JN: -1495 ONTARIO
CHECKED TET
SHEET 1 OF 1

CITY OF ONTARIO *Agenda Report* **March 21, 2023**	**SECTION:** **PUBLIC HEARINGS**
Department: Planning Prepared By: Elly Antuna Staff Member Presenting: Scott Murphy, Executive Director Community Development Approved By:	Submitted To: Council/OHA Approved: _____ Continued To: _____ Denied: _____ Item No: 17

SUBJECT: **A PUBLIC HEARING TO CONSIDER FILE NO. PUD22-003, A PLANNED UNIT DEVELOPMENT ON 0.11-ACRE OF LAND LOCATED AT 213 NORTH FERN AVENUE**

RECOMMENDATION: That the City Council introduce and waive further reading of an Ordinance approving File No. PUD22-003, the Fern Townhomes Planned Unit Development, establishing development standards, design guidelines, and infrastructure requirements to facilitate a residential development at 213 North Fern Avenue.

THE FOLLOWING COUNCIL GOALS ARE BEING ACHIEVED:
Invest in the Growth and Evolution of the City's Economy
Operate in a Businesslike Manner
Focus Resources in Ontario's Commercial and Residential Neighborhoods

FISCAL IMPACT: There is not a direct fiscal impact associated with this action. The proposed Fern Townhomes Planned Unit Development (PUD) establishes development standards and guidelines to facilitate the development of residential units. Implementation of the PUD would result in an increase in property taxes from future residential development and the one-time payment to the City of plan check fees and development impact fees.

BACKGROUND & ANALYSIS: On April 20, 2022, HDC Construction, Inc. filed a PUD application (File No. PUD22-003), concurrently with a Tentative Parcel Map (File No. PMTT22-015) and Development Plan (File No. PDEV22-024) applications to facilitate construction of 3 townhome units.

The Project site is comprised of 0.11-acres of land located at the southwest corner of Fern Avenue and a public alley, at 213 North Fern Avenue, within LUA-3 (Holt Boulevard) of the MU-1 (Downtown Mixed Use) zoning district. The site is located within a well-established mixed-use neighborhood with multiple-family residential to the north and west, single-family residential to the south, and commercial uses, including a parking lot and a church, to the east. The surrounding area was one of the first to be developed in the city, with the earliest residences constructed during the early 1900s and 1920s with some multiple-family residential developed in 1960. Existing residential buildings are one and two-stories and constructed in a variety of architectural styles, including Victorian and Craftsman Bungalow.

The Policy Plan specifies that the Downtown Mixed-Use Area is to be implemented through the approval of an Area Plan or Planned Unit Development prior to the development of properties. In compliance with this requirement, the Applicant has submitted the Fern Townhomes Planned Unit Development (included as Attachment A to the Ordinance), which is consistent with this vision, goals, and policies of the Policy Plan.

A Planned Unit Development is comparable to a Specific Plan in that it establishes development regulations that are unique to a specific area. However, it is unlike a Specific Plan in that a Planned Unit Development is typically intended to apply to a single development project or several interrelated development projects that function together as a single, comprehensive project.

Key components of the Fern Townhomes Planned Unit Development include the following:

- Land Use and Development Regulations — The MU-1 (Downtown Mixed Use) zoning district allows for residential development at a density of 25.1 to 75 dwelling units per acre. Consistent with the MU-1 zoning district and in keeping with the context of the existing neighborhood, the Fern Townhomes PUD allows for development of 3 to 7 dwelling units, with a maximum building height of 35 feet or 2 stories. The minimum building setback proposed along Fern Avenue is 7 feet and 5 feet for porches, patio coves and other architectural projections. Interior and rear property line setbacks are 5 feet, and the garage entry setback from the alley is 6 feet.
- Landscaping — A conceptual landscape plan has been submitted with the Development Plan for construction of the Project site. The PUD provides a planting palette comprised of "California friendly" planting materials that are compatible with the overall architectural style established by the PUD. The PUD also requires the landscaping and irrigation to comply with AB 1881 and all other laws and regulations related to planting materials.
- Parking and Circulation — The PUD utilizes a combination of on-site and on-street parking to provide an adequate parking supply to meet the anticipated parking demand for the Project. All resident parking will be provided on-site, while guest parking spaces will be provided on-street. The Project site is located within a mixed-use area where on-street parking is available along the project frontage and on surrounding blocks.
- Access to Mass Transit — An existing bus stop is located on the northwest corner of Holt Boulevard and Vine Avenue for Omnitrans routes 61. Additionally, the future West Valley Connector Bus Rapid Transit (BRT) line is proposed along Holt Boulevard.
- Architectural Character — The PUD architectural style and design is a modern interpretation of the Mediterranean style. The design will provide low pitched, gabled roofs covered with clay tile, shallow eaves, rough sawn beams, and a roof well for mechanical equipment. The townhome unit with street frontage will have a covered porch. The garage doors along the alley will have beam accents in the overhang above.

On February 28, 2023, the Planning Commission conducted a public hearing to consider the project and concluded the hearing on that date. After considering all public testimony on the application, the Planning Commission voted (6-0) to approve a resolution recommending that the City Council approve the Fern Townhomes Planned Unit Development.

HOUSING ELEMENT COMPLIANCE: The Project is consistent with the Housing Element of the Policy Plan (General Plan) component of The Ontario Plan, as the Project site is not one of the properties in the Housing Element Sites contained in Tables B-1 and B-2 (Housing Element Sites Inventory) of the Housing Element Technical Report.

AIRPORT LAND USE COMPATIBILITY PLAN (ALUCP) COMPLIANCE: The California State Aeronautics Act (Public Utilities Code Section 21670 et seq.) requires that an Airport Land Use Compatibility Plan be prepared for all public use airports in the State; and requires that local land use plans and individual development proposals must be consistent with the policies set forth in the adopted Airport Land Use Compatibility Plan. On April 19, 2011, the City Council of the City of Ontario approved and adopted the ONT ALUCP, establishing the Airport Influence Area for Ontario International Airport, which encompasses lands within parts of San Bernardino, Riverside, and Los Angeles Counties, and limits future land uses and development within the Airport Influence Area, as they relate to noise, safety, airspace protection, and overflight impacts of current and future airport activity. As the decision-making body for the Project, the City Council has reviewed and considered the facts and information contained in the Application and supporting documentation against the ONT ALUCP compatibility factors, including [1] Safety Criteria (ONT ALUCP Table 2-2) and Safety Zones (ONT ALUCP Map 2-2), [2] Noise Criteria (ONT ALUCP Table 2-3) and Noise Impact Zones (ONT ALUCP Map 2-3), [3] Airspace protection Zones (ONT ALUCP Map 2-4), and [4] Overflight Notification Zones (ONT ALUCP Map 2-5). As a result, the City Council, therefore, finds and determines that the Project, when implemented in conjunction with the conditions of approval, will be consistent with the policies and criteria set forth within the ONT ALUCP.

ENVIRONMENTAL REVIEW: The Project is exempt from the requirements of the California Environmental Quality Act (CEQA) and the guidelines promulgated thereunder, pursuant to Section 15061(b)(3) of the CEQA Guidelines, in that the activity is covered by the “common sense exemption” (also known as the “general rule exemption”) that CEQA applies only to projects that have the potential for causing a significant effect on the environment. Where it can be seen with certainty that there is no possibility that the activity in question may have a significant effect on the environment, the activity is not subject to CEQA.

ORDINANCE NO. _____

AN ORDINANCE OF THE CITY COUNCIL OF THE CITY OF ONTARIO, CALIFORNIA, APPROVING FILE NO. PUD22-003, A PLANNED UNIT DEVELOPMENT TO ESTABLISH DEVELOPMENT STANDARDS, DESIGN GUIDELINES, AND INFRASTRUCTURE REQUIREMENTS FOR PROPERTY LOCATED AT 213 NORTH FERN AVENUE, WITHIN LUA-3 (HOLT BOULEVARD) OF THE MU-1 (DOWNTOWN MIXED USE) ZONING DISTRICT, AND MAKING FINDINGS IN SUPPORT THEREOF—APN: 1048-572-06.

WHEREAS, HDC Construction, Inc. ("Applicant") has filed an Application for the approval of a Planned Unit Development, File No. PUD22-003, as described in the title of this Ordinance (hereinafter referred to as "Application" or "Project"); and

WHEREAS, the Application applies to 0.11-acre of land generally located at the southwest corner of Fern Avenue and a public alley, at 213 North Fern Avenue, within LUA-3 (Holt Boulevard) of the MU-1 (Downtown Mixed Use) zoning district, and is presently vacant; and

WHEREAS, properties surrounding the Project Site are located within LUA-3 (Holt Boulevard) of the MU-1 (Downtown Mixed Use) zoning district. The properties north and west of the Project site are developed with multiple-family dwellings. The property to the east is developed with a parking lot. The property to the south is developed with single-family dwellings; and

WHEREAS, on April 20, 2022, the Applicant submitted a Planned Unit Development (File No. PUD22-003) in conjunction with Tentative Parcel Map No. 20554 (File No. PMTT22-015), to subdivide the Project site into a single lot for condominium purposes, and a Development Plan (File No. PDEV22-024) to construct 3 attached townhome units at a density of 27.3 dwelling units per acre; and

WHEREAS, the Project site is located within the Downtown Mixed Use District of the Policy Plan (general plan). The Policy Plan specifies that the Downtown Mixed Use District is to be implemented through the approval of an Area Plan or Planned Unit Development (“PUD”) prior to the development of properties within the District. In compliance with this requirement, the Applicant has submitted the Fern Townhomes Planned Unit Development (included as Attachment “A” of this Resolution), which is consistent with this vision, and goals and policies of the Policy Plan; and

WHEREAS, the specific purpose of the Planned Unit Development is to secure a fuller realization of the Policy Plan than would otherwise result from the strict application of present zoning district regulations, and to promote high standards in urban design; encourage the development of exceptionally high quality, mixed-use, high intensity projects, while establishing regulations and standards for uses with unique regulatory and design needs; and, ensure harmonious relationships with surrounding land uses; and

WHEREAS, the Application is a project pursuant to the California Environmental Quality Act (Public Resources Code Section 21000 et seq.) ("CEQA"); and

WHEREAS, the Project is exempt from CEQA as the activity is covered by the commonsense exemption that CEQA applies only to projects which have the potential for causing a significant effect on the environment. Where it can be seen with certainty that there is no possibility that the activity in question may have a significant effect on the environment, the activity is not subject to CEQA (CEQA Guidelines Section 15061(b)(3)); and

WHEREAS, Ontario Development Code Table 2.02-1 (Review Matrix) grants the City Council the responsibility and authority to review and act on the subject Application; and

WHEREAS, the Project is located within the Airport Influence Area of Ontario International Airport, which encompasses lands within parts of San Bernardino, Riverside, and Los Angeles Counties, and is subject to, and must be consistent with, the policies and criteria set forth in the Ontario International Airport Land Use Compatibility Plan ("ONT ALUCP"), which applies only to jurisdictions within San Bernardino County, and addresses the noise, safety, airspace protection, and overflight impacts of current and future airport activity; and

WHEREAS, City of Ontario Development Code Division 2.03 (Public Hearings) prescribes the manner in which public notification shall be provided and hearing procedures to be followed, and all such notifications and procedures have been completed; and

WHEREAS, on February 28, 2023, the Planning Commission of the City of Ontario conducted a hearing to consider the Project, and concluded said hearing on that date, voting to issue Resolution No. PC23-009, recommending the City Council approve the Application; and

WHEREAS, on March 21, 2023, the City Council of the City of Ontario conducted a hearing to consider the Project, and concluded said hearing on that date; and

WHEREAS, all legal prerequisites to the adoption of this Ordinance have occurred.

NOW, THEREFORE, IT IS HEREBY FOUND, DETERMINED, AND ORDAINED by the City Council of the City of Ontario, as follows:

SECTION 1: ***Environmental Determination and Findings.*** As the decision-making body for the Project, the City Council has reviewed and considered the information contained in the administrative record for the Project. Based upon the facts and information contained in the administrative record, including all written and oral evidence presented to the City Council, the City Council finds as follows:

(1) The administrative record has been completed in compliance with CEQA, the State CEQA Guidelines, and the City of Ontario Local CEQA Guidelines; and

(2) The Project is exempt from the requirements of the California Environmental Quality Act (CEQA) and the guidelines promulgated thereunder, pursuant to Section 15061(b)(3) of the CEQA Guidelines, in that the activity is covered by the "common sense exemption" (also known as the "general rule exemption") that CEQA applies only to projects that have the potential for causing a significant effect on the environment. Where it can be seen with certainty that there is no possibility that the activity in question may have a significant effect on the environment, the activity is not subject to CEQA; and

(3) The determination of CEQA exemption reflects the independent judgment of the City Council.

SECTION 2: ***Airport Land Use Compatibility Plan ("ALUCP") Compliance.*** The California State Aeronautics Act (Public Utilities Code Section 21670 et seq.) requires that an Airport Land Use Compatibility Plan be prepared for all public use airports in the State; and requires that local land use plans and individual development proposals must be consistent with the policies set forth in the adopted Airport Land Use Compatibility Plan.

(1) On April 19, 2011, the City Council of the City of Ontario approved and adopted the Ontario International Airport Land use Compatibility Plan, establishing the Airport Influence Area for Ontario International Airport, which encompasses lands within parts of San Bernardino, Riverside, and Los Angeles Counties, and limits future land uses and development within the Airport Influence Area, as they relate to noise, safety, airspace protection, and overflight impacts of current and future airport activity. As the decision-making body for the Project, the City Council has reviewed and considered the facts and information contained in the Application and supporting documentation against the ONT ALUCP compatibility factors, including [1] Safety Criteria (ONT ALUCP Table 2-2) and Safety Zones (ONT ALUCP Map 2-2), [2] Noise Criteria (ONT ALUCP Table 2-3) and Noise Impact Zones (ONT ALUCP Map 2-3), [3] Airspace protection Zones (ONT ALUCP Map 2-4), and [4] Overflight Notification Zones (ONT ALUCP Map 2-5). As a result, the City Council, therefore, finds and determines that the Project, when implemented in conjunction with the conditions of approval, will be consistent with the policies and criteria set forth within the ONT ALUCP; and

SECTION 3: ***Concluding Facts and Reasons.*** Based upon the substantial evidence presented to the City Council during the above-referenced hearing, and upon the specific findings set forth in Section 1 and 2, above, the City Council hereby concludes as follows:

(1) ***The proposed Planned Unit Development is consistent with the goals, policies, plans and exhibits of the Vision, Policy Plan (General Plan), and City Council Priorities components of The Ontario Plan.*** The Project is consistent with Vision, Policy Plan (General Plan), and City Council Priorities components of The Ontario Plan. Section 1.1, The Ontario Plan Objectives of the Planned Unit Development, describes the manner in which the Planned Unit Development complies with the Policy Plan goals and policies.

(2) ***The proposed Planned Unit Development, would not be detrimental to the public interest, health, safety, convenience, or general welfare of the City.*** The City Council has required certain safeguards, and has required certain changes, which have been established to ensure that: [i] the purposes of the Planned Unit Development are maintained; [ii] the project will not endanger the public health, safety or general welfare; [iii] the project will not result in any significant environmental impacts; [iv] the project will be in harmony with the area in which it is located; and [v] the project will be in full conformity with the Vision, City Council Priorities and Policy Plan components of The Ontario Plan.

(3) ***In the case of an application affecting specific property(ies), the proposed Planned Unit Development, will not adversely affect the harmonious relationship with adjacent properties and land uses.*** The Planned Unit Development area is situated in Ontario's downtown and is adjacent to residential and commercial land uses and development. The surrounding development supports the objective of the Planned Unit Development to further commercial and residential mixed-use development. The Project will not affect the harmonious relationship with adjacent properties and land use.

(4) ***In the case of an application affecting specific property(ies), the subject site is physically suitable, including, but not limited to, parcel size, shape, access, and availability of utilities, for the request and anticipated development.*** In preparing the proposed Planned Unit Development, a thorough review and analysis of the proposed Project and the subject site's physical suitability for the Project was completed, including analysis of the project size, shape, intensity of development, building height, building setbacks, site access, site landscaping and drainage, fences and walls, vehicle circulation, pedestrian connections, availability of mass transit, necessary street dedication and easements, public right-of-way improvements, availability of utilities and other infrastructure needs, off-street parking and circulation, building orientation and streetscapes, architectural character, building materials and color, and site signage. Based upon this review and analysis, the subject site has been deemed physically suitable, including but not limited to parcel size, shape, access, and availability of utilities, for the proposed Planned Unit Development and the proposed development.

(5) ***The proposed Planned Unit Development is superior to that which could be obtained through the application of the Development Code or a specific plan.*** The Planned Unit Development will establish minimum building setbacks, parking and open space requirements, allow on-street parking, and establish a planting palette. These standards in the Planned Unit Development will facilitate the development of 3 attached single-family dwellings, related parking facilities and private and common open space areas. The proposed Planned Unit Development will allow for subsequent development that is superior to that which could be obtained through the application of the Development Code by itself.

SECTION 4: ***City Council Action.*** Based upon the findings and conclusions set forth in Sections 1 through 3, above, the City Council hereby APPROVES the herein described Planned Unit Development, attached hereto as "Attachment A," and incorporated herein by this reference.

SECTION 5: ***Indemnification.*** The Applicant shall agree to defend, indemnify and hold harmless, the City of Ontario or its agents, officers, and employees from any claim, action or proceeding against the City of Ontario or its agents, officers or employees to attack, set aside, void, or annul this approval. The City of Ontario shall promptly notify the applicant of any such claim, action, or proceeding, and the City of Ontario shall cooperate fully in the defense.

SECTION 6: ***Custodian of Records.*** The documents and materials that constitute the record of proceedings on which these findings have been based are located at the City of Ontario City Hall, 303 East "B" Street, Ontario, California 91764. The custodian for these records is the City Clerk of the City of Ontario.

SECTION 7: ***Severability.*** If any section, sentence, clause or phrase of this Ordinance or the application thereof to any entity, person or circumstance is held for any reason to be invalid or unconstitutional, such invalidity or unconstitutionality shall not affect other provisions or applications of this Ordinance which can be given effect without the invalid provision or application, and to this end the provisions of this Ordinance are severable. The People of the City of Ontario hereby declare that they would have adopted this Ordinance and each section, sentence, clause or phrase thereof, irrespective of the fact that any one or more section, subsections, sentences, clauses or phrases be declared invalid or unconstitutional.

SECTION 8: ***Effective Date.*** This Ordinance shall become effective 30 days following its adoption.

SECTION 9: ***Publication and Posting.*** The Mayor shall sign this Ordinance and the City Clerk shall certify as to the adoption and shall cause a summary thereof to be published at least once, in a newspaper of general circulation in the City of Ontario, California within 15 days following the adoption. The City Clerk shall post a certified copy of this ordinance, including the vote for and against the same, in the Office of the City Clerk, in accordance with Government Code Section 36933.

PASSED, APPROVED, AND ADOPTED this 23st day of March 2023.

CITY OF ONTARIO PLANNING DEPARTMENT

PLANNING COMMISSION AGENDA REPORT

February 28, 2023

303 East B Street, Ontario, California 91764 Phone: 909.395.2036 / Fax: 909.395.2420

FILE NOS: PUD22-003, PMTT22-015 and PDEV22-024

SUBJECT: A public hearing to consider: [1] a Planned Unit Development (File No. PUD22-003) to establish development standards, design guidelines, and infrastructure requirements for the Project site; [2] Tentative Parcel Map No. 20554 (File No. PMTT22-015), subdividing an 0.11-acre Project site into a single lot for condominium purposes; and [3] a Development Plan (File No. PDEV22-024) for the construction of three townhomes, all located at 213 North Fern Avenue, within LUA-3 (Holt Boulevard) of the MU-1 (Downtown Mixed Use) zoning district; (APN: 1048-572-06) **submitted by HDC Construction, Inc.**

PROPERTY OWNER: HDC Construction, Inc.

RECOMMENDED ACTION: That the Planning Commission consider and adopt the following:

(1) A resolution recommending that the City Council approve a Planned Unit Development (File No. PUD22-003), pursuant to facts and reasons contained in the staff report and attached resolution as "Attachment A."

(2) Resolutions approving the Tentative Parcel Map No. 20554 (File No. PMTT22-015), and Development Plan (File No. PDEV22-024), pursuant to the facts and reasons contained in the staff report and attached resolutions, and subject to the conditions of approval appended to the attached resolutions as "Attachment A."

PROJECT SETTING: The Project site is comprised of 0.11-acre of land located at the southwest corner of Fern Avenue and a public alley, at 213 North Fern Avenue (see Figure 1: Project Location Map, right), within LUA-3 (Holt Boulevard) of the MU-1 (Downtown Mixed Use) zoning district. The site was originally part of a larger residential property in the early 1900s. During the 1920s, the site was

Figure 1: Project Location

CC	3/21/23 (PUD)		Final

developed with a single-family residence and detached garage that were demolished in 1963 and replaced with a commercial building. The commercial building was demolished in 2005 and the site is currently vacant. The site is located within a well-established mixed-use neighborhood, with multiple-family residential to the north and west, single-family residential to the south, and commercial uses, including a parking lot and a church, to the east. The surrounding area was one of the first to be developed in the city, with the earliest residences constructed during the early 1900s and most of the residential development occurring during the 1920s, and some multiple-family residential developing in 1960. Existing residential buildings are one and two-stories and constructed in a variety of architectural styles including Victorian and Craftsman Bungalow. The existing surrounding land uses, zoning, and Policy Plan (general plan) designations are summarized in the "Surrounding Zoning & Land Uses" table located in the Technical Appendix of this report.

PROJECT ANALYSIS:

(1) Background — The Project site is located within the MU-1/LUA-3 (Downtown Mixed Use/Holt Boulevard) zoning district, requiring the preparation and approval of a Planned Unit Development (PUD) to establish development standards, design guidelines, and infrastructure requirements for the site. On April 20, 2022, the Applicant filed a PUD application (File No. PUD22-003), concurrently with a Tentative Parcel Map (File No. PMTT22-015) and Development Plan (File No. PDEV22-024) applications. Final approval of the Tentative Parcel Map and Development Plan is contingent upon the City Council adoption of the PUD for the Project site.

The Project site is located within the Center City Redevelopment Project Area, established in 1983. And while the redevelopment practice was eliminated by the State, the Center City Redevelopment Project Area Plan is still in effect and encourages the development of a high intensity, multi-use central business district. In addition, The Ontario Plan contains goals and policies for the City's original downtown and the Downtown Mixed Use District, which further support the goals of the Center City Redevelopment Project Area Plan. The Center City Redevelopment Project Area Plan envisions revitalization of the City's downtown area, in part, by infusing high-density residential and mixed-use developments into the downtown core. The Ontario Plan ("TOP") furthers this vision and is intended to create an intensive mixture of retail, office, and residential uses in a pedestrian friendly atmosphere, ensure the historic character of the district is enhanced, and concentrate the most intense/dense development along Euclid Avenue and Holt Boulevard. Furthermore, The Ontario Plan specifies a residential density range of 25 to 75 units per acre and a maximum floor area ratio of 2.0 for commercial office and retail developments within the Downtown Mixed Use District.

(2) Planned Unit Development (File No. PUD22-003) –

(a) Land Use and Development Regulations — The MU-1 (Downtown Mixed Use) zoning district allows for residential development at a density of 25.1 to 75 dwelling

units per acre. Consistent with the MU-1 zoning district and in keeping with the context of the existing neighborhood, the Fern Townhomes PUD allows for development of 3 to 7 dwelling units, with a maximum building height of 35 feet or 2 stories. The minimum building setback proposed along Fern Avenue is 7 feet and 5 feet for porches, patio coves and other architectural projections. Interior and rear property line setbacks are 5 feet, and the garage entry setback from the alley is 6 feet.

(b) Landscaping — A conceptual landscape plan has been submitted with the Development Plan for construction of the Project site. The PUD provides a planting palette comprised of "California friendly" planting materials that are compatible with the overall architectural style established by the PUD. The PUD also requires the landscaping and irrigation to comply with AB 1881, and all other laws and regulations related to planting materials.

(c) Parking and Circulation — The PUD utilizes a combination of on-site and on-street parking to provide an adequate parking supply to meet the anticipated parking demand for the Project. All resident parking will be provided on site, while guest parking spaces will be provided on-street. The Project site is located within a mixed-use area where on-street parking is available along the project frontage and on surrounding blocks.

(d) Access to Mass Transit — An existing bus stop is located on the northwest corner of Holt Boulevard and Vine Avenue for Omnitrans routes 61. Additionally, the future West Valley Connector Bus Rapid Transit (BRT) line is proposed along Holt Boulevard.

(e) Architectural Character — The PUD architectural style and design is a modern interpretation of the Mediterranean style. The design will provide low pitched, gabled roofs covered with clay tile, shallow eaves rough sawn beams, and a roof well for mechanical equipment. The unit with street frontage will have a covered porch. The garage doors will have beam accents in the overhang above.

(3) Tentative Parcel Map No. 20554 (File No. PMTT22-015) — Proposed Tentative Parcel Map No. 20554 will subdivide the Project site into one lot for condominium purposes, to facilitate the construction and possible future sale of three attached townhouse units. The Departmental Conditions of Approval for the Tentative Parcel Map require Covenants, Conditions, and Restrictions ("CC&R's") to be recorded with the Final Parcel Map, which will establish the rules, regulations, rights, and responsibilities of the property owner's association and townhouse unit owners.

(4) Development Plan (File No. PDEV22-024)

(a) Site Design/Building Layout — The Project proposes the development of three attached townhome units, at a density of 27.27 dwelling units per acre. The alley-loaded two-story building is positioned in an east-west configuration, designed with garage access off the alley. The 2-story building will have an overall height of 26 feet. Unit

A, at the east end of the building, has been designed with the front entry facing Fern Avenue. Units B and C have access from the south side of the building, along a landscaped pedestrian pathway. The units range from 1,406 square feet to 1,430 square feet in area and contain 3 bedrooms and 3 bathrooms. The first-floor plan consists of a 2-car garage, laundry room, one bedroom, and one bathroom. Two bedrooms, 2 bathrooms, a private balcony, kitchen, and main living area are on the second floor. North facing private balconies are located over the garages. Each unit contains a trash enclosure with a decorative iron gate and direct access to the alley.

(b) Site Access/Circulation — Vehicular access to the site is provided by means of a 20-foot-wide alley to the north, extending west from Fern Avenue and aligning with Vesta Street further west. Pedestrian access to the site is taken from Fern Avenue via a 5-foot-wide paved pathway along the southern portion of the Project site.

(c) Parking — Consistent with the PUD, the Project utilizes a combination of on-site and adjacent on-street parking. All required resident parking will be provided on-site within the enclosed garages, while required guest parking will be on-street. The existing street grid pattern allows for maximum opportunity of on-street parking that can be shared by guests of the site and the surrounding area. There are approximately 12 on-street parking spaces located on Fern Avenue, adjacent to the site. Based on the available street parking and provided on-site parking, there is sufficient parking available to support the proposed development. As demonstrated in the Parking Summary table below, the Project provides the required number of parking spaces.

Type of Use	***Parking Ratio***	***Spaces Required***	***Spaces Provided***
Two or more Bedroom Unit	2.0 parking spaces per unit (at least one covered)	6	6
Guest	1 parking space per 5 units	1	1
TOTAL		**7**	**7**

(d) Architecture — The architectural style proposed for the Project is a modern Mediterranean style that is exemplified by the use of a combination of hipped and gable clay tile roofs, smooth stucco siding, arched openings, recessed windows and doors, decorative iron work, and wood trim details. Hung style windows are placed in a single or double pattern throughout the Project. Building projections on the east elevation and a one-story covered entryway enhance the street-facing east elevation. Second story, cantilevered projections on the remaining elevations are enhanced with windows, recessed niches, decorative brackets, and ironwork.

(e) Landscaping — Perimeter landscaping is provided in the front, side, and rear yards. The Conceptual Landscape Plan has been designed to utilize California native trees and drought tolerant planting materials. Planters and pocket vines provide additional landscaping throughout the Project site. The parkway along the Project frontage will be landscaped with a new street tree (Island Oak) and groundcover.

(f) Open Space – Private open space is provided by second floor balconies in each residential unit. Balconies are 30 square feet each and are a minimum of 5 feet in any direction. The required common open area is dispersed throughout the Project site in the form of passive landscaped areas.

(g) Utilities (drainage, sewer) — Public utilities (water and sewer) are available to serve the Project. Furthermore, the Applicant has submitted a Preliminary Water Quality Management Plan ("PWQMP"), which establishes the Project's compliance with storm water discharge/water quality requirements. The PWQMP includes site design measures that capture runoff and pollutant transport by minimizing impervious surfaces and maximizes low impact development ("LID") best management practices ("BMPs"), such as retention and infiltration, biotreatment, and evapotranspiration. The PWQMP proposes the use of a dry well as storm water retention. Any overflow drainage will be conveyed to the public street by way of parkway drains and culverts.

PUBLIC NOTIFICATION: The subject application was advertised as a public hearing in at least one newspaper of general circulation in the City of Ontario (the Inland Valley Daily Bulletin newspaper). In addition, notices were mailed to all owners of real property located within a minimum of 300 feet of the exterior boundaries of the property that is the subject of the hearing, as shown on the records of the County Assessor.

CORRESPONDENCE: As of the preparation of this Decision, Planning Department staff has not received any written or verbal communications from the owners or occupants of properties surrounding the Project site or from the public in general, regarding the subject application.

AGENCY/DEPARTMENT REVIEWS: Each City agency/department has been provided the opportunity to review and comment on the subject application and recommend conditions of approval to be imposed upon the application. At the time of the Resolution preparation, recommended conditions of approval were provided and are appended to the attached Resolutions as "Attachment A."

AIRPORT LAND USE COMPATIBILITY PLAN (ALUCP) COMPLIANCE: The California State Aeronautics Act (Public Utilities Code Section 21670 et seq.) requires that an Airport Land Use Compatibility Plan be prepared for all public use airports in the State; and requires that local land use plans and individual development proposals must be consistent with the policies set forth in the adopted Airport Land Use Compatibility Plan.

On April 19, 2011, the City Council of the City of Ontario approved and adopted the ONT ALUCP, establishing the Airport Influence Area for Ontario International Airport, which encompasses lands within parts of San Bernardino, Riverside, and Los Angeles Counties, and limits future land uses and development within the Airport Influence Area, as they relate to noise, safety, airspace protection, and overflight impacts of current and future airport activity. As the recommending and decision-making body for the Project, the Planning Commission has reviewed and considered the facts and information contained

in the Application and supporting documentation against the ONT ALUCP compatibility factors, including [1] Safety Criteria (ONT ALUCP Table 2-2) and Safety Zones (ONT ALUCP Map 2-2), [2] Noise Criteria (ONT ALUCP Table 2-3) and Noise Impact Zones (ONT ALUCP Map 2-3), [3] Airspace protection Zones (ONT ALUCP Map 2-4), and [4] Overflight Notification Zones (ONT ALUCP Map 2-5). As a result, the Planning Commission, therefore, finds and determines that the Project, when implemented in conjunction with the conditions of approval, will be consistent with the policies and criteria set forth within the ONT ALUCP.

COMPLIANCE WITH THE ONTARIO PLAN: The proposed Project is consistent with the principles, goals and policies contained within the Vision, Governance, Policy Plan (general plan), and City Council Priorities components of The Ontario Plan ("TOP"). More specifically, the goals and policies of TOP that are furthered by the proposed Project are as follows:

(1) City Council Goals.

- Operate in a Businesslike Manner
- Focus Resources in Ontario's Commercial and Residential Neighborhoods

(2) Vision.

Distinctive Development:

- Commercial and Residential Development

➢ Development quality that is broadly recognized as distinctive and not exclusively tied to the general suburban character typical of much of Southern California.

(3) Governance.

Decision Making:

- Goal G1: Sustained decision-making that consistently moves Ontario towards its Vision by using The Ontario Plan as a framework for assessing choices.

➢ G 1-2. Long-term Benefit. We require decisions to demonstrate and document how they add value to the community and support the Ontario Vision.

(4) Policy Plan (General Plan)

Land Use Element:

- Goal LU-1 Balance: A community that has a spectrum of housing types and price ranges that match the jobs in the City and that make it possible for people to live and work in Ontario and maintain a quality of life.

  - LU-1.1 Strategic Growth. We concentrate growth in strategic locations that help create place and identity, maximize available and planned infrastructure, foster the development of transit, and support the expansion of the active and multimodal transportation networks throughout the City.

  - LU-1.6 Complete Community. We incorporate a variety of land uses and building types in our land use planning efforts that result in a complete community where residents at all stages of life, employers, workers, and visitors have a wide spectrum of choices of where they can live, work, shop and recreate within Ontario.

- Goal LU-2 Compatibility: Compatibility between a wide range of uses and a resultant urban patterns and forms.

  - LU-2.6 Infrastructure Compatibility. We require infrastructure to be aesthetically pleasing and in context with the community character.

Housing Element:

- Goal H-2 Housing Supply & Diversity: Diversity of types of quality housing that are affordable to a range of household income levels, accommodate changing demographics, and support and reinforce the economic sustainability of Ontario.

  - H-2.5 Housing Design. We require architectural excellence through adherence to City design guidelines, thoughtful site planning, environmentally sustainable practices, and other best practices.

- Goal H-5 Special Needs: A full range of housing types and community services that meet the special housing needs for all individuals and families in Ontario, regardless of income level, age, or other status.

  - H-5.2 Family Housing. We support the development of larger rental apartments that are appropriate for families with children, including, as feasible, the provision of services, recreation, and other amenities.

Community Economics Element:

- Goal CE-1 Complete Community: A complete community that provides for all incomes and stages of life.

  - CE-1.6 Diversity of Housing. We collaborate with residents, housing providers, and the development community to provide housing opportunities for every

stage of life; we plan for a variety of housing types and price points to encourage the development of housing supportive of our efforts to attract business in growing sectors of the community while being respectful of existing viable uses.

- Goal CE-2 Placemaking: A City of distinctive neighborhoods, districts, corridors, and centers where people choose to be.

  - CE-2.1 Development Projects. We require new development and redevelopment to create unique, high-quality places that add value to the community.

  - CE-2.2 Development Review. We require those proposing new development and redevelopment to demonstrate how their projects will create appropriately unique, functional, and sustainable places that will compete well with their competition within the region.

  - CE-2.4 Protection of Investment. We require that new development and redevelopment protect existing investment by providing architecture and urban design of equal or greater quality.

  - CE-2.5 Private Maintenance. We require adequate maintenance, upkeep, and investment in private property because proper maintenance on private property protects property values.

Safety Element:

- Goal S-1 Seismic & Geologic Hazards: Minimized risk of injury, loss of life, property damage, and economic and social disruption caused by earthquake-induced and other geologic hazards.

  - S-1.1 Implementation of Regulations and Standards. We require that all new habitable structures be designed in accordance with the most recent California Building Code adopted by the City, including provisions regarding lateral forces and grading.

Community Design Element:

- Goal CD-1 Image & Identity: A dynamic, progressive city containing distinct and complete places that foster a positive sense of identity and belonging among residents, visitors, and businesses.

  - CD-1.1 City Identity. We take actions that are consistent with the City being a leading urban center in Southern California while recognizing, enhancing, and preserving the character of our existing viable neighborhoods.

  - CD-1.2 Growth Areas. We establish Place Types in urban, mixed use, and transit-oriented areas to foster the City's identity as a premier community and require new

development within each Place Type to incorporate prescribed urban patterns, forms, and placemaking priorities.

- CD-1.3 Existing Neighborhoods. We require the existing character of viable residential and non-residential neighborhoods be preserved, protected, and enhanced.

- Goal CD-2 Design Quality: A high level of design quality resulting in neighborhoods, public spaces, parks, and streetscapes that are attractive, safe, functional, human-scale, and distinct.

- CD-2.1 Quality Building Design and Architecture. We encourage all development projects to convey visual interest and character through:

  - Building volume, massing, and height to provide context-appropriate scale and proportion;
  - A true architectural style which is carried out in plan, section, and elevation through all aspects of the building and site design and appropriate for its setting; and
  - Exterior building materials that are articulated, high quality, durable, and appropriate for the architectural style.

- CD-2.2 Neighborhood Design. We create distinct residential neighborhoods that promote a sense of community and identity by emphasizing access, connectivity, livability, and social interaction through such elements as:

  - A pattern of smaller, walkable blocks that promote activity, safety, and access to nearby amenities and services;
  - Varied parcel sizes and lot configurations to accommodate a diversity of housing types;
  - Traffic calming measures to slow traffic and promote walkability while maintaining acceptable traffic flows and emergency evacuation access;
  - Floor plans that encourage views onto the street and de-emphasize the visual and physical dominance of garages (introducing the front porch as the "outdoor living room"), as appropriate; and
  - Landscaped parkways, with sidewalks separated from the curb and designed to maximize safety, comfort, and aesthetics for all users.

- CD-2.7 Sustainability. We collaborate with the development community to design and build neighborhoods, streetscapes, sites, outdoor spaces, landscaping, and buildings to reduce energy demand through solar orientation, maximum use of natural daylight, passive solar and natural ventilation, building form, mechanical and structural systems, building materials, and construction techniques.

- CD-2.8 Safe Design. We incorporate defensible space design into new and existing developments to ensure the maximum safe travel and visibility on pathways,

corridors, and open space and at building entrances and parking areas by avoiding physically and visually isolated spaces, maintaining visibility and accessibility, and using lighting.

- CD-2.9 Landscape Design. We encourage durable, sustainable, and drought-tolerant landscaping materials and designs that enhance the aesthetics of structures, create and define public and private spaces, and provide shade and environmental benefits.

- CD-2.10 Parking Areas. We require all development, including single-family residential, to minimize the visual impact of surface, structured, and garage parking areas visible from the public realm in an aesthetically pleasing, safe and environmentally sensitive manner. Examples include:

  - Surface parking: Shade trees, pervious surfaces, urban run-off capture and infiltration, and pedestrian paths to guide users through the parking field;
  - Structured parking: facade articulation, screening, appropriate lighting, and landscaping; and
  - Garage parking: providing access to single-family residential garages through alley access, recessing garages from the frontage to emphasize front doors or active living spaces.

- CD-2.13 Entitlement Process. We work collaboratively with all stakeholders to ensure a high degree of certainty in the efficient review and timely processing of all development plans and permits.

▪ Goal CD-3 Urban, Mixed Use, and Transit-Oriented Place Types: Vibrant urban environments that are organized around intense buildings, pedestrian and transit areas, public plazas, and linkages between and within developments that are conveniently located, visually appealing and safe during all hours.

- CD-3.4 Context-Aware and Appropriate Design. We require appropriate building and site design that complements existing development, respects the intent and identity of the Place Type, and provides appropriate transitions and connections between adjacent uses to ensure compatibility of scale, maintain an appropriate level of privacy for each use, and minimize potential conflicts.

- CD-3.5 Active Frontages. We create lively pedestrian streetscapes by requiring primary building, business, and residential entrances, outdoor dining, and storefronts be located on ground floors adjacent to sidewalks or public spaces and designed to maximize safety, comfort, aesthetics, and the intended functionality (as defined by the Place Type).

- Goal CD-5 Protection of Investment: A sustained level of maintenance and improvement of properties, buildings, and infrastructure that protects the property values and encourages additional public and private investments.

  - CD-5.1 Maintenance of Buildings and Property. We require all public and privately-owned buildings and property (including trails and easements) to be properly and consistently maintained.

  - CD-5.2 Maintenance of Infrastructure. We require the continual maintenance of infrastructure.

HOUSING ELEMENT COMPLIANCE: The Project is consistent with the Housing Element of the Policy Plan (general plan) component of The Ontario Plan, as the Project site is not one of the properties in the Housing Element Sites contained in Tables B-1 and B-2 (Housing Element Sites Inventory) of the Housing Element Technical Report.

ENVIRONMENTAL REVIEW: The Project is categorically exempt from the requirements of the California Environmental Quality Act (CEQA) pursuant to Section 15332 (Class 32, In-fill Development Projects) of the CEQA Guidelines, and meets all of the following conditions: (a) the proposed Project is consistent with the applicable general plan designation and all applicable general plan policies as well as with applicable zoning designation and regulations; (b) the proposed development occurs within city limits and the area being developed is 0.11-acre, less than the maximum 5-acre threshold, and is substantially surrounded by urban land uses; (c) the Project site has no value as habitat for endangered, rare, or threatened species; (d) approval of the Project would not result in any significant effects relating to traffic, noise, air quality, or water quality; and (e) the site is adequately served by all required utilities and public services.

TECHNICAL APPENDIX:

Surrounding Zoning and Land Use:

	Existing Land Use	***Policy Plan Designation***	***Zoning Designation***

RESOLUTION NO. PC23-009

A RESOLUTION OF THE PLANNING COMMISSION OF THE CITY OF ONTARIO, CALIFORNIA, RECOMMENDING THAT THE CITY COUNCIL APPROVE FILE NO. PUD22-003, A PLANNED UNIT DEVELOPMENT TO ESTABLISH DEVELOPMENT STANDARDS, DESIGN GUIDELINES, AND INFRASTRUCTURE REQUIREMENTS FOR PROPERTY LOCATED AT 213 NORTH FERN AVENUE, WITHIN THE LUA-3 (HOLT BOULEVARD) DISTRICT OF THE MU-1 (DOWNTOWN MIXED USE) ZONING DISTRICT, AND MAKING FINDINGS IN SUPPORT THEREOF—APN: 1048-572-06

WHEREAS, HDC Construction, Inc. ("Applicant") has filed an Application for the approval of a Planned Unit Development, File No. PUD22-003, as described in the title of this Resolution (hereinafter referred to as "Application" or "Project"); and

WHEREAS, the Application applies to 0.11-acre of land generally located at the southwest corner of Fern Avenue and a public alley, at 213 North Fern Avenue, within LUA-3 (Holt Boulevard) of the MU-1 (Downtown Mixed Use) zoning district, and is presently vacant; and

WHEREAS, properties surrounding the Project Site are located within LUA-3 (Holt Boulevard) of the MU-1 (Downtown Mixed Use) zoning district. The properties north and west of the Project site are developed with multiple-family dwellings. The property to the east is developed with a parking lot. The property to the south is developed with single-family dwellings; and

WHEREAS, on April 20, 2022, the Applicant submitted a Planned Unit Development (File No. PUD22-003) in conjunction with Tentative Parcel Map No. 20554 (File No. PMTT22-015), to subdivide the Project site into a single lot for condominium purposes, and a Development Plan (File No. PDEV22-024) to construct 3 attached townhome units at a density of 27.3 dwelling units per acre; and

WHEREAS, the Project site is located within the Downtown Mixed Use District of the Policy Plan (general plan). The Policy Plan specifies that the Downtown Mixed Use District is to be implemented through the approval of an Area Plan or Planned Unit Development (“PUD”) prior to the development of properties within the District. In compliance with this requirement, the Applicant has submitted the Fern Townhomes Planned Unit Development (included as Attachment “A” of this Resolution), which is consistent with this vision, and goals and policies of the Policy Plan; and

WHEREAS, the specific purpose of the Planned Unit Development is to secure a fuller realization of the Policy Plan than would otherwise result from the strict application of present zoning district regulations, and to promote high standards in urban design; encourage the development of exceptionally high quality, mixed-use, high intensity

projects, while establishing regulations and standards for uses with unique regulatory and design needs; and, ensure harmonious relationships with surrounding land uses; and

WHEREAS, the Application is a project pursuant to the California Environmental Quality Act, commencing with Public Resources Code Section 21000 (hereinafter referred to as "CEQA"); and

WHEREAS, the Project is exempt from CEQA as the activity is covered by the common sense exemption that CEQA applies only to projects which have the potential for causing a significant effect on the environment. Where it can be seen with certainty that there is no possibility that the activity in question may have a significant effect on the environment, the activity is not subject to CEQA pursuant to Section 15061(b)(3) of the CEQA Guidelines; and

WHEREAS, Ontario Development Code Table 2.02-1 (Review Matrix) grants the Planning Commission the responsibility and authority to review and make recommendation to the City Council on the subject Application; and

WHEREAS, the Project has been reviewed for consistency with the Housing Element of the Policy Plan component of The Ontario Plan, as State Housing Element law (as prescribed in Government Code Sections 65580 through 65589.8) requires that development projects must be consistent with the Housing Element, if upon consideration of all its aspects, it is found to further the purposes, principals, goals, and policies of the Housing Element; and

WHEREAS, the Project is located within the Airport Influence Area of Ontario International Airport, which encompasses lands within parts of San Bernardino, Riverside, and Los Angeles Counties, and is subject to, and must be consistent with, the policies and criteria set forth in the Ontario International Airport Land Use Compatibility Plan (hereinafter referred to as "ALUCP"), which applies only to jurisdictions within San Bernardino County, and addresses the noise, safety, airspace protection, and overflight impacts of current and future airport activity; and

WHEREAS, City of Ontario Development Code Division 2.03 (Public Hearings) prescribes the manner in which public notification shall be provided and hearing procedures to be followed, and all such notifications and procedures have been completed; and

WHEREAS, on February 28, 2023, the Planning Commission of the City of Ontario conducted a hearing to consider the Project, and concluded said hearing on that date; and

WHEREAS, all legal prerequisites to the adoption of this Resolution have occurred.

NOW, THEREFORE, IT IS HEREBY FOUND, DETERMINED, AND RESOLVED by the Planning Commission of the City of Ontario, as follows:

SECTION 1: ***Environmental Determination and Findings.*** As the recommending authority for the Project, the Planning Commission has reviewed and considered the information contained in the administrative record for the Project. Based upon the facts and information contained in the administrative record, including all written and oral evidence presented to the Planning Commission, the Planning Commission finds as follows:

(1) The administrative record has been completed in compliance with CEQA, the State CEQA Guidelines, and the City of Ontario Local CEQA Guidelines; and

(2) The Project is exempt from the requirements of the California Environmental Quality Act (CEQA) and the guidelines promulgated thereunder, pursuant to Section 15061(b)(3) of the CEQA Guidelines, in that the activity is covered by the "common sense exemption" (also known as the "general rule exemption") that CEQA applies only to projects that have the potential for causing a significant effect on the environment. Where it can be seen with certainty that there is no possibility that the activity in question may have a significant effect on the environment, the activity is not subject to CEQA; and

(3) The determination of CEQA exemption reflects the independent judgment of the Planning Commission.

SECTION 2: ***Housing Element Compliance.*** Pursuant to the requirements of California Government Code Chapter 3, Article 10.6, commencing with Section 65580, as the recommending authority for the Project, the Planning Commission finds that based on the facts and information contained in the Application and supporting documentation, at the time of Project implementation, the project is consistent with the Housing Element of the Policy Plan (General Plan) component of The Ontario Plan, as the project site is not one of the properties in the Housing Element Sites Inventory contained in Tables B-1 and B-2 of the Housing Element Technical Report.

SECTION 3: ***Airport Land Use Compatibility Plan ("ALUCP") Compliance.*** The California State Aeronautics Act (Public Utilities Code Section 21670 et seq.) requires that an Airport Land Use Compatibility Plan be prepared for all public use airports in the State; and requires that local land use plans and individual development proposals must be consistent with the policies set forth in the adopted Airport Land Use Compatibility Plan.

On April 19, 2011, the City Council of the City of Ontario approved and adopted the Ontario International Airport Land use Compatibility Plan, establishing the Airport Influence Area for Ontario International Airport, which encompasses lands within parts of

San Bernardino, Riverside, and Los Angeles Counties, and limits future land uses and development within the Airport Influence Area, as they relate to noise, safety, airspace protection, and overflight impacts of current and future airport activity. As the recommending body for the Project, the Planning Commission has reviewed and considered the facts and information contained in the Application and supporting documentation against the ONT ALUCP compatibility factors, including [1] Safety Criteria (ONT ALUCP Table 2-2) and Safety Zones (ONT ALUCP Map 2-2), [2] Noise Criteria (ONT ALUCP Table 2-3) and Noise Impact Zones (ONT ALUCP Map 2-3), [3] Airspace protection Zones (ONT ALUCP Map 2-4), and [4] Overflight Notification Zones (ONT ALUCP Map 2-5). As a result, the Planning Commission, therefore, finds and determines that the Project, when implemented in conjunction with the conditions of approval, will be consistent with the policies and criteria set forth within the ONT ALUCP; and

SECTION 4: ***Concluding Facts and Reasons.*** Based upon the substantial evidence presented to the Planning Commission during the above-referenced hearing, and upon the specific findings set forth in Sections 1 through 3, above, the Planning Commission hereby concludes as follows:

(1) ***The proposed Planned Unit Development is consistent with the goals, policies, plans and exhibits of the Vision, Policy Plan (General Plan), and City Council Priorities components of The Ontario Plan.*** The Project is consistent with Vision, Policy Plan (General Plan), and City Council Priorities components of The Ontario Plan. Section 1.1, The Ontario Plan Objectives of the Planned Unit Development, describes the manner in which the Planned Unit Development complies with the Policy Plan goals and policies.

(2) ***The proposed Planned Unit Development, would not be detrimental to the public interest, health, safety, convenience, or general welfare of the City.*** The Planning Commission has required certain safeguards, and has required certain changes, which have been established to ensure that: [i] the purposes of the Planned Unit Development are maintained; [ii] the project will not endanger the public health, safety or general welfare; [iii] the project will not result in any significant environmental impacts; [iv] the project will be in harmony with the area in which it is located; and [v] the project will be in full conformity with the Vision, City Council Priorities and Policy Plan components of The Ontario Plan.

(3) ***In the case of an application affecting specific property(ies), the proposed Planned Unit Development, will not adversely affect the harmonious relationship with adjacent properties and land uses.*** The Planned Unit Development area is situated in Ontario's downtown and is adjacent to residential and commercial land uses and development. The surrounding development supports the objective of the Planned Unit Development to further commercial and residential mixed-use development.

The Project will not affect the harmonious relationship with adjacent properties and land use.

(4) ***In the case of an application affecting specific property(ies), the subject site is physically suitable, including, but not limited to, parcel size, shape, access, and availability of utilities, for the request and anticipated development.*** In preparing the proposed Planned Unit Development, a thorough review and analysis of the proposed Project and the subject site's physical suitability for the Project was completed, including analysis of the project size, shape, intensity of development, building height, building setbacks, site access, site landscaping and drainage, fences and walls, vehicle circulation, pedestrian connections, availability of mass transit, necessary street dedication and easements, public right-of-way improvements, availability of utilities and other infrastructure needs, off-street parking and circulation, building orientation and streetscapes, architectural character, building materials and color, and site signage. Based upon this review and analysis, the subject site has been deemed physically suitable, including but not limited to parcel size, shape, access, and availability of utilities, for the proposed Planned Unit Development and the proposed development.

(5) ***The proposed Planned Unit Development is superior to that which could be obtained through the application of the Development Code or a specific plan.*** The Planned Unit Development will establish minimum building setbacks, parking and open space requirements, allow on-street parking, and establish a planting palette. These standards in the Planned Unit Development will facilitate the development of 3 attached single-family dwellings, related parking facilities and private and common open space areas. The proposed Planned Unit Development will allow for subsequent development that is superior to that which could be obtained through the application of the Development Code by itself.

SECTION 5: ***Planning Commission Action.*** Based upon the findings and conclusions set forth in Sections 1 through 4, above, the Planning Commission hereby RECOMMENDS THE CITY COUNCIL APPROVES the herein described Application, subject to each and every condition set forth in the Department reports attached hereto as "Attachment A," and incorporated herein by this reference.

SECTION 6: ***Indemnification.*** The Applicant shall agree to defend, indemnify and hold harmless, the City of Ontario or its agents, officers, and employees from any claim, action or proceeding against the City of Ontario or its agents, officers or employees to attack, set aside, void, or annul this approval. The City of Ontario shall promptly notify the applicant of any such claim, action, or proceeding, and the City of Ontario shall cooperate fully in the defense.

SECTION 7: ***Custodian of Records.*** The documents and materials that constitute the record of proceedings on which these findings have been based are located

at the City of Ontario City Hall, 303 East "B" Street, Ontario, California 91764. The custodian for these records is the City Clerk of the City of Ontario.

SECTION 8: ***Certification to Adoption.*** The Secretary shall certify to the adoption of the Resolution.

- - - - - - - - - - - - - -

The Secretary Pro Tempore for the Planning Commission of the City of Ontario shall certify as to the adoption of this Resolution.

I hereby certify that the foregoing Resolution was duly and regularly introduced, passed and adopted by the Planning Commission of the City of Ontario at a regular meeting thereof held on the 28th day of February, 2023, and the foregoing is a full, true and correct copy of said Resolution, and has not been amended or repealed.

1. INTRODUCTION

This document is intended to function as a set of planning and design principles, development regulations and performance standards to guide and govern the development of an infill area of approximately 0.11 – acres of land, which is currently vacant, within a developed area. The development is comprised of a single vacant lot surrounded by existing residences. The lot is at the corner of North Fern Avenue (to the East) and West Vesta Street (existing Alley to the North). Access is available through the existing alley known as West Vesta Street (see Figure 1.1 Project Location Map).

The project site is located within The Ontario Plan Downtown Mixed Use Land Use District and the MU-1 (Downtown Mixed Use) zoning district which requires the establishment of a Planned Unit Development (PUD) prior to development. The Planned Unit Development (PUD) is set forth in the Ontario Development code section 4.01.030 (Planned Unit Development (PUD) and Amendments). Upon approval, this PUD will establish the land use and development standards for this particular project site. The Fern Townhome Planned Unit Development (PUD) will provide development standards unless otherwise defined herein, definitions and interpretations contained in the Development code shall apply.

City staff and private developers shall rely on this PUD to determine whether precise plans for development will be adequate and will meet the City's land use and design objectives.

Figure 1-1: Project Location Map

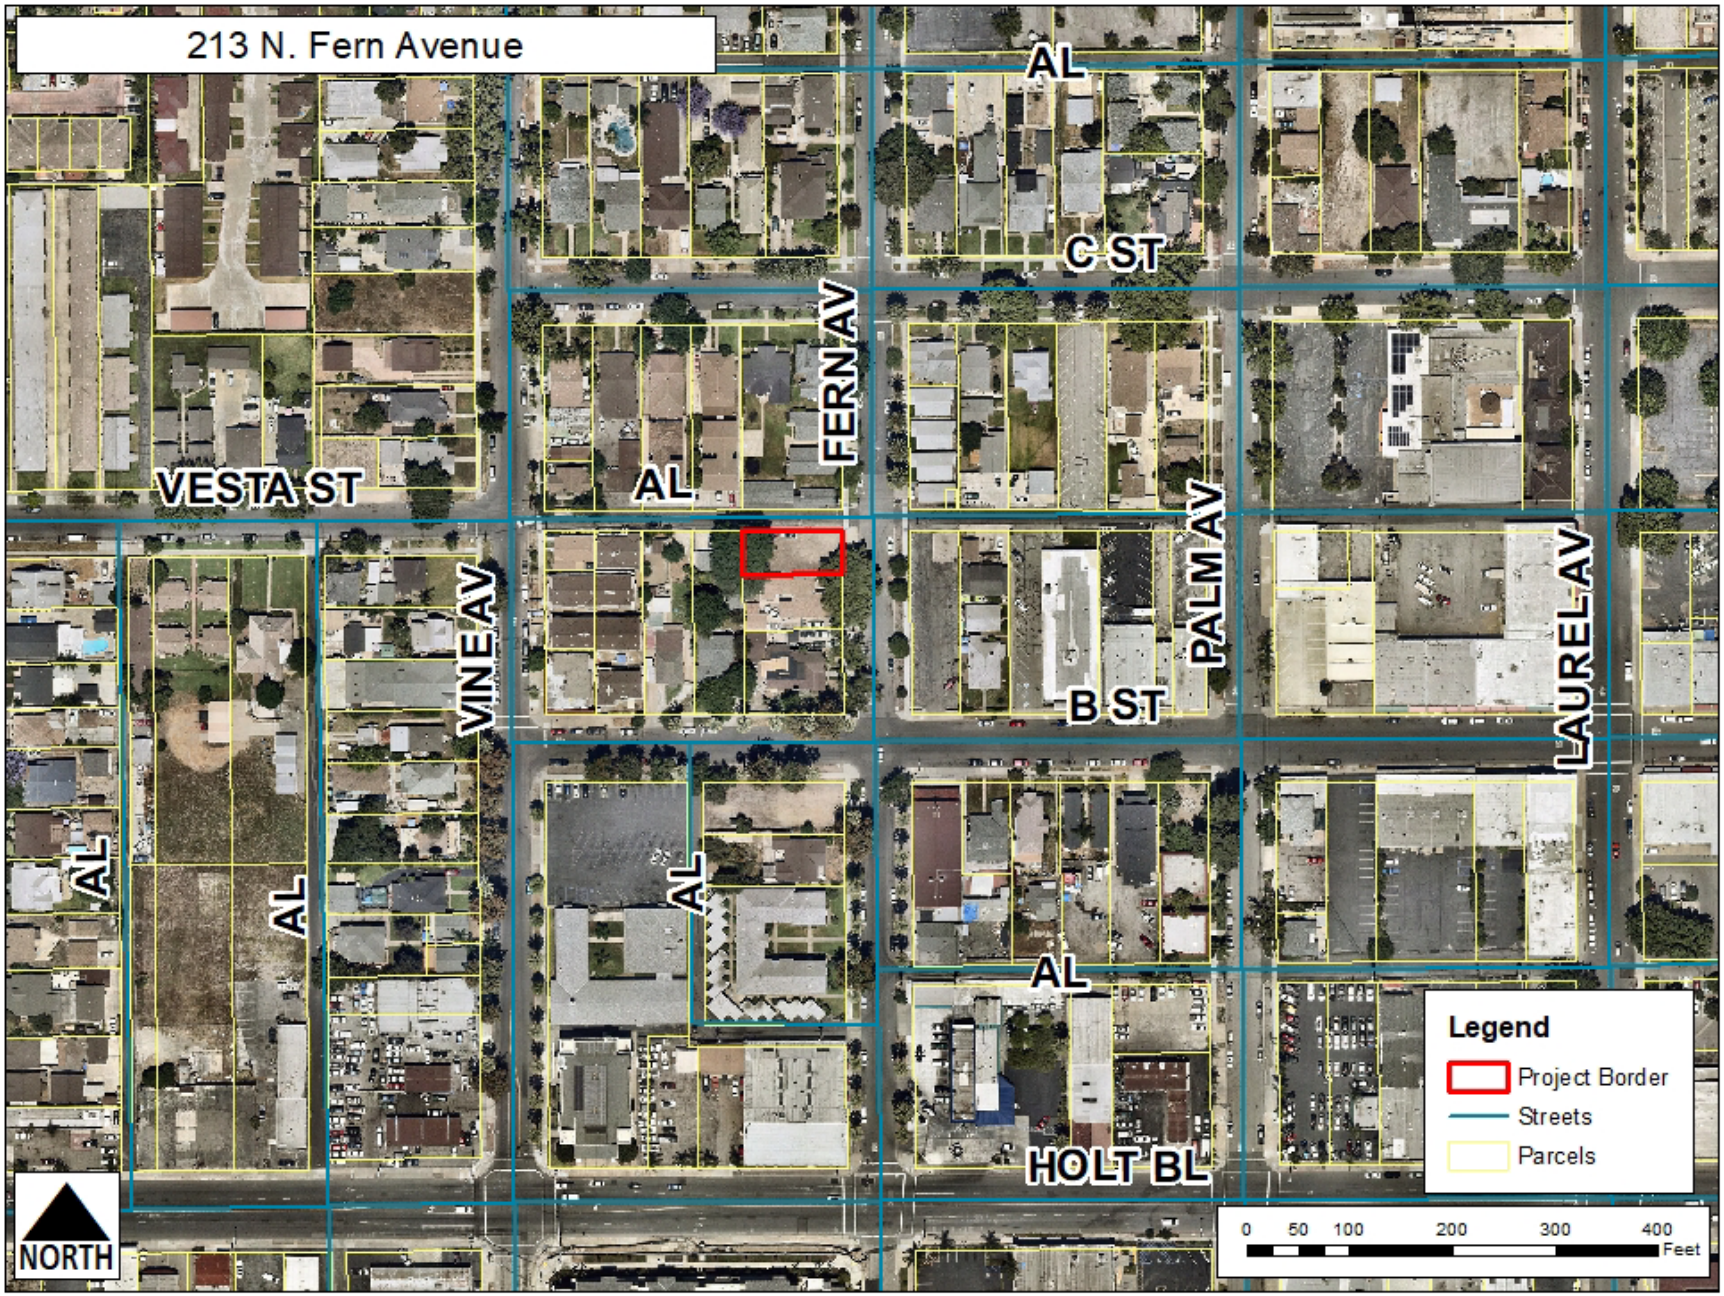

Figure 1-2: Site Plan

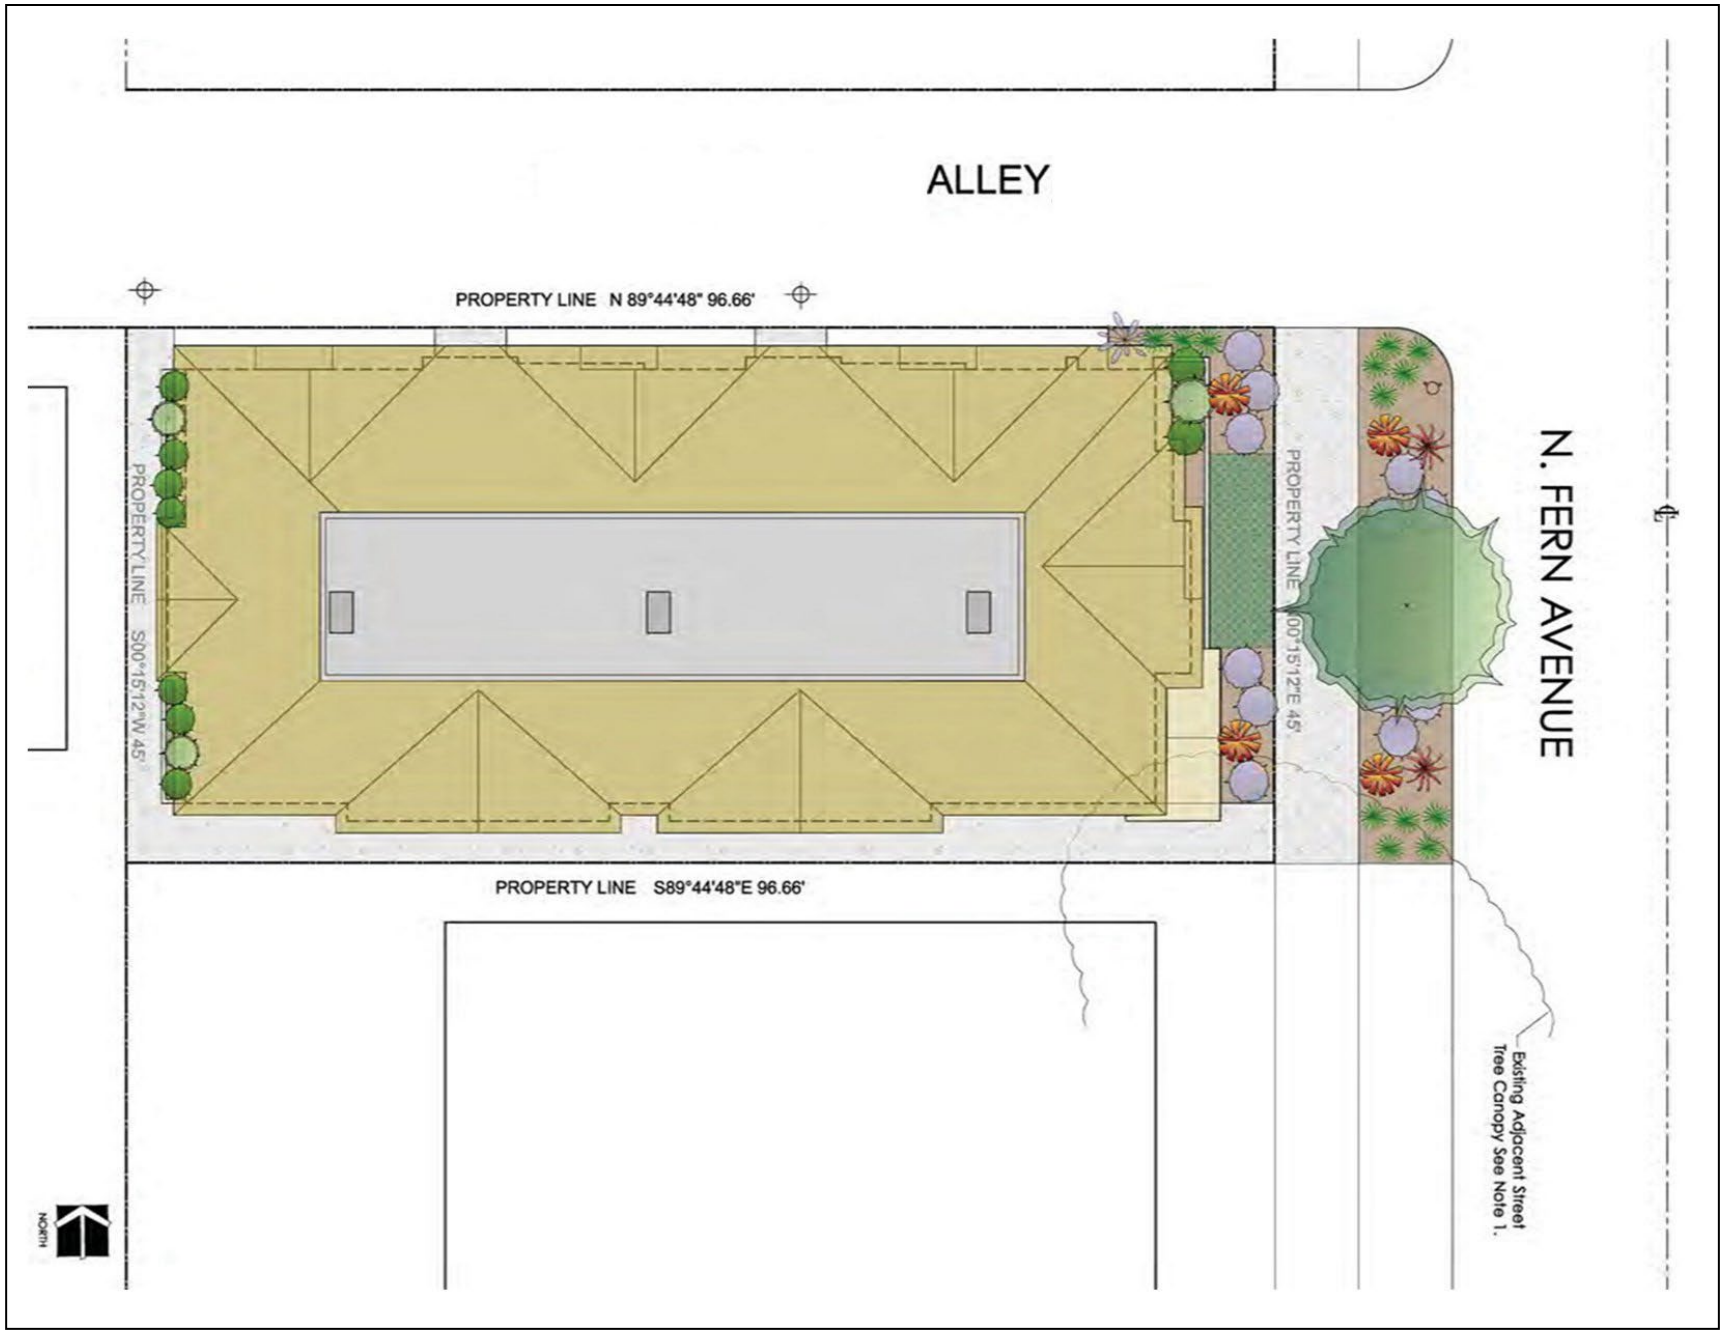


[THIS PAGE INTENTIONALLY LEFT BLANK]

2. OBJECTIVES

The Ontario Plan, which includes the City's General Plan (Policy Plan), designates the project area as part of the Downtown Mixed Use District (see Figure 2-1: Downtown Land Use District Map). The Downtown Mixed Use District designation requires approval of a Planned Unit Development (PUD) to develop the property. Additionally, the designation specifies a residential density range of 25.1-75 units per acre and a maximum floor area ratio (FAR) of 2.0 for office and retail uses if required.

The Ontario Plan goals and policies furthered by this Planned Unit Development are as follows:

2.1. Land Use Element Goals and Policies

i. LU1 – Balance. A community that has a spectrum of housing types and price ranges that match the jobs in the city and that make it possible for people to live and work in Ontario and maintain a quality of life.

   a. LU1-1 Strategic Growth. We concentrate growth in strategic locations that help create place and identity, maximize available and planned infrastructure, and foster the development of transit.

      - The PUD supports the goal by providing housing in the downtown core to maximize infrastructure and foster the development of transit.

ii. LU2 – Compatibility. Compatibility between a wide range of uses and resultant urban patterns and forms.

   a. LU2-2 Buffers. We require new uses to provide mitigation or buffers between existing uses where potential adverse impacts could occur. Additional mitigation is required when new uses could negatively impact environmental justice areas.

      - The PUD takes into consideration the existing uses on the surrounding properties and provides privacy buffers with decorative masonry walls, landscaping and setbacks.

iii. LU3 – Flexibility. Staff, regulations and processes that support and allow flexible response to conditions and circumstances in order to achieve the Vision.

   a. LU3-1 Development Standards. We maintain clear development standards which allow flexibility to achieve our Vision.

      - The PUD implements the flexibility anticipated by city development standards.

2.2. Housing Use Element Goals and Policies

i. H1 – Neighborhoods and Housing. Stable neighborhoods of quality housing, ample community services and public facilities, well-maintained infrastructure, and public safety that foster a positive sense of identity.

   a. H1-4 Historical Preservation. We support the preservation and enhancement of residential structures, properties, street designs, lot configurations, and other reminders of Ontario's past that are considered to be local historical or cultural resources.

      - The PUD is located within the Residential District of Downtown Ontario. The PUD will ensure the architectural enhancements complement the existing historic housing surrounding the project.

ii. H2 – Housing Supply and Diversity. Diversity of types of quality housing that are affordable to a range of household income levels, accommodate changing demographics, and support and reinforce the economic sustainability of Ontario.

   a. H2-5 Housing Design. We require architectural excellence through adherence to City design guidelines, thoughtful site planning, environmentally sustainable practices and other best practices.

      - The PUD is located within the Residential District of Downtown Ontario. The PUD will ensure the architectural enhancements complement the existing historic setting of the project location.

   b. H2-6 Infill Development. We support the revitalization of neighborhoods through the construction of higher-density residential developments on underutilized residential and commercial sites.

      - The PUD implements higher density residential development within the downtown core to support nearby businesses and assist in area revitalization.

2.3. Community Design Element Goals and Policies

i. CD1 – Image and Identity. A dynamic, progressive city containing distinct and complete places that foster a positive sense of identity and belonging among residents, visitors, and businesses.

   a. CD1-1 City Identity. We take actions that are consistent with the City being a leading urban center in Southern California while recognizing, enhancing, and preserving the character of our existing viable neighborhoods.

      - The PUD supports the policy goal by incorporating a diverse urban housing type into the downtown core.

   b. CD1-2 Place Types. We establish Place Types in urban, mixed use, and transit-oriented areas to foster the City's identity as a premier community and require new development within each Place Type to incorporate prescribed urban patterns, forms, and placemaking priorities.

      - The PUD is located within the Residential District of Downtown Ontario. The PUD will ensure the architectural enhancements complement the existing historic setting of the project location.

ii. CD2 – Design Quality. A high level of design quality resulting in neighborhoods, commercial areas, public spaces, parks, and streetscapes that are attractive, safe, functional, human-scale, and distinct.

   a. CD2-1 Quality Building Design and Architecture. We encourage all development projects to convey visual interest and character through:

      - Building volume, massing, and height to provide context-appropriate scale and proportion;

      - A true architectural style which is carried out in plan, section and elevation through all aspects of the building and site design and appropriate for its setting; and

      - Exterior building materials that are articulated, high quality, durable, and appropriate for the architectural style.

      - The PUD will ensure that architectural features and finishes which convey a particular style will be implemented to complement the existing historic setting of the project location.

2.4. Fern Townhomes Objectives

This Planned Unit Development provides guidelines for development of the project area. The following objectives are intended to provide a general framework for establishing development standards to ensure proper development of the project area.

i. Develop high quality, housing.

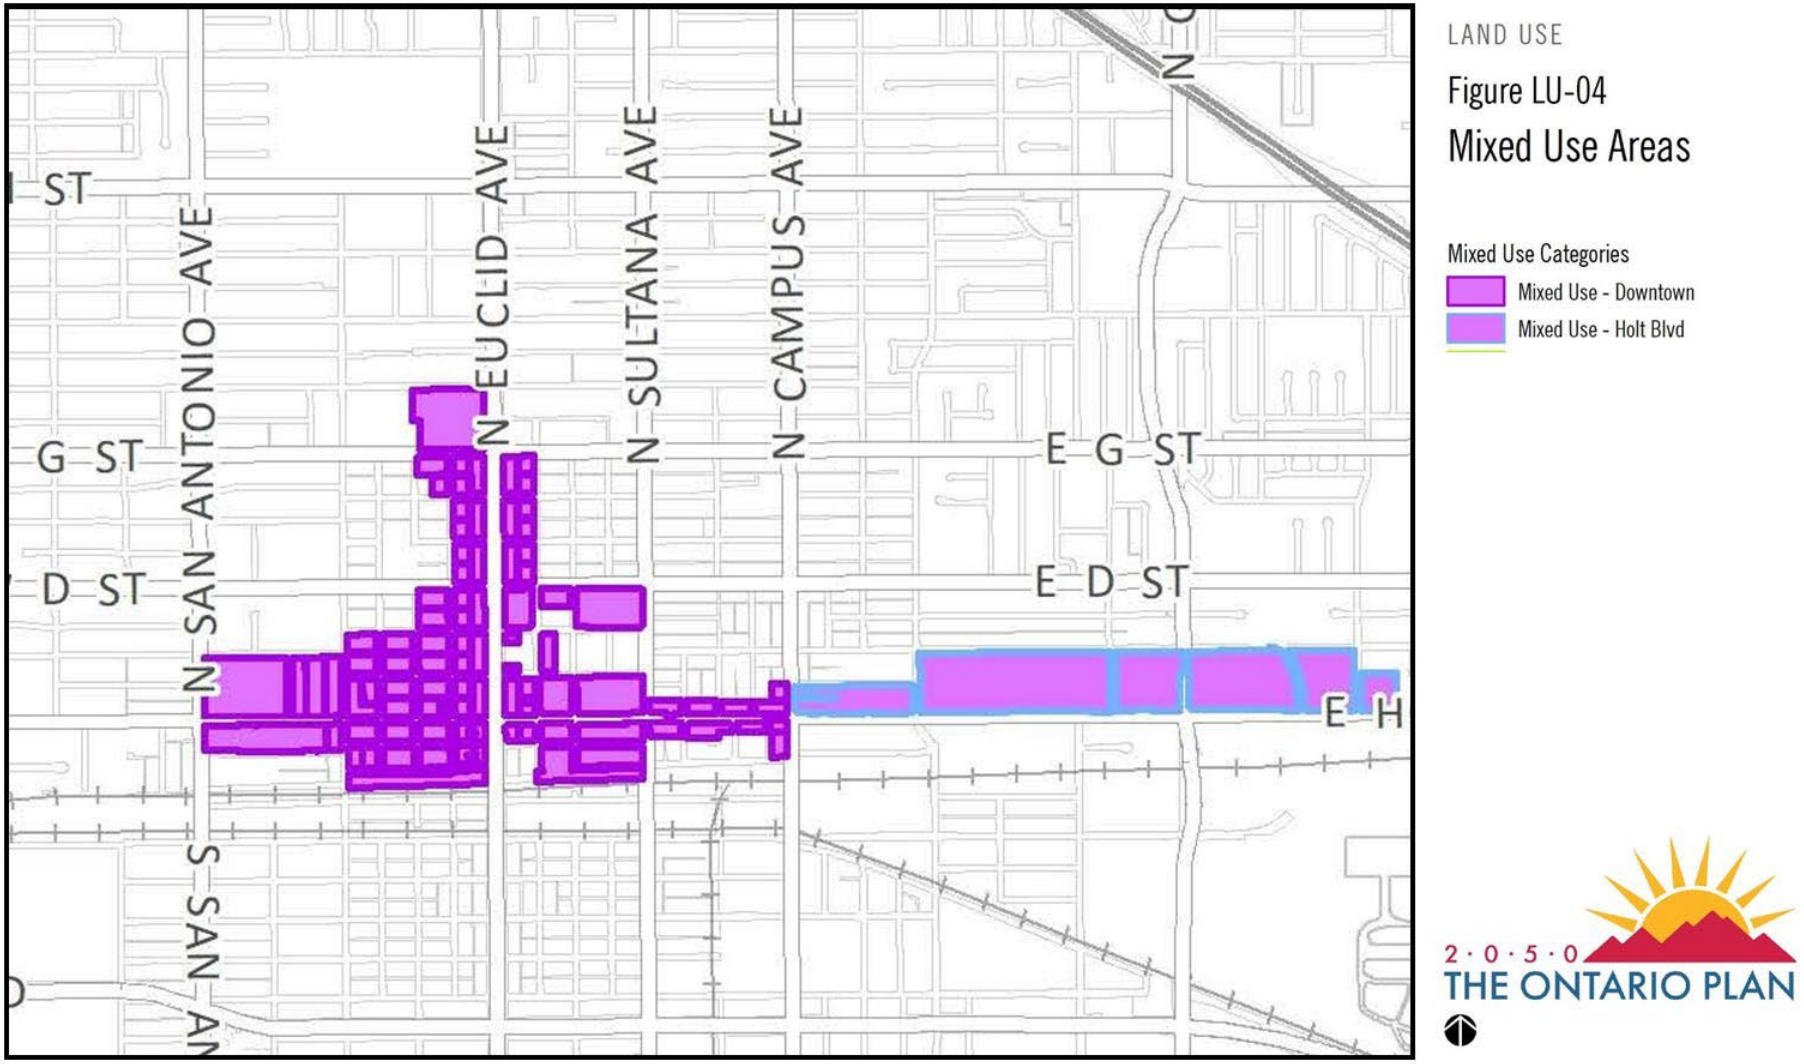
ii. Establish appropriate relationships among new residential neighborhoods as well as with adjacent land use.

iii. Provide new housing designed for families with children.

iv. Provide area of private and passive open space with each unit to include private balconies and attractive entries.

v. Provide flexible spaces at ground level which can be used as a Home Office or additional living space.

Figure 2-1: Downtown Growth Area Map



[THIS PAGE INTENTIONALLY LEFT BLANK]

3. LAND USE PLAN

3.1. Land Use Plan /Allowable Uses

The Project site is located within the Downtown Mixed Use Area Policy Plan (General Plan) land use district, and the MU-1 (Downtown Mixed-Use) zoning district, which implements the Downtown Mixed Use area. The MU-1 zoning district was established to accommodate and intensive mixture of vertical and horizontal retail and office uses at a development intensity of up to 2.0 FAR, and residential uses at a density of 25 to 75 dwelling units per acre. Development projects within the MU-1 zoning district are intended to maintain a pedestrian friendly atmosphere, while at the same time enhancing the historic character of the area.

Consistent with the intent of the Downtown Mixed Use Area and the MU-1 zoning district, the project site is designated Multiple Family Residential (MFR) land use designation. Exhibit 3.1 MU-1 (Mixed Use Downtown) depicts the Planned Unit Development boundary and zoning designation.

Figure 3-1: MU-1 (Mixed Use Downtown) District Map

3.2. Residential Use

The project site is envisioned to be developed with three attached housing units. All units will be two story with two car parking garages below and the living areas on upper/second level. A landscape buffer with trees and a planter is provided along Fern Avenue. Units will be accessed via a new paved walkway. All units will have private balconies.

3.3. Permitted Uses List

The Permitted Land uses within the 213 N. Fern Avenue Planned Unit Development (PUD) are as follows:

i. Multiple family residential dwellings

ii. Motor vehicle parking ancillary to multiple family housing developments

iii. Temporary uses as permitted within the residential districts of the City of Ontario Development Code subject to an Administrative Permit.

iv. Other land use compatible with multiple family residential development projects, as determined by the Zoning Administrator.

Uses may be prohibited through rental contracts and agreements as provided by the owner and project management, unless prohibited by Federal, State or local laws.

[THIS PAGE INTENTIONALLY LEFT BLANK]

4. DEVELOPMENT REGULATIONS

4.1. Residential Density

Residential density shall be 25.1 to 70 dwelling units per acre.

4.2. Project Density

This particular combined infill project site consists of 0.09 acres of land. This zone density will require a minimum of (3) dwellings and a maximum of (7) dwellings.

4.3. Building Height

No structure shall exceed 35 feet in height, except that the maximum height may be exceeded by roof mounted equipment, architectural projections, chimneys, elevator towers, parapet walls and any other roof top structures by up to 10% of the allowed building height. No rooftop equipment shall be visible from anywhere on the project site, public streets or adjacent properties, and shall be fully screened with appropriate architectural parapet walls or appropriate roof treatments. Roof mounted equipment shall not exceed the height of the structures and appurtenances used to screen the equipment.

i. No roof mounted equipment proposed. All HVAC units shall be placed within the attic space of the proposed roof structure, and condenser units shall be ground-mounted and properly screened.

4.4. Building Setbacks

Table 4-1: Minimum Building Setbacks

Minimum Setbacks:	Distance
From North Fern Avenue (East):	
▪ Building	7 FT
▪ Porches, Patio Covers, and Similar Architectural Projections**	5 FT
From Vesta Street/Alley (North)	
▪ Building	5 FT
▪ Garage Entry	6 FT
From Interior Property Line (South):	
▪ Building	5 FT
From Rear Property Line (West):	
▪ Building	5 FT
▪ Porches, Patio Covers, and Similar Architectural Projections**	5 FT
2nd story Architectural Projections and Balconies	**3 FT**

**No projection may encroach into any necessary easements

i. All setbacks shall be measured from the property lines. Placement of buildings, structures, fences, walls, utility facilities, yards etc. will be based on the street's rights of way and the property line dimensions. Allowable encroachments in yards include (maximum 6'-0" high) property line fences and gates, landscaping, paving and public utilities.

4.5. Access

Project vehicular access is from the northernly alley. Pedestrian access is from Fern Avenue.

4.6. Open Space

Open space shall be provided for the passive and the active recreation opportunities within the project site. Two types of open space are required, private and common open space. These open space areas are for the use of the on-site residents and their guests. Required street setback areas are not counted towards the common open space requirements.

4.7. Private Open Space

Private open space shall be provided for each residential unit in order to provide private outdoor areas which can be enjoyed for the exclusive use by the occupant of the residential unit and their guests. Types of areas considered private open space include balconies, decks and patios and enclosed yard areas.

Private open spaces are achieved with second floor balconies in each residential unit and shall have direct access from each residential unit. Residential units shall have a minimum size of private open space pursuant to Section 6.01.010.E (Open Space Requirements for Single-Family Small Lot Subdivisions, and Multiple-Family and Mixed-Use Development Projects) of the Ontario Development Code. The space may be provided in multiple areas (e.g. balconies, covered porches, a yard and a patio, etc.), a s long as the total area of the spaces meets the minimum private open space requirement of 30 square feet for the unit. The minimum dimension for private open space shall be no less than 5 feet in any direction. Balconies shall be a minimum dimension of 5’-0” x 6’-0”.

4.8. Common Open Space

Common Open Space shall be provided to allow for both passive and active types of recreation, along with the site landscape amenities. Common open space is achieved along the landscape buffer along Fern Avenue. These areas are for use by project residents and their guests. The Project site is located in an urbanized downtown area which provides access to many shared amenities including a public park (Ontario Town Square) within a quarter mile of the site.

Landscaping

4.9. Site Landscaping

A conceptual landscape plan shall be submitted with each Development Plan within the 213 N. Fern Avenue PUD area. The plan shall specify all landscape and hardscape elements for the development plan site. Detailed Landscape and Irrigation plans shall be required prior to the issuance of building permits.

The detailed plans shall show location of ground mounted utility boxes and equipment, along with the methods of screening for these items from the public right of way and adjacent residences where possible (see Figure 4-1: Conceptual Landscape Planting Legend).

The Landscape and irrigation plan shall be designed with water conservation in mind, utilizing "California friendly" species and drought tolerant planting materials. The landscaping and irrigation shall comply with AB 1881, and all other laws and regulations related to planting materials.

Compliance with State and Federal Laws

a. Provide landscaping and an irrigation system, which promotes the conservation of water as required by the Water Conservation in Landscaping Act of 2006 (AB 1881), commencing with the California Government Code Section 65591.

4.10. Screening

i. General Requirements

a. All roof and ground mounted mechanical equipment shall be screened pursuant to the requirements of the Ontario Development Code.

b. Screening shall include plant and building materials compatible with the project design so it is well integrated and hidden within the project area.

c. Building and plant materials used for screening shall be compatible with the architectural style and planting palette used on the project area.

d. All ground level screening shall comply with the requirements of the Ontario Development Code Section 6.02.030 (Protection of Intersection Visibility).

ii. Fences, Walls, and Hedges

Fences, walls and hedges shall comply with Section 6.02.030 (Protection of Intersection visibility) of the Ontario Development Code, Engineering Department corner sight distance standards, and all other applicable city standards. Fences and wall shall be made of decorative materials that are compatible with, or enhance the overall architectural character of the project. All fences, walls and hedges shall be in scale with the development, and shall be used for screening, site enhancement, and creating a safer living environment for residents and their guests. All decorative walls, monuments, and/or other similar features, shall not encroach in to the public street right of way.

5. PARKING AND CIRCULATION

5.1. Site Accessibility

The site shall be designed to promote safety for residents by only allowing limited vehicular and pedestrian access into and across the site. This can be achieved through building orientation and placement, and use of proper fences and gates to limit access to residents and their guests.

5.2. Vehicle Circulation

The project site shall be designed with parking access to the individual garages from alley, and shall provide all guest parking outside of development (on or off site) to ensure accessibility. Location of drive aisles and entries shall be approved ty the City Engineer. Vehicular circulation shall be designed in a way that promotes pedestrian safety and proper access to the parking garage areas.

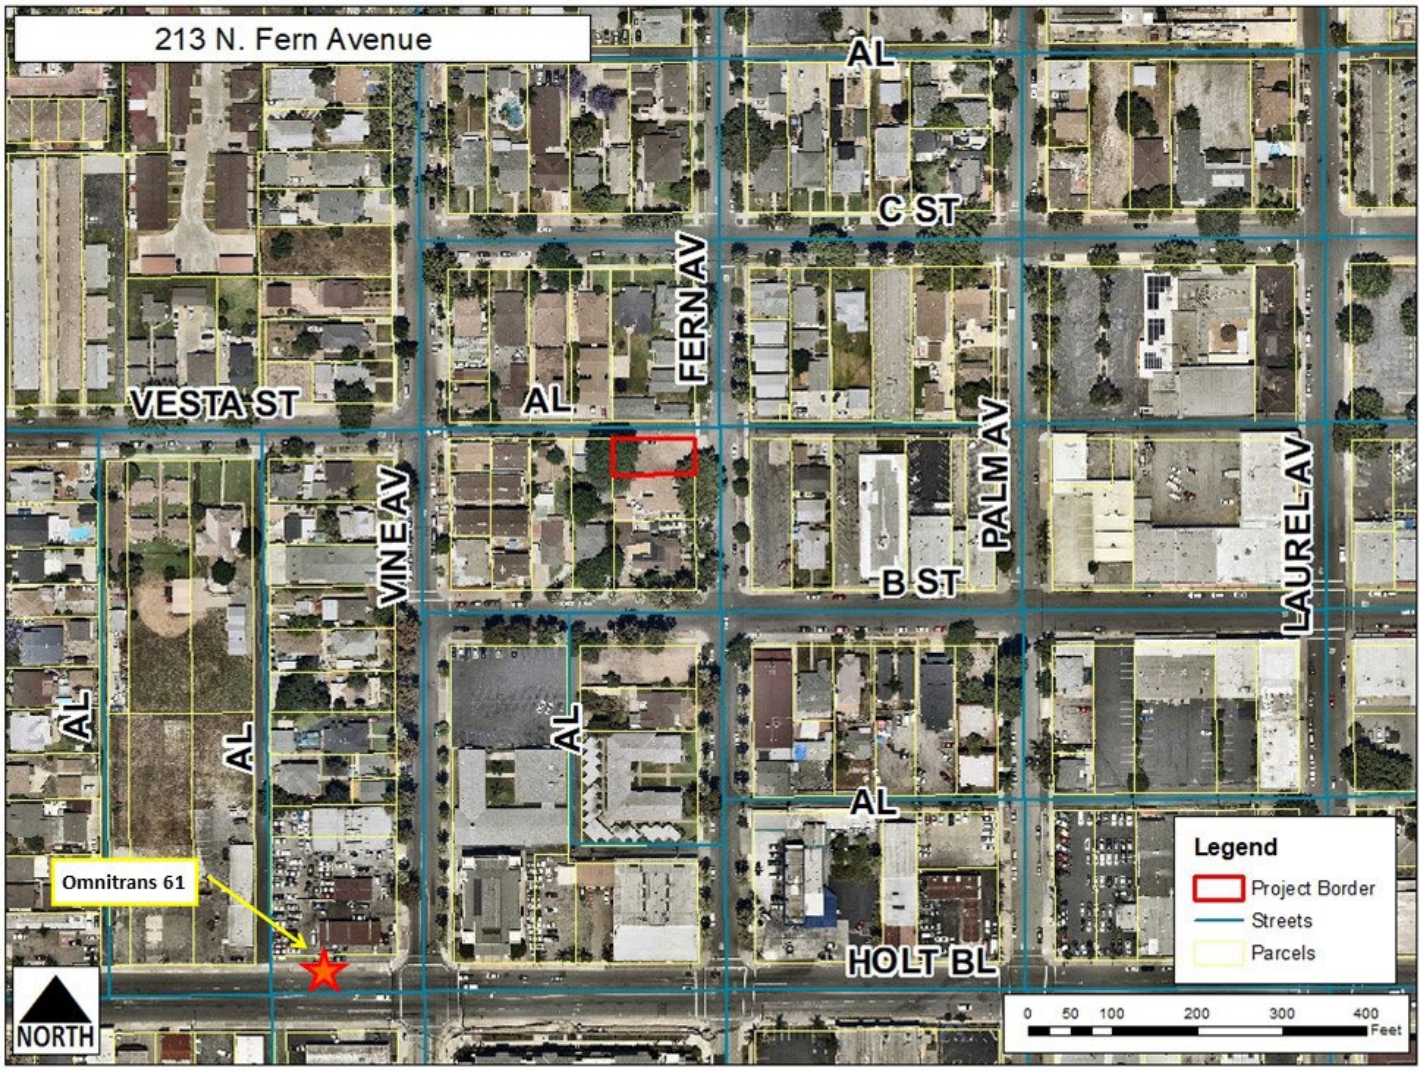
5.3. Pedestrian Circulation

Site design must provide for safe pedestrian circulation across the project site by separating the pedestrian areas from the vehicular access. This includes, but is not limited to, accessibility from the parking motor court to garages area to unit entries, site amenities, and perimeter sidewalk areas. Fencing and gates may be used to limit public access to resident-only areas.

5.4. Access to Mass Transit

Proposed Development Project within the PUD area should encourage the use of the existing bus stops by providing pedestrian connections to westbound line [Omnitrans 61] with a bus stop located on the northwest corner of Holt Boulevard and Vine Avenue (see Figure 5-1: Access to Mass Transit).

Figure 5-1: Access to Mass Transit



5.5. Public Right-of-Way Improvements

i. The public right-of-way shall be improved with each proposed development. The public right-of-way improvements required are to include, but are not limited to the following: street pavement, curb & gutter, parkway landscaping, parkway irrigation, public sidewalk, traffic signing, striping and fiber optic infrastructure. The extent of the required improvements shall be determined for each development plan. At a minimum the improvements shall incorporate all items along the street frontages of the properties to be developed with proper transitioning if the entire block frontage is not being installed with a particular development. Improvements along the street frontage for the entire block may be required at the time of development plan review.

5.6. Infrastructure

Water service will be provided from the existing water infrastructure in Fern Avenue, and sewer connections will be made to the existing sewer infrastructure in the alley. A dry well, as storm water detention, will be constructed on site for on-site storm water drainage and storm water runoff. The drywell shall be maintained by the property owner. In addition, there is a master-planned storm drain fronting the property based on the City's Master Plan of drainage.

5.7. Parking Requirements

i. On-Site Parking Requirements

The number of parking spaces provided is based on the number of bedrooms contained within each of the dwelling units proposed, and is subject to the following requirements.

a. All required resident parking spaces shall be provided on-site, except fractional spaces may be provided off-site;

b. Resident parking shall be provided in 2 car enclosed garages.

c. Each dwelling unit is intended for occupancy by one family only, regardless of bedroom size (s) provided in a particular unit. Parking for dwellings shall be provided on-site, pursuant to the requirements of Table 5-1: Minimum Parking Requirements below, except that guest parking may be provided on-street, pursuant to Section 5.7.ii (On-Street Parking) of this Planned Unit Development (PUD).

Table 5-1: Minimum Parking Requirements

Use	Parking Spaces Required
Multiple-Family Dwellings:	
• One-Bedroom Unit	1.75 parking spaces per unit (at least one space shall be in a garage or carport)
• Two or more Bedroom Unit	2.0 parking spaces per unit (at least one space shall be in a garage or carport)
Guest Parking	1 Space per 5 dwellings

ii. On-street Parking Requirements

On-street parking may be utilized to satisfy guest parking requirements, subject to the following conditions:

a. On-street parking may be used to satisfy guest parking requirements only, and shall not be used for required resident parking.

b. On-street parking shall only be counted along the public streets surrounding the project site, on the side of the street adjoining the project, excluding the alley to the north of the site (West Vesta Street).

c. On-street parallel parking spaces shall be calculated by the length of unobstructed curb adjacent to the project site.

iii. Parking Standards

All parking space size and location requirements shall conform to the standards set forth in Section 6.03.045 (Off-Street Parking Standards) of the Ontario Development Code.

[THIS PAGE INTENTIONALLY LEFT BLANK]

6. DESIGN GUIDELINES

6.1. Building Orientation and Streetscapes

Building orientation shall be designed to minimize noise impacts, aide in providing site safety, create proper accessibility to unit entries and parking garage areas. Maximize views from each of the residential units. Design should be done in a way to maximize each unit's ability to provide private and open space while prioritizing privacy for all tenants.

6.2. Architectural Character

The PUD Architectural style and design is a modern interpretation of the "Mediterranean" style. The design will provide gabled roofs, with clay tile eaves. lower roof pitch (3:12), rough sawn beams, and a roof well for mechanical equipment. The unit with street frontage will have a covered porch. The garage doors will have beam accents in the overhang above.

6.3. Architectural Details

The new building designed for this PUD, shall be consistent in design and detail with style throughout the project. Architectural details should complement and enhance openings and accentuate overall design of the buildings. Detailing can be achieved through the use of multi planes and recessed materials to create interesting exterior elevations.

6.4. Materials and Color

Materials and color scheme shall be compatible with, and complementary to the overall style of the development project. New Multiplex on the site will utilize light colors, pop outs and recesses to break up the building planes. Dark colored doors, trim, window casings, and sills will define openings and entries with black wrought iron accents at doors, eaves, gates and balconies. All colors shall be complementary to the architectural style and utilize primarily earth tones. Materials specified will be a combination of smooth troweled stucco plaster and rough sawn exposed wood beams. A Mediterranean architectural style clay tile roof shall be used for the roof covering.

6.5. On-Site Lighting

i. Decorative light fixtures attached to the buildings shall be compatible with the architectural style of the buildings, shall be provided for this development.

ii. All other on-site lighting shall meet development standard of the Ontario Development Code.

6.6. Signage

Signs within the project area shall comply with the Division 8.01 (Sign Regulations) of the Ontario Development code.

6.7. Off Site Improvements

All off-site improvements shall be installed in accordance with the City standards, and to the satisfaction of the City Engineering department.

[THIS PAGE INTENTIONALLY LEFT BLANK]

7. ADMINISTRATION

7.1. Items Not Addressed in PUD

Any terms, requirements, or regulations not addressed within this PLANNED UNIT DEVELOPMENT document shall be governed by the City of Ontario Development Code, the regulations of the General Mixed Use zones and City Standards.

7.2. Development Applications

Development Plan approval, pursuant to the requirements of Ontario Development Code Section 4.02.025 (Development Plans), shall be required for the physical alteration of a lot, the construction of a building, or the addition or significant alteration of an existing building. A Development Plan application shall be submitted to the Planning Department on a City application form pursuant to the requirements of Ontario Development Code Division 2.02 (Application Filing and Processing), commencing with Subsection B (Discretionary Permits and Actions) of Section 2.02.015 (Application Processing Procedures).

7.3. Administrative Exceptions

Deviation from the development standards set forth in this document may be granted up to a maximum of 10 percent by the Zoning Administrator. Any deviation that is greater than 10 percent shall require variance approval.

1. INTRODUCTION

This document is intended to function as a set of planning and design principles, development regulations and performance standards to guide and govern the development of an infill area of approximately 0.11 – acres of land, which is currently vacant, within a developed area. The development is comprised of a single vacant lot surrounded by existing residences. The lot is at the corner of North Fern Avenue (to the East) and West Vesta Street (existing Alley to the North). Access is available through the existing alley known as West Vesta Street (see Figure 1.1 Project Location Map).

The project site is located within The Ontario Plan Downtown Mixed Use Land Use District and the MU-1 (Downtown Mixed Use) zoning district which requires the establishment of a Planned Unit Development (PUD) prior to development. The Planned Unit Development (PUD) is set forth in the Ontario Development code section 4.01.030 (Planned Unit Development (PUD) and Amendments). Upon approval, this PUD will establish the land use and development standards for this particular project site. The Fern Townhome Planned Unit Development (PUD) will provide development standards unless otherwise defined herein, definitions and interpretations contained in the Development code shall apply.

City staff and private developers shall rely on this PUD to determine whether precise plans for development will be adequate and will meet the City's land use and design objectives.

Figure 1-1: Project Location Map

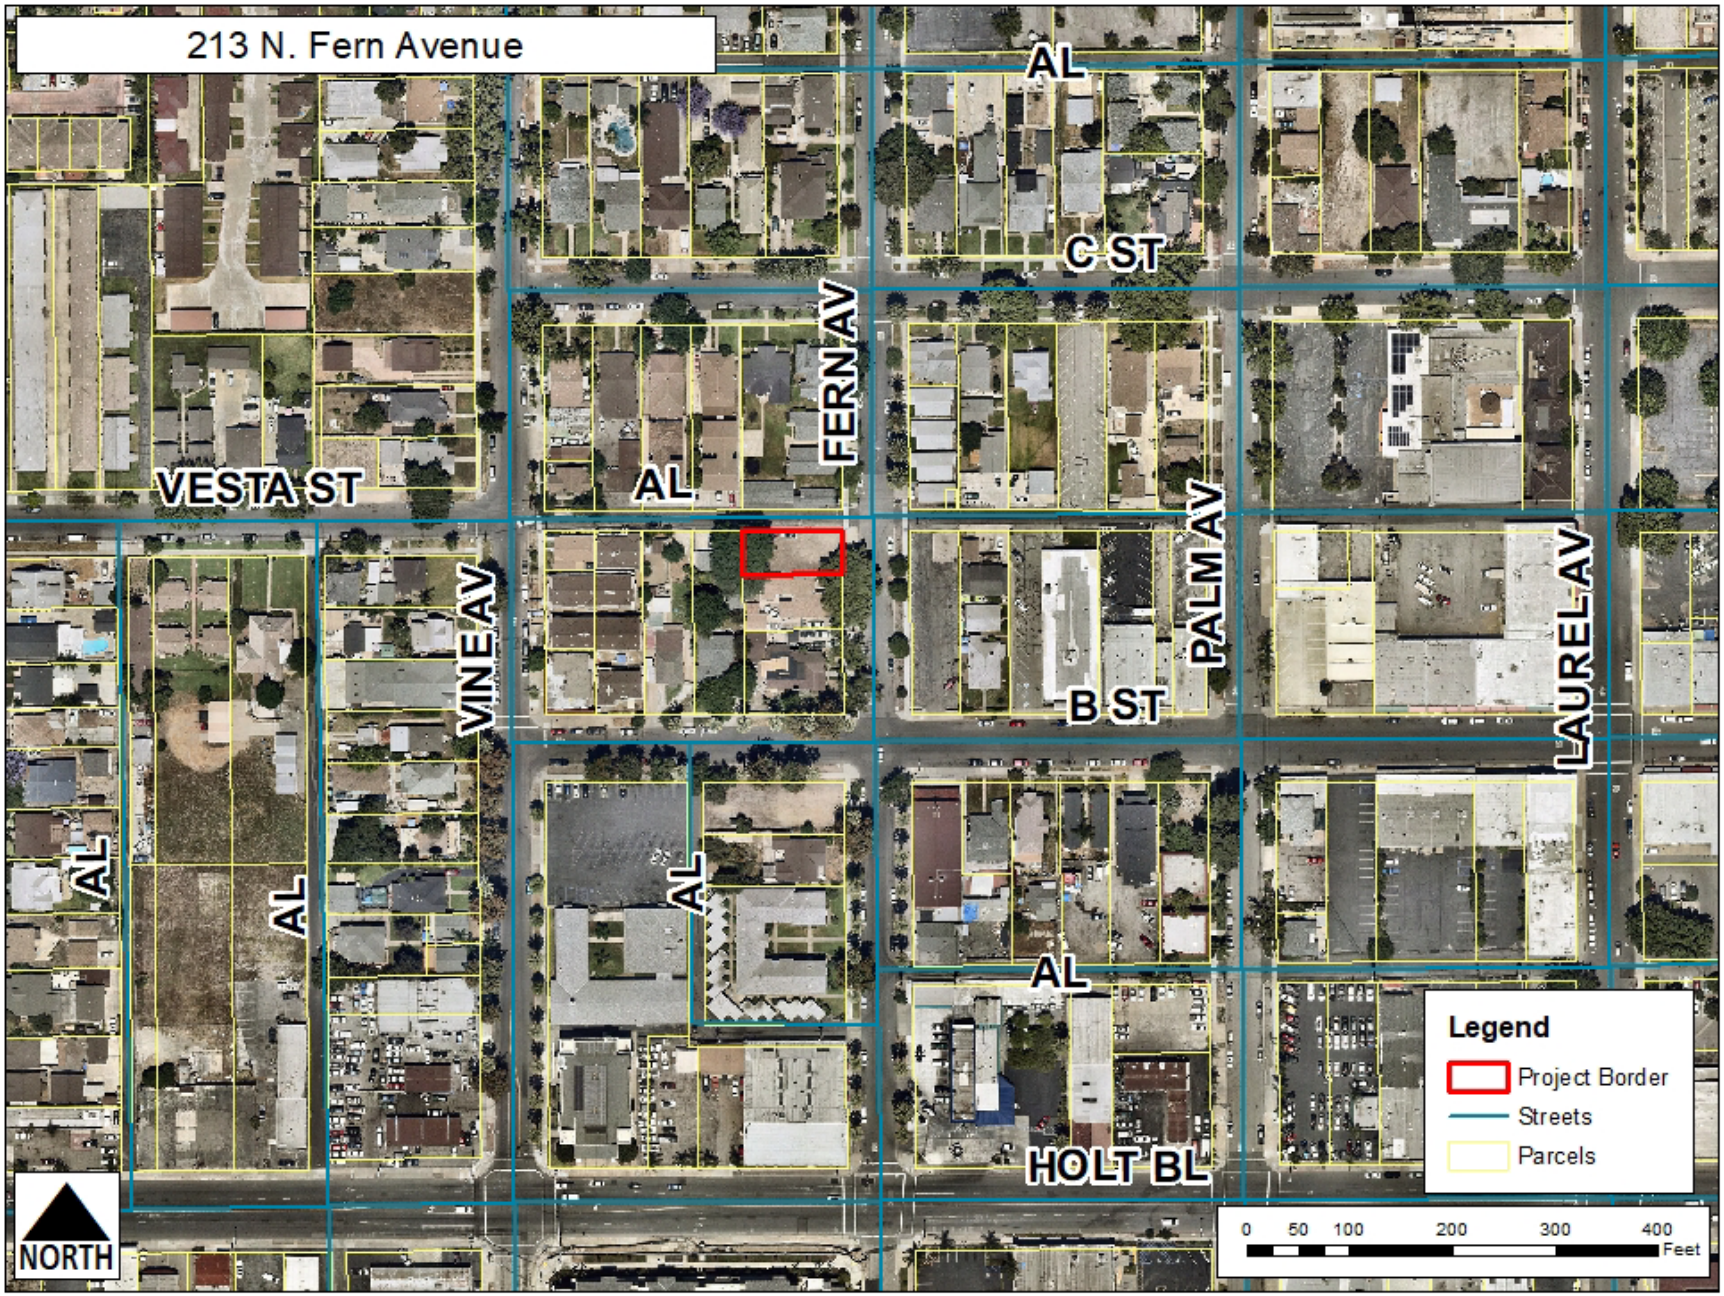

Figure 1-2: Site Plan

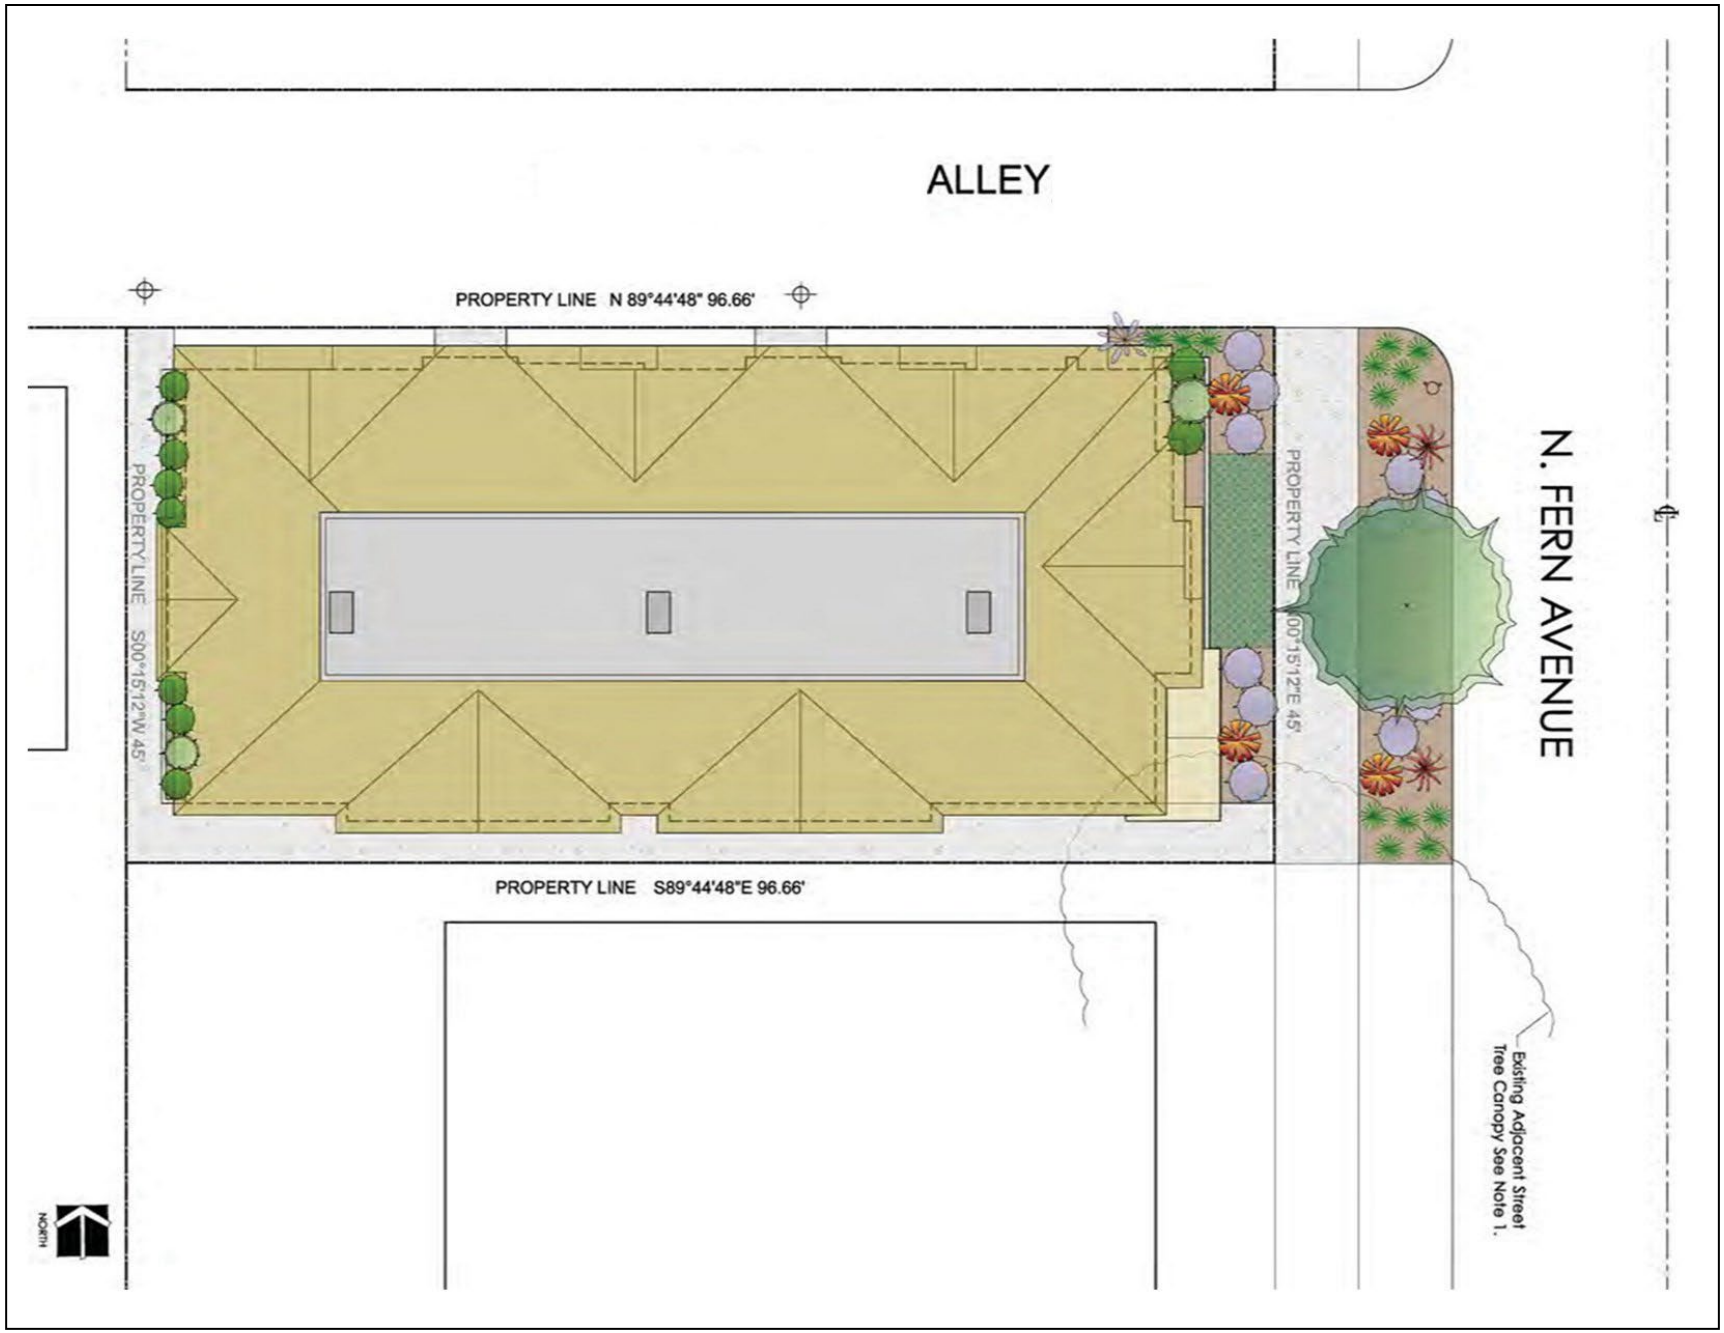


[THIS PAGE INTENTIONALLY LEFT BLANK]

2. OBJECTIVES

The Ontario Plan, which includes the City's General Plan (Policy Plan), designates the project area as part of the Downtown Mixed Use District (see Figure 2-1: Downtown Land Use District Map). The Downtown Mixed Use District designation requires approval of a Planned Unit Development (PUD) to develop the property. Additionally, the designation specifies a residential density range of 25.1-75 units per acre and a maximum floor area ratio (FAR) of 2.0 for office and retail uses if required.

The Ontario Plan goals and policies furthered by this Planned Unit Development are as follows:

2.1. Land Use Element Goals and Policies

i. LU1 – Balance. A community that has a spectrum of housing types and price ranges that match the jobs in the city and that make it possible for people to live and work in Ontario and maintain a quality of life.

   a. LU1-1 Strategic Growth. We concentrate growth in strategic locations that help create place and identity, maximize available and planned infrastructure, and foster the development of transit.

      - The PUD supports the goal by providing housing in the downtown core to maximize infrastructure and foster the development of transit.

ii. LU2 – Compatibility. Compatibility between a wide range of uses and resultant urban patterns and forms.

   a. LU2-2 Buffers. We require new uses to provide mitigation or buffers between existing uses where potential adverse impacts could occur. Additional mitigation is required when new uses could negatively impact environmental justice areas.

      - The PUD takes into consideration the existing uses on the surrounding properties and provides privacy buffers with decorative masonry walls, landscaping and setbacks.

iii. LU3 – Flexibility. Staff, regulations and processes that support and allow flexible response to conditions and circumstances in order to achieve the Vision.

   a. LU3-1 Development Standards. We maintain clear development standards which allow flexibility to achieve our Vision.

      - The PUD implements the flexibility anticipated by city development standards.

2.2. Housing Use Element Goals and Policies

i. H1 – Neighborhoods and Housing. Stable neighborhoods of quality housing, ample community services and public facilities, well-maintained infrastructure, and public safety that foster a positive sense of identity.

   a. H1-4 Historical Preservation. We support the preservation and enhancement of residential structures, properties, street designs, lot configurations, and other reminders of Ontario's past that are considered to be local historical or cultural resources.

      - The PUD is located within the Residential District of Downtown Ontario. The PUD will ensure the architectural enhancements complement the existing historic housing surrounding the project.

ii. H2 – Housing Supply and Diversity. Diversity of types of quality housing that are affordable to a range of household income levels, accommodate changing demographics, and support and reinforce the economic sustainability of Ontario.

   a. H2-5 Housing Design. We require architectural excellence through adherence to City design guidelines, thoughtful site planning, environmentally sustainable practices and other best practices.

      - The PUD is located within the Residential District of Downtown Ontario. The PUD will ensure the architectural enhancements complement the existing historic setting of the project location.

   b. H2-6 Infill Development. We support the revitalization of neighborhoods through the construction of higher-density residential developments on underutilized residential and commercial sites.

      - The PUD implements higher density residential development within the downtown core to support nearby businesses and assist in area revitalization.

2.3. Community Design Element Goals and Policies

i. CD1 – Image and Identity. A dynamic, progressive city containing distinct and complete places that foster a positive sense of identity and belonging among residents, visitors, and businesses.

   a. CD1-1 City Identity. We take actions that are consistent with the City being a leading urban center in Southern California while recognizing, enhancing, and preserving the character of our existing viable neighborhoods.

      - The PUD supports the policy goal by incorporating a diverse urban housing type into the downtown core.

   b. CD1-2 Place Types. We establish Place Types in urban, mixed use, and transit-oriented areas to foster the City's identity as a premier community and require new development within each Place Type to incorporate prescribed urban patterns, forms, and placemaking priorities.

      - The PUD is located within the Residential District of Downtown Ontario. The PUD will ensure the architectural enhancements complement the existing historic setting of the project location.

ii. CD2 – Design Quality. A high level of design quality resulting in neighborhoods, commercial areas, public spaces, parks, and streetscapes that are attractive, safe, functional, human-scale, and distinct.

   a. CD2-1 Quality Building Design and Architecture. We encourage all development projects to convey visual interest and character through:

      - Building volume, massing, and height to provide context-appropriate scale and proportion;

      - A true architectural style which is carried out in plan, section and elevation through all aspects of the building and site design and appropriate for its setting; and

      - Exterior building materials that are articulated, high quality, durable, and appropriate for the architectural style.

      - The PUD will ensure that architectural features and finishes which convey a particular style will be implemented to complement the existing historic setting of the project location.

2.4. Fern Townhomes Objectives

This Planned Unit Development provides guidelines for development of the project area. The following objectives are intended to provide a general framework for establishing development standards to ensure proper development of the project area.

i. Develop high quality, housing.

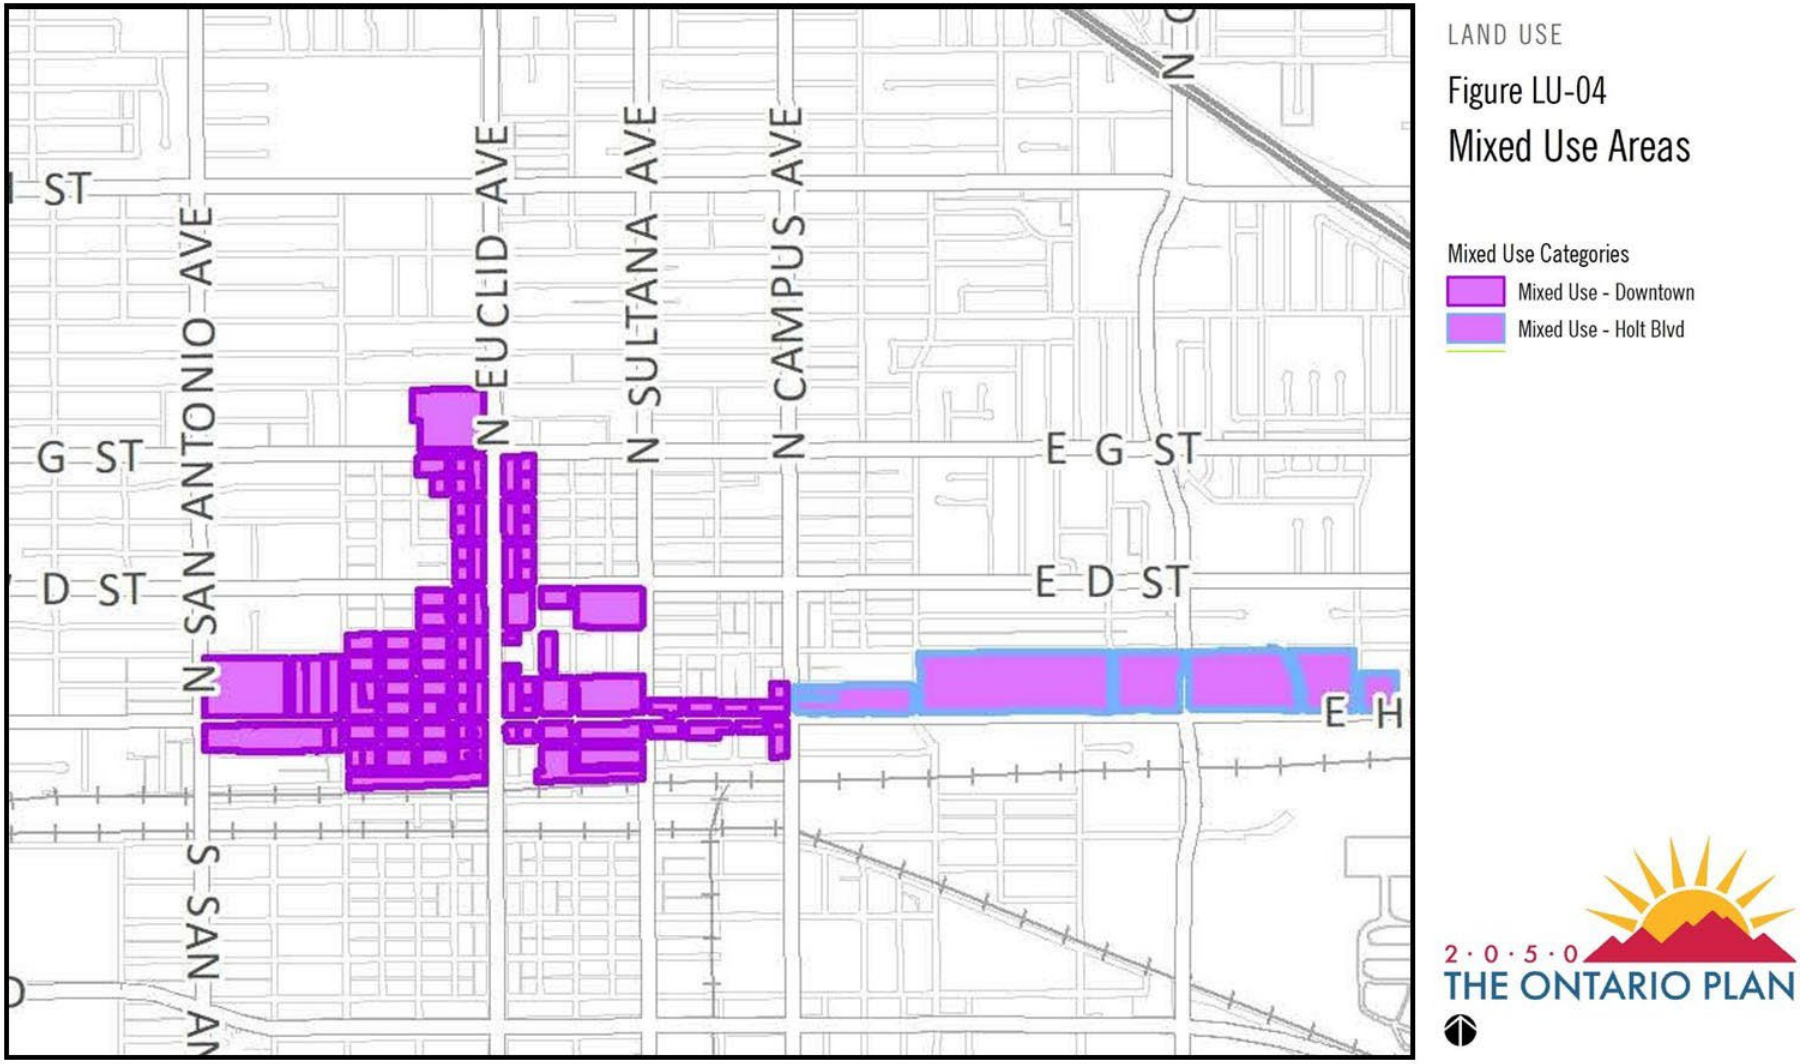
ii. Establish appropriate relationships among new residential neighborhoods as well as with adjacent land use.

iii. Provide new housing designed for families with children.

iv. Provide area of private and passive open space with each unit to include private balconies and attractive entries.

v. Provide flexible spaces at ground level which can be used as a Home Office or additional living space.

Figure 2-1: Downtown Growth Area Map



[THIS PAGE INTENTIONALLY LEFT BLANK]

3. LAND USE PLAN

3.1. Land Use Plan /Allowable Uses

The Project site is located within the Downtown Mixed Use Area Policy Plan (General Plan) land use district, and the MU-1 (Downtown Mixed-Use) zoning district, which implements the Downtown Mixed Use area. The MU-1 zoning district was established to accommodate and intensive mixture of vertical and horizontal retail and office uses at a development intensity of up to 2.0 FAR, and residential uses at a density of 25 to 75 dwelling units per acre. Development projects within the MU-1 zoning district are intended to maintain a pedestrian friendly atmosphere, while at the same time enhancing the historic character of the area.

Consistent with the intent of the Downtown Mixed Use Area and the MU-1 zoning district, the project site is designated Multiple Family Residential (MFR) land use designation. Exhibit 3.1 MU-1 (Mixed Use Downtown) depicts the Planned Unit Development boundary and zoning designation.

Figure 3-1: MU-1 (Mixed Use Downtown) District Map

3.2. Residential Use

The project site is envisioned to be developed with three attached housing units. All units will be two story with two car parking garages below and the living areas on upper/second level. A landscape buffer with trees and a planter is provided along Fern Avenue. Units will be accessed via a new paved walkway. All units will have private balconies.

3.3. Permitted Uses List

The Permitted Land uses within the 213 N. Fern Avenue Planned Unit Development (PUD) are as follows:

i. Multiple family residential dwellings

ii. Motor vehicle parking ancillary to multiple family housing developments

iii. Temporary uses as permitted within the residential districts of the City of Ontario Development Code subject to an Administrative Permit.

iv. Other land use compatible with multiple family residential development projects, as determined by the Zoning Administrator.

Uses may be prohibited through rental contracts and agreements as provided by the owner and project management, unless prohibited by Federal, State or local laws.

[THIS PAGE INTENTIONALLY LEFT BLANK]

4. DEVELOPMENT REGULATIONS

4.1. Residential Density

Residential density shall be 25.1 to 70 dwelling units per acre.

4.2. Project Density

This particular combined infill project site consists of 0.09 acres of land. This zone density will require a minimum of (3) dwellings and a maximum of (7) dwellings.

4.3. Building Height

No structure shall exceed 35 feet in height, except that the maximum height may be exceeded by roof mounted equipment, architectural projections, chimneys, elevator towers, parapet walls and any other roof top structures by up to 10% of the allowed building height. No rooftop equipment shall be visible from anywhere on the project site, public streets or adjacent properties, and shall be fully screened with appropriate architectural parapet walls or appropriate roof treatments. Roof mounted equipment shall not exceed the height of the structures and appurtenances used to screen the equipment.

i. No roof mounted equipment proposed. All HVAC units shall be placed within the attic space of the proposed roof structure, and condenser units shall be ground-mounted and properly screened.

4.4. Building Setbacks

Table 4-1: Minimum Building Setbacks

Minimum Setbacks:	Distance
From North Fern Avenue (East):	
▪ Building	7 FT
▪ Porches, Patio Covers, and Similar Architectural Projections**	5 FT
From Vesta Street/Alley (North)	
▪ Building	5 FT
▪ Garage Entry	6 FT
From Interior Property Line (South):	
▪ Building	5 FT
From Rear Property Line (West):	
▪ Building	5 FT
▪ Porches, Patio Covers, and Similar Architectural Projections**	5 FT
2nd story Architectural Projections and Balconies	**3 FT**

**No projection may encroach into any necessary easements

i. All setbacks shall be measured from the property lines. Placement of buildings, structures, fences, walls, utility facilities, yards etc. will be based on the street's rights of way and the property line dimensions. Allowable encroachments in yards include (maximum 6'-0" high) property line fences and gates, landscaping, paving and public utilities.

4.5. Access

Project vehicular access is from the northernly alley. Pedestrian access is from Fern Avenue.

4.6. Open Space

Open space shall be provided for the passive and the active recreation opportunities within the project site. Two types of open space are required, private and common open space. These open space areas are for the use of the on-site residents and their guests. Required street setback areas are not counted towards the common open space requirements.

4.7. Private Open Space

Private open space shall be provided for each residential unit in order to provide private outdoor areas which can be enjoyed for the exclusive use by the occupant of the residential unit and their guests. Types of areas considered private open space include balconies, decks and patios and enclosed yard areas.

Private open spaces are achieved with second floor balconies in each residential unit and shall have direct access from each residential unit. Residential units shall have a minimum size of private open space pursuant to Section 6.01.010.E (Open Space Requirements for Single-Family Small Lot Subdivisions, and Multiple-Family and Mixed-Use Development Projects) of the Ontario Development Code. The space may be provided in multiple areas (e.g. balconies, covered porches, a yard and a patio, etc.), a s long as the total area of the spaces meets the minimum private open space requirement of 30 square feet for the unit. The minimum dimension for private open space shall be no less than 5 feet in any direction. Balconies shall be a minimum dimension of 5’-0” x 6’-0”.

4.8. Common Open Space

Common Open Space shall be provided to allow for both passive and active types of recreation, along with the site landscape amenities. Common open space is achieved along the landscape buffer along Fern Avenue. These areas are for use by project residents and their guests. The Project site is located in an urbanized downtown area which provides access to many shared amenities including a public park (Ontario Town Square) within a quarter mile of the site.

Landscaping

4.9. Site Landscaping

A conceptual landscape plan shall be submitted with each Development Plan within the 213 N. Fern Avenue PUD area. The plan shall specify all landscape and hardscape elements for the development plan site. Detailed Landscape and Irrigation plans shall be required prior to the issuance of building permits.

The detailed plans shall show location of ground mounted utility boxes and equipment, along with the methods of screening for these items from the public right of way and adjacent residences where possible (see Figure 4-1: Conceptual Landscape Planting Legend).

The Landscape and irrigation plan shall be designed with water conservation in mind, utilizing "California friendly" species and drought tolerant planting materials. The landscaping and irrigation shall comply with AB 1881, and all other laws and regulations related to planting materials.

Compliance with State and Federal Laws

a. Provide landscaping and an irrigation system, which promotes the conservation of water as required by the Water Conservation in Landscaping Act of 2006 (AB 1881), commencing with the California Government Code Section 65591.

4.10. Screening

i. General Requirements

a. All roof and ground mounted mechanical equipment shall be screened pursuant to the requirements of the Ontario Development Code.

b. Screening shall include plant and building materials compatible with the project design so it is well integrated and hidden within the project area.

c. Building and plant materials used for screening shall be compatible with the architectural style and planting palette used on the project area.

d. All ground level screening shall comply with the requirements of the Ontario Development Code Section 6.02.030 (Protection of Intersection Visibility).

ii. Fences, Walls, and Hedges

Fences, walls and hedges shall comply with Section 6.02.030 (Protection of Intersection visibility) of the Ontario Development Code, Engineering Department corner sight distance standards, and all other applicable city standards. Fences and wall shall be made of decorative materials that are compatible with, or enhance the overall architectural character of the project. All fences, walls and hedges shall be in scale with the development, and shall be used for screening, site enhancement, and creating a safer living environment for residents and their guests. All decorative walls, monuments, and/or other similar features, shall not encroach in to the public street right of way.

5. PARKING AND CIRCULATION

5.1. Site Accessibility

The site shall be designed to promote safety for residents by only allowing limited vehicular and pedestrian access into and across the site. This can be achieved through building orientation and placement, and use of proper fences and gates to limit access to residents and their guests.

5.2. Vehicle Circulation

The project site shall be designed with parking access to the individual garages from alley, and shall provide all guest parking outside of development (on or off site) to ensure accessibility. Location of drive aisles and entries shall be approved ty the City Engineer. Vehicular circulation shall be designed in a way that promotes pedestrian safety and proper access to the parking garage areas.

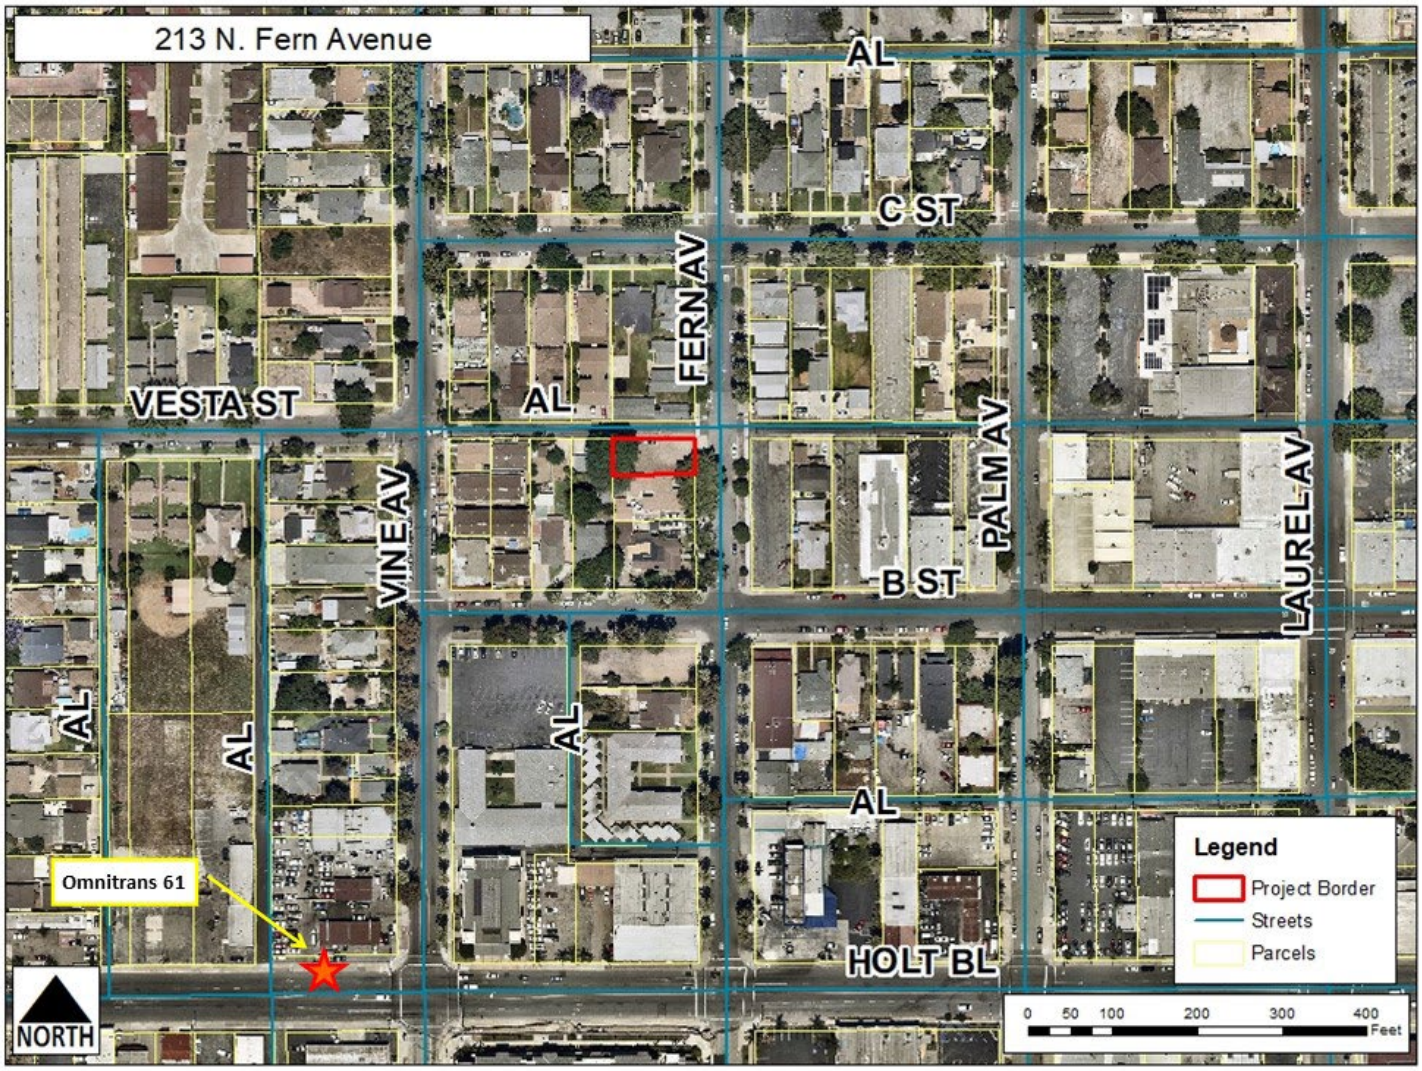
5.3. Pedestrian Circulation

Site design must provide for safe pedestrian circulation across the project site by separating the pedestrian areas from the vehicular access. This includes, but is not limited to, accessibility from the parking motor court to garages area to unit entries, site amenities, and perimeter sidewalk areas. Fencing and gates may be used to limit public access to resident-only areas.

5.4. Access to Mass Transit

Proposed Development Project within the PUD area should encourage the use of the existing bus stops by providing pedestrian connections to westbound line [Omnitrans 61] with a bus stop located on the northwest corner of Holt Boulevard and Vine Avenue (see Figure 5-1: Access to Mass Transit).

Figure 5-1: Access to Mass Transit



5.5. Public Right-of-Way Improvements

i. The public right-of-way shall be improved with each proposed development. The public right-of-way improvements required are to include, but are not limited to the following: street pavement, curb & gutter, parkway landscaping, parkway irrigation, public sidewalk, traffic signing, striping and fiber optic infrastructure. The extent of the required improvements shall be determined for each development plan. At a minimum the improvements shall incorporate all items along the street frontages of the properties to be developed with proper transitioning if the entire block frontage is not being installed with a particular development. Improvements along the street frontage for the entire block may be required at the time of development plan review.

5.6. Infrastructure

Water service will be provided from the existing water infrastructure in Fern Avenue, and sewer connections will be made to the existing sewer infrastructure in the alley. A dry well, as storm water detention, will be constructed on site for on-site storm water drainage and storm water runoff. The drywell shall be maintained by the property owner. In addition, there is a master-planned storm drain fronting the property based on the City's Master Plan of drainage.

5.7. Parking Requirements

i. On-Site Parking Requirements

The number of parking spaces provided is based on the number of bedrooms contained within each of the dwelling units proposed, and is subject to the following requirements.

a. All required resident parking spaces shall be provided on-site, except fractional spaces may be provided off-site;

b. Resident parking shall be provided in 2 car enclosed garages.

c. Each dwelling unit is intended for occupancy by one family only, regardless of bedroom size (s) provided in a particular unit. Parking for dwellings shall be provided on-site, pursuant to the requirements of Table 5-1: Minimum Parking Requirements below, except that guest parking may be provided on-street, pursuant to Section 5.7.ii (On-Street Parking) of this Planned Unit Development (PUD).

Table 5-1: Minimum Parking Requirements

Use	Parking Spaces Required
Multiple-Family Dwellings:	
• One-Bedroom Unit	1.75 parking spaces per unit (at least one space shall be in a garage or carport)
• Two or more Bedroom Unit	2.0 parking spaces per unit (at least one space shall be in a garage or carport)
Guest Parking	1 Space per 5 dwellings

ii. On-street Parking Requirements

On-street parking may be utilized to satisfy guest parking requirements, subject to the following conditions:

a. On-street parking may be used to satisfy guest parking requirements only, and shall not be used for required resident parking.

b. On-street parking shall only be counted along the public streets surrounding the project site, on the side of the street adjoining the project, excluding the alley to the north of the site (West Vesta Street).

c. On-street parallel parking spaces shall be calculated by the length of unobstructed curb adjacent to the project site.

iii. Parking Standards

All parking space size and location requirements shall conform to the standards set forth in Section 6.03.045 (Off-Street Parking Standards) of the Ontario Development Code.

[THIS PAGE INTENTIONALLY LEFT BLANK]

6. DESIGN GUIDELINES

6.1. Building Orientation and Streetscapes

Building orientation shall be designed to minimize noise impacts, aide in providing site safety, create proper accessibility to unit entries and parking garage areas. Maximize views from each of the residential units. Design should be done in a way to maximize each unit's ability to provide private and open space while prioritizing privacy for all tenants.

6.2. Architectural Character

The PUD Architectural style and design is a modern interpretation of the "Mediterranean" style. The design will provide gabled roofs, with clay tile eaves. lower roof pitch (3:12), rough sawn beams, and a roof well for mechanical equipment. The unit with street frontage will have a covered porch. The garage doors will have beam accents in the overhang above.

6.3. Architectural Details

The new building designed for this PUD, shall be consistent in design and detail with style throughout the project. Architectural details should complement and enhance openings and accentuate overall design of the buildings. Detailing can be achieved through the use of multi planes and recessed materials to create interesting exterior elevations.

6.4. Materials and Color

Materials and color scheme shall be compatible with, and complementary to the overall style of the development project. New Multiplex on the site will utilize light colors, pop outs and recesses to break up the building planes. Dark colored doors, trim, window casings, and sills will define openings and entries with black wrought iron accents at doors, eaves, gates and balconies. All colors shall be complementary to the architectural style and utilize primarily earth tones. Materials specified will be a combination of smooth troweled stucco plaster and rough sawn exposed wood beams. A Mediterranean architectural style clay tile roof shall be used for the roof covering.

6.5. On-Site Lighting

i. Decorative light fixtures attached to the buildings shall be compatible with the architectural style of the buildings, shall be provided for this development.

ii. All other on-site lighting shall meet development standard of the Ontario Development Code.

6.6. Signage

Signs within the project area shall comply with the Division 8.01 (Sign Regulations) of the Ontario Development code.

6.7. Off Site Improvements

All off-site improvements shall be installed in accordance with the City standards, and to the satisfaction of the City Engineering department.

[THIS PAGE INTENTIONALLY LEFT BLANK]

7. ADMINISTRATION

7.1. Items Not Addressed in PUD

Any terms, requirements, or regulations not addressed within this PLANNED UNIT DEVELOPMENT document shall be governed by the City of Ontario Development Code, the regulations of the General Mixed Use zones and City Standards.

7.2. Development Applications

Development Plan approval, pursuant to the requirements of Ontario Development Code Section 4.02.025 (Development Plans), shall be required for the physical alteration of a lot, the construction of a building, or the addition or significant alteration of an existing building. A Development Plan application shall be submitted to the Planning Department on a City application form pursuant to the requirements of Ontario Development Code Division 2.02 (Application Filing and Processing), commencing with Subsection B (Discretionary Permits and Actions) of Section 2.02.015 (Application Processing Procedures).

7.3. Administrative Exceptions

Deviation from the development standards set forth in this document may be granted up to a maximum of 10 percent by the Zoning Administrator. Any deviation that is greater than 10 percent shall require variance approval.

[THIS PAGE INTENTIONALLY LEFT BLANK]

CITY OF ONTARIO *Agenda Report* **March 21, 2023**	**SECTION:** **PUBLIC HEARINGS**
Department: Planning Prepared By: Edmelynne V Hutter Staff Member Presenting: Scott Murphy, Executive Director Community Development Approved By:	Submitted To: Council/OHA Approved: _____ Continued To: _____ Denied: _____ Item No: 18

SUBJECT: **A PUBLIC HEARING TO CONSIDER AN APPEAL OF THE PLANNING COMMISSION'S DECISION TO APPROVE THE USE OF AN ADDENDUM TO THE ONTARIO PLAN 2050 SUPPLEMENTAL ENVIRONMENTAL IMPACT REPORT (STATE CLEARINGHOUSE NO. 2021070364) AND A DEVELOPMENT PLAN (FILE NO. PDEV21-047) TO CONSTRUCT NINE INDUSTRIAL BUILDINGS TOTALING 4,263,454 SQUARE FEET ON 216.36 GROSS ACRES (196.83 NET ACRES) OF LAND LOCATED EAST OF HAVEN AVENUE, WEST OF DOUBLEDAY AND DUPONT AVENUES, NORTH OF JURUPA STREET AND SOUTH OF AIRPORT DRIVE**

RECOMMENDATION: That the City Council consider and adopt a Resolution upholding the Planning Commission's approval of the use of an Addendum to The Ontario Plan 2050 Supplemental Environmental Impact Report (State Clearinghouse No. 2021070364) and Development Plan (File No. PDEV21-047) and deny the appeal.

THE FOLLOWING COUNCIL GOALS ARE BEING ACHIEVED:
Invest in the Growth and Evolution of the City's Economy
Operate in a Businesslike Manner
Invest in the City's Infrastructure (Water, Streets, Sewers, Parks, Storm Drains and Public Facilities)

FISCAL IMPACT: The proposed Development Plan will facilitate the development of nine industrial buildings totaling 4,263,454 square feet. This will result in a one-time payment to the City for permitting and plan check fees, development impact fees, as well as increase in on-going property tax revenue for the City.

BACKGROUND & ANALYSIS: On December 15, 2021, the Applicant, McDonald Property Group, submitted a Development Plan (PDEV21-047) application requesting approval to develop 216.36 gross acres (196.83 net acres) of land with nine industrial buildings totaling 4,263,454 square feet. The project is located east of Haven Avenue, west of Doubleday and Dupont Avenues, north of Jurupa Street and south of Airport Drive, within the Light Industrial land use district of the California Commerce Center Specific Plan, hereinafter referred to as "Project" or "Application". The full project description is provided in the January 24, 2023, Planning Commission Agenda Report for the Project

(See Attachment B).

On January 4, 2023, the Development Advisory Board conducted a hearing to consider the Application and recommended that the Planning Commission approve the Project subject to conditions. On January 24, 2023, the Planning Commission conducted a public hearing to consider the Application and the Development Advisory Board's recommendation. Following a presentation of Staff's findings and after receipt of all public correspondence and testimony, the Planning Commission considered the Project and unanimously voted (4-0) to adopt Resolution Nos. PC23-007 and PC23-008, approving the use of an Addendum to The Ontario Plan 2050 Supplemental Environmental Impact Report (State Clearing House No. 2021070364) and the Development Plan, respectively.

APPEAL: On February 3, 2023, an appeal, hereinafter referred to as "Appeal", was submitted by the following organizations: Pomona Valley Audubon Society – Suzanne Thompson; Center for Biological Diversity – Hallie Kutak; Endangered Habitat League – Dan Silver; and Los Angeles Audubon Society – Travis Longcore, hereinafter referred to as "Appellant". The Appellant is appealing the Planning Commission's decision to approve the use of an Addendum to The Ontario Plan 2050 Supplemental Environmental Impact Report and approval of File No. PDEV21-047. A copy of the Appeal application and Appellant statement is included as Exhibit 1 of this report. The Appellant includes three points as the basis of the Appeal, which are summarized below:

Appeal Basis #1: The Appeal states that there was an abuse of discretion in that the individuals from the public were allotted three minutes to speak, and the Project applicant requested additional time, and was allowed additional time and that other individuals from the public were also allotted three minutes to speak but were not offered more time.

Appeal Basis #2: The Appeal states that the decision was not supported by the record in that there were misstatements of fact regarding Burrowing Owls present on the Project site and provides the following counter arguments: [a] Burrowing Owls do not live in storm drains; [b] the Project site is appropriate habitat for the owls; [c] other conditions such as events, police motorcycle training, semi-truck driver training, car shows, photo shoots, and spraying along Carnegie Avenue are the cause of the owls' decline; [d] owls are not a risk to airplane bird strikes, and that the Ontario International Airport should have a large raptor control program; [e] owls can be translocated as close as 10.5 miles away, which can help genetic diversity among owls in the area; and [f] pending litigation with OIAA needs to be settled before the City can approve the Project.

Appeal Basis #3: The Appeal states that there is inadequate accounting for greenhouse gas emissions and pollution and that The Ontario Plan 2050 Certified Environmental Impact Report does not adequately account for cumulative impacts of warehouse infrastructure, biodiversity loss, and loss of bio-productive land, and impacts the Project would have as a warehouse development.

Requested Relief: The Appellant is requesting relief as follows: [1] revoke the approval of PDEV21-047; [2] produce and circulate an EIR specific to this project; [3] and to ensure that the City Council is the final body to approve the Project.

RESPONSE TO THE APPEAL: The City and Applicant have reviewed the Appeal and responses are provided in the discussion below and in the Exhibits to this report.

Response to Appeal Basis #1: Appellant alleges that applicant Bruce McDonald was given additional time to speak after his time expired, while other speakers were given only three minutes, and, as such, the Planning Commission did not provide the public with a fair and reasonable opportunity to be heard. Appellant's allegations are legally incorrect and do not amount to an abuse of discretion. The Appellant states that the applicant "Bruce McDonald, was given a three-minute time frame for his remarks. He ran out of time, asked the chair for more time, and was granted additional time approximately double to what he had been allotted." A review of a video of the January 24, 2023, Planning Commission meeting (available online at ontarioca.gov under: Agendas, Planning Commission, January 4, 2023) confirms that, after receiving a presentation by staff on Public Hearing Item D, PDEV21-047, the Chair of the Planning Commission called on the Applicant, Mr. McDonald, to make the Applicant's presentation (applicant presentations always proceed public comments in support or in opposition to the project under consideration at a public hearing held by the PC). He made his timed presentation and then asked the Chairperson for additional time to speak, however, the video confirms that he ultimately spoke only for five (5) minutes. Five (5) minutes is the amount of time the Planning Commission's Rules and Procedures D.6(f) grants an applicant to speak at a public hearing and was granted additional time. Even if Appellant believes Mr. MacDonald should only have spoken for 3 minutes, a 5-minute presentation is consistent with the Planning Commission's Rules and Procedures, and, further, Per Chaffee v San Francisco Public Library Comm'n (2005) 134 Cal.App.4th 109, 115, the Chair of the Planning Commission may exercise reasonable discretion in departing from the normal time limits allocated to speakers. In addition, separate from his presentation, Mr. McDonald answered multiple questions posed by multiple members of the Commission. Mr. McDonald, as the applicant, also presented a timed rebuttal presentation at the end of the public hearing and then, separate from his rebuttal, answered multiple questions posed by multiple members of the Commission. Per Ribakoff v. City of Long Beach (2018) 27 Cal.App.5th 150, 172, the Planning Commission may impose time limits on each member of general public but is not required to impose time limits on comments by Commission members and invited speakers. As such, the Planning Commission was not required to limit the amount of time given to the Commission members in asking their questions of Mr. McDonald.

Appellant also alleges that the public expected to have five minutes each for comments "based on the meeting agenda and the Ontario Planning Commission Rules and Procedures" and that limiting the public's comments to three minutes while allowing Mr. McDonald additional time violated the Brown Act. Appellant is incorrect. The January 24, 2023, Agenda states, with regard to Public Hearings: "Members of the public will then be allowed five (5) minutes each to speak, unless there are a number of person's wishing to speak and then the Chairperson will allow only three (3) minutes, to accommodate for more persons." Per Chaffee v San Francisco Public Library Comm'n (2005) 134 Cal.App.4th 109, 115, the Chair of the Planning Commission may exercise reasonable discretion in departing from the normal time limits allocated to public speakers. Here the Agenda contained multiple substantive items and the meeting was over four hours long, making the Chair's decision to restrict speaking time, an action which the public was apprised by Agenda could happen, entirely reasonable.

Response to Appeal Basis #2: The Appeal states that the decision was not supported by the record in that there were misstatements of fact regarding Burrowing Owls present on the Project site. The Appeal provides counter arguments including: a) Burrowing Owls do not live in storm drains; b) the Project site is appropriate habitat for the owls however; c) other conditions such as events, police motorcycle training, semi-truck driver training, car shows, photo shoots, and spraying along Carnegie Avenue are the cause of the owls' decline; d) owls are not a risk to airplane bird strikes, and that the Ontario International Airport should have a large raptor control program; e) owls can be translocated at close as 10.5 miles away, which can help genetic diversity among owls in the area; and f) there is a pending lawsuit that could affect the Project and could put the City of Ontario at legal risk if the Project is approved. The following discussion addresses each sub-item above.

Response to Appeal Basis #2a, 2b, 2e: ELMT Consulting, the Applicant's biologist consultant, prepared a response to the Appellant's assertion that Burrowing Owls do not live in storm drains, that the Project site is appropriate habitat for Burrowing Owls, and that owls can be translocated closer to the Project site. The response from ELMT refutes the assertions and includes photographs showing evidence of owls in and around the storm drain inlet pipe including owl pellets, whitewash and use of a perch installed next to the inlet pipe. In addition, ELMT states that the Project site, as a habitat, would not be able to support owls in perpetuity because the Project site is surrounded by development and is essentially an island of undeveloped land. Other translocation efforts in the region, where the designated habitat is surrounded by development, were ultimately unsuccessful because the owls did not have the ability to safely disperse away from and into these areas, and that the same situation will likely present itself in this Project site.

The supporting studies conclude that the most appropriate solution to this safety issue is to relocate the owl from the project site to a safer site in some other location. The Burrowing Owl Relocation Plan ("Relocation Plan") prepared for the HUB OIA Project outlines a way to successfully achieve such relocation. The Appellant also provides erroneous information on the current and historic state of owls in the City, and more importantly, on the project site. The analysis included in the Addendum and TOP EIR adequately addresses the project's potential impact on owls. As explained therein, the applicant will comply with the City's existing regulations and TOP policies through implementation of a Relocation Plan, which is based on the most recent site-specific technical studies. Compliance with these requirements will ensure potential impacts to owls are less than significant. The Appellant's claims to the contrary are thus hyperbolic and inaccurate.

Response to Appeal Basis #2c: Regarding the Appellant's claim about events and activities taking place at the Project site, the City has not approved Temporary Use Permits for temporary events at the Project site. In regard to the Appellant's statement that pesticide was being sprayed on burrow openings, in 2020 the City was made aware of the observed activity and investigated. It was determined that the activity observed was a City contractor conducting weed abatement activities and was spraying adjacent to the street curb within the public right-of-way and the contractor was instructed to avoid spraying along those streets.

Response to Appeal Basis #2d: The Appeal stated that Burrowing Owls are not a danger to aircraft. However, the Federal Aviation Administration National Wildlife Strike Database documents 17 strike incidents that involve Burrowing Owls. The Wildlife Strike Database includes information and incidents of bird strikes reported by pilots, and/or discovery of remains or partial remains during

aircraft inspections and runway inspections. Burrowing Owl bird strikes do occur at Ontario International Airport and risks to aircraft and risks to the owls exist. The Federal Aviation Administration issued Advisory Circular No. 150-5200-33C, which states in Section 2.8.4 that "Other Hazardous Wildlife Attractants. Other land uses (e.g., conservation easements, parks, wildlife management areas) or activities not addressed in this AC may have the potential to attract hazardous wildlife. Regardless of the source of the attraction, when hazardous wildlife is noted on a public-use airport, each certificate holder must take prompt remedial action(s) to protect aviation safety and all non-certified airports should take prompt remedial action(s) to protect aviation safety."

On behalf of the Applicant, Mead & Hunt, Inc. prepared a response, dated February 21, 2023, addressing the Appellant's claim that the wildlife hazard information included in the January 4, 2023, Planning Commission Agenda Report made misstatements about Burrowing Owls and the hazards they pose for aircraft. The Mead & Hunt response provides and reiterates that Federal Aviation Administration data shows that 410 incidents nationwide involve Burrow Owl strikes, with 17 occurring at Ontario International Airport. The response goes on to explain that, as required, the Ontario International Airport Authority has prepared and maintains an FAA-approved Wildlife Hazard Management Plan to address raptors and other species identified as posing a hazard to aircraft. The Wildlife Hazard Management Plan includes responsibilities, policies and procedures to identify and abate wildlife hazards within the airfield and wildlife attractants in the surrounding area. In other words, the Ontario International Airport Authority, in compliance with the Federal Aviation Administration requirements, has a Wildlife Hazard Management Plan in place that includes raptor control.

Response to Appeal Basis #2f: The City is not involved in any litigation over the property and/or the Project. Rather, Inland Valley Advocates filed a legal challenge against OIAA and CanAm Ontario, LLC (an affiliate of McDonald). The City was not named in the lawsuit.

Response to Appeal Basis #3: The Appeal objects to the analysis of greenhouse gas emissions and pollution in the TOP 2050 EIR and to the "lack of attention to the Project's cumulative impacts as they relate to noise pollution, air quality, and truck trips." The City Council certified TOP EIR (SCH # 2021070364) which analyzed the direct and physical changes in the environment that would be caused by implementation of TOP; focusing on changes to land use associated with the buildout of the proposed land use plan, and impacts resultant of population and employment growth in the City. The project proposes land uses consistent with TOP 2050. The significant unavoidable adverse impacts that were identified in TOP EIR included: agriculture resources, air quality, cultural resources, greenhouse gas (GHG) emissions, noise and transportation/traffic.

To the extent that Appellants restate their objections to the TOP 2050 EIR, such objections are not appropriately before the City Council in this Appeal as the TOP 2050 EIR has been certified, the TOP 2050 approved, and those actions are now final and beyond challenge. Accordingly, the only question that may be considered by the City when evaluating the Project is whether one of the three exceptions triggering the need for a subsequent or supplemental EIR in CEQA Guidelines 15164 and 15162 exists.

Based on the conclusions of the previously certified TOP EIR, the analysis in the Project Addendum, CEQA and the CEQA Guidelines, including Sections 15164 and 15162, the Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in TOP EIR. No changes or additions to TOP EIR analyses are necessary, nor is there a need for additional mitigation with implementation of the number of conditions of approval required by the City based on the results of the site-specific technical studies for burrowing owl and airport safety.

The Appeal provides no substantial evidence that the Project's impacts (whether project-level or cumulative) as to any environmental topic analyzed in the Addendum will result in any new, increased or substantially different impacts, other than those previously considered and addressed in TOP EIR, nor any substantial evidence that any changes or additions to TOP EIR analyses are necessary, nor a need for additional mitigation.

The Project will be subject to all applicable mitigation measures adopted by the City with regard to the TOP 2050 EIR, including a number of conditions of approval required by the City per the TOP 2050 EIR and based on the results of the site-specific technical studies for burrowing owl and airport safety.

City of Ontario
Planning Department

Appeal Application Form

Instructions:

1. *Pursuant to Ontario Development Code Division 2.04 (Appeals), any person having legal standing may appeal and action or decision to the Appeal Authority, including but not limited to an applicant, resident, business owner, or any person owning real property within the City, that is aggrieved by an interpretation, action, or decision made by any City agency or department, or by an Approving Authority.*

2. *Within 10 days following the action or decision being appealed, an appeal request must be filed with the Planning Department on an Appeal Application Form, along with the required filing fees. The appeal request must include a statement identifying the specific action or decision that is being appealed, the specific grounds for the appeal, and the relief requested from the Appeal Authority.*

3. *An appeal of an action or decision made by an Approving Authority following a hearing, is limited to those matters raised during the hearing and contained in an appeal statement. The Appeal Authority cannot consider any matter that was not raised during the hearing before the Approving Authority and contained in the appeal statement.*

4. *The Appeal Authority that will hear the appeal request is limited to taking testimony and making its decision based solely on the specific grounds specified by the appellant in the Appeal Application Form, insofar as they make an adequate claim pursuant to Ontario Development Code Section 2.04.010. When the decision of an Approving Authority is appealed, you are limited to raising only those issues you or someone else raised during the hearing before the Approving Authority and stated in the Appeal Application Form.*

GENERAL INFORMATION (PRINT OR TYPE) See attachment for further appellants.

Appellant: Pomona Valley Audubon Society
Address: 2058 N. Mills PMB426
Claremont CA 91711
Phone: 909-767-9079 Email: pomonavalleyaudubon@gmail.com

Appellant's Representative: Chatten-Brown, Carstens, & Minteer
Address: 2200 CA-1
Hermosa Beach CA 90254
Phone: 310-798-2402 Email: dpc@cbcearthlaw.com

SUBJECT OF APPEAL

This application is hereby filed pursuant to Ontario Development Code Division 2.04 (Appeals), appealing a decision or action of the following Authority:

☐ Department/Agency Head ☐ Development Advisory Board ☐ Zoning Administrator
☐ Historic Preservation Subcommittee ☐ Historic Preservation Commission ☒ Planning Commission

Project File No(s).: PDEV21-047 Date of Action/Decision: 1/24/23
The application being appealed requests the following *(attach additional sheets as necessary)*: See attached

List the specific action(s) or decision(s) that is/are being appealed (attach additional sheets as necessary): See attachment

APPEAL STATEMENT

Please check the box that best describes your reason(s) for the appeal:

- ☐ Abuse of discretion.
- ☐ Decision was not supported by the record.
- ☒ Abuse of discretion and decision was not supported by the record.

State the specific grounds for the appeal and the relief requested (please be specific and attach additional sheets if necessary): See attachment

APPEAL APPLICATION CERTIFICATION

I, the undersigned, hereby certify that the statements and information provided in this **Appeal Application Form,** and in any attached exhibits, present the data and information required for this application to the best of my ability, and that the facts, statements and information presented are true and correct to the best of my knowledge and belief.

Date: 2/3/23 Signature: Suzanne Thompson

Name (print or type): Suzanne Thompson

Appellants: Pomona Valley Audubon Society, Center for Biological Diversity, Endangered Habitat League, Los Angeles Audubon Society

Appellant's Representative: Chatten-Brown, Carstens, and Minteer

SUBJECT OF APPEAL

Planning Commission

Project File No.: PDEV21-047 Date of Decision: January 24, 2023

The application being appealed requests the following: That the approval of PDEV21-04 be revoked and that an EIR be produced that is specific to this project and that explores project alternatives. We believe the City of Ontario is at legal risk for not having a project-specific EIR. We further request that the City Council be asked to vote and make the final decision on this project.

The specific actions or decisions that are being appealed are the Planning Commission approval of the project, the lack of an EIR for this particular project, and that the Planning Commission is the final body for approval.

APPEAL STATEMENT

Reasons for the appeal: Abuse of discretion and the decision was not supported by the record.

The specific grounds for the appeal include:

ABUSE OF DISCRETION

There is no specific case law that supports a finding in either direction regarding the length of time a project applicant may speak compared to the community during a public hearing. The determination of how much time should be allotted to each speaker is generally within the discretion of the local government agency conducting the hearing. However, the agency must ensure that all speakers are given a fair and reasonable opportunity to be heard and that the hearing is conducted in a manner that is consistent with the principles of due process. This did not occur.

At the Planning Commission meeting, the applicant, Bruce MacDonald, was given a three-minute time frame for his remarks. He ran out of time, asked the chair for more time, and was granted additional time approximately double to what he had been allotted. In contrast, the individuals making public comments who had expected to have five minutes for comments based on the meeting agenda and the Ontario Planning Commission Rules and Procedures were cut off

in the middle of their comments after three minutes and not offered more time. Thus, the applicant was allowed to present all his comments, but the public in opposition was not. This is an abuse of discretion and a violation of the Brown Act. It resulted in the inability of citizens to counter the misstatements of fact put on the record by the applicant's consultants. These could not be addressed in written comments before the meeting because some of these misstatements of fact came up at the meeting. There was not time in the meeting to give an adequate correction to the misstatements which then influenced the decision of the commission. The amount of information given to the Commission as well as to the public was restricted.

THE DECISION WAS NOT SUPPORTED BY THE RECORD

The decision was not supported by the record because of the many misstatements of fact made by the applicant's consultants which were then repeated by some of the Commissioners.

Misstatements of fact presented at the meeting include:

The owls were living in storm drains. Burrowing owls do not live in storm drains. The owls sometimes perch within metal water drainage structures so that they can be protected from raptors and see the field. They do not create burrows in storm drains or live there.

The area is not suited for burrowing owls. Most likely, the owls have lived successfully in this field for hundreds of years—including in all the years the airport has been in existence. Dr. Daniel Guthrie, a biologist and Burrowing Owl expert, surveyed these fields in 2017 and found eleven, thriving, active burrows. For years, the fields have provided excellent habitat for the owls. See the Appendix for his survey report.

The conditions in the fields are suited for Burrowing Owls, but compromises to the population have occurred because the city allows events, police motorcycle training, semi-truck driver training, car shows, photo shoots in the fields, and spraying into the burrows along Carnegie. The burrowing owl population is declining not because the landscape is unsuitable, but because of the activities that the City of Ontario has approved or hired, despite the knowledge that this is habitat for a California species of special concern. For example, there is evidence that owls abandoned their nests or removed dead chicks after a pesticide company hired by the City of Ontario sprayed burrow openings with pesticides. If this land were managed for the owls' benefit, the owls would thrive there.

The owls are a risk to aviation. From FAA birdstrike data, Burrowing Owls are not a danger to avian from bird strikes. There is no evidence in that data record from 2008 to 2021 of a Burrowing Owl causing damage to an aircraft at Ontario Airport. https://wildlife.faa.gov/search

Burrowing Owls will not be an attractor for large raptors if an airport has a good large raptor control program. Large raptors exist near all airports globally and every airport should have a good raptor control strategy. Evidently the Ontario International Airport does not have adequate raptor control because they allow tall poles which are an attractant to hawks throughout the proposed project land. See the picture of large hawks on those poles along Carnegie Avenue in the Appendix. Even if conserved, it would be unlikely for burrowing owls to increase the raptor population by much because of its population size relative to other animals such as squirrels,

rabbits, rats, mice, and other rodents. Some of these are prey for the owls as well as the raptors, and in that sense burrowing owls can actually help decrease some rodents that attract raptors.

The FAA disallows conservation of burrowing owls. Airports across the country offer some of the best burrowing owl habitat, with successful conservation programs. The idea that the FAA does not allow this kind of conservation is patently false. Burrowing owls are able to thrive in airport and airport adjacent areas, making this habitat suitable for burrowing owls,

Biodiversity can be exported; the owls should be moved 30-40 miles away. The decision to support this project was made based on a misunderstanding of what it means to protect biodiversity. Exporting biodiversity – in this case represented by the BUOW – will not maintain genetic diversity or local populations within the Ontario area that are critical to the health and wellbeing of this increasingly rare species in this area. The documents associated with this decision fail to adequately analyze the "off-site in Ontario" option.

Furthermore, owls do not have to be translocated 30-40 miles away. They could be moved to a closer location, which would be a better result to maintain Ontario's biodiversity. The applicants' consultants mistakenly stated that Burrowing Owls need to be translocated 30-40 miles from their original site. According to research by the San Diego Zoo Wildlife Alliance researchers who are widely recognized as the experts on Burrowing Owls, translocation needs to be a minimum of about 10.5 miles for best success (Personal communication from SDZoo Burrowing Owl expert to Suzanne Thompson). See Appendix.

Thus the owls could be translocated within or very near to Ontario. Failure to fully explore a closer option for translocation is an omission that compromises biodiversity within the City of Ontario.

The pending lawsuit is not a risk to this decision or to the City of Ontario. If the airport devised a plan that is being challenged by the lawsuit with the airport on this same project, this needs to be settled before the city of Ontario can approve the plan. Otherwise, the city is approving a plan that may change, get thrown out, or otherwise place the city at legal risk. The City Attorney at the Planning Commission meeting shifted his answer to the question asked by a commissioner, and skewed the answer to one that did not address the complexity of legal risk to the City of Ontario:

2:15:45 – Commissioner D'Andre Lampkin's question: "In regards to the statement made by attorney Helen Macky, I just want to see if we can get clarification or assess the veracity of her statement with the city attorney regarding any liability for the city of Ontario."

2:16:12 – City attorney responds with a question: "Commissioner, are you trying to get clarification on whether or not the city is involved in the lawsuit?"

2:16:16 – Commissioner D'Andre Lampkin: "Correct."

2:16:18 – City attorney responds: "I can confirm that is not the case. We are not involved."

This is an inadequate response to the initial question asked by Commissioner Lampkin. We restate our opinion here that the City of Ontario may be at legal risk in moving this project

forward while a lawsuit is pending on this same project, even if the City is not involved in that lawsuit.

OTHER BASES FOR APPEAL

Public Resources Code. Appeal is pursuant to Public Resources Code section 21151 subdivision (C).

Warehouses and Cumulative Impact. We incorporate all our previous objections to the inadequate accounting for greenhouse gas emissions and pollution.

Lack of attention to noise pollution, air quality, and truck trips are a continual problem for this project. Neither the addendum nor the TOP 2050 address emissions in an appropriately cumulative manner. We challenge the City of Ontario to think about planning in a different way due to the growing severity of climate crisis:

According to Gernot Stoeglehner (2020), "Environmental problems like climate change, loss of bioproductive land or biodiversity are very likely to become the main drivers for environmental protection, as they will be crucial for human survivability in the 21st century. They are extremely difficult to address in planning and assessment processes, as (1) they are caused by the normal functioning of society and economy, (2) are highly complex and often global, (3) have unclear cause-effect relations with a multitude of origins so that responsibilities remain unclear, but also the effects of mitigation or compensation measures, (4) have long distances or timeframes between cause and effect. (5) Classical means of environmental protection fail, as single measures do not show overall positive effects and the behavioral change of single actors does not solve the problem on a larger, or even global scale (Jänicke and Jörgens 2004)."

"Each project as such may not significantly contribute to the environmental problem, e.g. climate change, but the multitude of (small) projects and planning actions has considerable effects. That means for instance, that assessment methods developed for the project scale are not sufficient, as they are designed to answer assessment questions related to a single case."

We find that the general planning document—TOP 2050—and the specific project does not adequately account for cumulative impacts of warehouse infrastructure, biodiversity loss, and loss of bio-productive land.

The TOP 2050 (Ontario's General Plan with the referenced EIR) is proposed to be the certified EIR for this project. However, this certified EIR does not account for an Initial Study, environmental impact analysis of project specific elements, or public cited weaknesses and associated critiques in the form of previous opposition letters and speaker oral communications. You must take into account these issues or create and circulate an independent EIR for this project. The arguments at the Planning Commission meeting and in response to comments detailing that this is an inappropriate attack are false. By your own process and decisionmaking, TOP 2050's EIR and the EIR for this project are the same. We elaborate further below. Case law supports these claims as noted in our previous objection letter.

Furthermore, the Planning Commission staff proposes that the TOP 2050 SEIR with an addendum is the certified EIR for this project. However, the TOP 2050 SEIR only mentions "warehouse" in a single generalized statement, lacks specific details and, as such, a full EIR needs to be conducted for this specific project (PDEV21-047), to address the weaknesses and associated critiques in the form of previous opposition letters and public comments.

Problems with using an Addendum instead of EIR. There were several statements at the meeting that our critiques are an inappropriate attack on the TOP 2050. We have argued above that the deficiencies within the EIR for the TOP 2050 are relevant in terms of deficiencies that cover this project also. As we have stated, an EIR is mandatory in this case. If there had been an EIR instead of an addendum, some of the omissions and misstatements we address in the documents could have been addressed earlier.

The construction of this project is a topic of controversy as defined by CEQA. CEQA mandates that within projects containing a topic of controvery, an EIR must be circulated when an otherwise might not be. In this case, there are two topics of controversy— warehouse development and the relocation of the burrowing owls. Both now how have longstanding histories of debate within the city of Ontario.

REQUESTED RELIEF

The requested relief is to revoke the approval of PDEV21-047, to produce and circulate an EIR specific to this project, and to ensure that the City Council of Ontario is the final body to approve this project rather than the Planning Commission.

To: Suzanne C. Thompson

Tue 12/13/2022 11:42 AM

Hi Suzanne,
Based on our study, we found higher settlement for owls translocated more than 17.5 km (~11 miles). Translocation distance was a secondary driver of settlement, with the presence of cues (either conspecifics or playback/artificial whitewash) being the primary driver. The details can be found in the following sources, but let me know if you have any further questions.

Animal Conservation publication (Animal Conservation - 2022 - Hennessy - Release strategies and ecological factors influence mitigation translocation.pdf) – settlement and dispersal section of results on pages 618-619
https://sandiegozoo.box.com/s/r377vfrf9qsre0llry5oku7sseb6evg6

"When cues were present, settlement was 100% (n = 6) for translocation distances >17.5 km compared to80% settlement (n = 5) for translocation distances <17.5 km."

CEC final report – dispersal distance/settlement results on page 23
https://sandiegozoo.box.com/s/ljs5ugxc4s664zk06rpj1honl9i7zr63

"For settlement within the active translocation group, both cues and translocation distance were significant predictors (n=20, p<0.01, R2=0.57). Classification and regression tree analysis shows that the presence of cues was the primary effect (cues present were associated with increased settlement within 650 meters). There is also a secondary effect of translocation distance in addition to the presence of cues, in that BUOW that were translocated a distance greater than 17.5 km were more likely to settle."

Re: March 21, 2023 City Council Hearing
The HUB at Ontario International Airport
Appeal of File No. PDEV21-047

Dear Mayor Leon, Mayor Pro Tem Porada and Council Members Wapner, Bowman and Valencia:

This letter is submitted on behalf of McDonald Property Group (McDonald), the applicant of the HUB at Ontario International Airport (Project). As you are aware, the City of Ontario (City) Planning Commission unanimously approved the Project on January 24, 2023, and an appeal of that decision was submitted on February 3, 2023 (Appeal).

The Appeal raises a number of arguments in opposition to the Project. The abuse of discretion claims are best addressed by City staff so those are not addressed in this correspondence. Instead, this letter focuses on the substantive issues raised by the appellants, all of which were properly rejected by the Planning Commission. We urge you to do the same for the reasons outlined below.

The Appeal claims that a number of misstatements were made at Planning Commission regarding the burrowing owls that currently inhabit the Project site. Those arguments, which address the occupancy of a site adjacent to the Ontario International Airport and McDonald's proposed relocation plans, were soundly rejected by the Planning Commission. That decision was based on a lengthy discussion at the January 24, 2023 hearing, as well as the following correspondence:

- January 18, 2023 letter from Allen Matkins regarding the Coalition for Biological Diversity comment letter, a copy of which is attached hereto as Exhibit A;

- January 18, 2023 letter from Allen Matkins regarding the coalition comment letter, a copy of which is attached hereto as Exhibit B;

- January 18, 2023 memo from MIG Riverside, a copy of which is attached hereto as Exhibit C;

- January 18, 2023 letter from Ontario International Airport Authority (OIAA), a copy of which is attached hereto as Exhibit D;

- January 18, 2023 comments from ELMT Consulting, a copy of which is attached hereto as Exhibit E; and

- January 18, 2023 letter from Mead & Hunt , a copy of which is attached hereto as Exhibit F.

Further support for the Planning Commission's decision can be found in the attached comments provided by ELMT Consulting (Exhibit G), Mead & Hunt (Exhibit H) and Urban Crossroads (Exhibit I), which were prepared in response to the claims made in the Appeal.

As *repeatedly* explained in the above documents, the Project site cannot continue to support burrowing owls; the owls must be removed to a distant location; airport operations have been and will be negatively impacted by the owls' ongoing presence; the Project's potential environmental impacts were properly analyzed in an Addendum to The Ontario Plan (TOP) 2050 Environmental Impact Report (EIR); the statute of limitations for challenges to TOP EIR has long passed; and, most importantly, the Project will *not* result in new or more severe significant and unmitigated impacts than those disclosed in TOP EIR. Appellants consistently ignore these facts and simply restate the same invalid arguments. The record undoubtedly supports the Planning Commission's unanimous decision.

Finally, the day of the Planning Commission hearing, a coalition of opponents argued – for the very first time – that "the City of Ontario is in the midst of a lawsuit regarding the same property and project" and therefore, "proceeding with the project before the lawsuit is resolved could put the Commission and/or the City of Ontario at risk of legal action." Appellants are absolutely mistaken – the City is not a party to any such litigation and the obliquely referenced lawsuit does not have an effect on this entitlement process.

First, the City is not involved in any litigation over the property and/or the Project. Rather, Inland Valley Advocates filed a legal challenge against OIAA and CanAm Ontario, LLC (an affiliate of McDonald). As can be seen in the Verified First Amended Complaint, a copy of which is attached hereto as Exhibit J, the City was *not* named in the lawsuit.

Second, the litigation alleged a violation of the California Environmental Quality Act (CEQA) when the OIAA adopted a resolution, a copy of which is attached hereto as Exhibit K, that authorized a Development and Entitlement Agreement (Agreement) on December 23, 2021. The Agreement allowed CanAm the authority to submit an application to the City seeking entitlements for a proposed warehouse development on the Project site. Only *after* (1) the City's approval process was complete, (2) all necessary CEQA review was conducted by the City, and (3) all other agency approvals were received, would the OIAA consider executing a ground lease for the Project site. This litigation does *not* have any effect on the City's pending process; in fact, the exact opposite is true – the OIAA cannot and will not move forward with a ground lease unless or until the City and other interested agencies approve the Project. As such, appellants' claims are erroneous and should be rejected out of hand.

In sum, we request that you disregard appellants' inaccurate and inapplicable claims, deny the Appeal and uphold the Planning Commission's decision. McDonald and its consultant teams will be present at the appeal hearing should additional questions arise. We thank you in advance for your consideration and look forward to being development of the site in the near future.

Very truly yours,

Heather S. Riley

Re: January 24, 2023 Planning Commission Hearing
The HUB at Ontario International Airport
Environmental Assessment and Development Plan Review
(File No. PDEV21-047)

Honorable Chairperson Willoughby and Members of the Planning Commission:

This letter is submitted on behalf of McDonald Property Group (McDonald), the applicant of the HUB at Ontario International Airport (Project), in response to the January 3, 2023 letter of the Center for Biological Diversity (CBD Letter). The CBD Letter was submitted to the City of Ontario (City) the morning of the Development Advisory Board (DAB) hearing on the Project.

The CBD Letter displays a marked misunderstanding of planning and zoning law, as well as the California Environmental Quality Act (CEQA). The Ontario Plan 2050 (TOP), which constitutes the City's General Plan, considered full buildout of the City, including development of the exact proposed industrial uses on the Project site. The associated CEQA analysis addressed all potential impacts associated with buildout. There can be no question that the Project, which is proposed on an industrial designated site, was explicitly contemplated in TOP, and thus, the Project was adequately analyzed in the environmental impact report (EIR) certified for TOP.

Consistent with CEQA, the Addendum to the Ontario Plan Environmental Impact Report (Addendum) prepared for the Project determines – based on the information included within the text and its appendices – that the Project will *not* result in any new or more severe significant impacts than were previously analyzed in TOP EIR. Nothing more is required by CEQA, despite the CBD's Letter's erroneous claims to the contrary.

With regard to the Project's potential biological impacts, the Addendum includes a complete review. As explained therein, the Project will comply with the City's existing regulations and TOP policies through implementation of a Burrowing Owl Relocation Plan, which was prepared based on the most recent site-specific technical studies, copies of which are included in Appendix B to the Addendum. Compliance with these requirements will ensure potential impacts to owls are less than significant.

Moreover, the Addendum includes an extensive Project-specific air quality analysis, which was completely ignored by the commenter. As explained therein:

> A detailed air quality assessment (AQ Study) of the proposed project was conducted by Urban Crossroads in February 2022, to identify project-specific air pollutant impacts and recommend additional mitigation if necessary (i.e., other than those applicable measures already identified in TOP EIR). The AQ Study (Appendix A) determined the project would not result in a cumulatively considerable net increase of any criteria pollutant for which the region is in non-attainment under an applicable federal or state ambient air quality [threshold] because the project is consistent with the existing Industrial designation in the CCC SP. (Addendum, p. 34.)

Similarly, the Addendum includes a thorough analysis of the Project's potential impacts on nearby sensitive receptors, which was also overlooked by the CBD Letter. (*See*, Addendum, p. 39.) If CBD disagreed with TOP EIR's certified air quality analysis, it was required to raise those concerns at the time the plan was approved in August of 2022. Since the Project would not result in any new or more significant air quality impacts than those analyzed in TOP EIR, no further analysis and/or mitigation is required at this time.

In light of the above responses, coupled with the information submitted by biological, aviation and air quality experts, the CBD Letter should be rejected. We therefore respectfully request that the Planning Commission approve the Addendum and the Development Plan, File No. PDEV21-047. McDonald and its consultant team will be present should questions arise during the Planning Commission hearing. We thank you in advance for your consideration.

Very truly yours,

Heather S. Riley

Re: January 24, 2023 Planning Commission Hearing
The HUB at Ontario International Airport
Environmental Assessment and Development Plan Review
(File No. PDEV21-047)

Honorable Chairperson Willoughby and Members of the Planning Commission:

This letter is submitted on behalf of McDonald Property Group (McDonald), the applicant of the HUB at Ontario International Airport (Project), in response to the January 4, 2023 letter submitted by a coalition of entities, including among others, the Robert Redford Conservancy for Southern California Sustainability and the Pomona Valley Audubon Society (Coalition Letter). The Coalition Letter was submitted to the City of Ontario (City) the morning of the Development Advisory Board (DAB) hearing on the Project.

At the outset, it is important to note that comments regarding the adequacy of the environmental impact report (EIR) prepared for The Ontario Plan 2050 (TOP) are untimely and irrelevant. If the authors of the Coalition Letter disagreed with the City's overall planning decisions, those concerns needed to be raised prior to August 16, 2022, the date the City Council certified that analysis. Opponents cannot use this Project to collaterally attack TOP EIR – they are five months too late. Moreover, any letters that were submitted to the City as part of TOP process cannot be relied upon at this time – those unknown claims are immaterial to the current discussion.

The Coalition Letter raises a number of arguments about the adequacy of the Addendum to The Ontario Plan Environmental Impact Report (Addendum) prepared for the Project. The majority of the claims are conclusory in nature and a number are flat out wrong. For instance, the California Environmental Quality Act (CEQA) does not limit the type of document that can be prepared on the basis of so-called "topics of controversy." The Coalition Letter completely misstates CEQA on that point.

Similarly, the City is not relying on a CEQA exemption to approve the Project. Addendums, which are allowed under CEQA Guidelines section 15164, are totally unrelated to any statutory and/or categorical exemptions permitted under other provisions of CEQA and/or the CEQA Guidelines.

Likewise, the CEQA cases obliquely referenced in the Coalition Letter are inapplicable. Merely noting caselaw without including an actual citation is improper, particularly where, as here, the case names and/or years are wrong in every instance. Even if we grant the Coalition Letter authors the benefit of the doubt, none of the closest approximations of potentially referenced cases involve an addendum and therefore, none apply to the current situation.

The Coalition Letter also presents a disingenuous and absolutely wrong argument when it claims that "piggy backing" on the environmental review completed for a General Plan limits the ability of the City's elected officials to review individual land use decisions. There can be no question that the City Council fully understood that it was approving buildout of the City under TOP, it is indisputable that this Project is consistent with the goals and vision of that Citywide planning document and therefore, the potential environmental impacts of the Project were fully analyzed in TOP EIR. Consistent with the requirements of CEQA, the Addendum documents those facts and demonstrates that the Project will not result in any new or more severe impacts.

If an interested party disagrees with the Addendum's conclusions and/or this Planning Commission's ultimate decision on the Project, those individuals have the ability to file an administrative appeal. In that instance, the City Council will indeed have the opportunity to weigh in on this specific Project.

As for the public's involvement in the democratic process, numerous opportunities to weigh in on this Project have and will continue to occur, including the DAB hearing, this Planning Commission and, as noted, in the event of an appeal, City Council. In fact, robust public participation is already evidenced by the submission of numerous comment letters to the DAB.

Next, the Coalition Letter presents inaccurate information on the current status of regional warehouse development and onsite burrowing owls. As to the WAREHOUSE CITY tool mentioned in the Coalition Letter, the website includes a number of caveats and is "based on best

available information."[1] To that point, the mapping tool was *not* generated based on site specific data; instead general data was accumulated based on parcel size, use codes and land use categories to calculate a "best guess" situation that has an admitted "number of limitations."[2] The usefulness of the tool is therefore severely limited.

With regard to the burrowing owl, the Coalition Letter does not take into account the recent focused studies that were conducted for the Project site.[3] Nor does the letter consider the fact that the Project site is located immediately adjacent to the Ontario International Airport (OIA) and within Safety Zone 1 (Runway Protection Zone), Safety Zone 2 (Inner Approach/Departure Zone) and Safety Zone 3 (Inner Turning Zone). The studies, combined with the information contained in the attached June 13, 2022 letter from the Ontario International Airport Authority to the Pomona Valley Audubon Society (an author of the Coalition Letter), demonstrate that the owls must be relocated to another, safer site.

Furthermore, contrary to the claims made in the Coalition Letter, the analysis included in the Addendum and TOP EIR adequately address the Project's potential impact on owls. As explained therein, McDonald will comply with the City's existing regulations and TOP policies through implementation of a Burrowing Owl Relocation Program, which was developed based on site-specific technical studies. Compliance with these requirements will ensure potential impacts to burrowing owl are less than significant.

The Coalition Letter presents information claiming that ongoing OIA operations will result in increased greenhouse gas (GHG) emission impacts. Those claims are irrelevant to the current analysis, which considers the Project's potential impact on the environment. Even if the claims were appropriate, and they are not, the City previously considered cumulative GHG emissions impacts. Notably, TOP EIR concluded that full buildout, which includes this Project, would result in significant direct and cumulative GHG emission impacts. Thus a Statement of Overriding Considerations (SOC) was approved by the City Council when TOP EIR was certified.[4]

In fact, McDonald will implement a number of project design features to reduce GHG emissions as outlined in the City's GHG Reduction Measures Screening Threshold Table, attached to the Addendum as Appendix A-2. The Coalition Letter ignores this information, which is clearly stated in the Addendum, and decries the City's failure to consider cumulative impacts "at a broader scale." Full buildout of the City is the absolute broadest scale possible for the analysis of potential

---

1 https://www.pitzer.edu/redfordconservancy/mapping-data-visualization/

2 https://radicalresearch.shinyapps.io/WarehouseCITY/

3 Copies of these studies are included in Appendix B to the Addendum.

4 The Coalition Letter claims that the Project itself will result in significant and unmitigated impacts. *That is simply not true*. Buildout would cause significant and unmitigated Citywide impacts and therefore, the City Council adopted a SOC when TOP EIR was certified.

GHG impacts. Nothing more is required by CEQA, despite the Coalition Letter's erroneous claims to the contrary.

Similarly, general comments on industrial development as a whole are irrelevant to this current CEQA process. The authors of the Coalition Letter may disapprove of the City's planning efforts, but that disapproval is *not* a valid criticism of this Addendum. And, in any event, the Addendum includes an evaluation of all of the Project's potential environmental impacts, including noise, air quality and transportation. Vague and unsupported complaints about impacts allegedly associated with warehouse development must therefore be rejected.

Finally, complaints about the timing of the release of Project documents are misplaced. The City complied with all applicable state and local requirements, and even if the City erred – which it did not – there was no prejudice. The Coalition Letter and many others were submitted, considered and rejected by the DAB.

As can be seen, the Coalition Letter presents a host of misinformation. When viewed in the proper context, and in light of the information submitted by biological, aviation and other subject-matter experts, the Coalition Letter should be dismissed out of hand.

We therefore respectfully request that the Planning Commission approve the Addendum and the Development Plan, File No. PDEV21-047. McDonald and its consultant team will be present should questions arise during the Planning Commission hearing. We thank you in advance for your consideration.

Very truly yours,

Heather S. Riley

Claremont, CA 91711
sthompson@pomona.edu

Ms. Thompson,

Thank you for your proposal for a burrowing owl (BUOW) preserve at the Ontario International Airport ("ONT") on the "boot" property east of Haven Avenue.

In December 2021, Ontario International Airport Authority ("OIAA") Board deemed this land as surplus development airport land. The development of this land would allow the OIAA to obtain vital revenue sources to expand and grow ONT for the public benefit of the region, and to enhance the financial sustainability of ONT consistent with Federal Aviation Administration (FAA) policies and requirements.

Also in December 2021, the OIAA entered into a binding development entitlement agreement, which requires CanAm Ontario, LLC (Developer) to pursue and obtain all required zoning and California Environmental Quality Act (CEQA) reviews and approvals from the City of Ontario for a potential industrial development on the entire "boot" property. Subject to terms and conditions of the development agreement being satisfied and contingent on the results of the CEQA and zoning reviews for the land, the OIAA is contractually obligated to enter into a future 55-year commitment to ground lease securing the entire property for industrial development. Under proposed development plans, no part of this property is set aside for habitat preservation.

For decades the land has been zoned industrial under the California Commerce Center Specific Plan and has been covered by the California Environmental Quality Act (CEQA) approved Ontario Plan EIR. The Ontario Plan EIR fully analyzed biological impacts and requires habitat mitigation for the potential development of the land. CEQA permits active relocation of the owls to viable sites, subject to approval from United States Fish & Wildlife Services (USFW) and the California Department of Fish & Wildlife (CDFW). Per requirements, the Developer

is conducting seasonal focused owl protocol studies that will be completed in July 2022 and has identified existing nearby established conservation sites which will provide a superior life for these owls, subject to the City's concurrence under the pending CEQA review process. Occupancy of owls at or near the airport is not a viable location for any sustainable success of the owls. Such occupancy would be inconsistent with the FAA-approved Wildlife Hazard Management Plan for ONT, which is required by federal regulations. The owls are living in a flight path, pose a threat to aircraft operations, and are being threatened by urbanization, public harassment, and predators such as the red-tailed hawk.

The burrowing owl population at ONT continues to struggle, and since 2008 there have been sixteen (16) identified and reported bird strikes at ONT involving burrowing owls. Both the FAA and the OIAA have gone on record stating bird strikes present a continued danger to the public safety of commercial aircraft flights. The OIAA therefore does not support any enhancement of bird population on airport property.

This is first and foremost a safety issue, both for commercial flights and passengers, but also for the owls and red-tail hawks that prey upon them. Not only does the presence of birds near an airport pose a serious safety risk, but the owls are also becoming human-adapted due to their proximity to humans and development. We know this relocation would be better from a public safety perspective. In addition, the OIAA understands that expert burrowing owl biologists maintain that when relocated to a suitable conservation site, the owl population will have a higher probability of success.

As a result, and for the reasons we have outlined above, the OIAA is unable to execute this proposed concept and cannot support your proposal for a BUOW preserve within the ONT flight path and the California Commerce Center Specific Plan, and specifically within the proposed development site. We look forward to continuing a dialogue with the Pomona Audubon Society as it relates any approved BUOW relocation plans.

Sincerely,

Atif Elkadi

EXHIBIT C

memo riverside

to Rudy Zeledon, Planning Director

from Kent Norton, AICP, REPA, MIG Riverside

re The HUB at Ontario International Airport Project

date January 18, 2023

On January 3-4, 2023 a group of environmental organizations and 44 individuals submitted comment letters or emails on Environmental Assessment and Development Plan PDEV21-047 under consideration by the City's Development Advisory Board (DAB) on January 4. The development under consideration is referred to as the HUB at Ontario International Airport (HUB OIA Project) The following addresses the various comments and issues raised in those letters. The letters are also attached to this memo for reference. This information is provided to the Planning Commission for its deliberation on this project.

LETTER 1: JOINT ENVIRONMENTAL ORGANIZATIONS LETTER/SUSAN PHILLPS ET AL

Comment 1 (Pages 1-4). Their first major issue was the proposed use of an Addendum to The Ontario Plan (TOP) Environmental Impact Report (EIR) (Addendum) as the California Environmental Quality Act (CEQA) documentation for the proposed HUB OIA Project.

The commenter also refers to the City relying on a CEQA exemption. That is not the case here and such comments misstate the applicable law. An addendum, which is allowed under CEQA Guidelines section 15164, is totally unrelated to any statutory and/or categorical exemptions allowed under other provisions of CEQA and the CEQA Guidelines.

The commenter does not acknowledge that an addendum can be the appropriate CEQA compliance document for a project that is consistent with the General Plan and zoning when it can be demonstrated a project will not result in new or more significant impacts that those that were already examined in the EIR for which the addendum is prepared. The Addendum does just that.

In this case, the use of an addendum is appropriate as the HUB OIA Project is consistent with TOP land use designations and City zoning, therefore the potential impacts of the HUB OIA Project have been accounted for in TOP EIR.

In addition, general comments on industrial development in the City as a whole are irrelevant to this current CEQA process. Furthermore, the Addendum includes an evaluation of all of the project's potential environmental impacts, including noise, air quality and transportation. Vague and unsupported complaints about impacts allegedly associated with warehouse development in general are simply incorrect.

Comment 2 (Page 3). The commenter expresses concern that the project has "topics of controversy" and so a separate EIR should be prepared. The commenter states…."If a topic of controversy exists regarding a proposed project, this can counter the use of a CEQA Determination Motion." However, the commenter is citing CEQA incorrectly. CEQA Guidelines Section 15064(f)(4) states…"The existence of public controversy over the environmental effects of a project will not require preparation of an EIR if there is no substantial evidence before the agency that the project may have a significant effect on the environment." The key determinate is providing substantial evidence that there will be no significant impacts. In this case, the Addendum prepared for the HUB OIA Project provides substantial evidence, supported by information from TOP and TOP EIR, and a number of technical studies cited in the Addendum, to demonstrate the HUB OIA Project will not have new or more significant impacts on the environment that were not already evaluated in TOP EIR. This includes several studies on burrowing owl (owl) as well as air quality and health risk impacts of the project.

Comment 3 (Page 4). The commenter states…"There are significant impacts that can and should be mitigated but have not been properly considered. The City may not adopt a statement of overriding consideration to approve a project where feasible, less environmentally damaging alternatives exist and feasible mitigation measures have not been considered or adopted." The commenter also argues the City must "deny approval of a project with significant adverse effects when feasible alternatives or feasible mitigation measures can substantially lessen such effects." This comment fails to acknowledge the provision in CEQA for a lead agency to adopt a Statement of Overriding Considerations (SOC) if the benefits of a project or plan outweigh the identified significant impacts. In this case the City Council adopted an SOC for TOP EIR.

The comment fails to acknowledge the City Council already adopted a Statement of Overriding Considerations when it approved TOP, and the proposed HUB OIA Project is consistent with TOP land use designation for the site.

In addition, the comments on the adequacy of TOP EIR are untimely and irrelevant. If these groups disapproved of that document, they were required to raise those issues when the matter was before the City Council. Opponents cannot use this project to attack the certified TOP 2050 EIR now. Criticisms on the City's overall planning efforts are misplaced in the current context of a single project, one which has long been planned and allowed on this project site (i.e., CCCSP and TOP). Further, unnamed comment letters supposedly submitted regarding TOP 2050 EIR are immaterial, particularly when they are not provided to the City at this time.

Comment 4 (Page 5). The commenter argues that development of the HUB OIA Project will have irreparable impacts on the owl. The commenter argues that the project site is a critical part of the owl's habitat in the region and the Federal Aviation Administration (FAA) actually encourages wildlife like the owl to co-exist on airport properties.

However, the various technical studies[1] on the owl and airport safety clearly demonstrate that the project site (i.e., just east of OIA and under normal landing pattern operations) is absolutely not safe

[1] Addendum Appendix B, BUOW Reports (Helix-Kidd 2020), BUOW site surveys (Helix or Wood 2019-2022), BUOW Relocation Plan (ELMT 2022), and Appendix E, Airport Safety Report (Mead & Hunt 1-2022)

(i.e., harmful) for both airport aircraft and the owls. Owls may not fly high enough to directly cause aircraft accidents as cited by the commenter. However, the presence of owls in this location attracts larger birds of prey into the landing airspace of OIA which does represent a safety hazard both for aircraft damage and potential injury/loss of life for passengers/crew. Without removing the attractor prey species, it is unlikely a raptor management program would be successful over the long-term.

The U.S. Department of Agriculture (USDA) provides Wildlife Services (WS) through its Animal and Plant Health Inspection Service (APHIS) program for airports to help prevent and resolve wildlife conflicts that threaten public health and safety from concentrated populations of birds and other wildlife at or near airports contribute to wildlife strikes. The Airport Wildlife Hazards Program[2] supports an airport when preparing a Wildlife Hazards Management Plan (WMP) to document an airport's wildlife hazards and how the airport plans to address and manage them. It guides operations, defines roles of airport personnel, and details training to reduce risks. A WMP often involves a variety of methods to resolve wildlife conflicts including the following:

- o Habitat Modification — Altering vegetation and water, creating fences and barriers, and other activities to make the airport unattractive to wildlife.
- o Active Dispersal — Scaring and hazing wildlife away from airport environments.
- o Trapping and Relocation — Capturing and moving animals can be used for some species when legally allowed and feasible (e.g., hawks and owls).
- o Lethal Removal —Lethal removal may be used in some situations for the protection of the flying public and crew. Lethal removal is permitted by the U.S. Fish and Wildlife Service and state wildlife agencies under airport depredation permits.

The OIA strives to meet APHIS requirements for wildlife management to minimize risks and hazards to aircraft and their passengers and crews. On February 21, 2021, Michelle Brantley, the Director of Planning for OIA, stated in an email to Suzanne Thompson with the Audubon Society, that "the biologist's assessment [for the HUB project] concludes the only viable alternative is active relocation of the owls more than 10,000 feet away from the airport. I did discuss the draft report with the FAA. My contacts emphatically agreed with the assessment and reinforced that they would not allow any mitigation within 10,000 feet of the airport."

The supporting studies[1] conclude that the most appropriate solution to this safety issue is to relocate the owl from the project site to a safer site in some other location. The Burrowing Owl Relocation Plan (Relocation Plan) prepared for the HUB OIA Project outlines a way to successfully achieve such relocation (see Appendix B).

The commenter also provides erroneous information on the current and historic state of owls in the City, and more importantly, on the project site. The analysis included in the Addendum and TOP EIR

[2] USDA WS APHIS WMP Website https://www.bing.com/search?q=USDA%20APHIS%20wildlife%20management%20plans%20for%20airports&msbd=%7B%22triggeringMode%22%3A%22Explicit%22%2C%22intent%22%3A%22UserHistory%22%7D&form=BFBBQF&cvid=B43D24A1DAFC42E8B9C5A09CBAE3E636&sp=3&ghc=1

adequately addresses the project's potential impact on owls. As explained therein, the applicant will comply with the City's existing regulations and TOP policies through implementation of a Relocation Plan, which is based on the most recent site-specific technical studies. Compliance with these requirements will ensure potential impacts to owls are less than significant. Opponents' claims to the contrary are thus hyperbolic and inaccurate.

Comment 5 (Pages 5-7). The commenter next argues the project will have cumulative impacts related to air quality, greenhouse gas (GHG) emissions, and habitat loss.

The commenter fails to acknowledge TOP EIR did examine these cumulative issues at City buildout, and the HUB OIA Project is consistent with TOP. Therefore, potential cumulative air quality, GHG, and habitat impacts of this project have already been addressed in TOP EIR and a SOC was adopted by the City Council as allowed under CEQA.

In addition, the information provided regarding ongoing airport operations and the allegedly resulting GHG impacts is irrelevant to the current analysis, which considers a single project's potential impacts on the environment. TOP EIR concluded that buildout of the City, including this project, would result in significant direct and *cumulative* GHG emission impacts and thus, a SOC was approved by the City Council. The project site was analyzed in TOP EIR as an industrial site and the applicant will implement a number of project design features to reduce GHG emissions as outlined in the City's GHG Reduction Measures Screening Threshold Table, attached to the Addendum as Appendix A-2. Opponents ignore this information, which is clearly stated in the Addendum, and decry the City's failure to consider cumulative impacts "at a broader scale." Full buildout of the City is the absolute broadest scale possible for the analysis of potential GHG impacts. Opponents may dislike the City's GHG analysis, but it does not diminish the fact that the analysis demanded by opponents was completed and TOP 2050 EIR was certified without challenge.

Comment 6 (Pages 7-9). The commenter states, within evidentiary support, that TOP EIR mitigation for owl impacts has not been successful (i.e., collection of new development fees to purchase habitat). Regardless, however, a separate Relocation Plan has been prepared specially for this HUB OIA Project, and thus, a generic in-lieu fee is inapplicable. The Relocation Plan, which will be overseen by the California Department of Fish and Wildlife (CDFW), will govern before, during, and after project implementation to assure successful relocation of the owls from the unsafe project site.

In fact, no evidence was presented to show the Relocation Plan would result in alleged impacts, such as loss of biodiversity, avoiding inbreeding of dispersed juveniles, and/or cumulative impacts on owl populations. Moreover, the comments fail to acknowledge any benefits that may accrue from relocating owls from the project site, including survival of owls now and in the future.

Based on information in TOP, TOP EIR, and several technical studies[3] prepared by qualified professionals (see Appendix B), the Relocation Plan is the most appropriate way to provide for the

[3] Addendum Appendix B, BUOW Reports (Helix-Kidd 2020), BUOW site surveys (Helix or Wood 2019-2022), BUOW Relocation Plan (ELMT 2022), and Appendix E, Airport Safety Report (Mead & Hunt 1-2022)

long-term survival of the owls consistent with Policies ER5-1 and ER5-2 in TOP, as cited in the Addendum.

Letter 1 Summary. These responses, TOP, TOP EIR, the Addendum, and the various supporting technical studies[1], provide substantial evidence that the HUB OIA Project will not have any new or more significant impacts than those identified in TOP EIR, and therefore, the Addendum satisfies the intent and requirements of CEQA.

LETTER 2: ANA RODRIGUEZ

Comment 1 (Email Page 1). The commenter makes a number of claims about owls relative to the HUB OIA Project. The commenter argues that owls are being "driven out of the City" and that a 90-acre preserve on the project site is needed to protect the owls.

The various technical studies[4] on the owls and airport safety clearly demonstrate that the project site (i.e., just east of OIA and under normal landing pattern operations) is absolutely not safe (i.e., harmful) for both airport aircraft and the owls. The supporting studies[3] conclude that the most appropriate solution to this safety issue is to relocate the owls from the project site to a safer site in some other location. That is why a separate Relocation Plan has been prepared specially for this HUB OIA Project, and thus, a generic in-lieu fee is not applicable. The Relocation Plan, which will be overseen by the CDFW, will govern before, during, and after project implementation to assure successful relocation of the owls from the unsafe project site.

No evidence was presented to show the Relocation Plan would result in alleged impacts, such as loss of biodiversity, avoiding inbreeding of dispersed juveniles, and/or cumulative impacts on owl populations. Moreover, the comments fail to acknowledge any benefits that may accrue from relocating owls from the project site, including survival of owls now and in the future.

Based on information in TOP, TOP EIR, and several technical studies[3] prepared by qualified professionals, the Relocation Plan is the most appropriate way to provide for the long-term survival of the owls consistent with Policies ER5-1 and ER5-2 in TOP, as cited in the Addendum.

Letter 2 Summary. This response, TOP, TOP EIR, the Addendum, and the various supporting technical studies[3], provide substantial evidence that the HUB OIA Project will not have any new or more significant impacts than those identified in TOP EIR, and therefore, the Addendum satisfies the intent and requirements of CEQA.

[4] Addendum Appendix B, BUOW Reports (Helix-Kidd 2020), BUOW site surveys (Helix or Wood 2019-2022), BUOW Relocation Plan (ELMT 2022), and Appendix E, Airport Safety Report (Mead & Hunt 1-2022)

LETTER 3: BARBARA BARTON

Comment 1 (Email Page 1). The commenter makes a number of claims about owls relative to the HUB OIA Project. The commenter argues that owls are being "driven out of the City" and that a 90-acre preserve on the project site is needed to protect the owls.

The various technical studies[5] on the owls and airport safety clearly demonstrate that the project site (i.e., just east of OIA and under normal landing pattern operations) is absolutely not safe (i.e., harmful) for both airport aircraft and the owls. Owls may not fly high enough to directly cause aircraft accidents as cited by the commenter. However, the presence of owls in this location attracts larger birds of prey into the landing airspace of OIA which does represent a safety hazard both for aircraft damage and potential injury/loss of life for passengers/crew. Without removing the attractor prey species, it is unlikely a raptor management program would be successful over the long-term.

The U.S. Department of Agriculture (USDA) provides Wildlife Services (WS) through its Animal and Plant Health Inspection Service (APHIS) program for airports to help prevent and resolve wildlife conflicts that threaten public health and safety from concentrated populations of birds and other wildlife at or near airports contribute to wildlife strikes. The Airport Wildlife Hazards Program[6] supports an airport when preparing a Wildlife Hazards Management Plan (WMP) to document an airport's wildlife hazards and how the airport plans to address and manage them. It guides operations, defines roles of airport personnel, and details training to reduce risks. A WMP often involves a variety of methods to resolve wildlife conflicts including the following:

- o Habitat Modification — Altering vegetation and water, creating fences and barriers, and other activities to make the airport unattractive to wildlife.
- o Active Dispersal — Scaring and hazing wildlife away from airport environments.
- o Trapping and Relocation — Capturing and moving animals can be used for some species when legally allowed and feasible (e.g., hawks and owls).
- o Lethal Removal —Lethal removal may be used in some situations for the protection of the flying public and crew. Lethal removal is permitted by the U.S. Fish and Wildlife Service and state wildlife agencies under airport depredation permits.

The OIA strives to meet APHIS requirements for wildlife management to minimize risks and hazards to aircraft and their passengers and crews. On February 21, 2021, Michelle Brantley, the Director of Planning for OIA, stated in an email to Suzanne Thompson with the Audubon Society, that "the biologist's assessment [for the HUB project] concludes the only viable alternative is active relocation of the owls more than 10,000 feet away from the airport. I did discuss the draft report with the FAA.

---

[5] Addendum Appendix B, BUOW Reports (Helix-Kidd 2020), BUOW site surveys (Helix or Wood 2019-2022), BUOW Relocation Plan (ELMT 2022), and Appendix E, Airport Safety Report (Mead & Hunt 1-2022)

[6] USDA WS APHIS WMP Website https://www.bing.com/search?q=USDA%20APHIS%20wildlife%20management%20plans%20for%20airports&msbd=%7B%22triggeringMode%22%3A%22Explicit%22%2C%22intent%22%3A%22UserHistory%22%7D&form=BFBBQF&cvid=B43D24A1DAFC42E8B9C5A09CBAE3E636&sp=3&ghc=1

My contacts emphatically agreed with the assessment and reinforced that they would not allow any mitigation within 10,000 feet of the airport."

The supporting studies[4] conclude that the most appropriate solution to this safety issue is to relocate the owls from the project site to a safer site in some other location. That is why a separate Relocation Plan has been prepared specially for this HUB OIA Project, and thus, a generic in-lieu fee is not applicable. The Relocation Plan, which will be overseen by the CDFW, will govern before, during, and after project implementation to assure successful relocation of the owls from the unsafe project site.

No evidence was presented to show the Relocation Plan would result in alleged impacts, such as loss of biodiversity, avoiding inbreeding of dispersed juveniles, and/or cumulative impacts on owl populations. Moreover, the comments fail to acknowledge any benefits that may accrue from relocating owls from the project site, including survival of owls now and in the future.

Based on information in TOP, TOP EIR, and several technical studies[4] prepared by qualified professionals, the Relocation Plan is the most appropriate way to provide for the long-term survival of the owls consistent with Policies ER5-1 and ER5-2 in TOP, as cited in the Addendum.

Letter 3 Summary. This response, TOP, TOP EIR, the Addendum, and the various supporting technical studies[7], provide substantial evidence that the HUB OIA Project will not have any new or more significant impacts than those identified in TOP EIR, and therefore, the Addendum satisfies the intent and requirements of CEQA.

LETTER 4: HALLIE KUTAK, CENTER FOR BIOLOGICAL DIVERSITY

Comment 1 (Page 1). The commenter objects to the proposed use of an addendum as the CEQA documentation for the proposed HUB OIA Project.

The commenter does not acknowledge that an addendum can be the appropriate CEQA compliance document for a project that is consistent with the General Plan and zoning when it can be demonstrated a project will not result in new or more significant impacts that those that were already examined in the EIR for which the addendum is prepared. The Addendum does just that.

In this case, the use of an addendum is appropriate as the HUB OIA Project is consistent with TOP land use designations and City zoning, therefore the potential impacts of the HUB OIA Project have been accounted for in TOP EIR.

Comment 2 (Page 2). The commenter argues that the HUB OIA Project is not within the scope of TOP EIR, will have more severe significant impacts, and will require additional mitigation not found in TOP EIR. Their conclusion is a separate project-level EIR must be prepared for this project.

[7] Addendum Appendices A through G

As noted above, the commenter fails to recognize that an addendum can be the appropriate CEQA compliance document for a project that is consistent with the General Plan and zoning when it can be demonstrated a project will not result in new or more significant impacts that those that were already examined in the EIR for which an addendum is prepared. The Addendum does just that.

In this case, the use of an addendum is appropriate as the HUB OIA Project is consistent with TOP land use designations and City zoning, therefore the potential impacts of the HUB OIA Project have been accounted for in TOP EIR.

In addition, the Addendum and the various supporting technical studies[8] provide substantial evidence that the HUB OIA Project will not result in new or more severe significant impacts on the owls than those identified in TOP EIR, the Relocation Plan is consistent with TOP EIR mitigation, and the Addendum satisfies the intent and requirements of CEQA.

Comment 3 (Page 3). The commenter states the Addendum did not evaluate air quality impacts and health risks of the HUB OIA Project.

The Addendum states the following regarding Air Quality Significance Threshold 3.a, Conflict with or obstruct implementation of the applicable air quality plan:

The proposed project is consistent with TOP land use designations upon which the AQMP is based. Furthermore, the project is consistent with the City's participation in the AQMP and will not conflict with or obstruct implementation of the plan. The project will be required to implement TOP EIR Mitigation Measures AQ 3-1, 3-2, and 3-3 which include fugitive dust control measures pursuant to SCAQMD's Rule 403, use of Tier 3 construction equipment, proper service and maintenance of construction equipment, limiting nonessential idling of construction equipment, use of Super-Compliant volatile organic compounds (VOC) paints for coating and architectural surfaces, providing non-vehicular access options, and calculate and reduce any significant health risks from future development on nearby sensitive receptors (MM 3-1 through 3-3, respectively). The project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in TOP EIR. No changes or additions to TOP EIR analyses are necessary.

Mitigation: No project specific mitigation is required. The following measures from TOP EIR are applicable to the proposed project:

***AQ 3-1:** Prior to discretionary approval by the City of Ontario for development projects subject to CEQA (California Environmental Quality Act) review (i.e., nonexempt projects), project applicants shall prepare and submit a technical assessment evaluating potential project construction-related air quality impacts to the City of Ontario Planning Department for review and approval. The evaluation shall be prepared in conformance with South Coast Air Quality Management District (South Coast AQMD) methodology for assessing air quality impacts. If construction-related criteria air pollutants are determined to have the potential to exceed the South Coast AQMD–adopted thresholds of*

[8] Addendum Appendices A through G

significance, the City of Ontario Building Department shall require feasible mitigation measures to reduce air quality emissions. Potential measures shall be incorporated as conditions of approval for a project and may include:

- *Require fugitive dust control measures that exceed South Coast Air Quality Management District's Rule 403, such as:*
- − *Requiring use of nontoxic soil stabilizers to reduce wind erosion.*
- − *Applying water every four hours to active soil disturbing activities.*
- − *Tarping and/or maintaining a minimum of 24 inches of freeboard on trucks hauling dirt, sand, soil, or other loose materials.*
- *Using construction equipment rated by the United States Environmental Protection Agency as having Tier 4 interim or higher exhaust emission limits.*
- *Ensuring construction equipment is properly serviced and maintained to the manufacturer's standards*
- *Limiting nonessential idling of construction equipment to no more than five consecutive minutes.*
- *Using Super-Compliant VOC paints for coating of architectural surfaces whenever possible. A list of Super-Compliant architectural coating manufactures can be found on the South Coast Air Quality Management District's website at: http://www.aqmd.gov/prdas/brochures/SuperCompliant_AIM.pdf. These identified measures shall be incorporated into all appropriate construction documents (e.g., construction management plans) submitted to the City and shall be verified by the City's Planning Department.* (Addendum, pp. 32-33.)

The Addendum then determines the HUB OIA Project will not result in a cumulatively considerable net increase of any criteria pollutant for which the region is non-attainment under an applicable federal or state ambient air quality standard. (Addendum, pp 34-35.) That section provides a complete assessment of the air quality impacts of the HUB OIA Project relative to the South Coast Air Quality Management District's regional significance thresholds for criteria pollutants and recommends implementation of TOP EIR Mitigation Measures AQ 3-1 through AQ 3-3.

The Addendum also states… "*A detailed air quality assessment (AQ Study) of the proposed project was conducted by Urban Crossroads in February 2022, to identify project-specific air pollutant impacts and recommend additional mitigation if necessary (i.e., other than those applicable measures already identified in TOP EIR). The AQ Study (Appendix A) determined the project will not result in a cumulatively considerable net increase of any criteria pollutant for which the region is in non-attainment under an applicable federal or state ambient air quality because the project is consistent with the existing Industrial designation in the CCC SP."* (Addendum, p. 34.) It should also be noted the Addendum provides the full text of TOP EIR Mitigation Measures AQ 3-1 through 3-3 and explains how the project would implement them to address potential air quality impacts.

In addition, the Addendum concludes the project would not expose sensitive receptors to substantial pollutant concentrations and therefore, it would not result in any new impacts beyond those identified in TOP EIR. Thus, no project specific mitigation was required for sensitive receptors. In sum, the HUB OIA Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in TOP EIR. No changes or additions to TOP EIR analyses are necessary and no project specific mitigation is required.

Therefore, the commenter is incorrect as the Addendum did fully evaluate potential air quality impacts of the HUB OIA Project at a project level.

LETTER 5: JOEL HUSCHLE

Comment 1 (Email Page 1). The commenter makes a number of claims about owls relative to the HUB OIA Project. The commenter argues that owls are being "driven out of the City" and that a 90-acre preserve on the project site is needed to protect the owls.

The various technical studies[9] on the owls and airport safety clearly demonstrate that the project site (i.e., just east of OIA and under normal landing pattern operations) is absolutely not safe (i.e., harmful) for both airport aircraft and the owls. Owls may not fly high enough to directly cause aircraft accidents as cited by the commenter. However, the presence of owls in this location attracts larger birds of prey into the landing airspace of OIA which does represent a safety hazard both for aircraft damage and potential injury/loss of life for passengers/crew. Without removing the attractor prey species, it is unlikely a raptor management program would be successful over the long-term.

The U.S. Department of Agriculture (USDA) provides Wildlife Services (WS) through its Animal and Plant Health Inspection Service (APHIS) program for airports to help prevent and resolve wildlife conflicts that threaten public health and safety from concentrated populations of birds and other wildlife at or near airports contribute to wildlife strikes. The Airport Wildlife Hazards Program[10] supports an airport when preparing a Wildlife Hazards Management Plan (WMP) to document an airport's wildlife hazards and how the airport plans to address and manage them. It guides operations, defines roles of airport personnel, and details training to reduce risks. A WMP often involves a variety of methods to resolve wildlife conflicts including the following:

- o Habitat Modification — Altering vegetation and water, creating fences and barriers, and other activities to make the airport unattractive to wildlife.
- o Active Dispersal — Scaring and hazing wildlife away from airport environments.

[9] Addendum Appendix B, BUOW Reports (Helix-Kidd 2020), BUOW site surveys (Helix or Wood 2019-2022), BUOW Relocation Plan (ELMT 2022), and Appendix E, Airport Safety Report (Mead & Hunt 1-2022)

[10] USDA WS APHIS WMP Website https://www.bing.com/search?q=USDA%20APHIS%20wildlife%20management%20plans%20for%20airports&msbd=%7B%22triggeringMode%22%3A%22Explicit%22%2C%22intent%22%3A%22UserHistory%22%7D&form=BFBBQF&cvid=B43D24A1DAFC42E8B9C5A09CBAE3E636&sp=3&ghc=1

o Trapping and Relocation — Capturing and moving animals can be used for some species when legally allowed and feasible (e.g., hawks and owls).

o Lethal Removal —Lethal removal may be used in some situations for the protection of the flying public and crew. Lethal removal is permitted by the U.S. Fish and Wildlife Service and state wildlife agencies under airport depredation permits.

The OIA strives to meet APHIS requirements for wildlife management to minimize risks and hazards to aircraft and their passengers and crews. On February 21, 2021, Michelle Brantley, the Director of Planning for OIA, stated in an email to Suzanne Thompson with the Audubon Society, that "the biologist's assessment [for the HUB project] concludes the only viable alternative is active relocation of the owls more than 10,000 feet away from the airport. I did discuss the draft report with the FAA. My contacts emphatically agreed with the assessment and reinforced that they would not allow any mitigation within 10,000 feet of the airport."

The supporting studies[7] conclude that the most appropriate solution to this safety issue is to relocate the owls from the project site to a safer site in some other location. That is why a separate Relocation Plan has been prepared specially for this HUB OIA Project, and thus, a generic in-lieu fee is not applicable. The Relocation Plan, which will be overseen by the CDFW, will govern before, during, and after project implementation to assure successful relocation of the owls from the unsafe project site.

No evidence was presented to show the Relocation Plan would result in alleged impacts, such as loss of biodiversity, avoiding inbreeding of dispersed juveniles, and/or cumulative impacts on owl populations. Moreover, the comments fail to acknowledge any benefits that may accrue from relocating owls from the project site, including survival of owls now and in the future.

Based on information in TOP, TOP EIR, and several technical studies[7] prepared by qualified professionals, the Relocation Plan is the most appropriate way to provide for the long-term survival of the owls consistent with Policies ER5-1 and ER5-2 in TOP, as cited in the Addendum.

Letter 5 Summary. This response, TOP, TOP EIR, the Addendum, and the various supporting technical studies[11], provide substantial evidence that the HUB OIA Project will not have any new or more significant impacts than those identified in TOP EIR, and therefore, the Addendum satisfies the intent and requirements of CEQA.

LETTER 6: KIMBERLY DILLBECK

Comment 1 (Email Page 1). The commenter makes a number of claims about owls relative to the HUB OIA Project. The commenter argues that owls are being "driven out of the City" and that a 90-acre preserve on the project site is needed to protect the owls.

[11] Addendum Appendices A through G

The various technical studies[8] on the owls and airport safety clearly demonstrate that the project site (i.e., just east of OIA and under normal landing pattern operations) is absolutely not safe (i.e., harmful) for both airport aircraft and the owls. Owls may not fly high enough to directly cause aircraft accidents as cited by the commenter. Based on information in TOP, TOP EIR, and several technical studies[13] prepared by qualified professionals, the Relocation Plan is the most appropriate way to provide for the long-term survival of the owls consistent with Policies ER5-1 and ER5-2 in TOP, as cited in the Addendum. **Letter 8 Summary.** This response, TOP, TOP EIR, the Addendum, and the various supporting technical studies[20], provide substantial evidence that the HUB OIA Project will not have any new or more significant impacts than those identified in TOP EIR, and therefore, the Addendum satisfies the intent and requirements of CEQA.

LETTER 9: SUZANNE THOMPSON, POMONA VALLEY AUDUBON SOCIETY, BURROWING OWL COMMITTEE

Comment 1 (Email Pages 1-3). The commenter makes a number of comments about burrowing owl (owl) relative to the HUB OIA site and project. The commenter argues that this development will have irreparable impacts on the owl. The commenter argues that the project site is a critical part of owl habitat in the region and the FAA actually encourages wildlife like the owl to co-exist on airport properties. The commenter also states TOP EIR mitigation for owl impacts has not been successful (i.e., collection of new development fees to purchase habitat).

The various technical studies[21] on the owls and airport safety clearly demonstrate that the project site (i.e., just east of OIA and under normal landing pattern operations) is absolutely not safe (i.e., harmful) for both airport aircraft and the owls. Owls may not fly high enough to directly cause aircraft accidents

[20] Addendum Appendices A through G

[21] Addendum Appendix B, BUOW Reports (Helix-Kidd 2020), BUOW site surveys (Helix or Wood 2019-2022), BUOW Relocation Plan (ELMT 2022), and Appendix E, Airport Safety Report (Mead & Hunt 1-2022)

as cited by the commenter. However, the presence of owls in this location attracts larger birds of prey into the landing airspace of OIA which does represent a safety hazard both for aircraft damage and potential injury/loss of life for passengers/crew. Without removing the attractor prey species, it is unlikely a raptor management program would be successful over the long-term.

The U.S. Department of Agriculture (USDA) provides Wildlife Services (WS) through its Animal and Plant Health Inspection Service (APHIS) program for airports to help prevent and resolve wildlife conflicts that threaten public health and safety from concentrated populations of birds and other wildlife at or near airports contribute to wildlife strikes. The Airport Wildlife Hazards Program[22] supports an airport when preparing a Wildlife Hazards Management Plan (WMP) to document an airport's wildlife hazards and how the airport plans to address and manage them. It guides operations, defines roles of airport personnel, and details training to reduce risks. A WMP often involves a variety of methods to resolve wildlife conflicts including the following:

- o Habitat Modification — Altering vegetation and water, creating fences and barriers, and other activities to make the airport unattractive to wildlife.
- o Active Dispersal — Scaring and hazing wildlife away from airport environments.
- o Trapping and Relocation — Capturing and moving animals can be used for some species when legally allowed and feasible (e.g., hawks and owls).
- o Lethal Removal —Lethal removal may be used in some situations for the protection of the flying public and crew. Lethal removal is permitted by the U.S. Fish and Wildlife Service and state wildlife agencies under airport depredation permits.

The OIA strives to meet APHIS requirements for wildlife management to minimize risks and hazards to aircraft and their passengers and crews. On February 21, 2021, Michelle Brantley, the Director of Planning for OIA, stated in an email to Suzanne Thompson with the Audubon Society, that "the biologist's assessment [for the HUB project] concludes the only viable alternative is active relocation of the owls more than 10,000 feet away from the airport. I did discuss the draft report with the FAA. My contacts emphatically agreed with the assessment and reinforced that they would not allow any mitigation within 10,000 feet of the airport."
The supporting studies[15] conclude that the most appropriate solution to this safety issue is to relocate the owls from the project site to a safer site in some other location. That is why a separate Relocation Plan has been prepared specially for this HUB OIA Project, and thus, a generic in-lieu fee is not applicable. The Relocation Plan, which will be overseen by the CDFW, will govern before, during, and after project implementation to assure successful relocation of the owls from the unsafe project site.

No evidence was presented to show the Relocation Plan would result in alleged impacts, such as loss of biodiversity, avoiding inbreeding of dispersed juveniles, and/or cumulative impacts on owl

populations. Moreover, the comments fail to acknowledge any benefits that may accrue from relocating owls from the project site, including survival of owls now and in the future.

Based on information in TOP, TOP EIR, and several technical studies[23] prepared by qualified professionals, the Relocation Plan is the most appropriate way to provide for the long-term survival of the owls consistent with Policies ER5-1 and ER5-2 in TOP, as cited in the Addendum.

Letter 9 Summary. This response, TOP, TOP EIR, the Addendum, and the various supporting technical studies[24], provide substantial evidence that the HUB OIA Project will not have any new or more significant impacts than those identified in TOP EIR, and therefore, the Addendum satisfies the intent and requirements of CEQA.

LETTER 10: TRUDE HURD

Comment 1 (Page 1). The commenter laments the loss of owl habitat over the years throughout the region, and claims it would be appropriate for an owl preserve on the HUB OIA Project site.

The commenter is incorrect that the HUB OIA Project site is "perfect for a burrowing owl preserve." The various technical studies[25] on the owls and airport safety clearly demonstrate that the project site (i.e., just east of OIA and under normal landing pattern operations) is absolutely not safe (i.e., harmful) for both airport aircraft and the owls. Owls may not fly high enough to directly cause aircraft accidents as cited by the commenter. However, the presence of owls in this location attracts larger birds of prey into the landing airspace of OIA which does represent a safety hazard both for aircraft damage and potential injury/loss of life for passengers/crew. Without removing the attractor prey species, it is unlikely a raptor management program would be successful over the long-term.

The U.S. Department of Agriculture (USDA) provides Wildlife Services (WS) through its Animal and Plant Health Inspection Service (APHIS) program for airports to help prevent and resolve wildlife conflicts that threaten public health and safety from concentrated populations of birds and other wildlife at or near airports contribute to wildlife strikes. The Airport Wildlife Hazards Program[26] supports an airport when preparing a Wildlife Hazards Management Plan (WMP) to document an airport's wildlife hazards and how the airport plans to address and manage them. It guides operations, defines roles of airport personnel, and details training to reduce risks. A WMP often involves a variety of methods to resolve wildlife conflicts including the following:

o Lethal Removal —Lethal removal may be used in some situations for the protection of the flying public and crew. Lethal removal is permitted by the U.S. Fish and Wildlife Service and state wildlife agencies under airport depredation permits.

The OIA strives to meet APHIS requirements for wildlife management to minimize risks and hazards to aircraft and their passengers and crews. On February 21, 2021, Michelle Brantley, the Director of Planning for OIA, stated in an email to Suzanne Thompson with the Audubon Society, that "the biologist's assessment [for the HUB project] concludes the only viable alternative is active relocation of the owls more than 10,000 feet away from the airport. I did discuss the draft report with the FAA. My contacts emphatically agreed with the assessment and reinforced that they would not allow any mitigation within 10,000 feet of the airport."

The supporting studies[18] conclude that the most appropriate solution to this safety issue is to relocate the owls from the project site to a safer site in some other location. That is why a separate Relocation Plan has been prepared specially for this HUB OIA Project, and thus, a generic in-lieu fee is not applicable. The Relocation Plan, which will be overseen by the CDFW, will govern before, during, and after project implementation to assure successful relocation of the owls from the unsafe project site.

No evidence was presented to show the Relocation Plan would result in alleged impacts, such as loss of biodiversity, avoiding inbreeding of dispersed juveniles, and/or cumulative impacts on owl populations. Moreover, the comments fail to acknowledge any benefits that may accrue from relocating owls from the project site, including survival of owls now and in the future.

Based on information in TOP, TOP EIR, and several technical studies[18] prepared by qualified professionals, the Relocation Plan is the most appropriate way to provide for the long-term survival of the owls consistent with Policies ER5-1 and ER5-2 in TOP, as cited in the Addendum.

Letter 10 Summary. This response, TOP, TOP EIR, the Addendum, and the various supporting technical studies[27], provide substantial evidence that the HUB OIA Project will not have any new or more significant impacts than those identified in TOP EIR, and therefore, the Addendum satisfies the intent and requirements of CEQA.

[27] Addendum Appendices A through G

LETTER 11: DAN SILVER, ENDANGERED HABITATS LEAGUE

Comment 1 (Email Page 1). The commenter argues that owl relocation does not work and the HUB OIA Project site should include an owl preserve.

The commenter is incorrect that the HUB OIA Project site is "perfect for a burrowing owl preserve." The various technical studies[28] on the owls and airport safety clearly demonstrate that the project site (i.e., just east of OIA and under normal landing pattern operations) is absolutely not safe (i.e., harmful) for both airport aircraft and the owls. Owls may not fly high enough to directly cause aircraft accidents as cited by the commenter. However, the presence of owls in this location attracts larger birds of prey into the landing airspace of OIA which does represent a safety hazard both for aircraft damage and potential injury/loss of life for passengers/crew. Without removing the attractor prey species, it is unlikely a raptor management program would be successful over the long-term.

The U.S. Department of Agriculture (USDA) provides Wildlife Services (WS) through its Animal and Plant Health Inspection Service (APHIS) program for airports to help prevent and resolve wildlife conflicts that threaten public health and safety from concentrated populations of birds and other wildlife at or near airports contribute to wildlife strikes. The Airport Wildlife Hazards Program[29] supports an airport when preparing a Wildlife Hazards Management Plan (WMP) to document an airport's wildlife hazards and how the airport plans to address and manage them. It guides operations, defines roles of airport personnel, and details training to reduce risks. A WMP often involves a variety of methods to resolve wildlife conflicts including the following:

- o Habitat Modification — Altering vegetation and water, creating fences and barriers, and other activities to make the airport unattractive to wildlife.
- o Active Dispersal — Scaring and hazing wildlife away from airport environments.
- o Trapping and Relocation — Capturing and moving animals can be used for some species when legally allowed and feasible (e.g., hawks and owls).
- o Lethal Removal —Lethal removal may be used in some situations for the protection of the flying public and crew. Lethal removal is permitted by the U.S. Fish and Wildlife Service and state wildlife agencies under airport depredation permits.

The OIA strives to meet APHIS requirements for wildlife management to minimize risks and hazards to aircraft and their passengers and crews. On February 21, 2021, Michelle Brantley, the Director of Planning for OIA, stated in an email to Suzanne Thompson with the Audubon Society, that "the biologist's assessment [for the HUB project] concludes the only viable alternative is active relocation of the owls more than 10,000 feet away from the airport. I did discuss the draft report with the FAA.

[29] USDA WS APHIS WMP Website https://www.bing.com/search?q=USDA%20APHIS%20wildlife%20management%20plans%20for%20airports&msbd=%7B%22triggeringMode%22%3A%22Explicit%22%2C%22intent%22%3A%22UserHistory%22%7D&form=BFBBQF&cvid=B43D24A1DAFC42E8B9C5A09CBAE3E636&sp=3&ghc=1

My contacts emphatically agreed with the assessment and reinforced that they would not allow any mitigation within 10,000 feet of the airport."

The supporting studies[30] conclude that the most appropriate solution to this safety issue is to relocate the owls from the project site to a safer site in some other location. That is why a separate Relocation Plan has been prepared specially for this HUB OIA Project, and thus, a generic in-lieu fee is not applicable. The Relocation Plan, which will be overseen by the CDFW, will govern before, during, and after project implementation to assure successful relocation of the owls from the unsafe project site.

No evidence was presented to show the Relocation Plan would result in alleged impacts, such as loss of biodiversity, avoiding inbreeding of dispersed juveniles, and/or cumulative impacts on owl populations. Moreover, the comments fail to acknowledge any benefits that may accrue from relocating owls from the project site, including survival of owls now and in the future.

LETTER 12: SETH THOMPSON

Comment 1 (Email Page 1). The commenter suggests TOP EIR is a "flawed document".

Comments on the adequacy of TOP 2050 EIR are untimely and irrelevant. Objections to that document were required to be raised when the matter was before the City Council. Opponents cannot now use the current project to attack the certified TOP EIR. Moreover, criticism of the City's overall planning efforts are misplaced in the current context of a single project, one which has long been planned and allowed on the project site (i.e., CCCSP and TOP).

Comment 2 (Email Page 1). The commenter states TOP Addendum for the HUB OIA Project relies on an owl mitigation plan that has already failed but does not elaborate on the nature of the failure. The commenter also states…"there is incontrovertible scientific evidence that even the best translocation efforts result in high mortality." However, the commenter does not provide any documentation to support that statement.

The various technical studies[31] on the owls and airport safety clearly demonstrate that the project site (i.e., just east of OIA and under normal landing pattern operations) is absolutely not safe (i.e., harmful) for both airport aircraft and the owls. Owls may not fly high enough to directly cause aircraft accidents as cited by the commenter. However, the presence of owls in this location attracts larger birds of prey into the landing airspace of OIA which does represent a safety hazard both for aircraft damage and potential injury/loss of life for passengers/crew. Without removing the attractor prey species, it is unlikely a raptor management program would be successful over the long-term.

Comment 3 (Email Page 1). The commenter states, without evidentiary support, that owls that…"survive the trauma of translocation represent a loss of distinct biodiversity" and that "loss of the Ontario Airport owls will have damaging effects on Chino Burrowing Owls and cascading negative effects on the few indigenous Burrowing Owls in the Pomona Valley."

The various technical studies[33] on the owls and airport safety clearly demonstrate that the project site (i.e., just east of OIA and under normal landing pattern operations) is absolutely not safe (i.e., harmful) for both airport aircraft and the owls. Owls may not fly high enough to directly cause aircraft accidents as cited by the commenter. However, the presence of owls in this location attracts larger birds of prey into the landing airspace of OIA which does represent a safety hazard both for aircraft damage and potential injury/loss of life for passengers/crew. Without removing the attractor prey species, it is unlikely a raptor management program would be successful over the long-term.

The U.S. Department of Agriculture (USDA) provides Wildlife Services (WS) through its Animal and Plant Health Inspection Service (APHIS) program for airports to help prevent and resolve wildlife conflicts that threaten public health and safety from concentrated populations of birds and other wildlife at or near airports contribute to wildlife strikes. The Airport Wildlife Hazards Program[34] supports an airport when preparing a Wildlife Hazards Management Plan (WMP) to document an airport's wildlife hazards and how the airport plans to address and manage them. It guides operations, defines roles of airport personnel, and details training to reduce risks. A WMP often involves a variety of methods to resolve wildlife conflicts including the following:

- o Habitat Modification — Altering vegetation and water, creating fences and barriers, and other activities to make the airport unattractive to wildlife.
- o Active Dispersal — Scaring and hazing wildlife away from airport environments.
- o Trapping and Relocation — Capturing and moving animals can be used for some species when legally allowed and feasible (e.g., hawks and owls).
- o Lethal Removal —Lethal removal may be used in some situations for the protection of the flying public and crew. Lethal removal is permitted by the U.S. Fish and Wildlife Service and state wildlife agencies under airport depredation permits.

The OIA strives to meet APHIS requirements for wildlife management to minimize risks and hazards to aircraft and their passengers and crews. On February 21, 2021, Michelle Brantley, the Director of Planning for OIA, stated in an email to Suzanne Thompson with the Audubon Society, that "the biologist's assessment [for the HUB project] concludes the only viable alternative is active relocation of the owls more than 10,000 feet away from the airport. I did discuss the draft report with the FAA.

---

[33] Addendum Appendix B, BUOW Reports (Helix-Kidd 2020), BUOW site surveys (Helix or Wood 2019-2022), BUOW Relocation Plan (ELMT 2022), and Appendix E, Airport Safety Report (Mead & Hunt 1-2022)

[34] USDA WS APHIS WMP Website
https://www.bing.com/search?q=USDA%20APHIS%20wildlife%20management%20plans%20for%20airports&msbd=%7B%22triggeringMode%22%3A%22Explicit%22%2C%22intent%22%3A%22UserHistory%22%7D&form=BFBBQF&cvid=B43D24A1DAFC42E8B9C5A09CBAE3E636&sp=3&ghc=1

My contacts emphatically agreed with the assessment and reinforced that they would not allow any mitigation within 10,000 feet of the airport."

The supporting studies[23] conclude that the most appropriate solution to this safety issue is to relocate the owls from the project site to a safer site in some other location. . If the owls were to remain on the project site, raptors will continue to hunt the owls by perching on the large buildings and trees in the surrounding area. There is no indication that relocation of the owls to an appropriate site in the area would result in significant impacts to the biodiversity or genetic pool for owls in the Pomona Valley.

Comment 4 (Email Page 1). The commenter argued there was insufficient time to respond to the project documents over the holidays.

The HUB OIA Project has been in process for some time. The City properly noticed the January 4, 2023 Development Advisory Board hearing per California Government Code Sections 54950-54963 (Ralph M. Brown Act) and the Ontario Municipal Code (OMC) Titles 1 and 2 (General Provisions and Administration). Regarding this noticing, a number of individuals and entities – including this one – were able to provide comments prior to the start of the meeting. Regardless, the HUB OIA Project requires Planning Commission approval and all interested parties will have an opportunity to provide written and/or oral comments at that time.

Letter 12 Summary. These responses, TOP, TOP EIR, the Addendum, and the various supporting technical studies[35] provide substantial evidence that the HUB OIA Project will not have any new or more significant impacts than those identified in TOP EIR, and therefore, the Addendum satisfies the intent and requirements of CEQA.

LETTER 13: NATASHA WALTON, INLAND VALLEY ADVOCATES FOR THE ENVIRONMENT (IVAE)

Comment 1 (Email Page 1). The commenter questioned reliance on TOP EIR but did not acknowledge that an EIR Addendum can be the appropriate CEQA compliance document for a project that is consistent with the General Plan and zoning designations when it can be demonstrated the Pa project will not result in new or more have significant impacts that those that were not already examined in the EIR for which the Addendum is prepared. The Addendum does just that. In this case, the use of an TOP Addendum is appropriate as the HUB OIA Project is consistent with TOP land use designations and City zoning designations, therefore the cumulative potential impacts of the HUB OIA Project have been accounted for in TOP EIR.

[35] Addendum Appendices A through G

For additional information, see separate responses in letters from Allen Matkins regarding comments in the “Coalition Letter” and the “Center for Biological Diversity (CBD) Letter”.

Comment 2 (Email Page 1). The commenter argued the HUB OIA Project did not conduct a proper noise study involving airport noise. However, the commenter failed to note the Addendum clearly evaluated both Project-related and Airport-related noise impacts. Page 71 of the Addendum states…

> TOP EIR found stationary and transportation noise impacts of future development under TOP to be less than significant with implementation of Safety Element Policy S-4.1, Noise Mitigation, which utilizes the City’s Noise Ordinance, building codes, and subdivision and development code regulations to reduce noise from future development projects (SEIR p. 5.13-32).
>
> The project site was previously analyzed by TOP EIR as supporting industrial uses and the project will not expose people to or generate noise levels in excess of the standards established in TOP EIR (Section 5.12). The project site is surrounded on the north, east, and south sides by industrial or commercial/office uses, and to the west by the OIA. The I-10 is just north of the site, the I-15 is just east of the site, and the site is within the OIA’s Safety Zones. The issue of the project’s consistency with the ALUCP is addressed in Section 9, *Hazards and Hazardous Materials* (airport-related hazards) and potential noise impacts are addressed in detail in Section 9.3e. As discussed therein PDF/COA included in the Mead & Hunt airport study (Appendix E) have been incorporated into the project.

Both the Addendum and the Mead & Hunt report on airport safety included analyses of airport noise impacts.

Comment 3 (Email Pages 1-2). The remaining comments were regarding burrowing owl and are similar to those raised in Letters 14 through 44 below.

NOTE: The following 31 letters make essentially the same comments so they are addressed with one response after the list of commenters:

LETTER 14: DAVE MACIAS
LETTER 15: DEENA LIGORRIA
LETTER 16: GLORIA KARIMI
LETTER 17: GUS OCON
LETTER 18: JACOB LIGORRIA

LETTER 42: KELLY COYNE
LETTER 43: ERIK KNUTZEN
LETTER 44: SHARI WASSON

Comment 1 (Email Page 1). The commenters argue that owl relocation does not work and the HUB OIA Project site should include an owl preserve.

The HUB OIA Project site is not an appropriate location for an owl preserve. The various technical studies[36] on the owls and airport safety clearly demonstrate that the project site (i.e., just east of OIA and under normal landing pattern operations) is absolutely not safe (i.e., harmful) for both airport aircraft and the owls. Owls may not fly high enough to directly cause aircraft accidents as cited by the commenter. However, the presence of owls in this location attracts larger birds of prey into the landing airspace of OIA which does represent a safety hazard both for aircraft damage and potential injury/loss of life for passengers/crew. Without removing the attractor prey species, it is unlikely a raptor management program would be successful over the long-term.

The U.S. Department of Agriculture (USDA) provides Wildlife Services (WS) through its Animal and Plant Health Inspection Service (APHIS) program for airports to help prevent and resolve wildlife conflicts that threaten public health and safety from concentrated populations of birds and other wildlife at or near airports contribute to wildlife strikes. The Airport Wildlife Hazards Program[37] supports an airport when preparing a Wildlife Hazards Management Plan (WMP) to document an airport's wildlife hazards and how the airport plans to address and manage them. It guides operations, defines roles of airport personnel, and details training to reduce risks. A WMP often involves a variety of methods to resolve wildlife conflicts including the following:

- o Habitat Modification — Altering vegetation and water, creating fences and barriers, and other activities to make the airport unattractive to wildlife.
- o Active Dispersal — Scaring and hazing wildlife away from airport environments.
- o Trapping and Relocation — Capturing and moving animals can be used for some species when legally allowed and feasible (e.g., hawks and owls).
- o Lethal Removal —Lethal removal may be used in some situations for the protection of the flying public and crew. Lethal removal is permitted by the U.S. Fish and Wildlife Service and state wildlife agencies under airport depredation permits.

The OIA strives to meet APHIS requirements for wildlife management to minimize risks and hazards to aircraft and their passengers and crews. On February 21, 2021, Michelle Brantley, the Director of Planning for OIA, stated in an email to Suzanne Thompson with the Audubon Society, that "the biologist's assessment [for the HUB project] concludes the only viable alternative is active relocation of the owls more than 10,000 feet away from the airport. I did discuss the draft report with the FAA. My contacts emphatically agreed with the assessment and reinforced that they would not allow any mitigation within 10,000 feet of the airport."

RE: Ontario International Airport Authority's Information About Burrowing Owls at Ontario International Airport; City of Ontario Development Plan PDEV21-047.

Dear Mr. Zeledon:

The Ontario International Airport Authority (OIAA) submits this letter regarding proposed development plan PDEV21-047 on about 198 acres of real property owned by the OIAA east of Haven Avenue. We are informed that some have suggested that burrowing owls (BUOW) should be preserved on the property. But, as explained below, the presence of BUOWs at Ontario International Airport (ONT) continues to present a safety threat to the traveling public and to aircraft operations. Their presence at the Airport is also inconsistent with Federal Aviation Administration (FAA) regulations and a mandated Wildlife Hazard Management Plan (WHMP) for ONT.

In June 2022 the OIAA wrote to the Pomona Valley Audubon Society explaining that the group's proposed BUOW preserve concept for the 198 acres of OIAA property east of Haven Avenue, or anywhere else at ONT, was not feasible due to substantial safety concerns. A copy of that letter is attached. The OIAA's position about the safety threat posed by BUOWs at ONT stated in that letter remains the same today.

In addition, the presence of BUOWs at ONT is one wildlife hazard that the OIAA is required to abate under federal regulations. (14 Code of Federal Regulations § 139.337.) Those regulations require the OIAA, as part of ONT's certification with the FAA, to "alleviate or eliminate wildlife hazards to air carrier operations." The OIAA has prepared, and the FAA has approved, a required WHMP for ONT to comply with federal regulations.

The ONT WHMP specifically identifies the BUOW as a wildlife hazard to Airport operations that must be addressed, along with other hazards, under the Plan. Contents and requirements of the WHMP include:

- Identification of birds as the "greatest threat to aviation at ONT" and a determination that "birds are generally considered the most hazardous form of wildlife at ONT."

- An obligation by OIAA to "actively reduce attractive wildlife habitat" at ONT, and to reduce wildlife that attracts predators. (Red tail hawks, another wildlife hazard identified in the WHMP, are predators of BOUWs.)

- Prioritization of wildlife population management and habitat modifications efforts at ONT.

- Use of OIAA resources and trained personnel to implement the many wildlife hazard abatement procedures listed in the WHMP.

- Coordination by a Wildlife Hazard Working Group, made up of staff from the FAA, U.S. Department of Agriculture Wildlife Services, Air Traffic Control Tower, and OIAA, to implement a range of wildlife control procedures and projects at ONT.

Consequently, based on express federal regulations, and the requirements of the FAA-mandated and approved WHMP, suggestions about using the 198 acres of real property owned by the OIAA east of Haven Avenue as a BUOW preserve are not feasible and must be rejected.

Please contact me if you have any questions about this letter.

Sincerely,

Atif Elkadi
Chief Executive Officer

COPY

Ms. Thompson,

Thank you for your proposal for a burrowing owl (BUOW) preserve at the Ontario International Airport ("ONT") on the "boot" property east of Haven Avenue.

In December 2021, Ontario International Airport Authority ("OIAA") Board deemed this land as surplus development airport land. The development of this land would allow the OIAA to obtain vital revenue sources to expand and grow ONT for the public benefit of the region, and to enhance the financial sustainability of ONT consistent with Federal Aviation Administration (FAA) policies and requirements.

Also in December 2021, the OIAA entered into a binding development entitlement agreement, which requires CanAm Ontario, LLC (Developer) to pursue and obtain all required zoning and California Environmental Quality Act (CEQA) reviews and approvals from the City of Ontario for a potential industrial development on the entire "boot" property. Subject to terms and conditions of the development agreement being satisfied and contingent on the results of the CEQA and zoning reviews for the land, the OIAA is contractually obligated to enter into a future 55-year commitment to ground lease securing the entire property for industrial development. Under proposed development plans, no part of this property is set aside for habitat preservation.

For decades the land has been zoned industrial under the California Commerce Center Specific Plan and has been covered by the California Environmental Quality Act (CEQA) approved Ontario Plan EIR. The Ontario Plan EIR fully analyzed biological impacts and requires habitat mitigation for the potential development of the land. CEQA permits active relocation of the owls to viable sites, subject to approval from United States Fish & Wildlife Services (USFW) and the California Department of Fish & Wildlife (CDFW). Per requirements, the Developer

is conducting seasonal focused owl protocol studies that will be completed in July 2022 and has identified existing nearby established conservation sites which will provide a superior life for these owls, subject to the City's concurrence under the pending CEQA review process. Occupancy of owls at or near the airport is not a viable location for any sustainable success of the owls. Such occupancy would be inconsistent with the FAA-approved Wildlife Hazard Management Plan for ONT, which is required by federal regulations. The owls are living in a flight path, pose a threat to aircraft operations, and are being threatened by urbanization, public harassment, and predators such as the red-tailed hawk.

The burrowing owl population at ONT continues to struggle, and since 2008 there have been sixteen (16) identified and reported bird strikes at ONT involving burrowing owls. Both the FAA and the OIAA have gone on record stating bird strikes present a continued danger to the public safety of commercial aircraft flights. The OIAA therefore does not support any enhancement of bird population on airport property.

This is first and foremost a safety issue, both for commercial flights and passengers, but also for the owls and red-tail hawks that prey upon them. Not only does the presence of birds near an airport pose a serious safety risk, but the owls are also becoming human-adapted due to their proximity to humans and development. We know this relocation would be better from a public safety perspective. In addition, the OIAA understands that expert burrowing owl biologists maintain that when relocated to a suitable conservation site, the owl population will have a higher probability of success.

As a result, and for the reasons we have outlined above, the OIAA is unable to execute this proposed concept and cannot support your proposal for a BUOW preserve within the ONT flight path and the California Commerce Center Specific Plan, and specifically within the proposed development site. We look forward to continuing a dialogue with the Pomona Audubon Society as it relates any approved BUOW relocation plans.

Sincerely,

Atif Elkadi
CEO, Ontario International Airport Authority

EXHIBIT E

January 18, 2023

SUBJECT: Response to Comments – Group Letter dated January 4, 2023, challenging the HUB at Ontario International Airport.

1. The Ontario Plan mitigation that started around 2007 has been collecting fees from developers to mitigate the loss of large sections of habitat. The City has been working with the Inland Empire Resources Conservation District (IERCD) and Dan Silver to allocate the collected funds towards preserving lands around the Prado Basin.

2. The Ontario HUB is one of the last remaining sites undeveloped in this region. There is currently an insufficient quantity of owls to maintain a healthy population capable of persisting overtime. Single large mitigation sites can be subject to stochastic events (fire, disease, vandalism, predators, feral cats/dogs, etc.) that can lead to the loss of remnant populations. Several mitigation sites that are connected through greenbelts or areas allowing safe travel is necessary for dispersal between mitigation sites.

   Regarding the Hub property, the owls will not persist here forever even if the site was preserved and undeveloped. There are many reasons which demonstrate that owls will not persist in the subject site in perpetuity, despite if a monitoring and management program was established. Preservation of this subject site will not adequately support a population of owls.

   The owl populations at the Seal Beach naval weapons station and the Orange County fairgrounds and many other similar locations all met the same fate. They were surrounded by urbanization and development and after several years the populations were extirpated. Development brings increased risk of mortality (predators, vehicle strikes, loss of foraging habitats, vandalism, etc.). Eventually these island patches of fragmented habitats supporting owls will blink out. They won't support owls in perpetuity as supported by these similar situations at the OC fair grounds and Seal Beach (and many other locations). The ability to safely disperse away from and into these island patches are critical for a regional population but as this area loses more habitat and dispersal becomes more difficult (increases risk of mortality), then it's more likely owls will be extirpated. Preservation of portion of the property would not result in long term owl occupation either.

3. Prior to the 1980's southwestern San Bernardino supported a robust breeding BUOW population with hundreds of pairs from the base of the San Bernardino Mountains south to the Prado Basin. After decades of development pressure and the complete absence of meaningful mitigation, only a few remaining breeding pairs and winter migrants are known to persist. The remaining highly fragmented landscape which lacks suitable, large, protected sites with connectivity to and between extant breeding sites creates a bottleneck and prevents the existence of a healthy source population.

With the continued development pressure and lack of adequate mitigation required by the resource agencies, the BUOW population in this region is tenuous at best and will likely never recover from what was once a robust breeding source population (Kidd et al. 2003, 2007).

A current review of BUOWs previously reported near the Ontario Airport includes 45 records from 1989-2017. These 45 records are located within seven nearby 7.5min USGS quads (Ontario, Prado, Corona North, Fontana, Cucamonga Peak and Mt. Blady) and Guasti quad where the airport is located (CNDDB 2020). The nearest owl locations reported south of the airport were evicted approximately ten years ago during development of industrial warehouses. Mitigation included the installation of artificial burrows in a barrow pit on the west side of the nearby retired landfill and the owls were evicted from their burrows prior to grading. Owls are no longer known to occupy this site south of the airport. The existence of two (2) breeding owl pairs, currently surveyed by the 2022 Helix report, which are located at the subject OIAA property along the east side of Haven Avenue are included in the list of 45 owl records. Several reported owls north of Interstate 10 that are located west and north of Ontario Mills Mall are some of the only possible extant owls near the airport. All of these owls are surrounded by development and located on small, highly fragmented sites that will not provide long-term conservation value for the owl due to future development and predation pressure to name a few.

Further, the sites chosen for relocation are preserved sites and will be connected to large open areas that support existing burrowing owl populations, that are already in conserved areas, allowing increased survivability and genetic diversity to avoid inbreeding.

4. The Conclusions and Management Implications section of the study "Release Strategies and Ecological Factors Influence Mitigation Translocation Outcomes for Burrowing Owls: A Comparative Evaluation" (S.M. Hennessey, et. al.) states the following:

> "Even if there is a survival penalty associated with translocation, it is important for managers and regulatory agencies to consider that translocation may achieve conservation goals better than displacement. The long-term value of translocation exceeds that of displacement when there are plausible projections of increasing future threats on the unprotected landscape around displacement sites. As the pace of development continues without any apparent de-escalation, wildlife such as BUOW experience 'serial eviction' as one habitat patch after another is lost to infrastructure expansion. Under these circumstances, it may be wise to consider translocation to protected areas that can manage these threats, conduct restoration activities to enhance habitat suitability, and include extra management support following release."

Except for the undeveloped interstitial areas associated with the Ontario International Airport runway to the west of the project site, the project site is almost entirely surrounded by existing development (industrial buildings) to the north, east and south. In accordance with the 2012 CDFW Staff Report on Burrowing Owls, BUOW burrow exclusion and closure is employed only where there are adjacent natural burrows and non-impacted sufficient habitat for BUOW to occupy with permanent protection mechanism in place. Since the project site is surrounded by development on

three of its boundaries, BUOW burrow exclusion and closure would likely result in BUOW moving from The HUB @ ONT project site to the Ontario International Airport runway, which would put the BUOW at risk of creating additional bird strike hazards with aircraft.

The presence of BUOWs at ONT is one wildlife hazard that the OIAA is required to abate under federal regulations (14 Code of Federal Regulations §139.337). These regulations require the OIAA, as part of ONT's certification with FAA, to "alleviate or eliminate wildlife hazards to air carrier operations." The ONT WHMP identifies BUOW as a wildlife hazard to airport operations that must be addressed, along with other hazards, under the WHMP.

While the subject site is zoned for industrial uses, the change of use incorporating the creation of a burrowing owl preserve site on airport property east of Haven Street would directly conflict with FAA regulations and guidance associated with the safety of aircraft operations and the use airport property. The following regulations and FAA guidance would apply to the proposed establishment of burrowing owl preserve on airport property:

- Title 14 of the Code of Federal Regulations, Part 139.339, *Wildlife Hazard Management*
- FAA Advisory Circular 150/5200-33, *Wildlife Hazard Attractants on and Near Airports*
- FAA Grant Assurances
- CertAlert 06-07, Requests by State Wildlife Agencies to Facilitate and Encourage Habitat for State-Listed Threatened and Endangered Species and Species of Special Concern on Airports Each item and its applicability to the proposed preserve is discussed in the following paragraphs.

Numerous avian bird strikes have been reported on the Ontario International Airport, including various strikes from BUOW. Due to the Federal Aviation Administration (FAA) regulations for avian bird strikes, flight safety, and USDA depredation permits in situ, onsite conservation of this subject site is not feasible. Translocation is needed for the long-term survival of the BUOWs on The HUB @ ONT project site.

USDA (Animal Plant Health Inspection Service; APHIS) is hired by OIAA to reduce strike hazards caused by various wildlife species. Per FAA rules and regulations, OIAA can't engage in restoration, mitigation or any actions that increase wildlife hazards within zones at and around an FAA certified airport. Any airport can lose their FAA certificate and funding if they are found to be out of compliance with this rule. Any mitigation efforts within 10,000 feet of the airport (the project site is located well within 10,000 feet of the airport) would be considered out of compliance and would likely result in wasted efforts as APHIS has the authority to haze, evict or lethally remove any hazardous wildlife.

Installing artificial burrows and/or encouraging owls to inhabit lands on or directly adjacent to the OIAA property violates FAA rules and is not a viable strategy because of the expected increased presence of other larger hazardous birds (e.g. red-tailed hawks, golden eagles, ferruginous hawks, red-shouldered hawks, Cooper's hawks, turkey vultures, and common ravens) who would attempt to predate or scavenge owls, squirrels or rabbits that would likely use the artificial burrows. Hawks

and vultures are those struck by aircraft at the highest rates and those known to cause the most damage per strike. These species are often involved in aircraft strikes while they are hover hunting or circling over the approach or departure ends of the airport within the glide slopes. Bird strikes in these situations (landing and take-off) are the most dangerous and can lead to catastrophic events that can kill hundreds of passengers and crew on jetliners.

Evicting the owls along Haven Avenue outside the airfield could result in owls moving to areas within the airfield, making a more hazardous situation. Owls are often found seeking refuge very close to taxiways and runways under lights, signs and other man-made structures that support refuge and areas for squirrels to create burrows. Many burrowing owls that are struck at airports are those crossing runways as aircraft are departing and arriving. This will generally not lead to a catastrophic accident however even small birds like burrowing owls are capable of causing tens of thousands of dollars in damage to aircraft per event.

Further, relocating or encouraging owls to reside on a commercial airfield would violate FAA rules, will result in APHIS having to remove the owls in the future, and creates potential liability for the resource agencies or biologists promoting the in-situ conservation of owls at or near an airport.

In summary, the act of attempting to conduct any form of “mitigation” including in situ or eviction on or directly adjacent to the airfield is not supported by the FAA, APHIS, or past direction from CDFW Headquarters. The best approach for owl mitigation at and adjacent to OIAA property should involve active relocation. This will better ensure for safe flight operations and compliance with FAA regulations while also attempting to provide the owls with a greater chance of survival and future breeding attempts.

Sincerely,

Travis McGill, ELMT Consulting

RE: EIR for Proposed Development at the Ontario Airport

Dear Rudy:

Mead & Hunt, Inc. (Mead & Hunt) offers the following responses to comments received in association with proposed development of "The Hub," a proposed logistics/warehousing project at the Ontario International Airport (ONT). The following comment responses pertain to FAA wildlife hazard management regulations and guidance as well as policies set forth in the Airport Land Use Compatibility Plan (ALUCP) for the Ontario Airport. The same or similar comments are grouped to avoid duplication, and commentors are identified in association with each comment.

COMMENT TOPIC NO. 1

Burrowing Owls Are Not a Hazard to Aviation

Comment 1a: Contrary to statements in the Helix Environmental report, Burrowing Owls are not a hazard to aviation. They are small birds that fly close to the ground and do not fly in flocks. According to the FAA bird strike data, there were 21 reports of airstrikes involving these owls since 2008. Eight turned out to be other wildlife species or the species were unknown; for eleven a carcass or wing was found but no airstrike was reported by pilots; and two involved a Burrowing Owl strike but no damage was reported. In all these years there we no instances of a Burrowing Owl causing damage to a plane. If Burrowing Owls that live right next to the runways are not a threat to aviation, how much less a threat are the owls that live east of Haven.

Another argument is that Burrowing Owl attract larger raptors that might cause damage to a plane. This problem can be addressed through a raptor control problem, something that all airports need to have in place, whether or not they have Burrowing Owls near their property. Many other airports protect plans [sic] from large raptors using control strategies that do not kill or harm or trap the raptors.

Finally, none of the Helix Environmental statements that the FAA will not allow mitigation for Burrowing Owls near an airport are backed up with reference to FAA regulations or communications. If you look at the FAA regulations that discuss Wildlife Hazards, you will find that Burrowing Owls are not mentioned. If Burrowing Owls are NOT a hazard to aviation, the owl mitigation can be done on the boot property.

Commentors: Suzanne C. Thompson, Chair, Pomona Valley Audubon Society Burrowing Owl Committee (Letter submitted by email on January 4, 2023).

Susan A. Phillips, Director, Robert Redford Conservancy for Southern California and Sustainability Professor of Environmental Analysis, Pitzer College, with B. Elliott, D. Silver, C. Schlotterbeck, K. Floyd, S. Sheakley, A. Gonzolez, C. R. Smith, R. Bekendam, L. S. Dieter, and A. J. Noriega (Letter submitted by email on January 4, 2023)

RESPONSE TO COMMENT TOPIC NO. 1

A recent review of Wildlife strike records in the FAA's National Wildlife Strike Database (NWSD) indicate that burrowing owls have been associated with recorded wildlife strikes at U.S. airports since 1992. The NWSD identifies a total of 407 strikes associated with the Burrowing Owl, with 23 strikes (5.6 percent of the total strikes) occurring in 2022. Five burrowing owl strikes resulted in minor or minor/uncertain damage to the following commercial service aircraft: Boeing 727-200, Boing 737-700, Boeing 737-800, and McDonnell Douglas MD80. A 2015 strike with a commercially operated Cessna LC-41 resulted in substantial aircraft damage, which is defined as damage or structural failure which adversely affects the structure strength, performance or flight characteristics of the aircraft and would normally require major repair or replacement of the affected component.[1]

The recent FAA/USDA publication *Wildlife Strikes to Civil Aircraft, 1990 to 2021* analyzes and interprets NWSD strike records. The analysis of NWSD records indicates that approximately 71 percent of all strikes from 1990 to 2021 occurred at elevations below 500 feet above ground level (AGL), with many occurring while aircraft were on the ground. The number of strikes above 500 feet AGL declined by 32 percent for each 1,000-foot gain in height for commercial transport aircraft and by 43 percent for general aviation aircraft. Strikes that occur on the ground or at low altitudes may cause comparatively less damage to aircraft than strikes that occur at higher elevations, but they occur more frequently and cause a negative effect on flight, such as an aborted takeoff, engine shutdown, precautionary landing, or other negative effect because they occur during sensitive takeoff and landing cycles.[2] As indicated by this data, the conclusion that burrowing owls do not fly high enough to cause bird strikes is incorrect.

Both civil and military aviation agencies understand that the burrowing owl poses direct hazards to aircraft operations, and the burrowing owl has been the subject of research. A 2018 article published in the Journal of Raptor Research entitled "Assessing Owl Collisions with U.S. Civil and U.S. Air Force Aircraft" considered the FAA NWSD, and the U.S. Air Force's Birdstrike Database identified 2,531 strikes that involved at least 20 species of owls. A total of 192 of the strikes (7.8 percent) were associated with burrowing owls. Among the conclusions drawn in the report:

- Owl strikes typically occurred within the airfield environment itself.
- Of the strikes associated with owls, 86 percent occurred when the aircraft was at or below 30 feet AGL.
- Owl strikes with US civil and USAF aircraft are a common event during flight operations within the USA and throughout the world.[3]

[3] Journal of Raptor Research. 2018. Assessing Owl Collisions with U.S. Civil and U.S. Air Force Aircraft. Vol. 52 (3): 2820290. Available at: https://bioone.org/journals/journal-of-raptor-research/volume-52/issue-3/JRR-17-64.1/Assessing-Owl-Collisions-with-US-Civil-and-US-Air-Force/10.3356/JRR-17-64.1.full

The FAA and USDA have considered burrowing owls as both a direct and indirect hazard to aircraft operations, as the burrowing owl can be prey for other hazardous species. Burrowing owls are opportunists who often use abandoned ground squirrel burrows for nesting. The combined presence of ground squirrels and the small owls attracts birds of prey such as red-tailed and Swainson's hawks, which are large enough to cause damage to aircraft. Burrowing owls were determined to pose a sufficient hazard at Naval Air Station Lemoore to cause the U.S. Navy and U.S. Fish and Wildlife to relocate the population to a remote area of the 19,000-acre installation.[4] Vultures, hawks, and other raptors are routinely addressed in the integrated wildlife hazard management plans prepared by civil airports.

The response to comment Topic No. 2 identifies FAA regulations and guidance that would conflict with the establishment of a burrowing owl preserve on airport property east of Haven Avenue.

COMMENT TOPIC NO. 2

Suggested Creation of a 90-acre Burrowing Owl Preserve on Airport Property

Comment 2a: More than 30 comments refer to the land that OIAA owns east of Haven Avenue and suggest that the creation of a "90-acre burrowing owl preserve on the site that is properly endowed and well managed will help keep the remaining Ontario owls safe…."

Commentors: G. Sidney Silliman (email dated January 3, 202), Lori Galloway (email dated January 1, 2023), Laura Jaoui (email dated January 2, 2023), Shea Millan (email dated January 2, 2023), Dave Macias, (email dated January 2, 2023), Gus Ocon (email dated January 2, 2023), Jacob Ligorria (email dated January 2, 2023), Maria Holcomb (email dated January 3, 2023), Miriam Rodriguez (email dated January 2, 2023), Patty Anis (email dated January2, 2023), Patricia Gleason (email dated January 2, 2023), Rachel Innes (Email dated January 1, 2023), Deena Ligorria (email dated January 2, 2023), Rebecca Byerley (email dated January 2, 2023), Andy Georges (email dated January 2, 2023), Alan Davis (email dated January 2, 2023); Madeline Allinder (email dated January 2, 2023), Maria Bennett (email dated January 1, 2023), Martina Ebert, Ph.D (email dated January 3, 2023), Dan Silver (email dated January 2, 2023), Scott Marnoy, MD (email dated January 2, 2023), Robert Holcomb (email dated January 1, 2023), Pamela Nelson (email dated January 4, 2023), Barbara Barton (email dated January 3, 2023), Caren Hanson (email dated January 4, 2023), Joel Huschle (email dated January 4, 2023), Jazmyn Rivera (email dated January 4, 2022), Jeff Strogen (email dated January 4, 2023), Kelly Coyne (email dated January 4, 2023), Ana Rodriguez (email dated January 3, 2023), Erik Knutzen (email dated January 4, 2023), Kimberly Dillbeck (email dated January 3, 2023), Marcyn Del Clements (email dated January 4, 2023), April D. Chertkow (email dated January 4, 2023),

Comment 2b: I support the proposed 90-acre Burrowing Owl Reserve at that site. Please do not destroy one of the last remnants of Burrowing Owl habitat in our valley**.**

Commentor: Scott Marnoy, MD, email dated January 2, 2023.

Comment 2c: I implore the City to ensure that if this project moves forward, requires the project developer to conserve land, forever to protect burrowing owl within the City of Ontario.

[4] Hendron. 2017, Solving the unsolvable:wise conservation solution protects owls and aviators at NAS Lemoore. Available at: https://www.fws.gov/story/2021-06/solving-unsolvable

Commentor: Paul Romario (email dated January 4, 2023) – PDF P. 34

Comment 2d: This bird is an important part of the natural heritage of Ontario and the Inland Valley. The vestigial habitat and owl population are true treasures that the City and Airport have the unique opportunity to capitalize on and share with not just the local community, but with travelers near and far. Instead of allowing the land to be developed, this land should be set aside for preservation of the burrowing owl. In doing so, the City and Airport will be taking a leadership role in helping conserve the burrowing owl….

Commentor: Shari Wasson, Certified California Naturalist and Co-Founder of Inland Valley Advocates for the Environment (IVAE)

Comment 2e: The burrowing owl is perhaps the signature species that makes Ontario unique—so signature, in fact, that the entire airport could be named after and themed as the Burrowing Owl Ontario Airport. Conserving this sensitive species—that has long been on the cusp of endangered species status—would position Ontario as a leader in innovative conservation strategies. This would open opportunities for the city to develop ecotourism opportunities, interpretive displays, artwork, and educational stations within the airport to celebrate the local owl population. Including the Burrowing Owl habitat east of the Airport could be part of the Airport's plan for greening and electrification.

…The benefits of having burrowing owls on airport land include their role as natural pest controllers and their potential to attract ecotourism.

Commentor: Susan A. Phillips, *et al.* (Letter submitted by email dated January 4, 2023.)

Comment 2f: The Federal Aviation Administration (FAA) does not list the burrowing owl as a species that poses danger to aircraft. In fact, the FAA actively promotes the conservation of burrowing owls and other wildlife at airports through its Airport Wildlife Hazard Management Program. This program provides guidance and resources for airport operators to develop and implement effective wildlife hazard management strategies that prioritize safety, while also promoting the conservation of wildlife on and around airport property (Federal Aviation Administration, 2019). The FAA also recognizes the important of conserving wildlife at airports, and takes steps to ensure that safety is prioritized while also promoting the conservation of species like the burrowing owl (Federal Aviation Administration. (2019). AIrport wildlife hazard management. Retrieved from https://www.faa.gov /airports_safety/wildlife. U.S. Fish and wildlife Service (2020, and Burrowing owl (*Athene cunicularia*). Retrieved https://fws.gov.southeasxt/wildlife/bird.burrowing-owl/).

Commentor: Susan A. Phillips *et al.* (Letter submitted by email dated January 4, 2023.)

Comment 2g: Please find a way to keep Airport Burrowing Owls in Ontario with a professionally managed and properly endowed preserve for the owls on site or nearby.

Commentor: Susan A. Phillips et al. (Letter submitted by email dated January 4, 2023.)

Comment 2h: Surely the best use for this property is to become a Burrowing Owl preserve.

Commentor: Trude Hurde (letter dated January 2, 2023)

RESPONSE TO COMMENT TOPIC NO. 2

The creation of a burrowing owl preserve site on airport property east of Haven Street would directly conflict with FAA regulations and guidance associated with the safety of aircraft operations and the use airport property. The following regulations and FAA guidance would apply to the proposed establishment of burrowing owl preserve on airport property:

- Title 14 of the Code of Federal Regulations, Part 139.339, *Wildlife Hazard Management*
- FAA Advisory Circular 150/5200-33, *Wildlife Hazard Attractants on and Near Airports*
- FAA Grant Assurances
- CertAlert 06-07, Requests by State Wildlife Agencies to Facilitate and Encourage Habitat for State-Listed Threatened and Endangered Species and Species of Special Concern on Airports

Each item and its applicability to the proposed preserve is discussed in the following paragraphs.

Title 14 of the Code of Federal Regulations Part 139.337, Wildlife Hazard Management

The Ontario International Airport (ONT) holds an operating certificate from the FAA in accordance with Title 14 Part 193, "Airport Certification." As a certificated airport, the City, as the Airport Operator, must meet the requirements of Title 14 of the Code of Federal Regulations Part 139.337, *Wildlife Hazard Management* (14 CFR Part 139.337). As stated in the regulation, "The operator of certificated airport, must take immediate action to alleviate wildlife hazards whenever they are detected (14 CFR 139.337, (a))." In this context, a wildlife hazard refers to the potential to cause a damaging aircraft collision with wildlife on or near an airport. Wildlife poses a direct threat when it has the potential be involved in a collision or "strike" with aircraft. Wildlife poses an indirect threat when it causes damage to aircraft or aviation facilities, such as nesting in aircraft or navigational equipment, chewing through wires, or by attracting other wildlife that could pose a direct hazard, such as wildlife that may attracts predators, such as raptors, coyote, etc.

A certificate holder must formulate an implement a wildlife hazard management plan when the FAA Administrator determines that one is needed based on the results of Wildlife Hazard Assessment (14 CFR 139.337 (e)). The City of Ontario has developed an FAA-approved WHMP as requested by the FAA Administrator. FAA regulations at 14 CFR Part 139.337 also refers to other FAA resources that are acceptable for managing wildlife at airports. Paragraph (g) states that "FAA Advisory Circulars contain methods and procedures for wildlife hazard management at airports that are acceptable to the Administrator."

FAA AC 150/5200-33C, Wildlife Hazard Attractants On and Near Airports

Available at: https://www.faa.gov/documentLibrary/media/Advisory_Circular/150-5200-33C.pdf

The FAA issues several Advisory Circulars (ACs) and CertAlerts to help airport operators address specific issues associated with airport operations and management. AC 150/5200-33C provides guidance on certain land uses that have the potential to attract hazardous wildlife on or near public-use airports, and the FAA recommends the guidance for airports that receive funding under Federal grant assistance programs,

including the Airport Improvement Program, and the 39 grant assurances (obligations) associated with the receipt of federal funds, specifically FAA grant assurance nos. 9 and 34.
The FAA also recommends the AC 150/5200-33C for land-use planners and developers of projects, facilities, and activities on or near airports. The proposed creation of a burrowing owl preserve on Airport-owned property would conflict with key recommendation identified in the AC 150/5200-33C:

- **Maintaining an appropriate environment for safe and efficient aircraft operations.** As identified in AC 150/5200-33C, "Airport operators should maintain an appropriate environment for the safe and efficient operation of aircraft, which entails mitigating wildlife strike hazards by fencing, modifying the landscape in order to deter wildlife, or by hazing or removing wildlife hazards to aircraft from congregating at airports" (paragraph 1.1.1).

  Burrowing owls are known to pose direct and indirect strike hazards to aircraft operations – burrowing owls have been struck at ONT and other airports – and they can pose indirect hazards as they can attract other hazardous wildlife, including predators such as coyote and raptors. Contrary to the AC, creating a burrowing owl preserve would attract potentially hazardous wildlife rather than deter wildlife from congregating on airports.

- **Minimum Separation criteria for land use practices that attract hazardous wildlife to the airport vicinity.** Chapter 1 of AC 150/5200-33C identifies minimum separation distances between aircraft movement areas and land use practices that attract hazardous wildlife. As stated in paragraph 1.1.3, "FAA criteria include land uses that cause movement of hazardous wildlife onto, into, or across an airport's approach or departure airspace or aircraft movement areas."

  For airports that support turbine-powered aircraft (i.e., jets), the FAA recommends maintaining a separation of 10,000 feet "between the closest point of the airport's aircraft operation area and the hazardous wildlife attractant" (paragraph 1.3). To protect approach, departure, and circling airspace, "the FAA recommends a distance of 5 miles between closest point of the airport's aircraft operations area and the hazardous wildlife attractant" (paragraph 1.4).

  As measured using aerial photography, the east side of Haven Avenue is less than 2,100 feet from aircraft pavements associated with Runways 26L and 26R and is directly beneath the approach/departure airspace; therefore, the creation of a wildlife preserve at this location would conflict with FAA guidance set forth in the AC.

- **Land Uses that attract hazardous wildlife.** Chapter 2 of AC 150/5200-33C discusses land use practices that have the potential to attract hazardous wildlife and threaten aviation safety (paragraph 2.1.2). Among the land uses identified are mitigation banks and other land uses including conservation easements, parks, wildlife management areas, and other activities that may have the potential to attract hazardous wildlife.

  The AC states, "Regardless of the source of the attraction, when hazardous wildlife is noted on a public use airport, each certificate holder must take prompt remedial action(s) to protect aviation safety" (paragraph 2.8.4).

  Section 2.9 specifically refers to habitat for state and federally listed species on airports. The AC notes that airports provide an artificial environment that may vary from surrounding native landscapes, and some wildlife species may be attracted to the airport in higher numbers because the airport may offer features the species prefer, including state and federally listed species and species of concern.

The guidance clearly states:

> "Airport operators should exercise caution in adopting new management techniques because they may increase wildlife hazards and be inconsistent with safe airport operations. Managing the on-airport environment to facilitate or encourage the presence of hazardous wildlife species can create conditions that are incompatible with, or pose a threat to, aviation safety" (paragraph 2.9.1.1).

In referring to state listed species and species of concern, the FAA acknowledges that not all species of concern pose a direct threat to aviation safety, but "may pose and indirect threat and be hazardous because they attract other species or support prey species attractive to other species that are directly hazardous" (paragraph 2.9.1.2).

FAA Grant Assurances (Obligations)

When airport owners or sponsors, such as the City, accept funds from FAA-administered airport financial assistance programs, they must agree to certain obligations or assurances that require the recipients to maintain and operate their facilities safely and efficiently and in accordance with specified conditions.

Table 1 identifies specific Airport Improvement Program (AIP) grant assurances that are applicable to wildlife hazard management and the creation of a burrowing owl preserve on airport property.

Table 1: Grant Assurances Applicable to Wildlife Hazard Management

Grant Assurance No. / Title	Description and Applicability
GA 19 Operation and Maintenance	**Description** The airport and all facilities which are necessary to serve the aeronautical users of the airport, other than facilities owned or controlled by the United States, shall be operated at all times in a safe and serviceable condition and in accordance with the minimum standards as may be required or prescribed by applicable Federal, state, and local agencies for maintenance and operation. It will not cause or permit any activity or action thereon which would interfere with its use for airport purposes" (paragraph a). **Applicability** The creation of a burrowing owl preserve would create a hazardous wildlife attractant on airport property, which conflicts with the requirement to operate the airport at all times in a safe and serviceable condition.
GA 20 Hazard Removal and Mitigation	**Description** It will take appropriate action to assure that such terminal airspace as is required to protect instrument and visual operations to the airport (including established minimum flight altitudes) will be adequately cleared and protected by removing, lowering, relocating, marking, or lighting or otherwise mitigating existing airport hazards and by preventing the establishment or creation of future airport hazards. **Applicability** The creation of a wildlife preserve for the burrowing owl would create a hazardous wildlife attractant beneath terminal airspace. Such action would conflict with the terms of the grant assurance, which require the airport operator to adequately clear and protect the terminal airspace.

GA 21 Compatible Land Use	**Description** It will take appropriate action, to the extent reasonable, including the adoption of zoning laws, to restrict the use of land adjacent to or in the immediate vicinity of the airport to activities and purposes compatible with normal airport operations, including landing and takeoff of aircraft. **Applicability** The proposed burrowing owl preserve would be located on airport property and within the Airport Influence Area for ONT as designated by the adopted Airport Land Use Compatibility Plan (ALUCP). The development of wildlife preserve is considered an incompatible use within the context of ALUCP policies, the purpose of which is to restrict the use of land in the airport vicinity to activities and purposes that are compatible with normal operations. The proposed preserve would conflict with the ALUCP and the grant assurance.
Source: AIP Grant Assurances for Airport Sponsors. 2022. Accessed January 2022. Available at: https://www.faa.gov/sites/faa.gov/files/airports/new_england/airport_compliance/assurances-airport-sponsors-2022-05.pdf	

CertAlert 06-07, Requests by State Wildlife Agencies to Facilitate and Encourage Habitat for State-Listed Threatened and Endangered Species and Species of Special Concern on Airports

CertAlerts provide the FAA Airports Safety and Operations Division with additional guidance about Part 139 Airport Certification and related issues. Cert Alert 06-07 describes procedures for responding to requests by state wildlife agencies to facilitate and encourage habitat for state-listed species or species of special concern that occur on airports and may pose a threat to aviation safety. Some of the guidance set forth in this CertAlert is reiterated in AC 150/5200-33C. The CertAlert states:

> Airport operators must decline to adopt habitat management techniques that jeopardize aviation safety. Adopting such techniques could place them in violation of their obligations and subject to an FAA enforcement action and possible civil penalties under 49 U.S.C. §44706, as implemented by 14 CFR § 139.337. In particular, an airport operator that has received federal grant-in-aid assistance is obligated through its grant assurances to maintain compatible land uses. Failure to do so may lead to noncompliance with its grant obligations. Further, airports that serve commercial air carriers are required to be certificated under 49 U.S.C. §44706, as implemented by 14 CFR Part 139. Title 14 CFR § 139.337(a) requires airport operators holding a Part 139 certificate to "take immediate action to alleviate wildlife hazards whenever they are detected."

Although the proposal to create a burrowing owl preserve was not issued by a state agency, the burrowing owl is a state species of concern. The CertAlert is clear in that airport operators should not manage airport property for the preservation of state list species/species of concern based on their potential to attract potentially hazardous wildlife and pose conflicts with FAA regulations, grant assurances, and guidance.

COMMENT TOPIC NO. 3

Undeveloped Airport Safety Zones

Two comment letters indicated that the creation of a burrowing owl preserve would maintain the project area as "undeveloped safety zones for the airport" and that these "undeveloped areas provide emergency landing zones for aircraft, if needed."

Commenters: Natasha Walton, Planning Director, Inland Valley Advocates for the Environment (IVAE) (January 4, 2023); Trude Hurd, Lake Forest, CA (January 2, 2023)

RESPONSE TO COMMENT TOPIC NO. 3

While having undeveloped land around airports is desirable, designating open land as a wildlife preserve conflicts with federal, state, and local airport land use compatibility guidance due to wildlife hazard concerns (as noted in the above sections). For the purposes of "The Hub" project, buildings and other structures were sited in a manner that keep the following critical aeronautical areas clear of obstructions:

- **Runway Protection Zone (RPZ)**

  Trapezoidal in shape, centered about the extended runway centerline, and typically located off each runway end. The full standards and dimensions for RPZs are in FAA Advisory Circular 150/5300-13, *Airport Design*. The purpose of the RPZ is to enhance the protection of people and property on the ground by clearing RPZ areas (and keeping them clear) of objects and activities that would impact the safety of people and property on the ground.

- **Safety Zones**

  The ONT safety zones are established in the Ontario International Airport Land Use Compatibility Plan (ALUCP), which was adopted by the City of Ontario (the City) in 2011 and amended in July 2018.

  The ONT safety zones are based upon the generic safety zones provided in the California Airport Land Use Planning Handbook (January 2011) and published by the California Department of Transportation (Caltrans), Division of Aeronautics. Safety Zone 1 is adjusted to match the ONT RPZs. The intent of the safety compatibility policies is to minimize the risks associated with an off-airport aircraft accident or emergency landing. The policies focus on reducing the potential consequences of such events when they occur.

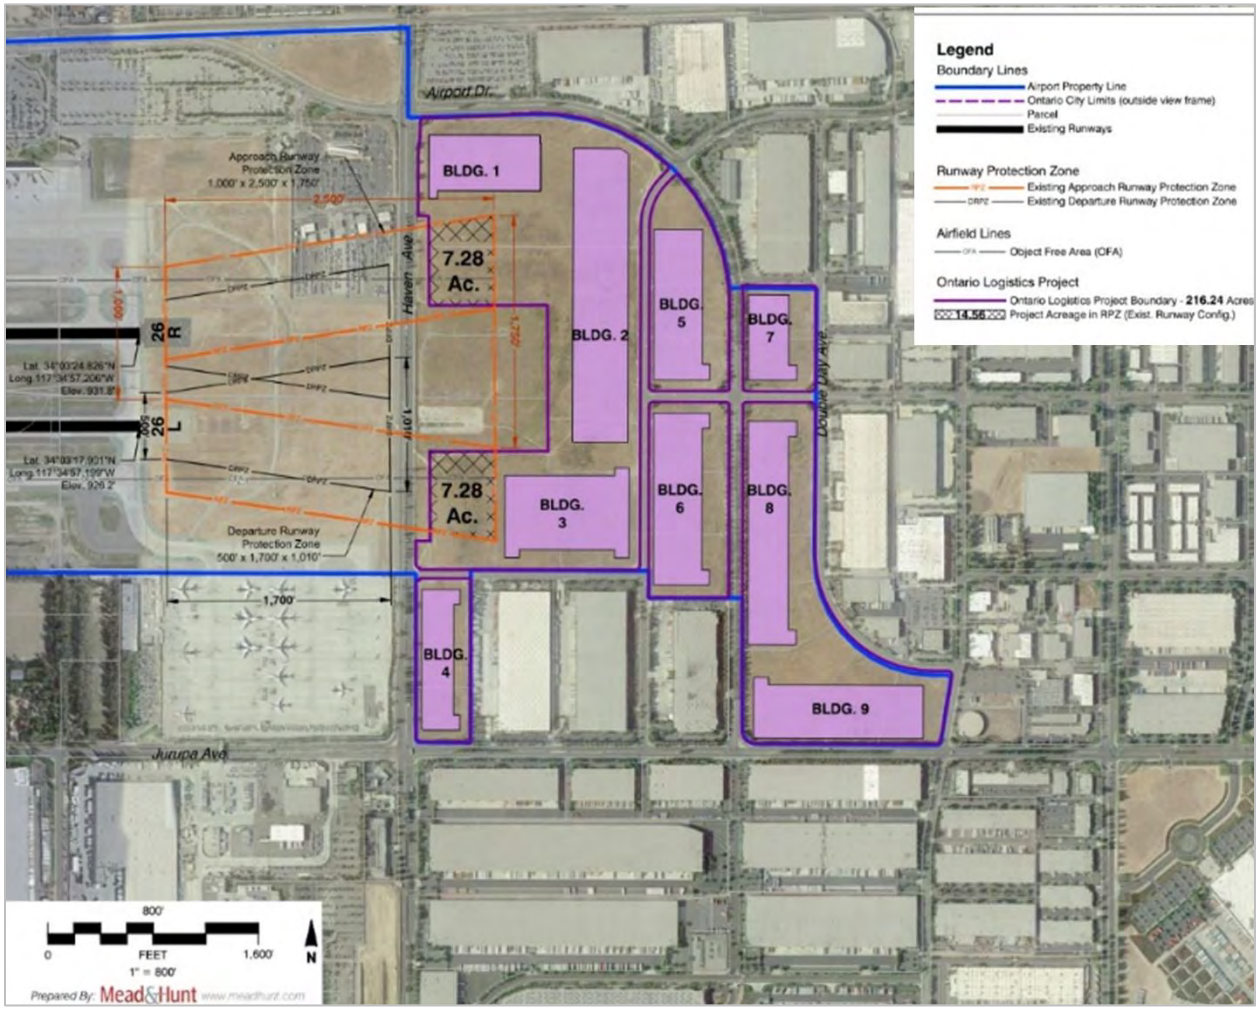
- **Airspace Surfaces**

  Three-dimensional airspace areas that surround a runway and are used by the FAA through Title 14, Code of Federal Regulations (CFR), Part 77, *Safe, Efficient Use, and Preservation of National Airspace,* to evaluate whether a structure or vegetation is or could be a hazard to air navigation. The dimensions of the ONT imaginary surfaces are based upon individual runway characteristics.

Runway Protection Zone (RPZ)

As shown in **Exhibit 1**, approximately 14.56 acres of the project site fall within the Runway Protection Zones (RPZs) for Runways 26L and 26R. The proposed site plan keeps this zone clear of future structures and parking lots. As such, no compatibility conflicts exist in the RPZs, which is the most restrictive of all the safety zones.

Exhibit 1: Runway Protection Zones

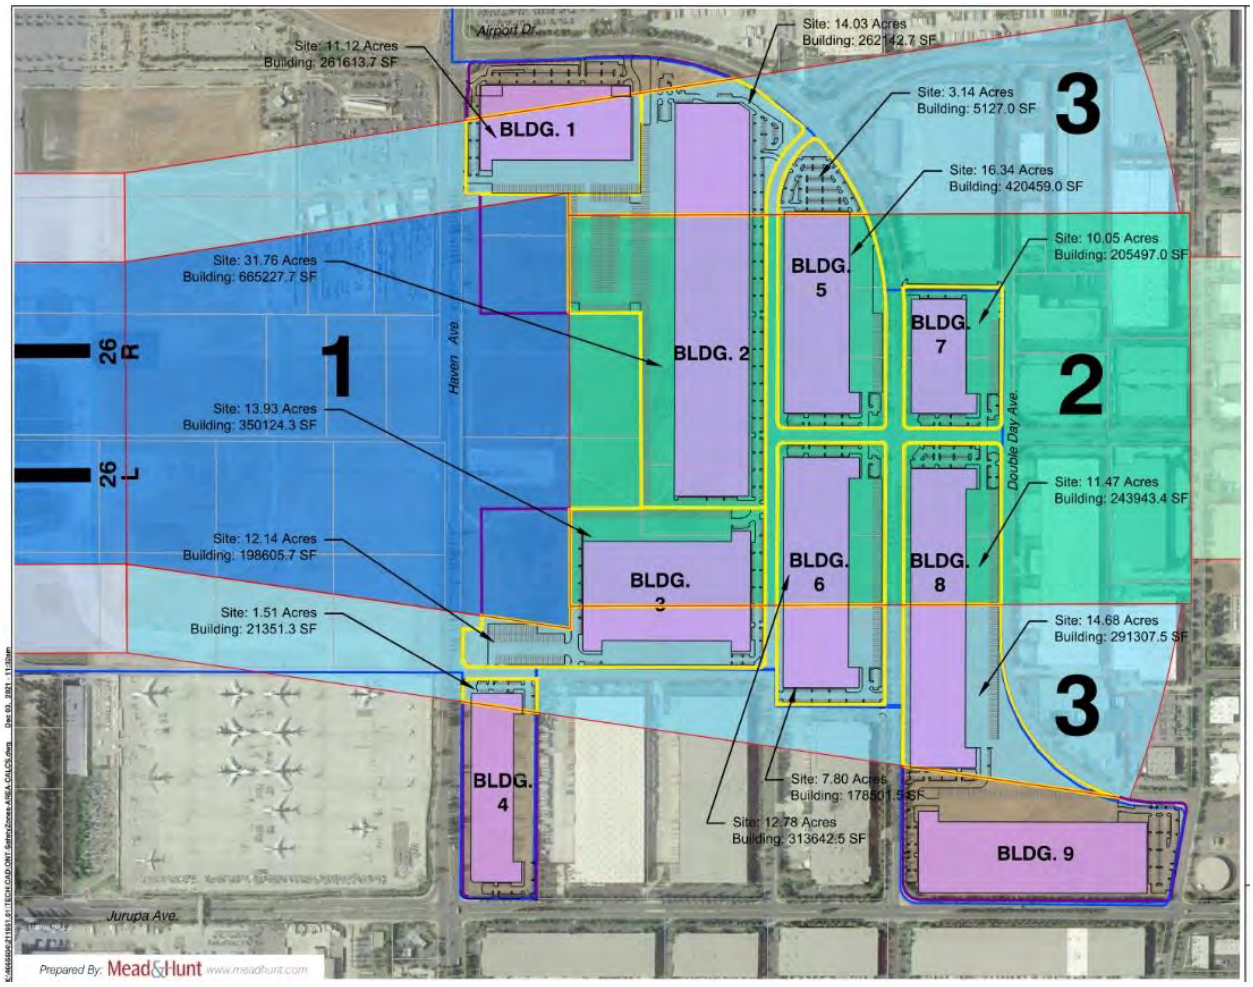


Safety Zones

The ONT ALUCP establishes intensity limits for nonresidential uses (i.e., maximum number of people per acre) and other safety considerations within each of the five safety zones established for ONT. As shown in **Exhibit 2**, the project site spans Safety Zones 1, 2, and 3.

As noted above, Safety Zone 1 is clear of structures and satisfies ALUCP safety criteria. For Safety Zones 2 and 3, the individual proposed building sites are subject to the ALUCP usage intensity (people per acre) limits for each zone. The City of Ontario controls the ultimate determination of compliance with the ALUCP intensity criteria, and those determinations will occur when a potential tenant(s) is identified for each building and a specific land use is proposed. The intensity limits for each building will be incorporated into the tenant lease agreement. As such, no compatibility conflicts exist in Safety Zones 2 and 3.

Exhibit 2: Safety Zones



Airspace Surfaces

Airspace protection compatibility policies seek to prevent the creation of land use features that can pose hazards to the airspace required by aircraft in flight and have the potential for causing an aircraft accident. The project has been conceptually designed to keep all future structures below the Part 77 obstruction surfaces; therefore, the project does not pose any air space hazards.

Additionally, FAA Form 7460-1 has been submitted to the FAA for an aeronautical study for all nine buildings in The Hub (see **Exhibit 3** for an example). The FAA has issued "Final Determination" letters for each of the nine project buildings in 2022. None of the buildings were determined to be a hazard to air navigation subject to the conditions stipulated.

BUILDING #1
California Logistics Center
Ontario International Airport

CONCLUSIONS

The creation of a burrowing owl preserve would create an incompatible land use that conflicts with Chapter 2 of FAA AC150/5200-33C; it would create habitat for a species that has caused both direct and indirect threats to aircraft operations. Although the FAA supports efforts to protect threatened and endangered species and must review proposed projects for the consistency with the Endangered Species Act, the FAA cannot do so to the detriment of safe aircraft operations. As stated in the AC, "Requests to enhance or create habitat for threatened and endangered species often conflict with the safety of the traveling public and may place the protected species at risk of mortality by aircraft collisions. The FAA does not support the creation, conservation, or enhancement of habitat or refuges to attract endangered species on airports" (paragraph 2.9.2.1).

The FAA's continuing mission is to provide the safest, most efficient aerospace system in the world, and the safety of aviators and the traveling public must remain paramount. FAA regulations pertaining to hazardous wildlife seek to prevent the development of new wildlife hazard attractants within specified separation distances to protect the traveling public; however, the FAA supports conservation and seeks to avoid and minimize effects to protected species. The FAA complies with the National Environmental Policy Act for proposed airport actions, and it does not oppose the creation, mitigation, or conservation of areas that are constructed outside of the separation distances identified in AC 150/5200-33.

Mead & Hunt appreciates this opportunity to review the comments received on The Hub, a proposed logistics project on Ontario International Airport. Please do not hesitate to contact Lisa Harmon by email (lisa.harmon@meadhunt.com) should you have comments on the material discussed in this letter.

Comments Received on The Hub at the Ontario International Airport (ONT)

From: Seth Thompson
To: Planning Director
Subject: Agenda Item B at the January 4, 2023 Development Advisory Board Meeting
Date: Monday, January 2, 2023 10:34:01 AM

The multi page document supporting this agenda item includes several misstatements of fact and references to a flawed earlier document, all purporting to support the notion that there are no potential environmental harms flowing form the proposed development scheme. This is clearly not the case:

- the document relies on a mitigation plan for Burrowing Owls that has already failed;
- there is incontrovertible scientific evidence that even the best translocation efforts result in high mortality;
- those owls who survive the trauma of translocation represent a loss of distinct biodiversity;
- loss of the Ontario Airport owls will have damaging effects on Chino Burrowing Owls and cascading negative effects on the few indigenous Burrowing Owls in the Pomona Valley.

Dumping a massive document supporting one agenda item in the middle of a holiday week end and poses an almost insurmountable obstacle for advisory board members who want to conscientiously weigh the interests of OIAA, the local communities, and the broader good of the region.

If I were a member of the board, I'd want to say, "whoa, let's give this proposal the time and attention it deserves and table this agenda item." I encourage you to do the same.

From: Seth Thompson
To: Planning Director

Date: Monday, January 2, 2023 10:46:08 AM

The multi page document supporting this agenda item includes several misstatements of fact and references to a flawed earlier document, all purporting to support the notion that there are no potential environmental harms flowing from the proposed development scheme.

But this bald statement requires you to ignore the dismal failure of the much hyped translocation scheme in the City of Ontario and the best available science on Burrowing Owl population dynamics.

The timing of filling this document in the middle of a holiday weekend almost guarantees that the members of the advisory board will not have time to thoughtfully review it and make a prudent recommendation.

The members of the advisory board and the larger community deserve better. Please table this item until you have had a chance to give it the skeptical scrutiny it deserves.

From: G. Sidney Silliman
To: Planning Director
Subject: Agenda Item B at the January 4, 2023 Development Advisory Board Meeting
Date: Tuesday, January 3, 2023 9:53:22 AM

To: Ontario Development Advisory Board
Subject: Agenda Item B at the January 4 2023 Development Advisory Board Meeting

Burrowing Owls, a California species of special concern, were once numerous in Ontario and Chino and on the land of what is now the Ontario Airport. Widespread development has resulted in a significant decrease in their numbers as little was done to ensure the survival of these unique birds. Today, we need to protect the remaining land where the Owls nest and raise their young.

There are at least four (4) significant and negative environmental effects of the proposed plan. These have not been considered or mitigated for. These are: (1) the plan proposes using a mitigation plan for Burrowing Owls that has already failed and will result in high mortality; (2) loss of distinct biodiversity for the translocated owls; (3) negative effects on the Chino Burrowing Owls; and (4) overall higher mortality of translocated owls. In short, contrary to the proposed Development Advisory Board decision, the project will have a significant negative effect on Burrowing Owls.

The land that OIAA owns east of Haven Avenue is a primary nesting site for the Owls. Please do not destroy it with more warehouses! A 90-acre Burrowing Owl preserve on the site that is properly endowed and well-managed will help keep the remaining Ontario Owls safe so they can continue to live in their native habitat. Schoolchildren, families, and all of us can enjoy having the owls nearby to study and enjoy.

Agenda item: For Agenda Item B at the January 4, 2023 Development Advisory Board Meeting

To the Ontario Development Advisory Board,

Please protect Burrowing Owls in our area. These small, sandy colored owls with long, slender legs and bright yellow eyes are a state species of special concern and also a local concern due to development which threatens their habitat. Unlike other owls, Burrowing Owls are active in the daytime. They live and hunt on the ground, and people can see how special they are in the full light of the sun. In the past Burrowing Owls were once abundant in Ontario and Chino, but many of these owls have been driven out of the area due to widespread development that did not protect the land where these beautiful owls nest and raise their young. They are worth saving and safeguarding.

There are at least four significant negative environmental effects of the proposed plan that have not been considered or mitigated for the consideration of these owls. The mitigation plan for the Burrowing Owls has already failed and will result in a high mortality, and there is a loss of distinct biodiversity for the translocated owls. There is also a damaging effect on Chino Burrowing Owls and overall higher mortality of translocated owls. Contrary to the proposed Development Advisory Board Decision, the project will have a significant negative effect on Burrowing Owls which are already a state species of special concern.

The land that OIAA owns east of Haven Avenue is a primary nesting site for the owls. Please do not destroy their habitat so that more warehouses can be added to Ontario. A 90-acre Burrowing Owl preserve on the site that is properly endowed and well-managed will help keep the remaining Ontario owls safe so they can continue to live in their native habitat, and schoolchildren, families and each one of us can study and enjoy the beauty of our local Burrowing Owls in the future.

Comment 2a

Please help the species to survive in our area by protecting Burrowing Owls and their nesting site east of Haven Avenue.

To the Ontario Development Advisory Board,

Burrowing Owls were once numerous in Ontario and Chino but have been driven out of the area due to widespread development that did not protect them. We need to protect the remaining land where the owls nest and raise their young.

There are at least four significant negative environmental effects of the proposedplan that have not been considered or mitigated for. These are: using a mitigation plan for Burrowing Owls that has already failed and will result in high mortality, loss of distinct biodiversity for the translocated owls, damaging effects on Chino Burrowing Owls, and overall higher mortality of translocated owls. Contrary to the proposed Development Advisory Board decision, the project will have a significant negative effect on Burrowing Owls, a state species of special concern.

The land that OIAA owns east of Haven Avenue is a primary nesting site for the owls. Please do not destroy it so more warehouses can be added to Ontario! A 90-acre Burrowing Owl preserve on the site that is properly endowed and well-managed will help keep the remaining Ontario owls safe so they can continue to live in their native habitat. Schoolchildren, families, and all of us can enjoy having the owls nearby to study and enjoy.

Regarding:

Agenda item: For Agenda Item B at the January 4, 2023 Development Advisory Board Meeting

To the Ontario Development Advisory Board,

Burrowing Owls have been in this area for years, this is their home. Do we really need more development???

Please find another location for development, protecting the remaining land where the owls nest and raise their young is crucial to their survival.

Thank you,
Gloria Karimi

Agenda item:
For Agenda Item B at the January 4, 2023
Development Advisory Board Meeting

To the Ontario Development Advisory Board,

For the past six years, I have been involved in efforts to monitor the numbers of burrowing owls in our area. At one time there were many native burrowing owls in southern California but heavy development has driven them close to elimination. Several small groups of them are still nesting in the Ontario and Chino areas and need to be protected by preserving the areas where they live and nest.

I understand that the Development Advisory Board is considering developments that will seriously endanger or eliminate these burrowing owl populations. There are at least four significant negative environmental effects of the proposed plan that have not been considered or mitigated for. These are: using a mitigation plan for Burrowing Owls that has already failed and will result in high mortality, loss of distinct biodiversity for the translocated owls, damaging effects on Chino Burrowing Owls, and overall higher mortality of translocated owls. Contrary to the proposed Development Advisory Board decision, the project will have a significant negative effect on Burrowing Owls, a state species of special concern.

The land that OIAA owns east of Haven Avenue is an important nesting site for these owls. Please do not destroy it so more warehouses can be added to Ontario. A 90-acre Burrowing Owl preserve on the site that is properly endowed and well-managed will help keep the remaining Ontario owls safe so they can continue to live in their native habitat. Schoolchildren, families, and all of us can enjoy having the owls nearby to study and enjoy. They are an important part of a healthy environment that we all need to live in.

RE: January 4, 2023, Item B, Development Advisory Board Meeting

Dear Members of the Board:

Endangered Habitats League (EHL) objects to plans to displace Burrowing Owls from the project site. For your reference, EHL is a Southern California regional conservation group.

Burrowing Owls were once numerous in Ontario and Chino but are in sharp decline due to development that has not been planned to be compatible with owl survival. The property owned by OIAA east of Haven Avenue is a primary nesting site for the owls. The proposed translocation plan for the owls is inadequate, leaving unmitigated significant impacts that require an EIR. The proposed scheme does not have a track record of long term success and will cause mortality. It will also result in genetic depletion of remaining owls in the area. Rather, commercial development should be sited on a small footprint, leaving a viable, managed owl preserve. Compatibly of owls with airport operations has been achieved elsewhere.

We urge you to step back and consider other options for this highly sensitive and depleted species.

Sincerely,
Dan Silver

To the Ontario Development Advisory Board,

Burrowing Owls were once numerous in Ontario and Chino but have been driven out of the area by widespread development that did not protect them. This mistake must not be made again. We need to protect the remaining land where the owls nest and raise their young.

There are significant negative environmental impacts of the proposed plan that have not been considered or for which adequate mitigation actions have not been identified. Those mitigation actions currently being proposed for Burrowing Owls ARE CLEARLY INADEQUATE, have FAILED in the past, and will result in HIGH MORTALITY and LOSS OF DISTINCT BIODIVERSiTY for the translocated population,

The proposed Development Advisory Board decision fails to recognize that the project, as proposed, will have a significant negative effect on Burrowing Owls, a state species of special concern. The land that OIAA owns east of Haven Avenue is one of a VERY SMALL number of primary nesting sites for the owls. These owls are a public and a community resource, and this critical nesting area must not be destroyed for the financial gain of a few or short-sighted revenue increases. Once lost, this public resource cannot be restored.

A reasonable accommodation needs to be adopted. A 90-acre Burrowing Owl preserve on the site that is properly endowed and well-managed will help keep the remaining Ontario owls safe so they can continue to live and breed in their native habitat. Schoolchildren, families, and all of us can enjoy having our owls nearby to study and enjoy.

CITY OF ONTARIO DEVELOPMENT ADVISORY BOARD MEETING SUBMITTED COMMENTS
1/4/23

Re: Agenda Item B at the January 4, 2023 Development Advisory Board Meeting

Burrowing Owls were once numerous in Ontario and Chino but due to widespread development that did not protect biological resources, the owls are fast disappearing. We need action now to protect Burrowing Owl habitat and allow these little birds to continue to live on in Ontario as they have for hundreds of years. The presence of a thriving population of Burrowing Owls in Ontario is a biological asset for the community and a chance for children and all of us to see the owls close by in their native habitat. The people of Ontario need protection for their native species, not more warehouses.

There are at least four significant negative effects on the environment that will be caused by and not mitigated by the current plan.

One, it is shocking that the DAB is suggesting that the Ontario Plan mitigation for Burrowing Owls was in any way successful and that it is an approach to be used for the owls east of Haven Avenue. The Ontario Plan mitigation started around 2007 and I assume it is continuing. From 2007 on, the City of Ontario collected fees from developers to mitigate the loss of large sections of habitat. The idea was that the funds would be used to purchase mitigation land. I don't know how much has been paid by developers but as of a few years ago, it was about $14 million. **None** of that has been spent for mitigation. Probably 100s of BUOWs were evicted from their homes and no mitigation land was purchased that they could go to. Please don't tell us that now 15 years after the first evictions that the city is trying to find a land trust to establish a mitigation site. That doesn't repair the damage done by years of evicting owls without a mitigation site.

Two, another significant negative effect of translocating owls to sites far from their native land is the loss of distinct biodiversity. Kelly Barr, Kristin Ruegg and others have found genetically distinct populations of Burrowing Owls that are a distance apart even within California (Alvarado, Bossu et al., 2022). Translocating owls 30 to 40 miles from their natal site risks mixing the distinct groups. Possible advantages of the genetic differences that might increase survivability in a particular location would be lost to the owls.

Three, Burrowing Owls need to have other sites nearby within the usual range of juvenile dispersion (from .5 to 13 miles) so young adult owls can avoid inbreeding (Rosenberg, Gervais, & Trulio, 2007). The East of Haven Ontario Burrowing Owls are an average of 7 to 8 miles from several Burrowing Owl nesting sites in the Chino area. Thus, the Airport area owls make it possible for a healthy exchange of young adults finding mates between the two sites. Loss of the East of Haven site could seriously undermine the viability of what are now healthy populations of Burrowing Owls in Chino, contributing to the loss of all Burrowing Owls from the Pomona Valley.

Four, mitigation translocation for burrowing owls is an option that suits the preferences of land developers, but it does not provide a superior life for the owls. In fact, owls that are translocated from their home habitat are subject to higher mortality than those who are protected on site or nearby (Hennessey et al., 2022). The removal of all the OIA owls will be a significant blow to the possibility of success of owls in the area.

Contrary to the DAB analysis, the project will have a significant negative effect on Burrowing Owls, a state species of special concern.

In fact, the Helix Environmental Biological Resources report also states that leaving Burrowing Owls on site is the best option for the owls. Unfortunately, the report goes on to reject that option for invalid reasons such as the mistaken notion that Burrowing Owls are a hazard to aviation. Contrary to the statements in the Helix Environmental report, Burrowing Owls are not a hazard to aviation. They are small birds that fly close to the ground and do not fly in flocks. According to the FAA bird strike data, there were 21 reports of airstrikes involving these owls at OIA since 2008. Eight turned out to be other wildlife or the species were unknown; for eleven a carcass or wing was found but no airstrike was reported by pilots; and two involved a Burrowing Owl strike but no damage was reported. In all these years, there were **no instances** of a Burrowing Owl causing damage to a plane. If Burrowing Owls that live right next to the runways are not a threat to aviation, how much less a threat are the owls that live east of Haven.

Comment 1a

Another argument is that Burrowing Owl attract larger raptors that might cause damage to a plane. This problem can be addressed through a raptor control program, something that all airports need to have in place, whether or not they have Burrowing Owls near their property. Many other airports protect plans from large raptors using control strategies that do not kill or harm or trap the raptors.

Finally, none of the Helix Environmental statements that the FAA will not allow mitigation for Burrowing Owls near an airport are backed up with reference to FAA regulations or communications. If you look at the FAA regulations that discuss Wildlife Hazards, you will find that Burrowing Owls are not mentioned. If Burrowing Owls are NOT a hazard to aviation, then owl mitigation can be done on the boot property.

It is not too late to do the right thing and find a way to keep the Ontario Airport Burrowing Owls in the Ontario area with a professionally managed and properly endowed preserve for the owls on site.

We incorporate by reference the objections stated in the Redford Conservancy group opposition letter and additional opposition letters related to the January 4, 2023 hearing of this matter. While one or more of these letters may be withdrawn, the objections stated in the letters are valid and we incorporate them as if fully stated herein.

Sincerely,
Suzanne Thompson
Chair, Pomona Valley Audubon Society Burrowing Owl Committee

To: Planning Director
Subject: Development Plan PDEV21-047 Environmental Assessment and Addendum Approval
Date: Wednesday, January 4, 2023 9:34:22 AM

Thank you for the opportunity to comment on the Development Plan PDEV21-047 Environmental Assessment and Addendum Approval on today's agenda for the City of Ontario Development Advisory Board. I am not available to attend today's meeting but would like to voice my concern for approval. I have lived in Ontario my entire life as well as my parents and children. I am very concerned regarding the proposed development and actions taken towards the burrowing owl population on-site. This burrowing owl population has garnered world-wide attention and has enthralled the public.

I am aware that the CIty of Ontario has collected fees from development, particularly within the Ontario Ranch Specific Plan in response to burrowing owl mitigation, but I am not aware, and the addendum also refers that these moneys have not been used to purchase and conserve burrowing owl mitigation. This deferment of mitigation is irresponsible and harms the burrowing owl population in the City of Ontario. There needs to be transparency on how these fees will be utilized for mitigating impacts. The City of Ontario as a lead agency, needs to be responsible and move forward with fulfilling its obligations, as well as consider the cumulative impacts from this deferment.

This may be one of the last successfully reproducing populations of burrowing owl in the City of Ontario. They have in recent years observed having up to 9 chicks, in one burrow! I implore the City to ensure that if this project moves forward, and the owls are moved, the City requires the project developer to conserve land, forever to protect burrowing owl within the City of Ontario. We should not subject these owls to move without permanent conservation. The fees are not acceptable in this case. These owls need land and without compensatory mitigation of habitat, the impacts to this project are significant under CEQA as they will have a substantial effect either directly or through habitat modifications on a special status species.

These are: using a mitigation plan for Burrowing Owls that has already failed and will result in high mortality, loss of distinct biodiversity for the translocated owls, damaging effects on Chino Burrowing Owls, and overall higher mortality of translocated owls. Contrary to the proposed Development Advisory Board decision, the project will have a significant negative effect on Burrowing Owls, a state species of special concern.

The land that OIAA owns east of Haven Avenue is a primary nesting site for the owls. Please do not destroy it so more warehouses can be added to Ontario! A 90-acre Burrowing Owl preserve on the site that is properly endowed and well-managed will help keep the remaining Ontario owls safe so they can continue to live in their native habitat. Schoolchildren, families, and all of us can enjoy having the owls nearby to study and enjoy.

To the Ontario Development Advisory Board,

Re: Agenda Item B at the January 4, 2023 Development Advisory Board Meeting

I agree with and support the following statement:

Burrowing Owls were once numerous in Ontario and Chino but have been driven out of the area due to widespread development that did not protect them. We need to protect the remaining land where the owls nest and raise their young.

There are at least four significant negative environmental effects of the proposed plan that have not been considered or mitigated for. These are: using a mitigation plan for Burrowing Owls that has already failed and will result in high mortality, loss of distinct biodiversity for the translocated owls, damaging effects on Chino Burrowing Owls, and overall higher mortality of translocated owls. Contrary to the proposed Development Advisory Board decision, the project will have a significant negative effect on Burrowing Owls, a state species of special concern.

The land that OIAA owns east of Haven Avenue is a primary nesting site for the owls. Please do not destroy it so more warehouses can be added to Ontario! A 90-acre Burrowing Owl preserve on the site that is properly endowed and well-managed will help keep the remaining Ontario owls safe so they can continue to live in their native habitat. Schoolchildren, families, and all of us can enjoy having the owls nearby to study and enjoy.

Re: Development Plan (File No. PDEV21-047) - Agenda Item B

Dear Development Advisory Board:

These comments are submitted on behalf of the Center for Biological Diversity (the "Center") regarding the City of Ontario Development Advisory Board's January 4, 2023 consideration of Development Plan (File No. PDEV21-047) ("Project") to construct nine industrial buildings totaling 4,263,454 square feet and associated site improvements on 197.74 acres. As explained in greater detail below, there is substantial evidence indicating that the Project will have additional or more severe environmental effects on burrowing owls, air quality, cumulative impacts, and other adverse effects, than were analyzed in the City's 2050 Ontario General Plan. There also is substantial evidence that the Project will require additional or different alternatives or mitigation measures than were specifically analyzed and included in the 2022 Supplemental Programmatic Environmental Impact Report (PEIR). Moreover, there is no substantial evidence to support the City's contrary conclusions. Thus, the City is required to prepare a project-specific subsequent environmental impact report (EIR) that analyzes the site-specific effects of the Project in detail and includes additional alternatives to and mitigation measures for this project

The Center is a non-profit, public interest environmental organization dedicated to the protection of native species and their habitats through science, policy, and environmental law. The Center has over 1.7 million members and online activists throughout California and the United States. The Center has worked for many years to protect imperiled plants and wildlife, open space, air and water quality, and overall quality of life for people in the City of Ontario and San Bernardino County.

I. THE PROJECT IS NOT WITHIN THE SCOPE OF THE SEIR AND THERE IS A FAIR ARGUMENT THE PROJECT WILL CAUSE MORE SEVERE SIGNIFICANT EFFECTS AND REQUIRE ADDITIONAL MITIGATION MEASURES THAT WERE NOT ADDRESSED IN THE SEIR

The City must prepare a subsequent project-specific EIR analyzing the site- and project-specific impacts of the current version of the Project, including analysis of alternatives to, and additional mitigation measures for, the project as required by CEQA. The Supplemental Programmatic Environmental Impact Report (PEIR) for the 2050 General Plan did not disclose sufficient baseline data, nor did it analyze, or include sufficient alternatives to or mitigation measures for, the site- and project-specific impacts of the Project, and therefore the Project is not within the scope of the PEIR.

Under CEQA, a lead agency must analyze any subsequent site-specific project that is proceeding under an approved PEIR to determine whether the subsequent project is "consistent with" and "within the scope of the project or program covered by" the previously-certified PEIR, and if it will have one or more additional or more severe significant effects or require additional mitigation measures that were not analyzed in the prior PEIR. Pub. Res. Code, § 21094(b)-(c); 14 Cal. Code Regs. § 15168(c)(2), (c)(5). When a lead agency has prepared a prior PEIR, "the question for a court reviewing an agency's decision not to use a tiered EIR for a later project is one of law." *Committee for Reevaluation of the T-Line Loop v. San Francisco Muni. Transp. Agency* (2016) 6 Cal.App.5th 1237, 1252 (2016); *Sierra Club v. County of San Diego* (2014) 231 Cal.App.4th 1152, 1164.

The case law makes clear that a project is "consistent with" and "within the scope of" the prior EIR if it is essentially part of the same project analyzed in the PEIR and that project was specifically identified, analyzed and discussed at a site-specific level of detail in the PEIR. (See, e.g., *Sierra Club v. County of Sonoma*, 6 Cal. App. 4th 1307, 1319-21 (1992); *Friends of Mammoth v. Town of Mammoth Lakes*, 82 Cal. App. 4th 511, 528-29 (2000); *Natural Resources Defense Council, Inc. v. City of Los Angeles*, 103 Cal. App. 4th 268, 281-85 (2002); *American Canyon Community v. City of American Canyon*, 145 Cal. App. 4th 1062, 1072-73 (2006); *Center for Sierra Nevada Conservation v. County of El Dorado*, 202 Cal. App. 4th 1156, 1172-73, 1175-77 (2012); *Sierra Club v. County of San Diego*, 231 Cal. App. 4th at 1174-76.)

All of these cases also hold that a project is not "consistent with" or "within the scope of" a PEIR if that previous environmental document did not contemplate or analyze the site- and project-specific effects of the subsequent project and those effects are not otherwise covered in the PEIR. *Id.*; cf. *Latinos Unidos de Napa v. City of Napa*, 221 Cal. App. 4th 192, 202-03 (2013) (revisions to housing element of general plan was within the scope of a prior PEIR for a general plan.

Here, the Project is not consistent with or within the scope of the PEIR because it was not specifically identified, analyzed or discussed in the PEIR, and the PEIR did not address the site- and project-specific impacts of this project. The PEIR merely discussed the impacts generally of an industrial land use category, which includes any "variety of industrial uses, including

warehousing/distribution." (Addendum, p. 11.) The PEIR discussed development in general and established a general mitigation program for such projects, and did not discuss projects at a project-specific level of detail.

The Project's environmental documents do not fill this analytic gap because they are too vague and general and do not contain any meaningful site-specific analysis of the precise nature or extent of the impacts of this project, or include any additional mitigation measures for these effects. For example, neither the Project, nor the PEIR, disclose existing baseline conditions for the burrowing owl, or the suitability of the habitat to support burrowing owl. The EA mentions that burrowing owl surveys were "completed in 2019, 2020 and a 2022 protocol study was conducted to determine the current number of burrowing owls on site." (Addendum, p. 11.) But nowhere were the results of these surveys *disclosed* to the public, or discussed in the Addendum.[1] Absent that information, the Addendum fails to meet CEQA's core informational purpose and deprives the Addendum of the necessary evidence supporting how the PEIR's mitigation measures will be adequate to mitigate these effects for this large project. Id. These errors pervade the addendum, which also fails to provide basic explanations of how the PEIR's air quality mitigation measures will prevent operational impacts to air quality in the region, both at an individual project and cumulative level.

Similarly, the Addendum lacks a site-specific discussion of how this Project may impact air quality and neighboring sensitive receptors. (Addendum, p. 33 [stating that the PEIR does not analyze the project's air quality impacts.]) The Addendum recognizes the PEIR did not "make a specific conclusion regarding the significance of project-related air pollutant emissions compared to any significance thresholds" and instead recommended a potential menu of mitigation measures to address project impacts. (Addendum, p. 33.) The Addendum then concludes the Project will have less-than-significant air quality impacts because the Project would not result in new impacts *"other than those previously considered or addressed in the [PEIR]*." (*Id.*) Under the Addendum's own admission, the PEIR did not address project-specific air quality impacts. The Addendum also lacks any discussion of how the PEIR's three mitigation measures will be adequate to mitigate the effects of this particular Project. The Addendum's conclusory statement is unsupported by evidence or analysis and simply does not meet CEQA"s muster.

For these reasons, the Project is not within the scope of the PEIR, and a fair argument can be made, based on substantial evidence, that the Project will have site-specific impacts and require additional mitigation measures that were not analyzed and included in that PEIR. Therefore, the City is obligated to prepare a subsequent EIR for this project analyzing these impacts in detail.

II. CONCLUSION

Thank you for the opportunity to submit comments on the Development Plan (File No. PDEV21-047). Due to the shortcomings described above, the City must prepare a project-specific

[1] The Addendum also relies on these surveys to conclude that the preparation of a site-specific EIR is not required. (Addendum, p. 11.) Absent disclosure of this information, the Addendum simply has no basis by which to conclude that an EIR is not warranted.

subsequent environmental impact report (EIR) that analyzes the site-specific effects of the Project in detail and includes additional alternatives to and mitigation measures for this project.

Given the possibility that the Center will be required to pursue legal remedies in order to ensure that the City complies with its legal obligations including those arising under CEQA, we note the City's statutory duty to maintain and preserve all documents and communications that may constitute part of the "administrative record" of this proceeding. (§ 21167.6(e); *Golden Door Properties, LLC v. Superior Court* (2020) 53 Cal.App.5th 733.) The administrative record encompasses any and all documents and communications that relate to any and all actions taken by the City with respect to the Project, and includes "pretty much everything that ever came near a proposed [project] or [] the agency's compliance with CEQA . . . ." (*County of Orange v. Superior Court* (2003) 113 Cal.App.4th 1, 8.) The administrative record further includes all correspondence, emails, and text messages sent to or received by the City's representatives or employees that relate to the Project, including any correspondence, emails, and text messages sent between the City's representatives or employees and the Project applicant's representatives or employees. Maintenance and preservation of the administrative record requires that, *inter alia*, the City (1) suspend all data destruction policies; and (2) preserve all relevant hardware unless an exact replica of each file is made.

Please add the Center to your notice list for all future updates to the Project and do not hesitate to contact the Center with any questions at the number or email listed below.

Sincerely,

From:	NATASHA WALTON
To:	Planning Director
Subject:	Please Vote to Deny Recommendation of the January 4, 2023, Ontario DAB Meeting Agenda Item B
Date:	Wednesday, January 4, 2023 12:28:39 PM

Dear City of Ontario Development Advisory Board:

We, Inland Valley Advocates for the Environment (IVAE), ask that you **recommend denial of the January 4, 2023, agenda item** B to the Ontario Planning Commission regarding the (1) "CEQA [California Environmental Quality Act] Determination Motion to recommend Approval / Denial of an Addendum to a previously approved EIR [Environmental Impact Report]," and (2) "File No. PDEV21-047 (Development Plan) Motion to recommend Approval/Denial." The Development Plan (File No. PDEV21-047) is to construct nine industrial buildings totaling 4,263,454 square feet and associated site improvements on 197.74 acres of land generally located east of Haven Avenue, west of Doubleday and Dupont Avenues, north of Jurupa Street and south of Airport Drive, within the IL (Light Industrial) land use district of the California Commerce Center Specific Plan.

One of the main reasons why we ask you to deny recommendation of agenda item B is because **we disagree with the City of Ontario's CEQA determination for the Development Plan** (p30 of 404 pp in the 1/4/2022 meeting agenda). This determination is that "although the proposed project could have a significant effect on the environment, because all potentially significant effects (a) have been analyzed adequately in an earlier EIR pursuant to applicable standards, and (b) have been avoided or mitigated pursuant to that earlier EIR, including revisions or mitigation measures that are imposed upon the proposed project, nothing further is required." We argue that the environmental impacts of the proposed project (including significant ones) have not been adequately analyzed and presented under the August 2022 Ontario Plan 2050 Supplemental EIR, and the public and public agency review of these potential impacts does not exist. These environmental impacts include, but are not limited to, the direct, indirect and cumulative impacts of this project on greenhouse gas emissions, transportation/traffic, agricultural resources, hazards and hazardous materials, air quality, noise, and biological resources. Thus, a higher level document consisting of a CEQA Environmental Impact Report should be completed to allow further study and public review of this project under CEQA. Examples of inadequate analyses and conclusions include the following:

- No field studies of current noise levels have been conducted at the proposed project to help determine the expected level of noise at the project site which is located within two miles of a public international airport.
- The proposed project would have a significant negative effect on burrowing owls and this effect cannot be mitigated by a proposed relocation plan; regardless of the addendum's conclusions, the previously approved EIR did not include, address, or evaluate the potential significant effects of warehouse developments on wildlife such as the burrowing owl. In addition, no documented concurrence has been received from the California Department of Fish and Wildlife that the proposed project with a burrowing owl relocation plan would have a less than significant impact on the local burrowing owl (a special-status species) population, as well as on the population of burrowing owls that would be receiving the relocated owls.

Another major reason to deny recommendation of agenda item B is so that **we may preserve the safety and quality of life of our community and our local wildlife**; the proposed project area should include an alternative project that would protect the project area as a nature preserve and not be developed for any kind of industrial facility. Such a nature preserve would not only preserve the area as undeveloped safety zones for the airport, but it could even draw in the world to visit our special wildlife residents like the burrowing owl which lives and nests annually on this land.

Please see the link below discussing how people are fighting to save our native wildlife, like burrowing owls, in California. We ask that you do the same and resist the urge to develop our precious open spaces into yet more ugly and unnecessary warehouses.

https://urbanbird.org/victory-for-southern-california-burrowing-owls/ [na01.safelinks.protection.outlook.com]

We have attached a photo that very few airports can boast about being able to capture – a burrowing owl perching on a light post as a commercial jetliner lands. You have the opportunity to make Ontario Airport special and not just another eyesore among the clutter of urban banality. Once again, please recommend denial on agenda item B.

Sincerely,

Natasha Walton, M.S.

To the Ontario Development Advisory Board,

Burrowing Owls were once numerous in Ontario and Chino but have been driven out of the area due to widespread development. Time and time again, the owls were driven out with no successful intervention to relocate them to a suitable habitat even though great amounts of mitigation money was collected. We need to protect the remaining land where the owls nest and raise their young and we need to change the practices that have resulted in the huge population drop that has occurred in the last 30 years.

There are significant negative environmental effects of the proposed plan that have not been considered or mitigated for. These are: using a mitigation plan for Burrowing Owls that has already failed and will result in high mortality, loss of distinct biodiversity for the translocated owls, damaging effects on Chino Burrowing Owls, and overall higher mortality of translocated owls. Contrary to the proposed Development Advisory Board decision, the project will have a significant negative effect on Burrowing Owls, a state species of special concern.

The land that OIAA owns east of Haven Avenue is a primary nesting site for the owls. Please do not destroy it so more warehouses can be added to Ontario! A 90-acre Burrowing Owl preserve on the site that is properly endowed and well-managed will help keep the remaining Ontario owls safe so they can continue to live in their native habitat. Schoolchildren, families, and all of us can enjoy having the owls nearby to study and enjoy.

From: Shari Wasson
To: Planning Director
Subject: Shari Wasson, Public Comment, Please Vote to Deny Agenda Item B
Date: Wednesday, January 4, 2023 12:28:33 PM

Dear City of Ontario Development Advisory Board:

I ask that you **recommend denial of the January 4, 2023, agenda item B** to the Ontario Planning Commission regarding the (1) "CEQA [California Environmental Quality Act] Determination Motion to recommend Approval / Denial of an Addendum to a previously approved EIR," and (2) "File No. PDEV21-047 (Development Plan) Motion to recommend Approval/Denial." The Development Plan (File No. PDEV21-047) is to construct nine industrial buildings totaling 4,263,454 square feet and associated site improvements on 197.74 acres of land generally located east of Haven Avenue, west of Doubleday and Dupont Avenues, north of Jurupa Street and south of Airport Drive, within the IL (Light Industrial) land use district of the California Commerce Center Specific Plan.

As a long-time resident of the Inland Valley and community member who values our native wildlife, I am greatly concerned about the proposed development plan and the devastating consequences it will have for Ontario's remaining burrowing owl population.

This unique little bird, which was once considered common and abundant, is now designated as a species of special concern by California Department of Fish and Wildlife (CDFW). Habitat loss due to development has been one of the strongest driving forces behind this. Due to the high levels of development that the Inland Valley has seen in the last several decades, the roughly 200 acres that the City of Ontario and Ontario International Airport are planning to develop with yet more warehouses is now one of the last remaining parcels of burrowing owl habitat in Ontario.

This bird is an important part of the natural heritage of Ontario and the Inland Valley. This vestigial habitat and owl population are true treasures that the City and Airport have the unique opportunity to capitalize on and share with not just the local community, but with travelers from both near

Comment 2d.

and far. Instead of allowing the land to be developed, this land should be set aside for preservation of the burrowing owl. In doing so, the City and Airport will be taking a leadership role in helping conserve the burrowing owl, which is, after all, a fellow partner in flight. Such a stance will brand the City of Ontario and the Ontario International Airport as ecologically minded entities that are invested in the wellbeing of the environment and the natural resources native to the area. Public relations centered on this can help increase City and Airport patronage, lead to partnerships with schools and other educational institutions, and set a model for other cities and businesses to follow. Partnering with the burrowing owl can help make the City of Ontario into an ecological destination.

I further recommend you deny agenda item B based on the City's inadequate CEQA determination for this Development Plan. Please see Natasha Walton's emailed public comment for details regarding this matter.

Sincerely,

Shari Wasson

CITY OF ONTARIO DEVELOPMENT ADVISORY BOARD MEETING
1/4/23

Re: Agenda Item B at the January 4, 2023
Development Advisory Board Meeting

Agenda Item B Summary: ENVIRONMENTAL ASSESSMENT AND DEVELOPMENT PLAN REVIEW FOR FILE NO. PDEV21-047: A public hearing to consider a Development Plan (File No. PDEV21-047) to construct nine industrial buildings totaling 4,263,454 square feet and associated site improvements on 197.74 acres of land generally located east of Haven Avenue, west of Doubleday and Dupont Avenues, north of Jurupa Street and south of Airport Drive, within the IL (Light Industrial) land use district of the California Commerce Center Specific Plan. An Addendum to The Ontario Plan 2050 Environmental Impact Report (State Clearinghouse No. 2021070364), which was certified by the City Council on August 16, 2022, was prepared. This application introduces no new significant environmental impacts. The proposed project is located within the Airport Influence Area of Ontario International Airport and was evaluated and found to be consistent with the policies and criteria of the Ontario International Airport Land Use Compatibility Plan; (APNs: 0211-222-47, 0211-222-48, 0211-222-52, 0211-222-53, 0211-222-54, 0211-222-55, 0211-222-56, 0211-232-04, 0211-232-05, 0211-232-06, 0211-232-07, 211-232-011, 0211-232-12, 0211-232-13, 0211-232-14, 0211-232-15, 0211-232-16, 0211-232-17, 0211-232-18, 0211-232-19, 0211-232-20, 0211-232-44, 0211-232-45, and 0211-232-46) submitted by McDonald Property Group. Planning Commission action is required. 1. CEQA Determination Motion to recommend Approval / Denial of an Addendum to a previously approved EIR 2. File No. PDEV21-047 (Development Plan) Motion to recommend Approval/Denial

Dear City of Ontario Development Advisory Board:

We write to oppose the Development Plan (File No. PDEV21-047) to construct nine industrial buildings totaling 4,263,454 square feet and associated site improvements on 197.74 acres of land generally located east of Haven Avenue, west of Doubleday and Dupont Avenues, north of Jurupa Street and south of Airport Drive, within the IL (Light Industrial) land use district of the California Commerce Center Specific Plan.

First, we oppose the use of a CEQA Determination Motion to streamline this project's approval process. The proposed land uses are environmentally detrimental and introduce significant environmental impacts. To avoid creating an individualized EIR in this case—especially due to the wholesale habitat destruction of the increasingly rare burrowing owl community—is arguable in court. Burrowing owl considerations were not adequately addressed in TOP 2050, as well as within the documents associated with this agenda item. In addition, since TOP 2050, new data have come forward through the recently released and updated Warehouse CITY tool, which allows municipalities to calculate their cumulative warehouse impact.

Case law supports countering a city's ability to utilize a CEQA Determination Motion in certain cases. In Friends of the East Sacramento Grid v. City of Sacramento (2017), the court found that the city's approval of an addendum to a previously approved EIR was improper because the addendum did not adequately address the potential environmental impacts of the proposed project. The court stated that "the addendum must address new information that was not considered in the original EIR and must explain why the new information does not require any changes to the EIR's conclusions or mitigation measures."

Additional environmental case law counters a city's ability to utilize a CEQA Determination Motion, including but not limited to:

1. Save Tara v. City of West Hollywood (2002): In this case, the California Court of Appeals ruled that the city of West Hollywood violated CEQA when it failed to consider the impacts of a proposed development on a historic site. The court held that the city's reliance on a CEQA Determination Motion to approve the project was not sufficient, as the motion did not adequately address the potential impacts on the historic site.

2. Santa Monica Mountains Conservancy v. City of Malibu (2000): In this case, the California Court of Appeals ruled that the city of Malibu violated CEQA when it approved a development project without adequately analyzing the potential impacts on the environment. The court held that the city's reliance on a CEQA Determination Motion to approve the project was not sufficient, as the motion did not adequately address the potential environmental impacts.

3. Friends of the Eel River v. Sonoma County Water Agency (1999): In this case, the California Court of Appeals ruled that the Sonoma County Water Agency violated CEQA when it approved a water project without adequately analyzing the potential impacts on the environment. The court held that the agency's reliance on a CEQA Determination Motion to approve the project was not sufficient, as the motion did not adequately address the potential environmental impacts.

In this case, the use of a CEQA Determination Motion is subject to legal challenge because the addendum to the TOP 2050 does not adequately address the potential environmental impacts. This includes lack of substantive analysis regarding environmental impacts, and the interrelationship between cumulative impact and the incremental impact of the project—issues that were already weak within Ontario's TOP 2050 and to which some of the signatories objected to at that time. In addition are erroneous conclusions

regarding the FAA's stance on the burrowing owl and legitimacy of considering burrowing owl habitat conservation within the Ontario Airport Sphere of Influence, which we outline below.

We also hereby incorporate previous opposition letters to TOP 2050. Opposition letters to a previously approved general plan may be used to oppose a land use plan in which a CEQA Determination motion is used. In the case of Friends of the Eel River v. North Coast Railroad Authority (2005), the court considered opposition letters and other evidence submitted by environmental groups who were challenging a land use plan that included the construction of a railroad. The court found that the opposition letters and other evidence were relevant and could be considered in determining whether the land use plan complied with CEQA.

In addition, loss of Burrowing Owl Habitat and Warehouses can be considered CEQA Topics of Controversy, which limits a city's ability to utilize a CEQA Determination Motion.

Under the California Environmental Quality Act (CEQA), a "topic of controversy" is defined as an issue that has been the subject of public disagreement or debate. This might include issues related to the environmental impacts of a proposed project, or the need for the project in the first place.

This land use decision involves two topics of controversy within the City of Ontario. The first is the eviction of burrowing owls and destruction of their historic habitat, which has been debated for years and which has included media coverage, litigation, and promised mitigation. The second is continued warehouse construction in Ontario, which has been the subject of recent controversy, lawsuits, and media coverage.

CEQA Determination Motions are used by public agencies to determine whether a project is exempt from CEQA review, or if an environmental impact report (EIR) is required. If a topic of controversy exists regarding a proposed project, this can counter the use of a CEQA Determination Motion.

For example, if a public agency is considering a proposed project that would have significant environmental impacts—in this case the building of a warehouse, generation of additional pollution and GHGs, and loss of habitat for a sensitive species—and there is significant public disagreement or debate over whether the project should be allowed to proceed, it can be considered a topic of controversy. In this case, the use of a CEQA Determination Motion to exempt the project from CEQA review is inappropriate because the topic of controversy requires public input and further environmental analysis and consideration through the CEQA process.

Piggy backing specific land use decisions on a general plan update such as TOP 2050 can also limit the ability of elected officials to make decisions on individual land use issues. The general plan may be adopted by a city council or planning commission, but individual land use decisions may be made by a different body or process. This can lead to a disconnect between the overall vision and goals of the general plan and the specific land use decisions being made, potentially undermining democratic involvement in the decision-making process.

In addition, the idea that an EIR is unnecessary due to the passage of TOP 2050 does not support the democratic spirit of municipal decision-making in which public voice is considered. TOP 2050 was an overwhelming process that took place when the Ontario residents were also embroiled in the historic redistricting process. The use of a CEQA determination can compromise democratic involvement in municipal decision making in a few ways. First, it may not allow for adequate public input and participation. The general plan update process may not be as well-publicized as a standalone land use decision, leading to less public awareness and engagement—and certainly less engagement in a decision based on over 3000 pages of materials made public at one of the busiest times of the year—and released

on a federal holiday (Jan 1, with many offices closed on Jan 2) when people are most distracted. This left even less time than the three days typically accorded for review in the City of Ontario. Additionally, the approval process approached in this way will not provide the same opportunities for public comment and participation as a standalone land use decision.

There are significant impacts that can and should be mitigated but have not been properly considered. The City may not adopt a statement of overriding consideration to approve a project where feasible, less environmentally damaging alternatives exist and feasible mitigation measures have not been considered or adopted.

We recommend that the DAB not forward this to the Planning Commission without insisting that appropriate environmental review and associated public comment process are adopted, and that feasible alternatives, including alternative project plans, are considered.

The "policy of the state" reflected in the California Environmental Quality Act is that projects with significant environmental impacts *may not* be approved "if there are feasible alternatives or feasible mitigation measures available which would substantially lessen the significant environmental effects . . ." (Pub. Resources Code § 21002.) More specifically, CEQA states:

> Pursuant to the policy stated in Sections 21002 and 21002.1, no public agency shall approve or carry out a project for which an environmental impact report has been certified which identifies one or more significant effects on the environment that would occur if the project is approved or carried out
> unless …:
>
> (a). . . (3) Specific economic, legal, social, technological, or other considerations . . . make infeasible the mitigation measures or alternatives identified in the environmental impact report. (Pub. Resources Code § 21081.)
>
> It is settled law that:
>
> CEQA contains *substantive* provisions with which agencies must comply. The most important ... is the provision requiring agencies to deny approval of a project with significant adverse effects when feasible alternatives or feasible mitigation measures can substantially lessen such effects.
>
> (*Sierra Club v. Gilroy City Council* (1990) 222 Cal.App.3d 30, 41, italics added.) Indeed, in a case decided on July 7, 2006, a court analyzed the "substantive mandate" of CEQA, then set aside a college campus master plan project because there was not substantial evidence to support a college district's findings of economic and legal infeasibility of mitigation. (*County of San Diego v. Grossmont-Cuyamaca Community College* (2006) –Cal. App.--, slip opinion, pp. 18-29.)
>
> "Feasible" is defined as "capable of being accomplished in a successful manner within a reasonable period of time, taking into account economic, environmental, social, and technological factors." (Pub. Resources Code § 21061.1.) The definition *does not* require the agreement of the project applicant. "Each public agency shall mitigate or avoid the significant effects on the environment of projects that it carries out or approves *whenever* it is feasible to do so." (*Lincoln Place Tenants Ass'n v. City of Los Angeles* (2005) 130 Cal.App.4th 1491, 1508, emphasis added.)

This project has impacts that can and must be mitigated due to burrowing owl habitat destruction, GHG emissions, emission of pollutants, and increased truck traffic. These are inappropriately labeled as

unavoidable, but they in fact may be avoided by properly adopting mitigation measures and alternatives to the existing plan.

Given the points above, we call for this item to be halted until the DAB can guarantee the City's ability to take into account community voice, conduct environmental impact review of loss of habitat and plans for mitigation, and consider significant harms to communities that reside in proximity of the project.

Burrowing Owls were once numerous in Ontario and Chino but due to widespread development that did not protect biological resources, the owls are fast disappearing. We need action now to protect Burrowing Owl habitat and allow these little birds to continue to live on in Ontario as they have for hundreds of years. The presence of a thriving population of Burrowing Owls in Ontario is a biological asset for the community and a chance for children and all of us to see the owls close by in their native habitat. The people of Ontario need protection for their native species, not more warehouses. Wouldn't it be better if Ontario children could tell the story of how their city protected this vulnerable species?

The burrowing owl is perhaps the signature species that makes Ontario unique—so signature, in fact, that the entire airport could be named after and themed as the Burrowing Owl Ontario Airport. Conserving this important sensitive species—that has long been on the cusp of endangered species status—would position Ontario as a leader in innovative conservation strategies. This would open opportunities for the city to develop ecotourism opportunities, interpretive, interactive displays, artwork, and educational stations within the airport to celebrate the local owl population. Including the Burrowing Owl habitat east of the Airport could be part of the Aiport's plan for greening and electrification.

Comment 2e

Some counterbalance to the overwhelming focus on industrial development is needed if the city plans to live up to its carbon and green promises in the TOP 2050, its prior promises of Burrowing Owl mitigation, its motto of a balanced city, and to prepare itself for a climate-compromised future. You simply can't have it both ways. Preservation of burrowing owl habitat would do wonders for Ontario's reputation as a green city. Destruction of habitat would simply further Ontario's reputation as being hungry for warehouses at all costs.

Cumulative Impact—Air Quality and Habitat Loss

According to the Ontario International Airport's 2019 Environmental Management Plan, the airport generated approximately **79,000 metric tons of greenhouse gas emissions from cargo and passenger aircraft in 2018**. This accounted for approximately 76% of the airport's total greenhouse gas emissions for that year. The majority of these emissions were from jet fuel consumption during aircraft takeoff and landing operations. The airport plans to implement various initiatives to reduce its greenhouse gas emissions, including the use of alternative fuels, electrification, and the implementation of energy-efficient technologies. However, the significant increase in air travel in recent years has led to an overall increase in greenhouse gas emissions from the airport (Ontario International Airport, 2019).

According to the Ontario International Airport Expansion Project Environmental Impact Report, the expansion of logistics operations at the airport is expected to result in an **increase in greenhouse gas emissions of approximately 36,000 metric tons of carbon dioxide equivalent per year.** This increase is primarily due to increased air traffic and vehicle activity associated with the expansion, as well as the energy consumption of the expanded facilities. The EIR states that these emissions will be offset through the implementation of various mitigation measures, including the use of renewable energy sources and the implementation of energy efficiency measures (Ontario International Airport Expansion Project Environmental Impact Report, 2018). Despite efforts to green the Airport, flights will continue to be dirty, thus expanding GHG heavy infrastructure into the future.

According to researchers such as B. O'Neill and L. Bunting, industrial warehouses contribute significantly to greenhouse gas emissions and are a major contributor to climate change. The transportation of goods to and from warehouses requires a significant amount of energy, resulting in high levels of pollution and negative impacts on environmental and human health.

We request that the City of Ontario consider both the cumulative impact of all Ontario warehouses and their relationship to the incremental impact of the project, as outlined below, and as per CEQA requirements, in the most robust way possible.

In general, Environmental Impact Reports (EIR) prepared under the California Environmental Quality Act (CEQA) have not sufficiently analyzed the cumulative impacts that continued industrial development have on the health of Inland residents. The IE has been and continues to remain on the EPA's Nonattainment status for air quality (PM and Ozone). Municipal leaders choose to allow developers to perpetuate the nonattainment status despite the rules of the Clean Air Act 42U.S.C 7401 et seq, which requires them to mitigate projects to achieve attainment status. Developers have chosen to ignore the cumulative impacts of all warehouses in the region. Developers and municipal leaders accept language of "significant and unavoidable impacts," with little regard for alternative plans. Instead, they focus on the incremental impact a specific project has towards increasing "severe and extreme" nonattainment status or increased cancer risk. In other words, because our air quality is already in the worst possible condition, a little more won't hurt.

According to State CEQA Guidelines Section 15355, projects must analyze cumulative impacts at a broader scale, in addition to individual impacts—in other words, they must consider the result of past, present, and future projects. This project and TOP 2050 have failed to consider the cumulative pollution burden of past, current, and future projects and the inequitable zoning that has resulted in historical conditions of environmental injustice. Garcia et. al. conclude that, when viewed together with past, current, and future projects, "a project's contribution may be **individually and incrementally insignificant but would make a considerable contribution to the overall cumulative impact and be cumulatively significant when combined with existing conditions.** The existing, often hazardous, environmental conditions in DACs must be taken into account when evaluating cumulative pollution burden impacts."

The focus on industrial development has also led to cumulative habitat loss within the City of Ontario for burrowing owls. Industrial development also often comes at the expense of other types of development, such as affordable housing or green spaces, leading to negative impacts on the overall livability of a city. According to SCAG's recent Economic Analysis, continued investment in logistics in the Inland Empire may not be good for the economy because it can lead to a reliance on low-wage, low-skill jobs and a lack of diversification in the economy. Logistics jobs tend to be lower paying and have less room for advancement compared to other industries, which can lead to a stagnant or declining wage growth for workers. Additionally, reliance on logistics can make the region vulnerable to economic downturns or shifts in global trade patterns, as the Inland Empire is heavily dependent on the logistics industry. Diversifying the economy and investing in other industries can help to create more sustainable, higher paying jobs and reduce the risk of economic instability.

The global supply chain is becoming increasingly unstable due to factors such as trade tensions and natural disasters, leading to uncertainty and risk for investors in industrial warehouses. Authors such as J. Glaser and J. Rabin have argued that the proliferation of industrial warehouses in cities has negative consequences for local communities. These warehouses often bring with them noise and air pollution, as well as traffic congestion, which can disrupt the quality of life for residents. Right now, due to problems at the Ports of LA and Long Beach, goods are being increasingly re-routed to East Coast or Gulf Coast

ports. The current and future precarity of global logistics does not justify building more warehouses in Ontario; in fact, the opposite is true. Alternative plans must be considered.

Importance of Biodiversity for Local Municipalities

Biodiversity helps to maintain the integrity and stability of ecosystems. Different species interact with one another in complex ways, and the loss of one species can affect the populations of other species. There is a growing body of evidence that suggests that maintaining biodiversity is important for local municipalities. For example, a study by Daily et al. (1997) found that areas with high levels of biodiversity had more stable and productive ecosystems, which provided a range of benefits to local communities. Another study by Balmford et al. (2002) found that the loss of biodiversity was associated with a decline in the provision of ecosystem services, such as the regulation of water quality and the control of pests and diseases.

There is intrinsic value for a municipality to maintain a species such as the burrowing owl nearing endangered status. The burrowing owl is an excellent animal protagonist that is well known across the country. The reputation of the City of Ontario is at risk if its leaders choose to green light yet another warehouse—far from an endangered species in this neck of the woods—instead of doing all it can to protect this cute, puffy feathered, vulnerable, unique creature and longtime friend to Ontario schoolchildren.

Burrowing owls are a sensitive species that are at risk of extinction due to habitat loss and human disturbance (US Fish and Wildlife Service, 2020). Protecting this species is important for maintaining biodiversity and the overall health of the ecosystem. The benefits of having burrowing owls on airport land include their role as natural pest controllers and their potential to attract ecotourism.

Comment 2e - cont.

According to the U.S. Fish and Wildlife Service, there are currently 12 airports in the United States that have implemented burrowing owl habitat conservation programs (U.S. Fish and Wildlife Service, 2020). These programs aim to protect and enhance the habitat of the burrowing owl, a species that is classified as threatened in some states and endangered in others (U.S. Fish and Wildlife Service, 2020).

The Federal Aviation Administration (FAA) does not list the burrowing owl as a species that poses a danger to aircraft. In fact, the FAA actively promotes the conservation of burrowing owls and other wildlife at airports through its Airport Wildlife Hazard Management program (Federal Aviation Administration, 2019). This program provides guidance and resources for airport operators to develop and implement effective wildlife management strategies that prioritize safety, while also promoting the conservation of wildlife on and around airport property (Federal Aviation Administration, 2019). The FAA also recognizes the importance of conserving wildlife at airports, and takes steps to ensure that safety is prioritized while also promoting the conservation of species like the burrowing owl (Federal Aviation Administration. (2019). Airport wildlife hazard management. Retrieved from https://www.faa.gov/airports/airport_safety/wildlife/ U.S. Fish and Wildlife Service (2020), and Burrowing owl (Athene cunicularia). Retrieved https://www.fws.gov/southeast/wildlife/bird/burrowing-owl/).

Comment 2f.

There are at least four significant negative effects on the environment that will be caused by and not mitigated by the current plan.

The Ontario Plan mitigation for Burrowing Owls has not been successful and is not an approach to be used for the owls east of Haven Avenue. The Ontario Plan mitigation started around 2007. From 2007 on, the City of Ontario collected fees from developers to mitigate the loss of large sections of habitat. The idea was that the funds would be used to purchase mitigation land.

The City has a mitigation program in place to compensate for BUOW impacts in the former Annexation Area 163. This property would contribute substantially success of that program. None of the money that the City has collected in mitigation fees has been spent for Burrowing Owl mitigation. It is particularly troubling that this project to destroy further habitat is being done based on similar promises that have had so many years for lack of follow through.

Two, another significant negative effect of translocating owls to sites far from their native land is the loss of distinct biodiversity. Kelly Barr, Kristin Ruegg and others have found genetically distinct populations of Burrowing Owls that are a distance apart even within California (Alvarado, Bossu et al., 2022). Translocating owls 30 to 40 miles from their natal site risks mixing the distinct groups. Possible advantages of the genetic differences that might increase survivability in a particular location would be lost to the owls.

Three, Burrowing Owls need to have other sites nearby within the usual range of juvenile dispersion (from .5 to 13 miles) so young adult owls can avoid inbreeding (Rosenberg, Gervais, & Trulio, 2007). The East of Haven Ontario Burrowing Owls are an average of 7 to 8 miles from several Burrowing Owl nesting sites in the Chino area. Thus, the Airport area owls make it possible for a healthy exchange of young adults finding mates between the two sites. Loss of the East of Haven site could seriously undermine the viability of what are now healthy populations of Burrowing Owls in Chino, contributing to the loss of all Burrowing Owls from the Pomona Valley.

Four, mitigation translocation for burrowing owls is an option that suits the preferences of land developers, but it does not provide a superior life for the owls. In fact, owls that are translocated from their home habitat are subject to higher mortality than those who are protected on site or nearby (Hennessey et al., 2022). The removal of all the OIA owls will be a significant blow to the possibility of success of owls in the area.

Contrary to the conclusion of the analysis of the DAB decision, the project will have a significant negative effect on Burrowing Owls, a state species of special concern.

In fact, Helix Environmental's Biological Resources report also states that leaving Burrowing Owls on site is the best option for the owls. Unfortunately, the report goes on to reject that option for invalid reasons such as the mistaken notion that Burrowing Owls are a hazard to aviation.

Contrary to the statements in the Helix Environmental report, Burrowing Owls are not a hazard to aviation. They are small birds that fly close to the ground and do not fly in flocks. According to the FAA birdstrike data, there were 21 reports of airstrikes involving these owls at OIA since 2008. Eight turned out to be other wildlife or the species were unknown; for eleven a carcass or wing was found but no airstrike was reported by pilots; and two involved a Burrowing Owl strike but no damage was reported. In all these years, there were **no instances** of a Burrowing Owl causing damage to a plane. If Burrowing Owls that live right next to the runways are not a threat to aviation, how much less a threat are the owls that live east of Haven.

Another argument is that Burrowing Owl attract larger raptors that might cause damage to a plane. This problem can be addressed through a raptor control program, something that all airports need to have in place, whether or not they have Burrowing Owls near their property. Many other airports protect plans from large raptors using control strategies that do not kill or harm or trap the raptors.

Finally, none of the Helix Environmental statements that the FAA will not allow mitigation for Burrowing Owls near an airport are backed up with reference to FAA regulations or communications. If

you look at the FAA regulations that discuss Wildlife Hazards, you will find that Burrowing Owls are not mentioned. If Burrowing Owls are NOT a hazard to aviation, then owl mitigation can be done on the boot property.

Please find a way to keep Airport Burrowing Owls in Ontario with a professionally managed and properly endowed preserve for the owls on site or nearby. Please also consider whether this is the time to continue to expand warehouse infrastructure, as it is encroaching nearer to residential communities at a time when we have very little or no time to reverse the negative effects of climate change, rather than enhance them, as this plan is doing. Do this for our children, grandchildren, schoolchildren, and all the residents of Ontario who care about their environment and who want to make Ontario the special place we all know it can be.

Citizen Letter Addressing Agenda Item B for the January 4, 2023 Development Advisory Board Meeting

January 2, 2023

Dear Ontario Development Advisory Board,

Fifty years ago while growing up in Los Angeles County, I enjoyed watching Burrowing Owls in the fields behind my childhood home. Sadly, this species has been in sharp decline ever since and is now a California Species of Special Concern. It is even being considered for listing under the California Endangered Species Act. So it is with great surprise that I read that the city of Ontario is considering developing one of its primary nesting sites!

It is prudent for cities to keep open land surrounding airports. Undeveloped areas provide emergency landing zones for aircraft if needed. This area is perfect for Burrowing Owls which already call it home. This owl flies low over the ground during the day while hunting large insects and small rodents, thus posing no danger to descending aircraft. In fact, there have been no documented plane strikes by Burrowing Owls so this grassland is safe for birds and people.

During the six years that I have visited this nest site, I have noticed a crowd of wildlife photographers standing respectfully along the edges of the S. Haven Avenue (north of E. Jurupa Street) when these owls are nesting. Many people travel long distances to get their photos, and spend money in Ontario during their visit which helps benefit the city.

Surely the best use for this property is to become a **Burrowing Owl preserve**. The local community can come visit and learn about the biology and interesting adaptations of their feathered neighbor. Children can study Burrowing Owls in school just like Orange County school children learn about the threatened Western Snowy Plover along their coastline.

Comment 2h.

As a reminder, these birds are state protected and cannot be harmed in any way. Trapping and moving them is not feasible and has resulted in high mortality. As a biologist, I am opposed to this devastating failed plan. Ontario's plans for these protected birds and their nest site need to be carefully reviewed so there are NO negative impacts. This is the lawful and right thing to do.

Thank you for listening to a nearby resident who enjoys the Burrowing Owls of Ontario.

EXHIBIT G

SUBJECT: **Appeal - Response to Comments**

1. Burrowing owls will use storm drains, concrete rubble piles, open pipes, rolled up carpets, etc. for shelter and roosting. The burrowing owls used the onsite storm drains (or the risers on-site) as a burrow. Please see photos below from the focused surveys that show the burrowing owls utilizing these as a sentinel burrow and as a main burrow. The amount of pellets and whitewash in and around the riser shows that the owls were not just using the riser to escape predators. Further, one of the photos includes a perch that photographers installed and shows the owls were using that riser as part of their burrow complex or at least as an active burrow.

2. The Ontario HUB was one of the last remaining sites undeveloped in the region this would leave a lack of owls in the region necessary to maintain a healthy population capable of persisting overtime. Single large mitigation sites can be subject to stochastic events (fire, disease, vandalism, etc.) that can lead to the loss of remnant populations. Several mitigation sites that are connected through greenbelts or areas allowing safe travel is necessary for dispersal between mitigation sites.

   Regarding the Hub property, the owls will not persist here forever even if the site was protected (not developed). There are many reasons why owls will not persist here in perpetuity even if you try to manage for them. Saving one property will not adequately support a population of owls.

   The owl populations at naval weapons station seal beach and the Orange County fairgrounds and many other similar locations all met the same fate. They were surrounded by development and after several years the populations were extirpated. All of the development bring increased risk of mortality (predators, vehicle strikes, loss of foraging habitats etc.). eventually these island patches of fragmented habitats supporting owls will blink out. They won't support owls in perpetuity as supported by these similar situations at the OC fair grounds and seal beach (and many other locations). The ability to safely disperse away from and into these island patches are critical for a regional population but as this area loses more habitat and dispersal becomes more difficult (increases risk of mortality) then it's more likely owls will be extirpated. Saving part of the property would not result in long term owl occupation either.

3. Except for the undeveloped interstitial areas associated with the Ontario International Airport runway to the west of the project site, the project site is almost entirely surrounded by existing development (industrial buildings) to the north, east and south.

   Prior to the 1980's southwestern San Bernardino supported a robust breeding BUOW population with hundreds of pairs from the base of the San Bernardino Mountains south to the Prado Basin. After decades of development pressure and the complete absence of meaningful mitigation, only a few remaining breeding pairs and winter migrants are known to persist. The remaining highly fragmented landscape which lacks suitable, large, protected sites with connectivity to and between extant breeding sites creates a bottleneck and prevents the existence of a healthy source population. With the continued development pressure and lack of adequate mitigation required by the resource agencies, the BUOW population in this region is tenuous at best and will likely never recover from what was once a robust breeding source population (Kidd et al. 2003, 2007).

   A current review of BUOWs previously reported near the Ontario Airport includes 45 records from 1989-2017. These 45 records are located within seven nearby 7.5min USGS quads (Ontario, Prado, Corona North, Fontana, Cucamonga Peak and Mt. Blady) and Guasti quad where the airport is located (CNDDB 2020). The nearest owl locations reported south of the airport were evicted approximately ten years ago during development of industrial warehouses. Mitigation included the installation of artificial burrows in a barrow pit on the west side of the nearby retired landfill and the owls were evicted from their burrows prior to grading. Owls are no longer known to occupy this site south of the airport. The subject owls on the OIAA property along the east side of Haven Avenue are included in the list of 45 owl records. Several reported owls north of Interstate 10 that

are located west and north of Ontario Mills Mall are some of the only possible extant owls near the airport. All of these owls are surrounded by development and located on small, highly fragmented sites that don't provide long-term conservation value for the owl due to future development and predation pressure to name a few.

Anthropogenic disturbances associated with photographers that are putting up "perching" posts for the burrowing owls to capture a portfolio worthy photograph of the owls has also lead to the becoming more acclimated to human presence.

4. The presence of BUOWs at ONT is one wildlife hazard that the OIAA is required to abate under federal regulations (14 Code of Federal Regulations §139.337). These regulations require the OIAA, as part of ONT's certification with FAA, to "alleviate or eliminate wildlife hazards to air carrier operations." The ONT WHMP identifies BUOW as a wildlife hazard to airport operations that must be addressed, along with other hazards, under the WHMP.

   Numerous avian bird strikes have been reported on the Ontario International Airport, including various strikes from BUOW. Installing artificial burrows and/or encouraging owls to inhabit lands on or directly adjacent to the OIAA property violates FAA rules and is not a viable strategy because of the expected increased presence of other larger hazardous birds (e.g. red-tailed hawks, golden eagles, ferruginous hawks, red-shouldered hawks, Cooper's hawks, turkey vultures, and common ravens) who would attempt to predate or scavenge owls, squirrels or rabbits that would likely use the artificial burrows. Hawks and vultures are those struck by aircraft at the highest rates and those known to cause the most damage per strike. These species are often involved in aircraft strikes while they are hover hunting or circling over the approach or departure ends of the airport within the glide slopes. Bird strikes in these situations (landing and take-off) are the most dangerous and can lead to catastrophic events that can kill hundreds of passengers and crew on jetliners.

   Evicting the owls along Haven Avenue outside the airfield could result in owls moving to areas within the airfield, making a more hazardous situation. Owls are often found seeking refuge very close to taxiways and runways under lights, signs and other man-made structures that support refuge and areas for squirrels to create burrows. Many burrowing owls that are struck at airports are those crossing runways as aircraft are departing and arriving. This will generally not lead to a catastrophic accident however even small birds like burrowing owls are capable of causing tens of thousands of dollars in damage to aircraft per event.

   Further, relocating or encouraging owls to reside on a commercial airfield would violate FAA rules, will result in APHIS having to remove the owls in the future, and creates potential liability for the resource agencies or biologists promoting the in-situ conservation of owls at or near an airport.

   In summary, the act of attempting to conduct any form of "mitigation" including in situ or eviction on or directly adjacent to the airfield is not supported by the FAA, APHIS, or past direction from CDFW Headquarters. The best approach for owl mitigation at and adjacent to OIAA property should involve active relocation. This will better ensure for safe flight operations and compliance with FAA regulations while also attempting to provide the owls with a greater chance of survival

and future breeding attempts.

5. As noted above, the project site is almost completely surrounded by existing development. Translocating the owls to an area already under conservation that is surrounded by conserved land will provide greater biodiversity to the regional population of burrowing owls. The small, fragmented project site does not support as high of a level of biodiversity as the translocation site would.

6. The email correspondence provided in the comment states, "Based on our study, we found higher settlement for owls translocated more than 17.5km (~11 miles). Translocation distance was a secondary driver of settlement, with the presence of cues (i.e., conspecifics or playback/artificial whitewash) being the primary driver."

   The comment states that owls should be relocated a **minimum** of 10.5 miles away, while the correspondence email says that burrowing owls had a higher settlement when they were translocated more than 11 miles The statement in the comment letter is contradictory to what was provided by the San Diego Zoo, that states that burrowing owls that were translocated a distance greater than 17.5km were more likely to settle.

EXHIBIT H

February 21, 2023 ***Sent via email***

Rudy Zeledon
Planning Director, City of Ontario
303 East B Street
Ontario, CA 91764

Subject: Response to Comments Received from the Pamona Valley Audubon Society on proposed project "The Hub" at Ontario International Airport dated February 3, 2023

Dear Rudy:

Mead & Hunt, Inc. (Mead & Hunt) offers the following responses to comments received from the Pamona Valley Audubon Society (Audubon) on February 3, 2023, in association with "The Hub," a proposed logistics/warehousing project at the Ontario International Airport (ONT). In the Audubon's letter of February 2, 2023, Audubon alleges that the decision made by the Planning Commission to approve the proposed project "was not supported by the record because of the many misstatements of fact made by the applicant's consultants which were then repeated by some of the Commissioners." Three of Audubon's comments identifying alleged "misstatements of fact" are addressed below and discussed within the context of applicable FAA regulations and guidance pertaining to aviation and wildlife hazard management.

ALLEGED MISSTATEMENT NO. 1

> The owls are a risk to aviation. From FAA birdstrike data, Burrowing Owls are not a danger to avian [sic] from bird strikes. There is no evidence in that data record from 2008 to 2021 of a Burrowing Owl causing damage to an aircraft at Ontario Airport. https://wildlife.faa.gov/search

Response No. 1

The FAA database contains records of more than 400 strikes with burrowing owls, and some have resulted in damage. Burrowing owls present a direct hazard as they can strike aircraft, and they present an indirect hazard because they can attract other species that are known to pose hazards, such as larger raptors.

National Wildlife Strike Database

The Federal Aviation Administration (FAA) publishes regulation and guidance pertaining to the presence of wildlife hazard management at commercial service airports and general aviation airports, and it maintains a database of known wildlife strike records from 1990 to the present. Burrowing owls have been associated with documented wildlife strikes at U.S. airports since 1992. A review of the FAA National Wildlife Strike Database (NWSD) conducted on February 19, 2023, identified a total of 410 documented strikes associated with the burrowing owl, 17 of which occurred at ONT.[1]

[1] Federal Aviation Administration. 2023. National Wildlife Strike Database. Available at: https://wildlife.faa.gov/search

The NWSD includes records of damaging strikes with burrowing owls: Four strikes resulted in minor or uncertain damage to the following commercial-service aircraft: Boeing 727-200, Boeing 737-700, Boeing 737-800, and McDonnell Douglas MD 83. A 2015 strike with a commercially operated Flexjet Cessna LC-41 resulted in substantial aircraft damage. Strikes with burrowing owls have occurred recently, as 26 of the documented strikes recorded at airports nationwide occurred during 2022. Evidence of burrowing owl strikes indicate that owl mortality occurs in every instance.

Academic Research on Hazards Posed by Burrowing Owls

Raptors, including burrowing owls, have been the subject of research associated with known wildlife strikes. A 2018 article published in the Journal of Raptor Research entitled "Assessing Owl Collisions with U.S. Civil and U.S. Air Force Aircraft" considered the FAA NWSD and the U.S. Air Force's Birdstrike Database, which together characterized 2,531 owl strikes involving at least 20 species.[2] A total of 192 strikes were associated with burrowing owls (7.8 percent). Among the conclusions drawn in the report:

- Owl strikes typically occurred within the airfield environment itself.
- Eighty-six percent of the strikes associated with owls occurred when the aircraft was at or below 30 meters above ground level (AGL).
- Owl strikes with US civil and USAF aircraft are a common event during flight operations within the USA and throughout the world.

ALLEGED MISSTATEMENT NO. 2

> Burrowing Owls will not be an attractor for large raptors if an airport has a good large raptor control program. Large raptors exist near all airports globally and every airport should have a good raptor control strategy. Evidently the Ontario International Airport does not have adequate raptor control because they allow tall poles which are an attractant to hawks throughout the proposed project land.

Response No. 2

The Airport prepared and maintains an FAA-approved Wildlife Hazard Management Plan (WHMP) to address raptors and other species identified as posing a hazard to aircraft.

The Ontario International Airport Authority (OIAA), in cooperation with the United States Department of Agriculture, Wildlife Services (USDA-WS), prepared a Wildlife Hazard Management Plan (WHMP) in 2015 in accordance with FAA regulations set forth in Title 14 of the Code of Federal Regulations (CFR) Part 139.337, "Wildlife Hazard Management." The WHMP addresses the responsibilities, policies, and procedures necessary to reduce wildlife hazards at ONT and places emphasis on identification and abatement of wildlife hazards within the airfield. Wildlife attractants (e.g., lakes, ponds, landfills, etc.) within 5 miles of the airfield are also addressed as they could potentially attract wildlife in a manner that could jeopardize the safety of air traffic operating into and out of ONT.

[2] Journal of Raptor Research. 2018. Assessing Owl Collisions with U.S. Civil and U.S. Air Force Aircraft. Vol. 52 (3): 2820290. Available at: https://bioone.org/journals/journal-of-raptor-research/volume-52/issue-3/JRR-17-64.1/Assessing-Owl-Collisions-with-US-Civil-and-US-Air-Force/10.3356/JRR-17-64.1.full

The proposed actions outlined in the WHMP would involve application of the most appropriate, effective, and biologically sound wildlife control methods available. This approach, known as Integrated Wildlife Damage Management, includes both habitat management and direct control of the species generally considered the most hazardous. The WHMP examines resolutions to detect and alleviate wildlife hazards that threaten human health and safety or aircraft operations operating out of ONT, including raptors. The WHMP was reviewed and approved by the FAA, and it is incorporated in the airport's Airport Certification Manual and subject to annual FAA inspection.

ALLEGED MISSTATEMENT NO. 3

> The FAA disallows conservation of burrowing owls. Airports across the country offer some of the best burrowing owl habitat, with successful conservation programs. The idea that the FAA does not allow this kind of conservation is patently false. Burrowing owls are able to thrive in airport and airport adjacent areas, making this habitat suitable for burrowing owls,

Response No. 3

The conservation of burrowing owls on airport property directly conflicts with Federal Aviation regulations and guidance associated with the safety of aircraft operations and the use airport property. Such regulation and guidance includes:

- Title 14 of the Code of Federal Regulations, Part 139.339, "Wildlife Hazard Management."
- FAA Advisory Circular 150/5200-33, "Wildlife Hazard Attractants on and Near Airports."
- FAA Grant Assurances, specifically assurance nos. 19, 20, and 21.
- Certalert 06-07, Requests by State Wildlife Agencies to Facilitate and Encourage Habitat for State-Listed Threatened and Endangered Species and Species of Special Concern on Airports.

Each item and its applicability to the proposed preserve is discussed in the following paragraphs.

Title 14 of the Code of Federal Regulations Part 139.337, "Wildlife Hazard Management"[3]

ONT holds an operating certificate from the FAA in accordance with Title 14 Part 193, "Airport Certification." As a certificated airport, the City, as the Airport Operator, must meet the requirements of Title 14 of the Code of Federal Regulations Part 139.337, "Wildlife Hazard Management" (14 CFR Part 139.337). As stated in the regulation, "The operator of certificated airport must take immediate action to alleviate wildlife hazards whenever they are detected" (14 CFR 139.337, (a)). In this context, a wildlife hazard refers to the potential to cause a damaging aircraft collision with wildlife on or near the airport. Wildlife poses a direct threat when it has the potential to be involved in a collision or "strike" with aircraft. Wildlife poses an indirect threat when it causes damage to aircraft and/or aviation facilities, such as nesting in aircraft or navigational equipment, chewing through wires, or by attracting other wildlife that could pose a direct hazard (e.g., wildlife that may attract predators such as raptors, coyote, etc.).

[3] Available at: https://www.ecfr.gov/current/title-14/chapter-I/subchapter-G/part-139/subpart-D/section-139.337

A certificate holder must formulate and implement a WHMP when the FAA Administrator determines that one is needed based on the results of a Wildlife Hazard Assessment (14 CFR 139.337 (e)). The City of Ontario has developed an FAA-approved WHMP as requested by the FAA Administrator.

FAA regulations at 14 CFR Part 139.337 also refers to other FAA resources that are acceptable for managing wildlife at airports. Paragraph (g) states that "FAA Advisory Circulars contain methods and procedures for wildlife hazard management at airports that are acceptable to the Administrator."

FAA AC 150/5200-33C, Wildlife Hazard Attractants On and Near Airports[4]

The FAA issues several Advisory Circulars (ACs) and Certalerts to help airport operators address specific issues associated with airport operations and management. AC 150/5200-33C provides guidance on certain land uses that have the potential to attract hazardous wildlife on or near public-use airports, and the FAA recommends that the guidance be implemented at airports that receive funding under federal grant assistance programs, including the Airport Improvement Program. The FAA also recommends the AC for land-use planners and developers of projects, facilities, and activities on or near airports.

The proposed conservation of burrowing owls on airport-owned property would conflict with key recommendations identified in the AC below.

Maintaining an appropriate environment for safe and efficient aircraft operations.

As identified in AC, "Airport operators should maintain an appropriate environment for the safe and efficient operation of aircraft, which entails mitigating wildlife strike hazards by fencing, modifying the landscape in order to deter wildlife, or by hazing or removing wildlife hazards to aircraft from congregating at airports" (paragraph 1.1.1).

Burrowing owls are known to pose direct and indirect strike hazards to aircraft operations – burrowing owls have been struck at ONT and other airports and they can pose indirect hazards because they can attract other hazardous wildlife, including predators such as coyotes and raptors. Providing burrowing owl conservation on airport property is contrary to the AC, as it would continue to attract potentially hazardous wildlife rather than deter wildlife from the airport.

Minimum separation criteria for land use practices that attract hazardous wildlife to the airport vicinity.

Chapter 1 of the AC identifies minimum separation distances between aircraft movement areas and land use practices that attract hazardous wildlife. As stated in paragraph 1.1.3, "FAA criteria include land uses that cause movement of hazardous wildlife onto, into, or across an airport's approach or departure airspace or aircraft movement areas."

For airports that support turbine-powered aircraft (i.e., jets), the FAA recommends maintaining a separation of 10,000 feet "between the closest point of the airport's aircraft operation area and the hazardous wildlife attractant" (paragraph 1.3). To protect approach, departure, and circling airspace, "the FAA recommends a distance of 5 miles between closest point of the airport's aircraft operations area and the hazardous wildlife attractant" (paragraph 1.4).

[4] Available at: https://www.faa.gov/documentLibrary/media/Advisory_Circular/150-5200-33C.pdf

As measured using aerial photography, the east side of Haven Avenue is less than 2,100 feet from aircraft pavements associated with Runways 26L and 26R, and it is directly beneath the approach/departure airspace. The creation of a wildlife preserve at this location would conflict with FAA guidance set forth in the AC.

Land Uses that attract hazardous wildlife.

Chapter 2 of the AC discusses land use practices that have the potential to attract hazardous wildlife and threaten aviation safety (paragraph 2.1.2). Among the land uses identified are mitigation banks and other land uses that include conservation easements, parks, wildlife management areas, and other activities that may have the potential to attract hazardous wildlife. The AC states, "Regardless of the source of the attraction, when hazardous wildlife is noted on a public use airport, each certificate holder must take prompt remedial action(s) to protect aviation safety" (paragraph 2.8.4). Section 2.9 specifically refers to habitat for state and federally listed species on airports. The AC notes that airports provide an artificial environment that may vary from surrounding native landscapes, and some wildlife species may be attracted to the airport in higher numbers because the airport may offer features the species prefer, including state and federally listed species and species of concern. The guidance clearly states, "Airport operators should exercise caution in adopting new management techniques because they may increase wildlife hazards and be inconsistent with safe airport operations. Managing the on-airport environment to facilitate or encourage the presence of hazardous wildlife species can create conditions that are incompatible with, or pose a threat to, aviation safety" (paragraph 2.9.1.1).

In referring to state-listed species and species of concern, the FAA acknowledges that not all species of concern pose a direct threat to aviation safety, but "may pose and indirect threat and be hazardous because they attract other species or support prey species attractive to other species that are directly hazardous" (paragraph 2.9.1.2).

FAA Grant Assurances (Obligations)

When airport owners or sponsors, such as the City, accept funds from FAA-administered airport financial assistance programs, they must agree to certain obligations or assurances that require the recipients to maintain and operate their facilities safely and efficiently and in accordance with specified conditions.

Table 1 identifies specific Airport Improvement Program (AIP) grant assurances that are applicable to wildlife hazard management and the creation of a burrowing owl preserve on airport property.

Table 1. Grant Assurances Applicable to Wildlife Hazard Management

Grant Assurance No./Title	Description and Applicability
19. Operation and Maintenance	**Description** The airport and all facilities which are necessary to serve the aeronautical users of the airport, other than facilities owned or controlled by the United States, shall be operated at all times in a safe and serviceable condition and in accordance with the minimum standards as may be required or prescribed by applicable Federal, state, and local agencies for maintenance and operation. It will not cause or permit any activity or action thereon which would interfere with its use for airport purposes" (paragraph a). **Applicability** The creation of a burrowing owl preserve would create a hazardous wildlife attractant on airport property, which conflicts with the requirement to operate the airport at all times in a safe and serviceable condition.
20. Hazard Removal and Mitigation	**Description** The airport will take appropriate action to assure that such terminal airspace as is required to protect instrument and visual operations to the airport (including established minimum flight altitudes) will be adequately cleared and protected by removing, lowering, relocating, marking, or lighting or otherwise mitigating existing airport hazards and by preventing the establishment or creation of future airport hazards. **Applicability** The creation of a wildlife preserve for the burrowing owl would create a hazardous wildlife attractant beneath terminal airspace. Such action would conflict with the terms of the grant assurance, which require the airport operator to adequately clear and protect the terminal airspace.
21. Compatible Land Use	**Description** The airport will take appropriate action, to the extent reasonable, including the adoption of zoning laws, to restrict the use of land adjacent to or in the immediate vicinity of the airport to activities and purposes compatible with normal airport operations, including landing and takeoff of aircraft. **Applicability** The proposed burrowing owl preserve would be located on airport property and within the Airport Influence Area for ONT as designated by the adopted Airport Land Use Compatibility Plan (ALUCP). The development of a wildlife preserve is considered an incompatible use within the context of ALUCP policies, the purpose of which is to restrict the use of land in the airport vicinity to activities and purposes that are compatible with normal operations, The proposed preserve would conflict with the ALUCP and the grant assurance.
Source: AIP Grant Assurances for Airport Sponsors. 2022. Accessed January 19, 2023. Available at: https://www.faa.gov/sites/faa.gov/files/airports/new_england/airport_compliance/assurances-airport-sponsors-2022-05.pdf	

Certalert 06-07, Requests by State Wildlife Agencies to Facilitate and Encourage Habitat for State-Listed Threatened and Endangered Species and Species of Special Concern on Airports

Certalerts provide the FAA Airports Safety and Operations Division with additional guidance about Part 139 Airport Certification and related issues. Cert Alert 06-07 describes procedures for responding to requests by state wildlife agencies to facilitate and encourage habitat for state-listed species or species of special concern that occur on airports and may pose a threat to aviation safety. Some of the guidance set forth in this Certalert is reiterated in AC 150/5200-33C. The Certalert states:

> Airport operators must decline to adopt habitat management techniques that jeopardize aviation safety. Adopting such techniques could place them in violation of their obligations and subject to an FAA enforcement action and possible civil penalties under 49 U.S.C. §44706, as implemented by 14 CFR § 139.337. In particular, an airport operator that has received federal grant-in-aid assistance is obligated through its grant assurances to maintain compatible land uses. Failure to do so may lead to noncompliance with its grant obligations. Further, airports that serve commercial air carriers are required to be certificated under 49 U.S.C. §44706, as implemented by 14 CFR Part 139. Title 14 CFR § 139.337(a) requires airport operators holding a Part 139 certificate to "take immediate action to alleviate wildlife hazards whenever they are detected."

Although the proposal to create a burrowing owl preserve was not issued by a state agency, the burrowing owl is a state species of concern. The Certalert is clear in that airport operators should not manage airport property for the preservation of state list species/species of concern based on their potential to attract potentially hazardous wildlife and pose conflicts with FAA regulations, grant assurances, and guidance.

CONCLUSIONS

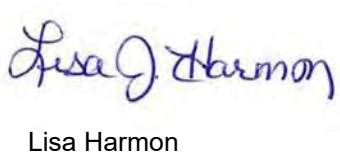
The conservation of burrowing owls, which have been involved in more than 400 wildlife strikes at airports nationwide, including 17 strikes at ONT, is an incompatible land use that conflicts with Chapter 2 of FAA AC 150/5200-33C. Burrowing owl conservation on airport property would create habitat for a species that has caused both direct and indirect threats to aircraft operations.

Although the FAA supports efforts to protect threatened and endangered species and must review proposed projects for the consistency with the Endangered Species Act, the FAA cannot do so to the detriment of safe aircraft operations. As stated in the AC, "Requests to enhance or create habitat for threatened and endangered species often conflict with the safety of the traveling public and may place the protected species at risk of mortality by aircraft collisions. The FAA does not support the creation, conservation or enhancement of habitat or refuges to attract endangered species on airports" (paragraph 2.9.2.1).

The FAA's continuing mission is to provide the safest, most efficient aerospace system in the world. As such, the safety of aviators and the traveling public must remain paramount. FAA regulations pertaining to hazardous wildlife seek to prevent the development of new wildlife hazard attractants within specified separation distances to protect the traveling public; however, the FAA supports conservation and seeks to avoid and minimize effects to protected species. The FAA requires compliance with the National Environmental Policy Act for proposed airport projects, and it does not oppose the creation mitigation or conservation areas that are constructed outside of the separation distances identified in AC 150/5200-33.

Mead & Hunt appreciates this opportunity to review the comments received on The Hub, a proposed logistics project on Ontario International Airport. Please do not hesitate to contact Lisa Harmon by email (lisa.harmon@meadhunt.com) should you have comments on the material discussed in this letter.

Sincerely



Lisa Harmon
Aviation/Environmental Planner

Rick Jones
FAA Qualified Airport Wildlife Biologist.

EXHIBIT I

MEMORANDUM

URBAN | CROSSROADS

DATE: February 21, 2023
TO: Heather Riley, Allen Matkins
FROM: Haseeb Qureshi, Urban Crossroads, Inc.
JOB NO: 14274-05 RTC

CALIFORNIA LOGISTICS CENTER RESPONSE TO COMMENTS

Urban Crossroads, Inc. is pleased to submit the following responses to comments received on the proposed California Logistics Center development (**Project**), which is located at the southeast corner of Haven Avenue and Airport Drive in the City of Ontario.

RESPONSE

The commenter's claims that there is an inadequate accounting for greenhouse gas emissions and pollution, a lack of attention to noise, air quality, and truck trips and that both the addendum and the TOP 2050 do not address emissions in an appropriately cumulative manner are unfounded.

As previously noted in the findings of the TOP 2050 EIR:

"The SoCAB are designated nonattainment for O3, PM2.5, PM10, and lead (SoCAB: Los Angeles County only) under the California and/or National AAQS. Construction of cumulative projects would further degrade the regional and local air quality. Air quality would be temporarily impacted during construction activities. Implementation of mitigation measures for related projects would reduce cumulative impacts. Mitigation Measure 3-1 would reduce impacts associated with consistency with the South Coast AQMD. However, project-related construction emissions could still potentially exceed the South Coast AQMD significance thresholds on a project and cumulative basis. Consequently, the ***Proposed Project's contribution to cumulative air quality impacts would be cumulatively considerable*** *and would therefore be significant."*

And

"For operational air quality emissions, any project that does not exceed or can be mitigated to less than the daily regional threshold values are not considered by South Coast AQMD to be a substantial source of air pollution and does not add significantly to a cumulative impact. Mitigation Measures 3-2 and new Mitigation Measure AQ-1 would reduce impacts associated with consistency with the South Coast AQMD. Nevertheless, operation of the Proposed Project would result in emissions in excess of the South Coast AQMD regional emissions thresholds for

long-term operation. Additionally, development under TOP 2050 would generate TACs that could contribute to elevated levels of risk. Therefore, the ***Proposed Project's air pollutant emissions would be cumulatively considerable*** *and therefore significant."*

As noted, the TOP 2050 EIR acknowledged a significant and unavoidable impact with respect to air quality.

If you have any questions or comments, I can be reached at hqureshi@urbanxroads.com.

Attorneys for Plaintiff and Petitioner Inland Valley Advocates for the Environment

SUPERIOR COURT OF THE STATE OF CALIFORNIA

COUNTY OF SAN BERNARDINO – CENTRAL DIVISION

INLAND VALLEY ADVOCATES FOR THE ENVIRONMENT, Plaintiff and Petitioner, vs. ONTARIO INTERNATIONAL AIRPORT AUTHORITY; and DOES 1 through 100, Defendants and Respondents. CANAM ONTARIO, LLC; and DOES 101 through 1,000, Defendants and Real Parties in Interest.	Case no. CIVSB2201937 **VERIFIED FIRST AMENDED COMPLAINT FOR DECLARATORY RELIEF AND PETITION FOR WRIT OF MANDATE UNDER THE CALIFORNIA ENVIRONMENTAL QUALITY ACT AND OTHER LAWS** Action Filed: January 21, 2022 Department: S23 (Hon. Donald R. Alvarez)

Plaintiff and Petitioner INLAND VALLEY ADVOCATES FOR THE ENVIRONMENT ("Petitioner") alleges as follows:

Parties

1. Petitioner is a non-profit organization formed and operating under the laws of the State of California. At least one of Petitioner's members resides near the Ontario International Airport and has an interest in, among other things, ensuring compliance with environmental laws and protecting the airport-influenced region's environment and quality of life.

2. Defendant and Respondent ONTARIO INTERNATIONAL AIRPORT AUTHORITY ("OIAA") is a "public agency" under Public Resources Code Section 21063 and a "lead agency" under

Public Resources Code Section 21067. As a "public agency" and a "lead agency," OIAA is required to comply with California Environmental Quality Act ("CEQA"), Public Resources Code Section 21000 *et seq*. Defendant and Real Party in Interest CANAM ONTARIO, LLC ("CANAM"), is a business entity with some cognizable interest in the subject matter of this lawsuit.

3. The true names and capacities of the Defendants/Respondents/Real Parties in Interest identified as DOES 1 through 1,000 are unknown to Petitioner, who will seek the Court's permission to amend this pleading in order to allege the true names and capacities as soon as they are ascertained. Petitioner is informed and believes and on that basis alleges that each of the fictitiously named DOES 1 through 100 has jurisdiction by law over one or more aspects of the proposed project that is the subject of this proceeding and DOES 101 through 1,000 has some other cognizable interest in the subject matter of this lawsuit.

Background Information

4. On or about December 23, 2021, OIAA's governing board adopted a resolution approving a Development and Entitlement Agreement (the "DEA") and a Ground Lease with CANAM (collectively, the "Project"). The DEA and the Ground Lease separately and together constitute a "project" under Public Resources Code Sections 21065(a) and 21080.

5. Prior to adopting the resolution approving the Project, OIAA did not make a determination that the Project is exempt from environmental review under CEQA and did not perform any environmental review under CEQA. Petitioner opposes the Project based on CITY's failure to subject the Project to CEQA.

Notice Requirements and Time Limitations

6. This lawsuit is being commenced not more than 35 days after the notice described in Public Resources Code Section 21167(d) was filed with the county clerk (if such a notice was filed).

7. Petitioner has caused a Notice of Commencement of Action to be served on Defendants/Respondents, as required by Public Resources Code Section 21167.5. A true and correct copy of the Notice of Commencement of Action is attached to this pleading as Exhibit "A."

8. Petitioner will have caused a copy of this pleading to be served on the Attorney General not more than 10 days after the commencement of this lawsuit, as required by Public Resources Code Section 21167.7 and Code of Civil Procedure Section 388.

Jurisdiction and Exhaustion of Administrative Remedies

9. Petitioner seeks review by and relief from this Court under Public Resources Code Sections 21168 and/or 21168.5, as applicable, and Code of Civil Procedure Sections 526a, 1060 *et seq.*, and 1084 *et seq.*, among other provisions of law.

10. Petitioner exhausted administrative remedies to the extent required by law. At least one of the persons who opposed the Project and submitted public comments in opposition to the Project at the public meeting held by OIAA on December 23, 2021, is a member of Petitioner, which was formed after the December 23 meeting as authorized by Public Resources Code Section 21177(c). Alternatively and additionally, neither Public Resources Code Section 21177(a)-(b) nor any other exhaustion-of-remedies requirement may be applied to Petitioner.

11. Defendants/Respondents' conduct in approving the Project without complying with CEQA and other applicable laws constitutes a prejudicial abuse of discretion because, as alleged in this pleading, they failed to proceed in a manner required by law.

12. Petitioner has no plain, speedy, and adequate remedy in the ordinary course of law, since its members and other members of the public will suffer irreparable harm as a result of Defendants/Respondents' violations of CEQA and other applicable laws. Defendants/Respondents' approval of the Project also rests on their failure to satisfy a clear, present, ministerial duty to act in accordance with the applicable laws. Even when Defendants/Respondents are permitted or required by law to exercise their discretion in approving projects under those laws, they remain under a clear, present, ministerial duty to exercise their discretion within the limits of and in a manner consistent with those laws. Defendants/Respondents have had and continue to have the capacity and ability to approve the Project within the time limits of and in a manner consistent with those laws, but Defendants/Respondents have failed and refused to do so and have exercised their discretion beyond the limits of and in a manner that is not consistent with those laws.

13. Petitioner has a beneficial right and interest in Defendants/Respondents' fulfillment of all their legal duties, as alleged in this pleading.

FIRST CAUSE OF ACTION:
Illegal Approval of Project
(Against All Defendants/Respondents/Real Parties in Interest)

14. Paragraphs 1 through 13 are fully incorporated into this paragraph.

15. The Project does not comply with all applicable laws. By way of example and not limitation (including alternative theories of liability):

A. The Project violates CEQA. In particular:

i. CEQA applies to every discretionary project proposed to be carried out or approved by a public agency, unless the project is exempt from CEQA. Generally speaking, the public agency must review the potentially significant environmental impacts of every discretionary project subject to CEQA review that the agency proposes to carry out or approve. Such review involves determining whether the proposal is exempt, should be the subject of a negative declaration, or should be the subject of an environmental impact report.

ii. The use of a CEQA exemption is inappropriate when a project may have significant environmental impacts or when there are potentially significant environmental impacts due to unusual circumstances.

iii. The Project constitutes a "project" under CEQA because its approval involved the exercise of discretion and has the potential to cause significant direct, indirect, or cumulative adverse impacts (if not all such impacts) on the environment, including but not limited to parking and traffic problems, noise problems, and biological/wildlife impacts.

iv. These significant direct, indirect, or cumulative adverse environmental impacts give rise to Defendants/Respondents' legal obligation to subject the Project to CEQA review.

v. Defendants/Respondents' refusal to apply CEQA to the Project and subject it to environmental review constitutes a violation of CEQA.

vi. As a result of Defendants/Respondents' violation of CEQA, Petitioner has been harmed insofar as Petitioner, its members, other members of the public, and the responsible decision-makers were not fully informed about the potential adverse environmental impacts of the

Project, and insofar as Petitioner, its members, and other members of the public did not have an opportunity to participate meaningfully in the analysis of such impacts prior to approval of the Project.

16. There is currently a dispute between Petitioner and Defendants/Respondents over the Project's legal force and effect. Petitioner contends that the Project has no legal force or effect because it violates CEQA and/or one or more other applicable laws. Defendants/Respondents dispute Petitioner's contention. The parties therefore require a judicial determination of the Project's legal force and effect (if any).

Prayer

FOR ALL THESE REASONS, Petitioner respectfully prays for the following relief against Defendants/Respondents (and any and all other parties who may oppose Petitioner in this lawsuit):

A. A judgment or other appropriate order determining or declaring that Defendants/Respondents failed to fully comply with CEQA and/or one or more other applicable laws as they relate to the Project and that there must be full compliance therewith before final approval and implementation of the Project may occur;

B. A judgment or other appropriate order determining or declaring that Defendants/Respondents failed to comply with CEQA and/or one or more other applicable laws as they relate to the Project and that its approval and implementation was illegal in at least some respect, rendering the approval and implementation null and void;

C. Injunctive relief prohibiting Defendants/Respondents (and any and all persons acting at the request of, in concert with, or for the benefit of one or more of them) from taking any action on any aspect of, in furtherance of, or otherwise based on the Project unless and until Defendants/Respondents comply with CEQA and all other applicable laws, as determined by the Court;

D. Any and all other relief that may be authorized by CEQA or other applicable laws, or any combination of them, but is not explicitly or specifically requested elsewhere in this Prayer;

E. Any and all legal fees and other expenses incurred by Petitioner in connection with this proceeding, including but not limited to reasonable attorney fees as authorized by the Code of Civil Procedure; and

F. Any and all further relief that this Court may deem appropriate.

Date: May 23, 2022.

Re: Notice of Commencement of Action

Dear Messrs. Thorpe and Wapner:

I represent Inland Valley Advocates for the Environment and am sending this Notice of Commencement of Action on my client's behalf.

Please be advised that an action is to be commenced by my client in San Bernardino County Superior Court against your agency. The action will challenge your agency's approval of the subject matter of Item 7 on the Ontario International Airport Authority governing board's agenda for December 23, 2021 (contracts with CanAm Ontario, LLC) on the grounds that the approval violated the California Environmental Quality Act (PUB. RES. CODE § 21000 *et seq.*). The action may also challenge your agency's approval of item based on one or more violations of other laws.

If you have any questions, please feel free to contact me.

Sincerely,

BRIGGS LAW CORPORATION

3. On May 23, 2022, I served ___ an original copy ✓ a true and correct copy of the following documents: VERIFIED FIRST AMENDED COMPLAINT FOR DECLARATORY RELIEF AND PETITION FOR WRIT OF MANDATE UNDER THE CALIFORNIA ENVIRONMENTAL QUALITY ACT AND OTHER LAWS

4. I served the documents on the person(s) identified on the attached mailing/service list as follows:

___ ***by personal service.*** I personally delivered the documents to the person(s) at the address(es) indicated on the list.

✓ ***by U.S. mail.*** I sealed the documents in an envelope or package addressed to the person(s) at the address(es) indicated on the list, with first-class postage fully prepaid, and then I

___ deposited the envelope/package with the U.S. Postal Service

✓ placed the envelope/package in a box for outgoing mail in accordance with my office's ordinary practices for collecting and processing outgoing mail, with which I am readily familiar. On the same day that mail is placed in the box for outgoing mail, it is deposited in the ordinary course of business with the U.S. Postal Service.

I am a resident of or employed in the county where the mailing occurred. The mailing occurred in the city of Upland, California.

___ ***by overnight delivery.*** I sealed the documents in an envelope/package provided by an overnight-delivery service and addressed to the person(s) at the address(es) indicated on the list, and then I placed the envelope/package for collection and overnight delivery in the service's box regularly utilized for receiving items for overnight delivery or at the service's office where such items are accepted for overnight delivery.

___ ***by facsimile transmission.*** Based on an agreement of the parties or a court order, I sent the documents to the person(s) at the fax number(s) shown on the list. Afterward, the fax machine from which the documents were sent reported that they were sent successfully.

___ ***by e-mail delivery.*** Based on an agreement of the parties or a court order, I sent the documents to the person(s) at the e-mail address(es) shown on the list. I did not receive, within a reasonable period of time afterward, any electronic message or other indication that the transmission was unsuccessful.

I declare under penalty of perjury under the laws ___ of the United States ✓ of the State of California that the foregoing is true and correct.

Date: May 23, 2022

Attorneys for Defendant,
Ontario International Airport Authority

EXHIBIT K

RESOLUTION NO. 2021-22

A RESOLUTION OF THE ONTARIO INTERNATIONAL AIRPORT AUTHORITY TO APPROVE AND ADOPT FINDINGS, INCLUDING AS TO "EXEMPT SURPLUS PROPERTY", REGARDING THE DISPOSITION OF CERTAIN AIRPORT REAL PROPERTY, AND TO APPROVE AND AUTHORIZE THE CHIEF EXECUTIVE OFFICER (CEO), OR THE CEO'S DESIGNEE, TO EXECUTE NECESSARY DOCUMENTATION FOR A DEVELOPMENT AND ENTITLEMENT AGREEMENT AND A LONG-TERM GROUND LEASE FOR SUCH AIRPORT REAL PROPERTY WITH CANAM ONTARIO, LLC.

WHEREAS, the Ontario International Airport Authority (OIAA or Authority) was established under a Joint Exercise of Powers Agreement between the City of Ontario and the County of San Bernardino pursuant to the Joint Exercise of Powers Act of the State of California, for the purpose of operating, maintaining, managing, developing, and marketing the Ontario International Airport (Airport) and related Airport facilities;

WHEREAS, the Authority owns approximately 197 acres on the eastern end of the Airport, east of Haven Road, north of Jurupa Avenue, and south of Airport Drive, which include Assessor's Parcel Numbers 0211-232-44-0-000, 0211-232-45-0-000, 0211-232-46-0-000, 0211-222-47-0-000, 0211-222-48-0-000, 0211-222-52-0-000 AND 0211-222-53-0-000, 0211-222-54-0-000, 0211-222-55-0-000, 0211-232-11-0-000, 0211-232-12-0-000, 0211-232-13-0-000, 0211-232-14, 0211-232-15-0-000, 0211-232-16-0-000, 0211-232-17-0-000, 0211-232-18-0-000, 0211-232-19-0-000, 0211-232-20-000, 0211-232-04-0-000, 0211-232-05-0-000, 0211-232-06-0-000, 0211-232-07-0-000, and 0211-222-56-0-000 (collectively the Property). The Property is surrounded by industrial buildings and land uses to the north, east, and south;

WHEREAS, in 2020, the Authority discussed with the Federal Aviation Administration (FAA) whether the possible lease and use of the Property for industrial logistics development related to the warehousing and distribution of goods and products would be subject to federal jurisdiction and approval. On November 23, 2020, the FAA issued to OIAA a letter under Section 163 of the FAA Reauthorization Act of 2018 regarding a portion of the Property. On January 21, 2021, the FAA issued to OIAA another letter under Section 163 of the Act regarding the remaining portions of the Property. Collectively, the two FAA letters stated that the proposed use of the Property for industrial logistics development related to the warehousing and distribution of goods and products would (1) create revenue to help fund Airport operating costs and (2) not adversely impact aircraft operations at the Airport. The FAA therefore determined it lacked authority to approve or disapprove any potential lease and development of the Property;

WHEREAS, the Property has been vacant and unused for decades. OIAA has determined that the Property is not suited for land uses for typical Authority or Airport aeronautical purposes, such as for runways, taxiways, terminals, hangars, and similar Airport facilities because the Property is physically separated and removed from the balance of the Airport by Haven Avenue, which runs along or near the entire western limits of the Property. Accordingly, the Property is not required for other Authority purposes, and pursuant to Government Code section 37395, can be leased for up to 55 years;

WHEREAS, between April and June 2020, OIAA commissioned three (3) separate and independent appraisals of the Property for the purpose of determining fair market value related to a sale or long-term lease of the Property;

WHEREAS, in February 2021, CBRE, Inc. (CBRE), on behalf of the OIAA, initiated an Offering of Memorandum for the proposed leasing and development of the Property. The Offering of Memorandum was distributed to CBRE's bidder list, which included more than 4,800 potential bidders nationwide. The first round offers received on April 9, 2021, included seventeen (17) responsive bidders. The second round of offers received on April 26, 2021, included twelve (12) responsive bidders. The final round of offers received on May 12, 2021, included five (5) responsive bidders. After the final round of offers/bids on June 23, 2021, the OIAA selection committee held interviews to understand bidders' proposals related to development process, timing, due diligence and environmental analysis, as well as a further analysis of their proposed ground lease offerings. After interviews, USAA Real Estate Company (later CanAm Ontario, LLC) was the final selected responsive bidder as the company was determined to have presented the best proposal for a long-term lease of the Property based on the bidding process, which proposal exceeded the determinations of fair market value in the appraisals for the Property discussed above. OIAA staff presented this determination and report on the bid process to the OIAA Commission in July 2021 and thereafter moved forward with negotiating lease and development terms relating to the Property;

WHEREAS, CanAm Ontario, LLC (CanAm) proposes a long-term Ground Lease for the Property for industrial logistics development related to the warehousing and distribution of goods and products (the Project), which use is generally complimentary with Airport operations. As detailed in the Agenda Report on the proposed Development and Entitlement Agreement and Ground Lease between OIAA and CanAm to be considered at the OIAA Commission's December 23, 2021, Regular public meeting, operations and uses on the Property under the proposed Ground Lease would involve significant improvements to the Property (subject to all environmental reviews and approvals), and significant rental revenues paid to OIAA over the 55-year term of the Ground Lease;

WHEREAS, operations under the proposed Project and Ground Lease will be also consistent with supply chain improvements that are encouraged in Governor Newsom's Executive Order N-19-21 regarding supply chain issues, which Order recognized that "the movement of goods and health of supply and distribution chains across California is a matter of vital statewide importance ...."

WHEREAS, given the unique circumstances that the Property is non-aeronautical lands of the Airport, the City of Ontario will be (i) the lead agency for purposes of compliance by the Project with the California Environmental Quality Act (CEQA), Public Resources Code § 21000 *et seq.*, and (ii) the zoning approval authority relating to the Property and the Project. Before approval by OIAA of any Ground Lease for the Property, or the allowance of any development activity on the Property related to the Project, CanAm shall be required to obtain all applicable land use, zoning, and CEQA reviews, approvals, and certifications for the Project (collectively "Government Approvals"), and shall implement any requirements under such Governmental Approvals, including, without limitation, any mitigation measures required as a result of compliance with CEQA;

WHEREAS, the Offering Memorandum and related request for proposals or bids process for the long-term Ground Lease and development of the Property summarized above confirmed that the proposed Ground Lease with CanAm will provide OIAA with fair market value for lease of the Property;

WHEREAS, certain State-imposed laws and regulations restrict and prevent use of the

Property for residential purposes and for some, but not all, non-residential uses, due to safety concerns and high noise levels;

WHEREAS, certain FAA-imposed regulations restrict and prevent use of the Property for residential purposes and for some, but not all, non-residential uses, due to safety concerns and high noise levels;

WHEREAS, such State and FAA laws and regulations justify a determination and finding by OIAA under Government Code section 54221(f)(1)(G) that the Property is "exempt surplus property" where housing would be prohibited;

WHEREAS, the OIAA Commission has reviewed and considered all materials identified and referred to in this Resolution, as well as all materials and documents discussed in and attached to the Agenda Report for this matter; and

WHEREAS, on December 20, 2021, the Authority provided notice of the Regular OIAA Commission meeting, which includes consideration of this matter, scheduled for December 23, 2021, in accordance with the Ralph M. Brown Act, Government Code § 54950, *et seq.*, and provided notice to Douglas Carstens, Esq.:

NOW, THEREFORE, BE IT RESOLVED by the OIAA Commission as follows:

SECTION 1. FINDINGS.

All Whereas clauses or Recitals in this Resolution above are incorporated by reference into these Findings.

Further, the OIAA Commission, in light of the whole record before it including, but not limited to (1) the Agenda Report, including attachments to the Report, for this matter, and (2) other substantial evidence within the record and/or provided at this December 23, 2021 Regular public meeting (all of which administrative record materials for this matter are incorporated by reference into this Resolution No. 2021-____), finds and determines as follows:

1. **The Property is not required for other Authority purposes, and pursuant to Government Code section 37395, can be leased for up to 55 years.**

   The Property has been vacant and unused for decades. OIAA has determined that the Property is not suited for land uses for typical Authority or Airport aeronautical purposes, such as for runways, taxiways, terminals, hangars, and similar Airport facilities because the Property is physically separated and removed from the balance of the Airport by Haven Avenue, which runs along or near the entire western limits of the Property. Accordingly, the Property is not required for other Authority purposes, and pursuant to Government Code section 37395, can be leased for up to 55 years.

2. **State Law and the Ontario International Airport Land Use Compatibility Plan Establish Legal Restrictions that Prohibit Residential Housing on the Property.**

   A. State Law Requires an Airport Land Use Compatibility Plan for the Airport

   The California State Aeronautics Act (Public Utilities Code section 21670 *et seq.*) requires each airport to adopt an Airport Land Use Compatibility Plan and requires

affected agencies to adopt land use designations consistent with the terms therein. (Pub. Util. Code, §§ 21674, 21675, 21676, 21676.5.) The intent of the Legislature under the Aeronautics Act is to "discourage incompatible land uses near existing airports." (*Id.* at § 21674.7.)

The Ontario International Airport Land Use Compatibility Plan, amended July 2018 (linked at https://www.ontarioca.gov/planning/ont-iac at Compatibility Plan, and incorporated in its entirety into this Resolution No. 2021-___), limits certain land uses near the airport based on state and FAA requirements. (Compatibility Plan, pp. 1-1, 1-2; see also Compatibility Plan, Appendix A, State Laws and Appendix B, Federal Aviation Regulations.) The Airport Compatibility Plan was created by the City of Ontario in coordination with the County of San Bernardino and other affected agencies, such as Riverside County and Los Angeles County. (*Id.* at pp. 1-3 through 1-4.) The policies set forth in the Compatibility Plan that limit land uses are requirements for surrounding jurisdictions, such as OIAA. (*Id.* at p. 2-4; see also Exhibit 2A: Affected Jurisdictions.) Affected agencies must modify, if necessary, any zoning and land use regulations to ensure they are consistent with the land use policies set forth in the Compatibility Plan. (*Id.* at p. 2-6; Gov. Code, § 65302.3; Pub. Util. Code, § 21676 [local agencies must comply with land use compatibility plans].)

B. State-Mandated Safety Policies in the Airport Land Use Compatibility Plan Prohibit Residential Housing and Uses on the Property.

The Airport Compatibility Plan required under State law adopts safety compatibility policies to minimize risks associated with off-airport accidents or emergency landings. More safety restrictions are set on residential land uses because residential uses warrant a greater degree of protection. (Compatibility Plan, p. 2-14.)

The Compatibility Plan creates five safety zones. (Compatibility Plan, p. 2-15.) "Residential development **is incompatible within all Safety Zones** (1 through 5)." (*Id.* at p. 2-15; *see* pp. 2-34 and 2-41.) "New mixed-use developments **will locate the residential component outside of all safety zones.**" (*Id.* at pp. 2-15; *see* p. 2-41.)

The Property is located within Safety Zones 1, 2, and 3 in the Compatibility Plan. (*See* Safety Zone Map Exhibit 1-8, attached to this Resolution as **Exhibit 1**; *see also* Appendix I, at I-13.) Residential development is therefore prohibited under State law for the Property under the Compatibility Plan's Safety Policies.

C. State-Mandated Noise Policies in the Airport Land Use Compatibility Plan Prohibit Residential Housing and Uses on the Property

The Airport Compatibility Plan also establishes noise polices based on state regulations, guidelines, and the California Airport Land Use Planning Handbook. (*Id.* at p. 2-21.) The purpose of the noise policies is to "avoid the establishment of noise-sensitive land uses in the portions of the [Ontario International Airport] that are exposed to significant levels of aircraft noise." (*Id.* at p. 2-19.)

Residential uses are incompatible with airport land areas with noise exposure CNEL 70 dB and above. (*Id.* at Tables 2-3 at p. 2-47.) Noise Policy SP3 states: "Residential infill development **should not be allowed in areas exposed to exterior noise levels equal to or greater than CNEL 70 dB.**" (*Id.* at p. 2-34.)

The Property is located directly below the flight path for the Airport. (Compatibility Plan, Modeled Flight Routes, Exhibit 1-13.) The Property is within the high noise impact zones of CNEL 70-75 dB and CNEL 75+ dB. (*See* Compatibility Plan, p. 1-10; Noise Map Exhibit 1-9, which Map is attached to this Resolution as **Exhibit 2**; *see also* Appendix I, at I-5.) Thus, residential development is not allowed on the Property under the Compatibility Plan's noise policies. (Noise Map Exhibit 1-9; *see also* Appendix I, at I-6 [map of areas with residential land use designation, do not include the Property, or anywhere near the Property].

3. **Federal Regulations Prohibit Residential Uses and Housing on the Property.**

FAA regulations require OIAA to "take appropriate action . . . to restrict the use of land adjacent to or in the immediate vicinity of the airport to activities and purposes compatible with normal airport operations." (49 U.S.C. § 47107(a)(10); see also FAA Order 5190.6B, (linked at: FAA Order 5190.6B Change 1, Airport Compliance Manual, 22 November 2021 and incorporated in its entirety into this Resolution No. 2021-___.) This is considered a "federal obligation to ensure compatible land use." (FAA Order 5190.6B, p. 20-2.)

"Incompatible land use at or near airports may result in the creation of hazards to air navigation and reductions in airport utility resulting from obstructions to flight paths or noise-related incompatible land uses resulting from residential construction too close to the airport." (*Id.* at p. 20-1.) "Residential housing and other land uses near airports must remain compatible with airports and the airport approach/departure corridors." (*Id.* at p. 20-1.) **"Restricting residential development near the airport is essential in order to avoid noise-related problems."** (*Id.* at p. 20-2.)

FAA Order 5190.6B also states, **"The general rule on residential use of land on or near airport property is that it is incompatible with airport operations because of the impact of aircraft noise and, in some cases, for reasons of safety, depending on the location of the property."** (*Id.* at p. 20-5.)

In sum, FAA Order 5190.6B mandates that OIAA ensures compatible land uses with land on or immediately surrounding the Airport, and that it therefore restrict residential housing on the Property, which is located directly below the flight path for the Airport and is within areas affected by high noise levels.

4. **The Property is Exempt Surplus Property under Government Code Section 54221(f)(1)(G).**

The State and federal laws and regulations discussed and referenced in Sections 2 and 3 (Findings) of this Resolution above warrant, justify, and result in a determination and finding by OIAA under Government Code section 54221(f)(1)(G) that the Property is "exempt surplus property" where housing would be prohibited from being developed.

The Property is suitable for use and development of industrial uses regarding the Project consistent with the Airport Compatibility Plan.

5. **The Long-Term Ground Lease of the Property will Produce and Provide Fair Market Value to the Authority.**

   OIAA's Offering Memorandum, through CBRE, and the related request for proposals or bids process for the long-term ground lease and development of the Property summarized above confirmed that the proposed Ground Lease with CanAm Ontario, LLC, will provide OIAA with fair market value for lease of the Property. The proposed Ground Lease between OIAA and CanAm will provide lease rentals and revenues for the Property that exceed the determinations of fair market value for the Property contained in the three (3) separate appraisals for the Property discussed above.

6. **The Proposed Development and Use of the Property Under the Ground Lease Will be Consistent with Vital State Objectives Regarding the Movement of Goods and Health of Supply and Distribution Chains Across California.**

   The proposed Project would utilize the Property for industrial logistics development related to the warehousing and distribution of goods and products. Operations under the proposed Project and Ground Lease will therefore be consistent with supply chain improvements that are encouraged in Governor Newsom's Executive Order N-19-21 regarding supply chain issues, which Order recognized that "the movement of goods and health of supply and distribution chains across California is a matter of vital statewide importance ...."

SECTION 2. OIAA COMMISSION ACTIONS:

1. Approval of Findings: The OIAA Commission approves and adopts the Findings set forth in Section 1 of this Resolution above.

2. Approval of the Development and Entitlement Agreement with CanAm Ontario, LLC: The OIAA Commission approves the Development and Entitlement Agreement (DEA) between CanAm Ontario, LLC, and OIAA included as Attachment A to the Agenda Report for this matter, and authorizes the OIAA's Chief Executive Officer (CEO), or the CEO's designee, to execute all documents related to the DEA.

3. Approval of the Ground Lease with CanAm Ontario, LLC: The OIAA Commission approves the Ground Lease between CanAm Ontario, LLC, and OIAA included as Attachment B to the Agenda Report for this matter, and, subject to satisfaction of each of the conditions stated and contained in Sections 2.2(a)(1), 2.3(d), 2.7, 4.1(f), and 4.1(g) of the DEA, authorizes the OIAA's Chief Executive Officer (CEO), or the CEO's designee, to execute all documents related to the Ground Lease.

PASSED, APPROVED, AND ADOPTED this 23rd day of December 2021.

ALAN D. WAPNER, OIAA PRESIDENT

MEMORANDUM

URBAN | CROSSROADS

DATE: February 21, 2023
TO: Heather Riley, Allen Matkins
FROM: Haseeb Qureshi, Urban Crossroads, Inc.
JOB NO: 14274-05 RTC

CALIFORNIA LOGISTICS CENTER RESPONSE TO COMMENTS

Urban Crossroads, Inc. is pleased to submit the following responses to comments received on the proposed California Logistics Center development (**Project**), which is located at the southeast corner of Haven Avenue and Airport Drive in the City of Ontario.

RESPONSE

The commenter's claims that there is an inadequate accounting for greenhouse gas emissions and pollution, a lack of attention to noise, air quality, and truck trips and that both the addendum and the TOP 2050 do not address emissions in an appropriately cumulative manner are unfounded.

As previously noted in the findings of the TOP 2050 EIR:

"The SoCAB are designated nonattainment for O3, PM2.5, PM10, and lead (SoCAB: Los Angeles County only) under the California and/or National AAQS. Construction of cumulative projects would further degrade the regional and local air quality. Air quality would be temporarily impacted during construction activities. Implementation of mitigation measures for related projects would reduce cumulative impacts. Mitigation Measure 3-1 would reduce impacts associated with consistency with the South Coast AQMD. However, project-related construction emissions could still potentially exceed the South Coast AQMD significance thresholds on a project and cumulative basis. Consequently, the ***Proposed Project's contribution to cumulative air quality impacts would be cumulatively considerable*** *and would therefore be significant."*

And

"For operational air quality emissions, any project that does not exceed or can be mitigated to less than the daily regional threshold values are not considered by South Coast AQMD to be a substantial source of air pollution and does not add significantly to a cumulative impact. Mitigation Measures 3-2 and new Mitigation Measure AQ-1 would reduce impacts associated with consistency with the South Coast AQMD. Nevertheless, operation of the Proposed Project would result in emissions in excess of the South Coast AQMD regional emissions thresholds for

long-term operation. Additionally, development under TOP 2050 would generate TACs that could contribute to elevated levels of risk. Therefore, the ***Proposed Project's air pollutant emissions would be cumulatively considerable*** *and therefore significant."*

As noted, the TOP 2050 EIR acknowledged a significant and unavoidable impact with respect to air quality.

If you have any questions or comments, I can be reached at hqureshi@urbanxroads.com.

SUBJECT: **Appeal - Response to Comments**

1. Burrowing owls will use storm drains, concrete rubble piles, open pipes, rolled up carpets, etc. for shelter and roosting. The burrowing owls used the onsite storm drains (or the risers on-site) as a burrow. Please see photos below from the focused surveys that show the burrowing owls utilizing these as a sentinel burrow and as a main burrow. The amount of pellets and whitewash in and around the riser shows that the owls were not just using the riser to escape predators. Further, one of the photos includes a perch that photographers installed and shows the owls were using that riser as part of their burrow complex or at least as an active burrow.

2. The Ontario HUB was one of the last remaining sites undeveloped in the region this would leave a lack of owls in the region necessary to maintain a healthy population capable of persisting overtime. Single large mitigation sites can be subject to stochastic events (fire, disease, vandalism, etc.) that can lead to the loss of remnant populations. Several mitigation sites that are connected through greenbelts or areas allowing safe travel is necessary for dispersal between mitigation sites.

   Regarding the Hub property, the owls will not persist here forever even if the site was protected (not developed). There are many reasons why owls will not persist here in perpetuity even if you try to manage for them. Saving one property will not adequately support a population of owls.

   The owl populations at naval weapons station seal beach and the Orange County fairgrounds and many other similar locations all met the same fate. They were surrounded by development and after several years the populations were extirpated. All of the development bring increased risk of mortality (predators, vehicle strikes, loss of foraging habitats etc.). eventually these island patches of fragmented habitats supporting owls will blink out. They won't support owls in perpetuity as supported by these similar situations at the OC fair grounds and seal beach (and many other locations). The ability to safely disperse away from and into these island patches are critical for a regional population but as this area loses more habitat and dispersal becomes more difficult (increases risk of mortality) then it's more likely owls will be extirpated. Saving part of the property would not result in long term owl occupation either.

3. Except for the undeveloped interstitial areas associated with the Ontario International Airport runway to the west of the project site, the project site is almost entirely surrounded by existing development (industrial buildings) to the north, east and south.

   Prior to the 1980's southwestern San Bernardino supported a robust breeding BUOW population with hundreds of pairs from the base of the San Bernardino Mountains south to the Prado Basin. After decades of development pressure and the complete absence of meaningful mitigation, only a few remaining breeding pairs and winter migrants are known to persist. The remaining highly fragmented landscape which lacks suitable, large, protected sites with connectivity to and between extant breeding sites creates a bottleneck and prevents the existence of a healthy source population. With the continued development pressure and lack of adequate mitigation required by the resource agencies, the BUOW population in this region is tenuous at best and will likely never recover from what was once a robust breeding source population (Kidd et al. 2003, 2007).

   A current review of BUOWs previously reported near the Ontario Airport includes 45 records from 1989-2017. These 45 records are located within seven nearby 7.5min USGS quads (Ontario, Prado, Corona North, Fontana, Cucamonga Peak and Mt. Blady) and Guasti quad where the airport is located (CNDDB 2020). The nearest owl locations reported south of the airport were evicted approximately ten years ago during development of industrial warehouses. Mitigation included the installation of artificial burrows in a barrow pit on the west side of the nearby retired landfill and the owls were evicted from their burrows prior to grading. Owls are no longer known to occupy this site south of the airport. The subject owls on the OIAA property along the east side of Haven Avenue are included in the list of 45 owl records. Several reported owls north of Interstate 10 that

are located west and north of Ontario Mills Mall are some of the only possible extant owls near the airport. All of these owls are surrounded by development and located on small, highly fragmented sites that don't provide long-term conservation value for the owl due to future development and predation pressure to name a few.

Anthropogenic disturbances associated with photographers that are putting up "perching" posts for the burrowing owls to capture a portfolio worthy photograph of the owls has also lead to the owls becoming more acclimated to human presence.

4. The presence of BUOWs at ONT is one wildlife hazard that the OIAA is required to abate under federal regulations (14 Code of Federal Regulations §139.337). These regulations require the OIAA, as part of ONT's certification with FAA, to "alleviate or eliminate wildlife hazards to air carrier operations." The ONT WHMP identifies BUOW as a wildlife hazard to airport operations that must be addressed, along with other hazards, under the WHMP.

   Numerous avian bird strikes have been reported on the Ontario International Airport, including various strikes from BUOW. Installing artificial burrows and/or encouraging owls to inhabit lands on or directly adjacent to the OIAA property violates FAA rules and is not a viable strategy because of the expected increased presence of other larger hazardous birds (e.g. red-tailed hawks, golden eagles, ferruginous hawks, red-shouldered hawks, Cooper's hawks, turkey vultures, and common ravens) who would attempt to predate or scavenge owls, squirrels or rabbits that would likely use the artificial burrows. Hawks and vultures are those struck by aircraft at the highest rates and those known to cause the most damage per strike. These species are often involved in aircraft strikes while they are hover hunting or circling over the approach or departure ends of the airport within the glide slopes. Bird strikes in these situations (landing and take-off) are the most dangerous and can lead to catastrophic events that can kill hundreds of passengers and crew on jetliners.

   Evicting the owls along Haven Avenue outside the airfield could result in owls moving to areas within the airfield, making a more hazardous situation. Owls are often found seeking refuge very close to taxiways and runways under lights, signs and other man-made structures that support refuge and areas for squirrels to create burrows. Many burrowing owls that are struck at airports are those crossing runways as aircraft are departing and arriving. This will generally not lead to a catastrophic accident however even small birds like burrowing owls are capable of causing tens of thousands of dollars in damage to aircraft per event.

   Further, relocating or encouraging owls to reside on a commercial airfield would violate FAA rules, will result in APHIS having to remove the owls in the future, and creates potential liability for the resource agencies or biologists promoting the in-situ conservation of owls at or near an airport.

   In summary, the act of attempting to conduct any form of "mitigation" including in situ or eviction on or directly adjacent to the airfield is not supported by the FAA, APHIS, or past direction from CDFW Headquarters. The best approach for owl mitigation at and adjacent to OIAA property should involve active relocation. This will better ensure for safe flight operations and compliance with FAA regulations while also attempting to provide the owls with a greater chance of survival

and future breeding attempts.

5. As noted above, the project site is almost completely surrounded by existing development. Translocating the owls to an area already under conservation that is surrounded by conserved land will provide greater biodiversity to the regional population of burrowing owls. The small, fragmented project site does not support as high of a level of biodiversity as the translocation site would.

6. The email correspondence provided in the comment states, "Based on our study, we found higher settlement for owls translocated more than 17.5km (~11 miles). Translocation distance was a secondary driver of settlement, with the presence of cues (i.e., conspecifics or playback/artificial whitewash) being the primary driver."

   The comment states that owls should be relocated a **minimum** of 10.5 miles away, while the correspondence email says that burrowing owls had a higher settlement when they were translocated more than 11 miles. The statement in the comment letter is contradictory to what was provided by the San Diego Zoo, that states that burrowing owls that were translocated a distance greater than 17.5km were more likely to settle.

Rudy Zeledon
Planning Director, City of Ontario
303 East B Street
Ontario, CA 91764

Subject: Response to Comments Received from the Pamona Valley Audubon Society on proposed project "The Hub" at Ontario International Airport dated February 3, 2023

Dear Rudy:

Mead & Hunt, Inc. (Mead & Hunt) offers the following responses to comments received from the Pamona Valley Audubon Society (Audubon) on February 3, 2023, in association with "The Hub," a proposed logistics/warehousing project at the Ontario International Airport (ONT). In the Audubon's letter of February 2, 2023, Audubon alleges that the decision made by the Planning Commission to approve the proposed project "was not supported by the record because of the many misstatements of fact made by the applicant's consultants which were then repeated by some of the Commissioners." Three of Audubon's comments identifying alleged "misstatements of fact" are addressed below and discussed within the context of applicable FAA regulations and guidance pertaining to aviation and wildlife hazard management.

ALLEGED MISSTATEMENT NO. 1

> The owls are a risk to aviation. From FAA birdstrike data, Burrowing Owls are not a danger to avian [sic] from bird strikes. There is no evidence in that data record from 2008 to 2021 of a Burrowing Owl causing damage to an aircraft at Ontario Airport. https://wildlife.faa.gov/search

Response No. 1

The FAA database contains records of more than 400 strikes with burrowing owls, and some have resulted in damage. Burrowing owls present a direct hazard as they can strike aircraft, and they present an indirect hazard because they can attract other species that are known to pose hazards, such as larger raptors.

National Wildlife Strike Database

The Federal Aviation Administration (FAA) publishes regulation and guidance pertaining to the presence of wildlife hazard management at commercial service airports and general aviation airports, and it maintains a database of known wildlife strike records from 1990 to the present. Burrowing owls have been associated with documented wildlife strikes at U.S. airports since 1992. A review of the FAA National Wildlife Strike Database (NWSD) conducted on February 19, 2023, identified a total of 410 documented strikes associated with the burrowing owl, 17 of which occurred at ONT.[1]

[1] Federal Aviation Administration. 2023. National Wildlife Strike Database. Available at: https://wildlife.faa.gov/search

The NWSD includes records of damaging strikes with burrowing owls: Four strikes resulted in minor or uncertain damage to the following commercial-service aircraft: Boeing 727-200, Boeing 737-700, Boeing 737-800, and McDonnell Douglas MD 83. A 2015 strike with a commercially operated Flexjet Cessna LC-41 resulted in substantial aircraft damage. Strikes with burrowing owls have occurred recently, as 26 of the documented strikes recorded at airports nationwide occurred during 2022. Evidence of burrowing owl strikes indicate that owl mortality occurs in every instance.

Academic Research on Hazards Posed by Burrowing Owls

Raptors, including burrowing owls, have been the subject of research associated with known wildlife strikes. A 2018 article published in the Journal of Raptor Research entitled "Assessing Owl Collisions with U.S. Civil and U.S. Air Force Aircraft" considered the FAA NWSD and the U.S. Air Force's Birdstrike Database, which together characterized 2,531 owl strikes involving at least 20 species.[2] A total of 192 strikes were associated with burrowing owls (7.8 percent). Among the conclusions drawn in the report:

- Owl strikes typically occurred within the airfield environment itself.
- Eighty-six percent of the strikes associated with owls occurred when the aircraft was at or below 30 meters above ground level (AGL).
- Owl strikes with US civil and USAF aircraft are a common event during flight operations within the USA and throughout the world.

ALLEGED MISSTATEMENT NO. 2

> Burrowing Owls will not be an attractor for large raptors if an airport has a good large raptor control program. Large raptors exist near all airports globally and every airport should have a good raptor control strategy. Evidently the Ontario International Airport does not have adequate raptor control because they allow tall poles which are an attractant to hawks throughout the proposed project land.

Response No. 2

The Airport prepared and maintains an FAA-approved Wildlife Hazard Management Plan (WHMP) to address raptors and other species identified as posing a hazard to aircraft.

The Ontario International Airport Authority (OIAA), in cooperation with the United States Department of Agriculture, Wildlife Services (USDA-WS), prepared a Wildlife Hazard Management Plan (WHMP) in 2015 in accordance with FAA regulations set forth in Title 14 of the Code of Federal Regulations (CFR) Part 139.337, "Wildlife Hazard Management." The WHMP addresses the responsibilities, policies, and procedures necessary to reduce wildlife hazards at ONT and places emphasis on identification and abatement of wildlife hazards within the airfield. Wildlife attractants (e.g., lakes, ponds, landfills, etc.) within 5 miles of the airfield are also addressed as they could potentially attract wildlife in a manner that could jeopardize the safety of air traffic operating into and out of ONT.

[2] Journal of Raptor Research. 2018. Assessing Owl Collisions with U.S. Civil and U.S. Air Force Aircraft. Vol. 52 (3): 2820290. Available at: https://bioone.org/journals/journal-of-raptor-research/volume-52/issue-3/JRR-17-64.1/Assessing-Owl-Collisions-with-US-Civil-and-US-Air-Force/10.3356/JRR-17-64.1.full

The proposed actions outlined in the WHMP would involve application of the most appropriate, effective, and biologically sound wildlife control methods available. This approach, known as Integrated Wildlife Damage Management, includes both habitat management and direct control of the species generally considered the most hazardous. The WHMP examines resolutions to detect and alleviate wildlife hazards that threaten human health and safety or aircraft operations operating out of ONT, including raptors. The WHMP was reviewed and approved by the FAA, and it is incorporated in the airport's Airport Certification Manual and subject to annual FAA inspection.

ALLEGED MISSTATEMENT NO. 3

> The FAA disallows conservation of burrowing owls. Airports across the country offer some of the best burrowing owl habitat, with successful conservation programs. The idea that the FAA does not allow this kind of conservation is patently false. Burrowing owls are able to thrive in airport and airport adjacent areas, making this habitat suitable for burrowing owls,

Response No. 3

The conservation of burrowing owls on airport property directly conflicts with Federal Aviation regulations and guidance associated with the safety of aircraft operations and the use airport property. Such regulation and guidance includes:

- Title 14 of the Code of Federal Regulations, Part 139.339, "Wildlife Hazard Management."
- FAA Advisory Circular 150/5200-33, "Wildlife Hazard Attractants on and Near Airports."
- FAA Grant Assurances, specifically assurance nos. 19, 20, and 21.
- Certalert 06-07, Requests by State Wildlife Agencies to Facilitate and Encourage Habitat for State-Listed Threatened and Endangered Species and Species of Special Concern on Airports.

Each item and its applicability to the proposed preserve is discussed in the following paragraphs.

Title 14 of the Code of Federal Regulations Part 139.337, "Wildlife Hazard Management"[3]

ONT holds an operating certificate from the FAA in accordance with Title 14 Part 193, "Airport Certification." As a certificated airport, the City, as the Airport Operator, must meet the requirements of Title 14 of the Code of Federal Regulations Part 139.337, "Wildlife Hazard Management" (14 CFR Part 139.337). As stated in the regulation, "The operator of certificated airport must take immediate action to alleviate wildlife hazards whenever they are detected" (14 CFR 139.337, (a)). In this context, a wildlife hazard refers to the potential to cause a damaging aircraft collision with wildlife on or near the airport. Wildlife poses a direct threat when it has the potential to be involved in a collision or "strike" with aircraft. Wildlife poses an indirect threat when it causes damage to aircraft and/or aviation facilities, such as nesting in aircraft or navigational equipment, chewing through wires, or by attracting other wildlife that could pose a direct hazard (e.g., wildlife that may attract predators such as raptors, coyote, etc.).

[3] Available at: https://www.ecfr.gov/current/title-14/chapter-I/subchapter-G/part-139/subpart-D/section-139.337

A certificate holder must formulate and implement a WHMP when the FAA Administrator determines that one is needed based on the results of a Wildlife Hazard Assessment (14 CFR 139.337 (e)). The City of Ontario has developed an FAA-approved WHMP as requested by the FAA Administrator.

FAA regulations at 14 CFR Part 139.337 also refers to other FAA resources that are acceptable for managing wildlife at airports. Paragraph (g) states that "FAA Advisory Circulars contain methods and procedures for wildlife hazard management at airports that are acceptable to the Administrator."

FAA AC 150/5200-33C, Wildlife Hazard Attractants On and Near Airports[4]

The FAA issues several Advisory Circulars (ACs) and Certalerts to help airport operators address specific issues associated with airport operations and management. AC 150/5200-33C provides guidance on certain land uses that have the potential to attract hazardous wildlife on or near public-use airports, and the FAA recommends that the guidance be implemented at airports that receive funding under federal grant assistance programs, including the Airport Improvement Program. The FAA also recommends the AC for land-use planners and developers of projects, facilities, and activities on or near airports.

The proposed conservation of burrowing owls on airport-owned property would conflict with key recommendations identified in the AC below.

Maintaining an appropriate environment for safe and efficient aircraft operations.

As identified in AC, "Airport operators should maintain an appropriate environment for the safe and efficient operation of aircraft, which entails mitigating wildlife strike hazards by fencing, modifying the landscape in order to deter wildlife, or by hazing or removing wildlife hazards to aircraft from congregating at airports" (paragraph 1.1.1).

Burrowing owls are known to pose direct and indirect strike hazards to aircraft operations – burrowing owls have been struck at ONT and other airports and they can pose indirect hazards because they can attract other hazardous wildlife, including predators such as coyotes and raptors. Providing burrowing owl conservation on airport property is contrary to the AC, as it would continue to attract potentially hazardous wildlife rather than deter wildlife from the airport.

Minimum separation criteria for land use practices that attract hazardous wildlife to the airport vicinity.

Chapter 1 of the AC identifies minimum separation distances between aircraft movement areas and land use practices that attract hazardous wildlife. As stated in paragraph 1.1.3, "FAA criteria include land uses that cause movement of hazardous wildlife onto, into, or across an airport's approach or departure airspace or aircraft movement areas."

For airports that support turbine-powered aircraft (i.e., jets), the FAA recommends maintaining a separation of 10,000 feet "between the closest point of the airport's aircraft operation area and the hazardous wildlife attractant" (paragraph 1.3). To protect approach, departure, and circling airspace, "the FAA recommends a distance of 5 miles between closest point of the airport's aircraft operations area and the hazardous wildlife attractant" (paragraph 1.4).

[4] Available at: https://www.faa.gov/documentLibrary/media/Advisory_Circular/150-5200-33C.pdf

As measured using aerial photography, the east side of Haven Avenue is less than 2,100 feet from aircraft pavements associated with Runways 26L and 26R, and it is directly beneath the approach/departure airspace. The creation of a wildlife preserve at this location would conflict with FAA guidance set forth in the AC.

Land Uses that attract hazardous wildlife.

Chapter 2 of the AC discusses land use practices that have the potential to attract hazardous wildlife and threaten aviation safety (paragraph 2.1.2). Among the land uses identified are mitigation banks and other land uses that include conservation easements, parks, wildlife management areas, and other activities that may have the potential to attract hazardous wildlife. The AC states, "Regardless of the source of the attraction, when hazardous wildlife is noted on a public use airport, each certificate holder must take prompt remedial action(s) to protect aviation safety" (paragraph 2.8.4). Section 2.9 specifically refers to habitat for state and federally listed species on airports. The AC notes that airports provide an artificial environment that may vary from surrounding native landscapes, and some wildlife species may be attracted to the airport in higher numbers because the airport may offer features the species prefer, including state and federally listed species and species of concern. The guidance clearly states, "Airport operators should exercise caution in adopting new management techniques because they may increase wildlife hazards and be inconsistent with safe airport operations. Managing the on-airport environment to facilitate or encourage the presence of hazardous wildlife species can create conditions that are incompatible with, or pose a threat to, aviation safety" (paragraph 2.9.1.1).

In referring to state-listed species and species of concern, the FAA acknowledges that not all species of concern pose a direct threat to aviation safety, but "may pose and indirect threat and be hazardous because they attract other species or support prey species attractive to other species that are directly hazardous" (paragraph 2.9.1.2).

FAA Grant Assurances (Obligations)

When airport owners or sponsors, such as the City, accept funds from FAA-administered airport financial assistance programs, they must agree to certain obligations or assurances that require the recipients to maintain and operate their facilities safely and efficiently and in accordance with specified conditions.

Table 1 identifies specific Airport Improvement Program (AIP) grant assurances that are applicable to wildlife hazard management and the creation of a burrowing owl preserve on airport property.

Table 1. Grant Assurances Applicable to Wildlife Hazard Management

Grant Assurance No./Title	Description and Applicability
19. Operation and Maintenance	**Description** The airport and all facilities which are necessary to serve the aeronautical users of the airport, other than facilities owned or controlled by the United States, shall be operated at all times in a safe and serviceable condition and in accordance with the minimum standards as may be required or prescribed by applicable Federal, state, and local agencies for maintenance and operation. It will not cause or permit any activity or action thereon which would interfere with its use for airport purposes" (paragraph a). **Applicability** The creation of a burrowing owl preserve would create a hazardous wildlife attractant on airport property, which conflicts with the requirement to operate the airport at all times in a safe and serviceable condition.
20. Hazard Removal and Mitigation	**Description** The airport will take appropriate action to assure that such terminal airspace as is required to protect instrument and visual operations to the airport (including established minimum flight altitudes) will be adequately cleared and protected by removing, lowering, relocating, marking, or lighting or otherwise mitigating existing airport hazards and by preventing the establishment or creation of future airport hazards. **Applicability** The creation of a wildlife preserve for the burrowing owl would create a hazardous wildlife attractant beneath terminal airspace. Such action would conflict with the terms of the grant assurance, which require the airport operator to adequately clear and protect the terminal airspace.
21. Compatible Land Use	**Description** The airport will take appropriate action, to the extent reasonable, including the adoption of zoning laws, to restrict the use of land adjacent to or in the immediate vicinity of the airport to activities and purposes compatible with normal airport operations, including landing and takeoff of aircraft. **Applicability** The proposed burrowing owl preserve would be located on airport property and within the Airport Influence Area for ONT as designated by the adopted Airport Land Use Compatibility Plan (ALUCP). The development of a wildlife preserve is considered an incompatible use within the context of ALUCP policies, the purpose of which is to restrict the use of land in the airport vicinity to activities and purposes that are compatible with normal operations, The proposed preserve would conflict with the ALUCP and the grant assurance.
Source: AIP Grant Assurances for Airport Sponsors. 2022. Accessed January 19, 2023. Available at: https://www.faa.gov/sites/faa.gov/files/airports/new_england/airport_compliance/assurances-airport-sponsors-2022-05.pdf	

Certalert 06-07, Requests by State Wildlife Agencies to Facilitate and Encourage Habitat for State-Listed Threatened and Endangered Species and Species of Special Concern on Airports

Certalerts provide the FAA Airports Safety and Operations Division with additional guidance about Part 139 Airport Certification and related issues. Cert Alert 06-07 describes procedures for responding to requests by state wildlife agencies to facilitate and encourage habitat for state-listed species or species of special concern that occur on airports and may pose a threat to aviation safety. Some of the guidance set forth in this Certalert is reiterated in AC 150/5200-33C. The Certalert states:

> Airport operators must decline to adopt habitat management techniques that jeopardize aviation safety. Adopting such techniques could place them in violation of their obligations and subject to an FAA enforcement action and possible civil penalties under 49 U.S.C. §44706, as implemented by 14 CFR § 139.337. In particular, an airport operator that has received federal grant-in-aid assistance is obligated through its grant assurances to maintain compatible land uses. Failure to do so may lead to noncompliance with its grant obligations. Further, airports that serve commercial air carriers are required to be certificated under 49 U.S.C. §44706, as implemented by 14 CFR Part 139. Title 14 CFR § 139.337(a) requires airport operators holding a Part 139 certificate to "take immediate action to alleviate wildlife hazards whenever they are detected."

Although the proposal to create a burrowing owl preserve was not issued by a state agency, the burrowing owl is a state species of concern. The Certalert is clear in that airport operators should not manage airport property for the preservation of state list species/species of concern based on their potential to attract potentially hazardous wildlife and pose conflicts with FAA regulations, grant assurances, and guidance.

CONCLUSIONS

The conservation of burrowing owls, which have been involved in more than 400 wildlife strikes at airports nationwide, including 17 strikes at ONT, is an incompatible land use that conflicts with Chapter 2 of FAA AC 150/5200-33C. Burrowing owl conservation on airport property would create habitat for a species that has caused both direct and indirect threats to aircraft operations.

Although the FAA supports efforts to protect threatened and endangered species and must review proposed projects for the consistency with the Endangered Species Act, the FAA cannot do so to the detriment of safe aircraft operations. As stated in the AC, "Requests to enhance or create habitat for threatened and endangered species often conflict with the safety of the traveling public and may place the protected species at risk of mortality by aircraft collisions. The FAA does not support the creation, conservation or enhancement of habitat or refuges to attract endangered species on airports" (paragraph 2.9.2.1).

The FAA's continuing mission is to provide the safest, most efficient aerospace system in the world. As such, the safety of aviators and the traveling public must remain paramount. FAA regulations pertaining to hazardous wildlife seek to prevent the development of new wildlife hazard attractants within specified separation distances to protect the traveling public; however, the FAA supports conservation and seeks to avoid and minimize effects to protected species. The FAA requires compliance with the National Environmental Policy Act for proposed airport projects, and it does not oppose the creation mitigation or conservation areas that are constructed outside of the separation distances identified in AC 150/5200-33.

Mead & Hunt appreciates this opportunity to review the comments received on The Hub, a proposed logistics project on Ontario International Airport. Please do not hesitate to contact Lisa Harmon by email (lisa.harmon@meadhunt.com) should you have comments on the material discussed in this letter.

Sincerely

Lisa Harmon

Advisory Circular

Subject: Hazardous Wildlife Attractants on or near Airports

Date: 02/21/2020
Initiated By: AAS-300

AC No: 150/5200-33C
Change:

1 **Purpose.**

This Advisory Circular (AC) provides guidance on certain land uses that have the potential to attract hazardous wildlife on or near public-use airports. It also discusses airport development projects (including airport construction, expansion, and renovation) affecting aircraft movement near hazardous wildlife attractants. Appendix 1 provides definitions of terms used in this AC.

2 **Cancellation.**

This AC cancels AC 150/5200-33B, *Hazardous Wildlife Attractants on or near Airports*, dated August 28, 2007.

3 **Application.**

The Federal Aviation Administration recommends the guidance in this AC for land uses that have the potential to attract hazardous wildlife on or near public-use airports. This AC does not constitute a regulation, is not mandatory, and is not legally binding in its own right. It will not be relied upon as a separate basis by the FAA for affirmative enforcement action or other administrative penalty. Conformity with this AC is voluntary, and nonconformity will not affect rights and obligations under existing statutes and regulations, except as follows:

1. Airports that hold Airport Operating Certificates issued under Title 14, Code of Federal Regulations (CFR), Part 139, Certification of Airports, Subpart D, may use the standards, practices and recommendations contained in this AC as one, but not the only, acceptable means of compliance with the wildlife hazard management requirements of Part 139.
2. The FAA recommends the guidance in this AC for airports that receive funding under Federal grant assistance programs, including the Airport Improvement Program. See Grant Assurance #34.

3. The FAA recommends the guidance in this AC for projects funded by the Passenger Facility Charge program. See PFC Assurance #9.
4. The FAA recommends the guidance in this AC for land-use planners and developers of projects, facilities, and activities on or near airports.

4 Principal Changes.

Changes are marked with vertical bars in the margin. Change in this AC include:

1. Clarification by the FAA that non-certificated airports are recommended to conduct a Wildlife Hazard Assessment (Assessment) or a Wildlife Hazard Site Visit (Site Visit);
2. Table 1, Ranking of Hazardous Species, has been moved to Advisory Circular 150/5200-32, *Reporting Wildlife Aircraft Strikes* (5/31/2013);
3. Consolidation and reorganization of discussion on land uses of concern; and updated procedures for evaluation and mitigation. Discussion addresses off-airport hazardous wildlife attractants, followed by discussion of on-airport attractants. It also clarifies language regarding the applicability of the AC.

5 Background.

1. Information about the risks posed to aircraft by certain wildlife species has increased a great deal in recent years. Improved reporting, studies, documentation, and statistics clearly show that aircraft collisions with birds and other wildlife are a serious economic and public safety problem. While many species of wildlife can pose a risk[1] to aircraft safety, they are not equally hazardous[2]. These hazard rankings can help focus hazardous wildlife management efforts on those species or groups that represent the greatest risk to safe air and ground operations in the airport environment. Used in conjunction with a site-specific Assessment that will determine the relative abundance and use patterns of wildlife species, these rankings combined with a systematic risk analysis can help airport operators better understand the general threat level (and consequences) of certain wildlife species. Also, the rankings can assist with the creation of a "high risk" list of hazardous species that warrant immediate attention.
2. Most public-use airports have large tracts of open, undeveloped land that provide added margins of safety and noise mitigation. These areas can also present potential hazards to aviation if they encourage wildlife to enter an airport's approach or departure airspace or aircraft operations area. Constructed or natural areas— such as

[1] Risk is the relationship between the severity and probability of a threat. It is the product of hazard level and abundance in the critical airspace, and is thus defined as the probability of a damaging strike with a given species.
[2] Hazardous wildlife are species of wildlife (birds, mammals, reptiles), including feral and domesticated animals, not under control that may pose a direct hazard to aviation (i.e., strike risk to aircraft) or an indirect hazard such as an attractant to other wildlife that pose a strike hazard or are causing structural damage to airport facilities (e.g., burrowing, nesting, perching).

poorly drained locations, detention/retention ponds, roosting habitats on buildings, landscaping, odor-causing rotting organic matter (putrescible waste) disposal operations, wastewater treatment plants, agricultural or aquaculture activities, surface mining, wetlands, or some conservation-based land uses — can provide wildlife with ideal locations for feeding, loafing, reproduction, and escape. Even small facilities, such as fast food restaurants, taxicab staging areas, rental car facilities, aircraft viewing areas, and public parks, can produce substantial attractions for hazardous wildlife.

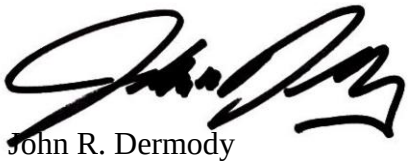
3. During the past century, wildlife-aircraft strikes have resulted in the loss of hundreds of lives worldwide, as well as billions of dollars in aircraft damage. Hazardous wildlife attractants on and near airports can jeopardize future airport expansion, making proper community land-use planning essential. This AC provides airport operators and those parties with whom they cooperate with the guidance they need to assess and address potentially hazardous wildlife attractants when locating new facilities and implementing certain land-use practices on or near public-use airports.

6 Memorandum of Agreement Between Federal Resource Agencies.

The FAA, the U.S. Air Force, the U.S. Army Corps of Engineers, the U.S. Environmental Protection Agency, the U.S. Fish and Wildlife Service, and the U.S. Department of Agriculture - Wildlife Services signed a Memorandum of Agreement (MOA) to acknowledge their respective missions in protecting aviation from wildlife hazards. Through the MOA, the agencies established procedures necessary to coordinate their missions to address more effectively existing and future environmental conditions contributing to collisions between wildlife and aircraft (wildlife strikes) throughout the United States. These efforts are intended to minimize wildlife risks to aviation and human safety while protecting the Nation’s valuable environmental resources.

7 Feedback on this AC.

If you have suggestions for improving this AC, you may use the Advisory Circular Feedback form at the end of this AC.



John R. Dermody
Director of Airport Safety and Standards

CHAPTER 1. GENERAL SEPARATION CRITERIA FOR HAZARDOUS WILDLIFE ATTRACTANTS ON OR NEAR AIRPORTS

1.1 Introduction.

1.1.1 Airport operators should maintain an appropriate environment for the safe and efficient operation of aircraft, which entails mitigating wildlife strike hazards by fencing, modifying the landscape in order to deter wildlife or by hazing or removing wildlife hazardous to aircraft from congregating on airports. When considering proposed land uses, operators and sponsors of airports certificated under Part 139, local planners, and developers must take into account whether the proposed land uses, including new development projects, will increase wildlife hazards. Land-use practices that attract or sustain hazardous wildlife populations on or near airports, specifically those listed in Chapter 2, can significantly increase the potential for wildlife strikes.

1.1.2 The FAA urges regulatory agencies and planning and zoning agencies to evaluate proposed new land uses within the separation criteria and prevent the creation of land uses that attract or sustain hazardous wildlife within the separation distances.

1.1.3 The FAA recommends the use of minimum separation criteria outlined below for land-use practices that attract hazardous wildlife to the vicinity of airports. Please note that FAA criteria include land uses that cause movement of hazardous wildlife onto, into, or across the airport's approach or departure airspace or aircraft operations area. (See the discussion of the synergistic effects of surrounding land uses in Paragraph 2.8 of this AC.). For the purpose of evaluating distance criteria, the delineation of the aircraft operations area may also consider future airport development plans depicted on the Airport Layout Plan (e.g., planned runway extension).

1.1.4 The separation distances are based on (1) flight patterns and performance criteria of piston-powered aircraft and turbine-powered aircraft, (2) the altitude at which most strikes happen (78 percent occur under 1,000 feet and 90 percent occur under 3,000 feet above ground level), and (3) National Transportation Safety Board recommendations.

1.2 Airports Serving Piston-Powered Aircraft.

Airports that do not sell Jet-A fuel normally serve piston-powered aircraft. Notwithstanding more stringent requirements for specific land uses, the FAA recommends a separation distance of 5,000 feet from these airports for any of the hazardous wildlife attractants discussed in Chapter 2 or for new airport development projects meant to accommodate aircraft movement. This distance is to be maintained between the closest point of the airport's aircraft operations area and the hazardous wildlife attractant. Figure 1 depicts an example of the 5,000-foot separation distance measured from the nearest aircraft operations area.

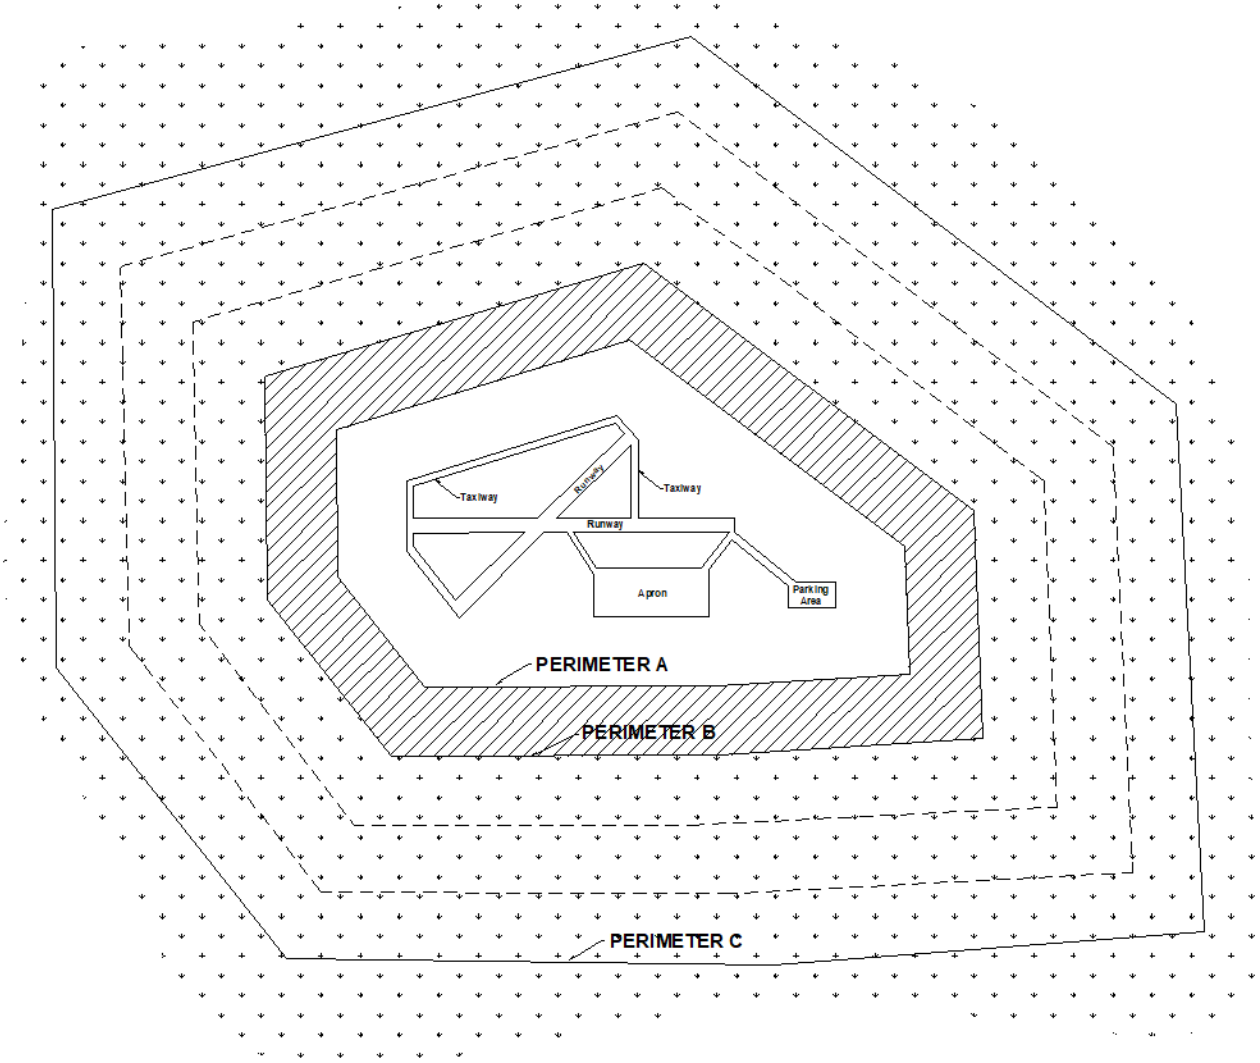
1.3 Airports Serving Turbine-Powered Aircraft.

For airports serving turbine-powered aircraft, the FAA recommends a separation distance of 10,000 feet from these airports for any of the hazardous wildlife attractants discussed in Chapter 2 or for new airport development projects meant to accommodate aircraft movement. This distance is to be maintained between the closest point of the airport's aircraft operations area and the hazardous wildlife attractant. Figure 1 depicts an example of the 10,000-foot separation distance from the nearest aircraft movement areas.

1.4 Protection of Approach, Departure, and Circling Airspace.

For all airports, the FAA recommends a distance of 5 miles between the closest point of the airport's aircraft operations area and the hazardous wildlife attractant. Special attention should be given to hazardous wildlife attractants that could cause hazardous wildlife movement into or across the approach or departure airspace. Figure 1 depicts an example of the 5-mile separation distance measured from the nearest aircraft operations area.

Figure 1. Example of recommended separation distances described in Chapter 1 within which hazardous wildlife attractants should be avoided, eliminated, or mitigated.



PERIMETER A: For airports serving piston-powered aircraft, it is recommended hazardous wildlife attractants be 5,000 feet from the nearest aircraft operations area.

PERIMETER B: For airports serving turbine-powered aircraft, it is recommended hazardous wildlife attractants be 10,000 feet from the nearest aircraft operations area.

PERIMETER C: Recommended for all airports, 5-mile range to protect approach, departure and circling airspace.

CHAPTER 2. LAND-USE PRACTICES ON OR NEAR AIRPORTS THAT POTENTIALLY ATTRACT HAZARDOUS WILDLIFE

2.1 General.

2.1.1 Many types of vegetation, habitats and land use practices can provide an attractant to animals that pose a risk to aviation safety. Hazardous wildlife use the natural or artificial habitats on or near an airport for food, water or cover. The wildlife species and the size of the populations attracted to the airport environment vary considerably, depending on several factors, including land-use practices on or near the airport. In addition to the specific considerations outlined below, airport operators should refer to *Wildlife Hazard Management at Airports* manual, prepared by FAA and U.S. Department of Agriculture (USDA) staff. (This manual is available in English, Spanish, and French). This manual, as well as other helpful resources can be viewed and downloaded free of charge from the Wildlife Strike Resources section of the FAA's wildlife hazard mitigation web site: http://www.FAA.gov/airports/airport_safety/wildlife).

2.1.1.1 The USDA / Animal and Plant Health Inspection Service (APHIS) / Wildlife Services developed a new publication series on wildlife damage management and is available online. The Wildlife Damage Management Technical Series highlights wildlife species or groups of wildlife species that cause damage to agriculture, property and natural resources, and/or impact aviation and human health and safety. The publications can be found at: https://www.aphis.usda.gov/aphis/ourfocus/wildlifedamage/sa_reports/ct_wildlife+damage+management+technical+series.

2.1.1.2 Additional resources have been provided by the USDA / APHIS / Wildlife Services National Wildlife Research Center (NWRC) at: https://www.aphis.usda.gov/aphis/ourfocus/wildlifedamage/programs/nwrc/sa_publications/ct_research_gateway. The NWRC Research Gateway contains research articles, reports, factsheets, technical notes, data and other materials on wildlife hazard mitigation, risk reduction, animal ecology, habitats, and advanced technologies and methodologies.

2.1.2 This section discusses land-use practices having the potential to attract hazardous wildlife and threaten aviation safety. The FAA has determined that the land uses listed below are generally not compatible with safe airport operations when they are located within the separation distances provided in Paragraphs 1.2 through 1.4.

2.1.3 As a reminder, these types of land uses or facilities often require permits from the appropriate permitting agency. The FAA may work with the permitting agency to include conditions for monitoring and mitigation measures, if necessary. Ultimately, the permittee is responsible for compliance to these conditions and the permitting agency is responsible for tracking compliance.

2.2 Waste Disposal Operations.

Municipal solid waste landfills (municipal landfills) are known to attract large numbers of hazardous wildlife, particularly birds. Because of this, these operations, when located within the separations identified in the siting criteria in Paragraphs 1.2 through 1.4, are considered incompatible with safe airport operations.

2.2.1 Siting for New Municipal Solid Waste Landfills Subject to AIR 21.

2.2.1.1 Section 503 of the Wendell H. Ford Aviation Investment and Reform Act for the 21st Century (P. L. 106-181) (AIR 21), 49 U.S.C. § 44718(d), prohibits the construction or establishment of a new municipal landfill within 6 miles of certain public-use airports. Before these prohibitions apply, both the airport and the landfill must meet the very specific conditions described below. These restrictions do not apply to airports or landfills located within the state of Alaska.

2.2.1.2 The airport must (1) have received a Federal grant(s) under 49 U.S.C. § 47101, et. seq.; (2) be under control of a public agency; (3) serve some scheduled air carrier operations conducted in aircraft with less than 60 seats; and (4) have total annual enplanements consisting of at least 51 percent of scheduled air carrier enplanements conducted in aircraft with less than 60 passenger seats.

2.2.1.3 The proposed municipal landfill must (1) be within 6 miles of the airport, as measured from airport property line to the landfill property line, and (2) have started construction or establishment on or after April 5, 2001. Section 44718(d) only limits the construction or establishment of some new landfills. It does not limit the expansion, either vertical or horizontal, of existing landfills.

2.2.1.4 Regarding existing municipal landfills and lateral expansions of landfills, 40 CFR § 258.10 requires owners or operators of a landfill units located within the separation distances provided in Paragraphs 1.2 through 1.4 to demonstrate that the unit is designed and operated so that it does not pose a bird hazard to aircraft. To accomplish this, follow the instructions provided in Paragraphs 3.2 and 3.3, document the wildlife monitoring and mitigation procedures that are cooperatively developed, and place this documentation in the operating permit of the facility.

2.2.2 Siting for New Municipal Landfills Not Subject to AIR 21.

If an airport and a municipal landfill do not meet the criteria of § 44718(d), then FAA recommends against locating the landfill within the separation distances identified in Paragraphs 1.2 through 1.4. In determining this distance separation, measurements should be made from the closest point of the airport property boundary to the closest point of the landfill property boundary.

2.2.3 Considerations for Existing Waste Disposal Facilities Within the Limits of Separation Criteria.

The FAA recommends against airport development projects that would increase the number of aircraft operations or accommodate larger or faster aircraft near landfill operations located within the separations identified in Paragraphs 1.2 through 1.4. In addition, in accordance with 40 CFR § 258.10, owners or operators of existing landfill units that are located within the separations listed in Paragraphs 1.2 through 1.4 must demonstrate that the unit is designed and operated so it does not pose a bird hazard to aircraft. (See Paragraph 4.3.2 of this AC for a discussion of this demonstration requirement.)

2.2.4 Enclosed Trash Transfer Stations.

Enclosed waste-handling facilities that receive garbage behind closed doors; process it via compaction, incineration, or similar manner; and remove all residue by enclosed vehicles generally are compatible with safe airport operations, provided they are constructed and operated properly and are not located on airport property or within the Runway Protection Zone. These facilities should not handle or store putrescible waste outside or in a partially enclosed structure accessible to hazardous wildlife. Trash transfer facilities that are open on one or more sides; or store uncovered quantities of municipal solid waste outside, even if only for a short time; or use semi-trailers that leak or have trash clinging to the outside; or do not control odors by ventilation and filtration systems (odor masking is not acceptable) do not meet the FAA's definition of fully enclosed trash transfer stations. The FAA considers fully enclosed waste-handling facilities constructed or operated incorrectly incompatible with safe airport operations if they are located closer than the separation distances specified in Paragraphs 1.2 through 1.4.

2.2.5 Composting Operations on or near Airport Property.

Composting operations that accept only yard waste (e.g., leaves, lawn clippings, or branches) generally do not attract hazardous wildlife. Sewage sludge, woodchips, and similar material are not municipal solid wastes and may be used as compost bulking agents. The compost, however, must never include food or other municipal solid waste. Composting operations should not be located on airport property unless effective, risk-reducing mitigations are in place. Off-airport property composting operations should be located no closer than the greater of the following distances: 1,200 feet from any aircraft operations area or the distance called for by airport design requirements (see AC 150/5300-13, *Airport Design*). This spacing should prevent material, personnel, or equipment from penetrating any Object Free Area, Obstacle Free Zone, Threshold Siting Surface, or Clearway. Airport operators should monitor composting operations located in proximity to the airport to ensure that steam or thermal rise does not adversely affect air traffic.

2.2.6 Underwater Waste Discharges.

The FAA recommends against the underwater discharge of any food waste (e.g., fish processing offal) within the separations identified in Paragraphs 1.2 through 1.4 because it could attract scavenging hazardous wildlife.

2.2.7 Recycling Centers.

Recycling centers that accept previously sorted non-food items, such as glass, newspaper, cardboard, aluminum, electronic, and household wastes such as paint, batteries, and oil, are, in most cases, not attractive to hazardous wildlife and are acceptable.

2.2.8 Construction and Demolition Debris Facilities.

2.2.8.1 Construction and demolition landfills generally do not attract hazardous wildlife and are acceptable if maintained in an orderly manner, admit no putrescible waste, and are not co-located with other waste disposal operations. However, construction and demolition landfills have similar visual and operational characteristics to putrescible waste disposal sites. When co-located with putrescible waste disposal operations, construction and demolition landfills are more likely to attract hazardous wildlife because of the similarities between these disposal facilities.

2.2.8.2 Therefore, a construction and demolition landfill co-located with another waste disposal operation should be located outside of the separations identified in Paragraphs 1.2 through 1.4.

2.2.8.3 Airport operators should be aware that on-site storage of construction and maintenance debris, as well as out-of-service aircraft or aircraft components, may provide an attractant for hazardous species (e.g., nesting or perching locations). The FAA recommends these on-site areas be monitored and/or mitigated, if necessary.

2.2.9 Fly Ash Disposal.

2.2.9.1 The incinerated residue from resource recovery power/heat-generating facilities that are fired by municipal solid waste, coal, or wood is generally not a wildlife attractant because it no longer contains putrescible matter. Landfills accepting only fly ash are generally not considered to be wildlife attractants and are acceptable as long as they admit no putrescible waste of any kind, and are not co-located with other disposal operations that attract hazardous wildlife.

2.2.9.2 Since varying degrees of waste consumption are associated with general incineration (not resource recovery power/heat-generating facilities), the FAA considers the ash from general incinerators a regular waste disposal by-product and, therefore, a hazardous wildlife attractant if disposed of within the separation criteria outlined in Paragraphs 1.2 through 1.4.

2.3 Water Management Facilities.

Drinking water intake and treatment facilities, storm water and wastewater treatment facilities, associated retention and settling ponds, ponds built for recreational use, ponds

and fountains for ornamental purposes, and ponds that result from mining activities often attract large numbers of potentially hazardous wildlife. Development of new open water facilities within the separation criteria identified in Paragraphs 1.2 through 1.4 should be avoided to prevent wildlife attractants. If necessary, land-use developers and airport operators may need to develop management plans, in compliance with local and state regulations, to support the operation of storm water management facilities on or near all public-use airports to ensure a safe airport environment. The FAA recommends these plans be developed in consultation with a Qualified Airport Wildlife Biologist[3], to minimize hazardous wildlife attractants.

2.3.1 Existing Stormwater Management Facilities.

2.3.1.1 On-airport stormwater management facilities allow the quick removal of surface water, including discharges related to aircraft deicing, from impervious surfaces, such as pavement and terminal/hangar building roofs. Existing on-airport detention ponds collect stormwater, protect water quality, and control runoff. Because they slowly release water after storms, they may create standing bodies of water that can attract hazardous wildlife. Where the airport has developed a Wildlife Hazard Management Plan, Part 139 regulations require the immediate correction of any wildlife hazards arising from existing stormwater facilities located on or near airports using appropriate wildlife hazard mitigation techniques. Airport operators should develop measures to minimize hazardous wildlife attraction in consultation with a Qualified Airport Wildlife Biologist.

2.3.1.2 Where possible, airport operators should modify stormwater detention ponds to allow a maximum 48-hour detention period for the design storm. The combination of open water and vegetation is particularly attractive to waterfowl and other hazardous wildlife. Water management facilities holding water longer than 48 hours should be maintained in a manner that keeps them free of both emergent and submergent vegetation. The FAA recommends that airport operators avoid or remove retention ponds and detention ponds featuring dead storage to eliminate standing water. Detention basins should remain totally dry between rainfalls. Where constant flow of water is anticipated through the basin, or where any portion of the basin bottom may remain wet, the detention facility should include a concrete or paved pad and/or ditch/swale in the bottom to prevent vegetation that may provide nesting habitat. Drainage basins with a concrete or paved pad should be maintained to prevent or remove any sediment build-up to prevent vegetation growth.

2.3.1.3 When it is not possible to drain a large detention pond completely, airport operators may use physical barriers, such as bird balls, wire grids, pillows,

[3] See Advisory Circular 150/5200-36, *Qualifications for Wildlife Biologist Conducting Wildlife Hazard Assessments and Training Curriculums for Airport Personnel Involved in Controlling Wildlife Hazards on Airports.*

or netting, to deter birds and other hazardous wildlife. When physical barriers are proposed, airport operators must evaluate their use, effectiveness and maintenance requirements. Airport operators must also ensure physical barriers will not adversely affect water rescue. Before installing any physical barriers over detention ponds on Part 139 airports, airport operators must get approval from the appropriate FAA Regional Airports Division Office.

2.3.1.4 The FAA recommends that airport operators encourage off-airport stormwater treatment facility operators to incorporate appropriate wildlife hazard mitigation techniques into stormwater treatment facility operating practices when their facility is located within the separation criteria specified in Paragraphs 1.2 through 1.4.

2.3.2 New Stormwater Management Facilities.

The FAA recommends that storm water management systems located within the separations identified in Paragraphs 1.2 through 1.4 be designed and operated so as not to create above-ground standing water. Stormwater detention ponds should be designed, engineered, constructed, and maintained for a maximum 48–hour detention period after the design storm and to remain completely dry between storms. To facilitate the control of hazardous wildlife, the FAA recommends the use of steep-sided, rip-rap or concrete lined, narrow, linear-shaped water detention basins. When it is not possible to place these ponds away from an airport's aircraft operations area (but still on airport property), airport operators may use physical barriers, such as bird balls, wire grids, floating covers, vegetation barriers (bottom liners), or netting, to prevent access of hazardous wildlife to open water and minimize aircraft-wildlife interactions. Caution is advised when nets or wire grids are used for deterring birds from attractants. Mesh size should be < 5 cm (2") to avoid entangling and killing birds and should not be made of a monofilament material. Grids installed above and across water to deter hazardous birds (e.g., waterfowl, cormorants, etc.) are different than using a small mesh covering but also provides an effective deterrent. Grid material, size, pattern and height above water may differ on a case-by-case basis. When physical barriers are used, airport operators must evaluate their use and ensure they will not adversely affect water rescue. Before installing any physical barriers over detention ponds on Part 139 airports, a review by a Qualified Airport Wildlife Biologist should be conducted, prior to approval from the appropriate FAA Regional Airports Division Office. All vegetation in or around detention basins that provide food or cover for hazardous wildlife should be eliminated. If soil conditions and other requirements allow, the FAA encourages the use of underground storm water infiltration systems because they are less attractive to wildlife.

2.3.3 Existing Wastewater Treatment Facilities.

2.3.3.1 The FAA recommends that airport operators immediately correct any wildlife hazards arising from existing wastewater treatment facilities located on or near the airport.

2.3.3.2 Where required, a wildlife management plan will outline appropriate wildlife hazard mitigation techniques. Accordingly, airport operators should encourage wastewater treatment facility operators to incorporate measures, developed in consultation with a Qualified Airport Wildlife Biologist, to minimize hazardous wildlife attractants. Airport operators should also encourage those wastewater treatment facility operators to incorporate these mitigation techniques into their standard operating practices. In addition, airport operators should consider the existence of wastewater treatment facilities when evaluating proposed sites for new airport development projects and avoid such sites when practicable.

2.3.4 New Wastewater Treatment Facilities.

The FAA recommends against the construction of new wastewater treatment facilities or associated settling ponds within the separations identified in Paragraphs 1.2 through 1.4. Appendix 1 defines wastewater treatment facility as "any devices and/or systems used to store, treat, recycle, or reclaim municipal sewage or liquid industrial wastes." The definition includes any pretreatment involving the reduction or elimination of pollutants prior to introducing such pollutants into a treatment facility. When a wastewater treatment facility is proposed within the separation criteria, the airport operator, project proponent, and local jurisdiction should discuss the proposed project location with regard to its location near the airport and the separation distances identified in Paragraphs 1.2 through 1.4. If possible, a more suitable location for the proposed facility should be identified. If no other suitable location exists, FAA recommends that the proposed facility plans be reviewed by a Qualified Airport Wildlife Biologist to identify measures to avoid or reduce the facility's potential to attract hazardous wildlife. If appropriate measures cannot be incorporated to reduce potential wildlife hazards, airport operators should document their opposition in a letter to the local jurisdiction.

2.3.5 Artificial Marshes.

In warmer climates, wastewater treatment facilities sometimes employ artificial marshes and use submergent and emergent aquatic vegetation as natural filters. These artificial marshes may be used by some species of flocking birds, such as blackbirds and waterfowl, for breeding or roosting activities. The FAA recommends against establishing artificial marshes within the separations identified in Paragraphs 1.2 through 1.4.

2.3.6 Wastewater Discharge and Sludge Disposal.

The FAA recommends careful consideration regarding the discharge of wastewater or biosolids (i.e., secondarily treated sewage sludge) on airport property. Such discharges might improve soil moisture and quality on unpaved areas and lead to improved turf growth. Depending on the airfield plant communities and habitats present, this can be an attractive food source for many species of animals or, conversely, could result in limited attractiveness to hazardous wildlife. Also, improved turf requires more frequent mowing and could attract geese. Airports should improve their turf with the goal of a monoculture of turf that is least attractive to wildlife. Wastewater or biosolids

applications might assist in achieving this goal. Caution should be exercised when discharges saturate airfield areas adjacent to paved surfaces. The resultant soft, muddy conditions could restrict or prevent emergency vehicles from reaching accident sites in a timely manner.

2.4 Wetlands.

Wetlands provide a variety of functions and can be regulated by local, state, and Federal laws. Wetlands can be attractive to many types of wildlife, including many which rank high on the list of hazardous wildlife species (Table 1 - AC 150/5200-32). Some types of wetlands are not as attractive to wildlife as others and they should be reviewed on a case-by-case basis to determine the likelihood of proposed wetlands increasing the numbers of hazardous wildlife at the airport. Factors such as size, shape, location, canopy cover and vegetative composition among other things should be considered when determining compatibility.

Note: If questions exist as to whether an area qualifies as a wetland, contact the District Office of the U.S. Army Corps of Engineers, the Natural Resources Conservation Service, or a wetland consultant qualified to delineate wetlands.

2.4.1 Existing Wetlands on or near Airport Property.

If wetlands are located on or near airport property, airport operators should be alert to any wildlife use or habitat changes in these areas that could affect safe aircraft operations. At public-use airports, the FAA recommends immediately correcting, in cooperation with local, state, and Federal regulatory agencies, any wildlife hazards arising from existing wetlands located on or near airports within 5 miles of the aircraft operations area. Where required, a wildlife management plan will outline appropriate wildlife hazard mitigation techniques. Accordingly, airport operators should develop measures to minimize hazardous wildlife attraction in consultation with a FAA Qualified Airport Wildlife Biologist.

2.4.2 New Airport Development.

Whenever possible, the FAA recommends locating new airports using the separations from wetlands identified in Paragraphs 1.2 through 1.4. Where alternative sites are not practicable, or when airport operators are expanding an existing airport into or near wetlands, a Qualified Airport Wildlife Biologist, in coordination with the U.S. Fish and Wildlife Service, the U.S. Army Corps of Engineers, and the state wildlife management agency should evaluate the wildlife hazards and prepare a wildlife management plan that indicates methods of minimizing the hazards.

2.4.3 Mitigation for Wetland Impacts from Airport Projects.

Wetland mitigation may be necessary when unavoidable wetland disturbances result from new airport development projects or projects required to correct wildlife hazards from wetlands. Wetland mitigation must be designed so it does not create a wildlife hazard. The FAA recommends that wetland mitigation projects that may attract hazardous wildlife be sited outside of the separations identified in Paragraphs 1.2 through 1.4.

2.4.3.1 **Onsite Mitigation of Wetland Functions.**

Wetland mitigation/conservation easements must not inhibit the airport operator's ability to effectively control hazardous wildlife on or near the mitigation site or effectively maintain other aspects of safe airport operations. Enhancing such mitigation areas to attract hazardous wildlife must be avoided. The FAA will review any onsite mitigation proposals to determine compatibility with safe airport operations and grant assurance compliance. Early coordination with the FAA is encouraged for any proposal to use airport land for wetland mitigation. A Qualified Airport Wildlife Biologist should evaluate any wetland mitigation projects that are needed to protect unique wetland functions and that must be located in the separation criteria in Paragraphs 1.2 through 1.4 before the mitigation is implemented. A wildlife management plan should be developed to reduce the wildlife hazards.

2.4.3.2 **Offsite Mitigation of Wetland Functions.**

2.4.3.2.1 The FAA recommends that wetland mitigation projects that may attract hazardous wildlife be sited outside of the separations identified in Paragraphs 1.2 through 1.4 unless they provide unique functions that must remain onsite (see 2.4.3.1). Agencies that regulate impacts to or around wetlands recognize that it may be necessary to split wetland functions in mitigation schemes. Therefore, regulatory agencies may, under certain circumstances, allow portions of mitigation to take place in different locations.

2.4.3.2.2 The FAA encourages landowners or communities supporting the restoration or enhancement of wetlands to do so only after critically analyzing how those activities would affect aviation safety. To do so, landowners or communities should contact the affected airport sponsor, FAA, and/or a Qualified Airport Wildlife Biologist.

2.4.3.2.3 Those parties should work cooperatively to develop restoration or enhancement plans that would not worsen existing wildlife hazards or create such hazards. See Paragraphs 4.1.1 – 4.1.3 for land-use modifications evaluation criteria.

2.4.3.2.4 If parties develop a mutually acceptable restoration or enhancement plan, the landowner or community proposing the restoration or enhancement must monitor the restored or enhanced site. This monitoring must verify that efforts have not worsened or created hazardous wildlife attraction or activity. If such attraction or activity occurs, the landowner or community should work with the airport sponsor, or a Qualified Airport Wildlife Biologist to reduce the hazard to aviation.

2.4.3.3 **Mitigation Banking.**

Wetland mitigation banking is the creation or restoration of wetlands in order to provide mitigation credits that can be used to offset permitted wetland losses. Mitigation banking benefits wetland resources by providing advance replacement for permitted wetland losses; consolidating small projects into larger, better-designed and managed units; and encouraging integration of wetland mitigation projects with watershed planning. This last benefit is most helpful for airport projects, as wetland impacts mitigated outside of the separations identified in Paragraphs 1.2 through 1.4 can still be located within the same watershed. Wetland mitigation banks meeting the separation criteria offer an ecologically sound approach to mitigation in these situations. Airport operators should work with local watershed management agencies or organizations to develop mitigation banking for wetland impacts on airport property.

2.5 Dredge Spoil Containment Areas.

The FAA recommends against locating dredge spoil containment areas (also known as Confined Disposal Facilities) within the separations identified in Paragraphs 1.2 through 1.4 if the containment area or the spoils contain material that would attract hazardous wildlife. Proposals for new dredge spoil containment areas located within the separation distances should be reviewed on a case-by-case basis to determine the likelihood of resulting in an increase in hazardous wildlife. The FAA recommends that airport sponsors work with a Qualified Airport Wildlife Biologist and/or the FAA to review proposals for dredge spoil containment areas located within separation criteria.

2.6 Agricultural Activities.

Many agricultural crops can attract hazardous wildlife and should not be planted within the separations identified in Paragraphs 1.2 through 1.4. Corn, wheat, and other small grains in particular should be avoided. If the airport has no financial alternative to agricultural crops to produce the income necessary to maintain the viability of the airport, then the airport should consider growing crops that hold little food value for hazardous wildlife, such as grass hay. Attractiveness to hazardous wildlife species during all phases of production, from planting through harvest and fallow periods, should be considered when contemplating the use of airport property for agricultural production. Where agriculture is present, crop residue (e.g., waste grain) should not be left in the field following harvest. Also, airports should consult AC 150/5300-13, *Airport Design,* to ensure that agricultural crops do not create airfield obstructions or other safety hazards. Before planning or initiating any agricultural practices on airport property, operators should get approval from the appropriate FAA regional Airports Division Office and demonstrate that the additional cost of wildlife control and potential accidents is offset by revenue generated by agricultural leases. Annual review of the Airport Certification Manual by the Certification Inspector does not constitute approval and is insufficient to meet this requirement.

2.6.1 Livestock Production.

Confined livestock operations (i.e., feedlots, dairy operations, hog or chicken production facilities, or egg laying operations) often attract flocking birds, such as blackbirds, starlings, or pigeons that pose a hazard to aviation. Therefore, the FAA recommends against such facilities within the separations identified in Paragraphs 1.2 through 1.4. The airport operator should be aware of any wildlife hazards that appear to be attracted to off-site livestock operations and consider working with a Qualified Airport Wildlife Biologist to identify reasonable and feasible measures that may be proposed to landowners to reduce the attractiveness of the site to the potentially hazardous wildlife species.

2.6.1.1 In exceptional circumstances, and following FAA review and approval, livestock may be grazed on airport property as long as they are off the airfield and separated behind fencing where they cannot pose a hazard to aircraft. The livestock should be fed and watered as far away from the airfield and approach/departure space as possible because the feed and water may attract birds. The wildlife management plan should include monitoring and wildlife mitigation for any areas where the livestock and their feed/water is located in case a wildlife hazard is detected. Airports without wildlife management plans should equally consider monitoring and mitigation protocols to identify and address any wildlife hazards associated with livestock and their feeding operations.

2.6.2 Alternative Uses of Agricultural Land.

2.6.2.1 Habitat modification both on and surrounding an airfield is one of the best and most economical long term mitigation strategies to decrease risk that wildlife pose to flight safety. Alternative land uses (e.g., solar and biofuel) at airports could help mitigate many of the challenges for the airport operator, developers, and conservationists. However, careful planning must first determine that proposed alternative energy production at airports does not create wildlife attractants or other hazards.

2.6.2.2 Some airports are surrounded by vast areas of farmed land within the distances specified in Paragraphs 1.2 through 1.4. Seasonal uses of agricultural land for activities such as hunting can create a hazardous wildlife situation. In some areas, farmers will rent their land for hunting purposes. Rice farmers, among others, flood their land to attract waterfowl or for conservation efforts. This is often done during waterfowl hunting season to obtain additional revenue by renting out duck blinds.

2.6.2.3 The waterfowl hunters then use decoys and call in hundreds, if not thousands, of birds, creating a threat to aircraft safety. It is recommended that a Qualified Airport Wildlife Biologist review, in coordination with local farmers and producers, these types of seasonal land uses and incorporate mitigating measures into the wildlife management plan, when possible.

2.7 Aquaculture.

Aquaculture is the breeding, rearing, and harvesting of fish, shellfish, and plants in all types of water environments including ponds, rivers, lakes, and the ocean. Aquaculture is used to produce food fish, sport fish, bait fish, ornamental fish, and to support restoration activities. Aquacultured species are grown in a range of facilities including tanks, cages, ponds, and raceways. When an aquaculture facility is proposed within the separation criteria, the airport operator, project proponent, and local jurisdiction should discuss the proposed project location with regard to its attraction to hazardous species, location near the airport and the separation distances identified in Paragraphs 1.2 through 1.4. If a facility is identified as a possible significant attraction, a more suitable location for the proposed facility should be identified. If no other suitable location exists, it is recommended that the proposed facility plans be reviewed by a Qualified Airport Wildlife Biologist to identify measures to avoid or reduce the facility's potential to attract hazardous wildlife.

2.7.1 Freshwater Aquaculture.

2.7.1.1 Freshwater aquaculture activities (e.g., catfish, tilapia, trout or bass production) are typically conducted outside of fully enclosed buildings in constructed ponds or tanks and are inherently attractive to a wide variety of birds and therefore pose a significant risk to airport safety when within the separation distances specified in Paragraphs 1.2 through 1.4. Freshwater aquaculture should only be considered if extensive mitigation measures have been incorporated to eliminate attraction to hazardous birds. Examples of such mitigation include:

1. Netting or other material to exclude hazardous birds (e.g., eagles, osprey, gulls, cormorants);
2. Acoustic hazing including pyrotechnics, propane cannons, directional sonic/hailing devices and other similar technologies;
3. Feeding procedure cleanliness, exclusion techniques prohibiting birds from perching or accessing food; efficiency of feeding operation procedures that reduce fish food attraction to hazardous birds;
4. Operation procedure efficiency transferring live fish to and from enclosures or removal of dead fish; maintenance and upkeep of facility;
5. Monitoring, mitigation and communication protocols with nearby airports as a proactive safety feature in response to specific hazardous species in the event they are identified at the facility in unacceptable numbers.

2.7.2 Marine Aquaculture.

Marine aquaculture (Mariculture) refers to the culturing of species that live in the ocean. When appropriately managed and mitigated as necessary, mariculture facilities do not pose a significant risk to airport safety.

2.7.2.1 **Finfish Mariculture.**

2.7.2.1.1 U.S. finfish mariculture primarily produces salmon and steelhead trout as well as lesser amounts of cod, moi, yellowtail, barramundi, seabass, and seabream. Maricultures use rigid and non-rigid enclosures (e.g., cages) at the surface or submerged in the water column. These enclosures may be fully enclosed, or be open at the top or covered with netted material to negate losses from depredation by birds or other predators. Different facilities employ different designs and operational protocols.

2.7.2.1.2 While mariculture operations typically do not pose a significant attractant to hazardous birds, design and operational features can be incorporated as permit conditions to mitigate attraction and effectively reduce this risk. Examples of such mitigation include:

1. Fully enclosed cages using netting or other material to exclude hazardous birds (e.g., gulls, cormorants, pelicans) and to insure retention of fish;
2. Submerged enclosures to reduce attraction to hazardous birds;
3. Feed barge cleanliness, exclusion techniques prohibiting birds from perching or accessing food; efficiency of feeding operation procedures that reduce fish food attraction to hazardous birds;
4. Operation procedure efficiency transferring live fish to and from enclosures or removal of dead fish; maintenance and upkeep of facility;
5. Monitoring, mitigation and communication protocols with nearby airports as a proactive safety feature in response to specific hazardous species in the event they are identified at the facility in unacceptable numbers.

2.7.2.2 **Shellfish Mariculture.**

U.S. shellfish mariculture primarily produces oysters, clams, mussels, lobster and shrimp. Shellfish may be grown directly on the bottom, in submerged cages or bags, or on suspended lines. These types of mariculture operations do not typically present a significant attractant to hazardous birds. For those operations that are found to pose a significant risk, design and operation features that diminish possible attraction to hazardous bird species (e.g., reducing areas for perching or feeding) can effectively reduce this risk.

2.7.2.3 **Plant Mariculture.**

2.7.2.3.1 Microalgae, also referred to as phytoplankton, microphytes, or planktonic algae constitute the majority of cultivated algae. Macroalgae, commonly known as seaweed, also have many commercial and industrial uses.

2.7.2.3.2 While few commercial seaweed farms exist, the sector is growing. These types of mariculture operations do not typically present an attractant to hazardous birds.

2.8 Golf Courses, Landscaping, Structures and Other Land-Use Considerations.

2.8.1 Golf Courses.

The large grassy areas and open water found on most golf courses are attractive to hazardous wildlife, particularly Canada geese and some species of gulls. These species can pose a threat to aviation safety. If golf courses are located on or near airport property, airport operators should be alert to any wildlife use or habitat changes in these areas that could affect safe aircraft operations. Accordingly, airport operators should develop, at a minimum, onsite measures to minimize hazardous wildlife attraction in consultation with a Qualified Airport Wildlife Biologist. Existing golf courses located within these separations that have been documented to attract hazardous wildlife are encouraged to develop a program to reduce the attractiveness of the sites to species that are hazardous to aviation safety. The FAA recommends against construction of new golf courses within the separations identified in Paragraphs 1.2 through 1.4 if determined that the new facility would create a significant wildlife hazard attractant by a Qualified Airport Wildlife Biologist. Airport operators should ensure these golf courses are monitored on a continuing basis for the presence of hazardous wildlife. If hazardous wildlife is detected, corrective actions should be immediately implemented.

2.8.2 Landscaping and Landscape Maintenance.

2.8.2.1 Depending on its geographic location, landscaping can attract hazardous wildlife. The FAA recommends that airport operators approach landscaping with caution and confine it to airport areas not associated with aircraft movements. Vegetation that produces seeds, fruits, or berries, or that provides dense roosting or nesting cover should not be used. Airports should develop a landscape plan to include approved and prohibited plants. The landscape plan should consider the watering needs of mature plants. A Qualified Airport Wildlife Biologist should review all landscaping plans. Airport operators should also monitor all landscaped areas on a continuing basis for the presence of hazardous wildlife. If hazardous wildlife is detected, corrective actions should be immediately implemented.

2.8.2.2 Turf grass areas on airports have the potential to be highly attractive to a variety of hazardous wildlife species. Research conducted by the USDA Wildlife Services' National Wildlife Research Center has shown that no one airfield vegetation management regimen will deter all species of hazardous wildlife in all situations. The composition and height of airfield grasslands should be properly managed to reduce their attractiveness to hazardous wildlife. In many situations, an intermediate height, monoculture turf grass might be most favorable. In cooperation with a

Qualified Airport Wildlife Biologist, airport operators should develop airport turf grass management plans on a prescription basis, including cultivar selection during reseeding efforts, that is specific to the airport's geographic location, climatic conditions, and the type of hazardous wildlife likely to frequent the airport.

2.8.2.3 Airport operators should ensure that plant varieties attractive to hazardous wildlife are not used on the airport. Disturbed areas or areas in need of re-vegetating should not be planted with seed mixtures containing millet or any other large-seed producing grass. For airport property already planted with seed mixtures containing millet, rye grass, or other large-seed producing grasses, the FAA recommends disking, plowing, or another suitable agricultural practice to prevent plant maturation and seed head production. Plantings should follow the specific recommendations for grass management and seed and plant selection made by the State University Cooperative Extension Service, the local office of Wildlife Services, or a Qualified Airport Wildlife Biologist. Airport operators should also consider developing and implementing a preferred/prohibited plant species list, reviewed by a Qualified Airport Wildlife Biologist, which has been designed for the geographic location to reduce the attractiveness to hazardous wildlife for landscaping airport property.

2.8.3 Structures.

2.8.3.1 Certain structures attract birds for loafing and nesting. Flat rooftops can be attractive to many species of gulls for nesting, hangars provide roosting / nesting opportunities for rock doves, towers, light posts and navigation aids can provide loafing / hunting perches for raptors and aircraft can provide loafing / nesting sites for European starlings, blackbirds and other species. These structures should be monitored and mitigated, if located on-site. Off-site structural attractions may require additional coordination to effectively mitigate their use by hazardous species.

2.8.3.2 Cellular communications towers are becoming increasingly more attractive to large birds (e.g., osprey, eagles, herons, vultures) for nesting and rearing their young. This problem is a growing concern because once the young fledge from nests built on manmade structures they are more likely to return to these kinds of sites to reproduce in future years.

2.8.4 Other Hazardous Wildlife Attractants.

Other land uses (e.g., conservation easements, parks, wildlife management areas) or activities not addressed in this AC may have the potential to attract hazardous wildlife. Regardless of the source of the attraction, when hazardous wildlife is noted on a public-use airport, each certificate holder must take prompt remedial action(s) to protect aviation safety and all non-certificated airports should take prompt remedial action(s) to protect aviation safety.

2.9 Habitat for State and Federally Listed Species on Airports.

An airport's air operations area is an artificial environment that has been created and maintained for aircraft operations. Because an aircraft operations area can be markedly different from the surrounding native landscapes, it may attract wildlife species that do not normally occur, or that occur only in low numbers in the area. Some of the grassland species attracted to an airport's aircraft operations area are at the edge of their natural ranges, but are attracted to habitat features found in the airport environment. Also, some wildlife species may occur on the airport in higher numbers than occur naturally in the region because the airport offers habitat features the species prefer. Some of these wildlife species are Federal or state-listed threatened and endangered species or have been designated by state resource agencies as species of special concern.

2.9.1 State-Listed Species Habitat Concerns.

2.9.1.1 Many state wildlife agencies have requested that airport operators facilitate and encourage habitat on airports for state-listed threatened and endangered species or species of special concern. Airport operators should exercise caution in adopting new management techniques because they may increase wildlife hazards and be inconsistent with safe airport operations. Managing the on-airport environment to facilitate or encourage the presence of hazardous wildlife species can create conditions that are incompatible with, or pose a threat to, aviation safety.

2.9.1.2 Not all state-listed threatened and endangered species or species of concern pose a direct threat to aviation safety. However, these species may pose an indirect threat and be hazardous because they attract other wildlife species or support prey species attractive to other species that are directly hazardous. Also, the habitat management practices that benefit these state-listed threatened and endangered species and species of special concern may attract other hazardous wildlife species. On-airport habitat and wildlife management practices designed to benefit wildlife that directly or indirectly create safety hazard where none existed before are incompatible with safe airport operations.

2.9.2 Federally Listed Species Habitat Concerns.

2.9.2.1 The FAA supports efforts to protect threatened and endangered species, as a matter of principle and consistent with the Endangered Species Act of 1973. The FAA must balance these requirements with our requirements and mission to maintain a safe and efficient airport system. Requests to enhance or create habitat for threatened and endangered species often conflict with the safety of the traveling public and may place the protected species at risk of mortality by aircraft collisions. The FAA does not support the creation, conservation or enhancement of habitat or refuges to attract endangered species on airports. If endangered species are present on an airport, specific obligations may apply under the Endangered

Species Act, 16 U.S.C. § 1531 et seq. and the airport operator should contact the Airports District Office Environmental Protection Specialist.

2.9.2.2 The designation of critical habitat for listed species under the Endangered Species Act on airport lands may be an incompatible land use in conflict with the intended and dedicated purpose of airport lands and may limit or preclude the ability of the airport to develop new infrastructure and growth capacity to meet future air carrier service demand. In addition, depending on the listed species (primarily but not limited to avian species), the designation of critical habitat within the separation distances provided in paragraphs 1.2 - 1.4 can represent a hazardous wildlife attractant in conflict with 14 CFR Part 139.337.

2.10 Synergistic Effects of Surrounding Land Uses.

There may be circumstances where two or more different land uses would not, by themselves, be considered hazardous wildlife attractants or are located outside of the separations identified in Paragraphs 1.2 through 1.4 but collectively may create a wildlife corridor directly through the airport and/or surrounding airspace. An example involves a lake located outside of the separation criteria on the east side of an airport and a large hayfield on the west side of an airport. These two land uses, taken together, could create a flyway for Canada geese directly across the airspace of the airport. Airport operators must consider the entire surrounding landscape and community when developing the wildlife management plan.

Page Intentionally Blank

CHAPTER 3. PROCEDURES FOR WILDLIFE HAZARD MANAGEMENT BY OPERATORS OF PUBLIC-USE AIRPORTS AND CONDITIONS FOR NON-CERTIFICATED AIRPORTS TO CONDUCT WILDLIFE HAZARD ASSESSMENTS AND WILDLIFE HAZARD SITE VISITS

3.1 Introduction.

In recognition of the increased risk of serious aircraft damage or the loss of human life that can result from a wildlife strike, the FAA recommends all airports conduct a Wildlife Hazard Site Visit or Wildlife Hazard Assessment unless otherwise mandated after an initial triggering events defined in Part 139 Section 139.337. After the airport has completed the site visit or assessment and implemented a wildlife management plan, investigations should be conducted following subsequent triggering events to determine if the original assessment and plan adequately address the situation or if conditions have changed that would warrant an update to the plan. In this section, airports that are certificated under 14 C.F.R. § 139.337 are referred to as "certificated airports" and all others are referred to as "non-certificated airports." When a statement refers to both certificated and non-certificated airports, "airport" or "all airports" is used.

3.2 Coordination with Qualified Airport Wildlife Biologists.

Hazardous wildlife management is a complex discipline and conditions vary widely across the United States. Therefore, only airport wildlife biologists meeting the qualification requirements in Advisory Circular 150/5200-36, *Qualifications for Wildlife Biologist Conducting Wildlife Hazard Assessments and Training Curriculums for Airport Personnel Involved in Controlling Wildlife Hazards on Airports*, can conduct Site Visits and Assessments. Airports must maintain documentation that the Qualified Airport Wildlife Biologist meets the qualification requirements in Advisory Circular 150/5200-36.

3.3 Wildlife Hazard Management at Airports: A Manual For Airport Personnel.

3.3.1 The Wildlife Hazard Management at Airports manual, prepared by FAA and USDA Wildlife Services staff, contains a compilation of information to assist airport personnel in the development, implementation, and evaluation of wildlife management plans at airports. The manual includes specific information on the nature of wildlife strikes, legal authority, regulations, wildlife management techniques, Assessments, Plans, and sources of help and information. The manual is available in three languages: English, Spanish, and French. It can be viewed and downloaded free of charge from the FAA's wildlife hazard mitigation web site: https://www.faa.gov/airports/airport_safety/wildlife. This manual only provides a starting point for addressing wildlife hazard issues at airports. FAA recommends that airports consult with a Qualified Airport Wildlife Biologists to assist with development of a wildlife management plan and the implementation of management actions by airport personnel.

3.3.2 There are many other resources complementary to this manual for use in developing and implementing wildlife management plans. Several are listed in the manual's bibliography or on the FAA Wildlife Mitigation website: https://www.faa.gov/airports/airport_safety/wildlife

3.4 Wildlife Hazard Site Visits and Wildlife Hazard Assessments.

3.4.1 Operators of certificated airports are encouraged to conduct an initial assessment regardless of whether the airport has experienced one of the triggering events. Doing so would allow the airport to take proactive action and mitigate the wildlife risk before experiencing an incident. All other airports are encouraged to conduct an assessment or site visit (as defined in FAA Advisory Circular 150/5200-38) conducted by a Qualified Airport Wildlife Biologist (as defined in FAA Advisory Circular 150/5200-36). Part 139 certificated airports are currently required to ensure that an assessment is conducted consistent with 14 C.F.R. § 139.337.

3.4.2 The intent of a site visit is to provide an abbreviated analysis of an airport's wildlife hazards and to provide timely information that allows the airport to expedite the mitigation of these hazards. The FAA also recommends that airports conduct an assessment or site visit as soon as practicable in order to identify any immediate wildlife hazards and/or mitigation measures.

3.4.3 Non-certificated airports should submit the results of the site visit or assessment to the FAA for review. The FAA will review the submitted site visit or assessment and make a recommendation regarding the development of a wildlife management plan. A wildlife management plan can be developed based on a site visit and will be required if the non-certificated airport is going to request federal grants for the purpose of mitigating wildlife hazards.

3.5 Wildlife Hazard Management Plan.

3.5.1 The FAA will consider the results of the assessment, along with the aeronautical activity at the airport and the views of the airport operator and airport users, in determining whether a wildlife management plan is needed for certificated airports, or recommended for non-certificated airports.

3.5.2 If the FAA determines that a wildlife management plan is needed for a certificated airport, the airport operator must formulate a plan, using the assessment as its basis and submit to the FAA for approval. If the FAA recommends that a non-certificated airport develop a plan, either an assessment or a site visit can be used as the basis for the wildlife management plan. Airports should consult AC 150/5200-38, *Protocol for the Conduct and Review of Wildlife Hazard Site Visits, Wildlife Hazard Assessments, and Wildlife Hazard Management Plans,* for further information on preparation and implementation requirements for their wildlife management plan.

3.5.3 The goal of an airport's wildlife management plan is to minimize the risk to aviation safety, airport structures or equipment, or human health posed by populations of hazardous wildlife on and around the airport. For wildlife management plans to effectively reduce wildlife hazards on and near airports, accurate and consistent wildlife strike reporting is essential. Airports should consult AC 150/5200-32, *Reporting Wildlife Aircraft Strikes,* for further information on responsibilities and recommendations concerning wildlife strikes.

3.5.4 The wildlife management plan must identify hazardous wildlife attractants on or near the airport and the appropriate wildlife management techniques to minimize the wildlife hazard. It must also prioritize the management measures.

3.6 Local Coordination.

The FAA recommends establishing a Wildlife Hazards Working Group to facilitate the communication, cooperation, and coordination of the airport and its surrounding community necessary to ensure the effectiveness of the wildlife management plan. The cooperation of the airport community is essential to prevent incompatible development in the airport vicinity. Whether on or off the airport, input from all involved parties must be considered when a potentially hazardous wildlife attractant is being proposed. Based on available resources, airport operators should undertake public education activities with the local planning agencies because some activities in the vicinity of an airport, while harmless under normal conditions, can attract wildlife and present a danger to aircraft (see Paragraphs 4.5 to 4.8). For example, if public trails are planned near wetlands or in parks adjoining airport property, the public should know that feeding birds and other wildlife in the area may pose a risk to aircraft.

3.7 Operational Notifications of Wildlife Hazards.

3.7.1 Operational notifications include active correspondence addressing wildlife issues on or near an airport, notifications and alerts. If an existing land-use practice creates a wildlife hazard and the land-use practice or wildlife hazard cannot be immediately eliminated, airport operators must issue a Notice to Airmen (NOTAM) and encourage the land owner or manager to take steps to control the wildlife hazard and minimize further attraction. Permanent attractions that cannot be eliminated or mitigated may be noted in the Airport/Facility Directory. NOTAMS and Airport/Facility Directory notifications are not appropriate for short-term or immediate advisories that can be relayed via Pilot Reports, direct air traffic control voice communications, or temporary Automated Terminal Advisory System alerts. Care should be given to avoid the continual broadcast of general warnings for extended periods of time. General warnings such as "birds in the vicinity of the aerodrome" offer little timely information to aid pilots and eventually may be ignored if not updated.

3.7.2 The Automated Terminal Advisory System (ATIS) is a continuous broadcast of recorded aeronautical information for aerodromes and their immediate surroundings. ATIS broadcasts contain essential information, such as current weather information,

active runways, available approaches, wildlife hazards and any other information required by the pilots. They indicate significant (moderate or severe) wildlife activity, as reported by an approved agency that presents temporary hazards on the ATIS broadcast. Pilots take notice of available ATIS broadcasts before contacting the local control unit, which reduces the controllers' workload and relieves frequency congestion. The recording is updated in fixed intervals or when there is a significant change in the information. Although ATIS broadcasts involving wildlife should be timely and specific, pilots do not need to know species-specific information. General descriptive information detailing size and number of animals, locations and timing of occurrence provides useful, actionable information for pilots.

3.7.3 A pilot report (PIREP) is reported by a pilot to indicate encounters of hazardous weather (e.g., icing or turbulence) and hazardous wildlife. Pilot reports are short-lived warnings providing immediate information on pilot observations that are transmitted in real-time to air traffic control. Large animals near active surfaces, soaring vultures and raptors within approach/ departure corridors and waterfowl such as geese feeding in grassy areas next to runways are all examples of pilot reports generated by pilots.

3.8 Federal and State Depredation Permits.

The FAA recommends that airports maintain federal and state depredation permits to allow mitigation and/ or removal of hazardous species. All protected species require special permits for lethal mitigation or capture and relocation procedures. Similarly, endangered or threatened species mitigation also requires special permits. The FAA recommends that airports work closely with a Qualified Airport Wildlife Biologist during the U.S. Fish and Wildlife Service consultation and permitting process. The following Orders can help airports reduce risks from hazardous species by allowing private citizens to control hazardous species off airport properties without the need for a Federal depredation permit.

3.8.1 Standing Depredation Orders.

3.8.1.1 Federal law allows people to protect themselves and their property from damage caused by migratory birds. Provided no effort is made to kill or capture the birds, a depredation permit is not required to merely scare or herd depredating migratory birds other than endangered or threatened species or bald or golden eagles (50 CFR 21.41).

3.8.1.2 In addition, certain species of migratory birds may be mitigated without a federal permit under specific circumstances, many of which relate to agricultural situations. The following Standing Depredation Orders have applicability near airports:

- 50 CFR § 21.49- Control Order for Resident Canada Geese at Airports and Military Airfields.
- 50 CFR § 21.50- Depredation Order for Resident Canada Geese Nests and Eggs.

- 50 CFR § 21.43 - Depredation Order for Blackbirds, Cowbirds, Crows, Grackles, and Magpies.
- 50 CFR § 21.54 - Control Order for Muscovy Ducks in the United States.
- 50 CFR § 21.55 - Control Order for Invasive Migratory Birds in Hawaii.

Page Intentionally Blank

CHAPTER 4. RECOMMENDED PROCEDURES FOR THE FAA, AIRPORT OPERATORS AND OTHER GOVERNMENT ENTITIES REGARDING OFF-AIRPORT ATTRACTANTS

4.1 FAA Notification and Review of Proposed Land-Use Practice Changes in the Vicinity of Public-Use Airports.

4.1.1 For projects that are located within 5 miles of the airport's aircraft operations area, the FAA may review development plans, proposed land-use changes, operational changes, major federal actions or wetland mitigation plans to determine if such changes increase risk to airport safety by attracting hazardous wildlife on and around airports. The FAA is not a permitting agency for land use modifications that occur off airport properties, therefore, such reviews are typically initiated by state or federal permitting agencies seeking FAA input on new or revised permits. Each of the land uses listed in Chapter 2 of this AC has the potential to pose a risk to airport operations when they are located within the separation distances provided in Paragraphs 1.2 through 1.4.

4.1.2 Off-site land use modifications near airports may include an assessment of risk for facilities and land-use changes and, if necessary, mitigation strategies that may reduce risk to an acceptable level. However, the FAA recognizes that individual facilities or land-use modifications may present a range of attractants to different species, resulting in varying levels of risk. Therefore, the FAA considers each proposal on a case-by-case basis.

4.1.3 The FAA analyzes each land-use modification or new facility proposal prior to its establishment or any significant planned changes to design or operations that may increase the risk level. As part of a review, the FAA considers several factors that include, but are not limited to:

1. Type of attractant;
2. Size of attractant;
3. Location/distance of attractant from airport;
4. Design (e.g., construction, material, mitigation techniques employed into design);
5. Operation (e.g., cleanliness, constancy/ volume of use, seasonality, time of day);
6. Monitoring protocols (e.g., frequency, documentation, evaluation, species identification and number thresholds that trigger actions of communication or mitigation, baseline wildlife data);
7. Mitigation protocols (e.g., responsibilities, methods, intensity, pre-determined objectives, documentation, evaluation); and
8. Communication protocols to airport and/ or air traffic control tower;

4.1.4 The review of these factors may result in FAA recommended additions or modifications to a conditional use permit that allows the permitting agency to track compliance with the permittee obligations. Such conditions placed within a permit

may involve a comprehensive outline and recognition of individuals responsible for monitoring, communication, and mitigation measures if certain action thresholds are met. Action thresholds are defined in this instance as those pre-determined parameters (e.g., number, location, behavior, time of day) of specific hazardous species that would trigger a mitigation response. Additionally, baseline data should be used to determine the effect, if any, on wildlife populations at the proposed off-site location and/or at the airport.

4.1.5 Baseline data may need to be collected, depending on the existence of useful data and timeline for site modification. If, after taking into account the factors above, FAA determines that a facility poses a significant risk to airport safety, FAA will object to its establishment or renewal.

4.1.6 For projects that are located within 5 miles of the airport's aircraft operations area, the FAA Airport District Office may review development plans, proposed land-use changes, operational changes, major federal actions or wetland mitigation plans to determine if such changes present potential wildlife hazards to aircraft operations. The FAA considers sensitive airport areas as those that lie under or next to approach or departure airspace. This brief examination should indicate if further investigation is warranted.

4.1.7 Where a Qualified Airport Wildlife Biologist has conducted a further study to evaluate a site's compatibility with airport operations, the FAA may use the study results to make a determination.

4.2 Waste Management Facilities.

4.2.1 Notification of New/Expanded Project Proposal.

4.2.1.1 49 U.S.C. § 44718(d), prohibits the construction or establishment of new municipal landfills within 6 miles of certain public-use airports, when both the airport and the landfill meet specific conditions. See Paragraph 2.2 of this guidance for a more detailed discussion of these restrictions.

4.2.1.2 The Environmental Protection Agency (EPA) requires any landfill operator proposing a new or expanded waste disposal operation within 5 miles of a runway end to notify the appropriate FAA Regional Airports Division Office and the airport operator of the proposal. See 40 CFR § 258, *Criteria for Municipal Solid Waste Landfills,* Section 258.10, *Airport Safety*. The EPA also requires owners or operators of new landfill units, or lateral expansions of existing MSWLF landfill units, that are located within 10,000 feet of any airport runway end used by turbine-powered aircraft, or within 5,000 feet of any airport runway end used only by piston-type aircraft, to demonstrate successfully that such units are not hazards to aircraft. (See 4.3.2 below.)

4.2.1.3 When new or expanded municipal landfills are being proposed near airports, landfill operators must notify the airport operator and the FAA of the proposal as early as possible pursuant to 40 CFR § 258.

4.2.1.4 The FAA discourages the development of waste disposal and other facilities, discussed in Chapter 2, located within the separation criteria specified in Paragraphs 1.2 through 1.4. To show that a waste-handling facility sited within the separations identified in Paragraphs 1.2 through 1.4 does not attract hazardous wildlife and does not threaten aviation, the developer must establish the facility will not handle putrescible material other than that as outlined in 2.2.4. The FAA recommends against any facility other than those outlined in 2.2.4 (enclosed transfer stations). The FAA will use this information to determine if the facility will be a hazard to aviation.

4.3 Other Land-Use Practice Changes.

4.3.1 The FAA encourages operators of public-use airports who become aware of proposed land use practice changes that may attract hazardous wildlife within 5 miles of their airports to notify their assigned Airport Certification Safety Inspector or Airports District Office Program Manager. The FAA also encourages proponents of such land use changes to notify the FAA as early in the planning process as possible. Advanced notice affords the FAA an opportunity (1) to evaluate the effect of a particular land-use change on aviation safety and (2) to support efforts by the airport sponsor to restrict the use of land next to or near the airport to uses that are compatible with the airport.

4.3.2 The airport operator, project proponent, or land-use operator may use FAA Form 7460-1, Notice of Proposed Construction or Alteration, or other suitable documents similar to FAA Form 7460-1 to notify the appropriate FAA Regional Airports Division Office. Project proponents can contact the appropriate FAA Regional Airports Division Office for assistance with the notification process prior to submitting Form 7460-1.

4.3.3 It is helpful if the notification includes a 15-minute quadrangle map of the area identifying the location of the proposed activity. The land-use operator or project proponent should also forward specific details of the proposed land-use change or operational change or expansion. In the case of solid waste landfills, the information should include the type of waste to be handled, how the waste will be processed, and final disposal methods.

4.3.4 Airports that have Received Federal Assistance.

Airports that have received Federal assistance are required under their grant assurances to take appropriate actions to restrict the use of land next to or near the airport to uses that are compatible with normal airport operations. See Grant Assurance 21. The FAA recommends that airport operators oppose off-airport land-use changes or practices, to

the extent practicable, within the separations identified in Paragraphs 1.2 through 1.4, which may attract hazardous wildlife. Failure to do so may lead to noncompliance with applicable grant assurances. The FAA will not approve the placement of airport development projects pertaining to aircraft movement in the vicinity of hazardous wildlife attractants without appropriate mitigating measures. Increasing the intensity of wildlife control efforts is not a substitute for preventing, eliminating or reducing a proposed wildlife hazard. Airport operators should identify hazardous wildlife attractants and any associated wildlife hazards during any planning process for airport development projects.

4.4 Coordination to Prevent Creation of New Off-Airport Hazardous Wildlife Attractants.

Airport operators should work with local and regional planning and zoning boards to be aware of proposed land-use changes, or modification of existing land uses, that could create hazardous wildlife attractants within the separations identified in Paragraphs 1.2 through 1.4. Pay particular attention to proposed land uses involving creation or expansion of wastewater treatment facilities, development of wetland mitigation sites, or development or expansion of dredge spoil containment areas. At the very least, it is recommended that airport operators are on the notification list of the local planning board or equivalent review entity for all communities located within 5 miles of the airport, so they will receive notification of any proposed project and have the opportunity to review it for attractiveness to hazardous wildlife. This may be accomplished through one or more of the following:

4.4.1 Site-specific Criteria.

The airport should establish site-specific criteria for assessment of land uses attractive to hazardous wildlife and locations that would be of concern based on wildlife strikes and on wildlife abundance and activity at the airport and in the local area. These criteria may be more selective, but should not be less restrictive than this guidance.

4.4.2 Outreach.

Airports should actively seek to provide educational information and/ or provide input regarding local development, natural resource modification or wildlife-related concerns that affect wildlife hazards and safe air travel.

4.4.2.1 **External Outreach.**

Airport operators and a Qualified Airport Wildlife Biologist should consider outreach to local planning and zoning organizations on land uses of concern or to local organizations responsible for natural resource management (including wildlife, wetlands, and parks.) Airports should also consider developing and distributing position letters and educational materials on airport-specific concerns regarding wildlife hazards, wildlife activity and attraction. Finally, airports should provide formal comments on local procedures, laws, ordinances, plans, and regulatory actions such as permits related to land uses of concern.

4.4.2.2 **Internal Outreach.**

Airports should consider developing and distributing position letters and educational materials on airport-specific concerns regarding species identification and mitigation procedures, wildlife hazards, wildlife activity and attraction to employees and personnel with access to the aircraft operations area.

4.5 Coordination on Existing Off-Airport Hazardous Wildlife Attractants.

Airports are encouraged to work with landowners and managers to cooperatively develop procedures to monitor and manage hazardous wildlife attraction. If applicable, these procedures may include:

1. Conducting a wildlife hazard site visit by a wildlife biologist meeting the qualification requirements of Advisory Circular 150/5200-36, *Qualifications for Wildlife Biologist Conducting Wildlife Hazard Assessments and Training Curriculums for Airport Personnel Involved in Controlling Wildlife Hazards on Airports*
2. Conducting regular, standardized, wildlife monitoring surveys;[4]
3. Establishing threshold numbers of wildlife which would trigger certain actions and/or communications;
4. Establishment of procedures to deter or remove hazardous wildlife.

4.6 Prompt Remedial Action.

For attractants found on and off airport property, and with landowner or manager cooperation, Part 139 certificated airports must take immediate action in accordance with their Airport Certification Manual and the requirements of Part 139.337, to alleviate wildlife hazards whenever they are detected. It is also recommended that non-certificated airports take immediate action to alleviate wildlife hazards whenever they are detected. In addition, airports should take prompt action to identify the source of attraction and cooperatively develop procedures to mitigate and monitor the attractant. **For Part 139 Certificated airports, immediate actions are required in accordance with 139.337(a).**

4.7 FAA Assistance.

If there is a question on the implementation of any of the guidance in this section, contact the FAA Regional Airports Division for assistance.

[4] Recommended survey protocols can be found in AC 150/5200-38, *Protocol for the Conduct and Review of Wildlife Hazard Site Visits, Wildlife Hazard Assessments, and Wildlife Hazard Management Plans*, and DeVault, T.L., B.F. Blackwell, and J.L. Belant, eds. 2013. *Wildlife in Airport Environments: Preventing Animal–Aircraft Collisions through Science-Based Management.* Johns Hopkins University Press, Baltimore, MD, USA. 181 pp.

4.7.1 Airport Documentation Procedures.

Airports should document on-site and off-site wildlife attractants as part of their "Wildlife Hazard Management Plan Annual Review," "Wildlife Hazard Management Plan Review Following a Triggering Event," and the airport's Continual Monitoring Annual Report (as outlined in FAA Advisory Circular 150/5200-38). As a best management practice, airports may choose to keep a log to track contacts from landowners or managers, permitting agencies, or other entities concerning land uses near the airport.

APPENDIX A. DEFINITIONS OF TERMS USED IN THIS ADVISORY CIRCULAR

A.1 **General.**

This appendix provides definitions of terms used throughout this AC.

1. **Air operations area.** Any area of an airport used or intended to be used for landing, takeoff, or surface maneuvering of aircraft. An air operations area includes such paved areas or unpaved areas that are used or intended to be used for the unobstructed movement of aircraft in addition to its associated runway, taxiways, or apron.
2. **Airport operator.** The operator (private or public) or sponsor of a public-use airport.
3. **Approach or departure airspace.** The airspace, within 5 statute miles of an airport, through which aircraft move during landing or takeoff.
4. **Bird balls.** High-density plastic floating balls that can be used to cover ponds and prevent birds from using the sites.
5. **Certificate holder.** The holder of an Airport Operating Certificate issued under 14 C.F.R. Part 139.
6. **Construct a new municipal landfill.** To begin to excavate, grade land, or raise structures to prepare a municipal solid waste landfill as permitted by the appropriate regulatory or permitting agency.
7. **Detention ponds.** Storm water management ponds that hold storm water for short periods of time, a few hours to a few days.
8. **Establish a new municipal landfill.** When the first load of putrescible waste is received on-site for placement in a prepared municipal solid waste landfill.
9. **Fly ash.** The fine, sand-like residue resulting from the complete incineration of an organic fuel source. Fly ash typically results from the combustion of coal or waste used to operate a power generating plant.
10. **General aviation aircraft.** Any civil aviation aircraft operating under 14 CFR Part 91.
11. **Hazardous wildlife.** Species of wildlife (birds, mammals, reptiles), including feral and domesticated animals, not under control that may pose a direct hazard to aviation (i.e., strike risk to aircraft) or an indirect hazard such as an attractant to other wildlife that pose a strike hazard or are causing structural damage to airport facilities (e.g., burrowing, nesting, perching).
12. **Municipal Landfill.** A publicly or privately owned discrete area of land or an excavation that receives household waste and that is not a land application unit, surface impoundment, injection well, or waste pile, as those terms are defined under 40 CFR § 257.2. A municipal landfill may receive other types wastes, such as commercial solid waste, non-hazardous sludge, small-quantity generator waste, and

industrial solid waste, as defined under 40 CFR § 258.2. A municipal landfill can consist of either a stand-alone unit or several cells that receive household waste.

13. **New municipal landfill.** A municipal solid waste landfill that was established or constructed after April 5, 2001.
14. **Piston-powered aircraft.** Fixed-wing aircraft powered by piston engines.
15. **Piston-use airport.** Any airport that does not sell Jet-A fuel for fixed-wing turbine-powered aircraft, and primarily serves fixed-wing, piston-powered aircraft. Incidental use of the airport by turbine-powered, fixed-wing aircraft would not affect this designation. However, such aircraft should not be based at the airport.
16. **Public agency.** A state or political subdivision of a state, a tax-supported organization, or an Indian tribe or pueblo (49 U.S.C. § 47102(19)).
17. **Public airport.** An airport used or intended to be used for public purposes that is under the control of a public agency; and of which the area used or intended to be used for landing, taking off, or surface maneuvering of aircraft is publicly owned (49 U.S.C. § 47102(20)).
18. **Public-use airport.** An airport used or intended to be used for public purposes where the area used or intended to be used for landing, taking off, or surface maneuvering of aircraft may be under the control of a public agency or privately owned and used for public purposes (49 U.S.C. § 47102(21)).
19. **Putrescible waste.** Solid waste that contains organic matter capable of being decomposed by micro-organisms and of such a character and proportion as to be capable of attracting or providing food for birds (40 CFR §257.3-8).
20. **Putrescible-waste disposal operation.** Landfills, garbage dumps, underwater waste discharges, or similar facilities where activities include processing, burying, storing, or otherwise disposing of putrescible material, trash, and refuse.
21. **Retention ponds.** Storm water management ponds that hold water for more than 48 hours.
22. **Risk**. Risk is the relationship between the severity and probability of a threat. It is the product of hazard level and abundance in the critical airspace, and is thus defined as the probability of a damaging strike with a given species.
23. **Runway protection zone.** An area off the runway end to enhance the protection of people and property on the ground (see AC 150/5300-13). The dimensions of this zone vary with the airport design, aircraft, type of operation, and visibility minimum.
24. **Scheduled air carrier operation.** Any common carriage passenger-carrying operation for compensation or hire conducted by an air carrier or commercial operator for which the air carrier, commercial operator, or their representative offers in advance the departure location, departure time, and arrival location. It does not include any operation that is conducted as a supplemental operation under 14 CFR Part 119 or as a public charter operation under 14 CFR Part 380 (14 CFR § 119.3).

25. **Sewage sludge.** Any solid, semi-solid, or liquid residue generated during the treatment of domestic sewage in a treatment works. Sewage sludge includes, but is not limited to, domestic septage; scum or solids removed in primary, secondary, or advanced wastewater treatment process; and a material derived from sewage sludge. Sewage does not include ash generated during the firing of sewage sludge in a sewage sludge incinerator or grit and screenings generated during preliminary treatment of domestic sewage in a treatment works. (40 CFR § 257.2)

26. **Sludge.** Any solid, semi-solid, or liquid waste generated form a municipal, commercial or industrial wastewater treatment plant, water supply treatment plant, or air pollution control facility or any other such waste having similar characteristics and effect. (40 CFR § 257.2).

27. **Solid waste.** Any garbage, refuse, sludge, from a waste treatment plant, water supply treatment plant or air pollution control facility and other discarded material, including, solid liquid, semisolid, or contained gaseous material resulting from industrial, commercial, mining, and agricultural operations, and from community activities, but does not include solid or dissolved materials in domestic sewage, or solid or dissolved material in irrigation return flows or industrial discharges which are point sources subject to permits under section 402 of the Clean Water Act, or source, special nuclear, or by product material as defined by the Atomic Energy Act of 1954.(40 CFR § 257.2).

28. **Turbine-powered aircraft.** Aircraft powered by turbine engines including turbojets and turboprops but excluding turbo-shaft rotary-wing aircraft.

29. **Turbine-use airport.** Any airport that sells fuel for fixed-wing turbine-powered aircraft.

30. **Wastewater treatment facility.** Any devices and/or systems used to store, treat, recycle, or reclaim municipal sewage or liquid industrial wastes, including publicly owned treatment works, as defined by Section 212 of the Clean Water Act. This definition includes any pretreatment involving the reduction of the amount of pollutants, the elimination of pollutants, or the alteration of the nature of pollutant properties in wastewater prior to or in lieu of discharging or otherwise introducing such pollutants into a publicly owned treatment system. (See 40 CFR § 403.3 (q), (r), & (s)).

31. **Wildlife.** Any wild animal, including without limitation any wild mammal, bird, reptile, fish, amphibian, mollusk, crustacean, arthropod, coelenterate, or other invertebrate, including any part, product, egg, or offspring thereof. 50 CFR § 10.12. As used in this AC, wildlife includes feral animals and domestic animals out of the control of their owners (14 CFR Part 139, Certification of Airports).

32. **Wildlife attractants.** Any human-made structure, land-use practice, or human-made or natural geographic feature that can attract or sustain hazardous wildlife within the landing or departure airspace or the airport's aircraft operations area. These attractants can include architectural features, landscaping, waste disposal sites, wastewater treatment facilities, agricultural or aquaculture activities, surface mining, or wetlands.

33. **Wildlife hazard.** A potential for a damaging aircraft collision with wildlife on or near an airport.

34. **Wildlife strike.** A wildlife strike is deemed to have occurred when:

    a. A strike between wildlife and aircraft has been witnessed;

    b. Evidence or damage from a strike has been identified on an aircraft;

    c. Bird or other wildlife remains, whether in whole or in part, are found:

        i. Within 250 feet of a runway centerline or within 1,000 feet of a runway end unless another reason for the animal's death is identified or suspected, unless another reason for the animal's death is identified or;

        ii. On a taxiway or anywhere else on or off airport that there is reason to believe was the result of a strike with an aircraft.

    d. The presence of birds or other wildlife on or off the airport had a significant negative effect on a flight (i.e., aborted takeoff, aborted landing, high-speed emergency stop, aircraft left pavement area to avoid collision with animal).

APPENDIX B. ADDITIONAL RESOURCES

B.1 Regulations

CITY OF ONTARIO PLANNING DEPARTMENT

PLANNING COMMISSION AGENDA REPORT

January 24, 2023

303 East B Street, Ontario, California 91764 Phone: 909.395.2036 / Fax: 909.395.2420

FILE NO: PDEV21-047

SUBJECT: A public hearing to consider an Addendum to The Ontario Plan 2050 Supplemental Environmental Impact Report and a Development Plan (File No. PDEV21-047) to construct nine industrial buildings totaling 4,263,454 square feet and associated site improvements on 216.39 gross acres (196.83 net acres) of land generally located east of Haven Avenue, west of Doubleday and Dupont Avenues, north of Jurupa Street and south of Airport Drive, within the IL (Light Industrial) land use district of the California Commerce Center Specific Plan (APNs: 0211-222-47, 0211-222-48, 0211-222-52, 0211-222-53, 0211-222-54, 0211-222-55, 0211-222-56, 0211-232-04, 0211-232-05, 0211-232-06, 0211-232-07, 211-232-011, 0211-232-12, 0211-232-13, 0211-232-14, 0211-232-15, 0211-232-16, 0211-232-17, 0211-232-18, 0211-232-19, 0211-232-20, 0211-232-44, 0211-232-45, and 0211-232-46); **submitted by McDonald Property Group.**

PROPERTY OWNER: Ontario International Airport Authority

RECOMMENDED ACTION: That the Planning Commission consider and adopt the following:

(1) The resolution approving the use of an Addendum to The Ontario Plan 2050 Supplemental Environmental Impact Report; and

(2) The resolution approving the Development Plan, File No. PDEV21-047, pursuant to the facts and reasons contained in the staff report and resolution, and subject to the conditions of approval appended to the attached resolutions as "Attachment A".

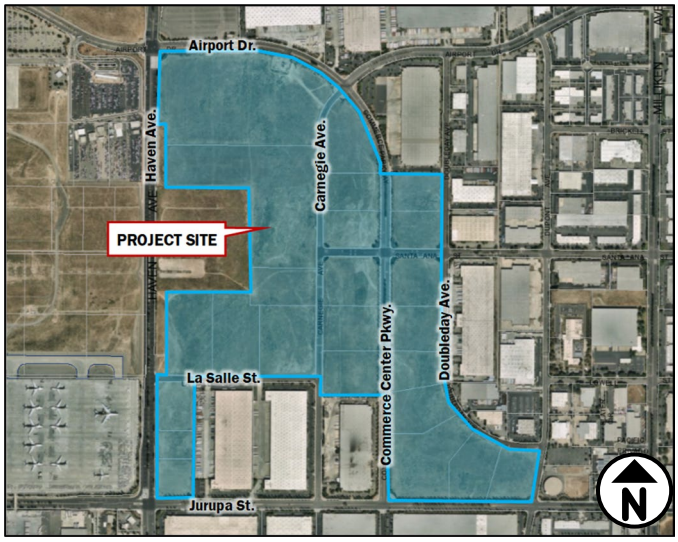

Figure 1: Project Location

PROJECT SETTING: The Project site is comprised of 216.39 gross acres (196.83 net acres) of land located east of Haven Avenue, west of Doubleday and Dupont Avenues,

Case Planner:	Edmelynne V. Hutter
Planning Director Approval:	
Submittal Date:	December 15, 2021

north of Jurupa Street and south of Airport Drive, within the California Commerce Center Specific Plan (see Figure 1: Project Location). The existing site is comprised of 24 vacant lots with the following existing public streets traversing through the Project site: Carnegie Avenue, Commerce Center Parkway, Santa Ana Street, and La Salle Street. The Project site is located east of the Ontario International Airport runway and abuts the airport's runway protection zone. The existing surrounding land uses, zoning, and Policy Plan (general plan) and specific plan land use designations are summarized in the "Surrounding Zoning & Land Uses" table located in the Technical Appendix of this report.

PROJECT ANALYSIS:

(1) Background — The California Commerce Center Specific Plan ("CCCSP") was adopted in May 1983 and established the land use designations, development standards, and design guidelines on approximately 1,400 acres of land, and allows for various land uses such as industrial, office, and commercial. Over the years, multiple specific plan amendments have been adopted to modify specific plan requirements, including land use designations, roadway alignments, development intensities, and development standards.

Previous land use designations for the Project site were Light Industrial, Office, Airport Reservation and Commercial. Previous specific plan amendments have been adopted to reclassify the Project site parcels to the Light Industrial land use designation. Other specific plan amendments include revisions to reflect updated airport clear zone requirements and low employee intensity areas, in response to Ontario International Airport operations and safety requirements.

On January 27, 2010, the Ontario City Council certified The Ontario Plan Environmental Impact Report in conjunction with File No. PGPA06-001 (City Council Resolution No. 2010-006). The Ontario Plan and associated Environmental Impact Report analyzed the Project site and established guidelines for development, including but not limited to general land use (Light Industrial), maximum 0.55 Floor Area Ratio (FAR), and assumed building area (approximately 4,736,449 square feet).

On August 16, 2022, the Ontario City Council certified The Ontario Plan 2050 Update Supplemental Environmental Impact Report in conjunction with File No. PGPA20-002 (City Council Resolution No. 2022-129). The Project site's land use district remained unchanged as part of the Citywide updates.

On December 15, 2021, the Applicant, and their consultant, MIG Inc., submitted a Development Plan to facilitate the development of nine industrial buildings totaling 4,263,454 square feet on the Project site. The Applicant has also submitted Lot Line Adjustment applications to the Engineering Department requesting to realign property boundaries throughout the Project site to accommodate the proposed building layouts.

On January 4, 2023, the Development Advisory Board ("DAB") voted unanimously to recommend approval of the Development Plan application to the Planning Commission. Prior to the DAB meeting, 45 written public comments were received in opposition to the Project, citing concerns about Burrowing Owls and desire to use the property as a Burrowing Owl preserve. During the DAB meeting, four persons from the public spoke in opposition to the project, citing concerns about Burrowing Owls, air quality, and traffic.

(2) Site Design/Building Layout — The Project site consists of nine vacant building sites encompassing 216.39 gross acres (196.83 net acres) of land located east of the Ontario International Airport runway and Haven Avenue. The overall floor area ratio ("FAR") for the Project is 0.50, which complies with the maximum FAR of 0.55 under The Ontario Plan Policy Plan. The associated Lot Line Adjustment applications are currently under review by the Engineering Department. Project approval is contingent on City approval of the associated Lot Line Adjustment applications. The Project site is irregular in shape, with the existing streets dictating the orientation and size of the proposed buildings. For purposes of clarity in this report, the Project site can be portioned into three areas, the West Project Area, Central Project Area, and East Project Area (see Exhibit B, attached).

(a) *West Project Area*. The West Project Area is bounded by Airport Drive, Carnegie Avenue, La Salle Avenue, Jurupa Street, and Haven Avenue. Buildings 1 through 4 are proposed in this portion, ranging from 254,677 square feet to 926,100 square feet in area.

The site for Building 1 is 23.6 acres in size, L-shaped, and is located at the southeast corner of Airport Drive and Haven Avenue. Building 1 is 850 feet wide and 480 feet deep, in an east-west orientation, with the primary office entrance oriented toward Airport Drive. The gross floor area for this building is 359,960 square feet, with a FAR of 0.35. The parking lots are located to the north and west of the building, and the screened truck docks and truck yard are located on the south side of the building.

The site for Building 2 is 40.6 acres in size and generally rectangular in shape, with the north property line flaring wider due to the curve of Airport Drive. Building 2 is 926,100 square feet in size, 2,211 feet wide, and 420 feet deep. The building is placed in a north-south orientation and parallels Carnegie Avenue. The proposed FAR for this building is 0.52. The parking lots are primarily located on the east side of the building, along Carnegie Avenue. The truck yard is located on the west side of the building and screened from street view by the building and 14-foot-high screen walls with view-obstructing gates.

The site for Building 3 is at the northwest corner of Carnegie Avenue and La Salle Street, encompassing 25.4 acres of land, and generally is rectangular in shape with an additional triangular area near the southwest corner of the site. Building 3 is proposed at 547,395 square feet in size, is 560 feet wide, and 945 feet deep, with the primary office area facing Carnegie Avenue. The proposed FAR is 0.50. The passenger vehicle parking lots are located on the east and west sides of the building. The north side of the building

is designed with truck docks and trailer parking, while the south side of the building only has truck docks. The trailer parking is located in the rectangular area on the west and will be screened from street views by 14-foot-high screen walls with view-obstructing gates.

The 11.7-acre site for Building 4 is located at the southeast corner of La Salle Street and Haven Avenue, north of Jurupa Street. Building 4 is 1,062 feet wide and 280 feet deep, 254,677 square feet in area, and positioned in a north-south direction. The proposed FAR is 0.50. The primary office faces La Salle Street with parking lot areas on the north and south sides of the building. The truck yard and trailer parking are located on the east side of the building and is screened from street views by the building and screen walls with view-obstructing gates. The west side of the project site provides a 45-foot building setback, which will be fully landscaped to further enhance the street view of the west building elevation.

(b) *Central Project Area*. The Central Project Area is bounded by Commerce Parkway to the north and east, Carnegie Avenue to the north and west, and an existing industrial land use to the south. The north tip of the central portion is at the southwest corner of the Airport Drive and Carnegie Avenue intersection. Buildings 5 and 6 are proposed in this area, with building areas of 424,550 square feet and 491,110 square feet, respectively.

The site for Building 5 is 19.5 acres in area and located at the northwest corner of Commerce Parkway and Santa Ana Street. Building 5, proposed at 424,550 square feet, has a width of 1,134 feet and depth of 429 feet, and is oriented in a north-south direction, with the primary office located in the northwest corner of the building. The proposed FAR is 0.50. The main parking lot is located on the north end of the Project site, with a smaller parking lot south of the building. The fully screened truck yard with trailer parking is located on the east side, adjacent to Commerce Parkway.

The 20.6-acre site for Building 6 is located at the southwest corner of Santa Ana Street and Commerce Parkway. Building 6, which is 491,110 square feet in area, has dimensions of 1,296 feet wide and 429 feet deep, with the primary office entrance at the southeast corner of the building. The proposed FAR is 0.55. The parking lots are located on the north and south ends of the site, and the truck yard is located on the east side of the building, which is screened from street views by the building and 14-foot-high screen walls. The west elevation of the building is setback 35 feet from Carnegie Avenue, and landscaping will be installed within this setback area to enhance the building's street view from Carnegie Avenue.

(c) *East Project Area*. The East Project Area is bounded by Doubleday Avenue to the east, Jurupa Street to the south, Commerce Way to the west, and existing industrial land use to the north. This eastern area is proposed with Buildings 7, 8, and 9, which range from 204,510 square feet to 534,292 square feet in area. The eastern portion is L-shaped, with Buildings 7 and 8 located between the parallel streets of Doubleday Avenue and

Commerce Parkway, and Building 9 is located along Jurupa Street, between Commerce Parkway and Dupont Avenue.

Building 7, with 204,510 square feet and a proposed FAR of 0.48, is located north of Santa Ana Street and is 643 feet wide by 369 feet deep. The site for Building 7 is 9.7 acres in area. The building is oriented in a north-south direction, with the primary office located at the northwest corner of the building. The passenger vehicle parking lots are located on the south and north sides of the building, and the truck yard is located on the east side, along Doubleday Avenue, and is fully screened from street views by the building and screen walls with view-obstructing gates.

The site for Building 8 is 24.1 acres in area and is located south of Santa Ana Street. The building is 534,292 square feet in area, measures 1,683 feet wide and 370 feet deep, and has a FAR of 0.51. Building 8 is situated in a north-south direction, with passenger vehicle parking lots located on the north and south sides on the building. The primary office is located at the southwest corner of the building. The truck yard and trailer parking are located on the east side of the site and are fully screened by 14-foot-high screen walls with view-obstructing gates.

Building 9 is located along Jurupa Street, between Dupont Avenue and Commerce Way, on 21.7 acres of land. The building is 520,860 square feet in area and has a FAR of 0.55. The site layout provides parking lots on the east and west sides of the building. The truck yard is located on the north side of the building and is fully screened from street views by the building and 14-foot-high screen walls. The proposed primary office is placed at the southeast corner of the building, near the Dupont Avenue and Jurupa Street intersection.

(3) Site Access/Circulation — The Project site will be accessible from existing public streets surrounding and traversing through the Project site, with each building site having at least three ingress/egress points for passenger vehicles and/or trucks. Where possible, shared drive approaches are provided for the building sites, which minimizes the number of drive approaches along any given street. As conditioned, reciprocal parking and circulation access will be available for building sites with shared access.

The Project includes public improvements such as new sidewalks, repair and replace deteriorated pavement, new landscaping, rehabilitated landscaping, and upgraded traffic signals with new cameras.

(4) Parking — The Project has provided off-street parking pursuant to the Warehouse/ Distribution parking standards specified in the Development Code. The number of off-street parking spaces provided for each individual building site meets or exceeds the minimum parking requirement for the proposed buildings. The off-street parking calculations for the Project are summarized in the table below:

Parking Summary

Bldg. No.	Type of Use	Building Area (in SF)	Trailer Parking		Vehicle Spaces	
			Required	Provided	Required	Provided
1	Warehouse / Distribution	359,960	13	305	190	276
2	Warehouse / Distribution	926,100	35	172	473	513
3	Warehouse / Distribution	547,395	24	131	284	284
4	Warehouse / Distribution	254,677	13	14	137	138
5	Warehouse / Distribution	424,550	15	33	222	343
6	Warehouse / Distribution	491,110	18	59	256	256
7	Warehouse / Distribution	204,510	7	28	112	112
8	Warehouse / Distribution	534,292	24	86	277	277
9	Warehouse / Distribution	520,860	16	64	270	270
Parking Totals:		**4,263,454**	**165**	**892**	**2,221**	**2,469**

(5) Architecture — The industrial buildings are proposed in a Contemporary Architectural style. The proposed buildings will be of concrete tilt-up construction with a variety of wall finishes, including monochromatic color blocking, score patterns, inset reveals, and color banding (see Exhibit D: Elevations, attached). Accent materials such as metal awnings, metal canopies, and glazing are applied at the corners of the buildings where offices are proposed and where they are highly visible from public streets.

The proposed architecture also includes angled metal eaves at the office corners. These eaves extend beyond the wall planes to create additional dimension to the office elevations.

An additional and unique feature of the proposed design is the incorporation of translucent acrylic panels with internal lighting, which are strategically placed at the primary office entrance. The design proposes three colors (green/"Turtle", orange/ Butternut" and blue/"Lago"), which will be strategically assigned to the nine buildings. These panels are proposed to be 10 feet wide and reach the full height of the building. When lit, the tower of acrylic panels will present a soft illumination that enhances each building and presents a themed Project-wide design.

The proposed floor plan for each building varies based on each site layout. The buildings are speculative and include basic floor plan components such as future office areas, electrical rooms, and truck docks. Exhibit C, attached, provides an example of a typical floor plan for the Project.

(6) Landscaping — The CCCSP does not specify a minimum landscape coverage percentage; however, developments within CCCSP area are required to provide landscaping within building setback areas, parking lots, and adjacent to buildings.

The street rights-of-way abutting the Project site are currently partially landscaped with shrubs and trees. As proposed and conditioned, the applicant will prepare a landscape plan for plan check that proposes new landscaping, landscape rehabilitation, and protection of existing street trees to the greatest extent possible.

The Project provides substantial landscaping along the perimeters of the Project site and within the required building and parking lot setbacks. The Project also includes right-of-way improvements (street, curb, gutter, sidewalks, and parkway) along the surrounding streets. A typical landscape plan is provided in Exhibit E, attached, showing plant species and planning layout. The proposed on-site and off-site landscape improvements will assist toward creating a walkable, safe area for pedestrians to access the Project site.

(7) Signage — All Project signage is required to comply with sign regulations provided in Ontario Development Code Division 8.1. Prior to the issuance of a Building Permit for the installation of any new on-site signage, the Applicant is required to submit Sign Plans for Planning Department review and approval.

(8) ONT ALUCP — This project is located within the Airport Influence Area of Ontario International Airport ("ONT") and was evaluated and found to be consistent with the policies and criteria of the Ontario International Airport Land Use Compatibility Plan ("ONT ALUCP"). The Project site is located adjacent to and east of the ONT runways and is impacted by height restrictions, Safety Zone 2 (Inner Approach/Departure Zone) and Safety Zone 3 (Inner Turning Zone), as shown in Exhibit G, attached. The allowable building heights range from 30 to 130 feet across the site from west to east. As a result, the project was required to submit their project to FAA for review and received a "Determination of No Hazard to Air Navigation" for all proposed building/structure heights. The project land uses were also restricted only permitting low people intensity uses such as warehouse distribution centers. Special conditions of approval have been placed on the project to conform with OIAA, FAA and City standards, and are attached to this report. Additionally, the project has been conditioned to limit the height of trees to be less than the FAR Part 77 height limits.

(9) Utilities (drainage, sewer) — Public utilities (water and sewer) are available to serve the Project. Furthermore, the Applicant has submitted a Preliminary Water Quality Management Plan ("PWQMP"), which establishes the Project's compliance with storm water discharge/water quality requirements. The PWQMP includes site design measures that capture runoff and pollutant transport by minimizing impervious surfaces and maximizes low impact development ("LID") best management practices ("BMPs"), such as retention and infiltration, biotreatment, and evapotranspiration. The PWQMP proposes the use of underground stormwater drywells in detention areas. Any overflow drainage will be conveyed to the public street by way of parkway drains and culverts.

PUBLIC NOTIFICATION: The subject application was advertised as a public hearing in at least one newspaper of general circulation in the City of Ontario (the Inland Valley Daily Bulletin newspaper). In addition, notices were mailed to all owners of real property

located within a minimum of 300 feet of the exterior boundaries of the property that is the subject of the hearing, as shown on the records of the County Assessor.

CORRESPONDENCE AND PUBLIC COMMENTS: As of the preparation of this report, Planning Department staff received 48 public comment submissions (see Exhibit H, attached). Of the 48, 45 comments were submitted prior to the Development Advisory Board ("DAB") meeting on January 4, 2023, including two submissions from one individual, and three comments were received after the DAB meeting. The comments were in opposition to the project and the majority of the correspondence were regarding concerns for Burrowing Owls on the Project site, stating that the Project site should be used for a Burrowing Owl preserve, there is higher mortality for translocated owls, potential loss of biodiversity with the removal of the owls, and the identified mitigation has failed in previous efforts. One comment discussed the timing of the DAB Agenda Report publication coinciding with the holidays and encouraged postponing the decision to allow more time to consider the project and information. Another comment stated concern about air quality and potential pollution generated by the Project.

The public comments provided during the DAB meeting were consistent with the written comments received.

The Applicant has prepared responses to the written correspondence and public comments received (see Exhibits I and J, attached). In summary, staff concurs with the responses in that:

- TOP 2050 SEIR and proposed Addendum to the SEIR, along with supporting technical studies, provide substantial evidence that the Project will not have any new or more significant impacts than those previously identified in the TOP 2050 SEIR.
- The presence of Burrowing Owls creates a hazard for airport operations. The Relocation Plan prepared for the Project is appropriate and consistent with the TOP 2050 policies.
- According to the Helix Environmental / Kidd Biological, Inc. 2020 report, mitigation options such as "in situ", or conserving owls on the Project site, and eviction of the owls are not supported by California Department of Fish and Wildlife Headquarters, the Federal Aviation Administration, and U.S. Department of Agriculture – Animal and Plant Health Inspection Service. The report concluded that the best approach for owl mitigation is active relocation.
- Impacts on air quality have been addressed in the TOP 2050 SEIR and a Statement of Overriding Consideration has been issued regarding air quality impacts.

In addition, Ontario International Airport Administration office submitted a letter to the City dated January 18, 2023, (see Exhibit K, attached) providing background information regarding Burrowing Owls located on Airport properties. In summary, the letter states that the FAA-approved Wildlife Hazard Management Plan ("WHMP") identifies that Burrowing Owls are a wildlife hazard to Airport operations and must be abated. The letter also states

that creating a Burrowing Owl preserve on the Project site is inconsistent with the WHMP and therefore not feasible.

AGENCY/DEPARTMENT REVIEWS: Each City agency/department has been provided the opportunity to review and comment on the subject application and recommend conditions of approval to be imposed upon the application. At the time of the Decision preparation, recommended conditions of approval were provided and are appended to the attached Resolution as "Attachment B."

AIRPORT LAND USE COMPATIBILITY PLAN (ALUCP) COMPLIANCE: The California State Aeronautics Act (Public Utilities Code Section 21670 et seq.) requires that an Airport Land Use Compatibility Plan be prepared for all public use airports in the State; and requires that local land use plans and individual development proposals must be consistent with the policies set forth in the adopted Airport Land Use Compatibility Plan. On April 19, 2011, the City Council of the City of Ontario approved and adopted the ONT ALUCP, establishing the Airport Influence Area for Ontario International Airport, which encompasses lands within parts of San Bernardino, Riverside, and Los Angeles Counties, and limits future land uses and development within the Airport Influence Area, as they relate to noise, safety, airspace protection, and overflight impacts of current and future airport activity. As the decision-making body for the Project, the Planning Commission Board has reviewed and considered the facts and information contained in the Application and supporting documentation against the ONT ALUCP compatibility factors, including [1] Safety Criteria (ONT ALUCP Table 2-2) and Safety Zones (ONT ALUCP Map 2-2), [2] Noise Criteria (ONT ALUCP Table 2-3) and Noise Impact Zones (ONT ALUCP Map 2-3), [3] Airspace protection Zones (ONT ALUCP Map 2-4), and [4] Overflight Notification Zones (ONT ALUCP Map 2-5). As a result, the Planning Commission, therefore, finds and determines that the Project, when implemented in conjunction with the conditions of approval, will be consistent with the policies and criteria set forth within the ONT ALUCP.

COMPLIANCE WITH THE ONTARIO PLAN: The proposed Project is consistent with the principles, goals and policies contained within the Vision, Governance, Policy Plan (general plan), and City Council Priorities components of The Ontario Plan ("TOP"). More specifically, the goals and policies of TOP that are furthered by the proposed Project are as follows:

(1) City Council Goals.

- Invest in the Growth and Evolution of the City's Economy
- Maintain the Current High Level of Public Safety
- Operate in a Businesslike Manner
- Invest in the City's Infrastructure (Water, Streets, Sewers, Parks, Storm Drains and Public Facilities)

(2) Vision.

Distinctive Development:

- Commercial and Residential Development

  - Development quality that is broadly recognized as distinctive and not exclusively tied to the general suburban character typical of much of Southern California.

(3) Governance.

Decision Making:

- Goal G1: Sustained decision-making that consistently moves Ontario towards its Vision by using The Ontario Plan as a framework for assessing choices.

  - G 1-2. Long-term Benefit. We require decisions to demonstrate and document how they add value to the community and support the Ontario Vision.

(4) Policy Plan (General Plan)

Land Use Element:

- Goal LU-1 Balance: A community that has a spectrum of housing types and price ranges that match the jobs in the City and that make it possible for people to live and work in Ontario and maintain a quality of life.

  - LU-1.1 Strategic Growth. We concentrate growth in strategic locations that help create place and identity, maximize available and planned infrastructure, foster the development of transit, and support the expansion of the active and multimodal transportation networks throughout the City.

  - LU-1.6 Complete Community. We incorporate a variety of land uses and building types in our land use planning efforts that result in a complete community where residents at all stages of life, employers, workers, and visitors have a wide spectrum of choices of where they can live, work, shop and recreate within Ontario.

- Goal LU-2 Compatibility: Compatibility between a wide range of uses and a resultant urban patterns and forms.

  - LU-2.6 Infrastructure Compatibility. We require infrastructure to be aesthetically pleasing and in context with the community character.

Community Economics Element:

- Goal CE-1 Complete Community: A complete community that provides for all incomes and stages of life.

- CE-1.6 Diversity of Housing. We collaborate with residents, housing providers, and the development community to provide housing opportunities for every stage of life; we plan for a variety of housing types and price points to encourage the development of housing supportive of our efforts to attract business in growing sectors of the community while being respectful of existing viable uses.

- Goal CE-2 Placemaking: A City of distinctive neighborhoods, districts, corridors, and centers where people choose to be.

- CE-2.1 Development Projects. We require new development and redevelopment to create unique, high-quality places that add value to the community.

- CE-2.2 Development Review. We require those proposing new development and redevelopment to demonstrate how their projects will create appropriately unique, functional, and sustainable places that will compete well with their competition within the region.

- CE-2.4 Protection of Investment. We require that new development and redevelopment protect existing investment by providing architecture and urban design of equal or greater quality.

- CE-2.5 Private Maintenance. We require adequate maintenance, upkeep, and investment in private property because proper maintenance on private property protects property values.

Safety Element:

- Goal S-1 Seismic & Geologic Hazards: Minimized risk of injury, loss of life, property damage, and economic and social disruption caused by earthquake-induced and other geologic hazards.

- S-1.1 Implementation of Regulations and Standards. We require that all new habitable structures be designed in accordance with the most recent California Building Code adopted by the City, including provisions regarding lateral forces and grading.

Community Design Element:

- Goal CD-1 Image & Identity: A dynamic, progressive city containing distinct and complete places that foster a positive sense of identity and belonging among residents, visitors, and businesses.

- CD-1.1 City Identity. We take actions that are consistent with the City being a leading urban center in Southern California while recognizing, enhancing, and preserving the character of our existing viable neighborhoods.

- CD-1.2 Growth Areas. We establish Place Types in urban, mixed use, and transit-oriented areas to foster the City's identity as a premier community and require new development within each Place Type to incorporate prescribed urban patterns, forms, and placemaking priorities.

- CD-1.3 Existing Neighborhoods. We require the existing character of viable residential and non-residential neighborhoods be preserved, protected, and enhanced.

- Goal CD-2 Design Quality: A high level of design quality resulting in neighborhoods, public spaces, parks, and streetscapes that are attractive, safe, functional, human-scale, and distinct.

- CD-2.1 Quality Building Design and Architecture. We encourage all development projects to convey visual interest and character through:

  - Building volume, massing, and height to provide context-appropriate scale and proportion;
  - A true architectural style which is carried out in plan, section, and elevation through all aspects of the building and site design and appropriate for its setting; and
  - Exterior building materials that are articulated, high quality, durable, and appropriate for the architectural style.

- CD-2.5 *Streetscapes*. We design new and, when necessary, retrofit existing streets to improve walkability, bicycling and transit integration, strengthen connectivity, and enhance community identity through improvements to the public right-of-way such as sidewalks, street trees, parkways, curbs, street lighting and street furniture.

- CD-2.7 Sustainability. We collaborate with the development community to design and build neighborhoods, streetscapes, sites, outdoor spaces, landscaping, and buildings to reduce energy demand through solar orientation, maximum use of natural daylight, passive solar and natural ventilation, building form, mechanical and structural systems, building materials, and construction techniques.

- CD-2.8 Safe Design. We incorporate defensible space design into new and existing developments to ensure the maximum safe travel and visibility on pathways, corridors, and open space and at building entrances and parking areas by avoiding physically and visually isolated spaces, maintaining visibility and accessibility, and using lighting.

- CD-2.9 Landscape Design. We encourage durable, sustainable, and drought-tolerant landscaping materials and designs that enhance the aesthetics of structures, create and define public and private spaces, and provide shade and environmental benefits.

➢ CD-2.10 Parking Areas. We require all development, including single-family residential, to minimize the visual impact of surface, structured, and garage parking areas visible from the public realm in an aesthetically pleasing, safe and environmentally sensitive manner. Examples include:

- Surface parking: Shade trees, pervious surfaces, urban run-off capture and infiltration, and pedestrian paths to guide users through the parking field;
- Structured parking: facade articulation, screening, appropriate lighting, and landscaping; and
- Garage parking: providing access to single-family residential garages through alley access, recessing garages from the frontage to emphasize front doors or active living spaces.

➢ CD-2.11 Entry Statements. We encourage the inclusion of amenities, signage, and landscaping at the entry to neighborhoods, commercial centers, mixed use areas, industrial developments, and public places that reinforce them as uniquely identifiable places.

➢ CD-2.12 Site and Building Signage. We encourage the use of sign programs that utilize complementary materials, colors, and themes. Project signage should be designed to effectively communicate and direct users to various aspects of the development and complement the character of the structures.

➢ CD-2.13 Entitlement Process. We work collaboratively with all stakeholders to ensure a high degree of certainty in the efficient review and timely processing of all development plans and permits.

▪ Goal CD-5 Protection of Investment: A sustained level of maintenance and improvement of properties, buildings, and infrastructure that protects the property values and encourages additional public and private investments.

➢ CD-5.1 Maintenance of Buildings and Property. We require all public and privately-owned buildings and property (including trails and easements) to be properly and consistently maintained.

➢ CD-5.2 Maintenance of Infrastructure. We require the continual maintenance of infrastructure.

HOUSING ELEMENT COMPLIANCE: The Project is consistent with the Housing Element of the Policy Plan (general plan) component of The Ontario Plan, as the Project site is not one of the properties in the Housing Element Sites contained in Tables B-1 and B-2 (Housing Element Sites Inventory) of the Housing Element Technical Report.

ENVIRONMENTAL REVIEW: The Application is a project pursuant to the California Environmental Quality Act (Public Resources Code Section 21000 et seq.) ("CEQA") and

an Initial Study/Addendum has been prepared to determine possible environmental impacts. Although the proposed project could have a significant effect on the environment, because all potentially significant effects have been analyzed adequately in an earlier Certified EIR, and have been avoided or mitigated pursuant to that earlier Certified EIR, including revisions or mitigation measures that are imposed on the proposed project, nothing further is required. The Project will introduce no new significant environmental impacts beyond those previously analyzed in the Certified EIR, and all mitigation measures previously adopted by the Environmental Impact Report, are a condition of project approval and are incorporated in the Initial Study/Addendum (see Attachment A—Initial Study/Addendum to the related resolution).

TECHNICAL APPENDIX:

Surrounding Zoning and Land Use:

	Existing Land Use	***Policy Plan Designation***	***Zoning Designation***	***Specific Plan Land Use***
Site	Vacant	Industrial	California Commerce Center Specific Plan	Light Industrial

January 4, 2023

CITY OF ONTARIO DEVELOPMENT ADVISORY BOARD MEETING
1/4/23

Re: Agenda Item B at the January 4, 2023
Development Advisory Board Meeting

Agenda Item B Summary: ENVIRONMENTAL ASSESSMENT AND DEVELOPMENT PLAN REVIEW FOR FILE NO. PDEV21-047: A public hearing to consider a Development Plan (File No. PDEV21-047) to construct nine industrial buildings totaling 4,263,454 square feet and associated site improvements on 197.74 acres of land generally located east of Haven Avenue, west of Doubleday and Dupont Avenues, north of Jurupa Street and south of Airport Drive, within the IL (Light Industrial) land use district of the California Commerce Center Specific Plan. An Addendum to The Ontario Plan 2050 Environmental Impact Report (State Clearinghouse No. 2021070364), which was certified by the City Council on August 16, 2022, was prepared. This application introduces no new significant environmental impacts. The proposed project is located within the Airport Influence Area of Ontario International Airport and was evaluated and found to be consistent with the policies and criteria of the Ontario International Airport Land Use Compatibility Plan; (APNs: 0211-222-47, 0211-222-48, 0211-222-52, 0211-222-53, 0211-222-54, 0211-222-55, 0211-222-56, 0211-232-04, 0211-232-05, 0211-232-06, 0211-232-07, 211-232-011, 0211-232-12, 0211-232-13, 0211-232-14, 0211-232-15, 0211-232-16, 0211-232-17, 0211-232-18, 0211-232-19, 0211-232-20, 0211-232-44, 0211-232-45, and 0211-232-46) submitted by McDonald Property Group. Planning Commission action is required. 1. CEQA Determination Motion to recommend Approval / Denial of an Addendum to a previously approved EIR 2. File No. PDEV21-047 (Development Plan) Motion to recommend Approval/Denial

Dear City of Ontario Development Advisory Board:

We write to oppose the Development Plan (File No. PDEV21-047) to construct nine industrial buildings totaling 4,263,454 square feet and associated site improvements on 197.74 acres of land generally located east of Haven Avenue, west of Doubleday and Dupont Avenues, north of Jurupa Street and south of Airport Drive, within the IL (Light Industrial) land use district of the California Commerce Center Specific Plan.

First, we oppose the use of a CEQA Determination Motion to streamline this project's approval process. The proposed land uses are environmentally detrimental and introduce significant environmental impacts. To avoid creating an individualized EIR in this case—especially due to the wholesale habitat destruction of the increasingly rare burrowing owl community—is arguable in court. Burrowing owl considerations were not adequately addressed in TOP 2050, as well as within the documents associated with this agenda item. In addition, since TOP 2050, new data have come forward through the recently released and updated Warehouse CITY tool, which allows municipalities to calculate their cumulative warehouse impact.

Case law supports countering a city's ability to utilize a CEQA Determination Motion in certain cases. In Friends of the East Sacramento Grid v. City of Sacramento (2017), the court found that the city's approval of an addendum to a previously approved EIR was improper because the addendum did not adequately address the potential environmental impacts of the proposed project. The court stated that "the addendum must address new information that was not considered in the original EIR and must explain why the new information does not require any changes to the EIR's conclusions or mitigation measures."

Additional environmental case law counters a city's ability to utilize a CEQA Determination Motion, including but not limited to:

1. Save Tara v. City of West Hollywood (2002): In this case, the California Court of Appeals ruled that the city of West Hollywood violated CEQA when it failed to consider the impacts of a proposed development on a historic site. The court held that the city's reliance on a CEQA Determination Motion to approve the project was not sufficient, as the motion did not adequately address the potential impacts on the historic site.

2. Santa Monica Mountains Conservancy v. City of Malibu (2000): In this case, the California Court of Appeals ruled that the city of Malibu violated CEQA when it approved a development project without adequately analyzing the potential impacts on the environment. The court held that the city's reliance on a CEQA Determination Motion to approve the project was not sufficient, as the motion did not adequately address the potential environmental impacts.

3. Friends of the Eel River v. Sonoma County Water Agency (1999): In this case, the California Court of Appeals ruled that the Sonoma County Water Agency violated CEQA when it approved a water project without adequately analyzing the potential impacts on the environment. The court held that the agency's reliance on a CEQA Determination Motion to approve the project was not sufficient, as the motion did not adequately address the potential environmental impacts.

In this case, the use of a CEQA Determination Motion is subject to legal challenge because the addendum to the TOP 2050 does not adequately address the potential environmental impacts. This includes lack of substantive analysis regarding environmental impacts, and the interrelationship between cumulative impact and the incremental impact of the project—issues that were already weak within Ontario's TOP 2050 and to which some of the signatories objected to at that time. In addition are erroneous conclusions

regarding the FAA's stance on the burrowing owl and legitimacy of considering burrowing owl habitat conservation within the Ontario Airport Sphere of Influence, which we outline below.

We also hereby incorporate previous opposition letters to TOP 2050. Opposition letters to a previously approved general plan may be used to oppose a land use plan in which a CEQA Determination motion is used. In the case of Friends of the Eel River v. North Coast Railroad Authority (2005), the court considered opposition letters and other evidence submitted by environmental groups who were challenging a land use plan that included the construction of a railroad. The court found that the opposition letters and other evidence were relevant and could be considered in determining whether the land use plan complied with CEQA.

In addition, loss of Burrowing Owl Habitat and Warehouses can be considered CEQA Topics of Controversy, which limits a city's ability to utilize a CEQA Determination Motion.

Under the California Environmental Quality Act (CEQA), a "topic of controversy" is defined as an issue that has been the subject of public disagreement or debate. This might include issues related to the environmental impacts of a proposed project, or the need for the project in the first place.

This land use decision involves two topics of controversy within the City of Ontario. The first is the eviction of burrowing owls and destruction of their historic habitat, which has been debated for years and which has included media coverage, litigation, and promised mitigation. The second is continued warehouse construction in Ontario, which has been the subject of recent controversy, lawsuits, and media coverage.

CEQA Determination Motions are used by public agencies to determine whether a project is exempt from CEQA review, or if an environmental impact report (EIR) is required. If a topic of controversy exists regarding a proposed project, this can counter the use of a CEQA Determination Motion.

For example, if a public agency is considering a proposed project that would have significant environmental impacts—in this case the building of a warehouse, generation of additional pollution and GHGs, and loss of habitat for a sensitive species—and there is significant public disagreement or debate over whether the project should be allowed to proceed, it can be considered a topic of controversy. In this case, the use of a CEQA Determination Motion to exempt the project from CEQA review is inappropriate because the topic of controversy requires public input and further environmental analysis and consideration through the CEQA process.

Piggy backing specific land use decisions on a general plan update such as TOP 2050 can also limit the ability of elected officials to make decisions on individual land use issues. The general plan may be adopted by a city council or planning commission, but individual land use decisions may be made by a different body or process. This can lead to a disconnect between the overall vision and goals of the general plan and the specific land use decisions being made, potentially undermining democratic involvement in the decision-making process.

In addition, the idea that an EIR is unnecessary due to the passage of TOP 2050 does not support the democratic spirit of municipal decision-making in which public voice is considered. TOP 2050 was an overwhelming process that took place when the Ontario residents were also embroiled in the historic redistricting process. The use of a CEQA determination can compromise democratic involvement in municipal decision making in a few ways. First, it may not allow for adequate public input and participation. The general plan update process may not be as well-publicized as a standalone land use decision, leading to less public awareness and engagement—and certainly less engagement in a decision based on over 3000 pages of materials made public at one of the busiest times of the year—and released

on a federal holiday (Jan 1, with many offices closed on Jan 2) when people are most distracted. This left even less time than the three days typically accorded for review in the City of Ontario. Additionally, the approval process approached in this way will not provide the same opportunities for public comment and participation as a standalone land use decision.

There are significant impacts that can and should be mitigated but have not been properly considered. The City may not adopt a statement of overriding consideration to approve a project where feasible, less environmentally damaging alternatives exist and feasible mitigation measures have not been considered or adopted.

We recommend that the DAB not forward this to the Planning Commission without insisting that appropriate environmental review and associated public comment process are adopted, and that feasible alternatives, including alternative project plans, are considered.

The "policy of the state" reflected in the California Environmental Quality Act is that projects with significant environmental impacts *may not* be approved "if there are feasible alternatives or feasible mitigation measures available which would substantially lessen the significant environmental effects . . ." (Pub. Resources Code § 21002.) More specifically, CEQA states:

> Pursuant to the policy stated in Sections 21002 and 21002.1, no public agency shall approve or carry out a project for which an environmental impact report has been certified which identifies one or more significant effects on the environment that would occur if the project is approved or carried out
> unless …:
>
> (a). . . (3) Specific economic, legal, social, technological, or other considerations . . . make infeasible the mitigation measures or alternatives identified in the environmental impact report. (Pub. Resources Code § 21081.)
>
> It is settled law that:
>
> CEQA contains *substantive* provisions with which agencies must comply. The most important ... is the provision requiring agencies to deny approval of a project with significant adverse effects when feasible alternatives or feasible mitigation measures can substantially lessen such effects.
>
> (*Sierra Club v. Gilroy City Council* (1990) 222 Cal.App.3d 30, 41, italics added.) Indeed, in a case decided on July 7, 2006, a court analyzed the "substantive mandate" of CEQA, then set aside a college campus master plan project because there was not substantial evidence to support a college district's findings of economic and legal infeasibility of mitigation. (*County of San Diego v. Grossmont-Cuyamaca Community College* (2006) –Cal. App.--, slip opinion, pp. 18-29.)
>
> "Feasible" is defined as "capable of being accomplished in a successful manner within a reasonable period of time, taking into account economic, environmental, social, and technological factors." (Pub. Resources Code § 21061.1.) The definition *does not* require the agreement of the project applicant. "Each public agency shall mitigate or avoid the significant effects on the environment of projects that it carries out or approves *whenever* it is feasible to do so." (*Lincoln Place Tenants Ass'n v. City of Los Angeles* (2005) 130 Cal.App.4th 1491, 1508, emphasis added.)

This project has impacts that can and must be mitigated due to burrowing owl habitat destruction, GHG emissions, emission of pollutants, and increased truck traffic. These are inappropriately labeled as

unavoidable, but they in fact may be avoided by properly adopting mitigation measures and alternatives to the existing plan.

Given the points above, we call for this item to be halted until the DAB can guarantee the City's ability to take into account community voice, conduct environmental impact review of loss of habitat and plans for mitigation, and consider significant harms to communities that reside in proximity of the project.

Burrowing Owls were once numerous in Ontario and Chino but due to widespread development that did not protect biological resources, the owls are fast disappearing. We need action now to protect Burrowing Owl habitat and allow these little birds to continue to live on in Ontario as they have for hundreds of years. The presence of a thriving population of Burrowing Owls in Ontario is a biological asset for the community and a chance for children and all of us to see the owls close by in their native habitat. The people of Ontario need protection for their native species, not more warehouses. Wouldn't it be better if Ontario children could tell the story of how their city protected this vulnerable species?

The burrowing owl is perhaps the signature species that makes Ontario unique—so signature, in fact, that the entire airport could be named after and themed as the Burrowing Owl Ontario Airport. Conserving this important sensitive species—that has long been on the cusp of endangered species status—would position Ontario as a leader in innovative conservation strategies. This would open opportunities for the city to develop ecotourism opportunities, interpretive, interactive displays, artwork, and educational stations within the airport to celebrate the local owl population. Including the Burrowing Owl habitat east of the Airport could be part of the Aiport's plan for greening and electrification.

Some counterbalance to the overwhelming focus on industrial development is needed if the city plans to live up to its carbon and green promises in the TOP 2050, its prior promises of Burrowing Owl mitigation, its motto of a balanced city, and to prepare itself for a climate-compromised future. You simply can't have it both ways. Preservation of burrowing owl habitat would do wonders for Ontario's reputation as a green city. Destruction of habitat would simply further Ontario's reputation as being hungry for warehouses at all costs.

Cumulative Impact—Air Quality and Habitat Loss

According to the Ontario International Airport's 2019 Environmental Management Plan, the airport generated approximately **79,000 metric tons of greenhouse gas emissions from cargo and passenger aircraft in 2018**. This accounted for approximately 76% of the airport's total greenhouse gas emissions for that year. The majority of these emissions were from jet fuel consumption during aircraft takeoff and landing operations. The airport plans to implement various initiatives to reduce its greenhouse gas emissions, including the use of alternative fuels, electrification, and the implementation of energy-efficient technologies. However, the significant increase in air travel in recent years has led to an overall increase in greenhouse gas emissions from the airport (Ontario International Airport, 2019).

According to the Ontario International Airport Expansion Project Environmental Impact Report, the expansion of logistics operations at the airport is expected to result in an **increase in greenhouse gas emissions of approximately 36,000 metric tons of carbon dioxide equivalent per year.** This increase is primarily due to increased air traffic and vehicle activity associated with the expansion, as well as the energy consumption of the expanded facilities. The EIR states that these emissions will be offset through the implementation of various mitigation measures, including the use of renewable energy sources and the implementation of energy efficiency measures (Ontario International Airport Expansion Project Environmental Impact Report, 2018). Despite efforts to green the Airport, flights will continue to be dirty, thus expanding GHG heavy infrastructure into the future.

According to researchers such as B. O'Neill and L. Bunting, industrial warehouses contribute significantly to greenhouse gas emissions and are a major contributor to climate change. The transportation of goods to and from warehouses requires a significant amount of energy, resulting in high levels of pollution and negative impacts on environmental and human health.

We request that the City of Ontario consider both the cumulative impact of all Ontario warehouses and their relationship to the incremental impact of the project, as outlined below, and as per CEQA requirements, in the most robust way possible.

In general, Environmental Impact Reports (EIR) prepared under the California Environmental Quality Act (CEQA) have not sufficiently analyzed the cumulative impacts that continued industrial development have on the health of Inland residents. The IE has been and continues to remain on the EPA's Nonattainment status for air quality (PM and Ozone). Municipal leaders choose to allow developers to perpetuate the nonattainment status despite the rules of the Clean Air Act 42U.S.C 7401 et seq, which requires them to mitigate projects to achieve attainment status. Developers have chosen to ignore the cumulative impacts of all warehouses in the region. Developers and municipal leaders accept language of "significant and unavoidable impacts," with little regard for alternative plans. Instead, they focus on the incremental impact a specific project has towards increasing "severe and extreme" nonattainment status or increased cancer risk. In other words, because our air quality is already in the worst possible condition, a little more won't hurt.

According to State CEQA Guidelines Section 15355, projects must analyze cumulative impacts at a broader scale, in addition to individual impacts—in other words, they must consider the result of past, present, and future projects. This project and TOP 2050 have failed to consider the cumulative pollution burden of past, current, and future projects and the inequitable zoning that has resulted in historical conditions of environmental injustice. Garcia et. al. conclude that, when viewed together with past, current, and future projects, "a project's contribution may be **individually and incrementally insignificant but would make a considerable contribution to the overall cumulative impact and be cumulatively significant when combined with existing conditions.** The existing, often hazardous, environmental conditions in DACs must be taken into account when evaluating cumulative pollution burden impacts."

The focus on industrial development has also led to cumulative habitat loss within the City of Ontario for burrowing owls. Industrial development also often comes at the expense of other types of development, such as affordable housing or green spaces, leading to negative impacts on the overall livability of a city. According to SCAG's recent Economic Analysis, continued investment in logistics in the Inland Empire may not be good for the economy because it can lead to a reliance on low-wage, low-skill jobs and a lack of diversification in the economy. Logistics jobs tend to be lower paying and have less room for advancement compared to other industries, which can lead to a stagnant or declining wage growth for workers. Additionally, reliance on logistics can make the region vulnerable to economic downturns or shifts in global trade patterns, as the Inland Empire is heavily dependent on the logistics industry. Diversifying the economy and investing in other industries can help to create more sustainable, higher paying jobs and reduce the risk of economic instability.

The global supply chain is becoming increasingly unstable due to factors such as trade tensions and natural disasters, leading to uncertainty and risk for investors in industrial warehouses. Authors such as J. Glaser and J. Rabin have argued that the proliferation of industrial warehouses in cities has negative consequences for local communities. These warehouses often bring with them noise and air pollution, as well as traffic congestion, which can disrupt the quality of life for residents. Right now, due to problems at the Ports of LA and Long Beach, goods are being increasingly re-routed to East Coast or Gulf Coast

ports. The current and future precarity of global logistics does not justify building more warehouses in Ontario; in fact, the opposite is true. Alternative plans must be considered.

Importance of Biodiversity for Local Municipalities

Biodiversity helps to maintain the integrity and stability of ecosystems. Different species interact with one another in complex ways, and the loss of one species can affect the populations of other species. There is a growing body of evidence that suggests that maintaining biodiversity is important for local municipalities. For example, a study by Daily et al. (1997) found that areas with high levels of biodiversity had more stable and productive ecosystems, which provided a range of benefits to local communities. Another study by Balmford et al. (2002) found that the loss of biodiversity was associated with a decline in the provision of ecosystem services, such as the regulation of water quality and the control of pests and diseases.

There is intrinsic value for a municipality to maintain a species such as the burrowing owl nearing endangered status. The burrowing owl is an excellent animal protagonist that is well known across the country. The reputation of the City of Ontario is at risk if its leaders choose to green light yet another warehouse—far from an endangered species in this neck of the woods—instead of doing all it can to protect this cute, puffy feathered, vulnerable, unique creature and longtime friend to Ontario schoolchildren.

Burrowing owls are a sensitive species that are at risk of extinction due to habitat loss and human disturbance (US Fish and Wildlife Service, 2020). Protecting this species is important for maintaining biodiversity and the overall health of the ecosystem. The benefits of having burrowing owls on airport land include their role as natural pest controllers and their potential to attract ecotourism.

According to the U.S. Fish and Wildlife Service, there are currently 12 airports in the United States that have implemented burrowing owl habitat conservation programs (U.S. Fish and Wildlife Service, 2020). These programs aim to protect and enhance the habitat of the burrowing owl, a species that is classified as threatened in some states and endangered in others (U.S. Fish and Wildlife Service, 2020).

The Federal Aviation Administration (FAA) does not list the burrowing owl as a species that poses a danger to aircraft. In fact, the FAA actively promotes the conservation of burrowing owls and other wildlife at airports through its Airport Wildlife Hazard Management program (Federal Aviation Administration, 2019). This program provides guidance and resources for airport operators to develop and implement effective wildlife management strategies that prioritize safety, while also promoting the conservation of wildlife on and around airport property (Federal Aviation Administration, 2019). The FAA also recognizes the importance of conserving wildlife at airports, and takes steps to ensure that safety is prioritized while also promoting the conservation of species like the burrowing owl (Federal Aviation Administration. (2019). Airport wildlife hazard management. Retrieved from https://www.faa.gov/airports/airport_safety/wildlife/ U.S. Fish and Wildlife Service (2020), and Burrowing owl (Athene cunicularia). Retrieved https://www.fws.gov/southeast/wildlife/bird/burrowing-owl/).

There are at least four significant negative effects on the environment that will be caused by and not mitigated by the current plan.

The Ontario Plan mitigation for Burrowing Owls has not been successful and is not an approach to be used for the owls east of Haven Avenue. The Ontario Plan mitigation started around 2007. From 2007 on, the City of Ontario collected fees from developers to mitigate the loss of large sections of habitat. The idea was that the funds would be used to purchase mitigation land.

The City has a mitigation program in place to compensate for BUOW impacts in the former Annexation Area 163. This property would contribute substantially success of that program. None of the money that the City has collected in mitigation fees has been spent for Burrowing Owl mitigation. It is particularly troubling that this project to destroy further habitat is being done based on similar promises that have had so many years for lack of follow through.

Two, another significant negative effect of translocating owls to sites far from their native land is the loss of distinct biodiversity. Kelly Barr, Kristin Ruegg and others have found genetically distinct populations of Burrowing Owls that are a distance apart even within California (Alvarado, Bossu et al., 2022). Translocating owls 30 to 40 miles from their natal site risks mixing the distinct groups. Possible advantages of the genetic differences that might increase survivability in a particular location would be lost to the owls.

Three, Burrowing Owls need to have other sites nearby within the usual range of juvenile dispersion (from .5 to 13 miles) so young adult owls can avoid inbreeding (Rosenberg, Gervais, & Trulio, 2007). The East of Haven Ontario Burrowing Owls are an average of 7 to 8 miles from several Burrowing Owl nesting sites in the Chino area. Thus, the Airport area owls make it possible for a healthy exchange of young adults finding mates between the two sites. Loss of the East of Haven site could seriously undermine the viability of what are now healthy populations of Burrowing Owls in Chino, contributing to the loss of all Burrowing Owls from the Pomona Valley.

Four, mitigation translocation for burrowing owls is an option that suits the preferences of land developers, but it does not provide a superior life for the owls. In fact, owls that are translocated from their home habitat are subject to higher mortality than those who are protected on site or nearby (Hennessey et al., 2022). The removal of all the OIA owls will be a significant blow to the possibility of success of owls in the area.

Contrary to the conclusion of the analysis of the DAB decision, the project will have a significant negative effect on Burrowing Owls, a state species of special concern.

In fact, Helix Environmental's Biological Resources report also states that leaving Burrowing Owls on site is the best option for the owls. Unfortunately, the report goes on to reject that option for invalid reasons such as the mistaken notion that Burrowing Owls are a hazard to aviation.

Contrary to the statements in the Helix Environmental report, Burrowing Owls are not a hazard to aviation. They are small birds that fly close to the ground and do not fly in flocks. According to the FAA birdstrike data, there were 21 reports of airstrikes involving these owls at OIA since 2008. Eight turned out to be other wildlife or the species were unknown; for eleven a carcass or wing was found but no airstrike was reported by pilots; and two involved a Burrowing Owl strike but no damage was reported. In all these years, there were **no instances** of a Burrowing Owl causing damage to a plane. If Burrowing Owls that live right next to the runways are not a threat to aviation, how much less a threat are the owls that live east of Haven.

Another argument is that Burrowing Owl attract larger raptors that might cause damage to a plane. This problem can be addressed through a raptor control program, something that all airports need to have in place, whether or not they have Burrowing Owls near their property. Many other airports protect plans from large raptors using control strategies that do not kill or harm or trap the raptors.

Finally, none of the Helix Environmental statements that the FAA will not allow mitigation for Burrowing Owls near an airport are backed up with reference to FAA regulations or communications. If

you look at the FAA regulations that discuss Wildlife Hazards, you will find that Burrowing Owls are not mentioned. If Burrowing Owls are NOT a hazard to aviation, then owl mitigation can be done on the boot property.

Please find a way to keep Airport Burrowing Owls in Ontario with a professionally managed and properly endowed preserve for the owls on site or nearby. Please also consider whether this is the time to continue to expand warehouse infrastructure, as it is encroaching nearer to residential communities at a time when we have very little or no time to reverse the negative effects of climate change, rather than enhance them, as this plan is doing. Do this for our children, grandchildren, schoolchildren, and all the residents of Ontario who care about their environment and who want to make Ontario the special place we all know it can be.

Date: Tuesday, January 3, 2023 5:45:51 PM

To the Ontario Development Advisory Board,

Burrowing Owls were once numerous in Ontario and Chino but have been driven out of the area due to widespread development that did not protect them. We need to protect the remaining land where the owls nest and raise their young.

There are at least four significant negative environmental effects of the proposed plan that have not been considered or mitigated for. These are: using a mitigation plan for Burrowing Owls that has already failed and will result in high mortality, loss of distinct biodiversity for the translocated owls, damaging effects on Chino Burrowing Owls, and overall higher mortality of translocated owls. Contrary to the proposed Development Advisory Board decision, the project will have a significant negative effect on Burrowing Owls, a state species of special concern.

The land that OIAA owns east of Haven Avenue is a primary nesting site for the owls. Please do not destroy it so more warehouses can be added to Ontario! A 90-acre Burrowing Owl preserve on the site that is properly endowed and well-managed will help keep the remaining Ontario owls safe so they can continue to live in their native habitat. Schoolchildren, families, and all of us can enjoy having the owls nearby to study and enjoy.

Sincerely,
Ana Rodriguez

Re: Development Plan (File No. PDEV21-047) - Agenda Item B

Dear Development Advisory Board:

These comments are submitted on behalf of the Center for Biological Diversity (the "Center") regarding the City of Ontario Development Advisory Board's January 4, 2023 consideration of Development Plan (File No. PDEV21-047) ("Project") to construct nine industrial buildings totaling 4,263,454 square feet and associated site improvements on 197.74 acres. As explained in greater detail below, there is substantial evidence indicating that the Project will have additional or more severe environmental effects on burrowing owls, air quality, cumulative impacts, and other adverse effects, than were analyzed in the City's 2050 Ontario General Plan. There also is substantial evidence that the Project will require additional or different alternatives or mitigation measures than were specifically analyzed and included in the 2022 Supplemental Programmatic Environmental Impact Report (PEIR). Moreover, there is no substantial evidence to support the City's contrary conclusions. Thus, the City is required to prepare a project-specific subsequent environmental impact report (EIR) that analyzes the site-specific effects of the Project in detail and includes additional alternatives to and mitigation measures for this project

The Center is a non-profit, public interest environmental organization dedicated to the protection of native species and their habitats through science, policy, and environmental law. The Center has over 1.7 million members and online activists throughout California and the United States. The Center has worked for many years to protect imperiled plants and wildlife, open space, air and water quality, and overall quality of life for people in the City of Ontario and San Bernardino County.

I. THE PROJECT IS NOT WITHIN THE SCOPE OF THE SEIR AND THERE IS A FAIR ARGUMENT THE PROJECT WILL CAUSE MORE SEVERE SIGNIFICANT EFFECTS AND REQUIRE ADDITIONAL MITIGATION MEASURES THAT WERE NOT ADDRESSED IN THE SEIR

The City must prepare a subsequent project-specific EIR analyzing the site- and project-specific impacts of the current version of the Project, including analysis of alternatives to, and additional mitigation measures for, the project as required by CEQA. The Supplemental Programmatic Environmental Impact Report (PEIR) for the 2050 General Plan did not disclose sufficient baseline data, nor did it analyze, or include sufficient alternatives to or mitigation measures for, the site- and project-specific impacts of the Project, and therefore the Project is not within the scope of the PEIR.

Under CEQA, a lead agency must analyze any subsequent site-specific project that is proceeding under an approved PEIR to determine whether the subsequent project is "consistent with" and "within the scope of the project or program covered by" the previously-certified PEIR, and if it will have one or more additional or more severe significant effects or require additional mitigation measures that were not analyzed in the prior PEIR. Pub. Res. Code, § 21094(b)-(c); 14 Cal. Code Regs. § 15168(c)(2), (c)(5). When a lead agency has prepared a prior PEIR, "the question for a court reviewing an agency's decision not to use a tiered EIR for a later project is one of law." *Committee for Reevaluation of the T-Line Loop v. San Francisco Muni. Transp. Agency* (2016) 6 Cal.App.5th 1237, 1252 (2016); *Sierra Club v. County of San Diego* (2014) 231 Cal.App.4th 1152, 1164.

The case law makes clear that a project is "consistent with" and "within the scope of" the prior EIR if it is essentially part of the same project analyzed in the PEIR and that project was specifically identified, analyzed and discussed at a site-specific level of detail in the PEIR. (See, e.g., *Sierra Club v. County of Sonoma*, 6 Cal. App. 4th 1307, 1319-21 (1992); *Friends of Mammoth v. Town of Mammoth Lakes*, 82 Cal. App. 4th 511, 528-29 (2000); *Natural Resources Defense Council, Inc. v. City of Los Angeles*, 103 Cal. App. 4th 268, 281-85 (2002); *American Canyon Community v. City of American Canyon*, 145 Cal. App. 4th 1062, 1072-73 (2006); *Center for Sierra Nevada Conservation v. County of El Dorado*, 202 Cal. App. 4th 1156, 1172-73, 1175-77 (2012); *Sierra Club v. County of San Diego*, 231 Cal. App. 4th at 1174-76.)

All of these cases also hold that a project is not "consistent with" or "within the scope of" a PEIR if that previous environmental document did not contemplate or analyze the site- and project-specific effects of the subsequent project and those effects are not otherwise covered in the PEIR. *Id.*; cf. *Latinos Unidos de Napa v. City of Napa*, 221 Cal. App. 4th 192, 202-03 (2013) (revisions to housing element of general plan was within the scope of a prior PEIR for a general plan.

Here, the Project is not consistent with or within the scope of the PEIR because it was not specifically identified, analyzed or discussed in the PEIR, and the PEIR did not address the site- and project-specific impacts of this project. The PEIR merely discussed the impacts generally of an industrial land use category, which includes any "variety of industrial uses, including

warehousing/distribution." (Addendum, p. 11.) The PEIR discussed development in general and established a general mitigation program for such projects, and did not discuss projects at a project-specific level of detail.

The Project's environmental documents do not fill this analytic gap because they are too vague and general and do not contain any meaningful site-specific analysis of the precise nature or extent of the impacts of this project, or include any additional mitigation measures for these effects. For example, neither the Project, nor the PEIR, disclose existing baseline conditions for the burrowing owl, or the suitability of the habitat to support burrowing owl. The EA mentions that burrowing owl surveys were "completed in 2019, 2020 and a 2022 protocol study was conducted to determine the current number of burrowing owls on site." (Addendum, p. 11.) But nowhere were the results of these surveys *disclosed* to the public, or discussed in the Addendum.[1] Absent that information, the Addendum fails to meet CEQA's core informational purpose and deprives the Addendum of the necessary evidence supporting how the PEIR's mitigation measures will be adequate to mitigate these effects for this large project. Id. These errors pervade the addendum, which also fails to provide basic explanations of how the PEIR's air quality mitigation measures will prevent operational impacts to air quality in the region, both at an individual project and cumulative level.

Similarly, the Addendum lacks a site-specific discussion of how this Project may impact air quality and neighboring sensitive receptors. (Addendum, p. 33 [stating that the PEIR does not analyze the project's air quality impacts.]) The Addendum recognizes the PEIR did not "make a specific conclusion regarding the significance of project-related air pollutant emissions compared to any significance thresholds" and instead recommended a potential menu of mitigation measures to address project impacts. (Addendum, p. 33.) The Addendum then concludes the Project will have less-than-significant air quality impacts because the Project would not result in new impacts *"other than those previously considered or addressed in the [PEIR]*." (*Id.*) Under the Addendum's own admission, the PEIR did not address project-specific air quality impacts. The Addendum also lacks any discussion of how the PEIR's three mitigation measures will be adequate to mitigate the effects of this particular Project. The Addendum's conclusory statement is unsupported by evidence or analysis and simply does not meet CEQA"s muster.

For these reasons, the Project is not within the scope of the PEIR, and a fair argument can be made, based on substantial evidence, that the Project will have site-specific impacts and require additional mitigation measures that were not analyzed and included in that PEIR. Therefore, the City is obligated to prepare a subsequent EIR for this project analyzing these impacts in detail.

II. CONCLUSION

Thank you for the opportunity to submit comments on the Development Plan (File No. PDEV21-047). Due to the shortcomings described above, the City must prepare a project-specific

[1] The Addendum also relies on these surveys to conclude that the preparation of a site-specific EIR is not required. (Addendum, p. 11.) Absent disclosure of this information, the Addendum simply has no basis by which to conclude that an EIR is not warranted.

subsequent environmental impact report (EIR) that analyzes the site-specific effects of the Project in detail and includes additional alternatives to and mitigation measures for this project.

Given the possibility that the Center will be required to pursue legal remedies in order to ensure that the City complies with its legal obligations including those arising under CEQA, we note the City's statutory duty to maintain and preserve all documents and communications that may constitute part of the "administrative record" of this proceeding. (§ 21167.6(e); *Golden Door Properties, LLC v. Superior Court* (2020) 53 Cal.App.5th 733.) The administrative record encompasses any and all documents and communications that relate to any and all actions taken by the City with respect to the Project, and includes "pretty much everything that ever came near a proposed [project] or [] the agency's compliance with CEQA . . . ." (*County of Orange v. Superior Court* (2003) 113 Cal.App.4th 1, 8.) The administrative record further includes all correspondence, emails, and text messages sent to or received by the City's representatives or employees that relate to the Project, including any correspondence, emails, and text messages sent between the City's representatives or employees and the Project applicant's representatives or employees. Maintenance and preservation of the administrative record requires that, *inter alia*, the City (1) suspend all data destruction policies; and (2) preserve all relevant hardware unless an exact replica of each file is made.

Please add the Center to your notice list for all future updates to the Project and do not hesitate to contact the Center with any questions at the number or email listed below.

Sincerely,

Hallie Kutak

Date: Tuesday, January 3, 2023 7:37:47 PM

To the Ontario Development Advisory Board,

Burrowing Owls were once numerous in Ontario and Chino but have been driven out of the area due to widespread development. Time and time again, the owls were driven out with no successful intervention to relocate them to a suitable habitat even though great amounts of mitigation money was collected. We need to protect the remaining land where the owls nest and raise their young and we need to change the practices that have resulted in the huge population drop that has occurred in the last 30 years.

There are significant negative environmental effects of the proposed plan that have not been considered or mitigated for. These are: using a mitigation plan for Burrowing Owls that has already failed and will result in high mortality, loss of distinct biodiversity for the translocated owls, damaging effects on Chino Burrowing Owls, and overall higher mortality of translocated owls. Contrary to the proposed Development Advisory Board decision, the project will have a significant negative effect on Burrowing Owls, a state species of special concern.

The land that OIAA owns east of Haven Avenue is a primary nesting site for the owls. Please do not destroy it so more warehouses can be added to Ontario! To: Planning Director
Subject: Development Plan PDEV21-047 Environmental Assessment and Addendum Approval
Date: Wednesday, January 4, 2023 9:34:22 AM

Thank you for the opportunity to comment on the Development Plan PDEV21-047 Environmental Assessment and Addendum Approval on today's agenda for the City of Ontario Development Advisory Board. I am not available to attend today's meeting but would like to voice my concern for approval. I have lived in Ontario my entire life as well as my parents and children. I am very concerned regarding the proposed development and actions taken towards the burrowing owl population on-site. This burrowing owl population has garnered world-wide attention and has enthralled the public.

I am aware that the CIty of Ontario has collected fees from development, particularly within the Ontario Ranch Specific Plan in response to burrowing owl mitigation, but I am not aware, and the addendum also refers that these moneys have not been used to purchase and conserve burrowing owl mitigation. This deferment of mitigation is irresponsible and harms the burrowing owl population in the City of Ontario. There needs to be transparency on how these fees will be utilized for mitigating impacts. The City of Ontario as a lead agency, needs to be responsible and move forward with fulfilling its obligations, as well as consider the cumulative impacts from this deferment.

This may be one of the last successfully reproducing populations of burrowing owl in the City of Ontario. They have in recent years observed having up to 9 chicks, in one burrow! I implore the City to ensure that if this project moves forward, and the owls are moved, the City requires the project developer to conserve land, forever to protect burrowing owl within the City of Ontario. We should not subject these owls to move without permanent conservation. The fees are not acceptable in this case. These owls need land and without compensatory mitigation of habitat, the impacts to this project are significant under CEQA as they will have a substantial effect either directly or through habitat modifications on a special status species.

Sincerely,

Paul Romero

CITY OF ONTARIO DEVELOPMENT ADVISORY BOARD MEETING SUBMITTED COMMENTS
1/4/23

Re: Agenda Item B at the January 4, 2023 Development Advisory Board Meeting

Burrowing Owls were once numerous in Ontario and Chino but due to widespread development that did not protect biological resources, the owls are fast disappearing. We need action now to protect Burrowing Owl habitat and allow these little birds to continue to live on in Ontario as they have for hundreds of years. The presence of a thriving population of Burrowing Owls in Ontario is a biological asset for the community and a chance for children and all of us to see the owls close by in their native habitat. The people of Ontario need protection for their native species, not more warehouses.

There are at least four significant negative effects on the environment that will be caused by and not mitigated by the current plan.

One, it is shocking that the DAB is suggesting that the Ontario Plan mitigation for Burrowing Owls was in any way successful and that it is an approach to be used for the owls east of Haven Avenue. The Ontario Plan mitigation started around 2007 and I assume it is continuing. From 2007 on, the City of Ontario collected fees from developers to mitigate the loss of large sections of habitat. The idea was that the funds would be used to purchase mitigation land. I don't know how much has been paid by developers but as of a few years ago, it was about $14 million. **None** of that has been spent for mitigation. Probably 100s of BUOWs were evicted from their homes and no mitigation land was purchased that they could go to. Please don't tell us that now 15 years after the first evictions that the city is trying to find a land trust to establish a mitigation site. That doesn't repair the damage done by years of evicting owls without a mitigation site.

Two, another significant negative effect of translocating owls to sites far from their native land is the loss of distinct biodiversity. Kelly Barr, Kristin Ruegg and others have found genetically distinct populations of Burrowing Owls that are a distance apart even within California (Alvarado, Bossu et al., 2022). Translocating owls 30 to 40 miles from their natal site risks mixing the distinct groups. Possible advantages of the genetic differences that might increase survivability in a particular location would be lost to the owls.

Three, Burrowing Owls need to have other sites nearby within the usual range of juvenile dispersion (from .5 to 13 miles) so young adult owls can avoid inbreeding (Rosenberg, Gervais, & Trulio, 2007). The East of Haven Ontario Burrowing Owls are an average of 7 to 8 miles from several Burrowing Owl nesting sites in the Chino area. Thus, the Airport area owls make it possible for a healthy exchange of young adults finding mates between the two sites. Loss of the East of Haven site could seriously undermine the viability of what are now healthy populations of Burrowing Owls in Chino, contributing to the loss of all Burrowing Owls from the Pomona Valley.

Four, mitigation translocation for burrowing owls is an option that suits the preferences of land developers, but it does not provide a superior life for the owls. In fact, owls that are translocated from their home habitat are subject to higher mortality than those who are protected on site or nearby (Hennessey et al., 2022). The removal of all the OIA owls will be a significant blow to the possibility of success of owls in the area.

Contrary to the DAB analysis, the project will have a significant negative effect on Burrowing Owls, a state species of special concern.

In fact, the Helix Environmental Biological Resources report also states that leaving Burrowing Owls on site is the best option for the owls. Unfortunately, the report goes on to reject that option for invalid reasons such as the mistaken notion that Burrowing Owls are a hazard to aviation. Contrary to the statements in the Helix Environmental report, Burrowing Owls are not a hazard to aviation. They are small birds that fly close to the ground and do not fly in flocks. According to the FAA bird strike data, there were 21 reports of airstrikes involving these owls at OIA since 2008. Eight turned out to be other wildlife or the species were unknown; for eleven a carcass or wing was found but no airstrike was reported by pilots; and two involved a Burrowing Owl strike but no damage was reported. In all these years, there were **no instances** of a Burrowing Owl causing damage to a plane. If Burrowing Owls that live right next to the runways are not a threat to aviation, how much less a threat are the owls that live east of Haven.

Another argument is that Burrowing Owl attract larger raptors that might cause damage to a plane. This problem can be addressed through a raptor control program, something that all airports need to have in place, whether or not they have Burrowing Owls near their property. Many other airports protect plans from large raptors using control strategies that do not kill or harm or trap the raptors.

Finally, none of the Helix Environmental statements that the FAA will not allow mitigation for Burrowing Owls near an airport are backed up with reference to FAA regulations or communications. If you look at the FAA regulations that discuss Wildlife Hazards, you will find that Burrowing Owls are not mentioned. If Burrowing Owls are NOT a hazard to aviation, then owl mitigation can be done on the boot property.

It is not too late to do the right thing and find a way to keep the Ontario Airport Burrowing Owls in the Ontario area with a professionally managed and properly endowed preserve for the owls on site.

We incorporate by reference the objections stated in the Redford Conservancy group opposition letter and additional opposition letters related to the January 4, 2023 hearing of this matter. While one or more of these letters may be withdrawn, the objections stated in the letters are valid and we incorporate them as if fully stated herein.

Sincerely,
Suzanne Thompson
Chair, Pomona Valley Audubon Society Burrowing Owl Committee

Citizen Letter Addressing Agenda Item B for the January 4, 2023 Development Advisory Board Meeting

January 2, 2023

Dear Ontario Development Advisory Board,

Fifty years ago while growing up in Los Angeles County, I enjoyed watching Burrowing Owls in the fields behind my childhood home. Sadly, this species has been in sharp decline ever since and is now a California Species of Special Concern. It is even being considered for listing under the California Endangered Species Act. So it is with great surprise that I read that the city of Ontario is considering developing one of its primary nesting sites!

It is prudent for cities to keep open land surrounding airports. Undeveloped areas provide emergency landing zones for aircraft if needed. This area is perfect for Burrowing Owls which already call it home. This owl flies low over the ground during the day while hunting large insects and small rodents, thus posing no danger to descending aircraft. In fact, there have been no documented plane strikes by Burrowing Owls so this grassland is safe for birds and people.

During the six years that I have visited this nest site, I have noticed a crowd of wildlife photographers standing respectfully along the edges of the S. Haven Avenue (north of E. Jurupa Street) when these owls are nesting. Many people travel long distances to get their photos, and spend money in Ontario during their visit which helps benefit the city.

Surely the best use for this property is to become a **Burrowing Owl preserve**. The local community can come visit and learn about the biology and interesting adaptations of their feathered neighbor. Children can study Burrowing Owls in school just like Orange County school children learn about the threatened Western Snowy Plover along their coastline.

As a reminder, these birds are state protected and cannot be harmed in any way. Trapping and moving them is not feasible and has resulted in high mortality. As a biologist, I am opposed to this devastating failed plan. Ontario's plans for these protected birds and their nest site need to be carefully reviewed so there are NO negative impacts. This is the lawful and right thing to do.

Thank you for listening to a nearby resident who enjoys the Burrowing Owls of Ontario.

RE: January 4, 2023, Item B, Development Advisory Board Meeting

Dear Members of the Board:

Endangered Habitats League (EHL) objects to plans to displace Burrowing Owls from the project site. For your reference, EHL is a Southern California regional conservation group.

Burrowing Owls were once numerous in Ontario and Chino but are in sharp decline due to development that has not been planned to be compatible with owl survival. The property owned by OIAA east of Haven Avenue is a primary nesting site for the owls. The proposed translocation plan for the owls is inadequate, leaving unmitigated significant impacts that require an EIR. The proposed scheme does not have a track record of long term success and will cause mortality. It will also result in genetic depletion of remaining owls in the area. Rather, commercial development should be sited on a small footprint, leaving a viable, managed owl preserve. Compatibly of owls with airport operations has been achieved elsewhere.

We urge you to step back and consider other options for this highly sensitive and depleted species.

Sincerely,
Dan Silver

From: Seth Thompson
To: Planning Director
Subject: Agenda Item B at the January 4, 2023 Development Advisory Board Meeting
Date: Monday, January 2, 2023 10:34:01 AM

The multi page document supporting this agenda item includes several misstatements of fact and references to a flawed earlier document, all purporting to support the notion that there are no potential environmental harms flowing form the proposed development scheme. This is clearly not the case:

- the document relies on a mitigation plan for Burrowing Owls that has already failed;
- there is incontrovertible scientific evidence that even the best translocation efforts result in high mortality;
- those owls who survive the trauma of translocation represent a loss of distinct biodiversity;
- loss of the Ontario Airport owls will have damaging effects on Chino Burrowing Owls and cascading negative effects on the few indigenous Burrowing Owls in the Pomona Valley.

Dumping a massive document supporting one agenda item in the middle of a holiday week end and poses an almost insurmountable obstacle for advisory board members who want to conscientiously weigh the interests of OIAA, the local communities, and the broader good of the region.

If I were a member of the board, I'd want to say, "whoa, let's give this proposal the time and attention it deserves and table this agenda item." I encourage you to do the same.

The multi page document supporting this agenda item includes several misstatements of fact and references to a flawed earlier document, all purporting to support the notion that there are no potential environmental harms flowing from the proposed development scheme.

But this bald statement requires you to ignore the dismal failure of the much hyped translocation scheme in the City of Ontario and the best available science on Burrowing Owl population dynamics.

The timing of filling this document in the middle of a holiday weekend almost guarantees that the members of the advisory board will not have time to thoughtfully review it and make a prudent recommendation.

The members of the advisory board and the larger community deserve better. Please table this item until you have had a chance to give it the skeptical scrutiny it deserves.

From:	NATASHA WALTON
To:	Planning Director
Subject:	Please Vote to Deny Recommendation of the January 4, 2023, Ontario DAB Meeting Agenda Item B
Date:	Wednesday, January 4, 2023 12:28:39 PM

Dear City of Ontario Development Advisory Board:

We, Inland Valley Advocates for the Environment (IVAE), ask that you **recommend denial of the January 4, 2023, agenda item** B to the Ontario Planning Commission regarding the (1) "CEQA [California Environmental Quality Act] Determination Motion to recommend Approval / Denial of an Addendum to a previously approved EIR [Environmental Impact Report]," and (2) "File No. PDEV21-047 (Development Plan) Motion to recommend Approval/Denial." The Development Plan (File No. PDEV21-047) is to construct nine industrial buildings totaling 4,263,454 square feet and associated site improvements on 197.74 acres of land generally located east of Haven Avenue, west of Doubleday and Dupont Avenues, north of Jurupa Street and south of Airport Drive, within the IL (Light Industrial) land use district of the California Commerce Center Specific Plan.

One of the main reasons why we ask you to deny recommendation of agenda item B is because **we disagree with the City of Ontario's CEQA determination for the Development Plan** (p30 of 404 pp in the 1/4/2022 meeting agenda). This determination is that "although the proposed project could have a significant effect on the environment, because all potentially significant effects (a) have been analyzed adequately in an earlier EIR pursuant to applicable standards, and (b) have been avoided or mitigated pursuant to that earlier EIR, including revisions or mitigation measures that are imposed upon the proposed project, nothing further is required." We argue that the environmental impacts of the proposed project (including significant ones) have not been adequately analyzed and presented under the August 2022 Ontario Plan 2050 Supplemental EIR, and the public and public agency review of these potential impacts does not exist. These environmental impacts include, but are not limited to, the direct, indirect and cumulative impacts of this project on greenhouse gas emissions, transportation/traffic, agricultural resources, hazards and hazardous materials, air quality, noise, and biological resources. Thus, a higher level document consisting of a CEQA Environmental Impact Report should be completed to allow further study and public review of this project under CEQA. Examples of inadequate analyses and conclusions include the following:

- No field studies of current noise levels have been conducted at the proposed project to help determine the expected level of noise at the project site which is located within two miles of a public international airport.
- The proposed project would have a significant negative effect on burrowing owls and this effect cannot be mitigated by a proposed relocation plan; regardless of the addendum's conclusions, the previously approved EIR did not include, address, or evaluate the potential significant effects of warehouse developments on wildlife such as the burrowing owl. In addition, no documented concurrence has been received from the California Department of Fish and Wildlife that the proposed project with a burrowing owl relocation plan would have a less than significant impact on the local burrowing owl (a special-status species) population, as well as on the population of burrowing owls that would be receiving the relocated owls.

Another major reason to deny recommendation of agenda item B is so that **we may preserve the safety and quality of life of our community and our local wildlife**; the proposed project area should include an alternative project that would protect the project area as a nature preserve and not be developed for any kind of industrial facility. Such a nature preserve would not only preserve the area as undeveloped safety zones for the airport, but it could even draw in the world to visit our special wildlife residents like the burrowing owl which lives and nests annually on this land.

Please see the link below discussing how people are fighting to save our native wildlife, like burrowing owls, in California. We ask that you do the same and resist the urge to develop our precious open spaces into yet more ugly and unnecessary warehouses.

https://urbanbird.org/victory-for-southern-california-burrowing-owls/
[na01.safelinks.protection.outlook.com]

We have attached a photo that very few airports can boast about being able to capture – a burrowing owl perching on a light post as a commercial jetliner lands. You have the opportunity to make Ontario Airport special and not just another eyesore among the clutter of urban banality. Once again, please recommend denial on agenda item B.

Sincerely,

Natasha Walton, M.S.
Cofounder of IVAE and Wildlife Biologist

Agenda item: For Agenda Item B at the January 4, 2023, Development Advisory Board Meeting

To the Ontario Development Advisory Board,

Burrowing Owls were once numerous in Ontario and Chino but have been driven out of the area due to widespread development that did not protect them. We need to protect the remaining land where the owls' nest and raise their young.

There are at least four significant negative environmental effects of the proposed plan that have not been considered or mitigated for. These are: using a mitigation plan for Burrowing Owls that has already failed and will result in high mortality, loss of distinct biodiversity for the translocated owls, damaging effects on Chino Burrowing Owls, and overall higher mortality of translocated owls. Contrary to the proposed Development Advisory Board decision, the project will have a significant negative effect on Burrowing Owls, a state species of special concern.

The land that OIAA owns east of Haven Avenue is a primary nesting site for the owls. Please do not destroy it so more warehouses can be added to Ontario! A 90-acre Burrowing Owl preserve on the site that is properly endowed and well-managed will help keep the remaining Ontario owls safe so they can continue to live in their native habitat. Schoolchildren, families, and all of us can enjoy having the owls nearby to study and enjoy.

Sincerely,
Dave Macias

Agenda item: For Agenda Item B at the January 4, 2023 Development Advisory Board Meeting

To the Ontario Development Advisory Board,

Please protect Burrowing Owls in our area. These small, sandy colored owls with long, slender legs and bright yellow eyes are a state species of special concern and also a local concern due to development which threatens their habitat. Unlike other owls, Burrowing Owls are active in the daytime. They live and hunt on the ground, and people can see how special they are in the full light of the sun. In the past Burrowing Owls were once abundant in Ontario and Chino, but many of these owls have been driven out of the area due to widespread development that did not protect the land where these beautiful owls nest and raise their young. They are worth saving and safeguarding.

There are at least four significant negative environmental effects of the proposed plan that have not been considered or mitigated for the consideration of these owls. The mitigation plan for the Burrowing Owls has already failed and will result in a high mortality, and there is a loss of distinct biodiversity for the translocated owls. There is also a damaging effect on Chino Burrowing Owls and overall higher mortality of translocated owls. Contrary to the proposed Development Advisory Board Decision, the project will have a significant negative effect on Burrowing Owls which are already a state species of special concern.

The land that OIAA owns east of Haven Avenue is a primary nesting site for the owls. Please do not destroy their habitat so that more warehouses can be added to Ontario. A 90-acre Burrowing Owl preserve on the site that is properly endowed and well-managed will help keep the remaining Ontario owls safe so they can continue to live in their native habitat, and schoolchildren, families and each one of us can study and enjoy the beauty of our local Burrowing Owls in the future.

Please help the species to survive in our area by protecting Burrowing Owls and their nesting site east of Haven Avenue.

Thank you.

Sincerely yours,

Patricia Gleeson

To the Ontario Development Advisory Board,

Burrowing Owls were once numerous in Ontario and Chino but have been driven out of the area due to widespread development that did not protect them. We need to protect the remaining land where the owls nest and raise their young.

There are at least four significant negative environmental effects of the proposed plan that have not been considered or mitigated for. These are: using a mitigation plan for Burrowing Owls that has already failed and will result in high mortality, loss of distinct biodiversity for the translocated owls, damaging effects on Chino Burrowing Owls, and overall higher mortality of translocated owls. Contrary to the proposed Development Advisory Board decision, the project will have a significant negative effect on Burrowing Owls, a state species of special concern.

The land that OIAA owns east of Haven Avenue is a primary nesting site for the owls. Please do not destroy it so more warehouses can be added to Ontario! A 90-acre Burrowing Owl preserve on the site that is properly endowed and well-managed will help keep the remaining Ontario owls safe so they can continue to live in their native habitat. Schoolchildren, families, and all of us can enjoy having the owls nearby to study and enjoy.

Thank you,

Rachael Innes

Date:	Sunday, January 1, 2023 9:34:44 PM

To the Ontario Development Advisory Board,

Burrowing Owls were once numerous in Ontario and Chino but have been driven out of the area by widespread development that did not protect them. This mistake must not be made again. We need to protect the remaining land where the owls nest and raise their young.

There are significant negative environmental impacts of the proposed plan that have not been considered or for which adequate mitigation actions have not been identified. Those mitigation actions currently being proposed for Burrowing Owls ARE CLEARLY INADEQUATE, have FAILED in the past, and will result in HIGH MORTALITY and LOSS OF DISTINCT BIODIVERSiTY for the translocated population,

The proposed Development Advisory Board decision fails to recognize that the project, as proposed, will have a significant negative effect on Burrowing Owls, a state species of special concern. The land that OIAA owns east of Haven Avenue is one of a VERY SMALL number of primary nesting sites for the owls. These owls are a public and a community resource, and this critical nesting area must not be destroyed for the financial gain of a few or short-sighted revenue increases. Once lost, this public resource cannot be restored.

A reasonable accommodation needs to be adopted. A 90-acre Burrowing Owl preserve on the site that is properly endowed and well-managed will help keep the remaining Ontario owls safe so they can continue to live and breed in their native habitat. Schoolchildren, families, and all of us can enjoy having our owls nearby to study and enjoy.

Ontario Development Advisory Board

Dear Sirs: This is to voice my opposition to the planned destruction of the Burrowing Owl habitat located east of the airport. Burrowing Owls are a state Species of Special Concern and the proposed translocation of these owls is risky and its success is unproven. As an alternative, I support the proposed 90 acre Burrowing Owl Preserve at that site. Please do not destroy one of the last remnants of Burrowing Owl habitat in our valley.

Sincerely,
Scott Marnoy, MD

Agenda item:
For Agenda Item B at the January 4, 2023
Development Advisory Board Meeting

To the Ontario Development Advisory Board,

For the past six years, I have been involved in efforts to monitor the numbers of burrowing owls in our area. At one time there were many native burrowing owls in southern California but heavy development has driven them close to elimination. Several small groups of them are still nesting in the Ontario and Chino areas and need to be protected by preserving the areas where they live and nest.

I understand that the Development Advisory Board is considering developments that will seriously endanger or eliminate these burrowing owl populations. There are at least four significant negative environmental effects of the proposed plan that have not been considered or mitigated for. These are: using a mitigation plan for Burrowing Owls that has already failed and will result in high mortality, loss of distinct biodiversity for the translocated owls, damaging effects on Chino Burrowing Owls, and overall higher mortality of translocated owls. Contrary to the proposed Development Advisory Board decision, the project will have a significant negative effect on Burrowing Owls, a state species of special concern.

The land that OIAA owns east of Haven Avenue is an important nesting site for these owls. Please do not destroy it so more warehouses can be added to Ontario. A 90-acre Burrowing Owl preserve on the site that is properly endowed and well-managed will help keep the remaining Ontario owls safe so they can continue to live in their native habitat. Schoolchildren, families, and all of us can enjoy having the owls nearby to study and enjoy. They are an important part of a healthy environment that we all need to live in.

Sincerely,
Alan Davis

To: Ontario Development Advisory Board
Subject: Agenda Item B at the January 4 2023 Development Advisory Board Meeting

Burrowing Owls, a California species of special concern, were once numerous in Ontario and Chino and on the land of what is now the Ontario Airport. Widespread development has resulted in a significant decrease in their numbers as little was done to ensure the survival of these unique birds. Today, we need to protect the remaining land where the Owls nest and raise their young.

There are at least four (4) significant and negative environmental effects of the proposed plan. These have not been considered or mitigated for. These are: (1) the plan proposes using a mitigation plan for Burrowing Owls that has already failed and will result in high mortality; (2) loss of distinct biodiversity for the translocated owls; (3) negative effects on the Chino Burrowing Owls; and (4) overall higher mortality of translocated owls. In short, contrary to the proposed Development Advisory Board decision, the project will have a significant negative effect on Burrowing Owls.

The land that OIAA owns east of Haven Avenue is a primary nesting site for the Owls. Please do not destroy it with more warehouses! A 90-acre Burrowing Owl preserve on the site that is properly endowed and well-managed will help keep the remaining Ontario Owls safe so they can continue to live in their native habitat. Schoolchildren, families, and all of us can enjoy having the owls nearby to study and enjoy.

From: Shari Wasson
To: Planning Director
Subject: Shari Wasson, Public Comment, Please Vote to Deny Agenda Item B
Date: Wednesday, January 4, 2023 12:28:33 PM

Dear City of Ontario Development Advisory Board:

I ask that you **recommend denial of the January 4, 2023, agenda item B** to the Ontario Planning Commission regarding the (1) "CEQA [California Environmental Quality Act] Determination Motion to recommend Approval / Denial of an Addendum to a previously approved EIR," and (2) "File No. PDEV21-047 (Development Plan) Motion to recommend Approval/Denial." The Development Plan (File No. PDEV21-047) is to construct nine industrial buildings totaling 4,263,454 square feet and associated site improvements on 197.74 acres of land generally located east of Haven Avenue, west of Doubleday and Dupont Avenues, north of Jurupa Street and south of Airport Drive, within the IL (Light Industrial) land use district of the California Commerce Center Specific Plan.

As a long-time resident of the Inland Valley and community member who values our native wildlife, I am greatly concerned about the proposed development plan and the devastating consequences it will have for Ontario's remaining burrowing owl population.

This unique little bird, which was once considered common and abundant, is now designated as a species of special concern by California Department of Fish and Wildlife (CDFW). Habitat loss due to development has been one of the strongest driving forces behind this. Due to the high levels of development that the Inland Valley has seen in the last several decades, the roughly 200 acres that the City of Ontario and Ontario International Airport are planning to develop with yet more warehouses is now one of the last remaining parcels of burrowing owl habitat in Ontario.

This bird is an important part of the natural heritage of Ontario and the Inland Valley. This vestigial habitat and owl population are true treasures that the City and Airport have the unique opportunity to capitalize on and share with not just the local community, but with travelers from both near

and far. Instead of allowing the land to be developed, this land should be set aside for preservation of the burrowing owl. In doing so, the City and Airport will be taking a leadership role in helping conserve the burrowing owl, which is, after all, a fellow partner in flight. Such a stance will brand the City of Ontario and the Ontario International Airport as ecologically minded entities that are invested in the wellbeing of the environment and the natural resources native to the area. Public relations centered on this can help increase City and Airport patronage, lead to partnerships with schools and other educational institutions, and set a model for other cities and businesses to follow. Partnering with the burrowing owl can help make the City of Ontario into an ecological destination.

I further recommend you deny agenda item B based on the City's inadequate CEQA determination for this Development Plan. Please see Natasha Walton's emailed public comment for details regarding this matter.

Sincerely,

Shari Wasson

Exhibit I: MIG RESPONSE TO COMMENTS

(Exhibit follows this page)

memo riverside

to Rudy Zeledon, Planning Director

from Kent Norton, AICP, REPA, MIG Riverside

re The HUB at Ontario International Airport Project

date January 18, 2023

On January 3-4, 2023 a group of environmental organizations and 46 individuals submitted comment letters or emails on Environmental Assessment and Development Plan PDEV21-047 under consideration by the City's Development Advisory Board (DAB) on January 4. The development under consideration is referred to as the HUB at Ontario International Airport (HUB OIA Project) The following addresses the various comments and issues raised in those letters. The letters are also attached to this memo for reference. This information is provided to the Planning Commission for its deliberation on this project.

LETTER 1: JOINT ENVIRONMENTAL ORGANIZATIONS LETTER/SUSAN PHILLPS ET AL

Comment 1 (Pages 1-4). Their first major issue was the proposed use of an Addendum to The Ontario Plan (TOP) Environmental Impact Report (EIR) (Addendum) as the California Environmental Quality Act (CEQA) documentation for the proposed HUB OIA Project.

The commenter also refers to the City relying on a CEQA exemption. That is not the case here and such comments misstate the applicable law. An addendum, which is allowed under CEQA Guidelines section 15164, is totally unrelated to any statutory and/or categorical exemptions allowed under other provisions of CEQA and the CEQA Guidelines.

The commenter does not acknowledge that an addendum can be the appropriate CEQA compliance document for a project that is consistent with the General Plan and zoning when it can be demonstrated a project will not result in new or more significant impacts that those that were already examined in the EIR for which the addendum is prepared. The Addendum does just that.

In this case, the use of an addendum is appropriate as the HUB OIA Project is consistent with TOP land use designations and City zoning, therefore the potential impacts of the HUB OIA Project have been accounted for in TOP EIR.

In addition, general comments on industrial development in the City as a whole are irrelevant to this current CEQA process. Furthermore, the Addendum includes an evaluation of all of the project's potential environmental impacts, including noise, air quality and transportation. Vague and unsupported complaints about impacts allegedly associated with warehouse development in general are simply incorrect.

Comment 2 (Page 3). The commenter expresses concern that the project has "topics of controversy" and so a separate EIR should be prepared. The commenter states…."If a topic of controversy exists regarding a proposed project, this can counter the use of a CEQA Determination Motion." However, the commenter is citing CEQA incorrectly. CEQA Guidelines Section 15064(f)(4) states…"The existence of public controversy over the environmental effects of a project will not require preparation of an EIR if there is no substantial evidence before the agency that the project may have a significant effect on the environment." The key determinate is providing substantial evidence that there will be no significant impacts. In this case, the Addendum prepared for the HUB OIA Project provides substantial evidence, supported by information from TOP and TOP EIR, and a number of technical studies cited in the Addendum, to demonstrate the HUB OIA Project will not have new or more significant impacts on the environment that were not already evaluated in TOP EIR. This includes several studies on burrowing owl (owl) as well as air quality and health risk impacts of the project.

Comment 3 (Page 4). The commenter states…"There are significant impacts that can and should be mitigated but have not been properly considered. The City may not adopt a statement of overriding consideration to approve a project where feasible, less environmentally damaging alternatives exist and feasible mitigation measures have not been considered or adopted." The commenter also argues the City must "deny approval of a project with significant adverse effects when feasible alternatives or feasible mitigation measures can substantially lessen such effects." This comment fails to acknowledge the provision in CEQA for a lead agency to adopt a Statement of Overriding Considerations (SOC) if the benefits of a project or plan outweigh the identified significant impacts. In this case the City Council adopted an SOC for TOP EIR.

The comment fails to acknowledge the City Council already adopted a Statement of Overriding Considerations when it approved TOP, and the proposed HUB OIA Project is consistent with TOP land use designation for the site.

In addition, the comments on the adequacy of TOP EIR are untimely and irrelevant. If these groups disapproved of that document, they were required to raise those issues when the matter was before the City Council. Opponents cannot use this project to attack the certified TOP 2050 EIR now. Criticisms on the City's overall planning efforts are misplaced in the current context of a single project, one which has long been planned and allowed on this project site (i.e., CCCSP and TOP). Further, unnamed comment letters supposedly submitted regarding TOP 2050 EIR are immaterial, particularly when they are not provided to the City at this time.

Comment 4 (Page 5). The commenter argues that development of the HUB OIA Project will have irreparable impacts on the owl. The commenter argues that the project site is a critical part of the owl's habitat in the region and the Federal Aviation Administration (FAA) actually encourages wildlife like the owl to co-exist on airport properties.

However, the various technical studies[1] on the owl and airport safety clearly demonstrate that the project site (i.e., just east of OIA and under normal landing pattern operations) is absolutely not safe

[1] Addendum Appendix B, BUOW Reports (Helix-Kidd 2020), BUOW site surveys (Helix or Wood 2019-2022), BUOW Relocation Plan (ELMT 2022), and Appendix E, Airport Safety Report (Mead & Hunt 1-2022)

(i.e., harmful) for both airport aircraft and the owls. Owls may not fly high enough to directly cause aircraft accidents as cited by the commenter. However, the presence of owls in this location attracts larger birds of prey into the landing airspace of OIA which does represent a safety hazard both for aircraft damage and potential injury/loss of life for passengers/crew. Without removing the attractor prey species, it is unlikely a raptor management program would be successful over the long-term.

The U.S. Department of Agriculture (USDA) provides Wildlife Services (WS) through its Animal and Plant Health Inspection Service (APHIS) program for airports to help prevent and resolve wildlife conflicts that threaten public health and safety from concentrated populations of birds and other wildlife at or near airports contribute to wildlife strikes. The Airport Wildlife Hazards Program[2] supports an airport when preparing a Wildlife Hazards Management Plan (WMP) to document an airport's wildlife hazards and how the airport plans to address and manage them. It guides operations, defines roles of airport personnel, and details training to reduce risks. A WMP often involves a variety of methods to resolve wildlife conflicts including the following:

- o Habitat Modification — Altering vegetation and water, creating fences and barriers, and other activities to make the airport unattractive to wildlife.
- o Active Dispersal — Scaring and hazing wildlife away from airport environments.
- o Trapping and Relocation — Capturing and moving animals can be used for some species when legally allowed and feasible (e.g., hawks and owls).
- o Lethal Removal —Lethal removal may be used in some situations for the protection of the flying public and crew. Lethal removal is permitted by the U.S. Fish and Wildlife Service and state wildlife agencies under airport depredation permits.

The OIA strives to meet APHIS requirements for wildlife management to minimize risks and hazards to aircraft and their passengers and crews. On February 21, 2021, Michelle Brantley, the Director of Planning for OIA, stated in an email to Suzanne Thompson with the Audubon Society, that "the biologist's assessment [for the HUB project] concludes the only viable alternative is active relocation of the owls more than 10,000 feet away from the airport. I did discuss the draft report with the FAA. My contacts emphatically agreed with the assessment and reinforced that they would not allow any mitigation within 10,000 feet of the airport."

The supporting studies[1] conclude that the most appropriate solution to this safety issue is to relocate the owl from the project site to a safer site in some other location. The Burrowing Owl Relocation Plan (Relocation Plan) prepared for the HUB OIA Project outlines a way to successfully achieve such relocation (see Appendix B).

The commenter also provides erroneous information on the current and historic state of owls in the City, and more importantly, on the project site. The analysis included in the Addendum and TOP EIR

[2] USDA WS APHIS WMP Website https://www.bing.com/search?q=USDA%20APHIS%20wildlife%20management%20plans%20for%20airports&msbd=%7B%22triggeringMode%22%3A%22Explicit%22%2C%22intent%22%3A%22UserHistory%22%7D&form=BFBBQF&cvid=B43D24A1DAFC42E8B9C5A09CBAE3E636&sp=3&ghc=1

adequately addresses the project's potential impact on owls. As explained therein, the applicant will comply with the City's existing regulations and TOP policies through implementation of a Relocation Plan, which is based on the most recent site-specific technical studies. Compliance with these requirements will ensure potential impacts to owls are less than significant. Opponents' claims to the contrary are thus hyperbolic and inaccurate.

Comment 5 (Pages 5-7). The commenter next argues the project will have cumulative impacts related to air quality, greenhouse gas (GHG) emissions, and habitat loss.

The commenter fails to acknowledge TOP EIR did examine these cumulative issues at City buildout, and the HUB OIA Project is consistent with TOP. Therefore, potential cumulative air quality, GHG, and habitat impacts of this project have already been addressed in TOP EIR and a SOC was adopted by the City Council as allowed under CEQA.

In addition, the information provided regarding ongoing airport operations and the allegedly resulting GHG impacts is irrelevant to the current analysis, which considers a single project's potential impacts on the environment. TOP EIR concluded that buildout of the City, including this project, would result in significant direct and *cumulative* GHG emission impacts and thus, a SOC was approved by the City Council. The project site was analyzed in TOP EIR as an industrial site and the applicant will implement a number of project design features to reduce GHG emissions as outlined in the City's GHG Reduction Measures Screening Threshold Table, attached to the Addendum as Appendix A-2. Opponents ignore this information, which is clearly stated in the Addendum, and decry the City's failure to consider cumulative impacts "at a broader scale." Full buildout of the City is the absolute broadest scale possible for the analysis of potential GHG impacts. Opponents may dislike the City's GHG analysis, but it does not diminish the fact that the analysis demanded by opponents was completed and TOP 2050 EIR was certified without challenge.

Comment 6 (Pages 7-9). The commenter states, within evidentiary support, that TOP EIR mitigation for owl impacts has not been successful (i.e., collection of new development fees to purchase habitat). Regardless, however, a separate Relocation Plan has been prepared specially for this HUB OIA Project, and thus, a generic in-lieu fee is inapplicable. The Relocation Plan, which will be overseen by the California Department of Fish and Wildlife (CDFW), will govern before, during, and after project implementation to assure successful relocation of the owls from the unsafe project site.

In fact, no evidence was presented to show the Relocation Plan would result in alleged impacts, such as loss of biodiversity, avoiding inbreeding of dispersed juveniles, and/or cumulative impacts on owl populations. Moreover, the comments fail to acknowledge any benefits that may accrue from relocating owls from the project site, including survival of owls now and in the future.

Based on information in TOP, TOP EIR, and several technical studies[3] prepared by qualified professionals (see Appendix B), the Relocation Plan is the most appropriate way to provide for the

[3] Addendum Appendix B, BUOW Reports (Helix-Kidd 2020), BUOW site surveys (Helix or Wood 2019-2022), BUOW Relocation Plan (ELMT 2022), and Appendix E, Airport Safety Report (Mead & Hunt 1-2022)

long-term survival of the owls consistent with Policies ER5-1 and ER5-2 in TOP, as cited in the Addendum.

Letter 1 Summary. These responses, TOP, TOP EIR, the Addendum, and the various supporting technical studies[1], provide substantial evidence that the HUB OIA Project will not have any new or more significant impacts than those identified in TOP EIR, and therefore, the Addendum satisfies the intent and requirements of CEQA.

LETTER 2: ANA RODRIGUEZ

Comment 1 (Email Page 1). The commenter makes a number of claims about owls relative to the HUB OIA Project. The commenter argues that owls are being "driven out of the City" and that a 90-acre preserve on the project site is needed to protect the owls.

The various technical studies[4] on the owls and airport safety clearly demonstrate that the project site (i.e., just east of OIA and under normal landing pattern operations) is absolutely not safe (i.e., harmful) for both airport aircraft and the owls. The supporting studies[3] conclude that the most appropriate solution to this safety issue is to relocate the owls from the project site to a safer site in some other location. That is why a separate Relocation Plan has been prepared specially for this HUB OIA Project, and thus, a generic in-lieu fee is not applicable. The Relocation Plan, which will be overseen by the CDFW, will govern before, during, and after project implementation to assure successful relocation of the owls from the unsafe project site.

No evidence was presented to show the Relocation Plan would result in alleged impacts, such as loss of biodiversity, avoiding inbreeding of dispersed juveniles, and/or cumulative impacts on owl populations. Moreover, the comments fail to acknowledge any benefits that may accrue from relocating owls from the project site, including survival of owls now and in the future.

Based on information in TOP, TOP EIR, and several technical studies[3] prepared by qualified professionals, the Relocation Plan is the most appropriate way to provide for the long-term survival of the owls consistent with Policies ER5-1 and ER5-2 in TOP, as cited in the Addendum.

Letter 2 Summary. This response, TOP, TOP EIR, the Addendum, and the various supporting technical studies[3], provide substantial evidence that the HUB OIA Project will not have any new or more significant impacts than those identified in TOP EIR, and therefore, the Addendum satisfies the intent and requirements of CEQA.

[4] Addendum Appendix B, BUOW Reports (Helix-Kidd 2020), BUOW site surveys (Helix or Wood 2019-2022), BUOW Relocation Plan (ELMT 2022), and Appendix E, Airport Safety Report (Mead & Hunt 1-2022)

LETTER 3: BARBARA BARTON

Comment 1 (Email Page 1). The commenter makes a number of claims about owls relative to the HUB OIA Project. The commenter argues that owls are being "driven out of the City" and that a 90-acre preserve on the project site is needed to protect the owls.

The various technical studies[5] on the owls and airport safety clearly demonstrate that the project site (i.e., just east of OIA and under normal landing pattern operations) is absolutely not safe (i.e., harmful) for both airport aircraft and the owls. Owls may not fly high enough to directly cause aircraft accidents as cited by the commenter. However, the presence of owls in this location attracts larger birds of prey into the landing airspace of OIA which does represent a safety hazard both for aircraft damage and potential injury/loss of life for passengers/crew. Without removing the attractor prey species, it is unlikely a raptor management program would be successful over the long-term.

The U.S. Department of Agriculture (USDA) provides Wildlife Services (WS) through its Animal and Plant Health Inspection Service (APHIS) program for airports to help prevent and resolve wildlife conflicts that threaten public health and safety from concentrated populations of birds and other wildlife at or near airports contribute to wildlife strikes. The Airport Wildlife Hazards Program[6] supports an airport when preparing a Wildlife Hazards Management Plan (WMP) to document an airport's wildlife hazards and how the airport plans to address and manage them. It guides operations, defines roles of airport personnel, and details training to reduce risks. A WMP often involves a variety of methods to resolve wildlife conflicts including the following:

- o Habitat Modification — Altering vegetation and water, creating fences and barriers, and other activities to make the airport unattractive to wildlife.
- o Active Dispersal — Scaring and hazing wildlife away from airport environments.
- o Trapping and Relocation — Capturing and moving animals can be used for some species when legally allowed and feasible (e.g., hawks and owls).
- o Lethal Removal —Lethal removal may be used in some situations for the protection of the flying public and crew. Lethal removal is permitted by the U.S. Fish and Wildlife Service and state wildlife agencies under airport depredation permits.

The OIA strives to meet APHIS requirements for wildlife management to minimize risks and hazards to aircraft and their passengers and crews. On February 21, 2021, Michelle Brantley, the Director of Planning for OIA, stated in an email to Suzanne Thompson with the Audubon Society, that "the biologist's assessment [for the HUB project] concludes the only viable alternative is active relocation of the owls more than 10,000 feet away from the airport. I did discuss the draft report with the FAA.

[6] USDA WS APHIS WMP Website https://www.bing.com/search?q=USDA%20APHIS%20wildlife%20management%20plans%20for%20airports&msbd=%7B%22triggeringMode%22%3A%22Explicit%22%2C%22intent%22%3A%22UserHistory%22%7D&form=BFBBQF&cvid=B43D24A1DAFC42E8B9C5A09CBAE3E636&sp=3&ghc=1

My contacts emphatically agreed with the assessment and reinforced that they would not allow any mitigation within 10,000 feet of the airport."

The supporting studies[4] conclude that the most appropriate solution to this safety issue is to relocate the owls from the project site to a safer site in some other location. That is why a separate Relocation Plan has been prepared specially for this HUB OIA Project, and thus, a generic in-lieu fee is not applicable. The Relocation Plan, which will be overseen by the CDFW, will govern before, during, and after project implementation to assure successful relocation of the owls from the unsafe project site.

No evidence was presented to show the Relocation Plan would result in alleged impacts, such as loss of biodiversity, avoiding inbreeding of dispersed juveniles, and/or cumulative impacts on owl populations. Moreover, the comments fail to acknowledge any benefits that may accrue from relocating owls from the project site, including survival of owls now and in the future.

Based on information in TOP, TOP EIR, and several technical studies[4] prepared by qualified professionals, the Relocation Plan is the most appropriate way to provide for the long-term survival of the owls consistent with Policies ER5-1 and ER5-2 in TOP, as cited in the Addendum.

Letter 3 Summary. This response, TOP, TOP EIR, the Addendum, and the various supporting technical studies[7], provide substantial evidence that the HUB OIA Project will not have any new or more significant impacts than those identified in TOP EIR, and therefore, the Addendum satisfies the intent and requirements of CEQA.

LETTER 4: HALLIE KUTAK, CENTER FOR BIOLOGICAL DIVERSITY

Comment 1 (Page 1). The commenter objects to the proposed use of an addendum as the CEQA documentation for the proposed HUB OIA Project.

The commenter does not acknowledge that an addendum can be the appropriate CEQA compliance document for a project that is consistent with the General Plan and zoning when it can be demonstrated a project will not result in new or more significant impacts that those that were already examined in the EIR for which the addendum is prepared. The Addendum does just that.

In this case, the use of an addendum is appropriate as the HUB OIA Project is consistent with TOP land use designations and City zoning, therefore the potential impacts of the HUB OIA Project have been accounted for in TOP EIR.

Comment 2 (Page 2). The commenter argues that the HUB OIA Project is not within the scope of TOP EIR, will have more severe significant impacts, and will require additional mitigation not found in TOP EIR. Their conclusion is a separate project-level EIR must be prepared for this project.

[7] Addendum Appendices A through G

As noted above, the commenter fails to recognize that an addendum can be the appropriate CEQA compliance document for a project that is consistent with the General Plan and zoning when it can be demonstrated a project will not result in new or more significant impacts that those that were already examined in the EIR for which an addendum is prepared. The Addendum does just that.

In this case, the use of an addendum is appropriate as the HUB OIA Project is consistent with TOP land use designations and City zoning, therefore the potential impacts of the HUB OIA Project have been accounted for in TOP EIR.

In addition, the Addendum and the various supporting technical studies[8] provide substantial evidence that the HUB OIA Project will not result in new or more severe significant impacts on the owls than those identified in TOP EIR, the Relocation Plan is consistent with TOP EIR mitigation, and the Addendum satisfies the intent and requirements of CEQA.

Comment 3 (Page 3). The commenter states the Addendum did not evaluate air quality impacts and health risks of the HUB OIA Project.

The Addendum states the following regarding Air Quality Significance Threshold 3.a, Conflict with or obstruct implementation of the applicable air quality plan:

The proposed project is consistent with TOP land use designations upon which the AQMP is based. Furthermore, the project is consistent with the City's participation in the AQMP and will not conflict with or obstruct implementation of the plan. The project will be required to implement TOP EIR Mitigation Measures AQ 3-1, 3-2, and 3-3 which include fugitive dust control measures pursuant to SCAQMD's Rule 403, use of Tier 3 construction equipment, proper service and maintenance of construction equipment, limiting nonessential idling of construction equipment, use of Super-Compliant volatile organic compounds (VOC) paints for coating and architectural surfaces, providing non-vehicular access options, and calculate and reduce any significant health risks from future development on nearby sensitive receptors (MM 3-1 through 3-3, respectively). The project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in TOP EIR. No changes or additions to TOP EIR analyses are necessary.

Mitigation: No project specific mitigation is required. The following measures from TOP EIR are applicable to the proposed project:

***AQ 3-1:** Prior to discretionary approval by the City of Ontario for development projects subject to CEQA (California Environmental Quality Act) review (i.e., nonexempt projects), project applicants shall prepare and submit a technical assessment evaluating potential project construction-related air quality impacts to the City of Ontario Planning Department for review and approval. The evaluation shall be prepared in conformance with South Coast Air Quality Management District (South Coast AQMD) methodology for assessing air quality impacts. If construction-related criteria air pollutants are determined to have the potential to exceed the South Coast AQMD–adopted thresholds of*

[8] Addendum Appendices A through G

significance, the City of Ontario Building Department shall require feasible mitigation measures to reduce air quality emissions. Potential measures shall be incorporated as conditions of approval for a project and may include:

- *Require fugitive dust control measures that exceed South Coast Air Quality Management District's Rule 403, such as:*
- − *Requiring use of nontoxic soil stabilizers to reduce wind erosion.*
- − *Applying water every four hours to active soil disturbing activities.*
- − *Tarping and/or maintaining a minimum of 24 inches of freeboard on trucks hauling dirt, sand, soil, or other loose materials.*
- *Using construction equipment rated by the United States Environmental Protection Agency as having Tier 4 interim or higher exhaust emission limits.*
- *Ensuring construction equipment is properly serviced and maintained to the manufacturer's standards*
- *Limiting nonessential idling of construction equipment to no more than five consecutive minutes.*
- *Using Super-Compliant VOC paints for coating of architectural surfaces whenever possible. A list of Super-Compliant architectural coating manufactures can be found on the South Coast Air Quality Management District's website at: http://www.aqmd.gov/prdas/brochures/SuperCompliant_AIM.pdf. These identified measures shall be incorporated into all appropriate construction documents (e.g., construction management plans) submitted to the City and shall be verified by the City's Planning Department.* (Addendum, pp. 32-33.)

The Addendum then determines the HUB OIA Project will not result in a cumulatively considerable net increase of any criteria pollutant for which the region is non-attainment under an applicable federal or state ambient air quality standard. (Addendum, pp 34-35.) That section provides a complete assessment of the air quality impacts of the HUB OIA Project relative to the South Coast Air Quality Management District's regional significance thresholds for criteria pollutants and recommends implementation of TOP EIR Mitigation Measures AQ 3-1 through AQ 3-3.

The Addendum also states… "*A detailed air quality assessment (AQ Study) of the proposed project was conducted by Urban Crossroads in February 2022, to identify project-specific air pollutant impacts and recommend additional mitigation if necessary (i.e., other than those applicable measures already identified in TOP EIR). The AQ Study (Appendix A) determined the project will not result in a cumulatively considerable net increase of any criteria pollutant for which the region is in non-attainment under an applicable federal or state ambient air quality because the project is consistent with the existing Industrial designation in the CCC SP."* (Addendum, p. 34.) It should also be noted the Addendum provides the full text of TOP EIR Mitigation Measures AQ 3-1 through 3-3 and explains how the project would implement them to address potential air quality impacts.

In addition, the Addendum concludes the project would not expose sensitive receptors to substantial pollutant concentrations and therefore, it would not result in any new impacts beyond those identified in TOP EIR. Thus, no project specific mitigation was required for sensitive receptors. In sum, the HUB OIA Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in TOP EIR. No changes or additions to TOP EIR analyses are necessary and no project specific mitigation is required.

Therefore, the commenter is incorrect as the Addendum did fully evaluate potential air quality impacts of the HUB OIA Project at a project level.

LETTER 5: JOEL HUSCHLE

Comment 1 (Email Page 1). The commenter makes a number of claims about owls relative to the HUB OIA Project. The commenter argues that owls are being "driven out of the City" and that a 90-acre preserve on the project site is needed to protect the owls.

The various technical studies[9] on the owls and airport safety clearly demonstrate that the project site (i.e., just east of OIA and under normal landing pattern operations) is absolutely not safe (i.e., harmful) for both airport aircraft and the owls. Owls may not fly high enough to directly cause aircraft accidents as cited by the commenter. However, the presence of owls in this location attracts larger birds of prey into the landing airspace of OIA which does represent a safety hazard both for aircraft damage and potential injury/loss of life for passengers/crew. Without removing the attractor prey species, it is unlikely a raptor management program would be successful over the long-term.

The U.S. Department of Agriculture (USDA) provides Wildlife Services (WS) through its Animal and Plant Health Inspection Service (APHIS) program for airports to help prevent and resolve wildlife conflicts that threaten public health and safety from concentrated populations of birds and other wildlife at or near airports contribute to wildlife strikes. The Airport Wildlife Hazards Program[10] supports an airport when preparing a Wildlife Hazards Management Plan (WMP) to document an airport's wildlife hazards and how the airport plans to address and manage them. It guides operations, defines roles of airport personnel, and details training to reduce risks. A WMP often involves a variety of methods to resolve wildlife conflicts including the following:

- o Habitat Modification — Altering vegetation and water, creating fences and barriers, and other activities to make the airport unattractive to wildlife.
- o Active Dispersal — Scaring and hazing wildlife away from airport environments.

[9] Addendum Appendix B, BUOW Reports (Helix-Kidd 2020), BUOW site surveys (Helix or Wood 2019-2022), BUOW Relocation Plan (ELMT 2022), and Appendix E, Airport Safety Report (Mead & Hunt 1-2022)

[10] USDA WS APHIS WMP Website https://www.bing.com/search?q=USDA%20APHIS%20wildlife%20management%20plans%20for%20airports&msbd=%7B%22triggeringMode%22%3A%22Explicit%22%2C%22intent%22%3A%22UserHistory%22%7D&form=BFBBQF&cvid=B43D24A1DAFC42E8B9C5A09CBAE3E636&sp=3&ghc=1

o Trapping and Relocation — Capturing and moving animals can be used for some species when legally allowed and feasible (e.g., hawks and owls).

o Lethal Removal —Lethal removal may be used in some situations for the protection of the flying public and crew. Lethal removal is permitted by the U.S. Fish and Wildlife Service and state wildlife agencies under airport depredation permits.

The OIA strives to meet APHIS requirements for wildlife management to minimize risks and hazards to aircraft and their passengers and crews. On February 21, 2021, Michelle Brantley, the Director of Planning for OIA, stated in an email to Suzanne Thompson with the Audubon Society, that "the biologist's assessment [for the HUB project] concludes the only viable alternative is active relocation of the owls more than 10,000 feet away from the airport. I did discuss the draft report with the FAA. My contacts emphatically agreed with the assessment and reinforced that they would not allow any mitigation within 10,000 feet of the airport."

The supporting studies[7] conclude that the most appropriate solution to this safety issue is to relocate the owls from the project site to a safer site in some other location. That is why a separate Relocation Plan has been prepared specially for this HUB OIA Project, and thus, a generic in-lieu fee is not applicable. The Relocation Plan, which will be overseen by the CDFW, will govern before, during, and after project implementation to assure successful relocation of the owls from the unsafe project site.

No evidence was presented to show the Relocation Plan would result in alleged impacts, such as loss of biodiversity, avoiding inbreeding of dispersed juveniles, and/or cumulative impacts on owl populations. Moreover, the comments fail to acknowledge any benefits that may accrue from relocating owls from the project site, including survival of owls now and in the future.

Based on information in TOP, TOP EIR, and several technical studies[7] prepared by qualified professionals, the Relocation Plan is the most appropriate way to provide for the long-term survival of the owls consistent with Policies ER5-1 and ER5-2 in TOP, as cited in the Addendum.

Letter 5 Summary. This response, TOP, TOP EIR, the Addendum, and the various supporting technical studies[11], provide substantial evidence that the HUB OIA Project will not have any new or more significant impacts than those identified in TOP EIR, and therefore, the Addendum satisfies the intent and requirements of CEQA.

LETTER 6: KIMBERLY DILLBECK

Comment 1 (Email Page 1). The commenter makes a number of claims about owls relative to the HUB OIA Project. The commenter argues that owls are being "driven out of the City" and that a 90-acre preserve on the project site is needed to protect the owls.

[11] Addendum Appendices A through G

The various technical studies[8] on the owls and airport safety clearly demonstrate that the project site (i.e., just east of OIA and under normal landing pattern operations) is absolutely not safe (i.e., harmful) for both airport aircraft and the owls. Owls may not fly high enough to directly cause aircraft accidents as cited by the commenter. However, the presence of owls in this location attracts larger birds of prey into the landing airspace of OIA which does represent a safety hazard both for aircraft damage and potential injury/loss of life for passengers/crew. Without removing the attractor prey species, it is unlikely a raptor management program would be successful over the long-term.

The U.S. Department of Agriculture (USDA) provides Wildlife Services (WS) through its Animal and Plant Health Inspection Service (APHIS) program for airports to help prevent and resolve wildlife conflicts that threaten public health and safety from concentrated populations of birds and other wildlife at or near airports contribute to wildlife strikes. The Airport Wildlife Hazards Program[12] supports an airport when preparing a Wildlife Hazards Management Plan (WMP) to document an airport's wildlife hazards and how the airport plans to address and manage them. It guides operations, defines roles of airport personnel, and details training to reduce risks. A WMP often involves a variety of methods to resolve wildlife conflicts including the following:

- o Habitat Modification — Altering vegetation and water, creating fences and barriers, and other activities to make the airport unattractive to wildlife.
- o Active Dispersal — Scaring and hazing wildlife away from airport environments.
- o Trapping and Relocation — Capturing and moving animals can be used for some species when legally allowed and feasible (e.g., hawks and owls).
- o Lethal Removal —Lethal removal may be used in some situations for the protection of the flying public and crew. Lethal removal is permitted by the U.S. Fish and Wildlife Service and state wildlife agencies under airport depredation permits.

The OIA strives to meet APHIS requirements for wildlife management to minimize risks and hazards to aircraft and their passengers and crews. The supporting studies[8] conclude that the most appropriate solution to this safety issue is to relocate the owls from the project site to a safer site in some other location. That is why a separate Relocation Plan has been prepared specially for this HUB OIA Project, and thus, a generic in-lieu fee is not

[12] USDA WS APHIS WMP Website https://www.bing.com/search?q=USDA%20APHIS%20wildlife%20management%20plans%20for%20airports&msbd=%7B%22triggeringMode%22%3A%22Explicit%22%2C%22intent%22%3A%22UserHistory%22%7D&form=BFBBQF&cvid=B43D24A1DAFC42E8B9C5A09CBAE3E636&sp=3&ghc=1

applicable. The Relocation Plan, which will be overseen by the CDFW, will govern before, during, and after project implementation to assure successful relocation of the owls from the unsafe project site.

No evidence was presented to show the Relocation Plan would result in alleged impacts, such as loss of biodiversity, avoiding inbreeding of dispersed juveniles, and/or cumulative impacts on owl populations. Moreover, the comments fail to acknowledge any benefits that may accrue from relocating owls from the project site, including survival of owls now and in the future.

Based on information in TOP, TOP EIR, and several technical studies[8] prepared by qualified professionals, the Relocation Plan is the most appropriate way to provide for the long-term survival of the owls consistent with Policies ER5-1 and ER5-2 in TOP, as cited in the Addendum.

Letter 6 Summary. This response, TOP, TOP EIR, the Addendum, and the various supporting technical studies[13], provide substantial evidence that the HUB OIA Project will not have any new or more significant impacts than those identified in TOP EIR, and therefore, the Addendum satisfies the intent and requirements of CEQA.

LETTER 7: MARCYN CLEMENTS

Comment 1 (Email Pages 1-2). The commenter makes a number of claims about owls relative to the HUB OIA Project. The commenter argues that owls are being "driven out of the City" and that a 90-acre preserve on the project site is needed to protect the owls.

The various technical studies[14] on the owls and airport safety clearly demonstrate that the project site (i.e., just east of OIA and under normal landing pattern operations) is absolutely not safe (i.e., harmful) for both airport aircraft and the owls. Owls may not fly high enough to directly cause aircraft accidents as cited by the commenter. However, the presence of owls in this location attracts larger birds of prey into the landing airspace of OIA which does represent a safety hazard both for aircraft damage and potential injury/loss of life for passengers/crew. Without removing the attractor prey species, it is unlikely a raptor management program would be successful over the long-term.

The U.S. Department of Agriculture (USDA) provides Wildlife Services (WS) through its Animal and Plant Health Inspection Service (APHIS) program for airports to help prevent and resolve wildlife conflicts that threaten public health and safety from concentrated populations of birds and other wildlife at or near airports contribute to wildlife strikes. The Airport Wildlife Hazards Program[15] supports an airport when preparing a Wildlife Hazards Management Plan (WMP) to document an airport's wildlife hazards and how the airport plans to address and manage them. It guides operations, defines roles of

[15] USDA WS APHIS WMP Website
https://www.bing.com/search?q=USDA%20APHIS%20wildlife%20management%20plans%20for%20airports&msbd=%7B%22triggeringMode%22%3A%22Explicit%22%2C%22intent%22%3A%22UserHistory%22%7D&form=BFBBQF&cvid=B43D24A1DAFC42E8B9C5A09CBAE3E636&sp=3&ghc=1

airport personnel, and details training to reduce risks. A WMP often involves a variety of methods to resolve wildlife conflicts including the following:

o Habitat Modification — Altering vegetation and water, creating fences and barriers, and other activities to make the airport unattractive to wildlife.

o Active Dispersal — Scaring and hazing wildlife away from airport environments.

o Trapping and Relocation — Capturing and moving animals can be used for some species when legally allowed and feasible (e.g., hawks and owls).

o Lethal Removal —Lethal removal may be used in some situations for the protection of the flying public and crew. Lethal removal is permitted by the U.S. Fish and Wildlife Service and state wildlife agencies under airport depredation permits.

The OIA strives to meet APHIS requirements for wildlife management to minimize risks and hazards to aircraft and their passengers and crews. On February 21, 2021, Michelle Brantley, the Director of Planning for OIA, stated in an email to Suzanne Thompson with the Audubon Society, that "the biologist's assessment [for the HUB project] concludes the only viable alternative is active relocation of the owls more than 10,000 feet away from the airport. I did discuss the draft report with the FAA. My contacts emphatically agreed with the assessment and reinforced that they would not allow any mitigation within 10,000 feet of the airport."

The supporting studies[16] conclude that the most appropriate solution to this safety issue is to relocate the owls from the project site to a safer site in some other location. That is why a separate Relocation Plan has been prepared specially for this HUB OIA Project, and thus, a generic in-lieu fee is not applicable. The Relocation Plan, which will be overseen by the CDFW, will govern before, during, and after project implementation to assure successful relocation of the owls from the unsafe project site.

No evidence was presented to show the Relocation Plan would result in alleged impacts, such as loss of biodiversity, avoiding inbreeding of dispersed juveniles, and/or cumulative impacts on owl populations. Moreover, the comments fail to acknowledge any benefits that may accrue from relocating owls from the project site, including survival of owls now and in the future.

Based on information in TOP, TOP EIR, and several technical studies[11] prepared by qualified professionals, the Relocation Plan is the most appropriate way to provide for the long-term survival of the owls consistent with Policies ER5-1 and ER5-2 in TOP, as cited in the Addendum.

Letter 7 Summary. This response, TOP, TOP EIR, the Addendum, and the various supporting technical studies[17], provide substantial evidence that the HUB OIA Project will not have any new or

[16] Addendum Appendix B, BUOW Reports (Helix-Kidd 2020), BUOW site surveys (Helix or Wood 2019-2022), BUOW Relocation Plan (ELMT 2022), and Appendix E, Airport Safety Report (Mead & Hunt 1-2022)

[17] Addendum Appendices A through G

more significant impacts than those identified in TOP EIR, and therefore, the Addendum satisfies the intent and requirements of CEQA.

LETTER 8: PAUL ROMERO/JESSICA GARCIACANO

Comment 1 (Email Pages 1-2). The commenter makes a number of comments about burrowing owl (owl) relative to the HUB OIA site and project. The commenter expresses concern about the collection of development fees to help protect the owl but is not aware if those funds have been used to protect owl habitat. The commenter states that land should be preserved in the City to protect the owl.

The various technical studies[18] on the owls and airport safety clearly demonstrate that the project site (i.e., just east of OIA and under normal landing pattern operations) is absolutely not safe (i.e., harmful) for both airport aircraft and the owls. Owls may not fly high enough to directly cause aircraft accidents as cited by the commenter. However, the presence of owls in this location attracts larger birds of prey into the landing airspace of OIA which does represent a safety hazard both for aircraft damage and potential injury/loss of life for passengers/crew. Without removing the attractor prey species, it is unlikely a raptor management program would be successful over the long-term.

The U.S. Department of Agriculture (USDA) provides Wildlife Services (WS) through its Animal and Plant Health Inspection Service (APHIS) program for airports to help prevent and resolve wildlife conflicts that threaten public health and safety from concentrated populations of birds and other wildlife at or near airports contribute to wildlife strikes. The Airport Wildlife Hazards Program[19] supports an airport when preparing a Wildlife Hazards Management Plan (WMP) to document an airport's wildlife hazards and how the airport plans to address and manage them. It guides operations, defines roles of airport personnel, and details training to reduce risks. A WMP often involves a variety of methods to resolve wildlife conflicts including the following:

- o Habitat Modification — Altering vegetation and water, creating fences and barriers, and other activities to make the airport unattractive to wildlife.

The OIA strives to meet APHIS requirements for wildlife management to minimize risks and hazards to aircraft and their passengers and crews. On February 21, 2021, Michelle Brantley, the Director of Planning for OIA, stated in an email to Suzanne Thompson with the Audubon Society, that "the biologist's assessment [for the HUB project] concludes the only viable alternative is active relocation of the owls more than 10,000 feet away from the airport. I did discuss the draft report with the FAA. My contacts emphatically agreed with the assessment and reinforced that they would not allow any mitigation within 10,000 feet of the airport."

The supporting studies[13] conclude that the most appropriate solution to this safety issue is to relocate the owls from the project site to a safer site in some other location. That is why a separate Relocation Plan has been prepared specifically for this HUB OIA Project, and thus, a generic in-lieu fee is not applicable. The Relocation Plan, which will be overseen by the CDFW, will govern before, during, and after project implementation to assure successful relocation of the owls from the unsafe project site.

No evidence was presented to show the Relocation Plan would result in alleged impacts, such as loss of biodiversity, avoiding inbreeding of dispersed juveniles, and/or cumulative impacts on owl populations. Moreover, the comments fail to acknowledge any benefits that may accrue from relocating owls from the project site, including survival of owls now and in the future.

Based on information in TOP, TOP EIR, and several technical studies[13] prepared by qualified professionals, the Relocation Plan is the most appropriate way to provide for the long-term survival of the owls consistent with Policies ER5-1 and ER5-2 in TOP, as cited in the Addendum. **Letter 8 Summary.** This response, TOP, TOP EIR, the Addendum, and the various supporting technical studies[20], provide substantial evidence that the HUB OIA Project will not have any new or more significant impacts than those identified in TOP EIR, and therefore, the Addendum satisfies the intent and requirements of CEQA.

LETTER 9: SUZANNE THOMPSON, POMONA VALLEY AUDUBON SOCIETY, BURROWING OWL COMMITTEE

Comment 1 (Email Pages 1-3). The commenter makes a number of comments about burrowing owl (owl) relative to the HUB OIA site and project. The commenter argues that this development will have irreparable impacts on the owl. The commenter argues that the project site is a critical part of owl habitat in the region and the FAA actually encourages wildlife like the owl to co-exist on airport properties. The commenter also states TOP EIR mitigation for owl impacts has not been successful (i.e., collection of new development fees to purchase habitat).

The various technical studies[21] on the owls and airport safety clearly demonstrate that the project site (i.e., just east of OIA and under normal landing pattern operations) is absolutely not safe (i.e., harmful) for both airport aircraft and the owls. Owls may not fly high enough to directly cause aircraft accidents

Letter 9 Summary. This response, TOP, TOP EIR, the Addendum, and the various supporting technical studies[24], provide substantial evidence that the HUB OIA Project will not have any new or more significant impacts than those identified in TOP EIR, and therefore, the Addendum satisfies the intent and requirements of CEQA.

LETTER 10: TRUDE HURD

Comment 1 (Page 1). The commenter laments the loss of owl habitat over the years throughout the region, and claims it would be appropriate for an owl preserve on the HUB OIA Project site.

The commenter is incorrect that the HUB OIA Project site is "perfect for a burrowing owl preserve." The various technical studies[25] on the owls and airport safety clearly demonstrate that the project site (i.e., just east of OIA and under normal landing pattern operations) is absolutely not safe (i.e., harmful) for both airport aircraft and the owls. Owls may not fly high enough to directly cause aircraft accidents as cited by the commenter. However, the presence of owls in this location attracts larger birds of prey into the landing airspace of OIA which does represent a safety hazard both for aircraft damage and potential injury/loss of life for passengers/crew. Without removing the attractor prey species, it is unlikely a raptor management program would be successful over the long-term.

The U.S. Department of Agriculture (USDA) provides Wildlife Services (WS) through its Animal and Plant Health Inspection Service (APHIS) program for airports to help prevent and resolve wildlife conflicts that threaten public health and safety from concentrated populations of birds and other wildlife at or near airports contribute to wildlife strikes. [27] Addendum Appendices A through G

LETTER 11: DAN SILVER, ENDANGERED HABITATS LEAGUE

Comment 1 (Email Page 1). The commenter argues that owl relocation does not work and the HUB OIA Project site should include an owl preserve.

The commenter is incorrect that the HUB OIA Project site is "perfect for a burrowing owl preserve." The various technical studies[28] on the owls and airport safety clearly demonstrate that the project site (i.e., just east of OIA and under normal landing pattern operations) is absolutely not safe (i.e., harmful) for both airport aircraft and the owls. Owls may not fly high enough to directly cause aircraft accidents as cited by the commenter. However, the presence of owls in this location attracts larger birds of prey into the landing airspace of OIA which does represent a safety hazard both for aircraft damage and potential injury/loss of life for passengers/crew. Without removing the attractor prey species, it is unlikely a raptor management program would be successful over the long-term.

The U.S. Department of Agriculture (USDA) provides Wildlife Services (WS) through its Animal and Plant Health Inspection Service (APHIS) program for airports to help prevent and resolve wildlife conflicts that threaten public health and safety from concentrated populations of birds and other wildlife at or near airports contribute to wildlife strikes. The Airport Wildlife Hazards Program[29] supports an airport when preparing a Wildlife Hazards Management Plan (WMP) to document an airport's wildlife hazards and how the airport plans to address and manage them. It guides operations, defines roles of airport personnel, and details training to reduce risks. A WMP often involves a variety of methods to resolve wildlife conflicts including the following:

- o Habitat Modification — Altering vegetation and water, creating fences and barriers, and other activities to make the airport unattractive to wildlife.
- o Active Dispersal — Scaring and hazing wildlife away from airport environments.
- o Trapping and Relocation — Capturing and moving animals can be used for some species when legally allowed and feasible (e.g., hawks and owls).
- o Lethal Removal —Lethal removal may be used in some situations for the protection of the flying public and crew. Lethal removal is permitted by the U.S. Fish and Wildlife Service and state wildlife agencies under airport depredation permits.

The OIA strives to meet APHIS requirements for wildlife management to minimize risks and hazards to aircraft and their passengers and crews. On February 21, 2021, Michelle Brantley, the Director of Planning for OIA, stated in an email to Suzanne Thompson with the Audubon Society, that "the biologist's assessment [for the HUB project] concludes the only viable alternative is active relocation of the owls more than 10,000 feet away from the airport. ---

[28] Addendum Appendix B, BUOW Reports (Helix-Kidd 2020), BUOW site surveys (Helix or Wood 2019-2022), BUOW Relocation Plan (ELMT 2022), and Appendix E, Airport Safety Report (Mead & Hunt 1-2022)

[29] USDA WS APHIS WMP Website
https://www.bing.com/search?q=USDA%20APHIS%20wildlife%20management%20plans%20for%20airports&msbd=%7B%22triggeringMode%22%3A%22Explicit%22%2C%22intent%22%3A%22UserHistory%22%7D&form=BFBBQF&cvid=B43D24A1DAFC42E8B9C5A09CBAE3E636&sp=3&ghc=1

My contacts emphatically agreed with the assessment and reinforced that they would not allow any mitigation within 10,000 feet of the airport."

The supporting studies[30] conclude that the most appropriate solution to this safety issue is to relocate the owls from the project site to a safer site in some other location. That is why a separate Relocation Plan has been prepared specially for this HUB OIA Project, and thus, a generic in-lieu fee is not applicable. The Relocation Plan, which will be overseen by the CDFW, will govern before, during, and after project implementation to assure successful relocation of the owls from the unsafe project site.

No evidence was presented to show the Relocation Plan would result in alleged impacts, such as loss of biodiversity, avoiding inbreeding of dispersed juveniles, and/or cumulative impacts on owl populations. Moreover, the comments fail to acknowledge any benefits that may accrue from relocating owls from the project site, including survival of owls now and in the future.

LETTER 12: SETH THOMPSON

Comment 1 (Email Page 1). The commenter suggests TOP EIR is a "flawed document".

Comments on the adequacy of TOP 2050 EIR are untimely and irrelevant. Objections to that document were required to be raised when the matter was before the City Council. Opponents cannot now use the current project to attack the certified TOP EIR. Moreover, criticism of the City's overall planning efforts are misplaced in the current context of a single project, one which has long been planned and allowed on the project site (i.e., CCCSP and TOP).

Comment 2 (Email Page 1). The commenter states TOP Addendum for the HUB OIA Project relies on an owl mitigation plan that has already failed but does not elaborate on the nature of the failure. The commenter also states…"there is incontrovertible scientific evidence that even the best translocation efforts result in high mortality." However, the commenter does not provide any documentation to support that statement.

The various technical studies[31] on the owls and airport safety clearly demonstrate that the project site (i.e., just east of OIA and under normal landing pattern operations) is absolutely not safe (i.e., harmful) for both airport aircraft and the owls. Owls may not fly high enough to directly cause aircraft accidents as cited by the commenter. However, the presence of owls in this location attracts larger birds of prey into the landing airspace of OIA which does represent a safety hazard both for aircraft damage and potential injury/loss of life for passengers/crew. Without removing the attractor prey species, it is unlikely a raptor management program would be successful over the long-term.

[30] Addendum Appendix B, BUOW Reports (Helix-Kidd 2020), BUOW site surveys (Helix or Wood 2019-2022), BUOW Relocation Plan (ELMT 2022), and Appendix E, Airport Safety Report (Mead & Hunt 1-2022)

[31] Addendum Appendix B, BUOW Reports (Helix-Kidd 2020), BUOW site surveys (Helix or Wood 2019-2022), BUOW Relocation Plan (ELMT 2022), and Appendix E, Airport Safety Report (Mead & Hunt 1-2022)

The U.S. Department of Agriculture (USDA) provides Wildlife Services (WS) through its Animal and Plant Health Inspection Service (APHIS) program for airports to help prevent and resolve wildlife conflicts that threaten public health and safety from concentrated populations of birds and other wildlife at or near airports contribute to wildlife strikes. The Airport Wildlife Hazards Program[32] supports an airport when preparing a Wildlife Hazards Management Plan (WMP) to document an airport's wildlife hazards and how the airport plans to address and manage them. It guides operations, defines roles of airport personnel, and details training to reduce risks. A WMP often involves a variety of methods to resolve wildlife conflicts including the following:

- o Habitat Modification — Altering vegetation and water, creating fences and barriers, and other activities to make the airport unattractive to wildlife.
- o Active Dispersal — Scaring and hazing wildlife away from airport environments.
- o Trapping and Relocation — Capturing and moving animals can be used for some species when legally allowed and feasible (e.g., hawks and owls).
- o Lethal Removal —Lethal removal may be used in some situations for the protection of the flying public and crew. Lethal removal is permitted by the U.S. Fish and Wildlife Service and state wildlife agencies under airport depredation permits.

The OIA strives to meet APHIS requirements for wildlife management to minimize risks and hazards to aircraft and their passengers and crews. On February 21, 2021, Michelle Brantley, the Director of Planning for OIA, stated in an email to Suzanne Thompson with the Audubon Society, that "the biologist's assessment [for the HUB project] concludes the only viable alternative is active relocation of the owls more than 10,000 feet away from the airport. I did discuss the draft report with the FAA. My contacts emphatically agreed with the assessment and reinforced that they would not allow any mitigation within 10,000 feet of the airport."

The supporting studies[22] conclude that the most appropriate solution to this safety issue is to relocate the owls from the project site to a safer site in some other location. That is why a separate Relocation Plan has been prepared specially for this HUB OIA Project, and thus, a generic in-lieu fee is not applicable. The Relocation Plan, which will be overseen by the CDFW, will govern before, during, and after project implementation to assure successful relocation of the owls from the unsafe project site.

No evidence was presented to show the Relocation Plan would result in alleged impacts, such as loss of biodiversity, avoiding inbreeding of dispersed juveniles, and/or cumulative impacts on owl populations. Moreover, the comments fail to acknowledge any benefits that may accrue from relocating owls from the project site, including survival of owls now and in the future.

[32] USDA WS APHIS WMP Website https://www.bing.com/search?q=USDA%20APHIS%20wildlife%20management%20plans%20for%20airports&msbd=%7B%22triggeringMode%22%3A%22Explicit%22%2C%22intent%22%3A%22UserHistory%22%7D&form=BFBBQF&cvid=B43D24A1DAFC42E8B9C5A09CBAE3E636&sp=3&ghc=1

Comment 3 (Email Page 1). The commenter states, without evidentiary support, that owls that…"survive the trauma of translocation represent a loss of distinct biodiversity" and that "loss of the Ontario Airport owls will have damaging effects on Chino Burrowing Owls and cascading negative effects on the few indigenous Burrowing Owls in the Pomona Valley."

The various technical studies[33] on the owls and airport safety clearly demonstrate that the project site (i.e., just east of OIA and under normal landing pattern operations) is absolutely not safe (i.e., harmful) for both airport aircraft and the owls. Owls may not fly high enough to directly cause aircraft accidents as cited by the commenter. However, the presence of owls in this location attracts larger birds of prey into the landing airspace of OIA which does represent a safety hazard both for aircraft damage and potential injury/loss of life for passengers/crew. Without removing the attractor prey species, it is unlikely a raptor management program would be successful over the long-term.

The U.S. Department of Agriculture (USDA) provides Wildlife Services (WS) through its Animal and Plant Health Inspection Service (APHIS) program for airports to help prevent and resolve wildlife conflicts that threaten public health and safety from concentrated populations of birds and other wildlife at or near airports contribute to wildlife strikes. The Airport Wildlife Hazards Program[34] supports an airport when preparing a Wildlife Hazards Management Plan (WMP) to document an airport's wildlife hazards and how the airport plans to address and manage them. It guides operations, defines roles of airport personnel, and details training to reduce risks. A WMP often involves a variety of methods to resolve wildlife conflicts including the following:

- o Habitat Modification — Altering vegetation and water, creating fences and barriers, and other activities to make the airport unattractive to wildlife.
- o Active Dispersal — Scaring and hazing wildlife away from airport environments.
- o Trapping and Relocation — Capturing and moving animals can be used for some species when legally allowed and feasible (e.g., hawks and owls).
- o Lethal Removal —Lethal removal may be used in some situations for the protection of the flying public and crew. Lethal removal is permitted by the U.S. Fish and Wildlife Service and state wildlife agencies under airport depredation permits.

The OIA strives to meet APHIS requirements for wildlife management to minimize risks and hazards to aircraft and their passengers and crews. On February 21, 2021, Michelle Brantley, the Director of Planning for OIA, stated in an email to Suzanne Thompson with the Audubon Society, that "the biologist's assessment [for the HUB project] concludes the only viable alternative is active relocation of the owls more than 10,000 feet away from the airport. I did discuss the draft report with the FAA.

---

[33] Addendum Appendix B, BUOW Reports (Helix-Kidd 2020), BUOW site surveys (Helix or Wood 2019-2022), BUOW Relocation Plan (ELMT 2022), and Appendix E, Airport Safety Report (Mead & Hunt 1-2022)

[34] USDA WS APHIS WMP Website
https://www.bing.com/search?q=USDA%20APHIS%20wildlife%20management%20plans%20for%20airports&msbd=%7B%22triggeringMode%22%3A%22Explicit%22%2C%22intent%22%3A%22UserHistory%22%7D&form=BFBBQF&cvid=B43D24A1DAFC42E8B9C5A09CBAE3E636&sp=3&ghc=1

My contacts emphatically agreed with the assessment and reinforced that they would not allow any mitigation within 10,000 feet of the airport."

The supporting studies[23] conclude that the most appropriate solution to this safety issue is to relocate the owls from the project site to a safer site in some other location. . If the owls were to remain on the project site, raptors will continue to hunt the owls by perching on the large buildings and trees in the surrounding area. There is no indication that relocation of the owls to an appropriate site in the area would result in significant impacts to the biodiversity or genetic pool for owls in the Pomona Valley.

Comment 4 (Email Page 1). The commenter argued there was insufficient time to respond to the project documents over the holidays.

The HUB OIA Project has been in process for some time. The City properly noticed the January 4, 2023 Development Advisory Board hearing per California Government Code Sections 54950-54963 (Ralph M. Brown Act) and the Ontario Municipal Code (OMC) Titles 1 and 2 (General Provisions and Administration). Regarding this noticing, a number of individuals and entities – including this one – were able to provide comments prior to the start of the meeting. Regardless, the HUB OIA Project requires Planning Commission approval and all interested parties will have an opportunity to provide written and/or oral comments at that time.

Letter 12 Summary. These responses, TOP, TOP EIR, the Addendum, and the various supporting technical studies[35] provide substantial evidence that the HUB OIA Project will not have any new or more significant impacts than those identified in TOP EIR, and therefore, the Addendum satisfies the intent and requirements of CEQA.

LETTER 13: NATASHA WALTON, INLAND VALLEY ADVOCATES FOR THE ENVIRONMENT (IVAE)

Comment 1 (Email Page 1). The commenter questioned reliance on TOP EIR but did not acknowledge that an EIR Addendum can be the appropriate CEQA compliance document for a project that is consistent with the General Plan and zoning designations when it can be demonstrated the Pa project will not result in new or more have significant impacts that those that were not already examined in the EIR for which the Addendum is prepared. The Addendum does just that. In this case, the use of an TOP Addendum is appropriate as the HUB OIA Project is consistent with TOP land use designations and City zoning designations, therefore the cumulative potential impacts of the HUB OIA Project have been accounted for in TOP EIR.

[35] Addendum Appendices A through G

For additional information, see separate responses in letters from Allen Matkins regarding comments in the “Coalition Letter” and the “Center for Biological Diversity (CBD) Letter”.

Comment 2 (Email Page 1). The commenter argued the HUB OIA Project did not conduct a proper noise study involving airport noise. However, the commenter failed to note the Addendum clearly evaluated both Project-related and Airport-related noise impacts. Page 71 of the Addendum states…

> TOP EIR found stationary and transportation noise impacts of future development under TOP to be less than significant with implementation of Safety Element Policy S-4.1, Noise Mitigation, which utilizes the City’s Noise Ordinance, building codes, and subdivision and development code regulations to reduce noise from future development projects (SEIR p. 5.13-32).
>
> The project site was previously analyzed by TOP EIR as supporting industrial uses and the project will not expose people to or generate noise levels in excess of the standards established in TOP EIR (Section 5.12). The project site is surrounded on the north, east, and south sides by industrial or commercial/office uses, and to the west by the OIA. The I-10 is just north of the site, the I-15 is just east of the site, and the site is within the OIA’s Safety Zones. The issue of the project’s consistency with the ALUCP is addressed in Section 9, *Hazards and Hazardous Materials* (airport-related hazards) and potential noise impacts are addressed in detail in Section 9.3e. As discussed therein PDF/COA included in the Mead & Hunt airport study (Appendix E) have been incorporated into the project.

Both the Addendum and the Mead & Hunt report on airport safety included analyses of airport noise impacts.

Comment 3 (Email Pages 1-2). The remaining comments were regarding burrowing owl and are similar to those raised in Letters 14 through 44 below.

NOTE: The following 33 letters make essentially the same comments so they are addressed with one response after the list of commenters:

LETTER 14: DAVE MACIAS
LETTER 15: DEENA LIGORRIA
LETTER 16: GLORIA KARIMI
LETTER 17: GUS OCON
LETTER 18: JACOB LIGORRIA
LETTER 19: LAURA JAOUI
LETTER 20: LORI GALLOWAY
LETTER 21: MADELINE ALLINDER
LETTER 22: MARCYN DEL CLEMENTS
LETTER 23: MARIA BENNETT
LETTER 24: MARTINA EBERT
LETTER 25: MYRIAM RODRIGUEZ
LETTER 26: PATRICIA ANIS
LETTER 27: PATRICIA GLEESON
LETTER 28: RACHAEL INNES
LETTER 29: REBECA BYERLEY
LETTER 30-1: ROBERT HOLCOMB
LETTER 30-2: MARIA HOLCOMB
LETTER 31: SCOTT MARNOY
LETTER 32: ALAN DAVIS
LETTER 33: SHEA MILLAN
LETTER 34: SIDNEY SILLIMAN
LETTER 35: ANDY GEORGES
LETTER 36-1: JIMMY CHERTKOW
LETTER 36-2: APRIL CHERTKOW
LETTER 37: PAM NELSON
LETTER 38: CAREN HANSON
LETTER 39: JOEL HUSCHLE

LETTER 41: JEFF STROGEN
LETTER 42: KELLY COYNE
LETTER 43: ERIK KNUTZEN
LETTER 44: SHARI WASSON

Comment 1 (Email Page 1). The commenters argue that owl relocation does not work and the HUB OIA Project site should include an owl preserve.

The HUB OIA Project site is not an appropriate location for an owl preserve. The various technical studies[36] on the owls and airport safety clearly demonstrate that the project site (i.e., just east of OIA and under normal landing pattern operations) is absolutely not safe (i.e., harmful) for both airport aircraft and the owls. Owls may not fly high enough to directly cause aircraft accidents as cited by the commenter. However, the presence of owls in this location attracts larger birds of prey into the landing airspace of OIA which does represent a safety hazard both for aircraft damage and potential injury/loss of life for passengers/crew. Without removing the attractor prey species, it is unlikely a raptor management program would be successful over the long-term.

The U.S. Department of Agriculture (USDA) provides Wildlife Services (WS) through its Animal and Plant Health Inspection Service (APHIS) program for airports to help prevent and resolve wildlife conflicts that threaten public health and safety from concentrated populations of birds and other wildlife at or near airports contribute to wildlife strikes. The Airport Wildlife Hazards Program[37] supports an airport when preparing a Wildlife Hazards Management Plan (WMP) to document an airport's wildlife hazards and how the airport plans to address and manage them. It guides operations, defines roles of airport personnel, and details training to reduce risks. A WMP often involves a variety of methods to resolve wildlife conflicts including the following:

- o Habitat Modification — Altering vegetation and water, creating fences and barriers, and other activities to make the airport unattractive to wildlife.
- o Active Dispersal — Scaring and hazing wildlife away from airport environments.
- o Trapping and Relocation — Capturing and moving animals can be used for some species when legally allowed and feasible (e.g., hawks and owls).
- o Lethal Removal —Lethal removal may be used in some situations for the protection of the flying public and crew. Lethal removal is permitted by the U.S. Fish and Wildlife Service and state wildlife agencies under airport depredation permits.

The OIA strives to meet APHIS requirements for wildlife management to minimize risks and hazards to aircraft and their passengers and crews. On February 21, 2021, Michelle Brantley, the Director of Planning for OIA, stated in an email to Suzanne Thompson with the Audubon Society, that "the biologist's assessment [for the HUB project] concludes the only viable alternative is active relocation of the owls more than 10,000 feet away from the airport. I did discuss the draft report with the FAA.

[37] USDA WS APHIS WMP Website
https://www.bing.com/search?q=USDA%20APHIS%20wildlife%20management%20plans%20for%20airports&msbd=%7B%22triggeringMode%22%3A%22Explicit%22%2C%22intent%22%3A%22UserHistory%22%7D&form=BFBBQF&cvid=B43D24A1DAFC42E8B9C5A09CBAE3E636&sp=3&ghc=1

My contacts emphatically agreed with the assessment and reinforced that they would not allow any mitigation within 10,000 feet of the airport."

The supporting studies[25] conclude that the most appropriate solution to this safety issue is to relocate the owls from the project site to a safer site in some other location. That is why a separate Relocation Plan has been prepared specially for this HUB OIA Project, and thus, a generic in-lieu fee is not applicable. The Relocation Plan, which will be overseen by the CDFW, will govern before, during, and after project implementation to assure successful relocation of the owls from the unsafe project site.

No evidence was presented to show the Relocation Plan would result in alleged impacts, such as loss of biodiversity, avoiding inbreeding of dispersed juveniles, and/or cumulative impacts on owl populations. Moreover, the comments fail to acknowledge any benefits that may accrue from relocating owls from the project site, including survival of owls now and in the future.

I have reviewed the three email DAB letters dated 1-4-23 you sent me today. Although we did not receive these with the other 44 email letters, they make the same comments as most of the other email letters we did respond to in our memo dated 1-18-23. They all present arguments regarding burrowing owl that were raised by many other commenters as addressed in our memo. You should consider these three emails added to the "group" of 31 responses presented at the end of our memo (Responses 14-44). If necessary, you can number them Letters 45-47 as attached and provide this email as part of the Administrative Record to the Planning Commission. Thank you...

Exhibit J: ELMT CONSULTING RESPONSE TO COMMENTS

(Exhibit follows this page)

January 18, 2023

SUBJECT: Response to Comments – Group Letter dated January 4, 2023, challenging the HUB at Ontario International Airport.

1. The Ontario Plan mitigation that started around 2007 has been collecting fees from developers to mitigate the loss of large sections of habitat. The City has been working with the Inland Empire Resources Conservation District (IERCD) and Dan Silver to allocate the collected funds towards preserving lands around the Prado Basin.

2. The Ontario HUB is one of the last remaining sites undeveloped in this region. There is currently an insufficient quantity of owls to maintain a healthy population capable of persisting overtime. Single large mitigation sites can be subject to stochastic events (fire, disease, vandalism, predators, feral cats/dogs, etc.) that can lead to the loss of remnant populations. Several mitigation sites that are connected through greenbelts or areas allowing safe travel is necessary for dispersal between mitigation sites.

   Regarding the Hub property, the owls will not persist here forever even if the site was preserved and undeveloped. There are many reasons which demonstrate that owls will not persist in the subject site in perpetuity, despite if a monitoring and management program was established. Preservation of this subject site will not adequately support a population of owls.

   The owl populations at the Seal Beach naval weapons station and the Orange County fairgrounds and many other similar locations all met the same fate. They were surrounded by urbanization and development and after several years the populations were extirpated. Development brings increased risk of mortality (predators, vehicle strikes, loss of foraging habitats, vandalism, etc.). Eventually these island patches of fragmented habitats supporting owls will blink out. They won't support owls in perpetuity as supported by these similar situations at the OC fair grounds and Seal Beach (and many other locations). The ability to safely disperse away from and into these island patches are critical for a regional population but as this area loses more habitat and dispersal becomes more difficult (increases risk of mortality), then it's more likely owls will be extirpated. Preservation of portion of the property would not result in long term owl occupation either.

3. Prior to the 1980's southwestern San Bernardino supported a robust breeding BUOW population with hundreds of pairs from the base of the San Bernardino Mountains south to the Prado Basin. After decades of development pressure and the complete absence of meaningful mitigation, only a few remaining breeding pairs and winter migrants are known to persist. The remaining highly fragmented landscape which lacks suitable, large, protected sites with connectivity to and between extant breeding sites creates a bottleneck and prevents the existence of a healthy source population.

With the continued development pressure and lack of adequate mitigation required by the resource agencies, the BUOW population in this region is tenuous at best and will likely never recover from what was once a robust breeding source population (Kidd et al. 2003, 2007).

A current review of BUOWs previously reported near the Ontario Airport includes 45 records from 1989-2017. These 45 records are located within seven nearby 7.5min USGS quads (Ontario, Prado, Corona North, Fontana, Cucamonga Peak and Mt. Blady) and Guasti quad where the airport is located (CNDDB 2020). The nearest owl locations reported south of the airport were evicted approximately ten years ago during development of industrial warehouses. Mitigation included the installation of artificial burrows in a barrow pit on the west side of the nearby retired landfill and the owls were evicted from their burrows prior to grading. Owls are no longer known to occupy this site south of the airport. The existence of two (2) breeding owl pairs, currently surveyed by the 2022 Helix report, which are located at the subject OIAA property along the east side of Haven Avenue are included in the list of 45 owl records. Several reported owls north of Interstate 10 that are located west and north of Ontario Mills Mall are some of the only possible extant owls near the airport. All of these owls are surrounded by development and located on small, highly fragmented sites that will not provide long-term conservation value for the owl due to future development and predation pressure to name a few.

Further, the sites chosen for relocation are preserved sites and will be connected to large open areas that support existing burrowing owl populations, that are already in conserved areas, allowing increased survivability and genetic diversity to avoid inbreeding.

4. The Conclusions and Management Implications section of the study "Release Strategies and Ecological Factors Influence Mitigation Translocation Outcomes for Burrowing Owls: A Comparative Evaluation" (S.M. Hennessey, et. al.) states the following:

> "Even if there is a survival penalty associated with translocation, it is important for managers and regulatory agencies to consider that translocation may achieve conservation goals better than displacement. The long-term value of translocation exceeds that of displacement when there are plausible projections of increasing future threats on the unprotected landscape around displacement sites. As the pace of development continues without any apparent de-escalation, wildlife such as BUOW experience 'serial eviction' as one habitat patch after another is lost to infrastructure expansion. Under these circumstances, it may be wise to consider translocation to protected areas that can manage these threats, conduct restoration activities to enhance habitat suitability, and include extra management support following release."

Except for the undeveloped interstitial areas associated with the Ontario International Airport runway to the west of the project site, the project site is almost entirely surrounded by existing development (industrial buildings) to the north, east and south. In accordance with the 2012 CDFW Staff Report on Burrowing Owls, BUOW burrow exclusion and closure is employed only where there are adjacent natural burrows and non-impacted sufficient habitat for BUOW to occupy with permanent protection mechanism in place. Since the project site is surrounded by development on

three of its boundaries, BUOW burrow exclusion and closure would likely result in BUOW moving from The HUB @ ONT project site to the Ontario International Airport runway, which would put the BUOW at risk of creating additional bird strike hazards with aircraft.

The presence of BUOWs at ONT is one wildlife hazard that the OIAA is required to abate under federal regulations (14 Code of Federal Regulations §139.337). These regulations require the OIAA, as part of ONT's certification with FAA, to "alleviate or eliminate wildlife hazards to air carrier operations." The ONT WHMP identifies BUOW as a wildlife hazard to airport operations that must be addressed, along with other hazards, under the WHMP.

While the subject site is zoned for industrial uses, the change of use incorporating the creation of a burrowing owl preserve site on airport property east of Haven Street would directly conflict with FAA regulations and guidance associated with the safety of aircraft operations and the use airport property. The following regulations and FAA guidance would apply to the proposed establishment of burrowing owl preserve on airport property:

- Title 14 of the Code of Federal Regulations, Part 139.339, *Wildlife Hazard Management*
- FAA Advisory Circular 150/5200-33, *Wildlife Hazard Attractants on and Near Airports*
- FAA Grant Assurances
- CertAlert 06-07, Requests by State Wildlife Agencies to Facilitate and Encourage Habitat for State-Listed Threatened and Endangered Species and Species of Special Concern on Airports Each item and its applicability to the proposed preserve is discussed in the following paragraphs.

Numerous avian bird strikes have been reported on the Ontario International Airport, including various strikes from BUOW. Due to the Federal Aviation Administration (FAA) regulations for avian bird strikes, flight safety, and USDA depredation permits in situ, onsite conservation of this subject site is not feasible. Translocation is needed for the long-term survival of the BUOWs on The HUB @ ONT project site.

USDA (Animal Plant Health Inspection Service; APHIS) is hired by OIAA to reduce strike hazards caused by various wildlife species. Per FAA rules and regulations, OIAA can't engage in restoration, mitigation or any actions that increase wildlife hazards within zones at and around an FAA certified airport. Any airport can lose their FAA certificate and funding if they are found to be out of compliance with this rule. Any mitigation efforts within 10,000 feet of the airport (the project site is located well within 10,000 feet of the airport) would be considered out of compliance and would likely result in wasted efforts as APHIS has the authority to haze, evict or lethally remove any hazardous wildlife.

Installing artificial burrows and/or encouraging owls to inhabit lands on or directly adjacent to the OIAA property violates FAA rules and is not a viable strategy because of the expected increased presence of other larger hazardous birds (e.g. red-tailed hawks, golden eagles, ferruginous hawks, red-shouldered hawks, Cooper's hawks, turkey vultures, and common ravens) who would attempt to predate or scavenge owls, squirrels or rabbits that would likely use the artificial burrows. Hawks

and vultures are those struck by aircraft at the highest rates and those known to cause the most damage per strike. These species are often involved in aircraft strikes while they are hover hunting or circling over the approach or departure ends of the airport within the glide slopes. Bird strikes in these situations (landing and take-off) are the most dangerous and can lead to catastrophic events that can kill hundreds of passengers and crew on jetliners.

Evicting the owls along Haven Avenue outside the airfield could result in owls moving to areas within the airfield, making a more hazardous situation. Owls are often found seeking refuge very close to taxiways and runways under lights, signs and other man-made structures that support refuge and areas for squirrels to create burrows. Many burrowing owls that are struck at airports are those crossing runways as aircraft are departing and arriving. This will generally not lead to a catastrophic accident however even small birds like burrowing owls are capable of causing tens of thousands of dollars in damage to aircraft per event.

Further, relocating or encouraging owls to reside on a commercial airfield would violate FAA rules, will result in APHIS having to remove the owls in the future, and creates potential liability for the resource agencies or biologists promoting the in-situ conservation of owls at or near an airport.

In summary, the act of attempting to conduct any form of "mitigation" including in situ or eviction on or directly adjacent to the airfield is not supported by the FAA, APHIS, or past direction from CDFW Headquarters. The best approach for owl mitigation at and adjacent to OIAA property should involve active relocation. This will better ensure for safe flight operations and compliance with FAA regulations while also attempting to provide the owls with a greater chance of survival and future breeding attempts.

Sincerely,

Travis McGill, ELMT Consulting

RE: Ontario International Airport Authority's Information About Burrowing Owls at Ontario International Airport; City of Ontario Development Plan PDEV21-047.

Dear Mr. Zeledon:

The Ontario International Airport Authority (OIAA) submits this letter regarding proposed development plan PDEV21-047 on about 198 acres of real property owned by the OIAA east of Haven Avenue. We are informed that some have suggested that burrowing owls (BUOW) should be preserved on the property. But, as explained below, the presence of BUOWs at Ontario International Airport (ONT) continues to present a safety threat to the traveling public and to aircraft operations. Their presence at the Airport is also inconsistent with Federal Aviation Administration (FAA) regulations and a mandated Wildlife Hazard Management Plan (WHMP) for ONT.

In June 2022 the OIAA wrote to the Pomona Valley Audubon Society explaining that the group's proposed BUOW preserve concept for the 198 acres of OIAA property east of Haven Avenue, or anywhere else at ONT, was not feasible due to substantial safety concerns. A copy of that letter is attached. The OIAA's position about the safety threat posed by BUOWs at ONT stated in that letter remains the same today.

In addition, the presence of BUOWs at ONT is one wildlife hazard that the OIAA is required to abate under federal regulations. (14 Code of Federal Regulations § 139.337.) Those regulations require the OIAA, as part of ONT's certification with the FAA, to "alleviate or eliminate wildlife hazards to air carrier operations." The OIAA has prepared, and the FAA has approved, a required WHMP for ONT to comply with federal regulations.

The ONT WHMP specifically identifies the BUOW as a wildlife hazard to Airport operations that must be addressed, along with other hazards, under the Plan. Contents and requirements of the WHMP include:

- Identification of birds as the "greatest threat to aviation at ONT" and a determination that "birds are generally considered the most hazardous form of wildlife at ONT."

- An obligation by OIAA to "actively reduce attractive wildlife habitat" at ONT, and to reduce wildlife that attracts predators. (Red tail hawks, another wildlife hazard identified in the WHMP, are predators of BOUWs.)

- Prioritization of wildlife population management and habitat modifications efforts at ONT.

- Use of OIAA resources and trained personnel to implement the many wildlife hazard abatement procedures listed in the WHMP.

- Coordination by a Wildlife Hazard Working Group, made up of staff from the FAA, U.S. Department of Agriculture Wildlife Services, Air Traffic Control Tower, and OIAA, to implement a range of wildlife control procedures and projects at ONT.

Consequently, based on express federal regulations, and the requirements of the FAA-mandated and approved WHMP, suggestions about using the 198 acres of real property owned by the OIAA east of Haven Avenue as a BUOW preserve are not feasible and must be rejected.

Please contact me if you have any questions about this letter.

Sincerely,

Atif Elkadi
Chief Executive Officer

COPY

Ms. Thompson,

Thank you for your proposal for a burrowing owl (BUOW) preserve at the Ontario International Airport ("ONT") on the "boot" property east of Haven Avenue.

In December 2021, Ontario International Airport Authority ("OIAA") Board deemed this land as surplus development airport land. The development of this land would allow the OIAA to obtain vital revenue sources to expand and grow ONT for the public benefit of the region, and to enhance the financial sustainability of ONT consistent with Federal Aviation Administration (FAA) policies and requirements.

Also in December 2021, the OIAA entered into a binding development entitlement agreement, which requires CanAm Ontario, LLC (Developer) to pursue and obtain all required zoning and California Environmental Quality Act (CEQA) reviews and approvals from the City of Ontario for a potential industrial development on the entire "boot" property. Subject to terms and conditions of the development agreement being satisfied and contingent on the results of the CEQA and zoning reviews for the land, the OIAA is contractually obligated to enter into a future 55-year commitment to ground lease securing the entire property for industrial development. Under proposed development plans, no part of this property is set aside for habitat preservation.

For decades the land has been zoned industrial under the California Commerce Center Specific Plan and has been covered by the California Environmental Quality Act (CEQA) approved Ontario Plan EIR. The Ontario Plan EIR fully analyzed biological impacts and requires habitat mitigation for the potential development of the land. CEQA permits active relocation of the owls to viable sites, subject to approval from United States Fish & Wildlife Services (USFW) and the California Department of Fish & Wildlife (CDFW). Per requirements, the Developer

is conducting seasonal focused owl protocol studies that will be completed in July 2022 and has identified existing nearby established conservation sites which will provide a superior life for these owls, subject to the City's concurrence under the pending CEQA review process. Occupancy of owls at or near the airport is not a viable location for any sustainable success of the owls. Such occupancy would be inconsistent with the FAA-approved Wildlife Hazard Management Plan for ONT, which is required by federal regulations. The owls are living in a flight path, pose a threat to aircraft operations, and are being threatened by urbanization, public harassment, and predators such as the red-tailed hawk.

The burrowing owl population at ONT continues to struggle, and since 2008 there have been sixteen (16) identified and reported bird strikes at ONT involving burrowing owls. Both the FAA and the OIAA have gone on record stating bird strikes present a continued danger to the public safety of commercial aircraft flights. The OIAA therefore does not support any enhancement of bird population on airport property.

This is first and foremost a safety issue, both for commercial flights and passengers, but also for the owls and red-tail hawks that prey upon them. Not only does the presence of birds near an airport pose a serious safety risk, but the owls are also becoming human-adapted due to their proximity to humans and development. We know this relocation would be better from a public safety perspective. In addition, the OIAA understands that expert burrowing owl biologists maintain that when relocated to a suitable conservation site, the owl population will have a higher probability of success.

As a result, and for the reasons we have outlined above, the OIAA is unable to execute this proposed concept and cannot support your proposal for a BUOW preserve within the ONT flight path and the California Commerce Center Specific Plan, and specifically within the proposed development site. We look forward to continuing a dialogue with the Pomona Audubon Society as it relates any approved BUOW relocation plans.

Sincerely,

Atif Elkadi
CEO, Ontario International Airport Authority

RESOLUTION NO. PC23-007

A RESOLUTION OF THE PLANNING COMMISSION OF THE CITY OF ONTARIO APPROVING AN ADDENDUM TO THE ONTARIO PLAN 2050 SUPPLEMENTAL ENVIRONMENTAL IMPACT REPORT, PURSUANT TO THE REQUIREMENTS OF THE CALIFORNIA ENVIRONMENTAL QUALITY ACT, AS AMENDED, FOR FILE NO PDEV21-047.

WHEREAS, MCDONALD PROPERTY GROUP (hereinafter referred to as "Applicant") has filed an Application for the approval of a Development Plan, File No. PDEV21-047, which consists of nine industrial buildings totaling 4,263,454 square feet and associated improvements on 216.39 gross acres (196.83 net acres) of land generally located east of Haven Avenue, west of Doubleday and Dupont Avenues, north of Jurupa Street and south of Airport Drive, in the City of Ontario, California (hereinafter referred to as "Application" or "Project"); and

WHEREAS, The Ontario Plan 2050 Supplemental Environmental Impact Report (State Clearinghouse No. 2021070364) was certified on August 16, 2022, (hereinafter referred to as "Certified EIR"), in which development and use of the Project site was discussed; and

WHEREAS, the Planning Director of the City of Ontario has prepared and approved for attachment to the certified Environmental Impact Report, an Addendum to the Certified EIR (hereinafter referred to as "EIR Addendum") in accordance with the requirements of the California Environmental Quality Act of 1970, together with State and local guidelines implementing said Act, all as amended to date (collectively referred to as "CEQA"); and

WHEREAS, the EIR Addendum concluded that implementation of the Project could result in a number of significant effects on the environment that were previously analyzed in the Certified EIR, and that the Certified EIR identified mitigation measures that would reduce each of those significant effects to a less-than-significant level; and

WHEREAS, pursuant to State CEQA Guidelines Section 15164(a), a lead agency shall prepare an addendum to a previously certified EIR if some changes or additions are necessary to a project, but the preparation of a subsequent or supplemental EIR is not required; and

WHEREAS, the City determined that none of the conditions requiring preparation of a subsequent or supplemental EIR would occur from the Project, and that preparation of an Addendum to the Certified EIR was appropriate; and

WHEREAS, the City of Ontario is the lead agency on the Project, and the Planning Commission is the decision-making authority for the requested approval to construct and otherwise undertake the Project; and

WHEREAS, public comments were received regarding opposition of the Project due to concerns about the Project's impact on Burrowing Owls and air quality; and

WHEREAS, the Applicant has provided responses to each comment; and

WHEREAS, the Planning Commission has reviewed and considered the EIR Addendum for the Project, the public comments received, and the Applicant's responses, has concluded that none of the conditions requiring preparation of a subsequent of supplemental EIR have occurred, and intends to take actions on the Project in compliance with CEQA and state and local guidelines implementing CEQA; and

WHEREAS, the EIR Addendum for the Project are on file in the Planning Department, located at 303 East B Street, Ontario, CA 91764, are available for inspection by any interested person at that location and are, by this reference, incorporated into this Resolution as if fully set forth herein; and

WHEREAS, all legal prerequisites to the adoption of this Resolution have occurred.

NOW, THEREFORE, IT IS HEREBY FOUND, DETERMINED, AND RESOLVED by the Planning Commission of the City of Ontario, as follows:

SECTION 1: ***Environmental Determination and Findings.*** As the decision-making authority for the Project, the Planning Commission has reviewed and considered the information contained in the administrative record for the Project. Based upon the facts and information contained in the administrative record, including all written and oral evidence presented to the Planning Commission, the Planning Commission finds as follows:

(1) The environmental impacts of this project were reviewed in conjunction with an Addendum to The Ontario Plan 2050 Supplemental Environmental Impact Report (State Clearinghouse No. 2021070364), certified by the Ontario City Council on August 16, 2022, in conjunction with File No. PGPA20-002; and

(2) The EIR Addendum and administrative record have been completed in compliance with CEQA, the State CEQA Guidelines, and the City of Ontario Local CEQA Guidelines; and

(3) The City's "Guidelines for the Implementation of the California Environmental Quality Act (CEQA)" provide for the use of a single environmental

assessment in situations where the impacts of subsequent projects are adequately analyzed. This Application introduces no new significant environmental impacts; and

(4) All previously adopted mitigation measures shall be a condition of project approval, as they are applicable to the Project, and are incorporated herein by this reference; and

(5) The EIR Addendum contains a complete and accurate reporting of the environmental impacts associated with the Project, and reflects the independent judgment of the Planning Commission; and

(6) There is no substantial evidence in the administrative record supporting a fair argument that the project may result in significant environmental impacts.

SECTION 2: ***Additional Environmental Review Not Required.*** Based on the Addendum, all related information presented to the Planning Commission, and the specific findings set forth in Section 1, above, the Planning Commission finds that the preparation of a subsequent or supplemental Environmental Impact Report is not required for the Project, as the Project:

(1) Does not constitute substantial changes to the Certified EIR that will require major revisions to the Certified EIR due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects; and

(2) Does not constitute substantial changes with respect to the circumstances under which the Certified EIR was prepared, that will require major revisions to the Certified EIR due to the involvement of new significant environmental effects or a substantial increase in the severity of the previously identified significant effects; and

(3) Does not contain new information of substantial importance that was not known and could not have been known with the exercise of reasonable diligence at the time the Certified EIR was certified/adopted, that shows any of the following:

(a) The project will have one or more significant effects not discussed in the Certified EIR; or

(b) Significant effects previously examined will be substantially more severe than shown in the Certified EIR; or

(c) Mitigation measures or alternatives previously found not to be feasible would in fact be feasible and would substantially reduce one or more significant effects of the Project, but the City declined to adopt such measures; or

(d) Mitigation measures or alternatives considerably different from those analyzed in the Certified EIR would substantially reduce one or more significant effects on the environment, but which the City declined to adopt.

SECTION 3: ***Planning Commission Action.*** Based upon the findings and conclusions set forth in Sections 1 and 2, above, the Planning Commission hereby finds that based upon the entire record of proceedings before it, and all information received, that there is no substantial evidence that the Project will constitute substantial changes to the Certified EIR, and does hereby approve the EIR Addendum, attached hereto as "Attachment A," and incorporated herein by this reference.

SECTION 4: ***Indemnification.*** The Applicant shall agree to defend, indemnify and hold harmless, the City of Ontario or its agents, officers, and employees from any claim, action or proceeding against the City of Ontario or its agents, officers or employees to attack, set aside, void, or annul this approval. The City of Ontario shall promptly notify the applicant of any such claim, action, or proceeding, and the City of Ontario shall cooperate fully in the defense.

SECTION 5: ***Custodian of Records.*** The documents and materials that constitute the record of proceedings on which these findings have been based are located at the City of Ontario City Hall, 303 East "B" Street, Ontario, California 91764. The custodian for these records is the City Clerk of the City of Ontario.

SECTION 6: ***Certification to Adoption.*** The Secretary shall certify to the adoption of the Resolution.

- - - - - - - - - - - - - -

The Secretary Pro Tempore for the Planning Commission of the City of Ontario shall certify as to the adoption of this Resolution.

I hereby certify that the foregoing Resolution was duly and regularly introduced, passed and adopted by the Planning Commission of the City of Ontario at a regular meeting thereof held on the 24th day of January 2023, and the foregoing is a full, true and correct copy of said Resolution, and has not been amended or repealed.

Nancy DeDiemar
Planning Commission Chairperson

ATTEST:

Rudy Zeledon
Planning Director and
Secretary to the Planning Commission

STATE OF CALIFORNIA)
COUNTY OF SAN BERNARDINO)
CITY OF ONTARIO)

I, Gwen Berendsen, Secretary Pro Tempore of the Planning Commission of the City of Ontario, DO HEREBY CERTIFY that foregoing Resolution No. PC23-007, was duly passed and adopted by the Planning Commission of the City of Ontario at their regular meeting held on January 24, 2023, by the following roll call vote, to wit:

AYES: Dean, DeDiemar, Lampkin, Ricci

NOES: None

ABSENT: Anderson, Gage

ABSTAIN: None

Gwen Berendsen
Secretary Pro Tempore

California Environmental Quality Act

Addendum to The Ontario Plan Environmental Impact Report

Project Title/File No.: PDEV21-047 — The HUB at Ontario International Airport

Lead Agency: City of Ontario, 303 East "B" Street, Ontario, California 91764, (909) 395-2036

Contact Person: Edmelynne Hutter, Senior Planner, (909) 395-2429

Project Sponsor: McDonald Property Group

Project Location: The project site is located in southwestern San Bernardino County, within the City of Ontario (City) as shown in **Figure 1** below. The City of Ontario is located approximately 40 miles from downtown Los Angeles, 20 miles from downtown San Bernardino, and 30 miles from Orange County. As illustrated in **Figure 2** below, the project site is irregularly shaped and located east of Haven Avenue, north of Jurupa Street, south of Airport Drive, and west of Double Day Avenue and Dupont Avenues within the California Commerce Center at Ontario Specific Plan (CCC SP or Specific Plan). The project is located on 24 parcels encompassing 196.9 acres just east of the Ontario International Airport (OIA). This acreage does not include the City water well easements. The project site includes Assessors' Parcel Numbers 0211-222-47 and -048; 0211-222-52 thru -57; 0211-232-04 thru -07; 0211-232-011 thru -20; and 0211-232-44 thru -046. All full rights-of-way for public streets that are required for this project have been dedicated and granted to the City.

Figure 1: REGIONAL LOCATION MAP

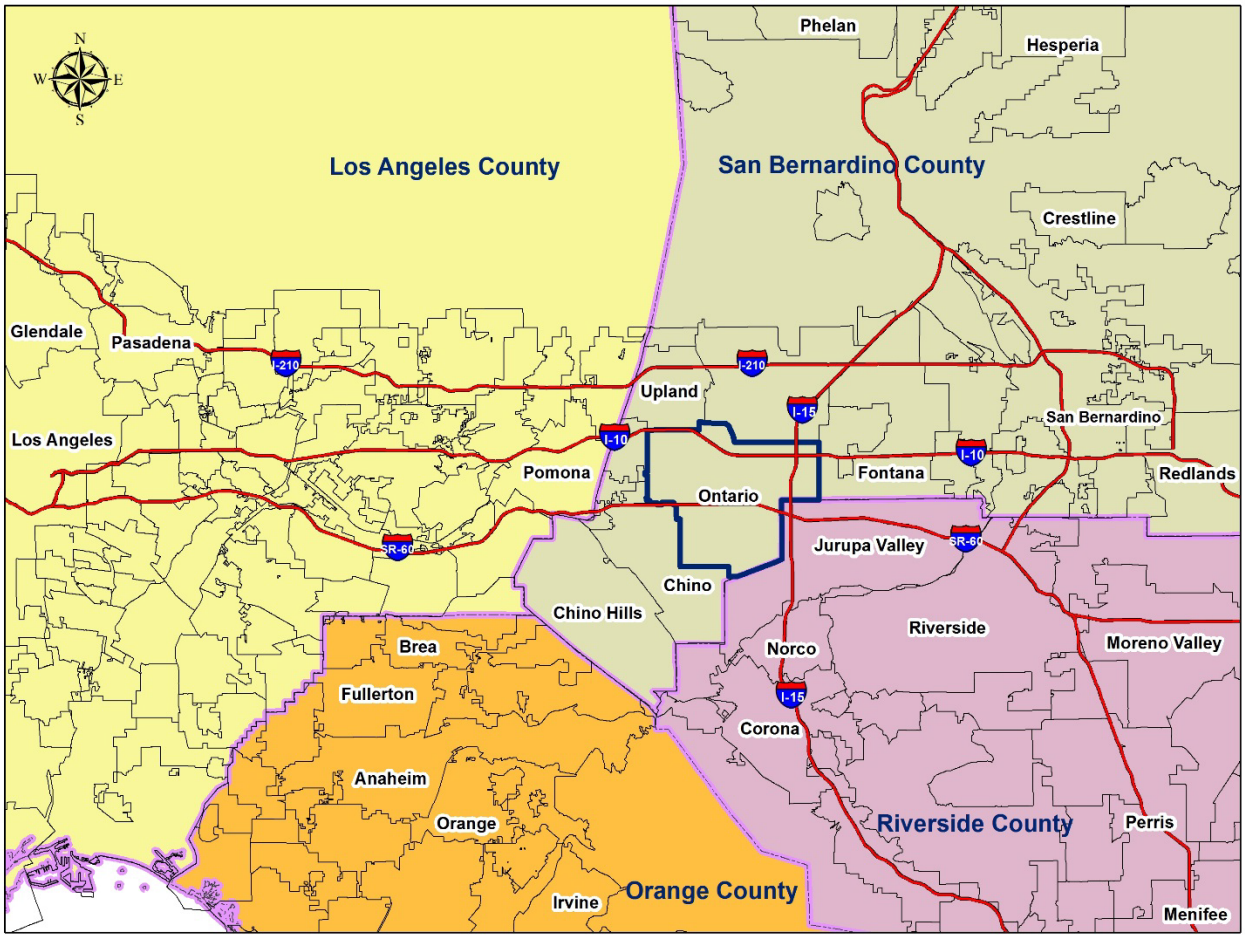

Figure 2: VICINITY MAP

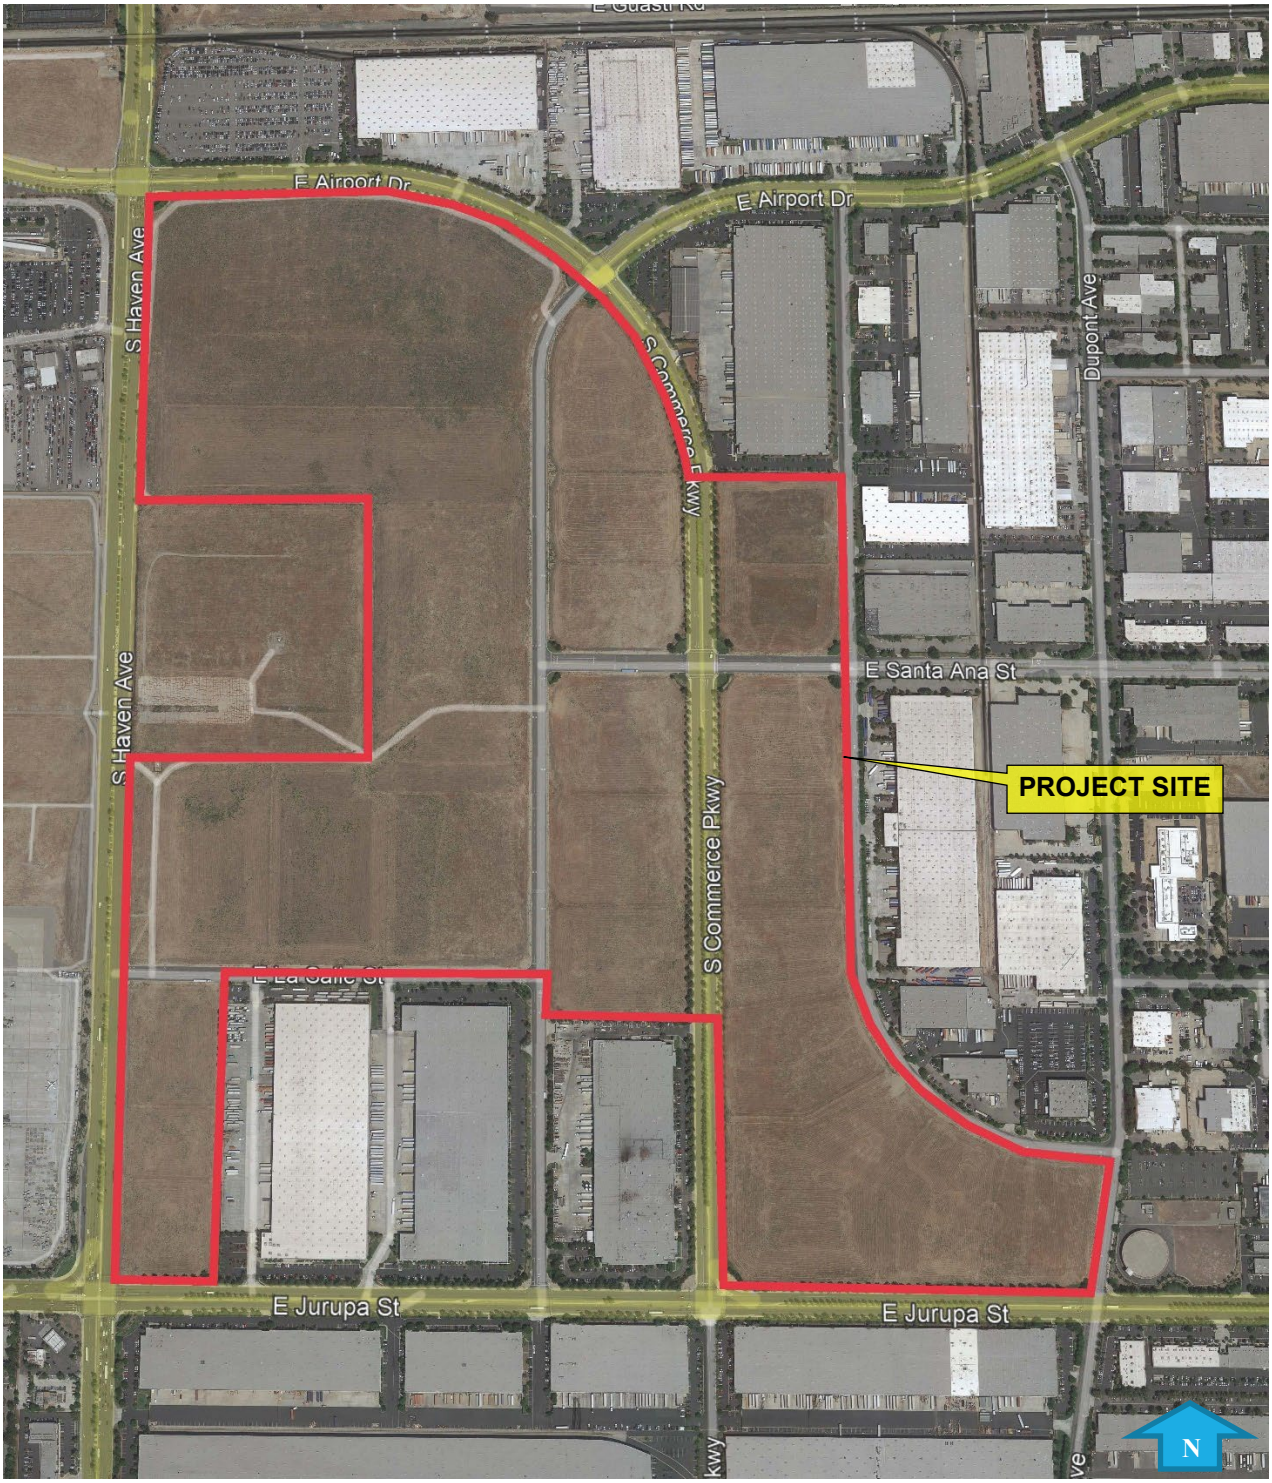

Figure 3: SITE PLAN

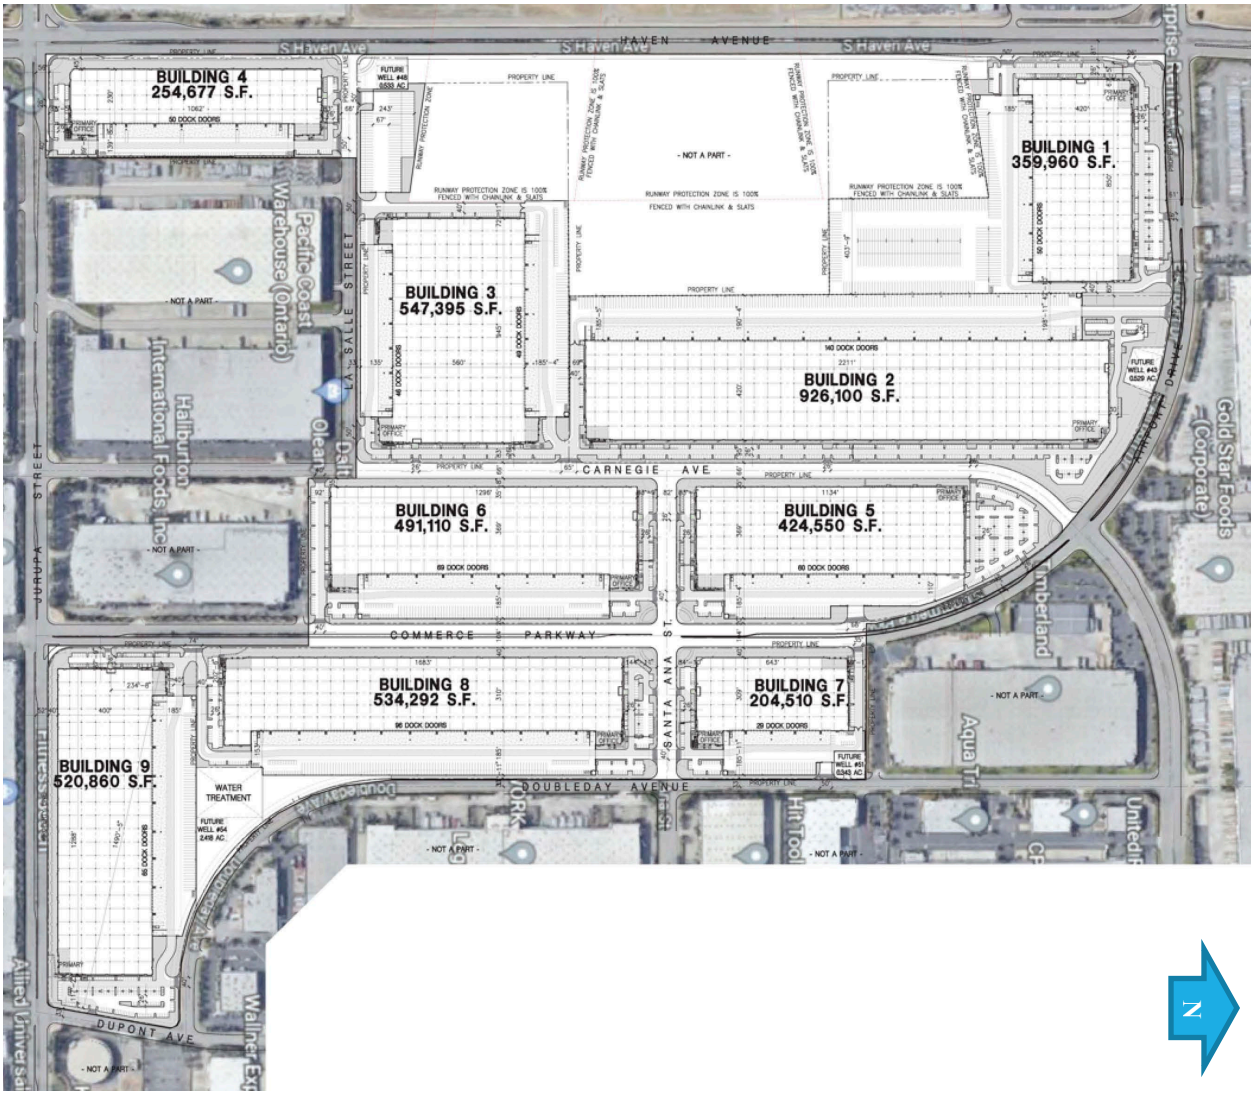

General Plan Designation: Existing – Industrial (0.55 FAR)
Proposed – Industrial (0.55 FAR)

Zoning: Existing – California Commerce Center Specific Plan (2591-SP) - Light Industrial
Proposed – California Commerce Center Specific Plan (2591-SP) - Light Industrial

Description of Project: The project proposes to construct nine (9) industrial warehouse buildings in one phase with a total of 4.28 million square feet of building area as shown in **Figure** 3 and consistent with the California Commerce Center Specific Plan (CCCSP). Table 1 shows the building characteristics of the proposed project. The most current Figure LU-01 of The Ontario Plan (TOP) 2050, which is the Land Use Plan of the City's current General Plan (2022), indicates that industrial uses have a maximum Floor Area Ratio (FAR) of 0.55 so the 196.9-acre site would be allowed up to 4,717,330 square feet of industrial uses such as warehousing under TOP. TOP Industrial land use category allows a "variety of light industrial uses, including warehousing/distribution". The project proposes 9.2% less square footage than the maximum allowed under TOP (i.e., project is 90.8% of TOP` maximum). It should be noted the most current version of TOP and its environmental impact report (EIR) are dated August 16, 2022 (State Clearinghouse No. 2021070364).

On August 21, 2018, the City Council amended the CCCSP designations and rezoned the following eight (8) parcels 0211-222-55, 0211-232-45, 0211-232-46, 0211-232-16, 0211-232-17, 0211-232-18, 0211-232-19, and 0211-232-20 on the project site from Commercial and Office to Light Industrial. **Table 1** shows the land uses of the proposed project. At that time the Council also determined the proposed changes were within and consistent with the analysis of TOP EIR certified on January 27, 2010, as the appropriate CEQA compliance for that action.

Table 1: Proposed Project Land Uses

	Site Area		Building Area (Sq. Ft)				Landscaping	
Building[1]	Acres	Sq. Ft.	Office	Warehouse	Total	%	Sq. Ft.	%
1	23.59	1,027,744	10,000	349,960	359,960	35.0	78,119	7.6

Source: Development Plan Application, McDonald Property Group December 2022
[1] see **Figure 3** a proposed site plan.

A detailed airport safety assessment was prepared for the project by Mead & Hunt in January 2022 with some of the tabular data updated in December 2022 (M&H 2022, Appendix E). Just west of the project site is a "clear zone," designated for the OIA, which is part of its aircraft landing approach zones for Runways 26R and 26L (Aircraft Safety Zone 2). As shown in **Figure 4**, the project site spans the following Safety Zones: Safety Zone 1, Runway Protection Zone (RPZ); Safety Zone 2, Inner Approach/Departure Zone; and Safety Zone 3, Inner Turning Zone. Although 14.56 acres of the Project site fall within Safety Zone 1, which encompasses the RPZs for Runways 26L and 26R, the proposed site plan (see Figure 3) keeps this zone clear of future structures and parking lots. As such, no compatibility conflicts exist in Safety Zone 1, which is the most restrictive of all the safety zones.

For Safety Zones 2 and 3, the individual proposed building sites are subject to the Airport Land Use Compatibility Plan (ALUCP) usage intensity (people per acre) limits for each zone. In accordance with ALUCP Policy S2, any site that is split by safety zone boundaries is treated as if it were multiple parcels divided at the safety zone boundary. This analysis is based on the most recently approved ALUCP (2018).

Figure 4: ONTARIO AIRPORT SAFETY ZONES

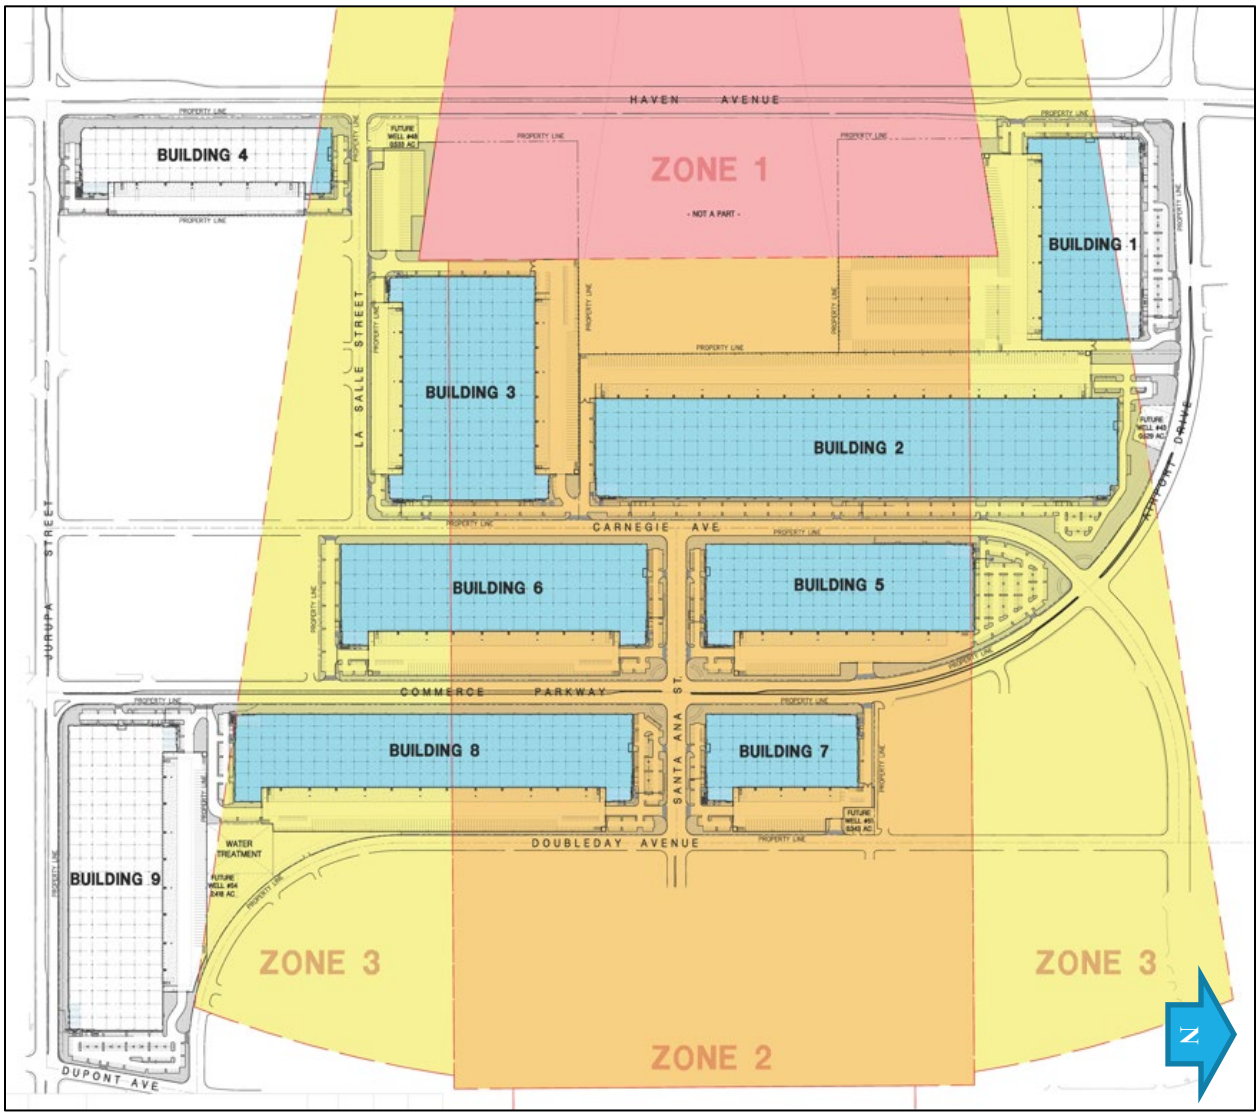

Table 2, Maximum Allowable Occupancy, presents the maximum allowable occupancy (number of people) permitted for each building site based on the ALUCP average intensity limits for Safety Zones 2 and 3. The maximum allowable occupancy is the primary criterion by which to evaluate the compatibility of each lessee's proposed specific use or combination of uses within each building. It should be noted that each building site includes the building itself plus adjacent parking and landscaping areas.

Table 2: Maximum Allowable Occupancy

Building[1] Site/Parcel	Safety Zone 2			Safety Zone 3			Building Site/Parcel Allowable Occupancy[3]
	Intensity Limit[2]	Site (acres)	Allowable Occupancy[3]	Intensity Limit[2]	Site (acres)	Allowable Occupancy[3]	
1	60	5.09	305	100	12.58	1,258	1,563
2	60	26.79	1,607	100	12.87	1,287	2,894
3	60	13.83	830	100	11.54	1,154	1,984
4	60	--	--	100	1.50	150	150

Building[1] Site/Parcel	Safety Zone 2			Safety Zone 3			Building Site/Parcel Allowable Occupancy[3]
	Intensity Limit[2]	Site (acres)	Allowable Occupancy[3]	Intensity Limit[2]	Site (acres)	Allowable Occupancy[3]	
5	60	16.35	981	100	3.12	312	1,293
6	60	12.77	766	100	7.81	781	1,547
7	60	9.71	583	100	--	--	583
8	60	11.46	688	100	11.53	1,153	1,841
9	NA	NA	NA	100	0.09	9	9
TOTAL (1-8)	**60**	**96.0**	**5,760**	**100**	**61.04**	**6,104**	**11,864**

Source: Exhibit 8, M&H 2022 Note: Totals rounded to nearest whole number NA = Not Applicable (see footnote 1)

[1] Portions of Buildings 3, 5-7 are also outside of the Safety Zones, and only the portions inside the Safety Zones are subject to building occupancy limits as shown above. Buildings 4 and 9 are not in Safety Zone 2 so no total building occupancy limits apply.
[2] Intensity limit = people per acre
[3] Allowable occupancy = maximum number of people on each building site

The Land Use Element of TOP 2050 states that all new developments surrounding ONT should be consistent with the adopted ALUCP and should meet standards and recommendations of Part 77 of the FAA, adopted through Ordinance 2758 in the Ontario Municipal Code. A consistency determination analysis for the ONT was prepared by the City and submitted to ONT-IAC and found that TOP 2050 is consistent with ALUCP for ONT (ONT–IAC 2022). Therefore, similar to the proposed project, TOP 2050 is consistent with the ALUCP for ONT because the general land use designations within the airport influence area are the same.

The City controls the ultimate determination of compliance with the ALUCP usage criteria, and those determinations will occur when a potential tenant(s) is identified for each building and a specific land use is proposed. The types of uses allowed with the proposed project include a mix of light industrial or warehouse uses with ancillary office space. According to data in the M&H Report, a high-intensity light industrial use (e.g., food products preparation) is likely to exceed the maximum allowable occupancy limits for Zone 2. Buildings located in Zone 2 are therefore better suited for low intensity light industrial and warehouse uses. Because tenants have not been identified, for purposes of this analysis, the applicant has requested approval of a 24-hour/7 days per week operational schedule to allow for flexibility for future tenants.

Requested Approvals. The project is within the boundaries of the CCCSP for which an EIR was prepared in 1981. The project application includes a Development Plan and an Addendum to the previously certified EIR prepared for TOP, which was Certified by the City Council on August 16, 2022. The EIR Addendum will allow the project to comply with the requirements of the California Environmental Quality Act (CEQA) (see Project Background below). The City's OIA Planning Liaison has shared the proposed Development Plan with OIA and it has been determined to be consistent with the OIA ALUCP.

Architecture. The proposed industrial buildings will include concrete tilt-up walls with painted and scored accents. The design will provide glazing and color variations to ease the length of the buildings. The mixture of varying elevations will utilize a combination of materials and colors. A maximum 14-foot tall concrete tilt-up wall will screen the truck yards and the wall colors will match the paint and color variations of the industrial buildings.

The project includes security and decorative lighting for the new proposed warehouse buildings, parking areas, and access routes consistent with the CCCSP and the City's Development Code. The lighting plan shows that all lighting is shielded and directed toward the ground to the extent necessary to minimize potential impacts with operations at the airport just west of the project site. The City's OIA Planning Liaison has shared the proposed Development Plan, including the proposed lighting, with OIA and it has been determined to be consistent with the OIA ALUCP.

Circulation and Parking. Access to the project will be from the following streets:

- Haven Avenue

- Jurupa Street
- Airport Drive
- Carnegie Avenue
- La Salle Street
- Commerce Parkway
- Doubleday Avenue
- Dupont Avenue
- Santa Ana Street

There are a minimum of two (2) access driveways for each of the buildings in the development. There are also 26-foot wide emergency vehicle access roads provided around the buildings and through the parking areas of the site. The project will provide a total of 2,269 parking spaces (see Table 3).

Landscaping. The project will provide landscaping along all the parkways, on the sides of the buildings except the truck docks/courts, and throughout the automobile parking areas per the requirements of the CCCSP. Landscaping setback requirements vary according to the street on which the building is located as outlined in the CCCSP. The Light Industrial zone does not have a set landscaping percentage requirement, however, the project will provide landscaping areas for each building site as shown previously in Table 1 for an average of 10.5% for the entire proposed project.

Development Standards. The industrial facility will be subject to the most current CCCSP zoning standards for development and design provided in **Table 3**, which demonstrates the project meets or exceeds the required standards. Setbacks vary according to the street on which the building is located.

Table 3: Project Development Standards

Location	Minimum Lot Size	Building Size	Building Height	Auto Parking Requirements	
CCC SP Requirement					
Development Standards for Light Industrial Uses	10,000 sf	See each building size below	55’	Warehouse: 1st 20,000 at 1/1,000 square feet Above 20,000 @1/2,000 square feet *(If office is less than 10% of Gross Floor Area, then no office parking is required)*	
Provided by Project Building/Parcel				**Provided**	**Required**
Building 1	23.6 ac	359,960 sf	48’	276 spaces	190 spaces
Building 2	40.6 ac	926,100 sf	48’	513 spaces	473 spaces
Building 3	25.4 ac	547,395 sf	50’ 6”	284 spaces	284 spaces
Building 4	11.7 ac	254,677 sf	48’	138 spaces	137 spaces
Building 5	19.5 ac	424,550 sf	50’	343 spaces	222 spaces

Total	**196.8 ac**	**4,263,454 sf**	**Max. 50’ 6”**	**2,469** spaces	**2,221 spaces**

Source: Development Plan Application, McDonald Property Group November 2022
ac = acres sf = square feet

Grading. Per the proposed conceptual grading plan, preparation of the project site will require specialized earthwork for Buildings 1-4 to accommodate the Federal Aviation Administration (FAA) Part 77 and 7460 aviation-related height restrictions. Grading of the site will require approximately 699,626 cubic yards (CY) of cut and 658,489 CY of fill, resulting in the export of 41,137 CY of soil from the site. Assuming 14 CY per load, the exporting of soil will require 2,938 one-way truck trips or 5,876 two-way truck trips which will require approximately 122 days to transport assuming 8 hours per day and 6 days per week. Truck trip lengths are assumed to be 20 miles per trip.

Construction. All construction activities, including site preparation and grading, building construction, paving, and the application of architectural coatings, are expected to take approximately three years (January 2024 to December 2026) and involve a variety of construction equipment as shown in **Table 4**.

Table 4: Construction Equipment

Construction Activity	Equipment	Quantity	Hours/Day
Site Preparation	Crawler Tractors	5	8
	Rubber Tired Dozers	4	8
Grading	Crawler Tractors	3	8
	Excavators	3	8
	Graders	2	8
	Rubber Tired Dozers	2	8

Paving	Pavers	2	8
	Paving Equipment	2	8
	Rollers	2	8
Architectural Coating	Air Compressors	1	8

Source: Urban Crossroads 2022

Project Setting: The project site consists of approximately 196.9 acres of land within eastern Ontario. The site is irregular in shape and is located just east of the OIA and Haven Avenue. The site is currently vacant and relatively flat with elevations ranging from 950 feet above mean sea level (amsl) at the northern end down to 910 feet amsl at the southern end with a gentle slope of 11 percent to the south. Runoff from the site generally flows toward the surrounding roadways. Historically the site was regularly disked for weed abatement and fire protection. However, it has not been cleared in some time now due to the presence of burrowing owl on the site (see below). The site supports some landscaped species around the perimeter and at major road intersections. The vacant conditions of the site currently support a small population of burrowing owl (*Athene cunicularia*) which is a California Species of Special Concern. The site supports no native plant associations of habitat for other listed or otherwise sensitive species of plants or animals.

The only existing onsite improvement is one abandoned water well although there is a former agricultural reservoir offsite just east of Haven Avenue. This structure appears to have been created sometime in the 1940's and was abandoned sometime before 1966 – remnants of it still appear on aerial photographs of the area. The location and extent of these uses are shown in the previous Figure 2. The majority of the project site lies within the OIA Safety Zones 1, 2 and 3 per the OIA ALUCP, as discussed above.

Project Background: The project is part of the CCC SP for which a project-level EIR was prepared and originally certified in November 1981. The CCCSP EIR (City EIR No. 81-4) originally proposed the project site for Industrial/Office uses (50% each) and identified the following environmental impacts with a total of 91 mitigation measures (MMs):

- construction air quality (MMs 1-6);
- operational air quality (7-13 MMs);

- airport noise on the project (14-16 MMs);
- cultural resources (MM 17);
- biological resources (MM 18-20); *[no mitigation for burrowing owl]*
- energy conservation (MMs 21-30);
- hydrology (MMs 31-34);
- land use compatibility (MMs 35-40);
- noise (MMs 41-44);
- seismicity (MMs 45-48);
- soils and geology (MMs 49-51);
- traffic (MMs 52-67); *[only addressed LOS/congestion impacts]*
- visual and aesthetics (MMs 71-73);
- wastewater (MM 74);
- water supply (MMs 75-78);
- utilities (MMs 79-83);
- services (MMs 84-89); and
- fiscal/economics (MMs 90-91).[1]

Due to its age, it should be noted the 1981 EIR did not make any conclusions about the significance of impacts after mitigation, only identifying the potential for impacts and recommending mitigation measures as shown above. Most of the mitigation measures recommended in the original 1981 EIR have been supplanted by regulatory compliance and standard conditions of approval by the City, and some issues like level of service (LOS) for traffic impacts no longer apply to CEQA documents. Typically, a project within a specific plan would be processed as an addendum to the previously certified EIR (i.e., the 1981 CCCSP EIR). However, in this case, the City's TOP and its EIR contain much more current and accurate environmental information about the project site and applicable mitigation as explained below and as summarized in Table A (provided separately).

On August 16, 2022, the Ontario City Council adopted the latest version of TOP, which serves as the City's General Plan under state law and provides a foundation for the City to operate as a municipal corporation that consists of six (6) distinct components: 1) Vision; 2) Governance Manual; 3) Policy Plan; 4) Council Priorities; 5) Implementation; and 6) Tracking and Feedback. The Policy Plan component of TOP meets the functional and legal mandate of a municipal General Plan and contains nine elements; Land Use, Housing, Parks and Recreation, Environmental Resources, Community Economics, Safety, Mobility, Community Design and Social Resources.

The City Council certified TOP EIR (SCH # 2021070364) analyzed the direct and physical changes in the environment that would be caused by implementation of TOP; focusing on changes to land use associated with the buildout of the proposed land use plan, and impacts resultant of population and employment growth in the City. The project proposes land uses consistent with TOP 2050. The significant unavoidable adverse impacts that were identified in TOP EIR included: agriculture resources, air quality, cultural resources, greenhouse gas (GHG) emissions, noise and transportation/traffic.

CEQA requires lead agencies to use the most current and accurate environmental information in analyzing project impacts. Therefore, consistent with the requirements of CEQA, the proposed project and its site have been analyzed relative to current technical studies and TOP EIR. These uses will be consistent with the industrial uses to the north, east, and south of the subject site. In addition, the subject site is located under the landing path of the OIA and this analysis evaluates the project relative to OIA constraints as well.

CEQA Requirements for an Addendum: If changes to a project or its circumstances occur or new information becomes available after adoption of an EIR or negative declaration, the lead agency may: (1) prepare a subsequent EIR if the criteria of CEQA Guidelines Section 15162(a) are met, (2) prepare a subsequent negative declaration, (3) prepare an addendum, or (4) prepare no further documentation (CEQA Guidelines Section 15162(b)). When only minor technical changes or additions to the negative declaration are necessary and none of the conditions described in Section 15162 calling for the preparation of a subsequent EIR or negative declaration have occurred, CEQA allows the lead agency to prepare and

[1] In January 1983, EIR Addendum No. 1 was approved that consolidated this list to 79 MMs and added some regulatory compliance.

adopt an addendum. (CEQA Guidelines Section 15164(b).) Under Section 15162, a subsequent EIR or negative declaration is required only when:

1) Substantial changes are proposed in the project which will require major revisions of the previous negative declaration due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects;

2) Substantial changes occur with respect to the circumstances under which the project is undertaken which will require major revisions of the negative declaration due to the involvement of any new significant environmental effects or a substantial increase in the severity of previously identified significant effects; or

3) New information of substantial importance, which was not known and could not have been known with the exercise of reasonable diligence at the time the negative declaration was adopted, shows any of the following:

    a) The project will have one or more significant effects not discussed in the previous negative declaration;

    b) Significant effects previously examined will be substantially more severe than shown in the previous EIR;

    c) Mitigation measures or alternatives previously found not to be feasible would in fact be feasible and would substantially reduce one or more significant effects of the project, but the project proponents decline to adopt the mitigation measure or alternative; or

    d) Mitigation measures or alternatives which are considerably different from those analyzed in the previous EIR would substantially reduce one or more significant effects on the environment, but the project proponents decline to adopt the mitigation measure or alternative.

Thus, if the project does not result in any of the circumstances listed in Section 15162 (i.e., no new or substantially greater significant impacts), the City may adopt an addendum to TOP EIR.

CEQA Analysis: According to CEQA Guidelines Section 15164, an Addendum to a previously certified EIR may be used if some changes or additions are necessary, but none of the conditions described in Section 15162 requiring the preparation of a subsequent negative declaration or EIR have occurred. The CEQA Guidelines require that a brief explanation be provided to support the findings that no subsequent EIR or negative declaration are needed for further discretionary approval. These findings are described below:

1) Required Finding: Substantial changes are not proposed for the project that will require major revisions of the previous EIR due to the involvement of new, significant environmental effects or a substantial increase in the severity of previously identified effects.

Substantial changes are not proposed by the project compared to what is allowed in TOP, and project implementation will not require revisions to TOP EIR. TOP EIR analyzed the direct and physical changes in the environment that would be caused by TOP; focusing on changes to land use associated with the buildout of the proposed land use plan. The site is located within the Light Industrial designated portion of the CCC SP. The project is consistent with the CCC SP requirements for that zone, which permit warehouse/distribution uses. As described in the Specific Plan and, therefore, analyzed in TOP EIR, maximum development of the project site (196.9 acres) would not exceed 4,717,330 square feet of light industrial uses. This is based on Figure LU-01 of the current TOP (Land Use Plan) which indicates that (light) industrial uses have a maximum FAR of 0.55 so the 196.9-acre site would be allowed up to 4,717,330 square feet of industrial uses under TOP. It should be noted the project proposes 9.2% less square footage than the maximum allowed under TOP (i.e., project is 90.8% of TOP maximum). Therefore, the proposed project will result in less development of the site than TOP EIR analyzed at buildout (i.e., 4,281,128 sf vs. 4,717,330 sf). Since the anticipated buildout resulting

from the project will be less than that originally analyzed in TOP EIR, no revisions to TOP EIR are required.

In addition, all previously adopted mitigation measures of TOP EIR are conditions of project approval or mitigation measures and are incorporated herein by reference. This document provides an analysis of the project and verification that the project will not cause any new or more significant environmental impacts.

2) *Required Finding: Substantial changes have not occurred with respect to the circumstances under which the project is undertaken, that would require major revisions of the previous Environmental Impact Report due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects.*

Substantial changes have not occurred with respect to the circumstances under which the project was undertaken, that would require major revisions to TOP EIR. TOP EIR evaluated the site as Industrial with a maximum FAR of 0.55 (based on TOP Figure LU-01, Land Use Plan, and TOP EIR Figure 1-3, Proposed Land Use Plan), consistent with the surrounding industrial properties to the north, east, and south. The proposed project is implementing TOP EIR's industrial land use designation for the site and is consistent with the previous 1992 General Plan land use designation of Industrial for the site. Therefore, no proposed changes or revisions to TOP EIR are required. In addition, all previously adopted TOP EIR mitigation measures are incorporated herein by reference (see separate Table A). This document provides an analysis of the project and verification that the project will not cause any new or more significant environmental impacts.

3) Required Finding. No new information has been provided that would indicate that the proposed project would result in one or more significant effects not discussed in the previous EIR.

No new information has been provided that would indicate the proposed project would result in any new significant effects not previously discussed in TOP EIR. TOP EIR evaluated the site as Industrial with a maximum FAR of 0.55 (based on TOP Figure LU-01, Land Use Plan, and TOP EIR Figure 1-3, Proposed Land Use Plan), consistent with the surrounding industrial properties to the north, west, and south. Since adoption of the 1992 General Plan certification and the TOP 2050 EIR, the subject site and surrounding area have been planned for and remained industrial.

Burrowing owl surveys were completed in 2019, 2020 and a 2022 protocol study was conducted to determine the current number of burrowing owls on site. Any owls found onsite will be relocated to a more natural, less urbanized location with no aviation associated hazards in accordance with California Department of Fish and Wildlife (CDFW) protocols. In this regard, the applicant has prepared a Burrowing Owl Relocation Program (BRP) consistent with TOP Environmental Resources Element Policies ER5-1 and ER5-2. Therefore, no proposed changes or revisions to the TOP EIR are required. In addition, all previously adopted mitigation measures are incorporated herein by reference and outlined in Table A. This document provides an analysis of the project and verification that the project will not cause any new or more significant environmental impacts.

Conclusion: TOP EIR, certified by the City Council on August 16, 2022 was prepared as a Program EIR in accordance with CEQA, the CEQA Guidelines section 15121(a), and the City's Rules for the Implementation of CEQA. TOP EIR considered the direct physical changes and reasonably foreseeable indirect physical changes in the environment that would be caused by TOP. Consequently, TOP EIR focused on impacts from changes to land use associated with buildout of the City and impacts from the resulting population and employment growth in the City. The proposed project is consistent and compatible with existing and planned uses in the surrounding area. The amount of development anticipated at project buildout, as shown in **Table 1** above, will be less than the development analyzed in TOP EIR.

Accordingly, and based on the conclusions of the previously certified TOP EIR, the analysis in this document, CEQA and the CEQA Guidelines, including Sections 15164 and 15162, the project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in TOP EIR. No changes or additions to TOP EIR analyses are necessary, nor is there a need

for additional mitigation with implementation of the number of conditions of approval required by the City based on the results of the site specific technical studies for burrowing owl and airport safety.

Surrounding Land Uses: The project site is surrounded on the north, east, and west by land uses within the CCCSP (e.g., rail industrial and light industrial) including some vacant land. The OIA and related uses (e.g., parking lots) are just west of the site across Haven Avenue. See **Table 5** for onsite and surrounding land uses and zoning designations. Onsite and surrounding land uses are also shown in the previous Figure 2.

Table 5: Existing Land Uses and Zoning Designations

Location	Existing Land Uses	TOP Designation	Zoning Designation	Specific Plan Land Use
Site:	Vacant	Industrial	California Commerce Center (2591-SP)	Light Industrial
North:	Light Industrial Warehousing and Vacant Land	Industrial	California Commerce Center (2591-SP)	Rail Industrial
South:	Light Industrial Warehousing	Industrial	California Commerce Center (2591-SP)	Rail Industrial
East:	Vacant and Light Industrial Warehousing	Industrial	California Commerce Center (2591-SP)	Rail Industrial and Light Industrial
West:	OIA	Airport	OIA	NA

TOP 2050 IMPLEMENTATION ACTIONS/REGULATORY COMPLIANCE

The following actions will implement various requirements of TOP 2050 to protect environmental resources and City residents from environmental hazards. They are based on recommendations from the various technical studies prepared specifically for the project (see "Additional Studies" listed below). The actions regarding biological resources were prepared to comply with Policies ER5-1 and ER5-2 of the Environmental Resources Element of TOP 2050 as well as comply with applicable federal and state environmental regulations:

BIOLOGICAL RESOURCES

BIO-1: BURROWING OWL RELOCATION PROGRAM (BRP). Prior to the issuance of any grading permit, the developer shall retain a qualified biologist to prepare a Burrowing Owl (BUOW) Relocation Plan for the project site that consists of the following steps:

Focused Survey. A subject site area focused survey is required to identify individual owls and nesting pairs and the burrows they are occupying.

Identify Receiver Site(s). The proiect biologist will identity potential receiver sites that can accommodate relocated birds from the project site and provide long-term habitat for the species. Based on preliminary research, there are three potential options:

Option 1 – Habitat Mitigation (HM) Land. California Department of Fish and Wildlife (CDFW) will allow an applicant to acquire and provide perpetual management of its own HM land or secure an existing conservation easement program in place to provide continued management of relocated Burrowing Owls. For this to occur, CDFW must approve the HM land as appropriate for the defined conservation goals. Several steps are required to accomplish this prior to relocation:

- Obtain CDFW written approval of the HM lands before acquisition.
- Transfer fee title of the HM lands to CDFW or a CDFW approved entity pursuant to terms approved in writing by CDFW.
- If CDFW does not hold fee title to the HM lands, CDFW shall serve as grantee for a Conservation Easement over the property or approve another entity to act as grantee.
- Provide a recent title report, Phase I Environmental Assessment, and other necessary documents.

- Designate both an interim and long-term land manager approved by CDFW. The interim and long-term managers need not be the same.
- Provide for site preparation, including the initial site protection and enhancements.
- Provide for the interim management of the HM land which, in the case of burrowing owls, is a minimum of two years.
- Ensure that the HM lands are perpetually managed, maintained, and monitored by the long-term manager as described in the long-term management plan.
- Provide long-term management funding by establishing a non-wasting endowment or otherwise ensure the perpetual management of the HM lands
- Develop and implement a two-year Habitat Mitigation and Monitoring Plan for preparing the relocation site and for monitoring the BUOW population.
- Ensure funding to cover all aspects of the relocation process.

Option 2 - Western Riverside County Multi-Species Habitat Conservation Plan (MSHCP). Active burrowing owl relocation is a pre-approved activity within the MSHCP. The Riverside Conservation Authority (RCA) manages conservation lands within Riverside County and accepts relocated owls if consistent with the MSHCP and approved by the wildlife agencies. A proposed relocation plan would have to be submitted to the RCA for review and approval by the Joint Project Review Committee (JPR). Both the United States Fish and Wildlife Service (USFWS) and CDFW are members of the JPR. Once the RCA tentatively approves the plan and can identify a receiver site on MSHCP conserved lands, the proposed relocation will be presented to the JPR for a final review and approval. With approval, the owls could be relocated by an authorized biologist according to a CDFW approved relocation plan.

Option 3 – Inland Empire Resource Conservation District (IERCD) Relocation Site and/or In-Lieu Fee. The IERCD manages habitat lands for various species within Riverside County and may have BUOW habitat land available for relocation of project BUOW. If existing easement sites as proposed under the current relocation plan are found to be unsuitable or not approved by CDFW or USFWS, then the applicant may be able to pay an in-lieu fee to help mitigate BUOW impacts of the proposed project. The applicant will continue discussions with the City and IERCD to determine if or what habitat resources are available, or in-lieu fee may be needed to adequately mitigate project impacts to BUOW.

Prepare a Burrowing Owl Relocation Plan. Once a receiver site(s) is chosen, the project biologist would submit the chosen site(s) to appropriate agencies (e.g., USFWS, CDFW) for review and approval. A site-specific relocation plan can then be prepared for review and approval. Upon plan approval, the developer shall establish an escrow account or endowment that guarantees funding for the entire translocation and monitoring effort.

Receiver Site Preparation. The authorized biologist shall supervise installation of cages and/or burrows on the receiver site as necessary. String trimming or minor vegetation modifications may be necessary to effectively install the cages/burrows.

Onsite Trapping. The authorized biologist shall trap owls on the project site as close to egg laying (February - early March) as possible, then release the owls into tracking cages at receiver site. At that time, the owls will be banded for identification and tracking purposes. Occupied burrows on the project site where capture occurred will be excavated to prevent reoccupation. One-way doors may also be installed for 72 hours prior at all other suitable burrows to prevent re-occupation of the project site.

Relocation Monitoring. The transfer of owls from the project site to the receiver site will be supervised by an authorized biologist holding a valid permit for such activities. Owls will be fed and monitored daily at the receiver site until a full clutch of eggs is well into incubation. Cages will then be removed from the receiver site. Game cameras shall be installed to assist future monitoring efforts. Monitoring is to assess site for predators, disturbances, and identify actions to be taken to address potential problems that could impact the success of owl relocation. The project biologist will band young birds and continue to monitor them for success and address any problems related to predators or site disturbance. The receiver site shall be monitored for two (2) years post release of owls on the site to document efficacy of relocation. The biologist shall also conduct habitat modifications and burrow maintenance as needed.

Reporting. The project biologist shall prepare monthly reports from the start of owl relocation for at least twenty-four (24) months and prepare at least two Annual Reports with the second being the final Project Mitigation Report. These monitoring reports shall be sent to the City, USFWS, and CDFW. This measure shall be implemented to the satisfaction of the City Planning Department in consultation with the CDFW and USFWS.

NOTE: In addition to burrowing owl, development of the project site may impact nesting birds in trees adjacent to the site. TOP EIR indicates the City wishes to protect biological resources such as nesting birds which are also protected by state regulations. Therefore, the following site-specific measure, Nesting Bird Survey, implements the goals of TOP to protect such resources:

BIO-2: NESTING BIRD SURVEY. Prior to issuance of a grading permit or if vegetation removal is scheduled during the nesting season (typically February 1 to September 1), then a focused survey for active nests shall be conducted by a qualified biologist (as determined by a combination of academic training and professional experience in biological sciences and related resource management activities) no more than five (5) days prior to the beginning of project-related activities (e.g., excavation, grading and vegetation removal). Surveys shall be conducted in proposed work areas, staging and storage areas, soil, equipment, and material stockpile areas. For passerines and small raptors, surveys shall be conducted within a 250-foot radius surrounding the work area (in non-developed areas and where access is feasible). For larger raptors, such as those from the genus Buteo, the survey area shall encompass a 500-foot radius. Surveys shall be conducted by a qualified biologist during weather conditions suited to maximize the observation of possible nests and shall concentrate on areas of suitable habitat. If a lapse in project-related work of five (5) days or longer occurs, an additional nest survey shall be required before work can be reinitiated. If nests are encountered during any preconstruction survey, a qualified biologist shall determine if it may be feasible for construction to continue as planned without impacting the success of the nest, depending on conditions specific to each nest and the relative location and rate of construction activities. Any nest(s) within the project site shall be monitored by a qualified biologist during active construction if work is occurring directly adjacent to the pre-determined no-work buffer. If the qualified biologist determines construction activities have the potential to adversely affect a nest, the biologist shall immediately inform the construction manager to halt construction activities within a minimum exclusion buffer of 50 feet for songbird nests, and 200 to 500 feet for raptor nests, depending on species and location. Construction activities within the no-work buffer may proceed after a qualified biologist determines the nest is no longer active due to natural causes (e.g., young have fledged, predation, or other non-anthropogenic nest failure).

CULTURAL RESOURCES

CUL-1: **WELLPIPE DOCUMENTATION.** Prior to issuance of a grading permit, the applicant shall retain a qualified archaeologist to adequately document the existing well/pipe using the appropriate Department of Parks and Recreation (DPR) 523 forms. Confirmation of receipt of the documentation by the California Office of Historic Preservation shall be provided prior to the start of grading. This measure shall be implemented to the satisfaction of the City Planning Department.

HAZARDS

NOTE: The following TOP Implementation Actions/Regulatory Compliance are based on the recommendations of the Mead & Hunt report (Appendix E) to comply with the recommendations of TOP EIR Section 5.8, Impact 5.8-3:

HAZ-1: Avigation Easements. Prior to issuance of a Certificate of Occupancy for each building, an avigation easement shall be recorded with the deed to the property. The avigation easement language and conveyances shall be acknowledged in the Ground Lease between the Ontario International Airport Authority (OIAA) and the developer and all future tenant sublease agreements, and Covenants, Conditions & Restrictions (CCRs).

HAZ-2: Building Intensity. Prior to issuance of a Certificate of Occupancy, the developer shall demonstrate to both the OIAA and the City of Ontario that the proposed use of each building complies with the Airport Land Use Compatibility Plan (ALUCP) intensity criteria. Additionally, the Ground Lease between the OIAA and the developer shall require a consistency evaluation at the time a specific use (or re-use) is proposed for each of the nine building sites to ensure long-term compliance with the ALUCP usage intensity

criteria. This measure shall be implemented to the satisfaction of the City Planning Department with OIAA concurrence.

HAZ-3: Part 77 Height Limits. Prior to issuance of a Certificate of Occupancy, the developer shall receive a positive "No Airspace Hazard Determination" determination from the FAA. While the proposed buildings have been confirmed by Mead & Hunt to be designed in compliance with Part 77 height limits, the FAA may find that other aspects of the project be further evaluated and addressed, such as electrical interference with aircraft communications or navigation. This measure shall be implemented to the satisfaction of the City Planning Department in consultation with the FAA and with OIAA concurrence.

HAZ-4: Architectural Design. Prior to issuance of a building permit, the developer shall demonstrate that building plans show structures or architectural features that could provide nesting, shelter, or perching opportunities for raptors and large birds have been designed to reduce the attractiveness of these features through the application of nets, bird spikes, or other deterrents (communication towers, signs, and light standards are examples of structures of this type). This measure shall be implemented to the satisfaction of the City Planning Department with OIAA concurrence.

HAZ-5: Landscaping. Prior to issuance of a building permit, the developer shall demonstrate that landscaping plans preclude the planting of new trees that create a dense and contiguous canopy or plant materials that provide food sources such as fruit, nuts, or berries. The plans shall use only short tree species/varieties to ensure that mature trees will not create an airspace obstruction or hazardous wildlife attractant. This measure shall be implemented to the satisfaction of the City Planning Department with OIAA concurrence.

HAZ-6: Lighting Fixtures. Prior to issuance of a building permit, the developer shall demonstrate that lighting fixtures do not project light directly onto the existing runways or taxiways or into the approach and departure paths for the OIA. Exterior lighting shall incorporate down-shielding to direct light downward and away from the airport approach and departure paths. Lighting shall not imitate airport lighting or impede the ability of pilots to distinguish airport lighting from other lighting (streetlights, signs, etc.), nor create the appearance of oncoming aircraft traffic to pilots landing from or departing toward the east on Runway 26R/L or toward the west on Runways 8R and 8L. Lighting within Airport Safety Zones 1 and 2 shall not be aligned in a linear pattern parallel with the runways (Runway 8R/26L and 8L/26R). This measure shall be implemented to the satisfaction of the City Planning Department with OIAA concurrence.

HAZ-7: Glare Control. Prior to issuance of a building permit, the developer shall demonstrate that buildings do not include glare-producing materials, including but not limited to unpainted metal, white paint/rooftop materials, or highly reflective glass (e.g., mirrored glass). No glare-producing materials shall be used on the exterior of structures located within the airport approach and departure paths or on nearby lands where glare could impair a pilot's vision. This measure shall be implemented to the satisfaction of the City Planning Department with OIAA concurrence.

HAZ-8: Glare Analysis. For any building rooftops on which solar systems are proposed, the developer shall retain a qualified consultant to prepare a glare analysis to alleviate potential visual impacts to OIA operations. The findings of the analysis shall be included in the FAA Form 7460-1 submittal for the solar project. This measure shall be implemented to the satisfaction of the City Planning Department with OIAA concurrence.

HAZ-9: Construction Coordination. Prior to the issuance of a building permit, the developer shall coordinate with the OIAA to develop a project construction schedule to alleviate any potential impacts to airport operations, particularly from cranes (i.e., due to their height and location) as outlined in Exhibit 14 of the Mead & Hunt report (Appendix E). If the project's schedule is aligned with planned runway closures, runway closure timeframes shall be included on the FAA Form 7460-1 submittal for the cranes. This measure shall be implemented to the satisfaction of the City Planning Department with OIAA concurrence.

Other public agencies whose approval is required (e.g., permits, financing approval or participation agreement): CDFW (burrowing owl survey and relocation)

Tribal Consultation: Have California Native American tribes traditionally and culturally affiliated with the project area requested consultation pursuant to Public Resources Code section 21080.3.1? ☐ Yes ☒ No

If “yes”, has consultation begun? ☐ Yes ☐ No ☐ Completed

This document is an Addendum to TOP 2050 EIR which had its own extensive Native American Consultation (NAC) process per SB 18 and AB 52. The proposed Project and its TOP EIR Addendum do not require separate subsequent NAC since the Project is consistent with TOP 2050 and an EIR Addendum is an administrative action, not a legislative action.

Additional Studies: The following additional studies have been or are being prepared in support of the analysis in this document regarding potential environmental impacts of the proposed project. These studies are in the Appendices to this document and include:

- Air Quality and Energy Memorandum, Urban Crossroads, March 15, 2022 (Appendix A)
- GHG Reduction Measures Screening Table for Commercial and Industrial Development, HPA Architects, December 14, 2021 (Appendix A)
- Burrowing Owl at Ontario Airport Study, Helix Env. – Kidd Biological, 2020 (Appendix B)
- Pre-Construction Clearance Survey for Burrowing Owl, Wood Environmental, August 14, 2021 (Appendix B)
- Cultural Resources Survey for Parcel Group 1 Development, Helix Environmental, April 15, 2019 (Appendix C)
- Cultural Resources Survey for Parcel Group 2 Development, Helix Environmental, April 15, 2019 (Appendix C)
- VMT Memorandum, Urban Crossroads, December 8, 2021 (Appendix D)
- Traffic Impact Assessment, Urban Crossroads, January 11, 2022 (Appendix D)
- Ontario Airport Land Use Consistency Report, Mead & Hunt, January 26, 2022 (Appendix E)
- Hydrology Report, Thienes Engineering, December 27, 2021 (Appendix F)
- Preliminary Water Quality Management Plan, Thienes Engineering, October 27, 2022 (Appendix F)
- Water Supply Assessment (WSA) for PDEV21-047 Hub at ONT, Ontario, California, Ontario Municipal Utilities Company, December 2022 (Appendix F)

ENVIRONMENTAL FACTORS POTENTIALLY AFFECTED

The environmental factors checked below would be potentially affected by this project, involving at least one impact that is a "Potentially Significant Impact" as indicated by the checklist on the following pages.

☐ Aesthetics	☐ Agriculture/Forestry Resources	☐ Air Quality
☐ Biological Resources	☐ Cultural Resources	☐ Geology / Soils
☐ Greenhouse Gas Emissions	☐ Hazards & Hazardous Materials	☐ Hydrology / Water Quality
☐ Land Use / Planning	☐ Mineral Resources	☐ Noise
☐ Population / Housing	☐ Public Services	☐ Recreation
☐ Transportation	☐ Utilities / Service Systems	☐ Mandatory Findings of Significance
☐ Tribal Cultural Resources	☐ Wildfire	☐ Energy

DETERMINATION *(To be completed by the Lead Agency)*

On the basis of this initial evaluation:

☐ I find that the proposed project COULD NOT have a significant effect on the environment, and a NEGATIVE DECLARATION will be prepared.

☐ I find that although the proposed project could have a significant effect on the environment, there will not be a significant effect in this case because revisions in the project have been made by or agreed to by the project proponent. A MITIGATED NEGATIVE DECLARATION will be prepared.

☐ I find that the proposed project MAY have a significant effect on the environment, and an ENVIRONMENTAL IMPACT REPORT is required.

☐ I find that the proposed project MAY have a "potentially significant" or "potentially significant unless mitigated" impact on the environment, but at least one effect 1) has been adequately analyzed in an earlier document pursuant to applicable legal standards, and 2) has been addressed by mitigation measures based on the earlier analysis as described on attached sheets. An ENVIRONMENTAL IMPACT REPORT is required, but it must analyze only the effects that remain to be addressed.

☒ I find that although the proposed project could have a significant effect on the environment, because all potentially significant effects (a) have been analyzed adequately in an earlier EIR pursuant to applicable standards, and (b) have been avoided or mitigated pursuant to that earlier EIR, including revisions or mitigation measures that are imposed upon the proposed project, nothing further is required.

For

EVALUATION OF ENVIRONMENTAL IMPACTS

1) A brief explanation is required for all answers except "No Impact" answers that are adequately supported by the information sources a lead agency cites in the parentheses following each question. A "No Impact" answer is adequately supported if the referenced information sources show that the impact simply does not apply to projects like the one involved (e.g. the project falls outside a fault rupture zone). A "No Impact" answer should be explained where it is based on project-specific factors as well as general standards (e.g. the project will not expose sensitive receptors to pollutants, based on a project-specific screening analysis).

2) All answers must take account of the whole action involved, including off-site as well as on-site, cumulative as well as project-level, indirect as well as direct, and construction as well as operational impacts.

3) Once the lead agency has determined that a particular physical impact may occur, then the checklist answers must indicate whether the impact is potentially significant, less than significant with mitigation, or less than significant. "Potentially Significant Impact" is appropriate if there is substantial evidence that an effect is significant. If there are one or more "Potentially Significant Impact" entries when the determination is made, an EIR is required.

4) "Negative Declaration: Less Than Significant With Mitigation Incorporated" applies where the incorporation of mitigation measures has reduced an effect from "Potentially Significant Impact" to a "Less than Significant Impact." The lead agency must describe the mitigation measures, and briefly explain how they reduce the effect to a less than significant level (mitigation measures from the "Earlier Analyses" Section may be cross-referenced).

5) Earlier analyses may be used where, pursuant to the tiering, program EIR, or other CEQA process, an effect has been adequately analyzed in an earlier EIR or Negative Declaration. Section 15063(c)(3)(D). In this case, a brief discussion should identify the following:

   a) Earlier Analyses Used. Identify and state where they are available for review. For this project, reference will be made to TOP EIR and the CCC SP EIR as appropriate.

   b) Impacts Adequately Addressed. Identify which effects from the above checklist were within the scope of and adequately analyzed in an earlier document pursuant to applicable legal standards, and state whether such effects were addressed by mitigation measures based on the earlier analysis.

   c) Mitigation Measures. For effects that are "Less than Significant with Mitigation Measures Incorporated," describe the mitigation measures which were incorporated or refined from the earlier document and the extent to which they address site-specific conditions for the project.

6) Lead agencies are encouraged to incorporate into the checklist references to information sources for potential impacts (e.g., general plans, zoning ordinances). Reference to a previously prepared or outside document should, where appropriate, include a reference to the page or pages where the statement is substantiated.

7) Supporting Information Sources. A source list should be attached, and other sources used or individuals contacted should be cited in the discussion.

8) This is only a suggested form, and lead agencies are free to use different formats; however, lead agencies should normally address the questions from this checklist that are relevant to a project's environmental effects in whatever format is selected.

9) The explanation of each issue should identify:

   a) The significance criteria or threshold, if any, used to evaluate each question; and

   b) The mitigation measure identified, if any, to reduce the impact to less than significance.

Issues	*Potentially Significant Impact*	*Less Than Significant with Mitigation*	*Less Than Significant Impact*	*Impacts Previously Analyzed in TOP FEIR*
1. AESTHETICS. Would the project:				
a. Have a substantial adverse effect on a scenic vista?	☐	☐	☐	☒
b. Substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway?	☐	☐	☐	☒
c. In non-urbanized areas, substantially degrade the existing visual character or quality of public views of the site and its surroundings? (Public views are those that are experienced from publicly accessible vantage point). If the project is in an urbanized area, would the project conflict with applicable zoning and other regulations governing scenic quality?	☐	☐	☐	☒
d. Create a new source of substantial light or glare which would adversely affect day or nighttime views in the area?	☐	☐	☐	☒
2. AGRICULTURE AND FOREST RESOURCES. In determining whether impacts to agricultural resources are significant environmental effects, lead agencies may refer to the California Agricultural Land Evaluation and Site Assessment Model (1997) prepared by the California Department of Conservation as an optional model to use in assessing impacts on agriculture and farmland. In determining whether impacts to forest resources, including timberland, are significant environmental effects, lead agencies may refer to information compiled by the California Department of Forestry and Fire Protection regarding the state's inventory of forest land, including the Forest and Range Assessment Project and the Forest Legacy Assessment project; and forest carbon measurement methodology provided in Forest protocols adopted by the California Air Resources Board. Would the project:				
a. Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?	☐	☐	☐	☒
b. Conflict with existing zoning for agricultural use, or a Williamson Act contract?	☐	☐	☐	☒
c. Conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code section 12220(g)), timberland (as defined by Public Resources Code section 4526), or timberland zoned Timberland Production (as defined by Government Code section 51104(g))?	☐	☐	☐	☒
d. Result in the loss of forest land or conversion of forest land to non-forest use?	☐	☐	☐	☒

Issues	*Potentially Significant Impact*	*Less Than Significant with Mitigation*	*Less Than Significant Impact*	*Impacts Previously Analyzed in TOP FEIR*
e. Involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland, to non-agricultural use or conversion of forest land to non-forest use?	☐	☐	☐	☒
3. AIR QUALITY. Where available, the significance criteria established by the applicable air quality management or air pollution control district may be relied upon to make the following determinations. Would the project:				
a. Conflict with or obstruct implementation of the applicable air quality plan?	☐	☐	☐	☒
b. Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard?	☐	☐	☐	☒
c. Expose sensitive receptors to substantial pollutant concentrations?	☐	☐	☐	☒
d. Result in other emissions (such as those leading to odors adversely affecting a substantial number of people?	☐	☐	☐	☒
4. BIOLOGICAL RESOURCES. Would the project:				
a. Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?	☐	☒	☐	☐
b. Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?	☐	☐	☐	☒
c. Have a substantial adverse effect on state or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?	☐	☐	☐	☒
d. Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?	☐	☐	☐	☒
e. Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?	☐	☐	☐	☒
f. Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan?	☐	☐	☐	☒

Issues	*Potentially Significant Impact*	*Less Than Significant with Mitigation*	*Less Than Significant Impact*	*Impacts Previously Analyzed in TOP FEIR*
5. CULTURAL RESOURCES. Would the project:				
a. Cause a substantial adverse change in the significance of a historical resource pursuant to Section 15064.5?	☐	☐	☒	☐
b. Cause a substantial adverse change in the significance of an archaeological resource pursuant to Section 15064.5?	☐	☐	☐	☒
c. Disturb any human remains, including those interred outside of dedicated cemeteries?	☐	☐	☐	☒
6. ENERGY. Would the project:				
a. Result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation?	☐	☐	☒	☐
b. Conflict with or obstruct a state or local plan for renewable energy or energy efficiency?	☐	☐	☒	☐
7. GEOLOGY AND SOILS. Would the project:				
a. Directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury or death involving:	☐	☐	☐	☒
i. Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publication 42.	☐	☐	☐	☒
ii. Strong seismic ground shaking?	☐	☐	☐	☒
iii. Seismic-related ground failure, including liquefaction?	☐	☐	☐	☒
iv. Landslides?	☐	☐	☐	☒
b. Result in substantial soil erosion or the loss of topsoil?	☐	☐	☐	☒
c. Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction or collapse?	☐	☐	☐	☒
d. Be located on expansive soil, as defined in Table 18 1 B of the Uniform Building Code, creating substantial direct or indirect risks to life or property?	☐	☐	☐	☒
e. Have soils incapable of adequately supporting the use of septic tanks or alternative waste water disposal systems where sewers are not available for the disposal of waste water?	☐	☐	☐	☒
f. Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?	☐	☐	☐	☒

Issues	*Potentially Significant Impact*	*Less Than Significant with Mitigation*	*Less Than Significant Impact*	*Impacts Previously Analyzed in TOP FEIR*
8. GREENHOUSE GAS EMISSIONS. Would the project:				
a. Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?	☐	☐	☐	☒
b. Conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emission of greenhouse gases?	☐	☐	☐	☒
9. HAZARDS AND HAZARDOUS MATERIALS. Would the project:				
a. Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?	☐	☐	☐	☒
b. Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?	☐	☐	☐	☒
c. Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?	☐	☐	☐	☒
d. Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?	☐	☐	☐	☒
e. For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard or excessive noise for people residing or working in the project area?	☐	☒	☐	☐
f. Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?	☐	☐	☐	☒
g. Expose people or structures, either directly or indirectly, to a significant risk of loss, injury or death involving wildland fires?	☐	☐	☐	☒
10. HYDROLOGY AND WATER QUALITY. Would the project:				
a. Violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or ground water quality?	☐	☐	☐	☒
b. Substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin?	☐	☐	☐	☒

Issues	*Potentially Significant Impact*	*Less Than Significant with Mitigation*	*Less Than Significant Impact*	*Impacts Previously Analyzed in TOP FEIR*
c. Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would:	☐	☐	☐	☒
i. result in substantial erosion or siltation on- or off-site;	☐	☐	☐	☒
ii. substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or offsite;	☐	☐	☐	☒
iii. create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff; or	☐	☐	☐	☒
iv. impede or redirect flood flows?	☐	☐	☐	☒
d. In flood hazard, tsunami, or seiche zones, risk release of pollutants due to project inundation?	☐	☐	☐	☒
e. Conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan?	☐	☐	☐	☒
11. LAND USE AND PLANNING. Would the project:				
a. Physically divide an established community?	☐	☐	☒	☐
b. Cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect?	☐	☒	☐	☐
12. MINERAL RESOURCES. Would the project:				
a. Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?	☐	☐	☐	☒
b. Result in the loss of availability of a locally-important mineral resource recovery site delineated on a local general plan, specific plan or other land use plan?	☐	☐	☐	☒
13. NOISE. Would the project result in:				
a. Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?	☐	☒	☐	☐
b. Generation of excessive groundborne vibration or groundborne noise levels?	☐	☐	☒	☐
c. For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?	☐	☒	☐	☐

Issues	*Potentially Significant Impact*	*Less Than Significant with Mitigation*	*Less Than Significant Impact*	*Impacts Previously Analyzed in TOP FEIR*
14. POPULATION AND HOUSING. Would the project:				
a. Induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of road or other infrastructure)?	☐	☐	☐	☒
b. Displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere?	☐	☐	☐	☒
15. PUBLIC SERVICES. Would the project:				
a. Result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the public services:				
i. Fire protection?	☐	☐	☐	☒
ii. Police protection?	☐	☐	☐	☒
iii. Schools?	☐	☐	☐	☒
iv. Parks?	☐	☐	☐	☒
v. Other public facilities?	☐	☐	☐	☒
16. RECREATION. Would the project:				
a. Increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?	☐	☐	☐	☒
b. Does the project include recreational facilities or require the construction or expansion of recreational facilities which have an adverse physical effect on the environment?	☐	☐	☐	☒
17. TRANSPORTATION. Would the project:				
a. Conflict with a program plan, ordinance or policy addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities?	☐	☐	☒	☐
b. Would the project conflict or be inconsistent with CEQA Guidelines section 15064.3, subdivision (b)?	☐	☐	☒	☐
c. Substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?	☐	☐	☐	☒
d. Result in inadequate emergency access?	☐	☐	☐	☒

Issues	*Potentially Significant Impact*	*Less Than Significant with Mitigation*	*Less Than Significant Impact*	*Impacts Previously Analyzed in TOP FEIR*
18. TRIBAL CULTURAL RESOURCES. Would the project cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is				
a. Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code section 5020.1(k)?	☐	☐	☐	☒
b. A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code section 5024.1. In applying the criteria set forth in subdivision (c) of Public Resources Code section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe.	☐	☐	☐	☒
19. UTILITIES AND SERVICE SYSTEMS. Would the project:				
a. Require or result in the relocation or construction of new or expanded water, wastewater treatment or storm water drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects?	☐	☐	☐	☒
b. Have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry and multiple dry years?	☐	☐	☐	☒
c. Result in a determination by the wastewater treatment provider which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?	☐	☐	☐	☒
d. Generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals?	☐	☐	☐	☒
e. Comply with federal, state, and local management and reduction statutes and regulations related to solid waste?	☐	☐	☐	☒
20. WILDFIRES. If located in or near state responsibility areas or lands classified as very high fire hazard severity zones, would the project:				
a. Substantially impair an adopted emergency response plan or emergency evacuation plan?	☐	☐	☒	☐

Issues	*Potentially Significant Impact*	*Less Than Significant with Mitigation*	*Less Than Significant Impact*	*Impacts Previously Analyzed in TOP FEIR*
b. Due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby expose project occupants to, pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire?	☐	☐	☒	☐
c. Require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment?	☐	☐	☒	☐
d. Expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes?	☐	☐	☒	☐
21. MANDATORY FINDINGS OF SIGNIFICANCE.				
a. Does the project have the potential to substantially degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, substantially reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory?	☐	☐	☐	☒
b. Does the project have impacts that are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current project, and the effects of probable future projects.)	☐	☐	☐	☒
c. Does the project have environmental effects which will cause substantial adverse effects on human beings, either directly or indirectly?	☐	☐	☐	☒

EXPLANATION OF ISSUES

1. AESTHETICS. Would the project:

a. Have a substantial adverse effect on a scenic vista?

Discussion of Effects: Section VI.M of the CCC SP EIR did not identify any significant visual impacts of the project but did recommend seven (7) mitigation measures for the project related to building appearance and landscaping with implementation of the CCC SP. Those measures are outlined in Table A and are referenced as CCCSP EIR Measures 18, 36, 37, 68, 69, 70, and 73 in the first column of the table.

TOP EIR concludes… "the scale and design of the City under TOP 2050 would not deter views of the San Gabriel Mountains which are the dominant scenic resource in the City of Ontario. Regulations such as the City's Municipal Code and policies *[of TOP]* would ensure that increased development would not impact scenic vistas" (SEIR p. 5.1-5). TOP Policy CD1-5 requires all major north-south streets be designed and redeveloped to feature views of the San Gabriel Mountains.

The project site is located just east of the OIA and includes the following north-south streets, Haven Avenue and South Commerce Way, consistent with the Functional Roadway Classification Plan (Figure M-2) of the Mobility Element within TOP Policy Plan. The CCC SP and surrounding area are planned for industrial and commercial uses. Major land uses in the surrounding area are non-residential (e.g., industrial and commercial). The proposed project will permit warehouse, distribution, assembly, and/or manufacturing similar to uses that already exist in the surrounding area and are consistent with TOP Policy Plan. The new uses are already allowed by TOP and do not obstruct views of the San Gabriel Mountains from onsite or surrounding north-south streets. No adverse impacts are anticipated in relation to the project.

Therefore, the project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in TOP EIR. No changes or additions to TOP EIR analyses are necessary.

Mitigation: No project specific mitigation is required.

b. Substantially damage scenic resources, including, but not limited to, trees, rock outcroppings and historic buildings within a state scenic highway?

Discussion of Effects: The CCC SP EIR did not identify any scenic resources on the site and did not identify any scenic highways in the area. The EIR concluded the project had no impacts and no mitigation was required.

TOP EIR states…"The Euclid Corridor and the Mission Boulevard Corridor are the primary scenic corridors in Ontario. These are not State-designated scenic highways, and Ontario does not have any State scenic highways through or in the vicinity of the City" (SEIR 5.1-6). The City is served by three freeways: I-10, I-15, and SR-60. I-10 and SR-60 traverse the northern and central portion of the City, respectively, in an east–west direction. I-15 traverses the northeastern portion of the City in a north–south direction. The project site is just south of the I-10 and west of the I-15 freeways. These segments of I-10, I-15, and SR-60 have not been officially designated as scenic highways by the California Department of Transportation (Caltrans) or the City.

The project site is vacant and contains no historic buildings or any scenic resources, nor are there any in the vicinity of the project site. Therefore, it will not result in adverse environmental impacts.

The project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in TOP EIR. No changes or additions to the EIR analyses are necessary.

Mitigation: No project specific mitigation is required.

c. In non-urbanized areas, substantially degrade the existing visual character or quality of public views of the site and its surroundings (Public views are those that are experienced from publicly accessible vantage point). If the project is in an urbanized area, would the project conflict with applicable zoning and other regulations governing scenic quality?

Discussion of Effects: Section VI.M of the CCC SP EIR did not identify any significant visual quality or characteristics of the area. Nevertheless, the EIR did recommend seven (7) mitigation measures related to building architecture and landscaping to be consistent with the CCC SP. Those measures are outlined in Table A and are referenced as CCCSP EIR Measures 18, 36, 37, 68, 69, 70, and 73 in the first column of the table.

TOP EIR characterized this area as having existing industrial development and the area contained urban land uses including industrial development planned on and around the project site. TOP EIR concluded that future development in the City, which includes light industrial uses planned on the project site, would not degrade the existing visual character or quality of the site or its surroundings and no mitigation was required (SEIR p. 5.1-7).

TOP EIR also states…"future development under the *[TOP 2050]* would still be required to adhere to the City's Development Code, which includes general development requirements for development density, screening and setback, signing, landscaping, lighting, height limitations, and other aspects related to the aesthetic of the City. Finally…the Development Code is enacted to assist implementation of planning, zoning, development, subdivision, and environmental laws and the TOP and to achieve the proper arrangement of land uses envisioned in TOP. Because it is the overriding planning document for the City, and because it is intended to improve consistency with existing regulations and conditions, the…TOP 2050…would not have a significant impact with respect to being inconsistent with policies or regulations governing scenic quality" (SEIR p. 5-1-7).

The project site is located in an area that is characterized by industrial development and is surrounded by urban land uses. The project is consistent with TOP land uses and zoning so it would not degrade the existing visual character or quality of the site or its surroundings.

The proposed project will be required to comply with the policies of the Community Design Element of TOP Policy Plan and zoning designations on the property, as well as the design requirements of the CCC SP. Therefore, no adverse visual impacts are anticipated, and the project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in TOP EIR. No changes or additions to TOP EIR analyses are necessary.

Mitigation: No project specific mitigation is required.

d. Create a new source of substantial light or glare that would adversely affect day or nighttime views in the area?

Discussion of Effects: The CCC SP EIR did not address lighting although one (1) of the mitigation measures in Section VI.M stated a unified lighting and signage program should be provided throughout the project.

TOP EIR concluded that new development throughout the City would increase ambient light levels over time as development occurred, but that compliance with Development Code lighting requirements would reduce potential impacts to less than significant levels, and no mitigation was required (SEIR p. 6.1-7).

The project proposes the development of nine light industrial buildings consistent with TOP and CCC SP land use designations. New development will have architectural and security lighting on buildings and in parking lots, and streets that do not yet have street lighting will have new lighting installed. Pursuant to the requirements of the CCC SP and the City's Development Code, onsite lighting will be shielded, diffused or indirect, to avoid glare to onsite users, pedestrians, and motorists. In addition, lighting fixtures will be selected and located to confine the area of illumination to within each building site and minimize light spillage. The OIA has reviewed the project plans and determined they have no concerns regarding lighting.

Site lighting plans will be subject to review by the Planning Department and Police Department prior to issuance of building permits (pursuant to the City's Building Security Ordinance). Therefore, no adverse impacts are anticipated.

The project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in TOP EIR. No changes or additions to TOP EIR analyses are necessary.

Mitigation: No project specific mitigation is required.

2. AGRICULTURE AND FOREST RESOURCES. In determining whether impacts to agricultural resources are significant environmental effects, lead agencies may refer to the California Agricultural Land Evaluation and Site Assessment Model prepared by the California Department of Conservation as an optional model to use in assessing impacts on agriculture and farmland. In determining whether impacts to forest resources, including timberland, are significant environmental effects, lead agencies may refer to information compiled by the California Department of Forestry and Fire Protection regarding the state's inventory of forest land, including the Forest and Range Assessment Project and the Forest Legacy Assessment project; and forest carbon measurement methodology provided in Forest Protocols adopted by the California Air Resources Board. Would the project:

a. Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program (FMMP) of the California Resources Agency, to non-agricultural use?

Discussion of Effects: Section VI.K of the CCC SP EIR addresses geology and soils and does indicate the project site is underlain by prime agricultural soils (site previously supported vineyards).

The CCC SP EIR did not identify any significant agricultural resources on the project site although it was prepared prior to the creation of the FMMP website. The EIR indicated the area had been used years ago for agriculture, as had much of the City, but was now transitioning to urban light industrial land uses. No impacts were anticipated, and no mitigation was recommended. The EIR concluded the project will result in the loss of prime agricultural soils but does not recommend any mitigation and does not indicate if this loss is a significant environmental impact of the project.

TOP EIR states that the City is underlain by prime agricultural soils in a number of areas but that the City envisions a natural transition of these lands to suburban and urban uses over time based on market forces and the desires of property owners. The EIR concluded TOP…"would have no direct, indirect, and cumulative impacts relating to conversion of Farmland to non-agricultural use" (SEIR p. 5.2-12). The EIR concluded this because those changes had already been evaluated in the 2010 TOP which represents the baseline condition for the 2050 TOP. TOP EIR did not anticipate these changes to be a significant adverse impact and as a result did not recommend mitigation.

The project site is presently vacant and does not contain any agricultural uses. Further, the site is identified as Urban and Built-up Land on the map prepared by the California Resources Agency as part of the FMMP. Based on the information above, no adverse environmental impacts from the project related to prime farmland are anticipated.

Therefore, the project will have no significant impacts on agricultural resources and no mitigation is required. The project will not result in any new, increased or substantially different impacts other than those previously considered and addressed in TOP EIR. No changes or additions to TOP EIR analyses are necessary.

Mitigation: No project specific mitigation is required.

b. Conflict with existing zoning for agricultural use, or a Williamson Act contract?

Discussion of Effects: The CCC SP EIR did not identify any agricultural zoning or current agricultural uses on the project site (i.e., at that time in 1981) although it did indicate the site supported vineyards in the past. The EIR did not indicate if the site was under a Williamson Act (agricultural preserve) contract, and current chain of title reports for the project parcels do not indicate any were or are present on the site now.

TOP EIR indicates that some areas of the City were used for agriculture in the past, including the general project area. However, the City currently has no agricultural land use or zoning designations. Figure 5.2-2 of TOP EIR indicates there are a number of Williamson Act contracts in the City, but they are in the southern portion of the City which also is transitioning to suburban land uses. The project area has been transitioning to urban light industrial land uses for some time, and no Williamson Act contracts are active in

this area at present. In this regard, no significant impacts were anticipated in TOP EIR and no mitigation was recommended.

The project site is not zoned for agricultural use; the site is designated within the CCC SP for light industrial uses which are permitted under TOP. Future development will be consistent with the development standards and land uses allowed under TOP and CCC SP.

Therefore, no impacts to agricultural uses are anticipated, nor will there be any conflict with Williamson Act contracts. The project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in TOP EIR. No changes or additions to TOP EIR analyses are necessary.

Mitigation: No project specific mitigation is required.

c. Conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code section 12220(g)), timberland (as defined by Public Resources Code section 4526), or timberland zoned Timberland Production (as defined by Government Code section 51104(g)?

Discussion of Effects: The CCC SP EIR did not identify any forest land on the project site. Therefore, there are no impacts and no mitigation is required.

TOP EIR indicated there were no forest resources in the City, so development of planned land uses in the City, including the light industrial uses of the project site, would not result in any impacts related to rezoning of forest or timberland to non-forest use.

The project proposes nine warehouse buildings consistent with the light industrial land uses allowed under TOP and CCC SP. The project would not result in the rezoning of forest land, timberland, or timberland zoned Timberland Production because such land use designations do not exist within the City.

Therefore, no impacts to forest or timberland are anticipated and the project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in TOP EIR. No changes or additions to TOP EIR analyses are necessary.

Mitigation: No project specific mitigation is required.

d. Result in the loss of forest land or conversion of forest land to non-forest use?

Discussion of Effects: The CCC SP EIR did not identify any forest resources on the site.

TOP EIR indicated there were no forest resources in the City, so development of planned land uses, including the light industrial uses of the project site, would not result in any impacts related to the conversion of forest land to non-forest use (SEIR p. 5.2-13).

There is currently no land in the City that qualifies as forest land as defined in Public Resources Code section 12220(g), including the project site. Neither TOP nor the City's Zoning Code provide designations for forest land anywhere in the City.

Therefore, the proposed project would not result in the loss or conversion of forest land. The project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in TOP EIR. No changes or additions to TOP EIR analyses are necessary.

Mitigation: No project specific mitigation is required.

e. Involve other changes in the existing environment, which, due to their location or nature, could individually or cumulatively result in loss of farmland to non-agricultural use or conversion of forest land to non-forest use?

Discussion of Effects: The CCC SP EIR did not identify any agricultural zoning or current agricultural uses on the project site (i.e., in 1981) although it did indicate the site supported vineyards in the past. The CCC SP EIR did not identify any forest resources on the site. The EIR stated the project would remove prime agricultural soils but did not make a conclusion if that impact was significant and did not recommend any mitigation in that regard.

TOP EIR indicated future development would not conflict with agricultural uses and would not result in conversion of farmland to non-agricultural use. It also concluded there is no forest land in Ontario, and therefore the project would not result in conversion of forest land to non-forest use (SEIR p. 5.2-14). TOP

envisions a natural transition of these lands to suburban and urban uses over time based on market forces and the desires of property owners. TOP EIR indicated there were no forest resources in the City, so development of planned land uses, including the light industrial uses of the project site, would not result in any cumulative impacts related to loss of forest land.

Implementation of the project would not result in changes to the existing environment other than those previously addressed in TOP EIR. While conversion of farmland increases the potential for adjacent areas to also be converted from farmland to urban uses, there are no agricultural uses occurring onsite or in the vicinity and the project will not directly or indirectly result in conversion of farmland. No new cumulative impacts beyond those identified in TOP EIR would result from project implementation. As a result, the project will not result in loss of farmland to non-agricultural use.

Additionally, there is currently no land in the City that qualifies as forest land as defined in Public Resources Code Section 12220(g). Neither TOP nor the City's Zoning Code provide designations for forest land.

Based on available data, the proposed project would not result in changes to the existing environment that would affect forest land. There will be no impacts and no mitigation is required. The project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in TOP EIR. No changes or additions to TOP EIR analyses are necessary.

Mitigation: No project specific mitigation is required.

3. AIR QUALITY. Where available, the significance criteria established by the applicable air quality management or air pollution control district may be relied upon to make the following determinations. Would the project:

a. Conflict with or obstruct implementation of the applicable air quality plan?

Discussion of Effects: Section VI.A of the CCC SP EIR addressed air quality but did not refer to any air quality management plan in place at that time (1981). In addition, the EIR did not make a specific conclusion regarding the significance of project-related air pollutant emissions compared to any significance thresholds from any air quality planning document.

The project site was analyzed in the current (2022) and previous (2010) TOP EIR as industrial land uses surrounded on the north, east, and south by industrial uses and on the west by the OIA. TOP EIR concluded future land uses, including the proposed project, may conflict with or obstruct implementation of the applicable 2016 Air Quality Management Plan (AQMP) issued by the South Coast Air Quality Management District (SCAQMD). TOP EIR concluded that future development and the cumulative air pollutant emissions would exceed the SCAQMD daily thresholds. As noted in the previous TOP EIR (Section 5.3) from 2010, pollutant levels in the City already exceeded Federal and State standards at that time. To reduce pollutant levels, the City is actively participating in efforts to enhance air quality by implementing Control Measures in the AQMP for local jurisdictions within the South Coast Air Basin (SCAB).

TOP EIR in 2022 evaluated the development of 87,620 residential units, 40,356,075 square feet of mixed-use development, 34,934,684 square feet of retail/service uses, 22,116,283 square feet of business park use, 159,998,711 square feet of industrial use, and 257,405,754 square feet of other uses within the area bounded by the current proposed project.

The proposed project is consistent with TOP land use designations upon which the AQMP is based. Furthermore, the project is consistent with the City's participation in the AQMP and will not conflict with or obstruct implementation of the plan. The project will be required to implement TOP EIR Mitigation Measures AQ 3-1, 3-2, and 3-3 which include fugitive dust control measures pursuant to SCAQMD's Rule 403, use of Tier 3 construction equipment, proper service and maintenance of construction equipment, limiting nonessential idling of construction equipment, use of Super-Compliant volatile organic compounds (VOC) paints for coating and architectural surfaces, providing non-vehicular access options, and calculate and reduce any significant health risks from future development on nearby sensitive receptors (MM 3-1 through 3-3, respectively). The project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in TOP EIR. No changes or additions to TOP EIR analyses are necessary.

Mitigation: No project specific mitigation is quired. The following measures from TOP EIR are applicable to the proposed project:

AQ 3-1: Prior to discretionary approval by the City of Ontario for development projects subject to CEQA (California Environmental Quality Act) review (i.e., nonexempt projects), project applicants shall prepare and submit a technical assessment evaluating potential project construction-related air quality impacts to the City of Ontario Planning Department for review and approval. The evaluation shall be prepared in conformance with South Coast Air Quality Management District (South Coast AQMD) methodology for assessing air quality impacts. If construction-related criteria air pollutants are determined to have the potential to exceed the South Coast AQMD–adopted thresholds of significance, the City of Ontario Building Department shall require feasible mitigation measures to reduce air quality emissions. Potential measures shall be incorporated as conditions of approval for a project and may include:

- Require fugitive dust control measures that exceed South Coast Air Quality Management District's Rule 403, such as:
  - Requiring use of nontoxic soil stabilizers to reduce wind erosion.
  - Applying water every four hours to active soil disturbing activities.
  - Tarping and/or maintaining a minimum of 24 inches of freeboard on trucks hauling dirt, sand, soil, or other loose materials.
- Using construction equipment rated by the United States Environmental Protection Agency as having Tier 4 interim or higher exhaust emission limits.
- Ensuring construction equipment is properly serviced and maintained to the manufacturer's standards
- Limiting nonessential idling of construction equipment to no more than five consecutive minutes.
- Using Super-Compliant VOC paints for coating of architectural surfaces whenever possible. A list of Super-Compliant architectural coating manufactures can be found on the South Coast Air Quality Management District's website at: http://www.aqmd.gov/prdas/brochures/SuperCompliant_AIM.pdf. These identified measures shall be incorporated into all appropriate construction documents (e.g., construction management plans) submitted to the City and shall be verified by the City's Planning Department.

AQ 3-2: The City of Ontario shall evaluate new development proposals within the City and require all developments to include access or linkages to alternative modes of transportation, such as transit stops, bike paths, and/or pedestrian paths (e.g., sidewalks).

AQ-3-3: Prior to discretionary approval by the City of Ontario for development projects subject to CEQA (California Environmental Quality Act) review (i.e., nonexempt projects), project applicants shall prepare and submit a technical assessment evaluating potential project operation-phase-related air quality impacts to the City of Ontario Planning Department for review and approval. The evaluation shall be prepared in conformance with South Coast Air Quality Management District (South Coast AQMD) methodology in assessing air quality impacts. If operation-related air pollutants are determined to have the potential to exceed the South Coast AQMD– adopted thresholds of significance, the City of Ontario Planning Department shall require that applicants for new development projects incorporate mitigation measures to reduce air pollutant emissions during operational activities. The identified measures shall be included as part of the conditions of approval. Possible mitigation measures to reduce long-term emissions could include but are not limited to the following:

- For site-specific development that requires refrigerated vehicles, the construction documents shall demonstrate an adequate number of electrical service connections at loading docks for plug-in of the anticipated number of refrigerated trailers to reduce idling time and emissions.
- Applicants for manufacturing and light industrial uses shall consider energy storage and combined heat and power in appropriate applications to optimize renewable energy generation systems and avoid peak energy use.
- Site-specific developments with truck delivery and loading areas and truck parking spaces shall include signage as a reminder to limit idling of vehicles while parked for loading/unloading in accordance with California Air Resources Board Rule 2845 (13 CCR Chapter 10 sec. 2485).

- Provide changing/shower facilities as specified in Section A5.106.4.3 of CALGreen (Nonresidential Voluntary Measures).
- Provide bicycle parking facilities per Section A4.106.9 of CALGreen (Residential Voluntary Measures).
- Provide preferential parking spaces for low-emitting, fuel-efficient, and carpool/van vehicles per Section A5.106.5.1 of CALGreen (Nonresidential Voluntary Measures).
- Provide facilities to support electric charging stations per Section A5.106.5.3 and Section A5.106.8.2 of CALGreen (Nonresidential Voluntary Measures; Residential Voluntary Measures).
- Applicant-provided appliances shall be Energy Star–certified appliances or appliances of equivalent energy efficiency (e.g., dishwashers, refrigerators, clothes washers, and dryers). Installation of Energy Star–certified or equivalent appliances shall be verified by the City during plan check.

b. Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard?

Discussion of Effects: Section VI.A of the CCC SP EIR concluded the overall project would emit a substantial amount of air pollutant emissions over the short- and long-term and considered them as a percentage of regional (basin-wide) emissions. The EIR did not make a specific conclusion regarding the significance of project-related air pollutant emissions compared to any significance thresholds, it simply presented the emissions in pounds/day before any of the recommended mitigation measures were applied. The EIR recommended six (6) mitigation measures to help limit short-term emissions during construction and seven (7) measures to help limit long-term emissions. However, the language of the measures was permissive rather than mandatory and all of them have since been incorporated into regulatory compliance and standard conditions of approval by the City (see Table A for CCCSP EIR Measures 1-6 and 7-13, respectively, in column 1 of the table).

TOP EIR concluded that air pollutant emissions from future development within the City consistent with TOP land uses, including the proposed project, would exceed established SCAQMD thresholds. TOP EIR evaluated the development of 87,620 residential units, 40,356,075 square feet of mixed-use development, 34,934,684 square feet of retail/service uses, 22,116,283 square feet of business park use, 159,998,711 square feet of industrial use, and 257,405,754 square feet of other uses within the area bounded by the current proposed project. **Table 6** summarizes the operational air quality emissions that would result from the currently approved land uses on the proposed project site. Table 6 demonstrates that the land uses on the project site under the approved TOP would exceed the SCAQMD regional thresholds of significance for emissions of VOC and NOx while TOP EIR indicates emissions of all land uses would exceed SCAQMD regional thresholds and a statement of overriding considerations was required.

Table 6: Currently Approved Maximum Daily Operation Emissions

Pollutant Characteristics	Emissions (pounds per day)					
	VOC	NOx	CO	SO_x	PM_{10}	$PM_{2.5}$
Transportation Sources	29,625	27,829	222,058	582	4,557	4,512
Area Sources	23,781	3,548	46,604	127	7,019	6,757
Maximum Daily Emissions	53,406	31,367	157,662	709	11,576	11,269
SCAQMD Regional Threshold	55.00	55.00	550.00	150.00	150.00	55.00
Threshold Exceeded?	**YES**	**YES**	**YES**	**YES**	**YES**	**YES**

Source: Table 1, Urban Crossroads, March 2022

Mitigation Measures AQ 3-1, 3-2, and 3-3 as outlined in Section 3.a have already been adopted by the City that would facilitate continued City cooperation with the SCAQMD and Southern California Association of Governments (SCAG) to reduce short-term construction emissions, help promote regional air quality improvement goals and energy conservation design and development techniques, encourage alternative modes of transportation, and implement transportation demand strategies. However, TOP EIR

concluded that air pollutant impacts would be significant even with implementation of the recommended mitigation measures (MM AQ 3-1 through 3-3).

A detailed air quality assessment (*AQ Study*) of the proposed project was conducted by Urban Crossroads in February 2022, to identify project-specific air pollutant impacts and recommend additional mitigation if necessary (i.e., other than those applicable measures already identified in TOP EIR). The *AQ Study* (Appendix A) determined the project will not result in a cumulatively considerable net increase of any criteria pollutant for which the region is in non-attainment under an applicable federal or state ambient air quality because the project is consistent with the existing Industrial designation in the CCC SP.

Construction. Table 7 shows the air pollutants estimated in the *AQ Study* for construction of the proposed project. Table 7 shows that the proposed project's construction-related activity would not exceed the applicable regional significance thresholds and a less than significant impact would occur. No mitigation beyond that identified in TOP EIR would be required.

Table 7: Project Regional Construction Emissions

Pollutant Characteristics	Emissions (pounds per day)					
	VOC	NOx	CO	SO_x	PM_{10}	$PM_{2.5}$
Maximum Daily Emissions	36.40	84.48	189.09	0.64	56.07	16.50
SCAQMD Regional Threshold	75.00	100.00	550.00	150.00	150.00	55.00
Threshold Exceeded?	No	No	No	No	No	No

Source: Table 2, Urban Crossroads, Feb 2022

Operation. Operational emissions associated with the proposed project are summarized in **Table 8** which indicates Project emissions would exceed the SCAQMD regional thresholds of significance for emissions of VOC and NOx. However, the VOC and NOx exceedances that would occur as a result of the proposed project have already been estimated and considered in TOP EIR (see below).

Table 8: Project Regional Operation Emissions

Pollutant Characteristics	Emissions (pounds per day)					
	VOC	NOx	CO	SO_x	PM_{10}	$PM_{2.5}$
Transportation Sources	28.65	200.90	324.75	1.47	104.22	29.84

Maximum Daily Emissions	128.70	224.69	337.30	1.59	105.55	31.13
SCAQMD Regional Threshold	55.00	55.00	550.00	150.00	150.00	55.00
Threshold Exceeded?	**YES**	**YES**	No	No	No	No

Source: Table 6, Urban Crossroads, Feb 2022

The project will comply with Mitigation Measures AQ 3-1 through 3-3 outlined in TOP FEIR as recommended by the SCAQMD, resulting in project level impacts that are less than significant with mitigation though the overall impact would remain, as discussion in the TOP EIR, significant and unavoidable. The project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in TOP EIR. No changes or additions to TOP EIR analyses are necessary.

Mitigation: Implement Mitigation Measures AQ 3-1, 3-2, and 3-3 as described in Section 3.a above, otherwise, no project specific mitigation is required.

c. Expose sensitive receptors to substantial pollutant concentrations?

Discussion of Effects: Section VI.A of the CCC SP EIR examined potential carbon monoxide hot spots but did not evaluate impacts of any more current localized air pollutants like toxic air contaminants

(TACs) or dust during construction because those requirements and methodologies were not in place at the time that EIR was certified (1981).

TOP EIR concluded that development and operation of new land uses accommodated under TOP 2050 proposed land use plan could generate new sources of localized criteria air pollutant and TACs in the City from area/stationary sources and mobile sources.

The subject site was previously analyzed by TOP EIR as an industrial use and is surrounded on the north, west, and south by industrial uses and on the east by the Interstate 15 Freeway. As discussed in Section 5.3 of TOP EIR, the proposed project is within a non-attainment region of the SCAB. The *AQ Study* included an assessment of potential health risks from the project on nearby sensitive receptors.

Sensitive Receptors. Certain land uses contain persons especially susceptible to air pollutants (children, the elderly, sick persons, etc.). These types of "sensitive" land uses include residences, day care centers, hospitals, etc. and are referred to as sensitive receptors. The *AQ Study* evaluated localized air quality impacts at sensitive receptors nearest the project site. All distances were measured from the project site boundary to the outdoor living areas (e.g., backyards) or at the building façade, whichever is closer to the project site. The selection of receptor locations was based on Federal Highway Administration (FHWA) guidelines and is consistent with additional guidance provided by the California Department of Transportation (Caltrans) and the Federal Transit Administration (FTA). The locations of the eleven (11) sensitive receptor sites and distances to the various project building sites are shown in **Figure 5**, Sensitive Receptor Locations, and are described below (shortest distance to project building shown in parenthesis):

R1: Location R1 represents the existing residence at 3141 Inland Empire Boulevard. Since there are no private outdoor living areas (backyards) facing the project site, receptor R4 is placed at the residential building façade (3,962 feet).

R2: Location R2 represents the Embassy Suites by Hilton Ontario Airport hotel at 3663 East Guasti Road. Receptor R2 is placed at the building façade (1,421 feet).

R3: Location R3 represents the Rodeway Inn Ontario Mills Mall hotel. Receptor R3 is placed at the building façade (3,272 feet).

R4: Location R4 represents the Ontario Airport Car Rental facility located at Rental Car Road. Receptor R4 is placed at the building façade (195 feet).

R5: Location R5 represents the Biagi Brothers Transportation facility at 3655 East Airport Drive. Receptor R5 is placed at the building façade (172 feet).

R6: Location R6 represents the westernmost building of the Timberland distribution center at 3950 East Airport Drive. Receptor R6 is placed at the building façade (126 feet).

R7: Location R7 represents the easternmost building of the Timberland distribution center at 3950 East Airport Drive. Receptor R7 is placed at the building façade (70 feet).

R8: Location R8 represents the Cubework coworking space building located at 1001 Doubleday Avenue. Receptor R8 is placed at the building façade (104 feet).

R9: Location R9 represents the EaZy BrandZ store located at 4060 East Jurupa Street. Receptor R9 is placed at the building façade (73 feet).

R10: Location R10 represents the Haliburton International Foods, Inc. food products supplier facility located at 3855 East Jurupa Street. Receptor R10 is placed at the building façade (116 feet).

R11: Location R11 represents the Pacific Coast Warehouse facility located at 3601 East Jurupa Street. Receptor R11 is placed at the building façade (85 feet).

The SCAQMD recommends that the nearest sensitive receptor be considered when determining the project's potential to cause an individual or cumulatively significant impact. The nearest land use to the project site where an individual could remain for 24 hours (R2) has been used to determine the worst case localized construction and operational air quality impacts for large and small particulate matter emissions (PM_{10} and $PM_{2.5}$, respectively) since their thresholds are based on a 24-hour averaging time. The LST analysis evaluated potential impacts from construction of each of the proposed warehouse buildings on the various sensitive receptors around the Project site, considering the location of the closest sensitive receptor to each of the building sites (see Figure 5).

Figure 5: SENSITIVE RECEPTOR LOCATIONS

Local Significance Thresholds (LSTs) for Construction. The SCAQMD has established that impacts to air quality are significant if there is a potential to contribute to or cause localized exceedances of the federal and/or state ambient air quality standards (NAAQS/CAAQS). Collectively, these are referred to as Localized Significance Thresholds (LSTs). LSTs represent the maximum emissions from a project that will not cause or contribute to an exceedance of the most stringent applicable federal or state ambient air quality standard at the sensitive receptor. The SCAQMD states that lead agencies can use the LSTs as an indicator of significance in its air quality impact analyses. For analytical purposes, emissions associated with peak site preparation and grading activities are considered for purposes of LSTs since these phases represent the maximum localized emissions that would occur. Any other construction phases of development that overlap would result in lesser emissions and consequently lesser impacts than what is disclosed herein. The SCAMQD's LST Methodology is used to determine localized construction and operational air impacts for emissions of oxides of nitrogen (NOx) and carbon monoxide (CO) because the averaging periods for these pollutants are shorter (8 hours or less) so it is reasonable to assume that an individual could be present adjacent to these sites and be exposed to these pollutants for periods of one to eight hours.

Table 9: LST Construction Impacts

Phase/ Building	Compliance Activity	Emissions (pounds per day)			
		NOx	CO	PM_{10}	$PM_{2.5}$

Source: Table 5, Urban Crossroads, February 2022

Table 9 demonstrates that the proposed project's construction-related activity would not exceed the applicable regional significance thresholds and a less than significant impact would occur. No mitigation beyond that identified in TOP EIR would be required of the project (see AQ 3-1).

LSTs for Operations. Localized operational emissions associated with the proposed project are summarized on **Table 10**, which concludes the proposed project's localized operational-related activity would not exceed the applicable regional significance thresholds and a less than significant impact would occur. No mitigation beyond the required mitigation from TOP EIR would be required (see AQ-2 and AQ-3).

Source: Table 7, Urban Crossroads, February 2022

TOP EIR Mitigation Measure AQ 3-3 requires new development to provide its own air quality studies consistent with SCAQMD and other applicable guidelines to determine specific air quality impacts of a proposed project on a specific site. Future development may be required to implement all feasible mitigation measures such as distance buffers or the installation of high efficiency Minimum Efficiency Reporting Value (MERV) filters, as appropriate, to protect future sensitive receptors from harmful concentrations of air pollutants as a result of proximity to existing air pollution sources. As shown in Tables 9 and 10, the *AQ Study* determined the proposed project would not result in any new impacts beyond those identified in TOP EIR and no project specific mitigation was required for sensitive receptors. The project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in TOP EIR. No changes or additions to TOP EIR analyses are necessary.

Mitigation: No project specific mitigation is required.

d. Result in other emissions (such as those leading to odors) adversely affecting a substantial number of people?

Discussion of Effects: Section VI.A of the CCC SP EIR addressed air quality but did not evaluate the potential for other emissions or odors to affect humans in the project area. No conclusions were made regarding these impacts and no mitigation was recommended in this regard.

TOP EIR concluded TOP would have a less than significant direct, indirect, and cumulative impacts relating to other emissions, such as those leading to odors (SEIR p. 5.3-47). The subject site was previously analyzed by TOP EIR as an industrial use and is surrounded on the north, east, and south by industrial uses and on the west by the OIA. The warehouse-related uses proposed on the project site will not create objectionable odors. Further, the project shall comply with the policies of the Ontario Municipal Code and TOP regarding solid waste storage and disposal which will prevent potential odor impacts. Therefore, no adverse impacts are anticipated.

The project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in TOP EIR. No changes or additions to TOP EIR analyses are necessary.

Mitigation: No project specific mitigation is required.

4. BIOLOGICAL RESOURCES. Would the project:

a. Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?

Discussion of Effects: The CCC SP EIR indicated the site was vacant and did not support any listed or otherwise sensitive species of plants or animals at the time the EIR was prepared in 1981. The EIR did not make a firm conclusion that the project would have a significant impact on any biological resources but it did recommend three (3) “permissive” mitigation measures (i.e., actions suggested but not required), which are outlined in Table A.

TOP The EIR concluded that “no sensitive plant species have been observed in Ontario, and the only such species that are considered potentially present in the City have a low potential due to lack of suitable habitat. Therefore, implementation of TOP 2050 would not have substantial adverse impacts on sensitive plant species” (SEIR p. 5.4-30). The project site was previously analyzed by TOP EIR as an industrial use.

According to TOP EIR, the project site is located within an area that has been identified as having the potential to contain species identified as a candidate, sensitive, or special status species in local or

regional plans, policies or regulations or by the CDFW or USFWS. These species include: the DSFLF, coast horned lizard, burrowing owl, and various species of nesting birds protected under the Migratory Bird Treaty Act. The proposed project is consistent with TOP land use designation and zoning classification for the site (industrial warehousing). However, there is a potential for burrowing owl and nesting birds to be on the project site. Based on governmental database information, TOP EIR did not identify a potential for any listed or otherwise sensitive species to be present on the project site.

The following biological studies/surveys, all of which are included in Appendix B of this report, were prepared for the proposed project site:

- *Burrowing Owls at Ontario International Airport, Biology, Status, Regulatory Setting, and Mitigation Options.* Prepared by Helix Environmental/Kidd Biological, Inc. (HE/KB) dated 2020.
- *California Logistics Center, Pre-Construction Clearance Survey for Burrowing Owl and Other Nesting Bird Species.* Prepared by Wood Consulting (WC) dated August 14, 2021.
- *First Year Focused Survey for Delhi Sands Flower-Loving Fly on a 151-Acre OIA Group 1 Properties in Ontario.* Prepared by Osborne Biological Consulting dated October 26, 2019.
- *Second Year Focused Survey for Delhi Sands Flower-Loving Fly on a 151-Acre OIA Group 1 Properties in Ontario.* Prepared by Osborne Biological Consulting (OBC) dated October 7, 2020.
- *Updated Delhi Sands Flower-Loving Fly Survey,* Fall 2022.

The site is currently undeveloped land that is cleared regularly for weed abatement and fire prevention. Due to its vacant condition and surrounding urban land uses, the project site does not contain or support any listed or otherwise sensitive species of plants or animals other than those discussed below. Species of concern that may have the potential to occur on the project site include the Delhi Sands flower-loving fly (DSFLF), Coast Horned Lizard, Burrowing Owl, and various species of nesting birds protected under the Migratory Bird Treaty Act.

Focused onsite surveys were conducted for the DSFLF in 2019-2022. This species is federally listed as endangered and is restricted (endemic) to the Colton Dunes (consisting of Delhi soil series). Delhi soils are fine sandy soils, often wholly or partly sand dunes stabilized by sparse native vegetation. These soils cover approximately 40 square miles in Riverside and San Bernardino Counties, underlying portions of the City and other neighboring cities. By 1997, studies indicated that over 97 percent of the area containing this soil type had been converted to agriculture, developed for urban or commercial uses, or otherwise altered. The DSFLF has never been observed in the City. In the past, this species has been found to inhabit areas with sand dune conditions that are underlain by Delhi Sands soils (NRCS[2] Series DaD2), Onsite surveys conducted over several years (2019-2022) based on the multi-year protocols established by the USFWS have determined the species is “absent from the site” (OBC 2019-2022)(Appendix B).

The Coast horned lizard is found in the surrounding region where physical conditions are present to support it. However, no sand dunes or dune-like conditions are present in this portion of the City or on the project site (per TOP EIR), so this species has a negligible potential to actually occur onsite.

At present the only other significant biological resource identified on the site is the burrowing owl (*Athene cunicularia*). This bird species is very opportunistic and often inhabits disturbed land quickly by taking over existing small mammal burrows. Several biological resource assessments have been prepared for the project site, most focusing on the presence or the extent/distribution of burrowing owl on the site or adjacent land. The Helix report from 2020 indicated the subject owls on the adjacent OIA property along the east side of Haven Avenue are included in the list of 45 documented owl records for the general area. All of these owl locations are surrounded by development and located on small, highly fragmented sites that do not provide long-term conservation value for the owl due to planned future development and predation pressures. The review of occupied owl sites within a few miles of the OIA property does not indicate any known conserved sites managed for owls that appear to provide any long-term conservation value for the species. Some owl pairs and individuals are known to occupy sites nearby, but these sites are also

[2] Natural Resources Conservation Service (NRCS) formerly the Soil Conservation Service (SCS)

surrounded by development and will not provide meaningful long-term contribution to the status of burrowing owls in this region (HE/KB 2020).

Burrowing owl stay close to their burrows and generally close to the ground for foraging or escaping predators. As a result, burrowing owls are seldom struck by aircraft and certainly not at high rates like geese, red-tailed hawks and vultures. Owls utilize burrows previously constructed by small mammals (e.g., squirrels and rabbits) in the vicinity of the airfields. However, populations of burrowing owl do attract other avian predators such as red-shouldered hawks, Cooper's hawks, and turkey vultures. Hawks and vultures are struck by aircraft at the highest rates of avian species and cause the most damage per strike. These species are often involved in aircraft strikes while they are hover hunting or circling over prey species on the ground under approach or departure routes. Bird strikes in these situations (landing and take-off) can lead to catastrophic events and hundreds of bird deaths (HE/KB 2020).

Allowing an owl population to remain within an airport landing and takeoff corridor is ignoring a serious wildlife hazard. Eviction or collapsing burrows in an area to force the owls to move out of the immediate area is a temporary solution that is costly to implement and requires extensive monitoring to ensure burrowing owls do not return to the area. Unfortunately, the owls will move only a short distance away to other open habitats within the airport area and will continue to create bird air strike hazards. Eviction has proven to not be a viable solution, particularly near a major airport. The only viable solutions are active relocation or a direct reduction of the local owl population (HE/KB 2020).

CDFW staff have communicated with burrowing owl researchers and made it very clear not to encourage burrowing owl to reside at or adjacent to commercial or military airfields. Consequences of bird air strikes are too severe and should be avoided. Given the severity of bird air strike incidents, active relocation is the most appropriate technique to conserve breeding pairs (HE/KB 2020).

Based on the presence of the owl in 2019 and 2020 reports, a breeding study starting in March 2022 is being conducted to confirm the continued presence of the species and to determine the number of owls/owl pairs that need to be relocated according to CDFW protocols. Consistent with the TOP 2050 SEIR, the project will comply with existing regulations and TOP 2050 policies through implementation of a Burrowing Owl Relocation Program (BRP), which is based on the most recent site-specific technical studies. Accordingly, compliance with existing plans, laws and regulations will ensure potential impacts to burrowing owl will be less than significant and no mitigation is required.

a Burrowing Owl Relocation Program (BRP) which is based on the most recent site-specific technical studies. With implementation of the BRP, potential impacts to burrowing owl will be less than significant and no mitigation is required.

In addition, implementation of the BRP for burrowing owl will also help reduce potential impacts to nesting birds on the project site due to tree removal. The removal of burrowing owl from the site and preclusion of additional tall trees on or adjacent to the site will help reduce predation by raptors, which utilize these resources, on other nesting birds onsite.

In addition to the four cited biological studies, Mead & Hunt prepared a report on airport safety (M&H 2022, Appendix E) that expressed concern over the mature pine and sycamore trees located adjacent to the site in the public right-of-way. Those trees would likely be removed during project construction. The study indicated these types of trees are known to attract birds of prey (e.g., Red-tailed hawks) for perching while hunting the burrowing owl that reside in and around the OIA. Since these mid-sized raptors increase the potential for a bird-strike incident, the report strongly recommended that only small tree varieties be located onsite that do not provide suitable perching opportunities for hawks.

The TOP 2050 SEIR concluded that, with regulatory compliance and compliance with TOP 2050's policies, there would be no impacts to biological resources, and specifically with regard to burrowing owls. Relative to the discussion of burrowing owl impacts of the Project, it is important to note that TOP Policies ER5-1 and ER5-2 from the Environmental Resources Element state the following:

> **Goal ER-5:** Protected high value habitat and farming and mineral resource extraction activities that are compatible with adjacent development.

Policy ER-5.1: Habitat Conservation Areas. We support the protection of biological resources through the establishment, restoration, and conservation of high-quality habitat areas.

Policy ER-5.2: Entitlement and Permitting Process. We comply with state and federal regulations regarding protected species.

To comply with these policies, the Project applicant will prepare and process a Burrowing Owl Relocation Plan through CDFW and conduct a Nesting Bird Survey prior to grading. These actions will adequately protect burrowing owl and nesting birds from impacts of developing the Project site, as well as protecting owls from ongoing impacts from OIA operations as well as provide them with a long-term safe and viable relocation/habitation site pursuant to state and federal protection species regulations. With regulatory compliance, TOP EIR concluded that future development in the City would not have significant impacts on listed or sensitive species and no mitigation was recommended.

Compliance with existing plans, laws, and regulations, via Implementation of the recommended BRP and nesting bird survey consistent with TOP Policies ER5-1 and ER5-2, will ensure that the project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in TOP EIR. No changes or additions to TOP EIR analyses are necessary.

Mitigation: No project specific mitigation is required.

b. Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?

Discussion of Effects: The CCC SP EIR found no riparian or wetland resources on the site so it identified no impacts and did not recommend any mitigation.

TOP EIR indicated development "of new, previously undeveloped areas of the City even though it would result in an increase in land use intensity. Individual projects undergoing environmental review under CEQA would be required to determine whether there is potential habitat on-site for sensitive species. If sensitive species were found on-site, the project proponent would be required to consult with the CDFW regarding impacts to sensitive species and ensuing mitigation" (SEIR p. 5.4-31). The EIR concluded TOP would have a less than significant direct, indirect, and cumulative impacts relating to riparian habitat or sensitive natural community. In TOP EIR, the project site was previously analyzed as an industrial use. TOP EIR does not identify any natural drainage features in this portion of the City due to its urbanized condition. With regulatory compliance, the EIR did not recommend any specific mitigation for future development relative to jurisdictional features.

Based on a review of aerial photographs and onsite surveys listed species, the site does not contain any riparian habitat or other sensitive natural community identified by CDFW or USFWS (GoogleEarth, HE/KB 2020). Therefore, no adverse environmental impacts are anticipated. In addition, the project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in TOP EIR. No changes or additions to TOP EIR analyses are necessary.

Mitigation: No project specific mitigation is required.

c. Have a substantial adverse effect on state or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?

Discussion of Effects: The CCC SP EIR and TOP EIR did not identify any wetland habitat or resources on the project site or in the immediate surrounding area due to its urban condition. The EIR stated TOP "would have a less than significant direct, indirect, and cumulative impacts relating to state or federally protected wetlands. Accordingly, no changes or alterations to the *[TOP 2050]* were required to avoid or substantially lessen any significant environmental impacts under those thresholds" (SEIR p. 5.4-33).

According to aerial photographs, the site is vacant and no drainage areas or wetland habitat are present on the project site (GoogleEarth). Therefore, project implementation would have no impact on these resources. In addition, the project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in TOP EIR. No changes or additions to TOP EIR analyses are necessary.

Mitigation: No project specific mitigation is required.

d. Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?

Discussion of Effects: The CCC SP EIR and TOP EIR did not identify any drainages or wetland habitat that could support fish on the project site, and the site is not located within an identified wildlife movement corridor due to its physical condition and development of the surrounding area.

TOP EIR found that no regional wildlife movement corridors have been identified in the City so it did not result in substantial adverse effects to wildlife movement (SEIR p. 5.4-33).

According to aerial photographs, the site is vacant with no drainages or native vegetation present (GoogleEarth). As a result, there are no wildlife corridors connecting this site to other areas. The project site and area may support nesting birds so in order to comply with existing laws, plans, and regulations, the project will conduct a nesting bird survey. With this compliance, a Nesting Bird Survey is recommended and will be conducted to help assure there will be no impacts to migratory birds. With implementation of the nesting bird survey and regulatory compliance, the project will not interfere with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife. The project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in TOP EIR. No changes or additions to TOP EIR analyses are necessary.

Mitigation: No project specific mitigation is required.

e. Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?

Discussion of Effects: The CCC SP EIR did not identify any local policies or ordinances relative to biological resources and the project site, so there were no conclusions about impacts, or any mitigation recommended.

TOP EIR indicates the City includes the Ontario Recovery Unit for the DSFLF with 21.7 square miles mainly in the eastern and southwestern portions of the City (i.e., not on or adjacent to the project site), The EIR concluded TOP would not conflict with the requirements of the DSFLF Ontario Recovery Unit (SEIR p. 5.4-34). It should also be noted the project will prepare a BRP and nesting bird survey to comply with the previously cited Policies ER5-1 and ER5-2 from the Environmental Resources Element of TOP 2050.

The City's Development Code requires replacement of trees removed. The species of tree selected for planting must be relatively short at maturity to be consistent with FAA restrictions and so as to not attract raptors to the site which could represent a bird strike hazard to the airport operational areas (i.e., takeoffs and landings).

The project will also conduct a nesting bird survey prior to removal of onsite or site-adjacent trees related to project construction. With implementation of the BRP, nesting bird survey, and limits on future tree plantings, no adverse environmental impacts are anticipated.

The project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in TOP EIR. No changes or additions to TOP EIR analyses are necessary.

Mitigation: No project specific mitigation is required.

f. Conflict with the provisions of an adopted Habitat Conservation Plan (HCP), Natural Community Conservation Plan (NCCP), or other approved local, regional, or state habitat conservation plan?

Discussion of Effects: The CCC SP EIR does not mention any HCPs or NCCPs that apply to the City as none existed at that time. TOP EIR only acknowledges a small portion of the City that contains an HCP for DSFLF but this plan does not apply to the proposed Project, and there are no HCPs or NCCPs to protect biological resources that affect the proposed Project site.

The site is not part of an adopted HCP, NCCP or other approved habitat conservation plan. As a result, no adverse environmental impacts are anticipated. The project will not result in any new, increased

or substantially different impacts, other than those previously considered and addressed in TOP EIR. No changes or additions to TOP EIR analyses are necessary.

Mitigation: No project specific mitigation required.

5. CULTURAL RESOURCES. Would the project:

a. Cause a substantial adverse change in the significance of a historical resource pursuant to Section 15064.5?

Discussion of Effects: Section VI. C of the CCC SP EIR indicated the region had been inhabited for hundreds of years but a cultural survey of the site found no resources on the site. The CCC SP EIR found no historic resources on the project site but recommended generalized MMs that have since been superseded by standard City conditions of approval as explained in Table A (see CCCSP EIR Measure 17 in column 1 of the table.

TOP EIR concluded that buildout of TOP could result in significant impacts to historical resources or paleontological resources, but Mitigation Measure 5-1 would reduce impacts to less than significant levels (SEIR p. 5.5-23). The project site was previously analyzed by TOP EIR as an industrial use.

The project site is vacant and does not contain any buildings or structures constructed more than 50 years ago and cannot be considered for eligibility for listing in the California Register of Historic Resources. Two cultural resource assessments (CRAs), which are included in Appendix C to this report, were conducted on the project site by Helix Environmental Planning (HEP 2019a, 2019b). According to the CRAs, a Cultural Resources Records Search was conducted on March 7, 2019, at the California Historic Resource Inventory System at the South Central Coastal Information Center (CHRIS-SCCIC). The records search indicated that there are no cultural resources (prehistoric, historic, or built environments) recorded within the project boundaries. A pedestrian survey of the site was conducted by Helix archaeological staff in March 2019.

The records search results identified seven previously recorded cultural resources within one mile of the project area, none of which are located within the project site (**Table 11**, *Local Cultural Resources*). Two of the resources within the search limits, the Guasti (Brookside) Winery and the Church of San Secondo D`Asti, are listed as California Points of Historical Interest (CPHI), and one resource, the Hofer Ranch, is listed on the National Register of Historic Places (NRHP). The Guasti (Brookside) Winery and the Church of San Secondo D`Asti, are located to the northwest of the project area, north of the railroad. The Hofer Ranch is located to the southwest. The pedestrian survey found a possible historic-period well comprised of a metal pipe with no markings in the northwest portion of the survey area. Although the age of the well is unknown, it was observed on the historic aerial photographs of the project area, which was cultivated for agriculture in the early 1900's.

Table 11: Local Cultural Resources

Resource Number (P-36-#)	Resource Number (CA-SBR-#)	Age and Resources Present[1]	Description	Recorder, Date
001963	1963H	Historic Site	Remnants of a homestead/ranch, possibly associated with the Collins family who owned the property in the late 1800s	McKenna, 1987
001964	1964H	Historic Structure	Small shed containing modern pumping equipment	McKenna, 1987
015469	--	Historic Site	Guasti (Brookside) Winery (CPHI # 84)	Hansberger, 1975
015471	--	Historic Site	San Secondo D'Asti Catholic Church (CPHI # 76)	Hansberger, 1975
015990	--	Historic Structures/ Historic District	Guasti Historic District; consists of 51 resources (buildings, houses, etc.) constructed between 1900 and 1946	Warner and Solie, 1985
016249	--	Historic Site	Hofer Ranch (NR #93000596), also known as Ballou Ranch & Ben Haven; farm complex consisting of 15	Hofer and Warner, 1985; Marvin and Goodwin, 2004

			resources (buildings and structures) constructed between 1905 and 1985	
016279	--	Historic Building	Guasti Mansion; constructed in the Italian-Villa architectural style in 1922	Warner and Solie, 1985

Source: Cultural Resources Survey for the Potential Development of Parcel Group 1, Helix Environmental Planning. April 15, 2019.

[1] Previously recorded resources within one mile of the Project site

The CRAs indicate that the presence of a possible historic-age well onsite does not constitute a significant historic resource under CEQA as they are prevalent throughout Southern California and do not convey any historic information about the project area.

The CRA nevertheless recommended the project adequately document the existing well/pipe using the appropriate Department of Parks and Recreation (DPR) 523 forms. This Wellsite Documentation will be completed prior to grading of the project site as outlined previously in TOP Implementation Action CUL-1.

With implementation of the Wellsite Documentation, the project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in TOP EIR. No changes or additions to TOP EIR analyses are necessary.

Mitigation: No project specific mitigation is required.

b. Cause a substantial adverse change in the significance of an archaeological resource pursuant to Section 15064.5?

Discussion of Effects: Section VI. C of the CCC SP EIR indicated the region had been inhabited by Native American tribes but a cultural survey of the site found no archaeological or other cultural resources on the site. Although it is permissive rather than mandatory, one (1) mitigation measure was recommended to reduce impacts as outlined in Table A (see CCCSP EIR Measure 17 in column 1 of the table).

TOP EIR (Section 5.5) indicates no archeological sites or resources have been recorded in the City with the Archeological Information Center at San Bernardino County Museum. The CRAs prepared for the project site included a pedestrian survey, a record search, a Sacred Lands File (SLF) search, and a review of existing documentation for the project site and surrounding area. The Native American Heritage Commission (NAHC) was contacted for a SLF search on April 1, 2019, and a response was received on April 15, 2019, indicating the project site contained no identified archaeological or tribal resources.

The CHRIS-SCCIC records search conducted for the CRA did not identify prehistoric resources within or adjacent to the project boundaries. The NAHC SLF search also did not indicate any archaeological resources or artifacts associated with Tribal Cultural Resources (TCRs) were located within the project site. Table 11 above demonstrates the seven cultural resources found in the surrounding area were historical and not archaeological in nature. The project site has been highly disturbed by modern human activities including agricultural use from the 1940's through the 1960's that could have displaced potential surface and subsurface archaeological resources. Therefore, it is not anticipated the proposed project will impact archaeological or identified TCRs.

While no adverse impacts to archeological resources are anticipated at this site due to its disturbed nature, the project will implement TOP MM CUL 5-2 to ensure that, in the event of unanticipated archeological discoveries, construction activities will not continue or will be moved to other parts of the project site and a qualified archaeologist shall be contacted to determine significance of these resources. If the find is discovered to be historical or unique archaeological resources, as defined in Section 15064.5 of the CEQA Guidelines, avoidance or other appropriate measures shall be implemented. The project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in TOP EIR. No changes or additions to TOP EIR analyses are necessary.

Mitigation: No project specific mitigation is required. The following mitigation measure from TOP EIR is applicable to the project:

MM CUL 5-2. In areas of documented or inferred archaeological and/or paleontological resource presence, City staff shall require applicants for development permits to provide studies to document the

presence/absence of such resources. On properties where resources are identified, such studies shall provide a detailed mitigation plan, including a monitoring program and recovery and/or in situ preservation plan, based on the recommendations of a qualified cultural preservation expert. The mitigation plan shall include the following requirements:

a) Archaeologists and/or paleontologist shall be retained for the project and will be on call during grading and other significant ground-disturbing activities.

b) Should any cultural resources be discovered, no further grading shall occur in the area of the discovery until the Planning Director or designee is satisfied that adequate provisions are in place to protect these resources.

c) Unanticipated discoveries shall be evaluated for significance by a San Bernardino County Certified Professional Archaeologist/Paleontologist. If significance criteria are met, then the project shall be required to perform data recovery, professional identification, radiocarbon dates, and other special studies; submit materials to a museum for permanent curation; and provide a comprehensive final report including catalog with museum numbers.

c. Disturb any human remains, including those interred outside of formal cemeteries?

Discussion of Effects: The CCC SP EIR did not address the issue of human remains but Section VI. C did discuss past habitation by Native American tribes. A cultural survey found no archaeological or other cultural artifacts on the site and did not recommend any mitigation.

TOP EIR states there are known Native American gravesites and cemeteries in the City, but none on or adjacent to the project site. Future development and grading of sensitive areas may disturb human remains, including those outside of formal cemeteries (SEIR p. 5.5-20).

The proposed project is in a general area that has been previously disturbed by human activity. No known religious or sacred sites exist within the project area. Thus, human remains are not expected to be encountered during any construction activities. However, in the unlikely event that human remains are discovered, existing regulations, including Public Resources Code Section 5097.98, would afford protection for human remains discovered during development activities. Per state law, in the event unanticipated discoveries of human remains are identified during excavation, the area shall not be disturbed until any required investigation is completed by the County Coroner and/or Native American consultation has been completed, if deemed applicable.

The project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in TOP EIR. No changes or additions to TOP EIR analyses are necessary.

Mitigation: No project specific mitigation is required. The Project shall implement TOP EIR Mitigation Measure 5-2 as outlined above.

6. ENERGY Would the project:

a. Result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation?

Discussion of Effects: Section VI.F of the CCC SP EIR evaluated energy "conservation" but just estimated the amount of energy that would be used, in terms of electricity, natural gas, and vehicular fuels, during construction and operation of the project. The EIR did recommend seven (7) mitigation measures to help reduce energy use on the site. Those measures are addressed in Table A (see CCCSP EIR Measures 19, 21-25, and 80 in column 1 of the table). The EIR did not make a specific conclusion as to whether the project would result in significant impacts to energy resources.

Energy was analyzed at a programmatic level in TOP EIR based on the 2019 revisions to the CEQA Guidelines. TOP EIR concluded TOP would not result in wasteful, inefficient, or unnecessary consumption of fuel use during construction or result in new or a substantial increase in magnitude of impacts (SEIR p. 5.6-13).

Implementation of the project would increase the demand for electricity and natural gas at the project site and gasoline consumption in the region during construction and operation. A detailed discussion is provided below.

Electricity

Construction. Temporary electric power would be required for lighting and electronic equipment (e.g., computers) located in trailers used by the construction crew. However, the electricity used for such activities would be temporary and would have a negligible contribution to the project's overall energy consumption. An Energy Assessment (*EA*) prepared for the project by Urban Crossroads in March 2022, a copy of which is included in Appendix A -1 to this report, indicated that construction of warehousing, both cold storage and fulfilment center uses, plus parking, landscaping, and other asphalt surfaces would consume 6,276,680 kilowatt-hours (kWh) of electricity (Table 10, UC 2022).

Operational. The proposed project entails the construction of nine new warehouse buildings, which are consistent with TOP and CCC SP land uses designated for the property. These warehouse uses will be similar in design and operation to existing and planned uses in the surrounding area, and will have similar energy use during operation to existing warehouses in the City. Operation of the project would require electricity for multiple purposes, such as: building heating and cooling, lighting, appliances, and electronics. The EA estimated the operation of stationary equipment as part of the project buildings would consume 34,405,914 kWh per year of electricity and 40,546,270 thousand British thermal units (kBTU) per year (Table 15, UC 2022).

The project will be required to comply with the CALGreen Building Code (CBC) requirements in effect at the time of development. Moreover, the project will implement the GHG Reduction Measures Screening Table 2 for Commercial and Industrial Development (see Appendix A-2 to this report). The project will be responsible for implementing the indicated measures as required by the City's development review process. The Screening Table included energy efficient development measures, indoor space efficiency measures, building efficiency measures, renewable energy measures, and water conservation measures. PDF that would reduce electricity consumption include but are not limited to: greatly enhanced window insulation over CBC limits, an enhanced cool-roof, an improved efficiency heating, ventilation, and air conditioning (HVAC) system, enhanced duct insulation, Energy Star commercial appliances, water efficient landscaping and irrigation systems, and water-efficient toilets and faucets. Although electricity consumption would increase at the site with implementation of the project, the building envelope, HVAC, lighting, and other systems, would be designed to maximize energy performance. With implementation of these various measures, the electricity that would be consumed by the project is not considered to be inefficient or wasteful, and impacts would be less than significant.

Natural Gas

Construction. Natural gas consumption is not anticipated during construction of the project. Fuels used for construction would generally consist of diesel and gasoline, which are discussed in the next subsection. The EA concludes that any amounts of natural gas that may be consumed during project construction would be nominal and would have a negligible contribution to the project's overall energy consumption.

Operational. The proposed project is consistent with TOP and CCC SP. Warehouse uses will be similar in size and appearance to existing and planned uses in the surrounding area and will have similar natural gas use during operation. During operation, the project would require natural gas consumption for various purposes, such as building heating and cooling. The *EA* estimated the operation of stationary equipment as part of the project buildings would consume 40,546,270 thousand British thermal units (kBTU) per year (Table 15, UC 2022).

All future structure developed on the site would be built to the 2016 Title 24 CALGreen efficiency requirements or the code in effect at the time of development. In addition, measures will be applied based on the information contained in the City's GHG checklist (see Appendix A-2). These measures include, but are not limited to: enhanced wall, attic, and window insulation; high efficiency water heater, and optimized building orientation. Although natural gas consumption would increase at the site under implementation of the project, the building envelope, HVAC, lighting, and other systems, would be designed to maximize energy performance. The project would be subject to statewide mandatory energy requirements as outlined in the CALGreen Code. For these reasons, the natural gas that would be consumed by the project is not

considered to be inefficient or wasteful, and impacts would be less than significant.

Diesel and Gasoline Fuel

Construction. Diesel and gasoline fuels, also referred to as petroleum in this subsection, would be consumed throughout construction of the project. Fuel consumed by construction equipment would be the primary energy resource consumed over the course of construction, and vehicle miles traveled (VMT) associated with the transportation of construction materials (e.g., deliveries to the site) and worker trips to and from the site would also result in petroleum consumption. Whereas on-site, heavy-duty construction equipment and delivery trucks would predominantly use diesel fuel, construction workers would generally rely on gasoline-powered vehicles. The *EA* estimated that project construction would consume 335,494 gallons of diesel fuel for offroad vehicles and equipment, 932,311 gallons of gasoline over approximately a four-year period for worker travel to and from the site, and 496,539 gallons of gasoline for vendor trips and hauling (Tables 11-13, UC 2022).

The project will be required to comply with the California Air Resources Board (CARB) Airborne Toxic Control Measures, which restrict heavy-duty diesel vehicle idling to five minutes. Since petroleum use during construction would be temporary and required to conduct development activities, it would not be wasteful or inefficient, and impacts would be less than significant.

Operational. Fuel consumption associated with the project's operational phase would primarily be attributable to workers commuting to and from the project and the operation of large, diesel-powered trucks (e.g., semi-trucks) needed to transport goods. Over the lifetime of the project, the fuel efficiency of the vehicles being used by the employees is expected to increase. As such, the amount of petroleum consumed as a result of vehicular trips to and from the project site during operation is anticipated to decrease over time. The *EA* estimated project-generated traffic would consume a total of 3,107,417 gallons of fuel for all types of vehicles and generate a total of 46,037,767 VMT each year (Table 14, UC 2022, Appendix A-1).

There are numerous regulations in place that require and encourage fuel efficiency. For example, CARB has adopted an approach to passenger vehicles by combining the control of smog-causing pollutants and GHG emissions into a single, coordinated package of standards. The approach also includes efforts to support and accelerate the number of plug-in hybrids and zero emission vehicles (ZEVs) in California. In addition, CARB adopted a regional goal for the SCAG region of reducing per-capita GHG emissions from 2005 levels by 8% in 2020 and 19% in 2035 for light-duty passenger vehicles. Accordingly, operation of the project is expected to decrease the amount of petroleum it consumes in the future due to improvements in state-wide fuel economy over time. Although the project would increase petroleum use in the region during construction and operation, the use would be a small incremental fraction of the statewide use and, due to efficiency increases, would diminish over time. As such, petroleum consumption associated with the project would not be considered to be inefficient or wasteful so its energy-related impacts would be less than significant.

The project will comply with Title 24 and other applicable state energy conservation regulations as recommended in TOP EIR. In November 2014, the City adopted the most current version of the Community Climate Action Plan (CCAP) which includes energy conservation that results from implementation of the recommended GHG reduction measures. To comply with TOP EIR, the project will implement the items outlined in the GHG Reduction Measures Screening Table (see GHG Study, Appendix A). As shown therein, the project garners a total of 103 points, so it is consistent with the City's CCAP, including energy conservation. The project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in TOP EIR. No changes or additions to TOP EIR analyses are necessary.

Mitigation: No project-specific mitigation is required.

b. Conflict with or obstruct a state or local plan for renewable energy or energy efficiency?

Discussion of Effects: Section VI.F of the CCC SP EIR evaluated energy "conservation," but just estimated the amount of energy that would be used, in terms of electricity, natural gas, and vehicular fuels, during construction and operation of the project. The EIR did recommend seven (7) mitigation measures to help reduce energy use on the site. Those measures are outlined in Table A (see CCCSP EIR Measures 19, 21-25, and 80 in column 1 of the table). The EIR did not make a specific conclusion as to whether the project would result in significant impacts to energy resources or if it was consistent with energy conservation plans or regulations.

Energy was analyzed at a programmatic level in TOP EIR based on the 2019 revisions to the CEQA Guidelines. The EIR determined TOP would have a less than significant direct, indirect, and cumulative impacts relating to conflict with or obstruction of a state or local plan for renewable energy or energy efficiency (SEIR p. 5.6-14).

The project would not conflict with or obstruct a state or local plan adopted for the purposes of increasing the amount of renewable energy or energy efficiency. The California Title 24 energy efficiency standards for non-residential buildings address electricity and natural gas efficiency in lighting, water, heating, and air conditioning, as well as the effects of the building envelope (e.g., windows, doors, walls and rooves, etc.) on energy consumption. As described above, the project would be required to comply with the Title 24 CALGreen standards current at that time and would implement additional measures as identified in the City's CCAP screening table checklist for industrial projects (Appendix A). Since each new building will comply with applicable State standards and adhere to the City's CCAP, which includes energy reductions measures, the project would not conflict with nor obstruct a state or local plan for renewable energy or energy efficiency.

This impact would be less than significant, and the project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in TOP EIR. No changes or additions to TOP EIR analyses are necessary

Mitigation: No project specific mitigation is required.

7. GEOLOGY & SOILS. Would the project:

a. Expose people or structures to potential substantial adverse effects, including the risk of loss, injury or death involving:

i. Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publication 42.

Discussion of Effects: Section VI.J of the CCC SP EIR does not identify any active faults on or in the vicinity of the project site, although it does discuss regional faults. The EIR concluded the site would be subject to strong groundshaking and recommended three (3) mitigation measures, which are now required as regulatory compliance in Table A (see CCCSP EIR Measures 45-47 in column 1 of the table).

According to TOP EIR, there are no active faults known on the site and the project site is located outside the Fault Rapture Hazard Zone (formerly Alquist-Priolo Zone). TOP EIR (Section 5.7/Figure 5.7-2) identifies eight active or potentially active fault zones near the City. The EIR determined TOP would have a less than significant direct, indirect, and cumulative impacts relating to seismic-related hazards (SEIR p. 5.7-19).

Given that the closest fault zone is located more than eight miles from the project site, fault rupture within the project area is not likely. All development will comply with the CBC seismic design standards to reduce geologic hazard susceptibility. Therefore, no adverse impacts are anticipated.

The project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in TOP EIR. No changes or additions to TOP EIR analyses are necessary.

Mitigation: No project specific mitigation is required.

ii. Strong seismic ground shaking?

Discussion of Effects: Section VI.J of the CCC SP EIR indicates the site would be subject to strong groundshaking and recommended three (3) mitigation measures, which are now required as regulatory compliance in Table A (see CCCSP EIR Measures 45-47 in column 1 of the table).

TOP EIR indicates there are no active faults known on the site and the project site is located outside the Fault Rapture Hazard Zone (formerly Alquist-Priolo Zone). TOP EIR (Section 5.7/Figure 5.7-2) identifies eight active or potentially active fault zones near the City. The closest fault zone is located more than eight miles from the Project site.

The proximity of the site to the active faults will result in ground shaking during moderate to severe seismic events. All construction will be in compliance with the CBC, the City Municipal Code (CMC), TOP and all other ordinances adopted by the City related to construction and safety. Therefore, no adverse impacts are anticipated.

The project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in TOP EIR. No changes or additions to TOP EIR analyses are necessary.

Mitigation: No project specific mitigation is required.

iii. Seismic-related ground failure, including liquefaction?

Discussion of Effects: Section VI.K of the CCC SP EIR addresses geology and soils but does not identify any specific soil constraints on the site. The EIR made no conclusions regarding ground failure or liquefaction and did not recommend any mitigation measures.

As identified in TOP EIR (Section 5.7), groundwater saturation of sediments is required for earthquake induced liquefaction. In general, groundwater depths shallower than 10 feet to the surface can cause the highest liquefaction susceptibility. TOP EIR indicates that depths to groundwater in the project site vicinity during the winter months is estimated to be over 200 feet below ground surface. Therefore, the liquefaction potential within the project area is minimal. Implementation of TOP strategies in the Safety Element regarding seismic building design, the CBC and the CMC would reduce impacts to a less than significant level.

The project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in TOP EIR. No changes or additions to TOP EIR analyses are necessary.

Mitigation: No project specific mitigation is required.

iv. Landslides?

Discussion of Effects: Section VI.K of the CCC SP EIR addresses geology and soils but does not identify any specific constraints regarding landslides. The site and surrounding areas are relatively flat and no major slopes are present.

TOP EIR did not identify any significant slopes in the City or the project area, so there were no impacts related to landslides and no mitigation is needed.

The project would not expose people or structures to potential adverse effects, including the risk of loss, injury, or death involving landslides because the relatively flat topography of the project site (less than two percent slope) and the proposed grading plan indicate the chances of landslides onsite would be remote. The project proposes nine new buildings on the site consistent with TOP and CCC SP land use designations.

Therefore, the project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in TOP EIR. No changes or additions to TOP EIR analyses are necessary.

Mitigation: No project specific mitigation is required.

b. Result in substantial soil erosion or the loss of topsoil?

Discussion of Effects: Section VI.K of the CCC SP EIR addresses geology and soils but does not identify any specific erosion impacts. However, it does recommend one (1) permissive mitigation measure requiring an erosion control plan as part of development. That measure is addressed in Table A (see CCCSP EIR Measure 51 in column 1 of the table).

TOP EIR concluded that TOP policies and state regulations would ensure that potential impacts from erosion or the loss of topsoil would be less than significant (SEIR p. 5.7-20).

The project site will not result in significant soil erosion or loss of topsoil because of the previously disturbed nature of the project site, the covering over of the site by mainly impervious surfaces, and implementation of the project-specific Water Quality Management Plan (WQMP), included in Appendix F of this report, for water quality control (including erosion). Grading increases the potential for erosion by

removing protective vegetation, changing natural drainage patterns, and constructing slopes. However, compliance with the CBC and review of grading plans by the City Engineer will ensure no significant impacts will occur. In addition, the City requires an erosion/dust control plan for projects located within this area. Implementation of a Water Quality Management Plan (WQMP) and Best Management Practices (BMPs), consistent with the federal water quality permitting requirements of the National Pollution Discharge Elimination Program (NPDES) program, the Environmental Resource Element of TOP Policy Plan strategies, the CBC, and the CMC, would reduce potential impacts to a less than significant level.

The project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in TOP EIR. No changes or additions to TOP EIR analyses are necessary.

Mitigation: No project specific mitigation is required.

c. Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction or collapse?

Discussion of Effects: Section VI.K of the CCC SP EIR addresses geology and soils but does not identify the potential for any of these specific constraints. The CCC SP EIR concluded the project would not have any impacts relative to soils or geology but recommended three (3) mitigation measures for these impacts. However, these measures have since been superseded by regulatory compliance and standard conditions of approval by the City as shown in Table A (see CCCSP EIR Measures 49-51 in column 1 of the table).

TOP EIR (Section 5.7) indicates that subsidence is generally associated with large decreases or withdrawals of water from an aquifer. The project would use domestic water supplies and would not withdraw water from the existing aquifer. The EIR states that future projects under TOP could expose structures or persons to potentially significant hazards from lateral spreading, ground subsidence, liquefaction, and compressible soils, However, compliance with the CBC and review of grading plans for individual projects by the City Engineer would ensure no significant impacts would occur (SEIR p. 5.7-21). The City is relatively flat, including the project site, so the risk of landslides is negligible.

The new light industrial buildings would not result in the location of development on a geologic unit or soil that is unstable, or that would become unstable because as previously discussed, the potential for liquefaction and landslides associated with the project is less than significant. Further, implementation of TOP strategies, the CBC and the CMC would reduce impacts to a less than significant level. Therefore, the project would not create greater landslide potential impacts than were identified in TOP EIR.

The project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in TOP EIR. No changes or additions to TOP EIR analyses are necessary.

Mitigation: No project specific mitigation is required.

d. Be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial risks to life or property?

Discussion of Effects: The CCC SP EIR did not identify any specific soil constraints, including expansive soils, on the project site, so the EIR concluded there were no impacts and no mitigation was required with regulatory compliance (i.e., CBC).

TOP EIR identified limited soil stability impacts of future development if expansive or other soil constraints were present beneath structures. TOP EIR recommended compliance with the CBC and CMC to assure impacts will be less than significant (SEIR p. 5.7-21).

The majority of Ontario, including the project site, is located on alluvial, and in some areas, aeolian (i.e., sandy) soil deposits. These types of soils are not considered to be expansive. In addition, specific soil conditions beneath each proposed building will be verified and addressed by specific foundation design to be confirmed by City Engineering. Therefore, no adverse impacts will occur.

Through the City's development and design review process, the project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in TOP EIR. No changes or additions to TOP EIR analyses are necessary.

Mitigation: No project specific mitigation is required.

e. Have soils incapable of adequately supporting the use of septic tanks or alternative wastewater disposal systems where sewers are not available for the disposal of wastewater?

Discussion of Effects: Section VI.N of the CCC SP EIR addresses wastewater and provide information about local sewers but does not mention septic or alternative systems. Two (2) mitigation measures are recommended to have a complete onsite sewer that meets all regulatory requirements as shown in Table A (see CCCSP EIR Measure 74-75 in column 1 of the table) .

TOP EIR states that TOP policies and state regulations would ensure that the potential impacts from geology and soils hazards would be less than significant. Wastewater from Ontario is treated at wastewater treatment facilities owned and operated by the Inland Empire Utilities Agency (IEUA). Use of septic tanks would be limited to existing septic tanks, and new septic tanks would be constricted to areas not in practical proximity to existing sewer mains, dependent on approval by the Santa Ana Regional Water Quality Control Board (RWQCB) on a case-by-case basis (SEIR p. 5.7-22).

The area is served by the local sewer system and the use of alternative systems is not necessary. Future sewer service is based on planned land uses and sizing of pipes and treatment facilities to accommodate planned growth. Since the project is consistent with TOP land use and zoning designations on the site, there will be no significant impacts to the sewage system.

The project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in TOP EIR. No changes or additions to TOP EIR analyses are necessary.

Mitigation: No project specific mitigation is required.

f. Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?

Discussion of Effects: The CCC SP EIR did not evaluate potential impacts to paleontological resources and no mitigation was recommended.

TOP EIR indicates the City is underlain by deposits of Quaternary and Upper-Pleistocene sediments deposited during the Pliocene and early Pleistocene time, Quaternary Older Alluvial sediments may contain significant, nonrenewable, paleontological resources and are, therefore, considered to have high sensitivity at depths of 10 feet or more below ground surface. In addition, TOP EIR (Section 5.5) indicates that only one paleontological resource has been discovered in the City. The project site has surficial sediments composed of younger Quaternary Alluvium, derived as alluvial fan deposits from the San Gabriel Mountains to the north or as dune sands. These deposits typically do not contain significant vertebrate fossils, at least in the uppermost layers, but they may be underlain by older sedimentary materials at estimated depths greater than 10 feet which could contain paleontological resources.

Project grading may exceed 10 feet in depth in some areas so the project will implement TOP EIR Mitigation Measure 5-2, as outlined previously in Section 5, Cultural Resources, as this measure addresses paleontological resources. The measure requires that, in the event unanticipated paleontological resources are identified during excavation, construction activities will not continue or will be moved to other parts of the project site and a qualified paleontologist shall be contacted to determine the significance of these resources. If the find is determined to be significant, avoidance or other appropriate resource protection actions will be taken.

The project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in TOP EIR. No changes or additions to TOP EIR analyses are necessary.

Mitigation: The project will be required to implement TOP EIR Mitigation Measure 5-2. No project specific mitigation is required.

8. GREENHOUSE GAS EMISSIONS. Would the project:

a. Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?

Discussion of Effects: In 1981 the State CEQA Checklist (CEQA Guidelines Appendix G) did not require an examination of impacts related to greenhouse gas (GHG) emissions, therefore, that topic was not addressed in the CCC SP EIR.

TOP EIR determined TOP would have a significant direct, indirect, and cumulative impacts relating to the generation of GHG emissions (SEIR p. 5.7-26).

The subject site was previously analyzed by TOP EIR as an industrial use. The impact of buildout of the TOP on the environment due to the emission of GHGs was analyzed in the EIR for the Policy Plan of TOP. According to TOP EIR, this impact would be significant and unavoidable and a statement of overriding considerations was adopted for TOP's significant and unavoidable impacts, including that concerning the emission of GHGs. Developing the site with planned industrial uses on the site will not create significantly greater impacts than were identified in TOP EIR. The project will implement PDF to reduce GHG emissions as outlined in the City's GHG Reduction Measures Screening Threshold Table (see GHG Study, Appendix A-2 dated 12/14/21). This Screening Table provides guidance in measuring the reduction of GHG emissions attributable to certain design and construction measures incorporated into development projects. The analysis, methodology, and significance determination (thresholds) are based upon the City's CCAP, which includes GHG emission inventories (2008 and 2020 forecasts), a year 2020 emission reduction target, the goals and policies to reach the target, together with TOP EIR Addendum prepared for the CCAP.

The Screening Table assigns points for each option incorporated into a project as mitigation or a PDF (collectively referred to as "feature"). The point values correspond to the minimum emissions reduction expected from each feature. The menu of features allows maximum flexibility and options for how development projects can implement the GHG reduction measures. The point levels are based upon improvements compared to 2008 emission levels of efficiency. Projects that garner at least 100 points will be consistent with the reduction quantities anticipated in the City's CCAP. As such, those projects that garner a total of 100 points or greater would not require quantification of project specific GHG emissions. Consistent with the City CEQA Guidelines, and development review process, such projects would be determined to have a less than significant individual and cumulative impact for GHG emissions. As shown in the project GHG Reduction Measures Screening Table (see GHG Study, Appendix A), the project will implement actions to achieve a total of 103 points and thus is consistent with the reduction quantities anticipated in the City's CCAP. Therefore, quantification of project-specific GHG emissions is not required.

Additionally, pursuant to Public Resources Code Section 21083.3, this impact need not be analyzed further, because (1) the proposed project would result in an impact that was previously analyzed in TOP EIR, which was certified by the City; (2) the proposed project would not result in any GHG impacts that were not addressed in TOP EIR; (3) the proposed project is consistent with TOP. The proposed impacts of the project were already analyzed in TOP EIR and the project will be built to current energy efficient standards. Potential impacts of project implementation will be less than significant by compliance with current Title 24 energy efficiency standards of the California Code of Regulations. No changes or additions to TOP EIR analyses are necessary.

The project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in TOP EIR. No changes or additions to TOP EIR analyses are necessary. The PDF outlined above, consistent with the GHG Reduction Measures Screening Threshold Table (see Appendix A-2) adequately address any GHG impacts and there is no need for any project specific mitigation measures.

Mitigation: No project specific mitigation is required.

b. Conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gases?

Discussion of Effects: In 1981, the State CEQA Checklist (CEQA Guidelines Appendix G) did not require an examination of impacts related to GHG emissions, therefore, that topic was not addressed in the CCC SP EIR.

The EIR determined TOP was consistent with statewide strategies adopted for the purpose of reducing GHG emissions including CARB's Scoping Plan and SCAG's Connect SoCal (SEIR p. 5.8-27). The subject site was previously analyzed by TOP EIR as an industrial use. By implementing TOP EIR Mitigation Measures AQ 3-1 through 3-3 regarding air pollutant emissions, the proposed project is

consistent with TOP Goal ER 4 of improving air quality by, among other things, implementation of Policy ER 4-3, regarding the reduction of GHG emissions in accordance with regional, state and federal regulations. In addition, the proposed project is consistent with the policies outlined in Section 5.6.4 of the EIR for TOP, which aims to reduce the City's contribution of GHG emissions at build-out by implementing energy efficient design, energy efficient irrigation systems, electric vehicle charging stations, and compliance with Title 24 of the California Code of Regulations. Since it achieves at least 100 points using the Screening Table (see GHG Study, Appendix A-2), the project is consistent with the City's CCAP. Therefore, the proposed project does not conflict with an applicable plan, policy or regulation adopted for the purpose of reducing emissions of GHGs.

The project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in TOP EIR. No changes or additions to TOP EIR analyses are necessary.

Mitigation: Project will implement TOP EIR Mitigation Measures AQ 3-1 through 3-3 but no project specific mitigation is required.

9. HAZARDS & HAZARDOUS MATERIALS. Would the project:

a. Create a significant hazard to the public or the environment through the routine transport, use or disposal of hazardous materials?

Discussion of Effects: The CCC SP EIR concluded the project would have no impacts regarding hazards or hazardous materials and did not recommend any mitigation measures.

TOP EIR determined that implementation of the policies in the Safety Element, in addition to existing regulations, would ensure less than significant impacts from transport, use, and/or disposal of hazardous materials. It further concluded TOP would have a less than significant direct, indirect, and cumulative impacts relating to transport, use, and disposal of hazardous materials, release of hazardous materials, and emission and handling of hazardous materials, substances, or waste (SEIR p. 5.9-37).

The subject site was previously analyzed by TOP EIR as a light industrial use. The project will not involve the transport, use or disposal of hazardous materials during either construction or project implementation based on the land use restrictions for industrial uses in TOP. Therefore, no adverse impacts are anticipated. However, in the unlikely event of an accident, implementation of the strategies included in TOP regarding emergency services such as police and fire will decrease the potential for health and safety risks from hazardous materials to less than significant levels.

The project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in TOP EIR. No changes or additions to TOP EIR analyses are necessary.

Mitigation: No project specific mitigation is required.

b. Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?

Discussion of Effects: The CCC SP limits the use of flammable, explosive, or other hazardous materials by onsite light industrial uses. In addition, hazardous materials are regulated by a variety of federal and state agencies. Therefore, the CCC SP EIR did not anticipate any significant impacts related to hazardous materials with regulatory compliance, and no mitigation was recommended.

TOP EIR concluded that implementation of the policies in the Safety Element, in addition to existing regulations, would ensure that development under TOP would not exacerbate hazards associated with existing hazardous materials sites (SEIR p. 5.9-39).

The subject site was previously analyzed by TOP EIR as an industrial use. Under the CCC SP, the proposed project would not involve the use of hazardous materials or volatile fuels. In addition, there are no known stationary commercial or industrial land uses within close proximity to the subject site, which use/store hazardous materials to the extent that they would pose a significant hazard to visitors/occupants to the subject site. Therefore, upset conditions resulting in the release of hazardous materials are not anticipated.

The project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in TOP EIR. No changes or additions to TOP FEIR analyses are necessary.

Mitigation: No project specific mitigation is required.

c. Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances or waste within one-quarter mile of an existing or proposed school?

Discussion of Effects: The CCC SP EIR did not evaluate potential impacts of the project from hazardous materials and nearby schools, most likely because there are no schools within a quarter mile of the project site.

TOP EIR concluded that a number of hazardous material facilities were within a quarter mile of various schools in the City and impacts were potentially significant, such that mitigation was recommended. However, the project site is not within a quarter mile of any school sites so there will be no impacts and no mitigation is required relative to TOP EIR analysis.

Under the CCC SP, the project cannot involve the use, emissions or handling of hazardous or acutely hazardous materials, substances or waste. Therefore, no impacts are anticipated. The project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in TOP EIR. No changes or additions to TOP EIR analyses are necessary.

Mitigation: No project specific mitigation is required.

d. Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?

Discussion of Effects: This list was not in place when the CCC SP EIR was prepared in 1981. However, there are no Cortese sites on or in the immediate vicinity of the project site (i.e., a quarter-mile radius around the site).

TOP EIR identified that implementation of the policies in the Safety Element in addition to existing regulations ensured that development of TOP would not exacerbate existing hazards associated with existing hazardous materials sites. The EIR concluded TOP would have a less than significant direct, indirect, and cumulative impacts relating to location on a site which is included on a list of hazard materials. Accordingly, no changes or alterations to the Proposed Project were required to avoid or substantially lessen any significant environmental impacts under those thresholds. (Draft SEIR pg. 5.9-39)

The project site is not listed on the hazardous materials site compiled pursuant to Government Code Section 65962.5. Therefore, the project would not create a hazard to the public or the environment and no impact is anticipated.

The project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in TOP EIR. No changes or additions to TOP EIR analyses are necessary.

Mitigation: No project specific mitigation is required.

e. For a project located within the safety zone of the airport land use compatibility plan for ONT or Chino Airports, would the project result in a safety hazard for people residing or working in the project area?

Discussion of Effects: Section VI.B of the CCC SP EIR examined potential issues related to hazards from the OIA ("airport expansion") and recommended three (3) mitigation measures, mainly regarding noise, as outlined in Table A (see CCCSP EIR Measures 14-16 in column 1 of the table).

Sections 5.9 (Hazards and Hazardous Materials) and 5.11 (Land Use and Planning) of TOP EIR indicated that with proper land-use planning, aircraft safety risks could be reduced, primarily by avoiding incompatible land uses. The FAA and Caltrans Division of Aeronautics provide guidance for land use safety near airports. With adherence to these guidelines, high concentrations of people are not exposed to potential airplane accidents along runways or near airports while airplanes are departing and arriving. There are also guidelines on the placement of housing, schools, and other sensitive land uses near airports because of the noise pollution caused by airplanes.

The Land Use Element of TOP 2050 states that all new developments surrounding ONT should be consistent with the adopted ALUCP and should meet standards and recommendations of Part 77 of the FAA, adopted through Ordinance 2758 in the Ontario Municipal Code. A consistency determination analysis for the ONT was prepared by the City and submitted to ONT-IAC and found that TOP 2050 is consistent with ALUCP for ONT (ONT–IAC 2022). Similar to the proposed project, TOP 2050 is consistent with the ALUCP for ONT because the general land use designations within the airport influence area are the same.

The EIR concluded TOP would have a less than significant impact associated with consistency with the OIA ALUCP (SEIR p. 5.9-41). The project site is not within the planning area of the Chino Airport.

The proposed project is located within the Airport Influence Area of OIA. The site is located within Airport Safety Zones 1, 2 and 3, and within three Noise Impact Zones of the airport. As a result, an airport safety report was prepared by Mead & Hunt in January 2022 (Appendix E).

Just west of the project site is an airport "clear zone," which is part of its aircraft landing approach zones for Runways 26R and 26L (Aircraft Safety Zone 2). As shown in the previous Figure 4, the OIA and the CCC SP designate the central portion of the Project site as a "low employee intensity area" approximately 1,700 feet wide (850 feet on both sides of Santa Ana Street) to protect the OIA clear zone and landing aircraft.

The basic function of the ALUCP is to promote compatibility between OIA and the land uses that surround it in order to avoid future compatibility conflicts. The ALUCP policies address four types of airport land use concerns:

- Noise – Locations exposed to potentially disruptive levels of aircraft noise.
- Overflights – Locations where aircraft overflights can be intrusive and annoying to many people.
- Safety – Areas where the risk of an aircraft accident poses heightened safety concerns for people and property on the ground.
- Airspace Protection – Places where height and certain other land use characteristics need to be restricted to protect the safe and efficient use of navigable airspace.

Noise. The purpose of noise compatibility policies is to avoid the establishment of noise-sensitive land uses in areas exposed to significant levels of aircraft noise. As shown in **Figure 6, Noise Impacts**, the project site falls within three ALUCP Noise Impact Zones: 65-70 dB Community Noise Equivalent Level (CNEL); 70-75 dB CNEL; and 75-80 dB CNEL. The ALUCP noise criteria indicate that office uses are considered normally incompatible in areas exposed to CNEL 75 dB or greater unless extensive mitigation techniques are applied to make the indoor environment (with windows closed) acceptable for performance of expected activities (i.e., maximum of 50 dB CNEL). In the lower Noise Impact Zones, office spaces are deemed to be conditionally compatible if a maximum interior noise level of CNEL 50 dB is achieved through incorporation of proper sound attenuation design. The requirement also applies to Light Industrial Uses in the 70-80 dB CNEL Noise Impact Zones. Warehousing is deemed to be a compatible use in all three zones.

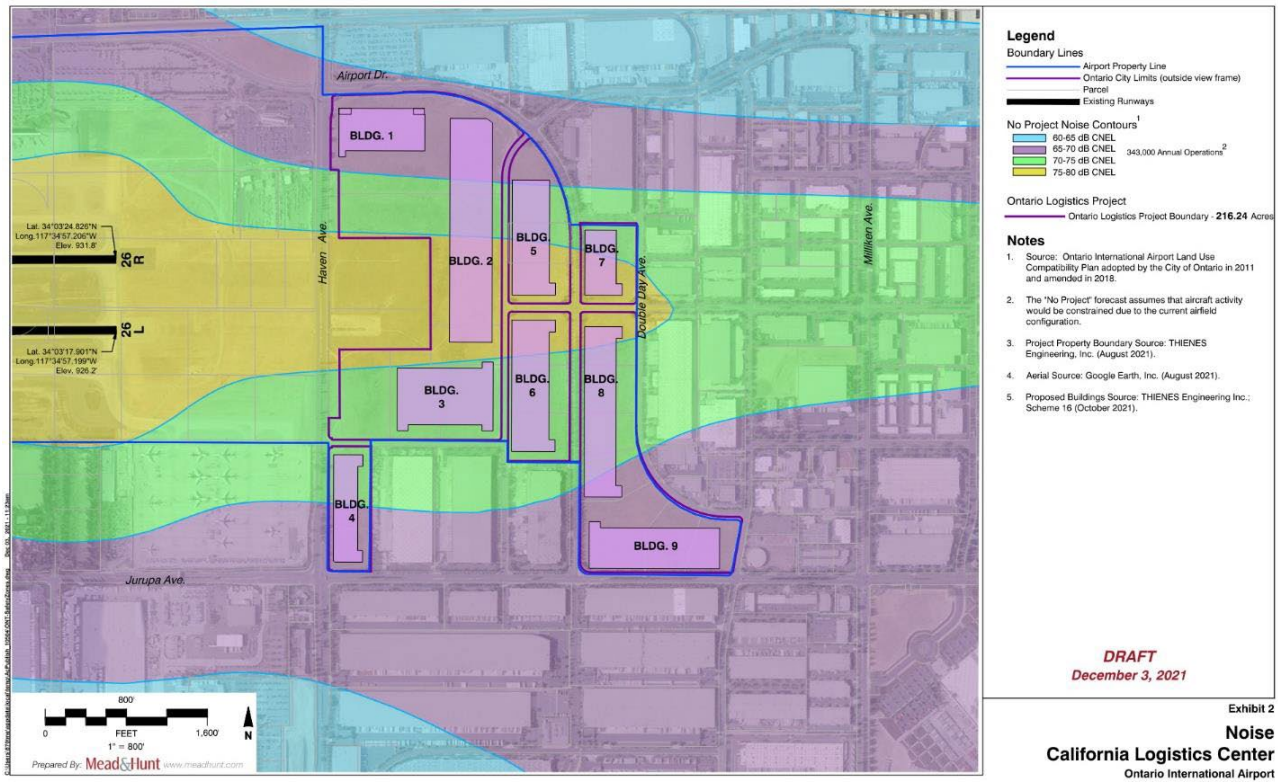
TOP EIR contains Mitigation Measure 12-1 to address noise impacts from future development projects:

12-1. Prior to the issuance of building permits for any project that involves a noise-sensitive use within the 65 dBA CNEL contour along major roadways, freeways, railroads, or the Ontario International Airport, the project property owner/developers shall retain an acoustical engineer to conduct an acoustic analysis and identify, where appropriate, site design features (e.g., setbacks, berms, or sound walls) and/or required building acoustical improvements (e.g., sound transmission class rated windows, doors, and attic baffling), to ensure compliance with the City's Noise Compatibility Criteria and the California State Building Code and California Noise Insulation Standards (Title 24 and 21 of the California Code of Regulations).

To comply with this requirement, the developer retained Mead and Hunt to prepare an airport hazards assessment of the proposed project, including airport-related noise (see Appendix E). The recommended TOP Implementation Actions for noise are tiered off of and directly implement the requirements of TOP EIR Mitigation Measure 12-1 regarding airport noise.

With implementation of TOP Mitigation Measure 12-1 and the two TOP Implementation Actions for noise recommended by the Mead & Hunt study, the project will have less than significant noise impacts on surrounding land uses, consistent with the analysis and conclusions of TOP EIR and supporting project-related studies.

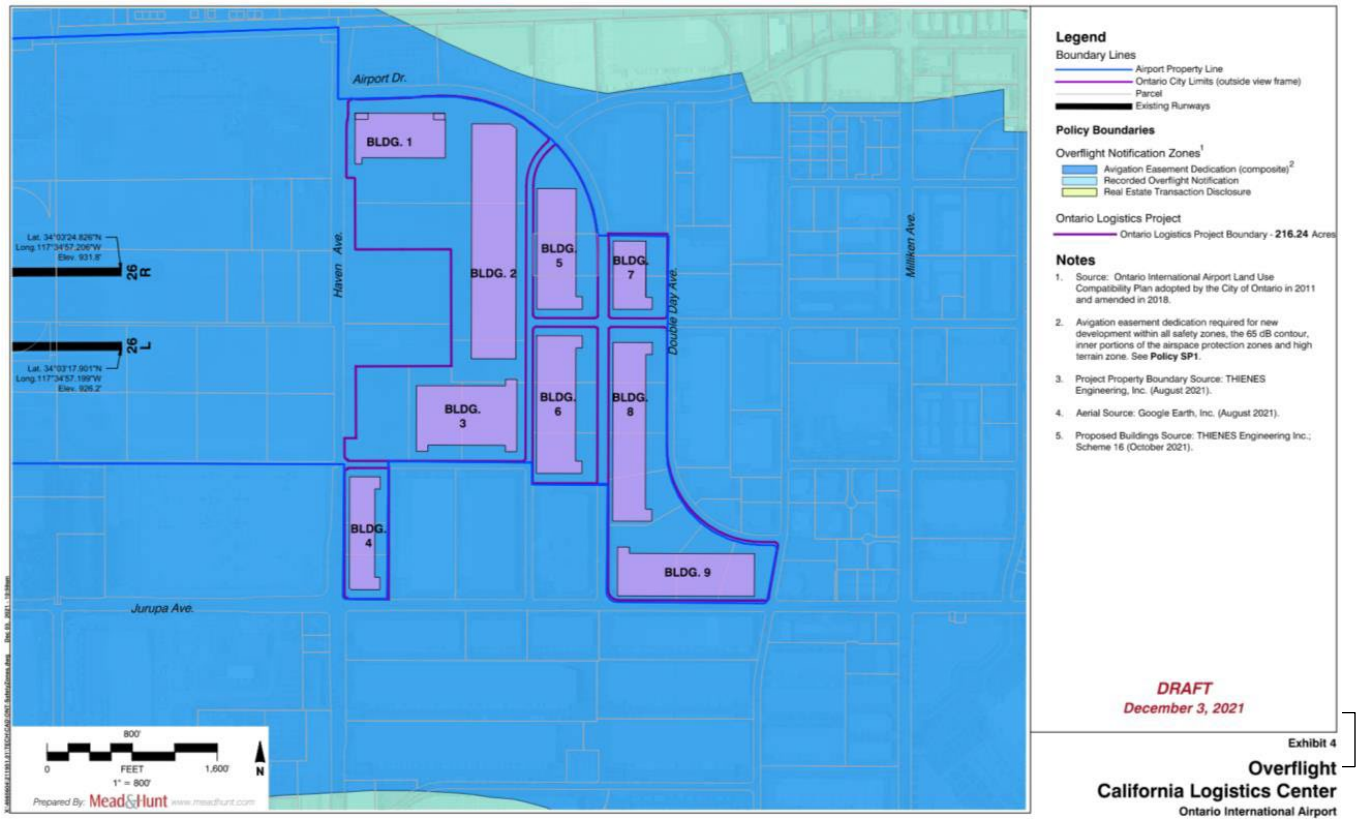
Figure 6: NOISE IMPACTS



Source: Exhibit 2, M&H 2022

Overflights. Noise from individual aircraft operations, especially by comparatively loud aircraft, can be intrusive and annoying in locations beyond the limits of the noise impact zones. The purpose of overflight compatibility policies is to help notify people about the presence of overflights near airports so that they can make more informed decisions regarding acquisition or lease of property in the affected area. As shown in **Figure 7, Overflight Impacts**, the project falls entirely with the Overflight Notification Zone - Avigation Easement Dedication. The ALUCP requires dedication of an avigation easement to the OIA owner/operator prior to commencement of construction as a COA of new development. This requirement is codified in the recommended PDF/COA included in the Mead & Hunt study (Appendix E).

Figure 7: OVERFLIGHT IMPACTS



Source: Exhibit 4, M&H 2022

Safety Zones. The intent of the safety compatibility policies is to minimize the risks associated with an off-airport aircraft accident or emergency landing. The policies focus on reducing the potential consequences of such events when they occur. For most nonresidential development, risk is measured in terms of the usage intensity—the number of people per acre on the site. Local development standards (e.g., floor area ratios, parking requirements) and building code occupancies can be used to calculate nonresidential usage intensities. The ALUCP safety criteria for light industrial, warehouse, and office uses are presented in **Figure 8, ALUCP Safety Criteria**. As shown in **Figure 9, Safety Zones**, the Project site spans the following Safety Zones: Safety Zone 1, RPZ; Safety Zone 2, Inner Approach/Departure Zone; and Safety Zone 3, Inner Turning Zone. Although 14.56 acres of the Project site fall within Safety Zone 1, which encompasses the RPZs for Runways 26L and 26R, the proposed site plan keeps this zone clear of future structures and parking lots. As such, no compatibility conflicts exist in Safety Zone 1, which is the most restrictive of all the safety zones. For Safety Zones 2 and 3, the individual proposed building sites are subject to the ALUCP usage intensity (people per acre) limits for each zone. In accordance with ALUCP Policy S2, any site that is split by safety zone boundaries is treated as if it were multiple parcels divided at the safety zone boundary.

The "maximum allowable occupancy" is the primary criterion by which to evaluate the compatibility of each lessee's proposed specific use or combination of uses within each building (see previous Table 2). The City controls the ultimate determination of compliance with the ALUCP usage criteria, and those determinations will occur when a potential tenant(s) is identified for each building and a specific land use is proposed. The CCC SP includes a mix of light industrial or warehouse uses with ancillary office space. In addition to maximum allowable occupancy, each building has a "theoretical occupancy" which is the calculated total intensity of each building assuming that the building is developed as either a light industrial/office use or warehouse/office use (see previous Table 3). The previous Tables 2 and 3 demonstrate that high-intensity light industrial uses would likely exceed the maximum allowable occupancy limits for Zone 2. Buildings located in Zone 2 are therefore better suited for low intensity light industrial and

warehouse uses. Those limits are codified in the recommended TOP Implementation Actions for noise included in the Mead & Hunt study (Appendix E).

Figure 8: ALUCP SAFETY CRITERIA

Safety Criteria

Legend: Land Use Compatibility
(A detailed explanation of each land use acceptability category is provided on pg. 2-46 of this table)

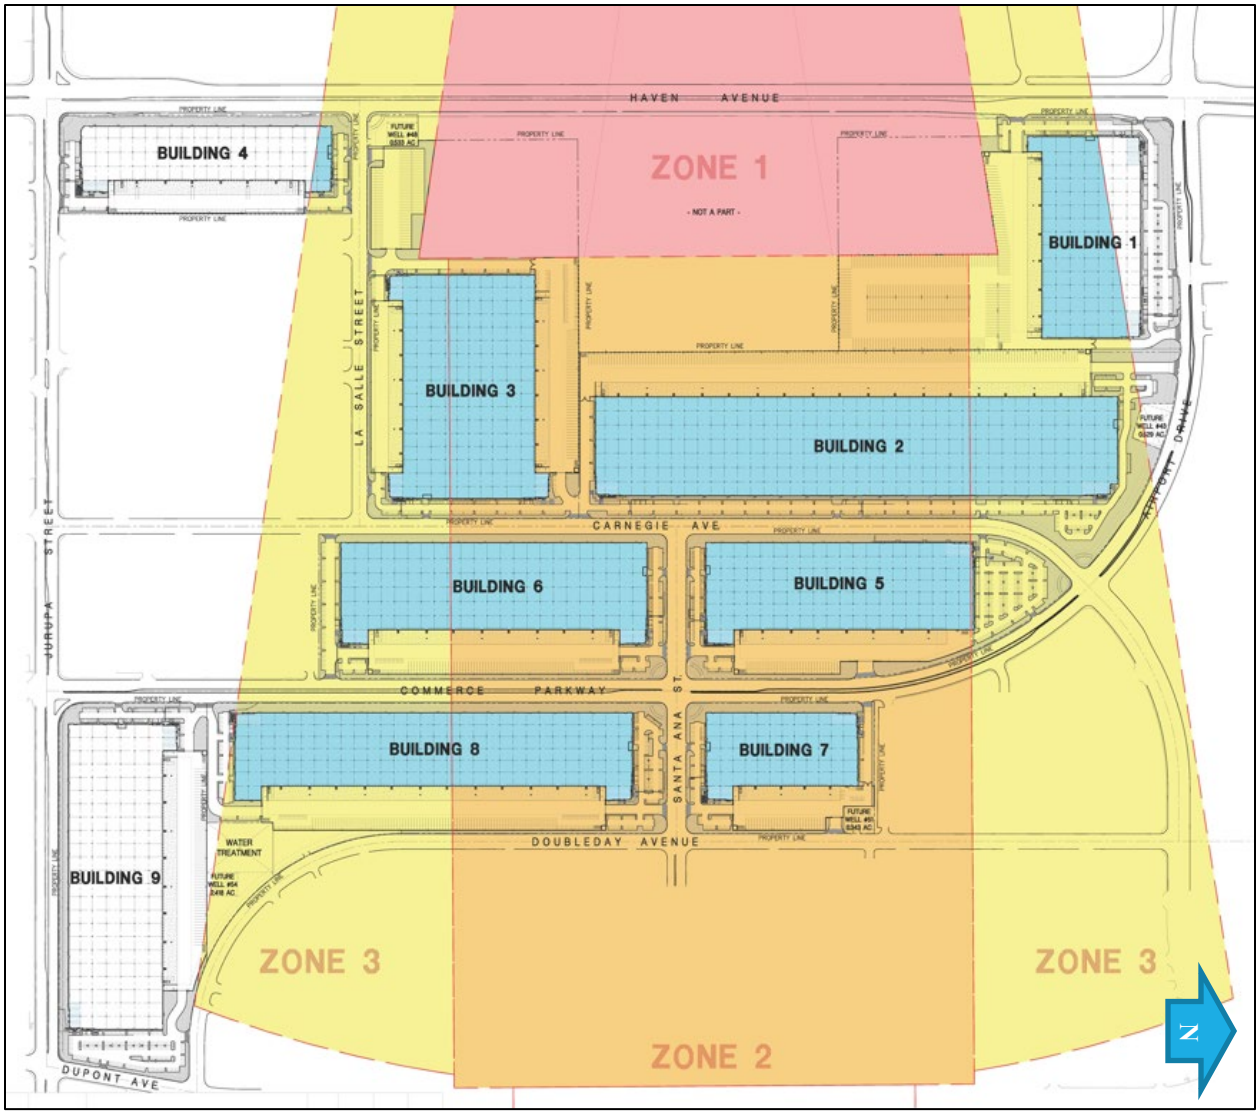
Normally Compatible Land Use	Conditional Land Use (FAR)	Incompatible Land Use

- A yellow cell indicates a use that is conditionally compatible provided it satisfies the maximum intensity limits and/or other listed conditions.
- Numbers in yellow cells indicate the Floor Area Ratio (FAR) limit for the use. The FAR limit is based on the common occupancy load factor [approx. number of square feet per person] indicated for that use. The FAR and/or the common occupancy load factors can be used to calculate the intensity (number of people per acre) of the proposed development (see **Policy S2c**). Up to 10% of the total FAR of a building may be devoted to an ancillary use and excluded from the single-acre intensity calculations, but not the average sitewide intensity limits.

Land Use Category [1] *Note: Multiple land use categories and compatibility criteria may apply to a project*	Safety Zone [2] 1	2	3	4	5	Criteria for Conditional Uses *Note: The numbers below indicate zone in which condition applies.*
Max Sitewide Average Intensity (people/acre)	10	60	100	160	160	▪ Nonresidential development must satisfy both forms of intensity limits. ▪ Maximum intensity criteria apply to Normally Compatible as well as Conditional land uses
Max Single-Acre Intensity (people/acre) *applicable to all nonresidential development*	20	120	250	400	400	
Industrial, Manufacturing, and Storage Uses						
Hazardous Materials Production: oil refineries, chemical plants (≥ 6,000 gallons)						
Heavy Industrial						3, 4: Avoid bulk storage of hazardous (flammable, explosive, corrosive, or toxic) materials; permitting agencies to evaluate possible need for special measures to minimize hazards if struck by aircraft
Light Industrial, High Intensity: food products preparation, electronic equipment [approx. 200 s.f./person]		0.28	0.46	0.74		2-4: FAR limits as indicated; avoid bulk storage of hazardous (flammable, explosive, corrosive, or toxic) materials; permitting agencies to evaluate possible need for special measures to minimize hazards if struck by aircraft
Light Industrial, Low Intensity: machine shops, wood products, auto repair [approx. 350 s.f./person]		0.48	0.80	1.29		2-4: FAR limits as indicated 5: Single story only; max. 10% in mezzanine 2-5: Avoid bulk storage of hazardous (flammable, explosive, corrosive, or toxic) materials; permitting agencies to evaluate possible need for special measures to minimize hazards if struck by aircraft
Research & Development [approx. 300 s.f./person]			0.69	1.10		3, 4: FAR limits as indicated; avoid bulk storage of hazardous (flammable, explosive, corrosive, or toxic) materials; permitting agencies to evaluate possible need for special measures to minimize hazards if struck by aircraft
Indoor Storage: wholesale sales, warehouses, mini/other indoor storage, barns, greenhouses [approx. 1,000 s.f./person]						2: Single story only; max. 10% in mezzanine

Source: Exhibit 6, M&H 2022

Figure 9: SAFETY ZONES



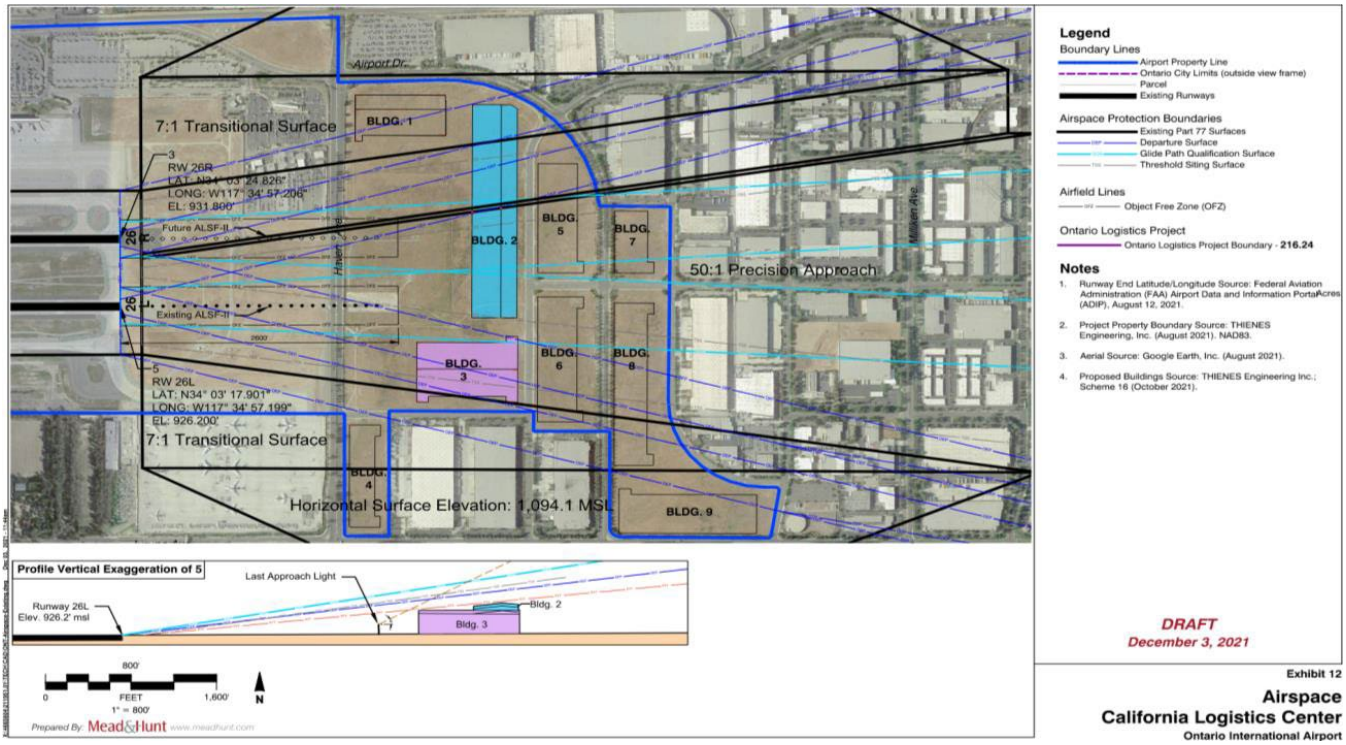
Airspace Protection. Airspace protection compatibility policies seek to prevent the creation of land use features that can pose hazards to the airspace required by aircraft in flight and have the potential for causing an aircraft accident. Categories of hazards to airspace include: physical hazards such as tall structures that may intrude upon protected airspace and land use; and features that have the potential to attract birds or other potentially hazardous wildlife to the airport area. Title 14 of the Code of Federal Regulations (CFR) Part 77 establishes height limits to provide a margin of safety for normal aircraft operations. Objects that exceed the Part 77 height limits constitute airspace obstructions. However, the standards are not absolute and deviation from the CFR Part 77 standards requires the offending objects be evaluated by the FAA and may be considered for marking or lighting application if appropriate.

Figure 10, Airspace Impacts, shows the layout of the proposed buildings at the project site. The heights of the buildings are required to be reported to the FAA by a completed Form 7460-1, *Notice of Proposed Construction or Alteration*. The building elevations are reported as the roof height with 10 feet added to account for building appurtenances such as, but not limited to, parapets and heating ventilation equipment, pursuant to the TOP Implementation Actions for airport hazards outlined in the Mead & Hunt report (Appendix E).

The Mead & Hunt Report (Appendix E) concluded the project has been conceptually designed to keep all future structures below the Part 77 obstruction surfaces and the other FAA clear areas noted in

Figure 10. Additionally, FAA Form 7460-1 has been submitted to the FAA for an aeronautical study for all nine buildings. FAA airspace determinations would have to be received and incorporated as necessary into the project design prior to commencement of construction.

Figure 10: AIRSPACE IMPACTS



Source: Exhibit 12, M&H 2022

To be consistent with TOP and its EIR, it must be demonstrated and assured the proposed project does not conflict with the ALUCP and related safety issues involving OIA. The project must comply with TOP EIR restriction that which states…"before any structure is placed within these areas, a permit is required to ensure that structures do not become a hazard to air navigation and that development is consistent with Part 77" (TOP EIR p. 5.8-27). This compliance requires the project to implement the various TOP Implementation Actions outlined in the project description of this document as part of the City's development review and approval process and ALUCP consistency determination.

The project was evaluated and found to be consistent with the policies and criteria of the ALUCP for OIA which in turn would ensure the project is consistent with TOP and its EIR with implementation of 10 specific actions (see TOP Implementation Actions/Regulatory Compliance in the Project Description). The Mead & Hunt study (Appendix E) recommended the following actions to reduce potential hazard-related impacts of OIA on the project which will be implemented by the project:

1. Regarding overflights, an avigation easement shall be filed with the OIA Authority prior to obtaining a Certificate of Occupancy;
2. Regarding safety, it shall be demonstrated to the OIA Authority and the City that each building meets the ALUCP intensity requirements prior to issuance of a building permit.
3. Regarding airspace, a ground lease agreement will be entered into between the applicant and the City contingent upon a "no airspace hazard determination" by the FAA.
4. Regarding wildlife hazards, buildings shall be designed to eliminate trees and other physical supports for raptors and other large birds.
5. Also regarding wildlife hazards, landscaping plans shall use short tree varieties.
6. Regarding outdoor lighting, the project shall have no lighting directed toward the airport property.

7. Regarding glare, the project shall not utilize any glare-producing materials on buildings within the airport safety zone.
8. Also regarding glare, a glare analysis should be prepared for any rooftop solar systems consistent with FAA glare limitations.
9. Regarding temporary equipment heights, the construction schedule must be coordinated with the OIA Authority to preclude impacts to airport operations by the height/location of cranes.
10. The Mead & Hunt airport safety report made recommendations about onsite surface detention basins. However, only underground retention/detention facilities are proposed as part of this project so there will be no impacts in this regard.

The project site lies outside the boundaries of the Chino Airport Influence Area (i.e., the next closest airport). Therefore, any impacts regarding airport safety and compatibility of that facility will be less than significant. The following TOP Implementation Actions are based on the recommendations of the M&H airport safety report to comply with the recommendations of TOP EIR Section 5.9, Impact 5.9-3. They are described fully in the Project Description portion of this document and summarized by title below:

1: Avigation Easements

2: Building Intensity

3: Part 77 Height Limits

4: Architectural Design

5: Landscaping

6: Lighting Fixtures

7: Glare Control

8: Glare Analysis

9: Construction Coordination

The M&H report concluded the project was consistent with the most current 2018 ALUCP, therefore, potential safety impacts from its proximity to the OIA will be less than significant with implantation of the recommended TOP Implementation Actions outlined in the Project Description. With implementation of the recommended TOP Implementation Actions relative to airport safety, the project will be consistent with the requirements of TOP EIR and will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in TOP EIR. No changes or additions to the TOP EIR analyses are necessary.

It should be noted the CCC SP EIR concluded the project would have no impacts regarding hazards or noise but did recommend two (2) mitigation measures to address noise impacts from airport operations as shown in Table A (see CCCSP EIR Measures 15 and 16 in column 1 of the table). However, these measures have since been superseded by the City's internal noise standards incorporated into TOP Noise Element.

f. Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?

Discussion of Effects: When the CCC SP EIR was prepared in 1981, the following wildfire-related issues were not part of the State CEQA Checklist so emergency response planning or evacuation routes were not addressed in the CCC SP EIR.

TOPEIR concluded TOP would not interfere with an emergency evacuation plan. According to the Vulnerability Analysis conducted as part of TOP, the threat of flood is the City's greatest hazard as large portions of the City are within the flood zone (i.e., the project site is within the 500-year flood zone). Figure S-10 of TOP indicates that Haven Avenue to the west, Airport Drive to the north, and Jurupa Street to the south are designated evacuation routes in the City. The City's Safety Element, as contained within TOP, includes policies and procedures to be administered in the event of a disaster. TOP seeks interdepartmental and inter-jurisdictional coordination and collaboration to be prepared for, respond to and recover from every day and disaster emergencies. The EIR concluded TOP would have a less than significant direct, indirect, and cumulative impacts relating to impairment of or interference with adopted emergency response plans or emergency evacuation plans (SEIR p. 5.9-41).

The project will comply with the requirements of the Ontario Fire Department and all City requirements for fire and other emergency access. Because the project is required to comply with all applicable City codes, any impacts would be reduced to less than significant levels.

The project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in TOP EIR. No changes or additions to TOP EIR analyses are necessary.

Mitigation: No project specific mitigation is required.

g. Expose people or structures, either directly or indirectly, to a significant risk of loss, injury or death involving wildland fires?

Discussion of Effects: When the CCC SP EIR was prepared in 1981, wildfire was not a specific issue of the State CEQA Checklist, so emergency response planning or evacuation routes were not addressed in the CCC SP EIR. However, the site is not located in a state responsibility area or lands classified as a very high fire hazard severity zone.

TOP EIR indicates the City would result in less than significant risks from wildfire hazards. The City is outside of the state responsibility area, and California Department of Forestry and Fire Protection (CAL FIRE) has determined that the City contains no areas subject to very high wildfire risk. The EIR concluded TOP would have a less than significant direct, indirect, and cumulative impacts relating to wildland fires (SEIR p. 5.9-42). Figure S-04 from TOP indicates the project site is not within any designated wildfire area. Therefore, no impacts are anticipated.

The project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in TOP EIR. No changes or additions to TOP EIR analyses are necessary.

Mitigation: No project specific mitigation is required.

10. HYDROLOGY & WATER QUALITY. Would the project:

a. Violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or ground water quality?

Discussion of Effects: Section VI.G of the CCC SP EIR evaluated hydrology and water-related impacts of the project. A project hydrology study was prepared, but the EIR did not present quantified data or analysis of impacts from that report. EIR Exhibit 20 did show the runoff input and output through the proposed storm drain master plan for the project.

Section VI.O of the CCC SP EIR addresses water supply and quality. The EIR evaluates overall water consumption compared to the Water Master Plan Report (EIR was prepared before requirements for Urban Water Management Plans). The discussion about water quality focused on the potable water supply and ways onsite equipment could contaminate drinking water, not regional water quality permitting requirements. The EIR recommended four (4) mitigation measures regarding water and sewer systems not contaminating drinking water supplies (i.e., not control of runoff water quality) as shown in Table A (see CCCSP EIR Measures 50-51 and 74-75 in column 1 of the table).

TOP EIR concluded there would be less than significant impacts related to water quality from development activities associated with future development under TOP. Nearly the entire City is developed, and implementation of TOP would not substantially alter the amount of developed land in the City. TOP EIR would have a less than significant direct, indirect, and cumulative impacts relating to surface or groundwater quality (SEIR p. 5.10-21).

The project site is served by City water and sewer service and will not affect water quality standards or waste discharge requirements. Discharge of storm water pollutants from areas of materials storage, vehicle or equipment fueling, vehicle or equipment maintenance (including washing, waste handling, hazardous materials handling or storage, delivery areas or loading docks, or other outdoor work) areas could result in a temporary increase in the amount of suspended solids, trash and debris, oil and grease, organic compounds, pesticides, nutrients, heavy metals and bacteria pathogens in surface flows during a concurrent storm event, thus resulting in surface water quality impacts. The site is required to comply with the statewide National Pollutant Discharge Elimination System (NPDES) General Industrial Activities

Stormwater Permit, the San Bernardino County Area-Wide Urban Runoff Permit (MS4 permit) and the City Municipal Code (CMC) Title 6, Chapter 6 (Stormwater Drainage System). This compliance would reduce any impacts to below a level of significance.

A Preliminary Water Quality Management Plan (PWQMP) was prepared for the project by Thienes Engineering in December 2021 (TE 2022)(Appendix F), which identifies how the site will comply with storm water discharge and water quality management requirements of the City and the Regional Water Quality Control Board. The PWQMP includes site design measures that capture runoff and pollutant transport by minimizing impervious surfaces and maximizes low impact development (LID) best management practices (BMPs), such as infiltration, biotreatment and evapotranspiration. The PWQMP would include the use of underground stormwater infiltration systems for each of the nine building development sites. There will also be gravity separator devices for pretreatment of sediment, trash/litter, and oil and grease. Any overflow drainage from future development will be conveyed to the public street by way of parkway culverts. The Water Quality Site Map in the PWQMP demonstrates the project will retain/detain a volume of water equal or greater than the design capture volume (DCV) for the entire property (905,754 v. 904,127 cubic feet, respectively) (TE 2022).

The airport safety report (Appendix E) prepared by Mead & Hunt stated that onsite surface stormwater drainage facilities (e.g., bioretention ponds) on the project site need to be designed to provide a 48-hour drawdown following a design storm event (i.e., 24-hour storm). The PWQMP indicates all retention/detention facilities will be underground, which will therefore preclude potential wildlife hazards that could result from surface water features.

The project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in TOP EIR. No changes or additions to TOP EIR analyses are necessary.

Mitigation: No project specific mitigation is required.

b. Substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin?

Discussion of Effects: Section VI.G of the CCC SP EIR evaluated hydrology and water-related impacts of the project, but did not address groundwater recharge. A project hydrology study was prepared, but the EIR did not present quantified data or analysis of impacts from that report.

Section VI.O of the CCC SP EIR includes one (1) mitigation measure to help protect local groundwater (MM 78 – install recharge/retention basin) as outlined in Table A (see CCCSP EIR Measure 32 in column 1 of the table).

TOP EIR identified less than significant impacts related to groundwater recharge and supply for TOP. At buildout, TOP is forecast to increase residential units by 25,399 and increase nonresidential square footage by 1,092,508 square feet; future development would increase the amount of impermeable surfaces in the City and reduce the amount of permeable surfaces available for groundwater recharge. TOP would have a less than significant direct, indirect, and cumulative impacts relating to impediment of sustainable groundwater management of the basin (SEIR p. 5.10-23).

The subject site was previously analyzed by TOP EIR as an industrial use. No increases in the current amount of water flow to the project site are anticipated, and the proposed project will not deplete groundwater supplies, nor will it interfere with recharge. The water use associated with the proposed use of the property was included in TOP EIR analysis. For development of the site, grading and excavation is expected to be less than 25 feet and would not reach a depth that could affect the existing aquifer, estimated to be over 200 feet below the ground surface. No adverse impacts are anticipated.

The project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in TOP EIR. No changes or additions to TOP EIR analyses are necessary.

Mitigation: No project specific mitigation is required.

c. Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would:

i. Result in substantial erosion or siltation on- or off-site;

Discussion of Effects: Section VI.G of the CCC SP EIR evaluated hydrology and water-related impacts of the project but did not address erosion. A project hydrology study was prepared but the EIR but did not present quantified data or analysis of impacts from that report. In addition, Section VI.K of the CCC SP EIR addresses geology and soils. but does not identify any specific erosion impacts. However, it does recommend one (1) mitigation measure requiring an erosion control plan as part of development (see CCCSP EIR Measure 51 in column 1 of Table A)

TOP EIR concluded that implementation of BMPs outlined in SWPPPs, erosion and sediment control plans, WQMPs, and TOP policies would address anticipated erosion and siltation impacts. Therefore, development would not result in substantial erosion or siltation on- or off-site (SEIR p. 5.10-24).

The project Hydro Report and PWQMP (Appendix F) demonstrate that the project will not alter the drainage pattern of the site or area, in a manner that would result in erosion, siltation or flooding on-or-off site, nor will the proposed Project increase the erosion of the subject site or surrounding areas. The existing drainage pattern of the site will not be altered, and it will have no significant impact on downstream hydrology. Stormwater generated by the project will be discharged in compliance with the statewide NPDES General Construction Activities Stormwater Permit and San Bernardino County MS4 permit requirements. With the full implementation of a Storm Water Pollution Prevention Plan (SWPPP) developed in compliance with the General Construction Activities Permit requirements, the BMPs included in the SWPPP, and a stormwater monitoring program, the project's potential impact would be reduced to below a level of significance. No streams or streambeds are present on the site. No changes in erosion off-site are anticipated.

The project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in TOP EIR. No changes or additions to TOP EIR analyses are necessary.

Mitigation: No project specific mitigation is required.

ii. Substantially increase the rate or amount of surface runoff water in a manner which would result in flooding on- or off-site;

Discussion of Effects: Section VI.G of the CCC SP EIR evaluated hydrology and water-related impacts of the project, but did not specifically address flooding other than storm drain concerns. A project hydrology study was prepared, but the EIR did not present quantified data or analysis of impacts from that report.

TOP EIR states that the current Flood Insurance Rate Map (FIRM) for the City only shows small portions of the City adjacent to flood control channels, detention basins, and creeks are within the 100-year floodplain. In addition to TOP policies, the CMC, Chapter 13, Flood Damage Prevention Program, requires that a development permit be obtained prior to development in a special flood hazard area to ensure that the site is reasonably safe from flooding and flood hazards. The City requires that all new structures in a special flood hazard area have elevations above the base flood elevation. Therefore, with implementation of existing policies, the potential to impede or redirect flood flows was considered less than significant (SEIR p. 5.10-25).

The Hydro Study concludes the proposed project will not increase the flow velocity or volume of storm water runoff to cause environmental harm from the site and will not create a burden on existing infrastructure. Furthermore, with the implementation of an approved Water Quality Management Plan developed for the site, in compliance with the San Bernardino County MS4 Permit requirements, stormwater runoff volume shall be reduced to below a level of significance.

The project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in TOP EIR. No changes or additions to TOP EIR analyses are necessary.

Mitigation: No project specific mitigation is required.

iii. Create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff; or

Discussion of Effects: Section VI.G of the CCC SP EIR evaluated hydrology and water-related impacts of the project. A project hydrology study was prepared, but the EIR did not present quantified data or analysis of impacts from that report. EIR Exhibit 20 did show the runoff input and output through the proposed storm drain master plan for the project. The EIR recommended four (4) mitigation measures all addressing drainage/storm drain impacts (see CCCSP EIR Measures 31-34 in column 1 of Table A).

TOP EIR indicates there are three major regional drainage channels that convey stormwater runoff from the City's storm drain system—San Antonio Channel, Cucamonga Channel, and Day Creek Channel. There are also several flood retentions and spreading basins in the City that are used to retain flood flows and recharge the Chino Groundwater Basin. Projects considered for approval under TOP would be required to prepare project-specific hydrology and hydraulic studies. The methodology for these studies is provided in the San Bernardino County Hydrology Manual, which describes the approach for estimating stormwater runoff and peak flow rates, for the 100-year storm event (SEIR 5.10-26). In addition, TOP EIR stated TOP would have a less than significant direct, indirect, and cumulative impacts relating to risk of release of pollutants due to project inundation (SEIR p. 5.10-27).

The Hydro Report (Appendix F) demonstrates the project will not create or contribute runoff water that would exceed the capacity of existing or planned stormwater drainage systems, or create or contribute stormwater runoff pollutants during construction and/or post-construction activity. The stormwater flows will enter existing storm pipes in Jurupa Street and other adjacent improved streets. Pursuant to the requirements of TOP, the City's Development Code, and the San Bernardino County MS4 Permit, individual developments must provide site drainage and PWQMP plans according to guidelines established by the City's Engineering Department. As shown in **Table 12**, Project Runoff Volumes, the project will retain/detain a volume of water equal or greater than the DCV for the entire 196.8-acre property (906,544 v. 1,008,774 cubic feet, respectively) (TE 2022).

Table 12: Project Runoff Volumes

Building/ Drainage Area	SiteArea (Acres)	Design Capture Volume (DCV) (cubic feet/second)	Retention/Detention Volume Provided (cubic feet/second)
1	23.59	113,360	113,818
2	40.64	247,903	248,234
3	25.37	69,399	69,445
4	11.74	48,362	48,540
5	19.47	86,568	86,816
6	20.58	90,195	90,530
7	9.71	42,559	42,723
8	24.08	112,442	112,574
9	21.65	95,757	96,094
Total	**196.83**	**906,544**	**1,008,774**

Source: Hydrology Study and Preliminary Water Quality Management Plan (PWQMP), Thienes Engineering, October 2022a, b

The Hydro Study stated that if master drainage facilities are not in place at the time of project development, then standard engineering practices for controlling post-development runoff may be required, which could include the construction of on-site storm water detention and/or retention/infiltration facilities. This is a temporary engineering contingency if a property were to develop prior to completion of all planned area-wide drainage facilities. However, the area-wide master plan of drainage facilities has already been installed. Therefore, any impacts would be less than significant.

The project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in TOP EIR. No changes or additions to TOP EIR analyses are necessary.

Mitigation: No project specific mitigation is required.

ii. Impede or redirect flood flows?

Discussion of Effects: Section VI.G of the CCC SP EIR evaluated hydrology and water-related impacts of the project, but did not specifically address flooding other than storm drain concerns. A project

hydrology study was prepared, but the EIR did not present quantified data or analysis of impacts from that report.

TOP EIR states that the current FIRM for the City only shows small portions of the City adjacent to flood control channels, detention basins, and creeks are within the 100-year floodplain. In addition to TOP policies, the CMC, Chapter 13, Flood Damage Prevention Program, requires that a development permit be obtained prior to development in a special flood hazard area to ensure that the site is reasonably safe from flooding and flood hazards. However, Figure S-03 of TOP indicates most of the project site is within the 500-year or 100-year flood plains, so there will be no flooding impacts relative to the 100-year flood zone. Impacts will be less than significant.

Urbanization in the areas surrounding the project site have resulted in increased responsiveness of the basin to rainfall. The increase in impervious surfaces such as roofs, roads, and parking lots has resulted in a decrease in groundwater infiltration and larger storm surges. The project site currently slopes southeast, and the existing drainage pattern is characterized by sheet flows that follow the slope to the northwest. The project site is not impacted by offsite flows. The project site is not located in a Federal Emergency Management Agency (FEMA) Firm Panel designated Flood Zone Risk, and according to the USFWS National Wetlands Inventory (NWI) no wetlands or other ponding features exist on the property. The project will lead to the conversion of permeable surfaces to impermeable surfaces such as parking areas and building foundation areas. The project site would discharge onsite flows into a combination of onsite infiltrations basins and an existing storm drain facility. As such, the proposed project would not impede or redirect flood flows. With adherence to existing federal, state, and local regulation, no changes to the existing flood flows would occur.

The project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in TOP EIR. No changes or additions to TOP EIR analyses are necessary.

Mitigation: No project specific mitigation is required.

d. In flood hazard, tsunami, or seiche zones, risk release of pollutants due to project inundation?

Discussion of Effects: Section VI.G of the CCC SP EIR evaluated hydrology and water-related impacts of the project, but did not specifically address pollutant release. A project hydrology study was prepared, but the EIR did not present quantified data or analysis of impacts from that report.

Figure S-04 of TOP indicates the project site is not within the inundation zones of either the San Antonio Dam to the northwest or overflow of debris basins to the north. Due to its location and surrounding conditions, TOP EIR identified less than significant impacts related to flood hazards, tsunamis, seiches, or dam inundation (SEIR p. 5.10-27).

Impacts associated with flooding are primarily related to the construction or placement of structures in areas prone to flooding including within an unprotected 100-year flood zone, and in areas susceptible to high tides, tsunamis, seiches, mudflows or sea level rise. Specifically, structures placed in flood prone areas, if flooded, would be damaged, and could subject people to injury or death. The National Flood Insurance Act of 1968 requires the identification of floodplain areas and establishment of flood-risk zones within those areas. FEMA administers the programs and coordinates with communities to establish effective floodplain management standards. According to FEMA, the project is not located in a known floodplain as shown in Figure S-04 of TOP. Furthermore, this area is not known to flood and is not typically subjected to flooding. The project site is vacant and regularly maintained for weed abatement so it does not contain any vegetation associated with riparian features. No wetlands have been mapped on the project site according to the NWI. According to the FEMA, the project is not located in an area that is subject to flood hazard, tsunami, or seiche zones. The project site is located over 60 miles east of the Pacific Ocean and is not located in a mapped tsunami zone. Therefore, the project would not have a significant risk of flood hazard, tsunami, seiche zones, release of pollutants due to project inundation.

The project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in TOP EIR. No changes or additions to TOP EIR analyses are necessary.

Mitigation: No project specific mitigation is required.

e. Conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan?

Discussion of Effects: Section VI.G of the CCC SP EIR evaluated hydrology and water-related impacts of the project, but did not specifically address water quality, permitting, or groundwater management. A project hydrology study was prepared, but the EIR presented no information on water quality or groundwater.

Section VI.O of the CCC SP EIR addresses water supply but does not discuss groundwater conditions or impacts. However, it does recommend two (2) mitigation measures to help protect local groundwater (see CCCSP EIR Measures 32 and 78 in column 1 of Table A).

TOP EIR identified less than significant impacts related to water quality or groundwater issues. The City's groundwater supplies are from the Chino Groundwater Basin, which is adjudicated and managed by the Chino Basin Watermaster. The Chino Basin is exempt from legislative requirements under the Sustainable Groundwater Management Act because it is an adjudicated basin and is not required to prepare a groundwater sustainability plan. TOP EIR concluded TOP would have less than significant direct, indirect, and cumulative impacts relating to a conflict with or obstruction of a water quality control plan or sustainable groundwater management plan (SEIR p. 5-10-27).

The Regional Water Quality Control Board's Basin Plan is designed to preserve and enhance water quality and protect the beneficial uses of all regional waters. Specifically, the Basin Plan (i) designates beneficial uses for surface and ground waters, (ii) sets narrative and numerical objectives that must be attained or maintained to protect the designated beneficial uses and conform to the state's anti-degradation policy, and (iii) describes implementation programs to protect all waters in the region. The project would be required to adhere to requirements of the water quality control plan, including all existing regulation and permitting requirements. This would include the incorporation of BMPs to protect water quality during construction and operational periods. The project would be subject to all existing water quality regulations and programs, including all applicable construction permits. Existing TOP policies related to water quality would also be applicable to the project. Implementation of these policies, in conjunction with compliance with existing regulatory programs, would ensure that water quality impacts related to the project would be less than significant.

The project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in TOP EIR. No changes or additions to TOP EIR analyses are necessary.

Mitigation: No project specific mitigation is required.

It should be noted the CCC SP EIR concluded the project would have impacts regarding hydrology and recommended four (4) mitigation measures most of which have since been superseded by regulatory compliance and standard City conditions of approval (see CCCSP EIR Measures 31-34 in column 1 of Table A.

11. LAND USE & PLANNING. Would the project:

a. Physically divide an established community?

Discussion of Effects: Section VI.H of the CCC SP EIR examined land use impacts, but focused on compatibility with the General Plan, surrounding land uses, and noise compatibility with airport operations to the west. The EIR recommended eight (8) mitigation measures mainly related to airport noise impacts on the project rather than on project-related noise impacts on surrounding land uses (see CCCSP EIR Measures 37-44 in column 1 of Table A).

TOP EIR concluded TOP policies would prevent conflicting land uses and would not divide any established communities. TOP would have less than significant direct, indirect, and cumulative impacts relating to physical division of an established community (SEIR p. 5.11-2).

The project site is located in an area that is currently developed with urban land uses to the north, east, and south, including large warehouses and commercial uses. This project will be of similar design and size to surrounding development. No adverse impacts are anticipated.

The project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in TOP EIR. No changes or additions to TOP FEIR analyses are necessary.

Mitigation: No project specific mitigation is required.

b. Cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect?

Discussion of Effects: Sections VI.A through VI.S in the CCC SP EIR evaluate the project relative to a number of land use planning documents and regulations, including the City General Plan (Land Use Compatibility, Section VI.H) and air quality management planning (Section VI.A), The EIR identified no significant impacts and no mitigation was recommended. However, the EIR also evaluated the project relative to the OIA and recommended three (3) mitigation measures all related to noise impacts from the airport (see CCCSP EIR Measures 38, 39, and 43 in column 1 of Table A).

TOP EIR found that buildout of TOP would not conflict with applicable plans adopted for the purpose of avoiding or mitigating an environmental effect, including SCAG regional plans and policies and the land use compatibility plans for the OIA and the Chino Airport. The project site is just east of the OIA and within its safety and noise impact zones (SEIR p. 5.11-6).

TOP Figure LU-01 (Land Use Plan) indicates that industrial uses have a maximum FAR of 0.55 so the 196.9-acre site would be allowed up to 4,717,330 square feet of industrial uses under TOP. It should be noted the project proposes 9.2% less square footage than the maximum allowed under TOP (i.e., project is 90.8% of TOP maximum). The most recent amendment to the CCC SP was City Council Resolution No.018-126 which was adopted August 21, 2018 and changed the land use designations for the following eight (8) parcels 0211-222-55, 0211-232-45, 0211-232-46, 0211-232-16, 0211-232-17, 0211-232-18, 0211-232-19, and 0211-232-20 on the project site from Commercial and Office to Light Industrial. The previous Table 1 shows the specific sizes of the nine proposed building on the proposed project site. The current Project plan is consistent with the land use designations for the site under the 2022 TOP.

TOP and existing laws and regulations will protect listed and otherwise sensitive biological species including the burrowing owl.

The proposed project does not interfere with any policies or plans established for environmental protection with implementation of a Burrowing Owl Relocation Program (BRP) for the relocation of burrowing owl consistent with CDFW protocols and a nesting bird survey to protect nesting birds per TOP Policies ER5-1 and ER5-2. With implementation of these actions, impacts are less than significant.

The project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in TOP EIR. No changes or additions to TOP EIR analyses are necessary.

Mitigation: No project specific mitigation is required.

12. MINERAL RESOURCES. Would the project:

a. Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?

Discussion of Effects: The CCC SP EIR did not examine potential impacts to mineral resources from the project, although it may be because the City's General Plan at that time did not identify any significant mineral resources in the vicinity of the project site.

TOP EIR indicates there are two areas in Ontario that are designated Mineral Resource Zone 2 (MRZ-2) where significant mineral resources are known or are likely. The remainder of the City is designated Mineral Resource Zone 3 (MRZ-3), where the significance of mineral deposits is unknown. Development in an MRZ-3 area would not result in significant impacts because mineral resources of statewide or local importance are not identified on the California Geological Survey's Production-

Consumption maps (SEIR p. 5.12-6). The project site is not within the portions of the City designated as MRZ-2.

The project site is located within a developed area surrounded by urban land uses to the north, east, and south with OIA safety zones to the west. There are no known mineral resources in the area and the site is largely surrounded by developed urban uses. Therefore, no impacts are anticipated.

The project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in TOP EIR. No changes or additions to TOP FEIR analyses are necessary.

Mitigation: No project specific mitigation is required.

b. Result in the loss of availability of a locally important mineral resource recovery site delineated on a local general plan, specific plan or other land use plan?

Discussion of Effects: The CCC SP EIR did not examine potential impacts to mineral resources from the project, although it may be because the City's General Plan at that time did not identify any significant mineral resources in the vicinity of the project site.

TOP EIR indicates there are two areas in Ontario that are designated Mineral Resource Zone 2 (MRZ-2) where significant mineral resources are known or are likely. The remainder of the City is designated Mineral Resource Zone 3 (MRZ-3), where the significance of mineral deposits is unknown. Development in an MRZ-3 area would not result in significant impacts because mineral resources of statewide or local importance are not identified on the California Geological Survey's Production-Consumption maps (SEIR p. 5.12-6). The project site is not within the portions of the City designated as MRZ-2. There are no known mineral resources in the area. No impacts are anticipated.

The project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in TOP EIR. No changes or additions to TOP EIR analyses are necessary.

Mitigation: No project specific mitigation is required.

13. NOISE. Would the project result in:

a. Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?

Discussion of Effects: Section VI.B of the CCC SP EIR concluded future workers of the project would be impacted by airport noise including potential future expansion of OIA. The EIR did not make a specific conclusion regarding the significance of airport noise impacts but recommended three (3) mitigation measures to help limit impacts. However, the language of the measures was permissive rather than mandatory and all of them have since been incorporated into regulatory compliance and standard conditions of approval by the City (see Table A for CCCSP EIR Measures 38, 39, and 43 in column 1).

TOP EIR found stationary and transportation noise impacts of future development under TOP to be less than significant with implementation of Safety Element Policy S-4.1, Noise Mitigation, which utilizes the City's Noise Ordinance, building codes, and subdivision and development code regulations to reduce noise from future development projects (SEIR p. 5.13-32).

The project site was previously analyzed by TOP EIR as supporting industrial uses and the project will not expose people to or generate noise levels in excess of the standards established in TOP EIR (Section 5.12). The project site is surrounded on the north, east, and south sides by industrial or commercial/office uses, and to the west by the OIA. The I-10 is just north of the site, the I-15 is just east of the site, and the site is within the OIA's Safety Zones. The issue of the project's consistency with the ALUCP is addressed in Section 9, *Hazards and Hazardous Materials* (airport-related hazards) and potential noise impacts are addressed in detail in Section 9.3e. As discussed therein various TOP Implementation Actions for noise which are recommended by the Mead & Hunt airport study (Appendix E) will be implemented by the project.

b. Generation of excessive groundborne vibration or groundborne noise levels?

Discussion of Effects: The CCC SP EIR did not evaluate potential impacts related to vibration in relation to the CCC SP project.

The project proposes industrial uses consistent with TOP Policy Plan and the CCC SP at approximately 10 percent less intensity than the maximum allowed under TOP. The site was previously analyzed by the TOP EIR as supporting industrial/warehouse uses. TOP EIR indicates these types of uses do not normally induce significant groundborne vibrations because they do not typically involve equipment or activities which result in large vibrations (e.g., blasting, impact compaction, handling of large boulders, etc.). Therefore, less than significant impacts are anticipated.

The project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in TOP EIR. No changes or additions to TOP EIR analyses are necessary.

Mitigation: No project specific mitigation is required.

c. For a project located within the vicinity of a private airstrip or the noise impact zones of the airport land use compatibility plan for ONT and Chino Airports, would the project expose people residing or working in the project area to excessive noise levels?

Discussion of Effects: The CCC SP EIR identified noise impacts and recommended four (4) mitigation measures mainly related to onsite architectural design to reduce impacts from airport noise on future project workers. These measures have been superseded by regulatory compliance and standard conditions of approval (see CCCSP EIR Measures 38, 39, 41, and 43 in column 1 of Table A).

The Land Use Element of TOP states that all new developments surrounding OIA should be consistent with the adopted ALUCP and should meet standards and recommendations of Part 77 of the FAA, adopted through Ordinance 2758 in the Ontario Municipal Code. A consistency determination analysis for the OIA was prepared by the City and OIA found TOP to be consistent with the ALUCP. Therefore, TOP is consistent with the ALUCP because the general land use designations within the airport influence area are the same (SEIR p. 5.9-41) in both documents. The City's OIA Liaison Planner has stated OIA has reviewed the proposed Development Plan and found the project to be consistent with the OIA ALUCP. Therefore, the project is also consistent with the ALUCP because it is consistent with TOP land use designation for the site.

As discussed in Section 9.e above, the project will implement the TOP Implementation Actions for airport noise recommended in the Mead & Hunt Study (Appendix E). The project site lies outside the boundaries of the Chino Airport Influence Area. Therefore, less than significant impacts are anticipated.

The project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in TOP EIR. No changes or additions to TOP FEIR analyses are necessary.

Mitigation: No project specific mitigation is required.

14. POPULATION & HOUSING. Would the project:

a. Induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of road or other infrastructure)?

Discussion of Effects: Section VI.R of the CCC SP EIR addresses socio-economic factors including population and housing. The EIR did not identify any significant impacts or recommend any mitigation for these issues.

TOP EIR identified less than significant impacts associated with population and housing increases. TOP allows the City to accommodate population growth through land use designations, goals, and policies that provide a vision and guide growth in the City (SEIR p. 5.14-11). The project site was previously analyzed by TOP EIR as industrial uses and the proposed project is consistent with the Industrial TOP designation and CCC SP land use plan.

The project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in TOP EIR. No changes or additions to TOP EIR analyses are necessary.

Mitigation: No project specific mitigation is required.

b. Displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere?

Discussion of Effects: Section VI.R of the CCC SP EIR addresses socio-economic factors including population and housing. The EIR did not identify any significant impacts or recommend any mitigation for these issues.

The purpose of TOP is to adequately plan and accommodate future growth through the distribution, location, balance, and extent of land uses. Implementation of TOP 2050 would accommodate population growth through land use designations, goals, and policies that provide a vision and guide growth in the City. The EIR concluded TOP would have less than significant direct, indirect, and cumulative impacts relating to displacement of people and housing (SEIR p. 5.14-12). The project site does not contain existing housing, nor is it designated or zoned for residential uses.

The project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in TOP EIR. No changes or additions to TOP EIR analyses are necessary.

Mitigation: No project specific mitigation is required.

15. PUBLIC SERVICES. Would the project:

c. Result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the public services:

i. Fire protection?

Discussion of Effects: Section VI.Q of the CCC SP EIR addresses public services. The EIR indicates the project will increase the demand for fire protection, but there are a number of City and other fire stations in the area that can provide adequate service. Three (3) mitigation measures were recommended (see CCCSP EIR Measures 84-86 in column 1 of Table A).

TOP EIR determined TOP would result in an increase in development and population, which would result in increased demand on fire protection services. The EIR indicated that existing facilities and services would not be adequate to meet increased demand from growth under TOP. Therefore, the Fire Department was planning on adding facilities and/or services as demand increases. With implementation of TOP policies and Fire Department review of new development, impacts will be less than significant (SEIR p. 5.15-3).

The project site is in a developed area currently served by the Ontario Fire Department. The Project is consistent with TOP land use designations, and TOP EIR states the City will not require the construction of any new fire protection facilities or alteration of any existing facilities or cause a decline in the levels of service, which could cause the need to construct new facilities in this portion of the City. Therefore, no impacts are anticipated.

The project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in TOP EIR. No changes or additions to TOP EIR analyses are necessary.

Mitigation: No project specific mitigation is required.

ii. Police protection?

Discussion of Effects: Section VI.Q of the CCC SP EIR addresses public services. The EIR indicates the project will increase the demand for police service, and two (2) mitigation measures were recommended (see CCCSP EIR Measures 87-88 in column 1 of Table A).

TOP EIR determined TOP would result in an increase in development and population, which would result in increased demand on police protection services. The EIR indicated that existing staffing would not be adequate to meet increased demand from growth under TOP. Therefore, the Police

Department is planning on adding facilities and/or services as demand increases. With implementation of TOP policies and Police Department review of new development, impacts will be less than significant (SEIR p. 5.15-7).

The site is in a developed area currently served by the Ontario Police Department. The project will contribute to the incremental need for construction of any new police facilities or alteration of any existing facilities

or cause a decline in the levels of service, which could cause the need to construct new facilities. No impacts are anticipated.

The project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in TOP EIR. No changes or additions to TOP EIR analyses are necessary.

Mitigation: No site specific mitigation is required.

iii. Schools?

Discussion of Effects: Section VI.Q of the CCC SP EIR addresses public services but did not address schools.

TOP EIR identified impacts to school facilities and services as less than significant upon payment of SB 50 school impact fees (SEIR p. 5.15-14).

The project proposes industrial land uses which are non-residential and do not generate school-aged students that require educational facilities or services. The project will be required to pay school fees as prescribed by state law prior to the issuance of building permits, which is considered adequate mitigation under CEQA. No impacts are anticipated.

The project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in TOP EIR. No changes or additions to TOP EIR analyses are necessary.

Mitigation: No project specific mitigation is required.

iv. Parks?

Discussion of Effects: Section VI.Q of the CCC SP EIR addresses public services but did not address parks.

TOP would generate additional residents, increasing the use of existing park and recreational facilities. However, TOP EIR concluded this would not result in a significant impact as long as development of park facilities keeps pace with the anticipated increase in population from buildout (SEIR p. 5-15-14).

The site is in a developed area currently served by the City. The project is industrial and not residential in nature so it will not require the construction of any new park facilities or alteration of any existing facilities or cause a decline in the levels of service, which could cause the need to construct new facilities. No impacts are anticipated.

The project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in TOP EIR. No changes or additions to TOP EIR analyses are necessary.

Mitigation: No project specific mitigation is required.

v. Other public facilities?

Discussion of Effects: Section VI.Q of the 1981 CCC SP EIR identified impacts to public services, but did not specifically address other public facilities.

TOP would generate additional residents, increasing the use of existing public facilities (e.g., libraries). TOP EIR identified less than significant impacts to library services and facilities (SEIR p. 5-15-18).

The site is in a developed area currently served by the City. Typically, new public facilities are needed to serve additional population generated by new housing. The project will not generate any new

housing so it will not require the construction of any new public facilities or alteration of any existing facilities or cause a decline in the levels of service, which could cause the need to construct new facilities. No impacts are anticipated.

The project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in TOP EIR. No changes or additions to TOP EIR analyses are necessary.

Mitigation: No project specific mitigation is required.

16. RECREATION. Would the project:

a. Increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?

Discussion of Effects: Section VI.Q of the 1981 CCC SP EIR identified impacts to public services, but did not specifically address parks or recreation.

TOP would generate additional residents, increasing the use of existing park and recreational facilities. However, TOP EIR concluded this would not result in a significant impact as long as development of park facilities keeps pace with the anticipated increase in population from buildout (SEIR p. 5-16-14).

This project is not proposing any new housing that would cause a significant increase in the use of neighborhood parks or other recreational facilities. No impacts are anticipated.

The project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in TOP EIR. No changes or additions to TOP EIR analyses are necessary.

Mitigation: No project specific mitigation is required.

b. Does the project include recreational facilities or require the construction or expansion of recreational facilities that have an adverse physical effect on the environment?

Discussion of Effects: Section VI.Q of the 1981 CCC SP EIR identified impacts to public services but did not specifically address parks or recreation.

TOP would generate additional residents, increasing the use of existing park and recreational facilities. However, TOP EIR concluded this would not result in a significant impact as long as development of park facilities keeps pace with the anticipated increase in population from buildout (SEIR p. 5-16-14).

This project is not proposing any new housing that would require the construction of new or expanded neighborhood parks or other recreational facilities. No impacts are anticipated.

The project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in TOP EIR. No changes or additions to TOP EIR analyses are necessary.

Mitigation: No project specific mitigation is required.

17. TRANSPORTATION. Would the project:

a. Conflict with a program plan, ordinance or policy addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities?

Discussion of Effects: Section VI.L of the CCC SP EIR identified traffic impacts and recommended sixteen (16) mitigation measures, however, the analysis focused on Level of Service (LOS) or road/intersection congestion. The CCC SP EIR stated the project could generate almost 30,000 new employees in the City and the project could generate approximately 157,100 daily vehicle trips with impacts at 14 local intersections. The EIR recommended mitigation measures mainly included improvements at various local intersections and roadways to lessen vehicular congestion.

TOP EIR found that the recommended TOP circulation plan would comply with adopted policies, plans, and programs for alternative transportation, including SCAG's Connect SoCal (SEIR p. 5.17-23) so impacts would be less than significant.

The subject site was previously analyzed by TOP EIR as supporting industrial uses and is surrounded on the north, east, and south by industrial uses and on the west by the OIA. The project is in an area that is mostly developed with all street improvements existing. A complete Traffic Impact Assessment (TIA) was prepared for the project by Urban Crossroads in January 2022. The TIA was based on 642,368 square feet of high-cube cold storage warehouse use (15%) and 3,640,082 square feet of high-cube fulfillment center warehouse use (85%) with a total building area of 4,282,450 square feet. The TIA indicated the project would generate a total of 7,980 vehicle trips per day with 613 AM peak hour trips and 644 PM peak hour trips, as shown in **Table 13**, Project Trip Generation. The TIA also estimated Passenger Car Equivalent (PCE) traffic based on the various trucks that would serve the project. The PCE trip generation of the project (9,646 trips) is also shown in Table 13.

Table 13: Project Trip Generation

Trip Characteristic	AM Peak Hour			PM Peak Hour			Total Trips
	In	Out	Total	In	Out	Total	
Actual Vehicles	463	102	613	250	394	644	7,980
Passenger Car Equivalents (PCE)	527	230	756	301	441	742	9,646

Source: Tables 4-2 & 4-3, UC 2022. ITE Land Use Code 155 (high cube warehousing) ITE Trip Generation Manual (11th edition, 2021)

The project proposes 8.2% less overall square footage than could be built under TOP and the CCC SP. The project would thus generate approximately 8.2% less traffic compared to what would be allowed under TOP. Therefore, the project would not have any greater traffic-related impacts on streets and intersections than were already analyzed in TOP EIR.

Transit. The project area and the City are served by Omnitrans, a public transit agency serving various jurisdictions in San Bernardino County. Omnitrans currently operates Route 81 adjacent to the site on Haven Avenue. There are existing bus stops located near Haven Avenue at Airport Drive and Jurupa Street, near Milliken Avenue at Santa Ana Street, Lowell Street, and Jurupa Street. Omnitrans regularly reviews and periodically changes routes, stops, etc. to address ridership and community demand needs as well as budget limitations. As part of the City's development review process, the project developer will coordinate with Omnitrans regarding expanded or additional bus service in the project area as needed.

Bicycles. The project site and surrounding area support mainly industrial with some commercial uses, and none of the adjacent streets, regardless of width, currently contain any bicycle lanes. The City's TOP 2050 Trails and Bikeway Systems Map (Figure M-02) shows Haven Avenue west of the site, Airport Drive north of the site, and Jurupa Street south of the site designated as needing study for possible future bike lanes. However, no bicycle lanes are currently planned in the surrounding area due to its anticipated industrial nature.

Sidewalks/Trails. The project site is vacant and the internal streets have no sidewalks at present, although there are sidewalks on both sides of S. Commerce Parkway and E. Jurupa Street. Eventually, as project sites develop, sidewalks will be installed according to the City's adopted cross street section requirements. The City'sTOP 2050 Trails and Bikeway Systems Map shows no trails or other pedestrian-oriented improvements are planned on the project site or in the surrounding area (i.e., half a mile radius).

The project will be developed consistent with the City's adopted plans for non-vehicular improvements as indicated in TOP. The project will install sidewalks on perimeter streets as indicated in the standard City street cross sections, and will install bus stop infrastructure if so directed by Omnitrans during the development review process. The project area is not planned for bicycle lanes or trails due to its industrial nature. Therefore, the project will not conflict with a program plan, ordinance or policy addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities. Impacts will be less than significant.

The project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in TOP EIR. No changes or additions to TOP EIR analyses are necessary.

Mitigation: No project specific mitigation is required.

b. Conflict or be inconsistent with CEQA Guidelines section 15064.3, subdivision (b)?

Discussion of Effects: In 1981, when the CCC SP EIR was prepared VMT was not identified as an environmental issue under CEQA so the CCC SP EIR did not evaluate VMT.

TOP EIR concludes TOP would result in a significant transportation impact related to VMT mainly due to the increase in population accommodated by TOP. TOP includes goals and policies to offset VMT impacts by creating greater access to transit and enhanced alternative transportation modes. In addition, projects that are calculated to exceed City-wide VMT levels must develop mitigation plans.

The City uses the San Bernardino County Transportation Authority (SBCTA) VMT Screening Tool, which allows users to select an assessor's parcel number (APN) to determine if a project's location meets one or more of the screening thresholds for land use projects identified in the City Guidelines. A project-specific VMT analysis was prepared for the project by Urban Crossroads in December of 2021 based on the adopted City Guidelines (Appendix D-1).

The City Guidelines state that certain projects that meet the following VMT screening criteria may be presumed to result in a less than significant transportation impact:

- Transit Priority Area (TPA) Screening
- Low VMT Area Screening
- Project Type Screening

A land use project needs to meet only one of these screening criteria to have a less than significant impact.

TPA Screening. Projects located within a TPA (i.e., within a half-mile of an existing "major transit stop"[3] or an existing stop along a "high-quality transit corridor"[4] may be presumed to have a less than significant VMT impact. The Screening Tool indicates the project site is not located within a half-mile of an existing major transit stop or along a high-quality transit corridor. Therefore, the TPA screening criteria is not met.

Low VMT Area Screening. As noted in the Technical Advisory, "Residential and office projects that locate in areas with low VMT and that incorporate similar features (density, mix of uses, and transit accessibility) will tend to exhibit similarly low VMT." The City Guidelines state that projects may be presumed to have a less than significant VMT impact if located in an already low VMT generating traffic analysis zones (TAZs) that generates a VMT per service population (SP) that is 15% below County of San Bernardino Baseline VMT per SP. The Screening Tool uses the sub-regional San Bernardino Transportation Analysis Model (SBTAM) to measure VMT performance within individual TAZ's within the region. The Project's physical location based on parcel number is selected in the Screening Tool to determine the TAZ in which the Project will reside. The Project's TAZs VMT per service population was compared to 15% below County of San Bernardino Baseline VMT per SP. The Screening Tool was run for production-attraction (PA) VMT per service population and it was determined that, the project is not located within a low VMT generating zone. Therefore, the low VMT area screening criteria is not met.

Project Type Screening. The City Guidelines indicate that local-serving retail less than 50,000 square feet or other local serving essential services (e.g., day care centers, public schools, medical/dental office buildings, etc.) are presumed to have a less than significant impact absent substantial evidence to the contrary. The project does not contain any local serving uses. Additionally, the City Guidelines state that small projects generating fewer than 110 daily vehicle trips or less may be presumed to have a less than significant impact, subject to discretionary approval by the City. The Project TIA estimated vehicle trips generated by the project's proposed land uses based on trip generation rates collected by the Institute of Transportation Engineers (ITE) Trip Generation Manual, 11th Edition, 2021. According to the TIA, the project will generate 7,980 daily vehicle trip-ends per day. Therefore, the project generates daily vehicle trips exceeding the 110 daily vehicle trip threshold and the project type screening threshold is not met.

Based on this analysis, the project is not eligible for screening and a detailed VMT analysis has been performed.

[3] Pub. Resources Code, § 21064.3 ("'Major transit stop' means a site containing an existing rail transit station, a ferry terminal served by either a bus or rail transit service, or the intersection of two or more major bus routes with a frequency of service interval of 15 minutes or less during the morning and afternoon peak commute periods.").

[4] Pub. Resources Code, § 21155 ("For purposes of this section, a high-quality transit corridor means a corridor with fixed route bus service with service intervals no longer than 15 minutes during peak commute hours.").

VMT Modeling. The City Guidelines identify SBTAM as the appropriate tool for conducting VMT analysis for land use projects in the City, as it considers interaction between different land uses based on socio-economic data, such as population, households, and employment. The calculation of VMT for land use projects is based on the total number of trips generated and the average trip length of each vehicle. SBTAM is also consistent with the model used to develop the City's VMT impact thresholds listed by the City Guidelines. Therefore, the vehicle trips and average daily trip length for project-related vehicle trips are model derived from SBTAM.

City VMT Threshold. The City Guidelines require the use of the VMT per Service Population metric as the appropriate measure in a VMT analysis. The City Guidelines state that "a significant impact would occur if the project VMT per Service Population exceeds the Citywide average for Service Population under General Plan Buildout Conditions." The SBCTA provides VMT calculations for each of its member agencies, including the City's average for Service Population under General Plan Buildout Conditions. Urban Crossroads has obtained this published data from SBCTA, which for the City's General Plan Buildout is 36.2 VMT per SP.

Project Modeling. In order to evaluate project VMT, standard land use information must first be converted into a SBTAM compatible dataset. The SBTAM model utilizes socio-economic data (SED) (e.g., population, households, employment, etc.) instead of land use information for the purposes of vehicle trip estimation. Project land use information such as building square footage must first be converted to SED for input into SBTAM. Adjustments in SED have been made to the appropriate TAZ within the SBTAM model to reflect the Project's proposed land uses (i.e., warehouse). The project would have approximately 3,585 employees at buildout based on the employment density factors identified in the SCAG Employment Density Study (Table II-B, SCAG October 2001).

Project Impacts. Adjustments to employment for the project's TAZ were made to both the SBTAM baseline year (2016) and cumulative year (2040) traffic models. The ability to capture all trips by all trip purposes can be achieved with the SBTAM model by using the Origin-Destination (OD) trip matrices. Using these OD trip matrices, the project generated total VMT was calculated utilizing straight-line interpolation for the baseline (2021) conditions. The total VMT for all scenarios is then normalized by dividing by the project's service population (SP) (e.g., employees). As shown in **Table 14**, Project VMT Impacts, the project Baseline VMT per SP is 32.96 and the project Cumulative VMT per SP is 33.60.

Table 14: Project VMT Impacts

VMT Value	Base Year (2016)	Cumulative Year (2040)	Baseline (2021)
Employment[1]	3,585	3,585	3,585
VMT	117,069	120,453	118,156
VMT / SP	32.66	33.60	32.96
Impact Threshold		36.2	36.2
Percent Change		-7.18%	-8.95%
Potentially Significant? (i.e., Project Exceeds Threshold)		No	No

Source: Tables 2 and 3, Urban Crossroads, December 2021

[1] Since the Project does not have a residential component, the service population consists entirely of employment.

Table 14 compares project-generated VMT per SP in the Baseline and Cumulative Conditions to the City's future Buildout VMT per SP. Table 14 demonstrates that the project would not exceed the City's threshold for either the Baseline or Cumulative project conditions.[5] Therefore, project VMT impacts with respect to CEQA Guidelines Section 15064.3(b) are less than significant.

[5] The City Guidelines state that cumulative impacts on VMT "… metrics such as VMT per capita or VMT per employee, i.e., metrics framed in terms of efficiency (as recommended below for use on residential

Moreover, the project is consistent with TOP's underlying land use assumptions and the project is also considered to have a less than significant cumulative impact as well.

The project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in TOP EIR. No changes or additions to TOP EIR analyses are necessary.

Mitigation: No project specific mitigation is required.

c. Substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?

Discussion of Effects: Section VI.L of the CCC SP EIR identified traffic impacts and recommended 28 mitigation measures. At that time, the analysis focused on LOS or road/intersection congestion, but some of the measures addressed unsafe operating conditions mainly due to anticipated intersection congestion from project traffic and transit-related issues. These measures are addressed in CCCSP EIR Measures 7-13, 26-30, and 52-67 in column 1 of Table A.

TOP EIR found that circulation improvements under the recommended TOP circulation plan would be designed to adequately address potential hazardous conditions and potential conflicting uses (SEIR p. 5.17-26) so impacts would be less than significant.

The project is largely surrounded by existing industrial and commercial development and the area is fully improved where adjacent to existing developed uses. All internal streets will be improved with project construction. Most of the roads on or adjacent to the site are or will be linear or curvilinear according to the City's Circulation Element master plan of streets in terms of alignment and cross section. Therefore, the project will not create a substantial increase in hazards due to a design feature. No impacts are anticipated.

The project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in TOP EIR. No changes or additions to TOP EIR analyses are necessary.

Mitigation: No project specific mitigation is required.

d. Result in inadequate emergency access?

Discussion of Effects: Section VI.L of the CCC SP EIR identified traffic impacts and recommended sixteen (16) mitigation measures, however, the analysis did not address emergency access.

TOP EIR found that circulation improvements under the recommended TOP circulation plan would be designed to adequately address emergency access (SEIR p. 5.17-26) so impacts would be less than significant.

As shown in Exhibit 2, the project will have standard street alignments and cross sections, which can provide access for all emergency vehicles and will therefore not result in inadequate emergency access. No impacts are anticipated.

The project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in TOP EIR. No changes or additions to TOP EIR analyses are necessary.

Mitigation: No project specific mitigation is required.

18. TRIBAL CULTURAL RESOURCES. Would the project cause a substantial adverse change in the significance of a TCR, defined in Public Resources Code section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is:

---

and office projects), cannot be summed because they employ a denominator. A project that falls below an efficiency-based threshold that is aligned with long-term goals and relevant plans has no cumulative impact distinct from the project impact. Accordingly, a finding of a less-than-significant project impact would imply a less than significant cumulative impact, and vice versa. This is similar to the analysis typically conducted for GHG emissions, air quality impacts, and impact that utilize plan compliance as a threshold of significance."

a. Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code section 5020.1(k)?

Discussion of Effects: At the time the CCC SP EIR was prepared, the State CEQA Guidelines did not require an evaluation of TCRs. However, Section VI. C of the CCC SP EIR indicated the region had long been inhabited by Native American tribes. A cultural survey of the site found no archaeological or other cultural resources. One (1) mitigation measure was recommended to reduce impacts to archaeological resources (see CCCSP EIR Measure 17 in column 1 of Table A).

The subject site was previously analyzed by TOP EIR as supporting industrial uses and is not listed in the California Register of Historic Resources or local register of historical resources. TOP EIR concluded that with recommended mitigation potential impacts to TCRs were reduced to less than significant levels.

Developing warehouses consistent with TOP and current zoning will not create greater impacts than were identified in TOP EIR. In addition, the SLF Search (commissioned through the NAHC) failed to indicate known TCRs within the project boundaries or within a one-mile radius of the project area.

The project site has been previously disturbed by human activities including agricultural use from the 1940's through the 1960's. The surrounding area is largely developed and supports infrastructure that would have displaced surface and subsurface archaeological resources. Therefore, it is not anticipated the proposed project will impact TCRs or Native American artifacts relating to TCRs. However, to err on the side of caution, the City will apply its standard conditions of approval for inadvertent discovery of archaeological resources and require the developer enter into monitoring agreements with interested tribal groups. With this regulatory compliance, no significant impacts will occur.

The project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in TOP EIR. No changes or additions to TOP EIR analyses are necessary.

Mitigation: No additional project specific mitigation is required. Mitigation Measure CUL 5-2 from TOP EIR shall be implemented.

b. A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code section 5024.1. In applying the criteria set forth in subdivision (c) of Public Resources Code section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe.

Discussion of Effects: At the time the CCC SP EIR was prepared, the State CEQA Guidelines did not require an evaluation of TCRs. However, Section VI. C of the CCC SP EIR indicated the region had long been inhabited by Native American tribes. A cultural survey of the site found no archaeological or other cultural resources on the site. One (1) mitigation measure was recommended to reduce impacts to archaeological resources (see Table A for CCCSP EIR Measure 17 in column 1 of the table).

TOP EIR (Section 5.5) indicates no archeological sites or resources have been recorded in the City with the Archeological Information Center at San Bernardino County Museum so there were no significant impacts. The CRAs prepared for the project site included a pedestrian survey, a record search, a SLF search, and a review of existing documentation for the project site and surrounding area. The NAHC was contacted for a SLF search on April 1, 2019, and a response was received on April 15, 2019, indicating the project site contained no identified archaeological or tribal resources.

While no adverse impacts to archeological resources are anticipated at this site due to its disturbed nature, the project will implement the TOP Implementation Actions for cultural resources outlined in the Project Description of this document to help assure there will be no impacts to any unknown TCRs which may be present onsite.

The project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in TOP EIR. No changes or additions to TOP EIR analyses are necessary.

Mitigation: No project specific mitigation is required. The project will implement TOP Mitigation Measure CUL 502.

19. UTILITIES AND SERVICE SYSTEMS. Would the project:

a. Require or result in the relocation or construction of new or expanded water, wastewater treatment or storm water drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects?

Discussion of Effects: Section VI.N of the CCC SP EIR addresses wastewater and provides information about local sewers. Two (2) mitigation measures are recommended (see CCCSP EIR Measures 74-75 in column 1 of Table A).

Section VI.P of the CCC SP EIR addresses public utilities including electricity, natural gas, telephone, and solid waste disposal. The EIR discusses connection plans but did not evaluate impacts from incremental increased use of the utilities. The EIR recommended five (5) mitigation measures (see CCCSP EIR Measures 74-78 in column 1 of Table A).

TOP EIR stated TOP would result in an overall increase in the number of residential dwelling units and non-residential square footage. To accommodate needed infrastructure expansion and improvements, the City has prepared a Water Master Plan (WMP) and Capital Improvement Program (CIP). The City also requires development impact fees and has construction requirements based on a completed evaluation of existing and projected water demands. The City and the Inland Empire Utility Authority (IEUA) have made plans for infrastructure expansion and improvement. TOP EIR concluded TOP would have less than significant direct, indirect, and cumulative impacts relating to water supply and delivery systems (SEIR p. 5.19-31).

The project is consistent with the land use designation and zoning for the site, and the project is thus consistent with the WMP. In addition, a Water Supply Assessment (WSA) was prepared for the project consistent with SB 600 which concluded there were adequate water supplies, including under drought conditions, to serve buildout of the project. Therefore, the City has sufficient water supplies to serve the project over the 20-year life of the WMP and WSA, including during multiple dry-year scenarios.

The proposed project is served by the City water system and has existing water lines available for connection in Jurupa Street and adequate water supply for the project. The proposed project is served by the City sewer system, which has existing sewer lines available for connection off Jurupa Street. The project's waste will be treated by the IEUA at the RP-1 treatment plant. RP-1 is not at capacity and future development of this project site will not cause RP-1 to exceed capacity. TOP EIR indicates increases in RP capacity in the future will be based on designated TOP land uses, and the Project is consistent with those designations. The project will therefore not require the construction of new unanticipated water or wastewater treatment facilities, or the expansion of existing facilities other than that already identified in TOP and TOP EIR. It should be noted the City does not provide will serve letters as it is both the land use authority and the water purveyor. Water and sewer service for development projects typically require the owner to complete requirements it specifies to provide adequate utility services. As the project goes through the City's development review process, the City will issue conditions of approval that will specify the developer's obligations in order to receive water and sewer service from the City. Less than significant impacts are anticipated.

TOP EIR stated TOP has the potential to increase sewer flows by 2.55 million gallons per day (mgd) within the City and by 166 mgd in the City's growth areas. TOP EIR concluded TOP would generate additional wastewater which would be adequately treated in accordance with the Santa Ana RWQCB and California Department of Public Health requirements (SEIR p. 5.19-11).

The proposed project is served by the City with existing storm drains located in Jurupa Street and other adjacent streets depending on the specific future building. The project is required to meet the requirements of the Ontario Engineering Department regarding the size, location, and connectivity of storm drain facilities. Less than significant impacts are anticipated.

As discussed in Section 6 above, the project will have less than significant impacts with regard to electric power and natural gas. In addition, telecommunication providers increase service and facilities as necessary as area population and land uses expand. Therefore, the project will not have a significant impact on telecommunications facilities.

The project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in TOP EIR. No changes or additions to TOP EIR analyses are necessary.

Mitigation: No project specific mitigation is required.

b. Have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry and multiple dry years? In making this determination, the City shall consider whether the project is subject to the water supply assessment requirements of Water Code Section 10910, et seq. (SB 610), and the requirements of Government Code Section 664737 (SB 221).

Discussion of Effects: Section VI.O of the CCC SP EIR addresses water supply. The EIR evaluates overall water consumption compared to the Water Master Plan Report. The EIR recommended four (4) mitigation measures regarding water and sewer systems not contaminating drinking water supplies (see CCCSP EIR Measures 74-78 in column 1 of Table A).

TOP EIR stated TOP would result in an overall increase in the number of residential dwelling units and non-residential square footage. To accommodate needed infrastructure expansion and improvements, the City has prepared a WMP and CIP. The City also requires development impact fees and has construction requirements based on a completed evaluation of existing and projected water demands. The City and the IEUA have made plans for infrastructure expansion and improvement. TOP EIR concluded TOP would have less than significant direct, indirect, and cumulative impacts relating to water supply and delivery systems (SEIR p. 5.19-31).

The project is consistent with the land use designation and zoning for site, and the project is thus consistent with the WMP. In addition, a Water Supply Assessment (WSA) was prepared for the project consistent with SB 600 which concluded there were adequate water supplies, including under drought conditions, to serve buildout of the project. Therefore, the City has sufficient water supplies to serve the project over the 20-year life of the WMP and the WSA, including during multiple dry-year scenarios.

The project site is served by the City water system. It is estimated the project will generate between 3,585 and 4,597 employees[6] who would consume between 537,750 and 689,550 gallons of water[7] per day (maximum 772 acre-feet per year) based on 150 gallons per person per day. Since the project site land uses are consistent with the TOP, there is currently a sufficient water supply available to the City to serve this project as per the findings of the TOP EIR. Less than significant impacts are anticipated.

The project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in TOP EIR. No changes or additions to TOP EIR analyses are necessary.

Mitigation: No project specific mitigation is required.

c. Result in a determination by the wastewater treatment provider that serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?

Discussion of Effects: Section VI.N of the CCC SP EIR addresses wastewater and provides information about the local sewer system. One (1) mitigation measure is recommended to have a complete onsite sewer that meets all regulatory requirements (see CCCSP EIR Measure 74 in column 1 of Table A).

TOP EIR stated TOP has the potential to increase sewer flows by 2.55 million gallons per day (mgd) within the City and by 166 mgd in the City's growth areas. TOP EIR concluded TOP would generate additional wastewater which would be adequately treated in accordance with the Santa Ana RWQCB and California Department of Public Health requirements (SEIR p. 5.19-11).

It is estimated the project will generate between 3,585 and 4,597 employees[8] who would generate between 268,875 and 344,775 gallons of wastewater[9] per day (maximum 0.34 million gallons per day or MGD) based on 75 gallons per person per day, The project site is served by the City sewer system, which

[6] SCAG employee density data indicates the Project could generate 3,585 employees while the Airport Land Use Consistency Plan data indicates the Project could generate up to 4,597 employees.

[7] 3,585 employees X 150 gallons/day = 537,750 gallons per day and 4,597 employees X 150 gallons/day = 689,550 gallons

[8] SCAG employee density data indicates the Project could generate 3,585 employees while the Airport Land Use Consistency Plan data indicates the Project could generate up to 4,597 employees.

[9] 3,585 employees X 75 gallons/day = 268,875 gallons per day and 4,597 employees X 75 gallons/day = 344,775 gallons

has waste treated by the IEUA at the RP-1 treatment plant. RP-1 is not at capacity and future development of this project site will not cause RP-1 to exceed capacity. In addition, the project site land uses are consistent with TOP and its EIR. Therefore, less than significant impacts are anticipated.

The project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in TOP EIR. No changes or additions to TOP EIR analyses are necessary.

Mitigation: No proiect specific mitigation is required.

b. Generate solid waste in excess of state or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals?

Discussion of Effects: Section VI.P of the CCC SP EIR addresses utilities including solid waste disposal. The capacity of Milliken Landfill is described, but no information on solid waste regulations or an estimate of additional solid waste generated by the project was provided. No mitigation was proposed.

TOP EIR indicated the City disposes of its solid waste in the Badlands Sanitary Landfill or the El Sobrante Landfill. These landfills currently have a combined excess daily capacity of 7,046 tons/day and have a remaining landfill capacity of 15,750,000 cubic yards for Badlands Sanitary Landfill and 144,000,000 cubic yards for El Sobrante Landfill. Both landfills have closure dates beyond 2050. In addition, state and local regulations and ordinances regarding the recycling of construction debris and organic wastes will further reduce the amount of solid waste transported to these landfills in the future. Therefore, TOP EIR concluded that potential impacts were less than significant with continued compliance with applicable regulations (SEIR p. 5.19-14).

It is estimated the project will generate between 3,585 and 4,597 employees[7] who would generate between 12,189 and 15,630 pounds of waste[10] per day (maximum 7.8 tons per day) based on 3.4 pounds per person per day. Currently, the City contracts with a waste disposal company that transports trash to a landfill with sufficient capacity to handle the City's solid waste disposal. No impacts are anticipated.

The project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in TOP EIR. No changes or additions to TOP EIR analyses are necessary.

Mitigation: No project specific mitigation required.

b. Comply with federal, state, and local management and reduction statutes and regulations related to solid waste?

Discussion of Effects: The CCC SP EIR identified generalized impacts to utilities including solid waste but did not recommend any specific mitigation measures (see CCCSP EIR Measure 83 in column 1 of Table A).

TOP EIR indicated that potential impacts related to solid waste reduction would be less than significant based on compliance with state and local regulations and ordinances regarding the recycling of construction debris and organic wastes will reduce the amount of solid waste transported to the two landfills serving the City in the future. Therefore, continued compliance with the applicable regulations, would ensure future development under TOP would have less than significant impacts (SEIR p. 5.19-16).

City development review regulations will require this project comply with federal, state, and local statues and regulations regarding solid waste. Therefore, no impacts are anticipated.

The project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in TOP EIR. No changes or additions to TOP EIR analyses are necessary.

Mitigation: No project specific mitigation is required.

20. WILDFIRE. If located in or near state responsibility areas or lands classified as very high fire hazard severity zones, would the project:

a. Substantially impair an adopted emergency response plan or emergency evacuation plan?

[10] 3,585 employees X 3.4 pounds/day = 12,189 pounds per day and 4,597 employees X 3.4 pounds/day = 15,630 pounds/day

Discussion of Effects: When the CCC SP EIR was prepared in 1981, wildfire-related issues were not part of the State CEQA Checklist so the issue was not addressed in the CCC SP EIR.

TOP EIR found that improvements under the recommended TOP circulation plan would be designed to adequately address emergency access. In addition, emergency access is included as part of the City's Design Review process for new development. According to the City's 2018 Local Hazard Mitigation Plan (LHMP), interstate highways would serve as major emergency response and evacuation routes. Additionally, the Fire Department reviews development applications to ensure that adequate emergency accessibility is provided based on local and state guidance. Figure S-10 of the TOP indicates that Haven Avenue to the west, Airport Drive to the north, and Jurupa Street to the south are designated evacuation routes in the City. The EIR concluded TOP would have a less than significant direct, indirect, and cumulative impacts relating to impairment of an adopted emergency response plan or emergency evacuation plan (SEIR p. 5.20-15 and p. 5.17-26).

The project site is not located in or near a state responsibility area, nor is it located in or near lands classified as very high fire hazard severity zones. Therefore, no impacts are anticipated.

The project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP FEIR. No changes or additions to TOP FEIR analyses are necessary.

Mitigation: No project specific mitigation is required.

b. Due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby expose project occupants to, pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire?

Discussion of Effects: When the CCC SP EIR was prepared in 1981, the following wildfire-related issues were not part of the State CEQA Checklist so the issue was not addressed in the CCC SP EIR.

TOP EIR indicated the City is outside of the State Responsibility Area, and contains no areas subject to very high wildfire risk. Therefore, the EIR concluded TOP would result in less-than-significant risks from wildfire hazards (SEIR p. 5.20-16).

The Project site is not located in or near a State Responsibility Area, nor is it located in or near lands classified as very high fire hazard severity zones. Therefore, no impacts are anticipated.

The project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in TOP EIR. No changes or additions to TOP EIR analyses are necessary.

Mitigation: No project specific mitigation is required.

c. Require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment?

Discussion of Effects: When the CCC SP EIR was prepared in 1981, wildfire-related issues were not part of the State CEQA Checklist so the issue was not addressed in the CCC SP EIR.

TOP EIR indicated the City is outside of the State Responsibility Area, and CAL FIRE and contains no areas subject to very high wildfire risk. Therefore, the EIR concluded TOP would result in less-than-significant risks from wildfire hazards (SEIR p. 5.20-16). In addition, the project is in an urbanized area surrounded by developed industrial buildings so no improvements for preventing wildfires are needed either on or adjacent to the site.

The project site is not located in or near a State Responsibility Area nor is it located in or near lands classified as very high fire hazard severity zones. Therefore, no impacts are anticipated.

The project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in TOP EIR. No changes or additions to TOP EIR analyses are necessary.

Mitigation: No project specific mitigation is required.

d. Expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes?

Discussion of Effects: The CCC SP EIR did not evaluate wildfire risks because at that time it was not identified as a specific environmental issue in the State CEQA Checklist.

TOP EIR indicated the City is outside of the State Responsibility Area, and CAL FIRE and contains no areas subject to very high wildfire risk. Therefore, the EIR concluded TOP would result in less-than-significant risks from wildfire hazards (SEIR p. 5.20-16). In addition, the project site and surrounding area are flat so there is little risk from flooding or landslides.

The project site is not located in or near a State Responsibility Area, nor is it located in or near lands classified as very high fire hazard severity zones. Therefore, no impacts are anticipated.

The project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in TOP EIR. No changes or additions to TOP EIR analyses are necessary.

Mitigation: No project specific mitigation is required.

21. MANDATORY FINDINGS OF SIGNIFICANCE.

a. Does the project have the potential to substantially degrade the quality of the environment, substantially reduce the habitat or a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, substantially reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory?

Discussion of Effects: The CCC SP EIR did examine potential impacts to biological resources (Section VI.D) and cultural resources (Section VI.C). The EIR indicated the site was vacant and did not support any listed or otherwise sensitive species of plants or animals at the time it was prepared in 1981. The EIR did not make a firm conclusion if the project would have significant impact on any biological resources, but it did recommend three (3) “permissive” mitigation measures (i.e., actions suggested but not required) which are outlined in Table A. Section VI. C of the CCC SP EIR indicated the region had been inhabited by Native American tribes, but a cultural survey of the site found no archaeological or other cultural resources on the site. One (1) mitigation measure was recommended to reduce impacts.

TOP EIR evaluated the potential impacts of future development under TOP and determined impacts related to biological or cultural resources could be reduced to less than significant levels by implementing a number of mitigation measures on sites that contain such resources.

The proposed project does not have the potential to reduce wildlife habitat and threaten a wildlife species with implementation of the recommended Burrowing Owl Relocation Program (BRP) to protect burrowing owl and a nesting bird survey to protect nesting birds to comply with TOP Policies ER5-1 and ER5-2. It will also not threaten any important examples of the major periods of California history or prehistory. In addition, the project will document removal of the historic age well onsite. Therefore, no impacts are anticipated.

The project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in TOP EIR. No changes or additions to TOP EIR analyses are necessary.

Mitigation: No project-specific mitigation is required. The project shall implement a Burrowing Owl Relocation Program and a nesting bird survey, as well as documentation of the onsite historic age well.

b. Does the project have the potential to achieve short-term environmental goals to the disadvantage of long-term environmental goals?

Discussion of Effects: Section VII of the CCC SP EIR addresses this issue and outlines the potential impacts of the project relative to various environmental issues as outlined in the State CEQA Guidelines at that time. Each analysis section (VI.A through VI.S) also identifies potential short- or long-term impacts but does not address achieving either short- or long-term environmental goals.

The analysis in TOP EIR, as outlined in Sections 1 through 20 of this document, indicate TOP is intended to achieve both the short- and long-term goals of the City in terms of the environment.

The project does not have the potential to achieve short-term environmental goals to the disadvantage of long-term environmental goals with implementation of the recommended burrowing owl relocation program and the nesting bird survey to comply with TOP Policies ER5-1 and ER5-2.

The project will not result in any new, increased or substantially different impacts other than those previously considered and addressed in TOP EIR. No changes or additions to TOP EIR analyses are necessary.

Mitigation: No project specific mitigation is required.

c. Does the project have impacts that are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current project, and the effects of probable future projects.)

Discussion of Effects: Section IX of the CCC SP EIR addresses potential cumulative impacts of the project. The EIR concluded the project would have cumulative air quality impacts, and all other impacts were either less than significant or could be reduced to less than significant levels by the implementation of the recommended mitigation measures.

TOP EIR concluded that all impacts of TOP could be reduced to less than significant levels with implementation of the recommended mitigation measures except for air quality, historical resources, noise, and transportation. The EIR further concluded TOP would not make a significant contribution to any cumulatively considerable impacts with the recommended mitigation except for air quality.

The project does not have impacts that are cumulatively considerable other than operational VOC and NOx emissions because those impacts exceed the SCAQMD daily thresholds even with mitigation. However, TOP EIR already examined this impact and adopted a Statement of Overriding Considerations for the cumulative air quality impacts of future development under TOP. Since the proposed project is consistent with TOP land use designations for the site, the potential air quality impacts of the project have been previously evaluated in TOP EIR and appropriate mitigation applied (i.e., TOP EIR MM AQ 3-1 through 3-3).

The project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in TOP EIR. No changes or additions to TOP EIR analyses are necessary.

Mitigation: No project specific mitigation is required. The project shall implement TOP EIR Mitigation Measures AW 3-1 through 3-3.

d. Does the project have environmental effects that will cause substantial adverse effects on human beings, either directly or indirectly?

Discussion of Effects: Sections VI.A through VI.S of the CCC SP EIR evaluate the various potential impacts of the project, including air quality (VI.A), airport hazards (VI.B), noise (VI.I). The EIR concluded only air quality impacts, in terms of air pollutant emissions and consistency with air quality planning, would remain at significant levels even with the implementation of recommended mitigation.

TOP EIR concluded that all impacts of TOP could be reduced to less than significant levels with implementation of the recommended mitigation measures except for air quality, historical resources, noise, and transportation. The air quality and noise impacts may have direct and/or indirect adverse effects on humans as development occurs in the City under TOP.

With implementation of the recommended TOP Mitigation Measures, compliance with existing laws, plans and regulations, and the various TOP Implementation Actions outlined in the Project Description, the project does not have environmental effects that will cause substantial adverse effects on human beings, either directly or indirectly.

The project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in TOP EIR. No changes or additions to TOP EIR analyses are necessary.

Mitigation: No project specific mitigation is required.

EARLIER ANALYSES

March 15, 2022

Mr. Bruce McDonald
McDonald Property Group
1140 N. Coast Highway
Laguna Beach, CA 92651

SUBJECT: CALIFORNIA LOGISTICS CENTER AIR QUALITY & ENERGY ASSESSMENT MEMORANDUM

Dear Mr. Bruce McDonald:

Urban Crossroads, Inc. is pleased to provide the following Air Quality & Energy Assessment Memorandum for the California Logistics Center Project ("Project"), which is located on the southeast corner of Haven Avenue and East Airport Drive in the City of Ontario, as shown on Exhibit A. Specifically, the following assessment has been prepared in support of the proposed Project CEQA Addendum to determine whether the proposed Project would result in new or substantially different air quality or energy impacts than those considered and addressed in the Ontario Plan Draft Environmental Impact Report SCH No. 2008101140 (referred to as "DEIR") dated April 2009.

PROJECT DESCRIPTION

The DEIR evaluated the development of 87,620 residential dwelling units (du)[1], 40,356,075 square feet (sf) of mixed-use, 34,934,684 sf of retail/service uses, 22,116,283 sf of business park use, 159,998,711 sf of industrial use, 257,405,754 sf of other uses[2] within the area bounded by the proposed Project.

The Project intends to develop 9 industrial warehouse buildings totaling of 4,282,450 square feet (SF). (See Attachment A)

It should be noted that, for the purposes of trip generation evaluation contained within this VMT analysis, the following mix of land uses are proposed to be evaluated for the Project:

- 642,368 sf of high-cube cold storage warehouse use (15% of the total square footage)
- 3,640,082 sf of high-cube fulfillment center warehouse use (85% of the total square footage)
- **Total of 4,282,450 sf**

[1] Residential uses Include 535 du of rural residential use, 32,766 du of low density residential us, 27,207 du of low-medium density residential use, 138,601 du of medium density residential use, and 27,892 du of high-density residential use.
[2] Other uses include open space – non-recreation, open space – recreation, open space – water, public facility, public school, Los Angeles/Ontario International Airport, landfill, railroad, and roadways.

EXHIBIT A: LOCATION MAP

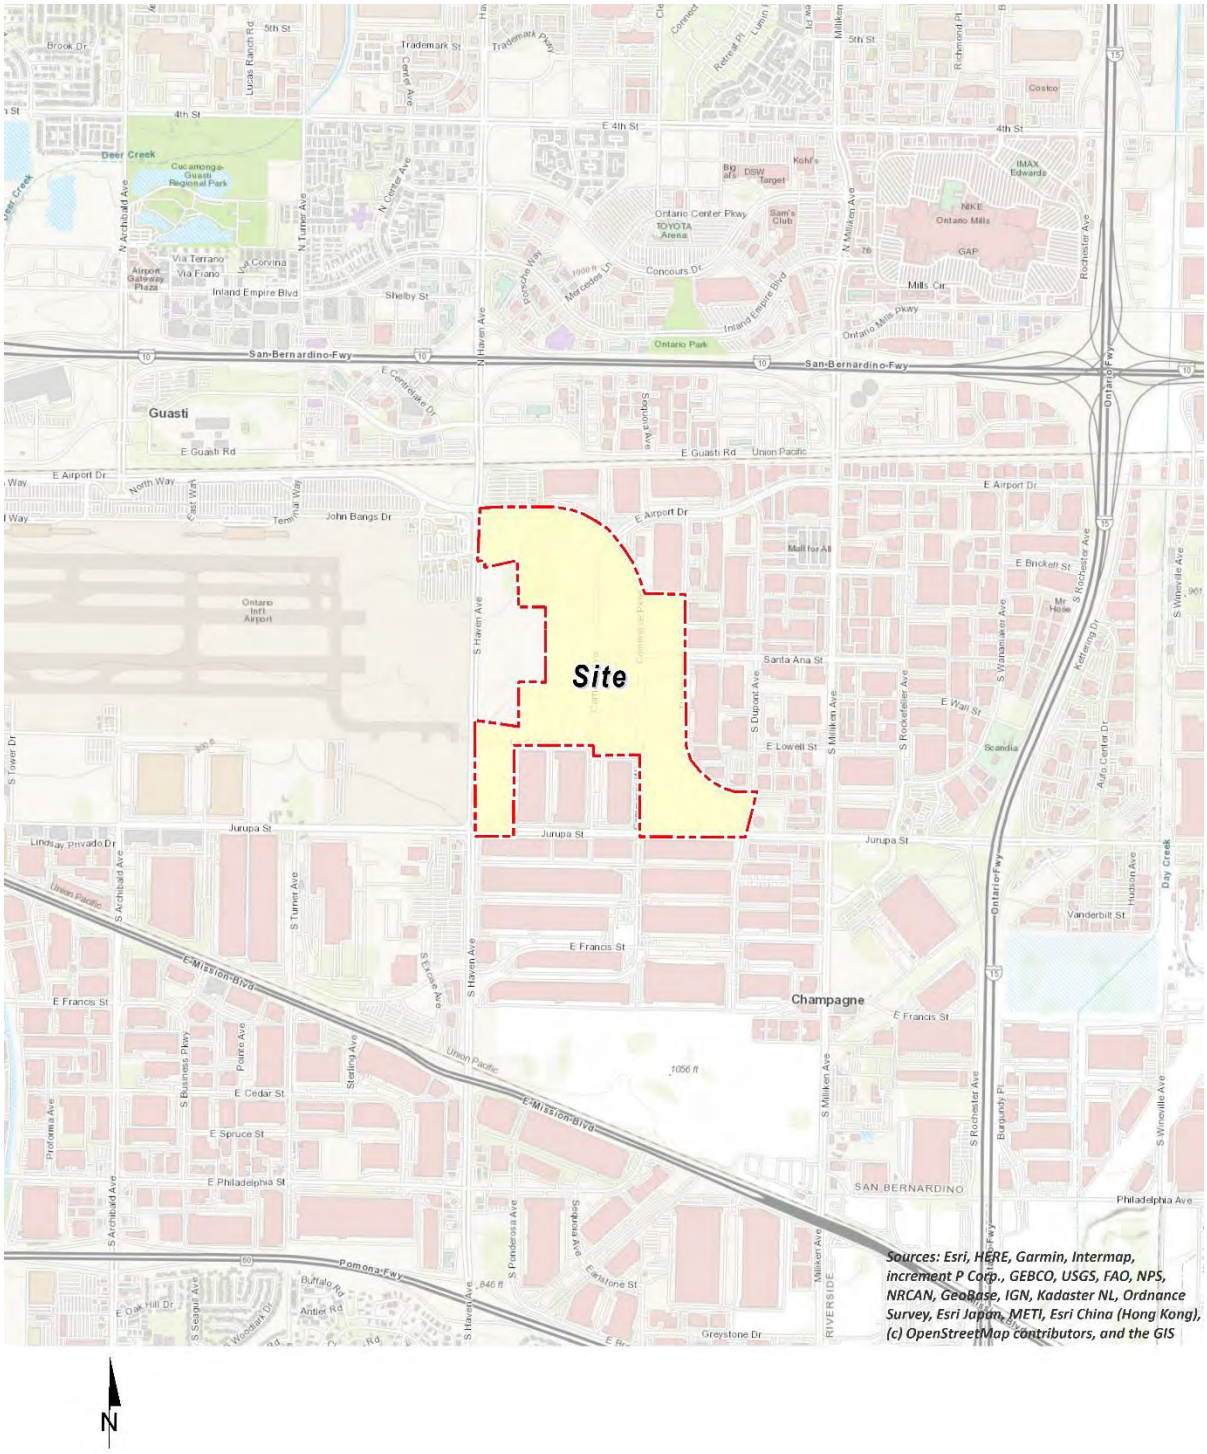

EXHIBIT B: SITE PLAN

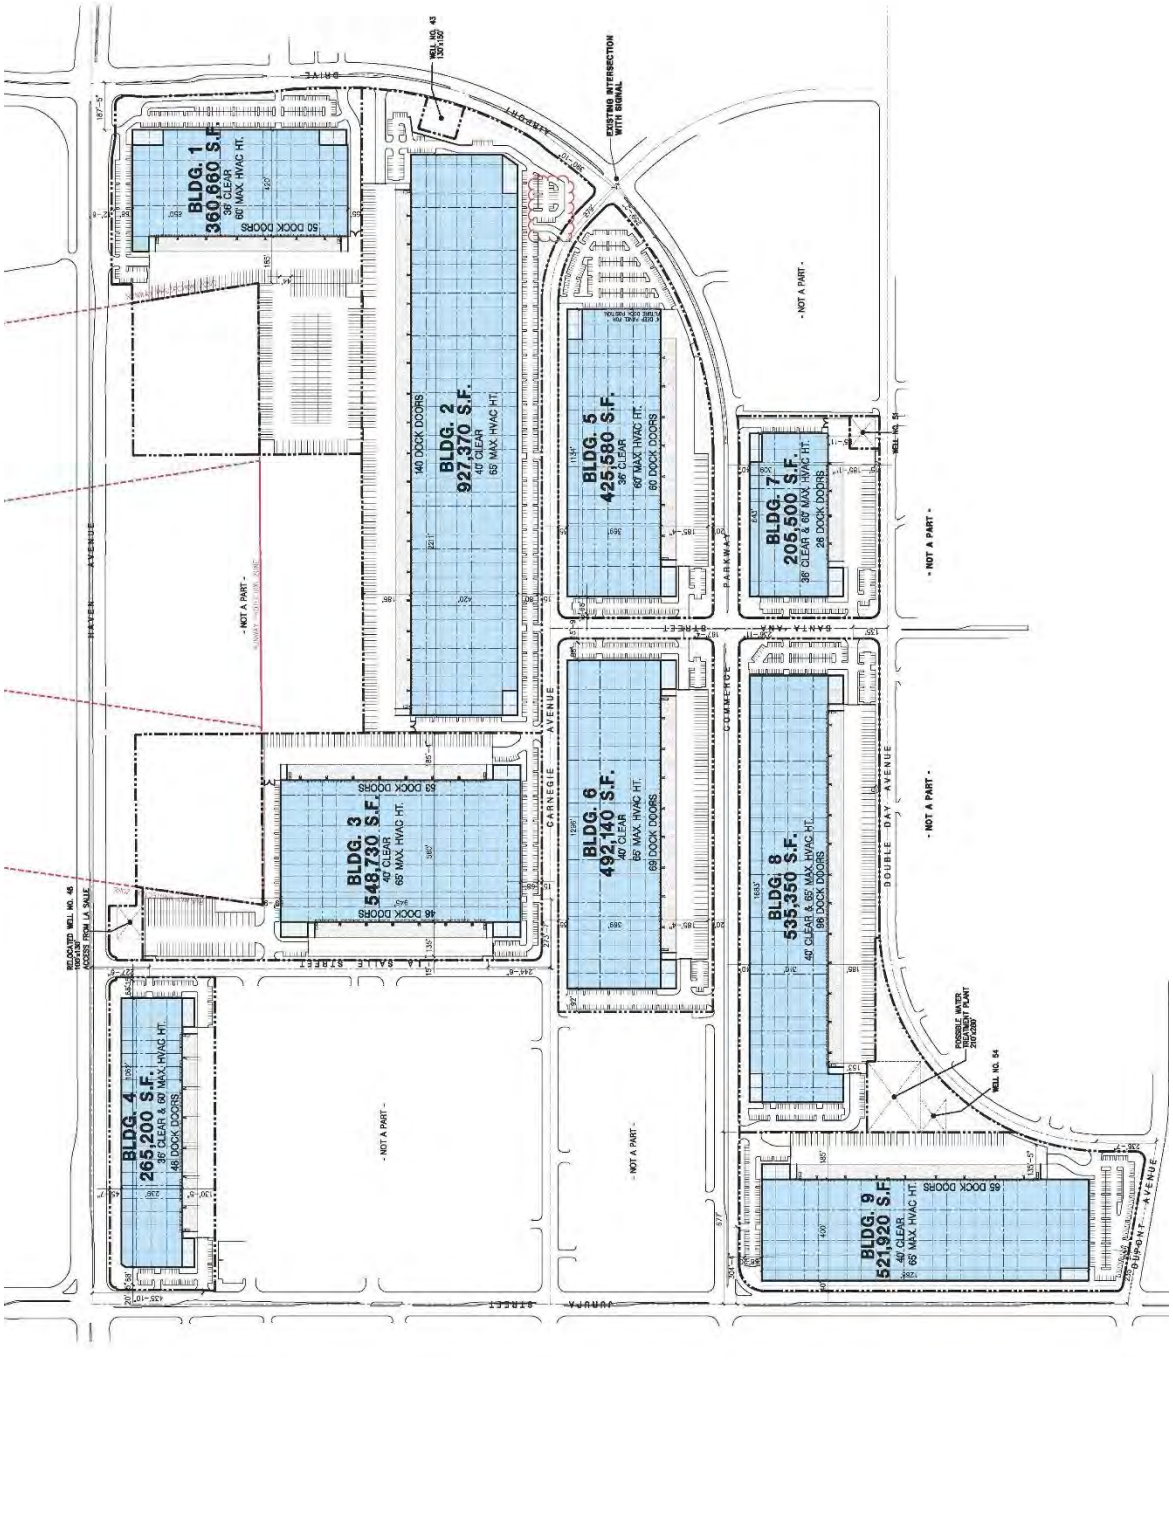

DEIR MITIGATION MEASURES

The DEIR included the following mitigation measures. The proposed Project is required to implement the following mitigation measures as follows.

AQ 3-1: The City of Ontario Building Department shall require that all new construction projects incorporate feasible mitigation measures to reduce air quality emissions. Potential measures shall be incorporated as conditions of approval for a project and may include.

- Requiring fugitive dust control measures that exceed South Coast Air Quality Management District's (SCAQMD) Rule 403, such as:
    - Requiring use of nontoxic soil stabilizers to reduce wind erosion.
    - Applying water every four hours to active soil-disturbing activities.
    - Tarping and/or maintaining a minimum of 24 inches of freeboard on trucks hauling dirt, sand, soil, or other loose materials.
    - Using construction equipment rated by the United States Environmental Protection Agency (EPA) as having Tier 3 or higher exhaust emission limits.
    - Ensuring construction equipment is properly serviced and maintained to the manufacturer's standards.
    - Limiting nonessential idling of construction equipment to no more than five consecutive minutes.
    - Using Super-Compliant VOC paints for coating of architectural surfaces whenever possible. A list of Super-Compliant architectural coating manufactures can be found on the SCAQMD's website at: http://www.aqmd.gov/prdas/brochures/Super-Compliant_AIM.pdf.

AQ 3-2: The City of Ontario shall evaluate new development proposals within the City and require all developments to include access or linkages to alternative modes of transportation, such as transit stops, bike paths, and/or pedestrian paths (e.g., sidewalks).

AQ-3-3: The City of Ontario shall evaluate new development proposals within the City for potential incompatibilities with regard to the California Air Resources Board's Air Quality and Land Use Handbook: A Community Health Perspective (April 2005). New development that is inconsistent with the recommended buffer distances shall only be approved if feasible mitigation measures, such as high efficiency Minimum Efficiency Reporting Value filters have been incorporated into the project design to protect future sensitive receptors from harmful concentrations of air pollutants as a result of proximity to existing air pollution sources.

CURRENTLY APPROVED PROJECT EMISSIONS

As previously stated, the DEIR evaluated the development of 87,620 residential du, 40,356,075 sf of mixed-use, 34,934,684 sf of retail/service uses, 22,116,283 sf of business park use, 159,998,711 sf of industrial use, 257,405,754 sf of other uses within the area bounded by the

proposed Project. Table 1 summarize the operational air quality emissions that would result from the currently approved land uses bounded by the proposed Project.

TABLE 1: CURRENTLY APPROVED MAXIMUM DAILY OPERATIONAL AIR QUALITY EMISSIONS SUMMARY

Source	Emissions (lbs/day)					
	VOC	NO_X	CO	SO_X	PM_{10}	$PM_{2.5}$
Transportation Source	29,625	27,819	111,058	582	4,557	4,512

PROPOSED PROJECT EMISSIONS

AIR QUALITY

REGIONAL CONSTRUCTION EMISSIONS

Construction emissions associated with the proposed Project are summarized on Table 2. As shown, the proposed Project's construction-related activity would not exceed the applicable regional significance thresholds and a less than significant impact would occur and no mitigation beyond the required mitigation from the DEIR would be required.

TABLE 2: PROPOSED PROJECT REGIONAL CONSTRUCTION EMISSIONS SUMMARY

Year	Emissions (lbs/day)					
	VOC	NO_X	CO	SO_X	PM_{10}	$PM_{2.5}$
Maximum Daily Emissions	**36.40**	**84.48**	**189.09**	**0.64**	**56.07**	**16.50**
SCAQMD Regional Threshold	75	100	550	150	150	55
Threshold Exceeded?	**NO**	**NO**	**NO**	**NO**	**NO**	**NO**

LOCALIZED CONSTRUCTION EMISSIONS

PROJECT-RELATED RECEPTORS

Receptors in the Project study area are described below and shown on Exhibit C. Localized air quality impacts were evaluated at sensitive receptor land uses nearest the Project site. All distances are measured from the Project site boundary to the outdoor living areas (e.g., backyards) or at the building façade, whichever is closer to the Project site. The selection of receptor locations is based on Federal Highway Administration (FHWA) guidelines and is

consistent with additional guidance provided by Caltrans and the Federal Transit Administration (FTA).

R1: Location R1 represents the existing residence at 3141 Inland Empire Boulevard. Since there are no private outdoor living areas (backyards) facing the Project site, receptor R4 is placed at the residential building façade.

R2: Location R2 represents the Embassy Suites by Hilton Ontario Airport hotel at 3663 East Guasti Road. Receptor R2 is placed at the building façade.

R3: Location R3 represents the Rodeway Inn Ontario Mills Mall hotel. Receptor R3 is placed at the building façade.

R4: Location R4 represents the Ontario Airport Car Rental facility located at Rental Car Road. Receptor R4 is placed at the building façade.

R5: Location R5 represents the Biagi Brothers Transportation facility at 3655 East Airport Drive. Receptor R5 is placed at the building façade.

R6: Location R6 represents the westernmost building of the Timberland distribution center at 3950 East Airport Drive. Receptor R6 is placed at the building façade.

R7: Location R7 represents the easternmost building of the Timberland distribution center at 3950 East Airport Drive. Receptor R7 is placed at the building façade.

R8: Location R8 represents the Cubework coworking space building located at 1001 Doubleday Avenue. Receptor R8 is placed at the building façade.

R9: Location R9 represents the EaZy BrandZ store located at 4060 East Jurupa Street. Receptor R9 is placed at the building façade.

R10: Location R10 represents the Haliburton International Foods, Inc. food products supplier facility located at 3855 East Jurupa Street. Receptor R10 is placed at the building façade.

R11: Location R11 represents the Pacific Coast Warehouse facility located at 3601 East Jurupa Street. Receptor R11 is placed at the building façade.

EXHIBIT 3-A: RECEPTOR LOCATIONS

The SCAQMD recommends that the nearest sensitive receptor be considered when determining the Project's potential to cause an individual a cumulatively significant impact. The nearest land use where an individual could remain for 24 hours to the Project site has been used to determine localized construction and operational air quality impacts for emissions of PM_{10} and $PM_{2.5}$ (since PM_{10} and $PM_{2.5}$ thresholds are based on a 24-hour averaging time). The nearest receptor used for evaluation of localized impacts of PM_{10} and $PM_{2.5}$ relative to each building area is identified in Table 3.

TABLE 3: NEAREST RECEPTOR LOCATIONS FOR EVALUATION OF LOCALIZED PM_{10} AND $PM_{2.5}$

Building Area	Nearest Receptor	Distance (feet)	Distance (meters)
Building 1	R1	3,962	1,208
Building 2	R2	1,431	436
Building 3	R2	4,042	1,232
Building 4	R2	5,008	1,526
Building 5	R2	2,136	651
Building 6	R3	3,478	1,060
Building 7	R3	2,420	738
Building 8	R3	3,272	997
Budling 9	R3	5,161	1,573

Consistent with *LST Methodology*, the nearest industrial/commercial use to the Project site is used to determine construction and operational LST air impacts for emissions of NO_X and CO as the averaging periods for these pollutants are shorter (8 hours or less) and it is reasonable to assumed that an individual could be present at these sites for periods of one to 8 hours. The nearest receptor used for evaluation of localized impacts of NO_X and CO relative to each building area is identified in Table 4.

TABLE 4: NEAREST SENSITIVE RECEPTOR LOCATIONS FOR LOCALIZED NO_X AND CO (1 OF 2)

Building Area	Nearest Receptor	Distance (feet)	Distance (meters)
Building 1	R4	195	59
Building 2	R5	172	52
Building 3	R11	85	26
Building 4	R11	106	32
Building 5	R6	126	38
Building 6	R10	116	35

TABLE 4: NEAREST SENSITIVE RECEPTOR LOCATIONS FOR LOCALIZED NO_X AND CO (2 OF 2)

Building Area	Nearest Receptor	Distance (feet)	Distance (meters)
Building 7	R7	70	21
Building 8	R8	104	32
Budling 9	R9	73	22

It should be noted that the look-up tables only identify thresholds up to a 500-meter distance. As a conservative measure, a 500-meter distance will be used in lieu of distances over 500 meters. Additionally, the *LST Methodology* explicitly states that "*It is possible that a project may have receptors closer than 25 meters. Projects with boundaries located closer than 25 meters to the nearest receptor should use the LSTs for receptors located at 25 meters* (39)." As such a 25-meter receptor distance will be used for evaluation of localized PM_{10}, $PM_{2.5}$, NO_2, and CO.

Pursuant to MM AQ 3-1 of the DEIR, the following analysis is presented to determine if the proposed Project would be required to implement any limitations on grading activity to prevent localized impacts to nearby receptors. The analysis makes use of methodology included in the SCAQMD *Final Localized Significance Threshold Methodology* (LST Methodology) (1). The SCAQMD has established that impacts to air quality are significant if there is a potential to contribute or cause localized exceedances of the federal and/or state ambient air quality standards (NAAQS/CAAQS). Collectively, these are referred to as Localized Significance Thresholds (LSTs). The SCAQMD established LSTs in response to the SCAQMD Governing Board's Environmental Justice Initiative I-4[3]. LSTs represent the maximum emissions from a project that will not cause or contribute to an exceedance of the most stringent applicable federal or state ambient air quality standard at the sensitive receptor. The SCAQMD states that lead agencies can use the LSTs as another indicator of significance in its air quality impact analyses. Table 5 includes a summary of the Project's construction localized emissions compared to the applicable thresholds. For analytical purposes, emissions associated with peak site preparation and grading activities are considered for purposes of LSTs since these phases represents the maximum localized emissions that would occur. Any other construction phases of development that overlap would result in lesser emissions and consequently lesser impacts than what is disclosed herein. Without mitigation, localized construction emissions would not exceed the applicable SCAQMD LSTs for emissions of any criteria pollutant

[3] The purpose of SCAQMD's Environmental Justice program is to ensure that everyone has the right to equal protection from air pollution and fair access to the decision-making process that works to improve the quality of air within their communities. Further, the SCAQMD defines Environmental Justice as "…equitable environmental policymaking and enforcement to protect the health of all residents, regardless of age, culture, ethnicity, gender, race, socioeconomic status, or geographic location, from the health effects of air pollution."

REGIONAL OPERATIONAL EMISSIONS

Regional operational emissions associated with the proposed Project are summarized on Table 6. As shown, during operational activity, Project emissions would exceed the SCAQMD regional thresholds of significance for emissions of VOC and NO_X. The VOC and NOx exceedances that would occur under the proposed Project are considered and addressed within the DEIR.

LOCALIZED OPERATIONAL EMISSIONS

Localized operational emissions associated with the proposed Project are summarized on Table 7. As shown, the proposed Project's localized operational-related activity would not exceed the applicable regional significance thresholds and a less than significant impact would occur and no mitigation beyond the required mitigation from the DEIR would be required.

AIR QUALITY EMISSIONS COMPARISON

Table 8 compares air quality associated with the Currently Approved Project to the proposed Project. As shown, emissions would result in a decrease of air quality emissions associated with the Project. Notwithstanding, the Project would not result in new or substantively different or substantively increased air quality impacts previously disclosed in the DEIR.

TABLE 8: AIR QUALITY EMISSIONS COMPARISON

ENERGY ANALYSIS

CONSTRUCTION POWER COSTS

Based on the *2022 National Construction Estimator* (2), the typical power cost per 1,000 square feet of building construction per month is estimated to be $2.41. Table 9 estimates the total power cost of the on-site electricity usage during the construction of the proposed Project to be approximately $826,764.29.

TABLE 9: PROJECT CONSTRUCTION POWER COST

Land Use	Power Cost (per 1,000 SF)	Size (1,000 SF)	Construction Duration (months)	Project Construction Power Cost
High-Cube Cold Storage Warehouse	$2.41	642.368	40	$61,924.23
High-Cube Fulfillment Center Warehouse	$2.41	3,640.083	40	$350,903.95
Parking	$2.41	1,054.353	40	$101,639.63
Landscape	$2.41	1,063.403	40	$102,512.05
Other Asphalt Surfaces	$2.41	2,176.187	40	$209,784.43
			CONSTRUCTION POWER COST	***$826,764.29***

CONSTRUCTION ELECTRICITY USAGE

The SCE's general service rate schedule were used to determine the Project's electrical usage. As of January 1, 2022, Southern California Edison's (SCE) general service rate is $0.13 per kilowatt hours (kWh) of electricity for commercial uses and $0.13 per kWh of electricity for street and area lighting (3), the total electricity usage from on-site Project construction related activities is estimated to be approximately 6,276,680 kWh.

TABLE 10: PROJECT CONSTRUCTION ELECTRICITY USAGE

Land Use	Cost per kWh	Project Construction Electricity Usage (kWh)
High-Cube Cold Storage Warehouse	$0.13	470,120
High-Cube Fulfillment Center Warehouse	$0.13	2,664,014
Parking	$0.13	771,634

Landscape	$0.13	778,257
Other Asphalt Surfaces	$0.13	1,592,654
CONSTRUCTION ELECTRICITY USAGE		***6,276,680***

CONSTRUCTION EQUIPMENT FUEL CONSUMPTION

Fuel consumption estimates are presented in Table 11. The aggregate fuel consumption rate for all equipment is estimated at 18.5 hp-hr-gal., obtained from California Air Resources Board (CARB) 2018 Emissions Factors Tables and cited fuel consumption rate factors presented in Table D-24 of the Moyer guidelines (4). For the purposes of this analysis, the calculations are based on all construction equipment being diesel-powered which is standard practice consistent with industry standards. Diesel fuel would be supplied by existing commercial fuel providers serving the City and region. As presented in Table 11, Project construction activities would consume an estimated 335,494 gallons of diesel fuel.

TABLE 11: CONSTRUCTION EQUIPMENT FUEL CONSUMPTION ESTIMATES

Construction Activity	Duration (Days)	Equipment	HP Rating	Quantity	Usage Hours	Load Factor	HP-hrs/day	Total Fuel Consumption
Site Preparation	60	Crawler Tractors	212	6	8	0.43	4,376	14,191

CONSTRUCTION FUEL DEMAND (GALLONS DIESEL FUEL)								***335,494***

CONSTRUCTION WORKER FUEL ESTIMATES

For purposes of analysis, it is assumed that 50% of all worker trips are from light-duty-auto vehicles (LDA), 25% are from light-duty-trucks with a gross vehicle weight rating (GVWR) of less than 6,000 lbs. and equivalent test weight (ETW) of less than or equal to 3,750 lbs (LDT1), and 25% are from light-duty-trucks with a GVWR of less than 6,000 lbs. and ETW between 3,751 lbs. and 5,750 lbs (LDT2). Data regarding Project related construction worker trips were based on CalEEMod 2020.4.0 model defaults utilized within the AQIA. Vehicle fuel efficiencies for LDAs, LDT1s, and LDT2s were estimated using information generated within the 2017 version of the EMFAC developed by the CARB.

Table 12 provides an estimated annual fuel consumption resulting from the Project generated by LDAs, LDT1s, and LDT2s related to construction worker trips. Based on Table 12, it is estimated that 932,311 gallons of fuel will be consumed related to construction worker trips during full construction of the proposed Project.

TOTAL CONSTRUCTION WORKER FUEL CONSUMPTION							***932,311***

CONSTRUCTION VENDOR FUEL ESTIMATES

It is assumed that 50% of all vendor trips are from Medium-Heavy-Duty-Trucks (MHDT) and 50% are from Heavy-Heavy-Duty Trucks (HHDT). These assumptions are consistent with the CalEEMod 2020.4.0 defaults utilized within the within the AQIA. Vehicle fuel efficiencies for MHDTs and HHDTs were estimated using information generated within EMFAC2017.

Table 13 shows the estimated fuel economy of MHDTs and HHDTs accessing the Project site. Based on Table 13, fuel consumption from construction trips will total approximately 412,179 gallons.

TABLE 13: CONSTRUCTION VENDOR/HAULING FUEL CONSUMPTION ESTIMATES (1 OF 2)

Year	Construction Activity	Duration (Days)	Vendor/ Hauling Trips/Day	Trip Length (miles)	VMT	Average Vehicle Fuel Economy (mpg)	Estimated Fuel Consumption (gallons)
2023	MHDT						
	Site Preparation	60	36	6.9	14,904	8.30	1,796

TRANSPORTATION ENERGY DEMANDS

Energy that would be consumed by Project-generated traffic is a function of total VMT and estimated vehicle fuel economies of vehicles accessing the Project site. Table 14 presents the estimated annual fuel consumption from project-generated traffic.

TABLE 14: PROJECT-GENERATED TRAFFIC ANNUAL FUEL CONSUMPTION

Vehicle Type	Average Vehicle Fuel Economy (mpg)	Annual VMT	Estimated Annual Fuel Consumption (gallons)
LDA	33.01	17,115,973	518,499
LDT1	25.37	1,773,342	69,891
LDT2	25.29	5,448,785	215,456
MDV	20.66	4,152,430	200,977
MCY	42.30	772,545	18,265
LHDT1	16.62	3,583,017	215,577
LHDT2	15.58	988,725	63,469
MHDT	8.59	3,436,475	400,190
HHDT	6.24	8,766,474	1,404,831
TRUs	-	-	262
TOTAL ANNUAL FUEL CONSUMPTION		***46,037,767***	***3,107,417***

MDV = Medium Duty Trucks; LHDT1 = Light-Duty Trucks (Vehicles under the LHDT1 category have a GVWR of 8,501 to 10,000 lbs.);
LHDT2 = Light-Duty Trucks (Vehicles under the LHDT2 category have a GVWR of 10,001 to 14,000 lbs.)

FACILITY ENERGY DEMANDS

Project building operations and Project site maintenance activities would result in the consumption of natural gas and electricity. Natural gas would be supplied to the Project by Southern California Gas (SoCalGas) and electricity would be supplied to the Project by SCE. Annual natural gas and electricity demands of the Project are summarized in Table 15.

TABLE 15: PROJECT ANNUAL OPERATIONAL NATURAL GAS AND ELECTRICITY DEMAND SUMMARY

Land Use	Natural Gas Demand (kBTU/year)	Electricity Demand (kWh/year)
High-Cube Cold Storage Warehouse	33,229,700	25,591,900
High-Cube Fulfillment Center Warehouse	7,316,570	8,444,990
Parking	0	369,024
Landscape	0	0
Other Asphalt Surfaces	0	0
TOTAL PROJECT ENERGY DEMAND	***40,546,270***	***34,405,914***

Respectfully submitted,

URBAN CROSSROADS, INC.

Haseeb Qureshi,
Principal

1.3 User Entered Comments & Non-Default Data

Project Characteristics -

Land Use - Total Project Area is 196.98 acres

Construction Phase - Construction anticipated to beging January 2023 and end in May 2026

Off-road Equipment - Hours are based on an 8-hour workday

Off-road Equipment - Equipment adjusted based on the changes made to the number of days for each construction phase

Off-road Equipment - Equipment adjusted based on the changes made to the number of days for each construction phase

Off-road Equipment - Equipment adjusted based on the changes made to the number of days for each construction phase

Off-road Equipment -

California Logistics Center (Construction with The Ontario Plan Draft EIR MMs) - San Bernardino-South Coast County, Summer

EMFAC Off-Model Adjustment Factors for Gasoline Light Duty Vehicle to Account for the SAFE Vehicle Rule Applied

Off-road Equipment - Equipment adjusted based on the changes made to the number of days for each construction phase

Trips and VMT - CalEEMod only assumes Vendor Trips during Building Construction. The CalEEMod default trips were ratioed between each phase based on the number of days

Grading - Analysis conservatively assumes that up to 25 acres can be disturbed per day

Architectural Coating - MM Impact 5.3.2

Vehicle Trips - Construction run only

Energy Use - Construction run only

Water And Wastewater - Construction run only

Solid Waste - Construction run only

Construction Off-road Equipment Mitigation - Rule 403

City Park	24.41	Acre	24.41	1,063,403.00	0

1.2 Other Project Characteristics

Urbanization	Urban	**Wind Speed (m/s)**	2.2	**Precipitation Freq (Days)**	32
Climate Zone	10			**Operational Year**	2026
Utility Company	Southern California Edison				
CO2 Intensity (lb/MWhr)	390.98	**CH4 Intensity (lb/MWhr)**	0.033	**N2O Intensity (lb/MWhr)**	0.004

1.3 User Entered Comments & Non-Default Data

Project Characteristics -

Land Use - Total Project Area is 196.98 acres

Construction Phase - Construction anticipated to beging January 2023 and end in May 2026

Off-road Equipment - Hours are based on an 8-hour workday

Off-road Equipment - Equipment adjusted based on the changes made to the number of days for each construction phase

Off-road Equipment - Equipment adjusted based on the changes made to the number of days for each construction phase

Off-road Equipment - Equipment adjusted based on the changes made to the number of days for each construction phase

Off-road Equipment -

California Logistics Center (Construction with The Ontario Plan Draft EIR MMs) - San Bernardino-South Coast County, Winter

EMFAC Off-Model Adjustment Factors for Gasoline Light Duty Vehicle to Account for the SAFE Vehicle Rule Applied

Off-road Equipment - Equipment adjusted based on the changes made to the number of days for each construction phase

Trips and VMT - CalEEMod only assumes Vendor Trips during Building Construction. The CalEEMod default trips were ratioed between each phase based on the number of days

Grading - Analysis conservatively assumes that up to 25 acres can be disturbed per day

Architectural Coating - MM Impact 5.3.2

Vehicle Trips - Construction run only

Energy Use - Construction run only

Water And Wastewater - Construction run only

Solid Waste - Construction run only

Construction Off-road Equipment Mitigation - Rule 403

Parking Lot	3,403.00	Space	24.30	1,054,353.00	0
City Park	24.41	Acre	24.41	1,063,403.00	0

1.2 Other Project Characteristics

Urbanization	Urban	**Wind Speed (m/s)**	2.2	**Precipitation Freq (Days)**	32
Climate Zone	10			**Operational Year**	2026
Utility Company	Southern California Edison				
CO2 Intensity (lb/MWhr)	390.98	**CH4 Intensity (lb/MWhr)**	0.033	**N2O Intensity (lb/MWhr)**	0.004

1.3 User Entered Comments & Non-Default Data

Project Characteristics -

Land Use - Total Project Area is 196.98 acres

Construction Phase - Construction anticipated to beging January 2023 and end in May 2026

Off-road Equipment - Hours are based on an 8-hour workday

Off-road Equipment - Equipment adjusted based on the changes made to the number of days for each construction phase

Off-road Equipment - Equipment adjusted based on the changes made to the number of days for each construction phase

Off-road Equipment - Equipment adjusted based on the changes made to the number of days for each construction phase

Off-road Equipment -

California Logistics Center (Construction with The Ontario Plan Draft EIR MMs) - San Bernardino-South Coast County, Annual

EMFAC Off-Model Adjustment Factors for Gasoline Light Duty Vehicle to Account for the SAFE Vehicle Rule Applied

Off-road Equipment - Equipment adjusted based on the changes made to the number of days for each construction phase

Trips and VMT - CalEEMod only assumes Vendor Trips during Building Construction. The CalEEMod default trips were ratioed between each phase based on the number of days

Grading - Analysis conservatively assumes that up to 25 acres can be disturbed per day

Architectural Coating - MM Impact 5.3.2

Vehicle Trips - Construction run only

Energy Use - Construction run only

Water And Wastewater - Construction run only

Solid Waste - Construction run only

Construction Off-road Equipment Mitigation - Rule 403

City Park	24.41	Acre	24.41	1,063,403.00	0
Other Asphalt Surfaces	2,176.19	1000sqft	49.96	2,176,187.00	0

1.2 Other Project Characteristics

Urbanization	Urban	**Wind Speed (m/s)**	2.2	**Precipitation Freq (Days)**	32
Climate Zone	10			**Operational Year**	2026
Utility Company	Southern California Edison				
CO2 Intensity (lb/MWhr)	390.98	**CH4 Intensity (lb/MWhr)**	0.033	**N2O Intensity (lb/MWhr)**	0.004

1.3 User Entered Comments & Non-Default Data

Project Characteristics -

Land Use - Total Project area (without the High-Cube Fulfillment Center component) is 113.42 acres

Construction Phase - Operations run only

Off-road Equipment - Operations run only

Vehicle Trips - Trip characteristics consistent with Traffic analysis. ITE does not provide Weekend Trip Rates for High-Cube Cold Storage use, this analysis conservatively uses Daily Trip Rate.

Fleet Mix - Passenger Car Mix estimated based on the CalEEMod default fleet mix and the ratio of the vehicle classes (LDA, LDT1, LDT2, MDV, & MCY). Truck Mix based on information in the Traffic analysis

Operational Off-Road Equipment - Based on SCAQMD High Cube Warehouse Truck Trip Study White Paper Summary of Busniess Survey Results (2014)

California Logistics Center (High-Cube Cold Storage Operations) - San Bernardino-South Coast County, Summer

1.0 Project Characteristics

1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
Refrigerated Warehouse-No Rail	642.37	1000sqft	14.75	642,368.00	0
User Defined Industrial	642.37	User Defined Unit	0.00	0.00	0
Parking Lot	3,403.00	Space	24.30	1,054,353.00	0
City Park	24.41	Acre	24.41	1,063,403.00	0
Other Asphalt Surfaces	2,176.19	1000sqft	49.96	2,176,187.00	0

1.2 Other Project Characteristics

Urbanization	Urban	**Wind Speed (m/s)**	2.2	**Precipitation Freq (Days)**	32
Climate Zone	10			**Operational Year**	2026
Utility Company	Southern California Edison				
CO2 Intensity (lb/MWhr)	390.98	**CH4 Intensity (lb/MWhr)**	0.033	**N2O Intensity (lb/MWhr)**	0.004

1.3 User Entered Comments & Non-Default Data

Project Characteristics -

Land Use - Total Project area (without the High-Cube Fulfillment Center component) is 113.42 acres

Construction Phase - Operations run only

Off-road Equipment - Operations run only

Vehicle Trips - Trip characteristics consistent with Traffic analysis. ITE does not provide Weekend Trip Rates for High-Cube Cold Storage use, this analysis conservatively uses Daily Trip Rate.

Fleet Mix - Passenger Car Mix estimated based on the CalEEMod default fleet mix and the ratio of the vehicle classes (LDA, LDT1, LDT2, MDV, & MCY). Truck Mix based on information in the Traffic analysis

Operational Off-Road Equipment - Based on SCAQMD High Cube Warehouse Truck Trip Study White Paper Summary of Busniess Survey Results (2014)

California Logistics Center (High-Cube Cold Storage Operations) - San Bernardino-South Coast County, Winter

EMFAC Off-Model Adjustment Factors for Gasoline Light Duty Vehicle to Account for the SAFE Vehicle Rule Applied

City Park	24.41	Acre	24.41	1,063,403.00	0
Other Asphalt Surfaces	2,176.19	1000sqft	49.96	2,176,187.00	0

1.2 Other Project Characteristics

Urbanization	Urban	**Wind Speed (m/s)**	2.2	**Precipitation Freq (Days)**	32
Climate Zone	10			**Operational Year**	2026
Utility Company	Southern California Edison				
CO2 Intensity (lb/MWhr)	390.98	**CH4 Intensity (lb/MWhr)**	0.033	**N2O Intensity (lb/MWhr)**	0.004

1.3 User Entered Comments & Non-Default Data

Project Characteristics -

Land Use - Total Project area (without the High-Cube Fulfillment Center component) is 113.42 acres

Construction Phase - Operations run only

Off-road Equipment - Operations run only

Vehicle Trips - Trip characteristics consistent with Traffic analysis. ITE does not provide Weekend Trip Rates for High-Cube Cold Storage use, this analysis conservatively uses Daily Trip Rate.

Fleet Mix - Passenger Car Mix estimated based on the CalEEMod default fleet mix and the ratio of the vehicle classes (LDA, LDT1, LDT2, MDV, & MCY). Truck Mix based on information in the Traffic analysis

Operational Off-Road Equipment - Based on SCAQMD High Cube Warehouse Truck Trip Study White Paper Summary of Busniess Survey Results (2014)

California Logistics Center (High-Cube Cold Storage Operations) - San Bernardino-South Coast County, Annual

EMFAC Off-Model Adjustment Factors for Gasoline Light Duty Vehicle to Account for the SAFE Vehicle Rule Applied

1.0 Project Characteristics

1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
Unrefrigerated Warehouse-No Rail	3,640.08	1000sqft	83.56	3,640,083.00	0
User Defined Industrial	3,640.08	User Defined Unit	0.00	0.00	0

1.2 Other Project Characteristics

Urbanization	Urban	**Wind Speed (m/s)**	2.2	**Precipitation Freq (Days)**	32
Climate Zone	10			**Operational Year**	2026
Utility Company	Southern California Edison				
CO2 Intensity (lb/MWhr)	390.98	**CH4 Intensity (lb/MWhr)**	0.033	**N2O Intensity (lb/MWhr)**	0.004

1.3 User Entered Comments & Non-Default Data

Project Characteristics -

Land Use -

Construction Phase - Operations run only

Off-road Equipment - Operations run only

Vehicle Trips - Trip characteristics consistent with Traffic analysis. ITE does not provide Weekend Trip Rates for High-Cube Fulfillment use, this analysis conservatively uses Daily Trip Rate.

Fleet Mix - Passenger Car Mix estimated based on the CalEEMod default fleet mix and the ratio of the vehicle classes (LDA, LDT1, LDT2, MDV, & MCY). Truck Mix based on information in the Traffic analysis

1.0 Project Characteristics

1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
Unrefrigerated Warehouse-No Rail	3,640.08	1000sqft	83.56	3,640,083.00	0
User Defined Industrial	3,640.08	User Defined Unit	0.00	0.00	0

1.2 Other Project Characteristics

Urbanization	Urban	**Wind Speed (m/s)**	2.2	**Precipitation Freq (Days)**	32
Climate Zone	10			**Operational Year**	2026
Utility Company	Southern California Edison				
CO2 Intensity (lb/MWhr)	390.98	**CH4 Intensity (lb/MWhr)**	0.033	**N2O Intensity (lb/MWhr)**	0.004

1.3 User Entered Comments & Non-Default Data

Project Characteristics -

Land Use -

Construction Phase - Operations run only

Off-road Equipment - Operations run only

Vehicle Trips - Trip characteristics consistent with Traffic analysis. ITE does not provide Weekend Trip Rates for High-Cube Fulfillment use, this analysis conservatively uses Daily Trip Rate.

Fleet Mix - Passenger Car Mix estimated based on the CalEEMod default fleet mix and the ratio of the vehicle classes (LDA, LDT1, LDT2, MDV, & MCY). Truck Mix based on information in the Traffic analysis

1.2 Other Project Characteristics

Urbanization	Urban	**Wind Speed (m/s)**	2.2	**Precipitation Freq (Days)**	32
Climate Zone	10			**Operational Year**	2026
Utility Company	Southern California Edison				
CO2 Intensity (lb/MWhr)	390.98	**CH4 Intensity (lb/MWhr)**	0.033	**N2O Intensity (lb/MWhr)**	0.004

1.3 User Entered Comments & Non-Default Data

Project Characteristics -

Land Use -

Construction Phase - Operations run only

Off-road Equipment - Operations run only

Vehicle Trips - Trip characteristics consistent with Traffic analysis. ITE does not provide Weekend Trip Rates for High-Cube Fulfillment use, this analysis conservatively uses Daily Trip Rate.

Fleet Mix - Passenger Car Mix estimated based on the CalEEMod default fleet mix and the ratio of the vehicle classes (LDA, LDT1, LDT2, MDV, & MCY). Truck Mix based on information in the Traffic analysis

Table 2: Greenhouse Gas Reduction Measures Screening Table for Commercial & Industrial Development

Feature	Description	Assigned Point Values	Project Point Values
Reduction Measure PS E3: Commercial/Industrial Energy Efficiency Development			
Building Envelope			
Insulation	2008 Baseline (walls: R-13; roof/attic: R-30)	0	
	Modestly Enhanced Insulation (walls: R-13; roof/attic: R-38)	15	15
	Enhanced Insulation (rigid wall insulation: R-13; roof/attic: R-38)	18	
	Greatly Enhanced Insulation (spray foam wall insulated walls R-15 or higher, roof/attic R-38 or higher)	20	
	(Applies to conditioned space, only, defined as those areas within the building that have air conditioning and heating)		
Windows	2008 Baseline Windows (0.57 U-factor, 0.4 solar heat gain coefficient (SHGC)	0	
	Modestly Enhanced Window Insulation {0.4 U-Factor, 0.32 SHGC)	7	
	Enhanced Window Insulation {0.32 U-Factor, 0.25 SHGC)	8	8
	Greatly Enhanced Window Insulation {0.28 or less U-Factor, 0.22 or less SHGC)	12	
	(Applies to conditioned space, only, defined as those areas within the building that have air conditioning and heating)		
Cool Roof	Modest Cool Roof (CRRC Rated 0.15 aged solar reflectance, 0.75 thermal emittance)	12	
	Enhanced Cool Roof(CRRC Rated 0.2 aged solar reflectance, 0.75 thermal emittance)	14	
	Greatly Enhanced Cool Roof (CRRC Rated 0.35 aged solar reflectance, 0.75 thermal emittance)	16	
	(Applies to conditioned space, only, defined as those areas within the building that have air conditioning and heating)		
Air Infiltration	Minimizing leaks in the building envelope is as important as the insulation properties of the building. Insulation does not work effectively if there is excess air leakage:		
	▪ Air barrier applied to exterior walls, calking, and visual inspection such as the HERS Verified Quality Insulation Installation (Q11 or equivalent)	12	
	▪ Blower Door HERS Verified Envelope Leakage or equivalent	10	
	▪ *(Applies to conditioned space, only, defined as those areas within the building that have air conditioning and heating)*		
Thermal Storage of Building	Thermal storage Is a design characteristic that helps keep a constant temperature in the building. Common thermal storage devices include strategically placed water filled columns, water storage tanks, and thick masonry walls:		
	▪ Modest Thermal Mass (10% of floor or 10% of walls: 12" or more thick exposed concrete or masonry. No permanently installed floor covering such as carpet, linoleum, wood or other insulating materials)	4	
	▪ Enhanced Thermal Mass (20% of floor or 20% of walls: 12" or more thick exposed concrete or masonry. No permanently installed floor covering such as carpet, linoleum, wood or other insulating materials)	6	

Feature	Description	Assigned Point Values	Project Point Values
	▪ Enhanced Thermal Mass (80% of floor or 80% of walls: 12" or more thick exposed concrete or masonry. No permanently installed floor covering such as carpet, linoleum, wood or other insulating materials)	24	
Indoor Space Efficiencies			
Heating/Cooling Distribution System	Minimum Duct Insulation (R-4.2 required)	0	
	Modest Duct insulation (R-6)	8	
	Enhanced Duct Insulation (R-8)	10	
	Distribution loss reduction with inspection (HERS Verified Duct leakage or equivalent)	14	
	(Applies to conditioned space, only, defined as those areas within the building that have air conditioning and heating)		
Space Heating/ Cooling Equipment	2008 Minimum HVAC Efficiency (SEER 13/60% AFUE or 7.7 HSPF}	0	
	Improved Efficiency HVAC (SEER 14/65% AFUE or 8 HSPF)	7	7
	High Efficiency HVAC (SEER 15/72% AFUE or 8.5 HSPF)	8	
	Very High Efficiency HVAC (SEER 16/80% AFUE or 9 HSPF)	12	
	(Applies to conditioned space, only, defined as those areas within the building that have air conditioning and heating)		
Commercial Heat Recovery Systems	Heat recovery strategies employed with commercial laundry, cooking equipment, and other commercial heat sources for reuse in HVAC air intake or other appropriate heat recovery technology. Point values for these types of systems will be determined based upon design and engineering data documenting the energy savings.	TBD	
Water Heaters	2008 Minimum Efficiency (0.57 Energy Factor)	0	
	Improved Efficiency Water Heater (0.675 Energy Factor)	14	
	High Efficiency Water Heater (0.72 Energy Factor)	16	16
	Very High Efficiency Water Heater (0.92 Energy factor)	19	
	Solar Pre-heat System (0.2 Net Solar Fraction)	4	
	Enhanced Solar Pre-heat System (0.35 Net Solar Fraction)	8	
Daylighting	Daylighting is the ability of each room within the building to provide outside light during the day, reducing the need for artificial lighting during daylight hours:		
	▪ All peripheral rooms within the living space have at least one window (required)	1	
	▪ All rooms within the living space have daylight (through use of windows, solar tubes, skylights, etc.)	5	5
	▪ All rooms daylighted	7	
Artificial Lighting	2008 Minimum (required)	0	
	Efficient lights (25% of In-unit fixtures considered high efficacy. High efficacy is defined as 40 lumens/watt for 15 watt or less fixtures; SO lumens/watt for15 to 40 watt fixtures, 60 lumens/watt for fixtures >40watt)	9	9
	High Efficiency lights (50% of in-unit fixtures are high efficacy)	12	
	Very High Efficiency Lights (100% of in-unit fixtures are high efficacy)	14	
Appliances	Energy Star Commercial Refrigerator (new)	4	
	Energy Star Commercial Dish Washer (new)	4	
	Energy Star Commercial Cloths Washing	4	
Miscellaneous Commercial/Industrial Building Efficiencies			

Feature	Description	Assigned Point Values	Project Point Values
Building Placement	North/South alignment of building or other building placement such that the orientation of the buildings optimizes natural heating, cooling, and lighting.	6	
Shading	At least 90% of south-facing glazing will be shaded by vegetation or overhangs at noon on Jun 21st•	6	
Other	This allows innovation by the applicant to provide design features that Increases the energy efficiency of the project not provided In the table. Note that engineering data will be required documenting the energy efficiency of innovative designs and point values given based upon the proven efficiency beyond Title 24 Energy Efficiency Standards.	TBD	
Existing Commercial Building Retrofits	The applicant may wish to provide energy efficiency retrofit projects to existing residential dwelling units to further the point value of their project. Retrofitting existing residential dwelling units within the City is a key reduction measure that is needed to reach the reduction goal. The potential for an applicant to take advantage of this program will be decided on a case by case basis and must have the approval of the Ontario Planning Department. The decision to allow applicants to participate in this program will be evaluated based upon, but not limited to, the following;	TBD	
	▪ Will the energy efficiency retrofit project benefit low income or disadvantaged communities?		
	▪ Does the energy efficiency retrofit project fit within the overall assumptions in reduction measures associated with commercial building energy efficiency retrofits?		
	▪ Does the energy efficiency retrofit project provide co-benefits important to the City?		
	▪ Point value will be determined based upon engineering and design criteria of the energy efficiency retrofit project.		
Reduction Measure PS E4: Commercial/Industrial Renewable Energy			
Photovoltaic	Solar Photovoltaic panels installed on individual homes or in collective neighborhood arrangements, such that the total power provided augments:		
	▪ Solar Ready Roofs (sturdy roof and electric hookups)	2	2
	▪ 10% of the power needs of the project	8	
	▪ 20% of the power needs of the project	14	
	▪ 30% of the power needs of the project	20	
	▪ 40% of the power needs of the project	26	
	▪ 50% of the power needs of the project	32	
	▪ 60% of the power needs of the project	38	
	▪ 70% of the power needs of the project	44	
	▪ 80% of the power needs of the project	50	
	▪ 90% of the power needs of the project	56	
	▪ 100% of the power needs of the project	60	
Wind Turbines	Some areas of the City lend themselves to wind turbine applications. Analysis of the area's capability to support wind turbines should be evaluated prior to choosing this feature.		
	Wind turbines as part of the commercial development, such that the total power provided augments:		
	▪ 10% of the power needs of the project	8	
	▪ 20% of the power needs of the project	14	

Feature	Description	Assigned Point Values	Project Point Values
	▪ 30% of the power needs of the project	20	
	▪ 40% of the power needs of the project	26	
	▪ 50% of the power needs of the project	32	
	▪ 60% of the power needs of the project	38	
	▪ 70% of the power needs of the project	44	
	▪ 80% of the power needs of the project	50	
	▪ 90% of the power needs of the project	56	
	▪ 100% of the power needs of the project	60	
Off-Site Renewable Energy Project	The applicant may submit a proposal to supply an off-site renewable energy renewable project such as renewable energy retrofits of existing commercial/industrial energy project that will help implement reduction measures associated with existing buildings. These off-site renewable energy retrofit project proposals will be determined on a case by case basis, accompanied by a detailed plan documenting the quantity of renewable energy the proposal will generate. Point values will be based upon the energy generated by the proposal.	TBD	
Other Renewable Energy Generation	The applicant may have innovative designs or unique site circumstances (such as geothermal) that allow the project to generate electricity from renewable energy not provided In the table. The ability to supply other renewable energy, and the point values allowed, will be decided based upon engineering data documenting the ability to generate electricity.	TBD	
Reduction Measure PS W2: Commercial/Industrial Water Conservation			
Irrigation and Landscaping			
Water Efficient Landscaping	Eliminate conventional turf from landscaping Only moderate water using plants Only low water using plants Only California Native landscape that requires no, or only supplemental, irrigation.	0 3 4 8	4
Trees	Increase tree planting in parking areas 50% beyond City Code requirements	TBD	
Water Efficient Irrigation Systems	Low precipitation spray heads <. 75"/hour, or drip irrigation Weather based Irrigation control systems combined with drip irrigation (demonstrate 20% reduced water use)	1 5	1
Recycled Water	Recycled connections (purple pipe) to irrigation system on site	5	
Storm Water Reuse Systems	Innovative on-site stormwater collection, filtration and reuse systems are being developed that provide supplemental irrigation water and provide vector control. These systems can greatly reduce the irrigation needs of a project. Point values for these types of systems will be determined based upon design and engineering data documenting the water savings.	TBD	
Potable Water			
Showers	Water Efficient Showerheads (2.0 gpm)	3	
Toilets	Water Efficient Toilets (1.5 gpm)	3	3
Faucets	Water Efficient faucets (1.28 gpm)	3	3
Commercial Dishwashers	Water Efficient Dishwasher (6 gallons per cycle or less)	1	
Commercial Laundry Washers	Water Efficient Washing Machine (Water factor < 5.5)	1	

Feature	Description	Assigned Point Values	Project Point Values
Commercial Water Operations Program	Establish an operational program to reduce water loss from pools, water features, etc., by covering pools, adjusting fountain operational hours, and using water treatment to reduce draw down and replacement *of* water. Point values for these types of plans will be determined based upon design and engineering data documenting the water savings.	TBD	
Reduction Measure PS T1: Land Use Based Trips and VMT Reduction			
Mixed Use	Mixes of land uses that complement one another in a way that reduces the need for vehicle trips can greatly reduce GHG emissions. The point value of mixed use projects will be determined based upon traffic studies that demonstrate trip reductions and/or reductions in vehicle miles traveled	TBD	
Local Retail Near Residential (commercial only projects	Having residential developments within walking and biking distance of local retail helps to reduce vehicle trips and/or vehicle miles traveled. The point value of residential projects in close proximity to local retail will be determined based upon traffic studies that demonstrate trip reductions and/or reductions in vehicle miles traveled	TBD	
Reduction Measure PS T2: Bicycle Master Plan			
Bicycle Infrastructure	Ontario's Bicycle Master Plan is extensive and describes the construction on 11.5 miles of Class I bike paths and 23 miles of Class II and Class Ill bikeways to build upon the current 8 miles of bikeways.	TBD	
	Provide bicycle paths within project boundaries.	TBD	
	Provide bicycle path linkages between residential and other land uses.	2	
	Provide bicycle path linkages between residential and transit.	5	
Reduction Measure PS T3: Neighborhood Electric Vehicle Infrastructure			
Electric Vehicles	Provide public charging station for use by an electric vehicle. *(ten points for each charging station within the facility)*	10	30
Reduction Measure PS T4: Employee Based Trip & VMT Reduction Policy			
Compressed Work Week	Reduce the number of days per week that employees need to be on site will reduce the number of vehicle trips associated with commercial/industrial development. Compressed work week such that full time employees are on site:	TBD	
	▪ 5 days per week		
	▪ 4 days per week on site		
	▪ 3 days per week on site		
Car/Vanpools	Car/vanpool program	TBD	
	Car/vanpool program with preferred parking		
	Car/vanpool with guaranteed ride home program		
	Subsidized employee incentive car/vanpool program		
	Combination of all the above		
Employee Bicycle/Pedestrian Programs	Complete sidewalk to residential within one-half mile	TBD	
	Complete bike path to residential within 3 miles		
	Bike lockers and secure racks		
	Showers and changing facilities		
	Subsidized employee walk/bike program		
Shuttle/Transit Programs	Local transit within one-quarter mile	TBD	
	Light rail transit within one-half mile		

Feature	Description	Assigned Point Values	Project Point Values
	Shuttle service to light rail transit station		
	Guaranteed ride home program		
	Subsidized transit passes		
CRT	Employer based Commute Trip Reduction (CRT). CRTs apply to commercial, offices, or industrial projects that include a reduction of vehicle trip or VMT goal using a variety of employee commutes trip reduction methods. The point value will be determined based upon a TIA that demonstrates the trip/VMT reductions. Suggested point ranges:	TBD	
	▪ Incentive based CRT Programs (1-8 points)		
	▪ Mandatory CRT programs (5-20 points)		
Other Trip Reductions	Other trip or VMT reduction measures not listed above with TIA and/or other traffic data supporting the trip and/or VMT for the project.	TBD	
Total Points Earned by Commercial/Industrial Project:			103

CERTIFICATION

I, the undersigned, hereby certify that the statements and information provided in this **Greenhouse Gas Reduction Measures Screening Table,** and in any attached exhibits, present the data and information required for this application to the best of my ability, and that the facts, statements and information presented are true and correct to the best of my knowledge and belief.

Biology

The burrowing owl is a small, brownish, ground-dwelling bird of prey that inhabits arid, open habitats with short vegetation, bare ground, level to sloping topography, and well-drained soils (Poulin *et al.* 2011, CDFG 2012). Suitable burrowing owl habitat varies widely from naturally occurring habitats to highly disturbed conditions in grasslands, deserts, and human-altered landscapes such as agricultural fields, vacant lots, pastures, fallow fields, road rights-of-way, airports, and golf courses (Klute *et al.* 2003). Throughout the range where burrowing owls are found, tall or dense cover types are generally not suitable as burrowing owl habitat. Visibility at nest sites appears to be an important habitat selection factor and may be an anti-predator behavior (Green and Antony 1989, Ronan 2002).

The primary requirement for suitable habitat is the presence of a suitable burrow (Rosenberg *et al.* 2007). Burrowing owls nest and roost in underground burrows created by burrowing mammals such as California ground squirrels (*Otospermophilus beecheyi*), coyotes (*Canis latrans*), and American badgers (*Taxidea taxus*), (Klute *et al.* 2003, Poulin *et al.* 2011, CDFG 2012). They may also nest and roost in other natural or man-made cavities such as rock piles, pipes, culverts, refuse piles, and artificial burrows. Owls prefer nesting in areas with a high density of suitable burrows which likely provide escape burrows for both adult and young owls (Poulin *et al.* 2011). In general, many burrowing owl adults show strong fidelity from year to year (CDFG 2012). Burrowing owls are semi-colonial and often congregate with other owls in winter and nest in loose colonies. Nest densities vary depending on abundance of suitable burrows and prey.

Burrowing owls are generalists as they feed on spiders and insects (arthropods), small mammals, birds and toads (Poulin *et al.* 2011, Rosenberg *et al.* 2007). Burrowing owls are mostly active during the morning and evening (crepuscular) but they can be found active at all times of the day and night (Poulin *et al.* 2011, Gervais *et al.* 2003). During the nesting season, they typically carry prey back to the nest burrow and drop prey at the apron or cache them in the burrows and tunnels depending on nest chronology (Poulin *et al.* 2011, Rosenberg *et al.* 2007). Distance to suitable foraging habitat is a primary factor in nest habitat selection (Rosenberg and McKelvey 1999, Rosenberg *et al.* 2007).

Current literature suggests, owl home range sizes vary from approximately 0.14 and 4.81 kilometers^2 (0.16 and 1.86 miles^2; mean = 2.41 kilometers^2 [0.93 miles^2]), depending on habitat and region (Poulin *et al.* 2011) and is likely related to food abundance and habitat fragmentation (Gervais *et al.* 2008). During the breeding season, owls generally forage within 2.7 km (1.67 miles) of their nest burrow (Haug and Oliphant 1990, Gervais *et al.* 2003, Rosenberg and Haley 2004). In the southern San Joaquin and Imperial Valleys, owls concentrated 80 percent of foraging within 600 meters (1,968.5 feet) of their nests (Gervais *et al.* 2003, Rosenberg and Haley 2004). In general, during the breeding season most foraging occurs within 250 to 600 m (820 to 1,968.5 feet) of the nest.

Natal dispersal from 17 nestlings recaptured as breeding adults in Western Riverside County ranged from 0.0 km to 5.7 km (J.W. Kidd unpublished). During 2013, Kidd Biological Inc, conducted a relocation for Helix Environmental in Otay Mesa, San Diego County and during the subsequent nesting in 2014, successful inbreeding was confirmed between a female offspring and the adult male (Kidd Biological, Inc 2013, San Diego Zoo pers comm).

Predation is often a limiting factor for burrowing owl populations (Catlin and Rosenberg 2008, Poulin *et al.* 2011). Burrowing owl adults, young, and/or eggs are preyed upon by a variety of avian, mammalian, and reptilian predators in our regions such as prairie falcon (*Falco mexicanus*), peregrine falcon (*Falco peregrinus*), great horned owl (*Bubo virginianus*), barn owl (*Tyto alba*), red-tailed hawk (*Buteo jamaicensis*), Cooper's hawk (*Accipiter cooperii*), American crow (*Corvus brachrhynchos*), common raven (*Corvus corax*), coyote, skunk (*Mephitis* spp.), opossum (*Didelphis virginiana*), gopher snake (*Pituophis catenifer*), and domestic dogs and cats (Ronan 2002, Catlin and Rosenberg 2008, Poulin *et al.* 2011).

Common ravens are known to predate a wide variety of species (Boarman and Heinrich 1999). Ravens were documented predating and harassing burrowing owls actively relocated to the Lake Mathews MSHCP Core Area in 2013 (Kidd Biological, Inc 2013). This behavior has been observed by others conducting burrowing owl relocations (Wildlife Preservation Canada 2013) and noted in other raven predation studies, notably desert tortoise (*Gopherus agassizii*), (Boarman 1992, Boarman 2002).

History and Current Status of BUOW Population in Inland Empire

Prior to the 1980's southwestern San Bernardino supported a robust breeding burrowing owl population with hundreds of pairs from the base of the San Bernardino Mountains south to the Prado Basin. After decades of development pressure and the complete absence of meaningful mitigation, only a few remaining breeding pairs and winter migrants are known to persist. The remaining highly fragmented landscape which lacks suitable large protected sites and critical connectivity to and between extant breeding sites creates a bottleneck and prevents the existence of a healthy source population. With the continued development pressure and lack of adequate mitigation required by the resource agencies, the burrowing owl population in this region is tenuous at best and will likely never recover from what was once a robust breeding source population (Kidd et al. 2003, 2007).

A current review of burrowing owls previously reported near the Ontario Airport includes 45 records from 1989-2017. These 45 records are located within seven nearby 7.5min USGS quads (Ontario, Prado, Corona North, Fontana, Cucamonga Peak and Mt. Blady) and Guasti quad where the airport is located (CNDDB 2020, Appendix A - Maps, Figure 1). The nearest owl locations reported south of the airport were evicted approximately ten years ago during development of industrial warehouses. Mitigation included the installation of artificial burrows in a barrow pit on the west side of the nearby retired landfill and the owls were evicted from

their burrows prior to grading (J. Kidd personal observation). Owls are no longer known to occupy this site south of the airport. The subject owls on the OIAA property along the east side of Haven Avenue are included in the list of 45 owl records. Several reported owls north of Interstate 10 that are located west and north of Ontario Mills Mall are some of the only possible extant owls near the airport. All of these owls are surrounded by development and located on small, highly fragmented sites that don't provide long-term conservation value for the owl due to future development and predation pressure to name a few.

The review of occupied owl sites within a few miles of the airport did not result in any known conserved sites, managed for owls, that appear to provide any long-term conservation value for the species. Some owl pairs and individuals are known to occupy sites nearby but those are surrounded by development and not expected to provide any meaningful long-term contribution to the status of burrowing owls in this region.

Regulatory Setting

The California Environmental Quality Act (hereafter CEQA) requires public agencies in California to analyze and disclose environmental impacts associated with development. CEQA was never intended to function as a habitat protection mechanism. When owl habitat is identified during the CEQA process, mitigation is nearly always proposed while avoidance and leaving owls in situ is rarely, if ever, implemented. Typically, during the CEQA process, lead agencies determine significant impacts can be reduced or avoided by evicting owls out of the way of development, thereby avoiding direct take.

CFGC §3503 protects bird nests and CDFC § 3503.5 protects birds of prey and their nests. Therefore, CEQA and the Fish and Game Code protect owls while they have active nests with eggs or young but do not provide any protections for the owls or their burrows during the non-breeding season even when burrows are occupied for shelter and refuge.

In the early 2000's the Center for Biological Diversity (CBD) wrote and submitted a listing petition for the species with the hopes of preserving more owls through adequate mitigation. Despite the recommendation from CDFW staff and experts all over the state, to list this species as threatened or endangered in California, the CDFW Commission rejected a listing petition for political reasons while completely ignoring the science (Center for Biological Diversity 2003). If the commission would have listed the species, it would have afforded the species adequate protection and likely prevented the near extirpation in this region.

With the failed listing attempt, the burrowing owl remains a California Species of Special Concern (SSC) and little to no mitigation is required for destruction/development of occupied habitat. The CDFW BUOW Staff Report on Mitigation (1995) which was replaced by a newer version in 2012, encouraged mitigation and BMP's, however both documents have weak language, are not enforceable, and have accelerated the decline of the burrowing owl throughout this and many other regions of California (Kidd et al. 2003, 2007). Other regional

owl experts in California documented an "*utter failure of CDFW and the CEQA process to protect owls and their habitats in central California*" (L. Trulio pers comm).

CDFW mitigation requirements in San Bernardino County are weak at best and don't afford the owls any reasonable chance of survival because actions weren't taken early enough by the regulatory agencies. Unfortunately, the CDFW 2012 staff report is still the guiding document for mitigation and again, it provides very little, if any conservation value due to the language or lack thereof.

Ontario International Airport Authority (OIAA) / FAA / USDA APHIS

USDA (APHIS) is hired by OIAA to reduce strike hazards caused by various wildlife species. Per FAA rules and regulations, OIAA can't engage in restoration, mitigation or any actions that increase wildlife hazards within zones at and around an FAA certified airport. Any airport can lose their FAA certificate and funding if they are found to be out of compliance with this rule. Any mitigation efforts within 10,000 feet of the airport would be considered out of compliance and would likely result in wasted efforts as APHIS has the authority to haze, evict or lethally remove any hazardous wildlife.

Burrowing owls are generally not struck by aircraft, at high rates like geese, red-tailed hawks and vultures but they are in fact struck throughout their range at both commercial and military airfields. Importantly, owls utilize burrows that support other fossorial animals (e.g. squirrels and rabbits) that attract other large predators to the airfield.

Installing artificial burrows and/or encouraging owls to inhabit lands on or directly adjacent to the OIAA property violates FAA rules and is not a viable strategy because of the expected increased presence of other larger hazardous birds (e.g. red-tailed hawks, golden eagles, ferruginous hawks, red-shouldered hawks, Cooper's hawks, turkey vultures, and common ravens) who would attempt to predate the owls, squirrels or rabbits that would likely use the artificial burrows. Hawks and vultures are those struck by aircraft at the highest rates and those known to cause the most damage per strike. These species are often involved in aircraft strikes while they are hover hunting or circling over the approach or departure ends of the airport within the glide slopes. Bird strikes in these situations (landing and take-off) are the most dangerous and can lead to catastrophic events that can kill hundreds of passengers and crew on jetliners.

Evicting the owls along Haven Avenue outside the airfield could result in owls moving to areas within the airfield, making a more hazardous situation. Owls are often found seeking refuge very close to taxiways and runways under lights, signs and other man-made structures that support refuge and areas for squirrels to create burrows. Many burrowing owls that are struck at airports are those crossing runways as aircraft are departing and arriving. This will generally not lead to a catastrophic accident however even small birds like burrowing owls are capable of causing tens of thousands of dollars in damage to aircraft per event.

Additionally, CDFW Headquarters has communicated with burrowing owl researchers and made it very clear we are not authorized to encourage burrowing owls to reside at or adjacent to commercial or military airfields whether they follow FAA rules or not. Local CDFW offices should be aware of the FAA rules regarding hazardous wildlife and their own internal guidelines from the Headquarters office.

Relocating or encouraging owls to reside on a commercial airfield would violate FAA rules, will result in APHIS having to remove the owls in the future, and creates huge liability for the resource agencies or biologists promoting the in-situ conservation of owls at or near an airport.

In summary, the act of attempting to conduct any form of "mitigation" including in situ or eviction on or directly adjacent to the airfield is not supported by the FAA, APHIS, or CDFW Headquarters hence this leaves us with Active Relocation as the most appropriate mitigation technique to conserve these breeding pairs.

Mitigation Options (In Situ, Eviction, Active Relocation)

During the CEQA process, a project proponent, should expect to hear three common types of mitigation to avoid impacts to owls. These three types of mitigation are discussed in details in this section below.

In situ (Avoidance On-Site)

Although the most important mitigation option, conserving owls on site (in situ) is rarely ever conducted since it is not required by the resource agencies. Preserving occupied habitats would've been the most effective tool for preserving viable source populations of owls but this was never required through the California Environmental Quality Act (CEQA) process (CDFW Staff Report 1995, 2012). The loss of occupied habitats is directly correlated to the current status of owls throughout southwestern San Bernardino County in which owls have encountered significant declines and are on the verge of extirpation.

During the formation of the nation's first HCP (Orange County NCCP) and largest HCP (Riverside County MSHCP) in southern California, very few burrowing owls were preserved within conservation areas in each of these plan areas. The Orange County NCCP preserved essentially no breeding burrowing owls within their plan area as it focused on grassland and ruderal sites that once supported burrowing owls.

The Riverside County MSHCP did preserve owls within conservations areas assumed under their plan and they have added some occupied lands through the development process however the County is having significant problems achieving their stated species objectives. More than a decade into their plan implementation, Riverside County has not met their owl species objectives and are running out of time to correct their failures.

Many of the remaining occupied sites in Riverside County occur in ruderal habitats surrounded by development which are not worthy of conserving. Additionally, during the development

process, on-site conservation is only required within criteria cells if there are more than three pairs within a proposed project and that rarely ever happens therefore in situ conservation is rare, even under HCP's.

Within the HCP, when conservation in situ is not required, viable or practical, owls can be evicted or relocated to suitable protected lands to support owl conservation efforts and to allow for development.

In summary, burrowing owl populations within southwestern San Bernardino County and southwestern California as a whole are in steep decline and on the verge of extirpation, even in the presence of HCP's, because owls are rarely, if ever, preserved on site.

Avoidance is only required during the nesting season where pairs have active nests (CDFW Code Sections 3503 and 3503.5). Once a nest has failed or fledged their young and the nest is no longer considered active, the site can be destroyed through the CEQA process.

Eviction (Passive Relocation)

Since the mid 1990's CDFW has endorsed eviction as the primary "mitigation" method associated with development projects (CDFW 1995, 2012 Staff Report). Also known as "Passive Relocation", this is the act of evicting burrowing owls from their current burrows, outside the nesting season, in support of proposed project related impacts (Trulio 1995). Eviction typically consists of installing one-way doors at all burrow entrances/exits forcing owls to disperse somewhere offsite so a project can proceed. This requires the owl(s) to flee their home range, avoid predation, and find refuge offsite. This process assumes owls are capable of finding and safely settling on nearby suitable lands. This method also (in theory) pushes owls to the next adjacent suitable vacant land and forces the next development project to assume responsibility for the owls that should've been mitigated for properly the first time.

Unfortunately, this decades long mitigation method endorsed by the California Department of Fish and Wildlife (CDFW 1995 & 2012) has never been found to conserve even a single pair of owls. This method is not supported by research including CDFW's own internal mark/recapture study that was quietly conducted between 2002 and 2003 (CDFW 2005). Their project which was never published, but is available on-line, concluded eviction resulted in mortality and never resulted in an evicted pair breeding the subsequent year, post eviction. Despite the known failures of eviction since 2003, CDFW has continued endorsement of eviction which has little to no conservation value. Kidd et al (2007) concluded the continued endorsement and use of eviction has accelerated the decline of the burrowing owl throughout southwestern California and has contributed to the near extirpation of the owl in southwestern San Bernardino County.

In summary, if eviction was found to be an effective mitigation method, one would assume an owl population would not have fluctuated much between 1995 and 2012. Unfortunately, the owl population in this region has sustained significant losses in this time and it is directly correlated to CDFW's continued endorsement of eviction as a viable mitigation method.

Active Translocation (Relocation)

As defined by Bloom and Kidd (unpublished), Active Translocation, is the act of relocating breeding pairs of owls from areas of impending development, immediately prior to egg laying. The main goal of relocation is to provide at least one more breeding attempt by the adults versus eviction which leads to loss of the pair and has never been known to result in a successful nesting attempt post eviction.

In relocation, owl pairs are captured (Bloom 1987, Bloom et al. 2007) at the development site and placed in hacking cages at a conservation area managed for burrowing owls and fed/monitored daily. Once a clutch of eggs has been laid and incubation is more than 50% complete, the cages are completely removed from the relocation site and the daily feeding events stop. Monitoring is conducted using game cameras and site surveys at rates that only introduce a minimum amount of disturbance. Predator control efforts (e.g. hazing, scent markings) are often required to ensure successful efforts. Adults and young are banded (mark/recapture study) and the site is typically monitored/managed for 2 years post release (USFWS MBTA Permit requirement) to ensure the site is managed properly for owl suitability and to report on efficacy of the relocation effort(s).

The relocated adults are critical to the initial efforts of successfully raising young however the fledged young are the most important birds as they will show site fidelity (philopatry) to the release site where they emerged from their natal burrow. Hence, if the adults disperse away from the conservation area post nesting season, that does not make this effort a failure. The most important owls are the young who will show fidelity to their natal area. In many cases, adults do in fact stay on site or explore the new surroundings post breeding season but the owls often nest on the relocation site in subsequent years.

Since relocated adults may return to the source sites, we encourage moving owls as far as possible, over mountain ranges and across other geographic barriers that might reduce the chances of owls returning. Active Relocation works best when conducted at great distances (>30-40 km) as to help break their homing behavior (Kidd and Bloom unpublished data).

Because relocated adult owls are known to have returned to their source sites following successful breeding at the relocation site, the source site must be made inhospitable to burrowing owls before owls are released from cages at the release site. Wild owls may also inhabit a vacant site where owls were just removed therefore the development site must be made inhospitable to owls immediately following removal of owls from a site.

In these cases, we collapse active burrows immediately following capture and scoping, then install of one-way doors throughout all other suitable burrows on site for a minimum of 72 hours. After 72 hours, we scope burrows to better ensure owls are not present then suitable burrows and all remaining habitat features are eliminated to help prevent re-occupation by other owls between the time we depart and the time when construction begins. If long periods of time are expected or if the site has squirrels, rabbits, dogs and coyotes that can dig holes

quickly, it is recommended that weekly site visits occur to better know new suitable burrows emerge.

We have used this mitigation method on state and federal lands throughout California since 1994 as part of personal research and conservation efforts. Many of the early and recent efforts were requested by or approved by the Ontario CDFW Office. Hence there is a system in place with the regulatory agencies that can authorize relocation within and across jurisdictional boundaries.

Relocation can be successful over time, with the right moving parts and some luck, however it is absolutely more successful than eviction when attempting to preserve breeding pairs from proposed development sites. Relocation is authorized by some HCP's and NCCP's or through Scientific Research Permits issued by the state and federal resource agencies to individuals or research organizations (Appendix B Permits).

Kidd Biological, Inc has conducted burrowing owl active translocations in six California counties (San Diego, Riverside, San Bernardino, Los Angeles, Kings and San Joaquin) where detailed coordination was required between multiple agencies and clients. Again, this form of mitigation is not intended to replace in situ conservation but in situ at airports is not recommended by CDFW Headquarters or supported by FAA guidelines.

In summary, this method of preserving breeding pairs is simply a better option than eviction because relocation offers pairs at least one last breeding attempt, something eviction has never been found to do. Active translocation is not the answer to the catastrophic extirpation of owls throughout southwestern California but this method does provide greater conservation value than eviction does, period.

Below I summarize the relocation process, chronologically.

- Hire permitted expert.
- Investigate potential relocation sites to establish which site(s) are most appropriate.
- Prepare Relocation Plan and submit to resource agencies and others included in the process (e.g. MBTA office, CDFW Headquarters, CDFW Local office, Land Owners).
- Upon approval of plan the proponent will set up an escrow account or endowment that guarantees funding for the entire effort (if needed).
- Cages and burrows are installed at release site. String trimming or minor vegetation modifications may be necessary.
- Owls are trapped at the source site close to egg laying (Feb-early March) and released into hacking cages at relocation site. Owls are banded for ID purposes.
- Occupied burrows at airport where capture occurred are excavated to prevent re-occupation.
- One-way doors are installed for 72 hours prior at all other suitable burrows to prevent re-occupation of site.

- Owls are fed and monitored daily at the release site until a full clutch of eggs is well into incubation. Cages are then removed from the site.
- Game cameras are installed to assist future monitoring efforts.
- Monitoring occurs to assess site for predators, disturbance and actions are taken to address potential problems that could impact results of relocation
- Band young and continue monitoring for success and address any problems related to predators or site disturbance
- Monitor site (staff and game cameras) for 2 yrs post release (USFWS Permit Requirement) to document efficacy of relocation
- Conduct habitat modifications and burrow maintenance as needed.
- Monthly reporting from start of project through 24 months.
- Two Annual Reports with the second being the final Project Report.

Conclusions

The USDA could evict the owls along Haven Avenue but that could lead to a more hazardous situation on the airfield operations area and would contribute to the continued reduction in owls within the region. This would also eliminate your chances for a sound and ethical resolution and positive public relations opportunity that would likely be beneficial to the OIAA.

The best approach for owl mitigation at and adjacent to OIAA property should involve active relocation. This will better ensure for safe flight operations and compliance with FAA regulations while also attempting to provide the owls with a greater chance of survival and future breeding attempts.

Recommendations

Below we provide two of the most logical translocation options.

Option 1. Naval Weapons Station Seal Beach (NWSSB).

This military installation in coastal, northwest Orange County once supported more than 50 pairs of owls (PhD Charles Collins unpublished data) in the 1970s-1980's but the population has been hanging on by a thread for the last two decades. On behalf of Leslie McNair of the CDFW Ontario office, we conducted a few active relocations from the Etiwanda area of San Bernardino County to NWSSB in the mid to late 1990's. Owls were removed from Southern California Edison projects and successfully relocated to NWSSB. These relocation efforts were some of the first owl relocations conducted in California and all of the current methods and permit conditions are based on the methods we developed from these successful relocations.

The NAVY conducts monthly surveys and annual owl banding to document and monitor the extant population. During late 2020 NWSSB installed 50 artificial burrowing owl burrows in a designated owl management area on the north magazine near where the extant population breeds. The base is committed to owl conservation and this site is located approximately 55

kilometers southwest of the source at Ontario International Airport (Appendix A – Maps, Figure 2).

Relocating owls from San Bernardino County to NWSSB is not setting a precedence. NWSSB supports distant, suitable lands, managed for owls and the NAVY is fully committed to owl conservation and will participate in this effort if the resource agencies authorize this as the relocation site.

Relocation could be conducted under Principal Investigator (PI) Jeff Kidd's CDFW and USFWS valid permits that authorize this activity.

Option 2. Western Riverside County Multi-Species Habitat Conservation Plan (MSHCP)

Active relocation is a pre-approved activity within the Western Riverside County MSHCP. The RCA who manages the reserve lands within Riverside County accepts relocated owls. Consultations would be required with regional CDFW, CDFW Headquarters, USFWS MBTA office, possibly the regional USFWS ecological services office, RCA and Riverside County Parks for approvals.

The permitting would likely be conducted under the Riverside County HCP and they would need to hire a permittee who maintains permits to conduct the relocations. This process gets to be more difficult as the county will establish roles for different parts of the relocation and delegate to various entities. Since the County is in charge there is no clear PI and projects tend to fail because of the systems they have in place. The expert owl biologist is generally not in charge of the entire process because the County is using their HCP to assume the lead role.

Nonetheless, there is a pre-approved procedure for relocating owls within and to Riverside County and they (Regional Conservation Authority – RCA) has been accepting owls from San Bernardino therefore moving owls from the OIAA would not be precedence setting.

Riverside County has several possible relocation sites that are suitable for owls. Specific sites would need to be selected through a lengthy process involving multiple agencies that are currently bound by COVID-19 rules that appear to reduce their availability in participating in site visits and meetings necessary for deciding relocation sites under the HCP.

Regardless of these restrictions, a site could be selected eventually and owls could be accepted to Riverside County MSHCP reserve land(s). The site would likely not be managed specifically for owls since the Riverside County preserve lands are multi species reserves that are designed to benefit many species under the plan. This can impact long term efficacy of translocations so future management of any release area needs to be discussed with the agencies prior to accepting a site. The option of relocating owls to western Riverside County is viable but should remain as a second option to NWSSB for many reasons unless the past and current process with the county and related resources agencies is amended significantly to promote quick, successful relocations.

FEDERAL BIRD BANDING PERMIT

Permittee: Personal	Permit Number:	Action:	Action Date:	Issue Date:	Valid Until:
JEFF KIDD	22951	Revise	09/01/2020	02/08/1999	06/30/2022
2911 MERIDIAN CT	Signature of Issuing Official: Thomas J. O'Connell				
ANACORTES, WA 98221	Signature of Permittee:				

Permittee agrees to band in accordance with the general conditions of this permit and with the specific authorization/s listed below:

Permittee is Authorized To Band:

All Raptors Except Eagles
* Threatened and Endangered species are not included in groups unless specified.

American Crow
Common Raven
Golden Eagle
Greater Roadrunner
Loggerhead Shrike

In the States of:

AK * CA * ID * NV * OR * UT * WA *

With Special Authorization to:

Band
Take, possess and transport blood samples-not to exceed 1% body mass
Take, possess and transport feather samples (except eagle flight feathers without USFWS authorization)
Hand capture
Trap at Cavity, Burrow, or Nest Box
Use Bal-chatris
Use Bow nets
Use Dho-gazas
Use Mist nets
Use Net launchers
Use Noose Carpets and Snares
Swedish Goshawk Trap
Use Walk-in traps
Trap

Comments: Use of Verbail Pole Traps, Pit Traps and Harnessed Lures approved.

And Additionally Authorized to Use The Following Auxiliary Marking Authorization/s:

Marker Type	Species	Colors of marker	Locations	Seg #
Plastic Color Leg Band (01A)	Red-shouldered Hawk	Red	Humboldt, CA San Diego, CA Orange, CA	2
	Comments SINGLE WHITE LETTER ON BAND			
Satellite/ Cell/	Cooper's Hawk		CA	3538

Permittee: Personal	Permit Number:	Action:	Action Date:	Issue Date:	Valid Until:

Satellite/ Cell/ GPS Transmitter (back pack) (80B)	Red-tailed Hawk	King, WA	26

Comments
GSM transmitter. All bands, auxiliary markers and attachment materials not to exceed 3% total body weight.

Satellite/ Cell/ GPS Transmitter (back pack) (80B)	Common Raven	San Bernardino, CA	27

Comments
GSM-GPS transmitter. All bands, auxiliary markers and attachment materials not to exceed 3% total body weight.

Permittee: Personal	Permit Number:	Action:	Action Date:	Issue Date:	Valid Until:
JEFF KIDD	22951	Revise	09/01/2020	02/08/1999	06/30/2022
2911 MERIDIAN CT	Signature of Issuing Official	Thomas J. O'Connell			
ANACORTES, WA 98221	Signature of Permittee				

Permittee agrees to band in accordance with the general conditions of this permit and with the specific authorization/s listed below:

The following Subpermittee/s are authorized to band under the direction of the above permittee, in accordance with the same general conditions, and the subpermittee specific authorizations listed below:

22951 - C NINA JIMERSON-KIDD 2911 MERIDIAN CT ANACORTES, WA 98221

Is Authorized To Band:

All Raptors Except Eagles
* Threatened and Endangered species are not included in groups unless specified.

American Crow
Common Raven
Greater Roadrunner
Loggerhead Shrike

In the States Of:

CA * ID * NV * OR * UT * WA *

With Special Authorization to:

Band
Auxiliary mark
Use Bal-chatris
Use Mist nets

Comments:

Phai traps and harnessed lures approved

22951 - F PETER BLOOM 13611 HEWES AVENUE SANTA ANA, CA 92705

Is Authorized To Band:

All Raptors Except Eagles
* Threatened and Endangered species are not included in groups unless specified.

American Crow
Common Raven
Greater Roadrunner
Loggerhead Shrike

In the States Of:

CA * ID * NV * OR *

With Special Authorization to:

Band
Auxiliary mark
Take, possess and transport blood samples-not to exceed 1% body mass
Take, possess and transport feather samples
Use Bal-chatris
Use Bow nets
Use Mist nets

Comments:

Verbail Pole Traps, Phai traps, Harnessed Lures approved

Permittee: Personal	Permit Number:	Action:	Action Date:	Issue Date:	Valid Until:
JEFF KIDD	22951	Revise	09/01/2020	02/08/1999	06/30/2022
2911 MERIDIAN CT	Signature of Issuing Official	Thomas J. O'Connell			
ANACORTES, WA 98221	Signature of Permittee				

Permittee agrees to band in accordance with the general conditions of this permit and with the specific authorization/s listed below:

22951 - G SCOTT THOMAS 24911 HAYUCO MISSION VIEJO, CA 92692

Is Authorized To Band:

All Raptors Except Eagles
* Threatened and Endangered species are not included in groups unless specified.

American Crow
Common Raven
Golden Eagle
Greater Roadrunner
Loggerhead Shrike

In the States Of:

CA * ID * NV * OR * UT * WA *

With Special Authorization to:

Band
Auxiliary mark
Take, possess and transport blood samples-not to exceed 1% body mass
Take, possess and transport feather samples (except eagle flight feathers without USFWS authorization)
Use Bal-chatris
Use Bow nets
Use Mist nets

Comments:

Verbail Pole Traps, Phai traps, Harnessed Lures approved

22951 - H MATTHEW BRINKMAN 1092 DYLAN CT #B MCKINLEYVILLE, CA 95519

Is Authorized To Band:

All Raptors Except Eagles
* Threatened and Endangered species are not included in groups unless specified.

In the States Of:

CA *

With Special Authorization to:

Band
Auxiliary mark
Take, possess and transport blood samples-not to exceed 1% body mass
Take, possess and transport feather samples
Use Bal-chatris
Use Bow nets
Use Dho-gazas
Use Noose Carpets and Snares

Comments:

CAN USE VERBAIL POLE TRAPS AND HARNESSED LURES

Use Bal-chatris
Use Bow nets
Use Dho-gazas
Use Mist nets

22951 - L JOHN HART 718 N HUMPHREY'S ST. STE 202 FLAGSTAFF, AZ 86001

Is Authorized To Band:

Common Raven

In the States Of:

CA *

With Special Authorization to:

Band
Auxiliary mark
Hand capture

FEDERAL BIRD BANDING PERMIT

Under the provisions of Regulations issued under the Migratory Bird Treaty Act of July 3, 1918 (40 Stat. 755) as amended, or the Bald Eagle Act of June 8, 1940 (54 Stat. 250) as amended, the person named hereon is authorized to capture, for scientific banding or marking purposes, those migratory birds described hereon and to salvage birds accidentally killed during normal banding activities.

This permit is subject to the terms, exceptions and restrictions expressed herein or on the reverse side hereof and is further subject to any applicable Territorial, State, Tribal or Federal Regulations.

This permit is invalid unless accompanied by any required State permits or licenses.

GENERAL CONDITIONS

1. The Permittee is not authorized to capture or possess migratory birds for any reason other than banding, marking or salvage of banding mortalities for scientific purposes. NOR IS THE PERMITTEE ALLOWED TO HOLD MIGRATORY BIRDS FOR A PERIOD OF MORE THAN 24 HOURS. Live birds shall be released as soon as practical after capture.
2. You may donate dead migratory birds or any parts thereof (except bald eagles and golden eagles, and species listed as threatened and endangered) without additional authorization from the migratory bird permit issuing office to public institutions (as specified in 50 CFR 10.12) or individuals or entities authorized by permit to acquire and possess migratory bird specimens for educational purposes. All dead specimens that you do not transfer to another authorized party must be disposed of by such means as are necessary to ensure that they are not exposed to animals in the wild.
3. You may not salvage and must immediately report to the USFWS Office of Law Enforcement any dead or injured migratory birds that you encounter that appear to have been poisoned, shot, electrocuted, have collided with industrial power generation equipment, or were otherwise killed or injured as the result of potential criminal activity. Please contact BBL for more information.
4. All eagle feathers and/or whole eagle carcasses must be shipped to the National Eagle Repository. Contact: U.S. Fish and Wildlife Service, National Eagle and Wildlife Repository, 5650 Havana St., RMA, Building 128, Commerce City, Colorado 80022, (303) 287-2110.
5. The Permittee shall keep RECORDS accounting for the use of all bands received. Periodic RECORDS COVERING THE USE OF THESE BANDS shall be submitted to the Bird Banding Laboratory in accordance with the instructions received there from. Failure to provide data in accordance with the instructions received from the Bird Banding Laboratory is sufficient justification for the revocation of this permit. The Permittee shall keep records of disposition of salvaged banding mortalities for a period of five years and shall be reported to the Bird Banding Laboratory upon request.
6. The holder of this permit shall not sell, exchange, or transfer bands to unauthorized banders or to the general public. All transfers to authorized banders must be communicated to the Bird Banding Laboratory prior to the transfer of bands. Any unused bands remaining when this permit is voluntarily returned, revoked, or expired must be returned to the Bird Banding Laboratory.
7. The Permittee shall, at all reasonable hours, allow any authorized representative of the U. S. Geological Survey or the U.S. Fish and Wildlife Service to ENTER and INSPECT the premises where operations authorized by this permit are being conducted and shall allow such representative to inspect the records relating to such operations.
8. This permit may be SUSPENDED or REVOKED by the Director of the U.S. Geological Survey or authorized representative, if the Permittee violates any of the provisions in the regulations under which this permit is issued or if the Permittee fails to render promptly any reports required. This permit is, at all times, subject to suspension or revocation at the discretion of the Director or representative.
9. This permit is not transferable and must be in possession of the Permittee when exercising the authorizations granted herein.
10. All traps, nets or other capture devices shall bear a TAG or LABEL showing the name, address and permit number of the Permittee; alternatively the trapping area shall be adequately marked with POSTERS provided by the Bird Banding Laboratory. The Permittee's name, address and permit number shall be legibly displayed on such posters.
11. This permit DOES NOT authorize the capture of any birds on any property, public or private without the CONSENT OF THE OWNER OR CUSTODIAN THEREOF.
12. All Banding under this permit is in accordance with the principles, spirit, and intent of the Animal Welfare Act of 1970 and the most recent revision of The Ornithological Council's Guidelines in the Use of Wild Birds in Research.
13. Unless specifically noted on the reverse, the following ARE NOT AUTHORIZED:

a. The taking of blood or feather sampling from any bird.

b. The use of ANY BAND, clip, paint, dye, signal-sending device or any marking device other than the official numbered leg bands issued by the Bird Banding Laboratory.

c. The use of MIST NETS or other nets for the capturing of birds.

d. The use of TRANQUILIZING DRUGS OR OTHER CHEMICALS for the purpose of capturing birds.

e. Trapping or disturbing the nests or nestlings, for the purpose of banding or marking, of species designated by the Secretary of Interior as "ENDANGERED "or "THREATENED."

f. The handling of any PREVIOUSLY BANDED BIRD in any manner which may bias data on file in the Bird Banding Laboratory which pertain to that bird or which may alter that bird's survival potential, behavior or other normal characteristics. This specifically includes adding markers to or removing markers from previously banded birds.

14. If a bird is found injured, the bander must assess the injury to determine if treatment and rehabilitation would lead to the bird's recovery. If it is likely that treatment will allow the bird to recover from it's injuries, the bander should transport the injured bird to an avian rehabilitation facility. If the bander determines that recovery is not likely given the extent of the injuries, they should euthanize the bird using approved euthanasia procedures. Banders operating under IACUC approval should follow their estabished guidelines regarding the application of euthanasia to bird in distress. Other banders should take the most appropriate course of action under the circumstances and consider euthanasia to avoid prolonged distress on birds.

Form 9-475
(February 2018)

SCIENTIFIC COLLECTING

Permit Number: MB52857C-0
Effective: 12/18/2020 Expires: 03/31/2023

Issuing Office:

Department of the Interior
U.S. FISH AND WILDLIFE SERVICE
Migratory Bird Permit Office

Sacramento, CA 95825
Tel: 916-978-6183 Fax: 916-978-6183

SUPERVISORY WILDLIFE BIOLOGIST

Permittee:

JEFF W KIDD
23046 AVENUE DE LA CARLOTA, SUITE 600, PMB 66
LAGUNA HILLS, CA 92653
U.S.A.

Authority: Statutes and Regulations: 16 USC 703-712, 16 USC 668(a); 50 CFR Part 13, 50 CFR 21.23, 50 CFR 22.21.

Location where authorized activity may be conducted:
Activities authorized throughout California. Research activities using a live lure bird are authorized throughout Washington. Specific research activities using a live lure bird in Alaska are specified in permit condition "D" below.
Records are maintained at 2911 Meridian Ct, Anacortes, WA 98221.

Reporting requirements:
ANNUAL REPORT DUE: 01/31
You must submit an annual report to your Regional Migratory Bird Permit Office each year, even if you had no activity. Form at www.fws.gov/forms/3-202-1.pdf.

Authorizations and Conditions:

A. General conditions set out in Subpart B of 50 CFR 13, and specific conditions contained in Federal regulations cited above, are hereby made a part of this permit. All activities authorized herein must be carried out in accord with and for the purposes described in the application submitted. Continued validity, or renewal of this permit is subject to complete and timely compliance with all applicable conditions, including the filing of all required information and reports.

B. The validity of this permit is also conditioned upon strict observance of all applicable foreign, state, local tribal, or other federal law.

C. Valid for use by permittee named above.

D. **Temporal Aspects of Rough-legged Hawk Migration in Western North America**
Project Investigator: Jeff Kidd (Kidd Biological, Inc) and Travis Booms (Alaska Dept of Fish & Game)
Location: Seward Peninsula, along the road system of Nome, Teller, & Council.
Dates: June-July 2019 Only
Authorized Activities: Authorized to bring non-releasable Great-horned Owl or taxidermied Great Horned Owl from California to use as a lure bird for this study. Authorized to trap and release Rough-legged Hawks and attach, via the backpack method, PTT or GSM transmitters (weighing no more than 30 grams) on no more than 21 birds in 2019.

Great Horned Owl, Peregrine Falcon, and Turkey Vulture Lures for Studies Involving Raptor Trapping with a Dho-Gaza Set - All Authorized Locations Excluding Alaska

You and all subpermittees are authorized to transport one (1) live, non-releasable Great Horned Owl; one (1) live Peregrine Falcon; and one (1) live Turkey Vulture to use as lures in capturing and banding other raptors. You are also authorized to transport one (1) live, non-releasable Common Raven to use as a lure in capturing and banding/marking other ravens. The lure birds may be borrowed from an individual/organization permitted to hold non-releasable raptors for educational or scientific purposes (see contact information below). In addition, you are also authorized to possess, transport, and use one (1) taxidermied Great Horned Owl as a lure.

These live birds may be temporarily borrowed from:
Orange County Bird of Prey Center, Special Purpose Possession - Live Permit No. MB753880, as well as other Special Purpose Possession - Live permittees in California and in Washington.

You and your subpermittees are authorized to possess, transport, and use (1) taxidermied Great Horned Owl as a lure in capturing and banding other raptors.

Burrowing Owl Relocation Study

You and your subpermittees are authorized to live-trap and relocate **30 BURROWING OWLS (*Athene cunicularia*) per year, including adults and juveniles** from construction projects or airfields located throughout California. You are authorized to move them to locations agreed upon by the U.S. Fish and Wildlife Service (Service). You are not authorized to relocate Burrowing Owl pairs that have viable eggs or nestlings without additional authorization. Every effort must be made to relocate Burrowing Owls immediately prior to the breeding season to avoid potentially impacting reproductive success. Active translocation must be implemented in such a way to encourage relocated Burrowing Owls to stay at the relocation site. Burrowing Owls are much more likely to stay at the relocation site if they successfully reproduce at the site. For best results and to avoid placing wintering owls in captivity, place the owls in the hacking enclosures when most of the owls formed pairs and begin displaying courtship behavior.

The details of each relocation project must be submitted to our office for prior approval before any owls are moved. A summary of each relocation project must include the following:

1) Location that Burrowing Owls are being removed from;
2) Reason why the Burrowing Owls need to be removed from the site;
3) Number of Burrowing Owls being relocated, including number of pairs and number of singles;
4) Description of methods that will be used to ensure burrows are vacant prior to their collapse (can be supplied by developer);
5) Location and landowner contact information for the release site
6) Description of the release site, including habitat description, presence/absence of ground squirrels, presence/absence of other Burrowing Owls, results of predator survey, results of prey survey, and landowner commitment to maintain artificial burrow systems and manage the land for Burrowing Owls long-term

E. Release Site Requirements:

1) Rodenticides and pesticides must not be applied in or around the vicinity of the release site as long as Burrowing Owls remain at the release site. Burrowing Owls are known to forage up to 600 meters away from their burrow. The use of rodenticides and pesticides has been known to cause secondary poisoning in owls and also can reduce prey populations, which may limit the success of the relocation project.
2) The release site must also be occupied by California ground squirrels or other fossorial mammals that create burrows large enough for Burrowing Owls to utilize. If ground squirrels are not currently present, you may translocate ground squirrels to the release site. If ground squirrel translocation isn't feasible, you must install 50% more artificial burrows than required under Condition H below.
3) Artificial burrows must not be placed in the bottom of a basin, wash, or depression where water can collect and flood burrows. Artificial burrows installed in mounds or levees must be above the flood zone.
4) The release site must consist of open habitat with short or sparse vegetation and an unobstructed view for hundreds of feet in all directions.
5) The release site must have abundant prey within close proximity (within 600 meters) to the burrows available year-round to sustain the owls.

Release Site Recommendations:

1) The Service recommends selecting a release site that minimizes potential human and wildlife conflicts or incompatibility,

including but not limited to human foot and vehicle traffic, predation by cats, loose dogs, and urban-adapted wildlife.
2) The Service recommends selecting a release site where Burrowing Owls are already present to encourage relocated owls to stay.

F. Trapping, Banding, and Monitoring Requirements:
1) Authorized trap methods include bow-trap, Swedish goshawk trap, compartment trap, bal-chatri, noose carpet, and one-way door with box at the burrow.
2) Captured owls must be handled and transported in a manner that minimizes stress.
3) For monitoring purposes, owls must be banded under the authority of a U.S. Geological Survey Bird Banding Lab permit prior to release.

Trapping, Banding, and Monitoring Recommendations:
1) The Service recommends color-banding captured owls to facilitate long-term monitoring. The Service also recommends gathering morphometric data for each owl.

G. Hack Enclosure Requirements: You are authorized to temporarily hold Burrowing Owls in hack enclosures at the release site.
1) You must keep family groups together in order to increase hunting success and protection from predators.
2) You must provide owls with food, water, and an adequate number of artificial burrows for shelter (artificial burrow requirements are described in further detail below) while they are held in the hack enclosure. Food may consist of mice, crickets, chicks, and meal worms.
3) The enclosure must be able to withstand stormy weather. The enclosure must also protect owls from all potential predators, be of sufficient size to enclose the artificial burrow systems, and provide sufficient space for flight (minimum 12' L x 12' W x 6' H). The height of the enclosure should be extended to 8' if there is a possibility that birds may remain in captivity for longer than 30 days to minimize muscle atrophy.
4) You must dismantle the hack enclosure within 30 days of relocation unless you receive approval for an extension from the U.S. Fish and Wildlife Service. Leaving Burrowing Owls in an enclosure for too long at the release site can give them a false sense of security and can be an attraction for predators.
5) You must discontinue feeding immediately after dismantling the enclosures.
6) You must remove enclosures and other human artifacts from the relocation site immediately after dismantling the enclosures.
7) You must camouflage all remote monitoring equipment (cameras) and place equipment as far from the enclosure as practical to avoid attracting predators. Cameras must be placed 1.5 feet or lower from the ground and be covered by a perch deterrent to minimize predator use as a perch.

Hack Enclosure Recommendations:
1) The Service recommends using an enclosure with corners that are as wide-angled as possible to minimize sharp-edge hazards and the risk of injury to owls.
2) Predators can be deterred from digging under the enclosure by installing a few feet of chicken wire or hardware cloth on the ground around the perimeter of the enclosure. Bury the chicken wire or hardware cloth in soil so that predators are unable to determine where the edge of the wire is located.

H. Artificial burrow system (ABS) Requirements:
1) Each relocated Burrowing Owl must be provided with 2-4 burrow chambers at the release site; each relocated owl pair must be provided with a minimum of 4 burrow chambers at the release site.
2) The bottom of the burrow chambers must be a minimum of 4 feet below the soil surface. The top of the burrow chambers must be buried under a minimum of 3 feet of soil.
3) Each ABS must have multiple entrances facing different directions so that owls can easily escape from predators.
4) Each burrow chamber must have at least one entrance tunnel leading to the soil's surface. Tunnels must be at least 8 feet long and constructed of 4-inch corrugated flexible drain pipe. Tunnels should have a slope of 20-45 degrees between the surface and the nest chamber. Each tunnel must have a 90 degree horizontal turn between the entrance and the nest chamber to help prevent predators from entering the chamber. The drain pipe should only protrude a short distance into the burrow chambers to maximize living space for the owls.
7) You must either install a hollow concrete block at each tunnel entrance at the soil surface, or you must slip a 6-inch rigid PVC pipe over each entrance and pile river rock around each entrance for erosion control and protection from predators.

9) You or the responsible landowner must maintain all ABS and surrounding habitat long-term to ensure the site remains suitable for Burrowing Owls. You or the responsible landowner must clean and repair artificial burrows annually. You or the responsible landowner must also manage the vegetation in and around the release site annually to maintain visibility for the owls.

Artificial burrow system (ABS) Recommendations:

1) The Service recommends maximizing the number of artificial burrows at the release site. The Service recommends installing more artificial burrows than required to support local owls that may move into the site, in addition to supporting the relocated owls. The quantity and spacing of occupied burrows and satellite burrows at the capture site will help determine the quantity and spacing of burrows that should be provided at the release site.
2) The Service recommends using either Wild at Heart's ABS design (summarized here) or John H. Barclay's design (Barclay, 2008, J. Raptor Res. 42(1):53-57). A wooden burrow chamber design may be used in lieu of the plastic chamber designs. The minimum ABS requirements described above must be implemented regardless of which ABS design you choose.
3) The following is a Summary of Wild at Heart, An Arizona-Based Raptor Rescue's ABS design (Greg Clark is available for questions about methods; greg@bluetiger.com or 480-595-5047). Over-turned 5-gallon plastic buckets may be used as burrow chambers. Four over-turned buckets may be placed side-by-side in a cluster to serve as burrow chambers for each owl pair. The buckets may either be arranged above ground for a mound ABS or placed inside the bottom of a pit for a subterranean ABS. A 5-inch diameter hole may be cut in the side of each bucket at the bucket opening for connection to a tunnel. Two of the buckets may be inter-connected with flexible tubing to provide owls with an expanded burrow chamber and a second entrance/exit. Poultry cloth (chicken wire) may be placed under burrow chambers to prevent California ground squirrels and pocket gophers from digging up the soil and filling the chambers and tunnels with soil. Poultry cloth may also be installed around burrow entrances to deter large predators from digging up a burrow.
4) The Service recommends installing ABS about 10 feet apart from each other.
5) Maintenance activities may include grazing, mowing with a push mower, mowing with a mechanical mower with low impact tires, or using a weedeater to reduce annual grass height. Maintenance may also include keeping area free of trees and shrubs and habitat modification to increase prey populations.
6) The Service strongly recommends preventing excessive human and human-related disturbance that can result in excessive flushing of Burrowing Owls or damage to their burrows (e.g., walking, jogging, off-road/dirt bike activity, dog-walking). This also includes controlling loose and feral pets that may chase, injure, and prey upon owls.

I. Post-relocation Monitoring Requirements:

1) You must monitor owl activity once per week in the morning and evening immediately following release (satellite telemetry fulfills this requirement). Cameras may be used to monitor activity to minimize disturbance at the release site. Monitoring intensity may vary depending on the season (e.g. less frequent during the non-breeding season). Monitoring must continue through the breeding season at a minimum.

Post-relocation Monitoring Recommendations:

1) The Service recommends continuing to monitor owl activity through the end of the second breeding season after release.

J. Ground Squirrel and Burrowing Owl Management Recommendations:

1) The Service recommends managing the release/relocation site to attract and maintain ground squirrels. Not only do the squirrels construct the natural and complex burrow systems used by the owls during all times of the year, they also serve as predator sentinels and can help reduce undue predation on owls. If ground squirrels are not present, consideration should be given to translocating squirrels to make the site more suitable for burrowing owls. Artificial burrows should not be relied upon as a long-term solution, and as long as artificial burrows are needed, there should be sufficient funding for annual maintenance and repair of the artificial burrow system.

K. You assume all liability and responsibility, including financial costs, for the conduct of any associated activity, i.e., rehabilitation costs.

L. You are authorized to salvage Burrowing Owl carcasses, tissues, feathers, pellets, and non-viable eggs for the purposes of 1) collecting genetic material for DNA sexing, gene sequencing, relatedness/parentage, cell culture, and other genetic analysis; 2) collecting feathers for stable isotope and other molecular analyses; 3) diet analysis of regurgitated pellets; 4) collecting non-viable eggs to determine fertility and/or obtain genetic material, and 5) determining causes of death, if possible. You are authorized to share specimens with collaborators

who are either permitted to possess these specimens or are exempt under 50 CFR 21.12.

M. You are authorized to salvage dead migratory birds (except species listed as threatened or endangered under the Endangered Species Act). Any dead bald eagle or golden eagle salvaged must be reported within 48 hours to the National Eagle Repository at (303) 287-2110 and to the migratory bird permit issuing office at 2800 Cottage Way, W-1916, Sacramento, CA 95825; (916) 978-6183; permitsR8MB@fws.gov. The Repository will provide directions for shipment of these specimens.

For a list of threatened and endangered species in your state, visit the U.S. Fish and Wildlife Service's Threatened and Endangered Species System (TESS) at: http://www.fws.gov/endangered/.

Unused specimens may be donated to the Western Foundation of Vertebrate Zoology or to other permittees or institutions exempt under 50 CFR 21.12.

N. You are authorized to salvage abandoned (unoccupied) migratory bird nests and nonviable eggs outside the nesting season, except for nests and eggs of bald eagles or golden eagles, or species listed as threatened or endangered under the Endangered Species Act.

O. You may not salvage and must immediately report to the USFWS Office of Law Enforcement any dead or injured migratory birds that you encounter that appear to have been poisoned, shot, electrocuted, have collided with industrial power generation equipment, or were otherwise killed or injured as the result of potential criminal activity. See FWS OLE contact information below.

P. A subpermittee is an individual to whom you have provided written authorization to conduct some or all of the permitted activities in your absence. Subpermittees must be at least 18 years of age.

As the permittee, you are legally responsible for ensuring that your subpermittees are in compliance with the terms and conditions of this permit, are qualified to perform these authorized activities and adhere to the terms of your permit. New subpermittees with limited Burrowing Owl relocation experience must receive a minimum of 4 days of training prior to conducting permitted activities independently. You are also responsible for maintaining current records of anyone you have designated as a subpermittee, including copies of letters you have provided to the subpermittees authorizing them to conduct the permitted activities on your behalf.

The following subpermittees are authorized:

In addition, any person who is
(1) employed by or under contract to you for the activities specified in this permit, or
(2) otherwise designated a subpermittee by you in writing, may exercise the authority of this permit.

Q. This permit does NOT authorize trespass and/or take on State and Federal wildlife refuges or Federal reserves, or other public and private property without written permit/permission from landowner or custodian.

R. Any injury to and/or death of a migratory bird or destruction of eggs shall be reported via e-mail to issuing office within forty-eight (48) hours at Jennifer_C_Brown@fws.gov <mailto:Jennifer_C_Brown@fws.gov> or permitsr8mb@fws.gov <mailto:permitsr8mb@fws.gov>.

S. You and any subpermittees must comply with the attached Standard Conditions for Federal Migratory Bird Scientific Collecting Permits. **These standard conditions are a continuation of your permit conditions *and must remain with your permit.***

T. Reporting:
1) A completed Annual Report Form 3-202-1 shall be submitted your Migratory Bird Permit Office (U.S. Fish and Wildlife Service, Migratory Bird Permit Office, 2800 Cottage Way, Room W-2606, Sacramento, CA 95825) by January 31st each year.
2) You shall also provide a written summary report describing results of the translocation efforts (i.e., geographic coordinates of capture site, release site, U.S. Geological Survey band numbers, breeding activity, movements, physical condition of the birds, predation, etc.) with your Annual Report Form.
3) Reporting must be submitted either electronically or in hard copy:
Email: Jennifer_C_Brown@fws.gov <mailto:Jennifer_C_Brown@fws.gov> or permitsr8mb@fws.gov

Permit Number: MB52857C-0
Effective: 12/18/2020 Expires: 03/31/2023

Postal Mail: U.S. Fish and Wildlife Service, Migratory Bird Permit Office, 2800 Cottage Way, Room W-2606, Sacramento, CA 95825

For suspected illegal activity, immediately contact USFWS Office of Law Enforcement at: San Diego, CA (619) 557-5063, Torrance, CA (310) 328-1516, or Sacramento, CA (916) 569-8444

Standard Conditions
Migratory Bird Scientific Collecting Permits
50 CFR 21.23

All of the provisions and conditions of the governing regulations at 50 CFR part 13 and 50 CFR part 21.23 are are conditions of your permit. Failure to comply with the conditions of your permit could be cause for suspension of the permit. The standard conditions below are a continuation of your permit conditions and must remain with your permit. If you have questions regarding these conditions, refer to the regulations or, if necessary, contact your migratory bird permit issuing office. For copies of the regulations and forms, or to obtain contact information for your issuing office, visit: http://www.fws.gov/migratorybirds/mbpermits.html.

1. Live migratory birds you take and retain alive must be released at the capture site unless otherwise authorized on the face of the permit.

2. You must tag each migratory bird specimen you collect or salvage. Each tag must include the information below. The permit number under which the specimen was collected or salvaged must be recorded in the permanent accession record.
   (a) Date and location where the specimen was collected or salvaged, and
   (b) Name of the person who collected or salvaged the specimen.

3. If you encounter a migratory bird with a Federal band issued by the U.S. Geological Survey **Bird Banding Laboratory,** Laurel, MD, report the band number to **1-800-327-BAND (2263) or www.reportband.gov.**

4. Nontoxic shot must be used with the following exceptions:
   (a) You may use lead shot when nontoxic shot is not produced in the small sizes needed to preserve the integrity of the specimens;
   (b) You may use lead shot in habitats where its use is allowed for sport hunting purposes.

5. Unless otherwise authorized on your permit, all migratory game birds taken during open hunting season must be in compliance with all applicable Federal and State hunting regulations.

6. This permit does not authorize the take or live trapping and release of bald eagles or golden eagles or species listed as endangered or threatened.

7. This permit does not authorize the take or release of migratory birds on Federal lands without additional prior written authorization from the applicable Federal agency, or on State lands or other public or private property without prior written permission or permits from landowner or custodian.

8. You may donate dead migratory birds or any parts thereof (except bald eagles and golden eagles, and species listed as threatened and endangered) without additional authorization from the migratory bird permit issuing office to public institutions (as specified in 50 CFR 10.12) or individuals or entities authorized by permit to acquire and possess migratory bird specimens for educational purposes.

   All dead specimens that you do not transfer to another authorized party must be disposed of by such means as are necessary to ensure that they are not exposed to animals in the wild.

   All eagle feathers and/or whole eagle carcasses must be shipped to the National Eagle Repository. Contact: **U.S. Fish and Wildlife Service, National Eagle and Wildlife Repository, RMA, Building 128, 6550 Gateway Rd., Commerce City, Colorado 80022, (303) 287-2110**.

9. A subpermittee is an individual to whom you have provided written authorization to conduct some or all of the permitted activities in your absence. Subpermittees must be at least 18 years of age. As the permittee, you are legally responsible for ensuring that your subpermittees are adequately trained and adhere to the terms of your permit. You are responsible for maintaining current records of who you have designated as a subpermittee, including copies of designation letters you have provided.

10. You and any subpermittees must carry a legible copy of this permit and display it upon request whenever you are exercising its authority. Subpermittees must also carry your written subpermittee designation letter.

11. Your annual report may include final reports, publications, or other documentation describing the results of the project.

12. You must maintain records as required by 50 CFR 13.46 and 50 CFR 21.23(c)(4). All records relating to the permitted activities must be kept at the location identified in writing by you to the migratory bird permit issuing office.

13. Acceptance of this permit authorizes the Fish and Wildlife Service to inspect any wildlife held, and to audit or copy any permits, books, or records required to be kept by the permit and governing regulations.

14. You may not conduct the activities authorized by this permit if doing so would violate the laws of the applicable State, county, municipal or tribal government or any other applicable law.

See permit for validity dates.

DEPARTMENT USE ONLY

THIS PERMIT IS VALID:	PERMANENT ID NUMBER	# OF PI's
FROM 9/25/19 THROUGH 9/25/22	SC- 1408	

SC- 001408

PERMIT, AMENDMENTS AND REPORT OF SPECIMENS CAPTURED OR SALVAGED MUST BE IN IMMEDIATE POSSESSION WHILE COLLECTING. Collecting is not allowed under the authority of a sport fishing license.

☐ **NEW** ■ **RENEWAL** - When renewing, Report of Specimens Collected or Salvaged (DFW 1379a) **MUST BE ATTACHED** or application will be returned.

FEES LISTED BELOW INCLUDE A NONREFUNDABLE APPLICATION FEE AND PERMIT FEE CHECK ALL BOXES THAT APPLY:

■ **INDIVIDUAL OR ENTITY $105.83 APPLICATION FEE** (SUBMIT NOW) *AND* ☐ **$315.75 PERMIT FEE** *(SUBMIT WHEN NOTIFIED)

☐ **PI $105.83 APPLICATION FEE (PER PI)** (SUBMIT NOW) *AND* ☐ **$315.75 PERMIT FEE (PER PI)*** (SUBMIT WHEN NOTIFIED)

☐ **STUDENT - $26.27 APPLICATION FEE** (SUBMIT NOW) *AND* ☐ **$53.05 PERMIT FEE** *(SUBMIT WHEN NOTIFIED)

***DO NOT SUBMIT THE PERMIT FEE NOW - You will be required to submit the permit fee if the permit is approved.**
(Fees include a nonrefundable three percent (3%) application fee, not to exceed $7.50 per item) (Section 700.4, Title 14, California Code of Regulations (CCR)).

BEFORE COMPLETING APPLICATION: Read instructions, permit descriptions, Standard Conditions, and Numbered Authorizations. **Complete all appropriate sections of the application (sponsor's section may be required). Type or print clearly.**

SECTION 1 - INDIVIDUAL PERMITTEE INFORMATION - Complete only if applying as an individual OR student. Provide the following information and attach a statement of qualifications or resume outlining experience with wildlife and activity requested in Section 3.

SECTION 4 – SPONSOR INFORMATION

Students, teachers and individuals collecting on behalf of an organization must all have one member of the organization sponsor them. Sponsors must fully complete this section of the application. Students must have one faculty member with affiliation to the student's college or university sponsor the student. Elementary and secondary school teachers must be sponsored by their principal. In some other cases, the Department may review an application and determine that a sponsor is needed and will request this information directly from the applicant or organization.

APPLICATION CERTIFICATION

BY CHECKING ALL BOXES, I HEREBY DECLARE THAT THE FOLLOWING INFORMATION IS PROVIDED IN THE JUSTIFICATION SECTION OF THIS APPLICATION

■ Purpose ■ Species + Numbers to be collected ■ Locations + Timeframes for Collecting ■ Species Disposition
■ Methods/Activity ■ Literature Cited ■ Attached Federal/State Permit(s) (Applicable/Not Applicable – Circle appropriate one)

I understand that if I fail to provide all information, circle items or check the boxes, my permit may be denied. I certify that I have read, understand, and agree to abide by, all conditions of this permit and attachments, the applicable provisions of the FGC, and the regulations promulgated thereto (Title 14, Section 650). I certify that I am not currently under any Fish and Wildlife license or permit revocation or suspension, and that there are no other legal or administrative proceedings pending that would disqualify me from obtaining this permit. I agree that if I make any false statement as to any fact required as a prerequisite to the issuance of this permit, the permit is void and will be surrendered where purchased, and I understand that I may be subject to prosecution pursuant to FGC Section 1054 or to other administrative actions pursuant to Section 746, Title 14, of the CCR.

SECTION 5 – PERMIT JUSTIFICATION – Required for **ALL** activities.

IS A FEDERAL OR ADDITIONAL STATE PERMIT OR MOU REQUIRED? ■ YES ***(If yes, attach copies.)*** ❑ NO

PROVIDE START AND END DATE AND/OR EXPLAIN SEASONAL REQUIREMENTS FOR YOUR WORK.	START	END
Various start and end dates depending on research and consulting projects.		

REMINDER - You must provide justification here for each wildlife taxa and activity circled in Section 3. Use the space below to summarize your proposed research. Be sure to include each of the following headers in **bold/underlined** and as follows: **purpose** (include scientific or educational need for the requested activity); **methods/techniques** (include equipment/gear) and the reason for using them; **species and numbers to be collected,** if known (include scientific and common names); **collection locations** (include counties and specific locales and reasons for choosing them); and **disposition,** which describes the organism's fate (i.e. sacrifice, catch and release, salvage, captivity). If you propose to collect in a Marine Protected Area (MPA), give the proper name of the MPA and explain (1) Why collection is required within an MPA and provide justification for why it cannot be conducted outside of an MPA; (2) Why the proposed methods are appropriate for this activity; and (3) Describe the frequency of the proposed activity per collecting area. If you are working in areas where special status species (listed, fully protected, or species of special concern) are expected to be incidentally captured, explain why collection is required in these areas, and describe how your methods/techniques and equipment/gear will avoid or minimize take of non-target sensitive species. If requesting marking/tagging, captivity, or sacrifice, specific details as described above must be included for each species and activity requested. **Attach additional pages if needed. Attach complete copies of appropriate federal permits and additional State permits (e.g., Memorandum of Understanding) to avoid delay of processing.**

Capture of raptors in CA is authorized per various federal and state permits.
Purpose is to continue to improve our understanding of raptor philopatry, survivorship, migration, behavior and status of various raptor species. All animals will be released as soon as possible at capture location unless specifically authorized during approved activities including avian predator management and burrowing owl translocations.
Methods include capture with net, hand and traps (Bloom et al. 2007).
Species and Numbers to be collected are detailed in approved MOU's and Federal Permits.
Collection Locations include all locations in CA that are approved per valid MOU's and associated permits.
All activities will be conducted in accordance with valid MOU's whereby I am named as the PI or independent investigator.
All animals found dead will be collected and delivered to CSU - Long Beach of the Western Foundation of Vertebrate Zoology.
Bullfrogs and African clawed frogs may be taken as part of predator management activities related to arroyo toad conservation efforts permitted under Biological Opinions. May be taken with net or hand.
Cowbird chicks and eggs can be removed from nests including California gnatcatchers in accordance with federal permits.
California gnatcatcher, Quino checkspot butterfly and arroyo toad surveys will be conducted per federal permits (TE022230). Arroyo toads may be captured by hand or pitfall traps.

Removal of cowbirds from gnatcatcher nests and activities with Quino checkerspot / Arroyo toad are not authorized by your federal recovery permit.

APPROVED
By Dylan Wilder at 5:22 pm, Aug 16, 2019

This permit was previously issued on November 18, 2014. The terms and conditions set forth in that permit are hereby superseded by this renewal.

Authorizations and conditions based on your 1-page SCP justification received by the Department on September 8, 2017, on file with the Nongame Wildlife Program (NWP).

Capture and release of terrestrial and vernal pool invertebrates (Wildlife Authorization #4), reptiles, amphibians (Wildlife Authorization #5a), and small mammals (Wildlife Authorization #5b) is authorized in accordance with the additional conditions below.

Sacrifice of American bullfrog (*Lithobates [=Rana] catesbeianus*) and African clawed frog (*Xenopus laevis*) is authorized in accordance with the conditions below.

Take of California gnatcatcher (*Polioptila californica*), Quino checkerspot butterfly (*Euphydryas editha quino*) and Arroyo toad (*Anaxyrus californicus*) (Wildlife Authorization #8) is authorized in accordance with the most current amendment of federal recovery permit TE-022230 and/or an appropriate federal Biological Opinion on which you are named, and in accordance with the additional conditions below. See Condition #2, below.

Sacrifice of Brown-headed cowbird (*Molothrus ater*) is authorized in accordance with the most current amendment of federal permit TE-022230 on which you are named, and in accordance with the additional conditions below.

Take of non-listed raptors, including Northern harrier (*Circus hudsonius*) a California Species of Special Concern, is authorized in accordance with your current federal Bird Banding Lab permit #22951 and the SCP attachment (additional authorizations and conditions) on which you are named (i.e., Principal Investigators: Jeff W. Kidd and Scott E. Thomas, Kidd Biological, Inc.; dated on August 16, 2019 or any later amendments).

In addition to the predator management activities authorized below, ***take*** of Burrowing owl (*Athene cunicularia*) is authorized in accordance with the most current amendment(s) of federal Bird Banding Lab permit #22951 and any relevant federal Migratory Bird permits on which you are named (e.g., MB-52857C, MB-86478B), and in accordance with all burrowing owl SCP Attachment(s) (Additional Authorizations and Conditions) on which you are named (i.e., Principal Investigator: Jeff W. Kidd, Kidd Biological, Inc.), covering research activities in California (capture, band, color-mark, radio-telemetry, relocation, hacking, and nest monitoring, including the use of remote cameras). See Condition #11, below.

For the purpose of conservation and recovery of threatened, endangered, and fully protected species, you are authorized to ***capture, band, auxiliary mark, collect blood and feathers, translocate, and release*** only the authorized hawks, owls, corvids, northern harrier (*Circus hudsonius*), American kestrel (*Falco sparverius*), and Loggerhead shrike (*Lanius ludovicianus*) (Wildlife Authorization #7) in accordance with the SCP attachment (additional authorizations and conditions) on which you are named (i.e., Principal Investigators: Jeff W. Kidd and Scott E. Thomas, Kidd Biological, Inc.; issued on August 16, 2019 or any later amendments), the most current version of federal Bird Banding Lab (BBL) permit #22951 on which you are named, the federal Migratory Bird Permit(s) authorizing this activity, and in accordance with the additional conditions below.

For the purpose of conservation and recovery of threatened, endangered, and fully protected species, you are authorized to ***capture, band, auxiliary mark, translocate, and release*** only the Peregrine falcon (*Falco peregrinus*), in accordance with the Memorandum of Understanding on which you are named (i.e., Principal Investigator: Jeff W. Kidd, Kidd Biological, Inc.; issued on May 21, 2019 or any later amendments), the most current version of federal Bird Banding Lab (BBL) permit #21564 and current federal Migratory Bird Permit(s) authorizing this activity, and in accordance with the additional conditions below.

Take of American peregrine falcon (*Falco peregrinus anatum*) is authorized in accordance with your current federal Bird Banding Lab permit #22951, federal permits on which you are named (MB-184858 and MB67046A), and the Memorandum(s) of Understanding on which you are named (i.e., Principal Investigator: Jeff W. Kidd, Kidd Biological, Inc.; issued on February 27, 2019 or any later amendments).

Take of Golden eagle (*Aquila chrysaetos*) is authorized in accordance with your current federal Bird Banding Lab permit #22951, federal permits on which you are named (MB-184858 and MB-041248), and the Memorandum of Understanding on which you are named (i.e., Principal Investigator: Jeff W. Kidd, Kidd Biological, Inc.; issued on February 27, 2019 or any later amendments).

Salvage of birds and bird parts, and collection of addled eggs and eggshells, (Wildlife Authorization #7) is authorized in accordance with current federal Migratory Bird Permits MB-184858, MB-170628, MB-041248, and MB-67046A, under which you are designated, and in accordance with the additional conditions below.

Salvage of dead reptiles, amphibians, and mammals (Wildlife Authorization #6) is authorized in accordance with the additional conditions below.

You are authorized to ***salvage*** dead Deer (*Odocoileus hemionus*) for use as avian trap bait, in accordance with the conditions below.

Permitted activities are restricted to the following geographic areas in California (additional locations may be authorized, but only as approved in writing by the Department contact(s) listed below):

a. For predator management activities (excluding Burrowing owl research):

Purisima Point (Vandenberg Air Force Base, Santa Barbara County), Monterey Bay (Monterey and Santa Cruz Counties), Naval Air Station North Island, Naval Base Coronado and Marine Corps Base Camp Pendleton (San Diego County), Naval Weapons Station Seal Beach, Huntington Beach State Park (Orange County), Humboldt County, Del Norte County, and Southern California.

b. For Burrowing owl and other wildlife/research activities:

Statewide.

Prior to conducting intrusive nest monitoring, capture, banding, or color-marking at each new study site for the Burrowing owl, you shall receive additional written authorization from Esther Burkett (Esther.Burkett@wildlife.ca.gov) and concurrence from the local Department regional office. A new scientific study proposal and an amendment to your SCP will be required before you may begin any biotelemetry or any new relocation/translocation plan.

c. For salvage of deer for use as avian trap bait:

Statewide; but only at locations described in the salvage conditions below.

Other Permits:
You shall obtain and maintain during the term of this SCP any federal permit(s) and/or other state permit(s) required to conduct the activities authorized herein. Although the provisions of the federal permit(s), other state permit(s) and this SCP may vary, the more restrictive conditions prevail. Copies of your federal permit(s) or other research-related permits (e.g., State Parks, landowner access agreements), and any amendments, shall be provided to the Department contacts (see below), and the names of all authorized sub-permittees shall be provided for the permit(s).

You shall carry all required documents, permits and MOUs, along with your SCP, with you while conducting all authorized activities.

Department Contacts:

The primary Department contact for this terrestrial wildlife permit is the Wildlife Branch SCP coordinator (Justin Garcia, Environmental Scientist, Justin.Garcia@wildlife.ca.gov, 916-323-0644).

The Department contact for all raptors (excluding Burrowing owl) is Carie Battistone, (Carie.Battistone@wildlife.ca.gov); the Department contact for Burrowing owl, California gnatcatcher, corvids and Loggerhead shrike is Esther Burkett (Esther.Burkett@wildlife.ca.gov); for Arroyo toad, American bullfrog and African clawed frog is Laura Patterson (Laura.Patterson@wildlife.ca.gov).

replace cowbird eggs with dummy eggs. You shall place no flagging or other material or device within 10 meters of a gnatcatcher nest. If any injury or mortality occurs, contact Esther Burkett (Esther.Burkett@wildlife.ca.gov).

11. Burrowing Owl

Take of burrowing owl (*Athene cunicularia*) is authorized in accordance with the most current amendment(s) of federal Bird Banding Lab permit #22951 and any relevant federal Migratory Bird permits on which you are named, and in accordance with each separate burrowing owl project and related SCP Attachment(s) (Additional Authorizations and Conditions) on which you are named (e.g., Principal Investigator, Jeff W. Kidd, Kidd Biological, Inc.; August 16, 2019), covering research activities throughout California (e.g., capture, band, color-mark, radio-mark/GPS tag, relocation, translocation, hacking, and nest monitoring, including the use of remote cameras and burrow scopes). An SCP amendment may be required, depending on the complexity of the proposed work, as determined by the Department contact (Esther Burkett; Esther.Burkett@wildlife.ca.gov). Research activities may not commence until approved in writing as outlined below.

At least **45 days** prior to conducting any intrusive nest monitoring (including nest monitoring cameras and burrow scopes), capture, banding, or color-marking at each new study site, you are required to submit a scientific study proposal and you shall not commence activities until you receive additional written authorization from the Department contact, and concurrence from the local Department regional office to assure any mitigation requirements are met. The 45 day period may be modified for time sensitive projects, if feasible, as determined by the Department contact.

Additionally, a scientific study proposal shall be required, and you shall not commence activities until you receive additional written authorization from the Department contact prior to conducting any biotelemetry or any relocation/translocation plan. The study proposal shall be submitted at least **120 days** prior to any capture and marking project involving the relocation/translocation of burrowing owls in order to allow for concurrent approval from the local Department Regional office and to assure any mitigation requirements are met. The 120 day period may be modified for time sensitive projects, if feasible, as determined by the Department contact.

12. Salvage of Wildlife

a. General Salvage Conditions

You may salvage non-migratory birds, mammals, amphibians, and reptiles incidentally killed during permitted activities or encountered dead in the field, as specified below. There is no limit to the number of salvaged wildlife.

Salvaged specimens of CESA-listed, CESA-Candidate, and Fully Protected species require disposition instructions from the Department (contact Esther Burkett, Esther.Burkett@wildlife.ca.gov, 916-531-1594; see also Reporting below). Fresh specimen(s) of these special-status taxa may require necropsy and shall be refrigerated, not frozen, until disposition is finalized. Federally-listed species require authorization and disposition instructions from the U.S. Fish and Wildlife Service (Service). If an eagle carcass or part is located, you shall contact Carie Battistone (Carie.Battistone@wildlife.ca.gov) for special disposition instructions; refer to the federal permits and MOU's on which you are named (see above). After contacting Ms. Burkett within 24 hours of encountering a special-status species, you shall provide a report within ten (10) working days, via email, describing the collection location of the specimen including UTM zone, UTM coordinates and datum, date and time the specimen was encountered, name of observer/collector, and details regarding the specimen including sex, estimated age, condition of carcass, possible or probable cause of death, distance from any road, and any other relevant information or observation notes. Photographs of the specimen and the salvage locale shall also be provided to Ms. Burkett.

You may not salvage bats (Order Chiroptera) or marine mammals unless additionally authorized. Salvage of mountain lions (*Puma concolor*) or their parts is prohibited by law. Black bears (*Ursus americanus*) may not be salvaged without obtaining additional authorization from the Department's regional law enforcement office and the regional wildlife management supervisor. Salvage of other big game species (i.e., feral pig (*Sus scrofa*), deer (*Odocoileus hemionus*), elk (*Cervus elaphus*), pronghorn antelope (*Antilocapra americana*), and bighorn sheep (*Ovis canadensis*)) is not authorized without obtaining additional written approval from the Big Game Program (contact Justin.Garcia@wildlife.ca.gov), except for salvage of Deer carcasses for trap baiting purposes, as conditioned below.

Appendix A 2022 Burrowing Owl Survey Report

Section 1 Introduction

This Relocation Plan has been prepared to address the relocation of burrowing owls (*Athene cunicularia*), (BUOW) from The HUB @ ONT Project Site (project site or site), an approximately 197-acre site the Ontario International Airport Authority is leasing for the development of a logistics center, to an approved relocation site (site approved for translocation). The purpose of this relocation plan is to obtain authorization to actively translocate two resident BUOW pairs and evict any possible non-breeding or migratory individuals prior to project related impacts. The number of owls to be translocated may change as the number may be different than what was reported during focued surveys conducted in 2022 (2022 Burrowing Owl Survey Report for The HUB @ ONT (formerlly California Logistics Cetner at Ontario International Airport, HELIX).

All monitoring and relocation efforts will be coordinated and approved by the California Department of Fish and Wildlife (CDFW) local and headquarters offices, the United States Fish and Wildlife Service (USFWS), collectively the Wildlife Agencies, and the Migratory Bird Treaty Act (MBTA) office.

1.1 PROJECT LOCATION AND DESCRIPTION

The approximately 197-acre undeveloped project site is located east of the Ontario International Airport, south of Interstate 10, west of Interstate 15, and north of State Route 60 in the City of Ontario, San Bernardino County, California (Exhibit 1, *Regional Vicinity*). The site is depicted on the *Guasti* quadrangle of the United States Geological Survey's (USGS) 7.5-minute topographic map series within Section 25 of Township 1 South, Range 7 West (Exhibit 2, *Site Vicinity*). Specifically, the project site is bounded by S. Haven Avenue to the west, E. Jurupa Street to the south, E. Airport Drive to the north, and Doubleday Avenue to the east (Exhibit 3, *Project Site*).

The Ontario International Airport Authority (OIAA) is leasing 197 acres of undeveloped land under one of its approach corridors for the development of a logistics center to support the commercial warehouse growth in the region and provide vital revenue to the OIAA. The 197-acre site will be developed as a logistic center consisting of 9 buildings totaling 4,282,450 square feet with associated parking, and landscaping.

1.2 SPECIES BACKGROUND

The BUOW is a small, brownish, ground-dwelling bird of prey that inhabits arid, open habitats with short vegetation, bare ground, level to sloping topography, and well-drained soils (Poulin *et al.* 2011, CDFG 2012). Suitable BUOW habitat varies widely from naturally occurring habitats to highly disturbed conditions in grasslands, deserts, and human-altered landscapes such as agricultural fields, vacant lots, pastures, fallow fields, road rights-of-way, airports, and golf courses (Klute *et al.* 2003). Throughout the range where BUOWs are found, tall or dense cover types are generally not suitable as BUOW habitat. Visibility at nest sites appears to be an important habitat selection factor and may be an anti-predator behavior (Green and Antony 1989, Ronan 2002).

The primary requirement for suitable habitat is the presence of a suitable burrow (Rosenberg *et al.* 2007). BUOWs nest and roost in underground burrows created by burrowing mammals such as California ground squirrels (*Otospermophilus beecheyi*), coyotes (*Canis latrans*), and American badgers (*Taxidea taxus),* (Klute *et al.* 2003, Poulin *et al.* 2011, CDFG 2012). They may also nest and roost in other natural or man-made cavities such as rock piles, pipes, culverts, refuse piles, and artificial burrows. Owls prefer nesting in areas with a high density of suitable burrows which likely provide escape burrows for both adult and young owls (Poulin *et al.* 2011). BUOWs are semi-colonial and often congregate with other owls in winter and nest in loose colonies. Nest densities vary depending on abundance of suitable burrows and prey and reduced predation pressure and site disturbance.

BUOWs are generalists as they feed on spiders and insects (arthropods), small mammals, birds and toads (Poulin *et al.* 2011, Rosenberg *et al.* 2007). BUOWs are mostly active during the morning and evening (crepuscular) but they can be found active at all times of the day and night (Poulin *et al.* 2011, Gervais *et al.* 2003). During the nesting season, they typically carry prey back to the nest burrow and drop prey at the apron or cache them in the burrows and tunnels depending on nest chronology (Poulin *et al.* 2011, Rosenberg *et al.* 2007). Distance to suitable foraging habitat is a primary factor in nest habitat selection (Rosenberg and McKelvey 1999, Rosenberg *et al.* 2007).

Current literature suggests, owl home range sizes vary from approximately 0.14 and 4.81 kilometers^2 (0.16 and 1.86 miles^2; mean = 2.41 kilometers^2 [0.93 miles^2]), depending on habitat and region (Poulin *et al.* 2011) and is likely related to food abundance and habitat fragmentation (Gervais *et al.* 2008). During the breeding season, owls generally forage within 2.7 km (1.67 miles) of their nest burrow (Haug and Oliphant 1990, Gervais *et al.* 2003, Rosenberg and Haley 2004). In the southern San Joaquin and Imperial Valleys, owls concentrated 80 percent of foraging within 600 meters (1,968.5 feet) of their nests (Gervais *et al.* 2003, Rosenberg and Haley 2004). In general, during the breeding season most foraging occurs within 250 to 600 m (820 to 1,968.5 feet) of the nest.

Predation is often a limiting factor for BUOW populations (Catlin and Rosenberg 2008, Poulin *et al.* 2011). BUOW adults, young, and/or eggs are preyed upon by a variety of avian, mammalian, and reptilian predators in our regions such as prairie falcon (*Falco mexicanus*), peregrine falcon (*Falco peregrinus*), great horned owl (*Bubo virginianus*), barn owl (*Tyto alba*), red-tailed hawk (*Buteo jamaicensis*), Cooper's hawk (*Accipiter cooperii*), American crow (*Corvus brachrhynchos*), common raven (*Corvus corax*), coyote, skunk (*Mephitis* spp.), opossum (*Didelphis virginiana*), gopher snake (*Pituophis catenifer*), and domestic dogs and cats (Ronan 2002, Catlin and Rosenberg 2008, Poulin *et al.* 2011).

History and Current Status of BUOW Population in Inland Empire

Prior to the 1980's southwestern San Bernardino supported a robust breeding BUOW population with hundreds of pairs from the base of the San Bernardino Mountains south to the Prado Basin. After decades of development pressure and the complete absence of meaningful mitigation, only a few remaining breeding pairs and winter migrants are known to persist. The remaining highly fragmented landscape which lacks suitable, large, protected sites with connectivity to and between extant breeding sites creates a bottleneck and prevents the existence of a healthy source population. With the continued development pressure and lack of adequate mitigation required by the resource agencies, the BUOW

population in this region is tenuous at best and will likely never recover from what was once a robust breeding source population (Kidd et al. 2003, 2007).

A current review of BUOWs previously reported near the Ontario Airport includes 45 records from 1989-2017. These 45 records are located within seven nearby 7.5min USGS quads (Ontario, Prado, Corona North, Fontana, Cucamonga Peak and Mt. Blady) and Guasti quad where the airport is located (CNDDB 2020). The nearest owl locations reported south of the airport were evicted approximately ten years ago during development of industrial warehouses. Mitigation included the installation of artificial burrows in a barrow pit on the west side of the nearby retired landfill and the owls were evicted from their burrows prior to grading. Owls are no longer known to occupy this site south of the airport. The subject owls on the OIAA property along the east side of Haven Avenue are included in the list of 45 owl records. Several reported owls north of Interstate 10 that are located west and north of Ontario Mills Mall are some of the only possible extant owls near the airport. All of these owls are surrounded by development and located on small, highly fragmented sites that don't provide long-term conservation value for the owl due to future development and predation pressure to name a few.

It should further be noted that 3-5 pairs of burrowing owls have been documented west of Haven Avenue with the OIAA property adjacent to the runway that are subject to the United States Department of Agriculture (USDA).

Section 2 Regulatory Framework

2.1 MIGRATORY BIRD TREATY ACT

The BUOW is a migratory bird species protected by international treaty under the Migratory Bird Treaty Act (MBTA) of 1918 (16 U.S. Government Code [USC] 703) of 1918, as amended in 1972, federal law prohibits the taking of migratory birds or their nests or eggs (16 USC 703; 50 CFR 10, 21). The MBTA reflects agreements made between the U.S., England, Mexico, the former Soviet Union, and Japan to protect all of North America's migratory bird populations. Pursuant to the MBTA The statute states:

> *Unless and except as permitted by regulations made as hereinafter provided in this subchapter, it shall be unlawful at any time, by any means or in any manner, to pursue, hunt, take, capture, kill, attempt to take, capture, or kill...any migratory bird, any part, nest, or egg of any such bird...included in the terms of the [Migratory Bird] conventions…*

The MBTA covers the taking of any nests or eggs of migratory birds, except as allowed by permit pursuant to 50 CFR, Part 21. Disturbances causing the killing of young by abandonment of eggs or offspring may also be considered "take[1]". It is illegal to collect, possess, and by any means transfer possession of any migratory bird nest.

The MBTA prohibits the destruction of a nest when it contains birds or eggs, and no possession shall occur during the destruction (United States Fish and Wildlife Service, Migratory Bird Permit Memorandum, April 15, 2003). Certain exceptions to this prohibition are included in 50 C.F.R. section 21. Pursuant to CDFW Code section 3513, CDFW enforces the MBTA consistent with rules and regulations adopted by the Secretary of the Interior under provisions of the Migratory Treaty Act. An avian nest (i.e., burrows) is no longer protected once it is deemed inactive for nesting by a qualified biologist

In 1972, the MBTA was amended to include protection for migratory birds of prey (e.g., raptors). Six families of raptors occurring in North America were included in the amendment: Accipitridae (kites, hawks, and eagles); Cathartidae (New World vultures); Falconidae (falcons and caracaras); Pandionidae (ospreys); Strigidae (typical owls); and Tytonidae (barn owls). The provisions of the 1972 amendment to the MBTA protects all species and subspecies of the families listed above. The MBTA protects over 800 species including geese, ducks, shorebirds, raptors, songbirds and many relatively common species.

[1] The regulatory definition of take, as defined in Title 50 C.F.R. part 10.12, means to pursue, hunt, shoot, wound, kill, trap, capture, or collect, or attempt to hunt, shoot, wound, kill, trap, capture, or collect. Only the verb "collect" applies to nests.

2.2 CALIFORNIA FISH AND GAME CODE

The BUOW is also protected under CDFW Fish and Game Code which prohibit the take, possession, or destruction of birds, their nests or eggs. Fish and Game Code Sections 3503, 3503.5, 3511, and 3513 are applicable to natural resource management. For example, Section 3503 of the Code makes it unlawful to destroy any birds' nest or any birds' eggs that are protected under the MBTA. Further, any birds in the orders Falconiformes or Strigiformes (Birds of Prey, such as hawks, eagles, and owls) are protected under Section 3503.5 of the Fish and Game Code which makes it unlawful to take, possess, or destroy their nest or eggs. A consultation with CDFW may be required prior to the removal of any bird of prey nest that may occur on a project site. Section 3511 of the Fish and Game Code lists fully protected bird species, where the CDFW is unable to authorize the issuance of permits or licenses to take these species. BUOW is not included in protections per Section 3511. Pertinent species that are fully protected by the State include golden eagle (*Aquila chrysaetos*) and white-tailed kite (*Elanus leucurus*). Section 3513 of the Fish and Game Code makes it unlawful to take or possess any migratory nongame bird as designated in the MBTA or any part of such migratory nongame bird except as provided by rules and regulations adopted by the Secretary of the Interior under provisions of the MBTA. This burrowing owl relocation plan has been put together to ensure compliance with Section 3513 and minimize potential take of BUOW.

The BUOW is not listed as endangered or threatened or as a candidate for such a listing under the California Endangered Species Act, nor is it listed for protection under the federal Endangered Species Act.

2.3 CALIFORNIA ENVIRONMENTAL QUALITY ACT

The California Environmental Quality Act (CEQA) provides for the protection of the environment within the State of California by establishing State policy to prevent significant, avoidable damage to the environment through the use of alternatives or mitigation measures for projects. It applies to actions directly undertaken, financed, or permitted by State or local lead agencies. Under CEQA, project impacts to sensitive species and species of special concern, such as the BUOW, must be analyzed and mitigated. The RSP Amendment Recirculated Subsequent EIR, Clearing House No. 2006071021, certified on December 14, 2016 (SEIR) concluded that development of the RSP Amendment Area would significantly adversely impact BUOW, and imposed Mitigation Measure BIO-3 (SEIR pp. 4.3-15 -4.3-16) requiring development of a BUOW relocation plan to mitigate those impacts.

Section 3 Site Conditions

3.1 THE HUB @ ONT CENTER PROJECT SITE

The approximately 197-acre project site consists of disturbed habitat with primarily non-native annuals and grasses, such as *Hordeum* spp. *Bromus* spp., *Malva* spp., and *Sisymbrium* spp. Native *Amsinckia* spp. was also observed throughout the site. Vegetation on the study area is regularly maintained as required for weed abatement. Ornamental landscaping was observed along the periphery of the project site. Soils within the project site solely consist of Delhi fine sand.

The topography of the project site is mostly flat, with elevations ranging from 900 feet (274 meters) above mean sea level (AMSL) near the southeast corner to 942 feet (287 meters) AMSL near the southwest corner. The project site is bounded by Ontario International Airport to the west, and industrial and commercial properties to the north, east, and south.

Except for the undeveloped interstitial areas associated with the Ontario International Airport runway to the west of the project site, the project site is almost entirely surrounded by existing development (industrial buildings) to the north, east and south. In accordance with the 2012 CDFW Staff Report on Burrowing Owls, BUOW burrow exclusion and closure is employed only where there are adjacent natural burrows and non-impacted sufficient habitat for BUOW to occupy with permanent protection mechanism in place. Since the project site is surrounded by development on three of its boundaries, BUOW burrow exclusion and closure would likely result in BUOW moving from The HUB @ ONT project site to the Ontario International Airport runway, which would put the BUOW at risk of creating additional bird strike hazards with aircraft.

Numerous avian bird strikes have been reported on the Ontario International Airport, including various strikes from BUOW. Between 2008 and 2021, approximately sixteen (16) BUOW strikes have been recorded. Due to the Federal Aviation Administration (FAA) regulations for avian bird strikes, flight safety, and USDA depredation permits in situ conservation is not feasible. Translocation is needed for the long-term survival of the BUOWs on The HUB @ ONT project site.

USDA (Animal Plant Health Inspection Service; APHIS) is hired by OIAA to reduce strike hazards caused by various wildlife species. Per FAA rules and regulations, OIAA can't engage in restoration, mitigation or any actions that increase wildlife hazards within zones at and around an FAA certified airport. Any airport can lose their FAA certificate and funding if they are found to be out of compliance with this rule. Any mitigation efforts within 10,000 feet of the airport (the project site is located well within 10,000 feet of the airport) would be considered out of compliance and would likely result in wasted efforts as APHIS has the authority to haze, evict or lethally remove any hazardous wildlife.

Installing artificial burrows and/or encouraging owls to inhabit lands on or directly adjacent to the OIAA property violates FAA rules and is not a viable strategy because of the expected increased presence of other larger hazardous birds (e.g. red-tailed hawks, golden eagles, ferruginous hawks, red-shouldered hawks, Cooper's hawks, turkey vultures, and common ravens) who would attempt to

predate or scavenge owls, squirrels or rabbits that would likely use the artificial burrows. Hawks and vultures are those struck by aircraft at the highest rates and those known to cause the most damage per strike. These species are often involved in aircraft strikes while they are hover hunting or circling over the approach or departure ends of the airport within the glide slopes. Bird strikes in these situations (landing and take-off) are the most dangerous and can lead to catastrophic events that can kill hundreds of passengers and crew on jetliners.

Evicting the owls along Haven Avenue outside the airfield could result in owls moving to areas within the airfield, making a more hazardous situation. Owls are often found seeking refuge very close to taxiways and runways under lights, signs and other man-made structures that support refuge and areas for squirrels to create burrows. Many burrowing owls that are struck at airports are those crossing runways as aircraft are departing and arriving. This will generally not lead to a catastrophic accident however even small birds like burrowing owls are capable of causing tens of thousands of dollars in damage to aircraft per event.

Further, relocating or encouraging owls to reside on a commercial airfield would violate FAA rules, will result in APHIS having to remove the owls in the future, and creates potential liability for the resource agencies or biologists promoting the in-situ conservation of owls at or near an airport.

In summary, the act of attempting to conduct any form of “mitigation” including in situ or eviction on or directly adjacent to the airfield is not supported by the FAA, APHIS, or past direction from CDFW Headquarters. The best approach for owl mitigation at and adjacent to OIAA property should involve active relocation. This will better ensure for safe flight operations and compliance with FAA regulations while also attempting to provide the owls with a greater chance of survival and future breeding attempts.

Section 4 Survey Results

Focused surveys were conducted during the 2022 breeding season within all areas determined to provide suitable habitat. Surveys were at least 3 weeks apart with the first survey conducted on March 3, 2022, and the remaining three surveys were conducted on April 21, 2022, May 18, 2022, and July 8, 2022 (see Appendix A, *2022 Burrowing Owl Survey Report*). Results from the 2022 focused survey can be seen in Exhibit 4, *2022 Burrowing Owl Observations*, and are summarized below.

Two burrows (Nest Nos. 1 and 2), with breeding pairs and juveniles, were detected within the project site. Six alternate burrows (Nos. 1 through 6) were also noted throughout the project site, and these burrows were used by BUOWs for cover.

- Nest No. 1 is an earthen burrow located on the west side of Carnegie Avenue and approximately 900 feet north of E Santa Ana Street. One adult BUOW pair was observed near the burrow entrance during the first survey. Two adult BUOWs and two juvenile BUOWs were noted during the second survey. No BUOWs were noted at this burrow during the first or fourth surveys.

- Nest No. 2 is an earthen burrow located on the west side of Carnegie Avenue and approximately 630 feet north of E Santa Ana Street. One adult BUOW was observed next to an earthen burrow during the second survey. Two adult BUOWs and four BUOW juveniles were observed during the third survey. No BUOWs were observed during the first or fourth surveys.

- Alternative Burrow No. 1 is an earthen burrow located on the west side of Carnegie Avenue and approximately 600 feet south of E Santa Ana Street. One adult BUOW was observed during the second survey. No BUOWs were observed at this burrow during the first, third, or fourth surveys.

- Alternative burrow No. 2 is a vertical corrugated metal pipe storm drain riser located on the east side of Carnegie Avenue and approximately 400 feet north of E Santa Ana Street. One adult BUOW was observed near the storm drain riser during the third survey. No BUOWs were observed at this burrow during the first, second, or fourth surveys.

- Alternative burrow No. 3 is an earthen burrow located approximately 650 feet to the southwest of the intersection of E Airport Drive and Carnegie Avenue. One BUOW individual was observed during the fourth survey. Due to the timing of the breeding season and the maturity of the juveniles, only individuals were noted during the fourth survey, given juveniles and adults were difficult to differentiate. No BUOWs were observed at this burrow during the first, second, or third surveys.

- Alternative burrow No. 4 is a vertical corrugated metal pipe storm drain riser located on the east side of Carnegie Avenue and approximately 840 feet north of E Santa Ana Street. Two BUOW individuals were observed during the fourth survey. Due to the timing of the breeding

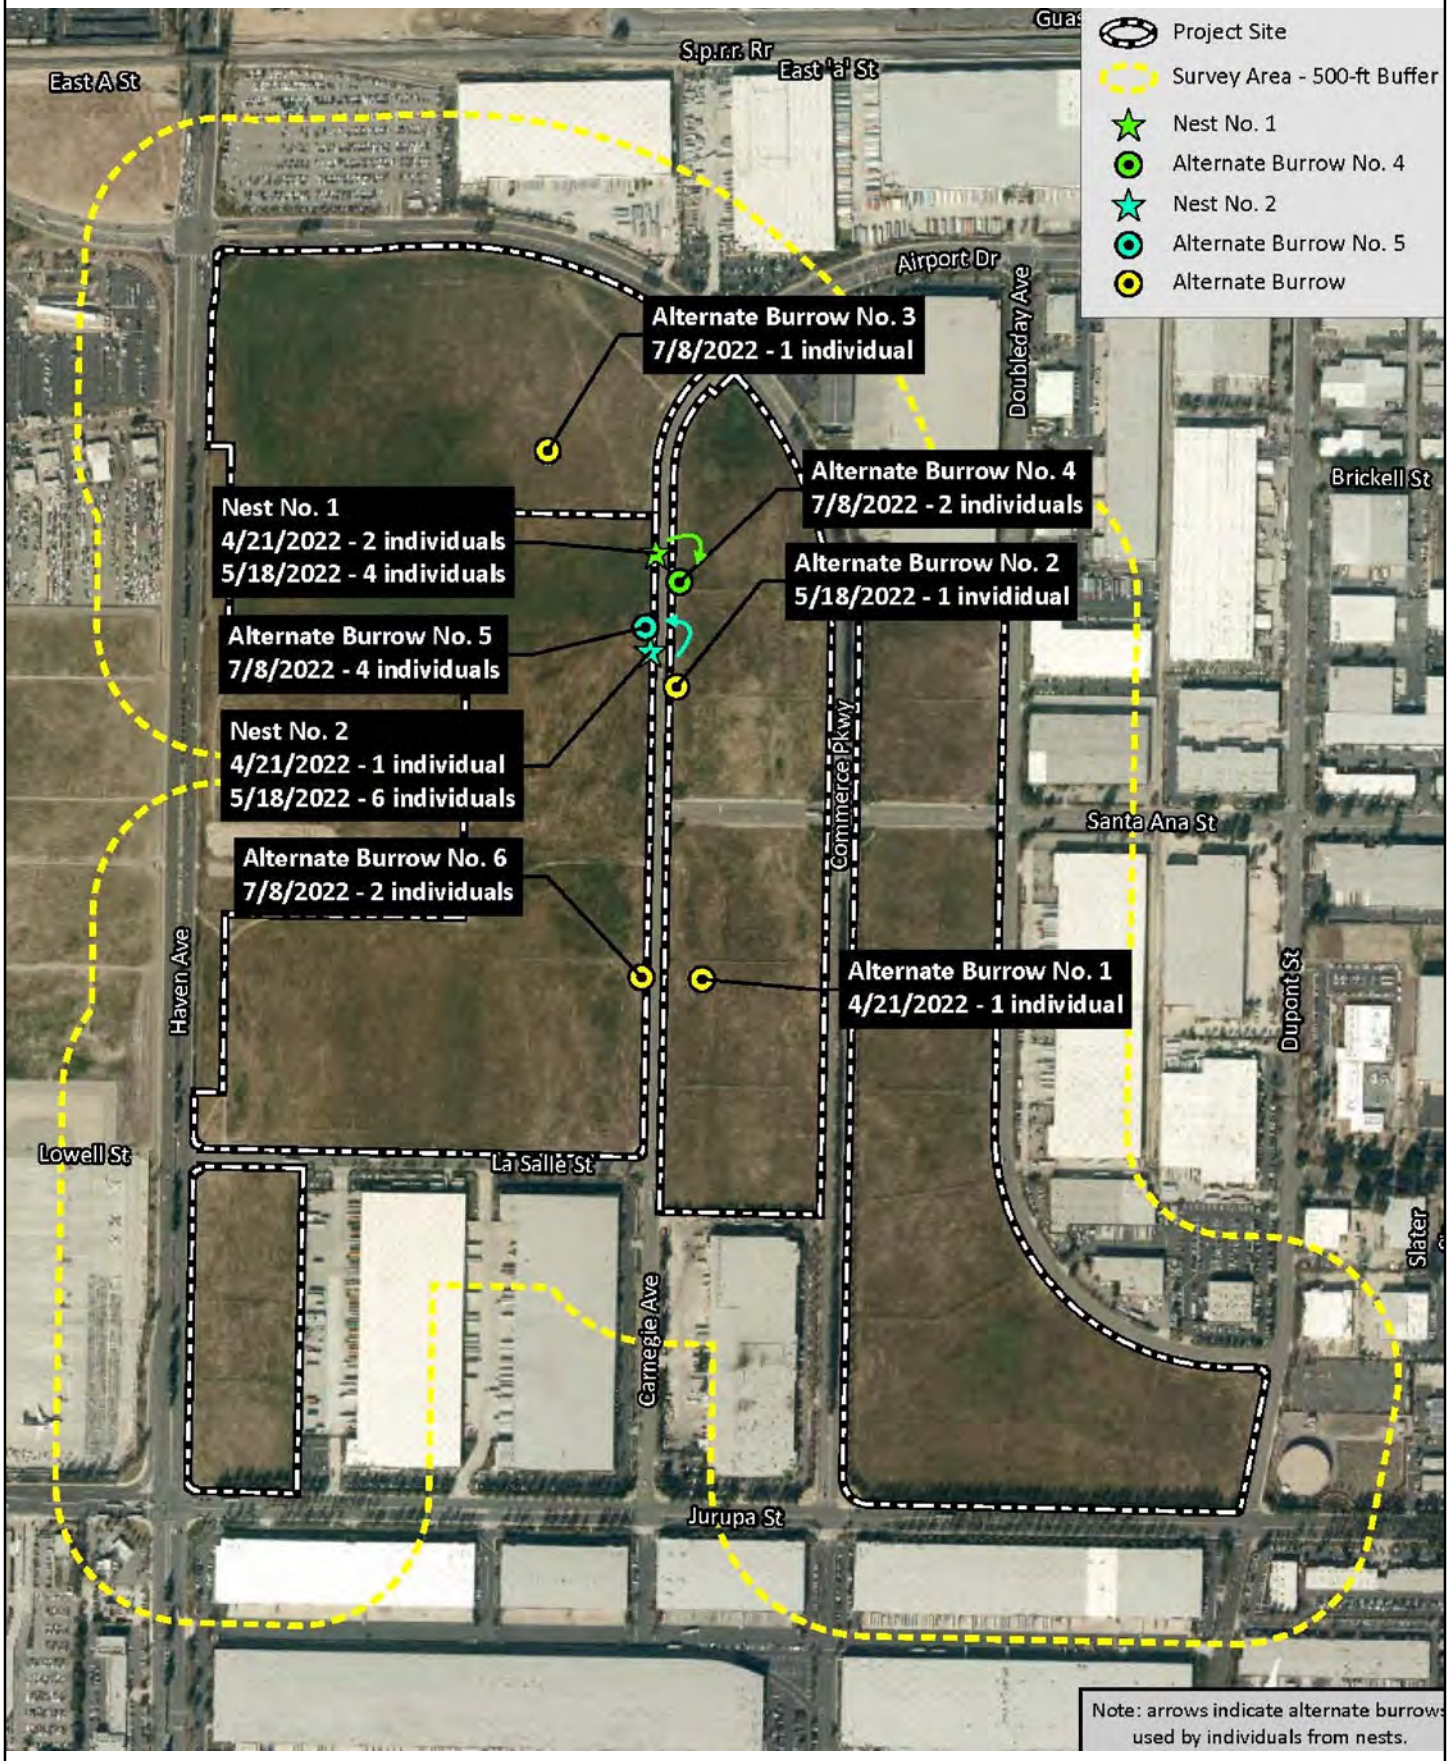
season and the maturity of the juveniles, only individuals were noted during the fourth survey, given juveniles and adults were difficult to differentiate. No BUOWs were observed at this burrow during the first, second, or third surveys. BUOWs from Nest No. 1 are presumably using this burrow as an alternate burrow based on its proximity to the nest location and observation of individuals flushing from the nest to this burrow.

- Alternative burrow No. 5 is a storm drain riser located on the west side of Carnegie Avenue and approximately 660 feet north of E Santa Ana Street. Four individuals were noted during the fourth survey. Due to the timing of the breeding season and the maturity of the juveniles, only individuals were noted during the fourth survey, given juveniles and adults were difficult to differentiate. No BUOWs were observed at this burrow during the first, second, or third surveys. BUOWs from Nest No. 2 are presumably using this burrow as an alternate burrow based on its proximity to the nest location and observation of individuals flushing from the nest to this burrow.

- Alternative burrow No. 6 is an earthen burrow located on the west side of Carnegie Avenue and approximately 600 feet south of E Santa Ana Avenue. Two BUOW individuals were observed during the fourth survey. Due to the timing of the breeding season and the maturity of the juveniles, only individuals were noted during the fourth survey, given juveniles and adults were difficult to differentiate. No BUOWs were observed at this burrow during the first, second, or third surveys.

Anthropogenic Disturbances

It should be noted that during the focused surveys, and as noted in news articles published online, numerous photographers, bird enthusiasts, and members of the Audubon society routinely gather immediately adjacent to the burrowing owls onsite to obtain close photographs of the burrowing owls. As observed onsite during the focused surveys, these photographers have trespassed to set up artificial perches to obtain "trophy" photographs of the burrowing owls. These anthropogenic disturbances could cause the burrowing owls to flush from their burrows and result in predation and they also leave their human scents which could lead to mammalian predators to the burrows they look at. Further, the routine human interactions with the burrowing owls onsite do not provide long term conservation for the owls onsite. In addition, this harassment of nongame birds could be considered a violation of the California Code of Regulations Title 14 Section 251.1.



THE HUB @ ONT
BURROWING OWL RELOCATION PLAN

Exhibit 3580

Section 5 Relocation Plan

Active relocation is an available method used in certain situations to provide future breeding and dispersal opportunities to owls that are presented with unique challenges including those from pending development, plane strike hazards and those that are predating special-status species. Active relocation typically involves the capture, marking, relocation, maintenance, release and monitoring of owls to preserved lands managed for owls. These sites are generally distant from the capture site and offer ample suitable habitat necessary for increased survivorship and breeding success as well as dispersal opportunities for their young. A relocation plan has 2 main steps: 1) Release Site Selection (5.1 – 5.2); and 2) Translocation Methods (5.3 – 5.6).

Active relocation is a lengthy step by step process that is fully described in the permittee's permits that are obtained on a case-by-case basis. In general, during relocation, owl pairs are captured (Bloom 1987, Bloom et al. 2007) at the development site and placed in hacking cages at an approved relocation site managed for BUOWs. Owls are fed and monitored daily and once a clutch of eggs has been laid and incubation is more than 50% complete, the cages are completely removed from the relocation site and the daily feeding events stop. Monitoring is conducted using game cameras and site surveys at rates that only introduce a minimum amount of disturbance. Predator control efforts (e.g., hazing and scent markings) are often required to ensure successful efforts (e.g. survival, breeding and site fidelity). Adults and young are banded (mark/recapture study) and the site is typically monitored/managed for 2 years post release (USFWS MBTA Permit requirement) to better ensure the site is managed properly for owl suitability and to report on efficacy of the relocation effort(s).

The relocated adults are critical to the initial efforts of successfully raising young however the fledged young are arguably the most important birds as they will show site fidelity (philopatry) to the release site where they emerged from their natal burrow. Hence, if the adults disperse away from the relocation site post nesting season, that does not make this effort a failure. The most important cohort of owls are the young who will show fidelity to their natal area. In many cases, adults do in fact stay on site or explore the new surroundings post breeding season, but the owls often nest on or adjacent to the relocation site in subsequent years.

Active Relocation works best when conducted at distances greater than (>30-40 km) as to help break their homing behavior.

This Active Relocation Plan has been prepared to address the relocation of breeding BUOWs from the proposed The HUB @ ONT site to one the following relocation sites ranked in order of hierarchy based on location (within same County), suitability of the habitat onsite and surrounding area to support a long-term population of burrowing owls, and; 1) Colton Dunes Conservation bank; 2) the Nuevo Donation Site in Riverside County; 3) Other Relocation Sites.

5.1 RELOCATION SITES

Prior to the selection of the following relocation sites, a lengthy, in-depth review of available lands within San Bernardino County and the region was conducted. Currently, San Bernardino County does not support any pre-established conservation areas for BUOW. Therefore, the search for a suitable conservation site included areas, not only in San Bernardino County, but also conservation sites in Riverside County and areas within the region.

Undeveloped areas in Chino/Ontario (near the Chino Preserve and Prado Basin), Green River Golf Course, and areas in the high desert were researched to find a suitable site for long term BUOW conservation. Next, areas already under conservation in San Bernardino County (i.e., Colton Dunes Conservation Bank and Cajon Creek Conservation Bank) that provide areas of open habitat that could be utilized by BUOW were explored. Finally, areas in the region that have already been receiver sites for relocation were looked at in Riverside County and Orange County.

5.1.1 Colton Dunes Conservation Bank

The Colton Dunes Conservation Bank (Bank) is 150 acres of conserved land that was established as a conservation bank in Colton, California, for Delhi Sands Flower-loving Fly (DSF) habitat, but also supports several other sensitive species including Los Angeles Pocket mouse, Cactus Wren, Coastal California Gnatcatcher, and BUOWs. Historically, the site supported active agriculture on the valley floor area of the site, along its eastern boundary. The western portion of the site has a series of gentle sloping hills that overlook the valley floor. With the abandonment of agricultural activities, the valley floor was restored to native coastal sage scrub habitat, while the remainder the of site supports Colton sand dune habitat, an open plant community with low growing and spare vegetative cover, that provides line-of-site opportunities for BUOW. BUOWs have periodically inhabited the Bank, usually observed on the walls of a deep drainage system entering the Bank from the north. A single pair of BUOW were observed within the canyon in 2020 and 2022.

Since the Bank was created specifically for protecting DSF and its habitat in south Colton, an inquiry was made to USFWS regarding the compatibility of DSF and BUOW. BUOW, when present, were found to occupy top of the canyon walls of the drainage entering the Bank from the north and have not occurred in the northeast corner of the Bank and the central portion down to the southern boundary. DSF only emerge during the heat of the day, between 10 am and 2 pm primarily during the month of August, a period of time when owls would be sheltering during the intense summer heat. Given the lack of proximity of the drainage feature from known DSF observations within the Bank and the lack of an overlap in their respective use of the habitat within the Bank, USFWS did not raise concerns regarding the relocation of BUOW into the Bank.

The Bank provides suitable nesting and foraging habitat for BUOW and is protected from trespass and other disturbances. Given the natural occurrence of BUOWs, there appears to be prey available to support the species. However, the Colton Dunes Conservation Bank is the closest potential relocation site to the population of owls on the project site. Further, some additional issues to note are that the Bank will require the installation of approximately 20 artificial burrows which could potentially impact

DSF larvae in the soils (although burrows would be placed in areas that are not know to support DSF), the powerline easements across the site provide perching for raptors that could prey on BUOW, and the potential need for a Streambed Alteration Agreement if the onsite drainage feature were impacted.

Even though the Bank provides suitable habitat for BUOW and is located within San Bernardino County, the proximity of the relocation site to the project site (12 miles/19 kilometers), raptor perching opportunities on the SCE powerlines, and lack of suitable dispersal habitat adjacent to the site (due to existing industrial buildings and mining activities bordering the relocation site) reduces the chance of survivorship for dispersing young and sustaining a long-term population of BUOW.

5.1.2 Nuevo Donation Site

The Nuevo Donation Site is generally located north of the Ramona Expressway, south of Alessandro Boulevard, east of Lake Perris, and west of Gillman Springs Road in the unincorporated community of Lakeview, Riverside County, California. The Conservation Site consists of one parcel (Assessor Parcel Number 425-040-009) which is 83.5 acres in size and abuts the San Jacinto Wildlife Area (SJWA) to the north and west, the San Jacinto River to the north, and Marvin Road to the south (refer to Exhibit 5, *Nuevo Donation Site*). Previous relocation efforts by the San Diego Zoo have occurred on the Nuevo Donation Site, and the Zoo has stated that the Nuevo Donation Site is suitable for future relocations.

The conservation site consists of fallow field that has been subject to a variety of anthropogenic disturbances (i.e., tilling and disking) associated with several decades of agricultural practices. Due to agricultural uses, plant communities that once occurred on the Nuevo Donation Site have been removed resulting in the majority of the site supporting non-native vegetation. Areas immediately to the south and east of the Nuevo Donation Site consist of agricultural land while areas to the north and east consist of vacant public land associated with the SJWA. Historically, the conservation site supported robust floodplain habitat associated with the San Jacinto River, as well as vernal pool habitat associated with on-site alkali/clay soils. The northern 30 acres will be converted back to floodplain habitat.

The Nuevo Donation Site consists of fallow agricultural field and is dominated by a variety of low-growing, early-successional/weedy plant species that provide open foraging habitat for BUOWs. Vegetative cover ranges between 10 and 25%. Several fossorial mammal burrows, including ground squirrel burrows, capable of providing suitable roosting/nesting opportunities for BUOWs are in the northern portions of the conservation site and throughout the surrounding agricultural fields, including along the banks of the San Jacinto River.

It is recommended that additional artificial burrows be installed, and the vegetation onsite be restored and maintained to ensure there is ample open space and cover for BUOWs. The entire site provides either suitable nesting habitat for BUOW or suitable foraging habitat.

The Nuevo Donation Site provides for increased chances of survivorship for dispersing young and for the relocated BUOW adults once the relocation is complete. No other sites in San Bernardino County offer this due to the level of development and highly fragmented landscapes. The Nuevo Donation Site is the number one choice for relocation because the site is part of a large, protected area that is capable of supporting a viable population of owls in the future, and the proximity of the site to San Bernardino

County and the Ontario International Airport (30 miles/47 kilometers from the project site). Further the Nuevo Donation site has already been approved for relocation, does not need a lot of work to enhance, is distant from the project site, but within the same regional population.

As part of the proposed mitigation, the Applicant proposes to translate the BUOW pairs to a relocation site where the BUOW will have increased chances of survival. The Applicant will work with the landowner to accomplish needed tasks that are necessary to make the relocation site more suitable and provide long term conservation for the BUOW. The tasks listed below will be completed as part of the mitigation package for the Nuevo Donation Site to make this site more suitable for the future management of the BUOW at the relocation site

- Install two clusters of 10 artificial burrows (20 total artificial burrows) following the best available methods.
- Provide funding for the County to install 3 strand, no barb wire along the west and east sides of the property.
    - The fence along the western boundary will be located on CDFW lands and increase the size of the protected Nuevo Donation Site by approoimalty 15 acres.
    - No Hunting and No Dog signs will be placed along this fence that runs north south along the east side of the CDFW access road, just east of the Nuevo Donation Site.
- Provide funding necessary for the County to mow the site two times per year for two years.
- Provide funding for a new pipe gate for CDFW/County of Riverside at the southwestern access point.
- Provide funding for large riprap to be placed on either side of the aforementioned gate to help prevent trespassing.
- Provide funding to purchase herbicide to treat patches of tall growing fivehook bassia (*Bassia hyssopifolia*) onsite for two years.
- Conduct success monitoring for three years (1 year more than other projects)
- The project proponents will fund a GPS telemetry study in conjunction with the state and federal permitting agencies. This will be permitted separately.

5.2 OTHER RELOCATION SITES

San Jacinto Wildlife Area

The SJWA was initially created in 1979 by the California Department of Water Resources as mitigation for the State Water Project but has been subsequently expanded to incorporate additional habitat and wildlife species protection. It is located east of Lake Perris in the San Jacinto River Valley and is located immediately north of the Nuevo Donation Site in the unincorporated community of Lakeview, Riverside County, California. The Davis Unit of the SJWA is comprised of 10,483 acres and supports a diverse array of biological resources including wetland habitats, vernal pools, riparian habitats, alkali habitats, waterfowl habitats and upland habitats. SJWA has been managed by CDFW since 2000 and is an important component of two regional conservation programs, the Stephens Kangaroo Rat Habitat Conservation Plan (SKR-HCP) and Western Riverside County Multiple Species Habitat Conservation Plan (MSHCP). The Davis Unit of SJWA is adjacent to and immediately west of the Nuevo Donation Site and includes non-native grassland and upland habitat areas known to support BUOW. BUOWs,

including breeding pairs, have been observed in the SJWA every year since 2006 when routine surveys started to be conducted by CDFW. Portions of the grasslands are routinely mowed and provide foraging and nesting opportunities for BUOWs.

Similar to the Nuevo Donation Site, the SJWA provides for increased chances of survivorship for dispersing young and for the relocated BUOW adults once the relocation is complete. No other sites in San Bernardino County offer this due to the level of development and highly fragmented landscapes. Artificial burrows would be installed, and the vegetation onsite would be restored and maintained to ensure there is ample open space and cover for BUOWs.

El Sol

The El Sol Vineyard Hill area is 400-acre of agricultural farmland that was donated to the Resources Conservation Agency (RCA) in Riverside County in 2007 and is managed by the RCA as part of the Western Riverside County MSHCP as prime burrowiung owl habitat.

El Sol Reserve is located between Lake Skinner and Temecula and consists primarily of gentle, rolling, grassland hills with scattered patches of sage scrub habitat. The grasslands have a mix of native and non-native plant species including *Plantago* sp., *Erodium* sp., *Plagiobothrys* sp., and various other forbs/herbaceous species and annual grasses. The sage scrub habitat is primarily dominated by California buckwheat (*Eriogonum fasciculatum*). Cattle frequently graze the site, as a part of the site management, restricting the vegetation within the grasslands to primarily low growing emergents. Elevations on the site range from approximately 1400 feet to 1550 feet above sea level. Multiple scattered ephemeral drainages are present within the site primarily concentrated in the lower elevations. Small mammal burrows are present throughout the site, while larger burrows, such as those created by California ground squirrel (*Otospermiphilus beecheyi*), are infrequently observed in the site. The locations selected for placement of artificial BUOW burrows to be used as relocation sites for the owls are primarily low growing annual grasslands that slope gently downward to the northwest.

The RCA's El Sol Burrowing Owl Management Site has suitable habitat, artificial burrows, and long-term management support to help sustain BUOWs at the location. Additionally, successful relocations have occurred in the past, resulting in as many as 6 BUOW breeding pairs. There has been as many as ten known owls occupying the site, including three BUOW pairs on the Reserve utilizing approximately 34 artificial burrows on the Property. A new cluster of artificial burrows would be built for receiving the new owls will be about 300 to 500 feet from the closest occupied burrows.

Naval Weapons Station Seal Beach

The U.S. Navy operates a weapons storage and handling facility in Seal Beach, California. The Station support extensive open space with line-of-site opportunities for BUOW. Ground squirrels, which create burrows, are abundant, providing natural burrows for BUOWs. During 2022 fifty artificial burrows were installed within a burrowing owl management area on the north magazine. The relocation area is protected from intrusions and provides abundance prey for owls. The area historically supported a large population of BUOWs. With a commitment to protecting and restoring native habitats and species, the Navy has committed to re-establishing BUOW habitat providing and managing up to 50

owls. Between 1992 and 2006, 63 BUOWs were relocated to Seal Beach. Early relocations originated from Etiwanda on behalf of CDFW. Management of the site is being done in partnership with USFWS, the Audubon Society, and the Friends of Seal Beach. An inquiry at the Station indicates that the BUOW population is below capacity and would be able to accommodate the two pairs of owls from the Ontario Airport Site.

5.3 PREPARATION OF THE RELOCATION SITE

Prior to relocation of BUOWs to the chosen relocation site, several steps may be taken to prepare the site for BUOW occupancy: Soil preparation, site contouring, installation of burrows, revegetation and enhancements:

- If needed, soil preparation includes de-compacting soils by ripping the soils to two directions, first against the overlying contours, and then again with the contour. The ripper blades will be 9 inches part and capable of ripping the soil to a depth of 6 to 10 inches. This will break up areas where the clay soils have clumped due to rough grading, making the soils finer and more suitable for installing burrows and conducive for seed germination.

- Following the ripping of surface soils, if required, artificial burrows will be installed, in a series of mounds and other topographical relief features, providing site with habitat diversity and increasing the carrying capacity of the site.

- Install two clusters of 10 artificial burrows (20 total artificial burrows) following the best available methods. The proposed locations will correspond to the existing location of BUOW colonies at The HUB @ ONT site.

    - Each colony will have a primary burrow enclosure and up to five individual and double burrows. The proposed locations will provide BUOWs immediate foraging habitat in the adjacent vegetated areas, while revegetation/enhancement activities on the relocation site are implemented.

5.4 RELOCATION TO THE RELOCATION SITE

The below methods are typically provided in the CDFW BUOW Amendment and USFWS MBTA permit. The below mentioned methods are those typically requested in the project specific permits and hence these can be modified by the permitting offices as needed. Therefore this plan should not be confused with the project permit or final conditions of approval provided to the permittee (principal investigator – PI)

The BUOWs found within the 197-acre property will be captured and relocated to the chosen relocation site that has been approved by CDFW. In agreement with CDFW, the BUOWs will be captured and released by a permitted biologist with prior experience into a designated conservation area. Trapping methodology is described below in Section 5.6.1. Relocation efforts will provide a more reasonable chance of success for the 2 pairs of BUOWs by reducing potential take and by providing an opportunity for long-term conservation of the BUOWs.

McDonald Property Group has contacted ELMT to prepare this burrowing owl relocation plan and assist with the relocation of the BUOW from the 197-acre project site to the chosen relocation site. ELMT will use an approved burrowing owl biologist authorized by the USFWS Migratory Bird Office (Jennifer Brown) and CDFW Sacramento Office (Esther Burkett) and agreed upon by the local CDFW office (Ontario) and USFWS (Palm Springs office), to live-trap and relocate the BUOWs from the project site to the relocation site.

Following relocation, the relocation site will be monitored as defined below in Section 5.7, which will include site assessment during each visit to ensure the continued integrity of artificial burrow complexes, the success of revegetation efforts, an ongoing evaluation and response to evidence of trespassing and the requirements for predator control. Signage will be installed every 100 feet along the perimeter to minimization trespassing. Enhancements and the installation of burrows will be sited to avoid or minimize the exposure to predators. Artificial or manmade perches within the project site that could be used by raptor species will be removed. If monitoring determines that predators are impacting the onsite BUOW populations, potential remedial actions, e.g., removal of raptor perches, installation of raptor deterrents, and removal of raptors, will be discussed with CDFW.

5.4.1 Authorized Trapping and Banding Methods

To relocate BUOW, the biologist who captures and handles BUOWs (including for translocation purposes) in California must maintain the following three permits authorizing BUOW capture and handling:

1. Scientific Collecting Permit from the USFWS' Division of Migratory Birds (permit office in either Albuquerque or Sacramento) that authorizes BUOW active relocation;
2. Scientific Collecting Permit from CDFW Headquarters in Sacramento, California; and
3. U.S. Geological Survey (USGS) Bird Banding Laboratory (BBL) Banding permit that authorizes the capture and marking of BUOW in Riverside County, California.

Every effort will be made to relocate the BUOWs immediately prior to egg-laying to avoid potentially impacting reproductive success. Furthermore, active translocation should be implemented in such a way as to encourage relocated BUOWs to stay at the relocation site. Focused monitoring of the owls will occur leading up to relocation to ensure they are resident BUOWs and paired. Courtship behaviors will be monitored and noted. If BUOWs are known to be copulating during the relocation approval process the RCA and the Wildlife Agencies will be informed of possible time restraints as BUOWs should only be moved prior to egg-laying. If the PI identifies that there is a high potential for eggs to have been laid after close monitoring of BUOW behavior and camera data, then relocation will no longer be viable until after the nesting season.

The authorized trap methods of the BUOWs include:

1. Bow-trap, Swedish goshawk trap, compartment trap, bal-chatri, noose carpet, and one-way door with box at the burrow.
2. Captured BUOWs must be handled and transported in a manner that minimizes stress.

3. For monitoring purposes, the BUOWs must be banded under the authority of a U.S. Geological Survey Bird Banding Lab permit prior to release.
4. The USFWS recommends color-banding captured owls to facilitate long-term monitoring. The USFWS also recommends gathering morphometric data for each BUOW.

5.4.2 Hack Enclosure and Artificial Burrow Requirements

The authorized hack enclosure requirements and recommendations include:

1. The permittee will keep family groups together for a minimum of 30 days following relocation in order to increase hunting success and protection from predators.
2. The permittee must provide the BUOWs with food, water, and an adequate number of artificial burrows for shelter (artificial burrow requirements are described in further detail below) while they are held in the hack enclosure. Food may consist of mice, crickets, chicks, and meal worms.
3. The enclosure must be able to withstand stormy weather. The enclosure must also protect the BUOWs from all potential predators, be of sufficient size to enclose the artificial burrow systems and provide sufficient space for flight (minimum 12' L x 12' W x 6' H). The height of the enclosure should be extended to 8' if there is a possibility that birds may remain in captivity for longer than 30 days to minimize muscle atrophy.
    - Each Release Enclosure will be 12'x12'x6' (144 sq. ft.) and consists of 12 panels with each panel being 6'x4'. Each is constructed with wood frames (2"x2") and heavy gauge steel wire with 1"x1" mesh. Wire mesh is stapled pneumatically into the wood frame every 6" or as necessary. Panels are connected by 2 lag bolts and additional hardware including door hinges, hasps, and combo locks. The enclosure has a bottom, including welded mesh extending outward from the enclosure no less than 3' to help prevent mammals from digging under and into the cage. A floor made of extra cage panels will also be added to eliminate the possibility of mammals digging into the enclosure. The floor made from additional panels will be covered with soil so the two owls will never encounter or come in contact with the wire. The cage has nylon netting surrounding the outside and top to help prevent avian predators from being able to reach through and grab the owls (Bloom et al. 2003). The release enclosure will be installed prior to the owls being captured.
4. The permittee must dismantle the hack enclosure within 30 days of relocation unless you receive approval for an extension from the USFWS. Leaving BUOWs in an enclosure for too long at the release site can give them a false sense of security and can be an attraction for predators.
5. The permittee must discontinue feeding immediately after dismantling the enclosures.
6. The permittee must remove enclosures and other human artifacts from the relocation site immediately after dismantling the enclosures.
7. The permittee must camouflage all remote monitoring equipment (cameras) and place equipment as far from the enclosure as practical to avoid attracting predators. Cameras must

be placed 1.5 feet or lower from the ground and be covered by a perch deterrent to minimize predator use as a perch.

8. The USFWS recommends using an enclosure with corners that are as wide-angled as possible to minimize sharp-edge hazards and the risk of injury to owls.
9. Predators can be deterred from digging under the enclosure by installing a few feet of chicken wire or hardware cloth on the ground around the perimeter of the enclosure. Bury the chicken wire or hardware cloth in soil so that predators are unable to determine where the edge of the wire is located.

Artificial burrow system requirements include the following:

1. Each relocated BUOW must be provided with 2-4 burrow chambers at the release site; each relocated BUOW pair must be provided with a minimum of 4 burrow chambers at the release site.
2. The bottom of the burrow chambers must be a minimum of 4 feet below the soil surface. The top of the burrow chambers must be buried under a minimum of 3 feet of soil.
3. Each artificial burrow system must have multiple entrances facing different directions so that the BUOWs can easily escape from predators.
4. Each burrow chamber must have at least one entrance tunnel leading to the soil's surface. Tunnels must be at least 8 feet long and constructed of 4-inch corrugated flexible drainpipe. Tunnels should have a slope of 20-45 degrees between the surface and the nest chamber. Each tunnel must have a 90-degree horizontal turn between the entrance and the nest chamber to help prevent predators from entering the chamber. The drainpipe should only protrude a short distance into the burrow chambers to maximize living space for the BUOWs.
5. The permittee must either install a hollow concrete block at each tunnel entrance at the soil surface, or you must slip a 6-inch rigid PVC pipe over each entrance and pile river rock around each entrance for erosion control and protection from predators.
6. The permittee or the responsible landowner must maintain all artificial burrow systems and surrounding habitat long-term to ensure the site remains suitable for BUOWs. The permittee or the responsible landowner must clean and repair artificial burrows annually. The permittee or the responsible landowner must also manage the vegetation in and around the release site annually to maintain visibility for the BUOWs.

Other Artificial Burrow System Recommendations:

1. The USFWS recommends maximizing the number of artificial burrows at the release site. The USFWS recommends installing more artificial burrows than required to support local BUOWs that may move into the site, in addition to supporting the relocated BUOWs. The quantity and spacing of occupied burrows and satellite burrows at the capture site will help determine the quantity and spacing of burrows that should be provided at the release site.
2. The USFWS recommends using either Wild at Heart's artificial burrow system design (summarized here) or John H. Barclay's design (Barclay, 2008, J. Raptor Res. 42(1):53–57). A wooden burrow chamber design may be used in lieu of the plastic chamber designs. The

minimum artificial burrow system requirements described above must be implemented regardless of which artificial burrow system design the Permittee chooses.

3. The following is a Summary of Wild at Heart, An Arizona-Based Raptor Rescue's artificial burrow system design (Greg Clark is available for questions about methods; greg@bluetiger.com or 480-595-5047). Over-turned 5-gallon plastic buckets may be used as burrow chambers. Four over-turned buckets may be placed side-by-side in a cluster to serve as burrow chambers for each owl pair. The buckets may either be arranged above ground for a mound artificial burrow system or placed inside the bottom of a pit for a subterranean artificial burrow system. A 5-inch diameter hole may be cut in the side of each bucket at the bucket opening for connection to a tunnel. Two of the buckets may be inter-connected with flexible tubing to provide owls with an expanded burrow chamber and a second entrance/exit. Poultry cloth (chicken wire) may be placed under burrow chambers to prevent California ground squirrels and pocket gophers from digging up the soil and filling the chambers and tunnels with soil. Poultry cloth may also be installed around burrow entrances to deter large predators from digging up a burrow.
4. The USFWS recommends installing artificial burrow system about 10 feet apart from each other.
5. Maintenance activities may include grazing, mowing with a push mower, mowing with a mechanical mower with low impact tires, or using a weed eater to reduce annual grass height. Maintenance may also include keeping area free of trees and shrubs and habitat modification to increase prey populations.
6. The USFWS strongly recommends preventing excessive human and human-related disturbance that can result in excessive flushing of BUOWs or damage to their burrows (e.g., walking, jogging, off-road/dirt bike activity, dog-walking). This also includes controlling loose and feral pets that may chase, injure, and prey upon owls.

5.4.3 BUOW Capture and Release Activities

Once all owls are translocated away from the project site, all burrows and refugia will be excavated and collapsed following the CDFW (2012) guidelines. The primary occupied burrow(s) will be excavated and collapse at The HUB @ ONT project site prior to leaving the site after trapping.

Occupied burrows where BUOWs were captured will be excavated to prevent re-occupation.

One-way doors are installed for 48-72 hours prior at all other suitable burrows to prevent re-occupation of site.

Grading/disturbance of the site will immediately follow burrow excavation and owl relocation to better prevent occupation by any other BUOWs. The enclosures at the relocation site will not be removed until the project site is cleared and graded therefore the developer should eliminate all suitable BUOW habitat features prior to BUOW release.

After capture, relocation and burrow excavations on The HUB @ ONT project site, a letter report will be submitted to all pertinent parties including the Wildlife Agencies within 72 hours of completion.

The report will include, but not be limited to: capture dates, times, USGS and VID band numbers, and coordinates. Conditions of each bird will be documented including overall health, weight, brood patch, molt, obvious injuries, and presence/absence of ectoparasites. Exact release time and location will also be documented.

While BUOWs are in the release enclosures, qualified staff as named on the List of Authorized Individuals associated with his Scientific Collecting Permit will provide daily feedings of dead house mice (*Mus musculus*) at a rate of one to two (2) mice per owl per day during the captivity period. Water will also be provided in a 24"x12"x4" plastic tub for drinking or bathing. A small rock is placed in the tub to help any small animals exit if they enter the water. When BUOWs are placed into the release enclosures, feeding visits will take place in the afternoons between 1430 and dusk, however, high temperatures greater than 85 degrees Fahrenheit will be avoided and mice won't be delivered until near dusk during those conditions, so mice don't spoil. Feeding events will be conducted in a manner that reduces disturbance to the BUOWs. Feedings are not conducted in the presence of known predators. Any nearby perched avian predators will be "bumped" from their perches and once safe, feeding of the caged owls will take place. Feedings do not require entering the enclosures; however, entry may be required to add water or remove any rotten mice that could attract predators.

During each site visit, the biologist will conduct a rapid evaluation of the release enclosures, visually assess owl health and document problems from trespassers and/or predators (coyotes, weasels, feral dogs, hawks, falcons, and great horned owls). Visits will be conducted as quickly as possible to reduce disturbance to the owls and the entire relocation site. Monitoring forms will have a comments section to address changes in habitat(s), management or any concerns. Additionally, any concerns that may conflict with the success of the relocation will be reported to the RCA and the Wildlife Agencies immediately.

During each visit, authorized individuals will fill out an electronic monitoring form on an application used on smart devices, or will fill out hand written forms. Forms will be used as part of the annual reporting process.

While BUOWs are in the release enclosure, camera traps will be placed approximately 15-30 feet south of the enclosure for a wide angle of the surrounding area and another inside the enclosure. The cameras will generally face north away from the sun resulting in better images. Cameras will be camouflaged, and bird spikes will be attached to camera cases to prevent perching by avian predators. Selected images from wildlife cameras will be provided with the final report. Cameras will be checked no later than every seven days, with every 2-3 days being the preference, in order to detect any significant issues in a timely manner and take effective action. Issues that may affect the survival of the BUOWs and the success of the translocation project will be reported. Significant issues would include any threats to BUOW health (e.g., high infestation of stick-tight fleas; or behavioral abnormalities, e.g., lethargy) or survival that may affect the success of the relocation project. Any issues and corrective actions will also be discussed in the final report.

Enclosures will be removed (and BUOWs will be released) when BUOWs have laid a complete clutch of eggs and are well into the incubation stage. Egg laying dates vary, and some pairs ultimately may

not lay eggs. Therefore, if owls do not appear to be nesting, BUOWs will be released after agency consultation and coordination (CDFW Headquarters and Regional staff and USFWS MBTA office). If nesting is not confirmed within the first 30 days of captivity in the enclosure, all pertinent parties will be notified and will discuss the situation and agree upon a plan. Esther Burkett, CDFW, will be consulted in regard to any caging extension beyond 30 days and if extension is allowed, CDFW shall authorize such via email.

When BUOWs are ready to be released, the enclosure(s) will then be carefully dismantled by two or more people and immediately removed and taken offsite. Adult BUOWs will generally flush down the burrow tunnel when the enclosure is entered by humans, however, if the owls don't flush down the burrow tunnel, they will be captured with a butterfly net and be released down the burrow tunnel at which point a towel will be placed in the burrow entrance to prevent escape. Once the human disturbance is complete and enclosure parts removed, the towel is removed so the owls can emerge safely. This event is timed such that owls emerge as close to dusk as possible so there is less risk of predation by local resident or migrant diurnal predators.

Supplemental Feeding:

Supplemental feeding shall occur in a carefully monitored way during both the acclimation period immediately following enclosure removal and through the fledgling stage, but feeding amount or frequency can be decreased or discontinued, if deemed necessary by the PI, based on camera footage, and observations and careful notes taken by the site monitors. Assessments of supplemental food that remains uneaten at each burrow will be conducted by the authorized individuals, throughout the season. The amount of supplemental food provisioning shall be tailored to the number and life stage of owls at each burrow. The PI can select their own protocol as needed to better suit the unique situation presented by the relocation. Supplemental feeding following hacking enclosure removal will be implemented with triggers based on site conditions, the PI prior data and experience, and additionally considering the feeding protocol and factors identified below:

- Feeding protocol utilized by the San Diego Zoo Institute for Conservation Research in past studies, with the caveats as noted in federal and state scientific collecting permits that feeding quantity and frequency can be adaptively managed depending on the needs of the owls, predator activity, and in keeping with minimizing human disturbance but also maximizing successful breeding and fledging of young.

  San Diego Zoo Institute for Conservation Research feeding protocol used in past studies (*for reference*):

  > Provide food on Mondays (for 2 days [Mon and Tues]), Wednesdays (for 2 days [Wed and Thurs]), and Fridays (for 3 days [Fri, Sat, Sun]), but feeding could possibly occur daily if there are sufficient personnel. One benefit of feeding every other day is reducing the amount of disturbance time. The feeding schedule is provided below with the amounts and frequency of feeding. Begin to wean the owls down 2 weeks after fledging and examine pellet contents throughout the season to keep rough track of wild prey utilized by the owls (i.e. wild prey remains versus white mice). Provide the mice

inside the burrows (chambers, if possible, or a few feet down the tunnels) to minimize attracting predators such as ravens and coyotes. Reduce the amount of mice if the owls are not consuming all of them (aim for 2-3 leftover mice, maximum, at each visit). Remove most of the uneaten mice (the owls do cache food, but aim to reduce the presence of many decayed mice). Guidelines for feeding schedule are noted in the chart below.

Feeding schedule and amount. Assumes 1 mouse ≈ 20 grams.

Stage[1]	Frequency	# of owls	Food[2]
Acclimation period	Once every 2-3 days	2 owls (Pair)	8-12 mice
Post-release to egg hatching	Once every 2-3 days	2 owls (Pair)	8-12 mice
Hatching (2 weeks after hatching)	Once every 2-3 days	2 owls (Pair) + young	8-12 mice + 1 mouse/chick
Banding age (3-4 weeks after hatching)	Once every 2-3 days	2 owls (Pair) + young	8-12 mice + 2-3 mice/chick
Fledging (5-6 weeks after hatching)	Once every 2-3 days	2 owls (Pair) + young	8-12 mice + 2-3 mice/fledge
Post-fledging (mid-July & Aug)	Twice per week	2 owls (Pair) + young	2 mice/owl
Late breeding/Early non-breeding	Once per week	Any number of owls	2 mice/owl where seen

[1]For all stages except Late breeding/Early non-breeding, feeding primarily occurs at nest and/or satellite burrow(s).
[2]Food amounts are calculated as: 2 mice/adult/calendar day and 1 mouse/juvenile/calendar day.

Qualified staff will provide feedings. Based on the PI's experience, a rate of one (1) mouse per owlet every other day is often used as a starting point. The feeding rate will be adjusted as necessary, based on the results of the periodic detailed assessments described below and in consideration of the protocols and factors listed above. For example, if the detailed assessment indicates there is too much food (prey remains are plentiful inside/outside the burrow, then supplemental feeding may be reduced to one (1) mouse per owlet every three days. The supplemental feeding rate would be tapered/reduced until the supplemental feeding is determined no longer necessary and stopped. The duration of supplemental feeding is proposed to occur as needed for up to 30 days post fledging, unless extenuating circumstances exist (e.g. if adults leave the site, etc.) or it is determined necessary to continue for successful rearing of the young and/or survival of the adults. Mice not consumed from the prior feeding will be removed and noted in the daily log (described below).

The frequency of detailed assessments will generally occur once per week but may vary and will be based on the goals of limiting disturbance to the owls, while gaining information often enough to sustain the offspring and encourage adults to remain on the site. The level of disturbance will be gauged by the owls' behavior. Considerations will include but not be limited to the following, as applicable, based on the life stage of the young:

- Examination inside the burrow tunnel and outside the burrow for prey remains. In order to avoid unnecessary disturbance and possible nest abandonment, the nest chamber shall only be examined when necessary, as determined by the PI.

- Observation of patterns in adult male/female foraging and feeding of live prey to the young owlets, and older juveniles in late Summer and early Fall.
- If adult owls abandon the site, supplemental feeding may be needed to sustain the young owls to fledging stage.
- Examination of quantity and size (e.g., small mammals vs. invertebrates) of natural prey remains in the immediate vicinity of the burrow.

Annual and final reports shall contain detailed information on the supplemental feeding effort and recommendations in regard to such for any future translocation efforts. The involved agencies understand that predators (e.g., coyotes, ravens) may be attracted to uneaten supplemental prey remains and could pose a risk to survival of the adults or chicks, in addition to causing owls to abandon the site. The agencies will rely on the monitoring results conveyed by the PI to determine how to proceed as the translocation effort unfolds. Because methods for owl translocation are still being tested and different sites present unique challenges, an adaptive management approach is needed, and close consultation between the PI and the agencies will be required throughout the translocation and monitoring effort.

5.5 POST-RELEASE MONITORING

Monitoring will be conducted through the first three breeding seasons beginning immediately following release. Monitoring will be conducted three times a week during the breeding season and weekly outside the breeding season. Cameras may be used to monitor activity to minimize disturbance at the release site. Monitoring will also include assessing the mitigation area to ensure the continued integrity of artificial burrow complexes, the success of revegetation efforts, effectiveness of control of trespassing, the requirements to control predator. Signage will be installed every 100 feet along the perimeter to minimization trespassing. Fencing may be required if trespassing become a management issue and will be discussed with CDFW prior to actions being taken. Enhancements and the installation of burrows will be sited to avoid or minimize the exposure to predators. Perches within the project site that could be used by raptor species will be removed. If monitoring determines that predators are impacting the onsite BUOW populations, remedial actions such as the installation of deterrents and/or the removal of predator birds, will be discussed with CDFW.

The detailed description of the monitoring efforts are described below that will be followed to better increase the chances of a successful relocation. Monitoring will be conducted by the approved BUOW biologist and qualified personnel.

1. Monitoring events should be conducted every third day post-release for the first 30 days. A simple windshield survey from points where all burrows can be viewed will be adequate unless BUOWs are not observed. Monitoring should take place during periods of BUOW activity (morning or evening) and in the absence of obvious avian predators. If BUOWs are not observed, quick pedestrian surveys of the release area should be conducted. If BUOWs are subsequently detected, the surveys will halt to reduce disturbance.
2. During the post-release monitoring phase, camera traps will be deployed to assist with data collection. This will help determine presence/absence and reduce site disturbance.

3. If BUOWs are present on the release site after 30 days post release, monitoring efforts will continue typically once-twice weekly with camera maintenance while they are present. The frequency of monitoring will be based on BUOW behavior and predator presence. Once a week monitoring is conducted only through fledging and supplemental feeding. Monitoring twice a month is conducted during the non-breeding season (relying on cameras) for most of the information. Monitoring will be less often if owls seem to be disturbed by presence of monitors, and if the site has predators that are following monitors around or attracted to the area (learning routines of feeding for example), then the frequency of site visits may be further reduced.
4. If breeding takes place during 2023, all young will be banded. Any unbanded BUOWs observed within the release area will also be banded (if captured) for monitoring purposes. Capture forms will be including with required reporting.
5. After the 2023 breeding season is complete, the site will continue to be monitored once to twice weekly with monthly camera maintenance and agency submittals will continue through the non-breeding season. The monitoring frequency will depend on number of BUOWs present and as noted above, the level of disturbance to the BUOWs (indicated by the owls' behavior) as well as potential modification to predator behavior/patterns. Each monitoring event will include a rapid assessment of the site as to reduce human activity. Most visits will last only a few minutes and surveys can generally take place from the vehicle. If BUOWs are absent from the site for one month, surveys will be reduced to monthly site visits. However, if the owl numbers decline over the 3-year period, so will the monitoring effort (accordingly). Also, if the PI believes management actions are needed to increase success, the PI we will do so as needed during the appropriate seasons.

During the 2023 breeding season (April-August) additional monitoring will take place to document presence/absence, nesting, and reproduction. Banding will occur for any young produced or new adults to further report on success during years two and three.

Predator Management

The county of riverside will obtain a depredation permit from the USFWS MBTA office and CDFW that allows them and the PI (and his subs) to haze and harass wildlife that are causing impacts to the relocation that would reduce the success of the relocation.

5.6 REPORTING

Three annual reports (and/or when the approved biologist encounters problems) will be submitted to the RCA and Wildlife Agencies through the conclusion of the 2023 nesting season. Memoranda will be prepared for the RCA after relocation efforts as needed. The RCA and County Parks shall be notified within 48 hours if there are problems on the release sites, such as predator risk, trespass, vandalism, other incompatible activities, or other concerns the approved biologist may encounter. Should any one serious injury (compromising survival in the wild) or mortality of burrowing owls or other species occur as a result of the methods, the Wildlife Agencies will be notified by phone within 24 hours, and the injury/mortality event must be described in the annual report. A separate detailed report of the injury/mortality incident, including photographs, must also be sent via email to the Wildlife Agencies within 3 days of the incident (or as detailed in the approved biologist's permits).

A completed Annual Report Form 3-202-1 shall be submitted to the Migratory Bird Permit Office (U.S. Fish and Wildlife Service, Migratory Bird Permit Office, 2800 Cottage Way, Room W-2606, Sacramento, CA 95825) by January 31st each year for two years post-release. Copies of this report will also be submitted to USFWS Palm Springs and CDFW (Sacramento and Ontario). The report shall also provide a written summary describing results of the translocation efforts (i.e., geographic coordinates of capture site, release site, U.S. Geological Survey band numbers, breeding activity, movements, physical condition of the birds, predation, etc.). Upon completion of the project, a final report documenting the overall number of BUOWs relocated (including artificial burrows) and burrows excavated shall be submitted to USFWS, CDFW, and other cooperating agencies.

A comprehensive final report describing the results of the project over the three-year period of work will be prepared summarizing the results of the monitoring and relocation efforts as described in this relocation plan written in scientific format including introduction, methods, results, discussion, recommendations, literature cited, and appendices for monitoring data, photos, and banding forms. This comprehensive report may be combined with the year 2 annual report, if appropriate.

All reporting will follow the terms and conditions of the approved biologist's permits and will be submitted to the respective agencies.

Section 6 Conclusion

During the 2022 breeding season, two pairs of BUOWs were observed to have successfully breed on the 197-acre The HUB @ ONT site in the eastern flight corridor at the Ontario International Airport. Based on the results of the 2022 breeding season focused surveys, these two pairs of BUOWs will be actively relocated prior to egg laying during the 2023 breeding season (end of February/beginning of March) to a relocation site to allow the two pairs to continue to breed. The vacated project site will subsequently be developed, removing all BUOW habitat.

Based upon an assessment of the available relocation sites presented in Section 5 above, we recommend proceeding with the relocation of the aforementioned BUOWs to the Nuevo Donation Site. The selected relocation site will provide the best long-term solution suitable for propagation and conservation of the BUOWs from eastern flight corridor at the Ontario International Airport.

McDonald Property Group will contract with an approved burrowing owl biologist to conduct the relocation of the BUOWs from The HUB @ ONT project site as approved by CDFW and USFWS MBTA offices.

Subject: 2022 Burrowing Owl (*Athene cunicularia*) Survey Report for the California Logistics Center at Ontario International Airport Project

Dear Mr. John Pierce:

This letter presents the results of the 2022 focused burrowing owl (*Athene cunicularia*; BUOW) survey conducted by HELIX Environmental Planning, Inc. (HELIX) for California Logistics Center at Ontario International Airport Project (project). The survey was conducted in accordance with the California Department of Fish and Wildlife (CDFW) Staff Report on Burrowing Owl Mitigation (formerly California Department of Fish and Game [CDFG] 2012).[1] This letter describes the methods used to perform the survey and the results.

SURVEY RESULTS SUMMARY

Numerous suitable burrow and burrow surrogates were observed throughout the project site. Two burrows (Nest Nos. 1 and 2) with breeding pairs and juveniles were detected. Six additional burrows (Alternate Burrow [AB] Nos. 1 through 6) were also noted, which were used by BUOWS for cover.

PROJECT LOCATION

The project site is generally located 0.7 mile to the west of Interstate (I-) 15 and 3 miles to the south of I-10 in the City of Ontario, San Bernardino County, California (Figure 1, *Regional Location*). It is depicted within Section 25 of Township 1 South, Range 7 West of the U.S. Geological Survey 7.5-minute Guasti quadrangle map (Figure 2, *USGS Topography*). Specifically, the project site is located west and east of S Commerce Parkway and north and south of E Santa Ana Street (Figure 3, *Aerial Photograph*).

[1] California Department of Fish and Game. 2012. Staff Report on Burrowing Owl Mitigation. State of California Natural Resource Agency. March 7.

PROJECT SITE DESCRIPTION

The approximately 218-acre project site consists of disturbed habitat with primarily non-native annuals and grasses, such as *Hordeum* spp. *Bromus* spp., *Malva* spp., and *Sisymbrium* spp. Native *Amsinckia* spp. was also observed throughout the site. Soils within the project site solely consist of Delhi fine sand.[2] The topography of the project site is mostly flat, with elevations ranging from 900 feet (274 meters) above mean sea level (AMSL) near the southeast corner to 942 feet (287 meters) AMSL near the southwest corner. The project site is bounded by Ontario International Airport to the west, and industrial and commercial properties to the north, east, and south.

Representative photographs of the project site are shown in Attachment A, *Representative Site Photos*.

METHODS

Part I: Habitat Assessment and Focused Burrow Survey

Prior to conducting the habitat assessment, HELIX consulted the California Natural Diversity Database (CNDDB) to determine the nearest BUOW occurrence(s).[3] HELIX biologists John Gardner, Robert Hogenauer, Jessica Lee, and Daniel Torres conducted a habitat assessment on March 3, 2022, to determine whether the project site supports suitable BUOW habitat. A focused burrow survey was conducted concurrently with the habitat assessment. All suitable burrows (i.e., greater than approximately four inches [11 cm] in height and width and greater than approximately 59 inches [50 cm] in depth) and burrow surrogates were recorded using a handheld Global Positioning System (GPS) unit. The habitat assessment and focused burrow survey were conducted concurrently with the first focused survey (see Part II described below). The assessment was conducted on the project site and included an approximately 500-foot (150-m) buffer zone around the periphery of the project site (survey area). Inaccessible areas of the survey area, including private land behind fences, were visually assessed using binoculars. The survey area was slowly walked and assessed for suitable BUOW habitat, including:

- disturbed, low-growing vegetation within grassland and shrublands (less than 30 percent canopy cover);
- gently rolling or level terrain;
- areas with abundant small mammal burrows, especially California ground squirrel (*Otospermophilus beecheyi*) burrows;
- fence posts, rocks, or other low perching locations; and
- artificial structures, such as earthen berms, debris piles, and cement culverts.

[2] Natural Resources Conservation Service. 2022. Web Soil Survey. United States Department of Agriculture (USDA). Retrieved from: http://websoilsurvey.nrcs.usda.gov/app/WebSoilSurvey.Aspx. Accessed July 14, 2022.

[3] California Department of Fish and Wildlife. 2022. California Natural Diversity Database and Rarefind. California Department of Fish and Wildlife: Sacramento, California. Retrieved from: https://www.wildlife.ca.gov/Data/CNDDB/Maps-and-Data. Accessed July 14, 2022.

All potential owl burrows were checked for signs of recent owl occupation. Signs of occupation include:

- pellets/casting (regurgitated fur, bones, and/or insect parts);
- white wash (excrement); and/or
- feathers.

Part II: Focused Burrowing Owl Survey

Because suitable habitat and burrows were observed within the survey area during the habitat assessment, focused BUOW surveys were conducted to determine whether the survey area supports BUOW. The focused surveys consisted of four breeding season surveys performed by Mr. Gardner, Mr. Hogenauer, Ms. Lee, and Mr. Torres, and HELIX Biologists Matthew Dimson and Shawn Carroll between March 3 and July 8, 2022. The surveys were spaced at least three weeks apart, with at least one survey conducted between February 15 and April 15, and the remaining three surveys conducted between April 15 and July 15, with at least one of these surveys occurring after June 15 (Table 1, *Survey Information*).

The biologists walked transects spaced no greater than approximately 65 feet apart (20 meters) to allow for 100 percent visual coverage of all suitable habitat within the survey area. The biologists walked slowly and methodically, closely checking suitable habitat within the survey area for BUOW diagnostic sign (e.g., molted feathers, pellets/castings, or whitewash at or near a burrow entrance) and individual BUOW. If observed, BUOW sign and BUOW observations were recorded with a GPS unit. Inaccessible areas of the survey area were visually assessed using binoculars.

Table 1
SURVEY INFORMATION

Survey Visit	Date	Biologist(s)	Time (Start/Stop)	Weather Conditions (Start/Stop)	Results
1[1]	03/03/22	John Gardner Robert Hogenauer Jessica Lee Daniel Torres	0610/0910	51°F, wind 0-1 mph, 30% clouds 62°F, wind 1-3 mph, 55% clouds	• Suitable BUOW habitat and burrows were identified within the survey area. • No BUOWs were observed during this focused survey.
2	04/21/22	Shawn Carroll Matthew Dimson Jessica Lee Daniel Torres	0630/1000	52°F, wind 0-1 mph, 1% clouds 61°F, wind 3-5 mph, 1% clouds	• Two adult BUOWs were observed near Nest No. 1, which is an earthen burrow located on the west side of Carnegie Avenue and approximately 900 feet north of E Santa Ana Street. • One adult BUOW was observed near Nest No. 2, which is an earthen burrow located on the west side of Carnegie Avenue and approximately 630 feet north of E Santa Ana Street. • One adult BUOW was observed near AB No. 1, which is an earthen burrow located on the west side of Carnegie Avenue and approximately 600 feet south of E Santa Ana Street.

Survey Visit	Date	Biologist(s)	Time (Start/Stop)	Weather Conditions (Start/Stop)	Results
3	05/18/22	Matthew Dimson Shawn Carroll Jessica Lee Daniel Torres	0610/0930	55°F, wind 1-2 mph, 100% clouds 64°F, wind 2-3 mph, 100% clouds	• Two adult BUOWs and two juvenile BUOWs were observed near Nest No. 1. • Two adult BUOWs and four juvenile BUOWs were observed near Nest No. 2 • One adult BUOW was observed near AB No. 2, which is a vertical corrugated metal pipe storm drain riser located on the east side of Carnegie Avenue and approximately 400 feet north of E Santa Ana Street.
4	07/08/22	Shawn Carroll Matthew Dimson John Gardner Daniel Torres	0620/0930	64°F, wind 1-2 mph, 10% clouds 73°F, wind 0-1 mph, 1% clouds	Due to the timing of the breeding season and the maturity of the juveniles, only individuals were noted, given juveniles and adults were difficult to differentiate. • One BUOW individual was observed near AB No. 3, which is an earthen burrow located approximately 650 feet to the southwest of the intersection of E Airport Drive and Carnegie Avenue. • Two BUOW individuals were observed near AB No. 4, which is a storm drain riser located on the east side of Carnegie Avenue and approximately 840 feet north of E Santa Ana Street. Individuals from Nest No. 1 are presumably using this burrow as an alternate burrow based on its proximity to the nest location and observation of individuals flushing from the nest to this burrow. [2] • Two BUOW individuals were observed near AB No. 5, which is a storm drain riser located on the west side of Carnegie Avenue and approximately 660 feet north of E Santa Ana Street. Individuals from Nest No. 2 are presumably using this burrow as an alternate burrow based on its proximity to the nest location and observation of individuals flushing from the nest to this burrow. [2] • Two BUOW individuals were observed near AB No. 6, which is an earthen burrow located on the west side of Carnegie Avenue and approximately 600 feet south of E Santa Ana Avenue.

[1] This survey included the habitat assessment and focused burrow survey.
[2] Alternate burrows used by BUOWs associated with Nests No. 1 and 2 are indicated by arrows shown on Figure 5.

RESULTS

CNDDB Record Review

There is a CNDDB record (Occurrence No. 1788) of BUOWs within the survey area, which between one and four breeding pairs were recorded between 2007 and 2013.[4] Four additional populations have been recorded on CNDDB within 1.5 miles of the project site. These CNDDB records are described below:

- CNDDB Occurrence No. 561: A BUOW population was documented within and adjacent to the existing Toyota Arena in the City of Ontario, approximately 0.75 mile north of the project site. Multiple breeding pairs and juveniles were documented at this location between 2002 and 2016, including prior to and after the Toyota Arena was constructed in 2007.
- CNDDB Occurrence No. 636: A BUOW population was recorded north of E 4th Street, east of Richmond Place, south of Mission Park Drive, and west of Buffalo Avenue in the City of Rancho Cucamonga. This population was recorded approximately 1.5 miles northeast of the project site. Nesting BUOWs were observed in 2003. The population is presumed extirpated since the habitat appears to have been developed sometime between 2015 and 2016 based on aerial imagery.[5]
- CNDDB Occurrence No. 664: A BUOW breeding pair and juveniles were documented in 2003 near the intersection of Vanderbilt Street and S Auto Center Drive in the City of Ontario, approximately 0.9 mile southeast of the project site. Based on the record description, these individuals were evicted outside of the nesting season in 2003. The site was developed sometime in 2003 based on aerial imagery.[6] The remaining suitable habitat appears to be present directly to the northwest and south of the developed site.
- CNDDB Occurrence No. 1044: A BUOW population was recorded east of S Haven Avenue, south of E Francis Street, and west of Dupont Avenue in the City of Ontario. This population was recorded approximately 0.3 mile south of the project site. Seven BUOWS were recorded at this location in 2006. This population is presumed extirpated since the habitat appears to have been developed sometime between 2008 and 2009 based on aerial imagery,[7] although remaining suitable habitat appears to be present directly to the south and southeast of the developed site.

Survey Results

Suitable BUOW habitat was observed within the survey area during the habitat assessment conducted on March 3, 2022, including low-growing vegetation within the non-native grassland. Several burrows and burrow surrogates, such as vertical corrugated metal pipe storm drain risers, which could

[4] California Department of Fish and Wildlife. 2022. California Natural Diversity Database and Rarefind. California Department of Fish and Wildlife: Sacramento, California. Retrieved from: https://www.wildlife.ca.gov/Data/CNDDB/Maps-and-Data. Accessed August 1, 2022.

[7] Google Earth. 2022. Aerial imagery of 34.042164°, -117.571124°. Aerial Imagery from January 31, 2009. Retrieved from: https://earth.google.com/web/. Accessed August 19, 2022.

potentially be used by BUOWs, were observed throughout the survey area (Figure 4, *Suitable Burrows*). Suitable foraging habitat was observed within and adjacent to the survey area.

Two burrows (Nest Nos. 1 and 2), with breeding pairs and juveniles, were detected within the project site (Figure 5, *Nests and Alternate Burrows*). Six alternate burrows, (AB Nos. 1 through 6) were also noted throughout the project site (Figure 5), and these burrows were used by BUOWs for cover. A summary of observations is provided below:

- Nest No. 1 is an earthen burrow located on the west side of Carnegie Avenue and approximately 900 feet north of E Santa Ana Street. One adult BUOW pair was observed near the burrow entrance during the first survey. Two adult BUOWs and two juvenile BUOWs were noted during the second survey. No BUOWs were noted at this burrow during the first or fourth surveys.
- Nest No. 2 is an earthen burrow located on the west side of Carnegie Avenue and approximately 630 feet north of E Santa Ana Street. One adult BUOW was observed next to an earthen burrow during the second survey. Two adult BUOWs and four BUOW juveniles were observed during the third survey. No BUOWs were observed during the first or fourth surveys.
- AB No. 1 is an earthen burrow located on the west side of Carnegie Avenue and approximately 600 feet south of E Santa Ana Street. One adult BUOW was observed during the second survey. No BUOWs were observed at this burrow during the first, third, or fourth surveys.
- AB No. 2 is a vertical corrugated metal pipe storm drain riser located on the east side of Carnegie Avenue and approximately 400 feet north of E Santa Ana Street. One adult BUOW was observed near the storm drain riser during the third survey. No BUOWs were observed at this burrow during the first, second, or fourth surveys.
- AB No. 3 is an earthen burrow located approximately 650 feet to the southwest of the intersection of E Airport Drive and Carnegie Avenue. One BUOW individual was observed during the fourth survey. Due to the timing of the breeding season and the maturity of the juveniles, only individuals were noted during the fourth survey, given juveniles and adults were difficult to differentiate. No BUOWs were observed at this burrow during the first, second, or third surveys.
- AB No. 4 is a vertical corrugated metal pipe storm drain riser located on the east side of Carnegie Avenue and approximately 840 feet north of E Santa Ana Street. Two BUOW individuals were observed during the fourth survey. Due to the timing of the breeding season and the maturity of the juveniles, only individuals were noted during the fourth survey, given juveniles and adults were difficult to differentiate. No BUOWs were observed at this burrow during the first, second, or third surveys. BUOWs from Nest No. 1 are presumably using this burrow as an alternate burrow based on its proximity to the nest location and observation of individuals flushing from the nest to this burrow.
- AB No. 5 is a storm drain riser located on the west side of Carnegie Avenue and approximately 660 feet north of E Santa Ana Street. Four individuals were noted during the fourth survey. Due to the timing of the breeding season and the maturity of the juveniles, only individuals were noted during the fourth survey, given juveniles and adults were difficult to differentiate. No BUOWs were observed at this burrow during the first, second, or third surveys. BUOWs from Nest No. 2 are presumably using this burrow as an alternate burrow based on its proximity to the nest location and observation of individuals flushing from the nest to this burrow.

- AB No. 6 is an earthen burrow located on the west side of Carnegie Avenue and approximately 600 feet south of E Santa Ana Avenue. Two BUOW individuals were observed during the fourth survey. Due to the timing of the breeding season and the maturity of the juveniles, only individuals were noted during the fourth survey, given juveniles and adults were difficult to differentiate. No BUOWs were observed at this burrow during the first, second, or third surveys.

OTHER SITE CONDITIONS

Wildlife photographers were noted in close proximity to Nest No. 1 during the second and third surveys (see Photograph 1 in Attachment A). An unknown person installed a perch consisting of a tree branch outside of Nest Nos. 1 and 2 (see Photographs 1 and 2 in Attachment A). There are numerous suitable raptor perches within and adjacent to the project site, which consists of tall ornamental trees and light poles. Raptors and/or sign of use (e.g., white wash) were observed on multiple suitable perching locations (Figure 6, *Observed Raptor Perches*).

CONCLUSION

Numerous suitable burrow and burrow surrogates were observed throughout the project site (Figure 4). Two burrows (Nest Nos. 1 and 2) with breeding pairs and juveniles were detected (Figure 5). Six alternate burrows (AB Nos. 1 through 6) were also noted (Figure 5), which were used by BUOWs for cover.

A take avoidance (pre-construction) survey is required within 14 days prior to ground disturbance ground-disturbing activities (i.e., earthwork, clearing, and/or grubbing), in accordance with CDFW Staff Report on BUOW Mitigation. If BUOW(s) are observed during the take avoidance survey, a BUOW Exclusion Plan and Mitigation Management Plan must be prepared and coordinated with CDFW prior to ground disturbance.[8]

Helix Ont BUOW with Permits_Revised.pdf

Hi Suzanne,

Thanks for your note. I did receive the report yesterday afternoon. I reviewed it today and am attaching it to this email.

The biologist's assessment concludes the only viable alternative is active relocation of the owls more than 10,000 feet away from the airport. As I mentioned to you before, I did discuss the draft report with the FAA. My contacts emphatically agreed with the assessment and reinforced that they would not allow any mitigation within 10,000 feet of the airport. I recognize that this is not the outcome that you and the Audubon Society were hoping for and understand any disappointment you may experience but I wanted to share it with you today.

Hi Michelle,
A link for an article from the Daily Bulletin is below. It is the story about our work with Burrowing Owls in Chino and a connection between the owls and an astronaut at the International Space Station. It is getting a lot of attention--people love those little owls!

> https://www.dailybulletin.com/2021/02/17/volunteers-send-photos-of-rare-burrowing-owls-to-pomona-born-astronaut-in-space/

We are eager to get the report from the Helix biological consultant on good options for the

Ontario Airport owls (we hope). Do you have an estimate of when we can expect it?

I hope all is well with you.

Best wishes,
Suzanne

September 16, 2019 OIA-01

Mr. Keith Owens
Ontario International Airport Authority
1923 E Avion Avenue
Ontario, CA 91761

Subject: 2019 Burrowing Owl Survey Report for Potential Development of Ontario International Airport's Group 1 Parcels (Assessor's Parcel Numbers 0211-222-47, 48, 53, 54; 0211-232-11, 12, 13, 14, 16, 17, 18, 19, 20, 44, 45, 46; 0211-232-52, and 55)

Dear Mr. Owens:

This letter report presents the results of the 2019 focused burrowing owl (*Athene cunicularia*; BUOW) survey conducted by HELIX Environmental Planning, Inc. (HELIX) for the Ontario International Airport's Group 1 Parcels (study area) located in the City of Ontario, San Bernardino County, California. The survey was conducted in accordance with the California Department of Fish and Wildlife (CDFW; previously California Department of Fish and Game [CDFG]) Staff Report on BUOW Mitigation (CDFG 2012). This letter report describes the methods used to perform the survey and the survey results.

STUDY AREA LOCATION

The 151-acre study area is generally located south of the Interstate (I-) 10 and west of I-15 (Figure 1, *Regional Location*). The study area is located within Section 25 of Township 1 South, Range 7 West of the Guasti, California U.S. Geological Survey (USGS) 7.5-minute topographic quadrangle (Figure 2, *Vicinity Map*). Specifically, the study area is located to the northeast and southeast of the intersection of E Santa Ana Avenue and South Commerce Parkway; to the southwest and south of the intersection of E Airport Drive and S Carnegie Avenue; and to the southeast of the intersection of S Haven Avenue and E La Salle Street (Figure 3, *Aerial Photograph*). The study area comprises eighteen parcels with Assessor's Parcel Numbers 0211-222-47, 48, 53, 54; 0211-232-11, 12, 13, 14, 16, 17, 18, 19, 20, 44, 45, 46; 0211-232-52, and 55.

STUDY AREA DESCRIPTION

The study area is located directly east of the Ontario International Airport. The study area is dominated by non-native grass species, such as common ripgut grass (*Bromus diandrus*), red brome (*Bromus madritensis* ssp. *rubens*), and slender oat (*Avena barbata*), which are maintained as required for weed

abatement. The topography of the study area is mostly flat with elevations ranging from 900 feet above mean sea level (AMSL) near the southeast corner to 942 feet AMSL near the southwest corner. Immediate surrounding land uses include undeveloped land and the Ontario International Airport to the west and commercial buildings to north, east, and south.

Representative photographs of the study area are shown on Attachment A, *Site Photographs*.

METHODS

The focused BUOW survey was conducted according to the CDFW BUOW survey guidelines (CDFG 2012), which includes Part I Habitat Assessment and Focused Burrow Survey and Part II Focused BUOW Surveys. The CDFW BUOW survey guidelines are described in further detail below.

Part I: Habitat Assessment and Focused Burrow Survey

Prior to conducting the habitat assessment, HELIX consulted the California Natural Diversity Database (CNDDB) to determine the nearest BUOW occurrence(s). A habitat assessment was conducted by HELIX biologists Ezekiel Cooley and Lauren Singleton on November 1, 2018 to determine whether the study area supports suitable BUOW habitat. A focused burrow survey was conducted concurrently with the habitat assessment. All suitable burrows (i.e., greater than 11 centimeters [cm] in height and width and greater than 150 cm in depth) and burrow surrogates were recorded using a handheld Global Positioning System (GPS) unit (Figure 4, *Suitable Burrow and Transect Locations*). The habitat assessment and focused burrow survey were conducted prior to commencement of the BUOW focused surveys. The assessment was conducted on the study area and within a 150-meter (approximately 500-foot) buffer zone around the periphery of the study area (survey area). The survey area was slowly walked and assessed for suitable BUOW habitat, including:

- disturbed low-growing vegetation within grassland and shrublands (less than 30 percent canopy cover);
- gently rolling or level terrain;
- areas with abundant small mammal burrows, especially California ground squirrel (*Otospermophilus beecheyi*) burrows;
- fence posts, rocks, or other low perching locations; and
- man-made structures, such as earthen berms, debris piles, and cement culverts.

All potential burrows were checked for signs of recent owl occupation. Signs of occupation include:

- pellets/casting (regurgitate fur, bones, and/or insect parts);
- white wash (excrement); and/or
- feathers.

Part II: Locating Burrowing Owls

Since suitable habitat and burrows were observed within the survey area during the habitat assessment, focused BUOW surveys were conducted to determine whether the survey area supports BUOW. The focused surveys consisted of four breeding season surveys that were performed by Mr. Cooley and Ms. Singleton and HELIX biologists Matthew Dimson and Daniel Torres between March 20 and June 26,

2019. The surveys were spaced at least three weeks apart, with at least one survey conducted between February 15 and April 15 and three surveys conducted between April 15 and July 15 (Table 1, *Survey Information*)

The biologists walked transects spaced no greater than 20 meters apart (approximately 65 feet) to allow for 100 percent visual coverage of all suitable habitat within the survey area (Figure 4). The biologists walked slowly and methodically, closely checking suitable habitat within the survey area for BUOW diagnostic sign (e.g., molted feathers, pellets/castings, or whitewash at or near a burrow entrance) and individual BUOW. If observed, BUOW sign and BUOW observations were recorded with a GPS unit. Inaccessible areas of the survey area were visually assessed using binoculars.

Table 1
SURVEY INFORMATION

Site Visit	Survey Date	Biologist	Start/Stop Time	Start/Stop Weather Conditions	Survey Results
HA[1]	11/01/18	Ezekiel Cooley Lauren Singleton	0815-1500	63°F, wind 0-1 mph, 15% clouds 84°F, wind 6-8 mph, 80% clouds	Suitable habitat and burrows observed.
1	03/20/19	Ezekiel Cooley Matthew Dimson Lauren Singleton Daniel Torres	0645-0930	54°F, wind 2-3 mph, 100% clouds 56°F, wind 1-2 mph, 90% clouds	• Active Burrow #1: One adult was observed on a berm adjacent to Doubleday Avenue in the eastern portion of the study area, approximately 1,800 feet to the south of its intersection with E Santa Ana Street. The individual was observed perched next to the burrow and pellets and whitewash were observed around the burrow entrance. • Active Burrow #2: One adult was observed in the northwestern portion of the study area, approximately 630 feet to the west of the Commerce Parkway and Carnegie Avenue intersection. The individual was observed in a burrow and pellets were observed around the burrow entrance. • Active Burrow #3: Two adults were observed within the 500-foot buffer adjacent to Carnegie Avenue, approximately 180 feet to the north of the Santa Ana Street and Carnegie Avenue intersection. The pair was observed perched near a burrow with sign, including pellets and whitewash. One of the adults flushed to the east and was observed perched adjacent to a vertical corrugated metal pipe storm drain riser. Sign, including pellets and whitewash, were observed in and around the storm drain riser. • Active Burrow #4: Two adults were observed within the 500-foot buffer adjacent to Carnegie Avenue, approximately 490 feet to the south of the Santa Ana Street and Carnegie Avenue intersection. The pair was observed perched near a burrow with sign, including pellets and whitewash. One of the adults flushed approximately 100 feet to the east and was observed perched adjacent to a storm drain riser. Sign, including pellets and whitewash,

Both adults flushed to the east and were observed perched adjacent to two different vertical corrugated metal pipe storm drain risers. Sign, including pellets and whitewash, were observed in and around the storm drain risers. • Active Burrow #4: Two adults were perched near the burrow entrance.
3	05/21/19	Ezekiel Cooley Matthew Dimson Lauren Singleton Daniel Torres	0700-0930	55°F, wind 0-1 mph, 95% clouds 57°F, wind 1-2 mph, 85% clouds	• Active Burrow #1: One adult was observed perched next to the burrow. • Active Burrow #3: Two adults were perched near the burrow entrance. Both adults flushed to the east and were observed perched adjacent to two different storm drain risers. • Active Burrow #4: One adult was perched near the burrow entrance. Six juvenile BUOWs were observed in and around the burrow. Another adult was observed adjacent to a burrow approximately 800 feet to the southwest of Active Burrow #4. The adult flushed towards Active Burrow #4.
4	06/26/19	Ezekiel Cooley Matthew Dimson Lauren Singleton Daniel Torres	0600-0830	64°F, wind 1-2 mph, 100% clouds 65°F, wind 1-2 mph, 100% clouds	• Active Burrow #1: One adult was observed perched next to the burrow. • Active Burrow #3: Two adults were perched near the burrow entrance. Both adults flushed to the east and were observed perched adjacent to two different storm drain risers. • Active Burrow #4: Two adults were perched near the burrow entrance. Five juvenile BUOWs were observed in and around the burrow.

[1] Step I Habitat Assessment and Step II (Part A) focused burrow survey.

RESULTS

Suitable BUOW habitat was observed within the survey area during the habitat assessment, including low-growing vegetation within the non-native grassland. Several burrows and burrow surrogates, such as vertical corrugated metal pipe storm drain risers, that could potentially be used by BUOWs were observed within the survey area (Figure 4). Suitable foraging habitat was observed within and adjacent to the survey area. There are CNDDB records of BUOWs within the survey area from 2007 and 2013 (CDFW 2019).

A total of four active burrows were detected within the survey area (Figure 4). Two active burrows were located within the study area (Active Burrow [AB]-1 and AB-2). AB-1 was located adjacent to the eastern boundary of the study area and AB-2 was located in the northwest portion of the study area. Two active burrows were located within the 500-foot buffer, adjacent to the western boundary of the study area (AB-3 and AB-4). A summary of observations is provided below.

AB-1 was located on the study area adjacent to Doubleday Avenue, approximately 1,800 feet to the south of the Doubleday Avenue and E Santa Ana Street intersection. One adult was observed perched next to the burrow during all four surveys. Pellets and whitewash were observed around the burrow entrance.

AB-2 was located in the northern portion of the study area, approximately 630 feet to the west of the Commerce Parkway and Carnegie Avenue intersection. One adult BUOW was observed during the first survey. The individual was observed in AB-2 and pellets were observed around the burrow entrance. No BUOWs were observed at AB-2 during the second, third, or fourth survey.

AB-3 was located within the 500-foot buffer adjacent to Carnegie Avenue, approximately 180 feet to the north of the Santa Ana Street and Carnegie Avenue intersection. Two adults were observed during the first survey. The pair was observed perched near AB-3 with sign, which included pellets and whitewash. One of the adults flushed to the east and was observed perched adjacent to a vertical corrugated metal pipe storm drain riser. Sign was observed in and around the storm drain riser, including pellets and whitewash. The two adults were also observed near AB-3 during the second, third, and fourth survey. During these three surveys, the individuals flushed to the east and were observed perched adjacent to two different storm drain risers.

AB-4 was located within the 500-foot buffer adjacent to Carnegie Avenue, approximately 490 feet to the south of the Santa Ana Street and Carnegie Avenue intersection. Two adults were observed during the first survey. The pair was observed perched near AB-4 with sign, which included pellets and whitewash. One of the adults flushed approximately 100 feet to the east and was observed perched adjacent to a storm drain riser. Sign, including pellets and whitewash, were observed in and around the storm drain riser. The pair was observed near AB-4 during the second survey. During the third survey, one adult was perched near the entrance of AB-4. Six juvenile BUOWs were also observed in and around the burrow. Another adult was observed adjacent to a burrow approximately 800 feet to the southwest of AB-4 and flushed towards AB-4 when approached. During the fourth survey, two adults and five juveniles were perched near AB-4.

The locations of all suitable burrows, BUOW sign, and occupied burrows observed within and adjacent to the study area are shown on Figure 4.

CONCLUSION

A total of four active burrows were detected within the survey area, including two on the study area (AB-1 and AB-2) and two within the 500-foot buffer (AB-3 and AB-4). One adult was observed near AB-1, one adult was observed near AB-2, two adults were observed near AB-3, and two adults and five to six juveniles were observed near AB-4.

A take avoidance (pre-construction) survey is required to be conducted within 14 days prior to ground disturbance in accordance with CDFW Staff Report on BUOW Mitigation (2012). If ground-disturbing activities are delayed more than 14 days after the pre-construction survey has been completed, the study area must be resurveyed.

If you have any questions regarding the information presented in this letter report, please contact Ezekiel Cooley (EzekielC@helixepi.com) or Lauren Singleton (LaurenS@helixepi.com) at (949) 234-8770.

Sincerely,

Ezekiel Cooley

Mr. Keith Owens
Ontario International Airport Authority
1923 E Avion Avenue
Ontario, CA 91761

Subject: 2019\2020 non-breeding Burrowing Owl Survey Report for Potential Development of Ontario International Airport's Parcel Study

Dear Mr. Owens:

This letter report presents the results of the 2019 non-breeding season burrowing owl (*Athene cunicularia*; BUOW) survey conducted by HELIX Environmental Planning, Inc. (HELIX) for the Ontario International Airport (study area) located in the City of Ontario, San Bernardino County, California. The survey was conducted in accordance with the California Department of Fish and Wildlife (CDFW; previously California Department of Fish and Game [CDFG]) Staff Report on BUOW Mitigation (CDFG 2012). This letter report describes the methods used to perform the survey and the survey results.

STUDY AREA LOCATION

The 322-acre study area is generally located south of the Interstate (I-) 10 and west of I-15 (Figure 1, *Regional Location*). The study area is located within Section 25 of Township 1 South, Range 7 West of the Guasti, California U.S. Geological Survey (USGS) 7.5-minute topographic quadrangle (Figure 2, *Vicinity Map*). Specifically, the study area is located to the northwest of the intersection of S Haven Avenue and Jurupa Street; to the northwest and southwest of the intersection of E Airport Drive and S Haven Avenue; and to the southwest and southeast of the intersection of S Grove Avenue and E Airport Drive (Figure 3, *Aerial Photograph*). The study area comprises approximately 320 acres of suitable burrowing owl habitat.

STUDY AREA DESCRIPTION

The study area is located directly on and surrounding the tarmac of the Ontario International Airport. The study area is dominated by non-native grass species, such as common ripgut grass (*Bromus diandrus*), puncture vine (*Tribulus terestris*), *red* brome (*Bromus madritensis* ssp. *rubens*), and slender oat (*Avena barbata*), which are maintained as required for weed abatement. The topography of the study area is mostly flat with elevations ranging from 902 feet above mean sea level (AMSL) near the southeast corner to 967 feet AMSL near the northeast corner. Immediate surrounding land uses include the commercial buildings to the north, east, south, and west.

METHODS

The focused BUOW survey was conducted according to the CDFW BUOW survey guidelines (CDFG 2012), which includes Part I Habitat Assessment and Focused Burrow Survey and Part II Focused BUOW Surveys. The CDFW BUOW survey guidelines are described in further detail below.

Part I: Habitat Assessment and Focused Burrow Survey

Prior to conducting the habitat assessment, HELIX consulted the California Natural Diversity Database (CNDDB) to determine the nearest BUOW occurrence(s). A habitat assessment was conducted by HELIX biologists Ezekiel Cooley and Lauren Singleton on November 1, 2018 to determine whether the study area supports suitable BUOW habitat. A focused burrow survey was conducted concurrently with the habitat assessment. All suitable burrows (i.e., greater than 11 centimeters [cm] in height and width and greater than 150 cm in depth) and burrow surrogates were recorded using a handheld Global Positioning System (GPS) unit (Figure 4, *Suitable Burrow and Transect Locations*). The habitat assessment and focused burrow survey were conducted prior to commencement of the BUOW focused surveys. The assessment was conducted on the study area and within a 150-meter (approximately 500-foot) buffer zone around the periphery of the study area (survey area). The survey area was slowly walked and assessed for suitable BUOW habitat, including:

- disturbed low-growing vegetation within grassland and shrublands (less than 30 percent canopy cover);
- gently rolling or level terrain;
- areas with abundant small mammal burrows, especially California ground squirrel (*Otospermophilus beecheyi*) burrows;
- fence posts, rocks, or other low perching locations; and
- man-made structures, such as earthen berms, debris piles, and cement culverts.

All potential burrows were checked for signs of recent owl occupation. Signs of occupation include:

- pellets/casting (regurgitate fur, bones, and/or insect parts);
- white wash (excrement); and/or
- feathers.

Part II: Locating Burrowing Owls

Since suitable habitat and burrows were observed within the survey area during the habitat assessment, non-breeding focused BUOW surveys were conducted to determine whether the survey area supports BUOW. The focused surveys consisted of four (4) non-breeding season surveys, spread evenly, throughout the nonbreeding season, that were performed by Mr. Cooley and Ms. Singleton and HELIX biologists Matthew Dimson, Amy Lee, and Daniel Torres between October 8, 2019 and January 14, 2020. (Table 1 *Survey Information*)

The biologists walked transects spaced no greater than 20 meters apart (approximately 65 feet) to allow for 100 percent visual coverage of all suitable habitat within the survey area (Figure 4). The biologists walked slowly and methodically, closely checking suitable habitat within the survey area for BUOW diagnostic sign (e.g., molted feathers, pellets/castings, or whitewash at or near a burrow entrance) and individual BUOW. If observed, BUOW sign and BUOW observations were recorded with a GPS unit. Inaccessible areas of the survey area were visually assessed using binoculars.

12/06/19	Matthew Dimson Lauren Singleton	0730-0930	50°F, wind 0-1 mph, 30% clouds 63°F, wind 2-3 mph, 50% clouds	• No BUOW detected.
12/10/19	Matthew Dimson Lauren Singleton	0710-0930	46°F, wind 1-2 mph, 20% clouds 55°F, wind 0-1 mph, 80% clouds	• No BUOW detected.
01/07/20	Ezekiel Cooley Matthew Dimson	0715-0900	46°F, wind 0-1 mph, 15% clouds 55°F, wind 0-1 mph, 20% clouds	• Active Burrow #3: One adult was observed below a grated drain with a burrow located on the south side of the drain.
1/10/20	Ezekiel Cooley Matthew Dimson	0710-0850	43°F, wind 2-3 mph, 100% clouds 50°F, wind 1-2 mph, 100% clouds	• No BUOW detected.
01/14/20	Ezekiel Cooley Matthew Dimson	0700-0900	43°F, wind 0-1 mph, 100% clouds 47°F, wind 0-1 mph, 100% clouds	• No BUOW detected.

RESULTS

Suitable BUOW habitat was observed within the survey area during the habitat assessment, including low-growing vegetation within the non-native grassland. Several burrows and burrow surrogates, such as vertical corrugated metal pipe storm drain risers, that could potentially be used by BUOWs were observed within the survey area (Figure 4). Suitable foraging habitat was observed within and adjacent to the survey area. There are CNDDB records of BUOWs within the survey area from 2007 and 2013 (CDFW 2019).

A total of three active burrows were detected within the survey area (Figure 4). One active burrow was located on the western end of the tarmac (Active Burrow [AB]-1) and two active burrows were located on the northeastern end of the tarmac (Active Burrow [AB]-2 and AB-3). A summary of observations is provided below.

AB-1 was on the study are in the middle of the tarmac between the two runways, approximately 2,100 feet to the northwest of South Vineyard Avenue and Avion Drive intersection. One adult BUOW was observed next to a grated drain with a burrow located to the west of the drain. This adult was only observed once on October 5, 2019 and was not present on subsequent surveys.

AB-2 was located on the eastern portion of the study area, approximately 2,200 feet to the southwest of South Haven Avenue and East Airport Drive. One adult BUOW was observed in a cement culvert on October 11 and November 8, 2019. The BUOW was not present on subsequent surveys.

AB-3 was located on the eastern portion of the study area, approximately 3,000 feet to the southwest of South Haven Avenue and East Airport Drive. One adult was observed below a grated drain with a burrow located on the south side of the drain. This adult was observed only once on January 7, 2020.

The locations of all suitable burrows, BUOW sign, and occupied burrows observed within and adjacent to the study area are shown on Figure 4.

CONCLUSION

A total of three active burrows were detected within the survey area. One adult BUOW was observed at each active burrow: AB-1, AB-2, and AB-3. AB-1 and AB-2 had no adult BUOW present during the final series of surveys.

These surveys are intended to document the non-breeding season activity on the survey area and may not be considered conclusive findings by CDFW even if BUOW are observed. A breeding season focused survey may be required to determine the full extent of use on the survey area.

In addition to breeding season protocol surveys, a take avoidance (pre-construction) survey would also be required and shall be conducted within 14 days prior to ground disturbance in accordance with CDFW Staff Report on BUOW Mitigation (2012). If ground-disturbing activities are delayed more than 14 days after the pre-construction survey has been completed, the study area must be resurveyed.

If you have any questions regarding the information presented in this letter report, please contact Ezekiel Cooley (EzekielC@helixepi.com) or Lauren Singleton (LaurenS@helixepi.com) at (949) 234-8770.

Sincerely,

Ezekiel Cooley

Subject: Pre-Construction Clearance Survey for Burrowing Owl and Other Nesting Birds at 10 Proposed Geotechnical Boring Sites in the City of Ontario, San Bernardino County, California

---

INTRODUCTION

Wood Environment & Infrastructure Solutions, Inc. (Wood) conducted a clearance survey for burrowing owl (*Athene cunicularia*) and other nesting bird species protected by the Migratory Bird Treaty Act (MBTA) at 10 proposed boring sites located within the California Logistics Center in the city of Ontario, San Bernardino County, California (Appendix A, Figure 1). McDonald Property Group proposes to conduct exploratory geotechnical boring at these sites in the immediate future and contracted Wood to conduct the clearance survey to determine if the burrowing owl would potentially be affected by the proposed action.

The 256-acre proposed project is located east of the Ontario International Airport. This area is generally located east of S Haven Avenue, west of Doubleday Avenue, south of E Airport Drive and north of E Jurupa Street (Appendix A, Figure 1). The proposed boring sites are location on Assessor's Parcel Numbers (APN's) 021-123-204-207, 211-220, 244-246 and 021-122-247, 248, 252-257 (Wood 2021).

BACKGROUND

The burrowing owl is a small, tan, short-tailed, ground-dwelling owl that occupies underground burrows. A member of the Strigidae (typical owls family), this species is associated with

grasslands and other arid open terrain, including Sonoran creosote bush scrub, throughout much of the western United States. Burrowing owls are opportunistic in their selection of burrows, typically utilizing the burrows of small mammals (*e.g.*, ground squirrels, kit fox), but also use drainpipes, culverts, and other suitable natural or manmade cavities at or below ground level. In California, the species often occurs in association with colonies of the California ground squirrel (*Otospermophilus beecheyi*), where it makes use of the squirrel's burrows. The entrance of the burrow is often adorned with animal dung, feathers, debris, and other small objects. The species is active both day and night and may be seen perching conspicuously on fence posts or standing at the entrance of their burrows. Due to the characteristic fossorial habits of burrowing owls, nest burrows are a critical component of their habitat.

In Southern California, burrowing owls are not only found in undisturbed natural areas, but also fallow agricultural fields, margins of active agricultural areas, livestock farms, airports, and vacant lots. Despite their apparent tolerance to human activities, burrowing owl populations in California are clearly declining and, if declines continue, the species may qualify for listing under the state and/or federal Endangered Species Acts (CDFG 1995). The declines in burrowing owl populations are attributed to loss and degradation of habitat, to on-going residential and commercial development, and to rodent control programs. The burrowing owl is currently designated a California Species of Concern (CSC) by the California Department of Fish and Wildlife (CDFW 2020), managed as a Bird of Conservation Concern by the United States Fish and Wildlife Service (USFWS), is considered "sensitive" by the U. S. Bureau of Land Management (BLM), and protected by the Migratory Bird Treaty Act (MBTA) and California Fish and Game Code Sections 3503, 3503.5, 3513, and 3800. Any impacts to burrowing owls and/or their occupied burrows may be considered significant under the MBTA and California Environmental Quality Act (CEQA), requiring specific mitigation often in the form of the purchase, establishment, and management of on- or off-site conservation areas in perpetuity.

The California Burrowing Owl Consortium (CBOC) developed the Burrowing Owl Survey Protocol and Mitigation Guidelines to meet the need of uniform standards when surveying burrowing owl populations and evaluating impacts from development projects (CBOC 1997). In 1995 the CDFG issued the Staff Report on Burrowing Owl Mitigation to all its regional managers to ensure consistency in standards, policies, and regulatory mandates relating to the burrowing owl (CDFG 1995). Due to the continued decline of burrowing owl populations statewide and as an attempt to reverse this trend, the CDFG issued more effective, viable, coordinated and concerted approach to burrowing owl conservation actions with the release of an updated Staff Report on Burrowing Owl Mitigation (CDFG 2012).

METHODS

The clearance survey was conducted on 11 August 2021 by Wood biologists Nathan Moorhatch, Alec Williams and Michael Wilcox. All areas of the Biological Study Area (BSA), which included all proposed boring locations, obvious access/ingress and egress routes and a 500-foot buffer zone area surrounding the bore sites and access routes, were surveyed on-foot utilizing parallel pedestrian belt transects spaced approximately 18 meters (60 feet) apart. Additionally, previously reported/known burrowing owl locations on-site and in immediate vicinity were surveyed. Adjacent off-site areas were surveyed with binoculars for presence of burrowing owls, in accordance with protocol established by the California Burrowing Owl Consortium (1997) and the Staff Report on Burrowing Owl Mitigation (CDFW 2012). Binoculars were used to visually inspect potential perching locations (i.e., rocks, debris, dirt mounds) as well as the entrances to all on-site mammal burrows, debris providing potential shelter (i.e., piles of

concrete slabs, cement drainpipes), search for other bird nests and to identify other bird species observed. Mammal burrows were carefully examined for evidence of burrowing owl occupation (i.e., animal dung, feathers, whitewash, pellets, debris, etc.). Locations with burrowing owls and/or burrows exhibiting burrowing owl sign were marked with a handheld cell phone using the Collector application. Representative photographs were also taken (Appendix B). All wildlife detected was recorded in field notes and is included as Appendix C.

RESULTS

Weather conditions during the survey were conducive for owl activity. Skies were partly cloudy with an estimated 30 to 90% cloud cover. Temperatures were 75 to 92 degrees Fahrenheit. Winds were calm (~0-5 mph).

Multiple burrowing owls were detected in multiple locations during the clearance survey (Appendix A, Figure 1). Some were observed perching on or beneath covered metal manmade structures resembling drainage features (although these features may serve some other purpose), some were observed perching on the ground and one was observed perching on a dead branch apparently staged by burrowing owl watchers/enthusiasts that were present and photographing the owls during the survey. At least 7 cars and at least 7 people were present, taking photographs and watching the owls for several hours during the survey. Biologists spoke with several of these individuals, and they indicated that they have collectively been aware of and monitoring this population for years. Several other staged branches, logs, etc. were observed throughout the area. A gathering of police officers training on motorcycles along one section of one of the roads bisecting the BSA were also aware of the owls and pointed out at least one location where they had just observed an owl to the biologists.

In addition to the live burrowing owls, several burrow locations were also observed exhibiting recent burrowing owl sign (i.e., whitewash, pellets, feathers, tracks and/or burrow adornments) (Appendix A, Figure 3). California ground squirrel burrows suitable for burrowing owls were detected on-site and throughout the adjacent BSA within the buffer zone areas.

More specifically, live burrowing owls and active burrowing owl burrows, including man-made structures currently being utilized by the species, are present in several areas of the site. Environmentally Sensitive Areas (ESAs) 152 meters (500-feet) in diameter from the center of the occupied owl burrows/shelters were established around these areas. Proposed bore sites B3, B6 and B7 are within the established ESAs. Proposed bore sites B1, B2, B4, B5, B7, B8, B9 and B10 are located outside of the established ESAs. While technically outside of the established ESAs, bore sites B2 and B4 are very close to the respective ESA edges.

No other bird nests or bird species displaying nesting behavior were detected. If an active nest belonging to a species protected by the MBTA are observed within the 152-meter (500-foot) buffer zone area of any of the bore sites, adaptive measures will be implemented to avoid impacts to those nests as well.

A total of one reptile, 14 bird species and two mammals were detected (Appendix C).

SUMMARY AND RECOMMENDATIONS

All the proposed bore sites are within suitable habitat for burrowing owl and the area is currently occupied by this declining and protected species. California ground squirrel burrows and man-made structures suitable for burrowing owl use are present throughout the area and within

proximity to each of the proposed bore sites. Live burrowing owls, active burrows and man-made structures currently being utilized by burrowing owls are present within the 150-meter (500-foot) buffer zone area surrounding bore sites B3, B6 and B7. Bore sites B2 and B4, while technically outside of ESAs, are very close to the edges. It should be noted that burrowing owls are highly mobile and may colonize or recolonize currently unused burrows and/or new burrows recently created by California ground squirrels at any time.

For these reasons, the potential for burrowing owls to occur in, or occupy areas where no burrowing owls, or their sign, were observed during the survey is considered high. As a result, biological monitoring of all project-related activities on-site is strongly recommended. Monitors would conduct a pre-construction clearance survey at the bore site(s) proposed to be worked on at that time, their proposed ingress/egress access route(s) and in the immediate vicinity prior to mobilization of equipment and throughout the day to confirm that burrowing owls are not currently present within the 500-foot buffer zone areas around each of the bore sites and to ensure that burrowing owls are not affected by project activities. If those bore sites that are within the 500-foot buffer of an occupied burrow can be moved outside of this buffer area, it would greatly reduce the potential for burrowing owl impacts.

If burrowing owls are determined to be present at a particular bore site, or nearby burrowing owls are observed displaying distress behaviors (i.e., flushing from perches or burrows, excessive bobbing, emitting distress calls, etc.) then actions to avoid disturbing those owls would be implemented immediately. Such actions may include stop work orders at that bore site and/or mobilization to other bore sites where activities would not affect burrowing owls. Use of sound and/or visual barriers may also be an option should the need arise.

Monitors would take daily field notes, or fill out standardized field forms, take photographs of the progress of project activities to document compliance and avoidance of project-related impacts to burrowing owls. A Worker Environmental Awareness Program (WEAP) with emphasis on the burrowing owl and the actions proposed to be implemented to avoid project-related impacts to the species should also be administered to all project personnel prior to the commencement of on-site activities. The WEAP would outline the identification, ecology, and conservation status of the burrowing owl, as well as general and specific impact avoidance measures to be implemented. All personnel would be required to sign a form documenting their attendance and agreement to implement measures to avoid impacting burrowing owls. Anyone that refuses to attend the WEAP, refuses to sign the acknowledgement form and/or implement impact avoidance measures will not be permitted to work on the site.

For work at proposed bore sites B3, B6 and B7, the CDFW should be contacted immediately for additional guidance. This population of burrowing owls is well-known and has a devoted fan club that monitors their activity frequently, perhaps even daily. Any perceived disturbance to these owls will almost certainly result in calls and/or reports to CalTIP, an online mobile phone application, website, and phone number for people to easily and instantly report violations of wildlife laws, catch poachers, etc., to the CDFW. Because of the high profile of this burrowing owl population, the project will very likely be under the microscope of both the public and resource agencies and could potentially end up in the crosshairs of anyone that believes that actions to protect the well-being of these owls aren't being implemented or are inadequate or ineffective. Actions taken, or not taken, during the implementation of on-site project activities could potentially end up in lawsuits and/or negative publicity. Wood strongly recommends that the project proponent involve the CDFW in the planning of project activities and implement the above measures and any others that the CDFW recommends.

CONCLUSIONS

Because burrowing owls occur in the immediate vicinity of the proposed bore sites, actions to avoid potential impacts to this species have been developed specifically for this project and should be implemented for all on-site project-related activities. These actions include: 1) administration of a project-specific WEAP, 2) pre-construction clearance surveys at bore sites, along access routes and the immediate vicinity immediately prior to site mobilization, 3) biological monitoring during all on-site operations resulting in surface disturbance, increased vibrations and/or loud noise, and 4) notification and correspondence with CDFW regarding the proposed project and impact avoidance measures. With implementation of the impact avoidance measures recommended above and the notification, and inclusion of the CDFW for any recommendations that they may have, the proposed geotechnical boring at the project site should be able to be successfully implemented without impacts to the burrowing owls.

Subject: 2022 Burrowing Owl (*Athene cunicularia*) Survey Report for the California Logistics Center at Ontario International Airport Project

Dear Mr. John Pierce:

This letter presents the results of the 2022 focused burrowing owl (*Athene cunicularia*; BUOW) survey conducted by HELIX Environmental Planning, Inc. (HELIX) for California Logistics Center at Ontario International Airport Project (project). The survey was conducted in accordance with the California Department of Fish and Wildlife (CDFW) Staff Report on Burrowing Owl Mitigation (formerly California Department of Fish and Game [CDFG] 2012).[1] This letter describes the methods used to perform the survey and the results.

SURVEY RESULTS SUMMARY

Numerous suitable burrow and burrow surrogates were observed throughout the project site. Two burrows (Nest Nos. 1 and 2) with breeding pairs and juveniles were detected. Six additional burrows (Alternate Burrow [AB] Nos. 1 through 6) were also noted, which were used by BUOWS for cover.

PROJECT LOCATION

The project site is generally located 0.7 mile to the west of Interstate (I-) 15 and 3 miles to the south of I-10 in the City of Ontario, San Bernardino County, California (Figure 1, *Regional Location*). It is depicted within Section 25 of Township 1 South, Range 7 West of the U.S. Geological Survey 7.5-minute Guasti quadrangle map (Figure 2, *USGS Topography*). Specifically, the project site is located west and east of S Commerce Parkway and north and south of E Santa Ana Street (Figure 3, *Aerial Photograph*).

[1] California Department of Fish and Game. 2012. Staff Report on Burrowing Owl Mitigation. State of California Natural Resource Agency. March 7.

PROJECT SITE DESCRIPTION

The approximately 218-acre project site consists of disturbed habitat with primarily non-native annuals and grasses, such as *Hordeum* spp. *Bromus* spp., *Malva* spp., and *Sisymbrium* spp. Native *Amsinckia* spp. was also observed throughout the site. Soils within the project site solely consist of Delhi fine sand.[2] The topography of the project site is mostly flat, with elevations ranging from 900 feet (274 meters) above mean sea level (AMSL) near the southeast corner to 942 feet (287 meters) AMSL near the southwest corner. The project site is bounded by Ontario International Airport to the west, and industrial and commercial properties to the north, east, and south.

Representative photographs of the project site are shown in Attachment A, *Representative Site Photos*.

METHODS

Part I: Habitat Assessment and Focused Burrow Survey

Prior to conducting the habitat assessment, HELIX consulted the California Natural Diversity Database (CNDDB) to determine the nearest BUOW occurrence(s).[3] HELIX biologists John Gardner, Robert Hogenauer, Jessica Lee, and Daniel Torres conducted a habitat assessment on March 3, 2022, to determine whether the project site supports suitable BUOW habitat. A focused burrow survey was conducted concurrently with the habitat assessment. All suitable burrows (i.e., greater than approximately four inches [11 cm] in height and width and greater than approximately 59 inches [50 cm] in depth) and burrow surrogates were recorded using a handheld Global Positioning System (GPS) unit. The habitat assessment and focused burrow survey were conducted concurrently with the first focused survey (see Part II described below). The assessment was conducted on the project site and included an approximately 500-foot (150-m) buffer zone around the periphery of the project site (survey area). Inaccessible areas of the survey area, including private land behind fences, were visually assessed using binoculars. The survey area was slowly walked and assessed for suitable BUOW habitat, including:

- disturbed, low-growing vegetation within grassland and shrublands (less than 30 percent canopy cover);
- gently rolling or level terrain;
- areas with abundant small mammal burrows, especially California ground squirrel (*Otospermophilus beecheyi*) burrows;
- fence posts, rocks, or other low perching locations; and
- artificial structures, such as earthen berms, debris piles, and cement culverts.

[2] Natural Resources Conservation Service. 2022. Web Soil Survey. United States Department of Agriculture (USDA). Retrieved from: http://websoilsurvey.nrcs.usda.gov/app/WebSoilSurvey.Aspx. Accessed July 14, 2022.

[3] California Department of Fish and Wildlife. 2022. California Natural Diversity Database and Rarefind. California Department of Fish and Wildlife: Sacramento, California. Retrieved from: https://www.wildlife.ca.gov/Data/CNDDB/Maps-and-Data. Accessed July 14, 2022.

All potential owl burrows were checked for signs of recent owl occupation. Signs of occupation include:

- pellets/casting (regurgitated fur, bones, and/or insect parts);
- white wash (excrement); and/or
- feathers.

Part II: Focused Burrowing Owl Survey

Because suitable habitat and burrows were observed within the survey area during the habitat assessment, focused BUOW surveys were conducted to determine whether the survey area supports BUOW. The focused surveys consisted of four breeding season surveys performed by Mr. Gardner, Mr. Hogenauer, Ms. Lee, and Mr. Torres, and HELIX Biologists Matthew Dimson and Shawn Carroll between March 3 and July 8, 2022. The surveys were spaced at least three weeks apart, with at least one survey conducted between February 15 and April 15, and the remaining three surveys conducted between April 15 and July 15, with at least one of these surveys occurring after June 15 (Table 1, *Survey Information*).

The biologists walked transects spaced no greater than approximately 65 feet apart (20 meters) to allow for 100 percent visual coverage of all suitable habitat within the survey area. The biologists walked slowly and methodically, closely checking suitable habitat within the survey area for BUOW diagnostic sign (e.g., molted feathers, pellets/castings, or whitewash at or near a burrow entrance) and individual BUOW. If observed, BUOW sign and BUOW observations were recorded with a GPS unit. Inaccessible areas of the survey area were visually assessed using binoculars.

Table 1
SURVEY INFORMATION

Survey Visit	Date	Biologist(s)	Time (Start/Stop)	Weather Conditions (Start/Stop)	Results
1[1]	03/03/22	John Gardner Robert Hogenauer Jessica Lee Daniel Torres	0610/0910	51°F, wind 0-1 mph, 30% clouds 62°F, wind 1-3 mph, 55% clouds	• Suitable BUOW habitat and burrows were identified within the survey area. • No BUOWs were observed during this focused survey.
2	04/21/22	Shawn Carroll Matthew Dimson Jessica Lee Daniel Torres	0630/1000	52°F, wind 0-1 mph, 1% clouds 61°F, wind 3-5 mph, 1% clouds	• Two adult BUOWs were observed near Nest No. 1, which is an earthen burrow located on the west side of Carnegie Avenue and approximately 900 feet north of E Santa Ana Street. • One adult BUOW was observed near Nest No. 2, which is an earthen burrow located on the west side of Carnegie Avenue and approximately 630 feet north of E Santa Ana Street. • One adult BUOW was observed near AB No. 1, which is an earthen burrow located on the west side of Carnegie Avenue and approximately 600 feet south of E Santa Ana Street.

Survey Visit	Date	Biologist(s)	Time (Start/Stop)	Weather Conditions (Start/Stop)	Results
3	05/18/22	Matthew Dimson Shawn Carroll Jessica Lee Daniel Torres	0610/0930	55°F, wind 1-2 mph, 100% clouds 64°F, wind 2-3 mph, 100% clouds	• Two adult BUOWs and two juvenile BUOWs were observed near Nest No. 1. • Two adult BUOWs and four juvenile BUOWs were observed near Nest No. 2 • One adult BUOW was observed near AB No. 2, which is a vertical corrugated metal pipe storm drain riser located on the east side of Carnegie Avenue and approximately 400 feet north of E Santa Ana Street.
4	07/08/22	Shawn Carroll Matthew Dimson John Gardner Daniel Torres	0620/0930	64°F, wind 1-2 mph, 10% clouds 73°F, wind 0-1 mph, 1% clouds	Due to the timing of the breeding season and the maturity of the juveniles, only individuals were noted, given juveniles and adults were difficult to differentiate. • One BUOW individual was observed near AB No. 3, which is an earthen burrow located approximately 650 feet to the southwest of the intersection of E Airport Drive and Carnegie Avenue. • Two BUOW individuals were observed near AB No. 4, which is a storm drain riser located on the east side of Carnegie Avenue and approximately 840 feet north of E Santa Ana Street. Individuals from Nest No. 1 are presumably using this burrow as an alternate burrow based on its proximity to the nest location and observation of individuals flushing from the nest to this burrow. [2] • Two BUOW individuals were observed near AB No. 5, which is a storm drain riser located on the west side of Carnegie Avenue and approximately 660 feet north of E Santa Ana Street. Individuals from Nest No. 2 are presumably using this burrow as an alternate burrow based on its proximity to the nest location and observation of individuals flushing from the nest to this burrow. [2] • Two BUOW individuals were observed near AB No. 6, which is an earthen burrow located on the west side of Carnegie Avenue and approximately 600 feet south of E Santa Ana Avenue.

[1] This survey included the habitat assessment and focused burrow survey.
[2] Alternate burrows used by BUOWs associated with Nests No. 1 and 2 are indicated by arrows shown on Figure 5.

RESULTS

CNDDB Record Review

There is a CNDDB record (Occurrence No. 1788) of BUOWs within the survey area, which between one and four breeding pairs were recorded between 2007 and 2013.[4] Four additional populations have been recorded on CNDDB within 1.5 miles of the project site. These CNDDB records are described below:

- CNDDB Occurrence No. 561: A BUOW population was documented within and adjacent to the existing Toyota Arena in the City of Ontario, approximately 0.75 mile north of the project site. Multiple breeding pairs and juveniles were documented at this location between 2002 and 2016, including prior to and after the Toyota Arena was constructed in 2007.
- CNDDB Occurrence No. 636: A BUOW population was recorded north of E 4th Street, east of Richmond Place, south of Mission Park Drive, and west of Buffalo Avenue in the City of Rancho Cucamonga. This population was recorded approximately 1.5 miles northeast of the project site. Nesting BUOWs were observed in 2003. The population is presumed extirpated since the habitat appears to have been developed sometime between 2015 and 2016 based on aerial imagery.[5]
- CNDDB Occurrence No. 664: A BUOW breeding pair and juveniles were documented in 2003 near the intersection of Vanderbilt Street and S Auto Center Drive in the City of Ontario, approximately 0.9 mile southeast of the project site. Based on the record description, these individuals were evicted outside of the nesting season in 2003. The site was developed sometime in 2003 based on aerial imagery.[6] The remaining suitable habitat appears to be present directly to the northwest and south of the developed site.
- CNDDB Occurrence No. 1044: A BUOW population was recorded east of S Haven Avenue, south of E Francis Street, and west of Dupont Avenue in the City of Ontario. This population was recorded approximately 0.3 mile south of the project site. Seven BUOWS were recorded at this location in 2006. This population is presumed extirpated since the habitat appears to have been developed sometime between 2008 and 2009 based on aerial imagery,[7] although remaining suitable habitat appears to be present directly to the south and southeast of the developed site.

Survey Results

Suitable BUOW habitat was observed within the survey area during the habitat assessment conducted on March 3, 2022, including low-growing vegetation within the non-native grassland. Several burrows and burrow surrogates, such as vertical corrugated metal pipe storm drain risers, which could

potentially be used by BUOWs, were observed throughout the survey area (Figure 4, *Suitable Burrows*). Suitable foraging habitat was observed within and adjacent to the survey area.

Two burrows (Nest Nos. 1 and 2), with breeding pairs and juveniles, were detected within the project site (Figure 5, *Nests and Alternate Burrows*). Six alternate burrows, (AB Nos. 1 through 6) were also noted throughout the project site (Figure 5), and these burrows were used by BUOWs for cover. A summary of observations is provided below:

- Nest No. 1 is an earthen burrow located on the west side of Carnegie Avenue and approximately 900 feet north of E Santa Ana Street. One adult BUOW pair was observed near the burrow entrance during the first survey. Two adult BUOWs and two juvenile BUOWs were noted during the second survey. No BUOWs were noted at this burrow during the first or fourth surveys.
- Nest No. 2 is an earthen burrow located on the west side of Carnegie Avenue and approximately 630 feet north of E Santa Ana Street. One adult BUOW was observed next to an earthen burrow during the second survey. Two adult BUOWs and four BUOW juveniles were observed during the third survey. No BUOWs were observed during the first or fourth surveys.
- AB No. 1 is an earthen burrow located on the west side of Carnegie Avenue and approximately 600 feet south of E Santa Ana Street. One adult BUOW was observed during the second survey. No BUOWs were observed at this burrow during the first, third, or fourth surveys.
- AB No. 2 is a vertical corrugated metal pipe storm drain riser located on the east side of Carnegie Avenue and approximately 400 feet north of E Santa Ana Street. One adult BUOW was observed near the storm drain riser during the third survey. No BUOWs were observed at this burrow during the first, second, or fourth surveys.
- AB No. 3 is an earthen burrow located approximately 650 feet to the southwest of the intersection of E Airport Drive and Carnegie Avenue. One BUOW individual was observed during the fourth survey. Due to the timing of the breeding season and the maturity of the juveniles, only individuals were noted during the fourth survey, given juveniles and adults were difficult to differentiate. No BUOWs were observed at this burrow during the first, second, or third surveys.
- AB No. 4 is a vertical corrugated metal pipe storm drain riser located on the east side of Carnegie Avenue and approximately 840 feet north of E Santa Ana Street. Two BUOW individuals were observed during the fourth survey. Due to the timing of the breeding season and the maturity of the juveniles, only individuals were noted during the fourth survey, given juveniles and adults were difficult to differentiate. No BUOWs were observed at this burrow during the first, second, or third surveys. BUOWs from Nest No. 1 are presumably using this burrow as an alternate burrow based on its proximity to the nest location and observation of individuals flushing from the nest to this burrow.
- AB No. 5 is a storm drain riser located on the west side of Carnegie Avenue and approximately 660 feet north of E Santa Ana Street. Four individuals were noted during the fourth survey. Due to the timing of the breeding season and the maturity of the juveniles, only individuals were noted during the fourth survey, given juveniles and adults were difficult to differentiate. No BUOWs were observed at this burrow during the first, second, or third surveys. BUOWs from Nest No. 2 are presumably using this burrow as an alternate burrow based on its proximity to the nest location and observation of individuals flushing from the nest to this burrow.

- AB No. 6 is an earthen burrow located on the west side of Carnegie Avenue and approximately 600 feet south of E Santa Ana Avenue. Two BUOW individuals were observed during the fourth survey. Due to the timing of the breeding season and the maturity of the juveniles, only individuals were noted during the fourth survey, given juveniles and adults were difficult to differentiate. No BUOWs were observed at this burrow during the first, second, or third surveys.

OTHER SITE CONDITIONS

Wildlife photographers were noted in close proximity to Nest No. 1 during the second and third surveys (see Photograph 1 in Attachment A). An unknown person installed a perch consisting of a tree branch outside of Nest Nos. 1 and 2 (see Photographs 1 and 2 in Attachment A). There are numerous suitable raptor perches within and adjacent to the project site, which consists of tall ornamental trees and light poles. Raptors and/or sign of use (e.g., white wash) were observed on multiple suitable perching locations (Figure 6, *Observed Raptor Perches*).

CONCLUSION

Numerous suitable burrow and burrow surrogates were observed throughout the project site (Figure 4). Two burrows (Nest Nos. 1 and 2) with breeding pairs and juveniles were detected (Figure 5). Six alternate burrows (AB Nos. 1 through 6) were also noted (Figure 5), which were used by BUOWs for cover.

A take avoidance (pre-construction) survey is required within 14 days prior to ground disturbance ground-disturbing activities (i.e., earthwork, clearing, and/or grubbing), in accordance with CDFW Staff Report on BUOW Mitigation. If BUOW(s) are observed during the take avoidance survey, a BUOW Exclusion Plan and Mitigation Management Plan must be prepared and coordinated with CDFW prior to ground disturbance.[8]

SUMMARY

The Ontario International Airport Authority has requested a first year focused survey to assess the presence or absence of Delhi Sands Flower-Loving Fly (DSF, *Rhaphiomidas terminatus abdominalis*) for 151 acres (Group 1, with 143 acres of habitat suitable for DSF) of the Ontario International Airport Northwest Quadrant Demolition project in Ontario, California. To determine presence or absence of DSF on the study area, a series of at least 83 site visits totaling at least 274.56 field hours, were conducted on the survey area from July 1 to September 20, 2019.

A habitat evaluation conducted on March 13, 2019 (Osborne 2019) found all parcels investigated for the project area are mapped with Delhi sands (Woodruff 1980). These parcels all feature soil and ecological conditions *Suitable* for potential DSF. The habitat evaluations determined 143 acres of potential DSF habitat over the study area.

Delhi Sands Flower-Loving Fly was not observed on the Group 1 properties during the course of this first year 2019 field season. One special status animal species, Burrowing Owl (*Athene cunicularia*) was occasionally encountered in the course of this survey.

1.0 INTRODUCTION

This report presents the methods and results of a Delhi Sands Flower-Loving Fly (DSF, *Rhaphiomidas terminatus abdominalis*) focused survey for a 151-acre Group 1 properties, in Ontario, San Bernardino. The DSF was listed as an endangered species by the U.S. Fish and Wildlife Service on September 23, 1993 (USFWS 1993).

The Group 1 properties are located east of Haven Avenue, south of E. Airport Drive, and north of Jurupa Street as shown on the accompanying maps. And can be found on the Guaste, California USGS 7.5-minute quadrangle map, Township 2 South, Range 7 West, in Section 1 (Figures 1 and 2) .

2.0 NATURAL HISTORY OF THE DELHI SANDS FLOWER-LOVING FLY

Delhi Sands Flower-loving fly belongs to a genus of flies (*Rhaphiomidas*) commonly known as flower loving flies. There are more than 30 species of these flies, distributed across the southwestern United States and northern Mexico. These flies are huge by the standards set by most flies – with size among the species ranging from approximately 1.5 centimeters up to 3, and even 4 centimeters, usually gray, tan, rust or yellow in color. All species of *Rhaphiomidas* are associated with rather arid, sandy habitats, with most species living on dune systems of inland desert valleys, rivers, deltas, and beach strands. A few species are found in sandy washes, alluvial benches and remnant glacial moraines. Many species of these flies often hover before flowers in the manner of hummingbirds, using a long, thin, tubular proboscis (mouth-part), with which the flies probe for nectar – hence a traditional name "giant flower-loving flies". Smaller flies of the family Apioceridae, once considered very closely related to *Rhaphiomidas* were formerly called "flower-loving flies".

The DSF is only known to occur in association with Delhi sand deposits, presumably occupied the once extensive dune system of the upper Santa Ana River Valley, including portions of what is now the City of Colton, west through portions of the City of Ontario, and south to the Santa Ana River. Today, DSF exists on only a few disjunct sites (USFWS 1997) within a radius of about eight miles in southwestern San Bernardino and northwestern Riverside Counties (Colton, Rialto, Fontana, and Ontario). More than 95 percent of known DSF habitat was considered eliminated by development, agriculture and other land management practices by 1993 (Smith 1993, USFWS 1996 *in* Kingsley 1996), however, this proportion is now nearer 98 to 99% due to these ongoing processes. Many of the last remaining fragments of DSF habitat are currently under pressure by land management efforts such as heavy disking, irrigation, manure dumping, and gravel dumping. There is presently an estimated 1,200 acres of habitat that can support this species (USFWS 1997), but this estimate likely includes lands needing extensive habitat restoration.

Adult DSF flight period is typically August and September, when individual adults emerge, reproduce and die. The adult life span of an individual DSF lasts for a few days and adults do not live beyond the flight period (Kiyani 1995). Adult DSF are highly mobile, agile fliers. Male DSF are frequently seen flying low through habitat, using apparently random, circuitous paths around and between shrubs in search of females. Such "cruising" behavior often covers areas on the scale of 1000 square meters in the time span of a minute. Alternatively, male DSF are often seen flying about an open patch of ground (ca 100 square meters) such as along a dirt path or dune blow-out area. Here, males may repetitively land and rest on one or another object (such as small dried plants) in the area, and such rests are interrupted by periods of patrolling flight (apparently territorial) about the spot. When alarmed, these insects tend to fly rapidly in more or less a straight line – often covering distances of 100 meters in less than 6 seconds. Adult DSF are known to nectar at flowers of California buckwheat and California croton.

DSF, like other *Rhaphiomidas* species, appears to have an annual life cycle (because of the annual flight). However, it has been widely believed that the underground larval/pupal stage may persist for additional years, depending upon various environmental factors such as annual rainfall, food availability and weather conditions during the flight season (many desert *Rhaphiomidas* species do not appear after a drought year and often, substantial flights occur only sporadically over the years). The biology of *Rhaphiomidas trochilus* is likely informative of *Rhaphiomidas* species in general and DSF in particular. Based on observations of captive *R. trochilus* larvae (Osborne and Ballmer 2014) it is reasonable to conclude that they are mobile opportunistic predators of soft-bodied, sand-inhabiting insects. Larvae from Sand Ridge, Kern County, CA were maintained in captivity for several months, during which they burrowed actively through sand maintained with slight moisture content (similar to the damp sand where they were found). They fed on larvae of a scarab beetle (Scarabaeidae) and an unidentified beefly (Diptera: Bombyliidae), which were also recovered from Sand Ridge, and larvae of paper wasps (*Polistes* sp.) which were removed from their nests and buried in the sand. Captive larvae grew and molted after feeding; but, when not fed for extended periods of time, they molted again – losing weight and size in the process. Some larvae were observed to repeat the growth and "shrinkage" cycle multiple times. One larva survived about 17 months in captivity; because it was captured nine months after the most recent flight season, it was at least two years old at time of death. This larva molted four times while undergoing five cycles of growth and shrinkage driven by variable food availability. Its final dry

weight was slightly smaller than the typical dry weight of an adult male *R. trochilus*. The ability of *R. trochilus* larvae to molt down during times of scarce food resources could allow an extended and indeterminate larval growth period, but with maturation and appearance of adults always during summer months. This may also explain the common observations that populations of various *Rhaphiomidas* species apparently exhibit little or no adult emergence in some years (especially years of below normal precipitation).

The brief adult life span and active mate-locating behavior of DSF males (typical of all *Rhaphiomidas* species) suggests that relatively high population density and/or nearly synchronous adult emergence may be crucial to survival of populations. Protracted *Rhaphiomidas* larval biology and staggered (across years) adult emergence must enhance population momentum and cross generational gene flow, and the requirement of abundant and diverse insect prey on which larvae develop – all explain why DSF populations appear as long-term entities (persisting for decades) associated with ecologically intact dune habitats.

3.0 METHODOLOGY

3.1 DSF Survey Guidelines

Interim General Survey Guidelines for the DSF have been suggested by the USFWS (1996). By following these guidelines, DSF presence or absence survey results may be deemed acceptable to the USFWS (rejection of survey results may result where the guidelines are not followed). The guidelines indicate that focused DSF surveys should be conducted wherever Delhi sands are present within the presumed range of DSF, twice weekly (two days per week) during the single annual flight period (usually from July 1 to September 20). Recent early season DSF discoveries lead the USFWS to recommend a survey season from July 15 to September 20 for 2003 and a survey season from July 1 to September 20 from the year 2004. Weather conditions must be suitable for DSF activity at the times survey work is pursued. The DSF is generally active when daytime temperatures exceed 80 degrees Fahrenheit (°F), but may fly with slightly cooler temperatures in bright sunlight.

3.2 Habitat Assessment Methods

On March 13, 2019, Osborne visited the project area in order to investigate habitat suitability for the DSF. Osborne examined the subject survey area to rate its potential to support DSF. Photographs were taken of the survey area from various perspectives. Habitat suitability for DSF was evaluated using indicators of potential DSF habitat including: presence and abundance of loose, unconsolidated Delhi sands with low organic contamination; degree of habitat disturbance indicated by plant species composition and disposition of soil surface, presence and abundance of native sand associated plants such as *Croton californicus*, *Heterotheca grandiflora, Eriogonum thurberi* and *Eriogonum fasciculatum*. These plants are actually more an indication of relative disturbance regimen – conditions with lesser disturbance being of higher quality for DSF. Presence and abundance of Delhi sands associated insects such as *Apiocera convergens, Apiocera chrysolasia* and (to a lesser extent) *Nemomydas pantherinus*, noted throughout the course of focused surveys, serve as further indicators of DSF habitat quality. Potential DSF habitat has been

further evaluated on the basis of overall insect diversity and abundance, particularly with respect to sand associated predators and parasitoids.

In the course of previous work Osborne (2003, Osborne et al. 2003) developed a means of rating habitat on sites for potential to support DSF, rating areas within any site based on a scale of 1 to 5, with 5 being the best quality and most suitable habitat based on the following scheme:

1. Developed areas, non-Delhi sands soils with high clay, silt, and/or gravel content. Delhi sands extensively and deeply covered by dumping of exotic soils, rubble, trash, manure, or organic debris. *Unsuitable.*

2. Delhi sands are present but the soil characteristics include a predominance of exotic soils such as alluvial materials, or predominance of other foreign contamination as gravels, manure, or organic debris. Severe and frequent disturbance (such as a maintenance yard or high use roadbed). *Very Low Quality.*

3. Moderately contaminated Delhi sands. Delhi sands with moderate to high disturbance (such as annual disking). Sufficient Delhi Sands are present to prevent soil compaction (related to contamination by foreign soils). Some sandy soils exposed on the surface due to fossorial animal activity. *Low Quality.*

4. Abundant clean Delhi Sands with little or no foreign soils (such as alluvial material) present. Moderate abundance of exposed sands on the soil surface. Low vegetative cover. Evidence of moderate degree of fossorial animal activity by vertebrates and invertebrates. May represent high quality habitat with mild or superficial disturbance. *Moderate Quality*

5. Sand dune habitat with clean Delhi Sands. High abundance of exposed sands on the soil surface. Low vegetative cover. Evidence (soil surface often gives under foot) of high degree of fossorial animal activity by vertebrates and invertebrates. Sand associated plant and arthropod species may be abundant. *High Quality*

It should be noted that habitat qualities often vary spatially within a site so that conditions on a site fall within a range of qualities. Further, overall habitat quality is affected by the overall habitat area on a site, such that very small areas diminish the overall habitat value of a site. It is also important to note that suitable habitats, even rated as high quality for DSF, are very rarely actually occupied by DSF. These ratings are more informative on mitigation and conservation measures in the event that DSF is found on any particular site. Use of this habitat rating system is somewhat subjective and best undertaken by a biologist who has extensive experience with *Rhaphiomidas* species. While investigating the survey area, Osborne subjected the site to an analysis of this kind so as to give a general estimate of overall habitat conditions relevant to DSF potential.

3.3 Focused Survey Methods

Each portion of suitable habitat (for DSF) was surveyed on 24 dates, with the overall survey effort involving four biologists conducting at least 83 site visits totaling at least 274.56 field hours, with site visits made from July 1, to September 20, 2019. Focused DSF surveys were conducted by

Kendall H. Osborne, Permit # TE-837760-10, Rick Rogers (under Osborne's permit), David K. Faulkner # TE-838743-6, and Eric S. Renfro # TE-142436-2. Following the USFWS Interim General Survey Guidelines, we surveyed all portions of the survey area at least twice a week, between the hours of 1000 and 1400 (Table 1). Due to the large acreage of the survey area, and four-hour (50 acre limit) of survey effort allowed for any given biologist, the survey area was divided into portions (1A, 1B, and 1C) in order to facilitate survey logistics and scheduling. These portions are noted in Table 1, below, as well as on daily field notes presented in the Appendix. A map was developed showing survey areas (including other surveys for the OIAA) showing acreages and allotted survey times meeting the USFWS protocol (Figure 4). The survey protocol, as set forth in the Interim General Guidelines for the Delhi Sands flower-loving fly survey, is designed to maximize the validity of a presence/absence determination.

Osborne photographed the property from several perspectives to document existing conditions. Notes were taken on vegetative cover and plant species composition, abundance and diversity and species composition of insects and other animals, soil types, degree and nature of disturbance, surface cover, organic content, compaction, current land management practices, existing development, and conditions of surrounding vicinity and proximity of other DSF populations.

4.0 RESULTS

4.1 Habitat Assessment Results

Department of Agriculture, Soil Conservation Service map (Woodruff 1980) and associated web based resources (https://casoilresource.lawr.ucdavis.edu/gmap/) show all portions of the project area mapped with Delhi fine sand soils (Figure 3). With the exception of limited street-side areas with exotic landscaped vegetation, and limited marginal portions with graveled drives, the project areas are open fields with vegetation dominated by exotic grasses and forbs (especially *Hordeum*, *Bromus*, *Amsinkia*, *Malva*, and *Sisymbrium*). Plant species associated with sandy soils are present in spare or low abundance, but include *Ambrosia acanthicarpa*, *Eriogonum gracile*, *Camissonia bistorta*, and *Camisonia strigosa*. The project areas appear unchanged since at least 1994 to the present, and have existed as exotic grass/forblands routinely mowed (Google Earth). Delhi sands are sporadically exposed by fossorial animals and paths through the majority of the area, demonstrating the wide distribution of sands across the survey area (as mapped by Woodruff 1980). In all areas investigated, where exotic annual (springtime) vegetation (covering the soil surface) was removed, Delhi sand soils were exposed. These areas constituting the majority of the investigated project areas were rated as *Low* to *Moderate Quality* habitat for DSF and are thus considered as approximately 142.32 acres of *Suitable* habitat for DSF. Street-side exotic landscaping is present in project areas along South Commerce Parkway, and along a southern portion of South Haven Avenue, amounting to an approximate total of 8.66 acres determined to be *Unsuitable* habitat for DSF. An additional 0.02 acres of graveled drive is present along the western edge of the extreme southwestern portion of this project area, also *Unsuitable* for DSF.

During the course of summer surveys, annual vegetation had dried, or been mowed, and abundant gopher activity had exposed the underlying sandy soils. Summertime field observations lead us to upgrade our overall rating of habitat conditions for potential DSF on these lands to include some *Low Quality* habitat but primarily *Moderate* to *High Quality* habitat for DSF.

4.1 Survey Results

Delhi Sands Flower-Loving Fly (DSF, *Rhaphiomidas terminatus abdominalis*) was not observed on the subject site during the course of this survey. One special status animal species, Burrowing Owl (*Athene cunicularia*) was occasionally encountered in the course of this survey. Lists of plants and insects observed during the course of the survey are given in the appendix.

Some of the consulting biologists on this project had concern about the mowing of the survey area late into our season. We are aware that these fields are mowed on a regular basis and have been for at least the last twenty years (Osborne, personal observations). The fields on and around the airport are routinely mowed, often multiple times a year, not only to reduce fuel load, but to deter presence of abundant birds. We understand that an abundance of birds, and particularly large birds such as raptors on airport flight paths, present a hazard to aircraft. This was dramatically demonstrated in January of 2009, when U S Airways flight 1549 ingested a flock of Canada geese and was forced to land without engine power into the Hudson River, miraculously intact. Nevertheless, we all noted the profound and immediate decline in insect abundance following mowing events.

4.3 Existing Environment and Community

4.3.1 Adjacent lands

The survey area is generally bounded on the west by undeveloped lands similar to those on the site, and otherwise generally surrounded (north, east, south) by commercial/industrial development.

4.3.2 Topography

The site is generally flat with elevation on the site ranging from approximately 950 to 900 feet, with the gentle slope diminishing to the south.

4.3.3 Soils

Woodruff (1980) indicated the site to consist of Delhi fine sands. These sands are evident throughout the site.

4.3.4 Vegetation

The survey area is generally characterized as open fields supporting exotic annual vegetation dominated by *Hordeum*, *Bromus*, *Amsinkia*, *Malva*, *Salsola*, *Hirschfeldia*, and *Sisymbrium*. Plant

species commonly associated with Delhi sands and potential DSF habitat are abundant, and include annual bursage (*Ambrosia acanthicarpa*), telegraphweed (*Heterotheca grandiflora*), slender buckwheat (*Eriogonum gracile*), California croton (Croton califonicus), and golden crownbeard (*Verbesina encelioides*). No special status plant species (species of concern) were encountered in the course of this survey.

Figures 5-8 present representative views of the survey site and habitats. Figure 9 provides a key as to where on the site these photographs were taken. Table 1 (Appendix A) provides a list of plant species encountered on the survey site.

4.3.5 Insect Community

During site visits at least 150 insect species (counting only large and conspicuous insects) were observed. The insect community encountered on the survey area was typical of ecological communities occurring on Delhi sands. Insects included Mydidae (*Nemomydas*), Apioceridae, Asilidae, Bombyliidae, Mutilidae, Pompilidae, Mymerliontidae, Crabionidae, and Sphecidae. A list of most insect species observed is presented in the appendix (Table 2, Appendix A).

5.0 CONCLUSIONS

Our single season of survey for DSF does not provide a definitive conclusion as to DSF presence or absence. Due in part to the tendency of DSF to emerge on and off over the years, The USFWS recommends two consecutive years of protocol survey with negative results before making a determination of DSF absence.

SUMMARY

The Ontario International Airport Authority has requested a second year focused survey to assess the presence or absence of Delhi Sands Flower-Loving Fly (DSF, *Rhaphiomidas terminatus abdominalis*) for 151 acres (Group 1, with 143 acres of habitat suitable for DSF) of the Ontario International Airport Northwest Quadrant Demolition project in Ontario, California. To determine presence or absence of DSF on the study area, a series of 82 biologist-site visits totaling 274.27 field hours, were conducted on the survey area from July 1 to September 20, 2020.

A habitat evaluation conducted on March 13, 2019 (Osborne 2019) found all parcels investigated for the project area are mapped with Delhi sands (Woodruff 1980). These parcels all feature soil and ecological conditions *Suitable* for potential DSF. The habitat evaluations determined 143 acres of potential DSF habitat over the study area.

The subject site does not currently support a population of the Delhi Sands Flower-Loving Fly. Delhi Sands Flower-Loving Fly was not observed on the Group 2 properties site during the course of either consecutive years 2019 (Osborne 2019b) or 2020 field seasons.

Two special status animal species were encountered in the course of this survey. Burrowing Owl (*Athene cunicularia*) was regularly encountered on the site. One individual Crotch's bumble bee (*Bombus crotchii*), a California special status animal species (species of concern) was encountered in the course of this survey.

1.0 INTRODUCTION

This report presents the methods and results of a Delhi Sands Flower-Loving Fly (DSF, *Rhaphiomidas terminatus abdominalis*) focused survey for a 151-acre Group 1 properties, in Ontario, San Bernardino. The DSF was listed as an endangered species by the U.S. Fish and Wildlife Service on September 23, 1993 (USFWS 1993).

The Group 1 properties are located east of Haven Avenue, south of E. Airport Drive, and north of Jurupa Street as shown on the accompanying maps. And can be found on the Guaste, California USGS 7.5-minute quadrangle map, Township 2 South, Range 7 West, in Section 1 (Figures 1 and 2) .

2.0 NATURAL HISTORY OF THE DELHI SANDS FLOWER-LOVING FLY

Delhi Sands Flower-loving fly belongs to a genus of flies (*Rhaphiomidas*) commonly known as flower loving flies. There are more than 30 species of these flies, distributed across the southwestern United States and northern Mexico. These flies are huge by the standards set by most flies – with size among the species ranging from approximately 1.5 centimeters up to 3, and even 4 centimeters, usually gray, tan, rust or yellow in color. All species of *Rhaphiomidas* are associated with rather arid, sandy habitats, with most species living on dune systems of inland desert valleys, rivers, deltas, and beach strands. A few species are found in sandy washes, alluvial benches and remnant glacial moraines. Many species of these flies often hover before flowers in

the manner of hummingbirds, using a long, thin, tubular proboscis (mouth-part), with which the flies probe for nectar – hence a traditional name "giant flower-loving flies". Smaller flies of the family Apioceridae, once considered very closely related to *Rhaphiomidas* were formerly called "flower-loving flies".

The DSF is only known to occur in association with Delhi sand deposits, presumably occupied the once extensive dune system of the upper Santa Ana River Valley, including portions of what is now the City of Colton, west through portions of the City of Ontario, and south to the Santa Ana River. Today, DSF exists on only a few disjunct sites (USFWS 1997) within a radius of about eight miles in southwestern San Bernardino and northwestern Riverside Counties (Colton, Rialto, Fontana, and Ontario). More than 95 percent of known DSF habitat was considered eliminated by development, agriculture and other land management practices by 1993 (Smith 1993, USFWS 1996 *in* Kingsley 1996), however, this proportion is now nearer 98 to 99% due to these ongoing processes. Many of the last remaining fragments of DSF habitat are currently under pressure by land management efforts such as heavy disking, irrigation, manure dumping, and gravel dumping. There is presently an estimated 1,200 acres of habitat that can support this species (USFWS 1997), but this estimate likely includes lands needing extensive habitat restoration.

Adult DSF flight period is typically August and September, when individual adults emerge, reproduce and die. The adult life span of an individual DSF lasts for a few days and adults do not live beyond the flight period (Kiyani 1995). Adult DSF are highly mobile, agile fliers. Male DSF are frequently seen flying low through habitat, using apparently random, circuitous paths around and between shrubs in search of females. Such "cruising" behavior often covers areas on the scale of 1000 square meters in the time span of a minute. Alternatively, male DSF are often seen flying about an open patch of ground (ca 100 square meters) such as along a dirt path or dune blow-out area. Here, males may repetitively land and rest on one or another object (such as small dried plants) in the area, and such rests are interrupted by periods of patrolling flight (apparently territorial) about the spot. When alarmed, these insects tend to fly rapidly in more or less a straight line – often covering distances of 100 meters in less than 6 seconds. Adult DSF are known to nectar at flowers of California buckwheat and California croton.

DSF, like other *Rhaphiomidas* species, appears to have an annual life cycle (because of the annual flight). However, it has been widely believed that the underground larval/pupal stage may persist for additional years, depending upon various environmental factors such as annual rainfall, food availability and weather conditions during the flight season (many desert *Rhaphiomidas* species do not appear after a drought year and often, substantial flights occur only sporadically over the years). The biology of *Rhaphiomidas trochilus* is likely informative of *Rhaphiomidas* species in general and DSF in particular. Based on observations of captive *R. trochilus* larvae (Osborne and Ballmer 2014) it is reasonable to conclude that they are mobile opportunistic predators of soft-bodied, sand-inhabiting insects. Larvae from Sand Ridge, Kern County, CA were maintained in captivity for several months, during which they burrowed actively through sand maintained with slight moisture content (similar to the damp sand where they were found). They fed on larvae of a scarab beetle (Scarabaeidae) and an unidentified beefly (Diptera: Bombyliidae), which were also recovered from Sand Ridge, and larvae of paper wasps (*Polistes* sp.) which were removed from their nests and buried in the sand. Captive larvae grew and molted after feeding; but, when not fed

for extended periods of time, they molted again – losing weight and size in the process. Some larvae were observed to repeat the growth and "shrinkage" cycle multiple times. One larva survived about 17 months in captivity; because it was captured nine months after the most recent flight season, it was at least two years old at time of death. This larva molted four times while undergoing five cycles of growth and shrinkage driven by variable food availability. Its final dry weight was slightly smaller than the typical dry weight of an adult male *R. trochilus*. The ability of *R. trochilus* larvae to molt down during times of scarce food resources could allow an extended and indeterminate larval growth period, but with maturation and appearance of adults always during summer months. This may also explain the common observations that populations of various *Rhaphiomidas* species apparently exhibit little or no adult emergence in some years (especially years of below normal precipitation).

The brief adult life span and active mate-locating behavior of DSF males (typical of all *Rhaphiomidas* species) suggests that relatively high population density and/or nearly synchronous adult emergence may be crucial to survival of populations. Protracted *Rhaphiomidas* larval biology and staggered (across years) adult emergence must enhance population momentum and cross generational gene flow, and the requirement of abundant and diverse insect prey on which larvae develop – all explain why DSF populations appear as long-term entities (persisting for decades) associated with ecologically intact dune habitats.

2.1 DSF Habitat Characteristics

DSF is typically found in areas of unconsolidated sandy soils (Delhi series) supporting an open community of native and exotic plant species. Dominant plants are typically California buckwheat (*Eriogonum fasciculatum*), California croton (*Croton californicus*), telegraph weed (*Heterotheca grandiflora*), annual bur ragweed (*Ambrosia acanthicarpa*) and deerweed (*Acmespon scoparius*) but many exotic species often dominate on DSF habitat as well. DSF have been found in habitats that do not support these dominant plant species, and plant species composition is not directly relevant to larval development (due to predatory biology of DSF larvae). Thus, the implication that DSF are reliant on some of these plant species – an idea often repeated in literature and biological reporting – is false. Adult DSF are anecdotally believed to nectar at flowers of California buckwheat and California croton, though such a habitat is rare at best and not yet documented. Many other plant species are common, including Thurber's eriogonum (*Eriogonum thurberi*), autumn vinegar weed (*Lessingia glandulifera*), and sapphire eriastrum (*Eriastrum sapphirinum*). Nonnative plant species also occur in DSF habitat (and incidentally, virtually everywhere). DSF habitat also commonly supports other associated insects such as flies and wasps considered as indicator species – *Apiocera convergens, Apiocera chrysolasia, Ligyra gozophylax*, *Campsomeris tolteca*, *Trielis alcione*, and *Nemomydas pantherinus.* Over 350 insect species have been found on one DSF site, and DSF habitat is typically marked by high abundance and diversity of predatory and parasitic insect groups including many highly specialized families of flies, wasps, bees, beetles, and antlions. The Delhi Sands community is one of California's unique natural communities containing an array of native plants and animals, some of which are found nowhere else. One plant species, Pringle's monardella, (*Monardella pringlei*) is already presumed extinct, as no living individuals have been observed in many years. Several species of insects and some vertebrates, which inhabit the Delhi

Sands dunes system, are as endangered as the DSF, but no one has yet petitioned to have them officially declared Endangered. These include the convergent flower-loving fly *Apiocera convergens*, a newly discovered species of Jerusalem cricket, (*Stenopelmatus* sp.), a new species of camel cricket (*Ceuthophilus* sp.) and an endemic subspecies of butterfly *Apodemia mormo nigrescens* (Emmel and Emmel 1998). The other apiocerid fly (*Apiocera chrysolasia*), although known from approximately six general localities, is only common within the Delhi sands.

3.0 METHODOLOGY

3.1 DSF Survey Guidelines

Interim General Survey Guidelines for the DSF have been suggested by the USFWS (1996). By following these guidelines, DSF presence or absence survey results may be deemed acceptable to the USFWS (rejection of survey results may result where the guidelines are not followed). The guidelines indicate that focused DSF surveys should be conducted wherever Delhi sands are present within the presumed range of DSF, twice weekly (two days per week) during the single annual flight period (usually from July 1 to September 20). Recent early season DSF discoveries lead the USFWS to recommend a survey season from July 15 to September 20 for 2003 and a survey season from July 1 to September 20 from the year 2004. Weather conditions must be suitable for DSF activity at the times survey work is pursued. The DSF is generally active when daytime temperatures exceed 80 degrees Fahrenheit (°*F*), but may fly with slightly cooler temperatures in bright sunlight.

3.2 Habitat Assessment Methods

On March 13, 2019 (Osborne 2019a), Osborne visited the project area in order to investigate habitat suitability for the DSF. Osborne examined the subject survey area to rate its potential to support DSF. Photographs were taken of the survey area from various perspectives. Habitat suitability for DSF was evaluated using indicators of potential DSF habitat including: presence and abundance of loose, unconsolidated Delhi sands with low organic contamination; degree of habitat disturbance indicated by plant species composition and disposition of soil surface, presence and abundance of native sand associated plants such as *Croton californicus*, *Heterotheca grandiflora, Eriogonum thurberi* and *Eriogonum fasciculatum*. These plants are actually more an indication of relative disturbance regimen – conditions with lesser disturbance being of higher quality for DSF. Presence and abundance of Delhi sands associated insects such as *Apiocera convergens, Apiocera chrysolasia* and (to a lesser extent) *Nemomydas pantherinus*, noted throughout the course of focused surveys, serve as further indicators of DSF habitat quality. Potential DSF habitat has been further evaluated on the basis of overall insect diversity and abundance, particularly with respect to sand associated predators and parasitoids.

In the course of previous work Osborne (2003, Osborne et al. 2003) developed a means of rating habitat on sites for potential to support DSF, rating areas within any site based on a scale of 1 to 5, with 5 being the best quality and most suitable habitat based on the following scheme:

1. Developed areas, non-Delhi sands soils with high clay, silt, and/or gravel content. Delhi

sands extensively and deeply covered by dumping of exotic soils, rubble, trash, manure, or organic debris. *Unsuitable.*

2. Delhi sands are present but the soil characteristics include a predominance of exotic soils such as alluvial materials, or predominance of other foreign contamination as gravels, manure, or organic debris. Severe and frequent disturbance (such as a maintenance yard or high use roadbed). *Very Low Quality.*

3. Moderately contaminated Delhi sands. Delhi sands with moderate to high disturbance (such as annual disking). Sufficient Delhi Sands are present to prevent soil compaction (related to contamination by foreign soils). Some sandy soils exposed on the surface due to fossorial animal activity. *Low Quality.*

4. Abundant clean Delhi Sands with little or no foreign soils (such as alluvial material) present. Moderate abundance of exposed sands on the soil surface. Low vegetative cover. Evidence of moderate degree of fossorial animal activity by vertebrates and invertebrates. May represent high quality habitat with mild or superficial disturbance. *Moderate Quality*

5. Sand dune habitat with clean Delhi Sands. High abundance of exposed sands on the soil surface. Low vegetative cover. Evidence (soil surface often gives under foot) of high degree of fossorial animal activity by vertebrates and invertebrates. Sand associated plant and arthropod species may be abundant. *High Quality*

It should be noted that habitat qualities often vary spatially within a site so that conditions on a site fall within a range of qualities. Further, overall habitat quality is affected by the overall habitat area on a site, such that very small areas diminish the overall habitat value of a site. It is also important to note that suitable habitats, even rated as high quality for DSF, are very rarely actually occupied by DSF. These ratings are more informative on mitigation and conservation measures in the event that DSF is found on any particular site. Use of this habitat rating system is somewhat subjective and best undertaken by a biologist who has extensive experience with *Rhaphiomidas* species. While investigating the survey area, Osborne subjected the site to an analysis of this kind so as to give a general estimate of overall habitat conditions relevant to DSF potential.

3.3 Focused Survey Methods

Each portion of suitable habitat (for DSF) was surveyed on 24 dates, with the overall survey effort involving four biologists conducting a series of 82 biologist-site visits totaling 274.27 field hours, with site visits made from July 1, to September 20, 2020. A slight additional rigor was often imparted to the survey effort by virtue gratuitous presence of biologists on the survey areas arriving (as much as an hour) early in order to initiate the protocol surveys promptly at 1000 hours. DSF surveys were conducted by Kendall H. Osborne, Permit # TE-837760-10, Rick Rogers #TE-844645-2, David K. Faulkner # TE-838743-6, and Eric S. Renfro # TE-142436-3. Following the USFWS Interim General Survey Guidelines, we surveyed all portions of the survey area at least twice a week, between the hours of 1000 and 1400 (Table 1). Due to the large acreage of the survey area, and four-hour (50 acre limit) of survey effort allowed for any given biologist, the survey area was divided into portions (1A, 1B, and 1C) in order to facilitate survey

logistics and scheduling. On occasion, survey efforts on these individual portions were dispersed across two dates (noted as "parts") always in keeping with USFWS survey protocol. These portions are noted in Table 1, below, as well as on daily field notes presented in the Appendix. These portions are noted in Table 1, below, as well as on daily field notes presented in the Appendix. A map was developed showing survey areas (including other surveys for the OIAA) showing acreages and allotted survey times meeting the USFWS protocol (Figure 4). The survey protocol, as set forth in the Interim General Guidelines for the Delhi Sands flower-loving fly survey, is designed to maximize the validity of a presence/absence determination.

Osborne photographed the property from several perspectives to document existing conditions. Notes were taken on vegetative cover and plant species composition, abundance and diversity and species composition of insects and other animals, soil types, degree and nature of disturbance, surface cover, organic content, compaction, current land management practices, existing development, and conditions of surrounding vicinity and proximity of other DSF populations.

Table 1. Dates (2020), personnel, times and conditions for focused DSF survey work.

Date	Portion	Hours	Biologist	Weather Conditions
1-Jul	1A (part)	1020-1400	R. Rogers	overcast to clear, winds 0-5 mph, 74-86° *F.*
1-Jul	1C	1000-1325	D. Faulkner	100% overcast clearing, winds 1-3 mph, 67-81° *F.*
2-Jul	1A (part)	1217-1237	K. Osborne	clear, winds 2-4 mph, 75-76° *F.*
2-Jul	1B	1000-1400	R. Rogers	65% patchy clouds to clear, winds 1-2 mph, 76-85° *F.*

13-Sep	1C	1000-1325	E. Renfro	clear/smoky, winds 1 mph, 78-91° *F.*
14-Sep	1A (part)	1000-1345	R. Rogers	clear/slightly hazy, winds 1-3 mph, 80-88° *F.*
14-Sep	1B	1000-1400	D. Faulkner	overcast/smoky, winds 0-9 mph, 79-93° *F.*
15-Sep	1A (part)	1146-1201	K. Osborne	clear/50% smoky, winds 0-2 mph, 90° *F.*
17-Sep	1A	1000-1400	R. Rogers	20%- 50% patchy clouds, winds 0-3 mph, 87-95° *F.*
17-Sep	1C	1000-1325	D. Faulkner	overcast to 20% patchy clouds; smoky, winds 0-5 mph, 83-97° *F.*
18-Sep	1B	1000-1400	D. Faulkner	clear, up to 25% haze, winds 2-7 mph, 87-102° *F.*
19-Sep	1C	1000-1325	E. Renfro	clear, winds 1-2 mph, 86-97° *F.*
20-Sep	1A	1000-1400	E. Renfro	clear, winds 1-4 mph, 81-93° *F.*
20-Sep	1B	1000-1400	D. Faulkner	clear/hazy, winds 0-3 mph, 81-91° *F.*

4.0 RESULTS

4.1 Habitat Assessment Results

Department of Agriculture, Soil Conservation Service map (Woodruff 1980) and associated web based resources (https://casoilresource.lawr.ucdavis.edu/gmap/) show all portions of the project area mapped with Delhi fine sand soils (Figure 3). With the exception of limited street-side areas with exotic landscaped vegetation, and limited marginal portions with graveled drives, the project areas are open fields with vegetation dominated by exotic grasses and forbs (especially *Hordeum*, *Bromus*, *Amsinkia*, *Malva*, and *Sisymbrium*). Plant species associated with sandy soils are present in spare or low abundance, but include *Ambrosia acanthicarpa*, *Eriogonum gracile*, *Camissonia bistorta*, and *Camisonia strigosa*. The project areas appear unchanged since at least 1994 to the present, and have existed as exotic grass/forblands routinely mowed (Google Earth). Delhi sands are sporadically exposed by fossorial animals and paths through the majority of the area, demonstrating the wide distribution of sands across the survey area (as mapped by Woodruff 1980). In all areas investigated, where exotic annual (springtime) vegetation (covering the soil surface) was removed, Delhi sand soils were exposed. These areas constituting the majority of the investigated project areas were rated as *Low* to *Moderate Quality* habitat for DSF and are thus considered as approximately 142.32 acres of *Suitable* habitat for DSF. Street-side exotic landscaping is present in project areas along South Commerce Parkway, and along a southern portion of South Haven Avenue, amounting to an approximate total of 8.66 acres determined to be *Unsuitable* habitat for DSF. An additional 0.02 acres of graveled drive is present along the western edge of the extreme southwestern portion of this project area, also *Unsuitable* for DSF.

During the course of summer surveys, annual vegetation had dried, or been mowed, and abundant gopher activity had exposed the underlying sandy soils. Summertime field observations lead us to upgrade our overall rating of habitat conditions for potential DSF on these lands to include some *Low Quality* habitat but primarily *Moderate* to *High Quality* habitat for DSF.

4.2 Survey Results

Delhi Sands Flower-Loving Fly (DSF, *Rhaphiomidas terminatus abdominalis*) was not observed on the subject site during the course of this survey. At least one individual Crotch's bumble bee (*Bombus crotchii*), a California special status animal species (species of concern) was encountered in the course of this survey. Lists of plants and insects observed during the course of the survey are given in the appendix.

We noticed an exceptionally sharp decline in insect abundance following the extreme heat wave on and around September 5, 2020, wherein presumably, large numbers of insects which might normally live well into early fall season, were abruptly extinguished. Some of the consulting biologists on this project had concern about the mowing of the survey area late into our season. We are aware that these fields are mowed on a regular basis and have been for at least the last twenty years (Osborne, personal observations). The fields on and around the airport are routinely mowed, often multiple times a year, not only to reduce fuel load, but to deter presence of abundant birds. We understand that an abundance of birds, and particularly large birds such as raptors on airport flight paths, present a hazard to aircraft. This was dramatically demonstrated in January of

2009, when U S Airways flight 1549 ingested a flock of Canada geese and was forced to land without engine power into the Hudson River, miraculously intact. Nevertheless, we all noted the profound and immediate decline in insect abundance following mowing events.

4.3 Existing Environment and Community

4.3.1 Adjacent lands

The survey area is generally bounded on the west by undeveloped lands similar to those on the site, and otherwise generally surrounded (north, east, south) by commercial/industrial development.

4.3.2 Topography

The site is generally flat with elevation on the site ranging from approximately 950 to 900 feet, with the gentle slope diminishing to the south.

4.3.3 Soils

Woodruff (1980) indicated the site to consist of Delhi fine sands. These sands are evident throughout the site.

4.3.4 Vegetation

The survey area is generally characterized as open fields supporting exotic annual vegetation dominated by *Hordeum*, *Bromus*, *Amsinkia*, *Malva*, *Salsola*, *Hirschfeldia*, and *Sisymbrium*. Plant species commonly associated with Delhi sands and potential DSF habitat are abundant, and include annual bursage (*Ambrosia acanthicarpa*), telegraphweed (*Heterotheca grandiflora*), slender buckwheat (*Eriogonum gracile*), California croton (Croton califonicus), and golden crownbeard (*Verbesina encelioides*). No special status plant species (species of concern) were encountered in the course of this survey.

Figures 5-8 present representative views of the survey site and habitats. Figure 9 provides a key as to where on the site these photographs were taken. Table 1 (Appendix A) provides a list of plant species encountered on the survey site.

4.3.5 Insect Community

During site visits (2019 and 2020) at least 179 insect species (counting only large and conspicuous insects) were observed. The insect community encountered on the survey area was typical of ecological communities occurring on Delhi sands. Insects included Mydidae (*Nemomydas*), Apioceridae, Asilidae, Bombyliidae, Mutilidae, Pompilidae, Mymerliontidae, Crabionidae, and Sphecidae. A list of most insect species observed is presented in the appendix (Table 2, Appendix A). Crotch's bumble bee (*Bombus*

crotchii), a California special status animal species (species of concern) was encountered at least once in the course of these surveys (July 1, 2020 by Rogers).

5.0 DISCUSSION AND CONCLUSIONS

Delhi Sands Flower-loving fly is absent from the site. Finding of Delhi sands on the survey site, and the observations (over the years) of Mydidae (*Nemomydas pantherinus*), Apioceridae (*Apiocera convergens*), Asilidae, Bombyliidae, Mutilidae, Pompilidae, Mymerliontidae, Crabionidae, and Sphecidae, along with the overall habitat ratings made for the site have all suggested some degree of habitat suitability and potential for DSF. After the course of two consecutive field seasons of DSF survey with negative results, we conclude that the survey site does not support a population of DSF.

Populations of a number of bumble bee species have been in sharp decline in the western United States over the last decade. Crotch's bumble bee (*Bombus crotchii*), observed at least once in the course of these two years of survey of Group 1 properties (observed multiple times on adjacent lands [Osborne 2020]), is generally distributed through wildlands and rural areas in low to middle elevations of California, and is one of several bumble bee species proposed for listing as a California endangered species.

It is important for any project proponent to understand that if the survey site is not developed before July 1, 2021, that the USFWS policy is to consider the current results (DSF absent the site) to be void as of that date, and thus their recommendation of continued consecutive years of survey until the site is developed. Should the project proponent fail to have the site surveyed for DSF in a subsequent summer season, then USFWS policy has been to require a full repeat of two consecutive years of DSF survey before negative results are again acceptable to them.

Subject: Cultural Resources Survey for the Potential Development of Parcel Group 1

Dear Mr. Devereaux:

HELIX Environmental Planning, Inc. (HELIX) was contracted to conduct a cultural resources survey for the Ontario International Airport Authority's (OIAA) potential development (project; Group 1) in the City of Ontario, San Bernardino County, California. HELIX conducted a pedestrian survey, a record search, a Sacred Lands File (SLF) search, and a review of existing documentation for the project. This letter report details the methods and results of the cultural resources survey. One cultural resource, a historic-period well, was observed in the northwest section of the survey area.

PROJECT LOCATION

The approximately 151-acre project area is located within the limits of the City of Ontario, west of Interstate (I-)15 and south of I-10 (Figure 1, *Regional Location*). The project is within Section 25 of Township 1 South, Range 7 West, on the Guasti, California U.S. Geological Survey (USGS) 7.5-minute topographic quadrangle (Figure 2, *Vicinity Map*). The Group 1 survey area is comprised of 18 parcels with Assessor's Parcel Numbers (APNs) 0211-222-47, 48, 53, 54; 0211-232-11, 12, 13, 14, 16, 17, 18, 19, 20, 44, 45, 46, 52, and 55.

The Group 1 survey area is located east of South Haven Avenue, south of East Airport Drive, west of Doubleday Avenue, and north of Jurupa Street (Figure 3, *Aerial Photograph*). Elevations range from approximately 899 feet above mean sea level (amsl) in the southern portion of the survey area to 951 feet amsl in the northern portion of the survey area. The Group 1 parcels are vacant; existing Ontario International Airport infrastructure and industrial development surround the survey area.

METHODS

HELIX conducted a record search at the South Central Coastal Information Center (SCCIC) on March 7, 2019. The records search covered a one-mile radius around the Group 1 survey area and included the identification of previously recorded cultural resources and locations and citations for previous cultural resources studies. A review of the California Historical Resources and the state Office of Historic Preservation (OHP) historic properties directories was also conducted.

The Native American Heritage Commission (NAHC) was contacted for a SLF search on April 1, 2019; a response was received on April 15, 2019 and indicated that the results were negative for the project area; no additional outreach to the Native American community was conducted.

Various archival sources, including historic topographic maps and aerial imagery, were consulted, and the existing cultural resources reports, *Historical Architectural and Cultural Resources Inventory Report* (Douglas and Livingstone 2006) and the *Ontario International Airport Historic Context Statement* (Davis and Novell 2017), were reviewed.

RESULTS

Records Search

The records search results identified seven previously recorded cultural resources within one mile of the project area, none of which are located within the Group 1 parcels (Table 1, *Previously Recorded Resources within One Mile of the Group 1 Parcels*). Two of the resources within the search limits, the Guasti (Brookside) Winery and the Church of San Secondo D`Asti, Guasti Church, are listed as California Points of Historical Interest (CPHI), and one resource, the Hofer Ranch, is listed on the National Register of Historic Places (NRHP). The Guasti (Brookside) Winery and the Church of San Secondo D`Asti, Guasti Church are located to the northwest of the project area, north of the railroad. The Hofer Ranch is located to the west, within Section 26.

Table 1
PREVIOUSLY RECORDED RESOURCES WITHIN ONE MILE OF THE GROUP 1 PARCELS

Resource Number (P-36-#)	Resource Number (CA-SBR-#)	Age and Resource Present	Description	Recorder, Date
001963	1963H	Historic Site	Remnants of a homestead/ranch, possibly associated with the Collins family who owned the property in the late 1800s	McKenna, 1987
001964	1964H	Historic Structure	Small shed containing modern pumping equipment	McKenna, 1987
015469	--	Historic Site	Guasti (Brookside) Winery (CPHI # 84)	Hansberger, 1975
015471	--	Historic Site	San Secondo D'Asti Catholic Church (CPHI # 76)	Hansberger, 1975
015990	--	Historic Structures/ Historic District	Guasti Historic District; consists of 51 resources (buildings, houses, etc.) constructed between 1900 and 1946	Warner and Solie, 1985
016249	--	Historic Site	Hofer Ranch (NR #93000596), also known as Ballou Ranch & Ben Haven; farm complex consisting of 15 resources (buildings and structures) constructed between 1905 and 1985	Hofer and Warner, 1985; Marvin and Goodwin, 2004
016279	--	Historic Building	Guasti Mansion; constructed in the Italian-Villa architectural style in 1922	Warner and Solie, 1985

The records search results identified 30 previous cultural resource studies within one mile of the project area, two of which cover or overlap with the project area (Table 2, *Previous Studies within One Mile of the Group 1 Parcels*). The overlapping studies include a cultural resource assessment (SB-01180) and a telecommunications report (SB-04161). The telecommunication study only covered a small portion of the Group 1 survey area. The cultural resources assessment study, however, was for the Ontario Industrial Park and covered the entirety of the project area; presumably this study included a pedestrian field survey.

**Studies that overlap with the project area*

Other Archival Research

Various archival sources were consulted, including historic topographic maps, aerial imagery (NETR Online 2019), and the Bureau of Land Management (BLM) General Land Office (GLO) Records. The purpose of this research was to identify historic land use in the area.

No land patents are on file with the BLM GLO for Section 25 of Township 1 South, Range 7 West, and neither the 1858 nor the 1865 survey plats show any cultural or environmental data for the section.

No buildings or structures appear within the Group 1 survey area or Section 25 on topographic maps prior to the 1950s. On the Guasti 1953 (1955 edition) 7.5-minute topographic map, a hollow square, possibly indicating a small structure, is observed in the central area of Section 25, within the survey area. In addition, a reservoir located in the northwest quarter of the southwest quarter of Section 25 is

represented on the same topographic map; it is situated outside of the project area and will not be impacted by the potential development of the Group 1 parcels.

The earliest aerial photograph of the Group 1 survey area dates to 1938; it shows open land and agricultural fields within the project area. By 1948, additional agriculture is represented in the area, and the reservoir shown on topographic maps appears, but no buildings or structures exist within the project area. By 1959, additional development, likely related to agriculture, is shown in the area, but outside of the Group 1 parcels. On the 1966 aerial, it appears that the majority of the lands surrounding the project have been left fallow and are still undeveloped. However, an influx of development occurred between 1966 and 1994, when aerial images show the region considerably more populated by buildings and roads; these are situated adjacent to, but outside of, the current project site. The area remains much as shown from 1994 until the final aerial image, dating to 2012.

Survey

A pedestrian survey of the Group 1 parcels was conducted between March 11 and 13, 2019 by HELIX archaeological field director Julie Roy and field archaeologists Ariana Yanez and Kellie Kandybowicz. Stephen Bernal, a Native American monitor with the Gabrieleño Band of Mission Indians - Kizh Nation, assisted in the survey activities. Vegetation consisted of thick native and non-native weeds and flowering plants. Visibility ranged from 30 percent along the edges of the roads to no more than 20 percent away from the roads, with rodent back dirt piles sometimes being the only soils visually inspected. Numerous berms were observed within the survey areas. The berms may involve buried water transmission pipes.

A possible historic-period well comprised of a metal pipe with no markings, was observed in the northwest portion of the survey area. The well has had a metal cap with a lock welded to the top of it, most likely for safety issues (Plate 1). Although the age of the well is unknown, as observed on the historic aerial photographs, the project area has been cultivated since at least 1938 (NETR Online 2019).

Plate 1. Capped well. View to the northeast.

No other cultural resources were observed within the Group 1 parcels during the survey effort. No evidence was observed of the building or structure shown within the project area on the Guasti 1953 (1955 edition) 7.5-minute topographic map.

SUMMARY AND RECOMMENDATIONS

A cultural resources survey of the Group 1 parcels was conducted between March 11 and 13, 2019. One potentially historic resource, a well comprised of a metal pipe, was identified within the project area. Additionally, it must be noted that although no Native American cultural resources have been documented in the NAHC's SLF for the project area, the general area is of importance to the Native American community.

No constraints to the potential development of the Group 1 parcels related to cultural resources are anticipated; however, documentation of the well/pipe on appropriate Department of Parks and Recreation (DPR) 523 forms and completion of a cultural resources technical report addressing both California Environmental Quality Act (CEQA) significance and federal compliance (e.g., Section 106 of the National Historic Preservation Act) are recommended.

If you have any questions, please call Stacie Wilson at (619) 462-1515.

Subject: Cultural Resources Survey for the Potential Development of Parcel Group 2

Dear Mr. Devereaux:

HELIX Environmental Planning, Inc. (HELIX) was contracted to conduct a cultural resources survey for the Ontario International Airport Authority's (OIAA) potential development (project; Group 2) in the City of Ontario, San Bernardino County, California. HELIX conducted a pedestrian survey, a record search, a Sacred Lands File (SLF) search, and review of existing documentation for the project. This letter report details the methods and results of the cultural resources survey. No cultural resources were observed during the survey effort

PROJECT LOCATION

The approximately 67-acre project area is located within the limits of the City of Ontario, west of Interstate (I-)15 and south of I-10 (Figure 1, *Regional Location*). The project is within Section 25 of Township 1 South, Range 7 West, on the Guasti, California U.S. Geological Survey (USGS) 7.5-minute topographic quadrangle (Figure 2, *Vicinity Map*). The Group 2 survey area is comprised of five parcels with Assessor's Parcel Numbers (APNs) 0211-222-56; 0211-232-04, 05, 06, 07.

The Group 2 survey area is located east of Haven Street, south of East Airport Drive, west of South Carnegie Avenue, and north of La Salle Street (Figure 3, *Aerial Photograph*). Elevations range from approximately 920 feet above mean sea level (amsl) in the southern portion of the survey area to 938 feet amsl in the northern portion of the survey area. The Group 2 parcels are vacant; existing Ontario International Airport infrastructure and industrial development surround the survey area.

METHODS

HELIX conducted a record search at the South Central Coastal Information Center (SCCIC) on March 7, 2019. The records search covered a one-mile radius around the Group 2 survey area and included the identification of previously recorded cultural resources and locations and citations for previous cultural resources studies. A review of the California Historical Resources and the state Office of Historic Preservation (OHP) historic properties directories was also conducted.

The Native American Heritage Commission (NAHC) was contacted for a SLF search on April 1, 2019; a response was received on April 15, 2019 and indicated that the results were negative for the project area; no additional outreach to the Native American community was conducted.

Various archival sources, including historic topographic maps and aerial imagery, were consulted, and the existing cultural resources reports, *Historical Architectural and Cultural Resources Inventory Report* (Douglas and Livingstone 2006) and *Ontario International Airport Historic Context Statement* (Davis and Novell 2017), were reviewed.

RESULTS

Records Search

The records search results identified seven previously recorded cultural resources within one mile of the project area, none of which are located within the Group 2 parcels (Table 1, *Previously Recorded Resources within One Mile of the Group 2 Parcels*). Two of the resources within the search limits, the Guasti (Brookside) Winery and the Church of San Secondo D`Asti, Guasti Church, are listed as California Points of Historical Interest (CPHI), and one resource, the Hofer Ranch, is listed on the National Register of Historic Places (NRHP). The Guasti (Brookside) Winery and the Church of San Secondo D`Asti, Guasti Church are located to the northwest of the project area, north of the railroad. The Hofer Ranch is located to the west, within Section 26.

Table 1
PREVIOUSLY RECORDED RESOURCES WITHIN ONE MILE OF THE GROUP 2 PARCELS

Resource Number (P-36-#)	Resource Number (CA-SBR-#)	Age and Resource Present	Description	Recorder, Date
001963	1963H	Historic Site	Remnants of a homestead/ranch, possibly associated with the Collins family who owned the property in the late 1800s	McKenna, 1987
001964	1964H	Historic Structure	Small shed containing modern pumping equipment	McKenna, 1987
015469	--	Historic Site	Guasti (Brookside) Winery (CPHI # 84)	Hansberger, 1975
015471	--	Historic Site	San Secondo D'Asti Catholic Church (CPHI # 76)	Hansberger, 1975
015990	--	Historic Structures/ Historic District	Guasti Historic District; consists of 51 resources (buildings, houses, etc.) constructed between 1900 and 1946	Warner and Solie, 1985
016249	--	Historic Site	Hofer Ranch (NR #93000596), also known as Ballou Ranch & Ben Haven; farm complex consisting of 15 resources (buildings and structures) constructed between 1905 and 1985	Hofer and Warner, 1985; Marvin and Goodwin, 2004
016279	--	Historic Building	Guasti Mansion; constructed in the Italian-Villa architectural style in 1922	Warner and Solie, 1985

The records search results identified 29 previous cultural resource studies within the record search limits, two of which cover or overlap with the project area (Table 2, *Previous Studies within One Mile of the Group 2 Parcels*). The overlapping studies include a cultural resources assessment (SB-01180) and a telecommunications report (SB-06525). The telecommunication study only covered a small portion of the Group 2 survey area. The cultural resources assessment study, however, was for the Ontario Industrial Park and covered the entirety of the project area; presumably this study included a pedestrian field survey.

**Studies that overlap with the project area*

Other Archival Research

Various archival sources were consulted, including historic topographic maps, aerial imagery (NETR Online 2019) and the Bureau of Land Management (BLM) General Land Office (GLO) Records. The purpose of this research was to identify historic land use in the area.

No land patents are on file with the BLM GLO for Section 25 of Township 1 South, Range 7 West, and neither the 1858 nor the 1865 survey plats show any cultural or environmental data for the section.

No buildings or structures appear within the Group 2 survey area or Section 25 on topographic maps prior to the 1950s. On the Guasti 1953 (1955 edition) 7.5-minute topographic map, a hollow square, possibly indicating a small structure, is observed in the central area of Section 25, to the east of the survey area. A reservoir is shown adjacent to the western edge of the project area along the west side of Haven Road on the same topographic map; however, it is situated outside of the project area and will not be impacted by the potential development of the Group 2 parcels.

The earliest aerial photograph of the Group 2 survey area dates to 1938; it shows open land and agricultural fields within the project area. By 1948, additional agriculture is represented in the area with what may be farm buildings or a residence with outbuildings situated in the northwest quarter of the southwest quarter of Section 25; however, these buildings are located outside of the Group 2 survey area. In addition, the reservoir shown on topographic maps appears in aerial photos as early as 1948. By 1959, additional development, likely related to agriculture, is shown in the area, but outside of the Group 2 parcels. On the 1966 aerial, it appears that the majority of the lands surrounding the project have been left fallow and are still undeveloped. However, an influx of development occurred between 1966 and 1994, when aerial images show the region considerably more populated by buildings and roads; these are situated adjacent to, but outside of, the current project site. The area remains much as shown from 1994 until the final aerial image, dating to 2012.

Survey

A pedestrian survey of the Group 2 parcels was conducted on March 13, 2019 by HELIX archaeological field director Julie Roy and field archaeologists Ariana Yanez and Kellie Kandybowicz. Stephen Bernal, a Native American monitor with the Gabrieleño Band of Mission Indians - Kizh Nation, assisted in the survey activities. Vegetation consisted of thick native and non-native weeds and flowering plants. Visibility ranged from 30 percent along the edges of the roads to 0 percent away from the roads, with rodent back dirt piles sometimes being the only soils visually inspected. Numerous berms were observed within the survey area. The berms may involve buried water transmission pipes. No cultural resources were observed during the survey effort.

SUMMARY AND RECOMMENDATIONS

A cultural resources survey of the project site was conducted on March 13, 2019, no cultural resources were recorded during the survey effort. It must be noted that although no Native American cultural resources have been documented in the NAHC's SLF for the project area, the general area is of importance to the Native American community.

No known cultural resources will be impacted by the potential development of the Group 2 parcels, and no constraints related to cultural resources are anticipated; however, completion of a cultural resources technical report addressing both California Environmental Quality Act (CEQA) significance and federal compliance (e.g., Section 106 of the National Historic Preservation Act) is recommended.

If you have any questions, please call Stacie Wilson at (619) 462-1515.

Mr. Bruce McDonald
McDonald Property Group
1140 N. Coast Highway
Laguna Beach, California 92651

SUBJECT: CALIFORNIA LOGISTICS CENTER AT ONTARIO INTERNATIONAL AIRPORT VEHICLE MILES TRAVELED (VMT) ANALYSIS

Dear Mr. Bruce McDonald:

The following VMT Analysis has been prepared for the proposed California Logistics Center at Ontario International Airport Project (**Project**), which is located on the southeast corner of Haven Avenue and E. Airport Drive in the City of Ontario.

PROJECT OVERVIEW

It is our understanding that the proposed Project intends to develop 9 industrial warehouse buildings totaling of 4,282,450 square feet (SF). (See Attachment A)

It should be noted that, for the purposes of trip generation evaluation contained within this VMT analysis, the following mix of land uses are proposed to be evaluated for the Project:

- 642,368 SF of high-cube cold storage warehouse use (15% of the total square footage)
- 3,640,082 SF of high-cube fulfillment center warehouse use (85% of the total square footage)
- **Total of 4,282,450 SF**

BACKGROUND

Changes to California Environmental Quality Act (CEQA) Guidelines were adopted in December 2018, which require all lead agencies to adopt VMT as a replacement for automobile delay-based level of service (LOS) as the measure for identifying transportation impacts for land use projects. This statewide mandate went into effect July 1, 2020. To aid in this transition, the Governor's Office of Planning and Research (OPR) released a Technical Advisory on Evaluating Transportation Impacts in CEQA (December of 2018) (**Technical Advisory**). (1) Based on the Technical Advisory, the City of Ontario has developed and adopted their own VMT methodologies and thresholds, which were adopted by City Council in June 2020 (**City Guidelines**). (2) It is our understanding the City of Ontario utilizes the San Bernardino County Transportation Authority (SBCTA) VMT Screening Tool (**Screening Tool**). The Screening Tool allows users to select an assessor's parcel number (APN) to determine if a project's location meets one or more of

the screening thresholds for land use projects identified in the City Guidelines. This VMT analysis has been developed based on the adopted City Guidelines.

VMT SCREENING EVALUATION

City Guidelines identify Projects that meet certain VMT screening criteria may be presumed to result in a less than significant transportation impact. The City Guidelines lists the following VMT screening criteria:

- Transit Priority Area (TPA) Screening
- Low VMT Area Screening
- Project Type Screening

A land use project need only meet one of the above screening criteria to result in a less than significant impact.

TPA SCREENING

Consistent with guidance identified in the City Guidelines, projects located within a Transit Priority Area (TPA) (i.e., within ½ mile of an existing "major transit stop"[1] or an existing stop along a "high-quality transit corridor"[2]) may be presumed to have a less than significant impact absent substantial evidence to the contrary. However, the presumption may not be appropriate if a project:

- Has a Floor Area Ratio (FAR) of less than 0.75;
- Includes more parking for use by residents, customers, or employees of the project than required by the jurisdiction (if the jurisdiction requires the project to supply parking);
- Is inconsistent with the applicable Sustainable Communities Strategy (as determined by the lead agency, with input from the Metropolitan Planning Organization); or
- Replaces affordable residential units with a smaller number of moderate or high-income residential units.

The Screening Tool was utilized to locate the Project site and its proximity to a TPA. Results as shown in attachment B identify the Project Site is not located within ½ mile of an existing major transit stop, or along a high-quality transit corridor.

TPA screening criteria is not met.
