] The Proposed Project is assumed to accommodate a variety of commercial/retail development[5]
- Increase light industrial development by approximately 1,583,623 square feet, an approximately 134 percent increase, with a maximum square foot of 2,767,148.[6] The Proposed Project would accommodate a mix of high-cube fulfillment warehouses, refrigerated warehouses, and business park uses[7]

[1] Draft EIR. Page 3-1.
[2] *Ibid.*
[3] *Ibid.* Page 3-3.
[4] *Ibid.* Page 3-4.
[5] *Ibid.* Page 3-17.
[6] *Ibid.* Page 3-4.
[7] *Ibid.* Page 3-16.

- Other aspects and attributes of the 2021 Specific Plan would be substantively maintained under the Proposed Project

As of this Draft EIR, approximately 468 residential units of the total 7,194 dwelling units have been constructed and are occupied.[8] The remainder of the Proposed Project site has not yet been developed; these land uses include a dairy farm, a former hog ranch, vacant/disturbed properties throughout the site, and Southern California Edison (SCE) transmission line easement.[9] The Proposed Project is west of Interstate 15 (I-15) and south of State Route 60 (SR-60).[10] Based on the aerial photographs, South Coast AQMD staff finds that sensitive receptors (e.g., residences, Colony High School) are within 70-120 feet north, east, and west of the Proposed Project site. The Proposed Project development is anticipated in sequence in two phases: Phase 1 is for light industrial and commercial uses, and Phase 2 is for residential products and community amenities (including parks and open space).[11] The Proposed Project Opening year is defined as 2025.[12] At buildout in 2027,[13] the Proposed Project would generate 95,552 two-way vehicle trips, including 1,144 two-way truck trips per day.[14]

AQMD-2 (cont'd)

South Coast AQMD Staff's Comments on the Draft EIR

Health Risk Assessment (HRA) Analysis

Construction HRA

Based on the provided modeling files and the AERMOD modeling outputs file in Appendix D – Air Quality Impact Analysis,[15] the averaging time used in the model run is ANNUAL. However, according to the South Coast AQMD Risk Assessment Procedures for Rule 1401, 1401.1, and 212[16] (version 8.1), and South Coast AQMD Modeling Guidance for AERMOD,[17] the detailed HRA utilizing AERMOD should be run using the averaging time of PERIOD and 1-hour. Therefore, South Coast AQMD staff recommend that the Lead Agency revise the construction HRA utilizing PERIOD and 1-hour averaging time to determine the health risk impacts to the sensitive receptors and off-site workers and include the results in the Final EIR. If the revision is not included in the Final EIR, the Lead Agency should provide reasons for not having them supported by substantial evidence in the record.

AQMD-3

Operational HRA

Based on the provided modeling files, South Coast AQMD staff is able to verify that the building downwash option is not selected in the operational HRA. The ground-level pollutant concentrations near the building would be underestimated if the downwash effects were absent in

AQMD-4

[10] *Ibid.* Page 3-1.
[11] *Ibid.* Page 3-17.
[12] *Ibid.* Page 3-26.
[13] *Ibid.* Page 4.3-31.
[14] *Ibid.* Appendix D – Air Quality Impact Analysis. Page 12.
[15] *Ibid.* Appendix D. Page 1139 of PDF.
[16] South Coast AQMD Risk Assessment Procedures for Rule 1401, 1401.1, and 212 Version 8.1. Page 23. Access at: http://www.aqmd.gov/docs/default-source/permitting/rule-1401-risk-assessment/riskassessproc-v8-1.pdf
[17] South Coast AQMD Modeling Guidance for AERMOD. Access at: http://www.aqmd.gov/home/air-quality/meteorological-data/modeling-guidance

the dispersion modeling. Therefore, building downwash should be considered for the Proposed Project operation to predict more accurate ground-level concentrations.

In addition, the truck idling emissions would need to be estimated separately and included in the dispersion modeling analysis and HRA as point sources. However, truck idling emissions from the modeling files are modeled as line volume sources. In addition, the EIR needs to clarify if any stationary combustion engines (e.g., diesel firewater pump, diesel emergency generator, etc.) will be used on-site during operation. If any of these will be used when implementing the Proposed Project, they will need to be added as additional sources to the HRA and dispersion modeling files. Therefore, South Coast AQMD staff recommend that the Lead Agency revise the operational HRA modeling by incorporating the above recommendations and including the HRA results in the Final EIR. If the HRA modeling is not revised and included in the Final EIR, the Lead Agency should provide reasons supported by substantial evidence in the record to explain why the revision is not included. AQMD-4 (cont'd)

Overlapped Construction and Operational Activities

According to the Draft EIR and Appendix D, the first phase of development is anticipated in the Opening Year of 2024, and the Proposed Project Buildout is anticipated in the year 2027.[18,19] Hence, the possibility of overlapped construction (Phase 2) and operation (Phase 1) activities is likely to occur. However, the Draft EIR does not include an emissions analysis for the overlapping activities. Therefore, South Coast AQMD staff recommends that the Lead Agency analyze the overlapping activities to estimate emissions associated with the time. The estimated overlapped emissions should then be compared to South Coast AQMD's regional air quality CEQA operational thresholds[20] to determine the significance level, and the results should be included in the Final EIR. If the overlapped emissions analysis is not included in the Final EIR, the Lead Agency should provide reasons for not having them supported by substantial evidence in the record. AQMD-5

Additional Air Quality and Greenhouse Gas Mitigation Measures

According to the Draft EIR and Appendix D, the Lead Agency utilizes CalEEMod's latest version to analyze the maximum daily emissions from Proposed Project's construction and operational activities.[21] The peak unmitigated construction and peak operational emissions are shown in Tables 4.3-4, 4.3-6, and 4.3-7.[22] The Lead Agency concludes that regional construction and operational emissions would be significant and unavoidable. To reduce the emissions from construction and operational activities, the Lead Agency proposes mitigation measures (MM) from 4.3.1 to 4.3.18.[23] However, the Lead Agency concludes that the impact of air quality and greenhouse gas are significant and unavoidable even with mitigation incorporated.[24] AQMD-6

[18] *Ibid.* Page 4.3-31.
[19] *Ibid.* Appendix D. Page 11.
[20] South Coast AQMD Air Quality Significance Thresholds. Access at: http://www.aqmd.gov/docs/default-source/ceqa/handbook/south-coast-aqmd-air-quality-significance-thresholds.pdf
[21] *Ibid.* Appendix D. Page 54.
[22] *Ibid.* Pages 4.3-29, 4.3-32, and 4.3-33.
[23] *Ibid.* Pages 4.3-29, 4.3-30, 4.3-34, 4.3-35, and 4.3-36.
[24] *Ibid.* Pages 4.3-31, 4.3-33, and 4.4-41.

Mitigation measures for operational air quality impacts from mobile sources that the Lead Agency should consider in the Final EIR may include the following:

- Require zero-emissions (ZE) or near-zero emission (NZE) on-road haul trucks, such as heavy-duty trucks with natural gas engines that meet the CARB's adopted optional NOx emissions standard at 0.02 grams per brake horsepower-hour (g/bhp-hr), if and when feasible. Given the state's clean truck rules and regulations aiming to accelerate the utilization and market penetration of ZE and NZE trucks, such as the Advanced Clean Trucks Rule[25] and the Heavy-Duty Low NOx Omnibus Regulation[26], ZE and NZE trucks will become increasingly more available to use. The Lead Agency should require a phase-in schedule to incentivize using these cleaner operating trucks to reduce any significant adverse air quality impacts. South Coast AQMD staff is available to discuss the availability of current and upcoming truck technologies and incentive programs with the Lead Agency. At a minimum, require the use of the 2010 model year[27] that meets CARB's 2010 engine emissions standards at 0.01 g/bhp-hr of particulate matter (PM) and 0.20 g/bhp-hr of NOx emissions or newer, cleaner trucks. Where appropriate, include environmental analyses to evaluate and identify sufficient electricity and supportive infrastructures in the Energy and Utilities and Service Systems Sections in the CEQA document. Include the requirement in applicable bid documents, purchase orders, and contracts. Operators shall maintain records of all trucks associated with project construction to document that each truck used meets these emission standards and make the records available for inspection. The Lead Agency should conduct regular inspections to the maximum extent feasible to ensure compliance.
- Limit the daily number of trucks allowed at the Proposed Project to levels analyzed in the Final CEQA document. If higher daily truck volumes are anticipated to visit the site, the Lead Agency should commit to re-evaluating the Proposed Project through CEQA prior to allowing this higher activity level.
- Provide electric vehicle (EV) charging stations or, at a minimum, provide the electrical infrastructure, and electrical panels should be appropriately sized. Electrical hookups should be provided for truckers to plug in any onboard auxiliary equipment.

AQMD-6 (cont'd)

Mitigation measures for operational air quality impacts from other area sources that the Lead Agency should consider in the Final EIR may include the following:

- Maximize the use of solar energy by installing solar energy arrays
- Use light-colored paving and roofing materials
- Utilize only Energy Star heating, cooling, and lighting devices, and appliances

[25] CARB. June 25, 2020. *Advanced Clean Trucks Rule*. Accessed at: https://ww2.arb.ca.gov/our-work/programs/advanced-clean-trucks.

[26] CARB has recently passed a variety of new regulations that require new, cleaner heavy-duty truck technology to be sold and used in state. For example, on August 27, 2020, CARB approved the Heavy-Duty Low NOx Omnibus Regulation, which will require all trucks to meet the adopted emission standard of 0.05 g/hp-hr starting with engine model year 2024. Accessed at: https://ww2.arb.ca.gov/rulemaking/2020/hdomnibuslownox.

[27] CARB adopted the statewide Truck and Bus Regulation in 2010. The Regulation requires diesel trucks and buses that operate in California to be upgraded to reduce emissions. Newer heavier trucks and buses must meet particulate matter filter requirements beginning January 1, 2012. Lighter and older heavier trucks must be replaced starting January 1, 2015. By January 1, 2023, nearly all trucks and buses will need to have 2010 model year engines or equivalent. More information on the CARB's Truck and Bus Regulation is available at: https://www.arb.ca.gov/msprog/onrdiesel/onrdiesel.htm.

- Use of water-based or low-VOC cleaning products that go beyond the requirements of South Coast AQMD Rule 1113

Furthermore, the Final EIR needs to clarify the routes designated for trucks associated with the Proposed Project development. Thus, design considerations for the Proposed Project that the Lead Agency should consider included in the Final EIR to further reduce air quality and health risk impacts may include the following:

- Identify any designated truck routes to transport to and from the Proposed Project
- Clearly mark truck routes with trailblazer signs so that trucks will not travel next to or near sensitive land uses (e.g., residences, schools, daycare centers, etc.)
- Design the Proposed Project such that truck entrances and exits are not facing sensitive receptors and trucks will not travel past sensitive land uses to enter or leave the Proposed Project site
- Design the Proposed Project such that any check-in point for trucks is inside the Proposed Project site to ensure that no trucks are queuing outside
- Design the Proposed Project to ensure that truck traffic inside the Proposed Project site is as far away as feasible from sensitive receptors
- Restrict overnight truck parking in sensitive land uses by providing overnight truck parking inside the Proposed Project site

AQMD-6 (cont'd)

South Coast AQMD staff also suggests the Lead Agency review the below-listed references and consider including the additional recommended mitigation measures in the Final EIR:

- State of California – Department of Justice: Warehouse Projects: Best Practices and Mitigation Measures to Comply with the California Environmental Quality Act[28]
- South Coast AQMD 2022 South Coast Air Quality Management Plan,[29] specifically:
  - Appendix IV-A – South Coast AQMD's Stationary and Mobile Source Control Measures
  - Appendix IV-B – CARB's Strategy for South Coast
  - Appendix IV-C – SCAG's Regional Transportation Strategy and Control Measures
- United States Environmental Protection Agency (U.S. EPA): Mobile Source Pollution - Environmental Justice and Transportation[30]

Health Risk Reduction Strategies

Notwithstanding the court rulings, South Coast AQMD staff recognizes that the Lead Agency that approves CEQA documents retain the authority to include any additional information they deem relevant to assessing and mitigating the environmental impacts of a project. South Coast AQMD staff is concerned about the potential public health impacts of siting sensitive populations within

AQMD-7

[28] State of California – Department of Justice. Warehouse Projects: Best Practices and Mitigation Measures to Comply with the California Environmental Quality Act. Access at: https://oag.ca.gov/system/files/media/warehouse-best-practices.pdf
[29] 2022 South Coast AQMP. Access at: http://www.aqmd.gov/home/air-quality/clean-air-plans/air-quality-mgt-plan
[30] United States Environmental Protection Agency (U.S. EPA): Mobile Source Pollution - Environmental Justice and Transportation. Access at: https://www.epa.gov/mobile-source-pollution/environmental-justice-and-transportation

proximity of sources of air pollution (e.g., warehouse). Therefore, it is recommended that, prior to approving future development projects, the Lead Agency consider the impacts of air pollutants on people who will live in and/or nearby a new project location and provide mitigation where necessary. Additionally, South Coast AQMD staff suggests that the Lead Agency review the CARB Air Quality Land Use and Handbook: A Community Health Perspective[31] as it is a reference guide for evaluating and reducing air pollution impacts associated with new projects that go through the land use decision-making process with additional guidance on strategies to reduce air pollution exposure near high-volume roadways available in CARB's technical advisory.[32]

AQMD-7 (cont'd)

Development of Air Quality Mitigation/Community Benefit Funds

Due to the proximity to sensitive receptors (e.g., residences, schools), the Proposed Project should consider additional mitigation strategies to reduce the health risk exposure to sensitive receptors. Many strategies are available to reduce exposures, including, but not limited to, building filtration systems with Minimum Efficiency Reporting Values (MERV) 13 or better, or in some cases, MERV 15 or better is recommended, building design, orientation, location, vegetation barriers or landscaping screening. Enhanced filtration units are capable of reducing exposures. However, enhanced filtration systems have limitations. For example, in a study that South Coast AQMD conducted to investigate filters,[33] a cost burden is expected to be within the range of $120 to $240 per year to replace each filter panel. The initial start-up cost could substantially increase if a Heating, Ventilation, and Air Conditioning (HVAC) system need to be installed and if standalone filter units are required. Installation costs may vary, including costs for conducting site assessments and obtaining permits and approvals before filters can be installed. Other costs may include filter life monitoring, annual maintenance, and training for conducting maintenance and reporting. In addition, because the filters would not be effective unless the HVAC system is running, there may be increased energy consumption. It is typically assumed that the filters operate 100 percent of the time while residents are indoors, and the environmental analysis does not generally account for the times when the residents have their windows or doors open or are in common space areas of the project. Additionally, these filters have no ability to filter out any toxic gases. Furthermore, when used filters are replaced, the replacement has the potential to result in emissions from the transportation of used filters at disposal sites and generate solid waste. Therefore, any filtration unit's presumed effectiveness and feasibility should be carefully evaluated in more detail before assuming they will sufficiently alleviate exposure to DPM emissions.

AQMD-8

In addition, South Coast AQMD offers a broad range of programs for businesses, the community, and local government that help to achieve cleaner air quality for all. Many of these programs offer financial incentives for implementing new clean air technologies. Some provide partnerships and new ways of addressing air quality issues throughout the South Coast Basin. Therefore, South Coast AQMD staff recommends that the Lead Agency review the incentive and programs on the South Coast AQMD Incentives & Programs landing page, http://www.aqmd.gov/home/programs.

[33] South Coast AQMD, Pilot Study of High-Performance Air Filtration for Classrooms Applications, Draft Report: October 2009, http://www.aqmd.gov/docs/default-source/ceqa/handbook/aqmdpilotstudyfinalreport.pdf. Also, see the 2012 Peer Review Journal article by South Coast AQMD: https://onlinelibrary.wiley.com/doi/10.1111/ina.12013.

South Coast AQMD Rules 2305 and 316

On May 7, 2021, South Coast AQMD's Governing Board adopted Rule 2305 – Warehouse Indirect Source Rule – Warehouse Actions and Investments to Reduce Emissions (WAIRE) Program, and Rule 316 – Fees for Rule 2305. Rules 2305 and 316 are new rules that will reduce regional and local emissions of nitrogen oxides (NOx) and particulate matter (PM), including diesel PM (DPM). These emission reductions will reduce public health impacts for communities near warehouses from mobile sources associated with warehouse activities. Also, the emission reductions will help the region attain federal and state ambient air quality standards. Rule 2305 applies to owners and operators of warehouses greater than or equal to 100,000 square feet. Under Rule 2305, operators are subject to an annual WAIRE Points Compliance Obligation calculated based on the annual number of truck trips to the warehouse. WAIRE Points can be earned by implementing actions in a prescribed menu in Rule 2305, implementing a site-specific custom plan, or paying a mitigation fee. Warehouse owners are only required to submit limited information reports, but they can opt-in to earn Points on behalf of their tenants if they choose because certain actions to reduce emissions may be better achieved during the warehouse development phase, for instance, the installation of solar and charging infrastructure. Rule 316 is a companion fee rule for Rule 2305, allowing South Coast AQMD to recover costs associated with Rule 2305 compliance activities. Since the Proposed Project consists of developing warehouses (unrefrigerated and refrigerated) under light industrial land use up to a maximum of 2,767,148 square feet, the Proposed Project's warehouse owners and operators will be required to comply with Rule 2305 once the warehouse is occupied. Therefore, South Coast AQMD staff recommends that the Lead Agency review South Coast AQMD Rule 2305 to determine the potential WAIRE Points Compliance Obligation for future operators and explore whether additional project requirements and CEQA mitigation measures can be identified and implemented at the Proposed Project that may help future warehouse operators meet their compliance obligation[34]. South Coast AQMD staff is available to answer questions concerning Rule 2305 implementation and compliance by phone or email at (909) 396-3140 or waire-program@aqmd.gov. For implementation guidance documents and compliance and reporting tools, please visit South Coast AQMD's WAIRE Program webpage[35]. AQMD-9

South Coast AQMD Permits and Responsible Agency

In the event that the implementation of the Proposed Project would require using new stationary equipment, permits from South Coast AQMD are required. Stationary equipment not only requires permits to construct but also permits to operate. Therefore, the Lead Agency should discuss any stationary equipment utilized in the Proposed Project's construction and operation, requiring South Coast AQMD permits and identifying South Coast AQMD as a Responsible Agency for the Proposed Project in the Final EIR. Any assumptions for the stationary sources in the Final EIR will also be used as the basis for the permit conditions and limits for the Proposed Project. Please contact South Coast AQMD's Engineering and Permitting staff at (909) 396-3385 for questions on permits. For more general information on permits, please visit South Coast AQMD's webpage at: http://www.aqmd.gov/home/permits. AQMD-10

Conclusion

Pursuant to California Public Resources Code section 21092.5(a) and CEQA Guidelines section 15088(b), South Coast AQMD staff requests that the Lead Agency provide South Coast AQMD staff with written responses to all comments contained herein, at least 10 days prior to the certification of the Final EIR.[36] In addition, issues raised in the comments should be addressed in detail, giving reasons why specific comments and suggestions are not accepted. There should be good faith and reasoned analysis in response. Conclusory statements unsupported by factual information will not suffice (CEQA Guidelines section 15088(c)). Conclusory statements do not facilitate the purpose and goal of CEQA on public disclosure and are not meaningful, informative, or useful to decision-makers and to the public who are interested in the Proposed Project. AQMD-11

South Coast AQMD staff is available to work with the Lead Agency to address any air quality questions that may arise from this comment letter. Please contact Danica Nguyen, Air Quality Specialist, at dnguyen1@aqmd.gov should you have any questions.

Sincerely,

Sam Wang

South Coast Air Quality Management District
21865 Copley Drive
Diamond Bar, CA 91765

Letter Dated April 4, 2023

Comment AQMD-1

South Coast Air Quality Management District (South Coast AQMD) staff appreciates the opportunity to comment on the above-mentioned document. The City of Ontario is the Lead Agency under the California Environmental Quality Act (CEQA) for the Proposed Project. The following comments [sic] recommended revisions to the health risk assessment analysis, overlapped construction and operational activities analysis, additional air quality and greenhouse gas mitigation measures, health risk reduction strategies, South Coast AQMD Rules 2305 and 316, and information on South Coast AQMD permits and responsible agency that the Lead Agency should include in the Final EIR.

Response AQMD-1

The Lead Agency appreciates AQMD's participation in the Project CEQA process. Responses to AQMD comments are presented below.

Findings and conclusions of the EIR are not affected. No revisions to the EIR are proposed.

Comment AQMD-2

South Coast AQMD Staff's Summary of Project Information in the Draft EIR

By way of background, the Rich-Haven Specific Plan was approved by the Lead Agency in 2015, with subsequent Specific Plan Amendments approved in 2016, 2018, and 2021. The Lead Agency proposes the current 2021 Specific Plan, which comprises approximately 584 acres, with the Rich-Haven Specific Plan 2022 Amendment (Proposed Project), resulting in the primary revisions to:

- *Maintain the total residential development of 7,194 dwelling units, with the residential units and densities would be reassigned*
- *Reduce commercial development by approximately 65,900 square feet, an approximately 6.7 percent reduction, with a maximum square foot of 925,002. The Proposed Project is assumed to accommodate a variety of commercial/retail development*
- *Increase light industrial development by approximately 1,583,623 square feet, an approximately 134 percent increase, with a maximum square foot of 2,767,148. The Proposed Project would accommodate a mix of high-cube fulfillment warehouses, refrigerated warehouses, and business park uses*
- *Other aspects and attributes of the 2021 Specific Plan would be substantively maintained under the Proposed Project*

As of this Draft EIR, approximately 468 residential units of the total 7,194 dwelling units have been constructed and are occupied. The remainder of the Proposed Project site has not yet been developed; these land uses include a dairy farm, a former hog ranch, vacant/disturbed properties throughout the site, and Southern California Edison (SCE) transmission line easement. The Proposed Project is west of Interstate 15 (I-15) and south of State Route 60 (SR-60). Based on the aerial photographs, South Coast AQMD staff finds that sensitive receptors (e.g., residences, Colony High School) are within 70-120 feet north, east, and west of the Proposed Project site. The Proposed Project development is anticipated in sequence in two phases: Phase 1 is for light industrial and commercial uses, and Phase 2 is for residential products and community amenities (including parks and open space). The Proposed Project Opening year is defined as 2025. At buildout in 2027, the Proposed Project would generate 95,552 two-way vehicle trips, including 1,144 two-way truck trips per day.

Response AQMD-2

AQMD's summary description of the Project is materially correct. Please refer also to EIR Section 3.0, *Project Description*.

Findings and conclusions of the EIR are not affected. No revisions to the EIR are proposed.

Comment AQMD-3

South Coast AQMD Staff's Comments on the Draft EIR

Health Risk Assessment (HRA) Analysis

Construction HRA

Based on the provided modeling files and the AERMOD modeling outputs file in Appendix D – Air Quality Impact Analysis, the averaging time used in the model run is ANNUAL. However, according to the South Coast AQMD Risk Assessment Procedures for Rule 1401, 1401.1, and 212 (version 8.1), and South Coast AQMD Modeling Guidance for AERMOD, the detailed HRA utilizing AERMOD should be run using the averaging time of PERIOD and 1-hour. Therefore, South Coast AQMD staff recommend that the Lead Agency revise the construction HRA utilizing PERIOD and 1-hour averaging time to determine the health risk impacts to the sensitive receptors and off-site workers and include the results in the Final EIR. If the revision is not included in the Final EIR, the Lead Agency should provide reasons for not having them supported by substantial evidence in the record.

Response AQMD-3

As requested by AQMD, the EIR Health Risk Assessment (HRA) model was re-run utilizing the PERIOD and 1-hour averaging time options, as opposed to the ANNUAL averaging time output employed in the current EIR HRA. Under the PERIOD and 1-hour averaging time options, the modeling outputs are identical to those presented in the current EIR HRA. Under both modeling scenarios, no health risk thresholds would be exceeded, and health risk impacts would be less-than-significant. The original and revised HRA modeling are provided at FEIR Attachment A.

It is further noted that the 1-Hour averaging time option suggested by AQMD is typically used for analyzing non-cancer acute health impacts, which are assumed to take place over a period of 1 hour. The only Toxic Air Contaminant (TAC) emitted by Project construction activities would be diesel particulate matter (DPM). DPM does not have an acute Reference Exposure Level (REL) meaning there are no expected acute health impacts. In this instance, the 1-Hour averaging time option is not necessary.

Findings and conclusions of the EIR are not affected. No revisions to the EIR are proposed or required.

Comment AQMD-4

Operational HRA

Based on the provided modeling files, South Coast AQMD staff is able to verify that the building downwash option is not selected in the operational HRA. The ground-level pollutant concentrations near the building would be underestimated if the downwash effects were absent in the dispersion modeling. Therefore, building downwash should be considered for the Proposed Project operation to predict more accurate ground-level concentrations.

In addition, the truck idling emissions would need to be estimated separately and included in the dispersion modeling analysis and HRA as point sources. However, truck idling emissions from the modeling files are modeled as line volume sources. In addition, the EIR needs to clarify if any stationary combustion engines (e.g., diesel firewater pump, diesel emergency generator, etc.) will be used on-site during operation. If any of these will be used when implementing the Proposed Project, they will need to be added as additional sources to the HRA and dispersion modeling files. Therefore, South Coast AQMD staff recommend that the Lead Agency revise the operational HRA modeling by incorporating the above recommendations and including the HRA results in the Final EIR. If the HRA modeling is not revised and included in the Final EIR, the Lead Agency should provide reasons supported by substantial evidence in the record to explain why the revision is not included.

Response AQMD-4

AQMD states that the EIR HRA should have been performed utilizing the building downwash[1] option. This is to account for any impacts that buildings may have on ground level pollutant concentrations.

[1] Buildings and similar structures in the path of air flow create a turbulent wake region on the leeward (i.e., downwind) side of the building. Air pollutant emissions caught in the path of this flow are drawn into the wake, temporarily trapping it in a recirculating cavity. This "downwash" effect can result in greater ground-level pollutant concentrations near buildings than if buildings were not present.

AQMD's suggested use of the "downwash option" for modeling of the Project truck on-site idling emissions is not appropriate. For the Project, these idling emissions are effectively line volume sources and have been modeled as such consistent with applicable AERMOD protocols. Per *User's Guide for the AMS/EPA Regulatory Model (AERMOD)*, Section 3.3.9, *Specifying Building Downwash Information*, the building downwash algorithms do not apply to volume or area sources. The EIR Air Quality Impact Analysis experts (Urban Crossroads, Inc.) have therefore concluded that truck idling emissions sources resulting from the Project would not be materially affected by downwash from the Project warehouse buildings.

The assumed gas station component(s) of the Project were appropriately modeled as point sources. In this regard, site plans detailing the location and configuration of gas station buildings were not available at the time the analysis was prepared. However, given the typically compact nature of buildings typically associated with gas stations. The EIR Air Quality Impact Analysis experts (Urban Crossroads, Inc.) have concluded that the inclusion of building downwash in the analysis would not significantly alter the results of the EIR HRA and no potentially significant impacts would occur.

AQMD states further that truck idling emissions should be modeled using point sources rather than line volume sources. The Project idling emissions would occur in a line adjacent to the Project warehouse loading docks, indicating emissions should be evaluated as line-volume sources. Moreover, specific parameters unique to truck point source emissions such as exhaust temperature, flow rate, and stack diameter are not known. A point-source analysis based on these unknown factors would therefore be largely speculative and of nominal value to the overall analysis. Lastly, the Project HRA analysis is consistent with HRAs conducted by the EIR Air Quality Impact Analysis experts for other similar Project EIRs that have been certified by the Lead Agency.[2] Based on the preceding, the EIR HRA modeling of truck idling as line volume sources is considered accurate and appropriate.

[2] Merrill Commerce Center Specific Plan Project EIR (SCH No. 2019049079); West Ontario Commerce Center Project EIR (SCH Number 2017041074); Meredith International Center Project EIR (SCH Number 2014051020); Ontario Ranch Business Park Project EIR (SCH Number 2019050018)

With regard to use of emergency generators within the Project site and any resulting emissions, specific locations for, and types of, emergency generators or diesel-powered fire pumps that may be located within the Project site are not known at this preliminary stage of Project development. When these specific factors become available, AQMD will be contacted, and all AQMD permitting requirements as outlined in Rule 219 will be complied with, thereby precluding potential emissions impacts that may result from operations of emergency generators or diesel-powered fire pumps.

Note further, in other than emergency conditions, emergency generators or diesel-powered fire pumps operate only for short-term periodic testing, and emissions from such short-term operations would not contribute substantively to health risks. In this latter regard, as a means of comparison, the maximum incremental health risk resulting from Project construction equipment operations would be 1.21 in one million, which is substantially less than the SCAQMD significance threshold of 10 in one million (Project HRA, p. 25). The Project construction emissions include diesel emissions generated during grading operations involving the following heavy duty diesel equipment: 6 excavators, 3 graders, 3 rubber-tired dozers, 6 scrapers, and 6 crawler tractors - all operating for 8 hours per day for an estimated 154 days. It is highly unlikely that temporary and intermittent operations of a few emergency generators within the Project site would result in health risk impacts greater than would result from Project construction equipment operations. As with Project construction-source emissions health risk impacts, any potential health risk impacts resulting from emergency generator operations would be less-than-significant.

Findings and conclusions of the EIR are not affected. No revisions to the EIR are proposed or required.

Comment AQMD-5

Overlapped Construction and Operational Activities

According to the Draft EIR and Appendix D, the first phase of development is anticipated in the Opening Year of 2024, and the Proposed Project Buildout is anticipated in the year 2027. Hence, the possibility of overlapped construction (Phase 2) and operation (Phase 1) activities is likely to

occur. However, the Draft EIR does not include an emissions analysis for the overlapping activities. Therefore, South Coast AQMD staff recommends that the Lead Agency analyze the overlapping activities to estimate emissions associated with the time. The estimated overlapped emissions should then be compared to South Coast AQMD's regional air quality CEQA operational thresholds to determine the significance level, and the results should be included in the Final EIR. If the overlapped emissions analysis is not included in the Final EIR, the Lead Agency should provide reasons for not having them supported by substantial evidence in the record.

Response AQMD-5

AQMD recommends additional overlapped modeling of certain Project construction-source and operational-source emissions. The Lead Agency considers the current analysis to currently and appropriately reflect likely emissions overlap that would occur during Project Phase 1 and Phase 2 construction activities. Contrary to AQMD recommendations, it would not be appropriate to combine Project Phase 1 operational emissions and Project Phase 2 construction emissions for purposes of comparing these against SCAQMD's operational significance thresholds.

That is, because construction activities are short-term and relatively intense in nature, emissions generated by such activities are temporarily elevated when compared to emissions generated by long-term operations. Because of this difference in emissions generation characteristics, the air quality significance thresholds for construction activity are intentionally set higher than those for long-term operational activity. Comparing combined construction-source and operational source emissions against an operational emissions threshold distorts the impacts of emissions and provides no meaningful information regarding the actual significance or air emissions impacts. Moreover, there is no established threshold for assessing the significance of combined construction-source and operational-source emissions. For these reasons, the Lead Agency opts not to further analyze modeling of combined emissions sources.

Findings and conclusions of the EIR are not affected. No revisions to the EIR are proposed or required.

Comment AQMD-6

Additional Air Quality and Greenhouse Gas Mitigation Measures

According to the Draft EIR and Appendix D, the Lead Agency utilizes CalEEMod's latest version to analyze the maximum daily emissions from Proposed Project's construction and operational activities. The peak unmitigated construction and peak operational emissions are shown in Tables 4.3-4, 4.3-6, and 4.3-7. The Lead Agency concludes that regional construction and operational emissions would be significant and unavoidable. To reduce the emissions from construction and operational activities, the Lead Agency proposes mitigation measures (MM) from 4.3.1 to 4.3.18. However, the Lead Agency concludes that the impact of air quality and greenhouse gas are significant and unavoidable even with mitigation incorporated.

Mitigation measures for operational air quality impacts from mobile sources that the Lead Agency should consider in the Final EIR may include the following:

- *Require zero-emissions (ZE) or near-zero emission (NZE) on-road haul trucks, such as heavy-duty trucks with natural gas engines that meet the CARB's adopted optional NOx emissions standard at 0.02 grams per brake horsepower-hour (g/bhp-hr), if and when feasible. Given the state's clean truck rules and regulations aiming to accelerate the utilization and market penetration of ZE and NZE trucks, such as the Advanced Clean Trucks Rule and the Heavy-Duty Low NOx Omnibus Regulation, ZE and NZE trucks will become increasingly more available to use. The Lead Agency should require a phase-in schedule to incentivize using these cleaner operating trucks to reduce any significant adverse air quality impacts. South Coast AQMD staff is available to discuss the availability of current and upcoming truck technologies and incentive programs with the Lead Agency. At a minimum, require the use of the 2010 model year that meets CARB's 2010 engine emissions standards at 0.01 g/bhp-hr of particulate matter (PM) and 0.20 g/bhp-hr of NOx emissions or newer, cleaner trucks. Where appropriate, include environmental analyses to evaluate and identify sufficient electricity and supportive infrastructures in the Energy and Utilities and Service Systems Sections in the CEQA document. Include the requirement in applicable bid documents, purchase orders, and contracts. Operators shall maintain records of all trucks associated with project construction to document that each truck used meets these emission standards and make*

the records available for inspection. The Lead Agency should conduct regular inspections to the maximum extent feasible to ensure compliance.

- *Limit the daily number of trucks allowed at the Proposed Project to levels analyzed in the Final CEQA document. If higher daily truck volumes are anticipated to visit the site, the Lead Agency should commit to re-evaluating the Proposed Project through CEQA prior to allowing this higher activity level.*
- *Provide electric vehicle (EV) charging stations or, at a minimum, provide the electrical infrastructure, and electrical panels should be appropriately sized. Electrical hookups should be provided for truckers to plug in any onboard auxiliary equipment.*

Mitigation measures for operational air quality impacts from other area sources that the Lead Agency should consider in the Final EIR may include the following:

- *Maximize the use of solar energy by installing solar energy arrays*
- *Use light-colored paving and roofing materials*
- *Utilize only Energy Star heating, cooling, and lighting devices, and appliances*
- *Use of water-based or low-VOC cleaning products that go beyond the requirements of South Coast AQMD Rule 1113*

Furthermore, the Final EIR needs to clarify the routes designated for trucks associated with the Proposed Project development. Thus, design considerations for the Proposed Project that the Lead Agency should consider included in the Final EIR to further reduce air quality and health risk impacts may include the following:

- *Identify any designated truck routes to transport to and from the Proposed Project*
- *Clearly mark truck routes with trailblazer signs so that trucks will not travel next to or near sensitive land uses (e.g., residences, schools, daycare centers, etc.)*
- *Design the Proposed Project such that truck entrances and exits are not facing sensitive receptors and trucks will not travel past sensitive land uses to enter or leave the Proposed Project site*
- *Design the Proposed Project such that any check-in point for trucks is inside the Proposed Project site to ensure that no trucks are queuing outside*

- *Design the Proposed Project to ensure that truck traffic inside the Proposed Project site is as far away as feasible from sensitive receptors*
- *Restrict overnight truck parking in sensitive land uses by providing overnight truck parking inside the Proposed Project site*

South Coast AQMD staff also suggests the Lead Agency review the below-listed references and consider including the additional recommended mitigation measures in the Final EIR:

- *State of California – Department of Justice: Warehouse Projects: Best Practices and Mitigation Measures to Comply with the California Environmental Quality Act*
- *South Coast AQMD 2022 South Coast Air Quality Management Plan,29 specifically:*
  - *Appendix IV-A – South Coast AQMD's Stationary and Mobile Source Control Measures*
  - *Appendix IV-B – CARB's Strategy for South Coast*
  - *Appendix IV-C – SCAG's Regional Transportation Strategy and Control Measures*
- *United States Environmental Protection Agency (U.S. EPA): Mobile Source Pollution - Environmental Justice and Transportation*

Response AQMD-6

Additional GHG emissions mitigation measures suggested by AQMD will be considered by the Lead Agency in their deliberations regarding the Project. The measures offered by AQMD are already materially incorporated in the Project, either through the EIR Mitigation Measures (see EIR Mitigation Measures 4.3.2 through 4.3.18) or through mandated compliance with GHG emissions reduction and control measures incorporated in the City Community Climate Action Plan (see EIR Mitigation Measure 4.4.1).

Regarding truck emissions along routes accessing the Project site, the EIR HRA modeling reflects likely maximum impacts, including likely maximum impacts from emissions generated by trucks accessing the Project. These impacts are substantiated to be less-than-significant (DEIR, pp. 4.3-46 – 4.3-48, Project HRA [EIR Appendix D], pp. 11 – 28). The

Lead Agency, through the Project Conditions of Approval, may impose additional design criteria that could further reduce already less-than-significant HRA impacts.

Findings and conclusions of the EIR are not affected. No revisions to the EIR are proposed or required.

Comment AQMD-7

Health Risk Reduction Strategies

Notwithstanding the court rulings, South Coast AQMD staff recognizes that the Lead Agency that approves CEQA documents retain the authority to include any additional information they deem relevant to assessing and mitigating the environmental impacts of a project. South Coast AQMD staff is concerned about the potential public health impacts of siting sensitive populations within proximity of sources of air pollution (e.g., warehouse). Therefore, it is recommended that, prior to approving future development projects, the Lead Agency consider the impacts of air pollutants on people who will live in and/or nearby a new project location and provide mitigation where necessary. Additionally, South Coast AQMD staff suggests that the Lead Agency review the CARB Air Quality Land Use and Handbook: A Community Health Perspective as it is a reference guide for evaluating and reducing air pollution impacts associated with new projects that go through the land use decision-making process with additional guidance on strategies to reduce air pollution exposure near high-volume roadways available in CARB's technical advisory.

Response AQMD-7

AQMD recommendations regarding air quality impact assessments and assessment methodologies are acknowledged.

The current Lead Agency air quality impact assessments and assessment methodologies comprehensively consider and address potential air quality impacts of all Projects consistent with CEQA requirements. Please refer also to Responses AQMD-3 through AQMD-6.

Findings and conclusions of the EIR are not affected. No revisions to the EIR are proposed or required.

Comment AQMD-8

Development of Air Quality Mitigation/Community Benefit Funds

Due to the proximity to sensitive receptors (e.g., residences, schools), the Proposed Project should consider additional mitigation strategies to reduce the health risk exposure to sensitive receptors. Many strategies are available to reduce exposures, including, but not limited to, building filtration systems with Minimum Efficiency Reporting Values (MERV) 13 or better, or in some cases, MERV 15 or better is recommended, building design, orientation, location, vegetation barriers or landscaping screening. Enhanced filtration units are capable of reducing exposures. However, enhanced filtration systems have limitations. For example, in a study that South Coast AQMD conducted to investigate filters, a cost burden is expected to be within the range of $120 to $240 per year to replace each filter panel. The initial start-up cost could substantially increase if a Heating, Ventilation, and Air Conditioning (HVAC) system need to be installed and if standalone filter units are required. Installation costs may vary, including costs for conducting site assessments and obtaining permits and approvals before filters can be installed. Other costs may include filter life monitoring, annual maintenance, and training for conducting maintenance and reporting. In addition, because the filters would not be effective unless the HVAC system is running, there may be increased energy consumption. It is typically assumed that the filters operate 100 percent of the time while residents are indoors, and the environmental analysis does not generally account for the times when the residents have their windows or doors open or are in common space areas of the project. Additionally, these filters have no ability to filter out any toxic gases. Furthermore, when used filters are replaced, the replacement has the potential to result in emissions from the transportation of used filters at disposal sites and generate solid waste. Therefore, any filtration unit's presumed effectiveness and feasibility should be carefully evaluated in more detail before assuming they will sufficiently alleviate exposure to DPM emissions.

In addition, South Coast AQMD offers a broad range of programs for businesses, the community, and local government that help to achieve cleaner air quality for all. Many of these programs offer financial incentives for implementing new clean air technologies. Some provide partnerships and new ways of addressing air quality issues throughout the South Coast Basin. Therefore, South Coast AQMD staff recommends that the Lead Agency review the incentive and programs on the South Coast AQMD Incentives & Programs landing page, http://www.aqmd.gov/home/programs.

Response AQMD-8

AQMD discusses various measures and community benefit programs directed to generally reducing health effects of air pollutant emissions. The Lead Agency acknowledges these measures and community benefit programs.

Consistent with CEQA requirements, the EIR substantiates that potential health risks attributable to Project-source air pollutant emissions would be less-than-significant. No additional mitigation for these impacts is required. Measures and community benefit programs outlined by AQMD are not required. Outside of the CEQA and EIR processes, the Lead Agency may consider additional strategies that could further reduce the Project's already less-than-significant impacts. Please refer also to Responses AQMD-3 through AQMD-7.

Findings and conclusions of the EIR are not affected. No revisions to the EIR are proposed or required.

Comment AQMD-9

South Coast AQMD Rules 2305 and 316

On May 7, 2021, South Coast AQMD's Governing Board adopted Rule 2305 – Warehouse Indirect Source Rule – Warehouse Actions and Investments to Reduce Emissions (WAIRE) Program, and Rule 316 – Fees for Rule 2305. Rules 2305 and 316 are new rules that will reduce regional and local emissions of nitrogen oxides (NOx) and particulate matter (PM), including diesel PM (DPM). These emission reductions will reduce public health impacts for communities near warehouses from mobile sources associated with warehouse activities. Also, the emission reductions will help the region attain federal and state ambient air quality standards. Rule 2305 applies to owners and operators of warehouses greater than or equal to 100,000 square feet. Under Rule 2305, operators are subject to an annual WAIRE Points Compliance Obligation calculated based on the annual number of truck trips to the warehouse. WAIRE Points can be earned by implementing actions in a prescribed menu in Rule 2305, implementing a site-specific custom plan, or paying a mitigation fee. Warehouse owners are only required to submit limited information reports, but they can opt-in to earn Points on behalf of their tenants if they choose because certain actions to reduce emissions may be better achieved during the warehouse

development phase, for instance, the installation of solar and charging infrastructure. Rule 316 is a companion fee rule for Rule 2305, allowing South Coast AQMD to recover costs associated with Rule 2305 compliance activities. Since the Proposed Project consists of developing warehouses (unrefrigerated and refrigerated) under light industrial land use up to a maximum of 2,767,148 square feet, the Proposed Project's warehouse owners and operators will be required to comply with Rule 2305 once the warehouse is occupied. Therefore, South Coast AQMD staff recommends that the Lead Agency review South Coast AQMD Rule 2305 to determine the potential WAIRE Points Compliance Obligation for future operators and explore whether additional project requirements and CEQA mitigation measures can be identified and implemented at the Proposed Project that may help future warehouse operators meet their compliance obligation. South Coast AQMD staff is available to answer questions concerning Rule 2305 implementation and compliance by phone or email at (909) 396-3140 or waire-program@aqmd.gov. For implementation guidance documents and compliance and reporting tools, please visit South Coast AQMD's WAIRE Program webpage.

Response AQMD-9

AQMD cites Rule 2305 – *Warehouse Indirect Source Rule – Warehouse Actions and Investments to Reduce Emissions (WAIRE) Program*, and Rule 316 – *Fees for Rule 2305 Requirements*. As a matter of law, the Project must comply with applicable Rule 2035/Rule 316 requirements, and all other applicable SCAQMD Rules.

Findings and conclusions of the EIR are not affected. No revisions to the EIR are proposed or required.

Comment AQMD-10

South Coast AQMD Permits and Responsible Agency

In the event that the implementation of the Proposed Project would require using new stationary equipment, permits from South Coast AQMD are required. Stationary equipment not only requires permits to construct but also permits to operate. Therefore, the Lead Agency should discuss any stationary equipment utilized in the Proposed Project's construction and operation, requiring South Coast AQMD permits and identifying South Coast AQMD as a Responsible Agency for the Proposed Project in the Final EIR. Any assumptions for the stationary sources in

the Final EIR will also be used as the basis for the permit conditions and limits for the Proposed Project. Please contact South Coast AQMD's Engineering and Permitting staff at (909) 396-3385 for questions on permits. For more general information on permits, please visit South Coast AQMD's webpage at: http://www.aqmd.gov/home/permits.

Response AQMD-10

AQMD cites permitting requirements for any new stationary equipment that may be implemented by the Project. Per the EIR, no new stationary equipment that would be a substantive source of air pollutant emissions is proposed by the Project. Should such equipment be proposed at a future date, as a matter of law, the Project operator(s) would be required to comply with AQMD's permitting requirements.

Findings and conclusions of the EIR are not affected. No revisions to the EIR are proposed or required.

Comment AQMD-11

Conclusion

*Pursuant to California Public Resources Code section 21092.5(a) and CEQA Guidelines section 15088(b), South Coast AQMD staff requests that the Lead Agency provide South Coast AQMD staff with written responses to all comments contained herein, at least 10 days prior to the certification of the Final EIR.36 In addition, issues raised in the comments should be addressed in detail, giving reasons why specific comments and suggestions are not accepted. There should be good faith and reasoned analysis in response. Conclusory statements unsupported by factual information will not suffice (*CEQA Guidelines *section 15088(c)). Conclusory statements do not facilitate the purpose and goal of CEQA on public disclosure and are not meaningful, informative, or useful to decision-makers and to the public who are interested in the Proposed Project.*

South Coast AQMD staff is available to work with the Lead Agency to address any air quality questions that may arise from this comment letter. Please contact Danica Nguyen, Air Quality Specialist, at dnguyen1@aqmd.gov, should you have any questions.

Response AQMD-11

Written responses to all AQMD comments have been provided to AQMD as required under PRC section 21092.5(a) and *CEQA Guidelines* section 15088(b). All comments and issues raised by AQMD have been adequately and appropriately addressed herein consistent with *CEQA Guidelines* section 15088(c). Contact information provided by AQMD is noted.

Findings and conclusions of the EIR are not affected. No revisions to the EIR are proposed or required.

RE: Rich-Haven Specific Plan 2022 Amendment (File No. PSPA22-001) & Proposed Changes to PA 5A

Lorena Mejia,

My name is Eric Belisle and I reside at 3629 E Happy Paseo, Unit 153, Ontario, CA 91761. I write to you to provide commentary regarding the Rich-Haven Specific Plan 2022 Amendment (File No. PSPA22-001) and the proposed changes to PA 5A.

This area (PA 5A) is directly adjacent to **existing** residential dwellings with no street separating us – the owners and residents of this neighborhood did not purchase into this area to see that the planning in their own backyards be changed to light industrial use. We do not want a warehouse in our backyards. The environmental impact report refers to several "significant and unavoidable" impacts on air quality, as well as needed mitigation for noise. Further, PA 5A is already divided by an SCE Easement, placing any new construction very close to our homes.

The changes to PA 5A have negative environmental impacts to those of us already living here. We do not have the choice to not buy here – the land is already developed, and we already did before a bait-and-switch on the planning surrounding our homes. Selling our homes adjacent to this zoning will present challenges and decreased values.

I ask that you please reconsider the zoning of PA 5A as open space or residential use to protect our homes and families from the effects of being directly adjected to light industrial land use.

EB-1

Thank You,

Eric Belisle

I ask that you please reconsider the zoning of PA 5A as open space or residential use to protect our homes and families from the effects of being directly adjected to light industrial land use.

Response EB-1

Commenter residency and location relative to the Project site are recognized. Commenter preferences regarding development of the Project site and opinions regarding the Project are recognized.

The commenter correctly states that the EIR analysis substantiates that, even with application of mitigation, the Project would result in certain significant and unavoidable air quality impacts (EIR, pp. 1-33, 1-44, 1-45, 1-46, 1-50; EIR Section 4.3, *Air Quality*, et. al). Under CEQA, lead agencies can approve a project even if that project has significant and unavoidable impacts if the lead agency adopts a Statement of Overriding Considerations. Should the City decide to approve the Project and Certify the EIR, Findings and a Statement of Overriding Considerations would be required as provided for at *CEQA Guidelines* Section 15091. *Findings*, and Section 15093. *Statement of Overriding Considerations*, respectively.

The commenter correctly states that the EIR includes mitigation for the Project's potential noise impacts. The EIR substantiates that with application of mitigation, the Project's potential noise impacts would be less-than-significant (EIR, pp. 1-51, 1-52, 1-53, 1-54; EIR Section 4.4, *Noise*, et. al).

Commenter opinions regarding property valuations are noted. CEQA does not consider potential economic impacts of projects, unless such impacts could result in adverse physical impacts.

The commenter's statements have been forwarded to the decision-makers for their consideration. Findings and conclusions of the EIR are not affected. No revisions to the EIR are proposed or required. The City appreciates the commenter's participation in the Project CEQA review process.

Subject: Rich Haven specific plan comments

Hello Lorena,

I am a resident of the Neuhouse community which is part of the rich haven plan and would like to offer some feedback that my neighbors also feel similarly about as I got a notice in my mail about the draft plans for the upcoming project in our area. Not sure if this is the appropriate place to send some comments but I am hoping this will at least reach the right people.

We are not sure if the city is aware but haven avenue is backed up at riverside drive until where Ontario ranch is every weekday morning due to influx of residents from Ontario ranch. Most of this is cause by people dropping off their kids at the nearby middle school and getting to the 60 freeway for work. My commute is increased by 10-15 minutes due to the one lane layout of haven avenue... and with the plans to add even more commercial and residential plans in the empty land in that area, it would be comical to not open up more lanes somehow on haven to help meet the demand of cars coming from Ontario ranch up Haven to enter the 60 freeway.

In addition, we hope that you highly consider the type of commercial businesses you bring into this area... Ontario ranch is up and coming... and in a way it seems like you guys are trying to mimic an almost Irvine-like type of community (great park, all new housing units, etc), I can tell you as someone who moved from south OC to here, a lot of the residents like myself have been disappointed in the potential choices of commercial business that will potentially occupy these spaces (lots of rumored layouts with potential plans floating on the internet and social media). We hope to see more businesses that raise the scale of the community and unfortunately, inland empire has nothing to offer compared to luxury shopping centers in Los Angeles and OC. I would like to encourage thoughtful conversation with your team on what you guys want to achieve with this area. Less lower tier stores that can be commonly found in inland empire please! Landscaping could also be improved all around.

I hope your teams considers the needs of their residents and the work it is going to take for this area to live up to the potential to break boundaries for the city. I am hopeful and excited to see what the plans are.

VO-1

Thank you for your time!

Good Morning Ms. Mejia,

My name is Kendra Reif and I am a resident that owns a home within the Rich-Haven Specific Plan area. I was interested in learning more about the amendment to the SP. Can you please highlight the majors differences between the existing SP and the new one. Do you know who would be developing the additional housing units, commercial spaces, and warehouse? Have they identified end uses for the commercial and industrial spaces? KR-1

Thank you so much,

Kendra Reif

4.0 MITIGATION MONITORING PROGRAM

4.0 MITIGATION MONITORING PROGRAM

4.1 INTRODUCTION

To ensure that the mitigation measures contained in this EIR are properly implemented, a mitigation monitoring program has been developed pursuant to state law. This Mitigation Monitoring Program (MMP) identifies measures incorporated in the Project which reduce its potential environmental effects; the entities responsible for implementation and monitoring of mitigation measures; and timing for implementation of mitigation measures. As described in *CEQA Guidelines* §15097, this MMP employs both reporting on, and monitoring of, Project mitigation measures.

The objectives of the MMP are to:

- Assign responsibility for, and further proper implementation of mitigation measures;
- Assign responsibility for, and provide for monitoring and reporting of compliance with mitigation measures;
- Provide the mechanism to identify areas of noncompliance and need for enforcement action before irreversible environmental damage occurs.

Mitigation monitoring and reporting procedures incorporated in the Project are presented in the following Section 4.2. Specific mitigation measures incorporated in the Project, mitigation timing, and implementation and reporting/monitoring responsibilities are presented within this Section in Table 4.2-1.

4.2 MITIGATION MONITORING AND REPORTING

Mitigation Monitoring and Responsibilities

As the Lead Agency, the City of Ontario is responsible for ensuring full compliance with the mitigation measures adopted for the Project. The City shall monitor and report on all mitigation activities. Mitigation measures shall be implemented at different stages of development throughout the Project area. In this regard, the responsibilities for implementation have been assigned to the Lead and Responsible Agencies, Applicant or successor(s) in interest, Contractors, On-Site Monitors, or combinations thereof.

If during the course of Project implementation, any of the mitigation measures identified herein cannot be successfully implemented, the City shall be immediately informed, and the City shall then inform any affected responsible agencies. The City, in conjunction with any affected responsible agencies, shall then determine if modification to the Project is required and/or whether alternative mitigation is appropriate.

Table 4.2-1: Mitigation Monitoring Program

General Note: *To facilitate coordination and effective implementation of mitigation measures, the mitigation measures provided herein shall appear on all grading plans, construction specifications, and bid documents. Incorporation of required notations shall be verified by the City prior to issuance of first development permit. Implementation Entities shall comply with listed mitigation requirements.*

Section / MM No.	Mitigation Measure	Mitigation Timing/Remarks	Implementation Entity	Monitoring/ Reporting Entity	Date of Completion/ Initials
4.3 Air Quality					
4.3.1	*Fugitive dust control measures surpassing SCAQMD Rule 403 minimum requirements shall be implemented. Such measures may include: use of nontoxic soil stabilizers, applying water every four hours to active soil disturbing activities and tarping and/or maintaining a minimum of 24 inches of freeboard on trucks hauling dirt, sand, soil, or other loose materials.*	Fugitive dust control measures shall be implemented for the duration of site disturbing activities. This measure's operational implementation is subject to periodic City inspection and verification.	Applicant or successor(s) in interest, contractor(s), developer(s).	City of Ontario Building Department.	
4.3.2	*Construction equipment rated by the United States Environmental Protection Agency as having Tier 3 or higher exhaust emission limits shall be utilized.*	Use of Tier 3 equipment shall be required for the duration of construction activities. This measure's operational implementation is subject to periodic City inspection and verification.	Applicant or successor(s) in interest, contractor(s), developer(s).	City of Ontario Building Department.	
4.3.3	*Construction equipment shall be properly serviced and maintained to the manufacturer's standards.*	Construction equipment shall be properly serviced and maintained for the duration of construction activities. This measure's operational implementation is subject to periodic City inspection and verification.	Applicant or successor(s) in interest, contractor(s), developer(s).	City of Ontario Building Department.	
4.3.4	*Non-essential idling of construction equipment shall be limited to no more than five consecutive minutes.*	Equipment idling restrictions shall be in force for the duration of construction activities. This measure's operational implementation is subject to periodic City inspection and verification.	Applicant or successor(s) in interest, contractor(s), developer(s).	City of Ontario Building Department.	
4.3.5	*Super-Compliant VOC paints for coating of architectural surfaces shall be used whenever possible.*	Build plan language specifying required use of "Super-Compliant" low VOC paints shall be verified by the City prior to issuance of building permit(s).	Applicant or successor(s) in interest, contractor(s), developer(s).	City of Ontario: Planning Department, Building Department.	

Table 4.2-1: Mitigation Monitoring Program

General Note: *To facilitate coordination and effective implementation of mitigation measures, the mitigation measures provided herein shall appear on all grading plans, construction specifications, and bid documents. Incorporation of required notations shall be verified by the City prior to issuance of first development permit. Implementation Entities shall comply with listed mitigation requirements.*

Section / MM No.	Mitigation Measure	Mitigation Timing/Remarks	Implementation Entity	Monitoring/ Reporting Entity	Date of Completion/ Initials
4.3.6	*Construction contractors shall use off-road diesel construction equipment that complies with EPA/CARB Tier 4 Interim or better emissions standards during all construction phases.*	Language specifying required use of Tier 4 construction equipment or better shall be verified by the City prior to issuance of development permit(s). Demonstrated ability to supply the Tier 4 construction equipment shall be provided by contractors/developers prior to issuance of development permit(s). At the time of mobilization of each applicable unit of equipment, and throughout construction activities, a copy of each unit's certified tier specification or model year specification and CARB or South Coast AQMD operating permit (if applicable) shall be made available by contractor(s)/developer(s) upon request by the City. Throughout construction activities, contractor(s)/developer(s) shall report to the City documenting Tier 4 equipment compliance. This measure's operational implementation is subject to periodic City inspection and verification.	Applicant or successor(s) in interest, contractor(s), developer(s).	City of Ontario: Planning Department, Building Department.	
4.3.7	*Legible, durable, weather-proof signs shall be placed at truck access gates, loading docks, and truck parking areas that identify applicable CARB anti-idling regulations. At a minimum, each sign shall include: 1) instructions for truck drivers to shut off engines when not in use; 2) instructions for drivers of diesel trucks to restrict idling to no more than five (5) minutes once the vehicle is stopped, the transmission is set to "neutral" or "park," and the parking brake is engaged; and 3) telephone numbers of the building facilities manager and the CARB to report violations. Prior to the issuance of an occupancy permit, the City shall conduct a site inspection to ensure that the signs are in place.*	Implemented signs per this measure shall be verified by the City prior to the issuance of Certificate(s) of Occupancy for non-residential use(s).	Applicant or successor(s) in interest, contractor(s), developer(s).	City of Ontario: Building Department and Planning Department.	

Table 4.2-1: Mitigation Monitoring Program

General Note: *To facilitate coordination and effective implementation of mitigation measures, the mitigation measures provided herein shall appear on all grading plans, construction specifications, and bid documents. Incorporation of required notations shall be verified by the City prior to issuance of first development permit. Implementation Entities shall comply with listed mitigation requirements.*

Section / MM No.	Mitigation Measure	Mitigation Timing/Remarks	Implementation Entity	Monitoring/ Reporting Entity	Date of Completion/ Initials
4.3.8	*Industrial building occupants/tenants shall be provided documentation on funding opportunities, such as the Carl Moyer Program, that provide incentives for using cleaner-than-required engines and equipment.*	Inclusion of language notifying non-residential tenants of *Carl Moyer Program* availability shall be verified by the City prior to issuance of Business License(s).	Applicant or successor(s) in interest, contractor(s), developer(s).	City of Ontario: Building Department and Planning Department.	
4.3.9	*Non-residential building plans and site designs shall include natural light, passive heating, and passive cooling measures. Typical measures would include efficient window designs, awnings, overhangs, and skylights.*	Inclusion of natural light, passive heating, and passive cooling measures in site plans and building plans shall be verified by the City prior to final site plan approval(s), and issuance of building permit(s) as applicable.	Applicant or successor(s) in interest, contractor(s), developer(s).	City of Ontario: Building Department and Planning Department.	
4.3.10	*Building and site plans for non-residential uses shall provide electrical service accessible to landscaped areas.*	Inclusion of accessible electrical service and outlets in site plans and building plans shall be verified by the City prior to final site plan approval(s), and issuance of building permit(s) as applicable.	Applicant or successor(s) in interest, contractor(s), developer(s).	City of Ontario: Building Department and Planning Department.	
4.3.11	*The following or similar language shall be included in lease/sale agreements for all non-residential buildings: "Building tenants shall utilize electric equipment for landscape maintenance to the extent feasible, through requirements in the lease agreements."*	Inclusion of language specifying required use of electrical landscape equipment shall be verified by the City prior to issuance of Business License(s) for non-residential uses. Verification of this measure's operational implementation is subject to periodic City inspection.	Applicant or successor(s) in interest, contractor(s), developer(s).	City of Ontario: Building Department and Planning Department.	
4.3.12	*The following or similar language shall be included in lease/sale agreements for all industrial buildings: "Tenants shall utilize only electric or natural gas service yard trucks (hostlers), pallet jacks and forklifts, and other onsite equipment, through requirements in the lease agreements. Electric-powered service yard trucks (hostlers), pallet jacks and forklifts, and other onsite equipment shall also be required instead of diesel-powered equipment, if technically feasible. Yard trucks may be diesel fueled in lieu of electrically or natural gas fueled provided such yard trucks are at least compliant with California Air Resources Board (CARB) 2010 standards for on-road vehicles or CARB Tier 4 compliant for off-road vehicles."*	Inclusion of language per this measure shall be verified by the City prior to issuance of Business License(s) for industrial uses. This measure's operational implementation is subject to periodic City inspection and verification.	Applicant or successor(s) in interest, contractor(s), developer(s).	City of Ontario: Building Department and Planning Department.	

Table 4.2-1: Mitigation Monitoring Program

General Note: *To facilitate coordination and effective implementation of mitigation measures, the mitigation measures provided herein shall appear on all grading plans, construction specifications, and bid documents. Incorporation of required notations shall be verified by the City prior to issuance of first development permit. Implementation Entities shall comply with listed mitigation requirements.*

Section / MM No.	Mitigation Measure	Mitigation Timing/Remarks	Implementation Entity	Monitoring/ Reporting Entity	Date of Completion/ Initials
4.3.13	*The following or similar language shall be included in lease/sale agreements for all industrial buildings: "Tenants that do not already operate 2010 and newer trucks shall apply in good faith for funding to replace/retrofit their trucks. Funding mechanisms include Carl Moyer, VIP, Prop 1B, SmartWay Finance, or other similar funds. If awarded, the tenant shall be required to accept and use the funding. Tenants shall be encouraged to consider the use of alternative fueled trucks as well as new or retrofitted diesel trucks. Tenants shall also be encouraged to become SmartWay Partners, if eligible." Note: This measure shall not apply to trucks that are not owned or otherwise controlled by the facility owner or facility tenant.*	Inclusion of language per this measure shall be verified by the City prior to issuance of Business License(s) for industrial uses. This measure's operational implementation is subject to periodic City inspection and verification.	Applicant or successor(s) in interest, contractor(s), developer(s).	City of Ontario: Building Department and Planning Department.	
4.3.14	*The following or similar language shall be included in lease/sale agreements for all industrial buildings: "Tenants who employ 250 or more employees on a full- or part-time basis shall comply with SCAQMD Rule 2202, On-Road Motor Vehicle Mitigation Options. The purpose of this rule is to provide employees with a menu of options to reduce employee commute vehicle emissions. Tenants with less than 250 employees or tenants with 250 or more employees who are exempt from SCAQMD Rule 2202 (as stated in the Rule) shall either (a) join with a tenant who is implementing a program in accordance with Rule 2202 or (b) implement an emission reduction program similar to Rule 2202 with annual reporting of actions and results to the City. The tenant-implemented program would include, but not be limited to the following:* • *Appoint a Transportation Demand Management (TDM) coordinator who would promote the TDM program, activities and features to all employees.* • *Create and maintain a "commuter club" to manage subsidies or incentives for employees who carpool, vanpool, bicycle, walk, or take transit to work.* • *Inform employees of public transit and commuting services available to them (e.g., social media, signage).* • *Provide on-site transit pass sales and discounted transit passes.* • *Guarantee a ride home.* • *Offer shuttle service to and from public transit and commercial areas/food establishments, if warranted.*	Inclusion of language per this measure shall be verified by the City prior to issuance of Business License(s) for industrial uses. This measure's operational implementation is subject to periodic City inspection and verification.	Applicant or successor(s) in interest, contractor(s), developer(s).	City of Ontario: Building Department and Planning Department.	

Table 4.2-1: Mitigation Monitoring Program

General Note: *To facilitate coordination and effective implementation of mitigation measures, the mitigation measures provided herein shall appear on all grading plans, construction specifications, and bid documents. Incorporation of required notations shall be verified by the City prior to issuance of first development permit. Implementation Entities shall comply with listed mitigation requirements.*

Section / MM No.	Mitigation Measure	Mitigation Timing/Remarks	Implementation Entity	Monitoring/ Reporting Entity	Date of Completion/ Initials
4.3.15	*Loading docks shall be designed to be compatible with SmartWay trucks.*	Design of loading docks per this measure shall be verified by the City prior to final site plan approval(s), and issuance of building permit(s).	Applicant or successor(s) in interest, contractor(s), developer(s).	City of Ontario: Building Department and Planning Department.	
4.3.16	*Non-residential use site plans shall include signs or other directional indicators delineating required site access and on-site circulation plan.*	Inclusion of signs or other directional indicators delineating required site access and on-site circulation shall be verified by the City prior to final site plan approval(s) for non-residential uses.	Applicant or successor(s) in interest, contractor(s), developer(s).	City of Ontario: Building Department and Planning Department.	
4.3.17	*The following or similar language shall be included in lease/sale agreements for all non-residential buildings: Tenants shall install (a) sign(s) on their respective property(ies) with telephone, email, and regular mail contact information for a designated tenant representative (representative) who would receive complaints about excessive noise, dust, fumes, or odors. The sign shall also identify contact data for the City for perceived Code violations. The representative shall keep records of any complaints received and actions taken to communicate with the complainant and resolve the complaint. The representative shall endeavor to resolve complaints within 24 hours.*	Inclusion of language per this measure shall be verified by the City prior to issuance of Business License(s) for non-residential uses. This measure's operational implementation is subject to periodic City inspection and verification.	Applicant or successor(s) in interest, contractor(s), developer(s).	City of Ontario: Building Department and Planning Department.	
4.3.18	*Industrial building designs and site plans shall incorporate electrical supply lines and panels sized to support anticipated future requirements for heavy truck charging facilities. Such designs and plans shall be based on reasonable predictions derived from the most recent available truck manufacturer's data.*	Inclusion of electrical supply lines and panels per this measure for industrial uses shall be verified by the City prior to final site plan approval(s), and issuance of building permit(s).	Applicant or successor(s) in interest, contractor(s), developer(s).	City of Ontario: Building Department and Planning Department.	
4.4 Greenhouse Gas Emissions					
4.4.1	*Development proposals within the Specific Plan Area shall implement Screening Table Measures to achieve a minimum of 100 points per the City's 2022 CCAP Update Screening Tables. The City shall verify minimum 100-point attainment prior to issuance of site plans and building permits.*	Verification of CAP Screening Table Measures achieving the CAP 100-point performance standard shall be verified prior to the issuance of building permit(s) and/or site plans (as applicable). Implemented Screening Table Measures	Applicant or successor(s) in interest, contractor(s), developer(s).	City of Ontario: Planning Department, Building Department.	

Table 4.2-1: Mitigation Monitoring Program

General Note: *To facilitate coordination and effective implementation of mitigation measures, the mitigation measures provided herein shall appear on all grading plans, construction specifications, and bid documents. Incorporation of required notations shall be verified by the City prior to issuance of first development permit. Implementation Entities shall comply with listed mitigation requirements.*

Section / MM No.	Mitigation Measure	Mitigation Timing/Remarks	Implementation Entity	Monitoring/ Reporting Entity	Date of Completion/ Initials
		shall be verified prior to issuance of Certificate(s) of Occupancy.			
4.6 Noise					
4.6.1	*Prior to Grading Permit issuance, the Applicant shall demonstrate that the Project complies with the following:* • *All construction equipment, fixed or mobile, shall be equipped with properly operating and maintained mufflers, to the satisfaction of the Noise Control Officer;* • *During construction, stationary construction equipment shall be placed such that emitted noise is directed away from sensitive noise receivers to the satisfaction of the City Planner; and* • *During construction and to the satisfaction of the City Planner, stockpiling and vehicle staging areas shall be located as far as practical from noise sensitive receptors during construction activities.*	Contractor(s) shall designate a Noise Control Officer. The Noise Control Officer(s) shall ensure compliance with the City Noise Ordinance, shall respond to any citizen noise complaints, and shall ensure implementation of the EIR noise impact mitigation measures. On-going verification of noise impact mitigation measure implementation throughout Project development. Noise officers shall respond to citizen noise complaints within 24 hours and shall coordinate response(s) to complaints with the City.	Applicant or successor(s) in interest, contractor(s), developer(s).	City of Ontario: Building Department.	
4.6.2	*Operating or causing the operation of any tools or equipment used in construction, drilling, repair, alteration, or demolition work between the hours of 10 p.m. and 7 a.m. is prohibited. The City Planner may approve additional hours when it can be found that such additional hours will not generate additional disturbance, or that mitigation measures will ensure compatibility with nearby residential areas.*	On-going verification of noise impact mitigation measure implementation throughout Project development. Noise officers shall respond to citizen noise complaints within 24 hours and shall coordinate response(s) to complaints with the City.	Applicant or successor(s) in interest, contractor(s), developer(s).	City of Ontario: Building Department.	
4.6.3	*Prior to the construction of residential development along Riverside Drive, Haven Avenue, Mill Creek Avenue, Edison Avenue, and Milliken Avenue, an acoustical noise analysis shall be prepared prior to the submittal of final tentative tract maps to ensure that exterior and interior noise levels are met. The acoustical analysis shall demonstrate that the buildings have been designed to limit interior noise levels to 45 dBA CNEL and exterior noise (backyards and habitable balconies and patios) to less than 65 dBA CNEL. Individual*	The required acoustical analyses shall be reviewed and approved by the City prior to approval of final tract maps for residential development along Riverside Drive, Haven Avenue, Mill Creek Avenue, Edison Avenue, and Milliken Avenue.	Applicant or successor(s) in interest, contractor(s), developer(s).	City of Ontario: Planning Department, Building Department.	

Table 4.2-1: Mitigation Monitoring Program

General Note: *To facilitate coordination and effective implementation of mitigation measures, the mitigation measures provided herein shall appear on all grading plans, construction specifications, and bid documents. Incorporation of required notations shall be verified by the City prior to issuance of first development permit. Implementation Entities shall comply with listed mitigation requirements.*

Section / MM No.	Mitigation Measure	Mitigation Timing/Remarks	Implementation Entity	Monitoring/ Reporting Entity	Date of Completion/ Initials
	developments shall, to the extent feasible, implement site-planning techniques.				
4.6.4	*Prior to final development plan approval, on a project-by-project basis and at the discretion of the Ontario Planning Department, subsequent noise studies shall be prepared, which demonstrate site placement of stationary noise sources would not result in noise exceeding criteria established in the City of Ontario Municipal Code. The analysis shall verify that loading dock facilities, rooftop equipment, trash compactors and other stationary noise sources are adequately shielded and/or located at an adequate distance from residential areas in order to comply with the City's noise standards.*	Any required noise studies shall be reviewed and approved by the City prior to final site plan approval(s) for the development(s) under consideration. Noise studies shall ensure that noise levels received do not exceed levels considered and addressed in the EIR.	Applicant or successor(s) in interest, contractor(s), developer(s).	City of Ontario: Planning Department, Building Department.	
4.6.5	*Prior to Building Permit issuance and to the satisfaction of the Ontario Planning Department, the Project Applicants, on a project-by-project basis, shall demonstrate compliance with the following with respect to mechanical equipment:* • *Mechanical equipment shall include specifications of quiet equipment;* • *Mechanical equipment shall be properly selected and installed, and shall include sound attenuation packages;* • *To the extent possible, mechanical equipment shall be oriented away from the nearest noise sensitive receptors; and* • *The need for sound attenuation measures, and design of, such measures shall be determined as part of the final engineering design on a project-by-project basis.*	Mechanical equipment compliance requirements per this measure shall be verified prior to issuance of building permit(s).	Applicant or successor(s) in interest, contractor(s), developer(s).	City of Ontario: Planning Department, Building Department.	
4.6.6	*Where a commercial zone abuts a residential zone or residential use, the following or similar language shall be included in lease/sale agreements for all non-residential buildings: All deliveries of goods and supplies; trash pick-up, including the use of parking lot trash sweepers; and the operation of machinery or mechanical equipment which emits noise levels in excess of 65 dBA, as measured from the closest property line to the equipment, shall only be allowed between the hours of 7 a.m. and 10 p.m., unless otherwise specified in an approved conditional use permit or other discretionary approval.*	Inclusion of language per this measure shall be verified by the City prior to issuance of Business License(s) for non-residential uses. This measure's operational implementation is subject to periodic City inspection and verification.	Applicant or successor(s) in interest, contractor(s), developer(s).	City of Ontario: Planning Department, Building Department.	

Table 4.2-1: Mitigation Monitoring Program

General Note: *To facilitate coordination and effective implementation of mitigation measures, the mitigation measures provided herein shall appear on all grading plans, construction specifications, and bid documents. Incorporation of required notations shall be verified by the City prior to issuance of first development permit. Implementation Entities shall comply with listed mitigation requirements.*

Section / MM No.	Mitigation Measure	Mitigation Timing/Remarks	Implementation Entity	Monitoring/ Reporting Entity	Date of Completion/ Initials
4.6.7	*Prior to final development plan approval, on a project-by-project basis, a subsequent noise analysis shall be prepared, to the satisfaction of the Ontario Planning Department, which demonstrates that all feasible sound attenuation has been incorporated into the parking areas (i.e., landscaping and brushed driving surfaces), such that noise from parking areas has been minimized to the greatest extent practicable.*	Any required noise studies shall be reviewed and approved by the City prior to final site plan approval(s) for the development(s) under consideration. Noise studies shall ensure that noise levels received do not exceed levels considered and addressed in the EIR.	Applicant or successor(s) in interest, contractor(s), developer(s).	City of Ontario: Planning Department, Building Department.	
4.7 Hazards/Hazardous Materials					
4.7.1	*Prior to the issuance of permits for any structural demolition activities on the Project site, the Project developer(s) shall submit documentation to the City of Ontario Building Department that asbestos and lead-based paint issues are not applicable to their property or that appropriate remediation actions have been undertaken to correct any lead-based paint or asbestos issues. Any required remediation shall conform with the regulations of the South Coast Air Quality Management District and the State of California, Division of Occupational Health and Safety.*	Required documentation per this measure shall be provided to City of Ontario Building Department prior to the issuance of permits for any structural demolition activities on the Project site. Any required remediation shall be completed prior to the issuance of building permits or as otherwise specified by the City of Ontario Building Department.	Applicant or successor(s) in interest, contractor(s), developer(s).	City of Ontario: Planning Department, Building Department.	
4.7.2	*Testing for methane gas shall be conducted subsequent to mass grading of any site within the Specific Plan Area. Methane gas testing shall conform to requirements of "City of Ontario Building Department Methane Gas Assessment for Projects in the New Model Colony."[1] Project designs shall conform to the Assessment's Methane Design Guidelines or other requirements stipulated by the City of Ontario Building Department.*	To the satisfaction of the City of Ontario Building Department, testing for methane presence shall be completed prior to issuance of building permits.	Applicant or successor(s) in interest, contractor(s), developer(s).	City of Ontario: Planning Department, Building Department.	
4.7.3	*Site grubbing, clearing, and stockpiling and disposal of soils shall conform to City grading permit requirements. Such requirements may include, but would not be limited to, identification and segregation/stockpiling or proper disposal of soils that contain elevated levels of organic material.*	This measure's operational implementation is subject to periodic City inspection and verification.	Applicant or successor(s) in interest, contractor(s), developer(s).	City of Ontario: Building Department.

Table 4.2-1: Mitigation Monitoring Program

General Note: *To facilitate coordination and effective implementation of mitigation measures, the mitigation measures provided herein shall appear on all grading plans, construction specifications, and bid documents. Incorporation of required notations shall be verified by the City prior to issuance of first development permit. Implementation Entities shall comply with listed mitigation requirements.*

Section / MM No.	Mitigation Measure	Mitigation Timing/Remarks	Implementation Entity	Monitoring/ Reporting Entity	Date of Completion/ Initials
4.7.4	*Prior to approval of tract maps or approval for development of any uses on the Hillardis Property (APNs 218-161-04, 218-161-05, 218-161-10, 218-161-11), the Applicant or successor interest shall complete a Phase II Environmental Site Assessment (ESA) for that property. Prior to issuance of the first development permit for the site, the Applicant or successor interest shall comply with requirements of the Phase II ESA, and shall provide documentation to the City of Ontario to that effect.*	Completion of Phase II ESA for APNs 218-161-04, 218-161-05, 218-161-10, 218-161-11 shall be verified prior to approval of tract maps or approval for development of any uses within the referenced properties.	Applicant or successor(s) in interest, contractor(s), developer(s).	City of Ontario: Planning Department, Building Department.	
4.8 Hydrology and Water Quality					
4.8.1	*General: In conjunction with all development proposals within the Specific Plan Area, peak flow mitigation measures for each development shall be implemented such that discharges to receiving MPD storm drain mainlines do not exceed the maximum allowable flow rates identified at Project Hydrology Report, Appendix A, Exhibit 3. Ultimate design, location, and configuration of peak flow mitigation measures are site-and use-specific. Design, location, and configuration of peak flow mitigation measures shall be approved by the City as part of site plan review and approval processes.*	Hydrologic analyses shall be prepared for individual developments within the Specific Plan Area. Hydrologic analyses shall be reviewed and approved by the City prior to the issuance of development permits. Hydrologic analyses shall substantiate that discharges to receiving MPD storm drain mainlines do not exceed the maximum allowable flow rates identified at Project Hydrology Report, Appendix A, Exhibit 3.	Applicant or successor(s) in interest, contractor(s), developer(s).	City of Ontario: Planning Department, Building Department.	
4.8.2	*Haven Storm Drain Mitigation: Measures (e.g., detention basins or similar) to control peak flows to the Haven Storm Drain shall be implemented to address increased stormwater discharges resulting from development of Planning Areas 1A, 1B, 1C, 2C, and 3C. Please refer to Figure 4.8-5. Locations for these measures shall be reviewed and approved by the City prior to final site plan approval(s) for development within Planning Areas 1A, 1B, 1C, 2C, and 3C.*	Haven Storm Drain Mitigation per this measure shall be implemented prior to issuance of issuance of a Certificate of Occupancy within any of the following *Planning Areas: 1A, 1B, 1C, 2C, or 3C.*	Applicant or successor(s) in interest, contractor(s), developer(s).	City of Ontario: Planning Department, Building Department.	
4.8.3	*Mill Creek Storm Drain Mitigation: Peak flow mitigation measures shall be implemented for stormwater discharges resulting from development of Planning Areas 2C, 3C, 5A, 6A, and 6B. Please refer to Figure 4.8-5. Locations for these measures shall be reviewed and approved by the City prior to final site plan approval(s) for development within Planning Areas 2C, 3C, 5A, 6A, and 6B.*	Mill Creek Storm Drain Mitigation per this measure shall be implemented prior to issuance of issuance of a Certificate of Occupancy within any of the following *Planning Areas: 2C, 3C, 5A, 6A, or 6B.*	Applicant or successor(s) in interest, contractor(s), developer(s).	City of Ontario: Planning Department, Building Department.	

Table 4.2-1: Mitigation Monitoring Program

General Note: *To facilitate coordination and effective implementation of mitigation measures, the mitigation measures provided herein shall appear on all grading plans, construction specifications, and bid documents. Incorporation of required notations shall be verified by the City prior to issuance of first development permit. Implementation Entities shall comply with listed mitigation requirements.*

Section / MM No.	Mitigation Measure	Mitigation Timing/Remarks	Implementation Entity	Monitoring/ Reporting Entity	Date of Completion/ Initials
4.9 Geology and Soils					
4.9.1	*All proposed development within the Specific Plan Area shall, at a minimum, comply with recommendations and standards identified in the Preliminary Geotechnical Report at Section 4.0, Recommendations. If further recommendations are developed as part of future site- and design-specific geotechnical investigations they shall prevail.*	Compliance with the Geotechnical Report Recommendations shall be verified prior to issuance of grading permits/building permits as applicable. Implemented Geotechnical Study Recommendations shall be verified prior to Final Grading Certification, issuance of Certificate(s) of Occupancy as applicable.	Applicant or successor(s) in interest, contractor(s), developer(s).	City of Ontario: Planning Department, Building Department.	
4.10 Biological Resources					
4.10.1	*Avoidance of Nesting Migratory Birds: If possible, all vegetation removal activities shall be scheduled from August 1 to February 1, which is outside the general avian nesting season. This would ensure that no active nests would be disturbed and that removal could proceed rapidly. If vegetation is to be cleared during the nesting season, all suitable habitat will be thoroughly surveyed within 72 hours prior to clearing for the presence of nesting birds by a qualified biologist (Project Biologist). The Project Biologist shall be approved by the City and retained by the Applicant. The survey results shall be submitted by the Project Applicant to the City Planning Department. If any active nests are detected, the area shall be flagged and mapped on the construction plans along with a minimum 300-foot buffer, with the final buffer distance to be determined by the Project Biologist. The buffer area shall be avoided until, as determined by the Project Biologist, the nesting cycle is complete or it is concluded that the nest has failed. In addition, the Project Biologist shall be present on the site to monitor the vegetation removal to ensure that any nests, which were not detected during the initial survey, are not disturbed.*	Prior to issuance of the first grading permit; on-going monitoring of this measure during ground disturbing activities.	Applicant or successor(s) in interest, contractor(s), developer(s), Project Biologist.	City of Ontario: Planning Department, Building Department, Project Biologist.	
4.10.2	*Avoidance of Nesting Burrowing Owls: No more than 72 hours prior to any site disturbances, focused surveys for the burrowing owl shall be conducted. If absence of this species is confirmed, Project work can proceed. If, however, burrowing owl is located on site, the appropriate resource agencies (CDFW and USFWS) shall be contacted. The*	Pre-construction presence/absence surveys for burrowing owls shall be completed within 72 hours prior to site disturbing activities. The surveys shall be submitted	Applicant or successor(s) in interest, contractor(s), developer(s), Project Biologist.	City of Ontario: Planning Department, Building Department, Project Biologist.	

Table 4.2-1: Mitigation Monitoring Program

General Note: *To facilitate coordination and effective implementation of mitigation measures, the mitigation measures provided herein shall appear on all grading plans, construction specifications, and bid documents. Incorporation of required notations shall be verified by the City prior to issuance of first development permit. Implementation Entities shall comply with listed mitigation requirements.*

Section / MM No.	Mitigation Measure	Mitigation Timing/Remarks	Implementation Entity	Monitoring/ Reporting Entity	Date of Completion/ Initials
	Project Applicant shall consult with the wildlife agencies regarding the most appropriate methods and timing for removal of owls. As necessary, owls will be actively evicted following agency approved protocols (i.e., placing a one-way door at the burrow entrance to ensure that owls cannot access the burrow once they leave). Any such active eviction shall occur outside of the breeding/nesting season. That is, active eviction shall be accomplished between September 1 and February 15. If more than 30 days has elapsed between owl eviction and completion of clearing and grubbing activities, a subsequent survey for the burrowing owl shall be conducted to ensure that owls have not re-populated the site. Any reoccupation by owls will require subsequent protocol active eviction.	to, and reviewed and approved by the City prior to site disturbing activities. Burrowing owl mitigation (if any required) shall be on-going throughout site disturbing activities.			
4.11 Cultural Resources					
	~~*4.11.1 Prior to the issuance of (a) grading permit(s) for development proposal(s) within the Specific Plan Area, the Applicant or successor(s) in interest shall provide a letter to the City of Ontario Building Department, or designee, from a qualified professional archeologist meeting the Secretary of Interior's Professional Qualifications for Archaeology as defined at 36 CFR Part 61, Appendix A stating that the archeologist has been retained to provide on call services in the event archeological resources are discovered. The archeologist shall be present at the pre grading conference to establish procedures for archeological resource surveillance. In the event a previously unrecorded archaeological deposit is encountered during construction, all activity within 50 feet of the area of discovery shall cease and the City shall be immediately notified. The archeologist shall be contacted to flag the area in the field and determine if the archaeological deposits meet the CEQA definition of historical (State CEQA Guidelines 15064.5(a)), unique archaeological resource (Public Resources Code 21083.2(g)), or Tribal Cultural Resource (Public Resources Code 21074 (a)). If the find is considered a "resource" the archaeologist shall pursue either protection in place or recovery, salvage and treatment of the deposits. A qualified archaeologist and a Native American Monitor of Gabrieleño Ancestry shall evaluate all archaeological resources*~~	**See below for revised Mitigation Measures, as presented in Section 2.**			

Table 4.2-1: Mitigation Monitoring Program

General Note: *To facilitate coordination and effective implementation of mitigation measures, the mitigation measures provided herein shall appear on all grading plans, construction specifications, and bid documents. Incorporation of required notations shall be verified by the City prior to issuance of first development permit. Implementation Entities shall comply with listed mitigation requirements.*

Section / MM No.	Mitigation Measure	Mitigation Timing/Remarks	Implementation Entity	Monitoring/ Reporting Entity	Date of Completion/ Initials
	~~*unearthed by Project construction activities. If the resources are Native American in origin, they shall have the opportunity to consult with the City and/or Project developer on appropriate treatment and curation of these resources. If unique archaeological resources, or Tribal Cultural Resources cannot be preserved in place or left in an undisturbed state, recovery, salvage and treatment shall be required at the Applicant or successor(s) in interest's expense. Recovery, salvage and treatment protocols shall be developed in accordance with applicable provisions of Public Resource Code Section 21083.2 and State CEQA Guidelines 15064.5 and 15126.4. All recovered and salvaged resources shall be prepared to the point of identification and permanent preservation by the archaeologist. Resources shall be identified and curated into an established accredited professional repository. The archaeologist shall have a repository agreement in hand prior to initiating recovery of the resource. Excavation as a treatment option shall be restricted to those parts of the unique archaeological resource, or Tribal Cultural Resource that would be damaged or destroyed by the Project.*~~ ~~*4.11.2 Project developer(s) shall retain a Native American Monitor of Gabrieleño Ancestry (Native American Monitor) that was consulted on this Project pursuant to Assembly Bill AB52 - SB18 to conduct a Native American Indian Sensitivity Training for construction personnel prior to commencement of any excavation activities. The training session shall include a handout and focus on how to identify Native American resources encountered during earthmoving activities and the procedures followed if resources are discovered, the duties of the Native American Monitor of Gabrieleño Ancestry and the general steps the Monitor would follow in conducting a salvage investigation.*~~ ~~*4.11.3 Project developer(s) shall retain a Native American Monitor of Gabrieleño Ancestry that was consulted on this Project pursuant to Assembly Bill AB52 - SB18 to be on site during all Project related, ground disturbing construction activities Such activities include: pavement removal, auguring, boring, grading,*~~				

Table 4.2-1: Mitigation Monitoring Program

General Note: *To facilitate coordination and effective implementation of mitigation measures, the mitigation measures provided herein shall appear on all grading plans, construction specifications, and bid documents. Incorporation of required notations shall be verified by the City prior to issuance of first development permit. Implementation Entities shall comply with listed mitigation requirements.*

Section / MM No.	Mitigation Measure	Mitigation Timing/Remarks	Implementation Entity	Monitoring/ Reporting Entity	Date of Completion/ Initials
	~~*excavation, potholing, trenching, and/or grubbing of previously undisturbed native soils to a maximum depth of 30 feet below ground surface. A copy of the executed consultant contract shall be submitted to the City of Ontario Planning Department prior to the issuance of any grading permit (any ground disturbing activity). At their discretion, a Native American Monitor of Gabrieleño Ancestry can be present during the removal of dairy manure to native soil, but not at developer expense.*~~ ~~*4.11.4 A qualified archaeologist and a Native American Monitor of Gabrieleño Ancestry that was consulted on this Project pursuant to Assembly Bill A52 SB18 shall evaluate all archaeological resources unearthed by Project construction activities. If the resources are Native American in origin, the Tribe shall coordinate with the developer regarding treatment and curation of these resources. Typically, the Tribe will request reburial or preservation for educational purposes. If archeological features are discovered, the archeologist shall report such findings to the Ontario Planning Director. If the archeological resources are found to be significant, the archeologist shall determine the appropriate actions, in cooperation with the City that shall be taken for exploration and/or salvage in compliance with CEQA Guidelines Section 15064.5(f).*~~ ~~*4.11.5 Prior to the start of ground disturbing activities, developer(s) shall arrange a designated site location within the footprint of the Project for the respectful reburial of Tribal human remains and/or ceremonial objects. All human skeletal material discoveries shall be reported immediately to the County Coroner. The Native American Monitor shall immediately divert work a minimum of 50 feet from the discovery site and place an exclusion zone around the burial.*~~ ~~*4.11.6 If encountering human skeletal materials, the Native American Monitor shall notify the construction manager who shall contact the San Bernardino County Coroner. All construction activity shall be diverted while the San Bernardino County Coroner*~~				

Table 4.2-1: Mitigation Monitoring Program

General Note: *To facilitate coordination and effective implementation of mitigation measures, the mitigation measures provided herein shall appear on all grading plans, construction specifications, and bid documents. Section / MM No.	Mitigation Measure	Mitigation Timing/Remarks	Implementation Entity	Monitoring/ Reporting Entity	Date of Completion/ Initials
	~~*determines if the remains are Native American. The discovery shall be confidential and secure to prevent further disturbance. If Native American, the San Bernardino County Coroner shall notify the Native American Heritage Commission (NAHC) as mandated by state law who will then appoint a Most Likely Descendant. In the case where discovered human remains cannot be documented and recovered on the same day, the remains shall be covered with muslin cloth and a steel plate that can be moved by heavy equipment placed over the excavation opening to protect the remains. If this type of steel plate is not available, a 24 hour guard shall be posted outside working hours. The Tribe shall make every effort to recommend diverting the Project and keep the remains in situ and protected. If the Project cannot be diverted, it may be determined that burials will be removed. If data recovery is approved by the Tribe, documentation shall be taken which includes, at a minimum, detailed descriptive notes and sketches. Additional types of documentation shall be approved by the Tribe for data recovery purposes. Cremations will either be removed in bulk or means necessary to ensure complete recovery of all material. If the discovery of human remains includes four (4) or more burials, the location is considered a cemetery and a separate treatment plan shall be created. The Project developer shall consult with the Tribe regarding avoidance of all cemetery sites. Once complete, a final report of all activities shall be submitted to the NAHC.*~~ ~~*4.11.7 There shall be no Scientific study or the utilization of any invasive diagnostics on any Native American human remains.*~~ ~~*4.11.8 If the San Bernardino County Coroner determines the remains represent a historic non-Native American burial, the burial shall be treated in the same manner of respect with agreement of the San Bernardino County Coroner. Reburial will be in an appropriate setting. If the San Bernardino County Coroner determines the remains to be modern, the San Bernardino County Coroner shall take custody of the remains.*~~				

Table 4.2-1: Mitigation Monitoring Program

General Note: *To facilitate coordination and effective implementation of mitigation measures, the mitigation measures provided herein shall appear on all grading plans, construction specifications, and bid documents. Incorporation of required notations shall be verified by the City prior to issuance of first development permit. Implementation Entities shall comply with listed mitigation requirements.*

Section / MM No.	Mitigation Measure	Mitigation Timing/Remarks	Implementation Entity	Monitoring/ Reporting Entity	Date of Completion/ Initials
	~~*4.11.9 As directed by the Project Archaeologist in consultation with the Native American Monitor, each occurrence of human remains and associated funerary objects shall be stored using opaque cloth bags. All human remains, funerary objects, sacred objects and objects of cultural patrimony shall be removed to a secure container on site if possible. These items shall be retained and reburied within six months of recovery. The site of reburial/repatriation shall be on the Project site, but at a location agreed upon between the Tribe and developer(s) and protected in perpetuity. There shall be no publicity regarding any cultural materials recovered.*~~				
4.11.1	***Retain a Native American Monitor Prior to Commencement of Ground-Disturbing Activities:*** ***A. The project applicant/lead agency shall retain a Native American Monitor from or approved by the Gabrieleño Band of Mission Indians – Kizh Nation. The monitor shall be retained prior to the commencement of any "ground-disturbing activity" for the subject project at all project locations (i.e., both on-site and any off-site locations that are included in the project description/definition and/or required in connection with the project, such as public improvement work). "Ground-disturbing activity" shall include, but is not limited to, demolition, pavement removal, potholing, auguring, grubbing, tree removal, boring, grading, excavation, drilling, and trenching.*** [2] ***B. A copy of the executed monitoring agreement shall be submitted to the lead agency prior to the earlier of the commencement of any ground-disturbing activity, or the issuance of any permit necessary to commence a ground-disturbing activity.*** [3] ***C. The monitor will complete daily monitoring logs that will provide descriptions of the relevant ground-disturbing activities, the type of construction activities performed,***	Retainment of Native American Monitor shall be verified prior to the issuance of the first grading permit. Mitigation for potential impacts to archaeological, historical, and tribal cultural resources per this measure shall be on-going for the duration of site disturbing activities.	Applicant or successor(s) in interest, contractor(s), developer(s), Native American Monitor.	City of Ontario: Planning Department, Building Department.	

[2] Tribal monitoring shall cease once all ground disturbance activities have been completed with respect to the property or portion thereof. Example: Once excavation, grading, trenching, etc. have occurred tribal monitoring shall cease. [3] The extent of necessary personnel and hourly wage shall be subject to commercially reasonable standards. If there is a dispute as to scope of the necessary labor needs or wage rates, the City may arbitrate any such disputes in accordance with commercially reasonable standards.

Table 4.2-1: Mitigation Monitoring Program

General Note: *To facilitate coordination and effective implementation of mitigation measures, the mitigation measures provided herein shall appear on all grading plans, construction specifications, and bid documents. Incorporation of required notations shall be verified by the City prior to issuance of first development permit. Implementation Entities shall comply with listed mitigation requirements.*

Section / MM No.	Mitigation Measure	Mitigation Timing/Remarks	Implementation Entity	Monitoring/ Reporting Entity	Date of Completion/ Initials
	locations of ground-disturbing activities, soil types, cultural-related materials, and any other facts, conditions, materials, or discoveries of significance to the Tribe. Monitor logs will identify and describe any discovered TCRs, including but not limited to, Native American cultural and historical artifacts, remains, places of significance, etc., (collectively, tribal cultural resources, or "TCR"), as well as any discovered Native American (ancestral) human remains and burial goods. Copies of monitor logs will be provided to the project applicant/lead agency upon written request to the Tribe. ***D. On-site tribal monitoring shall conclude upon the latter of the following (1) written confirmation to the Kizh from a designated point of contact for the project applicant/lead agency that all ground-disturbing activities and phases that may involve ground-disturbing activities on the project site or in connection with the project are complete; or (2) a determination and written notification by the Kizh to the project applicant/lead agency that no future, planned construction activity and/or development/construction phase at the project site possesses the potential to impact Kizh TCRs.*** ***E. Upon discovery of any TCRs, all construction activities in the immediate vicinity of the discovery shall cease (i.e., not less than the surrounding 50 feet) and shall not resume until the discovered TCR has been fully assessed by the Kizh monitor and/or Kizh archaeologist. The Kizh will recover and retain all discovered TCRs in the form and/or manner the Tribe deems appropriate, in the Tribe's sole discretion, and for any purpose the Tribe deems appropriate, including for educational, cultural and/or historic purposes.***				
4.11.2	***Unanticipated Discovery of Human Remains and Associated Funerary Objects:*** ***A. Native American human remains are defined in PRC 5097.98 (d)(1) as an inhumation or cremation, and in any state of decomposition or skeletal completeness. Funerary objects, called associated grave goods in Public Resources Code***	Mitigation for potential impacts to tribal cultural resources per this measure shall be on-going for the duration of site disturbing activities.	Applicant or successor(s) in interest, contractor(s), developer(s), Native American Monitor.	City of Ontario: Planning Department, Building Department.	

Table 4.2-1: Mitigation Monitoring Program

General Note: *To facilitate coordination and effective implementation of mitigation measures, the mitigation measures provided herein shall appear on all grading plans, construction specifications, and bid documents. Section / MM No.	Mitigation Measure	Mitigation Timing/Remarks	Implementation Entity	Monitoring/ Reporting Entity	Date of Completion/ Initials
	Section 5097.98, are also to be treated according to this statute. ***B. If Native American human remains and/or grave goods discovered or recognized on the project site, then all construction activities shall immediately cease. Health and Safety Code Section 7050.5 dictates that any discoveries of human skeletal material shall be immediately reported to the County Coroner and all ground-disturbing activities shall immediately halt and shall remain halted until the coroner has determined the nature of the remains. If the coroner recognizes the human remains to be those of a Native American or has reason to believe they are Native American, he or she shall contact, by telephone within 24 hours, the Native American Heritage Commission, and Public Resources Code Section 5097.98 shall be followed.*** ***C. Human remains and grave/burial goods shall be treated alike per California Public Resources Code section 5097.98(d)(1) and (2).*** ***D. Construction activities may resume in other parts of the project site at a minimum of 200 feet away from discovered human remains and/or burial goods, if the Kizh determines in its sole discretion that resuming construction activities at that distance is acceptable and provides the project manager express consent of that determination (along with any other mitigation measures the Kizh monitor and/or archaeologist deems necessary). (CEQA Guidelines Section 15064.5(f).)*** ***E. Preservation in place (i.e., avoidance) is the preferred manner of treatment for discovered human remains and/or burial goods. Any historic archaeological material that is not Native American in origin (non-TCR) shall be curated at a public, non-profit institution with a research interest in the materials, such as the Natural History Museum of Los Angeles County or the Fowler Museum, if such an institution agrees to accept the material. If no institution accepts the archaeological material, it shall be offered to a local school or historical society in the area for educational purposes.***				

Table 4.2-1: Mitigation Monitoring Program

Section / MM No.	Mitigation Measure	Mitigation Timing/Remarks	Implementation Entity	Monitoring/ Reporting Entity	Date of Completion/ Initials
	F. Any discovery of human remains/burial goods shall be kept confidential to prevent further disturbance.				
4.11.3	***Procedures for Burials and Funerary Remains:*** ***A. As the Most Likely Descendant ("MLD"), the Koo-nas-gna Burial Policy shall be implemented. To the Tribe, the term "human remains" encompasses more than human bones. In ancient as well as historic times, Tribal Traditions included, but were not limited to, the preparation of the soil for burial, the burial of funerary objects with the deceased, and the ceremonial burning of human remains.*** ***B. If the discovery of human remains includes four or more burials, the discovery location shall be treated as a cemetery and a separate treatment plan shall be created.*** ***C. The prepared soil and cremation soils are to be treated in the same manner as bone fragments that remain intact. Associated funerary objects are objects that, as part of the death rite or ceremony of a culture, are reasonably believed to have been placed with individual human remains either at the time of death or later; other items made exclusively for burial purposes or to contain human remains can also be considered as associated funerary objects. Cremations will either be removed in bulk or by means as necessary to ensure complete recovery of all sacred materials.*** ***D. In the case where discovered human remains cannot be fully documented and recovered on the same day, the remains will be covered with muslin cloth and a steel plate that can be moved by heavy equipment placed over the excavation opening to protect the remains. If this type of steel plate is not available, a 24-hour guard should be posted outside of working hours. The Tribe will make every effort to recommend diverting the project and keeping the remains in situ and protected. If the project cannot be diverted, it may be determined that burials will be removed.*** ***E. In the event preservation in place is not possible despite good faith efforts by the project applicant/developer and/or***	Mitigation for potential impacts to tribal cultural resources per this measure shall be on-going for the duration of site disturbing activities.	Applicant or successor(s) in interest, contractor(s), developer(s), Native American Monitor.	City of Ontario: Planning Department, Building Department.

Incorporation of required notations shall be verified by the City prior to issuance of first development permit. Implementation Entities shall comply with listed mitigation requirements.*

Section / MM No.	Mitigation Measure	Mitigation Timing/Remarks	Implementation Entity	Monitoring/ Reporting Entity	Date of Completion/ Initials
	landowner, before ground-disturbing activities may resume on the project site, the landowner shall arrange a designated site location within the footprint of the project for the respectful reburial of the human remains and/or ceremonial objects. ***F. Each occurrence of human remains and associated funerary objects will be stored using opaque cloth bags. All human remains, funerary objects, sacred objects and objects of cultural patrimony will be removed to a secure container on site if possible. These items should be retained and reburied within six months of recovery. The site of reburial/repatriation shall be on the project site but at a location agreed upon between the Tribe and the landowner at a site to be protected in perpetuity. There shall be no publicity regarding any cultural materials recovered.*** ***G. The Tribe will work closely with the project's qualified archaeologist to ensure that the excavation is treated carefully, ethically and respectfully. If data recovery is approved by the Tribe, documentation shall be prepared and shall include (at a minimum) detailed descriptive notes and sketches. All data recovery data recovery-related forms of documentation shall be approved in advance by the Tribe. If any data recovery is performed, once complete, a final report shall be submitted to the Tribe and the NAHC. The Tribe does NOT authorize any scientific study or the utilization of any invasive and/or destructive diagnostics on human remains.***

 - - - - - - - - - - - - - - -

 ** Model Options Selected:
      * Model Uses Regulatory DEFAULT Options
      * Model Is Setup For Calculation of Average CONCentration Values.
      * NO GAS DEPOSITION Data Provided.
      * NO PARTICLE DEPOSITION Data Provided.
      * Model Uses NO DRY DEPLETION. DDPLETE  =  F
      * Model Uses NO WET DEPLETION. WETDPLT  =  F
      * Stack-tip Downwash.
      * Model Accounts for ELEVated Terrain Effects.
      * Use Calms Processing Routine.
      * Use Missing Data Processing Routine.
      * No Exponential Decay.
      * Model Uses URBAN Dispersion Algorithm for the SBL for   137 Source(s),
        for Total of    1 Urban Area(s):
   Urban Population =   2035210.0 ;  Urban Roughness Length =  1.000 m
      * Urban Roughness Length of 1.0 Meter Used.
      * ADJ_U*   - Use ADJ_U* option for SBL in AERMET
      * CCVR_Sub - Meteorological data includes CCVR substitutions
      * TEMP_Sub - Meteorological data includes TEMP substitutions
      * Model Assumes No FLAGPOLE Receptor Heights.
      * The User Specified a Pollutant Type of: DPM

 **Model Calculates ANNUAL Averages Only

 **This Run Includes:    137 Source(s);       1 Source Group(s); and     227 Receptor(s)

                with:      0 POINT(s), including
                           0 POINTCAP(s) and      0 POINTHOR(s)
                 and:    137 VOLUME source(s)
                 and:      0 AREA type source(s)
                 and:      0 LINE source(s)
                 and:      0 RLINE/RLINEXT source(s)
                 and:      0 OPENPIT source(s)
                 and:      0 BUOYANT LINE source(s) with a total of     0 line(s)
                 and:      0 SWPOINT source(s)

 **Model Set To Continue RUNning After the Setup Testing.

 **The AERMET Input Meteorological Data Version Date:  16216

 **Output Options Selected:
          Model Outputs Tables of ANNUAL Averages by Receptor
          Model Outputs External File(s) of High Values for Plotting (PLOTFILE Keyword)
          Model Outputs Separate Summary File of High Ranked Values (SUMMFILE Keyword)

 **NOTE:  The Following Flags May Appear Following CONC Values:  c for Calm Hours
```

m for Missing Hours
b for Both Calm and Missing Hours

**Misc. Inputs: Base Elev. for Pot. Temp. Profile (m MSL) = 289.00 ; Decay Coef. = 0.000 ; Rot. Angle = 0.0
Emission Units = GRAMS/SEC ; Emission Rate
Unit Factor = 0.10000E+07
Output Units = MICROGRAMS/M**3

**Approximate Storage Requirements of Model = 3.7 MB of RAM.

**Input Runstream File:
aermod.inp
**Output Print File:
aermod.out

**Detailed Error/Message File: 14822 Construction HRA.err
**File for Summary of Results: 14822 Construction HRA.sum

 ** Model Options Selected:
      * Model Uses Regulatory DEFAULT Options
      * Model Is Setup For Calculation of Average CONCentration Values.
      * NO GAS DEPOSITION Data Provided.
      * NO PARTICLE DEPOSITION Data Provided.
      * Model Uses NO DRY DEPLETION. DDPLETE  =  F
      * Model Uses NO WET DEPLETION. WETDPLT  =  F
      * Stack-tip Downwash.
      * Model Accounts for ELEVated Terrain Effects.
      * Use Calms Processing Routine.
      * Use Missing Data Processing Routine.
      * No Exponential Decay.
      * Model Uses URBAN Dispersion Algorithm for the SBL for   137 Source(s),
        for Total of    1 Urban Area(s):
   Urban Population =   2035210.0 ;  Urban Roughness Length =  1.000 m
      * Urban Roughness Length of 1.0 Meter Used.
      * ADJ_U*   - Use ADJ_U* option for SBL in AERMET
      * CCVR_Sub - Meteorological data includes CCVR substitutions
      * TEMP_Sub - Meteorological data includes TEMP substitutions
      * Model Assumes No FLAGPOLE Receptor Heights.
      * The User Specified a Pollutant Type of: DPM

 **Model Calculates PERIOD Averages Only

 **This Run Includes:    137 Source(s);       1 Source Group(s); and     227 Receptor(s)

                with:      0 POINT(s), including
                           0 POINTCAP(s) and      0 POINTHOR(s)
                 and:    137 VOLUME source(s)
                 and:      0 AREA type source(s)
                 and:      0 LINE source(s)
                 and:      0 RLINE/RLINEXT source(s)
                 and:      0 OPENPIT source(s)
                 and:      0 BUOYANT LINE source(s) with a total of     0 line(s)
                 and:      0 SWPOINT source(s)

 **Model Set To Continue RUNning After the Setup Testing.

 **The AERMET Input Meteorological Data Version Date:  16216

 **Output Options Selected:
          Model Outputs Tables of PERIOD Averages by Receptor
          Model Outputs External File(s) of High Values for Plotting (PLOTFILE Keyword)
          Model Outputs Separate Summary File of High Ranked Values (SUMMFILE Keyword)

 **NOTE:  The Following Flags May Appear Following CONC Values:  c for Calm Hours
```

m for Missing Hours
b for Both Calm and Missing Hours

**Misc. Inputs: Base Elev. for Pot. Temp. Profile (m MSL) = 289.00 ; Decay Coef. = 0.000 ; Rot. Angle = 0.0
Emission Units = GRAMS/SEC ; Emission Rate
Unit Factor = 0.10000E+07
Output Units = MICROGRAMS/M**3

**Approximate Storage Requirements of Model = 3.7 MB of RAM.

**Input Runstream File:
aermod.inp
**Output Print File:
aermod.out

**Detailed Error/Message File: 14822 Construction PER.err
**File for Summary of Results: 14822 Construction PER.sum

Notice of Preparation

303 East B Street, Ontario, California 91764 Phone: 909.395.2036 / Fax: 909.395.2420

TO: **Property Owners, Responsible Agencies, and Interested Parties**

FROM: **City of Ontario, Planning Department, 303 East "B" Street, Ontario, CA 91764**

SUBJECT: **Notice of Preparation of a Draft Environmental Impact Report**

NOTICE IS HEREBY GIVEN that the City of Ontario will be the Lead Agency and will prepare an environmental impact report for the project identified below. We need to know the views of your agency as to the scope and content of the environmental information which is germane to your agency's statutory responsibilities in connection with the proposed project. Your agency will need to use the EIR prepared by our agency when considering your permit or other approval for the project.

The Project description, location and the probable environmental effects are contained in the attached materials. A copy of the Initial Study ☒ is, ☐ is not, attached and is available at Ontario City Hall, Planning Department. Electronic format of the document can also be obtained online using the following link: https://www.ontarioca.gov/Planning/Reports/EnvironmentalImpact.

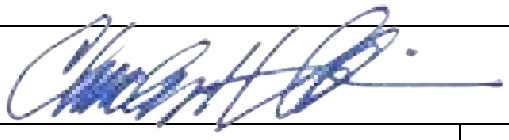
The proposed project ☒ is, ☐ is not, considered a project of statewide, regional, or area-wide significance. The proposed project ☐ will, ☒ will not, affect highways or other facilities under the jurisdiction of the State Department of Transportation. A scoping meeting ☒ will, ☐ will not, be held by the lead agency.

Scoping Meeting: If the project meets the criteria requiring the scoping meeting, or if the agency voluntarily elects to hold such a meeting, the date, time, and location of the scoping meeting are as follows:

Date and Time: October 27, 2022, at 6:00 p.m.
Location (this meeting will be held as a virtual meeting via Zoom): The Zoom meeting may be accessed online using the following link: https://us02web.zoom.us/j/83565725981 ; Webinar ID: 835 6572 5981. Alternatively, the Zoom meeting may be attended via telephone: (for higher quality, dial a number based on your current location): +1 669 900 9128 or +1 669 444 9171 or +1 346 248 7799 or +1 719 359 4580 or +1 253 215 8782 or +1 564 217 2000 or +1 646 558 8656 or +1 646 931 3860 or +1 301 715 8592 or +1 309 205 3325 or +1 312 626 6799 or +1 386 347 5053 or 888 788 0099 (Toll Free) or 833 548 0276 (Toll Free) or 833 548 0282 (Toll Free) or 877 853 5247 (Toll Free)

Review Period: The 30-day review period for this Notice of Preparation begins on October 17, 2022. Comments will be received until the close of business day on November 15, 2022, at 5:30 p.m. Please send your response to the contact person identified below. Please be sure to include the name of a contact person for your agency.

Charles Mercier, Principal Planner
City of Ontario Planning Department
303 East B Street, Ontario, CA 91764
Phone: (909) 395-2425
Email: cmercier@ontarioca.gov



Project Title/File No.: PSPA22-001

Project Location: The Specific Plan area comprises approximately 584 acres of land located west of Interstate 15 (I-15), and south of State Route 60 (SR-60). The Specific Plan Area lies within the 8,200-acre Ontario Ranch area, bounded generally by Riverside Drive to the north, "Old" East Edison Avenue [alignment] to the south, Mill Creek Avenue and Hamner Avenue to the east, and Haven Avenue to the west, in the City of Ontario, County of San Bernardino.

Project Description: Under the proposed 2022 Rich-Haven Specific Plan Amendment, the Specific Plan Area would be developed with up to 7,194 dwelling units, up to 925,002 square feet of commercial space, and up to 2,767,148 square feet of light industrial uses.

Project Applicant: BrookCal Ontario LLC/Richland Developers, Inc., 3161 Michelson Drive, Suite 425, Irvine, CA 92612

Consulting firm retained to prepare Draft EIR: Applied Planning, Inc, 11762 De Palma Road, 1-C 310, Corona, CA 92883; Contact: Ross Geller (909) 937-0333

1.0 INTRODUCTION

1.0 INTRODUCTION

1.1 BACKGROUND AND PROJECT OVERVIEW

The Rich-Haven Specific Plan (RHSP) was approved by the City of Ontario in 2015, with subsequent Specific Plan Amendments approved in 2016, 2018, and 2021. The current (2021) Rich-Haven Specific Plan ("2021 Specific Plan") comprises approximately 584 acres located west of Interstate 15 (I-15), and south of State Route 60 (SR-60). The 2021 Specific Plan Area lies within the 8,200-acre Ontario Ranch area, bounded generally by Riverside Drive to the north, "Old" East Edison Avenue [alignment] to the south, Mill Creek Avenue and Hamner Avenue to the east, and Haven Avenue to the west.

The 2021 Specific Plan entitlements allow for development of up to 7,194 dwelling units (all residential types), up to 990,902 square feet of commercial/office space, up to 1,183,525 square feet of light industrial uses, approximately 27 acres of public parkland, and approximately 20 acres of Southern California Edison (SCE) Parcel open space and SCE Easements. The 2022 RHSP Specific Plan Amendment (2022 Specific Plan Amendment, Project) evaluated in this Initial Study (IS) proposes a new amendment of the RHSP.

Under the proposed 2022 RHSP Specific Plan Amendment, the Specific Plan Area would be developed with up to 7,194 dwelling units, up to 925,002 square feet of commercial space, and up to 2,767,148 square feet of light industrial uses. Other existing RHSP land uses, e.g., public parkland, Southern California Edison (SCE) Parcel open space and SCE Easements would not be substantively affected under the 2022 RHSP Specific Plan Amendment. This IS evaluates potential environmental impacts of entire buildout of the Specific Plan Area that would result from the 2022 RHSP Specific Plan Amendment.

In summary, the proposed 2022 Specific Plan Amendment would result in the following primary revisions to the 2021 Specific Plan:

1. Total residential development within the Specific Plan Area would be maintained at 7,194 dwelling units. Residential units and residential densities would however be reassigned within the Specific Plan Area.
2. Total commercial development would be reduced by approximately 65,900 square feet, an approximate 6.7 percent reduction in the 2021 Specific Plan commercial entitlements.
3. Total light industrial development would be increased by approximately 1,583,623 square feet, an approximate 134 percent increase from the 2021 Specific Plan Amendment.

Other aspects and attributes of the 2021 Specific Plan would be substantively maintained under the proposed 2022 Specific Plan Amendment.

1.2 PURPOSE AND DISPOSITION OF THIS DOCUMENT

This IS was prepared pursuant to Section 15063 of the California Environmental Quality Act (CEQA) Guidelines. Although this IS was prepared with consultant support, all analysis, conclusions, findings and determinations presented in the IS fully represent the independent judgment and position of the City of Ontario, acting as Lead Agency under CEQA. In accordance with the provisions of CEQA and the State and local CEQA Guidelines, as the Lead Agency, the City of Ontario is solely responsible for approval of the Project. As part of the decision-making process, the City is required to review and consider the Project's potential environmental effects. This IS is an informational document, providing the City of Ontario decision-makers, other public agencies, and the public with an assessment of the potential environmental impacts that could result from the Project.

The City of Ontario (Lead Agency) specifically recognizes previous Certified CEQA documentation[1] and analysis prepared for the RHSP and its Amendments – as well as related State *CEQA Guidelines* Section 15162 limits and mandates (excerpted below) governing preparation of EIRs when a previous EIR has been Certified for a project. Lead Agency findings (italicized) for these criteria are summarized following each of the listed considerations. Based on the Lead Agency findings presented below and supporting analysis presented in this IS, a new EIR will be prepared that will analyze and disclose potential environmental impacts of the proposed 2022 Specific Plan Amendment.

> *CEQA Guidelines* Section 15162:
>
> (a) When an EIR has been certified or a negative declaration adopted for a project, no subsequent EIR shall be prepared for that project unless the lead agency determines, on the basis of substantial evidence in the light of the whole record, one or more of the following:
>
> (1) Substantial changes are proposed in the project which will require major revisions of the previous EIR or negative declaration due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects.

As substantiated in this IS, substantial changes to the previous project are proposed under the RHSP 2022 SPA. These changes include, but are not limited to: land use re-designations and land use reconfigurations, increased industrial development, and modified residential development. These changes could result in potentially new or different significant environmental impacts not considered or addressed in previous CEQA documentation prepared for the RHSP and its amendments.

[1] *Rich Haven Specific Plan Environmental Impact Report*, July 3, 2007 (SCH No. 2006051081); Rich Haven Specific Plan Amendments: 2015, 2016, 2018, 2021 - evaluated as Addendums to Certified EIRs.

Substantive changes proposed by the Project are detailed at IS Section 2.0, Project Description. *IS Section 3.0,* Environmental Evaluation *discusses and evaluates potentially significant impacts that could result from the Project.*

> (2) Substantial changes occur with respect to the circumstances under which the project is undertaken which will require major revisions of the previous EIR or Negative Declaration due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects.

Changes in circumstances warranting major revisions of the previous EIR include recent adoption of The Ontario Plan 2050 (TOP 2050) and associated General Plan Update. TOP 2050 and the General Plan Update represent a new context for the RHSP that could result in new significant environmental effects or a substantial increase in the severity of previously-identified significant effects presented in the previous RHSP EIR(s). Moreover, changes in circumstances from a regulatory perspective indicate that previous analyses for the RHSP and its Amendments have become increasingly decoupled from evolving CEQA analytic topics and protocols, diminishing the value and applicability of these analyses. These latter changes in circumstances contribute further to the likelihood that the Project could result in new or substantially different or increased impacts than were analyzed in the previous EIR.

> (3) New information of substantial importance, which was not known and could not have been known with the exercise of reasonable diligence at the time the previous EIR was certified as complete or the Negative Declaration was adopted, shows any of the following:
>
> (A) The project will have one or more significant effects not discussed in the previous EIR or negative declaration;
> (B) Significant effects previously examined will be substantially more severe than shown in the previous EIR.
> C) Mitigation measures or alternatives previously found not to be feasible would in fact be feasible and would substantially reduce

one or more significant effects of the project, but the project proponents decline to adopt the mitigation measure or alternative; or

(D) Mitigation measures or alternatives which are considerably different from those analyzed in the previous EIR would substantially reduce one or more significant effects on the environment, but the project proponents decline to adopt the mitigation measure or alternative.

Please refer to discussions at preceding Items (a) (1) (2).

Based on the preceding, potential environmental impacts of the Project will be evaluated and documented in a Project-specific Environmental Impact Report (EIR).

This IS and accompanying Notice of Preparation (NOP) for the EIR will be available for review for 30 days from October 17, 2022 to November 15, 2022 and can be accessed or obtained by contacting:

City of Ontario
Planning Department
303 East "B" Street
Ontario, CA 91764
Attention: Charles Mercier, Principal Planner

The public is encouraged to contact the City of Ontario for information regarding the Project and related CEQA processes.

1.3 DOCUMENT ORGANIZATION

This IS includes the following sections:

Introduction: This Section (1.0) describes the CEQA context of the Project, the IS format, and provides a summary of the findings of the IS.

Project Description: This Section (2.0) describes the Project and its Objectives. Discretionary actions, permits, and consultation necessary to realize the Project are also identified.

Environmental Evaluation: This Section (3.0) provides background information regarding the Project and Lead Agency, and presents responses to each question on the CEQA Initial Study Checklist regarding the possible environmental impacts of the Project. Answers provided in the checklist are substantiated qualitatively in all instances, and quantitatively where feasible and appropriate.

Determination: This Section (4.0) summarizes the results of the IS, and presents the determination regarding the appropriate environmental document for the Project. Source information cited within this IS is available through, or by contacting, the City of Ontario Planning Department.

1.4 POTENTIAL ENVIRONMENTAL EFFECTS

The analysis presented in this IS indicates that the Project may result in or cause potentially significant effects related to:

- Air Quality;
- Biological Resources;
- Cultural/Tribal Resources;
- Energy;
- Geology and Soils;
- Greenhouse Gas Emissions;
- Hazards/Hazardous Materials;
- Hydrology/Water Quality;
- Land Use and Planning;
- Noise;
- Transportation; and
- Utilities and Service Systems.

Consistent with the conclusion and findings of this IS, an EIR will be prepared for the Project. At a minimum, the EIR will evaluate the Project's potential environmental impacts under the topical areas identified above. Additional issues or concerns that may be identified pursuant to the EIR NOP process and/or scoping meeting(s) conducted for the Project will also be evaluated and addressed in the EIR.

2.0 PROJECT DESCRIPTION

2.0 PROJECT DESCRIPTION

2.1 BACKGROUND AND PROJECT OVERVIEW

The Rich-Haven Specific Plan (RHSP) was approved by the City of Ontario in 2015, with subsequent Specific Plan Amendments approved in 2016, 2018, and 2021. The current (2021) Rich-Haven Specific Plan ("2021 Specific Plan") comprises approximately 584 acres located west of Interstate 15 (I-15), and south of State Route 60 (SR-60). The 2021 Specific Plan Area lies within the 8,200-acre Ontario Ranch area, bounded generally by Riverside Drive to the north, "Old" East Edison Avenue [alignment] to the south, Mill Creek Avenue and Hamner Avenue to the east, and Haven Avenue to the west. Location of the 2021 Specific Plan is presented at Figure 2.1-1. The location and boundaries of the 2022 RHSP Specific Plan Amendment evaluated in this Initial Study (IS) coincide with the location and boundaries in the 2021 Specific Plan.

The 2021 Specific Plan entitlements allow for development of up to 7,194 dwelling units (all residential types), up to 990,902 square feet of commercial/office space, up to 1,183,525 square feet of light industrial uses, approximately 27 acres of public parkland, and approximately 20 acres of Southern California Edison (SCE) Parcel open space and SCE Easements. The 2022 RHSP Specific Plan Amendment (2022 Specific Plan Amendment, Project) evaluated in this Initial Study (IS) proposes a new amendment of the RHSP as described herein.

NOT TO SCALE

Source: Google Earth; Applied Planning, Inc.

Figure 2.1-1
Specific Plan Location

Under the proposed 2022 RHSP Specific Plan Amendment, the Specific Plan Area would be developed with up to 7,194 dwelling units, up to 925,002 square feet of commercial space, and up to 2,767,148 square feet of light industrial uses. Other existing RHSP land uses, e.g., public parkland, Southern California Edison (SCE) Parcel open space and SCE Easements would not be substantively affected under the 2022 RHSP Specific Plan Amendment. This IS evaluates potential environmental impacts of entire buildout of the Specific Plan Area that would result from the 2022 RHSP Specific Plan Amendment.[1]

In summary, the proposed 2022 Specific Plan Amendment would result in the following primary revisions to the 2021 Specific Plan:

1. Total residential development within the Specific Plan Area would be maintained at 7,194 dwelling units. Residential units and residential densities would however be reassigned within the Specific Plan Area.
2. Total commercial development would be reduced by approximately 65,900 square feet, an approximate 6.7 percent reduction in the 2021 Specific Plan commercial entitlements.
3. Total light industrial development would be increased by approximately 1,583,623 square feet, an approximate 134 percent increase from the 2021 Specific Plan Amendment.

Other aspects and attributes of the 2021 Specific Plan would be substantively maintained under the proposed 2022 Specific Plan Amendment. A summary of land uses and development by Planning Area is provided at Table 2.1-1.

[1] Potential environmental impacts of the Rich Haven Specific Plan were initially evaluated in *Rich Haven Specific Plan Environmental Impact Report*, July 3, 2007 (SCH No. 2006051081). Subsequent Rich Haven Specific Plan Amendments: 2015, 2016, 2018, 2021 have been evaluated as Addendums to Certified EIRs. While the City could have continued tiering off previous environmental documents in evaluation of the Project's potential environmental impacts, in order to provide a contemporary and comprehensive analysis of the Project's impacts, a new Project-level EIR will be developed.

Table 2.1-1
2022 Specific Plan Amendment Land Use Summary

Planning Area	Land Use	Acres (Gross)	Dwelling Units (Maximum)	Residential Density (Gross)	Comm./ Office (sf) (Maximum)	Light Industrial (sf) (Maximum)

Source: 2022 Rich Haven Specific Plan Amendment

The discussions presented in this IS reflect information in the preliminary 2022 Specific Plan Amendment, and reflect the range and types of uses envisioned under this Project. Based on the findings of this IS, the Project may result in certain potentially significant environmental impacts (see IS Section 3.0, *Environmental Evaluation*). Accordingly, potential environmental impacts of the Project will be evaluated and documented in a Project Environmental Impact Report (EIR). Within the subsequent Project EIR, discussions will be revised to reflect any substantive changes that may occur as the 2022 Specific Plan Amendment is further defined.

2.2 EXISTING CONDITIONS

2.2.1 THE ONTARIO PLAN (TOP) 2050

2.2.1.1 TOP 2050 Overview and Project Consistency with TOP 2050

The Project would be required to conform with applicable provisions of The Ontario Plan (TOP). TOP 2050 provides long-range guidance for the City of Ontario addressing development and conservation. TOP consists of a six-part component framework: 1) Vision, 2) Governance Manual, 3) Policy Plan (General Plan), 4) City Council Priorities, 5) Implementation, and 6) Tracking and Feedback. TOP 2050[2] represents the City's vision for the next 30 years.

The Project has been planned and designed to be consistent with TOP 2050. Within this analysis, unless otherwise noted, TOP 2050 and TOP 2050 SEIR are the basis for the Project's potential environmental impacts.

2.2.2 EXISTING LAND USES

Existing land uses within, and adjacent to, the Project site are illustrated at Figure 2.2-1 and are described below. Representative photos of existing Project site conditions are presented at Figures 2.2-2 through 2.2-5.

[2] TOP 2050 Draft SEIR, and TOP 2050 Final SEIR can be accessed at: https://www.ontarioplan.org/top2050/.

Site Photos (4)

2.2.2.1 Project Site

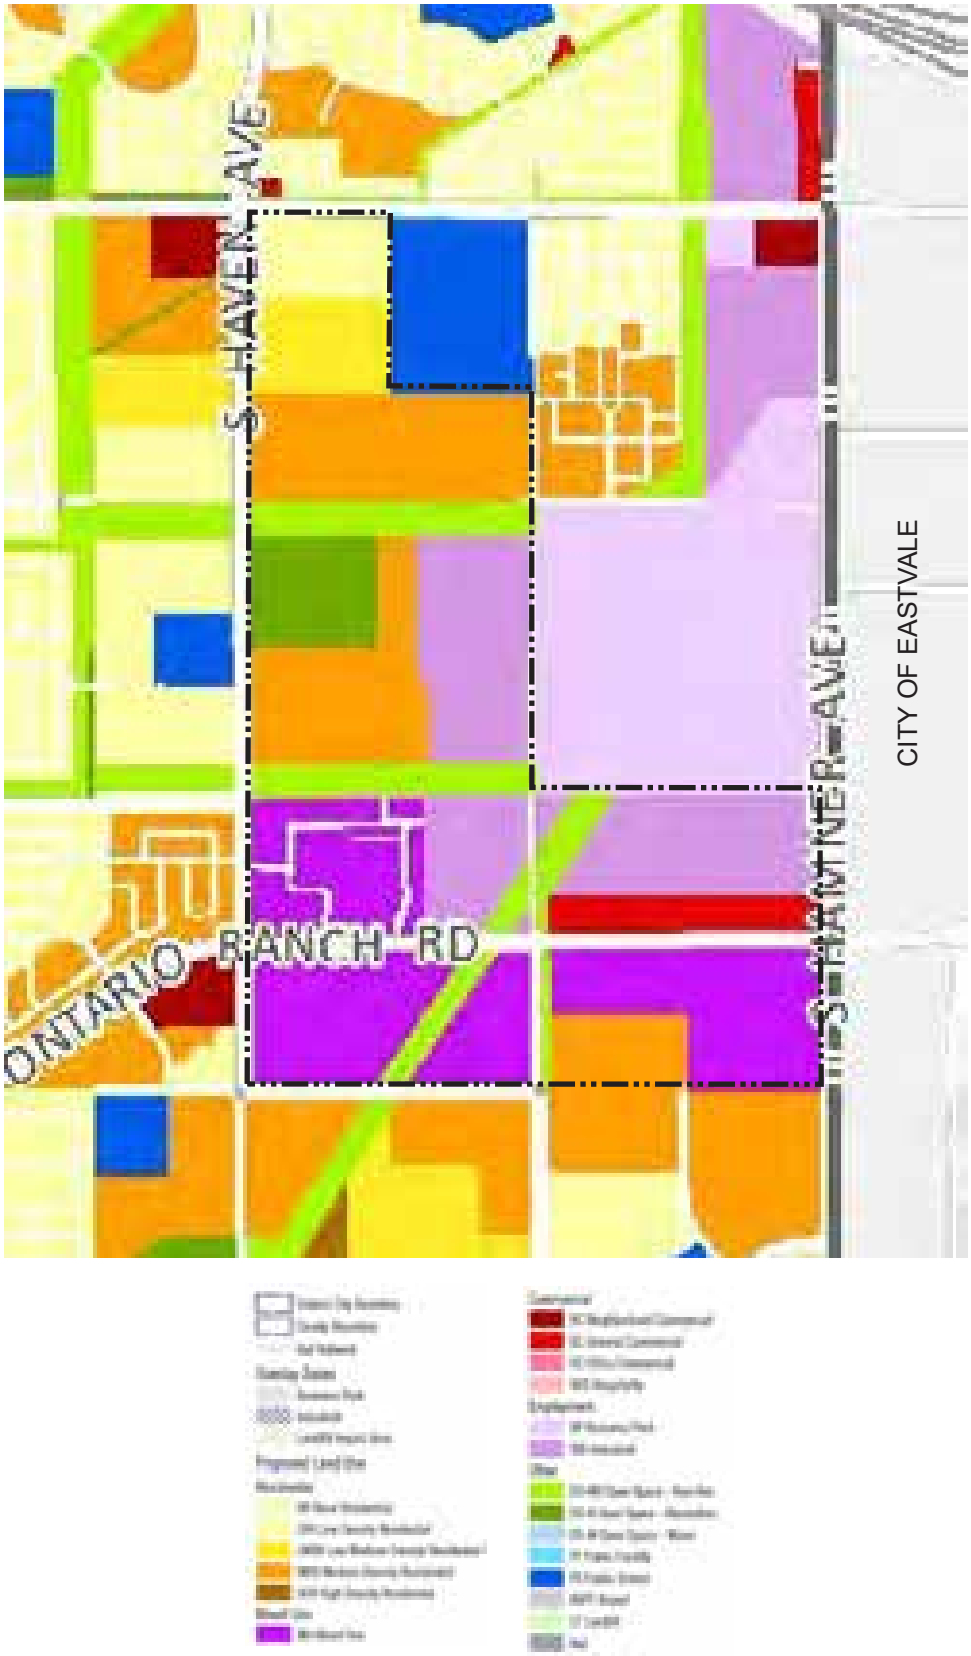
Existing land uses within the Specific Plan Area include developed portions of the currently entitled 2021 Specific Plan, and entitled areas that are undeveloped. As of the date of this IS, approximately 468 residential units of the total 7,194 dwelling units entitled under the 2021 Specific Plan have been constructed and are occupied. Existing residential development within the Specific Plan Area is located generally northeast of the intersection of Haven Avenue and Ontario Ranch Road.

The remainder of the 2021 Specific Plan entitlements have yet to be developed. Existing land uses in these areas include a dairy farm in the northern portion of the Specific Plan area, and vacant/disturbed properties through the remaining portions of the site. Additionally, within the southern portion of the Specific Plan Area, Southern California Edison (SCE) transmission line easements exist along a generally east – west/northeast – southwest alignment within the Specific Plan Area.

2.2.2.2 Vicinity Land Uses

Land uses adjacent to northern portions of the Specific Plan Area include residential development, agricultural uses, and Colony High School. Adjacent to the central Specific Plan Area are an SCE Substation occupying approximately 160 acres to the east, and agricultural/dairy and residential development to the west. The southern portion of the Specific Plan Area is bounded by residential and commercial development to the west across Haven Avenue, and vacant disturbed properties, residences, and dairy farm uses to the south across "Old" Edison Avenue [alignment]. To the east, across Hamner Avenue, are City of Eastvale properties that are developed or are being developed with commercial and light industrial uses.

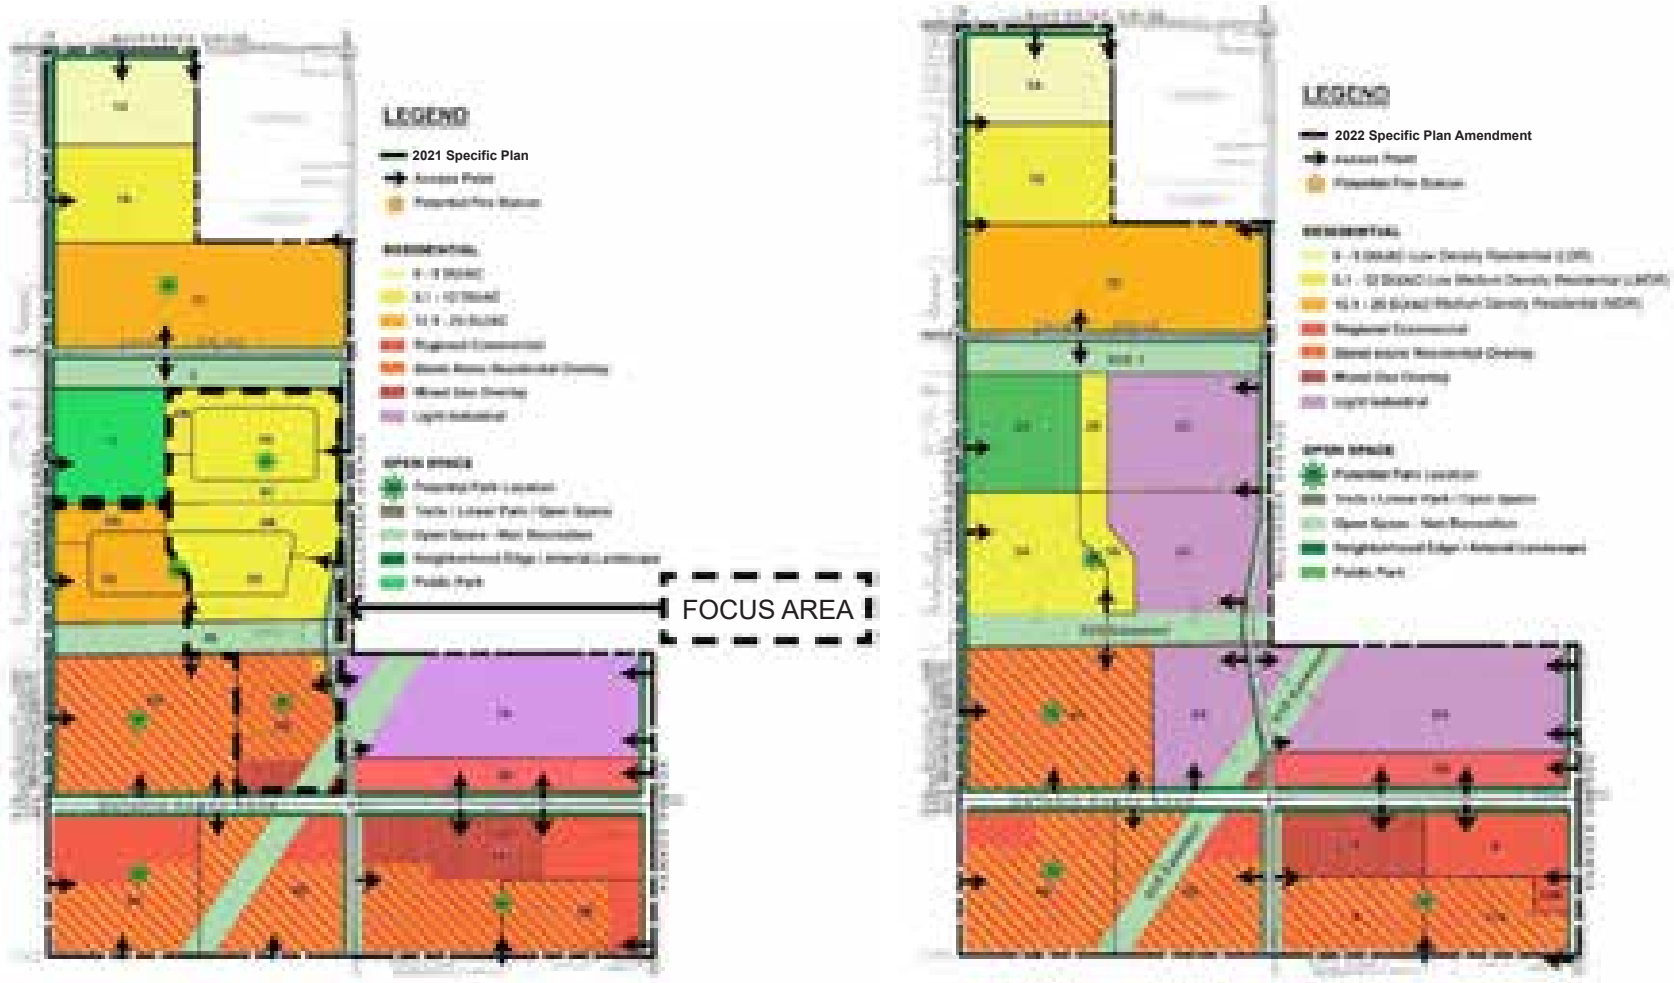
2.3 EXISTING and PROPOSED LAND USE DESIGNATIONS



2.3.1 Project Site

Policy Plan Land Uses

TOP 2050 Policy Plan Land Use designations for the Project site and surrounding areas are presented at Figure 2.3-1. Policy Plan Land Uses proposed by the Project are consistent with TOP 2050 Policy Plan Land Use designations for the Project site.



Zoning Designations

Existing Zoning of the Project site is established by the 2021 Specific Plan. Zoning of the Project site would be modified by the 2022 Specific Plan Amendment described herein. The 2021 Specific Plan and 2022 Specific Plan Amendment are compared at Figure 2.3-2.

Figure 2.3-2
2021 Specific Plan vs. 2022 Specific Plan Amendment

2.3.2 Vicinity Properties

Policy Plan Land Use and Zoning designations of surrounding properties are summarized below. The Project would not affect Land Use and Zoning designations of surrounding properties. Unless noted otherwise, existing and proposed land use designations of vicinity properties are consistent under current and known or anticipated future conditions.

North (across Riverside Drive)

- Policy Plan Land Use Designations: Open Space – Non-Recreation (abutting Riverside Drive), General Commercial, Low Density Residential
- Zoning: Specific Plan (*Creekside Specific Plan*), CT (abutting Riverside Drive), Low Density Residential

South (across East Edison Avenue)

- Policy Plan Land Use Designations: Medium Density Residential, Open Space – Non-Recreation, Low Density Residential.
- Zoning: Specific Plan (*Esperanza Specific Plan*), Specific Plan w/Agricultural Overlay

East

- Across Hamner Avenue:
    - City of Eastvale General Plan: Light Industrial, Commercial Retail
    - City of Eastvale Zoning: Industrial Park, Specific Plan (*Goodman Commerce Center Specific Plan*)
- Across Mill Creek Avenue:
    - Policy Plan Land Use Designations: Medium Density Residential, Low Density Residential, Business Park
    - Zoning: Specific Plan (*Edenglen Specific Plan*), Specific Plan w/Agricultural Overlay (Developed as SCE Substation)
- Abutting to Northeast:
    - Policy Plan Land Use Designation: Public School
    - Zoning: Civic

West (across Haven Avenue)

- Policy Plan Land Use Designations: Office Commercial, Low Density Residential, Low Medium Density Residential, Medium Density Residential Public School, Open Space – Non-Recreation
- Zoning: Specific Plan (*West Haven Specific Plan*)

2.4 PROJECT OPERATIONS/OCCUPANCY SUMMARY

For the purposes of this analysis, it is assumed that all Project development will be complete and fully operational by 2025, the Project Opening Year. Operational attributes of the Project land uses are presented below. Please refer also to the 2022 Specific Plan Amendment for details regarding the proposed Land Use Plan, Design Guidelines, and Development Standards.

2.4.1 Light Industrial Land Use

The Project light industrial land uses would accommodate a mix of high-cube fulfillment warehouse uses, refrigerated warehouse uses, and business park uses. Configurations and mix of these uses will be identified in the EIR as the Project is further defined.

- All uses are assumed to be open and operational 7 days per week, 24 hours per day.
- Unless otherwise noted herein, all operations would occur internal to main buildings.
- On-site operations would include on-site cargo handling. The most common type of cargo handling equipment is the yard truck designed for moving cargo containers. Yard trucks are also known as yard goats, utility tractors (UTRs), hustlers, yard hostlers, and yard tractors. Any yard trucks based at the Project site would be non-diesel (e.g., gasoline and/or electric-powered).

2.4.2 Commercial Land Use

The Project commercial land uses are assumed to accommodate a variety of commercial/retail development.

- All uses are assumed to be open and operational 7 days per week, 24 hours per day.
- Unless otherwise noted herein, all operations would occur internal to main buildings.

2.4.3 Residential Land Uses

- Residential land uses are assumed to be developed at quantities and densities reflected in the 2022 Specific Plan Amendment.

2.4.4 Open Space/Park Land Uses

- All open space/park land uses are assumed to be developed only with site/surface improvements supporting outdoor recreational activities.

2.5 DEVELOPMENT CONCEPT

Development implemented under the Project would be required to conform to provisions of the 2022 Specific Plan Amendment. In instances where the 2022 Specific Plan Amendment is silent, development proposals within the Specific Plan Area would be required to conform to applicable provisions of the City Development Code. The following discussions reflect preliminary 2022 Specific Plan Amendment information available to date. Within the subsequent Project EIR, discussions will be revised to reflect any substantive changes that may occur as the 2022 Specific Plan Amendment is further defined.

2.5.1 DEVELOPMENT SEQUENCING

The Project land uses would be constructed contingent on the availability of supporting infrastructure (e.g., water, sewer, storm drains, roadways/access) and as market conditions warrant. Generally, the anticipated sequence of development is as follows:

1. Light industrial/commercial uses; and
2. Residential products and community amenities including parks/open space uses.

2.5.2 SITE DESIGN/ARCHITECTURAL CONCEPTS

All Project development proposals would be required to conform to requirements and implement guidance articulated at 2022 Specific Plan Amendment Section 5, *Development Regulations*; and Section 6, *Design Guidelines*. All final Project site plans and building designs would be subject to City review and approval, to include consistency analysis with applicable provisions of the 2022 Specific Plan Amendment.

2.5.3 ACCESS AND CIRCULATION

Access to and within the Specific Plan Area is summarized below. Please also refer to 2022 Specific Plan Amendment Section 4.1, *Circulation Plan*.

2.5.3.1 Roadways

Regional access to the City and the Specific Plan Area is provided by State Route 60 (E – W) and Interstate 15 (N – S). State Route 60 (SR-60) interchanges with Interstate 15 (I-15) approximately 1.5 miles northeast of the Specific Plan Area. Local access to the Specific Plan Area is provided by existing vicinity roadways. These roadways include Riverside Drive to the north, Haven Avenue to the west, Mill Creek Avenue (partial) to the east, Hamner Avenue to the east, and Ontario Ranch Road which traverses the southern portion of the Specific Plan Area.

Ultimate designs of roadway alignments, roadway configurations, and site access would be required to conform to applicable provisions of the 2022 Specific Plan Amendment and City Conditions of Approval; and would be subject to City review and approval.

Roadways within and abutting the Project site would be constructed to their respective ultimate cross-sections pursuant to the 2022 Specific Plan Amendment design standards and City requirements.[3]

[3] The Specific Plan Amendment proposes modified design standards for Chino Avenue within the Project site, to include enhanced roadway sections with raised landscapes and roundabouts. These modified design standards would be subject to City review and approval as one component of the Specific Plan Amendment.

2.5.3.2 Bicycle and Pedestrian Access

The Project would construct bicycle and pedestrian access improvements consistent with the City Multipurpose Trails and Bikeway Corridor Plan.

Within the Project site, streets would be constructed with sidewalks, providing pedestrian access and inter-connectivity between various residential and mixed-use areas. Trail access would be provided to the various park facilities. As part of the City's Master Plan of Trails, the SCE Corridor Trail within the Project site would be extended within the linear park areas located within the existing SCE easements. Access to the SCE Corridor Trail would be provided at key points throughout the Project. On-street curb adjacent 5-foot bike lanes would be provided on both sides of the proposed modified/enhanced Chino Avenue section.

2.5.3.3 Bus Service

Bus service is available to the City via Omnitrans and the Riverside Transit Authority (RTA). No bus routes currently provide proximate service (within one-quarter mile) of the 2021 Specific Plan Area. Transit service providers periodically review and update schedules and routes to address ridership, budget, and community demands. The Applicant and City would coordinate Project final designs with Omnitrans and RTA to evaluate the potential for provision of bus services and bus amenities serving the 2021 Specific Plan Area. Omnitrans bus routes and schedules can be accessed at: https://omnitrans.org. RTA bus routes and schedules can be accessed at: https://www.riversidetransit.com/index.php/riding-the-bus/maps-schedules.

2.5.4 PARKING

The Project would be required to adhere to parking requirements established under the 2022 Specific Plan Amendment and the City of Ontario Development Code. Parking assignments and design of parking areas within the site would be subject to City review and approval.

2.5.5 LANDSCAPE/STREETSCAPE

The 2022 Specific Plan Amendment Landscape Concept is presented in detail at 2022 Specific Plan Amendment Section 7, *Landscape Plan*. All landscaping/streetscaping

implemented under the Project would be required to comply with applicable provisions of the 2022 Specific Plan Amendment and the City Municipal Code. The implemented landscape/streetscape concept would act to enhance perception of the site as developed under the Project, and to screen views of the site interior from off-site vantages. Landscape and streetscape elements would provide shade and visual interest, define entry/access points, and accentuate site and architectural features.

2.5.6 INFRASTRUCTURE/UTILITIES

2.5.6.1 Water Service

Potable (Domestic) Water

Potable water would be provided by the Ontario Municipal Utilities Company (OMUC).[4] The Project lies within the OMUC 925 and 1010 Pressure Zones. Within the Project site, water service would be provided by a system of 8-inch to 12-inch water mains constructed within the backbone roadway system. Connecting 8-inch service lines would be provided to individual developments.

The on-site public water system sizing would be required to comply with provisions of a City-approved hydraulic analysis to be conducted at the project-level design stage. All water mains and wells internal to site would be constructed by the merchant builder(s). In-tract water system design will be provided at the time of subdivision. Final designs of water conveyance systems serving the Project would be required to conform to City and OMUC requirements. Please refer also to 2022 Specific Plan Amendment Section 4.2.1, *Domestic Water*.

[4] Additionally, as discussed in the Specific Plan Amendment, "the Chino Basin Water Master Water Quality Map identifies the Rich-Haven [Project] area within an optimum water quality zone and requires that the owner/developer dedicate a total of two wells within the Specific Plan area to the City of Ontario for production of potable water." Well dedications within the Project site would be provided if/as required by the City/OMUC.

Recycled Water

The Project area would be served by OMUC 930/1050 Pressure Zones for recycled water. A range of recycled water lines would be constructed both on-site and off-site to service the Project. All Master Plan recycled water improvements implemented to serve the Project would be required to conform to the incumbent City Recycled Water Master Plan. Please refer also to 2022 Specific Plan Amendment Section 4.2.2, *Recycled Water*, *Regional Recycled Water Plan*.

The Project would be required to comply with applicable provisions of City Municipal Code Chapter 8c: *Recycled Water Use.*[5] Within the Project area, recycled water would be used for all approved applications, including but not limited to irrigation of parks, schools, street landscaping, recreational trails, HOA-maintained common areas and landscaping. An engineering report approved by the City and the California Department of Public Health is required prior to the use of recycled water.

Within the Project area, the backbone recycled water system would comprise 8-inch to 12-inch lines and would be located in the backbone street system. In-tract recycled water system design would be provided at the time of subdivision. It is noted here that ***no*** [emphasis added] recycled water can be used on single-family single lot ownership properties. Per the 2022 Specific Plan Amendment, a clear physical separation between potable and recycled water systems is required, such separations may comprise walls, fences, sidewalks, or mow strips. Please refer also to 2022 Specific Plan Amendment Section 4.2.2, *Recycled Water*, *Local Backbone Recycled Water Plan*.

2.5.6.2 Sewer Services

Sewer service would be provided by the City of Ontario. Master Plan sewer system improvements serving the Project and surrounding areas would be constructed consistent with the City's Sewer Master Plan. All Master Plan sewer improvements implemented to serve the Project would be required to conform to the incumbent City

[5] See also: https://codelibrary.amlegal.com/codes/ontarioca/latest/ontario_ca/0-0-0-44580#JD_6-8.714

Sewer System Master Plan. Please refer also to 2022 Specific Plan Amendment Section 4.3, *Sewer Master Plan*.

2.5.6.3 Stormwater Management System

Storm Drains

Multiple City Master Plan of Drainage storm drain facilities would serve the Project site. All Master Plan storm water management system improvements implemented to serve the Project would be required to conform to the incumbent City Master Plan of Drainage. Under post-development conditions, existing southerly trending on-site drainage patterns would be maintained.

Within the Project site, individual developments would implement required stormwater management systems. On-site storm stormwater management system designs would be provided concurrent with development plan submittals. Final designs of stormwater management systems serving the Project would be required to conform to City requirements. Please refer also to 2022 Specific Plan Amendment Section 4.4, *Drainage Master Plan*, *Regional Backbone Drainage Plan*.

Water Quality Management Plan

On a regional level, stormwater quality management would be available via the regional Mill Creek Wetlands system. Within the Project site, complementary on-site stormwater management systems that would detain and treat stormwater discharges. Stormwater discharges from the Project would be required to comply with requirements and performance standards established under the incumbent San Bernardino County National Pollutant Discharge Elimination System (NPDES) Stormwater Program MS4 Permit and Water Quality Management Plan (WQMP). To these ends, developments within the Project site would implement Low Impact Development (LID) Site Design Best Management Practices (BMPs) to reduce pollutant transport and increase on-site stormwater infiltration. Additionally, all Priority Land Use (PLU) areas within the Project site would be required to comply with the statewide Trash Provisions adopted by the

State Water Resources Control Board (SWRCB) and trash requirements in the most current San Bernardino County Area-Wide MS4 Permit.

Non-structural and structural Source Control BMPs would be documented in the Project WQMPs. Final WQMPs, as approved by the City, would ensure that the Project stormwater management systems have been designed to convey and treat stormwater discharges and limit the post-development peak flows consistent with available storm drain capacities. Please refer also to 2022 Specific Plan Amendment Section 4.4, *Drainage Master Plan, Stormwater Quality Measures*.

2.5.6.4 Solid Waste Management

The City of Ontario provides solid waste collection services for the City and will service the Project.

2.5.6.5 Electricity

Southern California Edison (SCE) would provide electricity to the site from existing vicinity facilities. SCE facilities located within and adjacent to the Project site consist of 115kV, 66kV, 12kV, towers/power lines and attached communication lines. Facilities less than 34.5kV will be located underground if they are located adjacent to any streets proposed to be improved in conjunction with site improvements.

2.5.6.6 Natural Gas

The Gas Company will provide natural gas to the site. All proposed connections and modifications to Gas Company facilities would conform to Gas Company and City requirements.

2.5.6.7 Fiber Optics System

A backbone fiber optics system (conduits, tracer wire, and fiber) would be constructed within the Project backbone street system. Backbone fiber optic components (conduits, hand holes, tracer wire, and fiber) would be placed underground within a duct and structure system to be installed in a joint trench. In-tract fiber and conduit would be installed per the City's in-tract fiber optic design guidelines (see:

https://www.ontarioca.gov/sites/default/files/Ontario-Files/Information-Technology/2014-12-16_in-tract_designguidelines.pdf).

2.5.6.8 Communications Services

Communications services, including wired and wireless telephone and internet services, are available through numerous private providers and would be provided on an as-needed basis. To the extent practical and consistent with City Conditions of Approval, existing and proposed wires, conductors, conduits, raceways, and similar communications improvements within the Project area would be installed underground. Any necessary surface-mounted equipment, e.g., terminal boxes, transformers, meters, service cabinets, etc., would be screened and would conform to City building setback requirements.

2.5.7 ENERGY EFFICIENCY/SUSTAINABILITY

Energy-saving and sustainable design features and operational programs would be incorporated in all facilities developed pursuant to the Project. The Project would be required to comply with incumbent energy efficiency and performance standards established under the incumbent CALGreen Code and City of Ontario Climate Action Plan (CAP).

2.5.8 CONSTRUCTION AREA TRAFFIC MANAGEMENT PLAN

Temporary and short-term traffic detours and traffic disruptions could result during construction activities including implementation of access and circulation improvements noted above. Accordingly, the Applicant would be responsible for the preparation and submittal of a Construction Area Traffic Management Plan (Plan). Typical elements and information incorporated in the Plan would include, but not be limited to:

- **Name of on-site construction superintendent and contact phone number.**

- **Identification of Construction Contract Responsibilities** - For example, for excavation and grading activities, describe the approximate depth of excavation, and quantity of soil import/export (if any).

- **Identification and Description of Truck Routes** - to include the number of trucks and their staging location(s) (if any).

- **Identification and Description of Material Storage Locations (if any).**

- **Location and Description of Construction Trailer (if any).**

- **Identification and Description of Traffic Controls** - Traffic controls shall be provided per the Manual of Uniform Traffic Control Devices (MUTCD) if the occupation or closure of any traffic lanes, parking lanes, parkways or any other public right-of-way is required. If the right-of-way occupation requires configurations or controls not identified in the MUTCD, a separate traffic control plan must be submitted to the City for review and approval. All right-of-way encroachments would require permitting through the City.

- **Identification and Description of Parking** - Estimate the number of workers and identify parking areas for their vehicles.

- **Identification and Description of Maintenance Measures** - Identify and describe measures taken to ensure that the work site and public right-of-way would be maintained (including dust control).

The Plan would be reviewed and approved by the City prior to the issuance of the first building permit. The Plan and its requirements would also be required to be provided to all contractors as one component of building plan/contract document packages.

2.5.9 OPENING YEAR

For the purposes of this analysis, the Project Opening Year is defined as 2025, by which time all proposed uses are assumed to be complete, occupied, and operational.

2.6 PROJECT OBJECTIVES

The broad vision of the 2022 Specific Plan Amendment is to create a community with a mixture of uses, connected through a series of trails, which provides opportunities for people to live, work and play. Supporting 2022 Specific Plan Amendment objectives are listed below.

Livable Neighborhood Development

- Incorporate Traditional Neighborhood Design guiding principles during the design phase to provide for opportunities to achieve the Project's vision statement, including:
  - Connections. To provide a series of sidewalks and trails connecting community parks, civic uses, employment areas, mixed-use and transit stops designed to be pedestrian friendly to avoid unnecessary automobile trips.
  - Traditional Street Network. To design a hierarchy of streets connected in a grid network with a variety of routes for pedestrians and vehicles, as well as creating a visually favorable and comfortable environment for pedestrians and bicyclists.
  - Main Street Environment. To design commercial/retail areas to a human scale with storefronts oriented to the street providing a "Main Street" atmosphere for strolling and shopping, all within walking distance from most homes.
  - Public Spaces. To create plazas, parks, and community gathering places placed within centralized areas providing synergy between adjacent land uses.
  - Identifiable Neighborhoods. To design neighborhoods around a discernable center, which may include a small park, square, school, or mixed-use center, within a five-minute walking distance.
  - Mix of Housing. To provide neighborhoods with a range of household types: a variety of single-family detached homes, attached units for young families, and live/work units for small at-home businesses.
- Design a mixed-use environment to ensure compatible uses that are cohesive and integrate a diversity of residential neighborhoods, with a range of commercial uses, and supporting open spaces.

- Utilize transportation, utility, and greenways/open space networks to establish clear edges and boundaries.
- Accommodate residential, commercial, open space, public, and other uses in accordance with the generalized distribution of uses depicted within the City's TOP Land Use Plan.
- Implement elements that will ensure walkability throughout the Project Area to discourage automobile dependency and encourage walking, biking, and other forms of transportation. This is achieved through the incorporation of subarea greenways and pedestrian connections and through sensitive site design of mixed-use development.
- Implement technological advances within residential communities, including internet access, to allow residents to shop and work from home and to decrease reliance on automobiles.
- Provide opportunity for at least one major public plaza/square as a centerpiece of community activities, including events and celebrations, outdoor performances, community meetings, picnics, farmers markets, and similar functions.
- Establish a clearly defined "edge" for the City's TOP area, where appropriate, that avoids the use of walls and creation of a "walled" enclave.
- Incorporate electrical transmission corridors and similar elements to form "edges" for residential neighborhoods and centers and/or accommodate public greenways/trails/corridors.

Residential District Objectives

- Create a livable community with neighborhoods designed at a human scale and oriented for pedestrian access to mixed-use, educational, and recreational uses.
- Provide for a range and diversity of housing products (detached single-family, detached and attached condominiums, and townhomes) that respond to a variety of homeownership needs and desires.
- Design residential projects to complement the character of adjacent neighborhoods.
- Encourage interaction among residents through the provision of an organized, simple, and "neo-traditional" system of streets, pathways, and entries to allow

residents to walk or bike to parks, recreation, and public facilities (including schools).

- Promote outdoor activity and casual social contact among residents and neighbors by designing neighborhoods around a central park where they can gather.
- Provide a focal point of activity within each residential planning area that may include a park, school, common area, or public meeting facility.
- Encourage architectural styles and traditional design elements that reflect the historic and eclectic mixture of architecture, reflective of the greater Ontario area.
- Increase densities adjacent to commercial centers.
- Establish clear, defined "edges" and "entries" that contribute to neighborhood identity.
- Avoid the use of walls to separate residential areas from arterials and other high traffic volume streets by expanded landscape setbacks, frontage roads, and other appropriate techniques.
- Include clustered multi-family housing within the Residential District, in order to create a diverse range of housing products and opportunities, while still in keeping with the overall low-density residential designation.
- Locate higher-density residential uses that provide population to support adjacent regional commercial centers.
- Provide sufficient on-site recreational amenities within higher density developments.
- Include community-oriented uses such as public meeting rooms, plazas and courtyards, and similar uses.
- Establish visual and physical links among the individual multi-family developments to create a cohesive and continuous corridor.
- Design building elevations to promote visual interest.
- Provide linkages between community service facilities, multi-family corridors, and residential neighborhoods.

Regional Commercial/Mixed-Use District Objectives

- Accommodate a diversity of large-scale retail, community and neighborhood shopping, office, medical research, entertainment, hotel/motel, dining, housing,

cultural, public, and similar uses that will serve the Project area and neighboring Planning Areas.

- Function with a high level of activity and/or employment.
- Accommodate development of multi-family housing, mixed-use buildings that incorporate housing and retail/office, and live/work facilities.
- Accommodate single-use buildings and mixed-use structures containing a variety of uses from residential over retail or office-to-office over retail.
- Encourage traditional, mixed-use design of commercial buildings, by requiring a lower maximum floor area ration (FAR) for single-use buildings, and a higher maximum FAR for mixed-use buildings.
- Develop plaza areas and other amenities to provide places of social interaction.
- Include one or more public "squares" to serve as gathering places.
- Incorporate modulated building volumes, mass, height, and articulated facades to create individual spaces.
- Site a portion of the buildings on peripheral streets to provide connectivity to adjacent uses.
- Orient buildings towards the local streets whenever possible to create an urban edge and sense of arrival and place.
- Include sidewalks of sufficient width to accommodate pedestrian activity and outdoor restaurants, newsstands, and other uses.
- Create visual interest through the opening of streets and sidewalks/plazas towards building elevations.
- Incorporate landscaping to enhance the environment.
- Visually integrate parking structures to continue the intended design character of the district.
- Incorporate multi-family housing to create a cohesive and continuous corridor.
- Ensure an appropriate mix of uses (residential and commercial) that are compatible.
- Encourage pedestrian access and ease of use within the mixed-use area by designing pedestrian and bike paths.
- Create a "Main Street" environment with buildings designed to a human scale where pedestrian activity is not overwhelmed by automobile traffic.

- Utilize urban design to create a "Gateway" or portal to the Ontario Ranch.

Industrial District Objectives

- Incorporate transitions and/or buffers between commercial/mixed-use and industrial areas and adjacent residential areas.
- Contribute to the regional jobs to housing balance by providing employment opportunities while minimizing development impacts on surrounding neighborhoods.
- Create a high-quality industrial park development that attracts an array of businesses and provides employment opportunities within proximity to area residents.
- Provide safe and efficient access/circulation routes for the distribution/transportation of goods.

Circulation Objectives

- Provide a circulation system designed to promote pedestrian activity through a network of off-street pedestrian walkways linking each neighborhood to parks, mixed-use commercial, and residential uses.
- Design a hierarchy of streets connected in a grid network with a variety of routes for pedestrians and vehicles, creating a visually attractive, enhanced, and comfortable environment for pedestrians and bicyclists.
- Design streets to incorporate landscaped parkways and pedestrian walkways separated from the street to enhance safety and enjoyment of residents and visitors.
- Provide opportunities for transit connections and alternative modes of transportation.

Recreation/Trails Objectives

- Provide new recreational opportunities for residents through the development of a series of public and private parks.
- Provide a series of pedestrian trails connecting community parks, civic uses, mixed-use, and transit stops designed to be pedestrian friendly to avoid unnecessary automobile trips.

- Incorporate off-street multi-use trails within the Southern California Edison easements.
- Incorporate a system of on- and off-street bicycle pathways with access from the residences to mixed-use areas.
- Use landscaping and streetscape materials that are low maintenance in recreation and trail areas.
- Provide a system of on-street bikeways integrated throughout the Project to provide access to schools, parks, and commercial uses.
- Provide new recreational opportunities for residents through the development of a series of parks ranging in size.

Community Facilities Objectives

- Incorporate existing major utilities into the overall fabric of the community.
- Provide opportunities for incorporation of community facilities (e.g., schools, fire station) as identified by affected agencies.

2.7 DISCRETIONARY APPROVALS AND PERMITS

Discretionary actions, permits, and related consultation(s) necessary to approve and implement the Project include, but are not limited to, the following.

2.7.1 LEAD AGENCY DISCRETIONARY ACTIONS AND PERMITS

- EIR Certification;
- Approval of the 2022 Specific Plan Amendment;
- Approval of Tentative Parcel Maps;
- Approval of Development Agreements; and
- Approval of Development Plans.

2.7.2 OTHER CONSULTATION AND PERMITS

Anticipated consultation and permits necessary to realize the Project would or may include the following:

- Permitting by/through the Regional Water Quality Control Board (RWQCB) pursuant to requirements of the City's National Pollutant Discharge Elimination System (NPDES) Permit.

- Permitting by/through the South Coast Air Quality Management District (SCAQMD) for certain equipment or land uses that may be implemented pursuant to the Project.

- Permitting (i.e., utility construction and connection permits) from affected utility purveyors, notably the City of Ontario, IEUA, and SCE.

Other ministerial permits necessary to realize all on- and off-site improvements related to the development of the Project.

3.4 BACKGROUND AND PROJECT OVERVIEW

The Rich-Haven Specific Plan (RHSP) was approved by the City of Ontario in 2015, with subsequent Specific Plan Amendments approved in 2016, 2018, and 2021. The current (2021) Rich-Haven Specific Plan ("2021 Specific Plan") comprises approximately 584 acres located west of Interstate 15 (I-15), and south of State Route 60 (SR-60). The 2021 Specific Plan Area lies within the 8,200-acre Ontario Ranch area, bounded generally by Riverside Drive to the north, "Old" East Edison Avenue [alignment] to the south, Mill Creek Avenue and Hamner Avenue to the east, and Haven Avenue to the west. Location of the 2021 Specific Plan is presented at Figure 2.1-1. The location and boundaries of the 2022 RHSP Specific Plan Amendment evaluated in this Initial Study (IS) coincide with the location and boundaries in the 2021 Specific Plan.

The 2021 Specific Plan entitlements allow for development of up to 7,194 dwelling units (all residential types), up to 990,902 square feet of commercial/office space, up to 1,183,525 square feet of light industrial uses, approximately 27 acres of public parkland, and approximately 20 acres of Southern California Edison (SCE) Parcel open space and SCE Easements. The 2022 RHSP Specific Plan Amendment (Project, Project) evaluated in this Initial Study (IS) proposes a new amendment of the RHSP.

Under the proposed 2022 RHSP Specific Plan Amendment, the Specific Plan Area would be developed with up to 7,194 dwelling units, up to 925,002 square feet of commercial space, and up to 2,767,148 square feet of light industrial uses. Other existing RHSP land uses, e.g., public parkland, Southern California Edison (SCE) Parcel open space and SCE Easements would not be substantively affected under the 2022 RHSP Specific Plan Amendment. This IS evaluates potential environmental impacts of buildout of the Specific Plan Area that would result from the 2022 RHSP Specific Plan Amendment.[1]

In summary, the proposed 2022 Specific Plan Amendment would result in the following primary revisions to the 2021 Specific Plan:

1. Total residential development within the Specific Plan Area would be maintained at 7,194 dwelling units. Residential units and residential densities would however be reassigned within the Specific Plan Area.
2. Total commercial development would be reduced by approximately 65,900 square feet, an approximate 6.7 percent reduction in the 2021 Specific Plan commercial entitlements.
3. Total light industrial development would be increased by approximately 1,583,623 square feet, an approximate 134 percent increase from the 2021 Specific Plan Amendment.

[1] Potential environmental impacts of the Rich Haven Specific Plan were initially evaluated in *Rich Haven Specific Plan Environmental Impact Report*, July 3, 2007 (SCH No. 2006051081). Subsequent Rich Haven Specific Plan Amendments: 2015, 2016, 2018, 2021 have been evaluated as Addendums to Certified EIRs. While the City could have continued tiering off previous environmental documents in evaluation of the Project's potential environmental impacts, in order to provide a contemporary and comprehensive analysis of the Project's impacts, a new Project-level EIR will be developed.

Other aspects and attributes of the 2021 Specific Plan would be substantively maintained under the proposed 2022 Specific Plan Amendment.

The discussions presented in this IS reflect preliminary 2022 Specific Plan Amendment information available to date, and reflect the range and types of uses envisioned under this Project. Based on the findings of this IS, the Project may result in certain potentially significant environmental impacts. Accordingly, potential environmental impacts of the Project will be evaluated and documented in a Project EIR. Within the subsequent Project EIR, discussions will be revised to reflect any substantive changes that may occur as the 2022 Specific Plan Amendment is further defined. Please refer also to the detailed discussion of the Project characteristics and attributes presented at IS Section 2.0, *Project Description*.

3.5 PREVIOUS ENVIRONMENTAL DOCUMENTATION, DOCUMENTS INCORPORATED BY REFERENCE

Section 15150 of the State *CEQA Guidelines* permits and encourages that an environmental document incorporate by reference other documents that provide relevant data. The documents outlined in this Section are hereby incorporated by reference, and the pertinent material is summarized throughout this Initial Study. All documents incorporated by reference are available through the City of Ontario Planning Department.

The Ontario Plan 2050 (TOP 2050), TOP 2050 Supplemental Environmental Impact Report (TOP 2050 SEIR), TOP 2050 Policy Plan (General Plan) Component

As one component of The Ontario Plan 2050 (TOP 2050), the City has updated the City Policy Plan (General Plan). Concurrent with the General Plan approval process, the City has certified the TOP 2050 Supplemental Environmental Impact Report (TOP 2050 SEIR) addressing the potential impacts of the General Plan as updated under TOP 2050. TOP 2050 and TOP 2050 SEIR[2] can be accessed at: https://www.ontarioplan.org/top2050/.

[2] TOP 2050 SEIR comprises TOP 2050 Draft SEIR, TOP 2050 Final SEIR, and all supporting technical analyses. These documents can be accessed at https://www.ontarioplan.org/top2050/, or by contacting the City of Ontario.

As noted at IS Section 2.0, *Project Description*, the Project has been planned and designed to be consistent with TOP 2050 and would therefore not likely result in impacts not currently identified and addressed in TOP 2050 SEIR. Within this analysis, unless otherwise noted, TOP 2050 and TOP 2050 SEIR are the basis for the Project's potential environmental impacts. TOP 2050 SEIR is a Supplemental EIR tiering off of TOP 2010 Certified EIR. TOP 2050 SEIR identifies potentially significant impacts resulting from TOP 2050 not already considered and addressed in TOP 2010 Certified EIR. As a corollary, impacts that are identified as less-than-significant under TOP 2050 SEIR are also less-than-significant under TOP 2010 Certified EIR.

2022 Rich-Haven Specific Plan Amendment

The 2022 Rich-Haven Specific Plan Amendment is the Project evaluated in this IS. To the extent practical, substantive provisions of the Project have been summarized in this IS (see: IS Section 2.0, *Project Description*). The 2022 Specific Plan Amendment is currently in draft form, and when completed, will be appended to the Project EIR.

3.6 EXPLANATION OF CHECKLIST CATEGORIES

"No Impact" applies where the impact simply does not apply to projects like the one involved. For example, if the project site is not located in a fault rupture zone, then the item asking whether the project would result in or expose people to potential impacts involving fault rupture should be marked as "No Impact."

"Less-Than-Significant Impact" applies where the impact would occur, but the magnitude of the impact is considered insignificant or negligible. For example, a development that would nominally increase the amount of surface water runoff generated at a project site would be considered to have a less-than-significant impact on surface water runoff.

"Potentially Significant Unless Mitigation Incorporated" applies where the incorporation of mitigation measures has reduced an effect from "Potentially Significant Impact" to a "Less-Than-Significant Impact." Incorporated mitigation measures should be outlined within the checklist and a discussion should be provided which explains how the

measures reduce the impact to a less-than-significant level. This designation is appropriate for a Mitigated Negative Declaration, where potentially significant issues have been analyzed and mitigation measures have been recommended.

"Potentially Significant Impact" applies where the project has the potential to cause a significant and unmitigable environmental impact. If there are one or more items marked as "Potentially Significant Impact," an EIR is required.

3.7 INITIAL STUDY CHECKLIST AND SUBSTANTIATION

	Potentially Significant Impact	Less-Than-Significant With Mitigation Incorporated	Less-Than-Significant Impact	No Impact
I. AESTHETICS. Except as provided in Public Resources Code Section 21099, would the project:				
a) Have a substantial adverse effect on a scenic vista?	☐	☐	☒	☐
b) Substantially damage scenic resources, including, but not limited to trees, rocks, outcroppings, and historic buildings within a state scenic highway?	☐	☐	☒	☐
c) In a non-urbanized area, substantially degrade the existing visual character or quality of public views of the site and its surroundings? (Public views are those that are experienced from publicly accessible vantage point.) If the project is in an urbanized area, would the project conflict with applicable zoning and other regulations governing scenic quality?	☐	☐	☒	☐
d) Create a new source of substantial light or glare, which would adversely affect the day or nighttime views in the area?	☐	☐	☒	☐

Substantiation:

a, c) *Less-Than-Significant Impact.* There are no scenic vistas within the Project site, nor would the Project otherwise adversely affect a designated scenic vista. Views of the San Gabriel Mountains, located to the north of the City, are the dominant scenic resource in the area.

The Project is located in an urbanized area and would be subject to those provisions of TOP 2050 General Plan and City of Ontario Development Code governing scenic quality. TOP 2050 General Plan Community Development

Element establishes multiple policies that protect scenic resources and promote high quality, visually compatible development. For example, TOP General Plan 2050 Community Design Element Policy CD-1.5 requires that "all major north-south streets be designed and redeveloped to feature views of the San Gabriel Mountains, which are part of the City's visual identity and a key to geographic orientation. Such views should be free of visual clutter, including billboards and may be enhanced by framing with trees"; Policy CD-2.1 encourages "all development projects to convey visual interest and character . . ."; Policy CD-2.15 supports "excellence in design and construction quality through collaboration with trade and professional organizations that provide expertise, resources and programs for developers, builders and the public" (TOP 2050 Policy Plan, p. 91).

TOP 2050 General Plan policies governing scenic quality, including those noted above, ensure protection of scenic resources and promote visually compatible and appealing development. These policies are implemented through the City of Ontario Development Code (Development Code Chapter 6.0 *Development and Subdivision Regulations*, et al.). The City would assure that the Project as implemented would conform to applicable provisions of the Project including the Project Development Regulations and Design Guidelines. The Project Development Regulations and Design Guidelines would, at a minimum, be required to conform to provisions of TOP 2050 General Plan and Development Code. Conformance with the Project would minimize the potential for the Project to adversely affect scenic resources or result in development that would conflict with applicable zoning and other regulations governing scenic quality.

Lastly, the Project has been designed to be consistent with TOP 2050, and by extension would not result in impacts not considered and addressed in the TOP 2050 SEIR. TOP 2050 SEIR concludes that the potential for TOP 2050 General Plan to adversely affect scenic vistas or conflict with zoning or other regulations governing scenic quality would be less-than-significant (TOP 2050 DSEIR Table ES-2, *Summary of Environmental Impacts, Mitigation Measures and Levels of Significance After Mitigation;* TOP 2050 DSEIR Section 5.1, *Aesthetics*).

Based on the preceding, the potential for the Project to have a substantial adverse effect on a scenic vista or to conflict with applicable zoning and other regulations governing scenic quality is considered less-than-significant.

b) *Less-Than-Significant Impact.* The City of Ontario is served by three freeways, including Interstate 10 (I-10), Interstate 15 (I-15), and State Route 60 (SR-60). The segments of these freeways located within the City are not designated as scenic highways by the California Department of Transportation. There are no scenic resources, including, but not limited to trees, rocks, outcroppings, and historic buildings within a state scenic highway located within the Project site. Nor does the Project propose or require facilities or operations that would otherwise substantially damage such resources.

Lastly, the Project has been designed to be consistent with TOP 2050, and by extension would not result in impacts not considered and addressed in the TOP 2050 SEIR. TOP 2050 SEIR concludes that the potential for TOP 2050 General Plan to adversely affect scenic resources would be less-than-significant (TOP 2050 DSEIR Table ES-2, *Summary of Environmental Impacts, Mitigation Measures and Levels of Significance After Mitigation;* TOP 2050 DSEIR Section 5.1, *Aesthetics*).

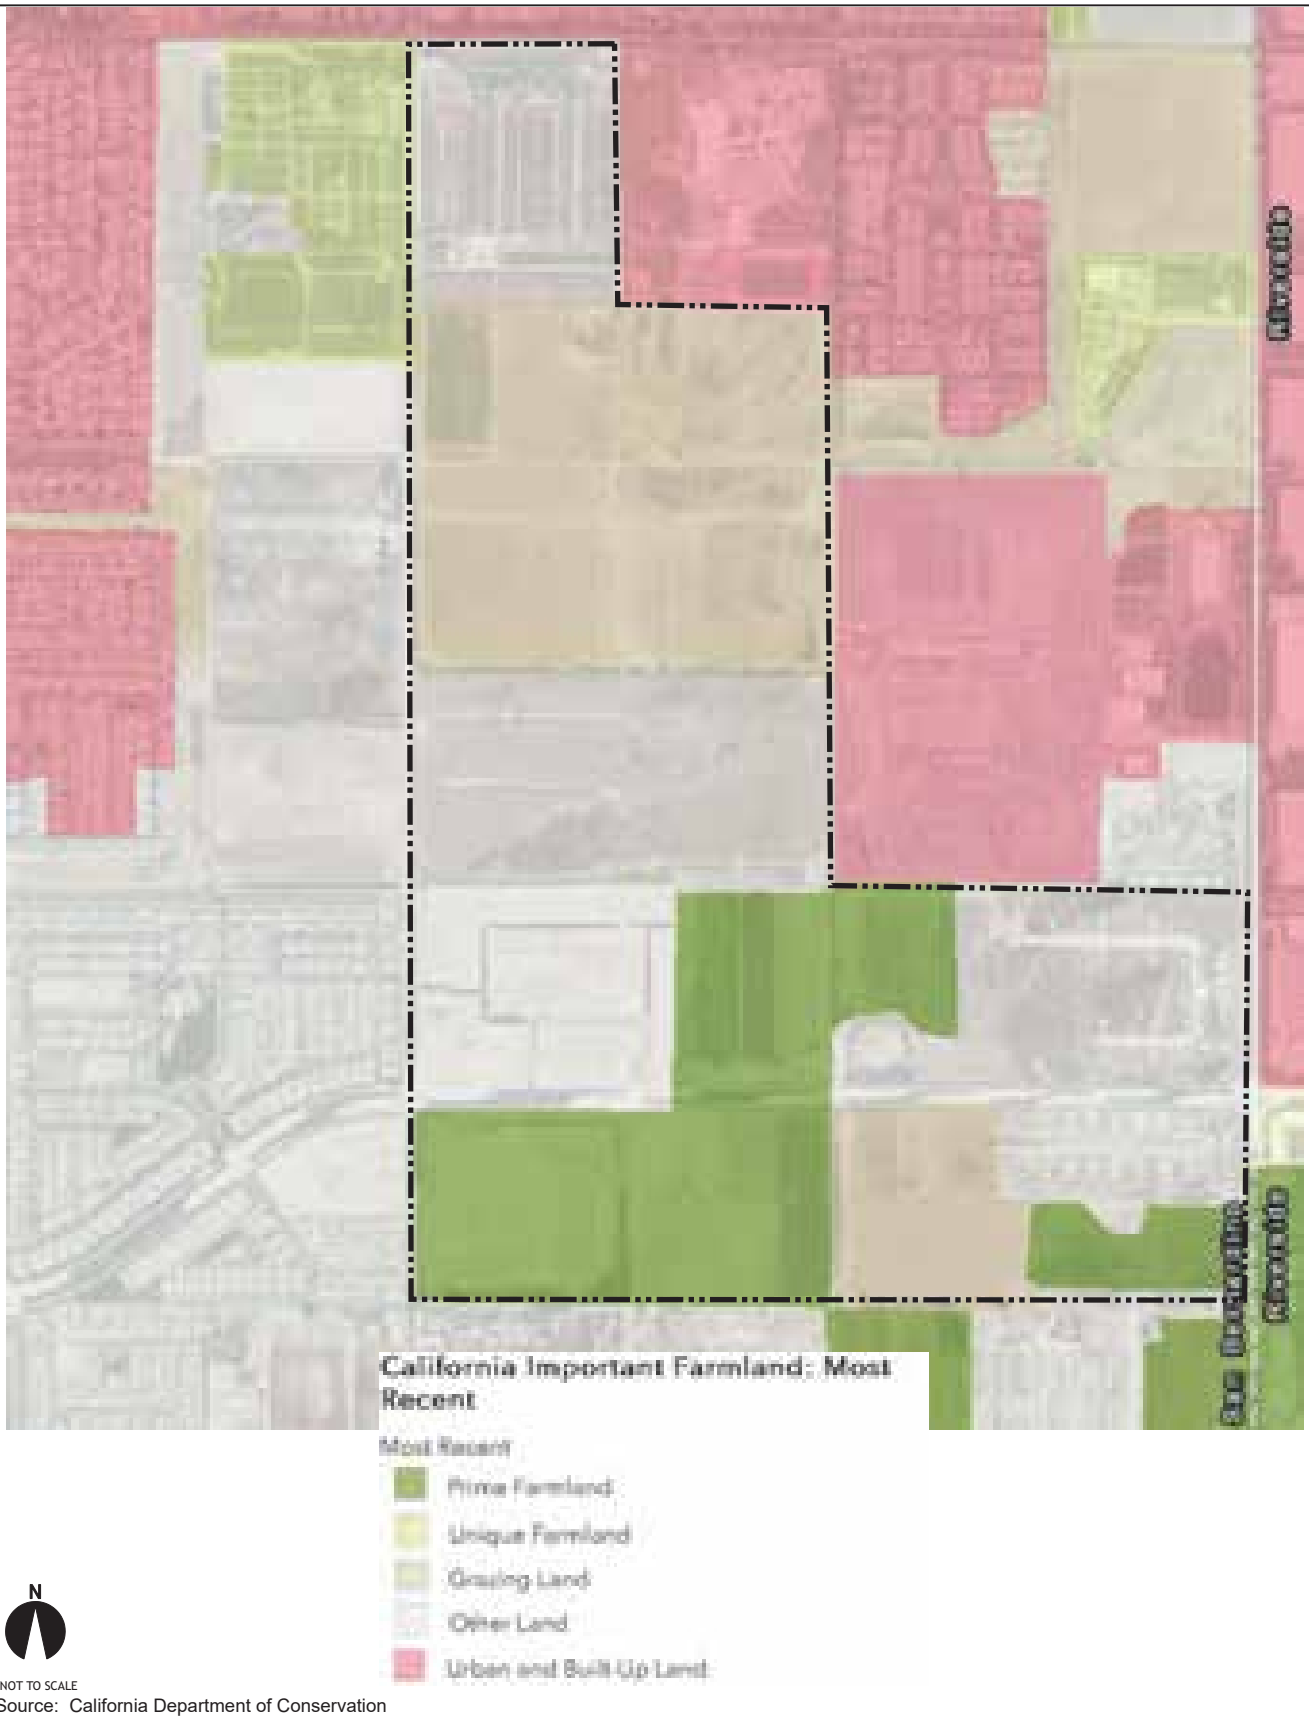
On this basis, the potential for the Project to substantially damage scenic resources, including, but not limited to trees, rocks, outcroppings, and historic buildings within a state scenic highway is considered less-than-significant.

d) *Less-Than-Significant Impact.* The Project would create new sources of lighting, including ground, building-mounted, wall-mounted, and pole-mounted lighting fixtures. The Project would also provide illuminated exterior signs. The City would assure that the Project, as implemented, contains Development Regulations and Design Guidelines that would, at a minimum, conform to City regulations addressing lighting and light overspill (see: Development Code, Division 6.01 – *District Standards and Guidelines*, *Lighting*). All subsequent development within the Project area would be required to conform with the Project Regulations and Design

Guidelines addressing light, glare and overspill. Conformance with the Project would minimize the potential for the Project to result in adverse light and glare impacts.

Lastly, the Project has been designed to be consistent with TOP 2050, and by extension would not result in impacts not considered and addressed in the TOP 2050 SEIR. TOP 2050 SEIR concludes that the potential for TOP 2050 General Plan to create a new source of substantial light or glare, which would adversely affect the day or nighttime views in the area would be less-than-significant (TOP 2050 DSEIR Table ES-2, *Summary of Environmental Impacts, Mitigation Measures and Levels of Significance After Mitigation;* TOP 2050 DSEIR Section 5.1, *Aesthetics*).

Based on the preceding, the potential for the Project to create a new source of substantial light or glare, which would adversely affect the day or nighttime views in the area is considered less-than-significant.



Sources: *City of Ontario Policy Plan, A Component of The Ontario Plan 2050* (Placeworks); *The Ontario Plan 2050 DSEIR, SCH No. 2021070364* (Placeworks) May 2022; City of Ontario Development Code; Project Application Materials.

	Potentially Significant Impact	Less-Than-Significant With Mitigation Incorporated	Less-Than-Significant Impact	No Impact
II. AGRICULTURE AND FOREST RESOURCES - In determining whether impacts to agricultural resources are significant environmental effects, lead agencies may refer to the California Agricultural Land Evaluation and Site Assessment Model (1997) prepared by the California Department of Conservation as an optional model to use in assessing impacts on agriculture and farmland. In determining whether impacts to forest resources, including timberland, are significant environmental effects, lead agencies may refer to information compiled by the California Department of Forestry and Fire Protection regarding the state's inventory of forest land, including the Forest and Range Assessment Project and the Forest Legacy				

	Potentially Significant Impact	Less-Than-Significant With Mitigation Incorporated	Less-Than-Significant Impact	No Impact
Assessment project; and forest carbon measurement methodology provided in Forest Protocols adopted by the California Air Resources Board. Would the Project:				
a) Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?	☐	☐	☒	☐
b) Conflict with existing zoning for agricultural use, or a Williamson Act contract?	☐	☐	☒	☐
c) Conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code section 12220(g)), timberland (as defined by Public Resources Code section 4526), or timberland zoned Timberland Production (as defined by Government Code section 51104(g))?	☐	☐	☐	☒
d) Result in the loss of forest land or conversion of forest land to non-forest use?	☐	☐	☐	☒
e) Involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland, to non-agricultural use or conversion of forest land to non-forest use?	☐	☐	☐	☒

Substantiation:

a) *Less-Than-Significant Impact.* The California Department of Conservation (CDC) Farmland Mapping and Monitoring (FMMP) System designates properties within the Project site as: "Prime Farmland," "Grazing Land," and "Other Land." Please refer to Figure II-1. See also: https://maps.conservation.ca.gov/dlrp/ciff/.

Source: California Department of Conservation

Figure II-1
California Important Farmland Finder

The City of Ontario does not prohibit the transition of agricultural land to urban uses. While existing agricultural uses are allowed to persist and are accommodated as transitional uses under the City's Agricultural Overlay District, the City Land Use Plan does not formally designate or allocate any areas of the City as "Agricultural" land uses.

The City of Ontario has acknowledged the planned transition of existing agricultural uses to urbanized uses pursuant to TOP 2050 Land Use Plan (Land Use Plan). As discussed in TOP 2050 DSEIR, "because former agriculture areas within Ontario are now already designated for nonagricultural uses and the current TOP is the baseline for this SEIR, the Proposed Project [TOP 2050] would not conflict with agricultural uses and would not result in conversion of farmland to nonagricultural use" (TOP 2050 DSEIR, p. 5.2-14).

The Project is consistent with TOP 2050 and with land uses and development anticipated under TOP 2050 SEIR. Further, the Project would implement provisions of the Project and requirements of the City Development Code that support buffering of, and separation between, agricultural and urban uses. These requirements support the City's planned orderly transition of existing agricultural uses to urban uses. These requirements include, but are not limited to:

- Project setback and screening standards that act to buffer and separate potentially incompatible uses.

- City of Ontario Development Code requirements including a minimum 100-foot separation between "a new residential, commercial or industrial development or structure used for public assembly and an existing animal feed trough, corral/pen or an existing dairy/feed lot including manure stockpiles and related wastewater detention basins" (Development Code Chapter 6 *Development and Subdivision Regulations*, p. 6.01-63).

Based on the preceding, the potential for the Project to result in adverse impacts related to conversion of Farmlands to non-agricultural use would be less-than-significant.

b) *Less-Than-Significant Impact.*

Agricultural Zoning

The Project site is Zoned "Specific Plan." The Project does not propose or require uses or activities that would otherwise result in potentially adverse effects at agriculturally-zoned properties. Based on the preceding, Project impacts to or affecting agricultural-zoned properties would be less-than-significant.

Williamson Act Contracts

The California Land Conservation Act of 1965 (the Williamson Act, Government Code Sections 51200 through 51297.4) encourages the preservation of agricultural lands through tax incentives due to the increasing trend toward the conversion of agricultural lands to urban uses. The Act enables counties and cities to designate agricultural preserves (Williamson Act lands) and within these preserves offer preferential taxation to agricultural landowners based on the agricultural income-producing value of the property.

One property within the Project site (APN 0218-161-13) is currently under a Williamson Act Contract (Contract No. 71-235). Buildout of the Project site would require the cancellation or nonrenewal of Contract No. 71-235.

The Project has been designed to be consistent with TOP 2050. Buildout of the Project site and cancellation or nonrenewal of Contract No. 71-235 are consistent with development anticipated under TOP 2050 as evaluated in TOP 2020 SEIR. In this regard, TOP 2050 SEIR concluded that development of the City (including the Project site) pursuant to TOP 2050 would result in City-wide cancellation or nonrenewal of Williamson Act contracts. The Project would not result in further impacts to Williamson Act lands beyond those already considered and addressed in TOP 2050

SEIR. As such, impacts from the Project in this respect would be less than significant. See also: TOP 2050 DSEIR Table ES-2, *Summary of Environmental Impacts, Mitigation Measures and Levels of Significance After Mitigation*; TOP 2050 DSEIR Section 5.2, *Agriculture and Forestry Resources*.

Based on the preceding, Project impacts to, or affecting, Williamson Act Contract properties would be less-than-significant.

c, d) *No Impact.* There is currently no land in the City of Ontario that qualifies as forest land or timberland. Neither TOP 2050 General Plan nor the City's Development Code provide such designations. As such, the Project would not conflict with existing zoning for, or cause rezoning of, forest land or timberland, or result in the loss or conversion of forest land.

e) *No Impact.* The Project does not involve other changes to the environment that could result in the conversion of farmland or forest land to other uses beyond those identified under the preceding discussions.

Sources: *City of Ontario Policy Plan, A Component of The Ontario Plan 2050* (Placeworks); *The Ontario Plan 2050 DSEIR, SCH No. 2021070364* (Placeworks) May 2022; City of Ontario Development Code; Project Application Materials.

	Potentially Significant Impact	Less-Than-Significant With Mitigation Incorporated	Less-Than-Significant Impact	No Impact
III. AIR QUALITY - Where available, the significance criteria established by the applicable air quality management district or air pollution control district may be relied upon to make the following determinations. Would the project:				
a) Conflict with or obstruct implementation of the applicable air quality plan?	☒	☐	☐	☐
b) Result in a cumulatively considerable net increase of any criteria pollutant for which the	☒	☐	☐	☐

	Potentially Significant Impact	Less-Than-Significant With Mitigation Incorporated	Less-Than-Significant Impact	No Impact
project region is non-attainment under an applicable federal or state ambient air quality standard?				
c) Expose sensitive receptors to substantial pollutant concentrations?	☒	☐	☐	☐
d) Result in other emissions (such as those leading to odors) adversely affecting a substantial number of people?	☐	☐	☒	☐

Substantiation:

a) *Potentially Significant Impact.* The Project site is located within the South Coast Air Basin (Basin), which includes all of Orange County, and the non-desert portions of Los Angeles, Riverside, and San Bernardino counties. The SCAQMD is locally responsible for administration and implementation of the Air Quality Management Plan (AQMP). Development of the Project could result in the production of additional criteria air pollutants which may interfere with, or obstruct, implementation of the AQMP. These potential impacts will be addressed in the Air Quality Impact Analysis (AQIA) prepared as part of the Project EIR. Mitigation measures will be developed to address any potentially significant impacts.

b, c) *Potentially Significant Impact.* Project demolition activities would result in site disturbance and generation of fugitive dust, and could also result in disturbance and release of asbestos, lead or other toxic materials that may be present in existing on-site structures or in subsurface improvements. Project construction activities would generate fugitive dust and construction equipment emissions.

The implemented Project land uses would generate vehicular trips and associated vehicular-source air pollutant emissions. Project truck traffic would generate diesel emissions and diesel particulate matter (DPM). DPM is a known carcinogen that could result in, or contribute to, adverse health effects. On-site Project operations

would result in energy consumption and byproduct air pollutant emissions. Construction-source and operational-source emissions resulting from the Project may contribute to existing and projected regional exceedances of criteria pollutants within the Basin. Localized concentrations of construction-source and operational-source emissions could adversely affect sensitive receptors.

These potential impacts will be addressed in the Project EIR AQIA. Mitigation measures will be developed to address any potentially significant impacts.

d) *Less-Than-Significant Impact.* Temporary, short-term odor releases are potentially associated with Project construction activities. Potential sources of odors associated with construction activities would include, but not be limited to: asphalt/paving materials, glues, paint, and other architectural coatings. Construction-source odor impacts are minimized through compliance with established regulations (Code of Federal Regulations [CFR], Subpart H-*Materials Handling, Storage Use and Disposal*, et al.) addressing construction materials storage, use, and disposal. In pertinent part the isolation/containment devices or mechanisms specified under these regulations prevent significant release of odors. The Project would be required to comply with these regulations.

Uses typically considered to be sources of odors or other emissions that could adversely affect a substantial number of people include agricultural operations, cement plants, wastewater treatment plants, and the like. The Project proposes none of these. Rather, the Project would implement contemporary residential, commercial, light industrial, parks, and open-space uses.

Refuse generated by the Project uses could be a source of localized odors. Project refuse is required to be collected, contained, and disposed of as stipulated in the City of Ontario Municipal Code (see: Municipal Code, Chapter 3: *Integrated Solid Waste Management*). Per the Municipal Code, refuse is to be disposed of in covered receptacles and routinely removed, thereby limiting the escape of odors to the open

air. Any odors generated would be temporary and transient, with little or no potential to adversely affect a substantial number of people.

Further, all Project construction activities, uses and occupancies would be required to conform to SCAQMD Rule 402. Rule 402 provides in pertinent part that there shall be no "discharge from any source whatsoever such quantities of air contaminants or other material which cause injury, detriment, nuisance, or annoyance to any considerable number of persons or to the public, or which endanger the comfort, repose, health or safety of any such persons or the public, or which cause, or have a natural tendency to cause, injury or damage to business or property."

Lastly, the Project has been designed to be consistent with TOP 2050, and by extension would not result in impacts not considered and addressed in the TOP 2050 SEIR. As concluded in TOP 2050 SEIR, the potential for TOP 2050 General Plan to result in other emissions (such as those leading to odors) adversely affecting a substantial number of people would be less-than-significant (TOP 2050 DSEIR Table ES-2, *Summary of Environmental Impacts, Mitigation Measures and Levels of Significance After Mitigation;* TOP 2050 DSEIR Section 5.3, *Air Quality*).

Based on the preceding discussion, the potential for the Project to result in other emissions (such as those leading to odors) adversely affecting a substantial number of people is considered less-than-significant.

Sources: *City of Ontario Policy Plan, A Component of The Ontario Plan 2050* (Placeworks); *The Ontario Plan 2050 DSEIR, SCH No. 2021070364* (Placeworks) May 2022; City of Ontario Development Code; Code of Federal Regulations; SCAQMD Rule 402; Project Application Materials.

	Potentially Significant Impact	Less-Than-Significant With Mitigation Incorporated	Less-Than-Significant Impact	No Impact
IV. BIOLOGICAL RESOURCES. Would the Project:				
a) Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?	☒	☐	☐	☐
b) Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?	☒	☐	☐	☐
c) Have a substantial adverse effect on state or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) though direct removal, filling, hydrological interruption, or other means?	☒	☐	☐	☐
d) Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of wildlife nursery sites?	☒	☐	☐	☐
e) Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?	☒	☐	☐	☐
f) Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan?	☒	☐	☐	☐

Substantiation:

a – f) *Potentially Significant Impact*. Historic and on-going ground-disturbing activities within, and in areas adjacent to, the Project site have substantially altered the Project site from its natural state. Notwithstanding, certain biological resources may be adversely affected by the Project. Special status species that have the potential to occur within the Project or that could be otherwise affected by Project construction and operations include, but are not limited to: the Delhi Sands Flower Loving Fly, the San Bernardino Kangaroo Rat, and the Burrowing Owl. Therefore, there is a potential for the Project to result in a range of potentially significant biological resources impacts. Accordingly, a Biological Resources Assessment will be conducted as part of the Project EIR. The Assessment will evaluate all potential biological resources impacts listed above that could result from Project construction and operations. The results of the Assessment, along with any necessary mitigation measures, will be presented in the Project EIR.

	Potentially Significant Impact	Less-Than-Significant With Mitigation Incorporated	Less-Than-Significant Impact	No Impact
V. CULTURAL RESOURCES. Would the project:				
a) Cause a substantial adverse change in the significance of a historical resource pursuant to § 15064.5?	☒	☐	☐	☐
b) Cause a substantial adverse change in the significance of an archaeological resource pursuant to § 15064.5?	☒	☐	☐	☐
c) Disturb any human remains, including those interred outside of formal cemeteries?	☐	☐	☒	☐

Substantiation:

a, b) *Potentially Significant Impact*. There are no known historic structures or archaeological resources located within the Project site nor would the Project affect any known off-site resources of historical or archaeological significance. However, TOP 2050 SEIR indicates the potential for discovery of as yet unknown archeological and paleontological resources within the General Plan area is high (TOP 2050 DSEIR, p. 5.7-23).

In areas affected by Project development, historic or archaeological resources may persist in a buried context. These resources could be disturbed during Project site-disturbing activities. The Project EIR will include a Cultural Resources Assessment of potential historical and archaeological resources impacts that could result from the Project. The Assessment will evaluate and address all potential on-site and off-site cultural resources impacts that could result from the Project. The results of the Assessment, along with any necessary mitigation measures, will be presented in the Project EIR.

c) *Less-Than-Significant Impact.* There are no known formal cemeteries or informal burial sites within the Project site or in off-site areas that would likely be affected by Project construction activities. The likelihood of encountering human remains in the course of Project development is therefore considered minimal. Further, as required under California Health and Safety Code Section 7050.5 (b) should human remains be encountered in the course of Project development, "there shall be no further excavation or disturbance of the site or any nearby area reasonably suspected to overlie adjacent remains until the coroner of the county in which the human remains are discovered has determined . . . that the remains are not subject to the provisions of Section 27491 of the Government Code or any other related provisions of law concerning investigation of the circumstances, manner and cause of any death, and the recommendations concerning the treatment and disposition of the human remains have been made to the person responsible for the excavation, or to his or

her authorized representative, in the manner provided in Section 5097.98 of the Public Resources Code."

Additionally, California Health and Safety Code Section 7050.5 (c) provides that "[i]f the coroner determines that the remains are not subject to his or her authority and if the coroner recognizes the human remains to be those of a Native American, or has reason to believe that they are those of a Native American, he or she shall contact, by telephone within 24 hours, the Native American Heritage Commission." All Project activities would be required to comply with provisions of the California Health and Safety Code and Public Resources Code as summarized above, minimizing or avoiding the potential to disturb human remains.

Lastly, the Project has been designed to be consistent with TOP 2050, and by extension would not result in impacts not considered and addressed in the TOP 2050 SEIR. As concluded in TOP 2050 SEIR, the potential for TOP 2050 General Plan to adversely affect human remains would be less-than-significant (TOP 2050 DSEIR Table ES-2, *Summary of Environmental Impacts, Mitigation Measures and Levels of Significance After Mitigation;* TOP 2050 DSEIR Section 5.5, *Cultural Resources*).

Based on the preceding, the potential for the Project to disturb any human remains, including those interred outside of formal cemeteries would be less-than-significant.

Sources: *City of Ontario Policy Plan, A Component of The Ontario Plan 2050* (Placeworks); *The Ontario Plan 2050 DSEIR, SCH No. 2021070364* (Placeworks) May 2022; City of Ontario Development Code; California Health and Safety Code; California Public Resources Code; Project Application Materials.

	Potentially Significant Impact	Less-Than-Significant With Mitigation Incorporated	Less-Than-Significant Impact	No Impact
VI. ENERGY. Would the project:				
a) Result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation?	☒	☐	☐	☐
b) Conflict with or obstruct a state or local plan for renewable energy or energy efficiency?	☒	☐	☐	☐

Substantiation:

a, b) *Potentially Significant Impact*. The Project would allow for development and operation of various new residential, light industrial, and commercial uses. When compared to existing conditions, construction and operation of the Project would result in increased consumption of energy resources. The Project EIR will analyze the potential for Project consumption of energy resources to result in environmental impacts due to wasteful, inefficient, or unnecessary consumption of energy. Potential for the Project to conflict with state or local energy plans for renewable energy or energy efficiency will also be evaluated in the Project EIR. Mitigation measures will be proposed for those impacts determined to be potentially significant.

Sources: Project Application Materials.

	Potentially Significant Impact	Less-Than-Significant With Mitigation Incorporated	Less-Than-Significant Impact	No Impact
VII. GEOLOGY AND SOILS. Would the Project:				
a) Directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury or death involving:				
i) Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publication 42.	☐	☐	☒	☐
ii) Strong seismic ground shaking?	☒	☐	☐	☐
iii) Seismic-related ground failure, including liquefaction?	☒	☐	☐	☐
iv) Landslides?	☐	☐	☒	☐
b) Result in substantial soil erosion or the loss of topsoil?	☐	☐	☒	☐
c) Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction or collapse?	☒	☐	☐	☐
d) Be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial direct or indirect risks to life or property?	☒	☐	☐	☐
e) Have soils incapable of adequately supporting the use of septic tanks or alternative wastewater disposal systems where sewers are not available for the disposal of wastewater?	☐	☐	☒	☐

	Potentially Significant Impact	Less-Than-Significant With Mitigation Incorporated	Less-Than-Significant Impact	No Impact
f) Directly or indirectly destroy a unique paleontological resource or site or unique geological feature?	☒	☐	☐	☐

Substantiation:

a. i) *Less-Than-Significant Impact.* TOP 2050 DSEIR Figure 5.7-2, *Regional Faults and Fault Zones* identifies active and/or potentially active fault zones in the region, none of which are located within the City. There are no active faults known with the Project site. The Project site is outside any Fault Rapture Hazard Zone (formerly Alquist-Priolo Zone). The Project does not propose actions or facilities that would otherwise exacerbate known or probable adverse earthquake fault conditions.

Lastly, the Project has been designed to be consistent with TOP 2050, and by extension would not result in impacts not considered and addressed in the TOP 2050 SEIR. As concluded in TOP 2050 SEIR, the potential for TOP 2050 General Plan to cause potential substantial adverse effects, including the risk of loss, injury or death involving rupture of a known earthquake fault would be less-than-significant (TOP 2050 DSEIR Table ES-2, *Summary of Environmental Impacts, Mitigation Measures and Levels of Significance After Mitigation;* TOP 2050 DSEIR Section 5.7, *Geology and Soils*).

Based on the preceding, the potential for the Project to directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury or death involving rupture of a known earthquake fault is considered less-than-significant.

a. ii – iii) *Potentially Significant Impact.* The Project does not propose actions or facilities that would exacerbate known or probable adverse strong seismic ground shaking, or seismic-related ground failure conditions. However, Southern California in general, including the Project site and surrounding areas, is generally susceptible to seismic events. Therefore, there is a potential for the Project to directly or indirectly

cause potential substantial adverse effects, including the risk of loss, injury or death involving strong seismic ground shaking, and/or seismic-related ground failure (including liquefaction). As part of the Project EIR, a Preliminary Geotechnical Investigation will be prepared, addressing these potential impacts. Mitigation will be proposed for any impacts determined to be potentially significant.

a. iv) *Less-Than-Significant Impact.* The Project site topography evidences little internal difference, with a moderate northeast to southwest downward trending slope, averaging between +2.0 % to -2.3% (Google Earth Imagery 2022). The Project site is not considered internally susceptible to land sliding. Any slopes manufactured in the course of Project development would be subject to review and approval by the City Building Department to ensure their stability. Adjacent properties also present little topographic relief.

Lastly, the Project has been designed to be consistent with TOP 2050, and by extension would not result in impacts not considered and addressed in the TOP 2050 SEIR. As concluded in TOP 2050 SEIR, the potential for TOP 2050 General Plan to exacerbate geologic hazards in the City, such as on- or off-site landslide, lateral spreading, subsidence, liquefaction, or collapse would be less-than-significant (TOP 2050 DSEIR Table ES-2, *Summary of Environmental Impacts, Mitigation Measures and Levels of Significance After Mitigation;* TOP 2050 DSEIR Section 5.7, *Geology and Soils*).

Based on the preceding, the potential for the Project to directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury or death involving landslides is considered less-than-significant.

b) *Less-Than-Significant Impact.* Project construction activities would temporarily expose underlying soils, thereby increasing their susceptibility to erosion. Potential erosion impacts incurred during construction activities are mitigated below the level of significance through the Project's mandated compliance with a City-approved Storm Water Pollution Prevention Plan (SWPPP), as well as compliance with SCAQMD Rules that prohibit grading activities and site disturbance during

high wind events. At Project completion, potential soil erosion impacts in the area will be resolved, as pavement, roads, buildings, and landscaping are established, overcovering previously-exposed soils.

The Project does not propose altering existing topography in a manner that would result in substantial soil erosion or the loss of topsoil. All Project development plans would be subject to review and approval by the City. As part of this review, the City would ensure that permanent slopes and slope protection would conform to City requirements, thereby minimizing the potential for soil erosion over the life of the Project. City review and approval of development plans would also ensure that stormwater management systems are incorporated that would minimize potential erosion from stormwater runoff, both on-site and off-site.

Lastly, the Project has been designed to be consistent with TOP 2050, and by extension would not result in impacts not considered and addressed in the TOP 2050 SEIR. As concluded in TOP 2050 SEIR, the potential for TOP 2050 General Plan to result in substantial soil erosion or the loss of topsoil would be less-than-significant (TOP 2050 DSEIR Table ES-2, *Summary of Environmental Impacts, Mitigation Measures and Levels of Significance After Mitigation;* TOP 2050 DSEIR Section 5.7, *Geology and Soils*).

Based on the preceding, the potential for the Project to result in substantial soil erosion or the loss of topsoil is considered less-than-significant.

c, d) *Potentially Significant Impact.* Adverse/unstable soils or subsurface conditions may exist within the Project site and would be considered potentially significant impacts. As part of the Project EIR, a Preliminary Geotechnical Investigation will be prepared, addressing these potential impacts. Mitigation will be proposed for any impacts determined to be potentially significant.

e) *Less-Than Significant Impact.* The Project uses would be served by municipal sewer services. No septic tanks or other alternative wastewater disposal systems are proposed by the Project.

Moreover, the Project has been designed to be consistent with TOP 2050, and by extension would not result in impacts not considered and addressed in the TOP 2050 SEIR. As concluded in TOP 2050 SEIR, the potential for TOP 2050 General Plan to have soils incapable of adequately supporting the use of septic tanks or alternative wastewater disposal systems where sewers are not available for the disposal of wastewater would be less-than-significant (TOP 2050 DSEIR Table ES-2, *Summary of Environmental Impacts, Mitigation Measures and Levels of Significance After Mitigation;* TOP 2050 DSEIR Section 5.7, *Geology and Soils*).

On this basis, the potential for the Project to affect or be affected by soils incapable of adequately supporting the use of septic tanks or alternative wastewater disposal systems would be less-than-significant.

f) *Potentially Significant Impact.* No known paleontological resources or unique geological features exist within the Specific Plan area. However, such resources may exist within the Project site and could be affected by site-disturbing activities. As part of the Project EIR, a Paleontological Resources Assessment will be prepared. This Assessment, in combination with the Project Geotechnical Investigation, will evaluate and substantiate the potential for the Project to directly or indirectly destroy a unique paleontological resource or site or unique geological feature. Pending information indicating otherwise, there is the potential for the Project to directly or indirectly destroy a unique paleontological resource or site or unique geological feature. The Project EIR will evaluate these impacts and mitigation will be proposed for those impacts determined to be potentially significant.

Sources: *City of Ontario Policy Plan, A Component of The Ontario Plan 2050* (Placeworks); *The Ontario Plan 2050 DSEIR, SCH No. 2021070364* (Placeworks) May 2022; City of Ontario Development Code; Project Application Materials.

	Potentially Significant Impact	Less-Than-Significant With Mitigation Incorporated	Less-Than-Significant Impact	No Impact
VIII. GREENHOUSE GAS EMISSIONS. Would the project:				
a) Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?	☒	☐	☐	☐
b) Conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gases?	☒	☐	☐	☐

Substantiation:

a, b) *Potentially Significant Impact.* Project construction and operations would generate Greenhouse Gas (GHG) emissions. The Project's contribution to greenhouse gas emissions may be potentially significant, both as a source of environmental impacts and in context of applicable plans, policies and regulations adopted for the purpose of reducing GHGs. Accordingly, a Greenhouse Gas Analysis (GHGA) will be prepared as part of the Project EIR. The GHGA findings, together with any necessary mitigation measures, will be presented within the Project EIR.

Source: Project Application Materials.

	Potentially Significant Impact	Less-Than-Significant With Mitigation Incorporated	Less-Than-Significant Impact	No Impact
IX. HAZARDS AND HAZARDOUS MATERIALS. Would the project:				
a) Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?	☒	☐	☐	☐
b) Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the likely release of hazardous materials into the environment?	☒	☐	☐	☐
c) Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?	☒	☐	☐	☐
d) Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?	☐	☐	☒	☐
e) For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard or excessive noise for the people residing or working in the project area?	☐	☐	☒	☐
f) Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?	☐	☐	☒	☐
g) Expose people or structures, either directly or indirectly, to a significant risk of loss, injury or death involving wildland fires?	☐	☐	☒	☐

Substantiation:

a – c) *Potentially Significant Impact.* Implementation of the Project would not require the transportation, use, storage, or disposal of hazardous or potentially hazardous materials beyond those typically employed for the construction and maintenance of the Project uses. However, the Project site could be affected by or could result in potentially significant hazards/hazards materials impacts due to structure demolition, potential presence of methane gas, presence of organic materials, and general hazards or hazardous conditions associated with current and historic agricultural and dairy farming uses.

Prior to, or concurrent with construction of the Project facilities, remediation of existing significant hazards/hazardous materials conditions would be required. These remedial actions could create a significant hazard to the public or the environment through the routine transport or disposal of hazardous materials; could create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the likely release of hazardous materials into the environment; and could emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school. The Project EIR will evaluate these potential impacts and will propose mitigation for those impacts determined to be potentially significant.

d) *Less-Than-Significant Impact.* The subject site is not included on the hazardous materials sites list compiled pursuant to Government Code Section 65962.5. Additionally, the Project would be required to comply with applicable federal, state, and local regulations, ensuring that hazards/hazardous materials impacts are maintained at levels that would be less-than-significant.

Moreover, the Project has been designed to be consistent with TOP 2050, and by extension would not result in impacts not considered and addressed in the TOP 2050 SEIR. As concluded in TOP 2050 SEIR, the potential for TOP 2050 General Plan to

result in development of sites that are included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, create a significant hazard to the public or the environment would be less-than-significant (TOP 2050 DSEIR Table ES-2, *Summary of Environmental Impacts, Mitigation Measures and Levels of Significance After Mitigation;* TOP 2050 DSEIR Section 5.9, *Hazards and Hazardous Materials*).

On this basis, the potential for the Project to be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 is considered less-than-significant.

e) *Less-Than-Significant Impact.* The Project site is located within the area subject to provisions of the ONT Airport Land Use Compatibility Plan (ALUCP, July 2018). The ALUCP defines the ONT Airport Influence Area (AIA) as an area in which current and future airport-related noise, overflight, safety, and airspace protection factors may significantly affect land uses or necessitate restriction on those uses. The Project site is located outside the ONT safety zones (see: TOP 2050 DSEIR Figure 5.9-2, *Airport Safety Zones*). All Project development would be required to comply with ALUCP requirements, thereby precluding or minimizing potential airport/aircraft-related hazards. The Project does not propose or require uses that would contribute to potential airport/aircraft-related hazards.

Moreover, the Project has been designed to be consistent with TOP 2050, and by extension would not result in impacts not considered and addressed in the TOP 2050 SEIR. As concluded in TOP 2050 SEIR, the potential for TOP 2050 General Plan to expose developments or populations to airport/aircraft-related hazards would be less-than-significant (TOP 2050 DSEIR Table ES-2, *Summary of Environmental Impacts, Mitigation Measures and Levels of Significance After Mitigation;* TOP 2050 DSEIR Section 5.9, *Hazards and Hazardous Materials*).

Based on the preceding, the potential for the Project to result in a safety hazard for the people residing or working in the project area is considered less-than-significant.

Please refer also to discussions addressing airport/aircraft-source noise presented at Checklist Item XIII. *Noise* (c).

f) *Less-Than-Significant Impact.* The Project does not propose or require permanent alteration of vehicle circulation routes, and would not interfere with any identified emergency response or emergency evacuation plan. Consistent with City policies, coordination with the local fire and police departments during pre-construction review of Project plans would ensure that potential interference with emergency response plans and evacuation plans are avoided.

Moreover, the Project has been designed to be consistent with TOP 2050, and by extension would not result in impacts not considered and addressed in the TOP 2050 SEIR. As concluded in TOP 2050 SEIR, the potential for TOP 2050 General Plan to impair implementation of or physically interfere with an adopted emergency response plan would be less-than-significant (TOP 2050 DSEIR Table ES-2, *Summary of Environmental Impacts, Mitigation Measures and Levels of Significance After Mitigation;* TOP 2050 DSEIR Section 5.9, *Hazards and Hazardous Materials*).

Based on the preceding, the potential for the Project to impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan is considered less-than-significant.

g) *Less-Than-Significant Impact*. The Project site is located in an urbanizing area, and no wildlands are located in the vicinity of the Project site. Fire protection services are provided to the City and the Project site by the Ontario Fire Department. Pre-construction coordination with Fire Department staff and adherence to local fire regulations during construction and operation of the Project would be required. The City and Fire Department would require that fire prevention/fire suppression measures are incorporated in the Project designs and that water delivery systems serving the Project site provide adequate fire flow. Creation and maintenance of firebreaks and fire-defensible spaces adjacent to building and roadways as required by the City and Fire Department would further reduce the potential for exposure to

wildland fires and the spread of wildland fires. The City would also enforce weed abatement measures, minimizing potential fire fuel loads. Additionally, development of the Project site would act to reduce fire hazards by eliminating existing fire fuel loads such as manure, hay, and weeds; while improving area fire protection infrastructure systems.

Lastly, the Project has been designed to be consistent with TOP 2050, and by extension would not result in impacts not considered and addressed in the TOP 2050 SEIR. As concluded in TOP 2050 SEIR, the potential for TOP 2050 General Plan to expose people or structures, either directly or indirectly, to a significant risk of loss, injury or death involving wildland fires would be less-than-significant (TOP 2050 DSEIR Table ES-2, *Summary of Environmental Impacts, Mitigation Measures and Levels of Significance After Mitigation;* TOP 2050 DSEIR Section 5.9, *Hazards and Hazardous Materials*).

Based on the preceding, the potential for the Project to result in significant risk of loss, injury or death involving wildland fires is considered less-than-significant. Please also refer also to the discussions at subsequent Checklist Item XX, *Wildfire*.

Sources: *City of Ontario Policy Plan, A Component of The Ontario Plan 2050* (Placeworks); *The Ontario Plan 2050 DSEIR, SCH No. 2021070364* (Placeworks) May 2022; City of Ontario Development Code; Project Application Materials.

	Potentially Significant Impact	Less-Than-Significant With Mitigation Incorporated	Less-Than-Significant Impact	No Impact
X. HYDROLOGY AND WATER QUALITY. Would the project:				
a) Violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or ground water quality?	☒	☐	☐	☐

	Potentially Significant Impact	Less-Than-Significant With Mitigation Incorporated	Less-Than-Significant Impact	No Impact
b) Substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin?	☐	☐	☒	☐
c) Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river, or through the addition of impervious surfaces, in a manner which would:				
(i) result in substantial erosion or siltation on- or off-site?	☐	☐	☒	☐
(ii) substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or offsite?	☒	☐	☐	☐
(iii) create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff?	☒	☐	☐	☐
(iv) impede or redirect flood flows?	☒	☐	☐	☐
d) In flood hazard, tsunami, or seiche zones, risk release of pollutants due to project inundation?	☒	☐	☐	☐
e) Conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan?	☒	☐	☐	☐

Substantiation:

a, e) *Potentially Significant Impact*. Runoff from the Project area may include oils from paved areas and other chemicals which may contribute to degradation of surface and groundwater quality. The Project may also conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan, thereby resulting in potentially significant environmental impacts. Analysis of potential impacts in regard to water quality standards/waste

discharge requirements, and consistency with an applicable water quality control plan and/or sustainable groundwater management plan will be included in the Project EIR. Mitigation measures will be incorporated to address any potentially significant impacts.

b) *Less-Than-Significant Impact*. Direct additions or withdrawals of groundwater are not proposed by the Project. Further, construction proposed by the Project will not involve substructures or other intrusions at depths that would significantly impair or alter the direction or rate of flow of groundwater. Water is provided throughout the City by the City of Ontario Utilities Department.[3] Groundwater which may be consumed by the Project and the City of Ontario, as a whole, would be recharged pursuant to the Department's policies and programs. The Project site is not a designated groundwater recharge area. The Project does not propose or require facilities or operations that would otherwise adversely affect designated recharge areas.

Moreover, the Project has been designed to be consistent with TOP 2050, and by extension would not result in impacts not considered and addressed in the TOP 2050 SEIR. As concluded in TOP 2050 SEIR, the potential for TOP 2050 General Plan to substantially decrease groundwater supplies or interfere substantially with groundwater recharge and thereby impede sustainable groundwater management of the basin would be less-than-significant (TOP 2050 DSEIR Table ES-2, *Summary of Environmental Impacts, Mitigation Measures and Levels of Significance After Mitigation;* TOP 2050 DSEIR Section 5.10, *Hydrology and Water Quality*).

Based on the preceding, the potential for the Project to substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin is considered less-than-significant.

[3] Water supply availability to the Project generally is discussed at Checklist Item XIX, *Utilities and Service Systems*.

c (i) *Less-Than-Significant Impact.* Please refer to previous discussions at Checklist Item VII, *Geology and Soils* (b).

c (ii, iv) *Potentially Significant Impact*. The Project would implement new structures and surface improvements that could result in substantially increased rates of surface runoff, with resulting increased on-site or off-site flooding potential. Similarly, Project structures and surface improvements could alter existing area stormwater runoff patterns in a manner that would create, impede, or redirect flood flows. The Project EIR will address these potential impacts. Mitigation will be proposed for impacts determined to be potentially significant.

c (iii) *Potentially Significant Impact*. The increase in impervious surfaces created by development of the Project site would result in decreased absorption rates and increased surface runoff. Development of the Project site could also substantially alter the existing drainage pattern of the site or area in a manner that could create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff. The Project EIR will address these potential impacts. Mitigation will be proposed for impacts determined to be potentially significant.

d) *Potentially Significant Impact*. As shown at TOP 2050 DSEIR Figure 5.10-2, *Flood Hazard Zones*, the Project site is not located proximate to a 100-year flood plain. The Project site does however lie within the dam inundation zone for the potential San Antonio Dam (see: TOP 2050 DSEIR Figure 5.10-3, *Dam Inundation Zones*). The Project uses would include limited on-site storage of conventional materials such as petroleum products, landscape fertilizer, cleaning products, etc. that could be released should the Project site be inundated. On this basis, there is a potential risk of release of pollutants due to inundation of the Project site. This impact will be evaluated in the Project EIR. Mitigation will be proposed if the impact is determined to be potentially significant.

Sources: *City of Ontario Policy Plan, A Component of The Ontario Plan 2050* (Placeworks); *The Ontario Plan 2050 DSEIR, SCH No. 2021070364* (Placeworks) May 2022; City of Ontario Development Code; Project Application Materials.

	Potentially Significant Impact	Less-Than-Significant With Mitigation Incorporated	Less-Than-Significant Impact	No Impact
XI. LAND USE AND PLANNING. Would the project:				
a) Physically divide an established community?	☐	☐	☒	☐
b) Cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect?	☒	☐	☐	☐

Substantiation:

a) *Less-Than-Significant Impact*. The developed Project would establish a pattern of cohesive and complementary land uses. The Project configuration and orientation of land uses, combined with integral development standards and design guidelines, act to preclude division or disruption of an established community, whether that community be internal or external to the Project site.

Physical arrangement of surrounding areas would not be modified or otherwise affected by the Project. Based on the preceding discussion, the Project's potential to disrupt or divide the physical arrangement of an established community is considered less-than-significant.

b) *Potentially Significant Impact.* The Project comprises an amendment to the current Rich-Haven Specific Plan. The proposed Specific Plan Amendment is intended to achieve land use designations that best represent the development and land use activities contemplated by the Project.

When a project includes amendments to the applicable land use designation(s), inconsistency with the existing designation(s) is an element of the project itself, which then requires a legislative policy decision of the agency. The request and subsequent approval of a change in designation in this regard does not of itself signify a potential environmental effect. Land use changes proposed by the Project could however result in physical changes translating to potentially significant environmental impacts, as discussed elsewhere in this IS. These potential impacts, as well as Project consistency with applicable land use policies addressing environmental effects, will be evaluated in the Project EIR.

Sources: *City of Ontario Policy Plan, A Component of The Ontario Plan 2050* (Placeworks); *The Ontario Plan 2050 DSEIR, SCH No. 2021070364* (Placeworks) May 2022; City of Ontario Development Code; Project Application Materials.

	Potentially Significant Impact	Less-Than-Significant With Mitigation Incorporated	Less-Than-Significant Impact	No Impact
XII. MINERAL RESOURCES. Would the project:				
a) Result in the loss of availability of a known mineral resource that would be of value to the region and to the residents of the state?	☐	☐	☒	☐
b) Result in the loss of availability of a locally important mineral resource recovery site delineated on a local general plan, specific plan or other land use plan?	☐	☐	☒	☐

Substantiation:

a, b) *Less-Than-Significant Impact.* Mineral resources in the City are limited to construction aggregates such as sand and gravel. There are currently no permitted mining operations located within the City (TOP 2050 DSEIR, p. 5.12-2). TOP 2050 DSEIR at Figure 5.12-1, *Areas of Mineral Resource Significance,* indicates that the Project site is

classified pursuant to the California Geological Survey as Mineral Resource Zone 3 (MRZ-3). The Project does not propose or require facilities or operations that would affect the availability of locally important or regionally important mineral resources.

Moreover, the Project has been designed to be consistent with TOP 2050, and by extension would not result in impacts not considered and addressed in the TOP 2050 SEIR. As concluded in TOP 2050 SEIR, the potential for TOP 2050 General Plan to result in the loss of availability of a known mineral resource would be less-than-significant (TOP 2050 DSEIR Table ES-2, *Summary of Environmental Impacts, Mitigation Measures and Levels of Significance After Mitigation;* TOP 2050 DSEIR Section 5.12, *Mineral Resources*).

On this basis, the potential for the Project to result in the loss of availability of a known mineral resource that would be of value to the region and to the residents of the state; or result in the loss of availability of a locally important mineral resource recovery site delineated on a local general plan, specific plan or other land use plan is considered less-than-significant.

Sources: *City of Ontario Policy Plan, A Component of The Ontario Plan 2050* (Placeworks); *The Ontario Plan 2050 DSEIR, SCH No. 2021070364* (Placeworks) May 2022; Project Application Materials.

	Potentially Significant Impact	Less-Than-Significant With Mitigation Incorporated	Less-Than-Significant Impact	No Impact
XIII. NOISE. Would the project result in:				
a) Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?	☒	☐	☐	☐
	☒	☐	☐	☐

	Potentially Significant Impact	Less-Than-Significant With Mitigation Incorporated	Less-Than-Significant Impact	No Impact
b) Generation of excessive groundborne vibration or groundborne noise?				
c) For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?	☒	☐	☐	☐

Substantiation:

a - c) *Potentially Significant Impact.* Construction of the Project would temporarily increase localized noise levels, and occupation of Project facilities will establish long-term stationary operational noise sources. These noise sources could adversely affect sensitive receptors. Further, Project traffic may increase noise levels along affected area roadways, with potentially adverse effects at receiving land uses. Additionally, there is the potential for the Project land uses to be adversely affected by noise generated by operations of the Ontario International Airport.

Accordingly, a Noise Impact Analysis will be prepared as part of the Project EIR. The Analysis will evaluate and address all Project-source noise impacts. The Analysis will also address potential effects of noise generated by Ontario International Airport operations. Mitigation measures will be proposed for impacts determined to be potentially significant.

Sources: *City of Ontario Policy Plan, A Component of The Ontario Plan 2050* (Placeworks); *The Ontario Plan 2050 DSEIR, SCH No. 2021070364* (Placeworks) May 2022; City of Ontario Development Code; Project Application Materials.

	Potentially Significant Impact	Less-Than-Significant With Mitigation Incorporated	Less-Than-Significant Impact	No Impact
XIV. POPULATION AND HOUSING. Would the project:				
a) Induce substantial unplanned population growth in the area, either directly (e.g., by proposing new homes and businesses) or indirectly (e.g., through the extension or roads or other infrastructure)?	☐	☐	☒	☐
b) Displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere?	☐	☐	☒	☐

Substantiation:

a) *Less-Than-Significant Impact.* The Project proposes new and reconfigured residential uses that would directly contribute to population growth. Additionally, the Project light industrial and commercial uses would create additional employment opportunities that could indirectly contribute to population growth. Development proposed by the Project responds globally to existing and anticipated market demands of the City and region, and employment generated by the Project would be a byproduct of this anticipated growth. The Project represents a component of development and growth anticipated by the City, as reflected by the site's TOP 2050 General Plan Land Use designations.

Moreover, the Project has been designed to be consistent with TOP 2050, and by extension would not result in impacts not considered and addressed in the TOP 2050 SEIR. As concluded in TOP 2050 SEIR, the potential for TOP 2050 General Plan to induce substantial unplanned population growth in the area would be less-than-significant (TOP 2050 DSEIR Table ES-2, *Summary of Environmental Impacts, Mitigation Measures and Levels of Significance After Mitigation;* TOP 2050 DSEIR Section 5.14, *Population and Housing*).

Based on the preceding, the potential for the Project to result in or induce substantial unplanned population growth, either directly or indirectly is considered less-than-significant.

b) *Less-than-Significant Impact.* The Project would maintain net residential development within the Specific Plan Area when compared to land uses and development entitled under the 2021 Specific Plan. That is, under both the 2021 Specific Plan and the proposed 2022 SPA, 7,194 dwelling units (all residential types) would be entitled. Locations and configurations of entitled residential uses would however be amended under the 2022 SPA. These amendments would not eliminate housing, diminish the potential for new housing, or displace persons from existing housing.

Moreover, the Project would be implemented consistent with TOP 2050. TOP 2050 SEIR concludes that the potential for TOP 2050 General Plan to displace people or housing, necessitating construction of replacement housing would be less-than-significant (TOP 2050 DSEIR Table ES-2, *Summary of Environmental Impacts, Mitigation Measures and Levels of Significance After Mitigation;* TOP 2050 DSEIR Section 5.14, *Population and Housing*).

Based on the preceding, the potential for the Project to displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere is considered less-than-significant.

Sources: *City of Ontario Policy Plan, A Component of The Ontario Plan 2050* (Placeworks); *The Ontario Plan 2050 DSEIR, SCH No. 2021070364* (Placeworks) May 2022; City of Ontario Development Code; Project Application Materials.

	Potentially Significant Impact	Less-Than-Significant With Mitigation Incorporated	Less-Than-Significant Impact	No Impact
XV. PUBLIC SERVICES. Would the project result in substantial adverse physical impacts associated with the provision of the new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the public services:				
a) Fire Protection?	☐	☐	☒	☐
b) Police Protection?	☐	☐	☒	☐
c) Schools?	☐	☐	☒	☐
d) Parks?	☐	☐	☒	☐
e) Other public facilities?	☐	☐	☒	☐

Substantiation:

a) *Less-Than-Significant Impact.* Fire suppression and emergency response services for the Project would be provided by the Ontario Fire Department (OFD). TOP 2050 SEIR recognizes the potential for development pursuant to The Ontario Plan, including development of the area encompassing the Project site to result in increased demands for fire protection services (TOP 2050 DSEIR, p. 5.15-3). TOP 2050 SEIR also recognizes that evaluation of potential environmental impacts resulting from the construction or expansion of new or modified fire protection facilities would be speculative until such time the location(s) of such facilities are determined. The Project provides for potential location of a new fire station at the northwest corner of Ontario Ranch Road (E – W) at Mill Creek Avenue (N – S). Ultimate need for and location of this fire station would be subject to review and

approval by the City and Fire Department. Environmental review of this facility would be conducted when and as required by the City.

Additionally, the Project would pay General City (GC) Development Impact Fees, a portion of which is available to offset incremental fire protection service demands generated by the Project. The Project Applicant would pay incumbent Development Impact Fees at issuance of building permit(s).

To the satisfaction of the OFD, the Project would comply with City and OFD fire prevention and suppression requirements, including building/site design requirements, substantiated fire flow adequacy, and provisions for emergency access, thereby reducing potential increased demands for fire protection services.

Lastly, the Project has been designed to be consistent with TOP 2050, and by extension would not result in impacts not considered and addressed in the TOP 2050 SEIR. TOP 2050 SEIR concludes that the potential for TOP 2050 General Plan to result in substantial adverse physical impacts associated with the provision of the new or physically altered fire protection and emergency services would be less-than-significant (TOP 2050 DSEIR Table ES-2, *Summary of Environmental Impacts, Mitigation Measures and Levels of Significance After Mitigation;* TOP 2050 DSEIR Section 5.15, *Public Services*).

Based on the preceding, the potential for the Project to result in substantial adverse physical impacts associated with the provision of the new or physically altered fire protection facilities is considered less-than-significant.

b) *Less-Than-Significant Impact.* The Project does not propose or require construction or modification of police protection facilities. The Project site is not designated or proposed as the location for new or modified police protection facilities. Incremental police protection service demands generated by the Project are offset through Project payment of City of Ontario General City (GC) Development Impact Fees. A portion of the City's GC Development Impact Fees are allocated for police protection

services. The Project Applicant would pay incumbent Development Impact Fees at issuance of building permit(s).

Additionally, the Project site plan concept and proposed building designs would be reviewed by the Ontario Police Department (OPD) to ensure incorporation of appropriate safety and security elements. Such design features would include secure building designs, defensible spaces, and area and facility security lighting. These design features would act to reduce Project demands for police protection services.

Lastly, the Project has been designed to be consistent with TOP 2050, and by extension would not result in impacts not considered and addressed in the TOP 2050 SEIR. TOP 2050 SEIR concludes that the potential for TOP 2050 General Plan to result in substantial adverse physical impacts associated with the provision of the new or physically altered police protection services would be less-than-significant (TOP 2050 DSEIR Table ES-2, *Summary of Environmental Impacts, Mitigation Measures and Levels of Significance After Mitigation;* TOP 2050 DSEIR Section 5.15, *Public Services*).

Based on the preceding, the potential for the Project to result in substantial adverse physical impacts associated with the provision of the new or physically altered police protection facilities is considered less-than-significant.

c) *Less-Than-Significant Impact.* Public school services for the City of Ontario are provided by the following school districts:

- Chino Valley Unified School District;
- Cucamonga Elementary School District;
- Mountain View Elementary School District; and
- Ontario-Montclair Elementary School District.

Occupancy of the Project residential uses would directly contribute to demands on school services. Indirectly, the Project may contribute to area demands for school

services if Project employees and their school age children would relocate to school districts serving the City.

The Project does not propose or require construction or modification of school facilities. The Project site is not designated or proposed as the location for new or modified school facilities.

Project incremental impacts to school services would be offset through mandated payment of school impact fees. The Project Applicant would pay incumbent school impact fees at issuance of building permit(s). Payment of school impact fees would reduce the Project's potential impacts to school services to levels that would be less-than-significant.

Lastly, the Project has been designed to be consistent with TOP 2050, and by extension would not result in impacts not considered and addressed in the TOP 2050 SEIR. TOP 2050 SEIR concludes that the potential for TOP 2050 General Plan to result in substantial adverse physical impacts associated with the provision of the new or physically altered school facilities would be less-than-significant (TOP 2050 DSEIR Table ES-2, *Summary of Environmental Impacts, Mitigation Measures and Levels of Significance After Mitigation;* TOP 2050 DSEIR Section 5.15, *Public Services*).

Based on the preceding, the potential for the Project to result in substantial adverse physical impacts associated with the provision of the new or physically altered school facilities is considered less-than-significant.

d) *Less-Than-Significant Impact.* The Project includes parks and open space non-recreation areas that would complement and support development of the Specific Plan Area generally. Potential environmental effects of construction of these facilities are reflected in the scope on analysis of environmental impacts of the Project in total.

Moreover, the Project has been designed to be consistent with TOP 2050, and by extension would not result in impacts not considered and addressed in the TOP 2050 SEIR. TOP 2050 SEIR concludes that the potential for TOP 2050 General Plan to result in substantial adverse physical impacts associated with the provision of the new or physically altered parks, recreational facilities, or recreational services would be less-than-significant (TOP 2050 DSEIR Table ES-2, *Summary of Environmental Impacts, Mitigation Measures and Levels of Significance After Mitigation;* TOP 2050 DSEIR Section 5.16, *Recreation*).

Of themselves, environmental impacts of parks and open space non-recreation areas that would be constructed as part of the Project are considered less-than-significant.

e) *Less-Than-Significant Impact.* Development of the Project would require established public agency oversight including, but not limited to, various plan check and permitting actions by the City. Impacts of the Project would fall within routine tasks of these agencies/departments and are paid for via plan check and inspection fees. Impacts of the Project would not be of such magnitude that new or physically altered facilities would be required. There are no known or probable other public facilities that would be substantially affected by the Project.

Based on the preceding, the potential for the Project to result in substantial adverse physical impacts associated with the provision of the new or physically altered other public facilities is considered less-than-significant.

Sources: *City of Ontario Policy Plan, A Component of The Ontario Plan 2050* (Placeworks); *The Ontario Plan 2050 DSEIR, SCH No. 2021070364* (Placeworks) May 2022; Project Application Materials.

	Potentially Significant Impact	Less-Than-Significant With Mitigation Incorporated	Less-Than-Significant Impact	No Impact
XVI. RECREATION				
a) Would the project increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial deterioration of the facility would occur or be accelerated?	☐	☐	☒	☐
b) Does the project include recreational facilities or require the construction or expansion of recreational facilities, which might have an adverse physical effect on the environment?	☐	☐	☒	☐

Substantiation:

a, b) *Less-Than-Significant Impact*. The Project includes parks and open space non-recreation areas that would complement and support development of the Specific Plan Area generally. Potential environmental effects of construction of these facilities are reflected in the scope on analysis of environmental impacts of the Project in total. Of themselves, environmental impacts of parks and open space non-recreation areas that would be constructed as part of the Project are considered less-than-significant. New residential development within the City is required to pay GC Development Impact Fees, a portion of which would be allocated for parks facilities, acting to offset incremental demands on neighborhood and regional parks or other recreational facilities. The Applicant would pay all requisite GC Development Impact Fees.

Moreover, the Project has been designed to be consistent with TOP 2050, and by extension would not result in impacts not considered and addressed in the TOP 2050 SEIR. TOP 2050 SEIR concludes that the potential for TOP 2050 General Plan to result in substantial adverse physical impacts associated with the provision of the new or physically altered parks, recreational facilities, or recreational services

would be less-than-significant (TOP 2050 DSEIR Table ES-2, *Summary of Environmental Impacts, Mitigation Measures and Levels of Significance After Mitigation;* TOP 2050 DSEIR Section 5.16, *Recreation*). Please refer also to discussions presented at Checklist Item XV. *Public Services* (d).

Based on the preceding, the potential for the Project to increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial deterioration of the facility would occur or be accelerated; or to require the construction or expansion of recreational facilities, which might have an adverse physical effect on the environment is considered less-than-significant.

Sources: *City of Ontario Policy Plan, A Component of The Ontario Plan 2050* (Placeworks); *The Ontario Plan 2050 DSEIR, SCH No. 2021070364* (Placeworks) May 2022; Project Application Materials.

	Potentially Significant Impact	Less-Than-Significant With Mitigation Incorporated	Less-Than-Significant Impact	No Impact
XVII. TRANSPORTATION. Would the project:				
a) Conflict with a program, plan, ordinance or policy addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities?	☒	☐	☐	☐
b) Conflict or be inconsistent with CEQA Guidelines Section 15064.3, subdivision (b)?	☒	☐	☐	☐
c) Substantially increase hazards to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?	☒	☐	☐	☐
d) Result in inadequate emergency access?	☒	☐	☐	☐

Substantiation:

a) *Potentially Significant Impact*. The Project would generate auto, transit, pedestrian, and bicycle trips. The Project has the potential to result in increased demand on the local transportation system, including the roadway network, transit service, pedestrian and bicycle facilities.

New or modified land uses proposed under the Project could result in various changes to circulation patterns. Based on the preceding, the Project would have the potential to conflict with a program, plan, ordinance or policy addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities.

The Project EIR will evaluate and assess the potential for the Project to conflict with a program, plan, ordinance or policy addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities, and thereby result in potentially significant environmental impacts.

b) *Potentially Significant Impact.* Project traffic may result in substantial additional vehicle miles traveled (VMT). The EIR will evaluate Project VMT impacts against per capita, per service population, or other VMT significance thresholds implemented by the Lead Agency. Mitigation will be developed for impacts determined to be potentially significant.

For informational purposes, and to facilitate Lead Agency planning of area transportation system improvements, the Project EIR will also present a summary of anticipated level-of-service (LOS) deficiencies, together with recommended improvements to address identified deficiencies.

c, d) *Potentially Significant Impact*. Although preliminary review of the Project does not indicate elements or aspects that would be considered hazardous design features or result in inadequate emergency access, these considerations will be further evaluated in the Project EIR. Mitigation will be developed for impacts determined to be potentially significant.

Source: Project Application Materials.

	Potentially Significant Impact	Less-Than-Significant With Mitigation Incorporated	Less-Than-Significant Impact	No Impact
XVIII. TRIBAL CULTURAL RESOURCES.				
a) Would the project cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is:	☒	☐	☐	☐
(i) Listed or eligible for listing in the California Register of Historical Resources, or in the local register of historical resources as defined in Public Resources Code Section 5020.1(k), or	☒	☐	☐	☐
(ii) A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code Section 5024.1. In applying the criteria set forth in subdivision (c) of Public Resource Code Section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe.	☒	☐	☐	☐

Substantiation:

a. i, ii) *Potentially Significant Impact*. There are no known Tribal Cultural Resources (TCRs) within the Project site. Nor is it anticipated that the Project would adversely affect off-site TCRs. However, detailed surveys confirming the presence or absence of these resources has not yet been conducted. A Tribal Cultural Resources Assessment of the Project site and potentially affected off-site areas will be prepared as an element of the Project EIR. Tribal Resources consultation with requesting Tribes will be conducted as provided for under *AB 52, Gatto. Native Americans: California Environmental Quality Act*. Pending completion of the Project Cultural Resources survey and any requested Tribal Consultation(s), the potential for the Project to cause a substantial adverse change in the

significance of a tribal cultural resource is considered potentially significant. The Project EIR will address these potential impacts. Mitigation will be proposed for impacts determined to be potentially significant.

Source: Project Application Materials.

	Potentially Significant Impact	Less-Than-Significant With Mitigation Incorporated	Less-Than-Significant Impact	No Impact
XIX. UTILITIES AND SERVICE SYSTEMS. Would the project:				
a) Require or result in the relocation or construction of new or expanded water, wastewater treatment, storm water drainage, electric power, natural gas, or telecommunication facilities, the construction or relocation of which could cause significant environmental effects?	☒	☐	☐	☐
b) Have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry and multiple dry years?	☒	☐	☐	☐
c) Result in a determination by the wastewater treatment provider which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?	☒	☐	☐	☐
d) Generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals?	☒	☐	☐	☐
e) Comply with federal, state, and local management and reduction statutes and regulations related to solid waste?	☒	☐	☐	☐

Substantiation:

a) *Potentially Significant Impact.* The Project would require new or altered infrastructure improvements for: water delivery, wastewater collection, storm water management, electric power distribution, natural gas service, and telecommunications service. Construction of or alteration of these facilities has the potential to cause significant environmental effects. The Project EIR will evaluate these potential impacts. Mitigation will be proposed for impacts determined to be potentially significant.

b) *Potentially Significant Impact.* The City of Ontario water supply is derived from a combination of local and imported water, obtained primarily from Ontario wells and treatment in the Chino Groundwater Basin, the Chino Desalter Authority (CDA) wells and treatment in the Chino Groundwater Basin, treated State Water Project water from the Water Facilities Authority (WFA), and recycled water from the Inland Empire Utilities Agency (IEUA), a member agency of the Metropolitan Water District of Southern California (MWD).

The Project uses could increase demands on available water supplies. Water supply and availability are recognized as general issues of concern. The City will prepare a Water Supply Assessment (WSA) pursuant to the requirements of SB 610. The results of the WSA will be summarized within the Project EIR.

Pending completion of the Project WSA, the Project's potential impacts to water supplies and potential effects on the availability of water are considered potentially significant, and will be further addressed in the Project EIR. Mitigation measures will be proposed for those impacts determined to be potentially significant.

c) *Potentially Significant Impact.* The City maintains a wastewater collection system and contracts with the Inland Empire Utilities Agency (IEUA) for wastewater treatment. The Project uses could result in increased wastewater treatment

demands that could exceed available wastewater treatment capacities. The Project EIR will evaluate the potential for the Project to generate wastewater exceeding available treatment capacities. Mitigation will be proposed for impacts determined to be potentially significant.

d, e) *Potentially Significant Impact.* Solid waste collection services are currently provided to City residents by the City of Ontario Solid Waste Department. Solid Waste generated by the Project would be disposed of at the Mid-Valley Sanitary Landfill, located in the City of Rialto. Implementation of the Project would result in increased solid waste generation. The Project EIR will evaluate the potential for Project uses to generate waste in excess of state or local standards, or to conflict with federal, state, and local management and reduction statutes and regulations related to solid waste. Mitigation will be proposed for impacts determined to be potentially significant.

Sources: *City of Ontario Policy Plan, A Component of The Ontario Plan 2050* (Placeworks); *The Ontario Plan 2050 DSEIR, SCH No. 2021070364* (Placeworks) May 2022; Project Application Materials.

	Potentially Significant Impact	Less-Than-Significant With Mitigation Incorporated	Less-Than-Significant Impact	No Impact
XX. WILDFIRE. If located in or near state responsibility areas or lands classified as very high fire hazard severity zones, would the project:				
a) Substantially impair an adopted emergency response plan or emergency evacuation plan?	☐	☐	☒	☐
b) Due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby expose project occupants to, pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire?	☐	☐	☒	☐

	Potentially Significant Impact	Less-Than-Significant With Mitigation Incorporated	Less-Than-Significant Impact	No Impact
c) Require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment?	☐	☐	☒	☐
d) Expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes?	☐	☐	☒	☐

Substantiation:

a - d) *Less-Than-Significant Impact*. CAL FIRE maintains California Fire Hazard Severity Zone Maps, including maps for State responsibility areas, as well as local responsibility areas.[4] As shown on the State responsibility map for southwestern San Bernardino County, the City of Ontario is located within a local responsibility area. According to the local responsibility map, Ontario is located in a non-very high fire hazard severity zone (Non-VHFHSZ).

As such, the Project is not located within or near a state responsibility area, or within an area classified as a very high fire hazard severity zone. All development would be required to comply with City building and Fire Codes. All building plans within the City are reviewed by the Ontario Fire Department to ensure their compliance with the City's fire code.

Moreover, the Project has been designed to be consistent with TOP 2050, and by extension would not result in impacts not considered and addressed in the TOP 2050 SEIR. TOP 2050 SEIR concludes that the potential for TOP 2050 General Plan to result in substantial adverse wildfire impacts would be less-than-significant

[4] https://egis.fire.ca.gov/FHSZ/

(TOP 2050 DSEIR Table ES-2, *Summary of Environmental Impacts, Mitigation Measures and Levels of Significance After Mitigation;* TOP 2050 DSEIR Section 5.20, *Wildfire*).

Based on the preceding, the potential for the Project to substantially impair an adopted emergency response or evacuation plan, expose Project occupants to pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire, involve infrastructure that may exacerbate fire risk, or result in significant post-fire risks is considered less-than-significant.

Sources: CAL FIRE; *City of Ontario Policy Plan, A Component of The Ontario Plan 2050* (Placeworks); *The Ontario Plan 2050 DSEIR, SCH No. 2021070364* (Placeworks) May 2022; Project Application Materials.

	Potentially Significant Impact	Less-Than-Significant With Mitigation Incorporated	Less-Than-Significant Impact	No Impact
XXI. MANDATORY FINDINGS OF SIGNIFICANCE.				
a) Does the project have the potential to substantially degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, substantially reduce the number or restrict the range of a rare or endangered plant or animal, or eliminate important examples of the major periods of California history or prehistory?	☒	☐	☐	☐
b) Does the project have impacts that are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable when reviewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects.)	☒	☐	☐	☐

	Potentially Significant Impact	Less-Than-Significant With Mitigation Incorporated	Less-Than-Significant Impact	No Impact
c) Does the project have environmental effects which will cause substantial adverse effects on human beings, either directly or indirectly?	☒	☐	☐	☐

Substantiation:

a) *Potentially Significant Impact.* Certain biological and cultural resources may be adversely affected by the Project. Potential impacts in this regard will be addressed within the Project EIR.

b) *Potentially Significant Impact.* The Project has the potential to result in cumulatively considerable impacts. As discussed in the previous environmental evaluation, implementation of the Project may result in potentially significant impacts under the environmental topics of:

- Air Quality;
- Biological Resources;
- Cultural/Tribal Resources;
- Energy;
- Geology and Soils;
- Greenhouse Gas Emissions;
- Hazards/Hazardous Materials;
- Hydrology/Water Quality;
- Land Use and Planning;
- Noise;
- Transportation; and
- Utilities and Service Systems.

Impacts of the Project, together with impacts of other known or probable related projects, may have considerably cumulative effects under the above-noted

environmental topics. The Project EIR will identify the Project's contribution to, and context within, potentially significant cumulative environmental impacts.

c) *Potentially Significant Impact***.** As indicated by this IS evaluation, the Project may cause or result in certain potentially significant environmental effects, resulting in potentially adverse effects to human beings. While adverse environmental effects that could affect human beings could, to some degree, be substantiated under all CEQA issue areas, Project impacts considered to be potentially significant and that could directly affect human beings include:

- Air Quality;
- Energy;
- Geology and Soils;
- Greenhouse Gas Emissions;
- Hazards/Hazardous Materials;
- Hydrology/Water Quality;
- Land Use;
- Noise;
- Transportation; and
- Utilities and Service Systems.

The Project EIR will address these environmental topics and present mitigation measures addressing potentially significant impacts.

4.0 DETERMINATION

4.0 DETERMINATION

On the basis of this initial evaluation:

I find that the proposed project COULD NOT have a significant effect on the environment, and a NEGATIVE DECLARATION will be prepared.	☐
I find that although the project could have a significant effect on the environment, there will not be a significant effect in this case because the mitigation measures described previously have been added to the project. A NEGATIVE DECLARATION will be prepared.	☐
I find that the project MAY have a significant effect on the environment and an ENVIRONMENTAL IMPACT REPORT is required.	☒
I find that the project MAY have a significant effect(s) on the environment, but at least one effect 1) has been adequately analyzed in an earlier document pursuant to applicable legal standards, and 2) has been addressed by mitigation measures based on an earlier analysis as described on attached sheets. If the effect is a potentially significant impact or potentially significant unless mitigated an ENVIRONMENTAL IMPACT REPORT is required, but it must analyze only the effects that need to be addressed.	☐
I find that although the proposed project could have a significant effect on the environment, there WILL NOT be a significant effect in this case because all potentially significant effects (a) have been analyzed adequately in an earlier EIR pursuant to applicable standards and (b) have been avoided or mitigated pursuant to that earlier EIR, including revisions or mitigation measures that are imposed upon the proposed project.	☐

Hello Charles,

Thank you for transmitting the above referenced project to ALUC for review. Please note that the proposed project may be influenced by Ontario International Airport. Please contact them for there procedures, additionally it seems like the project is outside the County and not in our jurisdiction.

Should you have any questions, please contact me.

NOVEMBER 16, 2022

VIA EMAIL: CMERCIER@ONTARIOCA.GOV
Charles Mercier, Principal Planner
City of Ontario Planning Department
303 East B Street
Ontario, CA 91764

Dear Mr. Mercier:

INITIAL STUDY AND NOTICE OF PREPERATION OF A DRAFT ENVIRONMENTAL IMPACT REPORT FOR THE 2022 RICH-HAVEN SPECIFIC PLAN AMENDMENT PROJECT, SCH# 2022100425

The Department of Conservation's (Department) Division of Land Resource Protection (Division) has reviewed the Initial Study and Notice of Preparation of a Draft Environmental Impact Report for the 2022 Rich-Haven Specific Plan Amendment Project (Project). The Division monitors farmland conversion on a statewide basis, provides technical assistance regarding the Williamson Act, and administers various agricultural land conservation programs. We offer the following comments and recommendations with respect to the project's potential impacts on agricultural land and resources.

Project Description

The Rich-Haven Specific Plan (RHSP) was approved by the City of Ontario in 2015, with subsequent Specific Plan Amendments approved in 2016, 2018, and 2021. The current (2021) Rich-Haven Specific Plan comprises approximately 584 acres located west of Interstate I-15, and south of State Route SR-60. The 2021 Specific Plan Area lies within the 8,200-acre Ontario Ranch area, bounded generally by Riverside Drive to the north, "Old" East Edison Avenue to the south, Mill Creek Avenue and Hamner Avenue to the east, and Haven Avenue to the west. The location and boundaries of the 2022 RHSP Specific Plan Amendment evaluated in the Initial Study coincide with the location and boundaries in the 2021 Specific Plan.

In summary, the proposed 2022 Specific Plan Amendment would result in the following primary revisions to the 2021 Specific Plan:

1. Total residential development within the Specific Plan Area would be maintained at 7,194 dwelling units. Residential units and residential densities would however be reassigned within the Specific Plan Area.

2. Total commercial development would be reduced by approximately 65,900 square feet, an approximate 6.7 percent reduction in the 2021 Specific Plan commercial entitlements.

3. Total light industrial development would be increased by approximately 1,583,623 square feet, an approximate 134 percent increase from the 2021 Specific Plan Amendment.

Department Comments

The conversion of agricultural land represents a permanent reduction and significant impact to California's agricultural land resources. CEQA requires that all feasible and reasonable mitigation be reviewed and applied to projects. Under CEQA, a lead agency should not approve a project if there are feasible alternatives or feasible mitigation measures available that would lessen the significant effects of the project.

All mitigation measures that are potentially feasible should be included in the project's environmental review. A measure brought to the attention of the lead agency should not be left out unless it is infeasible based on its elements.

Consistent with CEQA Guidelines, the Department recommends the County consider agricultural conservation easements, among other measures, as potential mitigation. (See Cal. Code Regs., tit. 14, § 15370 [mitigation includes "compensating for the impact by replacing or providing substitute resources or environments, including through permanent protection of such resources in the form of conservation easements."])

Mitigation through agricultural easements can take at least two forms: the outright purchase of easements or the donation of mitigation fees to a local, regional, or statewide organization or agency whose purpose includes the acquisition and stewardship of agricultural easements. The conversion of agricultural land should be deemed an impact of at least regional significance. Hence, the search for replacement lands should not be limited strictly to lands within the project's surrounding area.

A helpful source for regional and statewide agricultural mitigation banks is the California Council of Land Trusts. They provide helpful insight into farmland mitigation policies and implementation strategies, including a guidebook with model policies and a model local ordinance. The guidebook can be found at:

California Council of Land Trusts

Of course, the use of conservation easements is only one form of mitigation that should be considered. Any other feasible mitigation measures should also be considered. Indeed, the recent judicial opinion in King and Gardiner Farms, LLC v. County of Kern (2020) 45 Cal.App.5th 814 ("KG Farms") holds that agricultural conservation easements on a 1 to 1 ratio are not alone sufficient to adequately mitigate a project's conversion of agricultural land. KG Farms does not stand for the proposition that agricultural

conservation easements are irrelevant as mitigation. Rather, the holding suggests that to the extent they are considered, they may need to be applied at a greater than 1 to 1 ratio, or combined with other forms of mitigation (such as restoration of some land not currently used as farmland).

Conclusion

The Department recommends further discussion of the following issues:

- Type, amount, and location of farmland conversion resulting directly and indirectly from implementation of the proposed project.
- Impacts on any current and future agricultural operations in the vicinity; e.g., land-use conflicts, increases in land values and taxes, loss of agricultural support infrastructure such as processing facilities, etc.
- Incremental impacts leading to cumulative impacts on agricultural land. This would include impacts from the proposed project, as well as impacts from past, current, and likely future projects.
- Proposed mitigation measures for all impacted agricultural lands within the proposed project area.
- Projects compatibility with lands within an agricultural preserve and/or enrolled in a Williamson Act contract.
- If applicable, notification of Williamson Act contract non-renewal and/or cancellation.

Conclusion

Thank you for giving us the opportunity to comment on the Initial Study and Notice of Preparation of a Draft Environmental Impact Report for the 2022 Rich-Haven Specific Plan Amendment Project. Please provide this Department with notices of any future hearing dates as well as any staff reports pertaining to this project. If you have any questions regarding our comments, please contact Farl Grundy, Associate Environmental Planner via email at Farl.Grundy@conservation.ca.gov.

Sincerely,

Monique Wilber

RE: SCAG Comments on the Notice of Preparation of a Draft Environmental Impact Report for the Rich-Haven Specific Plan Amendment [SCAG NO. IGR10750]

Dear Charles H Mercier,

Thank you for submitting the Notice of Preparation of a Draft Environmental Impact Report for the Rich-Haven Specific Plan Amendment ("proposed project") to the Southern California Association of Governments (SCAG) for review and comment. SCAG is responsible for providing informational resources to regionally significant plans, projects, and programs per the California Environmental Quality Act (CEQA) to facilitate the consistency of these projects with SCAG's adopted regional plans, to be determined by the lead agencies.[1]

Pursuant to Senate Bill (SB) 375, SCAG is the designated Regional Transportation Planning Agency under state law and is responsible for preparation of the Regional Transportation Plan (RTP) including the Sustainable Communities Strategy (SCS). SCAG's feedback is intended to assist local jurisdictions and project proponents to implement projects that have the potential to contribute to attainment of Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS) goals and align with RTP/SCS policies. Finally, SCAG is the authorized regional agency for Intergovernmental Review (IGR) of programs proposed for Federal financial assistance and direct Federal development activities, pursuant to Presidential Executive Order 12372.

SCAG staff has reviewed the Notice of Preparation of a Draft Environmental Impact Report for the Rich-Haven Specific Plan Amendment in San Bernardino County. The proposed project includes a Specific Plan Amendment that would allow development of up to 7,194 dwelling units, up to 925,002 square feet (SF) of commercial space, and up to 2,767,148 SF of light industrial uses on a 584-acre site.

When available, please email environmental documentation to IGR@scag.ca.gov providing, at a minimum, the full public comment period for review.

If you have any questions regarding the attached comments, please contact the Intergovernmental Review (IGR) Program, attn.: Annaleigh Ekman, Associate Regional Planner, at (213) 630-1427 or IGR@scag.ca.gov. Thank you.

Sincerely,

Frank Wen, Ph.D.
Manager, Planning Strategy Department

[1] Lead agencies such as local jurisdictions have the sole discretion in determining a local project's consistency with the 2020 RTP/SCS (Connect SoCal) for the purpose of determining consistency for CEQA.

COMMENTS ON THE NOTICE OF PREPARATION OF A DRAFT ENVIRONMENTAL IMPACT REPORT FOR THE RICH-HAVEN SPECIFIC PLAN AMENDMENT [SCAG NO. IGR10750]

CONSISTENCY WITH CONNECT SOCAL

SCAG provides informational resources to facilitate the consistency of the proposed project with the adopted 2020-2045 Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS or Connect SoCal). For the purpose of determining consistency with CEQA, lead agencies such as local jurisdictions have the sole discretion in determining a local project's consistency with Connect SoCal.

CONNECT SOCAL GOALS

The SCAG Regional Council fully adopted Connect SoCal in September 2020. Connect SoCal, also known as the 2020 – 2045 RTP/SCS, builds upon and expands land use and transportation strategies established over several planning cycles to increase mobility options and achieve a more sustainable growth pattern. The long-range visioning plan balances future mobility and housing needs with goals for the environment, the regional economy, social equity and environmental justice, and public health. The goals included in Connect SoCal may be pertinent to the proposed project. These goals are meant to provide guidance for considering the proposed project. Among the relevant goals of Connect SoCal are the following:

SCAG CONNECT SOCAL GOALS	
Goal #1:	*Encourage regional economic prosperity and global competitiveness*
Goal #2:	*Improve mobility, accessibility, reliability and travel safety for people and goods*
Goal #3:	*Enhance the preservation, security, and resilience of the regional transportation system*
Goal #4:	*Increase person and goods movement and travel choices within the transportation system*
Goal #5:	*Reduce greenhouse gas emissions and improve air quality*
Goal #6:	*Support healthy and equitable communities*
Goal #7:	*Adapt to a changing climate and support an integrated regional development pattern and transportation network*
Goal #8:	*Leverage new transportation technologies and data-driven solutions that result in more efficient travel*
Goal #9:	*Encourage development of diverse housing types in areas that are supported by multiple transportation options*
Goal #10:	*Promote conservation of natural and agricultural lands and restoration of habitats*

For ease of review, we encourage the use of a side-by-side comparison of SCAG goals with discussions of the consistency, non-consistency or non-applicability of the goals and supportive analysis in a table format. Suggested format is as follows:

SCAG CONNECT SOCAL GOALS		
	Goal	Analysis
Goal #1:	*Encourage regional economic prosperity and global competitiveness*	*Consistent: Statement as to why;* *Not-Consistent: Statement as to why;* *Or* *Not Applicable: Statement as to why;* *DEIR page number reference*
Goal #2:	*Improve mobility, accessibility, reliability and travel safety for people and goods*	*Consistent: Statement as to why;* *Not-Consistent: Statement as to why;* *Or* *Not Applicable: Statement as to why;* *DEIR page number reference*
etc.		etc.

Connect SoCal Strategies

To achieve the goals of Connect SoCal, a wide range of land use and transportation strategies are included in the accompanying twenty (20) technical reports. Of particular note are multiple strategies included in Chapter 3 of Connect SoCal intended to support implementation of the regional Sustainable Communities Strategy (SCS) framed within the context of focusing growth near destinations and mobility options; promoting diverse housing choices; leveraging technology innovations; supporting implementation of sustainability policies; and promoting a Green Region. To view Connect SoCal and the accompanying technical reports, please visit the Connect SoCal webpage. Connect SoCal builds upon the progress from previous RTP/SCS cycles and continues to focus on integrated, coordinated, and balanced planning for land use and transportation that helps the SCAG region strive towards a more sustainable region, while meeting statutory requirements pertinent to RTP/SCSs. These strategies within the regional context are provided as guidance for lead agencies such as local jurisdictions when the proposed project is under consideration.

The 2020 Connect SoCal also identifies a goods movement system in the SCAG region and develops strategies to address expected growth trends and demands in goods movement. For further information on the goods movement strategies, please see the 2020 Connect SoCal Goods Movement Technical Report. For further information on industrial development and warehousing in Southern California, please see Industrial Warehousing in the SCAG Region.

Connect SoCal identified Key Connections that lie at the intersection of land use, transportation and innovation meant to advance policy discussions and strategies to leverage new technologies and create better partnerships to increase progress on the regional goals. Accelerated Electrification is one of the Key Connections and was established to create a holistic and coordinated approach to de-carbonizing or electrifying passenger vehicles, transit, and goods movement vehicles. The Accelerated Electrification Key Connection sets a vision to reduce both the local and global emissions associated with multiple modes of transportation by deploying clean mobility solutions and the infrastructure needed to support them. SCAG staff encourages the lead agency to incorporate clean mobility solutions and supporting infrastructure into the project, as appropriate.

DEMOGRAPHICS AND GROWTH FORECASTS

A key, formative step in projecting future population, households, and employment through 2045 for Connect SoCal was the generation of a forecast of regional and county level growth in collaboration with expert demographers and economists on Southern California. From there, jurisdictional level forecasts were ground-truthed by subregions and local agencies, which helped SCAG identify opportunities and barriers to future development. This forecast helps the region understand, in a very general sense, where we are expected to grow, and allows SCAG to focus attention on areas that are experiencing change and may have increased transportation needs. After a year-long engagement effort with all 197 jurisdictions one-on-one, 82 percent of SCAG's 197 jurisdictions provided feedback on the forecast

of future growth for Connect SoCal. SCAG also sought feedback on potential sustainable growth strategies from a broad range of stakeholder groups – including local jurisdictions, county transportation commissions, other partner agencies, industry groups, community-based organizations, and the general public. Connect SoCal utilizes a bottom-up approach in that total projected growth for each jurisdiction reflects feedback received from jurisdiction staff, including city managers, community development/planning directors, and local staff. Growth at the neighborhood level (i.e., transportation analysis zone (TAZ) reflects entitled projects and adheres to current general and specific plan maximum densities as conveyed by jurisdictions (except in cases where entitled projects and development agreements exceed these capacities as calculated by SCAG). Neighborhood level growth projections also feature strategies that help to reduce greenhouse gas emissions (GHG) from automobiles and light trucks to achieve Southern California's GHG reduction target, approved by the California Air Resources Board (CARB) in accordance with state planning law. Connect SoCal's Forecasted Development Pattern is utilized for long range modeling purposes and does not supersede actions taken by elected bodies on future development, including entitlements and development agreements. SCAG does not have the authority to implement the plan -- neither through decisions about what type of development is built where, nor what transportation projects are ultimately built, as Connect SoCal is adopted at the jurisdictional level. Achieving a sustained regional outcome depends upon informed and intentional local action. To access jurisdictional level growth estimates and forecasts for years 2016 and 2045, please refer to the Connect SoCal Demographics and Growth Forecast Technical Report. The growth forecasts for the region and applicable jurisdictions are below.

	Adopted SCAG Region Wide Forecasts				Adopted City of Ontario Forecasts			
	Year 2020	**Year 2030**	**Year 2035**	**Year 2045**	**Year 2020**	**Year 2030**	**Year 2035**	**Year 2045**

MITIGATION MEASURES

SCAG staff recommends that you review the Final Program Environmental Impact Report (Final PEIR) for Connect SoCal for guidance, as appropriate. SCAG's Regional Council certified the PEIR and adopted the associated Findings of Fact and a Statement of Overriding Considerations (FOF/SOC) and Mitigation Monitoring and Reporting Program (MMRP) on May 7, 2020 and also adopted a PEIR Addendum and amended the MMRP on September 3, 2020 (please see the PEIR webpage and scroll to the bottom of the page for the PEIR Addendum). The PEIR includes a list of project-level performance standards-based mitigation measures that may be considered for adoption and implementation by lead, responsible, or trustee agencies in the region, as applicable and feasible. Project-level mitigation measures are within responsibility, authority, and/or jurisdiction of project-implementing agency or other public agency serving as lead agency under CEQA in subsequent project- and site- specific design, CEQA review, and decision-making processes, to meet the performance standards for each of the CEQA resource categories.

Notice of Preparation of a Draft Environmental Impact Report for the PSPA22-001

South Coast Air Quality Management District (South Coast AQMD) staff appreciates the opportunity to comment on the above-mentioned document. Our comments are recommendations on the analysis of potential air quality impacts from the Proposed Project that should be included in the Draft Environmental Impact Report (EIR). Please send a copy of the Draft EIR upon its completion and public release directly to South Coast AQMD as copies of the Draft EIR submitted to the State Clearinghouse are not forwarded. **In addition, please send all appendices and technical documents related to the air quality, health risk, and greenhouse gas analyses and electronic versions of all emission calculation spreadsheets, and air quality modeling and health risk assessment input and output files (not PDF files). Any delays in providing all supporting documentation for our review will require additional review time beyond the end of the comment period.**

CEQA Air Quality Analysis

Staff recommends that the Lead Agency use South Coast AQMD's CEQA Air Quality Handbook and website[1] as guidance when preparing the air quality and greenhouse gas analyses. It is also recommended that the Lead Agency use the CalEEMod[2] land use emissions software, which can estimate pollutant emissions from typical land use development and is the only software model maintained by the California Air Pollution Control Officers Association.

South Coast AQMD has developed both regional and localized significance thresholds. South Coast AQMD staff recommends that the Lead Agency quantify criteria pollutant emissions and compare the emissions to South Coast AQMD's CEQA regional pollutant emissions significance thresholds[3] and localized significance thresholds (LSTs)[4] to determine the Proposed Project's air quality impacts. The localized analysis can be conducted by either using the LST screening tables or performing dispersion modeling.

The Lead Agency should identify any potential adverse air quality impacts that could occur from all phases of the Proposed Project and all air pollutant sources related to the Proposed Project. Air quality impacts from both construction (including demolition, if any) and operations should be calculated. Construction-related air quality impacts typically include, but are not limited to, emissions from the use of

[1] South Coast AQMD's CEQA Handbook and other resources for preparing air quality analyses can be found at: http://www.aqmd.gov/home/rules-compliance/ceqa/air-quality-analysis-handbook.
[2] CalEEMod is available free of charge at: www.caleemod.com.
[3] South Coast AQMD's CEQA regional pollutant emissions significance thresholds can be found at: http://www.aqmd.gov/docs/default-source/ceqa/handbook/scaqmd-air-quality-significance-thresholds.pdf.
[4] South Coast AQMD's guidance for performing a localized air quality analysis can be found at: http://www.aqmd.gov/home/regulations/ceqa/air-quality-analysis-handbook/localized-significance-thresholds.

heavy-duty equipment from grading, earth-loading/unloading, paving, architectural coatings, off-road mobile sources (e.g., heavy-duty construction equipment) and on-road mobile sources (e.g., construction worker vehicle trips, material transport trips, and hauling trips). Operation-related air quality impacts may include, but are not limited to, emissions from stationary sources (e.g., boilers and air pollution control devices), area sources (e.g., solvents and coatings), and vehicular trips (e.g., on- and off-road tailpipe emissions and entrained dust). Air quality impacts from indirect sources, such as sources that generate or attract vehicular trips, should be included in the analysis. Furthermore, emissions from the overlapping construction and operational activities should be combined and compared to South Coast AQMD's regional air quality CEQA ***operational*** thresholds to determine the level of significance.

If the Proposed Project generates diesel emissions from long-term construction or attracts diesel-fueled vehicular trips, especially heavy-duty diesel-fueled vehicles, it is recommended that the Lead Agency perform a mobile source health risk assessment[5].

Sensitive receptors are people that have an increased sensitivity to air pollution or environmental contaminants and include schools, daycare centers, nursing homes, elderly care facilities, hospitals, and residential dwelling units. The Proposed Project will include, among others, 7,194 residential units and is located in close proximity to Interstate 15 and State Route 60, and to facilitate the purpose of an EIR as an informational document, it is recommended that the Lead Agency perform a mobile source health risk assessment[5] to disclose the potential health risks[6].

In the event that implementation of the Proposed Project requires a permit from South Coast AQMD, South Coast AQMD should be identified as a Responsible Agency for the Proposed Project in the Draft EIR. The assumptions in the air quality analysis in the EIR will be the basis for evaluating the permit under CEQA and imposing permit conditions and limits. Questions on permits should be directed to South Coast AQMD's Engineering and Permitting staff at (909) 396-3385.

The California Air Resources Board's (CARB) *Air Quality and Land Use Handbook: A Community Health Perspective*[7] is a general reference guide for evaluating and reducing air pollution impacts associated with new projects that go through the land use decision-making process with additional guidance on strategies to reduce air pollution exposure near high-volume roadways available in CARB's technical advisory[8].

The South Coast AQMD's *Guidance Document for Addressing Air Quality Issues in General Plans and Local Planning*[9] includes suggested policies that local governments can use in their General Plans or through local planning to prevent or reduce potential air pollution impacts and protect public health. It is recommended that the Lead Agency review this Guidance Document as a tool when making local planning and land use decisions.

Mitigation Measures

In the event that the Proposed Project results in significant adverse air quality impacts, CEQA requires that all feasible mitigation measures that go beyond what is required by law be utilized to minimize these impacts. Any impacts resulting from mitigation measures must also be analyzed. Several resources to

[5] South Coast AQMD's guidance for performing a mobile source health risk assessment can be found at: http://www.aqmd.gov/home/regulations/ceqa/air-quality-analysis-handbook/mobile-source-toxics-analysis.
[6] *Ibid*.
[7] CARB's *Air Quality and Land Use Handbook: A Community Health Perspective* can be found at: http://www.arb.ca.gov/ch/handbook.pdf.
[8] CARB's technical advisory can be found at: https://www.arb.ca.gov/ch/landuse.htm.
[9] South Coast AQMD. 2005. *Guidance Document for Addressing Air Quality Issues in General Plans and Local Planning*. Available at: http://www.aqmd.gov/docs/default-source/planning/air-quality-guidance/complete-guidance-document.pdf.

assist the Lead Agency with identifying potential mitigation measures for the Proposed Project include South Coast AQMD's CEQA Air Quality Handbook,[10] South Coast AQMD's Mitigation Monitoring and Reporting Plan for the 2022 Air Quality Management Plan,[11] and Southern California Association of Government's Mitigation Monitoring and Reporting Plan for the 2020-2045 Regional Transportation Plan/Sustainable Communities Strategy.[12]

Mitigation measures for operational air quality impacts from mobile sources that the Lead Agency should consider in the Draft EIR may include the following:

- Require zero-emissions (ZE) or near-zero emission (NZE) on-road haul trucks such as heavy-duty trucks with natural gas engines that meet the CARB's adopted optional NOx emissions standard at 0.02 grams per brake horsepower-hour (g/bhp-hr), if and when feasible. Given the state's clean truck rules and regulations aiming to accelerate the utilization and market penetration of ZE and NZE trucks such as the Advanced Clean Trucks Rule[13] and the Heavy-Duty Low NOx Omnibus Regulation[14], ZE and NZE trucks will become increasingly more available to use. The Lead Agency should require a phase-in schedule to incentive the use of these cleaner operating trucks to reduce any significant adverse air quality impacts. South Coast AQMD staff is available to discuss the availability of current and upcoming truck technologies and incentive programs with the Lead Agency. At a minimum, require the use of 2010 model year[15] that meet CARB's 2010 engine emissions standards at 0.01 g/bhp-hr of particulate matter (PM) and 0.20 g/bhp-hr of NOx emissions or newer, cleaner trucks. Include environmental analyses to evaluate and identify sufficient electricity and supportive infrastructures in the Energy and Utilities and Service Systems Sections in the CEQA document, where appropriate. Include the requirement in applicable bid documents, purchase orders, and contracts. Operators shall maintain records of all trucks associated with project construction to document that each truck used meets these emission standards, and make the records available for inspection. The Lead Agency should conduct regular inspections to the maximum extent feasible to ensure compliance.
- Limit the daily number of trucks allowed at the Proposed Project to levels analyzed in the Final CEQA document. If higher daily truck volumes are anticipated to visit the site, the Lead Agency should commit to re-evaluating the Proposed Project through CEQA prior to allowing this higher activity level.
- Provide electric vehicle (EV) charging stations or at a minimum, provide the electrical infrastructure and electrical panels should be appropriately sized. Electrical hookups should be provided for truckers to plug in any onboard auxiliary equipment.

[10] https://www.aqmd.gov/home/rules-compliance/ceqa/air-quality-analysis-handbook
[11] South Coast AQMD's 2022 Air Quality Management Plan can be found at: http://www.aqmd.gov/home/air-quality/clean-air-plans/air-quality-mgt-plan (Chapter 4 - Control Strategy and Implementation).
[12] Southern California Association of Governments' 2020-2045 RTP/SCS can be found at: https://www.connectsocal.org/Documents/PEIR/certified/Exhibit-A_ConnectSoCal_PEIR.pdf.
[13] CARB. June 25, 2020. *Advanced Clean Trucks Rule*. Accessed at: https://ww2.arb.ca.gov/our-work/programs/advanced-clean-trucks.
[14] CARB has recently passed a variety of new regulations that require new, cleaner heavy-duty truck technology to be sold and used in state. For example, on August 27, 2020, CARB approved the Heavy-Duty Low NOx Omnibus Regulation, which will require all trucks to meet the adopted emission standard of 0.05 g/hp-hr starting with engine model year 2024. Accessed at: https://ww2.arb.ca.gov/rulemaking/2020/hdomnibuslownox.
[15] CARB adopted the statewide Truck and Bus Regulation in 2010. The Regulation requires diesel trucks and buses that operate in California to be upgraded to reduce emissions. Newer heavier trucks and buses must meet particulate matter filter requirements beginning January 1, 2012. Lighter and older heavier trucks must be replaced starting January 1, 2015. By January 1, 2023, nearly all trucks and buses will need to have 2010 model year engines or equivalent. More information on the CARB's Truck and Bus Regulation is available at: https://www.arb.ca.gov/msprog/onrdiesel/onrdiesel.htm.

Mitigation measures for operational air quality impacts from other area sources that the Lead Agency should consider in the Draft EIR may include the following:

- Maximize use of solar energy by installing solar energy arrays.
- Use light colored paving and roofing materials.
- Utilize only Energy Star heating, cooling, and lighting devices, and appliances.
- Use of water-based or low VOC cleaning products that go beyond the requirements of South Coast AQMD Rule 1113.

Design considerations for the Proposed Project that the Lead Agency should consider to further reduce air quality and health risk impacts include the following:

- Clearly mark truck routes with trailblazer signs, so that trucks will not travel next to or near sensitive land uses (e.g., residences, schools, day care centers, etc.).
- Design the Proposed Project such that truck entrances and exits are not facing sensitive receptors and trucks will not travel past sensitive land uses to enter or leave the Proposed Project site.
- Design the Proposed Project such that any check-in point for trucks is inside the Proposed Project site to ensure that there are no trucks queuing outside.
- Design the Proposed Project to ensure that truck traffic inside the Proposed Project site is as far away as feasible from sensitive receptors.
- Restrict overnight truck parking in sensitive land uses by providing overnight truck parking inside the Proposed Project site.

On May 7, 2021, South Coast AQMD's Governing Board adopted Rule 2305 – Warehouse Indirect Source Rule – Warehouse Actions and Investments to Reduce Emissions (WAIRE) Program, and Rule 316 – Fees for Rule 2305. Rules 2305 and 316 are new rules that will reduce regional and local emissions of nitrogen oxides (NOx) and particulate matter (PM), including diesel PM. These emission reductions will reduce public health impacts for communities located near warehouses from mobile sources that are associated with warehouse activities. Also, the emission reductions will help the region attain federal and state ambient air quality standards. Rule 2305 applies to owners and operators of warehouses greater than or equal to 100,000 square feet. Under Rule 2305, operators are subject to an annual WAIRE Points Compliance Obligation that is calculated based on the annual number of truck trips to the warehouse. WAIRE Points can be earned by implementing actions in a prescribed menu in Rule 2305, implementing a site-specific custom plan, or paying a mitigation fee. Warehouse owners are only required to submit limited information reports, but they can opt in to earn Points on behalf of their tenants if they so choose because certain actions to reduce emissions may be better achieved at the warehouse development phase, for instance the installation of solar and charging infrastructure. Rule 316 is a companion fee rule for Rule 2305 to allow South Coast AQMD to recover costs associated with Rule 2305 compliance activities. Since the Proposed Project consists of the development of up to 2,767,148-square-foot light industrial use area, if the Proposed Project's light industrial use is for warehouse, the owners and operators will be required to comply with Rule 2305 once the warehouse is occupied. Therefore, South Coast AQMD staff recommends that the Lead Agency review South Coast AQMD Rule 2305 to determine the potential WAIRE Points Compliance Obligation for future operators and explore whether additional project requirements and CEQA mitigation measures can be identified and implemented at the Proposed Project that may help future warehouse operators meet their compliance obligation[16]. South Coast AQMD staff is available to answer questions concerning Rule 2305 implementation and compliance by phone or email at

[16] South Coast AQMD Rule 2305 – Warehouse Indirect Source Rule – Warehouse Actions and Investments to Reduce Emissions (WAIRE) Program. Accessed at: http://www.aqmd.gov/docs/default-source/rule-book/reg-xxiii/r2305.pdf.

Health Risk Reduction Strategies

Many strategies are available to reduce exposures, including, but are not limited to, building filtration systems with MERV 13 or better, or in some cases, MERV 15 or better is recommended; building design, orientation, location; vegetation barriers or landscaping screening, etc. Enhanced filtration units are capable of reducing exposures. However, enhanced filtration systems have limitations. For example, in a study that South Coast AQMD conducted to investigate filters[18], a cost burden is expected to be within the range of $120 to $240 per year to replace each filter panel. The initial start-up cost could substantially increase if an HVAC system needs to be installed and if standalone filter units are required. Installation costs may vary and include costs for conducting site assessments and obtaining permits and approvals before filters can be installed. Other costs may include filter life monitoring, annual maintenance, and training for conducting maintenance and reporting. In addition, because the filters would not have any effectiveness unless the HVAC system is running, there may be increased energy consumption that the Lead Agency should evaluate in the Draft EIR. It is typically assumed that the filters operate 100 percent of the time while residents are indoors, and the environmental analysis does not generally account for the times when the residents have their windows or doors open or are in common space areas of the project. These filters have no ability to filter out any toxic gases. Furthermore, when used filters are replaced, replacement has the potential to result in emissions from the transportation of used filters at disposal sites and generate solid waste that the Lead Agency should evaluate in the Draft EIR. Therefore, the presumed effectiveness and feasibility of any filtration units should be carefully evaluated in more detail prior to assuming that they will sufficiently alleviate exposures to diesel particulate matter emissions.

South Coast AQMD staff is available to work with the Lead Agency to ensure that air quality, greenhouse gas, and health risk impacts from the Proposed Project are accurately evaluated and mitigated where feasible. If you have any questions regarding this letter, please contact me at swang1@aqmd.gov.

Sincerely,

Sam Wang

Ontario, CA 91764-4196

November 16, 2022

Attention: Planning Department

Subject: PSPA22-001

Our review of the subject subdivision of PSPA22-001 reveals that the proposed development may interfere with easement rights, and/or facilities held by Southern California Edison within or adjacent to the subdivision boundaries. Until such time as arrangements have been made with the developer to eliminate this interference, the development of the subdivision may unreasonably interfere with the complete and free exercise of Edison’s rights.

One copy of the following maps with scaled plans (1”=50’ maximum), including all maps submitted in hard copies or emailed in pdf format: including grading, drainage, landscape and street improvement plans are required to be submitted by the developer to determine the extent of the interference. The Edison facilities and the easements should be plotted on the above reference maps. Included with the above referenced plans, the developer must state the proposed method to eliminate any interference.

Plans should be emailed to following address:

Southern California Edison Company
Sharat.misra@sce.com

If you have any questions or need additional information in connection with the subject subdivision, please contact me at (909) 274-1078.

Rich-Haven Specific Plan Amendment (File No. PSPA22-001)

Summary

SCH Number	2022100425
Lead Agency	City of Ontario
Document Title	Rich-Haven Specific Plan Amendment (File No. PSPA22-001)
Document Type	NOP - Notice of Preparation of a Draft EIR
Received	10/20/2022
Present Land Use	Zoning - Rich-Haven Specific Plan / General Plan: TOP 2050 - LDR, LMDR, OS-NR, OS-R, MU, IND, GC
Document Description	The Project proposes a new amendment of the 2021 Rich-Haven Specific Plan (RHSP) and would be developed with up to 7,194 dwelling units, up to 925,002 square feet of commercial space, and up to 2,767,148 square feet of light industrial uses.

1 INTRODUCTION

This report presents the results of the Traffic Analysis (TA) for Rich Haven Specific Plan ("Project"), which is generally located north of Ontario Ranch Road, south of Riverside Drive, east of Haven Avenue, and on either side of Mill Creek Avenue in the City of Ontario, as shown on Exhibit 1-1. The purpose of this TA is to evaluate the potential circulation system deficiencies that may result from the development of the proposed Project, and where necessary recommend improvements to achieve acceptable operations consistent with General Plan level of service goals and policies. This traffic study has been prepared in accordance with the County of San Bernardino's Traffic Impact Study Guidelines and consultation with City staff during the traffic study scoping process. (1) The City approved Project Traffic Study Scoping agreement is provided in Appendix 1.1 of this TA.

1.5 SUMMARY OF FINDINGS

The Project is to construct the following improvements as design features in conjunction with development of the site:

- Project to construct Riverside Drive at its ultimate half-section width as a Minor Arterial (6-lanes, 108-foot right-of-way) from the Project's eastern boundary to Haven Avenue consistent with the City's standards.
- Project to construct Chino Avenue at its ultimate full-section width as a Minor Arterial (2-lanes, 88-foot right-of-way) from Haven Avenue to Mill Creek Avenue consistent with the City's standards. It should be noted, Chino Avenue will be constructed to its ultimate full-section width, however will only be striped with one lane of travel in each direction.
- Project to construct Ontario Ranch Road at its ultimate full-section width as a Principal Arterial (8-lanes, 124-foot right-of-way) from Haven Avenue to Hamner Avenue consistent with the City's standards.
- Project to construct Mill Creek Avenue at its ultimate full-section width as a Collector (4-lanes, 88-foot right-of-way) from the Project's southern boundary to the southern boundary of Planning Area 2C, and at its ultimate half-section width from the southern boundary of Planning Area 2C to the Project's northern boundary (northern boundary of Planning Area 1C) (with an additional 12-feet of pavement on the east side from the southern boundary of Planning Area 2C to Chino Avenue to facilitate site access) consistent with the City's standards.
- Project to construct Hamner Avenue at its ultimate half-section width as a Minor Arterial (6-lanes, 108-foot right-of-way) from the Project's northern boundary to the Project's southern boundary consistent with the City's standards.
- Project to construct Haven Avenue at its ultimate half-section width as a Principal Arterial (4-lanes, 124-foot right-of-way) from Riverside Drive to the Project's southern boundary consistent with the City's standards.
- Project to install a traffic signal at Haven Avenue & Chino Avenue.
- Project to construct a single-lane roundabout at Mill Creek Avenue & Chino Avenue and Twinkle Avenue & Chino Avenue.

Additional details and intersection lane geometrics are provided in Section 1.6 *Recommendations* of this report.

1.2 PROJECT OVERVIEW

Exhibit 1-1 illustrates the location map for the proposed Project and Exhibit 1-2 shows the proposed land use plan. The proposed Project is to consist of 7,194 single family and multifamily residential dwelling units, 27.0 acres of public park, 2,780,000 square feet of industrial uses, and 772,500 square feet of retail/office uses. Note that portions of Planning Areas 3A and 4A have already been developed (currently existing). Planning Areas 2, 3, 4A, 5C, 6, 10, and portions of 7, 8, and 9 are anticipated to be developed as part of the first phase with an anticipated Opening Year of 2024. Project Buildout is anticipated in Year 2027. Access to the proposed Project would be provided to the surrounding roadways of Riverside Drive to the north, Haven Avenue to the west, Ontario Ranch Road to the south, and Mill Creek Avenue to the east. Chino Avenue is also an east-west roadway that runs through the Project.

Regional access to the Project site is available from the SR-60 Freeway via Archibald Avenue, Haven Avenue, and Milliken Avenue interchanges and the I-15 Freeway via Cantu Galleano Road. Exhibit 1-3 depicts the location of the proposed Project in relation to the existing roadway network and the study area intersections.

In order to develop the traffic characteristics of the proposed project, trip-generation statistics published in the Institute of Transportation Engineers (ITE) Trip Generation Manual (11th Edition, 2021) for the following land uses have been utilized (2):

- Industrial Park (ITE Land Use Code 130)
- High-Cube Transload Warehouse (ITE Land Use Code 154)
- High-Cube Fulfillment Center (Sort) (ITE Land Use Code 155)
- High-Cube Cold Storage Warehouse (ITE Land Use Code 157)
- Single Family Detached Residential (ITE Land Use Code 210)
- Multifamily (Low-Rise) Housing (ITE Land Use Code 220)
- Public Park (ITE Land Use Code 411)
- General Office (ITE Land Use Code 810)
- Shopping Center (>150,000 square feet) (ITE Land Use Code 820)
- Shopping Center (40,000-150,000 square feet) (ITE Land Use Code 821)
- Strip Retail (<40,000 square feet) (ITE Land Use Code 822)
- High turnover Restaurant (ITE Land Use Code 932)
- Fast-Food Restaurant with Drive-Thru Window (ITE Land Use Code 934)
- Gas Station (4,000-5,000 square feet Convenience Market) (ITE Land Use Code 945)

EXHIBIT 1-1: LOCATION MAP

EXHIBIT 1-2: PRELIMINARY LAND USE PLAN

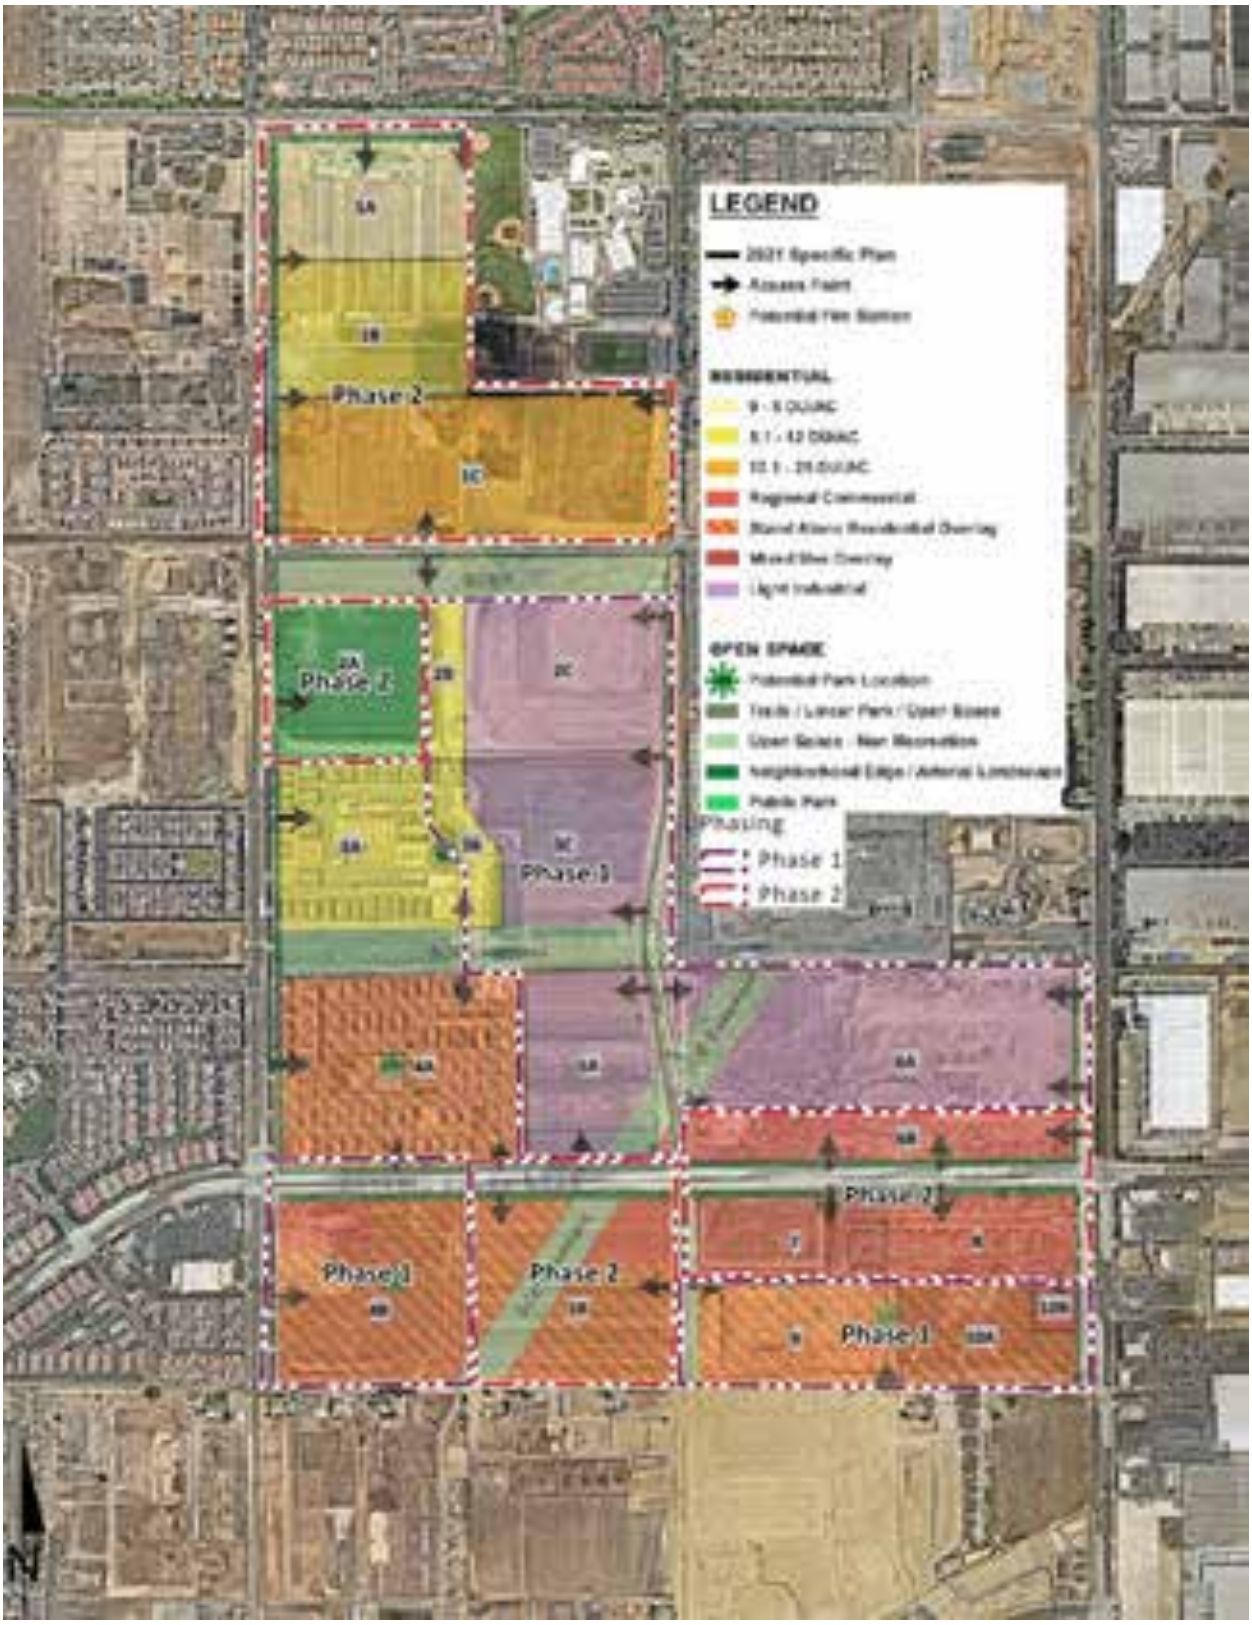

EXHIBIT 1-3: STUDY AREA

A portion of the High-Cube Fulfillment Center Warehouse use has been evaluated utilizing the High-Cube Warehouse Trip Generation Study, WSP, January 29, 2019. With the development of the proposed Project, the Project is anticipated to generate a total of 95,538 vehicle trip-ends per day with 8,078 AM peak hour trips and 8,036 PM peak hour trips. The assumptions and methods used to estimate the Project's trip generation characteristics are discussed in greater detail in Section 4.1 *Project Trip Generation* of this report.

1.3 ANALYSIS SCENARIOS

For the purposes of this traffic study, potential deficiencies to traffic and circulation have been assessed for each of the following conditions:

- Existing (2022)
- Existing plus Project – Phase 1
- Existing plus Project – Project Buildout
- Opening Year Cumulative (2027) Without Project
- Opening Year Cumulative (2027) With Project – Project Buildout only
- Horizon Year (2050) Without Project
- Horizon Year (2050) With Project – Project Buildout only

1.3.1 EXISTING (2022) CONDITIONS

Information for Existing (2022) conditions is disclosed to represent the baseline traffic conditions as they existed at the time this report was prepared.

1.3.2 EXISTING PLUS PROJECT (E+P) CONDITIONS

The Existing plus Project (E+P) analysis determines traffic deficiencies that would occur on the existing roadway system with the addition of Project (Phase 1 and Project Buildout) traffic. E+P traffic conditions have been evaluated in order to determine any potential off-site improvements.

1.3.3 OPENING YEAR CUMULATIVE (2027) CONDITIONS

The Opening Year Cumulative conditions analysis determines the potential near-term cumulative circulation system deficiencies. To account for background traffic growth, traffic associated with other known cumulative development projects in conjunction with an ambient growth factor from Existing conditions of 2% per year (compounded annually) are included for Opening Year Cumulative (2027) traffic conditions. The total growth factor for Opening Year Cumulative (2027) traffic conditions is 14.9% (or $1.02^{7\ years}$). Opening Year Cumulative traffic conditions have been evaluated for the proposed Project. This comprehensive list was compiled from information provided by the City of Ontario and other near-by agencies.

1.3.4 HORIZON YEAR (2050) CONDITIONS

Traffic projections for Horizon Year (2050) conditions were derived from the San Bernardino County Transportation Analysis Model (SBTAM) using accepted procedures for model forecast refinement and smoothing and is based on the currently adopted The Ontario Plan (TOP) 2050 General Plan Update, The Horizon Year conditions analysis will be utilized to determine if improvements funded through

regional transportation mitigation fee programs can accommodate the long-range cumulative traffic at the target Level of Service (LOS) identified in the City of Ontario (lead agency) General Plan. Each of the applicable transportation fee programs are discussed in more detail In Section 8 *Local and Regional Funding Mechanisms*.

1.4 STUDY AREA

To ensure that this TA satisfies the City of Ontario's traffic study requirements, Urban Crossroads, Inc. prepared a Project traffic study scoping package for review by City of Ontario staff prior to the preparation of this report. This agreement provides an outline of the Project study area, trip generation, trip distribution, and analysis methodology. The agreement approved by the City is included in Appendix 1.1 of this TA.

The following 27 study area intersections shown on Exhibit 1-3 and listed in Table 1-1 were selected for this TA based on consultation with City of Ontario staff. The "50 peak hour trip" criterion utilized by the City of Ontario is consistent with the methodology employed by the County of San Bernardino, and generally represents a minimum number of trips at which a typical intersection would have the potential to be affected by a given development proposal. Although each intersection may have unique operating characteristics, this traffic engineering rule of thumb is a widely utilized tool for estimating a potential area of influence (i.e., study area). Other analysis intersections, within the adjacent cities were not selected for evaluation as the Project is anticipated to contribute less than 50 peak hour trips.

The intent of a Congestion Management Program (CMP) is to more directly link land use, transportation, and air quality, thereby prompting reasonable growth management programs that will effectively utilize new transportation funds, alleviate traffic congestion and related deficiencies, and improve air quality. Counties within California have developed CMPs with varying methods and strategies to meet the intent of the CMP legislation. Study area intersections that are identified as CMP facilities in the County of San Bernardino per the San Bernardino County Transportation Authority (SBCTA) CMP are indicated in Table 1-1. (3)

1.5 DEFICIENCIES

This section provides a summary of deficiencies by analysis scenario. Section 2 *Methodologies* provides information on the methodologies used in the analysis and Section 3 *Area Conditions*, Section 5 *E+P Traffic Conditions*, Section 6 *Opening Year Cumulative (2027) Conditions*, and Section 7 *Horizon Year (2050) Traffic Conditions* includes the detailed analysis. A summary of Level of Service (LOS) results for all analysis scenarios is presented in Table 1-2.

1.5.1 EXISTING (2022) CONDITIONS

The following study area intersection is currently operating at an unacceptable LOS during the peak hours:

- Haven Avenue & Riverside Drive (#13) – LOS F AM peak hour only

1.5.2 E+P CONDITIONS

the following additional study area intersections are anticipated to operate at an unacceptable LOS during the peak hours under E+P (Phase 1) traffic conditions, in addition to the intersections identified under Existing (2022) traffic conditions:

- Haven Avenue & Chino Avenue (#13) – LOS F PM peak hour only
- Haven Avenue & Ontario Ranch Road (#15) – LOS F PM peak hour only
- Milliken Avenue & Riverside Drive (#22) – LOS E AM peak hour only
- Hamner Avenue & Chino Avenue (#23) – LOS F PM peak hour only
- Hamner Avenue & Ontario Ranch Road (#24) – LOS E PM peak hour only

The following additional study area intersection is anticipated to operate at an unacceptable LOS during the peak hours under E+P (Project Buildout) traffic conditions, in addition to the intersections identified under Existing (2022) traffic conditions:

- Archibald Avenue & Ontario Ranch Road (#6) – LOS F AM and PM peak hours

1.5.3 OPENING YEAR CUMULATIVE (2027) CONDITIONS

The following study area intersections are anticipated to operate at an unacceptable LOS during the peak hours under Opening Year Cumulative (2027) Without Project traffic conditions:

- Turner Avenue & Chino Avenue (#8) – LOS F AM peak hour only
- Haven Avenue & Riverside Drive (#12) – LOS F AM and PM peak hours
- Milliken Avenue & Riverside Drive (#22) – LOS F AM peak hour only

The following additional study area intersections anticipated to operate at an unacceptable LOS during the peak hours with the addition of Project traffic under Opening Year Cumulative (2027) With Project traffic conditions:

- Archibald Avenue & Riverside Drive (#3) – LOS F AM and PM peak hours
- Archibald Avenue & Ontario Ranch Road (#6) – LOS F AM and PM peak hours
- Haven Avenue & Chino Avenue (#13) – LOS F PM peak hour only
- Haven Avenue & Schaefer Avenue (#14) – LOS F AM peak hour only
- Haven Avenue & Ontario Ranch Road (#15) – LOS F AM and PM peak hours
- Hamner Avenue & Chino Avenue (#23) – LOS F AM and PM peak hours
- Hamner Avenue & Ontario Ranch Road (#24) – LOS F AM and PM peak hours

1.5.4 HORIZON YEAR (2050) CONDITIONS

The following study area intersections are anticipated to operate at an unacceptable LOS during the peak hours:

- Archibald Avenue & Riverside Drive (#3) – LOS F AM and PM peak hours
- Archibald Avenue & Chino Avenue (#4) – LOS F PM peak hour only
- Turner Avenue & Chino Avenue (#8) – LOS F PM peak hour only
- Haven Avenue & Riverside Drive (#12) – LOS F AM and PM peak hours
- Haven Avenue & Chino Avenue (#13) – LOS F AM and PM peak hours
- Haven Avenue & Ontario Ranch Road (#15) – LOS F PM peak hour only
- Mill Creek Road & Riverside Drive (#15) – LOS F AM and PM peak hours
- Milliken Avenue & Riverside Drive (#22) – LOS F AM peak hour only
- Archibald Avenue & Ontario Ranch Road (#6) – LOS F AM and PM peak hours
- Haven Avenue & Chino Avenue (#13) – LOS F PM peak hour only
- Haven Avenue & Schaefer Avenue (#14) – LOS F AM peak hour only
- Haven Avenue & Ontario Ranch Road (#15) – LOS F AM and PM peak hours

- Mill Creek Avenue & Riverside Drive (#17) – LOS F AM and PM peak hours
- Milliken Avenue & Riverside Drive (#22) – LOS F AM and PM peak hours
- Hamner Avenue & Chino Avenue (#23) – LOS F AM and PM peak hours
- Hamner Avenue & Ontario Ranch Road (#24) – LOS F AM and PM peak hours

1.6 RECOMMENDATIONS

1.6.1 SITE ADJACENT AND SITE ACCESS RECOMMENDATIONS

The following recommendations are based on the minimum improvements needed to accommodate site access and maintain acceptable peak hour operations for the proposed Project. The site adjacent recommendations are shown on Exhibit 1-4. The site adjacent queuing analysis worksheets are provided in Appendix 1.2.

The existing lane geometrics and traffic control should remain at the intersection of Haven Avenue & Ontario Ranch Road (#15).

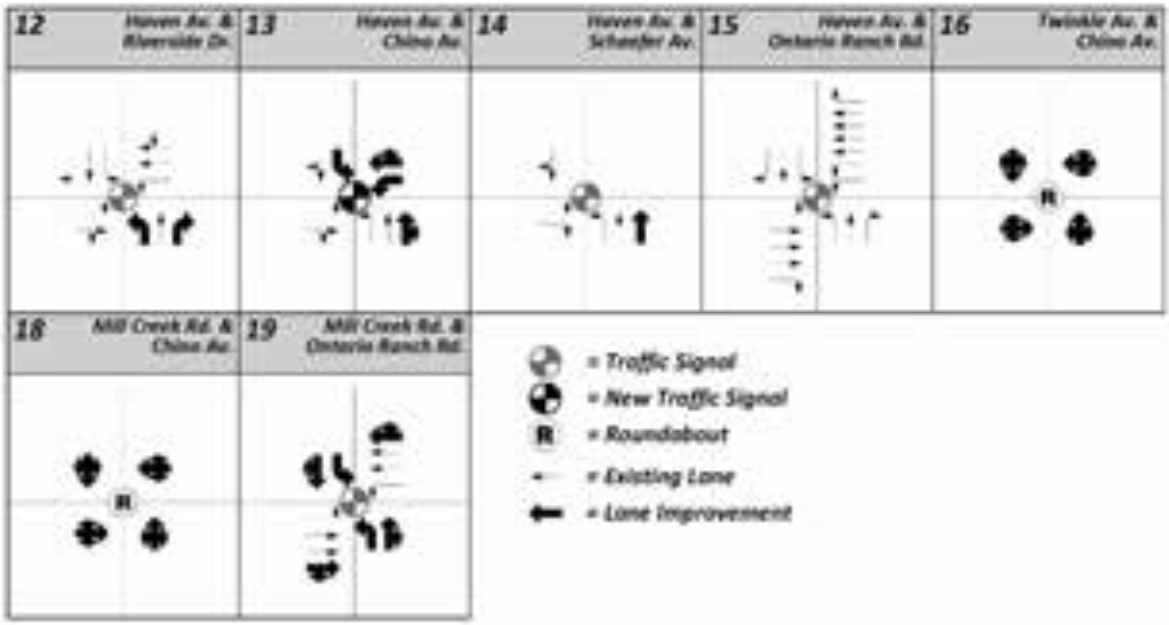
Recommendation 1 – ***Haven Avenue & Riverside Drive (#12)*** – The following improvement is necessary to accommodate site access:

- Project to construct a northbound left turn lane and right turn lane.

Recommendation 2 – ***Haven Avenue & Chino Avenue (#13)*** – The following improvements are necessary to accommodate site access:

- Project to install a traffic signal.
- Project to construct a northbound shared through-right turn lane.
- Project to construct a southbound left turn lane.
- Project to construct a westbound left turn lane and shared through-right turn lane.

Recommendation 3 – ***Haven Avenue & Schaefer Avenue (#14)*** – The following improvement is necessary to accommodate site access:



- Project to construct a northbound through lane.

Recommendation 4 – ***Twinkle Avenue & Chino Avenue (#16)*** – The following improvements are necessary to accommodate site access:

- Project to construct a single-lane roundabout.
- Project to construct a northbound shared left-through-right turn lane.
- Project to construct a southbound shared left-through-right turn lane.
- Project to construct an eastbound shared left-through-right turn lane.
- Project to construct a westbound shared left-through-right turn lane.

EXHIBIT 1-4: SITE ACCESS RECOMMENDATIONS

Recommendation 5 – ***Mill Creek Avenue & Chino Avenue (#18)*** – The following improvements are necessary to accommodate site access:

- Project to construct a single-lane roundabout.
- Project to construct a northbound shared left-through-right turn lane.
- Project to construct a southbound shared left-through-right turn lane.
- Project to construct an eastbound shared left-through-right turn lane.
- Project to construct a westbound shared left-through-right turn lane.

Recommendation 6 – ***Mill Creek Avenue & Ontario Ranch Road (#19)*** – The following improvements are necessary to accommodate site access:

- Project to construct a northbound left turn lane and shared through-right turn lane.
- Project to construct a southbound left turn lane and shared through-right turn lane.
- Project to construct an eastbound shared through-right turn lane.
- Project to construct a westbound shared through-right turn lane.

Recommendation 7 – Riverside Drive is an east-west oriented roadway located on the Project's northern boundary. Project to construct Riverside Drive at its ultimate half-section width as a Minor Arterial (6-lanes, 108-foot right-of-way) from the Project's eastern boundary to Haven Avenue consistent with the City's standards.

Recommendation 8 – Chino Avenue is an east-west oriented roadway located within the Project site. Project to construct Chino Avenue at its ultimate full-section width as a Minor Arterial (2-lanes, 88-foot right-of-way) from Haven Avenue to Mill Creek Avenue consistent with the City's standards. It should be noted, Chino Avenue will be constructed to its ultimate full-section width, however will only be striped with one lane of travel in each direction.

Recommendation 9 – Ontario Ranch Road is an east-west oriented roadway located on the Project's southern boundary. Project to construct Ontario Ranch Road at its ultimate full-section width as a Principal Arterial (8-lanes, 124-foot right-of-way) from Haven Avenue to Hamner Avenue consistent with the City's standards.

Recommendation 10 – Mill Creek Avenue is a north-south oriented roadway generally located on the Project's eastern boundary. Project to construct Mill Creek Avenue at its ultimate full-section width as a Collector (4-lanes, 88-foot right-of-way) from the Project's southern boundary to the southern boundary of Planning Area 2C, and at its ultimate half-section width from the southern boundary of Planning Area 2C to the Project's northern boundary (northern boundary of Planning Area 1C) (with an additional 12-feet of pavement on the east side from the southern boundary of Planning Area 2C to Chino Avenue to facilitate site access) consistent with the City's standards.

Recommendation 11 – Hamner Avenue is a north-south oriented roadway located on the Project's eastern boundary. Project to construct Hamner Avenue at its ultimate half-section width as a Minor Arterial (6-lanes, 108-foot right-of-way) from the Project's northern boundary to the Project's southern boundary consistent with the City's standards.

Recommendation 12 – Haven Avenue is a north-south oriented roadway located on the Project's western boundary. Project to construct Haven Avenue at its ultimate half-section width as a Principal Arterial (4-lanes, 124-foot right-of-way) from Riverside Drive to the Project's southern boundary consistent with the City's standards.

On-site traffic signing and striping should be implemented agreeable with the provisions of the California Manual on Uniform Traffic Control Devices (CA MUTCD) and in conjunction with detailed construction plans for the Project site.

Sight distance at each project access point should be reviewed with respect to standard California Department of Transportation (Caltrans) and City of Ontario sight distance standards at the time of preparation of final grading, landscape, and street improvement plans.

It should be noted, the Project will construct Chino Avenue at its ultimately full-section width, but striping one lane in each direction. Since the proposed roundabouts along Chino Avenue are single-lane roundabouts, one lane in each direction along Chino Avenue will facilities site access without requiring merging of traffic into the roundabout. Although the turning volumes (such as the northbound right turn) at the intersection of Haven Avenue & Chino Avenue may be relatively high during the peak hour, the intersection operations analysis at this location and the roadway segment analysis (see discussion below) are anticipated to operate at acceptable levels. As such, no additional roadway segment widening beyond the 2-lane roadway is recommended along Chino Avenue as the intersections are able to process the turning movement volumes at Haven Avenue & Chino Avenue.

According to the City of Ontario General Plan, a 2-lane roadway has a capacity of 12,500 vehicles per day. Based on a review of Horizon Year traffic volumes along Chino Avenue for the segment between Haven Avenue and Twinkle Avenue, it is estimated that 9,300 vehicles per day will utilize Chino Avenue, which is well within a 12,500 vehicle per day capacity of a 2-lane roadway.

The segment of Chino Avenue, between Twinkle Avenue and Mill Creek Avenue, is anticipated to exceed this capacity for Horizon Year (2050) With Project traffic conditions. This is due to the volumes developed from the City's new TOP model, which results in a daily volume of 12,800 vehicles per day for the segment of Chino Avenue, between Twinkle Avenue and Mill Creek Avenue. This exceeds the 2-lane capacity of 12,500 vehicles per day. However, it should be noted that in cases where anticipated daily volumes exceed the defined roadway segment capacity (based on the City's General Plan), a review of the more detailed peak hour intersection operations analysis is undertaken. The more detailed peak hour intersection operations analysis explicitly accounts for factors that affect roadway capacity and is utilized to determine if roadway segment widening is actually necessary. If the intersection operations for the intersections on either side of the roadway segment are anticipated to operate at an acceptable LOS during the peak hours, roadway segment widening is typically not recommended. The intersections are considered "choke points" along the roadways and if the intersection operations analysis is anticipated to operate at acceptable levels, then it is anticipated that the intersections can process the traffic volumes along the roadway segment without the need for additional roadway segment widening. Additionally, roadway segment analysis is considered a planning level analysis whereas the intersection operations analysis is considered more design level analysis. Based on a review of the anticipated intersection operations analysis under Horizon Year (2050) traffic conditions, the study area intersections along Chino Avenue (at Twinkle Avenue and Mill Creek Avenue) are anticipated to operate at an acceptable LOS during the peak hours.

As such, additional roadway segment widening along Chino Avenue is not recommended beyond the 2-lane roadway. It should also be noted, the City's TOP model classifies Chino Avenue as a 2-lane roadway. Therefore, the proposed 2-lane roadway for Chino Avenue is consistent with the City's General Plan.

Exhibit 1-5 shows the proposed roadway of Chino Avenue, from Haven Avenue to Mill Creek Avenue. As shown on Exhibit 1-5, single-lane roundabouts are proposed at the intersections of Twinkle Avenue & Chino Avenue and at Mill Creek Avenue & Chino Avenue. Based on the Federal Highway Administration's (FHWA) roundabout operational guidelines published in the Roundabouts: An Informational Guide, circulating traffic flows exceeding 1,800 vehicles per hour may indicate the need for a double-lane roundabout. (4) Based on a review of the peak hour traffic volumes under Horizon Year (2050) With Project traffic conditions, the anticipated peak hour traffic flow is 845 vehicles at Twinkle Avenue & Chino Avenue and 1,250 vehicles at Mill Creek Avenue & Chino Avenue. As such, a double-lane roundabout does not appear necessary to process peak hour traffic flows at both Twinkle Avenue & Chino Avenue and Mill Creek Avenue & Chino Avenue, as the single-lane roundabout is anticipated to process the peak hour traffic flows and operate at acceptable LOS during the peak hours under Horizon Year (2050) With Project traffic conditions.

1.6.2 OFF-SITE RECOMMENDATIONS

A summary of the off-site intersection improvements is provided in Table 1-3. For those improvements listed in Table 1-3 and not constructed as part of the Project, the Project Applicant's responsibility for the Project's contributions towards deficient intersections is fulfilled through payment of fees or fair share that would be assigned to construction of the identified recommended improvements.

TABLE 1-3: SUMMARY OF IMPROVEMENTS BY ANALYSIS SCENARIO

#	Intersection Location	Jurisdiction	E+P (Phase 1)	E+P (Project Buildout)	2032 Without Project	2032 With Project	2045 Without Project	2045 With Project	Project Responsibility	Improvements in DIF[1,2]	Estimated Cost[3,4]	Project Fair Share	Fair Share Cost[5]

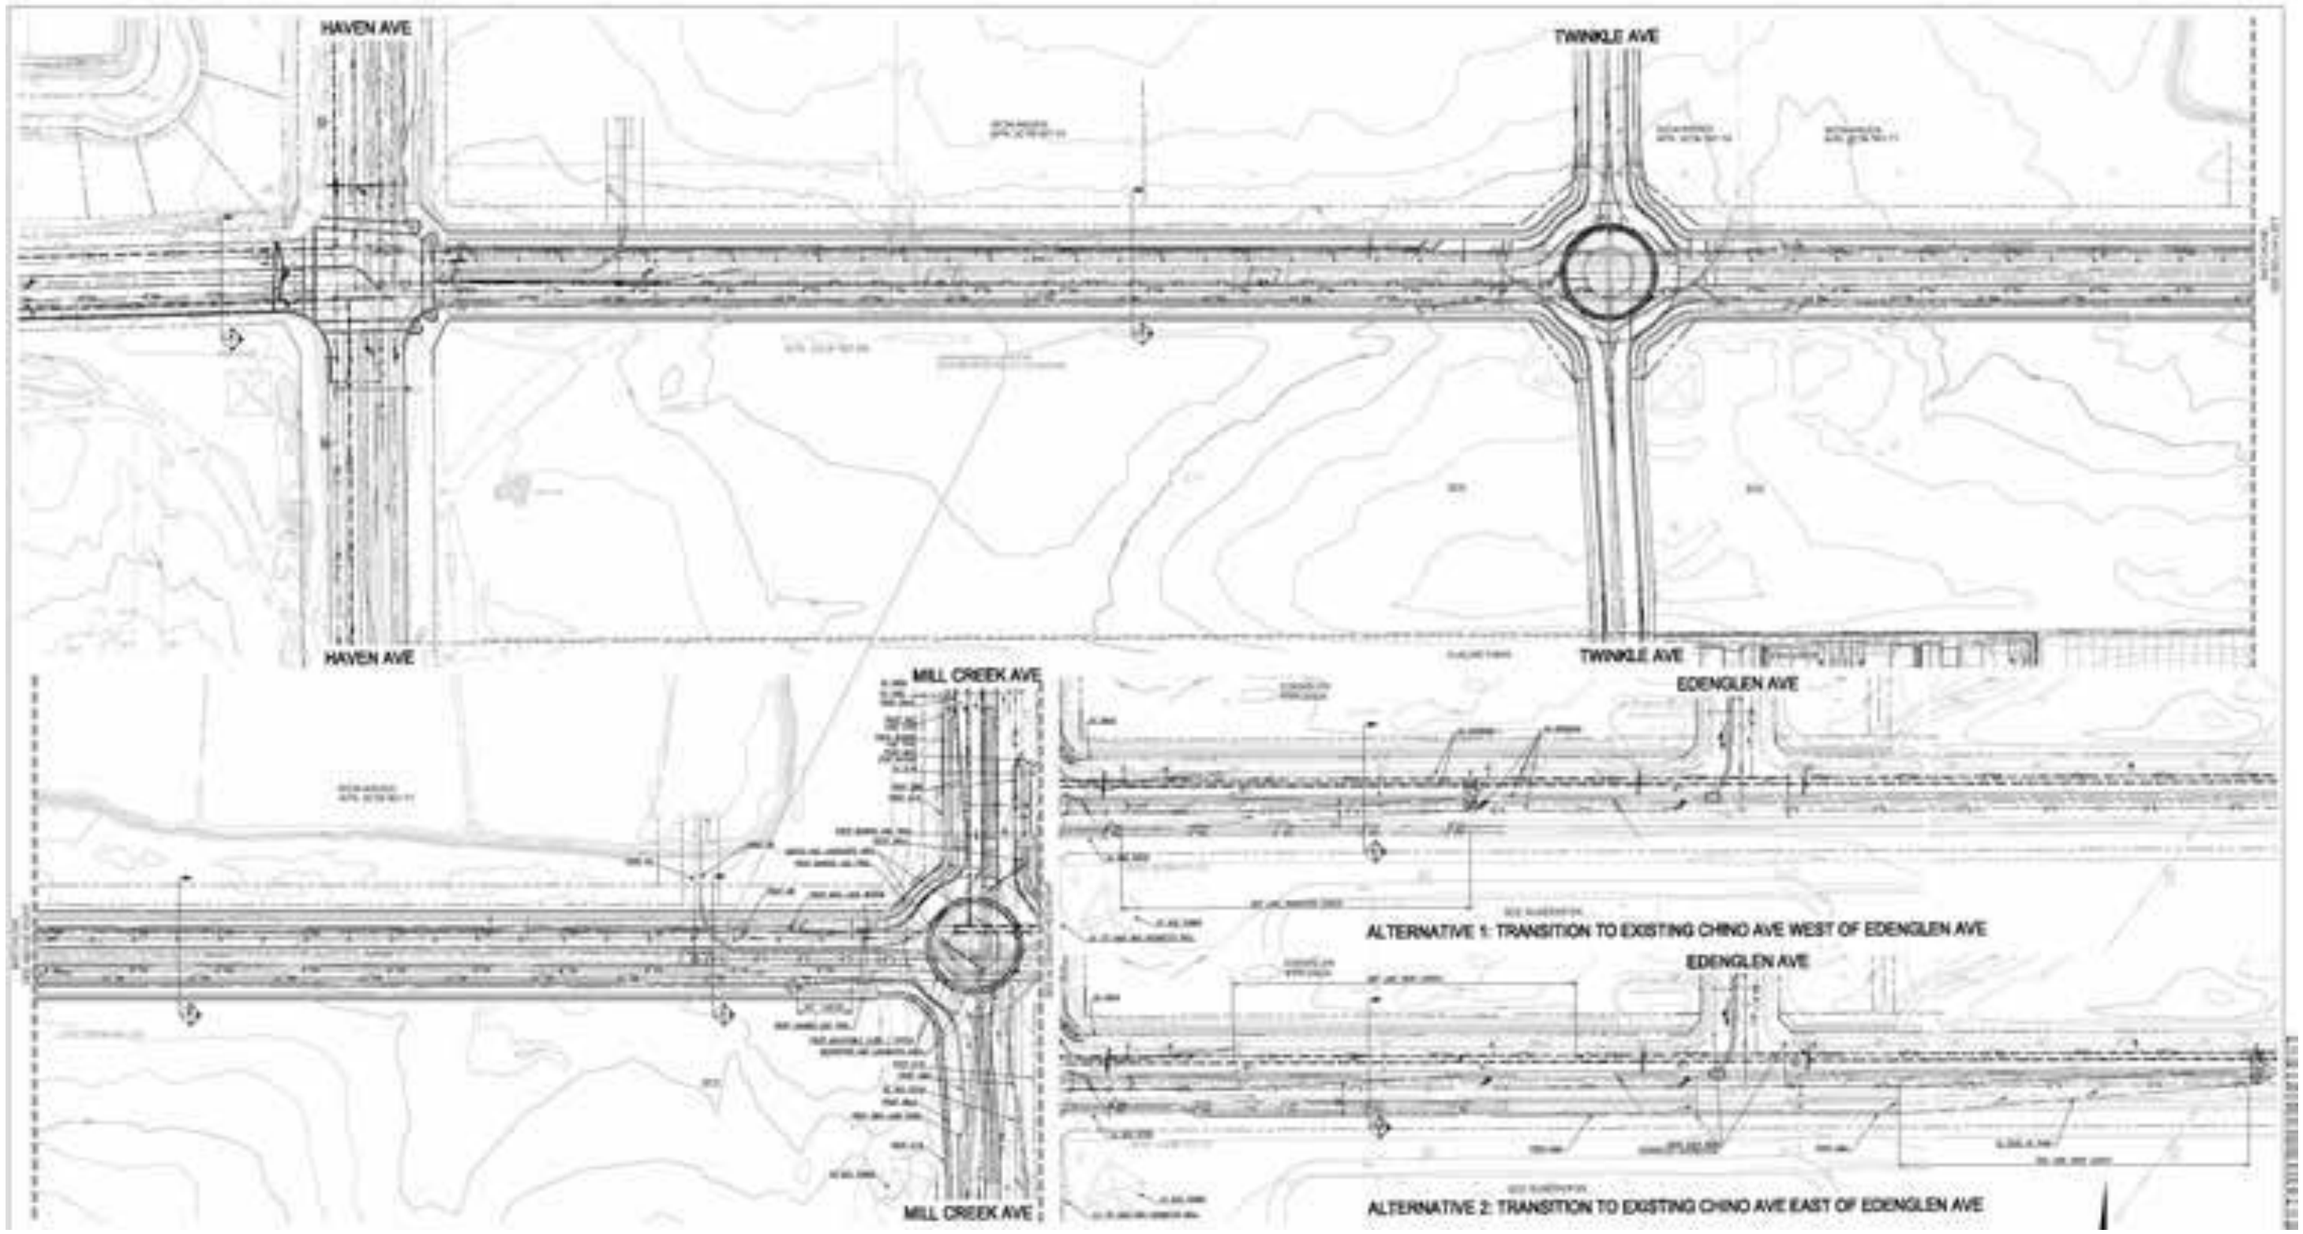
										Total:	**$177,000**		**$66,849**
										Total Cost for Improvements	$2,584,200		$1,091,779
										Total Project Fair Share Contribution to the City of Ontario (non-DIF/other)[6]		$1,012,749	
										Total Project Fair Share Contribution to the City of Eastvale[7]		$79,030	

[1] Improvements included in regional/City DIF programs have been identified as such.

[2] Program improvements constructed by project may be eligible for fee credit. In lieu fee payment is at the discretion of the City.

[3] Costs have been estimated using the data provided in Appendix "G" of the CMP (2003 Update) for preliminary construction costs with an application of 1.77 factor to adjust costs to 2022.



[4] Total project fair share contribution consists of the improvements which are not already included in a pre-existing fee program.

[5] Rough order of magnitude cost estimate.

[6] Total project fair share contribution consists of the improvements which are not already included in a fee program for those intersections wholly or partially within the City of Ontario.

[7] Total project fair share contribution consists of the improvements which are not already included in a fee program for those intersections wholly or partially within the City of Eastvale.

EXHIBIT 1-5: PROPOSED CHINO AVENUE IMPROVEMENTS

This Page Intentionally Left Blank

2 METHODOLOGIES

This section of the report presents the methodologies used to perform the traffic analyses summarized in this report. The methodologies described are consistent with City of Ontario's Traffic Study Guidelines.

2.1 LEVEL OF SERVICE

Traffic operations of roadway facilities are described using the term "Level of Service" (LOS). LOS is a qualitative description of traffic flow based on several factors, such as speed, travel time, delay, and freedom to maneuver. Six levels are typically defined ranging from LOS A, representing completely free-flow conditions, to LOS F, representing breakdown in flow resulting in stop-and-go conditions. LOS E represents operations at or near capacity, an unstable level where vehicles are operating with the minimum spacing for maintaining uniform flow.

2.2 INTERSECTION CAPACITY ANALYSIS

The definitions of LOS for interrupted traffic flow (flow restrained by the existence of traffic signals and other traffic control devices) differ slightly depending on the type of traffic control. The LOS is typically dependent on the quality of traffic flow at the intersections along a roadway. The 6th Edition Highway Capacity Manual (HCM) methodology expresses the LOS at an intersection in terms of delay time for the various intersection approaches. (4) The HCM uses different procedures depending on the type of intersection control.

2.2.1 SIGNALIZED INTERSECTIONS

The City of Ontario requires signalized intersection operations analysis based on the methodology described in the HCM. (4) Intersection LOS operations are based on an intersection's average control delay. Control delay includes initial deceleration delay, queue move-up time, stopped delay, and final acceleration delay. For signalized intersections LOS is related to the average control delay per vehicle and is correlated to a LOS designation as described in Table 2-1.

TABLE 2-1: SIGNALIZED INTERSECTION LOS THRESHOLDS

Description	Average Control Delay (Seconds), V/C ≤ 1.0	Level of Service, V/C ≤ 1.0[1]
Operations with very low delay occurring with favorable progression and/or short cycle length.	0 to 10.00	A
Operations with low delay occurring with good progression and/or short cycle lengths.	10.01 to 20.00	B
Operations with average delays resulting from fair progression and/or longer cycle lengths. Individual cycle failures begin to appear.	20.01 to 35.00	C
Operations with longer delays due to a combination of unfavorable progression, long cycle lengths, or high V/C ratios. Many vehicles stop and individual cycle failures are noticeable.	35.01 to 55.00	D
Operations with high delay values indicating poor progression, long cycle lengths, and high V/C ratios. Individual cycle failures are frequent occurrences. This is considered to be the limit of acceptable delay.	55.01 to 80.00	E
Operation with delays unacceptable to most drivers occurring due to over saturation, poor progression, or very long cycle lengths.	80.01 and up	F

Source: HCM, 6th Edition

[1] If V/C is greater than 1.0 then LOS is F per HCM.

Consistent with Appendix B of the San Bernardino County CMP, the following saturation flow rates, in vehicles per hour green per lane (vphgpl), will be utilized in the traffic analysis for signalized intersections:

Existing, E+P, and Opening Year Cumulative Traffic Conditions:

- Exclusive through: 1800 vphgpl
- Exclusive left: 1700 vphgpl
- Exclusive right: 1800 vphgpl
- Exclusive dual left: 1600 vphgpl
- Exclusive triple left: 1500 vphgpl

Horizon Year Traffic Conditions:

- Exclusive through: 1900 vphgpl
- Exclusive left: 1800 vphgpl
- Exclusive right: 1900 vphgpl
- Exclusive dual left: 1700 vphgpl
- Exclusive triple left: 1600 vphgpl

The traffic modeling and signal timing optimization software package Synchro (Version 11) has been utilized to analyze signalized intersections. Synchro is a macroscopic traffic software program that is based on the signalized intersection capacity analysis as specified in the HCM. Macroscopic level models represent traffic in terms of aggregate measures for each movement at the study intersections. Equations are used to determine measures of effectiveness such as delay and queue length. The level of service and capacity analysis performed by Synchro takes into consideration optimization and coordination of signalized intersections within a network.

The peak hour traffic volumes have been adjusted using a peak hour factor (PHF) to reflect peak 15-minute volumes. Customary practice for LOS analysis is to use a peak 15-minute rate of flow. However, flow rates are typically expressed in vehicles per hour. The PHF is the relationship between the peak 15-minute flow rate and the full hourly volume (e.g., PHF = [Hourly Volume] / [4 x Peak 15-minute Flow Rate]). The use of a 15-minute PHF produces a more detailed analysis as compared to analyzing vehicles per hour. Existing PHFs have been used for all analysis scenarios. Per the HCM, PHF values over 0.95 often are indicative of high traffic volumes with capacity constraints on peak hour flows while lower PHF values are indicative of greater variability of flow during the peak hour. (4)

2.2.2 UNSIGNALIZED INTERSECTIONS

The City of Ontario requires the operations of unsignalized intersections be evaluated using the methodology described in the HCM. (4) The LOS rating is based on the weighted average control delay expressed in seconds per vehicle (see Table 2-2). At two-way or side-street stop-controlled intersections, LOS is calculated for each controlled movement and for the left turn movement from the major street, as well as for the intersection as a whole. For approaches composed of a single lane, the delay is computed as the average of all movements in that lane. Delay for the intersection is reported for the worst individual movement at a two-way stop-controlled intersection. For all-way stop controlled intersections, LOS is computed for the intersection as a whole (average delay).

TABLE 2-2: UNSIGNALIZED INTERSECTION LOS THRESHOLDS

Description	Average Control Delay (Seconds), V/C ≤ 1.0	Level of Service, V/C ≤ 1.0[1]
Little or no delays.	0 to 10.00	A
Short traffic delays.	10.01 to 15.00	B
Average traffic delays.	15.01 to 25.00	C
Long traffic delays.	25.01 to 35.00	D
Very long traffic delays.	35.01 to 50.00	E
Extreme traffic delays with intersection capacity exceeded.	> 50.00	F

Source: HCM, 6th Edition

[1] If V/C is greater than 1.0 then LOS is F per HCM.

2.3 TRAFFIC SIGNAL WARRANT ANALYSIS METHODOLOGY

The term "signal warrants" refers to the list of established criteria used by Caltrans and other public agencies to quantitatively justify or determine the potential need for installation of a traffic signal at an otherwise unsignalized intersection. This TA uses the signal warrant criteria presented in the latest edition of the Caltrans California Manual on Uniform Traffic Control Devices (CA MUTCD). (5)

The signal warrant criteria for Existing study area intersections are based upon several factors, including volume of vehicular and pedestrian traffic, frequency of accidents, and location of school areas. The CA MUTCD indicates that the installation of a traffic signal should be considered if one or more of the signal warrants are met. (5) Specifically, this TA utilizes the Peak Hour Volume-based Warrant 3 as the appropriate representative traffic signal warrant analysis for existing traffic conditions and for all future analysis scenarios for existing unsignalized intersections. Warrant 3 is appropriate to use for this TA because it provides specialized warrant criteria for intersections with rural characteristics. For the purposes of this study, the speed limit was the basis for determining whether Urban or Rural warrants were used for a given intersection. Urban warrants have been used as posted speed limits on the major roadways with unsignalized intersections are 40 miles per hour or below and rural warrants have been used where speeds exceed 40 miles per hour.

Future intersections that do not currently exist have been assessed regarding the potential need for new traffic signals based on future average daily traffic (ADT) volumes, using the Caltrans planning level ADT-based signal warrant analysis worksheets. Similarly, the speed limit has been used as the basis for determining the use of Urban and Rural warrants.

Traffic signal warrant analyses were performed for the following study area intersection shown in Table 2-3:

TABLE 2-3: TRAFFIC SIGNAL WARRANT ANALYSIS LOCATIONS

#	Intersection
1	Archibald Av. & SR-60 WB Ramps
13	Haven Av. & Chino Av.
19	Mill Creek Av. & Ontario Ranch Rd.
23	Hamner Av. & Chino Av.

Although unsignalized, the intersections of Twinkle Avenue & Chino Avenue (#16) and Mill Creek Avenue & Chino Avenue (#18) have not been evaluated for traffic signal warrants as these intersections are proposed for roundabouts.

The Existing conditions traffic signal warrant analysis is presented in the subsequent section, Section 3 *Area Conditions* of this report. The traffic signal warrant analyses for future conditions are presented in Section 5 *E+P Traffic Conditions*, Section 6 *Opening Year Cumulative (2027) Conditions*, and Section 7 *Horizon Year (2050) Traffic Conditions* of this report. It is important to note that a signal warrant defines the minimum condition under which the installation of a traffic signal might be warranted. Meeting this threshold condition does not require that a traffic control signal be installed at a particular location, but rather, that other traffic factors and conditions be evaluated in order to determine whether the signal is truly justified. It should also be noted that signal warrants do not necessarily correlate with LOS. An intersection may satisfy a signal warrant condition and operate at or above acceptable LOS or operate below acceptable LOS and not meet a signal warrant.

2.4 QUEUING ANALYSIS

Consistent with Caltrans requirements, the 95th percentile queuing of vehicles has been assessed at the off-ramps to determine potential queuing deficiencies at the freeway ramp intersections at the SR-60 Freeway at the Archibald Avenue, Haven Avenue, and Milliken Avenue interchanges and at the I-15 Freeway at the Cantu Galleano Road interchange. Specifically, the off-ramp queuing analysis is utilized to identify any potential queuing and "spill back" onto the SR-60 and I-15 Freeway mainlines from the off-ramps.

The traffic progression analysis tool and HCM intersection analysis program, Synchro, has been used to assess the potential deficiencies/needs of the intersections with traffic added from the proposed Project. Storage (turn-pocket) length recommendations at the ramps have been based upon the 95th percentile queue resulting from the Synchro progression analysis. The footnote from the Synchro output sheets indicates if the 95th percentile cycle exceeds capacity. Traffic is simulated for two complete cycles of the 95th percentile traffic in Synchro in order to account for the effects of spillover between cycles. In practice, the 95th percentile queue shown will rarely be exceeded and the queues shown with the footnote are acceptable for the design of storage bays. The 95th percentile queue is derived from the average queue plus 1.65 standard deviations. The 95th percentile queue is not necessarily ever observed it is simply based on statistical calculations.

2.5 MINIMUM ACCEPTABLE LEVELS OF SERVICE (LOS)

Minimum Acceptable LOS and associated definitions of intersection deficiencies has been obtained from each of the applicable surrounding jurisdictions.

2.5.1 CITY OF ONTARIO

Per the Ontario Plan's Policy M-1, the City of Ontario utilizes a minimum acceptable LOS of LOS E, where feasible. (6)

2.5.2 CITY OF EASTVALE

The City of Eastvale General Plan Policy C-10 sets a standard of LOS C with LOS D as acceptable in commercial and employment areas and at intersections of any combination of major highways, urban arterials, secondary highways, or freeway ramps. (7) Based on this criterion, where feasible, LOS D is the minimum acceptable LOS at each of the study intersections within the City of Eastvale.

2.5.3 CALTRANS

Caltrans endeavors to maintain a target LOS at the transition between LOS C and LOS D on State Highway System facilities, however, Caltrans acknowledges that this may not always be feasible and recommends that the lead agency consult with Caltrans to determine the appropriate target LOS. (8) If an existing State highway facility is operating at less than this target LOS, the existing LOS should be maintained. In general, the region-wide goal for an acceptable LOS on all freeways and intersections is LOS D. Consistent with the City of Ontario LOS threshold of LOS D and in excess of the City of Ontario stated LOS threshold of LOS E, LOS D will be used as the target LOS.

2.6 DEFICIENCY CRITERIA

To determine whether the addition of project traffic at a study intersection would result in a traffic deficiency, the following will be utilized:

- When the Without Project condition is at or better than LOS D (or LOS E for CMP intersections and intersections located in the City of Ontario) (i.e., acceptable LOS), and project-generated traffic causes deterioration below LOS D/LOS E (i.e., unacceptable LOS), a deficiency is deemed to occur.

When the Without Project condition is already below LOS D/LOS E (i.e., unacceptable LOS), the Project will be responsible for improving its deficiency to acceptable levels of service. Thus, for intersections operating at unacceptable LOS during either the AM and/or PM peak hour, improvements have been identified to improve the deficiencies of the Project to an intersection LOS that is equal to or better than Without Project conditions (see Table 2-4).

The Project's contribution to a deficiency can be reduced if the Project is required to implement or fund its fair share of improvements designed to alleviate its contribution to the deficient condition.

TABLE 2-4: DEFICIENCY CRITERIA

Without Project Level of Service	Level of Service	Deficient?	Improvement Required?
City of Ontario			
A	A-D	No	No
B	B-D	No	No
C	C-D	No	No
D	D-E	No	No
E	E	No	No
A-E	F	Yes	Yes, bring LOS to E or better
F	F	Yes	Yes, bring LOS to E or better
City of Eastvale			
A	A-D	No	No
B	B-D	No	No
C	C-D	No	No
D	D	No	No
A-D	E or F	Yes	Yes, bring LOS to D or better
E	E	Yes	Yes, bring LOS to D or better
E	F	Yes	Yes, bring LOS to D or better
F	F	Yes	Yes, bring LOS to D or better

In the event that an intersection is operating at or is forecast to operate at a deficient LOS, the CMP guidelines have defined a series of steps to be completed to determine the Project's contribution to the deficiency of intersections, which has been applied to both CMP and non-CMP study area intersections. The steps are as follows:

- Determine the improvements necessary to achieve an acceptable service level,
- Calculate the Project's share in the future traffic volume projections for the peak hours,
- Estimate the cost to implement recommended improvements, and
- Calculate the Project's fair-share contribution to improve the Project's traffic deficiencies

2.7 PROJECT FAIR SHARE CALCULATION METHODOLOGY

In cases where this TA identifies that the Project would contribute additional traffic volumes to traffic deficiencies, Project fair share costs of improvements necessary to address deficiencies have been identified. The Project's fair share cost of improvements is determined based on the following equation, which is the ratio of Project traffic to new traffic, and new traffic is total future (Opening Year) traffic less existing baseline traffic:

Project Fair Share % = Project (Project Buildout) AM/PM Traffic / (2050 With Project AM/PM Total Traffic – Existing AM/PM Traffic)

The project fair share percentage has been calculated for both the AM peak hour and PM peak hour and the highest of the two has been selected. The Project fair share contribution calculations are presented in Section 8 *Local and Regional Funding Mechanisms* of this TA. The cost of implementing the improvements shown in Table 1-3 have been estimated based on the preliminary construction cost estimates found in Appendix G of the San Bernardino County CMP in conjunction with a total cost escalation factor of 1.77 to more closely approximate current (2022) costs. These cost estimates have been utilized in conjunction with the Project fair share percentages to determine the Project's fair share cost of the recommended improvements (see Table 7-2). These estimates are a rough order of magnitude only as they are intended only for discussion purposes and do not imply any legal responsibility or formula for contributions or physical improvements. If any analyzed intersections and roadway improvements fall outside of the jurisdiction of the City, the City does not have the authority to construct or demand the construction of such improvements. For this reason, the payment of fair share fees for the improvements identified in Table 1-3 is considered infeasible and therefore results in a significant and unavoidable impact for those locations outside of the City.

3 AREA CONDITIONS

This section provides a summary of the existing circulation network, the City of Ontario General Plan Circulation Network, and a review of existing peak hour intersection operations, traffic signal warrant, and off-ramp queuing analyses.

3.1 EXISTING CIRCULATION NETWORK

Pursuant to the agreement with City of Ontario staff (Appendix 1.1), the study area includes a total of 27 existing and future intersections as shown previously on Exhibit 1-3. Exhibit 3-1 illustrates the study area intersections located near the proposed Project and identifies the number of through traffic lanes for existing roadways and intersection traffic controls.

3.2 CITY OF ONTARIO GENERAL PLAN CIRCULATION ELEMENT

The 2050 Ontario Plan circulation element is shown on Exhibit 3-2. The study area roadways that are classified as 8-lane Other Principal Arterials are identified as having four lanes of travel in each direction. The following study area roadways within the City of Ontario are classified as 8-lane Other Principal Arterials:

- Hamner Avenue from the SR-60 Freeway to Bellegrave Avenue
- Edison Avenue

The study area roadways that are classified as 6-lane Other Principal Arterials are identified as having three lanes of travel in each direction and a 14-foot curbed or painted median. The following study area roadways within the City of Ontario are classified as 6-lane Other Principal Arterials:

- Archibald Avenue
- Haven Avenue, between Riverside Drive and SR-60 Freeway
- Vineyard Avenue

The study area roadways that are classified as 4-lane Other Principal Arterials are identified as having two lanes of travel in each direction. The following study area roadways within the City of Ontario are classified as 4-lane Other Principal Arterials:

- Haven Avenue, south of Riverside Drive

The study area roadway that is classified as a 6-lane Minor Arterial is identified as having three lanes of travel in each direction. The following study area roadway within the City of Ontario is classified as a 6-lane Minor Arterial:

- Riverside Drive

EXHIBIT 3-1: EXISTING NUMBER OF THROUGH LANES AND INTERSECTION CONTROLS (PAGE 1 OF 2)

EXHIBIT 3-1: EXISTING NUMBER OF THROUGH LANES AND INTERSECTION CONTROLS (PAGE 2 OF 2

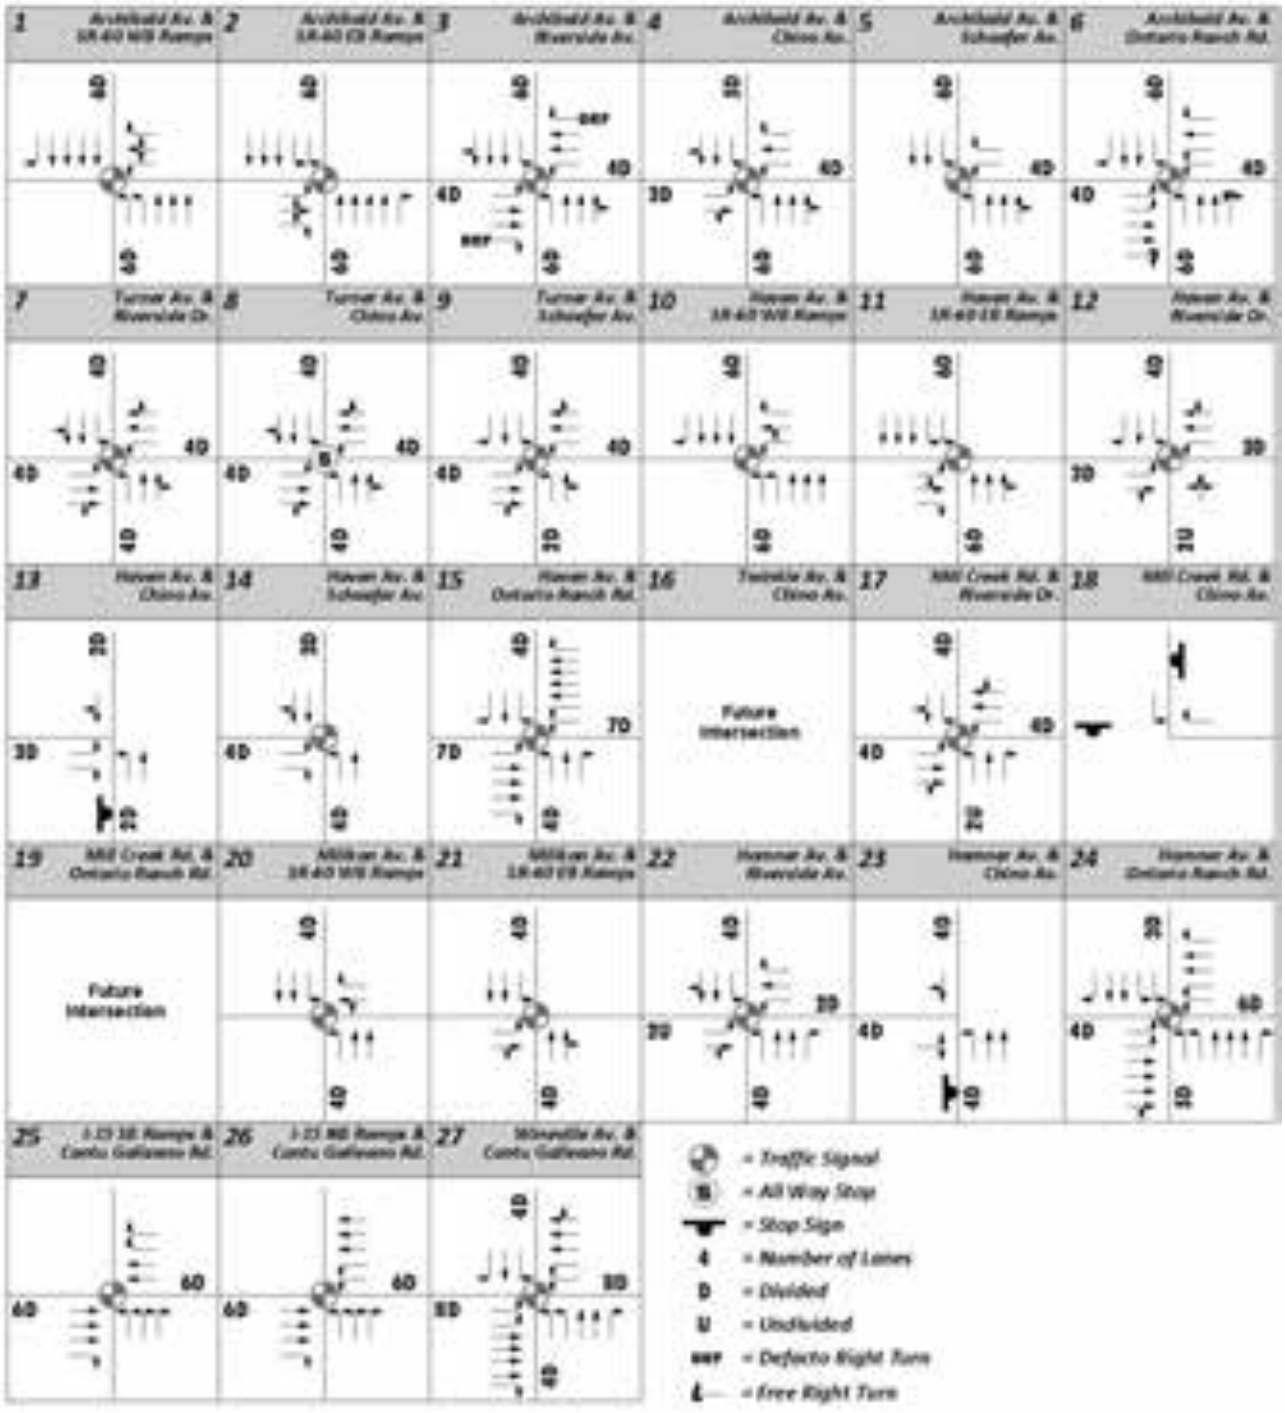


EXHIBIT 3-2: CITY OF ONTARIO 2050 GENERAL PLAN CIRCULATION ELEMENT

The study area roadways that are classified as Collector Streets are identified as having two to four lanes of travel in each direction. The following study area roadways within the City of Ontario are classified as Collector Streets:

- Chino Avenue
- Schaefer Avenue
- Eucalyptus Avenue
- Merrill Avenue
- Turner Avenue
- Mill Creek Avenue

3.3 CITY OF EASTVALE GENERAL PLAN CIRCULATION ELEMENT

Exhibit 3-3 shows the City of Eastvale General Plan Circulation Element and Exhibit 3-4 shows the City of Eastvale General Plan roadway cross-sections.

3.4 BICYCLE & PEDESTRIAN FACILITIES

Exhibit 3-5 illustrates the 2050 Ontario Plan bicycle facilities. Existing pedestrian facilities within the study area are shown on Exhibit 3-6. As shown on Exhibit 3-6, there are limited pedestrian facilities in the vicinity of the Project site. Field observations and traffic counts conducted in August 2022 indicate light pedestrian and bicycle activity within the study area.

3.5 TRANSIT SERVICE

Exhibit 3-7 shows the 2050 Ontario Plan transit facilities. The study area within the City of Ontario is currently served by Omnitrans, a public transit agency serving various jurisdictions within San Bernardino County. Exhibit 3-8 shows the existing transit facilities, which indicates that Omnitrans Route 87 could potentially serve the Project site. Transit service is reviewed and updated by Omnitrans periodically to address ridership, budget, and community demand needs. Changes in land use can affect these periodic adjustments which may lead to either enhanced or reduced service where appropriate. As such, it is recommended that the applicant work in conjunction with Omnitrans to potentially provide bus service to the site.

3.6 EXISTING (2022) TRAFFIC COUNTS

The intersection LOS analysis is based on the traffic volumes observed during the peak hour conditions using traffic count data collected in May 2022. The following peak hours were selected for analysis:

- Weekday AM Peak Hour (peak hour between 7:00 AM and 9:00 AM)
- Weekday PM Peak Hour (peak hour between 4:00 PM and 6:00 PM)

EXHIBIT 3-3: CITY OF EASTVALE CIRCULATION ELEMENT

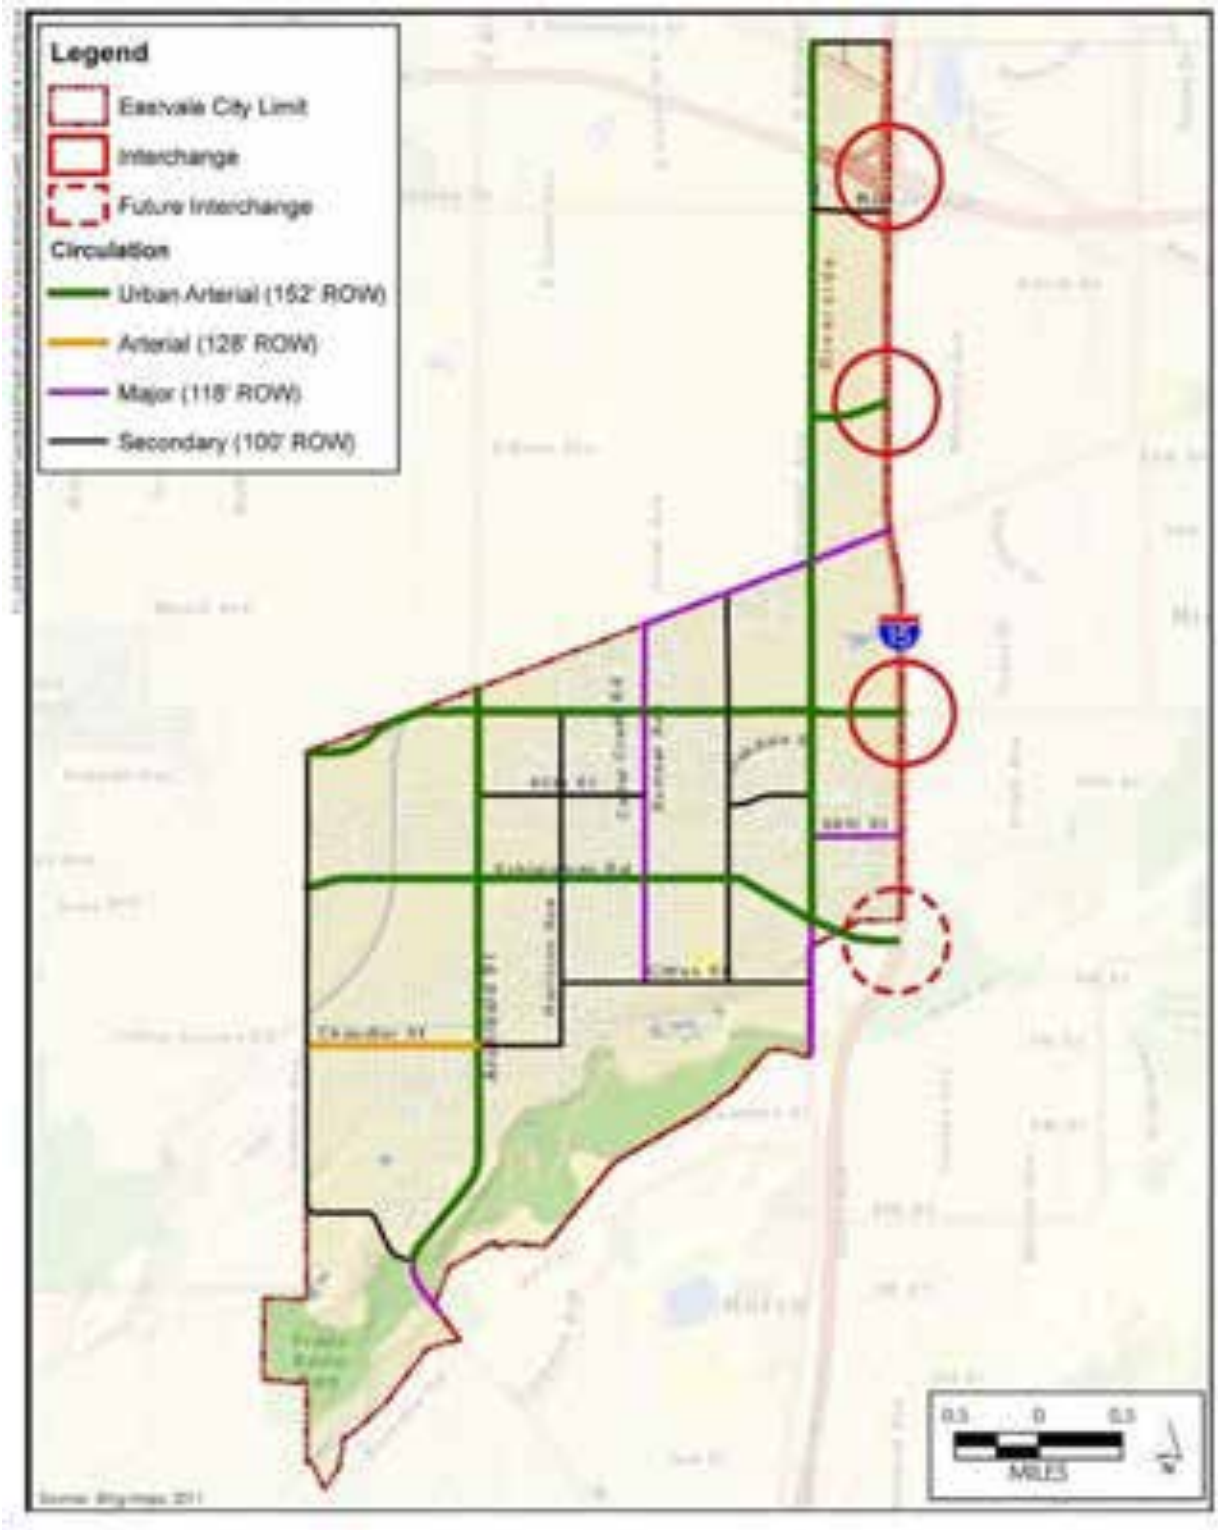

EXHIBIT 3-4: CITY OF EASTVALE GENERAL ROADWAY PLAN CROSS-SECTIONS

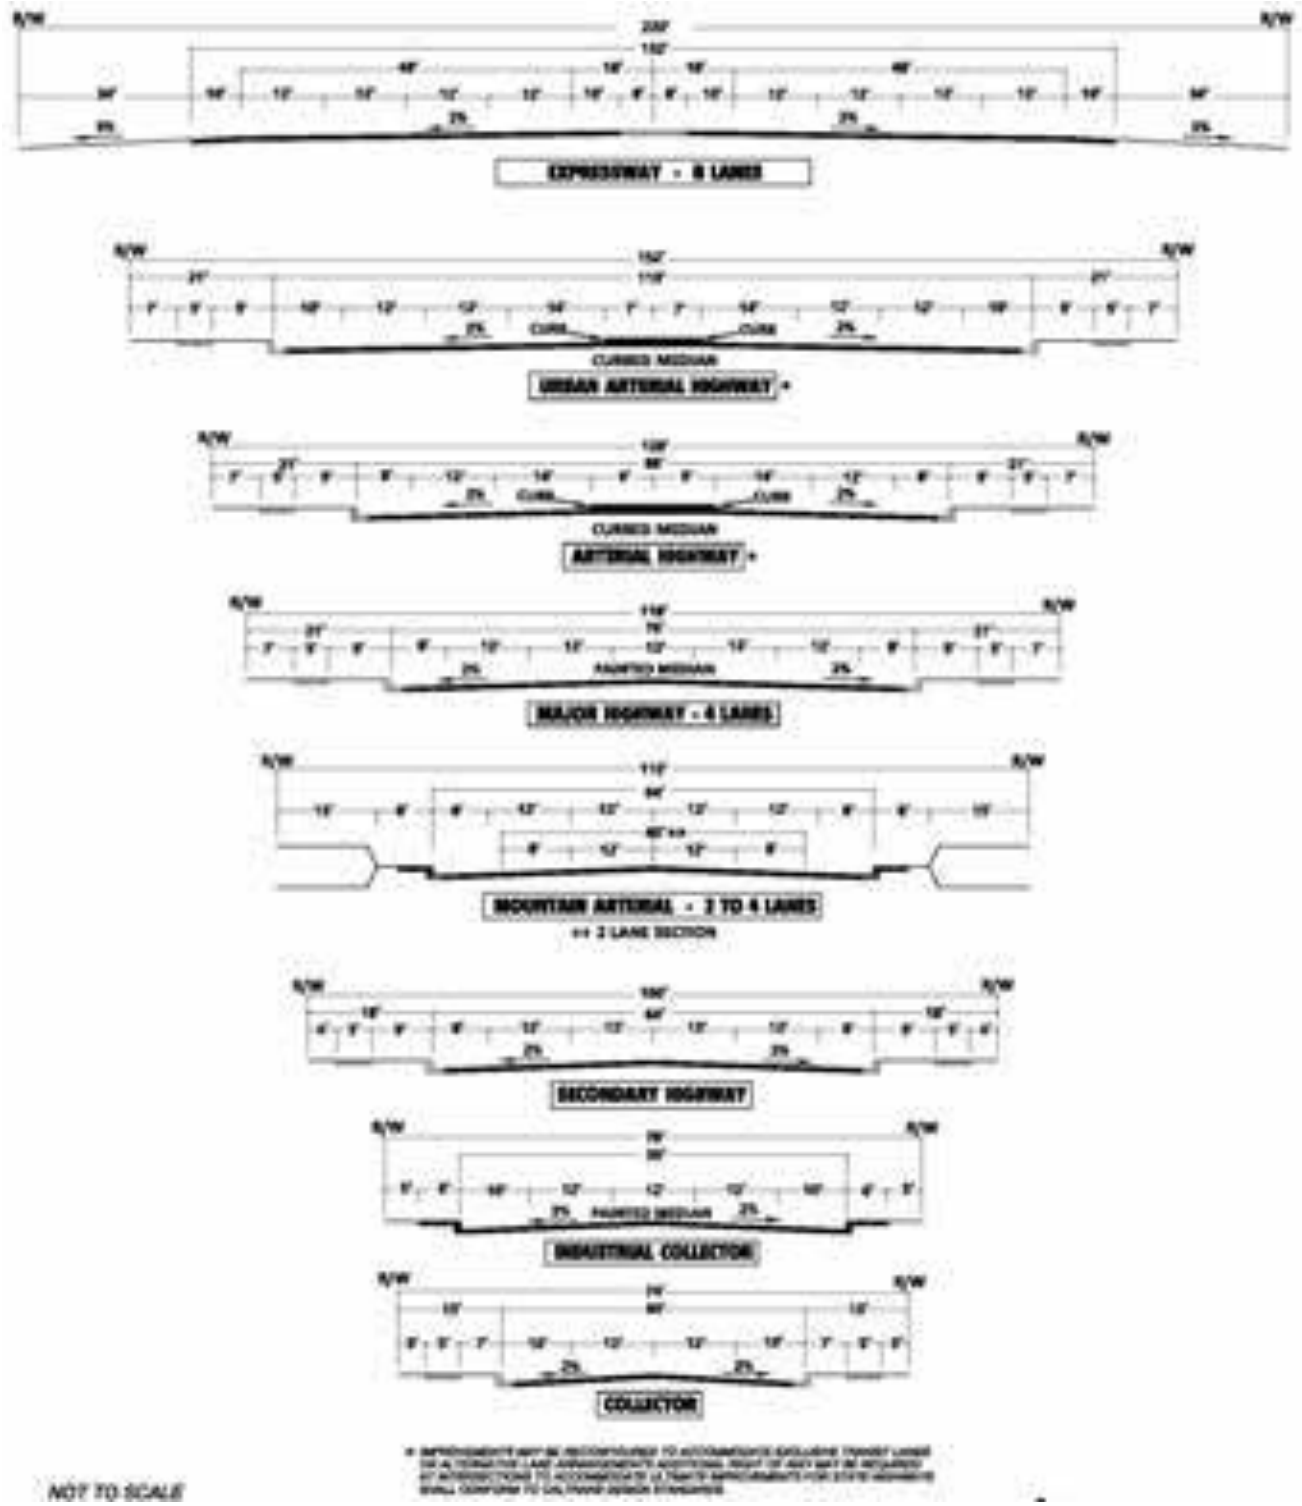

EXHIBIT 3-5: CITY OF ONTARIO 2050 BICYCLE FACILITIES

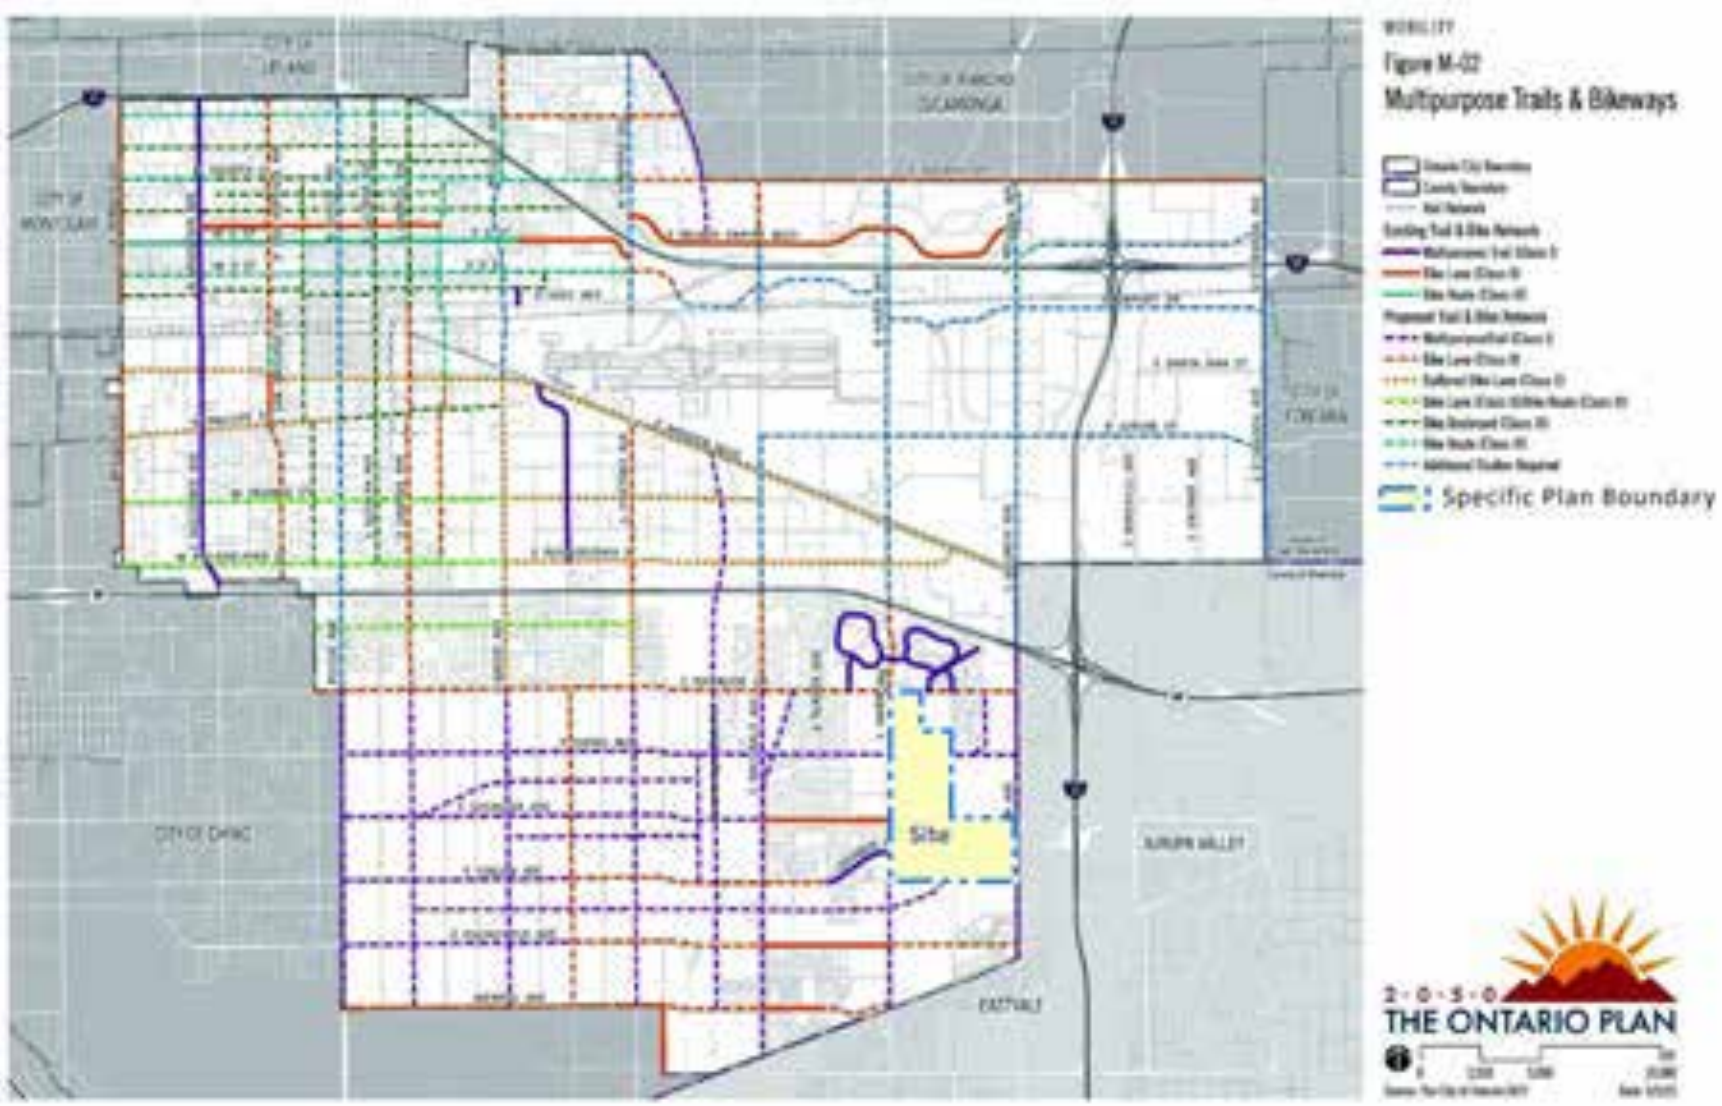

EXHIBIT 3-6: EXISTING PEDESTRIAN FACILITIES

EXHIBIT 3-7: CITY OF ONTARIO 2050 GENERAL PLAN TRANSIT ROUTES

EXHIBIT 3-8: EXISTING TRANSIT FACILITIES

The 2022 weekday AM and weekday PM peak hour count data is representative of typical weekday peak hour traffic conditions in the study area. There were no observations made in the field that would indicate atypical traffic conditions on the count dates, such as construction activity or detour routes and near-by schools were in session and operating on normal schedules. As such, no additional adjustments were made to the traffic counts to establish the baseline condition. The raw manual peak hour turning movement traffic count data sheets are included in Appendix 3.1.

Existing weekday ADT volumes are shown on Exhibit 3-11. Where actual 24-hour tube count data was not available, Existing ADT volumes were based upon factored intersection peak hour counts collected by Urban Crossroads, Inc. using the following formula for each intersection leg:

Weekday PM Peak Hour (Approach Volume + Exit Volume) x 12.65 = Leg Volume

A comparison of the PM peak hour and daily traffic volumes of various roadway segments within the study area indicated that the peak-to-daily relationship is approximately 7.91 percent. As such, the above equation utilizing a factor of 12.65 estimates the ADT volumes on the study area roadway segments assuming a peak-to-daily relationship of 7.91 percent (i.e., 1/0.0791 = 12.65) and was assumed to sufficiently estimate average daily traffic (ADT) volumes for planning-level analyses. Existing weekday and weekend peak hour intersection volumes are also shown on Exhibit 3-9.

3.7 INTERSECTION OPERATIONS ANALYSIS

Existing peak hour traffic operations have been evaluated for the study area intersections based on the analysis methodologies presented in Section 2.2 *Intersection Capacity Analysis* of this report. The intersection operations analysis results are summarized in Table 3-1, which indicates that the following study area intersection is currently operating at an unacceptable LOS during the peak hours:

- Haven Avenue & Riverside Drive (#13) – LOS F AM peak hour only

The intersection operations analysis worksheets are included in Appendix 3.2 of this TA.

3.8 TRAFFIC SIGNAL WARRANTS ANALYSIS

Traffic signal warrants for Existing traffic conditions are based on existing peak hour intersection turning volumes. The intersection of Turner Avenue & Chino Avenue (#8) currently meets a traffic signal warrant under Existing (2022) traffic conditions. Existing conditions traffic signal warrant analysis worksheets are provided in Appendix 3.3.

EXHIBIT 3-9: EXISTING (2022) TRAFFIC VOLUMES (PAGE 1 OF 2)

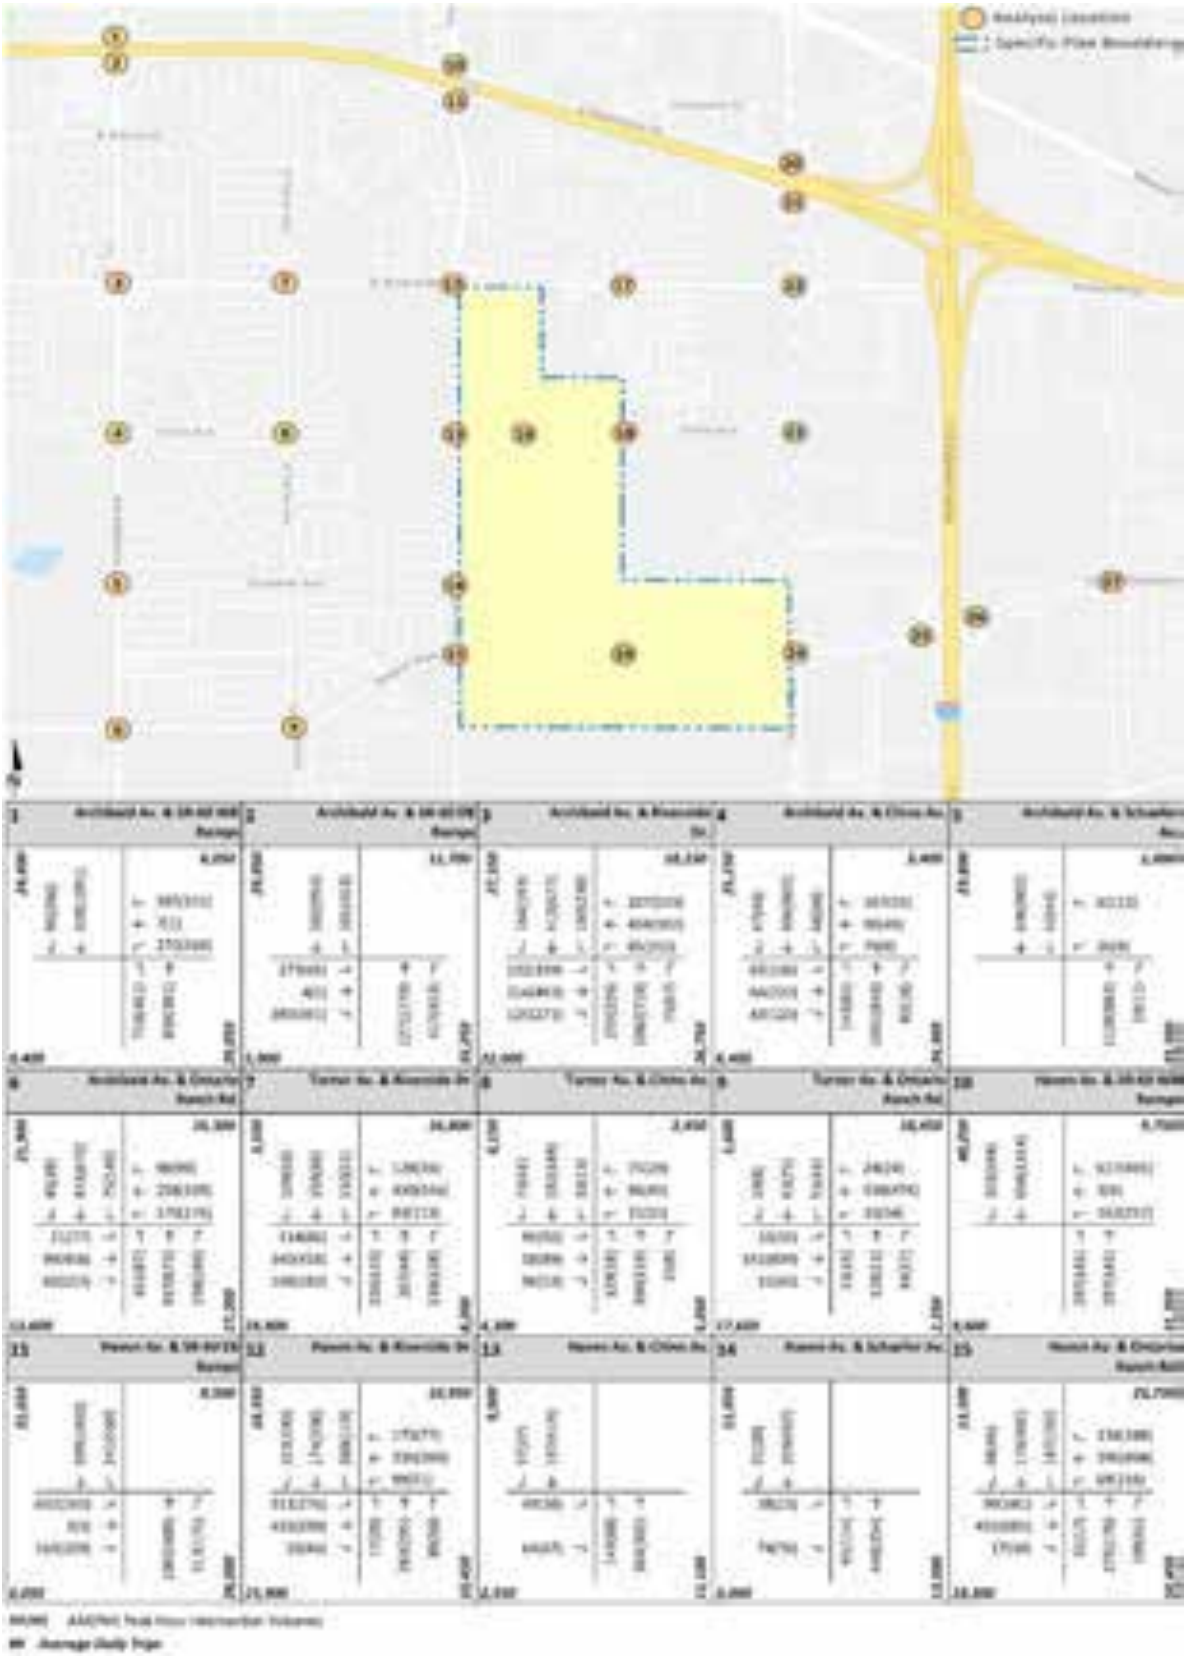

EXHIBIT 3-9: EXISTING (2022) TRAFFIC VOLUMES (PAGE 2 OF 2)

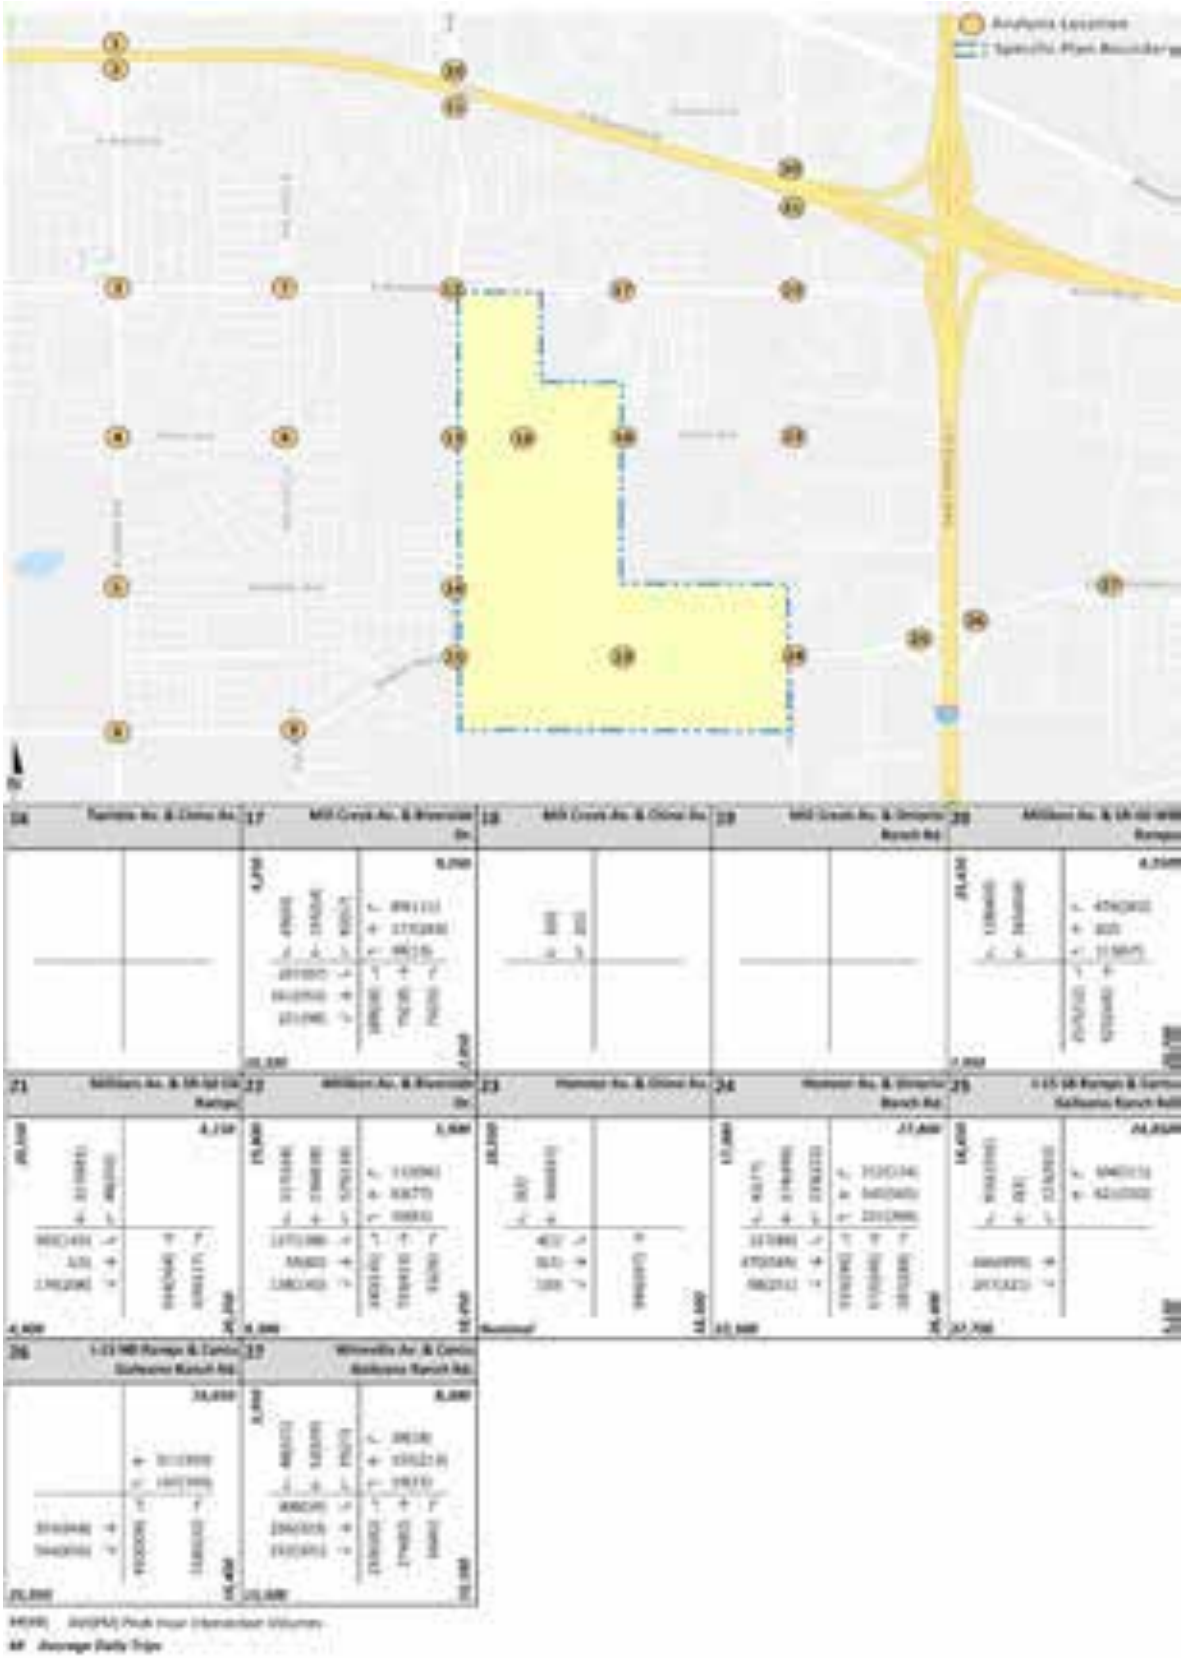

TABLE 3-1: INTERSECTION ANALYSIS FOR EXISTING (2022) CONDITIONS

#	Intersection	Traffic Control[2]	Delay[1] (secs.) AM	Delay[1] (secs.) PM	Level of Service AM	Level of Service PM	Acceptable LOS

26	I-15 NB Ramps & Cantu Galleano Ranch Rd.	TS	18.1	18.1	B	B	D
27	Wineville Av. & Cantu Galleano Ranch Rd.	TS	17.8	17.8	B	B	D

* **BOLD** = Level of Service (LOS) does not meet the applicable jurisdictional requirements (i.e., unacceptable LOS).

1 Per the Highway Capacity Manual (6th Edition), overall average intersection delay and level of service are shown for intersections with a traffic signal or all way stop control. For intersections with cross street stop control, the delay and level of service for the worst individual movement (or movements sharing a single lane) are shown. HCM delay reported in seconds.

2 TS = Traffic Signal; AWS = All-way Stop; CSS = Cross-street Stop

3.9 OFF-RAMP QUEUING ANALYSIS

A queuing analysis was performed for the off-ramps at the SR-60 Freeway at the Archibald Avenue and Haven Avenue interchanges to assess vehicle queues for the off ramps that may potentially result in deficient peak hour operations at the ramp-to-arterial intersections and may potentially "spill back" onto the SR-60 Freeway mainline. Queuing analysis findings are presented in Table 3-2. It is important to note that off-ramp lengths are consistent with the measured distance between the intersection and the freeway mainline. As shown in Table 3-2, there are no movements that are currently experiencing queuing issues during the weekday AM or weekday PM peak 95th percentile traffic flows. Worksheets for Existing (2022) traffic conditions off-ramp queuing analysis are provided in Appendix 3.4.

TABLE 3-2: PEAK HOUR OFF-RAMP QUEUING SUMMARY FOR EXISTING (2022) CONDITIONS

Intersection	Movement	Available Stacking Distance (Feet)	95th Percentile Queue (Feet)[3]		Acceptable?[1]	
			AM Peak Hour	PM Peak Hour	AM	PM
Archibald Av. & SR-60 WB Ramps	WBL	365	308 [2]	190	Yes	Yes
	WBL/T/R	1,285	178 [2]	193	Yes	Yes

	NBL/R	585	74	61	Yes	Yes

[1] Stacking Distance is acceptable if the required stacking distance is less than or equal to the stacking distance provided. An additional 15 feet of stacking which is assumed to be provided in the transition for turn pockets is reflected in the stacking distance shown on this table, where applicable.
[2] 95th percentile volume exceeds capacity, queue may be longer. Queue shown is maximum after two cycles.
[3] Although 95th percentile queue is anticipated to exceed the available storage for the turn lane, the adjacent through lane has sufficient storage to accommodate any spillover without spilling back and affecting the I-15Freeway mainline.

4 PROJECTED FUTURE TRAFFIC

This section presents the traffic volumes estimated to be generated by the Project, as well as the Project's trip assignment onto the study area roadway network. A preliminary land use plan for the proposed Project is shown previously on Exhibit 1-2. The proposed Project is to consist of 7,194 single family and multifamily residential dwelling units, 27.0 acres of public park, 2,780,000 square feet of industrial uses, and 772,500 square feet of retail/office uses. Table 4-1 provides a summary of the proposed land uses and Planning Areas. Note that portions of Planning Areas 3A and 4A have already been developed (currently existing). Planning Areas 2, 3, 4A, 5C, 6, 10, and portions of 7, 8, and 9 are anticipated to be developed as part of the first phase with an anticipated Opening Year of 2024. Project Buildout is anticipated in Year 2027. Access to the proposed Project would be provided to the surrounding roadways of Riverside Drive to the north, Haven Avenue to the west, Ontario Ranch Road to the south, and Mill Creek Avenue to the east. Chino Avenue is also an east-west roadway that runs through the Project.

Regional access to the Project site is available from the SR-60 Freeway via Archibald Avenue, Haven Avenue, and Milliken Avenue interchanges and the I-15 Freeway via Cantu Galleano Road. Exhibit 1-3 depicts the location of the proposed Project in relation to the existing roadway network and the study area intersections.

4.1 PROJECT TRIP GENERATION

Trip generation represents the amount of traffic which is both attracted to and produced by a development. Determining traffic generation for a specific project is therefore based upon forecasting the amount of traffic that is expected to be both attracted to and produced by the specific land uses being proposed for a given development. Trip generation rates for the proposed Project are provided in Appendix 4.1.

4.1.1 CURRENTLY APPROVED

Trip generation for the currently approved land uses are shown in Table 4-2 as evaluated in the Traffic Impact Analysis Report Rich Haven Specific Plan PA 1 & PA 7 Amendment (dated January 2021, prepared by LLG Engineers). The currently approved Specific Plan land uses include 7,194 single family detached and multifamily residential dwelling units, 27.0 acres of public park, 1,183,525 square feet of industrial uses and 990,902 square feet of retail/office uses. As shown in Table 4-2, the currently approved uses generate a total of 91,993 trip-ends per day with 6,372 AM peak hour trips and 8,772 PM peak hour trips.

TABLE 4-1: PROPOSED LAND USE SUMMARY

PA	Land Use	Quantity	Unit[1]
1A	Single Family Residential (0-5 DU/Ac)	128	DU

[1] DU = dwelling units; TSF = thousand square feet; AC = acres

4.1.2 PROPOSED PROJECT

The proposed Project is to consist of 7,194 single family and multifamily residential dwelling units, 27.0 acres of public park, 2,780,000 square feet of industrial uses, and 772,500 square feet of retail/office uses. The trip generation rates used the proposed Project are based upon information collected by the ITE as provided in their latest Trip Generation Manual, 11th Edition, 2021. The proposed Project trip generation summary is shown in Table 4-3. Detailed trip generation calculations are provided in Appendix 4.1. The proposed Project is anticipated to generate a total of 95,538 two-way trips per day with 8,078 AM peak hour trips and 8,036 PM peak hour trips, in actual vehicles. Pass-by is based on the ITE's latest Trip Generation Manual. For the purposes of the operations analysis, the PCE trip generation has been utilized, consistent with the City of Ontario traffic study guidelines.

TABLE 4-3: PROPOSED PROJECT TRIP GENERATION SUMMARY

	AM Peak Hour			PM Peak Hour			
Land Use	In	Out	Total	In	Out	Total	Daily
Actual Vehicles:							
Phase 1 Total Trips	1,634	2,101	3,735	2,199	1,832	4,031	47,226
Phase 2 Total Trips	2,005	2,338	4,343	2,281	1,724	4,005	48,312
Project Buildout Total Trips (Actual Vehicles)	**3,639**	**4,439**	**8,078**	**4,480**	**3,556**	**8,036**	**95,538**
Passenger Car Equivalent (PCE):							
Phase 1 Total Trips	1,694	2,140	3,834	2,231	1,893	4,124	48,922
Phase 2 Total Trips	2,005	2,338	4,343	2,281	1,724	4,005	48,312
Project Buildout Total Trips (PCE)	**3,699**	**4,478**	**8,177**	**4,512**	**3,617**	**8,129**	**97,234**

[1] DU = dwelling units; TSF = thousand square feet; AC = acres

4.1.3 TRIP GENERATION COMPARISON

As shown in Table 4-4, the proposed Project is anticipated to generate an additional 7,411 trip-ends per day with 1,969 additional AM peak hour trips and 392 fewer PM peak hour trips as compared to the uses evaluated in the currently approved Specific Plan. Since the currently approved TOP 2050 traffic forecasts include the currently approved Rich Haven Specific Plan, the trip generation comparison shown in Table 4-4 has been utilized for Horizon Year (2050) traffic conditions only.

TABLE 4-4: TRIP GENERATION COMPARISON SUMMARY

	AM Peak Hour			PM Peak Hour			
Land Use	In	Out	Total	In	Out	Total	Daily
2021 SPA Trip Generation	2,302	4,070	6,372	5,003	3,769	8,772	91,993
Proposed Project Trip Generation	3,639	4,439	8,078	4,480	3,556	8,036	95,538
Existing Uses	67	196	263	217	127	344	3,866
Variance	**1,404**	**565**	**1,969**	**-306**	**-86**	**-392**	**7,411**

4.2 PROJECT TRIP DISTRIBUTION

The Project trip distribution and assignment process represents the directional orientation of traffic to and from the Project site. The trip distribution pattern is heavily influenced by the geographical location of the site, the location of surrounding uses, and the proximity to the regional freeway system. Since the distribution patterns is influence by the type of land use, separate distribution patterns have been evaluated for the residential, non-residential, and industrial (passenger cars and trucks) uses. The Project trip distribution patterns are shown on the following Exhibits:

- Exhibit 4-1: Project (Residential) Trip Distribution
- Exhibit 4-2: Project (Non-Residential) Trip Distribution
- Exhibit 4-3: Project (2C, 3C & 5A Industrial – Passenger Cars) Trip Distribution
- Exhibit 4-4: Project (2C, 3C & 5A Industrial – Trucks) Trip Distribution
- Exhibit 4-5: Project (6A Industrial – Passenger Cars) Trip Distribution
- Exhibit 4-6: Project (6A Industrial – Trucks) Trip Distribution

4.3 MODAL SPLIT

The potential for Project trips to be reduced by the use of public transit, walking or bicycling have not been included as part of the Project's estimated trip generation. Essentially, the Project's traffic projections are "conservative" in that these alternative travel modes would reduce the forecasted traffic volumes.

4.4 PROJECT TRIP ASSIGNMENT

The assignment of traffic from the Project area to the adjoining roadway system is based upon the Project trip generation, trip distribution, and the arterial highway and local street system improvements that would be in place by the time of initial occupancy of the Project. Based on the identified Project traffic generation and trip distribution patterns, Project (Phase 1) and Project (Project Buildout) weekday ADT and weekday peak hour intersection turning movement volumes, in actual vehicles, are shown on Exhibits 4-7 and 4-8, respectively. The Project Only traffic volumes, in actual vehicles, for the variance in trip generation from the proposed Project to the currently approved Specific Plan utilized for Horizon Year (2050) conditions is shown in Exhibit 4-9.

4.5 BACKGROUND TRAFFIC

Future year traffic forecasts have been based upon background (ambient) growth at 2% per year, compounded annually, for 2027 traffic conditions. The total ambient growth is 14.9% for 2027 traffic conditions. The ambient growth factor is intended to approximate regional traffic growth. This ambient growth rate is added to existing traffic volumes to account for area-wide growth not reflected by cumulative development projects. Ambient growth has been added to daily and peak hour traffic volumes on surrounding roadways, in conjunction with traffic generated by the development of future projects that have been approved but not yet built and/or for which development applications have been filed and are under consideration by governing agencies. 2027 traffic volumes are provided in Section 6 of this report. The traffic generated by the proposed Project was then manually added to the base volume to determine With Project forecasts.

4.6 CUMULATIVE DEVELOPMENT TRAFFIC

A cumulative project list was developed for the purposes of this analysis through consultation with planning and engineering staff from the City of Ontario. The cumulative projects listed are those that would generate traffic and would contribute traffic to study area intersections. Exhibit 4-10 illustrates the cumulative development location map. A summary of cumulative development projects and their proposed land uses are shown in Table 4-5. If applicable, the traffic generated by individual cumulative projects was manually added to the Without Project forecasts to ensure that traffic generated by the listed cumulative development projects in Table 4-5 are reflected as part of the background traffic. In an effort to conduct a conservative analysis, the cumulative projects are added in conjunction with the ambient growth identified in Section 4.5 *Background Traffic*. The Cumulative Only ADT and peak hour intersection turning movement volumes, in actual vehicles, are shown on Exhibit 4-11.

4.7 NEAR-TERM TRAFFIC CONDITIONS

The "buildup" approach combines existing traffic counts with a background ambient growth factor to forecast Opening Year Cumulative (2027) traffic conditions. An ambient growth factor accounts for background (area-wide) traffic increases that occur over time up to the year 2027 from the year 2022. Traffic volumes generated by the Project are then added to assess the near-term traffic conditions. The 2027 roadway networks are similar to the Existing conditions roadway network, with the exception of future driveways proposed to be developed by the Project.

The near-term traffic analysis includes the following traffic conditions, with the various traffic components:

- Opening Year Cumulative (2027) Without Project
  - Existing 2022 counts
  - Ambient growth traffic (14.9%)
  - Cumulative Development Traffic

  - Opening Year Cumulative (2027) With Project
  - Existing 2022 counts
  - Ambient growth traffic (14.9%)
  - Cumulative Development Traffic
  - Project (Project Buildout) traffic

4.8 HORIZON YEAR (2050) VOLUME DEVELOPMENT

Traffic projections for Horizon Year (2050) without Project conditions were derived from the SBTAM using accepted procedures for model forecast refinement and smoothing for study area intersections located within the County of San Bernardino and are based on the City on Ontario TOP 2050 currently approved General Plan forecasts. The traffic forecasts reflect the area-wide growth anticipated between Existing (2022) conditions and Horizon Year (2050) traffic conditions. In most instances the traffic model zone structure is not designed to provide accurate turning movements along arterial roadways unless refinement and reasonableness checking is performed. Therefore, the Horizon Year (2050) peak hour forecasts were refined using the model derived long range forecasts, base (validation) year model forecasts, along with existing peak hour traffic count data collected at each analysis location in May 2022. The SBTAM has a base (validation) year of 2016 and a horizon (future forecast) year of 2050. The difference in model volumes (2050-2016) defines the growth in traffic over the 32-year period.

The refined future peak hour approach and departure volumes obtained from the model output data are then entered into a spreadsheet program consistent with the National Cooperative Highway Research Program (NCHRP Report 765), along with initial estimates of turning movement proportions. A linear programming algorithm is used to calculate individual turning movements which match the known directional roadway segment forecast volumes computed in the previous step. This program computes a likely set of intersection turning movements from intersection approach counts and the initial turning proportions from each approach leg.

The SBTAM uses an AM peak period-to-peak hour factor of 0.35 and a PM peak period-to-peak hour factor of 0.27. These factors represent the relationship of the highest single AM peak hour to the modeled 3-hour AM peak period (an even distribution would result in a factor of 0.33) and the highest single PM peak hour to the modeled 4-hour PM peak period (an even distribution would result in a factor of 0.25).

5 E+P TRAFFIC CONDITIONS

This section discusses the traffic forecasts for E+P conditions and the resulting intersection operations, traffic signal warrant, and off-ramp queuing analyses.

5.1 ROADWAY IMPROVEMENTS

The lane configurations and traffic controls assumed to be in place for E+P conditions are consistent with those shown previously on Exhibit 3-1, with the exception of the following:

- Project driveways and those facilities assumed to be constructed by the Project to provide site access are also assumed to be in place for E+P conditions only (e.g., intersection and roadway improvements at the Project's frontage and driveways).

5.2 E+P (PHASE 1) GROWTH TRAFFIC VOLUME FORECASTS

This scenario includes Existing traffic volumes plus the addition of Project (Phase 1) traffic. The weekday ADT and weekday AM and PM peak hour volumes, in actual vehicles, which can be expected for E+P traffic conditions are shown on Exhibit 5-1.

5.2 E+P (PROJECT BUILDOUT) GROWTH TRAFFIC VOLUME FORECASTS

This scenario includes Existing traffic volumes plus the addition of Project (Project Buildout) traffic. The weekday ADT and weekday AM and PM peak hour volumes, in actual vehicles, which can be expected for E+P traffic conditions are shown on Exhibit 5-2.

5.3 INTERSECTION OPERATIONS ANALYSIS

E+P peak hour traffic operations have been evaluated for the study area intersections based on the analysis methodologies presented in Section 2 *Methodologies* of this TA. The intersection analysis results are summarized in Table 5-1 for E+P traffic conditions, which indicates that the following additional study area intersections are anticipated to operate at an unacceptable LOS during the peak hours under E+P (Phase 1) traffic conditions, in addition to the intersections identified under Existing (2022) traffic conditions:

- Haven Avenue & Chino Avenue (#13) – LOS F PM peak hour only
- Haven Avenue & Ontario Ranch Road (#15) – LOS F PM peak hour only
- Milliken Avenue & Riverside Drive (#22) – LOS E AM peak hour only
- Hamner Avenue & Chino Avenue (#23) – LOS F PM peak hour only
- Hamner Avenue & Ontario Ranch Road (#24) – LOS E PM peak hour only

The following additional study area intersection is anticipated to operate at an unacceptable LOS during the peak hours under E+P (Project Buildout) traffic conditions, in addition to the intersections identified under Existing (2022) traffic conditions:

- Archibald Avenue & Ontario Ranch Road (#6) – LOS F AM and PM peak hours

* **BOLD** = Level of Service (LOS) does not meet the applicable jurisdictional requirements (i.e., unacceptable LOS).

1 Per the Highway Capacity Manual (6th Edition), overall average intersection delay and level of service are shown for intersections with a traffic signal or all way stop control. For intersections with cross street stop control, the delay and level of service for the worst individual movement (or movements sharing a single lane) are shown. HCM delay reported in seconds.

2 TS = Traffic Signal; AWS = All-way Stop; CSS = Cross-street Stop; RB = Roundabout; **TS** = Traffic Signal

The intersection operations analysis worksheets for E+P (Phase 1) and E+P (Project Buildout) traffic conditions are included in Appendices 5.1 and 5.2, respectively.

5.4 TRAFFIC SIGNAL WARRANTS ANALYSIS

The traffic signal warrant analysis for E+P traffic conditions is based on the peak hour volumes or planning level ADT volume-based traffic signal warrants. The following unsignalized study area intersections of are anticipated to meet a traffic signal warrant under E+P (Phase 1) traffic conditions (see Appendix 5.3):

- Haven Avenue & Chino Avenue (#13)
- Hamner Avenue & Chino Avenue (#23)

There are no unsignalized study area intersections evaluated for E+P (Project Buildout) traffic conditions, since all unsignalized study area intersections have previously met a traffic signal warrant under Existing or E+P (Phase 1) traffic conditions.

5.5 OFF-RAMP QUEUING ANALYSIS

Queuing analysis findings for E+P are presented in Table 5-2. As shown in Table 5-2, there are no movements that are anticipated to experience queuing issues during the weekday AM or weekday PM peak 95th percentile traffic flows, consistent with Existing (2022) traffic conditions. Worksheets for E+P (Phase 1) and E+P (Project Buildout) traffic conditions queuing analysis are provided in Appendices 5.4 and 5.5, respectively.

5.6 PROJECT DEFICIENCIES AND RECOMMENDED IMPROVEMENTS

Improvements needed to achieve acceptable LOS have been identified at intersections or off-ramps that are anticipated to operate at a deficient LOS under E+P traffic conditions.

5.6.1 IMPROVEMENTS TO ADDRESS DEFICIENCIES AT INTERSECTIONS

Improvement strategies have been recommended at intersections that have been identified as deficient under E+P traffic conditions in an effort to achieve an acceptable LOS. The effectiveness of the recommended improvement strategies to address E+P traffic deficiencies are presented in Table 5-3. Worksheets for E+P (Phase 1) and E+P (Project Buildout) conditions, with improvements, HCM calculation worksheets are provided in Appendices 5.6 and 5.7, respectively.

5.6.2 IMPROVEMENTS TO ADDRESS DEFICIENCIES ON OFF-RAMP QUEUES

As shown in Table 5-2, there are no movements that are anticipated to experience queuing issues during the weekday AM or weekday PM peak 95th percentile traffic flows for E+P traffic conditions. As such, no improvements have been identified.

TABLE 5-2: PEAK HOUR OFF-RAMP QUEUING SUMMARY FOR E+P CONDITIONS

[1] Stacking Distance is acceptable if the required stacking distance is less than or equal to the stacking distance provided. An additional 15 feet of stacking which is assumed to be provided in the transition for turn pockets is reflected in the stacking distance shown on this table, where applicable.

[2] 95th percentile volume exceeds capacity, queue may be longer. Queue shown is maximum after two cycles.

[3] Although 95th percentile queue is anticipated to exceed the available storage for the turn lane, the adjacent through lane has sufficient storage to accommodate any spillover without spilling back and affecting the SR-60 and I-15 Freeway mainline.

[1] When a right turn is designated, the lane can either be striped or unstriped. To function as a right turn lane there must be sufficient width for right turning vehicles to travel outside the through lanes.

L = Left; T = Through; R = Right; **1** = Improvement

[2] Per the Highway Capacity Manual (6th Edition), overall average intersection delay and level of service are shown for intersections with a traffic signal or all way stop control. For intersections with cross street stop control, the delay and level of service for the worst individual movement (or movements sharing a single lane) are shown.

[3] TS = Traffic Signal; **TS** = Traffic Signal

[4] Improvement includes modifying the traffic signal to implement protected left turn phasing for the northbound and southbound approaches.

This Page Intentionally Left Blank

6 OPENING YEAR CUMULATIVE (2027) TRAFFIC CONDITIONS

This section discusses the traffic forecasts for Opening Year Cumulative (2027) conditions and the resulting intersection operations, traffic signal warrant, and off-ramp queuing analyses.

6.1 ROADWAY IMPROVEMENTS

The lane configurations and traffic controls assumed to be in place for Opening Year Cumulative (2027) conditions are consistent with those shown previously on Exhibit 3-1, with the exception of the following:

- Project driveways and those facilities assumed to be constructed by the Project to provide site access are also assumed to be in place for Opening Year Cumulative (2027) conditions (e.g., intersection and roadway improvements at the Project's frontage and driveways).
- Project driveways and those facilities assumed to be constructed by the Project to provide site access are also assumed to be in place for Opening Year Cumulative (2027) conditions (e.g., intersection and roadway improvements at the Project's frontage and driveways).

6.2 OPENING YEAR CUMULATIVE (2027) WITHOUT PROJECT GROWTH TRAFFIC VOLUME FORECASTS

This scenario includes Existing traffic volumes plus an ambient growth factor of 14.9% plus traffic from pending and approved but not yet constructed known development projects in the area. The weekday ADT and weekday AM and PM peak hour volumes, in actual vehicles, which can be expected for Opening Year Cumulative (2027) Without Project traffic conditions are shown on Exhibit 6-1.

6.3 OPENING YEAR CUMULATIVE (2027) WITH PROJECT TRAFFIC VOLUME FORECASTS

This scenario includes Opening Year Cumulative (2027) Without Project traffic in conjunction with the addition of Project (Project Buildout) traffic. The weekday ADT and weekday AM and PM peak hour volumes, in actual vehicles, which can be expected for Opening Year Cumulative (2027) With Project traffic conditions are shown on Exhibit 6-2.

EXHIBIT 6-1: OPENING YEAR CUMULATIVE (2027) WITHOUT PROJECT TRAFFIC VOLUMES (PAGE 1 OF 2)

EXHIBIT 6-1: OPENING YEAR CUMULATIVE (2027) WITHOUT PROJECT TRAFFIC VOLUMES (PAGE 2 OF 2)

EXHIBIT 6-2: OPENING YEAR CUMULATIVE (2027) WITH PROJECT TRAFFIC VOLUMES (PAGE 1 OF 2)

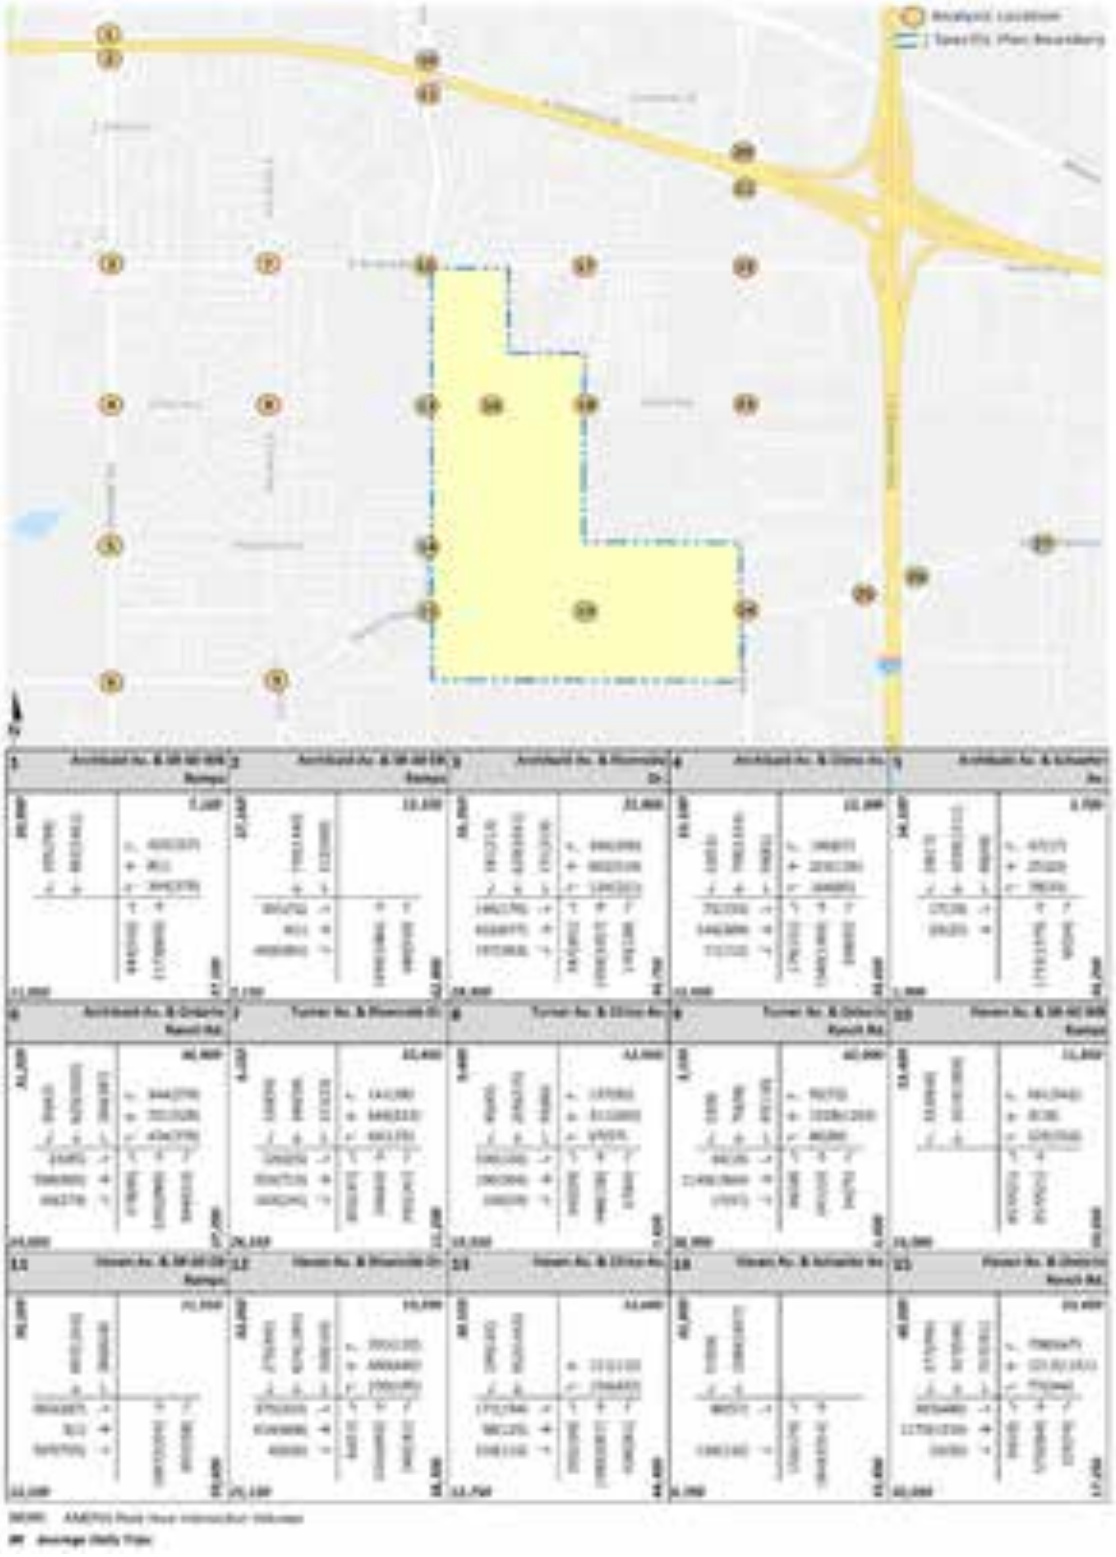

EXHIBIT 6-2: OPENING YEAR CUMULATIVE (2027) WITH PROJECT TRAFFIC VOLUMES (PAGE 2 OF 2)

6.4 INTERSECTION OPERATIONS ANALYSIS

Opening Year Cumulative (2027) peak hour traffic operations have been evaluated for the study area intersections based on the analysis methodologies presented in Section 2 *Methodologies* of this TA. The intersection analysis results are summarized in Table 6-1 for Opening Year Cumulative (2027) traffic conditions, which indicates that the following study area intersections are anticipated to operate at an unacceptable LOS during the peak hours under Opening Year Cumulative (2027) Without Project traffic conditions:

- Turner Avenue & Chino Avenue (#8) – LOS F AM peak hour only
- Haven Avenue & Riverside Drive (#12) – LOS F AM and PM peak hours
- Milliken Avenue & Riverside Drive (#22) – LOS F AM peak hour only

The following additional study area intersections anticipated to operate at an unacceptable LOS during the peak hours with the addition of Project traffic under Opening Year Cumulative (2027) With Project traffic conditions:

- Archibald Avenue & Riverside Drive (#3) – LOS F AM and PM peak hours
- Archibald Avenue & Ontario Ranch Road (#6) – LOS F AM and PM peak hours
- Haven Avenue & Chino Avenue (#13) – LOS F PM peak hour only
- Haven Avenue & Schaefer Avenue (#14) – LOS F AM peak hour only
- Haven Avenue & Ontario Ranch Road (#15) – LOS F AM and PM peak hours
- Hamner Avenue & Chino Avenue (#23) – LOS F AM and PM peak hours
- Hamner Avenue & Ontario Ranch Road (#24) – LOS F AM and PM peak hours

The intersection operations analysis worksheets for Opening Year Cumulative (2027) Without Project and With Project traffic conditions are included in Appendices 6.1 and 6.2, respectively.

6.5 TRAFFIC SIGNAL WARRANTS ANALYSIS

All unsignalized study area intersections are anticipated to meet a traffic signal warrant under previous scenarios. As such, traffic signal warrants have not been evaluated for Opening Year Cumulative (2027) traffic conditions.

6.6 OFF-RAMP QUEUING ANALYSIS

Queuing analysis findings for Opening Year Cumulative (2027) traffic conditions are presented in Table 6-2. As shown in Table 6-2, there are no movements that are anticipated to experience queuing issues during the weekday AM or weekday PM peak 95th percentile traffic flows. Worksheets for Opening Year Cumulative (2027) Without Project and With Project traffic conditions queuing analysis are provided in Appendices 6.3 and 6.4, respectively.

* **BOLD** = Level of Service (LOS) does not meet the applicable jurisdictional requirements (i.e., unacceptable LOS).

[1] Per the Highway Capacity Manual (6th Edition), overall average intersection delay and level of service are shown for intersections with a traffic signal or all way stop control. For intersections with cross street stop control, the delay and level of service for the worst individual movement (or movements sharing a single lane) are shown. HCM delay reported in seconds.

[2] TS = Traffic Signal; AWS = All-way Stop; CSS = Cross-street Stop; RB = Roundabout

[1] Stacking Distance is acceptable if the required stacking distance is less than or equal to the stacking distance provided. An additional 15 feet of stacking which is assumed to be provided in the transition for turn pockets is reflected in the stacking distance shown on this table, where applicable.

[2] 95th percentile volume exceeds capacity, queue may be longer. Queue shown is maximum after two cycles.
[3] Although 95th percentile queue is anticipated to exceed the available storage for the turn lane, the adjacent through lane has sufficient storage to accommodate any spillover without spilling back and affecting the SR-60 Freeway mainline.

6.7 PROJECT DEFICIENCIES AND RECOMMENDED IMPROVEMENTS

Improvements needed to achieve acceptable LOS have been identified at intersections or off-ramps that are anticipated to operate at a deficient LOS under Opening Year Cumulative (2027) traffic conditions.

6.7.1 IMPROVEMENTS TO ADDRESS DEFICIENCIES AT INTERSECTIONS

Improvement strategies have been recommended at intersections that have been identified as deficient under Opening Year Cumulative (2027) traffic conditions in an effort to achieve an acceptable LOS. The effectiveness of the recommended improvement strategies to address Opening Year Cumulative (2027) traffic deficiencies are presented in Table 6-3. Worksheets for Opening Year Cumulative (2027) Without Project and With Project traffic conditions, with improvements, HCM calculation worksheets are provided in Appendices 6.5 and 6.6, respectively.

6.7.2 IMPROVEMENTS TO ADDRESS DEFICIENCIES ON OFF-RAMP QUEUES

As shown previously in Table 6-2, there are no movements that are anticipated to experience queuing issues during the weekday AM or weekday PM peak 95th percentile traffic flows for Opening Year Cumulative (2027) traffic conditions. As such, no improvements have been identified.

TABLE 6-3: OPENING YEAR CUMULATIVE (2027) CONDITIONS INTERSECTION OPERATIONS ANALYSIS WITH IMPROVEMENTS

[1] When a right turn is designated, the lane can either be striped or unstriped. To function as a right turn lane there must be sufficient width for right turning vehicles to travel outside the through lanes.

L = Left; T = Through; R = Right; **1** = Improvement

[2] Per the Highway Capacity Manual (6th Edition), overall average intersection delay and level of service are shown for intersections with a traffic signal or all way stop control. For intersections with cross street stop control, the delay and level of service for the worst individual movement (or movements sharing a single lane) are shown.

[3] TS = Traffic Signal; **TS** = Traffic Signal

[4] Improvement includes modifying the traffic signal to implement protected left turn phasing for the northbound and southbound approaches.

7 HORIZON YEAR (2050) TRAFFIC CONDITIONS

This section discusses the methods used to develop Horizon Year (2050) Without and With Project traffic forecasts, and the resulting intersection operations and traffic signal warrant analyses.

7.1 ROADWAY IMPROVEMENTS

The lane configurations and traffic controls assumed to be in place for Horizon Year (2050) conditions are consistent with those shown previously on Exhibit 3-1, with the exception of the following:

- Project driveways and those facilities assumed to be constructed by the Project to provide site access are also assumed to be in place for Horizon Year conditions only (e.g., intersection and roadway improvements along the Project's frontage and driveways).
- If applicable, driveways and those facilities assumed to be constructed by cumulative developments to provide site access are also assumed to be in place for Horizon Year conditions only.

7.2 WITHOUT PROJECT TRAFFIC VOLUME FORECASTS

This scenario includes the refined post-process volumes obtained from the SBTAM (see Section 4.8 *Horizon Year (2050) Volume Development* of this TA for a detailed discussion on the post-processing methodology). The weekday ADT and weekday AM and PM peak hour volumes, in actual vehicles, which can be expected for Horizon Year (2050) Without Project traffic conditions are shown on Exhibit 7-1.

7.3 WITH PROJECT TRAFFIC VOLUME FORECASTS

This scenario includes the refined post-process volumes obtained from the SBTAM, plus the variance in traffic generated by the buildout proposed Project compared to the approved Specific Plan. The weekday ADT and weekday AM and PM peak hour volumes, in actual vehicles, which can be expected for Horizon Year (2050) With Project traffic conditions are shown on Exhibit 7-2.

7.4 INTERSECTION OPERATIONS ANALYSIS

LOS calculations were conducted for the study intersections to evaluate their operations under Horizon Year (2050) Without Project conditions with roadway and intersection geometrics consistent with Section 7.1 *Roadway Improvements*. As shown on Table 7-1, the following study area intersections are anticipated to operate at an unacceptable LOS during the peak hours:

- Archibald Avenue & Riverside Drive (#3) – LOS F AM and PM peak hours
- Archibald Avenue & Chino Avenue (#4) – LOS F PM peak hour only
- Turner Avenue & Chino Avenue (#8) – LOS F PM peak hour only
- Haven Avenue & Riverside Drive (#12) – LOS F AM and PM peak hours
- Haven Avenue & Chino Avenue (#13) – LOS F AM and PM peak hours
- Haven Avenue & Ontario Ranch Road (#15) – LOS F PM peak hour only

As shown on Table 7-1, the addition of the variance in Project (Project Buildout) traffic is not anticipated to result in any new deficiencies from those identified under Horizon Year (2050) Without Project traffic conditions. The intersection operations analysis worksheets for Horizon Year (2050) Without Project and With Project traffic conditions are included in Appendices 7.1 and 7.2, respectively.

7.5 TRAFFIC SIGNAL WARRANTS ANALYSIS

All unsignalized study area intersections are anticipated to meet a traffic signal warrant under previous scenarios. As such, traffic signal warrants have not been evaluated for Horizon Year (2050) traffic conditions.

7.6 OFF-RAMP QUEUING ANALYSIS

Queuing analysis findings for Horizon Year (2050) traffic conditions are presented in Table 7-2. As shown in Table 7-2, there are no movements that are anticipated to experience queuing issues during the weekday AM or weekday PM peak 95th percentile traffic flows. Worksheets for Horizon Year (2050) Without Project and With Project traffic conditions queuing analysis are provided in Appendices 7.3 and 7.4, respectively.

TABLE 7-2: PEAK HOUR OFF-RAMP QUEUING SUMMARY FOR HORIZON YEAR (2050) CONDITIONS

[1] Stacking Distance is acceptable if the required stacking distance is less than or equal to the stacking distance provided. An additional 15 feet of stacking which is assumed to be provided in the transition for turn pockets is reflected in the stacking distance shown on this table, where applicable.

[2] 95th percentile volume exceeds capacity, queue may be longer. Queue shown is maximum after two cycles.

[3] Although 95th percentile queue is anticipated to exceed the available storage for the turn lane, the adjacent through lane has sufficient storage to accommodate any spillover without spilling back and affecting the SR-60 and I-15 Freeway mainline.

7.7 PROJECT DEFICIENCIES AND RECOMMENDED IMPROVEMENTS

Improvements needed to achieve acceptable LOS have been identified at intersections or off-ramps that are anticipated to operate at a deficient LOS under Horizon Year (2050) traffic conditions.

7.7.1 IMPROVEMENTS TO ADDRESS DEFICIENCIES AT INTERSECTIONS

Improvement strategies have been recommended at intersections that have been identified as deficient under Horizon Year (2050) traffic conditions in an effort to achieve an acceptable LOS. The effectiveness of the recommended improvement strategies to address Opening Year Cumulative (2050) traffic deficiencies are presented in Table 6-3. Worksheets for Horizon Year (2050) Without Project and With Project traffic conditions, with improvements, HCM calculation worksheets are provided in Appendices 7.5 and 7.6, respectively.

7.7.2 IMPROVEMENTS TO ADDRESS DEFICIENCIES ON OFF-RAMP QUEUES

As shown previously in Table 7-2, there are no movements that are anticipated to experience queuing issues during the weekday AM or weekday PM peak 95th percentile traffic flows for Horizon Year (2050) traffic conditions. As such, no improvements have been identified.

TABLE 7-3: HORIZON YEAR (2045) CONDITIONS INTERSECTION OPERATIONS ANALYSIS WITH IMPROVEMENTS

[1] When a right turn is designated, the lane can either be striped or unstriped. To function as a right turn lane there must be sufficient width for right turning vehicles to travel outside the through lanes.

L = Left; T = Through; R = Right; **1** = Improvement

[2] Per the Highway Capacity Manual (6th Edition), overall average intersection delay and level of service are shown for intersections with a traffic signal or all way stop control. For intersections with cross street stop control, the delay and level of service for the worst individual movement (or movements sharing a single lane) are shown.

[3] TS = Traffic Signal; **TS** = Traffic Signal

[4] Improvement includes modifying the traffic signal to implement protected left turn phasing for the northbound and southbound approaches.

8 LOCAL AND REGIONAL FUNDING MECHANISMS

Transportation improvements within the City of Ontario are funded through a combination of construction of improvements, development impact fee programs or fair share contributions, such as the City of Ontario Development Impact Fee (DIF) program. Identification and timing of needed improvements is generally determined through local jurisdictions based upon a variety of factors.

8.1 CITY OF ONTARIO DEVELOPMENT IMPACT FEE PROGRAM

The City of Ontario has created its own local DIF program to impose and collect fees from new residential, commercial, and industrial development for the purpose of funding roadways and intersections necessary to accommodate City growth as identified in the City's General Plan Circulation Element. The City's DIF includes regional improvements to comply with Measure "I." The fee schedule was last updated in January 2020 and is reviewed/adjusted annually based upon changes in the construction cost index (CCI). Under the City's DIF program, the City may grant to developers a credit against specific components of fees when those developers construct certain facilities and landscaped medians identified in the list of improvements funded by the DIF program.

The timing to use the DIF fees is established through periodic capital improvement programs which are overseen by the City's Public Works Department. Periodic traffic counts, review of traffic accidents, and a review of traffic trends throughout the City are also periodically performed by City staff and consultants. The City uses this data to determine the timing of implementing the improvements listed in its facilities list. The City also uses this data to ensure that the improvements listed on the facilities list are constructed before the LOS falls below the LOS performance standards adopted by the City. In this way, the improvements are constructed before the LOS falls below the City's LOS performance thresholds.

The Project Applicant will be subject to the City's DIF fee program and will pay the requisite City DIF fees at the rates then in effect pursuant to the City's ordinance. The Project Applicant's payment of the requisite DIF at the rates then in effect, pursuant to the City DIF Program, would satisfy the Project's proportional improvement requirements at potentially affected DIF-funded facilities.

TABLE 8-1: ESTIMATED FEE OBLIGATION

Fee Reference	$ PER UNIT
Detached Dwellings	$4,847.00
Attached Dwellings	$3,237.00
Retail/Service Uses	$9.794
Business Park Uses	$5.824
Industrial Uses	$3.002

Source: City of Ontario General City (GC) Development Impact Fees (DIF), effective January 1, 2020.

Fee Calculation

Program	Category	Unit Cost	Units	Local Circulation
Streets, Signals and Bridges	Detached Dwellings	$4,847.00	1,553	$7,527,391
Streets, Signals and Bridges	Attached Dwellings	$3,237.00	5,641	$18,259,917
Streets, Signals and Bridges	Retail/Service Uses	$9.794	925,002	$9,059,470
Streets, Signals and Bridges	Business Park Uses	$5.824	316,724.6	$1,844,604
Streets, Signals and Bridges	Industrial Uses	$3.002	2,450,423.4	$7,356,171
		Total Transportation Impact Fees		**$44,047,553**

8.2 MEASURE "I" FUNDS

In 2004, the voters of San Bernardino County approved the 30-year extension of Measure "I," a one-half of one percent sales tax on retail transactions, through the year 2040, for transportation projects including, but not limited to, infrastructure improvements, commuter rail, public transit, and other identified improvements. The Measure "I" extension requires that a regional traffic impact fee be created to ensure development is paying its fair share. A regional Nexus study was prepared by SBCTA and concluded that each jurisdiction should include a regional fee component in their local programs in order to meet the Measure "I" requirement. The regional component assigns specific facilities and cost sharing formulas to each jurisdiction and was most recently updated in November 2011. Revenues collected through these programs are used in tandem with Measure "I" funds to deliver projects identified in the Nexus Study. While Measure "I" is a self-executing sales tax administered by SBCTA, it bears discussion here because the funds raised through Measure "I" have funded in the past and will continue to fund new transportation facilities in San Bernardino County.

8.3 FAIR SHARE CONTRIBUTION

Project improvement may include a combination of fee payments to established programs, construction of specific improvements, payment of a fair share contribution toward future improvements or a combination of these approaches. Improvements constructed by development may be eligible for a fee credit or reimbursement through the program where appropriate (to be determined at the City's discretion).

When off-site improvements are identified with a minor share of responsibility assigned to proposed development, the approving jurisdiction may elect to collect a fair share contribution or require the development to construct improvements. Detailed fair share calculations, for each peak hour, has been provided in Table 8-2 for the applicable deficient study area intersections.

These fees are collected with the proceeds solely used as part of a funding mechanism aimed at ensuring that regional highways and arterial expansions keep pace with the projected population increases.

TABLE 8-2: PROJECT FAIR SHARE CALCULATIONS

#	Intersection		Existing (2022)	Project Buildout	2045 With Project[2]	Total New Traffic	Project % of New Traffic[1]

APPENDIX 1.1: APPROVED TRAFFIC STUDY SCOPING AGREEMENT

This Page Intentionally Left Blank

August 19, 2022

Mr. Jay Bautista
City of Ontario
303 E. B Street
Ontario, CA 91764

RICH HAVEN SPECIFIC PLAN TRAFFIC STUDY SCOPING AGREEMENT

Mr. Jay Bautista,

Urban Crossroads, Inc. has prepared the following assessment for the proposed Rich Haven Specific Plan development (**Project**) to establish a traffic analysis (**TA**) scope of work that would be prepared in support of the proposed Rich Haven Specific Plan Amendment. The Project is north of Ontario Ranch Road, south of Riverside Drive, east of Haven Avenue, and on either side of Mill Creek Avenue in the City of Ontario. The following memo outlines the project-related trip generation, trip distribution patterns, proposed study area and analysis scenarios expected to be included in the Project traffic analysis.

PROJECT DESCRIPTION

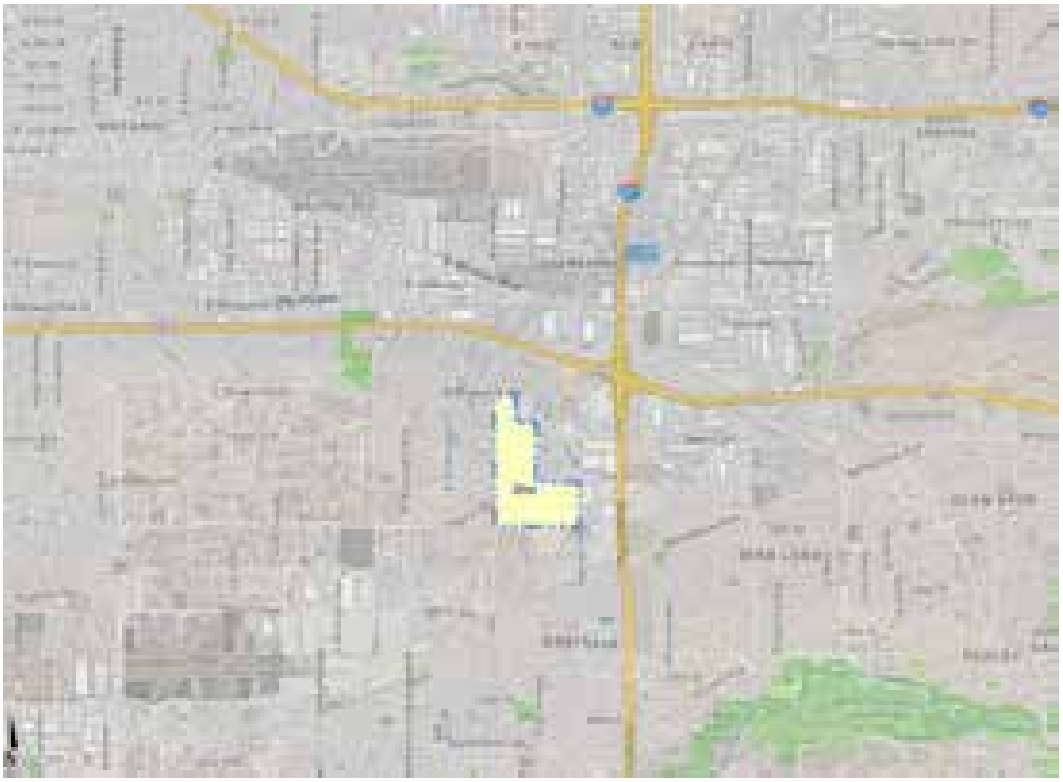

Exhibit 1 illustrates the location map for the proposed Project and Exhibit 2 shows the proposed land use plan. It is our understanding that the Project is to consist of amending the Rich Haven Specific Plan to accomplish the following:

1. Total acreage of the Specific Plan would increase by approximately 6.3-acres (approximately 1 percent) to include all properties accurately and correctly within the Specific Plan boundary.
2. Total residential development within the Specific Plan would be maintained at 7,194 dwelling units. Residential units and densities would however be reassigned within the Specific Plan.
3. Total commercial development would be reduced by 65,900 square feet (approximately 7 percent reduction from the 2021 Specific Plan commercial entitlements).
4. Total light industrial development would be increased by 1,583,623 square feet (approximately 134 percent increase from the 2021 Specific Plan light industrial entitlements).

Note that portions of Planning Areas 5A, 5C, and 6A have already been developed (currently existing). For Planning Areas 5A and 5C, approximately 164 dwelling units of the proposed 560 dwelling units have been built and occupied. Planning Area 6A is proposed to allow for 1,099 dwelling units and as of the date of the traffic counts 316 dwelling units have been sold. Remaining units in these PAs will be included as part of Phase 1. Planning Areas 4A, 4B, 4C, 5A, 5B, 5C, 5D, 6A, 6B, 6D, 7A, 8A, 8B, and 9A are anticipated to be developed as part of the first phase with an anticipated Opening Year of 2024. Project Buildout is anticipated in Year 2027. For purposes of the TA, the mix of uses for each planning area is summarized on Table 1. Access to the proposed Project would be provided to the surrounding roadways of Riverside Drive to the

north, Haven Avenue to the west, Ontario Ranch Road to the south, and Mill Creek Avenue to the east. Chino Avenue is also an east-west roadway that runs through the Project.

EXHIBIT 1: LOCATION MAP

PROPOSED ANALYSIS SCENARIOS

The following analysis scenarios are proposed to be evaluated in the Traffic Study:

- Existing (2022)
- Existing plus Project – Phase 1
- Existing plus Project – Project Buildout
- Opening Year Cumulative (2027) Without Project
- Opening Year Cumulative (2027) With Project – Project Buildout only
- Horizon Year (2050) Without Project – will be evaluated based on both the Currently Adopted and Draft TOP Update
- Horizon Year (2050) With Project – Project Buildout only

Horizon Year (2050) forecasts will be developed for both the currently adopted General Plan and based on The Ontario Plan (TOP 2050) General Plan Update (Draft). As such, there will be two Horizon Year (2050) Without Project and two Horizon Year (2050) With Project traffic conditions evaluated for the purposes of this TA.

EXHIBIT 2: PROPOSED LAND USE PLAN

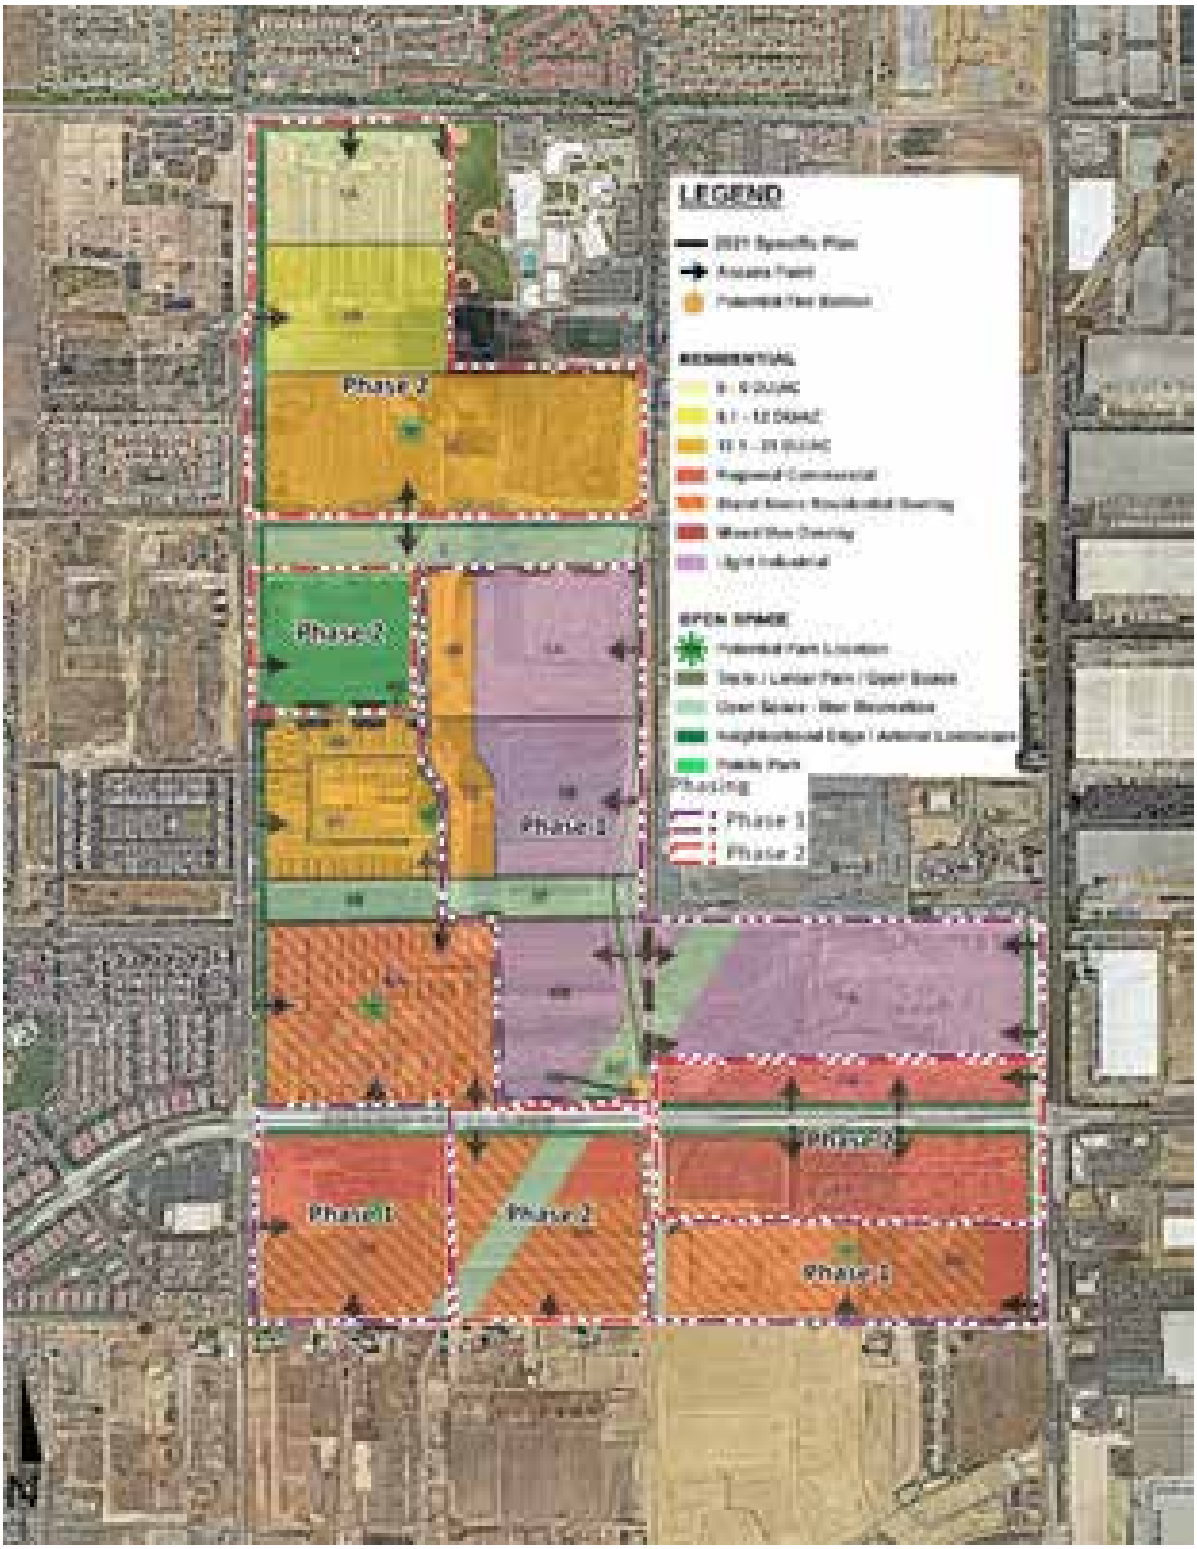

TABLE 1: SUMMARY OF PROPOSED LAND USES

PA	Land Use	Quantity	Unit[1]
1A	Single Family Residential (0-5 DU/Ac)	128	DU
1B	Single Family Residential (5.1-12 DU/Ac)	94	DU
	Multifamily Residential (12.1-25 DU/Ac)	200	DU
1C	Single Family Residential (5.1-12 DU/Ac)	231	DU
	Multifamily Residential (12.1-25 DU/Ac)	800	DU
2	Open Space (Edison Easement)	20.0	AC
3	Public Park	27.0	AC
4A	Light Industrial	560.617	TSF
4B	Multifamily Residential (12.1-25 DU/Ac)	190	DU
4C	Public Park	1.3	AC
5A	Single Family Residential (5.1-12 DU/Ac)	100	DU
	Multifamily Residential (12.1-25 DU/Ac)	110	DU
5B	Light Industrial	512.701	TSF
5C	Single Family Residential (5.1-12 DU/Ac)	100	DU
	Multifamily Residential (12.1-25 DU/Ac)	250	DU
5D	Multifamily Residential (12.1-25 DU/Ac)	190	DU
5E	Open Space (Edison Easement)	8.3	AC
5F	Open Space (Edison Easement)	8.5	AC
6A	Regional Commercial/Stand Alone Residential Overlay	1,099	DU
6B	Light Industrial	510.305	TSF
6C	Open Space	3.7	AC
6D	Regional Commercial	7.500	TSF
7A	Light Industrial	1,183.525	TSF
7B	Regional Commercial	300.000	TSF
8A	Regional Commercial/Mixed Use Overlay	852	DU
		325.000	TSF
8B	Regional Commercial/Stand Alone Residential Overlay	550	DU
		50.000	TSF
9A	Regional Commercial/Stand Alone Residential Overlay	1,150	DU
		166.182	TSF
9B	Regional Commercial/Stand Alone Residential Overlay	1,150	DU
		76.320	TSF

[1] DU = Dwelling Units; TSF = Thousand Square Feet; AC = Acres

EXISTING COUNT DATA

We are proposing to use new traffic counts for the study area intersections that were conducted in April and May 2022 while local schools were in session and will not apply any further adjustments in establishing the baseline as traffic counts would reflect the current conditions, including any foreseeable lasting effects due to the COVID-19 pandemic.

AMBIENT GROWTH

Future year traffic forecasts will be based upon a background (ambient) growth of 2% per year, compounded annually for five years. The growth factor for Opening Year Cumulative (2027) traffic conditions will be 10.41% (or $1.02^{5\ years}$).

TRIP GENERATION

Trip generation represents the amount of traffic which is both attracted to and produced by a development. Determining traffic generation for a specific project is therefore based upon forecasting the amount of traffic that is expected to be both attracted to and produced by the specific land uses being proposed for a given development.

CURRENTLY APPROVED LAND USES

Trip generation for the currently approved land uses are shown in Table 2 as evaluated in the Traffic Study for the Rich Haven Specific Plan PA 1 & PA 7 Amendment (dated January 22, 2021, prepared by Linscott Law & Greenspan Engineers, referred to as **2021 Traffic Study** in support of the **2021 Specific Plan Amendment**). The currently approved Specific Plan (2021 Specific Plan Amendment) land uses include 7,194 residential dwelling units, 990,902 square feet of commercial retail/general office use, and 1,183,525 square feet of light industrial use. The trip generation utilized for the project was obtained from the 2021 Traffic Study. As shown in Table 2, the currently approved uses generate a net total of 91,993 two-way trips per day with 6,372 AM peak hour trips and 8,772 PM peak hour trips.

TABLE 2: CURRENTLY APPROVED TRIP GENERATION SUMMARY

PROPOSED PROJECT

The trip generation rates used the proposed Project are based upon information collected by the ITE as provided in their latest Trip Generation Manual, 11th Edition, 2021 and the High Cube Warehouse Trip Generation Study (WSP, January 2019). Attachment A contains the Project's trip generation rates and summary tables. Table A-1 in Attachment A summarizes the trip generation rates used for the proposed Project. The proposed Project trip generation summary is shown on Table A-2 in actual vehicles and on Table A-3 in PCE. A condensed summary of the Project's trip generation is shown on Table 3 summarizing the detailed trip generation provided in Attachment A. The proposed Project is anticipated to generate a total of 95,538 two-way trips per day with 8,078 AM peak hour trips and 8,036 PM peak hour trips. Internal capture percentages have been derived from the worksheets included in Attachment A and pass-by reductions are based on the latest ITE Trip Generation Manual for each applicable retail/restaurant land use.

TABLE 3: PROJECT TRIP GENERATION SUMMARY

	AM Peak Hour			PM Peak Hour			
Land Use	In	Out	Total	In	Out	Total	Daily
Actual Vehicles:							
Phase 1 Total Trips	1,634	2,101	3,735	2,199	1,832	4,031	47,226
Phase 2 Total Trips	2,005	2,338	4,343	2,281	1,724	4,005	48,312
Project Buildout Total Trips (Actual Vehicles)	**3,639**	**4,439**	**8,078**	**4,480**	**3,556**	**8,036**	**95,538**
Passenger Car Equivalent (PCE):							
Phase 1 Total Trips	1,694	2,140	3,834	2,231	1,893	4,124	48,922
Phase 2 Total Trips	2,005	2,338	4,343	2,281	1,724	4,005	48,312
Project Buildout Total Trips (PCE)	**3,699**	**4,478**	**8,177**	**4,512**	**3,617**	**8,129**	**97,234**

[1] DU = dwelling units; TSF = thousand square feet; AC = acres

TRIP GENERATION COMPARISON

As shown on Table 4, the proposed Project is anticipated to generate 7,411 more two-way peak hour trips, 1,969 more AM peak hour trips, and 392 fewer PM peak hour trips as compared to the uses evaluated in the 2021 Specific Plan Amendment.

TABLE 4: TRIP GENERATION COMPARISON

	AM Peak Hour			PM Peak Hour			
Land Use	In	Out	Total	In	Out	Total	Daily
2021 SPA Trip Generation	2,302	4,070	6,372	5,003	3,769	8,772	91,993
Proposed Project Trip Generation	3,639	4,439	8,078	4,480	3,556	8,036	95,538
Existing Uses	67	196	263	217	127	344	3,866
Variance	**1,404**	**565**	**1,969**	**-306**	**-86**	**-392**	**7,411**

TRIP DISTRIBUTION

The Project trip distribution and assignment process represents the directional orientation of traffic to and from the Project site. Trip distribution patterns have been developed for each land use component of the Specific Plan as follows:

- Exhibit 4: Project (Residential) Trip Distribution
- Exhibit 5: Project (Non-Residential) Trip Distribution
- Exhibit 6: Project (4A, 5B, and 6B Industrial – Passenger Cars) Trip Distribution
- Exhibit 7: Project (4A, 5B, and 6B Industrial – Trucks) Trip Distribution
- Exhibit 8: Project (7A Industrial – Passenger Cars) Trip Distribution
- Exhibit 9: Project (7A Industrial – Trucks) Trip Distribution

The proposed residential, non-residential, and industrial trip distributions are based on select zone runs for the Project from the latest TOP traffic model. The trip distribution patterns for passenger cars and trucks for PA 7A is consistent with the 2021 Traffic Study prepared for the last Specific Plan Amendment. The non-residential land uses include the general office, shopping center, retail, and restaurant uses.

EXHIBIT 4: PROJECT (RESIDENTIAL) TRIP DISTRIBUTION

EXHIBIT 5: PROJECT (NON-RESIDENTIAL) TRIP DISTRIBUTION

EXHIBIT 6: PROJECT (4A, 5B & 6B INDUSTRIAL – PASSENGER CARS) TRIP DISTRIBUTION

EXHIBIT 7: PROJECT (4A, 5B & 6B INDUSTRIAL – TRUCKS) TRIP DISTRIBUTION

EXHIBIT 8: PROJECT (7A INDUSTRIAL – PASSENGER CARS) TRIP DISTRIBUTION

EXHIBIT 9: PROJECT (7A INDUSTRIAL – TRUCKS) TRIP DISTRIBUTION

INTERSECTION ANALYSIS LOCATIONS

Exhibit 10 depicts the recommended intersection analysis locations, based upon the Project trip generation and trip distribution patterns included as part of this letter. The study area intersections are consistent with the locations evaluated in the Specific Plan. Table 5 also includes a summary of the study area intersections.

TABLE 5: INTERSECTION ANALYSIS LOCATIONS

#	Intersections

27	Wineville Av. & Cantu Galleano Ranch Rd.

EXHIBIT 10: STUDY AREA

VEHICLE MILES TRAVELLED (VMT)

The VMT thresholds and methodology outlined in the City of Ontario's May 2020 VMT guidelines will be utilized to conduct the VMT analysis for the Project. The VMT analysis will be prepared and submitted under separate cover.

TRAFFIC SIGNAL WARRANTS

Traffic signal warrant analysis will be conducted for all unsignalized full access driveways/intersections following the guidance of the California Manual on Uniform Control Devices (CA MUTCD).

OPEN ITEMS – CUMULATIVE DEVELOPMENT PROJECTS

It is requested that the City of Ontario provide a current list of cumulative development projects for inclusion in our traffic study. A preliminary list of cumulative development projects is provided on Table 6 and graphically shown on Exhibit 11.

SPECIAL ISSUES

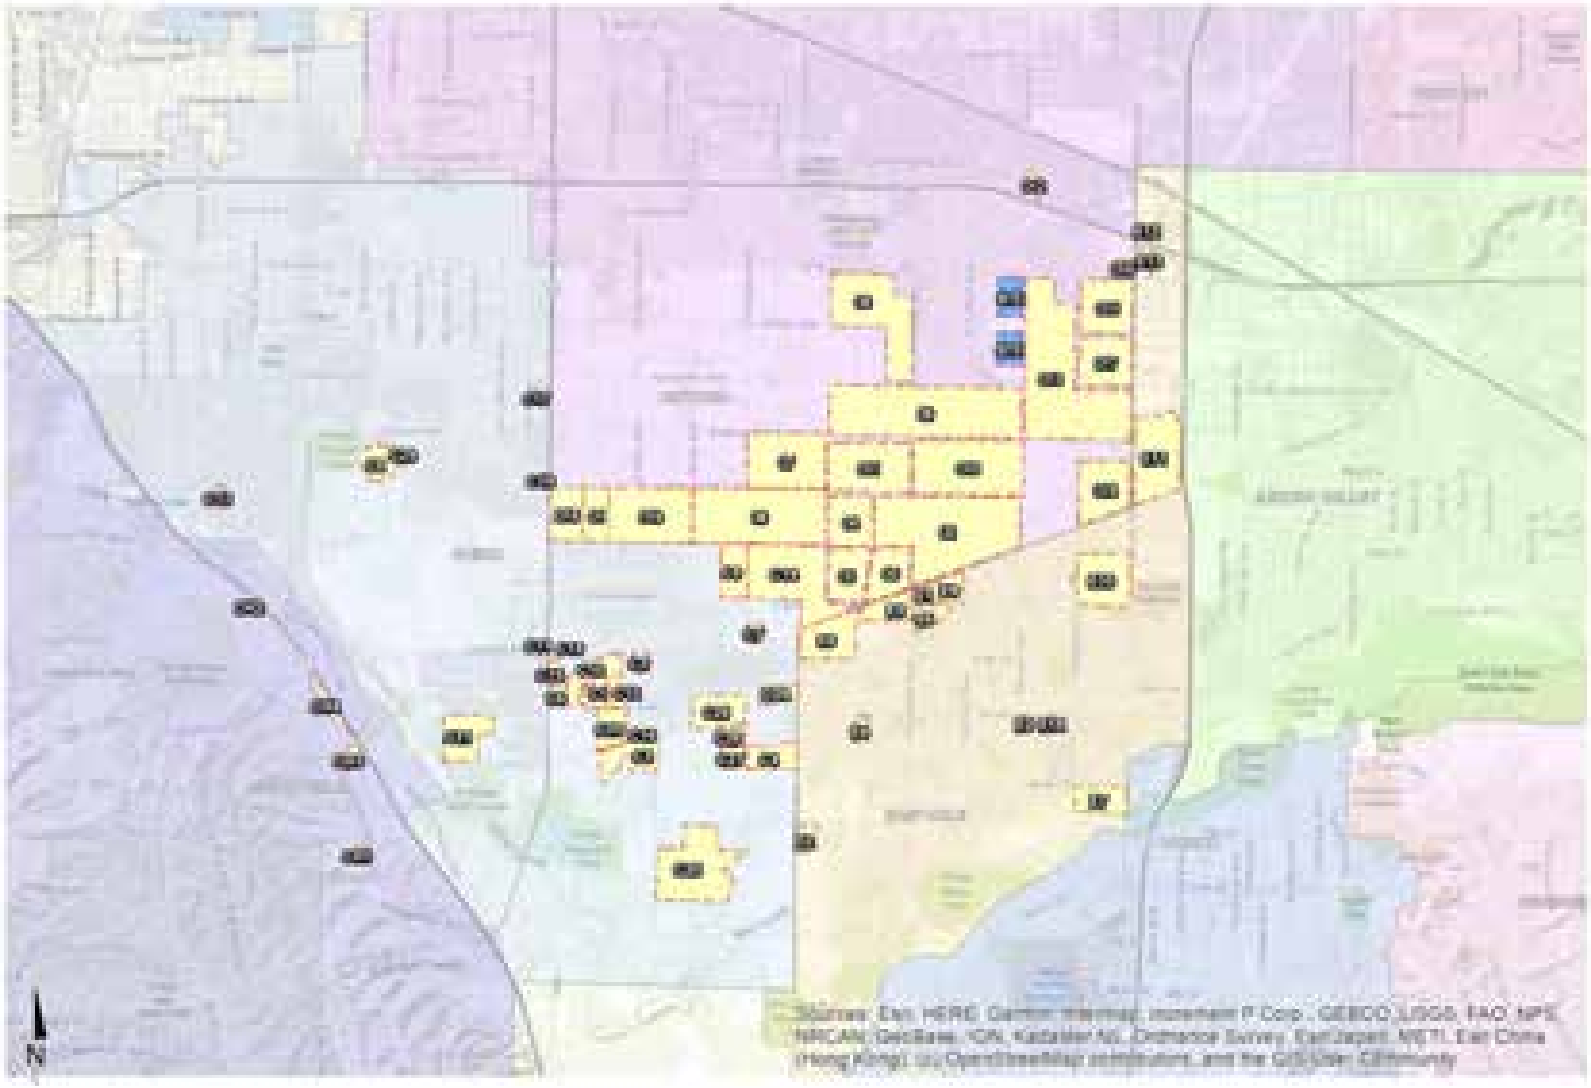
The following special issues will be addressed as part of the TA:

- The proposed reduced lanes along Chino Avenue between Haven Avenue and Mill Creek Avenue will also be evaluated as part of the Traffic Study to ensure acceptable operations. Chino Avenue between Haven Avenue and Mill Creek Avenue is proposed to maintain the ultimate right-of-way (88-feet) but is proposed to accommodate one lane in each direction, separated by a raised median. Chino Avenue will accommodate two-lanes of travel in each direction between Mill Creek Avenue and Hamner Avenue, consistent with the standard street section.
- Assess the roadway segment capacity for Chino Avenue to determine the necessary roadway cross-section.
- The proposed roundabouts located at Twinkle Avenue (#16) and Mill Creek Avenue (#18) along Chino Avenue will also be evaluated as part of the Traffic Study based on the preliminary concept plans for both locations. Twinkle Avenue is located approximately mid-block between Haven Avenue and Mill Creek Avenue.
- A concept striping plan will be included in the traffic study to reflect the proposed single lane roundabouts and the design necessary to transition to the adjacent roadway segments.
- Traffic signal warrant analyses will be conducted for all unsignalized study area intersections for all applicable analysis scenarios.

OPEN ITEMS – SIGNAL TIMING

It is requested that the City provide traffic signal timing for any City controlled intersections that we should take into consideration in our operations analysis. Applicable signal timing for Caltrans facilities will be obtained from District 8.

If you have any questions or comments, I can be reached at cso@urbanxroads.com.



Respectfully submitted,

URBAN CROSSROADS, INC.

Charlene So, PE
Principal

[1]Land Use Codes (LUCs) from *Trip Generation Manual*, published by the Institute of Transportation Engineers.

[2]Total estimate for all other land uses at mixed-use development site is not subject to internal trip capture computations in this estimator.

[3]Enter trips assuming no transit or non-motorized trips (as assumed in ITE *Trip Generation Manual*).

[4]Enter vehicle occupancy assumed in Table 1-A vehicle trips. If vehicle occupancy changes for proposed mixed-use project, manual adjustments must be made to Tables 5-A, 9-A (O and D). Enter transit, non-motorized percentages that will result with proposed mixed-use project complete.

[5]Vehicle-trips computed using the mode split and vehicle occupancy values provided in Table 2-A.

[6]Person-Trips

*Indicates computation that has been rounded to the nearest whole number.
