Handler Activities Summary:

U.S. importer of hazardous waste:	No
Mixed waste (haz. and radioactive):	No
Recycler of hazardous waste:	No
Transporter of hazardous waste:	No
Treater, storer or disposer of HW:	No
Underground injection activity:	No
On-site burner exemption:	No
Furnace exemption:	No
Used oil fuel burner:	No
Used oil processor:	No
User oil refiner:	No
Used oil fuel marketer to burner:	No
Used oil Specification marketer:	No
Used oil transfer facility:	No
Used oil transporter:	No

Hazardous Waste Summary:

. Waste code:	D001
. Waste name:	IGNITABLE WASTE

Violation Status: No violations found

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 01/30/2020

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 01/30/2020

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/1991

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Federal CERCLIS list

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 04/03/2019

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

RCRA-VSQG: RCRA - Very Small Quantity Generators (Formerly Conditionally Exempt Small Quantity Generators)

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

US INST CONTROL: Sites with Institutional Controls

A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

Date of Government Version: 06/03/2019

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

SCRD DRYCLEANERS: State Coalition for Remediation of Drycleaners Listing

The State Coalition for Remediation of Drycleaners was established in 1998, with support from the U.S. EPA Office of Superfund Remediation and Technology Innovation. It is comprised of representatives of states with established drycleaner remediation programs. Currently the member states are Alabama, Connecticut, Florida, Illinois, Kansas, Minnesota, Missouri, North Carolina, Oregon, South Carolina, Tennessee, Texas, and Wisconsin.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WASTEWATER PITS: Oil Wastewater Pits Listing
Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water boards review found that more than one-third of the region's active disposal pits are operating without permission.

WDR: Waste Discharge Requirements Listing

In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants
The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

EDR Hist Cleaner: EDR Exclusive Historical Cleaners

EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

GEOCHECK ®- PHYSICAL SETTING SOURCE ADDENDUM

TARGET PROPERTY ADDRESS

CITRUS FORD
1375 S WOODRUFF WAY
ONTARIO, CA 91761

TARGET PROPERTY COORDINATES

Latitude (North):	34.049482 - 34° 2' 58.14''
Longitude (West):	117.552025 - 117° 33' 7.29''
Universal Tranverse Mercator:	Zone 11
UTM X (Meters):	449049.8
UTM Y (Meters):	3767585.2
Elevation:	914 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	5620426 GUASTI, CA
Version Date:	2012

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

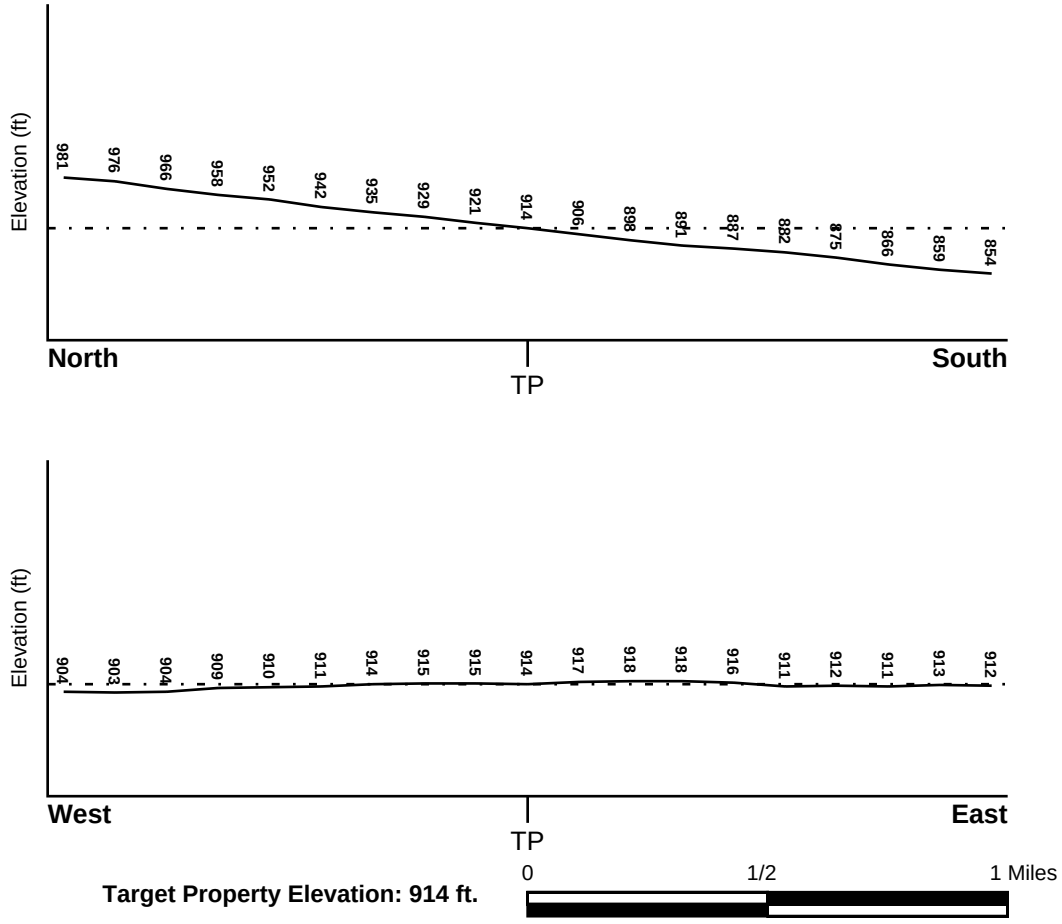
1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).



TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General South

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
06071C8641H	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type
06071C8633H	FEMA FIRM Flood data
06071C8637H	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
GUASTI	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW

* ©1996 Site−specific hydrogeological data gathered by CERCLIS Alerts, Inc., Bainbridge Island, WA. All rights reserved. All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: DELHI

Soil Surface Texture: fine sand

Hydrologic Group: Class A - High infiltration rates. Soils are deep, well drained to excessively drained sands and gravels.

Soil Drainage Class: Somewhat excessively drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	18 inches	fine sand	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 141 Min: 42	Max: 7.8 Min: 6.1
2	18 inches	59 inches	sand	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 141 Min: 42	Max: 7.8 Min: 6.1

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory
Source: Department of Fish and Wildlife
Telephone: 916-445-0411

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

STATE RECORDS

Water Well Database
Source: Department of Water Resources
Telephone: 916-651-9648

California Drinking Water Quality Database
Source: Department of Public Health
Telephone: 916-324-2319
The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

OTHER STATE DATABASE INFORMATION

California Oil and Gas Well Locations
Source: Dept of Conservation, Geologic Energy Management Division
Telephone: 916-323-1779
Oil and Gas well locations in the state.

California Earthquake Fault Lines
Source: California Division of Mines and Geology
The fault lines displayed on EDR's Topographic map are digitized quaternary fault lines prepared in 1975 by the United State Geological Survey. Additional information (also from 1975) regarding activity at specific fault lines comes from California's Preliminary Fault Activity Map prepared by the California Division of Mines and Geology.

RADON

State Database: CA Radon
Source: Department of Public Health
Telephone: 916-210-8558
Radon Database for California

Area Radon Information
Source: USGS
Telephone: 703-356-4020
The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

EPA Radon Zones

APPENDIX D: QUALIFICATIONS

Tatjana McCondichie

Professional Assessor

Education: Associates Degree of Language Arts, Olympia-Morata-Gymnasium (Germany), 1992
Major: English

Licenses/Registrations: California Registered Environmental Assessor
No. 08217, 2006

Summary of Professional Experience

Ms. McCondichie has over 6 years experience in environmental and air quality related fields, and has conducted over 100 Phase I Environmental Site Assessment (ESA) projects.

In addition, Ms. McCondichie has performed and managed environmental site assessments on various industrial, commercial, institutional and residential properties. Assessments included limited and comprehensive surveys for asbestos, lead-based paint and lead-in-drinking-water analysis. She has also managed subsurface investigations to determine the presence of contamination in soil, prepared written reports in formats prescribed by various fiduciary institutions and performed peer reviews on environmental site assessments completed by other environmental firms.

Ms. McCondichie's diversity across public and private industrial environments is a major contribution to LandAmerica Assessment Corporation's Professional Assessor team in the Southcentral United States.

Education

B.A. - Botany, Miami University (Ohio)
Minor - Conservation and the Environment

Training

Hazardous Waste Operations Emergency Response (HAZWOPER)

Highlights

Fifteen years of experience with environmental and engineering disciplines
Over 11 years of experience performing and overseeing environmental due diligence projects

Experience Summary

Mr. Kovach has experience in a broad range of environmental and engineering disciplines including: engineering and environmental due diligence services, industrial air, water, and wastewater permit compliance and monitoring, hazardous waste management and disposal, electrical utilities projects, environmental engineering projects, and wetland ecology research.

Mr. Kovach serves as a Senior Project Manager for Partner Engineering and Science, Inc. (Partner), managing and performing Phase I Environmental Site Assessments and other due diligence projects supporting the commercial real estate industry. Mr. Kovach has significant experience in managing, reviewing and performing due diligence assessments for a variety of property types and the needs and requirements of varied number of reporting standards, including ASTM standards, EPA's All Appropriate Inquiry (AAI), and customized client formats. Mr. Kovach's experience extends to numerous different client types and needs, such as lenders, brokers, property owners and prospective purchasers.

Mr. Kovach has performed Phase I Environmental Site Assessments, Environmental Transaction Screens, Property Condition Assessments (PCAs), Regulatory Compliance Assessments, Asbestos sampling, Lead-based Paint sampling, Radon Studies, Lead-in-Water sampling, permit compliance and regulatory agency interaction, hazardous waste storage and handling, air quality monitoring, and environmental emergency responses.

Project Experience

Dry cleaner, San Francisco, CA. Mr. Kovach performed a Phase I Environmental Assessment for a long-term dry cleaning operation and identified significant contamination and human health risk in subsequent investigations.

Industrial aerospace manufacturing facility, San Leandro, CA. Mr. Kovach performed a Phase I Environmental Assessment for an industrial facility identified as one of the responsible parties for a regional plume of groundwater contamination.

Proposed school site, Oakland, CA. Mr. Kovach oversaw and reviewed a Phase I Environmental Assessment for a proposed school site subject to California Department of Toxic Substances Control (DTSC) requirements.

Former mines and ore milling sites, Sierra Nevada Mountains, CA and NV. Mr. Kovach performed several Phase I Environmental Assessments for historical mining and ore milling sites.

Various Dairy Farms, Stanislaus County, CA. Mr. Kovach performed and reviewed several Phase I Environmental Assessments for large dairy farms regulated by the California State Water Resources Control Board's Confined Animal Feeding Operation (CAFO) program.

Paper product manufacturer, Longview, WA. Mr. Kovach performed a Phase I Environmental Assessment for a large, old paper manufacturing facility requiring evaluation of various environmental issues.

High-rise luxury hotel, Seattle, WA . Mr. Kovach performed a Phase I Environmental Assessment for a luxury hotel formerly developed with three gasoline service stations and other environmentally sensitive occupants.

Contact

skovach@partneresi.com

Jay Grenfell, REPA, LEED AP
National Client Manager, Principal

Education

B.A, Environmental Science, University of California at Berkeley

Registrations

Registered Environmental Property Assessor, National Registry of Environmental Professionals
LEED Accredited Professional, United States Green Building Council

Highlights

16 years in the environmental consulting industry
Experience in various disciplines, including regulatory compliance, asbestos abatement, point source air monitoring, Tier II reporting, and Environmental Health & Safety consulting services.

Experience Summary

Mr. Grenfell currently serves as a National Client Manager providing risk management solutions to clients' due diligence and engineering needs. Mr. Grenfell's breadth of experience and understanding of commercial real estate transactions from both an equity investment and lending view allow him to provide risk management consulting that align with client objectives.

Mr. Grenfell conducted and managed thousands of Phase I ESAs on industrial, office, multi-family, government, retail, and hospitality properties prior to assuming his role as a client manager and business development professional. His experience also includes management of large multi-site portfolios for varied and demanding stakeholders, where he mentored field assessors, identifying environmental risks, and provided detailed reports within demanding deadlines. Mr. Grenfell experience includes understanding and coordinating a full suite of due diligence services, including Phase II subsurface investigations, Property Condition Assessments, Seismic Risk Assessments, ALTA Surveys, Asbestos and Lead Surveys, and Energy Audits.

Mr. Grenfell has worked for nationwide and local clients that include commercial developers, mortgage bankers, real estate brokers, individual investors, equity/institutional investment groups, and financial lending institutions, including CMBS lenders, SBA lenders, and GSA (Fannie and Freddie) lenders.

Project Experience

Multi-Site Portfolio, Nationwide. Managed performance and delivery of summary matrix and complete reports for a 300-site portfolio of Class A high-rise office buildings, at the time valued as the largest real estate transaction in history. Lead scheduled conference calls summarizing and evaluating environmental liabilities for a large stakeholder group.

Phase II Subsurface Investigations, Kansas City, Missouri. Conducted eight Phase II Site Assessments at gasoline stations over a four-day period, coordinating and supervising the advancement of soil borings and collected soil and groundwater samples. Documented results in concise, well-written reports.

Industrial Compliance Evaluation, San Francisco, CA. Managed a compliance evaluation team at an 8,000 employee, 24-hour aircraft maintenance center, evaluating environmental regulatory compliance. Provided solutions and established protocols for ensuring compliance.

Third-Party Report Reviews, Chicago, IL. Conducted 3rd-party reviews of over 150 gasoline stations, documenting previous report findings and providing a matrix listing issues and updated risk-based recommendations.

High Rise Office Buildings, San Francisco. Worked with technical team to manage pre-acquisition due diligence for equity investor of high rise office buildings in downtown San Francisco. Included equity PCA with specialty evaluations of façade, MEP, Fire and Life Safety, Roof, and ADA. Provided red flag analysis and summary costs tables within 48 hours of initial site visits with final reports provided within 10 business days.

Multi-Site Portfolio, California. Managed performance and delivery of summary matrix and complete reports for a 150-site portfolio of fast food restaurants providing environmental and property condition assessments with specialty evaluations of roofs and MEP systems.

Affiliations

Bay Area Mortgage Association (BAMA)
International Council of Shopping Centers (ICSC)

EDR Environmental Lien and AUL Search

The EDR Environmental Lien and AUL Search Report provides results from a search of available current land title records for environmental cleanup liens and other activity and use limitations, such as engineering controls and institutional controls.

A network of professional, trained researchers, following established procedures, uses client supplied address information to:

- search for parcel information and/or legal description;
- search for ownership information;
- research official land title documents recorded at jurisdictional agencies such as recorders' offices, registries of deeds, county clerks' offices, etc.;
- access a copy of the deed;
- search for environmental encumbering instrument(s) associated with the deed;
- provide a copy of any environmental encumbrance(s) based upon a review of key words in the instrument(s) (title, parties involved, and description); and
- provide a copy of the deed or cite documents reviewed.

Thank you for your business.
Please contact EDR at 1-800-352-0050
with any questions or comments.

APPENDIX F
QUALIFICATIONS OF ENVIRONMENTAL PROFESSIONALS

FARSHAD RAZMDJOO

Managing Principal

Farshad Razmdjoo is the Managing Principal of Ramboll's Southwest operations. He has over 30 years of experience in environmental consulting and engineering. Farshad currently manages a vast variety of consulting projects, including real estate and merger and acquisition due diligence, tenant environmental audits, environmental, health and safety audits, property decommissioning and redevelopment, remedial investigations, remedial action design and implementation, regulatory agency interaction, asbestos management programs, radon surveys, mold investigation and remediation programs and evaluations of lead in drinking water. In addition, he has developed and managed an environmental risk-management program for a major real estate investment trust. Farshad is highly experienced in working with federal and California environmental regulations and has a working knowledge of many other state and local regulatory requirements and agencies throughout the United States. Much of Farshad's past and current projects involve assessing environmental issues at commercial and industrial facilities throughout the North America, Europe, China, and India. For the past 24 years at Ramboll, Farshad has managed projects for representatives in real estate development companies, insurance companies, financial institutions, pension funds, institutional investors, private equities, real estate investment trusts, aerospace companies, industrial and manufacturing companies, and law firms.

CAREER

2013-Current
Managing Principal, Ramboll US Corporation

2009-2013
Principal and Director of Operations, ENVIRON International Corporation

2000-2009
Principal, ENVIRON International Corporation

1993-2000
Senior Manager, ENVIRON International Corporation

1985-1993
Regional Manager & Senior Project Manager, Applied Geosciences Inc.

PROJECTS

Site Investigation and Remediation

- Negotiated with the Santa Ana Regional Water Quality Control Board (SARWQCB) a reasonable path forward for a former manufacturing facility located in Irvine, California where soil and groundwater is impacted with volatile organic compounds (VOCs). Historically, considerable remediation had been performed on site by other consultants, which included excavation, and above ground soil treatment, soil vapor extraction, and groundwater pump and treat technologies. The site has been in a post remediation monitoring phase under the oversight of the SARWQCB. Post remediation monitoring indicated that overall, natural attenuation processes were reducing VOC concentrations over time. However, in 2013, the SARWQCB requested the responsible parties to consider evaluating additional remedial options to reduce concentrations of VOCs in one area of the site. Also a Membrane Interface Probe (MIP) investigation was performed in that area of the site.

- Using the data collected during the MIP investigation, Farshad directed the development of a limited and focused remedial program utilizing state of the art technology appropriate for the restrictive conditions which are present in the area of the site investigated (challenging geologic materials, limited access due to occupied buildings, roadways, neighboring properties, etc.). The SARWQCB approved the remedial plan that included injection of zero-valent iron into the shallow saturated zone to reduce VOCs in the area of concern. The remediation was completed during October and November 2014. A post monitoring program started in December 2014 is on-going.

- Directed the evaluation of potential off-site sources, and development of a site conceptual model for a facility in Vernon, California where chlorinated VOCs (CVOCs) were discovered in groundwater. Designed and managed investigation of soil, soil gas, and groundwater to evaluate potential sources, including use of compound-specific isotope analysis to help demonstrate that the CVOCs detected in soil gas are distinct from those detected in groundwater, and unrelated. Managed additional soil, soil gas, and groundwater investigation to delineate the CVOC impacts onsite. Based on the onsite investigation, a pilot study was designed to assess the efficacy of soil vapor extraction (SVE) to reduce CVOCs in the vadose zone (ground surface to approximately 180 feet below ground surface). The pilot study showed that SVE operations effectively reduced CVOC soil gas concentrations at all depths. The SVE pilot system was expanded and operated under a final Remedial Action Plan. The SVE system appeared to have reached asymptotic conditions and the SVE operation has been stopped and post remedial rebound testing is ongoing. The rebound testing results will be used to assess and negotiate site closure. All work is being implemented under the oversight of Los Angeles Regional Water Quality Control Board (LARWQCB).

- Assisted an owner of a former industrial facility in southern California that was significantly impacted by CVOCs in soil, soil gas, and groundwater. The scope of work included oversight of the remediation of the vadose zone with in situ thermal treatment and evaluation of human health risk assessments to assess various future redevelopment scenarios. The work was conducted under the oversight of the LARWQCB.

- Designed and managed the implementation of site characterizations, remediation, and human health risk assessments for an existing 75-acre commercial and light industrial center in Irvine, California under the oversight of the Orange County Health Care Agency (OCHCA) and the SARWQCB. The work was conducted for the property owner and involved performing appropriate site characterization to define the extent of CVOC releases in soil, soil gas, and groundwater from prior and existing tenants; one of which included a dry cleaning facility. The human health risk assessment considered site specific conditions and data to define risk based threshold concentrations deemed as acceptable concentrations in soil, soil gas, and groundwater for indoor worker receptors.

- Remediation involved injection of approximately 100,000 pounds of zero-valent iron in sixty direct push borings to create three separate permeable reactive barriers or treatment zones. The purpose of work was that each zone would chemically reduce chlorinated solvents in the “shallow zone” groundwater as it migrates through the permeable reactive barrier(s). Due to the low groundwater concentrations, Farshad was able to negotiate the elimination of post remediation groundwater monitoring. The project also involved collection of sub-slab and indoor air samples followed by installation and operation of a sub-slab vapor depressurization system and epoxy coating the interior floors to mitigate vapor intrusion. Post mitigation indoor air samples reported a reduction of indoor air concentrations by 100 times. Farshad successfully negotiated and obtained a “No Further Action” for the site with the concurrence from the SARWQCB.
- Managed a remedial investigation at a California Superfund site in Los Angeles County. The site was under a consent order from Cal-EPA Department of Toxic Substances Control at the time. The project involved performing RI/FS, conducting human health and ecological risk assessments, and preparing a remedial action plan.
- Managed, reviewed, and evaluated numerous Phase I and II reports associated with the acquisition of a 500-acre industrial park in Spokane, Washington. Prepared a report of findings including conclusions and recommendations for review by the client.
- Managed Phase I and II site assessments and estimation of remediation costs of six manufacturing plants in Costa Mesa (Orange County), Perris (Riverside County), Ontario (San Bernardino County), Somerton (Arizona), Alliance (Ohio), and Winter Heaven (Florida).
- Designed and managed a site investigation program to evaluate the nature and the extent of soil contaminated with PCE at a dry cleaning facility in Aliso Viejo, California. Based on the results, several remedial alternatives were evaluated and a risk assessment was performed. Based on the results of the risk assessment, site closure was obtained from OCHCA.
- Managed a remedial investigation/feasibility study (RI/FS) using CPT/HydroPunch and Geoprobe techniques, with installation of multi-level groundwater monitoring wells, evaluation and selection of a remedial alternative, and design and preparation of an interim remedial action plan for remediation of soil and groundwater contaminated with dense non-aquas phase liquid (DNAPL) at a former manufacturing facility in Oxnard, California. The first phase of remediation included the excavation and placement of approximately 11,000 cubic yards of impacted soil into vapor extraction cells for on-site treatment. Soil vapor and vertical and horizontal groundwater extraction wells were installed. The vapor and groundwater treatment systems included air stripping, ultra violet oxidation, and vapor and liquid granulated activated carbon. All work was conducted under oversight of LARWQCB and Ventura County Air Pollution Control District.
- Managed a groundwater investigation program at a former electronics manufacturing plant in Santa Ana, California. This included installation, development, and sampling of shallow groundwater monitoring wells and evaluation and interpretation of hydrogeological and analytical data. The investigation was performed under the regulatory oversight of the SARWQCB.
- For a multinational corporation at an orphan site in the San Francisco Bay Area, provided investigative and consulting services in support of regulatory case closure under the San Francisco Regional Water Quality Control Board’s (RWQCB) Low-Threat Chlorinated Solvent Site guidance. The site was in long-term post-remedial monitoring status when the client took active responsibility for the site. Following development and implementation of soil gas and indoor air quality investigations and an evaluation of potential human health risks, the RWQCB rescinded the cleanup order for the site and issued case closure.
- Provided consulting services to evaluate soil, soil vapor, and groundwater impacts at the Site located at14657 Industry Circle, La Mirada, California. Ramboll was successful in demonstrating that the majority of groundwater impacts on the Site originated from an upgradient source. Through monitoring (4 years of groundwater monitoring and reporting) and evaluation of the remaining chemical of concern, Tetrahydrofuran, Ramboll was successful in attaining site closure using a detailed Conceptual Site Model and Health Risk Assessment to show that the groundwater at the site related to tetrahydrofuran posed no significant risk. The Regional Water Quality Control Board concurred with our assessment and issued a closure letter for the Site in September 2014.

Environmental Risk Management

- Farshad has developed and managed an environmental risk management program for a major real estate investment trust (REIT). This REIT contained over 200 properties with 400 tenants with pharmaceutical and life science operations throughout the western and eastern United States, China, and India. As part of the environmental risk management program, an acquisition due diligence, an asbestos management program, a moisture intrusion and mold prevention response (MIMPR) program, and a tenant environmental audit (TEA) program were developed and implemented. A mold prevention and response plan, as outlined in the MIMPR, was prepared and implemented. More than 500 tenant exit audits for tenants vacating the properties were conducted in accordance with the TEA. An overall tenant environmental audit program has been developed.

Decontamination / Decommissioning

- Managed the decontamination and decommissioning of a former biopharmaceutical research facility. A detailed survey of over 250 rooms was conducted, and radiological materials, hazardous chemicals, and potentially biologically hazardous substances were identified. Upon completion of the decontamination/decommissioning, the entire facility was cleaned and prepared for re-occupancy. Throughout the decommissioning process, Ramboll worked closely with State regulatory officials to demonstrate that all cleanup activities were in compliance with applicable regulations.

- Managed the acquisition due diligence and subsequent redevelopment of a former metal stamping facility in Santa Fe Springs, California. Under Farshad's direction, a Phase I ESA was completed and, based on the findings of the Phase I ESA, a targeted Phase II subsurface investigation was performed to evaluate areas of potential environmental concern that included soil gas, soil, and groundwater sampling. Farshad also assisted the client with closure activities for the site that included performing an assessment of building materials for polychlorinated biphenyls contamination, coordination and oversight of asbestos and lead-based paint surveys, groundwater monitoring well abandonment, post excavation soil sampling on removal of various subsurface features, and preparation of a soil management plan (SMP), to be implemented during redevelopment activities. Subsequently, a no further action letter was obtained from the Santa Fe Springs Fire Department.

Site Closure

- Managed the preparation of a sampling and analysis plan evaluating the nature and extent of soil and groundwater contaminated with tetrachloroethene (PCE) at a dry cleaning facility in Santa Ana, California. Ramboll obtained closure for the site from the SARWQCB.

Litigation Support

- Managed litigation support services related to the fate and transport of organic compounds in soil and groundwater, appropriate remedial alternatives, and cost associated for two facilities in southern California. The results of the evaluations were successfully used as part of the settlement negotiations with the opposing parties.

Due Diligence

- Directed the due diligence process and estimating environmental liabilities for acquisition of a former aerospace manufacturing facility in Los Angeles, California under extremely tight deadline. The site has been impacted with various VOCs, total petroleum hydrocarbons, metals, emerging chemicals, and radioactive wastes. The assignment also included evaluation of methane, asbestos, lead-based paint, and indoor air quality. The work was conducted on behalf of the site's buyer, which planned to develop it into a commercial business park.

- Acted as point of contact and responsible Principal for several national real estate and development clients with properties throughout the United States. Farshad has completed over 1000 assignments supporting the clients in acquiring, managing, and disposing properties. Many of these assignments were undertaken and successfully completed under extreme time constraints.

- Farshad has managed over 30 international multi-site environmental assessments at over 200 industrial, manufacturing, and commercial facilities as a part of merger and acquisition environmental due diligence. These included evaluation of aerospace component manufacturing facilities, automotive manufacturing and distribution facilities, medical device manufacturing facilities, telecommunication facilities, and hardware store facilities. Work plans and subsequent Phase II soil and groundwater investigations were also completed for many of those assignments.

ALEXIS HILLMAN

Senior Managing Consultant

Alexis Hillman is a Senior Managing Consultant at Ramboll's Los Angeles office. She has 19 years of experience in environmental investigations and due diligence projects and is a California Professional Geologist and Certified Hydrogeologist. Ms. Hillman has conducted and managed soil, groundwater, soil vapor, and indoor air quality sampling projects as well as aquifer testing for Phase II site investigations and groundwater monitoring programs, and has contributed to the development of feasibility studies, treatability studies, remedial investigation reports, and remedial action plans. She manages due diligence projects and has contributed to litigation support projects. Ms. Hillman works extensively on redevelopment projects from the due diligence phase, to site investigation, data evaluation, risk assessment, and remediation, as well as construction oversight and soil management.

CAREER

1996-2000
Assistant Geoscientist to Senior Associate Geoscientist, McLaren/Hart, Inc.
Staff Geoscientist responsible for site investigations, due diligence, preparation of work plans, groundwater monitoring reports, Phase I and Phase II reports.

EDUCATION

1990-1994
BS Geology
University of California, Los Angeles

COURSES/CERTIFICATIONS

OSHA 40-hour Hazardous Waste Operations and Emergency Response Standard - HAZWOPER, 2019
Certified Hydrogeologist - California, 2003-2019
Professional Geologist - California, 2001-2019

PROJECTS

2016-present

Former Metals Facility Soil Vapor Extraction

Project manager for Phase I and site characterization activities at former metal preparation facility being considered for multi-use redevelopment. Identified a vapor intrusion concern from chlorinated volatile organic compounds for future tenants and a potential off-site building. Ramboll installed and operates a soil vapor extraction system to proactively reduce concentrations in shallow subsurface soil and soil vapor while waiting for County oversight to begin the closure process.

2014-present

Redevelopment of Former Manufacturing Facility

Conducted and managed due diligence for prospective buyer and developer on property with lengthy site investigation and remediation history. Worked with agency on a separate redevelopment track to conduct earthwork activities under a soil management plan. Conducted pre-construction soil characterization to minimize disposal fees. Oversaw earthwork activities, which included export of 47,900 cubic yards of soil, monitoring soil for impacts and separation of soil for different disposal facilities. In addition, the project includes the design, installation, and ongoing performance monitoring of a sub-slab depressurization system (SSDS) to mitigate residual shallow soil impacts, which Ramboll continues to operate and maintain.

2016-2018

Source Area Excavation & Site Closure Activities

Managed a Phase I environmental site assessment and based on the significant former manufacturing activities, a Phase II investigation was recommended. An area of elevated tetrachloroethene and petroleum hydrocarbons was identified in soil and soil gas. After engaging local agency oversight, Ramboll implemented a source area removal work plan involving the excavation of approximately 207.83 tons of TPH- and VOC-impacted soil from the area with the highest concentrations of those constituents, the "source area", by large diameter auger drilling. Based on its site investigation and removal action activities, Ramboll requested no further action on behalf of its client, which was granted in December 2018 in concert with a land use restriction for commercial uses only.

2014-2016

Aerospace Manufacturing Facility

Managed a Phase I environmental site assessment to evaluate environmental liabilities for an aerospace manufacturing facility in southern California with a 25-year history of extensive site investigations and ongoing remedial actions. The site soil, soil gas and groundwater has been impacted primarily with chlorinated solvents and cleanup is being performed under the oversight of the Los Angeles Regional Water Quality Control Board. Further, conducted a Phase II subsurface investigation to document the current conditions of soil and soil gas to assist the client in marketing the property to potential buyers. The work was conducted on behalf of the parent company, which was considering sale of the property.

2013-2016

Commercial/Residential Redevelopment

Managed site investigation activities and risk assessment following identification of a recognized environmental condition during due diligence of a site being redeveloped into a high rise commercial and residential building in Los Angeles. Implemented soil management plan during grading to address previously unknown areas of impacted soil. Worked with Los Angeles County Fire Department, Health Hazardous Materials Division (LAFD) to satisfy requirements for no further action for soil while meeting aggressive project redevelopment schedules. LAFD provided a letter requiring no further action acknowledging that the contamination had been satisfactorily mitigated with a vapor barrier and passive venting system. Following one year of groundwater monitoring, LAFD also agreed to no further action for groundwater.

2012-2015

Due Diligence

Manager for property transaction environmental assessments, including industrial, commercial and residential property. Responsibilities include agency research, file, aerial photo, and historical map review; site visits and interviews; asbestos, lead-based paint, and drinking water sampling; detailed site plan preparation; and reporting.

2010-2014

Former Dry Cleaning Facility

Confidential Real Estate Investor

Evaluated historical releases from a former dry cleaning facility located in a shopping center. Conducted subsurface evaluations in an existing grocery store to evaluate VOCs in soil, soil gas, and groundwater. Conducted a screening human health risk assessment followed by indoor air sampling. Evaluated VOCs in groundwater over several monitoring events. Negotiated with the local agency to demonstrate groundwater plume stability and acceptable vapor intrusion risk to achieve regulatory closure.

2010-2013

Redevelopment of Industrial Property

Managed environmental issues during redevelopment of a former manufacturing facility in South Gate, California. A soil management plan was prepared to guide earthwork. The site had received a no further action letter for soil with unrestricted use from the DTSC; however, several areas of soil impacted with TPH, VOCs, and SVOCs were encountered during grading operations. To maintain the project schedule and avoid costly penalties for missed deadlines, aggressive excavations were conducted in five areas and in total 24,749 tons of impacted soil were removed and disposed off-site. In areas where building pads were proposed, soil gas surveys were completed to demonstrate to future tenants that the risk to site workers was well below commonly accepted standards. In addition, three previously unknown USTs were found during the grading process and removed and closed under the oversight of the local agency. A supplemental no further action letter was subsequently granted by the DTSC.

2013

Facility Decommissioning and Closure

Obtained closure of an ink manufacturing facility in Santa Fe Springs, California. Prepared the facility decommissioning and closure plan for submittal to the Santa Fe Springs Fire Department following site inspection. Following decommissioning, implemented a post-decommissioning sampling and analysis program to satisfy requirements of the Fire Department. Assistance was provided to the client in closing out stormwater and air permits for the facility. Prepared a closure report following sampling and decommissioning activities.

2002

Due Diligence

Conducted environmental due diligence of aerospace, chemical, manufacturing, multi-tenant and light industrial business parks as part of corporate mergers and acquisitions and commercial real estate transactions in California, Wyoming, and Montana. As part of the due diligence process, prepared cost scenarios for compliance issues regarding air, wastewater, and OSHA issues.

2001-2003

Former Manufacturing Facility

Task manager implementing remedial action plan (RAP) involving the installation of a dual-phase and soil vapor extraction system to clean up chlorinated-solvent impacted soil and groundwater. Implementation of the RAP required management of permitting process through numerous agencies in Southern California.

2001-2002

MTBE Field Investigation

Field geologist for agency driven, regional methyl tertiary-butyl ether (MTBE) study. Conducted discrete-depth groundwater sampling using a combination of air rotary casing hammer and mud rotary drilling techniques and using the Simulprobe sampling tool. The project included continuous core sampling, geophysical logging, and monitoring well installation in the shallow and regional aquifers. The project was completed under the supervision of RWQCB and USEPA representatives. Results of the investigations were used to determine cost allocations for regional remedial efforts.

2001

Due Diligence

Geologist for Phase I Environmental Assessment at former crude oil impoundment site. The Site is currently developed with a shopping center, however due to former operations at the site methane monitoring is conducted on a continuing basis. Other issues identified during the assessment included potential migration of impacted groundwater from an offsite source, and dry cleaning operations at the Site that have impacted a shallow perched groundwater zone. Responsible for reviewing all environmental documents related to the various identified issues and summarizing the work completed to the satisfaction of the Site owner.

1999-2000

Development of Feasibility Studies

Geologist for development of Feasibility Study and Treatability Studies for chlorinated solvent-impacted manufacturing facility in Southern California. The project included document review, compilation and presentation of soil and groundwater data, and comparison to potentially applicable agency clean-up criteria, for the purpose of selecting remedial action alternatives and appropriate treatability studies. Also responsible for implementing certain tasks for treatability studies, installing multiple offsite monitoring wells including several in public right-of-ways and in residential areas and implementing the community relations program in place to address the potential concerns of community members.

1999

Site Investigation

Field geologist for subsurface soil and groundwater investigation at a proposed 2-mile railroad construction site with underground petroleum pipelines in the Port of Los Angeles. This expedited site characterization included sampling at nearly 200 points, management of field database and mobile laboratory, plume definition and GPS surveying.

1999

Site Investigation

Geologist for extensive Cone Penetrometer Testing (CPT) study. Implemented CPT logging and multiple-depth groundwater sampling investigation along downgradient property boundary and prepared detailed cross-section of stratigraphy and distribution of contaminants for presentation to the Regional Water Quality Control Board.

1998

Former Landfill

Geologist for development of Brownfields Redevelopment Workplan. The site was a former landfill that was underdeveloped. Responsibilities include preliminary historical research regarding the extent and nature of the landfill, and development of a work plan to investigate the potential impact to soil and/or groundwater by the former landfill as well as current site operators.

1998

Site Investigation

Field geologist conducting slug tests at former underground storage tank site involved in litigation. The project included slug tests on multiple monitoring wells at the site and data analysis using AQTESOLV. The results were used along with physical soil analysis results to determine if a release date could be estimated.

1996-1997

Site Investigation

Field geologist for the installation of groundwater monitoring wells for a medical equipment manufacturing facility in Irvine, California. Groundwater at the facility is impacted with chlorinated solvents. Responsible for obtaining permits, including right-of-way; setting up subcontractors for well installation and lab analyses; and supervising installation of the monitoring wells. These wells were installed to aid in characterizing the extent of impact to groundwater. Also responsible for preparing groundwater monitoring reports, including groundwater contour maps, chemical impact figures, and hydrographs, under supervision of the RWQCB - Santa Ana Region.

1996

Pesticide Manufacturing Plant

Field geologist for several phases of site characterization for a pesticide manufacturing plant in the Los Angeles area where soil is impacted by chlorinated pesticides, and dioxins and furans. Responsible for implementing sampling plan, which involved precise measurement of sampling depths with the Geoprobe®. Also responsible for performing modified decontamination procedures to ensure representative integrity of samples. All work was performed under supervision of the Department of Toxic Substances Control.

2nd Submittal Date: 6/22/2022

Preliminary Water Quality Management Plan (PWQMP)

1. Introduction

The Preliminary Water Quality Management Plan (PWQMP) is a planning tool to improve integration of required water quality elements, stormwater management, water conservation, rainwater harvesting and re-use, and flood management in land use planning and the City's development process. The Preliminary WQMP will assist project applicants and planners in properly designing and laying out project sites so that water quality may be incorporated in the most effective manner and at the lowest cost for the developer.

The San Bernardino County Municipal Separate Storm Sewer System Permit (MS4 Permit) requires project-specific Water Quality Management plans (WQMP) to be prepared for all priority new development and significant redevelopment projects listed in Section 2 of this document. The MS4 Permit stipulates that the City of Ontario require priority project applicants to submit a Preliminary project-specific WQMP, as early as possible, during the environmental review or planning phase of a development project and that the Preliminary WQMP be approved prior to the issuance of land use entitlement.

2. Priority Projects (requiring a Preliminary WQMP)

Land Use entitlement shall not be issued for any of the listed projects, below, until a Preliminary WQMP has been approved by the City's Engineering Department. For construction projects not going through entitlement, a Preliminary and Final project specific WQMP shall be approved, prior to the issuance of construction permits:

Check the appropriate project category below, for this project:

Check below	**Project Categories**
	1. All significant re-development projects. Significant re-development is defined as the addition or replacement of 5,000 or more square feet of impervious surface on an already developed site subject to discretionary approval of the Permittee. Redevelopment does not include routine maintenance activities that are conducted to maintain original line and grade, hydraulic capacity, original purpose of the facility, or emergency redevelopment activity required to protect public health and safety. Where redevelopment results in an increase of less than fifty percent of the impervious surfaces of a previously existing developed site, and the existing development was not subject to WQMP requirements, the numeric sizing criteria discussed below applies only to the addition or replacement, and not to the entire developed site. Where redevelopment results in an increase of fifty percent or more of the impervious surfaces of a previously existing developed site, the numeric sizing criteria applies to the entire development (new and existing).
X	2. New development projects that create 10,000 square feet or more of impervious surface (collectively over the entire project site) including commercial, industrial, residential housing subdivisions (i.e., detached single family home subdivisions, multi-family attached subdivisions or townhomes, condominiums, apartments, etc.), mixed-use, and public projects. This category includes development projects on public and private land, which fall under the planning and building authority of the permitting agency.

Check below	Project Categories
	3. Automotive repair shops (with SIC codes 5013, 5014, 5541, 7532- 7534, 7536-7539).
	4. Restaurants and Food Service Establishments where the land area of development is 5,000 square feet or more.
	5. Developments of 2,500 square feet of impervious surface or more adjacent to (within 200 feet) or discharging directly into environmentally sensitive areas (ESA's) such as areas designated in the Ocean Plan as areas of special biological significance or waterbodies listed on the CWA Section 303(d) list of impaired waters.
X	6. Parking lots of 5,000 square feet or more exposed to storm water. Parking lot is defined as land area or facility for the temporary storage of motor vehicles.
	7. Retail Gasoline Outlets (RGOs) that are either 5,000 sq ft or more or have a projected average daily traffic of 100 or more vehicles per day.
	8. *This project is not covered under any of the categories listed above.

* If the development is not covered under any of the project categories listed in Section 2, the project is not required to design and install Site Design/LID BMPs or Treatment Control BMPs to treat the design storm event (Design Capture Volume) described in Section 4.

3. Preliminary WQMP Objectives

Through a combination of Site Design/LID BMPs (where feasible), Source Control, and/or Treatment Control BMPs, project-specific WQMPs shall address all identified pollutants and hydrologic conditions of concern from new development and significant re-development projects for the categories of projects (priority projects) listed in Section 2. Under each type of BMP, listed below, please indicate which BMPs are planned to be implemented and included in the Final WQMP for the project:

A. Site Design/LID (Low Impact Design) for Reducing Stormwater Runoff:

The MS4 Permit requires each priority development project to infiltrate, harvest and use, evapotranspire, or bio-treat the runoff from a 2-yr, 24-hour storm event (Design Capture Volume). If site conditions do not permit infiltration, harvest and use, evapotranspiration, and/or bio-treatment of the entire Design Capture Volume, at the project site, Site Design/LID techniques are required to be implemented to the Maximum Extent Practicable, at the project site, and the remainder of the DCV shall be infiltrated, harvested, bio-treated or treated by alternative measures. Project applicants shall submit a Preliminary WQMP that documents the LID/Site Design BMPs, proposed for the project. Please indicate, in the table below, which Site Design/LID BMPs will be utilized on this project to accomplish this requirement:

Site Design/LID Practice	Planned	Not Planned
Provide at least the minimum effective area required for LID BMPs, to comply with the WQMP (see Table 3-1 below).		**X[1]**
Grade parking lot areas/drive aisles/roof drains to sheet flow runoff into landscaped swales, via curb cuts or zero-face curbs or otherwise disconnect direct drainage from MS4.		**X[1]**
Design landscaped areas as swales and grade to accept runoff from building roofs, parking lots and project roadways.		**X[1]**
Install surface retention basins or infiltration trenches to receive impervious area runoff.		**X[2]**
Install pervious pavement in parking stalls, alleys, driveways, gutters, walkways, trails or patios.		**X[2]**
Install underground stormwater retention chambers where downstream landscaped areas are limited.	**X**	
Install approved Stormwater Drywells in detention areas.		**X[2]**
Construct streets, sidewalks, and parking lot stalls to the minimum widths necessary.	**X**	
Install on-site Biotreatment basins/trenches with underdrains, where soil type is poorly draining.		**X[2]**
Install “Engineered Soil” to increase uptake/soil storage capacity and/or evapotranspiration.		**X[2]**
Install Rainwater Harvesting/Use Equipment.		**X[3]**
Regional LID BMP facilities are installed, off-site, with the capacity and conveyances to accept post-development storm water runoff from this project and reserved capacity allocation credits have been assigned to the project, in a Certificate or other legally binding document, attached herein		**X[2]**

[1] Project capable of treating the full DCV onsite and not required to demonstrate this site design.
[2] The site will be captured and treated by the proposed underground infiltration facilities.
[3] Concept not utilized because the impervious area is much greater than landscape.

Table 3-1 Minimum Effective Area[1] Required for LID BMPs (surface + subsurface facilities) for Project WQMP to Demonstrate Infeasibility[2] (% of site)

Project Type	New Development	Re-Development
SF/MF Residential < 7 du/ac	10%	5%
SF/MF Residential < 7 - 18 du/ac	7%	3.5%
SF/MF Residential > 18 du/ac	5%	2.5%
Mixed Use, Commercial/Industrial w/FAR< 1.0	10%	5%
Mixed Use, Commercial/Industrial w/FAR 1.0-2.0	7%	3.5%
Mixed Use, Commercial/Industrial w/FAR> 2.0	5%	2.5%
Podium (parking under > 75% of project)	3%	1.5%
Zoning allowing development to property lines	2%	1%
Transit Oriented Development[3]	5%	2.5%
Parking	5%	2.5%

[1] "Effective area" is defined as land area which 1) is suitable for a retention/infiltration BMP (based on infeasibility criteria) and 2) is located down-gradient from building roof or paved areas, so that it may receive gravity flow runoff.

[2] Criteria only required if the project WQMP seeks to demonstrate that the full DCV cannot be feasibly managed on-site.

[3] Transit oriented development is defined as a project with development center within one half mile of a mass transit center.

Key: du/ac = dwelling units/acre, FAR = Floor Area Ratio = ratio of gross floor area of building to gross lot area, MF = Multi Family, SF = Single Family

B. Source Control BMPs – The following BMPs are designed to control stormwater pollutants and runoff water at the location where it is generated. Please indicate which of the listed BMPs are planned to be implemented for the project:

Source Control BMPs	Planned	Not Planned
Minimize non-stormwater site runoff through efficient irrigation system design and controllers.	**X**	
Minimize trash and debris in storm runoff through a regular parking lot, storage yard and roadway sweeping program.	**X**	
Provide proper covers/roofs and secondary containment for outside material storage & work areas.		**X[1]**
Provide solid roofs over all trash enclosures.	**X**	
Site Owner(s)/Property Manager/HOA or POA will be familiar with the project WQMP and stormwater BMPs.	**X**	
Owner or HOA or POA to provide Education/Training of site occupants and employees on stormwater BMPs.	**X**	
Install stormwater placards/stenciled messages with a "No Dumping" message on all on-site/off-site storm drain inlets.	**X**	
Provide contained equipment/vehicle wash rack areas that discharge to sanitary sewer.		**X[2]**

[1] Not applicable. No outside material storage or work areas. Secondary containment not needed.

[2] Not applicable, no vehicle wash areas.

C. Treatment Control BMPs – The following BMPs are designed to control stormwater pollutants where it is not feasible to install on-site or off-site Site Design/LID BMPs, with the requisite capacity to treat the Design Capture Volume for identified Pollutants of Concern or where pretreatment of stormwater runoff is required, ahead of infiltration BMPs. Please indicate which of the listed BMPs are planned to be implemented for the project:

Treatment Control BMP	Planned	Not Planned
Gravity Separator devices for pretreatment of sediment, trash/litter or Oil & Grease	**X**	
Proprietary Biofiltration vaults/devices		**X**
Media Cartridge Filtration Vaults		**X**
Proprietary Filter Inserts for on-site storm drain inlets or retention basin/trench overflow drains		**X**

4. Volume-based calculation (approximate) for sizing on-site or off-site Stormwater Retention/Infiltration, Harvest & Re-Use or Biotreatment facilities

1) After calculating the "Watershed Imperviousness Ratio", i, which is equal to the percent of impervious area in each Drainage Management Area, divided by 100, calculate the composite runoff coefficient C_{BMP} for the Drainage Area above using the following equation:

$$\mathbf{C_{BMP} = 0.858i^3 - 0.78i^2 + 0.774i + 0.04}$$

where: $\mathbf{C_{BMP}}$ = composite runoff coefficient; and,

i = watershed imperviousness ratio.

3) Determine the area-averaged "6-hour Mean Storm Rainfall", P_6, for the Drainage Area. This is calculated by multiplying the area averaged 2-year 1-hour value (0.5"-0.6") by the appropriate regression coefficient (1.4807). The 2-yr, 1-hr value for southern Ontario is approximately to 0.5" (P_6 = 0.5*1.4807 = 0.74 and northern Ontario is approximately 0.6" in/hr (P_6 = 0.6*1.4807 = 0.89).

4) Determine the appropriate drawdown time. Use the regression constant a = 1.582 for 24 hours and a = 1.963 for 48 hours. *Note: Regression constants are provided for both 24 hour and 48-hour drawdown times; however, 48-hour drawdown times should be used in most areas of California. Drawdown times in excess of 48 hours should be used with caution as vector breeding can be a problem after water has stood in excess of 72 hours. (Use of the 24-hour drawdown time should be limited to drainage areas with coarse soils (Class 'A' soils that readily drain.)*

5) Calculate the "Maximized Detention Volume", P_0, using the following equation:

$$\mathbf{P_0 = a \cdot C_{BMP} \cdot P_6}$$

where: $\mathbf{P_0}$ = Maximized Detention Volume, in inches

a = 1.582 for 24 hour and a = 1.963 for 48-hour drawdown,

$\mathbf{C_{BMP}}$ = composite runoff coefficient; and,

$\mathbf{P_6}$ = 6-hour Mean Storm Rainfall, in inches

6) Calculate the "Target Capture Volume", V_0, using the following equation:

$$\mathbf{V_0 = (P_0 \cdot A) / 12}$$

where: $\mathbf{V_0}$ = Target Capture Volume, in acre-feet

$\mathbf{P_0}$ = Maximized Detention Volume, in inches; and,

A = BMP Drainage Area, in acres

Project Volume-based calculation (approximate) for planned on-site or off-site Stormwater Retention/Infiltration, Harvest & Re-Use or Biotreatment facilities:

Variable	Factor/Formula	**DA 1-A**	**n/a**	**n/a**	**n/a**
Impervious surface/total surface, ratio	(i)	0.95	n/a	n/a	n/a
C_{BMP}= runoff coefficient	$0.858i^3 - 0.78i^2 + 0.774i + 0.04$	0.807	n/a	n/a	n/a
P_6	**P_6 = 2-yr,1-hr depth*1.4807 =	0.803	n/a	n/a	n/a
Detention Volume (acre inches)	$P_0 = a * C_{BMP} * P_6$ =	1.27	n/a	n/a	n/a
Drawdown rate of basin/trench (a)	1.963 for 48-hr drawdown =	1.963	n/a	n/a	n/a
Project Total Area (acre)	(A)	15.15	n/a	n/a	n/a
Design Capture Volume in cu. ft.	$V_0 = [(P_0 * A)/12] *43560$ =	69,915	n/a	n/a	n/a
Runoff Volume infiltrated in first 3 hours of storm (*not applicable for underground systems*)	Vol= in/hr/12 x ft^2 of infiltration area x 3 hrs	n/a	n/a	n/a	n/a
Retention Volume provided in cubic feet.	*Retention capacity of basins, trenches, underground storage or biotreatment basin	69,922	n/a	n/a	n/a

*Volume retained utilizing an underground infiltration facility. Refer to the DCV Calculations section for calculations.

**For P_6 value, use site coordinates and NOAA website to determine project's average 2-yr, 1-hr rainfall depth, at: http://hdsc.nws.noaa.gov/hdsc/pfds/sa/sca_pfds.html .

5. Flow-Based calculation (approximate) for sizing on-site or off-site Biotreatment facilities and proprietary treatment technology BMPs:

1) After calculating the "Watershed Imperviousness Ratio", i, which is equal to the percent of impervious area in each Drainage Management Area divided by 100, calculate the composite runoff coefficient C_{BMP} for the Drainage Area above using the following equation:

$$C_{BMP} = 0.858i^3 - 0.78i^2 + 0.774i + 0.04$$

where: C_{BMP} = composite runoff coefficient; and,

i = watershed imperviousness ratio.

2) Determine BMP design rainfall intensity, I_{BMP}, using the project site geo-coordinates and the NOAA website to determine project's average 2-yr, 1-hr rainfall intensity, at: http://hdsc.nws.noaa.gov/hdsc/pfds/sa/sca_pfds.html .Multiply this value by 0.2787 (regression coefficient for Ontario) and a minimum safety factor of 2.

4) Calculate the target BMP flowrate, Q, using the following formula (for each DMA <50 acres*):

$$Q = C_{BMP} \cdot I_{BMP} \cdot A$$

Where: **Q** = flow in cfs (Cubic feet per second)
I_{BMP} = BMP design rainfall intensity, in/hr
A = Drainage Area in acres

*For DMAs >50 acres, with C_{BMP} <0.5, the project applicant shall use the unit hydrograph method specified in the San Bernardino County Hydrology Manual, using the design storm pattern with rainfall return frequency such that the peak 1-hr rainfall intensity equals the 85th percentile 1-hr rainfall, multiplied by 2.

Project Flow-based calculation (approximate) for planned on-site or off-site flow-based Biotreatment facilities or Stormwater Treatment BMPs:

Variable	Factor/Formula	**DA 1-A**	**n/a**	**n/a**	**n/a**
Impervious surface/ total surface, ratio	(i)	0.95	n/a	n/a	n/a
C_{BMP}= composite runoff coefficient	$0.858i^3+0.78i^2+0.774i+0.04$	0.81	n/a	n/a	n/a
I_{BMP}	I_{BMP} = 2-yr,1-hr storm intensity*0.2787*safety factor	0.302	n/a	n/a	n/a
Drainage area (ac)	A = DMA sq ft/43,560	15.15	n/a	n/a	n/a
Target BMP flowrate	Q = C_{BPM}* I_{BMP} * A	3.69	n/a	n/a	n/a

6. **Hydrologic Conditions of Concern (HCOC) and use of the on-line San Bernardino County HCOC Map for determining necessary mitigation steps necessary if there are HCOCs downstream of a project:**

Project applicants may access the on-line HCOC Map at: http://permitrack.sbcounty.gov/WAP/. The map will indicate any hydrology concerns with downstream waterways that are hydraulically connected to the project and will indicate if there are any approved regional projects downstream that could be utilized for off-site mitigation of HCOCs. Please indicate here if the project will or will not be able to retain/infilter, harvest and use or biotreat and detain the DCV, on-site, as calculated in Section 4 and if there are HCOCs identified downstream of the project:

Retain or Harvest/Use the DCV on site?	Yes	**X**	No	
Biotreat the DCV but not infilter the runoff?	Yes		No	**X**
HCOCs identified downstream of site?	Yes		No	**X**

If the entire DCV will not be retained on site, the DCV is biotreated but not infiltered or additional detention capacity is needed to address identified HCOCs, downstream of the site, please list here, what additional mitigation measures will be utilized (on-site or off-site) to address HCOCs (see Section 4.2.1-4.2.3 of the SB County WQMP Technical Guidance):

HCOCs not applicable.

7. **Site Plan and Conceptual Grading/Drainage Plan requirements for submission with the Preliminary WQMP:**

Provide a Site Plan and Conceptual Grading/Drainage Plan along with this Preliminary WQMP, which conceptually shows the proposed locations of buildings, homes, parking lots, parks, new paved roadways, landscaped areas, drainage patterns and drainage sub-areas, methods of conveyance, proposed retention/infiltration, harvest & use or biotreatment facilities that are planned for installation. Where it is determined to be infeasible to capture and detain design storm runoff volumes, on-site, please include other design features, as described in Section 3, above. Include numbered or lettered notes on the Site Plan with a legend detailing other BMPs, as described in Section 3.

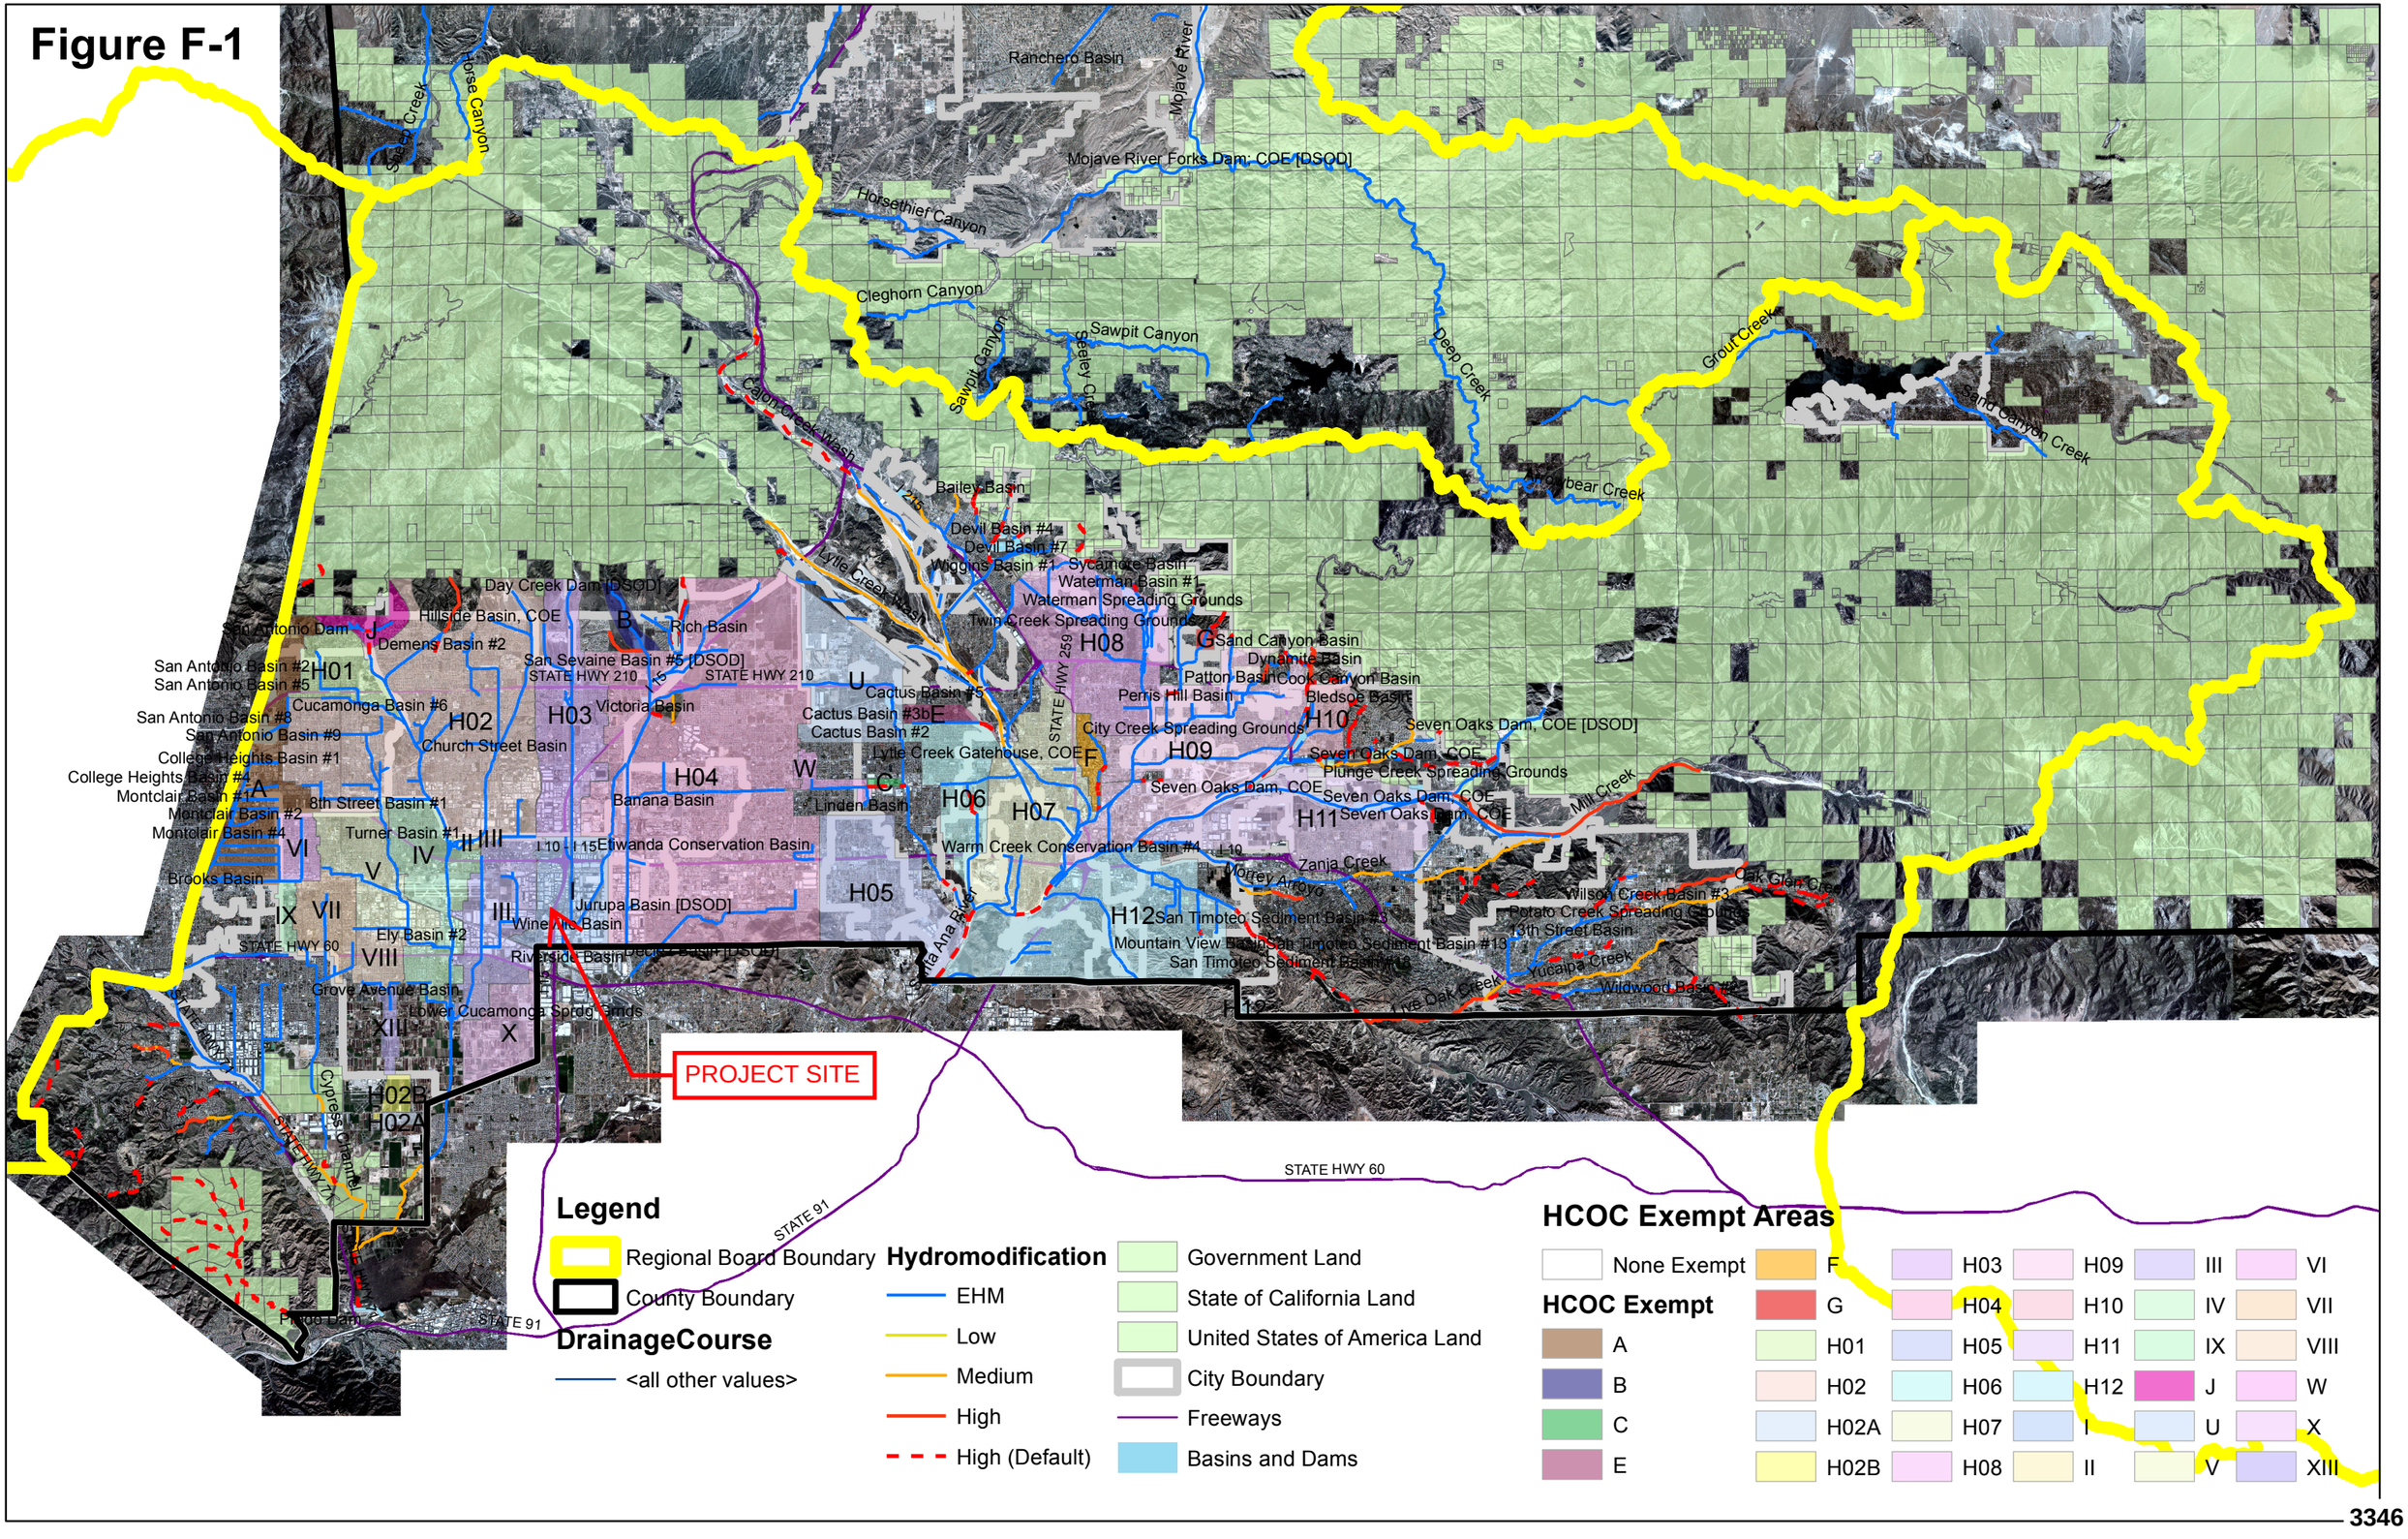
8. **BMP Maintenance and Funding Mechanism & Description:**

Ownership of the project will be held with Link Logistics Real Estate. Long term maintenance will be the responsibility of the owner. This includes BMP maintenance, catch basin inspection, storm drain maintenance (on-site), efficient irrigation and landscape maintenance, and etcetera until the property is sold or transferred.

9. Acknowledgment:

As the property owner or developer, I understand that this project is required to install and implement permanent LID Storm Water Best Management Practices pursuant to the requirements of the San Bernardino County MS4 Permit and to document those BMPs in the submittal of a Water Quality Management Plan, which is binding on any current or successive owners of this property.

Yes	X	No	



10. Exemption Signature:

As the property owner or developer, I understand that this project is not required by the San Bernardino County MS4 Permit to install and implement permanent LID Storm Water Best Management Practices and will not be required to submit a Water Quality Management Plan.

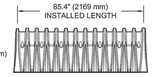
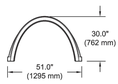
STORMTECH DC-780 CHAMBER



Designed to meet the most stringent industry performance standards for superior structural integrity while providing designers with a cost-effective method to save valuable land and protect water resources. The StormTech system is designed primarily to be used under parking lots, thus maximizing land usage for private (commercial) and public applications. StormTech chambers can also be used in conjunction with Green Infrastructure, thus enhancing the performance and extending the service life of these practices.

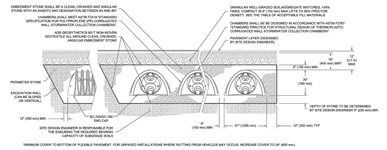


- 12' (3.6 m) Deep Cover Applications
- Designed in accordance with ASTM F 2787 and produced to meet the ASTM 2418 product standard.
- AASHTO safety factors provided for AASHTO Design Truck (H20 and deep cover conditions.)

STORMTECH DC-780 CHAMBER
(not to scale)

Nominal Chamber Specifications

Size (L x W x H)
85.4" x 51.0" x 30.0"
2,170 mm x 1,295 mm x 762 mm



Chamber Storage
46.2 ft³ (1.30 m³)

Min. Installed Storage*
78.4 ft³ (2.20 m³)

Weight
80.0 lbs (36.3 kg)

Shipping
24 chambers/pallet
60 end caps/pallet
12 pallets/truck

*Assumes 9" (230 mm) stone below, 6" (150 mm) row spacing and 40% stone porosity.

DC-780 CUMULATIVE STORAGE VOLUMES PER CHAMBER

Assumes 40% Stone Porosity. Calculations are Based
Upon a 9" (230 mm) Stone Base Under Chambers.

Depth of Water in System Inches (mm)		Cumulative Chamber Storage ft³ (m³)	Total System Cumulative Storage ft³ (m³)
45 (1,143)		46.27 (1.310)	78.47 (2.222)
44 (1,118)		46.27 (1.310)	77.34 (2.190)
43 (1,092)	Stone Cover	46.27 (1.310)	76.21 (2.158)
42 (1,067)		46.27 (1.310)	75.09 (2.126)
41 (1,041)		46.27 (1.310)	73.96 (2.094)
40 (1,016)		46.27 (1.310)	72.83 (2.062)
39 (991)		46.27 (1.310)	71.71 (2.030)
38 (965)		46.21 (1.309)	70.54 (1.998)
37 (940)		46.04 (1.304)	69.32 (1.963)
36 (914)		45.76 (1.296)	68.02 (1.926)
35 (889)		45.10 (1.278)	66.53 (1.884)

18 (457)		19.26 (0.545)	31.84 (0.902)
17 (432)		17.24 (0.488)	29.50 (0.835)
16 (406)		15.19 (0.430)	27.14 (0.769)
15 (381)		13.10 (0.371)	24.76 (0.701)
14 (356)		10.98 (0.311)	22.36 (0.633)
13 (330)		8.83 (0.250)	19.95 (0.565)
12 (305)		6.66 (0.189)	17.52 (0.496)
11 (279)		4.46 (0.126)	15.07 (0.427)
10 (254)		2.24 (0.064)	12.61 (0.357)

Depth of Water in System Inches (mm)		Cumulative Chamber Storage ft³ (m³)	Total System Cumulative Storage ft³ (m³)
9 (229)		0 (0)	10.14 (0.287)
8 (203)		0 (0)	9.01 (0.255)
7 (178)		0 (0)	7.89 (0.223)
6 (152)	Stone Foundation	0 (0)	6.76 (0.191)
5 (127)		0 (0)	5.63 (0.160)
4 (102)		0 (0)	4.51 (0.128)
3 (76)		0 (0)	3.38 (0.096)
2 (51)		0 (0)	2.25 (0.064)
1 (25)		0 (0)	1.13 (0.032)

Note: Add 1.13 ft³ (0.032 m³) of Storage for Each Additional Inch (25 mm) of Stone Foundation.

STORAGE VOLUME PER CHAMBER FT³ (M³)

	Bare Chamber Storage ft³ (m³)	Chamber and Stone Foundation Depth in. (mm)		
		9" (230 mm)	12" (300 mm)	18" (450 mm)
DC-780 Chamber	78.4 (2.2)	78.4 (2.2)	81.8 (2.3)	88.6 (2.5)

Note: Assumes 40% porosity for the stone, the bare chamber volume, 6" (150 mm) of stone above, and 6" (150 mm) row spacing.

AMOUNT OF STONE PER CHAMBER

ENGLISH TONS (yds3)	Stone Foundation Depth		
	9"	12"	18"
DC-780 Chamber	4.2 (3.0)	4.7 (3.3)	5.6 (3.9)
METRIC KILOGRAMS (m³)	230 mm	300 mm	450 mm
DC-780 Chamber	3,810 (2.3)	4,264 (2.5)	5,080 (3.0)

Note: Assumes 9" (150 mm) of stone above, and between chambers.

VOLUME EXCAVATION PER CHAMBER YD³ (M³)

	Stone Foundation Depth		
	9" (230 mm)	12" (300 mm)	18" (450 mm)
DC-780 Chamber	5.9 (4.5)	6.3 (4.8)	6.9 (5.3)

Note: Assumes 6" (150 mm) separation between chamber rows and 18" (450 mm) of cover. The volume of excavation will vary as depth of cover increases.

[1] Precipitation frequency (PF) estimates in this table are based on frequency analysis of partial duration series (PDS).

Numbers in parenthesis are PF estimates at lower and upper bounds of the 90% confidence interval. The probability that precipitation frequency estimates (for a given duration and average recurrence interval) will be greater than the upper bound (or less than the lower bound) is 5%. Estimates at upper bounds are not checked against probable maximum precipitation (PMP) estimates and may be higher than currently valid PMP values.

Please refer to NOAA Atlas 14 document for more information.

Estimates from the table in CSV format: Precipitation frequency estimates Submit

Worksheet H: Factor of Safety and Design Infiltration Rate Worksheet

Factor Category		Factor Description	Assigned Weight (w)	Factor Value (v)	Product (p) p = w x v
A	Suitability Assessment	Soil assessment methods	0.25	1	0.25
		Predominant soil texture	0.25	1	0.25
		Site soil variability	0.25	1	0.25
		Depth to groundwater / impervious layer	0.25	1	0.25
		Suitability Assessment Safety Factor, $S_A = \Sigma p$			1.0
B	Design	Tributary area size	0.25	3	0.75
		Level of pretreatment/ expected sediment loads	0.25	1	0.25
		Redundancy	0.25	3	0.75
		Compaction during construction	0.25	1	0.25
		Design Safety Factor, $S_B = \Sigma p$			2.0

Combined Safety Factor, $S_{TOT} = S_A \times S_B$	2.0
Measured Infiltration Rate, inch/hr, K_M (corrected for test-specific bias)	2.60
Design Infiltration Rate, in/hr, $K_{DESIGN} = K_M / S_{TOT}$	1.30

Supporting Data

Briefly describe infiltration test and provide reference to test forms:

A site-specific infiltration test was conducted at the project site to support a minimum measured infiltration result of 2.60 in/hr. The design infiltration rate is 1.30 in/hr after applying the appropriate safety factor. This design rate is suitable for infiltration facilities.

Note: The minimum combined adjustment factor shall not be less than 2.0 and the maximum combined adjustment factor shall not exceed 9.0.

FLOW-BASED BMP DESIGN (PRETREATMENT)

Vice President – Development

Project No.: **21G228-2**

Subject: **Results of Infiltration Testing**
Proposed Industrial Development
1350 and 1375 South Woodruff Way
Ontario, California

Reference: Geotechnical Investigation, Proposed C/I Development, 1350 and 1375 South Woodruff Way, Ontario, California, prepared by Southern California Geotechnical, Inc. (SCG) for Duke Realty, SCG Project No. 21G228-1, dated November 1, 2021.

Dear Ms. Hickenbottom:

In accordance with your request, we have conducted infiltration testing at the subject site. We are pleased to present this report summarizing the results of the infiltration testing and our design recommendations.

Scope of Services

The scope of services performed for this project was in general accordance with our Proposal No. 21P427, dated September 21, 2021. The scope of services included site reconnaissance, subsurface exploration, field testing, and engineering analysis to determine the infiltration rates of the on-site soils. The infiltration testing was performed in general accordance with the guidelines published in the Riverside County – Low Impact Development BMP Design Handbook – Section 2.3 of Appendix A, prepared for the Riverside County Department of Environmental Health (RCDEH), dated December, 2013. The San Bernardino County standards defer to the guidelines published by the RCDEH.

Site and Project Description

The subject site is located at the address of 1350 and 1375 South Woodruff Way in Ontario, California. The site is bounded to the north by existing commercial buildings, to the west by South Rockefeller Avenue, to the south by East Jurupa Street, and to the east by Highway I-15. Woodruff Way transverses the site in a roughly north to south direction. The general location of the site is illustrated on the Site Location Map, enclosed as Plate 1 in Appendix A of this report.

The site consists of two irregularly-shaped parcels which total 16.06± acres in size. As previously noted, Woodruff Way extends north to south, dividing the site into two (2) parcels, east and west. The site is presently developed as the Citrus Motors automobile dealership. The eastern parcel is

developed with one building, 158,000± ft^2 in size, that includes a Ford dealership, service facility and body shop. The western parcel is developed with a 14,000± ft^2 building that is a Kia dealership. Both buildings are surrounded by asphaltic concrete pavements, with some areas of concrete flatwork and landscape planters.

Detailed topographic information was not available at the time of this report. Based on elevations obtained from Google Earth and visual observations made at the time of the subsurface investigation, the western parcel slopes downward to the southeast at a gradient of 1± percent. The western parcel possesses 2 to 4± feet maximum topographic relief. The eastern parcel slopes downward to the southwest at a gradient of less than 1± percent. The eastern parcel possesses 5± feet maximum topographic relief.

Proposed Development

Two potential site plans depicting the scope of the proposed development were provided by the client. Site Plan 1 depicts a development comprised of a single building, 352,240 ft^2 in size, located in the north-central region of the overall site. This structure would include dock high doors on most of the south side of the building. Site Plan 2 depicts two (2) buildings, one on each side of Woodruff Way. Building 1 will be located on the eastern parcel and will be 236,400± ft^2 in size. This building will include dock doors on the eastern side of the structure. Building 2 will be located on the western parcel and will be 135,870+ ft^2 in size, with dock doors on the eastern side of the structure. We expect that the buildings will be surrounded by asphaltic concrete pavements in the parking and drive areas, Portland cement concrete pavements in the truck court areas, with isolated areas of concrete flatwork and landscape planters. The proposed development will require the abandonment of the portion of Woodruff Way which extends across the project site.

We understand that the proposed development will include on-site stormwater infiltration. The infiltration system is expected to consist of a below-grade chamber system located in the southern region of the site. The bottom of the chamber system is expected to be 14± feet below existing site grades.

Concurrent Study

SCG concurrently conducted a geotechnical investigation at the subject site, referenced above. As a part of this study, seven (7) borings (identified as Boring Nos. B-1 through B-7) were advanced to depths of 20 to 25± feet below the existing site grades, asphaltic concrete (AC) pavements were encountered at the ground surface at all of the boring locations. At these locations, the pavement sections consisted of 2 to 4± inches of asphaltic concrete, underlain by 4 to 6± inches of aggregate base. Artificial fill soils were encountered beneath the existing pavements at all of the boring locations, extending to depths of 2½ to 4½± feet below the existing site grades. The fill soils generally consisted of very loose to medium dense silty fine sands, fine sandy silts and fine to medium sands with varying coarse sand and fine to coarse gravel content. The fill soils possessed a disturbed appearance, resulting in their classification as artificial fill. Native alluvium was encountered beneath the artificial fill at all of the boring locations, extending to at least the maximum explored depth of 25± feet below existing site grades. The alluvium consisted of loose to medium dense silty fine sands, fine sands, fine to medium sands, and fine sandy silts, with varying gravel content.

Groundwater

Free water was not encountered during the drilling of any of the borings. Based on the lack of any water within the borings, and the moisture contents of the recovered soil samples, the static groundwater table is considered to have existed at a depth in excess of 25± feet at the time of the subsurface exploration.

As part of our research, we reviewed readily available groundwater data in order to determine regional groundwater depths. Recent water level data was obtained from the California Department of Water Resources website, http://www.water.ca.gov/waterdatalibrary/. The nearest monitoring well on record is located approximately ½± mile southwest of the site. Water level readings within this monitoring well indicate a groundwater level of 277± feet below the ground surface in March 2021.

Subsurface Exploration

Scope of Exploration

The subsurface exploration conducted for the infiltration testing consisted of two (2) infiltration test borings, advanced to a depth of 14± feet below the existing site grades. The infiltration borings were advanced using a truck-mounted drilling rig, equipped with 8-inch-diameter hollow-stem augers and were logged during drilling by a member of our staff. The approximate locations of the infiltration test borings (identified as I-1 and I-2) are indicated on the Infiltration Test Location Plans, enclosed as Plates 2A and 2B of this report.

Upon the completion of the infiltration borings, the bottom of each test boring was covered with 2± inches of clean ¾-inch gravel. A sufficient length of 3-inch-diameter perforated PVC casing was then placed into each test hole so that the PVC casing extended from the bottom of the test hole to the ground surface. Clean ¾-inch gravel was then installed in the annulus surrounding the PVC casing.

Geotechnical Conditions

Artificial fill soils were encountered at the ground surface at both of the infiltration boring locations, extending to a depth of 3± below the existing site grades. The fill soils generally consist of loose fine sands and silty fine sands with varying gravel content. The fill soils possess a disturbed mottled appearance resulting in their classification as artificial fill.

Native alluvial soils were encountered beneath the fill soils at both of the infiltration boring locations, extending to at least the maximum depth explored of 14± feet below the existing site grades. The alluvial soils generally consist of very loose to medium dense fine sands and fine to coarse sands and occasional silty fine to medium sands. Infiltration Test No. I-1 encountered some fine gravel at depths ranging from 12½± to 14± feet. The Boring Logs, which illustrate the conditions encountered at the boring locations, are included with this report.

Infiltration Testing

As previously mentioned, the infiltration testing was performed in general accordance with the guidelines published in Riverside County – Low Impact Development BMP Design Handbook – Section 2.3 of Appendix A, which apply to San Bernardino County.

Pre-soaking

In accordance with the county infiltration standards for sandy soils, all infiltration test borings were pre-soaked 2 hours prior to the infiltration testing or until all of the water had percolated through the test holes. The pre-soaking process consisted of filling test borings by inverting a full 5-gallon bottle of clear water supported over each hole so that the water flow into the hole holds constant at a level at least 5 times the hole's radius above the gravel at the bottom of each hole. Pre-soaking was completed after all of the water had percolated through the test holes.

Infiltration Testing

Following the pre-soaking process of the infiltration test borings, SCG performed the infiltration testing. Each test hole was filled with water to a depth of at least 5 times the hole's radius above the gravel at the bottom of the test holes. In accordance with the San Bernardino County guidelines, since "sandy soils" were encountered at the bottom of both of the infiltration test borings (where 6 inches of water infiltrated into the surrounding soils for two consecutive 25-minute readings), readings were taken at 10-minute intervals for a total of 1 hour at each test location. After each reading, water was added to the borings so that the depth of the water was at least 5 times the radius of the hole. The water level readings are presented on the spreadsheets enclosed with this report. The infiltration rates for each of the timed intervals are also tabulated on the spreadsheets.

The infiltration rates from the test are tabulated in inches per hour. In accordance with the typically accepted practice, it is recommended that the most conservative reading from the latter part of the infiltration tests be used as the design infiltration rate. The rates are summarized below:

Infiltration Test No.	Depth (feet)	Soil Description	Infiltration Rate (inches/hour)
I-1	14	Brown fine to coarse Sand, some fine Gravel, trace to little Silt	4.2
I-2	14	Brown Silty fine to medium Sand	2.6

Laboratory Testing

Moisture Content

The moisture contents for the recovered soil samples within the borings were determined in accordance with ASTM D-2216 and are expressed as a percentage of the dry weight. These test results are presented on the Boring Logs.

Grain Size Analysis

The grain size distribution of selected soils collected from the base of each infiltration test boring have been determined using a range of wire mesh screens. These tests were performed in general accordance with ASTM D-422 and/or ASTM D-1140. The weight of the portion of the sample retained on each screen is recorded and the percentage finer or coarser of the total weight is calculated. The results of these tests are presented on Plates C-1 and C-2 of this report.

Design Recommendations

Two (2) infiltration tests were performed at the subject site. As noted above, the infiltration rates at these locations vary from 2.6 to 4.1 inches per hour. Based on the infiltration test results, we recommend an infiltration rate of 2.6 inches per hour to be used for the proposed below-grade chamber system in the southern region of the site, if the system extends to a depth of 14 feet below the existing grades.

We recommend that a representative from the geotechnical engineer be on-site during the construction of the proposed infiltration system to identify the soil classification at the base of the system. It should be confirmed that the soils at the base of the proposed infiltration system correspond with those presented in this report to ensure that the performance of the system will be consistent with the rate reported herein.

The design of the storm water infiltration system should be performed by the project civil engineer, in accordance with the City of Ontario and/or County of San Bernardino guidelines. It is recommended that the system be constructed so as to facilitate removal of silt and clay, or other deleterious materials from any water that may enter the system. The presence of such materials would decrease the effective infiltration rate. **It is recommended that the project civil engineer apply an appropriate factor of safety. The infiltration rate recommended above is based on the assumption that only clean water will be introduced to the subsurface profile. Any fines, debris, or organic materials could significantly impact the infiltration rate.** It should be noted that the recommended infiltration rates are based on infiltration testing at two (2) discrete locations and that the overall infiltration rate of the proposed infiltration system could vary considerably.

Infiltration Rate Considerations

The infiltration rates presented herein was determined in accordance with the San Bernardino County guidelines and are considered valid only for the time and place of the actual test. Varying subsurface conditions will exist in other areas of the site, which could alter the recommended infiltration rates presented above. The infiltration rates will decline over time between maintenance cycles as silt or clay particles accumulate on the BMP surface. The infiltration rate is highly dependent upon a number of factors, including density, silt and clay content, grainsize distribution throughout the range of particle sizes, and particle shape. Small changes in these factors can cause large changes in the infiltration rates.

Infiltration rates are based on unsaturated flow. As water is introduced into soils by infiltration, the soils become saturated and the wetting front advances from the unsaturated zone to the saturated zone. Once the soils become saturated, infiltration rates become zero, and water can only move through soils by hydraulic conductivity at a rate determined by pressure head and soil

permeability. Changes in soil moisture content will affect the infiltration rate. Infiltration rates should be expected to decrease until the soils become saturated. Soil permeability values will then govern groundwater movement. Permeability values may be on the order of 10 to 20 times less than infiltration rates. The system designer should incorporate adequate factors of safety and allow for overflow design into appropriate traditional storm drain systems, which would transport storm water off-site.

Construction Considerations

The infiltration rates presented in this report are specific to the tested locations and tested depths. Infiltration rates can be significantly reduced if the soils are exposed to excessive disturbance or compaction during construction. Compaction of the soils at the bottom of the infiltration system can significantly reduce the infiltration ability of the basins. Therefore, the subgrade soils within proposed infiltration system areas should not be over-excavated, undercut or compacted in any significant manner. **It is recommended that a note to this effect be added to the project plans and/or specifications.**

We recommend that a representative from the geotechnical engineer be on-site during the construction of the proposed infiltration systems to identify the soil classification at the base of each system. It should be confirmed that the soils at the base of the proposed infiltration systems correspond with those presented in this report to ensure that the performance of the systems will be consistent with the rates reported herein.

We recommend that scrapers and other rubber-tired heavy equipment not be operated on the basin bottom, or at levels lower than 2 feet above the bottom of the system, particularly within basins. As such, the bottom 24 inches of the infiltration systems should be excavated with non-rubber-tired equipment, such as excavators.

Chamber Maintenance

The proposed project may include infiltration basins. Water flowing into these basins will carry some level of sediment. Wind-blown sediments and erosion of the basin side walls will also contribute to sediment deposition at the bottom of the basin. This layer has the potential to significantly reduce the infiltration rate of the basin subgrade soils. Therefore, a formal basin maintenance program should be established to ensure that these silt and clay deposits are removed from the basin on a regular basis. Appropriate vegetation on the basin sidewalls and bottom may reduce erosion and sediment deposition.

Basin maintenance should also include measures to prevent animal burrows, and to repair any burrows or damage caused by such. Animal burrows in the basin sidewalls can significantly increase the risk of erosion and piping failures.

Location of Infiltration Systems

The use of on-site storm water infiltration systems carries a risk of creating adverse geotechnical conditions. Increasing the moisture content of the soil can cause the soil to lose internal shear strength and increase its compressibility, resulting in a change in the designed engineering properties. Overlying structures and pavements in the infiltration area could potentially be damaged due to saturation of the subgrade soils. **The proposed infiltration systems for this**

site should be located at least 25 feet away from any structures, including retaining walls. Even with this provision of locating the infiltration system at least 25 feet from the building(s), it is possible that infiltrating water into the subsurface soils could have an adverse effect on the proposed or existing structures. It should also be noted that utility trenches which happen to collect storm water can also serve as conduits to transmit storm water toward the structure, depending on the slope of the utility trench. Therefore, consideration should also be given to the proposed locations of underground utilities which may pass near the proposed infiltration system.

The infiltration system designer should also give special consideration to the effect that the proposed infiltration systems may have on nearby subterranean structures, open excavations, or descending slopes. In particular, infiltration systems should not be located near the crest of descending slopes, particularly where the slopes are comprised of granular soils. Such systems will require specialized design and analysis to evaluate the potential for slope instability, piping failures and other phenomena that typically apply to earthen dam design. This type of analysis is beyond the scope of this infiltration test report, but these factors should be considered by the infiltration system designer when locating the infiltration systems.

Closure

We sincerely appreciate the opportunity to be of service on this project. We look forward to providing additional consulting services during the course of the project. If we may be of further assistance in any manner, please contact our office.

BORING LOG LEGEND

SAMPLE TYPE	GRAPHICAL SYMBOL	SAMPLE DESCRIPTION
AUGER		SAMPLE COLLECTED FROM AUGER CUTTINGS, NO FIELD MEASUREMENT OF SOIL STRENGTH. (DISTURBED)
CORE		ROCK CORE SAMPLE: TYPICALLY TAKEN WITH A DIAMOND-TIPPED CORE BARREL. TYPICALLY USED ONLY IN HIGHLY CONSOLIDATED BEDROCK.
GRAB		SOIL SAMPLE TAKEN WITH NO SPECIALIZED EQUIPMENT, SUCH AS FROM A STOCKPILE OR THE GROUND SURFACE. (DISTURBED)
CS		CALIFORNIA SAMPLER: 2-1/2 INCH I.D. SPLIT BARREL SAMPLER, LINED WITH 1-INCH HIGH BRASS RINGS. DRIVEN WITH SPT HAMMER. (RELATIVELY UNDISTURBED)
NSR		NO RECOVERY: THE SAMPLING ATTEMPT DID NOT RESULT IN RECOVERY OF ANY SIGNIFICANT SOIL OR ROCK MATERIAL.
SPT		STANDARD PENETRATION TEST: SAMPLER IS A 1.4 INCH INSIDE DIAMETER SPLIT BARREL, DRIVEN 18 INCHES WITH THE SPT HAMMER. (DISTURBED)
SH		SHELBY TUBE: TAKEN WITH A THIN WALL SAMPLE TUBE, PUSHED INTO THE SOIL AND THEN EXTRACTED. (UNDISTURBED)
VANE		VANE SHEAR TEST: SOIL STRENGTH OBTAINED USING A 4 BLADED SHEAR DEVICE. TYPICALLY USED IN SOFT CLAYS-NO SAMPLE RECOVERED.

COLUMN DESCRIPTIONS

DEPTH: Distance in feet below the ground surface.

SAMPLE: Sample Type as depicted above.

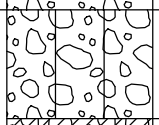
BLOW COUNT: Number of blows required to advance the sampler 12 inches using a 140 lb hammer with a 30-inch drop. 50/3" indicates penetration refusal (>50 blows) at 3 inches. WH indicates that the weight of the hammer was sufficient to push the sampler 6 inches or more.

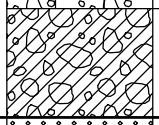
POCKET PEN.: Approximate shear strength of a cohesive soil sample as measured by pocket penetrometer.

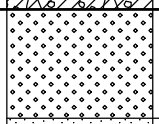
GRAPHIC LOG: Graphic Soil Symbol as depicted on the following page.

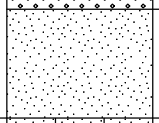
DRY DENSITY: Dry density of an undisturbed or relatively undisturbed sample in lbs/ft^3.

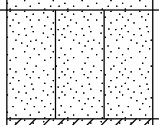
MOISTURE CONTENT: Moisture content of a soil sample, expressed as a percentage of the dry weight.

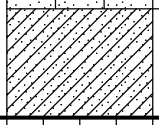


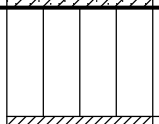


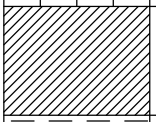


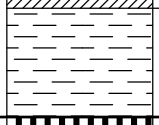


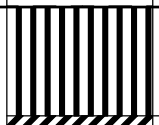


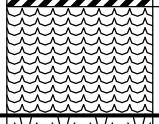


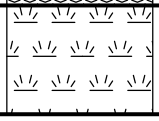












LIQUID LIMIT: The moisture content above which a soil behaves as a liquid.

PLASTIC LIMIT: The moisture content above which a soil behaves as a plastic.

PASSING #200 SIEVE: The percentage of the sample finer than the #200 standard sieve.

UNCONFINED SHEAR: The shear strength of a cohesive soil sample, as measured in the unconfined state.

INFILTRATION CALCULATIONS

Project Name	Proposed C/I Development
Project Location	Ontario. CA
Project Number	21G228-2
Engineer	Jose Zuniga

Test Hole Radius	4	(in)
Test Depth	14.00	(ft)

Infiltration Test Hole	I-1

Soil Criteria Test

Interval Number		Time	Time Interval (min)	Water Depth (ft)	Change in Water Level (in)	Did 6 inches of water seep away in less than 25 minutes?	Sandy Soils or Non-Sandy Soils?
1	Initial	8:00 AM	25.00	10.00	28.20	YES	SANDY SOILS
	Final	8:25 AM		12.35			
2	Initial	8:27 AM	25.00	10.00	27.00	YES	SANDY SOILS
	Final	8:52 AM		12.25			

Test Data

Interval Number		Time	Time Interval (min)	Water Depth (ft)	Change in Water Level (ft)	Average Head Height (ft)	Infiltration Rate Q (in/hr)
1	Initial	9:00 AM	10.00	10.00	1.35	3.33	4.64
	Final	9:10 AM		11.35			
2	Initial	9:12 AM	10.00	10.00	1.33	3.34	4.56
	Final	9:22 AM		11.33			
3	Initial	9:24 AM	10.00	10.00	1.30	3.35	4.44
	Final	9:34 AM		11.30			
4	Initial	9:36 AM	10.00	10.00	1.25	3.38	4.24
	Final	9:46 AM		11.25			
5	Initial	9:48 AM	10.00	10.00	1.23	3.39	4.16
	Final	9:58 AM		11.23			
6	Initial	10:00 AM	10.00	10.00	1.23	3.39	4.16
	Final	10:10 AM		11.23			

Per County Standards, Infiltration Rate calculated as follows:

$$Q = \frac{\Delta H(60r)}{\Delta t(r + 2H_{avg})}$$

Where: Q = Infiltration Rate (in inches per hour)
ΔH = Change in Height (Water Level) over the time interval
r = Test Hole (Borehole) Radius
Δt = Time Interval
H_{avg} = Average Head Height over the time interval

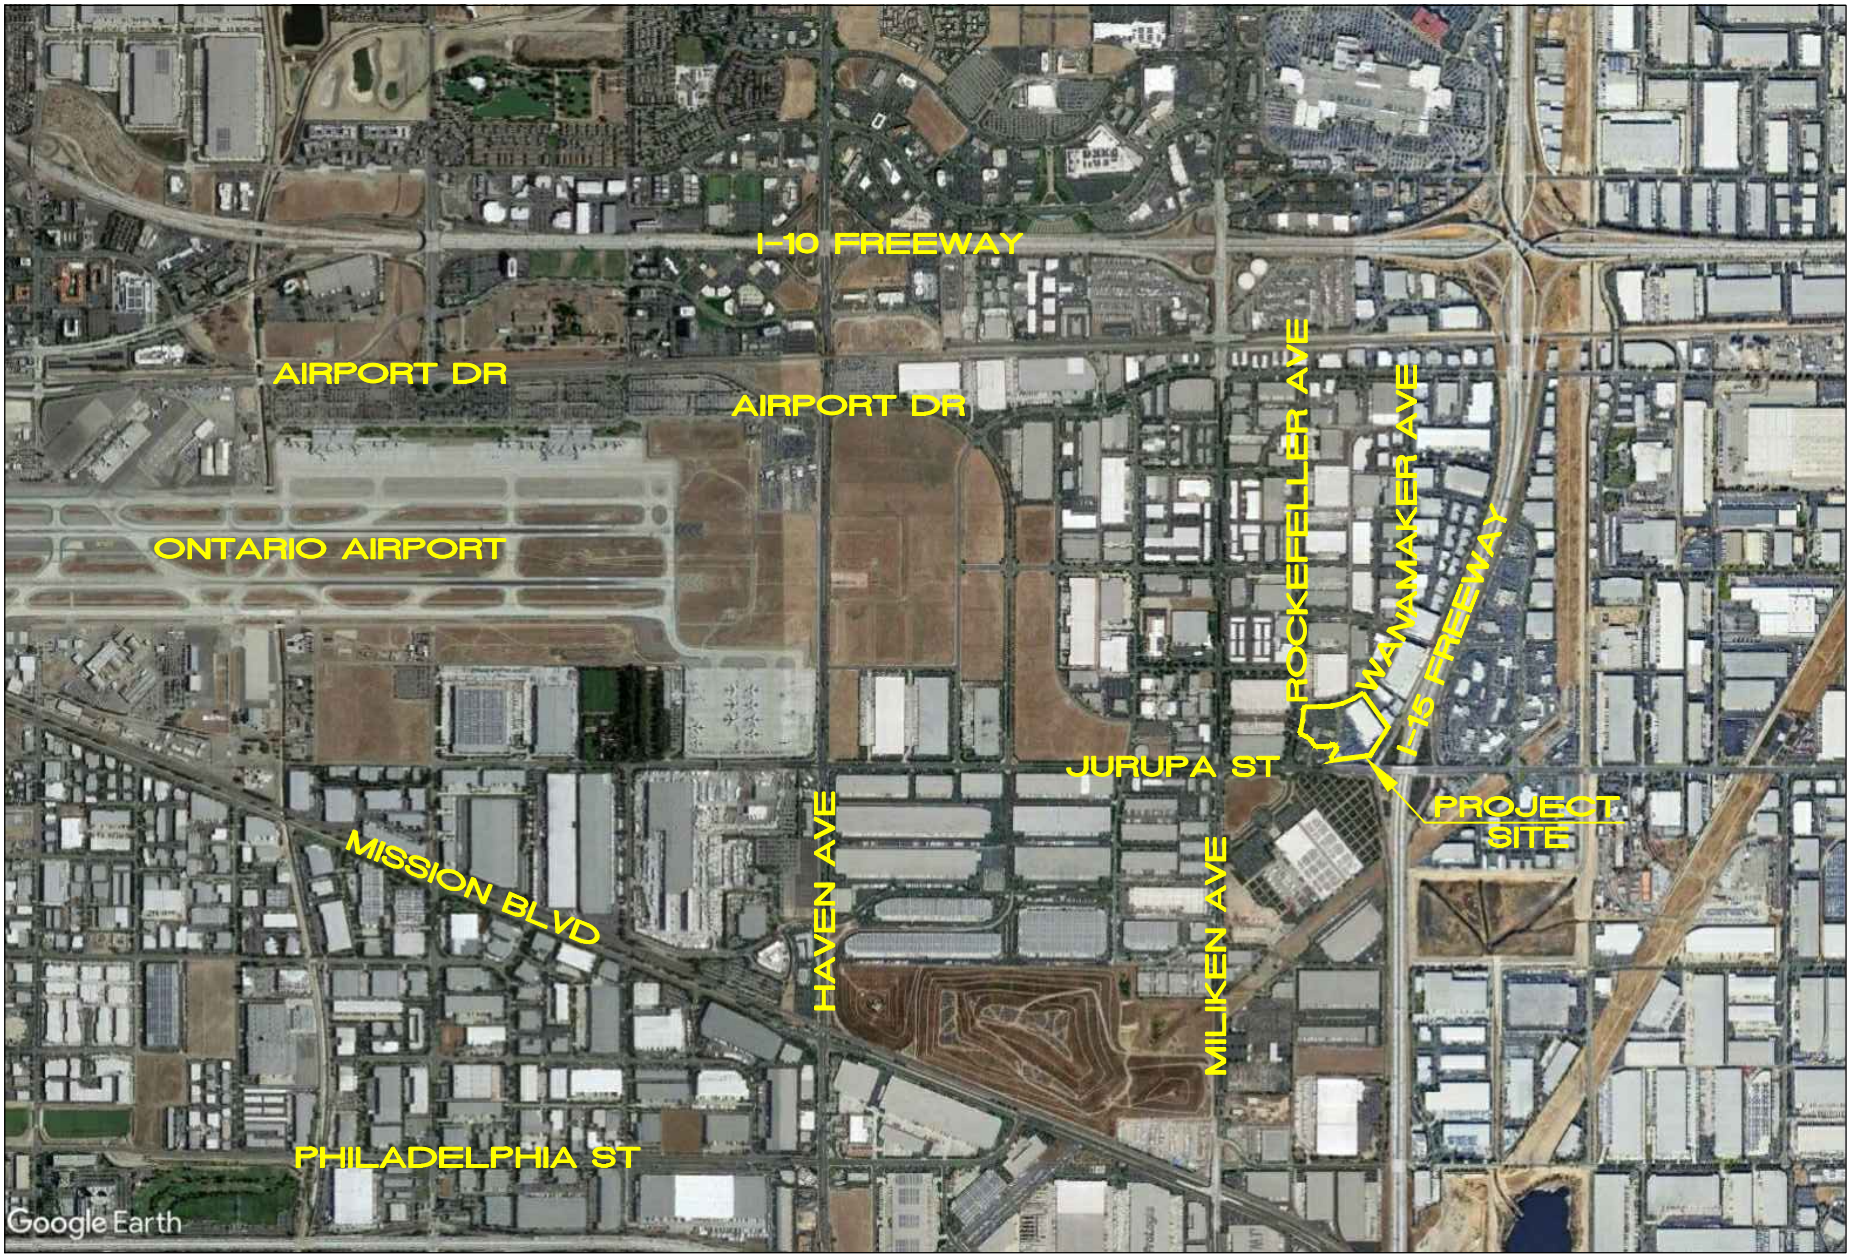
INTRODUCTION

A: PROJECT LOCATION

The project site is located on the northerly side of Jurupa Street and south of Wanamaker Avenue between Rockefeller Avenue and Ontario Freeway in the City of Ontario. See following page for vicinity map.



B: STUDY PURPOSE

The purpose of this study is to determine the existing and proposed condition 100-year peak flow rate from the site that drains to an existing 27" reinforced concrete pipe that connects to an existing 96" R.C.P. at Jurupa Avenue south of the project site.

DISCUSSION

The proposed project site encompasses approximately 16.75 acres. There is one proposed warehouse type building of approximately 344,678 square feet. A truck yard and truck parking area will be located at the south side of the building while vehicle parking is on the north, east and westerly side of the building. A paved drive aisle will be located on the easterly, westerly and southerly side of the site. There will be landscaped areas adjacent to Wanamaker Avenue, Rockefeller Avenue and Jurupa Street and other smaller areas throughout the site.

Master Plan of Drainage

The site is tabled to an existing 96" R.C.P. storm drain system in Jurupa Street as commercial development. The site is a portion of the "D18" subareas on the City Master Plan. The total 100 year peak flow for this block is approximately 85.0 cfs.

Please see Appendix "A" (Reference materials) for portions of the City's Master Plan of Drainage and downstream existing storm drain plans.

Existing Condition

The future project site is composed of two separate developed lot at existing condition. Parcel 1 LL 96-19 for the westerly lot and Parcel 2 per Parcel Map 9752 for the easterly lot. Woodruff Way, a public street is utilized as a common access road for both easterly and westerly lot. Each lot has single story type building structure with paved parking and landscaped areas throughout the site.

The Westerly Lot:

The northerly half portion of the west lot (node 100-101) drains northwesterly to an existing catch basin northwest of the site. The 100-year storm event at this location (node 101) is approximately 7.7 cfs. Runoff from the southerly half portion of the site (node 110-111) drains southeasterly to an existing catch basin at the southeast corner of the site and connects to the existing 27" RCP storm drain system at Woodruff Way. The 100-year peak flow rate at this point (node 111) is approximately 6.9 cfs. The remaining easterly portion of the west lot including the westerly half of Woodruff Way (node 200-201) will drain south to an existing catch basin southwest of Woodruff Way. The 100-year runoff discharge from this area (201) is approximately 4.0 cfs. The easterly half of Woodruff Way (node 210-211) will drain south and conveyed into an existing catch basin southeast of Woodruff Way. The 100-year storm event at this location (node 211) is approximately 2.3 cfs. Runoff from the westerly lot including Woodruff Way will be conveyed south to an existing 27" RCP south of Woodruff Way that connects to an existing 96" RCP public

storm drain system in Jurupa Street. The total 100-year peak flow rate from the westerly lot including Woodruff Way is approximately 20.9 cfs (7.7 cfs + 6.9 cfs + 4.0 cfs + 2.3 cfs).

The Easterly Lot:

The westerly half of the easterly lot (node 300-301) will drain from north to south and into an existing catch basin at the southwest corner of the site. The 100-year runoff discharge at this location (node 301) is approximately 16.2 cfs. The northeasterly portion of the site (node 310-311) will sheet flow northwesterly to an existing catch basin northeast of the site. The 100-year peak flow rate from this area (node 311) is approximately 7.6 cfs. The remaining southeasterly area (node 320-321) will drain southwesterly to an existing catch basin south of the site. The 100-year storm event at this point (node 321) is approximately 8.3 cfs. Runoff from the easterly lot will drain to a series of existing catch basins and conveyed south to an existing 27" RCP storm drain system that connects to the existing 96" RCP at Jurupa Street. The total 100-year peak flow rate tributary to the easterly lot is approximately 32.1 cfs (16.2 cfs + 8.3 cfs + 7.6 cfs). Runoff from the northerly landscaped area (node 400-401) will drain westerly to an existing street catch basin at Wanamaker Avenue northwest of the site. The 100-year peak flow rate tributary from this area (node 401) is approximately 0.9 cfs. The remaining westerly landscape area (node 410-411) adjacent to Rockefeller Avenue will drain south and ultimately discharged to an existing street catch basin northeast of Jurupa Street and Rockefeller Avenue intersection. The 100-year storm event at this point (node 411) is approximately 0.2 cfs. The total 100-year peak flow rate tributary to the project site is approximately 54.1 cfs (20.9 cfs + 32.1 cfs + 0.9 cfs + 0.2 cfs).

Offsite runoff from the sloped landscaped area south of the project site sheet flows to an existing ditch that runs southwesterly and easterly and drains to a low point where storm water is conveyed into an existing corrugated metal pipe inlet and discharged south. The storm drain inlet is located southeast of the site adjacent to Ontario freeway and east of the existing electrical pad. There is no available information from the city as to where the existing corrugated metal pipe inlet connected to downstream.

See Appendix "B" for the existing condition hydrology calculations and Appendix "C" for the Existing Condition Hydrology Map.

Proposed Condition

The easterly and westerly lot including Woodruff Way at proposed condition will be integrated into a single lot that will consist of one large warehouse type building. The truck yard including the truck parking area will be located at the south side of the building. There will be vehicle parking areas along the east, west and northeast portion of the site. Catch basins will be situated throughout the project site. A storm drain system will be installed in both east and west side of the proposed building conveying the runoff southerly that ultimately drains to the existing 96" RCP at Jurupa Street.

The westerly half of the site (node 100-103) will drain from north to south via a proposed storm drain system that connects to an existing 27" RCP downstream at Woodruff Way that ultimately discharge to an existing 96" RCP in Jurupa Street. The 100-year peak flow rate tributary to this area (node 103) is approximately 15.7 cfs.
Runoff from the northeasterly area including the easterly half of the site (node 200-223) will drain southwesterly to a series of catch basins and conveyed south via proposed storm drain line that connects to an existing 27" RCP downstream south of the project site. The 100-year runoff discharge from this area (node 223) is approximately 35.1 cfs.

The northerly landscaped area adjacent to Wanamaker Avenue (node 400-401) will sheet flow west to an existing street catch basin northwest of the site. The 100-year storm event at this location (node 401) is approximately 0.8 cfs. The remaining westerly landscaped area adjacent to Rockefeller Avenue (node 410-411) will drain east to an existing street catch basin at the intersection northeast of Jurupa Street and Rockefeller Avenue. The 100-year peak discharge at this location (node 411) is approximately 1.2 cfs.

The total 100-year peak flow rate tributary to the project site at proposed condition is approximately 52.8 cfs (15.7 cfs + 35.1 cfs + 0.8 cfs + 1.2 cfs). which is slightly less than the existing condition (54.1 cfs.). The slight reduction of runoff discharge at proposed condition is due to more landscaped areas were provided onsite and the higher time of concentration or longer runoff travel time. Overall, runoff discharge tributary to the site at proposed condition will not adversely affect the existing 96" RCP storm drain system in Jurupa Street. Detention onsite will not be required.

See Appendix "B" for the proposed condition hydrology calculations and Appendix "C" for the Proposed Condition Hydrology Map.

Methodology

Hydrology calculations were computed based on NOAA Atlas 14 Precipitation Frequency Data rainfall intensities. (See Appendix "A" for reference materials). San Bernardino County's Rational Method Program was used for Hydrology calculations. The soil type is "B" per San Bernardino County Hydrology manual.

[1] Precipitation frequency (PF) estimates in this table are based on frequency analysis of partial duration series (PDS).

Numbers in parenthesis are PF estimates at lower and upper bounds of the 90% confidence interval. The probability that precipitation frequency estimates (for a given duration and average recurrence interval) will be greater than the upper bound (or less than the lower bound) is 5%. Estimates at upper bounds are not checked against probable maximum precipitation (PMP)

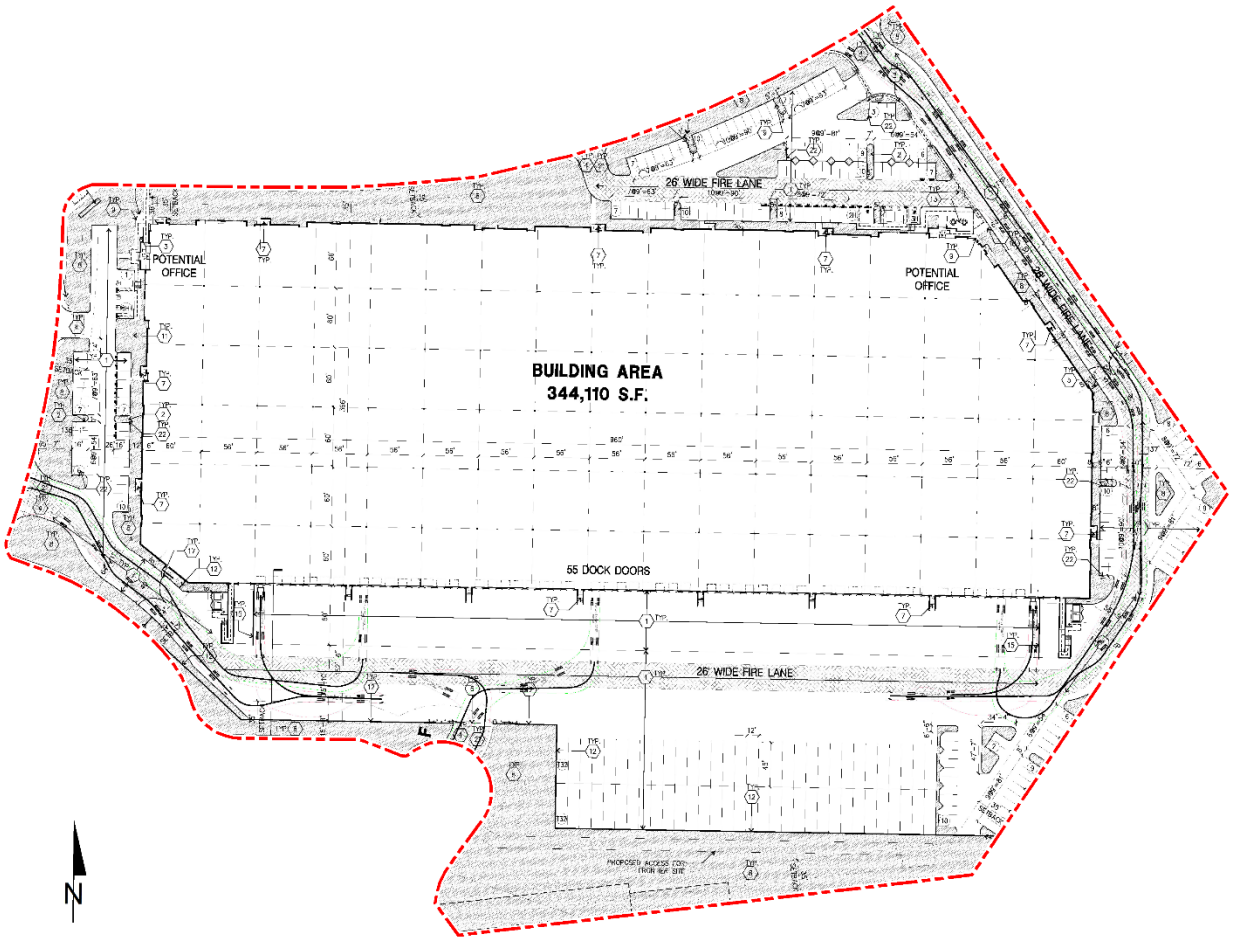
URBAN | CROSSROADS

June 5, 2023

Mr. Tom Cruikshank
Link Logistics Real Estate
915 Wilshire Blvd., Suite 2050
Los Angeles, CA 90017

SUBJECT: WOODRUFF LOGISTICS NOISE ASSESSMENT

Dear Mr. Tom Cruikshank:



Urban Crossroads, Inc. is pleased to provide the following Noise Assessment for the Woodruff Logistics development (referred to as "Project") located northeast of Jurupa Street and Rockefeller Avenue, south of Wanamaker Avenue, and straddling the existing Woodruff Way in the City of Ontario. The proposed Project includes the development of a 344,110 square foot industrial warehouse building as shown on Exhibit 1. The purpose of this Noise Assessment is to describe the potential Project-related operational and construction noise impact at the nearest noise sensitive receiver locations.

AIRPORT LAND USE COMPATIBILITY

The Project site is located approximately 1.2 miles east of the Ontario International Airport (ONT). This places the Project site within the ONT Airport Influence Area according to Policy Map 2-1 of the *Ontario International Airport Land Use Compatibility Plan (ONT ALUCP).* The ONT ALUCP was amended July 2018 to promote compatibility between airport and the land uses that surround it (1). Since the Project site is located within the ONT Airport Influence Area, the Project is subject to the Noise Criteria established on Table 2-3 in the ONT ALUCP. As shown on Exhibit 2, the Project site is located within the ONT Airport Influence Area and the 65-70 dBA CNEL airport noise impact zone consistent with Policy Map 2-3.

According to Table 2-3 of the ONT ALUCP, the Project's industrial warehouse is considered *normally compatible land use* with exterior noise levels ranging from 65-70 dBA CNEL. For *normally compatible land use,* activities associated with the land use may be carried out with minimal interference from aircraft noise.

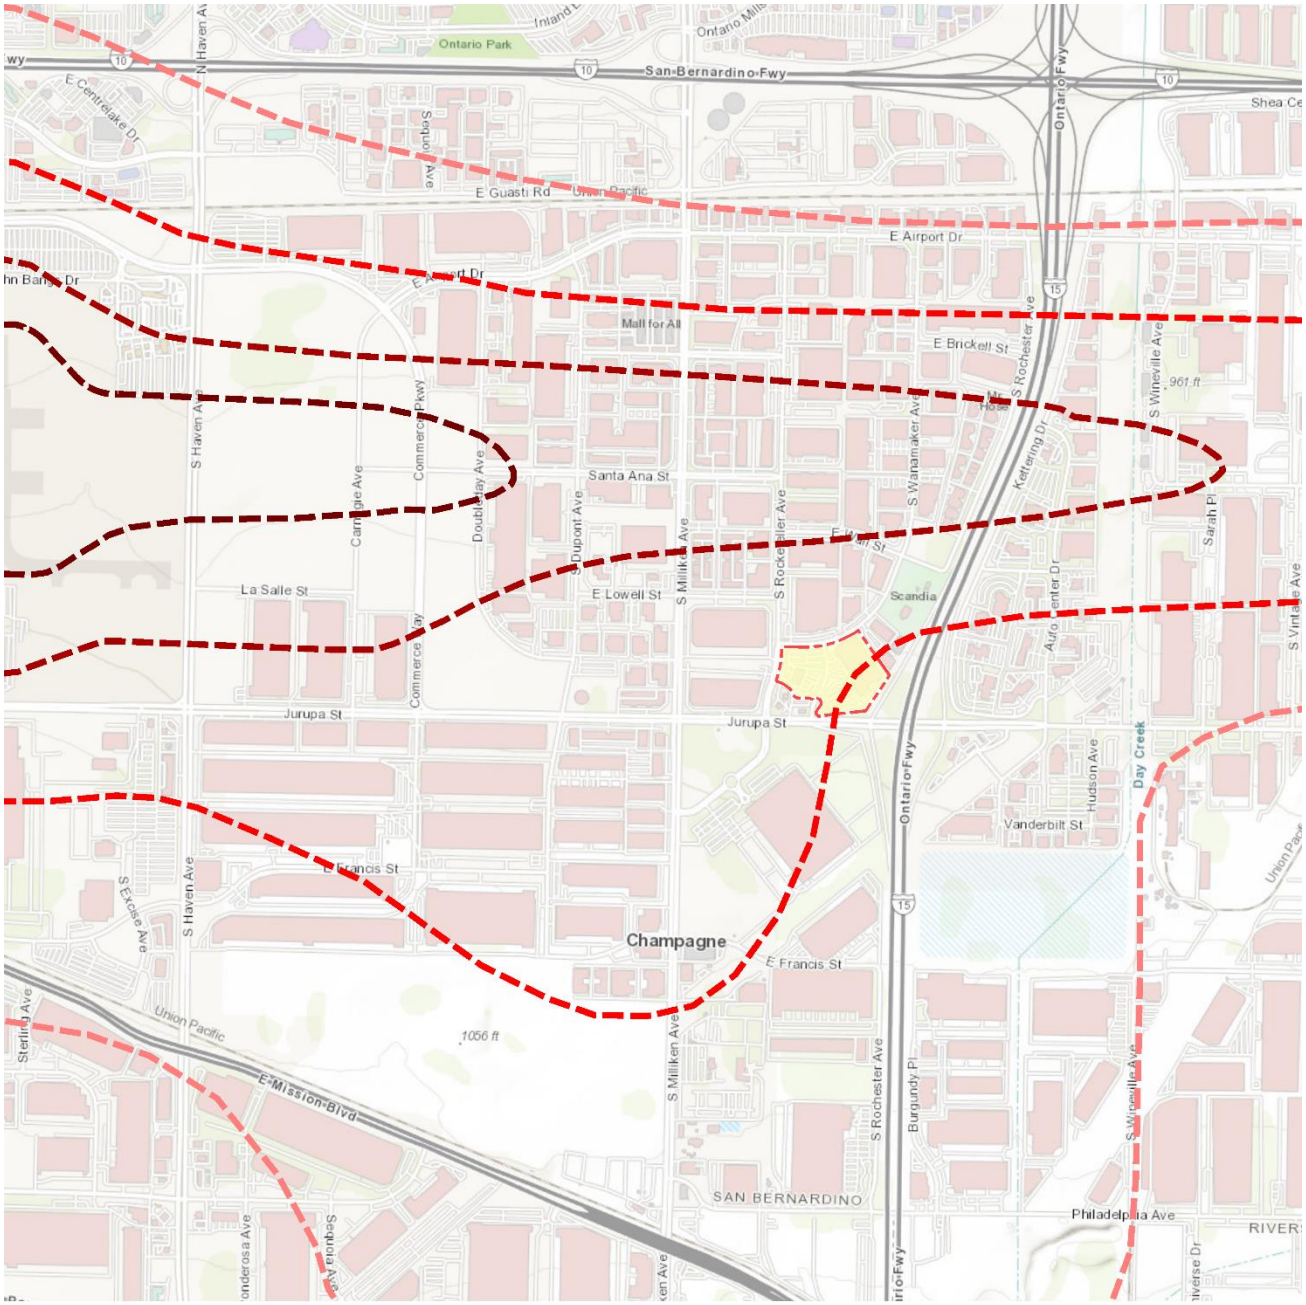


EXHIBIT A: SITE PLAN

RECEIVER LOCATIONS

To assess the potential for long-term operational and short-term construction noise impacts, the following five receiver locations, as shown on Exhibit 3, were identified as representative locations for analysis. Sensitive receivers are generally defined as locations where people reside or where the presence of unwanted sound could otherwise adversely affect the use of the land. Noise-sensitive land uses are generally considered to include schools, hospitals, single-family dwellings, mobile home parks, churches, libraries, and recreation areas. Moderately noise-sensitive land uses typically include multi-family dwellings, hotels, motels, dormitories, out-patient clinics, cemeteries, golf courses, country clubs, athletic/tennis clubs, and equestrian clubs. Land uses that are considered relatively insensitive to noise include business, commercial, and professional developments. Land uses that are typically not affected by noise include: industrial, manufacturing, utilities, agriculture, undeveloped land, parking lots, warehousing, liquid and solid waste facilities, salvage yards, and transit terminals.

EXHIBIT 2: ONT FUTURE AIRPORT NOISE CONTOURS

LEGEND:

- 65 dBA CNEL Noise Contour
- 70 dBA CNEL Noise Contour
- 75 dBA CNEL Noise Contour

Source: Ontario International ALUCP Compatibility Policy Map: Noise Impact Zones, Map 2-3 (July 2018 Amendment)

Other sensitive land uses in the Project study area that are located at greater distances than those identified in this noise study will experience lower noise levels than those presented in this report due to the additional attenuation from distance and the shielding of intervening structures. Distance is measured in a straight line from the project site boundary to each receiver location.

EXHIBIT 3: RECEIVER LOCATIONS

NOISE PREDICTION MODEL

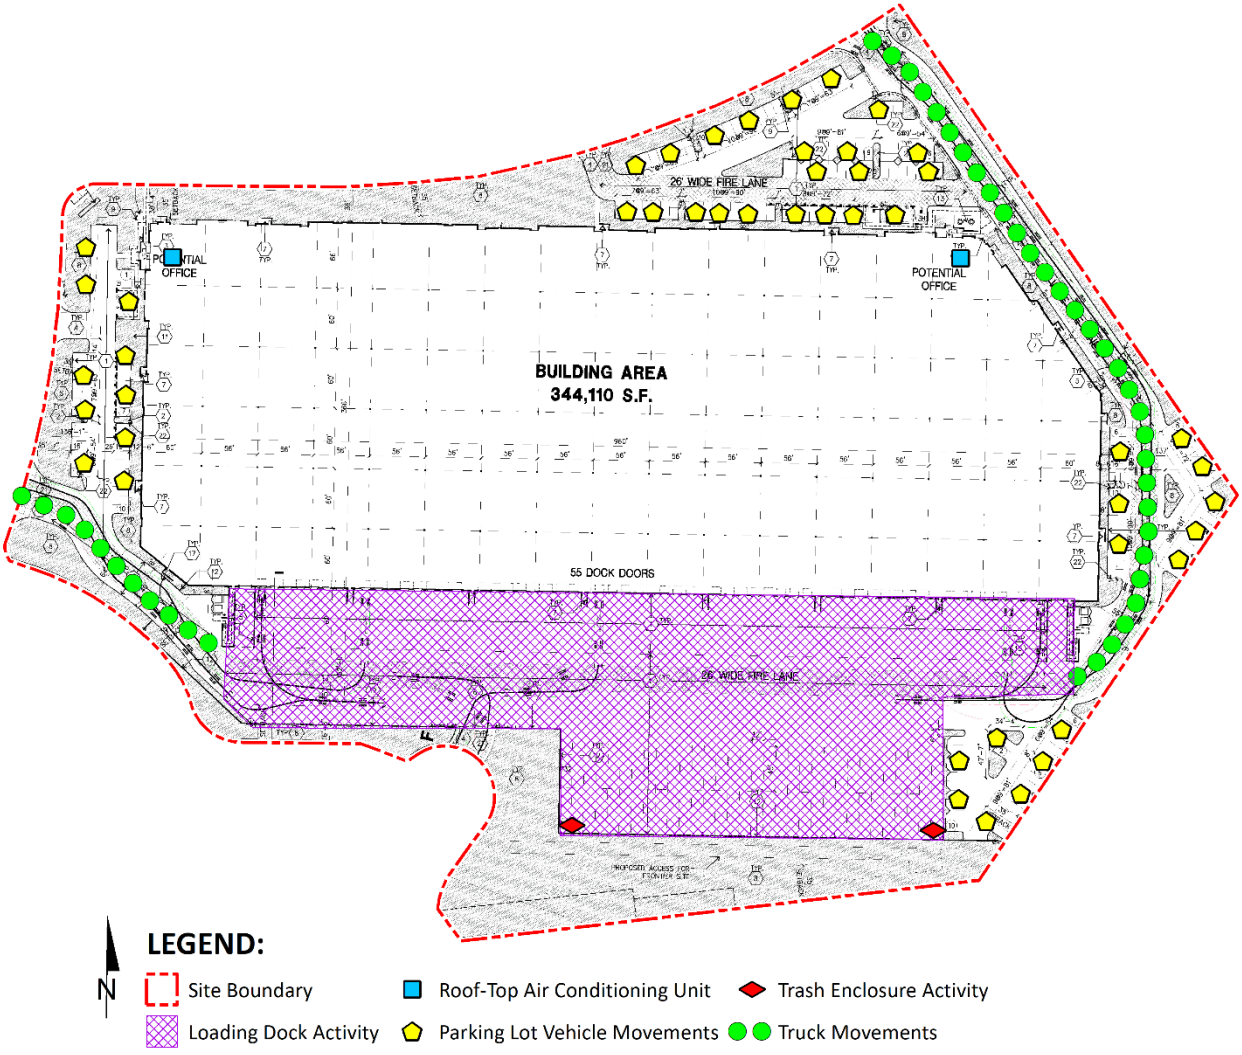
To fully describe the exterior operational noise levels from the Project, Urban Crossroads, Inc. developed a noise prediction model using the CadnaA (Computer Aided Noise Abatement) computer program. CadnaA can analyze multiple types of noise sources using the spatially accurate Project site plan, georeferenced Nearmap aerial imagery, topography, buildings, and barriers in its calculations to predict outdoor noise levels. Using the ISO 9613-2 protocol, CadnaA will calculate the distance from each noise source to the noise receiver locations, using the ground absorption, distance, and barrier/building attenuation inputs to provide a summary of noise level at each receiver and the partial noise level contributions by noise source. The noise level calculations provided in this noise assessment account for the distance attenuation provided due to geometric spreading, when sound from a localized stationary source (i.e., a point source) propagates uniformly outward in a spherical pattern. A default ground attenuation factor of 0.5 was used in the noise analysis to account for mixed ground representing a combination of hard and soft surfaces.

OPERATIONAL NOISE ANALYSIS

This section analyzes the potential stationary-source operational noise impacts at the nearby receiver locations resulting from the operation of the proposed Woodruff Logistics Project. This operational noise analysis is intended to describe noise level impacts associated with the expected typical of daytime and nighttime activities at the Project site. The on-site Project-related noise sources are expected to include loading dock activity, truck movements, roof-top, air-conditioning units, parking lot vehicle movements, and trash enclosure activity.

OPERATIONAL NOISE STANDARDS

To analyze noise impacts originating from a designated fixed location or private property such as the Woodruff Logistics Project, stationary-source (operational) noise such as the proposed loading dock activity, truck movements, roof-top, air-conditioning units, parking lot vehicle movements, and trash enclosure activity. are typically evaluated against standards established under a City's Municipal Code. Compliance with the City's Noise Ordinance would result in noise levels that are acceptable to the city and would result in less than significant noise impacts from stationary sources.



The City of Ontario Municipal Code, Title 5, Chapter 29 Section 5-29.04(a) identifies the allowable daytime and nighttime ambient exterior noise standards for each land use type. For Manufacturing and Industrial land uses (Noise Zone V), such as the Project, ambient exterior noise levels may not exceed 70 dBA L_{eq}. For residential land uses (Noise Zone I), ambient exterior noise levels may not exceed 65 dBA L_{eq} during the daytime hours (7:00 a.m. to 10:00 p.m.) and may not exceed 45 dBA L_{eq} during the nighttime hours (10:00 p.m. to 7:00 a.m.) (2).

OPERATIONAL NOISE SOURCES

To estimate the Project service commercial land use operational noise impacts, reference noise level measurements were collected from similar types of activities to represent the noise levels expected with the development of the proposed Project. While sound pressure levels (e.g., L_{eq}) quantify in decibels the intensity of given sound sources at a reference distance, sound power levels (L_w) are connected to the sound source and are independent of distance. Sound pressure levels vary substantially with distance from the source and diminish because of intervening obstacles and barriers, air absorption, wind, and other factors. Sound power is the acoustical energy emitted by the sound source and is an absolute value that is not affected by the environment. The reference project operational noise levels are based on the Project related noise sources shown on Exhibit 4. The reference project operational sound power levels are summarized below:

- Loading Dock Activity: 111.5 dBA L_w based on reference noise level measurements collected by Urban Crossroads, Inc. This includes truck idling, deliveries, backup alarms, trailer docking including a combination of tractor trailer semi-trucks, two-axle delivery trucks, and background operation activities.
- Truck Movements: 93.2 dBA L_w based on reference noise level measurements describing truck movements collected by Urban Crossroads, Inc. This includes trucks entering and existing the Project driveways and maneuvering in and out of the outdoor loading dock activity area.
- A/C Condenser Units: Represents a Lennox SCA120 series 10-ton model packaged air conditioning unit with a reference sound power level of 88.9 dBA L_w.
- Parking Lot Vehicle Movements: 84.3 dBA L_w based on reference noise level measurements describing warehouse parking lot vehicle activity collected by Urban Crossroads, Inc.
- Trash Enclosure Activity: 89.0 dBA L_w based on reference noise level measurements describing trash enclosure event activity collected by Urban Crossroads, Inc.

EXHIBIT 4: OPERATIONAL NOISE SOURCE LOCATIONS

OPERATIONAL NOISE LEVEL COMPLIANCE

Using the reference noise levels to represent the proposed Project operations that include loading dock activity, truck movements, roof-top, air-conditioning units, parking lot vehicle movements, and trash enclosure activity., Urban Crossroads, Inc. calculated the operational source noise levels that are expected to be generated at the Project site and the Project-related noise level increases that would be experienced at each of the sensitive receiver locations. Table 1 shows that the Project operational noise levels at the off-site receiver locations are expected to range from 20.1 to 25.5 dBA L_{eq}. Appendix A includes the detailed CadnaA operational noise model inputs and calculations.

TABLE 1: OPERATIONAL NOISE LEVEL COMPLIANCE

Receiver Location[1]	Project Operational Noise Levels (dBA Leq)[2]		Noise Level Standards (dBA Leq)[3]		Noise Level Standards Exceeded?[4]	
	Daytime	Nighttime	Daytime	Nighttime	Daytime	Nighttime
R1	21.9	21.8	65.0	45.0	No	No
R2	24.4	24.3	65.0	45.0	No	No
R3	20.1	20.1	65.0	45.0	No	No
R4	25.4	25.4	65.0	45.0	No	No
R5	25.5	25.5	65.0	45.0	No	No

[1] See Exhibit 3 for the receiver locations.
[2] Proposed Project operational noise level calculations are included in Appendix A.
[3] Section 5-29.04 of the City of Ontario Municipal Code.
[4] Do the estimated Project operational noise source activities exceed the noise level standards?
"Daytime" = 7:00 a.m. to 10:00 p.m.; "Nighttime" = 10:00 p.m. to 7:00 a.m.

Table 1 shows that the unmitigated operational noise levels associated with Woodruff Logistics Project will not exceed the City of Ontario exterior noise level standards. Therefore, the operational noise impacts are considered *less than significant* at the nearest noise-sensitive receiver locations.

CONSTRUCTION NOISE STANDARDS

The City of Ontario has set restrictions to control noise impacts associated with construction. Section 5-29.09 of the Municipal Code states: No person, while engaged in construction, remodeling, digging, grading, demolition or any other related building activity, shall operate any tool, equipment or machine in a manner that produces loud noise that disturbs a person of normal sensitivity who works or resides in the vicinity, or a Police or Code Enforcement Officer, on any weekday except between the hours of 7:00 a.m. and 6:00 p.m. or on Saturday or Sunday between the hours of 9:00 a.m. and 6:00 p.m. (2) While the City establishes limits to the hours during which construction activity may take place, it does not identify specific noise level limits for construction noise levels at potentially affected receiver locations for CEQA analysis purposes. Therefore, a numerical construction threshold based on Federal Transit Administration (FTA) Transit Noise and Vibration Impact Assessment Manual is used for analysis of daytime construction impacts, as discussed below.

According to the FTA, local noise ordinances are typically not very useful in evaluating construction noise. They usually relate to nuisance and hours of allowed activity, and sometimes specify limits in terms of maximum levels, but are generally not practical for assessing the impact of a construction project. Project construction noise criteria should account for the existing noise environment, the absolute noise levels during construction activities, the duration of the construction, and the adjacent land use. Due to the lack of standardized construction noise thresholds, the FTA provides guidelines that can be considered reasonable criteria for construction noise assessment. The FTA considers a daytime exterior construction noise level of 80 dBA Leq as a reasonable threshold for noise sensitive residential land use. (3 p. 179)

CONSTRUCTION REFERENCE NOISE LEVELS

To describe construction noise activities, this construction noise analysis was prepared using reference construction equipment noise levels from the Federal Highway Administration (FHWA) published the Roadway Construction Noise Model (RCNM), which includes a national database of construction equipment reference noise emission levels. (4) The RCNM equipment database, provides a comprehensive list of the noise generating characteristics for specific types of construction equipment. In addition, the database provides an acoustical usage factor to estimate the fraction of time each piece of construction equipment is operating at full power (i.e., its loudest condition) during a construction operation.

CONSTRUCTION NOISE ANALYSIS

Using the reference construction equipment noise levels and the CadnaA noise prediction model, calculations of the Project construction noise level impacts at the nearby sensitive receiver locations were completed. Consistent with FTA guidance for general construction noise assessment, Table the combined noise levels for the loudest construction equipment, assuming they operate at the same time is estimated 115 dBA Lw. As shown on Table 2, the construction noise levels are expected to range from 30.3 to 42.1 dBA L_{eq} at the nearby receiver locations. Appendix B includes the detailed CadnaA construction noise model inputs.

TABLE 2: CONSTRUCTION NOISE LEVEL COMPLIANCE

Receiver Location[1]	Construction Noise Levels (dBA L_{eq})		
	Highest Construction Noise Levels[2]	Threshold[3]	Threshold Exceeded?[4]
R1	38.1	80	No
R2	42.1	80	No
R3	30.3	80	No
R4	35.5	80	No
R5	35.7	80	No

[1] Noise receiver locations are shown on Exhibit 3.
[2] Highest construction noise level calculations based on distance from the construction noise source activity to the nearest receiver locations.
[3] Federal Transit Administration, Transit Noise and Vibration Impact Assessment Manual.
[4] Do the estimated Project construction noise levels exceed the construction noise level threshold?

To evaluate whether the Project will generate potentially significant short-term noise levels at nearest receiver locations, a construction-related daytime noise level threshold of 80 dBA L_{eq} is used as a reasonable threshold to assess the daytime construction noise level impacts. Table 3 shows that the unmitigated construction noise levels associated with Woodruff Logistics Project will not exceed will not exceed the reasonable daytime 80 dBA L_{eq} significance threshold during Project construction activities. Therefore, the operational noise impacts are considered less than significant at the nearest noise-sensitive receiver locations.

CONCLUSIONS

This Noise Assessment demonstrates that the operational noise levels associated with Woodruff Logistics Project will not exceed the City of Ontario exterior noise level standards at all nearby receiver locations. Therefore, the project related noise impacts are considered *less than significant* at the nearby noise-sensitive receiver locations. If you have any questions, please contact me directly at (949) 584-3148.

Respectfully submitted,

URBAN CROSSROADS, INC.

Bill Lawson, P.E., INCE
Principal

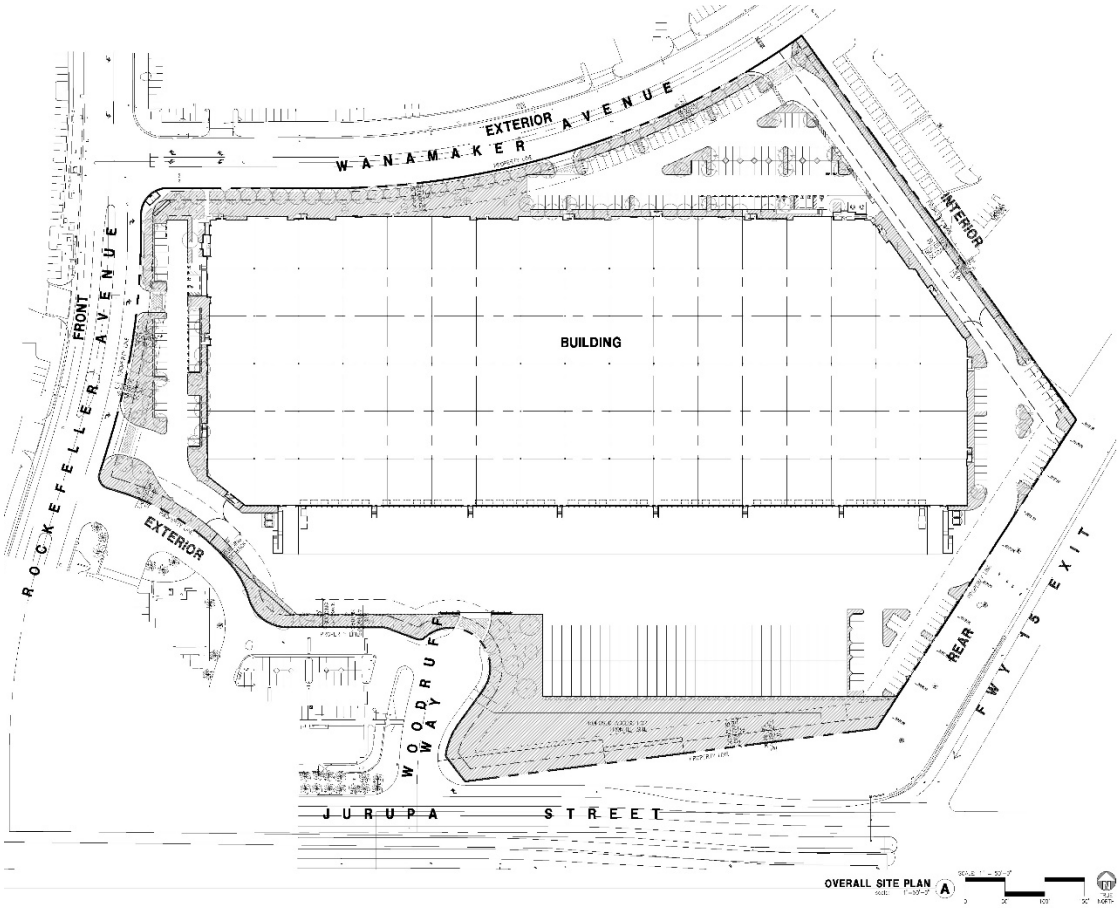
MEMORANDUM

URBAN | CROSSROADS

DATE: February 21, 2023
TO: Tom Cruikshank, Link Logistics Real Estate
FROM: Charlene So, Urban Crossroads, Inc.
JOB NO: 15364-01 TG Memo



WOODRUFF LOGISTICS CENTER TRIP GENERATION ASSESSMENT

Urban Crossroads, Inc. is pleased to submit this Trip Generation Assessment for the proposed Woodruff Logistics Center development (**Project**), which is located northeast of Jurupa Street and Rockefeller Avenue, south of Wanamaker Avenue, and straddling the existing Woodruff Way in the City of Ontario. The purpose of the following trip generation is to determine whether additional analysis is necessary based on the City's Guidelines (County's Transportation Impact Study Guidelines, dated July 9, 2019).

PROPOSED PROJECT

It is our understanding that the Project is to consist of a 344,678 square foot industrial warehouse building (see Exhibit 1). Access is proposed to Rockefeller Avenue via two driveways (one to serve trucks with both serving passenger cars), Wanamaker Avenue via two driveways (one to serve trucks with both serving passenger cars), and one driveway on Woodruff Way to serve trucks.

EXHIBIT 1: PRELIMINARY SITE PLAN

TRIP GENERATION

EXISTING TRAFFIC

The site is occupied by existing uses that are currently active, specifically the Citrus Motors Ford and Citrus Motors Kia auto dealerships. The Citrus Motors Kia auto dealership lies on a 5.56-acre parcel (APN 238-201-41) located at 1350 Woodruff Way. The Citrus Motors Ford auto dealership lies on a 10.59-acre parcel (APN 238-221-22) located at 1375 Woodruff Way. In an effort to understand the existing traffic associated with the current use, traffic counts were collected at the driveways on May 31, June 1, and June 2, 2022 (Tuesday through Thursday). A summary of the count data collected is shown on Table A-1 of Attachment A. See Attachment A for driveway count data worksheets.

Table 1 below summarizes the average existing trip generation based on the count data collected over three days. The existing site currently generates an average of 1,563 two-way trips per day, with 138 trips during the AM peak hour and 125 trips during the PM peak hour. Trip generation for the existing use has been reflected in both actual vehicles and passenger car equivalent (PCE) on Table 1. PCE factors were applied to the trip generation rates for heavy trucks (large 2-axles, 3-axles, 4+-axles). PCEs allow the typical "real-world" mix of vehicle types to be represented as a

single, standardized unit, such as the passenger car, to be used for the purposes of capacity and level of service analyses. The PCE factors are consistent with the recommended PCE factors in the County Guidelines and with those used for other projects within the County.

TABLE 1: EXISTING TRIP GENERATION

	AM Peak Hour			PM Peak Hour			
Land Use	In	Out	Total	In	Out	Total	Daily

Total Trips (PCE)[1]	84	57	141	47	81	127	1,582

[1] Total Trips = Passenger Cars + Truck Trips.

THE ONTARIO PLAN (TOP) 2050

The Ontario Plan (**TOP**) 2050 Environmental Impact Report (**EIR**) (August 2022) designates the Project site with industrial development. Per the adopted TOP 2050, the Project site could be developed with up to 398,901 square feet of industrial use (assuming a 16.65-acre site and a floor-to-area-ratio of 0.55). The trip generation rates used for this analysis is based upon information collected by the Institute of Transportation Engineers (ITE) as provided in their Trip Generation Manual (11th Edition, 2021). For purposes of the trip generation assessment, the following ITE land use code and vehicle mix has been utilized for the currently adopted land use per the TOP 2050 (see Table 2):

- ITE land use code 110 (General Light Industrial) has been used to derive site specific trip generation estimates for up to 398,901 square feet. A light industrial facility is a free-standing facility devoted to a single use that has an emphasis on activities other than manufacturing. Typically, there is minimum office space. The vehicle mix has been obtained from the ITE's Trip Generation Manual. The truck percentages were further broken down by axle type per the following South Coase Air Quality Management District (SCAQMD) recommended truck mix: 2-Axle = 16.7%; 3-Axle = 20.7%; 4+-Axle = 62.6%.

TABLE 2: TOP 2050 TRIP GENERATION RATES

Land Use[1]	Units[2]	ITE LU Code	AM Peak Hour In	AM Peak Hour Out	AM Peak Hour Total	PM Peak Hour In	PM Peak Hour Out	PM Peak Hour Total	Daily

[2] TSF = thousand square feet

[3] Truck Mix: South Coast Air Quality Management District's (SCAQMD) recommended truck mix, by axle type.
Normalized % - Without Cold Storage: 16.7% 2-Axle trucks, 20.7% 3-Axle trucks, 62.6% 4-Axle trucks.

The trip generation summary illustrating daily, and peak hour trip generation estimates for the current TOP 2050 in actual and passenger car equivalent (PCE) vehicles are shown on Table 3. As shown on Table 3, the Project site is anticipated to generate a total of 1,946 two-way trips per day with 294 AM peak hour trips and 257 PM peak hour trips based on the TOP 2050 adopted Industrial land use designation (in actual vehicles). In comparison, the Project site is anticipated to generate a total of 2,100 two-way PCE trips per day with 301 PCE AM peak hour trips and 265 PCE PM peak hour trips based on the TOP 2050 adopted Industrial land use designation (see Table 3).

[2] Total Trips = Passenger Cars + Truck Trips.

PROPOSED PROJECT

Trip generation rates for the proposed Project is shown on Table 4. The trip generation rates used for this analysis is based upon information collected by the ITE as provided in their Trip Generation Manual (11th Edition, 2021). For purposes of the trip generation assessment, the following ITE land use codes and vehicle mixes have been utilized for the proposed Project (see Table 2):

- High-Cube Fulfillment Center Warehouse (ITE Land Use Code 155) has been used to derive site specific trip generation estimates for up to 292,976 square feet of the proposed Project (or 85% of the overall building square footage). The ITE Trip Generation Manual has trip generation rates for high-cube fulfillment center use for both non-sort and sort facilities (ITE land use code 155). As defined by ITE, a high-cube warehouse is a building that typically has at least 200,000 gross square feet of floor area, has a ceiling height of 24 feet or more, and is used primarily for the storage and/or consolidation of manufactured goods (and to a lesser extent, raw materials) prior to their distribution to retail locations or other warehouses. A typical high-cube warehouse has a high level of on-site automation and logistics management. The automation and logistics enable highly efficient processing of goods through the high-cube warehouse. The ITE Trip Generation Manual has two subcategories for the High-Cube Fulfillment Center use: sort and non-sort. ITE describes a sort facility as a fulfillment center that ships out smaller items, requiring extensive sorting, typically by manual means. In comparison, a non-sort facility is a fulfillment center that ships large box items that are processed primarily with automation rather than through manual means. Some limited assembly and repackaging may occur within the facility. In light of the on-site parking provided, a non-sort facility has been assumed for the purposes of calculating trip generation for the proposed Project. The off-street parking for the currently proposed Project would not support the anticipated daily passenger car (employee) traffic generated by a sort facility (the passenger car sort rate is nearly 4 times that of the non-sort passenger car rate). The vehicle mix (passenger cars versus trucks) has been obtained from the ITE's Trip Generation Manual. The truck percentages were further broken down by axle type per the following SCAQMD recommended truck mix: 2-Axle = 16.7%; 3-Axle = 20.7%; 4+-Axle = 62.6%.
- ITE land use code 157 (High-Cube Cold Storage Warehouse) has been used to derive site specific trip generation estimates for up to 51,702 square feet (15% of the light industrial area). High-cube cold storage warehouses include warehouses characterized by the storage and/or consolidation of manufactured goods (and to a lesser extent, raw materials) prior to their distribution to retail locations or other warehouses. High-cube cold storage warehouses are facilities typified by temperature-controlled environments for frozen food or other perishable products. The High-Cube Cold Storage Warehouse vehicle mix (passenger cars versus trucks) has been obtained from the ITE's Trip Generation Manual. The truck percentages were further broken down by axle type per the following SCAQMD recommended truck mix: 2-Axle = 34.7%; 3-Axle = 11.0%; 4+-Axle = 54.3%.

[1] Trip Generation & Vehicle Mix Source: Institute of Transportation Engineers (ITE), Trip Generation Manual, Eleventh Edition (2021).

[2] TSF = thousand square feet

[3] Truck Mix: South Coast Air Quality Management District's (SCAQMD) recommended truck mix, by axle type.
Normalized % - Without Cold Storage: 16.7% 2-Axle trucks, 20.7% 3-Axle trucks, 62.6% 4-Axle trucks.
Normalized % - With Cold Storage: 34.7% 2-Axle trucks, 11.0% 3-Axle trucks, 54.3% 4-Axle trucks.

The trip generation summary illustrating daily, and peak hour trip generation estimates for the proposed Project in actual and passenger car equivalent (PCE) vehicles are shown on Table 5 and Table 6, respectively. As shown on Table 5, the proposed Project is anticipated to generate a total of 644 two-way trips per day with 50 AM peak hour trips and 51 PM peak hour trips (in actual vehicles). In comparison, the proposed Project is anticipated to generate a total of 812 two-way PCE trips per day with 62 PCE AM peak hour trips and 59 PCE PM peak hour trips (see Table 6).

Total Trips (PCE)[2]			**45**	**17**	**62**	**23**	**36**	**59**	**812**

[1] TSF = thousand square feet

[2] Total Trips = Passenger Cars + Truck Trips.

TRIP GENERATION COMPARISON

Table 7 shows the trip generation comparison between the existing and proposed use. The resulting net new trips are identified on Table 7. As shown, the Project is anticipated to generate 770 fewer two-way trips per day with 79 fewer AM peak hour trips and 68 fewer PM peak hour trips in comparison to the existing uses (in PCE). Per the City's Guidelines, the trip generation comparison is based on PCE as the existing and proposed uses are truck-intensive uses and any operations analysis performed (if necessary) would utilize PCE values.

TABLE 7: TRIP GENERATION COMPARISON – EXISTING VS. PROPOSED PROJECT

	AM Peak Hour			PM Peak Hour			
Land Use	In	Out	Total	In	Out	Total	Daily
Proposed Project							
Passenger Cars:	37	5	42	18	31	49	536
Total Truck Trips (PCE):	8	12	20	5	5	10	276

Passenger Cars:	78	54	132	42	79	121	1,468
Total Truck Trips (PCE):	6	3	9	5	2	6	114
Total Trips	84	57	141	47	81	127	1,582
Net Change							
Passenger Cars:	-41	-49	-90	-24	-48	-72	-932
Total Truck Trips (PCE):	2	9	11	1	4	4	162
Total Trips	**-39**	**-40**	**-79**	**-24**	**-45**	**-68**	**-770**

Table 8 shows the trip generation comparison between the adopted TOP 2050 land use (Industrial) and proposed use. The resulting net new trips are identified on Table 8. As shown, the Project is anticipated to generate 1,288 fewer two-way trips per day with 239 fewer AM peak hour trips and 206 fewer PM peak hour trips in comparison to the approved TOP 2050 land use (in PCE).

TABLE 8: TRIP GENERATION COMPARISON – TOP 2050 VS. PROPOSED PROJECT

	AM Peak Hour			PM Peak Hour			
Land Use	In	Out	Total	In	Out	Total	Daily
Proposed Project

Total Trips	**-219**	**-21**	**-239**	**-17**	**-190**	**-206**	**-1,288**

FINDINGS

The City of Ontario adheres to the San Bernardino County Transportation Authority (SBCTA) Recommended Traffic Impact Study Guidelines for Vehicle Miles Traveled and Level of Service Assessment (dated February 2020, by Fehr & Peers) which has been used to determine whether additional traffic analysis is necessary for the proposed Project. The County's Guidelines indicates that development projects that generate a net increase of 100 or more peak hour vehicle trips (without pass-by reductions) would require the preparation and submittal of a Transportation Impact Analysis.

The Project is anticipated to generate fewer than 50 net new peak hour trips during the morning and evening peak hours. The Project on its own, without taking any credit for existing uses, also generates fewer than 100 new peak hour trips (both in actual vehicles and PCE). Lastly, the proposed Project uses are anticipated to generate fewer trips than the adopted TOP 2050 land use (Industrial). As such, additional peak hour traffic operations analysis is not necessary based on the County's Guidelines.

If you have any questions or comments, I can be reached at cso@urbanxroads.com.

MEMORANDUM

URBAN CROSSROADS

DATE: February 22, 2023
TO: Nicole Morse, T&B Planning, Inc.
FROM: Alex So, Urban Crossroads, Inc.
JOB NO: 15364-01 VMT

WOODRUFF WAY LOGISTICS CENTER VEHICLE MILES TRAVELED (VMT) SCREENING EVALUATION

Urban Crossroads, Inc. is pleased to provide the following Vehicle Miles Traveled (VMT) Screening Evaluation for the Woodruff Way Logistics Center (**Project**), which is located northeast of Jurupa Street and Rockefeller Avenue, south of Wanamaker Avenue, and straddling the existing Woodruff Way in the City of Ontario.

PROJECT OVERVIEW

It is our understanding that the Proposed Project is to consist of a 344,260 square foot industrial warehouse building. A preliminary site plan for the Proposed Project is shown on Attachment A.

BACKGROUND

The California Environmental Quality Act (CEQA) requires all lead agencies to adopt VMT as the measure for identifying transportation impacts for land use projects. To comply with CEQA, in June of 2020 the City of Ontario developed and adopted their own VMT methodologies and thresholds (Resolution No. 2020-071), (**City Guidelines**) (1). This VMT screening evaluation has been developed based on the adopted City Guidelines.

VMT SCREENING

The City Guidelines lists standardized screening methods for project level VMT analysis that can be used to identify when a proposed land use development project is anticipated to result in a less than significant impact, thereby eliminating the need to conduct a full VMT analysis. The City of Ontario VMT screening criteria, as described within the City Guidelines, are listed below:

- Transit Priority Area (TPA) Screening
- Low VMT Area Screening
- Project Type Screening

A land use project need only to meet one of the above screening criteria to result in a less than significant impact.

TPA SCREENING

Consistent with guidance identified in the City Guidelines, projects located within a Transit Priority Area (TPA) (i.e., within ½ mile of an existing "major transit stop"[1] or an existing stop along a "high-quality transit corridor"[2]) may be presumed to have a less than significant impact absent substantial evidence to the contrary. However, the presumption may not be appropriate if a project:

- Has a Floor Area Ratio (FAR) of less than 0.75;
- Includes more parking for use by residents, customers, or employees of the project than required by the jurisdiction (if the jurisdiction requires the project to supply parking);
- Is inconsistent with the applicable Sustainable Communities Strategy (as determined by the lead agency, with input from the Metropolitan Planning Organization); or
- Replaces affordable residential units with a smaller number of moderate- or high-income residential units.

Based on the secondary criteria outlined in the City Guidelines, the Project does not meet the secondary criteria of having an FAR at or above 0.75, regardless of the Project being physically located in a TPA.

TPA Screening criteria is not met.

LOW VMT AREA SCREENING

City Guidelines state that projects may be presumed to have a less than significant VMT impact if located in an already low VMT generating traffic analysis zone (TAZ). City Guidelines recognize low VMT areas as those that generate a VMT per service population (i.e., population and employment) that is 15% below County of San Bernardino Baseline VMT per service population. The San Bernardino Transportation Analysis Model (SBTAM) is used to measure VMT performance in individual TAZs within the region. The Project's physical location was identified in the SBTAM model to determine the TAZ where the Project is located. The Project TAZ 53687401 is then calculated using Origin-Destination (OD) trip matrices to obtain total OD VMT. The resulting total OD VMT is divided by the Project TAZ's service population. The Project TAZ 53687401 has a VMT per service population of 55.8, which was compared to 15% below County

[1] Pub. Resources Code, § 21064.3 ("'Major transit stop' means a site containing an existing rail transit station, a ferry terminal served by either a bus or rail transit service, or the intersection of two or more major bus routes with a frequency of service interval of 15 minutes or less during the morning and afternoon peak commute periods.").
[2] Pub. Resources Code, § 21155 ("For purposes of this section, a high-quality transit corridor means a corridor with fixed route bus service with service intervals no longer than 15 minutes during peak commute hours.").

of San Bernardino baseline or 28.41 VMT per service population (33.42 x 0.85= 28.41). As a result, the Project is not located within a low VMT generating zone.

Low VMT Area Screening criteria is not met.

PROJECT TYPE SCREENING

The City Guidelines identify that local serving retail with buildings less than 50,000 square feet or other local serving essential services (e.g., day care centers, public schools, medical/dental office buildings, etc.) are presumed to have a less than significant impact absent substantial evidence to the contrary. The proposed Project does not intend to develop any local serving retail land uses.

Additionally, the City Guidelines indicates for small projects that generate low traffic volumes (i.e., fewer than 110 daily trips) and by association low greenhouse gas (GHG) emissions are also assumed to cause a less than significant impact.

Existing Traffic

The site is occupied by existing uses that are currently active, specifically the Citrus Motors Ford and Citrus Motors Kia auto dealerships. The Citrus Motors Kia auto dealership lies on a 5.56-acre parcel (APN 238-201-41) located at 1350 Woodruff Way. The Citrus Motors Ford auto dealership lies on a 10.59-acre parcel (APN 238-221-22) located at 1375 Woodruff Way. In an effort to understand the existing traffic associated with the current use, traffic counts were collected at the driveways on May 31, June 1, and June 2, 2022 (Tuesday through Thursday). A summary of the count data collected is shown on Table B-1 of Attachment B.

Table 1 below summarizes the average existing trip generation based on the count data collected over those three days. The existing site currently generates an average of 1,543 daily vehicle trips.

TABLE 1: EXISTING TRIP GENERATION

	AM Peak Hour			PM Peak Hour			
Land Use	In	Out	Total	In	Out	Total	Daily
Actual Vehicles:							
Existing Use							
Passenger Cars:	78	54	132	42	79	121	1,468
2-axle Trucks:	4	2	6	3	1	4	75
3-axle Trucks:	0	0	0	0	0	0	0
4+-axle Trucks:	0	0	0	0	0	0	0
Total Trucks:	4	2	6	3	1	4	75
Total Trips (Actual Vehicles)[1]	82	56	138	45	80	125	1,543

[1] Total Trips = Passenger Cars + Truck Trips.

THE ONTARIO PLAN (TOP) 2050

The Ontario Plan (**TOP**) 2050 Environmental Impact Report (**EIR**) (August 2022) designates the Project site with industrial development. Per the adopted TOP 2050, the Project site could be

developed with up to 398,901 square feet of industrial use (assuming a 16.65-acre site and a floor-to-area-ratio of 0.55). The trip generation rates used for this analysis are based upon information collected by the Institute of Transportation Engineers (ITE) as provided in their Trip Generation Manual (11th Edition, 2021). For purposes of the VMT screening evaluation, the following ITE land use code and vehicle mix has been utilized for the currently adopted land use per the TOP 2050 (see Table 2):

- ITE land use code 110 (General Light Industrial) has been used to derive site specific trip generation estimates for up to 398,901 square feet. A light industrial facility is a free-standing facility devoted to a single use that has an emphasis on activities other than manufacturing. Typically, there is minimum office space. The vehicle mix has been obtained from the ITE's Trip Generation Manual. The truck percentages were further broken down by axle type per the following South Coase Air Quality Management District (SCAQMD) recommended truck mix: 2-Axle = 16.7%; 3-Axle = 20.7%; 4+-Axle = 62.6%.

TABLE 2: TOP 2050 TRIP GENERATION RATES

PROPOSED PROJECT

Trip generation rates for the proposed Project are shown on Table 4. The trip generation rates used for this analysis are based upon information collected by the ITE as provided in their Trip Generation Manual (11th Edition, 2021). For purposes of the VMT screening evaluation, the following ITE land use codes and vehicle mixes have been utilized for the proposed Project (see Table 4):

- High-Cube Fulfillment Center Warehouse (ITE Land Use Code 155) has been used to derive site specific trip generation estimates for up to 292,976 square feet of the proposed Project (or 85% of the overall building square footage). The ITE Trip Generation Manual has trip generation rates for high-cube fulfillment center use for both non-sort and sort facilities (ITE land use code 155). As defined by ITE, a high-cube warehouse is a building that typically has at least 200,000 gross square feet of floor area, has a ceiling height of 24 feet or more, and is used primarily for the storage and/or consolidation of manufactured goods (and to a lesser extent, raw materials) prior to their distribution to retail locations or other warehouses. A typical high-cube warehouse has a high level of on-site automation and logistics management. The automation and logistics enable highly efficient processing of goods through the high-cube warehouse. The ITE Trip Generation Manual has two subcategories for the High-Cube Fulfillment Center use: sort and non-sort. ITE describes a sort facility as a fulfillment center that ships out smaller items, requiring extensive sorting, typically by manual means. In comparison, a non-sort facility is a fulfillment center that ships large box items that are processed primarily with automation rather than through manual means. Some limited assembly and repackaging may occur within the facility. In light of the on-site parking provided, a non-sort facility has been assumed for the purposes of calculating trip generation for the proposed Project. The off-street parking for the currently proposed Project would not support the anticipated daily passenger car (employee) traffic generated by a sort facility (the passenger car sort rate is nearly 4 times that of the non-sort passenger car rate). The vehicle mix (passenger cars versus trucks) has been obtained from the ITE's Trip Generation Manual. The truck percentages were further broken down by axle type per the following SCAQMD recommended truck mix: 2-Axle = 16.7%; 3-Axle = 20.7%; 4+-Axle = 62.6%.
- ITE land use code 157 (High-Cube Cold Storage Warehouse) has been used to derive site specific trip generation estimates for up to 51,702 square feet (15% of the light industrial area). High-cube cold storage warehouses include warehouses characterized by the storage and/or consolidation of manufactured goods (and to a lesser extent, raw materials) prior to their distribution to retail locations or other warehouses. High-cube cold storage warehouses are facilities typified by temperature-controlled environments for frozen food or other perishable products. The High-Cube Cold Storage Warehouse vehicle mix (passenger cars versus trucks) has been obtained from the ITE's Trip Generation Manual. The truck percentages were further broken down by axle type per the following

SCAQMD recommended truck mix: 2-Axle = 34.7%; 3-Axle = 11.0%; 4+-Axle = 54.3%.

TRIP GENERATION COMPARISON

Table 7 shows the trip generation comparison between the existing and proposed use. As shown, the Project is anticipated to generate 899 fewer two-way trips per day as compared to the existing use.

TABLE 7: TRIP GENERATION COMPARISON – EXISTING VS. PROPOSED PROJECT

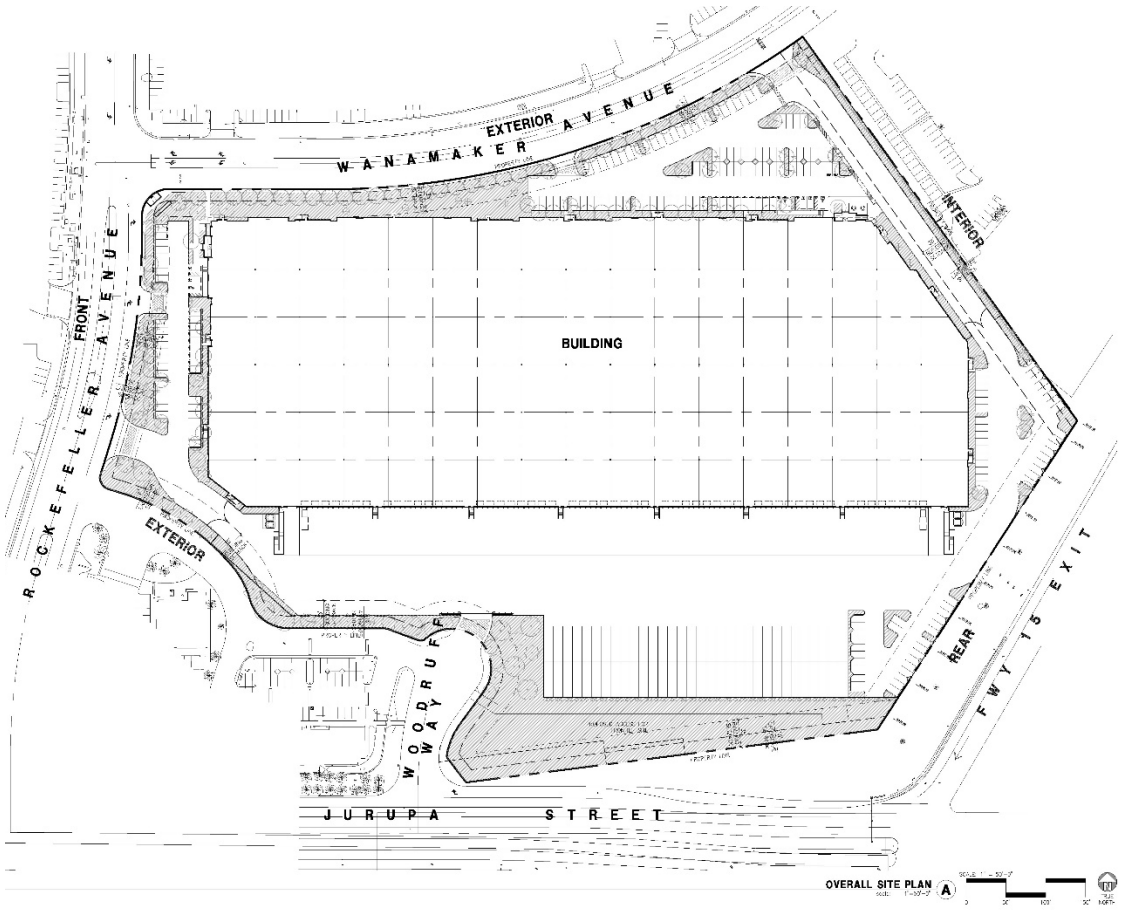
	AM Peak Hour			PM Peak Hour			
Land Use	In	Out	Total	In	Out	Total	Daily
Proposed Project							
Passenger Cars:	37	5	42	18	31	49	536
Total Truck Trips (Actual Vehicles):	4	4	8	1	1	2	108
Total Trips	41	9	50	19	32	51	644
Existing							
Passenger Cars:	78	54	132	42	79	121	1,468
Total Truck Trips (Actual Vehicles):	4	2	6	3	1	4	75
Total Trips	82	56	138	45	80	125	1,543
Net Change							
Passenger Cars:	-41	-49	-90	-24	-48	-72	-932
Total Truck Trips (Actual Vehicles):	0	2	2	-2	0	-2	33
Total Trips	**-41**	**-47**	**-88**	**-26**	**-48**	**-74**	**-899**

Table 8 shows the trip generation comparison between the adopted TOP 2050 land use (Industrial) and proposed use. As shown, the Project is anticipated to generate 1,302 fewer two-way trips per day as compared to the adopted TOP 2050.

TABLE 8: TRIP GENERATION COMPARISON – TOP 2050 VS. PROPOSED PROJECT

	AM Peak Hour			PM Peak Hour			
Land Use	In	Out	Total	In	Out	Total	Daily
Proposed Project							
Passenger Cars:	37	5	42	18	31	49	536
Total Truck Trips (Actual Vehicles):	4	4	8	1	1	2	108
Total Trips	41	9	50	19	32	51	644
TOP 2050 (Industrial)							
Passenger Cars:	257	34	291	34	221	255	1,844
Total Truck Trips (Actual Vehicles):	2	1	3	1	1	2	102
Total Trips	259	35	294	35	222	257	1,946
Net Change							
Passenger Cars:	-220	-29	-249	-16	-190	-206	-1,308
Total Truck Trips (Actual Vehicles):	2	3	5	0	0	0	6
Total Trips	**-218**	**-26**	**-244**	**-16**	**-190**	**-206**	**-1,302**

As shown in Table 7 and 8 the Proposed Project is estimated to have a net reduction in vehicle trips as compared to both the existing land uses and the land uses assumed in the TOP 2050. Therefore, the Project's estimated trips will not exceed the City's 110 net new daily vehicle trip threshold.



Project Type screening criteria is met.

As the Project was found to meet the Project Type screening criteria, it is presumed to have a **less than significant VMT impact**.

MEMORANDUM

URBAN | CROSSROADS

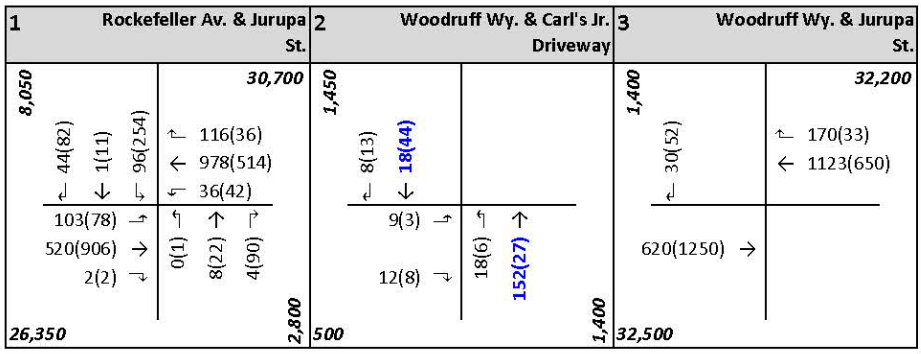
DATE: July 25, 2023
TO: Tom Cruikshank, Link Logistics Real Estate
FROM: Charlene So, Urban Crossroads, Inc.
JOB NO: 15364-03 TA Letter

WOODRUFF LOGISTICS CENTER FOCUSED TRAFFIC ASSESSMENT

Urban Crossroads, Inc. is pleased to submit this Focused Traffic Assessment for the proposed Woodruff Logistics Center development (**Project**), which is located northeast of Jurupa Street and Rockefeller Avenue, south of Wanamaker Avenue, and straddling the existing Woodruff Way in the City of Ontario. The purpose of the following focused traffic assessment is to respond to the City's comment requesting an intersection peak hour level of service (**LOS**) operations analysis at the intersection of Jurupa Street and Rockefeller Avenue to evaluate the effect of an additional westbound right turn traffic at the intersection due to the vacation and termination of the existing Woodruff Way. This assessment will also determine whether a westbound dedicated right turn lane is needed at the intersection of Jurupa Street and Rockefeller Avenue to support the anticipated traffic volume or acceptable peak hour operations.

PROPOSED PROJECT

It is our understanding that the Project is to consist of a 344,678 square foot industrial warehouse building (see Exhibit 1). Access is proposed to Rockefeller Avenue via two driveways (one to serve trucks with both serving passenger cars), Wanamaker Avenue via two driveways (one to serve trucks with both serving passenger cars), and one driveway on Woodruff Way to serve trucks only. As part of the Project, Woodruff Way will be vacated between the existing Carl's Jr. restaurant Wanamaker Avenue. As a result of the vacation, vehicles previously using Woodruff Way to access Wanamaker Avenue will now be using Jurupa Street to Rockefeller Avenue.



EXISTING CONDITIONS

Traffic counts were conducted on April 26, 2023, at the following intersections:

1. Rockefeller Avenue & Jurupa Street
2. Woodruff Way & Carl's Jr. Driveway
3. Woodruff Way & Jurupa Street

The existing peak hour intersection operations analysis has been conducted for Rockefeller Avenue and Jurupa Street only. Existing traffic volumes are shown on Exhibit 1. Traffic counts were also collected at intersections along Woodruff Way to reassign existing traffic that is currently using Woodruff Way from Jurupa Street to access Wanamaker Avenue (or vice versa). Since the Project is vacating Woodruff Way north of the existing Carl's Jr. driveway, through traffic at the Carl's Jr. driveway will need to be reassigned from Woodruff Way at Jurupa Street to the intersection of Rockefeller Avenue at Jurupa Street for With Project traffic conditions (see **blue** boldface volumes on Exhibit 1). Lastly, volumes into and out of the Carl's Jr. driveway from the north will also be reassigned to the northbound left and eastbound right turn movements. The raw manual peak hour turning movement traffic count data sheets are included in Attachment A.

EXISTING 1: EXISTING (2023) TRAFFIC VOLUMES

##(##) AM(PM) Peak Hour Intersection Volumes

Average Daily Trips

The intersection operations analysis results are summarized in Table 1, which indicates that the intersection of Rockefeller Avenue and Jurupa Street is currently operating at an acceptable level of service (**LOS**) during the peak hours. LOS E is the minimum LOS standard for intersections within the City. The Existing (2023) intersection operations analysis worksheets are included in Attachment B.

TABLE 1: INTERSECTION ANALYSIS FOR EXISTING (2023) CONDITIONS

#	Intersection	Traffic Control[2]	Delay[1] (secs.) AM	Delay[1] (secs.) PM	Level of Service AM	Level of Service PM	Jurisdiction(s) / LOS Standard[3]
1	Rockefeller Av. & Jurupa St.	TS	17.9	22.4	B	C	Ontario / LOS E

[1] Per the Highway Capacity Manual (6th Edition), overall average intersection delay and level of service are shown for intersections with a traffic signal or all way stop control. For intersections with cross street stop control, the delay and level of service for the worst individual movement (or movements sharing a single lane) are shown.

[2] TS = Traffic Signal

PROJECT TRAFFIC

TRIP GENERATION

The trip generation summary illustrating daily, and peak hour trip generation estimates for the proposed Project in actual and passenger car equivalent (**PCE**) vehicles are shown in Table 2 and Table 3, respectively. As shown in Table 2, the proposed Project is anticipated to generate a total of 644 two-way trips per day with 50 AM peak hour trips and 51 PM peak hour trips (in actual vehicles). In comparison, the proposed Project is anticipated to generate a total of 812 two-way PCE trips per day with 62 PCE AM peak hour trips and 59 PCE PM peak hour trips (see Table 3). The trip generation reflected is consistent with that presented in the Woodruff Logistics Center Trip Generation Assessment (dated February 21, 2023).

The site is occupied by existing uses that are currently active, specifically the Citrus Motors Ford and Citrus Motors Kia auto dealerships. The Citrus Motors Kia auto dealership lies on a 5.56-acre parcel (APN 238-201-41) located at 1350 Woodruff Way. The Citrus Motors Ford auto dealership lies on a 10.59-acre parcel (APN 238-221-22) located at 1375 Woodruff Way. Table 4 shows the trip generation comparison between the existing and proposed use. The resulting net new trips are identified in Table 4. As shown, the Project is anticipated to generate 770 fewer two-way trips per day with 79 fewer AM peak hour trips and 68 fewer PM peak hour trips in comparison to the existing uses (in PCE). Per the City's Guidelines, the trip generation comparison is based on PCE as the existing and proposed uses are truck-intensive uses and any operations analysis performed (if necessary) would utilize PCE values.

TABLE 4: TRIP GENERATION COMPARISON

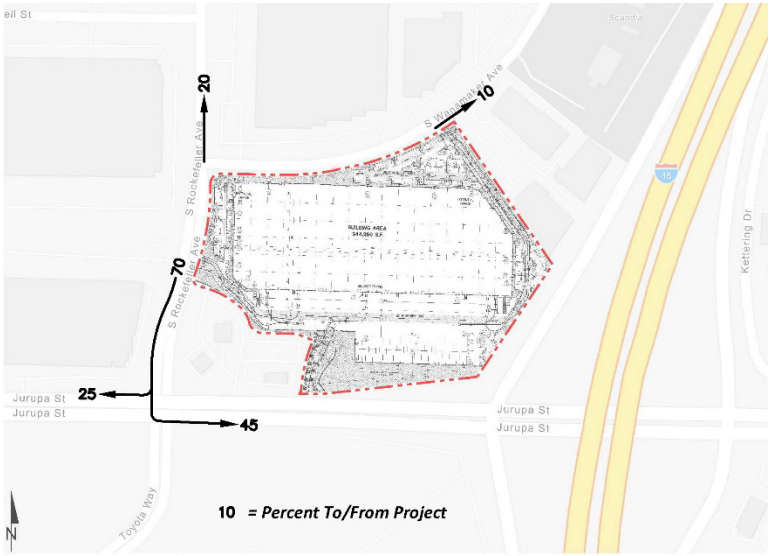
TRIP DISTRIBUTION

The Project trip distribution and assignment process represents the directional orientation of traffic to and from the Project site. The trip distribution pattern of passenger cars is heavily influenced by the geographical location of the site, the location of surrounding uses, and the proximity to the regional freeway system. Exhibit 2 illustrates the passenger car trip distribution patterns and Exhibit 3 illustrates the truck trip distribution patterns. Project trip distribution patterns for the Project are based on existing travel patterns per the traffic count data collected.

EXHIBIT 2: PROJECT (PASSENGER CAR) TRIP DISTRIBUTION



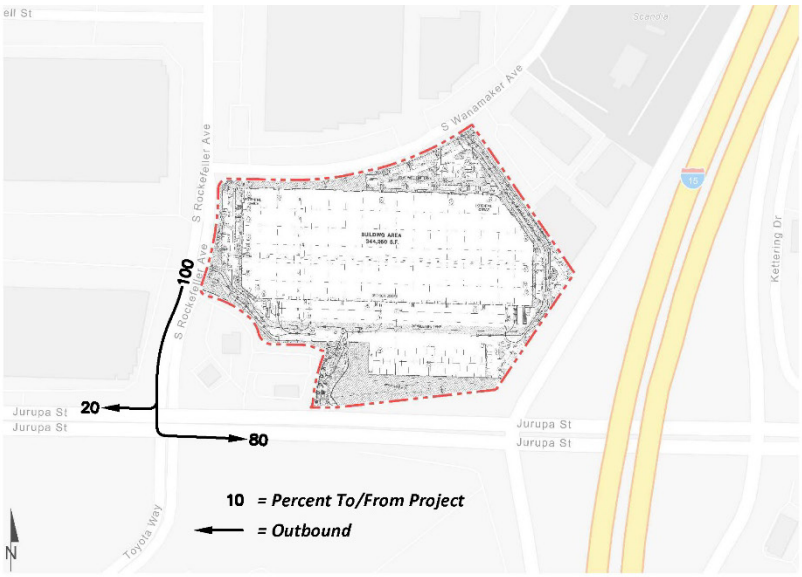


EXHIBIT 3: PROJECT (TRUCK) TRIP DISTRIBUTION

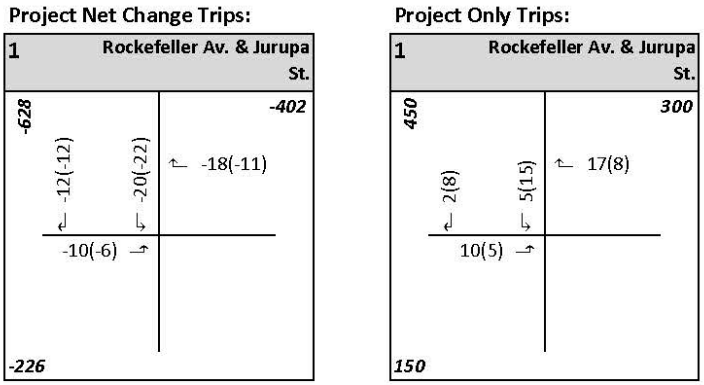

TRIP ASSIGNMENT

The assignment of traffic from the Project area to the adjoining roadway system is based upon the Project trip generation, trip distribution, and the arterial highway and local street system improvements that would be in place by the time of initial occupancy of the Project. Based on the identified Project traffic generation and trip distribution patterns, Project ADT and peak hour intersection turning movement volumes are shown on Exhibit 4. Project volumes are shown based on the trip generation reflected in Table 2 and the net change in Project trips (accounting for the existing use) is also shown (negative values reflect a reduction in trips).

EXHIBIT 4: PROJECT TRAFFIC VOLUMES

##(##) AM(PM) Peak Hour Intersection Volumes
Average Daily Trips

EXISTING PLUS PROJECT

This scenario includes Existing traffic volumes plus Project traffic (**E+P**). The traffic volumes for E+P traffic conditions account for the reassignment of existing trips from Woodruff Way to Rockefeller Avenue along Jurupa Street. The intersection analysis result is summarized in Table 5 for E+P traffic conditions which indicates the intersection of Rockefeller Avenue at Jurupa Street is anticipated to continue to operate at an acceptable LOS. Since the development of the proposed Project will result in a net reduction in trips from the existing use, the peak hour intersection operations at Rockefeller Avenue and Jurupa Street are anticipated to improve under E+P traffic conditions in comparison to Existing traffic conditions. The intersection operations analysis worksheets for E+P traffic conditions are included in Attachment C.

TABLE 5: INTERSECTION ANALYSIS FOR E+P CONDITIONS

			Existing (2023)				E+P				
			Delay[1] (secs.)		Level of Service		Delay[1] (secs.)		Level of Service		
#	Intersection	Traffic Control[2]	AM	PM	AM	PM	AM	PM	AM	PM	Jurisdiction(s) / LOS Standard[3]
1	Rockefeller Av. & Jurupa St.	TS	17.9	22.4	B	C	17.4	21.4	B	C	Ontario / LOS E

1 Per the Highway Capacity Manual (6th Edition), overall average intersection delay and level of service are shown for intersections with a traffic signal or all way stop control. For intersections with cross street stop control, the delay and level of service for the worst individual movement (or movements sharing a single lane) are shown.

2 TS = Traffic Signal

HORIZON YEAR WITH PROJECT

This scenario includes the refined post-process volumes obtained from the San Bernardino County Transportation Analysis Model (**SBTAM**), plus the traffic generated by the proposed Project. The Project trips shown in Exhibit 4 have been added to post-processed Horizon Year Without Project traffic volumes (not the net change in Project trips). The intersection analysis result is summarized in Table 6 for Horizon Year traffic conditions which indicates the intersection of Rockefeller Avenue at Jurupa Street is anticipated to continue to operate at an acceptable LOS. The intersection operations analysis worksheets for Horizon Year With Project traffic conditions are included in Attachment D.

TABLE 6: INTERSECTION ANALYSIS FOR HORIZON YEAR CONDITIONS

#	Intersection	Traffic Control[2]	Delay[1] (secs.) AM	Delay[1] (secs.) PM	Level of Service AM	Level of Service PM	Jurisdiction(s) / LOS Standard[3]
1	Rockefeller Av. & Jurupa St.	TS	61.7	30.7	E	C	Ontario / LOS E

[1] Per the Highway Capacity Manual (6th Edition), overall average intersection delay and level of service are shown for intersections with a traffic signal or all way stop control. For intersections with cross street stop control, the delay and level of service for the worst individual movement (or movements sharing a single lane) are shown.

[2] TS = Traffic Signal

FINDINGS

The City of Ontario adheres to the San Bernardino County Transportation Authority (**SBCTA**) Recommended Traffic Impact Analysis Guidelines for Vehicle Miles Traveled and Level of Service Assessment (dated February 2020, by Fehr & Peers) which has been used to determine whether additional traffic analysis is necessary for the proposed Project. The existing and future westbound right turn volume at the intersection of Rockefeller Avenue and Jurupa Street is less than 300 vehicles per hour during the peak hours. In addition, the intersection is anticipated to operate at an acceptable LOS with the existing lane geometrics, so the intersection operations do not suggest additional capacity (such as a right turn lane) are necessary to maintain acceptable peak hour operations.

If you have any questions or comments, I can be reached at cso@urbanxroads.com.

RESOLUTION NO. _____

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF ONTARIO, CALIFORNIA, APPROVING FILE NO. PSPA22-006, AN AMENDMENT TO THE CALIFORNIA COMMERCE CENTER SPECIFIC PLAN TO CHANGE THE LAND USE DESIGNATION FROM COMMERCIAL/FOOD/HOTEL TO LIGHT INDUSTRAIL, UPDATE EXHIBITS AND TEXT TO SUPPORT THE CHANGE, AND BRING THE SPECIFIC PLAN INTO COMPLIANCE WITH THE ONTARIO PLAN 2050 (GENERAL PLAN), ON 16.65 ACRES OF LAND GENERALLY LOCATED AT THE SOUTHEAST CORNER OF ROCKEFELLER AVENUE AND WANAMAKER AVENUE, AT 1350 AND 1375 S. WOODRUFF WAY, WITHIN THE CALIFORNIA COMMERCE CENTER SPECIFIC PLAN, AND MAKING FINDINGS IN SUPPORT THEREOF—APNS: 0238-201-41 AND 0238-221-22.

WHEREAS, LINK LOGISTICS REAL ESTATE MANAGEMENT, LLC (hereinafter referred to as Applicant) has filed an Application for the approval of an amendment to the California Commerce Center Specific Plan, File No. PSPA22-006, as described in the title of this Resolution (hereinafter referred to as Application or Project); and

WHEREAS, the Application applies to 16.65 acres of land generally located at the southeast corner of Rockefeller and Wanamaker Avenues, at 1350 and 1375 South Woodruff Way within the proposed Light Industrial land use designation of the California Commerce Center Specific Plan, and is presently improved with two commercial buildings (Citrus Motors); and

WHEREAS, the properties to the north and west of the Project site are located within the Light Industrial land use district of the California Commerce Center Specific Plan, and are developed with industrial buildings. The property to the east of the project site is the Interstate-15 Freeway (I-15). The properties to the south of the project site are located within the Commercial / Food / Hotel land use district of the California Commerce Center Specific Plan and are developed with a gas station and fast-food drive-thru restaurant; and

WHEREAS, the Application has been submitted in conjunction with Tentative Parcel Map No. 20559 (File No. PMTT22-025) to consolidate two existing parcels into one and facilitate the vacation of a portion of Woodruff Way, and a Development Plan (File No. PDEV22-034) to demolish the existing commercial buildings (approximately 161,320 square feet) and construct one 343,110 square-foot industrial building; and

WHEREAS, the Applicant submitted an amendment to the California Commerce Center Specific Plan to modify the land use designation on the Project site from Commercial / Food / Hotel to Light Industrial to support the Project and bring the property into compliance with TOP 2050's Land Use Plan, which designates the property as Industrial (0.55 Floor Area Ratio [FAR]); and

WHEREAS, the amendment includes graphic and textual modifications throughout to support the proposed Project, and the document has been appended to this Resolution as Attachment A; and

WHEREAS, The Ontario Plan 2050 Supplemental Environmental Impact Report (State Clearinghouse No. 2021070364) was certified on August 16, 2022, (hereinafter referred to as Certified SEIR), in which development and use of the Project site was discussed; and

WHEREAS, the Planning Director of the City of Ontario prepared and approved for attachment to the certified Environmental Impact Report, an Addendum to the Certified SEIR (hereinafter referred to as SEIR Addendum) in accordance with the requirements of the California Environmental Quality Act of 1970, together with State and local guidelines implementing said Act, all as amended to date (collectively referred to as CEQA); and

WHEREAS, the environmental impacts of this project were thoroughly analyzed in the SEIR Addendum, which concluded that implementation of the Project could result in a number of significant effects on the environment that were previously analyzed in the Certified SEIR, and that the Certified SEIR identified mitigation measures that would reduce each of those significant effects to a less-than-significant level; and

WHEREAS, the City's "Local Guidelines for the Implementation of the California Environmental Quality Act (CEQA)" provide for the use of a single environmental assessment in situations where the impacts of subsequent projects are adequately analyzed; and

WHEREAS, the Application is a project pursuant to the California Environmental Quality Act — Public Resources Code Section 21000 et seq. — (hereinafter referred to as CEQA) and an SEIR Addendum has been prepared to determine possible environmental impacts; and

WHEREAS, Ontario Development Code Table 2.02-1 (Review Matrix) grants the City Council the responsibility and authority to review and act on the subject Application; and

WHEREAS, the Project has been reviewed for consistency with the Housing Element of the Policy Plan component of The Ontario Plan 2050, as State Housing Element law (as prescribed in Government Code Sections 65580 through 65589.8) requires that development projects must be consistent with the Housing Element, if upon consideration of all its aspects, it is found to further the purposes, principals, goals, and policies of the Housing Element; and

WHEREAS, the Project is located within the Airport Influence Area of Ontario International Airport, which encompasses lands within parts of San Bernardino, Riverside, and Los Angeles Counties, and is subject to, and must be consistent with, the policies and criteria set forth in the Ontario International Airport Land Use Compatibility Plan (hereinafter referred to as ALUCP), which applies only to jurisdictions within San

Bernardino County, and addresses the noise, safety, airspace protection, and overflight impacts of current and future airport activity; and

WHEREAS, City of Ontario Development Code Division 2.03 (Public Hearings) prescribes the manner in which public notification shall be provided and hearing procedures to be followed, and all such notifications and procedures have been completed; and

WHEREAS, at the September 26, 2023, hearing, the Planning Commission voted to continue the item to the October 24, 2023, hearing date; and

WHEREAS, on October 24, 2023, the Planning Commission of the City of Ontario conducted a hearing to consider the SEIR Addendum and the Project, and concluded said hearing on that date, voting to issue Resolution No. PC23-078, recommending the City Council adopt the SEIR Addendum, and voting to issue Resolution No. PC23-079, recommending the City Council approve the Application; and

WHEREAS, as the first action on the Project, on November 21, 2023, the City Council issued a Resolution adopting the SEIR Addendum, finding that the proposed Project introduces no new significant environmental impacts and applying all previously adopted mitigation measures to the Project, which were incorporated by reference; and

WHEREAS, on November 21, 2023, the City Council of the City of Ontario conducted a hearing to consider the Project, and concluded said hearing on that date; and

WHEREAS, all legal prerequisites to the adoption of this Resolution have occurred.

NOW, THEREFORE, BE IT RESOLVED by the City Council of the City of Ontario as follows:

SECTION 1. ***Housing Element Compliance.*** Pursuant to the requirements of California Government Code Chapter 3, Article 10.6, commencing with Section 65580, as the decision-making body for the Project, the City Council finds that based upon the facts and information contained in the Application and supporting documentation, at the time of Project implementation, the project is consistent with the Housing Element of the Policy Plan (General Plan) component of The Ontario Plan, as the project site is not one of the properties in the Housing Element Sites Inventory contained in Tables B-1 and B-2 of the Housing Element Technical Report.

SECTION 2. ***Airport Land Use Compatibility Plan (ALUCP) Compliance.*** The California State Aeronautics Act (Public Utilities Code Section 21670 et seq.) requires that an Airport Land Use Compatibility Plan be prepared for all public use airports in the State; and requires that local land use plans and individual development proposals must be consistent with the policies set forth in the adopted Airport Land Use Compatibility Plan.

On April 19, 2011, the City Council of the City of Ontario approved and adopted the Ontario International Airport Land use Compatibility Plan, establishing the Airport Influence Area for Ontario International Airport, which encompasses lands within parts of San Bernardino, Riverside, and Los Angeles Counties, and limits future land uses and development within the Airport Influence Area, as they relate to noise, safety, airspace protection, and overflight impacts of current and future airport activity. As the decision-making body for the Project, the City Council has reviewed and considered the facts and information contained in the Application and supporting documentation against the ONT ALUCP compatibility factors, including [1] Safety Criteria (ONT ALUCP Table 2-2) and Safety Zones (ONT ALUCP Map 2-2), [2] Noise Criteria (ONT ALUCP Table 2-3) and Noise Impact Zones (ONT ALUCP Map 2-3), [3] Airspace protection Zones (ONT ALUCP Map 2-4), and [4] Overflight Notification Zones (ONT ALUCP Map 2-5). As a result, the City Council, therefore, finds and determines that the Project, when implemented in conjunction with the conditions of approval, will be consistent with the policies and criteria set forth within the ONT ALUCP; and

SECTION 3. ***Concluding Facts and Reasons.*** Based upon the substantial evidence presented to the City Council during the above-referenced hearing, and upon the specific findings set forth in Sections 1 and 2, above, the City Council hereby concludes as follows:

(1) ***The proposed Specific Plan, or amendment thereto, is consistent with the goals, policies, plans and exhibits of the Vision, Policy Plan (General Plan), and City Council Priorities components of The Ontario Plan.*** The Project site's current zoning (Commercial / Food / Hotel land use designation of the California Commerce Center Specific Plan) is inconsistent with the Policy Plan Land Use Designation of Industrial (0.55 FAR). With the Project's conditions of approval, implementation of the proposed Specific Plan Amendment to change the land use designation to Light Industrial would make the Project site consistent with the Policy Plan, as well as the Vision and City Council Priorities components of The Ontario Plan 2050, as it would facilitate the development of a well-designed industrial building in keeping with, and complementary to, the existing industrial neighborhood surrounding the Project site.

(2) ***The proposed Specific Plan, or amendment thereto, would not be detrimental to the public interest, health, safety, convenience, or general welfare of the City.*** The proposed modifications established by the Specific Plan Amendment have been created with the intent to safeguard and further the public interest, health, safety, convenience, and/or general welfare, and to ensure that the purposes of The Ontario Plan 2050 and the proposed Specific Plan Amendment, are maintained. The Project site is located within an existing industrial neighborhood; as such, an industrial development is an appropriate land use for the site.

(3) ***In the case of an application affecting specific property(ies), the proposed Specific Plan, or amendment thereto, will not adversely affect the harmonious relationship with adjacent properties and land uses.*** The location of the proposed Specific Plan Amendment, and the proposed conditions under which future developments will be constructed and maintained, is consistent with the Policy Plan component of The Ontario Plan 2050 and the City's Development Plan, and, therefore,

will not adversely affect the harmonious relationship with adjacent properties and land uses. The Project site is located within an existing industrial neighborhood; as such, an industrial development is an appropriate land use for the site.

(4) ***In the case of an application affecting specific property(ies), the subject site is physically suitable, including, but not limited to, parcel size, shape, access, and availability of utilities, for the request and anticipated development.*** The proposed Specific Plan Amendment has been reviewed by all City departments, which have established that the project site is physically suitable for the anticipated development in terms of parcel size, shape, and availability of utilities. Development of the Project site is subject to Planning Commission review and approval of the related development entitlements (File Nos. PMTT22-025 and PDEV22-034), which have also been reviewed by all City departments and conditioned to ensure that the proposed development is appropriate for the Project site. Lastly, the Project site exceeds the Specific Plan and Development Code minimum requirements for lot size and dimensions and proposed development does not exceed the maximum FAR as prescribed by The Ontario Plan 2050.

SECTION 4. ***City Council Action.*** Based upon the findings and conclusions set forth in Sections 1 through 3, above, the City Council hereby APPROVES the herein described Specific Plan Amendment, attached hereto as Attachment A, and incorporated herein by this reference.

SECTION 5. ***Indemnification.*** The Applicant shall agree to defend, indemnify and hold harmless, the City of Ontario or its agents, officers, and employees from any claim, action or proceeding against the City of Ontario or its agents, officers or employees to attack, set aside, void, or annul this approval. The City of Ontario shall promptly notify the applicant of any such claim, action, or proceeding, and the City of Ontario shall cooperate fully in the defense.

SECTION 6. ***Custodian of Records.*** The documents and materials that constitute the record of proceedings on which these findings have been based are located at the City of Ontario City Hall, 303 East B Street, Ontario, California 91764. The custodian for these records is the City Clerk of the City of Ontario.

The City Clerk of the City of Ontario shall certify as to the adoption of this Resolution.

PASSED, APPROVED, AND ADOPTED this 21st day of November 2023.

CALIFORNIA COMMERCE CENTER

AT ONTARIO

I. INTRODUCTION

I. INTRODUCTION

A. PURPOSE OF SPECIFIC PLAN

The purpose for filing this Specific Plan document is to insure an integrated, well planned, high quality environment for the development of industrial, office, and service commercial uses. This document fulfills the Specific Plan requirements of the City of Ontario Municipal Code and of the State of California relating to the adoption and implementation of Specific Plans.

B. AUTHORITY

The Specific Plan for the California Commerce Center has been prepared in accordance with the California Government Code Section 65450 et.al. and applicable ordinances of the City of Ontario, and will constitute the zoning for the project site. Land use standards and regulations contained within this document shall govern all areas within the project. A legal description of the project boundaries is included in the Appendix of this report.

C. DEFINITIONS

For purposes of clarity, the following words, terms, and phrases have been defined as they are used in this document. All other definitions shall be per the Ontario Municipal Code. Terms not defined in the Municipal Code shall have the meaning ascribed to them in Webster's Collegiate Dictionary.

1. Applicant: person or entity applying for a Site Plan, Subdivision Map or other land use, or development approval submitted pursuant to this Specific Plan .

2. Approving Agent: in order of precedence and succession: (a) California Commerce Center (C.C.C.) as long as it owns any interest in the Property or a portion thereof or thereafter; (b) a Successor to California Commerce Center, which may include (i) any corporation, association or trust controlled by California Commerce Center, or with which C.C.C. has been merged and consolidated, or by which C.C.C. has been acquired, so long as it owns any interest in the Property or a portion thereof; or (ii) any Successor Owner of the interest of C.C.C. in the Property or a portion thereof, provided any such successor has been designated by C.C.C. the status as "Approving Agent" with the exclusive right to approve plans and grant variances as hereinafter set forth or thereafter; (c) the Property Owners' Association, provide C.C.C. or C.C.C.'s Successor has granted to such Association the status as "Approving Agent" with the exclusive right to approve plans and grant variances as hereinafter set forth. C.C.C. covenants that such a designation will be made by C.C.C. or by C.C.C.'s Successor before C.C.C. or C.C.C.'s Successor ceases to own any interest in the Property if a written request for such designation is received from the Owners' Association. Any designation of a new "Approving Agent" shall be effected by a signed, acknowledged and recorded Certificate to such effect.

3. Arterial: a through road or street constructed as part of the California Commerce Center's project, which has the minimum design characteristics established herein and which conforms to the City of Ontario's standards.

4. City: shall refer to the City of Ontario.

5. Food Park: two or more restaurant establishments grouped together around an amenity with shared, clustered parking.

6. Hometels: time share hotels offering extended rental periods.

7. Local Industrial Streets: local streets serving internal circulation needs of the project.

8. Low-Rise Buildings: buildings one to two stories in height.

9. Mid-Rise Buildings: buildings three to eight stories in height.

10. Permitted: without the requirement of further discretionary permits, but subject to all other applicable regulations.

11. Project: shall refer to the California Commerce Center.

12. Project Site: shall refer to the area within the designated legal boundaries of the California Commerce Center.

13. Project Sponsor: shall refer to California Commerce Center.

14. Service Commercial: retail establishments that cater primarily to the needs of employees and tenants, with direct sales to the public of personal and professional services.

CALIFORNIA COMMERCE CENTER

AT ONTARIO

II. PLANNING CONCEPTS

II. PLANNING CONCEPTS

A. GOALS AND OBJECTIVES

The California Commerce Center is a 1400± acre master planned, highly controlled, heavily landscaped complex that will accommodate the needs of a full range of industrial/office and commercial users. The Specific Plan provides site specific development standards and criteria within which detailed phased development can occur.

Specifically, the plan is designed to achieve the following objectives:

1. create a high quality, landscaped setting within which industrial/office and related retail facilities can locate;

2. establish design and development standards that will insure a high quality, integrated development that will endure over time;

3. provide a land use and phasing program that will allow development to occur in an orderly, integrated manner, and yet will have the flexibility to respond to changes in market demand;

4. respond to the growing pressures of industrial/office expansion in the Ontario region;

5. provide an expanding industrial economic base for the City of Ontario;

6. provide employment opportunities for those people seeking to relocate to the Ontario area because of the availability and affordability of housing, and for those living in the Ontario area and commuting to outlying employment centers;

7. create a landscape and streetscape that will enhance the aesthetic and visual quality of the area;

8. provide a planned infrastructure, utility, and service program that can meet the expanding needs of the project as they evolve, in an efficient and cost effective manner;

9. utilize landscape buffers to minimize disturbance from the adjacent airport, contiguous railroad lines, and nearby freeways.

B. VISUAL IMAGE

The visual image that will be created by the California Commerce Center will be one of a high quality, heavily landscaped, integrated industrial/office park. A landscape theme and hierarchy will be established that will lend identity and coherence to the project area. Uniform lighting and a graphic system for signage will be integrated into the design and layout of the project. The California Commerce Center will serve as a visual landmark to people entering the area either by air at the Ontario International Airport or by freeways from the east.

C. COMMUNITY AND REGIONAL PERSPECTIVE

Over the past decade the Southern California region has experienced rapid growth. Much of the region's agricultural land has been converted to urban uses for residential and industrial development. The growth trend is continuing, expanding into new geographic areas. As pressures of expansion increase in the Los Angeles/Orange County area, cities in San Bernardino County also experience pressures to grow and expand.

As a response to these pressures and to changes in regional economies, the City of Ontario is making a strong attempt to attract industry into the area, capitalizing on the City's central location in the growing Southern California region. The General Plan outlines a program for growth within the City, while the efforts of both the Redevelopment Agency and the local Chamber of Commerce are being directed to a large extent toward providing a structure within which this growth can occur.

The expansion of the Ontario International Airport is also a response to region-wide growth trends. The expansion will provide needed air carrier, transportation and passenger facilities. The provision of this large local air carrier facility will also stimulate industrial growth. It will stimulate demand for hotels, commercial facilities, and office space, attracting businesses looking to locate in the Southern California region.

The California Commerce Center is an integral part of this program, providing 1400± acres of land for industrial, office, and commercial expansion. It will serve as an employment base for a large number of people who are currently relocating to the Ontario area because of the availability of housing. In doing so, the project will aid in reducing regional energy consumption levels by reducing work related travel, and by providing an employment center within close proximity to growing residential areas.

CALIFORNIA COMMERCE CENTER

AT ONTARIO

III. GENERAL NOTES

III. GENERAL NOTES

1. The City of Ontario will provide water service to the California Commerce Center. The primary source of this water will be groundwater from wells owned and operated by the City Water Department. Four of the City's wells are located on, or near, the project site.

   C.C.C. has prepared a Technical Master Plan under separate cover for water service for the Specific Plan area. Section V.D., Component Plans; Infrastructure, of this report, summarizes the elements and conditions of water service.

2. Wastewater will be discharged into a regional system provided by the Chino Basin Municipal Water District, in a manner approved by the City of Ontario Engineering Department and the Chino Basin Municipal Water District.

   C.C.C. has prepared a Technical Master Plan under separate cover for sewer service of the Specific Plan. Section V.D. of this report, summarizes the elements and conditions of sewer service.

3. Drainage of the Specific Plan area will be provided by storm drain systems tributary to both Lower Deer Creek and the Day Creek Channel System. C.C.C. will prepare a Technical Master Plan of drainage and water conservation approved by the City of Ontario and San Bernardino County Flood Control District, prior to any development west of Milliken Avenue. Refer to Section V.D. of this report for the conceptual drainage plan.

4. Solid waste disposal will be handled by the City of Ontario which maintains and operates its own fleet of refuse pick-up trucks. The City will gradually increase its capacity to service the site as the project develops.

5. Telephone service will be provided by General Telephone Company through the installation of new lines to the project site from General Telephone's existing central facilities.

6. Southern California Edison Company will provide electricity to the site via the existing 12 kV lines that form the system's network.

7. Southern California Gas Company will provide natural gas to the site through the distribution lines currently servicing the project area from the south.

8. Fire protection and paramedic services will be handled by the City of Ontario's Fire Stations Nos. 1, 2, 3, 5, and 6, as well as by a new fire station, located off-site. The California Commerce Center designated a 3.8-acre site at Jurupa Street, east of the Ontario Freeway for the construction of this facility (see Exhibit 32, Fire Station).

9. In the event of an aircraft-related incident on-site, the Los Angeles Department of Airports maintains a fire station at the airport to respond to such occurrences. Through a Mutual Aid Agreement, the Ontario Fire Department acts as an auxiliary back-up team when necessary.

10. Police protection will be provided by the Ontario Police Department, with air surveillance provided daily by the Ontario Police Department's helicopter patrol.

11. The City of Ontario will provide street cleaning services for the streets in the California Commerce Center.

    California Commerce Center shall provide the City of Ontario with two (2) sweeper transfer stations within the Specific Plan area. The Public Services Director shall determine the location of these transfer stations.

12. Noise impacts from the Ontario International Airport, the Southern Pacific and Union Pacific Railroads, and the Ontario and San Bernardino Freeways will be mitigated where necessary by landscape buffers and the application of architectural acoustical design standards.

13. Grading permits may be issued for individual developments, provided that the grading plan is in basic conformance with the conceptual grading plan approved as part of this Specific Plan. Soil may be stockpiled on, or borrowed from, locations within the total project site. All grading plans shall be reviewed by the West End Resource Conservation District. Prior to the stockpiling or borrowing of any soil in order to grade separate parcels, the developer shall obtain an approval from the City Building Department and the Engineering Department to assure conformance with appropriate codes and provision for proper drainage.

14. Continued use of portions of the project site for existing agricultural purposes shall be permitted.

15. Development standards and criteria contained herein will replace and supplement those of the City of Ontario's Zoning Ordinance, and are intended to insure the goals and objectives of the California Commerce Center's Specific Plan.

16. California Commerce Center's Approving Agent shall have the authority to interpret and approve minor adjustments to the design guidelines and criteria contained herein in order to achieve superior design solutions. Minor adjustments shall be defined as site specific modifications including, but not limited to, granting of reciprocal side yards, location of parking and loading areas, and the substitution of building materials. Such adjustments will also require approval by the City of Ontario Planning Director and Building Official.

17. Any standards or land use proposals not specifically covered by this plan and supplemental text shall be subject to the regulations of the City of Ontario Zoning Ordinance. If any provisions of this document conflict with the regulations of the Ontario Zoning Ordinance, the provisions in this document shall take precedence.

18. A Property Owners' Association shall be formed. This association will maintain all landscaped areas including median landscaping and maintenance, and energy costs of street lighting throughout the Specific Plan area. The Property Owners' Association shall follow maintenance standards as approved by the City of Ontario and California Commerce Center. Those areas to be maintained by an association shall not be dedicated to the City of Ontario in easement or fee title.

19. Amendments or revisions to the Master Plans contained in this document shall not require a revision of the entire Specific Plan document. However, such amendments or revisions shall be subject to the approval of the City of Ontario Planning Commission and City Council and may require review by the Development Advisory Board.

20. Additional rights-of-way will be dedicated to the City for "intersection bubbling" to accommodate added turn lanes as necessary. Intersection bubbling will be determined subsequent to a developer-sponsored traffic study, and in conjunction with a traffic monitoring program approved by the City Engineer. Street and highway rights-of-way and curb widths shown within the Specific Plan may be slightly modified if warranted by a precise traffic lane striping configuration, and approved by the City Engineer. Dedication will be at the time of development of particular parcels adjacent to intersections.

21. Location of all traffic signals shall be based upon a developer-sponsored, City-approved traffic study and traffic monitoring programs. Traffic signals necessitated and resulting from the Specific Plan development will be required in conjunction with construction of the streets and roads of the Specific Plan.

22. The specific requirements for infrastructure improvements shall be determined by the various Technical Master Plans. The various infrastructure necessitated by phase construction will be determined by a phasing infrastructure and circulation plan approved by the City Engineer, through the subdivision process.

23. All exhibits in this document relative to Ontario International Airport runway extensions reflect Noise Abatement Policy No. 13513.

24. California Commerce Center will increase the overdrafting of water from the basin which will require the City of Ontario to purchase additional supplies from the State. The development will also increase sewage discharge and treatment. Approval of the Specific Plan does not guarantee the availability of water or sewer services, including importation and treatment facilities.

25. Bus service, turn outs, and bays within the Specific Plan area will be provided. The specific location and geometrics will be developed pursuant to developer-sponsored, City-approved, traffic study in conjunction with the Traffic Monitoring Program.

CALIFORNIA COMMERCE CENTER

AT ONTARIO

IV. SUMMARY OF EXISTING CONDITIONS

IV. SUMMARY OF EXISTING CONDITIONS

A. PROJECT LOCATION

1. REGIONAL CONTEXT

The California Commerce Center encompasses approximately 1400 acres of agricultural land in Southern California, and is located in the southwest corner of San Bernardino County within the City of Ontario (see Exhibit 1, State of California, and Exhibit 2, Southern California Regional Map). This area is part of the Chino Basin, formed by the San Bernardino Mountains, the Jurupa Mountains, and the Santa Ana Mountains, separated on the west from the Los Angeles Basin by the San Jose Hills. The project is centrally located, being approximately 40 miles from downtown Los Angeles, 20 miles from downtown San Bernardino, and 30 miles from Orange County. Neighboring cities include Rancho Cucamonga, Upland, Fontana, Chino, and Montclair (see Exhibit 3, Regional Context). Land uses in the region range from former agricultural lands devoted to citrus/grape production and the raising of dairy cattle, to areas of industrial and residential expansion.

2. AREA CONTEXT

The California Commerce Center is located in the eastern portion of the City of Ontario, immediately adjacent to Ontario International Airport. All development proposals shall be consistent with the Ontario International Airport Land Use Compatibility Plan. The site is bounded by the Southern Pacific Railroad mainline to the north, Haven Avenue to the west, the San Bernardino County Sanitary Landfill site along Mission Boulevard to the south, and Day Creek Channel to the east (see Exhibit 4, Area Context, and Exhibit 5, Project Site).

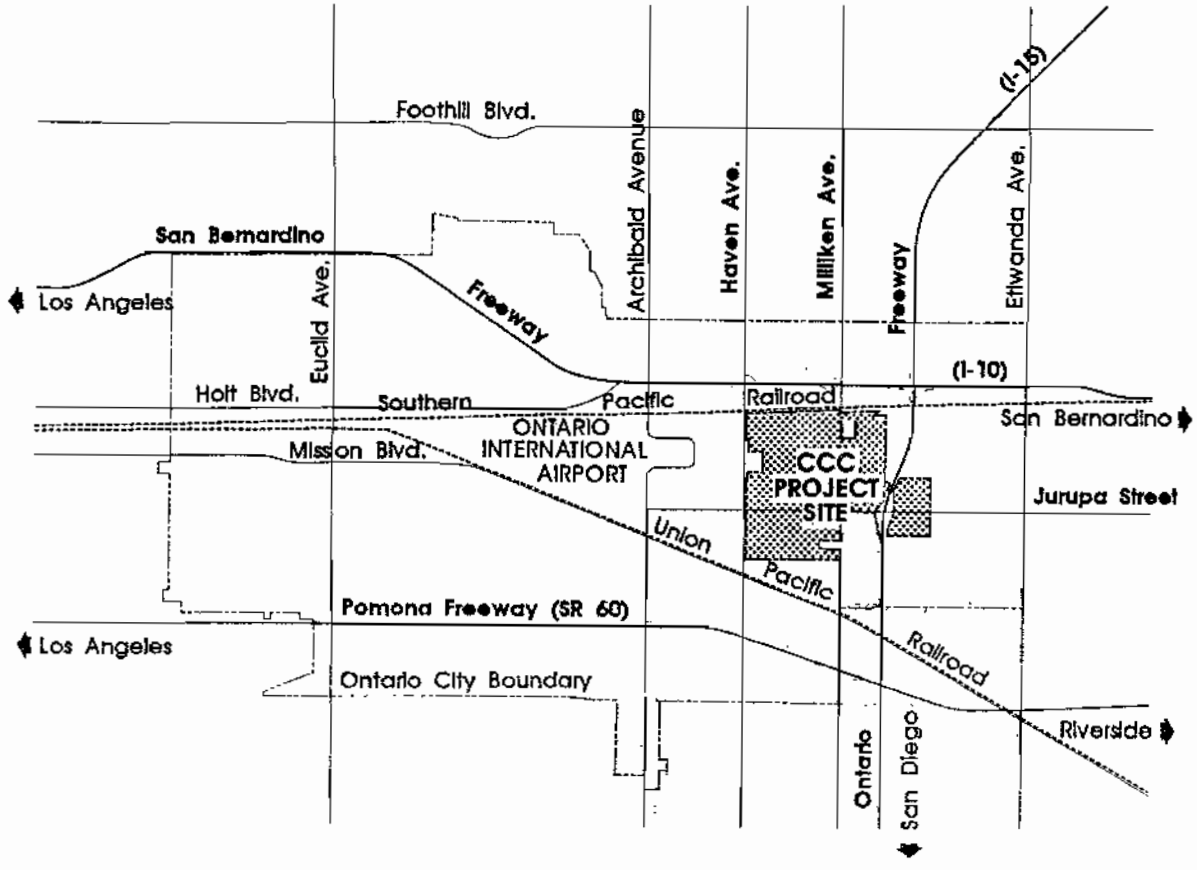
EXHIBIT 4

AREA CONTEXT



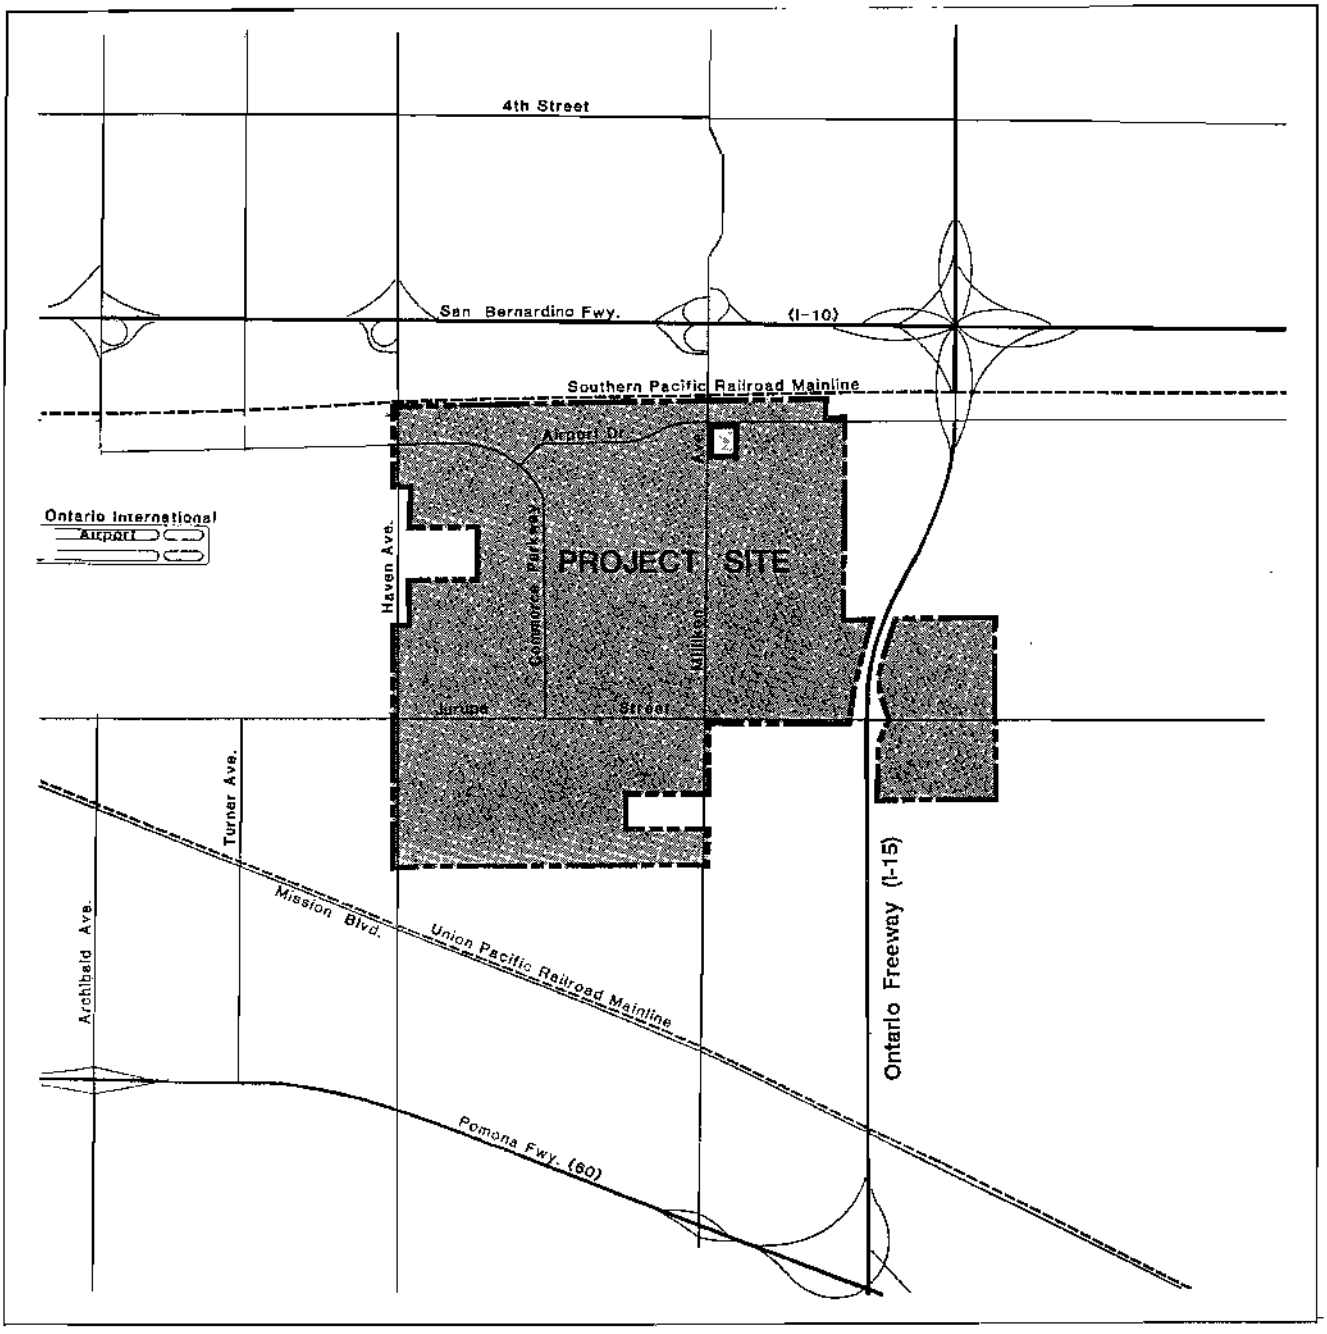


EXHIBIT 5

PROJECT SITE

CALIFORNIA COMMERCE CENTER

Ontario, California

NORTH

0' 500' 1000' 1500' 2000' 2500'

B. SITE CONDITIONS-EXISTING LAND USES

The project site consists primarily of vacant land and abandoned vineyards. Nordstrom, Inc. occupies a fifteen-acre parcel in the southern portion of the site, and Quaker Paint Company owns ten acres in the northern portion. Both of these uses operate primarily as distribution centers. A major utility easement owned by Southern California Edison Company is located southeast of the site, with transmission lines traversing the eastern section of the project area (see Exhibit 6, Existing Land Uses).

C. EXISTING CIRCULATION

1. REGIONAL CIRCULATION

The project site has excellent regional accessibility, located within close proximity to the San Bernardino Freeway (I-10), the Ontario Freeway (I-15), and the Pomona Freeway (SR 60). The San Bernardino Freeway provides a major route to Los Angeles on the west and San Bernardino to the east. The Ontario Freeway provides north-south regional circulation. In addition, the site is serviced by two major railroads, the Southern Pacific and the Union Pacific (see Exhibit 7, Regional Circulation).

2. LOCAL CIRCULATION

Existing local circulation includes services of discontinuous north-south and east-west streets. North-south access to the site is provided by Milliken Avenue, a two-lane highway with interchanges at both the San Bernardino and Pomona Freeways. In the east-west direction, Airport Drive traverses the project site near its northern boundary. Jurupa Street will provide a connection from the Ontario Freeway to Haven Avenue. Haven Avenue, at the western boundary of the site, is discontinuous, terminating at rail lines at both the north and south boundaries of the site (see Exhibit 8, Local Circulation). In addition, the City of Ontario's Master Plan of Streets and Highways is provided for reference (see Exhibit 8A, City of Ontario, Master Plan of Streets and Highways).

Exhibit 8A

0 400 800 1,600
Feet

Master Plan of Streets and Highways

D. EXISTING PHYSICAL CONDITIONS

1. TOPOGRAPHY

The site is basically flat, sloping slightly to the south at an average grade of one to two percent. Elevations on-site range from approximately 980 to 870 feet (see Exhibit 9, Topography (U.S.G.S., 1981)).

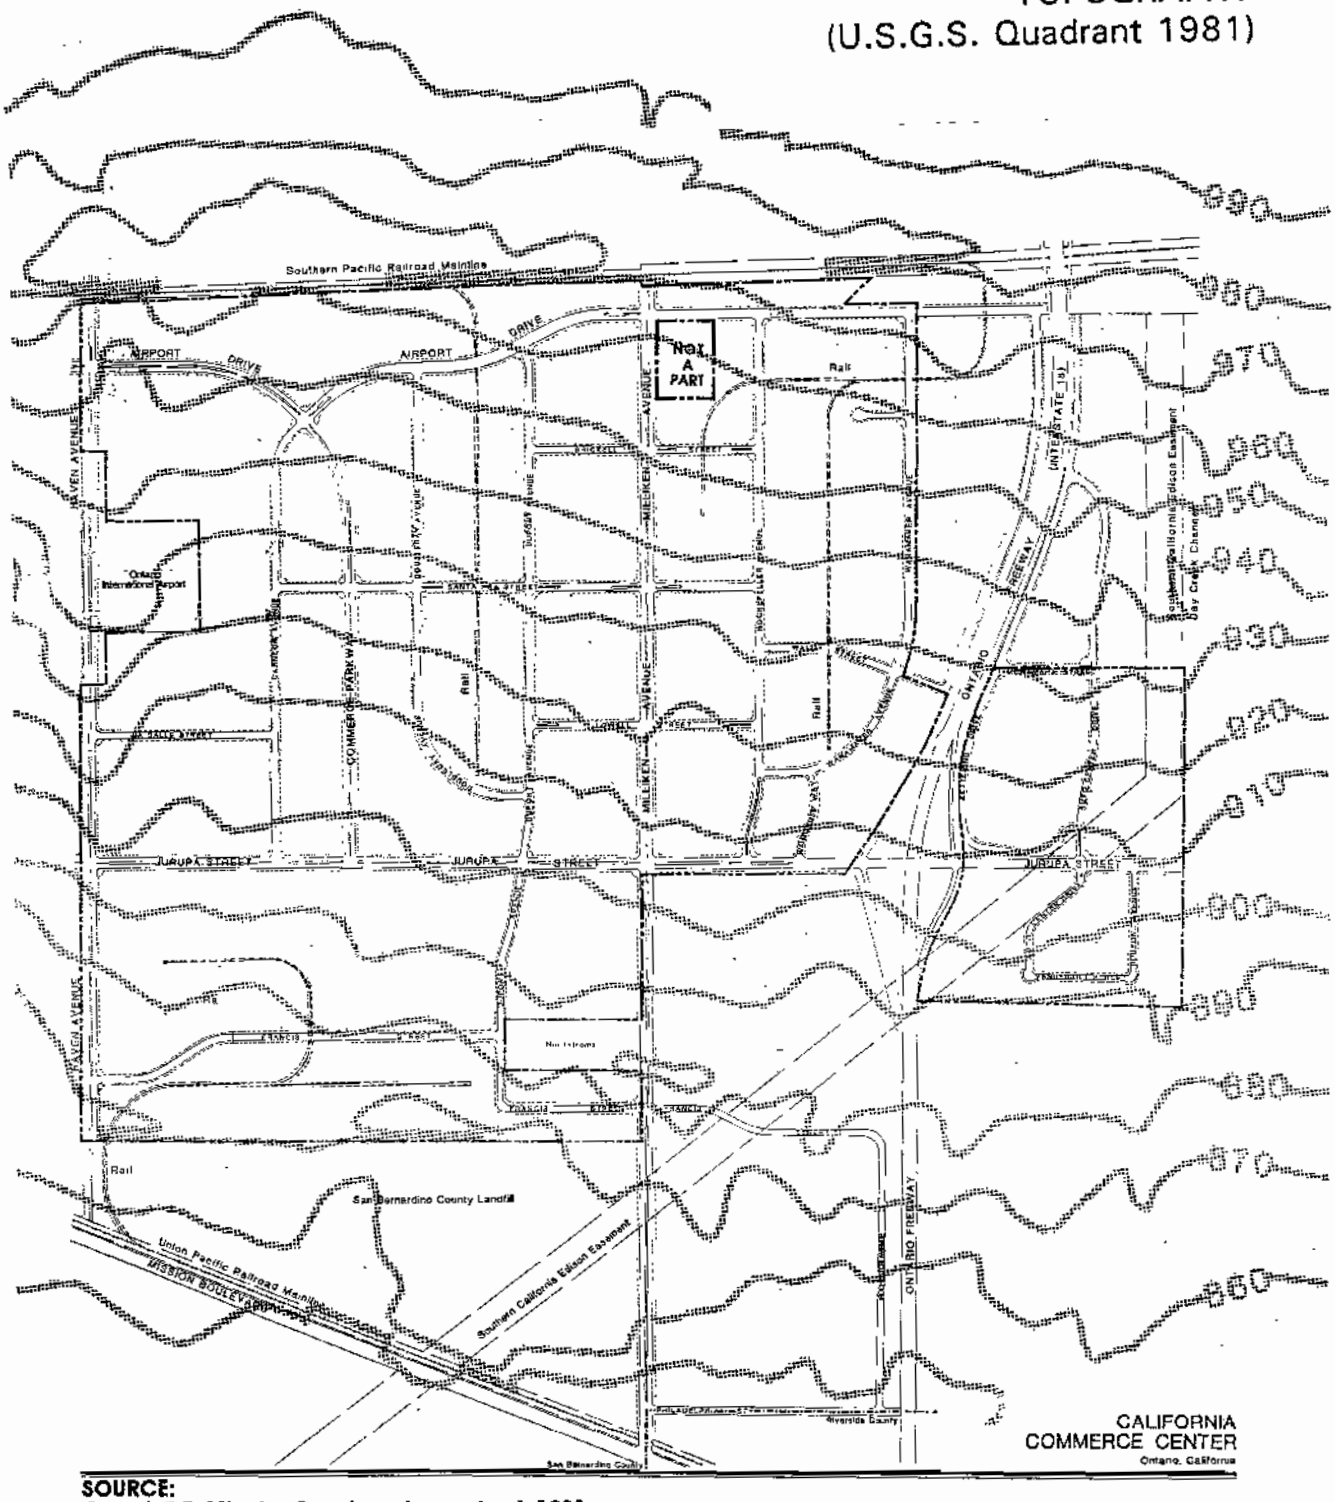
2. GEOLOGY AND SOILS

Major soils of the project site have been classified as part of the Delhi Association, with minor soils being of the Tujunga series.

3. CLIMATE

The climate in the area is dominated by the region's Pacific high pressure system, and is characterized by hot, dry summers and mild winters.

4. SEISMICITY



No geologic faults are know to occur in, or to cross, the immediate boundaries of the project; however, the area is subject to earth shaking as a result of known active faults in the region. Cucamonga, Red Hill, San Jose, Indian Hill, and Chino-Elsinore are potentially active faults within a ten- to fifteen-mile radius of the site. San Jacinto and San Andreas Faults are historically active faults located approximately twenty-five miles northwest of the area (see Exhibit 10, Seismic Faults).

5. HYDROLOGY

The project site was subject to infrequent flood hazards. A portion of the site, 119.5 acres, was identified as a flood hazard area by the Federal Emergency Management Agency's (FEMA) National Flood Insurance Program, dated December 2, 1980. With the completion of the Lower Deer Creek Channel system, the City of Ontario has applied to FEMA to revise the Flood Insurance Rate Map for this area. Major storm flooding problems within the project site are reduced by the site's location south of the San Bernardino Freeway and the Southern Pacific Railroad mainline. Both of these structures are constructed at a slightly higher elevation than the surrounding area and, therefore, serve as barriers to northerly flood flows. The completion of the upper reaches of Lower Deer Creek Channel in 1987 has reduced flood hazards to the project site from those shown on the current flood insurance rate map (see Exhibit 11, Flood Boundary (Flood Insurance Rate Map, 1980)).

EXHIBIT 11

FLOOD BOUNDARY
(Flood Insurance Rate Map, 1980)

*Since the map was prepared by FEMA, storm drain improvements have been made to alleviate the 100-year flood condition. A letter, dated March 1, 1991, is on file with the City Engineering Department which identifies the status of the 100-year flood condition affecting the project site. For detailed storm drain improvements see Exhibit 26.

CALIFORNIA COMMERCE CENTER

Ontario, California

NORTH

0' 500' 1000' 1500' 2000' 2500'

The Army Corps of Engineers has master planned the Specific Plan area to drain into Cucamonga Creek at the confluence with Lower Deer Creek. Cucamonga Creek was constructed to receive these flows, and there are no capacity limitations in Cucamonga Creek which would prevent the 100-year flows from discharging at the confluence. C.C.C. has prepared a Comprehensive Master Plan for drainage and water conservation of the Specific Plan area, and other tributary areas within the watershed of Lower Deer Creek. This Master Plan includes hydrology, sizing of facilities, developing cost estimates, and identification of property ownership within the watershed boundaries. This Master Plan has been approved by the Corps of Engineers, San Bernardino County Flood Control District, and the City of Ontario.

C.C.C. shall be responsible for constructing the Master Planned facilities as follows:

(1) Within the Specific Plan area.

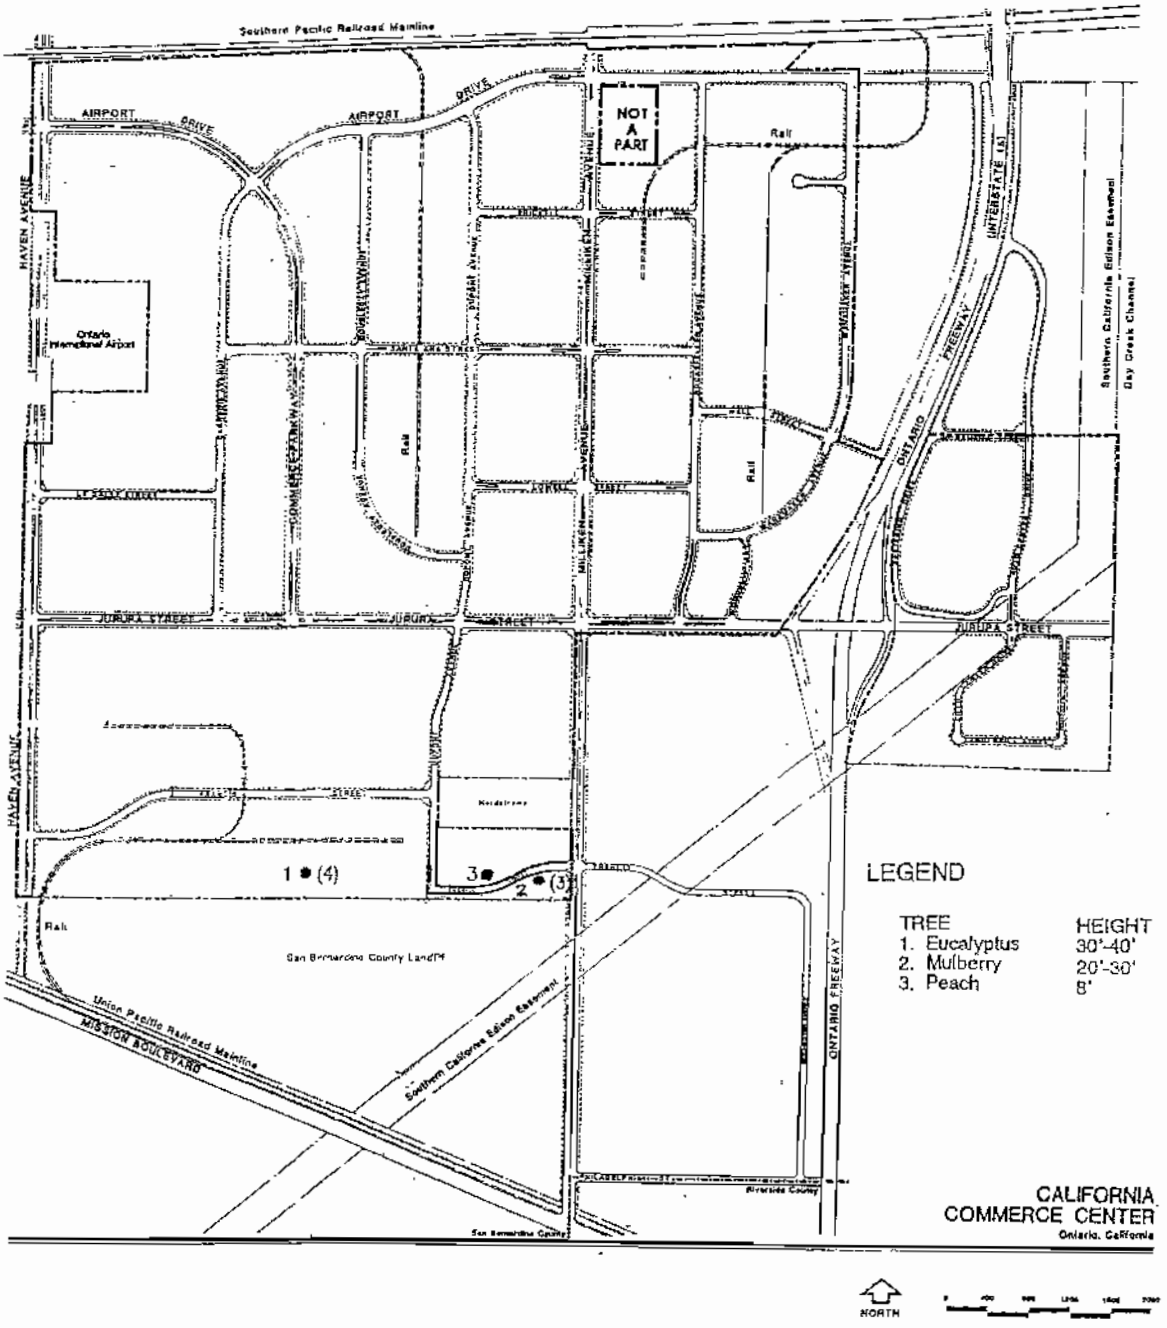
(2) From the Specific Plan area to the point of connection at Lower Deer Creek, including right-of-way acquisition.

(3) Lower Deer Creek and any retention/water conservation facilities will be developed pursuant to the following criteria as approved by the City Engineer:

(a) Drainage flows to Lower Deer Creek should be retained/restricted, not to exceed the functional 100-year capacity of the existing "improved" channel facilities of Lower Deer Creek.

(b) Lower Deer Creek should be improved to prevent continued erosion, siltation, and potential flood damage to downstream properties.

6. VEGETATION



The project site consist primarily of vacant land and old vineyards. Most of the area's native vegetation has since long been modified or displaced by the introduction of agriculture (see Exhibit 11A, Existing Vegetation in Undeveloped Project Areas, Trees Over 6' in Height).

Refer to the Draft Environmental Impact Report No. 81-4 prepared for this project for a detailed description of topography, geology and soils, climate, seismicity, hydrology, and vegetation.

EXHIBIT 11A

EXISTING VEGETATION IN UNDEVELOPED PROJECT AREAS

(Trees Over 6' in Height)

E. EXISTING UTILITIES

1. SOLID WASTE DISPOSAL

The City of Ontario provides solid waste disposal service throughout the city, as well as to the project site. Six refuse trucks currently service the City's industrial areas, and ten trucks service commercial areas.

2. WATER

Groundwater is the source of eighty-five percent of the City of Ontario's water. The wells within the City limits are owned by the City of Ontario and draw from the Chino Basin. Four wells are located near the California Commerce Center site. Currently the developed portion of this site has a water distribution network. Existing waterlines are twelve, sixteen, and eighteen inches, as identified in Exhibit 12, Water Lines Existing Condition. C.C.C. has prepared a Master Plan for water service which relates service demand and system capabilities. Any facilities which may need to be constructed, shall be done by C.C.C. on a phase basis, as approved by the City Engineer.

3. GAS

The Southern California Gas Company provides natural gas service to the area. The existing natural gas distribution system consists of two high pressure distribution lines located in Airport Drive and Milliken Avenue, connecting up to a line at Jurupa Street, and then to a transmission line at Riverside Drive, south of the project area (see Exhibit 13, Southern California Gas Existing Condition).

4. ELECTRICITY

Electricity in the project area is provided by Southern California Edison, with existing distribution lines in Airport Drive and a major feeder in Milliken Avenue. This distribution is connected to a substation northwest of the site at Sixth Street and Archibald Avenue (see Exhibit 14, Southern California Edison Existing Condition).

5. TELEPHONE

Telephone service in the project area is provided by General Telephone Company, with cables located in Airport Drive between Haven and Milliken Avenues. A major feeder system is located along Milliken Avenue; it will be served from a new central facility south of the project (see Exhibit 15, General Telephone Company Existing Condition).

EXHIBIT 12

WATER LINES
EXISTING CONDITION

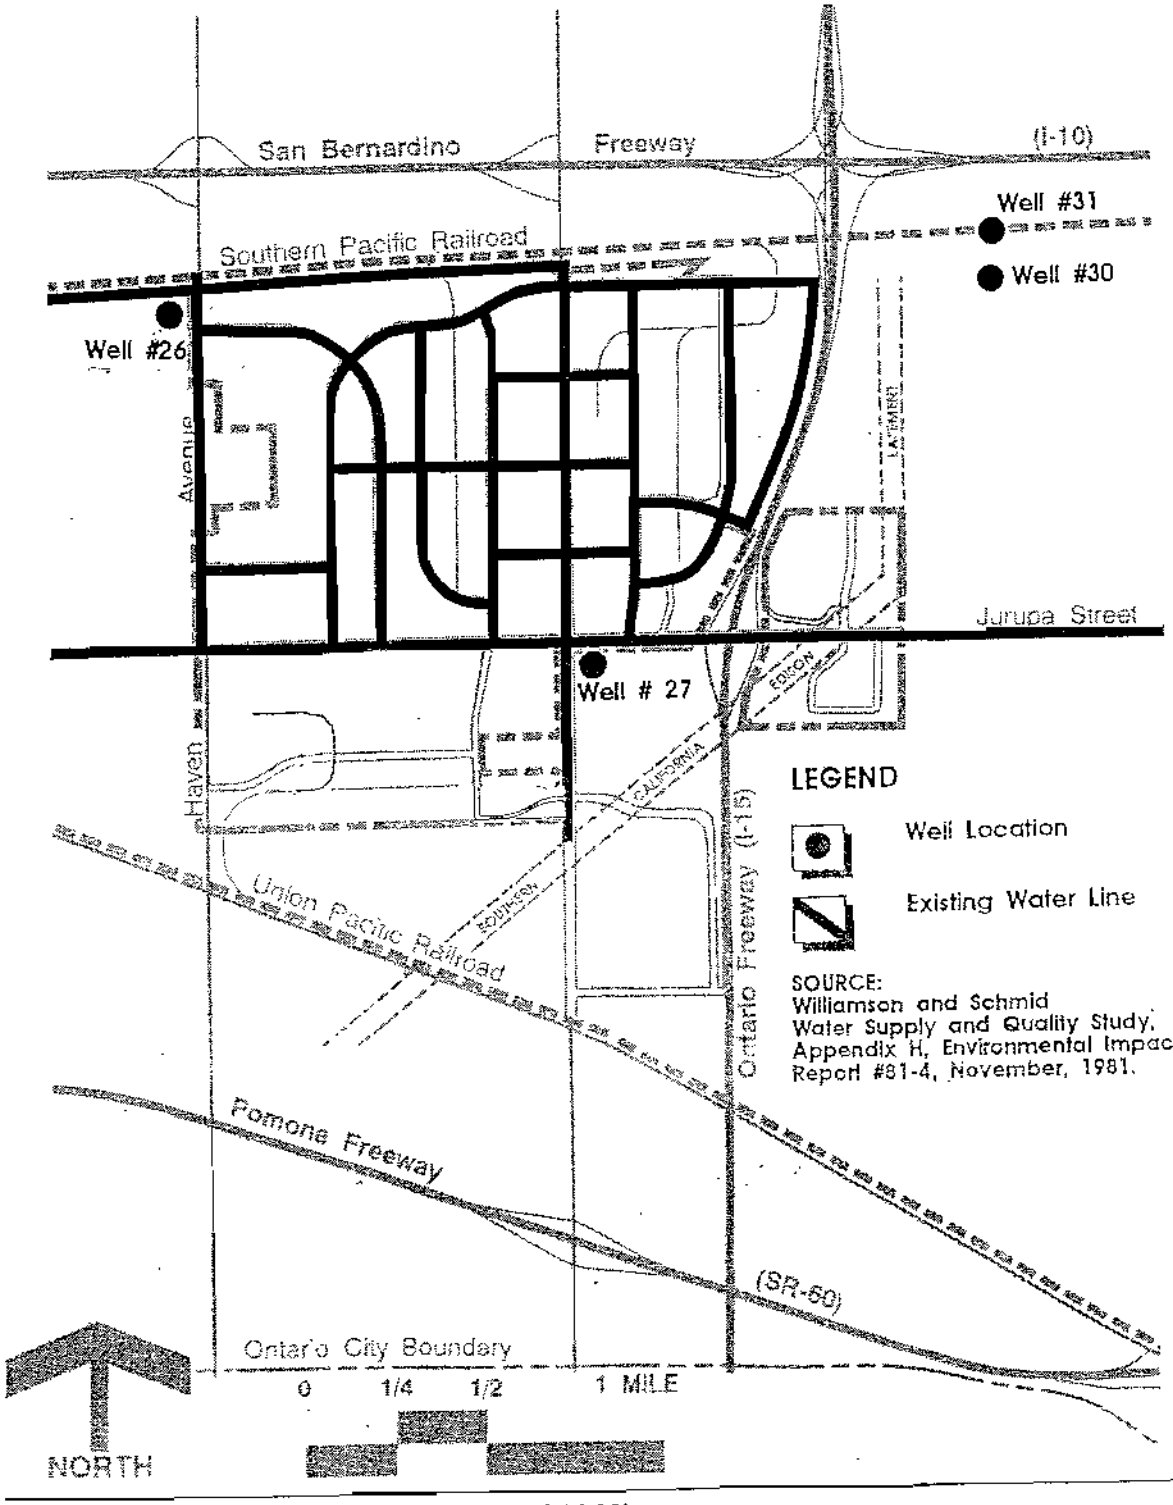


EXHIBIT 13

SOUTHERN CALIFORNIA GAS
EXISTING CONDITION

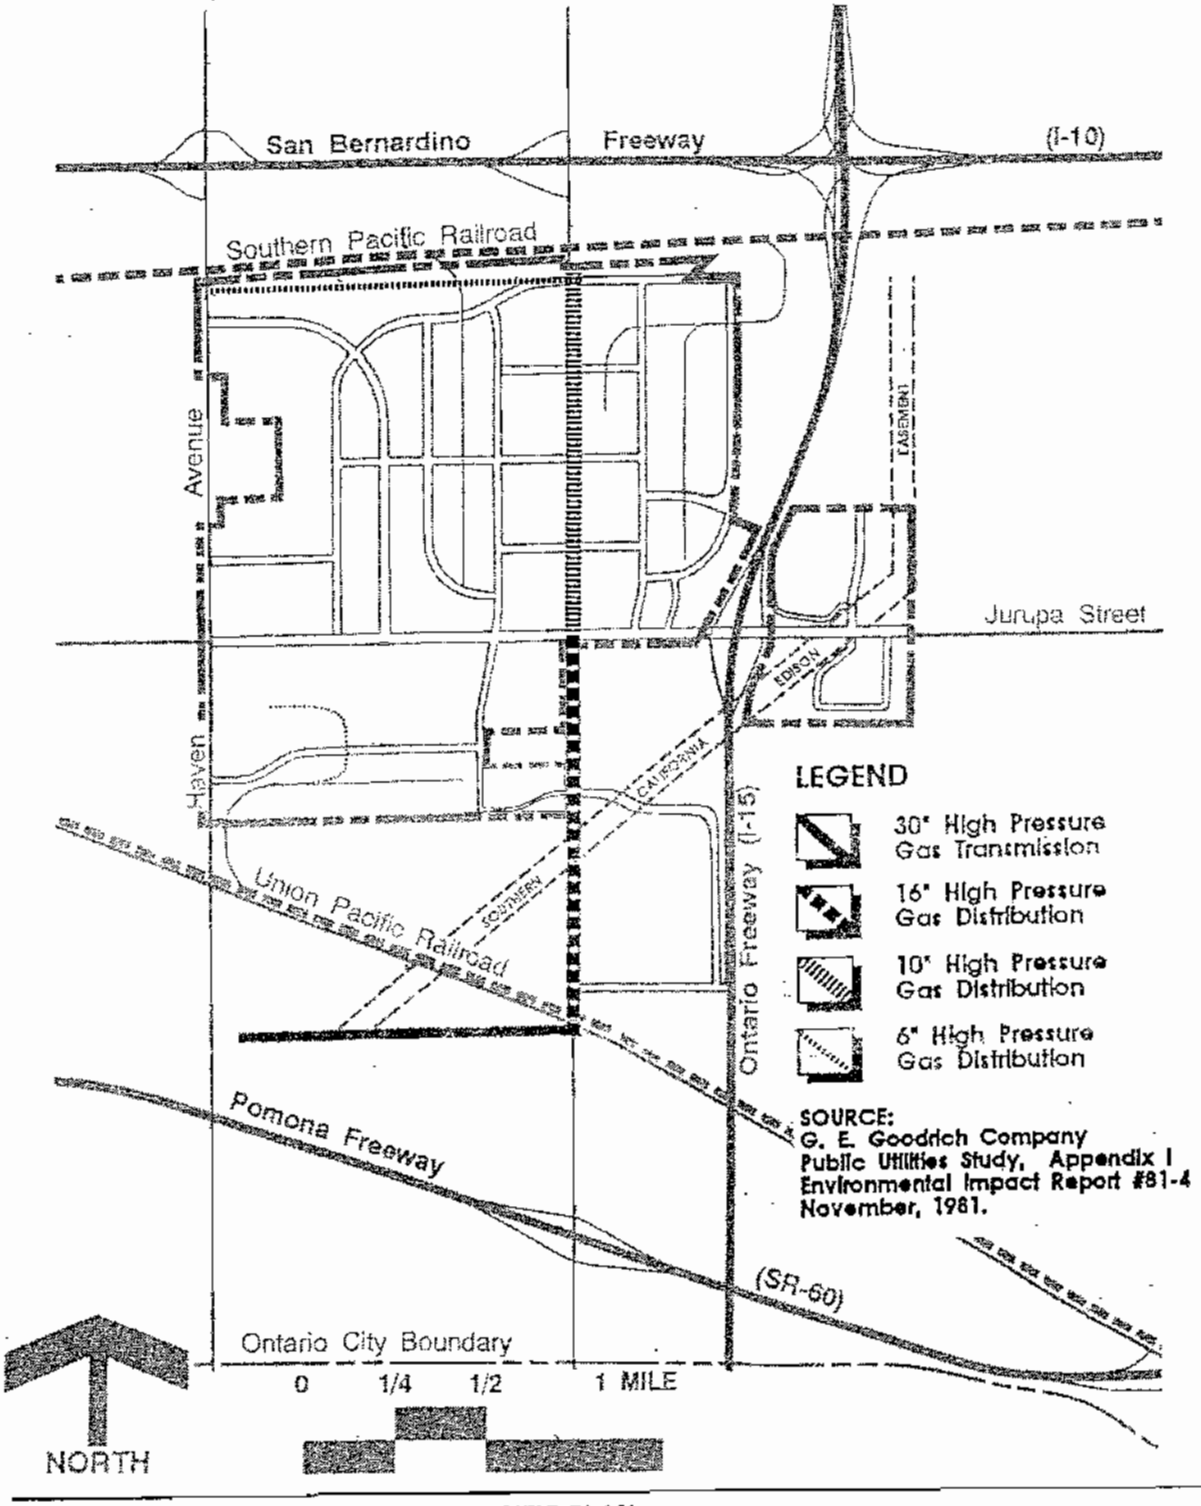

EXHIBIT 14

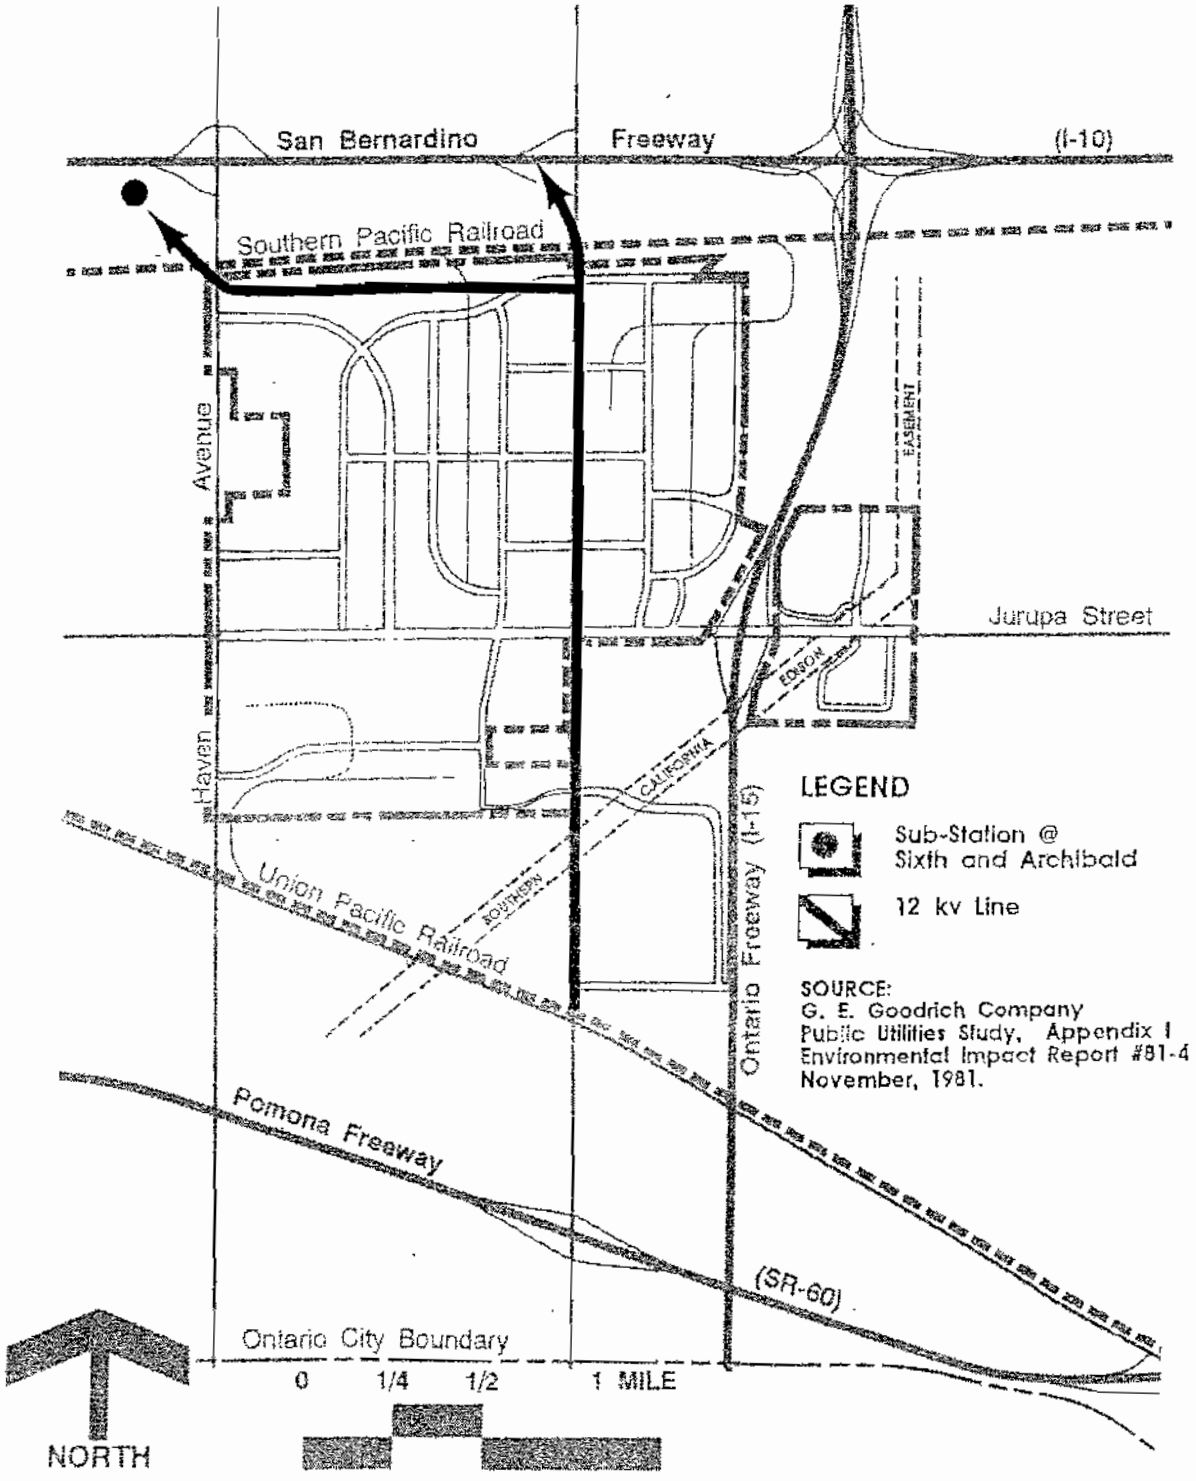
SOUTHERN CALIFORNIA EDISON
EXISTING CONDITION



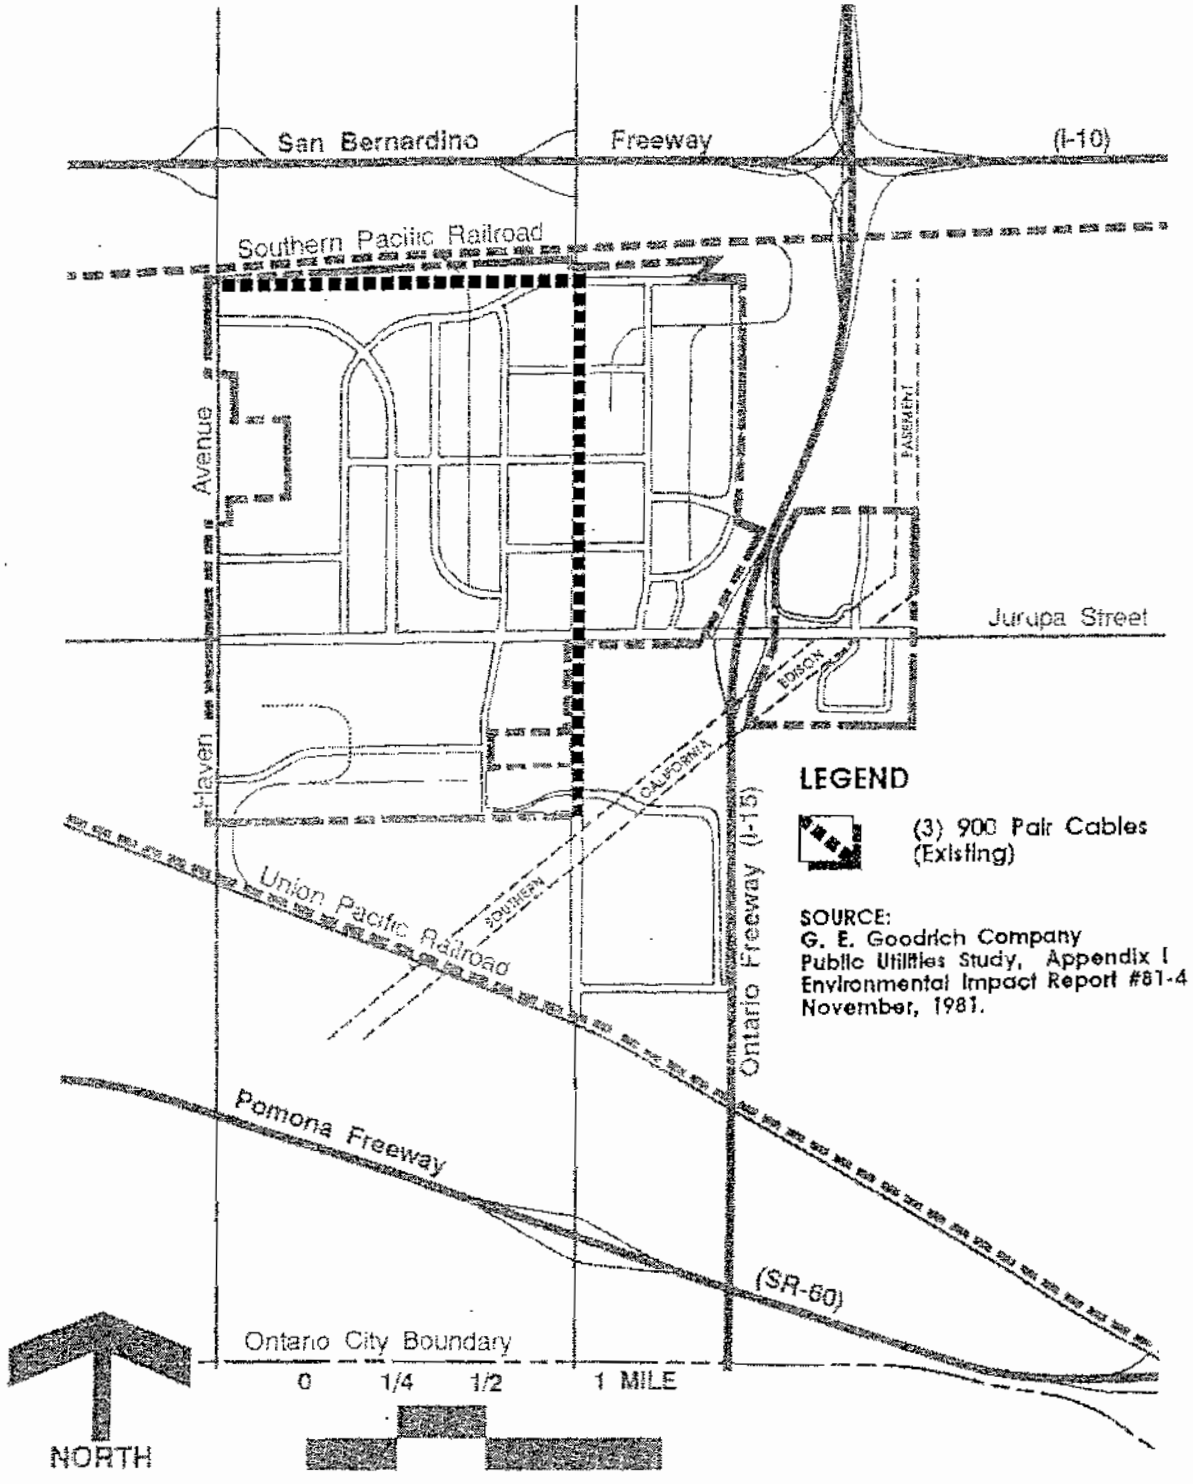


EXHIBIT 15

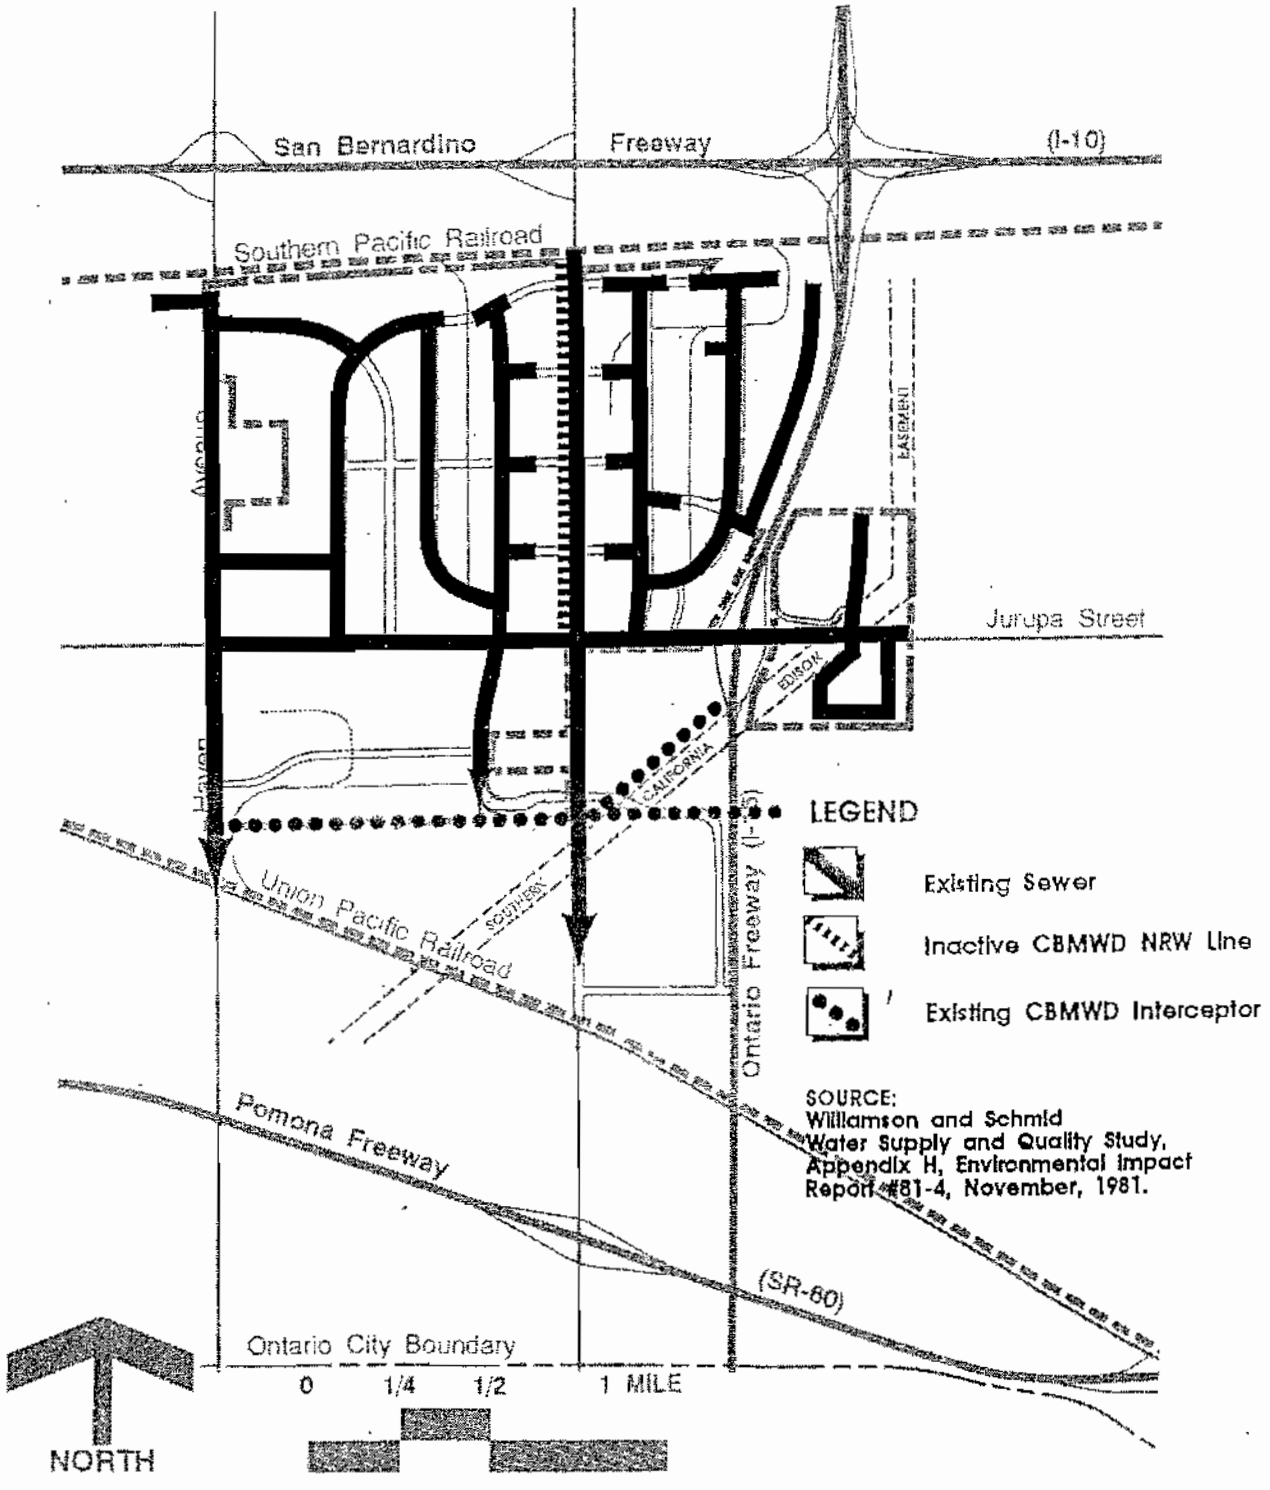
GENERAL TELEPHONE COMPANY
EXISTING CONDITION



6. WASTEWATER

Existing City sewer lines are located in Milliken Avenue, Haven Avenue and the developed portions of California Commerce Center. There is also an existing CBMWD sewer line in the future alignment of Haven Avenue. This line collects flow from north of the San Bernardino Freeway and carries it to Regional Plant No. 1 (see Exhibit 16, Sewer Existing Condition).

The proposed sewer system is conceptual, and is proposed to utilize the future Fontana Interceptor at various points of connection. These possible connection points are subject to capacity limitations of the proposed Fontana Interceptor, the existing Cucamonga Interceptor, and the existing Regional Plant No. 1. All connections shall be approved by the Chino Basin Municipal Water District. C.C.C. shall pay for all permit and connection fees, as well as oversizing and capacity fees required by CBMWD. The overall sewer system development shall be constructed pursuant to the Comprehensive Sewer Master Plan for the Specific Plan area and tributary areas. All sewer facilities necessary to serve the Specific Plan areas will be provided by C.C.C. The City of Ontario will assist C.C.C. in obtaining requested connections; however, the City of Ontario cannot guarantee approval for connection, or that capacity will be available.

EXHIBIT 16

SEWER
EXISTING CONDITION

CALIFORNIA COMMERCE CENTER

AT ONTARIO

V. COMPONENT PLANS

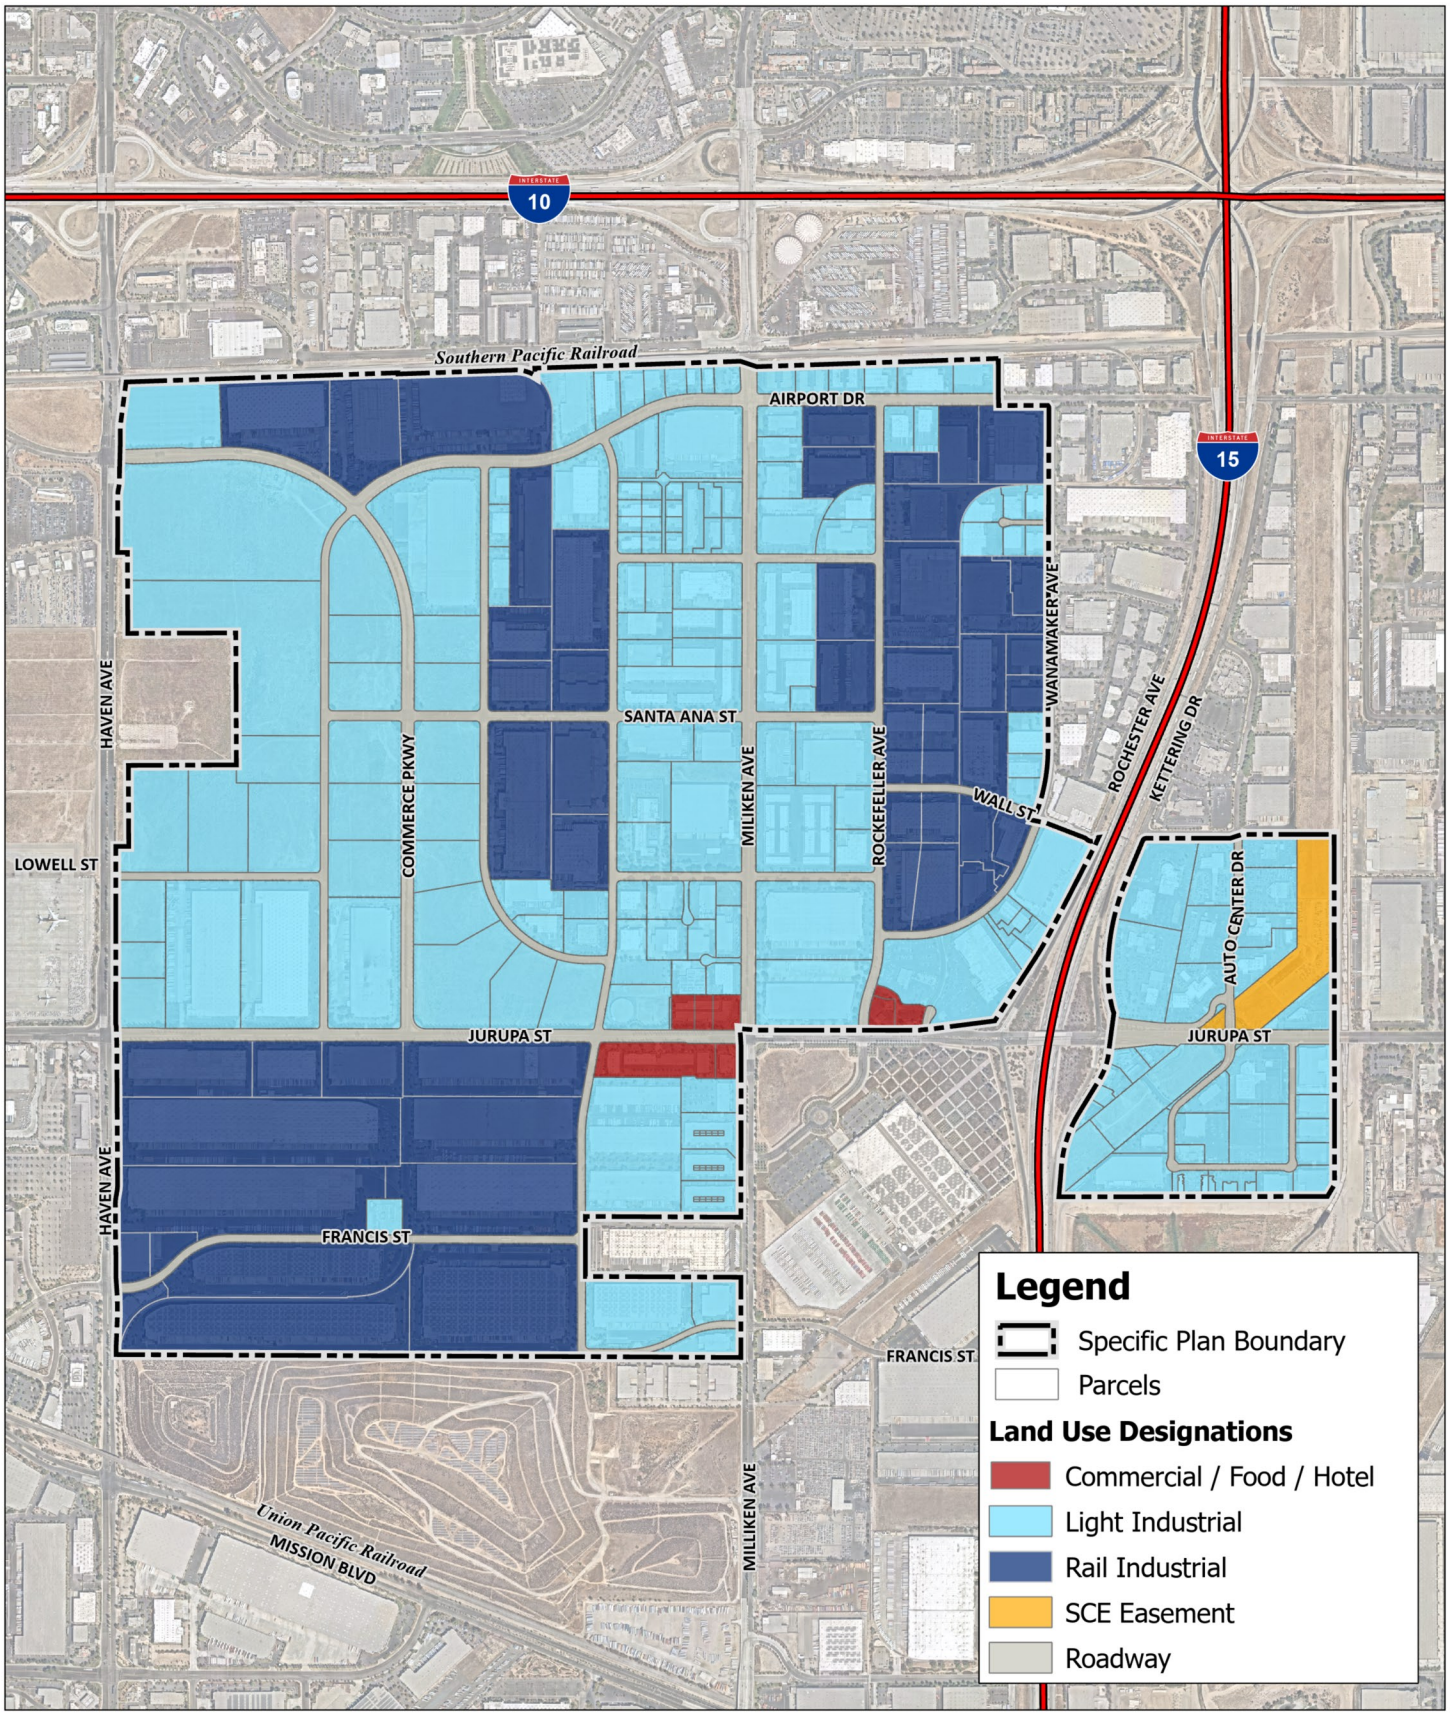
A. LAND USE CONCEPT

The land uses proposed for the California Commerce Center are Rail Industrial, Light Industrial, Office, Commercial/Food/Hotel, and Miscellaneous Services. Such designations are intended to respond to a wide range of demands for land uses, while offering a variety of development and employment opportunities, all within an integrated setting.

The Land Use Plan has been designed to allow for future flexibility in determining specific land uses and their intensity, so that as market demands changes over time, the project can respond to those changes. The land use plan presented at this time includes 596.9 acres of light industrial, 417.7 acres of rail industrial, 146.8 acres of commercial/food/hotel, and 60.1 acres of office use. However, if demand increases for more office spaces and less industrial space, during the period of project construction, the plan has the flexibility to allow for this.

A major amendment to this Specific Plan would be required as outlined in Section IX.B., Amendment Process Major Amendments, of this document.

The circulation patterns, utility systems, and overall design of the plan can, through project phasing, meet these changes in demand. This is an important concept in a region that is experiencing rapid growth (see Exhibit 17, Land Use Plan. Note that illustrative streets and landscaping designations are shown in Exhibit 34-A-K, Conceptual Landscape Plan).



1. RAIL INDUSTRIAL USES

   Rail Industrial uses will be those uses directly serviced by rail lines. These uses will be located at the periphery of the site on parcels closest to the mainlines of the Southern Pacific and Union Pacific Railroad, and are expected to occupy approximately 417.7 acres, or 29.5% of the project site. Building heights will be primarily one story.

2. LIGHT INDUSTRIAL USES

   The Industrial category will include industrial buildings together with administrative business offices associated with permitted uses. Industrial development will consist primarily of corporate manufacturing, research and development, multi-tenant industrial, and corporate terminals with air-related facilities. The buildings will be predominantly single story.

   The Industrial category will occupy approximately 596.9 acres, or 42.2% of the project site.

Source(s): Esri, Nearmap Imagery (September 2022)

Exhibit 17

0 400 800 1,600 Feet

Land Use Plan

3. OFFICE USES

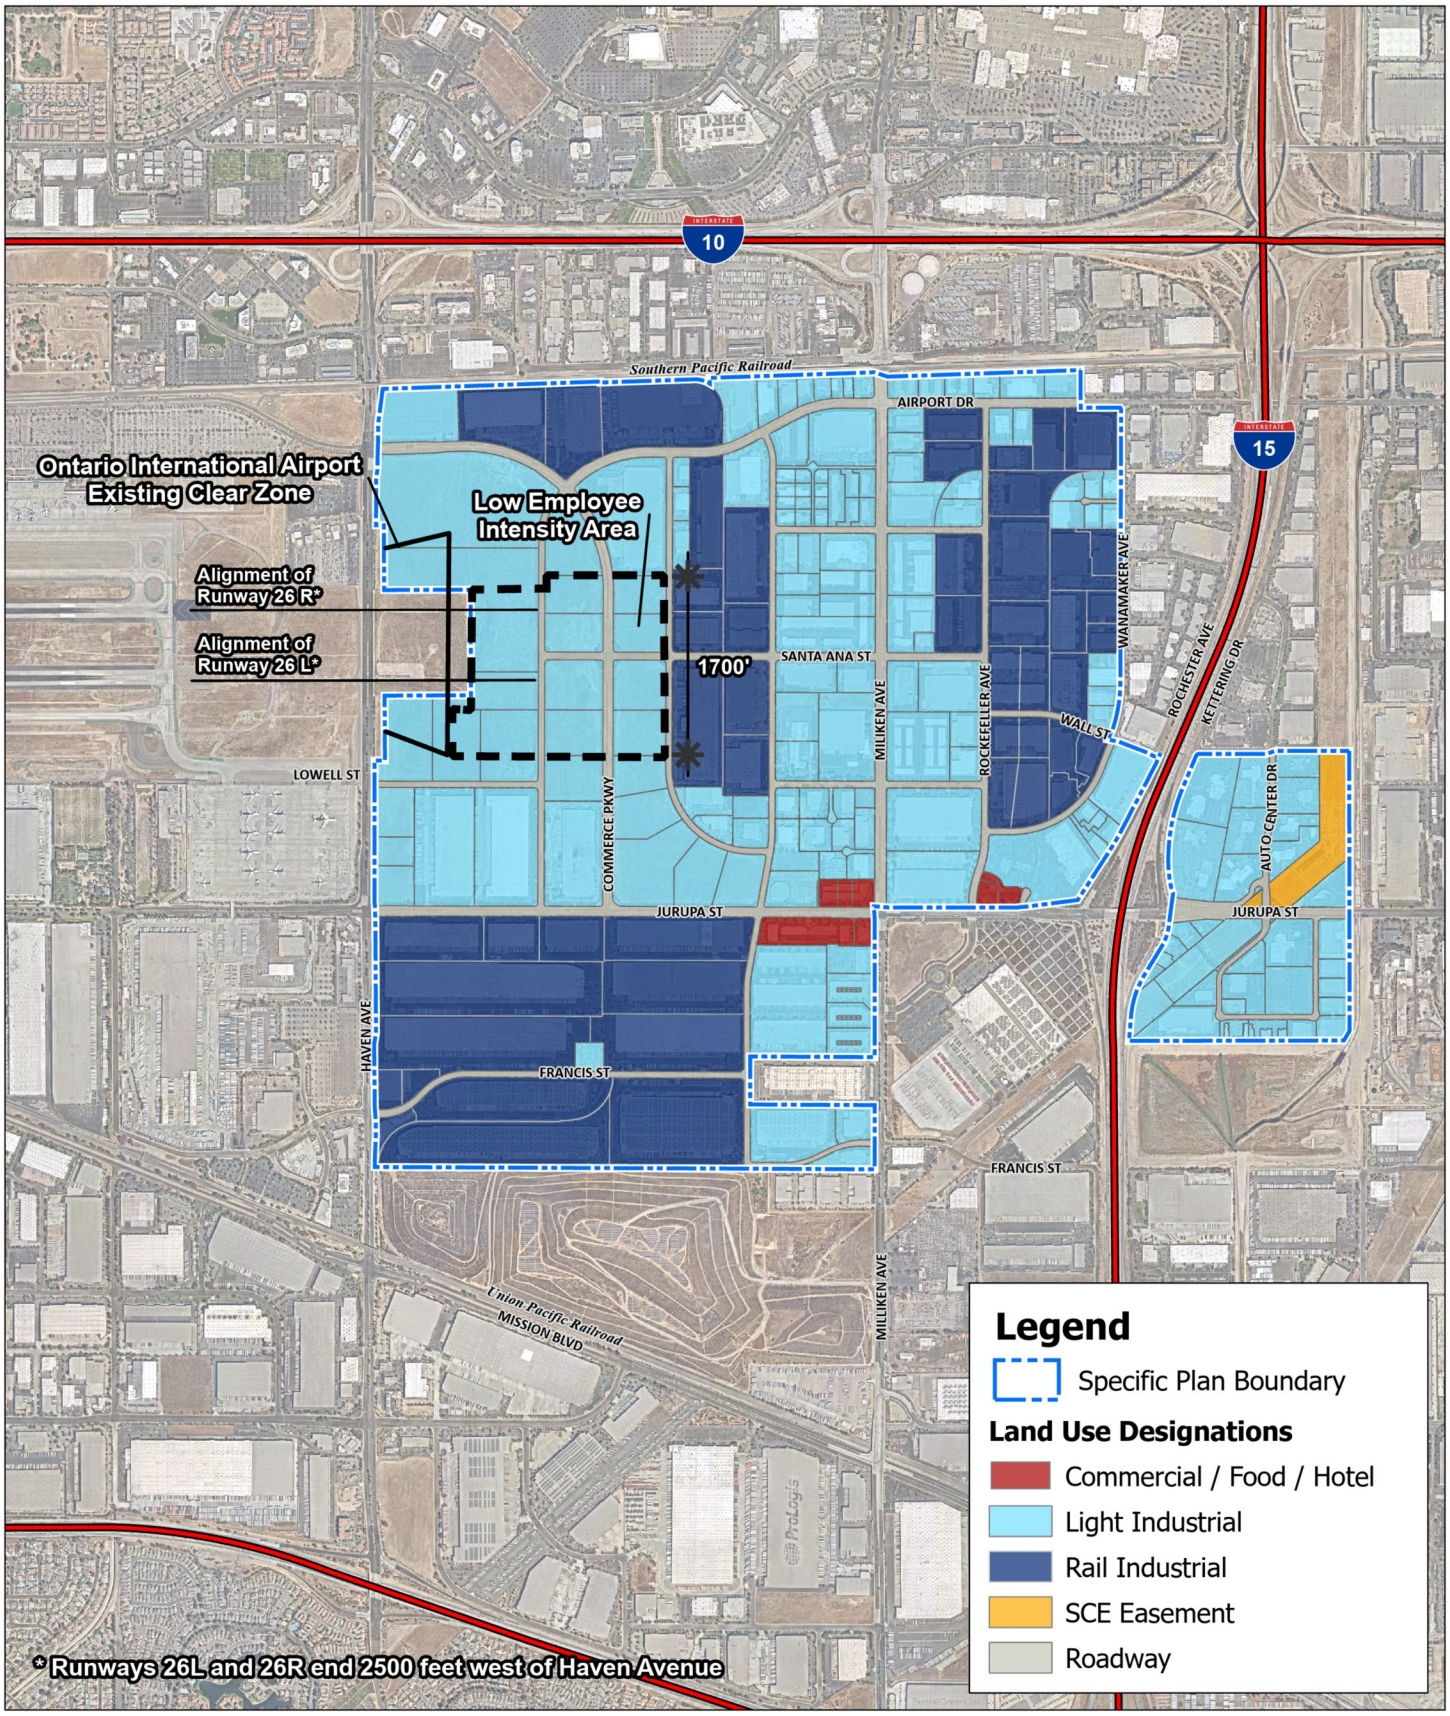
The Office Development category will include corporate and general offices. Buildings will be of multiple stories ranging from low-rise garden office (one to two stories) in clustered landscaped settings, to more urban, or mid-rise office buildings (three to eight stories).

The Office category will occupy approximately 60.1 acres, or 4% of the project site.

The design guidelines developed for the California Commerce Center will insure compatibility between the light industrial and office uses.

4. COMMERICAL/FOOD/HOTEL

This category will include 146.8 acres, or 10% of the project site, of retail-related services such as food parks, retail facilities, and a hotel complex. The food parks and retail facilities will be located at various points within the project area, and are intended primarily to serve local employees. Food parks will be located within walking distance of many of the industrial/office uses to reduce mid-day automobile travel. Food parks will be landscaped, and may offer open space areas or courtyards to provide a pleasant setting.



The hotel complex will be located near the Ontario Airport and is intended to service air travelers. The complex will be urban in character, multi-story, with retail and office uses on the ground floor and in adjacent buildings.

5. AIRPORT RELATED ALTERNATIVE

This category relates to the 167.4 acres, or 12% of the project site, located east of Haven Avenue, north of Jurupa Street, south of Airport Drive, and west of Commerce Parkway. This area has potential taxiway access to Ontario International Airport. Uses in this area may include aircraft manufacturing, service, storage, air cargo, airline food service, executive air terminals, general aviation facilities, and other related uses. The proposed streets and taxiways shown on Exhibit 17A, Airport Related Alternative Land Use Plan, are conceptual. More refined configurations will be developed with specific uses are identified.

If this alternative is implemented, development standards will be prepared during the “minor revision process”, based on a more specific development design, and prior to submittal of a specific development plan.

All development proposals shall be consistent with the Ontario International Airport Land Use Compatibility Plan. Refer to the Ontario International Airport Land Use Compatibility Plan for additional criteria and policies that may limit the restriction of allowable land uses, allowable FAR, overall site design and building/structure heights.

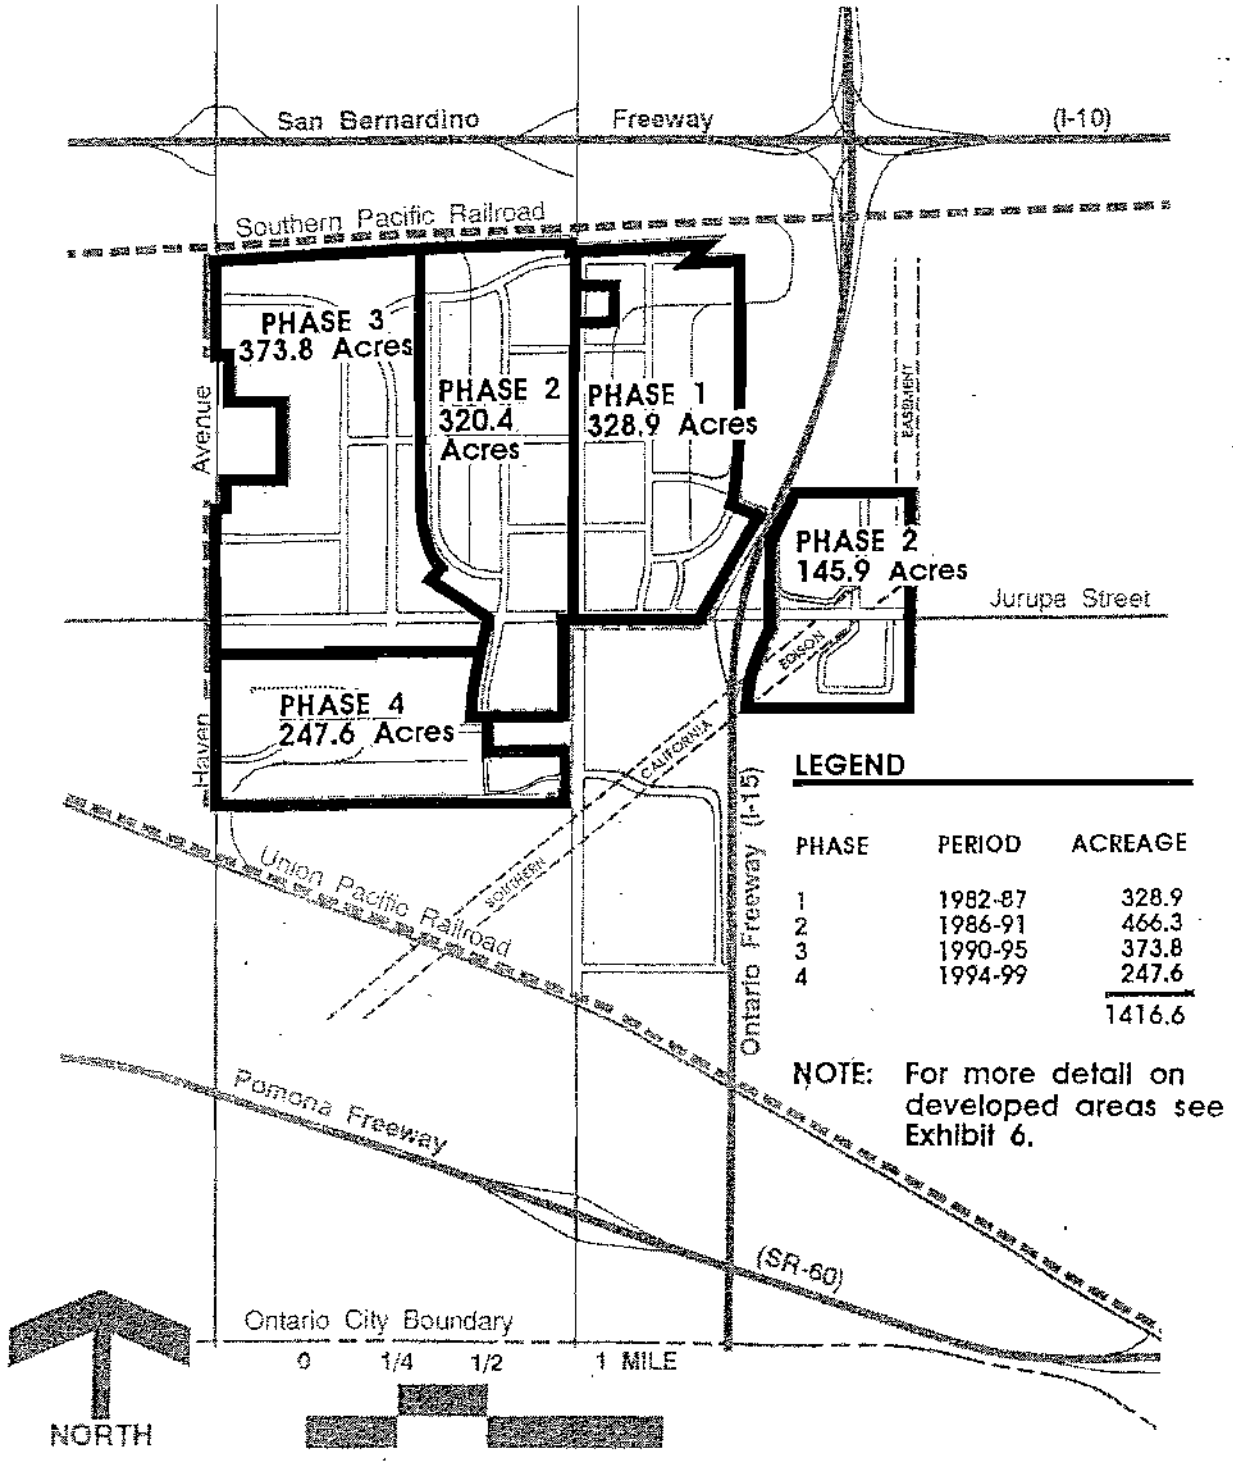
Source(s): Esri, Nearmap Imagery (September 2022), California Commerce Center Specific Plan (Oct 1992)

Exhibit 17A

0 500 1,000 2,000
Feet

Airport Related Alternative Proposed Land Use Plan

B. PHASING



Development of the California Commerce Center project will proceed over an estimated seventeen year timeframe. Four preliminary phases have been outlined for construction of the project, the first phase being the area east of Milliken Avenue. Table 1 summarizes the approximate acreage and square footage of land uses to be developed. Approximately 248 to 466 net acres will be developed during each of these phases. The phasing of streets and utilities will generally correspond to this, preceding actual construction in each phase (see Exhibit 18, Phasing Plan). A consolidated infrastructure phasing plan shall be submitted to the City of Ontario for approval prior to construction of any phase of development. This phasing plan shall incorporate all items which may be necessary to service the phase under consideration, and shall consider circulation of roads, water, sewer, storm drain systems, utilities, etc.

The phases presented for both land development and the construction of utilities and roads will continue to be refined as development proceeds.

Any minor revisions to these phasing plans will require only the approval of the Development Advisory Board, as outlined in Section IX.A. of this document, Amendment Process, Minor Revisions.

EXHIBIT 18

PHASING PLAN

LEGEND

PHASE	PERIOD	ACREAGE
1	1982-87	328.9
2	1986-91	466.3
3	1990-95	373.8
4	1994-99	247.6
		1416.6

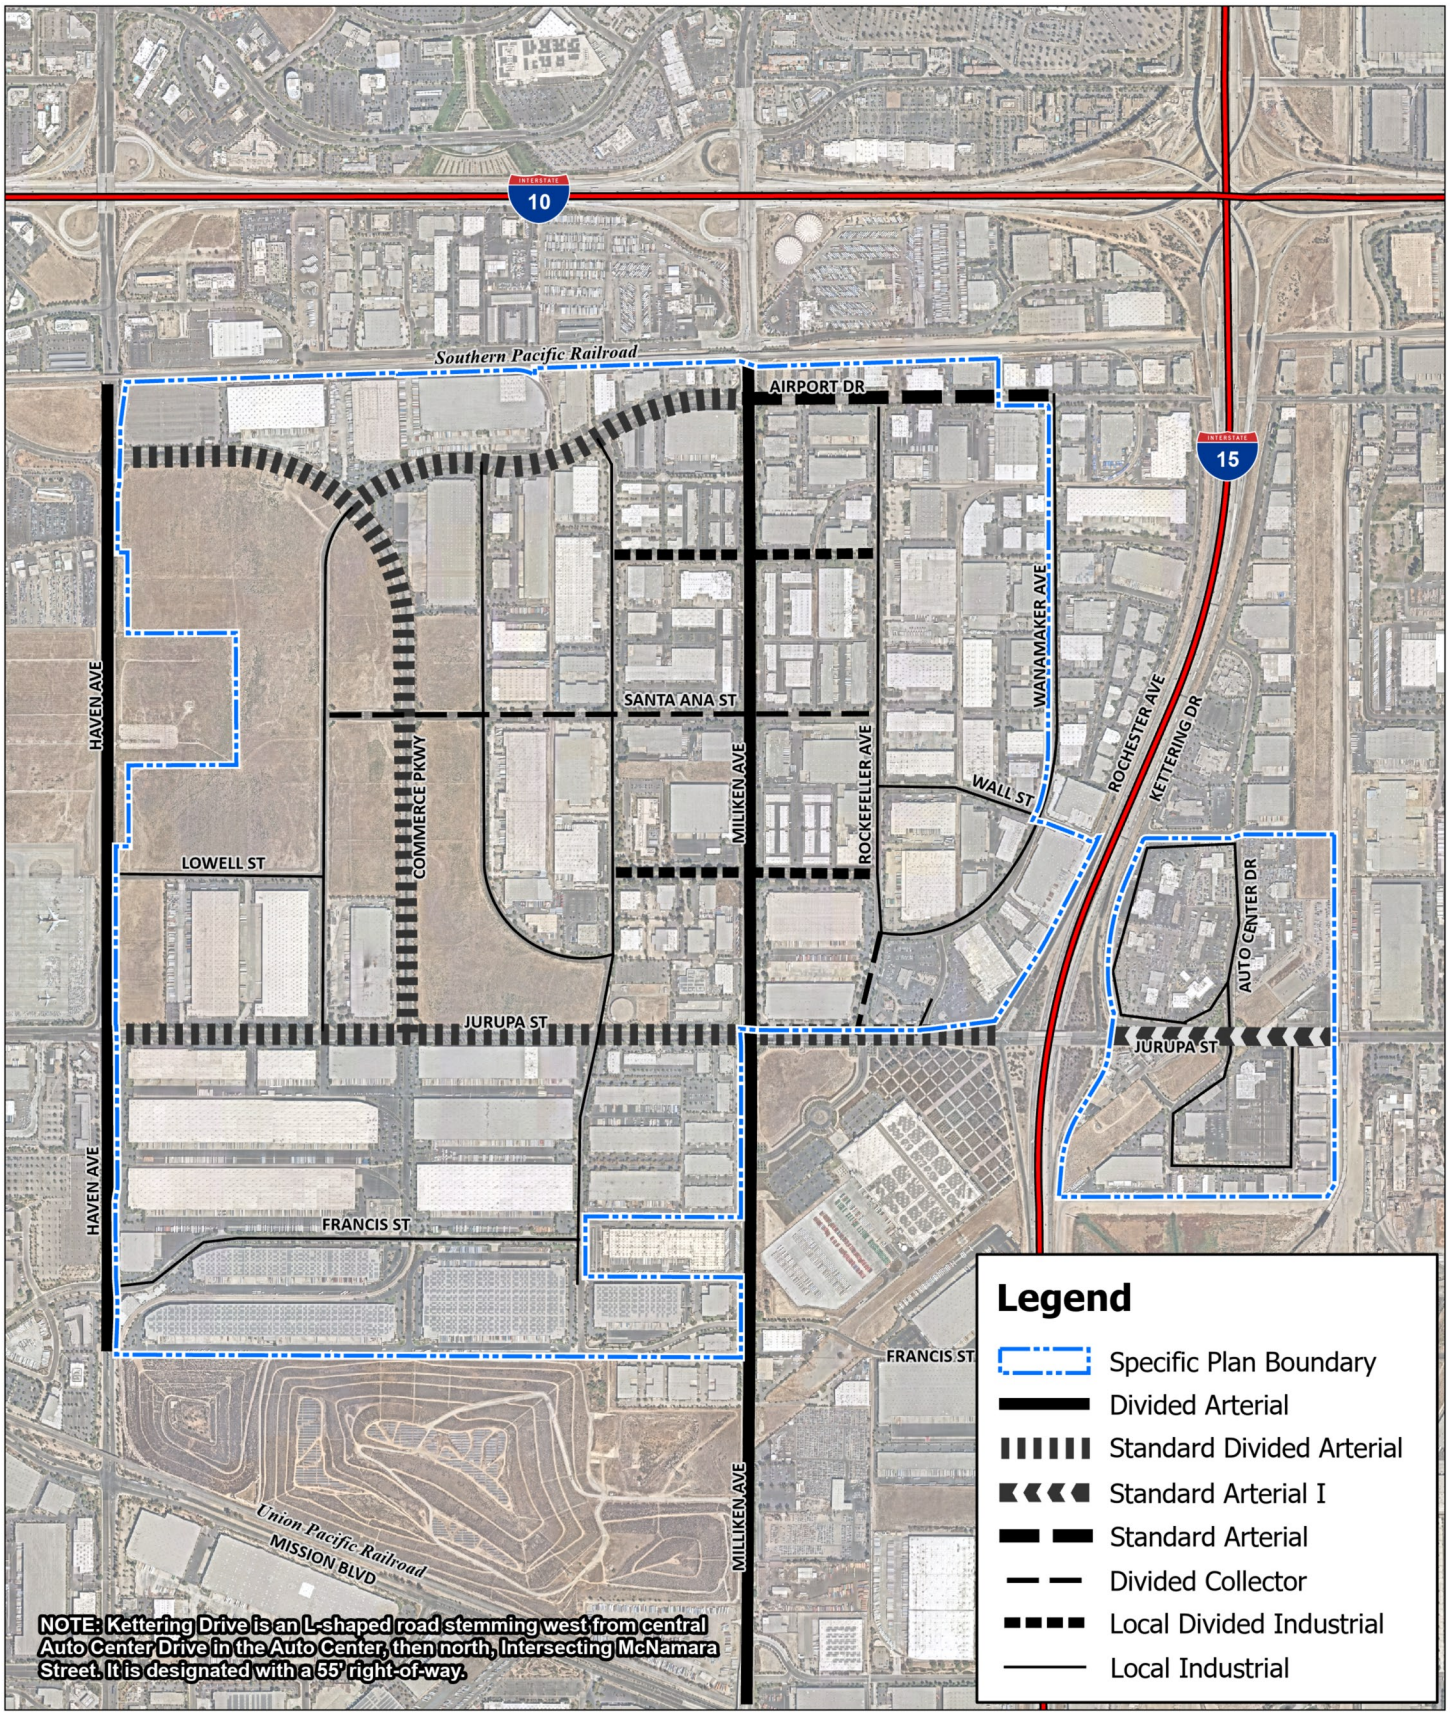
NOTE: For more detail on developed areas see Exhibit 6.

C. CIRCULATION AND ACCESS

The circulation system for the site forms a classic east-west/north-south grid between Haven Avenue and the Ontario Freeway (Interstate 15). These alignments reflect the basic street pattern already established elsewhere in the City (see Exhibit 19, Proposed Internal Circulation).

The efficient street pattern features two key east-west routes, Airport Drive (north) and Jurupa Street (south-central), and a major north-south route, Commerce Parkway (paralleled further east by Milliken Avenue). Commerce Parkway meets Jurupa at a four-way intersection, and Milliken meets Jurupa at a major standard 4-way intersection. The Rail Industrial area south of Jurupa is accessible from Haven Avenue, Commerce Parkway, Dupont Avenue and Peachtree Street. The future auto center east of the Ontario Freeway is also reached from Jurupa Street.

The super-imposition of this grid system on Commerce Parkway maximizes points of ingress and egress within the project. Based on traffic studies and projections done for the preparation of the Environmental Impact Report for this project, the proposed circulation network appears to be well-oriented toward serving future traffic demands in the area (see Exhibit 20, Daily Trip Generation by Project Site Sub-Area).



Airport, Jurupa, and Commerce Parkway form the major traffic spines, accessing individual land uses throughout the Commerce Center, and providing direct access from the Ontario Freeway to Ontario International Airport.

The following table provides trips per day by land use:

TABLE 2
TRIPS PER DAY BY LAND USE

Land Use	Vehicular Trips/Day*
Rail Industrial	22,237
Light Industrial	65,506
Office	15,620
Commercial/Food/Hotel	42,626
TOTAL	145,989

*Factors supplied by Donald Frischer Associates based on proposed land use plan.

Daily Trip Generation

1. VEHICULAR CIRCULATION SYSTEM

The proposed street network is generally consistent with the City of Ontario's Master Plan of Streets, except for the alignment of Airport Drive, Commerce Parkway, and Jurupa Street. Airport Drive, east of Haven Avenue, curves southerly where it becomes Commerce Parkway. At this intersection, Airport Drive stems back to the northeast and continues in an easterly alignment, intersecting with Milliken Avenue. Commerce Parkway continues southward from the intersection with Airport Drive and intersects with Jurupa Avenue. Airport Drive and Jurupa Avenue thus form the major entry roads and Commerce Parkway the spine at the project site. The revised street pattern will provide a continuous access route from the Ontario Freeway, Milliken Avenue, and Jurupa Street to the Airport for airport-related traffic, as well as provide continuous access throughout the site for project-related traffic.

Street signage: all street signage, traffic control signage, etc., shall conform to City of Ontario standards.

No cul-de-sac street in this project will be designed to more than 500' in length. Cul-de-sac bulbs shall be reviewed by the fire department to assure proper turn around access.

2. STREET NAMES

Street names have been selected to reflect the dynamic elements of a commerce center. The east-west streets are named after some of the great financial streets of the nation. The names of the north-south streets represent some of the pre-eminent financial entrepreneurs of this country (see Exhibit 21, Project Street Names).

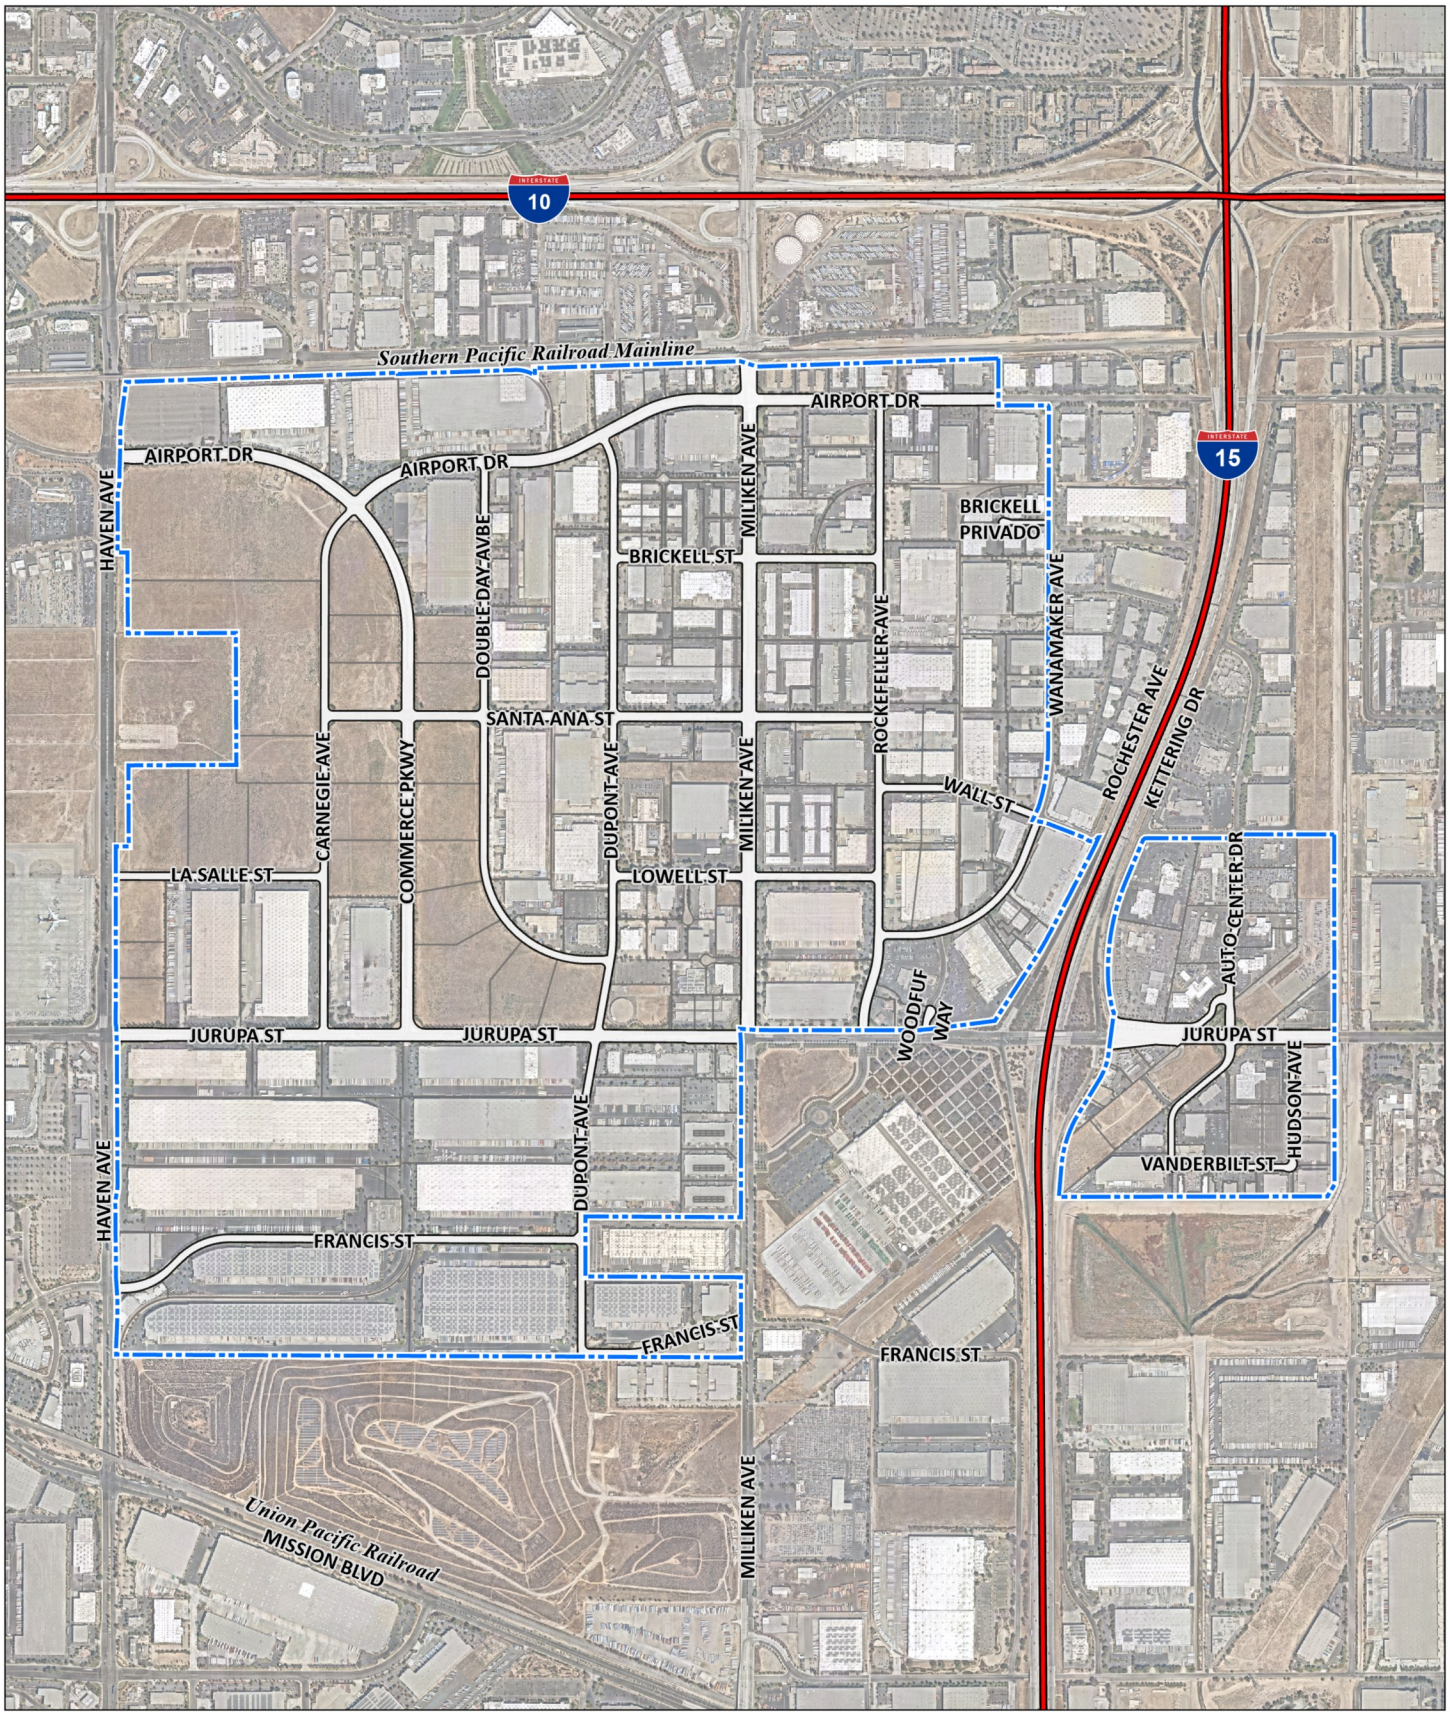
3. STREET HIERARCHY

Arterial streets, as proposed, will run primarily in an east-west or north-south direction, their location and spacing are largely determined by the existing one-half mile grid system which is the basis for the City of Ontario's Master Plan of Streets and Highways, and are also due to the presence of the mainline railroad tracks at the north and south edges of the site.

a. Divided Arterial

Milliken Avenue

Milliken Avenue is an existing north-south arterial extending from Fourth Street, north of the project area, south to the Pomona Freeway. It is currently developed as a two-lane highway with interchanges at both the San Bernardino Freeway and the Pomona Freeway. As part of this project, Milliken Avenue will be upgraded to a six-lane, divided arterial within the boundaries of the project, and will function as a major north-south through route. This street will consist of a 120' right-of-way (property line to property line) with a 94' curb-to-curb dimension including a 14' median (see Exhibit 22, Section A).



Haven Avenue

Haven Avenue is presently a discontinuous north-south arterial with an interchange at the San Bernardino Freeway. This street will be developed as a six-lane, divided arterial (120' right-of-way from property line to property line) from south of Airport Drive, to provide a second major north-south access route (see Exhibit 22, Section A). It will be developed as an eight-lane, divided arterial from Airport Drive to the I-10 Freeway, to provide capacity for the additional traffic travelling north of the I-10 Freeway and beyond. Improvement of this street to a six-lane and eight-lane divided arterial will be made in advance of the traffic needs of this project. The development of this Specific Plan by phases, as shown, will include widening and improvements to Haven Avenue, both adjacent to the phased developments, and off-site if traffic generated by a phase requires off-site street improvements in order to accommodate the generated traffic. The necessity and timing for these improvements shall be determined by a C.C.C.-prepared Traffic Monitoring Program to be approved by the City of Ontario. This program shall identify street and signal requirements in advance of development, and shall establish C.C.C. funding mechanism.

C.C.C. shall also contribute to the funding of Haven Avenue Grade Separation at the S.P.R.R. and U.P.R.R. tracks. Such contribution shall be based upon the portion of generated traffic of the Specific Plan area to the total projected traffic on Haven Avenue at the respective location, or consistent with the funding mechanism established through the ground access implementation program. This funding shall be provided at such time the City of Ontario has obtained agreements from the respective railroad companies for the construction of the grade crossings. C.C.C. shall also agree to dedicate to the City of Ontario necessary rights-of-way for the grade separation construction at the Southern Pacific Railroad, at such time the respective railroad agreements are required.

Commerce Parkway (between Airport Drive and Jurupa Street)

Commerce Parkway will be the major spine road for the development, formed by connecting the eastward extension of Airport Drive from Haven Avenue, to the westward extension of Jurupa Street from Milliken Avenue. Commerce Parkway will be a standard divided arterial with a 104' right-of-way (property line to property line), with a 94' curb-to-curb dimension including a 14' median (see Exhibit 22, Section B).

Source(s): Esri, Nearmap Imagery (September 2022), California Commerce Center Specific Plan (Oct 1992)

Exhibit 21

0 400 800 1,600
Feet

Project Street Names

Airport Drive (west of Milliken Avenue)
Jurupa Street (west of I-15)

Airport Drive west of Milliken Avenue, and Jurupa Street west of I-15, will be improved as major six-lane, standard divided arterials with a 104' right-of-way (property line to property line), with a 94' curb-to-curb dimension including a 14' median (see Exhibit 22, Section B).

b. Standard Arterial

Jurupa Street (east of I-15)
Airport Drive (east of Milliken Avenue)

Jurupa Street (east of I-15) will be developed as a standard arterial, consisting of a 120' right-of-way (property line to property line), with a 94' curb-to-curb dimension (see Exhibit 22, Section BB).

Airport Drive between the Ontario Freeway and Milliken Avenue will be developed as a standard arterial, consisting of a 100' right-of-way (property line to property line), with a 76' curb-to-curb dimension (see Exhibit 22, Section C).

c. Divided Collector

Santa Ana Street & Rockefeller Avenue
(South of Wanamaker Avenue)

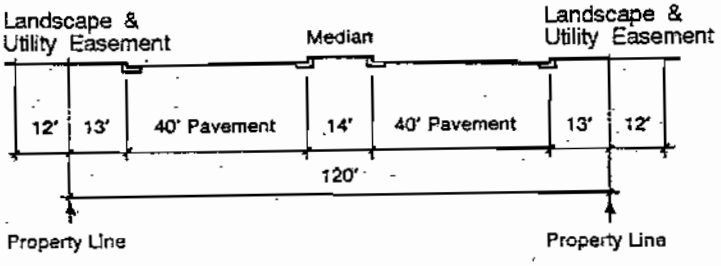
Santa Ana Street is shown on the City of Ontario's Master Plan of Streets as a collector street with the same basic alignment as that proposed. When developed, this street will be a four-lane divided collector, providing a major east-west link between Milliken Avenue and the project spine road. This street will consist of an 82' right-of-way. Curb-to-curb dimension will be 80' including a 16' median east of Doubleday (see Exhibit 22, Section E) and no median west of Doubleday.

d. Local Divided Industrial Street

Brickell Street and Lowell Street
(east of Milliken Avenue)

Brickell Street and Lowell Street will form the basis for the other east-westerly aligned streets within the development. Each will be extended west of Milliken Avenue to connect with Dupont Avenue. Inclusion of these streets west of Milliken Avenue shall provide access points to adjoining parcels, thereby reducing the need to access these parcels from Milliken Avenue. These streets will consist of a 72' right-of-way. Curb-to-curb dimension will be 70' including a 16' median (see Exhibit 22, Section F).

e. Local Industrial Street



Auto Center Drive
Carnegie Avenue
Commerce Parkway (south of Jurupa Street)
Doubleday Avenue
Dupont Avenue

Francis Street
Hudson Avenue
Kettering Drive
La Salle Street
McNamara Street
Rockefeller Avenue (north of Wanamaker Avenue)
Vanderbilt Street
Wall Street
Wanamaker Avenue
Woodruff Way

Local industrial streets will form the basis for the internal circulation. These streets will be two lanes without medians and will consist of varying widths ranging from a 78' right-of-way to a 50' right-of-way (see Exhibit 22, Sections G, H, I, J, K and L).

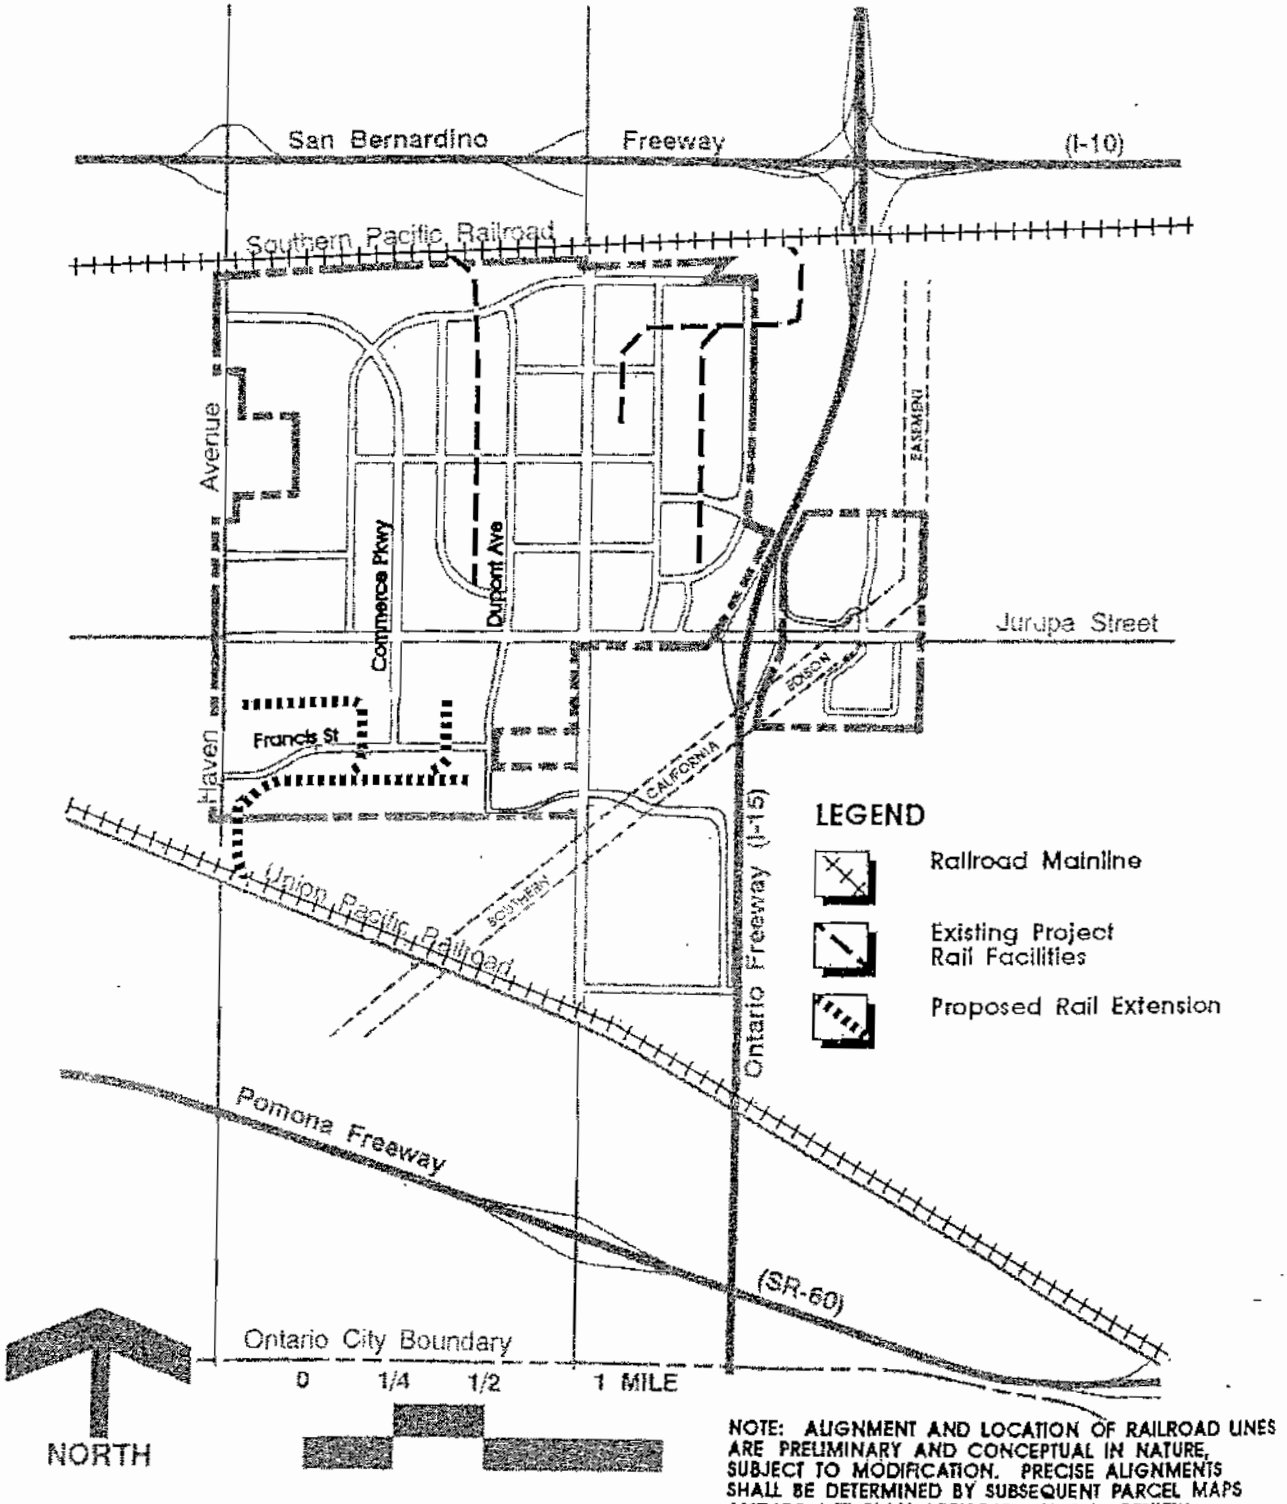
4. RAILROAD ACCESS

A Master Plan of railroad access has been prepared to illustrate conceptually how rail spurs from the Southern Pacific and Union Pacific Railroad mainlines will serve rail industrial uses within the project (see Exhibit 23, Railroad Access Master Plan). If rail lines are extended as development progresses, locations and precise alignments shall be determined by applicable parcel maps and/or site plan applications and review. California Commerce Center will pay all costs and fees for the construction of rail service to the Specific Plan area, which may be imposed on the City by the railroads and the Public Utilities Commission. This shall include crossing signals, and any additional bridge widening costs required to provide rail facilities to the Specific Plan area. (i.e., Haven Avenue/S.P.R.R. Grade Separation).

The applicant will install appropriate warning signal lights and/or potential gates as may be required by the City Engineering Department for the railroad crossing at Airport Drive, west of Milliken Avenue.



Only parcels which are developed to Rail Industrial standards shall have access to and use of the rail.

5. SIDEWALKS

Sidewalks will be constructed along Jurupa Street, (west of Milliken Avenue). Commerce Parkway (between Airport Drive and Jurupa Street), Airport Drive (west of Milliken Avenue) and east side of Haven Avenue. Sidewalks may also be required on other streets as determined by the City Engineer. Precise alignment and installation responsibilities will be determined as part of the site plan process.

EXHIBIT 23

RAILROAD ACCESS MASTER PLAN

NOTE: ALIGNMENT AND LOCATION OF RAILROAD LINES ARE PRELIMINARY AND CONCEPTUAL IN NATURE, SUBJECT TO MODIFICATION. PRECISE ALIGNMENTS SHALL BE DETERMINED BY SUBSEQUENT PARCEL MAPS AND/OR SITE PLAN APPLICATIONS AND REVIEW.

D. INFRASTRUCTURE

1. PHASING OF UTILITIES

The construction of new infrastructure, utilities, and any necessary improvements to existing utilities, will be phased as required in general conformance with the phasing of project development. Streets and utilities will be constructed and improved in the early stages of each phase to insure that the projected demands of development occurring in the individual phases are met. The street and utility phasing plan designates a four-phase plan spanning a period from 1982 to 1999. Like the project development phasing plan, this plan is conceptual in nature and will be refined as development proceeds. Exhibit 25, Street and Utility Phasing Plan, shows the location of these four phases. The phasing of the infrastructure for utilities shall be approved by the City Engineer. If so determined by the City Engineer, portions of the infrastructure may be required to be completed even though it is not in sequence with a proposed phase, as shown in Exhibit 25.

2. STORM DRAIN SYSTEM

C.C.C. shall construct all drainage facilities in the Specific Plan area necessary to provide 100-year flood protection (see Exhibit 26, Conceptual Storm Drain Master Plan). Additionally, C.C.C. shall obtain necessary rights-of-way and construct storm drain facilities adequate to carry the design storm flows from the Specific Plan area to Lower Deer Creek.

C.C.C. shall address and construct the following:

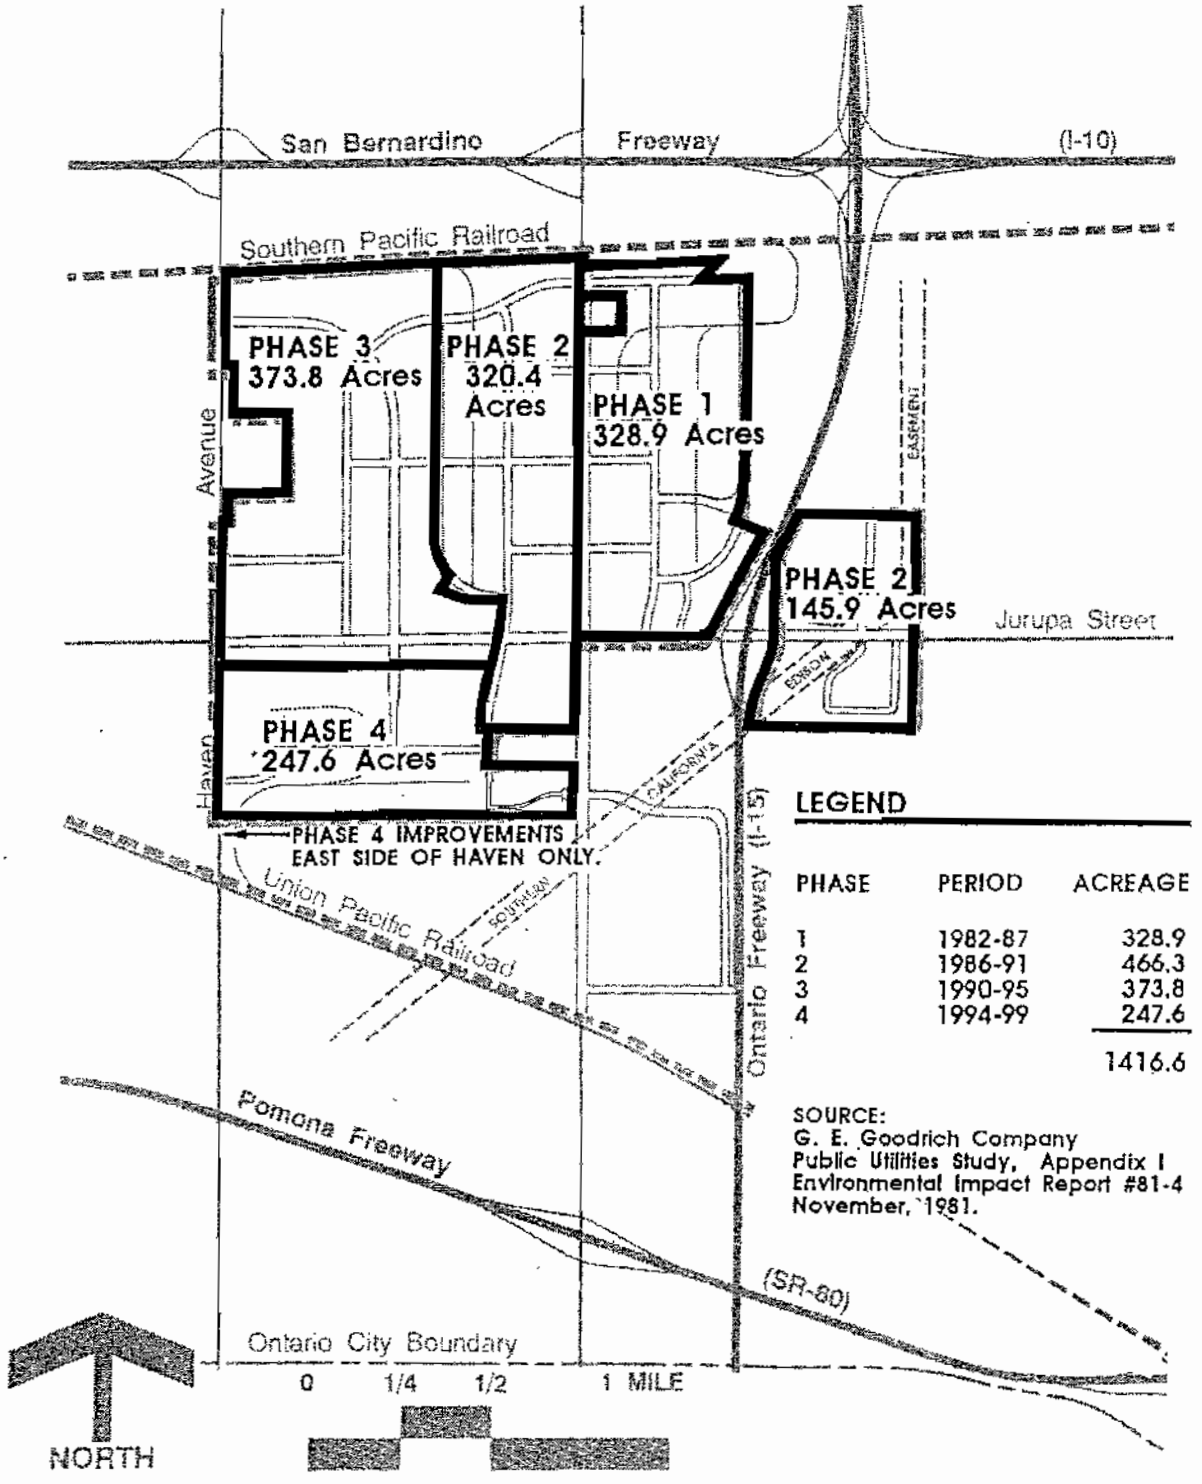
a. Drainage flows to Lower Deer Creek should be retained/restricted, not to exceed the functional 100-year capacity of the existing "improved" channel facilities of Lower Deer Creek.

b. Lower Deer Creek has been improved to prevent continued erosion, siltation, and potential flood damage to downstream properties (see Exhibit 26).

A Master Plan of storm drains has been developed for the project site, as depicted on Exhibit 25. This plan divides the site into three areas.

Area 1 is the land area east of the Ontario Freeway. Drainage plans for this area provide for an outlet into the Wineville Retarding Basin.

Area 2 is the land area east of Milliken Avenue, west of the Ontario Freeway, and north of Jurupa Street. This system will be served by an existing box culvert under the Ontario Freeway, which will also drain into the Wineville Retarding Basin.



The land area west of Milliken Avenue comprises Area 3 and the remainder of the site. This area is tributary to Cucamonga Creek by way of Lower Deer Creek. C.C.C. has developed a Comprehensive Master Plan of drainage for Lower Deer Creek, which has been approved by the City of Ontario and the San Bernardino County Flood Control District. C.C.C. shall be responsible to construct all Specific Plan area storm drains, in addition to a storm drain connecting to Lower Deer Creek (including right-of-way acquisition).

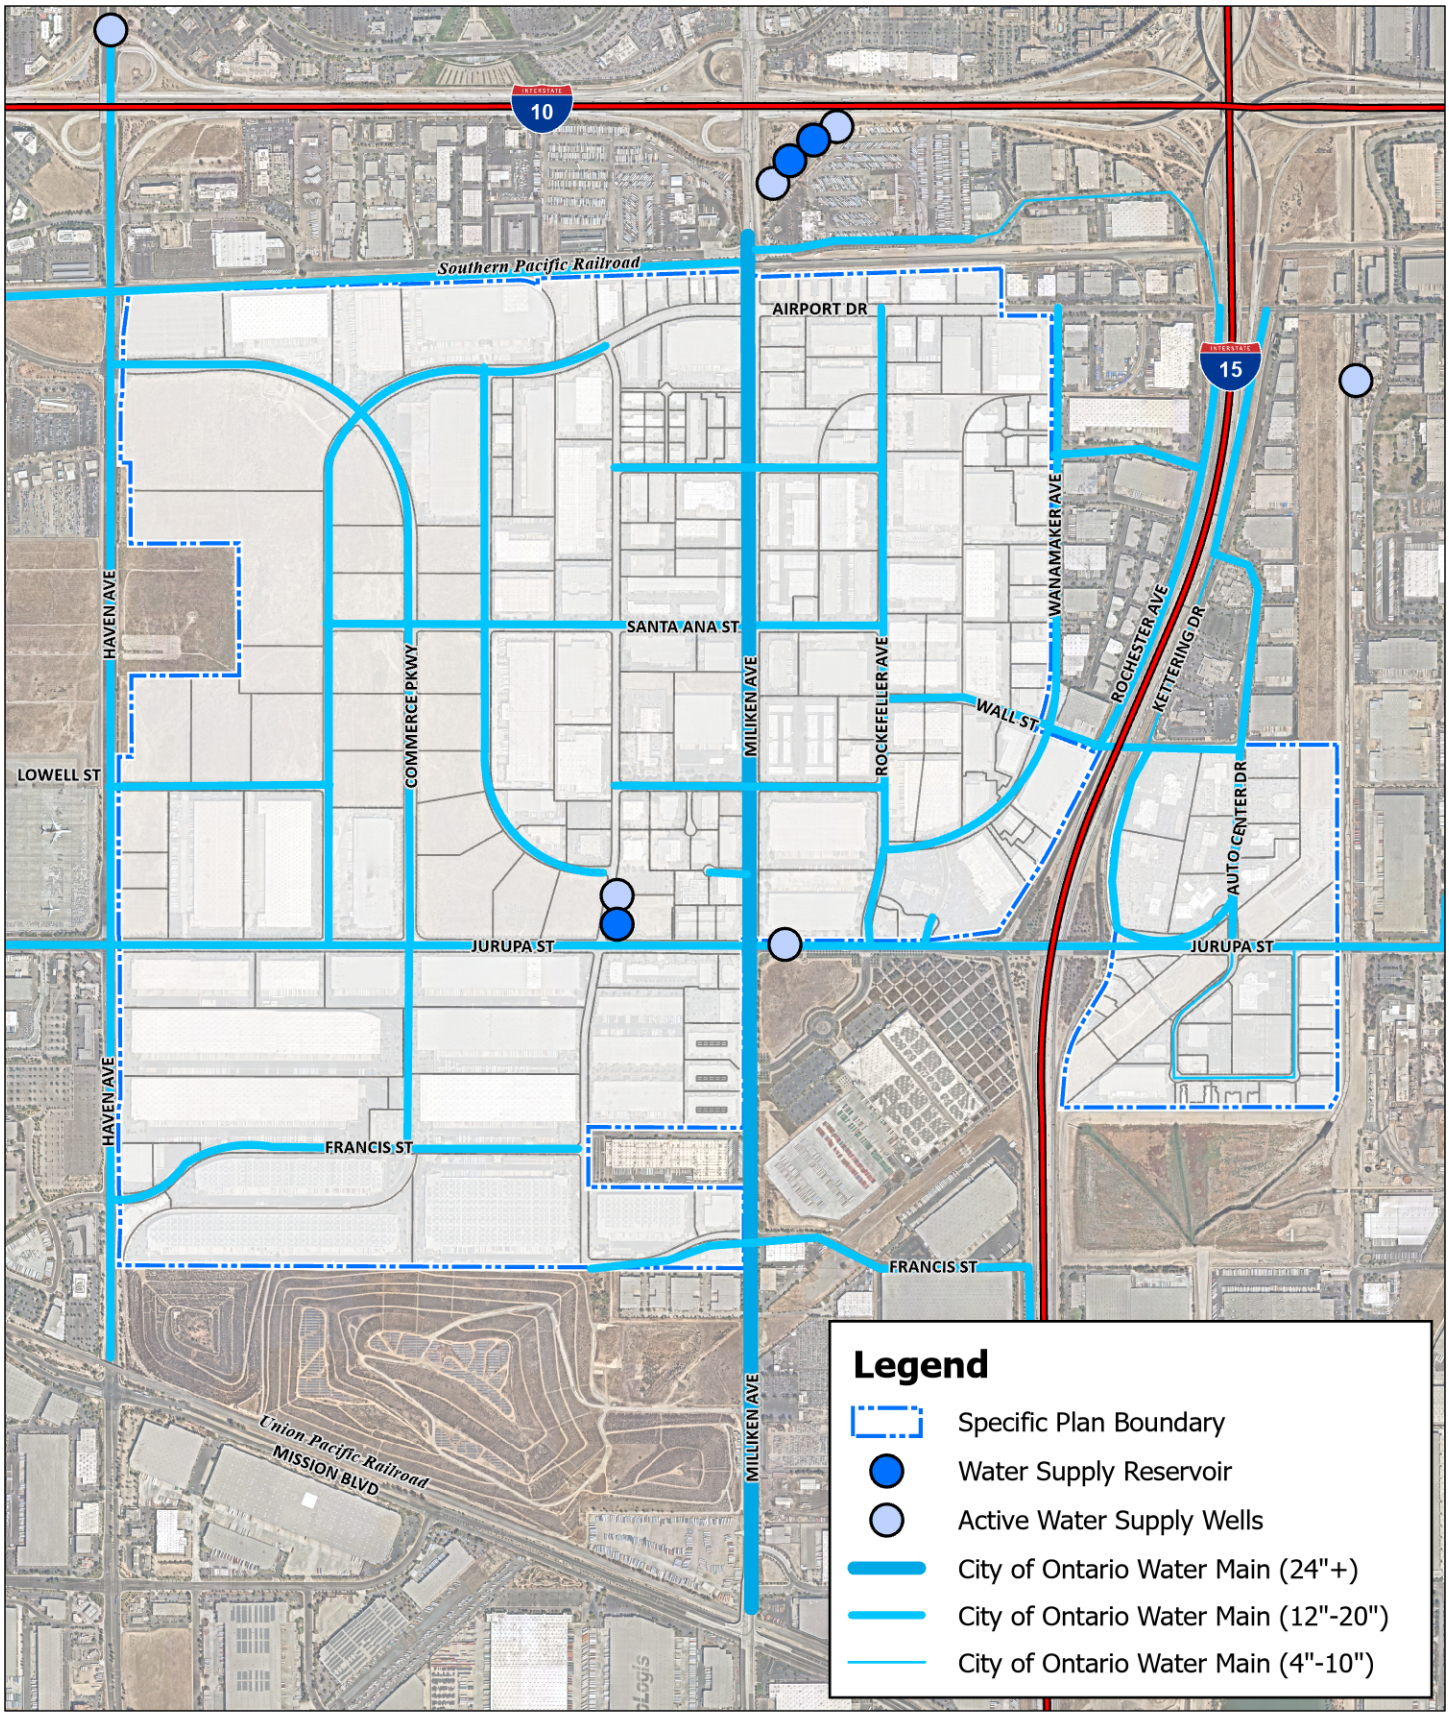
EXHIBIT 26

CONCEPTUAL STORM DRAIN MASTER PLAN



3. WATER SYSTEM

The water system for the project will consist of a well water distribution system. The source for this water will be the City of Ontario's wells, located near, or within, the project site. C.C.C. has prepared a Technical Master Plan for water service under a separate cover. This Master Plan indicates all water facilities required to serve the Specific Plan boundary, as well as any off-site facilities necessary to provide service and meet fire flow requirements. The Master Plan examines threshold limits by phases, and specifies the expansion of the water system infrastructure required by development and construction. It also identifies present deficiencies in the existing City water system which will need to be mitigated in order to provide service.

The Master Plan also defines development needs in terms of flow requirements based on proposed land use as designated in the Specific Plan. In the event C.C.C. elects to develop a higher density or modify the phasing as shown in the Specific Plan, C.C.C. shall request a revision to the Master Plan from the City of Ontario. These revisions may require additional on-site and/or off-site water system improvements. Should C.C.C. require service in advance of the City's ability to supply, system improvements shall be installed under a C.C.C.-sponsored improvement program. C.C.C. may request participation pursuant to City policy in effect at the time of request for facility oversizing, and/or off-site construction at the time the improvements are made. Fee schedules in effect at the time of development shall also be applied. Public water facilities will be placed in dedicated public streets, in other dedicated easements within private streets, or in other dedicated easements subject to the approval of the City Engineer and Public Services Director (see Exhibit 27, Water Master Plan).

Waterlines will be installed in all streets having lot frontage. The minimum size for these lines will be twelve inches. An additional line of sixteen inches will cross between Milliken and Haven Avenues to supplement the flow of well water on the east side of the project to areas west of the project. The water lines will be designed to provide a combined domestic and fire flow of 6000 gallons per minute (gpm). Specifically, 1000 gpm will be provided for industrial domestic use, and 5000 gpm for fire flow, as required by the City of Ontario.

Recycled Water Master Plan

4. WASTEWATER

C.C.C. has prepared a Technical Master Plan for sewer service under a separate cover. The Master Plan identifies flows based on generation factors pursuant to proposed land use. The Master Plan also specifies the size and capacities of the system to be constructed by C.C.C., as well as the capacities of the Fontana and Cucamonga Interceptors. The capacity limitations of Regional Plant No. 1 are also to be identified. The Master Plan specifies additional interceptor lines and treatment plan facilities required to service the Specific Plan area. The construction of any additional facilities to accommodate flows from the Specific Plan area shall be the responsibility of C.C.C. Concurrently, the City of Ontario will work with C.C.C. and the CBMWD to plan for the construction of additional facilities required to service the east end area. The City of Ontario shall not be obligated to assure C.C.C. capacity on connections to any facilities under the jurisdiction of the CBMWD. Master Plan exhibits are included in the Specific Plan. Any change in Master Plan use shall necessitate a revision to the Master Plan, and require appropriate agency approval. C.C.C. shall also agree to dedicate right-of-way to CBMWD for the Fontana Interceptor.

Wastewater from the California Commerce Center will discharge at Milliken and Haven Avenues into the proposed Fontana Interceptor, to be located along the north border of the San Bernardino County Landfill. The Interceptor will carry the flow to the existing forty-two inch domestic line in Mission Boulevard and then to Regional Plant No. 1.

Sewer mains for the project will be eight, ten, twelve, fifteen, and eighteen inches in diameter to carry the proposed wastewater discharge from the project, and will be designed in accordance with the City of Ontario standards. The sizing of these sewer mains was based on an assumed average wastewater generation of 2,050 gpd for industrial/commercial. This was then increased by a peak factor $F = 2.42 - 0.235 \ln Q$ where Q is the average wastewater flow. Based on this, the pipes were sized for maximum fifty percent (50%) full for mains 8" in diameter.

For mains larger that 8", pipes were sized for seventy-five percent (75%) full. The minimum allowable size was 8". The estimated pipe slope used was based on the general fall of the existing ground and proposed street alignment.

The construction of these sewer lines will be phased to coincide with the project build-out time. Public wastewater facilities shall be placed in dedicated streets, in dedicated easements within private streets or, in other dedicated easements subject to the approval of the City Engineer and Public Service Director.

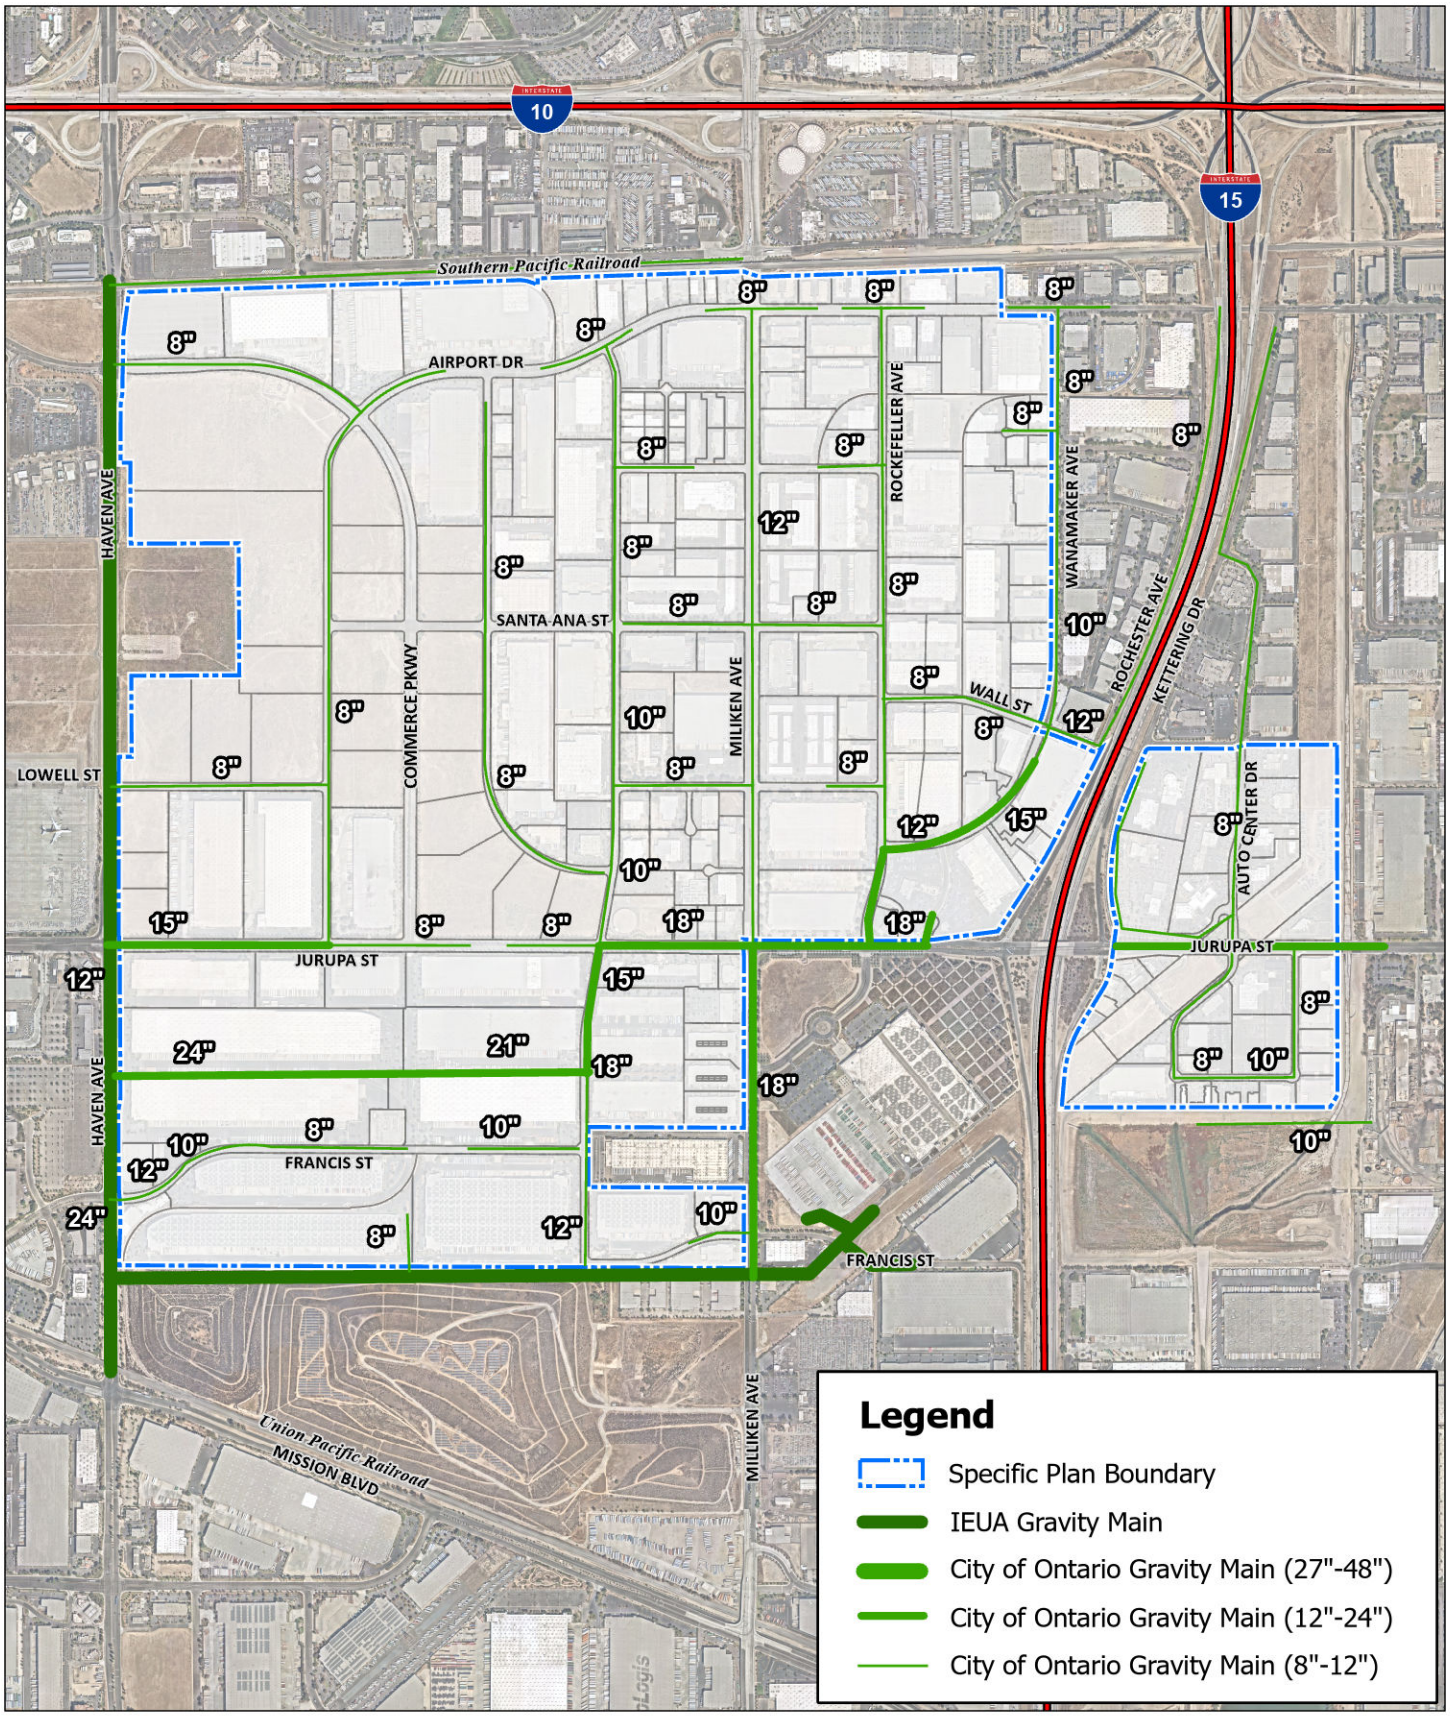
5. PUBLIC UTILITIES

a. Electricity

Electricity for the project will be supplied by Southern California Edison, and can be adequately serviced by the existing 12 kV lines that form the system network (see Exhibit 29, Southern California Edison).

b. Natural Gas

The Southern California Gas Company will provide natural gas to the project. The distribution lines that currently service the project area from the south are sufficient in size and pressure to service new development throughout the project (see Exhibit 30, Southern California Gas).



c. Telephone

General Telephone will provide telephone service to the project and will install new lines from their existing central facilities to the project site as construction proceeds (see Exhibit 31, General Telephone Company,).

d. Solid Waste Disposal

Solid waste disposal services will be handled by the City of Ontario, which will gradually increase its capacity to service the project over the twenty-year anticipated build-out time. The Solid Waste Superintendent shall determine type, size, quantity, and location of all solid waste receptacles. For multiple-story development, refuse compaction units shall be required.

The Solid Waste Superintendent shall determine type, quantity, and location of all refuse collection service. All refuse enclosures shall be constructed to City specifications.

Sewer Master Plan

EXHIBIT 29

SOUTHERN CALIFORNIA EDISON

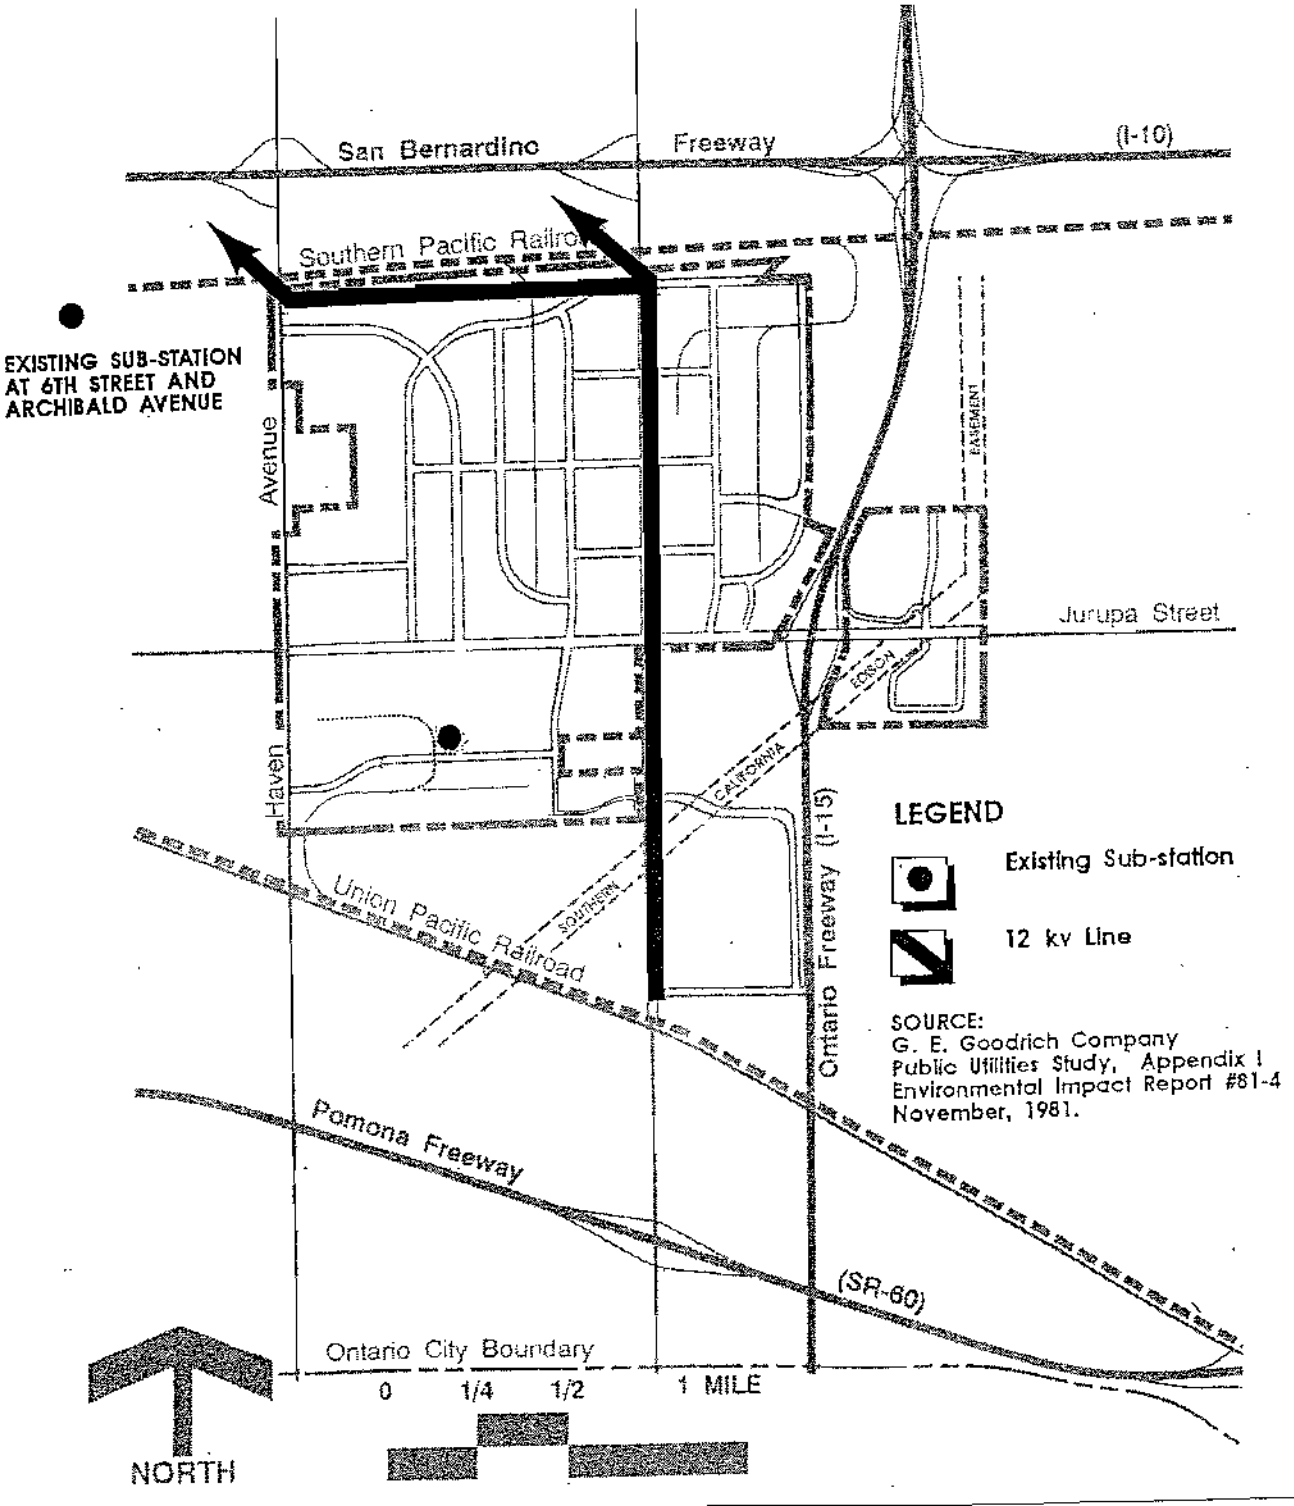

EXHIBIT 30

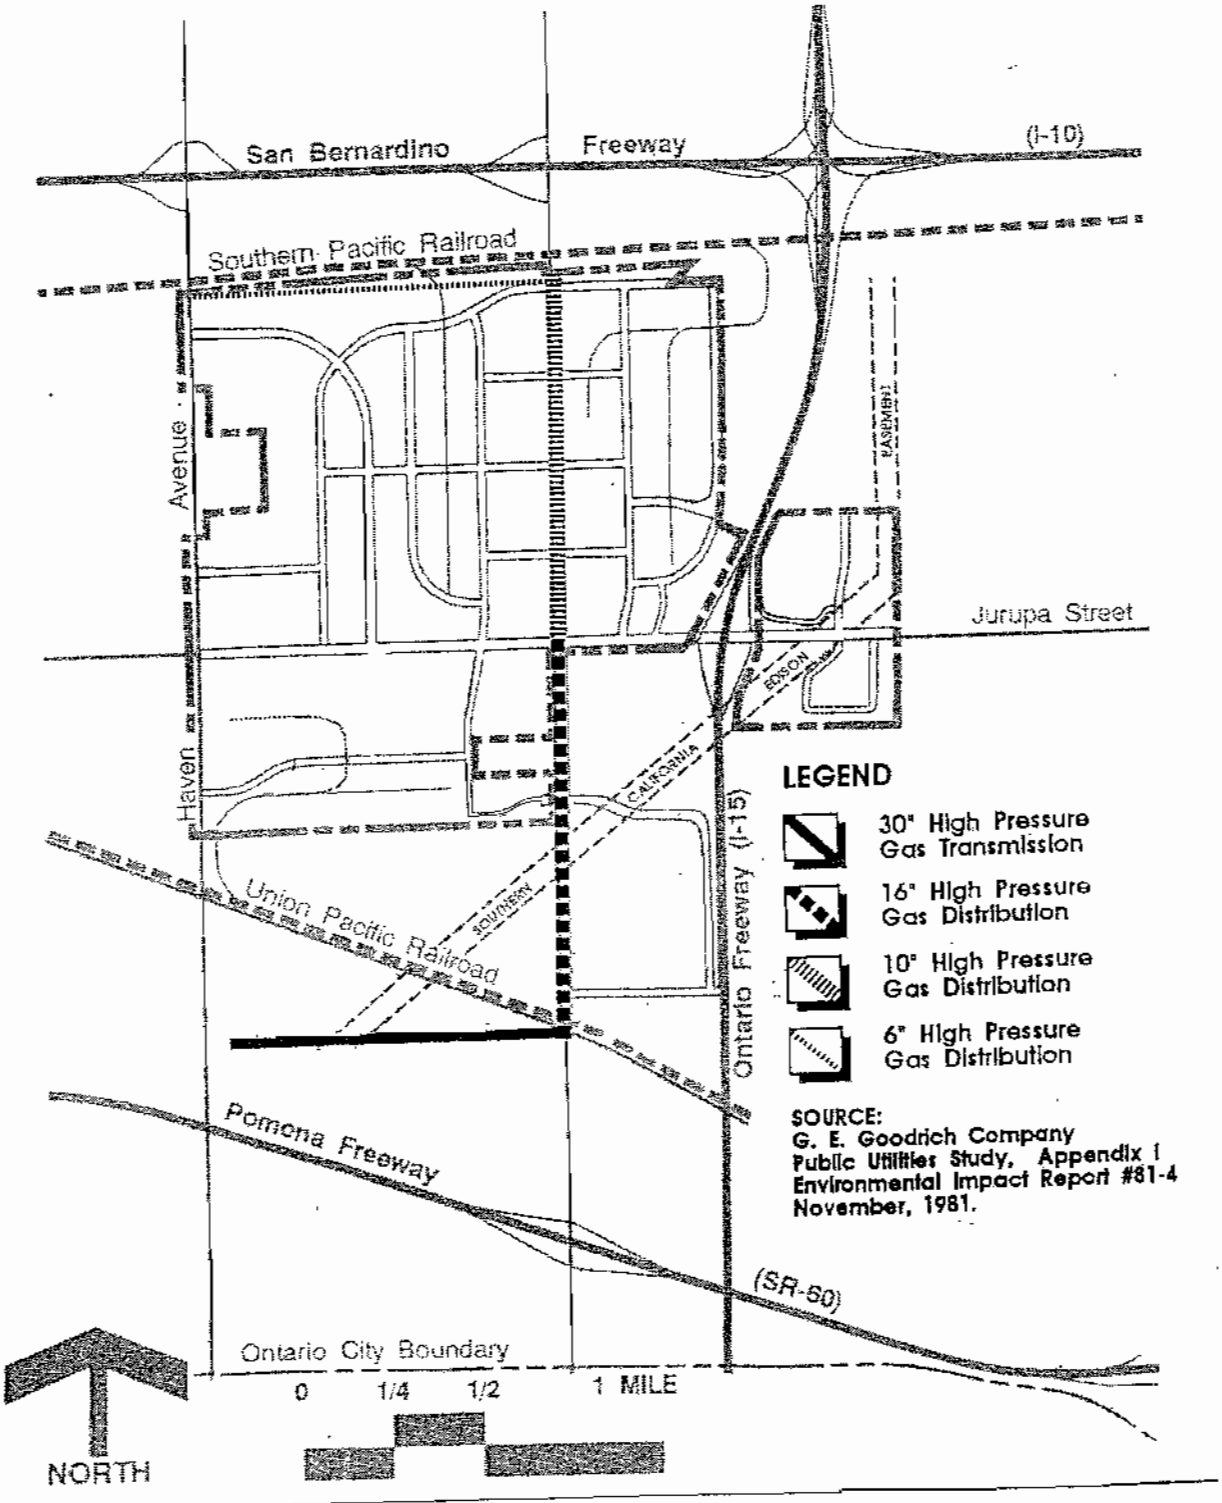
SOUTHERN CALIFORNIA GAS



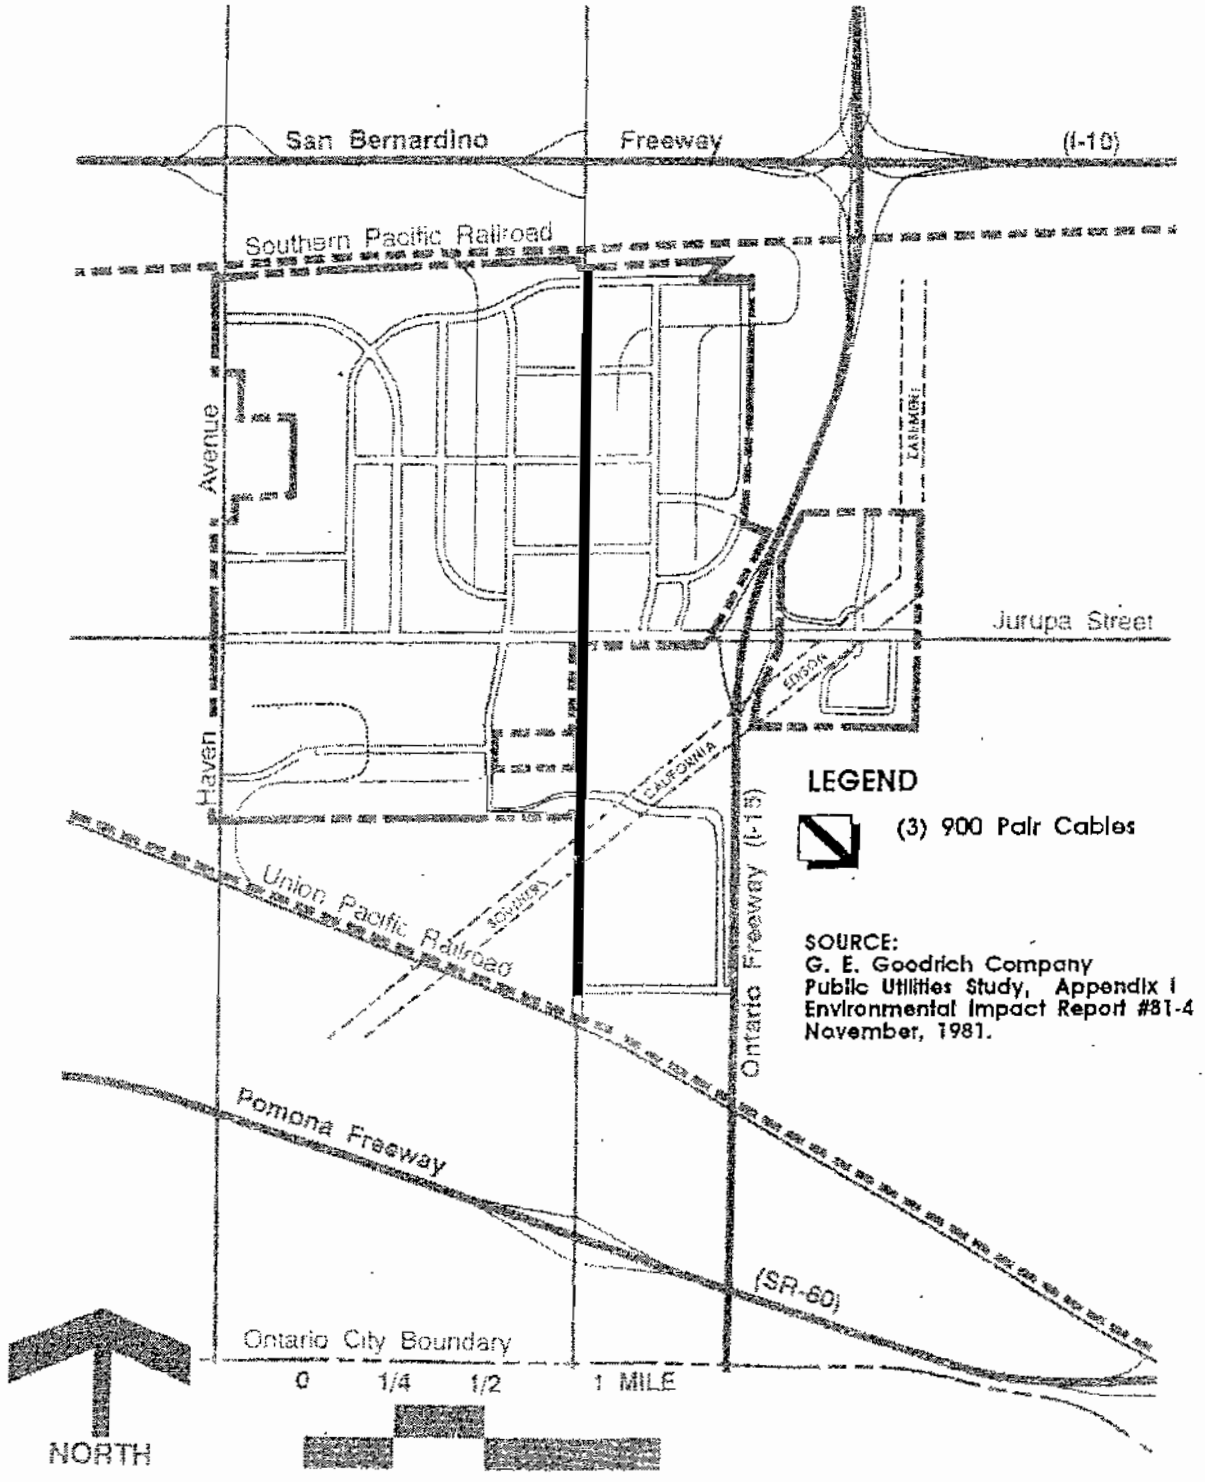


EXHIBIT 31

GENERAL TELEPHONE COMPANY

E. COMMUNITY FACILITIES

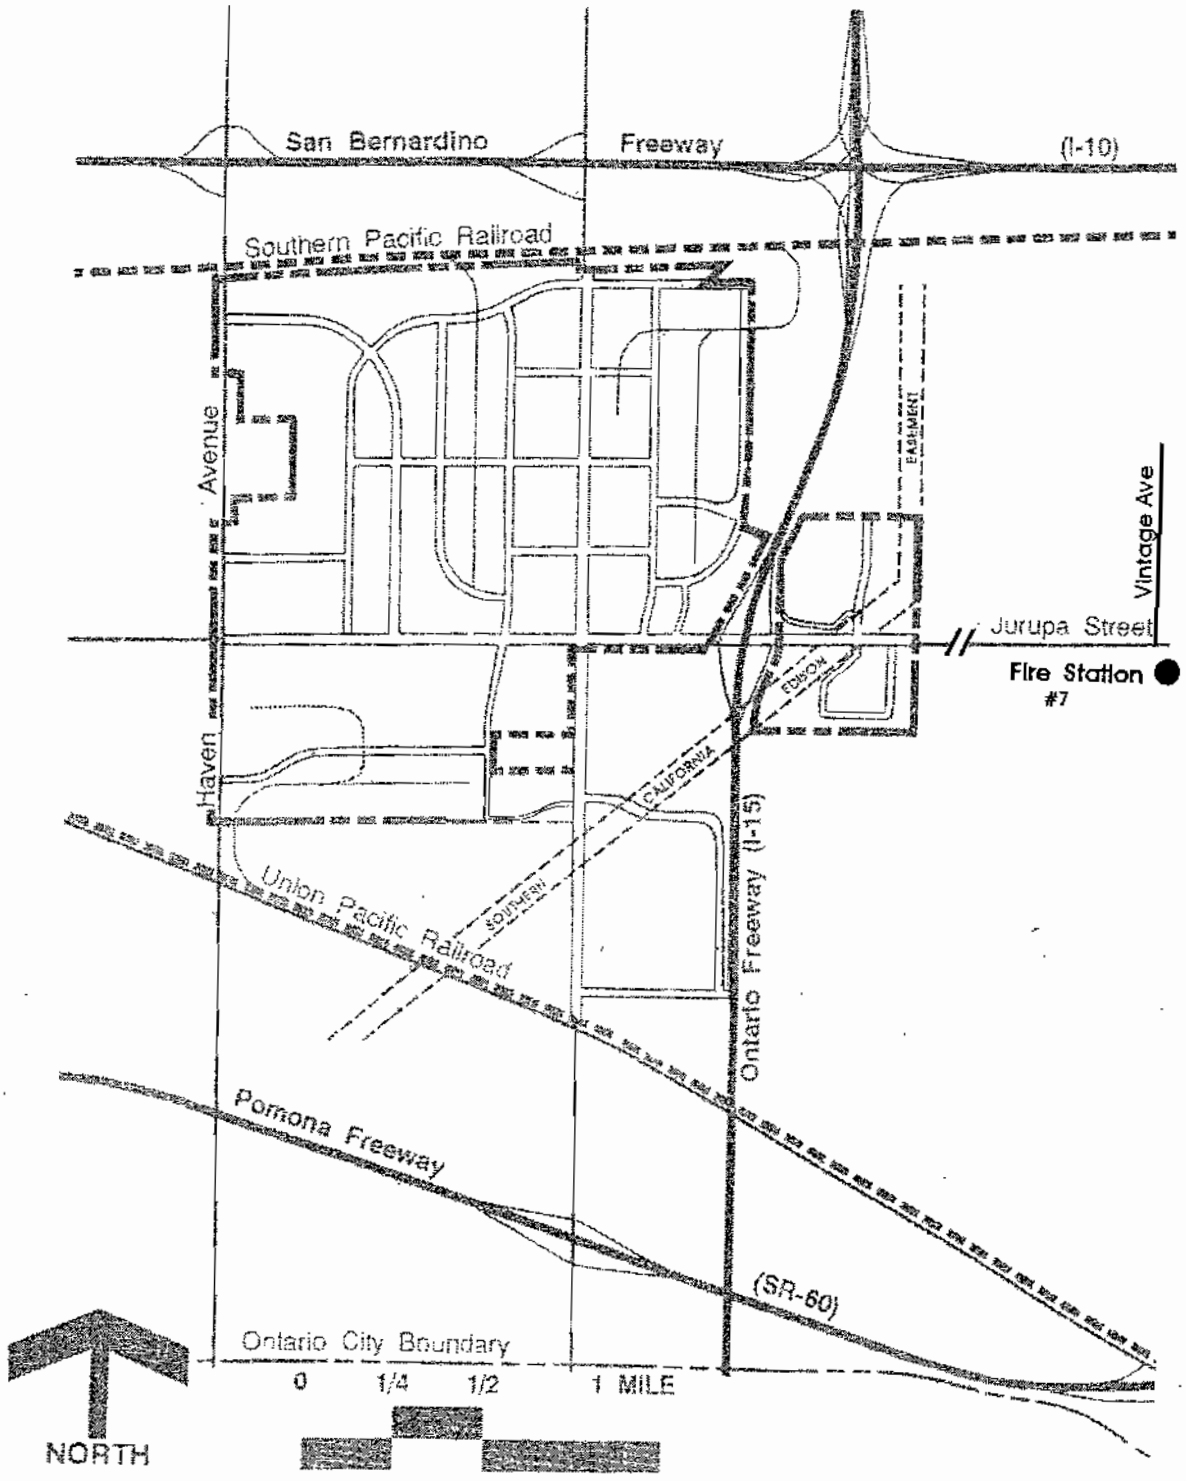
1. FIRE AND POLICE PROTECTION

The City of Ontario currently provides fire protection service to the project area. However, development of the California Commerce Center, combined with envisioned surrounding development, necessitates the construction of an additional fire station. The new fire station (Station No. 7) has been built on a 3.14-acre site located on the south side of Jurupa Street, approximately 4000 feet east of Day Creek Channel/Wineville Avenue (see Exhibit 32, Fire Station). California Commerce Center has participated in an assessment district for operation and maintenance costs.

Police protection to the project will be provided by the City of Ontario through their existing police services. If necessary, these services will be expanded when the project is complete.

A minimum of two beats will be required in the development area indicated. The main reason is due to adjoining planned development sites in and around the Ontario Airport.

Two beats would provide a 24-hour coverage, seven days per week, to an area covering roughly 8-10 square miles. Each beat consists of 5 officers. A cursory look at the Specific Plan indicates that the police resource required to adequately provide service to the C.C.C. development in the upcoming Phase I (1982-87) will be traffic enforcement, utilizing approximately two police officers, given that 265 acres will be used. This is based on an average police beat of 4.2 square miles.



The first and second phase costs for police services are minimal, with costs accruing rapidly in the fourth phase.

2. OPEN SPACE

Open space will be provided by building setbacks along streets, heavy streetscape treatment including landscaped medians, and by the standards set for landscaping of buildings.

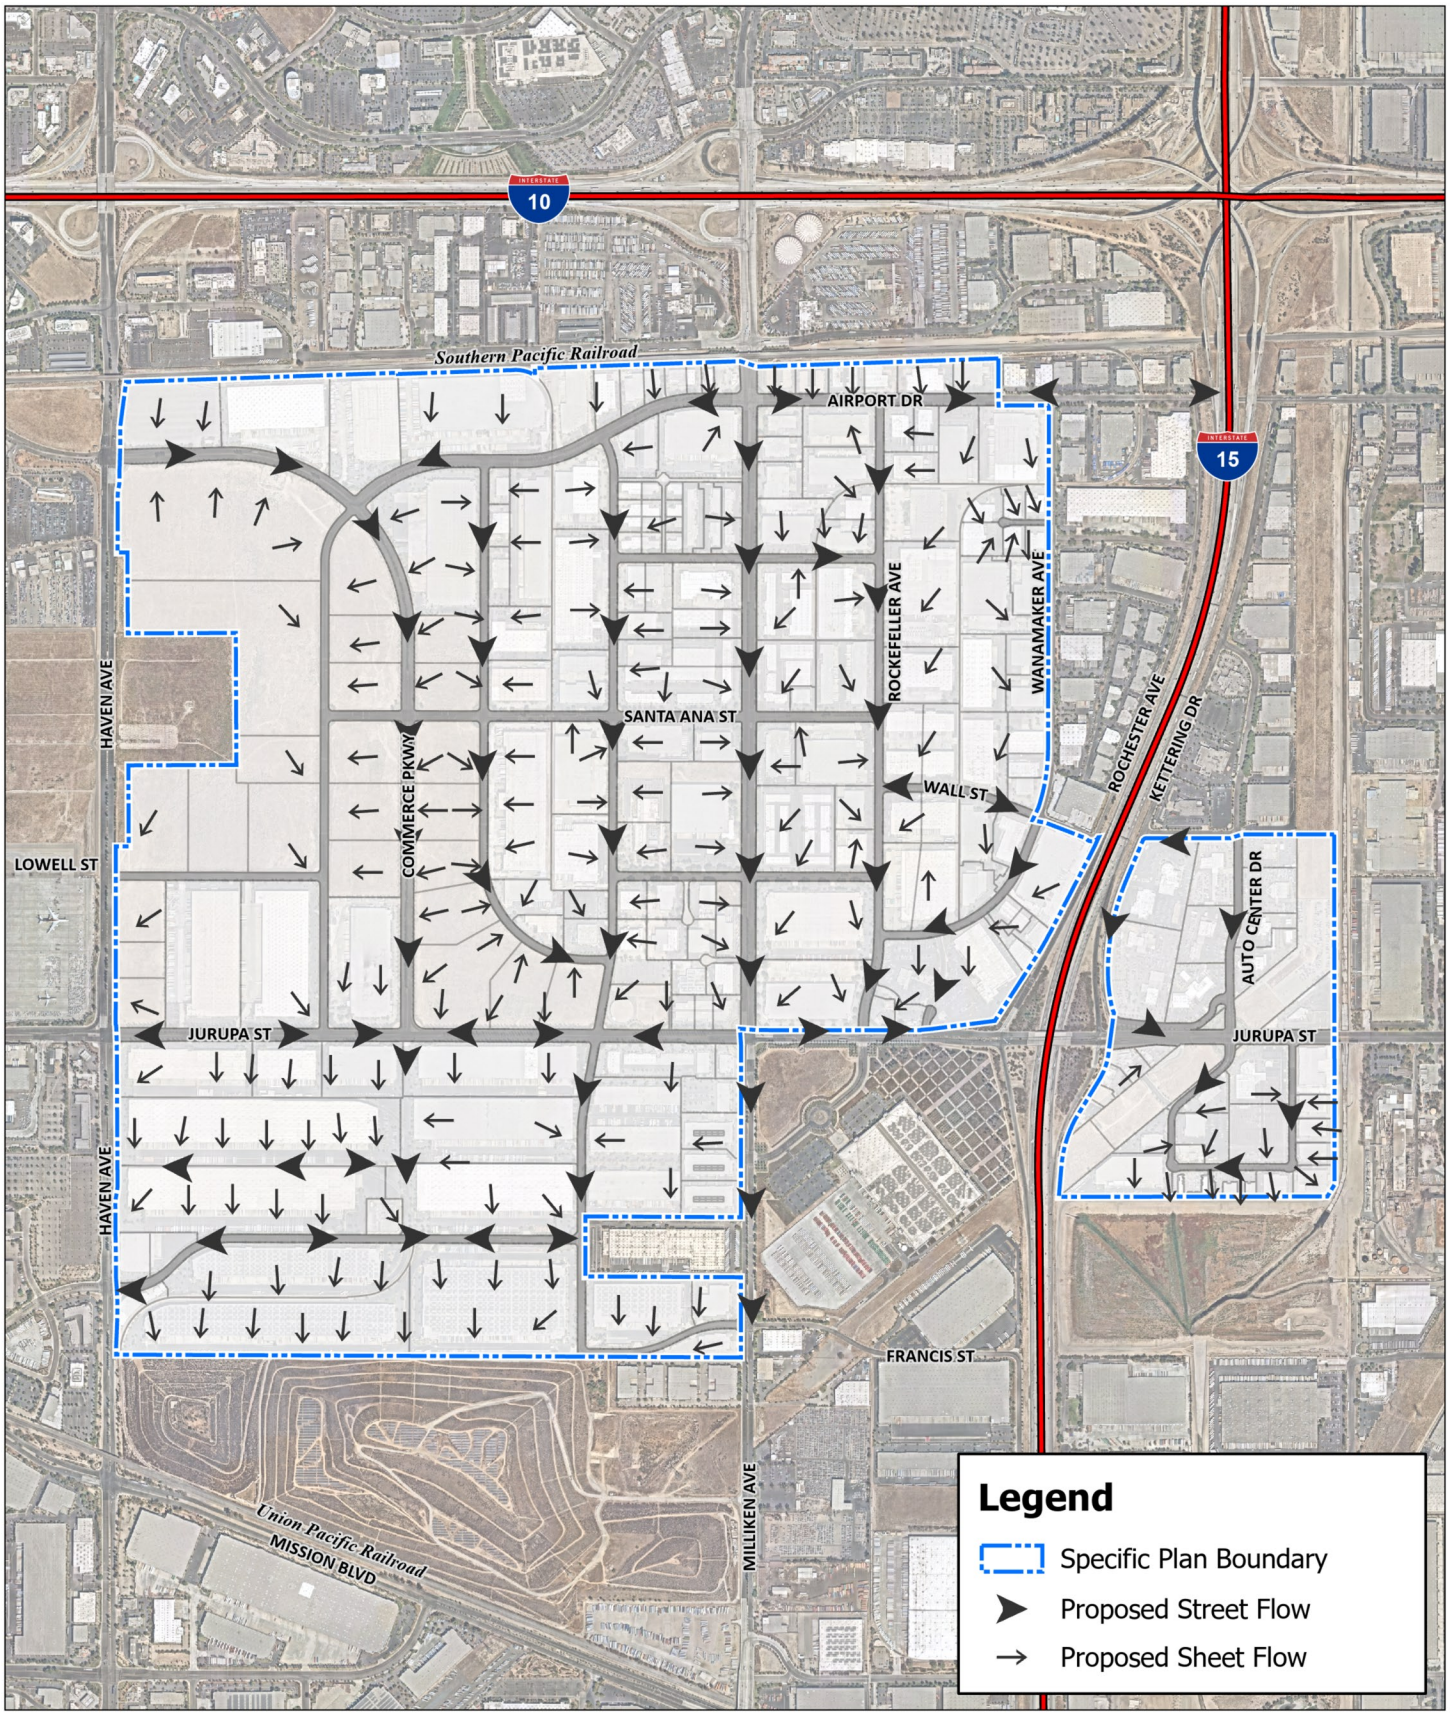
EXHIBIT 32

FIRE STATION

F. GRADING

Conceptual grading of the project site has been designed so that the necessary cut and fill earth works will balance on a project-wide basis. Individual parcels will be graded in such a way as to direct runoff away from the buildings and into drainage facilities located within each street (see Exhibit 33, Drainage Master Plan).

G. LANDSCAPE CONCEPT



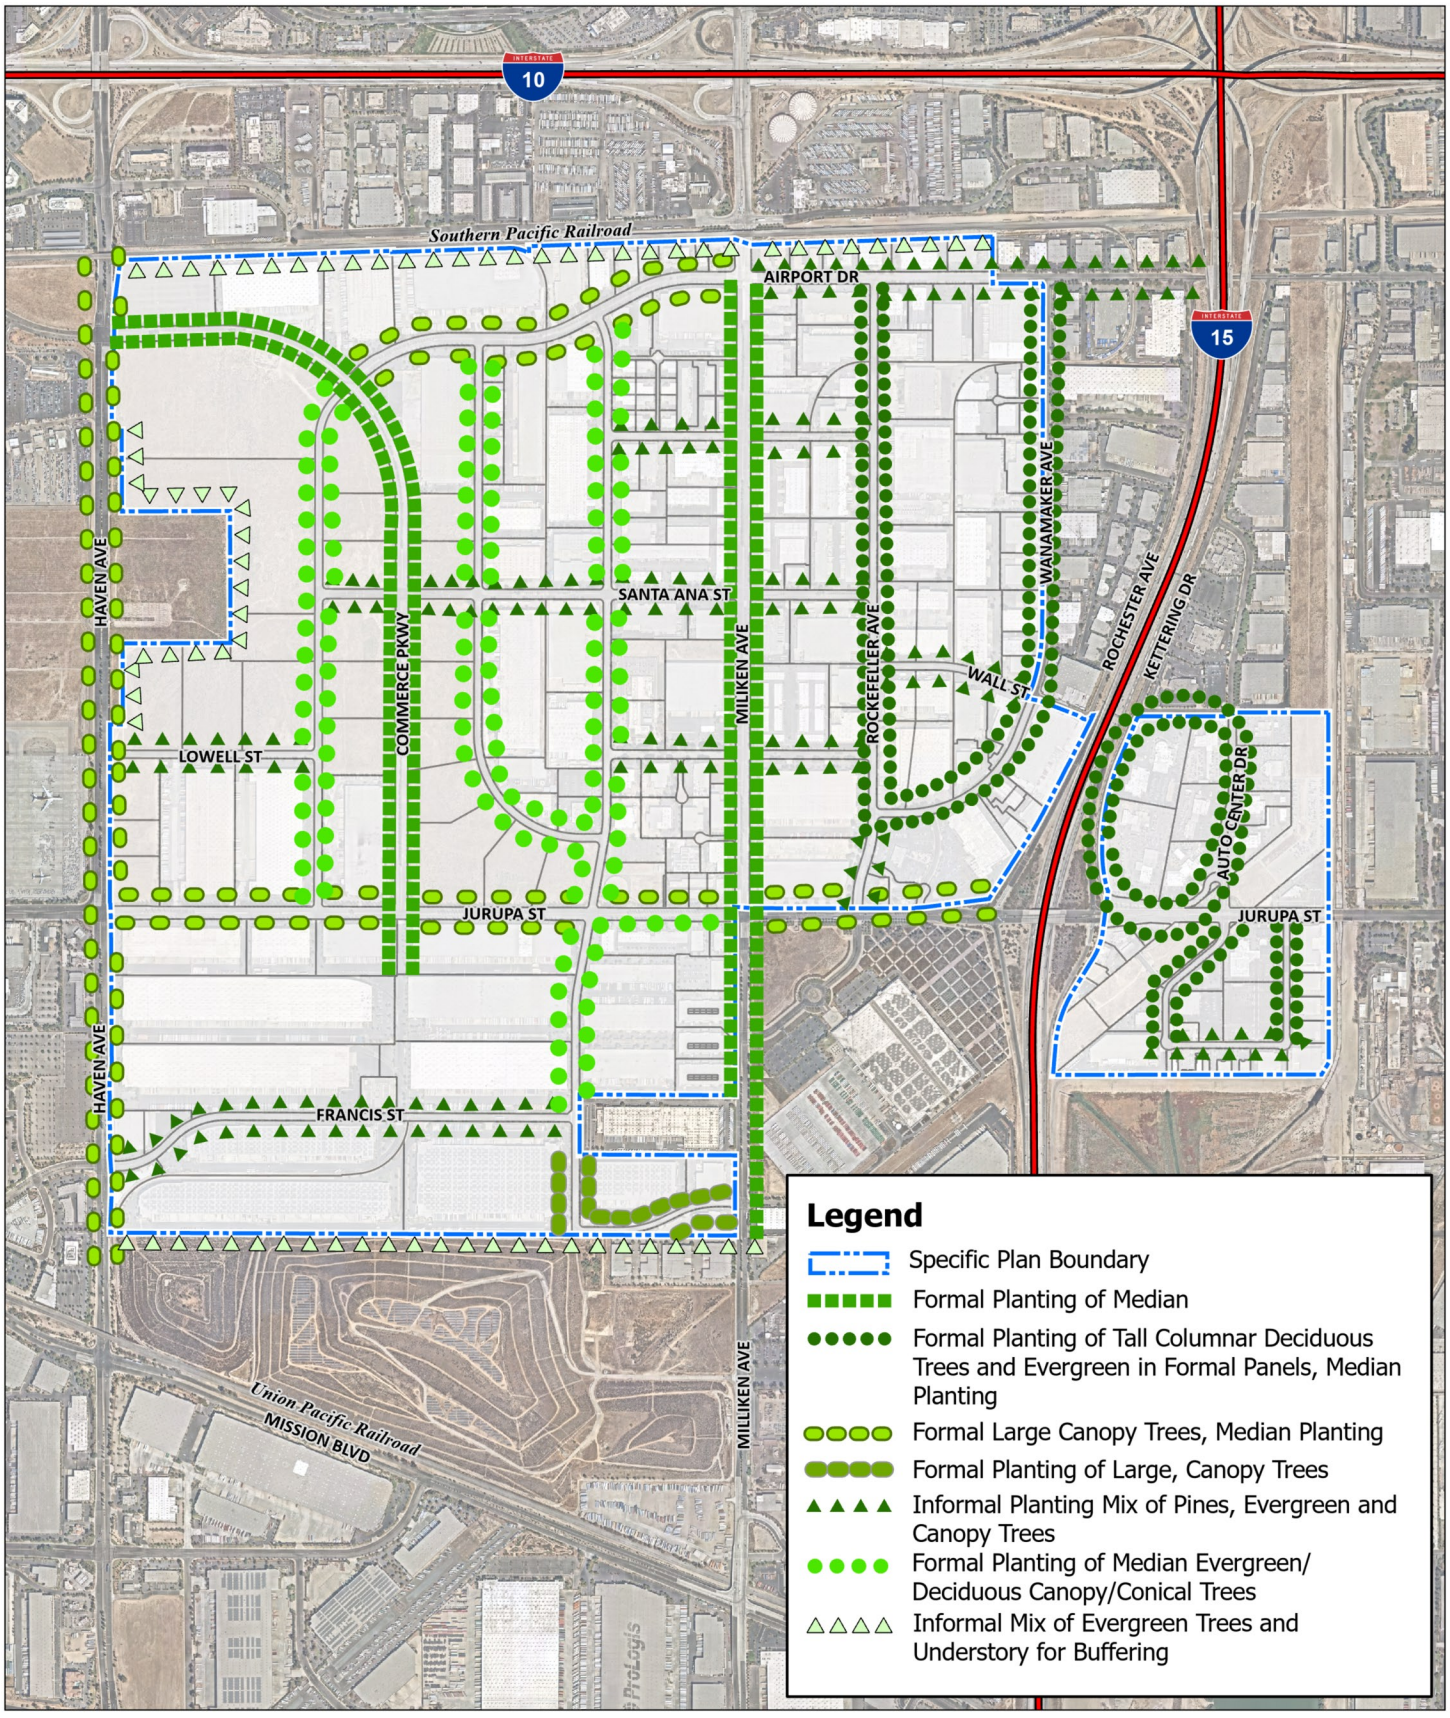
The high quality environment envisioned for the California Commerce Center will be established, in part, by the landscape treatment. The landscape is intended to give structure and identity to the overall project, while providing orientation within the project itself.

The conceptual landscape plan recognizes the region's concern for conserving water and energy, and for using plants that do well in the hot, dry climate of Ontario. The plan, therefore, proposes the use of drought-tolerant plants, as well as other plants that may be native or naturalized to the area. This concept will borrow from the existing landscape vocabulary in a manner that will provide project identity and character.

The plan identifies primary landscape elements that will visually emphasize the character of this project. These elements include streetscape buffer planting, intersections, and on-site landscaping. The plant palettes included in the landscape concept may be revised by the City of Ontario with equivalent plant materials.

1. STREETSCAPE

The conceptual streetscape plan establishes structure, hierarchy, coherence, continuity, and visual identity to the project. The plant palette and the landscape treatment for each of the streets serve to reinforce the overall concept. Preference has been given to those plant materials that are predominantly evergreen, thereby insuring maximum yearly foliage. The plants reflect the hierarchy of the street system with taller, imposing trees defining the major arterials and parkway, and medium-sized trees articulating the more local streets (see Exhibit 34, Conceptual Landscape Plan).



Source(s): Esri, Nearmap Imagery (September 2022), California Commerce Center Specific Plan (Oct 1992)

Exhibit 33

0 400 800 1,600 Feet

Drainage Master Plan

Source(s): Esri, Nearmap Imagery (September 2022), California Commerce Center Specific Plan (Oct 1992)

Exhibit 34

0 400 800 1,600 Feet

Conceptual Landscape Plan

Generally, formal plantings of equally spaced trees are proposed for all north-south avenues, and an informal planting of randomly spaced trees proposed for all east-west streets. Linear berms are proposed throughout the project, within the landscape easement. These berms are to further enhance the landscape character, and to create topographic variation and interest to the site (see Exhibit 34I, Streetscape, Grading Concept). Shrubs, groundcover, and grass articulate the ground plane. These streetscape elements collectively give the project a coherence and structure, and an identity achievable only through the development of a large scale project such as this.

Upon the development of parcels, owners of the parcels shall be required to install the following streetscape treatments.

a. Parkway

Commerce Parkway
(from Airport Drive extending approximately 700' south of Jurupa)

Commerce Parkway functions as a spine for the entire development. Local streets generate out from it on a grid system. Access rights are limited and shall be dedicated to the City of Ontario. The Parkway is proposed as the most significant street in the project, and is one of the major entrances to Ontario International Airport. As such, a formal planting of double rows of equally spaced Tristinia conferta, (see Exhibit 34B, Streetscape/Divided Arterial), are proposed for each side of the Parkway and a single row along the median. Landscape berms and a linear hedge along the crest of the berms are proposed for each side of the parkway. The intent is to give the visual impression of a depressed parkway (see Exhibit 34A, Streetscape/Divided Arterial, Commerce Parkway).

b. Arterials

Airport Drive
Haven Avenue
Jurupa Street*
Milliken Avenue

Large trees formally planted and equally spaced, are proposed for the arterials within the project.

For Milliken Avenue, tall, columnar, alternating panels of Pinus canariensis (Canary Island Pine) and Gingko biloba (Maidenhair Tree) are proposed, with complementing linear hedge panels of shrubs.

Haven Avenue, Jurupa Street, and Airport Drive are articulated with a formal planting of large, predominantly evergreen canopy trees equally spaced (see Exhibit 34A, 34B, 34C, Streetscape/Divided Arterial and Exhibits 34D, 34E, Streetscape/Standard Arterial).

* Plant Palette at Jurupa/Auto Center Drive intersection may change due to Edison easement (height, access issues, etc.)

c. Local and Local Divided Industrial Streets and Divided Collectors

- Brickell Street
- Francis Street
- La Salle Street
- Lowell Street
- Rockefeller Avenue (south of Wanamaker Avenue)
- Santa Ana Street
- Vanderbilt Street
- Wall Street
- Rochester Avenue

An informal, random planting of pines, evergreen, and canopy trees, reinforced with berms and shrubs, is proposed for the collector streets and local (east-west) industrial streets (see Exhibit 34F, Streetscape/Divided Collector and Exhibit 34G, Streetscape/Local (Divided) Industrial Streets; and Exhibit 34H, Streetscape/Local Industrial Streets).

d. Local (North-South) Industrial Streets

- Auto Center Drive
- Carnegie Avenue
- Dupont Avenue
- Doubleday Avenue
- Hudson Avenue
- Kettering Drive
- Rockefeller Avenue (north of Wanamaker Avenue)
- Wanamaker Avenue
- Woodruff Way
- Commerce Parkway (extending approximately 700' north of Francis)

The local (north-south) industrial streets are expressed with a formal planting of equally spaced, medium evergreen/deciduous canopy or conical trees (see Exhibit 34H, Local Industrial Streets).

Cul-de-sacs are proposed for Vanderbilt Street only, and are expressed with unobstructed turning radii (see Exhibit 35D, Streetscape/Cul-de-sac).

NOTE: A PROPERTY OWNERS' ASSOCIATION WILL BE RESPONSIBLE FOR MAINTENANCE OF ALL LANDSCAPED AREAS WITHIN THE SPECIFIC PLAN BOUNDARIES AS ILLUSTRATED IN THE MATRIX, TABLE 3, SUMMARY OF MAINTENANCE RESPONSIBILITIES.

2. BUFFER PLANTING

Buffer planting is proposed along the San Bernardino County Sanitary Landfill and Southern Pacific Railroad right-of-way. The planting visually screens both the landfill and the railroad line, and also provides some noise reduction along the railroad. The buffer area, 10' in width, consists of a mixture of plant material. Tall, upright evergreen trees will be planted, infilled with a planting of dense, spreading trees, reinforced with shrubs (see Exhibit 34J, Buffer Planting, San Bernardino County Sanitary Landfill and Exhibit 34K, Buffer Planting, Southern Pacific Railroad).

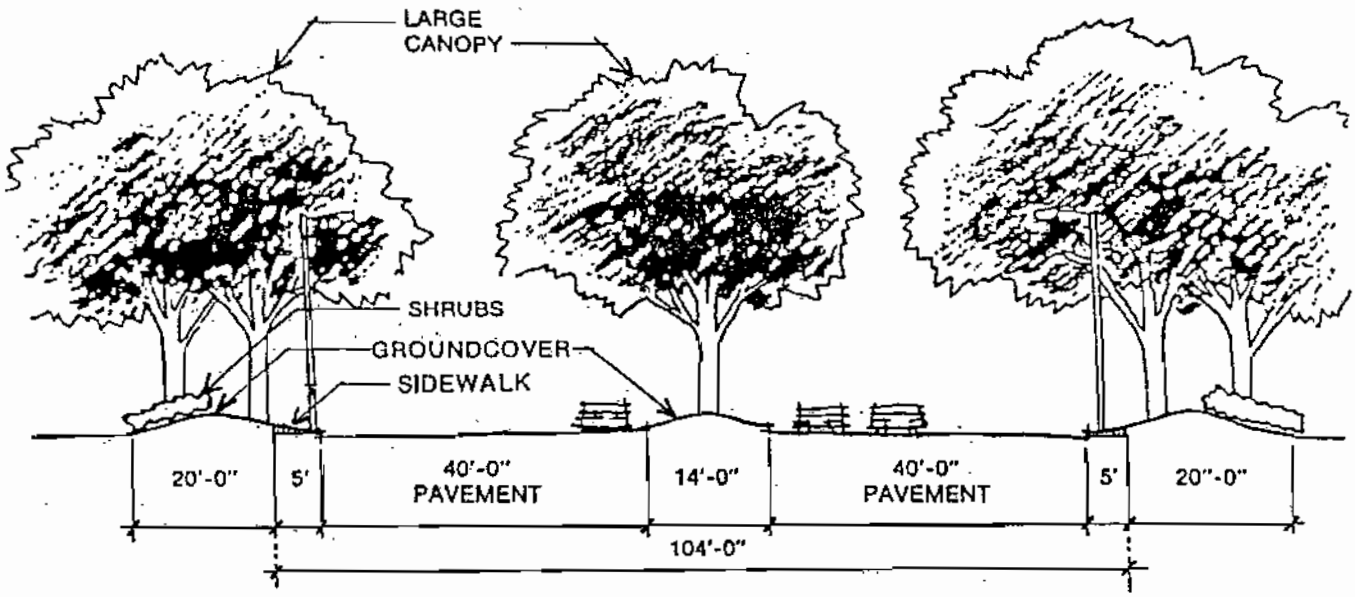
3. INTERSECTIONS

The landscape treatments proposed for the intersections within the project site are based on an hierarchical concept. Three levels of intersections have been identified:

(1) Major
(2) Secondary
(3) Tertiary

(See Exhibit 35, Conceptual Intersection Landscape Plan.)

Major intersections occur at the intersection of major arterials and serve as gateways to the project. They will offer project identity with low walls displaying the project name. Grading, planting of columnar/vertical trees, and terraces of seasonal color groundcover in a circular pattern will be used to delineate and highlight these intersections (see Exhibit 35A, Conceptual Major Entrance/Identity Statement).



Secondary intersections will have a similar circular pattern treatment, although of smaller nature. Predominantly evergreen flowering trees will be planted at the intersections to complement the adjacent streetscape treatments. Seasonal color groundcover will also be used, again with a terrace wall. These low walls may contain project identification signs (see Exhibit 35B, Conceptual Secondary Entrance/Identity Statement).

Landscape treatment of the tertiary intersections will be similar to the treatment of the major and secondary intersections. These intersections give neighborhood level identity, and offer visual open spaces throughout the overall development. The intersection setback, however, will be smaller. Evergreen trees, flowering accent trees, and groundcover or turf will be used to delineate these intersections (see Exhibit 35C, Conceptual Tertiary Identity Statement).

VI. DEVELOPMENT STANDARDS AND CRITERIA

VI. DEVELOPMENT STANDARDS AND CRITERIA

A. RAIL INDUSTRIAL

B. LIGHT INDUSTRIAL

C. OFFICE

D. COMMERCIAL/FOOD/HOTEL

E. AIRPORT RELATED ALTERNATIVE

F. BUILDING AND PARKING SETBACKS

G. FEDERAL AVIATIQN ADMINISTRATION'S REGULATIONS ON CLEAR ZONE/BUILDING HEIGHTS

H. SOUND ATTENUATION RITERIA

I. CRITERIA FOR DEVELOPING ADJACENT TO FREEWAYS

J. AIRPORT RESTRICTIVE OVERLAYS/AIRPORT RESERVATION AREA/CLEAR ZONE/LOW EMPLOYEE INTENSITY AREA

The following regulations and criteria establish minimum development standards for the land uses proposed in this project. These regulations shall govern all property within the California Commerce Center and shall supersede the City of Ontario Zoning Ordinance.

The Approving Agent for California Commerce Center shall review al! proposed development plans prior to review and approval by the City of Ontario.

All development proposals shall be consistent with the Ontario International Airport Land Use Compatibility Plan. Refer to the Ontario International Airport Land Use Compatibility Plan for additional criteria and policies that may limit the restriction of allowable land uses, allowable FAR, overall site design and building/structure heights.

TABLE 4
APPLICABLE MITIGATION MEASURES

	DUST CONTROL	NOISE	DRAINAGE	ENERGY CONSERVATION	TRAFFIC/ TRANSIT	WATER CONSERVATION	AESTHETICS	BUILDING HEIGHT	SOILS/GROUND STABILITY	RECYCLING	SAFETY/ SECURITY

C. Office	X	X	X	X	X	X	X	X	X	X	X
D. Commercial/ Food/Hotel	X	X*	X	X	X	X	X	X	X	X	X

*The Environmental Mitigation Measures listed in Section VIII-B apply to the development of projects within CCC. Please consult this chart for specifics.

A. EXHIBIT 38

RAIL INDUSTRIAL

PERMITTED USES

- Administrative/professional/business offices associated with on-site permitted uses
- Distribution/storage/warehousing, within an enclosed structure
- Interim agricultural production
- Manufacturing/assembly, testing/repair
- Research/development/laboratories
- Wholesale and limited retail sales of products manufactured or warehoused on-site

LIMITED USES

The following uses require review by the City Planner prior to approval of a site plan or business license. To approve the use at the proposed location, the City Planner must determine that parking, access, and/or any other factors associated with the use or the location will be adequately resolved.

- Auto/truck services

All other uses are prohibited unless a finding is made by the Planning Commission that the use is similar to and no more objectionable than a permitted or a limited use.

MINIMUM PARCEL SIZE	2.5 acres
MAXIMUM BUILDING HEIGHT	Refer to Federal Aviation Administration Regulations as shown in Section VI.G
MINIMUM BUILDING SETBACKS (Measured from property line)	Refer to Building Setbacks Summary, Exhibit 48
MINIMUM PARKING SETBACKS	Refer to Parking Setbacks Summary, Exhibit 49
PARKING REGULATIONS (per City of Ontario Parking Standards)	Refer to Appendix B

LANDSCAPE

MINIMUM LANDSCAPE REQUIREMENTS

• Minimum landscape coverage	Not applicable
• Building front and exterior side setbacks	100%
Parking front and exterior side setbacks	100%
• Front and exterior side building elevations softened by minimum landscaped area	10’
• Interior side building setback (interior parcels, in front of concrete screenwall)	5’
• In front of screewalls {sea Exhibit 39)	6’
• All parking visible from any public street must be shielded by bermed mounding planted with trees, shrubs, and grass per Mater Streetscape Plan	Front and exterior setbacks
• Maximum 10 cars between finger type planters, minimum 6’ wide from parking areas (in front of concrete screenwall)	Front, exterior side and interior side (refer to Conceptual Site Plan)
• All landscaped area to be delineated with minimum 6” concrete curb	100%

All development proposals shall be consistent with the Ontario International Airport Land Use Compatibility Plan. Refer to the Ontario International Airport Land Use Compatibility Plan for additional criteria and policies that may limit the restriction of allowable land uses, allowable FAR, overall site design and building/structure heights.

A.

EXHIBIT 38 (Continued)

RAIL INDUSTRIAL

LOADING AREAS

1. Loading areas shall be designed to provide for backing and maneuvering on-site and not from a public street.
2. Loading areas shall not encroach into building setbacks.
3. All loading areas shall be screened from adjacent parcels and streets.
4. Buildings shall be designed per the conceptual site plans shown in Exhibits 39, 40, 42, 43 which show loading areas primarily located to the side and rear of the building.
5. Where loading doors front a public street, roll-up doors and openings in the screen wall shall be positioned such that the doors are not visible from the street.
6. All loading areas fronting a public street shall be screened by a combination of screen walls, ornamental landscaping, and/or portions of the building such that the roll-up doors are not visible from the street.
7. Loading areas and doors not fronting a public street shall be screened from view of the public street by concrete wing walls with redwood slatted gate (or equal) and ornamental landscaping.
8. Loading doors fronting a public street shall not be closer than 70' from property line.
9. All screenwalls and wing walls shall be a maximum of 12' in height.
10. A sight-line analysis shall be required with all development applications, and shall show that all roll-up doors are screened from view from adjoining parcels and public streets (see diagram on following page as an example of acceptable sight-line analysis - Exhibit 40A).

OUTDOOR STORAGE

- No outdoor storage shall be permitted unless adequately screened by an opaque material approved by California Commerce Center's Approving Agent.
- All storage screening shall be a minimum of 8' in height and no material shall be stored higher than 8'.
- All storage areas fronting a public street shall be screened by a concrete screen wall and ornamental landscaping.
- Location of outdoor storage areas shall be shown on the development site plan, and shall be subject to approval by California Commerce Center's Approving Agent and the City of Ontario Development Advisory Board.

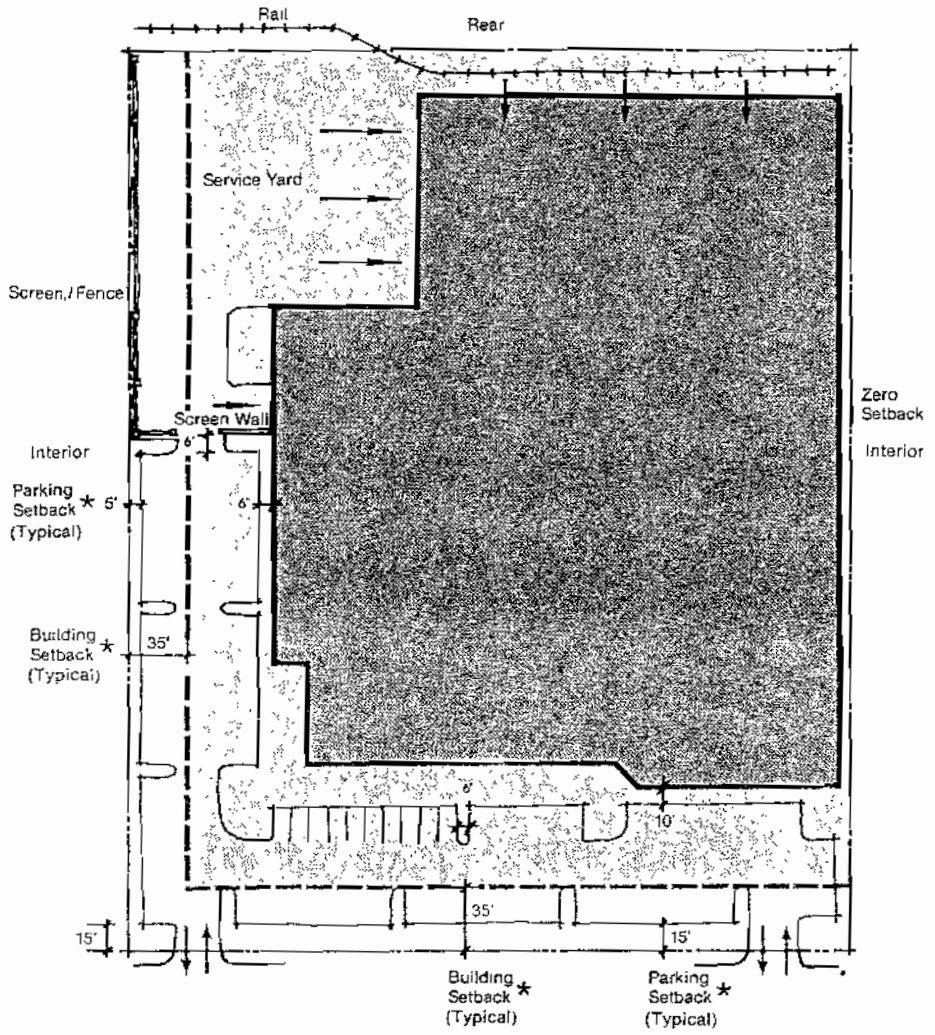
EXTERIOR BUILDING MATERIALS

- All building improvements, with the exception of trim and minor architectural features, shall be constructed of masonry, concrete, glass, or other material approved by California Commerce Center's Approving Agent (no precision block).
- All exterior walls shall be painted or suitably treated.

ROOFING AND ROOFTOP EQUIPMENT

- Opaque screening approved by California Commerce Center's Approving Agent, shall be provided to conceal all rooftop equipment.
- Unless roofing materials are a part of the design element (shingles, tile, etc.), the ridge line elevation shall not exceed the parapet elevation.
- All mechanical equipment on top of the roof shall be painted to blend with the building and roofing materials.

SIGNAGE



- All signs shall be subject to the provisions of the Master Signage Plan and will require the approval of California Commerce Center's Approving Agent and the City of Ontario (refer to Section VII. A and Signage and Graphics Criteria, Exhibit 56).

B. EXHIBIT 41

LIGHT INDUSTRIAL

PERMITTED USES

- Administrative/professional/general business offices in conjunction with an on-site permitted use
- Airport related uses such as Air Cargo and airline food service facilities (refer to Exhibit 47C, Airport Related Alternative)
- Distribution/storage/warehousing, within an enclosed structure
- Manufacturing/assembly/testing/repair
- Research/development/laboratories
- Retail auto center east of 1-15 Freeway and at the northeast corner of Jurupa Street and Woodruff Way, including ancillary uses, e.g., auto repair
- Service industries including, but not limited to: public utilities, printing/lithography, auto rental agencies
- Wholesale and limited retail sales of products manufactured or warehoused on-site

LIMITED USES

The following uses require review by the City Planner prior to approval of a site plan or business license. To approve the use at the proposed location, the City Planner must determine that parking, access, and/or any other factors associated with the use or the location will be adequately resolved.

- Administrative/professional/general business offices
- Financial institutions
- Medical and healthcare clinics
- Recreation facilities
- Restaurants, sandwich shops, delicatessens, donut shops, etc.

All other uses are prohibited unless a finding is made by the Planning Commission that the use is similar to and no more objectionable than a permitted or a limited use.

MINIMUM PARCEL SIZE — 1.0 ACRE EXCEPT AS FOLLOWS:
A subdivision with less than one (1) acre parcels may be permitted subject to the following conditions:

a. Minimum site area shall be twenty (20) acres.

b. The 20-acre site shall be masterplanned as a unit subject to approval **by** the City of Ontario Development Advisory Board.

c. Construction must be underway, or building permits must be issued, for those buildings located on the proposed subdivision site.

d. Minimum parcel size under this provision shall be one half (0.5) acre.

MAXIMUM BUILDING HEIGHT	Refer to Federal Aviation Administration Regulations as shown in Section VI.G
MINIMUM BUILDING SETBACKS (Measured from property line)	Refer to Building Setbacks Summary, Exhibit 48
MINIMUM PARKING SETBACKS	Refer to Parking Setbacks Summary, Exhibit 49
PARKING REGULATIONS (per City of Ontario Parking Standards)	Refer to Appendix B

All development proposals shall be consistent with the Ontario International Airport Land Use Compatibility Plan. Refer to the Ontario International Airport Land Use Compatibility Plan for additional criteria and policies that may limit the restriction of allowable land uses, allowable FAR, overall site design and building/structure heights.

LANDSCAPE

MINIMUM LANDSCAPE REQUIREMENTS

• Minimum landscape coverage	Not applicable
• Building front and exterior side setbacks	100%
• Parking front and exterior side setbacks	100%
• Front and exterior side building elevations softened by minimum landscaped area	10'
• Interior side parking setback (in front of concrete screenwall)	p[illegible] (see exhibits 42 and 43)
• All parking visible from any public street must be shielded by bermed mounding planted with trees, shrubs, and grass per Master Streetscape Plan	Front and exterior setbacks
• Maximum 10 cars between finger type planters, minimum 6' wide from parking areas	100%
• All landscaped areas to be delineated with minimum 6" concrete curb	

LOADING AREAS

1. Loading areas shall be designed to provide for backing and maneuvering on-site and not from a public street.
2. Repealed.
3. All loading areas shall be screened from adjacent parcels and streets.
4. Buildings shall be designed per the conceptual site plans shown in Exhibits 39, 40, 42, 43 which show loading areas primarily located to the side and rear of the building.
5. Where loading doors front a public street, roll-up doors and openings in the screen wall shall be positioned such that the doors are not visible from the street.
6. All loading areas fronting a public street shall be screened by a combination of screen walls, ornamental landscaping, and/or portions of the building such that the roll-up doors are not visible from the street.
7. Loading areas and doors not fronting a public street shall be screened from view of the public street by concrete wing walls with redwood slatted gate, or equal.
8. Loading doors fronting a public street shall not be closer than 70' from property line.
9. All screenwalls and wing walls shall be a maximum of 14' in height.
10. A sight-line analysis shall be required with all development applications, and shall show that all roll-up doors are screened from view from adjoining parcels and public streets (see diagram in Exhibit 40A).

OUTDOOR STORAGE

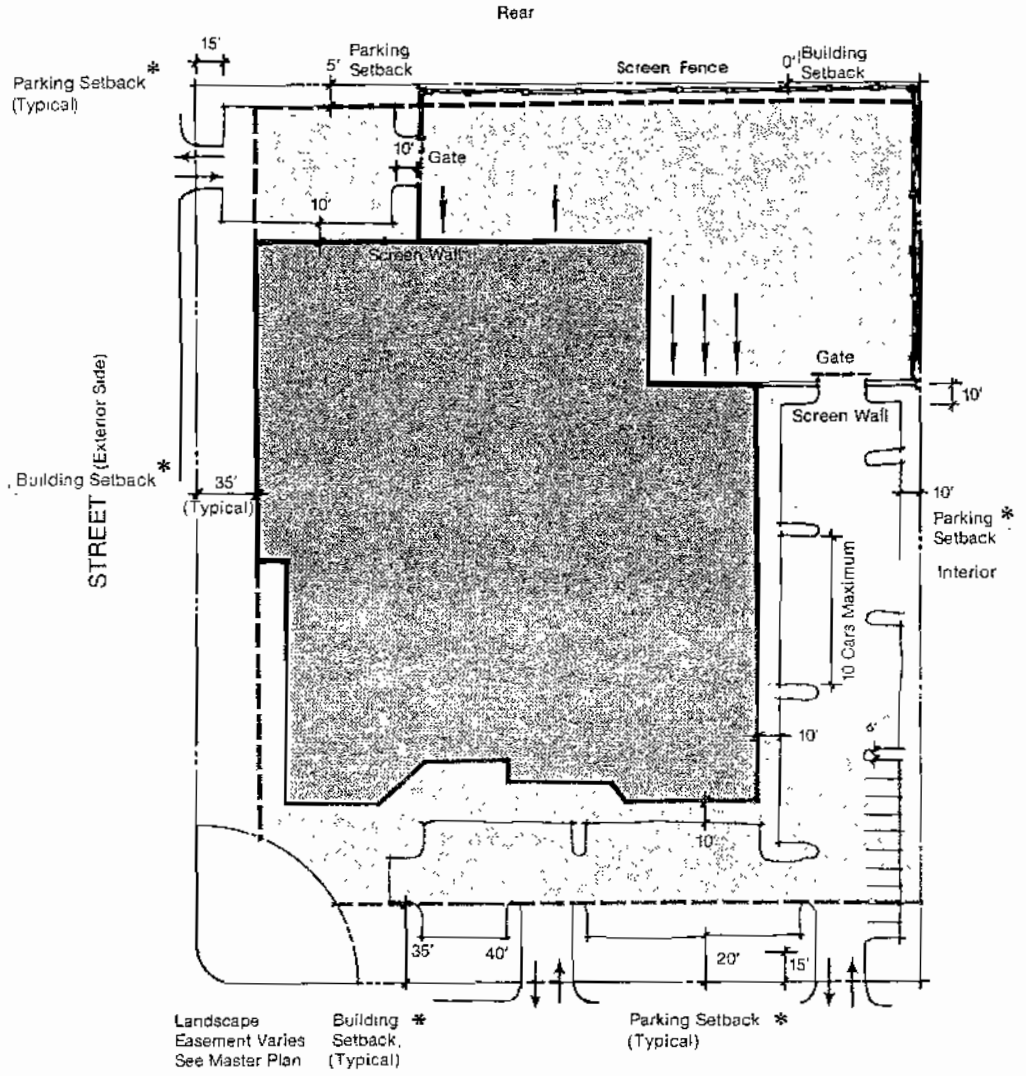
- No outdoor storage shall be permitted unless adequately screened by an opaque material approved by California Commerce Center's Approving Agent.
- All storage screening shall be a minimum of 8' in height and no material shall be stored higher than 8'.
- All storage areas fronting a public street shall be screened by a concrete screen wall and ornamental landscaping.
- Location of outdoor storage areas shall be shown on the development site plan, and shall be subject to approval by California Commerce Center's Approving Agent and the City of Ontario Development Advisory Board.

EXTERIOR BUILDING MATERIALS

- All building improvements, with the exception of trim and minor architectural features, shall be constructed of masonry, concrete, glass, or other material approved by California Commerce Center's Approving Agent (no precision block).
- All exterior walls shall be painted or suitably treated.

ROOFING AND ROOFTOP EQUIPMENT

- Opaque screening approved by California Commerce Center's Approving Agent shall be provided to conceal all rooftop equipment.
- Unless roofing materials are a part of the design element (shingles, tile, etc.), the ridge line elevation shall not exceed the parapet elevation.
- All mechanical equipment on top of the roof shall be painted to blend with the building and roofing materials.



SIGNAGE

- All signs shall be subject to the provisions of the Master Signage Plan and will require the approval of California Commerce Center's Approving Agent and the City of Ontario, (refer to Section VII.A and Signage and Graphics Criteria, Exhibit 56).

- Research/development/laboratories
- Restaurants/sandwich shops, delicatessens, donut shops, etc.

All other uses are prohibited unless a finding is made by the Planning Commission that the use is similar to and no more objectionable than a permitted or a limited use.

MINIMUM PARCEL SIZE	Not Applicable
MAXIMUM BUILDING HEIGHT	Refer to Federal Aviation Administration Regulations as shown in Section VI.G
MINIMUM BUILDING SETBACKS (Measured from property line)	Refer to Building Setbacks Summary, Exhibit 48
MINIMUM PARKING SETBACKS	Refer to Parking Setbacks Summary, Exhibit 49
PARKING REGULATIONS (per City of Ontario Parking Standards)	Refer to Appendix B

LANDSCAPE

MINIMUM LANDSCAPE REQUIREMENTS

• Minimum landscape coverage	15%
• Building front and exterior side, interior and rear side setbacks	100%
• Parking front and exterior, interior and rear side setbacks	100%
• Elevations softened by minimum landscaped area	15’
• All parking visible from any public street must be shielded by bermed mounding planted with trees, shrubs, and grass per Mater Streetscape Plan	100%
• Maximum 10 cars between finger type planters, minimum 6’ wide from parking areas	100%
• All landscaped area to be delineated with minimum 6” concrete curb	100%

LOADING AREAS

- Loading areas shell be designed to provide for backing and maneuvering on-site and not from a public street.
- Loading areas shall not be visible from street or on-site passenger circulation drives and shall be screened from adjacent parcels.

OUTDOOR STORAGE

- No outdoor storage shall be permitted unless adequately screened by an opaque material approved by California Commerce Center's Approving Agent.

All development proposals shall be consistent with the Ontario International Airport Land Use Compatibility Plan. Refer to the Ontario International Airport Land Use Compatibility Plan for additional criteria and policies that may limit the restriction of allowable land uses, allowable FAR, overall site design and building/structure heights.

- All storage areas fronting a public street shall be screened by a concrete screen wall and ornamental landscaping.
- Location of outdoor storage areas shall be shown on the development site plan, and shall be subject to approval by California Commerce Center's Approving Agent and the City of Ontario Development Advisory Board.

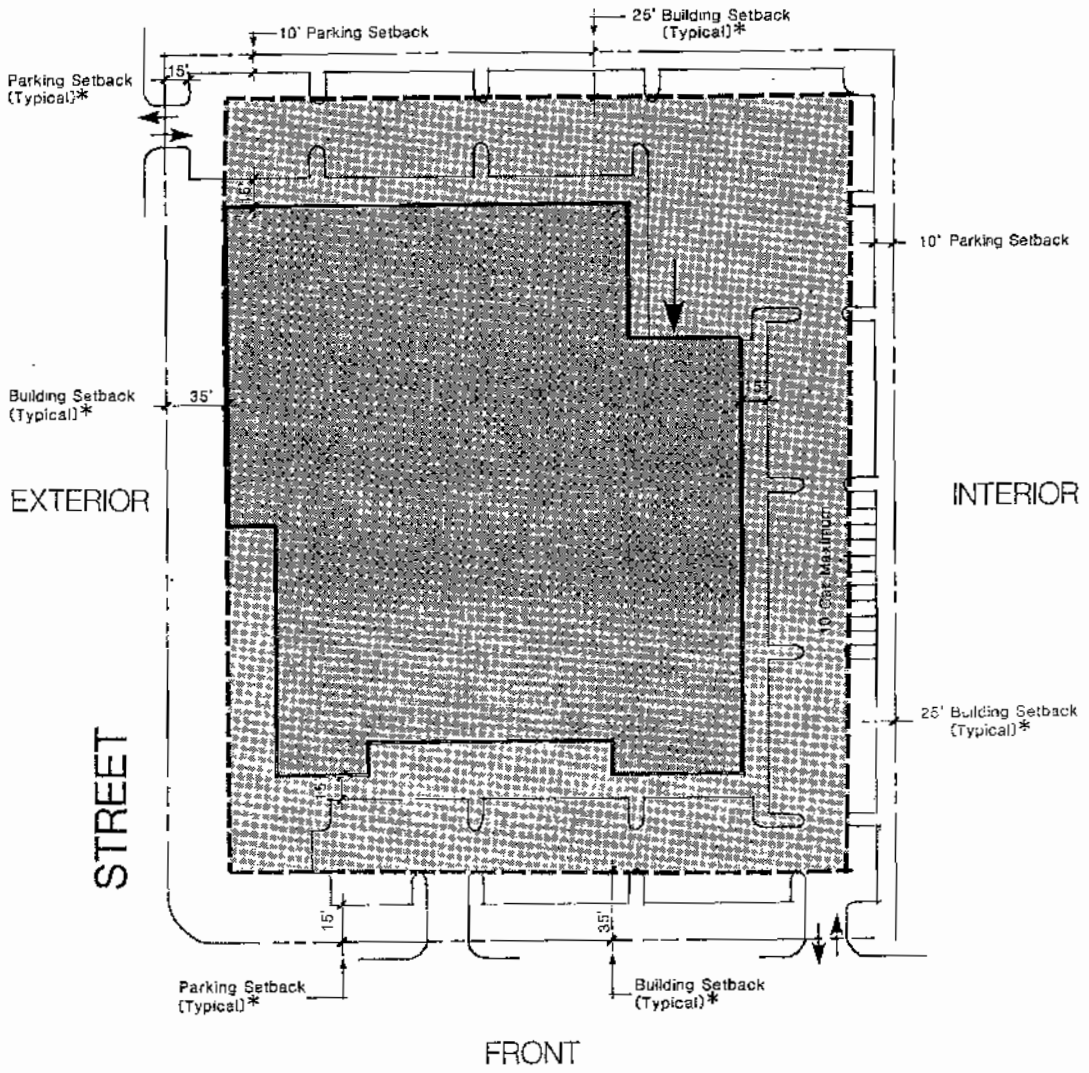
EXTERIOR BUILDING MATERIALS

- All building improvements, with the exception of trim and minor architectural features shall be constructed of masonry, concrete, glass or other material approved by California Commerce Center's Approving Agent (no precision block).
- All exterior walls shall be painted or suitably treated.

ROOFING AND ROOFTOP EQUIPMENT

- Opaque screening approved by California Commerce Center's Approving Agent, shall be provided to conceal all rooftop equipment.
- Unless roofing materials are a part of the design element (shingles, tile, etc.), the ridge line elevation shall not exceed the parapet elevation.
- All mechanical equipment on top of the roof shall be painted to blend with the building and roofing materials.

SIGNAGE



- All signs shall be subject to the provisions of the Master Signage Plan and will require the approval of California Commerce Center's Approving Agent and the City of Ontario, (refer to Section VII.A and Signage and Graphics Criteria, Exhibit 56.)

COMMERICAL/FOOD/HOTEL

PERMITTED USES

- Administrative/professional/business offices
- Automobile rental agencies
- Auto service
- Financial Institutions
- Health and recreational facilities
- Hotels/motels/hometels
- Interim agricultural production
- Medical and health care facilities
- Restaurants/sandwich shops, delicatessens, donut shops, etc.
- Retail sales (excluding auto and truck sales and office services, e.g. print shops, courier services, etc.

LIMITED USES

The following uses require review by the City Planner prior to approval of a site plan or business license. To approve the use at the proposed location, the City Planner must determine that parking, access, and/or any other factors associated with the use or the location will be adequately resolved.

- Child day care centers

All other uses are prohibited unless a finding is made by the Planning Commission that the use is similar to and no more objectionable than a permitted or a limited use.

MINIMUM PARCEL SIZE	Not Applicable
MAXIMUM BUILDING HEIGHT	Refer to Federal Aviation Administration Regulations as shown in Section VI.G
MINIMUM BUILDING SETBACKS (Measured from property line)	Refer to Building Setbacks Summary, Exhibit 48
MINIMUM PARKING SETBACKS	Refer to Parking Setbacks Summary, Exhibit 49
PARKING REGULATIONS (per City of Ontario Parking Standards)	Refer to Appendix B

LANDSCAPE

MINIMUM LANDSCAPE REQUIREMENTS

• Minimum landscape coverage	15%
• Building front and exterior side, interior and rear side setbacks	100%
• Parking front and exterior, interior and rear side setbacks	100%
• Elevations softened by minimum landscaped area	15’
• All parking visible from any public street must be shielded by bermed mounding planted with trees, shrubs, and grass per Mater Streetscape Plan	100%
• Maximum 10 cars between finger type planters, minimum 6’ wide from parking areas	100%
• All landscaped area to be delineated with minimum 6” concrete curb	100%

All development proposals shall be consistent with the Ontario International Airport Land Use Compatibility Plan. Refer to the Ontario International Airport Land Use Compatibility Plan for additional criteria and policies that may limit the restriction of allowable land uses, allowable FAR, overall site design and building/structure heights

LOADING AREAS

- Loading areas shall be designed to provide for backing and maneuvering on-site and not from a public street.
- Loading areas shall not be visible from street or on-site passenger circulation drives and shall be screened from adjacent parcels.

OUTDOOR STORAGE

- No outdoor storage shall be permitted.

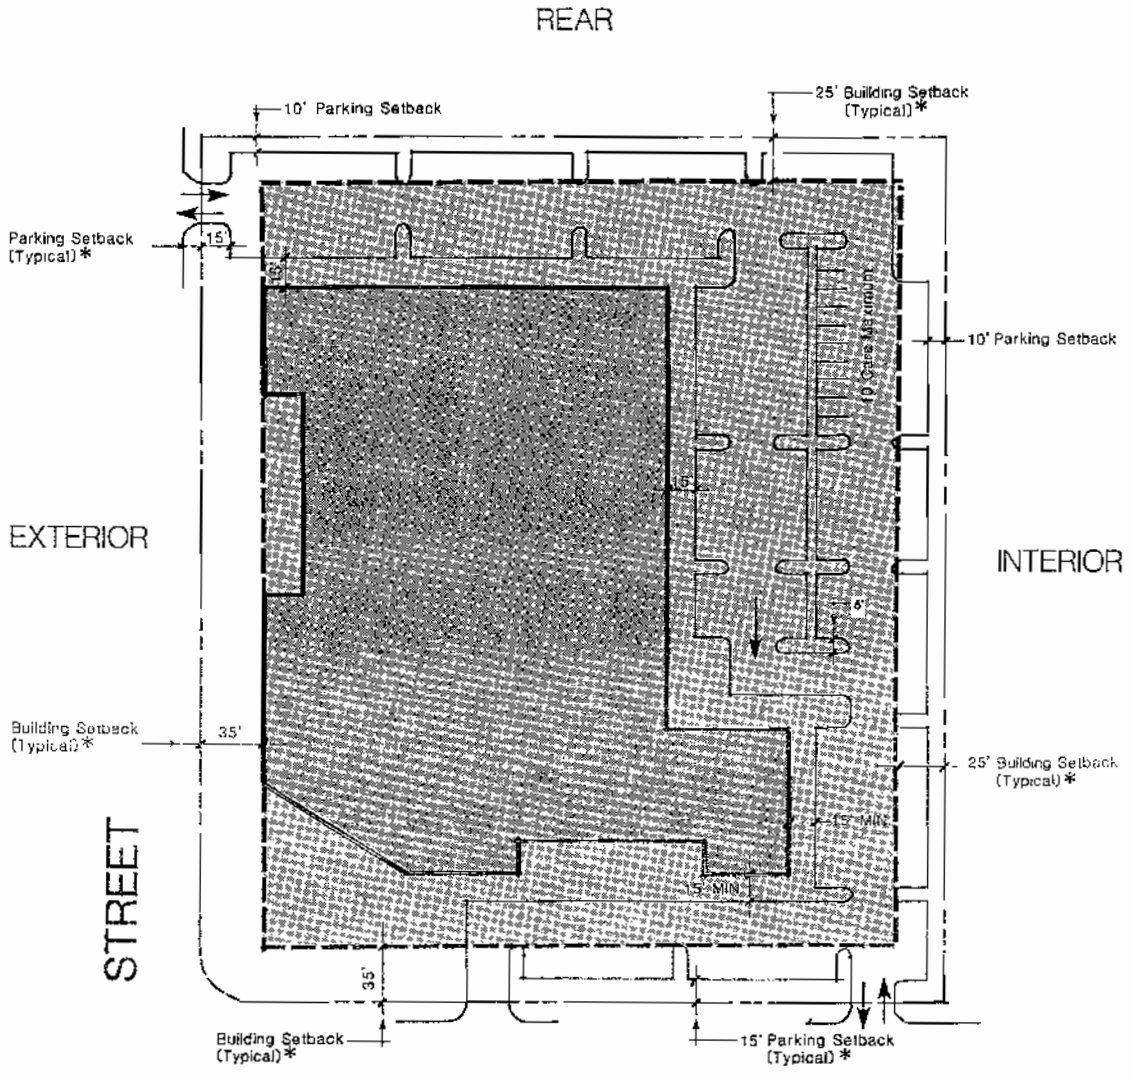
EXTERIOR BUILDING MATERIALS

- All building improvements, with the exception of trim and minor architectural features, shall be constructed of masonry, concrete, glass, or other material approved by California Commerce Center's Approving Agent (no precision block).
- All exterior walls shall be painted or suitably treated.

ROOFING AND ROOFTOP EQUIPMENT

- Opaque screening approved by California Commerce Center's Approving Agent, shall be provided to conceal all rooftop equipment.
- Unless roofing materials are a part of the design element (shingles, tile, etc.), the ridge line elevation shall not exceed the parapet elevation.
- All mechanical equipment on top of the roof shall be painted to blend with the building and roofing materials.

SIGNAGE



- All sings shall be subject to the provisions of the Master Signage Plan and will require the approval of California Commerce Center's Approving Agent and the City of Ontario, (refer to Section VII.A and Signage and Graphics Criteria, Exhibit 56).

SIGNAGE

All development proposals shall be consistent with the Ontario International Airport Land Use Compatibility Plan. Refer to the Ontario International Airport Land Use Compatibility Plan for additional criteria and policies that may limit the restriction of allowable land uses, allowable FAR, overall site design and building/structure heights.

Note: If this alternative ls implemented. development standards will be prepared during the "minor revision process", based on a more specific development design and prior lo submittal of a specific development plan. That which is provided above is a gene1ol outline for use in developing any future standards.

F. EXHIBIT 48

BUILDING SETBACK SUMMARY

	RAIL INDUSTRIAL	LIGHT INDUSTRIAL	OFFICE	COMMERCIAL/ FOOD/HOTEL
Jurupa Street, Commerce Parkway (from Airport Drive extending approx. 700' south of Jurupa) and Airport Drive (west of Milliken)				
Front	40'	40'	40'	40'
Exterior Side (Corner parcels)	40'	40'	40'	40'
Interior Side (One side only)	-0-	-0-	35'	35'
Interior Side (Other side)	35'	-0-	35'	35'
Rear	-0-	-0-	35'	35'
Milliken Avenue, Haven Avenue				
Front	45'	45'	45'	45'
Exterior Side (Corner parcels)	32'	32'	32'	32'
Interior Side (One side only)	-0-	-0-	35'	35'
Interior Side (Other side)	35'	-0-	35'	35'
Rear	-0-	-0-	35'	35'
Airport Drive (east of Milliken Avenue)				
Front	23'	23'	23'	23'
Exterior Side (Corner parcels	40'	40'	40'	40'
Interior Side (One side only)	-0-	-0-	35'	35'
Interior Side (Other side)	35'	-0-	35'	35'
Rear	-0-	-0-	35'	35'
All Other Streets				
Front	35'	35'	35'	35'
Exterior Side (Corner parcels)	35'	35'	35'	35'
Interior Side (One side only)	-0-	-0-	25'	25'
Interior Side (Other side)	35'	-0-	25'	25'
Rear	-0-	-0-	25'	25'

Notes:

1. All setbacks are measured from the property line.
2. All rear setbacks for rail served parcels shall be subject to final approval of California Commerce Center's Approving Agent based upon the final design standards and guidelines of the CC&R's.
3. Rear and interior side building setbacks shall be subject to the following requirements pursuant to section 506(b) of the California Uniform Building Code:
   (a) (i) Either maintain a minimum of 50 feet building setback when adjacent parcels are undeveloped; or
   (ii) Maintain an overall 50 feet building separation between the proposed building and existing buildings on adjacent parcels; or
   (iii) Maintain a minimum of 30 feet building setback when buildings on adjacent parcels are setback a minimum of 30 feet.
   (b) Any other Rear and interior side setbacks may be as indicated in the Specific Plan Standards so long as proposed buildings meet all other Uniform Building Code Standards.

F. EXHIBIT 49

PARKING SETBACK SUMMARY

	RAIL INDUSTRIAL	LIGHT INDUSTRIAL	OFFICE	COMMERCIAL/ FOOD HOTEL
Jurupa Street, Commerce Parkway (between Airport Drive and Peaschtree Street) and Airport Drive (west of Milliken Avenue)				
Front	20'	20'	20'	20'
Exterior Side (Corner Parcels)	20'	20'	20'	20'
Interior Sides	5'	5'	10'	10'

Exterior Side (Corner Parcels)	15'	15'	15'	15'
Interior Sides	5'	5'	10'	10'
Rear	-0-	-0-	10'	10'

Note: All setbacks are measured from the property line.

A. FEDERAL AVIATION ADMINISTRATION'S REGULATIONS ON CLEAR ZONES/BUILDING HEIGHTS

Because of the close proximity of the project to Ontario International Airport, building heights will be restricted as required under the Revised Part 77 of the Federal Aviation Administration (FAA) Regulations.

Refer to the Ontario International Airport Land Use Compatibility Plan for allowable building heights and FAA notification requirements.

H. SOUND ATTENUATION CRITERIA

The project's location, adjacent to the Ontario International Airport, the Ontario Freeway, and the mainlines of Southern Pacific and Union Pacific Railroads, requires the implementation of sound attenuation measures for interior spaces. Maximum interior sound level criteria have been established for each land use. Exhibit 52 illustrates the maximum permitted interior noise levels (measured in LEQ_{12}) for non-residential and residential construction (see Exhibit 53, Existing 1981 Noise Contours (CNEL) and Exhibit 54, CNELS for Airport Dual Runway).

EXHIBIT 52

MAXIMUM INTERIOR NOISE LEVELS, NON-RESIDENTIAL CONSTRUCTION

Noise Level Criteria for Hotel/Motel Construction

Noise levels during the hours from 7:00 a.m. to 7:00 p.m. which shall not be exceeded for the interior industrial/office/commercial spaces are as follows:

USE	SOUND LEVEL, LEQ_{12}
Private Offices	40-50 dBA
General Offices, Reception,	45-55
Typing, Clerical, Banks, Retail Stores	50-55
Other Uses and Areas for Manufacturing, Assembly Testing, etc	55-65

Where LEQ_{12} is the Energy Equivalent Sound Level during the hours 7:00 a.m. to 7:00 p.m.

I. CRITERIA FOR DEVELOPING ADJACENT TO FREEWAYS

The City of Ontario has established standards for regulating development adjacent to Mission Boulevard, the San Bernardino Freeway (1-10), the Pomona Freeway (SR 60), and the Ontario Freeway (1-15). These standards have been adopted by the Ontario Planning Commission, Resolution No. 2392, May 27, 1980, and shall apply to such development within the California Commerce Center's project.

1. BUILDING ORIENTATION

    a. All buildings shall face the highway, except where the highway is substantially elevated.

    b. The size, height, number, and type of on-premise signs shall be the minimum necessary for identification pursuant to the California Commerce Center's Master Signage Plan.

    c. Open storage of materials and equipment should be permitted only when incidental to the permitted use, provided that such storage area shall not face the highway, and shall be shown and approved on the site plan.

    d. Overhead doors, garages or loading zones shall be placed facing away from view of the highway.

    e. All mechanical equipment shall be screened from public view.

2. LANDSCAPING

    a. Not less than 20 feet of landscaping, measured from the public right-of-way, shall be provided and permanently maintained.

    b. Proposed development should be designed to preserve existing stands of trees wherever practicable.

I. AIRPORT RESTRICTIVE OVERLAYS

On April 19, 2011, the City Council of the City of Ontario approved and adopted the ONT ALUCP, establishing the Airport Influence Area for Ontario International Airport, which encompasses lands within parts of San Bernardino, Riverside, and Los Angeles Counties, and limits future land uses and development within the Airport Influence Area, as they relate to noise, safety, airspace protection, and overflight impacts of current and future airport activity.

Refer to the Ontario International Airport Land Use Compatibility Plan for additional criteria and policies that may limited to the restriction of allowable land uses, allowable FAR, overall site design and building/structure heights.

K. COMMUNITY FACILITIES - POLICE PROTECTION

Commercial developments within the project area may require the use of on-site security, and/or Ontario Police department facilities. If on-site security is required, the applicant will have the option of providing in-house security, or contracting with an outside security company. Whatever security system is chosen, it must meet with the approval of the Ontario Police Department pursuant to OMC 3-1601.

The use of physical security measures, i.e. CCTV, Card Access, Burglar and Robbery Alarms, as well as other electronic security measures, will be utilized as necessary to provide adequate surveillance of the site and security for persons and property at the site.

The projected fiscal impact to the Ontario Police Department may be mitigated by the payment of a one-time developer impact assessment fee according to a schedule of fees contained in a pending Development Assessment Fee Ordinance that is yet to be adopted by the Ontario City Council.

In addition to the payment of Impact Fees, the developer must also comply with all physical security requirements contained in the Ontario Security Code, OMC 4-11.01.

CALIFORNIA COMMERCE CENTER

AT ONTARIO

VII. ARCHITECTURAL/DESIGN CONCEPTS

VII. ARCHITECTURAL/DESIGN CONCEPTS

A. SIGNAGE AND GRAPHICS

A master program for signage and graphics has been developed for the California Commerce Center to ensure a high quality visual environment, project identity, and cohesiveness. The master program establishes overall general criteria for graphics and signage within the project area. California Commerce Center will have the authority to interpret these criteria for general conformance, in order to allow for creativity in architectural design (see Exhibit 56, Signage and Graphics Criteria).

1. DEFINITION OF SIGN TYPES AND RELATED TERMS

a. Entry Statements/Master Identification

Signs, graphics, and landscape treatments at perimeter access points to the project defining the entries to the development.

b. Freestanding Identification

Signs along streets and roadways which identify facilities, businesses, tenants, and addresses.

c. Building Identification

Signs mounted on the face(s) of buildings and which identify the building or the major building tenant.

d. Complex Identification

Signs which are freestanding and identify a multi-building development.

e. Tenant Identification

Signs mounted on the face(s) of buildings or which are freestanding and identify a single tenant within the building.

f. Building Street Address

Signs mounted on buildings designating the street address number.

g. Tenant Directories

Signs in commercial facilities which identify the location of individual tenants.

h. Directional and Regulatory Signs

Signs within the development and within individual projects which control and direct the circulation of vehicles and pedestrians.

i. Temporary Signs

Any sign, barrier, pennant, valance, or advertising display used for marketing purposes for a short period of time.

j. Sign Area

The area of a sign having an integral part of a building, wall, awning, canopy, marquee, or other part of a structure as its background shall be the area enclosed within the shortest line drawn to include all letters, designs, tubing, direct illumination sources, or other components of the sign, including all intervening spaces. The area of all other signs shall be the largest cross-sectional area measured to a line encompassing all portions of the sign, including the background and tubing, but excluding the supporting posts or poles without attached lighting. In determining the area of a sign having more than one face, only the area of one face shall be counted.

k. Halo Lit Letters

Opaque, fabricated metal letterform with internal luminous tubing, mounted a few inches off face of building. Illumination falls only on building surface immediately adjacent to letter, creating halo effect.

l. Interior Illuminated Letters

Fabricated letterform with internal luminous tubing and translucent acrylic face.

m. Post and Panel Sign

A post supports each end of a sign panel.

n. Flag Sign

Sign panel projects horizontally from a single pole.

o. Flush Left Layout

Typography begins at left margin, and any additional lines of typography are also flush with the first line at left margin.

p. Centered Layout

Each line of typography is centered horizontally within the sign panel

q. Integral Graphic Band

Constant horizontal band or fascia area of an architectural complex, where graphics must be placed.

2. GENERAL REQUIREMENTS

a. All owner/tenant identification signs shall conform to the guidelines of the Specific Signage Requirements Summary at the end of this section.

b. A sign program shall be submitted in conjunction with the submittal of a site plan and/or architectural plans.

c. All signing shall be of materials compatible with exterior building colors, materials and finishes, and be of a high quality of fabrication.

d. No signing will be permitted which does not directly relate to the primary service or function of the given owner/tenant activity.

e. All owner(s)/tenant(s) shall be responsible for the proper maintenance of all their signs.

On notice by the City of Ontario or California Commerce Center's Approving Agent, an owner/tenant will be required to restore or repair any signing which is not properly maintained.

f. Signs are to be free of all labels and fabricator's advertising, except for those required by code.

g. All electrical service to any sign shall be fully concealed, and shall be on the owner/tenant's meter.

h. All signs will conform to appropriate building and electrical codes, and bear the U.L. label if illuminated. The owner/tenant and contractor shall be responsible for obtaining any and all permits required.

i. No sign is to be located higher than the second story, except for commercial or office buildings, (including hotels and restaurants) which are three (3) stories or more, and which may have a maximum of two (2) building identification signs above the top story and below the parapet per the requirements of Exhibits 56 and 56A.

j. Owner/tenant will be responsible for the design, fabrication and installation of individual owner/tenant signs.

k. Each individual owner/tenant shall submit three (3) sets of professionally executed sign drawings for approval by California Commerce Center's Approving Agent and the City of Ontario. These drawings shall be of a scale of 1" = 1' or larger, showing sign locations, size, layout, design, colors, letter styles, and materials.

l. All permits and fee requirements for signs shall be obtained from the City of Ontario and paid for by the owner/tenant prior to installation.

m. No sign shall have visible moving parts or simulate movement by means of fluttering, rotating, or reflecting devices.

n. No sign shall have flashing, blinking or moving lights, or any otherilluminating device which has changing light intensity, brightness, or color, except for parts designed to give public service information such as time, date, temperature, or similar information.

o. All building-mounted signs shall be constructed so as not to have exposed wiring, raceways, ballasts, conduit, and transformers.

p. Freestanding monolith signs shall be incorporated into landscaping berms to minimize visual mass.

q. Metal signs include aluminum or brass signs.

r. All freestanding signs shall be integrated with landscaping and grading.

3. SINGLE BUILDING OCCUPANT IDENTIFICATION: Warehousing, manufacturing, research and development, and commercial signage

a. Street Identification

Within each property there are a number of requirements for signs. The primary need is owner/tenant or facility identification.

(1) The freestanding monolith will be placed adjacent to the main entry to the property.

(2) The sign will be positioned perpendicular or parallel to the street and set back behind the property line, per the requirements of Exhibit 56.

(3) The double-faced sign will be integrated with the landscape.

(4) Design for the signs will consist of a park standard base and a customized cap to accommodate the message content. The caps may be constructed of a variety of materials to be consistent with the architecture. These materials may include concrete, stucco, brushed or polished metal, anodized aluminum, ceramic tile, granite, wood, or fiberglass.

(5) Graphics on the sign will consist of the tenant name and/or logo, address and street name.

(6) Typography may vary according to the user's identity.

(7) The sign shall be indirectly illuminated.

b. Wall-Mounted Sign

(1) The business name and/or logo may be mounted on the face of the building in an architecturally appropriate position, per requirements of Exhibit 56. In addition, building identification signage is permitted for building of three (3) stories or more, per the requirements of (2i) above and Exhibits 56 and 56A.

(2) These graphics shall be aluminum or metal plate elements individually mounted.

(3) Individual letters or logos may be interiorly illuminated; metal "can" signs will not be allowed. All conduits, raceways and wiring shall be subsurface; no clips or support brackets will be visible from the frontal elevation.

(4) Scale and proportion of graphics shall be in consonance with the architecture.

(5) All design and layouts shall be reviewed and approved by California Commerce Center's Approving Agent through site plan review prior to implementation.

4. MULTIPLE TENANT OFFICE, INDUSTRIAL, OR COMMERCIAL BUILDING OR MULTIPLE BUILDING COMPLEX SIGNAGE

For each multiple tenant building or multiple building complex, a customized signage program will be implemented to identify the individual businesses at their respective entries.

The criteria for these systems will be based on the architectural style and detailing of the building, and will include form, size, and finish of the elements and their relationship to entries, fenestration, structural members, and materials. Sign programs will be reviewed and approved by California Commerce Center's Approving Agent prior to submittal to the City for approval.

Directional and regulatory signs within a property will conform to the standard sign system for the entire California Commerce Center. These will be post and panel or flag signs. Directional signs will be of a modular nature to allow for additions or deletions.

5. SERVICE STATIONS

Sign Criteria apply to all service stations.

a. Self Service

Self service stations are allowed two canopy-mounted signs. Price signs should be either column-mounted (on the canopy support) or pump-mounted. Promotional graphics are not permitted.

b. Full service

Price signs should either be mounted on the column of the canopy or pump-mounted, as should "Full Service/Self Service" signs.

Outside displays of merchandise are discouraged, i.e., racks of automobile tires. When such displays are used; however, they must be kept within the canopy area.

Promotional graphics are not permitted.

Glass areas on store fronts should remain free of graphics. Only the hours of operation and other pertinent information are allowed. The amount and size of copy should be unobtrusive, and constructed of white die-cut vinyl letters with a four-inch maximum height.

6. DIRECTIONAL AND REGULATORY SIGNS

Directional signs provide functional directions, such as "shipping and receiving". Regulatory signs control vehicular movement, such as "handicapped parking only". These signs will be post and panel and flag type signs constructed of aluminum or fiberglass. Size, design, layout, and color shall conform to project standard (to be submitted with overall sign design). Copy will be as succinct as needed to convey the message. Signs will be located as utility and safety dictate, with placement approved by California Commerce Center's Approving Agent. There shall be no more than two signs per driveway.

a. Traffic Control Signage

All street signage shall conform to City of Ontario's standards.

7. TEMPORARY SIGNS

a. Free-standing Signs

The developer of each facility may display information on a temporary free-standing sign whose purpose is to disseminate information pertinent to a site and its stage of development. The sign is to be designed to conform to the California Commerce Center standards and submitted for approval to California Commerce Center's Approving Agent prior to its installation on the site. No temporary promotional signs will be allowed on the premises of the adjoining public street rights-of-way.

A sign may be constructed on a site any time after the site has been purchased. Information can be added or the sign can be exchanged for another to indicate the advent of construction, or to recruit employees, or to identify the leasing agent. However, each revision or sign replacement must conform to the guideline's criteria. A sign that is to be replaced with another must be removed before the other sign can be installed. Temporary signs must be removed from the site when the initial leasing program is ninety-five percent (95%) complete.

- Form

  Free-standing monolith with panels which meet the grade.

- Scale

  Rectangular ratio of height to width shall be 2:1. Total area not to exceed ninety-eight square feet.

- Materials

  Designed to last the length of its intended use without significant fading, peeling, blistering, warping, cracking, rotting, or delamination. California Commerce Center reserves the right without liability to cause removal of any sign deemed to be in violation of the provision by virtue of deterioration or damage.

- Duration

  Temporary signs shall remain in place for no more than twelve (12) months. This period may be extended upon approval by California Commerce Center's Approving Agent and the City of Ontario.

- Security Deposit

  A security deposit fee of five hundred ($500) dollars shall be posted with the City of Ontario to guarantee removal of the temporary sign(s). Failure to remove sign(s) after specified duration will result in forfeiture of security deposit.

b. Wall Signs

Banners, pennants, flags, and any other advertising devices, except floodlights, may be placed on an occupant's property for the purpose of announcing the opening of a new business, subject to the following requirements:

- The total area of all such signs or advertising devices shall not exceed the area of permanent signs for the use permitted by these sign criteria (see Exhibit 56, Signage and Graphic Criteria).

  No such device shall be located in a manner not permitted for permanent signs.

- No such device shall pose a hazard to the safe movement of traffic and shall not block the visibility of permanent signs on adjacent properties.

- The temporary signs may remain in place for a period not to exceed thirty (30) days after the date of installation of the sign; or until a permanent sign is installed, whichever occurs first.

- Prior to installation of the temporary sign, the proponent shall obtain approval from California Commerce Center's Approving Agent.

SIGNAGE and GRAPHICS CRITERIA

LAND USE	SIGN TYPE	NUMBER OF SIGNS	PLACEMENT AND LOCATION	SIGN AREA	LETTER SIZE
Warehousing, Manufacturing, Research and Development (Single Building)	-Freestanding	1 per parcel per street frontage	Perpendicular to street, 20' from driveway, 15' from property line	60 sq. ft. Max.	NA
	Tenant Identification -Wall	1 per occupant	At primary entrance	55 sq. ft. plus 2 sq. ft. for each 5' of bldg. setback beyond required setback: maximum 100 sq. ft. of sign area	36" Max. Height
Industrial/Business Park; Multi-Tenant Complex *Note: A sign program is required.	Complex Identification -Freestanding	1 per complex per street frontage	Perpendicular to street, min. 20' from driveway, min. 15' from curb	60 sq. ft. Max.	NA
	Occupant Identification; -Wall	1 per occupant	At primary entrance	40 sq. ft. Max.	20" Max. Height
Commercial and Office Buildings Including Restaurants, Retail, and Hotels *Note: A sign program is required for a multi-building complex.	-Freestanding	1 per building or 1 per complex if more than 1 building	Perpendicular to street: min. 20' from driveways, min. 15' from property line	60 sq. ft. Max.	NA
	Building Identification -Wall (for buildings 3 or more stories)	Max. 2 (no more than 1 per building face)	Above top story and below parapet	Refer to table 56A	Refer to table 56A
	Tenant Identification -Wall	1 per tenant	1 at tenant entrance	1 sq. ft. per width of building elevation: not to exceed 55 sq. ft.	26" (36" for main showroom of Auto Dealerships)
Service station	Freestanding Identification	1 (with possibility for 2 if station fronts 2 streets)	Adjacent to entry; perpendicular to street	60 sq. ft.	NA

EXHIBIT 56 (Continued)

SIGNAGE and GRAPHICS CRITERIA

LAND USE	SIGN HEIGHT	FORM AND MATERIALS	MESSAGE AND LAYOUT	COLOR	ILLUMINATION
Warehousing, Manufacturing, Research and Development (Single Building)	54" Height, Height to length ratio not to exceed 1:3	Must relate to architectural style of project	May be 2 sided name of owner/tenant or building & street address, flush left or centered layout	Must relate to architectural style	Ground lit
	NA	Individual letters; metal, fiberglass or acrylic	Owner/tenant or business name and/or logo	Must relate to architectural style	Halo lit letters or interiorly illuminated
Industrial/Business Park; Multi-Tenant Complex * Note: A sign program is required.	54" Height. Height to length ratio not to exceed 1:3	Must relate to architectural style	May be 2 sided name of owner/tenant or building & street address, centered layout	Must relate to architectural style	Ground lit
	NA	Individual letters; metal fiberglass and acrylic	Tenant or business name and/or logo	Must relate to architectural style	Ambient

B. TRANSPORTATION MANAGEMENT

One of the objectives of the California Commerce Center is to create an industrial/office complex that minimizes, to the extent possible, the number of vehicle miles traveled (VMT) and thus reduces air pollutant emissions and minimizes traffic congestion. Project-wide design measures have been developed in order to achieve this objective.

Land uses have been organized in such a way as to minimize traffic within the project. Significant trip generators (office, commercial, and hotel) have been located near major streets to avoid congestion of internal industrial streets. Rail-served parcels are located with maximum access to existing rail facilities and freeway intersections to minimize freight-related highway traffic. Service commercial and food parks have been incorporated into the complex, distributed throughout the project to service local employees and to reduce midday vehicular trips.

The vehicular circulation system for the project has also been designed to minimize traffic congestion. Streets and intersections within the project have been designed to accommodate peak hour traffic levels, and have taken into account airport-related and adjacent project traffic that will use the site's major arterials as through routes. Major intersections have been spaced to facilitate traffic flow. Internal streets have been designed to allow for on-street parking without restricting traffic.

Major arterials have also been designed to accommodate bicycle lanes, to encourage alternative modes of transportation. Food parks will have pedestrian sidewalks, encouraging local employees to walk to the food parks for lunch.

The designation of two potential sites for transit rail terminals, should rapid transit facilities become operational on the Southern Pacific and Union Pacific rail lines, provides an opportunity for the project to serve as a major public transit distribution center. These terminals could serve as transfer points from regional mass transit systems to local systems such as buses and van pools. Park-and-ride facilities would most likely be provided to service persons travelling to and from Los Angeles and San Bernardino, reducing regional VMT.

In order to continue this effort on a site specific basis, California Commerce Center shall encourage applicants to provide on-site measures that will reduce vehicle miles travelled. These measures include the following:

- distribute information to employees about regional and local public transit facilities
- provide for transportation points including bus stops, turnouts, bus parking areas, and passenger loading areas and shelters if appropriate
- encourage employee van pools and car pools
- provide preferential parking for cars participating in car pools
- provide preferential parking spaces for compact cars
- provide facilities for securing and storing small vehicles, such as bicycles, motor scooters, and motorcycles

- establish staggered and/or flexible work hours where appropriate
- where appropriate, provide food and office supply delivery to industrial/office tenants (applies to service commercial and food parks)

1. TRAFFIC MONITORING PROGRAM

The purpose of this study is to identify (using projected traffic volumes) that period in time when street improvements will be required. This may or may not correspond to construction phases. It shall also identify which intersections will require signalization. The signals will be constructed with the phase creating the demand, even if construction is beyond the limits of the phase under construction. It shall be the responsibility of the developer of each phase to construct all the improvements required. Should any phase not be developed uniformly (i.e., sub-phases created), the construction requirements of the master phase shall either be constructed in advance of need or by a funding program approved by the City on either a traffic generation or acreage basis, so the improvements required can be constructed at their time of need. Should any deviation from the proposed land use, traffic generation, or phasing program be changed, the developer(s) shall re-evaluate the above items and obtain approval from the City of Ontario. Traffic monitoring forms shall be completed and submitted in connection with each site plan submittal.

C.C.C. shall dedicate the required rights-of-way for the Haven Avenue at S.P.R.R. Grade Separation, as well as provide their proportionate share of construction funds at the time the railroad agreements have be obtained by the City. C.C.C. shall be solely responsible for the additional widening of any bridges required to provide rail service to their property.

C. LIGHTING

1. PUBLIC LIGHTING

Public lighting refers primarily to street lights. Street lights shall conform, both in type and location, to the standards of the City of Ontario at the time of installation (see Exhibit 57, Street Light Standard, City of Ontario Standard Drawing).

2. SITE LIGHTING

Site lighting refers to illumination of on-site areas for purposes of safety, security, and nighttime ambience. This includes lighting for parking areas, pedestrian walkways, graphics and signage, architectural and landscape features, shipping and loading areas, and any additional exterior areas.

The concept for on-site lighting is intended to be low-key. Overall high levels of illumination are not required; intensity should be no greater than required for automobile and pedestrian safety. Within these parameters, light sources should convey a sense of safety, direction, and movement (see Exhibit 58, Site Lighting).

On each site, all lighting fixtures shall be from the same family of fixtures with respect to design, materials, color of fixture, and color of light. Lighting sources shall be shielded, diffused, or indirect to avoid glare to pedestrians and motorists. Lighting fixtures shall be selected and located to confine the area of illumination to within the site boundaries. To minimize the number of light standards and overhead clutter, overflow light from inside the building should be wall-mounted.

Along pedestrian movement corridors, the use of low mounted fixtures (bollard height) which reinforce the pedestrian scale and which reduce visual glare are encouraged. Parking areas should be lit with shielded, lower intensity fixtures. Pedestrian walkway lighting shall not exceed an overall height of sixteen (16') feet. Steps, ramps, and seatwalls should be illuminated, wherever possible, with built-in fixtures. The shields for security lighting are to be painted to match the surface to which the fixture is attached. These fixtures are not to project above the fascia or roof lines of the building. Exterior lights should be used to accent entrances and special features. All illumination elements shall have controls to allow their selective use as an energy conservation measure.

SITE LIGHTING

VIII. APPROVAL PROCESS

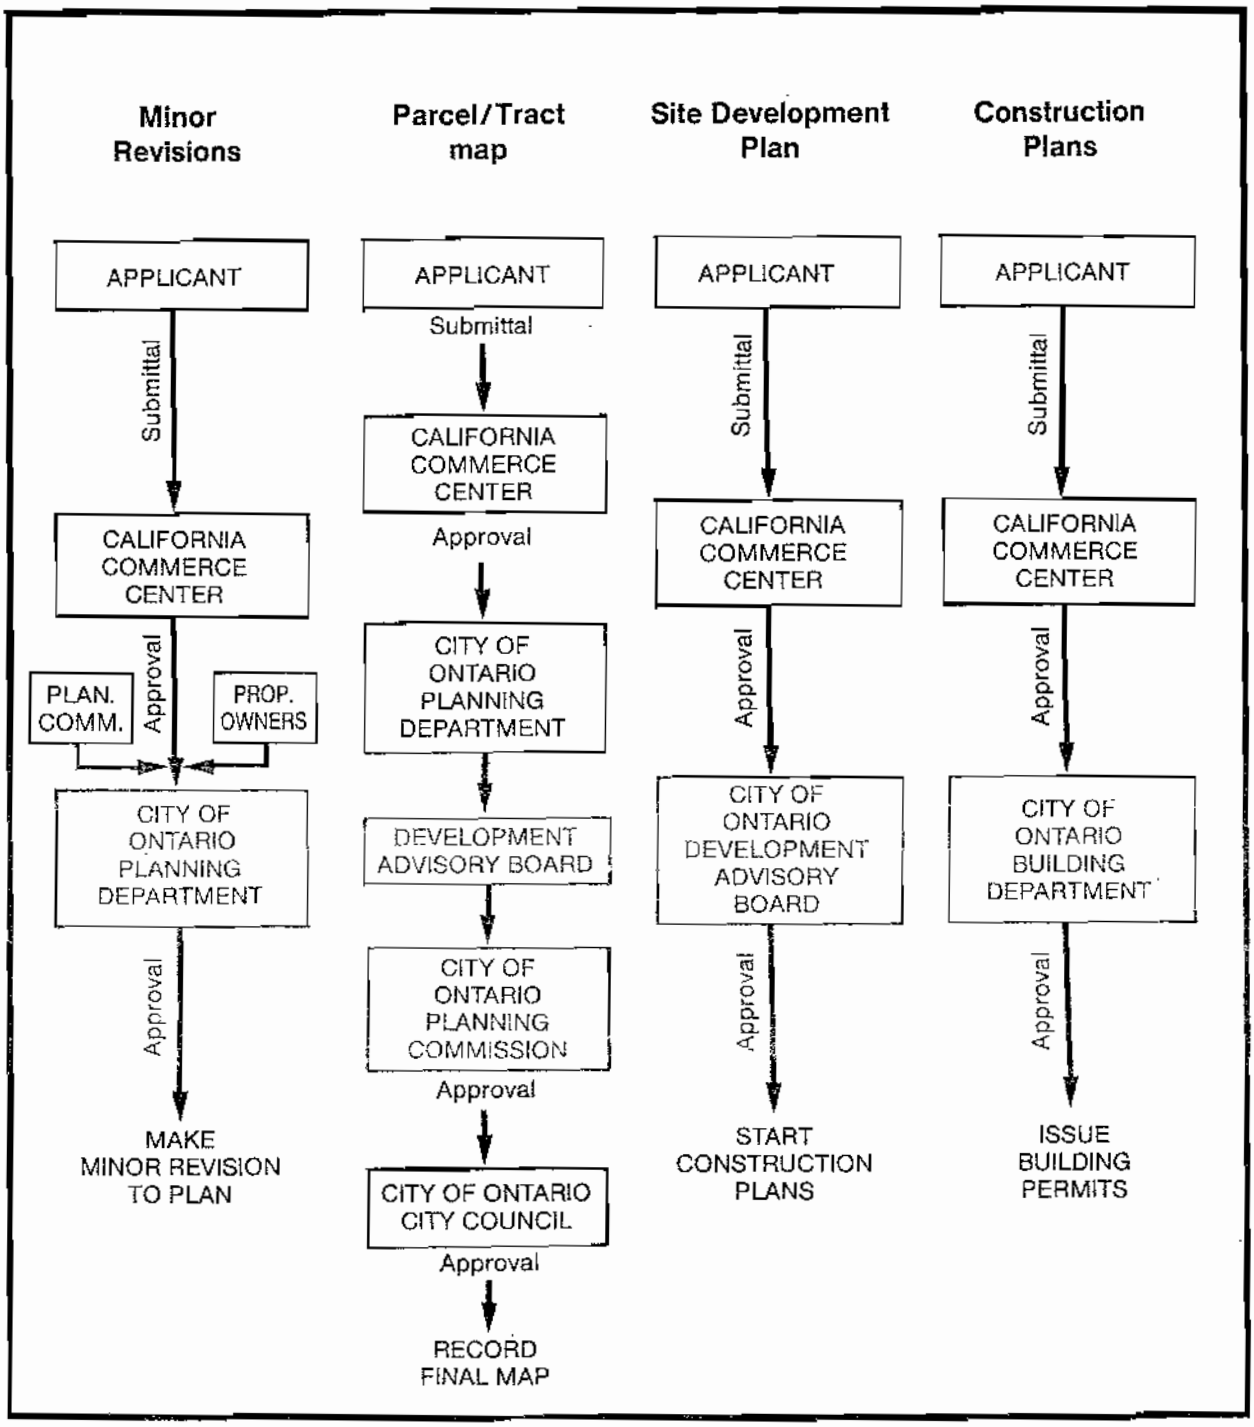
VIII. APPROVAL PROCESS

A. REQUIRED APPROVALS

1. CALIFORNIA COMMERCE CENTER'S SUBMITTAL PACKAGES

Any proposed resubdivision of any parcel or the construction of any improvement within the California Commerce Center's development must be approved by California Commerce Center's Approving Agent. The Approving Agent shall not unreasonably withhold its approval of any such submittal. Subject to the provisions of California Commerce Center's Covenants Conditions and Restrictions (see Appendix), the Approving Agent shall be conclusively deemed to have given approval unless express written notice, specifying in reasonable detail items that are disapproved, is given within forty-five (45) days after receiving submittal. The Approving Agent shall endorse approval on one set of submittal documents and return same to the applicant.

2. DEVELOPMENT SITE PLANS



Site development plans shall be subject to review and approval by the City of Ontario DAB. The Development Plan Review Application Form, City of Ontario 84-4 (4/84) is included in the Appendix, for reference. Consult the City of Ontario Planning Department for DAB Scheduling (see Exhibit 59, Plan Submittal Guideline Flow Chart).

3. ENVIRONMENTAL EVALUATION - NOTICE OF INTENT

An Environmental Evaluation - Notice of Intent is required by the City of Ontario with the submittal of any preliminary building or site plans. Applicants filing for this should refer to the Final Environmental Impact Report No. 81-4, prepared for this project, and the mitigation measures contained therein. The City of Ontario's planning staff reviews all Environmental Evaluations prior to the DAB meeting on development site plans.

EXHIBIT 59

PLAN SUBMITTAL GUIDELINE
FLOW CHART

B. ENVIRONMENTAL MITIGATION MEASURES

An environmental impact report (Final Environmental Impact Report No. 81-4) has been prepared for this project. Listed below are the final mitigation measures that are a part of that document. Many of these mitigation measures have been directly addressed through the Specific Plan; others will be addressed through the site plan approval process. The following illustrates how the Specific Plan has addressed these measures, and which measures will be addressed at site plan approval. Developers submitting plans for Development Advisory Board site plan approval should insure that these mitigations are addressed through their building and construction processes.

Mitigation Measures No. 1 - 6

1. Drilling apparatus should be equipped with water or chemical dust control systems.

2. Land areas to be cleared and exposed should be kept at a minimum until field construction is scheduled to begin. All areas that are cleared or graded where construction is not scheduled to begin immediately shall be stabilized by hydroseeding or other means.

3. Water sprinkler trucks and chemical dust control should be used on all temporary roads.

4. Wind erosion measures, such as the following, should be incorporated during construction. A combination of any or all of these measures may be utilized.

   a. The application of mulches.

   b. The application of tackifiers.

   c. Clearing and developing small acreages at a time.

   d. The establishment of windbreaks for long term protection and fuel efficiency. This will be established project-wide through the planting of street trees.

   e. Seed disturbed areas with one of the following mixtures and irrigate:

Seed	Broadcast Rate
Biando Brome	18 lb./acre
Rose Clover	12 lb./acre
California Poppy	2 lb./acre
Buggs Barley	216 lb./acre
Wimmera 62 Ryegrass	27 lb./acre

   f. The application of gravel mulches on exposed areas.

   g. The use of asphalt emulsifiers.

h. The use of oil emulsifiers.

i. Provide sprinklers or other forms of water application as required.

5. Vacuum-equipped sandblasting systems should be used.

6. Concrete and asphalt patching operations should be equipped with dust collectors.

Measures No. 1 through No. 6 are applicable to the construction process. These measures shall be reviewed during the City of Ontario's site plan and Building Permit approval process. In addition, California Commerce Center shall require, through its CC&R's, that all construction within the Specific Plan area conform with applicable dust abatement requirements.

Measure No. 4.d., the establishment of windbreaks for long-term protection and fuel efficiency, is addressed in the Specific Plan. Street trees shall be planted project-wide as established in Section V.G.1., Component Plans; Landscape Concept; Streetscape.

Mitigation Measure No. 7

7. Extensive landscaping of the site shall be provided.

The Specific Plan establishes criteria and standards for landscaping streets and on-site areas within the project site. These areas include streetscape, building and parking setbacks, parking areas, buffers, and areas directly adjacent to buildings (see Section V.G.1, 2, 3, and 4, Component Plans; Landscape Concept; Streetscape; Buffer Planting; Intersections and On-Site Landscaping).

Mitigation Measure No. 8

8. Establish a transportation management plan, in coordination to the extent possible with SANBAG, with provisions for the following:

a. Extensive bus services and local transit systems.

b. Reduce fares or other inducements for off-peak transit patronage.

c. Provisions of facilities for the securing and storage of small vehicles such as bicycles, motor scooters, and motorcycles.

d. Construction of additional amenities for transit patrons such as bus shelters, public telephones at bus stops, transit schedules at all transit stops, etc.

e. Companies locating in the project area shall be encouraged to allow flexible working hours.

f. Encouragement of vanpool services and incentives for carpooling such as special carpool lanes, parking fee reductions, and provision of carpool park-and-ride lots to alleviate regional transportation congestion.

The Specific Plan established a transportation management plan to minimize, to the extent possible, the number of vehicle miles travelled, and thus reduce air pollutant emissions and minimize traffic congestion. This program will be coordinated, to the extent possible, with SANBAG (see Section VII.B., Architectural Design Concepts; Transportation Management).

Mitigation Measure No. 9

9. Noise attenuation shall be implemented in construction of buildings to reduce the impact of noise levels from the existing runway configurations.

Section VI.F. (Development Standards and Criteria; Sound Attenuation Criteria) establishes maximum interior sound levels permitted for each land use. Specific noise attenuation measures typically incorporated into building construction will be reviewed as part of the site plan approval process. As the site is within the 65 CNEL noise print of the O.I.A., per Section 9-3.2425 of O.M.C., an Avigation Agreement is required prior to permit issuance. All block walls require separate building permits and approval prior to construction.

Mitigation Measure No. 10

10. In an effort to encourage the extension of the northerly runway (25R) east of the existing Ontario International Airport boundary, the Project Sponsor (California Commerce Center) has offered to dedicate approximately 30 acres of land to the City of Ontario for runway extension purposes.

Mitigation Measure No. 11

11. As specific land uses and facilities become more clearly identified, the Los Angles Department of Airports should be consulted to minimize the impact of project-related aircraft operations on the capacity of existing future airfield operations.

As site plans for individual developments are submitted to Development Advisory Board for approval, the City of Ontario and the developer should consult the Los Angeles Department of Airports.

Mitigation Measure No. 12

12. In the event that cultural resources are encountered during the course of construction, a qualified archaeologist shall be consulted.

This will be addressed at either parcel map or site plan review.

Mitigation Measures No. 13 and 14

13. Landscaping of the project area shall be encouraged and, once established, well maintained. Plant species should include naturalized and well adapted plant types. Replacement vegetation should be emphasized where possible and appropriate. This will provide possible food and shelter resources capable of supporting some of the bird, mammal, and reptile species currently found in the area.

14. Low energy, drought-tolerant, and smog-tolerant planting shall be used in order to conserve water and energy, and to ensure landscaping that will continue to do well

The Specific Plan outlines standards and criteria for landscaping the project area. A recommended plant palette has been provided which includes a variety of naturalized and drought-tolerant plant material. Plants have also been recommended that have adapted well to the climatic conditions of this area (see Section V.G., Component Plans; Landscape Concept).

Mitigation Measures No. 15 - 20

15. Precautions shall be taken during construction to reduce the possibility of new termite infestations. Roots, stumps, vines, and other wood debris should be removed prior to construction. Burying of this material could in itself result in infestation. Finish grade around buildings should be gently sloped so that surface water will drain away from buildings, preventing moisture build-up.

16. Tinted glass, solar reflective glass, and insulated glass shall be used, where appropriate, to reduce heating and cooling loads. North-south orientation of buildings will also be encouraged where feasible to allow for passive solar conservation measures.

17. Thermal insulation that meets the standards established by the State of California and/or the Department of Building and Safety shall be used in walls and ceilings where heating or air conditioning is required.

18. Use fluorescent lighting rather than incandescent lighting wherever possible.

19. Public area lighting, both interior and exterior, shall be time-controlled and limited to that necessary for safety and protection.

20. Use lighting switches and multi-switch provisions for control by occupants and building personnel to permit optimum energy use.

Mitigation Measures No. 15 through No. 20 are building and site specific, and should be addressed by the Development Advisory Board as part of site plan approval and through the City of Ontario Building Permit process.

Mitigation Measure No. 21

21. Enforce maximum speed limits and minimize entry points for maximum vehicular efficiency.

As the project site develops, the City of Ontario should enforce maximum speed limits. The number of entry points into individual parcels will be reviewed as part of the site plan approval.

Mitigation Measure No. 22

22. A sufficient number of public transportation stops shall be provided where appropriate to encourage use of public transportation as and when determined by the City of Ontario in conjunction with the affected agencies.

Transportation stops shall be provided as appropriate during the development of the project. In addition, to encourage future use of commuter rail lines, the Specific Plan provides two potential sites for commuter rail terminals (see Section V.C.6., Component Plans, Circulation and Access; Public Transit System).

Mitigation Measure No. 23

23. Carpools shall be encouraged.

As part of the Development Advisory Board site plan approval, individual developers should be encouraged to implement carpooling as appropriate.

Mitigation Measure No. 24

24. Major streets within the project site should be designed to allow for bicycle lanes to provide for an alternative means of transportation.

Major internal streets have been designed to accommodate bicycle lanes (see Section V.C., Component Plans; Circulation and Access).

Mitigation Measure No. 25

25. Reduce trip lengths and ultimate vehicle miles travelled by locating shopping and support facilities within convenient distances from other uses.

The Specific Plan has located food parks and retail/service facilities within walking distance of many of the industrial/office uses in order to reduce automobile travel (see Section V.A.3., Component Plans; Land Use Concept, Commercial/Food/Hotel).

Mitigation Measure No. 26

26. It is the State's policy to conserve water. To encourage water conservation and to prevent flood damage, the following measures are recommended:

Required by law

a. Low-flush toilets (Health and Safety Code Section 17921.3).

b. Low-flow showers and faucets (California Administrative Code, Title 24, Part 6, Article 1, T20-1405F).

c. Insulation of hot water lines in water recirculating systems (California Energy Commission Regulations).

Recommended to be implemented where applicable

Interior:

a. Supply line pressure: recommend water pressure greater than 50 pounds per square inch (psi) be reduced to 50 psi or less by means of a pressure-reducing valve.

b. Flush valve operated water closets: recommend 3 gallons per flush.

c. Drinking fountains: recommend equipped with self-closing valves.

d. Pipe insulation: recommend all hot water lines in dwelling be insulated.

e. Hotel rooms: recommend posting conservation reminders in rooms and rest rooms*.

f. Laundry facilities: recommend use of water-conserving models of washers.

g. Restaurants: recommend use of water-conserving models of dishwashers or retrofitting spray emitters. Recommend serving drinking water upon request only.*

Exterior:

a. Landscape with low water-consuming plants wherever feasible.

b. Minimize use of lawn by limiting it to lawn-dependent uses, such as playing fields.

c. Use mulch extensively in all landscaped areas. Mulch applied on top of soil will improve the water-holding capacity of the soil by reducing evaporation and soil compaction.

d. Preserve and protect existing trees and shrubs. Established plants are often adapted to low water conditions, and their use saves water needed to establish replacement vegetation.

e. Install efficient irrigation systems which minimize runoff and evaporation, and maximize the water which will reach the plant roots. Drip irrigation, soil moisture sensors, and automatic irrigation systems are a few methods of increasing irrigation efficiency.

f. Use pervious paving material whenever feasible to reduce surface water runoff and aid in ground water recharge.

g. Grading of slopes should minimize surface water runoff.

h. Investigate the feasibility of utilizing reclaimed wastewater, stored rainwater, or household gray water for irrigation.

i. Encourage cluster development which can reduce the amount of land being converted to urban use. This will reduce the amount of impervious paving created, and thereby aid in ground water recharge.

* The Department of Water Resources or local water district may aid in developing these materials.

j. Preserving existing natural drainage areas encourages the incorporation of natural drainage systems in new developments. This would aid in ground water recharge.

k. Flood plains and aquifer recharge areas which are the best sites for ground water recharge should be preserved as open space.

Recommendations for Flood Damage Prevention

In flood-prone areas, flood damage prevention measures required to protect a proposed development should be based on the following guidelines:

a. All building structures should be protected against a 100-year flood.

b. At least one route of ingress and egress to the development should remain open during a 100-year flood.

c. The slope and foundation designs for all structures should be based on detailed soils and engineering studies, especially for hillside developments.

d. Revegetation of the slopes should be done as soon as possible.

e. The potential damage to the proposed development by mudflow should be assessed and mitigated as required.

f. Grading should be limited to dry months, when possible, to minimize problems associated with sediment transport during construction.

The water conservation and flood damage Mitigation Measures outlined in Mitigation Measure No. 26 that are required by law and those recommended to be implemented are primarily addressed through the building process. These measures will be reviewed at either site plan review or prior to issuing Building or Grading Permits.

In addition, the Specific Plan provides for a Grading Master Plan that directs runoff away from buildings and into drainage facilities located within streets.

Any temporary drainage basin installed on-site will be designed to meet the requirements of the California Regional Water Quality Control Board and the Ontario City Engineer.

Mitigation Measure No. 27

27. The project Sponsor, California Commerce Center, shall agree to continue their participation in the Day/Etiwanda Creek Study to ensure its successful completion. Prior to actual completion of the construction of the Day/Etiwanda Creek system, California Commerce Center, shall agree, if required as a condition of the Bill Mann Study, to excavate additional capacity in the Wineville Basin to accommodate future increased drainage from their development. Further, in the event that an overall City or County program is formed to excavate the basins, California Commerce Center, shall agree to contribute their proportionate share toward the cost of such an excavation program. Furthermore, California Commerce Center shall agree, if required by the City to contribute their proportionate and equitable share towards the cost of construction of the Day/Etiwanda Creek.

System channel improvements and associated expenses, pursuant to the City of Ontario's responsibilities to complete the Day/Etiwanda system.

Mitigation Measures No. 28 - 30

28. As part of a required technical appendix, C.C.C. shall develop a Comprehensive Master Plan of drainage for the watershed area of Lower Deer Creek, along with a Master Plan for water conservation of the Specific Plan area. The Drainage Master Plan shall include, but not be limited to, hydrology, sizing of pipes and channels, cost estimates, and property owners. These Master Plans of drainage and water conservation shall be subject to regulatory agency approvals. Refer to City Engineer's letter dated March 31, 1983 for improvement requirements to Lower Deer Creek. Prior to commencing construction of the Specific Plan area west of Milliken Avenue, C.C.C. shall construct the Master Planned storm drain facilities from the Specific Plan area to Lower Deer Creek (including right-of-way acquisition). Master Planned culverts under Airport Drive adjacent to this Specific Plan shall also be constructed with the improvement of Airport Drive.

29. Develop a Master Plan of storm drains for the project area east of Ontario Freeway. This plan will provide for drainage southward into the Wineville Basin.

30. Continue to actively participate in the ongoing efforts of the Day/Etiwanda/San Sevine Drainage Area Study Program to insure the design, funding, and construction of the ultimate Day/Etiwanda/San Sevine Drainage Improvements.

The Specific Plan provides for a Master Plan of storm drains for the areas east of Milliken Avenue, west of Milliken Avenue and east of Ontario Freeway. See Section V.D.2. (Component Plans, Infrastructure; Storm Drain System). In addition, California Commerce Center will continue to participate in the ongoing efforts of the Day/Etiwanda/San Sevine Drainage Area Study Program.

Mitigation Measure No. 31

31. For visual and aesthetic purposes, any uses other than rail industrial that are adjacent to a railroad, freeway, or the landfill site shall be screened by landscaping.

Section VI.G. of the Specific Plan, Development Standards and Criteria, Criteria for Developing Adjacent to Freeways, establishes criteria for landscaping areas adjacent to freeways. In addition, the development standards and criteria for each land use establish minimum landscape requirements. Site plans should be reviewed for their conformance to these landscape standards.

31.A. Guidelines of the City Public Services Department will also be followed for landscaping and irrigation. These include:

- All medians shall be 50% landscape/50% hardscape.
- All landscape and irrigation drawings shall be approved by the Community Services Agency and Planning Department (Section 9-3.2530(c)).

- Landscape and irrigation drawings of entire project site must be submitted to the Building Department and approved by Community Services and Planning Department prior to issuance of building permits.

- All existing established plant materials shall be saved, if possible.

- No work within the project in regards to landscape and irrigation shall be permitted until all water meters are installed.

- All parkway trees shall be designated by the Community Services Agency.

- All landscape and irrigation designs shall incorporate drought tolerant plant materials and water efficient irrigation systems.

- Information on design requirements, drought tolerant plant material and street tree staking can be obtained in Community Services.

Mitigation Measure No. 32

32. Streets adjacent to the airport shall be heavily landscaped. Although this will not provide significant noise reductions, the Department of Airports feels that shielding a noise source visually can make the noise more acceptable.

The Specific Plan establishes landscape criteria for Haven Avenue, as well as all other streets within the project area (see Section V.G., Component Plans; Landscape Concept) and Exhibit 34 (Conceptual Landscape Plan).

Mitigation Measures No. 33 and 34

33. Site plans submitted to the City for review shall have building elevations plotted to indicate conformance with FAA height restrictions.

33.A. Any structures exceeding 45' in height shall be reviewed to conform with City of Ontario High Rise Ordinance 2188.

34. The City of Ontario, through its permit approval processes, shall notify the FAA, in accordance with Regulc1tions Part 77, prior to building construction.

The Specific Plan addresses height and building restrictions in accordance with Revised Part 77 of the Federal Aviation Administration Regulations (see Section VI.E., Development Standards and Criteria; Federal Aviation Administration's Regulations on Building Heights).

These measures will be specifically addressed during site plan review, prior to issuing Building Permits.

Mitigation Measure No. 35

35. The Project Sponsor shall work with the City of Ontario and the Ontario International Airport Authority (OIAA) to analyze alternatives for taxiway access crossing or bridging Haven Avenue.

The Specific Plan establishes a phasing program for development which will allow sufficient time for the Project Sponsor, the City of Ontario, and the Ontario International Airport Authority (OIAA) to analyze alternatives for taxiway access crossing or bridging Haven Avenue. See Section V.B. (Component Plans; Phasing).

Mitigation Measure No. 36

Refer to the ONT ALUCP for Safety Zone and Airspace criteria and policies.

Mitigation Measures No. 37 - 40

37. Special design treatment shall be given to private office uses and in some cases, general office uses, depending on their specific locations, as indicated by acoustical analysis.

38. Should the proposed hotel facility be constructed near Haven Avenue and the Southern Pacific Railroad mainline, substantial design features shall be incorporated to reduce interior noise levels as indicated by acoustical analysis.

39. All building plans shall be subject to acoustical analysis prior to issuance of a Building Permit, and all construction plans must be certified by an acoustical engineer.

40. If residential uses are developed on-site, they must conform to Title 25, Section 1092 of the California Administrative Code, and the City of Ontario's Noise Element.

Maximum interior sound levels have been establish d for each land use within the project area (see Section VI.F., Development Standards and Criteria; Sound Attenuation Criteria). Building plans will be reviewed for their conformance with these standards, as part of site plan approval prior to the issuance of Building Permits.

Mitigation Measures No. 41 - 44

41. Site specific soils testing shall be performed prior to grading and construction to determine the degree of compaction, the potential for settling, and the strength of the soil materials.

42. The structural engineering and design of buildings shall take into account the possibility of ground shaking.

43. Building construction shall be in compliance with the Uniform Building Code (1876), Chapter 23, relative to Seismic Shaking and Structural Engineering for California, Bluebook for Earthquake Design, 1976.

44. Vibrations, which may result from the close proximity of certain portions of the site to the Southern Pacific Railroad mainline, shall be analyzed prior to the construction of facilities other than industrial.

These measures are site specific and should be reviewed prior to the issuance of Building Permits.

44.A. Prior to approval of any proposed project within Phase 4 (see Exhibit 18, Phasing Plan) the applicant shall be required to:

(a) Conduct a test to determine any incidence of methane gas on the project site. The test and analysis shall be conducted by a qualified and registered engineer with appropriate expertise in landfill gas migration.

(b) Where methane gas is detected, appropriate mitigation measures shall be established to be included in the development of the subject project site. These measures shall include but not be limited to the following minimum control standards:

i) install a methane gas monitoring system

ii) incorporate sub-floor membranes designed to control gas movement into the building

iii) incorporate appropriate ventilation systems, both passive and active mechanical air injection, designed to minimize explosive concentrations of methane gas within the building(s).

Mitigation Measure No. 45

45. Grading plans shall be submitted to the West End Resource Conservation District for review and comment.

The City of Ontario shall review grading plans in coordination with other various agencies, as appropriate, prior to issuing Grading Permits. Site clearing or grading requires a dust control program be approved by the City Building Deptartment.

Mitigation Measures No. 46 - 55

46. Airport Drive shall have six through lanes on both approaches to Haven Avenue to maximize the signal green time allocation to Haven Avenue. For continuity, the six through lanes should be carried east to the intersection with Commerce Parkway. With this improvement, the Haven Avenue/Airport Drive intersection is projected to operate at Level of Service "D" even under the proposed project plus C.C.C. Alternative.

47. Phasing of roadway improvements and signalization will be planned and constructed to accommodate trip generation levels at the various development phases. Traffic shall not exceed service level "D". At such time traffic levels reach service level "C", a transportation management plan shall be prepared by a registered traffic engineer. This plan shall implement the measures listed in Mitigation Measure No. 8.

48. Entrances to Haven and Milliken Avenues shall be restricted to right turns in and out, and limited to locations that provide access to either a large grouping of small parcels or one large individual parcel.

49. Driveways along Airport Drive and Jurupa Street shall be at least 500 feet from any signalized intersection, and prohibition of left turn entrance/exit maneuvers considered on a case-by-case basis. Again, the number of entrances shall be kept to the minimum necessary for access to either groupings of small parcels or single large parcels. There shall be no vehicular driveway access points along Commerce Parkway (See Exhibit 60, Restricted Parking Access). Rights-of-way shall be dedicated to the City of Ontario.

49.A. All rail-served parcels shall be specifically reviewed by emergency service agencies in regards to appropriate access. In some cases, it is anticipated that reciprocating access agreements would be required.

50. All other driveways or other internal projects streets shall be located at least 200 feet from each other and from the nearest intersection.

51. Cul-de-sacs shall be provided with a turnaround loop that will accommodate emergency vehicles and trucks.

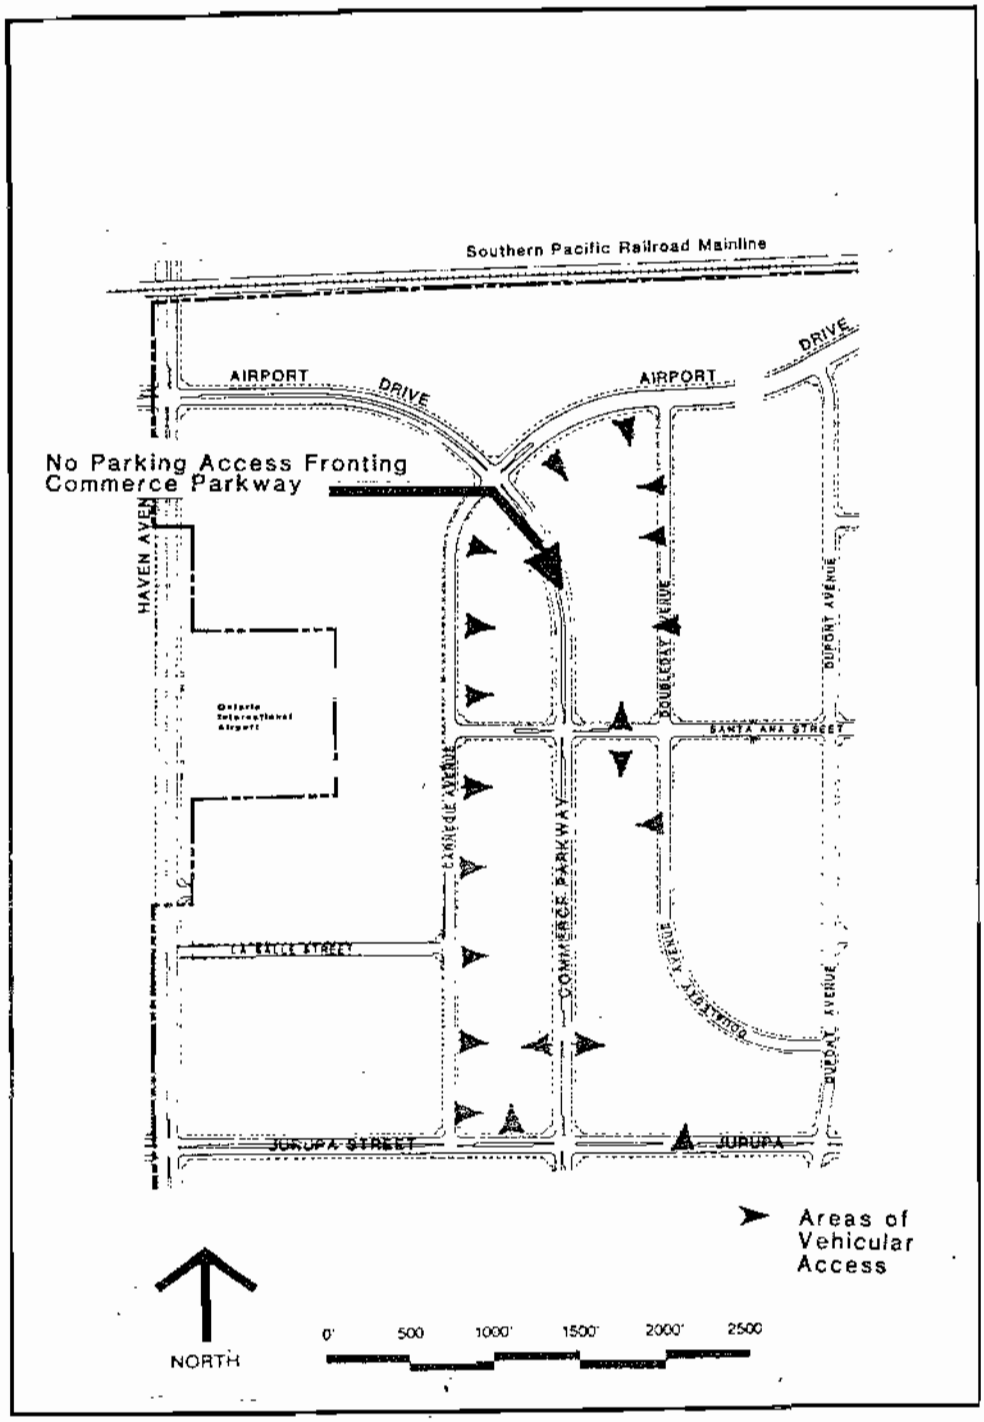
52. Bicycle lanes shall be provided on major internal streets to separate autos and bicycles and encourage commuting by bicycles.

53. Bus stops and pullouts shall be provided in the future as development occurs and transit service is introduced. Precise locations cannot yet be determined, but candidate locations are at internal street intersections with Haven and Milliken Avenues, Jurupa Street and Commerce Parkway, and the intersections of these major arterials. A certain width to be determined by the City Engineer shall be offered for dedication to the City for transit use purposes at the time of approval of subdivision map or site plan.

54. Pedestrian sidewalks shall be provided near future bus stops and near restaurants, banks, and other businesses likely to generate walk-in traffic from nearby employment sites.

55. The Project Sponsor shall fund on-site circulation improvements, and will work with the City of Ontario, Caltrans, SANBAG, and other local and regional agencies to insure a satisfactory regional solution to making necessary improvements, and participate financially on a fair share basis for required off-site improvements, as specified in the traffic monitoring study program, and as outlined in a proposed development agreement.

The Specific Plan provides for the implementation of these measures through the standards established in Section V.C., Component Plans; Circulation and Access.



Mitigation Measures No. 56 - 59

56. Public Transit: Omnitrans should expand bus service to serve the project areas as the project and adjacent land develops.

57. Ride-Sharing Incentives: Carpools, vanpools, and subscription bus (commuter club bus) services shall be encouraged.

EXHIBIT 60

RESTRICTED PARKING ACCESS

58. Modified Work Hours: Modified work hours may involve flextime programs (where employees are free to set their own work hours around a specified core period), or staggered work hours (where work hours of different employee groups are staggered by, say, 15 or 30 minute intervals). Both types of programs attempt to reduce the amount of peak period traffic by spreading employee arrivals and departures over a longer period. Daily traffic is unaffected.

59. Actions that could be taken by future employers in the project shall include:

    a. Distribute ride-sharing matching forms to all new employees and on a regular basis to continuing employees.

    b. Designate a staff member to assist other employees in finding carpool matches.

    c. Advertise and promote to generate interest and awareness of such a program.

    d. Tailor work hours to facilitate ride-sharing.

    e. Provide preferentially located or priced parking for carpoolers.

    f. Lease vans, at cost, for employees who carpool.

    g. Provide company fleet cars at nominal cost for carpool commuters.

    h. Subsidize subscription bus services, particularly in the early period of program formation.

These measures should be reviewed with individual developers and encouraged by the Development Advisory Board during site plan approval.

Mitigation Measures No. 60 and 61

60. Develop an overall landscape concept that will lend coherence and identity to the entire project.

61. Develop a landscape palette for roadways that identifies a hierarchy of streets, with implementation as outlined in the Specific Plan.

An overall landscape concept plan and a plant palette for roadways have been established in the Specific Plan (see Section V.G., Component Plans; Landscape Concept).

For specific information on City Public Services Department landscaping guidelines, please refer to Mitigation Measure No. 31.

Mitigation Measure No. 62

62. Provide a unified lighting and signage program throughout the site. Special attention shall be given to major entrances. All signing requires separate building permits and approvals by Planning and Building Departments.

A lighting and signage program has been established as part of the Specific Plan (see Section VII.A. and C., Architectural/Design Concepts; Signage and Graphics; Lighting).

Mitigation Measures No. 63 and 64

63. Buildings fronting on major streets shall have sufficient setbacks from the road to provide room for landscaping. Such setbacks will be identified in the Specific Plan.

64. Parking and loading areas fronting public streets shall be bermed and landscaped to screen cars from view.

The Specific Plan establishes landscape criteria for building and parking setbacks, and parking and loading areas (see Section VI., Development Standards and Criteria) for each land use.

Mitigation Measure No. 65

65. Buildings along the freeways shall be given special architectural and landscaping treatment in conformance with the City of Ontario's Criteria for Developing Adjacent to Freeways.

The Specific Plan has established standards for buildings developed adjacent to freeways (see Section VI.G., Development Standards and Criteria; Criteria for Developing Adjacent to Freeways).

Mitigation Measure No. 66

66. The proposed sewer system shall be designed and constructed to meet standard practices and be in compliance with all applicable codes.

A sewer system has been established in the Specific Plan that is designed to meet standard practices and applicable codes (see Section V.D.4., Component Plans; Infrastructure; Wastewater).

Mitigation Measures No. 67 - 69

67. A special one-time sewer assessment must be paid to the City prior to permit issuance. All water and sewer construction shall be inspected by the City of Ontario on a regular basis to ensure that normal practices of good construction are used to prevent contamination.

68. A competent backflow prevention program shall be implemented and maintained by the City of Ontario.

69. The City of Ontario shall provide continued maintenance and monitoring of the water quality from their wells.

These mitigation measures should be reviewed and implemented throughout the construction process.

Mitigation Measure No. 70

70. To reduce the potential of lowering the area's water table, the project plans to utilize a recharge/retention basin to return flood runoff to the water table.

The Specific Plan proposes a recharge/retention basin to return flood runoff to the water table (see Section V.D.2., Component Plans; Infrastructure; Storm Drain System).

Mitigation Measure No. 71

71. Street and utility improvements shall be phased to meet the expanding needs of the project as it develops. Exhibit 37 of the Draft EIR No. 81-4 outlines a phasing program for implementing these improvements.

A street and utility phasing plan has been established in the Specific Plan, to insure that improvements are phased to meet expanding needs of the project as it develops (see Section V.D.1., Component Plans; Infrastructure; Phasing of Utilities).

Mitigation Measure No. 72

72. The Project Sponsor will comply with recycling programs adopted by the City of Ontario to decrease the amount of solid waste generated by uses on-site.

72.A. The Solid Waste Superintendent shall determine type, quantity, and location of all refuse collection services. All refuse enclosures shall be constructed to City specifications.

This measure shall be complied with during site plan review.

Mitigation Measures No. 73 - 79

73. As higher intensity uses develop, the City of Ontario should investigate the cost/benefit of securing a second 100-foot ladder truck to respond to calls at multi-story buildings.

74. Paramedic services should be evaluated as the project develops.

75. As specific plans are developed and users more clearly identified, the City's fire department shall be consulted so that their capability in handling chemical and toxic spills can be expanded as necessary. Fire department requirements regarding access, structural height, cul-de-sac dimensions, street names, and addresses will be observed.

76. The number of police officers should be increased as necessary over the buildout time of the project. At the completion of development, one full-time mobile patrol unit should be in the vicinity twenty-four hours a day.

77. The contract agreement with the San Bernardino County Sheriff's Department should be expanded at a later date to include evening surveillance of the project site.

The City of Ontario Police Department guidelines will be observed as follows:

- The police department agrees with the conditions set by the fire department in regard to Cul-de Sacs within this development.

- The police department will review each development on a case-by-case basis. These developments will be required to meet the police department's commercial requirements.

- The police department is currently requiring all commercial developments to install rooftop numbers on all buildings, to include existing developments.

SECURITY LIGHTING

a. All parking lots and storage lots must have security lighting. These areas are to be lighted from sunset to the opening of business. Lights are to be on photo-censored cell.

b. All buildings are to have minimal security lighting to eliminate dark areas around the outside of the buildings, with direct lighting to be provided by all entrance ways, to come on between the hours of sunset and sunrise. Lights are to be on photo-censored cell.

c. Lighting in exterior areas shall be enclosed to prevent vandalism.

d. Placement of lights shall be approved by both Police and Building Departments.

e. Lighting is to be consistent around entire project. Lighting is to be of non-glare type with moveable refractors.

f. Lighting to be minimal maintained 1-1-1/2 foot candle-power.

SECURITY HARDWARE

a. Locking slide-bolts will be installed on all sliding glass doors.

b. One-inch single cylinder deadbolts will be installed on all entrance doors. If windows are within forty inches of any locking device, tempered glass must be used.

c. Large garage doors are to have slide-bolts, one on each side of the door.

SECURITY FENCING

a. No obscuring materials will be used on any entrance gate.

b. Block or chain link fencing will be a minimum of 8 feet tall around storage areas.

WINDOWS

a. All sliding glass windows are to have secondary locking devices and be equipped with anti-lift devices.

b. Storm front window systems with shrubbery located in front shall have decorative steel panels installed.

NUMBERING

a. Street address numbering shall adhere to standards set forth in the City Ordinance 9-3.2746(3). Numbers and the background to which they are attached shall be of contrasting colors or shades, and shall be of reflective material for nighttime visibility. Samples of the materials used shall be submitted to and approved by the Development Advisory Board (DAB).

b. Developer shall install rooftop numbers on all roofs of this development. Developer shall contact the Ontario Police Deptartment for numbering requirements.

SECURITY SHRUBBERY

a. Security shrubbery shall be installed next to all fences/walls that adjoin all common/public access areas. Placement of such shrubbery will meet all requirements of the DAB.

ALARM SYSTEMS

a. Recommend that all businesses install a burglar alarm system, if needed.

   * If an alarm system is installed, an alarm permit must be obtained from the Ontario Police Department. Also, subscribers should acquaint themselves with Ontario's False Alarm Ordinance, #1990, Chapter 9, Title 4, of the Ontario Municipal Code.

ADDITIONAL REQUIREMENTS

- All roof openings giving access to the building shall be secured with either iron bars, metal gates and stamped metal, or alarmed, meeting with police department approval.

- Interior night lighting shall be constructed and maintained in those areas that are visible from the street (ground floor level only).

- The placement of outside public telephones shall be restricted to an area immediately adjacent to the front door of the development.

78. The Ontario International Airport Ground Access Study Committee is studying the possibility of funding from the Public Utilities Commission (PUC) from its $15 million annual grade separation fund. The Project Sponsor will work with the Ontario International Airport Ground Access Study Committee, the City of Ontario, SANBAG and other local agencies to insure a satisfactory solution for implementing grade separation improvement. C.C.C. will contribute financially on a fair share basis towards grade separation project at the S.P.R.R. and U.P.R.R. tracts.

79. Sources that could provide capital funds for interchange improvements are:

    a. State Department of Transportation - Capital Improvement Budget

    b. Proposed increase in the State Gas Tax

    c. Tax Increment Financing

    d. Road Tolls

    e. Assessment Districts

    f. Taxes on Motor Vehicle Ownership

    g. Parking Charges

    h. Motor Fuel Taxes

    i. Retail Sales Tax

    j. Severance Taxes

    k. Personal Income and Payroll Taxes

    l. Employer Payroll Taxes

The Project Sponsor will contribute financially on a fair share basis with the City of Ontario, Caltrans, SANBAG, and other local, regional, and state agencies to ensure that a satisfactory regional solution to improving interchanges is made as outlined in a proposed development agreement.

The City of Ontario and other appropriate agencies should review for implementation, Mitigation Measures No. 74 - 79 as the project develops.

Additional Note: All new construction must provide handicapped facilities per Title 24 of the State Building Code and City Building Department requirements.

IX. AMENDMENT PROCESS

IX. AMENDMENT PROCESS

A. MINOR REVISIONS

Minor revisions to the Specific Plan that relate to realignment of roads, or adjustments to individual Master Plans (such as drainage, sewer, and water) shall be approved by the City of Ontario Development Advisory Board.

Rearrangements, transfer, or exchange of land use designations within the Specific Plan may be approved subject to the following conditions.

1. The applicant shall submit an analysis of the proposed land use rearrangement to ascertain the following:

   a. The rearrangement does not create adverse impacts on traffic volumes and circulation adjacent to areas of land use category exchange.

   b. The rearrangement does not create adverse impacts on sewer, water and other infrastructure capacities in the areas of land use category exchange.

2. The surrounding property owners within three hundred feet (300') of the proposed land use category exchange shall be notified, in writing, of the proposed rearrangement. The applicant shall provide names and addresses of the affected property owners, and shall pay all postage costs. If any affected party including property owners, Airport Land Use Commission (ALUC), and any other agency objects to the rearrangement(s), the proposal shall be subject to requirements for a "major amendment" to the Specific Plan.

3. Concurrently, the Planning Commission members shall be notified by mail, of the proposed land use category rearrangement. The Planning Commission members will have ten (10) days (from the date of their receipt of notice) in which to comment on the proposal. If the Planning Commission members have no objection to the proposed land use rearrangement, the proposal will be placed on the next Planning Commission agenda as a consent item. If any member of the Planning Commission has a concern with the proposed land use rearrangement, then the proposal shall be subject to requirements for a "major amendment" to the Specific Plan.

4. An application for land use category rearrangement shall be accompanied with the appropriate amount of fees as approved by the existing resolution of the City Council for a revision to a Specific Plan.

B. MAJOR AMENDMENTS

A major amendment to the Specific Plan will require review and approval by California Commerce Center, the City of Ontario Development Advisory Board, the Planning Commission, and the City Council. Such major amendments are governed by the California Government Code, Section 65500, which requires an application and fee submitted to the City of Ontario Planning Department, stating in detail the reasons for the proposed amendment.

C. APPEALS

An appeal from any determination, decision, or requirement of staff, Development Advisory Board, or the Planning Commission shall be made to the City Council in conformance to the appeal procedures established by Section 9-3.3400 of the Ontario Municipal Code.

File No. PSPA22-006
Conditions of Approval

(Document to follow this page)

LAND DEVELOPMENT DIVISION CONDITIONS OF APPROVAL

CITY OF ONTARIO PLANNING DEPARTMENT
303 East B Street, Ontario, California 91764 Phone: 909.395.2036 / Fax: 909.395.2420

Date Prepared: 8/16/2023

File No: PSPA22-006

Related Files: PMTT22-025 (TPM 20559) and PDEV22-034

Project Description: An amendment to the California Commerce Center Specific Plan to change the land use designation from Commercial/Food/Hotel to Light Industrial and make graphic and textual modifications throughout to support the change, on 16.65 acres of land generally located at the southeast corner of Rockefeller Avenue and Wanamaker Avenue, within the proposed Light Industrial Land Use Designation of the California Commerce Center Specific Plan; (APNs: 0238-201-41 and 0238-221-22); **submitted by Link Logistics Real Estate Management LLC.**

Prepared By: Alexis Vaughn, Associate Planner
Phone: 909.395.2416 (direct)
Email: avaughn@ontarioca.gov

The Planning Department, Land Development Section, conditions of approval applicable to the above-described Project, are listed below. The Project shall comply with each condition of approval listed below:

1.0 Standard Conditions of Approval. The project shall comply with the *Standard Conditions for New Development*, adopted by City Council Resolution No. 2017-027 on April 18, 2017. A copy of the *Standard Conditions for New Development* may be obtained from the Planning Department or City Clerk/Records Management Department.

2.0 Special Conditions of Approval. In addition to the *Standard Conditions for New Development* identified in condition no. 1.0, above, the project shall comply with the following special conditions of approval:

2.1 Specific Plan Amendment. The following shall be submitted to the Planning Department within 30 days following City Council approval of the Specific Plan Amendment:

(a) Two copies of the final Specific Plan document – double-sided, bound, color;

(b) One CD or flash drive containing a complete copy of the final Specific Plan document with all required revisions in the following formats:

(i) An accessible editable format (e.g. Microsoft Word, InDesign), including all required revisions;

(ii) One complete PDF copy;

(iii) A complete electronic website version broken down by chapter, optimized for web. For the purposes of this Specific Plan, the historical resolutions appended to the front of the document may be separated out as their own PDF.

2.2 Indemnification. The applicant shall agree to defend, indemnify and hold harmless, the City of Ontario or its agents, officers, and employees from any claim, action or proceeding against the City of Ontario or its agents, officers or employees to attack, set aside, void or annul any approval of the City of Ontario, whether by its City Council, Planning Commission or other authorized board or officer. The City of Ontario shall promptly notify the applicant of any such claim, action or proceeding, and the City of Ontario shall cooperate fully in the defense.

2.3 Additional Fees.

(a) Within 5 days following final application approval, the Notice of Determination ("NOD") filing fee shall be provided to the Planning Department. The fee shall be paid by check, made payable to the "Clerk of the Board of Supervisors", which shall be forwarded to the San Bernardino County Clerk of the Board of Supervisors, along with all applicable environmental forms/notices, pursuant to the requirements of the California Environmental Quality Act ("CEQA"). Failure to provide said fee within the time specified will result in the extension of the statute of limitations for the filing of a CEQA lawsuit from 30 days to 180 days.

2.4 Related Applications. Specific Plan Amendment approval shall not be final and complete until such time that related File Nos. PMTT22-025 and PDEV22-034 have been approved by the Planning Commission and the related Addendum to TOP 2050 SEIR has been approved by the City Council.

2.5 Additional Requirements.

(a) Per the findings of the related Addendum to TOP 2050 SEIR, Appendix D, Phase I ESA, the Project shall not be converted to a commercial land use without further environmental analysis.

(b) Planning staff shall work with the applicant after Project approval to finalize the Specific Plan document. Updates include, but may not be limited to, the addition of the final Specific Plan Amendment approval information to the document (amendment file number, City Council Resolution number, approval date); the addition of the final amended Specific Plan document to the City website; and making any final modifications to the document as needed for clarity and consistency.

CITY OF ONTARIO *Agenda Report* **November 21, 2023**	**SECTION:** **PUBLIC HEARINGS**
Department: Planning Prepared By: Robert Morales Department: Planning Prepared By: Thomas Grahn Staff Member Presenting: Scott Murphy, Executive Director Community Development Reviewed By: Kimberly Ruddins, Rudy Zeledon, Scott Murphy Approved By:	Submitted To: Council/OHA Approved: _____ Continued To: _____ Denied: _____ Item No: 22

SUBJECT: **A PUBLIC HEARING TO CONSIDER AMENDING THE GENERAL PLAN LAND DESIGNATIONS (FILE NO. PGPA23-001) AND ZONE CHANGES (FILE NO. PZC23-003) ON VARIOUS PROPERTIES THROUGHOUT THE CITY**

RECOMMENDATION:

That the City Council consider the following:

A. Adopt a Resolution approving the use of an Addendum to The Ontario Plan 2050 (TOP) Supplemental Environmental Impact Report (SEIR) (State Clearinghouse No. 2021070364);
B. Adopt a Resolution for an amendment to the Policy Plan (General Plan) component of The Ontario Plan to modify the Land Use Plan (Exhibit LU-01) and Exhibit LU-03 (Future Buildout) changing the land use designation; and
C. Introduce and waive further readings of an Ordinance approving a Zone Change application (File No. PZC23-003) to rezone.

THE FOLLOWING COUNCIL GOALS ARE BEING ACHIEVED:
Invest in the Growth and Evolution of the City's Economy
Operate in a Businesslike Manner
Focus Resources in Ontario's Commercial and Residential Neighborhoods

FISCAL IMPACT: There are no direct fiscal impacts anticipated with the adoption of the General Plan Amendment and Zone Change application. Any potential long-term fiscal impact and anticipated expenditures to the City would be offset by development impact fees and property tax revenues from the future development.

BACKGROUND & ANALYSIS:

On August 16, 2022, the City Council adopted the Ontario Plan 2050 Update (TOP 2050) to align the City's Policy Plan with state housing mandates and new legislation addressing various community aspects. This initiative prompted a zoning consistency project to ensure the City's Zoning Map corresponds to the TOP 2050 Policy Plan's goals, as mandated by Government Code Section 65860.

On March 28, 2023, the Planning Commission conducted a public hearing to discuss proposed Zone Changes (File No. PZC22-001) in line with the adopted TOP 2050 Update Land Use Plan. These changes supported mixed-use development, fulfilling Regional Housing Needs Assessment (RHNA) housing requirements, and addressed underutilized properties along the Holt Boulevard Bus Rapid Transit (BRT) route. During the hearing, residents who live near the Project sites A1 (south of 5th Street, west of Mountain Avenue) and C2 (north of Holt Boulevard, west of San Antonio Avenue, and east of Boulder Avenue) expressed concerns about increased traffic, potential parking issues, and privacy loss due to higher-density residential development near single-family homes. Despite these concerns, the Planning Commission unanimously recommended City Council approval of the zone changes (6-0) while recommending that the City Council consider retaining the existing zoning for Areas A1 and C2, as a result of public feedback.

On April 18, 2023, the City Council held a public hearing to deliberate on proposed zone changes aimed at updating the official Zoning Map. Following deliberations, the City Council unanimously approved all zone changes (6-0), with exception to Areas A1 and C2, which sought to transition Area A1 from LDR-5 (Low-Density Residential) zoning district to MDR-18 (Medium Density Residential) zoning district and Area C2 from MDR-25 (Medium-High Density Residential) zoning district to HDR-45 (High-Density Residential) zoning district. The City Council instructed Staff to revert the General Plan designations in these areas to their previous land use designations.

General Plan Amendment — The City of Ontario has initiated requests to amend its General Plan and Official Zoning Map. These amendments involve changes to land use designations and zoning designations for multiple parcels of land within the city. The proposed modifications include:

- Modify land use designations for 3.8 acres from High-Density Residential (25.1-45 dus/acre) to Mixed Use – Downtown located north of D Street, south of E Street, and to the west of Laurel Street. (See Attachment 1, Exhibit A-1);
- As directed by City Council for area A1, modify land use designations for 9.3 acres from Medium-Density Residential (11.1-25 dus/acre) to Low-Density Residential (2.1-5 dus/acre) located south of 5th Street and west of Mountain Avenue. (See Attachment 1, Exhibit A-2);
- As directed by City Council for area C2, modify land use designations for 4.7 acres from High-Density Residential (25.1-45 dus/acre) to Medium-Density Residential (11.1-25 dus/acre) located north of Holt Boulevard, west of San Antonio Avenue, and east of Boulder Avenue. (See Attachment 1, Exhibit A-3);
- Modify land use designations for 9.8 acres from Business Park to Mixed Use – East Holt located on the north side of Holt Boulevard, 800 feet east of Imperial Street. (See Attachment 1, Exhibit A-4)
- Modify text in the Land Use Designation Summary Table (Exhibit LU-02) to allow Civic uses within the Mixed-Use Downtown land use designation. (See Attachment 1, Exhibits B and C)

Zoning Map Amendment — The City of Ontario has initiated requests to amend its Official Zoning

Map, involving changes to zoning districts for multiple parcels of land within the City. The proposed modifications include:

- Rezone 3.8 acres of land from HDR-45 (High-Density Residential 25.1-45 dus/acre)) to MU-1 (Downtown Mixed Use) located north of D Street, south of E Street, and to the west of Laurel Street. (See Attachment 1, Exhibit D-1)
- Rezone 9.8 acres of land from BP (Business Park) to MU-6 (East Holt Mixed Use) located on the north side of Holt Boulevard, 800 feet east of Imperial Street. (See Attachment 1, Exhibit D-2)
- Rezone 5.75 acres of land from OL (Low-Intensity Office) to MU-1 (Downtown Mixed Use) located on the southwest corner of Sultana Avenue and D Street. (See Attachment 1, Exhibit D-3)

Analysis: The City's proposal involves revising the land use designations and rezoning of additional properties to mixed-use within specific areas. These areas encompass properties located in the Downtown area to the north of D Street, south of E Street, and to the west of Laurel Street, extending to include the southwest corner of D Street and Campus Avenue. The City proposes to incorporate Civic Land Uses within the downtown area to foster a more dynamic and adaptable environment, in support of the revitalization of the downtown district.

Rezoning of the properties includes properties located on the north side of Holt Boulevard approximately, 800 feet east of Imperial Street to Mixed Use designation to support opportunities for residential and commercial developments along the East Holt Corridor Bus Rapid Transit (BRT) route.

In compliance with Senate Bill 330 (known as the Housing Crisis Act of 2019), rezoning of properties to higher residential densities is required to comply with the provision of 'No Net Loss of Zoning Capacity', mandating that the City maintain its existing residential capacity. Under SB 330, local governments are prohibited from reducing the zoning capacity for residential development unless they provide equivalent zoning elsewhere within the jurisdiction. This requirement ensures that the overall housing capacity remains consistent.

With the proposed land use changes, the total assumed buildout for the City would result in an additional 58 units, to the City's total housing capacity of 129,562 units (TOP 2050 Table LU-03). As there is an increase in overall unit capacity, the City remains fully compliant with the provisions of SB 330.

On October 24, 2023, the Planning Commission conducted a public hearing to review the proposed General Plan Amendment and Zone Change application. The Planning Commission concluded the hearing on that date and unanimously voted (7-0) to recommend the approval of the General Plan Amendment and Zone Change to the City Council.

Community Meetings: Over the past year, the City has organized several neighborhood meetings, one of which took place on November 21, 2022, at City Hall. During this meeting, Staff presented an overview of File No. PDEV22-013, a Development Plan for a 27,835-square-foot, 2-story fire station. This Project site is the same site where the proposed Zone Change aims to rezone 5.75 acres of land from OL (Low-Intensity Office) to MU-1 (Downtown Mixed Use) at the southwest corner of D

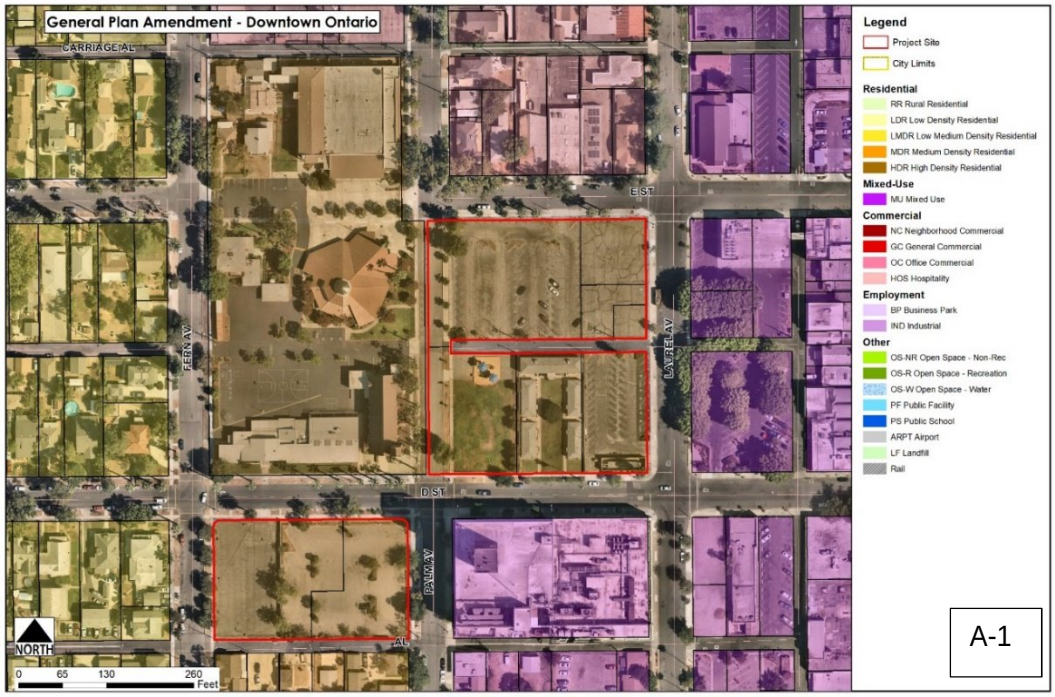
Street and Sultana Avenue. Three community members attended the meeting to learn more about the project, and Staff addressed their questions. Notably, there was no opposition to the Project.

On February 22, 2023, the Planning Department conducted a neighborhood meeting regarding a Project involving Zone Changes (File No. PZC22-001) in different areas of the City. The meeting included the participation of 50 community members and City Staff received 6 email inquiries. Participants included residents from 5th Street and Princeton Street (refer to Attachment 1, Exhibit A-2) West Holt (refer to Attachment 1, Exhibit A-3) who shared their concerns during the meeting. Comments included fears of high-rise multiple-family units negatively impacting existing neighborhoods, increased on-street parking issues, elevated traffic congestion, and potential delinquency and loitering problems. In response, the Planning Department clarified that the Project aimed to align with City policies, future developments would adhere to zoning standards, parking concerns would be addressed, traffic impacts would be evaluated, and measures to address security and loitering would be taken in coordination with the Police Department and Community Improvement.

On October 5, 2023, the Planning Department conducted an in-person Open House at the Ontario Senior Center, presenting an overview of File Nos. PGPA23-001 and PZC23-003, General Plan Amendment and Zone change for an approximately 10-acre parcel situated near Imperial Avenue and Holt Avenue. Five community members attended the meeting, and they expressed concerns regarding potential construction impacts, including noise, vibration, and traffic along Holt Boulevard. Staff clarified that the meeting's primary objective was to inform residents and property owners about the zoning and General Plan change and that no development proposal is currently in place.

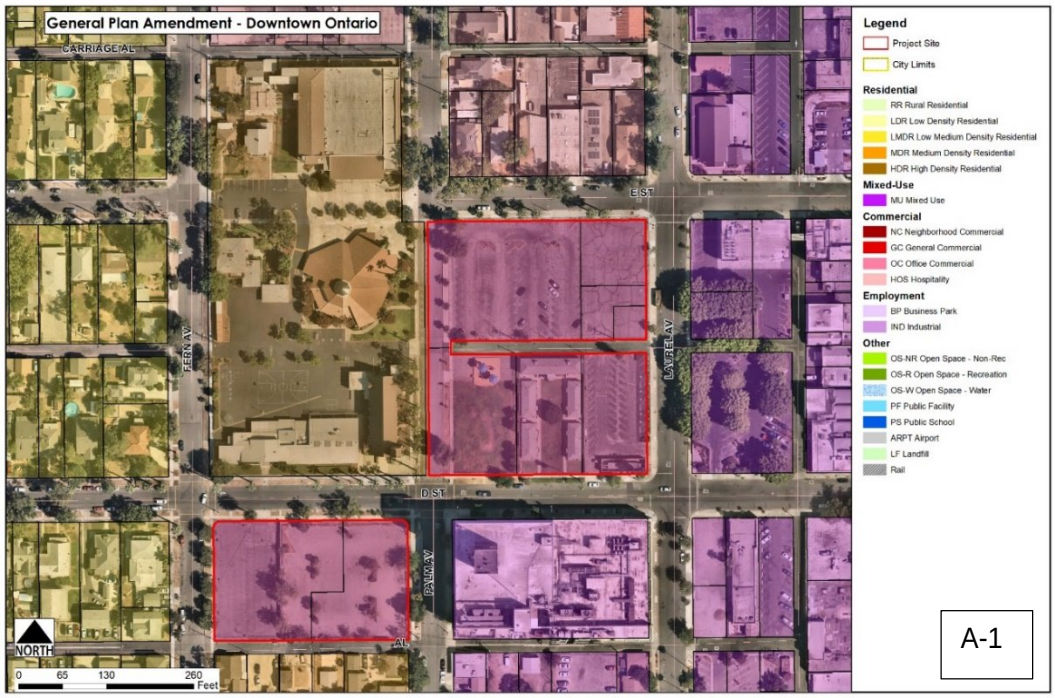
Housing Element Compliance: As noted previously, local jurisdictions are required to maintain their Housing Element Sites Inventory in compliance with Government Code Section 65583. This inventory must consistently accommodate the jurisdiction's regional housing needs throughout the planning period.

The proposed General Plan Amendment will alter the land use designation for a 4.7-acre Project site situated to the north of Holt Boulevard, west of San Antonio Avenue, and east of Boulder Avenue (refer to Attachment 1, Exhibit A-3). The affected property is presently listed in the Housing Element Sites Inventory, specifically found within Tables B-1 and B-2 (Map ID Nos. 2-4, 2-5, 2-6, 2-9 & 2-10) of the Housing Element Technical Report.



Local jurisdictions have the flexibility to decrease residential density for specific parcels if they identify sufficient alternative sites to ensure that there is no overall reduction in City's Regional Housing Needs Assessment (RHNA) obligations. The removal of the subject property from the inventory will not affect the RHNA capacity, as the City maintains an adequate number of sites to meet the RHNA requirement.

Environmental: The environmental impacts of this Project were reviewed in conjunction with an Addendum to The Ontario Plan 2050 Supplemental Environmental Impact Report (State Clearinghouse No. 2021070364), certified by the Ontario City Council on August 16, 2022, in conjunction with File No. PGPA20-002. This Application introduces no new significant environmental impacts. All previously adopted mitigation measures are a condition of Project approval and are



incorporated herein by this reference.

Notes

1 Historically, citywide buildout levels do not achieve the maximum allowable density/intensity on every parcel and are, on average, lower than allowed by the Policy Plan. Accordingly, the buildout projections in this Policy Plan do not assume buildout at the maximum density or intensity and instead are adjusted downward. There are a few notable exceptions to this. The assumed density for Low-Density Residential north of Riverside Drive is estimated above the allowed density to account for the continued use of areas that were built at densities above the current allowance, and to account for growth in these areas due to accessory dwelling unit (ADU) development and lot splits. Some areas were also entitled at greater densities due to the use of gross acreage rather than net acreage. These areas, identified in note 7 utilized customized growth assumptions to ensure that the future projection was equal to or larger than the number of existing units in built areas, and equal to or larger than existing entitlements in undeveloped or partially developed areas.

2 Acres are based on the City's Parcel data as of January 2021.

3 Assumed Density/Intensity includes both residential density, expressed as units per acre, and non-residential intensity, expressed as floor area ratio (FAR), which is the amount of building square feet in relation to the size of the lot.

4 Projections of population by residential designation are based on projected occupancy rates and a persons-per-household factor that varies by housing type.

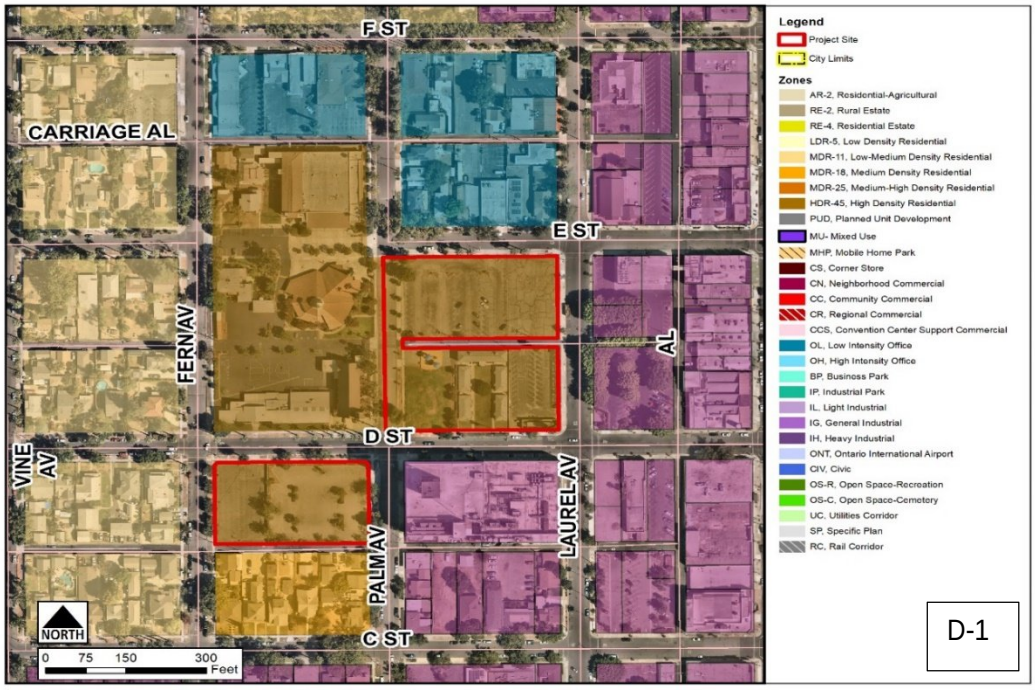
5 The factors used to generate the number of employees by land use category were derived by comparing 2018 employment data published by the U.S. Census as part of the Longitudinal Employer-Household Dynamics (LEHD) dataset to existing building square footage by use type, as recorded in the City's building permit database.

LU-03 Future Buildout Table

Land Use	Acres[2]	Assumed Density/Intensity[3]	Units	Pop[4]	Non-Residential Square Feet	Jobs[5]

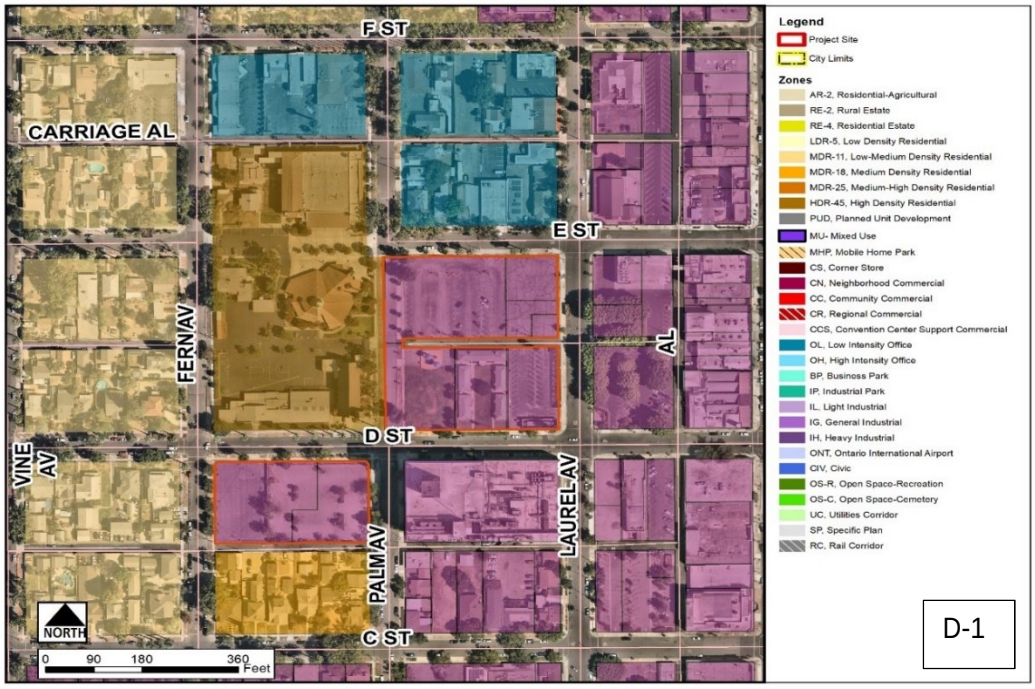
6 Acreages and corresponding buildout estimates for these designations do not reflect underlying land uses within the Business Park and Industrial Overlays. Estimates within overlay areas are included within the corresponding Business Park and Industrial categories.

7. To ensure future projections are equal to or larger than existing conditions in built out areas as of August 2021, and equal to or larger than existing entitlements (approved before August 2021) in undeveloped or partially developed areas, buildout estimates for the following projects, assumed realistic densities as follows: Countryside Specific Plan (Low Density Residential: 6.18 du/ac), Creekside Specific Plan (Low Density Residential: 7.47 du/ac, Medium Density Residential: 15.81 du/ac), Subarea 29 Specific Plan (Low Density Residential: 7.03).
8. In certain mixed use categories, different buildout assumptions were employed on different sites. Variations in assumptions are included in multiple rows within this table.



Last Amended: August 16, 2022

LU-02 Land Use Designations Summary Table



Land Use Designation	Residential Density & Non-Residential Intensity	Intention
		consider a host of uses including a transit station and multimodal transfer station.
Mixed Use – An intense mixture of uses that, when concentrated, create focal points for community activity and identity and facilitate walking, biking, and the use of transit. The Mixed Use land use category accommodates a horizontal and/or vertical mixture of retail, service, office, restaurant, entertainment, cultural, and residential uses. • Density, intensity and intended character varies by area, as generally described below, and defined in detail under the applicable Place Type in the Community Design Element. • The densities and intensities of the Mixed Use designation represent the intended level of anticipated development; however, individual projects may vary depending upon an approved master plan, such as a specific plan, or planned unit development. • The maximum amount of development in each Mixed Use area shall be limited by the Future Buildout Projections detailed in Table LU-03. Further direction regarding land use distributions, densities and intensities within some of these areas are provided by specific plans as noted below. • Most Mixed Use areas are the focal point of the City's Place Type designations illustrated on Figure CD-01 and noted below. Place Types are defined in the Community Design Element, and the vision for the intended outcome and character of each area is established and illustrated in the Place Type Figures noted below.		
Mixed Use - Downtown[1] *(MU-Downtown)*	• 25.0 to 75.0 dwelling units per acre • 2.0 FAR for retail and office uses *Subject to PUD at City's discretion*	Envisioned as an intensive vertical and horizontal mixture of retail, civic, office, and residential uses in a pedestrian friendly atmosphere. The historic character is enhanced. The most intensive uses are envisioned along Euclid and Holt Avenues. [Link to Community Design Element *Urban, Mixed Use, and Transit-oriented Place Types* Section, Community Design Element *Exhibits CD-01, CD-02, CD-03* and *CD-08*]
Mixed Use - Holt Blvd[1] *(MU-Holt)*	• 14.0[2] to 40.0 dwelling units per acre • 2.0 FAR for office uses • 1.0 FAR for retail uses *Subject to PUD at City's discretion*	This area is envisioned as a low-rise (3-5 stories) intensification of the Holt Corridor. The intent is to create identity and place along the Holt Corridor, connect the corridor to Downtown, and connect the Downtown to the Ontario Airport Metro Center. [Link to Community Design Element *Urban, Mixed Use, and Transit-oriented Place Types* Section, Community Design Element *Exhibits CD-01, CD-02, CD-08* and *CD-09*]
Mixed Use - Meredith[1] *(MU-Meredith)*	• 14.0 to 125.0 dwelling units per acre • 3.0 FAR for office and retail uses	This area is envisioned as a mixture of mid-rise buildings, regional-serving retail and office centers, and stand-alone high density residential projects. [Link to Community Design Element *Urban, Mixed Use, and Transit-oriented Place Types* Section, Community Design Element *Exhibits CD-01, CD-02,* and *CD-08*]

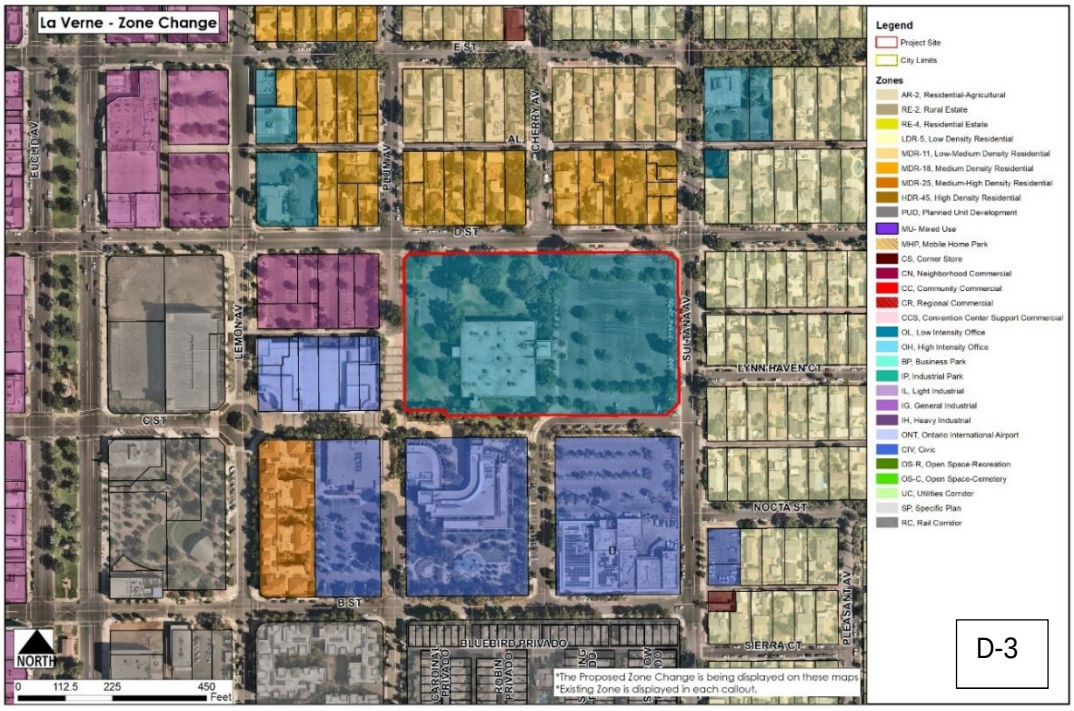
Exhibit D: PROPOSED ZONING CHANGES

Existing Zone: HDR-45 (High Density Residential—25.1 to 45.0 DU/Acre) Zoning District



Proposed Zone: MU-1 (Downtown Mixed Use) Zoning District.

Existing Zone: BP (Business Park) Zoning District.

Proposed Zone: MU-6 (East Holt Mixed Use) Zoning District.

Existing Zone: OL (Low Intensity Office) Zoning District.

Proposed Zone: MU-1 (Downtown Mixed Use) Zoning District.

CITY OF ONTARIO PLANNING DEPARTMENT

PLANNING COMMISSION AGENDA REPORT

October 24, 2023

303 East B Street, Ontario, California 91764 Phone: 909.395.2036 / Fax: 909.395.2420

FILE NOS: PGPA23-001 & PZC23-003

SUBJECT: A City initiated amendment to the Policy Plan (General Plan) component of The Ontario Plan to: [1] Modify the Land Use Plan (Exhibit LU-01) and Exhibit LU-03 (Future Buildout) changing the land use designation for 3.8 acres of land from High-Density Residential to Mixed Use - Downtown, [2] Modify the Land Use Plan (Exhibit LU-01) and Exhibit LU-03 (Future Buildout) changing the land use designation for 9.3 acres of land, from Medium-Density Residential to Low-Density Residential, [3] Modify the Land Use Plan (Exhibit LU-01) and Exhibit LU-03 (Future Buildout) changing the land use designation for 4.7 acres of land from High-Density Residential to Medium-Density Residential, [4] Modify the Land Use Plan (Exhibit LU-01) and Exhibit LU-03 (Future Buildout) changing the land use designation for 9.8 acres of land from Business Park to Mixed Use – East Holt, and [5] Modify the text in the Land Use Designation Summary Table (Exhibit LU-02) to allow Civic uses within the Mixed-Use Downtown land use designation, and a Zone Change request to amend the Official Zoning Map: [1] rezoning 3.8 acres of land from HDR-45 (High-Density Residential) to MU-1 (Downtown Mixed Use), [2] rezoning of 9.8 acres of land from BP (Business Park) to MU-6 (East Holt Mixed Use), and [3] rezoning 5.75 acres of land from OL (Low-Intensity Office) to MU-1 (Downtown Mixed Use) (APNs: 0110-072-25, 0110-081-06, 0110-081-07, 1008-551-01, 1008-551-07, 1008-551-11, 1008-551-12, 1008-551-13, 1008-561-06, 1010-491-02, 1010-491-03, 1010-491-16, 1048-344-03, 1048-353-04, 1048-353-05, 1048-353-09, 1048-353-13, 1048-353-14, 1048-541-15, 1048-576-01, 1048-576-02, 1048-604-13, 1048-604-14, and 1048-604-15); **City Council Action Is Required.**

PROPERTY OWNER: Various

RECOMMENDED ACTION: That the Planning Commission consider and adopt the following:

(1) Adopt a Resolution recommending the City Council approve the use of an Addendum to The Ontario Plan 2050 Supplemental Environmental Impact Report (SEIR)(State Clearinghouse No. 2021070364) adopted by the City Council on August 16, 2022;

(2) Adopt a Resolution recommending the City Council approve the General Plan Amendment, File No. PGPA23-001, pursuant to the facts and reasons contained in the staff report and attached Resolution; and

Case Planner:	Robert Morales, Assistant Planner
Planning Director Approval:	
Submittal Date:	July 12, 2023

Hearing Body	*Date*	*Decision*	*Action*
DAB			
PC	10/24/2023	Approval	Recommend
CC	11/21/2023		Final

(3) Adopt a resolution recommending the City Council approve the Zone Change, File No. PZC23-003, pursuant to the facts and reasons contained in the staff report and attached resolution.

PROJECT ANALYSIS:

(1) Background — On August 16, 2022, the Ontario Plan 2050 (TOP 2050) was adopted to align the City's Policy Plan (General Plan) with state housing mandates and new legislation addressing various community aspects. This initiative prompted a zoning consistency project to ensure the City's Zoning Map corresponds to the TOP 2050 Policy Plan's goals, as mandated by Government Code Section 65860. The City is currently processing requested General Plan Amendments and associated Zone Changes for the following:

(a) General Plan Amendment — The City of Ontario has initiated requests to amend its General Plan and Official Zoning Map. These amendments involve changes to land use designations and zoning designations for multiple parcels of land within the city. The proposed modifications include:

- Modify land use designations for 3.8 acres from High-Density Residential to Mixed Use - Downtown. Located on properties in the Downtown area to the north of D Street, south of E Street, and to the west of Laurel Street. (Exhibit A-1)
- Modify land use designations for 9.3 acres from Medium-Density Residential to Low-Density Residential. Located om properties south of 5th Street and west of Mountain Avenue. City Council directed. (Exhibit A-2)
- Modify land use designations for 4.7 acres from High-Density Residential to Medium-Density Residential. Located north of Holt Boulevard, west of San Antonio Avenue, and east of Boulder Avenue. City Council directed. (Exhibit A-3)
- Modify land use designations for 9.8 acres from Business Park to Mixed Use – East Holt. Located on the north side of Holt Boulevard 800 feet east of Imperial Street. (Exhibit A-4)
- Modify text in the Land Use Designation Summary Table (Exhibit LU-02) to allow Civic uses within the Mixed-Use Downtown land use designation. (Exhibits B and C)

(b) Zoning Map Amendment — The City of Ontario has initiated requests to amend its Official Zoning Map, involving changes to zoning districts for multiple parcels of land within the City. The proposed modifications include:

- Rezone 3.8 acres of land from HDR-45 (High-Density Residential) to MU-1 (Downtown Mixed Use). Located on properties in the Downtown area to the north of D Street, south of E Street, and to the west of Laurel Street. (Exhibit D-1)
- Rezone 9.8 acres of land from BP (Business Park) to MU-6 (East Holt Mixed Use). Located on the north side of Holt Boulevard 800 feet east of Imperial Street. (Exhibit D-2)

- ❖ Rezone 5.75 acres of land from OL (Low-Intensity Office) to MU-1 (Downtown Mixed Use). Located on the southwest corner of Sultana Avenue and D Street. (Exhibit D-3)

NEIGHBORHOOD MEETINGS: The City has conducted neighborhood meeting over the last year and includes a neighborhood meeting held on November 21, 2022, presented an overview of File No. PDEV22-013, for the southwest corner of D Street and Sultana Avenue. On February 22, 2023 a neighborhood meeting was held regarding File No. PZC22-001, for zoning consistency of 9.3 acres of land located on properties south of 5th Street and west of Mountain Avenue to be zoned from LDR-5 (Low-Density Residential) zoning district to MDR-18 (Medium Density Residential) zoning district and 4.7 acres located north of Holt Boulevard, west of San Antonio Avenue, and east of Boulder Avenue from MDR-25 (Medium-High Density Residential) zoning district to HDR-45 (High-Density Residential) zoning district. During this neighborhood meeting members of the public requested that the zone changes remain unchanged. Subsequently, City Council instructed staff to revert the General Plan land Use Plan to align with the existing zoning map.

On October 5, 2023, the Planning Department conducted an in-person Open House at the Ontario Senior Center, presenting an overview of File Nos. PGPA23-001 and PZC23-003, General Plan Amendment and Zone change for a 10-acre parcel situated near Imperial Avenue and Holt Avenue. A total of five community members attended the meeting. Attendees expressed concerns regarding potential construction impacts, encompassing issues including noise, vibration, and traffic along Holt Boulevard. Staff reaffirmed that the meeting's primary objective was to inform residents and property owners about the zoning and general plan change, clarifying that no development proposal is currently in place. Staff reaffirmed residents that they would receive notifications when entitlement applications are formally submitted.

PUBLIC NOTIFICATION: The subject application was advertised as a public hearing in at least one newspaper of general circulation in the City of Ontario (the Inland Valley Daily Bulletin newspaper). In addition, notices were mailed to all owners of real property located within a minimum of 300 feet of the exterior boundaries of the property that is the subject of the hearing, as shown on the records of the County Assessor.

CORRESPONDENCE: As of the preparation of this Agenda Report, Planning Department staff has not received any written or verbal communications from the owners or occupants of properties surrounding the Project site or from the public in general, regarding the subject application.

AGENCY/DEPARTMENT REVIEWS: Each City agency/department has been provided the opportunity to review and comment on the subject application and recommend conditions of approval to be imposed upon the application. At the time of the Resolution preparation, recommended conditions of approval were provided and are appended to the attached Resolutions as "Attachment A."

AIRPORT LAND USE COMPATIBILITY PLAN (ALUCP) COMPLIANCE: The California State Aeronautics Act (Public Utilities Code Section 21670 et seq.) requires that an Airport Land Use Compatibility Plan be prepared for all public use airports in the State; and requires that local land use plans and individual development proposals must be consistent with the policies set forth in the adopted Airport Land Use Compatibility Plan.

On April 19, 2011, the City Council of the City of Ontario approved and adopted the ONT ALUCP, establishing the Airport Influence Area for Ontario International Airport, which encompasses lands within parts of San Bernardino, Riverside, and Los Angeles Counties, and limits future land uses and development within the Airport Influence Area, as they relate to noise, safety, airspace protection, and overflight impacts of current and future airport activity. As the recommending body for the Project, the Planning Commission has reviewed and considered the facts and information contained in the Application and supporting documentation against the ONT ALUCP compatibility factors, including [1] Safety Criteria (ONT ALUCP Table 2-2) and Safety Zones (ONT ALUCP Map 2-2), [2] Noise Criteria (ONT ALUCP Table 2-3) and Noise Impact Zones (ONT ALUCP Map 2-3), [3] Airspace protection Zones (ONT ALUCP Map 2-4), and [4] Overflight Notification Zones (ONT ALUCP Map 2-5). As a result, the Planning Commission, therefore, finds and determines that the Project, when implemented in conjunction with the conditions of approval, will be consistent with the policies and criteria set forth within the ONT ALUCP.

COMPLIANCE WITH THE ONTARIO PLAN: The proposed Project is consistent with the principles, goals and policies contained within the Vision, Governance, Policy Plan (general plan), and City Council Priorities components of The Ontario Plan ("TOP"). More specifically, the goals and policies of TOP that are furthered by the proposed Project are as follows:

(1) City Council Goals.

- Operate in a Businesslike Manner.
- Focus Resources in Ontario's Commercial and Residential Neighborhoods.

(2) Vision.

Distinctive Development:

- Commercial and Residential Development.

➢ Development quality that is broadly recognized as distinctive and not exclusively tied to the general suburban character typical of much of Southern California.

(3) Governance.

Decision Making:

- Goal G1: Sustained decision-making that consistently moves Ontario towards its Vision by using The Ontario Plan as a framework for assessing choices.

  - G 1-2. Long-term Benefit. We require decisions to demonstrate and document how they add value to the community and support the Ontario Vision.

(4) Policy Plan (General Plan)

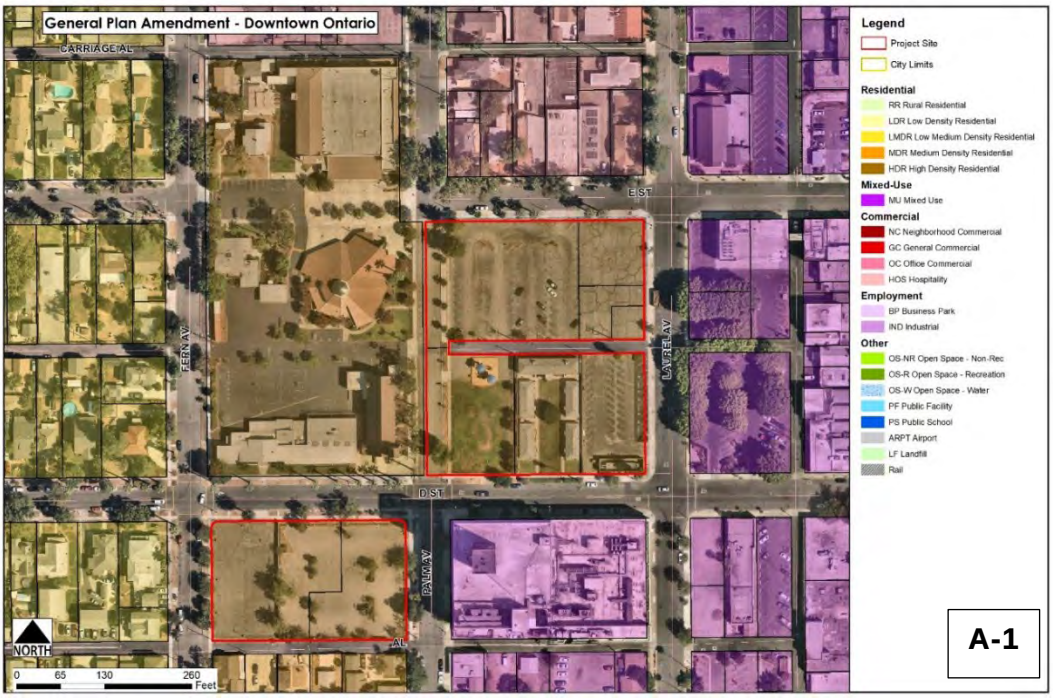
Land Use Element:

- LU-1.1 Strategic Growth. We concentrate growth in strategic locations that help create place and identity, maximize available and planned infrastructure, foster the development of transit, and support the expansion of the active and multimodal transportation networks throughout the City.

- LU-1.6 Complete Community. We incorporate a variety of land uses and building types in our land use planning efforts that result in a complete community where residents at all stages of life, employers, workers, and visitors have a wide spectrum of choices of where they can live, work, shop and recreate within Ontario.

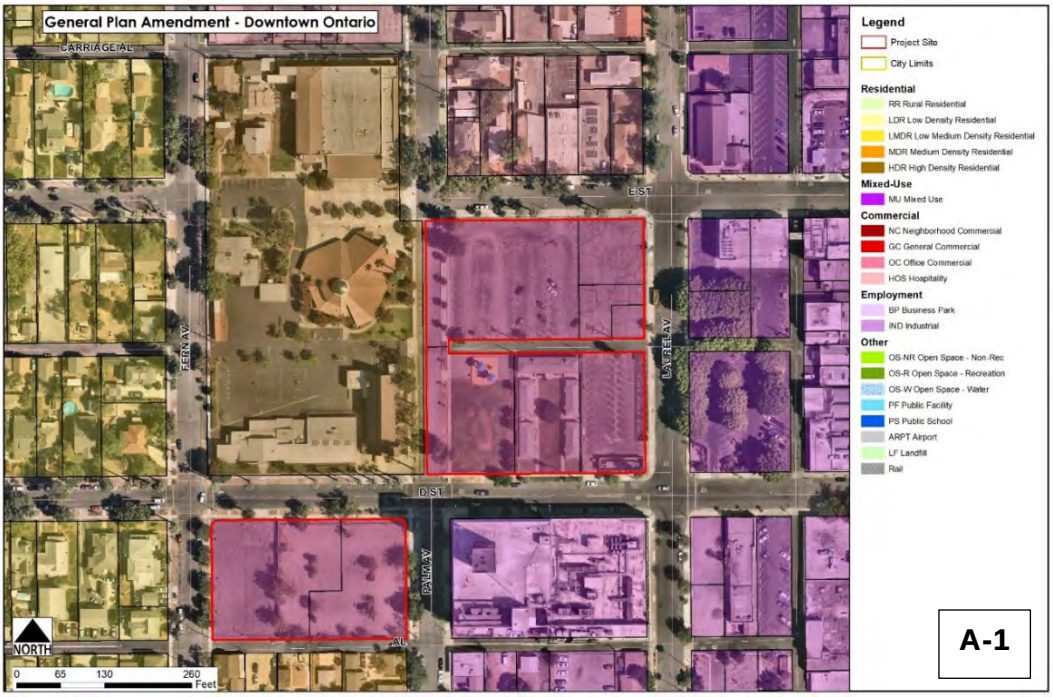
- Goal LU-2 Compatibility: Compatibility between a wide range of uses and a resultant urban patterns and forms.

Community Economics Element:



- Goal CE-1 Complete Community: A complete community that provides for all incomes and stages of life.

- Goal CE-2 Placemaking: A City of distinctive neighborhoods, districts, corridors, and centers where people choose to be.



HOUSING ELEMENT COMPLIANCE: The proposed General Plan Amendment action modifying land use designations for 4.7 acres from High-Density Residential to Medium-Density Residential, located north of Holt Boulevard, west of San Antonio Avenue, and east of Boulder Avenue (Exhibit A-3), is not consistent with the Housing Element of the General Plan component of The Ontario Plan. The property is listed in the Housing Element Sites Inventory contained in Tables B-1 and B-2 of the Housing Element Technical Report, and inconsistent with the number of dwelling units or density specified in the Housing Element Sites Inventory; therefore, a General Plan Amendment to remove the subject property from the Housing Element Sites Inventory is required. Removal of the subject property from the inventory will not impact the City's Regional Housing Needs Assessment ("RHNA") obligations, as there are an adequate number of sites in the inventory to meet the RHNA obligation.

ENVIRONMENTAL REVIEW: The environmental impacts of this Project were previously reviewed in conjunction with The Ontario Plan 2050 Supplemental Environmental Impact Report (State Clearinghouse No. 2021070364) which was adopted by the City Council on August 16, 2022, in conjunction with File No. PGPA20-002. An Addendum to The Ontario Plan 2050 SEIR was prepared to address the environmental effects of the project.

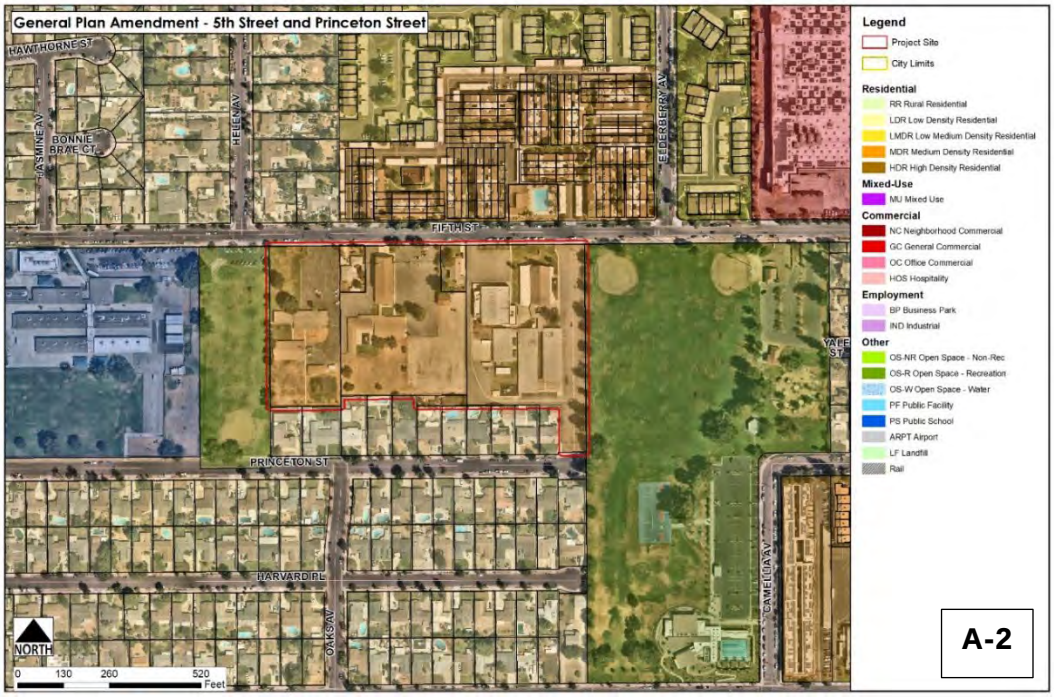


Exhibit A: GENERAL PLAN AMENDMENTS

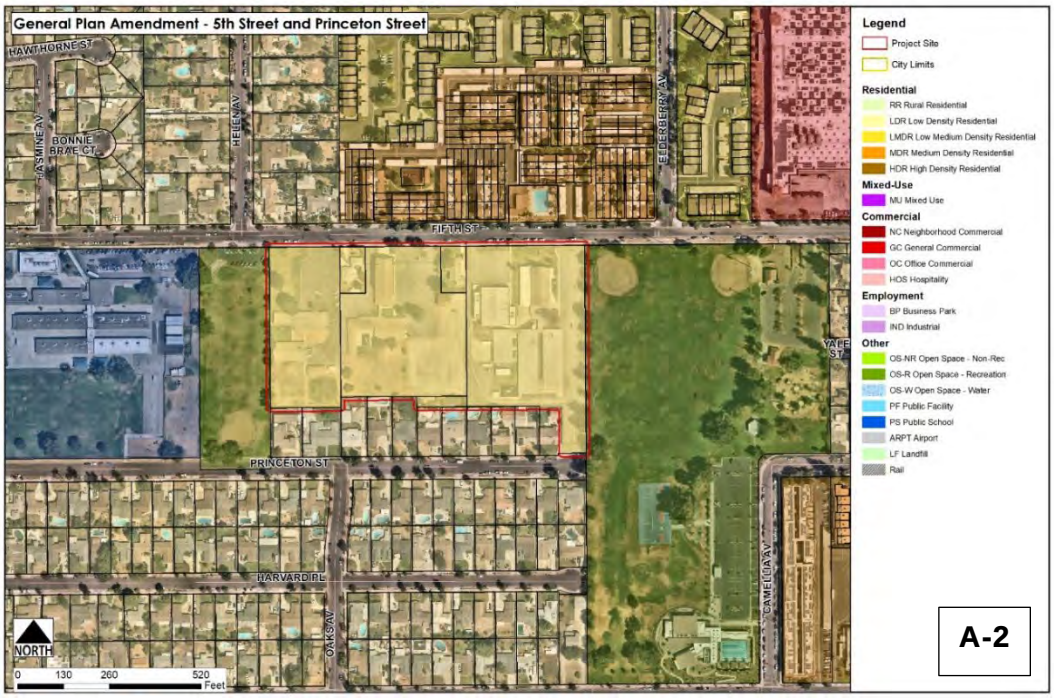
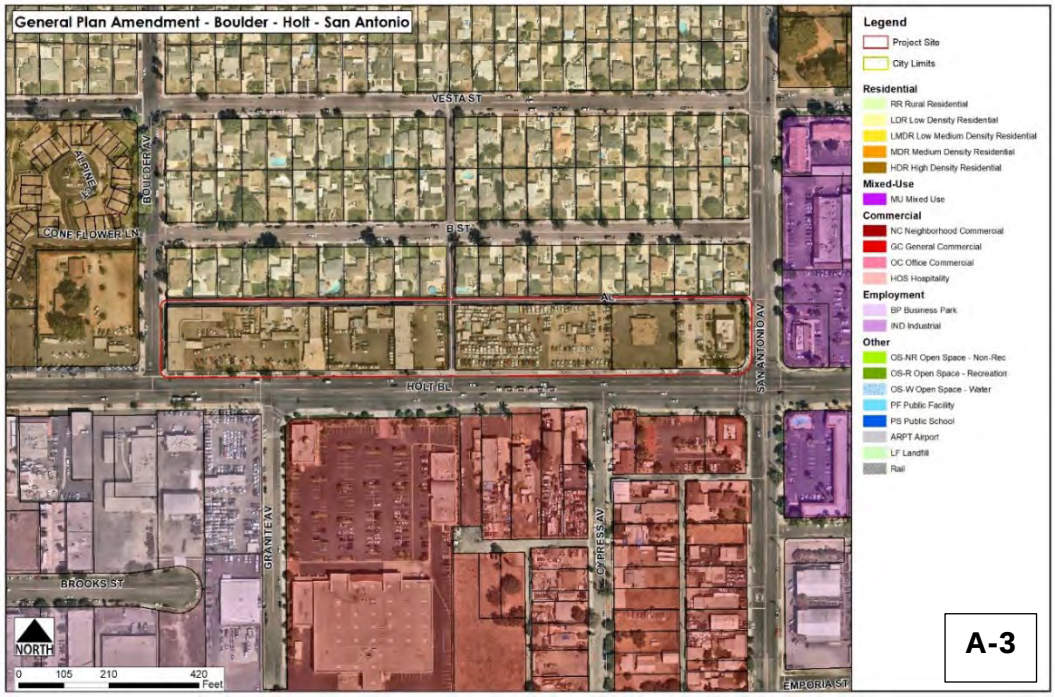


Existing Policy Plan Land Use Designation – High Density Residential



Proposed Policy Plan Land Use Designation – Downtown Mixed Use

Notes

1 Historically, citywide buildout levels do not achieve the maximum allowable density/intensity on every parcel and are, on average, lower than allowed by the Policy Plan. Accordingly, the buildout projections in this Policy Plan do not assume buildout at the maximum density or intensity and instead are adjusted downward. There are a few notable exceptions to this. The assumed density for Low-Density Residential north of Riverside Drive is estimated above the allowed density to account for the continued use of areas that were built at densities above the current allowance, and to account for growth in these areas due to accessory dwelling unit (ADU) development and lot splits. Some areas were also entitled at greater densities due to the use of gross acreage rather than net acreage. These areas, identified in note 7 utilized customized growth assumptions to ensure that the future projection was equal to or larger than the number of existing units in built areas, and equal to or larger than existing entitlements in undeveloped or partially developed areas.

2 Acres are based on the City's Parcel data as of January 2021.

3 Assumed Density/Intensity includes both residential density, expressed as units per acre, and non-residential intensity, expressed as floor area ratio (FAR), which is the amount of building square feet in relation to the size of the lot.

4 Projections of population by residential designation are based on projected occupancy rates and a persons-per-household factor that varies by housing type.

5 The factors used to generate the number of employees by land use category were derived by comparing 2018 employment data published by the U.S. Census as part of the Longitudinal Employer-Household Dynamics (LEHD) dataset to existing building square footage by use type, as recorded in the City's building permit database.

LU-03 Future Buildout Table

Land Use	Acres[2]	Assumed Density/Intensity[3]	Units	Pop[4]	Non-Residential Square Feet	Jobs[5]
		• 5% of area at 0.75 FAR office • 55% of area at 0.50 FAR retail

General Commercial	385	0.30 FAR	-	-	5,033,395	5,605
Office/ Commercial	310	0.75 FAR	-	-	10,101,733	28,239

LU-03 Future Buildout Table

Land Use	Acres[2]	Assumed Density/Intensity[3]	Units	Pop[4]	Non-Residential Square Feet	Jobs[5]

6 Acreages and corresponding buildout estimates for these designations do not reflect underlying land uses within the Business Park and Industrial Overlays. Estimates within overlay areas are included within the corresponding Business Park and Industrial categories.

7. To ensure future projections are equal to or larger than existing conditions in built out areas as of August 2021, and equal to or larger than existing entitlements (approved before August 2021) in undeveloped or partially developed areas, buildout estimates for the following projects, assumed realistic densities as follows: Countryside Specific Plan (Low Density Residential: 6.18 du/ac), Creekside Specific Plan (Low Density Residential: 7.47 du/ac, Medium Density Residential: 15.81 du/ac), Subarea 29 Specific Plan (Low Density Residential: 7.03).
8. In certain mixed use categories, different buildout assumptions were employed on different sites. Variations in assumptions are included in multiple rows within this table.

Last Amended: August 16, 2022

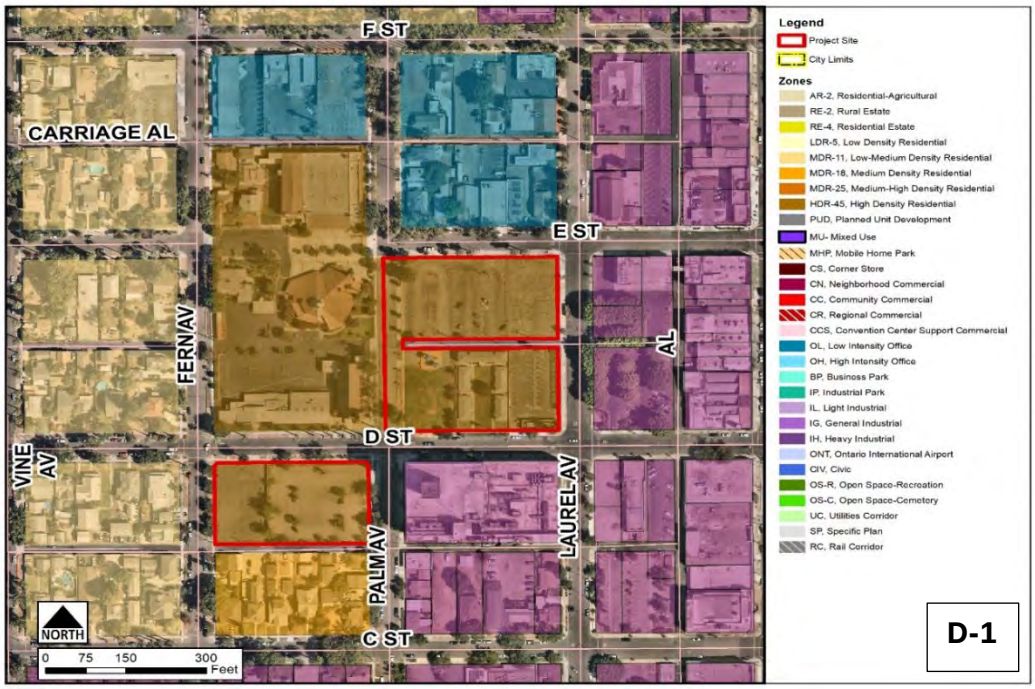

Exhibit C: PROPOSED LAND USE DESIGNATION TABLE (LU-02)

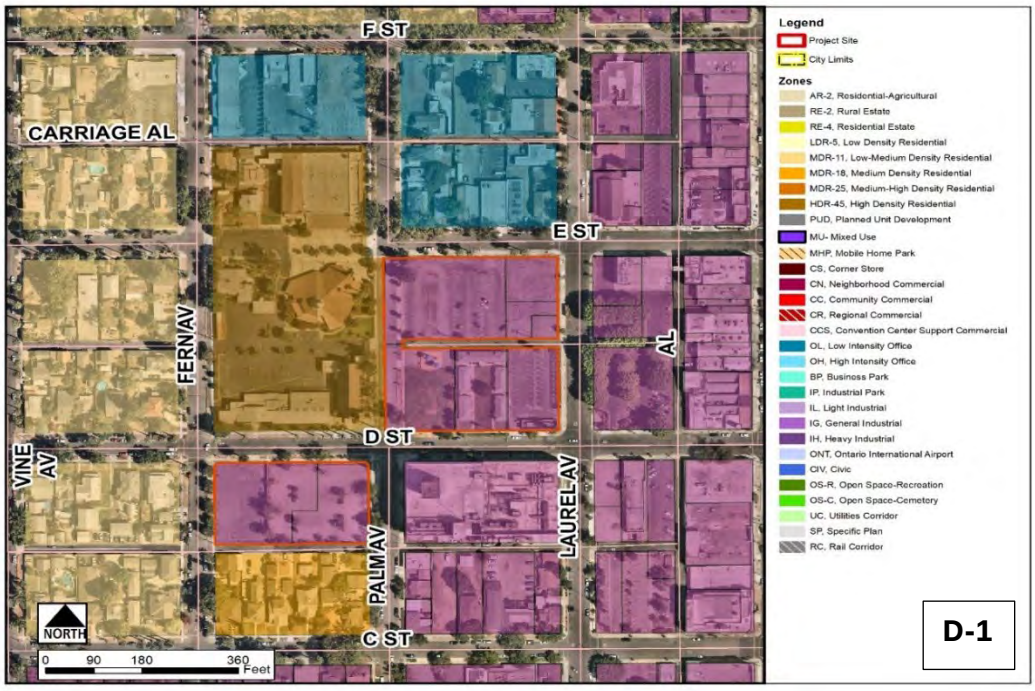
LU-02 Land Use Designations Summary Table



Land Use Designation	Residential Density & Non-Residential Intensity	Intention
		consider a host of uses including a transit station and multimodal transfer station.
Mixed Use – An intense mixture of uses that, when concentrated, create focal points for community activity and identity and facilitate walking, biking, and the use of transit. The Mixed Use land use category accommodates a horizontal and/or vertical mixture of retail, service, office, restaurant, entertainment, cultural, and residential uses. • Density, intensity and intended character varies by area, as generally described below, and defined in detail under the applicable Place Type in the Community Design Element. • The densities and intensities of the Mixed Use designation represent the intended level of anticipated development; however, individual projects may vary depending upon an approved master plan, such as a specific plan, or planned unit development. • The maximum amount of development in each Mixed Use area shall be limited by the Future Buildout Projections detailed in Table LU-03. Further direction regarding land use distributions, densities and intensities within some of these areas are provided by specific plans as noted below. • Most Mixed Use areas are the focal point of the City's Place Type designations illustrated on Figure CD-01 and noted below. Place Types are defined in the Community Design Element, and the vision for the intended outcome and character of each area is established and illustrated in the Place Type Figures noted below.		
Mixed Use - Downtown[1] *(MU-Downtown)*	• 25.0 to 75.0 dwelling units per acre • 2.0 FAR for retail and office uses *Subject to PUD at City's discretion*	Envisioned as an intensive vertical and horizontal mixture of retail, civic, office, and residential uses in a pedestrian friendly atmosphere. The historic character is enhanced. The most intensive uses are envisioned along Euclid and Holt Avenues. [Link to Community Design Element *Urban, Mixed Use, and Transit-oriented Place Types* Section, Community Design Element *Exhibits CD-01, CD-02, CD-03* and *CD-08*]
Mixed Use - Holt Blvd[1] *(MU-Holt)*	• 14.0[2] to 40.0 dwelling units per acre • 2.0 FAR for office uses • 1.0 FAR for retail uses *Subject to PUD at City's discretion*	This area is envisioned as a low-rise (3-5 stories) intensification of the Holt Corridor. The intent is to create identity and place along the Holt Corridor, connect the corridor to Downtown, and connect the Downtown to the Ontario Airport Metro Center. [Link to Community Design Element *Urban, Mixed Use, and Transit-oriented Place Types* Section, Community Design Element *Exhibits CD-01, CD-02, CD-08* and *CD-09*]
Mixed Use - Meredith[1] *(MU-Meredith)*	• 14.0 to 125.0 dwelling units per acre • 3.0 FAR for office and retail uses	This area is envisioned as a mixture of mid-rise buildings, regional-serving retail and office centers, and stand-alone high density residential projects. [Link to Community Design Element *Urban, Mixed Use, and Transit-oriented Place Types* Section, Community Design Element *Exhibits CD-01, CD-02,* and *CD-08*]

Proposed Zone: MU-6 (East Holt Mixed Use) Zoning District.

Existing Zone: OL (Low Intensity Office) Zoning District.

Proposed Zone: MU-1 (Downtown Mixed Use) Zoning District.

RESOLUTION NO. PC23-084

A RESOLUTION OF THE PLANNING COMMISSION OF THE CITY OF ONTARIO, CALIFORNIA, RECOMMENDING THE CITY COUNCIL APPROVE AN ADDENDUM TO THE ONTARIO PLAN 2050 CERTIFIED SUPPLEMENTAL ENVIRONMENTAL IMPACT REPORT (STATE CLEARINGHOUSE NO. 2021070364), FOR WHICH AN INITIAL STUDY WAS PREPARED, ALL IN ACCORDANCE WITH THE CALIFORNIA ENVIRONMENTAL QUALITY ACT, AS AMENDED, FOR FILE NOS. PGPA23-001 AND PZC23-003.

WHEREAS, in August 2022, the City Council certified The Ontario Plan 2050 ("TOP 2050") Supplemental Environmental Impact Report ("SEIR") (State Clearinghouse No.2021070364), adopted an update to The Ontario Plan Policy Plan (general plan) and the Preferred Land Use Plan, and adopted a Statement of Overriding Considerations pursuant to CEQA; and

WHEREAS, prior to the adoption of this Resolution, the Planning Director of the City of Ontario prepared and approved for attachment to the Certified Supplemental Environmental Impact Report, an addendum to The Ontario Plan 2050 Certified Supplemental Environmental Impact Report (State Clearinghouse No. 2021070364) for File No. PZC23-003, (hereinafter referred to as "SEIR Addendum"), all in accordance with the requirements of the California Environmental Quality Act of 1970, together with State and local guidelines implementing said Act, all as amended to date (collectively referred to as "CEQA"); and

WHEREAS, the SEIR Addendum concluded that implementation of the Project could result in a number of significant effects on the environment and identified mitigation measures that would reduce each of those significant effects to a less-than-significant level; and

WHEREAS, pursuant to California Environmental Quality Act ("CEQA") Guidelines Section 15164(a), a lead agency shall prepare an addendum to a previously certified EIR if some changes or additions are necessary to a project, but the preparation of a subsequent or supplemental EIR is not required; and

WHEREAS, the City determined that none of the conditions requiring preparation of a subsequent or supplemental EIR would occur from the Project, and that preparation of an Addendum to the Certified SEIR was appropriate; and

WHEREAS, the City of Ontario is the lead agency on the Project, and the Planning Commission is the recommending authority for a General Plan Amendment (File No. PGPA23-001) and Zone Change (File No. PZC23-003) application; and

WHEREAS, the Planning Commission is the recommending body for the General Plan Amendment (File No. PGPA23-001) and Zone Change (File No. PZC23-003), therefore approval will not be final and complete until it has been approved by the City Council; and

WHEREAS, the Planning Commission has reviewed and considered the SEIR Addendum for the Project, has concluded that none of the conditions requiring preparation of a subsequent of supplemental Environmental Impact Report have occurred, and intends to take actions on the Project in compliance with CEQA and state and local guidelines implementing CEQA; and

WHEREAS, the SEIR Addendum for the Project is on file in the Planning Department, located at 303 East B Street, Ontario, CA 91764, and is available for inspection by any interested person at that location and are, by this reference, incorporated into this Resolution as if fully set forth herein; and

WHEREAS, all legal prerequisites to the adoption of this Resolution have occurred.

NOW, THEREFORE, IT IS HEREBY FOUND, DETERMINED, AND RESOLVED by the Planning Commission of the City of Ontario, as follows:

SECTION 1: ***Environmental Determination and Findings.*** As the recommending authority for the Project, the Planning Commission has reviewed and considered the information contained in the administrative record for the Project. Based upon the facts and information contained in the administrative record, including all written and oral evidence presented to the Planning Commission, the Planning Commission finds as follows:

(1) The environmental impacts of this project were reviewed in conjunction with an Addendum to The Ontario Plan 2050 Supplemental Environmental Impact Report (State Clearinghouse No. 2021070364) adopted by City Council on August 16, 2022, in conjunction with File No. PGPA20-002; and

(2) The SEIR Addendum and administrative record have been completed in compliance with CEQA, the State CEQA Guidelines, and the City of Ontario Local CEQA Guidelines; and

(3) The City's "Guidelines for the Implementation of the California Environmental Quality Act (CEQA)" provide for the use of a single environmental assessment in situations where the impacts of subsequent projects are adequately analyzed. This Application introduces no new significant environmental impacts; and

(4) All previously adopted mitigation measures shall be a condition of project approval, as they are applicable to the Project, and are incorporated herein by this reference; and

(5) The SEIR Addendum contains a complete and accurate reporting of the environmental impacts associated with the Project, and reflects the independent judgment of the Planning Commission; and

(6) There is no substantial evidence in the administrative record supporting a fair argument that the project may result in significant environmental impacts.

SECTION 2: ***Additional Environmental Review Not Required.*** Based on the Addendum, all related information presented to the Planning Commission, and the specific findings set forth in Section 1, above, the Planning Commission finds that the preparation of a subsequent or supplemental Environmental Impact Report is not required for the Project, as the Project:

(1) Does not constitute substantial changes to the Certified SEIR that will require major revisions to the Certified SEIR due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects; and

(2) Does not constitute substantial changes with respect to the circumstances under which the Certified SEIR was prepared, that will require major revisions to the Certified SEIR due to the involvement of new significant environmental effects or a substantial increase in the severity of the previously identified significant effects; and

(3) Does not contain new information of substantial importance that was not known and could not have been known with the exercise of reasonable diligence at the time the Certified EIR was certified/adopted, that shows any of the following:

(a) The project will have one or more significant effects not discussed in the Certified SEIR; or

(b) Significant effects previously examined will be substantially more severe than shown in the Certified SEIR; or

(c) Mitigation measures or alternatives previously found not to be feasible would in fact be feasible and would substantially reduce one or more significant effects of the Project, but the City declined to adopt such measures; or

(d) Mitigation measures or alternatives considerably different from those analyzed in the Certified SEIR would substantially reduce one or more significant effects on the environment, but which the City declined to adopt.

SECTION 3: ***Planning Commission Action.*** Based upon the findings and conclusions set forth in Sections 1 and 2, above, the Planning Commission hereby finds that based upon the entire record of proceedings before it, and all information received, that there is no substantial evidence that the Project will constitute substantial changes to the Certified EIR, and does hereby recommend that the City Council APPROVES the SEIR Addendum, attached hereto as "Attachment A," and incorporated herein by this reference.

SECTION 4: ***Custodian of Records.*** The documents and materials that constitute the record of proceedings on which these findings have been based are located at the City of Ontario City Hall, 303 East "B" Street, Ontario, California 91764. The custodian for these records is the City Clerk of the City of Ontario.

SECTION 5: ***Certification to Adoption.*** The Secretary shall certify to the adoption of the Resolution.

- - - - - - - - - - - - - -

The Secretary Pro Tempore for the Planning Commission of the City of Ontario shall certify as to the adoption of this Resolution.

I hereby certify that the foregoing Resolution was duly and regularly introduced, passed and adopted by the Planning Commission of the City of Ontario at a special meeting thereof held on the 24th day of October 2023, and the foregoing is a full, true and correct copy of said Resolution, and has not been amended or repealed.

Nancy DeDiemar
Planning Commission Chairperson

ATTEST:

Rudy Zeledon
Community Development Assistant Director and Secretary to the Planning Commission

STATE OF CALIFORNIA)
COUNTY OF SAN BERNARDINO)
CITY OF ONTARIO)

I, Gwen Berendsen, Secretary Pro Tempore of the Planning Commission of the City of Ontario, DO HEREBY CERTIFY that foregoing Resolution No. PC23-084, was duly passed and adopted by the Planning Commission of the City of Ontario at their special meeting held on October 24, 2023 by the following roll call vote, to wit:

AYES: Anderson, Dean, DeDiemar, Del Turco, Gage, Lampkin, Ricci

NOES: None

ABSENT: None

ABSTAIN: None

Gwen Berendsen
Secretary Pro Tempore

6. **Policy Plan (General Plan) Designation:** Various

7. **Zoning Designation:** Various

8. **Description of Project:**

    a. A City initiated request to amend the Policy Plan (General Plan) component of The Ontario Plan to:

        i. [1] Modify the Land Use Plan (Exhibit LU-01) changing the land use designation for 3.8 acres of land from High-Density Residential to Mixed Use - Downtown,
        ii. [2] Modify the Land Use Plan (Exhibit LU-01) changing the land use designation for 9.3 acres of land, from Medium-Density Residential to Low-Density Residential,
        iii. [3] Modify the Land Use Plan (Exhibit LU-01) changing the land use designation for 4.7 acres of land from High-Density Residential to Medium-Density Residential,
        iv. [4] Modify the Land Use Plan (Exhibit LU-01) changing the land use designation for 9.8 acres of land from Business Park to Mixed Use – East Holt, and
        v. [5] Modify the text in the Land Use Designation Summary Table (Exhibit LU-02) to allow Civic uses within the Mixed-Use - Downtown land use designation.

    b. A City-initiated Zone Change request to amend the Official Zoning Map:
        i. [1] rezoning 3.8 acres of land from HDR-45 (High-Density Residential) to MU-1 (Downtown Mixed Use),
        ii. [2] rezoning of 9.8 acres of land from BP (Business Park) to MU-6 (East Holt Mixed Use), and
        iii. [3] rezoning 5.75 acres of land from OL (Low-Intensity Office) to MU-1 (Downtown Mixed Use).

9. **Project Setting:** As illustrated in Figure 1, the Project site is located is located in southwestern San Bernardino County, within the City of Ontario.

10. **Analysis:** According to the California Environmental Quality Act ("CEQA") Guidelines Section 15164, an Addendum to a previously Certified EIR may be used if some changes or additions are necessary, but none of the conditions described in Section 15162 requiring the preparation of a subsequent Negative Declaration or EIR have occurred. The CEQA Guidelines require that a brief explanation be provided to support the findings that no subsequent EIR or Negative Declaration are needed for further discretionary approval. These findings are described below:

a. *Required Finding: Substantial changes are not proposed for the project that will require major revisions of the previous EIR due to the involvement of new, significant environmental effects or a substantial increase in the severity of previously identified effects.*

Substantial changes are not proposed by the Project and project implementation will not require revisions to TOP 2050 SEIR. TOP 2050 SEIR analyzed the direct and physical changes in the environment that would be caused by TOP; focusing on changes to land use associated with the final buildout of the Official Land Use Plan. TOP 2050 SEIR assumes the same overall development at buildout as shown below.

TOP Buildout Analysis	Units	Population	Non-Residential Square Footage	Jobs
Buildout per current TOP 2050 SEIR	129,562	410,492	261,491,779	296,002
Buildout per Proposed Project	129,620 +58	410,643 +151	261,417,457 (74,322)	295,776 (226)

Since the anticipated buildout change is minor, no revisions to TOP 2050 SEIR are required. In addition, all previously adopted mitigation measures are a condition of project approval and are incorporated herein by reference. The attached Initial Study provides an analysis of the Project and verification that the Project will not cause environmental impacts such that any of the circumstances identified in CEQA Guidelines Section 15162 are present.

b. *Required Finding: Substantial changes have not occurred with respect to the circumstances under which the project is undertaken, that would require major revisions of the previous Environmental Impact Report due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects.*

Substantial changes have not occurred with respect to the circumstances under which the project was undertaken, that would require major revisions to TOP 2050 SEIR in that the proposed zoning changes are consistent with what was analyzed under the TOP 2050 SEIR; therefore, no proposed changes or revisions to the SEIR are required. In addition, all previously adopted mitigation measures are a condition of project approval and are incorporated herein by reference. The attached Initial Study provides an analysis of the Project and verification that the Project will not cause environmental impacts such that any of the circumstances identified in CEQA Guidelines Section 15162 are present.

c. Required Finding: No new information has been provided that would indicate that the proposed project would result in one or more significant effects not discussed in the previous EIR.

No new information has been provided that would indicate the proposed Project would result in any new significant effects not previously discussed in TOP 2050 SEIR; therefore, no proposed changes or revisions to the EIR are required. In addition, all previously adopted mitigation measures are a condition of project approval are incorporated herein by reference. The attached Initial Study provides an analysis of the Project and verification that the Project will not cause environmental impacts such that any of the circumstances identified in CEQA Guidelines Section 15162 are present.

CEQA Requirements for an Addendum: If changes to a project or its circumstances occur or new information becomes available after adoption of a negative declaration, the lead agency may: (1) prepare a subsequent EIR if the criteria of CEQA Guidelines Section 15162(a) are met, (2) prepare a subsequent negative declaration, (3) prepare an addendum, or (4) prepare no further documentation. (CEQA Guidelines Section 15162(b)). When only minor technical changes or additions to the negative declaration are necessary and none of the conditions described in section 15162 calling for the preparation of a subsequent EIR or negative declaration have occurred, CEQA allows the lead agency to prepare and adopt an addendum. (CEQA Guidelines Section 15164(b).)

Under CEQA Section 15162, no subsequent EIR or negative declaration shall be prepared for that project unless the lead agency determines, on the basis of substantial evidence in light of the whole record, one or more of the following:

1) Substantial changes are proposed in the project which will require major revisions of the previous EIR or negative declaration due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects;

2) Substantial changes occur with respect to the circumstances under which the project is undertaken which will require major revisions of the previous EIR or negative declaration due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects; or

3) New information of substantial importance, which was not known and could not have been known with the exercise of reasonable diligence at the time the previous EIR was certified as complete or the negative declaration was adopted, shows any of the following:

i. The project will have one or more significant effects not discussed in the previous EIR or negative declaration; or

ii. Significant effects previously examined will be substantially more severe than shown in the previous EIR; or

iii. Mitigation measures or alternatives previously found not to be feasible would in fact be feasible, and would substantially reduce one or more significant effects of the project, but the project proponents decline to adopt the mitigation measure or alternative; or

iv. Mitigation measures or alternatives which are considerably different from those analyzed in the previous EIR would substantially reduce one or more significant effects on the environment, but the project proponents decline to adopt the mitigation measure or alternative.

Thus, if the Project does not result in any of the circumstances listed in Section 15162 (i.e., no new or substantially greater significant impacts), the City may properly adopt an addendum to the Certified SEIR.

Conclusion: TOP 2050 SEIR was prepared as a Supplemental EIR in accordance with CEQA, the CEQA Guidelines, the City's Rules for the Implementation of CEQA, and in accordance with Section 15121(a) of the CEQA Guidelines (California Code of Regulations, Title 14, Division 6, Chapter 3). The SEIR considered the direct physical changes and reasonably foreseeable indirect physical changes in the environment that would be caused by TOP. Consequently, the SEIR focused on impacts from changes to land use associated with buildout of the City's Official Land Use Plan and impacts from the resulting population and employment growth. The proposed land use designation changes coordinate with the existing uses of the properties and uses within the surrounding areas. The Project will not result in a change in the final buildout projections (TOP Buildout Analysis, page 10). Subsequent activities within TOP 2050 SEIR have been evaluated to determine whether an additional CEQA document needs to be prepared.

Accordingly, and based on the findings and information contained in the previously certified TOP 2050 SEIR, the analysis above, the attached Initial Study, and CEQA statute and State CEQA Guidelines, including Sections 15164 and 15162, the Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in TOP SEIR. No changes or additions to TOP SEIR analyses are necessary, nor is there a need for any additional mitigation measures. Therefore, pursuant to CEQA Guidelines Section 15164, the City Council hereby adopts this Addendum to TOP SEIR.

11. Other public agencies whose approval is required (e.g., permits, financing approval or participation agreement): None

12. Have California Native American tribes traditionally and culturally affiliated with the project area requested consultation pursuant to Public Resources Code section 21080.3.1?

☒Yes ☐ No

If "yes", has consultation begun? ☐ Yes ☐ No ☒ Completed

ENVIRONMENTAL FACTORS POTENTIALLY AFFECTED

The environmental factors checked below would be potentially affected by this project, involving at least one impact that is a "Potentially Significant Impact" as indicated by the checklist on the following pages.

☐ Aesthetics	☐ Agriculture/Forestry Resources	☐ Air Quality
☐ Biological Resources	☐ Cultural Resources	☐ Geology / Soils
☐ Greenhouse Gas Emissions	☐ Hazards & Hazardous Materials	☐ Hydrology/Water Quality
☐ Land Use / Planning	☐ Mineral Resources	☐ Noise
☐ Population / Housing	☐ Public Services	☐ Recreation
☐ Transportation	☐ Utilities / Service Systems	☐ Mandatory Findings of Significance
☐ Tribal Cultural Resources	☐ Wildfire	☐ Energy

DETERMINATION (To be completed by the Lead Agency)

On the basis of this initial evaluation:

☐ I find that the proposed project COULD NOT have a significant effect on the environment, and a NEGATIVE DECLARATION will be prepared.

☐ I find that although the proposed project could have a significant effect on the environment, there will not be a significant effect in this case because revisions in the project have been made by or agreed to by the project proponent. A MITIGATED NEGATIVE DECLARATION will be prepared.

☐ I find that the proposed project MAY have a significant effect on the environment, and an ENVIRONMENTAL IMPACT REPORT is required.

☐ I find that the proposed project MAY have a "potentially significant" or "potentially significant unless mitigated" impact on the environment, but at least one effect 1) has been adequately analyzed in an earlier document pursuant to applicable legal standards, and 2) has been addressed by mitigation measures based on the earlier analysis as described on attached sheets. An ENVIRONMENTAL IMPACT REPORT is required, but it must analyze only the effects that remain to be addressed.

☒ I find that although the proposed project could have a significant effect on the environment, because all potentially significant effects (a) have been analyzed adequately in an earlier Certified The Ontario Plan 2050 (TOP 2050) Supplemental Environmental Impact Report (SEIR) pursuant to applicable standards, and (b) have been avoided or mitigated pursuant to that earlier Certified TOP 2050 SEIR, including revisions or mitigation measures that are imposed upon the proposed project, the analysis from the Certified TOP 2050 SEIR prepared for this project was used as a basis for this Addendum, nothing further is required.

Printed Name: Robert Morales, Assistant Planner For: City of Ontario

EVALUATION OF ENVIRONMENTAL IMPACTS

1. A brief explanation is required for all answers except "No Impact" answers that are adequately supported by the information sources a lead agency cites in the parentheses following each question. A "No Impact" answer is adequately supported if the referenced information sources show that the impact simply does not apply to projects like the one involved (e.g., the project falls outside a fault rupture zone). A "No Impact" answer should be explained where it is based on project-specific factors as well as general standards (e.g., the project will not expose sensitive receptors to pollutants, based on a project-specific screening analysis).

2. All answers must take account of the whole action involved, including off-site as well as on-site, cumulative as well as project-level, indirect as well as direct, and construction as well as operational impacts.

3. Once the lead agency has determined that a particular physical impact may occur, then the checklist answers must indicate whether the impact is potentially significant, less than significant with mitigation, or less than significant. "Potentially Significant Impact" is appropriate

if there is substantial evidence that an effect is significant. If there are one or more "Potentially Significant Impact" entries when the determination is made, an EIR is required.

4. "Negative Declaration: Less Than Significant with Mitigation Incorporated" applies where the incorporation of mitigation measures has reduced an effect from "Potentially Significant Impact" to a "Less than Significant Impact." The lead agency must describe the mitigation measures, and briefly explain how they reduce the effect to a less than significant level (mitigation measures from the "Earlier Analyses" Section may be cross-referenced).

5. Earlier analyses may be used where, pursuant to the tiering, program EIR, or other CEQA process, an effect has been adequately analyzed in an earlier EIR or Negative Declaration. Section 15063(c)(3)(D). In this case, a brief discussion should identify the following:

   a. Earlier Analyses Used. Identify and state where they are available for review.

   b. Impacts Adequately Addressed. Identify which effects from the above checklist were within the scope of and adequately analyzed in an earlier document pursuant to applicable legal standards, and state whether such effects were addressed by mitigation measures based on the earlier analysis.

   c. Mitigation Measures. For effects that are "Less than Significant with Mitigation Measures Incorporated," describe the mitigation measures which were incorporated or refined from the earlier document and the extent to which they address site-specific conditions for the project.

6. Lead agencies are encouraged to incorporate into the checklist references to information sources for potential impacts (e.g., general plans, zoning ordinances). Reference to a previously prepared or outside document should, where appropriate, include a reference to the page or pages where the statement is substantiated.

7. Supporting Information Sources. A source list should be attached, and other sources used, or individuals contacted should be cited in the discussion.

8. This is only a suggested form, and lead agencies are free to use different formats; however, lead agencies should normally address the questions from this checklist that are relevant to a project's environmental effects in whatever format is selected.

9. The explanation of each issue should identify:

   a. The significance criteria or threshold, if any, used to evaluate each question; and

   b. The mitigation measure identified, if any, to reduce the impact to less than significance.

Issues	*Potentially Significant Impact*	*Less Than Significant with Mitigation*	*Less Than Significant Impact*	*No Impact*
1. **AESTHETICS**. Except as provided in Public Resources Code section 21099, would the project:				
a) Have a substantial adverse effect on a scenic vista?	☐	☐	☐	☒
b) Substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway?	☐	☐	☐	☒

Issues	*Potentially Significant Impact*	*Less Than Significant with Mitigation*	*Less Than Significant Impact*	*No Impact*
c) In non-urbanized areas, substantially degrade the existing visual character or quality of public views of the site and its surroundings? (Public views are those that are experienced from publicly accessible vantage point). If the project is in an urbanized area, would the project conflict with applicable zoning and other regulations governing scenic quality?)	☐	☐	☐	☒
d) Create a new source of substantial light or glare which would adversely affect day or nighttime views in the area?	☐	☐	☐	☒
2. **AGRICULTURE AND FOREST RESOURCES.** In determining whether impacts to agricultural resources are significant environmental effects, lead agencies may refer to the California Agricultural Land Evaluation and Site Assessment Model (1997) prepared by the California Dept. of Conservation as an optional model to use in assessing impacts on agriculture and farmland. In determining whether impacts to forest resources, including timberland, are significant environmental effects, lead agencies may refer to information compiled by the California Department of Forestry and Fire Protection regarding the state's inventory of forest land, including the Forest and Range Assessment Project and the Forest Legacy Assessment project; and forest carbon measurement methodology provided in Forest protocols adopted by the California Air Resources Board. Would the project:				
a) Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?	☐	☐	☐	☒
b) Conflict with existing zoning for agricultural use, or a Williamson Act contract?	☐	☐	☐	☒
c) Conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code section 12220(g)), timberland (as defined by Public Resources Code section 4526), or timberland zoned Timberland Production (as defined by Government Code section 51104(g))?	☐	☐	☐	☒
d) Result in the loss of forest land or conversion of forest land to non-forest use?	☐	☐	☐	☒
e) Involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland, to non-agricultural use or conversion of forest land to non-forest use?	☐	☐	☐	☒
3. **AIR QUALITY**. Where available, the significance criteria established by the applicable air quality management district or air pollution control district may be relied upon to make the following determinations. Would the project:				
a) Conflict with or obstruct implementation of the applicable air quality plan?	☐	☐	☐	☒
b) Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard?	☐	☐	☐	☒

Issues	*Potentially Significant Impact*	*Less Than Significant with Mitigation*	*Less Than Significant Impact*	*No Impact*
c) Expose sensitive receptors to substantial pollutant concentrations?	☐	☐	☐	☒
d) Result in other emissions (such as those leading to odors) adversely affecting a substantial number of people?	☐	☐	☐	☒
4. **BIOLOGICAL RESOURCES**. Would the project:				
a) Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?	☐	☐	☐	☒
b) Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?	☐	☐	☐	☒
c) Have a substantial adverse effect on state or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?	☐	☐	☐	☒
d) Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?	☐	☐	☐	☒
e) Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?	☐	☐	☐	☒
f) Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan?	☐	☐	☐	☒
5. **CULTURAL RESOURCES**. Would the project:				
a) Cause a substantial adverse change in the significance of a historical resource pursuant to § 15064.5?	☐	☐	☐	☒
b) Cause a substantial adverse change in the significance of an archaeological resource pursuant to § 15064.5?	☐	☐	☐	☒
c) Disturb any human remains, including those interred outside of dedicated cemeteries?	☐	☐	☐	☒
6. **ENERGY**. Would the project:				
a) Result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation?	☐	☐	☐	☒
b) Conflict with or obstruct a state or local plan for renewable energy or energy efficiency?	☐	☐	☐	☒

Issues	*Potentially Significant Impact*	*Less Than Significant with Mitigation*	*Less Than Significant Impact*	*No Impact*
7. **GEOLOGY AND SOILS**. Would the project:				
a) Directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury or death involving:				
i) Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publication 42.	☐	☐	☐	☒
ii) Strong seismic ground shaking?	☐	☐	☐	☒
iii) Seismic-related ground failure, including liquefaction?	☐	☐	☐	☒
iv) Landslides?	☐	☐	☐	☒
b) Result in substantial soil erosion or the loss of topsoil?	☐	☐	☐	☒
c) Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction or collapse?	☐	☐	☐	☒
d) Be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code, creating substantial direct or indirect risks to life or property?	☐	☐	☐	☒
e) Have soils incapable of adequately supporting the use of septic tanks or alternative wastewater disposal systems where sewers are not available for the disposal of wastewater?	☐	☐	☐	☒
f) Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?	☐	☐	☐	☒
8. **GREENHOUSE GAS EMISSIONS**. Would the project:				
a) Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?	☐	☐	☐	☒
b) Conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emission of greenhouse gases?	☐	☐	☐	☒
9. **HAZARDS AND HAZARDOUS MATERIALS**. Would the project:				
a) Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?	☐	☐	☐	☒
b) Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?	☐	☐	☐	☒
c) Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?	☐	☐	☐	☒
d) Be located on a site which is included on a list of hazardous materials sites compiled pursuant to	☐	☐	☐	☒

Issues	*Potentially Significant Impact*	*Less Than Significant with Mitigation*	*Less Than Significant Impact*	*No Impact*
Government Code section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?				
e) For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard or excessive noise for people residing or working in the project area?	☐	☐	☐	☒
f) Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?	☐	☐	☐	☒
g) Expose people or structures, either directly or indirectly, to a significant risk of loss, injury or death involving wildland fires?	☐	☐	☐	☒
10. **HYDROLOGY AND WATER QUALITY**. Would the project:				
a) Violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or ground water quality?	☐	☐	☐	☒
b) Substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin?	☐	☐	☐	☒
c) Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would:				
i) Result in substantial erosion or siltation on- or off-site;	☐	☐	☐	☒
ii) Substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or offsite;	☐	☐	☐	☒
iii) Create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff; or	☐	☐	☐	☒
d) Impede or redirect flood flows?	☐	☐	☐	☒
e) In flood hazard, tsunami, or seiche zones, risk release of pollutants due to project inundation?	☐	☐	☐	☒
f) Conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan?	☐	☐	☐	☒
11. **LAND USE AND PLANNING.** Would the project:				
a) Physically divide an established community?	☐	☐	☐	☒
b) Cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect?	☐	☐	☐	☒

Issues	*Potentially Significant Impact*	*Less Than Significant with Mitigation*	*Less Than Significant Impact*	*No Impact*
12. **MINERAL RESOURCES**. Would the project:				
a) Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?	☐	☐	☐	☒
b) Result in the loss of availability of a locally important mineral resource recovery site delineated on a local general plan, specific plan or other land use plan?	☐	☐	☐	☒
13. **NOISE**. Would the project result in:				
a) Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?	☐	☐	☐	☒
b) Generation of excessive groundborne vibration or groundborne noise levels?	☐	☐	☐	☒
c) For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?	☐	☐	☐	☒
14. **POPULATION AND HOUSING**. Would the project:				
a) Induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of road or other infrastructure)?	☐	☐	☐	☒
b) Displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere?	☐	☐	☐	☒
15. **PUBLIC SERVICES**. Would the project:				
a) Result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the public services:				
i) Fire protection?	☐	☐	☐	☒
ii) Police protection?	☐	☐	☐	☒
iii) Schools?	☐	☐	☐	☒
iv) Parks?	☐	☐	☐	☒
v) Other public facilities?	☐	☐	☐	☒
16. **RECREATION**.				
a) Would the project increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?	☐	☐	☐	☒

Issues	*Potentially Significant Impact*	*Less Than Significant with Mitigation*	*Less Than Significant Impact*	*No Impact*
b) Does the project include recreational facilities or require the construction or expansion of recreational facilities which have an adverse physical effect on the environment?	☐	☐	☐	☒
17. **TRANSPORTATION**. Would the project:				
a) Conflict with a program plan, ordinance or policy addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities?	☐	☐	☐	☒
b) Conflict or be inconsistent with CEQA Guidelines section 15064.3, subdivision (b)?	☐	☐	☐	☒
c) Substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?	☐	☐	☐	☒
d) Result in inadequate emergency access?	☐	☐	☐	☒
18. **TRIBAL CULTURAL RESOURCES**. Would the project cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is:				
a) Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code section 5020.1(k), or	☐	☐	☐	☒
b) A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code section 5024.1. In applying the criteria set forth in subdivision (c) of Public Resources Code section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe.	☐	☐	☐	☒
19. **UTILITIES AND SERVICE SYSTEMS**. Would the project:				
a) Require or result in the relocation or construction of new or expanded water, wastewater treatment or storm water drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects?	☐	☐	☐	☒
b) Have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry and multiple dry years?	☐	☐	☐	☒
c) Result in a determination by the wastewater treatment provider which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?	☐	☐	☐	☒
d) Generate solid waste in excess of State or local standards, or in excess of the capacity of local	☐	☐	☐	☒

Issues	*Potentially Significant Impact*	*Less Than Significant with Mitigation*	*Less Than Significant Impact*	*No Impact*
infrastructure, or otherwise impair the attainment of solid waste reduction goals?				
e) Comply with federal, state, and local management and reduction statutes and regulations related to solid waste?	☐	☐	☐	☒
20. **WILDFIRE**. If located in or near state responsibility areas or lands classified as very high fire hazard severity zones, would the project:	☐	☐	☐	☒
a) Substantially impair an adopted emergency response plan or emergency evacuation plan?	☐	☐	☐	☒
b) Due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby expose project occupants to, pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire?	☐	☐	☐	☒
c) Require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment?	☐	☐	☐	☒
d) Expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes?	☐	☐	☐	☒
21. **MANDATORY FINDINGS OF SIGNIFICANCE**. (State CEQA Guidelines section 15065(a).)				
a) Does the project have the potential to substantially degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, substantially reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory?	☐	☐	☐	☒
b) Does the project have the potential to achieve short-term environmental goals to the disadvantage of long-term environmental goals?	☐	☐	☐	☒
c) Does the project have impacts that are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current project, and the effects of probable future projects.)	☐	☐	☐	☒
d) Does the project have environmental effects which will cause substantial adverse effects on human beings, either directly or indirectly?	☐	☐	☐	☒

City and County of San Francisco* (2002) 102 Cal.App.4th 656.

EXPLANATION OF ISSUES

1. AESTHETICS. Would the project:

a. Have a substantial adverse effect on a scenic vista?

Discussion of Effects: The proposed Project will not have a significant adverse effect aesthetically. As provided in TOP 2050 SEIR, the City of Ontario's physical setting lends opportunities for many views of the community and surrounding natural features, including panoramic views of the San Bernardino and San Gabriel Mountains and stretches of open space and undeveloped land south of Riverside Drive. TOP 2050 SEIR provides that compliance with TOP Policy CD-1.5 in the Community Design Element will avoid significant impacts to scenic vista by making it the policy of the City to protect public views of the San Gabriel Mountains.

The Project does not permit construction of new buildings and so does not conflict with Policy CD-1.5 in the Community Design Element as it will not alter existing public views of the San Gabriel Mountains. Since no adverse aesthetic impacts are expected, no mitigation is necessary.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

b. Substantially damage scenic resources, including, but not limited to, tress, rock outcroppings and historic buildings within a state scenic highway?

Discussion of Effects: As provided in TOP 2050 SEIR, the City of Ontario is served by three freeways: I-10, I-15, and SR-60. I-10 and SR-60 traverse the northern and central portion of the City, respectively, in an east–west direction. I-15 traverses the northeastern portion of the City in a north–south direction. These segments of I-10, I-15, and SR-60 have not been officially designated as scenic highways by the California Department of Transportation. Remnants of native vegetation are virtually absent. The general aesthetic character of this project area within OMC is urban and within Ontario Ranch is predominantly agricultural. The proposed Project will not disturb historic buildings, or any scenic resources identified on or in the vicinity of the Project area.

No impact on scenic resources would occur as a result of implementation of the Project and no mitigation measures would be required. In addition, the TOP 2050 SEIR provides that compliance with TOP Policy CD-1.5, CD-2.5, and CD-4.2 in the Community Design Element will avoid significant impacts to scenic vista by making it the policy of the City to protect scenic resources.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

c. Substantially degrade the existing visual character or quality of the site and its surroundings?

Discussion of Effects: As concluded in TOP 2050 SEIR, implementation of TOP would change the existing visual character but the impacts are not considered significant because TOP policies of the Community Design Element have the common goal of improving the visual quality of the area by developing guidelines to improve future development projects. In addition, Title 9: Development Code of the City's Municipal Code, requires that individual development projects

submit to site-specific review pursuant to the City of Ontario processes. These design guidelines and standards would regulate the features of buildings and streets that affect the public realm and would guide the physical development of any development project within the City's boundaries. Therefore, TOP would not substantially degrade the visual character or quality of the City of Ontario. Implementation of the Project would not substantially degrade the existing visual character or quality of the site and its surroundings. In addition, the TOP 2050 SEIR provides that compliance with TOP Community Design Element will avoid significant impacts to the existing visual character or quality of the site and its surroundings.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

d. Create a new source of substantial light or glare that would adversely affect day or nighttime views in the area?

Discussion of Effects: The proposed Project will not increase the amount of light and glare within the City. In addition, as concluded in TOP 2050 SEIR, adherence to the design standards of the City of Ontario Development Code would ensure that light and glare from new developments would be minimized and that significant impacts would not occur. Therefore, the Project will not result in any new, increased or substantially different impacts.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

2. AGRICULTURE AND FOREST RESOURCES. In determining whether impacts to agricultural resources are significant environmental effects, lead agencies may refer to the California Agricultural Land Evaluation and Site Assessment Model prepared by the California Department of Conservation as an optional model to use in assessing impacts on agriculture and farmland. In determining whether impacts to forest resources, including timberland, are significant environmental effects, lead agencies may refer to information compiled by the California Department of Forestry and Fire Protection regarding the state's inventory of forest land, including the Forest and Range Assessment Project and the Forest Legacy Assessment project; and forest carbon measurement methodology provided in Forest Protocols adopted by the California Air Resources Board. Would the project:

a. Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?

Discussion of Effects: The Proposed Project does not contain any agricultural uses. As a result, no adverse environmental impacts are anticipated.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

b. Conflict with existing zoning for agricultural use, or a Williamson Act contract?

Discussion of Effects: The sites in the Project are not zoned for agricultural use. There is no Williamson Act contract in effect on any of the subject sites. Therefore, no impacts to agricultural uses are anticipated, nor will there be any conflict with existing or Williamson Act contracts.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

c. Conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code section 12220(g)), timberland (as defined by Public Resources Code section 4526), or timberland zoned Timberland Production (as defined by Government Code section 51104(g)?

Discussion of Effects: The City of Ontario does not have any land zoned for forest, timberland, or timberland production.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

d. Result in the loss of forest land or conversion of forest land to non-forest use?

Discussion of Effects: There is currently no land in the City of Ontario that qualifies as forest land as defined in Public Resources Code Section 12220(g). Neither The Ontario Plan nor the City's Zoning Code provide designations for forest land. The proposed project would not result in the loss or conversion of forest land.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

e. Involve other changes in the existing environment, which, due to their location or nature, could individually or cumulatively result in loss of Farmland to non-agricultural use or conversion of forest land to non-forest use?

Discussion of Effects: No land in the City of Ontario that qualifies as forest land as defined in Public Resources Code Section 12220(g). Neither TOP nor the City's Zoning provide designations for forest land. The TOP 2050 SEIR provides that compliance with TOP Environmental Resources Element will avoid significant impacts to loss of farmland. Thus, the proposed Project would not result in conversion of forest land to non-forest use.

Mitigation Required: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

3. AIR QUALITY. Where available, the significance criteria established by the applicable air quality management or air pollution control district may be relied upon to make the following determinations. Would the project:

a. Conflict with or obstruct implementation of the applicable air quality plan?

Discussion of Effects: The Project will not conflict with or obstruct implementation of any air quality plan. As noted in TOP 2050 SEIR (Section 5.3 (Air Quality)), pollutant levels in the Ontario area already exceed Federal and State standards. To reduce pollutant levels, the City of Ontario is actively participating in efforts to enhance air quality by implementing Control Measures in the Air Quality Management Plan for local jurisdictions within the South Coast Air Basin.

TOP 2050 SEIR has addressed short-term construction impacts, however, and adequate mitigation (Mitigation Measure(s) MM 3-1 and AQ-1) have been adopted by the City that will help reduce emissions and air quality impacts. No new impacts beyond those identified in TOP 2050 SEIR would result from Project implementation.

The proposed Project is consistent with The Ontario Plan, for which the SEIR was prepared, and impacts evaluated. Furthermore, the project is consistent with the City's participation in the Air Quality Management Plan and, because of the project's limited size and scope, will not conflict with or obstruct implementation of the plan.

Mitigation: No new mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

b. Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard?

Discussion of Effects: The Project will not result in a cumulatively considerable net increase of any criteria pollutant for which the region is in non-attainment under an applicable federal or state ambient air quality because of the scope of the project. Although no impacts are anticipated, the Project will still comply with the air quality standards of the TOP 2050 SEIR and the SCAQMD resulting in impacts that are less than significant.

Short term air quality impacts will result from construction related activities associated with construction activity, such as excavation and grading, machinery and equipment emissions, vehicle emissions from construction employees, etc. The daily emissions of nitrogen oxides and particulates from resulting grading and vehicular emissions may exceed threshold levels of the South Coast Air Quality Management District (SCAQMD).

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

c. Expose sensitive receptors to substantial pollutant concentrations?

Discussion of Effects: Adequate mitigation (Mitigation Measure(s) MM 3-1 and AQ-1) have been adopted by the City that will reduce emissions and air quality impacts to a less-than-significant level. No new impacts beyond those identified in TOP 2050 SEIR would result from Project implementation.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

d. Result in other emissions (such as those leading to odors adversely affecting a substantial number of people)?

Discussion of Effects: As discussed in Section 5.3 of TOP 2050 SEIR, the proposed Project is within a non-attainment region of the South Coast Air Basin (SCAB) and any new contribution of emissions into the SCAB would be considered significant and adverse. Adequate mitigation (Mitigation Measure(s) MM 3-1 and AQ-1) have been adopted by the City that will reduce air pollutants to a less-than-significant level. No new impacts beyond those identified in TOP 2050 SEIR would result from Project implementation.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

4. BIOLOGICAL RESOURCES. Would the project:

a. Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service?

Discussion of Effects: The Project site is located within an area that has not been identified as containing species identified as a candidate, sensitive, or special status species in local or regional plans, policies or regulations or by the California Department of Fish and Wildlife or the U.S. Fish and Wildlife Service. Therefore, no adverse impacts are anticipated.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

b. Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations, or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service?

Discussion of Effects: The Project does not contain any riparian habitat or other sensitive natural community identified by the California Department of Fish & Wildlife or the U.S. Fish & Wildlife Service. Therefore, no adverse environmental impacts are anticipated.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

c. Have a substantial adverse effect on federally protected wetlands as defined by Section 404 of the Clean Water Act (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?

Discussion of Effects: No wetland habitat is present on the Project area. Therefore, Project implementation would have no impact on these resources.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and

addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

d. Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?

Discussion of Effects: TOP 2050 SEIR requires implementation of regulatory and standard conditions of approval to mitigate for impacts to species and project specific CEQA review will be undertaken at the appropriate time. Policy ER-5.1 in the Environmental Resources Element encourages efforts to protect biological resources through the establishment, restoration, and conservation of high-quality habitat areas. Consequently, impacts would be less than significant.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

e. Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?

Discussion of Effects: The Project area will not conflict with any ordinances protecting biological resources.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

f. Conflict with the provisions of an adopted Habitat Conservation Plan (HCP), Natural Community Conservation Plan (NCCP), or other approved local, regional, or state habitat conservation plan?

Discussion of Effects: The Project area is not part of an adopted HCP, NCCP or other approved habitat conservation plan. As a result, no adverse environmental impacts are anticipated.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

5. CULTURAL RESOURCES. Would the project:

a. Cause a substantial adverse change in the significance of a historical resource as defined in Section 15064.5?

Discussion of Effects: Implementation of the Project would not cause a substantial adverse change in the significance of an historical resource as defined in CEQA Guidelines Section15064.5. In addition, Title 9, Division 4.02.050. Historic Preservation -Certificate of Appropriates and Demolition of Historic Resources of the City of Ontario Municipal Code protects sensitive historical resources of local interest. No new impacts beyond those identified in TOP 2050 SEIR would result from Project implementation.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

b. Cause a substantial adverse change in the significance of an archaeological resource pursuant to Section 15064.5?

Discussion of Effects: TOP 2050 SEIR (Section 5.5) indicates no archeological sites or resources have been recorded in the City with the Archeological Information Center at San Bernardino County Museum. While no adverse impacts to archeological resources are anticipated at these sites due to their urbanized nature, standard conditions will be imposed on future development that in the event of unanticipated archeological discoveries, construction activities will not continue or will moved to other parts of the project site and a qualified archaeologist shall be contacted to determine significance of these resources. If the find is discovered to be historical or unique archaeological resources, as defined in Section 15064.5 of the CEQA Guidelines, avoidance or other appropriate measures shall be implemented.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

c. Disturb any human remains, including those interred outside of dedicated cemeteries?

Discussion of Effects: Changing the general plan designation or zoning of a property or properties does not affect the potential discovery of human remains during future development. The proposed Project is located in an area that has undergone previous development, and there are no known religious or sacred sites within the Project area. While it is not expected that human remains will be encountered during construction activities, should such a discovery occur, existing regulations, including California Public Resources Code Section 5097.98, provide protection for human remains found during development.

Furthermore, standard conditions will be imposed on future development. In the event unanticipated discoveries of human remains are made during excavation or construction activities, the area will not be disturbed until any necessary investigations are completed by the County Coroner and/or Native American consultation has been conducted, as deemed applicable.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

6. ENERGY. Would the project:

a. Result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation?

Discussion of Effects: The Project would have no impact relating to wasteful, inefficient, or unnecessary consumption of energy resources as there is no construction or operations proposed on the Project. As a result, no adverse environmental impacts are anticipated.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

b. Conflict with or obstruct a state or local plan for renewable energy or energy efficiency?

Discussion of Effects: The proposed Project would have no impact relating to conflict with or obstruction of a state or local plan for renewable energy or energy efficiency as there is no construction or operations proposed on the Project. As a result, no adverse environmental impacts are anticipated.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

7. GEOLOGY & SOILS. Would the project:

a. Expose people or structures to potential substantial adverse effects, including the risk of loss, injury or death involving:

i. Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publication 42.

Discussion of Effects: There are no active faults known on the site, and the Project site is located outside the Fault Rapture Hazard Zone (formerly Alquist-Priolo Zone). The TOP SEIR (Section 5.7/Figure 5.7-2) identifies eight active or potentially active fault zones near the City. Given that the closest fault zone is located more than ten miles from the project site, fault rupture within the project area is not likely. All development will comply with the Uniform Building Code seismic design standards to reduce geologic hazard susceptibility. Therefore, no adverse impacts are anticipated.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

ii. Strong seismic ground shaking?

Discussion of Effects: There are no active faults known on the site and the project site is located outside the Fault Rapture Hazard Zone (formerly Alquist-Priolo Zone). The Land Use Plan (Figure LU-6) of the Policy Plan (General Plan) SEIR (Section 5.7/Figure 5.7-2) identifies eight active or potentially active fault zones near the City. The closest fault zone is located more than ten miles from the project site. The proximity of the site to the active faults will result in ground shaking during moderate to severe seismic events. All construction will be in compliance with the California Building Code, the Ontario Municipal Code, The Ontario Plan and all other ordinances adopted by the City related to construction and safety. Therefore, no adverse impacts are anticipated.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and

addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

iii. Seismic-related ground failure, including liquefaction?

Discussion of Effects: As identified in the TOP 2050 SEIR (Section 5.7), groundwater saturation of sediments is required for earthquake induced liquefaction. In general, groundwater depths shallower than 10 feet to the surface can cause the highest liquefaction susceptibility. Depth to ground water at the project site during the winter months is estimated to be between 250 to 450 feet below ground surface. Therefore, the liquefaction potential within the project area is minimal. Implementation of TOP strategies, Uniform Building Code, and the Ontario Municipal code would reduce impacts to a less than significant level.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

iv. Landslides?

Discussion of Effects: The Project would not expose people or structures to potential adverse effects, including the risk of loss, injury, or death involving landslides because the relatively flat topography of the project site (less than 2 percent slope across the city) makes the chance of landslides remote. Implementation of TOP strategies, Uniform Building Code, and the Ontario Municipal Code would reduce impacts to a less than significant level.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

b. Result in substantial soil erosion or the loss of topsoil?

Discussion of Effects: The Project will not result in significant soil erosion or loss of topsoil because of the scope of the Project. Grading increases the potential for erosion by removing protective vegetation, changing natural drainage patterns, and constructing slopes. Compliance with the California Building Code and review of grading plans by the City Engineer will ensure no significant impacts will occur. In addition, the City requires an erosion/dust control plan for projects located within this area. Implementation of a NPDES program, the Environmental Resource Element of the Policy Plan (General Plan) strategies, Uniform Building Code, and the Ontario Municipal code would reduce impacts to a less than significant level.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

c. Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction, or collapse?

Discussion of Effects: The Project would not result in the location of development on a geologic unit or soil that is unstable, or that would become unstable because as previously discussed, the potential for liquefaction and landslides associated with the project is less than

significant. TOP 2050 (Section 5.7) indicates that subsidence is generally associated with large decreases or withdrawals of water from the aquifer. The Project would not withdraw water from the existing aquifer. Further, implementation of TOP strategies, Uniform Building Code, and the Ontario Municipal code would reduce impacts to a less than significant level.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

d. Be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial risks to life or property?

Discussion of Effects: The majority of Ontario, including the Project sites, are located on alluvial soil deposits. These types of soils are not considered to be expansive. Therefore, no adverse impacts are anticipated.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

e. Have soils incapable of adequately supporting the use of septic tanks or alternative wastewater disposal systems where sewers are not available for the disposal of wastewater?

Discussion of Effects: The Project is served by the local sewer system and the use of alternative systems is not necessary. There will be no impact to the sewage system.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

8. GREENHOUSE GAS EMISSIONS. Would the project:

a. Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?

Discussion of Effects: As part of TOP 2050 SEIR, The City updated the Community Climate Action Plan (CCAP). The CCAP serves as the programmatic tiering document for review of the climate change impacts of projects under CEQA. The 2022 CCAP is included in the TOP 2050 SEIR. The CCAP includes a greenhouse gas inventory baseline for the Year 2019, a future "business-as-usual" projection of greenhouse gas emissions for the Year 2030 and Year 2050, an emissions reduction target consistent with the State's emissions reduction goals, an implementation plan identifying specific measures, and a timeline for implementation of said measures to reach the reduction targets for Year 2030 and Year 2050.

The CCAP is consistent with the CEQA Guidelines for the Reduction of Greenhouse Gas Emissions (California Code of Regulations Section 15183.5). This allows the 2022 CCAP to support and streamline environmental review of GHG emissions for future development projects in the City. Therefore, the Project will not introduce new GHG emissions beyond those previously analyzed in TOP 2050 SEIR.

Mitigation Required: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

b. Conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gases?

Discussion of Effects: The Proposed project is consistent with TOP Goal ER-4 (Air Quality) of improving air quality. The implementation of Policy ER-4.3, regarding the reduction of greenhouse gas emissions is in accordance with regional, State, and federal regulations.

Mitigation Required: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

9. HAZARDS & HAZARDOUS MATERIALS. Would the project:

a. Create a significant hazard to the public or the environment through the routine transport, use or disposal of hazardous materials?

Discussion of Effects: The Project will have no impacts relating to transport, use, and disposal of hazardous materials, to release of hazardous materials, and to emission and handling materials, substances, or waste. Therefore, no adverse impacts are anticipated.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

b. Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?

Discussion of Effects: The Project does not include the use of hazardous materials or volatile fuels. Therefore, no adverse impacts are anticipated.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

c. Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances or waste within one-quarter mile of an existing or proposed school?

Discussion of Effects: The proposed Project does not include the use, emissions or handling of hazardous or acutely hazardous materials, substances, or waste. Therefore, no impacts are anticipated.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

d. Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?

Discussion of Effects: The proposed Project site is not listed on the hazardous materials site compiled pursuant to Government Code Section 65962.5. Therefore, the Project would not create a hazard to the public or the environment and no impact is anticipated.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

e. For a project located within the safety zone of the airport land use compatibility plan for ONT or Chino Airports, would the project result in a safety hazard for people residing or working in the project area?

Discussion of Effects: Per the Land Use Element (Exhibit LU-06 Airport Safety Zones & Influence Areas) of TOP, the proposed site falls within the airport land use plan. However, it's important to note that the Project will not pose a safety hazard to individuals working or residing in the area, as it will not obstruct aircraft maneuvering. Additionally, the ALUCP designates the Project area for uses consistent with the 60-65 and 65-70 CNEL noise zones. In accordance with Land Use Element Policy LU-5.2, the City is committed to coordinating with airport authorities to ensure that the Proposed Land Use Plan aligns with the established master land use plans and compatibility plans for both Chino Airport and Ontario International Airport (ONT). As a result, the Project is not anticipated to generate adverse impacts.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

f. For a project within the vicinity of a private airstrip, would the project result in a safety hazard for people residing or working in the project area?

Discussion of Effects: The project site is not located within the vicinity of a private airstrip. Therefore, no impacts are anticipated.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

g. Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?

Discussion of Effects: The City's Safety Element, as outlined in TOP, encompasses comprehensive policies and procedures for disaster preparedness and response. TOP places a strong emphasis on fostering interdepartmental and inter-jurisdictional coordination and collaboration to ensure readiness for both routine and emergency situations, including disasters. Furthermore, the Project is committed to adhering to the requirements set forth by the Ontario Fire Department and all City regulations related to fire safety and emergency access. Given the

Project's obligation to comply with all applicable City codes, it is expected that any potential impacts would be effectively mitigated to a level that is less than significant.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

h. Expose people or structures to a significant risk of loss, injury or death involving wildland fires, including where wildlands are adjacent to urbanized areas or where residences are intermixed with wildlands?

Discussion of Effects: The Project site is not located in or near wildlands. Therefore, no impacts are anticipated.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

10. HYDROLOGY & WATER QUALITY. Would the project:

a. Violate any other water quality standards or waste discharge requirements or potential for discharge of storm water pollutants from areas of material storage, vehicle or equipment fueling, vehicle or equipment maintenance (including washing), waste handling, hazardous materials handling or storage, delivery areas or loading docks, or other outdoor work areas?

Discussion of Effects: The Project area currently benefits from City water and sewer services, and its use will not introduce new effects on water quality standards or waste discharge requirements. The implementation of the Project aligns with all local, state, and federal regulations governing water quality and waste discharge. There are no new impacts anticipated beyond those already identified in the TOP 2050 SEIR (refer to TOP Policies ER-1.5, ER-1.6, and ER-1.7).

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

b. Substantially deplete groundwater supplies or interfere substantially with groundwater recharge such that there would be a net deficit in aquifer volume or a lowering of the local groundwater table level (e.g., the production rate of pre-existing nearby wells would drop to a level which would not support existing land uses or planned uses for which permits have been granted)?

Discussion of Effects: The Project will not result in increased water flow to the site, nor will it deplete groundwater supplies or interfere with recharge. The City has already adopted adequate policy measures (as outlined in ER-1.5, ER-1.6, and ER-1.7) to effectively mitigate potential groundwater impacts to a level that is less than significant. No new impacts beyond those identified in the TOP 2050 SEIR are anticipated as a result of Project implementation.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

c. Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river, in a manner which would result in substantial erosion or siltation on- or off-site or volume of storm water runoff to cause environmental harm or potential for significant increases in erosion of the project site or surrounding areas?

Discussion of Effects: Policy Measures (ER-1.5, ER-1.6 and ER-1.7) have already been adopted by the City that would reduce impacts to existing hydrology patterns to a less-than-significant level. No new impacts beyond those identified in TOP 2050 SEIR would result from Project implementation.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

d. Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river, or substantially increase the rate or amount of surface runoff in a manner that would result in flooding on- or off-site or potential for significant changes in the flow velocity or volume of storm water runoff to cause environmental harm?

Discussion of Effects: The Project would not involve conversion of permeable soils to an impermeable surface, resulting in an increase in surface runoff. Policy Measures (ER-1.5, ER-1.6 and ER-1.7) have already been adopted by the City that would reduce impacts to existing hydrology patterns to a less-than-significant level. No new impacts beyond those identified in TOP 2050 SEIR would result from Project implementation.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

e. Create or contribute runoff water which would exceed the capacity of existing or planned storm water drainage systems or provide substantial additional sources of polluted runoff (a&b) during construction and/or post-construction activity?

Discussion of Effects: The Project would not involve conversion of permeable soils to an impermeable surface, resulting in an increase in surface runoff. Policy Measures (ER-1.5, ER-1.6 and ER-1.7) have already been adopted by the City that would reduce impacts to existing hydrology patterns to a less-than-significant level. No new impacts beyond those identified in TOP 2050 SEIR would result from Project implementation.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP EIR. No changes or additions to TOP EIR analyses are necessary.

f. Otherwise substantially degrade water quality or potential for discharge of storm water to affect the beneficial uses of receiving water?

Discussion of Effects: The proposed Project is not anticipated to violate any water quality standards or result in wastewater discharges that would adversely affect human health, wildlife, or plant species. The City has already adopted policy measures (specifically ER-1.5, ER-1.6, and ER-1.7) aimed at reducing impacts on existing water quality to a level deemed less than

significant. No new impacts beyond those previously identified in the TOP 2050 SEIR are expected as a result of Project implementation.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

g. Place housing within a 100-year flood hazard area as mapped on a federal Flood Hazard Boundary or Flood Insurance Rate Map or other flood hazard delineation map?

Discussion of Effects: The Project site is not located within a 100-year flood hazard area as mapped on a Federal Flood Hazard Boundary or Flood Insurance Rate Map or other flood hazard delineation map. Therefore, no impacts are anticipated.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

h. Place within a 100-year flood hazard area, structures that would impede or redirect flood flows?

Discussion of Effects: As identified in the Safety Element (Exhibit S-2) of TOP, the site lies outside of the 100-year flood hazard area. Therefore, no adverse impacts are anticipated.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

i. Expose people or structures to a significant risk of loss, injury or death involving flooding, including flooding as a result of the failure of a levee or dam?

Discussion of Effects: As identified in the Safety Element (Exhibit S-2) of TOP, the site lies outside of the 100-year flood hazard area. No levees or dams are located near the project site. Therefore, no adverse impacts are anticipated.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

j. Expose people or structures to inundation by seiche, tsunami or mudflow?

Discussion of Effects: There are no lakes or substantial reservoirs near the project site; therefore, impacts from seiche are not anticipated. The City of Ontario has relatively flat topography, less than two percent across the City, and the chance of mudflow is remote. Therefore, no impacts are anticipated.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

11. LAND USE & PLANNING. Would the project:

a. Physically divide an established community?

Discussion of Effects: The implementation of the Project is not expected to result in physical improvements that would divide an established community. Additionally, the application of Land Use Policies LU-2.3, LU-2.4, LU-2.5, and LU-2.6 has been designed to minimize conflicts between potentially contradicting land uses. Consequently, no adverse impacts are anticipated.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

b. Conflict with applicable land use plan, policy or regulation of agencies with jurisdiction over the project (including, but not limited to general plan, airport land use compatibility plan, specific plan, or development code) adopted for the purpose of avoiding or mitigation an environmental effect?

Discussion of Effects: Land Use Policies LU-2.3, LU-2.4, LU-2.5, and LU-2.6 have been established to mitigate conflicts between potentially contradicting land uses. The proposed Project is fully consistent with the provisions outlined in TOP.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

c. Conflict with any applicable habitat conservation plan or natural community conservation plan?

Discussion of Effects: There are no adopted habitat conservation plans in the Project area. As such no conflicts or impacts are anticipated.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

12. MINERAL RESOURCES. Would the project:

a. Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?

Discussion of Effects: The Project site is situated within a primarily developed urban area, and there are no known mineral resources in the vicinity. As a result, there are no anticipated impacts.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

b. Result in the loss of availability of a locally important mineral resource recovery site delineated on a local general plan, specific plan or other land use plan?

Discussion of Effects: There are no known mineral resources in the area. No impacts are anticipated.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

13. NOISE. Would the project result in:

a. Exposure of persons to or generation of noise levels in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?

Discussion of Effects: The City has already implemented sufficient mitigation measures (Mitigation Measures 12-1, 12-2, 12-3, and 12-4) to reduce severe noise levels to a point that they no longer pose a significant concern. The implementation of the Project would not result in any new impacts beyond those previously identified in the TOP 2050 SEIR.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

b. Exposure of persons to or generation of excessive groundborne vibration or groundborne noise levels?

Discussion of Effects: The proposed Project would not generate excessive groundborne vibration or noise levels. The City has already adopted appropriate mitigation measures (Mitigation Measures 12-1, 12-2, 12-3, and 12-4) to reduce noise levels to a less-than-significant level. Therefore, Project implementation would not result in any new impacts beyond those identified in the TOP 2050 SEIR.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

c. A substantial permanent increase in ambient noise levels in the project vicinity above levels existing without the project?

Discussion of Effects: The implementation of the Project would not result in a substantial permanent increase in ambient noise levels in the project vicinity above the levels that existed prior to the project. The City has already adopted adequate mitigation measures (Mitigation Measures 12-1, 12-2, 12-3, and 12-4) to reduce noise impacts to a level deemed less than significant. Therefore, there would be no new impacts beyond those identified in the TOP 2050 SEIR resulting from Project implementation.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

d. A substantial temporary or periodic increase in ambient noise levels in the project vicinity above levels existing without the project?

Discussion of Effects: The implementation of the Project itself would not result in a significant temporary or periodic increase in ambient noise levels in the Project vicinity compared to the levels existing without the Project. The City has already adopted adequate mitigation measures (Mitigation Measures 12-1, 12-2, 12-3, and 12-4) to reduce noise impacts to a level deemed less than significant. Therefore, no new impacts beyond those identified in the TOP 2050 SEIR would arise from Project implementation.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

e. For a project located within the noise impact zones of the airport land use compatibility plan for ONT and Chino Airports, would the project expose people residing or working in the project area to excessive noise levels?

Discussion of Effects: The implementation of the Project itself would not subject residents or workers in the Project area to excessive noise levels. The City has already adopted adequate mitigation measures (Mitigation Measure 12-1) to reduce noise impacts to a level deemed less than significant. Therefore, there would be no new impacts beyond those identified in the TOP 2050 SEIR resulting from Project implementation.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

f. For a project within the vicinity of a private airstrip, would the project expose people residing or working in the project area to excessive noise levels?

Discussion of Effects: The Project site is not located within the vicinity of a private airstrip. Therefore, no impacts are anticipated.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

14. POPULATION & HOUSING. Would the project:

a. Induce substantial population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of road or other infrastructure)?

Discussion of Effects: On July 7, 2021, the NOP for the TOP 2050 SEIR was circulated, establishing the baseline environmental conditions. During that assessment, the population growth for the entire City was included in the baseline conditions and analyzed in the TOP 2050 SEIR. The Project will not directly or indirectly induce substantial population growth beyond what was previously analyzed in the TOP 2050 SEIR.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

b. Displace substantial numbers of existing housing, necessitating the construction of replacement housing elsewhere?

Discussion of Effects: The Project will not displace existing housing and will not generate any additional impact on residential housing beyond what is expected under the current land use designation. Therefore, no adverse impacts resulting from this Project are expected.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

c. Displace substantial numbers of people, necessitating the construction of replacement housing elsewhere?

Discussion of Effects: The Project will not displace existing housing and will not create any impact on residential housing beyond those that would occur under the current land use designation. Therefore, no adverse impacts are anticipated as a result of this project.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

15. PUBLIC SERVICES. Would the project:

a. Result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the public services:

i. Fire protection?

Discussion of Effects: The Project area is located in a developed area that is currently served by the Ontario Fire Department. The Project will not necessitate the construction of new facilities, alterations to existing facilities, or a decline in service levels that might trigger the need for new facilities. Therefore, no impacts are anticipated.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

ii. Police protection?

Discussion of Effects: The Project area is located in a developed area that is currently served by the Ontario Police Department. The Project will not necessitate the construction of new

facilities, alterations to existing facilities, or a decline in service levels that might trigger the need for new facilities. Therefore, no impacts are anticipated.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

iii. Schools?

Discussion of Effects: The Project area is located in a developed area that is currently served by the City of Ontario. The Project will not necessitate the construction of new facilities, alterations to existing facilities, or a decline in service levels that might trigger the need for new facilities. Therefore, no impacts are anticipated.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

iv. Parks?

Discussion of Effects: The Project area is located in a developed area that is currently served by the City of Ontario. The Project will not necessitate the construction of new facilities, alterations to existing facilities, or a decline in service levels that might trigger the need for new facilities. Therefore, no impacts are anticipated.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

v. Other public facilities?

Discussion of Effects: The Project area is located in a developed area that is currently served by the City of Ontario. The Project will not necessitate the construction of new facilities, alterations to existing facilities, or a decline in service levels that might trigger the need for new facilities. Therefore, no impacts are anticipated.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

16. RECREATION. Would the project:

a. Increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?

Discussion of Effects: On July 7, 2021, the NOP for the TOP 2050 SEIR was circulated, thereby establishing the baseline environmental conditions. During that assessment, the potential increases in the use of existing neighborhood and regional parks and other recreational facilities associated with the site were included in the baseline conditions. As a result, the Project will not

generate new demands for other recreational facilities beyond those previously analyzed in the TOP SEIR.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

b. Does the project include recreational facilities or require the construction or expansion of recreational facilities that have an adverse physical effect on the environment?

Discussion of Effects: This Project is not proposing any new significant housing or large employment generator that would require the construction of neighborhood parks or other recreational facilities. No impacts are anticipated.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

17. TRANSPORTATION/TRAFFIC. Would the project:

a. Conflict with an applicable plan, ordinance or policy establishing measures of effectiveness for the performance of the circulation system, taking into account all modes of transportation including mass transit and non-motorized travel and relevant components of the circulation system, including but not limited?

Discussion of Effects: When the TOP 2050 SEIR was prepared, the impacts associated with land use were incorporated into the baseline conditions. As such, the Project is proposed to align with the TOP. The Project will not introduce any new traffic impacts beyond those previously analyzed in the TOP SEIR.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

b. Conflict with an applicable congestion management program, including, but not limited to, level of service standard and travel demand measures, or other standards established by the county congestion management agency for designated roads or highways?

Discussion of Effects: The Project is situated in an area that is predominantly developed, with all street improvements already in place. It will not pose conflicts with any applicable congestion management program or adversely affect the level of service standards on adjacent arterials, given that the number of trips to be generated is minimal compared to the existing capacity within the congestion management program. Less than significant impacts are anticipated.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

c. Result in a change in air traffic patterns, including either an increase in traffic levels or a change in location that results in substantial safety risks?

Discussion of Effects: The implementation of the Project would not alter air traffic patterns. As a result, these impacts are deemed less than significant, and no mitigation measures are necessary.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

d. Substantially increase hazards due to a design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?

Discussion of Effects: The impacts associated with the Project would be considered less than significant, and no mitigation measures are required. The project is in an area that is mostly developed. All street improvements are complete, and no alterations are proposed for adjacent intersections or arterials. The project will, therefore, not create a substantial increase in hazards due to a design feature. No impacts are anticipated.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

e. Result in inadequate emergency access?

Discussion of Effects: The proposed Project would not result in inadequate emergency access. Future roadway construction would increase access into areas that were previously void of them. Details of road placement are given in section 5.17-3 in TOP 2050 SEIR. No new impacts beyond those identified in TOP 2050 SEIR would result from Project implementation. Therefore, no mitigation measures are necessary.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

f. Result in inadequate parking capacity?

Discussion of Effects: Future development of the site will be required to meet parking standards established by the Ontario Development Code and will therefore not create an inadequate parking capacity. No impacts are anticipated. Therefore, proposed Project will not result in a demand for new parking.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

g. Conflict with adopted policies, plans, or programs supporting alternative transportation (e.g., bus turnouts, bicycle racks)?

Discussion of Effects: The Project does not conflict with any transportation policies, plans or programs. Therefore, no impacts are anticipated.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

18. TRIBAL CULTURAL RESOURCES. Would the project cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is:

a. Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code section 5020.1(k)?

Discussion of Effects: None of the subject sites within the Project area are listed in the California Register of Historic Resources. Changing the zoning on these sites will not result in greater impacts than those previously identified in the Certified TOP EIR. However, in accordance with TOP SEIR Mitigation Measure 5-4, for projects requiring a General Plan amendment and defined cultural resource mitigation under CEQA for potential tribal resources, the project applicant must notify the designated tribe(s) before issuing grading permits. The applicant will collaborate with the City of Ontario and tribal representatives to establish mitigation measures covering tribal monitors' roles during grading, excavation, and ground-disturbing activities, scheduling, compensation terms, and the treatment and final disposition of cultural resources, sacred sites, and human remains discovered on the site. The City of Ontario has the authority to determine project conditions within its jurisdiction. Therefore, it is concluded that the proposed Project will not impact Tribal Cultural Resources (TCR) or Native American artifacts related to TCRs, and no additional mitigation measures are recommended.

Mitigation: No new mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

b. A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code section 5024.1. In applying the criteria set forth in subdivision (c) of Public Resources Code section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe.

Discussion of Effects: None of the subject sites in the Project area are in the California Register of Historic Resources. No impacts are anticipated through Project implementation.

Mitigation: No new mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

19. UTILITIES AND SERVICE SYSTEMS. Would the project:

a. Exceed wastewater treatment requirements of the applicable Regional Water Quality Control Board?

Discussion of Effects: The Project itself will not require the construction or use of a sewer or septic tank, and as such, no mitigation measures are necessary. No impacts are anticipated resulting from Project implementation.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

b. Require or result in the construction of new water or wastewater treatment facilities or expansion of existing facilities, the construction of which could cause significant environmental effects?

Discussion of Effects: The proposed Project will not require or result in the construction of new water or wastewater treatment facilities or expansion of existing facilities, the construction of which could cause significant environmental effects.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary. No impacts are anticipated through Project implementation.

c. Require or result in the construction of new storm water drainage facilities or expansion of existing facilities, the construction of which could cause significant environmental effects?

Discussion of Effects: The Project in itself will not require or result in the construction of new storm water drainage facilities or expansion of existing facilities, the construction of which could cause significant environmental effects. However, future roadway construction may impact and alter existing storm water drainage systems. Nevertheless, adequate Policies (ER-1.5, ER-1.6 and ER-1.7) have already been adopted by the City that would reduce stormwater impacts to less-than-significant levels, with no additional mitigation required.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

d. Have sufficient water supplies available to serve the project from existing entitlements and resources, or are new or expanded entitlements needed? In making this determination, the City shall consider whether the project is subject to the water supply assessment requirements of Water Code Section 10910, et seq. (SB 610), and the requirements of Government Code Section 664737 (SB 221).

Discussion of Effects: The Project site is served by the City of Ontario water system. There is currently sufficient water supply available to the City of Ontario to serve this Project as per the findings of TOP 2050 SEIR. No impacts are anticipated.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

e. Result in a determination by the wastewater treatment provider that serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?

Discussion of Effects: No intensification of uses would occur that could result in increased demand for sewer facilities other than those previously considered and addressed in the TOP 2050 SEIR. Therefore, the Project will not increase demands on wastewater. No impacts would result.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

f. Be served by a landfill with sufficient permitted capacity to accommodate the project's solid waste disposal needs?

Discussion of Effects: No intensification of uses would occur that could result in increased demand for waste disposal other than those previously considered and addressed in the TOP EIR. No new impacts beyond those identified in TOP 2050 SEIR would result from Project implementation.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

g. Comply with federal, state, and local statutes and regulations related to solid waste?

Discussion of Effects: Implementation of the Project complies with all federal, State, and local statutes and regulations related to solid waste. No impacts are anticipated, and therefore, no mitigation measures are necessary.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

20. WILDFIRE. If located in or near state responsibility areas or lands classified as very high fire hazard severity zones, would the project:

a. Substantially impair an adopted emergency response plan or emergency evacuation plan?

Discussion of Effects: The Project site is not located in or near a state responsibility area nor is it located in or near lands classified as very high fire hazard severity zones. Therefore, no impacts are anticipated.

Mitigation: No new mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

b. Due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby expose project occupants to, pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire?

Discussion of Effects: The Project site is not located in or near a state responsibility area nor is it located in or near lands classified as very high fire hazard severity zones. Therefore, no impacts are anticipated.

Mitigation: No new mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

c. Require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment?

Discussion of Effects: The Project site is not located in or near a state responsibility area nor is it located in or near lands classified as very high fire hazard severity zones. Therefore, no impacts are anticipated.

Mitigation: No new mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

d. Expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes?

Discussion of Effects: The Project site is not located in or near a state responsibility area nor is it located in or near lands classified as very high fire hazard severity zones. Therefore, no impacts are anticipated.

Mitigation: No new mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

21. MANDATORY FINDINGS OF SIGNIFICANCE.

a. Does the project have the potential to substantially degrade the quality of the environment, substantially reduce the habitat or a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, substantially reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory?

Discussion of Effects: The proposed Project does not have the potential to reduce wildlife habitat and threaten a wildlife species; therefore, no environmental impacts resulting from the Project are anticipated.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP SEIR. No changes or additions to TOP SEIR analyses are necessary.

b. Does the project have the potential to achieve short-term environmental goals to the disadvantage of long-term environmental goals?

Discussion of Effects: The Project does not have the potential to achieve short-term environmental goals to the disadvantage of long-term environmental goals.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP SEIR. No changes or additions to TOP SEIR analyses are necessary.

c. Does the project have impacts that are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current project, and the effects of probable future projects.)

Discussion of Effects: The Project does not have impacts that are cumulatively considerable.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP SEIR. No changes or additions to TOP SEIR analyses are necessary.

d. Does the project have environmental effects that will cause substantial adverse effects on human beings, either directly or indirectly?

Discussion of Effects: The Project does not have environmental effects that will cause substantial adverse effects on human beings, either directly or indirectly.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP SEIR. No changes or additions to TOP SEIR analyses are necessary.

22. MANDATORY FINDINGS OF SIGNIFICANCE.

a. Does the project have the potential to degrade the quality of the environment, substantially reduce the habitat or a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory?

Discussion of Effects: The proposed Project does not have the potential to reduce wildlife habitat and threaten a wildlife species. Therefore, no impacts are anticipated.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

b. Does the project have the potential to achieve short-term environmental goals to the disadvantage of long-term environmental goals?

Discussion of Effects: The Project in itself does not have the potential to achieve short-term environmental goals to the disadvantage of long-term environmental goals. The proposed Project is being pursued pursuant to TOP. Therefore, the Project will not result in adverse impacts.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

c. Does the project have impacts that are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current project, and the effects of probable future projects.)

Discussion of Effects: When the TOP 2050 SEIR was prepared, the impacts associated with the Project area were included in the baseline conditions. Here, the Project is being proposed to be consistent with the established land use pursuant to the TOP. The Project will not result in any new cumulatively considerable impacts beyond what was previously analyzed in the TOP SEIR. Therefore, the Project will not result in adverse impacts.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

d. Does the project have environmental effects that will cause substantial adverse effects on human beings, either directly or indirectly?

Discussion of Effects: The Project does not have environmental effects that will cause substantial adverse effects on human beings, either directly or indirectly.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

EARLIER ANALYZES

(Earlier analyses may be used where, pursuant to the tiering, program EIR, or other CEQA process, one or more effects have been adequately analyzed in an earlier EIR or Negative Declaration. Section 15063(c)(3)(D)):

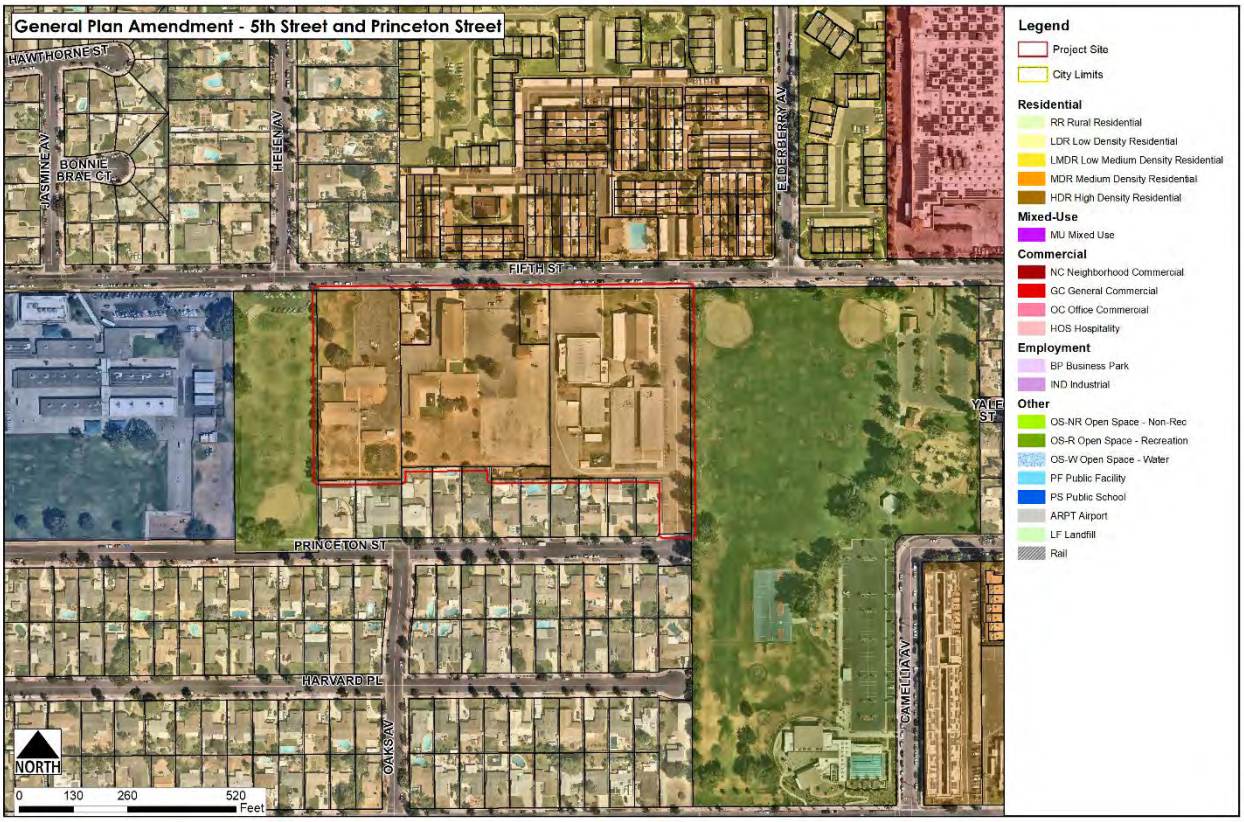
1. Earlier analyzes used. Identify earlier analyzes used and state where they are available for review.

   (a) The Ontario Plan 2050 Supplemental Environmental Impact Report (SEIR)
   (b) The Ontario Plan
   (c) The Ontario Land Use Plan
   (d) The Ontario Plan Mitigation Monitoring and Reporting Program
   (e) The Ontario Plan CEQA Findings and Statement of Overriding Consideration

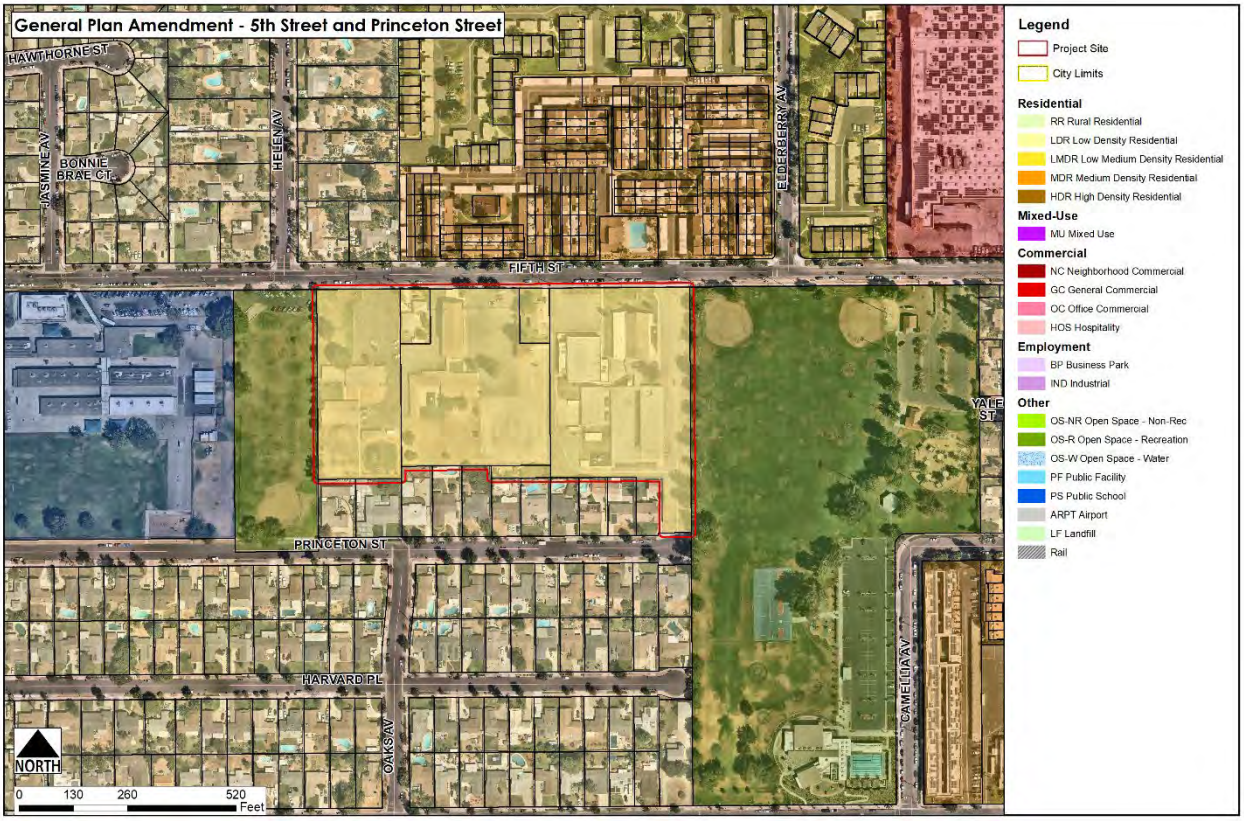
   All documents listed above are on file with the City of Ontario Planning Department, 303 East "B" Street, Ontario, California 91764, (909) 395-2036.

2. Impacts adequately addressed. Identify which effects from the above checklist were within the scope of and adequately analyzed in an earlier document pursuant to applicable legal standards.

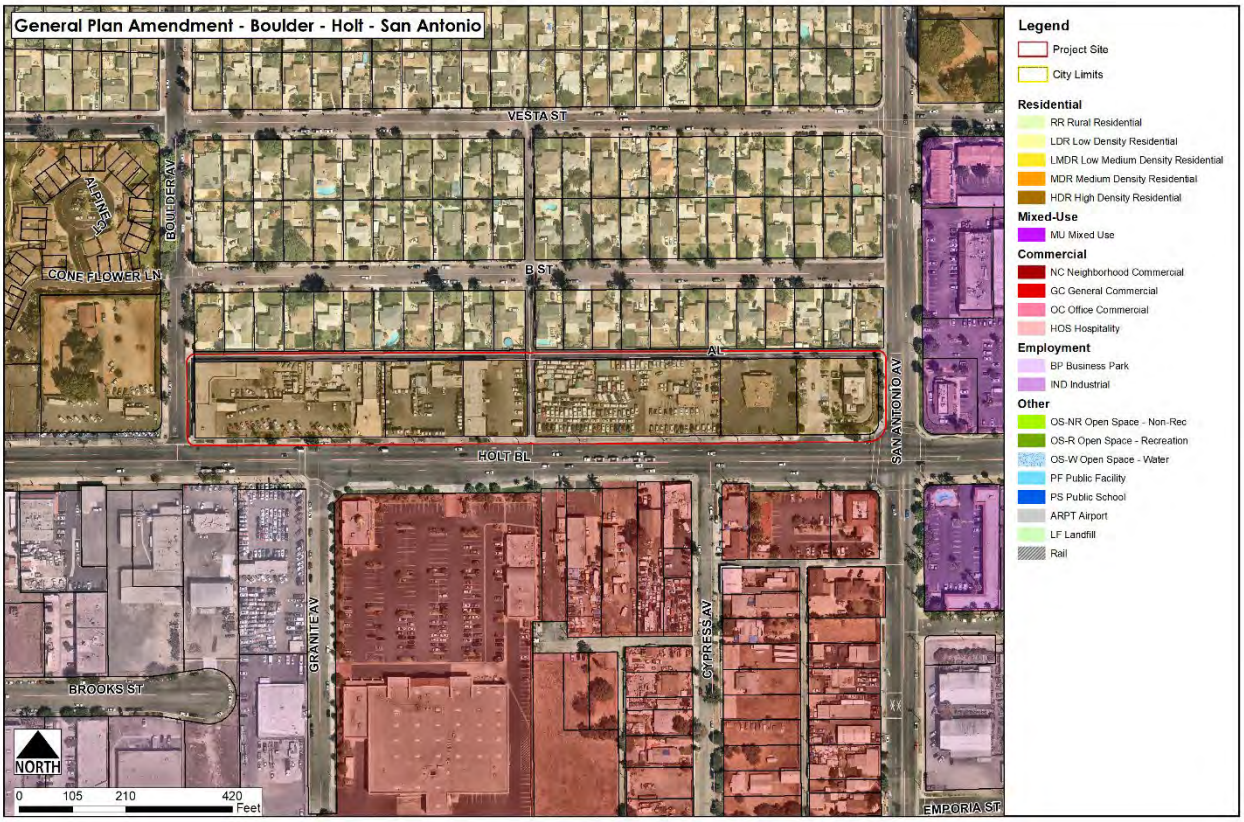
   Most of the checklist items were analyzed in the TOP 2050 SEIR, the Project does not permit the introduction of any new uses that were not part of the Project description in TOP 2050 SEIR. Therefore, the Project will not result in any new impacts beyond what was previously analyzed in TOP 2050 SEIR.



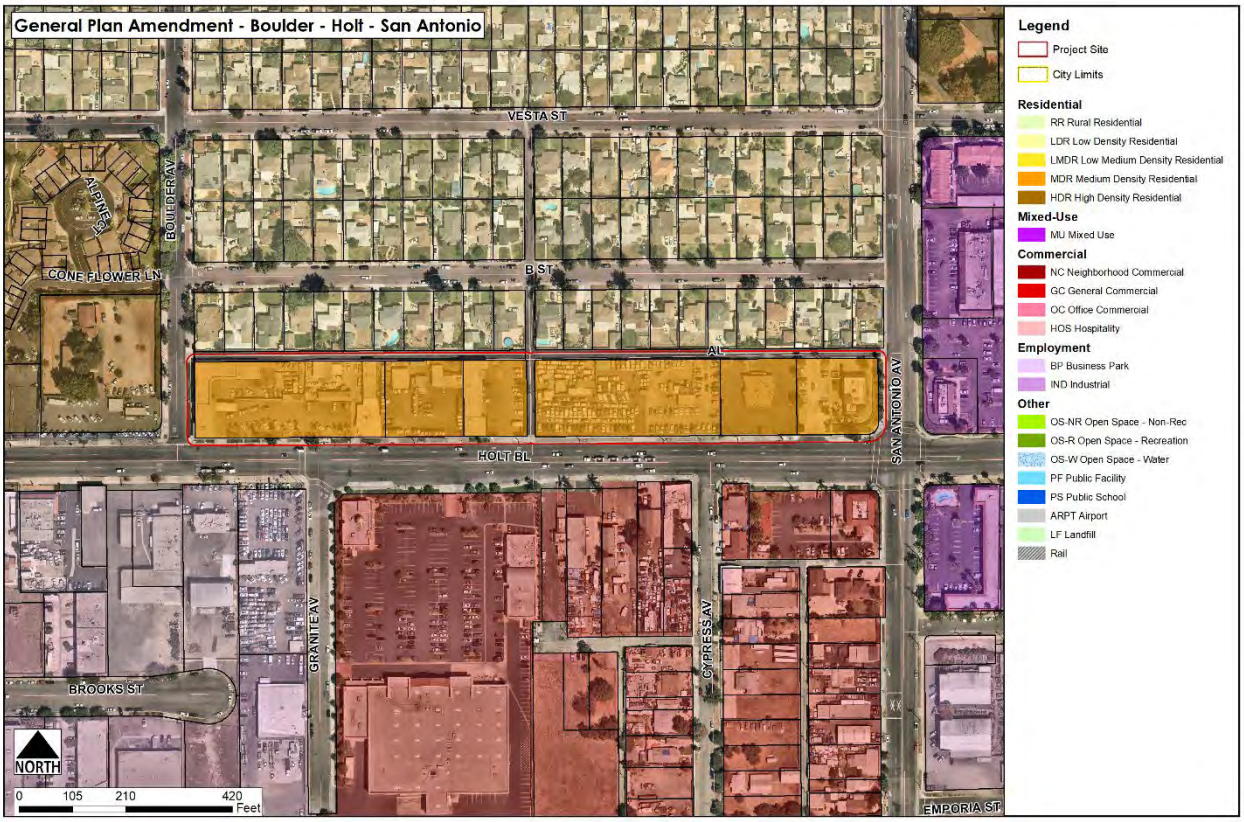
MITIGATION MEASURES



(For effects that are "Less than Significant with Mitigation Incorporated," describe the mitigation measures, which were incorporated or refined from the earlier document and the extent to which they address site-specific conditions for the project



The Mitigation Measures contained in the Certified TOP 2050 SEIR adequately mitigate the impacts of the proposed Project. These mitigation measures are contained in the attached Mitigation Monitoring Program.



No additional mitigation beyond that previously imposed is required.

Notes

1 Historically, citywide buildout levels do not achieve the maximum allowable density/intensity on every parcel and are, on average, lower than allowed by the Policy Plan. Accordingly, the buildout projections in this Policy Plan do not assume buildout at the maximum density or intensity and instead are adjusted downward. There are a few notable exceptions to this. The assumed density for Low-Density Residential north of Riverside Drive is estimated above the allowed density to account for the continued use of areas that were built at densities above the current allowance, and to account for growth in these areas due to accessory dwelling unit (ADU) development and lot splits. Some areas were also entitled at greater densities due to the use of gross acreage rather than net acreage. These areas, identified in note 7 utilized customized growth assumptions to ensure that the future projection was equal to or larger than the number of existing units in built areas, and equal to or larger than existing entitlements in undeveloped or partially developed areas.

2 Acres are based on the City's Parcel data as of January 2021.

3 Assumed Density/Intensity includes both residential density, expressed as units per acre, and non-residential intensity, expressed as floor area ratio (FAR), which is the amount of building square feet in relation to the size of the lot.

4 Projections of population by residential designation are based on projected occupancy rates and a persons-per-household factor that varies by housing type.

5 The factors used to generate the number of employees by land use category were derived by comparing 2018 employment data published by the U.S. Census as part of the Longitudinal Employer-Household Dynamics (LEHD) dataset to existing building square footage by use type, as recorded in the City's building permit database.

LU-03 Future Buildout Table

Land Use	Acres[2]	Assumed Density/Intensity[3]	Units	Pop[4]	Non-Residential Square Feet	Jobs[5]
		• 5% of area at 0.75 FAR office • 55% of area at 0.50 FAR retail				
• Rich-Haven[2]	154	• 86% of area at 18 du/ac • 2% of area at 0.35 FAR office • 12% of area at 0.30 FAR retail	2,389	6,122	289,088	373

General Commercial	385	0.30 FAR	-	-	5,033,395	5,605
Office/ Commercial	310	0.75 FAR	-	-	10,101,733	28,239

LU-03 Future Buildout Table

Land Use	Acres[2]	Assumed Density/Intensity[3]	Units	Pop[4]	Non-Residential Square Feet	Jobs[5]

6 Acreages and corresponding buildout estimates for these designations do not reflect underlying land uses within the Business Park and Industrial Overlays. Estimates within overlay areas are included within the corresponding Business Park and Industrial categories.

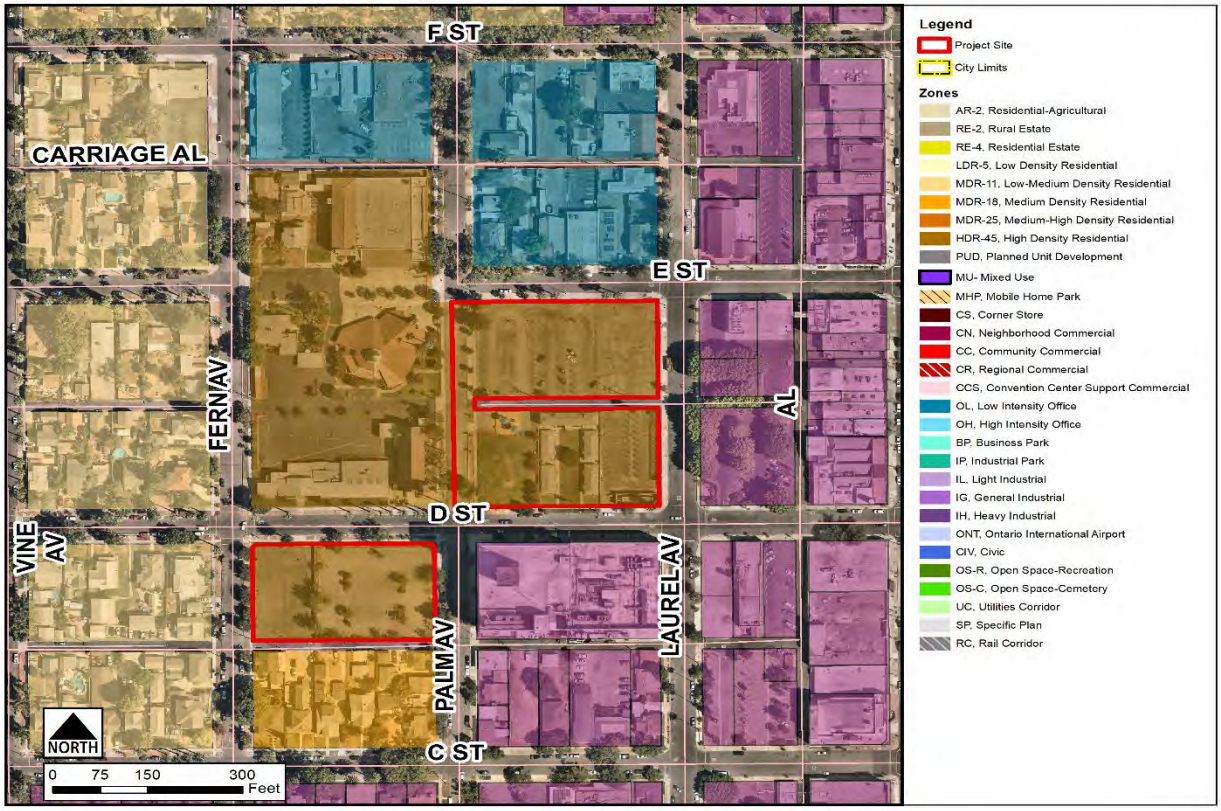
7. To ensure future projections are equal to or larger than existing conditions in built out areas as of August 2021, and equal to or larger than existing entitlements (approved before August 2021) in undeveloped or partially developed areas, buildout estimates for the following projects, assumed realistic densities as follows: Countryside Specific Plan (Low Density Residential: 6.18 du/ac), Creekside Specific Plan (Low Density Residential: 7.47 du/ac, Medium Density Residential: 15.81 du/ac), Subarea 29 Specific Plan (Low Density Residential: 7.03).

8. In certain mixed use categories, different buildout assumptions were employed on different sites. Variations in assumptions are included in multiple rows within this table.

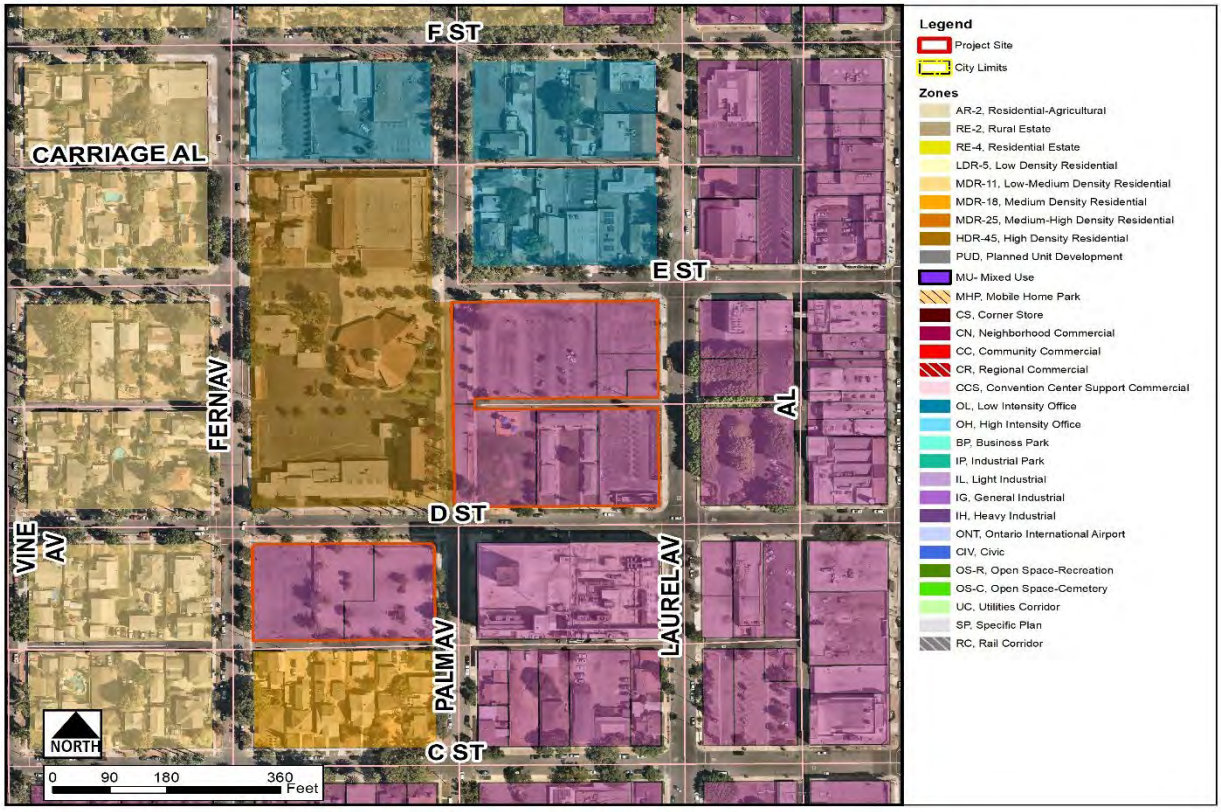
Last Amended: August 16, 2022

Exhibit C: PROPOSED LAND USE DESIGNATION TABLE (LU-02)

City of Ontario Policy Plan
Land Use Element



THE ONTARIO PLAN 2050



LU-02 Land Use Designations Summary Table

Land Use Designation	Residential Density & Non-Residential Intensity	Intention
		consider a host of uses including a transit station and multimodal transfer station.
Mixed Use – An intense mixture of uses that, when concentrated, create focal points for community activity and identity and facilitate walking, biking, and the use of transit. The Mixed Use land use category accommodates a horizontal and/or vertical mixture of retail, service, office, restaurant, entertainment, cultural, and residential uses. • Density, intensity and intended character varies by area, as generally described below, and defined in detail under the applicable Place Type in the Community Design Element. • The densities and intensities of the Mixed Use designation represent the intended level of anticipated development; however, individual projects may vary depending upon an approved master plan, such as a specific plan, or planned unit development. • The maximum amount of development in each Mixed Use area shall be limited by the Future Buildout Projections detailed in Table LU-03. Further direction regarding land use distributions, densities and intensities within some of these areas are provided by specific plans as noted below. • Most Mixed Use areas are the focal point of the City's Place Type designations illustrated on Figure CD-01 and noted below. Place Types are defined in the Community Design Element, and the vision for the intended outcome and character of each area is established and illustrated in the Place Type Figures noted below.		
Mixed Use - Downtown[1] *(MU-Downtown)*	• 25.0 to 75.0 dwelling units per acre • 2.0 FAR for retail and office uses *Subject to PUD at City's discretion*	Envisioned as an intensive vertical and horizontal mixture of retail, civic, office, and residential uses in a pedestrian friendly atmosphere. The historic character is enhanced. The most intensive uses are envisioned along Euclid and Holt Avenues. [Link to Community Design Element *Urban, Mixed Use, and Transit-oriented Place Types* Section, Community Design Element *Exhibits CD-01, CD-02, CD-03* and *CD-08*]
Mixed Use - Holt Blvd[1] *(MU-Holt)*	• 14.0[2] to 40.0 dwelling units per acre • 2.0 FAR for office uses • 1.0 FAR for retail uses *Subject to PUD at City's discretion*	This area is envisioned as a low-rise (3-5 stories) intensification of the Holt Corridor. The intent is to create identity and place along the Holt Corridor, connect the corridor to Downtown, and connect the Downtown to the Ontario Airport Metro Center. [Link to Community Design Element *Urban, Mixed Use, and Transit-oriented Place Types* Section, Community Design Element *Exhibits CD-01, CD-02, CD-08* and *CD-09*]
Mixed Use - Meredith[1] *(MU-Meredith)*	• 14.0 to 125.0 dwelling units per acre • 3.0 FAR for office and retail uses	This area is envisioned as a mixture of mid-rise buildings, regional-serving retail and office centers, and stand-alone high density residential projects. [Link to Community Design Element *Urban, Mixed Use, and Transit-oriented Place Types* Section, Community Design Element *Exhibits CD-01, CD-02,* and *CD-08*]

RESOLUTION NO. PC23-085

A RESOLUTION OF THE PLANNING COMMISSION OF THE CITY OF ONTARIO, CALIFORNIA, RECOMMENDING THE CITY COUNCIL APPROVE FILE NO. PGPA23-001, AN AMENDMENT TO THE POLICY PLAN (GENERAL PLAN) COMPONENT OF THE ONTARIO PLAN TO: [1] MODIFY THE LAND USE PLAN (EXHIBIT LU-01) AND EXHIBIT LU-03 (FUTURE BUILDOUT) CHANGING THE LAND USE DESIGNATION FOR 3.8 ACRES OF LAND FROM HIGH-DENSITY RESIDENTIAL TO MIXED USE - DOWNTOWN, [2] MODIFY THE LAND USE PLAN (EXHIBIT LU-01) AND EXHIBIT LU-03 (FUTURE BUILDOUT) CHANGING THE LAND USE DESIGNATION FOR 9.3 ACRES OF LAND, FROM MEDIUM-DENSITY RESIDENTIAL TO LOW-DENSITY RESIDENTIAL, [3] MODIFY THE LAND USE PLAN (EXHIBIT LU-01) AND EXHIBIT LU-03 (FUTURE BUILDOUT) CHANGING THE LAND USE DESIGNATION FOR 4.7 ACRES OF LAND FROM HIGH-DENSITY RESIDENTIAL TO MEDIUM-DENSITY RESIDENTIAL, [4] MODIFY THE LAND USE PLAN (EXHIBIT LU-01) AND EXHIBIT LU-03 (FUTURE BUILDOUT) CHANGING THE LAND USE DESIGNATION FOR 9.8 ACRES OF LAND FROM BUSINESS PARK TO MIXED USE – EAST HOLT, AND [5] MODIFY THE TEXT IN THE LAND USE DESIGNATION SUMMARY TABLE (EXHIBIT LU-02) TO ALLOW CIVIC USES WITHIN THE MIXED-USE DOWNTOWN LAND USE DESIGNATION. AND MAKING FINDINGS IN SUPPORT THEREOF— APN: 0110-072-25, 0110-081-06, 0110-081-07, 1008-551-01, 1008-551-07, 1008-551-11, 1008-551-12, 1008-551-13, 1008-561-06, 1010-491-02, 1010-491-03, 1010-491-16, 1048-344-03, 1048-353-04, 1048-353-05, 1048-353-09, 1048-353-13, 1048-353-14, 1048-576-01, 1048-576-02, 1048-604-13, 1048-604-14, AND 1048-604-15. (SEE ATTACHMENTS 1 AND 2) (PART OF CYCLE 4 FOR THE 2023 CALENDAR YEAR)

WHEREAS, City of Ontario has filed an Application for the approval of a General Plan Amendment, File No. PGPA23-001, as described in the title of this Resolution (hereinafter referred to as "Application" or "Project"); and

WHEREAS, the City of Ontario adopted the Policy Plan (General Plan) as part of The Ontario Plan in January 2010. Since the adoption of The Ontario Plan, the City has evaluated Exhibits LU-01: Official Land Use Plan and LU-03: Future Buildout further and is proposing modifications; and

WHEREAS, the proposed changes to Exhibit LU-01 Official Land Use Plan include changes to land use designations of certain properties shown on Exhibit A to align the land use designations of these properties with the City's continuous endeavors to facilitate and improve future development and land use patterns as outlined in The Ontario Plan; and

WHEREAS, Policy Plan Exhibit LU-03 (Future Buildout) specifies the expected buildout for the City of Ontario, incorporating the adopted land use designations. The proposed changes to Exhibit LU-01 (Official Land Use Plan) will require that Exhibit LU-03 (Future Buildout) is modified to be consistent with Exhibit LU-01 (Official Land Use Plan), as depicted on Exhibit B, attached; and

WHEREAS, the City of Ontario conducted an Open House on October 5, 2023, to gain input from impacted property owners; and

WHEREAS, the Project is located within the Airport Influence Area of Ontario International Airport, which encompasses lands within parts of San Bernardino, Riverside, and Los Angeles Counties, and is subject to, and must be consistent with, the policies and criteria set forth in the Ontario International Airport Land Use Compatibility Plan ("ALUCP"), which applies only to jurisdictions within San Bernardino County, and addresses the noise, safety, airspace protection, and overflight impacts of current and future airport activity; and

WHEREAS, the Application is a project pursuant to the California Environmental Quality Act (Public Resources Code Section 21000 et seq.) ("CEQA"); and

WHEREAS, as the first action on the Project, on October 24, 2023, the Planning Commission recommended approval of a Resolution adopting an Addendum to the Ontario Plan 2050 Supplemental Environmental Impact Report (State Clearinghouse No. 2021070364) adopted by City Council on August 16, 2022, for File No. PGPA20-002. The Addendum finds that the proposed project introduces no new significant environmental impacts, and all previously adopted mitigation measures were incorporated into the Project by reference; and

WHEREAS, on October 24, 2023, the Planning Commission of the City of Ontario conducted a hearing to consider the Project, and concluded said hearing on that date; and

WHEREAS, all legal prerequisites to the adoption of this Resolution have occurred.

NOW, THEREFORE, IT IS HEREBY FOUND, DETERMINED, AND RESOLVED by the Planning Commission of the City of Ontario, as follows:

SECTION 1: ***Environmental Determination and Findings.*** As the recommending body for the Project, the Planning Commission has reviewed and considered the information contained in the administrative record for the Project. Based upon the facts and information contained in the administrative record, including all written and oral evidence presented to the Planning Commission, the Planning Commission finds as follows:

(1) The environmental impacts of this project were reviewed in conjunction with an The Ontario Plan 2050 Supplemental Environmental Impact Report State Clearinghouse No. 2021070364 ("Certified EIR"), which was certified by the Ontario City Council on August 16, 2022, in conjunction with File No. PGPA20-002; and

(2) The Addendum and administrative record have been completed in compliance with CEQA, the State CEQA Guidelines, and the City of Ontario Local CEQA Guidelines; and

(3) The City's "Guidelines for the Implementation of the California Environmental Quality Act (CEQA)" provide for the use of a single environmental assessment in situations where the impacts of subsequent projects are adequately analyzed. This Application introduces no new significant environmental impacts; and

(4) All previously adopted mitigation measures shall be a condition of project approval, as they are applicable to the Project, and are incorporated herein by this reference; and

(5) The Addendum contains a complete and accurate reporting of the environmental impacts associated with the Project, and reflects the independent judgment of the Planning Commission; and

(6) There is no substantial evidence in the administrative record supporting a fair argument that the project may result in significant environmental impacts.

SECTION 2: ***Additional Environmental Review Not Required.*** Based on the Addendum, all related information presented to the Planning Commission, and the specific findings set forth in Section 1, above, the Planning Commission finds that the preparation of a subsequent or supplemental environmental impact report is not required for the Project, as the Project:

(1) Does not constitute substantial changes to the Certified EIR that will require major revisions to the Certified EIR due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects; and

(2) Does not constitute substantial changes with respect to the circumstances under which the Certified EIR was prepared, that will require major revisions to the Certified EIR due to the involvement of new significant environmental effects or a substantial increase in the severity of the previously identified significant effects; and

(3) Does not contain new information of substantial importance that was not known and could not have been known with the exercise of reasonable diligence at the time the Certified EIR was certified/adopted, that shows any of the following:

(a) The project will have one or more significant effects not discussed in the Certified EIR; or

(b) Significant effects previously examined will be substantially more severe than shown in the Certified EIR; or

(c) Mitigation measures or alternatives previously found not to be feasible would in fact be feasible and would substantially reduce one or more significant effects of the Project, but the City declined to adopt such measures; or

(d) Mitigation measures or alternatives considerably different from those analyzed in the Certified EIR would substantially reduce one or more significant effects on the environment, but which the City declined to adopt.

SECTION 3: ***Airport Land Use Compatibility Plan ("ALUCP") Compliance.*** The California State Aeronautics Act (Public Utilities Code Section 21670 et seq.) requires that an Airport Land Use Compatibility Plan be prepared for all public use airports in the State; and requires that local land use plans and individual development proposals must be consistent with the policies set forth in the adopted Airport Land Use Compatibility Plan. On April 19, 2011, the City Council of the City of Ontario approved and adopted the Ontario International Airport Land use Compatibility Plan, establishing the Airport Influence Area for Ontario International Airport, which encompasses lands within parts of San Bernardino, Riverside, and Los Angeles Counties, and limits future land uses and development within the Airport Influence Area, as they relate to noise, safety, airspace protection, and overflight impacts of current and future airport activity. As the recommending body for the Project, the Planning Commission has reviewed and considered the facts and information contained in the Application and supporting documentation against the ONT ALUCP compatibility factors, including [1] Safety Criteria (ONT ALUCP Table 2-2) and Safety Zones (ONT ALUCP Map 2-2), [2] Noise Criteria (ONT ALUCP Table 2-3) and Noise Impact Zones (ONT ALUCP Map 2-3), [3] Airspace protection Zones (ONT ALUCP Map 2-4), and [4] Overflight Notification Zones (ONT ALUCP Map 2-5). As a result, the Planning Commission, therefore, finds and determines that the Project, when implemented in conjunction with the conditions of approval, will be consistent with the policies and criteria set forth within the ONT ALUCP.

SECTION 4: ***Concluding Facts and Reasons.*** Based upon the substantial evidence presented to the Planning Commission during the above-referenced hearing, and upon the specific findings set forth in Sections 1 through 3, above, the Planning Commission hereby concludes as follows:

(1) The proposed General Plan Amendment is consistent with the goals and policies of The Ontario Plan as follows:

Policy Plan (General Plan)

Land Use Element:

- LU-1.1 Strategic Growth. We concentrate growth in strategic locations that help create place and identity, maximize available and planned infrastructure, foster the development of transit, and support the expansion of the active and multimodal transportation networks throughout the City.

- LU-1.6 Complete Community. We incorporate a variety of land uses and building types in our land use planning efforts that result in a complete community where residents at all stages of life, employers, workers, and visitors have a wide spectrum of choices of where they can live, work, shop and recreate within Ontario.

- Goal LU-2 Compatibility: Compatibility between a wide range of uses and a resultant urban patterns and forms.

Community Economics Element:

- Goal CE-1 Complete Community: A complete community that provides for all incomes and stages of life.

- Goal CE-2 Placemaking: A City of distinctive neighborhoods, districts, corridors, and centers where people choose to be; and

(2) The proposed General Plan Amendment would not be detrimental to the public interest, health, safety, convenience, or general welfare of the City; and

(3) The Land Use Element is a mandatory element allowed four general plan amendments per calendar year and this general plan amendment is the first amendment to the Land Use Element of the 2023 calendar year consistent with Government Code Section 65358; and

(4) The proposed General Plan Amendment action modifying land use designations for 4.7 acres from High-Density Residential to Medium-Density Residential, located north of Holt Boulevard, west of San Antonio Avenue, and east of Boulder Avenue (Exhibit A-3), is not consistent with the Housing Element of the General Plan component of The Ontario Plan. The property is listed in the Housing Element Sites Inventory contained in Tables B-1 and B-2 of the Housing Element Technical Report, and inconsistent with the number of dwelling units or density specified in the Housing Element Sites Inventory; therefore, a General Plan Amendment to remove the subject property from the Housing Element Sites Inventory is required. Removal of the subject property from the inventory will not impact the City's Regional Housing Needs Assessment ("RHNA") obligations, as there are an adequate number of sites in the inventory to meet the RHNA obligation; and

(5) During the amendment of the general plan, opportunities for the involvement of citizens, California Native American Indian tribes (Government Code Section 65352.3.), public agencies, public utility companies, and civic, education, and other community groups, through public hearings or other means were implemented consistent with Government Code Section 65351.

SECTION 5: ***Planning Commission Action.*** Based upon the findings and conclusions set forth in Sections 1 through 4, above, the Planning Commission hereby RECOMMENDS THE CITY COUNCIL APPROVES the proposed General Plan Amendment, as depicted in Attachment 1 (Policy Plan Land Use Plan (Exhibit LU-01) Revision) and Attachment 2 (Future Buildout Table (Exhibit LU-03) Revision) of this Resolution.

SECTION 6: ***Custodian of Records.*** The documents and materials that constitute the record of proceedings on which these findings have been based are located at the City of Ontario City Hall, 303 East "B" Street, Ontario, California 91764. The custodian for these records is the City Clerk of the City of Ontario.

SECTION 7: ***Certification to Adoption.*** The Secretary shall certify to the adoption of the Resolution.

- - - - - - - - - - - - - -

The Secretary Pro Tempore for the Planning Commission of the City of Ontario shall certify as to the adoption of this Resolution.

I hereby certify that the foregoing Resolution was duly and regularly introduced, passed and adopted by the Planning Commission of the City of Ontario at a regular meeting thereof held on the 24th day of October, 2023 and the foregoing is a full, true and correct copy of said Resolution, and has not been amended or repealed.

Notes

1 Historically, citywide buildout levels do not achieve the maximum allowable density/intensity on every parcel and are, on average, lower than allowed by the Policy Plan. Accordingly, the buildout projections in this Policy Plan do not assume buildout at the maximum density or intensity and instead are adjusted downward. There are a few notable exceptions to this. The assumed density for Low-Density Residential north of Riverside Drive is estimated above the allowed density to account for the continued use of areas that were built at densities above the current allowance, and to account for growth in these areas due to accessory dwelling unit (ADU) development and lot splits. Some areas were also entitled at greater densities due to the use of gross acreage rather than net acreage. These areas, identified in note 7 utilized customized growth assumptions to ensure that the future projection was equal to or larger than the number of existing units in built areas, and equal to or larger than existing entitlements in undeveloped or partially developed areas.

2 Acres are based on the City's Parcel data as of January 2021.

3 Assumed Density/Intensity includes both residential density, expressed as units per acre, and non-residential intensity, expressed as floor area ratio (FAR), which is the amount of building square feet in relation to the size of the lot.

4 Projections of population by residential designation are based on projected occupancy rates and a persons-per-household factor that varies by housing type.

5 The factors used to generate the number of employees by land use category were derived by comparing 2018 employment data published by the U.S. Census as part of the Longitudinal Employer-Household Dynamics (LEHD) dataset to existing building square footage by use type, as recorded in the City's building permit database.

LU-03 Future Buildout Table

Land Use	Acres[2]	Assumed Density/Intensity[3]	Units	Pop[4]	Non-Residential Square Feet	Jobs[5]

6 Acreages and corresponding buildout estimates for these designations do not reflect underlying land uses within the Business Park and Industrial Overlays. Estimates within overlay areas are included within the corresponding Business Park and Industrial categories.

7. To ensure future projections are equal to or larger than existing conditions in built out areas as of August 2021, and equal to or larger than existing entitlements (approved before August 2021) in undeveloped or partially developed areas, buildout estimates for the following projects, assumed realistic densities as follows: Countryside Specific Plan (Low Density Residential: 6.18 du/ac), Creekside Specific Plan (Low Density Residential: 7.47 du/ac, Medium Density Residential: 15.81 du/ac), Subarea 29 Specific Plan (Low Density Residential: 7.03).
8. In certain mixed use categories, different buildout assumptions were employed on different sites. Variations in assumptions are included in multiple rows within this table.

Last Amended: August 16, 2022

RESOLUTION NO. PC23-086

A RESOLUTION OF THE PLANNING COMMISSION OF THE CITY OF ONTARIO, CALIFORNIA, RECOMMENDING THE CITY COUNCIL APPROVE FILE NO. PZC-23-003, A ZONE CHANGE REQUEST TO AMEND THE OFFICIAL ZONING MAP: [1] REZONING 3.8 ACRES OF LAND FROM HDR-45 (HIGH-DENSITY RESIDENTIAL) TO MU-1 (DOWNTOWN MIXED USE), [2] REZONING OF 9.8 ACRES OF LAND FROM BP (BUSINESS PARK) TO MU-6 (EAST HOLT MIXED USE), AND [3] REZONING 5.75 ACRES OF LAND FROM OL (LOW-INTENSITY OFFICE) TO MU-1 (DOWNTOWN MIXED USE), AND MAKING FINDINGS IN SUPPORT THEREOF—APNS: 0110-072-25, 0110-081-06, 0110-081-07, 1048-344-03, 1048-353-04, 1048-353-05, 1048-353-09, 1048-353-13, 1048-353-14, 1048-541-15, 1048-576-01, AND 1048-576-02.

WHEREAS, The Zoning Map amendment includes the following:

1. Rezoning 3.8 acres of land from HDR-45 (High-Density Residential) to MU-1 (Downtown Mixed Use).
2. Rezoning 9.8 acres of land from BP (Business Park) to MU-6 (East Holt Mixed Use).
3. Rezoning 5.75 acres of land from OL (Low-Intensity Office) to MU-1 (Downtown Mixed Use); and

WHEREAS, on October 5, 2023, the Planning Department held an in-person community meeting attended by 5 community members; and

WHEREAS, the Project has been reviewed for consistency with the Housing Element of the Policy Plan component of The Ontario Plan, as State Housing Element law (as prescribed in Government Code Sections 65580 through 65589.8) requires that development projects must be consistent with the Housing Element, if upon consideration of all its aspects, it is found to further the purposes, principals, goals, and policies of the Housing Element; and

WHEREAS, the Project is located within the Airport Influence Area of Ontario International Airport, which encompasses lands within parts of San Bernardino, Riverside, and Los Angeles Counties, and is subject to, and must be consistent with, the policies and criteria set forth in the Ontario International Airport Land Use Compatibility Plan ("ONT ALUCP"), which applies only to jurisdictions within San Bernardino County, and addresses the noise, safety, airspace protection, and overflight impacts of current and future airport activity; and

WHEREAS, the Application is a project pursuant to the California Environmental Quality Act (Public Resources Code Section 21000 et seq.) ("CEQA") and an addendum has been prepared to determine possible environmental impacts; and

WHEREAS, Ontario Development Code Table 2.02-1 (Review Matrix) grants the Planning Commission the responsibility and authority to review and make recommendation to City Council on the subject Application; and

WHEREAS, City of Ontario Development Code Division 2.03 (Public Hearings) prescribes the manner in which public notification shall be provided and hearing procedures to be followed, and all such notifications and procedures have been completed; and

WHEREAS, as the first action on the Project, on October 24, 2023, the Planning Commission approved a Resolution recommending the City Council approve the use of an Addendum to TOP 2050 Supplemental Environmental Impact Report (SEIR) (State Clearinghouse No. 2021070364), prepared pursuant to CEQA, the State CEQA Guidelines, and the City of Ontario Local CEQA Guidelines, which indicated that all potential environmental impacts from the Project were less than significant or could be mitigated to a level of less than significance; and

WHEREAS, on October 24, 2023, the Planning Commission of the City of Ontario conducted a hearing to consider the Project, and concluded said hearing on that date; and

WHEREAS, all legal prerequisites to the adoption of this Resolution have occurred.

NOW, THEREFORE, IT IS HEREBY FOUND, DETERMINED, AND RESOLVED by the Planning Commission of the City of Ontario, as follows:

SECTION 1: ***Environmental Determination and Findings.*** As the recommending authority for the Project, the Planning Commission has reviewed and considered the information contained in the previous Certified SEIR and supporting documentation. Based upon the facts and information contained in the previous Certified SEIR and supporting documentation, the Planning Commission recommends City Council find as follows:

(1) The environmental impacts of this project were reviewed in conjunction with an Addendum to TOP 2050 SEIR (State Clearinghouse No. 2021070364), certified by the City of Ontario City Council on August 16, 2022, in conjunction with File No. PGPA20-002; and

(2) The Addendum and administrative record have been completed in compliance with CEQA, the State CEQA Guidelines, and the City of Ontario Local CEQA Guidelines; and

(3) The City's "Guidelines for the Implementation of the California Environmental Quality Act (CEQA)" provide for the use of a single environmental assessment in situations where the impacts of subsequent projects are adequately analyzed. This Application introduces no new significant environmental impacts; and

(4) The Addendum contains a complete and accurate reporting of the environmental impacts associated with the Project, and reflects the independent judgment of the Planning Commission; and

(5) There is no substantial evidence in the administrative record supporting a fair argument that the project may result in significant environmental impacts; and

(6) The proposed project will introduce no new significant environmental impacts beyond those previously analyzed in the Certified SEIR, and all mitigation measures previously adopted by the Certified SEIR, are incorporated herein by this reference.

SECTION 2: ***Subsequent or Supplemental Environmental Review Not Required.*** Based on the Addendum, all related information presented to the Planning Commission, and the specific findings set forth in Section 1, above, the Planning Commission finds that the preparation of a subsequent or supplemental Certified SEIR is not required for the Project, as the Project:

(1) Does not constitute substantial changes to the Certified SEIR that will require major revisions to the Certified SEIR due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects; or

(2) Does not constitute substantial changes with respect to the circumstances under which the Certified SEIR was prepared, that will require major revisions to the Certified SEIR due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects; or

(3) Does not contain new information of substantial importance that was not known and could not have been known with the exercise of reasonable diligence at the time the Certified SEIR was certified/adopted, that shows any of the following:

(a) The project will have one or more significant effects not discussed in the Certified SEIR; or

(b) Significant effects previously examined will be substantially more severe than shown in the Certified SEIR; or

(c) Mitigation measures or alternatives previously found not to be feasible would in fact be feasible, and would substantially reduce one or more significant effects of the Project, but the City declined to adopt such measures; or

(d) Mitigation measures or alternatives which are considerably different from those analyzed in the Certified SEIR would substantially reduce one or more significant effects on the environment, but which the City declined to adopt.

SECTION 3: ***Housing Element Compliance.*** Pursuant to the requirements of California Government Code Chapter 3, Article 10.6, commencing with Section 65580, as the recommending body for the Project, the Planning Commission finds that based upon the facts and information contained in the Application and supporting documentation, at the time of Project implementation, the project is consistent with the Housing Element of the Policy Plan (general plan) component of TOP.

SECTION 4: ***Ontario International Airport Land Use Compatibility Plan ("ALUCP") Compliance.*** The California State Aeronautics Act (Public Utilities Code Section 21670 et seq.) requires that an Airport Land Use Compatibility Plan be prepared for all public use airports in the State; and requires that local land use plans and individual development proposals must be consistent with the policies set forth in the adopted Airport Land Use Compatibility Plan. On April 19, 2011, the City Council of the City of Ontario approved and adopted the ALUCP, establishing the Airport Influence Area for Ontario International Airport (hereinafter referred to as "ONT"), which encompasses lands within parts of San Bernardino, Riverside, and Los Angeles Counties, and limits future land uses and development within the Airport Influence Area, as they relate to noise, safety, airspace protection, and overflight impacts of current and future airport activity. As the recommending body for the Project, the Planning Commission has reviewed and considered the facts and information contained in the Application and supporting documentation against the ALUCP compatibility factors, including [1] Safety Criteria (ALUCP Table 2-2) and Safety Zones (ALUCP Map 2-2), [2] Noise Criteria (ALUCP Table 2-3) and Noise Impact Zones (ALUCP Map 2-3), [3] Airspace protection Zones (ALUCP Map 2-4), and [4] Overflight Notification Zones (ALUCP Map 2-5). As a result, the Planning Commission, therefore, finds and determines that the Project, when implemented in conjunction with the conditions of approval, will be consistent with the policies and criteria set forth within the ALUCP.

SECTION 5: ***Concluding Facts and Reasons.*** Based upon the substantial evidence presented to the Planning Commission during the above-referenced hearing, and upon the specific findings set forth in Section 1 through 4, above, the Planning Commission hereby concludes as follows:

(1) ***The proposed Zone Change is consistent with the goals, policies, plans and exhibits of the Vision, Policy Plan (General Plan), and City Council Priorities components of The Ontario Plan as follows:***

Land Use Element:

- Goal LU1: A community that has a spectrum of housing types and price ranges that match the jobs in the City and that make it possible for people to live and work in Ontario and maintain a quality of life.

  - LU-1.6: *Complete Community*. We incorporate a variety of land uses and building types in our land use planning efforts that result in a complete community where residents at all stages of life, employers, workers, and visitors have a wide spectrum of choices of where they can live, work, shop and recreate within Ontario.

Compliance: The proposed Zone Change will reflect the existing uses of the properties or closely coordinates with land use designations in the surrounding area and provides opportunities for choice in living environments.

- Goal LU2: Compatibility between a wide range of uses.

  - LU-2.1: *Land Use Decisions*. We minimize adverse impacts on adjacent properties when considering land use and zoning requests.

Compliance: The proposed Zone Change reflects the existing uses of the properties or closely coordinates with land use designations in the surrounding area and will not create adverse impacts on adjacent properties.

- Goal LU5: Integrated airport systems and facilities that minimize negative impacts to the community and maximize economic benefits.

  - LU-5.7: *ALUCP Consistency with Land Use Regulations*. We comply with state law that requires general plans, specific plans and all new development be consistent with the policies and criteria set forth within an Airport Land Use Compatibility Plan for any public use airport.

Compliance: The proposed Zone Change is consistent with the Ontario Airport ALUCP.

Safety Element — Noise Hazards:

- Goal S4: An environment where noise does not adversely affect the public's health, safety, and welfare.

- S-4.6: *Airport Noise Compatibility*. We utilize information from Airport Land Use Compatibility Plans to prevent the construction of new noise sensitive land uses within airport noise impact zones.

Compliance: The City is proposing zone changes across the City, as illustrated in Exhibit A, to align with the TOP Vision. Furthermore, these zoning adjustments are an integral component of the City's continuous endeavors to influence and improve future development and land use patterns as outlined in The Ontario Plan.

(2) ***The proposed Zone Change would not be detrimental to the public interest, health, safety, convenience, or general welfare of the City.*** The proposed zoning changes are compatible with the existing zoning and land uses in the surrounding area. In addition, Land Use Policies LU-2.3, LU-2.4, LU-2.5, and LU-2.6 would reduce the amount of conflict between contradicting land uses.

(3) ***The proposed Zone Change will not adversely affect the harmonious relationship with adjacent properties and land uses.*** The implementation of the Project would not lead to physical improvements that could potentially divide an established community. Moreover, the Land Use Policies LU-2.3, LU-2.4, LU-2.5, and LU-2.6 would serve to minimize conflicts between conflicting land uses. As a result, no adverse impacts are anticipated.

(4) ***The subject site is physically suitable, including, but not limited to, parcel sizes, shapes, access, and availability of utilities, for the request and anticipated development.*** The proposed zone changes are aimed at facilitating the systematic development of the Project sites. This will be achieved by rezoning parcels that constitute the Project sites, rendering it physically conducive for any anticipated future development and associated permitted land uses.

SECTION 6: ***Planning Commission Action.*** Based upon the findings and conclusions set forth in Sections 1 through 5, above, the Planning Commission hereby RECOMMENDS THE CITY COUNCIL APPROVES the herein described Application, as detailed in "Exhibit A" attached hereto and incorporated herein by this reference.

SECTION 7: ***Custodian of Records.*** The documents and materials that constitute the record of proceedings on which these findings have been based are located at the City of Ontario City Hall, 303 East "B" Street, Ontario, California 91764. The custodian for these records is the City Clerk of the City of Ontario.

SECTION 8: ***Certification to Adoption.*** The Secretary shall certify to the adoption of the Resolution.

- - - - - - - - - - - - - -

The Secretary Pro Tempore for the Planning Commission of the City of Ontario shall certify as to the adoption of this Resolution.

I hereby certify that the foregoing Resolution was duly and regularly introduced, passed and adopted by the Planning Commission of the City of Ontario at a special meeting thereof held on the 24th day of October, 2023, and the foregoing is a full, true and correct copy of said Resolution, and has not been amended or repealed.

Existing Zone: OL (Low Intensity Office) Zoning District.

Proposed Zone: MU-1 (Downtown Mixed Use) Zoning District.

RESOLUTION NO. _____

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF ONTARIO, CALIFORNIA, APPROVING AN ADDENDUM TO THE ONTARIO PLAN 2050 CERTIFIED SUPPLEMENTAL ENVIRONMENTAL IMPACT REPORT (STATE CLEARINGHOUSE NO. 2021070364), FOR WHICH AN INITIAL STUDY WAS PREPARED, ALL IN ACCORDANCE WITH THE CALIFORNIA ENVIRONMENTAL QUALITY ACT, AS AMENDED, FOR FILE NOS. PGPA23-001 AND PZC-23-003.

WHEREAS, on August 16, 2022, the City Council certified The Ontario Plan 2050 ("TOP 2050") Supplemental Environmental Impact Report ("SEIR") (State Clearinghouse No.2021070364), adopted an update to The Ontario Plan Policy Plan (general plan) and the Preferred Land Use Plan, and adopted a Statement of Overriding Considerations pursuant to CEQA; and

WHEREAS, prior to the adoption of this Resolution, the Planning Director of the City of Ontario prepared and approved for attachment to the Certified Supplemental Environmental Impact Report, an addendum to The Ontario Plan 2050 Certified Supplemental Environmental Impact Report (State Clearinghouse No. 2021070364) for File Nos. PGPA23-001 and PZC-23-003, (hereinafter referred to as "SEIR Addendum"), all in accordance with the requirements of the California Environmental Quality Act of 1970, together with State and local guidelines implementing said Act, all as amended to date (collectively referred to as "CEQA"); and

WHEREAS, the SEIR Addendum concluded that implementation of the Project could result in a number of significant effects on the environment and identified mitigation measures that would reduce each of those significant effects to a less-than-significant level; and

WHEREAS, pursuant to California Environmental Quality Act ("CEQA") Guidelines Section 15164(a), a lead agency shall prepare an addendum to a previously certified SEIR if some changes or additions are necessary to a project, but the preparation of a subsequent or supplemental EIR is not required; and

WHEREAS, the City determined that none of the conditions requiring preparation of a subsequent or supplemental EIR would occur from the Project, and that preparation of an Addendum to the Certified SEIR was appropriate; and

WHEREAS, on October 24, 2023, the Planning Commission of the City of Ontario conducted a hearing to consider the Addendum and concluded said hearing on that date, voting to issue Resolution No. PC23-084, recommending that the City Council approve the use of an Addendum and conclude that none of the conditions requiring preparation of a subsequent or supplemental EIR have occurred, and further recommending that the City Council take actions on the Project in compliance with CEQA and state and local guidelines implementing CEQA; and

WHEREAS, the City of Ontario is the lead agency on the Project, and the City Council is the decision-making authority for the General Plan Amendment (File No. PGPA23-001) and Zone Change (File No. PZC-23-003) application; and

WHEREAS, the City Council has reviewed and considered the SEIR Addendum for the Project, has concluded that none of the conditions requiring preparation of a subsequent or supplemental EIR have occurred, and intends to take actions on the Project in compliance with CEQA and state and local guidelines implementing CEQA; and

WHEREAS, the SEIR Addendum for the Project is on file in the Planning Department, located at 303 East B Street, Ontario, CA 91764, available for inspection by any interested person at that location and is, by this reference, incorporated into this Resolution as if fully set forth herein; and

WHEREAS, all legal prerequisites to the adoption of this Resolution have occurred.

NOW, THEREFORE, IT IS HEREBY FOUND, DETERMINED, AND RESOLVED by the City Council of the City of Ontario, as follows:

SECTION 1. ***Environmental Determination and Findings.*** As the decision-making authority for the Project, the City Council has reviewed and considered the information contained in the administrative record for the Project. Based upon the facts and information contained in the administrative record, including all written and oral evidence presented to the City Council, the City Council finds as follows:

(1) The environmental impacts of this project were reviewed in conjunction with an Addendum to The Ontario Plan 2050 Supplemental Environmental Impact Report (State Clearinghouse No. 2021070364) adopted by City Council on August 16, 2022, in conjunction with File No. PGPA20-002; and

(2) The SEIR Addendum and administrative record have been completed in compliance with CEQA, the State CEQA Guidelines, and the City of Ontario Local CEQA Guidelines; and

(3) The City's "Guidelines for the Implementation of the California Environmental Quality Act (CEQA)" provide for the use of a single environmental assessment in situations where the impacts of subsequent projects are adequately analyzed. This Application introduces no new significant environmental impacts; and

(4) All previously adopted mitigation measures shall be a condition of project approval, as they are applicable to the Project, and are incorporated herein by this reference; and

(5) The SEIR Addendum contains a complete and accurate reporting of the environmental impacts associated with the Project, and reflects the independent judgment of the City Council; and

(6) There is no substantial evidence in the administrative record supporting a fair argument that the project may result in significant environmental impacts.

SECTION 2. ***Additional Environmental Review Not Required.*** Based on the SEIR Addendum, all related information presented to the City Council, and the specific findings set forth in Section 1, above, the City Council finds that the preparation of a subsequent or supplemental Environmental Impact Report is not required for the Project, as the Project:

(1) Does not constitute substantial changes to the Certified SEIR that will require major revisions to the Certified SEIR due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects; and

(2) Does not constitute substantial changes with respect to the circumstances under which the Certified SEIR was prepared, that will require major revisions to the Certified SEIR due to the involvement of new significant environmental effects or a substantial increase in the severity of the previously identified significant effects; and

(3) Does not contain new information of substantial importance that was not known and could not have been known with the exercise of reasonable diligence at the time the Certified SEIR was certified/adopted, that shows any of the following:

(a) The project will have one or more significant effects not discussed in the Certified SEIR; or

(b) Significant effects previously examined will be substantially more severe than shown in the Certified SEIR; or

(c) Mitigation measures or alternatives previously found not to be feasible would in fact be feasible and would substantially reduce one or more significant effects of the Project, but the City declined to adopt such measures; or

(d) Mitigation measures or alternatives considerably different from those analyzed in the Certified SEIR would substantially reduce one or more significant effects on the environment, but which the City declined to adopt.

SECTION 3. ***City Council Action.*** Based upon the findings and conclusions set forth in Sections 1 and 2, above, the City Council hereby finds that based upon the entire record of proceedings before it, and all information received, that there is no substantial evidence that the Project will constitute substantial changes to the Certified SEIR, and does hereby APPROVES the SEIR Addendum, attached hereto as "Attachment A," and incorporated herein by this reference.

SECTION 4. ***Custodian of Records.*** The documents and materials that constitute the record of proceedings on which these findings have been based are located at the City of Ontario City Hall, 303 East "B" Street, Ontario, California 91764. The custodian for these records is the City Clerk of the City of Ontario.

PASSED, APPROVED, AND ADOPTED this 21st day of November 2023.

6. Policy Plan (General Plan) Designation: Various

7. Zoning Designation: Various

8. Description of Project:

a. A City initiated request to amend the Policy Plan (General Plan) component of The Ontario Plan to:

i. [1] Modify the Land Use Plan (Exhibit LU-01) changing the land use designation for 3.8 acres of land from High-Density Residential to Mixed Use - Downtown,
ii. [2] Modify the Land Use Plan (Exhibit LU-01) changing the land use designation for 9.3 acres of land, from Medium-Density Residential to Low-Density Residential,
iii. [3] Modify the Land Use Plan (Exhibit LU-01) changing the land use designation for 4.7 acres of land from High-Density Residential to Medium-Density Residential,
iv. [4] Modify the Land Use Plan (Exhibit LU-01) changing the land use designation for 9.8 acres of land from Business Park to Mixed Use – East Holt, and
v. [5] Modify the text in the Land Use Designation Summary Table (Exhibit LU-02) to allow Civic uses within the Mixed-Use - Downtown land use designation.

b. A City-initiated Zone Change request to amend the Official Zoning Map:
i. [1] rezoning 3.8 acres of land from HDR-45 (High-Density Residential) to MU-1 (Downtown Mixed Use),
ii. [2] rezoning of 9.8 acres of land from BP (Business Park) to MU-6 (East Holt Mixed Use), and
iii. [3] rezoning 5.75 acres of land from OL (Low-Intensity Office) to MU-1 (Downtown Mixed Use).

9. Project Setting: As illustrated in Figure 1, the Project site is located is located in southwestern San Bernardino County, within the City of Ontario.

10. Analysis: According to the California Environmental Quality Act ("CEQA") Guidelines Section 15164, an Addendum to a previously Certified EIR may be used if some changes or additions are necessary, but none of the conditions described in Section 15162 requiring the preparation of a subsequent Negative Declaration or EIR have occurred. The CEQA Guidelines require that a brief explanation be provided to support the findings that no subsequent EIR or Negative Declaration are needed for further discretionary approval. These findings are described below:

a. *Required Finding: Substantial changes are not proposed for the project that will require major revisions of the previous EIR due to the involvement of new, significant environmental effects or a substantial increase in the severity of previously identified effects.*

Substantial changes are not proposed by the Project and project implementation will not require revisions to TOP 2050 SEIR. TOP 2050 SEIR analyzed the direct and physical changes in the environment that would be caused by TOP; focusing on changes to land use associated with the final buildout of the Official Land Use Plan. TOP 2050 SEIR assumes the same overall development at buildout as shown below.

TOP Buildout Analysis	Units	Population	Non-Residential Square Footage	Jobs
Buildout per current TOP 2050 SEIR	129,562	410,492	261,491,779	296,002
Buildout per Proposed Project	129,620 +58	410,643 +151	261,417,457 (74,322)	295,776 (226)

Since the anticipated buildout change is minor, no revisions to TOP 2050 SEIR are required. In addition, all previously adopted mitigation measures are a condition of project approval and are incorporated herein by reference. The attached Initial Study provides an analysis of the Project and verification that the Project will not cause environmental impacts such that any of the circumstances identified in CEQA Guidelines Section 15162 are present.

b. *Required Finding: Substantial changes have not occurred with respect to the circumstances under which the project is undertaken, that would require major revisions of the previous Environmental Impact Report due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects.*

Substantial changes have not occurred with respect to the circumstances under which the project was undertaken, that would require major revisions to TOP 2050 SEIR in that the proposed zoning changes are consistent with what was analyzed under the TOP 2050 SEIR; therefore, no proposed changes or revisions to the SEIR are required. In addition, all previously adopted mitigation measures are a condition of project approval and are incorporated herein by reference. The attached Initial Study provides an analysis of the Project and verification that the Project will not cause environmental impacts such that any of the circumstances identified in CEQA Guidelines Section 15162 are present.

c. Required Finding: No new information has been provided that would indicate that the proposed project would result in one or more significant effects not discussed in the previous EIR.

No new information has been provided that would indicate the proposed Project would result in any new significant effects not previously discussed in TOP 2050 SEIR; therefore, no proposed changes or revisions to the EIR are required. In addition, all previously adopted mitigation measures are a condition of project approval are incorporated herein by reference. The attached Initial Study provides an analysis of the Project and verification that the Project will not cause environmental impacts such that any of the circumstances identified in CEQA Guidelines Section 15162 are present.

CEQA Requirements for an Addendum: If changes to a project or its circumstances occur or new information becomes available after adoption of a negative declaration, the lead agency may: (1) prepare a subsequent EIR if the criteria of CEQA Guidelines Section 15162(a) are met, (2) prepare a subsequent negative declaration, (3) prepare an addendum, or (4) prepare no further documentation. (CEQA Guidelines Section 15162(b)). When only minor technical changes or additions to the negative declaration are necessary and none of the conditions described in section 15162 calling for the preparation of a subsequent EIR or negative declaration have occurred, CEQA allows the lead agency to prepare and adopt an addendum. (CEQA Guidelines Section 15164(b).)

Under CEQA Section 15162, no subsequent EIR or negative declaration shall be prepared for that project unless the lead agency determines, on the basis of substantial evidence in light of the whole record, one or more of the following:

1) Substantial changes are proposed in the project which will require major revisions of the previous EIR or negative declaration due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects;

2) Substantial changes occur with respect to the circumstances under which the project is undertaken which will require major revisions of the previous EIR or negative declaration due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects; or

3) New information of substantial importance, which was not known and could not have been known with the exercise of reasonable diligence at the time the previous EIR was certified as complete or the negative declaration was adopted, shows any of the following:

i. The project will have one or more significant effects not discussed in the previous EIR or negative declaration; or

ii. Significant effects previously examined will be substantially more severe than shown in the previous EIR; or

iii. Mitigation measures or alternatives previously found not to be feasible would in fact be feasible, and would substantially reduce one or more significant effects of the project, but the project proponents decline to adopt the mitigation measure or alternative; or

iv. Mitigation measures or alternatives which are considerably different from those analyzed in the previous EIR would substantially reduce one or more significant effects on the environment, but the project proponents decline to adopt the mitigation measure or alternative.

Thus, if the Project does not result in any of the circumstances listed in Section 15162 (i.e., no new or substantially greater significant impacts), the City may properly adopt an addendum to the Certified SEIR.

Conclusion: TOP 2050 SEIR was prepared as a Supplemental EIR in accordance with CEQA, the CEQA Guidelines, the City's Rules for the Implementation of CEQA, and in accordance with Section 15121(a) of the CEQA Guidelines (California Code of Regulations, Title 14, Division 6, Chapter 3). The SEIR considered the direct physical changes and reasonably foreseeable indirect physical changes in the environment that would be caused by TOP. Consequently, the SEIR focused on impacts from changes to land use associated with buildout of the City's Official Land Use Plan and impacts from the resulting population and employment growth. The proposed land use designation changes coordinate with the existing uses of the properties and uses within the surrounding areas. The Project will not result in a change in the final buildout projections (TOP Buildout Analysis, page 10). Subsequent activities within TOP 2050 SEIR have been evaluated to determine whether an additional CEQA document needs to be prepared.

Accordingly, and based on the findings and information contained in the previously certified TOP 2050 SEIR, the analysis above, the attached Initial Study, and CEQA statute and State CEQA Guidelines, including Sections 15164 and 15162, the Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in TOP SEIR. No changes or additions to TOP SEIR analyses are necessary, nor is there a need for any additional mitigation measures. Therefore, pursuant to CEQA Guidelines Section 15164, the City Council hereby adopts this Addendum to TOP SEIR.

11. Other public agencies whose approval is required (e.g., permits, financing approval or participation agreement): None

12. Have California Native American tribes traditionally and culturally affiliated with the project area requested consultation pursuant to Public Resources Code section 21080.3.1?

☒Yes ☐ No

If "yes", has consultation begun? ☐ Yes ☐ No ☒ Completed

ENVIRONMENTAL FACTORS POTENTIALLY AFFECTED

The environmental factors checked below would be potentially affected by this project, involving at least one impact that is a "Potentially Significant Impact" as indicated by the checklist on the following pages.

☐ Aesthetics	☐ Agriculture/Forestry Resources	☐ Air Quality
☐ Biological Resources	☐ Cultural Resources	☐ Geology / Soils
☐ Greenhouse Gas Emissions	☐ Hazards & Hazardous Materials	☐ Hydrology/Water Quality
☐ Land Use / Planning	☐ Mineral Resources	☐ Noise
☐ Population / Housing	☐ Public Services	☐ Recreation
☐ Transportation	☐ Utilities / Service Systems	☐ Mandatory Findings of Significance
☐ Tribal Cultural Resources	☐ Wildfire	☐ Energy

DETERMINATION (To be completed by the Lead Agency)

On the basis of this initial evaluation:

☐ I find that the proposed project COULD NOT have a significant effect on the environment, and a NEGATIVE DECLARATION will be prepared.

☐ I find that although the proposed project could have a significant effect on the environment, there will not be a significant effect in this case because revisions in the project have been made by or agreed to by the project proponent. A MITIGATED NEGATIVE DECLARATION will be prepared.

☐ I find that the proposed project MAY have a significant effect on the environment, and an ENVIRONMENTAL IMPACT REPORT is required.

☐ I find that the proposed project MAY have a "potentially significant" or "potentially significant unless mitigated" impact on the environment, but at least one effect 1) has been adequately analyzed in an earlier document pursuant to applicable legal standards, and 2) has been addressed by mitigation measures based on the earlier analysis as described on attached sheets. An ENVIRONMENTAL IMPACT REPORT is required, but it must analyze only the effects that remain to be addressed.

☒ I find that although the proposed project could have a significant effect on the environment, because all potentially significant effects (a) have been analyzed adequately in an earlier Certified The Ontario Plan 2050 (TOP 2050) Supplemental Environmental Impact Report (SEIR) pursuant to applicable standards, and (b) have been avoided or mitigated pursuant to that earlier Certified TOP 2050 SEIR, including revisions or mitigation measures that are imposed upon the proposed project, the analysis from the Certified TOP 2050 SEIR prepared for this project was used as a basis for this Addendum, nothing further is required.

Signature: Robert Morales Date: October 24, 2023

Printed Name: Robert Morales, Assistant Planner For: City of Ontario

EVALUATION OF ENVIRONMENTAL IMPACTS

1. A brief explanation is required for all answers except "No Impact" answers that are adequately supported by the information sources a lead agency cites in the parentheses following each question. A "No Impact" answer is adequately supported if the referenced information sources show that the impact simply does not apply to projects like the one involved (e.g., the project falls outside a fault rupture zone). A "No Impact" answer should be explained where it is based on project-specific factors as well as general standards (e.g., the project will not expose sensitive receptors to pollutants, based on a project-specific screening analysis).

2. All answers must take account of the whole action involved, including off-site as well as on-site, cumulative as well as project-level, indirect as well as direct, and construction as well as operational impacts.

3. Once the lead agency has determined that a particular physical impact may occur, then the checklist answers must indicate whether the impact is potentially significant, less than significant with mitigation, or less than significant. "Potentially Significant Impact" is appropriate

if there is substantial evidence that an effect is significant. If there are one or more "Potentially Significant Impact" entries when the determination is made, an EIR is required.

4. "Negative Declaration: Less Than Significant with Mitigation Incorporated" applies where the incorporation of mitigation measures has reduced an effect from "Potentially Significant Impact" to a "Less than Significant Impact." The lead agency must describe the mitigation measures, and briefly explain how they reduce the effect to a less than significant level (mitigation measures from the "Earlier Analyses" Section may be cross-referenced).

5. Earlier analyses may be used where, pursuant to the tiering, program EIR, or other CEQA process, an effect has been adequately analyzed in an earlier EIR or Negative Declaration. Section 15063(c)(3)(D). In this case, a brief discussion should identify the following:

   a. Earlier Analyses Used. Identify and state where they are available for review.

   b. Impacts Adequately Addressed. Identify which effects from the above checklist were within the scope of and adequately analyzed in an earlier document pursuant to applicable legal standards, and state whether such effects were addressed by mitigation measures based on the earlier analysis.

   c. Mitigation Measures. For effects that are "Less than Significant with Mitigation Measures Incorporated," describe the mitigation measures which were incorporated or refined from the earlier document and the extent to which they address site-specific conditions for the project.

6. Lead agencies are encouraged to incorporate into the checklist references to information sources for potential impacts (e.g., general plans, zoning ordinances). Reference to a previously prepared or outside document should, where appropriate, include a reference to the page or pages where the statement is substantiated.

7. Supporting Information Sources. A source list should be attached, and other sources used, or individuals contacted should be cited in the discussion.

8. This is only a suggested form, and lead agencies are free to use different formats; however, lead agencies should normally address the questions from this checklist that are relevant to a project's environmental effects in whatever format is selected.

9. The explanation of each issue should identify:

   a. The significance criteria or threshold, if any, used to evaluate each question; and

   b. The mitigation measure identified, if any, to reduce the impact to less than significance.

Issues	*Potentially Significant Impact*	*Less Than Significant with Mitigation*	*Less Than Significant Impact*	*No Impact*
1. **AESTHETICS**. Except as provided in Public Resources Code section 21099, would the project:				
a) Have a substantial adverse effect on a scenic vista?	☐	☐	☐	☒
b) Substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway?	☐	☐	☐	☒

Issues	*Potentially Significant Impact*	*Less Than Significant with Mitigation*	*Less Than Significant Impact*	*No Impact*
c) In non-urbanized areas, substantially degrade the existing visual character or quality of public views of the site and its surroundings? (Public views are those that are experienced from publicly accessible vantage point). If the project is in an urbanized area, would the project conflict with applicable zoning and other regulations governing scenic quality?)	☐	☐	☐	☒
d) Create a new source of substantial light or glare which would adversely affect day or nighttime views in the area?	☐	☐	☐	☒
2. **AGRICULTURE AND FOREST RESOURCES.** In determining whether impacts to agricultural resources are significant environmental effects, lead agencies may refer to the California Agricultural Land Evaluation and Site Assessment Model (1997) prepared by the California Dept. of Conservation as an optional model to use in assessing impacts on agriculture and farmland. In determining whether impacts to forest resources, including timberland, are significant environmental effects, lead agencies may refer to information compiled by the California Department of Forestry and Fire Protection regarding the state's inventory of forest land, including the Forest and Range Assessment Project and the Forest Legacy Assessment project; and forest carbon measurement methodology provided in Forest protocols adopted by the California Air Resources Board. Would the project:				
a) Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?	☐	☐	☐	☒
b) Conflict with existing zoning for agricultural use, or a Williamson Act contract?	☐	☐	☐	☒
c) Conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code section 12220(g)), timberland (as defined by Public Resources Code section 4526), or timberland zoned Timberland Production (as defined by Government Code section 51104(g))?	☐	☐	☐	☒
d) Result in the loss of forest land or conversion of forest land to non-forest use?	☐	☐	☐	☒
e) Involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland, to non-agricultural use or conversion of forest land to non-forest use?	☐	☐	☐	☒
3. **AIR QUALITY**. Where available, the significance criteria established by the applicable air quality management district or air pollution control district may be relied upon to make the following determinations. Would the project:				
a) Conflict with or obstruct implementation of the applicable air quality plan?	☐	☐	☐	☒
b) Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard?	☐	☐	☐	☒

Issues	*Potentially Significant Impact*	*Less Than Significant with Mitigation*	*Less Than Significant Impact*	*No Impact*
c) Expose sensitive receptors to substantial pollutant concentrations?	☐	☐	☐	☒
d) Result in other emissions (such as those leading to odors) adversely affecting a substantial number of people?	☐	☐	☐	☒
4. **BIOLOGICAL RESOURCES**. Would the project:				
a) Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?	☐	☐	☐	☒
b) Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?	☐	☐	☐	☒
c) Have a substantial adverse effect on state or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?	☐	☐	☐	☒
d) Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?	☐	☐	☐	☒
e) Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?	☐	☐	☐	☒
f) Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan?	☐	☐	☐	☒
5. **CULTURAL RESOURCES**. Would the project:				
a) Cause a substantial adverse change in the significance of a historical resource pursuant to § 15064.5?	☐	☐	☐	☒
b) Cause a substantial adverse change in the significance of an archaeological resource pursuant to § 15064.5?	☐	☐	☐	☒
c) Disturb any human remains, including those interred outside of dedicated cemeteries?	☐	☐	☐	☒
6. **ENERGY**. Would the project:				
a) Result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation?	☐	☐	☐	☒
b) Conflict with or obstruct a state or local plan for renewable energy or energy efficiency?	☐	☐	☐	☒

Issues	*Potentially Significant Impact*	*Less Than Significant with Mitigation*	*Less Than Significant Impact*	*No Impact*
7. **GEOLOGY AND SOILS**. Would the project:				
a) Directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury or death involving:				
i) Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publication 42.	☐	☐	☐	☒
ii) Strong seismic ground shaking?	☐	☐	☐	☒
iii) Seismic-related ground failure, including liquefaction?	☐	☐	☐	☒
iv) Landslides?	☐	☐	☐	☒
b) Result in substantial soil erosion or the loss of topsoil?	☐	☐	☐	☒
c) Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction or collapse?	☐	☐	☐	☒
d) Be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code, creating substantial direct or indirect risks to life or property?	☐	☐	☐	☒
e) Have soils incapable of adequately supporting the use of septic tanks or alternative wastewater disposal systems where sewers are not available for the disposal of wastewater?	☐	☐	☐	☒
f) Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?	☐	☐	☐	☒
8. **GREENHOUSE GAS EMISSIONS**. Would the project:				
a) Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?	☐	☐	☐	☒
b) Conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emission of greenhouse gases?	☐	☐	☐	☒
9. **HAZARDS AND HAZARDOUS MATERIALS**. Would the project:				
a) Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?	☐	☐	☐	☒
b) Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?	☐	☐	☐	☒
c) Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?	☐	☐	☐	☒
d) Be located on a site which is included on a list of hazardous materials sites compiled pursuant to	☐	☐	☐	☒

Issues	*Potentially Significant Impact*	*Less Than Significant with Mitigation*	*Less Than Significant Impact*	*No Impact*
Government Code section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?				
e) For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard or excessive noise for people residing or working in the project area?	☐	☐	☐	☒
f) Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?	☐	☐	☐	☒
g) Expose people or structures, either directly or indirectly, to a significant risk of loss, injury or death involving wildland fires?	☐	☐	☐	☒
10. **HYDROLOGY AND WATER QUALITY**. Would the project:				
a) Violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or ground water quality?	☐	☐	☐	☒
b) Substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin?	☐	☐	☐	☒
c) Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would:				
i) Result in substantial erosion or siltation on- or off-site;	☐	☐	☐	☒
ii) Substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or offsite;	☐	☐	☐	☒
iii) Create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff; or	☐	☐	☐	☒
d) Impede or redirect flood flows?	☐	☐	☐	☒
e) In flood hazard, tsunami, or seiche zones, risk release of pollutants due to project inundation?	☐	☐	☐	☒
f) Conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan?	☐	☐	☐	☒
11. **LAND USE AND PLANNING.** Would the project:				
a) Physically divide an established community?	☐	☐	☐	☒
b) Cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect?	☐	☐	☐	☒

Issues	*Potentially Significant Impact*	*Less Than Significant with Mitigation*	*Less Than Significant Impact*	*No Impact*
12. **MINERAL RESOURCES**. Would the project:				
a) Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?	☐	☐	☐	☒
b) Result in the loss of availability of a locally important mineral resource recovery site delineated on a local general plan, specific plan or other land use plan?	☐	☐	☐	☒
13. **NOISE**. Would the project result in:				
a) Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?	☐	☐	☐	☒
b) Generation of excessive groundborne vibration or groundborne noise levels?	☐	☐	☐	☒
c) For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?	☐	☐	☐	☒
14. **POPULATION AND HOUSING**. Would the project:				
a) Induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of road or other infrastructure)?	☐	☐	☐	☒
b) Displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere?	☐	☐	☐	☒
15. **PUBLIC SERVICES**. Would the project:				
a) Result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the public services:				
i) Fire protection?	☐	☐	☐	☒
ii) Police protection?	☐	☐	☐	☒
iii) Schools?	☐	☐	☐	☒
iv) Parks?	☐	☐	☐	☒
v) Other public facilities?	☐	☐	☐	☒
16. **RECREATION**.				
a) Would the project increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?	☐	☐	☐	☒

Issues	*Potentially Significant Impact*	*Less Than Significant with Mitigation*	*Less Than Significant Impact*	*No Impact*
b) Does the project include recreational facilities or require the construction or expansion of recreational facilities which have an adverse physical effect on the environment?	☐	☐	☐	☒
17. **TRANSPORTATION**. Would the project:				
a) Conflict with a program plan, ordinance or policy addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities?	☐	☐	☐	☒
b) Conflict or be inconsistent with CEQA Guidelines section 15064.3, subdivision (b)?	☐	☐	☐	☒
c) Substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?	☐	☐	☐	☒
d) Result in inadequate emergency access?	☐	☐	☐	☒
18. **TRIBAL CULTURAL RESOURCES**. Would the project cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is:				
a) Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code section 5020.1(k), or	☐	☐	☐	☒
b) A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code section 5024.1. In applying the criteria set forth in subdivision (c) of Public Resources Code section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe.	☐	☐	☐	☒
19. **UTILITIES AND SERVICE SYSTEMS**. Would the project:				
a) Require or result in the relocation or construction of new or expanded water, wastewater treatment or storm water drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects?	☐	☐	☐	☒
b) Have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry and multiple dry years?	☐	☐	☐	☒
c) Result in a determination by the wastewater treatment provider which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?	☐	☐	☐	☒
d) Generate solid waste in excess of State or local standards, or in excess of the capacity of local	☐	☐	☐	☒

Issues	*Potentially Significant Impact*	*Less Than Significant with Mitigation*	*Less Than Significant Impact*	*No Impact*
infrastructure, or otherwise impair the attainment of solid waste reduction goals?				
e) Comply with federal, state, and local management and reduction statutes and regulations related to solid waste?	☐	☐	☐	☒
20. **WILDFIRE**. If located in or near state responsibility areas or lands classified as very high fire hazard severity zones, would the project:	☐	☐	☐	☒
a) Substantially impair an adopted emergency response plan or emergency evacuation plan?	☐	☐	☐	☒
b) Due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby expose project occupants to, pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire?	☐	☐	☐	☒
c) Require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment?	☐	☐	☐	☒
d) Expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes?	☐	☐	☐	☒
21. **MANDATORY FINDINGS OF SIGNIFICANCE**. (State CEQA Guidelines section 15065(a).)				
a) Does the project have the potential to substantially degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, substantially reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory?	☐	☐	☐	☒
b) Does the project have the potential to achieve short-term environmental goals to the disadvantage of long-term environmental goals?	☐	☐	☐	☒
c) Does the project have impacts that are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current project, and the effects of probable future projects.)	☐	☐	☐	☒
d) Does the project have environmental effects which will cause substantial adverse effects on human beings, either directly or indirectly?	☐	☐	☐	☒

City and County of San Francisco* (2002) 102 Cal.App.4th 656.

EXPLANATION OF ISSUES

1. AESTHETICS. Would the project:

a. Have a substantial adverse effect on a scenic vista?

Discussion of Effects: The proposed Project will not have a significant adverse effect aesthetically. As provided in TOP 2050 SEIR, the City of Ontario's physical setting lends opportunities for many views of the community and surrounding natural features, including panoramic views of the San Bernardino and San Gabriel Mountains and stretches of open space and undeveloped land south of Riverside Drive. TOP 2050 SEIR provides that compliance with TOP Policy CD-1.5 in the Community Design Element will avoid significant impacts to scenic vista by making it the policy of the City to protect public views of the San Gabriel Mountains.

The Project does not permit construction of new buildings and so does not conflict with Policy CD-1.5 in the Community Design Element as it will not alter existing public views of the San Gabriel Mountains. Since no adverse aesthetic impacts are expected, no mitigation is necessary.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

b. Substantially damage scenic resources, including, but not limited to, tress, rock outcroppings and historic buildings within a state scenic highway?

Discussion of Effects: As provided in TOP 2050 SEIR, the City of Ontario is served by three freeways: I-10, I-15, and SR-60. I-10 and SR-60 traverse the northern and central portion of the City, respectively, in an east–west direction. I-15 traverses the northeastern portion of the City in a north–south direction. These segments of I-10, I-15, and SR-60 have not been officially designated as scenic highways by the California Department of Transportation. Remnants of native vegetation are virtually absent. The general aesthetic character of this project area within OMC is urban and within Ontario Ranch is predominantly agricultural. The proposed Project will not disturb historic buildings, or any scenic resources identified on or in the vicinity of the Project area.

No impact on scenic resources would occur as a result of implementation of the Project and no mitigation measures would be required. In addition, the TOP 2050 SEIR provides that compliance with TOP Policy CD-1.5, CD-2.5, and CD-4.2 in the Community Design Element will avoid significant impacts to scenic vista by making it the policy of the City to protect scenic resources.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

c. Substantially degrade the existing visual character or quality of the site and its surroundings?

Discussion of Effects: As concluded in TOP 2050 SEIR, implementation of TOP would change the existing visual character but the impacts are not considered significant because TOP policies of the Community Design Element have the common goal of improving the visual quality of the area by developing guidelines to improve future development projects. In addition, Title 9: Development Code of the City's Municipal Code, requires that individual development projects

submit to site-specific review pursuant to the City of Ontario processes. These design guidelines and standards would regulate the features of buildings and streets that affect the public realm and would guide the physical development of any development project within the City's boundaries. Therefore, TOP would not substantially degrade the visual character or quality of the City of Ontario. Implementation of the Project would not substantially degrade the existing visual character or quality of the site and its surroundings. In addition, the TOP 2050 SEIR provides that compliance with TOP Community Design Element will avoid significant impacts to the existing visual character or quality of the site and its surroundings.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

d. Create a new source of substantial light or glare that would adversely affect day or nighttime views in the area?

Discussion of Effects: The proposed Project will not increase the amount of light and glare within the City. In addition, as concluded in TOP 2050 SEIR, adherence to the design standards of the City of Ontario Development Code would ensure that light and glare from new developments would be minimized and that significant impacts would not occur. Therefore, the Project will not result in any new, increased or substantially different impacts.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

2. AGRICULTURE AND FOREST RESOURCES. In determining whether impacts to agricultural resources are significant environmental effects, lead agencies may refer to the California Agricultural Land Evaluation and Site Assessment Model prepared by the California Department of Conservation as an optional model to use in assessing impacts on agriculture and farmland. In determining whether impacts to forest resources, including timberland, are significant environmental effects, lead agencies may refer to information compiled by the California Department of Forestry and Fire Protection regarding the state's inventory of forest land, including the Forest and Range Assessment Project and the Forest Legacy Assessment project; and forest carbon measurement methodology provided in Forest Protocols adopted by the California Air Resources Board. Would the project:

a. Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?

Discussion of Effects: The Proposed Project does not contain any agricultural uses. As a result, no adverse environmental impacts are anticipated.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

b. Conflict with existing zoning for agricultural use, or a Williamson Act contract?

Discussion of Effects: The sites in the Project are not zoned for agricultural use. There is no Williamson Act contract in effect on any of the subject sites. Therefore, no impacts to agricultural uses are anticipated, nor will there be any conflict with existing or Williamson Act contracts.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

c. Conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code section 12220(g)), timberland (as defined by Public Resources Code section 4526), or timberland zoned Timberland Production (as defined by Government Code section 51104(g)?

Discussion of Effects: The City of Ontario does not have any land zoned for forest, timberland, or timberland production.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

d. Result in the loss of forest land or conversion of forest land to non-forest use?

Discussion of Effects: There is currently no land in the City of Ontario that qualifies as forest land as defined in Public Resources Code Section 12220(g). Neither The Ontario Plan nor the City's Zoning Code provide designations for forest land. The proposed project would not result in the loss or conversion of forest land.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

e. Involve other changes in the existing environment, which, due to their location or nature, could individually or cumulatively result in loss of Farmland to non-agricultural use or conversion of forest land to non-forest use?

Discussion of Effects: No land in the City of Ontario that qualifies as forest land as defined in Public Resources Code Section 12220(g). Neither TOP nor the City's Zoning provide designations for forest land. The TOP 2050 SEIR provides that compliance with TOP Environmental Resources Element will avoid significant impacts to loss of farmland. Thus, the proposed Project would not result in conversion of forest land to non-forest use.

Mitigation Required: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

3. AIR QUALITY. Where available, the significance criteria established by the applicable air quality management or air pollution control district may be relied upon to make the following determinations. Would the project:

a. Conflict with or obstruct implementation of the applicable air quality plan?

Discussion of Effects: The Project will not conflict with or obstruct implementation of any air quality plan. As noted in TOP 2050 SEIR (Section 5.3 (Air Quality)), pollutant levels in the Ontario area already exceed Federal and State standards. To reduce pollutant levels, the City of Ontario is actively participating in efforts to enhance air quality by implementing Control Measures in the Air Quality Management Plan for local jurisdictions within the South Coast Air Basin.

TOP 2050 SEIR has addressed short-term construction impacts, however, and adequate mitigation (Mitigation Measure(s) MM 3-1 and AQ-1) have been adopted by the City that will help reduce emissions and air quality impacts. No new impacts beyond those identified in TOP 2050 SEIR would result from Project implementation.

The proposed Project is consistent with The Ontario Plan, for which the SEIR was prepared, and impacts evaluated. Furthermore, the project is consistent with the City's participation in the Air Quality Management Plan and, because of the project's limited size and scope, will not conflict with or obstruct implementation of the plan.

Mitigation: No new mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

b. Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard?

Discussion of Effects: The Project will not result in a cumulatively considerable net increase of any criteria pollutant for which the region is in non-attainment under an applicable federal or state ambient air quality because of the scope of the project. Although no impacts are anticipated, the Project will still comply with the air quality standards of the TOP 2050 SEIR and the SCAQMD resulting in impacts that are less than significant.

Short term air quality impacts will result from construction related activities associated with construction activity, such as excavation and grading, machinery and equipment emissions, vehicle emissions from construction employees, etc. The daily emissions of nitrogen oxides and particulates from resulting grading and vehicular emissions may exceed threshold levels of the South Coast Air Quality Management District (SCAQMD).

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

c. Expose sensitive receptors to substantial pollutant concentrations?

Discussion of Effects: Adequate mitigation (Mitigation Measure(s) MM 3-1 and AQ-1) have been adopted by the City that will reduce emissions and air quality impacts to a less-than-significant level. No new impacts beyond those identified in TOP 2050 SEIR would result from Project implementation.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

d. Result in other emissions (such as those leading to odors adversely affecting a substantial number of people)?

Discussion of Effects: As discussed in Section 5.3 of TOP 2050 SEIR, the proposed Project is within a non-attainment region of the South Coast Air Basin (SCAB) and any new contribution of emissions into the SCAB would be considered significant and adverse. Adequate mitigation (Mitigation Measure(s) MM 3-1 and AQ-1) have been adopted by the City that will reduce air pollutants to a less-than-significant level. No new impacts beyond those identified in TOP 2050 SEIR would result from Project implementation.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

4. BIOLOGICAL RESOURCES. Would the project:

a. Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service?

Discussion of Effects: The Project site is located within an area that has not been identified as containing species identified as a candidate, sensitive, or special status species in local or regional plans, policies or regulations or by the California Department of Fish and Wildlife or the U.S. Fish and Wildlife Service. Therefore, no adverse impacts are anticipated.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

b. Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations, or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service?

Discussion of Effects: The Project does not contain any riparian habitat or other sensitive natural community identified by the California Department of Fish & Wildlife or the U.S. Fish & Wildlife Service. Therefore, no adverse environmental impacts are anticipated.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

c. Have a substantial adverse effect on federally protected wetlands as defined by Section 404 of the Clean Water Act (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?

Discussion of Effects: No wetland habitat is present on the Project area. Therefore, Project implementation would have no impact on these resources.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and

addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

d. Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?

Discussion of Effects: TOP 2050 SEIR requires implementation of regulatory and standard conditions of approval to mitigate for impacts to species and project specific CEQA review will be undertaken at the appropriate time. Policy ER-5.1 in the Environmental Resources Element encourages efforts to protect biological resources through the establishment, restoration, and conservation of high-quality habitat areas. Consequently, impacts would be less than significant.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

e. Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?

Discussion of Effects: The Project area will not conflict with any ordinances protecting biological resources.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

f. Conflict with the provisions of an adopted Habitat Conservation Plan (HCP), Natural Community Conservation Plan (NCCP), or other approved local, regional, or state habitat conservation plan?

Discussion of Effects: The Project area is not part of an adopted HCP, NCCP or other approved habitat conservation plan. As a result, no adverse environmental impacts are anticipated.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

5. CULTURAL RESOURCES. Would the project:

a. Cause a substantial adverse change in the significance of a historical resource as defined in Section 15064.5?

Discussion of Effects: Implementation of the Project would not cause a substantial adverse change in the significance of an historical resource as defined in CEQA Guidelines Section15064.5. In addition, Title 9, Division 4.02.050. Historic Preservation -Certificate of Appropriates and Demolition of Historic Resources of the City of Ontario Municipal Code protects sensitive historical resources of local interest. No new impacts beyond those identified in TOP 2050 SEIR would result from Project implementation.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

b. Cause a substantial adverse change in the significance of an archaeological resource pursuant to Section 15064.5?

Discussion of Effects: TOP 2050 SEIR (Section 5.5) indicates no archeological sites or resources have been recorded in the City with the Archeological Information Center at San Bernardino County Museum. While no adverse impacts to archeological resources are anticipated at these sites due to their urbanized nature, standard conditions will be imposed on future development that in the event of unanticipated archeological discoveries, construction activities will not continue or will moved to other parts of the project site and a qualified archaeologist shall be contacted to determine significance of these resources. If the find is discovered to be historical or unique archaeological resources, as defined in Section 15064.5 of the CEQA Guidelines, avoidance or other appropriate measures shall be implemented.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

c. Disturb any human remains, including those interred outside of dedicated cemeteries?

Discussion of Effects: Changing the general plan designation or zoning of a property or properties does not affect the potential discovery of human remains during future development. The proposed Project is located in an area that has undergone previous development, and there are no known religious or sacred sites within the Project area. While it is not expected that human remains will be encountered during construction activities, should such a discovery occur, existing regulations, including California Public Resources Code Section 5097.98, provide protection for human remains found during development.

Furthermore, standard conditions will be imposed on future development. In the event unanticipated discoveries of human remains are made during excavation or construction activities, the area will not be disturbed until any necessary investigations are completed by the County Coroner and/or Native American consultation has been conducted, as deemed applicable.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

6. ENERGY. Would the project:

a. Result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation?

Discussion of Effects: The Project would have no impact relating to wasteful, inefficient, or unnecessary consumption of energy resources as there is no construction or operations proposed on the Project. As a result, no adverse environmental impacts are anticipated.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

b. Conflict with or obstruct a state or local plan for renewable energy or energy efficiency?

Discussion of Effects: The proposed Project would have no impact relating to conflict with or obstruction of a state or local plan for renewable energy or energy efficiency as there is no construction or operations proposed on the Project. As a result, no adverse environmental impacts are anticipated.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

7. GEOLOGY & SOILS. Would the project:

a. Expose people or structures to potential substantial adverse effects, including the risk of loss, injury or death involving:

i. Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publication 42.

Discussion of Effects: There are no active faults known on the site, and the Project site is located outside the Fault Rapture Hazard Zone (formerly Alquist-Priolo Zone). The TOP SEIR (Section 5.7/Figure 5.7-2) identifies eight active or potentially active fault zones near the City. Given that the closest fault zone is located more than ten miles from the project site, fault rupture within the project area is not likely. All development will comply with the Uniform Building Code seismic design standards to reduce geologic hazard susceptibility. Therefore, no adverse impacts are anticipated.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

ii. Strong seismic ground shaking?

Discussion of Effects: There are no active faults known on the site and the project site is located outside the Fault Rapture Hazard Zone (formerly Alquist-Priolo Zone). The Land Use Plan (Figure LU-6) of the Policy Plan (General Plan) SEIR (Section 5.7/Figure 5.7-2) identifies eight active or potentially active fault zones near the City. The closest fault zone is located more than ten miles from the project site. The proximity of the site to the active faults will result in ground shaking during moderate to severe seismic events. All construction will be in compliance with the California Building Code, the Ontario Municipal Code, The Ontario Plan and all other ordinances adopted by the City related to construction and safety. Therefore, no adverse impacts are anticipated.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and

addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

iii. Seismic-related ground failure, including liquefaction?

Discussion of Effects: As identified in the TOP 2050 SEIR (Section 5.7), groundwater saturation of sediments is required for earthquake induced liquefaction. In general, groundwater depths shallower than 10 feet to the surface can cause the highest liquefaction susceptibility. Depth to ground water at the project site during the winter months is estimated to be between 250 to 450 feet below ground surface. Therefore, the liquefaction potential within the project area is minimal. Implementation of TOP strategies, Uniform Building Code, and the Ontario Municipal code would reduce impacts to a less than significant level.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

iv. Landslides?

Discussion of Effects: The Project would not expose people or structures to potential adverse effects, including the risk of loss, injury, or death involving landslides because the relatively flat topography of the project site (less than 2 percent slope across the city) makes the chance of landslides remote. Implementation of TOP strategies, Uniform Building Code, and the Ontario Municipal Code would reduce impacts to a less than significant level.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

b. Result in substantial soil erosion or the loss of topsoil?

Discussion of Effects: The Project will not result in significant soil erosion or loss of topsoil because of the scope of the Project. Grading increases the potential for erosion by removing protective vegetation, changing natural drainage patterns, and constructing slopes. Compliance with the California Building Code and review of grading plans by the City Engineer will ensure no significant impacts will occur. In addition, the City requires an erosion/dust control plan for projects located within this area. Implementation of a NPDES program, the Environmental Resource Element of the Policy Plan (General Plan) strategies, Uniform Building Code, and the Ontario Municipal code would reduce impacts to a less than significant level.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

c. Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction, or collapse?

Discussion of Effects: The Project would not result in the location of development on a geologic unit or soil that is unstable, or that would become unstable because as previously discussed, the potential for liquefaction and landslides associated with the project is less than

significant. TOP 2050 (Section 5.7) indicates that subsidence is generally associated with large decreases or withdrawals of water from the aquifer. The Project would not withdraw water from the existing aquifer. Further, implementation of TOP strategies, Uniform Building Code, and the Ontario Municipal code would reduce impacts to a less than significant level.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

d. Be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial risks to life or property?

Discussion of Effects: The majority of Ontario, including the Project sites, are located on alluvial soil deposits. These types of soils are not considered to be expansive. Therefore, no adverse impacts are anticipated.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

e. Have soils incapable of adequately supporting the use of septic tanks or alternative wastewater disposal systems where sewers are not available for the disposal of wastewater?

Discussion of Effects: The Project is served by the local sewer system and the use of alternative systems is not necessary. There will be no impact to the sewage system.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

8. GREENHOUSE GAS EMISSIONS. Would the project:

a. Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?

Discussion of Effects: As part of TOP 2050 SEIR, The City updated the Community Climate Action Plan (CCAP). The CCAP serves as the programmatic tiering document for review of the climate change impacts of projects under CEQA. The 2022 CCAP is included in the TOP 2050 SEIR. The CCAP includes a greenhouse gas inventory baseline for the Year 2019, a future "business-as-usual" projection of greenhouse gas emissions for the Year 2030 and Year 2050, an emissions reduction target consistent with the State's emissions reduction goals, an implementation plan identifying specific measures, and a timeline for implementation of said measures to reach the reduction targets for Year 2030 and Year 2050.

The CCAP is consistent with the CEQA Guidelines for the Reduction of Greenhouse Gas Emissions (California Code of Regulations Section 15183.5). This allows the 2022 CCAP to support and streamline environmental review of GHG emissions for future development projects in the City. Therefore, the Project will not introduce new GHG emissions beyond those previously analyzed in TOP 2050 SEIR.

Mitigation Required: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

b. Conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gases?

Discussion of Effects: The Proposed project is consistent with TOP Goal ER-4 (Air Quality) of improving air quality. The implementation of Policy ER-4.3, regarding the reduction of greenhouse gas emissions is in accordance with regional, State, and federal regulations.

Mitigation Required: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

9. HAZARDS & HAZARDOUS MATERIALS. Would the project:

a. Create a significant hazard to the public or the environment through the routine transport, use or disposal of hazardous materials?

Discussion of Effects: The Project will have no impacts relating to transport, use, and disposal of hazardous materials, to release of hazardous materials, and to emission and handling materials, substances, or waste. Therefore, no adverse impacts are anticipated.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

b. Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?

Discussion of Effects: The Project does not include the use of hazardous materials or volatile fuels. Therefore, no adverse impacts are anticipated.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

c. Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances or waste within one-quarter mile of an existing or proposed school?

Discussion of Effects: The proposed Project does not include the use, emissions or handling of hazardous or acutely hazardous materials, substances, or waste. Therefore, no impacts are anticipated.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

d. Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?

Discussion of Effects: The proposed Project site is not listed on the hazardous materials site compiled pursuant to Government Code Section 65962.5. Therefore, the Project would not create a hazard to the public or the environment and no impact is anticipated.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

e. For a project located within the safety zone of the airport land use compatibility plan for ONT or Chino Airports, would the project result in a safety hazard for people residing or working in the project area?

Discussion of Effects: Per the Land Use Element (Exhibit LU-06 Airport Safety Zones & Influence Areas) of TOP, the proposed site falls within the airport land use plan. However, it's important to note that the Project will not pose a safety hazard to individuals working or residing in the area, as it will not obstruct aircraft maneuvering. Additionally, the ALUCP designates the Project area for uses consistent with the 60-65 and 65-70 CNEL noise zones. In accordance with Land Use Element Policy LU-5.2, the City is committed to coordinating with airport authorities to ensure that the Proposed Land Use Plan aligns with the established master land use plans and compatibility plans for both Chino Airport and Ontario International Airport (ONT). As a result, the Project is not anticipated to generate adverse impacts.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

f. For a project within the vicinity of a private airstrip, would the project result in a safety hazard for people residing or working in the project area?

Discussion of Effects: The project site is not located within the vicinity of a private airstrip. Therefore, no impacts are anticipated.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

g. Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?

Discussion of Effects: The City's Safety Element, as outlined in TOP, encompasses comprehensive policies and procedures for disaster preparedness and response. TOP places a strong emphasis on fostering interdepartmental and inter-jurisdictional coordination and collaboration to ensure readiness for both routine and emergency situations, including disasters. Furthermore, the Project is committed to adhering to the requirements set forth by the Ontario Fire Department and all City regulations related to fire safety and emergency access. Given the

Project's obligation to comply with all applicable City codes, it is expected that any potential impacts would be effectively mitigated to a level that is less than significant.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

h. Expose people or structures to a significant risk of loss, injury or death involving wildland fires, including where wildlands are adjacent to urbanized areas or where residences are intermixed with wildlands?

Discussion of Effects: The Project site is not located in or near wildlands. Therefore, no impacts are anticipated.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

10. HYDROLOGY & WATER QUALITY. Would the project:

a. Violate any other water quality standards or waste discharge requirements or potential for discharge of storm water pollutants from areas of material storage, vehicle or equipment fueling, vehicle or equipment maintenance (including washing), waste handling, hazardous materials handling or storage, delivery areas or loading docks, or other outdoor work areas?

Discussion of Effects: The Project area currently benefits from City water and sewer services, and its use will not introduce new effects on water quality standards or waste discharge requirements. The implementation of the Project aligns with all local, state, and federal regulations governing water quality and waste discharge. There are no new impacts anticipated beyond those already identified in the TOP 2050 SEIR (refer to TOP Policies ER-1.5, ER-1.6, and ER-1.7).

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

b. Substantially deplete groundwater supplies or interfere substantially with groundwater recharge such that there would be a net deficit in aquifer volume or a lowering of the local groundwater table level (e.g., the production rate of pre-existing nearby wells would drop to a level which would not support existing land uses or planned uses for which permits have been granted)?

Discussion of Effects: The Project will not result in increased water flow to the site, nor will it deplete groundwater supplies or interfere with recharge. The City has already adopted adequate policy measures (as outlined in ER-1.5, ER-1.6, and ER-1.7) to effectively mitigate potential groundwater impacts to a level that is less than significant. No new impacts beyond those identified in the TOP 2050 SEIR are anticipated as a result of Project implementation.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

c. Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river, in a manner which would result in substantial erosion or siltation on- or off-site or volume of storm water runoff to cause environmental harm or potential for significant increases in erosion of the project site or surrounding areas?

Discussion of Effects: Policy Measures (ER-1.5, ER-1.6 and ER-1.7) have already been adopted by the City that would reduce impacts to existing hydrology patterns to a less-than-significant level. No new impacts beyond those identified in TOP 2050 SEIR would result from Project implementation.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

d. Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river, or substantially increase the rate or amount of surface runoff in a manner that would result in flooding on- or off-site or potential for significant changes in the flow velocity or volume of storm water runoff to cause environmental harm?

Discussion of Effects: The Project would not involve conversion of permeable soils to an impermeable surface, resulting in an increase in surface runoff. Policy Measures (ER-1.5, ER-1.6 and ER-1.7) have already been adopted by the City that would reduce impacts to existing hydrology patterns to a less-than-significant level. No new impacts beyond those identified in TOP 2050 SEIR would result from Project implementation.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

e. Create or contribute runoff water which would exceed the capacity of existing or planned storm water drainage systems or provide substantial additional sources of polluted runoff (a&b) during construction and/or post-construction activity?

Discussion of Effects: The Project would not involve conversion of permeable soils to an impermeable surface, resulting in an increase in surface runoff. Policy Measures (ER-1.5, ER-1.6 and ER-1.7) have already been adopted by the City that would reduce impacts to existing hydrology patterns to a less-than-significant level. No new impacts beyond those identified in TOP 2050 SEIR would result from Project implementation.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP EIR. No changes or additions to TOP EIR analyses are necessary.

f. Otherwise substantially degrade water quality or potential for discharge of storm water to affect the beneficial uses of receiving water?

Discussion of Effects: The proposed Project is not anticipated to violate any water quality standards or result in wastewater discharges that would adversely affect human health, wildlife, or plant species. The City has already adopted policy measures (specifically ER-1.5, ER-1.6, and ER-1.7) aimed at reducing impacts on existing water quality to a level deemed less than

significant. No new impacts beyond those previously identified in the TOP 2050 SEIR are expected as a result of Project implementation.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

g. Place housing within a 100-year flood hazard area as mapped on a federal Flood Hazard Boundary or Flood Insurance Rate Map or other flood hazard delineation map?

Discussion of Effects: The Project site is not located within a 100-year flood hazard area as mapped on a Federal Flood Hazard Boundary or Flood Insurance Rate Map or other flood hazard delineation map. Therefore, no impacts are anticipated.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

h. Place within a 100-year flood hazard area, structures that would impede or redirect flood flows?

Discussion of Effects: As identified in the Safety Element (Exhibit S-2) of TOP, the site lies outside of the 100-year flood hazard area. Therefore, no adverse impacts are anticipated.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

i. Expose people or structures to a significant risk of loss, injury or death involving flooding, including flooding as a result of the failure of a levee or dam?

Discussion of Effects: As identified in the Safety Element (Exhibit S-2) of TOP, the site lies outside of the 100-year flood hazard area. No levees or dams are located near the project site. Therefore, no adverse impacts are anticipated.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

j. Expose people or structures to inundation by seiche, tsunami or mudflow?

Discussion of Effects: There are no lakes or substantial reservoirs near the project site; therefore, impacts from seiche are not anticipated. The City of Ontario has relatively flat topography, less than two percent across the City, and the chance of mudflow is remote. Therefore, no impacts are anticipated.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

11. LAND USE & PLANNING. Would the project:

a. Physically divide an established community?

Discussion of Effects: The implementation of the Project is not expected to result in physical improvements that would divide an established community. Additionally, the application of Land Use Policies LU-2.3, LU-2.4, LU-2.5, and LU-2.6 has been designed to minimize conflicts between potentially contradicting land uses. Consequently, no adverse impacts are anticipated.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

b. Conflict with applicable land use plan, policy or regulation of agencies with jurisdiction over the project (including, but not limited to general plan, airport land use compatibility plan, specific plan, or development code) adopted for the purpose of avoiding or mitigation an environmental effect?

Discussion of Effects: Land Use Policies LU-2.3, LU-2.4, LU-2.5, and LU-2.6 have been established to mitigate conflicts between potentially contradicting land uses. The proposed Project is fully consistent with the provisions outlined in TOP.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

c. Conflict with any applicable habitat conservation plan or natural community conservation plan?

Discussion of Effects: There are no adopted habitat conservation plans in the Project area. As such no conflicts or impacts are anticipated.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

12. MINERAL RESOURCES. Would the project:

a. Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?

Discussion of Effects: The Project site is situated within a primarily developed urban area, and there are no known mineral resources in the vicinity. As a result, there are no anticipated impacts.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

b. Result in the loss of availability of a locally important mineral resource recovery site delineated on a local general plan, specific plan or other land use plan?

Discussion of Effects: There are no known mineral resources in the area. No impacts are anticipated.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

13. NOISE. Would the project result in:

a. Exposure of persons to or generation of noise levels in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?

Discussion of Effects: The City has already implemented sufficient mitigation measures (Mitigation Measures 12-1, 12-2, 12-3, and 12-4) to reduce severe noise levels to a point that they no longer pose a significant concern. The implementation of the Project would not result in any new impacts beyond those previously identified in the TOP 2050 SEIR.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

b. Exposure of persons to or generation of excessive groundborne vibration or groundborne noise levels?

Discussion of Effects: The proposed Project would not generate excessive groundborne vibration or noise levels. The City has already adopted appropriate mitigation measures (Mitigation Measures 12-1, 12-2, 12-3, and 12-4) to reduce noise levels to a less-than-significant level. Therefore, Project implementation would not result in any new impacts beyond those identified in the TOP 2050 SEIR.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

c. A substantial permanent increase in ambient noise levels in the project vicinity above levels existing without the project?

Discussion of Effects: The implementation of the Project would not result in a substantial permanent increase in ambient noise levels in the project vicinity above the levels that existed prior to the project. The City has already adopted adequate mitigation measures (Mitigation Measures 12-1, 12-2, 12-3, and 12-4) to reduce noise impacts to a level deemed less than significant. Therefore, there would be no new impacts beyond those identified in the TOP 2050 SEIR resulting from Project implementation.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

d. A substantial temporary or periodic increase in ambient noise levels in the project vicinity above levels existing without the project?

Discussion of Effects: The implementation of the Project itself would not result in a significant temporary or periodic increase in ambient noise levels in the Project vicinity compared to the levels existing without the Project. The City has already adopted adequate mitigation measures (Mitigation Measures 12-1, 12-2, 12-3, and 12-4) to reduce noise impacts to a level deemed less than significant. Therefore, no new impacts beyond those identified in the TOP 2050 SEIR would arise from Project implementation.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

e. For a project located within the noise impact zones of the airport land use compatibility plan for ONT and Chino Airports, would the project expose people residing or working in the project area to excessive noise levels?

Discussion of Effects: The implementation of the Project itself would not subject residents or workers in the Project area to excessive noise levels. The City has already adopted adequate mitigation measures (Mitigation Measure 12-1) to reduce noise impacts to a level deemed less than significant. Therefore, there would be no new impacts beyond those identified in the TOP 2050 SEIR resulting from Project implementation.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

f. For a project within the vicinity of a private airstrip, would the project expose people residing or working in the project area to excessive noise levels?

Discussion of Effects: The Project site is not located within the vicinity of a private airstrip. Therefore, no impacts are anticipated.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

14. POPULATION & HOUSING. Would the project:

a. Induce substantial population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of road or other infrastructure)?

Discussion of Effects: On July 7, 2021, the NOP for the TOP 2050 SEIR was circulated, establishing the baseline environmental conditions. During that assessment, the population growth for the entire City was included in the baseline conditions and analyzed in the TOP 2050 SEIR. The Project will not directly or indirectly induce substantial population growth beyond what was previously analyzed in the TOP 2050 SEIR.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

b. Displace substantial numbers of existing housing, necessitating the construction of replacement housing elsewhere?

Discussion of Effects: The Project will not displace existing housing and will not generate any additional impact on residential housing beyond what is expected under the current land use designation. Therefore, no adverse impacts resulting from this Project are expected.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

c. Displace substantial numbers of people, necessitating the construction of replacement housing elsewhere?

Discussion of Effects: The Project will not displace existing housing and will not create any impact on residential housing beyond those that would occur under the current land use designation. Therefore, no adverse impacts are anticipated as a result of this project.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

15. PUBLIC SERVICES. Would the project:

a. Result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the public services:

i. Fire protection?

Discussion of Effects: The Project area is located in a developed area that is currently served by the Ontario Fire Department. The Project will not necessitate the construction of new facilities, alterations to existing facilities, or a decline in service levels that might trigger the need for new facilities. Therefore, no impacts are anticipated.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

ii. Police protection?

Discussion of Effects: The Project area is located in a developed area that is currently served by the Ontario Police Department. The Project will not necessitate the construction of new

facilities, alterations to existing facilities, or a decline in service levels that might trigger the need for new facilities. Therefore, no impacts are anticipated.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

iii. Schools?

Discussion of Effects: The Project area is located in a developed area that is currently served by the City of Ontario. The Project will not necessitate the construction of new facilities, alterations to existing facilities, or a decline in service levels that might trigger the need for new facilities. Therefore, no impacts are anticipated.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

iv. Parks?

Discussion of Effects: The Project area is located in a developed area that is currently served by the City of Ontario. The Project will not necessitate the construction of new facilities, alterations to existing facilities, or a decline in service levels that might trigger the need for new facilities. Therefore, no impacts are anticipated.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

v. Other public facilities?

Discussion of Effects: The Project area is located in a developed area that is currently served by the City of Ontario. The Project will not necessitate the construction of new facilities, alterations to existing facilities, or a decline in service levels that might trigger the need for new facilities. Therefore, no impacts are anticipated.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

16. RECREATION. Would the project:

a. Increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?

Discussion of Effects: On July 7, 2021, the NOP for the TOP 2050 SEIR was circulated, thereby establishing the baseline environmental conditions. During that assessment, the potential increases in the use of existing neighborhood and regional parks and other recreational facilities associated with the site were included in the baseline conditions. As a result, the Project will not

generate new demands for other recreational facilities beyond those previously analyzed in the TOP SEIR.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

b. Does the project include recreational facilities or require the construction or expansion of recreational facilities that have an adverse physical effect on the environment?

Discussion of Effects: This Project is not proposing any new significant housing or large employment generator that would require the construction of neighborhood parks or other recreational facilities. No impacts are anticipated.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

17. TRANSPORTATION/TRAFFIC. Would the project:

a. Conflict with an applicable plan, ordinance or policy establishing measures of effectiveness for the performance of the circulation system, taking into account all modes of transportation including mass transit and non-motorized travel and relevant components of the circulation system, including but not limited?

Discussion of Effects: When the TOP 2050 SEIR was prepared, the impacts associated with land use were incorporated into the baseline conditions. As such, the Project is proposed to align with the TOP. The Project will not introduce any new traffic impacts beyond those previously analyzed in the TOP SEIR.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

b. Conflict with an applicable congestion management program, including, but not limited to, level of service standard and travel demand measures, or other standards established by the county congestion management agency for designated roads or highways?

Discussion of Effects: The Project is situated in an area that is predominantly developed, with all street improvements already in place. It will not pose conflicts with any applicable congestion management program or adversely affect the level of service standards on adjacent arterials, given that the number of trips to be generated is minimal compared to the existing capacity within the congestion management program. Less than significant impacts are anticipated.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

c. Result in a change in air traffic patterns, including either an increase in traffic levels or a change in location that results in substantial safety risks?

Discussion of Effects: The implementation of the Project would not alter air traffic patterns. As a result, these impacts are deemed less than significant, and no mitigation measures are necessary.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

d. Substantially increase hazards due to a design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?

Discussion of Effects: The impacts associated with the Project would be considered less than significant, and no mitigation measures are required. The project is in an area that is mostly developed. All street improvements are complete, and no alterations are proposed for adjacent intersections or arterials. The project will, therefore, not create a substantial increase in hazards due to a design feature. No impacts are anticipated.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

e. Result in inadequate emergency access?

Discussion of Effects: The proposed Project would not result in inadequate emergency access. Future roadway construction would increase access into areas that were previously void of them. Details of road placement are given in section 5.17-3 in TOP 2050 SEIR. No new impacts beyond those identified in TOP 2050 SEIR would result from Project implementation. Therefore, no mitigation measures are necessary.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

f. Result in inadequate parking capacity?

Discussion of Effects: Future development of the site will be required to meet parking standards established by the Ontario Development Code and will therefore not create an inadequate parking capacity. No impacts are anticipated. Therefore, proposed Project will not result in a demand for new parking.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

g. Conflict with adopted policies, plans, or programs supporting alternative transportation (e.g., bus turnouts, bicycle racks)?

Discussion of Effects: The Project does not conflict with any transportation policies, plans or programs. Therefore, no impacts are anticipated.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

18. TRIBAL CULTURAL RESOURCES. Would the project cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is:

a. Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code section 5020.1(k)?

Discussion of Effects: None of the subject sites within the Project area are listed in the California Register of Historic Resources. Changing the zoning on these sites will not result in greater impacts than those previously identified in the Certified TOP EIR. However, in accordance with TOP SEIR Mitigation Measure 5-4, for projects requiring a General Plan amendment and defined cultural resource mitigation under CEQA for potential tribal resources, the project applicant must notify the designated tribe(s) before issuing grading permits. The applicant will collaborate with the City of Ontario and tribal representatives to establish mitigation measures covering tribal monitors' roles during grading, excavation, and ground-disturbing activities, scheduling, compensation terms, and the treatment and final disposition of cultural resources, sacred sites, and human remains discovered on the site. The City of Ontario has the authority to determine project conditions within its jurisdiction. Therefore, it is concluded that the proposed Project will not impact Tribal Cultural Resources (TCR) or Native American artifacts related to TCRs, and no additional mitigation measures are recommended.

Mitigation: No new mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

b. A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code section 5024.1. In applying the criteria set forth in subdivision (c) of Public Resources Code section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe.

Discussion of Effects: None of the subject sites in the Project area are in the California Register of Historic Resources. No impacts are anticipated through Project implementation.

Mitigation: No new mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

19. UTILITIES AND SERVICE SYSTEMS. Would the project:

a. Exceed wastewater treatment requirements of the applicable Regional Water Quality Control Board?

Discussion of Effects: The Project itself will not require the construction or use of a sewer or septic tank, and as such, no mitigation measures are necessary. No impacts are anticipated resulting from Project implementation.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

b. Require or result in the construction of new water or wastewater treatment facilities or expansion of existing facilities, the construction of which could cause significant environmental effects?

Discussion of Effects: The proposed Project will not require or result in the construction of new water or wastewater treatment facilities or expansion of existing facilities, the construction of which could cause significant environmental effects.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary. No impacts are anticipated through Project implementation.

c. Require or result in the construction of new storm water drainage facilities or expansion of existing facilities, the construction of which could cause significant environmental effects?

Discussion of Effects: The Project in itself will not require or result in the construction of new storm water drainage facilities or expansion of existing facilities, the construction of which could cause significant environmental effects. However, future roadway construction may impact and alter existing storm water drainage systems. Nevertheless, adequate Policies (ER-1.5, ER-1.6 and ER-1.7) have already been adopted by the City that would reduce stormwater impacts to less-than-significant levels, with no additional mitigation required.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

d. Have sufficient water supplies available to serve the project from existing entitlements and resources, or are new or expanded entitlements needed? In making this determination, the City shall consider whether the project is subject to the water supply assessment requirements of Water Code Section 10910, et seq. (SB 610), and the requirements of Government Code Section 664737 (SB 221).

Discussion of Effects: The Project site is served by the City of Ontario water system. There is currently sufficient water supply available to the City of Ontario to serve this Project as per the findings of TOP 2050 SEIR. No impacts are anticipated.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

e. Result in a determination by the wastewater treatment provider that serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?

Discussion of Effects: No intensification of uses would occur that could result in increased demand for sewer facilities other than those previously considered and addressed in the TOP 2050 SEIR. Therefore, the Project will not increase demands on wastewater. No impacts would result.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

f. Be served by a landfill with sufficient permitted capacity to accommodate the project's solid waste disposal needs?

Discussion of Effects: No intensification of uses would occur that could result in increased demand for waste disposal other than those previously considered and addressed in the TOP EIR. No new impacts beyond those identified in TOP 2050 SEIR would result from Project implementation.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

g. Comply with federal, state, and local statutes and regulations related to solid waste?

Discussion of Effects: Implementation of the Project complies with all federal, State, and local statutes and regulations related to solid waste. No impacts are anticipated, and therefore, no mitigation measures are necessary.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

20. WILDFIRE. If located in or near state responsibility areas or lands classified as very high fire hazard severity zones, would the project:

a. Substantially impair an adopted emergency response plan or emergency evacuation plan?

Discussion of Effects: The Project site is not located in or near a state responsibility area nor is it located in or near lands classified as very high fire hazard severity zones. Therefore, no impacts are anticipated.

Mitigation: No new mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

b. Due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby expose project occupants to, pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire?

Discussion of Effects: The Project site is not located in or near a state responsibility area nor is it located in or near lands classified as very high fire hazard severity zones. Therefore, no impacts are anticipated.

Mitigation: No new mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

c. Require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment?

Discussion of Effects: The Project site is not located in or near a state responsibility area nor is it located in or near lands classified as very high fire hazard severity zones. Therefore, no impacts are anticipated.

Mitigation: No new mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

d. Expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes?

Discussion of Effects: The Project site is not located in or near a state responsibility area nor is it located in or near lands classified as very high fire hazard severity zones. Therefore, no impacts are anticipated.

Mitigation: No new mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

21. MANDATORY FINDINGS OF SIGNIFICANCE.

a. Does the project have the potential to substantially degrade the quality of the environment, substantially reduce the habitat or a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, substantially reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory?

Discussion of Effects: The proposed Project does not have the potential to reduce wildlife habitat and threaten a wildlife species; therefore, no environmental impacts resulting from the Project are anticipated.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP SEIR. No changes or additions to TOP SEIR analyses are necessary.

b. Does the project have the potential to achieve short-term environmental goals to the disadvantage of long-term environmental goals?

Discussion of Effects: The Project does not have the potential to achieve short-term environmental goals to the disadvantage of long-term environmental goals.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP SEIR. No changes or additions to TOP SEIR analyses are necessary.

c. Does the project have impacts that are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current project, and the effects of probable future projects.)

Discussion of Effects: The Project does not have impacts that are cumulatively considerable.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP SEIR. No changes or additions to TOP SEIR analyses are necessary.

d. Does the project have environmental effects that will cause substantial adverse effects on human beings, either directly or indirectly?

Discussion of Effects: The Project does not have environmental effects that will cause substantial adverse effects on human beings, either directly or indirectly.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP SEIR. No changes or additions to TOP SEIR analyses are necessary.

22. MANDATORY FINDINGS OF SIGNIFICANCE.

a. Does the project have the potential to degrade the quality of the environment, substantially reduce the habitat or a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory?

Discussion of Effects: The proposed Project does not have the potential to reduce wildlife habitat and threaten a wildlife species. Therefore, no impacts are anticipated.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

b. Does the project have the potential to achieve short-term environmental goals to the disadvantage of long-term environmental goals?

Discussion of Effects: The Project in itself does not have the potential to achieve short-term environmental goals to the disadvantage of long-term environmental goals. The proposed Project is being pursued pursuant to TOP. Therefore, the Project will not result in adverse impacts.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

c. Does the project have impacts that are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current project, and the effects of probable future projects.)

Discussion of Effects: When the TOP 2050 SEIR was prepared, the impacts associated with the Project area were included in the baseline conditions. Here, the Project is being proposed to be consistent with the established land use pursuant to the TOP. The Project will not result in any new cumulatively considerable impacts beyond what was previously analyzed in the TOP SEIR. Therefore, the Project will not result in adverse impacts.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

d. Does the project have environmental effects that will cause substantial adverse effects on human beings, either directly or indirectly?

Discussion of Effects: The Project does not have environmental effects that will cause substantial adverse effects on human beings, either directly or indirectly.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP 2050 SEIR. No changes or additions to TOP 2050 SEIR analyses are necessary.

EARLIER ANALYZES

(Earlier analyses may be used where, pursuant to the tiering, program EIR, or other CEQA process, one or more effects have been adequately analyzed in an earlier EIR or Negative Declaration. Section 15063(c)(3)(D)):

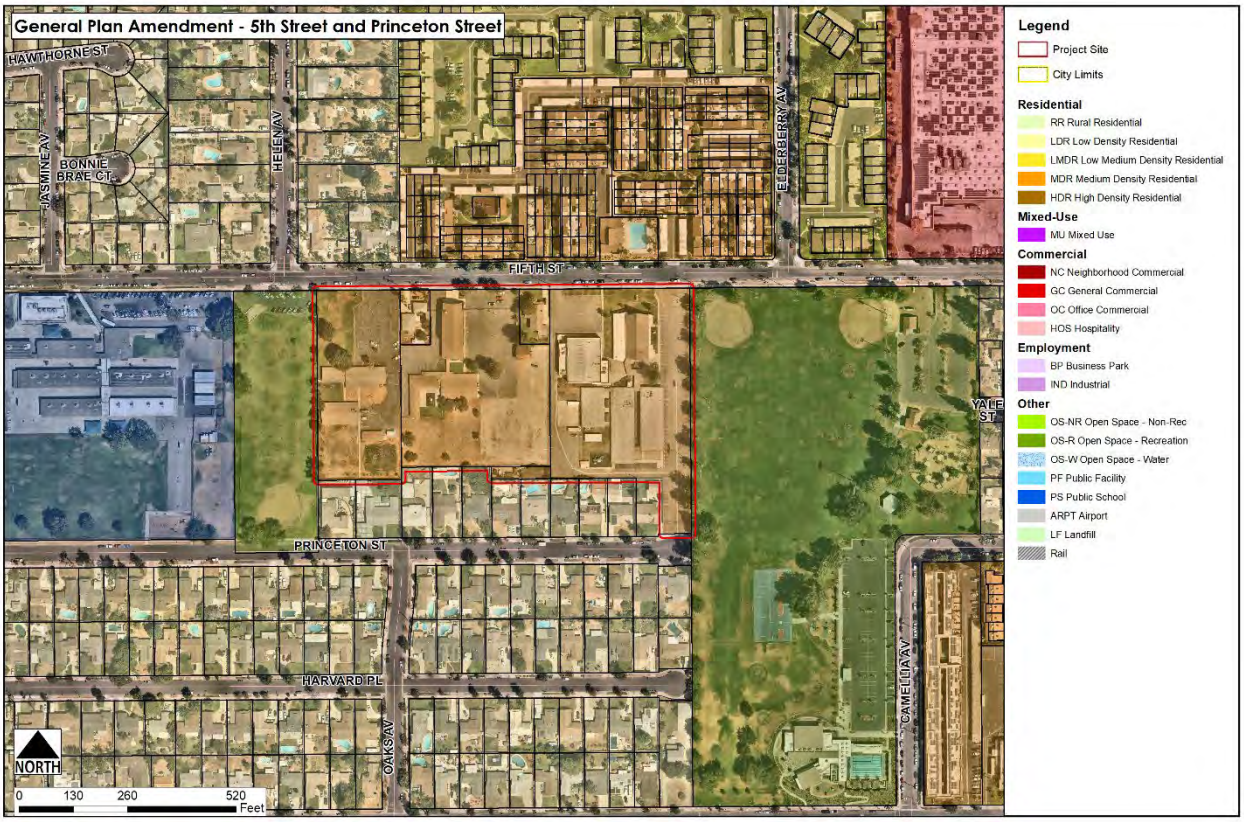
1. Earlier analyzes used. Identify earlier analyzes used and state where they are available for review.

   (a) The Ontario Plan 2050 Supplemental Environmental Impact Report (SEIR)
   (b) The Ontario Plan
   (c) The Ontario Land Use Plan
   (d) The Ontario Plan Mitigation Monitoring and Reporting Program
   (e) The Ontario Plan CEQA Findings and Statement of Overriding Consideration

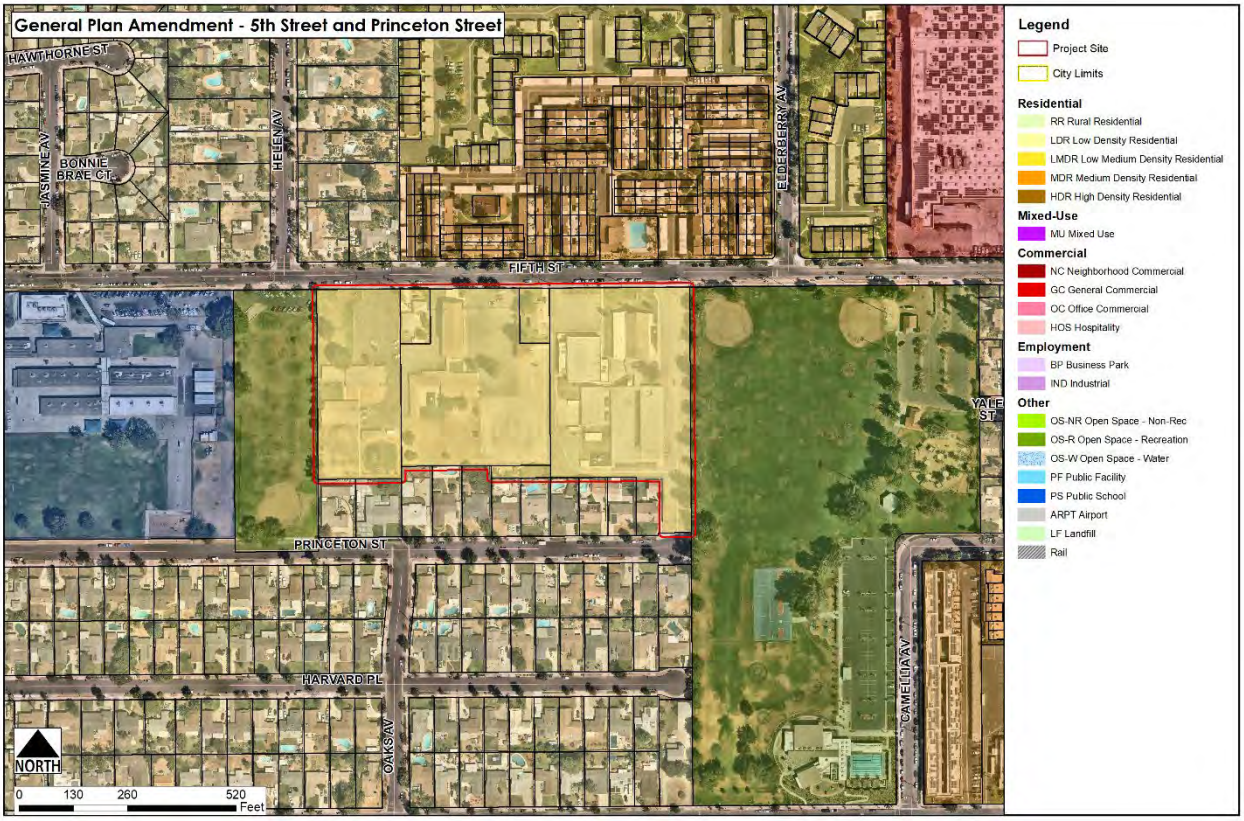
   All documents listed above are on file with the City of Ontario Planning Department, 303 East "B" Street, Ontario, California 91764, (909) 395-2036.

2. Impacts adequately addressed. Identify which effects from the above checklist were within the scope of and adequately analyzed in an earlier document pursuant to applicable legal standards.

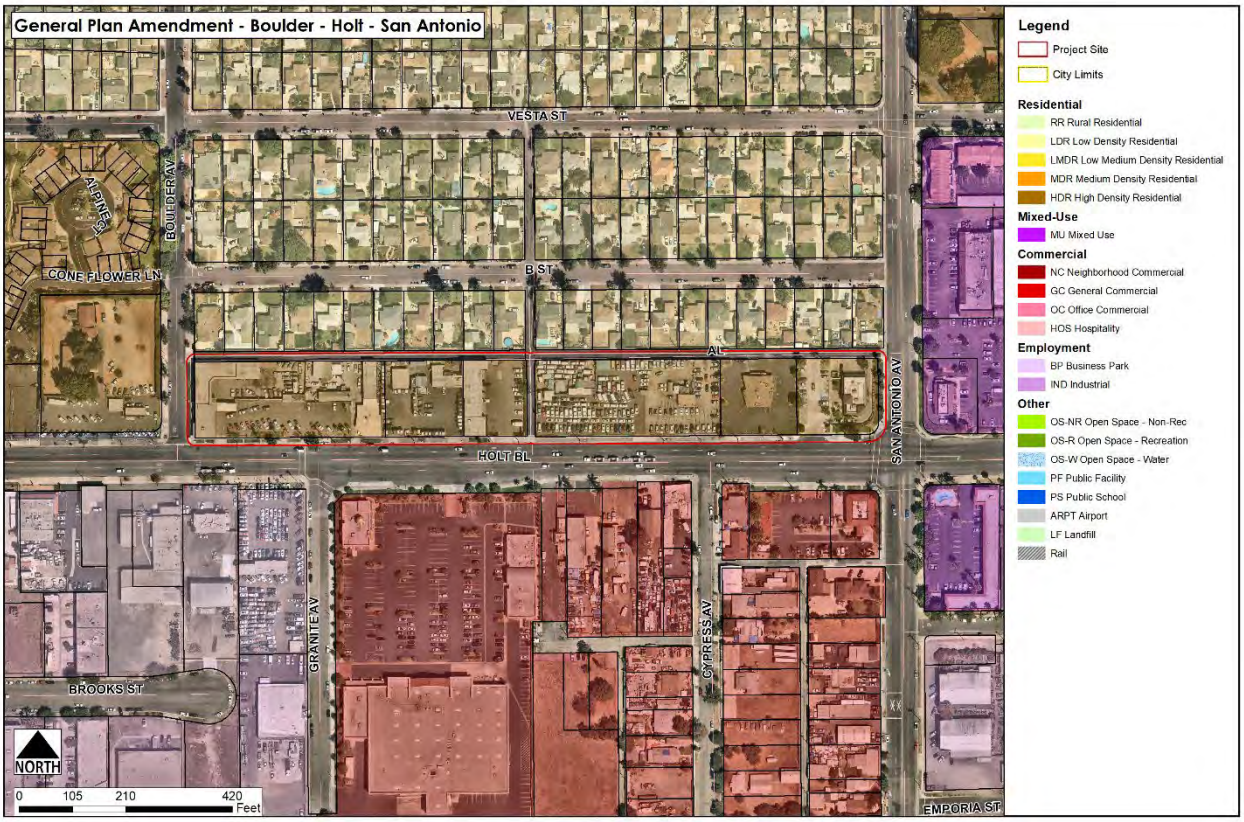
   Most of the checklist items were analyzed in the TOP 2050 SEIR, the Project does not permit the introduction of any new uses that were not part of the Project description in TOP 2050 SEIR. Therefore, the Project will not result in any new impacts beyond what was previously analyzed in TOP 2050 SEIR.



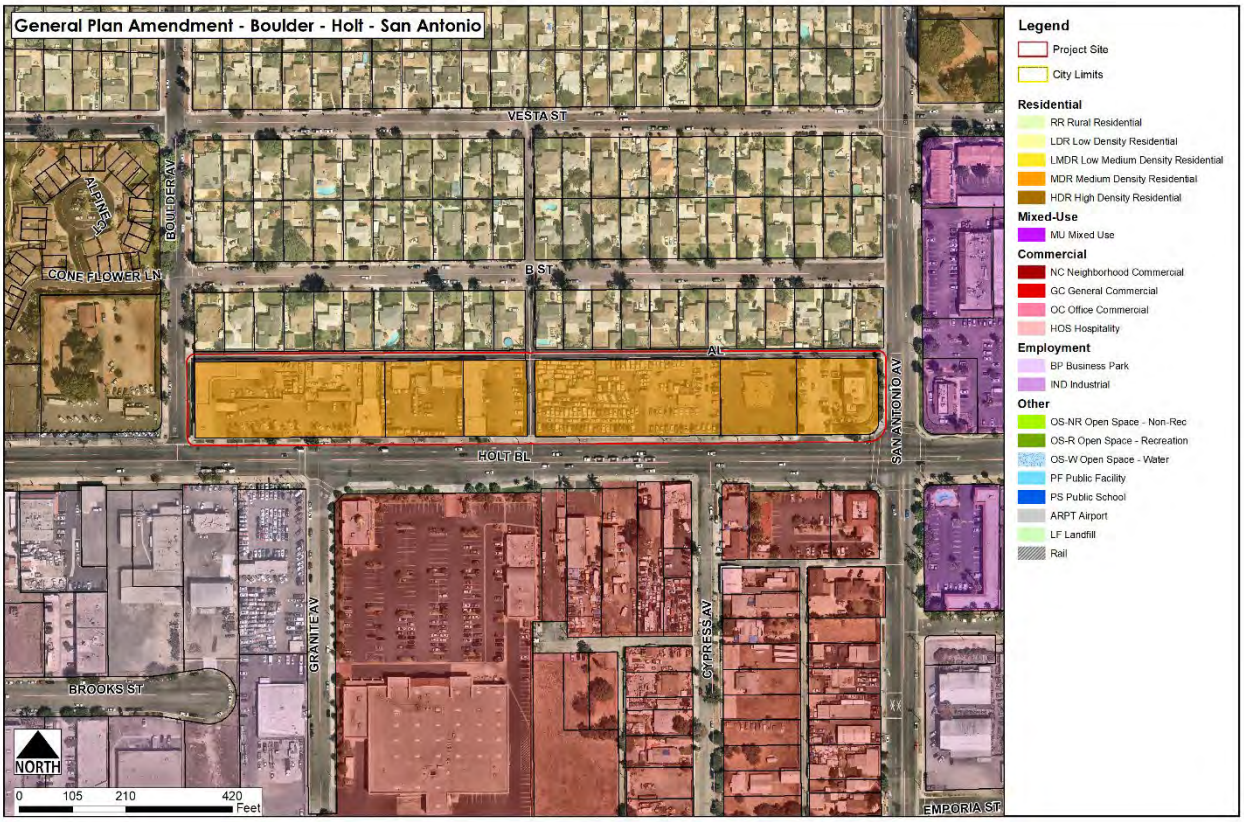
MITIGATION MEASURES



(For effects that are "Less than Significant with Mitigation Incorporated," describe the mitigation measures, which were incorporated or refined from the earlier document and the extent to which they address site-specific conditions for the project



The Mitigation Measures contained in the Certified TOP 2050 SEIR adequately mitigate the impacts of the proposed Project. These mitigation measures are contained in the attached Mitigation Monitoring Program.



No additional mitigation beyond that previously imposed is required.

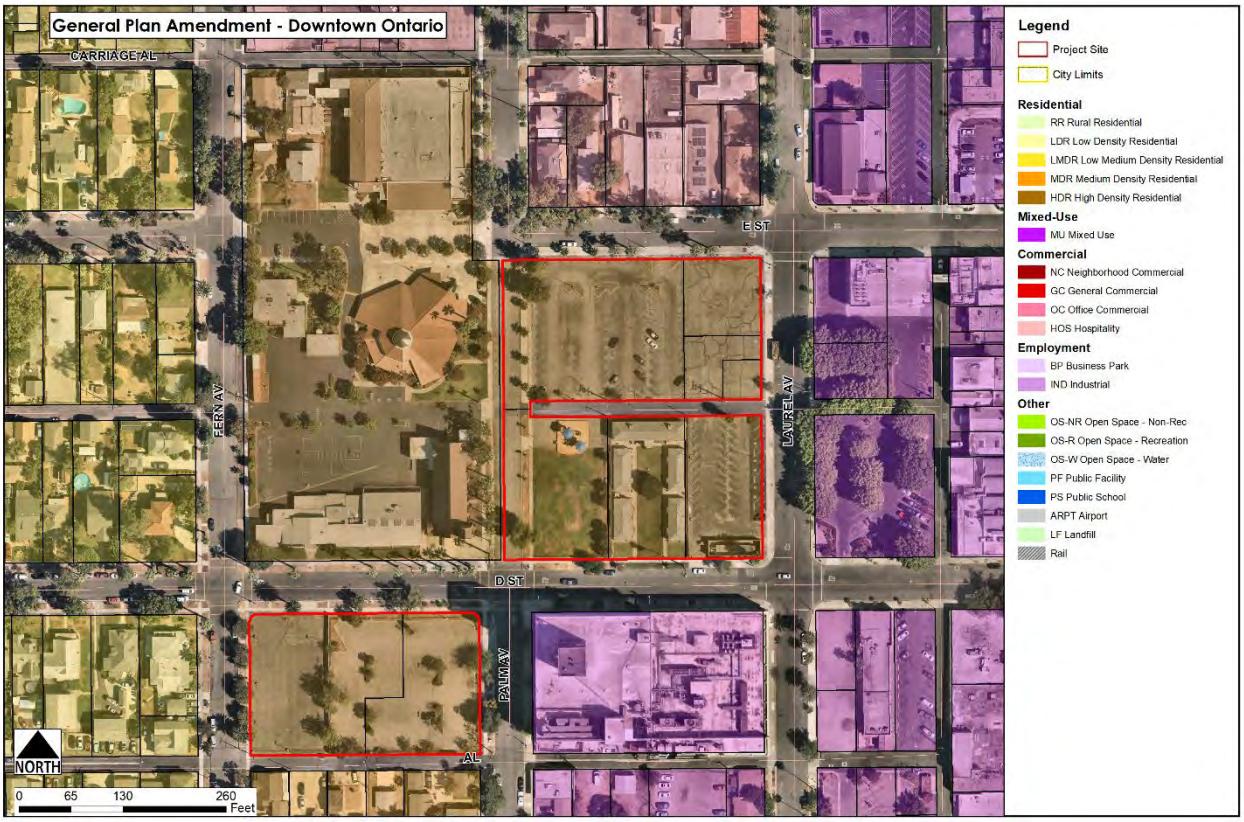


Exhibit A: GENERAL PLAN AMENDMENTS

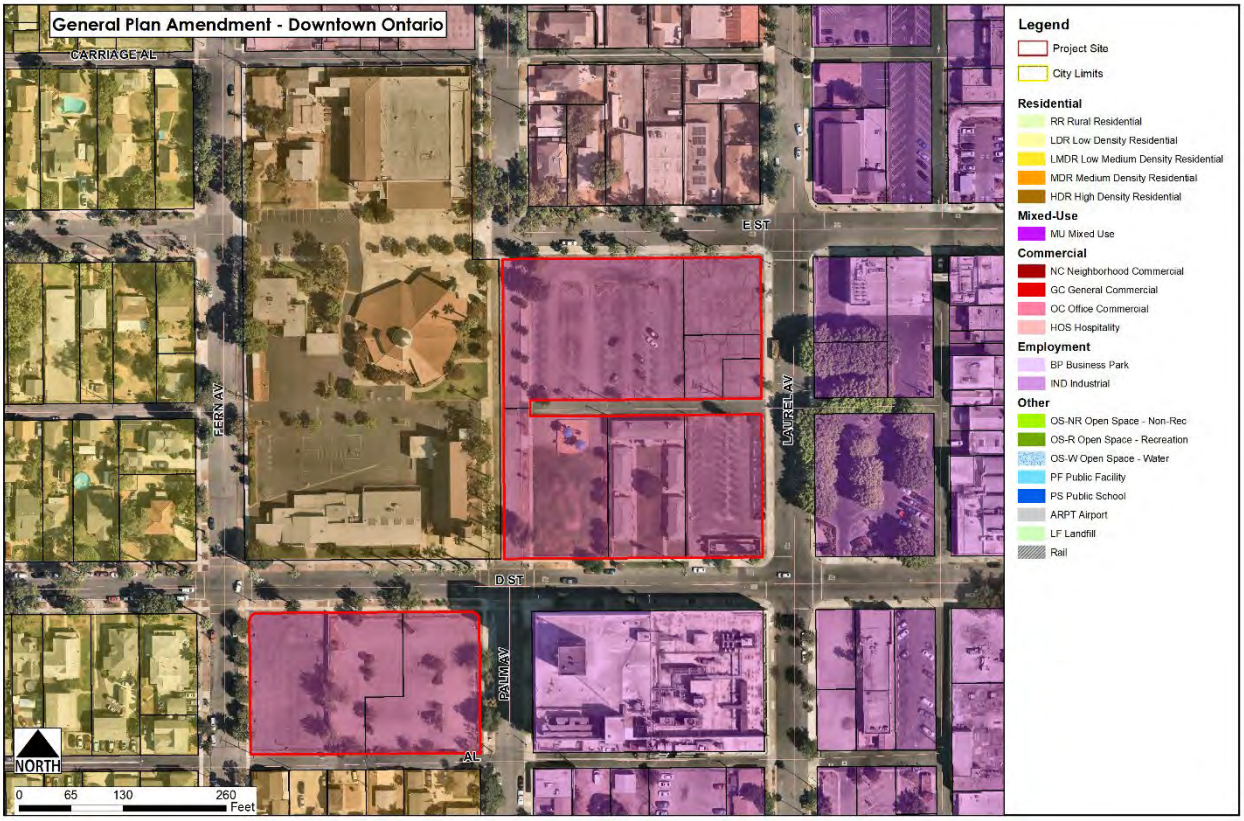

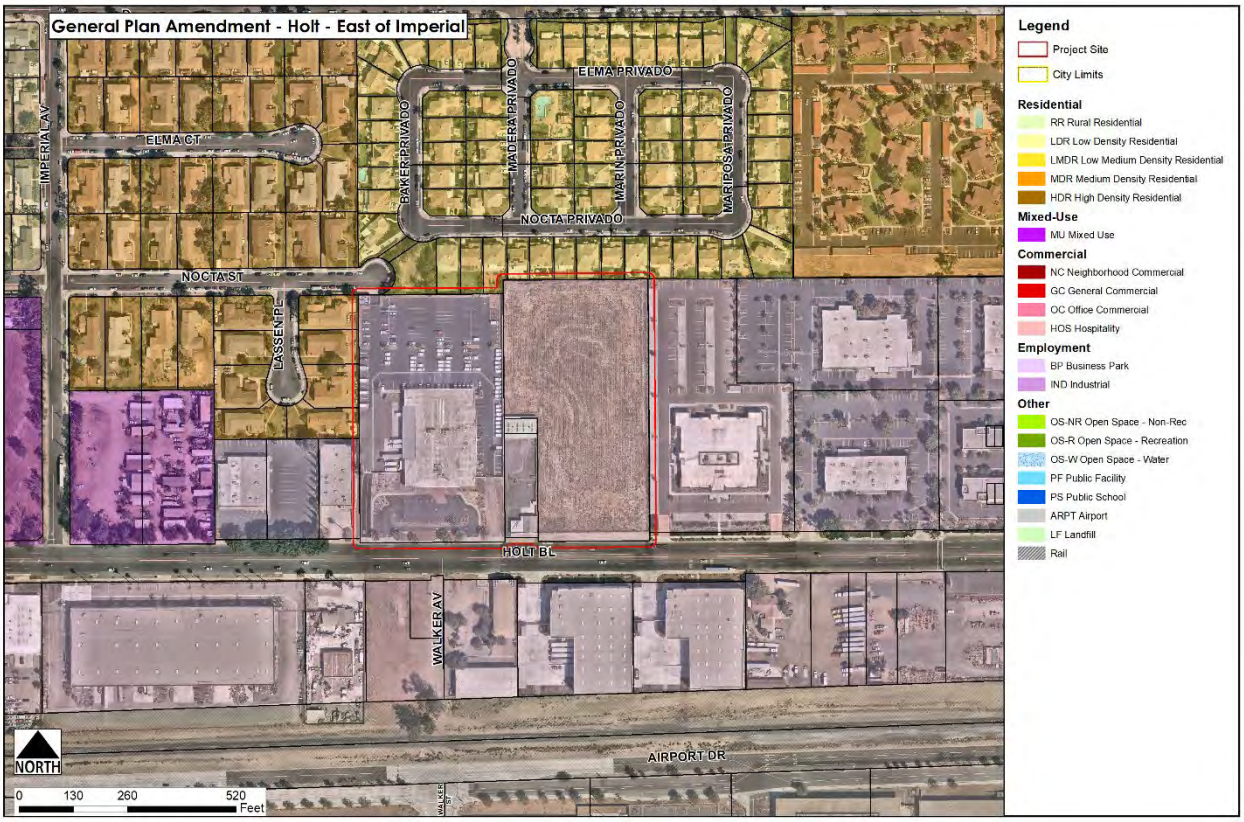

General Plan Amendment - Boulder - Holt - San Antonio

Notes

1 Historically, citywide buildout levels do not achieve the maximum allowable density/intensity on every parcel and are, on average, lower than allowed by the Policy Plan. Accordingly, the buildout projections in this Policy Plan do not assume buildout at the maximum density or intensity and instead are adjusted downward. There are a few notable exceptions to this. The assumed density for Low-Density Residential north of Riverside Drive is estimated above the allowed density to account for the continued use of areas that were built at densities above the current allowance, and to account for growth in these areas due to accessory dwelling unit (ADU) development and lot splits. Some areas were also entitled at greater densities due to the use of gross acreage rather than net acreage. These areas, identified in note 7 utilized customized growth assumptions to ensure that the future projection was equal to or larger than the number of existing units in built areas, and equal to or larger than existing entitlements in undeveloped or partially developed areas.

2 Acres are based on the City's Parcel data as of January 2021.

3 Assumed Density/Intensity includes both residential density, expressed as units per acre, and non-residential intensity, expressed as floor area ratio (FAR), which is the amount of building square feet in relation to the size of the lot.

4 Projections of population by residential designation are based on projected occupancy rates and a persons-per-household factor that varies by housing type.

5 The factors used to generate the number of employees by land use category were derived by comparing 2018 employment data published by the U.S. Census as part of the Longitudinal Employer-Household Dynamics (LEHD) dataset to existing building square footage by use type, as recorded in the City's building permit database.

LU-03 Future Buildout Table

Land Use	Acres[2]	Assumed Density/Intensity[3]	Units	Pop[4]	Non-Residential Square Feet	Jobs[5]
		• 5% of area at 0.75 FAR office • 55% of area at 0.50 FAR retail

LU-03 Future Buildout Table

Land Use	Acres[2]	Assumed Density/Intensity[3]	Units	Pop[4]	Non-Residential Square Feet	Jobs[5]

6 Acreages and corresponding buildout estimates for these designations do not reflect underlying land uses within the Business Park and Industrial Overlays. Estimates within overlay areas are included within the corresponding Business Park and Industrial categories.

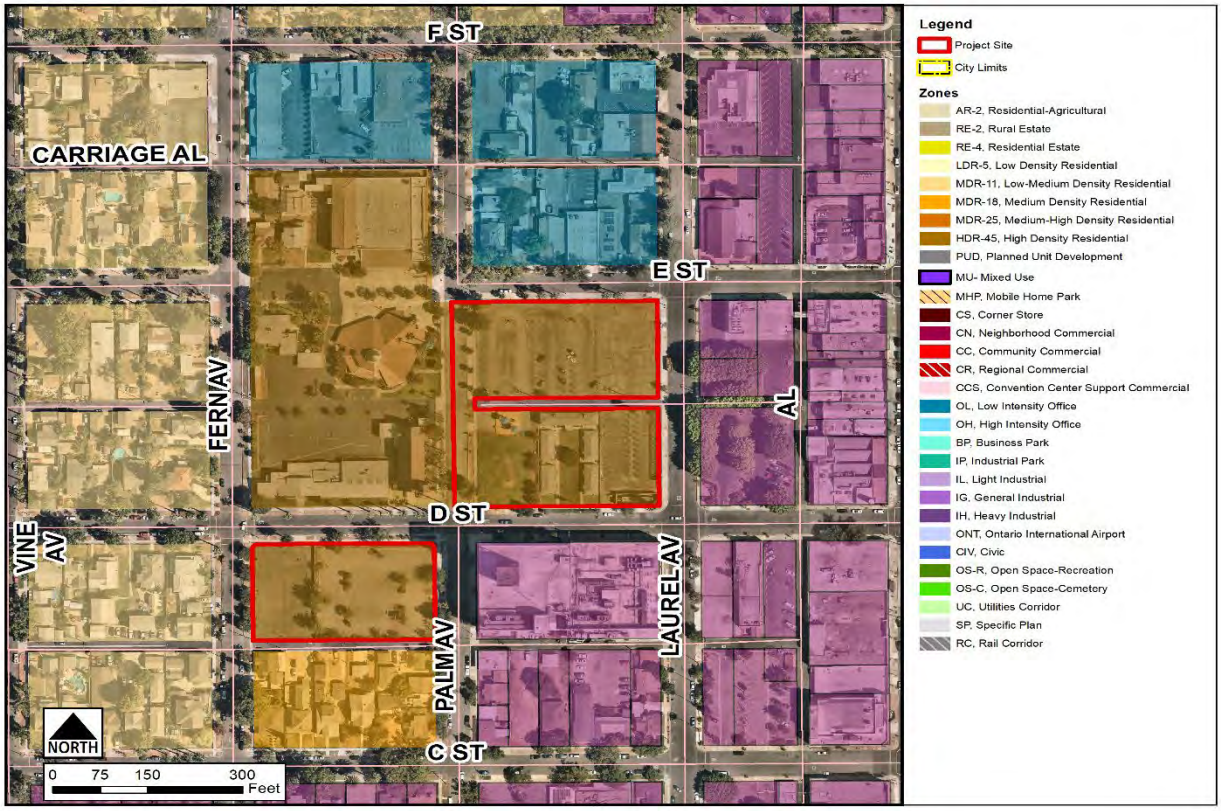
7. To ensure future projections are equal to or larger than existing conditions in built out areas as of August 2021, and equal to or larger than existing entitlements (approved before August 2021) in undeveloped or partially developed areas, buildout estimates for the following projects, assumed realistic densities as follows: Countryside Specific Plan (Low Density Residential: 6.18 du/ac), Creekside Specific Plan (Low Density Residential: 7.47 du/ac, Medium Density Residential: 15.81 du/ac), Subarea 29 Specific Plan (Low Density Residential: 7.03).

8. In certain mixed use categories, different buildout assumptions were employed on different sites. Variations in assumptions are included in multiple rows within this table.

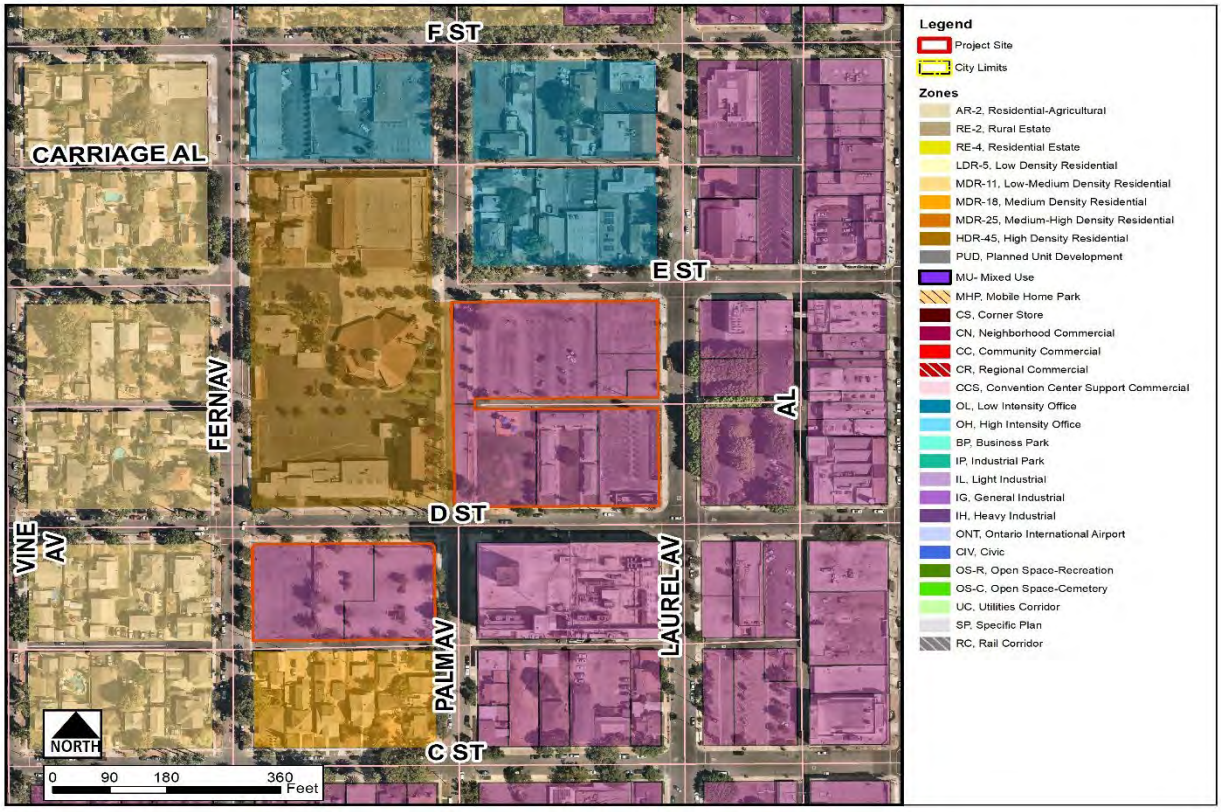
Last Amended: August 16, 2022

Exhibit C: PROPOSED LAND USE DESIGNATION TABLE (LU-02)

City of Ontario Policy Plan
Land Use Element



THE ONTARIO PLAN 2050



LU-02 Land Use Designations Summary Table

Land Use Designation	Residential Density & Non-Residential Intensity	Intention
		consider a host of uses including a transit station and multimodal transfer station.
Mixed Use – An intense mixture of uses that, when concentrated, create focal points for community activity and identity and facilitate walking, biking, and the use of transit. The Mixed Use land use category accommodates a horizontal and/or vertical mixture of retail, service, office, restaurant, entertainment, cultural, and residential uses. • Density, intensity and intended character varies by area, as generally described below, and defined in detail under the applicable Place Type in the Community Design Element. • The densities and intensities of the Mixed Use designation represent the intended level of anticipated development; however, individual projects may vary depending upon an approved master plan, such as a specific plan, or planned unit development. • The maximum amount of development in each Mixed Use area shall be limited by the Future Buildout Projections detailed in Table LU-03. Further direction regarding land use distributions, densities and intensities within some of these areas are provided by specific plans as noted below. • Most Mixed Use areas are the focal point of the City's Place Type designations illustrated on Figure CD-01 and noted below. Place Types are defined in the Community Design Element, and the vision for the intended outcome and character of each area is established and illustrated in the Place Type Figures noted below.		
Mixed Use - Downtown[1] *(MU-Downtown)*	• 25.0 to 75.0 dwelling units per acre • 2.0 FAR for retail and office uses *Subject to PUD at City's discretion*	Envisioned as an intensive vertical and horizontal mixture of retail, civic, office, and residential uses in a pedestrian friendly atmosphere. The historic character is enhanced. The most intensive uses are envisioned along Euclid and Holt Avenues. [Link to Community Design Element *Urban, Mixed Use, and Transit-oriented Place Types* Section, Community Design Element *Exhibits CD-01, CD-02, CD-03* and *CD-08*]
Mixed Use - Holt Blvd[1] *(MU-Holt)*	• 14.0[2] to 40.0 dwelling units per acre • 2.0 FAR for office uses • 1.0 FAR for retail uses *Subject to PUD at City's discretion*	This area is envisioned as a low-rise (3-5 stories) intensification of the Holt Corridor. The intent is to create identity and place along the Holt Corridor, connect the corridor to Downtown, and connect the Downtown to the Ontario Airport Metro Center. [Link to Community Design Element *Urban, Mixed Use, and Transit-oriented Place Types* Section, Community Design Element *Exhibits CD-01, CD-02, CD-08* and *CD-09*]
Mixed Use - Meredith[1] *(MU-Meredith)*	• 14.0 to 125.0 dwelling units per acre • 3.0 FAR for office and retail uses	This area is envisioned as a mixture of mid-rise buildings, regional-serving retail and office centers, and stand-alone high density residential projects. [Link to Community Design Element *Urban, Mixed Use, and Transit-oriented Place Types* Section, Community Design Element *Exhibits CD-01, CD-02,* and *CD-08*]

RESOLUTION NO. _____

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF ONTARIO, CALIFORNIA, APPROVING FILE NO. PGPA23-001, AN AMENDMENT TO THE POLICY PLAN (GENERAL PLAN) COMPONENT OF THE ONTARIO PLAN TO: [1] MODIFY THE LAND USE PLAN (EXHIBIT LU-01) AND EXHIBIT LU-03 (FUTURE BUILDOUT) CHANGING THE LAND USE DESIGNATION FOR 3.8 ACRES OF LAND FROM HIGH-DENSITY RESIDENTIAL TO MIXED USE - DOWNTOWN, [2] MODIFY THE LAND USE PLAN (EXHIBIT LU-01) AND EXHIBIT LU-03 (FUTURE BUILDOUT) CHANGING THE LAND USE DESIGNATION FOR 9.3 ACRES OF LAND, FROM MEDIUM-DENSITY RESIDENTIAL TO LOW-DENSITY RESIDENTIAL, [3] MODIFY THE LAND USE PLAN (EXHIBIT LU-01) AND EXHIBIT LU-03 (FUTURE BUILDOUT) CHANGING THE LAND USE DESIGNATION FOR 4.7 ACRES OF LAND FROM HIGH-DENSITY RESIDENTIAL TO MEDIUM-DENSITY RESIDENTIAL, [4] MODIFY THE LAND USE PLAN (EXHIBIT LU-01) AND EXHIBIT LU-03 (FUTURE BUILDOUT) CHANGING THE LAND USE DESIGNATION FOR 9.8 ACRES OF LAND FROM BUSINESS PARK TO MIXED USE – EAST HOLT, AND [5] MODIFY THE TEXT IN THE LAND USE DESIGNATION SUMMARY TABLE (EXHIBIT LU-02) TO ALLOW CIVIC USES WITHIN THE MIXED-USE DOWNTOWN LAND USE DESIGNATION. AND MAKING FINDINGS IN SUPPORT THEREOF - APN: 0110-072-25, 0110-081-06, 0110-081-07, 1008-551-01, 1008-551-07, 1008-551-11, 1008-551-12, 1008-551-13, 1008-561-06, 1010-491-02, 1010-491-03, 1010-491-16, 1048-344-03, 1048-353-04, 1048-353-05, 1048-353-09, 1048-353-13, 1048-353-14, 1048-576-01, 1048-576-02, 1048-604-13, 1048-604-14, AND 1048-604-15. (SEE ATTACHMENTS 1 AND 2) (PART OF CYCLE 1 FOR THE 2023 CALENDAR YEAR).

WHEREAS, City of Ontario has filed an Application for the approval of a General Plan Amendment, File No. PGPA23-001, as described in the title of this Resolution (hereinafter referred to as "Application" or "Project"); and

WHEREAS, the City of Ontario adopted the Policy Plan (General Plan) as part of The Ontario Plan on August 16, 2022. Since the adoption of The Ontario Plan, the City has evaluated Exhibits LU-01: Official Land Use Plan and LU-03: Future Buildout further and is proposing modifications; and

WHEREAS, the proposed changes to Exhibit LU-01 Official Land Use Plan involve adjusting land use designations for specific properties shown on Exhibit A to align with the long-term goals, principles, and policies of The Ontario Plan 2050 (TOP 2050) that are designed to fulfill Ontario's Vision; and

WHEREAS, Policy Plan Exhibit LU-03 (Future Buildout) specifies the expected buildout for the City of Ontario, incorporating the adopted land use designations. The proposed changes to Exhibit LU-01 (Official Land Use Plan) will require that Exhibit LU-03

(Future Buildout) is modified to be consistent with Exhibit LU-01 (Official Land Use Plan), as depicted on Exhibit B, attached; and

WHEREAS, the City of Ontario conducted an Open House on October 5, 2023, to gain input from impacted property owners; and

WHEREAS, the Application is a project pursuant to the California Environmental Quality Act (Public Resources Code Section 21000 et seq.) ("CEQA") and an initial study has been prepared to determine possible environmental impacts; and

WHEREAS, Ontario Development Code Table 2.02-1 (Review Matrix) grants the City Council the responsibility and authority to review and act on the subject Application; and

WHEREAS, the Project is located within the Airport Influence Area of Ontario International Airport, which encompasses lands within parts of San Bernardino, Riverside, and Los Angeles Counties, and is subject to, and must be consistent with, the policies and criteria set forth in the Ontario International Airport Land Use Compatibility Plan ("ALUCP"), which applies only to jurisdictions within San Bernardino County, and addresses the noise, safety, airspace protection, and overflight impacts of current and future airport activity; and

WHEREAS, City of Ontario Development Code Division 2.03 (Public Hearings) prescribes the manner in which public notification shall be provided and hearing procedures to be followed, and all such notifications and procedures have been completed; and

WHEREAS, on October 24, 2023, the Planning Commission of the City of Ontario conducted a hearing to consider the Addendum and the Project, and concluded said hearing on that date, voting to issue Resolution Nos. PC23-084 and PC23-085, recommending the City Council approve the Application; and

WHEREAS, as the first action on the Project, on November 21, 2023, the City Council approved a Resolution adopting an Addendum to the Ontario Plan 2050 Supplemental Environmental Impact Report (State Clearinghouse No. 2021070364) adopted by City Council on August 16, 2022, for File No. PGPA20-002. The Addendum finds that the proposed project introduces no new significant environmental impacts, and all previously adopted mitigation measures were incorporated into the Project by reference; and

WHEREAS, on November 21 2023, the City Council of the City of Ontario conducted a hearing to consider the Project, and concluded said hearing on that date; and

WHEREAS, all legal prerequisites to the adoption of this Resolution have occurred.

NOW, THEREFORE, IT IS HEREBY FOUND, DETERMINED, AND RESOLVED by the City Council of the City of Ontario, as follows:

SECTION 1. ***Environmental Determination and Findings.*** As the decision-making body for the Project, the City Council has reviewed and considered the information contained in the administrative record for the Project. Based upon the facts and information contained in the administrative record, including all written and oral evidence presented to the City Council, the City Council finds as follows:

(1) The environmental impacts of this project were reviewed in conjunction with an The Ontario Plan Supplemental Environmental Impact Report — State Clearinghouse No. 2021070364 ("Certified EIR"), which was certified by the Ontario City Council on August 16, 2022, in conjunction with File No. PGPA20-002; and

(2) The Addendum and administrative record have been completed in compliance with CEQA, the State CEQA Guidelines, and the City of Ontario Local CEQA Guidelines; and

(3) The City's "Guidelines for the Implementation of the California Environmental Quality Act (CEQA)" provide for the use of a single environmental assessment in situations where the impacts of subsequent projects are adequately analyzed. This Application introduces no new significant environmental impacts; and

(4) The Addendum contains a complete and accurate reporting of the environmental impacts associated with the Project, and reflects the independent judgment of the City Council; and.

(5) There is no substantial evidence in the administrative record supporting a fair argument that the project may result in significant environmental impacts; and

(6) The proposed project will introduce no new significant environmental impacts beyond those previously analyzed in the Certified EIR, and all mitigation measures previously adopted by the Certified EIR, are incorporated herein by this reference.

SECTION 2. ***Additional Environmental Review Not Required.*** Based on the Addendum, all related information presented to the City Council, and the specific findings set forth in Section 1, above, the City Council finds that the preparation of a subsequent or supplemental environmental impact report is not required for the Project, as the Project:

(1) Does not constitute substantial changes to the Certified EIR that will require major revisions to the Certified EIR due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects; and

(2) Does not constitute substantial changes with respect to the circumstances under which the Certified EIR was prepared, that will require major revisions to the Certified EIR due to the involvement of new significant environmental effects or a substantial increase in the severity of the previously identified significant effects; and

(3) Does not contain new information of substantial importance that was not known and could not have been known with the exercise of reasonable diligence at the time the Certified EIR was certified, that shows any of the following:

(a) The project will have one or more significant effects not discussed in the Certified EIR; or

(b) Significant effects previously examined will be substantially more severe than shown in the Certified EIR; or

(c) Mitigation measures or alternatives previously found not to be feasible would in fact be feasible and would substantially reduce one or more significant effects of the Project, but the City declined to adopt such measures; or

(d) Mitigation measures or alternatives considerably different from those analyzed in the Certified EIR would substantially reduce one or more significant effects on the environment, but which the City declined to adopt.

SECTION 3. ***Airport Land Use Compatibility Plan ("ALUCP") Compliance.*** The California State Aeronautics Act (Public Utilities Code Section 21670 et seq.) requires that an Airport Land Use Compatibility Plan be prepared for all public use airports in the State; and requires that local land use plans and individual development proposals must be consistent with the policies set forth in the adopted Airport Land Use Compatibility Plan.

(1) On April 19, 2011, the City Council of the City of Ontario approved and adopted the Ontario International Airport Land use Compatibility Plan, establishing the Airport Influence Area for Ontario International Airport, which encompasses lands within parts of San Bernardino, Riverside, and Los Angeles Counties, and limits future land uses and development within the Airport Influence Area, as they relate to noise, safety, airspace protection, and overflight impacts of current and future airport activity. As the decision-making body for the Project, the City Council has reviewed and considered the facts and information contained in the Application and supporting documentation against the ONT ALUCP compatibility factors, including [1] Safety Criteria (ONT ALUCP Table 2-2) and Safety Zones (ONT ALUCP Map 2-2), [2] Noise Criteria (ONT ALUCP Table 2-3) and Noise Impact Zones (ONT ALUCP Map 2-3), [3] Airspace protection Zones (ONT ALUCP Map 2-4), and [4] Overflight Notification Zones (ONT ALUCP Map 2-5). As a result, the City Council, therefore, finds and determines that the Project, when implemented in conjunction with the conditions of approval, will be consistent with the policies and criteria set forth within the ONT ALUCP; and

SECTION 4. ***Concluding Facts and Reasons.*** Based upon the substantial evidence presented to the City Council during the above-referenced hearing, and upon the specific findings set forth in Sections 1 through 3, above, the City Council hereby concludes as follows:

(1) The proposed General Plan Amendment is consistent with the goals and policies of The Ontario Plan as follows:

Policy Plan (General Plan)

Land Use Element:

- LU-1.1 Strategic Growth. We concentrate growth in strategic locations that help create place and identity, maximize available and planned infrastructure, foster the development of transit, and support the expansion of the active and multimodal transportation networks throughout the City.

- LU-1.6 Complete Community. We incorporate a variety of land uses and building types in our land use planning efforts that result in a complete community where residents at all stages of life, employers, workers, and visitors have a wide spectrum of choices of where they can live, work, shop and recreate within Ontario.

- Goal LU-2 Compatibility: Compatibility between a wide range of uses and a resultant urban patterns and forms.

Community Economics Element:

- Goal CE-1 Complete Community: A complete community that provides for all incomes and stages of life.

- Goal CE-2 Placemaking: A City of distinctive neighborhoods, districts, corridors, and centers where people choose to be; and

(a) ; and

(2) The proposed General Plan Amendment would not be detrimental to the public interest, health, safety, convenience, or general welfare of the City; and

(3) The Land Use Element is a mandatory element allowed four general plan amendments per calendar year and this general plan amendment is the first amendment to the Land Use Element of the 2023 calendar year consistent with Government Code Section 65358; and

(4) The proposed General Plan Amendment action modifying land use designations for 4.7 acres from High-Density Residential to Medium-Density Residential, located north of Holt Boulevard, west of San Antonio Avenue, and east of Boulder Avenue (Exhibit A-3), is not consistent with the Housing Element of the General Plan component of The Ontario Plan. The property is listed in the Housing Element Sites Inventory contained in Tables B-1 and B-2 of the Housing Element Technical Report, and inconsistent with the number of dwelling units or density specified in the Housing Element Sites Inventory; therefore, a General Plan Amendment to remove the subject property from the Housing Element Sites Inventory is required. Removal of the subject property from the inventory will not impact the City's Regional Housing Needs Assessment ("RHNA") obligations, as there are an adequate number of sites in the inventory to meet the RHNA obligation; and

(5) During the amendment of the general plan, opportunities for the involvement of citizens, California Native American Indian tribes (Government Code Section 65352.3.), public agencies, public utility companies, and civic, education, and other community groups, through public hearings or other means were implemented consistent with Government Code Section 65351.

SECTION 5. ***City Council Action.*** Based upon the findings and conclusions set forth in Sections 1 through 4, above, the City Council hereby APPROVES the proposed General Plan Amendment, as depicted in Attachment 1 (Policy Plan Land Use Plan (Exhibit LU-01) Revision) and Attachment 2 (Future Buildout Table (Exhibit LU-03) Revision) of this Resolution.

SECTION 6. ***Custodian of Records.*** The documents and materials that constitute the record of proceedings on which these findings have been based are located at the City of Ontario City Hall, 303 East "B" Street, Ontario, California 91764. The custodian for these records is the City Clerk of the City of Ontario.

SECTION 7. ***Certification to Adoption.*** The City Clerk shall certify to the adoption of the Resolution.

PASSED, APPROVED, AND ADOPTED this 21st day of November 2023.

Notes

1 Historically, citywide buildout levels do not achieve the maximum allowable density/intensity on every parcel and are, on average, lower than allowed by the Policy Plan. Accordingly, the buildout projections in this Policy Plan do not assume buildout at the maximum density or intensity and instead are adjusted downward. There are a few notable exceptions to this. The assumed density for Low-Density Residential north of Riverside Drive is estimated above the allowed density to account for the continued use of areas that were built at densities above the current allowance, and to account for growth in these areas due to accessory dwelling unit (ADU) development and lot splits. Some areas were also entitled at greater densities due to the use of gross acreage rather than net acreage. These areas, identified in note 7 utilized customized growth assumptions to ensure that the future projection was equal to or larger than the number of existing units in built areas, and equal to or larger than existing entitlements in undeveloped or partially developed areas.

2 Acres are based on the City's Parcel data as of January 2021.

3 Assumed Density/Intensity includes both residential density, expressed as units per acre, and non-residential intensity, expressed as floor area ratio (FAR), which is the amount of building square feet in relation to the size of the lot.

4 Projections of population by residential designation are based on projected occupancy rates and a persons-per-household factor that varies by housing type.

5 The factors used to generate the number of employees by land use category were derived by comparing 2018 employment data published by the U.S. Census as part of the Longitudinal Employer-Household Dynamics (LEHD) dataset to existing building square footage by use type, as recorded in the City's building permit database.

LU-03 Future Buildout Table

Land Use	Acres[2]	Assumed Density/Intensity[3]	Units	Pop[4]	Non-Residential Square Feet	Jobs[5]

6 Acreages and corresponding buildout estimates for these designations do not reflect underlying land uses within the Business Park and Industrial Overlays. Estimates within overlay areas are included within the corresponding Business Park and Industrial categories.

7. To ensure future projections are equal to or larger than existing conditions in built out areas as of August 2021, and equal to or larger than existing entitlements (approved before August 2021) in undeveloped or partially developed areas, buildout estimates for the following projects, assumed realistic densities as follows: Countryside Specific Plan (Low Density Residential: 6.18 du/ac), Creekside Specific Plan (Low Density Residential: 7.47 du/ac, Medium Density Residential: 15.81 du/ac), Subarea 29 Specific Plan (Low Density Residential: 7.03).
8. In certain mixed use categories, different buildout assumptions were employed on different sites. Variations in assumptions are included in multiple rows within this table.

Last Amended: August 16, 2022

ORDINANCE NO. _____

AN ORDINANCE OF THE CITY COUNCIL OF THE CITY OF ONTARIO, CALIFORNIA, APPROVING FILE NO. PZC-23-003, A ZONE CHANGE REQUEST TO AMEND THE OFFICIAL ZONING MAP: [1] REZONING 3.8 ACRES OF LAND FROM HDR-45 (HIGH-DENSITY RESIDENTIAL) TO MU-1 (DOWNTOWN MIXED USE), [2] REZONING OF 9.8 ACRES OF LAND FROM BP (BUSINESS PARK) TO MU-6 (EAST HOLT MIXED USE), AND [3] REZONING 5.75 ACRES OF LAND FROM OL (LOW-INTENSITY OFFICE) TO MU-1 (DOWNTOWN MIXED USE), AND MAKING FINDINGS IN SUPPORT THEREOF - APNS: 0110-072-25, 0110-081-06, 0110-081-07, 1048-344-03, 1048-353-04, 1048-353-05, 1048-353-09, 1048-353-13, 1048-353-14, 1048-541-15, 1048-576-01, AND 1048-576-02.

WHEREAS, City of Ontario ("Applicant") has filed an Application for the approval of a Zone Change application, File No. PZC-23-003, as described in the title of this Ordinance (hereinafter referred to as "Application" or "Project"); and

WHEREAS, The Zoning Map amendment includes the following:

1. Rezone 3.8 acres of land from HDR-45 (High-Density Residential) to MU-1 (Downtown Mixed Use). Located on properties in the Downtown area to the north of D Street, south of E Street, and to the west of Laurel Street.
2. Rezone 9.8 acres of land from BP (Business Park) to MU-6 (East Holt Mixed Use). Located on the north side of Holt Boulevard 800 feet east of Imperial Street.
3. Rezone 5.75 acres of land from OL (Low-Intensity Office) to MU-1 (Downtown Mixed Use). Located on the southwest corner of Sultana Avenue and D Street.

WHEREAS, on October 5, 2023, the Planning Department held an in-person community meeting attended by 5 community members; and

WHEREAS, on October 24, 2023, the Planning Commission conducted a public hearing and approved Resolution No. PC23-084, recommending the City Council approve a Resolution adopting an Addendum to the Ontario Plan 2050 Supplemental Environmental Impact Report (State Clearinghouse No. 2021070364), certified by the City Council on August 16, 2022, in conjunction with File No. PGPA20-002. The Addendum finds that the proposed project introduces no new significant environmental impacts. Furthermore, all mitigation measures previously adopted with the Certified Environmental Impact Report are incorporated into the Project by reference; and

WHEREAS, the City's "Local Guidelines for the Implementation of the California Environmental Quality Act (CEQA)" provide for the use of a single environmental assessment in situations where the impacts of subsequent projects are adequately analyzed; and

WHEREAS, the Application is a project pursuant to the California Environmental Quality Act (Public Resources Code Section 21000 et seq.) ("CEQA") and an initial study has been prepared to determine possible environmental impacts; and

WHEREAS, Ontario Development Code Table 2.02-1 (Review Matrix) grants the City Council the responsibility and authority to review and act on the subject Application; and

WHEREAS, the Project is located within the Airport Influence Area of Ontario International Airport ("ONT"), which encompasses lands within parts of San Bernardino, Riverside, and Los Angeles Counties, and is subject to, and must be consistent with, the policies and criteria set forth in the Ontario International Airport Land Use Compatibility Plan (ALUCP), which applies only to jurisdictions within San Bernardino County, and addresses the noise, safety, airspace protection, and overflight impacts of current and future airport activity; and

WHEREAS, City of Ontario Development Code Division 2.03 (Public Hearings) prescribes the manner in which public notification shall be provided and hearing procedures to be followed, and all such notifications and procedures have been completed; and

WHEREAS, on October 24, 2023, the Planning Commission of the City of Ontario conducted a hearing to consider the Addendum and the Project, and concluded said hearing on that date, voting to issue Resolution Nos. PC23-084 and PC23-086, recommending the City Council approve the Application; and

WHEREAS, as the first action on the Project, on November 21, 2023, the City Council approved a resolution adopting an Addendum to a previous Certified EIR prepared pursuant to CEQA, the State CEQA Guidelines and the City of Ontario Local CEQA Guidelines, which indicated that all potential environmental impacts from the Project were less than significant or could be mitigated to a level of significance; and

WHEREAS, on November 21, 2023, the City Council of the City of Ontario conducted a hearing to consider the Project, and concluded said hearing on that date; and

WHEREAS, all legal prerequisites to the adoption of this Ordinance have occurred.

NOW, THEREFORE, IT IS HEREBY FOUND, DETERMINED, AND ORDAINED by the City Council of the City of Ontario, as follows:

SECTION 1. ***Environmental Determination and Findings.*** As the decision-making body for the Project, the City Council has reviewed and considered the information contained in the previous Certified EIR and supporting documentation. Based upon the facts and information contained in the previous Certified EIR and supporting documentation, the City Council finds as follows:

(1) The environmental impacts of this project were reviewed in conjunction with an Addendum to The Ontario Plan 2050 Supplemental Environmental Impact Report, certified by the City of Ontario City Council on August 16, 2022, in conjunction with File No. PGPA20-002.

(2) The Addendum and administrative record have been completed in compliance with CEQA, the State CEQA Guidelines, and the City of Ontario Local CEQA Guidelines; and

(3) The City's "Guidelines for the Implementation of the California Environmental Quality Act (CEQA)" provide for the use of a single environmental assessment in situations where the impacts of subsequent projects are adequately analyzed. This Application introduces no new significant environmental impacts; and

(4) The Addendum contains a complete and accurate reporting of the environmental impacts associated with the Project, and reflects the independent judgment of the recommended bodies; and

(5) There is no substantial evidence in the administrative record supporting a fair argument that the project may result in significant environmental impacts; and

(6) The proposed project will introduce no new significant environmental impacts beyond those previously analyzed in the Certified EIR, and all mitigation measures previously adopted by the Certified EIR, are incorporated herein by this reference.

SECTION 2. ***Additional Environmental Review Not Required.*** Based on the Addendum, all related information presented to the City Council, and the specific findings set forth in Section 1, above, the City Council finds that the preparation of a subsequent or supplemental Certified EIR is not required for the Project, as the Project:

(1) Does not constitute substantial changes to the Certified EIR that will require major revisions to the Certified EIR due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects; and

(2) Does not constitute substantial changes with respect to the circumstances under which the Certified EIR was prepared, that will require major revisions to the Certified EIR due to the involvement of new significant environmental effects or a substantial increase in the severity of the previously identified significant effects; and

(3) Does not contain new information of substantial importance that was not known and could not have been known with the exercise of reasonable diligence at the time the Certified EIR was certified/adopted, that shows any of the following:

(a) The project will have one or more significant effects not discussed in the Certified EIR; or

(b) Significant effects previously examined will be substantially more severe than shown in the Certified EIR; or

(c) Mitigation measures or alternatives previously found not to be feasible would in fact be feasible and would substantially reduce one or more significant effects of the Project, but the City declined to adopt such measures; or

(d) Mitigation measures or alternatives considerably different from those analyzed in the Certified EIR would substantially reduce one or more significant effects on the environment, but which the City declined to adopt.

SECTION 3. ***Airport Land Use Compatibility Plan ("ALUCP") Compliance.*** The California State Aeronautics Act (Public Utilities Code Section 21670 et seq.) requires that an Airport Land Use Compatibility Plan be prepared for all public use airports in the State; and requires that local land use plans and individual development proposals must be consistent with the policies set forth in the adopted Airport Land Use Compatibility Plan.

(1) On April 19, 2011, the City Council of the City of Ontario approved and adopted the Ontario International Airport Land use Compatibility Plan, establishing the Airport Influence Area for Ontario International Airport, which encompasses lands within parts of San Bernardino, Riverside, and Los Angeles Counties, and limits future land uses and development within the Airport Influence Area, as they relate to noise, safety, airspace protection, and overflight impacts of current and future airport activity. As the decision-making body for the Project, the City Council has reviewed and considered the facts and information contained in the Application and supporting documentation against the ONT ALUCP compatibility factors, including [1] Safety Criteria (ONT ALUCP Table 2-2) and Safety Zones (ONT ALUCP Map 2-2), [2] Noise Criteria (ONT ALUCP Table 2-3) and Noise Impact Zones (ONT ALUCP Map 2-3), [3] Airspace protection Zones (ONT ALUCP Map 2-4), and [4] Overflight Notification Zones (ONT ALUCP Map 2-5). As a result, the CITY COUNCIL, therefore, finds and determines that the Project, when implemented in conjunction with the conditions of approval, will be consistent with the policies and criteria set forth within the ONT ALUCP; and

SECTION 4. ***Concluding Facts and Reasons.*** Based upon the substantial evidence presented to the City Council during the above-referenced hearing, and upon the specific findings set forth in Section 1 through 3, above, the City Council hereby concludes as follows:

(1) ***The proposed Zone Change is consistent with the goals, policies, plans and exhibits of the Vision, Policy Plan (General Plan), and City Council Priorities components of The Ontario Plan.***

Land Use Element:

- Goal LU1: A community that has a spectrum of housing types and price ranges that match the jobs in the City and that make it possible for people to live and work in Ontario and maintain a quality of life.

➢ LU-1.6: *Complete Community*. We incorporate a variety of land uses and building types in our land use planning efforts that result in a complete community where residents at all stages of life, employers, workers, and visitors have a wide spectrum of choices of where they can live, work, shop and recreate within Ontario.

Compliance: The proposed Zone Change will reflect the existing uses of the properties or closely coordinates with land use designations in the surrounding area and provides opportunities for choice in living environments.

- Goal LU2: Compatibility between a wide range of uses.

➢ LU-2.1: *Land Use Decisions*. We minimize adverse impacts on adjacent properties when considering land use and zoning requests.

Compliance: The proposed Zone Change reflects the existing uses of the properties or closely coordinates with land use designations in the surrounding area and will not create adverse impacts on adjacent properties.

- Goal LU5: Integrated airport systems and facilities that minimize negative impacts to the community and maximize economic benefits.

➢ LU-5.7: *ALUCP Consistency with Land Use Regulations*. We comply with state law that requires general plans, specific plans and all new development be consistent with the policies and criteria set forth within an Airport Land Use Compatibility Plan for any public use airport.

Compliance: The proposed Zone Change is consistent with the Ontario Airport ALUCP.

Safety Element — Noise Hazards:

- Goal S4: An environment where noise does not adversely affect the public's health, safety, and welfare.

➢ S-4.6: *Airport Noise Compatibility*. We utilize information from Airport Land Use Compatibility Plans to prevent the construction of new noise sensitive land uses within airport noise impact zones.

Compliance: The City is proposing zone changes across the City, as illustrated in Exhibit A, to align with the TOP Vision. Furthermore, these zoning adjustments are an integral component of the City's continuous endeavors to influence and improve future development and land use patterns as outlined in The Ontario Plan.

(2) ***The proposed Zone Change would not be detrimental to the public interest, health, safety, convenience, or general welfare of the City.*** The proposed zone changes are compatible with the existing zoning and land uses in the surrounding area. In addition, Land Use Policies LU-2.3, LU-2.4, LU-2.5, and LU-2.6 would reduce the amount of conflict between contradicting land uses.

(3) ***The proposed Zone Change will not adversely affect the harmonious relationship with adjacent properties and land uses.*** The implementation of the Project would not lead to physical improvements that could potentially divide an established community. Moreover, the Land Use Policies LU-2.3, LU-2.4, LU-2.5, and LU-2.6 would serve to minimize conflicts between conflicting land uses. As a result, no adverse impacts are anticipated.

(4) ***The subject site is physically suitable, including, but not limited to, parcel size, shape, access, and availability of utilities, for the request and anticipated development.*** The proposed zone changes are aimed at facilitating the systematic development of the Project sites. This will be achieved by rezoning parcels that constitute the Project sites, rendering it physically conducive for any anticipated future development and associated permitted land uses.

SECTION 5. ***City Council Action.*** Based upon the findings and conclusions set forth in Sections 1 through 4, above, the City Council hereby APPROVES the herein described Application.

SECTION 6. ***Custodian of Records.*** The documents and materials that constitute the record of proceedings on which these findings have been based are located at the City of Ontario City Hall, 303 East "B" Street, Ontario, California 91764. The custodian for these records is the City Clerk of the City of Ontario.

SECTION 7. ***Severability.*** If any section, sentence, clause or phrase of this Ordinance or the application thereof to any entity, person or circumstance is held for any reason to be invalid or unconstitutional, such invalidity or unconstitutionality shall not affect other provisions or applications of this Ordinance which can be given effect without the invalid provision or application, and to this end the provisions of this Ordinance are severable. The People of the City of Ontario hereby declare that they would have adopted this Ordinance and each section, sentence, clause or phrase thereof, irrespective of the fact that any one or more section, subsections, sentences, clauses or phrases be declared invalid or unconstitutional.

SECTION 8. ***Effective Date.*** This Ordinance shall become effective 30 days following its adoption.

SECTION 9. ***Publication and Posting.*** The Mayor shall sign this Ordinance and the City Clerk shall certify as to the adoption and shall cause a summary thereof to be published at least once, in a newspaper of general circulation in the City of Ontario, California within 15 days following the adoption. The City Clerk shall post a certified copy of this ordinance, including the vote for and against the same, in the Office of the City Clerk, in accordance with Government Code Section 36933.

PASSED, APPROVED, AND ADOPTED this ____ day of _____ 2023.

Department: Planning Prepared By: Jeanie Irene T Aguilo Staff Member Presenting: Scott Murphy, Executive Director Community Development Reviewed By: Lorena Mejia, Kimberly Ruddins, Rudy Zeledon Approved By:	Submitted To: Council/OHA Approved: _____ Continued To: _____ Denied: _____ Item No: 23

SUBJECT: **A PUBLIC HEARING TO CONSIDER AN AMENDMENT TO THE SUBAREA 29 SPECIFIC PLAN (FILE NO. PSPA21-005)**

RECOMMENDATION: That the City Council consider and adopt:

A. A Resolution adopting the Subsequent Environmental Impact Report (SEIR) (State Clearinghouse No. 2004011009) for the Subarea 29 Specific Plan Amendment, including the adoption of a Mitigation Monitoring and Reporting Program and a Statement of Overriding Considerations; and
B. A Resolution approving File No. PSPA21-005, an Amendment to the Subarea 29 Specific Plan (File No. PSPA21-005), to include: [1] the annexation of 113.2 gross acres of land, located on the southwest corner of Haven Avenue and Eucalyptus Avenue and establish Planning Area 32 (Mixed Residential (5-25 du/ac), Planning Area 33 (Mixed Residential (5-25 du/ac), and Planning Area 34 (School); [2] change the land use designation for Planning Area 30 from Conventional Large Lot (3-6 du/ac) to Mixed Residential (5-25 du/ac) and Planning Area 31 from Conventional Medium Lot (4-6 du/ac) to Mixed Residential (5-25 du/ac); [3] establish development standards for 7 new residential product types; and [4] various changes to the Specific Plan land use map, land use table, development standards, exhibits, and text modification to reflect the proposed annexation and land use changes.

THE FOLLOWING COUNCIL GOALS ARE BEING ACHIEVED:
Invest in the Growth and Evolution of the City's Economy
Maintain the Current High Level of Public Safety
Operate in a Businesslike Manner
Pursue City's Goals and Objectives by Working with Other Governmental Agencies
Focus Resources in Ontario's Commercial and Residential Neighborhoods

FISCAL IMPACT: There is not a direct fiscal impact associated with the adoption of the Subarea 29 Specific Plan Amendment. Any potential long-term fiscal impacts and anticipated expenditures to

the City would be offset by development impact fees and property tax revenues from the future development. Additionally, future development projects approved on the subject properties will be conditioned to form/join a services Community Facilities District to offset increased costs associated with police, fire, and other public services.

BACKGROUND & ANALYSIS: On April 21, 2015, the City Council approved an Amendment to the Subarea 29 Specific Plan (File No. PSPA14-002) and an Addendum to the Subarea 29 Specific Plan Environmental Impact Report (State Clearinghouse No. 2004011009) to increase the residential unit count by 99 dwelling units, for a total unit count of 2,392 dwelling units within the Specific Plan area. The Amendment included updates to the development standards, exhibits, and text changes to reflect the proposed annexation and overall compliance with the Policy Plan component of The Ontario Plan ("Policy Plan").

On June 15, 2021, the City Council approved an Amendment to the Subarea 29 Specific Plan (File No. PSPA14-002) and an Addendum to the Subarea 29 Specific Plan Environmental Impact Report (State Clearinghouse No. 2004011009) to increase the overall density from 4.8 to 4.9 dwelling units per gross acre and establish a new residential product type (Motorcourt Cluster D – 8-Plex). The proposed change increased the number of units within Planning Area 27 (Cluster Homes – 7-14 du/ac) from 47 to 73 dwelling units, for a total unit count of 2,418 dwelling units.

On August 16, 2022, the City Council certified The Ontario Plan 2050 Update Supplemental Environmental Impact Report ("SEIR") in conjunction with The Ontario Plan 2050 ("TOP 2050") (File No. PGPA20-002) General Plan update. The TOP 2050 and SEIR included the following land use changes within the Subarea 29 Specific Plan boundary (see Figure 2: TOP Official Land Use Plan Comparison (TOP 2010/TOP 2050):

- Planning Area 30 – Changing 8.3 acres of land from Low Density Residential (2.1 – 5 du/ac) to Low Density Residential (2.1 – 5 du/ac), Low-Medium Density Residential (5.1 – 11 du/ac), and Medium Density Residential (11.1 to 25.0 du/ac);
- Planning Area 31 – Changing 10.7 acres of land from Low Density Residential (2.1 – 5 du/ac) to Low-Medium Density Residential (5.1 – 11 du/ac) and Medium Density Residential (11.1 to 25.0 du/ac);
- Proposed Planning Area 32 (Annexation Area) – Changing 15.4 acres of land from Low Density Residential (2.1 – 5 du/ac) and Public School to Low-Medium Density Residential (5.1 – 11 du/ac) and Medium Density Residential (11.1 to 25.0 du/ac);
- Proposed Planning Area 33 (Annexation Area) – Changing 49.6 acres of land from Low-Medium Density Residential (5.1 – 11 du/ac) to Medium Density Residential (11.1 to 25.0 du/ac);
- Proposed Planning Area 34 (Annexation Area) – Changing 20 acres of land from Low Density Residential (2.1 – 5 du/ac) to Public School.

On August 23, 2021, SL Ontario Development Company, LLC, submitted an Amendment to the Subarea 29 Specific Plan for the annexation of 113.2 gross acres of land to bring the Specific Plan into compliance with TOP Policy Plan (General Plan) land uses. The Amendment to Subarea 29 would establish Planning Area 32 (Mixed Use Residential (5-25 DU/AC), Planning Area 33 (Mixed Use residential (5-25 DU/AC), and Planning Area 34 (School). In addition, the Amendment would covert

Subarea 29 Planning Area 30 from Conventional Large Lot (3-6 DU/AC) to Mixed Use Residential (5-25 DU/AC) and Planning Area 31 from Conventional Medium Lot (4-6 DU/AC) to Mixed Use Residential (5-25 DU/AC), and establish development standards for 7 new product types within the residential land use designation.

AMENDMENT: The proposed Subarea 29 Specific Plan Amendment (SPA) includes the following:

1) **Annexation**. The Amendment includes the annexation of 113.2 gross acres of land located on the southwest corner of Haven Avenue and Eucalyptus Avenue and establishment of Planning Area 32 (Mixed Residential (5-25 du/ac), Planning Area 33 (Mixed Residential (5-25 du/ac), and Planning Area 34 (School). Planning Areas 32 and 33 will encompass 93.2 acres while Planning Area 34 will encompass 20 acres.

- Planning Area 32 – Mixed Residential (5-25 du/ac), totaling 43.6 gross acres of land (42.5 net acres), is located on the southeast corner of Haven Avenue and Eucalyptus Avenue and will allow 671 dwelling units at a density of 15.8 dwelling units per acre.
- Planning Area 33 – Mixed Residential (5-25 du/ac) totals 49.6 gross acres of land (47.6 net acres) is located at the southwest corner of Mill Creek Avenue and Eucalyptus Avenue and will allow 644 dwelling units at a density of 13.5 dwelling units per acre.
- Planning Area 34 is located at the northeast corner of Haven and Merrill Avenue and will include 20 gross acres of land (19 net acres) for the development of a future middle school. This school would serve the 6th through 8th grade school needs in the Mountain View School District.

2) **TOP Policy Plan Land Use Map Consistency**. To achieve consistency with the TOP 2050 Official Land Use Plan (Figure LU-01) and bring the Specific Plan into compliance, the SPA proposes to change the land use designation for Planning Area 30 from Conventional Large Lot (3-6 du/ac) to Mixed Residential (5-25 du/ac) and Planning Area 31 from Conventional Medium Lot (4-6 du/ac) to Mixed Residential (5-25 du/ac).

- Planning Area 30 – Planning Area 30 will total 21.8 gross acres of land (21.1 net acres), and is bounded by Eucalyptus Avenue to the north, Planning Area 22 to the west, the SCE Easement to the east, and Parkview Street to the south. The SPA is proposed to change this area from Conventional Medium Lot (4-6 du/ac) to Mixed Residential (5-25 du/ac) and will allow 180 dwelling units at a density of 8.5 dwelling units per acre; and
- Planning Area 31 – Planning Area 31 will total 16.1 gross acres of land (15.5 net acres), and is bounded by Eucalyptus Avenue to the north, the SCE Easement to the west, Haven Avenue to the east, and Parkview Street to the south. The SPA proposes to change this area from Conventional Large Lot (3-6 du/ac) to Mixed Residential (5-25 du/ac) and will allow 172 dwelling units at a density of 11.1 dwelling units per acre.

Overall, there will be a net increase of 1,470 dwelling units allowed within the Specific Plan Area going from 2,418 units to 3,888 total units.

3) **Residential Product Types**. The Subarea 29 Specific Plan provides a variety of residential housing types oriented towards park and open space amenities designed to promote walkability

and interaction among residents. The establishment of the proposed Mixed Residential land use designation requires the need for additional product types that promote higher density, more choice in floorplans, and more attainable options for a greater range of residents. To provide more diverse housing types and to meet the current market conditions for the next phases of development, the SPA proposes to introduce seven additional product types that include a combination of single-family detached homes and multi-family triplex and townhomes.

4) **Document Changes**. The SPA includes various changes to the land use map, land use table, development standards, exhibits, and text modification to reflect the proposed annexation and land use changes. All changes and additions to the Specific Plan (exhibits, tables, and development standards, and design guidelines) are contained within the revised Specific Plan document and all deletions and strikethroughs are highlighted in red.

ENVIRONMENTAL REVIEW: A Subsequent Environmental Impact Report (SEIR) (State Clearinghouse No. 2004011009) was prepared for this Project in accordance with CEQA requirements. Through the Notice of Preparation and scoping meeting discussion, the following areas of potential impact were identified and addressed:

- Aesthetics;
- Agriculture and Forestry Resources;
- Air Quality;
- Biological Resources;
- Cultural Resources;
- Energy;
- Geology and Soils;
- Greenhouse Gas Emissions;
- Hazards and Hazardous Materials;
- Hydrology and Water Quality;
- Land Use and Planning;
- Mineral Resources;
- Noise;
- Population and Housing;
- Public Services;
- Recreation;
- Transportation;
- Tribal Cultural Resources;
- Utilities and Service Systems; and
- Wildfire.

The Subarea 29 Specific Plan (2023 Amendment) SEIR evaluates each of these areas and identifies mitigation measures and/or revisions to the plan to lessen the level of impact. With the implementation of the various mitigation measures, many of the potential adverse impacts can be reduced to a level of less than significant. Of the 20 areas considered by the EIR, all but three of the impact areas were mitigated to a level of less than significant. The threeremaining impact areas, even with the mitigation measures, could not be reduced to less than significant, resulting in some impacts remaining potentially significant and unavoidable. These areas include:

1) **Agriculture**.

Loss of Prime Farmland. The southwest portion of existing Planning Area 30 includes land mapped as Prime Farmland. The loss of approximately 4.7 acres Prime Farmland is considered a significant impact, consistent with the loss of Prime Farmland associated with the development of the adopted Subarea 29 Specific Plan, which includes Planning Area 30. In the 2006 EIR, the impact was determined to be significant and unavoidable. Consistent with the 2006 EIR, mitigation to reduce impacts to less than significant levels remain infeasible. Although the proposed conversion of agricultural land in the City is consistent with the projected decline in agricultural productivity of the region and is anticipated in TOP 2050, development of Planning Area 30 and the associated off-site improvement area would result in the loss of Prime Farmland consistent with the determination identified in the 2006 EIR and TOP 2010 EIR.

2) **Air Quality**.

Air Quality Management Plan (AQMP) Conflict. The Project's operational-source emissions would exceed the regional thresholds of significance for volatile organic compounds (VOC), nitrogen oxides (NOX), and carbon monoxide (CO) emissions. VOC and NOX are precursors for ozone (O3); thus, Project operational activities would contribute a substantial volume of pollutants to the South Coast Air Basin (SoCAB) that could delay the attainment of Federal and State ozone standards. Consequently, the Project is conservatively assumed to generate operational-source emissions not reflected within the current 2022 AQMP regional emissions inventory for the SoCAB. As such, the Project is considered to have the potential to conflict with the 2022 AQMP. Project impacts due to a conflict with the 2022 AQMP would be significant and unavoidable.

Cumulatively Considerable Increase in Criteria Pollutant During Operation. The proposed Project would not be consistent with the applicable air quality plan. After the application of mandatory regulatory requirements and feasible mitigation measures, maximum daily emissions from Project operations would exceed the SCAQMD CEQA significance thresholds for NOx, VOC, and CO, and cannot be effectively reduced to a level below the SCAQMD thresholds of significance. Because NOX and VOC are O3 precursors, this could also result in additional violations of the State and Federal O3 standards. O3 is a nonattainment pollutant. There are no additional feasible mitigation measures beyond those identified in SEIR Section 5.3, Air Quality that would reduce the Project's NOX, VOC, and CO emissions to a less than significant level. Therefore, the Project's operational air quality impacts are significant and unavoidable and the Project would result in a cumulatively considerable net increase in a criteria pollutant for which the Project region is in non-attainment, which is a significant and unavoidable impact.

3) **Noise**.

Off-site Traffic Noise Impacts (Project and Cumulative Impact). The Project would result in increased traffic noise levels along Eucalyptus Avenue, west of Hamner Avenue, which would exceed the City's established threshold of significance (allowable increase of 5 dBA) under the Existing Plus Project and Opening Year 2025 traffic scenarios. The use of rubberized open graded asphalt hot mix can provide the noise attenuation needed to reduce this impact to a less than significant level, however, the City of Ontario pavement standards require the use of rubberized gap graded asphalt, which

would not result a sufficient noise reduction. Since the City does not allow for the use of rubberized open graded asphalt, the mitigation is not considered feasible and this impact is considered significant and unavoidable under the Existing Plus Project and Opening Year 2025 traffic scenarios; the Opening Year 2025 traffic scenario considers cumulative traffic.

The City of Ontario circulated the Draft SEIR on July 17, 2023, through August 31, 2023, for public review. At the end of the public review period, two (2) comments were received. Areas of concern include air quality and general site-specific conditions for future development within the San Bernardino County Flood Control District (SBCFCD) Road Right-of-Way. Refer to the Final Environmental Impact Report, Response to Comments.

While these impacts will be significant and unavoidable, the Staff believes that the benefits of the Project outweigh the potential unavoidable, adverse impacts of the plan as further described below:

- The Project will provide adequate school sites to serve Subarea 29 and adjoining Subareas;
- The Project will maximize housing opportunities to assist in meeting City of Ontario regional housing allocation requirements.
- The Project will create a high-quality residential development that responds well to market demand and meets a range of housing types and affordability;
- The Project will include infrastructure improvements that will provide utilities, safe and efficient access/circulation routes for residents; and
- The Project establishes clearly defined “edges” and “entries” that contribute to a district neighborhood identity.

Staff recommends that the City Council adopt a Statement of Overriding Considerations for those impacts that could not be fully mitigated to a level of less than significant. Furthermore, to ensure that the mitigation measures are implemented, a Mitigation Monitoring and Reporting Program has been prepared for the Project pursuant to CEQA Guidelines Section 15097 which specifies responsible agencies/departments, monitoring frequency, timing and method of verification and possible sanctions for non-compliance with mitigation measures.

PLANNING COMMISSION REVIEW: On October 24, 2023, the Planning Commission conducted a duly noticed public hearing on the subject applications and voted unanimously (7-0) to recommend that the City Council adopt the Final Subsequent Environmental Impact Report (SEIR) (State Clearinghouse No. 2004011009) for the Subarea 29 Specific Plan Amendment, a Mitigation Monitoring and Reporting Program, and a Statement of Overriding Considerations and approve the Specific Plan Amendment.

RESOLUTION NO._____

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF ONTARIO, ADOPTING ENVIRONMENTAL FINDINGS PURSUANT TO THE CALIFORNIA ENVIRONMENTAL QUALITY ACT AND CERTIFYING THE SUBAREA 29 SPECIFIC PLAN AMENDMENT (FILE NO. PSPA21-005) FINAL SUBSEQUENT ENVIRONMENTAL IMPACT REPORT (STATE CLEARINGHOUSE NO. 2004011009), AND ADOPTING FINDINGS OF OVERRIDING CONSIDERATIONS AND A MITIGATION MONITORING AND REPORTING PROGRAM, AND APPROVING THE PROJECT. THE SUBAREA 29 SPECIFIC PLAN IS BOUNDED BY EUCALYPTUS AVENUE TO THE NORTH, THE CUCAMONGA CREEK CHANNEL TO THE WEST, THE COUNTY LINE CHANNEL AND BELLEGRAVE AVENUE TO THE SOUTH, AND MILL CREEK AVENUE TO THE EAST, AND MAKING FINDINGS IN SUPPORT THEREOF—APNS: 0218-331-12, 0218-331-14, 0218-331-18, 0218-331-30, 0218-331-31, AND 0218-331-52.

WHEREAS, SL ONTARIO DEVELOPMENT COMPANY, LLC (hereinafter referred to as "Applicant") has filed an Application for the approval of a Specific Plan Amendment, File No. PSPA21-005, for which a Subsequent Environmental Impact Report (“SEIR”) has been prepared, as described in the title of this Resolution (hereinafter referred to as "Application" or "Project"), to include the annexation of 113.2 gross acres of land, located on the southwest corner of Haven Avenue and Eucalyptus Avenue and establish Planning Area 32 (Mixed Residential (11.1-25 du/ac), Planning Area 33 (Mixed Residential (11.1-25 du/ac), and Planning Area 34 (School); change the land use designation for Planning Area 30 from Conventional Large Lot (3-6 du/ac) to Mixed Residential (11.1-25 du/ac) and Planning Area 31 from Conventional Medium Lot (4-6 du/ac) to Mixed Residential (11.1-25 du/ac) to bring the Specific Plan into compliance with The Ontario Plan Policy Plan (General Plan) land use plan; establish development standards for seven new product types within the residential land use designations; and various changes to the Specific Plan land use map, land use table, development standards, exhibits, and text modification to reflect the proposed annexation and land use changes; and

WHEREAS, the Application applies to the existing Subarea 29 Specific Plan boundary that is comprised of 539.7 gross acres of land generally bounded by Eucalyptus Avenue to the north, County Line Channel and Bellegrave Avenue to the south, Haven Avenue to the east, and the Cucamonga Creek Channel to the west. The Project site gently slopes from north to south, the majority of the specific plan is developed with residential homes, Celebration Park, Park View Elementary School, and various pocket parks west of the SCE Easement. The areas east of the SCE Easement are vacant and were previously used for dairy and agricultural uses. The existing 255-foot-wide SCE Easement (8.5 acres) runs diagonally north/south along the eastern portion of the specific plan from Haven Avenue to Bellegrave Avenue and is developed with 180-foot-tall transmission towers (115kV) and community trails; and

WHEREAS, the Application also applies to the proposed annexation area and is comprised of 113.2 gross acres of land bounded by Eucalyptus Avenue to the north, Haven Avenue to the west, Mill Creek Boulevard to the east, and Bellegrave Avenue to

the south. The natural vegetation and soil conditions that once occurred throughout the annexation area have been significantly altered through agricultural activities and the site is currently vacant; and

WHEREAS, the portion of the properties to the north are located within Parkside Specific Plan and developed with new residential subdivisions. The remaining properties to the north are within the Grand Park Specific Plan are vacant, dairy and agriculture uses. The properties to the south are residential, commercial, and industrial uses within the City of Eastvale. The properties to the east, opposite of Mill Creek Road, are within the Esperanza Specific Plan and are currently being developed with residential uses. The properties to the west are located within the Cucamonga Creek Channel and Colony Commerce Center – East Specific Plan and are developed with industrial uses; and

WHEREAS, the Project SEIR, Statement of Overriding Considerations, and Mitigation Monitoring and Reporting Program for File No. PSPA21-005, the Subarea 29 Specific Plan Amendment, have been prepared in accordance with the California Environmental Quality Act ("CEQA"), the State CEQA Guidelines, and the City of Ontario Guidelines for implementation of CEQA; and

WHEREAS, the City prepared the Subarea 29 (Hettinga) Specific Plan Final Environmental Impact Report (State Clearinghouse No. 2004011009) in association with the Subarea 29 Specific Plan (State Clearinghouse No. 2008101140) and certified the 2006 EIR in October 2006 (2006 EIR); and

WHEREAS, the City prepared The Ontario Plan Final Environmental Impact Report ("TOP EIR") (State Clearinghouse No. 2008101140) in association with the 2009 General Plan Update ("GPA") and certified the TOP EIR on January 26, 2010; and

WHERAS, the City certified the Program Supplemental Environmental Impact Report ("Supplemental EIR," State Clearinghouse No. 2021070364) for The Ontario Plan 2050 Technical Update, in association of the General Plan Update, File No. PGPA20-002, and certified the Supplemental EIR on August 16, 2022; and

WHEREAS, the 2006 EIR, TOP 2010 EIR, and TOP 2050 Supplemental EIR are Program EIRs from which later specific plan EIRs, such as the SEIR for this Project, are tiered; and

WHEREAS, the City of Ontario is the lead agency on the Project, and the City Council is the approving authority for the proposed approval to construct and otherwise undertake the Project; and

WHEREAS, in accordance with State CEQA Guidelines section 15063, the City evaluated the Project to determine whether an Environmental Impact Report ("EIR") was required; and

WHEREAS, the City determined that a Subsequent Environmental Impact Report (SEIR) to the 2006 EIR should be prepared because the Project may have a significant effect on the environment in the following areas: Aesthetics; Agriculture/Forestry

Resources; Air Quality; Biological Resources; Cultural Resources; Energy; Geology and Soils; Greenhouse Gas Emissions; Hazards/Hazardous Materials; Hydrology/Water Quality; Land Use and Planning; Mineral Resources; Noise; Population/Housing; Public Services; Recreation; Transportation; Tribal Cultural Resources; Utilities and Service Systems; Wildlife; and

WHEREAS, in accordance with State CEQA Guidelines section 15082, the City issued a Notice of Preparation ("NOP") for the Subarea 29 Specific Plan Amendment Draft SEIR for which the public review period extended from December 1, 2021, through December 31, 2021; and

WHEREAS, the City received three comment letters from multiple agencies on the NOP; and

WHEREAS, pursuant to Public Resources Code (PRC) §21083.9 and State CEQA Guidelines §15082(c) and 15083, a public scoping meeting was held on December 9, 2021, and no public agencies or individuals attended the scoping meeting; and

WHEREAS, a Draft SEIR was prepared, incorporating comments received in response to the NOP; and

WHEREAS, the Draft SEIR determined that incorporation of 2006 EIR mitigation measures and Project-level mitigation measures were required to mitigate impacts to a less than significant level for aesthetics, biological resources, cultural resources, energy, geology and soils, greenhouse gas emissions, hazards and hazardous materials, hydrology and water quality, public services and recreation, transportation, tribal cultural resources, and utilities and service systems; and

WHEREAS, the Draft SEIR further concluded that despite the incorporation of all feasible mitigation measures, the proposed Project would nonetheless result in significant and unavoidable impacts relating to agricultural resources, air quality, noise; and

WHEREAS, in accordance with State CEQA Guidelines section 15085, a Notice of Completion was prepared and filed with the Office of Planning and Research on July 17, 2023; and

WHEREAS, after completing the Draft SEIR (State Clearinghouse No. 2004011009), the City released the document for public review for a 45-day public comment period, beginning July 17, 2023 and concluding August 31, 2023. A Notice of Availability ("NOA") was circulated along with the Draft SEIR and was published in the Inland Valley Daily Bulletin and posted in the Office of the Clerk of the Board of Supervisors of San Bernardino County. At that time, the City also provided a Notice of Availability to federal, state, regional, local, and other agencies, and organizations and individuals who had previously requested such notice; and

WHEREAS, the Draft SEIR was distributed to the Planning Commission, and City departments; and

WHEREAS, during the 45-day comment period on the Draft SEIR, the City consulted with and requested comments from all responsible and trustee agencies, other regulatory agencies, and others pursuant to State CEQA Guidelines §15086; and

WHEREAS, the City received two written comment letters on the Draft SEIR, both of which the City responded to in the Final SEIR; and

WHEREAS, pursuant to PRC §21092.5, the City provided copies of its responses to commenting public agencies at least ten days prior to the City's consideration of the Final SEIR on October 18, 2023; and

WHEREAS, on October 24, 2023, the Planning Commission of the City of Ontario conducted a duly noticed public hearing on the Final SEIR at which time all persons wishing to testify were heard and the Final SEIR was fully studied and concluded said hearing on that date. After considering all public testimony, the Planning Commission issued Resolution No. PC23-082, recommending City Council certification of the Project Final SEIR; and

WHEREAS, no written public comments were received prior to the Planning Commission hearing; and

WHEREAS, November 9, 2023, the City released the Final SEIR, which consists of the Draft SEIR, all technical appendices prepared in support of the Draft SEIR, all written comment letters received on the Draft SEIR, and written responses to all written comment letters received on the Draft SEIR; and

WHEREAS, the "SEIR" consists of the Final SEIR and its attachments and appendices, as well as the Draft SEIR and its attachments and appendices (as modified by the Final SEIR); and

WHEREAS, the City provided a Notice of Public Hearing and/or Intent to Certify a Subsequent Environmental Impact Report to all organizations and individuals who had previously requested such notice, and published the Notice of Public Hearing, in the Inland Valley Daily Bulletin, a newspaper of general circulation in the Project area; and

WHEREAS, all potential significant adverse environmental impacts were sufficiently analyzed in the Final SEIR; and

WHEREAS, as contained herein, the City has endeavored in good faith to set forth the basis for its decision on the Project; and

WHEREAS, all the requirements of CEQA, the State CEQA Guidelines, and the City's Local Guidelines have been satisfied by the City in the SEIR, which is sufficiently detailed so that all of the potentially significant environmental effects of the Project have been adequately evaluated; and

WHEREAS, the SEIR prepared in connection with the Project sufficiently analyzes both the feasible mitigation measures necessary to avoid or substantially lessen the

Project's potential environmental impacts and a range of feasible alternatives capable of eliminating or reducing these effects in accordance with CEQA, the State CEQA Guidelines and the City's Local Guidelines; and

WHEREAS, all of the findings and conclusions made by the City Council pursuant to this Resolution are based upon all oral and written evidence presented to it as a whole and are not based solely on the information provided in this Resolution; and

WHEREAS, environmental impacts identified in the SEIR which the City finds are less than significant and do not require mitigation are described in Section IV, B hereof; and

WHEREAS, environmental impacts identified in the SEIR as potentially significant but which the City finds can be mitigated to a level of less than significant, through the imposition of feasible mitigation measures identified in the SEIR and set forth herein and in the Mitigation Monitoring and Reporting Program, attached hereto as Exhibit A, are described in Section IV, C hereof; and

WHEREAS, environmental impacts identified in the SEIR as potentially significant and which the City finds cannot be fully mitigated to a level of less than significant, despite the imposition of all feasible mitigation measures identified in the Final SEIR and set forth herein, are described in Section IV, D hereof; and

WHEREAS, the cumulative impacts of the Project identified in the SEIR and set forth herein, are described in Section IV, E hereof; and

WHEREAS, alternatives to the Project that might eliminate or reduce significant environmental impacts are described in Section IV, F hereof; and

WHEREAS, the existence of any growth-inducing impacts and significant and irreversible environmental changes resulting from the proposed Project identified in the SEIR and set forth herein, are described in Section IV, G hereof; and

WHEREAS, in compliance with CEQA Guidelines §15093, because some environmental impacts identified in the SEIR as potentially significant cannot be fully mitigated to a level of less than significant, despite the imposition of all feasible mitigation measures identified in the SEIR and set forth herein, the City Council has balanced the economic, legal, social, technological, and other benefits of the Project against its significant and unavoidable impacts, and has determined that the benefits of the Project outweigh the unavoidable adverse impacts, and therefore, render those impacts "acceptable." The City Council has documented its determination regarding significant and unavoidable impacts in the Statement of Overriding Considerations in Section V hereof; and

WHEREAS, prior to taking action, the City Council has heard, been presented with, reviewed and considered all of the information and data in the administrative record, including the SEIR, and all oral and written evidence presented to it during all meetings and hearings on the Project; and

WHEREAS, the SEIR reflects the independent judgment of the City Council and is deemed adequate for purposes of making recommendations on the merits of the Project; and

WHEREAS, no comments made in the public hearings conducted by the City, or any additional information submitted to the City, have produced substantial new information requiring recirculation or additional environmental review under State CEQA Guidelines section 15088.5; and

WHEREAS, on November 21, 2023, the City Council of the City of Ontario conducted a hearing on the Project and concluded said hearing on that date; and

WHEREAS, all other legal prerequisites to the adoption of this Resolution have occurred.

NOW, THEREFORE, IT IS HEREBY FOUND, DETERMINED, AND RESOLVED by the City Council of the City of Ontario, as follows:

SECTION I. RECITALS

The recitals above are true and correct and are incorporated into this Resolution by reference as findings of fact.

SECTION II. SUMMARY OF FINDINGS

The City Council hereby finds that it has been presented with the SEIR, which it has reviewed and considered, and further finds that the SEIR is an accurate and objective statement that has been completed in full compliance with CEQA and the State CEQA Guidelines. The City Council finds that the SEIR reflects the independent judgment and analysis of the City. The City Council declares that no evidence of new significant impacts or any new information of "substantial importance" as defined by State CEQA Guidelines §15088.5, has been received by the City after circulation of the Draft SEIR that would require recirculation. Therefore, the City Council hereby certifies the SEIR based on the entirety of the record of proceedings.

SECTION III. PROCEDURAL COMPLIANCE WITH CALIFORNIA ENVIRONMENTAL QUALITY ACT

A. RECORD OF PROCEEDINGS

For purposes of CEQA and these Findings, the Record of Proceedings for the proposed Project consists of the following documents and other evidence, at a minimum:

- The NOP, NOA, and all other public notices issued by the City in conjunction with the proposed Project.
- The Draft SEIR and Final SEIR for the proposed Project.
- All written comments submitted by agencies or members of the public during the public review comment period on the Draft SEIR.

- All responses to written comments submitted by agencies or members of the public during the public review comment period on the Draft SEIR.
- All written and verbal public testimony presented during noticed public hearings for the proposed Project.
- The Mitigation Monitoring and Reporting Program.
- The reports and technical memoranda included or referenced in the Final SEIR.
- All documents, studies, EIRs, or other materials incorporated by reference in the Draft SEIR and Final SEIR.
- The Resolutions adopted by the City in connection with the proposed Project, and all documents incorporated by reference therein, including comments received after the close of the comment period and responses thereto.
- Matters of common knowledge to the City, including but not limited to federal, state, and local laws and regulations.
- Any documents expressly cited in these Findings.
- Any other relevant materials required to be in the record of proceedings by PRC §21167.6(e).

B. CUSTODIAN AND LOCATION OF RECORDS

The documents and materials that constitute the record of proceedings on which these findings have been based are located at the City of Ontario City Hall, 303 East "B" Street, Ontario, California 91764. The custodian for these records is the City Clerk of the City of Ontario. Copies of these documents, which constitute the record of proceedings, are and at all relevant times have been and will be available upon request at the offices of the Planning Department. This information is provided in compliance with PRC §21081.6(a)(2) and CEQA Guidelines §15091(e).

C. PROJECT PURPOSE AND OBJECTIVES

The adopted Subarea 29 Specific Plan allows for the development of 2,418 dwelling units, commercial uses (12.1 net acres/87,000 square feet [sf]), neighborhood parks (13.9 net acres), a recreation center (3.1 gross acres), and two schools (elementary and middle schools) within 31 existing PAs. With the exception of the planned uses in PA 2 (commercial), and PAs 30 and 31 (197 residential units), the previously approved Subarea 29 Specific Plan uses are constructed/occupied or under construction. Approved units in PA 1, PA 27, PA 28, and PA 29 (734 units) are under construction. The Park View Elementary School opened in August 2022. A change to the allowed number and type of residential units in PAs 30 and 31 is part of the currently proposed Specific Plan Amendment.

The City of Ontario adopted *The Ontario Plan 2050* (TOP 2050) in August 2022. TOP 2050 is intended to guide the City's development and conservation for the next 30 years

through 2050. Relevant to the Final SEIR for the proposed Project, proposed TOP 2050 anticipated the proposed Subarea 29 Specific Plan Amendment, including the increase to 3,888 units in the Specific Plan Area, as amended (an overall increase of 1,470 units). The proposed Subarea 29 Specific Plan Amendment is consistent with the recently approved TOP 2050 land use designations.

The proposed Specific Plan Amendment applies a new “Mixed Residential” land use designation to existing PAs 30 and 31 and new PAs 32 and 33 and adds approximately 93.2 residential acres to the Subarea 29 Specific Plan. This “Mixed Residential” land use designation and proposed revisions to the Residential Design Guidelines permit a variety of housing types that promote higher density and more choice in floorplans. “Mixed Residential” has been created to provide more attainable options for a greater range of residents as well as options for different household compositions. The proposed Specific Plan Amendment includes a new 20 net-acre middle school in proposed PA 34, located at the southeast corner of Haven and Eucalyptus Avenue. The objectives that have been established for the Project are consistent with those presented in the 2006 EIR, that are applicable to the Project, including:

1. Develop a project consistent with the vision for Ontario Ranch.
2. Develop a specific plan that incorporates General Plan land use principles; standards and distribution of land uses relative to residential, open space, recreation, and public uses.
3. Provide adequate school sites to serve Subarea 29 and adjoining Subareas.
4. Maximize housing opportunities to assist in meeting City of Ontario regional housing allocation requirements.
5. Provide neighborhoods which are identifiable from each other, with public and private amenities, linked by a network of pedestrian trails.
6. Create a community with a sense of place, walkability, and livability. Include pedestrian and bicycle trails to link neighborhoods and districts; short blocks to promote ease of access and neighborhood activity; use variable setbacks and reduced garage emphasis; and curb-separated landscaped parkways.
7. Create small neighborhoods with a wide range of lot sizes and street frontages among the various neighborhoods (not within neighborhoods).
8. Establish clearly defined “edges” and “entries” that contribute to a district neighborhood identity.
9. Develop a project that responds well to market demand and meets a range of housing types and affordability.
10. Develop a project with good regional access.
11. Minimize the use of walls as sound barriers along arterials and high traffic roadways through the use of landscaped setbacks and structures designed to attenuate sound, or a combination thereof, to promote visual quality and sound attenuation.

SECTION IV. CALIFORNIA ENVIRONMENTAL QUALITY ACT FINDINGS

CEQA (Pub. Resources Code, §21000 et seq.) requires that public agencies shall not approve or carry out a project for which an environmental impact report (EIR) has been certified that identifies one or more significant adverse environmental effects of a project unless the public agency makes one or more written Findings for each of those significant effects, accompanied by a brief explanation of the rationale for each Finding (State CEQA Guidelines [Cal. Code Regs., tit. 14, §15000 et seq.], §15091). This document presents the CEQA Findings of Fact made by the City of Ontario, in its capacity as the CEQA lead agency, regarding the Subarea 29 Specific Plan Amendment Project, evaluated in the Draft SEIR and Final SEIR for the Project.

The City Council hereby adopts the "CEQA Findings of Fact" which were prepared in accordance with State CEQA Guidelines §15091, and which are as follows:

A. INTRODUCTION

PRC §21002 states that "public agencies should not approve projects as proposed if there are feasible alternatives or feasible mitigation measures available which would substantially lessen the significant environmental effects of such projects[.]" Section 21002 further states that the procedures required by CEQA "are intended to assist public agencies in systematically identifying both the significant effects of proposed projects and the feasible alternatives or feasible mitigation measures which will avoid or substantially lessen such significant effects."

Pursuant to §21081 of the PRC, a public agency may only approve or carry out a project for which an EIR has been completed that identifies any significant environmental effects if the agency makes one or more of the following written finding(s) for each of those significant effects accompanied by a brief explanation of the rationale for each finding:

1. Changes or alterations have been required in, or incorporated into, the project which mitigate or avoid the significant effects on the environment.
2. Those changes or alterations are within the responsibility and jurisdiction of another public agency and have been, or can and should be, adopted by that other agency.
3. Specific economic, legal, social, technological, or other considerations, including considerations for the provision of employment opportunities for highly trained workers, make infeasible the mitigation measures or alternatives identified in the environmental impact report.

As indicated above, §21002 requires an agency to "avoid or substantially lessen" significant adverse environmental impacts. Thus, mitigation measures that "substantially lessen" significant environmental impacts, even if not completely avoided, satisfy §21002's mandate. (*Laurel Hills Homeowners Assn. v. City Council* (1978) 83 Cal.App.3d 515, 521 ["CEQA does not mandate the choice of the environmentally best feasible project if through the imposition of feasible mitigation measures alone the appropriate public agency has reduced environmental damage from a project to an acceptable level"]; *Las Virgenes Homeowners Fed., Inc. v. County of Los Angeles* (1986) 177 Cal. App. 3d 300, 309 ["[t]here is no requirement that adverse impacts of a project be avoided

completely or reduced to a level of insignificance . . . if such would render the project unfeasible"].)

While CEQA requires that lead agencies adopt feasible mitigation measures or alternatives to substantially lessen or avoid significant environmental impacts, an agency need not adopt infeasible mitigation measures or alternatives. (Pub. Resources Code, §21002.1(c) [if "economic, social, or other conditions make it infeasible to mitigate one or more significant effects on the environment of a project, the project may nonetheless be carried out or approved at the discretion of a public agency"]; see also State CEQA Guidelines, §15126.6(a) [an "EIR is not required to consider alternatives which are infeasible"].) CEQA defines "feasible" to mean "capable of being accomplished in a successful manner within a reasonable period of time, taking into account economic, environmental, social, and technological factors." (Pub. Resources Code, §21061.1.). The State CEQA Guidelines add "legal" considerations as another indicia of feasibility. (State CEQA Guidelines, §15364.) Project objectives also inform the determination of "feasibility." (*Jones v. U.C. Regents* (2010) 183 Cal. App. 4th 818, 828-829.). "'[F]easibility' under CEQA encompasses 'desirability' to the extent that desirability is based on a reasonable balancing of the relevant economic, environmental, social, and technological factors." (*City of Del Mar v. City of San Diego* (1982) 133 Cal.App.3d 401, 417; see also *Sequoyah Hills Homeowners Assn. v. City of Oakland* (1993) 23 Cal.App.4th 704, 715.) "Broader considerations of policy thus come into play when the decision-making body is considering actual feasibility[.]" (*Cal. Native Plant Soc'y v. City of Santa Cruz* (2009) 177 Cal.App.4th 957, 1000 ("Native Plant"); see also Pub. Resources Code, §21081(a)(3) ["economic, legal, social, technological, or other considerations" may justify rejecting mitigation measures and alternatives as infeasible] (emphasis added).)

Environmental impacts that are less than significant do not require the imposition of mitigation measures. (*Leonoff v. Monterey County Board of Supervisors* (1990) 222 Cal.App.3d 1337, 1347)

The California Supreme Court has stated, "[t]he wisdom of approving . . . any development project, a delicate task which requires a balancing of interests, is necessarily left to the sound discretion of the local officials and their constituents who are responsible for such decisions. The law as we interpret and apply it simply requires that those decisions be informed, and therefore balanced." (*Citizens of Goleta Valley v. Board of Supervisors* (1990) 52 Cal.3d 553, 576). In addition, perfection in a project or a project's environmental alternatives is not required; rather, the requirement is that sufficient information be produced "to permit a reasonable choice of alternatives so far as environmental aspects are concerned." Outside agencies (including courts) are not to "impose unreasonable extremes or to interject [themselves] within the area of discretion as to the choice of the action to be taken." (*Residents Ad Hoc Stadium Com. v. Board of Trustees* (1979) 89 Cal.App.3d 274, 287)

B. FINDINGS REGARDING ENVIRONMENTAL IMPACTS NOT REQUIRING MITIGATION

The City Council hereby finds that for the following environmental issues there would be no Project impact, or the Project impacts are less than significant and therefore do not require the imposition of Mitigation Measures, as identified in the Draft SEIR.

1. AESTHETICS

a. *Scenic Vistas*

Threshold: Would the project have a substantial adverse effect on a scenic vista?

Finding: Less than significant. (Draft SEIR, p. 5.1-8)

Explanation: The Project does not involve any development within or adjacent to any scenic resources that define a scenic vista. The views available from existing roadways that extend north-south (Haven Avenue and Mill Creek Avenue), and generally east-west (Eucalyptus Avenue and Bellegrave Avenue) adjacent to the Amendment Area would largely be retained. The proposed development would obstruct some distant views currently available across the Amendment area; however, new east-west and north-south roadways would be constructed adjacent to and within the Amendment Area, and the Southern California Edison (SCE) corridor extending through PAs 30 and 31 would be retained. These linear corridors would also provide opportunities for views of distant mountains from vantage points with the Amendment Area. Additionally, the Subarea 29 Specific Plan development regulations include setbacks, landscaping, screening, and other design measures to screen undesirable aspects of site development from the major roadways within the development area. Therefore, implementation of the Project would not result in significant impacts to scenic resources and would not have a substantial adverse impact on a scenic vista.

b. *Scenic Resources within a State Scenic Highway*

Threshold: Would the Project substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway?

Finding: No Impact. (Draft SEIR, p. 5.1-9)

Explanation: There are no trees, rock outcroppings, or historic buildings located within the Amendment Area, and the Amendment Area is not within or in proximity to a State designated scenic highway. The closest eligible or designated state scenic highway is SR-91, which is approximately seven miles to the south. Due to distance and intervening topography, the Amendment Area would not be visible from SR-91. Accordingly, the Project would not damage scenic resources within a State scenic highway.

c. ***Visual Character***

Threshold: Would the Project, in non-urbanized areas, substantially degrade the existing visual character or quality of public view of the site and its surroundings? (Public views are those that are experienced from publicly accessible vantage point). If the project is in an urbanized area, would the project conflict with applicable zoning and other regulations governing scenic quality?

Finding: Less than significant. (Draft SEIR, pp. 5.1-10 - 5.1-14)

Explanation: Heavy equipment would be used during Project construction and would be visible from vantage points adjacent to the Amendment Area. Construction activities do not inherently or substantially degrade an area's visual quality and would be temporary in nature; all construction equipment would be removed from the Amendment Area following completion of Project-related construction activities. Furthermore, there are no City zoning requirements or other regulations governing scenic quality that specifically address construction activities.

With implementation of the Project pursuant to the Subarea 29 Specific Plan, the visual character of the Amendment Area would change; however, the Project would not conflict with zoning and other regulations governing scenic quality. The Project is consistent with the goals and policies in TOP 2050 Community Design Element.

The proposed amendment to the Subarea 29 Specific Plan involves including the proposed Expansion Area as part of the Subarea 29 Specific Plan Area, and future development within the proposed Amendment Area (existing PAs 30 and 31 and the Expansion Area), would be implemented in accordance with proposed Subarea 29 Specific Plan Amendment. The proposed Subarea 29 Specific Plan includes Residential Design Guidelines to guide development of the residential neighborhoods in the Amendment Area in a manner consistent with the General Plan and Ontario Municipal Code (OMC). Following the approval of the proposed amendment to the Subarea 29 Specific Plan, all development proposals for individual residential neighborhoods within the Amendment Area would be subject to the Development Plan Review process pursuant to Section 4.02.025 of the City's Development Code. The City would review the proposed site plans, building design/architecture, landscape plans, etc. for consistency with the Subarea 29 Specific Plan and/or Development Code, as applicable. With adherence to the Subarea 29 Specific Plan and Development Code regulations, future development within the Amendment Area would not conflict with applicable zoning and other regulations governing scenic quality resulting in a less than significant impact.

2. AGRICULTURE AND FORESTRY RESOURCES

a. *Williamson Contract*

Threshold: Would the project conflict with existing zoning for agricultural use, or a Williamson Act contract?

Finding: No Impact. (Draft SEIR, pp. 5.2-11 - 5.2-12)

Explanation: PAs 30 and 31 are within the existing Subarea 29 Specific Plan Area and are zoned Specific Plan (Subarea 29 Specific Plan). As with the adopted Subarea 29 Specific Plan, development of PAs 30 and 31 as part of the Project would result in no conflicts with existing zoning and no impacts would occur. Notwithstanding, MM Ag 1 and MM Ag 2 from the 2006 EIR remain applicable to development in PAs 30 and 31 to minimize conflicts between urban and agricultural land uses. PAs 30 and 31 are not subject to an existing Williamson Act Contract; therefore, no conflicts with a Williamson Act Contract would occur.

Currently, the proposed Expansion Area is zoned Specific Plan with an AG Overlay, which accommodates the continuation of agricultural uses within the City, on an interim basis, until such time that the Overlay District is developed consistent with the goals and policies of TOP. According to Development Code Section 6.01.035(C)(1), AG (Agricultural) Overlay District, the Specific Plan zoning with an AG Overlay District requires that each project address the appropriate transition of the area from agricultural uses and include provisions for buffering the proposed uses to protect agricultural and urban uses. As with the uses within the existing Subarea 29 Specific Plan Area, development within the Expansion Area would be required to comply with provisions in Development Code Section 6.01.035(C)(1), which address separation requirements for new development, and include a minimum 100-foot separation between these uses and existing dairies/feed lots, as required by 2006 EIR MM Ag 1. Further, in order to minimize conflicts between the proposed residential uses within the Expansion Area and agricultural land uses, and as required by 2006 EIR Ag 2, residential units would be provided with a deed disclosure, or similar notice, regarding the proximity and nature, including odors, of neighboring agricultural uses. Therefore, implementation of the proposed uses within the Expansion Area would not conflict with the existing AG Overlay District zoning. The Expansion Area is not subject to an existing Williamson Act Contract; therefore, no conflicts with a Williamson Act Contract would occur. Notwithstanding, MM Ag 1 and MM Ag 2 from the 2006 EIR apply to minimize conflicts between urban and agricultural land uses.

2006 EIR Mitigation Measures:

MM Ag 1 In order to minimize conflicts between urban and agricultural land uses, each Specific Plan developed for properties within the NMC

must comply with the Agricultural Overlay District requirements for urban development in proximity to existing agricultural operations. The proposed project shall establish a minimum 100-foot separation between active agricultural operations and new, non-agricultural development, or an equivalent easement that is approved by the City of Ontario.

MM Ag 2 In order to minimize conflicts between urban and agricultural land uses, all residential units in the Subarea 29 Specific Plan shall be provided with a deed disclosure, or similar notice, approved by the City Attorney, regarding the proximity and nature, including odors, of neighboring agricultural uses.

b. ***Forestland Zoning***

Threshold: Would the Project conflict with existing zoning for, or cause rezoning of, forest land (as defined in PRC §12220(g)), timberland (as defined by PRC §4526), or timberland zoned Timberland Production (as defined by Government Code §51104(g)?

Finding: No impact. (Draft SEIR, p. 5.2-12)

Explanation: There are no land use designations or zoning for forest land, timberland, or timberland zoned Timberland Production in the City. Thus, the Project would not conflict with existing zoning for forest land, timberland, or timberland zoned Timberland Production.

c. ***Loss of Forest Land***

Threshold: Would the Project result in the loss of forest land or conversion of forest land to non-forest use?

Finding: No impact. (Draft SEIR, p. 5.2-12)

Explanation: There is no forest land located within the Amendment Area; therefore, the Project would not result in loss or conversion of timberland to non-forest uses.

d. ***Conversion of Farmland or Forest Land***

Threshold: Would the project involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland, to non-agricultural use or conversion of forest land to non-forest use?

Finding: No impact. (Draft SEIR, p. 5.2-13 - 5.2-14)

Explanation: The areas to the west, south and east of the Amendment Area are developed or under construction, including areas mapped as Prime Farmland; therefore, the Project would not result in the conversion of these areas to non-agricultural uses. There are existing agricultural uses north of the Amendment Area; however, these areas are mapped as “Other Land” consistent with the Amendment Area (not Farmland) and are also zoned Specific Plan pursuant to adopted

specific plans, or Specific Plan with an AG Overlay District. The conversion of Farmland and agricultural uses to non-agricultural uses is consistent with City's TOP policies and Development Code regulations.

The Project would not involve the installation of any roadways, or infrastructure beyond that necessary to serve the proposed uses and would not result in the conversion of Farmland to non-agricultural uses, beyond the direct conversion of Farmland within the Amendment Area as discussed previously. The Project does not include any other components that would change the existing environment, due to location or nature, that would result in the conversion of Farmland to non-agricultural use. As such, there would be no impact related to the conversion of off-site Farmland and agricultural uses in proximity to the Amendment Area to non-agricultural uses.

The City does not have any land designated as forest land. Therefore, the Project would not result in the conversion of forest land to non-forest use.

3. AIR QUALITY

e. *Other Adverse Emissions*

Threshold: Would the Project result in other emissions (such as those leading to odors) adversely affecting a substantial number of people?

Finding: Less than significant. (Draft SEIR, pp. 5.3-39 - 5.3-40)

Explanation: The Project does not include any uses identified by the South Coast Air Quality Management District (SCAQMD) as being associated with emitting objectionable odors. Potential odor sources associated with the Project may result from construction equipment exhaust and the application of asphalt and architectural coatings during construction activities and the temporary storage of typical solid waste (refuse) associated with the proposed Project's long-term operational uses. Standard construction requirements would minimize odor impacts from construction. The construction odor emissions would be temporary and intermittent in nature and would cease upon completion of the respective phase of construction and is thus considered less than significant. It is expected that Project-generated refuse would be stored in covered containers and removed at regular intervals in compliance with the solid waste regulations. The proposed Project also would be required to comply with SCAQMD Rule 402 to prevent occurrences of public nuisances. Therefore, odors associated with the proposed Project construction and operations would be less than significant and no mitigation is required.

4. BIOLOGICAL RESOURCES

a. *Riparian Habitat or Sensitive Natural Communities*

Threshold: Would the Project have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?

Finding: No Impact. (Draft SEIR, p. 5.4-22).

Explanation: The Amendment Area and off-site improvement areas do not contain riparian habitat or other sensitive natural communities identified in local or regional plans. Vegetation communities and land cover type include disturbed/developed, agricultural – row crops, dairy farm, herbaceous non-native forbs and grasses, tamarisk thickets, and tree tobacco stands. Therefore, no impacts to riparian habitat or other sensitive natural communities would occur, consistent with the conclusion of the 2006 EIR.

b. *Wetlands*

Threshold: Would the Project have a substantial adverse effect on State or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?

Finding: No impact. (Draft SEIR, p. 5.4-22).

Explanation: The Amendment Area and off-site improvement areas do not contain any federally protected wetlands; therefore, no impacts would occur.

c. *Local Policies and Ordinances*

Threshold: Would the Project conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?

Finding: No impact. (Draft SEIR, p. 5.4-24)

Explanation: Development Code Section 6.05.020 (updated in 2020) was established to further the preservation, protection, and maintenance of healthy heritage trees. The Amendment Area and off-site improvement areas do not contain any heritage trees; therefore, the preservation or protection of existing trees is not required for the Project. The City does not have any other ordinances or local policies related to the protection of biological resources that are applicable to the Project. No impact would occur.

d. *Habitat Conservation Plans*

Threshold: Would the Project conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan?

Finding: No impact. (Draft SEIR, p. 5.4-25)

Explanation: The Amendment Area and off-site improvement areas are not within a Natural Community Conservation Plan or Habitat Conservation Plan. Additionally, the City's General Plan does not identify an adopted conservation plan. Thus, implementation of the Project would not conflict with the provisions of a Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or State habitat conservation plan.

5. CULTURAL RESOURCES

a. *Historical Resources*

Threshold: Would the Project cause a substantial adverse change in the significance of a historical resource pursuant to State CEQA Guidelines, §15064.5?

Finding: No impact. (Draft SEIR, p. 5.5-11)

Explanation: There are no historic resources, defined by CEQA Guidelines Section 15064.5, present with the Amendment Area; therefore, no historic resources would be impacted.

b. *Human Remains*

Threshold: Would the Project disturb any human remains, including those interred outside of formal cemeteries?

Finding: Less than significant. (Draft SEIR, pp. 5.5-13 - 5.5-14)

Explanation: Although remote, there is a potential that Project-related ground disturbance activities have the potential to unearth previously undiscovered human remains. This impact would be reduced to a level considered less than significant with adherence to regulatory requirements which are outlined in 2006 EIR MM Cultural 2 and incorporated into the Project. With mandatory compliance to California Health and Safety Code Section 7050.5 and Public Resources Code Section 5097.98, as outlined in 2006 EIR MM Cultural 2, any potential impacts to human remains, including human remains of Native American ancestry, that may result from development of the Project would be less than significant.

2006 EIR Mitigation Measures:

MM Cultural 2 If human remains are uncovered at any time, all activities in the area of the find shall be halted by the developer or its contractor and the County Coroner shall be notified immediately pursuant to CA Health & Safety Code Section 7050.5 and CA PRC Section 5097.98. If the Coroner determines that the remains are of Native American origin, the Coroner shall proceed as directed in Section 15064.5(e) of the CEQA Guidelines.

6. ENERGY

a. *Wasteful Use of Energy*

Threshold: Would the Project result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation?

Finding: Less than significant. (Draft SEIR, pp. 5.6-7 - 5.6-10)

Explanation: The Project's construction process is estimated to occur over approximately 48 months and would consume electrical energy and fuel. Project-related construction would represent a "single-event" electric energy and fuel demand and would not require on-going or permanent commitment of energy or diesel fuel resources for this purpose. The equipment used for Project construction would conform to California Air Resources Board (CARB) regulations and California emissions standards. There are no unusual Project characteristics or construction processes that would require the use of equipment that would be more energy intensive than is used for comparable activities; or equipment that would not conform to current emissions standards (and related fuel efficiencies).

Project construction energy consumption would not be considered inefficient, wasteful, or otherwise unnecessary. Construction impacts would be less than significant.

Energy consumption in support of or related to Project operations would include transportation energy demands (energy consumed by passenger car and truck vehicles accessing the Amendment Area) and facilities energy demands (energy consumed by building operations and site maintenance activities). Trip generation and vehicle miles traveled VMT generated by the Project are consistent with other single-family and attached residential and middle school uses of similar scale and configuration. As such, Project operations would not result in excessive and wasteful vehicle trips and VMT, nor excess and wasteful vehicle energy consumption compared to other residential/commercial land uses. Additionally, enhanced fuel economies realized pursuant to federal and state regulatory actions, and related transition of vehicles to alternative energy sources would likely decrease future gasoline fuel demands per VMT. Additionally, the Project would include pedestrian and bicycle facilities, facilitating and encouraging pedestrian and bicycle access. Facilitating pedestrian and bicycle access would reduce VMT and associated energy consumption.

Project building operations activities would result in the consumption of natural gas and electricity. Energy efficiency/energy conservation attributes of the Project would be complemented by increasingly stringent state and federal regulatory actions addressing vehicle fuel economies and vehicle emissions standards; and enhanced

building/utilities energy efficiencies mandated under California building codes. Enhanced fuel economies realized pursuant to federal and State regulatory actions, and related transition of vehicles to alternative energy sources (e.g., electricity, natural gas, biofuels, hydrogen cells) would likely decrease future gasoline fuel demands per VMT. The location of the Project proximate to regional and local roadways systems tends to reduce VMT within the region, acting to reduce regional vehicle energy demands. The Project would also comply with the current version of the Title 24 Energy Code and CALGreen standards.

Impacts would be less than significant. Notwithstanding, in accordance with 2006 EIR MM Util 5, and through compliance with current energy regulations that are more stringent when the 2006 EIR was prepared, the Project is designed to include sustainable systems for use of water and energy. Project operational energy consumption would not be considered inefficient, wasteful, or otherwise unnecessary.

2006 EIR Mitigation Measures:

MM Util 5 To reduce the quantity of energy used and to conserve water resources, the project developer and City of Ontario should work to include sustainable systems for use of water and energy within the project design.

b. ***Energy Efficiency Plans***

Threshold: Would the Project conflict with or obstruct a State or local plan for renewable energy or energy efficiency?

Finding: Less than significant. (Draft SEIR, pp. 5.6-10 - 5.6-13)

Explanation: The Project would not conflict with any of the State or local plans for renewable energy or energy efficiency.

7. GEOLOGY AND SOILS

a. ***Fault Rupture, Seismic Ground Shaking, Liquefaction and Unstable Soils, Landslides***

Threshold: Would the project directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving:

i) Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publication 42.

ii) Strong seismic ground shaking

iii) Seismic-related ground failure, including liquefaction?

iv) Would the Project directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving landslides?

Finding: Less than significant. (Draft SEIR, pp. 5.7-11 - 5.7-12)

Explanation: *Earthquake Fault Rupture*: The Amendment Area is not within an Alquist-Priolo Earthquake Fault Zone. The nearest active fault to the Amendment Area is the Chino fault approximately 6.5 miles to the southwest. Therefore, the Project would not directly or indirectly expose people or structures to substantial adverse effects related to fault rupture. No impact would occur.

Strong Seismic Ground Shaking: As a mandatory condition of Project approval, future buildings to be developed would be constructed in accordance with the California Building Code (CBC) and the City Building Code, which is based on the CBC with local amendments. The CBC and City Building Code provide standards that must be met to safeguard life or limb, health, property, and public welfare by regulating and controlling the design, construction, quality of materials, use and occupancy, location, and maintenance of all buildings and structures, and have been specifically tailored for California earthquake conditions. In addition, the CBC and the City Building Code (OMC Section 8-1.01) require development projects to prepare geologic engineering reports to identify site-specific geologic and seismic conditions and implement the site-specific recommendations contained therein to preclude adverse effects involving unstable soils and strong seismic ground-shaking. With mandatory compliance with building code standards and site-specific design and construction measures, implementation of the Project would not directly or indirectly expose people or structures to substantial adverse effects, including loss, injury or death, involving seismic ground shaking. Impacts would be less than significant. Notwithstanding this less than significant impact, the requirement for preparation of site-specific geotechnical investigation is included as 2006 EIR MM Geo 4.

Seismic Related Ground Failure: Groundwater is recorded at a depth of 120 feet below the ground surface. Therefore, soil liquefaction is unlikely, and is not a design concern for the Project. The Project Geotechnical Report estimates that the total seismic settlement within the Amendment Area may be assumed as 2.5 inches and the differential settlement as 1.25 inches over a length of 30 feet. The City would require development projects within the Amendment area to be constructed in accordance with the latest applicable seismic safety guidelines, including the standard requirements of the CBC and the City's Building Code, to minimize potential liquefaction and seismic settlement hazards. This impact would be less than significant.

Landslides: The Amendment Area is relatively flat and is not in proximity to any natural or manmade steep slopes. Further, any slopes created during construction within the Amendment Area would be properly designed and constructed pursuant to the recommendations in the site-specific geotechnical studies required by the OCM. As such, there is no impact related to seismically induced landslides within the Amendment Area.

2006 EIR Mitigation Measures:

MM Geo 4 Prior to the issuance of building permits, a project-specific geotechnical investigation for the site must be prepared and submitted to the City for approval. All recommendations contained within the geotechnical investigation must be incorporated during project design and construction. Examples of recommendations include, but are not limited to, specific seismic design parameters and subgrade preparation parameters specifying the amount of over-excavation and re-compaction of specific soils in building pad and pavement areas.

b. *Soil Erosion*

Threshold: Would the Project result in substantial soil erosion or the loss of topsoil?

Finding: Less than significant. (Draft SEIR, pp. 5.7-13 - 5.7-14)

Explanation: Implementation of the Project would not result in substantial soil erosion or loss of topsoil. Construction activities would be conducted in compliance with local and state regulations addressing erosion during construction (e.g., National Pollutant Discharge Elimination System [NPDES] permit, preparation of a Storm Water Pollution Prevention Plan [SWPPP], and OMC (refer to 2006 EIR MM Geo 1, which outlines the City's permit requirements). Following completion of development, implementation of a water quality management plan (WQMP) during operation is required, which would preclude substantial long-term erosion impacts.

2006 EIR Mitigation Measures:

MM Geo 1 To reduce impacts associated with erosion due to high winds, prior to construction, all tentative tracts and other construction activities will apply for and adhere to the permit given by the City of Ontario and enforced by the Building Official found in Title 6, Chapter 12, sections 6-12.01 – 6-12.07. The permit lasts for one (1) year, therefore all construction lasting for a period of more than one calendar year from the date of issue will reapply for the permit and pay appropriate annual fees. At a minimum, the permit prohibits the disturbance of the surface or subsurface of more than one (1) acre of land without meeting permit requirements which can include such things as the application of soil stabilizers and limitations on grading activities during wind events.

c. ***Septic Tanks***

Threshold: Would the Project have soils incapable of adequately supporting the use of septic tanks or alternative wastewater disposal systems where sewers are not available for the disposal of wastewater?

Finding: No impact. (Draft SEIR, pp. 5.7-17 - 5.7-18)

Explanation: The Project does not propose the use of septic tanks or alternative wastewater disposal systems. The Project would construct an on-site sewer system that would connect to the existing sewer system in the surrounding roadways.

8. HAZARDS AND HAZARDOUS MATERIALS

a. ***Transport, Use or Disposal of Hazardous Materials***

Threshold: Would the Project create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?

Finding: Less than significant. (Draft SEIR, pp. 5.9-16 - 5.9-17)

Explanation: Heavy equipment (e.g., dozers, excavators, tractors) would be operated within the Amendment Area and off-site improvement areas during construction. Construction contractors would be required to comply with all applicable federal, State, and local laws and regulations regarding the transport, use, and storage of hazardous construction-related materials, and to control erosion. During operation, the proposed residential and school uses would not utilize, store, or generate hazardous materials or waste in quantities that may pose a significant hazard to the public. With mandatory compliance with applicable hazardous materials regulations, the Project would not create significant hazard to the public or the environment through routine transport, use, or disposal of hazardous materials during construction or operation.

b. ***Emission or Handling of Hazardous Materials Near a School***

Threshold: Would the project emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?

Finding: Less than significant. (Draft SEIR, p. 5.9-20)

Explanation: Park View Elementary School within the Specific Plan Area is located at 4860 S Celebration Avenue, approximately 0.3 mile west of the Amendment Area. The Project includes a proposed middle school in PA 34. The proposed residential and school uses have the potential to involve the transport and use of hazardous substances, materials, and/or wastes to-and-from the Amendment Area during construction and long-term operation. However, the Project would not utilize,

store, or generate hazardous materials or waste in quantities that may pose a significant hazard to the public. Additionally, construction and operational activities would be required to comply with applicable federal, State, and local regulations that would preclude substantial public safety hazards associated with emissions, handling of, or the routine transport of hazardous substances, materials and/or wastes to-and-from the Amendment Area. Impacts would be less than significant.

c. ***Location on a Hazardous Materials Site***

Threshold: Would the Project be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code §65962.5 and, as a result, would it create a significant hazard to the public or the environment?

Finding: Less than significant. (Draft SEIR, p. 5.9-20)

Explanation: Based on review of the Cortese List, the Amendment Area is not located on any list of hazardous materials sites compiled pursuant to Government Code Section 65962.5. However, the search completed by EDR to support the 2022 Phase I ESA identified the Amendment Area being listed on various databases. With the exception of the HIST CORTESE database, none of these listings themselves indicate a release of hazardous substances or petroleum products. The HIST CORTESE data base identified one UST site within the Amendment Area (Koolhaus Dairy at 14717 Haven Avenue); this case has been closed by the San Bernardino County Fire Protection District.

Therefore, the Amendment Area is not located on a listed hazardous materials site that would create a significant hazard to the public or the environment, resulting in a less than significant impact.

d. ***Airport Noise***

Threshold: For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard or excessive noise for people residing or working in the project area?

Finding: Less than significant. (Draft SEIR, p. 5.9-22)

Explanation: The Amendment Area is approximately 2.4 miles northeast of the Chino Airport. The western portion of the existing Subarea 29 Specific Plan is located within the Chino Airport Safety Zone 6 (Traffic Pattern Zone); however, the Amendment Area is not within a designated safety zone. The Amendment Area is more than four miles south of the Ontario International Airport (ONT). As with other areas in the Specific Plan Area, the Amendment Area is located within the ONT Airport Influence Area (AIA). The Amendment Area is located outside of the Safety, Noise Impact and Airspace

Protection Zones identified in the ONT Airport Land Use Compatibility Plan (ALUCP). Therefore, implementation of the proposed residential and school uses within the Amendment Area would not pose a safety hazard to people residing or working within the Amendment Area, resulting in a less than significant impact.

Additionally, the Specific Plan Area and the Amendment Area are not located with the noise contours for the ONT or Chino Airport. Therefore, the Project would not expose people working or living within the Amendment Area to excess noise levels from airport operations, resulting in a less than significant impact.

Notwithstanding the less than significant impacts related to airport-related safety hazards and excessive noise, as required by 2006 EIR MM Haz 9, future buyers within the Amendment Area would be notified of proximity of the property to the Chino Airport and the ONT.

2006 EIR Mitigation Measures:

MM Haz 9 To disclose to the buyer or lessee of subdivided lands within the Subarea 29 project of the proximity of this site to the Chino Airport and the Ontario International Airport as required by AB 2776, the City shall disclose, and ensure that the developer makes disclosures, as required by law, to all future buyers.

e. ***Emergency Plans***

Threshold: Would the project impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?

Finding: Less than significant. (Draft SEIR, p. 5.9-23)

Explanation: The Project site does not contain any emergency facilities. During construction and long-term operation, adequate emergency vehicle access is required to be provided. The Project involves the construction of roadway improvements along site-adjacent roadways, which would be constructed in compliance with the City's roadway standards and would enhance emergency access. The Project would not impair implementation of or physically interfere with an adopted emergency response or emergency evacuation plan.

f. ***Wildland Fires***

Threshold: Would the project expose people or structures, either directly or indirectly, to a significant risk of loss, injury or death involving wildland fires?

Finding: No Impact. (Draft SEIR, p. 5.9-24)

Explanation: There are no areas within the City mapped within a Very High Fire Hazard Severity Zone (VHFHSZ); the nearest VHFHSZ to the Amendment Area is approximately 3.5 miles to the southeast.

Additionally, the City's Local Hazard Mitigation Plan (LHMP) designates the majority of the Ontario Ranch, which includes the Amendment Area, as Non-Wildland/Non-Urban. Therefore, implementation of the Project would not expose people or structures, either directly or indirectly, to a significant risk of loss, injury or death involving wildland fires.

9. HYDROLOGY AND WATER QUALITY

a. *Water Quality Standards*

Threshold: Would the Project violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or ground water quality?

Finding: Less than significant. (Draft SEIR, pp. 5.10-13 - 5.10-16)

Explanation: The Project would not violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or ground water quality. Adherence to applicable NPDES permits and other regulatory requirements addressing water quality, and compliance with operational WQMPs is required as part of the Project's implementation to address construction- and operational-related water quality and ensure that water quality impacts are less than significant (refer to 2006 EIR MM Hydro 1 through MM Hydro 3 and MM Hydro 6).

Groundwater was not encountered during the drilling of soil borings, which extended to depths of approximately 51.5 feet bgs. Therefore, excavation activities associated with the Project, including grading, are not anticipated to encounter significant amounts of groundwater. Nonetheless, the Project would comply with regulatory requirements, including the Construction General Permit, and surface water that may percolate into the soil would not adversely affect groundwater on or off site.

Therefore, the Project would not violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or ground water quality during long-term operation. Impacts would be less than significant.

2006 EIR Mitigation Measures:

MM Hydro 1 In order to ensure that construction activities associated with the Subarea 29 Specific Plan will not cause a violation of any water quality standard or waste discharge requirements and to assure no substantial degradation of water quality occurs, and to implement the intent of mitigation measures included in the Final Environmental Impact Report for the NMC, developments within the project area shall comply with all applicable provisions of the State's General Permit for Construction Activities (Order No. 99-08-DWQ, or most recent version) during all phases of construction. A copy of evidence

of the receipt of a Waste Discharge Identification Number from the State Regional Water Quality Control Board shall be filed with the City Engineer along with a copy of the Storm Water Pollution Prevention Plan (SWPPP) maps and BMPs. The City Engineer shall review and approve the provisions of the SWPPP prior to implementation of any SWPPP provision or starting any construction activity.

MM Hydro 2 In order to ensure that development within the Specific Plan will not cause or contribute to violations of any water quality standard or waste discharge requirements, and to assure no substantial degradation of water quality occurs, the project will complete a Preliminary Water Quality Management Plan (PWQMP) and Water Quality Management Plan (WQMP) pursuant to the MS4 permit (Order No. 2002-0012) adopted by the City of Ontario and the Trash Mandate adopted by the SARWQCB. The project shall incorporate Site Design BMPs and Source Control BMPs, and potentially Treatment Control BMPs. Table III-7-F and G of the 2006 EIR, which are included in Technical Appendix I2 of this SEIR, provide guidelines and BMPs that shall be incorporated as appropriate into project design (on construction drawings) and/or project specifications and implemented in the field to reduce the expected pollutants from various types of development. Prior to acceptance of the WQMP, the City shall assure that maintenance responsibilities of BMPs approved for the project are identified and enforceable. Table III-7-G correlates each BMP to the pollutants of concern which it removes/reduces and/or meets the design objectives for the BMP.

MM Hydro 3 To assure that development within the Specific Plan will not cause a violation of any water quality standard or waste discharge requirements, including San Bernardino County's MS4 permit issued by the SARWQCB, and to assure that no substantial degradation to water quality occurs after construction, any loading docks present within the academic or retail areas designated in the Specific Plan will be designed with devices to trap oil and grease, such that these pollutants are not discharged from the site in storm water or non-storm water discharges.

MM Hydro 6 In order to reduce pollutants in post construction run-off and to implement mitigation measures included in the Final Environmental Impact Report for the NMC, the individual project owners and operators (e.g., homeowner associations, retail center owners, school district, parks department, etc.) shall ensure that all pest control, herbicide, insecticide and other similar substances used as part of maintenance of project features are handled, stored, applied and disposed of by those conducting facility maintenance in a manner consistent with all applicable federal, state and local regulations. According to Title 6, Chapter 6, Section 6 of the City's code, the City Engineer shall monitor and enforce this provision.

b. ***Groundwater Supplies***

Threshold: Would the Project substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the Project may impede sustainable groundwater management of the basin?

Finding: Less than significant. (Draft SEIR, pp. 5.10-16 - 5.10-17)

Explanation: The Project does not propose the installation or use of groundwater wells and would result in the closure and removal of existing groundwater wells within the Amendment Area. The closure and removal of the existing groundwater wells would be in accordance with the California Department of Water Resources Health Guidelines and the City of Ontario Guidelines.

The Project would be served by domestic water provided by the City; direct additions or withdrawals of groundwater are not proposed by the Project. According to the Project-specific Water Supply Assessment (WSA), the City's water demand is accommodated through potable and non-potable water supplies managed by the Ontario Municipal Utilities Company (OMUC). OMUC manages both the potable and non-potable supplies to ensure withdrawals from the Chino Groundwater Basin for domestic demands do not exceed the safe yield for the basin, consistent with and in support of implementation of the Chino Basin Watermaster's OBMP. Groundwater which may be consumed by the Project and the City would be recharged pursuant to the established policies and programs.

The Amendment Area is not a designated groundwater recharge area. The Project does not propose or require facilities or operations that would otherwise adversely affect designated recharge areas. The potential for the Project to substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the Project may impede sustainable groundwater management of the basin is considered less than significant. Nonetheless, as with the Approved Project, the Project would incorporate MM Hydro 5 to conserve water and ensure that groundwater recharge is not impeded.

2006 EIR Mitigation Measure:

MM Hydro 5 In order to conserve water and to mitigate for any potential unforeseen adverse impacts to a reduction in ground water recharge, the following measure has been recommended by the Chino Basin Water Conservation District. Landscaping within individual development projects will retain and percolate both applied irrigation water and storm water in vegetated areas of parking lots and other areas, where appropriate; "depressed" planted areas bordered by

shrubbery screens will be implemented rather than “mounded” grass and shrubbery planted screens.

c. *Erosion, Siltation, Flooding, and Runoff*

Threshold: Would the Project substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would:

i) result in substantial erosion or siltation on- or off-site?

ii) Substantially increase the rate or amount of surface run-off in a manner which would result in flooding on- or off-site?

iii) Create or contribute run-off water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted run-off?

iv) Impede or redirect flood flows?

Finding: Less than significant. (Draft SEIR, pp. 5.10-18 - 5.10-21)

Explanation: The 2006 EIR analyzed the development of PAs 30 and 31 and its impact on the existing drainage pattern, and the storm drain infrastructure required to accommodate storm water runoff from these sites has been installed. With the exception of the 48-inch RCP in Eucalyptus Avenue, which would be installed as part of the Project with the development of PA 33, and on-site storm drains within the Amendment Area to convey the on-site flows to the proposed Master Planned lines, the backbone storm drain infrastructure required to serve the Amendment Area has been installed.

The Project would not result in on- or off-site flooding and would not result in exceeding the capacity of the existing stormwater drainage system. Impacts would be less than significant. Notwithstanding the Project’s less than significant impact, as required, the San Bernardino County Flood Control District would review the storm drain system during final design (refer to 2006 EIR MM Hydro 4).

As discussed above, the Project would not result in substantial erosion or siltation on or off site during both construction and operation or provide substantial additional sources of polluted runoff.

The Amendment Area is not within a 100-year flood hazard area; therefore, the Project would not redirect or impede flood flows.

Mitigation Measure:

MM Hydro 4 In order to reduce the risk of flooding and to implement mitigation measures included in the GPA for the NMC Final Environmental Impact Report, prior to issuance of grading permits, the City of Ontario shall coordinate with the San Bernardino County Flood

Control District to ensure that the project meets County flood control requirements.

d. ***Flood Hazard***

Threshold: Would the project in flood hazard, tsunami, or seiche zones, risk release of pollutants due to project inundation?

Finding: Less than significant. (Draft SEIR, p. 5.10-24)

Explanation: The Pacific Ocean is located over 40 miles southwest of the Amendment Area and there is no potential for the Amendment Area to be impacted by a tsunami. Additionally, the Amendment Area is not subject to flooding due to a seiche as seiches occur on enclosed or partially enclosed bodies of water. The Amendment Area is not within a flood hazard area; therefore, the Project is not subject to inundation due to storm related flooding.

According to Figure S-04, Dam Inundation Zones, of the TOP 2050 Policy Plan Safety Element, the Amendment is within the potential inundation zone for the San Antonio Dam. The Expansion Area is located approximately 13.0 miles southeast of the San Antonio Dam. The probability of dam failure is very low, and the City has never been impacted by a major dam failure. As identified in the TOP 2050 Final SEIR, because the likelihood of catastrophic failure of the San Antonio Dam is very low and the City has emergency notification procedures, impacts of release of pollutants due to dam inundation are considered less than significant. The Project would not result in the risk of release of pollutants due to project inundation and this impact would be less than significant.

e. ***Water Quality Control Plan***

Threshold: Would the Project conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan?

Finding: Less than significant. (Draft SEIR, p. 5.10-25)

Explanation: The Amendment Area is within the Santa Ana River Basin; thus, Project-related construction and operational activities would be required to comply with the *Santa Ana River Basin Water Quality Control Plan* by preparing and adhering to a SWPPP and WQMP. Implementation of the Project would not conflict with or obstruct implementation of the *Santa Ana River Basin Water Quality Control Plan* and impacts would be less than significant.

The Department of Water Resources (DWR) currently categorizes the Chino Groundwater Basin as a “low-priority” and adjudicated basin; therefore, the Chino Groundwater Basin is not subject to the requirements of the 2014 Sustainable Groundwater Management Act (SGMA). Additionally, Section 10720.8(a) of the SGMA exempts adjudicated basins (including the Chino Groundwater Basin specifically) from the SGMA’s requirement to prepare a groundwater

sustainability plan. Accordingly, the Project has no potential to conflict with or obstruct implementation of a sustainable groundwater management plan.

10. LAND USE AND PLANNING

a. *Established Communities*

Threshold: Would the Project physically divide an established community?

Finding: No impact. (Draft SEIR, p. 5.11-6)

Explanation: The Amendment Area includes dairy farming and agriculture uses, and farm structures that supported previous agricultural activities. The entire area has been previously disturbed. Agricultural lands are located north of the Amendment Area (north of Eucalyptus Avenue) and are planned to be developed with residential uses per the Grand Park Specific Plan, and the area to the east (east of Mill Creek Avenue) is currently being developed with residential uses per the Esperanza Specific Plan. The area south of the Amendment Area is developed with existing residential uses in the City of Eastvale. Residential uses in the Specific Plan Area are currently under construction to the west of the proposed Expansion Area and south of existing PAs 30 and 31. The Project would expand the existing Specific Plan Area, similar to existing and planned surrounding uses, and would not involve the construction of any new utility infrastructure or roadways that would physically divide an established community. No impact would occur.

b. *Conflict*

Threshold: Would the Project cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect?

Finding: Less than significant. (Draft SEIR, pp. 5.11-7 - 5.11-)

Explanation: Implementation of the Project would not conflict with the Southern California Association of Governments (SCAG) *Connect SoCal* goals. The Project implements land uses anticipated by TOP 2050 and would not conflict with TOP 2050 policies adopted for the purpose of avoiding or mitigating an environmental effect, or policies that address scenic quality and circulation.

PAs 30 and 31 are zoned as Specific Plan (SP) District (Subarea 29 Specific Plan), and the proposed Expansion Area (PAs 32, 33, and 34) are zoned as SP (Specific Plan) with an AG (Agriculture) Overlay. Consistent with this zoning, the Project involves an amendment to the existing Subarea 29 Specific Plan, which would add the Expansion Area to the Specific Plan and establishes the Development Standards and Design Guidelines for the Expansion Area. With the approval of the proposed Subarea 29 Specific Plan

amendment, the AG Overlay District would be removed and remaining agricultural activities would transition to residential and school uses; this transition is anticipated by the AG Overlay District. The Project would not conflict with the requirements of the Ontario Development Code, including Zoning regulations.

The proposed residential and school uses are consistent with uses currently allowed by the Subarea 29 Specific Plan and would be implemented in accordance with the Development Standards and Design Guidelines outlined in the Subarea 29 Specific Plan, as amended with the Project. Therefore, should the proposed SPA be approved, the Project would not conflict with the Subarea 29 Specific Plan requirements.

11. MINERAL RESOURCES

a. *Regional and Statewide Mineral Resources*

Threshold: Would the Project result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the State?

Finding: No impact. (Draft SEIR, p. 5.12-3)

Explanation: The Amendment Area has no known identified mineral resources of regional or statewide importance and is within an area classified as MRZ-3 where the significance of mineral deposits is unknown. The nearest MRZ-2 area is approximately 2.6 miles north-northeast of the Amendment Area. Due to distance, the implementation of the Project would not impact the identified MRZ-2 resources. Therefore, implementation of the Project would not result in the loss of availability of a known mineral resource that would be of value to the region and residents of the State.

b. *Locally-Important Mineral Resource*

Threshold: Would the project result in the loss of availability of a locally important mineral resource recovery site delineated on a local general plan, specific plan, or other land use plans?

Finding: No impact. (Draft SEIR, p. 5.12-4)

Explanation: TOP Policy Plan designates land with the Amendment Area for residential, school, and open space uses. TOP Policy Plan does not identify the Amendment Area as a mineral resource recovery site. Therefore, the Project would not result in the loss of availability of a locally important mineral resource recovery site.

12. NOISE

a. *Vibration*

Threshold: Would the Project result in generation of excessive groundborne vibration or groundborne noise levels?

Finding: Less than significant. (Draft SEIR, pp. 5.13-17 – 5.17-18)

Explanation: Construction vibration velocities are estimated to range between 0.01 and 0.11 peak particle velocity (PPV). Based on the maximum acceptable continuous vibration threshold of 0.3 PPV, the typical Project construction vibration levels would fall below the building damage thresholds at all sensitive receiver locations. Therefore, vibration impacts related to Project construction would be less than significant during typical construction activities at the Project site.

The operational activities associated with the proposed residential and school uses would not include or require equipment, facilities or activities that would result in perceptible ground-borne vibration. Accordingly, Project operation would not generate excessive groundborne vibration or groundborne noise levels and impacts would be less than significant.

b. *Airport Noise*

Threshold: For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the Project expose people residing or working in the Project area to excessive noise levels?

Finding: Less than significant. (Draft SEIR, p. 5.13-19)

Explanation: The Amendment Area is located outside the ONT and Chino Airport noise contours. Therefore, people residing or working within the Amendment Area would not be exposed to excessive noise levels from airport operations. This impact would be less than significant.

13. POPULATION AND HOUSING

a. *Population Growth*

Threshold: Would the Project induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure)?

Finding: Less than significant. (Draft SEIR, pp. 5.14-5 - 5.14-8)

Explanation: Project construction activities would require contractors and laborers; however, general construction labor would be available from the local and regional labor pool and would not result in substantial population growth because the construction workers would commute from their respective homes. The Project would not directly or indirectly induce substantial population growth in the City during construction, resulting in a less than significant impact.

The Project would result in an increase of 1,470 units in the Specific Plan area. Based on the population generation rate of approximately 4.0 persons per dwelling unit, it is estimated that the Project would

generate approximately 5,876 new residents. The development of new housing units would assist the City in meeting State-mandated fair share housing production targets for above moderate housing as outlined in SCAG's RHNA (8,599 units). The proposed increase in units within the Amendment Area is consistent with TOP 2050 and would not result in an increase in housing or population beyond that anticipated with buildout of TOP 2050. Although the increase in population, housing, and employment under TOP 2050 would exceed SCAG's regional forecasts for the City, TOP 2050 would improve the job-housing balance when compared to the previous TOP; therefore, the TOP 2050 EIR concluded that implementation of the TOP, which includes the Project, would be consistent with *Connect SoCal,* and the increase in housing and population would be less than significant. The increase in housing and population resulting from the Project would be consistent with TOP 2050, would not result in substantial unplanned population growth beyond that anticipated in the region, would assist the City in meeting its RHNA requirements and reducing the jobs-housing ratio. Therefore, this impact would be less than significant.

The proposed school within PA 34 is estimated to generate up to 56 employment opportunities; however, the school use was anticipated in the previous and current TOP. Implementation of the school would not indirectly induce substantial unplanned population growth in the area.

The utility infrastructure improvements included as part of the Project would be sized to accommodate the Project and would not include additional capacity to accommodate future development off site. As such, the Project's proposed infrastructure improvements are not anticipated to result in indirect substantial unplanned population growth.

Implementation of the Project would not induce substantial unplanned population growth in an area, either directly or indirectly, resulting in a less than significant impact.

b. *Displacement of Housing*

Threshold: Would the project displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere?

Finding: No impact. (Draft SEIR, p. 5.14-8)

Explanation: The existing uses within the Amendment Area, including the single-family residence within PA 30, have been vacated; therefore, the Project would not result in the displacement of housing or people necessitating the construction of replacement housing. No impact would occur.

14. PUBLIC SERVICES and RECREATION

a. *Fire, Police, Schools, Other Public Facilities*

Threshold: Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the public services:

i) Fire Protection?

ii) Police Protection?

iii) Schools?

v) Other Public Facilities

Finding: Less than significant. (Draft SEIR, pp. 5.15-10 - 5.15-13)

Explanation: *Fire Protection Services*: Increased demands for fire protection services would result from implementation of the proposed Subarea 29 Specific Plan Amendment. The increase in units/population, development of a new middle school, and associated increased demand for fire protection services, is anticipated in the recently approved TOP 2050 and associated development impact fee program update. Therefore, the City has already planned for the increased demand as part of its facilities planning. The Project Applicant would be required to pay the applicable development impact fees, which would contribute to funding for additional staffing, facilities, and equipment. Additionally, Fire Station No. 9 in the Parkside Specific Plan Area has been constructed and would serve the Specific Plan Area, as anticipated in the 2006 EIR. The Project would also be required to comply with all applicable codes, ordinances, and standard conditions, including the current edition of the California Fire Code (CFC), as adopted by the Ontario Municipal Code (Section 4-4.01). With adherence to existing regulations, the Project would not require the construction of new or expanded fire protection facilities that would result in physical environmental impacts, resulting in a less than significant impact. Notwithstanding the Project's less than significant impacts related to fire protection services, 2006 EIR MM Serv 1 through MM Serv 6 would be incorporated into the Project to reduce the Project's fire hazards.

Police Protection Services: The Project would increase existing demands for police protection services. The increase in units/population, development of a new middle school, and associated increased demand for police services is anticipated in the recently approved TOP 2050 and the associated development impact fee program update. Therefore, the City has already planned

for the increased demand as part of its facilities planning. The Ontario Police Department (OPD) would ultimately determine the timing and number of new officers hired as part of its standard staffing practices. The Project Applicant would be required to pay applicable development impact fees (EIR MM Serv 8), which would contribute to funding for additional staffing, facilities, and equipment. The Project would not require the construction of new or expanded police facilities that would result in physical environmental impacts, resulting in a less than significant impact.

School Services: The Project would result in a net increase of 1,470 units and has the potential to place a greater demand on the existing public school system by generating additional students to be served by the Mountain View School District (MVSD) and Chaffey Joint Union High School District (CJUHSD). Park View Elementary School, which is within the existing Specific Plan Area, opened in August 2022, and would accommodate the new elementary school students generated by the Project. Additionally, the Project involves construction of a new middle school within proposed PA 34 with an anticipated capacity of 1,200 students. The proposed middle school would be part of the MVSD and would serve grades 6-8. Development of the proposed middle school is part of the Project and is evaluated throughout the SEIR under appropriate issue areas. In compliance with the 2015 School Mitigation Agreement, further required site-specific evaluation of the school site would be conducted by the MVSD prior to purchase of the site and development of the middle school.

The Project Applicant would be required to comply with the provisions of the required 2015 School Mitigation Agreement (refer to 2006 EIR MM Serv 9), which addresses elementary and middle school facilities within the MVSD. Additionally, the Project Applicant would pay school impact fees to the CJUHSD. Compliance with the 2015 School Mitigation Agreement with the MVSD and payment of school impact fees to the CJUHSD constitutes complete mitigation for Project-related impacts to school services. The Project would not require the construction of new or expanded school facilities that would result in physical environmental impacts, resulting in a less than significant impact.

Library Facilities: The Project would result in an increase in the City's residential population; thus, the Project has the potential to increase the demand for other public facilities, including library services. As with development pursuant the adopted Subarea 29 Specific Plan, the Project would be required to pay library development impact fees to contribute its fair share of costs for acquiring, designing, constructing, improving, providing, and maintaining, the library facilities. The increase in units/population within the Amendment Area and associated increased demand for library services is

anticipated in the recently approved TOP 2050 and the associated development impact fee program update. Therefore, the City has already planned for the increased demand as part of its facilities planning. The Project would not require the construction of new or expanded library facilities that would result in physical environmental impacts, resulting in a less than significant impact.

2006 EIR Mitigation Measures:

MM Serv 1 To reduce fire hazards, wood-shingled and shake-shingled roofs are prohibited.

MM Serv 2 To reduce fire hazards, fire hydrant locations and water main sizes shall meet standards established by the City Fire Department and reviewed and implemented by the Engineering Department.

MM Serv 3 To reduce fire hazards when water is provided to the site, adequate fire flow pressure shall be provided for residential areas and non-residential projects in accordance with currently adopted standards.

MM Serv 4 To reduce fire hazards, adequate water supply shall be provided as approved by the Fire Department prior to the framing stages of construction.

MM Serv 5 To reduce fire hazards, houses located on cul-de-sacs longer than 300 feet shall be constructed with residential fire sprinklers.

MM Serv 6 To reduce fire hazards, access roadways designed in accordance with Fire Department standard to within 150' of all structures, shall be provided prior to the framing stages of construction. This access is to be maintained in an unobstructed manner throughout construction.

MM Serv 8 The developer shall pay library, police, and fire service development impact fees.

MM Serv 9 The developer shall pay school fees or otherwise, in lieu of fees, meet project obligations to schools, as approved by Mountain View and Chaffey Joint Union High School Districts.

b. ***Parks, and Recreational Facilities***

Threshold: Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the public services:

iv) Parks?

Would the Project increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?

Would the Project include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment?

Finding: Less than significant. (Draft SEIR, pp. 5.15-14 - 5.15-15)

Explanation: The Project would develop additional residential uses, which would result in a population requiring parkland. Based on a future population projection of 5,143 residents for purposes of determining parkland requirements, the Project's future residents would require approximately 25.7 acres of parkland consisting of 15.4 acres of public parks and 10.3 acres of private on-site local parks. In accordance with Ontario Development Code Chapter 6.080.30, the Project proposes to meet this standard though a combination of payment of in-lieu park fees to meet the public park requirement, and construction of parkland within the Amendment Area to meet the private local park requirement (identified in 2006 EIR MM Serv 10). With adherence to the City's requirements for the provision of parkland, no additional new or expanded park facilities would be required beyond those included as part of the Project and evaluated in the SEIR, and there would not be an accelerated physical deterioration of local or regional parks. The Project would not result in substantial physical environmental impacts associated with the construction or expansion of parkland or recreational facilities beyond that addressed in the SEIR. This impact would be less than significant.

2006 EIR Mitigation Measure:

MM Serv 10 Park development impact fees, Quimby fees, and/or developed parkland shall be provided to the City commensurate with the requirements of the General Plan.

15. TRANSPORTATION AND TRAFFIC

a. *Transportation Plans, Policies, and Ordinances*

Threshold: Would the Project conflict with a program plan, ordinance or policy addressing the circulation system, including transit, roadway, bicycle, and pedestrian facilities?

Finding: Less than significant. (Draft SEIR, pp. 5.16-16 - 5.16-21)

Explanation: Implementation of the Project, which includes roadway improvements, and features to encourage non-vehicular travel and use of transit, would not conflict with the goals of SCAG's *Connect SoCal*, or any TOP 2050 Mobility Element policies addressing the circulation system, including transit, roadway, bicycle, and pedestrian facilities. The Project would not conflict with OMC truck

route requirements. Therefore, the Project would not conflict with a program, plan, ordinance, or policy addressing the circulation system, including transit, roadway, bicycle, and pedestrian facilities. Impacts would be less than significant. Notwithstanding this less than significant impact, the Project would incorporate 2006 EIR MM Trans 1 through MM Trans 4a, and MM Trans 7, which require compliance with standard City requirements.

2006 EIR Mitigation Measures:

MM Trans 1 Construction of full width of internal roadways and ½ width adjacent roadways not implemented as specified in the Design Considerations of the project such that they shall comply with City of Ontario standards.

MM Trans 2 Sight distance at the project entrance roadways should be reviewed with respect to the City of Ontario sight distance standards at the time of preparation of final grading, landscape and street improvement plans.

MM Trans 3 Signing/striping should be implemented in conjunction with detailed construction plans for the project site.

MM Trans 4a Intersection, median opening, and traffic signal spacing shall be in accordance with the City of Ontario Engineering Department Traffic and Transportation Division, Traffic and Transportation Guidelines New Model Colony Access Guidelines.

MM Trans 7 The project shall participate in the cost of offsite improvements through the payment of "fair-share" development impact fees. These fees should be collected and utilized as needed by the City of Ontario to maintain acceptable levels of service.

b. ***Consistency with CEQA Guidelines Addressing VMT Impacts***

Threshold: Would the Project conflict or be inconsistent with CEQA Guidelines Section 15064.3, subdivision (b)?

Finding: Less than significant. (Draft SEIR, pp. 5.16-21 - 5.16-23)

Explanation: The Origin/Destination (O/D) vehicle miles traveled (VMT) per service population (VMT/SP) for the Amendment Area (PAs 30 through 34; 23.85 VMT/SP) and for the total Specific Plan Area with implementation of the Project (26.4 VMT/SP) is lower than the Citywide threshold (29.42 VMT/SP) resulting in a less than significant VMT impact.

c. ***Design Hazards***

Threshold: Would the Project substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?

Finding: Less than significant. (Draft SEIR, pp.5.16-23 - 5.16-25)

Explanation: The Project would not involve the construction of incompatible uses and would involve the construction of roadways within and adjacent to the Amendment Area. As required, roadway improvements and driveways would be constructed in conformance with City design standards for roadways, sight distance, etc. (as identified in 2006 EIR MM Trans 1 through Trans 4a,. The Project would not substantially increase hazards resulting in a less than significant impact.

Mitigation Measures:

2006 EIR MM Trans 1 through MM Trans 4a shall apply.

d. ***Emergency Access***

Threshold: Would the Project result in inadequate emergency access?

Finding: Less than significant. (Draft SEIR, p. 5.16-25)

Explanation: The City LHMP identifies interstates as emergency evacuation routes for the City. As identified in TOP 2050 EIR (Figure 5.17-5, Evacuation Routes), the nearest evacuation routes to the Amendment Area are Edison Avenue to the north, and Bellegrave Avenue, which forms the southern boundary of the Amendment Area. During construction and long-term operation, the Project would be required to maintain adequate emergency access for emergency vehicles. Further, the Project involves the completion of roadways adjacent to and within the Amendment Area, which would enhance and not impede emergency access. The Project would not substantially impede emergency response in the local area.

16. TRIBAL CULTURAL RESOURCES

a. ***Change in the Significance of Tribal Cultural Resources Listed or Eligible for Listing in the California Register of Historic Resources (CRHR)***

Threshold: Would the Project cause a substantial adverse change in the significance of a tribal cultural resource…and that is listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code section 5020.1(k)?

Finding: No impact. (Draft SEIR, p. 5.17-6)

Explanation: Based on the records search conducted for the Project and review of existing literature related to cultural and historic resources within the Amendment area and surrounding areas, no tribal cultural resources listed or eligible for listing in the CRHR or in a local register of historical resources were identified. Further, there were no tribal cultural resources eligible for listing in the CRHR or in a local register of historical resources identified during the required Native American consultation process. Accordingly, no impact would occur.

17. UTILITIES AND SERVICE SYSTEMS

a. ***Expanded water, wastewater treatment, stormwater drainage, electric power, natural gas, or telecommunications facilities.***

Threshold: Would the Project require or result in the relocation or construction of new or expanded water, wastewater treatment, or stormwater drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects?

Finding: Less than significant. (Draft SEIR, pp. 5.18-15 - 5.18-17)

Explanation: Backbone infrastructure required to serve the uses allowed by the approved Subarea 29 Specific Plan, including residential development in PAs 30 and 31, has been installed pursuant to applicable master plans. Additionally, the utility infrastructure to be installed as part of the Project would be installed in compliance with requirements of the respective utility providers, as identified in 2006 EIR MM Util 1, MM Util 3, MM Util 4.

Construction activities associated with installation of new utility infrastructure would be within the physical impact area identified for the Project and evaluated throughout the SEIR. The installation of utility lines has the potential to cause construction-related environmental effects (e.g., short-term air pollutant emissions, noise, impacts to biological, cultural, and paleontological resources, and traffic movement disruptions), which are an inherent part of the Project's construction process. In instances where the Project's construction phase would result in specific, significant impacts, feasible mitigation measures are provided. Accordingly, impacts would be less than significant and additional mitigation measures beyond those identified throughout other sections of the SEIR would not be required.

2006 EIR Mitigation Measures:

MM Util 1 All water and sewer pipelines within and adjacent to the project boundaries shall be constructed based on the NMC Infrastructure Master Plans and to the satisfaction of the City.

MM Util 3 Off-site water lines, tanks, interconnectors, and other facilities required in the Water Master Plan to provide water to the site shall be in place and operational prior to issuance of the first certificate of occupancy. The applicant shall participate on a fair share basis in the development of these off-site facilities.

MM Util 4 Prior to obtaining grading permit(s), the project proponent shall coordinate with the applicable natural gas, electrical, and telephone utility providers for the project site to ensure that all existing underground and overhead lines are not damaged during project construction.

b. *Water Supplies*

Threshold: Would the Project have sufficient water supplies available to serve the Project and reasonably foreseeable future development during normal, dry, and multiple dry years?

Finding: Less than significant. (Draft SEIR, pp. 5.18-17 - 5.18-21)

Explanation: The Project is within the service area of the OMUC, which has the ability to provide adequate water service to its customers during normal, dry, and multiple dry years. A Project-specific Water Supply Assessment was prepared and concluded that the Project's water demands fall within the level of demand considered in the OMUC 2020 Urban Water Management Plan. Specifically, the Project would result in a net increase of 292 acre feet per year (AFY) in total water demand. Impacts would be less than significant. Notwithstanding this less than significant impact, in accordance with 2006 EIR MM Util 5, water conserving features would be incorporated into the Project.

Mitigation Measures:

2006 EIR MM Util 5 shall apply.

c. *Wastewater Capacity*

Threshold: Would the Project result in a determination by the wastewater treatment provider, which serves or may serve the Project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?

Finding: Less than significant. (Draft SEIR, p. 5.18-22)

Explanation: The Amendment Area is within the wastewater treatment service area for Inland Empire Utilities Agency (IEUA). Wastewater generated by the Project would be treated at recycling plant RP-5. The Project would generate 270,650 gpd (0.27 MGD) average dry weather flow of wastewater requiring treatment, which represents approximately 3.5 percent of the excess treatment capacity at RP-5 (7.8 MGD). Therefore, RP-5 has sufficient existing excess capacity to treat wastewater generated by the Project. No new treatment facilities would be required as a result of the Project. Impacts would be less than significant.

d. *Solid Waste Generation*

Threshold: Would the Project generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals?

Finding: Less than significant. (Draft SEIR, pp. 5.18-23 – 5.18-24)

Explanation: There is adequate capacity available at the Badlands Landfill and El Sobrante Landfill to accept the Project's solid waste during both construction and long-term operation. The Project would not generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure to handle the solid waste. Impacts would be less than significant.

Collectively, the residential population and employees would generate approximately 27.1 tons per day of non-recyclable solid waste requiring disposal in a landfill. Non-recyclable waste generated by the Project would be disposed of at the Badlands Landfill or El Sobrante Landfill. The Project's collective estimated solid waste generation represents approximately 0.4 percent of the combined remaining daily capacities of these landfills. The Project's long-term solid waste generation is not in excess of State or local disposal standards, or in excess of the local infrastructure capacity to handle the waste disposal. Thus, waste generated by the Project's operation is not anticipated to cause the landfills to exceed their maximum permitted daily disposal volume.

e. *Solid Waste Compliance*

Threshold: Would the project comply with federal, state, and local management and reduction statutes and regulations related to solid waste?

Finding: Less than significant. (Draft SEIR, pp. 5.18-23 – 5.18-24)

Explanation: Federal, State, and local statutes and regulations regarding solid waste generation, transport, and disposal, are intended to decrease solid waste generation through mandatory reductions in solid waste quantities (e.g., through recycling and composting of green waste) and the safe and efficient transport of solid waste. Future residents within the Amendment Area, and school operations, would comply applicable statues and regulations related to the management and reduction of solid waste and pertaining to waste disposal, reduction, and recycling. Adherence to the mandatory solid waste management requirements, as required by the City, would reduce the amount of solid waste generated during construction and operation of the proposed uses, and ultimately diverted to landfills, which in turn would aid in the extension of the life of affected disposal sites. Therefore, impacts related to solid waste statutes and regulations would be less than significant.

18. WILDFIRE

a. *Response Plans, Pollutant Concentrations, Infrastructure Risks, and Runoff Risks*

Threshold: Would the project substantially impair an adopted emergency response plan or emergency evacuation plan?

Would the project, due to slope, prevailing winds, and other factors, exacerbate wildlife risks, and thereby expose Project occupants to pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire?

Would the Project require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment?

Would the Project expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes?

Finding: No impact. (Draft SEIR, p. 5.19-4)

Explanation: Based on CalFire's FHSZ Viewer and the City's LHMP, the Amendment Area and surrounding areas are not within an SRA or within lands classified as being within a VHFHSZ. Therefore, the Project would not result in impacts related to wildfires or exacerbate wildfire hazards.

C. FINDINGS REGARDING SIGNIFICANT ENVIRONMENTAL IMPACTS THAT CAN BE REDUCED TO A LESS THAN SIGNIFICANT LEVEL

The City Council hereby finds that mitigation measures have been identified in the SEIR that will avoid or substantially lessen the following potentially significant environmental impacts to a less than significant level. The potentially significant impacts, and the Mitigation Measures that will reduce them to a less than significant level, are as follows:

1. AESTHETICS

a. *Light and Glare*

Threshold: Would the Project create a new source of substantial light or glare which would adversely affect day or nighttime views in the area?

Finding: Changes or alterations have been required in, or incorporated into, the project which mitigate or avoid the significant effects on the environment. (Draft SEIR, pp. 5.1-15 - 5.1-16)

Explanation: Nighttime lighting would likely be used within the construction areas to provide security for construction equipment and construction materials. This type of temporary security lighting is often unshielded and may shine onto adjacent properties and roadways. Even though construction staging areas would be located as far as possible from existing residential uses, such security lighting may cause a significant impact in the form of a nuisance to the residents, resulting in a potentially significant impact prior to mitigation. MM 5.1-1 requires that construction staging areas be located as far as possible from existing residential uses to minimize light intrusion, and also requires that any temporary nighttime lighting that is installed be

downward facing and hooded or shielded to prevent security lighting from spilling outside the staging area or from directly broadcasting security lighting into the sky or onto existing residential properties. With implementation of MM 5.1-1, potential lighting impacts during construction would be reduced to a less than significant level.

Adherence to the lighting design requirements outlined in the Subarea 29 Specific Plan and Ontario Development Code would ensure that the proposed lighting would not create a new source of substantial light or glare during operation which would adversely affect day or nighttime views in the area.

Exterior building materials that are expected be used for the residential uses are: stucco; exposed masonry walls; stone, brick, adobe, brick veneers (accent materials); horizontal plank siding; and, board and batten siding. No highly reflective glazing would be used. These low- and non-reflective building materials would not result in substantial glare impacts within the Amendment Area or surrounding areas, and notably at the street level. Adherence to the Residential Design Guidelines outlined in the Subarea 29 Specific Plan, which require finishes that reduce reflection and glare, would ensure that these materials would not result in substantial light or glare that adversely affect day or nighttime views in the area resulting in a less than significant impact.

Project-Specific Mitigation Measures:

MM 5.1-1 Prior to the issuance of grading permits, the Property Owner/Developer shall provide evidence to the City that the contractor specifications require temporary nighttime lighting installed during construction for security or any other purpose shall be downward-facing and hooded or shielded to prevent light from spilling outside the staging area and from directly broadcasting security light into the sky or onto adjacent residential properties. Compliance with this measure shall be verified by the City during inspections of the construction site.

2. AIR QUALITY

a. *Cumulatively Considerable Pollutant Emissions - Construction*

Threshold: Would the Project result in a cumulatively considerable net increase of any criteria pollutant for which the Project region is non-attainment under an applicable state or federal ambient air quality standard?

Finding: Changes or alterations have been required in, or incorporated into, the project which mitigate or avoid the significant effects on the environment (for Project construction). (Draft SEIR, p. 5.3-30)

Explanation: Construction activities associated with the Project would result in emissions of VOCs, NO_X, SO_X, CO, PM_{10}, and $PM_{2.5}$, and are expected from demolition, site preparation, grading, building

construction, paving, and architectural coating. Emissions resulting from the Project construction would exceed the criteria pollutant threshold established by the SCAQMD for emissions of NO_X during construction activities in 2023, and emissions of VOC in 2025. VOC and NO_X are precursors for ozone; thus, the Project would result in a cumulatively-considerable net increase of criteria pollutant for which the Project region is in non-attainment. Accordingly, prior to incorporation of mitigation the Project's construction-related emissions in 2023 and 2025 would represent a significant impact for which mitigation would be required. After implementation of 2006 EIR MM Air 1, MM Air 2, and MM Air 3, and TOP 2050 EIR MM 3-1, Project construction-source emissions would not exceed criteria pollutant thresholds established by the SCAQMD for emissions of any criteria pollutant. As such, with mitigation, the Project's construction-source emissions would be less than significant.

2006 EIR Mitigation Measures:

MM Air 1 During construction, mobile construction equipment will be properly maintained at an offsite location, which includes proper tuning and timing of engines. Equipment maintenance records and equipment design specification data sheets shall be kept on-site during construction.

MM Air 2 During construction of the proposed improvements, all contractors will be advised not to idle construction equipment on site for more than ten minutes.

MM Air 3 Configure construction parking to minimize traffic interference.

TOP 2050 SEIR Mitigation Measures:

MM 3-1 Prior to discretionary approval by the City of Ontario for development projects subject to CEQA (California Environmental Quality Act) review (i.e., nonexempt projects), project applicants shall prepare and submit a technical assessment evaluating potential project construction-related air quality impacts to the City of Ontario Planning Department for review and approval. The evaluation shall be prepared in conformance with South Coast Air Quality Management District (South Coast AQMD) methodology for assessing air quality impacts. If construction-related criteria air pollutants are determined to have the potential to exceed the South Coast AQMD–adopted thresholds of significance, the City of Ontario Building Department shall require feasible mitigation measures to reduce air quality emissions. Potential measures shall be incorporated as conditions of approval for a project and shall include:

- Require fugitive dust control measures that exceed South Coast Air Quality Management District's Rule 403, such as:

- Requiring use of nontoxic soil stabilizers to reduce wind erosion.
- Applying water every four hours to active soil disturbing activities.
- Tarping and/or maintaining a minimum of 24 inches of freeboard on trucks hauling dirt, sand, soil, or other loose materials.

- Use construction equipment rated by the United States Environmental Protection Agency as having Tier 4 interim or higher exhaust emission limits.
- Ensure construction equipment is properly serviced and maintained to the manufacturer's standards.
- Limit nonessential idling of construction equipment shall be limited to no more than five consecutive minutes.
- Use Super-Compliant VOC paints for coating of architectural surfaces shall be used whenever possible.

The identified measures shall be incorporated into all appropriate construction documents (e.g., construction management plans) submitted to the City and shall be verified by the City's Planning Department.

b. ***Impacts to Sensitive Receptors***

Threshold: Would the proposed project expose sensitive receptors to substantial pollutant concentrations?

Finding: Changes or alterations have been required in, or incorporated into, the project which mitigate or avoid the significant effects on the environment (for Project construction). (Draft SEIR, pp. 5.3-34 - 5.3-39)

Explanation: The nearest land use where an individual could remain for 24 hours to the Amendment Area has been used to determine localized construction and operational air quality impacts for emissions of PM_{10} and $PM_{2.5}$ (since PM_{10} and $PM_{2.5}$ thresholds are based on a 24-hour averaging time). The nearest receptor used for evaluation of localized impacts of PM_{10} and $PM_{2.5}$ is represented by location R4 which represents the existing residence at 4677 Sagewood Lane, approximately 22 feet west of the Amendment Area. As there are no industrial/commercial receptors located at a closer distance than the nearest residential home, the same residence located at 4677 Sagewood Lane (location R4) was used for evaluation of localized impacts of NO_X and CO.

With implementation of mitigation measures from the 2006 EIR (MMs Air 1, Air 2, and Air 3), and TOP 2050 EIR MM 3-1, emissions during

the peak construction activity would not exceed the SCAQMD's localized significance thresholds (LST). As such, the Project's localized impacts during construction activity would be less than significant with mitigation.

Emissions during the peak operational activity would not exceed the SCAQMD's localized significance thresholds. The Project would not exceed any of the operational LSTs and localized impacts during operational activity would be less than significant.

At the maximally exposed individual receptor (MEIR), the maximum incremental cancer risk attributable to Project construction-source DPM emissions is estimated at 3.69 in one million, which is less than the SCAQMD's significance threshold of 10 in one million. At this same location, non-cancer risks were estimated to be <0.01, which would not exceed the applicable threshold of 1.0. Because all other modeled receptors would experience lower concentrations of DPM during Project construction, all other receptors in the vicinity of the Project would be exposed to less emissions and therefore less risk than the MEIR identified herein. As such, the Project would not cause a significant human health or cancer risk to adjacent land uses as a result of Project construction activity, resulting in a less than significant impact.

The Project would not produce the volume of traffic required to generate a CO "hot spot" resulting in a less than significant impact.

Mitigation Measures:

2006 EIR MM Air 1 through MM Air 3 and TOP EIR MM 3-1 shall apply.

3. BIOLOGICAL RESOURCES

a. *Impacts to Sensitive Species*

Threshold: Would the Project have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service?

Finding: Changes or alterations have been required in, or incorporated into, the project which mitigate or avoid the significant effects on the environment (for impacts to sensitive wildlife). (Draft SEIR, pp. 5.4-19 - 5.4-21)

Explanation: *Sensitive Vegetation Communities*: The Project's potential impacts to vegetation communities and land cover types due to implementation of the Project include the entire Amendment Area and off-site improvement areas, totaling 171.4 acres. The Amendment Area and off-site improvement areas do not contain any

sensitive vegetation communities and no sensitive communities were reported within two miles of the Amendment Area.

Direct impacts to disturbed/developed, herbaceous non-native forbs and grasses, tamarisk thickets, tree tobacco stands, and agricultural vegetation/land cover types are considered less than significant because these habitats/land covers are common in the surrounding vicinity and do not represent sensitive plant communities.

Special Status Plants: None of the 36 special status plant species with the potential to occur in the area are anticipated to occur within the Amendment Area or off-site improvement areas. Based on the habitat found onsite, high levels of disturbance, low habitat quality, and the lack of detection of any special status plants during the biological survey, the Project would not impact any special status plant species. No impacts to special status plant species would occur.

Special Status Wildlife: Three sensitive wildlife species were observed within the Amendment Area during the field survey. Two additional species have a high or low to moderate potential to occur on the site. Cooper's hawk is considered to have moderate to high potential to occur within the Amendment Area during the nesting bird season and in a foraging capacity. Foraging habitat exists within the Amendment Area as open fields with perching opportunities in the tamarisk trees. The species was observed within the western portion of the Amendment Area. The tamarisk trees may provide potential nesting bird habitat; however, this species prefers other mature trees including large pines and Eucalyptus trees, which are not present. Project activities may have an impact if performed during the nesting bird season. 2006 EIR MM Bio 2 requires that the City's open space mitigation fees to mitigate the loss of nesting and migratory bird habitat be paid. 2006 EIR MM Bio 3 requires that construction and removal of trees occur outside of the nesting season (September 1 to January 31 for songbirds; September 1 to January 14 for raptors), and refers to actions required by 2006 EIR MM Bio 4 if nesting birds are located. 2006 EIR MM Bio 4 requires that a pre-construction field survey shall be conducted by a qualified biologist to determine if active nests of species protected by the Migratory Bird Treaty Act (MBTA) or California Department of Fish and Wildlife (CDFW) Code are present in the construction zone or within a buffer of 500 feet and identifies actions to take if nesting birds are located. With implementation of the 2006 EIR MMs, impacts would be less than significant.

Burrowing owl was not detected during the biological field visit and burrowing owl focused survey conducted in September 2021, or the focused surveys conducted in 2022. However, the species has a high potential to occur as it has been observed previously, and the Amendment Area and off-site improvement areas contain burrows

suitable for burrowing owl and suitable burrowing owl foraging habitat. Impacts to the burrowing owls are considered potentially significant. MM Bio 1 from the 2006 EIR requires pre-construction survey be conducted by a qualified biologist to determine the presence of burrowing owl. With implementation of mitigation from the 2006 EIR, impacts would be less than significant.

Bell's sage sparrow was observed foraging during the biological survey. However, the Amendment Area and off-site improvement areas lack suitable nesting habitat for the species, which is primarily chaparral and sage scrub vegetation communities. Similarly, the grasshopper sparrow has a low to moderate potential to occur for foraging, however, the Amendment Area and off-site improvement areas lack suitable nesting habitat for the species. The loss of 171.4 acres of foraging habitat for these two species would not decrease populations below self-sustaining levels given the availability of habitat remaining in the region. Foraging individuals are expected to move to adjacent habitat during construction activities; therefore, there would be no direct mortality on these species. Impacts would be less than significant, and no mitigation is required.

San Diego black-tailed jackrabbit was observed within the Amendment Area. Although the Amendment Area and off-site improvement areas are very disturbed, these areas could provide foraging habitat for this species. The loss of 171.3 acres of habitat for this species would result in an incremental loss of habitat, which is considered a less than significant impact per CEQA because it would not decrease jackrabbit populations in the region below self-sustaining levels given the availability of remaining habitat. Individuals are expected to move to adjacent habitat during construction activities; therefore, there would be no direct mortality on the species. Therefore, no mitigation would be required.

The remaining species listed in Appendix C of SEIR Technical Appendix C1 are not expected to occur within the Amendment Area or off-site improvement areas due to the lack of suitable habitat. Therefore, there would be no impact on these species and no mitigation would be required.

Impacts to sensitive wildlife species would be less significant with mitigation.

Project Impacts to Critical Habitat: The Amendment Area and off-site improvement areas do not fall within any Critical Habitat. Therefore, the implementation of the Project would not result in impacts to any Critical Habitat

2006 EIR Mitigation Measures:

MM Bio 1 There may be a probability of owl colonization within the project site considering the presence of foraging habitat and previous records of

presence. To ensure that no direct loss of individuals occurs, mitigation shall be completed prior to initiation of on-site grading activities for each development phase. A pre- construction survey for resident burrowing owls will be conducted by a qualified biologist. The survey will be conducted 30 days prior to construction activities including vegetation clearing, grubbing, tree removal, or site watering. If ground-disturbing activities are delayed or suspended for more than 30 days after the preconstruction survey, the site should be resurveyed for owls.

If owls are determined to be present within the construction footprint, they will be captured and relocated. If non-breeding owls must be moved away from the disturbance area, passive relocation techniques will be used. The pre-construction survey and any relocation activity will be conducted in accordance with the CDFG Report on Burrowing Owl Mitigation, 1995. According to CDFG guidelines, mitigation actions will be conducted from September 1 to January 31, which is prior to the nesting season. However, burrowing owl nesting activity is variable, and as such the time frame will be adjusted accordingly. Should eggs or fledglings be discovered in any owl burrow, the burrow cannot be disturbed (pursuant to CDFG guidelines) until the young have hatched and fledged (matured to a stage that they can leave the nest on their own).

Occupied burrows will not be disturbed during the nesting season (February 1 through August 31) unless a qualified biologist approved by the Department of Fish and Game verifies through non-invasive methods that either: a) the adult birds have not begun egg-laying and incubation; or b) the juveniles from the occupied burrows are foraging independently and are capable of independent survival. If a biologist is unable to verify one of the above conditions, then no disturbance shall occur within 300 feet of the burrowing owl nest during the breeding season to avoid abandonment of the young.

Passive relocation can be used to exclude owls from their burrows (outside the breeding season or once the young are able to leave the nest and fly) by installing one-way doors in burrow entrances. These one-way doors allow the owl to exit the burrow, but not enter it. These doors should be left in place 48 hours to ensure owls have left the burrow. Artificial burrows should be provided nearby. The project area should be monitored daily for one week to confirm owl use of burrows before excavating burrows in the impact area. Burrows should be excavated using hand tools and refilled to prevent reoccupation. Sections of flexible pipe should be inserted into the tunnels during excavation to maintain an escape route for any animals inside the burrow.

MM Bio 2 To mitigate for potential impacts to loss of nesting and foraging habitat, the project proponent shall be required to pay City of Ontario open space mitigation fees. Fees collected will be used “to acquire

and restore mitigation lands to offset impacts to species now living in the New Model Colony and impacts to existing open space," according to the City of Ontario Development Impacts Fee Calculation Report and the Settlement and general Release Agreement. Development is currently required to pay $4,320 per acre. Therefore, the proposed project will pay approximately $1,080,000 for open space acquisition based upon the current fee.

MM Bio 3 While project impacts to individual raptor species were considered to be not significant, the following mitigation measure will also be incorporated in order to eliminate or reduce any potential impacts to raptors and/or migratory birds. Construction and/or removal of windrow trees will occur outside of the nesting season (the nesting season for songbirds is February 1st through August 31st, and the nesting season for raptors is January 15th to August 31st). If tree removal activities must occur during the breeding season, the mitigation measure in MM Bio 4 shall be implemented.

MM Bio 4 If project construction activities involving heavy equipment and/or windrow tree removal are to occur during the nesting/breeding season (between February 1st and August 31st for songbirds; and between January 15th and to August 31st for raptors) of potentially occurring sensitive bird species, a pre-construction field survey shall be conducted by a qualified biologist to determine if active nests of species protected by MBTA or CDFG are present in the construction zone or within a buffer of 500 feet. Pre- construction nesting/breeding surveys shall be conducted in all CDFG jurisdictional areas and within windrow trees. If no active nests are found during the survey, construction activities may proceed.

If active nests are located during the pre-construction surveys, no grading, heavy equipment or tree removal activities shall take place within at least 500 feet of an active listed species or raptor nest, 300 feet of other sensitive bird nests (non-listed), and 100 feet of most common songbird nests. The buffer may be modified and/or other recommendations proposed as determined appropriate by the biological monitor to minimize impacts.

b. *Wildlife Movement*

Threshold: Would the Project interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of wildlife nursery sites?

Finding: Changes or alterations have been required in, or incorporated into, the project which mitigate or avoid the significant effects on the environment. (Draft SEIR, p. 5.4-23)

Explanation: *Wildlife Movement*: The Project has the potential to support local wildlife dispersal and foraging; however, due to the disturbed nature

of the Amendment Area and off-site improvement areas, and the degraded habitats, the loss of foraging habitat and/or effect on local wildlife movement would be less than significant. No long-term or significant effects to wildlife movement would result. Additionally, no native resident or migratory fish species or native wildlife nursery sites are located within the Amendment Area or off-site improvement areas.

Nesting Birds/Raptor Foraging Habitat: Due to the potential for onsite bird nesting and marginal foraging habitat for raptors including tamarisk and residential trees, Project construction could result in impacts to nesting birds resulting in a potentially significant impact. The Project would incorporate 2006 EIR MM Bio 2 to mitigate the loss of nesting and foraging habitat. Additionally, the Project would incorporate 2006 EIR MM Bio 3 and MM Bio 4, which require that tree removal activities occur outside or the nesting/breeding season or preconstruction nesting bird/raptor surveys be conducted and identify actions to take if nesting birds/raptors are located. Incorporation of mitigation from the 2006 EIR would ensure potential impacts to nesting birds are less than significant.

Bat Foraging Habitat: The potential for bat roosting is low within the Amendment Area and off-site improvement areas, while the existing vegetation may represent suitable foraging habitat. However, the impact on foraging habitat would be less than significant given the availability of habitat remaining in the region.

Mitigation Measures:

2006 EIR MM Bio 2 through MM Bio 4 shall apply.

4. CULTURAL RESOURCES

a. *Archaeological Resources*

Threshold: Would the Project cause a substantial adverse change in the significance of an archaeological resource pursuant to §15064.5?

Finding: Changes or alterations have been required in, or incorporated into, the project which mitigate or avoid the significant effects on the environment. (Draft SEIR, p. 5.5-12)

Explanation: As identified in the 2006 EIR, two archaeological isolates—basalt flakes—were discovered within the boundaries of the Specific Plan Area, which includes existing PAs 30 and 31; however, these isolates were not considered significant resources. No additional archaeological resources were identified through the records search or field survey conducted for the Amendment Area during preparation of the Cultural Resources Study. Therefore, construction activities associated with the Project would not adversely affect any existing known significant archaeological resources.

Due to the current condition of the Amendment Area, which has been disturbed, any buried resources discovered in the Amendment Area or off-site improvement areas during construction would likely lack integrity, and no unique resources are expected to be discovered. However, there is a remote potential for archaeological resources to be present beneath the surface. If any archaeological resources are unearthed during construction that meet the definition of an archaeological resource cited in CEQA Guidelines Section 15064.5 and are disturbed/damaged by Project construction activities, impacts to archaeological resources would be potentially significant. 2006 EIR MM Cultural 1 is incorporated into the Project and requires that a qualified archaeologist determine the significance of resources unearthed during ground-disturbing activities. If the resource is determined to be an historical or unique archaeological resource, as defined in Section 15064.5 of the CEQA Guidelines, avoidance or other appropriate measures would be implemented to ensure impacts on archaeological resources remain less than significant.

2006 EIR Mitigation Measures:

MM Cultural 1 Should any cultural and/or archaeological resources be accidentally discovered during construction, construction activities shall be moved to other parts of the project site and a qualified archaeologist shall be contacted to determine the significance of these resources. If the find is determined to be an historical or unique archaeological resource, as defined in Section 15064.5 of the CEQA Guidelines, avoidance or other appropriate measures shall be implemented.

5. GEOLOGY AND SOILS

a. *Liquefaction and Unstable Soils*

Threshold: Would the Project be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction, or collapse?

Finding: Changes or alterations have been required in, or incorporated into, the project which mitigate or avoid the significant effects on the environment. (Draft SEIR, pp. 5.7-15 - 5.7-16)

Explanation: *Landslides*: The Amendment Area is relatively flat and is not in proximity to natural or manmade steep slopes. As such, the Project would not be located in an area susceptible to landslides. No impact would occur.

Lateral Spreading/Liquefaction: The Amendment Area is within an area where groundwater is recorded at a depth of 120 feet below the surface. Therefore, due to the absence of groundwater in the upper 50 feet at the Amendment Area, soil liquefaction and lateral spreading is unlikely. Impacts would be less than significant.

Earthwork Shrinkage and Subsidence: It is estimated that shrinkage factor for soil removed and replaced as compacted fill within the Amendment Area is 10-15 percent, and the subsidence factor is 0.1 foot. The degree to which fill soils are compacted and variations in the in-situ density of existing soils would influence earth volume changes. Therefore, some adjustments in grades near the completion of grading could be required to balance the earthwork. The Project would comply with the ground preparation and construction recommendations contained in the site-specific geotechnical investigations required by the OMC and 2006 EIR MM Geo 4. Further, 2006 EIR MM Geo 3 requires that site materials be continuously tested and excavated to a minimum of four feet where soils generally become denser, and that actual removal depths be determined during grading when subsurface conditions are exposed. Therefore, with implementation of 2006 EIR MMs, potential impacts related to earthwork shrinkage and soil subsidence would be less than significant.

Organic Soils: In accordance with 2006 EIR MM Geo 2, the site-specific geotechnical investigations would include an analysis of the organic matter content of soils within PAs 30 through 34. The Project Geotechnical Report recommends that soils of poor gradation, expansion, or strength properties be placed in areas designated by the geotechnical consultant or shall be mixed with other soils providing satisfactory fill material. If the organic matter content of the soils is greater than 2 percent when mixed with subsurface soils and/or imported fill, then manure would be removed from the site prior to grading operations. With implementation of 2006 EIR MM Geo 2 and compliance with the site-specific ground preparation and construction recommendations contained in the site-specific geotechnical investigations required by the OCM and 2006 EIR MM Geo 4, potential impacts related to organic soils would be less than significant. Implementation of the Project would not result in any new or more severe significant impacts related to unstable soils than those disclosed in the 2006 EIR.

Corrosive Soils: Concrete within PAs 30 and 31 would have a negligible exposure to water-soluble sulfate in the soil; however, the underlying soils are extremely corrosive to ferrous metals. The soil conditions are similar within the Expansion Area. Protection of buried pipes utilizing coatings on all underground pipes; clean backfills and a cathodic protection system can be effective in controlling corrosion. With compliance with the site-specific recommendations contained in the site-specific geotechnical investigations required by the OMC and 2006 EIR MM Geo 4, potential impacts related to corrosive soils would be less than significant.

2006 EIR Mitigation Measures:

2006 EIR MM Geo 4 shall apply.

MM Geo 2 To properly assess and address the suitability of on-site soils to be used as fill, a geotechnical evaluation shall be performed by a qualified professional prior to the approval of the Tentative Tract map or site plan for a given phase of development. This evaluation will include an analysis of the organic matter content of soils on the site. If the organic matter content of the soils is greater than 2 percent when mixed with subsurface soils and/or imported fill, then manure will be removed from the site prior to grading operations.

MM Geo 3 Site materials should be continuously tested and excavated to a minimum of 4 feet where soils generally become denser. Actual removal depths will be determined during grading when subsurface conditions are exposed.

b. *Expansive Soils*

Threshold: Would the Project be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial direct or indirect risks to life or property?

Finding: Changes or alterations have been required in, or incorporated into, the project which mitigate or avoid the significant effects on the environment. (Draft SEIR, p. 5.7-17)

Explanation: The Amendment Area includes soils with very low to medium expansion potential. As required by 2006 EIR MM Geo 3, soils would be subject to additional testing and the expansion potential would be verified. With incorporation of recommendations from the Geotechnical Investigation (refer to 2006 EIR MM Geo 4), impacts related to expansive soils would be less than significant. With implementation of the 2006 EIR MMs, potential impacts related to expansive soils would be less than significant.

Mitigation Measures:

2006 EIR MM Geo 3 and MM Geo 4 shall apply.

c. *Paleontological Resources*

Threshold: Would the Project directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?

Finding: Changes or alterations have been required in, or incorporated into, the project which mitigate or avoid the significant effects on the environment. Draft SEIR, pp. 5.7-18 - 5.7-19)

Explanation: The Amendment Area does not contain any known unique geologic features and no paleontological resources or localities were observed during the pedestrian survey conducted during preparation of the site-specific Cultural Resources Study. However, the Amendment Area is underlain by Pleistocene deposits that have yielded fossil localities near the Amendment Area. Therefore, due to the Amendment Area's proximity to recorded fossil localities, the

Project's soil deposits have the potential to yield paleontological resources. As such, the Project's construction activities have the potential to unearth paleontological resources, resulting in a potentially significant impact.

2006 EIR MM Cultural 3 requires the preparation of a Paleontological Resources Monitoring and Treatment Plan (PRMTP), which outlines actions to take to ensure protection of paleontological resources that may exist in the underlying soils. The required *Paleontological Resource Monitoring and Treatment Plan for the Park Place Project, City of Ontario, San Bernardino County, California* (2015 PRMTP), was prepared for the existing Specific Plan Area, including PA 30 and 31, and has been implemented during grading activities, including monitoring by a qualified paleontologist. No paleontological resources have been encountered during construction activities completed to date within the existing Specific Plan Area.

Grading activities within the PAs 30 and 31 would be subject to the requirements outlined in the 2015 PRMTP for the existing Specific Plan Area, and grading activities within the Expansion Area would be subject to a similar PRMTP to be prepared in accordance with 2006 EIR MM Cultural 3. The PRMTP would include requirements for paleontological monitoring during ground disturbing activities at depths greater than 5 feet and would identify actions to be taken in the event paleontological resources are encountered. With implementation of the PRMTP, as required by 2006 EIR MM Cultural 3, impacts (loss or destruction) to potential nonrenewable paleontological resources would be reduced to a less than significant level.

2006 EIR Mitigation Measures:

MM Cultural 3 Since grading plans have not yet been prepared to establish how deep excavation is needed, prior to the issuance of grading permits, and as recommended in the Phase I Cultural and Paleontological Resources Assessment for this site, a qualified paleontologist shall be retained to develop a Paleontological Resources Monitoring and Treatment Plan (PRMTP) for approval by the City. Following City approval of the PRMTP, grading and construction activities may proceed in compliance with the provisions of the approved PRMTP. The PRMTP shall include the following measures:

a. Identification of those locations within the project site where paleontological resources are likely to be uncovered during grading.

b. A monitoring program specifying the procedures for the monitoring of grading activities by a qualified paleontologist or qualified designee.

c. If fossil remains large enough to be seen are uncovered by earth-moving activities, a qualified paleontologist or qualified designee shall temporarily divert earth- moving activities around the fossil site until the remains have been evaluated for significance and, if appropriate, have been recovered; and the paleontologist or qualified designee allows earth-moving activities to proceed through the site. If potentially significant resources are encountered, a letter of notification shall be provided in a timely manner to the City, in addition to the report (described below) that is filed at completion of grading.

d. If a qualified paleontologist or qualified designee is not present when fossil remains are uncovered by earth- moving activities, these activities shall be stopped, and a qualified paleontologist or qualified designee shall be called to the site immediately to evaluate the significance of the fossil remains.

e. At a qualified paleontologist or qualified designee's discretion and to reduce any construction delay, a construction worker shall assist in removing fossiliferous rock samples to an adjacent location for temporary stockpiling pending eventual transport to a laboratory facility for processing.

f. A qualified paleontologist or qualified designee shall collect all significant identifiable fossil remains. All fossil sites shall be plotted on a topographic map of the project site.

g. If the qualified paleontologist or qualified designee determines that insufficient fossil remains have been found after fifty percent of earthmoving activities have been completed, monitoring can be reduced or discontinued.

h. Any significant fossil remains recovered in the field as a result of monitoring or by processing rock samples shall be prepared, identified, catalogued, curated, and accessioned into the fossil collections of the San Bernardino County Museum, or another museum repository complying with the Society of Vertebrate Paleontology standard guidelines. Accompanying specimen and site data, notes, maps, and photographs also shall be archived at the repository.

i. Within 6 months following completion of the above tasks, a qualified paleontologist or qualified designee shall prepare a final report summarizing the results of the mitigation program and presenting an inventory and describing the scientific significance of any fossil remains accessioned into the museum repository. The report shall be submitted to the City Planning Department and the museum repository. The report shall comply with the Society of Vertebrate Paleontology standard guidelines for assessing and mitigating impacts on paleontological resources.

6. GREENHOUSE GAS EMISSIONS

a. *Emissions Generation and Plan Consistency*

Threshold: Would the Project generate greenhouse gas (GHG) emissions, either directly or indirectly, that may have a significant impact on the environment?

Would the Project conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emission of greenhouse gases?

Finding: Changes or alterations have been required in, or incorporated into, the project which mitigate or avoid the significant effects on the environment. (Draft SEIR, pp. 5.8-15 - 5.8-17)

Explanation: Because the Ontario 2022 Community Climate Action Plan (CCAP) Update addresses GHG emissions reductions and is consistent with the requirements of AB 32, SB 32, and international efforts to reduce GHG emissions, compliance with the CCAP Update fulfills the description of mitigation for impacts related to GHG impacts found in the State CEQA Guidelines. As required by Project-specific MM 8-1, future residential development within the Amendment Area would implement Screening Table Measures providing for the required points pursuant to the City Screening Tables. As such, the Project would be consistent with the GHG Development Review Process requirement to achieve the requisite amount of points and thus the Project is considered to have a less than significant individual and cumulatively considerable impact on GHG emissions.

Project-Specific Mitigation Measure:

MM 8-1 Project development proposals shall implement Screening Table Measures that achieve the requisite points per the City's Community Climate Action Plan (CCAP) Screening Tables. The City shall verify that Screening Table Measures achieving the requisite points are incorporated in development plans prior to the issuance of building permit(s) and/or site plans (as applicable). The City shall verify implementation of the selected Screening Table Measures prior to the issuance of Certificate(s) of Occupancy. At the discretion of the City, measures that provide GHG reductions equivalent to GHG emissions reductions achieved via the Screening Table Measures may be implemented. Alternatively, the Project shall demonstrate that annual GHG emissions would not exceed the target thresholds or other alternative compliance mechanisms in the CCAP or subsequent updates.

7. HAZARDS AND HAZARDOUS MATERIALS

a. *Reasonably Foreseeable Upset and Accident Conditions Involving the Release Of Hazardous Materials*

Threshold: Would the Project create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?

Finding: Changes or alterations have been required in, or incorporated into, the project which mitigate or avoid the significant effects on the environment. (Draft SEIR, pp. 5.9-18 - 5.9-19)

Explanation: *Recognized Environmental Conditions (RECs)*: Existing and prior uses within the Amendment Area have resulted in RECs that have the potential to expose workers on site, the public, and/or the environment to a substantial hazard. As required by 2006 EIR MM Haz 1 and MM Haz 6, Phase I Environmental Site Assessments (ESAs) and methane gas testing have been conducted for the Amendment Area. Recommendations from the Phase I ESAs would be implemented consistent with 2006 EIR MM Haz 1.

In compliance with 2006 EIR MM Haz 3, any septic tanks present would be properly removed and disposed, and water wells to be abandoned would be destroyed following City requirements, which would ensure that potential impacts are less than significant. The investigations conducted for the Amendment Area also concluded that subsurface methane gas levels and pesticide use are not expected to pose a hazard to future site occupants; however, soil with organic contents greater than 2 percent should not be placed as structural fill.

Although previous methane gas surveys have concluded that the methane levels do not pose a hazard, pursuant to 2006 EIR MM Haz 6, current methane gas assessments will be conducted for PAs 30 through 33 and recommendations identified as a result of these assessment, if any, would be implemented. With adherence to 2006 EIR MM Haz 1 and MM Haz 6, the implementation of proposed residential and school uses would not pose a hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment. This impact would be less than significant.

Although not identified as a REC, the SCE corridor with high power transmission lines passes between PAs 30 and 31, which was evaluated in the 2006 EIR. As identified in the 2006 EIR, this would not pose a hazard to future residential uses within these PAs.

Building Materials: Due to the age of the buildings within PAs 30 and 31 (constructed before 1976) asbestos containing materials and lead-based paint are present and could be released during

demolition activities. As required by 2006 EIR MM Haz 5, prior to demolition, asbestos and lead-based paint would be removed in accordance with regulatory requirements prior to demolition. With implementation of 2006 EIR MM Haz 5, impacts associated with the potential release of hazardous building materials during demolition activities would be less than significant impact.

2006 EIR Mitigation Measures:

MM Haz 1 To the extent not previously prepared and to properly assess and address potential hazardous materials, including pesticide residue, within the specific plan area, a Phase I Environmental Site Assessment (ESA) shall be performed by a registered environmental assessor (REA) prior to the approval of the Tentative Tract map, site plan or other discretionary approval for a given phase of development. If potential hazardous materials or conditions are identified in the Phase I report, the recommendations of the ESA shall be implemented. Such recommendations could include surficial sampling and chemical analysis within agricultural areas or where soil staining was observed. The Phase I ESA shall be provided to the City of Ontario and shall be included in any CEQA analysis prepared in connection with the consideration of the discretionary approval for development.

MM Haz 3 All septic tanks on the project site will be properly removed and disposed of prior to site development. All water wells on the project site which are proposed to be abandoned will be properly destroyed prior to site development in accordance with City requirements. These activities will occur subject to City of Ontario Building Safety requirements.

MM Haz 3 is applicable to PAs 30 and 31 only with respect to septic tanks; there are no septic tanks within PAs 32 through 34. With respect to water wells, MM Haz 3 is applicable to PAs 30, 33, and potentially 34; there are no wells within PAs 31 and 32.

MM Haz 4 If, while performing any excavation as part of project construction, material that is believed to be hazardous waste is discovered, as defined in Section 25117 of the California Health & Safety Code, the developer shall contact the City of Ontario Fire Department and the County of San Bernardino Fire Department Hazardous Materials Division. Excavation shall be stopped until the material has been tested and the presence of hazardous waste has been confirmed. If no hazardous waste is present, excavation may continue. If hazardous waste is determined to be present, the California Department of Toxic Substances Control shall be contacted, and the material shall be removed and disposed of pursuant to applicable provisions of California law.

MM Haz 5 Prior to demolition, all onsite buildings and remaining foundations that were built before 1976 shall be evaluated for the presence of asbestos and lead-based paint and those materials shall be removed according to applicable regulations and guidelines established by the South Coast Management District, Department of Toxic Substances Control, and the United States Environmental Protection Agency.

MM Haz 5 is applicable to PAs 30 and 31 only; there are no structures within PAs 32 through 34.

MM Haz 6 A methane gas assessment shall be prepared by a licensed professional with expertise in soil gas assessments for subdivisions proposed on former dairies, poultry ranches, hog ranches, livestock feed operations and similar facilities to determine the presence of methane gas within the project boundary. The methane gas assessment shall identify monitoring and mitigation strategies and approaches. All mitigation measures/plans and specifications shall be reviewed and approved by the City of Ontario.

Such an "assessment" may take two steps. A preliminary assessment should be done prior to grading to determine exactly where dairies have existed in the past so that the post grading assessment/mitigation measures can be focused on the portions of the specific plan area that have included dairies. The second step may include actual testing of graded pads no sooner than 30 days after construction to determine if methane is detected above 5,000 ppm. If so, the types of mitigation measures described below in MM Haz 7, or those approved by the City, shall be implemented in the areas exceeding this limit.

MM Haz 7 To reduce the risk of ground cracking, manure shall be removed from the site, such that the organic matter content of on-site soils shall not exceed 2 percent (a 2 percent total organic content is allowed, of which no more than 1 percent can be manure) in the building foundation areas when mixed with underlying clean soils and imported fill.

8. TRIBAL CULTURAL RESOURCES

a. *Impacts to Significant Tribal Cultural Resources*

Threshold: Would the Project cause a substantial adverse change in the significance of a tribal cultural resource…and that is a resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code Section 5024.1. In applying the criteria set forth in subdivision (c) of Public Resources Code Section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe.

Finding: Changes or alterations have been required in, or incorporated into, the project which mitigate or avoid the significant effects on the environment. (Draft SEIR, p. 5.17-7 – 5.17-8)

Explanation: The Gabrieleño Band of Mission Indians – Kizh Nation was the only tribe to request consultation. Through this consultation, which involved a consultation meeting held on April 13, 2022, the City and Gabrieleño Band of Mission Indians – Kizh Nation agreed that no tribal cultural resources are known to exist with this Amendment Area or off-site improvement areas. With implementation of Project-level MM 5.17-1 and MM 5.17-2, listed below, potentially significant impacts to unknown tribal cultural resources would be less than significant. MM 5.17-1 allows a Native American Monitor approved by the Gabrieleño Band of Mission Indians – Kizh Nation be present during ground-disturbing activity, and MM 5.17-2 identifies requirements for the preservation in place treatment of tribal cultural resources, and archaeological data recovery excavations if preservation is place is not feasible.

Project-Specific Mitigation Measures:

MM 5.17-1 Prior to the commencement of any ground disturbing activity at the Amendment Area or off-site improvement areas (Project site), the Project Applicant shall request a Native American Monitor approved by the Gabrieleño Band of Mission Indians-Kizh Nation – the tribe that consulted on this project pursuant to Assembly Bill A52 – SB18 (the "Tribe" or the "Consulting Tribe"). If a monitoring contract is declined by the Gabrieleño Band of Mission Indians-Kizh Nation, a qualified tribal monitor shall be retained. A copy of the executed monitoring contract shall be submitted to the City of Ontario Planning and Building Department prior to the issuance of any permit necessary to commence a ground-disturbing activity. The Tribal monitor will only be present on site during the construction phases that involve ground-disturbing activities. Ground disturbing activities are defined by the Tribe as activities that may include, but are not limited to, pavement removal, potholing or auguring, grubbing, tree removals, boring, grading, excavation, drilling, and trenching, within the project area. The Tribal Monitor will complete daily monitoring logs that will provide descriptions of the day's activities, including construction activities, locations, soil, and any cultural materials identified. The on-site monitoring shall end when all ground-disturbing activities on the Project Site are completed, or when the Tribal Representatives and Tribal Monitor have indicated that all upcoming ground-disturbing activities at the Project Site have little to no potential for impacting Tribal Cultural Resources. Upon discovery of any Tribal Cultural Resources, construction activities shall cease in the immediate vicinity of the find (not less than the surrounding 100 feet) until the find can be assessed. All Tribal Cultural Resources unearthed by project activities shall be evaluated by the qualified

archaeologist and Tribal monitor approved by the Consulting Tribe. If the resources are Native American in origin, the Consulting Tribe will retain it/them in the form and/or manner the Tribe deems appropriate, for educational, cultural and/or historic purposes. If human remains and/or grave goods are discovered or recognized at the Project Site, all ground disturbance shall immediately cease, and the county coroner shall be notified per Public Resources Code Section 5097.98, and Health & Safety Code Section 7050.5. Human remains and grave/burial goods shall be treated alike per California Public Resources Code section 5097.98(d)(1) and (2). Work may continue on other parts of the Project Site while evaluation and, if necessary, mitigation takes place (CEQA Guidelines Section 15064.5[f]). If a non-Native American resource is determined by the qualified archaeologist to constitute a "historical resource" or "unique archaeological resource," time allotment and funding sufficient to allow for implementation of avoidance measures, or appropriate mitigation, must be available. The treatment plan established for the resources shall be in accordance with CEQA Guidelines Section 15064.5(f) for historical resources and PRC Sections 21083.2(b) for unique archaeological resources.

MM 5.17-2 Preservation in place (i.e., avoidance) is the preferred manner of treatment. If preservation in place is not feasible, treatment may include implementation of archaeological data recovery excavations to remove the resource along with subsequent laboratory processing and analysis. Any historic archaeological material that is not Native American in origin shall be curated at a public, non-profit institution with a research interest in the materials, such as the Natural History Museum of Los Angeles County or the Fowler Museum, if such an institution agrees to accept the material. If no institution accepts the archaeological material, it shall be offered to a local school or historical society in the area for educational purposes.

D. FINDINGS REGARDING SIGNIFICANT AND UNAVOIDABLE IMPACTS THAT CANNOT BE MITIGATED TO A LESS THAN SIGNIFICANT LEVEL

The City Council hereby finds that, despite the incorporation of Mitigation Measures identified in the SEIR and in these Findings, the following environmental impacts cannot be fully mitigated to a less than significant level and a Statement of Overriding Considerations is therefore included herein:

1. AGRICULTURE AND FORESTRY RESOURCES

a. *Farmland Conversion*

Threshold: Would the Project convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?

Finding: Significant and unavoidable (Project and Cumulative). (Draft SEIR, pp. 5.2-9 - 5.2-10)

Specific economic, legal, social, technological, or other considerations, including considerations for the provision of employment opportunities for highly trained workers, make infeasible the mitigation measures or alternatives identified in the environmental impact report.

Explanation: The southwest portion of PA 30 and the associated off-site impact area, which are part of the adopted Specific Plan area, are currently classified as Prime Farmland by the California department of Conservation (DOC). The Project would result in the removal of approximately 4.7 acres of Prime Farmland within PA 30 and the associated offsite improvement area. The direct and cumulative loss of Prime Farmland associated with the development of the adopted Subarea 29 Specific Plan, which includes PA 30, is a significant impact previously evaluated in the 2006 EIR and the TOP 2010 EIR. The 2006 EIR concluded that project and cumulative impacts associated with the loss of agricultural resources and Prime Farmland would be significant and unavoidable, and a Statement of Overriding Considerations was adopted. This is consistent with the TOP 2010 EIR determination that Citywide agricultural impacts were significant and unavoidable. It should be noted that TOP 2050 SEIR determined that the implementation of TOP 2050 would not result in any new or more significant impacts related to the direct conversion of Farmland than what was identified in TOP 2010 EIR. Consistent with the 2006 EIR, mitigation to reduce impacts to less than significant levels, including city-wide farmland preservation, remain infeasible. In summary, it was concluded that if a portion of the Specific Plan area was maintained in agriculture, in the long-term it would become economically unviable, and environmental factors and regulations are also causing the decline in the viability of agriculture within the Chino Basin (i.e., stricter air quality and water quality regulations). With the decline in the long-term economic viability of agriculture in the Chino Basin, if this approach were taken in Ontario Ranch, easements for all prime Farmland soils lost (about 2,952 acres) would have to be acquired elsewhere. Therefore, cumulatively, it was found not feasible to preserve or mitigate agricultural uses in the Specific Plan area. In addition, preserving agriculture within Ontario Ranch would impede the City of Ontario from achieving General Plan goals and objectives for housing. As such, the Project's impact on Prime Farmland within PA 30 remains significant and unavoidable.

The proposed Expansion Area (proposed new PAs 32 through 34) does not contain any land mapped by the DOC as Farmland (Prime Farmland, Unique Farmland, or Farmland of Statewide Importance). The proposed Expansion Area is identified as "Other Land" by the

DOC. Additionally, the Expansion area consists of Class IV and III soils, which have limitations relative to agricultural production. Therefore, the implementation of the Project within the proposed Expansion Area would not convert Farmland to non-agricultural uses and no impacts would occur. Implementation of development in the proposed Expansion Area would not result in any new or more severe impacts on agricultural resources than previously disclosed in the 2006 EIR, TOP 2010 EIR or TOP 2050 SEIR.

Mitigation Measures: No feasible mitigation.

2. AIR QUALITY

a. *Implementation of the Air Quality Management Plan*

Threshold: Would the Project conflict with or obstruct implementation of the applicable air quality plan?

Finding: Significant and unavoidable (Project and Cumulative). (Draft SEIR, pp. 5.3-27 - 5.3-29)

Specific economic, legal, social, technological, or other considerations, including considerations for the provision of employment opportunities for highly trained workers, make infeasible the mitigation measures or alternatives identified in the environmental impact report.

Explanation: The Project would not result in the exceedance of growth assumptions within the SCAQMD Air Quality Management Plan (AQMP). However, as discussed below, the Project has the potential to result in or cause National Ambient Air Quality Standards (NAAQS) or California Ambient Air Quality Standards (CAAQS) violations because operational-source emissions would exceed the applicable SCAQMD regional thresholds for VOC, NO_X, and CO. The primary emissions sources are consumer products (VOC) and mobile source emissions (NO_X and CO). The Project would implement TOP 2050 SEIR MM AQ-1 and 2006 EIR MM Air 4; however, these measures would not reduce emissions to below the SCAQMD regional thresholds for these pollutants. Additional Project-level mitigation measures are not available to further reduce the operational air quality emissions from the proposed residential, school and park uses. As such, the Project is considered to have the potential to conflict with the AQMP and a potentially significant impact would occur.

2006 EIR Mitigation Measures:

MM Air 4 Local transit agencies shall be contacted to determine bus routing in the project area that can accommodate bus stops at the project access points and the project shall provide bus passenger benches and shelters at these project access points.

TOP EIR Mitigation Measures

MM AQ-1 Prior to discretionary approval by the City of Ontario for development projects subject to CEQA (California Environmental Quality Act) review (i.e., nonexempt projects), project applicants shall prepare and submit a technical assessment evaluating potential project operation-phase-related air quality impacts to the City of Ontario Planning Department for review and approval. The evaluation shall be prepared in conformance with South Coast Air Quality Management District (South Coast AQMD) methodology in assessing air quality impacts. If operation-related air pollutants are determined to have the potential to exceed the South Coast AQMD–adopted thresholds of significance, the City of Ontario Planning Department shall require that applicants for new development projects incorporate mitigation measures to reduce air pollutant emissions during operational activities. The identified measures shall be included as part of the conditions of approval. Possible mitigation measures to reduce long-term emissions could include, but are not limited to the following:

- For site-specific development that requires refrigerated vehicles, the construction documents shall demonstrate an adequate number of electrical service connections at loading docks for plug-in of the anticipated number of refrigerated trailers to reduce idling time and emissions.
- Applicants for manufacturing and light industrial uses shall consider energy storage and combined heat and power in appropriate applications to optimize renewable energy generation systems and avoid peak energy use.
- Site-specific developments with truck delivery and loading areas and truck parking spaces shall include signage as a reminder to limit idling of vehicles while parked for loading/unloading in accordance with California Air Resources Board Rule 2845 (13CCR Chapter 10 sec. 2485).
- Provide changing/shower facilities as specified in Section A5.106.4.3 of CALGreen (Nonresidential Voluntary Measures).
- Provide bicycle parking facilities per Section A4.106.9 of CALGreen (Residential Voluntary Measures).
- Provide preferential parking spaces for low-emitting, fuel-efficient, and carpool/van vehicles per Section A5.106.5.1 of CALGreen (Nonresidential Voluntary Measures).
- Provide facilities to support electric charging stations per Section A5.106.5.3 and Section A5.106.8.2 of CALGreen (Nonresidential Voluntary Measures; Residential Voluntary Measures).
- Applicant-provided appliances shall be Energy Star–certified appliances or appliances of equivalent energy efficiency (e.g.,

dishwashers, refrigerators, clothes washers, and dryers). Installation of Energy Star–certified or equivalent appliances shall be verified by the City during plan check.

b. *Cumulatively Considerable Pollutant Emissions*

Threshold: Would the Project result in a cumulatively considerable net increase of any criteria pollutant for which the Project region is non-attainment under an applicable state or federal ambient air quality standard?

Finding: Significant and unavoidable (for operational Project and cumulative air quality impacts. (Draft SEIR, pp. 5.3-30 - 5.3-34)

Specific economic, legal, social, technological, or other considerations, including considerations for the provision of employment opportunities for highly trained workers, make infeasible the mitigation measures or alternatives identified in the environmental impact report.

Explanation: Operational activities associated with the Project (residential, school and park uses) would result in emissions of VOCs, NO_X, SO_X, CO, PM_{10}, and $PM_{2.5}$. A majority of the VOC emissions are derived from consumer products. Consumer products cannot be regulated by the City of Ontario. CARB is primarily responsible for controlling pollution from consumer products. As such, the Project Applicant cannot meaningfully control the use of consumer products by future residents and building users via mitigation; thus, the Project's operational VOC emissions are considered significant and unavoidable as no feasible mitigation measure exists that would reduce the impact to less-than-significant levels. The use of Energy Star-certified appliances as required by TOP 2050 SEIR MM AQ-1 would reduce a negligible amount of emissions from area source air quality emissions that may occur onsite. Additionally, a majority of the operational-source NO_X and CO emissions would be generated by Project mobile sources (traffic). Although the Project would be required to implement 2006 EIR MM Air 4, no other mitigation measures related to vehicular emissions are available that are within the City of Ontario's jurisdictional authority and that are feasible for the City of Ontario to enforce and have a proportional nexus to the Project's level of impact. VOC and NO_X are precursors for ozone; thus, the Project would result in a cumulatively-considerable net increase of criteria pollutant for which the Project region is non-attainment. Therefore, because the Project's operational-source VOC, NO_X, and CO emissions would exceed the applicable SCAQMD regional thresholds, the Project would result in significant and unavoidable direct and cumulatively-considerable impacts to air quality during long-term operations.

Mitigation Measures:

2006 EIR MM Air 4 and TOP EIR MM AQ-1 shall apply.

3. NOISE

a. *Increase in Noise Levels in Excess of Noise Standards*

Threshold: Would the Project result in generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the Project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?

Finding: Significant and unavoidable (Project and cumulative offsite traffic noise). (Draft SEIR, pp. 5.13-11 - 5.13-16)

Specific economic, legal, social, technological, or other considerations, including considerations for the provision of employment opportunities for highly trained workers, make infeasible the mitigation measures or alternatives identified in the environmental impact report.

Explanation: *Construction Noise Level Impacts*: The Project's construction noise levels would not exceed the daytime 80 dBA L_{eq} significance threshold at all receiver locations. Therefore, noise impacts related to Project construction would be less than significant and no mitigation is required. Notwithstanding, 2006 EIR MM Noi 1, which requires adherence to the City's Noise Ordinance relative to days/hours of construction, and 2006 EIR MM Noi 2, which requires construction staging areas not be located within 150 feet of existing sensitive receptors and construction equipment be fitted with properly operating and maintained mufflers, are incorporated into the Project. Construction-related noise impacts would be less than significant.

Operational Noise Level Impacts: The proposed residential development within the Amendment Area would not include any specific type of operational noise levels beyond the typical noise sources associated with similar residential land uses in the area, such as people and children, parking lot activity, garage doors, small air conditioners, and trash collection.

To ensure the proposed mechanical ventilation complies with the City's Noise Ordinance requirements (OMC Section 5-29.04), Project-specific MM 5.13-1 requires best engineering practices be used in the placement of noise generating equipment when developing site plans for future land uses containing HVAC units such that noise levels at the property line comply with City standards. Development plans shall be accompanied by an acoustical analysis demonstrating compliance with City standards for approval prior to issuance of building permits. With adherence to the City's Noise

Ordinance, which would be ensured with incorporation of MM 5.13-1, operational noise impacts would be less than significant.

Off-Site Traffic Noise Impacts: The Existing without Project exterior noise levels are expected to range from 53.1 to 72.1 dBA CNEL, without accounting for any noise attenuation features such as noise barriers or topography. Under Existing with Project conditions exterior noise levels are calculated to range between 55.0 to 72.1 dBA CNEL. The Project's off-site noise level increases are calculated to range between 0.0 to 8.0 dBA CNEL on the study area roadway segments. Therefore, based on the significance criteria, the land uses adjacent to the following study area roadway segments would experience significant noise level impacts due to unmitigated Project-related traffic noise levels: Eucalyptus Ave west of Hamner Ave (Segment 46) (noise level increase from 55.3 to 63.3 dBA CNEL).

Due to the nature of the noise source (traffic noise), mitigation options are limited to barriers to shield receivers and roadway modification, such as lowering speed limits and alternate roadways surfaces. Barriers already exist along Segment 46 or are not considered feasible due to property access requirements of existing noise sensitive land uses. The speed modeled for Segment 46 is already considered low and reducing the speed to 25 mph would reduce noise level by 3 dBA and would not reduce the impact to less than significant levels (i.e., -4 dBA). Rubberized open graded asphalt hot mix can provide noise attenuation of approximately 4 dBA for automobile traffic noise levels. Thus, rubberized open graded asphalt could reduce the increase in noise levels to less than 5 dBA CNEL along Segment 46. However, the City of Ontario pavement standards require the use of rubberized gap graded asphalt, which would result in an approximate 1 dBA CNEL reduction. Since the City does not allow for the use of rubberized open graded asphalt, the mitigation is not considered feasible. Therefore, there is no feasible mitigation to reduce the off-site traffic noise impacts along Eucalyptus Ave west of Hamner Ave (Segment 46) to less than significant, and this noise level increase would be significant and unavoidable.

Opening Year 2025 without Project exterior noise levels are calculated to range between 54.1 to 73.2 dBA CNEL, without accounting for any noise attenuation features such as noise barriers or topography. The Opening Year 2025 with Project noise levels are expected to range between 57.1 to 73.4 dBA CNEL. The Project's off-site noise level increases are calculated to range between 0.0 to 7.1 dBA CNEL. Based on the significance criteria for off-site traffic noise, the land uses adjacent to Eucalyptus Ave west of Hamner Ave (Segment 46) (noise level increase from 56.4 to 63.5 dBA), would also experience significant noise level impacts due to unmitigated

Project-related traffic noise levels. There is no feasible mitigation to reduce this impact to a less than significant level; therefore, the Project's traffic noise levels under the Opening Year 2025 with Project conditions would be significant and unavoidable.

The Future Year 2040 without Project exterior noise levels are calculated to range between 57.3 to 72.8 dBA CNEL, without accounting for any noise attenuation features. The Future Year 2040 with Project conditions noise levels are calculated to range between range from 57.9 to 73.1 dBA CNEL. The Project off-site traffic noise level changes are calculated to range from 0.0 to 1.7 dBA CNEL. The decreases in traffic noise shown in the future year condition are due to new roadways being constructed over time, allowing for a redistribution of traffic within the City. Based on the significance criteria for off-site traffic noise, land uses adjacent to the study area roadway segments would experience less than significant noise level increases. Therefore, the Project's traffic noise levels under the Future Year 2040 with Project conditions would be less than significant without mitigation.

On-Site Traffic Noise Impacts: The City's general building code requirements require new developments to meet the noise standards outlined in the CBC. Notably, the CBC requires that interior noise levels attributable to exterior sources not exceed 45 dBA in any habitable room for residential uses. 2006 EIR MM Noi 7 requires that architectural plans be submitted to the City of Ontario for an acoustical plan check prior to the issuance of building permits to assure that the proper windows and/or doors are upgraded for sound reduction and proper ventilation systems are incorporated in order to meet the interior noise level requirement.

2006 EIR Mitigation Measures:

MM Noi 1 The construction activities of the proposed project shall comply with the City of Ontario Noise Ordinance Section 5-29.09(a) that prohibits construction activities on any weekday except between the hours of 7:00 a.m. and 6:00 p.m. or on Saturday or Sunday between the hours of 9:00 a.m. and 6:00 p.m.

MM Noi 2 Construction staging areas shall not be located within 150 feet of existing sensitive receptors and construction equipment shall be fitted with properly operating and maintained mufflers.

MM Noi 7 Architectural plans shall be submitted to the City of Ontario for an acoustical plan check prior to the issuance of building permits to assure that the proper windows and/or doors are upgraded for sound reduction and proper ventilation systems are incorporated in order to meet the interior noise level requirement.

Project-Specific Mitigation Measures:

MM 5.13-1 Prior to the issuance of a building permit for residential development, the Property Owner/Developer shall prepare an acoustical study(ies) of proposed plans, which shall identify all noise-generating areas and associated equipment, predict noise levels at property lines from all identified areas, and noise attenuation features required to be implemented (e.g., enclosures, barriers, site orientation), as necessary, to comply with the City Municipal Code Section 5-29.04.

E. CUMULATIVE IMPACTS

Regarding the Project's potential to result in cumulative impacts, the City hereby finds as follows:

1. AESTHETICS

Cumulative development in the vicinity of Amendment Area would be within Ontario Ranch and subject to the requirements of individual Specific Plans required for development in this area. Haven Avenue, which is a major north-south street with views of the San Gabriel Mountains, extends north-south between PAs 30 and 31 and the proposed Expansion Area. Consistent with TOP Policy CD1-5, the public views available from Haven Avenue would largely be retained, and the Project's potential impacts to scenic views of the San Gabriel Mountains would be less than significant. Similarly, the views of distant mountains from other streets adjacent to the Amendment Area (Mill Creek Avenue, Eucalyptus Avenue, and Bellegrave Avenue), would also be retained. The cumulative development that would be in the same viewshed as the Project from vantage points along the adjacent roadways, including Haven Avenue, would also maintain distant mountain views, as required by the City. Further, as with the Subarea 29 Specific Plan, the City requires that Specific Plans establish requirements to ensure that view corridors are free of visual clutter and include street trees. Therefore, cumulative development also would not have a substantial adverse impact on a scenic vista, and the Project would not contribute to cumulatively significant aesthetic impact related to scenic vistas.

The Amendment Area and nearby cumulative projects within the same viewshed are not within a State scenic highway corridor and do not contain any scenic resources. Therefore, the Project would not contribute to a cumulatively significant impacts on scenic resources within a designated State scenic highway.

The Project and cumulative projects in the same viewshed are within areas zoned Specific Plan, and future development would be required to adhere to the respective development standards and design guidelines outlined in the respective specific plans, which address architecture, landscaping, walls/fences, and other elements of the physical environment. Additionally, the cumulative projects would be required to adhere to established development standards addressing scenic quality as outlined in TOP and OMC, resulting in a less than significant impact. Therefore, the Project would not result in a cumulatively considerable contribution to a significant aesthetic impact related to scenic quality.

Cumulative development projects with the potential to generate light and glare would be required to comply with regulations established to reduce light and glare impacts from new development, including the City's Development Code and respective regulations, and would also result in less than significant light and glare impacts. Therefore, the Project

would not result in a cumulatively considerable contribution to a significant aesthetic impact related to light and glare. (SEIR, pp. 5.1-16 - 5.1-17)

2. AGRICULTURE AND FORESTRY RESOURCES

This cumulative impact analysis for agriculture and forestry resources considered development of the Amendment Area in conjunction with other development projects and planned development pursuant to the City's adopted TOP Policy Plan. The Project would contribute to the loss of Prime Farmland in the City, consistent with the determination identified in the 2006 EIR and TOP 2010 EIR. Important Farmland in the City has continually declined and all of the Prime Farmland in the southern area of Ontario is planned for development as identified in TOP 2050. Continued conversion of Prime Farmland to urban uses would substantially reduce overall agricultural productivity in the City. Although the proposed conversion is consistent with the projected decline in agricultural productivity of the region, and the City (including PA 30), the Project would result in a significant direct and cumulatively considerable impact related to the conversion of Farmland to non-agricultural uses, consistent with the conclusion of the TOP 2010 EIR and 2006 EIR.

The Project would not conflict with existing zoning for agricultural use nor contribute to a cumulative impact to agriculturally zoned properties. The Project site and adjacent sites are not under a Williamson Act contract and therefore, would not contribute to a cumulatively significant impact to Williamson Act lands. There are existing agricultural uses north of the Amendment Area; however, these areas are mapped as "Other Land" consistent with the Amendment Area (not Farmland) and are also zoned Specific Plan pursuant to adopted specific plans, or Specific Plan with an AG Overlay District. These lands are already planned to be converted to non-agricultural uses and the Project would not cause a cumulative impact related to conflict with existing zoning for agricultural uses, or other changes in the environment that could result in conversion of Farmland to non-agricultural uses.

There are no forest lands, timberlands, or Timberland Production zones within the Project site or in the City, nor are any lands in the City under active production as forest land. Therefore, cumulatively significant impacts to forest land would not occur and the Project not contribute to a cumulatively significant impact related to the loss of these lands. (SEIR, pp. 5.2-14 - 5.2-15)

3. AIR QUALITY

This cumulative impact analysis considers development of the proposed Project in conjunction with other development projects and planned development within the SoCAB.

The CAAQS designate the SoCAB as nonattainment for O_3, PM_{10}, and $PM_{2.5}$ while the NAAQS designates the SoCAB as nonattainment for O_3 and $PM_{2.5}$. SCAQMD has published a report on how to address cumulative impacts from air pollution: White Paper on Potential Control Strategies to Address Cumulative Impacts from Air Pollution. In summary, projects that do not generate operational or construction emissions that exceed SCAQMD's recommended daily thresholds for Project-specific impacts also would not cause a cumulatively-considerable increase in emissions for those pollutants for which the SoCAB is in nonattainment, and, therefore, would not be considered to have a significant, adverse air quality impact. Alternatively, individual Project-related construction

and operational emissions that exceed SCAQMD thresholds for Project-specific impacts would be considered cumulatively considerable.

Project implementation would have the potential to conflict with SCAQMD's 2022 AQMP because the Project would contribute to existing regional air quality violations. Based on SCAQMD's regional emissions thresholds, the Project's conflict with the AQMP is determined to be a significant cumulatively-considerable impact.

Project construction criteria air pollutant emissions would not exceed the applicable SCAQMD regional thresholds with implementation of 2006 EIR and TOP 2050 EIR mitigation measures; however, SCAQMD regional thresholds for VOC, NO_X, and CO emissions would be exceeded during Project operation even with mitigation. Therefore, the Project's operational VOC, NO_X, and CO emissions would be cumulatively considerable resulting in a significant and unavoidable impact.

All Project-related construction- and operational localized air pollutant emissions would be less than significant; therefore, impacts are not considered cumulatively considerable. Additionally, the Project would not result a human health risk, or result in the formation of or contribute to a CO "hot spot." As such, impacts are not considered cumulatively-considerable.

There are no Project components that would expose a substantial number of sensitive receptors to objectionable odors. Because the Project's construction and operation would not create substantial and objectionable odors, odors from the Amendment Area would not commingle with odors from nearby development projects or agricultural/dairy farm activities to expose nearby sensitive receptors to substantial, offensive odors. Accordingly, implementation of the Project would result in a less than significant cumulative impact related to odors. (SEIR, pp. 5.3-40 - 5.3-41)

4. BIOLOGICAL RESOURCES

This cumulative impact analysis for biological resources considers development of the Amendment Area in conjunction with other development projects in the vicinity of the Project as well as buildout of development anticipated by TOP. This area consists of a variety of land uses that include agricultural, residential, commercial, and industrial uses. The undeveloped areas may include sensitive habitats, which may contain special-status plants, migratory birds, and jurisdictional water. However, as discussed above, the Amendment Area and off-site improvement areas do not have special-status plants or jurisdictional areas; therefore, implementation of the Project would not result in cumulatively considerable impacts to these biological resources.

The Amendment Area and off-site improvement areas do not contain sensitive vegetation communities, or support habitat for special status plant species. However, these areas have suitable habitat for burrowing owl, Cooper's hawk, and the Bell's sage sparrow. 2006 EIR MM Bio 1 through MM Bio 4 have been incorporated into the Project to reduce impacts to special status wildlife species to less than significant levels. Notably, the Project Applicant would pay the required City of Ontario open space mitigation fee to address potential cumulative impacts associated with loss of habitat (refer to 2006 EIR MM Bio 2). Additionally, each cumulative development project in the City would also be required to evaluate potential impacts to special status biological resources, identify project-specific mitigation measures, and pay the City's open space fee, if applicable.

Therefore, implementation of the Project would not contribute to a substantial adverse cumulatively considerable impact to special-status species.

The Project site does not contain any sensitive or critical habitat or State or federally protected wetlands and is not within a wildlife movement corridor. Therefore, the Project would not contribute to a cumulatively considerable impact on these biological resources.

The Project would result in the removal of vegetation that has the potential to support nesting avian species and raptor species. A wide range of habitat and vegetation types have the potential to support nesting avian and raptor species; therefore, it is likely that other development projects within the cumulative study area also may impact nesting avian and raptor species. However, the Project – like all other development activities in the cumulative study area – would be required to comply with State and federal law to preclude impacts to nesting avian and raptor species. Further, the Project's impacts would be mitigated to a level considered less than significant with implementation of 2006 EIR MM Bio 3 and MM Bio 4. Therefore, the Project would not contribute to a cumulatively considerable impact on these biological resources.

The Project would not conflict with any local policies or ordinances protecting biological resources, including the City's requirements to protect heritage trees, as there are no heritage trees within the Amendment Area or off-site improvement area. Other development projects in the cumulative study area would be required to comply with applicable local policies and/or ordinances related to the protection of biological resources as a standard condition of review/approval. Because the Project and cumulative development would be prohibited from violating applicable, local policies or ordinances related to the protection of biological resources, a cumulatively considerable impact would not occur.

There are no adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or State habitat conservation plan applicable to the Project. Therefore, the Project would not result in a cumulatively considerable impact. (Draft SEIR, pp. 5.4-25 - 5.4-26)

5. CULTURAL RESOURCES

The potential for implementation of the Project to contribute to cumulative impacts to historical resources was analyzed in conjunction with other projects located in areas that were once similarly influenced by the historical agricultural industry of the City and the region. Record searches and field surveys indicate the absence of significant historic cultural resource sites and resources on and abutting the Project site; therefore, implementation of the Project would not contribute towards a cumulative impact to significant historical sites and/or resources.

Direct impacts to cultural resources are site-specific and would not result in significant cumulative impacts; however, the Project, in conjunction with cumulative development in the City could lead to accelerated degradation of previously unknown archaeological resource sites. Each development proposal received by the City undergoes environmental review and would be subject to the same resource protection requirements as the Project. If there is a potential for significant impacts on cultural resources, an investigation will be required to determine the nature and extent of the resources and to identify appropriate mitigation measures, including requirements such as those identified

in this section. Based on the information presented in the required site-specific cultural resource studies, construction activities associated with the Project would not impact any known prehistoric archaeological resources; however, there is a remote potential to encounter previously unknown archaeological resources during construction of the Project, and other development project sites in the City. Therefore, without mitigation, the Project would result in a potentially cumulatively considerable contribution to a significant cumulative impact to archaeological resources, if such resources are unearthed during Project construction. With implementation of 2006 EIR MM Cultural 1, the Project's impacts would be less than significant. The City requires incorporation of similar measures in each development Project. As such, the Project would not result in a cumulatively considerable contribution to a significant cumulative impact to archaeological resources.

Mandatory compliance with the provisions of California Health and Safety Code Section 7050.5 as well as Public Resources Code Section 5097 et seq., as identified in 2006 EIR MM Cultural 2, would assure that, as with the Project, future development projects within the City treat human remains that may be uncovered during development activities in accordance with prescribed, respectful and appropriate practices, thereby avoiding significant cumulative impacts. (Draft SEIR, pp. 5.5-14 - 5.5-15)

6. ENERGY

Project construction and operations would not result in the inefficient, wasteful, or unnecessary consumption of energy. The Project would not engage in wasteful or inefficient uses of energy and aims to achieve energy conservation goals within California. Other cumulative developments within the region would be required to demonstrate that the wasteful, inefficient, or unnecessary energy consumption would not occur. Additionally, other cumulative developments would be subject to the same regulatory requirements as the Project, including compliance with the Title 24 Energy Code, CALGreen, and TOP CCAP, which would ensure that cumulative development does not result in the wasteful, inefficient, or unnecessary consumption of energy. The Project and other cumulative developments also inherently would be consistent with the IEPR, State of California Energy Plan, AB 1493 (Pavley), and SB 350, as discussed herein. As such, there is a less than significant cumulative impact related to energy. (Draft SEIR, p. 5.6-14)

7. GEOLOGY AND SOILS

Except for erosion hazards, potential hazardous effects related to geologic and soil conditions are unique to the Amendment Area, and inherently restricted to the specific property proposed for development. That is, issues including fault rupture, seismic ground shaking, liquefaction, landslides, and expansive soils would involve effects to (and not from) a proposed development project, are specific to conditions on the subject property, and are not influenced or exacerbated by the geologic and/or soils hazards that may occur on other, off-site properties. Further, the Project and any future development projects would be required to comply with applicable State and local requirements, such as the City's Building Code, and grading requirements outlined in the OMC. As with the Project, future development would be required to have site-specific geotechnical investigations prepared to identify the geologic and seismic characteristics on a site and to provide recommendations for engineering design and construction to ensure the structural

integrity of proposed development; these recommendations would be incorporated into Project design. Compliance of individual projects with the recommendations of the applicable geotechnical investigation would prevent hazards associated with unstable soils, landslide potential, lateral spreading, liquefaction, soil collapse, expansive soil, and other geologic issues. Because of the site-specific nature of these potential hazards and the measures to address them, there would be no direct or indirect connection to similar potential issues or cumulative effects to or from other properties.

Regulatory requirements mandate that the Project incorporate design measures during construction and long-term operation to ensure that significant erosion impacts do not occur. Other development projects in the vicinity of the Amendment Area would be required to comply with the same regulatory requirements as the Project to preclude substantial adverse water and wind erosion impacts. Because the Project and cumulative development projects would be subject to similar mandatory regulatory requirements to control erosion hazards during construction and long-term operation, cumulative impacts associated with wind and water erosion hazards would be less than significant.

Because the soils present on the Project site have paleontological sensitivity and because this geologic layer is present throughout the City and southern California, there is a potential to impact paleontological resources. The Project's potential to result in cumulative impacts to paleontological resources is similar to that of other projects located in the region that are underlain by Pleistocene and Holocene alluvial soils. However, each development proposal received by the City undergoes environmental review and would be subject to the same resource protection requirements as the Project. If there is a potential for significant impacts on paleontological resources, an investigation would be required to determine the nature and extent of the resources and to identify appropriate mitigation measures, including requirements such as those identified in this subsection (refer to 2006 EIR MM Cultural 3). With implementation of mitigation, impacts to paleontological resources would be less than significant. The Project's contribution to cumulative geology and soils impacts would be less than significant, with mitigation. (Draft SEIR, pp. 5.7-19 - 5.7-20)

8. GREENHOUSE GAS EMISSIONS

The assessment of GHG emissions is inherently cumulative because climate change is a global phenomenon. An individual development project does not have the potential to result in direct and significant global climate change-related effects in the absence of cumulative sources of GHGs. Accordingly, the analysis provided in Section 5.8.4 of the SEIR reflects a cumulative impact analysis of the effects related to the Project's GHG emissions, which concludes that the Project would not conflict with an applicable GHG-reduction plans, policies, or regulations and would not generate cumulatively-considerable GHG emissions that may have a significant impact on the environment because the Project is consistent with the City's CCAP. (Draft SEIR, p. 5.8-18)

9. HAZARDS AND HAZARDOUS MATERIALS

The Project's construction and operation would be required to comply with all applicable federal, State, and local regulations to ensure proper use, storage, and disposal of hazardous substances. Such uses also would be subject to additional review and permitting requirements by the Ontario Fire Department. Similarly, any other

developments in the area proposing the construction of uses with the potential for use, storage, or transport of hazardous materials also would be required to comply with applicable federal, State, and local regulations, and such uses would be subject to additional review and permits from their local oversight agency. Additionally, based on the laboratory testing results, there are no concentrations of chemicals detected that exceed established regulatory standards for residential or school uses or that would otherwise pose a hazard to the public, and potential impacts associated with former uses on site would be less than significant with implementation of the identified mitigation measures. Therefore, the potential for release of toxic substances or hazardous materials into the environment, either through accidents or due to routine transport, use, or disposal of such materials, would be less than significant for the Project and cumulative development. Accordingly, the Project would not result in a cumulatively considerable contribution to a significant cumulative impact related to hazardous materials.

The Amendment Area is located within 0.3-mile of an existing school, and the Project includes a middle school site. However, due to the nature of the Project (residential and school uses), there would not be any hazardous emissions, and the handling of hazardous materials, substances, or waste would not involve the type or quantity that would pose a significant hazard to school children, resulting in a less than significant impact. Therefore, the Project would not contribute to a cumulatively significant hazards/hazardous materials impact on any public or private schools located within one-quarter mile of the Amendment Area.

The Amendment Area is not identified on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 that would pose a hazard to the public; therefore, the Project would not contribute to a cumulatively significant hazardous materials impact associated with a listed hazardous materials site.

The Amendment Area is within the AIA for ONT but is not within a safety zone for the ONT or Chino Airport. The Amendment Area is not within the noise contours for ONT or the Chino Airport Additionally, the Project construction and operations would not exceed established height restrictions requiring FAA notification pursuant to FAR Part 77 and would not obstruct airport operations. Therefore, the Project would not result in a safety hazard or excessive noise for people residing or working in the Project area and would not contribute to a cumulatively considerable impact associated with airport hazards.

The Amendment Area does not contain any emergency facilities, nor does it serve as an emergency evacuation route. Further, the Project would involve implementation of roadway and site access improvements, including along Bellegrave Avenue south of the Amendment Area, which is an evacuation route, and would not impair implementation of, or physically interfere with an adopted emergency response plan or emergency evacuation plan area. Similarly, cumulative development in proximity to the Amendment Area would be required to adhere to emergency access requirements. The Project would not contribute to any cumulative impacts associated with an adopted emergency response plan or emergency evacuation plan.

The Amendment does not contain wildlands and is not within or near a VHFHZ. There is no potential for the Project to expose people or structure, either directly or indirectly, to a significant risk of loss, injury or death involving wildland fires. Cumulative developed proposed within VHFHSZs would be required to meet minimum fire fuel modification

and/or clearing requirements in addition to meeting the standards of the various fire codes in effect at the time of building permit issuance. With adherence to applicable requirements, cumulative development within VHFHSZs would not increase hazards from wildland fires and hazards to adjacent properties. The Project would not contribute to any cumulative impacts associated with wildland fires. (Draft SEIR, pp. 5.9-24 - 5.9-25)

10. HYDROLOGY AND WATER QUALITY

The cumulative impact analysis considers development of the Project in conjunction with other development projects and planned development in the Santa Ana River Basin and Chino Groundwater Basin. Project construction and the construction of other projects in the cumulative study area would have the potential to contribute waterborne pollution, including erosion and siltation, to the Santa Ana River Basin. Pursuant to the requirements of the State Water Resources Control Board and the Santa Ana RWQCB, all construction projects that disturb one (1) or more acres of land area are required to obtain coverage for construction activities under the State's General Construction NPDES Permit. To obtain coverage, an effective site-specific SWPPP is required to be developed and implemented. The SWPPP must identify potential on-site pollutants and identify an effective combination of erosion control and sediment control measures to reduce or eliminate discharge of pollutants to surface waters. In addition, the Project Applicant and all cumulative developments in the Santa Ana River Basin would be required to comply with the Santa Ana RWQCB's *Santa Ana River Basin Water Quality Control Program*, which establishes water quality standards for ground and surface waters of the region. Compliance with these mandatory regulatory requirements would ensure that development projects within the Santa Ana River Basin, including the proposed Project, would not contribute substantially to water quality impairments during construction.

Operational activities with the Amendment Area would be required to comply with site-specific WQMPs to minimize the amount of waterborne pollution, including erosion and sediment, discharged from the site. Other development projects within the watershed would similarly be required by law to prepare and implement site-specific WQMPs to ensure that runoff does not substantially contribute to water quality violations. Additionally, with implementation of the 2006 EIR MMs Hydro 1 through 3 and 6 in conjunction with the MCW, the Project would not contribute to water quality impacts. Moreover, because the Project's proposed uses were anticipated by TOP 2050, the water quality effects due to the development of the Amendment Area were analyzed in TOP 2050 SEIR, which determined that the implementation of TOP 2050 would not result in cumulatively considerable water quality impacts. Accordingly, operation of the Project would not contribute to cumulatively-considerable water quality effects.

The Project does not include the installation or use of groundwater wells on site; the Project would abandon and remove the existing groundwater wells on site. Although the Project would increase impervious surface coverage within the Amendment Area as compared to existing conditions, the Project would not substantially interfere with groundwater recharge for the Chino Groundwater Basin. Additionally, preparation and implementation of WQMPs would ensure that runoff from the Amendment Area does not contain substantial pollutants that could impair surface or groundwater quality. Other developments within the cumulative study area would also be required to implement operational WQMPs and would be required to demonstrate that overall runoff does not substantially change in terms of peak volumes or total volumes of runoff. Therefore, the

Project would result in a less than cumulatively considerable impact to groundwater supply, recharge, and quality.

Construction of the Project and other development projects within the Santa Ana River Basin would be required to comply with applicable federal, State, and local regulation and applicable regional and local master drainage plans to mitigate flood hazards on and off site. Compliance with applicable federal, State, and local regulations and applicable drainage plans would require development sites to be protected from flooding during peak storm events (i.e., 100-year storm) and would not allow development projects to expose downstream properties to increased flooding risks during peak storm events. Additionally, future development proposals within the Santa Ana River Basin would be required to prepare hydrologic and hydraulic calculations, subject to review any approval by the responsible City/County Engineer to demonstrate that substantial on- or off-site flood hazards would not occur. Increased storm water runoff from the Expansion Area would not exceed the capacity of existing storm drain infrastructure. Additionally, storm water runoff from existing PAs 30 and 31 would adhere to the runoff yields identified in the 2012 Ontario MPD. Because the Project and all other developments throughout the Santa Ana River Basin would be required to comply with applicable federal, State, and local regulations to ensure that stormwater discharges do not substantially exceed existing volumes or exceed the volume of available conveyance infrastructure, a substantial cumulative impact related to flood hazards would not occur.

The Amendment Area is not within a special flood hazard area. Accordingly, development on the Project site would have no potential to impede or redirect flood flows and a cumulatively-considerable impact would not occur.

The Project would have no impacts related to the risk of release of pollutants due to inundation resulting from flooding, seiche, or tsunami and would have less than significant impacts related to the release of pollutants due to dam failure. Therefore, the Project would not result in a cumulatively considerable contribution to a significant cumulative impact associated with pollutant release due to inundation.

The Project would not conflict with any water quality control plans or sustainable groundwater management plans. As such, the Project would not conflict with such plans on a cumulative basis; no significant cumulative impacts from the Project related to conflicts with water quality control plans or sustainable groundwater management plan would occur. (Draft SEIR, pp. 5.10-25 - 5.10-27)

11. LAND USE AND PLANNING

The cumulative impact analysis considers development of the Project in addition to other development in the City in accordance with the TOP 2050 Policy Plan (General) and City zoning. The TOP 2050 SEIR concluded that with adherence to TOP 2050 development pursuant to the TOP 2050 would not result in cumulative impacts related to land use.

The Project would involve development of residential and school uses consistent with that anticipated by the City in TOP 2050 and would not divide an established community. Therefore, the Project would not cause or cumulatively contribute to the division of an established community.

The land use character and overall density of the Project are consistent with that anticipated by the TOP 2050 Policy Plan, and would be compatible with surrounding uses, including existing and planned uses with the existing Subarea 29 Specific Plan Area. Cumulative development projects would be reviewed for consistency with adopted land use plans, policies, and regulations by the City (including Policy/General Plan policies and Ontario Development Code regulations), in accordance with the requirements of CEQA, the state Zoning and Planning Law, and the State Subdivision Map Act, all of which require findings of plan and policy consistency prior to approval of entitlements for development. Through these requirements, future development would be consistent with adopted goals and polices, would be in compliance with applicable regulations, and would be compatible with existing land uses. Even if the cumulative impact of these projects would be significant, the Project's contribution to such cumulative land use impacts is less than significant and is thus not cumulatively considerable because (1) the proposed development would not change the type or amount of development anticipated by the TOP 2050 General Plan/Policy; and, (2) the Project does not conflict with adopted goals and policies as identified through the analysis presented in the SEIR. (Draft SEIR, pp. 5.11-21 – 5.11-22)

12. MINERAL RESOURCES

The area considered for cumulative impacts to mineral resources is the P-C regions overlapping the City and extending into other counties within the Greater Los Angeles Sand and Gravel Resources Area: the Claremont-Upland P-C region extends into Los Angeles County; the Orange County-Temescal Region extends into Orange County and Western Riverside County, and the San Bernardino P-C region encompasses San Bernardino and most western Riverside County. Other projects in the referenced areas would likely be proposed within MRZ-2 and MRZ-3 areas. Development of such projects could cause loss of availability of known mineral resources valuable to the region. Other projects would be subject to independent CEQA review, including analysis of impacts to MRZ areas and mining sites. Implementation of all feasible mitigation measures would be required to reduce any significant impacts identified. The Project would not impact mineral resources of statewide, regional, or local value. Therefore, the Project would not contribute to a significant cumulative impact.

13. NOISE

The cumulative noise impact analysis considers development of the Project in conjunction with development anticipated by TOP 2050 and cumulative development projects identified in the Transportation Study included in SEIR Technical Appendix M.

Project construction-related noise impacts would be less than significant. As it is unlikely that any other cumulative developments would be under construction in proximity to the Project concurrent with Project construction, cumulatively-considerable construction-related noise impacts would be less than significant.

With respect to noise associated with Project operations, the Project's operational noise from on-site residential and school uses would be less than significant. There are no cumulative projects in the vicinity of the Amendment Area that would result in significant operational noise impacts. Therefore, the Project's contribution to cumulative operational noise impacts would be less than significant.

The Project's traffic noise contributions along study area roadways would not exceed applicable significance thresholds with the exception of one roadway segment (Eucalyptus Avenue west of Hamner Avenue) under the Existing Plus Project and Opening Year 2025 condition. There is no feasible mitigation to address this impact; therefore, the Project would result in a significant and unavoidable cumulative traffic-related noise impact.

The Project-related vibration impacts would be less than significant during Project construction. As it is unlikely that other sources of vibration would occur in the vicinity of the Amendment Area concurrent with Project construction activities, impacts would be less than cumulatively considerable.

Under long-term conditions, the Project would not include or require equipment or activities that would result in perceptible groundborne vibration. As with the Project, cumulative projects in the vicinity of the Amendment Area would consist primarily of residential and other uses that would not generate perceptible groundborne vibration during operation. Therefore, Project impacts due to vibration during operation would be less than cumulatively considerable.

The Project would not involve the construction, operation, or use of any public airports or public use airports. There are no conditions associated with implementation of the Project that would contribute airport noise or exposure of additional people to unacceptable level of airport noise. Accordingly, the Project would not cumulatively contribute to impacts associated with noise from a public airport, public use airport, or private airstrip. (Draft SEIR, p. 5.13-19 - 5.13-20)

14. POPULATION AND HOUSING

Buildout of the Amendment Area is anticipated to generate housing and non-residential uses consistent with TOP 2050. The associated increases in population (estimated 5,876 residents) and employment opportunities (estimated 56 jobs) in the City would not result in substantial unplanned population growth in the area. The anticipated employment opportunities associated with the proposed school use would not be such that individuals would move to the City or the region creating unplanned indirect increases in population. Additionally, the Project would not result in an extension of infrastructure that would result in unplanned induced or cumulatively considerable development. Since the Project impact is less than significant, the Project would not cause a cumulatively considerable impact related to population or housing.

15. PUBLIC SERVICES AND RECREATION

Based on their inherent purpose, the provision of public services takes into consideration a larger service area than just individual project boundaries. Public services to the Amendment Area are provided by OFD, OPD, MVSD, CJUHSD, Ontario Public Library, and the City's Recreation Department. The implementation of the Project would result in a net increase of 1,470 units to the Specific Plan Area, which would generate an increase in the residential population in the City, consistent with that anticipated in the TOP 2050 EIR, and an associated increase in the demand for public services. The Project's residential component would generate new residents, based on the population generation factor of 4.0 persons per dwelling unit, and 56 new employment opportunities, which would increase existing demands for public services.

Fire Protection, Police, and Library Services: Future development in the City - based on buildout of TOP 2050 and including other proposed development projects such as the Project - is expected to increase demand for fire protection, police and library services within the City and would contribute to the need to expand facilities and operate such services. Each development project in the City would be required to pay applicable development fees as charged by the City's Building Department or collected by the Building Department on the behalf of other departments or governmental agencies for fire protection facilities. By maintaining a consistent level of service through expansion or facility improvements, the service providers would be able to ensure that their performance objectives are consistently met. As increases in demand would be incremental over time, the City would continue to regularly monitor resources to ensure that adequate facilities, staffing, and equipment are available to serve existing and future development and population increases.

Additionally, new development in the City, including development assumed for buildout of TOP 2050, would be required to comply with all applicable codes, ordinances and regulatory requirements, including the current edition of the CFC, regarding fire prevention and suppression measures, fire hydrants, automatic fire extinguishing systems, fire access, and water availability, among other measures. Future development in the City, would also have to comply with applicable fire safety and fire access requirements to prevent fire incidents; to facilitate emergency response; and to reduce the demand for fire protection services. Individual projects would be reviewed by the OFD to determine the specific fire requirements applicable to the development and to ensure compliance with these requirements. This further ensures an adequate level of service for fire protection and emergency services to residents in the OFD service area. Therefore, the Project's increased demand for fire protection, police and library services would not result in a cumulatively considerable contribution to a significant cumulative impact related to these services.

School Services: Cumulative development in the MVSD and CJUHSD service area would generate an increase in student population in MVSD and CJUHSD schools. As school districts' enrollments expand, administrators must seek short-term and long-term remedies to accommodate those additional students. In recognition of these conditions, the State Legislature provided authority for school districts to assess impact fees for both residential and nonresidential development projects. Those fees, as authorized under Section 65995 of the California Government Code, are collected by municipalities at the time building permits are issued and conveyed to the affected school district in accordance with a defined fee structure. The Legislature has declared that the payment of these fees constitutes full mitigation for the impacts generated by new development, per Section 65995 of the California Government Code. Since all development implemented pursuant to the Project and other development proposed in the City and surrounding areas must pay its appropriate school impact fees, each project would mitigate the impacts associated with its activities. Additionally, Project Applicants in Ontario Ranch that are party to the 2015 School Mitigation Agreement would be required to adhere to the mitigation requirements established in that Agreement. Further, the Project includes a middle-school site (PA 34) with a capacity of 1,200 students. Therefore, the Project's increased demand for school services would not result in a cumulatively considerable contribution to a significant cumulative impact related to schools.

Parks and Recreational Facilities: Future residential development in the City would contribute to the cumulative need for more recreational open space and park facilities generated by the increase in residents. Buildout of TOP 2050 would generate a need for a total of approximately 539 acres of parkland. Currently there are approximately 481.4 acres of existing and planned parkland in the City; therefore, additional parkland is required to serve cumulative development.

The City has several regulations in place to address funding from new residential development for additional parkland and park improvements. Pursuant to the Quimby Act, Ontario Development Code Chapter 6.08.030 requires the dedication of land, payment of an in-lieu fee, or a combination of both for the provision of parks and recreational facilities for new residential developments. Through adherence to requirements for provision of parkland and/or payment of development impact fees, residential developments in the City would provide parks and recreational facilities to meet their demands.

Since individual development projects would mitigate their incremental impact on parks and recreational facilities, the Project's increased demand for park and recreational facilities would not result in a cumulatively considerable contribution to a significant cumulative impact related to park and recreational facilities.

16. TRANSPORTATION

The Project would not conflict with a program, plan, ordinance, or policy addressing the circulation system, including transit, roadway, bicycle, and pedestrian facilities. Cumulative development projects would be reviewed for consistency with adopted programs, plans, ordinances, or policies, including but not limited to the *Connect SoCal* (SCAG RTP/SCS) and TOP 2050, as applicable. Even if cumulative development projects are in conflict, the Project would not contribute to a cumulative impact and thus would not be cumulatively considerable because the Project does not conflict with a program, plan, ordinance, or policy addressing the circulation system.

With respect to VMT impacts, the City of Ontario has adopted the following threshold of significance related to cumulative VMT impacts for land use plans:

- A significant impact would occur if the project caused total daily VMT/SP within the City to be higher than the no project alternative under cumulative conditions.

Since the Project is consistent with the General Plan land use designations, there is no difference between the Future No Project and Future With Project conditions and therefore there is no forecast change in daily VMT within the City under cumulative conditions. Therefore, the Project's cumulative VMT impact would be less than significant.

The Project Applicant would develop the Amendment Area with uses consistent with the TOP 2050 land use designations. The Project would have less than significant impacts related to hazards from design or incompatible uses during construction and operation, and with respect to emergency access, with adherence to applicable requirements. Cumulative projects would also be required to comply with applicable regulations related to the use of designated truck routes for construction, roadway and access design, and emergency access, which are in place to ensure impacts are less than significant. Additionally, cumulative development in the area would continue the transition from agricultural to urban uses, reducing the potential conflict between farming equipment and

vehicles. Therefore, the Project would not result in a considerable contribution to cumulative impacts for these issues, when considered with the cumulative projects that are planned, proposed, or under construction in the vicinity of the Amendment Area. (Draft SEIR, p. 5-16.26)

17. TRIBAL CULTURAL RESOURCES

The Amendment Area is located within a Native American traditional use area that stretches across San Bernardino County. Other development projects within this traditional use area would have a similar potential as the Project to adversely affect tribal cultural resources. The City conducted Native American consultation with potentially culturally affiliated tribes, as required by AB 52 and SB 18. As a result of this consultation effort, no tribal cultural resources were identified within the Amendment Area or off-site improvement areas. However, it is possible that buried prehistoric artifacts or tribal cultural resources could be present within the area. The Project includes mitigation measures to ensure proper identification, treatment, and preservation of tribal cultural resources. Implementation of these measures would reduce the potential for the Project's adverse impacts on tribal cultural resources. Each future Project considered for approval by the City would be required to do its own consultation and include mitigation measures to protect resources if they are uncovered during grading activities. Neither the Project nor other cumulative developments are expected to result in significant impacts to tribal cultural resources provided site-specific surveys are conducted and required measures to protect the tribal cultural resources are implemented. As such, the Project would not result in a cumulatively considerable contribution to a significant cumulative impact to tribal cultural resources.

18. UTILITIES AND SERVICE SYSTEMS

The geographic context for the cumulative impact analysis for utilities and infrastructure systems for water systems and supply, sewer systems, storm drains, and solid waste services is the City. The geographic context for the cumulative impact analysis for dry utilities is the service area for the respective service providers (SCE, SoCalGas, Frontier, Charter/Spectrum and Ontario City Fiber). The cumulative impact area for wastewater treatment impacts is the service area for RP-5.

As with the Project, individual cumulative development projects would require the construction of necessary infrastructure (water and wastewater lines, storm drain facilities, dry utility infrastructure, and others) to serve the projects. However, the infrastructure needed for the Project would be limited to previously planned Master Plan utility infrastructure, and relatively small distribution and collection lines, which would occur within the Project's identified construction impact area. No new or expanded off-site infrastructure is required to be implemented as part of the Project, beyond the utility infrastructure to be constructed adjacent to the Amendment Area. The Project's proposed utility infrastructure would serve the Project and would not facilitate additional development in the area beyond that already anticipated by the respective Master Plans. The environmental impacts associated with construction of utility infrastructure to be installed as part of the Project have been addressed throughout the SEIR and would be less than significant with mitigation. The Project and all new development would have to coordinate with service providers to obtain services, and connections to existing utility lines would be made in accordance with the applicable requirements of the utility provider

and the City, as applicable. Further, the payment of service fees to the respective service providers is expected to ensure adequate services to individual developments. The Project in conjunction with cumulative development would not result in significant impacts related to the construction and installation of utility infrastructure and would not result in a cumulative impact. Therefore, the Project would not have a cumulatively considerable contribution to a significant cumulative impact associated with construction of utility infrastructure.

The analysis in the Project's WSA, which is based on the City's 2020 UWMP, demonstrates that with implementation of the Project and other cumulative developments, the City would have adequate water supplies through the year 2045 during normal, dry, and multiple dry years. Therefore, there would be a less than significant cumulative impact, and the Project would not have a cumulatively considerable contribution to a significant cumulative impact associated with water supply.

Under long-term, cumulative conditions, IEUA anticipates future increases in the demand for wastewater treatment services as the population within their service area grows. The Project would not result in the need for expanded wastewater treatment facilities, as RP-5 has sufficient existing capacity to handle wastewater generated by the Project and other cumulative development. Any proposed changes to capacity of the IEUA or any facility maintained by IEUA are reviewed throughout the year by IEUA. For all new development within the EMWD service area, connection and service fees are allocated to assist in the financing of any future collection and disposal facilities and any future new/modified water and sewer treatment plant facilities. Therefore, IEUA would have adequate wastewater treatment capacity for wastewater generation by the Project and cumulative developments in its service area and there would be less than significant cumulative impact. The wastewater generated by the Project would not exceed the capacity of the RP-5 and the Project would not have a cumulatively considerable contribution to a significant cumulative impact associated with wastewater treatment.

The solid waste generated by construction and operation of the Project would represent a nominal portion of the daily disposal capacity at the landfills serving the City. These landfills have sufficient daily capacity to handle solid waste during the Project construction and operation and the Project and would not directly result in the need for expanded solid waste disposal facilities. Further, the Project would adhere to applicable local and State regulations during both construction and long-term operations. Other cumulative development would also be required to comply with such regulations. Solid waste management regulations are more stringent now compared to when the 2006 EIR was prepared. Therefore, notwithstanding the significant and unavoidable impact conclusion reached in the 2006 EIR, TOP 2050 SEIR concluded the buildout of TOP 2050, which includes the development anticipated by the proposed Subarea 29 Specific Plan Amendment would result in less than significant cumulative impacts related to solid waste (landfill capacity and no conflict with solid waste management regulations). Consistent with the conclusion of the TOP 2050 SEIR, the Project combined with cumulative projects would not have a cumulative impact, and the Project would not have a cumulatively considerable contribution to a significant cumulative impact related to solid waste disposal and compliance with regulations addressing the reduction of solid waste generation and disposal. (Draft SEIR, pp. 5.18-25 – 5.18-26).

19. WILDFIRE

The Amendment Area is not within an SRA and is not within lands classified as VHFHSZ and no wildfire impacts would occur with implementation of the Project. Therefore, the Project would not contribute to cumulative wildfire impacts.

F. ALTERNATIVES TO THE PROPOSED PROJECT

The City Council hereby declares that it has considered and rejected as infeasible the alternatives identified in the EIR and described below. Section 15126.6 of the State CEQA Guidelines requires an EIR to describe a range of reasonable alternatives to the Project, or to the location of the Project, which could feasibly achieve most of its basic objectives, but would avoid or substantially lessen any of the significant effects identified in the EIR analysis. An EIR is not required to consider every conceivable alternative to a proposed project. Rather, an EIR must consider a reasonable range of alternatives that are potentially feasible; an EIR is not required to consider alternatives that are infeasible. In addition, an EIR should evaluate the comparative merits of the alternatives. Therefore, this section sets forth the potential alternatives to the Project analyzed in the EIR and evaluates them in light of the objectives of the Project, as required by CEQA.

Key provisions of the State CEQA Guidelines on alternatives (Sections 15126.6[b]–15126.6[f]) are summarized below.

- "The discussion of alternatives shall focus on alternatives to the project or its location which are capable of avoiding or substantially lessening any significant effects of the project, even if these alternatives would impede to some degree the attainment of the project objectives, or would be more costly" (Section 15126.6[b]).
- "The specific alternative of 'no project' shall also be evaluated along with its impact" (Section 15126.6[e][1]).
- "The 'no project' analysis shall discuss the existing conditions at the time the Notice of Preparation is published, and at the time the environmental analysis is commenced, as well as what would reasonably be expected to occur in the foreseeable future if the project were not approved, based on current plans and consistent with available infrastructure and community services. If the environmentally superior alternative is the 'no project' alternative, the EIR shall also identify an environmentally superior alternative among the other alternatives" (Section 15126.6[e][2]).
- "The range of alternatives required in an EIR is governed by the 'rule of reason' that requires the EIR to set forth only those alternatives necessary to permit a reasoned choice. The alternatives shall be limited to ones that would avoid or substantially lessen any of the significant effects of the project. Of those alternatives, the EIR need examine in detail only the ones that the lead agency determines could feasibly attain most of the basic objectives of the project. The range of feasible alternatives shall be selected and discussed in a manner to foster meaningful public participation and informed decision making. Among the factors that may be taken into account when addressing the feasibility of alternatives are site suitability, economic viability, availability of infrastructure, general plan consistency, other plans or regulatory limitations, jurisdictional boundaries, and

whether the proponent can reasonably acquire, control or otherwise have access to the alternative site (or the site is already owned by the proponent)" (Section 15126.6[f]).

- For alternative locations, "only locations that would avoid or substantially lessen any of the significant effects of the project need be considered for inclusion in the EIR" (Section 15126.6[f][2][A]).
- "An EIR need not consider an alternative whose effect cannot be reasonably ascertained and whose implementation is remote and speculative" (Section 15126.6[f][3]).

1. RATIONALE FOR SELECTING POTENTIALLY FEASIBLE ALTERNATIVES

The potentially significant impacts of the Project can be mitigated to a less than significant level with the exception of agricultural resources (site-specific and cumulative impacts related to conversion of Farmland to non-agricultural uses), air quality (conflict with the AQMP and operational impacts), and noise (traffic-related noise along a roadway segment under Existing plus Project and Opening Year 2025 conditions).

The alternatives to the Project must include a no-project alternative and a range of reasonable alternatives to the Project if those reasonable alternatives would attain most of the Project objectives while substantially lessening the potentially significant Project impacts. The range of alternatives discussed in an EIR is governed by a "rule of reason," which the State *CEQA Guidelines* Section 15126.6(f) defines as:

> . . . set[ting] forth only those alternatives necessary to permit a reasoned choice. The alternatives shall be limited to ones that would avoid or substantially lessen any of the significant effects of the project. Of those alternatives, the EIR need examine in detail only the ones that the lead agency determines could feasibly attain most of the basic objectives of the project. The range of feasible alternatives shall be selected and discussed in a manner to foster meaningful public participation and informed decision-making.

Among the factors that may be taken into account when addressing the feasibility of alternatives (as described in the State *CEQA Guidelines* Section 15126.6(f)[1]) are site suitability, economic viability, availability of infrastructure, general plan consistency, other plans or regulatory limitations, jurisdictional boundaries, and whether the Project proponent could reasonably acquire, control, or otherwise have access to an alternative site. An EIR need not consider an alternative whose effects could not be reasonably identified, and whose implementation is remote or speculative.

The Project alternatives are evaluated to determine the extent to which they attain the basic Project objectives, while significantly lessening any significant effects of the Project.

2. ALTERNATIVES CONSIDERED AND REJECTED DURING THE SCOPING/PROJECT PLANNING PROCESS

Section 15126.6(c) of the State CEQA Guidelines specifies that an EIR should (1) identify alternatives that were considered by the lead agency but were rejected as infeasible during the scoping process; and (2) briefly explain the reasons underlying the lead

agency's determination. Among the factors that may be used to eliminate alternatives from detailed consideration in an EIR are: (i) failure to meet most of the basic project objectives; (ii) infeasibility; and/or (iii) inability to avoid significant environmental impacts.

The following is a discussion of the alternatives considered during the scoping and planning process and the reasons why they were not selected for detailed analysis in the SEIR.

- **Alternative Site.** The Project Applicant does not own any other land in the Ontario Ranch area that is not already entitled and identified as a growth area in TOP 2050 that would serve as an Alternative Site and accommodate the Project. Further, significant and unavoidable impacts resulting from implementation of the Project likely would not be avoided with development at an alternative site.

- **Farmland Impact Avoidance Alternative.** A Farmland Avoidance Alternative would involve avoiding the loss of Farmland in existing PA 30 of the Subarea 29 Specific Plan. Development of PA 30 would occur under the existing Subarea 29 Specific Plan, and the loss of Farmland within the previously approved Specific Plan Area was already evaluated in the 2006 EIR. The proposed increase in units in PA 30 as proposed by the Project would not change the physical impacts that would occur with development pursuant to the existing Specific Plan as evaluated in the 2006 EIR. As determined in the 2006 EIR, an alternative that avoids the loss of Farmland does not require further evaluation due to: a) the lack of long-term viability for commercial agriculture within the Chino Basin and Ontario Ranch; and, b) the lack of such an alternative's ability to meet General Plan policies, land plan, and goals for development of the Ontario Ranch.

Thus, the Alternative Site and Farmland Impact Avoidance Alternatives have been rejected from further consideration for the Project consistent with the conclusion of the 2006 EIR. (Draft SEIR, pp. 7-5 - 7-6)

3. ALTERNATIVES SELECTED FOR FURTHER ANALYSIS

Based on the CEQA requirements, and the Project objectives listed in Section III.C, the following three alternatives have been determined to represent a reasonable range of alternatives. The two build alternatives have the potential to feasibly attain most of the basic objectives of the Project and may avoid or substantially lessen the significant effects of the Project. These alternatives are analyzed in detail in Section 7.0 of the SEIR.

- No Project/No Development Alternative
- Reduced Density/Expansion Area Only Alternative
- Reduced Density Alternative

a. *No Project/No Development Alternative*

Description: Under the No Project/No Development Alternative, the Amendment Area (PAs 30 through PA 34) would remain in its current condition. Existing uses within PAs 30 and 31 include dairy farming and agriculture uses, and farm structures that supported previous agricultural activities; no agricultural activities currently occur, and the structures have been vacated. The entire

area was disturbed, and the vegetation communities are limited to agricultural and ruderal. The southwest corner of the Expansion Area includes a disturbed lot formerly occupied by a trucking company. The western portion of the Expansion Area is used for agriculture production and the eastern portion of the Expansion Area is disturbed and undeveloped. (Draft SEIR, p. 7-7)

Impacts: **Aesthetics**

The Amendment Area does not contain any unique aesthetic resources, nor does it serve as a prominent scenic vista. The No Project/No Development Alternative does not involve any development or change in the current condition of the Amendment Area; therefore, there would be no change to the visual quality or character of the Amendment Area, or surrounding areas. With adherence to Standards and Guidelines outlined in the Subarea 29 Specific Plan and Project-specific mitigation measures, impacts would be less than significant under the Project. The No Project/No Development Alternative would avoid the Project's less than significant impact.

Agricultural and Forestry Resources

Under the No Project/No Development Alternative, no construction or development in the Amendment Area would occur; and the Amendment Area would remain in its current condition, including existing agricultural operations in the Expansion Area. There are no forestry resources within the Amendment Area; therefore, under both the No Project/No Development Alternative and the Project, impacts to forestry resources would not occur. Existing Prime Farmland in PA 30 would not be converted to non-agricultural uses under the No Project/No Development Alternative. Therefore, the significant and unavoidable and cumulative impacts of the Project related to agricultural resources would not occur with this Alternative.

Air Quality

The No Project/No Development Alternative would not involve any construction activities (including grading). Therefore, construction-related air quality emissions resulting from the Project would not occur. However, the Project's air quality impacts during construction were determined to be less than significant with implementation of 2006 EIR and TOP EIR mitigation measures. Because no development would occur within the Amendment Area, operational activities, and associated trip generation, would not occur. SCAQMD thresholds for long-term operational emissions would not be exceeded and there would not be a conflict with the AQMP. Therefore, the No Project/No Development Alternative would avoid significant long-term and cumulative unavoidable operational air quality impacts that would occur with implementation of the Project.

Biological Resources

No grading or development would occur under this Alternative, and there would be no potential impacts to sensitive wildlife species and migratory and nesting birds that may be present. Therefore, the No Project/No Development Alternative would avoid on- and off-site disturbances. The Project would have a less than significant impact on biological resources after implementation of 2006 EIR mitigation measures. Therefore, the No Project/No Development Alternative would avoid the Project's less than significant impacts to biological resources.

Cultural Resources

No historic resources are present within the Amendment Area; thus, no impacts to historic resources would occur with the Project or the No Project/No Development Alternative. The No Project/No Development Alternative would not involve any excavation or grading activities. Therefore, the potential to discover previously unidentified archaeological resources is eliminated. With incorporation of the applicable 2006 EIR mitigation measures, the impacts from the Project would be less than significant. Therefore, the No Project/No Development Alternative would avoid the less than significant impacts to cultural resources resulting from implementation of the Project.

Energy

The No Project/No Development Alternative would leave the Amendment Area in its existing condition and would not demand any energy beyond the de minimis amount needed for routine maintenance activities and continued agricultural activities (row crops) in a portion of the Expansion Area. In the absence of construction activities and operation of the proposed uses, the No Project/No Development Alternative would require no new demand for near-term or long-term energy or fuel use within the Amendment Area. The No Project/No Development Alternative would avoid the Project's near- and long-term energy use and would avoid the Project's less than significant energy impacts.

Geology and Soils

The No Project/No Development Alternative would leave the Amendment Area in its existing condition, which would include periodic ground disturbances related to periodic onsite maintenance activities and agricultural operations. These activities have the potential to result in water and/or wind erosion of exposed soils that would not occur with the Project. No new development would occur under the No Project/No Development Alternative. Therefore, there would be no potential for additional workers, building and structures to experience seismic ground shaking, liquefaction, lateral spreading, subsidence, or collapse within the Amendment Area. This Alternative would avoid the Project's less than significant impacts related to geology and soils but would have greater impacts associated with potential for erosion.

Regarding paleontological resources, this Alternative would not result in impacts to paleontological resources since no grading would occur. Therefore, the No Project/No Development Alternative would avoid the less than significant impacts to paleontological resources resulting from implementation of the Project.

Greenhouse Gas Emissions

Under the No Project/No Development Alternative, no development would occur within the Amendment Area. Therefore, there would be no new sources of near-term or long-term greenhouse gas (GHG) emissions under the No Project/No Development Alternative, and this Alternative would avoid the Project's less than significant impacts associated with GHG emissions.

Hazards and Hazardous Materials

Because no development would occur under the No Project/No Development Alternative, no impacts related to hazards or hazardous materials would occur. The agricultural uses would remain onsite, and the other portions of the Project site would remain vacant and disturbed. The Project would have a less than significant impact on hazards and hazardous materials with incorporation of the 2006 EIR mitigation measures incorporated. The No Project/No Development Alternative would avoid the Project's less than significant impacts related to hazards and hazardous materials.

Hydrology and Water Quality

Under the No Project/No Development Alternative, existing hydrology patterns and characteristics of the Amendment Area and water quality conditions would remain unchanged. The Project would result in an increase in impervious surface, which would increase the amount of storm water runoff from the Amendment Area and potentially increase the amount of urban pollutants entering the storm water compared to existing conditions. However, the Project impacts would be less than significant with incorporation of applicable 2006 EIR mitigation measures and compliance with existing regulatory requirements. Under the No Project/No Development Alternative, the storm water leaving the Amendment Area would continue to contain sediment and other potential pollutants, as occurs under existing conditions. Overall, the No Project/No Development Alternative would have fewer hydrology and water quality impacts compared to the Project. However, the impacts from the Project would be less than significant.

Land Use and Planning

The No Project/No Development Alternative would not divide an established community and would not result in any new development that would indirectly result in environmental impacts due to a conflict with an existing land use plan. Accordingly, selection of the No Project/No Development

Alternative would result in no impacts to land use and planning; however, the Project's impacts would be less than significant.

Mineral Resources

The No Project/No Development Alternative would leave the Project site in its existing condition. The Project site does not contain any known mineral resources. Therefore, under both the No Project/No Development Alternative and the Project, there would be no impacts to mineral resources.

Noise

The No Project/No Development Alternative would not involve any grading or construction activities. Therefore, noise and vibration effects associated with construction activities would not occur under this Alternative. However, the construction-related noise impacts from the Project would be less than significant after implementation of the 2006 EIR mitigation measures. The increase in long-term, traffic-related, and operational noise levels associated with the Project, including the significant and unavoidable traffic noise impact along one roadway segment would not occur under the No Project/No Development Alternative.

Population and Housing

Under the No Project/No Development Alternative, the Amendment Area would remain in its current condition and would not increase the population or employment in the City. Accordingly, this Alternative would avoid the Project's less than significant impacts related to population and housing.

Public Services and Recreation

Under the No Project/No Development Alternative, the Amendment Area would remain in its current condition. There would be no increase in demand for fire, police, school, or park/recreation services and the No Project/No Development Alternative would have no impact on public services or recreation facilities. Accordingly, this Alternative would avoid the Project's less than significant impacts related to the increased demand for public services and recreation and would avoid the Project's less than significant impacts associated with construction of onsite recreational facilities.

Transportation

The No Project/No Development Alternative would not change the existing circulation conditions because no new development would occur and circulation improvements anticipated by TOP 2050 that would be constructed as part of the Project would not be implemented (including roadway, bicycle, pedestrian and transit improvements). No long-term (operational) vehicle trips would be generated under the No Project/No Development Alternative. The Project would have less than significant impacts related to consistency with plans and programs addressing circulation, VMT, potential hazards, and emergency access. Therefore, the

No Project/No Development Alternative would avoid the Project's less than significant impacts related to transportation.

Tribal Cultural Resources

The No Project/No Development Alternative would leave the Amendment Area in its existing condition, with ongoing maintenance and agricultural activities. No grading would occur under the No Project/No Development Alternative and there would be no potential impacts to subsurface tribal cultural resources that may exist. Therefore, the No Project/No Development Alternative would avoid new disturbances and would avoid the potential for Project construction activities to damage buried tribal cultural resources, although Project impacts are less than significant with implementation of the identified mitigation measures.

Utilities and Service Systems

The No Project/No Development Alternative would not place any new demands on local and regional utilities and service systems because no new development would occur. Under this Alternative, no new utilities would be constructed, and no physical impacts would result. Accordingly, this Alternative would avoid the Project's less than significant impacts related to utilities and service systems.

Wildfire

The Amendment Area is not within or near a SRA, does not have lands classified as a VHFHSZ, is not near a VHFHSZ, and developed areas or vacant lots being used primarily for agricultural purposes provide a buffer between the Amendment Area and VHFHSZs. As such, the Project would not result in impacts related to wildfires or exacerbate wildfire hazards. Under both the Project and No Project/No Development Alternative no impacts would occur.

Ability to Reduce Project Impacts

The No Project/No Development Alternative would avoid significant and unavoidable impacts resulting from implementation of the Project on agricultural resources (site-specific and cumulative impacts related to conversion of Farmland to non-agricultural uses), air quality (conflict with the AQMP and operational impacts), and noise (traffic-related noise along a roadway segment under Existing plus Project and Opening Year 2025 conditions). Additionally, because no development would occur under the No Project/No Development Alternative, less than significant impacts resulting from the Project for the following environmental topics would be avoided: aesthetics, biological resources, cultural resources, energy, geology, greenhouse gas emissions, hazards and hazardous materials, hydrology and water quality, land use and planning, mineral resources, population and housing, public services and recreation, transportation, tribal cultural resources, utilities and service systems, and wildfire.

Ability to Achieve Project Objectives

The No Project/No Development Alternative would not involve any development in the Amendment Area. This alternative would not attain any of the Project Objectives, including goals and policies relevant related to the development of housing in the Ontario Ranch, including the Amendment Area, to assist the City in meeting its RHNA requirements and to implement TOP 2050.

Finding: The City Council rejects the No Project/No Development Alternative, on the following grounds: the alternative fails to meet any of the Project objectives and would not provide any of the Project benefits that would occur with the implementation of the Project, including development of housing in the Ontario Ranch to assist the City in meeting its Regional Housing Need Assessment (RHNA) requirements.

b. *Reduced Density/Expansion Area Only Alternative*

Description: The Reduced Density/Expansion Area Only Alternative would reduce the number of residential units compared to the Project by retaining the existing Specific Plan development assumptions for PAs 30 and 31 (not implementing the proposed Specific Plan Amendment for these PAs) and proceeding with the proposed Specific Plan Amendment associated with the Expansion Area (PAs 32, 33, and 34). As shown in Table 7-1 of the SEIR, this Alternative would involve the development of 1,512 dwelling units within PAs 30 through 33 and would result in an overall reduction of 155 dwelling units in PAs 30 through 33 compared to the Project (1,667 units) (a reduction of approximately 9%).

The Project would result in a net increase of 1,470 units within the Specific Plan area compared to the approved Specific Plan (an increase from 2,418 units to 3,888 units), and this would be reduced to a net increase of 1,315 units with this Alternative. New home types to provide a variety of housing types that promote higher density and more choice in floorplans, and that provide more attainable options for a greater range of residents as well as options for different household compositions would be provided in the Expansion Area. However, the allowed home types in PAs 30 and 31 would remain the same as the previously approved Subarea 29 Specific Plan. The proposed school in PA 34, and roadway and infrastructure improvements to be implemented with the Project would also be implemented under this Alternative. (Draft SEIR, p. 7-12)

Impacts: **Aesthetics**

As with the Project, the Reduced Density/Expansion Area Only Alternative would involve the development of residential uses and school uses; PAs 30 and 31 would be developed pursuant to the approved Specific Plan and the Expansion Area would be developed consistent with the proposed Specific Plan Amendment. Although there would be a reduction of residential uses, the visual character of the development would be similar to the Project since the development would be required to adhere to the Standards and Guidelines outlined in the Subarea 29 Specific Plan and the Ontario Municipal Code. As with the Project, this Alternative would have less than

significant impacts related to impact to a scenic vista, and conflict with goals or policies outlined in the General Plan or Ontario Municipal Code requirements that regulate scenic quality, and no impact related to degrading scenic resources within a State Scenic Highway. Furthermore, both the Project and this Alternative would include mitigation to reduce impacts related to construction lighting to a less than significant level. Therefore, impacts would be less than significant under both the Project and the Reduced Density/Expansion Area Only Alternative.

Agricultural and Forestry Resources

Under the Reduced Density/Expansion Area Only Alternative, the physical impact area would be the same as the Project, and Prime Farmland in PAs 30 and 31 would be converted to non-agricultural uses, consistent with the City's land use designation and zoning, which do not anticipate continued agricultural activities. Therefore, the significant and unavoidable Project and cumulative impacts to agricultural resources resulting from the Project would also occur with this Alternative, consistent with the conclusion of the 2006 EIR and TOP 2010 EIR.

Air Quality

As with the Project, Reduced Density/Expansion Area Only Alternative would be consistent with the TOP 2050 growth projections and would not conflict with growth assumptions in the SCAQMD AQMP. However, as with the Project, the Reduced Density/Expansion Area Only Alternative would result in VOC, NO_X, and CO emissions that exceed the SCAQMD regional significance thresholds, resulting in a significant impact even with mitigation. This would contribute to a delay in the attainment of federal and State O_3 standards in the SoCAB. As such, as with the Project, the Reduced Density/Expansion Area Only Alternative would be considered to have the potential to conflict with the SCAQMD AQMP, thereby resulting in a significant and unavoidable impact.

Implementation of the Reduced Density/Expansion Area Only Alternative would have the same physical impact area as the Project, and the construction assumptions with respect to the intensity of construction would be similar. Therefore, local and regional construction emissions and associated impacts would be less than significant with mitigation, similar to the Project. The relationship of proposed uses under this Alternative would be the same as with the Project, and potential impacts to sensitive receptors during construction and operation would be less than significant with the Project and this Alternative.

The Project is estimated to generate a maximum of 144.93 pounds per day (lbs/day) of VOC compared to the threshold of 55 lbs/day, 112.20 lbs/day of NOx compared to the threshold of 55 lbs per day, and 802 lbs/day of CO compared to the threshold of 550 lbs/day. The Reduced Density/Expansion Area Only Alternative would have an approximately 9% reduction in residential units compared to the Project (155 fewer residential units). Thus,

total operational emissions (which include area, energy, and mobile sources) including NOx, VOC, and CO emissions would be lower with the Reduced Density/Expansion Area Only Alternative compared to the Project. With the reduction in residential units under this Alternative, and assuming a similar 9% reduction in emissions from mobile and other sources, there would still be an exceedance of VOC, NOx, and CO operational emission thresholds established by the SCAQMD. An approximate 9% emissions reduction would not be sufficient to reduce the emissions of NOx, VOC and CO below the SCAQMD CEQA thresholds of significance. As with the Project, even with implementation of mitigation measures identified in SEIR Section 5.3, the amount of emissions reduction would not reduce emissions to below the established threshold of significance. Long-term operational emissions of NOx and VOC, which are O_3 precursors, would be cumulatively considerable, resulting in a significant impact. Therefore, although the amount of emissions would be reduced, the Reduced Density/Expansion Area Only Alternative would not eliminate the Project's significant and unavoidable operational and cumulative air quality impacts resulting from operational emissions.

The Reduced Density/Expansion Area Only Alternative and Project would involve development of the same types of uses and would have less than significant impacts related to other emissions, such as those leading to odors, that would adversely affect a substantial number of people.

Biological Resources

The Reduced Density/Expansion Area Only Alternative would have the same physical impact area as the Project. As with the Project, this Alternative would have no impact to riparian habitat or wetlands and would comply with local requirements for protection of trees. Potential significant impacts to sensitive wildlife species and migratory and nesting birds would be the same under the Project and this Alternative. The Project would have a less than significant impact on biological resources after implementation of 2006 EIR mitigation measures. With incorporation of the identified mitigation measures, the impacts to biological resources would be less than significant with this Alternative and the Project.

Cultural Resources

No historic resources are present within the Amendment Area. Therefore, no impact to historic resources would occur with implementation of the Project or the Reduced Density/Expansion Area Only Alternative. This Alternative would involve the same physical impact area as the Project. Therefore, this Alternative would result in the same potential impacts to unknown archaeological resources as the Project. With incorporation of the identified mitigation measures, this Alternative would have similar, less than significant impacts as the Project related to cultural resources.

Energy

Implementation of the Reduced Density/Expansion Area Only Alternative would result in similar types of energy demand during construction and operation of the residential and school uses as the Project due to the same physical impact area, and type of uses to be developed. However, energy demand for construction and operation of the residential uses would be reduced due to the reduction in the number of units. Therefore, this Alternative would have reduced energy impacts as compared to the Project; however, the Project's energy impacts are less than significant.

Geology and Soils

The Reduced Density/Expansion Area Only Alternative would have the same physical impact area as the Project and would result in the same potential impacts related to geology and soils and seismic hazards as the Project. With implementation of the 2006 EIR mitigation measures, which require adherence to applicable building codes and incorporation of the recommendations from the site-specific geotechnical studies, the Project and this Alternative would not expose people or structures to substantial safety risks associated with geologic hazards. Further, because the physical impact area would be the same as the Project, this Alternative would also have the potential to impact subsurface paleontological resources and the impact would be reduced to a less than significant level with mitigation. Therefore, with incorporation of the identified mitigation measures, and adherence to applicable regulations, geology and soils impacts would be less than significant with implementation of this Alternative and the Project.

Greenhouse Gas Emissions

The Reduced Density/Expansion Area Only Alternative would involve similar construction activities, and the development of the same type of uses as the Project. Therefore, the sources of GHG emissions would be the same, although there would be an overall reduction in GHG emissions due to the reduction in residential units (155 fewer residential units; a reduction of approximately 9% compared to the Project). As with the Project, development under the Reduced Density/Expansion Area Only Alternative would be consistent with the City's Community Climate Action Plan (CCAP) Update, and therefore, impacts related to GHG emissions would be less than significant.

Hazards and Hazardous Materials

The Reduced Density/Expansion Area Only Alternative would have the same physical impact area as the Project and would involve the development of the same types of uses (residential and school). Thus, similar impacts to hazards and hazardous materials would occur. Based on the location and condition of the Project site and types of uses proposed, the Reduced Density/Expansion Area Only Alternative and the Project would have no impact related to location on a hazardous materials site or wildland fire, and a less than significant impact related to hazardous emissions within 0.25 mile of a school. Land uses that would occur onsite

under this Alternative would have a similar potential to handle and store hazardous materials as the Project resulting in a less than significant impact, and similar less than significant impacts related to hazards associated with the ONT and Chino Airport, and emergency response/evacuation. Impacts associated with the potential to encounter septic tanks and water wells, potential methane gas, and hazardous building materials (asbestos and lead) would also be less than significant for the Project and this Alternative with implementation of the 2006 EIR mitigation measures.

Hydrology and Water Quality

The Reduced Density/Expansion Area Only Alternative would involve development of the same area that would occur with implementation of the Project, and the development of the same types of uses. Both the Reduced Density/Expansion Area Only Alternative and the Project would result in an increase in impervious surface, which would increase the amount of storm water runoff and potentially increase the amount of pollutants entering the storm water. As with the Project, storm water runoff would flow to existing drainage and water quality treatment facilities that have sufficient capacity to accommodate storm runoff and water quality treatment requirements from development of this Alternative. Hydrology and water quality impacts would be less than significant for the Project with implementation of 2006 EIR mitigation measures and compliance with existing regulatory requirements and would also be less than significant for the Reduced Density/Expansion Area Only Alternative.

As with the Project, the Reduced Density/Expansion Area Only Alternative would not involve excavation at depths that would encounter groundwater and would not substantially decrease groundwater supplies or interfere substantially with groundwater recharge.

Because the development area would be the same, the Reduced Density/Expansion Area Only Alternative and the Project would have the same less than significant impacts related to inundation, and no impacts related to flood hazard.

Land Use and Planning

The Reduced Density/Expansion Area Only Alternative would involve the same area of development as the Project, which is already planned for development pursuant to the approved Subarea 29 Specific and the TOP 2050. Additionally, development has already occurred to the east and west and south. Neither the Reduced Density/Expansion Area Only Alternative nor the Project would divide an established community.

The Reduced Density/Expansion Area Only Alternative would involve development of PAs 30 and 31 pursuant to the approved Subarea 29 Specific Plan, and development of the Expansion Area with residential uses and a middle school, consistent with the land uses anticipated by the TOP

2050 Policy Plan. Further the current zoning for existing PAs 30 and 31 is Specific Plan (SP) District (Subarea 29 Specific Plan), and the zoning for the Expansion Area is SP (Specific Plan) with an AG (Agriculture) Overlay, which anticipates development pursuant TOP 2050 Policy Plan and the underlying zoning district. Residential and school uses are currently allowed by the existing Subarea 29 Specific Plan, and the residential and school uses that would be developed under this Alternative would be implemented in accordance with the Development Standards and Design Guidelines outlined in the Subarea 29 Specific Plan, as amended with the Project. The Reduced Density/Expansion Area Only Alternative would not provide the minimum number of dwelling units anticipated by TOP 2050 in PAs 30 and 31. Even though there would be a reduction in dwelling units developed in the City, as with the Project, the Reduced Density/Expansion Area Only Alternative would not conflict with the TOP 2050 Policy Plan, the Ontario Municipal Code, or SCAG Connect SoCal, and specifically would not conflict with applicable environmental plans, policies, and regulations adopted for the purpose of avoiding or mitigating an environmental effect. Impacts would be less than significant with implementation of this Alternative and the Project.

Mineral Resources

The Amendment Area does not contain mineral resources of regional or statewide importance and is not designated as a mineral recovery site. The Reduced Density/Expansion Area Only Alternative would have the same physical impact area as the Project, and as with the Project would have no impact to mineral resources.

Noise

The Reduced Density/Expansion Area Only Alternative would involve similar construction activities as the Project and noise and vibration impacts would be less than significant with adherence to the City's Noise Ordinance as identified in the 2006 EIR mitigation measures. Because the types of uses developed under the Reduced Density/Expansion Area Only Alternative and the Project would be the same, the operational onsite noise sources would also be the same and would be less than significant.

The Project would result in increased traffic noise levels along Eucalyptus Avenue west of Hamner Avenue, which would exceed the City's established threshold of significance (allowable increase of 5 dBA) under the Existing Plus Project and Opening Year 2025 traffic scenarios (noise increase of 8.0 dBA and 6.4 dBA, respectively). A 3 dB increase is a doubling of acoustic energy and is the threshold of perceptibility. With an approximate 9% reduction in trip generation associated with the reduction in units, and similar trip distribution on the roadway network, the traffic noise reduction along Segment 46 would be approximately 0.4 dBA, which would not avoid the significant noise impact (there would be an estimated 6.7 dBA increase in noise compared to the 5 dBA threshold of significance). Therefore, as with the Project, the traffic-related noise impact along this roadway segment

under the Reduced Density/Expansion Area Only Alternative would be significant and unavoidable because there is no feasible mitigation to reduce this impact to a less than significant level.

As with the Project, onsite uses under the Reduced Density/Expansion Area Only Alternative would not be subjected to excessive noise levels from ONT or Chino Airport operations, resulting in a less than significant impact.

Population and Housing

The Reduced Density/Expansion Area Only Alternative would result in the development of 155 fewer residential units compared to the Project and would include development of the proposed middle school. Thus, development of the Reduced Density/Expansion Area Only Alternative would result in 620 fewer residents (5,260 new residents compared to 5,880 new residents with the Project), and the same number of new employees (56 employees). Population growth under the Project was determined to be within the growth projections for the area and impacts to related population and housing were determined to be less than significant. Therefore, as with the Project, the Reduced Density/Expansion Area Only Alternative would not induce substantial unplanned growth resulting in a less than significant impact. Because the Amendment Area is not occupied, the Reduced Density/Expansion Area Only Alternative and the Project would not displace existing people or housing.

Public Services and Recreation

The Reduced Density/Expansion Area Only Alternative would result in the development of 155 fewer residential units compared to the Project and would include development of the proposed middle school. Thus, development of the Reduced Density/Expansion Area Only Alternative would result in a reduced demand for public services and recreational facilities. As with the Project, with incorporation of the 2006 EIR mitigation measures, which implement standard requirements, the Reduced Density/Expansion Area Only Alternative would not require the construction of new or expanded fire, police, school or library facilities that would result in physical environmental impacts, resulting in a less than significant impact. Additionally, with adherence to the City's parkland requirements impacts to recreational facilities would be less than significant. Therefore, the Reduced Density/Expansion Area Only Alternative and the Project would have a less than significant impact related to public services and recreation.

Transportation

The Reduced Density/Expansion Area Only Alternative would involve implementation of the same roadway, bikeway, pedestrian and transit improvements as the Project, and would comply with City requirements relative to the circulation system. Therefore, as with the Project, the Reduced Density/Expansion Area Only Alternative would not conflict with TOP 2050 Policy Plan Mobility Element policies related to transportation and circulation, Ontario Municipal Code requirements, or SCAG's Connect

SoCal transportation-related goals. Additionally, this Alternative and the Project would not create hazards through design and would not result in inadequate emergency access. Therefore, the Reduced Density/Expansion Area Only Alternative and the Project would have a less than significant impact related to conflict with plans addressing the circulation system, transportation-related hazards and emergency access.

The latest research provided in the California Air Pollution Control Officers Association (CAPCOA) *Handbook for Analyzing Greenhouse Gas Emission Reductions, Assessing Climate Vulnerabilities, and Advancing Health and Equity*, published in December 2021, details the increase in VMT and VMT per capita associated with decreased density of dwelling units (T-1 Increase Residential Density). Decreased densities affect the distance people travel and provide lesser options for the mode of travel they choose. Decreasing residential density results in longer and more trips by single-occupancy vehicles and thus an increase in VMT. Table 7-2 in the SEIR presents the VMT Summary for the Reduced Density/Expansion Area Only Alternative. As shown, the OD VMT per SP for both Planning Areas 30-34 (24.39) and for the total Specific Plan Area (26.7) is lower than the Citywide average OD VMT per service population under General Plan Buildout Conditions. For comparison, the Project OD VMT per SP would be 23.85 for PAs 30 through 34 and 26.4 for the total Specific Plan Area. Therefore, there would be a slight increase in VMT with buildout of the Subarea 29 Specific Plan under this Alternative; however, as with the Project, the VMT impact would be less than significant. Cumulative VMT impacts would also be less than significant for this Alternative and the Project because the proposed development would be consistent with TOP 2050 land use designations.

Tribal Cultural Resources

There are no known tribal cultural resources located within the Amendment Area. Therefore, no impact to known tribal cultural resources would occur with implementation of the Reduced Density/Expansion Area Only Alternative or the Project. This Alternative would involve the same physical impact area as the Project. Therefore, this Alternative would result in the same potential impacts to unknown tribal cultural resources as the Project. With incorporation of the identified mitigation measures, the Reduced Density/Expansion Area Only Alternative would have similar, less than significant impacts as the Project related to tribal cultural resources.

Utilities and Service Systems

As with the Project, the Reduced Density/Expansion Area Only Alternative would increase the water demand, wastewater generation, and electric demand at the Project site compared to existing conditions. Additionally, the Reduced Density/Expansion Area Only Alternative would involve development of the same area that would occur with implementation of the Project and would generate a similar amount of storm water runoff. Although the total number of residential units would be reduced, the overall utility infrastructure needed to serve the Reduced Density/Expansion Area Only

Alternative would be the same as the Project and would be located within the same construction impact area. Therefore, as with the Project, the Reduced Density/Expansion Area Only Alternative would have similar, less than significant impacts as the Project related to the installation of utility infrastructure.

The Reduced Density/Expansion Area Only Alternative would have a reduced water demand than the Project due to the reduction in residential units. Therefore, the conclusions of the Project-specific WSA would be applicable to this Alternative, and OMUC would have sufficient water to serve the Reduced Density/Expansion Area Only Alternative. Similarly, with a reduction in wastewater generation, there would be adequate capacity in the IEUA wastewater treatment facilities to treat wastewater generated. The Reduced Density/Expansion Area Only Alternative and Project would have less than significant impacts related to water supply and wastewater treatment.

As with the Project, construction and operation of the proposed residential and school uses under the Reduced Density/Expansion Area Only Alternative would comply with applicable local and state regulations related to solid waste management and diversion of solid waste from landfills. The Reduced Density/Expansion Area Only Alternative and Project would have less than significant impacts related to solid waste.

Wildfire

The Amendment Area is not within or near an SRA or VHFSZ. Therefore, under both the Reduced Density/Expansion Area Only Alternative and the Project, wildfire impacts would not occur.

Ability to Reduce Project Impacts

The Reduced Density/Expansion Area Only Alternative would not avoid any of the significant and unavoidable impacts resulting from implementation of the Project on agricultural resources (site-specific and cumulative impacts related to conversion of Farmland to non-agricultural uses), air quality (conflict with the AQMP and operational impacts), and noise (off-site traffic-related noise along one roadway segment under Existing plus Project and Opening Year 2025 conditions). The Reduced Density/Expansion Area Only Alternative would reduce the Project's less than significant impacts to energy, public services and recreation, and utilities and service systems. The total VMT per capita would increase under this Alternative; however, the impact would remain less than significant. All other impacts from the Reduced Density/Expansion Area Only Alternative (biological resources, cultural resources, geology and soils, hazards and hazardous materials, hydrology and water quality, land use and planning, population and housing, mineral resources, tribal cultural resources, and wildfire) would be similar to the Project.

Ability to Achieve Project Objectives

The Reduced Density/Expansion Area Only Alternative would involve the development of 155 fewer dwelling units compared to the Project by not including the increase in units proposed in existing Subarea 29 Specific Plan PAs 30 and 31. This represents an approximately 9% reduction in dwelling units compared to the Project. This alternative would meet most of the Project Objectives; however, it would not meet the following objectives, or not meet the objectives to the same extent as the Project:

2. Develop a specific plan that incorporates General Plan land use principles; standards and distribution of land uses relative to residential, open space, recreation, and public uses.

   The proposed Subarea 29 Specific Plan Amendment incorporates the land use changes for existing PAs 30 and 31 included in TOP 2050 Policy Plan. While the Reduced Density/Expansion Area Only Alternative would include the proposed Specific Plan Amendment for the Expansion Area, it would not include the proposed Specific Plan Amendment for PAs 30 and 31 and would not meet this objective to the same extent as the Project. Although the Reduced Density/Expansion Area Only Alternative would not conflict with the goals and policies of TOP 2050, it would not provide the minimum number of dwelling units anticipated by TOP 2050 in PAs 30 and 31.

4. Maximize housing opportunities to assist in meeting City of Ontario regional housing allocation requirements.

   The Reduced Density/Expansion Area Only Alternative would have 155 fewer dwelling units than the Project and would not maximize housing opportunities; therefore, this objective would not be met.

9. Develop a project that responds well to market demand and meets a range of housing types and affordability.

   The proposed Subarea 29 Specific Plan Amendment introduces new home types to provide a variety of housing types that promote higher density and more choice in floorplans, and that provide more attainable options for a greater range of residents as well as options for different household compositions. While these new home types would be implemented in the Specific Plan Area under the Reduced Density/Expansion Area Only Alternative, the allowed home types in PAs 30 and 31 would remain the same. Therefore, this Alternative would not be meet this objective to the same extent as the Project.

Finding: The City Council rejects the Reduced Density/Expansion Area Only Alternative on the following grounds, each of which individually provides sufficient justification for rejection of this alternative: (1) This Alternative would not avoid the Project's significant and unavoidable impacts (agricultural resources, air quality and noise); and (2) due to its comparative reduction in residential units, this Alternative would impede attainment of the Project Objectives to the same extent as the Project.

c. *Reduced Density Alternative*

Description: The Amendment Area includes land designated for Low Density Residential (2.1-5 du/ac), Low-Medium Density Residential (5.1-11), and Medium Density Residential. The Reduced Density Alternative would involve the same proposed Subarea 29 Specific Plan Amendment as the Project for PAs 30 through 34, which would be consistent with the TOP 2050 Policy Plan; however, the PAs would be built out at the lower end of the allowed density range for each TOP 2050 Policy Plan land use designation. As shown in Table 7-3 of the SEIR, this Alternative would involve the development of 794 dwelling units within PAs 30 through 33 and would result in an overall reduction of 873 dwelling units in PAs 30 through 33 compared to the Project (1,667 units) (a reduction of approximately 53%). The Project would result in a net increase of 1,470 units within the Specific Plan area, and this would be reduced to a net increase of 597 units with the Alternative. The proposed school in PA 34, and roadway and infrastructure improvements to be implemented with the Project would also be implemented under this Alternative. (Draft SEIR, p. 7-22)

Impacts: **Aesthetics**

As with the Project, the Reduced Density Alternative would involve the development of residential uses and school uses consistent with the TOP 2050 Policy Plan land use designation. Although there would be a reduction of residential uses, the visual character of the development would be similar to the Project since the development would be required to adhere to the Standards and Guidelines outlined in the Subarea 29 Specific Plan and the OMC. As with the Project, this Alternative would have less than significant impacts related to impact to a scenic vista, and conflict with goals or policies outlined in the TOP 2050 Policy Plan or OMC requirements that regulate scenic quality, and no impact related to degrading scenic resources within a State Scenic Highway. Furthermore, both the Project and this Alternative would include mitigation to reduce impacts related to construction lighting to a less than significant level. Therefore, impacts would be less than significant under both the Project and the Reduced Density Alternative.

Agricultural and Forestry Resources

Under the Reduced Density Alternative, the physical impact area would be the same as the Project, and Prime Farmland in PAs 30 and 31 would be converted to non-agricultural uses, consistent with the City's land use designation and zoning, which do not anticipate continued agricultural activities. Therefore, the significant and unavoidable Project and cumulative impacts to agricultural resources resulting from the Project would also occur with this Alternative, consistent with the conclusion of the 2006 EIR and TOP 2010 EIR.

Air Quality

As with the Project, the Reduced Density Alternative would be consistent with the TOP 2050 growth projections and would not conflict with growth

assumptions in the SCAQMD AQMP. However, as with the Project, the Reduced Density Alternative would result in VOC emissions that exceed the SCAQMD regional significance thresholds, resulting in a significant impact even with mitigation. This would contribute to a delay in the attainment of federal and State O_3 standards in the SoCAB. As such, as with the Project, the Reduced Density Alternative would be considered to have the potential to conflict with the SCAQMD AQMP, thereby resulting in a significant and unavoidable impact.

Implementation of the Reduced Density Alternative would have the same physical impact area as the Project; however, with an approximately 53% reduction in residential units, construction activities would be reduced and there would be reduced air pollutant emissions during construction. Therefore, local and regional construction emissions and associated impacts would be less than significant with mitigation, similar to the Project. The relationship of proposed uses under this Alternative would be the same as with the Project, and potential impacts to sensitive receptors during construction and operation would be less than significant with the Project and this Alternative.

The Project is estimated to generate a maximum of 144.93 lbs/day of VOC compared to the threshold of 55 lbs/day, 112.20 lbs/day of NOx compared to the threshold of 55 lbs per day, and 802 lbs/day of CO compared to the threshold of 550 lbs/day. The Reduced Density Alternative would have an approximately 53% reduction in residential units compared to the Project (873 fewer residential units). Thus, total operational emissions (which include area, energy, and mobile sources) including NOx, VOC, and CO emissions would be lower with the Reduced Density Alternative compared to the Project. With the reduction in residential units under this Alternative, and assuming a similar 53% reduction in emissions from residential mobile and other sources, there would still be an exceedance of VOC operational emission thresholds established by the SCAQMD. It is estimated that NOx and CO emissions would be reduced to a level that would not exceed the SCAQMD threshold avoiding this impact; however, the SoCAB is not in nonattainment for CO. As with the Project, even with implementation of mitigation measures identified in SEIR Section 5.3, the amount of VOC emissions reductions would not reduce emissions to below the established threshold of significance. Long-term operational emissions of VOC, which is an O_3 precursor, would be cumulatively considerable, resulting in a significant impact. Therefore, although the amount of emissions would be reduced, the Reduced Density Alternative would not eliminate the Project's significant and unavoidable operational and cumulative air quality impacts resulting from operational emissions.

The Reduced Density Alternative and Project would involve development of the same types of uses and would have less than significant impacts related to the other emissions, such as those leading to odors, that would adversely affect a substantial number of people.

Biological Resources

The Reduced Density Alternative would have the same physical impact area as the Project. As with the Project, this Alternative would have no impact to riparian habitat or wetlands and would comply with local requirements for protection of trees. Potential significant impacts to sensitive wildlife species and migratory and nesting birds would be the same under the Project and this Alternative. The Project would have a less than significant impact on biological resources after implementation of 2006 EIR mitigation measures. With incorporation of the identified mitigation measures, the impacts to biological resources would be less than significant with this Alternative and the Project.

Cultural Resources

No historic resources are present within the Amendment Area. Therefore, no impact to historic resources would occur with implementation of the Project or the Reduced Density Alternative. This Alternative would involve the same physical impact area as the Project. Therefore, this Alternative would result in the same potential impacts to unknown archaeological resources as the Project. With incorporation of the identified mitigation measures, this Alternative would have similar, less than significant impacts as the Project related to cultural resources.

Energy

Implementation of the Reduced Density Alternative would result in similar types of energy demand during construction and operation of the residential and school uses as the Project due to the same physical impact area, and type of uses to be developed. However, energy demand for construction and operation of the residential uses would be reduced due to the reduction in the number of units. Therefore, this Alternative would have reduced energy impacts than the Project; however, the Project's energy impacts are less than significant.

Geology and Soils

The Reduced Density Alternative would have the same physical impact area as the Project and would result in the same potential impacts related to geology and soils and seismic hazards as the Project. With implementation of the 2006 EIR mitigation measures, which require adherence to applicable building codes and incorporation of the recommendations from the site-specific geotechnical studies, the Project and this Alternative would not expose people or structures to substantial safety risks associated with geologic hazards. Further, because the physical impact area would be the same as the Project, this Alternative would also have the potential to impact subsurface paleontological resources and the impact would be reduced to a less than significant level with mitigation. Therefore, with incorporation of the identified mitigation measures, and adherence to applicable regulations, geology and soils impacts would be less than significant with implementation of this Alternative and the Project.

Greenhouse Gas Emissions

The Reduced Density Alternative would involve similar construction activities, and the development of the same type of uses as the Project. Therefore, the sources of GHG emissions would be the same, although there would be an overall reduction in GHG emissions due to the reduction in residential units (873 fewer residential units; a reduction of approximately 53% compared to the Project). As with the Project, the Reduced Density Alternative would be consistent with the City's CCAP Update, and therefore, impacts related to GHG emissions would be less than significant.

Hazards and Hazardous Materials

The Reduced Density Alternative would have the same physical impact area as the Project and would involve the development of the same types of uses (residential and school). Thus, similar impacts to hazards and hazardous materials would occur. Based on the location and condition of the Project site and types of uses proposed, the Reduced Density Alternative and the Project would have no impact related to location on a hazardous materials site or wildland fire, and a less than significant impact related to hazardous emissions within 0.25 mile of a school. Land uses that would occur onsite under this Alternative would have a similar potential to handle and store hazardous materials as the Project resulting in a less than significant impact, and similar less than significant impacts related to hazards associated with the ONT and Chino Airport, and emergency response/evacuation. Impacts associated with the potential to encounter septic tanks and water wells, potential methane gas, and hazardous building materials (asbestos and lead) would also be less than significant for the Project and this Alternative with implementation of the 2006 EIR mitigation measures.

Hydrology and Water Quality

The Reduced Density Alternative would involve development of the same area that would occur with implementation of the Project, and the development of the same types of uses, although the density of the residential uses would be reduced. Both the Reduced Density Alternative and the Project would result in an increase in impervious surface, which would increase the amount of storm water runoff and potentially increase the amount of pollutants entering the storm water. As with the Project, storm water runoff would flow to existing drainage and water quality treatment facilities that have sufficient capacity to accommodate storm runoff and water quality treatment requirements from development of this Alternative. Hydrology and water quality impacts would be less than significant for the Project with implementation of 2006 EIR mitigation measures and compliance with existing regulatory requirements and would also be less than significant for the Reduced Density Alternative.

As with the Project, the Reduced Density Alternative would not involve excavation at depths that would encounter groundwater and would not

substantially decrease groundwater supplies or interfere substantially with groundwater recharge.

Because the development area would be the same, the Reduced Density Alternative and the Project would have the same less than significant impacts related to inundation, and no impacts related to flood hazard.

Land Use and Planning

The Reduced Density Alternative would involve the same area of development as the Project, which is already planned for development pursuant to the approved Subarea 29 Specific Plan and the City's TOP 2050. The Reduced Density Alternative and the Project would not divide an established community.

The Reduced Density Alternative would involve development consistent with the land uses anticipated by the TOP 2050. Further the current zoning for existing PAs 30 and 31 is Specific Plan (SP) District (Subarea 29 Specific Plan), and the zoning for the Expansion Area is SP (Specific Plan) with an AG (Agriculture) Overlay, which anticipates development pursuant TOP 2050 and the underlying zoning district. Residential and school uses are currently allowed by the existing Subarea 29 Specific Plan, and the residential and school uses that would be developed under this Alternative would be implemented in accordance with the Development Standards and Design Guidelines outlined in the Subarea 29 Specific Plan, as amended with the Project. Therefore, even though there would be a reduction in dwelling units developed in the City, as with the Project, the Reduced Density Alternative would not conflict with the TOP 2050, the Ontario Municipal Code, or SCAG Connect SoCal, and specifically would not conflict with applicable environmental plans, policies, and regulations adopted for the purpose of avoiding or mitigating an environmental effect. Impacts would be less than significant with implementation of this Alternative and the Project.

Mineral Resources

The Amendment Area does not contain mineral resources of regional or statewide importance and is not designated as a mineral recovery site. The Reduced Density Alternative would have the same physical impact area as the Project, and as with the Project would have no impact to mineral resources.

Noise

The Reduced Density Alternative would involve similar construction activities as the Project and noise and vibration impacts would be less than significant with adherence to the City's Noise Ordinance as identified in the 2006 EIR mitigation measures. Because the types of uses developed under the Reduced Density Alternative and the Project would be the same, the operational onsite noise sources would also be the same and would be less than significant.

The Project would result in increased traffic noise levels along Eucalyptus Avenue west of Hamner Avenue, which would exceed the City's established threshold of significance (allowable increase of 5 dBA) under the Existing Plus Project and Opening Year 2025 traffic scenarios (noise increase of 8.0 dBA and 6.4 dBA, respectively). A 3 dB increase is a doubling of acoustic energy and is the threshold of perceptibility. With an approximate 53% reduction in trip generation associated with the reduction in units under this Alternative, and similar trip distribution on the roadway network, the traffic noise reduction along Segment 46 would be approximately 3 dBA. Therefore, the noise level increase along Segment 46 would be approximately 5.0 dBA and 3.4 dBA with this Alternative. Therefore, this Alternative would avoid the Project's significant and unavoidable off-site traffic noise impact for the Opening year 2025 traffic scenario, but the impact under the Existing Plus Project traffic scenario would remain significant and unavoidable.

As with the Project, onsite uses under the Reduced Density Alternative would not be subjected to excessive noise levels from ONT or Chino Airport operations, resulting in a less than significant impact.

Population and Housing

The Reduced Density Alternative would result in the development of 873 fewer residential units compared to the Project and would include development of the proposed middle school. Thus, development of the Reduced Density Alternative would result in 2,704 fewer residents (3,176 new residents compared to 5,880 new residents with the Project), and the same number of new employees (56 employees). Population growth under the Project was determined to be within the growth projections for the area and impacts to related population and housing were determined to be less than significant. Therefore, as with the Project, the Reduced Density Alternative would not induce substantial unplanned growth, resulting in a less than significant impact. Because the Amendment Area is not occupied, the Reduced Density Alternative and the Project would not displace existing people or housing.

Public Services and Recreation

The Reduced Density Alternative would result in the development of 873 fewer residential units compared to the Project and would include development of the proposed middle school. Thus, development of the Reduced Density Alternative would result in a reduced demand for public services and recreational facilities. As with the Project, with incorporation of the 2006 EIR mitigation measures, the Reduced Density Alternative would not require the construction of new or expanded fire, police, school or library facilities that would result in physical environmental impacts, resulting in a less than significant impact. Additionally, with adherence to the City's parkland requirements, impacts to recreational facilities would be less than significant. Therefore, the Reduced Density Alternative and the Project

would both have a less than significant impact related to public services and recreation.

Transportation

The Reduced Density Alternative would involve implementation of the same roadway, bikeway, pedestrian and transit improvements as the Project, and would comply with City requirements relative to the circulation system. Therefore, as with the Project, the Reduced Density Alternative would not conflict with TOP 2050 Mobility Element policies related to transportation and circulation, Ontario Municipal Code requirements, or SCAG's Connect SoCal transportation-related goals. Additionally, this Alternative and the Project would not create hazards through design and would not result in inadequate emergency access. Therefore, the Reduced Density Alternative and the Project would have a less than significant impact related to conflict with plans addressing the circulation system, transportation-related hazards and emergency access.

Decreasing residential density results in longer and more trips by single-occupancy vehicles and thus an increase in VMT. Table 7-4 of the SEIR presents the VMT Summary for the Reduced Density Alternative. The OD VMT per SP for the total Specific Plan Area under this Alternative (28.6) is lower than the Citywide average OD VMT per SP under General Plan Buildout Conditions, resulting in a less than significant impact as with the Project. However, the OD VMT per SP under this Alternative would be higher than buildout of the Specific Plan with implementation of the Project (26.4).

The Project OD VMT per SP for the Project (23.85) is less than the Citywide average resulting in a less than significant VMT impact. Under this Alternative, with 873 fewer residents, the OD VMT per SP for PA 30 through 34 would be 29.62, which exceeds the Citywide average, resulting in a significant impact that would not occur with the Project. Therefore, at a Project-level, the Reduced Density Alternative would have greater VMT impacts than the Project.

Cumulative VMT impacts would be less than significant for this Alternative and the Project because the proposed development would be consistent with TOP 2050 land use designations.

Tribal Cultural Resources

There are no known tribal cultural resources located within the Amendment Area. Therefore, no impact to known tribal cultural resources would occur with implementation of the Reduced Density Alternative or the Project. This Alternative would involve the same physical impact area as the Project. Therefore, this Alternative would result in the same potential impacts to unknown tribal cultural resources as the Project. With incorporation of the identified mitigation measures, the Reduced Density Alternative would have similar, less than significant impacts as the Project related to tribal cultural resources.

Utilities and Service Systems

As with the Project, the Reduced Density Alternative would increase the water demand, wastewater generation, and electric demand at the Project site compared to existing conditions. Additionally, the Reduced Density Alternative would involve development of the same area that would occur with implementation of the Project and would generate a similar amount of storm water runoff. Although the total number of residential units would be reduced, the overall utility infrastructure needed to serve the Reduced Density Alternative would be the same as the Project and would be located within the same construction impact area. Therefore, as with the Project, the Reduced Density Alternative would have similar, less than significant impacts as the Project related to the installation of utility infrastructure.

The Reduced Density Alternative would have a reduced water demand as compared to the Project due to the reduction in residential units. Therefore, the conclusions of the Project-specific WSA would be applicable to this Alternative, and OMUC would have sufficient water to serve the Reduced Density Alternative. Similarly, with a reduction in wastewater generation, there would be adequate capacity in the IEUA wastewater treatment facilities to treat wastewater generated. The Reduced Density Alternative and Project would have less than significant impacts related to water supply and wastewater treatment.

As with the Project, construction and operation of the proposed residential and school uses under the Reduced Density Alternative would comply with applicable local and state regulations related to solid waste management and diversion of solid waste from landfills. The Reduced Density Alternative and Project would have less than significant impacts related to solid waste.

Wildfire

The Amendment Area is not within or near an SRA or VHFSZ. Therefore, under both the Reduced Density Alternative and the Project, wildfire impacts would not occur.

Ability to Reduce Project Impacts

The Reduced Density Alternative would not avoid the significant and unavoidable impacts resulting from implementation of the Project related to agricultural resources (site-specific and cumulative impacts related to conversion of Farmland to non-agricultural uses). The Reduced Density Alternative would not result in CO and NOx emissions that exceed the SCAQMD thresholds of significance; however, this Alternative would not avoid the significant and unavoidable air quality impacts associated with VOC emissions in exceedance of the SCAQMD thresholds of significance (conflict with the AQMP and operational impacts). The Reduced Density Alternative would avoid the Project's off-site traffic-related noise along one roadway segment under Opening Year 2025 conditions, but the off-site traffic noise impact for the Existing Plus Project traffic scenario would remain significant and unavoidable.

The total VMT per capita would increase under this Alternative and would be significant for PAs 30 through 34 (the Amendment Area), resulting in a significant impact that would not occur with the Project. The VMT per capita would remain less than significant for buildout of the Subarea 29 Specific Plan and with respect to cumulative VMT impacts.

Due to the reduction in residential units, the Reduced Density Alternative would reduce the Project's less than significant impacts to energy, public services and recreation, and utilities and service systems. All other impacts from the Reduced Density Alternative (biological resources, cultural resources, geology and soils, hazards and hazardous materials, hydrology and water quality, land use and planning, population and housing, mineral resources, tribal cultural resources, and wildfire) would be similar to the Project.

Ability to Achieve Project Objectives

The Reduced Density Alternative would involve the development of 873 fewer dwelling units compared to the Project (a reduction of approximately 53%). This alternative would meet most of the Project Objectives; however, it would not meet the following objectives, or not meet the objectives to the same extent as the Project:

4. Maximize housing opportunities to assist in meeting City of Ontario regional housing allocation requirements.

   The Reduced Density Alternative would have 873 fewer dwelling units than the Project and would not maximize housing opportunities; therefore, this objective would not be met.

9. Develop a project that responds well to market demand and meets a range of housing types and affordability.

   The proposed Subarea 29 Specific Plan Amendment introduces new home types to provide a variety of housing types that promote higher density and more choice in floorplans, and that provide more attainable options for a greater range of residents as well as options for different household compositions. While the proposed Specific Plan Amendment introducing new home types would still occur under the Reduced Density Alternative, with 873 fewer units, there would be fewer types of units developed, and the density of the residential development would be reduced. With reduced density development, home prices would be higher. Therefore, although the provision of housing under this Alternative would meet this objective to a certain extent, this objective would be met to a substantially lesser degree than with the Project.

Finding: The City Council rejects the Reduced Density Alternative on the following grounds, each of which individually provides sufficient justification for rejection of this alternative: (1) This Alternative would reduce but not avoid the Project's significant and unavoidable impacts (agricultural resources, air quality and noise); (2) this Alternative would result in a new significant VMT

impact for PAs 30 through 34; and (3) due to its substantial reduction in residential units as compared to the Project, this Alternative would impede attainment of the Project Objectives to the same extent as the Project.

4. ENVIRONMENTALLY SUPERIOR ALTERNATIVE

Section 15126.6(e)(2) of the CEQA Guidelines indicates that an analysis of alternatives shall identify an environmentally superior alternative among the alternatives evaluated in the EIR. In general, the environmentally superior alternative as defined by CEQA should minimize adverse impacts to the project site and its surrounding environment.

The No Project/No Development Alternative would avoid or reduce all of the Project's significant and less than significant environmental impacts and, therefore, can be considered environmentally superior to the Project. While this Alternative would avoid the significant effects of the Project, none of the Project objectives would be met. If a "no project" alternative is identified as the environmentally superior alternative, then the EIR must also identify an environmentally superior alternative among the other alternatives (see State CEQA Guidelines Section 15126.6(e)(2)).

The Reduced Density Alternative would be the environmentally superior alternative compared to the Project and the Reduced Density/Expansion Area Only Alternative. The Reduced Density Alternative would have the same physical impact area as the Project; therefore, it would not reduce the Project's significant and unavoidable impacts to agricultural resources. The reduction in impacts for the Reduced Density Alternative is due to that fact that this Alternative would generate approximately 873 fewer dwelling units than the Project (a reduction of approximately 53%), which would reduce operational impacts (e.g., air quality and GHG emissions, energy demand, trip generation, noise, etc.). Comparatively, the Reduced Density/Expansion Area Only Alternative would result in 155 fewer dwelling units compared to the Project, a reduction of approximately 9%.

As with the Reduced Density/Expansion Area Only Alternative, the Reduced Density Alternative would not avoid the significant and unavoidable impacts resulting from implementation of the Project on agricultural resources (site-specific and cumulative impacts related to conversion of Farmland to non-agricultural uses), air quality (conflict with the AQMP and operational impacts), or traffic-related noise impact along one roadway segment under Existing plus Project condition. Due to the reduction in dwelling units, the Reduced Density Alternative would result in a significant VMT impact for development within PAs 30 through 34 (Amendment Area). Although the overall OD VMT per SP at buildout of the Specific Plan would be higher under the Reduced Density Alternative compared to the Reduced Density/Expansion Area Only Alternative and the Project, the impact would be less than significant.

For the other impact categories, the level of impact would be similar to or less than the Project.

Although the Reduced Density Alternative is environmentally superior to the Project, it does not meet key Project Objectives to the same extent as the Project, including maximizing housing opportunities to assist in meeting City RHNA allocation requirements, and developing a range of housing types and affordability.

CEQA does not require the lead agency (the City of Ontario) to choose the environmentally superior alternative. Instead, CEQA requires the City to consider environmentally superior alternatives, weigh those considerations against the environmental impacts of the proposed Project, and make findings that the benefits of those considerations outweigh the harm. "Among the factors that may be used to eliminate alternatives from detailed consideration in an EIR are: (i) failure to meet most of the basic project objectives, (ii) infeasibility, or (iii) inability to avoid significant environmental impacts" (State CEQA Guidelines §15126.6[c]).

G. ADDITIONAL CEQA CONSIDERATIONS

1. SIGNIFICANT IRREVERSIBLE CHANGES DUE TO THE PROPOSED PROJECT

State CEQA Guidelines Section 15126(c), Section 15126.2(d), and 15127, require that for certain types or categories of projects, an EIR must address significant irreversible environmental changes that would occur should the Project be implemented. As presented in State CEQA Guidelines Section 15127, the topic of Significant Irreversible Environmental Changes need be addressed in EIRs prepared in connection with any of the following activities:

(a) The adoption, amendment, or enactment of a plan, policy, or ordinance of a public agency;

(b) The adoption by a local agency formation commission of a resolution making determinations; or

(c) A project which will be subject to the requirements for preparing of an environmental impact statement pursuant to the requirements of the National Environmental Policy Act of 1969, 42 U.S.C. 4321-4347.

The Project qualifies under State CEQA Guidelines Section 15127(a) in that an amendment to the current Subarea 29 Specific Plan is required in order to implement the Project.

State CEQA Guidelines Section 15126.2(d) requires a discussion of any significant irreversible environmental changes that would be caused by a proposed project and states:

> "Uses of nonrenewable resources during the initial and continued phases of the project may be irreversible, since a large commitment of such resources makes removal or non-use thereafter unlikely. Primary impacts and, particularly, secondary impacts (such as highway improvement which provides access to a previously inaccessible area) generally commit future generations to similar uses. Also, irreversible damage can result from environmental accidents associated with the project. Irretrievable commitments of resources should be evaluated to assure that such current consumption is justified."

Generally, a project will result in significant irreversible environmental changes if the following occurs:

- The primary and secondary impacts would generally commit future generations to similar uses;

- The project would involve a large commitment of nonrenewable resources;
- The project involves uses in which irreversible damage could result from any potential environmental accidents associated with the project; and
- The proposed consumption of resources is not justified (e.g., the project involves the wasteful use of energy).

Determining whether the Project may result in significant irreversible effects requires a determination of whether key non-renewable resources would be degraded or destroyed in such a way that there would be little possibility of restoring them. PAs 30 and 31 are developed with structures associated with former dairy farming operation. An existing SCE easement bisects existing PAs 30 and 31. The western portion of the proposed Expansion Area is disturbed; specifically, the northern portion was used for agricultural purposes and the southern portion was previously occupied by a trucking company. The eastern portion of the proposed Expansion Area is undeveloped. The Amendment Area and surrounding area has historically been used for agricultural purposes; however, agricultural activities at the Amendment Area ceased in 2009, except for the western portion of the proposed Expansion Area. There are no non-renewable resources present at the Amendment Area; therefore, conversion of the land from its current state to residential and school uses would not degrade or destroy non-renewable resources in such a way that there would be little possibility of restoring them.

Construction and long-term operation of the Project would require the commitment and reduction of non-renewable and/or slowly renewable resources, including petroleum fuels and natural gas (for vehicle emissions, construction, lighting, heating, and cooling of structures) as well as lumber, sand/gravel, steel, copper, lead, and other metals (for use in building and roadway construction and utility infrastructure). Other resources that are slow to renew and/or recover from environmental stressors would also be impacted by Project implementation; these include air quality (through the combustion of fossil fuels and production of greenhouse gases) and water supply (through the increased potable water demands for drinking, cleaning, landscaping, and general maintenance needs). The Project is required by law to comply with federal, State, and local building requirements addressing energy conservation. Compliance with these requirements reduces a building operation's energy volume that is produced by fossil fuels. A more detailed discussion of energy consumption is provided in SEIR Section 5.6, Energy. The consumption of non-renewable resources to construct and operate the Project over the long-term would likely commit subsequent generations to the same use of the land and similar patterns of energy consumption. It is improbable that the Amendment Area would revert to permanently undeveloped conditions due to the large capital investment that would already have been committed. However, the Project is not expected to reduce the availability of any natural resources as a result of long-term operational activities.

TOP 2050 and the Ontario zoning ordinance anticipate that development within the Amendment Area would eventually support residential and school uses in accordance with the underlying zoning classification and land use designations. Implementation of the Project would commit the Amendment Area to residential uses and one middle school. These uses are compatible with the existing and planned uses that surround the Amendment Area. The Project and its environmental effects would not compel or commit surrounding properties to land uses other than those that are existing today or those that

are planned by TOP 2050 and the zoning ordinance. For this reason, the Project would not result in a significant, irreversible change to nearby, off-site properties.

SEIR Section 5.9, Hazards and Hazardous Materials, provides an analysis of the Project's potential to transport or handle hazardous materials which, if released into the environment, could result in irreversible damage to the environment. As concluded in the analysis, compliance with federal, State, and local regulations related to hazardous materials would be required of all contractors working at the Amendment Area during the Project's construction and of all occupants that occupy the Project's buildings. As such, construction and long-term operation of the Project would not cause significant irreversible damage to the environment that could result if hazardous materials were released from the site, including damage that may result from upset or accident conditions.

Lastly, an increased commitment of public services (e.g., police and fire) would also be required. However, as discussed in SEIR Section 5.15, Public Services and Recreation, the Project would not require or result in the unplanned construction of new or alteration of existing fire or police protection facilities to maintain an adequate level of service to the Amendment Area, and no physical environmental impacts would result. (Draft SEIR, pp. 6-3 - 6-4)

2. GROWTH-INDUCING IMPACTS OF THE PROPOSED PROJECT

CEQA requires a discussion of ways in which a proposed project could foster economic or population growth, or the construction of additional housing, either directly or indirectly, in the surrounding environment (State CEQA Guidelines, Section 15126.2[e]). New residents and employees from the future residential and school uses, which would be allowed by the proposed Subarea 29 Specific Plan Amendment, represent direct forms of growth. These direct forms of growth have a secondary effect of expanding the size of local markets and inducing additional economic activity in the area, placing additional demands on public services and infrastructure systems, and in the generation of a variety of environmental impacts, which are addressed in SEIR Section 5.1 through Section 5.19.

To address this issue, potential growth-inducing effects are examined through analysis of the following questions:

1. Would this project remove obstacles to growth (e.g., through the construction or extension of major infrastructure facilities that do not presently exist in the project area or through changes in existing regulations pertaining to land development)?
2. Would this project result in the need to expand one or more public services to maintain desired levels of service?
3. Would this project encourage or facilitate economic effects that could result in other activities that could significantly affect the environment?
4. Would approval of this project involve some precedent-setting action that could encourage and facilitate other activities that could significantly affect the environment?

A project could indirectly induce growth by reducing or removing barriers to growth, or by creating a condition that attracts additional population or new economic activity. However,

a project's potential to induce growth does not automatically result in growth. Growth can only happen through capital investment in new economic opportunities by the private or public sectors. Under CEQA, growth inducement is not considered necessarily detrimental, beneficial, or of little significance to the environment. This issue is presented to provide additional information on ways in which the proposed project could contribute to significant changes in the environment, beyond the direct consequences of implementing the Project examined in the SEIR.

a. Would this project move obstacles to growth (e.g., through the construction or extension of major infrastructure facilities that do not presently exist in the project area, or through changes in existing regulations pertaining to land development)? The Project would result in the completion of roadway improvements along the roadways that abut the Amendment Area and new roadways built on site would serve the Project but would not provide additional capacity to induce unplanned growth. Additionally, the Project would not involve development that would establish an essential unplanned public service or utility/service system. The Amendment Area and surrounding areas are already served by essential public services and an extensive network of utility/service systems and other infrastructure necessary to accommodate or allow the existing conditions and planned growth.

The existing and planned utility/service systems in the roadways adjacent to or near the Amendment area can serve the development proposed within the Amendment Area with connections to these existing facilities. The utility infrastructure installed as part of the Project would be sized and located expressly to serve the onsite uses, and would not, therefore, induce unplanned growth in the Project vicinity.

The Project involves the development of residential uses in PAs 30 through 33, and a middle school in PA 34, consistent with the land use designations for the Amendment Area identified in the TOP 2050 Policy Plan Land Use Plan. The proposed residential uses would be development in accordance with applicable Subarea 29 Specific Plan requirements and City development standards, and the proposed middle school would be developed in accordance with applicable state requirements for school uses. The Project implements growth and development anticipated by TOP 2050 and would not change existing regulations pertaining to land development. Therefore, the Project is not considered to be growth inducing with respect to the removal of obstacles to growth.

b. Would this project result in the need to expand one or more public services to maintain desired levels of service? As discussed in SEIR Section 5.15, Public Services and Recreation, the Project would increase the demand for public services (police, fire, schools, libraries, and parks and recreational facilities). The proposed residential and school uses would create the typical range of service calls for police and fire services that occur with these types of uses, and the proposed middle school implements a school that has already been planned to serve school demands in the Ontario Ranch. Therefore, the Project would not necessitate the unplanned construction of new or the expansion of existing public service facilities in order to maintain desired levels of service. Additionally, funding mechanisms are in place through existing regulations and standard practices to accommodate growth in the City, including the Project. This Project would not, therefore, have significant growth-inducing consequences with respect to public services.

c. Would this project encourage or facilitate economic effects that could result in other activities that could significantly affect the environment? During Project construction, a number of design, engineering, and construction-related jobs would be created. This would last until Project construction is completed. This would be an indirect, growth-inducing effect of the Project.

As further described in SEIR Section 3.0, Project Description, for purposes of analysis in the SEIR, it is anticipated the Project would result in the development of 1,470 net new residential units and one middle school on 20 acres. It is estimated that this development could generate up to 5,876 new residents and approximately 56 new employment opportunities. As discussed in SEIR Section 5.14, Population and Housing, the Project would not exceed the growth projections for the City or the region. The increase in housing/population and employment generation at the Amendment Area was anticipated in TOP 2050, which estimates the buildout conditions for the City (by 2050). Further, it is expected that the short-term construction jobs and new positions during operation would be filled by workers who already reside in the local area or region.

As development occurs onsite, Project residents and employees would seek shopping, entertainment, employment, home improvement, auto maintenance, and other economic opportunities in the surrounding area. The Project is located near existing employment and retail areas, which would help serve the employment and shopping needs of the future residents. However, the increased demand for such economic goods and services could encourage the creation of new businesses and/or the expansion of existing businesses that address these economic needs. This growth may be experienced in the areas in proximity to the Amendment Area that are either currently undeveloped or underutilized. However, this type of growth is already anticipated in TOP 2050. Therefore, implementation of residential and school uses allowed by the Project would support existing uses in the area and could encourage or facilitate the growth envisioned in TOP 2050.

d. Would approval of this project involve some precedent-setting action that could encourage and facilitate other activities that could significantly affect the environment? There are no proposed changes to the type of uses allowed by TOP 2050 and zoning ordinance. Further, no changes to any of the City's building safety standards (i.e., building, grading, plumbing, mechanical, electrical, fire codes) are proposed or required to implement this Project. As identified in SEIR Sections 5.1 through 5.19, the Project would be implemented in accordance with applicable regulations and identified mitigation measures, which would ensure there are no conflicts with adopted land development regulations, and environmental impacts are minimized. The Project does not propose any precedent-setting actions that, if approved, would specifically allow, or encourage other projects and resultant growth to occur. Furthermore, the Project is not extending any infrastructure or facilitating further development. Accordingly, the Project's potential influence on other nearby properties to redevelop at greater intensities and/or different uses than TOP 2050 and zoning ordinance allow is speculative. CEQA does not require the analysis of speculative effects (CEQA Guidelines Section 15145). If any other property owner were to propose development or redevelopment of a property in the Project vicinity or in any part of the City, that project would require evaluation under CEQA based on its

own merits, including an analysis of direct and cumulatively considerable effects. (Draft SEIR, pp. 6-4 - 6-7)

SECTION V. STATEMENT OF OVERRIDING CONSIDERATIONS

CEQA requires decision makers to balance the benefits of the proposed Project against its unavoidable environmental risks when determining whether to approve the project. If the benefits of the project outweigh the unavoidable adverse effects, those effects may be considered "acceptable" (State CEQA Guidelines Section 15093[a]). CEQA requires the agency to support, in writing, the specific reasons for considering a project acceptable when significant impacts are infeasible to mitigate. Such reasons must be based on substantial evidence in the Final EIR or elsewhere in the administrative record (State CEQA Guidelines Section 15093[b]). The agency's statement is referred to as a Statement of Overriding Considerations.

The following provides a description of the project's significant and unavoidable adverse impact and the justification for adopting a statement of overriding considerations.

A. SIGNIFICANT AND UNAVOIDABLE IMPACTS

The City identifies the following significant unavoidable adverse impacts of the Project:

Agricultural Resources

- Would the Project convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use? (Project and Cumulative Impact)

Air Quality

- Would the Project conflict with or obstruct implementation of the applicable air quality plan? (Project and Cumulative Impact)

- Would the proposed project, result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard? (Project and Cumulative Operational Impacts)

Noise

1. Would the Project generate substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or Noise Ordinance, or applicable standards of other agencies? (Project and Cumulative Off-site Traffic Noise Impacts)

B. PROJECT BENEFITS IN SUPPORT OF THE STATEMENT OF OVERRIDING CONSIDERATIONS

The following section describes the benefits of the Project that outweigh the Project's unavoidable adverse effects and provides specific reasons for considering the Project acceptable even though the Final SEIR has indicated that there will be significant and unavoidable project impacts even with the mitigation measures implemented. Accordingly, this Statement of Overriding Considerations regarding potentially significant adverse environmental impacts resulting from the Project, as set forth below, has been prepared. Pursuant to CEQA Guidelines Section 15093(c), the Statement of Overriding Considerations will be included in the record of the Project approval and will also be noted in the Notice of Determination. Each of the benefits identified below provides a separate and independent basis for overriding the significant environmental effects of the Project.

Having reduced the potential effects of the proposed Project through all feasible mitigation measures as described previously herein and balancing the benefits of the Project against its potential unavoidable adverse impacts, the City finds that the following legal requirements and benefits of the proposed Project individually and collectively outweigh the potentially significant unavoidable adverse impacts for the reasons stated. The Statement of Overriding Considerations adopted for the approved Specific Plan are restated in subsection (1) below and remain applicable to the Project. In addition, the Statement of Overriding Considerations has been updated and refined based on current information as presented in subsection (2) below.

1. 2006 EIR Overriding Considerations

The Project involves an amendment to the previously approved Subarea 29 Specific Plan to among other reasons, develop a project consistent with the vision for Ontario Ranch as presented in TOP 2050. The Project does not change the types of land uses allowed by the approved Specific Plan (residential, park and school). The Statement of Overriding Considerations adopted for the approved Specific Plan are restated below.

The Project will implement the vision of the New Model Colony (NMC) General Plan, which is designed to be a place of diversity that includes the following: a mix of residential neighborhoods with a variety of housing options; regional serving centers that provide retail, professional office, medical facilities, high-density housing, entertainment complexes, and hotel and conference facilities; employment centers; and a Town Center that serves as the principal center of activity and the common focal point for all NMC neighborhoods and districts.

The Project will provide land uses that are compatible with surrounding land uses and that are consistent with the policies for specific plans identified in the NMC General Plan.

- *The Project will implement the policies of the NMC General Plan.*
- *The Project will provide infrastructure to serve the Project in a timely manner consistent with NMC programmed infrastructure plans.*
- *The Project will provide employment opportunities on the Project site.*

- *The Project will contribute to the City's Jobs/Housing Balance and assist in satisfying the City's regional housing needs allocation.*
- *The Project will improve water quality by transitioning land uses on the Project site from agriculture to urban uses and by implementing best management practices that will prevent pollutants from entering waterways.*

2. Subarea 29 Specific Plan Amendment Statement of Overriding Considerations

To the extent that the significant effects of the Project are not avoided or substantially lessened to below a level of significance, the City of Ontario, having reviewed and considered the information contained in the Final SEIR and the public record, and having balanced the benefits of the Project against the unavoidable effects which remain, finds that such unmitigated effects to be acceptable in view of the following overriding considerations. The City finds that any one of these Project benefits standing alone would be sufficient to sustain the Statement of Overriding Considerations.

- **The Subarea 29 Specific Plan Amendment Project is consistent with and will contribute to achieving the goals and objectives established by TOP 2050. Implementing the City's General Plan as a policy is a legal and social prerogative of the City.**

  TOP 2050, including the Policy Plan, which is the City's General Plan, was approved in August 2022. As described in SEIR Section 5.14, Population and Housing, the Project would generate approximately 5,876 new residents and would increase the total number of allowed units in the Subarea 29 Specific Plan from 2,418 units to 3,888 units (an increase of 1,470 units). The proposed increase in units within the Amendment Area is consistent with TOP 2050 and would not result in an increase in housing or population beyond that anticipated with buildout of TOP 2050. Further, as outlined in SEIR Section 5.11, Land Use and Planning, the Project is consistent with the goals and policies included in TOP 2050 Policy Plan.

- **The Subarea 29 Specific Plan Amendment Project would assist in the City in meeting State-mandated fair share housing production targets as outlined in the Southern California Association of Governments (SCAG) Regional Housing Needs Assessment (RHNA) and contribute to the City's Jobs/Housing Balance.**

  SCAG's RHNA provides an allocation of the existing and future housing needs by jurisdiction; this is based on income level, existing housing needs in each city and county, and the fair share allocation of the projected regional population growth. All local governments are required to set aside sufficient land, adopt programs, and provide funding (to the extent feasible), to facilitate and encourage housing production commensurate with that housing need. The City's adopted Housing Element outlines how the City will meet its RHNA allocation obligations for the Sixth Cycle Housing Element Update, which covers the housing element planning period of October 2021 through October 2029. The City's RHNA allocation for the 2021-2029 planning period is 20,854 units, including 8,599 above moderate units. The Amendment Area is not identified in the Housing Element as a "Housing Opportunity Area;" however, the development of new housing units within the

Amendment Area (an increase of 1,470 units compared to the approved Specific Plan) would assist the City in meeting State-mandated fair share housing production targets for above moderate housing as outlined in SCAG's RHNA.

As further discussed in SEIR Section 5.14, Population and Housing, implementation of development pursuant to TOP 2050, including the Project, would result in a jobs-housing ratio of 2.3, which would be reduced compared to the 3.0 jobs-housing ratio under the previous TOP.

- **The Project will provide infrastructure to serve the Project in a timely manner consistent with Ontario Ranch programmed infrastructure plans.**

  As described in SEIR Section 3.0, Project Description, the Project would implement on- and off-site infrastructure improvements consistent with Ontario Ranch programmed infrastructure plans, including, but not limited to the 2012 New Model Colony Water Master Plan (Phase 1a-1e), 2012 New Model Colony Sewer Master Plan, and 2012 City of Ontario Master Plan of Drainage.

- **The Project will provide employment opportunities on the Project site.**

  The approved Subarea 29 Specific Plan PA 2 (14.5 gross acres) is planned for development with commercial uses, and the Project does not include any changes to this planned employment-generating use. Further, as identified in SEIR Section 5.14, Population and Housing, the middle school within PA 34 of the proposed Expansion Area would generate approximately 56 employment opportunities.

- **The Project will improve water quality by transitioning land uses on the Project site from agriculture to urban uses.**

  As further discussed in SEIR Section 5.10, Hydrology and Water Quality, existing dairy operations were a primary source of nitrate and total dissolved solids (TDS), and implementation of the Subarea 29 Specific Plan would improve groundwater quality over time, with respect to nitrates and TDS. With respect to surface water quality, project-specific Water Quality Management Plans (WQMPs) would be prepared for development within the Amendment Area (PAs 30 through 34), and the WQMPs would adhere to the New Model Colony East Water Quality Management Plan Guidance (NMC East WQMPG). The NMC East WQMPG establishes a uniform and integrated approach in meeting MS4 requirements and provides overall guidance for NMC East Builders and the City of Ontario as it relates to selection of best management practices (BMPs) and implementation NMC East WQMPG. Preparation and implementation of Project-specific WQMPs would ensure compliance with the City's NPDES municipal stormwater permit and would minimize the release of potential waterborne pollutants, including pollutants of concern for downstream receiving water.

C. CONCLUSION

The City Council of Ontario has balanced the Project's benefits against the significant unavoidable impacts. The City Council finds that the Project's benefits, which aim to meet

the goals and policies of TOP 2050, outweigh the Project's significant unavoidable impacts, and these impacts, therefore, are considered acceptable in the light of the Project's benefits. The City Council finds that each of the benefits described above is an overriding consideration, independent of the other benefits, that warrants approval of the Project notwithstanding the Project's significant unavoidable impacts.

SECTION VI. MITIGATION MONITORING AND REPORTING PROGRAM

Pursuant to PRC Section 21081.6, the City Council hereby adopts the Mitigation Monitoring and Reporting Program attached to this Resolution as Exhibit A. Implementation of the Mitigation Measures contained in the Mitigation Monitoring and Reporting Program is hereby made a condition of approval of the Project. In the event of any inconsistencies between the mitigation measures as set forth herein and the Mitigation Monitoring and Reporting Program, the Mitigation Monitoring and Reporting Program shall control.

SECTION VII. PROJECT APPROVAL

Based upon the entire record before it, including the SEIR, Findings of Fact, Statement of Overriding Considerations, and all written and oral evidence presented, City Council hereby approves the proposed Project.

SECTION VIII. STAFF DIRECTION

A Notice of Determination shall be filed with the County of San Bernardino within five (5) working days of final Project approval.

The City Clerk of the City of Ontario shall certify as to the adoption of this Resolution.

PASSED, APPROVED, AND ADOPTED this 21st day of November 2023.

1.0 INTRODUCTION

1.1 OVERVIEW

This document, combined with the Draft Subsequent Environmental Impact Report (SEIR), constitutes the Final SEIR for the Subarea 29 Specific Plan Amendment (Project). In summary, the Draft SEIR describes the Project, describes the existing environmental conditions relevant to the Project, evaluates the Project's potential environmental effects, and identifies mitigation measures and alternatives to reduce or avoid the potentially significant impacts. The Draft SEIR was circulated for a 45-day review period: July 17, 2023 through August 31, 2023.

1.2 CONTENT AND FORMAT

Following this introductory Section 1.0, Section 2.0, *Comments and Responses*, of this Final SEIR presents Draft SEIR comments and responses to these comments; Section 3.0, *Draft SEIR Clarifications and Corrections*, identifies minor revisions to the Draft SEIR; and Section 4.0, *Mitigation Monitoring and Reporting Program*, presents the Mitigation Monitoring and Reporting Program for the Project.

1.3 DRAFT SEIR COMMENTORS

Draft SEIR comment letters were received from the following agencies.

- San Bernardino County Flood Control District
- South Coast Air Quality Management District

Comment letters received in regard to the Draft SEIR are included, along with corresponding responses, in their entirety in Final SEIR Section 2.0, *Comments and Responses*.

1.4 LEAD AGENCY AND POINT OF CONTACT

The Lead Agency for the Project and SEIR is the City of Ontario. Any questions or comments regarding the preparation of this document, its assumptions, or its conclusions, should be referred to:

City of Ontario
Planning Division
303 East B Street
Ontario, CA 91764
Contact Person: Jeanie Irene Aguilo, Associate Planner

1.5 PROJECT SUMMARY

The following information is summarized from the Project Description in the Draft SEIR. For additional detail regarding Project characteristics and Project-related improvements, along with analyses of the Project's

potential environmental impacts, please refer to Draft SEIR Sections 3.0, *Project Description*, and 5.0, *Environmental Analysis*, respectively.

1.5.1 PROJECT LOCATION

The Project is located in the City of Ontario, in San Bernardino County. The currently proposed Amendment Area encompasses approximately 151.1 acres and includes existing Planning Areas (PA) 30 and 31 (approximately 37.9 acres) of the Subarea 29 Specific Plan area, and the proposed Expansion Area (new PAs 32, 33, and 34; approximately 113.2 acres). Existing PAs 30 and 31 are bound by Eucalyptus Avenue to the north, Haven Avenue to the east, Parkview Street to the south, and existing residential development in PAs 22 and 23 to the west. The proposed Expansion Area is bound by Eucalyptus Avenue to the north, Haven Avenue to the west, Mill Creek Boulevard to the east, and Bellegrave Avenue to the south. Bellegrave Avenue also forms the jurisdictional boundary between the City of Ontario/San Bernardino County and City of Eastvale/Riverside County.

1.5.2 PROJECT OVERVIEW

The adopted Subarea 29 Specific Plan allows for the development of 2,418 dwelling units, commercial uses (12.1 net acres/87,000 square feet [sf]), neighborhood parks (13.9 net acres), a recreation center (3.1 gross acres), and two schools (elementary and middle schools) within 31 existing PAs. With the exception of the planned uses in PA 2 (commercial), and PAs 30 and 31 (197 residential units), the previously approved Subarea 29 Specific Plan uses are constructed/occupied or under construction. Approved units in PA 1, PA 27, PA 28, and PA 29 (734 units) are under construction. The Park View Elementary School opened in August 2022. A change to the allowed number and type of residential units in PAs 30 and 31 is part of the currently proposed Specific Plan Amendment.

The proposed Specific Plan Amendment would add the approximately 113.2 gross-acre Expansion Area to the Subarea 29 Specific Plan area to create new PAs 32, 33 and 34 in the southern portion of the City of Ontario and allow for the development of a 20-acre middle school and up to 1,315 detached and attached homes in this area. In addition, the Project includes changes to the Subarea 29 Specific Plan for existing PAs 30 and 31 to allow for the development of an additional 155 dwelling units (an increase from 197 units to 352 units). Collectively, these actions would increase the total number of allowed residential units in the Subarea 29 Specific Plan from 2,418 units to 3,888 units (an increase of 1,470 units). The proposed Specific Plan Amendment applies a new "Mixed Residential" land use designation to existing PAs 30 and 31 and new PAs 32 and 33 and adds approximately 93.2 residential acres to the Subarea 29 Specific Plan. This "Mixed Residential" land use designation and proposed revisions to the Residential Design Guidelines permit a variety of housing types that promote higher density and more choice in floorplans. "Mixed Residential" has been created to provide more attainable options for a greater range of residents as well as options for different household compositions.

The City of Ontario adopted The Ontario Plan 2050 (TOP 2050) in August 2022. TOP 2050 is intended to guide the City's development and conservation for the next 30 years through 2050. TOP 2050 anticipates the proposed Subarea 29 Specific Plan Amendment, including the increase to 3,888 units in the Specific Plan Area,

as amended. The proposed Subarea 29 Specific Plan Amendment is consistent with the recently approved TOP 2050 land use designations.

1.5.3 PROJECT OBJECTIVES

The objectives that have been established for the Project are consistent with those presented in the 2006 EIR, that are applicable to the Project, including:

1. Develop a project consistent with the vision for Ontario Ranch.
2. Develop a specific plan that incorporates General Plan land use principles; standards and distribution of land uses relative to residential, open space, recreation, and public uses.
3. Provide adequate school sites to serve Subarea 29 and adjoining Subareas.
4. Maximize housing opportunities to assist in meeting City of Ontario regional housing allocation requirements.
5. Provide neighborhoods which are identifiable from each other, with public and private amenities, linked by a network of pedestrian trails.
6. Create a community with a sense of place, walkability, and livability. Include pedestrian and bicycle trails to link neighborhoods and districts; short blocks to promote ease of access and neighborhood activity; use variable setbacks and reduced garage emphasis; and curb-separated landscaped parkways.
7. Create small neighborhoods with a wide range of lot sizes and street frontages among the various neighborhoods (not within neighborhoods).
8. Establish clearly defined "edges" and "entries" that contribute to a district neighborhood identity.
9. Develop a project that responds well to market demand and meets a range of housing types and affordability.
10. Develop a project with good regional access.
11. Minimize the use of walls as sound barriers along arterials and high traffic roadways through the use of landscaped setbacks and structures designed to attenuate sound, or a combination thereof, to promote visual quality and sound attenuation.

1.5.4 DISCRETIONARY ACTIONS

A. Lead Agency Discretionary Actions and Permits

California Code of Regulations, Title 14 (hereinafter, "CEQA Guidelines") Section 15124 states in pertinent part that if "a public agency must make more than one decision on a project, all its decisions subject to CEQA

should be listed…" As identified in Table 3-2, *Project Related Approvals/Permits,* of the Draft SEIR, decisions, or discretionary actions, necessary to realize the Project would include:

- Approval of the Subarea 29 Specific Plan Amendment
- Approval of Tentative Subdivision Maps
- Approval of Development Plans
- Approval of Development Agreements

The City would also process ministerial permits necessary to implement on- and off-site improvements related to the development of the Project.

B. Other Agency Consultations and Permits

Anticipated consultation(s) and permits from agencies and utility companies necessary to realize the Project would likely include, but are not limited to, the following:

- Permitting by/through the Santa Ana Regional Water Quality Control Board (SARWQCB) pursuant to requirements of the City's Construction Activity General Construction Permit and National Pollutant Discharge Elimination System (NPDES) Permit.
- Approval from San Bernardino County Department of Public Health to cap the well in Eucalyptus Avenue.
- Approval of permits for stationary sources from the South Coast Air Quality Management District (SCAQMD).
- Approval of an encroachment permit from the San Bernardino County Flood Control District (SBCFCD) for any work within the SBCFCD roadway right-of-way.
- Approval from Southern California Edison (SCE) for construction within the SCE easement area, and permits and associated approvals, as necessary for the construction of new utility infrastructure or connections to existing facilities.
- Permitting (i.e., utility construction and connection permits) from affected utility purveyors, notably Southern California Gas Company, Frontier Communications, Charter Communications/Spectrum, and Ontario City Fiber.

2.0 COMMENTS AND RESPONSES

This Section presents written comments received pursuant to public review of the Draft SEIR and provides responses to those comments as required by CEQA Guidelines Sections 15089, 15132, and 15088. Specifically, CEQA Guidelines Section 15088(a) requires that: "[t]he lead agency…evaluate comments on environmental issues received from persons who reviewed the draft EIR and shall prepare a written response. The lead agency shall respond to comments raising significant environmental issues received during the noticed comment period and any extensions and may respond to late comments."

The Draft SEIR was circulated for a 45-day review period: July 17, 2023 through August 31, 2023. Table 2-1, *Draft SEIR Commentors*, lists the Draft SEIR commentors. Commentor correspondence and correlating responses are presented subsequently. Comments have been reproduced verbatim and without grammatical or typographical correction. The comments received do not raise significant environmental issues related to the analysis presented in the Draft SEIR.

RE: CEQA COMMENT – NOTICE OF AVAILABILITY OF A DRAFT SUBSEQUENT ENVIRONMENTAL IMPACT REPORT (DSEIR); FILE NO. PSPA21-005; SUBAREA 29 SPECIFIC PLAN AMENDMENT PROJECT (SCH NO. 2004011009).

Dear Ms. Aguilo:

Thank you for allowing the San Bernardino County Department of Public Works the opportunity to comment on the above-referenced project. **We received this request on July 26, 2023** and pursuant to our review, the following comments are provided:

Permits Division (Johnny Gayman, Chief, (909) 387-7995):

1. The proposed Project in the City of Ontario is located adjacent to the San Bernardino County Flood Control District (SBCFCD) Road Right-of-Way. The applicant will need to obtain an encroachment permit from the SBCFCD if they are proposing any work within the SBCFCD R/W. If you have any questions regarding this process, please contact the SBCFCD Permit Section at (909) 387-1863.

SBCFCD-1

Flood Control Water Resources Division (Michael Fam, Chief, (909) 387-8120):

The Project is part of:

- Comprehensive Storm Drain Plan (CSDP) No. 2 – March 1969; Moffatt & Nichol
- Ontario New Model Colony Master Plan of Drainage (MPD) – L.D. King
- City of Ontario MPD – March 2012; Hunsaker and Assoc. Irvine, Inc.

We have reviewed the DSEIR and offer these comments:

1. The San Bernardino County Flood Control District's recommendations are most often made for site specific conditions. Therefore, the recommendations made here are general in nature until such time as more detailed plans become available.

SBCFCD-2

BOARD OF SUPERVISORS
Col. Paul Cook (Ret.) Vice Chairman, First District | Jesse Armendarez Second District | Dawn Rowe Chair, Third District | Curt Hagman Fourth District | Joe Baca, Jr. Fifth District | Leonard X. Hernandez Chief Executive Officer

2. According to the most recent FEMA Flood Insurance Rate Map (FIRM), Panels 06071C9375H, dated August 28, 2008, the Project (two Planning Areas (PA), both lie within Zone X (outside the 500-yr. floodplain). SBCFCD-3

3. If any encroachment onto the SBCFCD's Road Right-of-Way is anticipated, a permit shall be obtained from the District. Other on-site or off-site improvements may be required, which cannot be determined at this time. SBCFCD-4

4. One of the benefits of the CSDP/MPD is to identify the alignment of future drainage and flood control facilities. It is hoped that the City of Ontario will continue to use this document to protect the alignment of these future facilities. SBCFCD-5

Flood Control Planning Division (Michael Fam, Chief, (909) 387-8120):

1. We are aware there may be storm drains in and around the site that may be affected by the proposed Project. When planning for or altering existing or future storm drains, be advised that the Project is subject to the Ontario MPD dated, March 2012. It is to be used as a guideline for drainage in the area and is available at the City of Ontario offices. Any revision to the drainage should be reviewed and approved by the jurisdictional agency (City, County). SBCFCD-6

2. The proposed Project is located adjacent to a San Bernardino County Flood Control District (SBCFCD) right-of-way and/or facilities (3-317-1A) County Line Channel Easement (06-594751 OR) located along the north side of Belgrave Avenue. Any encroachments including but not limited to, access for grading, fence removal and installation, side drain connections, and utilities on the District's right-of-way and/or facilities will require a permit from the SBCFCD prior to start of construction. Please contact the San Bernardino County Flood Control Permit Section at (909) 387-7995 for further information regarding this process. SBCFCD-7

Sincerely,

Nancy Sansonetti

San Bernardino County Flood Control District
825 East Third Street
San Bernardino, CA 92415-0835

Dated August 17, 2023

Comment SBCFCD-1

Thank you for allowing the San Bernardino County Department of Public Works the opportunity to comment on the above-referenced project. We received this request on July 26, 2023 and pursuant to our review, the following comments are provided:

1. *The proposed Project in the City of Ontario is located adjacent to the San Bernardino County Flood Control District (SBCFCD) Road Right-of-Way. The applicant will need to obtain an encroachment permit from the SBCFCD if they are proposing any work within the SBCFCD R/W. If you have any questions regarding this process, please contact the SBCFCD Permit Section at (909) 387-1863.*

Response SBCFCD-1

SBCFCD's receipt of the SEIR is acknowledged. The need for an encroachment permit for any work within the SBCFCD's right-of-way is noted and has been added to the list of "Other Agencies and Utilities – Subsequent Approvals and Permits" included in Table 3-2, *Project Related Approvals/Permits,* of the Draft SEIR (refer to Section 3.0, *Draft SEIR Clarifications and Corrections,* of this Final SEIR).

Comment SBCFCD-2

The Project is part of:

- *Comprehensive Storm Drain Plan (CSDP) No. 2 – March 1969; Moffatt & Nichol*
- *Ontario New Model Colony Master Plan of Drainage (MPD) – L.D. King*
- *City of Ontario MPD – March 2012; Hunsaker and Assoc. Irvine, Inc.*

We have reviewed the DSEIR and offer these comments:

1. *The San Bernardino County Flood Control District's recommendations are most often made for site specific conditions. Therefore, the recommendations made here are general in nature until such time as more detailed plans become available.*

Response SBCFCD-2

SBCFCD's statement that the recommendations provided in their comment letter are general in nature is noted and no response is required.

Comment SBCFCD-3

2. *According to the most recent FEMA Flood Insurance Rate Map (FIRM), Panels06071C9375H, dated August 28, 2008, the Project (two Planning Areas (PA), both lie within Zone X (outside the 500-yr. floodplain).*

Response SBCFCD-3

SBCFCD's comment that the Project lies within Zone X is noted and is consistent with the information presented in Section 5.10, *Hydrology and Water Quality,* of the Draft SEIR.

Comment SBCFCD-4

3. *If any encroachment onto the SBCFCD's Road Right-of-Way is anticipated, a permit shall be obtained from the District. Other on-site or off-site improvements may be required, which cannot be determined at this time.*

Response SBCFCD-4

The need for an encroachment permit for any work within the SBCFCD's right-of-way is noted and has been added to the list of "Other Agencies and Utilities – Subsequent Approvals and Permits" included in Table 3-2, *Project Related Approvals/Permits,* of the Draft SEIR (refer to Section 3.0, *Draft SEIR Clarifications and Corrections,* of this Final SEIR). As identified in Draft SEIR Section 3.0, Project Description, existing storm drain facilities installed pursuant to the City of Ontario Master Plan of Drainage (2012) would accommodate storm water runoff from the Project. This includes an existing 96-inch reinforced concrete pipe (RCP) in Haven Avenue and a 10-foot by 8-foot reinforced concrete box in Mill Creek Avenue, which are owned and maintained by the City of Ontario, and the SBCFCD County Line Channel, which extends along Bellegrave Avenue. The Project would install a 48-inch reinforced concrete pipe (RCP) in Eucalyptus Avenue (along the northern boundary of PA 33). Storm drains installed within the Amendment Area would convey the on-site flows to the proposed Master Planned lines. The physical impacts associated with installation of the on- and off-site storm drain infrastructure necessary to serve the Project have been evaluated in the Draft SEIR. Further, as required by mitigation measure MM Hydro 4 presented in the Mitigation Monitoring and Reporting Program included in Section 4 of this FSEIR, the City of Ontario will coordinate with the SBCFCD to ensure that the Project meets the County's flood control requirements.

Comment SBCFCD-5

4. *One of the benefits of the CSDP/MPD is to identify the alignment of future drainage and flood control facilities. It is hoped that the City of Ontario will continue to use this document to protect the alignment of these future facilities.*

Response SBCFCD-5

The request for the City of Ontario to continue to use the CSDP/MPD to identify the alignment of future drainage and flood control facilities is noted. As discussed in Section 4.10, *Hydrology and Water Quality*, of the Draft SEIR, and in Response to Comment SBCFCD-6 below, the Project would not require new or expanded backbone storm drain facilities beyond that anticipated by the 2012 Ontario MPD. The Project does not conflict with the CSDP/MPD.

Comment SBCFCD-6

1. *We are aware there may be storm drains in and around the site that may be affected by the proposed Project. When planning for or altering existing or future storm drains, be advised that the Project is subject*

to the Ontario MPD dated, March 2012. It is to be used as a guideline for drainage in the area and is available at the City of Ontario offices. Any revision to the drainage should be reviewed and approved by the jurisdictional agency (City, County).

Response SBCFCD-6

Section 4.10, *Hydrology and Water Quality*, of the Draft SEIR, and the *supporting Subarea 29 Specific Plan Amendment Hydrology and Hydraulics Report* (Hydrology Report) prepared by Q3, dated May 11, 2022, included in Appendix J of the Draft SEIR, provide an analysis of the Project's potential impacts to the storm drain system outlined in the 2012 Ontario MPD, consistent with the commentor's suggestion. As identified, development of the Project would not require new or expanded backbone storm drain facilities beyond that anticipated by the 2012 Ontario MPD.

Comment SBCFCD-7

2. *The proposed Project is located adjacent to a San Bernardino County Flood Control District (SBCFCD) right-of-way and/or facilities (3-317-1A) County Line Channel Easement (06-594751 OR) located along the north side of Belgrave Avenue. Any encroachments including but not limited to, access for grading, fence removal and installation, side drain connections, and utilities on the District's right-of-way and/or facilities will require a permit from the SBCFCD prior to start of construction. Please contact the San Bernardino County Flood Control Permit Section at (909) 387-7995 for further information regarding this process.*

Response SBCFCD-7

The Project's location adjacent to the SBCFCD's right-of-way and/or facilities (County Line Channel Easement along the north side of Bellegrave Avenue) is discussed in the Draft SEIR and is shown on Figure 5.10-1, *Regional Drainage Map*. The need for an encroachment permit for any work within the SBCFCD's right-of-way is noted and has been added to the list of "Other Agencies and Utilities – Subsequent Approvals and Permits" included in Table 3-2, Project Related Approvals/Permits, of the Draft SEIR (refer to Section 3.0, Draft SEIR Clarifications and Corrections, of this Final SEIR).

August 31, 2023

Notice of Availability of a Draft Subsequent Environmental Impact Report (SEIR) for the PSPA21-005, Subarea 29 Specific Plan Amendment Project (Proposed Project)

South Coast Air Quality Management District (South Coast AQMD) staff appreciates the opportunity to comment on the above-mentioned document. The City of Ontario is the California Environmental Quality Act (CEQA) Lead Agency for the Proposed Project. The following comments include additional recommended air quality mitigation measures for construction and information about South Coast AQMD rules and permits that the Lead Agency should include in the Final SEIR.

SCAQMD-1

South Coast AQMD Staff's Summary of Project Information in the Draft SEIR

Based on the Draft SEIR, the Lead Agency proposes construction of 1,470 residential units on 151.1 acres.[1] The project is located on the southeast corner of Eucalyptus Avenue and Haven Avenue.[2] The Proposed Project's construction would last approximately 48 months, in the beginning of February 2023 to the completion which is expected in July 2025.[3]

South Coast AQMD Staff's Comments

Air Quality Mitigation Measures for NOx and PM emissions from construction

Based on the Air Quality Section of the Draft SEIR, it is evident that the construction activities associated with the Proposed Project are expected to have significant air quality impact on NOx emissions before implementing mitigation measures.[4] Given the project's scope, it is crucial to ensure that the levels of construction emissions, particularly NOx and PM_{10}, remain below significant thresholds during the 48-months of construction period. An effective approach to achieve this goal, when feasible, is opting for electric emission-free engines instead of diesel-fueled ones for the construction equipment. This proactive choice not only aligns with environmental concerns but also demonstrates a commitment to minimizing the project's environmental footprints. To mitigate NOx emissions, the Proposed Project should consider promoting greener construction practices, such as limiting the older engines use in favor of latest available advanced technologies or choosing to retrofit some to cutting-edge cleaner exhaust aftertreatment techniques. Additionally, the South Coast AQMD's CEQA Air Quality

SCAQMD-2

[3] Ibid. p. 23.
[4] Ibid. p. 187.

Jeanie Irene Aguilo August 31, 2023

Handbook[5] offer resources to help the Lead Agency identify additional potential mitigation measures for the Proposed Project for both operational and construction emissions. SCAQMD-2 (CONT.)

South Coast AQMD Permits and Responsible Agency

If the implementation of the Proposed Project would require the use of new stationary equipment (e.g., internal combustion engines), permits from South Coast AQMD are required. The Final SEIR should include a discussion on any existing and new stationary equipment requiring South Coast AQMD permits and identify South Coast AQMD as a Responsible Agency for the Proposed Project. Any assumptions used for the stationary sources in the Final SEIR will also be used as the basis for the permit conditions and limits for the Proposed Project. Please contact South Coast AQMD's Engineering and Permitting staff at (909) 396-3385 for questions on permits. For more general information on permits, please visit South Coast AQMD's webpage at: http://www.aqmd.gov/home/permits. SCAQMD-3

Conclusion

According to CEQA Guidelines Section 15074, prior to approving the Proposed Project, the Lead Agency shall consider the Draft SEIR for adoption together with any comments received during the public review process. Please provide South Coast AQMD with written responses to all comments contained herein prior to the adoption of the Final SEIR. When the Lead Agency's position is at variance with recommendations raised in the comments, the issues raised in the comments should be addressed in detail, giving reasons why specific comments and suggestions are not accepted. There should be good faith and reasoned analysis in response. Conclusory statements unsupported by factual information do not facilitate the purpose and goal of CEQA on public disclosure and are not meaningful, informative, or useful to decision-makers and the public who are interested in the Proposed Project. SCAQMD-4

We appreciate the opportunity to review the Proposed Project. Thank you for considering these comments. South Coast AQMD staff is available to work with the Lead Agency to address any air quality questions that may arise from this comment letter. Please contact Sahar Ghadimi, Air Quality Specialist, at sghadimi@aqmd.gov should you have any questions.

Sincerely,

Sam Wang

South Coast Air Quality Management District
21865 Copley Drive
Diamond Bar, CA 91765-4178

Dated August 31, 2023

Comment SCAQMD-1

South Coast Air Quality Management District (South Coast AQMD) staff appreciates the opportunity to comment on the above-mentioned document. The City of Ontario is the California Environmental Quality Act (CEQA) Lead Agency for the Proposed Project. The following comments include additional recommended air quality mitigation measures for construction and information about South Coast AQMD rules and permits that the Lead Agency should include in the Final SEIR.

Based on the Draft SEIR, the Lead Agency proposes construction of 1,470 residential units on 151.1 acres.[1] The project is located on the southeast corner of Eucalyptus Avenue and Haven Avenue.[2] The Proposed Project's construction would last approximately 48 months, in the beginning of February 2023 to the completion which is expected in July 2025.[3]

Response SCAQMD-1

SCAQMD's introductory comments are noted and the summary of the Project description is accurate. However, for clarification, the City of Ontario is the lead agency for the Project, and is not the project proponent for the proposed development. Specific comments regarding the Draft EIR are provided and responded to below.

Comment SCAQMD-2

Based on the Air Quality Section of the Draft SEIR, it is evident that the construction activities associated with the Proposed Project are expected to have significant air quality impact on NOx emissions before implementing mitigation measures.[4] Given the project's scope, it is crucial to ensure that the levels of construction emissions, particularly NOx and PM10, remain below significant thresholds during the 48-months of construction period. An effective approach to achieve this goal, when feasible, is opting for electric emission-free engines instead of diesel-fueled ones for the construction equipment. This proactive choice not only aligns with environmental concerns but also demonstrates a commitment to minimizing the project's environmental footprints. To mitigate NOx emissions, the Proposed Project should consider promoting greener construction practices, such as limiting the older engines use in favor of latest available advanced technologies or choosing to retrofit some to cutting-edge cleaner exhaust aftertreatment techniques. Additionally, the South Coast AQMD's CEQA Air Quality Handbook offer resources to help the Lead Agency

[1] Draft SEIR, p. 16.
[2] Ibid.
[3] Ibid. p. 23.
[4] Ibid. p. 187.

identify additional potential mitigation measures for the Proposed Project for both operational and construction emissions.

Response SCAQMD-2

This comment addresses the need for the implementation of mitigation measures to reduce construction-related criteria pollutant emissions. As indicated in section 5.3, *Air Quality*, of the Draft SEIR, mitigation measures from the *Subarea 29 (Hettinga) Specific Plan Final Environmental Impact Report* (State Clearinghouse [SCH] No. 2004011009) certified by the City in 2006 (mitigation measures MM Air 1, MM Air 2, and MM Air 3) and T*he Ontario Plan 2050 Final Supplemental Environmental Impact Report* (SCH No. 2021070364) certified by the City in 2022 (mitigation measure MM 3-1) have been incorporated into the Project to reduce construction-related emissions. With implementation of these mitigation, which include a requirement for use of construction equipment rated by the United States Environmental Protection Agency as having Tier 4 interim or higher exhaust emission limits (refer to TOP 2050 SEIR MM 3-1), construction-related impacts would be less than significant, and no additional mitigation is required. It should be noted that use of Tier 4 equipment is a feasible mitigation measure that is included in the Project's Mitigation Monitoring and Report Program and implementation of this mitigation measure will be enforced by the City.

Comment SCAQMD-3

If the implementation of the Proposed Project would require the use of new stationary equipment (e.g., internal combustion engines), permits from South Coast AQMD are required. The Final SEIR should include a discussion on any existing and new stationary equipment requiring South Coast AQMD permits and identify South Coast AQMD as a Responsible Agency for the Proposed Project. Any assumptions used for the stationary sources in the Final SEIR will also be used as the basis for the permit conditions and limits for the Proposed Project. Please contact South Coast AQMD's Engineering and Permitting staff at (909) 396-3385 for questions on permits. For more general information on permits, please visit South Coast AQMD's webpage at: http://www.aqmd.gov/home/permits.

Response SCAQMD-3

This comment addresses SCAQMD's role as a Responsible Agency for the issuance of permits for stationary equipment. Although no such permits are expected to be needed for the proposed residential and park uses, the SCAQMD has been added to the list of "Other Agencies and Utilities – Subsequent Approvals and Permits" included in Table 3-2, Project Related Approvals/Permits, of the Draft SEIR (refer to Section 3.0, Draft SEIR Clarifications and Corrections, of this Final SEIR). It is anticipated that the proposed school use may require permits for stationary sources. The school district, serving as the lead agency for the required CEQA documentation for the school, would be responsible for obtaining such permits at such a time that the school site is developed.

Comment SCAQMD-4

According to CEQA Guidelines Section 15074, prior to approving the Proposed Project, the Lead Agency shall consider the Draft SEIR for adoption together with any comments received during the public review process. Please provide South Coast AQMD with written responses to all comments contained herein prior to the adoption of the Final SEIR. When the Lead Agency's position is at variance with recommendations raised

in the comments, the issues raised in the comments should be addressed in detail, giving reasons why specific comments and suggestions are not accepted. There should be good faith and reasoned analysis in response. Conclusory statements unsupported by factual information do not facilitate the purpose and goal of CEQA on public disclosure and are not meaningful, informative, or useful to decision-makers and the public who are interested in the Proposed Project.

We appreciate the opportunity to review the Proposed Project. Thank you for considering these comments. South Coast AQMD staff is available to work with the Lead Agency to address any air quality questions that may arise from this comment letter. Please contact Sahar Ghadimi, Air Quality Specialist, at sghadimi@aqmd.gov should you have any questions.

Response SCAQMD-4

As requested, the City will provide SCAQMD with written responses to all comments prior to approval of the Project and certification of the Final SEIR. Responses to the commentor's specific comments on the Draft EIR are provided and responded to above. SCAQMD is on the City's notification list for public notices issued for the Project and the Final SEIR.

3.0 DRAFT SEIR CLARIFICATIONS AND CORRECTIONS

Minor clarifications or corrections to the Draft Subsequent Environmental Impact Report (SEIR) generated by the City of Ontario or in response to comments received on the Draft SEIR are stated in this Section. The Draft SEIR clarifications and corrections presented below are in the same order as the information appears in the Draft SEIR. Changes in text are signified by strikeouts (~~strikeouts~~) where text has been removed and by bold underline (**underline**) where text has been added. The applicable page numbers from the Draft SEIR are also provided where necessary for easy reference. The Draft SEIR has not been modified and published in its entirety as a single document to reflect these SEIR minor revisions.

The information included in these Draft SEIR revisions does not constitute significant new information that requires recirculation of the Draft SEIR pursuant to the California Environmental Quality Act (CEQA) Guidelines Section 15088.5 because the new information added to the SEIR through these revisions makes insignificant clarifications or corrections to the already adequate Draft SEIR.

Draft EIR Global Change

1. The proposed land use designation for PA 30 and PA 31 is hereby changed from Mixed Residential (11.1-25 du/acre) to Mixed Residential (5-25 du/acre) to be consistent with The Ontario Plan (TOP) 2050. This change applies to all Draft SEIR text, tables and figures, as applicable. There is no change to the maximum number of residential units allowed in the Subarea 29 Specific Plan area and evaluated in the Draft SEIR.

Section 3.0, Project Description

1. Table 3-2, Project Related Approvals/Permits, is hereby revised as follows to identify the San Bernardino County Flood Control District and South Coast Air Quality Management District as potential Responsible Agencies that would be required to issue permits for implementation of the Project.

Table 3-2 Project Related Approvals/Permits

Subsequent City of Ontario Approvals	
Discretionary Approvals	
City of Ontario • Development Advisory Board (DAB) • Planning Commission (PC) • City Council (CC)	• Tentative Subdivision Maps (DAB, PC, CC) • Development Plans (DAB and PC) • Development Agreements (DAB, PC, CC)

Public Agency	Approvals and Decision
Ministerial/Administrative Approvals	
City of Ontario Staff	• Final Subdivision Maps • Landscaping/irrigation plan(s) • Grading Permits • Building Permits • Street Improvement Plans • Encroachment Permits • Accept public right-of-way dedications • Water Quality Management Plan (WQMP)
Ontario Municipal Utilities Company	• Infrastructure plans for the construction of water and sewer infrastructure and connection to the water and sewer distribution and conveyance systems.
Ontario City Fiber	• Infrastructure plans for the construction of new utility infrastructure or connections to existing facilities.
Other <u>Responsible</u> Agencies and Utilities – Subsequent Approvals and Permits	
Santa Ana Regional Water Quality Control Board	• Issuance of a Construction Activity General Construction Permit. • Issuance of a National Pollutant Discharge Elimination System (NPDES) Permit.
San Bernardino County Department of Public Health	• Approval to cap well in Eucalyptus Avenue
<u>San Bernardino County Flood Control District (SBCFCD)</u>	• **<u>Approval of encroachment permits for work within SBCFCD right-of-way</u>**
<u>South Coast Air Quality Management District</u>	• **<u>Issuance of permits for any new stationary equipment</u>**
Southern California Edison	• Approval of construction within SCE easement area, and permits and associated approvals, as necessary, for the construction of new utility infrastructure or connections to existing facilities.
Southern California Gas Company, Frontier Communications, Charter Communications/Spectrum, and Ontario City Fiber	• Permits and associated approvals, as necessary, for the construction of new utility infrastructure or connections to existing facilities.

<u>Section 7.0, Alternatives</u>

1. The 4th sentence on page 7-27 of the Draft SEIR is hereby revised as follows to correct the opening year for the Project.

   Therefore, this Alternative would avoid the Project's significant and unavoidable off-site traffic noise impact for the Opening year ~~2020~~ **<u>2025</u>** traffic scenario, but the impact under the Existing Plus Project traffic scenario would remain significant and unavoidable.

4.0 MITIGATION MONITORING AND REPORTING PROGRAM

4.1 INTRODUCTION

CEQA requires that when a public agency completes an environmental document that includes measures to mitigate or avoid significant environmental effects, the public agency must adopt a reporting or monitoring program for the changes to the project which it has adopted or made a condition of project approval in order to mitigate or avoid significant effects on the environment. The reporting or monitoring program must be designed to ensure compliance during project implementation (Public Resources Code Section 21081.6, CEQA Guidelines Section 15097).

This Mitigation Monitoring and Reporting Program (MMRP) identifies measures incorporated in the Project which reduce its potential environmental effects; the entities responsible for implementation and monitoring of mitigation measures; and timing for implementation of mitigation measures (refer to Table 4.2-1). As described in CEQA Guidelines Section 15097, this MMRP employs both reporting on, and monitoring of, Project mitigation measures. The objectives of the MMRP are to:

- Assign responsibility for, and further proper implementation of mitigation measures;
- Assign responsibility for, and provide for monitoring and reporting of compliance with mitigation measures; and,
- Provide the mechanism to identify areas of noncompliance and need for enforcement action before irreversible environmental damage occurs.

4.2 DESCRIPTION OF THE PROGRAM

As the Lead Agency, the City of Ontario is responsible for ensuring full compliance with the mitigation measures adopted for the Project. The City shall monitor and report on all mitigation activities. Mitigation measures shall be implemented at different stages of development throughout the Project area. In this regard, the responsibilities for implementation have been assigned to the Lead and Responsible Agencies, Applicant or successor(s) in interest, Contractors, On-Site Monitors, or combinations thereof.

If during the course of Project implementation, any of the mitigation measures identified herein cannot be successfully implemented, the City shall be immediately informed, and the City shall then inform any affected Responsible Agencies. The City, in conjunction with any affected Responsible Agencies, shall then determine if modification to the Project is required and/or whether alternative mitigation is appropriate.

Table 4-2 Mitigation Monitoring and Reporting Program

SEIR Section/ MM No.	Mitigation Measure	Implementation Timing	Responsible Party	Monitoring/ Reporting Entity	Date of Completion/ Initials
Section 4.1 - Aesthetics					
MM 5.1	**Project-specific Mitigation** Prior to the issuance of grading permits, the Property Owner/Developer shall provide evidence to the City that the contractor specifications require temporary nighttime lighting installed during construction for security or any other purpose shall be downward-facing and hooded or shielded to prevent light from spilling outside the staging area and from directly broadcasting security light into the sky or onto adjacent residential properties. Compliance with this measure shall be verified by the City during inspections of the construction site.	Prior to Issuance of Grading Permits	Property Owner/ Developer	Planning Department	
Section 4.2 - Agricultural Resources					
2006 EIR Mitigation					
MM Ag 1	In order to minimize conflicts between urban and agricultural land uses, each Specific Plan developed for properties within the NMC must comply with the Agricultural Overlay District requirements for urban development in proximity to existing agricultural operations. The proposed project shall establish a minimum 100-foot separation between active agricultural operations and new, non-agricultural development, or an equivalent easement that is approved by the City of Ontario.	Prior to Construction	Property Owner/ Developer	Planning Department	
MM AG 2	In order to minimize conflicts between urban and agricultural land uses, all residential units in the Subarea 29 Specific Plan shall be provided with a deed disclosure, or similar notice, approved by the City Attorney, regarding the proximity and nature, including odors, of neighboring agricultural uses.	Prior to Opening of Model Homes	Property Owner/ Developer	City Attorney/ Planning Department	
Section 4.3 - Air Quality					
2006 EIR Mitigation					

SEIR Section/ MM No.	Mitigation Measure	Implementation Timing	Responsible Party	Monitoring/ Reporting Entity	Date of Completion/ Initials
MM Air 1	During construction, mobile construction equipment will be properly maintained at an offsite location, which includes proper tuning and timing of engines. Equipment maintenance records and equipment design specification data sheets shall be kept on-site during construction.	During Construction	Contractor	Planning Department	
MM Air 2	During construction of the proposed improvements, all contractors will be advised not to idle construction equipment on site for more than ten minutes.	During Construction	Contractor	Planning Department	
MM Air 3	Configure construction parking to minimize traffic interference.	During Construction	Contractor	Planning Department	
MM Air 4	Local transit agencies shall be contacted to determine bus routing in the project area that can accommodate bus stops at the project access points and the project shall provide bus passenger benches and shelters at these project access points.	Prior to Approval of Street Improvement Plans	Property Owner/ Developer	Engineering Department	
TOP 2050 SEIR Mitigation					
MM 3-1	Prior to discretionary approval by the City of Ontario for development projects subject to CEQA (California Environmental Quality Act) review (i.e., nonexempt projects), project applicants shall prepare and submit a technical assessment evaluating potential project construction-related air quality impacts to the City of Ontario Planning Department for review and approval. The evaluation shall be prepared in conformance with South Coast Air Quality Management District (South Coast AQMD) methodology for assessing air quality impacts. If construction-related criteria air pollutants are determined to have the potential to exceed the South Coast AQMD–adopted thresholds of significance, the City of Ontario Building Department shall require feasible mitigation measures to reduce air quality emissions. Potential measures shall be incorporated as conditions of approval for a project and shall include: • Require fugitive dust control measures that exceed South Coast Air Quality Management District's Rule 403, such as:	CEQA Review is Complete During Construction	Contractor	Planning Department	

SEIR Section/ MM No.	Mitigation Measure	Implementation Timing	Responsible Party	Monitoring/ Reporting Entity	Date of Completion/ Initials
	○ Requiring use of nontoxic soil stabilizers to reduce wind erosion. ○ Applying water every four hours to active soil disturbing activities. ○ Tarping and/or maintaining a minimum of 24 inches of freeboard on trucks hauling dirt, sand, soil, or other loose materials. • Use construction equipment rated by the United States Environmental Protection Agency as having Tier 4 interim or higher exhaust emission limits. • Ensure construction equipment is properly serviced and maintained to the manufacturer's standards. • Limit nonessential idling of construction equipment shall be limited to no more than five consecutive minutes. • Use Super-Compliant VOC paints for coating of architectural surfaces shall be used whenever possible. The identified measures shall be incorporated into all appropriate construction documents (e.g., construction management plans) submitted to the City and shall be verified by the City's Planning Department.				
MM AQ-1	Prior to discretionary approval by the City of Ontario for development projects subject to CEQA (California Environmental Quality Act) review (i.e., nonexempt projects), project applicants shall prepare and submit a technical assessment evaluating potential project operation-phase-related air quality impacts to the City of Ontario Planning Department for review and approval. The evaluation shall be prepared in conformance with South Coast Air Quality Management District (South Coast AQMD) methodology in assessing air quality impacts. If operation-related air pollutants are determined to have the potential to exceed the South Coast AQMD–adopted thresholds of significance, the City of Ontario Planning Department shall require that applicants for	CEQA Review is Complete			

SEIR Section/ MM No.	Mitigation Measure	Implementation Timing	Responsible Party	Monitoring/ Reporting Entity	Date of Completion/ Initials
	new development projects incorporate mitigation measures to reduce air pollutant emissions during operational activities. The identified measures shall be included as part of the conditions of approval. Possible mitigation measures to reduce long-term emissions could include, but are not limited to the following: • For site-specific development that requires refrigerated vehicles, the construction documents shall demonstrate an adequate number of electrical service connections at loading docks for plug-in of the anticipated number of refrigerated trailers to reduce idling time and emissions. • Applicants for manufacturing and light industrial uses shall consider energy storage and combined heat and power in appropriate applications to optimize renewable energy generation systems and avoid peak energy use. • Site-specific developments with truck delivery and loading areas and truck parking spaces shall include signage as a reminder to limit idling of vehicles while parked for loading/unloading in accordance with California Air Resources Board Rule 2845 (13CCR Chapter 10 sec. 2485). • Provide changing/shower facilities as specified in Section A5.106.4.3 of CALGreen (Nonresidential Voluntary Measures). • Provide bicycle parking facilities per Section A4.106.9 of CALGreen (Residential Voluntary Measures). • Provide preferential parking spaces for low-emitting, fuel-efficient, and carpool/van vehicles per Section A5.106.5.1 of CALGreen (Nonresidential Voluntary Measures). • Provide facilities to support electric charging stations per Section A5.106.5.3 and Section A5.106.8.2 of CALGreen (Nonresidential Voluntary Measures; Residential Voluntary Measures). • Applicant-provided appliances shall be Energy Star–certified appliances or appliances of equivalent energy efficiency (e.g., dishwashers, refrigerators, clothes washers, and dryers).	Prior to Issuance of Building Permits	Property Owner/Developer	Planning Department	

SEIR Section/ MM No.	Mitigation Measure	Implementation Timing	Responsible Party	Monitoring/ Reporting Entity	Date of Completion/ Initials
	Installation of Energy Star–certified or equivalent appliances shall be verified by the City during plan check.				
Section 5.4 - Biological Resources					
2006 EIR Mitigation					
MM Bio 1	There may be a probability of owl colonization within the project site considering the presence of foraging habitat and previous records of presence. To ensure that no direct loss of individuals occurs, mitigation shall be completed prior to initiation of on-site grading activities for each development phase. A pre-construction survey for resident burrowing owls will be conducted by a qualified biologist. The survey will be conducted 30 days prior to construction activities including vegetation clearing, grubbing, tree removal, or site watering. If ground-disturbing activities are delayed or suspended for more than 30 days after the preconstruction survey, the site should be resurveyed for owls. If owls are determined to be present within the construction footprint, they will be captured and relocated. If non-breeding owls must be moved away from the disturbance area, passive relocation techniques will be used. The pre-construction survey and any relocation activity will be conducted in accordance with the CDFG Report on Burrowing Owl Mitigation, 1995. According to CDFG guidelines, mitigation actions will be conducted from September 1 to January 31, which is prior to the nesting season. However, burrowing owl nesting activity is variable, and as such the time frame will be adjusted accordingly. Should eggs or fledglings be discovered in any owl burrow, the burrow cannot be disturbed (pursuant to CDFG guidelines) until the young have hatched and fledged (matured to a stage that they can leave the nest on their own). Occupied burrows will not be disturbed during the nesting season (February 1 through August 31) unless a qualified biologist approved by the Department of Fish and Game verifies through non-invasive	Prior to Grading	Property Owner/ Developer	Planning Department	

SEIR Section/ MM No.	Mitigation Measure	Implementation Timing	Responsible Party	Monitoring/ Reporting Entity	Date of Completion/ Initials
	methods that either: a) the adult birds have not begun egg-laying and incubation; or b) the juveniles from the occupied burrows are foraging independently and are capable of independent survival. If a biologist is unable to verify one of the above conditions, then no disturbance shall occur within 300 feet of the burrowing owl nest during the breeding season to avoid abandonment of the young. Passive relocation can be used to exclude owls from their burrows (outside the breeding season or once the young are able to leave the nest and fly) by installing one-way doors in burrow entrances. These one-way doors allow the owl to exit the burrow, but not enter it. These doors should be left in place 48 hours to ensure owls have left the burrow. Artificial burrows should be provided nearby. The project area should be monitored daily for one week to confirm owl use of burrows before excavating burrows in the impact area. Burrows should be excavated using hand tools and refilled to prevent reoccupation. Sections of flexible pipe should be inserted into the tunnels during excavation to maintain an escape route for any animals inside the burrow.				
MM Bio 2	To mitigate for potential impacts to loss of nesting and foraging habitat, the project proponent shall be required to pay City of Ontario open space mitigation fees. Fees collected will be used "to acquire and restore mitigation lands to offset impacts to species now living in the New Model Colony and impacts to existing open space," according to the City of Ontario Development Impacts Fee Calculation Report and the Settlement and general Release Agreement. Development is currently required to pay $4,320 per acre. Therefore, the proposed project will pay approximately $1,080,000 for open space acquisition based upon the current fee.	Prior to Issuance of Grading Permit	Property Owner/ Developer	Planning Department	
MM Bio 3	While project impacts to individual raptor species were considered to be not significant, the following mitigation measure will also be incorporated in order to eliminate or reduce any potential impacts to	Prior to Issuance of Grading Permit	Property Owner/ Developer	Planning Department	

SEIR Section/ MM No.	Mitigation Measure	Implementation Timing	Responsible Party	Monitoring/ Reporting Entity	Date of Completion/ Initials
	raptors and/or migratory birds. Construction and/or removal of windrow trees will occur outside of the nesting season (the nesting season for songbirds is February 1st through August 31st, and the nesting season for raptors is January 15th to August 31st). If tree removal activities must occur during the breeding season, the mitigation measure in MM Bio 4 shall be implemented.				
MM Bio 4	If project construction activities involving heavy equipment and/or windrow tree removal are to occur during the nesting/breeding season (between February 1st and August 31st for songbirds; and between January 15th and to August 31st for raptors) of potentially occurring sensitive bird species, a pre-construction field survey shall be conducted by a qualified biologist to determine if active nests of species protected by MBTA or CDFG are present in the construction zone or within a buffer of 500 feet. Pre- construction nesting/breeding surveys shall be conducted in all CDFG jurisdictional areas and within windrow trees. If no active nests are found during the survey, construction activities may proceed. If active nests are located during the pre-construction surveys, no grading, heavy equipment or tree removal activities shall take place within at least 500 feet of an active listed species or raptor nest, 300 feet of other sensitive bird nests (non-listed), and 100 feet of most common songbird nests. The buffer may be modified and/or other recommendations proposed as determined appropriate by the biological monitor to minimize impacts.	Prior to Issuance of Grading Permit	Property Owner/ Developer	Planning Department	
Section 5.5 – Cultural Resources					
2006 EIR Mitigation					
MM Cultural 1	Should any cultural and/or archaeological resources be accidentally discovered during construction, construction activities shall be moved to other parts of the project site and a qualified archaeologist shall be contacted to determine the significance of these resources. If the find is determined to be an historical or unique archaeological resource, as	During Construction	Contractor	Planning Department	

SEIR Section/ MM No.	Mitigation Measure	Implementation Timing	Responsible Party	Monitoring/ Reporting Entity	Date of Completion/ Initials
	defined in Section 15064.5 of the CEQA Guidelines, avoidance or other appropriate measures shall be implemented.				
MM Cultural 2	If human remains are uncovered at any time, all activities in the area of the find shall be halted by the developer or its contractor and the County Coroner shall be notified immediately pursuant to CA Health & Safety Code Section 7050.5 and CA PRC Section 5097.98. If the Coroner determines that the remains are of Native American origin, the Coroner shall proceed as directed in Section 15064.5(e) of the CEQA Guidelines.	During Construction	Contractor	Planning Department	
Section 5.6 – Energy					
MM Util 5	**2006 EIR Mitigation** To reduce the quantity of energy used and to conserve water resources, the project developer and City of Ontario should work to include sustainable systems for use of water and energy within the project design.	Prior to Occupancy	Property Owner/ Developer	Engineering Department	
Section 5.7 – Geology and Soils					
2006 EIR Mitigation					
MM Geo 1	To reduce impacts associated with erosion due to high winds, prior to construction, all tentative tracts and other construction activities will apply for and adhere to the permit given by the City of Ontario and enforced by the Building Official found in Title 6, Chapter 12, sections 6-12.01 – 6-12.07. The permit lasts for one (1) year, therefore all construction lasting for a period of more than one calendar year from the date of issue will reapply for the permit and pay appropriate annual fees. At a minimum, the permit prohibits the disturbance of the surface or subsurface of more than one (1) acre of land without meeting permit requirements which can include such things as the application of soil stabilizers and limitations on grading activities during wind events.	Prior to Issuance of Grading Permits	Property Owner/ Developer	Building Department	
MM Geo 2	To properly assess and address the suitability of on-site soils to be used as fill, a geotechnical evaluation shall be performed by a qualified professional prior to the approval of the Tentative Tract map or site plan for a given phase of development. This evaluation will include an	Prior to Tentative Map Approval Report Submitted	Property Owner/ Developer	Planning Department	

SEIR Section/ MM No.	Mitigation Measure	Implementation Timing	Responsible Party	Monitoring/ Reporting Entity	Date of Completion/ Initials
	analysis of the organic matter content of soils on the site. If the organic matter content of the soils is greater than 2 percent when mixed with subsurface soils and/or imported fill, then manure will be removed from the site prior to grading operations.	Removal of Unstable Soils Prior to Grading		Building Department	
MM Geo 3	Site materials should be continuously tested and excavated to a minimum of 4 feet where soils generally become denser. Actual removal depths will be determined during grading when subsurface conditions are exposed.	Prior to Issuance of Grading Permits	Property Owner/ Developer	Building Department	
MM Geo 4	Prior to the issuance of building permits, a project-specific geotechnical investigation for the site must be prepared and submitted to the City for approval. All recommendations contained within the geotechnical investigation must be incorporated during project design and construction. Examples of recommendations include, but are not limited to, specific seismic design parameters and subgrade preparation parameters specifying the amount of over-excavation and re-compaction of specific soils in building pad and pavement areas.	Prior to Issuance of Building Permits	Property Owner/ Developer	Building Department	
MM Cultural 3	Since grading plans have not yet been prepared to establish how deep excavation is needed, prior to the issuance of grading permits, and as recommended in the Phase I Cultural and Paleontological Resources Assessment for this site, a qualified paleontologist shall be retained to develop a Paleontological Resources Monitoring and Treatment Plan (PRMTP) for approval by the City. Following City approval of the PRMTP, grading and construction activities may proceed in compliance with the provisions of the approved PRMTP. The PRMTP shall include the following measures: a. Identification of those locations within the project site where paleontological resources are likely to be uncovered during grading. b. A monitoring program specifying the procedures for the monitoring of grading activities by a qualified paleontologist or qualified designee. c. If fossil remains large enough to be seen are uncovered by earth-moving activities, a qualified paleontologist or qualified designee	Prior to Issuance of Grading Permits	Property Owner/Developer	Planning Department	

SEIR Section/ MM No.	Mitigation Measure	Implementation Timing	Responsible Party	Monitoring/ Reporting Entity	Date of Completion/ Initials
	shall temporarily divert earth- moving activities around the fossil site until the remains have been evaluated for significance and, if appropriate, have been recovered; and the paleontologist or qualified designee allows earth-moving activities to proceed through the site. If potentially significant resources are encountered, a letter of notification shall be provided in a timely manner to the City, in addition to the report (described below) that is filed at completion of grading. d. If a qualified paleontologist or qualified designee is not present when fossil remains are uncovered by earth- moving activities, these activities shall be stopped, and a qualified paleontologist or qualified designee shall be called to the site immediately to evaluate the significance of the fossil remains. e. At a qualified paleontologist or qualified designee's discretion and to reduce any construction delay, a construction worker shall assist in removing fossiliferous rock samples to an adjacent location for temporary stockpiling pending eventual transport to a laboratory facility for processing. f. A qualified paleontologist or qualified designee shall collect all significant identifiable fossil remains. All fossil sites shall be plotted on a topographic map of the project site. g. If the qualified paleontologist or qualified designee determines that insufficient fossil remains have been found after fifty percent of earthmoving activities have been completed, monitoring can be reduced or discontinued. h. Any significant fossil remains recovered in the field as a result of monitoring or by processing rock samples shall be prepared, identified, catalogued, curated, and accessioned into the fossil collections of the San Bernardino County Museum, or another museum repository complying with the Society of Vertebrate Paleontology standard guidelines. Accompanying specimen and site				

SEIR Section/ MM No.	Mitigation Measure	Implementation Timing	Responsible Party	Monitoring/ Reporting Entity	Date of Completion/ Initials
	data, notes, maps, and photographs also shall be archived at the repository. i. Within 6 months following completion of the above tasks, a qualified paleontologist or qualified designee shall prepare a final report summarizing the results of the mitigation program and presenting an inventory and describing the scientific significance of any fossil remains accessioned into the museum repository. The report shall be submitted to the City Planning Department and the museum repository. The report shall comply with the Society of Vertebrate Paleontology standard guidelines for assessing and mitigating impacts on paleontological resources.				
Section 5.8 – Greenhouse Gas Emissions					
Project-specific Mitigation					
MM 8-1	Project development proposals shall implement Screening Table Measures that achieve the requisite points per the City's Community Climate Action Plan (CCAP) Screening Tables. The City shall verify that Screening Table Measures achieving the requisite points are incorporated in development plans prior to the issuance of building permit(s) and/or site plans (as applicable). The City shall verify implementation of the selected Screening Table Measures prior to the issuance of Certificate(s) of Occupancy. At the discretion of the City, measures that provide GHG reductions equivalent to GHG emissions reductions achieved via the Screening Table Measures may be implemented. Alternatively, the Project shall demonstrate that annual GHG emissions would not exceed the target thresholds or other alternative compliance mechanisms in the CCAP or subsequent updates.	Prior to Issuance of Building Permits and/or Site Plans	Property Owner/Developer	Planning Department	
Section 5.9 – Hazards and Hazardous Materials					
2006 EIR Mitigation					
MM Haz 1	To the extent not previously prepared and to properly assess and address potential hazardous materials, including pesticide residue, within the specific plan area, a Phase I Environmental Site Assessment	Prior to Issuance of Grading Permits	Property Owner/Developer	Planning Department	

SEIR Section/ MM No.	Mitigation Measure	Implementation Timing	Responsible Party	Monitoring/ Reporting Entity	Date of Completion/ Initials
	(ESA) shall be performed by a registered environmental assessor (REA) prior to the approval of the Tentative Tract map, site plan or other discretionary approval for a given phase of development. If potential hazardous materials or conditions are identified in the Phase I report, the recommendations of the ESA shall be implemented. Such recommendations could include surficial sampling and chemical analysis within agricultural areas or where soil staining was observed. The Phase I ESA shall be provided to the City of Ontario and shall be included in any CEQA analysis prepared in connection with the consideration of the discretionary approval for development.				
MM Haz 3	All septic tanks on the project site will be properly removed and disposed of prior to site development. All water wells on the project site which are proposed to be abandoned will be properly destroyed prior to site development in accordance with City requirements. These activities will occur subject to City of Ontario Building Safety requirements. ***MM Haz 3 is applicable to PAs 30 and 31 only with respect to septic tanks; there are no septic tanks within PAs 32 through 34. With respect to water wells, MM Haz 3 is applicable to PAs 30, 33, and potentially 34; there are no wells within PAs 31 and 32.***	Prior to Issuance of Grading Permits	Property Owner/Developer	Building Department	
MM Haz 4	If, while performing any excavation as part of project construction, material that is believed to be hazardous waste is discovered, as defined in Section 25117 of the California Health & Safety Code, the developer shall contact the City of Ontario Fire Department and the County of San Bernardino Fire Department Hazardous Materials Division. Excavation shall be stopped until the material has been tested and the presence of hazardous waste has been confirmed. If no hazardous waste is present, excavation may continue. If hazardous waste is determined to be present, the California Department of Toxic Substances Control shall be contacted, and the material shall be removed and disposed of pursuant to applicable provisions of California law.	Prior to Issuance of Grading Permits	Property Owner/Developer	Planning Department	

SEIR Section/ MM No.	Mitigation Measure	Implementation Timing	Responsible Party	Monitoring/ Reporting Entity	Date of Completion/ Initials
MM Haz 5	Prior to demolition, all onsite buildings and remaining foundations that were built before 1976 shall be evaluated for the presence of asbestos and lead-based paint and those materials shall be removed according to applicable regulations and guidelines established by the South Coast Management District, Department of Toxic Substances Control, and the United States Environmental Protection Agency. ***MM Haz 5 is applicable to PAs 30 and 31 only; there are no structures within PAs 32 through 34.***	Prior to and During Demolition	Property Owner/Developer	Planning Department	
MM Haz 6	A methane gas assessment shall be prepared by a licensed professional with expertise in soil gas assessments for subdivisions proposed on former dairies, poultry ranches, hog ranches, livestock feed operations and similar facilities to determine the presence of methane gas within the project boundary. The methane gas assessment shall identify monitoring and mitigation strategies and approaches. All mitigation measures/plans and specifications shall be reviewed and approved by the City of Ontario. Such an "assessment" may take two steps. A preliminary assessment should be done prior to grading to determine exactly where dairies have existed in the past so that the post grading assessment/mitigation measures can be focused on the portions of the specific plan area that have included dairies. The second step may include actual testing of graded pads no sooner than 30 days after construction to determine if methane is detected above 5,000 ppm. If so, the types of mitigation measures described below in MM Haz 7, or those approved by the City, shall be implemented in the areas exceeding this limit.	Prior to Issuance of Grading Permits	Property Owner/Developer	Planning Department	
MM Haz 7	To reduce the risk of ground cracking, manure shall be removed from the site, such that the organic matter content of on-site soils shall not exceed 2 percent (a 2 percent total organic content is allowed, of which no more than 1 percent can be manure) in the building foundation areas when mixed with underlying clean soils and imported fill.	Prior to Issuance of Grading Permits	Property Owner/Developer	Planning Department	

SEIR Section/ MM No.	Mitigation Measure	Implementation Timing	Responsible Party	Monitoring/ Reporting Entity	Date of Completion/ Initials
MM Haz 9	To disclose to the buyer or lessee of subdivided lands within the Subarea 29 project of the proximity of this site to the Chino Airport and the Ontario International Airport as required by AB 2776, the City shall disclose, and ensure that the developer makes disclosures, as required by law, to all future buyers.	Prior to specific filings and sale agreements as stated in AB 2776	Property Owner/Developer	Planning Department	
Section 5.10 – Hydrology and Water Quality					
2006 EIR Mitigation					
MM Hydro 1	In order to ensure that construction activities associated with the Subarea 29 Specific Plan will not cause a violation of any water quality standard or waste discharge requirements and to assure no substantial degradation of water quality occurs, and to implement the intent of mitigation measures included in the Final Environmental Impact Report for the NMC, developments within the project area shall comply with all applicable provisions of the State's General Permit for Construction Activities (Order No. 99-08-DWQ, or most recent version) during all phases of construction. A copy of evidence of the receipt of a Waste Discharge Identification Number from the State Regional Water Quality Control Board shall be filed with the City Engineer along with a copy of the Storm Water Pollution Prevention Plan (SWPPP) maps and BMPs. The City Engineer shall review and approve the provisions of the SWPPP prior to implementation of any SWPPP provision or starting any construction activity.	Prior to and During Construction	Property Owner/Developer	Engineering Department	
MM Hydro 2	In order to ensure that development within the Specific Plan will not cause or contribute to violations of any water quality standard or waste discharge requirements, and to assure no substantial degradation of water quality occurs, the project will complete a Preliminary Water Quality Management Plan (PWQMP) and Water Quality Management Plan (WQMP) pursuant to the MS4 permit (Order No. 2002-0012) adopted by the City of Ontario and the Trash Mandate adopted by the SARWQCB. The project shall incorporate Site Design BMPs and Source Control BMPs, and potentially Treatment Control BMPs. Table III-7-F and G of the 2006 EIR, which are included in Technical	Prior to Issuance of Grading Permits	Property Owner/Developer	Engineering Department	

SEIR Section/ MM No.	Mitigation Measure	Implementation Timing	Responsible Party	Monitoring/ Reporting Entity	Date of Completion/ Initials
	Appendix I2 of the SEIR, provide guidelines and BMPs that shall be incorporated as appropriate into project design (on construction drawings) and/or project specifications and implemented in the field to reduce the expected pollutants from various types of development. Prior to acceptance of the WQMP, the City shall assure that maintenance responsibilities of BMPs approved for the project are identified and enforceable. Table III-7-G correlates each BMP to the pollutants of concern which it removes/reduces and/or meets the design objectives for the BMP.				
MM Hydro 3	To assure that development within the Specific Plan will not cause a violation of any water quality standard or waste discharge requirements, including San Bernardino County's MS4 permit issued by the SARWQCB, and to assure that no substantial degradation to water quality occurs after construction, any loading docks present within the academic or retail areas designated in the Specific Plan will be designed with devices to trap oil and grease, such that these pollutants are not discharged from the site in storm water or non-storm water discharges.	Prior to and During Construction	Property Owner/Developer	Engineering Department	
MM Hydro 4	In order to reduce the risk of flooding and to implement mitigation measures included in the GPA for the NMC Final Environmental Impact Report, prior to issuance of grading permits, the City of Ontario shall coordinate with the San Bernardino County Flood Control District to ensure that the project meets County flood control requirements.	Prior to Issuance of Grading Permits	Property Owner/Developer	Engineering Department	
MM Hydro 5	In order to conserve water and to mitigate for any potential unforeseen adverse impacts to a reduction in ground water recharge, the following measure has been recommended by the Chino Basin Water Conservation District. Landscaping within individual development projects will retain and percolate both applied irrigation water and storm water in vegetated areas of parking lots and other areas, where appropriate; "depressed" planted areas bordered by shrubbery screens will be implemented rather than "mounded" grass and shrubbery planted screens.	Post construction	Property Owner/Developer	Planning Department	

SEIR Section/ MM No.	Mitigation Measure	Implementation Timing	Responsible Party	Monitoring/ Reporting Entity	Date of Completion/ Initials
MM Hydro 6	In order to reduce pollutants in post construction run-off and to implement mitigation measures included in the Final Environmental Impact Report for the NMC, the individual project owners and operators (e.g., homeowner associations, retail center owners, school district, parks department, etc.) shall ensure that all pest control, herbicide, insecticide and other similar substances used as part of maintenance of project features are handled, stored, applied and disposed of by those conducting facility maintenance in a manner consistent with all applicable federal, state and local regulations. According to Title 6, Chapter 6, Section 6 of the City's code, the City Engineer shall monitor and enforce this provision.	Post construction	Property Owner/Developer	Engineering Department	
Section 5.13 - Noise					
2006 EIR Mitigation					
MM Noi 1	The construction activities of the proposed project shall comply with the City of Ontario Noise Ordinance Section 5-29.09(a) that prohibits construction activities on any weekday except between the hours of 7:00 a.m. and 6:00 p.m. or on Saturday or Sunday between the hours of 9:00 a.m. and 6:00 p.m.	During construction	Contractor	Planning Department	
MM Noi 2	Construction staging areas shall not be located within 150 feet of existing sensitive receptors and construction equipment shall be fitted with properly operating and maintained mufflers.	During construction	Contractor	Planning Department	
MM Noi 7	Architectural plans shall be submitted to the City of Ontario for an acoustical plan check prior to the issuance of building permits to assure that the proper windows and/or doors are upgraded for sound reduction and proper ventilation systems are incorporated in order to meet the interior noise level requirement.	Prior to Issuance of Building Permits	Property Owner/ Developer	Planning Department	
Project-specific Mitigation					
MM 5.13-1	Prior to the issuance of a building permit for residential development, the Property Owner/Developer shall prepare an acoustical study(ies) of proposed plans, which shall identify all noise-generating areas and associated equipment, predict noise levels at property lines from all identified areas, and noise attenuation features required to be	Prior to Issuance of a Building Permit for Residential Development	Property Owner/ Developer	Planning Department

Section 5.16 - Transportation					
2006 EIR Mitigation Measures					
MM Trans 1	Construction of full width of internal roadways and ½ width adjacent roadways not implemented as specified in the Design Considerations of the project such that they shall comply with City of Ontario standards.	Prior to Occupancy	Property Owner/ Developer	Engineering Department	
MM Trans 2	Sight distance at the project entrance roadways should be reviewed with respect to the City of Ontario sight distance standards at the time of preparation of final grading, landscape and street improvement plans.	Prior to Occupancy	Property Owner/ Developer	Engineering Department	
MM Trans 3	Signing/striping should be implemented in conjunction with detailed construction plans for the project site.	Prior to occupancy	Property Owner/ Developer	Engineering Department	
MM Trans 4a	Intersection, median opening, and traffic signal spacing shall be in accordance with the City of Ontario Engineering Department Traffic and Transportation Division, Traffic and Transportation Guidelines.	To be Shown on Tract Maps and Prior to Map Approval	Property Owner/ Developer	Engineering Department	
MM Trans 7	The project shall participate in the cost of offsite improvements through the payment of "fair-share" development impact fees. These fees should be collected and utilized as needed by the City of Ontario to maintain acceptable levels of service.	Prior to Occupancy	Property Owner/ Developer	Engineering Department	
Section 5.17 – Tribal Cultural Resources					
Project-specific Mitigation					
MM 5.17-1	Prior to the commencement of any ground disturbing activity at the Amendment Area or off-site improvement areas (Project site), the Project Applicant shall request a Native American Monitor approved by the Gabrieleño Band of Mission Indians-Kizh Nation – the tribe that consulted on this project pursuant to Assembly Bill A52 – SB18 (the "Tribe" or the "Consulting Tribe"). If a monitoring contract is declined by the Gabrieleño Band of Mission Indians-Kizh Nation, a qualified tribal monitor shall be retained. A copy of the executed monitoring contract shall be submitted to the City of Ontario Planning and Building Department prior to the issuance of any permit necessary to commence a ground-disturbing activity. The Tribal monitor will only be present on	Prior to the Commencement of any Ground Disturbing Activity	Property Owner/ Developer	Planning Department	

SEIR Section/ MM No.	Mitigation Measure	Implementation Timing	Responsible Party	Monitoring/ Reporting Entity	Date of Completion/ Initials
	site during the construction phases that involve ground-disturbing activities. Ground disturbing activities are defined by the Tribe as activities that may include, but are not limited to, pavement removal, potholing or auguring, grubbing, tree removals, boring, grading, excavation, drilling, and trenching, within the project area. The Tribal Monitor will complete daily monitoring logs that will provide descriptions of the day's activities, including construction activities, locations, soil, and any cultural materials identified. The on-site monitoring shall end when all ground-disturbing activities on the Project Site are completed, or when the Tribal Representatives and Tribal Monitor have indicated that all upcoming ground-disturbing activities at the Project Site have little to no potential for impacting Tribal Cultural Resources. Upon discovery of any Tribal Cultural Resources, construction activities shall cease in the immediate vicinity of the find (not less than the surrounding 100 feet) until the find can be assessed. All Tribal Cultural Resources unearthed by project activities shall be evaluated by the qualified archaeologist and Tribal monitor approved by the Consulting Tribe. If the resources are Native American in origin, the Consulting Tribe will retain it/them in the form and/or manner the Tribe deems appropriate, for educational, cultural and/or historic purposes. If human remains and/or grave goods are discovered or recognized at the Project Site, all ground disturbance shall immediately cease, and the county coroner shall be notified per Public Resources Code Section 5097.98, and Health & Safety Code Section 7050.5. Human remains and grave/burial goods shall be treated alike per California Public Resources Code section 5097.98(d)(1) and (2). Work may continue on other parts of the Project Site while evaluation and, if necessary, mitigation takes place (CEQA Guidelines Section 15064.5[f]). If a non-Native American resource is determined by the qualified archaeologist to constitute a "historical resource" or "unique archaeological resource," time allotment and funding sufficient to allow for implementation of avoidance measures, or appropriate mitigation,				

SEIR Section/ MM No.	Mitigation Measure	Implementation Timing	Responsible Party	Monitoring/ Reporting Entity	Date of Completion/ Initials
	must be available. The treatment plan established for the resources shall be in accordance with CEQA Guidelines Section 15064.5(f) for historical resources and PRC Sections 21083.2(b) for unique archaeological resources.				
MM 5.17-2	Preservation in place (i.e., avoidance) is the preferred manner of treatment. If preservation in place is not feasible, treatment may include implementation of archaeological data recovery excavations to remove the resource along with subsequent laboratory processing and analysis. Any historic archaeological material that is not Native American in origin shall be curated at a public, non-profit institution with a research interest in the materials, such as the Natural History Museum of Los Angeles County or the Fowler Museum, if such an institution agrees to accept the material. If no institution accepts the archaeological material, it shall be offered to a local school or historical society in the area for educational purposes. RESOLUTION NO._____

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF ONTARIO, APPROVING FILE NO. PSPA21-005, AN AMENDMENT TO THE SUBAREA 29 SPECIFIC PLAN TO BRING THE SPECIFIC PLAN INTO COMPLIANCE WITH THE ONTARIO PLAN POLICY PLAN (GENERAL PLAN) LAND USE PLAN THAT INCLUDE: [1] THE ANNEXATION OF 113.2 GROSS ACRES OF LAND, LOCATED ON THE SOUTHWEST CORNER OF HAVEN AVENUE AND EUCALYPTUS AVENUE AND ESTABLISH PLANNING AREA 32 (MIXED RESIDENTIAL (5-25 DU/AC), PLANNING AREA 33 (MIXED RESIDENTIAL (5-25 DU/AC), AND PLANNING AREA 34 (SCHOOL), [2] CHANGE THE LAND USE DESIGNATION FOR PLANNING AREA 30 FROM CONVENTIONAL LARGE LOT (3-6 DU/AC) TO MIXED RESIDENTIAL (5-25 DU/AC) AND PLANNING AREA 31 FROM CONVENTIONAL MEDIUM LOT (4-6 DU/AC) TO MIXED RESIDENTIAL (5-25 DU/AC) TO BRING THE SPECIFIC PLAN INTO COMPLIANCE WITH THE ONTARIO PLAN POLICY PLAN (GENERAL PLAN) LAND USE PLAN, [3] ESTABLISH DEVELOPMENT STANDARDS FOR 7 NEW PRODUCT TYPES WITHIN THE RESIDENTIAL LAND USE DESIGNATIONS, AND [4] VARIOUS CHANGES TO THE SPECIFIC PLAN LAND USE MAP, LAND USE TABLE, DEVELOPMENT STANDARDS, EXHIBITS, AND TEXT MODIFICATION TO REFLECT THE PROPOSED ANNEXATION AND LAND USE CHANGES. THE SUBAREA 29 SPECIFIC PLAN IS BOUNDED BY EUCALYPTUS AVENUE TO THE NORTH, THE CUCAMONGA CREEK CHANNEL TO THE WEST, THE COUNTY LINE CHANNEL AND BELLEGRAVE AVENUE TO THE SOUTH, AND MILL CREEK AVENUE TO THE EAST, AND MAKING FINDINGS IN SUPPORT THEREOF—APNS: 0218-331-12, 0218-331-14, 0218-331-18, 0218-331-30, 0218-331-31, AND 0218-331-52.

WHEREAS, SL ONTARIO DEVELOPMENT COMPANY, LLC ("Applicant") has filed an Application for the approval of a Specific Plan Amendment (SPA), File No. PSPA21-005, as described in the title of this Resolution (hereinafter referred to as "Application" or "Project"); and

WHEREAS, the Application applies to the existing 539.7 acres of land located within the Subarea 29 Specific Plan generally bounded by Eucalyptus Avenue to the north, County Line Channel and Bellegrave Avenue to the south, Haven Avenue to the east, and the Cucamonga Creek Channel to the west. The Project site gently slopes from north to south. The majority of the specific plan is developed with residential homes, Celebration Park, Park View Elementary School, and various pocket parks west of the SCE Easement. The areas east of the SCE Easement are vacant and were previously used for dairy and agricultural uses. The existing 255-foot-wide SCE Easement (8.5 acres) runs diagonally north/south along the eastern portion of the specific plan from Haven Avenue to Bellegrave Avenue and is developed with 180-foot-tall transmission towers (115kV) and community trails; and

WHEREAS, the Application also applies to the proposed annexation area comprised of 113.2 gross acres of land bounded by Eucalyptus Avenue to the north, Haven Avenue to the west, Mill Creek Boulevard to the east, and Bellegrave Avenue to the south. The natural vegetation and soil conditions that once occurred throughout the annexation area have been significantly altered through agricultural activities and the site is currently vacant; and

WHEREAS, the portion of the properties to the north are located within Parkside Specific Plan and developed with new residential subdivisions. The properties to the south are residential, commercial, and industrial uses within the City of Eastvale. The properties to the south are residential, commercial, and industrial uses within the City of Eastvale. The properties to the east are within the Esperanza Specific Plan and are currently being developed with residential uses. The properties to the west include the Cucamonga Creek Channel and Colony Commerce Center – East Specific Plan that are developed with industrial uses; and

WHEREAS, to achieve consistency with the TOP 2050 Official Land Use Plan (Figure LU-01), the SPA proposes to amend the following land uses:

(1) Planning Area 30 – Changing 8.3 acres of land from Low Density Residential (2.1 – 5 du/ac) to Low Density Residential (2.1 – 5 du/ac), Low-Medium Density Residential (5.1 – 11 du/ac), and Medium Density Residential (11.1 to 25.0 du/ac);

(2) Planning Area 31 – Changing 10.7 acres of land from Low Density Residential (2.1 – 5 du/ac) to Low-Medium Density Residential (5.1 – 11 du/ac) and Medium Density Residential (11.1 to 25.0 du/ac);

(3) Proposed Planning Area 32 (Annexation Area) – Changing 15.4 acres of land from Low Density Residential (2.1 – 5 du/ac) and Public School to Low-Medium Density Residential (5.1 – 11 du/ac) and Medium Density Residential (11.1 to 25.0 du/ac);

(4) Proposed Planning Area 33 (Annexation Area) – Changing 49.6 acres of land from Low-Medium Density Residential (5.1 – 11 du/ac) to (MDR) Medium Density Residential (11.1 to 25.0 du/ac); and

(5) Proposed Planning Area 34 (Annexation Area) – Changing 20 acres of land from Low Density Residential (2.1 – 5 du/ac) to Public School; and

WHEREAS, the SPA includes the annexation of 113.2 gross acres of land, located on the southwest corner of Haven Avenue and Eucalyptus Avenue and establishment of Planning Area 32 (Mixed Residential (5-25 du/ac)), Planning Area 33 (Mixed Residential (5-25 du/ac)), and Planning Area 34 (School). The proposed annexation will create three additional planning areas within the Mixed Residential and School land use designations. Planning Areas 32 and 33 will encompass 93.2 acres while Planning Area 34 will encompass 20 acres; and

WHEREAS, to achieve consistency with the TOP 2050 Official Land Use Plan (Figure LU-01) and bring the Specific Plan into compliance, the SPA proposes to change the land use designation for Planning Area 30 from Conventional Large Lot (3-6 du/ac) to Mixed Residential (5-25 du/ac) and Planning Area 31 from Conventional Medium Lot (4-6 du/ac) to Mixed Residential (5-25 du/ac); and

WHEREAS, there will be a net increase of 1,470 dwelling units allowed with the Specific Plan Area, for an increase of 2,418 units to 3,888 units; and

WHEREAS, the Subarea 29 Specific Plan provides a variety of residential housing types, oriented toward park and open space amenities designed to promote walkability and interaction among residents. The establishment of the proposed Mixed Residential land use designation requires the need for additional product types that promote higher density, more choice in floorplans, more attainable options for a greater range of residents. To provide more diverse housing types and to meet the current market conditions for the next phases of development, the SPA proposes to introduce the following seven additional product types:

(1) Motorcourt Single Family Detached (SFD) – The Motorcourt SFD is an 8-Pack Cluster Home detached product type and is characterized by a private lane constructed with decorative pavers that provides both garage and front entry access to each unit;

(2) Greencourt – The Greencourt is similar to the Motorcourt SFD, but introduces different building configurations including a 6-, 8-, and 12-Pack Cluster Home plotting types to provide more flexibility and diversity;

(3) Attached Motorcourt – The Attached Motorcourt is an attached townhome designed around a common motorcourt constructed with decorative pavers that provides garage access to each unit, with the main entrances of the units fronting the street, private drive aisle, or paseo. The paseos will be landscaped to provide visual interest and promote pedestrian mobility;

(4) 3-Story Townhomes – The 3-Story Townhomes product type are attached homes that share two common walls, except for the end units. These homes have direct garage access from a private lane or drive aisle, that may be side-by-side or a tandem configuration. The main entrances of the units front the street or a paseo. The paseos will be landscaped with accent trees, provide landscape planters, and feature enhanced entries;

(5) 3-Story Triplex – The 3-Story Triplex is an attached 3-unit row townhome product type which has direct garage access from a private lane or drive aisle. The main entrances of the units front the street or a paseo;

(6) 3-Story Tandem Townhomes – The 3-Story Tandem Townhomes product type are similar to the 3-Story Townhomes, with the exception that all units feature a

tandem garage configuration. The attached homes that share two common walls, except for the end units. These homes have direct garage access from a private lane or drive aisle. The main entrances of the units front the street or a paseo; and

(7) Flats – Flats are attached homes that are stacked on top of each other. These homes have attached garage access, that may be side-by-side or a tandem configuration. Front doors may be accessed from a street-side sidewalk, paseo, or from a private alley. Front door access depends on the design of the homes; and

WHEREAS, all changes and additions to the Specific Plan (exhibits, tables, development standards and design guidelines) are contained within the revised Specific Plan document; and

WHEREAS, the Application is a project pursuant to the California Environmental Quality Act, commencing with Public Resources Code Section 21000 et seq. (hereinafter referred to as "CEQA"); and

WHEREAS, the Subarea 29 Specific Plan has been prepared in conformance with the goals and policies of the City of Ontario Policy Plan (General Plan). Section 9 of the Specific Plan, “General Plan Consistency”, describes the manner in which the Subarea 29 Specific Plan complies with the Policy Plan goals and policies applicable to the Subarea 29 Specific Plan; and

WHEREAS, a Subsequent Environmental Impact Report (“EIR”) (State Clearinghouse No. 2004011009), including the adoption of a Mitigation Monitoring and Reporting Program and a Statement of Overriding Consideration have been prepared in accord with the California Environmental Quality (CEQA), the State CEQA Guidelines and the City of Ontario Guidelines to address the environmental effects of the Specific Plan Amendment; and

WHEREAS, Ontario Development Code Table 2.02-1 (Review Matrix) grants the Planning Commission the responsibility and authority to review and make recommendation to the City Council on the subject Application; and

WHEREAS, the Project has been reviewed for consistency with the Housing Element of the Policy Plan component of The Ontario Plan, as State Housing Element law (as prescribed in Government Code Sections 65580 through 65589.8) requires that development projects must be consistent with the Housing Element, if upon consideration of all its aspects, it is found to further the purposes, principals, goals, and policies of the Housing Element; and

WHEREAS, the Project is located within the Airport Influence Area of Ontario International Airport, which encompasses lands within parts of San Bernardino, Riverside, and Los Angeles Counties, and is subject to, and must be consistent with, the policies and criteria set forth in the Ontario International Airport Land Use Compatibility Plan (hereinafter referred to as "ALUCP"), which applies only to jurisdictions within San

Bernardino County, and addresses the noise, safety, airspace protection, and overflight impacts of current and future airport activity; and

WHEREAS, during the Subarea 29 Specific Plan Amendment review, opportunities for the involvement of citizens, California Native American Indian tribes (Government Code Section 65352.3.), public agencies, public utility companies, and civic, education, and other community groups, through public hearings or other means were implemented consistent with California Government Code Section 65351; and

WHEREAS, City of Ontario Development Code Division 2.03 (Public Hearings) prescribes the manner in which public notification shall be provided and hearing procedures to be followed, and all such notifications and procedures have been completed; and

WHEREAS, on October 24, 2023, the Planning Commission of the City of Ontario conducted a hearing to consider the Environmental Impact Report, Mitigation Monitoring and Reporting Program, and Statement of Overriding Considerations, and the Project, and concluded said hearing on that date, voting to issue Resolution Nos. PC23-082 and PC23-083, recommending the City Council adopt the Final Environmental Impact Report, Mitigation Monitoring and Reporting Program, and Statement of Overriding Considerations, and approve the Application; and

WHEREAS, as the first action on the Project, on November 21, 2023, the City Council approved a resolution adopting a Final Environmental Impact Report, Mitigation Monitoring and Reporting Program, and Statement of Overriding Considerations, each prepared pursuant to CEQA, the State CEQA Guidelines, and the City of Ontario Local CEQA Guidelines, and concluded said hearing on that date; and

WHEREAS, on November 21, 2023, the City Council of the City of Ontario conducted a hearing to consider the Project, and concluded said hearing on that date; and

WHEREAS, all legal prerequisites to the adoption of this Resolution have occurred.

NOW, THEREFORE, BE IT RESOLVED by the City Council of the City of Ontario as follows:

SECTION 1. ***Housing Element Compliance.*** Pursuant to the requirements of California Government Code Chapter 3, Article 10.6, commencing with Section 65580, as the decision-making body for the Project, the City Council finds that based upon the facts and information contained in the Application and supporting documentation, at the time of Project implementation, the project is consistent with the Housing Element of the Policy Plan (General Plan) component of The Ontario Plan, as the project site is not one of the properties in the Housing Element Sites Inventory contained in Tables B-1 and B-2 of the Housing Element Technical Report.

SECTION 2. ***Environmental Determination and Findings.*** As the decision-making body for the Project, the City Council has reviewed and considered the information contained in Subsequent Environmental Impact Report (SEIR), Mitigation Monitoring and Reporting Program and a Statement of Overriding Considerations prepared for the project and supporting documentation. Based upon the facts and information contained in the SEIR (State Clearinghouse No. 2004011009) and supporting documentation, the City Council finds as follows:

(1) The Subarea 29 Specific Plan Amendment SEIR, Mitigation Monitoring and Reporting Program and a Statement of Overriding Considerations contains a complete and accurate reporting of the environmental impacts associated with the Project; and

(2) The Subarea 29 Specific Plan Amendment SEIR, Mitigation Monitoring and Reporting Program and a Statement of Overriding Considerations was completed in compliance with CEQA and the Guidelines promulgated thereunder; and

(3) The Subarea 29 Specific Plan Amendment SEIR, Mitigation Monitoring and Reporting Program, and a Statement of Overriding Considerations reflects the independent judgment of the City Council.

SECTION 3. ***Airport Land Use Compatibility Plan ("ALUCP") Compliance.*** The California State Aeronautics Act (Public Utilities Code Section 21670 et seq.) requires that an Airport Land Use Compatibility Plan be prepared for all public use airports in the State; and requires that local land use plans and individual development proposals must be consistent with the policies set forth in the adopted Airport Land Use Compatibility Plan.

(1) On April 19, 2011, the City Council of the City of Ontario approved and adopted the ONT ALUCP, establishing the Airport Influence Area for Ontario International Airport, which encompasses lands within parts of San Bernardino, Riverside, and Los Angeles Counties, and limits future land uses and development within the Airport Influence Area, as they relate to noise, safety, airspace protection, and overflight impacts of current and future airport activity. As the decision-making authority for the Project, the City Council has reviewed and considered the facts and information contained in the Application and supporting documentation against the ONT ALUCP compatibility factors, including [1] Safety Criteria (ONT ALUCP Table 2-2) and Safety Zones (ONT ALUCP Map 2-2), [2] Noise Criteria (ONT ALUCP Table 2-3) and Noise Impact Zones (ONT ALUCP Map 2-3), [3] Airspace protection Zones (ONT ALUCP Map 2-4), and [4] Overflight Notification Zones (ONT ALUCP Map 2-5). As a result, the City Council, therefore, finds and determines that the Project, is consistent with the policies and criteria set forth within the ONT ALUCP; and

(2) On August 2, 2022, the City Council of the City of Ontario approved and adopted a Development Code Amendment to establish the Chino Airport ("CNO") Overlay Zoning District ("OZD") and Reference I, Chino Airport Land Use Compatibility Plan ("CNO ALUCP"). The CNO OZD and CNO ALUCP established the Airport Influence Area

for Chino Airport, solely within the City of Ontario, and limits future land uses and development within the Airport Influence Area, as they relate to safety, airspace protection, and overflight impacts of current and future airport activity. The CNO ALUCP is consistent with policies and criteria set forth within the Caltrans 2011 California Airport Land Use Planning Handbook. The proposed Project is located within the Airport Influence Area of Chino Airport and was evaluated and found to be consistent with the California Airport Land Use Planning Handbook and the CNO ALUCP. As the decision-making authority for the Project, the City Council has reviewed and considered the facts and information contained in the Application and supporting documentation against the CNO ALUCP compatibility factors, including Safety, Airspace Protection, Overflight. As a result, the City Council, therefore, finds and determines that the Project, is consistent with the policies and criteria set forth within the California Airport Land Use Planning Handbook and the Chino ALUCP.

SECTION 4. ***Concluding Facts and Reasons.*** Based upon the substantial evidence presented to the City Council during the above-referenced hearing, and upon the specific findings set forth in Section 1 through 3, above, the City Council hereby concludes as follows:

(1) ***The proposed Specific Plan, or amendment thereto, is consistent with the goals, policies, plans and exhibits of the Vision, Policy Plan (General Plan), and City Council Priorities components of The Ontario Plan.*** The proposed Subarea 29 Specific Plan amendment will provide land use consistency with The Ontario Plan Policy Plan (General Plan). The proposed amendment will accommodate the construction of future residential and school land uses within the Specific Plan which is consistent with goals, policies, plans and City Council priorities of The Ontario Plan.

(2) ***The proposed Specific Plan, or amendment thereto, would not be detrimental to the public interest, health, safety, convenience, or general welfare of the City.*** The proposed Subarea 29 Specific Plan amendment will provide land use consistency with The Ontario Plan Policy Plan (General Plan). The proposed Specific Plan Amendment will not be detrimental to the public interest, health, safety, convenience, or general welfare of the City. The land use changes will provide a combination of residential and school uses within the Subarea 29 Specific Plan, which is consistent with the type and intensity of development specified in The Ontario Plan.

(3) ***In the case of an application affecting specific properties, the proposed Specific Plan, or amendment thereto, will not adversely affect the harmonious relationship with adjacent properties and land uses.*** The proposed amendments will accommodate the construction of future residential and school developments in order to establish a harmonious relationship between the existing surrounding land uses and planned uses within the southeast quadrant of the specific plan.

(4) ***In the case of an application affecting specific properties, the subject site is physically suitable, including, but not limited to, parcel size, shape, access,***

and availability of utilities, for the request and anticipated development. The subject site is physically suitable to accommodate future residential and school land uses. The Subarea 29 Specific Plan amendment includes development standards to facilitate the proposed land uses, which will be developed with adequate lot sizes, access, and utilities to serve the project site.

SECTION 5. ***City Council Action.*** Based upon the findings and conclusions set forth in Sections 1 through 4, above, the City Council hereby APPROVES the herein described Specific Plan Amendment, attached hereto as "Attachment A," and incorporated herein by this reference.

SECTION 6. ***Notice of Determination Filing.*** Within 5 days following final application approval, The Applicant shall provide the Notice of Determination ("NOD") filing fee and applicable Department of Fish and Wildlife mitigation fee to the City of Ontario Planning Department. Required fees shall be paid by check, made payable to the "Clerk of the Board of Supervisors", which shall be forwarded to the San Bernardino County Clerk of the Board of Supervisors, along with all applicable environmental forms/notices, pursuant to the requirements of the California Environmental Quality Act ("CEQA"). Failure to provide required fees within the above-specified time will result in an extension to the statute of limitations for the filing of a CEQA lawsuit against the Project, from 30 days to 180 days.

SECTION 7. ***Final Documents.*** Within 30 days following approval of this Ordinance, the Applicant shall provide the following to the City:

(1) Two bound copies of the final Specific Plan Amendment document; and

(2) One CD containing a complete Microsoft Word copy of the final Specific Plan Amendment document, including all required revisions and a complete PDF copy of the final Specific Plan document, including all required revisions.

SECTION 8. ***Indemnification.*** The Applicant shall agree to defend, indemnify and hold harmless, the City of Ontario or its agents, officers, and employees from any claim, action or proceeding against the City of Ontario or its agents, officers or employees to attack, set aside, void, or annul this approval. The City of Ontario shall promptly notify the applicant of any such claim, action, or proceeding, and the City of Ontario shall cooperate fully in the defense.

SECTION 9. ***Custodian of Records.*** The documents and materials that constitute the record of proceedings on which these findings have been based are located at the City of Ontario City Hall, 303 East "B" Street, Ontario, California 91764. The custodian for these records is the City Clerk of the City of Ontario.

The City Clerk of the City of Ontario shall certify as to the adoption of this Resolution.

-

PASSED, APPROVED, AND ADOPTED this 21st day of November 2023.

1. Specific Plan Overview

1.0 Specific Plan Overview

The Subarea 29 Specific Plan is comprised of approximately 539.7 gross acres. The project site is bounded by Eucalyptus Avenue to the north, Riverside County Flood Control Channel to the south, Haven Avenue to the east, Cucamonga Creek Channel to the west as illustrated in ***Exhibit 1, Regional Location and Exhibit 2, Vicinity Map.***

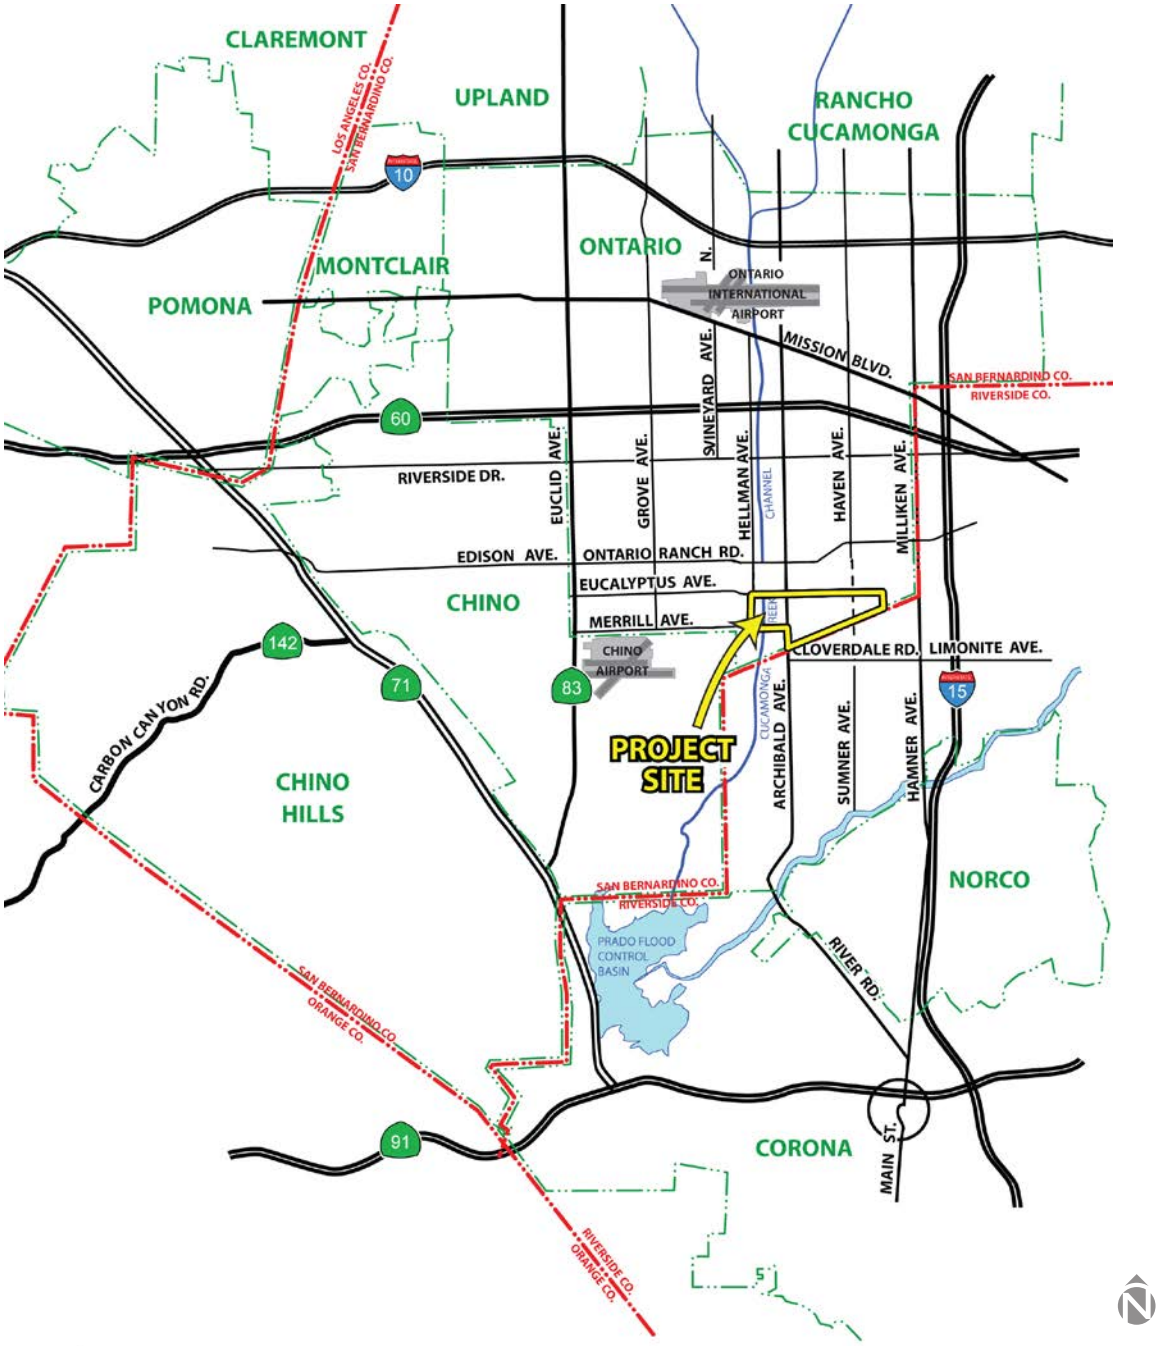
The net acreage of the Specific Plan area is 449.9 net acres. This excludes street right-of-ways, Southern California Edison (SCE), and County Line easements.

The regional context and local setting of the Specific Plan area are illustrated in the ***Regional Location Map, Exhibit 1, and Vicinity Map, Exhibit 2.***

The project site is consistent with and implements the gross Low Density Residential allocation (5.0 dwelling units permitted per gross acre) and broad "community design" policy requirements for the ~~New Model Colony~~ Ontario Ranch, including a general neo-traditional community design. These include:

- Creation of a "sense of place;"
- Diversity in housing product and architecture;
- Pedestrian connectivity;
- Smaller "neighborhoods;" and
- Elimination of the "subdivision" feel.

At the time of the initial Subarea 29 Specific Plan approval, the area was designated as the New Model Colony. Around 2015, the City established a new name for the area, Ontario Ranch. The Specific Plan Amendment acknowledges the new name and as such, has replaced New Model Colony with Ontario Ranch.



The ~~New Model Colony~~ Ontario Ranch General Plan Amendment adopted by the City of Ontario designated Planning Subarea 29 for development of residential, Neighborhood Center commercial, three (3) elementary, and one (1) middle school land uses. Residential land uses are designated within the Low Density Residential category, with a maximum permitted density of 5.0 dwelling units (du) per gross acre. A General Plan Amendment was adopted concurrently with the Specific Plan in 2006, modifying the General Plan Land Use Policy Map and Circulation Map to 1) reassign the location of one elementary school, 2) eliminate one elementary school, 3) relocate the middle school designation southeast of the intersection of Eucalyptus Ave. and Haven Ave., 4) "straighten" the Haven Ave. alignment between Merrill Ave. and Eucalyptus Ave., and 5) eliminate Neighborhood Center in the northeast portion of Subarea 29.

On January 26th, 2010, the City of Ontario adopted The Ontario Plan (TOP) which serves as the City's new business plan and includes a long term Vision and a principle based Policy Plan (General Plan). The City's Policy Plan, which acts as the City's General Plan, designates (Policy Plan Exhibit LU-1 - Land Use Plan) the project site for development of Low Density Residential (2.1 -5.0 dwelling units per acre), Neighborhood Commercial, Public Schools, and Open Space - Parkland.

Consistent with the adopted General Plan allowing for 5.0 du/gross acre, Subarea 29 is permitted to include a total of 2,470 residential units based on a gross residential acreage of 494.2 acre; see Table 3-A for calculations. The Subarea 29 Specific Plan (2006) originally allocated a total of 1,937 dwelling units. The Specific Plan Amendment (2015) reallocated a variety of residential home types in Subarea 29 resulting in a total of 2,392 dwelling units, or 4.8 du/gross residential acre, 4.4 du/gross acre overall. Adjusting the total unit count implements the land use designation of the General Plan while maintaining the neighborhood crafting and architectural design standards of the original Specific Plan. This Specific Plan Amendment increases the total number of allocated dwelling units to 2,418 or 4.9 du/gross residential acre, 4.5 du/gross acre overall.

The 2023 Amendment adds approximately 113 gross acres of land to the Subarea 29 Specific Plan. The 2023 Amendment will allow for the development of a middle school and both detached and attached homes. The 2023 Amendment will be compliant with the Ontario Plan which allows for up to 11.0 dwelling units per gross acre for low-medium density and 25 dwelling units per gross acre for medium density residential. A General Plan Amendment has been processed to change the land use from Low Density Residential with a centralized Open Space- Water designation to Medium Density Residential to permit the 2023 Subarea 29 Amendment. In addition to a school land use that was proposed at the south-east corner of Haven Avenue and Eucalyptus Avenue, the school land use is being shifted south toward the Haven Avenue and Merrill Avenue intersection. Furthermore, additional housing types will be included to address a wider market base. This additional housing will maintain the orderly and efficient extension of infrastructure and services.

Overall, Subarea 29 is planned for a total of ~~thirty-one (31)~~ thirty-four (34) planning areas. A total of ~~twenty-six (26)~~ twenty-eight (28) residential neighborhoods are planned within Park Place, with varying lot sizes, product design, and architectural character. ***Refer to Exhibit 3, Land Use Plan.*** Single-family detached home types range Cluster Homes, to 6,300 square foot lots. Attached homes are proposed in the amendment area east of Haven Avenue. A maximum total of ~~1,374~~ 2,045 dwelling units are proposed for Park Place. Richland Communities, Inc. controls a total of ~~five (5)~~ seven (7) residential neighborhoods with varying product, ~~and lot sizes~~ ranging from attached homes, to ~~3,500 1,750 square feet lots, to~~ 5,040 square feet lots. A maximum total of

A) Minimum square footage identified is for exclusive use area on a per home basis, recorded lot size may differ.
1) Gross Acres calculated to centerlines of Master Planned streets minus SCE easements.
2) Net Acres excludes street rights-of-way and SCE easements.
3) Actual total units and gross/net density and acreage will be dependent on final lotting.
4) Target unit count based on submitted Tentative "B" Maps
5) A density transfer of 15.0% may occur between Planning Areas.

*) Indicates Planning Areas as controlled/owned by Richland Communities, Inc.
**) Indicates "Park Place" Planning Areas as controlled/owned by SL Ontario Development Company
***) Indicates Planning Areas as controlled/owned by Brookfield Homes

~~936~~ 1,735 dwelling units are planned for the ~~five (5)~~ seven (7) planning areas controlled by Richland Communities, Inc. Brookfield Homes owns Planning Area 29. This planning area is planned for 108 lots featuring either lane or conventionally loaded designs. Combined these three land holders may develop ~~2,418~~ 3,888 potential dwelling units within Subarea 29 Specific Plan area. ***Refer to Table 3a on page 4-4.***

Non-residential uses proposed in the Specific Plan include a commercial parcel (Planning Area 2) consisting of 14.5 gross acres on the southwest corner of Eucalyptus Ave. and Archibald Ave. An elementary school (Planning Area 18) made up of 11.2 gross acres is included at the center of Subarea 29, directly adjacent to a neighborhood park (Planning Area 14) consisting of 7.7 gross acres.

Parks and the private Recreation Center form the "heart" of the Specific Plan and entire planned community. These include a private 3.1-acre private Recreation Center (Planning Area 15) and two (2) neighborhood parks (Planning Area 11 and 14) north and south of Merrill Ave. The two (2) neighborhood parks amount to 7.7 gross acres (north) and 6.2 gross acres (south) of Merrill Ave. Subarea 29 is planned as a walkable community.

A system of pedestrian trails link all residential neighborhoods with the planned school, parks, and recreation amenities. Additionally, connections to the SCE Corridor trail and County Line Channel trail are also planned.

The internal street system includes a modified grid and landscaped parkways in all local residential streets. ***Refer to Exhibit 3, Land Use Plan.***

1.1 Purpose for the 2017 Amendment

The 2017 Amendment was a Minor Specific Plan Amendment for Subarea29. Approved by the Zoning Administrator, this Amendment requested to add a new Conventional Small Lot Residential product within PA 24. This Amendment did not increase or decrease the approved number of dwelling units or overall density.

1.2 Purpose for the 2018 Amendment

The 2018 Amendment was a Minor Specific Plan Amendment for Subarea29. Approved by the Zoning Administrator, this Amendment requested a modification to the maximum lot coverage standards for Conventional Large Lot Residential: Enclave Homes. This modification allows the building lot coverage for single-story homes within PA 7, 22 and 30 to increase from 45% to 55%. This Amendment did not increase or decrease the allowed number of dwelling units or overall density.

1.3 Purpose for Amendment (PA-27)

This Specific Plan Amendment (2021) modified PA-27 to permit a greater number of units. This unit increase would change the overall Subarea 29 density from 4.8 dwelling units per gross acre to 4.9 dwelling units per gross acre. This Amendment also permits an additional cluster housing typology.

1.4 Purpose for the 2023 Amendment

The 2023 Amendment adds 113 acres to the east side of the Specific Plan, increases density permitted in PA-30 and PA-31, and permits the addition of 1,665 units (inclusive of the PA30/31 density increase and the addition of the land area east of Haven Avenue. This Amendment also introduces new home types and architectural styles to support the goals of the Specific Plan.

1.5 Governing Documents

Development of the Subarea 29 Specific Plan will be regulated by the following documents:

- The Ontario Plan (TOP) Policy Plan (General Plan) which establishes policies governing land use, circulation, housing, conservation and open space, noise, safety, and public facilities within the Specific Plan area;
- The Specific Plan, to include a Land Use Plan, Infrastructure Plan, Design Guidelines, and Development Regulations;
- The City of Ontario Development Code, as applicable to the project site, where the Specific Plan is silent on development standards and regulations;
- The City of Ontario Subdivision Ordinance, regulating the subdivision of land within the project site area;
- The Airport Land Use Compatibility Plans of Chino Airport and Ontario International Airport;
- The approved Subarea 29 Environmental Impact Report; and
- Covenants, Conditions, and Restrictions (CC&R's) to be established by the developer of Park Place, and other developers in Subarea 29 as a means of ensuring and enforcing quality design and development of the master planned community.

Specific Plan Components

The Subarea 29 Specific Plan is organized into the following sections in addition to Section 1, Specific Plan Overview.

2.0 Introduction

The Introduction provides:

- The project site setting;
- A general description of the project site proposal;
- The goals and policies of the Specific Plan;
- The entitlements to accompany the Specific Plan; and
- The relationship of the Specific Plan to The Ontario Plan (TOP) Policy Plan (General Plan) and the City on Ontario Development Code.

3.0 Existing Conditions

This section describes the setting for the project site, outlining the existing physical conditions on and around the site at the time of the original approval.

4.0 Land Use

The Land Use section describes the various residential planning areas and residential types, commercial planning area, school planning area, and the parks and trails within the planned community.

5.0 Infrastructure and Public Improvements

This section provides information on proposed circulation improvements, the planned backbone water, sewer, and storm drain systems, the grading concept for the project site, and a discussion of public utilities and services to serve the Specific Plan area.

6.0 Development Regulations

The Development Regulations identify permitted uses and standards regulating the development of various residential product types and commercial uses. The relationship of the Specific Plan development regulations to the City of Ontario Development Ordinance is also provided. The policies and procedures for the City's review and approval of future development proposals within the Specific Plan are included in this section. This section provides the methods and procedures for interpreting and amending the Specific Plan, as necessary in the future.

7.0 Design Guidelines

The Specific Plan Design Guidelines are intended to direct the site planning, landscaping, and architectural quality of the development. Streetscapes, entries, edge treatments, walls and fencing, lighting, signage, and architectural design are addressed in the Design Guidelines.

8.0 Commercial Design Guidelines

This section will direct site planning, architectural design, and landscaping for the commercial parcel.

9.0 General Plan Consistency

This section includes the City of Ontario General Plan consistency matrix describing the relationship of the Specific Plan to each policy of The Ontario Plan (TOP) Policy Plan (General Plan).

2. Introduction

2.0Introduction

The Specific Plan is comprised of 539.7 gross acres designated as Planning Subarea 29 of the ~~New Model Colony~~ Ontario Ranch, within the City of Ontario. The Specific Plan area illustrated in Exhibit 2, Vicinity Map, is bounded by Eucalyptus Ave. on the north, Haven Ave. on the east, County Line Channel on the south, and Cucamonga Channel and Archibald Ave. on the west. The Specific Plan is a comprehensive plan proposed by SL Ontario Development Company, Richland Communities, Inc, and Brookfield Homes, for the development of residential neighborhoods designed to reflect the small town character of older established communities.

The Specific Plan also includes a commercial site, parks, and school uses. The Specific Plan establishes Development Standards and Design Guidelines for a commercial land use area within Planning Subarea 29.

It should be noted that use of the term "Park Place" throughout this document applies only to the SL Ontario Development Company ownership.

2.1 Purpose and Objectives

2.1.1 Purpose

The Subarea 29 Specific Plan serves to implement the City's Policy Plan (General Plan) for the project site and provides zoning regulations for development of the project site by establishing permitted land use, development standards, infrastructure requirements, and implementation requirements for development. A comprehensive set of design guidelines and development regulations are included to guide and regulate site planning, landscape, and architectural character within the community ensuring that excellence in community design is achieved during project development. The Subarea 29 Specific Plan establishes the procedures and requirements to approve new development within the project site.

The Specific Plan is designed to address the following guiding planning principles:

- Diversity and choice of single-family housing types and opportunities to address a variety of lifestyles, home sizes, and economic segments of the marketplace;
- Connectivity among land uses within the Specific Plan area and to surrounding public facilities and the existing Ontario community;
- Use of traditional development patterns as found in older established neighborhoods in Southern California;
- Recreational amenities within walking distance of all residential neighborhoods;
- Bicycle and pedestrian accessibility and mobility to encourage alternative modes of travel;
- Diversity in architectural design; and
- Sustainable development practices addressing energy efficiency.

2.1.2 Objectives

The following objectives are established for the Subarea 29 Specific Plan.

Residential Areas

- Residential neighborhoods designed at a "human scale" and oriented to pedestrian activity;
- Connectivity provided among residential neighborhoods and recreational areas through a network of pedestrian sidewalks and on-street bicycle trails;
- Connectivity provided between residential neighborhoods and the adjacent commercial land use, as well as to the central elementary school, by means of pedestrian and bicycle trail linkages;
- A variety of housing types incorporated into the land use plan addressing lifestyle considerations of singles, families, and empty nesters;
- Residential neighborhoods designed around a central park "green core," "framing" green spaces, promoting active and passive recreational activity and casual social interaction among neighbors; and
- Residential neighborhoods with diverse architectural styles and traditional design elements reflecting the characteristics of older established Ontario neighborhoods.

Commercial Area

- Neighborhood commercial uses to meet the needs of the residential community within the project site as well as the larger surrounding market area;
- Provision for trails connecting the residential community with the commercial center and adjacent uses;
- The development of plaza areas and other amenities within the commercial center providing space for social interaction; and
- Orientation of commercial buildings to the street wherever possible to create an urban edge and sense of arrival.

Streets and Pedestrian/Bicycle Mobility

- Streets and lanes (private alleys) designed in a modified grid pattern, reminiscent of traditional neighborhood streets;
- Streets with landscaped parkways and pedestrian walkways separated from the street, to create a pleasant and safe pedestrian environment, promoting friendly interaction among neighbors;
- Several traffic calming techniques within the project site street design including enhanced parkway landscaping, median landscaping, and tapered street intersections and lane entrances to influence a driver's peripheral vision and encourage motorists to drive more slowly; and
- Inside turning radii at corners reduced to slow traffic at corners.

Recreation / Trails

- New recreational opportunities for residents through the development of two (2) neighborhood parks centered within the community "green core" to include play fields, tot lots, and picnic areas. Additionally, a private Recreation Center including a recreation building with swimming pool for Park Place residents (3.13 acres), community tennis courts, and other areas for passive recreation. The two (2) neighborhood parks amount to 7.7 acres (north) and 6.2 acres (south) of Merrill Ave.;
- A portion of the City's Multipurpose Trails and Bikeway Corridor Master Plan provided through development of a multipurpose trail within the SCE property connecting County Line Channel and Merrill Ave. with Eucalyptus Ave.; and
- A system of on-street multipurpose trails and bicycle lanes integrated into the project site providing bicycle access from the residential community to surrounding areas.

Sustainable Development

- The opportunity for development of residential units designed with living areas on the second floor and home office areas on the first floor;
- Native plant materials and non-invasive ornamental landscape materials will be incorporated into the landscaping plan for portions of the SCE property developed for trail purposes;
- Residential development will be connected to the commercial land use area located within the site through pedestrian and bicycle trails promoting walking and bicycling as an alternative means of travel to the automobile to and from these areas;
- Residential development will be equipped with the latest technology for internet access allowing residents to shop and work on-line, thereby reducing vehicle trips to employment centers and shopping;
- Canopy trees will be utilized in public areas such as parkways, medians, and the public parks to provide shade to counteract the heat island effect;
- Roadway widths will be reduced as much as possible to minimize heat generating asphalt surfaces; and
- Recycled water will be utilized for the central public parks, neighborhood edges, and other common landscape areas.

2.2 Specific Plan Proposal

2.2.1 Project Summary

The Specific Plan Land Use Plan is described below and in the Specific Plan Statistical Summary, Tables 1-1b, pages 4-3 through 4-4.

Residential Uses

The Subarea 29 Specific Plan will provide for development of a variety of residential housing types, oriented toward park and open space amenities and designed to promote walkability and interaction among residents. Residential development within 494.2 acres of the Specific Plan area (per Table 1a, Specific Plan Land Use Summary) will contain up to 2,392 dwelling units, providing a varied mix of single-family detached housing types, as described below.

~~Row Townhomes~~ Mixed Residential (PA 30, 31, 32, 33)

The Mixed Residential designation permits a variety of product types that promote higher density and more choice in floorplans. Mixed Residential has been created to provide more attainable options for a greater range of residents as well as options for different household compositions. Permitted typologies:

- Row Townhomes are attached homes that share two common walls, except for the end units. These homes have direct garage access, that may be side-by-side or tandem configuration. Front doors may be accessed from a street-side sidewalk, paseo, or from a private alley. Front door access depends on the design of the homes. Residential areas that utilize this housing typology will be developed at an approximate net density of 5-25 dwelling units per acre.
- Flats are attached homes that are stacked on top of each other. These homes have attached garage access, that may be side-by-side or tandem configuration. Front doors may be accessed from a street-side sidewalk, paseo, or from a private alley. Front door access depends on the design of the homes. Residential areas that utilize this housing typology will be developed at an approximate net density of 5-25 dwelling units per acre.
- Cluster Homes- see definition provided in this section.

Residential Detached

Five (5) types of single-family detached residential development products are planned for the site; Planning Areas may be identified with more than one type of planned development product to allow for flexibility within the maximum number of permitted dwelling units. These include:

Cluster Homes (PA 13, 25, 26, 27, 32, 33)

Cluster Homes are single-family detached residential development with vehicular access from lanes (private alleys or motorcourts) via interior streets, with direct access garages. Entries are accessed from a greencourt or a motorcourt. These residential areas will be developed at an approximate net density of 7-14 dwelling units per acre with a exclusive use area size of at least 1,750 square feet.

Conventional Small Lot (PA 1, 5, 12, 16, 17, 23 & 24)

Conventional single-family detached residential development will consist of cottage style residential homes designed with vehicular access provided from local interior streets. Residential areas will be developed at an approximate net density of 5-9 dwelling units per acre with a minimum lot size of at least 3,015 square feet.

Lane Loaded (PA 9, 10, 19 & 29)

Detached single-family residential development consists of lane-served residential units designed with an orientation to the street or green spaces, by locating garages to the rear of residential units. Residential areas will be developed at an approximate net density of 5-8 dwelling units per acre with an minimum lot size of at least 3,100 square feet.

Conventional Medium Lot (PA 3, 4, 6, 8, 20, 21, 28, 29 & 31)

Conventional single-family detached units with orientation to local streets and direct access garages, in varying orientations. Residential neighborhoods will be developed at an approximate net density of 4-6 dwelling units per acre, with a minimum lot size of 4,000 square feet.

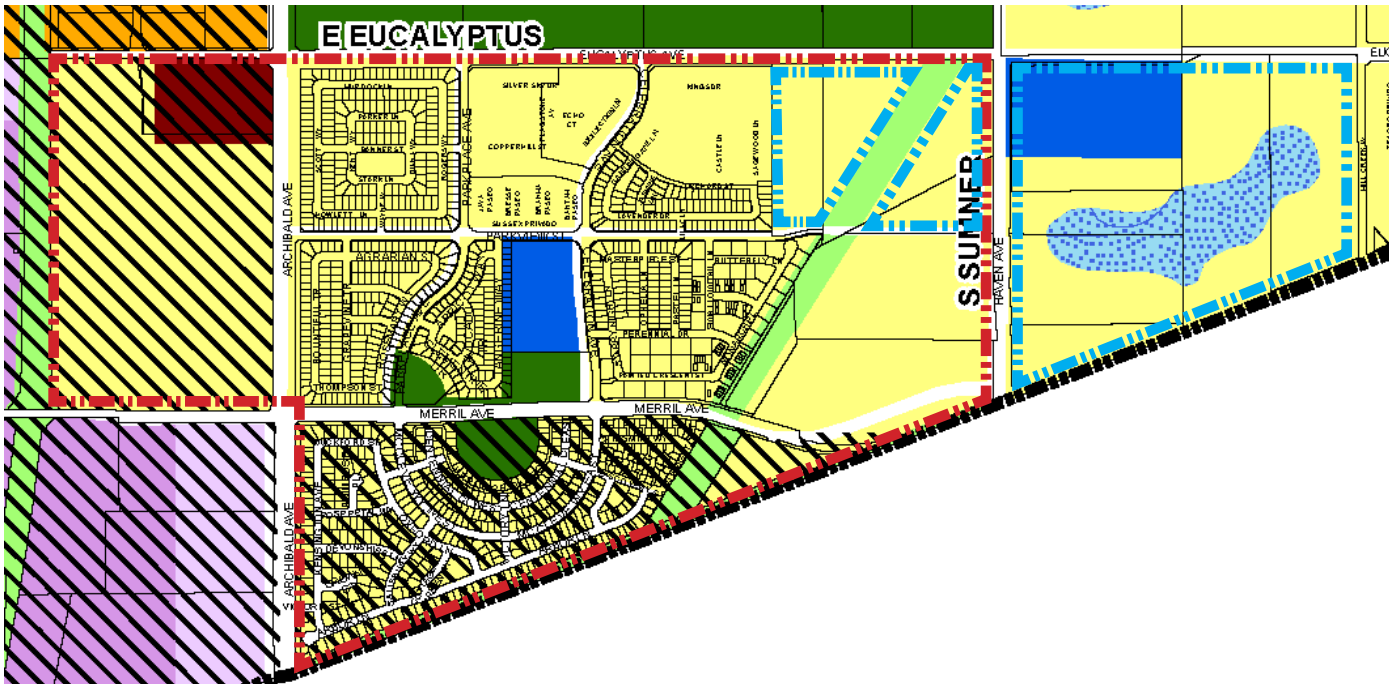
Conventional Large Lot (PA 7, 22 & 30)

These are the largest single-family detached lots in the Specific Plan, conventionally accessed from local streets. Net densities average approximately 3-6 dwelling units per acre, with a minimum lot size of 5,000 square feet.

2.3 Authority and Requirements

2.3.1 Authority

State of California Government Code, Title 7, Division 1, Chapter 3, Article 8, Section 65450-57 grants authority to cities to adopt Specific Plans for purposes of implementing the goals and policies of their General Plans. The Government Code specifies that specific plans may be adopted either by resolution or by ordinance and that the Specific Plan is required to be consistent with the General Plan. The City of Ontario adopts specific plans by ordinance, thereby establishing the zoning regulations for development of the project site. The requirements of the Specific Plan shall take precedence over the City of Ontario Development Code. In instances where the Specific Plan is silent, the City of Ontario Development Code shall prevail.



2.3.2 Requirements of the Specific Plan

California Government Code Section 65451 sets forth the minimum requirements and review procedures for Specific Plans as follows:

A Specific Plan shall include a text and a diagram or diagrams, which specify all of the following in detail:

- The distribution, location, and extent of the uses of land, including open space, within the area covered by the plan;
- The proposed distribution, location, and extent and intensity of major components of public and private transportation, sewage, water, drainage, solid waste disposal, energy, and other essential facilities proposed to be located within the area covered by the plan and needed to support the land uses described in the plan;
- Standards and criteria by which improvements will proceed, and standards for the conservation, development, and utilization of natural resources, where applicable; and
- A program of implementation measures including regulations, programs, public works projects and the financing measures necessary to carry out paragraphs 1, 2, and 3 above. The Specific Plan shall include a statement of the relationship of the Specific Plan to the General Plan.

The Subarea 29 Specific Plan meets the requirements of the State of California Government Code.

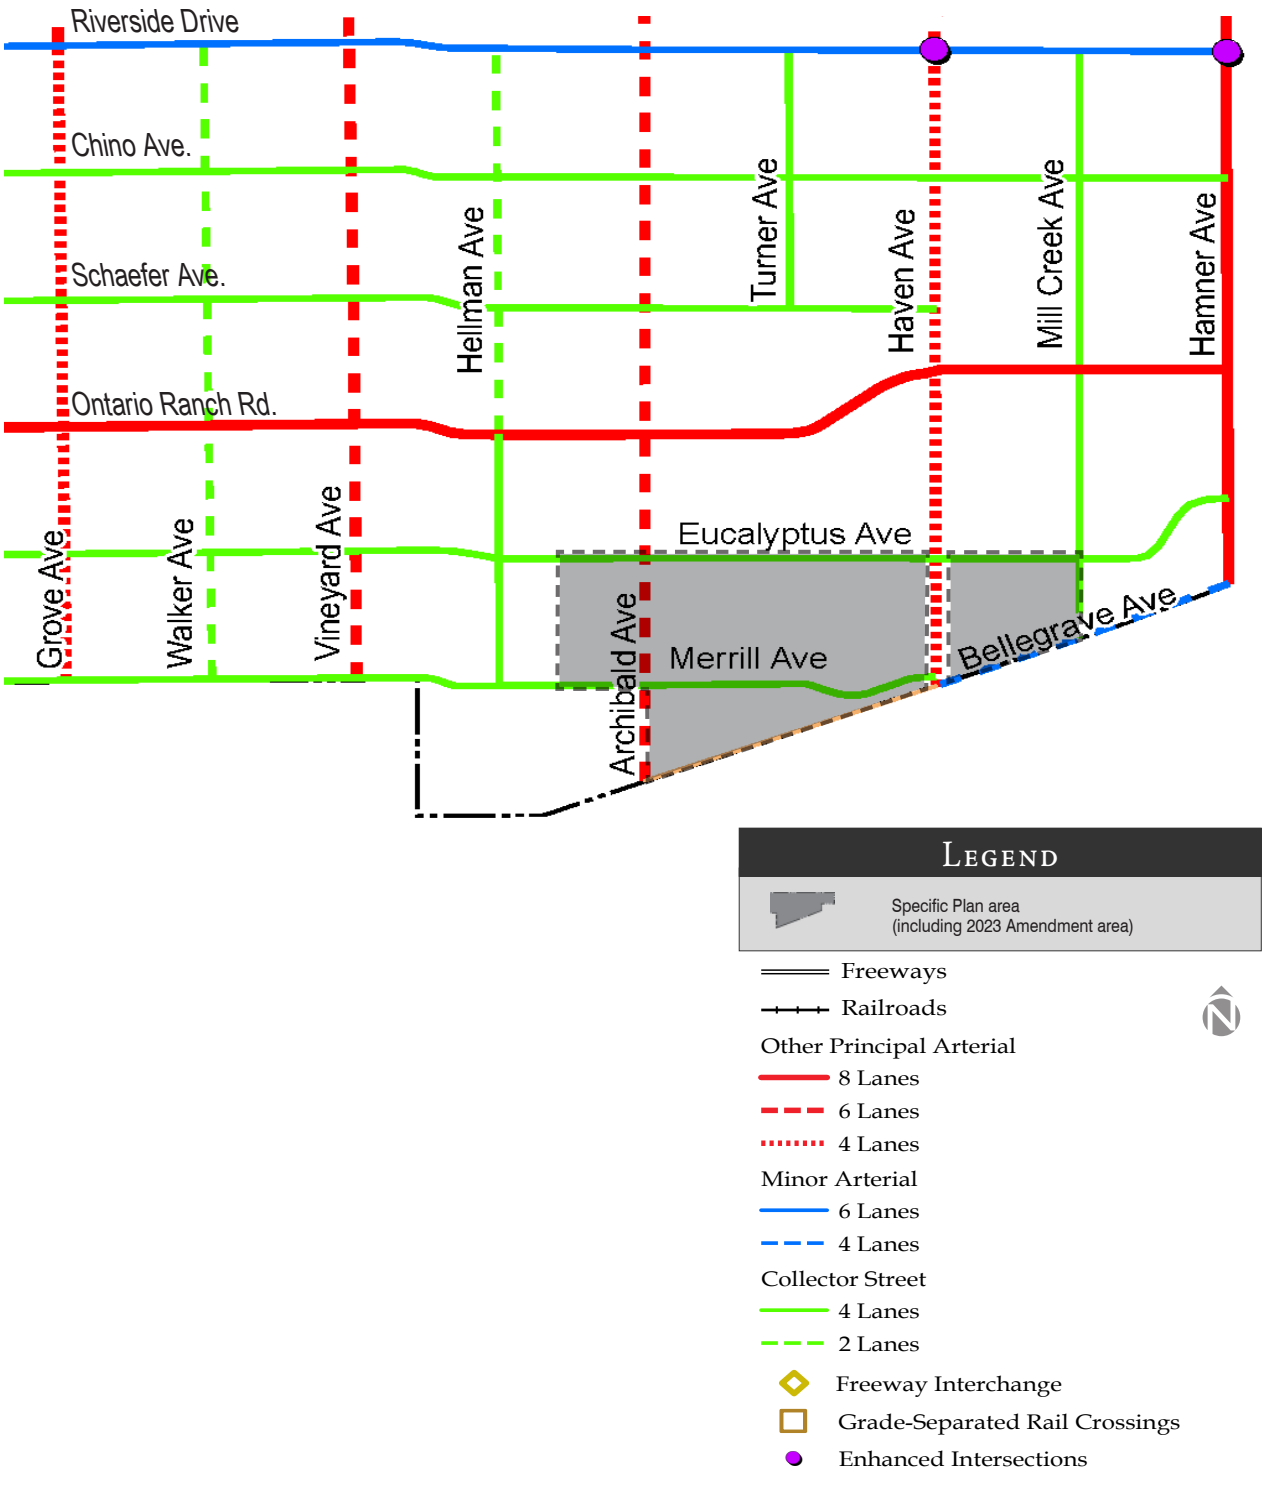

Exhibit 5—Policy Plan Functional Roadway Classification Plan

2.3.3 Development Agreement Required

Unless done in a coordinated manner and with adequate fiscal planning, development projects within the ~~New Model Colony~~ Ontario Ranch are likely to present a challenge in their implementation because of the lack of existing public facilities, including, streets, sewerage, transportation, drinking water, school, and utility facilities. California law has established a mechanism for ensuring the adequate provision of such facilities, while at the same time providing assurances to applicants that, upon approval of the project, the applicants can proceed with their projects. Approval of this Specific Plan without a development agreement may result in a waste of resources, escalate the cost of housing to the consumer, and discourage investment in and commitment to comprehensive planning, as envisioned by the City, which seeks to make maximum efficient utilization of resources at the least economic cost to the public.

Therefore, a statutory development agreement, authorized pursuant to California Government Code sections 65864 et seq., shall be required as part of the approval of this Specific Plan. For the above-mentioned reasons, the development agreement for this Specific Plan shall include, among other things, methods for financing acquisition and construction of infrastructure, acquisition and development of adequate levels of park land, and schools, as well as the provision of adequate housing opportunities for various segments of the community consistent with the regional housing needs assessment. SL Ontario Development Company, Richland Communities, Inc., and Brookfield Homes may each enter into separate development agreements with the City.

2.4 Development Approval Components

The components of the development approval process for the Specific Plan are as follows:

General Plan (Policy Plan)

The Ontario Plan (TOP) establishes the direction and vision for the City of Ontario providing a single guidance system that will shape the Ontario community for the future. TOP provides for policies to accommodate change over a 30 year period commencing in 2010, the beginning of the planning period. TOP consists of a six part Component Framework: 1) Vision, 2) Governance Manual, 3) Policy Plan, 4) City Council Priorities, 5) Implementation, and 6) Tracking and Feedback.

Specific Plan

The Policy Plan (General Plan) requires the approval of a Specific Plan for development of the project site to ensure that sufficient land area is included to achieve unified districts and neighborhoods. The City of Ontario has zoned the project site as AG-Specific Plan. The zoning designation of AG-Specific Plan requires that a Specific Plan be approved to guide development of the project site and to implement the goals and policies of the Policy Plan. The Specific Plan provides the zoning regulations to govern development of the project site. The requirements of the Specific Plan shall take precedence over the City of Ontario Development Code. In instances where the Specific Plan is silent, the City of Ontario Development Code shall prevail.

Subdivision Maps

A tentative tract map(s) will be reviewed by the City of Ontario for the residential portion of the Specific Plan indicating the approximate location of lot lines, streets, and proposed grading. Following approval by the City of the tentative tract map(s), a final map(s) will be prepared. Parcel maps will be approved by the City of Ontario for development proposed within the commercial portion of the Specific Plan.

2.5 CEQA Compliance

A project site Environmental Impact Report (EIR) prepared by the City of Ontario for the Specific Plan, in accordance with the California Environmental Quality Act (CEQA), addressed impacts associated with the Specific Plan and subdivision map. The EIR recommended mitigation measures to reduce impacts of the project site to a less than significant level. The EIR was prepared as the basis for the environmental review for all subsequent discretionary and ministerial actions.

2.6 Relationship to General Plan and Zoning

The City's Policy Plan, which acts as the City's General Plan, designates the project site for development as follows:

- Low Density Residential (2.1 -5.0 dwelling units per acre)
- Low -Medium Density Residential (5.0 -11.0 dwelling units per acre)
- Medium Density Residential (11.0 -25.0 dwelling units per acre)
- Neighborhood Commercial
- Public Schools
- Open Space - Parkland
- Open Space - Non-Recreation

The Policy Plan (General Plan) establishes a development capacity of ~~2,228~~ 3,888 dwelling units and approximately 189,486 square feet of commercial use and 369,171 of commercial office use for the project site. The Policy Plan Residential Capacity is further broken down as follows:

Table 2—Policy Plan Residential Capacity

Gross Acres	*TOP Land Use Designation*	*Maximum Permitted Dwelling Units*
495.2	Low Density Residential	2.228
Total: 495.2		2,228*

**Densities do not reflect maximum allowable densities by the Policy Plan and are based on TOP EIR densities (average) of 4.5 du/ac for Low Density.*

Table 2A—Policy Plan Residential Capacity (with 2023 Amendment Area)

Gross Acres	*TOP Land Use Designation*	*Maximum Permitted Dwelling Units*
588.7	Low, Low-Medium, and Medium Density Residential	3,888
Total: 588.7		3,888

California Government Code (Title 7, Division 1, Chapter 3, Article 8, Section 65450-65457) permits the adoption and administration of specific plans as an implementation tool for elements contained in the local general plan. Specific plans must demonstrate consistency in regulations, guidelines, and programs with the goals and policies set forth in the general plan. The Subarea 29 Specific Plan has been prepared in conformance with the goals and policies of the City of Ontario Policy Plan (General Plan). The policy analysis is located in the Appendix of this document, describes the manner in which the Subarea 29 Specific Plan complies with the Policy Plan policies applicable to the project.

2.7 Development Plan Review

Following the approval of the Specific Plan, all development proposals for individual residential neighborhoods or product areas within the Specific Plan will be subject to the Development Plan Review process pursuant to Article 8: Development Plan Review of the City of Ontario Development Code.

2.8 Airport Land Use Compatibility Planning Consistency

All development proposals or Specific Plan Amendments are required to be consistent with the Airport Land Use Compatibility Plans of Chino Airport and Ontario International Airport.

3. Existing Conditions

3.0 Existing Conditions

3.1 Property Ownership

The 539.7 gross acre Subarea 29 Specific Plan consists of twenty-two (22) parcels with eight (8) separate ownerships. Three (3) separate developers, SL Ontario Development Company, Richland Communities, Inc., and Brookfield Homes are involved in the entitlement process to develop portions of the study area at this time. ***Exhibit*** 6, ***Existing Property Ownership & Williamson Act Contract Status*** illustrates this information.

3.1.1 Property Ownership (2023 Amendment Area)

The 2023 Amendment area has added 4 Planning Areas to Subarea 29 (PA32, PA33 & PA34). PA32 and PA34 are controlled by SL Ontario Development Company, while PA33 is controlled by Richland Communities. ***Exhibit 6—Existing Property Ownerships and Williamson Act Contract Status*** illustrates this information and includes the ownership identification for the PAs effected by the unit transfer.

3.2 Williamson Act Status

The Williamson Act program is designed as a mechanism for the preservation of agricultural and open space lands in the State of California. Within the Subarea 29 Specific Plan, only one Williamson Act contract is active. ***Exhibit*** 6, ***Existing Property Ownerships & Williamson Act Contract Status*** illustrates the location and status of the Williamson Act contract within the Subarea 29 Specific Plan.

3.3 Airport Land Use Compatibility Plan Consistency

The Project Site is located within the Airport Influence Areas of Chino Airport and Ontario International Airport (ONT) as depicted in Exhibit 10, Airport Influence Areas.

3.4 Existing Site Conditions and Improvements

Existing on-site land uses include dairy farming, agriculture, and the SCE transmission corridor. The 539.7 gross acre Specific Plan area has historically been used for general agricultural purposes. Agricultural activities remain within the Specific Plan area and include operations such as dairy farming and row crop production. The site contains farm buildings supporting the existing agricultural activities.

3.5 Surrounding Land Uses

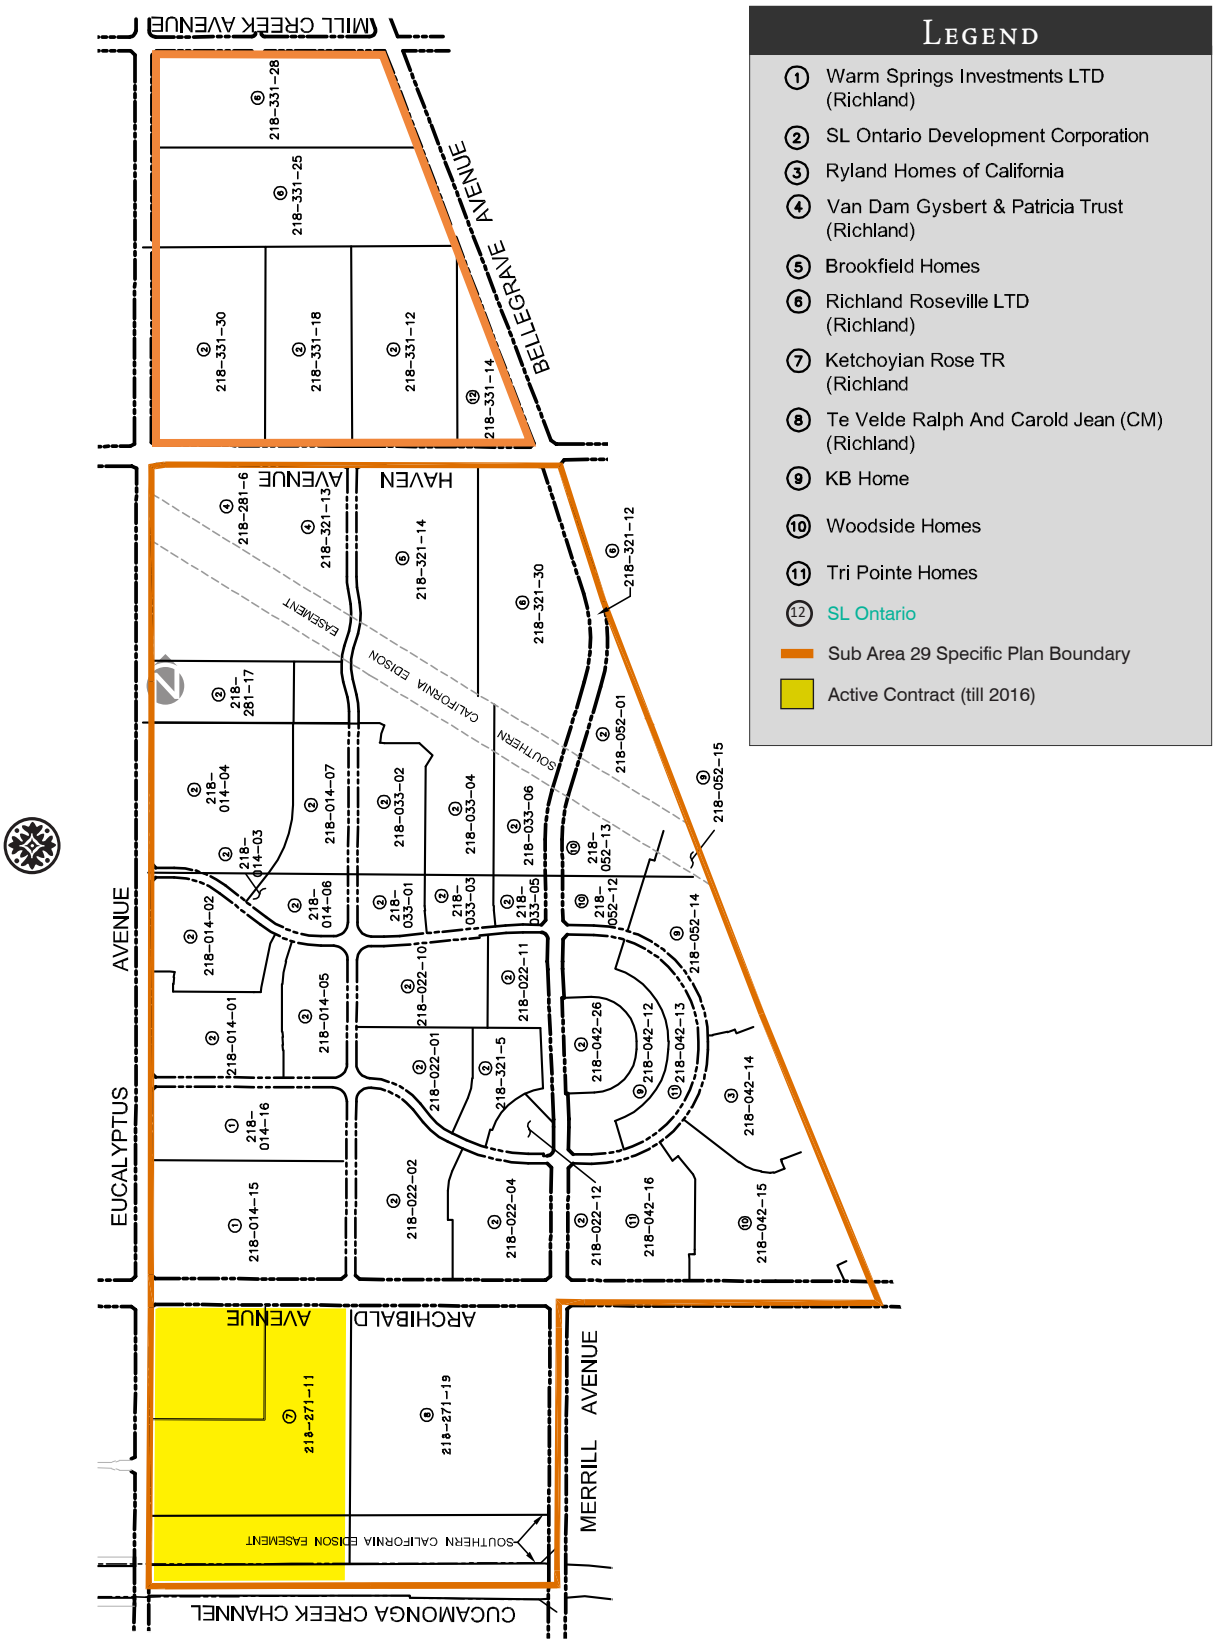
Uses surrounding the Specific Plan area include residential, dairy farming, agriculture, vacant open space, and roadways. Refer to ***Exhibit 8, Aerial Photo***, which documents existing and surrounding land uses.

3.6 Topography

The project site is relatively flat with gently sloping topography of approximately 2%, sloping in a northeasterly to southwesterly direction. ***Exhibit 18, Conceptual Grading Plan***, illustrates existing and proposed topographic contours on the site. There are no significant landforms or rock outcroppings within the project site.

3.7 Hydrology

Most of the project site is presently in agricultural use, and only a limited portion is now covered with impervious surfaces. Normal rainfall in the area is, therefore, able to percolate through on-site soils and does not result in high volumes of surface runoff, typically associated with urban areas. During periods of heavy rainfall, when ground surfaces are saturated, surface runoff is collected in the existing storm drains, culverts, and retention basins located within the surrounding area.



Groundwater within and surrounding the project site as a whole, contains high concentrations of salt, attributable to historic agricultural activities such as dairy farming. The high organic content of on-site soils has contributed incrementally to the degradation of surface and groundwater quality. Removal of the organic materials which constitute by-products of those dairy operations and compliance with National Pollution Discharge Elimination System (NPDES) and other storm water permit requirements will be required as part of project site development.

3.8 Existing Circulation/Access

3.8.1 Regional Circulation

The Pomona Freeway, State Route (SR-60), is located approximately one (1) mile to the north of the ~~New Model Colony General Plan~~ Ontario Plan area. In this area, SR-60 has full diamond-type interchanges with Euclid Ave., Grove Ave., Vineyard Ave., Archibald Ave., Haven Ave., and Milliken Ave. SR-60 carries approximately 160,000 vehicles per day near the City of Ontario sphere of influence area, also referred to as the New Model Colony (NMC) General Plan area.

The Ontario Freeway, Interstate 15 (I-15), is located approximately one-half mile to the east of the ~~New Model Colony General Plan~~ Ontario Plan area, and carries approximately 90,000 vehicles per day in the vicinity of the ~~NMC General Plan~~ Ontario Plan area. The closest arterial interchange to the ~~NMC General Plan~~ Ontario Plan area is located at Limonite Road in Riverside County, approximately 3-¼ miles south of the SR-60 interchange with I-15.

(Not to Scale)

Exhibit 6—Existing Property Ownerships and Williamson Act Contract Status

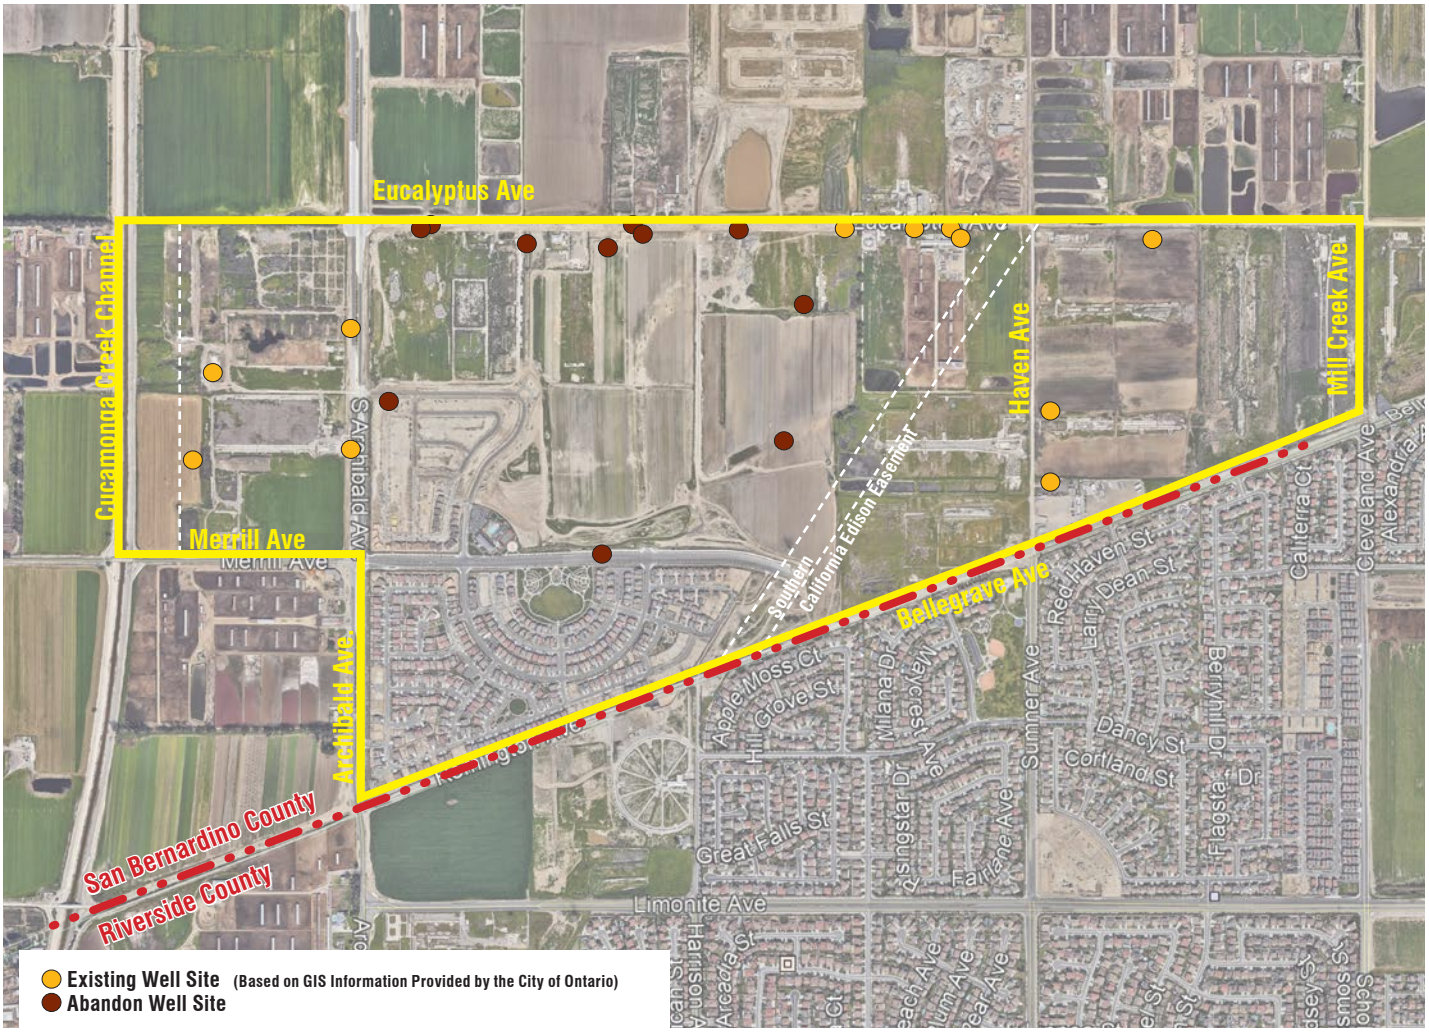


Exhibit 7—Aerial Photo

State Highway SR-83 (Euclid Ave.) extends along the western boundary of the NMC General Plan area. Another major freeway in the area is SR-71 (Chino Valley Freeway), located between SR-91 and SR-60, and is approximately 2-3 miles southwest of the ~~NMC General Plan~~ Ontario Ranch area. This freeway is a major commuter route in southwestern San Bernardino County, connecting the SR-91 freeway with SR-60 and I-10 freeways.

Regional access to the project site is provided from Interstate 15 (I-15) located approximately 1.5 miles east of the project site and from SR-60, located approximately 2.2 miles north of the project site. Refer to ***Exhibit 1, Regional Location,*** page 1-2.

3.8.2 Local Circulation

No local streets exist at present to serve the project site, other than Merrill Ave. Archibald Ave. provides arterial access. It has an existing intersection with Eucalyptus Ave. west of the project site.

Archibald Ave. is improved with approximately 36 (thirty-six) feet of paved area from the southerly boundary of the site to Eucalyptus Ave. A five-foot wide shoulder is located adjacent to Archibald Ave. on both sides of the street. Eucalyptus Ave. is improved with approximately 26.5 feet of paved area between Archibald Ave. and the Cucamonga Channel. Haven Ave. is improved with a paved area varying in width from fourteen (14) feet to seventeen (17) feet. Refer to ***Exhibit 8, Policy Plan Functional Roadway Classification Plan,*** which illustrates the General Plan Circulation network for the New Model Colony.

3.9 Existing Infrastructure/Utilities

3.9.1 Water Supply Facilities

The closest water mains to the project site are located over 1.5 miles north of the Specific Plan area in Riverside Drive. This water main has not been sized to serve significant development within the ~~New Model Colony~~ Ontario Ranch. A 16-inch water main, owned and operated by the Jurupa Community Services District, is located within Riverside County along the east side of Milliken Avenue, east of the site. As part of the development of the project site, the construction of new water systems shall be consistent with the City's approved Water Master Plan.

On-site residential and agricultural uses are served by private wells, as illustrated on ***Exhibit 7, Aerial Photo***. Please note that the well sites depicted on this exhibit may not be all inclusive, and existing wells will be identified at the Tentative Map stage. Upon development of the well site areas, these wells, or any other wells found on the property, will be abandoned per California Department of Water Resources Health Guidelines and the City of Ontario Guidelines. In compliance with the Chino Basin Water Master's *Well Procedure for Developers*, a well use/destruction plan and schedule for all existing private/agricultural wells shall be submitted to the City of Ontario for approval prior to the issuance of permits for any construction activity. If a private well is actively used for water supply, the Developer shall submit a plan to abandon such well and connect users to the City's water system (residential to the domestic water system and agricultural to the recycled water system) when available. Wells shall be destroyed/abandoned per the California Water Resource Guidelines and require permitting from County Health Department. A copy of such permit shall be provided to the Engineering and Ontario Municipal Utilities Company (OMUC) ~~Agency~~ prior to issuance of grading and/or building permits. If the Developer proposes temporary use of an existing agricultural well for purposes other than agriculture, such as grading, dust control, etc., the developer shall make a formal request to the City of Ontario for such use prior to issuance of permits for any construction activity. Upon approval, the Developer shall enter into an agreement with the City of Ontario and pay any applicable fees as set forth by the agreement.

The City of Ontario does not have recycled water facilities on or within the area of the Specific Plan. Construction of new recycled water facilities will be required of the developer as part of development of the project. Construction of these recycled water facilities will be consistent with the City's approved Recycled Water Master Plan.

3.9.2 Sewer

The City of Ontario does not have sewer facilities within the vicinity of the project site. Wastewater disposal within the Specific Plan area is currently provided through septic tanks and subsurface disposal fields. Prior to grading operations, existing septic tanks and subsurface disposal fields will need to be abandoned in accordance with Department of Health Services requirements. The City of Ontario's Sewer Master Plan provides for significant new facilities to serve the project site.

3.9.3 Stormwater/Drainage Facilities

There are no existing storm drain facilities located within the vicinity of the site. The existing storm drainage system surrounding the site generally consists of open earthen swales adjacent to area roadways. Storm water run-off from the site is generally by sheet flow. As part of the development of the project site, construction of new storm drain facilities will be required consistent with the City's approved Storm Drain Master Plan.

3.9.4 Solid Waste Disposal

There is no solid waste disposal in the vicinity of the project site.

3.9.5 Natural Gas Lines

Natural gas service in the vicinity of the site is provided by the Southern California Gas Company.

3.9.6 Electrical Facilities

Electrical service in the vicinity of the site is provided by Southern California Edison.

3.9.7 Communications Systems

Time Warner provides telephone service within the project citarea. Currently, telephone service is provided to the residences, dairies and farms in the area.

3.10 Geology and Soils

The City of Ontario General Plan identified the project site as containing Delhi series soils, as mapped by the United States Department of Agriculture, Soil Conservation Service in 1971 and 1980. Delhi series soils have been used for agriculture, primarily for grapes and citrus, since the 1800's.

3.11 Seismicity

The General Plan identified numerous earthquake faults within a 50-mile radius of the project site. Major mapped faults include, but are not limited to, the Chino, Whittier and North Elsinore, and Cucamonga Faults. For the "maximum probable earthquake" (MPE), defined as the 100-year event normally considered in the design of non-critical structures, the values range from about 0.13 to 0.20 g (i.e., the unit force of gravity). In the design of certain critical or important facilities such as hospitals and dams, the "maximum credible earthquake" (MCE) should yield an estimated peak horizontal acceleration in the range of 0.33 to 0.52 g.

A zone of concentrated, relatively low-magnitude seismicity extends to the southwest from the San Jacinto fault zone (Rialto-Colton branch) along an inferred fault near Fontana. Where the inferred fault (Fontana trend) stops, this zone of micro-seismicity continues in a southwesterly to westerly direction terminating in the New Model Colony area. It is expected that the MPE for this fault structure could produce horizontal accelerations in the range of 0.3 to 0.5 g. More distant faults are capable of larger earthquakes with a higher probability of occurrence. The San Andreas fault is expected to generate a MCE event every 150 to 200 years, yielding a peak horizontal ground acceleration of approximately 0.21 to 0.26 g. The Uniform Building Code (UBC), establishes procedures designed to ensure that all development occurs in a safe manner relative to those known hazards.

3.12 Vegetation

The project site has been extensively used for agricultural operations, including both dairy use and the cultivation of row crops. Those areas not in active agricultural production are occupied by rural residential housing, farm buildings, and other ancillary facilities. The natural vegetation and soils conditions that once occurred throughout the site have been significantly altered through human uses.

3.13 Biological Resources

The Program EIR prepared for the City's NMC General Plan Amendment states that the Ontario NMC General Plan area has been greatly altered from natural conditions, under the influence of intensive agriculture and dairy industry.

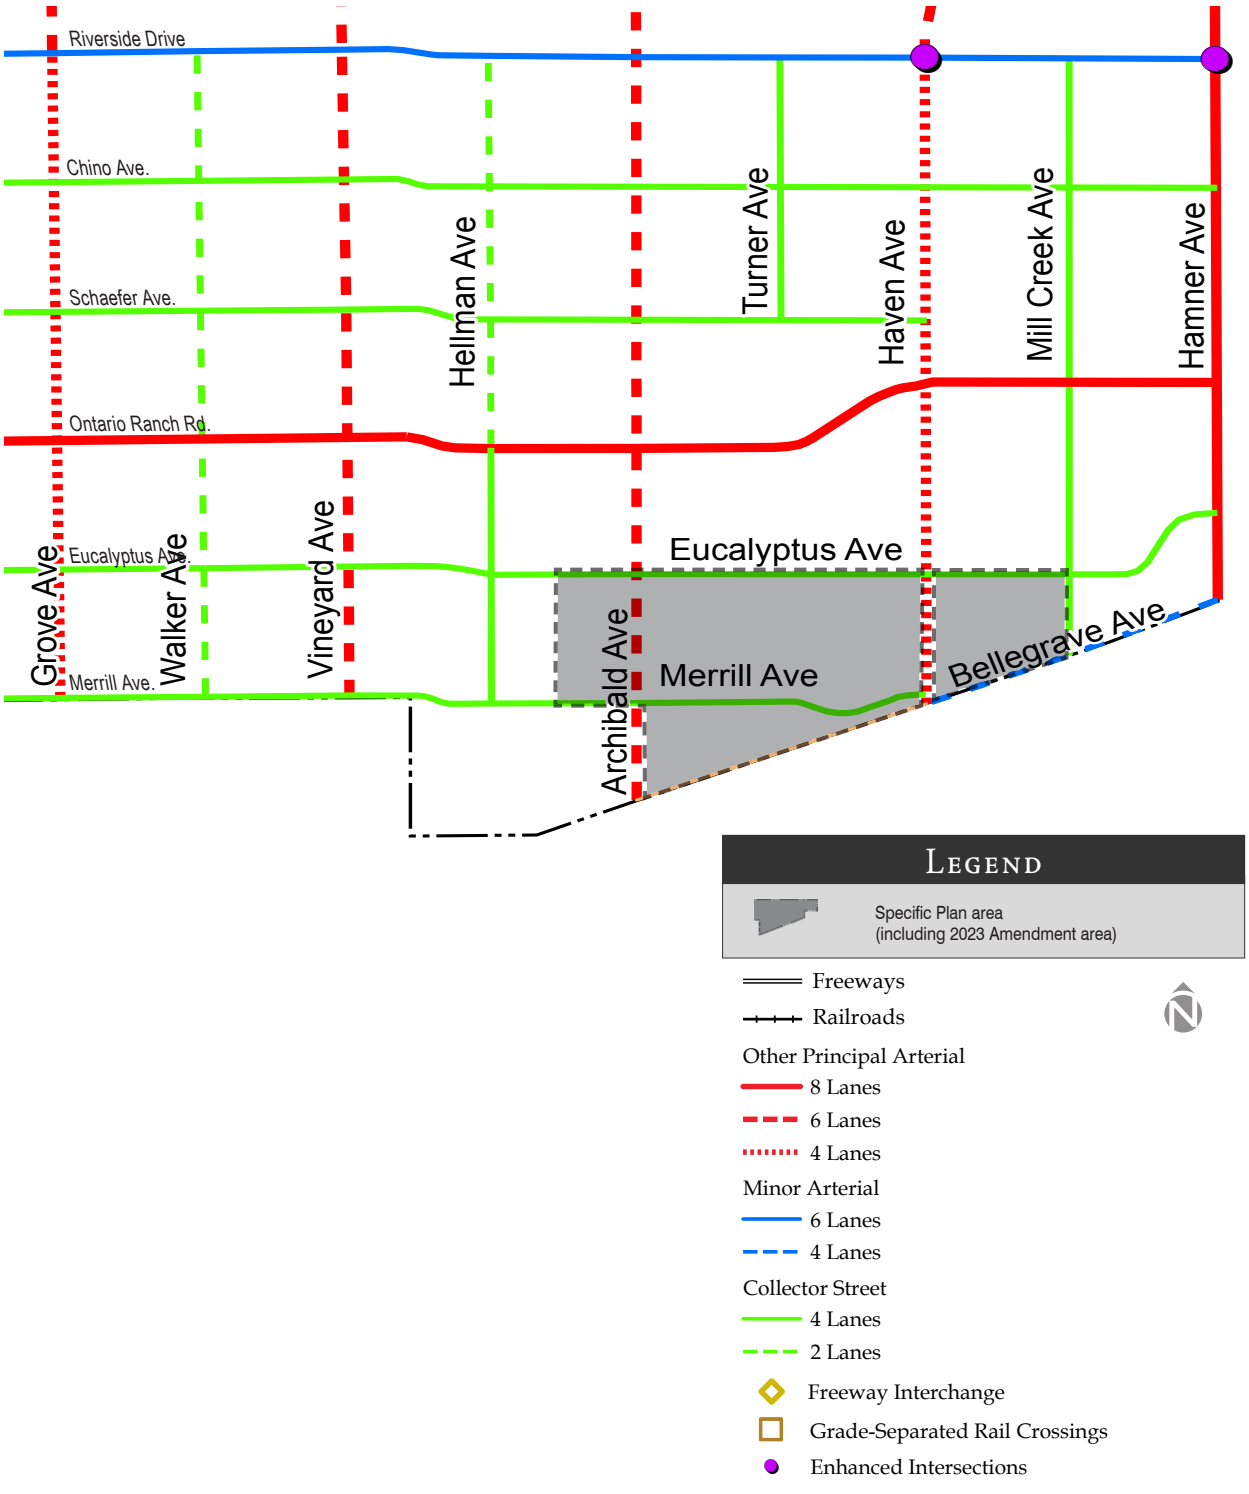

Exhibit 8—Policy Plan Functional Roadway Classification Plan

4. Land Use

4.0Land Use

4.1 Introduction

The 539.7 gross acre Specific Plan along with the additional 130 acre 2023 Amendment area is envisioned to provide a neighborhood lifestyle featuring a variety of residential housing types designed within easy walking distance to the school, recreational amenities, and commercial retail uses. Connectivity within the Specific Plan is provided through a system of pedestrian and bicycle trails linking residential neighborhoods to one another, to parks, to school, and to the commercial land use area. A component of the trail system will be provided through the improvement of a portion of the SCE owned property (SCE Corridor) within the Specific Plan. These improvements represent a part of the City's Master Planned multi-purpose trail system planned for the ~~New Model Colony~~ Ontario Ranch.

Residential development is designed to address a variety of income levels and lifestyles, such as singles, families, executives, and "empty nesters." Housing types will include single-family detached homes ranging from cluster homes and lane loaded homes with significant architectural street and "green" frontage and garages facing courts or lanes, to conventional single-family detached cottage homes with lot sizes from approximately 3,015 square feet, and scaling up to larger single-family detached homes on lot sizes varying between 5,000 and 6,300 square feet. For additional buyer choice, attached typologies are also included, namely attached row townhomes.

A commercial land use is provided for in the Specific Plan, in Planning Area 2. The Specific Plan allows for the development of approximately 87,000 square feet of neighborhood commercial, retail, and service uses in Planning Area 2 conveniently located adjacent to Archibald Ave. and Eucalyptus Ave. on approximately 12.1 net acres.

The Land Use diagram shown in ***Exhibit 10, Land Use Plan*** illustrates the overall land use pattern within Subarea 29. Table 1 documents statistical totals for the entire Subarea, Table 1a provides residential allocations for Subarea 29 by ownership, and Table 1b provides the Specific Plan Land Use Summary. ***Refer to pages 4-3 through 4-5, Tables 1-1b.***

4.2 Residential Use

Residential land uses within the Subarea 29 Specific Plan comprise approximately 494.2 gross acres. The 2023 Amendment area proposes approximately 108 additional residential acres. The Specific Plan will permit the development of up to 3,888 single-family detached and attached residential dwelling units. Residential land use areas are contained within ~~26~~ 27 distinctive neighborhoods, linked by a network of sidewalks and on-street bicycle paths connecting all the neighborhoods to the central neighborhood parks, the elementary school, a middle school, and a private Community Recreation Center (Planning Area 15).

The 2023 Amendment area is envisioned to extend and enhance the neighborhood lifestyle of the adopted Specific Plan and permit additional higher density homes.

Table 4B—Specific Plan Land Use Summary (2023 Amendment Area Included) provides a summary of unit counts and densities throughout the entire Subarea 29 project boundary.

4.2.1 Variety of Housing Types

A total of seven (7) housing types or product lines are included in the Specific Plan; these single-family detached housing types proposed for Park Place include:

- Attached Row Townhomes;
- Cluster Homes: minimum 1,750-square foot exclusive use area per home;
- Conventional Small Lot Homes: minimum 3,015-square foot lots;
- Lane Loaded Homes: minimum 3,100-square foot lots;
- Conventional Medium Lot Homes: minimum 4,000-square foot lots;
- Conventional Large Lot Homes: minimum 5,000-square foot lots: and

4.2.2 Traditional Neighborhood Design

The community plan for Park Place offers a strong neighborhood character and identity for residents and visitors through a traditional approach to street design, architecture, and landscape design elements to reflect a similar character to that of older traditional Southern California neighborhoods, including Ontario. The design features described below "activate" the streetscene and promote friendly interaction between neighbors.

- A traditional grid and geometric street design in residential neighborhoods, with sidewalks separated by landscaped parkways, which provide visual interest, slower traffic, lower traffic volumes, and enhance a pedestrian orientation for neighborhoods. Sidewalks separated by a landscaped parkway promote pedestrian mobility, beautify the streetscene, and lend a pedestrian scale.
- The primary entry street into the residential area (Merrill Ave.) shall include on-street parking for park and recreation uses to the north and south, and a "linear" landscape treatment on both sides of the street. Parkways adjacent to both sides of the street are planned to be heavily landscaped. This street leads directly to the central neighborhood parks (Planning Areas 11 and 14) and the private Recreation Center (Planning Area 15), the focal point designed to reinforce the sense of arrival and establish a sense of community.

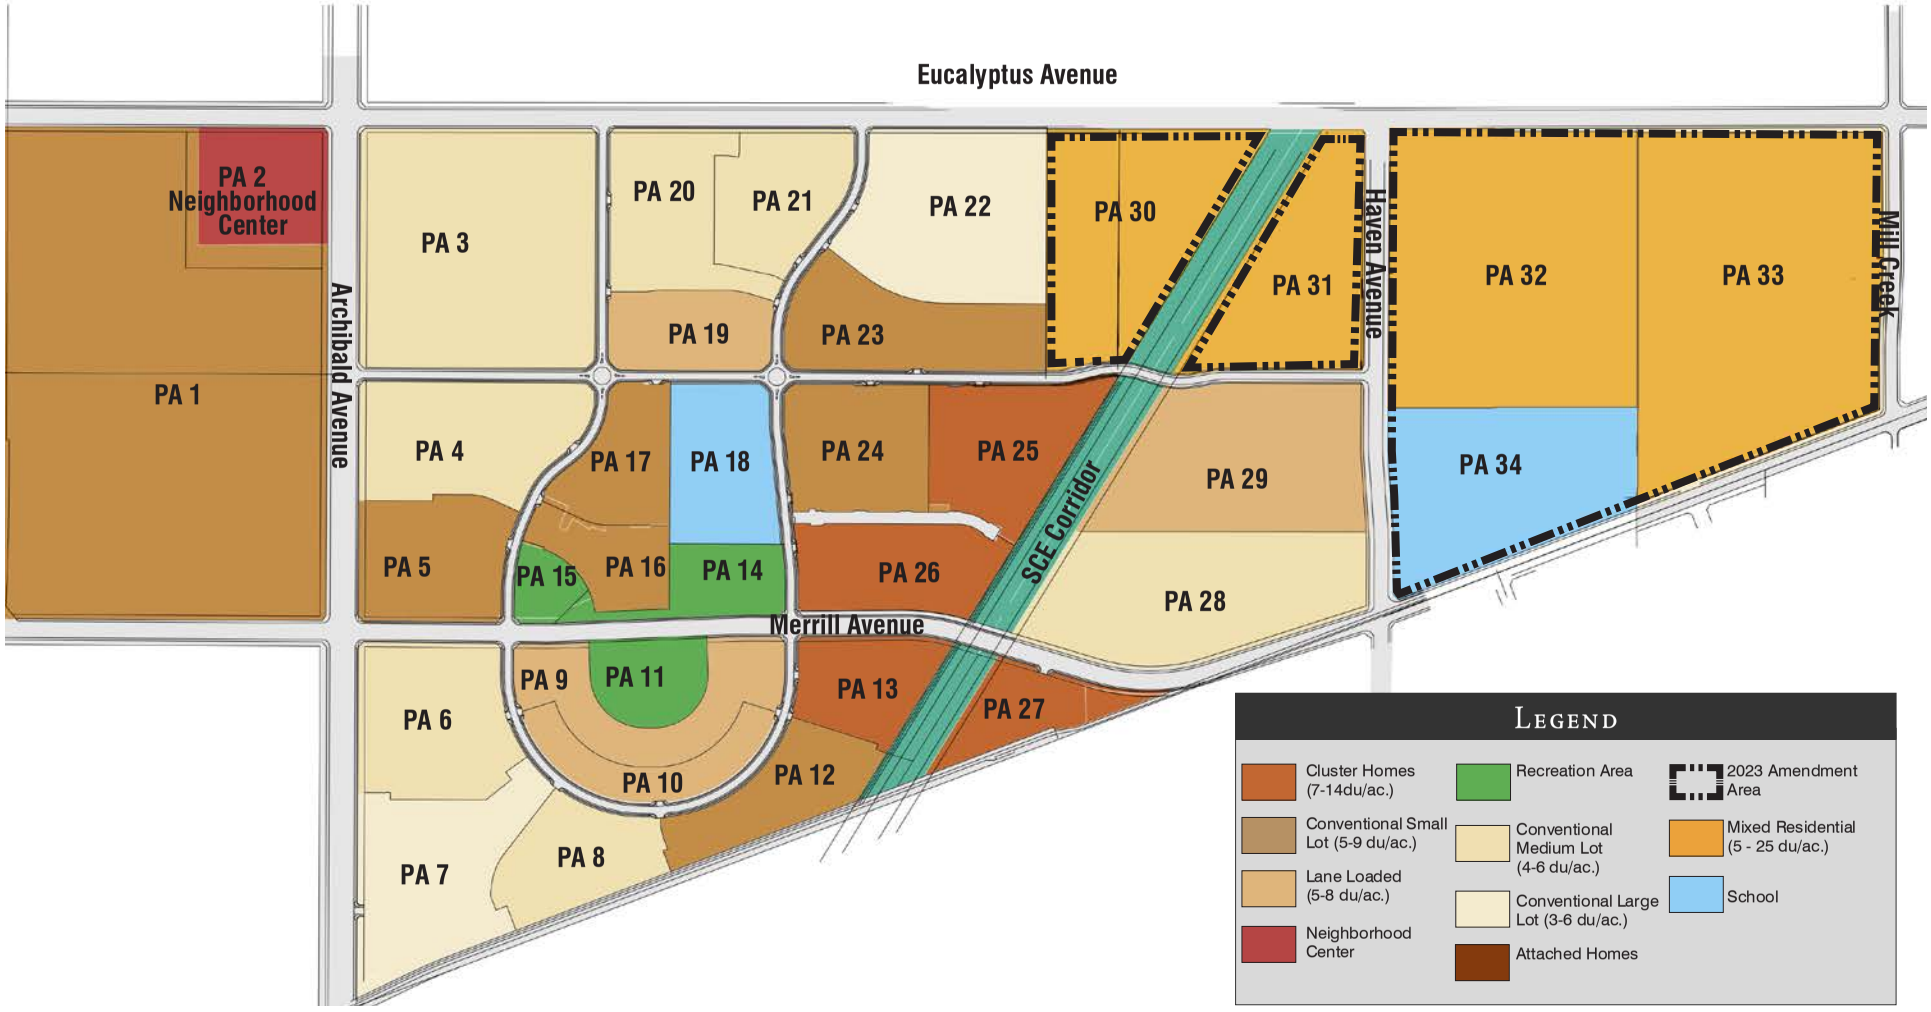

Exhibit 9—Land Use Plan

Table 4B—Specific Plan Land Use Summary (2023 Amendment Area Included)

Planning Area	Land Use	Minimum Lot Size (S.F)	Planned Dwelling Units[3,4,5]	Net Acre[1]	Planned Net Density (Du/Ac.)[3,5]	Gross Acres[2]	Planned Gross Density (Du/Ac.)[3,5]

Description	*Dwelling Units*
Original Subarea 29 (2006)	1,937 du, 3.6 du/gross ac.
March 2008 Amendment	2,293 du, 4.2 du/gross ac.
Subarea 29 Amendment (2015)	2,392 du, 4.8 du/gross ac.
Subarea 29 Amendment (2023)	3,888 du, 6.0 du/gross ac.

(*) Only one (1) Elementary School, No Residential Allocation for Deleting.
(**) Elementary School, Middle School, and Neighborhood Center are "Useable" (excluding Street, Right-of-Way, and Additional Neighborhood Edge).

- The architecture of residences within Park Place will be designed to focus on human scale details which will enhance the pedestrian friendly character of the community. These features may include the use of front porches, railings, enhanced entries, a mix of materials and textures, and authentic detailing on elements such as windows and doors, columns, balconies, and lighting.
- Innovative garage designs will be utilized in order to de-emphasize the visual impact of garage doors on the streetscene. Design techniques may include varied garage setback requirements, split-garages, turn-in garages, garages located on rear lanes (private alleys), garages located on motorcourts, or other similar techniques that de-emphasize the view of garage doors from the street.
- Lane Loaded Homes permitted in Planning Areas 9, 10, 19, and 29 will front directly on green spaces and local streets, framing these spaces with architecture.

4.3 Parks, Open Space and Recreational Facilities

The Park Place portion of the Specific Plan will have a central, "Green Core" that consists primarily of open space for recreation and passive use, linked to the elementary school. Exterior walkways and paseos lead to this centralized area. Several opportunities exist for community interaction and recreation within these parklands. The "Green Core" is comprised of several facilities and amenities to meet the needs of the community. The following areas make up the "Green Core": two (2) neighborhood parks, the linear park system, a private Community Recreation Center, and the paseo trail system, which are all linked to the elementary school (Planning Area 18).

4.3.1 Parks

An integral part of the development of the residential program within the development boundary of the Specific Plan is park and recreational areas, providing active and passive recreational opportunities for residents of the project site. A total of 12.0 net acres of usable neighborhood park is included in Park Place. The Quimby Act for the City of Ontario, provides for the dedication of three (3) acres of parkland per 1,000 residents. However, pursuant to the GPA Goal 12.0, Objective 12.2, Policy 12.1.3, each specific plan is required to define a park acquisition and improvement financing plan to ensure the achievement of a park standard of five (5) acres of parkland per 1,000 residents through a combination of Neighborhood and pocket parks. Pursuant to the foregoing policy, the total parkland requirement for the project is 45.5 gross acres. However, at the City of Ontario election, it was determined that the developers of Subarea 29 may pay park area fees in lieu of park dedication. Neighborhood parks shall be dedicated to the City and pocket parks shall be transferred to a homeowners association. ~~Refer to Chapter 7.6, Landscape Design, included in the overall Residential Design Guidelines for the project, for park plans for Park Place, including the overall core plan and detailed site plans of the two (2) neighborhood parks and the private Community Recreation Center.~~

The park requirement for the 2023 Amendment will be fulfilled through the implementation of pocket parks at the Tentative Map level and payment of in-lieu fees for park dedication. Pocket parks shall be transferred to a homeowners association for ownership and maintenance.

4.3.2 Trails

Bicycle trails are an integral element in creating accessibility and mobility within the Specific Plan. An off-street Class I bicycle trail system will be provided within the right-of-way of Haven Ave. (west side of street) adjacent to the project site as part of the ultimate development of the Specific Plan area. An off-street Class I bicycle trail system will also be provided within the right-of-way of Archibald Ave. (west side of street) adjacent to the development area between Merrill Ave. and Eucalyptus Ave. Adequate right-of-way will be provided for on-street bicycle routes with the improvement of Archibald Ave. adjacent to the development area south of Eucalyptus Ave., Eucalyptus Ave. adjacent to the development area, and Merrill Ave. serving the central portion of the community. The bicycle trail system will link residential neighborhoods to the planned parks and the elementary school site located within the project site, as well as providing connectivity to future development areas within the Specific Plan area and to the proposed school site located adjacent to the project site at the southeast corner of Haven Ave. and Eucalyptus Ave.

Refer to ***Exhibit 11, Master Circulation Plan***, for the location of Class 1 bike paths.

4.4 SCE Corridor Trail

A link within the City's Master Plan of Trails proposed for SCE easements and corridors includes a portion of the trail which will be developed in the Specific Plan, extending a multi-purpose bicycle trail from Eucalyptus Ave. south to County Line Channel Trail. Access to the SCE Corridor Trail will be provided at key points within residential areas to provide pedestrian and bicycle accessibility. A conceptual plan for the SCE Corridor Trail is illustrated in ***Exhibits 13, Pedestrian and Bicycle Circulation Plan, and Exhibit 29, SCE Easement Paseo System,*** in Chapter 7, Design Guidelines.

4.5 Commercial / Neighborhood Center

The Specific Plan includes approximately 12.1-net acres (11.2 usable acres) designated for development of commercial uses as a neighborhood center in Planning Area 2. Approximately 87,000 square feet of neighborhood center commercial land uses are planned adjacent to Archibald and Eucalyptus Avenues. Commercial development at this location is conveniently located to serve Subarea 29. Pedestrian and bicycle connectivity between residential land use areas within the Specific Plan area and the future commercial center will be provided through an extensive network of trails. Commercial uses which could be developed within this land use district include local servicing commercial uses, such as small restaurants, small retail shops, and personal services.

4.6 Schools

The Specific Plan is located within the Mountain View School District, which serves the school needs for grades K-8 and the Chaffey Joint Union School District, which serves the school needs for grades 9-12.

One elementary school (Planning Area 18) is included within Park Place and Subarea 29 Specific Plan. A 10.0 net acre (10-acre usable) K-5 elementary school is located in the heart of Park Place, adjacent to the northern neighborhood park, north of Merrill Ave. Joint use school/park facilities are envisioned, serving the K-5 school needs generated by the project. ~~A middle school of approximately 20 acres is conceptually planned east of the Specific Plan area, east of Haven Ave. and south of Eucalyptus Ave. The developers of Park Place and other developers in Subarea 29 will be required to pay school fees or construct school facilities, as required by the State of California.~~

A 20 net-acre middle school (Planning Area 34) is located at the southeast corner of Haven and Eucalyptus Avenue. This school will serve the 6-8 school needs generated by development of both the 2023 Amendment area and the original Specific Plan area. The developers within the 2023 Amendment area will be required to pay school fees or construct school facilities, as required by the State of California.

Final approval of the elementary and middle school site rests with the State of California Department of Education. It shall be the responsibility of the school district to seek such approval and to comply with all applicable regulations and procedures. Should the Mountain View School District find it necessary to build the elementary school or another public school in a location other than Planning Area 18 or Planning Area 34, the placement of a school at another location within Subarea 29 Specific Plan shall be considered consistent with the provisions of Specific Plan.

In the event that the Mountain View School District elects to construct the elementary school at an alternate location outside the Subarea 29 Specific Plan, the designated school site (Planning Area 18) will be developed with residential uses. Should this site be developed with residential uses, in lieu of the school, it will be developed as Low Density Residential within a density of 4.6 dwelling units per acre and with a development target of 46 dwelling units; and the total number of dwelling units within the specific plan will be increased to 2,438 dwelling units with the approval of a Specific Plan Amendment (SPA).

In the event that the Mountain View School District elects to construct a middle school at an alternate location outside the Subarea 29 Specific Plan, the designated school site (Planning Area 34) will be developed with residential uses. Should this site be developed with residential uses, in lieu of a school, it will be developed with a blended average of Low-Medium and Medium Density similar to the other parcels. This Planning Area will have a density of 17.0 dwelling units per acre and a development target of 340 dwelling units. Upon this occurring, the total number of dwelling units will be increased for the specific plan with the approval of a Specific Plan Amendment (SPA).

In order to develop Planning Area ~~18~~ 34 with residential uses in lieu of the ~~elementary~~ school, the developer shall be required to obtain written confirmation from the Mountain View School District that it will not utilize the planning area for development of an elementary or other school. The written confirmation will be submitted to the City of Ontario Planning Department concurrently with any development application for ~~Planning Area 18 or~~ Planning Area 34, which would require an amendment to the Specific Plan.

4.7 Dairy Farming

The Specific Plan Area contains existing dairies and feed lots. A minimum 100-foot separation shall be required between a new residential, commercial, or industrial development, or structures used for public assembly and an existing animal feed trough, corral/pen, or an existing dairy/feed lot including manure stockpiles and related wastewater detention basins. The 100-foot separation requirement may be satisfied by an off-site easement acceptable to the Planning Director with adjacent properties, submitted with the initial final map and recorded prior to or concurrent with the final map.

4.8 Airport Land Use Compatibility Planning (ALUCP)

4.8.1 Ontario Airport (ONT) Requirements

The ALUCP for ONT was adopted in April of 2011 and the project site is located outside noise and safety impact zones but is located within the Real Estate Transaction Disclosure zone due to overflight and does not place development restrictions on the property but does require disclosure to new property owners. The Business and Professions Code

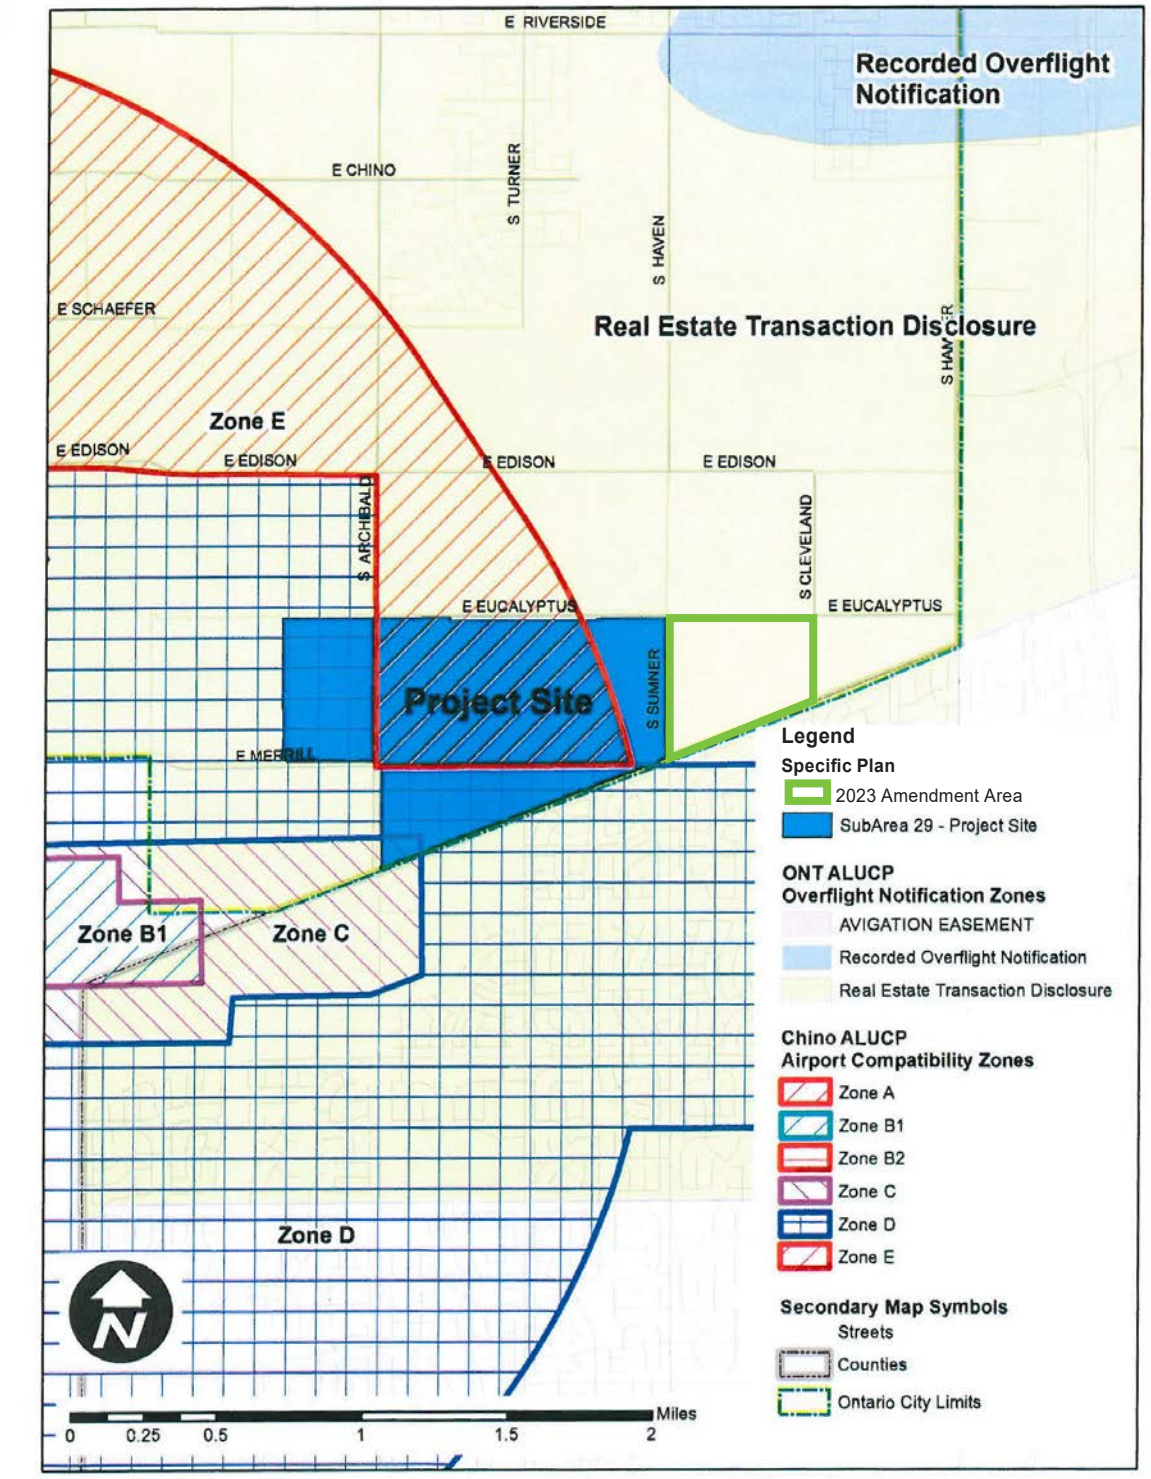

Exhibit 10—Airport Influence Areas

Section 11010 and Civil Code Sections 1102.6, 1103.4, and 1353 require that, as part of many residential real estate transactions, information be disclosed regarding whether the property is situated within an Airport Influence Area (AlA). The Business and Professions Code applies the disclosure requirement to the sale or lease of newly subdivided lands and condominium conversions and to the sale of certain existing residential property.

The Civil Code applies the disclosure requirement to existing residential property transfers only when certain natural conditions (earthquake, fire, or flood hazards) warrant disclosure. State Law provides the following disclosure language:

> NOTICE OF AIRPORT IN VICINITY: This property is presently located in the vicinity of an airport, within what is known as an airport influence area. For that reason, the property may be subject to some of the annoyances or inconveniences associated with proximity to airport operations (for example: noise, vibration, or odors). Individual sensitivities to those annoyances can vary from person to person. You may wish to consider what airport annoyances, if any, are associated with the property before you complete your purchase and determine whether they are acceptable to you.

4.8.2 Chino Airport Requirements

The most recent ALUCP for Chino Airport was completed by the County of Riverside Airport Land Use Commission in 2008 and is being used by the City as a guide for development around Chino Airport. The project site is partially located within Zones C, D and E.

- The portions located within Zone C are considered existing land uses.
- Residential land uses within Chino Airport Compatibility Zone D are required to have a Recorded Overflight Notification appearing on the Property Deed and Title incorporating the following language:

  > (NOTICE OF AIRPORT IN VICINITY: This property is presently located in the vicinity of an airport, within what is known as an airport influence area. For that reason, the property may be subject to some of the annoyances or inconveniences associated with proximity to airport operations (for example: noise, vibration, or odors). Individual sensitivities to those annoyances can vary from person to person. You may wish to consider what airport annoyances, if any, are associated with the property before you complete your purchase and determine whether they are acceptable to you.)

- Zone D requires that 10% of the area be set aside as Open Land. Open Land must have a minimum dimensions of (75 feet by 300 feet). Open Land area must be free most structures and other major obstacles such as walls, large trees or poles (greater than 4 inches in diameter, measured 4 feet above the ground), and overhead wires. Small trees and shrubs that exceed 4 feet in height and/or thickness of 4 inches may be allowed along the edge of Open Land areas where the area abuts a wall or similar feature, provided that they are planted within 4 feet of the wall. Roads and automobile parking lots are acceptable as Open Land areas if they meet the above criteria.
- Zone D requires residential densities to be at or above 5.0 dwelling units per acre or have an average parcel size of less than 0.2 gross acres (8,712 SF).
- Zone D limits building/structure heights to 70 feet. Any permanent or temporary object greater than 70 feet in height are required to file a FAA Form 7460-1 and receive a determination of No Hazard from the FAA prior to project approval. During construction or grading of the site construction equipment such as cranes that exceed 70 feet will also be required to file a FAA Form 7460-1 and receive a No Hazard determination.
- Zone E and does not place any land use restrictions on the property but due to flight patterns the height of any structure cannot exceed 100 feet without FAA approval. If a structure exceeds 100 feet in height or has the potential to be a hazard to flight due to visual glare or electronic interference the project applicant is required to notify the FAA by electronically filing a 7460-1 Form.

5. Infrastructure and Services

5.0 Infrastructure and Services

The infrastructure, utilities, and public services to be provided to support development of the Subarea 29 Specific Plan are discussed in this section.

5.1 Circulation

The circulation plan for the Specific Plan area will provide efficient movement of vehicular traffic throughout the project as well as an environment for pedestrian circulation and bicycle traffic, reducing the reliance on the automobile as a means of travel. The plan reinforces the concept of traditional neighborhood design with a grid street pattern and traffic calming measures. The ***Master Circulation Plan, Exhibit 11*** illustrates the roadway system planned for the Specific Plan area, as well as new backbone street traffic signals.

The project site will be served by a system of new arterial roadways to be improved per the requirements of the City Council Approved 2022 The Ontario Plan (TOP), General Plan, the 2012 Master Plan of Streets and Highways, and through proposed new local streets to be constructed as part of project development. Improvements will be constructed to Archibald Ave., Haven Ave., and Eucalyptus Ave. adjacent to the site and elsewhere to accommodate traffic increases as specified in the traffic impact analysis and as required by the City. Proposed Merrill Ave. will be fully developed through the site to provide access to and from the project.

Within the development area, local collector roadways and local interior streets will provide for efficient movement of vehicles and pedestrians through the project. The developer will be required to submit a parking analysis to the City of Ontario to ensure the proposal is in conformance with the City's Parking Code for residential developments.

In addition to the typical street section described and depicted, additional right-of-way and geometric enhancements such as additional left turn and right turn lanes at intersections, may be required to adequately mitigate impacts identified in the Traffic Impact Analysis/Specific Plan EIR.

5.1.1 Streets

The developer(s) of the Subarea 29 Specific Plan area will be responsible for all offsite improvements for the entire project frontage or as otherwise indicated. Phasing of the improvements will be implemented as required by the City Engineer and pursuant to the mitigation measures identified in the EIR and/or the Conditions of Approval established on the approved tentative maps for the project. Additionally, bus turnouts within the Specific Plan area may be required to be constructed to the satisfaction of the City of Ontario and Omnitrans.

The minimum design speeds to be used for centerline curve radii, superelevation, corner sight distance, vertical and horizontal alignment, and sight distance, etc. are listed:

Eucalyptus Ave.	45 m.p.h.
Merrill Ave.	45 m.p.h.
Haven Avenue	45 m.p.h.
Archibald Ave.	50 m.p.h.
Mill Creek Ave.	40 m.p.h.
Bellegrave Ave.	45 m.p.h.

~~The traffic study prepared for the Subarea 29 Specific Plan will verify the need for additional rights-of-way at critical intersections in order to accommodate additional left and right turn lanes.~~

An updated traffic study has been prepared for the Subarea 29 Specific Plan 2023 Amendment area.

On-street parking is prohibited on all master planned roadways, except that section of Merrill Ave. along the neighborhood parks.

Any walls and/or fencing exceeding 3 feet in height proposed within the 10-foot street (interior street) side yard setback area shall be setback a minimum of 5-feet from side yard property line. The 5-foot setback area shall be landscaped and maintained by the home owner and/or HOA.

Archibald Ave.

Per the City's 2012 Master Plan of Streets and Highways, Archibald Ave. is designated as an Other Principal Arterial. The Street Sections for Archibald Ave. are per the approved Archibald Ave. Street Improvement Plans. Per this plan set, Archibald Ave. has a 165-foot right-of-way (north of Merrill Ave. to Edison Ave) and a 160-foot right-of-way (south of Merrill Ave. to the County Line). Archibald Ave. will provide north/south access along the western portion of the Specific Plan. Per The Ontario Plan (TOP) Figure M-3: Multipurpose Trails and Bikeway Corridor Plan, Archibald Ave. is to include an off-street multipurpose trail. Access to this street via driveways from residential units and on-street parking will be prohibited. Improvements to Archibald Ave. are illustrated on ***Exhibit 12— Street Sections, Archibald Ave. and Archibald Ave. (East Side).***

Merrill Ave. (Collector Street)

Merrill Ave. is designated as a Collector Street street with a 108-foot right-of-way and will provide east/west access through the Specific Plan. Access to this street via driveways from residential units and on-street parking will be prohibited (on-street parking along the Neighborhood Parks will be allowed). Improvements to Merrill Ave. are illustrated on

Exhibit 12e— Lane (Private Alley)

Exhibit 12 — Street Sections Merrill Ave. and Merrill Ave. (North Side).

Per TOP Figure M-3: Multipurpose Trails and Bikeway Corridor Plan, Merrill Ave. is to include a class II (on-street striped and signed bike lanes) bicycle system and an off-street multipurpose trail.

Eucalyptus Ave. (Collector Street)

The Collector roadway, Eucalyptus Ave., abuts the project site on the north. Eucalyptus Ave. will be improved as a half-street along the project's northern boundary (from the Cucamonga Creek Channel to ~~Haven Ave~~. Mill Creek Ave). Improvements to be constructed to Eucalyptus Ave. will include the south half-street and parkway improvements of the 108-foot right-of-way, as well as the additional neighborhood edge landscaped buffer. These improvements include 42 feet of pavement, including two (2) lanes for eastbound traffic, a 12-foot landscaped parkway, which includes a 5-foot sidewalk separated from the street by a 7-foot landscaped buffer; as well as 23 feet of additional landscaped buffer (35-foot total neighborhood edge), provided from the street right-of-way extending to the property line. Additionally, north side improvements to Eucalyptus Ave. include a 7-foot painted median, a 14-foot paved lane and 5 feet of graded shoulder. ***Exhibit 12, Eucalyptus Ave. (South Side)***, illustrates the half-street improvements for Eucalyptus Ave. The Project Level EIR will determine the need for constructing additional lanes for westbound traffic.

Per TOP Figure M-3: Multipurpose Trails and Bikeway Corridor Plan, Eucalyptus Ave. is to include a class II (on-street striped and signed bike lanes) bicycle system and an off-street multipurpose trail.

Mill Creek Ave.

Mill Creek Avenue, a Collector Street with a design speed of 40 m.p.h. with an 88-foot right-of-way. Mill Creek Avenue will provide north/south access along the eastern boundary of the 2023 Amendment area. Access to the street via driveways from residential units and on-~~site~~ street parking will be prohibited. Improvements to Mill Creek Avenue are illustrated on ***Exhibit 12 — Street Sections.***

Bellegrave Avenue

Bellegrave Avenue, a Minor Arterial with a design speed of 45 m.p.h. is currently improved with approximately 55 feet of paved area from Haven Avenue to approximately ¼ mile east of Haven Avenue and from Mill Creek Avenue to approximately ⅛ of a mile west of Mill Creek Avenue. Improvements proposed by the adopted Specific Plan, as illustrated on Exhibit 10.6— Bellegrave Avenue (East) Street Sections, will be extended to the portion of Bellegrave Avenue located within the Amendment area. Access to this street via driveways from residential units and on-street parking will be prohibited.

Haven Ave.

Haven Ave. is designated as an Other Principal Arterial with 124-foot right-of-way. Haven Ave and will provide north/south access along the eastern boundary of the Specific Plan. Access to this street via driveways from residential units and on-street parking will be prohibited. Improvements to Haven Ave. are illustrated on ***Exhibit 12 — Street Sections, Haven Ave. (West Side)***.

Refer to ***Exhibit 13, Pedestrian and Bicycle Circulation Plan***, which illustrates all pedestrian and multipurpose trails in Park Place.

Primary Local Streets

Primary Local Streets include a 60-foot right-of-way and provide for circulation between the varying Planning Areas within the Specific Plan. Refer to ***Exhibit 12a, Local Street Sections, Primary Local/Interior Street and Cul-De-Sac Street***, which illustrates these improvements. Varying additional landscaped buffers are provided along the Primary Street where specific conditions apply, as detailed below. Development conditions, where walls are proposed on either side of the roadway will include seven (7) feet of additional landscaped buffers between the rights-of-way and the proposed walls. Refer to ***Exhibit 12a, Local Street Sections, Primary Local Street (60′ R/W with 14′ Total Additional Landscaped Buffer)***, which illustrates this condition. Development conditions where a wall is proposed on one (1) side of the roadway will include seven (7) feet of additional landscaped buffers between the right-of-way and the proposed wall. ***Exhibit 12a, Local Street Sections: Primary Local Street (60' R/W with 7' Total Additional Landscaped Buffer)*** illustrates this condition.

Local Streets

Local Streets include a 60-foot right-of-way and provide for circulation within the residential planning areas of the project site. Exhibit 12a, Local Street Sections: Primary Local/Interior Street & Cul-De-Sac Street, illustrates these improvements. Where any local street is adjacent to a park, paseo area, or paseo link, the street parkway will be included as park/paseo area/acreage. ***Exhibit 12a, Local Street Sections, Primary Local/Interior Street & Cul-De-Sac Street*** along Park/SCE Easement, illustrates these improvements.

Private Streets

Private streets are to be utilized within the residential development. These streets will be private, but will offer a public utility easement within the paved section. A 32-foot minimum paved section with 5-foot minimum (measurement taken from inside of curb) landscaping and 5-foot sidewalks on each side will be used as illustrated on ***Exhibit 12c, Private Street Sections***.

Lanes/Private Alleys

Private lanes/alleys are to be utilized within the residential development. These lanes will be private, but will offer a public utility easement along the paved section. Where private lanes are utilized for non-emergency access a 20-foot minimum paved section with 5-foot minimum (measurement taken from inside of curb) landscaping on each side will be used as illustrated on ***Exhibit 12b, Lane (Private Alley) Sections***. Where

emergency access lanes or public utility easements are proposed within the residential development, a 24-foot minimum paved section with 3-foot minimum landscaping (measurement taken from inside of curb) on each side will be utilized.

Motorcourts

Motorcourts shall be scaled and developed consistent with the development standards of the typical product plotting diagram of the applicable residential product (Motorcourt Cluster A, B, C); see Section 7.5.2 for home type criteria.

5.1.2 Traffic Calming

The Specific Plan area provides for traffic calming within residential neighborhoods to slow traffic and reduce traffic noise on streets contributing to livable neighborhoods in which to walk, bike, and drive.

Traffic calming within the Specific Plan is designed to address the following:

- Reduction in traffic speeds;
- Reduction in traffic related noise;
- Reduction in "cut-through" traffic within residential neighborhoods;
- A secure pedestrian friendly circulation system to encourage walking;
- Allowance for non-restricted access for emergency services vehicles such as police, fire, and ambulances; and
- Reduction in radii of streets.

Factors affecting traffic speeds are those that influence the driver's perception of the roadway such as:

- Type of adjacent development and the distance of development from the roadway;
- Frequency of access points onto the roadway;
- Roadway alignment and curvature;
- Type and massing of landscaping adjacent to the roadway;
- Frequency of traffic control devices along the roadway;
- Width of travel lanes; and
- Roundabout locations.

The following traffic calming techniques may be implemented in the design of the roadways within the Specific Plan.

Local Neighborhood Street Design

Neighborhood streets within the Specific Plan are designed in a grid with landscaping on either side within parkways to add interest in the street, encouraging drivers to slow their travel speed and observe their surroundings. Traffic speeds on local residential streets may be reduced by incorporating tapered intersections for local streets as illustrated in ***Exhibit 12d, Neighborhood Street Tapers.*** Tapers may not be appropriate at all intersections.

Lanes (Private Alleys)

The lanes (private alleys) within the Specific Plan will incorporate tapers at the entrance to lanes to slow traffic in these areas and to provide a visual element to discourage drivers from using lanes as a through street. Speeds for traffic entering the lanes and cut-through traffic can be reduced by incorporating tapers at the entrance to these lanes as illustrated on ***Exhibit 12e, Lane (Private Alley) Tapers.***

Landscaping

Landscaping adjacent to streets within the Specific Plan area will combine the use of shade trees, shrubs, and ground cover adjacent to sidewalks to create a more intimate streetscape, encouraging drivers to reduce driving speeds. The landscape concept for the Specific Plan is designed to contribute a sense that the street system is a pedestrian "protected area" to promote slower traffic speeds.

5.1.3 Pedestrian Circulation

Off-street pedestrian circulation will be available throughout the Specific Plan by means of the interconnected paved sidewalk system within the roadway right-of-way separated from vehicular travel lanes by a landscaped parkway. All pedestrian circulation improvements within the SCE corridor and County Line Channel require approval from the appropriate public entity prior to the construction of any improvements.

5.1.4 Bicycle Trails

Bicycle trails are an integral element creating accessibility and mobility within the Specific Plan. A multi-purpose pedestrian and bicycle trail will be provided within the SCE Corridor between Eucalyptus Ave. and County Line Channel. This multi-purpose trail will provide a link within the City's Master Planned trail system proposed for SCE easements and corridors throughout the City. All bicycle trail improvements within the SCE corridor and County Line Channel require approval from the appropriate public entity prior to the construction of any improvements. Refer to ***Exhibit 13, Pedestrian and Bicycle Circulation Plan*** and Exhibit 29, SCE Easement Paseo System.

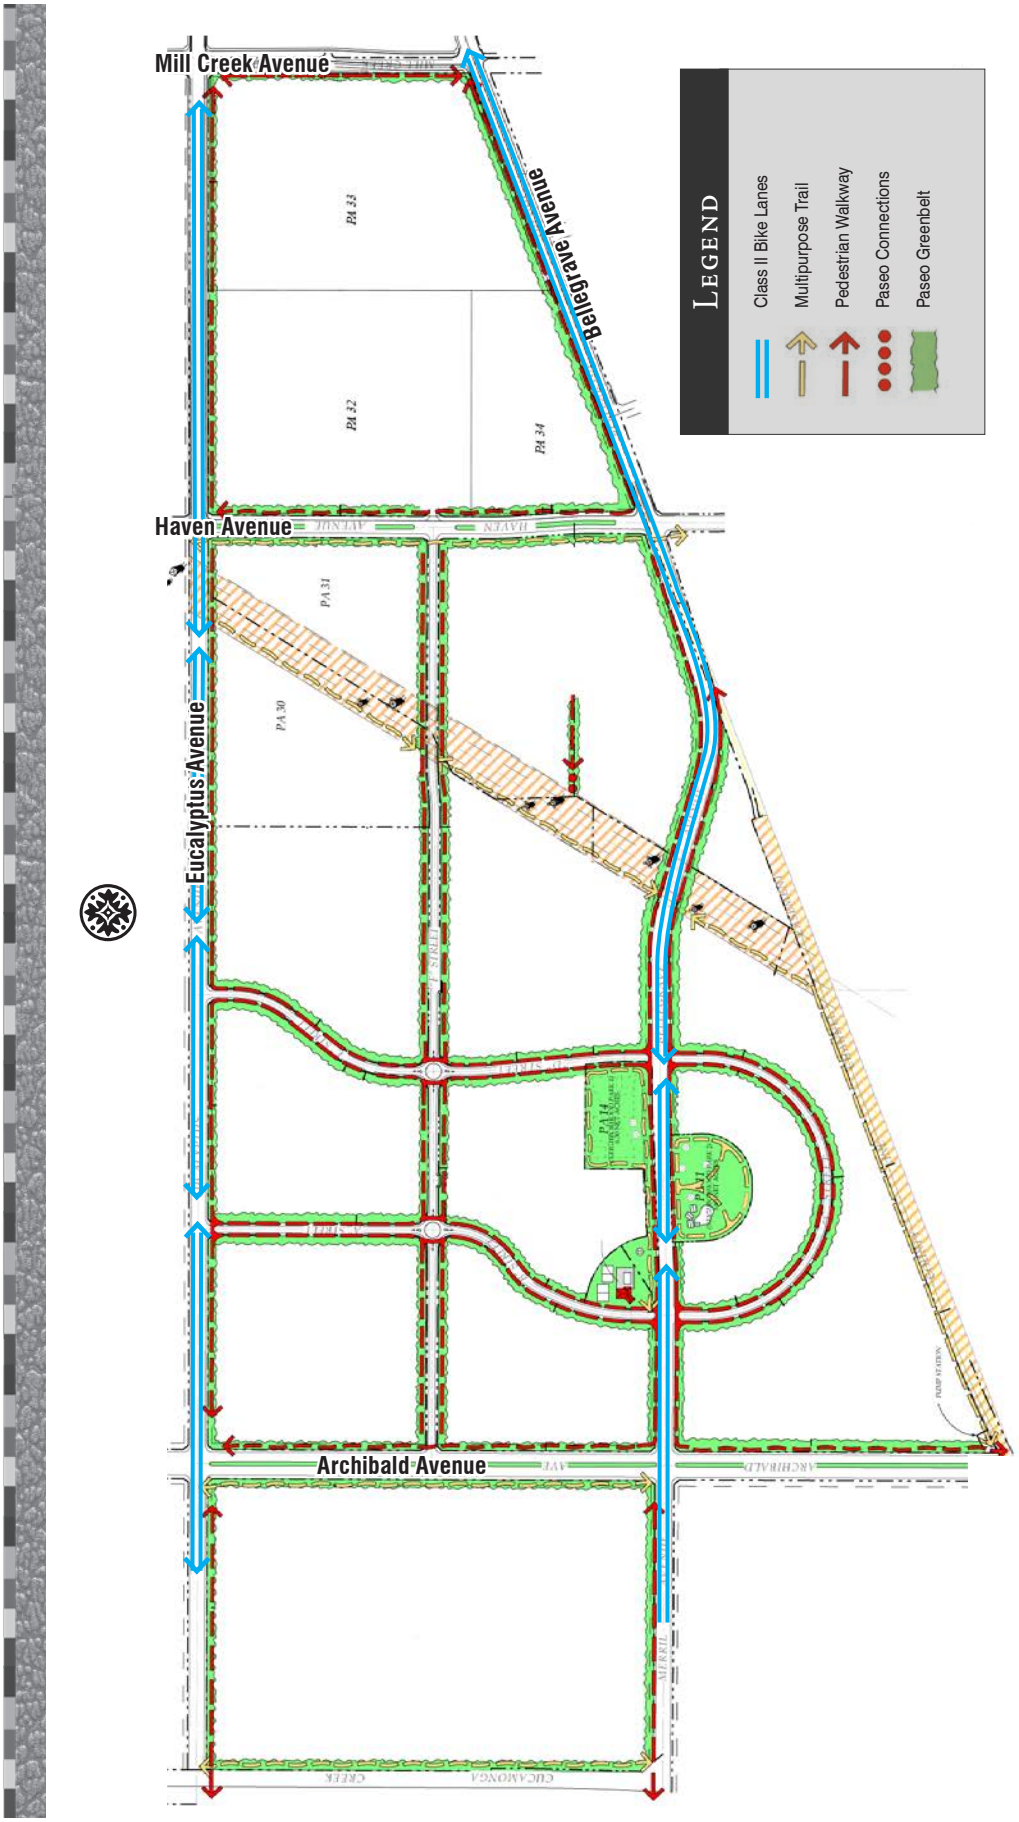

Exhibit 13 — Pedestrian and Bicycle Circulation Plan

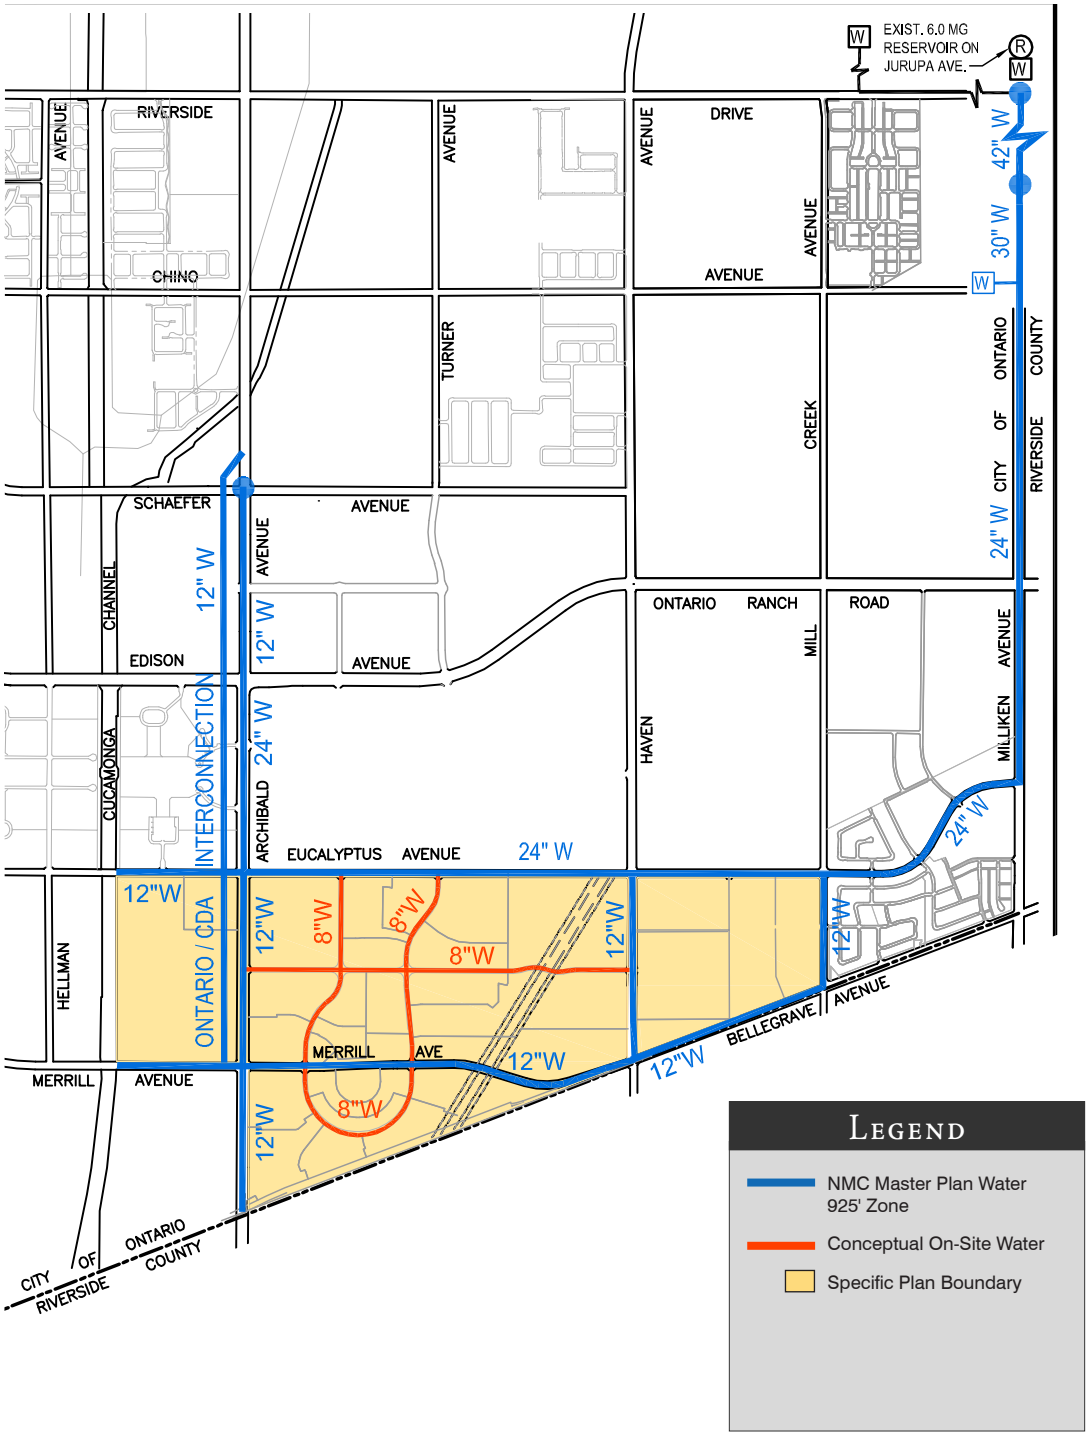

Exhibit 14— Conceptual Domestic Water Master Plan

5.2 Water Master Plans

All pipe improvements, sizing and alignment shall follow the most currently approved version of the Master Plan (currently 2012), in case there are discrepancies between pipe improvements, sizing and/or alignment as shown on the utility exhibits versus the Master Plans.

5.2.1 Domestic and Recycled Water Master Plan

Domestic water will be provided by the City of Ontario. The New Model Colony Water Master Plan Phase 1 (Phases 1a–1e) identifies new water facilities to include three reservoirs, four groundwater wells, and potable and recycled transmission water lines. Construction of the on-site and off-site Master Plan water service improvements shall be the responsibility of the developer(s) and is required prior to issuance of occupancy permits for the Specific Plan. One of the waterlines included in the Phase 1 improvements is a 24-inch water main in Eucalyptus Ave., which borders the Specific Plan on the north. Master planned domestic and recycled water main lines serving surrounding and within the Specific Plan, as identified in the current Water Master Plan, shall be constructed prior to issuance of first occupancy.

5.2.2 Domestic Water

The project site lies within the 925 Pressure Zone. Master Plan water mains to be constructed as part of the development of the Specific Plan will include a 12-inch water main in Merrill Ave., Haven Ave., and Archibald Ave. Within the project site, a network of minimum 8-inch water lines will be installed. The proposed on-site public water system sizing is subject to the recommendations and approval of the required hydraulic analysis.

The domestic water system for the adopted Specific Plan area has been extended easterly to serve the 2023 ~~Amendment~~ expansion area. Water mains have been installed adjacent to the 2023 Amendment area, including 12-inch water mains in Eucalyptus Avenue, Bellegrave Avenue, Haven Avenue, and Mill Creek Avenue. Within the 2023 Amendment area, a network of 8-inch water mains will be installed.

On-site public system sizing is subject to the recommendations and approval of the hydraulic analysis. Additionally, a hydraulic analysis to verify adequate fire flow may be required for each Tract Map and development within the Specific Plan. The public system location shall be approved during final design.

The Master Plan for domestic water for the Specific Plan is illustrated on ***Exhibit 14 — Conceptual Domestic Water Improvement Plan***. Also reference ***Exhibit 15 — Conceptual Recycled Water Master Plan*** and ***Exhibit 16 — Conceptual Sewer Master Plan.***

5.2.3 Recycled Water System

New recycled water lines in conformance with the City of Ontario's Recycled Water Master Plan will be constructed as part of the development of the Specific Plan. The source of recycled water is an Inland Empire Utilities Agency (IEUA) Facility located east of the Cucamonga Creek Channel and north of Riverside Drive. The project site lies within the 930 Pressure Zone. The master plan improvements, adjacent to the project site, will include a 16-inch recycled water line in Eucalyptus Ave., a 12-inch recycled water line in Archibald Ave., and in Merrill Ave. (west of Archibald Ave.), and 8-inch recycled water lines in Merrill Ave. (east of Archibald Ave.) and in Haven Ave. The planned recycled water line along Riverside Drive will be constructed generally as follows: Easterly along Riverside Drive from RP-1, southerly along Haven to Chino Avenue, including the pressure reducing station at Haven & Chino. This pipeline shall be fully operational prior to occupancy. Within the project site, a network of minimum 8-inch recycled water lines will be installed. The proposed on-site public water system sizing is subject to the recommendations and approval of the required hydraulic analysis. The Subarea 29 Specific Plan shall comply with City Ordinance 2689 and make use of recycled water for all approved uses, including but not limited to irrigation of parks, schools, street landscaping, recreational trails, HOA maintained on-site common areas, and commercial/industrial landscaping. An Engineering Report approved by the City and the Department of Health Services is required prior to the use of recycled water.

There may be an interim period where recycled water supply does not have adequate pressure depending on the timing of development and construction of a regional booster station. In this case, the recycled water system will connect to the potable system initially, until such point that recycled water service is available.

The recycled water system for the adopted Specific Plan area will be extended easterly to serve the 2023 Amendment area as illustrated on ***Exhibit 15 — Conceptual Recycled Water Plan.*** Recycled water lines have been installed adjacent to the 2023 Amendment area, including a 12-inch recycled water line in Eucalyptus and Haven Avenues, and 8-inch recycled water lines in Bellegrave Avenue and Mill Creek Avenue. Within the 2023 Amendment area, a network of 8-inch recycled water lines will be installed.

The Recycled Water Master Plan for recycled water for the Specific Plan is illustrated on ***Exhibit 15, Conceptual Recycled Water Master Plan.***

5.3 Sewer Master Plan

All pipe, improvements, sizing, and alignment shall follow the most current approved version of the Sewer Master Plan (currently ~~2012~~ 2022), in case there are discrepancies between pipe improvements, sizing, and/or alignments as show on the utility exhibits versus the Master Plan. Sewer service for the Specific Plan area will be provided by the City of Ontario. The City's Sewer Master Plan identifies ultimate sewer facilities from the project site to the Eastern Trunk Sewer. Master Planned facilities within the project area include a 24-inch sewer main extending along Merrill Ave. from the easterly project boundary to the Eastern Trunk Sewer. Completion of these Master Plan improvements is required to provide ultimate sewer service to the project area. Within the project site, a network of minimum 8-inch sewer lines will be installed. The proposed on-site public sewer system sizing is subject to the recommendations and approval of the required sewer analysis.

The sewer system for the adopted Specific Plan Area has been extended easterly to serve the 2023 Amendment area. Sewer lines have been installed within the 2023 Amendment area, including a 15-inch sewer line in Haven Avenue, ~~and~~ an 18-inch in Mill Creek Avenue from Bellegrave Avenue to Eucalyptus Avenue, and a 24-inch line in Bellegrave Avenue. Within the 2023 Amendment area, a network of 8-inch sewer lines will be installed.

A Sewer Sub-Area Master Plan (SSAMP) shall be prepared for each Tract Map and Development within the Specific Plan.

The Sewer Master Plan for the Specific Plan is illustrated on ***Exhibit 16, Conceptual Sewer Master Plan.***

5.4 Drainage

All pipe, improvements, sizing, and alignment shall follow the most current approved version of the Storm Drain Master Plan (currently 2012), in case there are discrepancies between pipe improvements, sizing, and/or alignments as show on the utility exhibits versus the Master Plan. The City's Storm Drain Master Plan identifies two new storm drain systems to serve the site and properties north of the site. The storm drain systems, namely the Turner Storm Drain and the Archibald Storm Drain, will connect to the County Line Channel. Completion of these Master Plan improvements will provide permanent storm drain service to the Specific Plan area.

The County Line Channel is located along the southerly boundary of the 2023 Amendment area within Bellegrave Avenue right-of-way. ~~There are 2 existing connector pipes to the County Line Channel within the limits of the 2022 Amendment area, one located at Haven Avenue and one located ¼ mile east of Haven Avenue. There are storm drain facilities located along Bellegrave, Mill Creek and Haven Ave.~~

Pursuant to the City's Storm Drain Master Plan, the Haven Avenue Storm Drain will serve the 2023 Amendment area. Planning Areas 32 and 34 within the 2023 Amendment Area. The Mill Creek Avenue storm drain will serve Planning Area 33. The Haven Avenue storm drain includes a 96-inch storm drain line connecting to the County Line Channel. The Mill Creek Avenue storm drain includes a 10' x 8' RCB box culvert connecting to the County Line Channel. On-site storm drains will be constructed to convey the on-site flows to the Haven Avenue line, Mill Creek Avenue Line and County Line Channel lines.

That portion of the Master Planned line, which lies within the Specific Plan, will be constructed as a part of the development of the Specific Plan. The Archibald Ave. storm drain includes a 90-inch storm drain in Archibald Ave., which transitions to a 96-inch storm drain and connects to the County Line Channel. The Celebration Ave. storm drain includes a 84-inch storm drain in Turner Ave., which transitions to an 90-inch storm drain, then transitions to a 96-inch storm drain and connects to the County Line Channel.

On-site storm drains will be constructed to convey the on-site flows to the proposed Master Planned lines. Size and location of proposed SD may change based on final design. On-site storm flows from the Specific Plan west of Archibald Ave. will be collected at an outlet into the Cucamonga Creek Channel.

The Storm Drain Master Plan for the Specific Plan is illustrated in ***Exhibit 17, Conceptual Storm Drain Master Plan.*** Size and location of proposed storm drain may change based on final design, however, all storm drain facilities will require continued consistency with the City's approved Storm Drain Master Plan. In addition, NSBB 11-16-114 device locations are also illustrated in Exhibit 17.

5.4.1 NPDES Compliance

The grading and drainage of the Specific Plan area shall be designed to detain, filter, and treat surface runoff, in a manner and combination which is practical, to comply with the most recent requirements of the San Bernardino County NPDES Storm Water Program's Quality Management (WQMP) for significant new development projects. The objective of the WQMP for this project is to minimize the detrimental effects of urbanization on the beneficial uses of receiving waters, including effects caused by increased pollutants and changes in hydrology. These effects may be minimized through the implementation of site designs that reduce runoff and pollutant transport by minimizing impervious surfaces and maximizing on-site infiltration, Source Control Best Management Practices (BMP's) and/or either on-site Structural Treatment Control BMP's, or participation in regional or watershed-based Treatment Control BMP's.

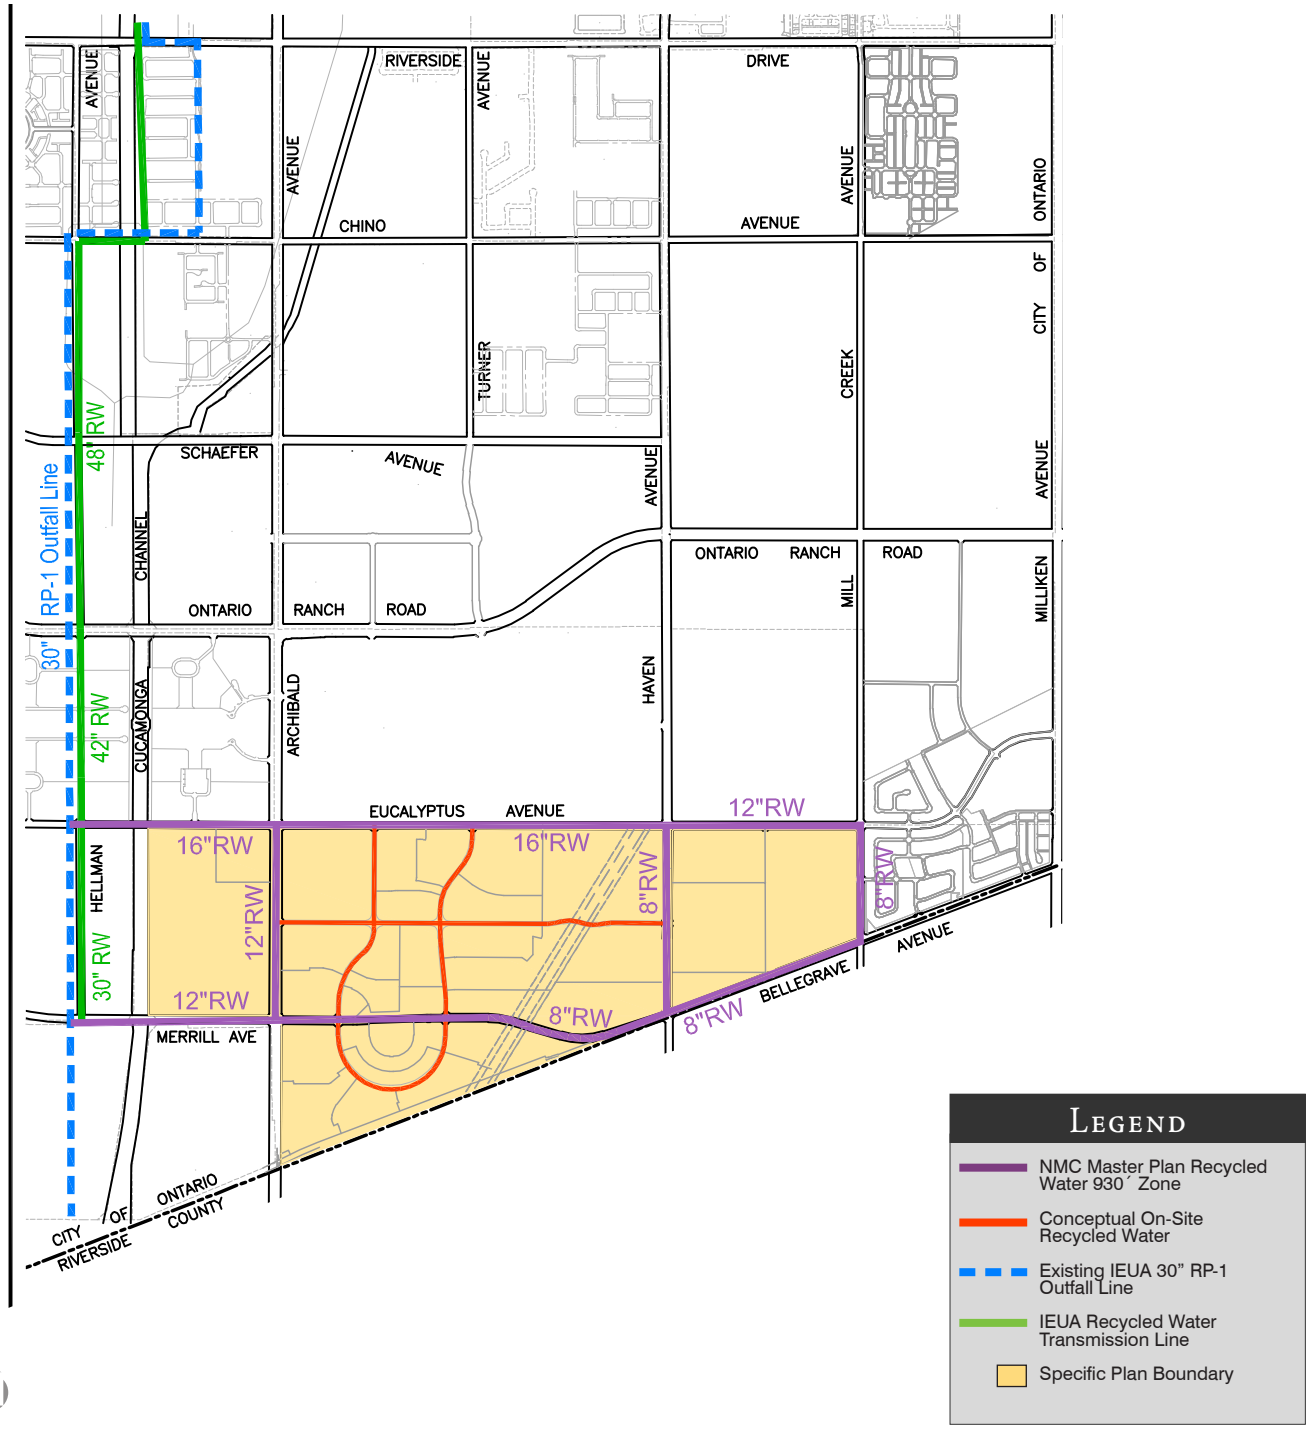

Exhibit 15— Conceptual Recycled Water Master Plan

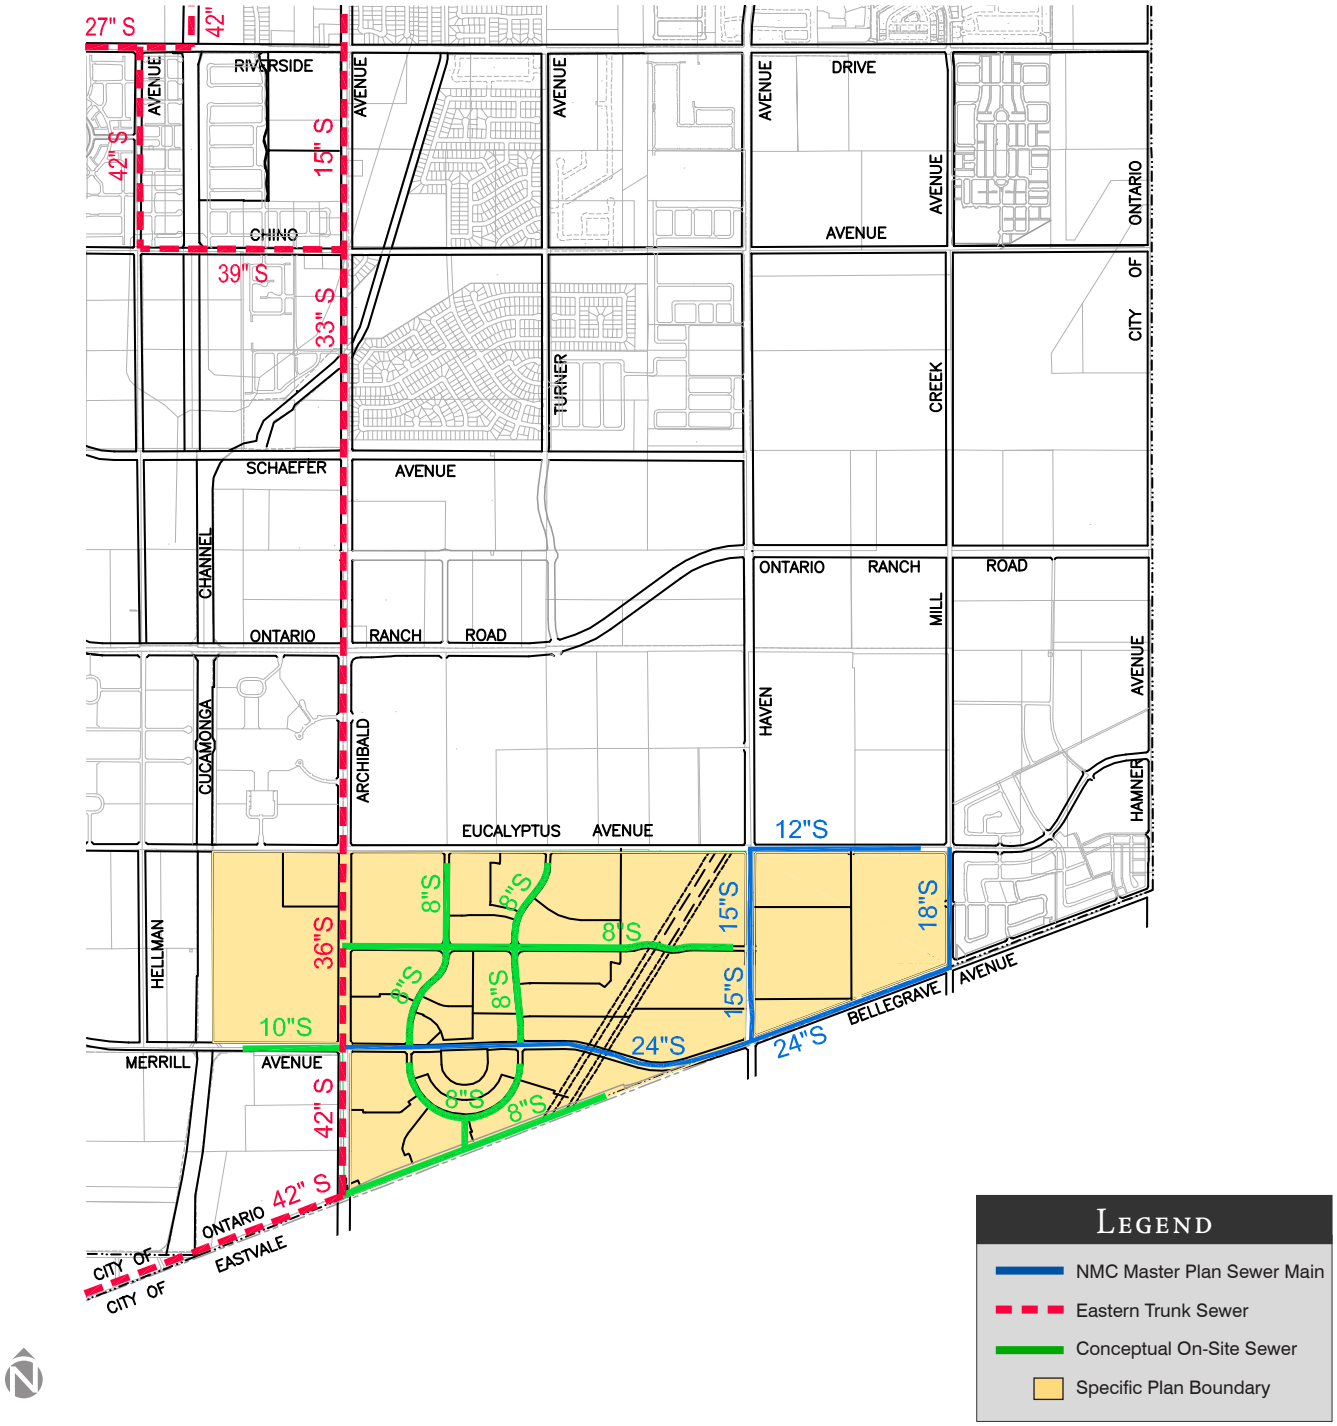

Exhibit 16— Conceptual Sewer Master Plan

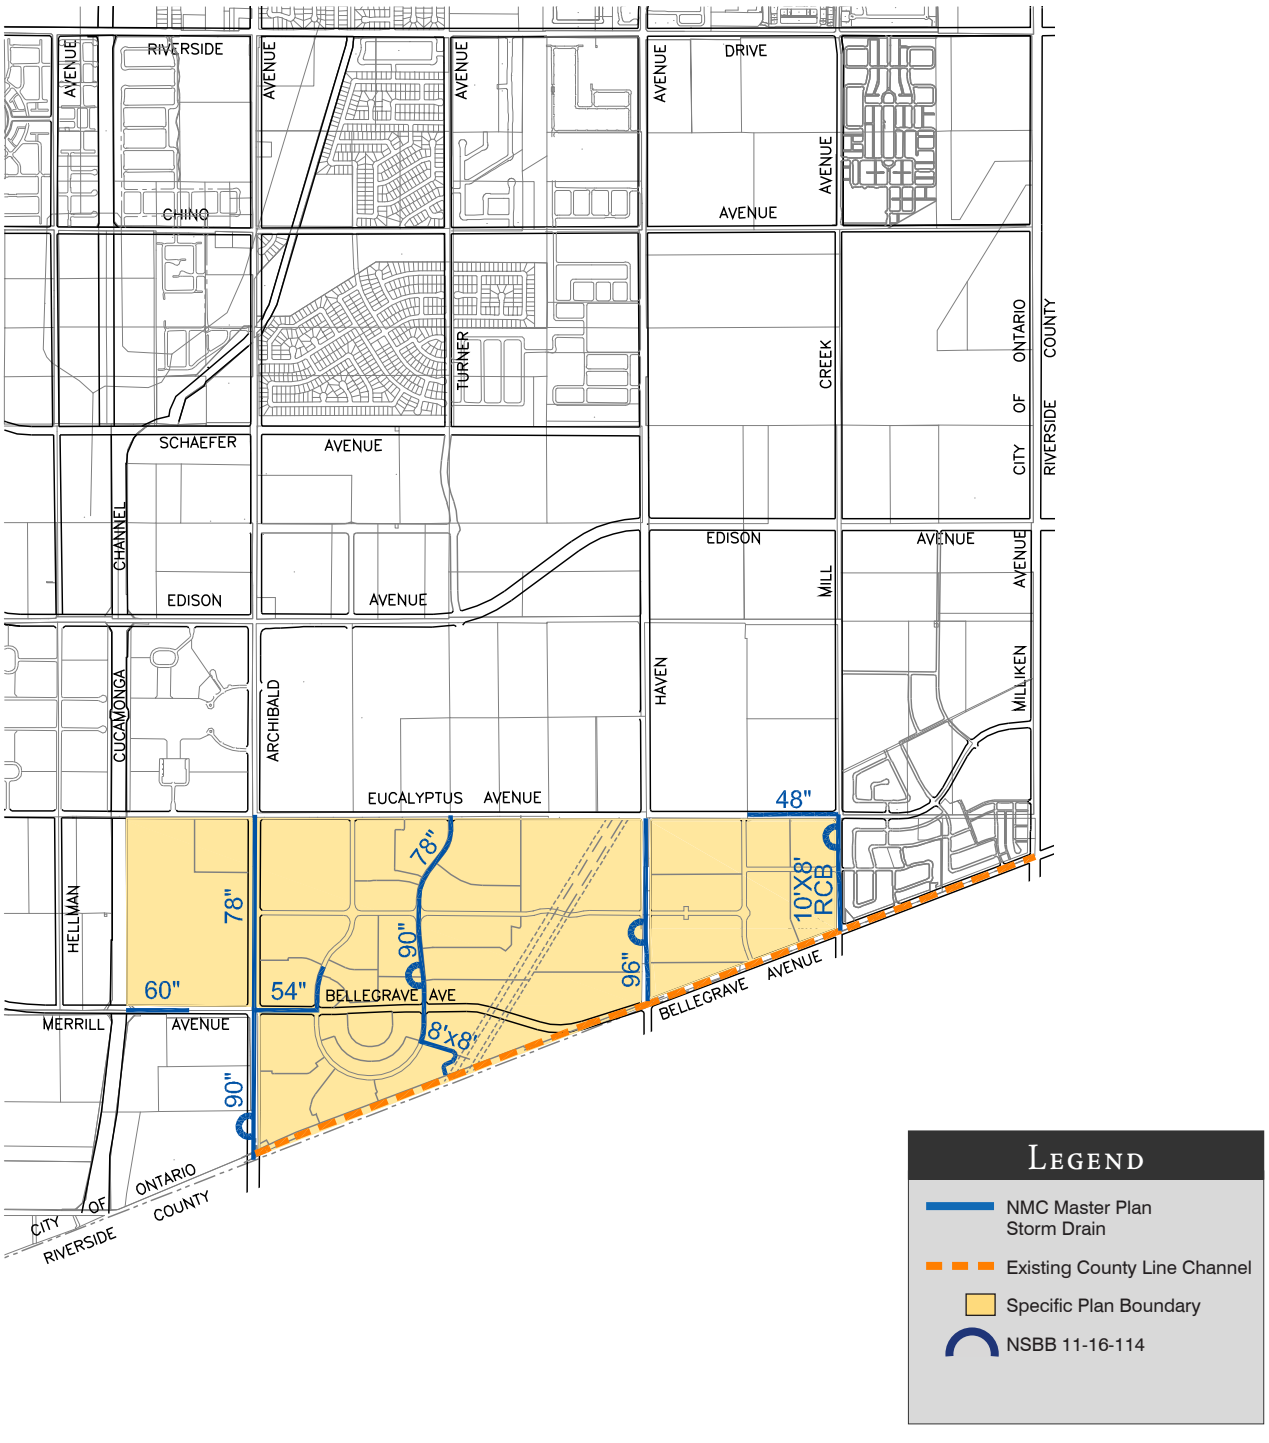

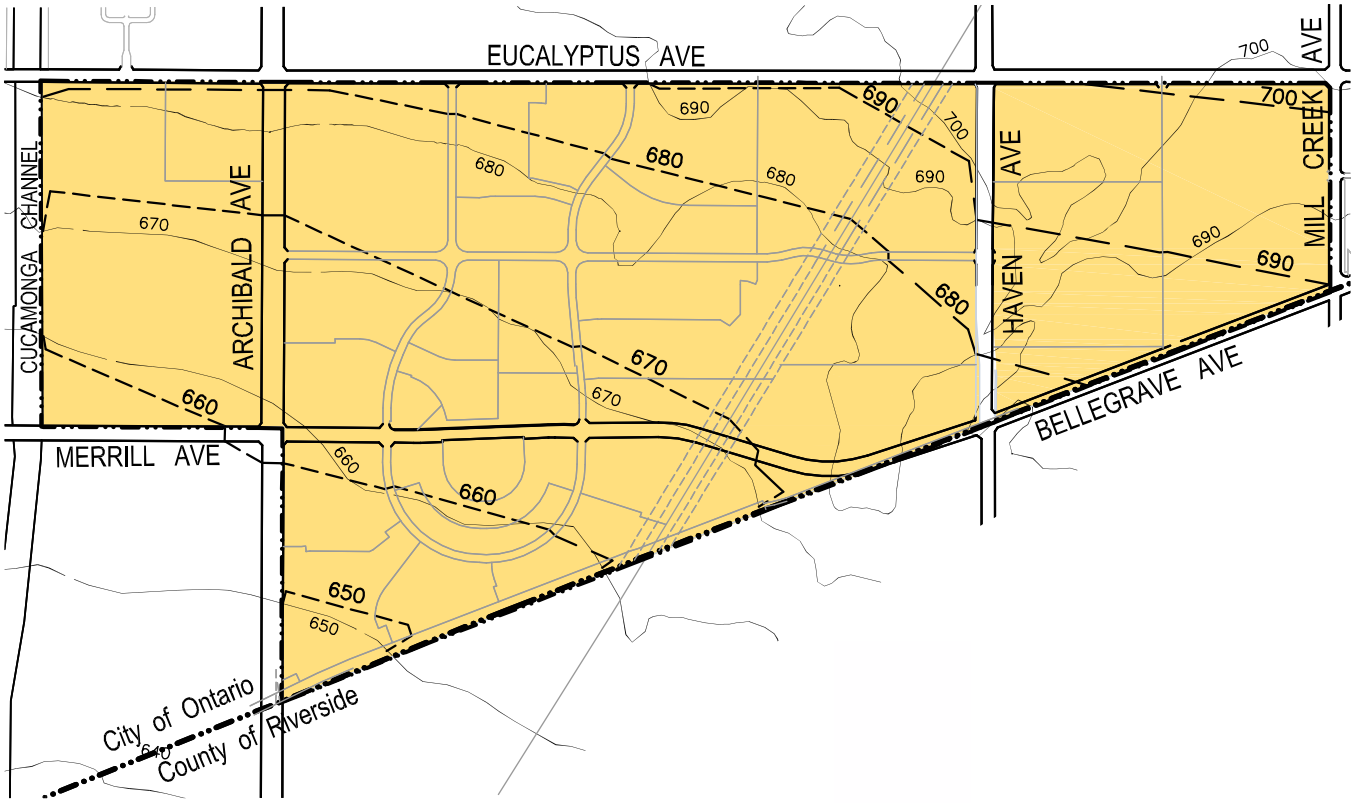

Exhibit 17—Conceptual Storm Drain Master Plan

Legend

- Specific Plan Boundary
- 650 Existing Contours
- 660 Proposed Contours

Exhibit 18—Conceptual Grading Plan

Prior to the issuance of a grading or construction permit, a Storm Water Pollution Prevention Plan (SWPPP) will also be prepared. The SWPPP will be prepared to comply with the California State Water Resources Control Board's (State Water Board) current, "General Permit to Discharge Storm Water Associated With Construction Activity" and the current Area Wide Urban Storm Water Runoff (Regional NPDES Permit). The SWPPP will identify and detail all appropriate Best Management Practices (BMP's) to be implemented or installed during construction of the project.

In addition to the preparation of a SWPPP for construction-related activities, and as part of the approval of any grading plans within the Specific Plan Area, the applicant will be required to submit a Water Quality Management Plan (WQMP) on the regional model form provided by the City. The WQMP shall identify and detail all Site Design BMP's, Source Control BMP's and Treatment Control BMP's to be implemented or installed at this site in order to reduce storm water pollutants and site runoff.

The Mill Creek Wetlands, a regional runoff treatment facility for the sub-watershed area that this project lies within has been constructed. This regional treatment facility is part of an overall solution for storm water treatment.

5.5 Schools

The Specific Plan area is located within the Mountain View School District which serves the school needs for grades K-8 and the Chaffey Joint Union School District, which serves the school needs for grades 9-12.

Development of the Subarea 29 Specific Plan area will generate an estimated student population as follows (based on student generation numbers supplied by the City of Ontario, "School Generation for NMC Subareas," July 2, 2004):

Grades K-5 - Generation Factor 0.38/du - 0.38 x 2,392 = 909

Grades 6-8 - Generation Factor 0.22du - 0.22 x 2,315 = 527

Grades 9-12 - Generation Factor 0.20/du - 0.20 x 2,315 = 479

One 10-acre elementary school is included within the Subarea 29 Specific Plan (Planning Area 18). The school is located north of Merrill Ave. in the heart of Park Place, adjacent to the two (2) neighborhood parks. Joint use school/park facilities are envisioned, serving the K-5 school needs generated by the project.

A 20-acre middle school site is conceptually located east of Subarea 29, east of Haven Ave. and south of Eucalyptus Ave. (not within the Specific Plan area).

The developers of the Specific Plan will be required to pay school fees or construct school facilities as required by the State of California.

Development of the 2023 Amendment area will generate an additional estimated student population as follows (based on student generation numbers supplied by the City, "School Generation for NMC Subareas," July 2, 2004):

Grades K-5 – Generation Factor 0.33 x 1,470 du = 486 students

Grades 6-8 – Generation Factor 0.17 x 1,470 du = 250 students

Grades 9-12 – Generation Factor 0.50 x 1,470 du = 735 students

A 10-acre elementary school is already located in the heart of original Specific Plan area and will serve the K-5 school needs generated by development of the 2023 Amendment area.

A 20 net-acre middle school site is conceptually located within the 2023 Amendment area, in Planning Area 34. This middle school will serve the grade 6-8 school needs generated by development of the Specific Plan and the Amendment area.

The developers of the 2023 Amendment area will be required to pay school fees or construct school facilities as required by the State.

5.6 Public Utilities

Public utilities including telephone, gas, and electrical service will be available to the site and will be extended into the planned community as part of the development of the Specific Plan. All existing overhead utilities shall be under-grounded, including all on-site utilities and those within the public right-of-way along streets fronting the project. All new facilities will be under-grounded by developer and according to the City of Ontario adopted ordinance.

5.6.1 Telecommunications

Proposed Fiber Optics (conduits and fiber) will be placed underground within a duct and structure system to be installed by the Developer. The fiber optic conduits along the backbone streets shall be installed in a joint trench by each Developer as the last lane improvements are completed. In-tract fiber optic conduits shall be installed by the Developer in joint trenches with City Street Light conduits where possible. Maintenance of the installed system will be the responsibility of the City/Special District. Development of the Project requires the installation by the Developer of all fiber optic conduits and pullboxes as well as payment of Development Impact Fees to cover the installation of the fiber optic cable.

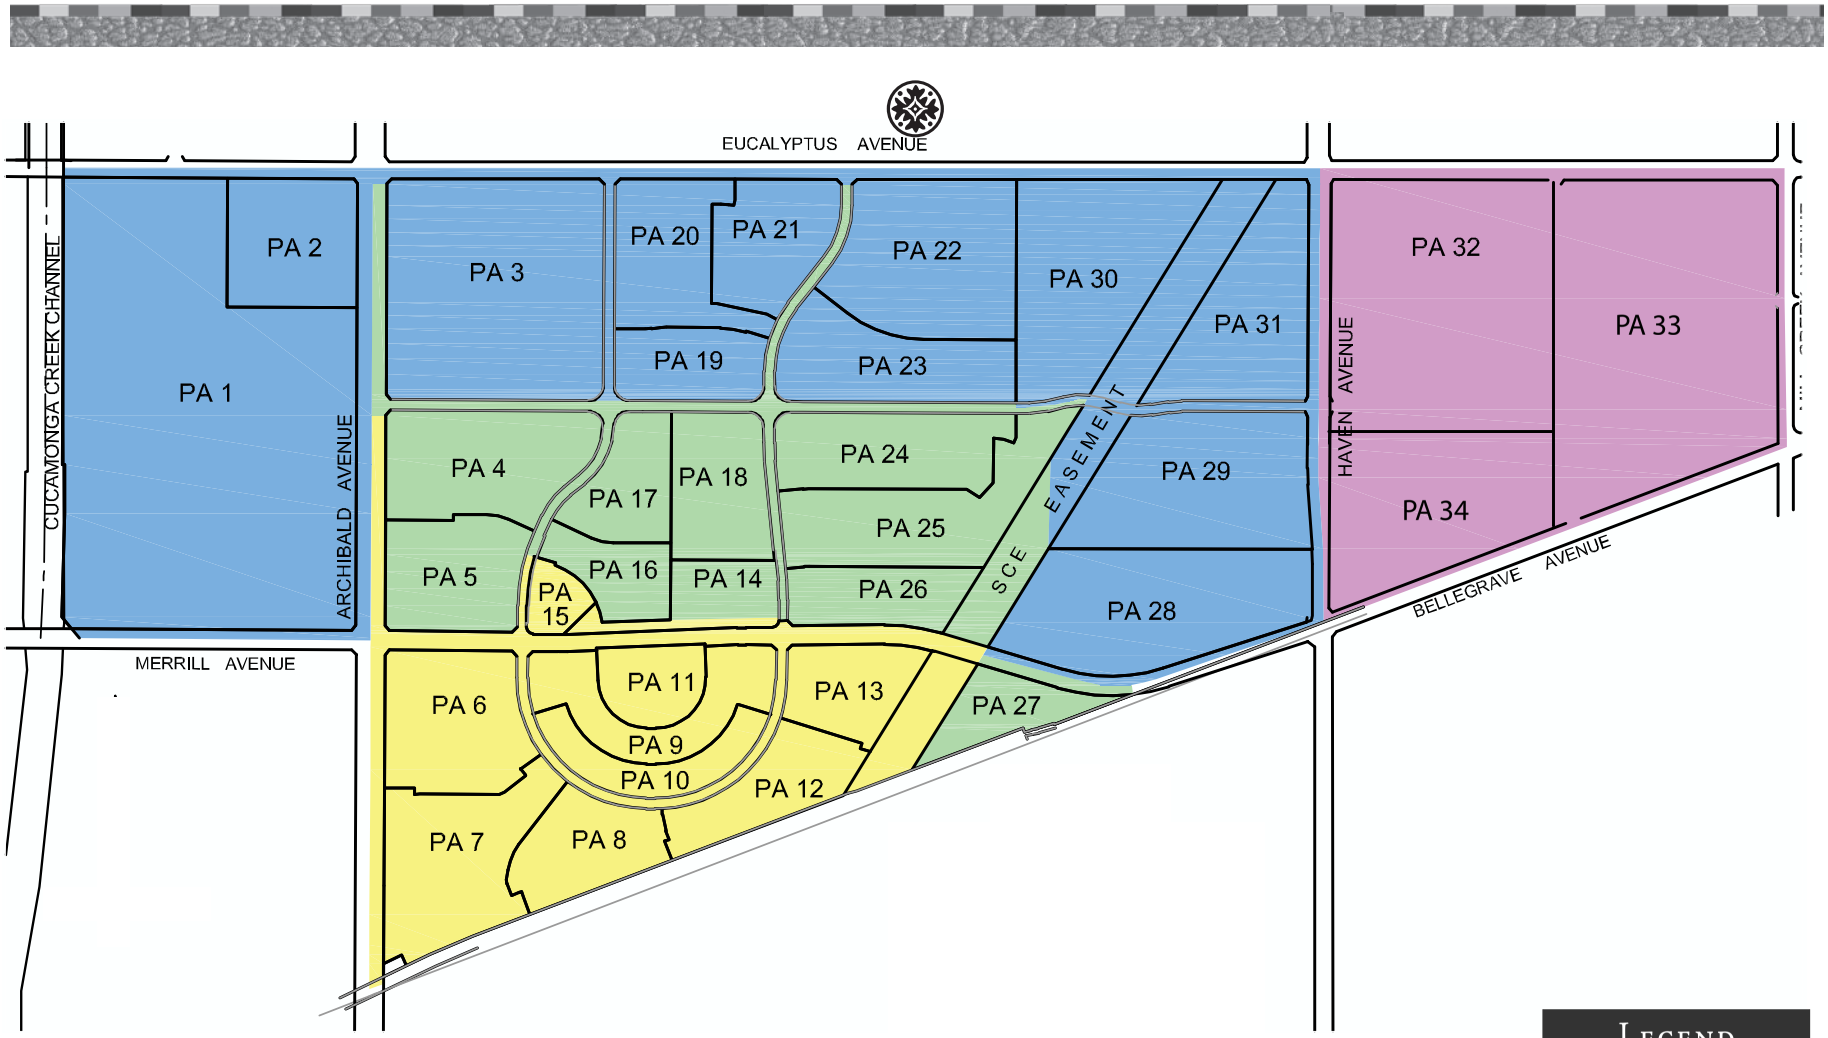

Exhibit 19—Conceptual Phasing Plan

5.6.2 Natural Gas

The Southern California Gas Company will provide natural gas to the site.

5.6.3 Electricity

Southern California Edison will provide electricity to the site from existing facilities in the vicinity of the site. Proposed on-site facilities will be located underground.

5.6.4 Solid Waste

- Commercial - Developer shall comply with Municipal Code Sec. 6-3.314 Commercial Storage Standards, and Sec. 6-3.601 Business Recycling Plan.
- Apartment - For apartments using commercial bin service developer shall comply with Municipal Code Sec. 6-3.314 Commercial Storage Standards and Sec. 6-3.601 Business Recycling Plan.
- Residential - For curbside automated container service developer shall comply with Municipal Code Sec. 6-3.308.9(a) and (d), Residential Receptacles, Placement.
- Recycling Requirements - Developer shall comply with Municipal Code Article 6. Recycling Requirements for Specified Business Activity, Sec. 6-3.601 Business Recycling Plan, and Sec. 6-3.602 Construction and Demolition Recycling Plan.
- Site Improvement Plans shall follow the City of Ontario refuse collections standards.
- Standard two bin enclosures (for solid waste) may be used to service the residents. Modification to the standard two bin enclosure may be allowed to accommodate architectural/design layout for the cluster products.
- CC&Rs/HOA shall define areas where tenants place their waste cans for pickup by service vehicles. Said policy shall be reviewed/ approved by the Solid Waste Department.

5.7 Grading Concept

The existing ground has a gentle, uniform slope to the south, at approximately 1.0 to 2.0% and will not require a large grading operation, nor will it result in noticeable cut or fill slope banks. The grading operation will generally consist of the removal of any manure left over from dairy operations, clearing and grubbing, demolition of existing structures, and movement of surface soils to construct residential building pads and streets.

The grading and drainage of the Subarea 29 Specific Plan shall be designed to retain, infiltrate, and treat surface runoff, in a manner and combination which is practical, to reach NPDES compliance. Landscaped strips and landscaped setback areas can be swaled and depressed to retain and infiltrate irrigation water and runoff from smaller storm events. Pedestrian paseos, open space, and paseo connectors are examples of the landscaped strips that work well for this purpose in residential areas. If slopes are required on the property, the top of the slopes shall be set at the property lines. In areas adjacent to a ridgeline or in moderate slope areas, dwelling units and structures should be sited to use the natural ridgeline as a backdrop for structures; use landscape plant materials as a backdrop; and use structure to maximize concealment of cut slope. If retaining walls are constructed, they shall be kept to a minimum height and step with the contours of the property. Where retaining walls or fences face roadways, they shall be built, when feasible, of decorative materials consistent with the wall theme of the neighborhood. Exposed walls and fences facing roadways shall be no greater than six feet (6) in height, except as necessary for acoustical purposes to satisfy the intent of the noise ordinance.

5.7.1 Preliminary Earthwork Calculations

Based on the Conceptual Grading Plan, the estimated total amount of cut/fill for the project would be approximately 1,200,000 cubic yards.

5.7.2 Preliminary Grading/Drainage Concept

Grading plans for each tract in the Specific Plan area will be reviewed and approved by the City of Ontario Building, Planning, and Engineering Departments prior to the issuance of grading permits. All grading plans and activities will conform to the City grading ordinance and dust control and erosion control requirements.

A Conceptual Grading Plan for the project site is illustrated in Exhibit 18.

5.8 Phasing

Development of the Specific Plan area will be phased to meet the following objectives:

- Orderly build-out of the community based upon market and economic conditions;
- Provisions for adequate infrastructure and public facilities as determined and deemed necessary by the City Engineer; and
- Protection of public health, safety and welfare.

Development phasing of the project site will be determined by the landowner and/or developer based upon real estate market conditions. Phasing will occur as appropriate levels of infrastructure, community facilities, and open space dedications are provided. Phasing sequencing is subject to change over time to respond to these various factors and individual phases may overlap or develop concurrently. Phased infrastructure improvements, as required and approved by the City Engineer to support each phase, will be installed by the developer. Refer to ***Exhibit 19, Conceptual Phasing Plan***. This plan describes three general phases of development, starting in the southern portion of Park Place and extending north over time.

Infrastructure required to serve the commercial development area will be installed by the developer(s) of these areas. The timing for installation of infrastructure and utilities and the provision of public services for the commercial development within the Specific Plan will be determined as part of the City's approval of parcel maps. Facilities will be constructed and services made available in a timely manner as development progresses.

Backbone infrastructure to serve all areas of the Specific Plan shall be installed by the developer(s) in accordance with the City's adopted Master Plan for the areas or any approved amendments to it. Infill service mains will be installed/constructed in phases as development proceeds and conditioned by the City Engineer's office to support individual phases of development. This may require installation of off-site infrastructure improvements beyond a given phase boundary.

Flexibility to adjust final product selection in Phases 2 and 3 shall be provided to the master developer, based on evolving market conditions. In particular, parcels designated for lane loaded product may be re-designated to conventionally loaded product in the future, at the time Phases 2 and 3 are underway. Other single-family detached product lines may also be adjusted over time, while not sacrificing the overall integrity of the proposed land plan and with the approval of the City of Ontario. Should a new product be introduced, a Specific Plan Amendment will be required.

A "Model Home Permit" is required and will be approved through the "Temporary Use Permit" process. Flexibility to adjust final product.

The 2023 Amendment area will be added as a new phase, Phase 4, to the existing Phasing Plan of the adopted Specific Plan.

Land Use, Infrastructure and Services

Water, recycled water and sewer utilities may be designated as "public utilities" if located within public or private streets. All public utilities within private streets shall be designed and constructed per City standards and contained within acceptable easements. The CC&RS shall contain language that requires all proposed work by the HOA within said easements to be plan checked and inspected by the City, including applicable fees. Generally, utilities will not be accepted as public within lanes, parking areas or driveways. Utilities within commercial and industrial parking lots and loading areas shall be designated as private. The extent to which said utilities will be accepted as public utilities shall be determined, at the full discretion of the City, during final design plan review.

6. Development Regulations

6.0 Development Regulations

6.1 Introduction

The provisions contained herein will regulate design and development within the Subarea 29 Specific Plan. The regulations contained herein provide for the development of all land use categories with development regulations established for residential uses, commercial uses, parks and recreation, and landscaping.

6.2 Definition of Terms

The meaning and construction of words, phrases, titles, and terms shall be the same as provided in the City of Ontario Development Code Article 2, "Definitions," unless otherwise specifically provided herein.

6.3 Applicability

The development regulations contained herein provide specific standards for land use development within the Subarea 29 Specific Plan. Regulations address residential, commercial, and parks and recreation land uses. General landscaping regulations are also provided. Application of the following regulations is intended to encourage the most appropriate use of the land, ensure the highest quality of development, and protect the public health, safety, and general welfare. The adoption of the Subarea 29 Specific Plan by ordinance, supersedes otherwise applicable City of Ontario zoning regulations unless stated herein to the contrary. Whenever the provisions and development standards contained herein conflict with those contained in the City of Ontario Development Code, the provisions of the Subarea 29 Specific Plan shall take precedence. Where the Specific Plan is silent, City codes shall apply. These regulations shall reinforce specific site planning, architectural design, and landscape design guidelines contained in ***Chapter 7, Residential Design Guidelines,*** and ***Chapter 8, Commercial Design Guidelines***, of the Specific Plan.

6.4 Administration

The Specific Plan is adopted by ordinance and will serve as the implementation tool for the General Plan as well as the zoning for the site. The Specific Plan Development Regulations address general provisions, permitted uses, and development standards for the project.

6.5 Methods and Interpretation

Development within the Specific Plan shall be implemented through the approval by the City of Ontario of parcel maps, tract maps, and development permits. The administration process described herein provides the mechanisms for review and approval of development projects within the project, consistent with the Specific Plan objectives.

6.6 General Site Development Criteria

The following general site development criteria shall apply to all land development proposed in the Specific Plan.

- Gross Acres-Except as otherwise indicated, gross acres for all development areas are measured to the centerline of streets;
- Grading-Development within the site shall utilize grading techniques as approved by the City of Ontario. Grading concepts shall respond to the grading design included in this Specific Plan which guide the development of land use toward the goal of providing for a livable community with streets and entries designed for walking and resident interaction;
- Building Modification-Additions shall match the architectural style of the primary unit and shall be constructed of the same materials and colors as the primary unit;
- Utilities-All new and existing public utility distribution lines of 66 kV or less shall be subsurface throughout the planned community;
- Technology-All homes and businesses shall accommodate the most modern technology for computer internet access, phone, fax, and television. Broadband fiber optics cable will be installed on all peripheral streets per the approved Broadband Master Plan;
- Density-The Specific Plan Land Use Plan allocates a total number of units to each residential neighborhood as indicated in the "Land Use Summaries" Tables 1 and 1b, included in Section 4, Land Use, of the Specific Plan. Variations in the number and type of dwelling units within each residential neighborhood may occur at the time of final design of the neighborhood, depending upon the residential product identified for development. Increases in allocation of residential units up to a maximum of fifteen percent (15%) are permitted among the residential neighborhoods within the Specific Plan, provided the total number of units established for the Specific Plan area is not exceeded; and

- Maximum Number of Dwelling Units-The maximum number of dwelling units permitted within the Subarea 29 Specific Plan shall be ~~2,392~~ 3,888 dwelling units, as set forth in the Specific Plan Land Use Summaries. Consistent with Table 1a, the maximum number of residential dwelling units permitted within Park Place shall be ~~1,374~~ 2,045 dwelling units. The maximum number of residential dwelling units permitted within Richland Communities, Inc. controlled properties shall be ~~936~~ 1,735 dwelling units. The maximum number of residential dwelling units permitted within Brookfield Homes controlled property shall be 108 dwelling units.
- The measurement of the width of the lots on curvilinear streets shall be taken from the front and rear setback lines. The front setback lines shall be displayed by dotted lines or by plotting the footprint of the dwelling unit.
- Buildings or parts of buildings, in particular roof overhangs, shall not encroach into the 3-foot building setback from the property line.

6.7 Implementation

- Development proposals within the project site shall be subject to the implementation procedures established herein. The provisions and development standards contained herein supercede those contained in the City of Ontario Development Code. However, where the development standards are silent, the City's Development Code shall apply;
- Severability - If any portion of these regulations is declared to be invalid or ineffective in whole or in part, such decision shall not affect the validity of the remaining portions thereof. The legislative body hereby declares that they would have enacted these regulations and each portion thereof irrespective of the fact that any one or more portions be declared invalid or ineffective;
- Unless otherwise provided, any ambiguity concerning the content or application of the Specific Plan shall be resolved by the Planning Director or his/her designee, hereinafter referred to as Director, in a manner consistent with the goals, policies, purpose, and intent established in this Specific Plan; and
- Any major deviation from the design guidelines within the Specific Plan shall require a Specific Plan Amendment. The Director shall determine whether a proposed change constitutes a major deviation.

6.8 Development Permit

All development projects within the Specific Plan shall be subject to the Development Plan Review Process as established in Article 8: Development Plan Review, City of Ontario Development Code. Adoption of the Specific Plan by the City includes adoption of the design guidelines contained within the Specific Plan. Where the Specific Plan design guidelines are silent, the applicant's design guidelines contained within the City's Development Code shall apply. The design guidelines are intended to be flexible in nature while establishing basic evaluation criteria for the review by the City of developer projects during design review.

Pursuant to these provisions, the Development Permit process constitutes a design review of project architecture, site plans, and landscape plans. All development project applications shall include a landscape and irrigation plan describing plant materials and their growth habits, plant size and spacing, methods of irrigation and landscaping maintenance, site plans, architectural elevations, floor plans, grading plans, and other requirements as specified by the City. Development permits will be approved with conditions of approval.

6.9 Subdivision Maps

Approval of the Tentative Tract Map(s) and Parcel Maps will create legal lots for development. All Tentative Tract Maps and Parcel Maps will be reviewed and approved pursuant to applicable provisions of the City of Ontario Subdivision Ordinance and consistent with the applicable provisions contained within this Specific Plan.

6.10 Specific Plan Modifications and Amendments

6.10.1 Minor Modifications

The following constitute minor modifications to the Specific Plan, not requiring a Specific Plan Amendment, and are subject to review and approval by the Zoning Administrator. The Zoning Administrator shall have the discretion to refer any such request for modification to the Planning Commission or the City Council.

- Change in utility and/or public service provider;
- An increase of more than fifteen percent (15%) to the number of units within an individual neighborhood, provided the total number of units for the entire Specific Plan areas does not exceed that established in the approved Specific Plan;

- Adjustment of a neighborhood boundary, provided the total acreage of the affected area does not increase or decrease by more than fifteen percent (15%) of the total acreage stated in the approved Specific Plan;
- Minor changes to the design guidelines, which are intended to be conceptual in nature only, and are intended to be flexible in implementation; and
- Other modifications of a similar nature to those listed above, which are deemed minor by the Director, which are in keeping with the purpose and intent of the approved Specific Plan and which are in conformance with the General Plan.

6.10.2 Specific Plan Amendments

Amendments to the Specific Plan may be requested by the applicant or by the City at any time pursuant to Section 65433(a) of the Government Code. Amendments shall be processed pursuant to the provisions of the Government Code for Specific Plan Amendments. In the event the proposed amendment requires supplemental environmental analysis pursuant to the California Environmental Quality Act (CEQA), the applicant(s) will be responsible for preparing the necessary CEQA documentation.

6.11 Appeals

Appeals from any determination of the Zoning Administrator shall be made to the Planning Commission. The applicant(s) or any other entity shall have the right to appeal the decision of the Planning Commission on any determination. Appeals shall be submitted by filing an application on forms provided by the City of Ontario within ten (10) days following the final date of action for which an appeal is made. Appeals shall be processed consistent with the provisions of Article 5, "Appeals" of the City of Ontario Development Code.

6.12 Project Financing

Construction and maintenance of public improvements and facilities to serve the Specific Plan will be financed through a combination of financing mechanisms including the use of public and private funds. In order for the project to be fiscally self-sufficient the following options can be considered for implementation:

Maintenance

A lighting and landscape district can be implemented in order to defray the costs associated with street maintenance and street light costs.

Facilities and Services

A variety of other financing options can be considered by the City of Ontario for financing facilities and services to be provided within the Specific Plan to include:

- Establishment of a Mello-Roos Community Facilities District, which enables governmental entities to finance public infrastructure on a tax-exempt basis;
- Special assessment districts;
- Benefit assessment financing for improvements such as storm drains and street lighting; and
- Integrated financing districts such as landowner assessments that are contingent upon development.

City Council approval is required for the establishment of all special district financing mechanisms. Establishment of a district would enable the City to levy a special tax and to issue bonds for the financing of improvements and/or services. Among the facilities that potentially could be financed are flood control, drainage, utilities, street improvements, and other infrastructure and related facilities. The district provisions for those services would cover all phases, including planning, design, acquisition, construction, operations, and maintenance. These assessments would only affect the Subarea 29 Specific Plan area, and the debt service incurred by these assessments would be paid by landowners or homeowners within the Specific Plan area.

6.13 Maintenance Responsibilities

The public and private improvements constructed within the Specific Plan area will be maintained through a combination of public and private entities as described below and in ***Table 4, Maintenance Responsibilities.*** During the course of maintenance of public utilities (including storm drain) within private and public streets, the City will pave the streets and restore landscaping per City standards. Restoration of any enhancements above and beyond City standards, including but not limited to architectural, hardscaping, and landscaping enhancements shall be the responsibility of the HOA or other entity maintaining those enhancements. This applies to all areas where public utilities are located including but not limited to public and private streets, gated communities, alleys, etc.

6.13.1 Public Maintenance

Water, recycled water, and sewer utilities may be designated as "public utilities" if located within public or private streets. All public utilities within private streets shall be designed and constructed per City

Table 4—Maintenance Responsibilities

1. Including restoration work following public street repairs.
2. Only those facilities in the public right-of-way and/or easements.
3. City CFD maintains public interior streets, HOA will maintain private streets

standards and contained within acceptable easements. The CC&RS shall contain language that requires all proposed work by the HOA within said easements to be plan checked and inspected by the City, including applicable fees. Generally, utilities will not be accepted as public within alleys, parking areas or driveways. Utilities within commercial and industrial parking lots and loading areas shall be designated as private. The extent to which said utilities would be accepted as public utilities shall be determined, at the full discretion of the City, during final design plan review. Refer to ***Table 4, Maintenance Responsibilities.***

6.13.2 Homeowner Association

Refer to ***Table 4, Maintenance Responsibilities.***

6.14 Residential Development Standards

6.14.1 Residential Detached

General

This category includes the development of all single-family detached dwelling units. The purpose of the residential standards for single-family detached housing is to establish the minimum criteria for the development of these product types on individual lots within the neighborhoods specified within the Subarea 29 Specific Plan. Further residential design guidelines are in Chapter 7.0.

Permitted Uses

- Public or private parks, recreational buildings, newsstands, coffee concessions, and sales of grocery items, greenbelts, or open space.
- Accessory uses to include the following:
- Garages (minimum 2-car);
- Granny Flats (i.e. Second Dwelling Units, in accordance with the City's Zoning Code;
- Home occupations;
- Swimming pools, spas, sports courts, and other similar outdoor recreational amenities;
- Patios and patio covers;
- Storage, garden structures, cabanas, and greenhouses;
- Monument signage;
- Temporary uses such as model home and subdivision sales trailers; temporary construction parking, offices, and facilities; real estate signs, signage indicating future development and directional signage with the approval of a Temporary Use Permit; and
- Second story additions to existing single story dwelling units.

Conditionally Permitted Uses

- Places of worship including but not limited to churches and synagogues; and
- Child care facilities/day care facilities.

6.15 Neighborhood Serving Commercial Land Use Development Standards

General

This section sets forth the development regulations for development of commercial land uses within the Specific Plan Planning Area 2.

Permitted Uses

- Bakery (Retail);
- Barber Shop and Beauty/Nail Salon;
- Book Stores;
- Camera and Photographic Supply Stores;
- Clothing and Accessory Stores;
- Convenience Market;
- Dry Cleaner;
- Florist;
- Jewelry and watches/clocks;
- Laundry – Self-Service;
- Locksmith/Key Shop;
- Police Storefront/Sub-Station;
- Satellite Dishes/Ham Radio Antennas (private use);
- Shoe Repair;
- Specialty Food Stores;
- Tailor; and
- Travel Agency

Table 5—Neighborhood Service Commercial Site Development Standards

Planning Area 2	
Minimum Parcel Area	N/A
Minimum Lot Size	Shall be large enough to accommodate the proposed use and meet all Development Standards as specified within the Specific Plan. Minimum site area shall be 7 acres; however, the site area may be less when developed as part of an integrated commercial center.
Maximum Development Floor Area Ratio	0.35
Minimum Building Setbacks (1)(2)	
• From Public Street Property Lines	20'
• From Private Street Property Lines	15 '
• From Interior Property Lines	0'
• From Haven Avenue Right-of-Way	14'
• From Archibald Avenue Right-of-Way	19'
• From Eucalyptus Avenue Right-of-Way	
• From Private or Local Street	15'
• From Interior Property Line	0'
• From Interior Property Line Adjacent to Residential District	25'
Parking & Drive Aisle Setbacks	
• From Public Arterial Streets	25'
• From Private Streets & Drive Aisles to Bldgs.	10'
• From Interior Property Line	5'
• From Rear Property Line	5'
• From Haven Avenue Right-of-Way	14'
• From Archibald Avenue Right-of-Way	19
• From Merrill Avenue Right-of-Way	N/A
• From Private or Local Street	10'
• From Interior Property Line	5'
• From Interior Property Line Adjacent to Residential District	5'
Minimum Landscape Coverage	15%
Maximum Building Height	
• Main Structure	35'

Table 5—Neighborhood Service Commercial Site Development Standards *Continued*

Architectural Projections and Focal Elements such as Towers, Cupolas, and other[3]	55'
Porte-Cocheres [4]	1 story
Other Development Regulations	Per Article 16, City of Ontario Dev. Code.
• Walls, Fences & Hedges	Per Article 16, City of Ontario Dev. Code. When a non-residential use adjoins a residential district, a 6-foot high masonry wall shall be required at the interior side or rear property lines.
• Parking	Per Article 30, City of Ontario Dev. Code.
• Screening	All loading areas shall be screened from adjacent public streets, residential, and open space uses through the use of landscaping, earthen berms, decorative walls, or fencing. All storage, including cartons, containers, materials, or trash shall be shielded from view within a building or area enclosed by a solid fence or wall not less than 6' in height
	All roof-mounted equipment, including but not limited to, mechanical equipment, satellite dishes, tanks, ducts, towers, and all equipment appurtenant thereto, shall be screened on all sides from public view from the street adjoining properties, and neighboring residential units, by a parapet wall, decorative enclosure, or other architectural element. Equipment screening shall appear as an integral part of the building architecture.
• Lighting	All interior and exterior lighting shall be directed away from residential and open space uses.

1. All setbacks areas shall be landscaped.
2. All setbacks are measured to habitable area not architectural appurtenance or projection. An architectural projection is defined as an element that articulates the building elevation such as eaves, window and door pop-out surrounds, bay windows, pot shelves, chimneys, enhanced window sills, shutter detail, window trim, and balconies, and other similar elements. Such elements may project a max. of 3' into setback areas. Building setbacks shall be determined by the hierarchy of streets (major arterial and local streets) and measured from PL for local streets and RW for major arterials.
3. Architectural element only, not to be used for signage, subject to Planning Director approval. Within commercial areas, towers and vertical projections are limited in size to 10% of the total building square footage.
4. Porte-Cocheres shall be open on three sides.

Conditionally Permitted Uses

- Alcoholic Beverage Sales;
- Commercial Day Care Facility (including Adult Day Care);
- Banks, Credit Unions and Other Depository Institutions;
- Church;
- Money Transmitting;
- Other Financial Services;
- Police/Fire Station;
- Recreation Center; and
- Senior Citizen Center

Determination of Use

Uses not specifically listed may be deemed permitted subject to a "determination of Use" as provided for in Section 9-1.1310 of the City of Ontario Development Code.

Design Guidelines

Prior to the approval of the first site development permit and/or parcel map within the Community Commercial land use area, a detailed set of design guidelines for the area shall be submitted by the developer and approved by the City. These guidelines shall be compatible with the residential architectural styles in this Specific Plan and discretion of the City.

6.16 Landscape Standards

6.16.1 General Provisions

- All landscape plans, streetscape plans and graphic designs which create neighborhood identity or enhance entry monuments shall conform to the design guidelines and regulations as set forth herein and shall be subject to review and approval by the City of Ontario;
- The landscape/streetscape improvements for the Specific Plan shall establish a landscape theme reminiscent of the regional landscape character of the surrounding area;
- Installation of landscaping within the front yards of single-family detached housing products will be provided by the home builder. Front yard landscaping shall be installed prior to Certificate of Occupancy;
- Installation of landscaping in residential areas of Park Place may be provided by the home builder, based on future landscape plans submitted to the City during site plan review; and
- Installation of landscaping within the commercial area of the Specific Plan will be provided by the developer/builder.
- All loading areas shall be screened from adjacent public streets, residential, and open space use through the use of landscaping, earthen berms, and/or decorative walls or fencing. All storage including cartons, containers, materials, or trash shall be shielded from view within a building or area enclosed by a solid fence or wall not less than six feet in height.

6.16.2 Landscape Standards

- Landscaping within the Specific Plan shall be provided in accordance with the Design Guidelines for Streetscapes and Entries utilizing plant materials specified on the Plant Palette included in ***Chapter 7, Residential Design Guidelines, and Chapter 8, Commercial Design Guidelines,*** established for the Specific Plan;
- Boundary landscaping will be required adjacent to residential, commercial, park, and school areas. Landscaping shall generally be placed along the entire property line;
- Landscaping and irrigation systems within the public rights-of-way of the Specific Plan area shall be installed by the developer;
- Freestanding perimeter walls and view fencing shall be provided within and at the perimeter of the project as specified in the ***Wall and Fence Master Plan, Chapter 7, Residential Design Guidelines***. Such walls and fences will be constructed concurrently with the construction of improvements required for development of the neighborhoods of the Specific Plan;
- Walls and Fencing—Perimeter walls shall be constructed in locations and of a design consistent with the Residential Design Guidelines and the Wall and Fence Master Plan, and Wall Details, provided in Chapter 7, Residential Design Guidelines, and shall not exceed six feet (6) in height from finished grade. Perimeter walls may exceed six feet (6) in height if required for sound attenuation. Perimeter walls shall be constructed of either decorative masonry (both sides) or other permanent, durable, low maintenance material subject to approval by the City;

- Residential—Side and rear yard walls and fencing shall not exceed six (6) feet in height from the highest adjacent finished grade. Walls and fencing within the residential front yard setback area shall not exceed three feet (3) in height. Walls shall be decorative masonry construction (both sides) or other permanent low maintenance materials. Front yard fences may be constructed of attractive, durable materials, including, but not limited to, wrought iron with pilasters, textured concrete block, formed concrete with reveals, or other materials approved by the Planning Director. View fencing may be of a decorative wrought iron, glass panels, or other durable material subject to approval by the City;
- All perimeter wall and fence materials throughout the Specific Plan will be of uniform manufacture with colors specified for the overall design theme;
- All interior walls (both sides) that are visible from the public street shall be constructed of attractive, durable materials, including, but not limited to, wrought iron with pilasters, textured concrete block, formed concrete with reveals, or other materials approved by the Planning Director. Colors shall be consistent with the colors specified for the overall design theme and shall be decoratively capped. Decorative all-weather vinyl fencing is not permitted in the Specific Plan area;
- The developer will provide site inspection of all construction and installation of open space areas in accordance with City of Ontario requirements;
- Parking lot landscaping within commercial areas shall be required in accordance with Section 9-1.3040 of the City's Development Code; and
- Non-toxic and non-invasive vegetation shall be utilized adjacent to all public open space areas.
- All landscaping features shall comply with City of Ontario requirements for sight distance.

6.17 Signage

A Master Sign Program shall be submitted by the developer(s) of each land use component for the Specific Plan and approved by the City of Ontario pursuant to Article 31 of the City's Development Code to address residential project entries, residential neighborhood identification signs, commercial center identification, tenant signage, and "way-finding" signs within the Specific Plan area. All other signs shall be subject to the approval of a sign permit pursuant to the City's Development Code. All traffic-related signs shall conform to City of Ontario Traffic and Transportation Design Guidelines and California Manual of Uniform Traffic Control Devices (MUTCD), latest editions.

6.17.1 Master Sign Program Contents

All sign programs shall address, at a minimum, the following:

- Permitted signs;
- Prohibited signs;
- The hierarchy of signage; and
- Definition of types of signs.
- Locations and dimensions for monument signs, neighborhood identification signs, and public facilities signs;
- Locations and dimensions of directional signage;
- Provision for size, location, and duration of display of temporary signs;
- Permitted sign types, styles, construction materials, colors, and lettering styles;
- Requirements for a sign permit application;
- Procedures for obtaining approval of a sign permit; and
- Procedures for amendments to the sign program.

6.18 Private Recreational Facilities

This category includes the development of all private recreation facilities and is subject to the Development Permit process contained herein.

7. Residential Design Guidelines

7.0Residential Design Guidelines

7.1 Introduction

Subarea 29 is a new residential master-planned community located within the ~~New Model Colony~~ Ontario Ranch in Ontario, California. The historical character of this area is typically rural and agricultural in nature. However, being located in the path of the advancing railroad, the later automobile Route 66, and eventually Ontario International Airport, Ontario has also typically been associated with transit and forward-moving progress.

The proposed community design integrates the historic character of the past with a plan which provides a variety of housing choices that serve the needs and lifestyles of today.

Upon entering the community, residents and visitors arrive at a central community core consisting of a school and community park. Connections to both community and regional trails are accessed from this core area. With a focus on promoting a pedestrian friendly, healthy lifestyle this core area is within approximately ¼ mile walk from all neighborhoods in the community.

Community Overview

Community design elements include:

- A central village core consisting of a school, parks, and private recreation center;
- A wide variety of home sizes and plans to fulfill the needs of different life stages;
- Tree-lined neighborhood streets with curb separated sidewalks and generous plantings in parks and open spaces;
- Neighborhood parks and a private recreation center to support physical and social activities within the community;
- A network of sidewalks and trails that link all neighborhoods to schools, parks, open spaces, a regional trail system and nearby retail; and
- Nearby connections to local, regional and global transit.

The community character is inspired by:

- The charm and tradition of Ontario's historic downtown and the existing neighborhood's eclectic mix of architectural styles;
- The simple, yet stately landscape along Euclid Ave. and the region's agricultural heritage; and
- Environments that encourage wellness by providing opportunities for pedestrian and outdoor physical activity.

Community retail goods and services are conveniently located in a planning area at the Northwest corner of the Specific Plan at the intersection of Eucalyptus Ave. and Archibald Ave.

The Specific Plan community entries along Archibald Ave., Haven Ave., and Merrill Ave. will be identified with community character monuments and entry statements. Signage, lighting, and monuments within Park Place will reflect an identifiable community character.

Upon arrival at the primary Merrill Ave. entry, from Archibald Ave., residents and visitors are greeted by the central "village core;" a private community recreation center and two (2) neighborhood parks frame the lane loaded lot homes on the south side and an elementary school and lane loaded homes on the north side. These elements are all easily accessed from all neighborhoods by way of pedestrian, bicycle, and vehicular routes.

Farther into the community, Merrill Ave. crosses through a green space over the SCE Easement before connecting with Haven Ave. to the east. Circulation throughout the community is organized by a network of interior streets with curb separated sidewalks framed by street trees and varied architectural styles that reflect the chosen community character.

7.1.1 Guiding Principles

The following guiding principles have been created to help develop architecture that reflects quality in design, simplicity in form and plan and contributes charm and appeal to the neighborhoods of Subarea 29 as a whole.

- The home, not the garage, is the primary focus of the front elevation. A variety of garage placements emphasizes the pedestrian environment as opposed to the automobile;
- A variety of compatible architectural styles are provided to ensure a degree of individuality throughout neighborhoods;
- Appropriate massing and roof forms play a major role in defining architecture styles, roof framing related to each plan versus individual elevations;
- Architectural elements, details, and appropriate color palettes are used to reinforce individual architectural styles;
- Rear elevations visible to the public viewshed should provide articulated walls, windows, and varied roof profiles, all defining level of quality in detail and interest in neighborhood architecture; and
- Selected architectural styles are related to those historically represented in Ontario. These are: Craftsman, Cottage, American Colonial, Farmhouse, American Traditional, Spanish Colonial, and Andalusian.

7.2 Architectural Styles

7.2.1 Introduction

The style information on the following pages provides the builder and design consultants with the tools to create functional and attractive architectural designs without using gimmicks or sacrificing the integrity of the style.

Authenticity

The design criteria in these guidelines is offered to encourage a high quality of architecture and reasonable level of authenticity of styles through the use of appropriate elements. Although detail elements may be used to further convey the character of a style, the overall massing and appropriate roof forms should be used to establish a recognizable style. Proper scale and proportion of architectural elements and appropriate choice of details are all factors in achieving authenticity.

7.2.2 Architectural Philosophy

Looking back to Ontario's older, established neighborhoods for inspiration, the design intent for Subarea 29 is to re-capture the charm and essence of these original home styles and express them in the simple, honest manner that they originated. These homes reflected function and tradition, simplicity in massing, plan and roof forms, and authentic, regional styles.

Homes will provide the kind of function, quality, value, and appeal that were built into those original homes. Neighborhood parks, sidewalks, parkways, and street trees will add to the traditional feeling in these neighborhoods, linking them with the overall community.

Design Character

The design character of the neighborhoods will be one of hometown appeal characterized by simple, yet charming homes, curb separated sidewalks, and parkways lined with street trees. Homes and street scenes will reflect an overall feeling of quality and tradition. The architectural palette of styles has a regional historic background and context in keeping with the character of Ontario.

7.2.3 Architectural Styles

Architectural Style/Plan Mix

An important goal in this community is to develop varied and interesting streetscenes. In order to achieve this, the following architectural style and plan requirements shall be met for all Lane Loaded and Conventional Small, Medium, and Large Lot residential development products:

In each neighborhood that consists of 0-80 homes, provide:

- A minimum of three (3) plans;
- A minimum of three (3) elevations per plan using a minimum of two (2) significantly different styles per plan; and
- A minimum of four (4) different color schemes per number of plans.

In each neighborhood that consists of 81-100 homes, provide:

- A minimum of four (4) plans;
- A minimum of three (3) elevations per plan using a minimum of three (3) significantly different styles per plan; and
- A minimum of four (4) different color schemes per number of plans.

Cluster Home Style/Plan Mix

The development of Cluster Homes generally results in the same 1 or 2 plans being repeated along the street front. To support varied neighborhood streetscenes, each Cluster Home residential product neighborhood shall provide:

- A minimum of three (3) significantly different styles per plan. Although the styles shall be significantly different, they shall be coordinated to provide a harmonious and cohesive neighborhood preferably from a family of related architectural styles; and
- A minimum of four (4) different color schemes per number of plans.

Number of plans and elevations shall not be regulated for interior units; the above standards shall apply to any unit plotted along (facing or siding on to) a street more than one (1) time.

Architectural Styles

Farmhouse

Cottage

American Traditional

American Colonial

Craftsman

Spanish Colonial

Andalusian

Specific Plan Style Selection

Builders will select from the following palette of architectural styles:

- Farmhouse;
- Cottage;
- American Colonial;
- American Traditional;
- Craftsman;
- Andalusian; and
- Spanish Colonial.

The "common features" for each architectural style are displayed on the following pages. These elements will assist in defining the character of each one.

As future phases of the Subarea 29 Specific Plan are developed, architectural styles may be added or deleted provided that they are compatible with the overall style palette and approved by the City of Ontario.

Farmhouse

©2006 William Hezmalhalch Architects, Inc.

The American Farmhouse represents a practical and picturesque country house. Its beginnings are traced to both Colonial styles from New England and later the Mid-West. As the American Frontier moved westward, the American Farmhouse style evolved according to availability of materials and technological advancements, such as balloon framing.

Predominant features of the style are large front and/or wrapping porches with a variety of wood columns and railings. Two story massing, dormers, and symmetrical elevations occur most often on the New England Farmhouse variations. The asymmetrical, casual cottage look, with a more decorated appearance, is typical of the Midwest American Farmhouse. Roof ornamentation is a characteristic detail consisting of cupolas, weather vanes, and dovecotes.

Full to Partial Width Front Porch

Multi-Pane Bay Window
Horizontal Lapped Siding

Simple Wood Columns & Wood Railings

Farmhouse

Element	*Common Features*
Form	• Simple plan form massing and simple roof design
Roof	• 6:12 to 12:12 roof pitch, possibly lower pitch at main roof • Front to back main gable roof • 12" overhangs with open eaves • Concrete tiles with smooth flat or shingled appearance
Walls	• Horizontal siding may be combined with stucco • All material changes must occur at an inside corner or another logical location
Windows	• Vertical multi-paned windows or use of an accent window appropriate to style, such as: bay windows or single hung windows at front elevation • Multi-paned windows or inserts on side and rear elevations in high visibility public view areas • Vinyl wrapped windows
Details	• Porches with simple wood or shaped wood columns and wood railings • Minimum 2′ x 4′ window and door trim - wood on siding, foam on stucco • All surface mounted fixtures on front elevations must complement architectural style (i.e. use of some style appropriate details such as: wood pot shelves, louvered attic vents, cupolas or dormers). • Stucco or siding chimney wrap • Garage door patterns and colors to complement style
Colors	• Field: Whites or light tinted colors • Trim: Whites or light shades complementary to field color • Accents: Light or dark shades in contrast with field color

Note: Enhancements are required at corners and second-story elevations seen from public views.

Cottage

Cottage is a picturesque style derived from medieval Norman and Tudor domestic architecture. The resulting English and French inspired "cottage" became extremely popular nationwide after the adoption of stone and brick veneer techniques in the 1920s.

Although the cottage is looked upon as small and not costly, it was recognized as one of the most popular styles in suburban America. The design of the home was reflected in the rural setting that they evolved in. Established neighborhoods in Riverside, Orange, and Santa Ana contained many homes of charm and character that depicted the alluring, yet unpretentious lifestyle of the Cottage home.

Varying Roof Slopes & Forms

Feature Windows & Gable Accents

Stucco With Stone Accents

Cottage

Element	*Common Features*
Form	• Rectangular plan form massing with some recessed second floor area
Roof	• Main roof hip or gable with intersecting gable roofs • Secondary roof with either a curved slope or steeper pitch than main roof • 6:12 to 12:12 roof pitch, possibly lower pitch at main roof • 0" to 12" overhangs - (limit tight overhangs to distinguishing character elements) • Architectural quality asphalt shingles or smooth flat concrete tiles
Walls	• Stucco, wood siding, or stone accents
Windows	• Vertical multi-paned windows at front elevation • Multi-paned windows or inserts on side and rear elevations in high visibility public view areas • Vinyl wrapped windows • Use of an accent window where appropriate to style, such as: curved or round top accent windows, bay windows or single hung windows at front
Details	• Entry accents with natural or manufactured stone • Shutters • Simple wood 2x window and door trim - wood on stone or siding, foam on stucco • All surface mounted fixtures on front elevations must complement architectural style. • Garage door patterns and colors to complement style
Colors	• Field: Whites or light tinted colors • Trim: Whites or light shades complementary to field color • Accents: Light or dark shades in contrast with field color

Note: Enhancements are required at corners and second-story elevations seen from public views.

American Traditional

The American Traditional style evolved in the early twentieth century being influenced by American Colonial styles as formal as Georgian Revival and those as simple and functional as Cape Cod, New England Colonial, and Farmhouse.

With respect to East Coast traditions and regional culture, the Colonial Revival vocabulary of white-painted columns, clapboards, and shuttered windows were combined with the less symmetrical, unpretentious massing, and functional forms of the Cape Cod and Farmhouse. Combined one and two-story massing with single story wings, gabled roofs with dormered windows, or occasional saltbox roof forms were favored solutions, later becoming classic variations of the traditional style. These inspirations yielded a truly American inspired architecture for a more relaxed, yet still dignified style that would become the new American dream.

Closed Pediment and Shuttered Windows

Brick Siding and Vertical Multi-paned Windows

Vented Gable and Horizontal Siding

American Traditional

Element	*Common Features*
Form	• Asymmetrical massing with a vertical and a horizontal break
Roof	• 5:12 to 12:12 roof pitch, possibly lower pitch at main roof • 16" to 24" overhangs • Concrete roof tile - flat or shake appearance • Front to back gable or hip roof with intersecting hip or gable roofs
Walls	• Horizontal siding - may be combined with stucco • All material changes must occur at an inside corner or another logical location
Windows	• Vertical multi-paned windows or use of an accent window where appropriate to architectural style, such as: round top accent or bay windows at front elevations • Multi-paned windows or inserts on side and rear elevations in high visibility public view areas • Vinyl wrapped windows
Details	• Simplified cornice trim at gable ends • 2x6 window and door trim - wood on siding, foam on stucco • All surface mounted fixtures on front elevations must complement architectural style (i.e. use some style appropriate details such as: header window wood accent trim, full porches or balconies, square columns with trim, window pot shelves, brick veneer chimney wrap) • Garage door patterns and colors to complement style
Colors	• Field: Whites, off-white, dark, or light colors • Trim: White or contrasting with field color • Accents: White, light, or dark colors in contrast or harmony with field color

Note: Enhancements are required at corners and second-story elevations seen from public views.

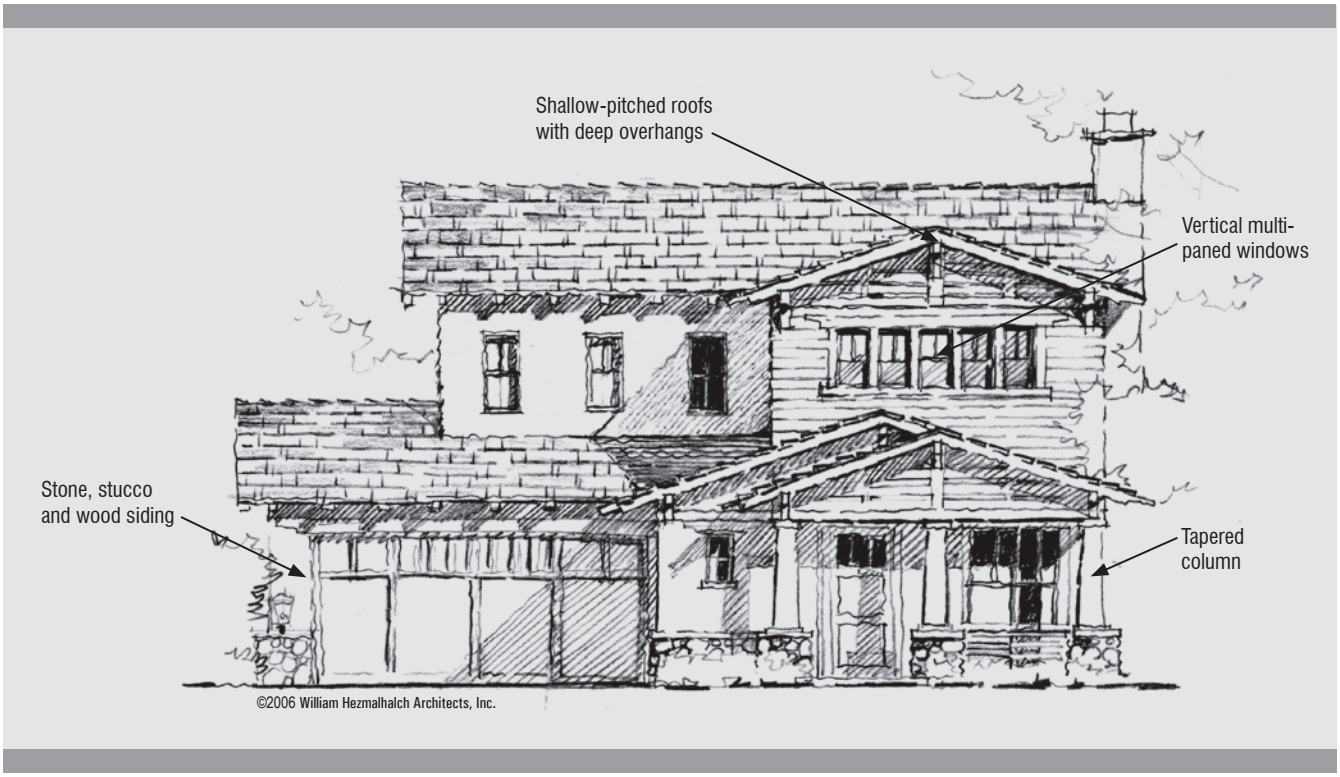
American Colonial

This classic American style descended directly from the first homes built in the New England colonies in the 17th century. Their beginnings were as small and unpretentious as the one story saltbox, favoring the cultures and traditions of the settlements.

As living functions became more defined and prosperity increased, so did the need for additional space. Second stories with overhangs, dormers, and gabled roof forms became favored solutions, later evolving into classic elements of this traditional American style. Wood shutters and an enhanced entry element and/or trim are the finishing details for an otherwise simple and functional form.

Vertical Multi-Paned Windows with Shutters

Accent Window and Enhanced Molding details



Articulated Portico Entry

American Colonial

Element	*Common Features*
Form	• Simple plan form and massing; or shed or pitched roof dormers
Roof	• 5:12 to 12:12 roof pitch, possibly lower pitch at main roof • 12" to 18" overhang • Simple front to back gable roof • Architectural quality asphalt shingles or shingle texture flat concrete tiles
Walls	• Horizontal siding or brick may be combined with stucco. All material changes must occur at an inside corner or other logical location
Windows	• Vertical multi-paned windows or use of an accent window where appropriate to architectural style such as: bay windows, dormer window in roof at front elevations • Multi-paned windows or inserts on side and rear elevations in high visibility public view areas • Vinyl wrapped windows
Details	• Neoclassic columns or posts at entry • Simplified cornice trim at gable ends • 2 x 6 window and door trim - wood on siding, foam on stucco • Enhanced entry element such as portico or covered porch • All surface mounted fixtures on front elevations must complement architectural style (i.e. use of some style appropriate details such as: knee braces at dormer, wood porch columns and rails, shutters, enhanced window trims, and louvered attic vents) • Garage door patterns and colors to complement style
Colors	• Field: Pastels, whites, light earth tones, off-whites, or dark earth tones • Trim: Light or dark in contrast to field color • Accents: Whites, light tones, or medium to dark tones in contrast to field, grayed or dark greens, blues, reds, or black

Note: Enhancements are required at corners and second-story elevations seen from public views.

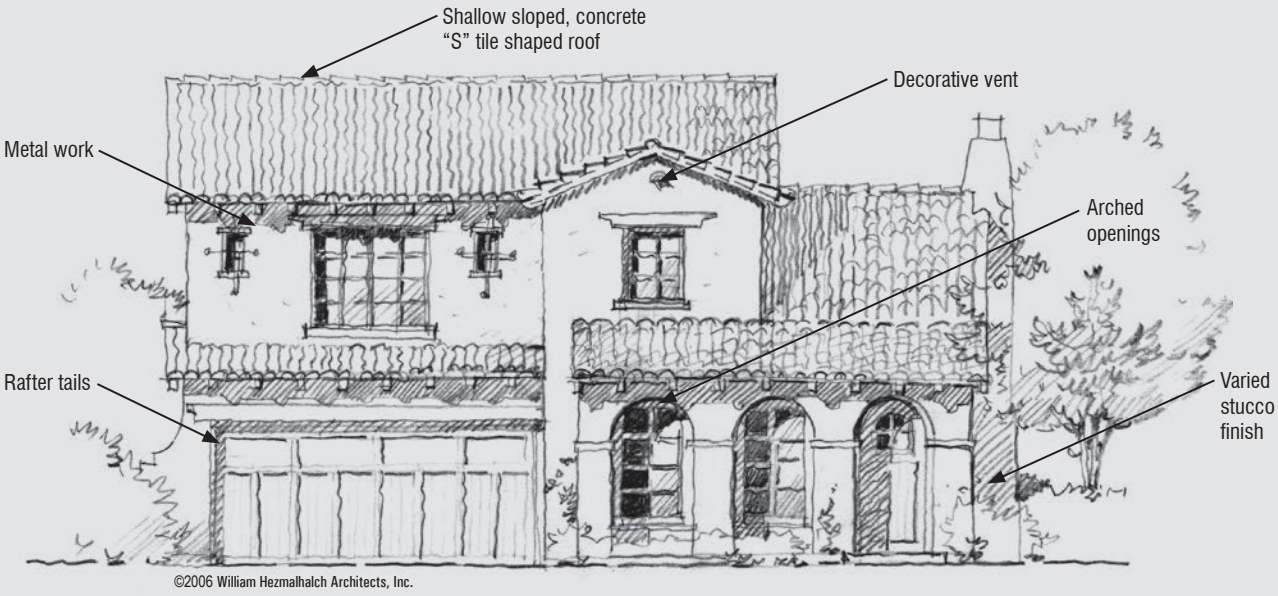
Craftsman

The Craftsman style was inspired by the English Arts and Crafts Movement of the late 19th century. Of the utmost importance was that all exterior and interior elements received both tasteful and "artful" attention. The movement influenced numerous California architects such as Green and Green, and Bernard Maybeck.

The resulting Craftsman style responded with extensive built-in elements and by treating details such as windows or ceilings as if they were furniture. The style was further characterized by the rustic texture of building materials, broad overhangs with exposed rafter tails at the eaves, and trellises over the porches. The overall affect was the creation of a natural, warm and livable home. In Southern California, the Craftsman style spun out of bungalows that were the production home of the time.

Front Porch with Battered Columns

Gabled Roof with Deep Overhang



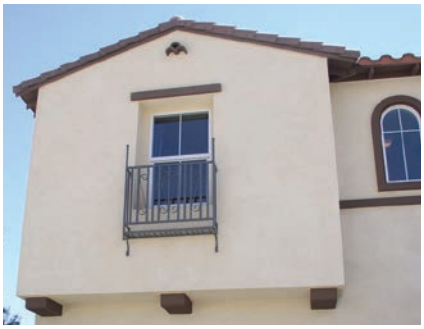
Vertical Multi-Paned Windows

Craftsman

Element	*Common Features*
Form	• Simple 2 story boxed massing with vertical and horizontal breaks
Roof	• 4:12 to 5:12 roof pitch, possibly lower pitch at main roof • 16" to 24" overhangs • Flat concrete tile - shingle appearance • Basic gabled roof - side to side with cross gables
Walls	• Horizontal siding or stone base accents may be combined with stucco. All material changes must occur on inside corner or other logical location
Windows	• Vertical multi-paned windows or use of accent window where appropriate to architectural style such as: single hung windows at front elevation, feature ribbon windows (3 or more) at front elevation • Multi-paned windows or inserts on side and rear elevations in high visibility public view areas • Vinyl wrapped windows • Use windows individually or in groups
Details	• Entry or full porches with heavy square columns or posts on stone or brick piers • Shaped wood header trim at windows and doors - wood on siding, foam on stucco • Simple or triangulated knee brace • All surface mounted fixtures on front elevations must complement architectural style • Garage door patterns and colors to complement style
Colors	• Field: Light to dark earth tones • Trim: Light to dark earth tones in harmony or contrasting with field color • Accents: Light to dark earth tones in contrast with field color

Note: Enhancements are required at corners and second-story elevations seen from public views.

Spanish Colonial



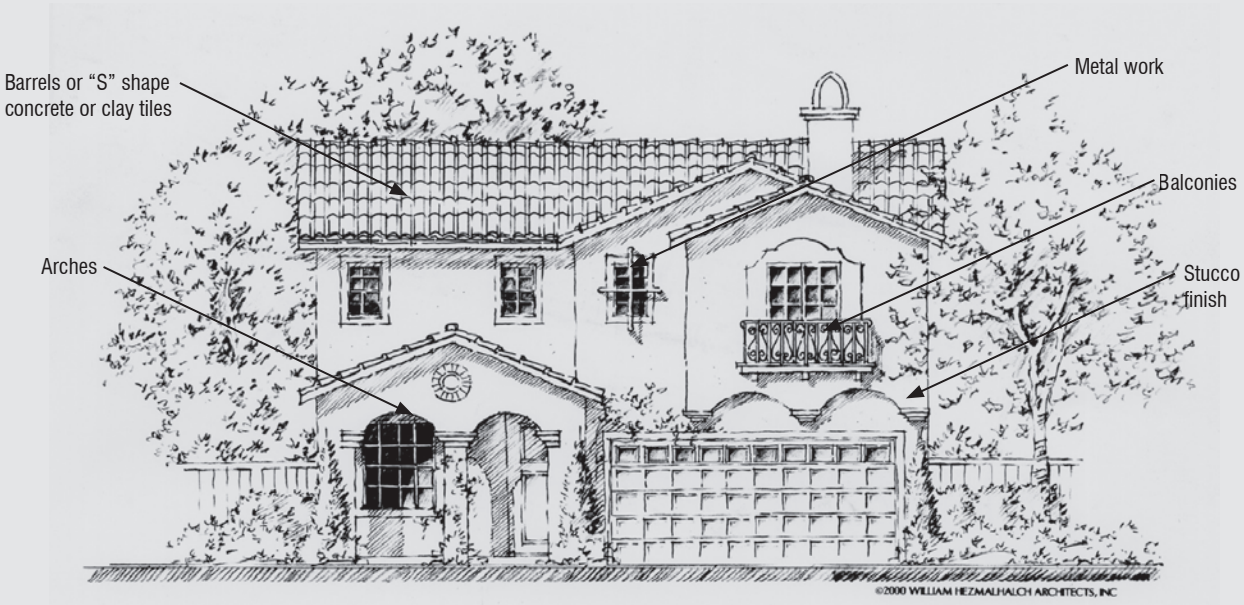
Spanish Colonial, also known as Spanish Eclectic is an adaptation of Mission Revival enriched with additional Latin American details and elements. The style attained widespread popularity after its use in the Panama-California Exposition of 1915.

The simple courtyards of the Spanish Colonial heritage with hanging pots, a flowering garden, and sprawling shade trees are hardly surpassed as foreground design elements. Further architectural distinction was established through the use of tile roofs, stucco walls, heavily textured wooden doors and highlighted ornamental ironwork.

Key features of this style were adapted to the Southern California locale. The plans were informally organized around a courtyard with the front elevation very simply articulated and detailed. The charm of this style lies in the directness, adaptability, and contrast of materials and textures.

Feature Window

Tile Roof, Gable Vent and Wrought Iron Accents



Stucco Walls with Arched Openings

Spanish Colonial

Element	*Common Features*
Form	• 2 story massing with strong one-story element
Roof	• 4:12 to 5:12 roof pitch, possibly lower pitch at main roof • 12" to 18" overhang • Simple hip or gable roof with one intersecting gable roof • Barrel or 'S' shape concrete tiles
Walls	• Stucco
Windows	• Vertical multi-paned windows or use of an accent window where appropriate to architectural style such as: feature recessed arched window, accent beveled glass recessed window, single or grouped round top windows at front elevations • Multi-paned windows or inserts on side and rear elevations in high visibility public view areas • Vinyl wrapped windows • Simple 2x window and door trim - wood or stucco over foam
Details	• Stucco over foam window and door trim • Arched stucco column porches • All surface mounted fixtures on front elevations must complement architectural style (i.e. some style appropriate details such as: wrought iron balconies and accent details and shaped rafter tails at feature areas • Garage door patterns and colors to complement style
Colors	• Field: Whites or off-whites • Trim: Dark browns • Accents: Deep jewel tones of green, blue, red (on shutters, door, balcony trim)

Note: Enhancements are required at corners and second-story elevations seen from public views.

Andalusian

The Andalusian style is an adaptation of the farmhouses and cottages found in the rural areas throughout Andalusia, in the South of Spain. Enriched with details and elements derived from Moroccan, Moorish, and classical Roman architecture this style represents a simple, yet elegant blend of cultures.

The informality of rural life originally inspired a simple, rectangular form that evolved organically over time to meet the spatial needs of the owner. Subsequent massing was typically similar in form, but changed in dimension with new functions and arrangement of spaces. The resultant irregularity in massing and appearance adds to the charm and romance of this southern European style. Its informal rustic character is highlighted with sophisticated details, natural, indigenous materials, warm, sun-bleached colors, and rich textures.

Architectural distinction is established through the use of details such as softly sculpted or curved wall and chimney articulation, colorful mosaics and tile work, rustic stone accents, balconies, perforated wall patterns and vents, cantilevered windows, classical elements, arches, and/or wrought iron grillwork accents.

Feature Windows and Simple Massing

Vertical Windows with Wrought Iron Detail

Well Articulated Entry

Andalusian

Element	*Common Features*
Form	• 2 story massing with one story elements at courtyards and/or entries
Roof	• 4:12 to 5:12 roof pitch, possibly lower pitch at main roof • 12" to 18" overhang • Simple hip or gable roof • Barrel or 'S' shape concrete or clay tiles
Walls	• Stucco finish
Windows	• Vertical multi-paned windows or use of an accent window where appropriate to architectural style such as: feature recessed arched window, accent beveled glass recessed window, single or grouped round top windows at front elevations • Multi-paned windows or inserts on side and rear elevations in high visibility public view areas • Vinyl wrapped windows • Simple 2x window and door trim - wood or stucco over foam
Details	• Arcades supported by classic columns at courtyards, balconies, and porches • Enhanced articulation at entrances and feature windows • Classical and/or Moorish details • Wood or wrought iron railings at balconies or porches • Garage door patterns and colors to complement style
Colors	• White or beige tones on field color • Dark brown or jewel toned trim

Note: Enhancements are required at corners and second-story elevations seen from public views.

7.3 Massing

7.3.1 Introduction

Creating street scenes that function well and have visual interest is a primary community objective. The following basic elements and criteria are intended to develop variations in appearance and a sense of individuality for each home. Neighborhoods that have nearly identical homes and streets without variation in product placement and form will not be approved in design review. This section lists architectural massing and plotting techniques that will help to create a quality environment.

Objectives:

- Minimize visual impact of garages;
- Give attention to composition of building mass;
- Incorporate single-story elements in two-story buildings;
- Vary setbacks at porches, living and garage areas;
- Minimize two-story dominance on streetscene, sidewalks and open spaces;
- Design with sensitivity to corner lot conditions;
- Use appropriate transition of scale; and
- Use four-sided elevation design.

7.3.2 General Elements

The general elements of building massing include:

- Front articulation;
- Roof form;
- Garage placement;
- Balconies and projections;
- Rear articulation;
- Variable setbacks; and
- Corner lots/critical edge conditions.

Neighborhood Massing and Plotting Concepts

To provide more interesting neighborhood streetscenes, varied massing on all elevations is encouraged.

Where possible when plotting, refrain from strict compliance to minimum garage setbacks to avoid contributing to repetitious street scenes. Typically, plans are to be reversed and plotted so that garages and entries are adjacent to each other to create an undulating setback. Occasionally, this pattern should be broken to avoid monotony. Additionally, no more than two (2) of the same plan/elevations shall be plotted next to each other or directly across the street from one another.

Simple Home Design

In an attempt to design aesthetically pleasing architecture that is economically feasible and functions well the concept of "The Simple House" is to be implemented. This suggests that starting with simple structural forms and building masses and appropriate roof forms can lead to the development of an "authentic" style while maintaining acceptable building costs. In order to achieve this the following basic criteria have been established:

- Design "simple," attractive homes using simple plan forms and style-appropriate massing and roof pitches;
- Use style-appropriate elements and details to enhance good architecture;
- Provide a variety of single-story heights and profiles while stepping back second story massing where appropriate;

SINGLE STORY ELEMENTS

- Acknowledge both street front facades on corner homes or buildings by 'wrapping' usable spaces, architectural elements & materials around to face the side street frontage;
- Give added attention to side and rear articulation on all building facades;
- Use covered and shaded spaces such as porches, landscaped courtyards or structural landscape elements to provide a sense of entry and respond to local climate conditions; and
- Respond to overall community character with appropriate choices of style, color and materials.

Refer to sections 7.2, 7.3, and 7.4 of this document for specific guidelines concerning styles, massing, elements and details of simple residential architectural design.

Single Story Elements

Single-story elements are encouraged on all homes to help establish neighborhood pedestrian scale and add variety to the street scene. A minimum of 33% of homes in each neighborhood shall have at least one (1) significant single-story element on an exposed front or side elevation.

Significant single-story elements include:

- Front or wraparound porch (minimum 7' deep and 10' wide);
- Roofed porte cochere;
- Single-story living space in conjunction with a second story recess of at least 5'; and
- Pop-out gable element - enclosed or open.

In neighborhoods with required lot sizes of less than 5,000 square feet, this requirement may be satisfied with the addition of a one-story porch or other elements listed above.

In neighborhoods with required lot sizes of 5,000 square feet or greater, this requirement shall be satisfied with an enclosed single-story living space in conjunction with a second story recess of at least five (5) feet.

Where forward garages are used, single story massing is encouraged.

7.3.3 Front Articulation

The appearance of the street scene and collection of homes within it is typically the first impression of any neighborhood. Most homes are seen primarily from the front and represent the transition from public to private space as well as the character of those who dwell within .

Varied Massing on Elevation

Varied Roof Forms

With this in mind it is important that the front of the home, and any sides exposed to the street receive thoughtful design and articulation to bring character and quality to the individual home and to the neighborhood as a whole. The following guidelines will help to achieve that level of articulation:

- Design neighborhood plan packages with forms and front elevations in mind to work together in controlling the impact of buildings on the street scene;
- Provide variety in form and massing to reflect interior uses and achieve attractive and interesting elevations;
- Design placement of windows to work with interior uses and provide "eyes on the street;"
- Consider the entry as a focal point when designing the front elevation; and
- Provide an appropriate level of detail and trim at entry, doors and windows to enhance good design.

7.3.4 Roof Forms

Rows of homes seen from a distance or along arterial roads are perceived by their contrast against the skyline or background. The dominant impact is the shape of the building and roof line. Articulate the building mass and roof lines to express a variety of conditions and minimize the visual impact of repetitious flat planes, similar building silhouettes and similar ridge heights. This can be achieved by designing a discernibly different roof for each home plan. Individual roof plans may be simple but between different plans should exhibit variety by using front to rear, side-to-side, gables, hipped roofs, and/or by the introduction of one-story elements.

7.3.5 Garage Placement & Treatment

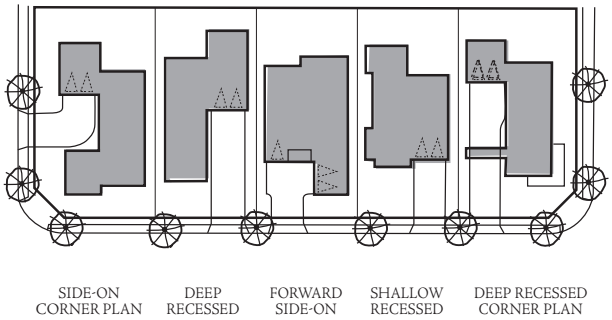
Create attractive and comfortable street scenes and pedestrian spaces by de-emphasizing garages, implementing "architecture forward," and encouraging "corner homesites."

A. Street Facing Garages

The impact of repetitive, street-front garages can be reduced by using the following techniques:

- Vary garage placement mix within neighborhood plotting plan;
- Vary garage door appearance;
- Vary garage placement; and
- Provide optional treatments that occur forward of the garage to buffer the view impact of garages and garage doors.

Vary garage placement within neighborhood plotting plan



Vary garage placement whenever possible by alternating front setbacks. Alternate plans with different garage locations when plotting adjacent homes.

Vary garage door appearance

Vary garage door pattern, windows and/or color as appropriate to individual architectural styles. Where possible, use two (2) single doors instead of a large one. Additional treatments are encouraged to buffer direct view of the garage door.

Vary garage placement from plan to plan

The following are examples of garage placements in each Conventional Small, Medium, and Large Lot neighborhood (Cluster Home and Lane Loaded neighborhoods are exempt). The intent is to limit the impact of street facing garages and vary garage placement (i.e. forward, shallow, deep recessed) within each neighborhood.

Varied Garage Placement—Street Facing

Varied Garage Door Appearance

1. Shallow-Recessed Garage

All front facing, shallow-recessed garages shall be located a minimum of five (5) feet behind the front elevation/living space and a minimum of twenty (20) feet from the property line. Homes with shallow recessed garages shall be limited to 25 percent of the total number of units in each builder's plan package; 50 percent of units may be permitted with shallow-recessed garages if front porches are provided on those plans. Porches shall have a minimum depth between 5 to 7 feet (Subject to Planning Department review and approval).

2. Mid-Recessed Garage

Mid-recessed garages are located ten (10) feet or more behind the front elevation, living space, or front porch feature.

3. Deep-Recessed Garage

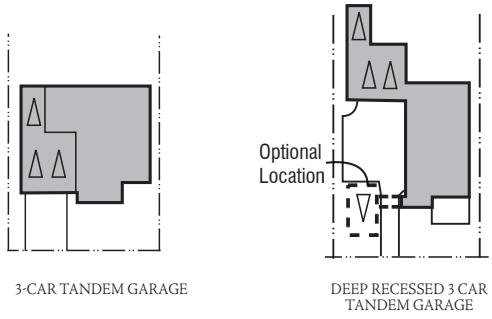
Deep-recessed garages are located twenty (20) feet or more behind the front elevation, living space, or front porch feature. These may be attached or detached.

4. Corner Lot with Side-street Entry Garage

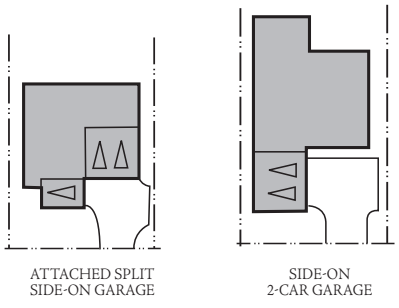
This garage placement allows the option of entering from the side street, thereby eliminating the garage and driveway from the front face of the house.

5. Garage Forward

This garage placement includes front-facing or swing-in access. It applies to any garage located forward of the home's front facade. Extra attention and treatments should be applied when using this garage location.



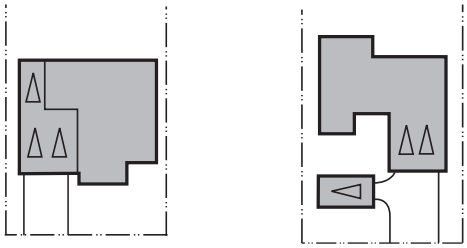
Shallow Recessed



Mid Recessed

Deep Recessed

Varied Tandem Garage Examples



Varied Swing-in Garage Examples

Split 3-car Swing-in Example
(55' Wide Minimum)

Detached, Deep Recessed Examples

Varied Tandem Garage Examples

Forward Side-On Garage

Side-on garages greatly reduce the impact of garage door faces on the streetscape. The resultant street-facing garage wall shall be articulated with the same level of detail as the front facade of the home including windows, trim, etc.

- Side-on garages are prohibited on lots less than 55' wide; and
- All garage doors on side-on plans shall be recessed a minimum of twelve (12) inches behind the garage wall plane.

Forward-Front facing Garage

This garage placement is limited and must be used in combination with others to lessen the impact on the street scene. The minimum garage setbacks (as stated in Section 7.5, Home Types, of this document) shall be maintained.

- All garage doors located forward of the front living space shall be recessed a minimum of twelve (12) inches behind the garage wall plane.

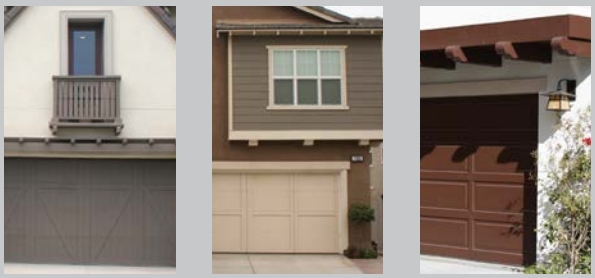
Garage Treatments

Garage Placement

Tandem Garage or Split Garages

When a three (3)-car garage is planned, the impact on the streetscape can be reduced by constructing the additional car bay in tandem behind the standard two (2)-car garage door. Designing split or separated garages is another option to reduce the impact of adjacent garage doors.

3-Car Front-Facing Garage Requirements



Three (3)-car garages with all doors facing front are limited to:

- One plan per neighborhood plan package ;
- Lots that are 55' wide or greater; and
- All other standard garage requirements of the Specific Plan

When a 3-car front-facing garage is used, in addition to standard garage requirements and a minimum seven (7) feet deep by ten (10) feet wide porch, it shall provide at least one (1) of the following additional front-facing plan requirements:

- Offset a single garage door at least two (2) feet from a double door; and

- Provide three (3) single garage doors each separated by at least one (1) foot. Three (3)-car garages may be located forward of the house or recessed. If they are located forward of the living space they are subject to all requirements of garage forward plans.
- Provide an 18- to 24-inch box-out or architectural projection forward of the garage to create a plane break.

Box-out and Architectural Projection Examples

Detached Garages

Detached garages may be deep-recessed or corner-facing with a side street entry. Detached garages are located toward the rear of the lot behind the primary structure. They are enhanced by applying the same details found on the home. When detached garages are front-facing, long driveways should be improved by adding texture, pattern or a 'ribbon' driveway.

Optional Garage Treatments

The following optional treatments are encouraged to reduce or buffer the direct view of garages and garage doors from the sidewalk or street.

Porte Cochere

A recessed garage plan with a porte cochere creates an additional, partially covered, parking space and serves an occasional outdoor private space while buffering the view of the garage.

Garage Door Screening Elements

The following screening elements may be utilized to reduce direct impact of the garage:

- An attached overhead trellis installed beneath garage roof fascia and/or above garage door header trim.
- Driveway may be spanned with a gated element or overhead trellis.

Three Car Tandem Garages

Offset Garage Doors

Three Single Garage Doors

Porte Cochere Example

B. Garage Placement and Treatments

Lane Facing / Motorcourt Garages

Although lanes and motorcourts are thought of as merely a transitional vehicular space, they also provide garage and sometimes direct residence access, trash collection and other daily utility uses. They may be experienced by homeowners as often as the front entries to these homes.

Therefore, when designing lanes and motorcourts, both functional and aesthetic issues are to be considered. It is the intent to provide a pleasant experience for daily users by incorporating both in the elements of lane design.

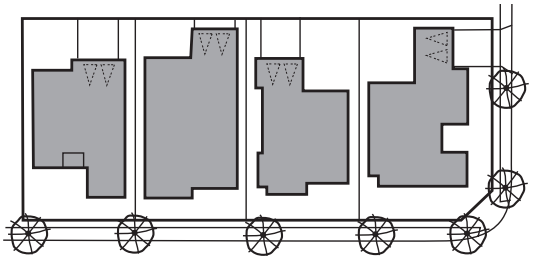
Lanes and motorcourts with home and garage elevations that have similar or identical facades, setbacks, roof lines, or color schemes are not permitted.

In order to avoid this, the following requirements must be met:

- Avoid a multi-storied, "canyon-like" effect within the lane by providing varied massing, vertical and horizontal offsets of primary architectural elements and roof lines. Where possible, vary ground floor building setbacks to provide undulation in the line of garage doors. All drive apron and building separation setback requirements shall still be maintained, (refer to Section 7.5, Home Types for specific setback requirements);
- Articulate lane-facing and motorcourt building elevations with style-appropriate window trim, elements and details;
- Vary garage door appearance by using door patterns, colors, and windows appropriate to individual architectural styles;
- Design and locate rear privacy walls and pedestrian-gate entries to provide ease of access to the rear yard, allow sufficient dimension for landscape requirements and screen trash can storage from lane and motorcourt view; and
- Provide landscape planters (as feasible) within lanes to soften the appearance of the building elevations.

C. Off-Street Parking

If providing off-street parking, ensure the dimensions of the space are 9 feet by 18 feet for uncovered spaces. A 2-foot landscape area may be used to reduce the stall length minimum to 16 feet. Carports must have 10 feet by 20 feet clear at minimum.



Cottage

Farmhouse

LANE (PRIVATE ALLEY) LOADED ACCESS

Varied Garage Placement—Lane (Private Alley) Facing

7.3.6 Balconies and Projections

The inclusion of balconies and projections are encouraged for both aesthetic and practical purposes. They are useful in breaking up large wall planes, offsetting floors, providing shade, creating visual interest, and adding human scale to a building. Balconies also provide the practical advantage of extending living areas to the outdoors and providing elevated spaces and views.

- Balconies may be covered or open. They may be partially recessed into the mass of the building or serve as a projecting element; and
- Design balconies as integral elements of the building with details, eaves, supports, and railings to be consistent with the architectural style and other elements of the building's design.
- Unless otherwise specified within a Planning Area patio covers shall be a minimum of three (3) feet from a property line.
  - Measured from post (with an overhang) or from the edge; if any encroachments into required setback is allowed.

Other architectural projections may include elements such as cantilevered massing, secondary roof changes, niches in plan and bay windows.

7.3.7 Accessory Structures

- Accessory structures, also referred to as freestanding structures (e.g. sheds, trellises) shall be a minimum of four (4) feet from the side or rear property line. If development standards require a five (5) foot side yard setback, the accessory structure shall be a minimum five (5) feet from the side or rear property line.

7.3.8 Elevation Enhancements

The second story portion of elevations facing a public street should include a variety of window treatments, roof projections, etc. to provide an appearance similar in quality to front elevations. A variety of hipped and gabled roof forms should be used in each neighborhood. One-story elements also help to provide this variety.

7.3.9 Varied Massing

Provide varied massing and articulated elevations consistent with the selected style. Provide alternative garage locations, from shallow to deep, and alternate plan configurations within each neighborhood, for conventionally loaded product.

Floor Plan Form

Keep architectural styles in mind when designing the floor plan. For example, styles such as Cottage or Farmhouse that reflect asymmetrical massing and steeper roof pitches may be applied to a similar floor plan and elevation while both maintain an authentic appearance.

7.3.10 Corner Lots/Critical Edge Conditions

Neighborhood quality will be enhanced by adding a home plan designed specifically for the corner, or by enhancing an interior lot plan for use on the corner with additional architectural elements and/or details as found on the front elevation.

All corner homes (Conventional, Lane Loaded, and Cluster Home product) shall wrap materials (where applicable to the style/front elevation) and continue articulation around to the corner side facade. All material changes shall occur on an inside corner such as a porch, fireplace, niche or bay window, OR coincide with an architectural element that conceals the material change, OR terminate a logical stopping point such as a fence, column, or window.

Corner Plans

At least two (2) plans per Conventional and Lane Loaded residential product neighborhood should be designed for optional use on corner lots. Cluster Home product should be designed appropriately to address the front and corner side exposure.

- One (1) of these plans shall include a significant architectural element that encompasses an interior room or living space that wraps around or occupies the corner side yard.

A second plan (primarily for conventional product) should include an element that helps to articulate the side facade such as:

- A wraparound porch;
- pop-out side gable;
- significant wall plane offset;
- appropriately detailed second story pop-out.

These elements will also provide logical stopping points/less conspicuous inside corners for wrapping materials. Corner plans should also consider use of the following elements:

- A corner-related front entry door placement; and
- A garage placement that allows entry from the side street or lane.

Community Recreation and Common Facilities

Private, common recreation facilities may include a pool, spa, clubhouse, barbeque areas or other facilities as appropriate to the community. Common facilities act as key character elements. Therefore, the following should be considered when designing for such facilities.

- Clubhouse and other common buildings should exhibit a high level of quality and attention to detail on all sides of the building;
- All architectural and community elements, such as street furnishings, benches, and lighting standards should be consistent with the selected overall architectural character for the community; and
- Colors, massing, roof pitch, and materials of surrounding residential buildings should also be considered in conjunction with the design of the common facility.

Wrapping Materials

Wraparound Porch On Corner Plan

Doors

Windows

7.4 Materials and Details

7.4.1 Introduction

Although the character and style of homes should be established primarily through the use of massing, roof forms and key architectural elements, the addition of appropriate secondary character elements, detailing and accent materials provides an effective means of further reinforcing and enhancing character and style interpretations.

Key elements are those primary architectural features of the home that clearly discern one style from another. Secondary elements and details are identified as those that help to reinforce or enhance an already identifiable style. A list of appropriate elements, colors and materials for each individual style is found in the requirements matrices in the "Architectural Styles" section of this document.

The Key or Primary elements are:

- Doors and Entries;
- Windows;
- Rakes and Eaves;
- Exterior Lighting Fixtures;
- Roof Materials;
- Colors;
- Accent Materials; and
- Wall Finishes

7.4.2 Doors and Entries

Building entries represent an important point of interface between public and private spaces typically creating the initial impression for the user and a focal point for the viewer. Front doors and associated entry spaces should thereby be treated with a sense of importance and detailed so as to emphasize their location and purpose. In designing the door and entry space of homes the following guidelines shall be observed:

- Design of door and entry spaces shall be consistent with the architectural style of the home;
- Doors shall be protected by a deep recess, porch or other covered element;
- Door and entry spaces shall reflect a level of detail appropriate to their function and architectural style;
- Surface mounted lights shall not be permitted in garage door soffits; and
- Wall mounted lighting fixtures shall be selected according to the individual style of the home or building.

7.4.3 Windows

The following guidelines shall be observed for windows:

- Proportions and alignment shall be appropriate to individual style;
- No highly reflective glazing shall be used;
- Windows may be vinyl-wrapped or wood;
- Inset windows shall be a minimum of two (2) inches in depth;
- Recessed windows are encouraged to be a minimum of six (6) inches in depth;
- Window placement shall be designed to enhance privacy between neighbors;
- Full window trim is encouraged on street facing elevations;
- Shutters shall be sized to match window width and exhibit style-appropriate hardware; and
- Style-appropriate grates, shutters and tile surrounds are encouraged.

7.4.4 Rakes and Eaves

As with other architectural elements, roof edge treatments vary with the character of each style. Rakes and eaves shall reflect that of each individual style and contribute to the overall look and feel of the community.

- Elements and proportions of rakes and eaves shall be appropriate to the individual style;
- Where appropriate to individual style, larger eave overhangs are encouraged to provide opportunities for shading and relief; and
- Rafter tails, when exposed, shall be a minimum of four (4) inches and painted or stained.

7.4.5 Exterior Lighting and Fixtures

In the neighborhoods, streets and lanes of the Specific Plan emphasis shall be placed on lighting for safety, security and aesthetics. Street poles and wall fixtures shall be used to provide sufficient light for traversal and visibility, thereby providing the community with a comfortable level of safety and security at night. Every attempt should be made to reduce overflowing light on adjacent homes and to increase the amount of light in less visible areas.

Opportunities to use lighting for directional and aesthetic reasons should also be considered. Where fixtures are not an important focal point, conceal light sources and concentrate on achieving the maximum effects of good lighting design. Where fixtures are part of architectural detailing they should reflect the selected style.

- Lighting used on walls and walkways shall focus light down and provide appropriate down-casting hardware to minimize glare; and
- Ambient light shall be down-cast to reduce the impact on the neighborhood.

Exterior Treatments

7.4.6 Roof Materials

Roof materials, colors and treatments should correspond to the individual character or style of the home or building and be compatible with the overall look of the neighborhood. Style appropriate materials and colors are found in each appropriate matrix in the "Architectural Styles" section of this document.

- A variety of roof plans, forms and ridge heights shall be provided using hips, gables and intersecting elements to avoid a repetitious skyline;
- High quality composition, concrete or clay tiles may be used in conjunction with the style of home; and
- Skylights are prohibited on sloped roofs facing public streets.

7.4.7 Colors

A varied palette of regional and style-appropriate colors and materials have been selected for the homes in the Specific Plan. This inherently rich and diverse palette will provide the variety required for visual interest while providing a sense of unity within the neighborhoods. Style-appropriate color selections will enhance the architectural character and impart individuality to each home.

- Color shall contribute to distinguishing the overall architectural character of the dwelling. Refer to "Architectural Styles" matrices for individual color palettes;
- Hue variation in adjacent homes shall be provided to create diversity within the neighborhood;
- Diversity of color is encouraged; and
- Roof tile colors will be selected according to architectural styles.

To further this goal of diversity, the following criteria shall be met:

- Elevation/color scheme shall consider the composition of colors, appropriately combining colors for an aesthetic and varied streetscape. Consider field color, trim color, accent colors, and accent materials colors.
- Individual color schemes must be appropriate to the architectural styles with a harmonious selection of accent materials, roof profiles and colors;
- No adjacent or facing home shall have the same color scheme; and
- No more than two (2) of the same plan/elevation shall be plotted adjacent to one another.

Roof Materials

Accent Materials

7.4.8 Accent Materials

Accent materials should be used to enhance and reinforce the architectural style and composition of individual homes and provide variety in the street scene. Selective use of appropriate materials, color and placement can provide maximum impact while imparting a sense of unique character to each home.

- Culmination of accent materials shall terminate at inside corners or coincide with an edge or architectural element to conceal changes in material. Where views are limited or edges concealed by an architectural element, accent materials may terminate at privacy wall conditions;
- Natural stone, approved manufactured or cultured stone, painted or natural brick, precast concrete, ceramic tile, slump block, and horizontal or vertical wood siding (or approved manufactured siding, i.e. cementitious board) are encouraged;
- Accent materials shall be selected to complement the overall color and style of the home or building; and
- Architectural trim applied to all elevations is encouraged to be consistent with front elevation and the architectural style.

7.4.9 Wall Finishes

Style-appropriate wall finishes should visually enhance individual homes. The use and placement of extreme contrasts in color and/or materials should be carefully considered in order to maintain a compatible overall look throughout the neighborhood. Footings shall be exposed no higher than 6" above finished grade.

Permitted Finishes:

- Stucco: light to medium sand finish ("Spanish Lace" finish is prohibited);
- Exposed masonry walls (brick, slump block, etc.);
- Stone, brick, adobe, brick veneers (accent materials);
- Horizontal plank siding; and
- Board and batten siding.

7.4.10 Trash Container Pads in Lanes

Builders are required to build one (1) 42-inch by 42-inch brick pane pad for each lot immediately adjacent to the lane for the purpose of temporarily placing trash containers for pick-up by the Sanitation Department on scheduled days. The design of the enclosures shall comply with NPDES requirements.

7.5 Home Types

7.5.1 Introduction

A primary design objective for the Specific Plan is to provide a variety of home sizes and plans to suit the needs of different life stages and market segments.

The following section provides conceptual plotting examples for a variety of single-family detached homes, arrangements, and lot size ranges. The plotting concepts are provided only to illustrate a typical layout of each building type. These concepts are not intended to be mandated layouts.

7.5.2 Home Type Criteria

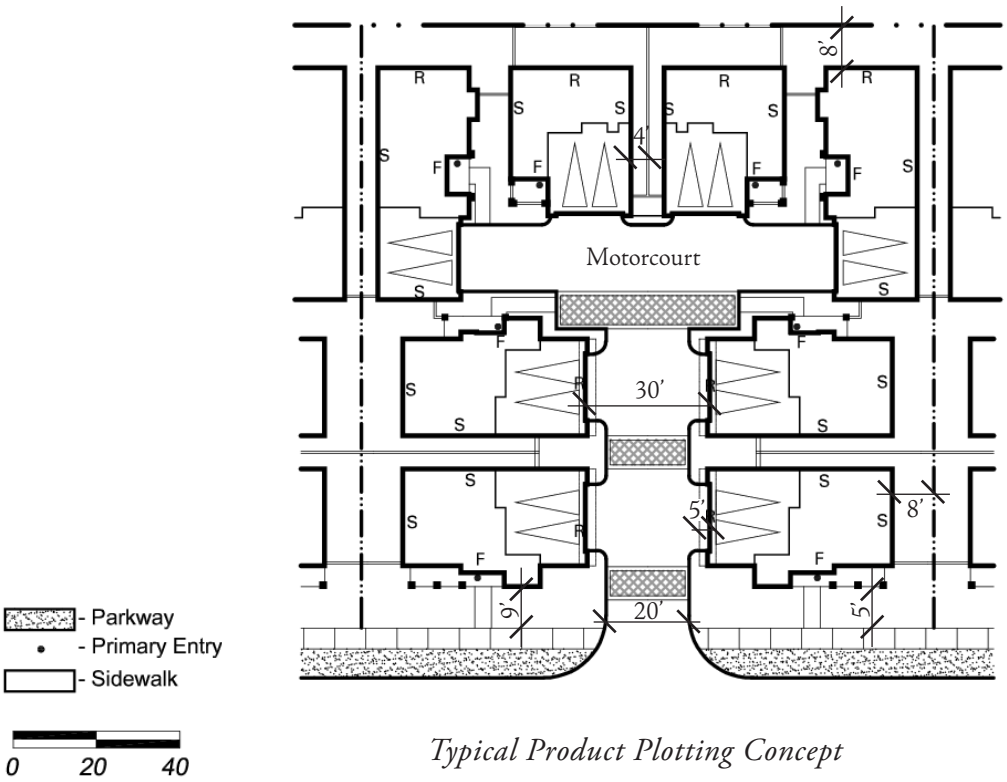
The following are design standards and minimum setbacks by typical residential product and building type.

Finishes

Cluster Homes Residential Product:

Motorcourt Cluster A (6- or 8-Plex) ***(PA 13, 25, 26 & 27)****

Characteristics



- Potential net density of 7.5 to 9 du/ac.
- Single-family detached dwellings clustered around motor court
- Automobile access via common motor court driveway
- Primary entries and walks face motor court or street
- Private side and rear yards
- Parking for residents provided in garages
- Guest parking provided on local streets, designated parking areas, or as approved by the City of Ontario
- Reciprocal use easements extend private space

Notes:

1. Actual acreages, lot sizes, unit counts and densities may vary based on final plans.
2. Refer to other areas of ***Chapter 7 – Residential Design Guidelines,*** for more specific criteria regarding building design, plotting, styles, materials, details and implementation.
3. Refer to other areas of 7.6 Landscape Design, for specific criteria regarding all landscape design and implementation.
4. Typical Product Plotting Concepts are provided for representative purposes only - not intended to be mandated layout.

* Proposed representative product types in each planning area are subject to final development submittal and are subject to change.

Cluster Homes: Motorcourt Cluster A (6- or 8- Plex) *(PA 13, 25, 26 & 27)*

Note: Private lanes shall be enhanced with a combination of pavers, colored concrete or similar decorative material, subject to the review and approval of the Planning Director.

Typical Product Plotting Concept

Minimum Standards

Minimum Lot Size
Exclusive use area per home 2,100 s.f.

Building Separation
Front to side living space N/A
Front entry to side living space 8' (4' +4')
Side to side living space 8' (4' +4')

Side Setbacks - To Back of Sidewalk - Street Facing
Living space 9'
Porch, balcony 5'
Garden wall N/A'

Side Setbacks - To Parcel Edge
Living space to property line 4'

Rear Setbacks - To Parcel Edge
Living space (2-story) 8'

Garage Setbacks
Garage face to garage face 30'
Garage face to driveway (apron) 5'*
Note: Lane width may be increased to 24' when the lane length exceeds 150'.
Second floor cantilever over garage 2'

Private Open Space Per Unit
Minimum dimension 6'
Total per unit 100 s.f.

Parking Per City of Ontario Development Code

Building Height
Architectural projections may exceed the maximum building height of 35' by an additional 10'.

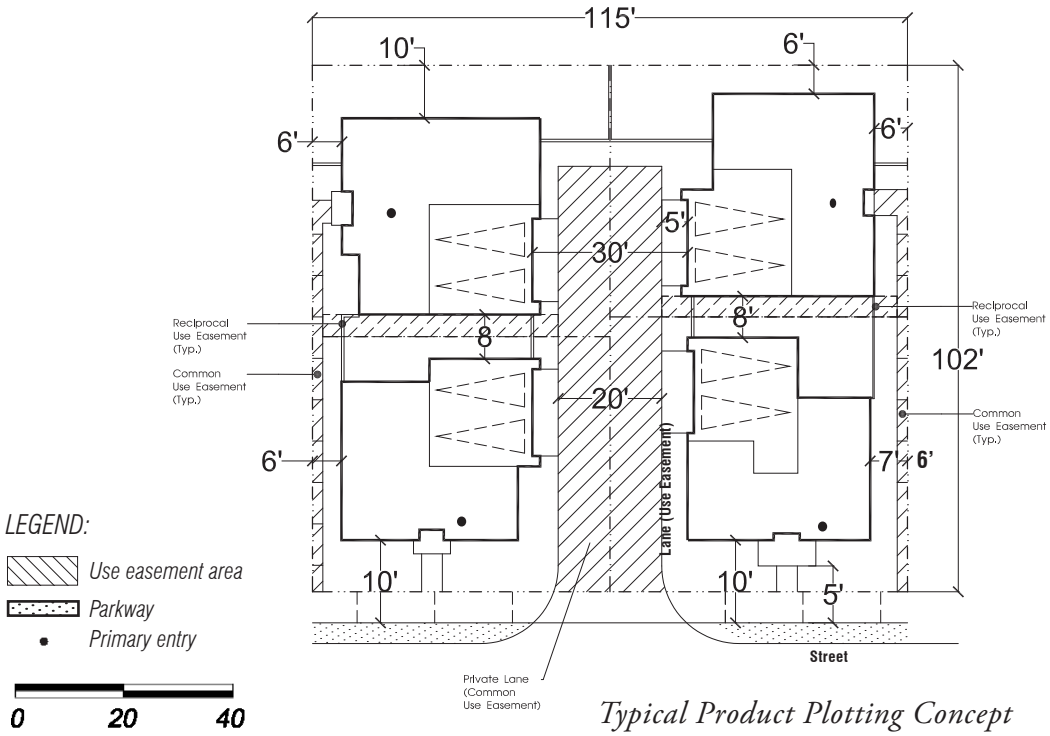
*Measurement is to be taken from the inside of the curb.

Cluster Homes Residential Product:
Paseo Cluster Lots (PA 25 & 27)*

©2015 William Hezmalhalch Architects, Inc.

Not to Scale

Characteristics



- Potential net density of 7.5 to 9 du/ac.
- Single-family dwellings with front orientation (primary entries and walks) along green court, paseo, or street
- Automobile access via lane
- Private side and rear yards/patios
- Parking for residents provided in garages
- Guest parking provided on local streets or in designated parking areas
- Reciprocal use easements may be used to increase private yards and meet building standards

Notes:

1. Actual lot sizes and densities may vary based on final plan.
2. Refer to other areas of Section 7 - Residential Design Guidelines for more specific criteria regarding building design, plotting, styles, materials, details, and implementation.
3. Refer to Section 7.6 Landscape Design, for specific criteria regarding landscape design and implementation.
4. Typical Product Plotting Concepts are provided for representative purposes only and are not intended to be mandated layouts.

* Proposed representative product types in each planning area are subject to final development submittal and are subject to change.

Cluster Homes: Paseo Cluster Lots *(PA 25 & 27)*

Note: Private lanes shall be enhanced with a combination of pavers, colored concrete or similar decorative material, subject to the review and approval of the Planning Director.

Minimum Standards

Minimum Lot Size

Exclusive use area per home	2,100 s.f.

Cluster Dimensions*

Lot width standard	115'
Lot width on corner Lot	120'
Lot depth on standard lot	102'
Maximum building coverage	45%

*Minimum lot dimensions on curvilinear streets shall be measured at front and rear building setbacks.

Building Separation

Side to side living space	8' (4'+4')
Paseo separation	12' (6'+6')

Front Setbacks - To Back of Sidewalk - Street Facing

Living space	10'
Porch, balcony	10'
Garage facing street	- -
Garage facing lane	10'

Building Height

Architectural projections may exceed the maximum building height of 35 feet by an additional 10 feet.

Side Setbacks - To Back of Sidewalk - Street Facing

Living space	10'
Porch, balcony	5'
Corner facing garage	18'

Interior Setbacks to Property Line or Lane

Living space to PL (ground floor)	6'
Living space to lane (ground floor)	5'
Garage to PL or lane	5'

Encroachments into Setbacks

Fireplace, media niche (8' max length), bay windows, potshelves, brackets, roof overhangs etc.	2' max encroachment, 3' min. from PL
Second story living space over garage, offset or cantilever from face of garage (or as approved by the City of Ontario)	4' max encroachment, 3' min. from PL

Private Open Space Per Unit

Minimum dimension	10'
Total per unit	100 s.f.

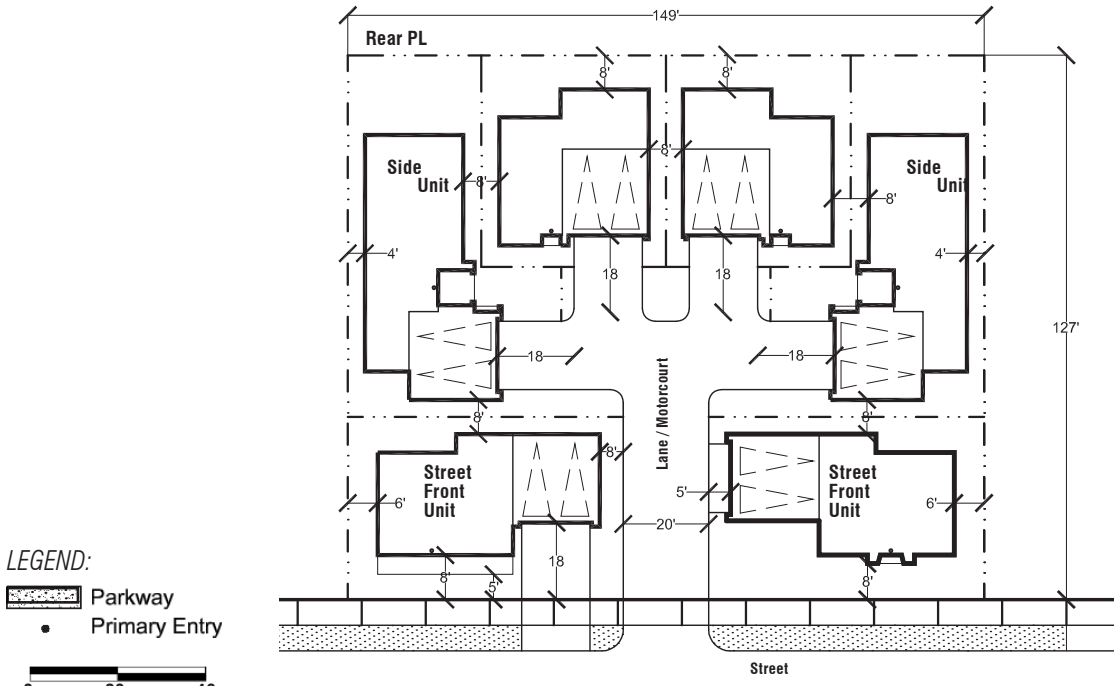
Parking Per City of Ontario Development Code

Cluster Homes Residential Product:
Motorcourt Cluster B (PA 26 & 27)*

©2015 William Hezmalhalch Architects, Inc.

Not to Scale

Characteristics



- Potential net density of 8.5 to 10 du/ac.
- Single-family dwellings with front orientation along paseos, motorcourt, or street
- Automobile access via lane or motorcourt
- Primary entries and walks face paseos or motorcourt
- Private yards/patios
- Parking for residents provided in garages
- Guest parking provided on local streets or in designated parking areas
- Reciprocal use easements may be used to increase private yards and meet building standards

Notes:

1. Actual lot sizes and densities may vary based on final plan.

Characteristics

- Potential net density of 5 to 8 du/ac.
- Single-family dwellings with street front orientation
- Automobile access via lanes
- Primary entries and walks face street
- Private side yards
- Reciprocal use easements extend private yard space
- Parking for residents provided in garages
- Guest parking provided on local streets or in designated parking areas

Notes:

1. Actual lot sizes and densities may vary based on final plan.
2. Refer to other areas of Section 7 - Residential Design Guidelines, for more specific criteria regarding building design, plotting, styles, materials, details, and implementation.
3. Refer to Section 7.6 Landscape Design, for specific criteria regarding landscape design and implementation.
4. Typical Product Plotting Concepts are provided for representative purposes only and are not intended to be mandated layouts.

* Proposed representative product types in each planning area are subject to final development submittal and are subject to change.

Lane Loaded: Lane Homes *(PA 9, 10, 19 & 29)*

Typical Product Plotting Concept

©2006 William Hezmalhalch Architects, Inc.

Minimum Standards

Lot Dimensions

Minimum lot size	3,150 sq. ft.
Lot width on front	45'
Lot width on corner	50'
Lot depth on standard lot	70'
Maximum building coverage	50%

Building Separation

Side to side living space	10' (5'+5')
Rear to rear living space	26'
Garage face to garage face	30'

Front Setbacks - to Back of Sidewalk

Living space	10'
Garden wall	3'
Porch, balcony	8'

Side Setbacks

Living space to property line or paseo easement	5'

Building Height

Architectural projections may exceed the maximum building height of 35 feet by an additional 10 feet.

Side Setbacks - at Corners - to Back of Sidewalk

Living space	10'
Porch or balcony	8'
Garden wall	3'

Rear Setbacks - to Lane

Living space (ground floor)	8'
Garage face (drive apron)	3'-5'*
Living space over garage - min. offset or max. cantilever from face of garage	2'

Encroachments into Setbacks

Fireplace, media niche (8' max length), bay windows, potshelves, brackets, roof overhangs etc.	2' max encroachment, 3' min. from PL
Second floor cantilever over garage (or as approved by the City of Ontario)	4' max encroachment, 3' min. from PL

Private Open Space Per Unit

Minimum dimension	7'
Total per unit	70 s.f.

Parking Per City of Ontario Development Code

*Measurement is to be taken from the inside of the curb.

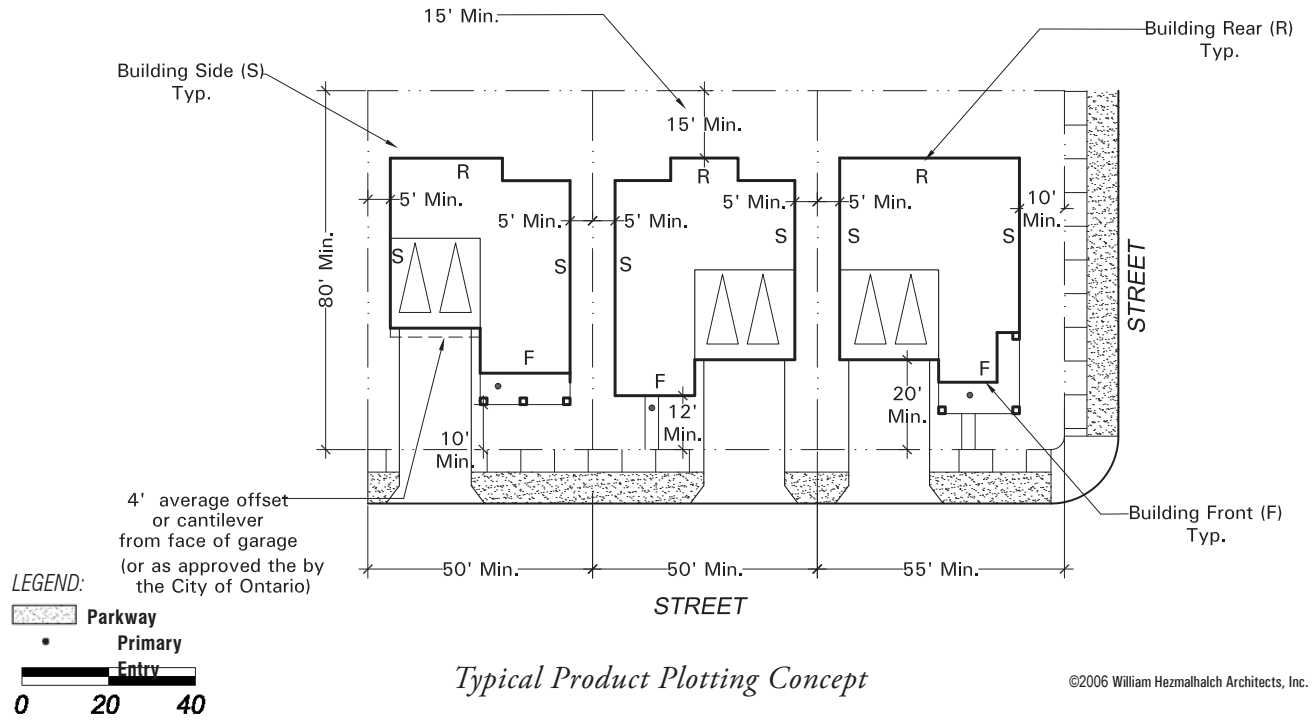
Conventional Medium Lot Residential Product:

Village Homes (PA 3, 4, 6, 8, 20, 21, 28, 29 & 31)*

©2006 William Hezmalhalch Architects, Inc.

Not to Scale

Characteristics



- Potential net density of 4 to 6 du/ac.
- Single-family dwellings with street front orientation
- Automobile access via street
- Primary entries and walks face street
- Private rear and side yards
- Parking for residents provided in garages
- Guest parking provided on local streets or in designated parking areas

Notes:

1. Actual lot sizes and densities may vary based on final plan.
2. Refer to other areas of Section 7 - Residential Design Guidelines for more specific criteria regarding building design, plotting, styles, materials, details, and implementation.
3. Refer to Section 7.6 Landscape Design, for specific criteria regarding landscape design and implementation.
4. Typical Product Plotting Concepts are provided for representative purposes only and are not intended to be mandated layouts.

* Proposed representative product types in each planning area are subject to final development submittal and are subject to change.

Conventional Medium Lot: Village Homes *(PA 3, 4, 6, 8, 20, 21, 28, 29 & 31)*

Typical Product Plotting Concept

Minimum Standards

Lot Dimensions

Minimum lot size	4,000 sq. ft.
Lot width on front property line	50'*
Lot width on corner	55'
Lot depth on standard lot	80'
Maximum building coverage	50%
Minimum front lot width on cul-de-sac, standard knuckle or modified knuckle street	35'

Minimum lot dimensions on curvilinear streets shall be measured at front and rear building setbacks.

Building Separation

Side to side living space	10' (5'+5')

Front Setbacks - To Back of Sidewalk - Street Facing

Living space	12'
Porch, balcony	10'
Garage	20'
Side-on garage**	15'

Building Height

Architectural projections may exceed the maximum building height of 35 feet by an additional 10 feet.

Side Setbacks - To Back of Sidewalk - Street Facing

Living space	10'
Porch, balcony	10'
Side-on garage**	15'
Corner facing garage	20'

Rear Setbacks to Property Line

Living space (ground floor) minimum	15'

Encroachments into Setbacks

Fireplace, media niche (8' max length), bay windows, potshelves, brackets, roof overhangs etc.	2' max encroachment, 3' min. from PL
Second floor cantilever over garage (or as approved by the City of Ontario)	4' max encroachment, 3' min. from PL

Private Open Space Per Unit

Minimum dimension	7'
Total per unit	70 s.f.

Parking Per City of Ontario Development Code

*Planning Area 3 may have a lot width of 45' for a variable lot program per minor SP Amendment August 2013.
**Side-on garages are prohibited on lots less then 60' wide.

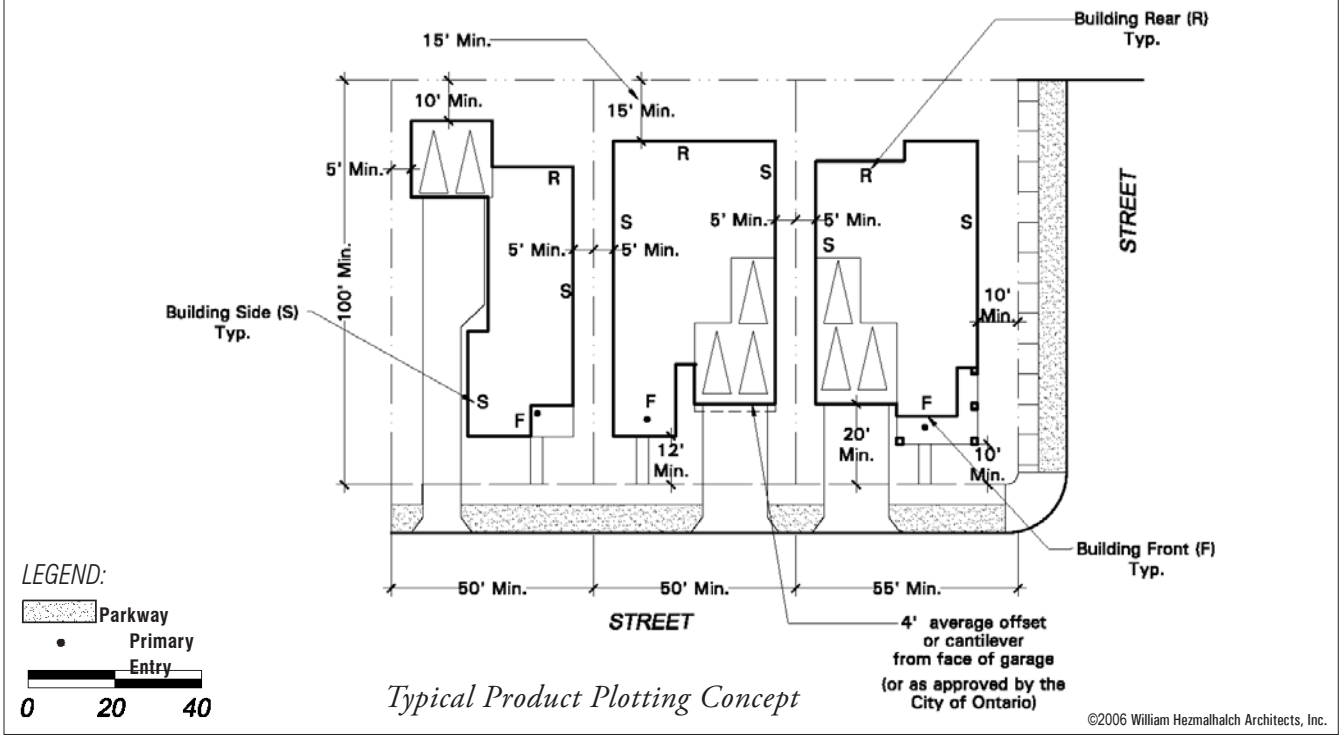
Conventional Large Lot Residential Product:

Enclave Homes (PA 7, 22 & 30)*

©2006 William Hezmalhalch Architects, Inc.

Not to Scale

Characteristics



- Potential net density of 3 to 6 du/ac.
- Single-family dwellings with street front orientation
- Automobile access via street
- Primary entries and walks face street
- Private rear and side yards/patios
- Parking for residents provided in garages
- Guest parking provided on local streets or in designated parking areas

Notes:

1. Actual lot sizes and densities may vary based on final plan.
2. Refer to other areas of Section 7 - Residential Design Guidelines for more specific criteria regarding building design, plotting, styles, materials, details, and implementation.
3. Refer to Section 7.6 Landscape Design, for specific criteria regarding landscape design and implementation.
4. Typical Product Plotting Concepts are provided for representative purposes only and are not intended to be mandated layouts.

7.6 Landscape

7.6.1 Introduction

Careful consideration has been given to the design of the community landscape architectural character for the Specific Plan. The following design guidelines are organized to help define the basic landscape design principles for the Specific Plan. Observing these guidelines will help to assure the "design vision" and integrity of this planned community.

All landscape plans, streetscape plans, and graphic designs with regard to community identity, neighborhood identity, or entry monumentation shall conform to the guideline as set forth herein, and shall be subject to review and approval by the City of Ontario.

The community landscape character for the 2023 Amendment area will be complementary to the character established in the adopted Specific Plan. Landscaping shall be subject to the same landscaping guidelines in the adopted Specific Plan, with the addition of more drought tolerant planting options to meet current code requirements. Community walls and fences, outdoor lighting, mailboxes, and similar community-wide landscape elements shall be subject to the same requirements as the adopted Specific Plan to ensure a consistent character. However, wall and fencing materials may include modified designs, such as precision block walls and caps, "wood plank" stone veneers and steel gates, to capture a more contemporary aesthetic. Refer to ***Exhibit 44A—Amendment Area Wall & Fence Plan*** for the location of community walls and fences in the Amendment Area.

7.6.2 Overall Streetscapes and Entries

Perimeter Streetscape Design

Streetscape design guidelines establish a hierarchy for the landscape development along the surrounding roadways, as well as establishing a framework for consistency of design. Three (3) major master planned arterial roadways surround the Specific Plan area: Archibald Ave. to the west, Eucalyptus Ave. to the north, and Haven Ave. to the east. Landscape easements associated with these roadways have been defined, as noted in The Ontario Plan (TOP) Policy Plan (General Plan).

Landscape development surrounding the Specific Plan area will help to set the character, while maintaining consistency with the City of Ontario's pedestrian pathway system illustrated within the Mobility Element Exhibit M-3: Multipurpose Trails and Bikeway Corridor Plan of The Ontario Plan (TOP) Policy Plan (General Plan).

Archibald Ave.

Archibald Ave. streetscape (North of Merrill Ave.) shall include the following:

- A landscaped parkway 7-foot wide parkway on the west side and 10-foot wide parkway on the east side with a double row of street trees per the New Model Colony Streetscape Master Plan along both sides of the street;
- A split sidewalk (5-foot wide)/DG Multipurpose Trail (8-foot wide) along the west side of the street. Multipurpose trail shall be separated from the concrete sidewalk and shall be constructed of stabilized decomposed granite;
- A landscaped median (26-foot wide) with a single row of street trees per the New Model Colony Streetscape Master Plan;
- A landscape easement of fifty (50) feet measured from face of curb to perimeter wall on both sides of the street;
- Background trees (minimum of 24-inch box) and shrub masses planted in series of layers (foreground, midground, background) to help define borders and plant grouping while combining interesting foliage textures and color; and
- Monumentation as shown in the ***Conceptual Landscape Master Plan, Exhibit 20.***
- Refer to the ***Streetscape/Paseo Sections, Exhibit 21 and Archibald Ave., Exhibit 22A*** for illustration.

Archibald Ave. streetscape (South of Merrill Ave.) shall include the following:

- A landscaped parkway 7-foot wide parkway on the west side and 10-foot wide parkway on the east side with a double row of street trees per the New Model Colony Streetscape Master Plan along both sides of the street;
- A sidewalk (5-foot wide) along both sides of the street. The multipurpose trail shall be separated from the concrete sidewalk and shall be constructed of stabilized decomposed granite;
- A landscaped median (26-foot wide) with a single row of street trees per the New Model Colony Streetscape Master Plan;
- A landscape easement of 50-foot measured from face of curb to perimeter wall on both sides of the street;
- Background trees (minimum of 24-inch box) and shrub masses planted in series of layers (foreground, midground, background) to help define borders and plant groupings while combining interesting foliage textures and color; and
- Monumentation as shown in the ***Conceptual Landscape Master Plan, Exhibit 20.***
- Refer to the ***Streetscape/Paseo Sections, Exhibit 21 and Archibald Ave., Exhibit 22*** for illustration.

Eucalyptus Ave.

Eucalyptus Ave. streetscape shall include the following:

- A landscaped parkway (7-foot wide min.) with a single row of street trees per the City of Ontario Street Tree Master Plan along both sides of the street;
- A lineal sidewalk (5-foot wide) on the south side of the street, with a (13-foot wide) sidewalk/bike path on the north side;
- A landscape easement of 35 feet measured from face of curb to perimeter wall on both sides of the street;
- Background trees (minimum of 24-inch box) and shrub masses planted in series of layers (foreground, midground, background) to help define borders and plant groupings while combining interesting foliage textures and color; and
- Monumentation as shown in the ***Conceptual Landscape Master Plan, Exhibit 20.***
- Refer to the ***Streetscape/Paseo Sections, Exhibit 21 and Eucalyptus Ave., Exhibit 25*** for illustration.

Haven Ave.

Haven Ave. streetscape shall include the following:

- A landscaped parkway (16-foot wide min.-west side, 21-foot wide min.-east side) with a double row of street trees per the City of Ontario Street Tree Master Plan along both sides of the street;
- A split sidewalk (5-foot wide)/DG Multipurpose Trail (8-foot wide) on the west side of Haven Ave. and a lineal sidewalk (5-foot wide) on the east side of Haven Ave.;
- A landscape easement of forty (40) feet measured from face of curb to perimeter wall on both sides of the street;
- Background trees (minimum 24-inch box) and shrub masses planted in series of layers (foreground, midground, background) to help define borders and plant groupings while combining interesting foliage textures and color;
- Monumentation as shown in the ***Conceptual Landscape Master Plan, Exhibit 20***; and
- Refer to the ***Streetscape/Paseo Sections, Exhibit 21 and Haven Ave., Exhibit 24*** for illustration.

7.6.3 Interior Streetscape Design

Streetscape design within the interior of the Specific Plan area shall be consistent in character with the perimeter streetscapes and should help to promote pedestrian circulation into the "Community Green Core."

Where interior streetscapes interface with community parks and open space, special consideration should be taken to integrate pedestrian circulation into these areas via a streetside pedestrian paseo system that links city sidewalk to active walking trails and open space uses. Refer to the Interior Local Street Paseo Edge for illustration.

Where interior streetscapes include a turn-about median, special considerations should be taken to integrate pedestrian circulation through enhanced landscaping and traffic calming. Refer to ***Exhibit 31, Round-about Intersection with Neighborhood Paseo Connector*** for illustration.

Two major interior roadways bring residents into the "Community Green Core", Merrill Ave., extending east/west, and Turner Ave. that enters off Eucalyptus Ave., extending north/south.

Merrill Ave.

Merrill Ave. streetscape shall include the following:

- A landscaped parkway (7-foot wide min.) with a single row of street trees per the City of Ontario Street Tree Master Plan along both sides of the street;
- A lineal sidewalk (5-foot wide) along both sides of the street;
- A landscape easement of 35 feet taken from face of curb to perimeter wall on both sides of the street;
- Background trees (minimum of 24-inch box) and shrub masses planted in series of layers (foreground, midground, background) to help define borders and plant groupings while combining interesting foliage textures and color;
- Monumentation as shown in the ***Conceptual Landscape Master Plan, Exhibit 19***; and
- Refer to the ***Streetscape/Paseo Sections, Exhibit 21*** and ***Merrill Ave. (From Archibald to Rec. Center & From SCE Easement to Haven Ave.), Exhibit 23*** for illustration.

Merrill Ave. (between Community Recreation Center and the SCE Easement) streetscape shall include the following:

- A landscaped parkway (7-foot wide min.) and an additional landscaped parkway projection (7-foot wide by approximately 25-foot long) to accommodate a single row of street trees per the City of Ontario Street Tree Master Plan along both sides of the street;
- A lineal sidewalk (5-foot wide) along both sides of the street that makes additional connections to park and paseo walkways;
- A landscape easement of thirty-five (35) feet measured from face of curb to perimeter wall on both sides of the street;
- Background landscaping that harmonizes with the landscape character set in the "Community Green Core";
- Monumentation as shown in the ***Conceptual Landscape Master Plan, Exhibit 20***; and
- Refer to the ***Streetscape/Paseo Sections, Exhibit 21*** and ***Merrill Ave., Exhibits 23 and 23A*** for illustration.

7.6.4 Lanes

Lanes will occur in single-family detached lane-loaded planning areas 9, 16, 17, and 19. In these product areas, garage access will be provided along lanes. Lanes consist of a twenty (20) feet wide asphalt travel way with five (5) feet of landscaping provided in planter pockets on both sides of the lane. Refer to ***Exhibit 32, Conceptual Lane (Private Alley) Section,*** which illustrates the conceptual location of planter pockets in a lane condition. Where emergency access is required, residential lanes will have a twenty-four (24)-foot paved section with three (3) feet minimum landscaping on each side. Measurement will be taken from inside of curb.

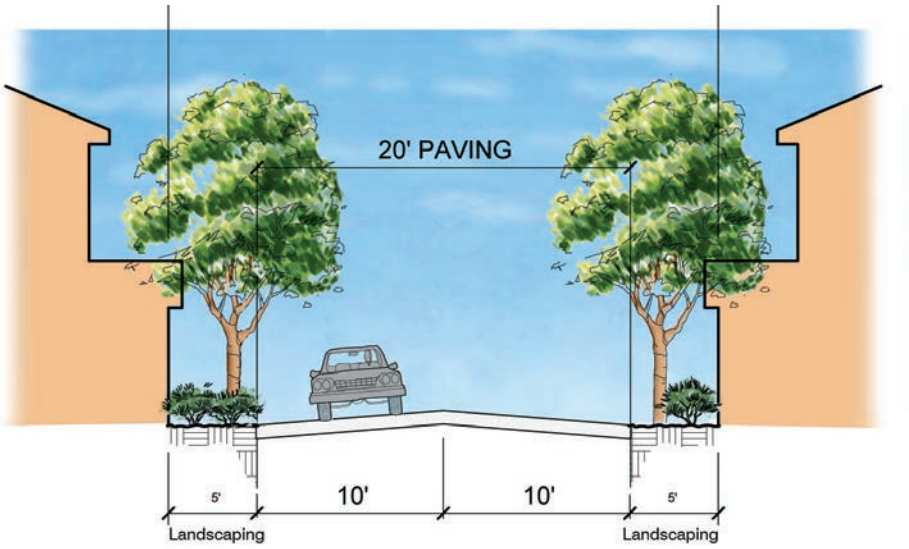
A key design goal of these guidelines is to design lanes which are "scaled" to the driver and do not appear as "tunnels" of garages. Planter pockets may occur at common property lines and at corners of lanes, to include trees and shrubs, to break up the massing of buildings and create a more inviting street scene.

7.6.5 Entries and Monumentation

Monumentation occurs throughout the Specific Plan area and is designed to establish a hierarchy for entering each area of the community. Along the perimeter edges there are several entry points into the community. At key entries a landscape and monumentation program will be utilized to help identify the community as well as convey a "welcoming" feeling for both vehicular and pedestrian traffic. Three monument treatments are used to set this hierarchy: the Primary Community Entry and Monumentation, the Secondary Community Entry and Monumentation, and the Neighborhood Entry and Monumentation.

7.6.6 Primary and Secondary Community Entry, and Neighborhood Entry Monumentation

A. Community Entry and Monumentation



The Primary Community Entry and Monumentation shall include the following:

- Decorative, freestanding curved monument walls at each corner with anchoring large entry pilaster;
- Identification field for potential sign lettering placement;
- Decorative, architectural concrete caps, trim, and bases to help delineate each veneered material used;
- Short curved wall in front of main freestanding wall to create layering effect of monumentation;
- Use of veneer materials;
- Use of large specimen trees (minimum of 48-inch box) to flank each side of entry drive at site entry;
- Use of seasonal perennial shrubs to allow for flowering interest throughout the year;
- Enhanced pedestrian paving at street crossing and at monument location;
- Accent trees (minimum of 48-inch box) and shrub masses planted in series of layers (foreground, midground, background) to help define borders and plant groupings while combining interesting foliage textures and color;
- Accent lighting of landscape/monumentation; and
- Refer to the ***Conceptual Landscape Plan, Exhibit 20*** and the ***Primary Community Entry and Monument, Exhibit 33*** for detailed conceptual illustration.

B. Secondary Community Entry and Monumentation

The Secondary Community Entry and Monumentation shall include the following:

- Decorative, freestanding curved walls at each corner with anchoring entry pilaster. The large entry plaster should embody the same character as that of the Primary Community Entry Monument;
- Identification field for potential sign lettering placement on enhanced perimeter corner cut wall;
- Decorative, architectural concrete caps, trim, and bases to help delineate each veneered material used;

Lanes (Private Alleys)

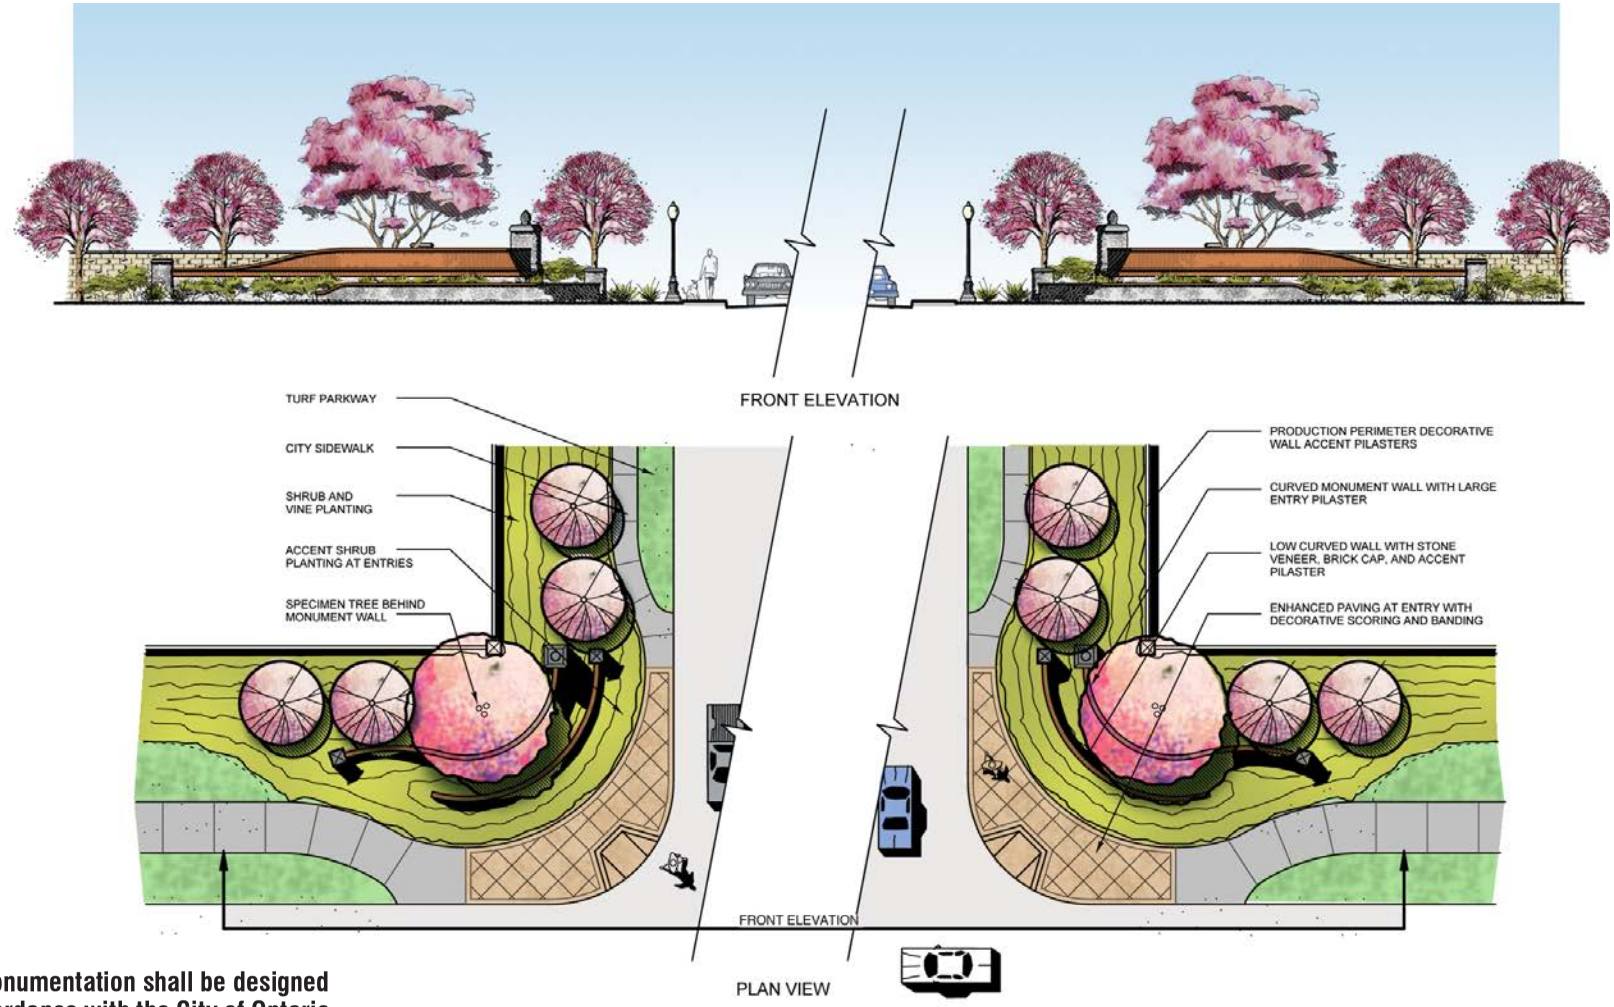
20' Paved Section / 30' Width, Garage to Garage
N.T.S.
Note: where emergency access lanes are to be used within the residential development, a 24-foot paved section with 3-foot minimum landscaped area will be utilized (30-feet total)

* Measurement taken from inside of curb

Exhibit 32—Conceptual Lane (Private Alley) Section

- Enhancement of corner cut wall and use of accent pilasters to anchor each side;
- Use of veneer materials instead;
- Use of large specimen native trees (minimum 48-inch box) to flank each side of entry drive at site entry;
- Use of seasonal perennial shrubs to allow for flowering interest throughout the year;
- Enhanced pedestrian paving at street crossing and at monument location;
- Accent trees (minimum 48-inch box) and shrub masses planted in series of layers (foreground, midground, background) to help define borders and plant groupings while combining interesting foliage textures and color;
- Accent lighting of landscape/monumentation;
- All monumentation shall be designed in accordance with the City of Ontario Traffic and Transportation Design Guidelines and are subject to City Engineer approval within the public street right-of-way; and
- Refer to the ***Conceptual Landscape Plan, Exhibit 20***, and the ***Secondary Community Entry and Monument, Exhibit 34*** for detailed conceptual illustration.

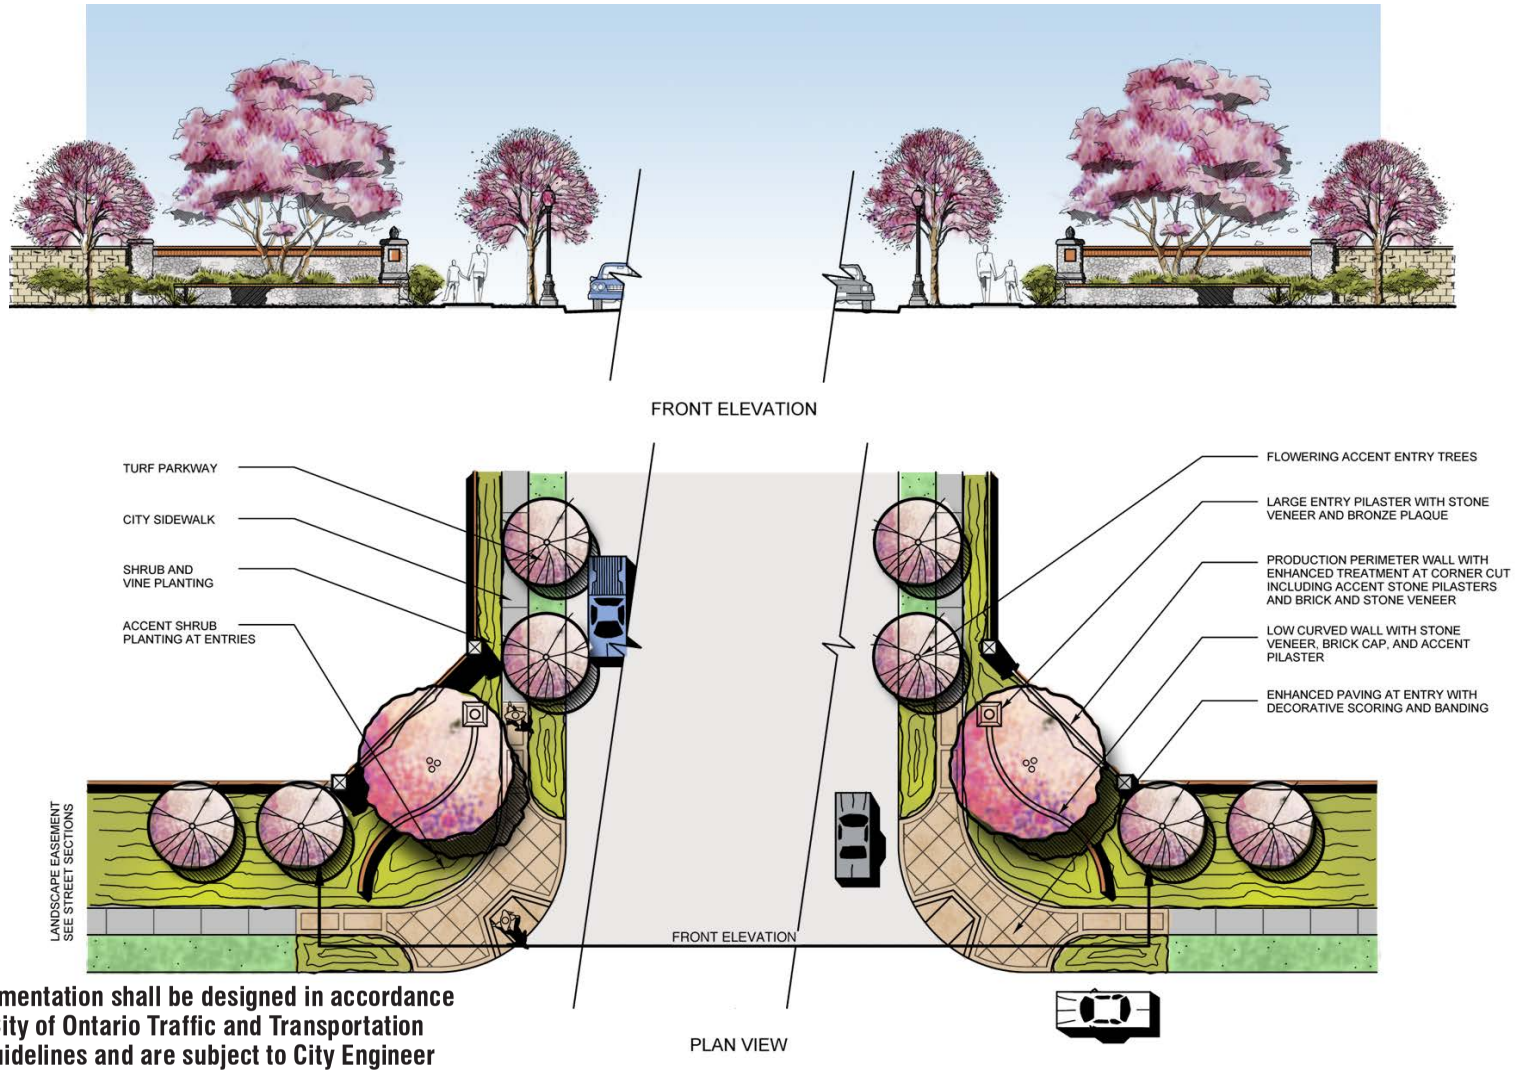
C. Neighborhood Entry and Monumentation



Neighborhood entries and monumentation should occur on interior corner entries within the Specific Plan area. These entries should be used to help continue the landscape character theme to the "core" of the community. Each neighborhood built within the project will have the opportunity to identify their individual project character while providing the basic design features of the other monuments.

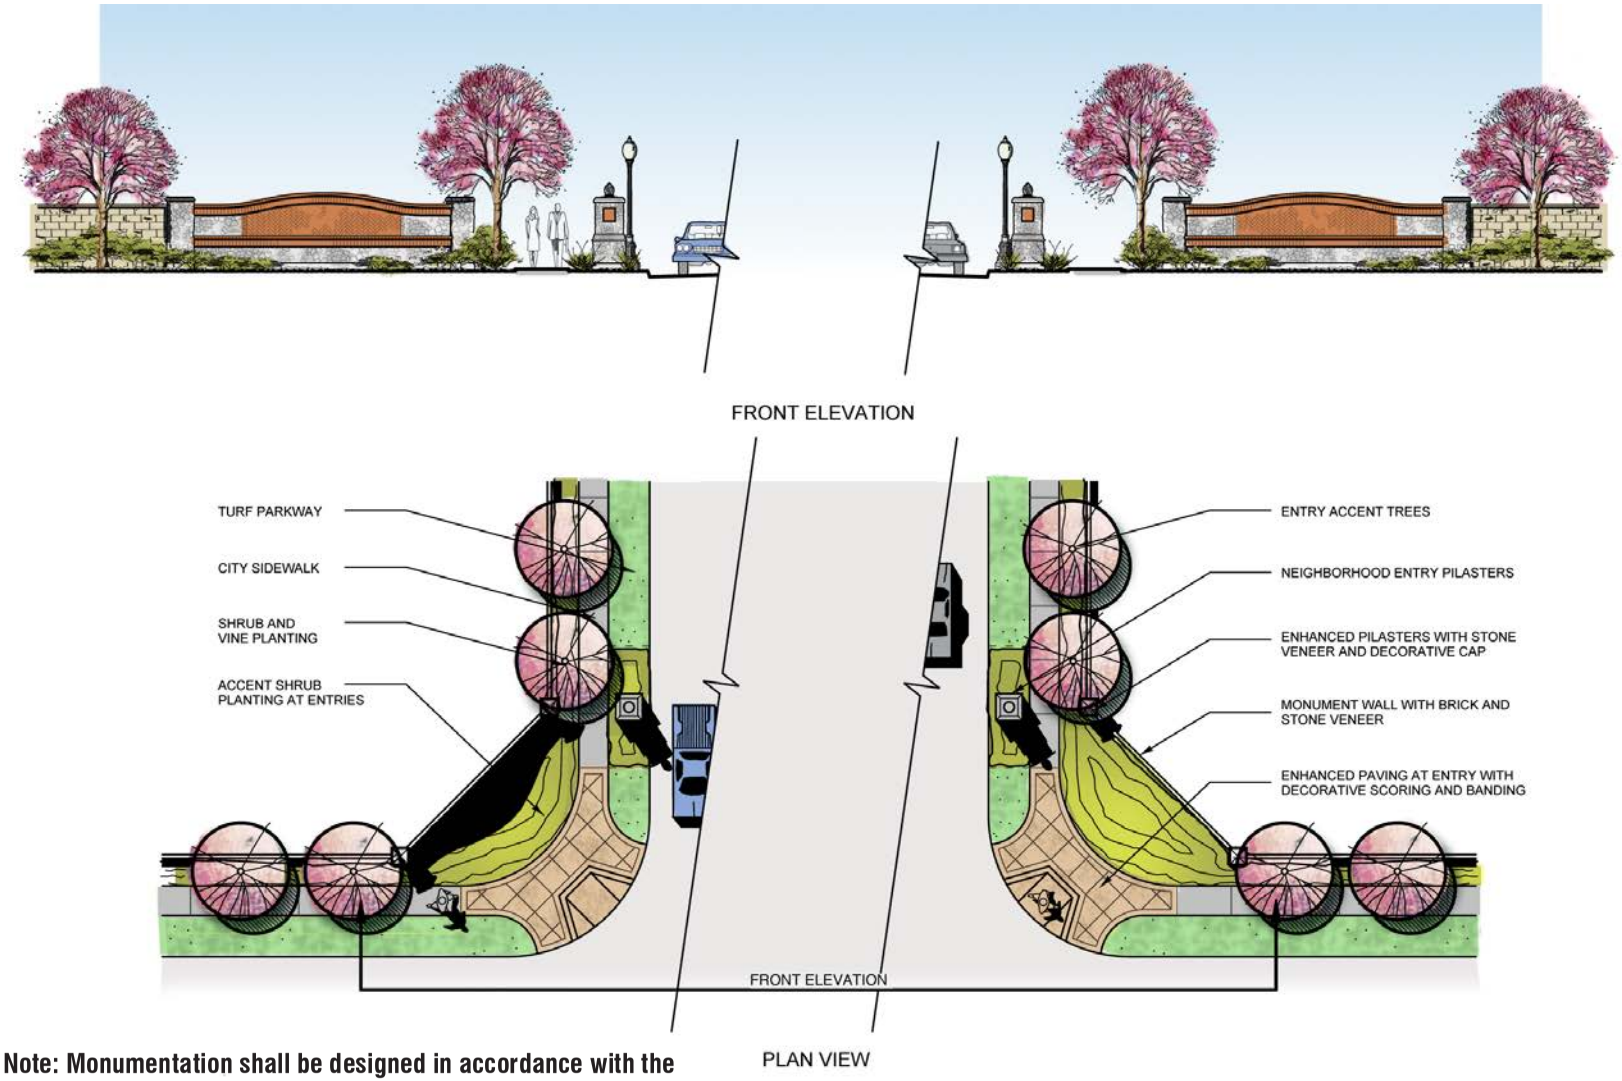
The Neighborhood Entry and Monumentation shall include the following:

- Freestanding, large, decorative entry pilaster set within the landscaped parkway. This pilaster should embody the same character as that of the Primary Community Entry Monument but is slightly reduced in scale to create a pedestrian gateway" into each neighborhood;
- Identification field for potential sign lettering placement on enhanced perimeter corner cut wall;
- Architectural decorative concrete caps, trim, and bases to help delineate each veneered material used;
- Enhancement of corner cut wall and use of accent pilasters to anchor each side;
- Use of veneer materials;
- Use of seasonal perennial shrubs to allow for flowering interest throughout the year;
- Enhanced pedestrian paving at street crossing and at monument location;
- Accent trees (minimum 48-inch box) and shrub masses planted in series of layers (foreground, midground, background) to help define borders and plant groupings while combining interesting foliage textures and color;
- Accent lighting of landscape/monumentation; and
- Refer to the ***Conceptual Landscape Master Plan, Exhibit 20***, and ***Neighborhood Entry and Monument, Exhibit 35*** for detailed conceptual illustrations.



City of Ontario "Gateway" Monument

At the corner of Archibald Ave. and the southern corner of the Specific Plan planning area, a city "Gateway" monument will be located. Special consideration should be made to integrate the landscaping within the easement on Archibald Ave. into the monument. The City of Ontario is currently developing the "Gateway" monument program for the New Model Colony. Additional coordination with the City of Ontario will be needed prior to developing this area.



Note: Monumentation shall be designed in accordance with the City of Ontario Traffic and Transportation Design Guidelines and are subject to City Engineer approval within the public street right-of-way;

Exhibit 33—Primary Community Entry & Monument

Note: Monumentation shall be designed in accordance with the City of Ontario Traffic and Transportation Design Guidelines and are subject to City Engineer approval within the public street right-of-way;

Exhibit 34—Secondary Community Entry & Monument

Note: Monumentation shall be designed in accordance with the City of Ontario Traffic and Transportation Design Guidelines and are subject to City Engineer approval within the public street right-of-way;

Exhibit 35—Neighborhood Entry & Monument

7.6.7 Neighborhood Parks and Open Space

The Specific Plan area will have a central "Community Green Core" that consists primarily of open space for recreation and passive use. Exterior walkways and paseos lead to this centralized area. Several opportunities exist for community interaction and recreation within these parklands. The "Community Green Core" is comprised of several facilities and amenities to meet the needs of the community.

The following areas make up the "Community Green Core:" the two (2) Park Place Neighborhood Parks, the Linear Park System, the Community Recreation Center, and the Paseo Trail System.

A. The Public Neighborhood Parks

Public Neighborhood Parks will be designed and constructed per City guidelines and approvals. The Neighborhood Parks consists of the following:

- Parking - Parking shall be adequate to accommodate daily use of the park, and should be screened from public view using a combination of berming and landscaping. In addition, the parking configuration should take into consideration possible shared use with the proposed neighboring elementary school to the North;
- On-street parallel parking is provided along the corridor from the Private Community Recreation Center to the SCE Easement, along Merrill Ave.;
- Children's Tot Lot Play Area - A tot lot will be located within close proximity to the parking lot and private Park Place Community Recreation Center. Play structures and equipment should be staged to allow for separated use based on age. The tot lot should also follow ADA (Americans With Disabilities Act) guidelines and provide access based off of equipment selected. Seating areas shall be located near the tot lot to provide areas for parental supervision;
- Open Turf Area/Barbeque Picnic Facilities - The two (2) Park Place Neighborhood Parks should provide an open turf area and barbeque picnic facilities scattered throughout a looped concrete walkway system. Barbeque facilities (minimum of 50%) should be located adjacent to the walkway system for ADA accessibility; the remaining percentage set in open turf areas. Each barbeque picnic facility shall provide a picnic table, freestanding barbeque, hot coal container, and trash receptacle. These barbeque facilities can be placed on concrete or any other ADA acceptable surfacing. The design of the two (2) Park Place Neighborhood Parks open space should take into account pedestrian circulation and the linkage to the two adjacent roads as well as the surrounding community;
- Sports Fields for unorganized play - The open space turf area should be arranged to accommodate two baseball/softball fields and a soccer field overlay;
- Tennis Courts - An area for tennis courts should be implemented into the site with special consideration to solar orientation. The tennis court facility will be fenced with standard tennis court fencing and will allow public access. Hours of operation will be enforced in an effort to avoid evening disturbance to adjacent neighborhoods;
- Pedestrian Plaza - A centralized pedestrian plaza should be located near the children's tot lot as a entry walkway system from the city sidewalk. This space should include bench seating and decorative pots, as well as shade for protection from the sun. Enhanced paving should be utilized within this area for decorative treatment, and should match the material used in the enhanced pedestrian crossings;
- Refer to the ***Park Blow-ups, Exhibits 37-39,*** for detailed conceptual illustrations;
- Landscaping - Landscaping within the park system shall harmonize with the surrounding streetscapes. Large specimen trees should be used within the open turf areas to help provide shade and screening of unwanted views. Accent trees should also be used at pedestrian entries and around the tot lot for color and seasonal interest. All trees shall be a minimum of 24-inch box. Specimen trees surrounding play areas shall be a minimum of 36-inch box;
- Landform Berming - Landform berming should occur throughout the park system to provide interest and opportunities for screening;
- Paseo Walkway System - A paseo walkway system should be designed to provide connections to adjacent neighborhoods as well as linking the private Park Place Community Recreation Center and Park together; and
- Lighting - No sports lighting should be implemented in the park. However, safety lighting will be provided in the parks and paseos within the Subarea 29 Specific Plan. A photometric plan will be required to be submitted with the landscape plans for these areas.

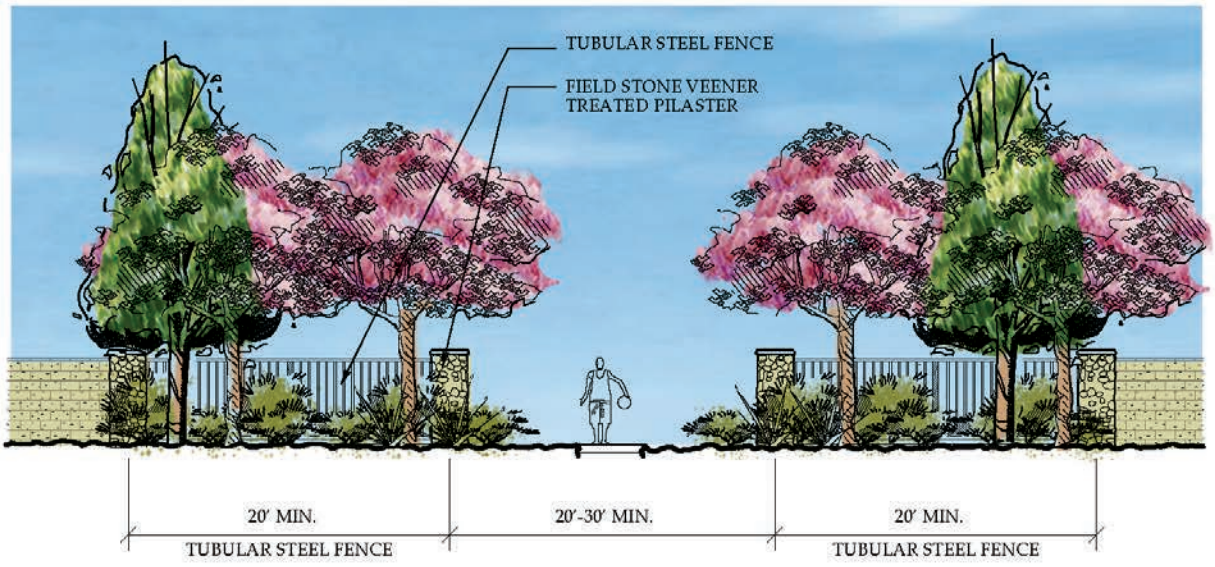
7.6.8 The Park Place Private Recreation Center

The Private Recreation Center consists of the following:

- Private Parking - Parking shall be adequate to accommodate daily use of the Private Recreation Center, and should be screened from public view using a combination of berming and landscaping;
- Recreation Building - The Park Place Recreation Building should adhere to the architectural design guidelines and should be designed to accommodate the community needs;
- Private Pool and Spa Facility - The Park Place residents will have access to a pool sized adequately to accommodate competitive swimming as well as serve as a summer leisure recreational amenity for adults and children of the community;
- The pool decking area should be sized to allow for lounge chairs and tables. A spa area separate of the pool will also be located within the Park Place Community Pool and Spa Facility. A group barbeque facility and wood shade structure should be located within the pool deck area. The pool and spa facility should be fenced and gated for resident entry only. Hours of operation will be enforced in an effort to avoid evening disturbance to adjacent neighborhoods;
- Landform Berming - Landform berming should occur throughout the linear park system to provide interest and opportunities for screening; and
- Paseo Walkway System - A paseo walkway system should be designed to provide connections to adjacent neighborhoods as well as linking the Private Park Place Community Recreation Center and Park together with the linear park system.
- Tennis Courts will be available through the Private Recreation Center, and therefore will be private.

2023 Amendment Area Private Recreation Centers

Planning Areas east of Haven Avenue are intended to have recreation areas within each individual residential neighborhood. Depending on the recreation area size and the individual builder, amenities will vary.



7.6.9 Paseo Trail System

Pedestrian circulation is highly encouraged within the Specific Plan Community. Landscape easements are provided along major roadways and are encouraged within the neighborhood communities.

- Paseo Trail System - A paseo walkway system should be designed to provide connections to adjacent neighborhoods as well as linking the Private Park Place Community Recreation Center and Park together with the linear park system;
- Landscaping - Landscaping along the paseo trail system shall harmonize with the surrounding streetscapes. All trees shall be a minimum of 24-inch box. Specimen trees shall be a minimum of 36-inch box;
- Meandering sidewalks are encouraged;
- Enhanced paving should be provided at paseo connections where pedestrian circulation crosses roadways;
- Paseos should provide strong connections to the "Community Village Core;"
- Utilization of SCE Easement Corridor for multipurpose trails should be provided. Refer to the detailed conceptual illustrations. Final approval of paseo configuration and design to by SCE. Refer to ***Exhibit 29, SCE Easement Paseo System***; and
- Utilization of the County Line Channel Flood Control Easement. Refer to the detailed conceptual illustrations, ***Exhibit 30, County Line Channel Paseo System.***
- Connection of neighborhood pocket parks to paseo trail system. Refer to the detailed conceptual illustrations. At strategic places within neighborhoods, pocket parks will be implemented to serve each neighborhood, These pocket parks are intended to provide minimal amenities, and should be linked throughout each neighborhood link via the paseo trail system. Pocket parks should be sized between 1/4–2 acre in size. The paseo pocket parks will contain the following amenities:
- Paseo walkway (meandering encouraged);
- Landscaping - Landscaping shall harmonize with the surrounding streetscapes; and
- Lighting - Pole mounted fixtures spaced at appropriate intervals for safety and security.

The Paseo Pocket Parks might contain the following additional amenities:

- Open turf area/barbeque picnic facilities;
- Basketball courts; and
- Tot lots

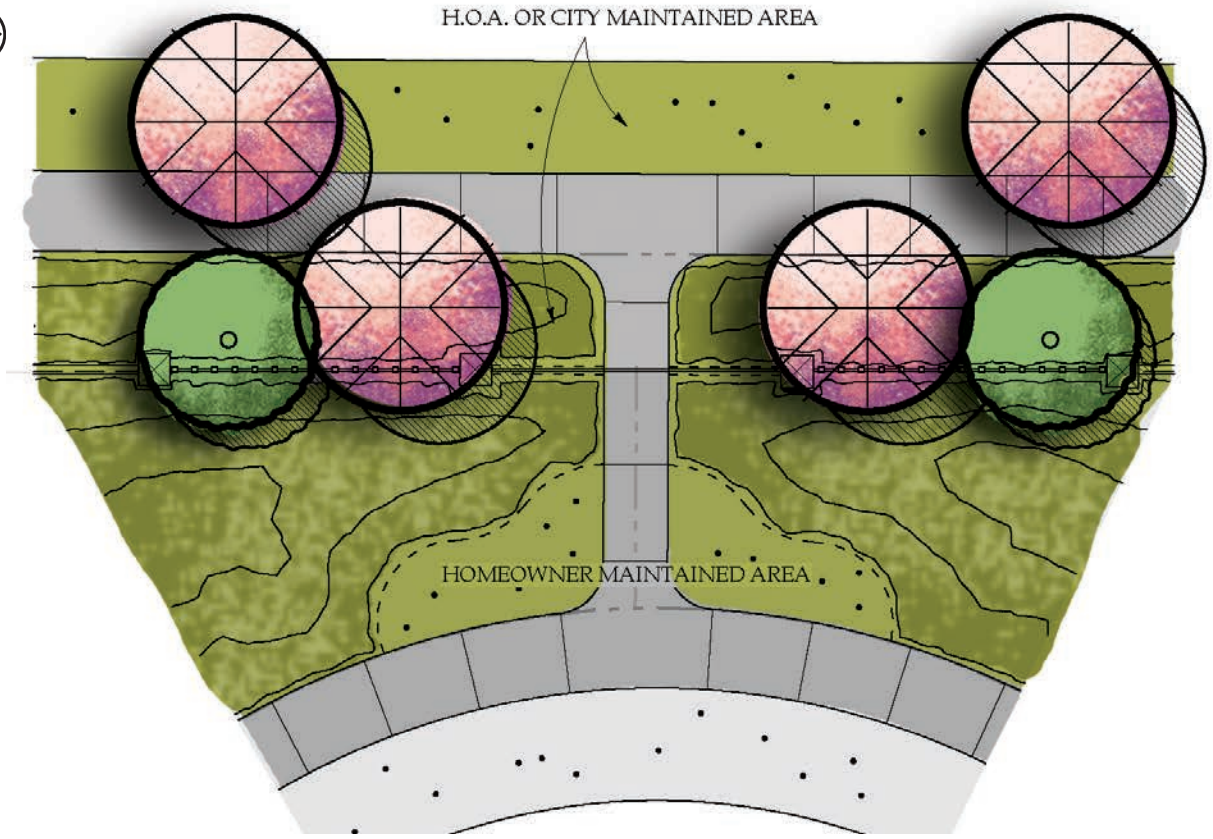


Exhibit 36—Community Portal Entry

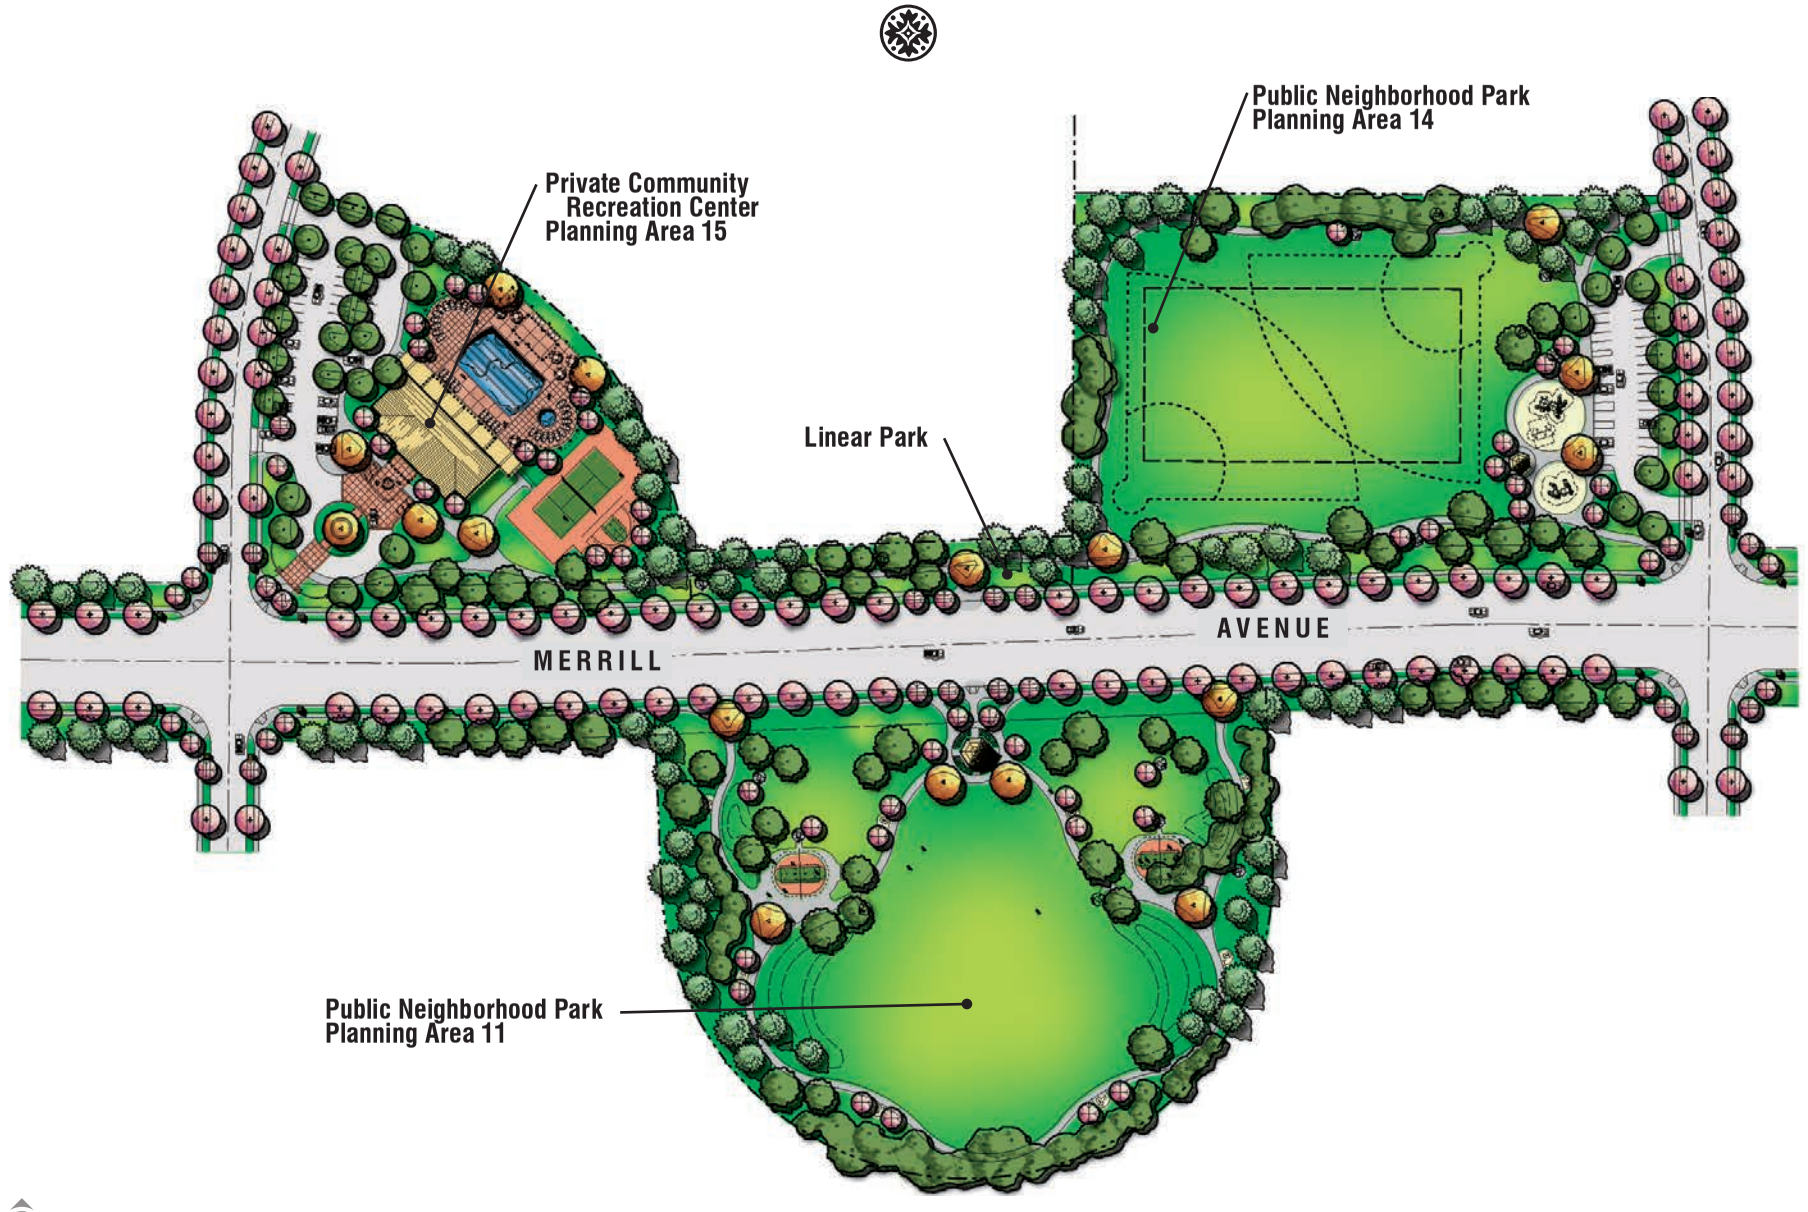

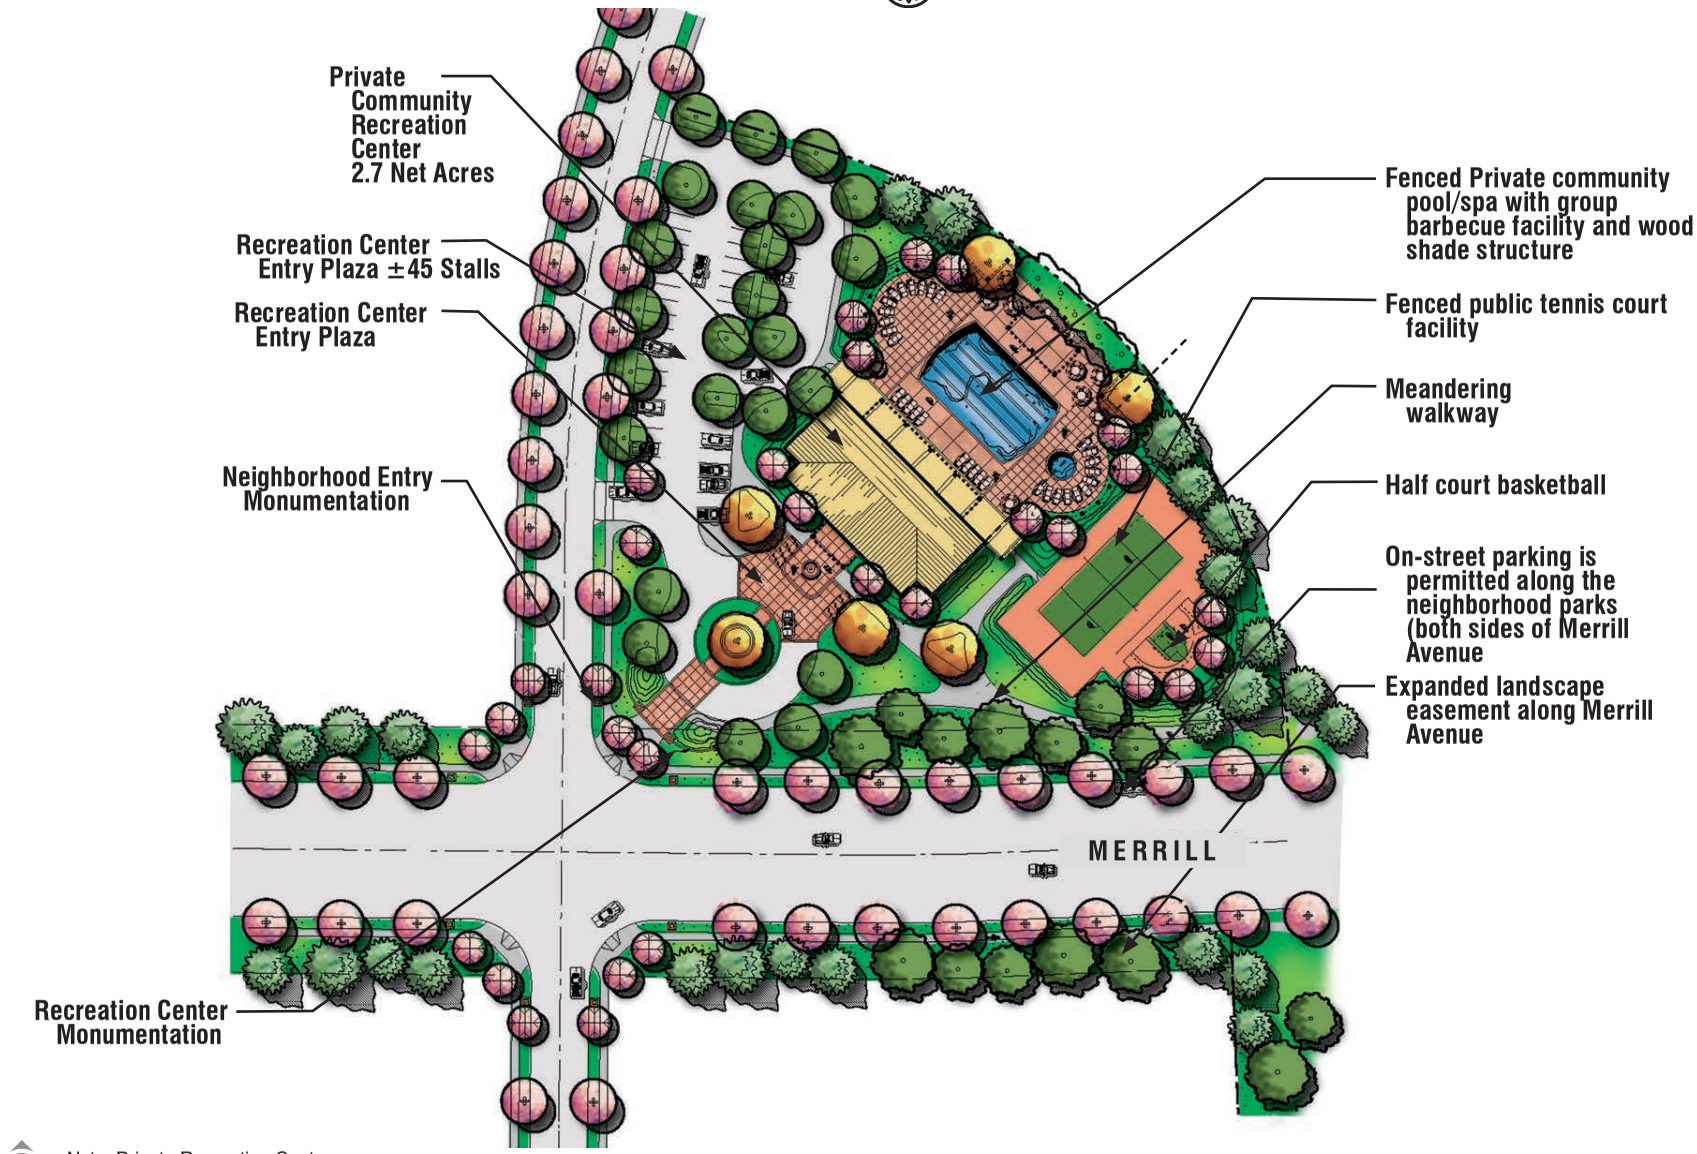

Exhibit 37—Overall Park

Note: Private Recreation Center for Park Place residents use. Tennis Court and Basketball area for public use.

Exhibit 38—Community Recreation Center
Public Tennis Courts & Basketball Court

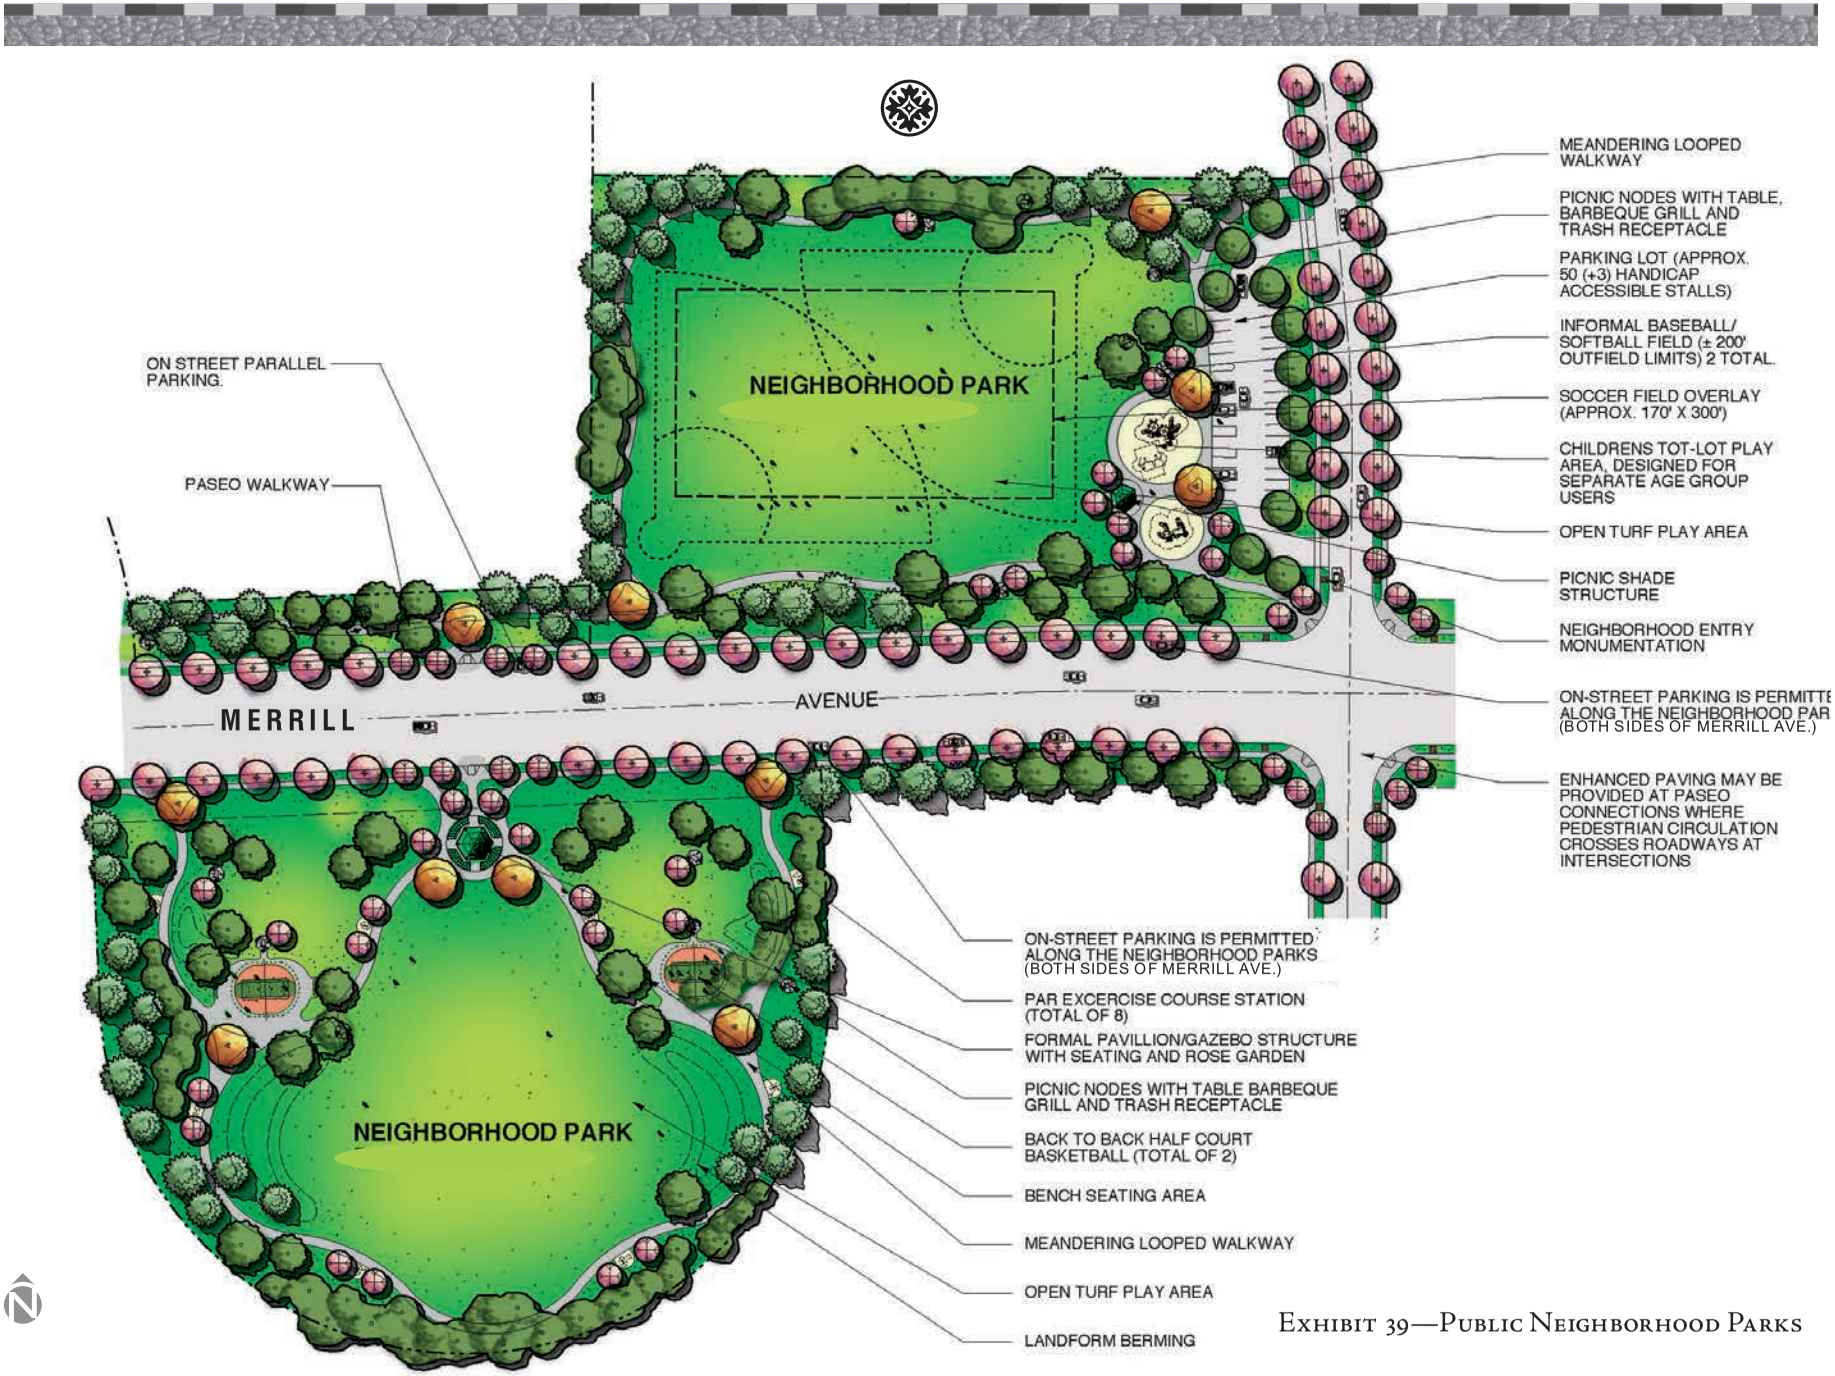

Exhibit 39—Public Neighborhood Parks

7.6.10 Community Walls and Fencing

Walls are a major component in achieving an overall community theme within the Specific Plan. A strong cohesive appearance is achieved through the use of "community walls" and general overall wall guidelines.

All walls that adjoin community street scenes and are along the boundary edges of the paseo and to the opposite side of the corridor shall be deemed "community walls." All wall and fencing designs and layout shall be approved by the City of Ontario prior to construction.

Refer to the ***Conceptual Wall and Fence Plan, Exhibit 40.***

Brick walls or screening walls shall have climbing plants or anti-graffiti elements to prevent vandalism.

Community Walls

Community walls shall be decorative in nature. Decorative accent pilasters spaced at equal intervals are highly encouraged.

Solid Walls and Fencing

Where privacy or protection of common area views dictates, walls shall be of decorative block. Reverse frontage walls and any wall return that is visible from the street shall be constructed of split-face block or precision block that is plastered or stuccoed, and of a color that blends with the Specific Plan color palette. Decorative caps and the use of pilasters to help enhance the perimeter appeal of the walls are encouraged. Walls visible from the community streets may not be made of exposed or painted precision block or slumped block. Variation shall be provided in the perimeter wall to include pilasters, material changes, and/or other decorative features which offers relief along the proposed perimeter walls or as approved by the City of Ontario Planning Department. All interior walls (both sides) shall be constructed of decorative block whether they are in public view or not. Colors shall be consistent with the colors specific for the overall design theme and shall be decoratively shaped. Combo walls shall be utilized where residential properties abut trails, paseos and/or parks or as approved by the City of Ontario. The overall height established by the City of Ontario for walls and fences shall not be exceeded; however, the height of the decorative block and/or wrought iron utilized to construct the combo walls may vary depending on the proposed location of the combo walls. Wood and vinyl fencing are prohibited within the Specific Plan. The final wall design and location shall be approved by the Planning Department during the tentative map or development review process. Refer to ***Exhibit 40A, Wall and Fence Details.***

Tubular Steel Fencing

If applicable, tubular steel fences should be located in the rear yards of those properties abutting large slope areas. In addition, view fencing shall be used at the Private Recreation Center pool area, and any other open space areas where visibility is needed and physical access is controlled. Areas where tubular steel fencing occurs will be subject to review by the City of Ontario.

7.6.11 Outdoor Lighting

Lighting standards within the Specific Plan community shall be consistent in style, color, and materials in order to maintain uniformity throughout. Lighting should be subtle, providing a soft wash of light over illuminated objects such as monumentation. Hierarchy shall be established by using a variety of lighting fixtures and illumination levels based off of lighting design intent. Lighting styles shall tie into architectural styles and provide sufficient illumination for the safety and well being of the community. Accent lighting of landscape and monumentation shall be incorporated into the following areas: Metal halide lighting to project true colors and clear visibility, and reflective street signs shall be used on all proposed streets. Lighting shall have anti-vandalism fixtures.

Each residential unit shall have illuminated addresses at the front door and the garage door, if the garage faces a lane.

Entry Monuments

Avoid intensely bright or "hot" lighting of monuments; rather, each should be lit to provide a soft wash of light across the monument signage. Specimen trees should be uplighted with several fixtures into the canopy to avoid creating dark sides of the trees.

Recreation Center

Uplighting of specimen trees is very important and providing adequate lighting within the vehicular turn-around areas. Recreation center monumentation/kiosk should also be illuminated.

Community Park/Linear Park/Paseo Lighting

Lighting of the walkways, tot lot, and parking area within the Parks and Paseo Trail System should be considered for safety and security. Utilization of a traditional Globe/Acorn Post mounted light fixture should be considered for both the park open space areas as well as interior street lighting fixtures. Keeping with the character of traditional materials, this will help to create a better sense of scale to the pedestrian.

7.6.12 Mailboxes

The developers shall work with the United States Post Office to determine the best possible location for mailboxes within the residential subdivisions. The developer will determine the specifications for the mailbox units.

7.7 Landscape Implementation

7.7.1 Improvement Responsibility Landscape Maintenance

Landscape Maintenance

- All public landscapes, including slopes, street trees, lighting, and irrigation systems, shall be maintained by the City of Ontario Landscape Maintenance District;
- Front yard landscapes shall be installed by the developer and maintained by the homeowner in a healthy condition at all times; and
- All manufactured and cut/fill slopes which exceed three (3) feet in height shall be planted with an effective mixture of groundcover, shrubs, and trees by the Developer. Such slopes shall also be irrigated as necessary to ensure germination and establishment in conformance with the fuel modification guidelines described later in this document.

Tree Size	Percentage on-site
15 Gallon	55%
24" Box	30%
36" Box	10%
48" Box	5%

Landscape Implementation

The implementation of landscaping within the 2023 Amendment area and the Specific Plan Area will remain essentially the same; however, the amendment proposes revisions to the adopted document that encourage or require new water conservation practices including the following:

- Use of low water use ground cover in lieu of high water use turf is encouraged in front yard landscaping.
- Use of low to medium water use shrubs and groundcovers, with an emphasis on drought tolerant plant species is encouraged for private yards.
- Use of low to moderate water use plants is desired for City maintained landscape areas.
- Water use for planter areas shall not exceed the maximum applied water allowance (MAWA).
- Spray irrigation systems are not allowed within 2' from edge of non-permeable surface.
- Landscape design shall conform to the City water efficient landscape ordinance.

7.7.2 Homebuilder Landscape Requirements

Public Landscapes (HOA and City maintained areas)

- Landscape plantings in public areas should reflect a commitment to both developing a "sense of place" and maintaining harmony with the New Model Colony;
- A landscape architect licensed in California shall be retained to prepare planting and irrigation plans for all public areas. Arrangement of plants should incorporate the concepts of mass planting; plants should be placed to allow them to grow to their natural sizes and forms, and sheared hedges should be kept to a minimum; and
- All pathway areas shall be designed to be barrier free and meet ADA guidelines.

The plant matrix at the end of this section offers a suggested plant palette for the Specific Plan; while it is by no means all-inclusive, plantings in public areas should draw primarily from this palette for visual community continuity.

Front Yard Landscapes

Plantings in front yards may vary substantially from the Specific Plan Plant Matrix, but should retain some of the character and style of the public plantings. No more than 50 percent of the total square footage of any front yard shall be lawn; the balance shall be composed of shrubs and groundcovers, with an emphasis on drought tolerant plant species. Each front yard shall be planted with one 24-gallon tree (minimum). Installation of landscaping within the front yards of single family detached housing products will be provided by the home builder. Front yard landscaping shall be installed prior to Certificate of Occupancy.

7.7.3 Soil Testing

Soil samples shall be taken from several locations after the completion of rough grading operations, and a reputable soil-testing laboratory shall perform an agronomic soils test. The test shall assess soil fertility needs for water-wise California native and Mediterranean plant types. No planting shall take place until the soil has been properly prepared based on the recommendations of the soils testing laboratory.

7.7.4 Slope Landscaping - HOA

All manufactured and cut/fill slopes which exceed three (3) feet in height shall be planted with an effective mixture of groundcover, shrubs, and trees. These slopes shall be installed before the Certificates of Occupancy. Such slopes shall also be irrigated as necessary to ensure germination and establishment in conformance with the fuel modification guidelines. Slopes shall not exceed 3:1.

7.7.5 Private Interior Slopes: Residential Interior

- Private interior slopes may be more ornamental in character than exterior slopes. They may have a somewhat broader range of plant materials than exterior slopes, but should still be chosen primarily from the plant palette and are subject to the same fuel modification restrictions.
- All manufactured and cut/fill slopes which exceed three (3) feet in height shall be planted by the Developer with an effective mixture of groundcover, shrubs, and trees. Such slopes shall also be irrigated as necessary to ensure germination and establishment in conformance with the fuel modification guidelines described later in this document. All slopes shall be landscaped in accordance with the City of Ontario's standards.

7.7.6 Streetscape Landscaping

Streetscape Development Standards

- All new plantings within the planned community shall draw substantially from the Park Place Plant Matrix included in this document;
- All streetscape landscaping within the Specific Plan planned community will be implemented by the Developer in accordance with this Specific Plan;
- A balance of evergreen and deciduous trees shall be considered during the planning process for the selection of street trees and understory trees between them (if any). Street trees shall be sized per City of Ontario's standards;
- The Developer shall install all primary and secondary improvements concurrently with the construction of the roadway on which they front. Neighborhood intersections shall be constructed as each neighborhood street is built;
- The Developer shall provide site inspection of all construction and installation of entries and intersections in accordance with the City of Ontario requirements;
- Self-attached vines are to be added against block walls;
- Along community walls, the use of 5-gallon plant material as hedgegrow is preferred; and
- Closely spaced plant materials (to horticultural practices) is expected on this project.

7.7.7 Irrigation Design

Irrigation for both public and private landscapes should be designed to be as water-efficient as possible. All irrigation systems shall have automatic controllers designed to properly water plant materials given the site's soil conditions, and irrigation systems for all public landscapes shall have automatic rain shut-off devices. Low volume irrigation is encouraged. Spray systems shall have low-gallons-per-minute, matched-precipitation heads. All City maintained landscapes (LMD areas) are to be controlled with a central controlled system as approved by the City of Ontario, Parks and Maintenance Department, and trees plantings are to consist of root barriers and a pop up stream bubbler system on a separate valve. Irrigation design shall meet the requirements of the Landscape Development Standards.

Addresses

Each single family home will be required to have the address numbers painted on the curb with black numerals on a white reflective paint background. Each homeowner will be responsible for the maintenance of these numbers.

7.8 Design Guideline Implementation

7.8.1 Design Review Submittal Requirements

The respective developers. SL Ontario Development Corporation, Richland Communities, Inc, and Brookfield Homes shall review all plans prior to submittal to the City for Plan Check for their projects. This design review process will include these steps: Conceptual review, Refined review and Construction document review prior to plans being submitted for city processing. The Design Review process will ensure the vision of Subarea 29 will be implemented.

7.9 Plant Matrix

Per City of Ontario Street Tree Master Plan.

8. Commercial Design Guidelines

8.0 Commercial Design Guidelines

8.1 Introduction

The Subarea 29 Specific Plan area will include a commercial area in the northwest corner of the project, at the intersection of Archibald Ave. and Merrill Ave. This non-residential use will allow the residents of the Specific Plan area with shopping and employment conveniently located nearby. Residents will have the ability to access services by foot or ride their bicycles to work via pedestrian trails connecting the residential uses to the commercial center and the local community.

Throughout the commercial development, landscaping, site planning, and architectural design should be considered to create friendly and welcoming places to shop and work. These non-residential uses will continue to vision established in the residential community, including integrating pedestrian-friendly design.

The Commercial Design Guidelines will help guide the development of the area to enhance the pedestrian experience and innovative design that contributes to the character of the Specific Plan area. These guidelines are not intended to be strictly enforced rules, but rather as a tool in aiding the design process. Additionally, these guidelines have been generalized for the Specific Plan. Potential developers will be required to submit their own supplemental design guidelines for the Commercial development area to the City of Ontario for approval.

The Commercial Section is organized into the following components:

- Site Planning;
- Building Design;
- Architectural Details; and
- Open Space and Landscaping.

8.1.1 Guiding Principles

Guiding Principles for commercial design for the Specific Plan include:

Buildings should contribute to the qualitative nature of the overall neighborhood.

- Proper scale and proportions in massing and details should be used;
- Pedestrian open spaces should be implemented;
- Massing and articulation should be varied;
- Buildings should be designed at a human-scale; and
- Parking lots should be de-emphasized as much as possible.

Buildings should have an enduring quality

- Design should draw inspiration from the rich and diverse Southern California architectural heritage;
- Materials and colors typical to southern California should be used;
- Details and ornamentation should be authentic, as much as possible; and
- Design should create an inviting place to shop and work. Pedestrian trails from the residential neighborhoods should not lead to the rear of the Commercial Center.

8.1.2 Review Process

The Commercial Design Guidelines are to be used as a general tool to guide the development of the northwest portion of the Specific Plan area. Final designs will be subject to the City of Ontario's approval. Additionally, more detailed Design Guidelines for each developer may be required by the City prior to final approval. Refer to the City of Ontario Code for further information regarding the review process.

8.2 Commercial Design Guidelines

8.2.1 Introduction

Commercial development within the Specific Plan will continue the pedestrian-friendly character established in the residential community. By reducing the impact of the automobile on the appearance of the commercial development, appropriate site planning can de-emphasize the vehicle, creating a safe outdoor environment without ignoring the necessary needs of vehicular traffic. Through well executed planning, architecture, and landscape design, the commercial uses within the Specific Plan will complement and, to some extent, integrate the residential community rather than turn its back completely to the community residents.

8.2.2 Site Planning

Orientation

Buildings should be oriented for best visibility from the street. Windows and entries should face the street, avoiding blank walls which could dominate public views. Stores with entries not visible from the street may be oriented towards pedestrian open space.

All primary entries should face onto a street or a connecting walkway.

Driveways and Sidewalks

The site should be provided with a limited number of driveways to reduce the traffic impact along Merrill Ave. and Archibald Ave. Pedestrian crossing distances should be minimized at driveways. To increase safety for pedestrians, a raised median as a pedestrian island should be provided between travel lanes, especially those entries with more than one lane in any direction. Driveways should be paved with asphalt, concrete or an enhanced paving material such as brick.

Sidewalks should be located along natural travel paths for pedestrians. Sidewalks should be a minimum of six (6) feet wide along pedestrian pathways and a minimum of eight (8) feet width along more heavily traveled commercial areas.

Street Frontage and Buildings

Streetside buildings, or those with no parking separating them from the street, should use windows and entry features to soften the building's appearance to the street. These buildings should not be more than 100-feet long without a pedestrian plaza or walkway breaking the building mass and connecting the parking lot with the street. On corners, buildings should utilize massing elements to anchor the corner.

Streetside Setbacks and Buildings

The sides of buildings along street edges should be landscaped within the setback to soften the building's appearance to the street as well as have additional windows or design elements. Refer to the City of Ontario Development Code for specific setback requirements.

Street Frontage and Parking Lots

Parking lots should generally be placed away from streets. No street frontages should consist of a continuous parking lot, but should be broken up with buildings, landscaping, plazas, and other pedestrian features. Any parking along street edges should be set back with a landscaped buffer to minimize the dominant feeling of the automobile along the street. Continuous parking stalls should be interrupted by landscaped islands, no more than ten (10) stalls apart.

Service and Storage Areas

Loading docks, garages and storage areas are to be located behind or to the side of buildings siding onto secondary access and not primary streets. These features must be screened with walls and landscaping as much as possible from public view of streets, residences, pedestrians walkways and connecting trails. Loading docks and storage areas should not conflict with pedestrian walkways.

Refuse Containers, Utility and Mechanical Equipment

Refuse containers and equipment should be easily accessed by service vehicles but screened from view of the streets, parking lots, and connecting walkways through roof forms, walls and/or landscaping. Screening details should incorporate elements that are compatible with the architectural style of the building. Proper landscaping including trellises also may help to screen these elements. Equipment and enclosures shall not be located near pedestrian walkways.

8.2.3 Building Design

Massing

With larger buildings, appropriate massing becomes more important to maintain the human-scale of the development and create a visually pleasing environment. Bay windows, stepped buildings, height changes and setback variations between stores helps to break up large buildings as well as indicate entries and store locations to customers. Tower elements or monumental features are encouraged at focal points, such as corners, plazas, major entrances, or where walkways meet streets. All elevations of a tower element or monumental feature shall be completely constructed. In no instance shall a feature of this nature be left unfinished and exposed to public view.

Roof Forms

Hipped and gable roofs are encouraged. Roof pitches should be compatible with the architectural style of the building. Flat roofs should vary in height and be accompanied by cornice, trim or other accent features.

Entry Design

Building entries should be prominent and easily identified. Various elements can be used to enhance the entry features including massing variation, materials and color change, change in roof form, and awnings. For smaller retail, as part of a cluster or strip, arcades, awnings, and simple signage may be acceptable as entries.

Arcades, Trellises, and Awnings

Outdoor arcades along store fronts are encouraged over pedestrian walkways. Arcades may be used to connect separate buildings, or providing a more pleasing experience for pedestrians. Trellises or awnings may also be used to create a covered walkway to protect pedestrians from the sun and rain.

8.2.4 Architectural Details

Architectural Styles

A consistent architectural style should be used throughout the commercial development to create a sense of continuity between the buildings. Related elements, such as trellises, planters, light-standards, windows, doors, etc. should also adopt detailing that is compatible with

the selected architectural style. The selected style of the commercial development does not necessarily need to be of any one of those available for the residential community but should be compatible to them.

Architectural styles should derive from Southern California and Ontario's history. Modern and "high-tech" styles are not acceptable style choices. Acceptable styles generally respond to the region's climate including such features as shade windows, outdoor circulation, and outdoor courtyards or plazas, recessed window frames, awnings, arcades, loggias, and trellises.

Building Wall Treatment

No wall should have a blank, uninterrupted length exceeding 20 feet without including one of the following:

- Change in texture;
- Change in material;
- Change in plane;
- Lattice; and
- A tree or equivalent element.

Facades that are visible from adjacent streets or walkways should display even greater visual interest by using architectural elements that break up the massing of large buildings, such as windows, arcades, awnings, porticos, and other architectural features.

Base and Top Treatments

Base and top treatments help to balance the "weight" of the building visually. Bases should appear to "ground" the building, while tops create a defined edge to the roofline. Possible treatment techniques are as follows:

- Base;
- Thicker walls;
- Natural materials;
- Different colored materials;
- Enriched landscaping with a mature height of at least 18";
- Special materials, such as ceramic tile, granite and marble, are encouraged on the base of buildings that face streets or connecting walkways, especially adjacent to major entries;
- Tops;
- Cornice treatments;
- Roof overhangs with brackets;
- Stepped parapets;
- Textured materials; and
- Different colored materials.

Exterior Materials

Recommended materials include stucco, exterior plaster, brick, wood siding, tile, or stone. Exterior materials that appear pre-fabricated are not recommended. Selected materials and detailing should have an enduring appearance.

Roof Materials

Roofing materials that are generally acceptable include metal standing seam, concrete tile, ceramic tile and slate or slate-like materials.

Colors

Color selection should be consistent with the selected architecture style.

8.2.5 Open Space and Landscaping

Site Accessories

Site accessories, such as recycling bins, bike racks, litter cans, planters, benches and transit shelters, should use materials and have an architectural character consistent with the overall project. These accessories should be graffiti-resistant with materials that are easy to clean and paint.

Connecting Walkways

Walkways throughout the Specific Plan's commercial development should connect the various buildings to each other and to the sidewalks. Use of trellises, landscaping, sitting areas and the site planning of buildings adjacent to one another will encourage pedestrian activity within the commercial area. A typical walkway should be a minimum of six (6) feet wide. In large parking lots, pedestrian walkways should be provided within the median of at least two parking aisles for every five (5) aisles of 20 stalls or more.

Pedestrian walkways that may also be used for emergency access must allow minimum clearance of 30' wide and 14' vertical clearance.

Off-site Connections

Off-site connections should be provided from the commercial area to the Specific Plan residential development. Access to the residential community will be available by adjacent sidewalks. Pedestrian trails should not lead to the rear of a Commercial Center.

Plazas

Plazas are encouraged as much as possible to emphasize a pedestrian-friendly environment by creating locations within the commercial development that allow for people to gather. Plazas create a more inviting feeling to pedestrians, allowing them to feel safe from the vehicular dominated parking lot. These outdoor places may include water features, landscaping, and other elements to create a comfortable place to sit. Plazas are encouraged where high levels of pedestrian activity are expected, such as adjacent to major entrances and nearby uses that allow for more interactivity with the plaza such as delis, cafes, restaurants, bakeries and other food services.

Landscaping

Landscaping helps to soften the feel of the buildings and parking lot while enhancing the visual quality of the site. The following landscaping techniques may be used:

Shrubs and tree canopies shall not be higher than three and lower then seven feet respectively to allow police officers the ability to patrol the project site without visual obstructions. Plants near low-lying windows shall have thorns as a deterrent for suspects hiding and removing glass panes as a point of entry.

- Provide special landscaping treatment at all project entries and building entries;
- Provide shade/canopy trees within parking areas;
- Use plants to define outdoor spaces such as edges, outdoor plazas, or movement paths between parking and building entrances;
- Chosen plantings should provide a continuity of form across the entire project.
- Where a parking lot contains 10 or more parking spaces and is visible from a street, not less than 5 percent of the total area, excluding any perimeter landscaping, shall be landscaped. Such landscaping shall be concentrated in any one location. A minimum of 50 percent of the plant material shall be canopy or shade trees. Contact the Community Services Department for specific requirements;
- All rows of parking spaces shall be provided with landscape islands at each row terminus, minimum five (5) feet in width, exclusive of curbs, to protect parked vehicles, ensure visibility, confine moving traffic to drive aisles and driveways, and provide within each row of parking spaces, landscaped islands, minimum five (5) feet in width exclusive of curbs, located so as to prevent more than ten vehicles from being parked side-by-side in an abutting configuration.
- Landscaped areas shall be delineated with a concrete curb, minimum 6-inches high by 6-inches wide; except where a landscape area is parallel and adjacent to a parking stall, the curb shall be a minimum 6-inches high by 12-inches wide, to provide an area for persons to step when entering or exiting a motor vehicle.

Outdoor Storage Areas

Outdoor storage areas should be incorporated into the design of a project to avoid visual impacts on the site.

Outdoor storage areas should be located away from the street, behind or to the side of buildings. Walls and landscaping should be used to screen stored materials.

Transit Shelters

Transit shelters should be incorporated into the design of the commercial project and will be designed according to guidelines provided by the transit agency of Ontario. The commercial developer should explore with the transit agency and the City, possibilities for a structure that is integrated architecturally with the project through its color, materials and architectural style.

Pedestrian walkways should be provided for easy accessibility by pedestrians moving to and from the transit stop to the commercial development.

Lighting

Lighting standards under 15 feet should provide adequate illumination throughout the site during the nighttime hours. Lighting fixtures should be designed to be compatible with the architectural styles selected for the project. At a minimum, all light standards should have an attractive base and top; overhead "cobrahead" standards are not permitted. Buildings and landscaping can be illuminated indirectly to create a strong positive image. Along pedestrian walks, lighting should provide appropriate illumination at a human scale without too much glare. Lighting within larger parking lots should provide safe visibility. Service area lighting should be positioned as to not be seen from public view.

9. General Plan Consistency

9.0General Plan Consistency

California Government Code (Title 7, Division 1, Chapter 3, Article 8, Section 65450-65457) permits the adoption and administration of specific plans as an implementation tool for elements contained in the local General Plan. Specific plans must demonstrate consistency In regulations, guidelines, and programs with the goals and policies set forth in the General Plan.

The Subarea 29 Specific Plan (SP) has been prepared in conformance with the goals and policies of The Ontario Plan (TOP) Policy Plan (General Plan). The policy analysis in this Chapter describes the manner in which the SP complies with TOP Goals and Polices applicable to the project.

Land Use Element	
Policy Plan Goals and Policies	**SP Consistency**
GOAL LU-1: A community that has a spectrum of housing types and price ranges that match the jobs in the City and that make it possible for people to live and work in Ontario and maintain a quality of life.	
LU-1.1 Strategic Growth. We concentrate growth in strategic locations that help create place and identity, maximize available and planned infrastructure, foster the development of transit, and support the expansion of the active and multimodal transportation networks throughout the City.	The SP area is within the ~~New Model Colony~~ Ontario Ranch as identified in The Ontario Plan. The SP will adhere to current approved City of Ontario Infrastructure Master Plans.
LU-1.2 Sustainable Community Strategy. We integrate state, regional and local Sustainable Community/ Smart Growth principles into the development and entitlement process.	Sustainable Community/Smart Growth principles are incorporated into Land Use Plan. Pedestrian sidewalks and multipurpose trails provide connectivity.
LU-1.3 Adequate Capacity. We require adequate infrastructure and services for all development.	The SP establishes an infrastructure and public facilities plan to ensure that adequate roadways and public utilities including sewer, water and drainage facilities along with parks and other public facilities are provided to serve the SP area.
LU-1.4 Mobility. We require development and urban design, where appropriate, that reduces reliance on the automobile and capitalizes on ~~multi-modal transportation opportunities. (Link to Mobility Element Policy M3-3)~~ active transportation, transit, electric vehicles, and multimodal transportation opportunities (Link to Mobility Element Policies M-2.1, M-3.3; Community Design Element Policy CD-2.6, CD-3.1, CD-3.3, CD3.6).	Multipurpose trails are provided within the SP area. These trails connect with the trails located on the City's Multipurpose Trails and Bikeway Corridor Plan and provides points of connection to parks, residential neighborhoods, schools and the neighborhood commercial area.
LU-1.6 Complete Community. We incorporate a variety of land uses and building types in our land use planning efforts that result in a complete community where residents at all stages of life, employers, workers and visitors have a wide spectrum of choices of where they can live, work, shop and recreate within Ontario. ~~(Link to Complete Community Section of Community Economics Element)~~ (Link to Community Economics Element Complete Community Section; Community Design Element Urban, Mixed Use, and Transit-oriented Place Types Section)	The SP plans for a complete community with a mix of residential, commercial, and parks where residents can live, work, shop and recreate.
GOAL LU-2: Compatibility between a wide range of uses.	
LU-2.6 Infrastructure Compatibility. We require infrastructure to be aesthetically pleasing and in context with the community character.	The SP provides for an aesthetically pleasing streetscape concept.
LU-2.9 Methane Gas Sites. We require sensitive land uses and new uses on former dairy farms or other methane-producing sites be designed to minimize health risks.	The project will comply with appropriate mitigation measures identified in the project EIR for soil remediation and proper venting to address the potential existence of methane gases within the project. Per development requirements, several feet of soil that is potentially methane producing will be removed from the site to minimize risks.

GOAL LU-3: Staff, regulations and processes that support and allow flexible response to conditions and circumstances in order to achieve the Vision.	
LU-3.1 Development Standards. We maintain clear development standards which allow flexibility to achieve our Vision and provide objective standards that ensure predictability and deliver the intended physical outcomes. (Link to Community Design Element Design Quality and Urban, Mixed Use, and Transit-oriented Place Types Sections)	Utilizing the Specific Plan tool enables flexible development standards to be implemented, encouraging a range of housing and community design ideas. The standards set forth are implementable which helps maintain the vision and provide clear direction while encouraging creativity. .
GOAL LU5: Integrated airport facilities that minimize negative impacts to the community and maximize economic benefits.	
LU-5.7 ALUCP Consistency and Land Use Regulations. We comply with state law that requires general plans, specific plans and all new development to be consistent with the policies and criteria set forth within an Airport Land Use Compatibility Plan for any public use airport.	The SP is located within the Airport Influence Areas of Chino Airport and Ontario International Airport. Section 4.8 requires all development to be consistent with the Airport Land Use Compatibility Plans for both airports.
Housing Element	
GOAL H-2: Diversity of types of quality housing that are affordable to a range of household income levels, accommodate changing demographics, and support and reinforce the economic sustainability of Ontario.	
H-2.4 ~~New Model Colony~~ Ontario Ranch. We support a premier lifestyle community in the ~~New Model Colony~~ Ontario Ranch, distinguished by diverse housing, highest design quality, and cohesive and highly amenitized neighborhoods.	The SP features ~~single family~~ detached and attached housing types in a variety of plotting configurations distinguished by the highest design quality and cohesive and highly amenitized neighborhoods.
H-2.5 Housing Design. We require architectural excellence through adherence to City design guidelines, thoughtful site planning, environmentally sustainable practices and other best practices.	The SP has is own design guidelines to achieve architectural excellence.
GOAL H-4: Increased opportunities for low and moderate income households and families to afford and maintain quality ownership and rental housing opportunities, including move-up opportunities. Inclusive communities, racial equity, fair housing choice, and access to opportunity.	
H-4.4: Mixed-income Housing. We encourage the integration of affordable housing in the ~~New Model Colony~~ Ontario Ranch, Ontario Airport Metro Center Area, and existing neighborhoods.	The SP provides for a wide range of home ownership opportunities for many different lifestyles.
Parks and Recreation Element	
Goal PR-1: A system of safe and accessible parks that meets the needs of the community.	
PR-1.1 Access to Parks. ~~We strive to provide a park and/or recreational facility within walking distances (1/4 mile) of every residence.~~ In all new residential development areas, we strive to provide a park and/or recreational facility within walking distance (¼ mile) of every residence and prioritize the establishment of parks in environmental justice areas that do not have adequate access to parks.	The SP provides for parks and multipurpose trails that allow all homes to be within walking distance.
PR-1.5 Acreage Standard. We strive to provide 5 acres of parkland (public and private) per 1,000 residents.	The SP provides for park land, park improvements and/or park fees or a combination thereof in order to meet and comply with City park standards.

PR-1.6 Private Parks. We expect development to provide a minimum of 2 acres of developed private park space per 1,000 residents.	The SP will provide a minimum of 2 acres of developed private park space per 1,000 residents.
PR-1.9 Phased Development. We require parks be built in new communities before a significant proportion of residents move in.	Development within the SP is required to be reviewed and approved pursuant to the City's Subdivision Ordinance which requires the approval of tentative and final subdivision maps for the project. Conditions of approval associated with the City's approval of tentative subdivision maps will provide for the timing of construction of parks as part of the development.
PR-1.11 Environmental Function of Parks. We require new parks to meet environmental management objectives.	The SP requires all new development to be reviewed and approved pursuant to the provisions of the City's Subdivision Ordinance and Development Plan Review process which provides for review by the City's Planning Department which may require the development to incorporate environmental management objectives into the design of parks.
PR-1.12 Trails. We promote connections between parks and local trails including those managed by other public agencies.	Multipurpose trails are provided within the SP area. These trails connect with the trails located on the City's Multipurpose Trails and Bikeway Corridor Plan and provides points of connection to parks, residential neighborhoods, schools and the neighborhood commercial area.
PR-1.14 Multi-family Residential Developments. We require that new multi-family residential developments of five or more units provide recreational facilities or open space, in addition to paying adopted impact fees.	The SP requires that all condominium and multi-family developments within the project provide private recreational areas and/or pocket parks for residents of the development in addition to the payment by the developer of adopted impact fees.
Environmental Resources Element	
GOAL ER-1: A reliable and cost effective system that permits the City to manage its diverse water resources and needs.	
ER-1.3 ~~Conservation. We require conservation strategies that reduce water usage.~~ Conservation and Sustainable Water Supply. We work with regional water providers and users to conserve water and ensure sustainable local water supplies as more frequent droughts reduce long term local and regional water availability.	All SP development will meet CALgreen low flow fixture requirements. All irrigation systems will be designed per AB 325 guidelines and/or the City of Ontario's Water Conservation Ordinance.
ER-1.5 ~~Groundwater Management. We protect groundwater quality by incorporating strategies that prevent pollution, require remediation where necessary, capture and treat urban run-off, and recharge the aquifer.~~ Water Resource Management. Environmental justice areas are prioritized as we coordinate with local agencies to protect water quality, prevent pollution, address existing contamination, and remediate contaminated surface water and groundwater.	The SP development will comply with all applicable regulations in regards to protecting ~~ground~~ water quality.
ER-1.6 Urban Run-off Quantity. We encourage the use of low impact development strategies, including green infrastructure, to intercept run-off, slow the discharge rate, increase infiltration and ultimately reduce discharge volumes to traditional storm drain systems.	SP development shall be designed to detain, filter and treat surface runoff, in a manner and combination which is practical, to comply with the most recent requirements of the San Bernardino County NPDES Stormwater Program's Water Quality Management (WQMP) for significant new development projects. Low impact development strategies will be implemented as part of source control best management practices.

ER-1.7 Urban Run-off Quality. We require the control and management of urban run-off, consistent with Regional Water Quality Control Board regulations.	The project is obligated to control urban run-off, consistent with Regional Water Quality Control Board regulations as part of the regional NPDES Permit.
ER-1.8 Wastewater Management. We require the management of wastewater discharge and collection consistent with waste discharge requirements adopted by the Regional Water Quality Control Board.	The project is obligated to comply with wastewater discharge and collection requirements adopted by the Regional Water Quality Control Board.
GOAL ER-3: Cost-effective and reliable energy system sustained through a combination of low impact building, site and neighborhood energy conservation and diverse sources of energy generation that collectively helps to minimize the region's carbon footprint.	
ER-3.1 Conservation Strategy. We require conservation as the first strategy to be employed to meet applicable energy-saving standards.	All development within the SP will meet California's stringent CALgreen and Energy Codes.
ER-3.2 Green Development- Communities. ~~We require the use of best practices identified in green community rating systems~~ We encourage the use of the LEED Neighborhood Development rating system, or similar mechanism, to guide the planning and development of all new communities.	The SP contains a broad mix of land uses, density, trails and proximity to planned transit as identified in the best practices of several rating systems.
ER-3.3 Building and Site Design. We require new construction to incorporate energy efficient building and site design strategies, which could include appropriate solar orientation, maximum use of natural daylight, passive solar and natural ventilation.	All development within the SP will meet California's stringent CALgreen and Energy Codes.
ER-3.6 Generation- Renewable Sources. We promote the use of renewable energy sources (e.g., solar, wind, biomass) in public and private sector development.	All development within the SP will meet California's stringent Energy Codes.
GOAL ER-4: Improved indoor and outdoor air quality and reduced locally generated pollutant emissions.	
ER4-4 Indoor Air Quality. We will comply with State Green Building Codes relative to indoor air quality. We seek funding to improve indoor air quality for households with poor indoor air quality, with priority for lower income households in environmental justice areas.	SP development will be required to comply with all State laws in regards to indoor air quality.
ER-4.6 Particulate Matter. We support efforts to reduce particulate matter to meet State and Federal Clean Air Standards.	SP development will be required to comply with all State laws in regards to particulate matter as it relates to the SP projects.
GOAL ER5: Protected high value habitat and farming and mineral resource extraction activities that are compatible with adjacent development.	
ER5-2 Entitlement and Permitting Process. We comply with state and federal regulations regarding protected species.	The project will comply with all mitigation measures identified in the project EIR with regard to biological resources.
ER5-3 Right to Farm. We support the right of existing farms to continue their operations within the ~~New Model Colony~~ Ontario Ranch.	N/A, this refers to a City function.
ER5-4 Transition of Farms. We protect both existing farms and sensitive uses around them as agricultural areas transition to urban uses.	N/A, this refers to a City function.

Community Economics Element	
GOAL CE-1: A complete community that provides for all incomes and stages of life.	
CE-1.6 Diversity of Housing. We collaborate with residents, housing providers, and the development community to provide housing opportunities for every stage of life; we plan for a variety of housing types and price points to encourage the development of housing supportive of our efforts to attract business in growing sectors of the community while being respectful of existing viable uses.	The SP promotes a variety of housing product types, both attached and detached. Having diversity enables a wider range of residents to live in Ontario Ranch. Bringing more residents will help support and attract local business.
CE-1.7 Retail Goods and Services. We seek to ensure a mix of retail businesses that provide the full continuum of goods and services for the community.	The SP contains an approximately 12.1-acre neighborhood commercial site to provide goods and services to the community as well as surrounding areas.
CE-1.12 Circulation. We continuously plan and improve public transit and non-vehicular circulation for the mobility of all, including those with limited or no access to private automobiles. (Link to Mobility Public Transit)	The SP multipurpose trails throughout the community. A bus turnout is provided on Merrill Avenue.
GOAL CE-2: A City of distinctive neighborhoods, districts, and corridors, where people choose to be.	
CE-2.1 Development Projects. We require new development and redevelopment to create unique, high-quality places that add value to the community. (Link to Community Design Element)	The SP sets forth criteria for creating high-quality places.
CE-2.4 Protection of Investment. We require that new development and redevelopment protect existing investment by providing architecture and urban design of equal or greater quality.	The SP provides a framework for high quality architecture and urban design.
CE-2.5 Private Maintenance. We require adequate maintenance, upkeep, and investment in private property because proper maintenance on private property protects property values.	Maintenance will be ensured by the HOA.
CE-2.6 Public Maintenance. We require the establishment and operation of maintenance districts or other vehicles to fund the long-term operation and maintenance of the public realm whether on private land, in rights-of-way, or on publicly-owned property.	A Community Facilities District (CFD) may be established in conjunction with the Master Homeowners Association to maintain the public realm at the Avenue.
Safety Element	
Goal S-1: Minimized risk of injury, loss of life, property damage and economic and social disruption caused by earthquake-induced and other geologic hazards.	
S-1.1: Implementation of Regulations and Standards. We require that all new habitable structures be designed in accordance with the most recent California Building Code adopted by the City, including provisions regarding lateral forces and grading.	All habitable buildings within the SP will be required to meet the California Building Code.
S-1.2 Entitlement and Permitting Process. We follow state guidelines and the California Building Code to determine when development proposals must conduct geotechnical and geological investigations.	The SP will be compliant with all state mandated requirements for geotechnical and geological studies.

Goal S-3: Reduced risk of death, injury, property damage and economic loss due to fires, accidents and normal everyday occurrences through prompt and capable emergency response.	
S-3.8: Fire Prevention through Environmental Design. We require new development to incorporate fire prevention consideration in the design of streetscapes, sites, open space and buildings. (Link to Community Design Element)	All development within the SP incorporates fire prevention considerations in the design of streetscapes, sites, open spaces and buildings and will be verified for compliance during the review process.
Goal S-4: An environment where noise does not adversely affect the public's health, safety, and welfare.	
S-4.1: Noise Mitigation. We utilize the City's Noise Ordinance, building codes, and subdivision and development codes to mitigate noise impacts.	The SP will be compliant with results of noise studies and mitigation measures.
Goal S-5: Reduced risk of injury, property damage and economic loss resulting from windstorms and wind- related hazards.	
S-5.1 Dust Control Measures. We require the implementation of Best Management Practices for dust control at all excavation and grading project.	Construction within the Specific Plan will comply with all mitigation measures identified in the project EIR with regard to dust control.
Goal S-6: Reduced potential for hazardous materials exposure and contamination.	
S-6.9 Remediation of Methane. We require development to assess and mitigate the presence of methane, per regulatory standards and guidelines.	The project will comply with all mitigation measures identified as part of the venting to address the potential existence of methane gases within the project.
Goal S-7: Neighborhoods and commercial and industrial districts that are kept safe through a multi-faceted approach of prevention, suppression, community involvement and a system of continuous monitoring.	
S-7.4 Crime Prevention through Environmental Design (CPTED). We require new development to incorporate CPTED in the design of streetscapes, sites, open spaces and buildings.	The Specific Plan requires all new development to be reviewed and approved pursuant to the provisions of the City's Subdivision Ordinance and Development Plan Review process which provides for review by the City's Police Department which may require the development to incorporate CPTED in the design of streetscapes, sites, open spaces and buildings.
Mobility Element	
GOAL M-1: A system of roadways that meets the mobility needs of a dynamic and prosperous Ontario.	
M-l.1: Roadway Design and Maintenance. We require our roadways to: 1. Comply with federal, state and local design and safety standards. 2. Meet the needs of multiple transportation modes and users. 3. Handle the capacity envisioned in the ~~Functional Roadway Classification Plan~~ City of Ontario Master Plan of Streets and Highways;. ~~* Maintain a peak hour Level of Service (LOS) E or better at all intersections.~~ ~~* Be compatible with the streetscape and surrounding land uses.~~ 4. Be maintained in accordance with best practices ~~and our Right-of-Way Management Plan.~~ 5. Be compatible with the streetscape and surrounding land uses; and 6. Promote the efficient flow of all modes of traffic through the implementation of intelligent transportation systems and travel demand management strategies. (Link to Community Design Element Policies CD-2.5, CD-2.6, CD-2.16, CD-3.3)	The SP is consistent with the requirements of the City's Functional Roadway Classification Plan. The City will maintain arterial streets and curb-to-curb internal streets through the creation of an Community Facilities District. Parkway improvements within the ROW along interior streets and alleys shall be maintained by an HOA.

M-l.2: Mitigation of Impacts. We require development to mitigate its traffic impacts.	Development within the SP will implement all traffic mitigation measures, standard conditions and project design features identified in the project EIR.
GOAL M-2: A SYSTEM OF TRAILS AND CORRIDORS THAT FACILITATE AND ENCOURAGE BICYCLING AND WALKING.	
M-2.3: Pedestrian Walkways. ~~We require walkways that promote safe and convenient travel between residential areas, businesses, schools, parks, recreation areas, and other key destination points. (Link to Community Design CD3-1)~~ We require streets to include sidewalks and visible crosswalks at major intersections where necessary to promote safe and comfortable mobility between residential areas, businesses, schools, parks, recreation areas, and other key destination points. (Link to Community Design Policy CD-3.3)	Pedestrian walkways, as shown in the roadway plans and sections, exist throughout the SP area promoting safe and convenient travel between destination points.
GOAL M-3: A PUBLIC TRANSIT SYSTEM THAT IS A VIABLE ALTERNATIVE TO AUTOMOBILE TRAVEL AND MEETS THE BASIC TRANSPORTATION NEEDS OF THE TRANSIT DEPENDENT.	
M-3.2 Alternative Transit Facilities at New Development. We require new development to provide transit facilities, such as bus shelters, transit bays and turnouts, as necessary.	A bus turnout on Merril Avenue is being developed.
Community Design Element	
GOAL CD-1: A DYNAMIC, PROGRESSIVE CITY CONTAINING DISTINCT NEIGHBORHOODS AND COMMERCIAL DISTRICTS THAT FOSTER A POSITIVE SENSE OF IDENTITY AND BELONGING AMONG RESIDENTS, VISITORS, AND BUSINESSES.	
~~CD-1.2 Growth Areas. We require development in growth areas to be distinctive and unique places within which there are cohesive design themes.~~	~~The Design Guidelines set forth a clear and cohesive design theme by providing design criteria for site planning, architectural styles, landscaping, and walls and fences.~~
CD-1.5 View Corridors. We require all major north- south streets be designed and redeveloped to feature views of the San Gabriel Mountains, which are part of the City's visual identity and a key to geographic orientation. Such views should be free of visual clutter, including billboards and may be enhanced by framing with trees.	The major north-south streets are designed to feature views of the San Gabriel Mountains and comply with City standards for these streets.
GOAL CD-2: A HIGH LEVEL OF DESIGN QUALITY RESULTING IN NEIGHBORHOODS, COMMERCIAL AREAS, PUBLIC SPACES, PARKS, AND STREETSCAPES ~~, AND DEVELOPMENTS~~ THAT ARE ATTRACTIVE, SAFE, FUNCTIONAL, HUMAN-SCALE, AND DISTINCT.	
CD-2.1: Quality Building Design and Architecture. We encourage all development projects to convey visual interest and character through: 1. Building volume, massing, and height to provide appropriate scale and proportion; 2. A true architectural style which is carried out in plan, section and elevation through all aspects of the building and site design and appropriate for its setting; and 3. Exterior building materials that are visually interesting, high quality, durable, and appropriate for the architectural style.	The Design Guidelines set forth a clear and cohesive design theme by providing design criteria for architecture, landscaping, and walls and fences.

CD-2.2 Neighborhood Design. We create distinct residential neighborhoods that ~~are functional, have~~ promote a sense of community and identity by ~~emphasize livability and social interaction, and are uniquely identifiable places~~ emphasizing access, connectivity, livability, and social interaction through such elements as: 1. A pattern of smaller, walkable blocks that promote access, activity, ~~and~~ safety and access to nearby amenities and services; 2. ~~variable setbacks and parcel sizes to accommodate a diversity of housing types~~ Varied parcel sizes and lot configurations to accommodate a diversity of housing types; 3. Traffic calming measures to slow traffic and promote walkability while maintaining acceptable fire protection and traffic flows; 4. Floor plans that encourage views onto the street and de-emphasize the visual and physical dominance of garages (introducing the front porch as the "outdoor living room"), as appropriate; and 5. Landscaped parkways, with sidewalks separated from the curb and designed to maximize safety, comfort, and aesthetics for all users.	The Design Guidelines provide for distinct residential neighborhoods that are functional, have a sense of community, emphasize livability and social interaction, and are uniquely identifiable places.
CD-2.5: Streetscapes. We design new and, when necessary, retrofit existing streets to improve walkability, bicycling and transit integration, strengthen connectivity, and enhance community identity through improvements to the public right of way such as sidewalks, street trees, parkways, curbs, street lighting and street furniture.	The Circulation Plan is designed to accommodate pedestrians, bicycles and autos ~~equally~~.
CD-2.6: Connectivity. We promote development of local street patterns, ~~and pedestrian networks~~ multimodal networks, and connected public spaces that create and unify neighborhoods, rather than divide them, and create cohesive and continuous corridors, rather than independent "islands" through the following means: 1. Local street patterns that provide access between subdivisions and within neighborhoods and discourage through traffic; 2. A local street system that is logical and understandable for the user. A grid system is preferred to avoid circuitous and confusing travel paths between internal neighborhood areas and adjacent arterials and to provide adequate emergency and evacuation access; and 3. Pedestrian and bicycle networks that provide convenient access to neighborhoods and nearby destinations, such as schools, parks, other public spaces, commercial areas, and transit stops. ~~neighborhoods, centers, public schools, and parks that are linked by pedestrian greenways open space networks. These may also be used to establish clear boundaries between distinct neighborhoods and/or centers.~~	The Circulation Plan is designed for connectivity that unifies neighborhoods.

CD-2.7: Sustainability. We collaborate with the development community to design and build neighborhoods, streetscapes, sites, outdoor spaces, landscaping and buildings to reduce energy demand through solar orientation, maximum use of natural daylight, passive solar and natural ventilation, building form, mechanical and structural systems, building materials and construction techniques.	All buildings will meet or exceed California's stringent CALgreen and California Energy Codes reducing energy demand.
CD-2.8: Safe Design. We incorporate defensible space design into new and existing developments to ensure the maximum safe travel and visibility on pathways, corridors, and open space and at building entrances and parking areas by avoiding physically and visually isolated spaces, ~~maintenance of~~ maintaining visibility and accessibility, and using ~~use of~~ lighting.	The SP encourages "eyes on the street" for neighborhood safety and security.
CD-2.9: Landscape Design. We encourage durable, sustainable, and drought-tolerant landscaping materials and designs that enhance the aesthetics of structures, create and define public and private spaces, and provide shade and environmental benefits.	The SP landscape enhances the aesthetics of structures, created and defines public and private spaces and provides shade. Landscape planting will be in accordance with the City's landscape ordinance and CALGreen.
CD-2.10 Parking Areas. We require all development, including single-family residential, to minimize the visual impact of surface, structured, and garage parking areas visible from the public realm in an aesthetically pleasing, safe and environmentally sensitive manner. Examples include: 1. Surface parking: Shade trees, pervious surfaces, urban run-off capture and infiltration, and pedestrian paths to guide users through the parking field. 2. Structured parking: facade articulation, screening, appropriate lighting, and landscaping. 3. Garage parking: providing access to single-family residential garages through alley access, recessing garages from the frontage to emphasize front doors or active living spaces.	Garages and parking lots are a relevant and focused on element of site design. Single family homes will be designed appropriate to product, they will be placed on alleys or drive courts if feasible to layout or along local private streets if a more conventional design. Bringing architecture forward to minimize garage visual impact is encouraged.
CD-2.11: Entry Statements. We encourage the inclusion of amenities, signage and landscaping at the entry to neighborhoods, commercial centers, mixed use areas, industrial developments, and public places that reinforce them as uniquely identifiable places.	The SP contains guidelines for neighborhood entries and monumentation.
CD-2.12: Site and Building Signage. We encourage the use of sign programs that utilize complementary materials, colors, and themes. Project signage should be designed to effectively communicate and direct users to various aspects of the development and complement the character of the structures.	The SP contains guidelines for neighborhood entries and monumentation.

GOAL CD-3: Vibrant urban environments that are organized around intense buildings, pedestrian and transit areas, public plazas, and linkages between and within developments that are conveniently located, visually appealing, and safe during all hours.	
~~CD3-1 Design. We require that pedestrian, vehicular, bicycle and equestrian circulation on both public and private property be coordinated and designed to maximize safety, comfort and aesthetics. (Link to Bicycle and Pedestrians Section of the Mobility Element and Policies M2-3 and M2-4)~~	~~The SP is designed for bicycle and pedestrian accessibility throughout the community through a network of off-street bike and pedestrian trails.~~
~~CD3-2 Connectivity Between Streets, Sidewalks, Walkways and Plazas. We require landscaping and paving be used to optimize visual connectivity between streets, sidewalks, walkways and plazas for pedestrians.~~	~~Landscaping and paving are used to maintain a visual connectivity between streets, sidewalks, and walkways for pedestrians.~~
~~CD3-3 Building Entrances. We require all building entrances to be accessible and visible from adjacent streets, sidewalks or public open spaces. (Link to Safety Element Policy S7-4)~~	~~The SP guidelines for doors and entries promote the interface between public and private spaces.~~
~~CD3-5 Paving. We require sidewalks and road surfaces to be of a type and quality that contributes to the appearance and utility of streets and public spaces.~~	~~Sidewalks and road surfaces contribute to the appearance of streets and public spaces.~~
GOAL CD-5: A sustained level of maintenance and improvement of properties, buildings and infrastructure that protects the property values and encourages public and private investments.	
CD-5.1 Maintenance of Buildings and Property. We require all public and privately owned buildings and property (including trails and easements) to be properly and consistently maintained.	A master Home Owner Association (HOA) will be established to maintain common areas and other areas as shown in the Maintenance Responsibility Matrix.
CD-5.2 Maintenance of Infrastructure. We require the continual maintenance of infrastructure.	The HOA will maintain infrastructure elements as shown in the Maintenance Responsibility Matrix and in accordance with City rules and regulations.

Appendix

Appendix A—Legal Description

Subarea 29

Section 23, Township 2 South, Range 7 West, San Bernardino Meridian, in the County of San Bernardino, State of CALIFORNIA, according to official plat thereof.

Together with the northeast quarter of Section 22, Township 2 South, Range 7 West, San Bernardino meridian, in the County of San Bernardino, state of CALIFORNIA, according to official plat thereof.

Excepting therefrom that portion lying westerly of the easterly line of that portion conveyed to the San Bernardino County Flood Control District by deed recorded September 9, 1977 in book 9259, page 335 of official records.

Also Excepting therefrom that portion lying westerly of the easterly line of that portion conveyed to the San Bernardino County Flood Control District by deed recorded November 18, 1977 in book 9308, page 683 of official records.

Appendix B—Glossary of Specific Plan Terms

A. Glossary of Specific Plan terms

Accessory Structures —"Accessory structures" shall mean a detached subordinate structure located on the same lot, which is devoted exclusively to a use customarily incidental and subordinate to the principal structure.

Building Height – "Building" Height shall mean the vertical distance measured from the average level of the highest and lowest point of the building site covered by the building, to the highest point of the structure.

Casita—An additional bedroom, home office, or use area located on the same lot as a single-family detached residence, which does not require subdivision. A Casita may contain its own bathroom facilities but not a kitchen. It also may not, by deed restriction, be rented or sold separately from the appurtenant residence.

A Casita shall meet main building setbacks, standard height limits, overall lot coverage, floor area ratios, and other applicable requirements.

Conditional Use – "Conditional Use" shall mean a use permitted on a particular site and within a zoning district only upon finding that such use in a specified location will comply with all the conditions and standards for the location or operation of such use.

Front Yard – "Front Yard" shall mean a yard extending across the full width of the lot, having at no point a depth of less than the minimum required, horizontal distance between the front lot line, or its tangent, and the closest permissible locations of the main building. A line at right angle to the front lot line or its tangent shall measure said distance. Front yard setbacks shall be measured from back of walk or R/W, if no walk.

Home Occupations – "Home Occupations" shall mean an occupation customarily conducted as a secondary use entirely within a dwelling by the occupant of the dwelling in connection with which there is not display, no stock in trade, or commodity sold on the premises, and no persons employed: and which is conducted in such a manner that the outward appearance of the premise gives no indication of other than residential use, and which is not detrimental to the residential character of the neighborhood by virtue of traffic flow, noise, odor, or other adverse conditions.

Lot Coverage – "Lot Coverage" shall mean that portion of the area of a lot, expressed as a percentage, occupied by all buildings or structures which are roofed or otherwise covered (exclusive of eaves or overhangs) and which extend more than three (3) feet above grade level).

Lot Size – "Lot Size" shall mean the total area exclusive of public streets within the boundary lines of the lot.

Lot Width – "Lot Width" shall mean the horizontal distance between the side lot line measured at right angles to the line comprising the depth of the lot at a point midway between the front and rear lot lines.

Minimum Floor Area – "Minimum Floor Area" shall mean the minimum total horizontal area expressed in square feet, of all the floors of a building included within the surrounding walls, including shafts and enclosed exterior stairwells.

Rear Yard – "Rear Yard" shall mean a yard extending across the full width of the lot, having at no point a depth of less than the minimum required horizontal distance as measured from the part of the main building nearest the rear lot line towards the rear lot line, and such measurement shall be along a line representing the shortest distance between said part of the main building and the rear lot line.

Side Yard – "Side Yard" shall mean a yard between the main building and the side lot lines extending from the required front yard, or the front lot line where not front yard is required, to the rear yard, the width of which side yard shall be measured horizontally from, and at right angles to, the nearest point of a side lot line toward the nearest part of a main building.

Temporary Uses – "Temporary Uses" shall mean residential or commercial construction activities, including necessary construction offices and materials and equipment storage, subdivision sales and leasing offices, sales information centers, sales pavilions, model home complexes, and signage located within the subdivision.

Appendix C—Summary of Key Specific Plan Background Information

Technical appendices

- Traffic Study and/or TIA (Traffic Impact Analysis);
- Hydrology/Drainage Study and drainage master plan for the Specific Plan area;
- Sewer Master Plan for the Specific Plan area;
- Water Master Plan for the Specific Plan area; and
- Geotechnical/Soils study (if applicable) for the Specific Plan area.

CITY OF ONTARIO *Agenda Report* **November 21, 2023**	**SECTION:** **PUBLIC HEARINGS**
Department: Planning Prepared By: Gwen Berendsen Staff Member Presenting: Scott Murphy, Executive Director Community Development Approved By:	Submitted To: Council/OHA Approved: _____ Continued To: _____ Denied: _____ Item No: 24

SUBJECT: **A PUBLIC HEARING TO CONSIDER AN AMENDMENT TO SECTION 5.03.363, "SHORT TERM RENTALS," OF DIVISION 5.03 OF CHAPTER 5 OF THE ONTARIO DEVELOPMENT CODE, UPDATING REGULATIONS FOR THE SHORT-TERM RENTAL OF PROPERTY IN THE CITY**

RECOMMENDATION: That the City Council introduce and waive the first reading of an Ordinance amending subsections C, D, E, F, I, J and K of Section 5.03.363 of the Ontario Development Code, relating to regulations of short-term rentals.

THE FOLLOWING COUNCIL GOALS ARE BEING ACHIEVED:
Operate in a Businesslike Manner
Focus Resources in Ontario's Commercial and Residential Neighborhoods

FISCAL IMPACT: Stricter regulation of short-term rental operations pursuant to the Ontario Development Code may result in increased collection of permit fees and administrative fines which are payable to the City. Staff does not anticipate any increased enforcement cost on the staffing side, as current staffing levels support the need for stricter regulation.

BACKGROUND & ANALYSIS: This item was continued from the October 3, 2023, City Council Hearing.

While short term rentals provide options to the traveling public and income to the affected host property owner or tenant, they can also impact the community. Over the past few years, there has been an increase in the number of properties in the City being offered on websites such as Airbnb, VRBO, and Homeaway. In December 2022, the City Council adopted Ordinance No. 3235, adding a new Section 5.03.363 to the Ontario Development Code to regulate short-term rentals in the City. The regulations adopted at that time:

- Established a requirement that operators obtain a short-term rental permit from the City;
- Set forth the process for permit applications, investigations, issuance, expiration, renewal, and revocation;
- Created an appeals procedure for aggrieved applicants;

- Established a series of operating requirements for short-term rentals, including limiting the locations where short-term rentals may be located (zoning districts AR-2, RE-2, RE-4, LDR-5, MDR-11, MDR-18, MDR-25, HDR-45, LUA-3, and MU-2);
- Established a series of requirements applicable to hosting platforms such as AirBNB and VRBO; and
- Established the City's procedures for enforcement of violations of the Ordinance.

The proposed updates to Section 5.03.363 will make updates to strengthen the regulations for permit revocation, operating requirements, enforcement and penalties. In addition, updates are proposed to how the City processes permit applications; allow for short-term rental permit applications to be filed while the applicant is awaiting a pending business license; and clarify the areas of the City in which short-term rentals are allowed (all areas not specifically named in the Ordinance will not allow for short-term rentals).

CONCLUSION: Staff and the City Attorney recommend approval for the first reading of the attached Ordinance. All the Ordinance deletions are shown in strikethrough, additions shown in underline.

ORDINANCE NO. _____

AN ORDINANCE OF THE CITY COUNCIL OF THE CITY OF ONTARIO, CALIFORNIA, AMENDING SECTION 5.03.363, "SHORT-TERM RENTALS," OF DIVISION 5.03 OF CHAPTER 5 OF THE ONTARIO DEVELOPMENT CODE, UPDATING REGULATIONS FOR THE SHORT-TERM RENTAL OF PROPERTY IN THE CITY.

WHEREAS, the growing popularity of "home-sharing" and other short-term vacation rentals, through the use of websites such as Airbnb, VRBO, and Homeaway, allow individual homeowners, landlords, and tenants to list homes, apartments, and rooms for rent at the price and duration of their choosing; and

WHEREAS, on December 20, 2022, the City Council adopted Ordinance No. 3235, adding Section 5.03.363 to the Ontario Development Code to establish a regulatory framework applicable to all short-term rentals within the City; and

WHEREAS, the City has determined that certain minor clarifying revisions are necessary to Section 5.03.363, including an update to the areas of the City in which short-term rentals are expressly authorized; and

WHEREAS, all legal prerequisites to the adoption of this Ordinance have occurred.

NOW THEREFORE, THE CITY COUNCIL OF THE CITY OF ONTARIO DOES ORDAIN AS FOLLOWS:

SECTION 1. The recitals above are true and correct and are hereby incorporated herein by this reference.

SECTION 2. Amendment. Subsections C, D, E, F, I, J and K of Section 5.03.363 ("Short Term Rentals") of the Ontario Municipal Code is hereby revised to read as follows (deletions shown in ~~strikethrough~~, additions shown in underline):

"5.03.063: Short Term Rentals

A. Definitions. As used in this Section, the words or phrases listed below shall have the meanings thereafter specified:

1. *Booking transaction* means any reservation or payment service provided by a person who facilitates a short-term rental, home sharing, or similar transaction between a prospective guest and a host.

2. *Director* means the finance director of the City of Ontario.

3. *Dwelling unit* means a structure or portion thereof which is used for human habitation.

4. *Guest* means a person who rents a short-term rental for a period of less than 30 days.

5. *Group* means a single guest or any number of guests who are occupying a short-term rental on a single rental agreement.

6. *Host* means a person engaged in providing short-term rental at their primary residence.

7. *Hosted stay* means short-term rental activity whereby the host remains on the site of his or her primary residence throughout the duration of the guest's stay, expect during daytime and/or work hours.

8. *Hosting platform* means a marketplace in whatever form or format which facilitates the short-term rental activity, through advertising, match-making, or any other means, using any medium of facilitation, and from which the operator of the hosting platform derives revenues, including booking fees or advertising revenues, from providing or maintaining the marketplace.

9. *Primary residence* means the dwelling unit used as the permanent residence or usual place of return for housing by the host. A person may have only one primary residence.

10. *Short-term rental* means a dwelling unit, or any portion thereof, that is rented by the host to another party for a period of not more than 30 consecutive days in exchange for any form of monetary or non-monetary consideration, including trade, fee, swap or any other consideration in lieu of cash payment. Hosted stays, Un-hosted stays, and vacation rentals are types of short-term rental.

11. *Transient occupancy tax* or *"TOT'* means the tax imposed on occupancies of 30 consecutive calendar days or less under Chapter 6 of Title 3 of the Ontario Municipal Code.

12. *Un-hosted* stay means a short-term rental activity whereby the host remains off the site of his or her primary residence-site for some or all of the duration of the guest's stay.

13. *Vacation rental* means a dwelling unit that is not a primary residence, and which is available for temporary lodging, for compensation or any form of consideration. The term "vacation rental" shall not include: single-room occupancy buildings, bed and breakfast inns, hotels, a dwelling unit for which a tenant has a month-to-month rental agreement and the rental payments are made on a monthly basis, or corporate housing.

B. Permit required for authorized short-term rental

No person, either for themselves or any other person, shall cause, allow, conduct, permit, maintain, or facilitate short-term rental at any dwelling unit within the city without first obtaining a short-term rental permit pursuant to this chapter, and complying with all other applicable provisions of this code. A short-term rental permit shall only be issued to authorize hosted stays and un-hosted stays. Vacation rentals are prohibited.

C. Permit application

To apply for a short-term rental permit, a person seeking to become a host must file an application with the ~~director~~City, accompanied by a nonrefundable processing fee in an amount established by resolution of the city council. The application shall be in a form prescribed by the ~~director~~City and shall contain, at a minimum, the following:

1. The legal name, current address and telephone number of the applicant;

2. Address of the short-term rental property, and if applicable, location telephone number;

3. An index of all residents of the property with name and date of birth, juveniles may be listed by title and age only;

4. A diagram of the property indicating areas intended for use as short-term rental;

5. Documentation indicating the number of bedrooms within the dwelling unit, such as a record from the County Assessor's Office;

6. A parking plan indicating sufficient lawful parking on the property for all vehicles belonging to residents and one additional space for each bedroom of the house to be used for short-term rental;

7. Evidence that the applicant has applied for and is in the process of obtaining ~~A copy of a~~ ~~valid~~ business license ~~issued~~ pursuant to Chapter 1 of Title 3 of the Ontario Municipal Code;

8. A home occupation permit pursuant to Section 5.03.240 of the Ontario Development Code is not required;

9. Emergency contact information for 24-hour response within 30 minutes;

10. Certification by the applicant that the information contained in the application is true to his or her knowledge and belief;

11. Documentation establishing that the dwelling unit proposed to be used as a short-term rental is the host's primary residence. Such documentation shall include at least two of the following and be in the name of the host: Motor vehicle registration, driver's license, voter registration, or tax documents showing the residential unit as the residence of the host;

12. Two passport size photographs of the applicant; and

13. Any other information required by regulations promulgated pursuant to this chapter or deemed necessary by the director.

D. Application investigation and criteria for approval or denial or permit

Upon receipt of a completed application, the ~~director, or his or her designee~~City, shall cause an investigation of the applicant and the application as submitted. The investigation shall be completed in a timely manner as follows and the applicant shall be notified of the result in writing in a timely manner:

1. The applicant shall be required to pay the established fees for such service in addition to the permit fee.

2. Inspection of the property by city staff shall be scheduled within 30 days of application. Annual inspections will be required upon renewal of a short-term rental permit.

3. If, as a result of this investigation, the applicant is found to satisfy all of the requirements of Section 5.03.063.D., and no grounds for denial exist, the application shall be approved, and a short-term rental permit shall be issued to the applicant. The permit shall contain the name, address of the permittee, a description of the short-term rental to be offered, the date of issuance and term of the permit, photograph of the permittee, and the signature of the Planning Director ~~director~~ or his or her designee.

4. A short-term rental permit application may be denied for any of the following reasons:

a. Information contained in the application, or supplemental information requested from the applicant, is false or misleading in any material detail;

b. The applicant failed to provide a complete application, after having been notified of the requirement to produce additional information or documents;

c. The applicant is delinquent in payment of any city or county taxes, fines, or penalties in relation to short-term rental;

d. The applicant has previously held a short-term rental permit which was revoked by the city during the year prior to the application;

e. The applicant has failed to pay any previous administrative fines, remediate any other violations, and/or complete any other alternative disposition associated with a previous violation of this chapter; or

f. The applicant has failed to demonstrate an ability to conform to the operating standards set forth in Section ~~5.03.063.1~~ 5.03.363.1.

If the permit application is denied, written notice of such denial and the reasons therefore shall be provided to the applicant.

E. Permit expiration and renewal

A short-term rental permit shall be valid for 12 months from the date of issuance and shall expire and become null and void on the first anniversary date of its issuance. A person may apply for a permit renewal on a form provided by the city prior to the expiration of his or her active short-term rental permit and upon successfully completing an inspection by city staff. The applicant shall be required to pay the administrative fee for the permit renewal fee in the amount established by city council resolution at the time the renewal application is filed. In addition, the applicant shall renew their business license. Failure of the applicant to submit a complete application prior to the expiration date of the existing short-term rental permit shall be a basis for denial of the renewal.

F. Permit revocation

Two (2) violations of any provision of this chapter or this code within one (1) year by any applicant, occupant, responsible person, local contact person, owner, or owner's authorized agent or representative, with respect to any one (1) residential dwelling shall result in an immediate suspension of the short-term vacation rental permit. ~~The director may revoke a short-term rental permit issued to a short-term rental host for a third or subsequent violation of this chapter within any period of time or for any violation of Chapter 6 of Title 3 of the Ontario Municipal Code relating to transient occupancy tax. A short-term rental host whose permit is revoked may apply for a new short-term rental permit one year after the revocation of the permit.~~ A revocation under this section may be appealed in accordance with the procedure set forth in Section 5.03.363(G), below.

G. Appeals

Any person whose short-term rental permit is denied or revoked may file an appeal of the decision in writing with the city clerk within 15 days following the date of the director's decision stating the grounds for said appeal. The appellant shall pay a non-refundable fee in an amount established by resolution of the city council for such appeal. The city clerk shall schedule an appeal hearing with the city manager or his or her designee within 15 days of an appeal being filed. The decision of the city manager or the designee shall be final.

H. Permits nontransferable

A short-term rental permit granted pursuant to this chapter shall not be transferable to another person, parcel number, or to another property owner. Said permit shall not run with the land or property to which it applies.

I. Operating requirements

Short-term rental hosts shall comply with the following requirements:

1. The host shall be:

a. The property owner or the spouse, parent, or adult child of the property owner.

b. A tenant of the property who has occupied the property as his or her primary residence prior to making application for a short-term rental permit and who has submitted written authorization from the property owner to operate short-term rental at the residence.

2. The dwelling unit shall be the primary residence of the host.

3. The dwelling unit must be located within the following zones: AR-2, RE-2, RE-4, LDR-5, MDR-11, MDR-18, MDR-25, HDR-45, LUA-3, MU-2, ~~MU-11~~, MU-1, MU-3, MU-6, MU-8B, MU-8C, MU-8D and MU-8E, including residential and mixed-use zoning districts within specific plan and planned unit development areas. Dwelling units are not permitted to be used as short-term rentals in any other zones.

4. All advertising for the dwelling unit as a short-term rental that is displayed on a hosting platform or other media shall display the number of the current and valid permit as issued by the city, a street-view photo of the front of the house and the maximum number of guests based on the occupancy limit set forth in subsection 1.5.

5. The dwelling unit's occupancy, including the host, other residents of the dwelling unit, and guests, during a short-term rental shall not exceed two times the number of bedrooms of the dwelling unit.

6. The short-term rental permit shall be conspicuously displayed in each area of the dwelling unit available for occupancy.

7. Any accessory dwelling unit subject to a covenant that specifically prohibits rentals of 30 days or less may not be used as a short-term rental.

8. A single dwelling unit shall be limited to two groups of any number concurrently or two concurrent booking transactions.

9. The short-term rental shall comply with all applicable provisions of this Code and State law.

10. Conditions that cause a public nuisance, as defined by this code or state law, are prohibited at the dwelling unit during a short-term rental.

11. Un-hosted stays shall be limited to a total of 90 days within a calendar year at the same dwelling unit. Hosted stays shall not be limited.

12. Excessive traffic to and from the short-term rental that significantly impairs the quiet enjoyment of neighboring properties is prohibited.

13. Excessive noise that significantly impairs the quiet enjoyment of neighboring properties is prohibited. The amplification of sound by any device outside the short-term rental is prohibited. Quiet hours during which noise must be restricted to the interior of the short-term rental shall be between 10:00 p.m. and 7:00 a.m. the following morning.

14. The obstruction of any public right-of-way, road, street, highway, or private road by occupants of the unit is prohibited.

15. No event, including a conference, wedding, fundraiser, or similar gathering, or any commercial event, may be held at a short-term rental.

16. The permittee shall install at least one (1) public-facing camera at or near the front entrance of the home that enables the host or manager to remotely monitor the number of individuals entering the home and activity in the front yard. The permittee shall install at least one (1) public-facing camera over the garage of the home that enables the host or manager to remotely monitor the activity in the front driveway and street in front of the residence. The permittee shall maintain video recordings from both required cameras for a minimum of 30 days.

17. A permittee shall, for a period of at least one year after the date of each stay, keep written rental records that document the following information:

a. All dates on which the permittee rented the short-term rental to one or more guests;

b. The name and contact information for each renter; and

c. The license plate(s) of vehicles associated with the renter stored at or near the short-term rental during their stay.

18. Short-term rentals, within those neighborhood communities with established Homeowner Associations (HOAs), shall comply with any HOA Short-Term Rental provisions and/or regulations.

19. Off-street parking spaces shall be provided on the property sufficient for all vehicles associated with the short-term rental property or its occupants in accordance with the Ontario Development Code Section 6.03.015. Parking is allowed only in designated driveways and garages. The maximum number of vehicles at a Short-Term rental property at any time is equivalent to the minimum number of parking spaces required for that property.

J. Hosting platform requirements

1. Hosting platforms shall be responsible for collecting all applicable TOTs and remitting the same to the city. TOT remittance is due monthly, in accordance with Chapter 6 of Title 3 of the Ontario Municipal Code. The hosting platform shall be considered a managing agent of the host for purpose of TOT collections and remittance responsibilities as set forth in Chapter 6 of Title 3 of the Ontario Municipal Code.

2. Subject to applicable laws, hosting platforms shall disclose to the city on a regular basis each short-term rental listing located in the city, the names of the persons responsible for each such listing, the address of each such listing, the length of stay for each such listing and the price paid for each stay.

3. Hosting platforms shall require hosts to include the city-issued registration number in their listing(s), in a format designated by the city. Upon notice from the city that a listing is non-compliant, hosting platforms shall cease any short-term rental booking transactions for said listing(s) within five business days. A hosting platform shall not complete any booking transaction for a residential property or unit subject to a city notice until notified by the city that the residential property or unit is in compliance with the local registration requirement.

4. Hosting platforms shall not collect or receive a fee, directly or indirectly through an agent or intermediary, for facilitating or providing services ancillary to a vacation rental or unregistered short-term rental, including, but not limited to, insurance, concierge services, catering, restaurant bookings, tours, guide services, entertainment, cleaning, property management, or maintenance of the dwelling unit.

5. A hosting platform operating exclusively on the internet, which operates in compliance with subsections 1., 2., 3., and 4. above, shall be presumed to be in compliance with this chapter.

6. The provisions of this section shall be interpreted in accordance with otherwise applicable state and federal law(s) and will not apply if determined by the city to be in violation of, or preempted by, any such law(s).

K. Enforcement and penalties.

1. Operating a short-term rental without a valid short-term rental permit and business license is prohibited. Advertising shall be considered prima facie evidence of operation. Additional evidence of operation may include, but shall not be limited to, guest testimony, online reviews, rental agreements, receipts, or any other information deemed relevant by the city.

2. A violation of this chapter shall constitute a public nuisance, which may be abated by any means provided by law, including, but not limited to, injunctive relief, issuance of administrative fines pursuant to Chapter 2 of Title 1 of the Ontario Municipal Code, and shall also constitute a misdemeanor punishable pursuant to

Chapter 2 of Title. The city may issue an administrative citation to any applicant, occupant, responsible person, local contact person, owner, owner's authorized agent or representative, or hosting platform of this code, if there is any violation of this chapter committed, caused or maintained by any of the above parties. Nothing in this section shall preclude the city from also issuing a citation upon the occurrence of the same offense on a separate day.

3. An administrative citation may impose a civil penalty for one (1) or more violations of this chapter in the maximum amount allowed by state law or this code. A civil penalty issued in accordance with this code shall be in the amount of one thousand dollars ($1,000.00) for the first violation, two thousand dollars ($2,000.00) for the second violation, and three thousand dollars ($3,000.00) for the third and all subsequent violations.

4. Each and every day, or portion thereof, a violation of this chapter exists shall constitute a separate and distinct violation.

5. The remedies provided herein are intended to be cumulative and may be used in lieu of or in addition to any other remedy provided by this chapter or other law."

SECTION 3. If any section, subsection, subdivision, sentence, clause, or phrase in this Ordinance or any part thereof is for any reason held to be unconstitutional, invalid or ineffective by any court of competent jurisdiction, such decision shall not affect the validity or effectiveness of the remaining portions of this ordinance or any part thereof. The City Council hereby declares that it would have adopted each section irrespective of the fact that any one or more subsections, subdivisions, sentences, clauses, or phrases be declared unconstitutional, invalid or ineffective.

SECTION 4. This Ordinance shall become effective thirty (30) days after its adoption by the City Council.

SECTION 5. The City Council finds that adoption of this Ordinance is exempt from the California Environmental Quality Act ("CEQA") pursuant to Section 15358 (the activity will not result in a direct or reasonably foreseeable indirect physical change in the environment) of the CEQA Guidelines, California Code of Regulations, Title 14, Chapter 3, because it has no potential for resulting in physical change to the environment, directly or indirectly. Moreover, the City Council finds that this Ordinance is also exempt under CEQA pursuant to Guidelines Section 15061(b)(3) (there exists no possibility that the activity will have a significant adverse effect on the environment).

SECTION 6. The Mayor shall sign this Ordinance and the City Clerk shall certify as to the adoption and shall cause a summary thereof to be published at least once, in a newspaper of general circulation in the City of Ontario, California within fifteen (15) days of the adoption. The City Clerk shall post a certified copy of this Ordinance, including the vote for and against the same, in the Office of the City Clerk, in accordance with Government Code Section 36933.

PASSED, APPROVED, AND ADOPTED this 21st day of November 2023.

RESOLUTION NO. _____

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF ONTARIO, CALIFORNIA, ESTABLISHING A SHORT-TERM RENTAL PERMIT APPLICATION FEE UNDER ONTARIO MUNICIPAL CODE SECTION 5.03.363(c).

WHEREAS, pursuant to the provisions of the California Constitution, the laws of the State of California, and City ordinances, the City of Ontario is authorized to adopt and implement fees and charges for certain municipal services, provided the same do not exceed the estimated reasonable cost of providing such services; and

WHEREAS, the City of Ontario Municipal Code Section 5.03.363(c), adopted by the City Council on December 22, 2022, establishes that a person seeking to become a host of a short-term rental must file an application accompanied by a nonrefundable processing fee in an amount established by resolution of the City Council; and

WHEREAS, City staff has conducted a comprehensive review of the costs to provide such services related to the processing, review, and inspection of the short-term rental application using fully burdened rates of staff time involved; and

WHEREAS, the City Council hereby finds that the fees established and adopted hereby do not exceed the estimated reasonable cost of providing the services or materials involved; and

WHEREAS, pursuant to Government Code Section 66016, at least 10 days prior to the meeting at which this Resolution was adopted, the City has made available to the public data indicating the amount of cost, or estimated cost, required to provide the service for which the fee or service charge is levied and the revenue sources anticipated to provide the service, including General Fund revenues.

NOW, THEREFORE, BE IT RESOLVED by the City Council of the City of Ontario as follows:

SECTION 1. The City Council hereby adopts the short-term rental permit application fee in the amount of $456.00, pursuant to Title 5, Chapter 3 Section 5.03.363(c) of the Ontario Municipal Code, and authorizes its addition to the appropriate fee schedule. This fee will take effect on the date of adoption of this Resolution.

SECTION 2. Other previous City Council actions are hereby repealed to the extent that they are inconsistent herewith.

SECTION 3. The Mayor shall sign this Resolution and the City Clerk shall certify as to its adoption.

PASSED, APPROVED, AND ADOPTED this 21st day of November 2023.
