[1] Pub. Resources Code, § 21064.3 ("'Major transit stop' means a site containing an existing rail transit station, a ferry terminal served by either a bus or rail transit service, or the intersection of two or more major bus routes with a frequency of service interval of 15 minutes or less during the morning and afternoon peak commute periods.").
[2] Pub. Resources Code, § 21155 ("For purposes of this section, a high-quality transit corridor means a corridor with fixed route bus service with service intervals no longer than 15 minutes during peak commute hours.").

LOW VMT AREA SCREENING

As noted in the Technical Advisory, "Residential and office projects that locate in areas with low VMT and that incorporate similar features (density, mix of uses, and transit accessibility) will tend to exhibit similarly low VMT."

City Guidelines state that projects may be presumed to have a less than significant VMT impact if located in an already low VMT generating traffic analysis zones (TAZs) that generates a VMT per service population (SP) that is 15% below County of San Bernardino Baseline VMT per SP. The Screening Tool uses the sub-regional San Bernardino Transportation Analysis Model (SBTAM) to measure VMT performance within individual TAZ's within the region. The Project's physical location based on parcel number is selected in the Screening Tool to determine the TAZ in which the Project will reside. The Project's TAZs VMT per service population was compared to 15% below County of San Bernardino Baseline VMT per SP. The parcel containing the proposed Project was selected and the Screening Tool was run for production-attraction (PA) VMT per service population, the Project is not located within a low VMT generating zone. (See Attachment B)

Low VMT Area screening criteria is not met.

PROJECT TYPE SCREENING

The City Guidelines identify that local serving retail less than 50,000 square feet or other local serving essential services (e.g., day care centers, public schools, medical/dental office buildings, etc.) are presumed to have a less than significant impact absent substantial evidence to the contrary. The Project as intended does not contain any local serving uses.

Additionally, the City Guidelines state that small projects generating fewer than 110 daily vehicle trips or less may be presumed to have a less than significant impact, subject to discretionary approval by the City. Trips generated by the Project's proposed land uses have been estimated based on trip generation rates collected by the Institute of Transportation Engineers (ITE) Trip Generation Manual, 11th Edition, 2021. (3) The Project is anticipated to generate 7,980 daily vehicle trip-ends per day. Therefore, the Project generate daily vehicle trips exceeding the 110 daily vehicle trip threshold. (See Attachment C)

The Project Type screening threshold is not met.

Based on a more detailed review of the applicable VMT screening methods, it was determined that the Project is not eligible for screening and VMT analysis should be performed.

VMT ANALYSIS

VMT MODELING

The City Guidelines identifies SBTAM as the appropriate tool for conducting VMT analysis for land use projects in the City of Ontario, as it considers interaction between different land uses based on socio-economic data, such as population, households, and employment. The calculation of VMT for land use projects is based on the total number of trips generated and the average trip length of each vehicle. SBTAM is also consistent with the model used to develop the City's VMT impact thresholds listed by the City Guidelines. Therefore, the vehicle trips and average daily trip length for project-related vehicle trips are model derived from SBTAM.

VMT METRIC AND SIGNIFICANCE THRESHOLD

The City Guidelines state for land use projects in the City of Ontario shall use the VMT metric of VMT per Service Population as the appropriate measure in a VMT analysis. The City Guidelines have identified following recommended threshold:

- A significant impact would occur if the project VMT per Service Population exceeds the Citywide average for Service Population under General Plan Buildout Conditions.

SBCTA provides VMT calculations for each of its member agencies and for the City of Ontario's average for Service Population under General Plan Buildout Conditions. Urban Crossroads has obtained this published data from SBCTA, which for the **City of Ontario's General Plan Buildout is 36.2 VMT per SP**.

PROJECT LAND USE CONVERSION

In order to evaluate Project VMT, standard land use information must first be converted into a SBTAM compatible dataset. The SBTAM model utilizes socio-economic data (SED) (e.g., population, households, employment, etc.) instead of land use information for the purposes of vehicle trip estimation. Project land use information such as building square footage must first be converted to SED for input into SBTAM. Adjustments in SED have been made to the appropriate TAZ within the SBTAM model to reflect the Project's proposed land uses (i.e., warehouse). Table 1 summarizes the employment estimates for the Project. It should be noted that the employment estimates are consistent with the employment density factors identified in the Southern California Association of Governments (SCAG) Employment Density Study (October 2001). (4)

TABLE 1: EMPLOYMENT ESTIMATES

Land Use	Quantity (SF)	Employment Density Factor[3]	Estimated Employees
Warehouse	4,282,450	1 employee per 1,195 SF	3,585

[3] SCAG Employment Density Study; Table II-B

PROJECT VMT CALCULATION

Adjustments to employment for the Project's TAZ were made to both the SBTAM baseline year (2016) and cumulative year (2040) traffic models. The ability to capture all trips by all trip purposes can be achieved with the SBTAM model by using the Origin-Destination (OD) trip matrices. Using these OD trip matrices, the project generated total VMT was calculated utilizing straight-line interpolation for the baseline (2021) conditions. The total VMT for all scenarios is then normalized by dividing by the Project's service population (SP) (e.g., employees). As shown in Table 2, the Project Baseline VMT per SP is 32.96 and Project Cumulative VMT per SP is 33.60.

TABLE 2: PROJECT VMT PER SP

	Base Year (2016)	Cumulative Year (2040)	Baseline (2021)
Employment[4]	3,585	3,585	3,585
VMT	117,069	120,453	118,156
VMT / SP	32.66	33.60	32.96

PROJECT COMPARISON TO SIGNIFICANCE THRESHOLD

Table 3 illustrates the comparison between Project generated VMT per SP in the Baseline and Cumulative Conditions to the City of Ontario's future Buildout VMT per SP. As shown, the Project would not exceed the City's threshold of City of Ontario's future Buildout VMT per SP for either in the Baseline or Cumulative Project conditions. The Project VMT impact is therefore considered less than significant.

TABLE 3: PROJECT VMT PER SP COMPARISON

	Baseline	Cumulative
Impact Threshold	36.2	36.2
Project	32.96	33.60
Percent Change	-8.95%	-7.18%
Potentially Significant?	No	No

PROJECT CUMULATIVE IMPACT ON VMT

The City Guidelines consistent with the Technical Advisory states that cumulative impacts on VMT "… metrics such as VMT per capita or VMT per employee, i.e., metrics framed in terms of efficiency (as recommended below for use on residential and office projects), cannot be summed because they employ a denominator. A project that falls below an efficiency-based threshold that is aligned with long-term goals and relevant plans has no cumulative impact distinct from the project impact. Accordingly, a finding of a less-than-significant project impact would imply a less than significant cumulative impact, and vice versa. This is similar to the analysis typically conducted for greenhouse gas emissions, air quality impacts,

[4] Since the Project does not have a residential component, the service population consists entirely of employment.

and impact that utilize plan compliance as a threshold of significance."[5] The Project is consistent with the City's General Plan underlying land use assumptions and the Project was found to have a less than significant impact at the project level. The Project is also considered to be less than significant cumulative impact as well.

CONCLUSION

In summary, the Project was not found to meet any of the City's described screening criteria and a project level VMT analysis was performed. The Project's VMT analysis findings for project generated VMT per service population was found to not exceed the City's threshold, the Project's impact on VMT is presumed to be less than significant**.**

1 INTRODUCTION

This report presents the results of the traffic analysis (TA) for the proposed California Logistics Center ("Project"), which is located on the southeast corner of Haven Avenue and E. Airport Drive in the City of Ontario. The Project's location relative to the surrounding area is shown on Exhibit 1-1.

The purpose of this TA is to evaluate the potential circulation system deficiencies that may result from the development of the proposed Project, and where necessary recommend improvements to achieve acceptable operations consistent with General Plan level of service goals and policies. This traffic study has been prepared in accordance with the San Bernardino County Congestion Management Program (CMP) Guidelines for CMP Traffic Impact Analysis Reports (Appendix B, 2016 Update) and consultation with City staff during the traffic study scoping process. (1) The City approved Project Traffic Study Scoping agreement is provided in Appendix 1.1 of this TA.

1.1 SUMMARY OF FINDINGS

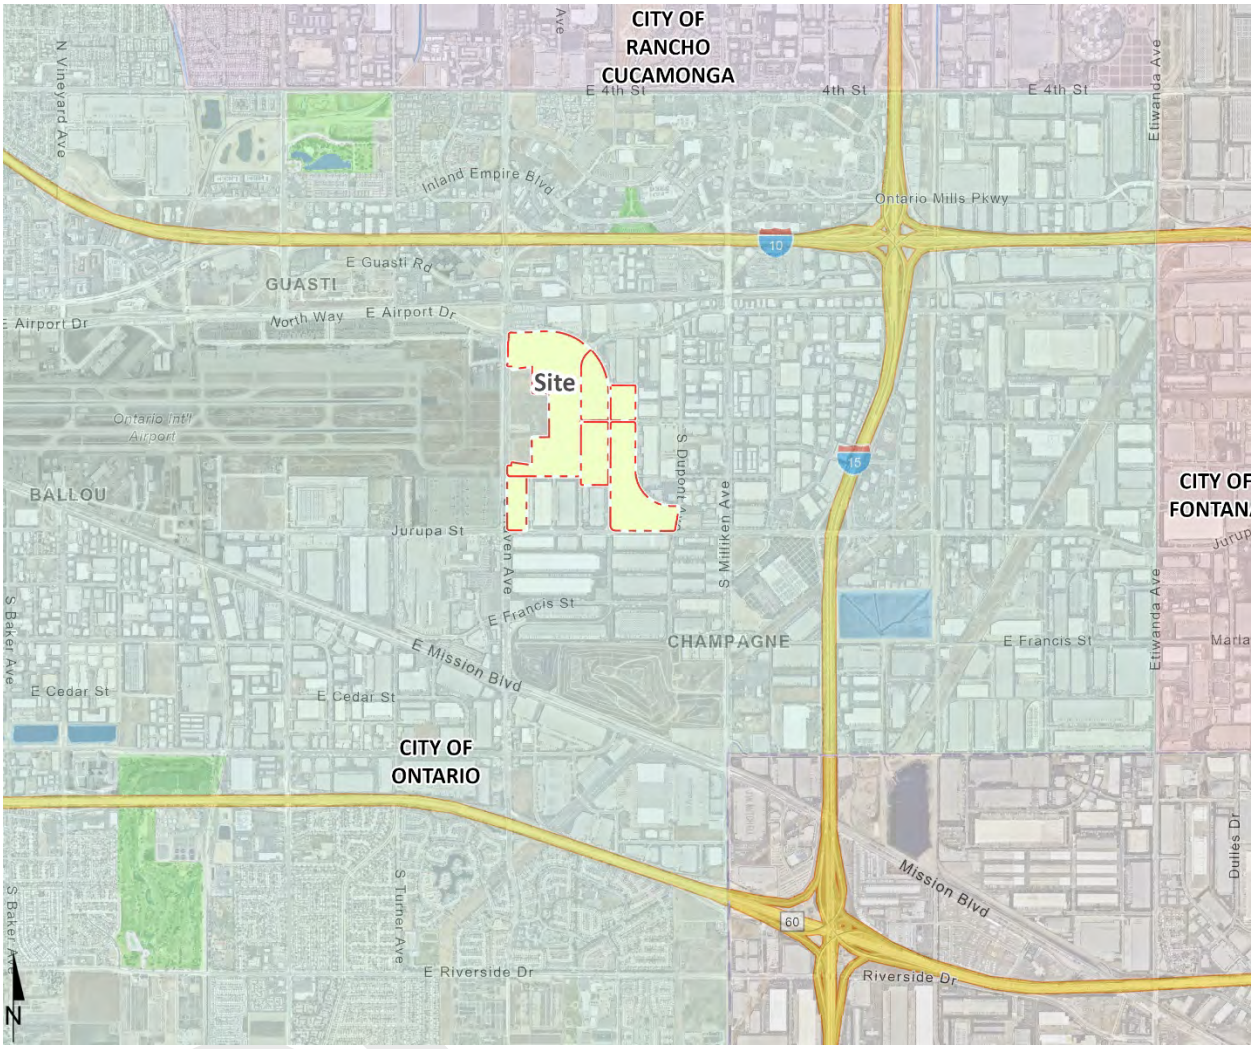
The Project is to construct the following improvements as design features in conjunction with development of the site:

- Project to install stop sign for egress traffic from the proposed Project at all driveway locations.
- Airport Drive, Commerce Parkway, Haven Avenue, La Salle Street, Carnegie Avenue, Santa Ana Street, Jurupa Avenue, Doubleday Avenue, and Dupont Avenue are currently constructed at its ultimate full-width consistent with the City's standards. Project to construct curb-and gutter and sidewalk improvements along the Project boundary.

Additional details and intersection lane geometrics are provided in Section 1.6 *Recommendations* of this report.

DRAFT

EXHIBIT 1-1: LOCATION MAP



1.2 PROJECT OVERVIEW

Exhibit 1-2 illustrates the preliminary Project site plan. For the purposes of this TA, the Project has been assumed to be developed in a single phase and anticipated to be fully built and operational by 2026. For purposes of this analysis, the following mix of industrial/warehousing land uses are assumed for the Project:

- 642,368 square feet of high-cube cold storage warehouse use (15% of the total square footage)
- 3,640,082 square feet of high-cube fulfillment center warehouse use (85% of the total square footage)
- **Total of 4,282,450 square feet**

Access to the proposed Project would be provided to the surrounding roadways of Haven Avenue, E. Airport Drive, Carnegie Avenue, Commerce Parkway, Doubleday Avenue, Dupont Avenue, La Salle Street, Santa Ana Street, and Jurupa Avenue.

Trips generated by the Project's proposed land uses have been estimated based on trip generation rates collected by the Institute of Transportation Engineers (ITE) Trip Generation Manual, 11th Edition, 2021. (3) The proposed Project is anticipated to generate a total of 7,980 trip-ends per day, 613 AM peak hour trips, and 644 PM peak hour trips (in actual vehicles). The assumptions and methods used to estimate the Project's trip generation characteristics are discussed in greater detail in Section 4.1 *Project Trip Generation* of this report.

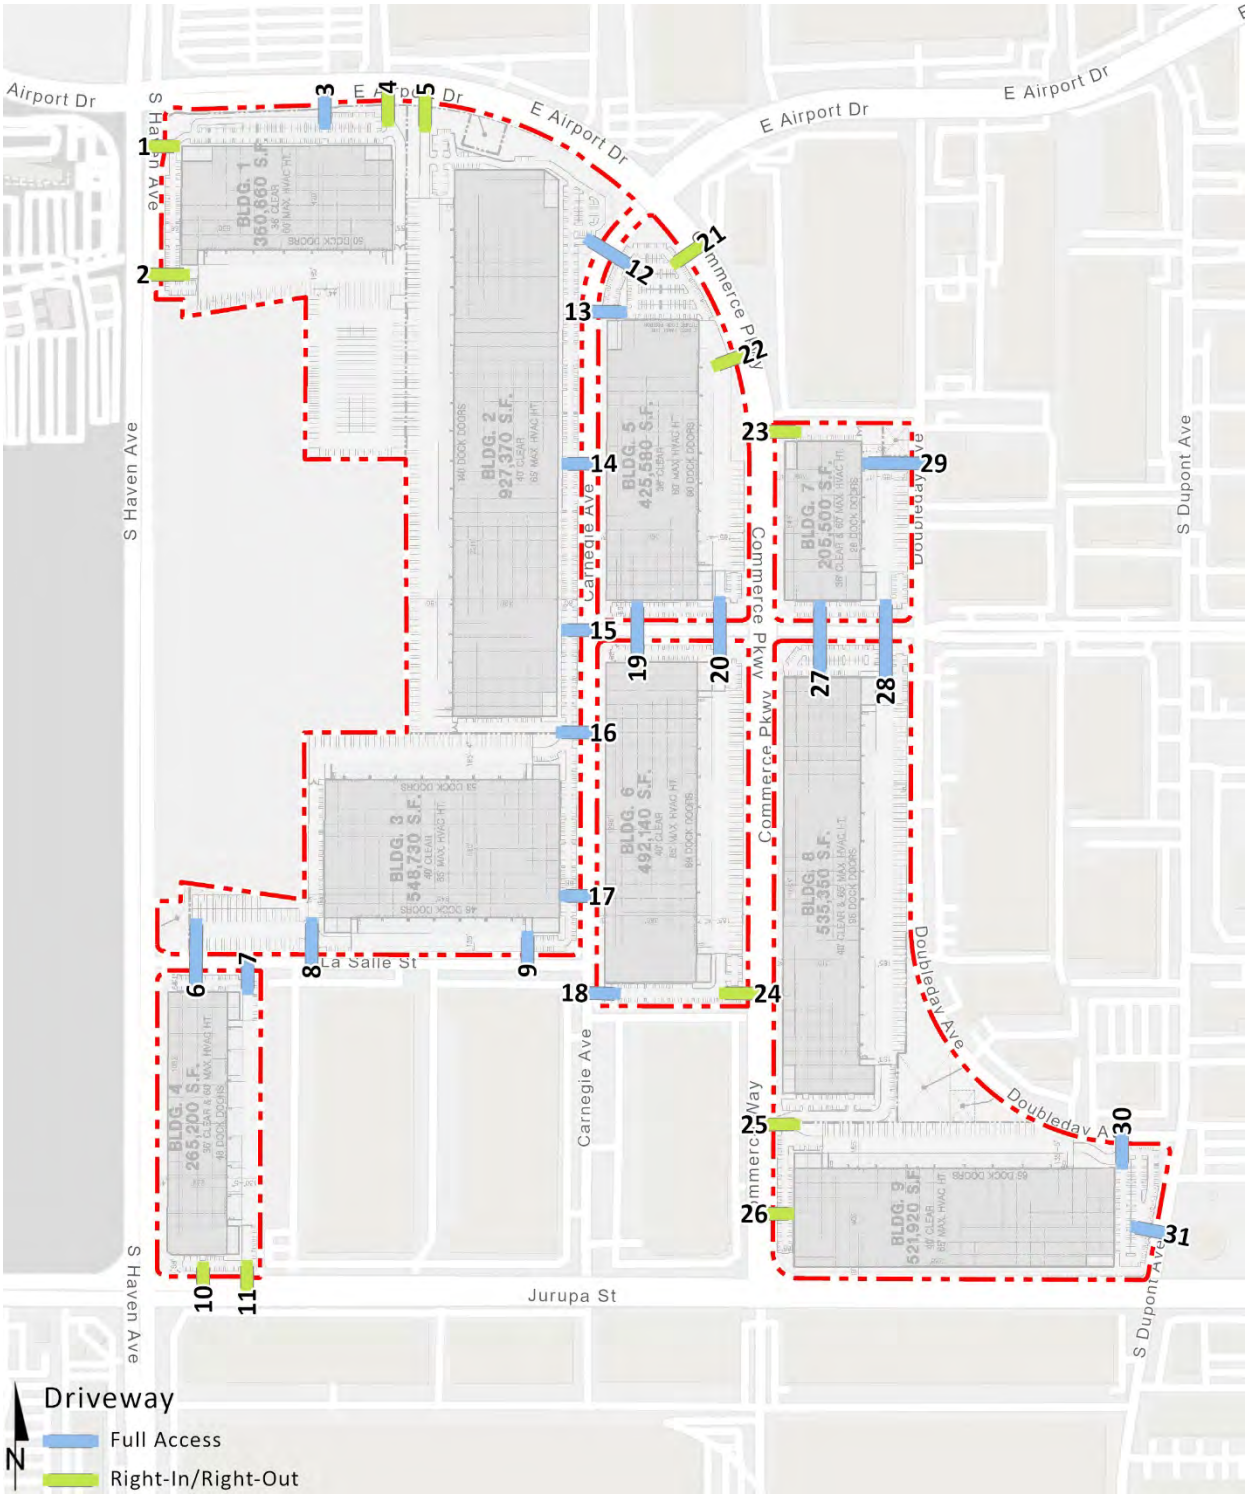
1.3 ANALYSIS SCENARIOS

For the purposes of this traffic study, potential deficiencies to traffic and circulation have been assessed for each of the following conditions:

- Existing (2021)
- Existing plus Project (E+P)
- Opening Year Cumulative (2026) Without Project
- Opening Year Cumulative (2026) With Project
- Horizon Year (2040) Without Project
- Horizon Year (2040) With Project

DRAFT

EXHIBIT 1-2: PRELIMINARY SITE PLAN



1.3.1 Existing (2021) Conditions

Information for Existing (2021) conditions is disclosed to represent the baseline traffic conditions as they existed at the time this report was prepared. See Section 3.7 *Existing Traffic Counts* for a detailed discussion on the methodology.

1.3.2 Existing Plus Project Conditions

The Existing plus Project (E+P) analysis determines traffic deficiencies that would occur on the existing roadway system with the addition of Project traffic. E+P traffic conditions have been evaluated in order to determine any potential off-site improvements.

1.3.3 Opening Year Cumulative (2026) Conditions

The Opening Year Cumulative conditions analysis determines the potential near-term cumulative circulation system deficiencies. To account for background traffic growth, traffic associated with other known cumulative development projects in conjunction with an ambient growth factor from Existing conditions of 2% per year (compounded annually over four years) are included for Opening Year Cumulative (2026) traffic conditions. Opening Year Cumulative traffic conditions have been evaluated for the proposed Project. This comprehensive list was compiled from information provided by the City of Ontario and other near-by agencies.

1.3.4 Horizon Year (2040) Conditions

Traffic projections for Horizon Year (2040) with Project conditions were derived from the San Bernardino Transportation Analysis Model (SBTAM), which represents the 2040 forecast year of the City of Ontario. The Horizon Year (2040) conditions analysis will be utilized to determine if improvements funded through regional transportation mitigation fee programs, such as the City's Development Impact Fee (DIF) program, or other approved funding mechanisms can accommodate the long-range cumulative traffic at the target level of service (LOS) identified by the City of Ontario (lead agency). It should be noted that the City of Ontario has updated their DIF program to also include appropriate contributions towards regionally significant improvements that have been identified via the San Bernardino County CMP regional fee program study. If the planned and funded improvements can provide the target LOS, then the Project's payment into established fee programs will be considered as an improvement to address deficiencies. Other improvements needed beyond the "funded" improvements (such as localized improvements to non-DIF facilities) are identified as such.

1.4 Study Area

To ensure that this TA satisfies the City of Ontario's traffic study requirements, Urban Crossroads, Inc. prepared a project traffic study scoping package for review by City staff prior to the preparation of this report. The Agreement provides an outline of the Project study area, trip generation, trip distribution, and analysis methodology.

1.4.1 INTERSECTIONS

The following 55 study area intersections shown on Exhibit 1-3 and listed on Table 1-1 were selected for this TA based on consultation with City of Ontario staff. The "50 peak hour trip" criterion utilized by the City of Ontario is consistent with the methodology employed by the County of San Bernardino, and generally represents a minimum number of trips at which a typical intersection would have the potential to be affected by a given development proposal. Although each intersection may have unique operating characteristics, this traffic engineering rule of thumb is a widely utilized tool for estimating a potential area of influence (i.e., study area). The "50 peak hour trip" criterion is also utilized by the City of Eastvale. Other analysis intersections, within the adjacent cities were not selected for evaluation as the Project is anticipated to contribute less than 50 peak hour trips.

TABLE 1-1: INTERSECTION ANALYSIS LOCATIONS

ID	Intersection Location	Jurisdiction	SBCTA CMP?
1	Haven Av. & Inland Empire Bl.	Ontario	No

The intent of a CMP is to more directly link land use, transportation, and air quality, thereby prompting reasonable growth management programs that will effectively utilize new transportation funds, alleviate traffic congestion and related deficiencies, and improve air quality. Counties within California have developed CMPs with varying methods and strategies to meet the intent of the CMP legislation. Study area intersections that are identified as CMP facilities in the County of San Bernardino per the San Bernardino County Transportation Authority (SBCTA) CMP are indicated on Table 1-1. (1)

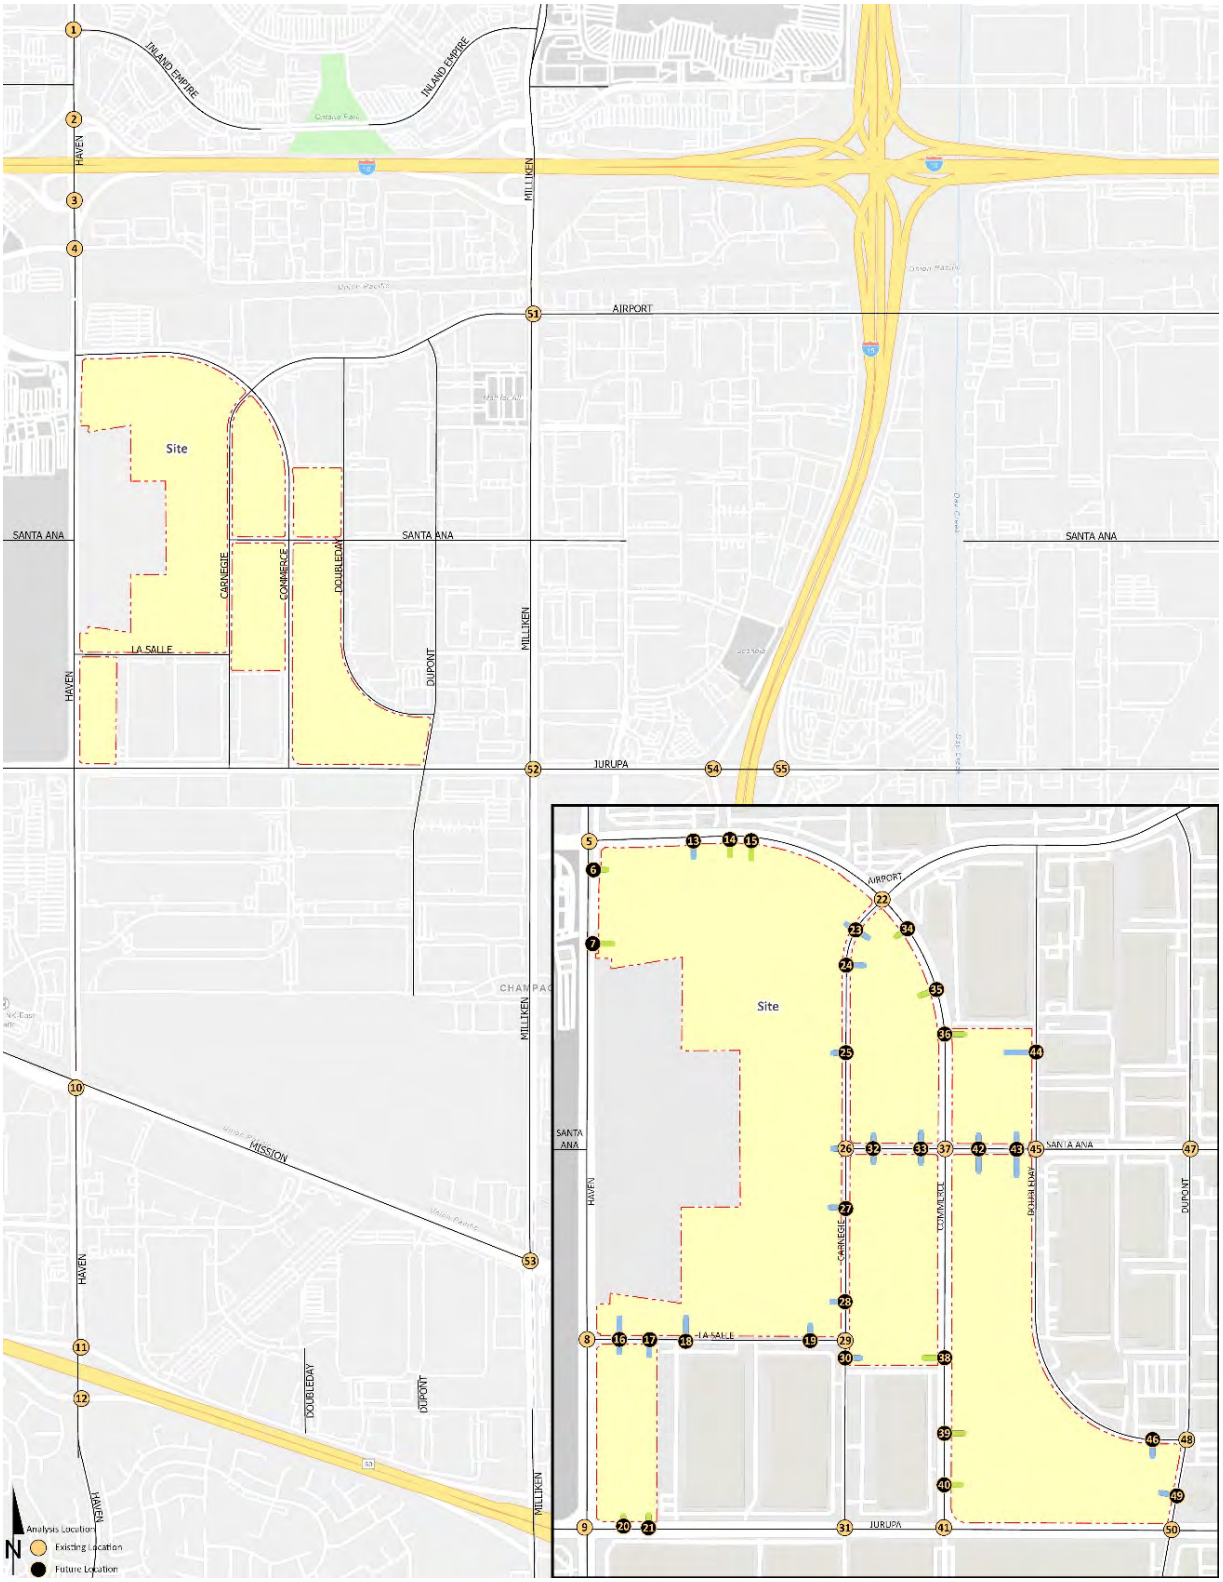
EXHIBIT 1-3: LOCATION MAP



1.5 PROJECT DEFICIENCIES

This section provides a summary of Project deficiencies. Section 2 *Methodologies* provides information on the methodologies used in the analysis and Section 5 *E+P Traffic Analysis*, Section 6 *Opening Year Cumulative (2026)*, and Section 7 *Horizon Year (2040) Traffic Analysis* includes the detailed analysis. A summary of LOS results for all analysis scenarios is presented on Table 1-2.

1.5.1 EXISTING (2021) CONDITIONS

The existing study area intersections are currently operating at acceptable LOS during the peak hours.

1.5.2 E+P CONDITIONS

There are no study area intersections anticipated to operate at an unacceptable LOS with the addition of Project traffic.

1.5.3 OPENING YEAR CUMULATIVE (2026) CONDITIONS

There are no study area intersections are anticipated to operate at an unacceptable LOS. No study area intersections are anticipated to operate at a deficient LOS during one or both peak hours for Opening Year Cumulative (2026) With Project traffic conditions with the addition of Project Buildout traffic.

1.5.4 HORIZON YEAR (2040) CONDITIONS

There are no study area intersections are anticipated to operate at an unacceptable LOS under Horizon Year (2040) Without Project traffic conditions.

The following study area intersections are anticipated to operate at a deficient LOS during one or both peak hours for Horizon Year (2040) With Project traffic conditions with the addition of Project traffic:

- Driveway 3 & E. Airport Dr. (#13) – LOS F PM peak hour only
- Milliken Av. & Mission Bl. (#53) – LOS E AM peak hour; LOS F PM peak hour

1.6 RECOMMENDATIONS

1.6.1 SITE ACCESS AND SITE ADJACENT ROADWAY RECOMMENDATIONS

The following recommendations are based on the improvements needed to accommodate site access. Exhibit 1-4 shows the site adjacent recommendations for off-site improvement recommendations.

Recommendation 1 – Haven Av. & E. Airport Dr. (#5) – Maintain the existing traffic control and lane geometrics.

Recommendation 2 – Haven Av. & Driveway 1 (#6) – The following improvement is necessary to accommodate site access:

- Project to install a stop control on the westbound approach and a right turn only lane.

Recommendation 3 – Haven Av. & Driveway 2 (#7) – The following improvement is necessary to accommodate site access:

- Project to install a stop control on the westbound approach and a right turn only lane.

Recommendation 4 – Haven Av. & La Salle St. (#8) – Maintain the existing traffic control and lane geometrics.

Recommendation 5 – Haven Av. & Jurupa Av. (#9) – Maintain the existing traffic control and lane geometrics.

Recommendation 6 – Driveway 3 & E. Airport Dr. (#13) – The following improvement is necessary to accommodate site access:

- Project to install a stop control on the northbound approach and a shared left-through-right turn lane.
- Project to construct a westbound left turn lane.

Recommendation 7 – Driveway 4 & E. Airport Dr. (#14) – The following improvement is necessary to accommodate site access:

- Project to install a stop control on the northbound approach and a right turn only lane.

Recommendation 8 – Driveway 5 & E. Airport Dr. (#15) – The following improvement is necessary to accommodate site access:

- Project to install a stop control on the northbound approach and a right turn only lane.

Recommendation 9 – Driveway 6 & La Salle St. (#16) – The following improvement is necessary to accommodate site access:

- Project to install a stop control on the northbound and southbound approaches, and a shared left-through-right turn lane on both approaches.
- Project to utilize the existing two-way-left-turn lane for inbound left turn movements.

DRAFT

EXHIBIT 1-4: SITE ADJACENT ROADWAY AND SITE RECOMMENDATIONS (1 OF 2)

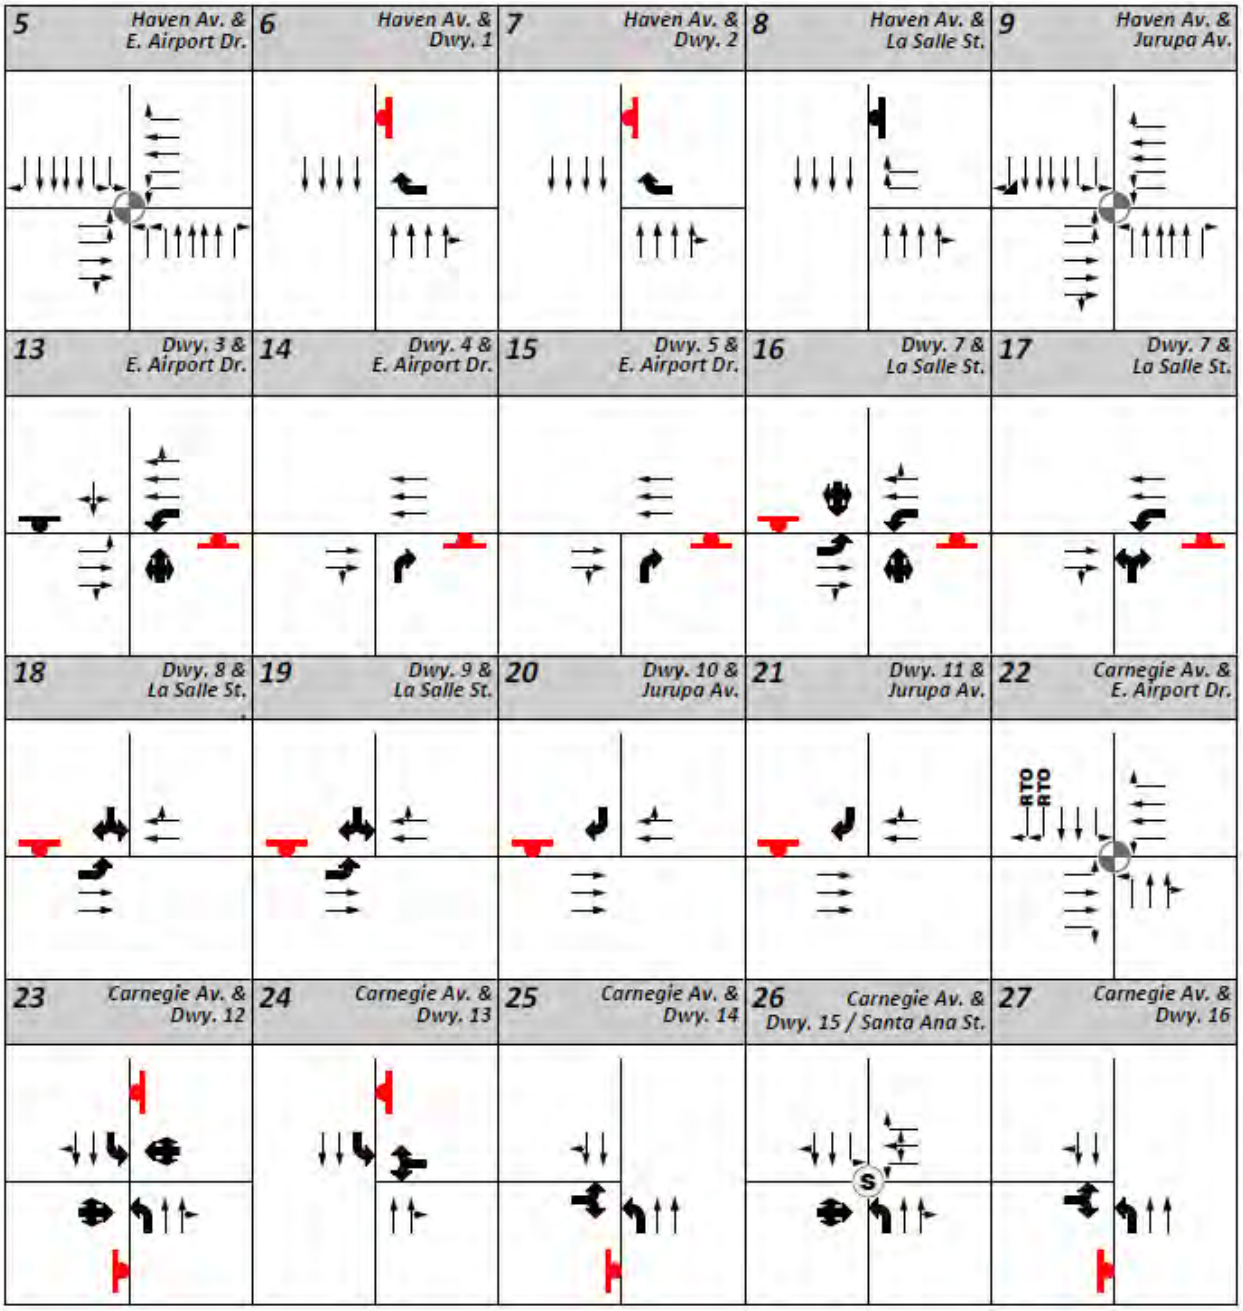

EXHIBIT 1-4: SITE ADJACENT ROADWAY AND SITE RECOMMENDATIONS (2 OF 2)

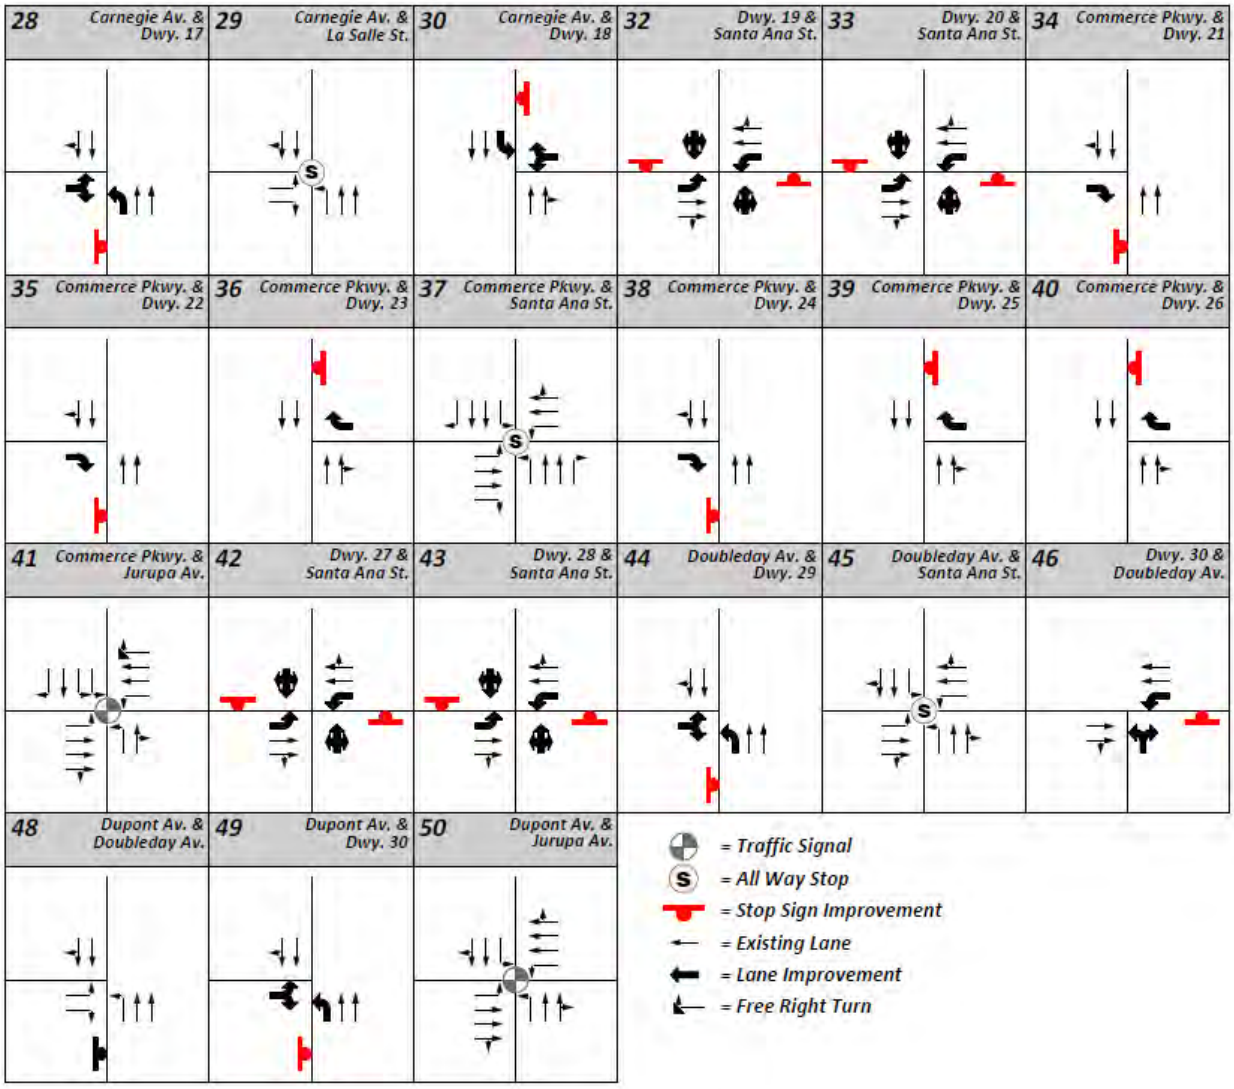

Recommendation 10 – Driveway 7 & La Salle St. (#17) – The following improvement is necessary to accommodate site access:

- Project to install a stop control on the northbound approach and a shared left-right turn lane.
- Project to utilize the existing two-way-left-turn lane for inbound left turn movements.

Recommendation 11 – Driveway 8 & La Salle St. (#18) – The following improvement is necessary to accommodate site access:

- Project to install a stop control on the southbound approach and a shared left-right turn lane.
- Project to utilize the existing two-way-left-turn lane for inbound left turn movements.

Recommendation 12 – Driveway 9 & La Salle St. (#19) – The following improvement is necessary to accommodate site access:

- Project to install a stop control on the southbound approach and a shared left-right turn lane.
- Project to utilize the existing two-way-left-turn lane for inbound left turn movements.

Recommendation 13 – Driveway 10 & Jurupa Av. (#20) – The following improvement is necessary to accommodate site access:

- Project to install a stop control on the southbound approach and a right turn only lane.

Recommendation 14 – Driveway 11 & Jurupa Av. (#21) – The following improvement is necessary to accommodate site access:

- Project to install a stop control on the southbound approach and a right turn only lane.

Recommendation 15 – Carnegie Av. & E. Airport Dr. (#22) – Maintain the existing traffic control and lane geometrics.

Recommendation 16 – Carnegie Av. & Driveway 12 (#23) – The following improvement is necessary to accommodate site access:

- Project to install a stop control on the eastbound and westbound approaches, and a shared left-through-right turn lane on both approaches.
- Project to utilize the existing two-way-left-turn lane for inbound left turn movements.

Recommendation 17 – Carnegie Av. & Driveway 13 (#24) – The following improvement is necessary to accommodate site access:

- Project to install a stop control on the westbound approach and a shared left-right turn lane.
- Project to utilize the existing two-way-left-turn lane for inbound left turn movements.

Recommendation 18 – Carnegie Av. & Driveway 14 (#25) – The following improvement is necessary to accommodate site access:

- Project to install a stop control on the eastbound approach and a shared left-right turn lane.
- Project to utilize the existing two-way-left-turn lane for inbound left turn movements.

DRAFT

Recommendation 19 – Carnegie Av. & Driveway 15/Santa Ana St. (#26) – The following improvement is necessary to accommodate site access:

- Project to install a stop control on the eastbound approach and a shared left-through-right turn lane.
- Project to construct a northbound left turn lane in the two-way-left-turn lane medium.
- Project to restripe the westbound left-right turn lane to a shared a shared left-through-right turn lane.

Recommendation 20 – Carnegie Av. & Driveway 16 (#27) – The following improvement is necessary to accommodate site access:

- Project to install a stop control on the eastbound approach and a shared left-right turn lane.
- Project to utilize the existing two-way-left-turn lane for inbound left turn movements.

Recommendation 21 – Carnegie Av. & Driveway 17 (#28) – The following improvement is necessary to accommodate site access:

- Project to install a stop control on the eastbound approach and a shared left-right turn lane.
- Project to utilize the existing two-way-left-turn lane for inbound left turn movements.

Recommendation 22 – Carnegie Av. & La Salle St. (#29) – Maintain the existing traffic control and lane geometrics.

Recommendation 23 – Carnegie Av. & Driveway 18 (#30) – The following improvement is necessary to accommodate site access:

- Project to install a stop control on the westbound approach and a shared left-right turn lane.
- Project to utilize the existing two-way-left-turn lane for inbound left turn movements.

Recommendation 24 – Driveway 19 & Santa Ana St. (#32) – The following improvement is necessary to accommodate site access:

- Project to install a stop control on the northbound and southbound approaches, and a shared left-through-right turn lane on both approaches.
- Project to utilize the existing two-way-left-turn lane for inbound left turn movements.

Recommendation 25 – Driveway 20 & Santa Ana St. (#33) – The following improvement is necessary to accommodate site access:

- Project to install a stop control on the northbound and southbound approaches, and a shared left-through-right turn lane on both approaches.
- Project to utilize the existing two-way-left-turn lane for inbound left turn movements.

Recommendation 26 – Commerce Pkwy. & Driveway 21 (#34) – The following improvement is necessary to accommodate site access:

- Project to install a stop control on the eastbound approach and a right turn only lane.

DRAFT

Recommendation 27 – Commerce Pkwy. & Driveway 22 (#35) – The following improvement is necessary to accommodate site access:

- Project to install a stop control on the eastbound approach and a right turn only lane.

Recommendation 28 – Commerce Pkwy. & Driveway 23 (#36) – The following improvement is necessary to accommodate site access:

- Project to install a stop control on the westbound approach and a right turn only lane.

Recommendation 29 – Commerce Pkwy. & Santa Ana St. (#37) – Maintain the existing traffic control and lane geometrics.

Recommendation 30 – Commerce Pkwy. & Driveway 24 (#38) – The following improvement is necessary to accommodate site access:

- Project to install a stop control on the eastbound approach and a right turn only lane.

Recommendation 31 – Commerce Pkwy. & Driveway 25 (#39) – The following improvement is necessary to accommodate site access:

- Project to install a stop control on the westbound approach and a right turn only lane.

Recommendation 32 – Commerce Pkwy. & Driveway 26 (#10) – The following improvement is necessary to accommodate site access:

- Project to install a stop control on the westbound approach and a right turn only lane.

Recommendation 33 – Commerce Pkwy. & Jurupa Av. (#41) – Maintain the existing traffic control and lane geometrics.

Recommendation 34 – Driveway 27 & Santa Ana St. (#42) – The following improvement is necessary to accommodate site access:

- Project to install a stop control on the northbound and southbound approaches, and a shared left-through-right turn lane on both approaches.
- Project to utilize the existing two-way-left-turn lane for inbound left turn movements.

Recommendation 35 – Driveway 28 & Santa Ana St. (#43) – The following improvement is necessary to accommodate site access:

- Project to install a stop control on the northbound and southbound approaches, and a shared left-through-right turn lane on both approaches.
- Project to utilize the existing two-way-left-turn lane for inbound left turn movements.

Recommendation 36 – Doubleday Av. & Driveway 29 (#44) – The following improvement is necessary to accommodate site access:

- Project to install a stop control on the eastbound approach and a shared left-right turn lane.
- Project to utilize the existing two-way-left-turn lane for inbound left turn movements.

DRAFT

Recommendation 37 – Doubleday Av. & Santa Ana St. (#45) – Maintain the existing traffic control and lane geometrics.

Recommendation 38 – Driveway 30 & Doubleday Av. (#46) – The following improvement is necessary to accommodate site access:

- Project to install a stop control on the northbound approach and a shared left-right turn lane.
- Project to utilize the existing two-way-left-turn lane for inbound left turn movements.

Recommendation 39 – Dupont Av. & Doubleday Av. (#48) – Maintain the existing traffic control and lane geometrics.

Recommendation 40 – Dupont Av. & Driveway 31 (#49) – The following improvement is necessary to accommodate site access:

- Project to install a stop control on the eastbound approach and a shared left-right turn lane.
- Project to utilize the existing two-way-left-turn lane for inbound left turn movements.

Recommendation 41 – Dupont Av. & Jurupa Av. (#50) – Maintain the existing traffic control and lane geometrics.

Recommendation 42 – Airport Drive is an east-west oriented roadway located on the Project's northern boundary. Airport Drive is currently constructed at its ultimate full-width as a Principal Arterial (120-foot right-of-way) from the Project's western boundary to Carnegie Avenue consistent with the City's standards. Project to construct curb-and gutter and sidewalk improvements along the Project boundary.

Recommendation 43 – Commerce Parkway is a north-south oriented roadway bisected by the Project. Commerce Parkway is currently constructed at its ultimate full-width as a Principal Arterial (120-foot right-of-way) from Carnegie Avenue to Jurupa Street consistent with the City's standards. Project to construct curb-and gutter and sidewalk improvements along the Project boundary.

Recommendation 44 – Haven Avenue is a north-south oriented roadway located on the Project's western boundary. Haven Avenue is currently constructed at its ultimate full-width as a Principal Arterial from Airport Drive to Jurupa Street consistent with the City's standards. Project to construct curb-and gutter and sidewalk improvements along the Project boundary.

Recommendation 45 – La Salle Street is an east-west oriented roadway bisected by the Project. La Salle Street is currently constructed at its ultimate full-width as a Collector (88-foot right-of-way) from Haven Avenue to Carnegie Avenue consistent with the City's standards. Project to construct curb-and gutter and sidewalk improvements along the Project boundary.

Recommendation 46 – Carnegie Avenue is a north-south oriented roadway bisected by the Project. Carnegie Avenue is currently constructed at its ultimate full-width as a Collector (88-foot right-of-way) from Airport Drive to the Project's southern boundary consistent with the City's standards. Project to construct curb-and gutter and sidewalk improvements along the Project boundary.

Recommendation 47 – Santa Ana Street is an east-west oriented roadway bisected by the Project. Santa Ana Street is currently constructed at its ultimate full-width as an Other Principal Arterial (100-foot right-of-way) from Carnegie Avenue to Doubleday Avenue consistent with the City's standards. Project to construct curb-and gutter and sidewalk improvements along the Project boundary.

Recommendation 48 – Jurupa Avenue is an east-west oriented roadway located on the Project's southern boundary. Jurupa Avenue is currently constructed at its ultimate full-width as a Principal Arterial (120-foot right-of-way) from Haven Avenue to Dupont Avenue consistent with the City's standards. Project to construct curb-and gutter and sidewalk improvements along the Project boundary.

Recommendation 49 – Doubleday Avenue is a north-south oriented roadway located on the Project's northern boundary. Doubleday Avenue is currently constructed at its ultimate full-width as a Collector (88-foot right-of-way) from Santa Ana Street to Dupont Avenue consistent with the City's standards. Project to construct curb-and gutter and sidewalk improvements along the Project boundary.

Recommendation 50 – Dupont Avenue is a north-south oriented roadway located on the Project's eastern boundary. Dupont Avenue is currently constructed at its ultimate full-width as a Collector (88-foot right-of-way) from Doubleday Avenue to Jurupa Street consistent with the City's standards. Project to construct curb-and gutter and sidewalk improvements along the Project boundary.

On-site traffic signing and striping should be implemented agreeable with the provisions of the California Department of Transportation (Caltrans) California Manual on Uniform Traffic Control Devices (CA MUTCD) and in conjunction with detailed construction plans for the Project site.

Sight distance at each project access point should be reviewed with respect to standard Caltrans and City of Ontario sight distance standards at the time of preparation of final grading, landscape, and street improvement plans.

1.6.2 OFF-SITE RECOMMENDATIONS

The recommended improvements needed to address the cumulative deficiencies identified under Horizon Year (2040) traffic conditions are summarized in Table 1-3. For those improvements listed in Table 1-3 and not constructed as part of the Project, the Project Applicant's responsibility for the Project's contributions towards deficient intersections is fulfilled through payment of fees (e.g., DIF) or fair share that would be assigned to construction of the identified recommended improvements. Please refer to Section 8 *Local and Regional Funding Mechanisms*.

Table 1-3 also summarizes the applicable cost associated with each of the recommended improvements based on the preliminary construction cost estimates found in Appendix G of the San Bernardino County CMP in conjunction with a cost escalation factor of 1.71 to reflect current (2021) costs. A rough order of magnitude cost has been prepared to determine the appropriate contribution value based upon the Project's fair share of traffic as part of the project approval

process. Based on the Project fair share percentages, the Project's fair share cost is estimated at $1,765. These estimates are a rough order of magnitude only as they are intended only for disclosure purposes and do not imply any legal responsibility or formula for contributions or mitigation.

Recommendation 51 – Prior to the issuance of building permits, the Project Applicant shall pay the Project's fair share amount of $1,765 for the improvements identified in Table 1-3 at intersections located within the City of Ontario, or as agreed to by the City and Project Applicant.

1.7 TRUCK ACCESS AND CIRCULATION

A truck turning template has been overlaid on the site plan at the applicable driveways, which are anticipated to be utilized by heavy trucks, in order to determine the appropriate curb radii and to verify that trucks will have sufficient space to execute turning maneuvers. For the purposes of this evaluation, the WB-67 class truck template has been utilized. WB-67 class trucks are approximately 73.5 feet in length with a trailer length of 53-feet.

The proposed truck access for the site and circulation can be found in Appendix 1.3. As shown on Appendix 1.3, the following modifications are recommended to accommodate the ingress and egress of trucks:

- Driveway 2 on Haven Avenue should be modified to widen the driveway to 50-feet wide by relocating the southern curb of the drive aisle to the south and provide a 40-foot radius on the northeast and southeast curbs.
- Driveway 4 on E. Airport Drive should be modified to relocate the eastern curb of the drive aisle 5-feet to the east, provide a 45-foot radius on the southwest curb, and provide a 40-foot radius on the southeast curb.
- Driveway 5 on E. Airport Drive should be modified to widen the driveway to 45-feet wide by relocating the western curb of the drive aisle 5-feet to the west, provide a 45-foot radius on the southwest curb, and provide a 40-foot radius on the southeast curb.
- Driveway 6 on La Salle Street should be modified to widen the driveway to 50-feet wide, provide a 40-foot radius on the northwest curb, and provide a 45-foot radius on the northeast curb.
- Driveway 7 on La Salle Street should be modified to widen the driveway to 50-feet wide, provide a 40-foot radius on the southwest curb, and provide a 45-foot radius on the southeast curb.
- Driveway 8 on La Salle Street should be modified to widen the driveway to 50-feet wide, provide a 40-foot radius on the southwest curb, and provide a 45-foot radius on the southeast curb.
- Driveway 9 on La Salle Street should be modified to widen the driveway to 50-feet wide, provide a 45-foot radius on the northwest curb, and provide a 40-foot radius on the northeast curb.
- Driveway 11 on Jurupa Avenue modified to provide a 40-foot radius on the northwest curb and a 45-foot radius on the northeast curb.
- Driveway 16 on Carnegie Avenue should be modified to widen the driveway to 65-feet wide by relocating the northern and southern curb of the drive aisle, relocate the on-site median 30 feet to the west, and provide a 40-foot radius on the southwest curb.
- Driveway 20 on Santa Ana Street should be modified to provide a 40-foot radius on the southwest and southeast curbs.

- Driveway 22 on Commerce Parkway should be modified to widen the driveway to 68-feet wide by relocating the northern and southern curb of the drive aisle and provide a 40-foot radius on the northwest curb.
- Driveway 24 on Commerce Parkway should be modified to provide a 35-foot radius on the northwest curb.
- Driveway 25 on Commerce Parkway should be modified to widen the driveway by relocating the southern curb of the drive aisle to the south by 24-feet and relocate the on-site median 30 feet to the east.
- Driveway 28 on Santa Ana Street should be modified to provide a 40-foot radius on the northeast curb.
- Driveway 29 on Doubleday Avenue should be modified to widen the driveway to 50-feet wide by relocating the southern curb of the drive aisle to the south and provide a 40-foot radius on the northwest and southwest curbs.

DRAFT

TABLE 1-3: SUMMARY OF IMPROVEMENTS RECOMMENDED TO MEET CITY OF ONTARIO OR SURROUNDING AGENCY LOS REQUIREMENTS

#	Intersection Location	Jurisdiction	E+P	2026 With Project	2040 With Project	Improvements in City DIF?[1]	Project Responsibility[6]	Total Cost[2,3,4]	Fair Share %[4]	Fair Share Cost[5]
53	Milliken Av. & Mission Bl.	Ontario, Eastvale	None	None	Modify the traffic signal to implement overlap phasing for the NB and EB right turn lanes	No	Fair Share	$128,250	2.8%	$3,530
							Total	**$128,250**		**$3,530**
							Total Costs for Horizon Year (2040) Improvements	**$128,250**		**$3,530**
							Total Project Fair Share Contribution to the City of Ontario (non-DIF/other)[6]		**$1,765**	

[1] Improvements included in City of Ontario DIF program for local, regional and specific plan components.

[2] Costs have been estimated using the data provided in Appendix "G" of the CMP (2003 Update) for preliminary construction costs.

[3] Appendix "G" costs escalated by a factor of 1.568 per City direction except Traffic Signals.

[4] Program improvements constructed by project may be eligible for fee credit, at discretion of City. See Table 8-2 for Fair Share Calculations.

[5] Rough order of magnitude cost estimate.

[6] Total project fair share contribution consists of the improvements which are not already included in the City-wide DIF for those intersections wholly or partially within the City of Ontario.

This Page Intentionally Left Blank

DRAFT

2 METHODOLOGIES

This section of the report presents the methodologies used to perform the traffic analyses summarized in this report. The methodologies described are consistent with City of Ontario's Traffic Study Guidelines.

2.1 LEVEL OF SERVICE

Traffic operations of roadway facilities are described using the term "Level of Service" (LOS). LOS is a qualitative description of traffic flow based on several factors such as speed, travel time, delay, and freedom to maneuver. Six levels are typically defined ranging from LOS A, representing completely free-flow conditions, to LOS F, representing breakdown in flow resulting in stop-and-go conditions. LOS E represents operations at or near capacity, an unstable level where vehicles are operating with the minimum spacing for maintaining uniform flow.

2.2 INTERSECTION CAPACITY ANALYSIS

The definitions of LOS for interrupted traffic flow (flow restrained by the existence of traffic signals and other traffic control devices) differ slightly depending on the type of traffic control. The LOS is typically dependent on the quality of traffic flow at the intersections along a roadway. The 6th Edition Highway Capacity Manual (HCM) methodology expresses the LOS at an intersection in terms of delay time for the various intersection approaches. (4) The HCM uses different procedures depending on the type of intersection control.

2.2.1 SIGNALIZED INTERSECTIONS

City of Ontario and City of Eastvale

The City of Ontario and the City of Eastvale require signalized intersection operations analysis based on the methodology described in the HCM. (4) Intersection LOS operations are based on an intersection's average control delay. Control delay includes initial deceleration delay, queue move-up time, stopped delay, and final acceleration delay. For signalized intersections LOS is directly related to the average control delay per vehicle and is correlated to a LOS designation as described on Table 2-1.

DRAFT

TABLE 2-1: SIGNALIZED INTERSECTION LOS THRESHOLDS

Description	Average Control Delay (Seconds), V/C ≤ 1.0	Level of Service, V/C ≤ 1.0	Level of Service, V/C > 1.0
Operations with very low delay occurring with favorable progression and/or short cycle length.	0 to 10.00	A	F
Operations with low delay occurring with good progression and/or short cycle lengths.	10.01 to 20.00	B	F
Operations with average delays resulting from fair progression and/or longer cycle lengths. Individual cycle failures begin to appear.	20.01 to 35.00	C	F
Operations with longer delays due to a combination of unfavorable progression, long cycle lengths, or high V/C ratios. Many vehicles stop and individual cycle failures are noticeable.	35.01 to 55.00	D	F
Operations with high delay values indicating poor progression, long cycle lengths, and high V/C ratios. Individual cycle failures are frequent occurrences. This is considered to be the limit of acceptable delay.	55.01 to 80.00	E	F
Operation with delays unacceptable to most drivers occurring due to over saturation, poor progression, or very long cycle lengths.	80.01 and up	F	F

Source: HCM (6th Edition)

Consistent with Appendix B of the San Bernardino County CMP, the following saturation flow rates, in vehicles per hour green per lane (vphgpl), will be utilized in the traffic analysis for signalized intersections:

Existing and Opening Year Cumulative Traffic Conditions:

- Exclusive through: 1800 vphgpl
- Exclusive left: 1700 vphgpl
- Exclusive right: 1800 vphgpl
- Exclusive dual left: 1600 vphgpl
- Exclusive triple left: 1500 vphgpl

Horizon Year (2040) Traffic Conditions:

- Exclusive through: 1900 vphgpl
- Exclusive left: 1800 vphgpl
- Exclusive dual left: 1700 vphgpl
- Exclusive right: 1900 vphgpl
- Exclusive dual right: 1800 vphgpl
- Exclusive triple left: 1600 vphgpl or less

The traffic modeling and signal timing optimization software package Synchro (Version 11) has been utilized to analyze signalized intersections within the City of Ontario and City of Eastvale.

DRAFT

Synchro is a macroscopic traffic software program that is based on the signalized intersection capacity analysis as specified in the HCM. Macroscopic level models represent traffic in terms of aggregate measures for each movement at the study intersections. Equations are used to determine measures of effectiveness such as delay and queue length. The level of service and capacity analysis performed by Synchro takes into consideration optimization and coordination of signalized intersections within a network.

The peak hour traffic volumes have been adjusted using a peak hour factor (PHF) to reflect peak 15-minute volumes. Common practice for LOS analysis is to use a peak 15-minute rate of flow. However, flow rates are typically expressed in vehicles per hour. The PHF is the relationship between the peak 15-minute flow rate and the full hourly volume (e.g., PHF = [Hourly Volume] / [4 x Peak 15-minute Flow Rate]). The use of a 15-minute PHF produces a more detailed analysis as compared to analyzing vehicles per hour. Existing PHFs have been used for all analysis scenarios. Per the HCM, PHF values over 0.95 often are indicative of high traffic volumes with capacity constraints on peak hour flows while lower PHF values are indicative of greater variability of flow during the peak hour. (4)

2.2.2 UNSIGNALIZED INTERSECTIONS

The City of Ontario and City of Eastvale require the operations of unsignalized intersections be evaluated using the methodology described in the HCM. (4) The LOS rating is based on the weighted average control delay expressed in seconds per vehicle (see Table 2-2).

TABLE 2-2: UNSIGNALIZED INTERSECTION LOS THRESHOLDS

Description	Average Control Delay Per Vehicle (Seconds)	Level of Service, V/C ≤ 1.0	Level of Service, V/C > 1.0
Little or no delays.	0 to 10.00	A	F
Short traffic delays.	10.01 to 15.00	B	F
Average traffic delays.	15.01 to 25.00	C	F
Long traffic delays.	25.01 to 35.00	D	F
Very long traffic delays.	35.01 to 50.00	E	F
Extreme traffic delays with intersection capacity exceeded.	> 50.00	F	F

Source: HCM (6th Edition)

At two-way or side-street stop-controlled intersections, LOS is calculated for each controlled movement and for the left turn movement from the major street, as well as for the intersection as a whole. For approaches composed of a single lane, the delay is computed as the average of all movements in that lane. Per HCM, the worst individual turning movement (typically on the side-street) is reported for the overall intersection's delay at cross-street stop-controlled intersections. For all-way stop controlled intersections, LOS is computed for the intersection as a whole.

2.3 TRAFFIC SIGNAL WARRANT ANALYSIS METHODOLOGY

The term "signal warrants" refers to the list of established criteria used by Caltrans and other public agencies to quantitatively justify or ascertain the potential need for installation of a traffic

signal at an otherwise unsignalized intersection. This TA uses the signal warrant criteria presented in the latest edition of the Caltrans California Manual on Uniform Traffic Control Devices (CA MUTCD). (5)

The signal warrant criteria for Existing study area intersections are based upon several factors, including volume of vehicular and pedestrian traffic, frequency of accidents, and location of school areas. The CA MUTCD indicates that the installation of a traffic signal should be considered if one or more of the signal warrants are met. (5) Specifically, this TA utilizes the Peak Hour Volume-based Warrant 3 as the appropriate representative traffic signal warrant analysis for existing traffic conditions. Warrant 3 is appropriate to use for this TA because it provides specialized warrant criteria for intersections with rural characteristics (e.g., located in communities with populations of less than 10,000 persons or with adjacent major streets operating above 40 miles per hour). For the purposes of this study, the speed limit was the basis for determining whether Urban or Rural warrants were used for a given intersection.

Future intersections that do not currently exist have been assessed regarding the potential need for new traffic signals based on future average daily traffic (ADT) volumes, using the Caltrans planning level ADT-based signal warrant analysis worksheets.

Traffic signal warrant analyses were performed for the following study area intersection shown on Table 2-3. Traffic signal warrants have not been evaluated for intersections that are anticipated to have restricted access (right-in/right-out only) and would therefore not be suitable locations for installing a traffic signal.

DRAFT

47	Dupont Av. & Santa Ana St.	Ontario
48	Dupont Av. & Doubleday Av.	Ontario
49	Dupont Av. & Driveway 31	Ontario

The Existing conditions traffic signal warrant analysis is presented in the subsequent section, Section 3 *Area Conditions* of this report. The traffic signal warrant analyses for future conditions are presented in Section 5 *E+P Traffic Analysis,* Section 6 *Opening Year Cumulative (2026) Traffic Analysis,* and Section 7 *Horizon Year (2040) Traffic Analysis* of this report. It is important to note that a signal warrant defines the minimum condition under which the installation of a traffic signal might be warranted. Meeting this threshold condition does not require that a traffic control signal be installed at a particular location, but rather, that other traffic factors and conditions be evaluated in order to determine whether the signal is truly justified. It should also be noted that signal warrants do not necessarily correlate with LOS. An intersection may satisfy a signal warrant condition and operate at or above acceptable LOS or operate below acceptable LOS and not meet a signal warrant.

2.4 MINIMUM ACCEPTABLE LEVELS OF SERVICE (LOS)

Minimum Acceptable LOS and associated definitions of intersection deficiencies has been obtained from each of the applicable surrounding jurisdictions.

2.4.1 CITY OF ONTARIO

Per the Ontario Plan's Policy M-1, the City of Ontario utilizes a minimum acceptable LOS of LOS E, where feasible. (6)

2.4.2 CITY OF EASTVALE

The City of Eastvale General Plan Policy C-10 sets a standard of LOS C with LOS D as acceptable in commercial and employment areas and at intersections of any combination of major highways, urban arterials, secondary highways, or freeway ramps. (7) Based on this criterion, where feasible, LOS D is the minimum acceptable LOS at each of the study intersections within the City of Eastvale.

2.4.3 CMP

The CMP definition of deficiency is based on maintaining a level of service standard of LOS E or better, where feasible, except where an existing LOS F condition is identified in the CMP document. However, in an effort to overstate as opposed to understate potential deficiencies, LOS D has been utilized for the CMP intersections for the purposes of this analysis, unless the intersection is located in the City of Ontario (which uses LOS E). (1)

2.5 DEFICIENCY CRITERIA

To determine whether the addition of project traffic at a study intersection would result in a traffic deficiency, the following will be utilized:

- When the Without Project condition is at or better than LOS D (or LOS E for CMP intersections and intersections located in the City of Ontario) (i.e., acceptable LOS), and project-generated traffic causes deterioration below LOS D/LOS E (i.e., unacceptable LOS), a deficiency is deemed to occur.

When the Without Project condition is already below LOS D/LOS E (i.e., unacceptable LOS), the Project will be responsible for improving its deficiency to acceptable levels of service. Thus, for intersections operating at unacceptable LOS during either the AM and/or PM peak hour, improvements have been identified to improve the deficiencies of the Project to an intersection LOS that is equal to or better than Without Project conditions (see Table 2-6).

The Project's contribution to a deficiency can be reduced if the Project is required to implement or fund its fair share of improvements designed to alleviate its contribution to the deficient condition.

DRAFT

TABLE 2-6: DEFICIENCY CRITERIA

Without Project Level of Service	Level of Service	Deficient?	Improvement Required?
City of Ontario			
A	A-D	No	No
B	B-D	No	No
C	C-D	No	No
D	D-E	No	No
E	E	No	No
A-E	F	Yes	Yes, bring LOS to E or better
F	F	Yes	Yes, bring LOS to E or better
City of Eastvale			
A	A-D	No	No
B	B-D	No	No
C	C-D	No	No
D	D	No	No
A-D	E or F	Yes	Yes, bring LOS to D or better
E	E	Yes	Yes, bring LOS to D or better
E	F	Yes	Yes, bring LOS to D or better
F	F	Yes	Yes, bring LOS to D or better

In the event that an intersection is operating at or is forecast to operate at a deficient LOS, the CMP guidelines have defined a series of steps to be completed to determine the Project's contribution to the deficiency of intersections, which has been applied to both CMP and non-CMP study area intersections. The steps are as follows:

- Determine the improvements necessary to achieve an acceptable service level,
- Calculate the Project's share in the future traffic volume projections for the peak hours,
- Estimate the cost to implement recommended improvements, and
- Calculate the Project's fair-share contribution to improve the Project's traffic deficiencies

2.5 PROJECT FAIR SHARE CALCULATION METHODOLOGY

In cases where this TA identifies that the Project would contribute additional traffic volumes to traffic deficiencies, Project fair share costs of improvements necessary to address deficiencies have been identified. The Project's fair share cost of improvements is determined based on the following equation, which is the ratio of Project traffic to new traffic, and new traffic is total future (Horizon Year) traffic less existing baseline traffic:

Project Fair Share % = Project (2040) AM/PM Traffic / (2040 With Project AM/PM Total Traffic – Existing AM/PM Traffic)

DRAFT

The project fair share percentage has been calculated for both the AM peak hour and PM peak hour and the highest of the two has been selected. The Project fair share contribution calculations are presented in Section 8 *Local and Regional Funding Mechanisms* of this TA. The cost of implementing the improvements shown on Table 1-3 have been estimated based on the preliminary construction cost estimates found in Appendix G of the San Bernardino County CMP in conjunction with a total cost escalation factor of 1.71 to more closely approximate current (2021) costs. These cost estimates have been utilized in conjunction with the Project fair share percentages to determine the Project's fair share cost of the recommended improvements (see Table 8-2). These estimates are a rough order of magnitude only as they are intended only for discussion purposes and do not imply any legal responsibility or formula for contributions or physical improvements.

DRAFT

3 AREA CONDITIONS

This section provides a summary of the existing circulation network, the City of Ontario General Plan Circulation Network, and a review of existing peak hour intersection operations and traffic signal warrant analyses.

3.1 EXISTING CIRCULATION NETWORK

Pursuant to the agreement with City of Ontario staff (Appendix 1.1), the study area includes a total of 55 existing and future intersections as shown previously on Exhibit 1-2. Exhibit 3-1 illustrates the study area intersections located near the proposed Project and identifies the number of through traffic lanes for existing roadways and intersection traffic controls.

3.2 CITY OF ONTARIO GENERAL PLAN CIRCULATION ELEMENT

As noted previously, the Project site is located within the City of Ontario. The roadway classifications and planned (ultimate) roadway cross-sections of the major roadways within the study area, as identified on the City of Ontario General Plan Circulation Element, are described subsequently. Exhibit 3-2 shows the City of Ontario General Plan Circulation Element and Exhibit 3-3 illustrates the City of Ontario General Plan roadway cross-sections.

The study area roadways that are classified as 8-lane Other Principal Arterials are identified as having four lanes of travel in each direction. The following study area roadways within the City of Ontario are classified as 8-lane Other Principal Arterials:

- Haven Avenue, north of the SR-60 Freeway

The study area roadways that are classified as 6-lane Other Principal Arterials are identified as having three lanes of travel in each direction and a 14-foot curbed or painted median. The following study area roadways within the City of Ontario are classified as 6-lane Other Principal Arterials:

- Milliken Avenue, north of Airport Drive
- Mission Boulevard
- Jurupa Avenue

The study area roadway that is classified as a 6-lane Minor Arterial is identified as having three lanes of travel in each direction. The following study area roadway within the City of Ontario is classified as a 6-lane Minor Arterial:

- Airport Drive, between Grove Avenue and Hamner Avenue
- Commerce Parkway
- Inland Empire Boulevard, east of Haven Avenue

The study area roadway that is classified as a 4-lane Minor Arterial is identified as having two lanes of travel in each direction and a 14-foot median. The following study area roadway within the City of Ontario is classified as a 4-lane Minor Arterial:

- Inland Empire Boulevard, between Archibald Avenue and Haven Avenue
- Guasti Road

3.3 CITY OF EASTVALE GENERAL PLAN CIRCULATION ELEMENT

Exhibits 3-4 and 3-5 show the City of Eastvale General Plan Circulation Element and roadway cross-sections, respectively.

3.4 TRUCK ROUTES

The City of Ontario designated truck route map is shown on Exhibit 3-6. Commerce Parkway, Airport Drive, Haven Avenue, Milliken Avenue, Jurupa Avenue, and Mission Boulevard are designated as Truck Routes in the City of Ontario. The designated truck route map has been utilized to route truck traffic for the proposed Project and cumulative development projects throughout the study area.

3.5 BICYCLE, EQUESTRIAN, & PEDESTRIAN FACILITIES

Field observations indicate nominal pedestrian and bicycle activity within the study area. Exhibit 3-7 illustrates the City of Ontario future planned bicycle facilities, which proposes Class II and Multipurpose Trails along Guasti Road and Inland Empire Boulevard located north of the Project. Haven Avenue and Mission Boulevard are designated as a Bicycle Corridor. Exhibit 3-8 illustrates the City of Eastvale trails and bikeway systems. Existing pedestrian facilities within the study area are shown on Exhibit 3-9.

3.6 TRANSIT SERVICE

The study area within the City of Ontario is currently served by Omnitrans, a public transit agency serving various jurisdictions within San Bernardino County. Based on a review of the existing transit routes within the vicinity of the proposed Project, Omnitrans Route 81 operates on Haven Avenue, adjacent to the site. There are existing comments located near Haven Avenue at Airport Drive and Jurupa Street, and near Milliken Avenue at Santa Ana Street, Lowell Street, and Jurupa Street. Transit service is reviewed and updated by Omnitrans periodically to address ridership, budget, and community demand needs. Changes in land use can affect these periodic adjustments which may lead to either enhanced or reduced service where appropriate. As such, it is recommended that the applicant work in conjunction with Omnitrans to potentially provide additional bus service to the site. Existing transit routes in the vicinity of the study area are illustrated on Exhibit 3-10.

3.7 EXISTING TRAFFIC COUNTS

The intersection LOS analysis is based on the traffic volumes observed during the peak hour conditions using traffic count data collected in October 2021. The following peak hours were selected for analysis:

- Weekday AM Peak Hour (peak hour between 7:00 AM and 9:00 AM)
- Weekday PM Peak Hour (peak hour between 4:00 PM and 6:00 PM)

The weekday AM and weekday PM peak hour count data is representative of typical weekday peak hour traffic conditions in the study area. There were no observations made in the field that would indicate atypical traffic conditions on the count dates, such as construction activity or detour routes and near-by schools were in session and operating on normal schedules. The raw manual peak hour turning movement traffic count data sheets are included in Appendix 3.1.

The traffic counts collected in October 2021 include the following vehicle classifications: Passenger Cars, 2-Axle Trucks, 2-Axle Trucks, and 4 or More Axle Trucks. To represent the effect of large trucks, buses and recreational vehicles have on traffic flow; all trucks were converted into passenger car equivalent (PCE). By their size alone, these vehicles occupy the same space as two or more passenger cars. In addition, the time it takes for them to accelerate and slow-down is much longer than for passenger cars and varies depending on the type of vehicle and number of axles. For the purpose of this analysis, a PCE factor of 1.5 has been applied to 2-axle trucks, 2.0 for 3-axle trucks, and 3.0 for 4+-axle trucks to estimate each turning movement. These factors are consistent with the values recommended for use in the CMP.

Existing weekday ADT volumes are shown on Exhibit 3-11. Where actual 24-hour tube count data was not available, Existing ADT volumes were based upon factored intersection peak hour counts collected by Urban Crossroads, Inc. using the following formula for each intersection leg:

Weekday PM Peak Hour (Approach Volume + Exit Volume) x 8.62 = Leg Volume

A comparison of the PM peak hour and daily traffic volumes of various roadway segments within the study area indicated that the peak-to-daily relationship is approximately 11.60 percent. As such, the above equation utilizing a factor of 8.62 estimates the ADT volumes on the study area roadway segments assuming a peak-to-daily relationship of approximately 11.60 percent (i.e., 1/0.1160 = 8.62) and was assumed to sufficiently estimate average daily traffic (ADT) volumes for planning-level analyses. Existing weekday AM and weekday PM peak hour intersection volumes (in actual vehicles) are shown on Exhibit 3-11. The peak hour operations analyses utilize PCE volumes per the City's Traffic Study Guidelines (PCE volumes are included in the appendices with the HCM operations analysis worksheets for each applicable analysis scenario).

3.8 INTERSECTION OPERATIONS ANALYSIS

Existing peak hour traffic operations have been evaluated for the study area intersections based on the analysis methodologies presented in Section 2.2 *Intersection Capacity Analysis* of this report. The intersection operations analysis results are summarized on Table 3-1, which indicates that all existing study area intersections are currently operating at acceptable LOS during the peak hours. The intersection operations analysis worksheets are included in Appendix 3.2 of this TA.

* **BOLD** = Level of Service (LOS) does not meet the applicable jurisdictional requirements (i.e., unacceptable LOS).

[1] Per the Highway Capacity Manual (6th Edition), overall average intersection delay and level of service are shown for intersections with a traffic signal or all way stop control. For intersections with cross street stop control, the delay and level of service for the worst individual movement (or movements sharing a single lane) are shown.

[2] CSS = Cross-street Stop; AWS = All-Way Stop; TS = Traffic Signal

[3] Minimum acceptable LOS for each applicable jurisdiction.

3.9 TRAFFIC SIGNAL WARRANTS ANALYSIS

Traffic signal warrants for Existing traffic conditions are based on existing peak hour intersection turning volumes. No study area intersections currently warrant a traffic signal for Existing traffic conditions. Existing conditions traffic signal warrant analysis worksheets are provided in Appendix 3.3.

DRAFT

4 PROJECTED FUTURE TRAFFIC

This section presents the traffic volumes estimated to be generated by the Project, as well as the Project's trip assignment onto the study area roadway network. For the purposes of this TA, the proposed Project is anticipated to be developed by the Year 2026 in a single phase.

The proposed Project includes the following mix of land uses:

- 642,368 square feet of high-cube cold storage warehouse use (15% of the total square footage)
- 3,640,082 square feet of high-cube fulfillment center warehouse use (85% of the total square footage)
- **Total of 4,282,450 square feet**

4.1 PROJECT TRIP GENERATION

Trip generation represents the amount of traffic which is both attracted to and produced by a development. Determining traffic generation for a specific project is therefore based upon forecasting the amount of traffic that is expected to be both attracted to and produced by the specific land uses being proposed for a given development.

Trip generation rates for the Project are shown on Table 4-1 for both actual vehicles and PCE. The trip generation summary illustrating daily, and peak hour trip generation estimates for the proposed Project in actual vehicles and PCE are shown in Table 4-2 and Table 4-3, respectively. The trip generation rates used for this analysis are based upon information collected by the ITE as provided in their Trip Generation Manual (11th Edition, 2021). (3)

DRAFT

For purposes of this analysis, the following ITE land use codes and vehicle mixes have been utilized:

- ITE land use code 155 (High-Cube Fulfillment Center Warehouse, Non-Sort Facility) has been used to derive site specific trip generation estimates for up to 3,640,082 square feet. High-cube (non-sort facility) fulfillment center warehouses are primarily used for the storage and/or consolidation of manufactured goods prior to their distribution to retail locations or other warehouses. A typical high-cube warehouse will have a high level of automation and logistics management where the automation and logistics enable the processing of goods in a highly efficient manner. Fulfillment center warehouses include warehouses characterized by a significant storage function and direct distribution of ecommerce product to end users. These facilities handle smaller packages and quantities than other high-cube warehouses. A non-sort facility is a fulfillment center that ships large box items that are processed primarily with automation rather than through manual means. The High-Cube Fulfillment Center (Non-Sort Facility) Warehouse vehicle mix (passenger cars versus trucks) has also been obtained from the ITE's latest Trip Generation Manual. The truck percentages were further broken down by axle type per the following SCAQMD recommended truck mix: 2-Axle = 16.7%; 3-Axle = 20.7%; 4+-Axle = 62.6%.
- ITE land use code 157 (High-Cube Cold Storage Warehouse) has been used to derive site specific trip generation estimates for up to 642,368 square feet. High-cube cold storage warehouses include warehouses characterized by the storage and/or consolidation of manufactured goods (and to a lesser extent, raw materials) prior to their distribution to retail locations or other warehouses. High-cube cold storage warehouses are facilities typified by temperature-controlled environments for frozen food or other perishable products. The High-Cube Cold Storage Warehouse vehicle mix (passenger cars versus trucks) has also been obtained from the ITE's latest Trip Generation Manual. The truck percentages were further broken down by axle type per the following SCAQMD recommended truck mix: 2-Axle = 34.7%; 3-Axle = 11.0%; 4+-Axle = 54.3%.

Finally, PCE factors were applied to the trip generation rates for heavy trucks (large 2-axles, 3-axles, 4+-axles) for the Project. PCEs allow the typical "real-world" mix of vehicle types to be represented as a single, standardized unit, such as the passenger car, to be used for the purposes of capacity and level of service analyses. The PCE factors are consistent with the recommended PCE factors in Appendix B of the San Bernardino County Congestion Management Program (CMP), 2016 Update.

As shown on Table 4-2, the proposed Project is anticipated to generate a total of 7,980 two-way trips per day, with 613 AM peak hour trips and 644 PM peak hour trips (in actual vehicles). For the purposes of the operations analysis, the PCE trip generation shown in Table 4-3 has been utilized. Detailed Project trip generation summaries for each building are provided in Appendix 4.1.

4.2 PROJECT TRIP DISTRIBUTION

The Project trip distribution and assignment process represents the directional orientation of traffic to and from the Project site. The trip distribution pattern of passenger cars is heavily influenced by the geographical location of the site, the location of surrounding uses, and the proximity to the regional freeway system. The trip distribution pattern for truck traffic is also influenced by the local truck routes approved by the City of Ontario, City of Eastvale, and Caltrans.

Given these differences, separate trip distributions were generated for both passenger cars and truck trips.

Exhibit 4-1 illustrates the external truck trip distribution patterns and Exhibit 4-2 illustrates the external passenger car trip distribution patterns. As shown on Exhibit 4-1, trucks are anticipated to utilize designated truck routes to reach regional State highways such as the I-10, SR-60, and I-15 Freeways. Detailed Project trip distributions for each building are provided in Appendix 4.2.

4.3 MODAL SPLIT

The potential for Project trips (non-truck) to be reduced by the use of public transit, walking or bicycling have not been included as part of the Project's estimated trip generation. Essentially, the Project's traffic projections are "conservative" in that these alternative travel modes would reduce the forecasted traffic volumes (non-truck trips only).

4.4 PROJECT TRIP ASSIGNMENT

The assignment of traffic from the Project area to the adjoining roadway system is based upon the Project trip generation, trip distribution, and the arterial highway and local street system improvements that would be in place by the time of initial occupancy of the Project. Based on the identified Project traffic generation and trip distribution patterns, Project ADT and peak hour intersection turning movement volumes are shown on Exhibit 4-3.

4.5 BACKGROUND TRAFFIC

4.5.1 OPENING YEAR CUMULATIVE CONDITIONS

Future year traffic forecasts have been based upon background (ambient) growth at 2% per year for 2026 traffic conditions. The ambient growth factor is intended to approximate regional traffic growth. This ambient growth rate is added to existing traffic volumes to account for area-wide growth not reflected by cumulative development projects. Ambient growth has been added to daily and peak hour traffic volumes on surrounding roadways, in addition to traffic generated by the development of future projects that have been approved but not yet built and/or for which development applications have been filed and are under consideration by governing agencies.

Opening Year Cumulative (2026) traffic volumes are provided in Section 6 of this report. The traffic generated by the proposed Project was then manually added to the base volume to determine Opening Year Cumulative "With Project" forecasts.

4.5.2 HORIZON YEAR (2040) CONDITIONS

The adopted Southern California Association of Governments (SCAG) 2020 Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS) (May 2020) growth forecasts for the City of Ontario identifies projected growth in population of 172,200 in 2016 to 269,100 in 2045, or a 56.3% increase over the 29-year period. (8) The change in population equates to roughly a 1.55% growth rate, compounded annually. Similarly, growth over the same 29-year period in households is projected to increase by 62.0%, or a 1.67% annual growth rate. Finally, growth in employment over the same 29-year period is projected to increase by 48.6%, or a 1.38% annual growth rate.

Therefore, the annual growth rate utilized for the purposes of this analysis would appear to conservatively approximate the anticipated regional growth in traffic volumes in the City of Ontario for Opening Year Cumulative and Horizon Year (2040) traffic conditions, especially when considered along with the addition of project-related traffic. As such, the growth in traffic volumes assumed in this traffic impact analysis would tend to overstate as opposed to understate the potential deficiencies to traffic and circulation. Horizon Year (2040) With Project traffic forecasts reflects buildout of the Project.

4.6 CUMULATIVE DEVELOPMENT TRAFFIC

A cumulative project list was developed for the purposes of this analysis through consultation with planning and engineering staff from the City of Ontario. The cumulative projects listed are those that would generate traffic and would contribute traffic to study area intersections. The neighboring jurisdictions of Rancho Cucamonga, Eastvale, and Jurupa Valley have also been contacted to include key projects in their respective cities.

Exhibit 4-4 illustrates the cumulative development location map. A summary of cumulative development projects and their proposed land uses are shown on Table 4-4. If applicable, the traffic generated by individual cumulative projects was manually added to the Opening Year Cumulative forecasts to ensure that traffic generated by the listed cumulative development projects on Table 4-4 are reflected as part of the background traffic. In an effort to conduct a conservative analysis, the cumulative projects are added in conjunction with the ambient growth identified in Section 4.5.1 *Background Traffic: Opening Year Cumulative Conditions*. Cumulative ADT and peak hour intersection turning movement volumes are shown on Exhibit 4-5.

4.7 HORIZON YEAR (2040) VOLUME DEVELOPMENT

Traffic projections for Horizon Year (2040) without Project conditions were derived from the San Bernardino Transportation Analysis Model (SBTAM) using accepted procedures for model forecast refinement and smoothing for study area intersections located within the County of San Bernardino. The current version of the SBTAM (Version 2.20, March 2019) reflects the local input in the adopted 2020 SCAG RTP within the County of San Bernardino.

The traffic forecasts reflect the area-wide growth anticipated between Existing (2021) conditions and Horizon Year (2040) traffic conditions. In most instances the traffic model zone structure is not designed to provide accurate turning movements along arterial roadways unless refinement and reasonableness checking is performed. Therefore, the Horizon Year (2040) peak hour forecasts were refined using the model derived long range forecasts, base (validation) year model forecasts, along with existing peak hour traffic count data collected at each analysis location in January 2019. The SBTAM has a base (validation) year of 2016 and a horizon (future forecast) year of 2040. The difference in model volumes (2040-2016) defines the growth in traffic over the 28-year period.

The refined future peak hour approach and departure volumes obtained from the model output data are then entered into a spreadsheet program consistent with the National Cooperative Highway Research Program (NCHRP Report 785), along with initial estimates of turning movement proportions. A linear programming algorithm is used to calculate individual turning movements which match the known directional roadway segment forecast volumes computed in the previous step. This program computes a likely set of intersection turning movements from intersection approach counts and the initial turning proportions from each approach leg.

The SBTAM uses an AM peak period-to-peak hour factor of 0.35 and a PM peak period-to-peak hour factor of 0.27. These factors represent the relationship of the highest single AM peak hour to the modeled 3-hour AM peak period (an even distribution would result in a factor of 0.33) and the highest single PM peak hour to the modeled 4-hour PM peak period (an even distribution would result in a factor of 0.25).

Typically, the model growth is prorated and is subsequently added to the existing (base validation) traffic volumes to represent Horizon Year traffic conditions. In an effort to conduct a conservative analysis, reductions to traffic forecasts from either Existing or Opening Year Cumulative traffic conditions were not assumed as part of this analysis. As such, in conjunction with the addition of cumulative projects that are not consistent with the General Plan, additional growth has also been applied on a movement-by-movement basis, where applicable, to estimate reasonable Horizon Year (2040) forecasts. Horizon Year (2040) turning volumes were compared to Opening Year Cumulative (2026) volumes in order to ensure a minimum growth as a part of the refinement process. The minimum growth includes any additional growth between Opening Year Cumulative (2026) and Horizon Year (2040) traffic conditions that is not accounted for by the traffic generated by cumulative development projects and ambient growth rates assumed between Existing (2021) and Opening Year Cumulative (2026) conditions. Adjustments have not been made to study area intersections that may be affected by new future roadway connections (such as the extension of Kimball Avenue/Limonite Avenue), where travel patterns would likely

get affected and forecasts may potentially decrease from the Opening Year Cumulative conditions. Future estimated peak hour traffic data was used for new intersections and intersections with an anticipated change in travel patterns to further refine the Horizon Year (2040) peak hour forecasts.

The future Horizon Year (2040) Without Project peak hour turning movements were then reviewed by Urban Crossroads, Inc. for reasonableness, and in some cases, were adjusted to achieve flow conservation, reasonable growth, and reasonable diversion between parallel routes. Flow conservation checks ensure that traffic flow between two closely spaced intersections, such as two adjacent driveway locations, is verified in order to make certain that vehicles leaving one intersection are entering the adjacent intersection and that there is no unexplained loss of vehicles. The result of this traffic forecasting procedure is a series of traffic volumes which are suitable for traffic operations analysis.

The SBTAM does not include a truck component or have data that is unusually low. As such, in an effort to conduct a conservative analysis, the presence of trucks has been accounted for based on the manual volume adjustments made to demonstrate growth above Opening Year Cumulative (2026) traffic forecasts, which are presented and evaluated in PCE (see Section 3.7 *Existing Traffic Counts* for discussion on PCE). As such, the Horizon Year (2040) forecasts are also assumed to be in PCE for the purposes of this analysis. Post-processing worksheets for Horizon Year (2040) without Project traffic conditions are provided in Appendix 4.3.

DRAFT

5 E+P TRAFFIC CONDITIONS

This section discusses the traffic forecasts for Existing plus Project (E+P) conditions and the resulting intersection operations and traffic signal warrant analyses.

5.1 ROADWAY IMPROVEMENTS

The lane configurations and traffic controls assumed to be in place for E+P conditions are consistent with those shown previously on Exhibit 3-1, with the exception of the following:

- Project driveways and those facilities assumed to be constructed by the Project to provide site access are also assumed to be in place for E+P conditions only (e.g., intersection and roadway improvements at the Project's frontage and driveways).

5.2 EXISTING PLUS PROJECT TRAFFIC VOLUME FORECASTS

This scenario includes Existing traffic volumes plus Project traffic. The ADT and weekday AM and PM peak hour intersection turning movement volumes which can be expected for E+P traffic conditions are shown on Exhibit 5-1.

5.3 INTERSECTION OPERATIONS ANALYSIS

E+P peak hour traffic operations have been evaluated for the study area intersections based on the analysis methodologies presented in Section 2 *Methodologies* of this TA. The intersection analysis results are summarized on Table 5-1 for E+P traffic conditions, which indicate that the following no study area intersections are anticipated to operate at an unacceptable LOS. The intersection operations analysis worksheets for E+P traffic conditions are included in Appendix 5.1 of this TA.

5.4 TRAFFIC SIGNAL WARRANTS ANALYSIS

No study area intersections are anticipated to meet peak hour or planning-level ADT volume-based traffic signal warrants for E+P traffic conditions (see Appendix 5.2).

[1] Per the Highway Capacity Manual (6th Edition), overall average intersection delay and level of service are shown for intersections with a traffic signal or all way stop control. For intersections with cross street stop control, the delay and level of service for the worst individual movement (or movements sharing a single lane) are shown.

[2] CSS = Cross-street Stop; AWS = All-Way Stop; TS = Traffic Signal; **CSS** = Improvement

[3] Minimum acceptable LOS for each applicable jurisdiction.

5.5 IMPROVEMENTS

This section provides a summary of Project deficiencies and identified improvements. Based on the City of Ontario deficiency criteria discussed in Section 2.6 *Deficiency Criteria*, no intersections were found to be deficient.

5.5.1 IMPROVEMENTS TO ADDRESS DEFICIENCIES AT INTERSECTIONS

As shown on Table 5-1, all intersections are anticipated to operate at an acceptable LOS for E+P traffic conditions. No improvements have been recommended.

DRAFT

6 OPENING YEAR CUMULATIVE (2026) TRAFFIC CONDITIONS

This section discusses the methods used to develop Opening Year Cumulative (2026) Without and With Project traffic forecasts, and the resulting intersection operations and traffic signal warrant analyses.

6.1 ROADWAY IMPROVEMENTS

The lane configurations and traffic controls assumed to be in place for Opening Year Cumulative (2026) conditions are consistent with those shown previously on Exhibit 3-1, with the exception of the following:

- Project driveways and those facilities assumed to be constructed by the Project to provide site access are also assumed to be in place for Opening Year Cumulative conditions only (e.g., intersection and roadway improvements along the Project's frontage and driveways).
- Driveways and those facilities assumed to be constructed by cumulative developments to provide site access are also assumed to be in place for Opening Year Cumulative conditions only.

6.2 OPENING YEAR CUMULATIVE (2026) WITHOUT PROJECT TRAFFIC VOLUME FORECASTS

This scenario includes Existing traffic volumes plus an ambient growth factor of 10.26% plus traffic from pending and approved but not yet constructed known development projects in the area. The weekday ADT and weekday AM and PM peak hour volumes which can be expected for Opening Year Cumulative (2026) Without Project traffic conditions are shown on Exhibit 6-1.

6.3 OPENING YEAR CUMULATIVE (2026) WITH PROJECT TRAFFIC VOLUME FORECASTS

This scenario includes Opening Year Cumulative (2026) Without Project traffic in conjunction with the addition of Project traffic. The weekday ADT and weekday AM and PM peak hour volumes which can be expected for Opening Year Cumulative (2026) With Project traffic conditions are shown on Exhibit 6-2, respectively.

6.4 INTERSECTION OPERATIONS ANALYSIS

6.4.1 OPENING YEAR CUMULATIVE (2026) WITHOUT PROJECT TRAFFIC CONDITIONS

LOS calculations were conducted for the study intersections to evaluate their operations under Opening Year Cumulative (2026) Without Project conditions with roadway and intersection geometrics consistent with Section 6.1 *Roadway Improvements*. As shown on Table 6-1, no study area intersections are anticipated to operate at an unacceptable LOS under Opening Year Cumulative (2026) Without Project traffic conditions. The intersection operations analysis worksheets for Opening Year Cumulative (2026) Without Project traffic conditions are included in Appendix 6.1 of this TA.

6.4.2 Opening Year Cumulative (2026) With Project Traffic Conditions

As shown on Table 6-1, no study area intersections are anticipated to operate at a deficient LOS during one or both peak hours for Opening Year Cumulative (2026) With Project traffic conditions with the addition of Project Buildout traffic. The intersection operations analysis worksheets for Opening Year Cumulative (2026) With Project traffic conditions are included in Appendix 6.2 of this TA.

6.5 Traffic Signal Warrants Analysis

No unsignalized study area intersection is anticipated to meet a peak hour or daily volume-based traffic signal warrant under Opening Year Cumulative (2026) Without Project traffic conditions, in addition to the locations previously identified under Existing and E+P traffic conditions (see Appendix 6.3).

The following unsignalized study area intersections anticipated to meet a peak hour volume-based traffic signal warrant under Opening Year Cumulative (2026) With Project traffic conditions (see Appendix 6.4):

- Commerce Pkwy. & Santa Ana St. (#37)

6.6 Improvements

This section provides a summary of Project deficiencies and identified improvements. Based on the City of Ontario deficiency criteria discussed in Section 2.6 *Deficiency Criteria*, no intersections were found to be deficient.

6.6.1 Improvements To Address Deficiencies At Intersections

As shown on Table 6-1, all intersections are anticipated to operate at an acceptable LOS for Opening Year Cumulative (2026) Without and With Project traffic conditions. No improvements have been recommended.

[3] Minimum acceptable LOS for each applicable jurisdiction.

DRAFT

7 HORIZON YEAR (2040) TRAFFIC CONDITIONS

This section discusses the methods used to develop Horizon Year (2040) Without and With Project traffic forecasts, and the resulting intersection operations and traffic signal warrant analyses.

7.1 ROADWAY IMPROVEMENTS

The lane configurations and traffic controls assumed to be in place for Horizon Year (2040) conditions are consistent with those shown previously on Exhibit 3-1, with the exception of the following:

- Project driveways and those facilities assumed to be constructed by the Project to provide site access are also assumed to be in place for Horizon Year conditions only (e.g., intersection and roadway improvements along the Project's frontage and driveways).
- Driveways and those facilities assumed to be constructed by cumulative developments to provide site access are also assumed to be in place for Horizon Year conditions only (e.g., intersection and roadway improvements along the cumulative development's frontages and driveways).

7.2 HORIZON YEAR (2040) WITHOUT PROJECT TRAFFIC VOLUME FORECASTS

This scenario includes the refined post-process volumes obtained from the SBTAM (see Section 4.7 *Horizon Year (2040) Volume Development* of this TA for a detailed discussion on the post-processing methodology). The weekday ADT and weekday AM and PM peak hour volumes which can be expected for Horizon Year (2040) Without Project traffic conditions are shown on Exhibit 7-1.

7.3 HORIZON YEAR (2040) WITH PROJECT TRAFFIC VOLUME FORECASTS

This scenario includes the refined post-process volumes obtained from the SBTAM, plus the traffic generated by the proposed Project. Horizon Year (2040) With Project traffic forecasts assumes buildout of the Project. The weekday ADT and weekday AM and PM peak hour volumes which can be expected for Horizon Year (2040) With Project traffic conditions are shown on Exhibit 7-2.

7.4 INTERSECTION OPERATIONS ANALYSIS

7.4.1 HORIZON YEAR (2040) WITHOUT PROJECT TRAFFIC CONDITIONS

LOS calculations were conducted for the study intersections to evaluate their operations under Horizon Year (2040) Without Project conditions with roadway and intersection geometrics consistent with Section 7.1 *Roadway Improvements*. As shown on Table 7-1, no study area intersections are anticipated to operate at an unacceptable LOS under Horizon Year (2040) Without Project traffic conditions. The intersection operations analysis worksheets for Horizon Year (2040) Without Project traffic conditions are included in Appendix 7.1 of this TA.

7.4.2 HORIZON YEAR (2040) WITH PROJECT TRAFFIC CONDITIONS

As shown on Table 7-1, the following study area intersections are anticipated to operate at a deficient LOS during one or both peak hours for Horizon Year (2040) With Project traffic conditions with the addition of Project traffic:

- Driveway 3 & E. Airport Dr. (#13) – LOS F PM peak hour only
- Milliken Av. & Mission Bl. (#53) – LOS E AM peak hour; LOS F PM peak hour

The intersection operations analysis worksheets for Horizon Year (2040) With Project traffic conditions are included in Appendix 7.2 of this TA.

7.5 TRAFFIC SIGNAL WARRANTS ANALYSIS

No additional study area intersections are anticipated to meet peak hour or planning level (ADT) volume-based traffic signal warrants for Horizon Year (2040) Without Project traffic conditions (see Appendix 7.3), in addition to those previously warranted under Opening Year Cumulative (2026) With Project traffic conditions.

No additional study area intersections anticipated to meet planning level (ADT) volume-based traffic signal warrant for Horizon Year (2040) With Project traffic conditions (see Appendix 7.4) with the addition of Project traffic.

* **BOLD** = Level of Service (LOS) does not meet the applicable jurisdictional requirements (i.e., unacceptable LOS).

[1] Per the Highway Capacity Manual (6th Edition), overall average intersection delay and level of service are shown for intersections with a traffic signal or all way stop control. For intersections with cross street stop control, the delay and level of service for the worst individual movement (or movements sharing a single lane) are shown.

[2] CSS = Cross-street Stop; AWS = All-Way Stop; TS = Traffic Signal; **CSS** = Improvement

[3] Minimum acceptable LOS for each applicable jurisdiction.

7.6 IMPROVEMENTS

7.6.1 IMPROVEMENTS TO ADDRESS DEFICIENCIES AT INTERSECTIONS

Improvement strategies have been identified at intersections that have been identified as deficient, in an effort to reduce each location's peak hour delay and improve the associated LOS grade to an acceptable LOS (LOS D/E or better). The effectiveness of the recommended improvement strategies to address Horizon Year (2040) traffic deficiencies are presented on Table 7-2. Improvements have not been recommended at the intersection of Driveway 3 and E. Airport Drive. The deficiency is anticipated to occur within the driveway for vehicles making an outbound left turn movement during the PM peak hour only. During congested peak hours, vehicles are likely to make a right turn or utilize alternative driveways on-site.

If not constructed by the Project, the Project Applicant shall contribute to these improvements through payment of City DIF fees or fair share contribution as identified on Table 1-3. Worksheets for Horizon Year (2040) With Project conditions, with improvements, HCM calculation worksheets are provided in Appendix 7.5, respectively.

TABLE 7-2: INTERSECTION ANALYSIS FOR HORIZON YEAR (2040) CONDITIONS WITH IMPROVEMENTS

#	Intersection	Traffic Control[3]	Intersection Approach Lanes[1]												Delay[2] (secs.)		Level of Service		Jurisdiction(s) / LOS Standard
			Northbound			Southbound			Eastbound			Westbound							
			L	T	R	L	T	R	L	T	R	L	T	R	AM	PM	AM	PM	
53	Milliken Av. & Mission Bl.																		
	Without Improvements	TS	2	3	0	2	3	1	1	2	0	1	1	1	63.0	96.0	E	F	Eastvale,
	With Improvements	TS	2	3	0	2	3	1	1	2	0	1	1	1>	42.4	54.7	D	D	Ontario / LOS D

[1] When a right turn is designated, the lane can either be striped or unstriped. To function as a right turn lane there must be sufficient width for right turning vehicles to travel outside the through lanes.

L = Left; T = Through; R = Right; > = Right-Turn Overlap Phasing; 1 = Improvement

[2] Per the Highway Capacity Manual (6th Edition), overall average intersection delay and level of service are shown for intersections with a traffic signal or all way stop control. For intersections with cross street stop control, the delay and level of service for the worst individual movement (or movements sharing a single lane) are shown.

[3] TS = Traffic Signal

8 LOCAL AND REGIONAL FUNDING MECHANISMS

Transportation improvements within the City of Ontario are funded through a combination of construction of improvements, development impact fee programs or fair share contributions, such as the City of Ontario DIF program. Identification and timing of needed improvements is generally determined through local jurisdictions based upon a variety of factors.

8.1 CITY OF ONTARIO DEVELOPMENT IMPACT FEE PROGRAM

The City of Ontario has created its own local DIF program to impose and collect fees from new residential, commercial, and industrial development for the purpose of funding roadways and intersections necessary to accommodate City growth as identified in the City's General Plan Circulation Element. The City's DIF includes regional improvements to comply with Measure "I." The fee schedule was last updated in January 2020 and is reviewed/adjusted annually based upon changes in the construction cost index (CCI). Under the City's DIF program, the City may grant to developers a credit against specific components of fees when those developers construct certain facilities and landscaped medians identified in the list of improvements funded by the DIF program.

The timing to use the DIF fees is established through periodic capital improvement programs which are overseen by the City's Public Works Department. Periodic traffic counts, review of traffic accidents, and a review of traffic trends throughout the City are also periodically performed by City staff and consultants. The City uses this data to determine the timing of implementing the improvements listed in its facilities list. The City also uses this data to ensure that the improvements listed on the facilities list are constructed before the LOS falls below the LOS performance standards adopted by the City. In this way, the improvements are constructed before the LOS falls below the City's LOS performance thresholds.

The Project Applicant will be subject to the City's DIF fee program and will pay the requisite City DIF fees at the rates then in effect pursuant to the City's ordinance. The Project Applicant's payment of the requisite DIF at the rates then in effect, pursuant to the City DIF Program, would satisfy the Project's proportional improvement requirements at potentially affected DIF-funded facilities.

DRAFT

TABLE 8-1: ESTIMATED FEE OBLIGATION

Fee Reference	Industrial ($ PER SQ. FT.)
Industrial: Regional and Local Streets	$3.002/SF

Fee Calculation

Program	Category	Unit Cost	Units/Sq.Ft.	Local Circulation
Local/Regional Impacts	Industrial	$3.00	4,282,450	$12,848,206
			Total Transportation Impact Fees	$12,848,206

8.2 MEASURE "I" FUNDS

In 2004, the voters of San Bernardino County approved the 30-year extension of Measure "I," a one-half of one percent sales tax on retail transactions, through the year 2040, for transportation projects including, but not limited to, infrastructure improvements, commuter rail, public transit, and other identified improvements. The Measure "I" extension requires that a regional traffic impact fee be created to ensure development is paying its fair share. A regional Nexus study was prepared by SBCTA and concluded that each jurisdiction should include a regional fee component in their local programs in order to meet the Measure "I" requirement. The regional component assigns specific facilities and cost sharing formulas to each jurisdiction and was most recently updated in November 2011. Revenues collected through these programs are used in tandem with Measure "I" funds to deliver projects identified in the Nexus Study. While Measure "I" is a self-executing sales tax administered by SBCTA, it bears discussion here because the funds raised through Measure "I" have funded in the past and will continue to fund new transportation facilities in San Bernardino County.

8.3 FAIR SHARE CONTRIBUTION

Project improvement may include a combination of fee payments to established programs, construction of specific improvements, payment of a fair share contribution toward future improvements or a combination of these approaches. Improvements constructed by development may be eligible for a fee credit or reimbursement through the program where appropriate (to be determined at the City's discretion).

When off-site improvements are identified with a minor share of responsibility assigned to proposed development, the approving jurisdiction may elect to collect a fair share contribution or require the development to construct improvements. Detailed fair share calculations, for each peak hour, has been provided on Table 8-2 for the applicable deficient study area intersections.

These fees are collected with the proceeds solely used as part of a funding mechanism aimed at ensuring that regional highways and arterial expansions keep pace with the projected population increases.

TABLE 8-2: PROJECT FAIR SHARE CALCULATIONS FOR INTERSECTIONS

#	Intersection		Existing	Total Project	2040 With Project Volume	Total New Traffic	Project % of New Traffic
53	Milliken Av. & Mission Bl.						
		AM:	2,980	57	5,051	2,071	2.8%
		PM:	3,680	60	5,964	2,284	2.6%

BOLD = Denotes highest fair share percentage.

APPENDIX 1.1:

APPROVED TRAFFIC STUDY SCOPING AGREEMENT

This Page Intentionally Left Blank

October 25, 2021

Mr. Jay Bautista
City of Ontario
303 E. B Street
Ontario, CA 91764

SUBJECT: SCOPING ASSUMPTIONS FOR THE CALIFORNIA LOGISTICS CENTER TRAFFIC ANALYSIS

Dear Mr. Jay Bautista:

Urban Crossroads, Inc. has conducted an initial assessment of the proposed California Logistics Center development (**Project**) to establish a traffic analysis (**TA**) scope of work that would be prepared in support of an Environmental Impact Report (**EIR**) Addendum. The Project is located on the southeast corner of Haven Avenue and E. Airport Drive in the City of Ontario. The following memo outlines the project-related trip generation, trip distribution patterns, proposed study area and analysis scenarios expected to be included in the Project traffic analysis.

PROJECT DESCRIPTION

Exhibit 1 illustrates the location map for the proposed Project and Exhibit 2 shows the preliminary site plan. The proposed Project is anticipated to be developed in one phase with an opening year of 2026. For purposes of TA, the following mix of land uses are proposed to be evaluated for the Project:

- 642,368 square feet of high-cube cold storage warehouse use (15% of the total square footage)
- 3,640,082 square feet of high-cube fulfillment center warehouse use (85% of the total square footage)
- **Total of 4,282,450 square feet**

Access to the proposed Project would be provided to the surrounding roadways of Haven Avenue, E. Airport Drive, Carnegie Avenue, Commerce Parkway, Double Day Avenue, Dupont Avenue, La Salle Street, Santa Ana Street, and Jurupa Avenue. Exhibit 3 illustrates the Project with respect to the proposed study area.

EXHIBIT 1: LOCATION MAP

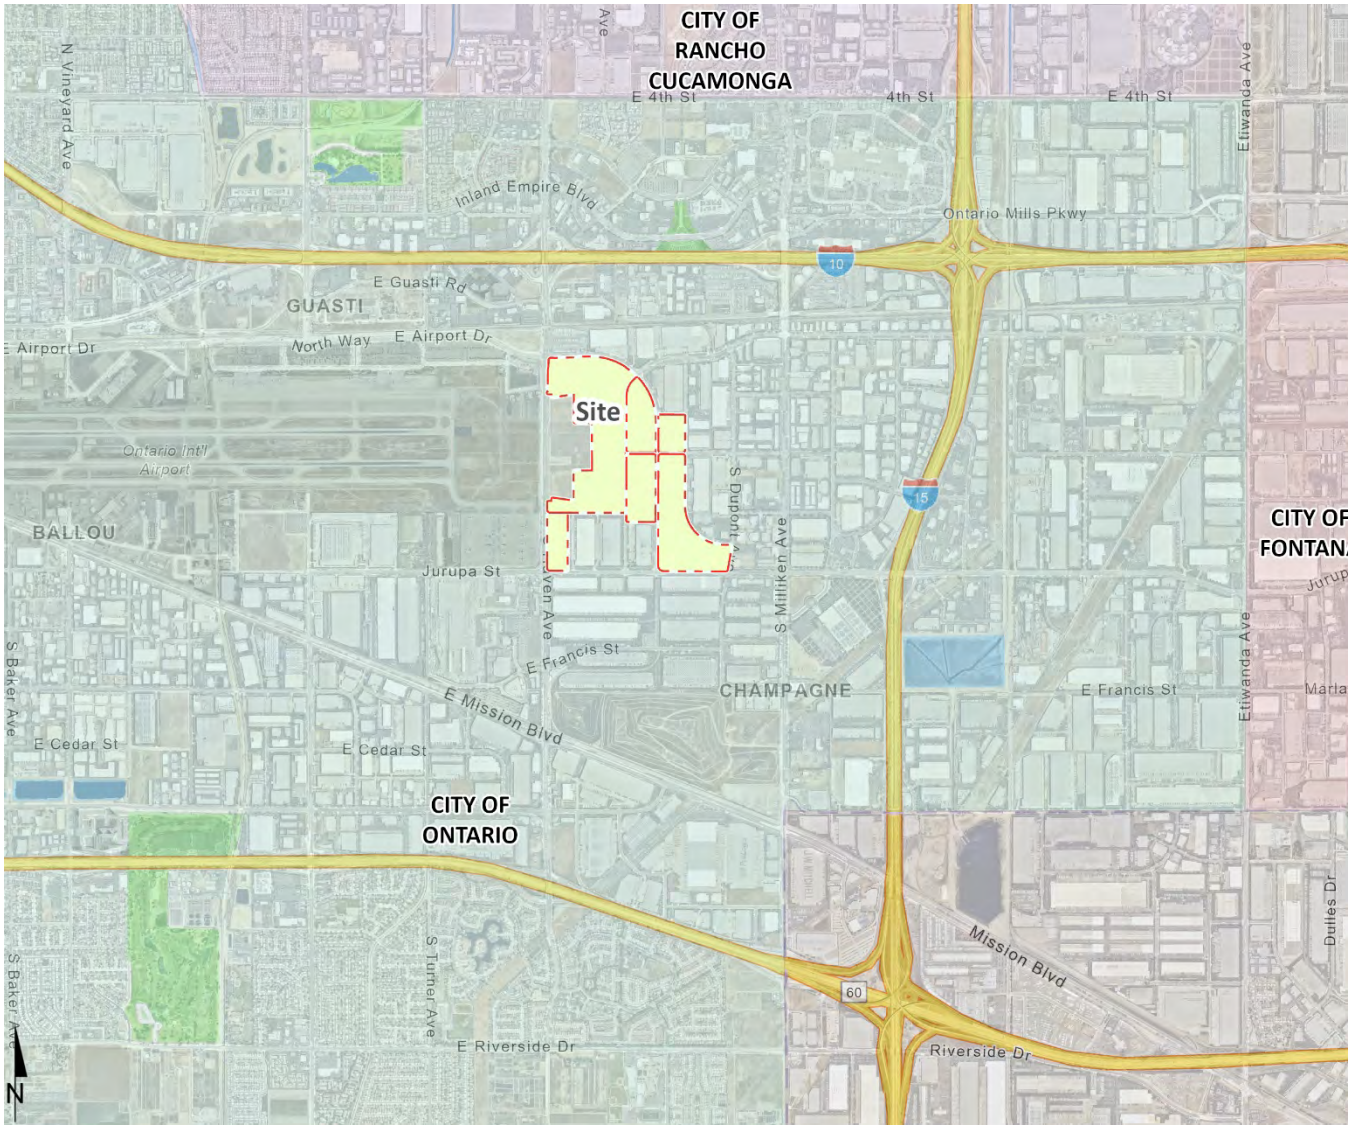

EXHIBIT 2: PRELIMINARY SITE PLAN

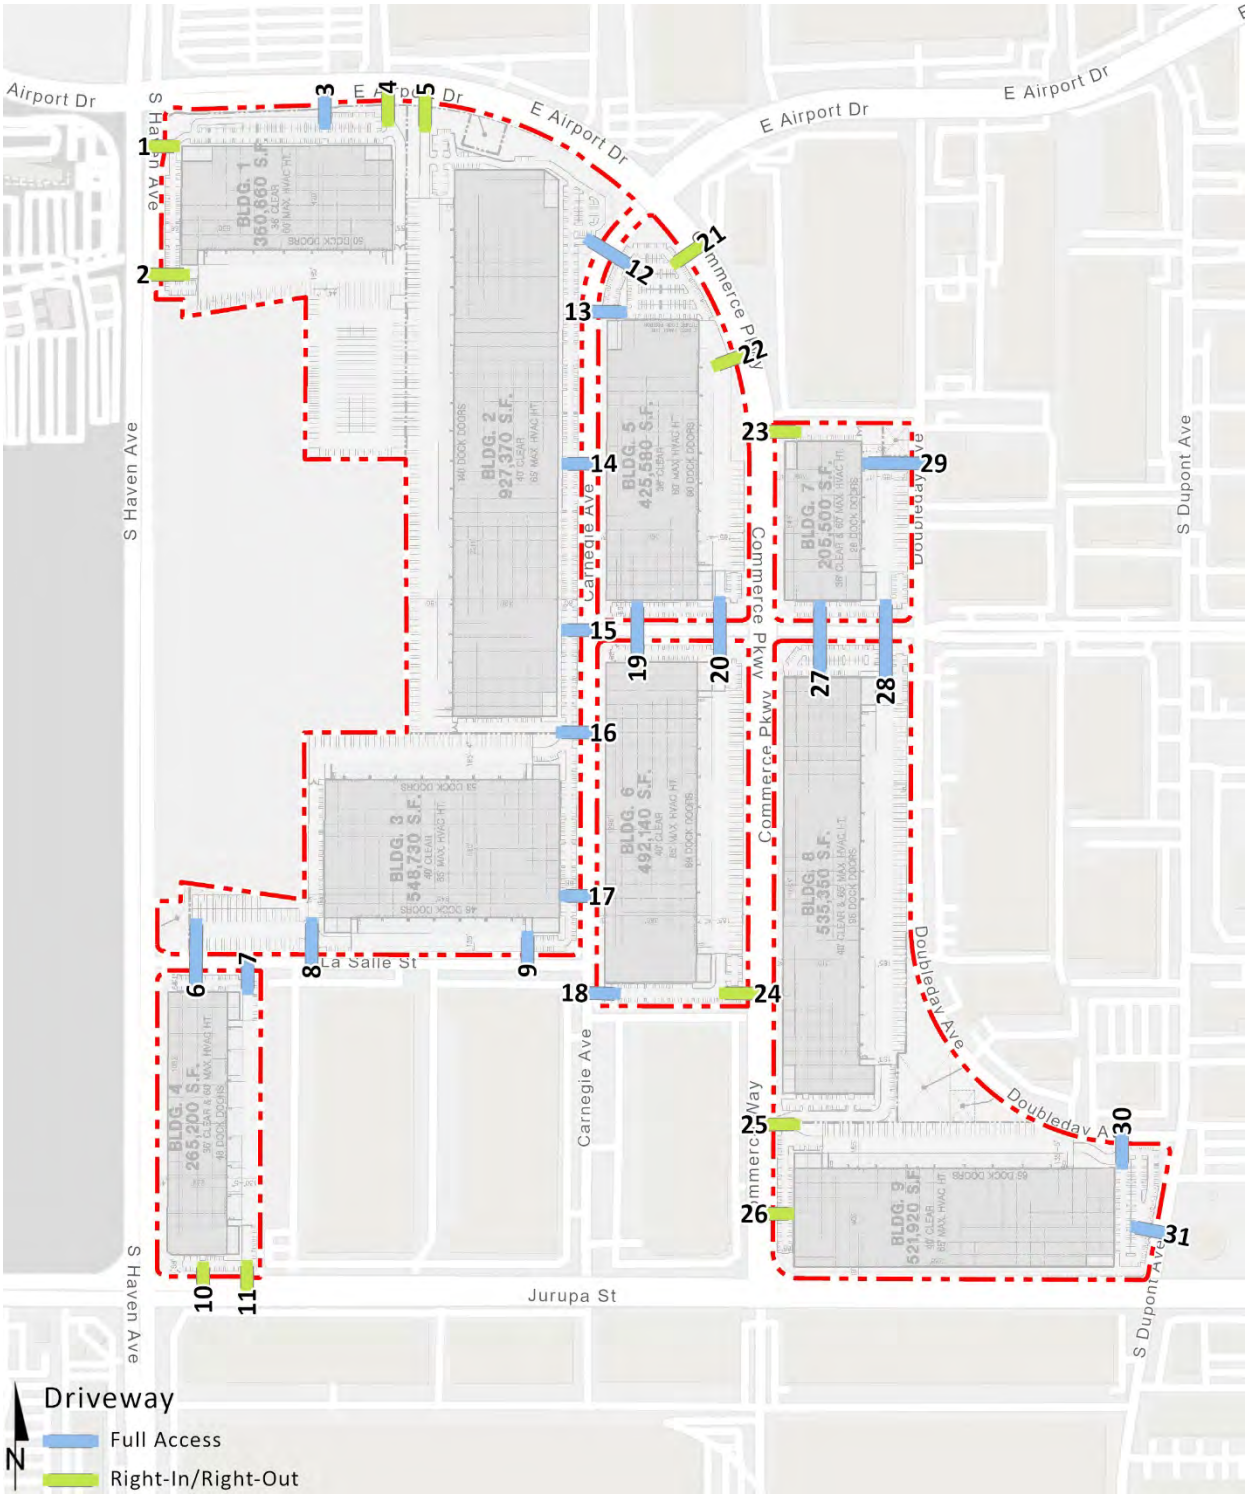

EXHIBIT 3: STUDY AREA

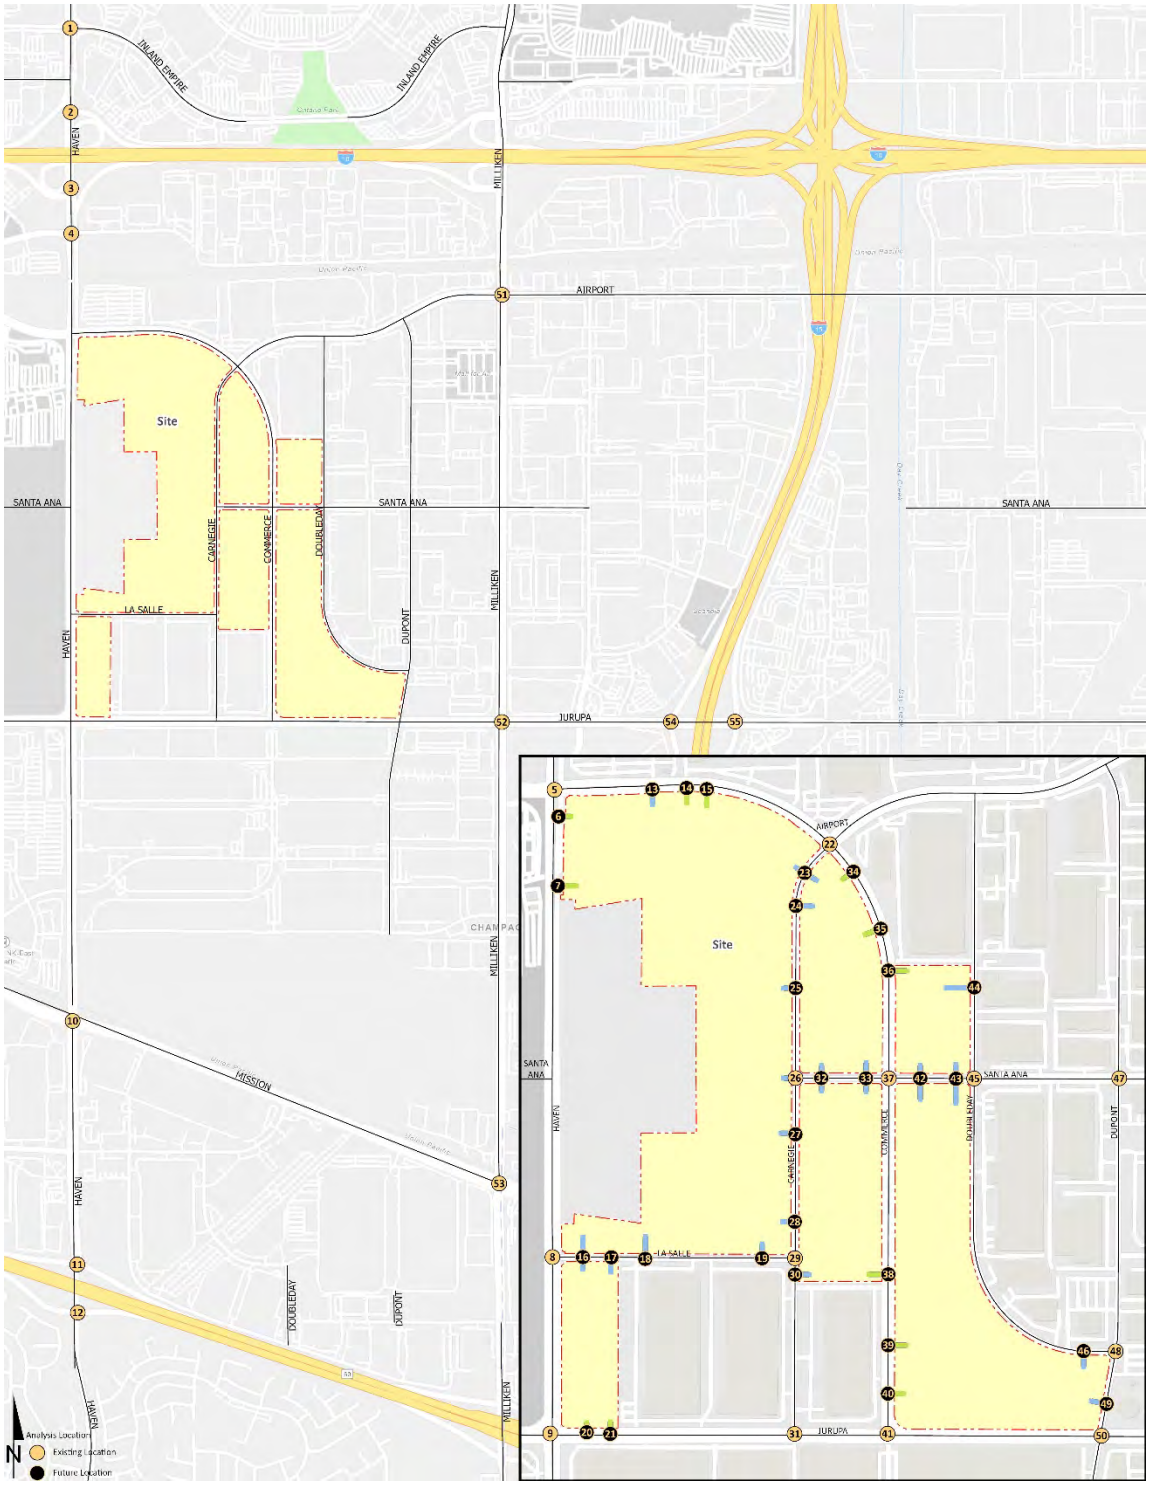

PROPOSED ANALYSIS SCENARIOS

The following analysis scenarios are proposed based on planned development phasing:

- Existing (2021)
- Existing plus Project
- Opening Year Cumulative (2026) Without Project
- Opening Year Cumulative (2026) With Project
- Horizon Year (2040) Without Project
- Horizon Year (2040) With Project

EXISTING COUNT DATA

The Cucamonga School District (in which the Project area lies within) started school for the 2021-2022 school year on August 12, 2021. In addition, Mountain View School District and Ontario Montclair School District have also started their school year. It is our understanding that schools are back to in-person instruction. We are proposing to conduct new traffic counts for the study area intersections and not apply any further adjustments in establishing the baseline as traffic counts would reflect the current conditions, including any foreseeable lasting effects due to the currently ongoing COVID-19 pandemic.

AMBIENT GROWTH

Future year traffic forecasts will be based upon a background (ambient) growth of 2% per year, compounded annually. The growth factor for Opening Year Cumulative (2026) traffic conditions will be 10.41% (or $1.02^{5\ years}$).

TRIP GENERATION

Trip generation represents the amount of traffic that is attracted and produced by a development and is based upon the specific land uses planned for a given project. Trip generation rates for the Project are shown in Table 1 for both actual vehicles and passenger car equivalent (PCE). The trip generation rates used for this analysis are based upon information collected by the Institute of Transportation Engineers (ITE) as provided in their Trip Generation Manual (11^{th} Edition, 2021).

[1] Trip Generation and Vehicle Mix Source: Institute of Transportation Engineers (ITE), Trip Generation Manual, Eleventh Edition (2021).

[2] TSF = thousand square feet

[3] Truck Mix: South Coast Air Quality Management District's (SCAQMD) recommended truck mix, by axle type.
Normalized % - Without Cold Storage: 16.7% 2-Axle trucks, 20.7% 3-Axle trucks, 62.6% 4-Axle trucks.
Normalized % - With Cold Storage: 34.7% 2-Axle trucks, 11.0% 3-Axle trucks, 54.3% 4-Axle trucks.

[4] PCE factors: 2-axle = 1.5; 3-axle = 2.0; 4+-axle = 3.0.

For purposes of this analysis, the following ITE land use codes and vehicle mixes have been utilized:

- ITE land use code 155 (High-Cube Fulfillment Center Warehouse, Non-Sort Facility) has been used to derive site specific trip generation estimates for up to 3,640,082 square feet. High-cube (non-sort facility) fulfillment center warehouses are primarily used for the storage and/or consolidation of manufactured goods prior to their distribution to retail locations or other warehouses. A typical high-cube warehouse will have a high level of automation and logistics management where the automation and logistics enable the processing of goods in a highly efficient manner. Fulfillment center warehouses include warehouses characterized by a significant storage function and direct distribution of ecommerce product to end users. These facilities handle smaller packages and quantities than other high-cube warehouses. A non-sort facility is a fulfillment center that ships large box items that are processed primarily with automation rather than through manual means. The High-Cube Fulfillment Center (Non-Sort

Facility) Warehouse vehicle mix (passenger cars versus trucks) has also been obtained from the ITE's latest Trip Generation Manual. The truck percentages were further broken down by axle type per the following SCAQMD recommended truck mix: 2-Axle = 16.7%; 3-Axle = 20.7%; 4+-Axle = 62.6%.

- ITE land use code 157 (High-Cube Cold Storage Warehouse) has been used to derive site specific trip generation estimates for up to 642,368 square feet. High-cube cold storage warehouses include warehouses characterized by the storage and/or consolidation of manufactured goods (and to a lesser extent, raw materials) prior to their distribution to retail locations or other warehouses. High-cube cold storage warehouses are facilities typified by temperature-controlled environments for frozen food or other perishable products. The High-Cube Cold Storage Warehouse vehicle mix (passenger cars versus trucks) has also been obtained from the ITE's latest Trip Generation Manual. The truck percentages were further broken down by axle type per the following SCAQMD recommended truck mix: 2-Axle = 34.7%; 3-Axle = 11.0%; 4+-Axle = 54.3%.

Finally, PCE factors were applied to the trip generation rates for heavy trucks (large 2-axles, 3-axles, 4+-axles) for the Project. PCEs allow the typical "real-world" mix of vehicle types to be represented as a single, standardized unit, such as the passenger car, to be used for the purposes of capacity and level of service analyses. The PCE factors are consistent with the recommended PCE factors in Appendix B of the San Bernardino County Congestion Management Program (CMP), 2016 Update.

The trip generation summary illustrating daily and peak hour trip generation estimates for the proposed Project in actual vehicles are shown on Table 2, and Table 3 shows the trip generation summary based on PCE. As shown on Table 2, the proposed Project is anticipated to generate a total of 7,980 vehicle trip-ends per day with 613 AM peak hour trips and 644 PM peak hour trips (in actual vehicles). For the purposes of the operations analyses, the PCE trip generation shown in Table 3 will be utilized consistent with other studies prepared within the City. Detailed Project trip generation by Building are provided in Attachment A of this scoping memorandum.

TRIP DISTRIBUTION

The Project trip distribution and assignment process represents the directional orientation of traffic to and from the Project site. Exhibit 3 illustrates the truck trip distribution patterns for Existing plus Project, Opening Year Cumulative and Horizon Year conditions. As shown on Exhibit 4, trucks are anticipated to utilize designated truck routes to reach regional State highways such as the I-10, SR-60, and I-15 Freeways. Exhibit 5 illustrates the passenger car trip distribution patterns. Detailed Project trip distributions for each building are provided in Attachment B.

EXHIBIT 4: PROJECT (TRUCK) TRIP DISTRIBUTION

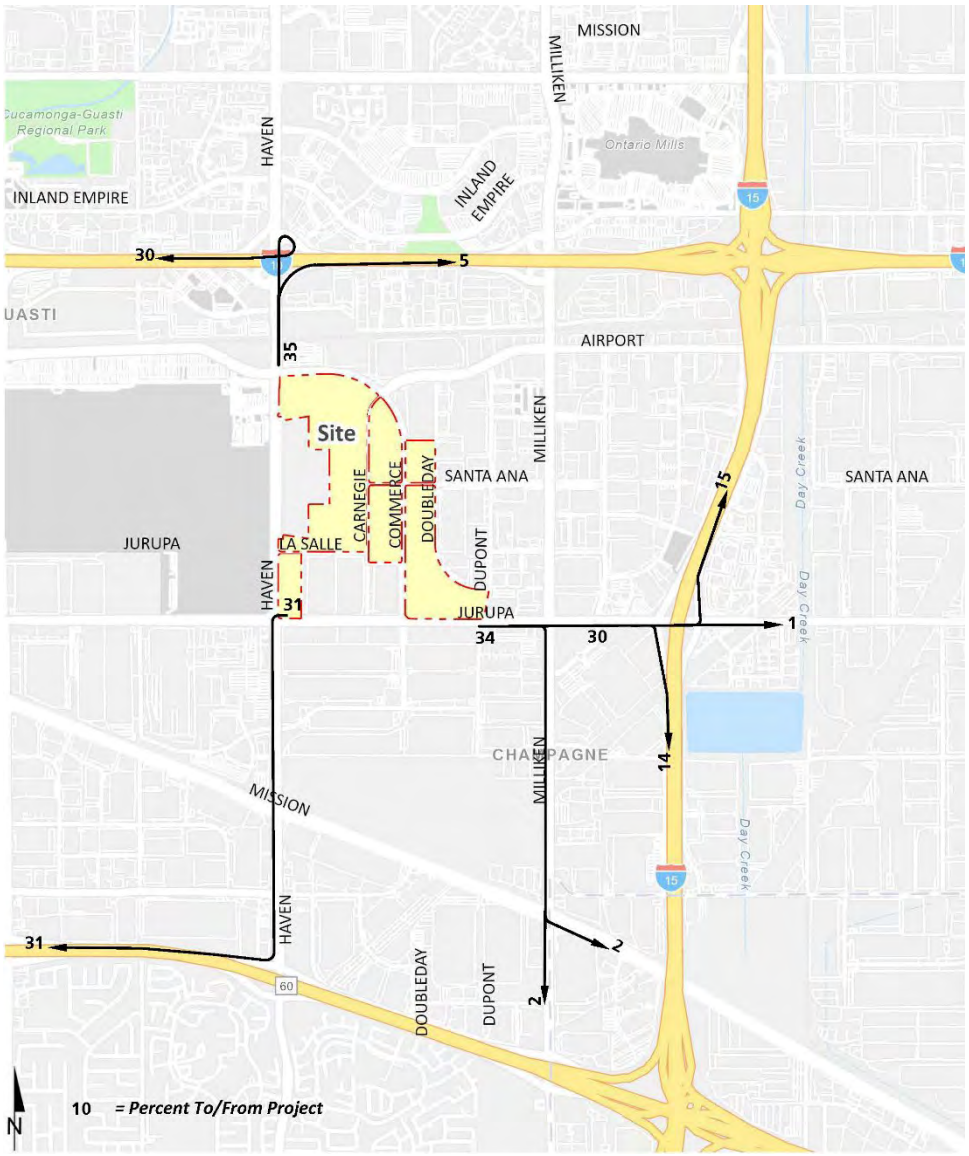

EXHIBIT 5: PROJECT (PASSENGER CAR) TRIP DISTRIBUTION

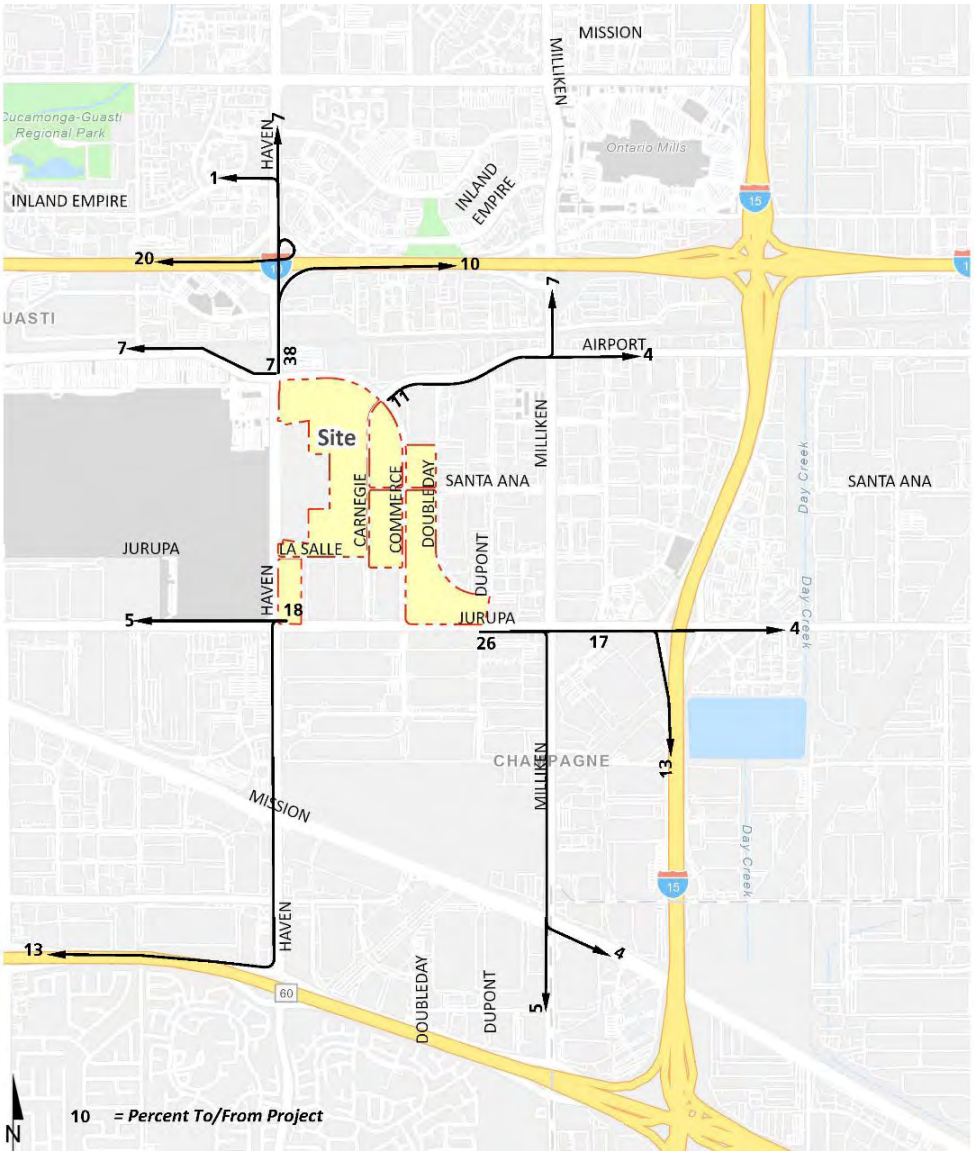

INTERSECTION ANALYSIS LOCATIONS

Exhibit 3 depicts the recommended intersection analysis locations, based upon the Project trip generation and trip distribution patterns included as part of this letter. The recommended intersection analysis locations are based on the highest Project traffic contribution presented for either Opening Year Cumulative or Horizon Year scenarios (i.e., 50 peak hour trip criteria). Table 4 also includes a summary of the study area intersections.

TABLE 4: INTERSECTION ANALYSIS LOCATIONS

#	Intersection	#	Intersection
1	Haven Av. & Inland Empire Bl.	30	Carnegie Av. & Driveway 18

VEHICLE MILES TRAVELLED (VMT)

The VMT thresholds and methodology outlined in the City of Ontario's May 2020 VMT guidelines will be utilized to conduct the VMT analysis for the Project. The VMT analysis will be prepared and submitted under separate cover.

TRAFFIC SIGNAL WARRANTS

Traffic signal warrant analysis will be conducted for all unsignalized full access driveways/intersections following the guidance of the California Manual on Uniform Control Devices (CA MUTCD).

OPEN ITEMS – CUMULATIVE DEVELOPMENT PROJECTS

It is requested that the City of Ontario provide a current list of cumulative development projects for inclusion in our traffic study.

OPEN ITEMS – SIGNAL TIMING

It is requested that the City provide traffic signal timing for any City controlled intersections that we should take into consideration in our operations analysis.

If you have any questions, please contact me directly at (949) 861-0177.

Respectfully submitted,

URBAN CROSSROADS, INC.

Charlene So

Charlene So, PE
Associate Principal

Intersection Summary	
HCM 6th Ctrl Delay	18.6
HCM 6th LOS	B

Notes

* HCM 6th computational engine requires equal clearance times for the phases crossing the barrier.

Unsignalized Delay for [WBR] is excluded from calculations of the approach delay and intersection delay.

Notes

User approved volume balancing among the lanes for turning movement.

* HCM 6th computational engine requires equal clearance times for the phases crossing the barrier.

Intersection Summary	
HCM 6th Ctrl Delay	14.5
HCM 6th LOS	B

Notes

* HCM 6th computational engine requires equal clearance times for the phases crossing the barrier.

Unsignalized Delay for [WBR] is excluded from calculations of the approach delay and intersection delay.
