Intersection Summary	
HCM 6th Ctrl Delay	19.5
HCM 6th LOS	B

Notes

* HCM 6th computational engine requires equal clearance times for the phases crossing the barrier.

Unsignalized Delay for [WBR] is excluded from calculations of the approach delay and intersection delay.

Intersection Summary	
HCM 6th Ctrl Delay	16.9
HCM 6th LOS	B

Notes

* HCM 6th computational engine requires equal clearance times for the phases crossing the barrier.

Unsignalized Delay for [WBR] is excluded from calculations of the approach delay and intersection delay.

Intersection Summary	
HCM 6th Ctrl Delay	21.0
HCM 6th LOS	C

Notes

* HCM 6th computational engine requires equal clearance times for the phases crossing the barrier.

Unsignalized Delay for [WBR] is excluded from calculations of the approach delay and intersection delay.

Intersection Summary	
HCM 6th Ctrl Delay	13.8
HCM 6th LOS	B

Notes

* HCM 6th computational engine requires equal clearance times for the phases crossing the barrier.

Unsignalized Delay for [WBR] is excluded from calculations of the approach delay and intersection delay.

Subject: California Logistics Center – Airport Land Use Compatibility Review

Dear Mr. McDonald:

This letter documents Mead & Hunt's airport compatibility review of the proposed California Logistics Center (the Project) located just beyond a half mile east of Ontario International Airport (ONT or Airport). Our evaluation compares the Project proposal against the airport land use compatibility criteria included in the Ontario International Airport Land Use Compatibility Plan (ALUCP) adopted by the City of Ontario (the City) in 2011 and amended in July 2018.

There are three areas of your development which we have reviewed as it relates to the proposed Project:

1. Support interpreting the City's ALUCP (heights and occupancy intensity limits).
2. Support interpreting Federal Aviation Administration (FAA) airspace regulations related to Part 77 of the Federal Aviation Regulations, *Safe, Efficient Use, and Preservation of National Airspace*, and Runway Threshold Siting Surfaces in FAA Advisory Circular (AC) 150/5300-13A, Change 1, *Airport Design* (hereafter "AC-13A").
3. Support interpreting FAA runway protection zone (RPZ) policy and guidance in AC-13A and the FAA Memorandum on *Interim Guidance on Land Uses Within a Runway Protection Zone*, dated September 2012. Mead & Hunt provided its RPZ findings in a draft "ghost" letter in September 2021 that would be submitted on McDonald Property Group letterhead to the Ontario International Airport Authority (OIAA).

As detailed below, Mead & Hunt finds the Project to be conditionally consistent with the 2018 ALUCP and other matters reviewed by Mead & Hunt. Recommended conditions are noted at the end of this letter.

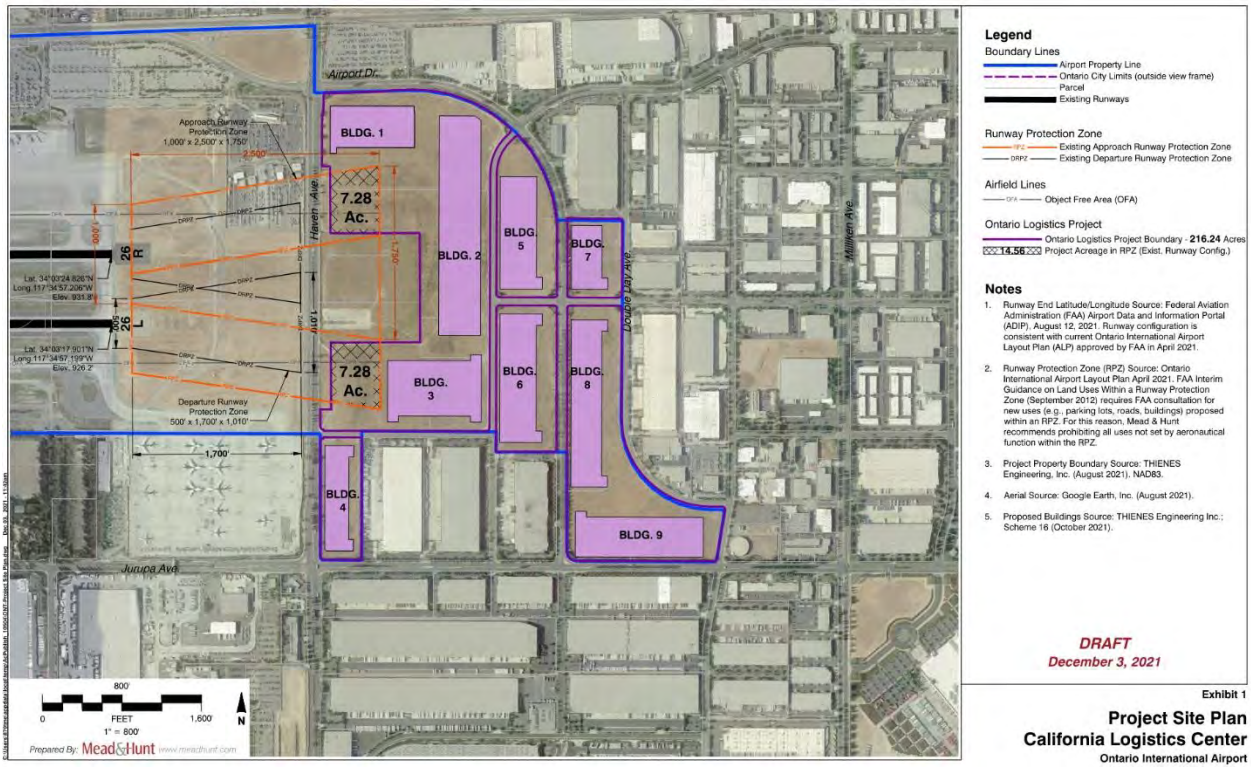
PROJECT OVERVIEW

As the information provided to us indicates, the Project site is located between Haven Avenue and Dupont Avenue, east of the Ontario International Airport (the Airport) on property owned by the OIAA. The Project site totals 216± acres (see **Exhibit 1**). Under a Ground Lease between the OIAA and the McDonald Property Group, the Project site will be developed for nonaeronautical use and will consist of nine industrial buildings (warehousing/manufacturing). As indicated in OIAA Resolution No. 2021-22, the FAA released the property under Section 163 of the FAA Reauthorization Act of 2018 for nonaeronautical use to support the Project on November 23, 2020 (first portion of property) and January 21, 2021 (second portion of property).

The Project site is part of the California Commerce Center that was developed in the 1980s, at which time underground infrastructure, streets, street frontages, and select corner landscape monuments were constructed. Since then, several commercial/industrial buildings have been constructed throughout the park; however, the Project site remains vacant and undeveloped.

The proposed California Logistics Center is conceptually planned as a nine-building, master-planned industrial park totaling approximately 4.2 million square feet of state-of-the art buildings. Buildings will range in size from 205,000 square feet to 927,000 square feet with a minimum interior clearance height ranging from 36 feet to 40 feet and will have a maximum exterior height of approximately 65 feet, which provides a 10-foot vertical clearance for rooftop equipment. Once the exterior shells of the buildings and associated infrastructure (e.g., parking lots) are constructed, the buildings will be leased to tenants for warehousing and light manufacturing uses. Mead & Hunt understands that the McDonald Property Group is designing each building to provide ancillary office space and employee facilities (e.g., break rooms, restrooms) and are assumed for purposes of this ALUCP review to be less than, but not limited to, 10% of each building's floor area.

Exhibit 1: Project Site Plan



ALUCP REQUIREMENTS

California Public Utilities Code (PUC), Section 21675(a) requires that an airport land use compatibility plan (ALUCP) be developed for all public-use airports in the state. The City adopted an ALUCP for the Ontario International Airport in April 2021. The 2011 ALUCP protected for a long-term scenario involving shifting both runways south and east of their present positions.

In 2018, at the request of the OIAA, the City amended the ALUCP to remove the long-term runway scenario and to reflect only the runway configuration that exists today (see **Attachment A**).

The basic function of the ALUCP is to promote compatibility between the Airport and the land uses that surround it in order to avoid future compatibility conflicts. The ALUCP policies address four types of airport land use concerns:

- Noise – Locations exposed to potentially disruptive levels of aircraft noise.
- Overflights – Locations where aircraft overflights can be intrusive and annoying to many people.
- Safety – Areas where the risk of an aircraft accident poses heightened safety concerns for people and property on the ground.
- Airspace Protection – Places where height and certain other land use characteristics need to be restricted to protect the safe and efficient use of navigable airspace.

A compatibility evaluation of the Project against each compatibility factor is described below.

Noise Evaluation

The purpose of noise compatibility policies is to avoid the establishment of noise-sensitive land uses in areas exposed to significant levels of aircraft noise.

As shown in **Exhibit 2**, the Project site falls within three ALUCP Noise Impact Zones:

- 65-70 dB CNEL
- 70-75 dB CNEL
- 75-80 dB CNEL

Exhibit 2: Noise

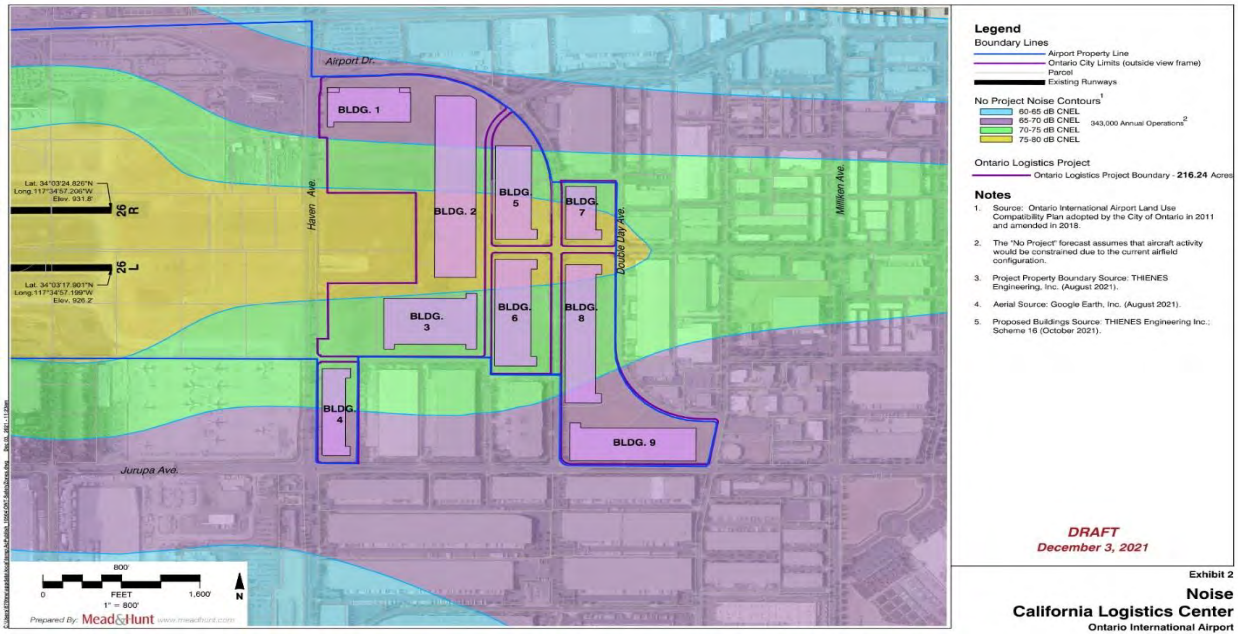


Exhibit 3 presents the ALUCP noise criteria that indicate that office uses are considered normally incompatible in areas exposed to CNEL 75 dB or greater unless extensive mitigation techniques are applied to make the indoor environment (with windows closed) acceptable for performance of expected activities (i.e., maximum of CNEL 50 dB). In the lower Noise Impact Zones, office spaces are deemed to be conditionally compatible if a maximum interior noise level of CNEL 50 dB is achieved through incorporation of proper sound attenuation design. The requirement also applies to Light Industrial Uses in the CNEL 70-80 dB Noise Impact Zones. Warehousing is deemed to be a compatible use in all three zones.

To facilitate a consistency determination from the City for the portion of the Project site in the CNEL 75-80 dB zone, Mead & Hunt recommends further actions by the McDonald Property Group that are listed in the Findings section below at the end of this letter.

Exhibit 3: ALUCP Noise Criteria

Noise Criteria

Legend: Land use compatibility
(A detailed explanation of each land use acceptability category is provided on pg. 2-50 of this table.)

Normally Compatible Land Use	Conditional Land Use (45/50)	Incompatible Land Use

- Cells that are conditionally compatible that have a number, indicate the interior noise level standard condition for use consistency.

Land Use Category [1] *Note: Multiple land use categories and compatibility criteria may apply to a project*	Noise Impact Zones Exterior Noise Exposure [1] (CNEL dB)					Criteria for Conditional Uses *Note: Interior noise level limits shown in yellow cells also apply (See **Policy N4**)*
	≤ 60	60-65	65-70	70-75	≥ 75	
Offices: professional services, doctors, finance, civic; radio, television & recording studios, office space associated with other listed uses			50	50		
Personal & Miscellaneous Services: barbers, car washes, print shops			50	50		
Vehicle Fueling: gas stations, trucking & transportation terminals				50	50	
Industrial, Manufacturing, and Storage Uses						
Hazardous Materials Production: oil refineries, chemical plants (≥6,000 gallons)						
Heavy Industrial						
Light Industrial, High Intensity: food products preparation, electronic equipment				50	50	
Light Industrial, Low Intensity: machine shops, wood products, auto repair				50	50	
Research & Development			50	50		
Indoor Storage: wholesale sales, warehouses, mini/other indoor storage, barns, greenhouses						
Outdoor Storage: public works yards, automobile dismantling						
Mining & Extraction						

Overflight Evaluation

Noise from individual aircraft operations, especially by comparatively loud aircraft, can be intrusive and annoying in locations beyond the limits of the noise impact zones. The purpose of overflight compatibility policies is to help notify people about the presence of overflights near airports so that they can make more informed decisions regarding acquisition or lease of property in the affected area.

As shown in **Exhibit 4**, the Project falls entirely with the Overflight Notification Zone - Avigation Easement Dedication. The ALUCP requires dedication of an avigation easement to the Airport owner/operator prior to commencement of construction as a condition for approval of new development. **Exhibit 5** provides a sample avigation easement from the ALUCP.

Exhibit 4: Overflight

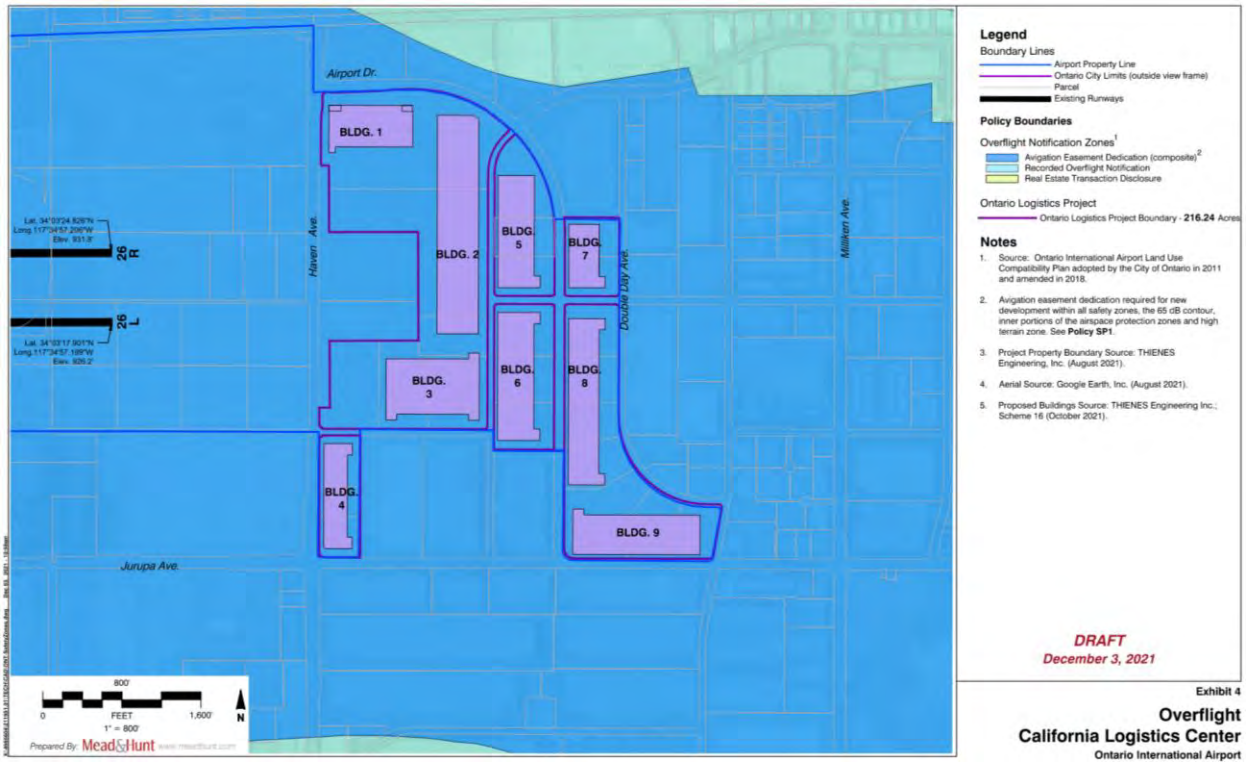

Exhibit 5: Avigation Easement

Table E3

Typical Avigation Easement

AVIGATION EASEMENT

This indenture made this _____ day of _____, 20__, between _____ hereinafter referred to as Grantor, and the City of Los Angeles, Los Angeles World Airports (LAWA), a political subdivision in the State of California, that owns and operates LA/Ontario International Airport in the City of Ontario, State of California, hereinafter referred to as Grantee.

The Grantor, for good and valuable consideration, the receipt and sufficiency of which are hereby acknowledged, does hereby grant to the Grantee, its successors and assigns, a perpetual and assignable easement over the following described parcel of land in which the Grantor holds a fee simple estate. The property which is subject to this easement is depicted as _____ on "Exhibit A" attached and is more particularly described as follows:

[Insert legal description of real property]

The easement applies to the Airspace above an imaginary plane over the real property. The plane is described as follows:

The imaginary plane above the hereinbefore described real property, as such plane is defined by Part 77 of the Federal Aviation Regulations, and consists of a plane [describe approach, transition, or horizontal surface]; the elevation of said plane being based upon the LA/Ontario International Airport official runway end elevation of 944 feet Above Mean Sea Level (AMSL), as determined by the LA/Ontario International Airport Layout Plan, the approximate dimensions of which said plane are described and shown on Exhibit A attached hereto and incorporated herein by reference.

The aforesaid easement and right-of-way includes, but is not limited to:

(1) For the use and benefit of the public, the easement and continuing right to fly, or cause or permit the flight by any and all persons, or any aircraft, of any and all kinds now or hereafter known, in, through, across, or about any portion of the Airspace hereinabove described; and

(2) The easement and right to cause or create, or permit or allow to be caused and created within all space above the existing surface of the hereinabove described real property and any and all Airspace laterally adjacent to said real property, such noise, vibration, currents and other effects of air illumination and fuel consumption as may be inherent in, or may arise or occur from or during the operation of aircraft of any and all kinds, now or hereafter known or used, for navigation of or flight in air; and

(3) A continuing right to clear and keep clear from the Airspace any portions of buildings, structures or improvements of any kinds, and of trees or other objects, including the right to remove or demolish those portions of such buildings, structures, improvements, trees, or other things which extend into or above said Airspace, and the right to cut to the ground level and remove, any trees which extend into or above the Airspace; and

(4) The right to mark and light, or cause or require to be marked and lighted, as obstructions to air navigation, any and all buildings, structures or other improvements, and trees or other objects, which extend into or above the Airspace; and

(5) The right of ingress to, passage within, and egress from the hereinabove described real property, for the purposes described in subparagraphs (3) and (4) above at reasonable times and after reasonable notice.

For and on behalf of itself, its successors and assigns, the Grantor hereby covenants with the Los Angeles World Airports (LAWA), for the direct benefit of the real property constituting the LA/Ontario International Airport hereinafter described, that neither the Grantor, nor its successors in interest or assigns will construct, install, erect, place or grow, in or upon the hereinabove described real property, nor will they permit or allow any building structure, improvement, tree, or other object to extend into or above the Airspace so as to constitute an obstruction to air navigation or to obstruct or interfere with the use of the easement and rights-of-way herein granted.

The easements and rights-of-way herein granted shall be deemed both appurtenant to and for the direct benefit of that real property which constitutes the LA/Ontario International Airport, in the City of Ontario, State of California; and shall further be deemed in gross, being conveyed to the Grantee for the benefit of the Grantee and any and all members of the general public who may use said easement or right-of-way, in landing at, taking off from or operating such aircraft in or about the LA/Ontario International Airport, or in otherwise flying through said Airspace.

Grantor, together with its successors in interest and assigns, hereby waives its right to legal action against Grantee, its successors or assigns for monetary damages or other redress due to impacts, as described in paragraph (2) of the granted rights of easement, associated with aircraft operations in the air or on the ground at the airport, including future increases in the volume or changes in location of said operations. Furthermore, Grantee, its successors, and assigns shall have no duty to avoid or mitigate such damages through physical modification of airport facilities or establishment or modification of aircraft operational procedures or restrictions. However, this waiver shall not apply if the airport role or character of its usage (as identified in an adopted airport master plan, for example) changes in a fundamental manner which could not reasonably have been anticipated at the time of the granting of this easement and which results in a substantial increase in the in the impacts associated with aircraft operations. Also, this grant of easement shall not operate to deprive the Grantor, its successors or assigns of any rights which may from time to time have against any air carrier or private operator for negligent or unlawful operation of aircraft.

These covenants and agreements run with the land and are binding upon the heirs, administrators, executors, successors and assigns of the Grantor, and, for the purpose of this instrument, the real property firstly hereinabove described is the servient tenement and said Los Angeles World Airports (LAWA) is the dominant tenement.

Table E3, continued

Although the Project site is owned by the OIAA, Mead & Hunt recommends that a formal avigation easement be recorded with the Property and acknowledged in the Ground Lease between the OIAA and McDonald Property Group.

The avigation easement will enable the McDonald Property Group to incorporate the OIAA's standard avigation easement requirements into future tenant agreements and Covenants, Conditions, and Restrictions (CC&Rs).

Safety Evaluation

The intent of the safety compatibility policies is to minimize the risks associated with an off-airport aircraft accident or emergency landing. The policies focus on reducing the potential consequences of such events when they occur. For most nonresidential development, risk is measured in terms of the usage intensity—the number of people per acre on the site. Local development standards (e.g., floor area ratios, parking requirements) and building code occupancies can be used to calculate nonresidential usage intensities. The ALUCP safety criteria for light industrial, warehouse, and office uses are presented below (**Exhibit 6)**.

Exhibit 6: ALUCP Safety Criteria

Safety Criteria

Legend: Land Use Compatibility
(A detailed explanation of each land use acceptability category is provided on pg. 2-46 of this table)

Normally Compatible Land Use	Conditional Land Use (FAR)	Incompatible Land Use

- A yellow cell indicates a use that is conditionally compatible provided it satisfies the maximum intensity limits and/or other listed conditions.
- Numbers in yellow cells indicate the Floor Area Ratio (FAR) limit for the use. The FAR limit is based on the common occupancy load factor [approx. number of square feet per person] indicated for that use. The FAR and/or the common occupancy load factors can be used to calculate the intensity (number of people per acre) of the proposed development (see **Policy S2c**). Up to 10% of the total FAR of a building may be devoted to an ancillary use and excluded from the single-acre intensity calculations, but not the average sitewide intensity limits.

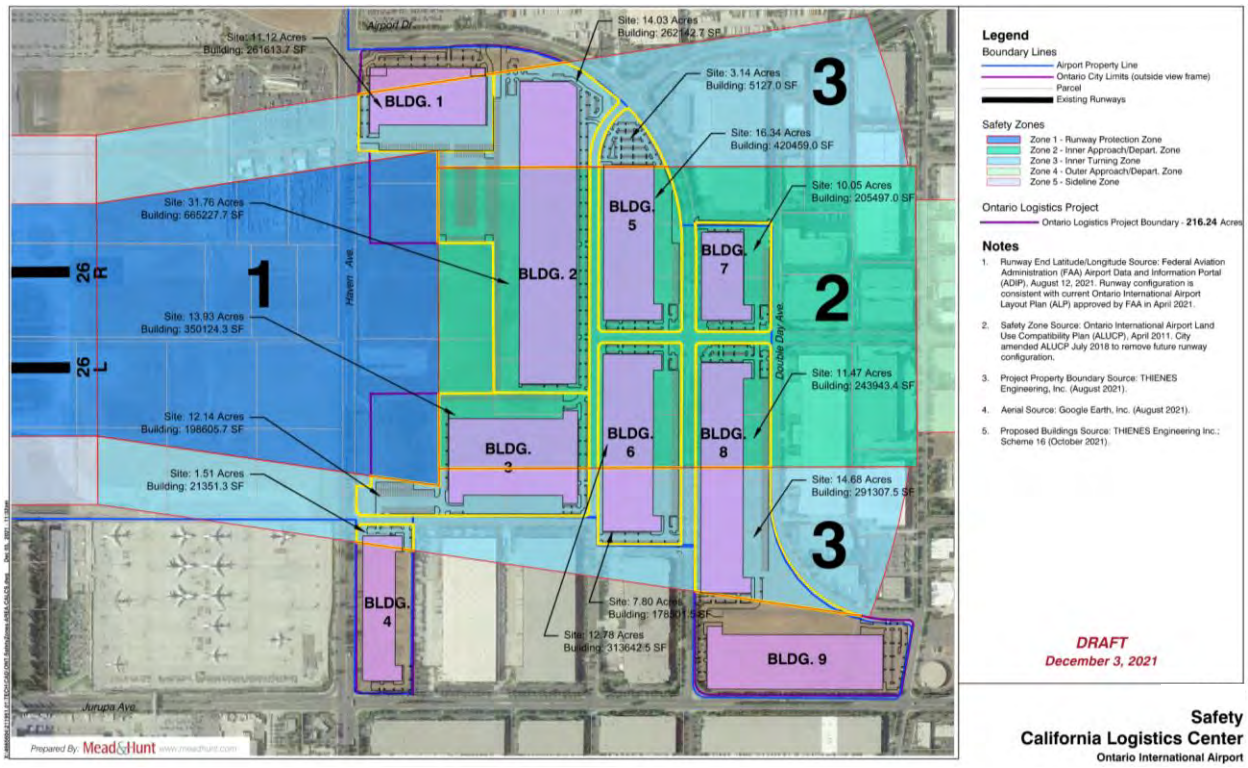
Land Use Category [1] *Note: Multiple land use categories and compatibility criteria may apply to a project*	Safety Zone [2] 1	2	3	4	5	Criteria for Conditional Uses *Note: The numbers below indicate zone in which condition applies.*
Max Sitewide Average Intensity (people/acre)	10	60	100	160	160	• Nonresidential development must satisfy both forms of intensity limits. • Maximum intensity criteria apply to Normally Compatible as well as Conditional land uses
Max Single-Acre Intensity (people/acre) *applicable to all nonresidential development*	20	120	250	400	400	
Industrial, Manufacturing, and Storage Uses						
Hazardous Materials Production: oil refineries, chemical plants (> 6,000 gallons)						
Heavy Industrial						3, 4: Avoid bulk storage of hazardous (flammable, explosive, corrosive, or toxic) materials; permitting agencies to evaluate possible need for special measures to minimize hazards if struck by aircraft
Light Industrial, High Intensity: food products preparation, electronic equipment [approx. 200 s.f./person]		0.28	0.46	0.74		2-4: FAR limits as indicated; avoid bulk storage of hazardous (flammable, explosive, corrosive, or toxic) materials; permitting agencies to evaluate possible need for special measures to minimize hazards if struck by aircraft
Light Industrial, Low Intensity: machine shops, wood products, auto repair [approx. 350 s.f./person]		0.48	0.80	1.29		2-4: FAR limits as indicated 5: Single story only; max. 10% in mezzanine 2-5: Avoid bulk storage of hazardous (flammable, explosive, corrosive, or toxic) materials; permitting agencies to evaluate possible need for special measures to minimize hazards if struck by aircraft
Research & Development [approx. 300 s.f./person]			0.69	1.10		3, 4: FAR limits as indicated; avoid bulk storage of hazardous (flammable, explosive, corrosive, or toxic) materials; permitting agencies to evaluate possible need for special measures to minimize hazards if struck by aircraft
Indoor Storage: wholesale sales, warehouses, mini/other indoor storage, barns, greenhouses [approx. 1,000 s.f./person]						2: Single story only; max. 10% in mezzanine
Offices: professional services, doctors, finance, civic; radio, television & recording studios, office space associated with other listed uses [approx. 215 s.f./person]		0.30	0.49	0.79	0.79	2-5: FAR limits as indicated

As shown in **Exhibit 7A**, the Project site spans the following Safety Zones:

- Safety Zone 1, Runway Protection Zone (RPZ);
- Safety Zone 2, Inner Approach/Departure Zone; and
- Safety Zone 3, Inner Turning Zone.

Although 14.56 acres of the Project site fall within Safety Zone 1, which encompasses the Runway Protection Zones (RPZs) for Runways 26L and 26R, the proposed site plan keeps this zone clear of future structures and parking lots. As such, no compatibility conflicts exist in Safety Zone 1, which is the most restrictive of all the safety zones.

Exhibit 7A: Safety



For Safety Zones 2 and 3, the individual proposed building sites are subject to the ALUCP usage intensity (people per acre) limits for each zone (see **Exhibit 6**). In accordance with ALUCP Policy S2, any site that is split by safety zone boundaries is treated as if it were multiple parcels divided at the safety zone boundary. Exhibit 7A indicates the portions of the site and buildings in each of the Safety Zones.

Exhibit 7B

Site #	Site Ac.	Zone				Bldg. S.F.	Zone

Allowable Occupancy by Site

Exhibit 8 presents the maximum allowable occupancy (number of people) permitted for each building site based on the ALUCP average intensity limits for Safety Zones 2 and 3. The maximum allowable occupancy is the primary criterion by which to evaluate the compatibility of each lessee's proposed specific use or combination of uses within each building. Note that each building site, as depicted by the yellow lines in **Exhibit 7A,** includes the building itself plus adjacent parking and landscaping areas.

Also note that the total allowable occupancies indicated in the last column of **Exhibit 8** assume that, when a building falls into two zones, each part will be used to its allowable limit. In all cases, the maximum allowable occupancy in Zone 2 cannot be exceeded. However, to the extent that the use in the Zone 2 part of a building will have less than its allowable maximum occupancy, the unused amount of the occupancy can be transferred to the Zone 3 part of the building. The Zone 3 part can then exceed the allowable limit for that part provided that the total building occupancy remains within the limits. Although subject to approval by the City, what this transfer provision accomplishes is to move people from the higher risk Zone 2 into comparatively less at-risk Zone 3 in accordance with ALUCP Policy S7 which states:

> *"… the intensity of nonresidential development allowed within the more restricted portion of the parcel can (and is encouraged to) be transferred to the less restricted portion. The full or partial reallocation of intensity is permitted even if the resulting intensity in the less restricted area would then exceed the average intensity limits which would otherwise apply within the safety zone."*

Exhibit 8: Maximum Allowable Occupancy

BLDG #	Zone 2 Intensity Limit (People/Acre)	Zone 2 Site Acres	Zone 2 Allow-Able Occ.	Zone 3 Intensity Limit (People/Acre)	Zone 3 Site Acres	Zone 3 Allow-Able Occ.	Allowable Occupancy (Max. Number Of People On Each Building Site)
BLDG 1*	60	-	**-**	100	11.1	**1,112**	**1,112**
BLDG 2	60	31.8	**1,906**	100	14.0	**1,403**	**3,309**
BLDG 3	60	13.9	**836**	100	12.1	**1,214**	**2,050**
BLDG 4*	60	-	**-**	100	1.5	**151**	**151**
BLDG 5	60	16.3	**980**	100	-	**-**	**980**
BLDG 6	60	12.8	**767**	100	7.8	**780**	**1,547**
BLDG 7	60	10.1	**603**	100	-	**-**	**603**
BLDG 8	60	11.5	**688**	100	14.7	**1,468**	**2,156**
BLDG 9*	NA	NA	**NA**	NA	NA	**NA**	**NA**

Note: * Building 9 is not in a Safety Zone and no total building occupancy limits apply. Portions of Buildings 1 and 4 are also outside of the Safety Zones, which have no ALUCP occupancy limits, and only the portions inside the Safety Zones are subject to building occupancy limits as shown above.
Note: Totals rounded to the nearest whole number.
Example Calculation - BLDG 2 ALLOWABLE OCCUPANCY: (60*31.8)+(100*14.0) = 3,309

Occupancy by Use

The City of Ontario controls the ultimate determination of compliance with the ALUCP usage criteria, and those determinations will occur when a potential tenant(s) is identified for each building and a specific land use is proposed. As discussed above, the types of uses envisioned for the California Logistics Center include a mix of light industrial or warehouse uses with ancillary office space.

Exhibit 9, Theoretical Occupancy, presents the calculated total intensity of each building assuming that the building is developed as either a light industrial/office use or warehouse/office use. As can be seen in the table, a high-intensity light industrial use (e.g., food products preparation) is likely to exceed the maximum allowable occupancy limits for Zone 2. Buildings located in Zone 2 are therefore better suited for low-intensity light industrial and warehouse uses.

Exhibit 10, Hypothetical Development Scenarios, provides two hypothetical scenarios for Building 2 to showcase how the proposed use of the building will influence the intensity results and, ultimately, the compatibility determination of the individual uses. An editable version of the Development Scenario table is provided for use by McDonald Property Group (see **Exhibit 11** for example).

Scenario 1 shows the percent of space allocation across office, light industrial, and warehouse uses. This scenario loads up Zone 3 with the most intensive uses (office and light industrial). The office space (10 percent of the total building square footage) is kept in Zone 3 with the balance remaining for light industrial use. In Zone 2, the more restrictive zone, only 46 percent of the building's square footage can be allocated to light industrial use (with 54 percent left for warehousing) to maintain compliance with the ALUCP intensity criteria. Compliance is based on a comparison of the proposed occupancy with the maximum allowable occupancy (orange columns).

Scenario 2 increases the percentage of light industrial use with a corresponding decrease in warehouse use. While the proposed occupancy exceeds the maximum allowable occupancy, the proposed occupancy for the entire Building 2 site is still satisfied. Under this scenario and other similar scenarios, coordination with the City of Ontario would be required if there is a desire to exceed or transfer the additional intensity criteria as provided by ALUCP Policy S7.

Exhibit 9: Theoretical Occupancy

Zone/ Building	Bldg Sf	THEORETICAL OCCUPANCY (Number of people allowed on site)				
		Light Industrial	Ware-House	Office	Total Occupancy: Light Industrial + Office	Total Occupancy: Warehouse + Office
ZONE 2						
BLDG 2	665,227.7	2,994	599	309	3,303	908
BLDG 3	350,124.3	1,576	315	163	1,738	478
BLDG 5	425,586.0	1,915	383	198	2,113	581
BLDG 6	313,642.5	1,411	282	146	1,557	428
BLDG 7	205,497.0	925	185	96	1,020	281
BLDG 8	243,943.4	1,098	220	113	1,211	333
ZONE 3						
BLDG 1	665,227.7	1,177	235	122	1,299	357
BLDG 2	350,124.3	1,180	236	122	1,302	358
BLDG 3	425,586.0	894	179	92	986	271
BLDG 4	313,642.5	96	19	10	106	29
BLDG 6	205,497.0	803	161	83	886	244
BLDG 8	243,943.4	1,311	262	135	1,446	398

Example Calculation – **ZONE 2, BLDG 2, LIGHT INDUSTRIAL+OFFICE (NO WAREHOUSING)**:
665,227.7 sf of BLDG 2 in Zone 2 – 10% for office = 598,704.93 sf of Light Industrial
598,704.93 sf of light industrial/200 sf per person = 2,994 people
66,522.77 sf of office/215 sf per person = 309 people
2,994 people + 309 people = **3,303 people on BLDG 2 site in Zone 2**
Max. Allowable Occupancy for BLDG 2 (see **Exhibit 8**) = **1,906 people on BLDG 2 site in Zone 2**
Consistency Finding: **Incompatible (proposed use exceeds intensity limit)**
Notes: Red text indicates exceedance of intensity limits. Totals rounded to the nearest whole number.

DEVELOPMENT SCENARIO WORKSHEET
NOTE: Adjust percentages (in red) to determine if proposed allocation of use will satisfy intensity criteria. Do not change percentages in black as they are formula-driven.

Airspace Evaluation

Airspace protection compatibility policies seek to prevent creation of land use features that can pose hazards to the airspace required by aircraft in flight and have the potential for causing an aircraft accident. Categories of hazards to airspace include:

- Physical hazards such as tall structures that may intrude upon protected airspace and land use features that have the potential to attract birds or other potentially hazardous wildlife to the airport area.

- Visual hazards such as certain types of lights, sources of glare, and sources of dust, steam, or smoke.

Physical Hazards

Airspace Obstruction Hazards

Title 14 of the Code of Federal Regulations (CFR) Part 77 establishes height limits to provide a margin of safety for normal aircraft operations. Objects that exceed the Part 77 height limits constitute airspace obstructions. However, the standards are not absolute and deviation from the CFR Part 77 standards requires the offending objects be evaluated by the FAA and may be considered for marking or lighting application if appropriate.

Exhibit 12 shows the layout of the 9 proposed buildings at the Project site. The heights of the buildings are required to be reported to the FAA by a completed Form 7460-1, *Notice of Proposed Construction or Alteration*. The building elevations are reported as the roof height with 10 feet added to account for building appurtenances such as, but not limited to, parapets and heating ventilation equipment.

Mead & Hunt has confirmed that the Project has been conceptually designed to keep all future structures below the Part 77 obstruction surfaces and the other FAA clear areas noted in **Exhibit 12**. Additionally, FAA Form 7460-1 has been submitted to the FAA for an aeronautical study for all nine buildings. FAA airspace determinations are expected in the March 2022 timeframe and prior to commencement of construction. **Exhibit 13** provides a copy of the supporting graphics for the FAA Form 7460-1 submittals.

Mead & Hunt understands that the McDonald Property Group will submit the required FAA Form 7460-1 for construction cranes at least 45 days prior to the beginning of Project construction. We also understand that the maximum height of a tilt panel crane boom tower at full extension is 185 feet; however, lower boom heights are anticipated for this Project because the standard total weight per panel is typical and not excessive. **Exhibit 14** identifies the allowable height within a 60-foot working area around each building. As can be seen, some building sites will require the use of a modified crane to ensure that the above airspace remains obstruction-free. McDonald Property Group has confirmed with its concrete subcontractor and crane consultant that the boom crane height can be significantly lowered by a combination of a.) modifying the hydraulic counterweights associated with the crane and b.) reducing the crane “picking” reach distance by constructing more strategic off-building floor slab casting beds. When the panel pick locations are poured closer to the perimeter/final building wall locations, lower crane boom heights are enabled to suit each situation, as may be required by FAA.

Mead & Hunt highly recommends close coordination with the Airport before commencing with construction as Project construction activities will impact aircraft operations and necessitate the Airport to take certain actions such as informing tenants, pilots, and Airport users of Project construction (e.g., filing NOTAMs), monitoring Project construction progress, or making temporary changes to airport operations to accommodate Project construction schedules (e.g., adjusting runway use or runway closure). As such, coordinating the Project’s construction schedule with the Airport will be critical for safety.

Mead & Hunt also understands that the Airport is undertaking several airport improvement projects that will require closure of the existing runways. Depending on the timing of construction of the Project, this planned runway closure may certainly benefit the approval of the Project crane operation. Aligning Project construction activities during planned runway closures would be ideal for all parties involved. Mead & Hunt understands that the tentative schedule for runway closure to be:

- Runway 8L/26R: Jan 2023-Oct 2024; runway will be reopened for FAA flight checks during a 30-day period from mid-May to mid-June in 2023 (tentative)
- Runway 8R/26L: Jan 2024-Oct 2024 and Jan 2025-Oct 2026 (tentative)

Wildlife Hazards

The FAA establishes guidelines to address wildlife hazards in Advisory Circular 150/5200-33C, *Hazardous Wildlife Attractants On or Near Airports*. A wildlife hazard is a land use feature and location that creates the potential to attract wildlife that may collide with aircraft or cause aircraft damage or injuries/loss of human life.
A wildlife attractant is defined as any human-made structure, land-use practice, or human-made or natural geographic feature that can attract or sustain potentially hazardous wildlife within the approach or departure airspace or an airport's air operations area.

Any proposed use that creates an increased attraction for hazardous wildlife and that is inconsistent with FAA rules and regulations is deemed to be a wildlife hazard. As such, land use features that have the potential to attract birds and certain other wildlife to the airport area need to be evaluated as a form of physical hazard.

To address wildlife hazards, Mead & Hunt recommends that the Project be designed to consider the following:

- Structures or architectural features that could provide nesting, shelter, or perching opportunities for raptors and large birds should be designed to reduce the attractiveness of these features through the application of nets, bird spikes, or other deterrents. Communication towers, signs, and light standards are examples of structures of this type.
- Landscaping plans should preclude the planting of new trees that create a dense and contiguous canopy or plant materials that provide food sources such as fruit, nuts, or berries. Additionally, use short tree varieties to ensure that mature trees will not create an airspace obstruction. Mead & Hunt also understands that the City may require replacement of the mature Pine and Sycamore trees that will be removed during Project construction with similar tree species elsewhere on the Project site. These types of trees are known to attract birds of prey (e.g., Red-tailed hawks) for perching while hunting the Burrowing Owls that reside in and around the Airport. These mid-sized raptors increase the potential for a bird-strike incident. For this reason, Mead & Hunt strongly encourages that only small tree varieties be located onsite, and that the replacement of large tree species be sited outside of the city-established Airport Influence Area or, alternatively, for the McDonald Property Group to participate in an offsite mitigation bank to offset Project impacts. These options should be discussed with the City.
- Onsite stormwater drainage facilities (e.g., bioretention ponds) should be designed to provide a 48-hour drawdown following a design storm event (i.e., 24-hour storm). Stormwater facilities and water features holding exposed surface water for more than 48 hours are considered incompatible with airport operations per FAA Advisory Circular 150/5200-33C, *Hazardous Wildlife Attractants on or near Airports*.

Visual Hazards

Certain land uses or land use features can create visual distractions or impairment for pilots, thereby threatening the safety of aircraft operations. These conditions increase the risk not only to the occupants of aircraft but also to persons occupying land uses near the airport in the event that an aircraft accident occurs. Visual hazards can result from:

- The amount of dust, glare, light emissions, smoke, steam, or smog the development will emit.
- The location of lighting fixtures relative to the runway ends and runway extended centerlines.
- High-intensity lighting projecting directly onto airfields or into airport approach corridors.
- Glare or reflection from glass windows or open water bodies such as retention ponds.
- Glare from concentrated solar arrays (ones that concentrate a large area of sunlight onto a receiver).

As of May 2021, airports are no longer required to submit the results of an ocular analysis to the FAA for an on-airport solar project. Instead, the FAA requires that the airport "sufficiently analyze the potential for glint and glare and determine there will be no potential for ocular impact to the airport traffic control tower cab." A statement of this determination of no visual impact must be confirmed via FAA Form 7460-1. This due-diligence requirement to assess visual impacts should also be applied to off-airport projects.

The FAA's Airport Solar Guidance (2018) indicates that a solar photovoltaics (PV) system (roof- or ground-mounted system) is one of the more practical applications for airports and, therefore by inference, near airports. The FAA has no specific standards for PV facilities, glare impacts, and type of glare analyses. Based on FAA guidance, Mead & Hunt recommends one or both activities be undertaken by the McDonald Property Group:

- A geometric analysis to determine days and times when there may be an ocular impact. The ocular analysis would be conducted once PV systems have been designed but not installed. Some vendors provide free or low-cost glare analysis tools online (e.g., Sandia and ForgeSolar).
- A demonstration field test with solar panels at the proposed site in coordination with Air Traffic Control Tower (ACTC) personnel. Coordination with Airport staff would be required to involve ACTC staff.

Recommended measures to mitigate visual hazards are described in the Findings section below.

FINDINGS

Based on the analysis described above, Mead & Hunt finds the proposed California Logistics Center to be conditionally consistent with the compatibility criteria included in the 2018 ALUCP with the caveats and recommendations listed below. However, the City of Ontario will make the final determination of Project compliance with the 2018 ALUCP and other local standards and will define appropriate Project conditions and impact mitigations.

- **Noise:** The office space in the CNEL 75-80 dB Noise Impact Zone does not clearly comply with the ALUCP noise criteria. To facilitate a consistency determination from the City, we recommend that the following actions be taken:
  - The Project architect shall provide written confirmation that future office spaces constructed within the CNEL 75-80 dB noise impact zone (portions of Buildings 2 and 5-8 only; excludes Buildings 1, 3, 4, and 9) will be designed in a manner to achieve a maximum interior noise limit of CNEL 50 dB.
  - Following construction and before occupancy, an acoustical study shall be conducted to document that the structure (with windows closed) is built to comply with the CNEL 50 dB maximum interior noise limit in the office spaces and in areas where the uses themselves generate little noise and/or are noise sensitive.

- The McDonald Property Group seek concurrence from the City of Ontario that the above recommendations will adequately address noise impacts.

- **Overflight:** Mead & Hunt recommends that an avigation easement be recorded with the deed to the property. Additionally, the avigation easement language and conveyances should be acknowledged in the Ground Lease between the OIAA and the McDonald Property Group and all future tenant sub-lease agreements, Project Covenants, Conditions & Restrictions (CCRs), and Conditions of Approval (COA) by the City of Ontario.
- **Safety:** The McDonald Property Group will need to demonstrate to both the OIAA and the City of Ontario that the proposed use complies with the ALUCP intensity criteria. Additionally, consideration should be given to the potential for the use of a building to change over time. As such, we recommend that the Ground Lease between the OIAA and McDonald Property Group and COA with the City require a consistency evaluation at the time a specific use (or re-use) is proposed for each of the nine building sites to ensure long-term compliance with the ALUCP usage intensity criteria.
- **Airspace:**
  - **Obstructions:** The Ground Lease Agreement should be contingent upon a positive "No Airspace Hazard Determination" determination from the FAA. While the proposed buildings have been confirmed by Mead & Hunt to be designed in compliance with Part 77 height limits, the FAA may find that other aspects of the Project be further evaluated and addressed, such as electrical interference with aircraft communications or navigation.
  - **Wildlife Hazards:** Structures or architectural features that could provide nesting, shelter, or perching opportunities for raptors and large birds should be designed to reduce the attractiveness of these features through the application of nets, bird spikes, or other deterrents. Communication towers, signs, and light standards are examples of structures of this type. Landscaping plans should preclude the planting of new trees that create a dense and contiguous canopy or plant materials that provide food sources such as fruit, nuts, or berries. Additionally, use short tree varieties to ensure that mature trees will not create an airspace obstruction or hazardous wildlife attractant.
  - **Outdoor Lighting:** No lighting features should project light directly onto the existing runways or taxiways or into the approach and departure paths for the Airport. Exterior lighting should incorporate down-shielding in their designs to reflect light downward and away from the airport approach and departure paths. Lighting should not imitate airport lighting or impede the ability of pilots to distinguish airport lighting from other lighting (streetlights, signs, etc.), nor create the appearance of oncoming traffic to pilots landing from or departing toward the east on Runway 26R/L or toward the west on Runways 8R and 8L. Lighting within the airport approach should not be aligned in a linear pattern parallel with the runways (Runway 8R/26L and 8L/26R).
  - **Glare:** No glare-producing material, including but not limited to unpainted metal, white paint/rooftop materials, or highly reflective glass (e.g., mirrored glass), shall be used on the exterior of structures located within the airport approach and departure paths or on nearby lands where glare could impair a pilot's vision. Mead & Hunt also recommends that a glare analysis of proposed rooftop solar systems be conducted to mitigate potential visual impacts and the findings be included in the FAA Form 7460-1 submittal for the solar project.

- **Other Recommendations**
  - **Project Construction:** Coordinate with the Airport to develop a Project construction schedule that will appropriately mitigate impacts to airport operations, particularly from cranes. If the Project's schedule is aligned with planned runway closures, include runway closure timeframes on FAA Form 7460-1 submittal for the cranes.

If you have any questions or require additional information, please contact me at (707) 284-8690.

Sincerely,

MEAD & HUNT, Inc.

Maranda Thompson
Senior Aviation Planner

Attachment:
Attachment A - OIAA Resolution No. 2021-22

ATTACHMENT A

RESOLUTION NO. 2021-22

A RESOLUTION OF THE ONTARIO INTERNATIONAL AIRPORT AUTHORITY TO APPROVE AND ADOPT FINDINGS, INCLUDING AS TO "EXEMPT SURPLUS PROPERTY", REGARDING THE DISPOSITION OF CERTAIN AIRPORT REAL PROPERTY, AND TO APPROVE AND AUTHORIZE THE CHIEF EXECUTIVE OFFICER (CEO), OR THE CEO'S DESIGNEE, TO EXECUTE NECESSARY DOCUMENTATION FOR A DEVELOPMENT AND ENTITLEMENT AGREEMENT AND A LONG-TERM GROUND LEASE FOR SUCH AIRPORT REAL PROPERTY WITH CANAM ONTARIO, LLC.

WHEREAS, the Ontario International Airport Authority (OIAA or Authority) was established under a Joint Exercise of Powers Agreement between the City of Ontario and the County of San Bernardino pursuant to the Joint Exercise of Powers Act of the State of California, for the purpose of operating, maintaining, managing, developing, and marketing the Ontario International Airport (Airport) and related Airport facilities;

WHEREAS, the Authority owns approximately 197 acres on the eastern end of the Airport, east of Haven Road, north of Jurupa Avenue, and south of Airport Drive, which include Assessor's Parcel Numbers 0211-232-44-0-000, 0211-232-45-0-000, 0211-232-46-0-000, 0211-222-47-0-000, 0211-222-48-0-000, 0211-222-52-0-000 AND 0211-222-53-0-000, 0211-222-54-0-000, 0211-222-55-0-000, 0211-232-11-0-000, 0211-232-12-0-000, 0211-232-13-0-000, 0211-232-14, 0211-232-15-0-000, 0211-232-16-0-000, 0211-232-17-0-000, 0211-232-18-0-000, 0211-232-19-0-000, 0211-232-20-000, 0211-232-04-0-000, 0211-232-05-0-000, 0211-232-06-0-000, 0211-232-07-0-000, and 0211-222-56-0-000 (collectively the Property). The Property is surrounded by industrial buildings and land uses to the north, east, and south;

WHEREAS, in 2020, the Authority discussed with the Federal Aviation Administration (FAA) whether the possible lease and use of the Property for industrial logistics development related to the warehousing and distribution of goods and products would be subject to federal jurisdiction and approval. On November 23, 2020, the FAA issued to OIAA a letter under Section 163 of the FAA Reauthorization Act of 2018 regarding a portion of the Property. On January 21, 2021, the FAA issued to OIAA another letter under Section 163 of the Act regarding the remaining portions of the Property. Collectively, the two FAA letters stated that the proposed use of the Property for industrial logistics development related to the warehousing and distribution of goods and products would (1) create revenue to help fund Airport operating costs and (2) not adversely impact aircraft operations at the Airport. The FAA therefore determined it lacked authority to approve or disapprove any potential lease and development of the Property;

WHEREAS, the Property has been vacant and unused for decades. OIAA has determined that the Property is not suited for land uses for typical Authority or Airport aeronautical purposes, such as for runways, taxiways, terminals, hangars, and similar Airport facilities because the Property is physically separated and removed from the balance of the Airport by Haven Avenue, which runs along or near the entire western limits of the Property. Accordingly, the Property is not required for other Authority purposes, and pursuant to Government Code section 37395, can be leased for up to 55 years;

WHEREAS, between April and June 2020, OIAA commissioned three (3) separate and independent appraisals of the Property for the purpose of determining fair market value related to a sale or long-term lease of the Property;

WHEREAS, in February 2021, CBRE, Inc. (CBRE), on behalf of the OIAA, initiated an Offering of Memorandum for the proposed leasing and development of the Property. The Offering of Memorandum was distributed to CBRE's bidder list, which included more than 4,800 potential bidders nationwide. The first round offers received on April 9, 2021, included seventeen (17) responsive bidders. The second round of offers received on April 26, 2021, included twelve (12) responsive bidders. The final round of offers received on May 12, 2021, included five (5) responsive bidders. After the final round of offers/bids on June 23, 2021, the OIAA selection committee held interviews to understand bidders' proposals related to development process, timing, due diligence and environmental analysis, as well as a further analysis of their proposed ground lease offerings. After interviews, USAA Real Estate Company (later CanAm Ontario, LLC) was the final selected responsive bidder as the company was determined to have presented the best proposal for a long-term lease of the Property based on the bidding process, which proposal exceeded the determinations of fair market value in the appraisals for the Property discussed above. OIAA staff presented this determination and report on the bid process to the OIAA Commission in July 2021 and thereafter moved forward with negotiating lease and development terms relating to the Property;

WHEREAS, CanAm Ontario, LLC (CanAm) proposes a long-term Ground Lease for the Property for industrial logistics development related to the warehousing and distribution of goods and products (the Project), which use is generally complimentary with Airport operations. As detailed in the Agenda Report on the proposed Development and Entitlement Agreement and Ground Lease between OIAA and CanAm to be considered at the OIAA Commission's December 23, 2021, Regular public meeting, operations and uses on the Property under the proposed Ground Lease would involve significant improvements to the Property (subject to all environmental reviews and approvals), and significant rental revenues paid to OIAA over the 55-year term of the Ground Lease;

WHEREAS, operations under the proposed Project and Ground Lease will be also consistent with supply chain improvements that are encouraged in Governor Newsom's Executive Order N-19-21 regarding supply chain issues, which Order recognized that "the movement of goods and health of supply and distribution chains across California is a matter of vital statewide importance ...."

WHEREAS, given the unique circumstances that the Property is non-aeronautical lands of the Airport, the City of Ontario will be (i) the lead agency for purposes of compliance by the Project with the California Environmental Quality Act (CEQA), Public Resources Code § 21000 *et seq*., and (ii) the zoning approval authority relating to the Property and the Project. Before approval by OIAA of any Ground Lease for the Property, or the allowance of any development activity on the Property related to the Project, CanAm shall be required to obtain all applicable land use, zoning, and CEQA reviews, approvals, and certifications for the Project (collectively "Government Approvals"), and shall implement any requirements under such Governmental Approvals, including, without limitation, any mitigation measures required as a result of compliance with CEQA;

WHEREAS, the Offering Memorandum and related request for proposals or bids process for the long-term Ground Lease and development of the Property summarized above confirmed that the proposed Ground Lease with CanAm will provide OIAA with fair market value for lease of the Property;

WHEREAS, certain State-imposed laws and regulations restrict and prevent use of the

Property for residential purposes and for some, but not all, non-residential uses, due to safety concerns and high noise levels;

WHEREAS, certain FAA-imposed regulations restrict and prevent use of the Property for residential purposes and for some, but not all, non-residential uses, due to safety concerns and high noise levels;

WHEREAS, such State and FAA laws and regulations justify a determination and finding by OIAA under Government Code section 54221(f)(1)(G) that the Property is "exempt surplus property" where housing would be prohibited;

WHEREAS, the OIAA Commission has reviewed and considered all materials identified and referred to in this Resolution, as well as all materials and documents discussed in and attached to the Agenda Report for this matter; and

WHEREAS, on December 20, 2021, the Authority provided notice of the Regular OIAA Commission meeting, which includes consideration of this matter, scheduled for December 23, 2021, in accordance with the Ralph M. Brown Act, Government Code § 54950, *et seq.*, and provided notice to Douglas Carstens, Esq.:

NOW, THEREFORE, BE IT RESOLVED by the OIAA Commission as follows:

SECTION 1. FINDINGS.

All Whereas clauses or Recitals in this Resolution above are incorporated by reference into these Findings.

Further, the OIAA Commission, in light of the whole record before it including, but not limited to (1) the Agenda Report, including attachments to the Report, for this matter, and (2) other substantial evidence within the record and/or provided at this December 23, 2021 Regular public meeting (all of which administrative record materials for this matter are incorporated by reference into this Resolution No. 2021-____), finds and determines as follows:

1. **The Property is not required for other Authority purposes, and pursuant to Government Code section 37395, can be leased for up to 55 years.**

   The Property has been vacant and unused for decades. OIAA has determined that the Property is not suited for land uses for typical Authority or Airport aeronautical purposes, such as for runways, taxiways, terminals, hangars, and similar Airport facilities because the Property is physically separated and removed from the balance of the Airport by Haven Avenue, which runs along or near the entire western limits of the Property. Accordingly, the Property is not required for other Authority purposes, and pursuant to Government Code section 37395, can be leased for up to 55 years.

2. **State Law and the Ontario International Airport Land Use Compatibility Plan Establish Legal Restrictions that Prohibit Residential Housing on the Property.**

   A. State Law Requires an Airport Land Use Compatibility Plan for the Airport

   The California State Aeronautics Act (Public Utilities Code section 21670 *et seq.*) requires each airport to adopt an Airport Land Use Compatibility Plan and requires

affected agencies to adopt land use designations consistent with the terms therein. (Pub. Util. Code, §§ 21674, 21675, 21676, 21676.5.) The intent of the Legislature under the Aeronautics Act is to "discourage incompatible land uses near existing airports." (*Id.* at § 21674.7.)

The Ontario International Airport Land Use Compatibility Plan, amended July 2018 (linked at https://www.ontarioca.gov/planning/ont-iac at Compatibility Plan, and incorporated in its entirety into this Resolution No. 2021-___), limits certain land uses near the airport based on state and FAA requirements. (Compatibility Plan, pp. 1-1, 1-2; see also Compatibility Plan, Appendix A, State Laws and Appendix B, Federal Aviation Regulations.) The Airport Compatibility Plan was created by the City of Ontario in coordination with the County of San Bernardino and other affected agencies, such as Riverside County and Los Angeles County. (*Id.* at pp. 1-3 through 1-4.) The policies set forth in the Compatibility Plan that limit land uses are requirements for surrounding jurisdictions, such as OIAA. (*Id.* at p. 2-4; see also Exhibit 2A: Affected Jurisdictions.) Affected agencies must modify, if necessary, any zoning and land use regulations to ensure they are consistent with the land use policies set forth in the Compatibility Plan. (*Id.* at p. 2-6; Gov. Code, § 65302.3; Pub. Util. Code, § 21676 [local agencies must comply with land use compatibility plans].)

B. State-Mandated Safety Policies in the Airport Land Use Compatibility Plan Prohibit Residential Housing and Uses on the Property.

The Airport Compatibility Plan required under State law adopts safety compatibility policies to minimize risks associated with off-airport accidents or emergency landings. More safety restrictions are set on residential land uses because residential uses warrant a greater degree of protection. (Compatibility Plan, p. 2-14.)

The Compatibility Plan creates five safety zones. (Compatibility Plan, p. 2-15.) "Residential development **is incompatible within all Safety Zones** (1 through 5)." (*Id.* at p. 2-15; *see* pp. 2-34 and 2-41.) "New mixed-use developments **will locate the residential component outside of all safety zones**." (*Id.* at pp. 2-15; *see* p. 2-41.)

The Property is located within Safety Zones 1, 2, and 3 in the Compatibility Plan. (*See* Safety Zone Map Exhibit 1-8, attached to this Resolution as **Exhibit 1**; *see also* Appendix I, at I-13.) Residential development is therefore prohibited under State law for the Property under the Compatibility Plan's Safety Policies.

C. State-Mandated Noise Policies in the Airport Land Use Compatibility Plan Prohibit Residential Housing and Uses on the Property

The Airport Compatibility Plan also establishes noise polices based on state regulations, guidelines, and the California Airport Land Use Planning Handbook. (*Id.* at p. 2-21.) The purpose of the noise policies is to "avoid the establishment of noise-sensitive land uses in the portions of the [Ontario International Airport] that are exposed to significant levels of aircraft noise." (*Id.* at p. 2-19.)

Residential uses are incompatible with airport land areas with noise exposure CNEL 70 dB and above. (*Id.* at Tables 2-3 at p. 2-47.) Noise Policy SP3 states: "Residential infill development **should not be allowed in areas exposed to exterior noise levels equal to or greater than CNEL 70 dB**." (*Id.* at p. 2-34.)

The Property is located directly below the flight path for the Airport. (Compatibility Plan, Modeled Flight Routes, Exhibit 1-13.) The Property is within the high noise impact zones of CNEL 70-75 dB and CNEL 75+ dB. (*See* Compatibility Plan, p. 1-10; Noise Map Exhibit 1-9, which Map is attached to this Resolution as **Exhibit 2**; *see also* Appendix I, at I-5.) Thus, residential development is not allowed on the Property under the Compatibility Plan's noise policies. (Noise Map Exhibit 1-9; *see also* Appendix I, at I-6 [map of areas with residential land use designation, do not include the Property, or anywhere near the Property].

3. **Federal Regulations Prohibit Residential Uses and Housing on the Property.**

FAA regulations require OIAA to "take appropriate action . . . to restrict the use of land adjacent to or in the immediate vicinity of the airport to activities and purposes compatible with normal airport operations." (49 U.S.C. § 47107(a)(10); see also FAA Order 5190.6B, (linked at: FAA Order 5190.6B Change 1, Airport Compliance Manual, 22 November 2021 and incorporated in its entirety into this Resolution No. 2021-___.) This is considered a "federal obligation to ensure compatible land use." (FAA Order 5190.6B, p. 20-2.)

"Incompatible land use at or near airports may result in the creation of hazards to air navigation and reductions in airport utility resulting from obstructions to flight paths or noise-related incompatible land uses resulting from residential construction too close to the airport." (*Id.* at p. 20-1.) "Residential housing and other land uses near airports must remain compatible with airports and the airport approach/departure corridors." (*Id.* at p. 20-1.) **"Restricting residential development near the airport is essential in order to avoid noise-related problems."** (*Id.* at p. 20-2.)

FAA Order 5190.6B also states, **"The general rule on residential use of land on or near airport property is that it is incompatible with airport operations because of the impact of aircraft noise and, in some cases, for reasons of safety, depending on the location of the property."** (*Id.* at p. 20-5.)

In sum, FAA Order 5190.6B mandates that OIAA ensures compatible land uses with land on or immediately surrounding the Airport, and that it therefore restrict residential housing on the Property, which is located directly below the flight path for the Airport and is within areas affected by high noise levels.

4. **The Property is Exempt Surplus Property under Government Code Section 54221(f)(1)(G).**

The State and federal laws and regulations discussed and referenced in Sections 2 and 3 (Findings) of this Resolution above warrant, justify, and result in a determination and finding by OIAA under Government Code section 54221(f)(1)(G) that the Property is "exempt surplus property" where housing would be prohibited from being developed.

The Property is suitable for use and development of industrial uses regarding the Project consistent with the Airport Compatibility Plan.

5. **The Long-Term Ground Lease of the Property will Produce and Provide Fair Market Value to the Authority.**

   OIAA's Offering Memorandum, through CBRE, and the related request for proposals or bids process for the long-term ground lease and development of the Property summarized above confirmed that the proposed Ground Lease with CanAm Ontario, LLC, will provide OIAA with fair market value for lease of the Property. The proposed Ground Lease between OIAA and CanAm will provide lease rentals and revenues for the Property that exceed the determinations of fair market value for the Property contained in the three (3) separate appraisals for the Property discussed above.

6. **The Proposed Development and Use of the Property Under the Ground Lease Will be Consistent with Vital State Objectives Regarding the Movement of Goods and Health of Supply and Distribution Chains Across California.**

   The proposed Project would utilize the Property for industrial logistics development related to the warehousing and distribution of goods and products. Operations under the proposed Project and Ground Lease will therefore be consistent with supply chain improvements that are encouraged in Governor Newsom's Executive Order N-19-21 regarding supply chain issues, which Order recognized that "the movement of goods and health of supply and distribution chains across California is a matter of vital statewide importance …."

SECTION 2. OIAA COMMISSION ACTIONS:

1. Approval of Findings: The OIAA Commission approves and adopts the Findings set forth in Section 1 of this Resolution above.

2. Approval of the Development and Entitlement Agreement with CanAm Ontario, LLC: The OIAA Commission approves the Development and Entitlement Agreement (DEA) between CanAm Ontario, LLC, and OIAA included as Attachment A to the Agenda Report for this matter, and authorizes the OIAA's Chief Executive Officer (CEO), or the CEO's designee, to execute all documents related to the DEA.

3. Approval of the Ground Lease with CanAm Ontario, LLC: The OIAA Commission approves the Ground Lease between CanAm Ontario, LLC, and OIAA included as Attachment B to the Agenda Report for this matter, and, subject to satisfaction of each of the conditions stated and contained in Sections 2.2(a)(1), 2.3(d), 2.7, 4.1(f), and 4.1(g) of the DEA, authorizes the OIAA's Chief Executive Officer (CEO), or the CEO's designee, to execute all documents related to the Ground Lease.

PASSED, APPROVED, AND ADOPTED this 23rd day of December 2021.

ALAN D. WAPNER, OIAA PRESIDENT

ATTEST:

NATALIE GONZAGA, ASSISTANT SECRETARY

APPROVED AS TO LEGAL FORM:

LORI D. BALLANCE, GENERAL COUNSEL

STATE OF CALIFORNIA)

INTRODUCTION

A: PROJECT LOCATION

The project site is generally located south of Airport Drive, east of Haven Avenue, west of Doubleday Avenue and north of Jurupa Street in the city of Ontario, California. Please see next page for vicinity map.

B: STUDY PURPOSE

The purpose of this study is to determine the 25-and 100-year proposed condition peak flow rates from the project site that are tributary to existing storm drain systems in Commerce Parkway, Carnegie Avenue, La Salle Street and Santa Ana Street.

C: PROJECT STAFF:

DISCUSSION

The project site is generally bounded by Airport Drive to the north, Haven Avenue to the west, Jurupa Street to the South and Doubleday Avenue to the east. The site consists of 9 separate buildings as follows:

- Buildings 1-3 are located between Airport Drive, Haven Avenue, La Salle Street and Carnegie Avenue. The respective Building sizes are 360,660 square feet, 930,300 square feet and 548,730 square feet. This portion of the project site encompasses approximately 105.3 acres.
- Building 4 is located at the northeast corner of Haven Avenue and Jurupa Street. This building is approximately 265,200 square feet on a 11.8 acre site.
- Building 5 is located between Carnegie Avenue and Commerce Parkway north of Santa Ana Street. This building is approximately 425,580 square feet on 19.5 acres.
- Building 6 is located between Carnegie Avenue and Commerce Parkway south of Santa Ana Street. The site is approximately 20.6 acres. The proposed building is approximately 492,140 square feet.
- Building 7 is located between Commerce Parkway and Doubleday Avenue north of Santa Ana Street. This site is approximately 10.0 acres. The proposed building is approximately 205,500 square feet.
- Buildings 8 and 9 are located between Commerce Parkway and Doubleday Avenue between Santa Ana Street and Jurupa Street. The respective building sizes are 535,350 square feet and 521,920 square feet. This portion of the project site encompasses approximately 49.0 acres.

Master Plan Hydrology

The project site is part of Drainage Area III of the City of Ontario's Master Plan of Drainage, March 2012. From the Master Plan of Drainage, it appears that Buildings 1-3 and 5-9 of the project site ultimately drain to the Master Plan facility in Commerce Parkway via existing storm drains in La Salle Street, Carnegie Avenue, Jurupa Street and Santa Ana Street. Building 4 is tabled to an existing storm drain system in Haven Avenue.

The Master Plan of Drainage generally does not indicate peak flow rates for the individual buildings, since they are a small part of the overall drainage areas tributary to the Commerce Parkway storm drain system. However, existing storm drain plans do indicate peak flow rates that appear to be for specific lots that are part of the project site, as further described below.

Please see Appendix "A" for the portions of the City's Master Plan of Drainage.

Existing Storm Drains

There are several existing storm drain systems to which the project site is tabled. A brief description of each are as follows:

- The largest storm drain system is in Commerce Parkway. This is an existing 10' wide by 9' high reinforced concrete box (RCB). This storm drain is part of the Deer Creek watershed. This storm drain conveys flows from north to south. The storm drain plans, prepared by Williamson and Schmid, show a hydraulic grade line, but do not indicate peak flow rates or storm frequency.
- The southerly Carnegie Avenue storm drain is 24" diameter pipe at the upstream portion of the system. The storm drain then transitions to a 60" diameter pipe upstream of La Salle Street. These plans, also prepared by Williamson and Schmid, indicate a 25-year peak flow rate for the 24" portion and 100-year peak flow rates for the 60" portion. This storm drain conveys runoff southerly to Jurupa Street. The storm drain continues easterly in Jurupa Street ultimately connecting to the RCB in Commerce Parkway.
- The La Salle storm drain conveys runoff from Haven Avenue easterly to the storm drain system in Carnegie Avenue as described above. The upstream portion of this drain indicates 25-year peak flow rates while the downstream portion shows 100-year peak flow rates. Pipe sizes range from 30" diameter to 54" diameter.
- The northerly Carnegie Avenue storm drain conveys flows from north to south then turns easterly in Santa Ana Street. This storm drain continues easterly to the existing RCB in Commerce Parkway. The portion of storm drain in Carnegie Avenue indicates 25-year peak flow rates, while the portion in Santa Ana Street shows 100-year peak flow rates.
- The storm drain in Dupont Avenue conveys mostly offsite flows southerly in a 72" storm drain. There are two stubs provided for the project site. Both the laterals and the 72" storm drain indicate 25-year peak flow rates.
- Separate Commerce Parkway storm drain plans show several laterals to the 10' x 9' RCB. These laterals tend to collect runoff from the street or are intended to serve many of the individual lots that comprise the project site. These laterals generally indicate 25-year peak flow rates.

There are two existing storm drains that convey offsite flow through the project site that will need to be relocated due to the layout of Buildings 3 and 8. Based on recent survey and recorded easements, there appears to be an existing storm drain system that conveys offsite flow through the Building 3 site. A plan for this drain was not available. Proposed improvements will redirect this storm drain around the westerly side of Building 3 and reconnect to the original storm drain.

The other storm drain relocation is an existing 48" storm drain that traverses westerly through the Building 8 site. This storm drain conveys offsite flow from areas tributary to Doubleday Avenue to the existing RCB in Commerce Parkway. This storm drain plan, prepared by Williamson and Schmid, indicates a 25-year peak flow rate. Proposed

improvements will redirect this storm drain around the southerly side of Building 8 and connect to the existing RCB in Commerce Parkway downstream of the original connection.

While not shown on the storm drain plans, it is assumed that the Commerce Parkway storm drain system is sized for 100-year frequencies. Typically, in San Bernardino County, a storm drain of this size with such a large tributary area and peak flow rate would be sized for the 100-year storm event. Also, there are several storm drain systems that connect to this facility that do indicate 100-year peak flow rates.

See Appendix "A" for pertinent storm drain plans.

Proposed Condition

As previously mentioned, there are several laterals that appear to be designed to accept runoff from individual lots that comprise the overall project site. Unfortunately, a hydrology map was not available that corresponds to the laterals and storm drains prepared by Williamson and Schmid. But, based on lot sizes and peak flow rates indicated on the storm drain plans, it can be assumed that particular lots were tabled to specific laterals as further described below.

Buildings 1-2 Site:

The Building 1 and 2 portions of the project site appears to encompass three lots that are tabled to three separate laterals tributary to the northerly storm drain system in Carnegie Avenue. The southerly portion of Building 2 and a small portion of Building 3 appears to be tabled to a lateral tributary to the southerly storm drain system in Carnegie Avenue.

Runoff from the Building 1 site will be collected in catch basins located in the vehicle and truck parking areas (nodes 100-122). A proposed storm drain conveys flows southerly through the truck parking area (at node 142) then into the Building 2 site. Runoff from the undeveloped portion of Building 1 (nodes 130-131) will also be intercepted in this storm drain system.

Flow from the westerly portion of Building 2 and the truck yard area (nodes 200-203) will be conveyed southerly through the truck yard and intercepted a catch basin located at the southwest corner of Building 2 site. Here, flows confluence with Building 1 (at node 204). The proposed storm drain system continues easterly on the southerly side of Building 2.

Runoff from the easterly portion of Building 2 and the easterly parking lot (nodes 210-213) drains from north to south to catch basins located at the southeasterly parking area. This area confluences with the previously mentioned storm drain system (at node 214). This storm drain continues northeasterly to an existing lateral to the northerly Carnegie Avenue storm drain system. The 100-year peak flow rate at this location is approximately 159.5 cfs.

Runoff from parking areas on the northerly side of Building 2 (nodes 220-222) will be intercepted in catch basins in the parking lot. A proposed storm drain conveys this flow around the easterly side of Building 2, ultimately connecting to an existing lateral to the northerly Carnegie Avenue storm drain (at node 223). The 100-year peak flow rate at this location is approximately 13.9 cfs.

Building 3 site:

The majority of Building 3 appears to be tabled to three laterals at La Salle Street. There is an additional lateral at La Salle Street that appears to serve an existing storm drain traversing though the Building 3 portion of the site. This existing storm drain collects runoff from 2 undeveloped lots north of Building 3.

Runoff from the northerly half of Building 3 and the northerly truck yard (nodes 300-307) drain to catch basin located in the truck yard. A proposed storm drain conveys flow easterly around the building and connects to an existing lateral on the southerly storm drain system in Carnegie Avenue (at node 308). The 100-year peak flow rate for this area is approximately 41.7 cfs.

Flow from offsite areas adjacent to Haven Avenue and the southwesterly corner of Building 3 site (nodes 310-311) will drain southerly to a proposed C.M.P. riser. A proposed storm drain will connect this area to the existing storm drain in La Salle Street (at node 312). The 100-year peak flow rate at this location is approximately 5.1 cfs.

Runoff from the westerly parking lot and the undeveloped areas north of this lot (nodes 320-332) area conveyed to an existing storm drain lateral at La Salle Street. The 100-year peak flow rate for this area is approximately 20.9 cfs.

Runoff from the southwest corner of Building 3 and a portion of the truck yard (nodes 340-341) drain to a catch basin in the truck yard area. A proposed storm drain will convey flow to an existing storm drain lateral at La Salle Street (at node 342). The 100-year peak flow rate at this area is approximately 13.5 cfs.

Flow from the undeveloped lots north of Building 3 (nodes 350-353) will be intercepted by a proposed C.M.P. riser. A proposed storm drain will convey this flow around the westerly side of the building. This is a relocation of the existing storm drain that would be under the proposed building. Runoff from the westerly parking lot adjacent to the building (nodes 360-361) is also tributary to this storm drain (at node 362). The storm drain continues around the building, ultimately connecting to the existing storm drain lateral at La Salle Street. The 100-year peak flow rate for this area is approximately 42.6 cfs.

Finally, a portion of the southerly half of the building, truck yard and easterly parking lot (nodes 370-375 and 380-382) will be collected in catch basin at the southerly portion of the site. A proposed storm drain will convey runoff to an existing lateral at La Salle Street (at node 383). The 100-year peak flow rate at this area is approximately 27.2 cfs.

Building 4 site:

The Building 4 portion of the project site appears to be tabled to an existing stub located at the northeast corner of Haven Avenue and Jurupa Street. This is part of an existing storm drain in Jurupa Street that continues southerly in Haven Avenue.

Runoff from this portion of the site drains to catch basins located in the northerly parking lot and the truck yard (nodes 400-409). A proposed onsite storm drain conveys runoff southerly then westerly around the building to the aforementioned lateral (at node 410). The 100-year peak flow rate at this location is approximately 31.2 cfs.

Building 5 site:

The Building 5 portion of the project site appears tabled to two laterals tributary to the northerly Carnegie Avenue storm drain and 2 laterals to the Santa Ana Street storm drain. Ultimately, all runoff from Building 5 is tributary to the downstream portion of the existing storm drain in Santa Ana Street.

While the site appears to be tabled to 4 different locations, proposed condition will utilize only the downstream connection, thus providing relief to the upstream portion of existing storm drain system.

Runoff from the westerly portion of the building (nodes 511-520) will be collected in a storm drain in the westerly landscaped area. This drain conveys flows south then east around the proposed building. Runoff from the southerly parking lot is added to this drain (at nodes 521-522). The storm drain continues easterly.

The northerly parking lot, the easterly half of the building and the truck yard area (nodes 500-506) will drain to catch basins located in the parking lot and truck yard. A proposed storm drain system will collect flow from these catch basins and convey runoff southerly to the previously mentioned storm drain (at node 523), ultimately connecting to the easterly existing stub at Santa Ana Street (at node 524). The 100-year peak flow for this area is about 59.6 cfs.

Building 6 site:

From available information, it appears that half of the Building 6 site is tabled westerly to the Carnegie Avenue storm drain while the other half is tabled to the Commerce Parkway storm drain. There are three existing laterals to each storm drain system serving the project site.

Roof drains from the westerly portion of the building (nodes 621-631) will be conveyed in an onsite storm drain and will connect to the southerly lateral at Carnegie Avenue (at node 632). The 100-year peak flow rate at this location is approximately 20.5 cfs.

The easterly half of the building and the easterly parking area (nodes 600-613) drain to catch basin in the truck and parking areas. A storm drain system conveys runoff to the southerly lateral at Commerce Parkway (at node 614). Here, the 100-year peak flow rate is approximately 42.5 cfs.

Building 7 site:

The Building 7 site appears to be tabled to two separate laterals that are tributary to the RCB in Commerce Parkway. Proposed improvements will only utilize the downstream lateral, thus providing relief to the upstream portions of the RCB in Commerce Parkway.

Runoff from the northerly parking area, the easterly half of the building and the easterly truck yard (nodes 710-714) will be collected in catch basin in the truck and vehicle parking areas. A proposed storm drain system will convey runoff from these catch basins and convey the flow westerly through the southerly parking area. Runoff from this parking area (nodes 715-716) will be added to this storm drain. This storm drain continues westerly to an existing lateral at Commerce Parkway (at node 717). Flow from the westerly half of the building (nodes 700-706) will be conveyed southerly to the existing lateral at Commerce Parkway (at node 707). The respective 100-year peak flow rates for these areas are approximately 20.2 cfs and 8.0 cfs.

Buildings 8 and 9 site:

This portion of the project site consists of 7 individual lots. The 5 lots adjacent to Commerce Parkway appear to have existing laterals that convey runoff to the existing RCB in Commerce Parkway. The easterly lot appears to be tabled to a storm drain lateral at Dupont Street. The remaining lot appears to sheet flow to Jurupa Avenue, where most of the flow continues westerly to the intersection with Commerce Parkway. There is no storm drain in Jurupa Avenue at this location.

The easterly half of the building, the truck yard area and the vehicle parking lots (nodes 800-812) drain to catch basin in the truck yard and parking areas. A proposed storm drain system conveys these flows southerly, connecting to the relocated storm drain system from Doubleday Avenue (at node 813). The 100-year peak flow rate at this connection is approximately 49.4 cfs.

Flow from the parking area south of Building 8 (node 820-821) will drain to a catch basin in the parking lot. A storm drain will connect to the relocated storm drain (at node 822). The 100-year peak flow rate added at this location is approximately 4.4 cfs.

Runoff from the westerly portion of Building 8 (nodes 831-835, nodes 841-845 and nodes 850-855) will be conveyed southerly in a proposed storm drain system, which will connect to the 3 existing laterals adjacent to the building. The respective 100-year peak flow rate at these areas are approximately 6.0 cfs, 6.6 cfs and 6.6 cfs.

The southwesterly portion of Building 8 (nodes 861-865) drains southerly and connects to the proposed relocated storm drain from Doubleday Avenue. The 100-year peak flow rate at this connection is approximately 6.0 cfs.

The majority of the Building 9 site will drain to the existing lateral located at the northeast corner of Jurupa Street and Commerce Parkway. Here, runoff from the northerly portion of the building and the truck yard area (nodes 910-918) will drain to catch basin located in the truck yard. A storm drain will convey flows west then south around the building. Runoff from the westerly parking lot (node 919) is also added to this storm drain. The storm drain continues southerly and then connects to an existing lateral (at node 920). The 100-year peak flow rate at this location is approximately 34.2 cfs.

Roof drains from the southerly half of the building (nodes 931-942) will be conveyed to a proposed storm drain that traverses westerly to the join with the other onsite storm drain. This system then connects to the existing lateral (at node 943). The 100-year peak flow rate for this portion of the site is approximately 20.3 cfs.

The remaining easterly parking lot of Building 9 (nodes 900-901) will be collected in a catch basin at the easterly parking lot. A proposed storm drain will convey runoff easterly to an existing lateral off Dupont Street (at node 902). The 100-year peak flow rate at this location is approximately 7.7 cfs.

Finally, the portion between Buildings 8 and 9 will remain undeveloped and will continue with its current drainage pattern by draining to Doubleday Avenue.

See Appendix "B" for proposed condition hydrology calculations and Appendix “C” for proposed condition hydrology map.

Storm Drain Improvements

At some point, the existing storm drain systems become 100-year facilities. To avoid any onsite detention, it is recommended that portions of the existing 25-year storm drain systems be replaced with a larger storm drain to accommodate 100-year peak flow rates. The following is a preliminary list of proposed improvements to existing storm drain systems:

- Santa Ana Street and northerly Carnegie Avenue storm drain. The expected limits of replacement of this storm drain system is from station 65+86 to station 90+27. Note, there is a stationing change within this range and the amount of replacement is about 131 linear feet. The lateral to the Building 1-2 connection will also need to be increased. With the onsite redirection of flow from Building 5, the upstream portion of the northerly Carnegie Avenue storm drain will not need to be upgraded.
- Southerly Carnegie Avenue Storm Drain. This storm drain is designated as a 25-year drain upstream of the La Salle Street connection. Portions of this storm drain are already 60” diameter, which is the same as the downstream 100-year portion. It is unlikely that this portion needs improvements. However, the upstream portion

may need to be replaced from station 79+94 to station 83+77 along with the lateral that serves the Building 3 site.

- La Salle Street Storm Drain. This storm drain is designed as a 25-year facility upstream of station 56+93. Improvements will be required from station 56+93 to station 53+76. Additional upsizing may be required upstream depending on hydraulic calculations.
- The relocated storm drain that traverses through the Building 8 site has a 25-year design. This storm drain will likely need to be upsized due to longer length and the addition of onsite 100-year peak flow rates.
- Plans for the existing storm drain that traverses through the Building 3 site were not available. Therefore, the design frequency is not known at this time. Hydraulic analysis will be required to determine the size of the proposed storm drain realignment.

In addition to the above, several laterals may need to be upsized as well depending on hydraulic capacity of each lateral. Ultimate storm drain and lateral sizing will be determined with precise grading and storm drain plans.

Methodology

Hydrology calculations were computed using San Bernardino County Rational Method program (by AES Software). The soil type is "B" per the San Bernardino County Hydrology Manual. Rainfall values are taken from isohyetal map from the Hydrology Manual. See Appendix "A" for reference materials.

Offsite areas adjacent to Buildings 1-3 are modeled as existing condition (open brush) since these areas will not be fully developed due to airport lighting and beacons.

Preliminary Water Quality Management Plan (PWQMP)

For compliance with Santa Ana Regional Water Quality Control Board
Order Number R8-2010-0036 (NPDES Permit No. CAS618036)

Project Name:	**California Logistic Center**
Ontario Project #:	**PDEV21-XXX**
Applicant Name:	**McDonald Property Group**
Applicant Address:	**1140 N. Coast Highway, Laguna Beach, CA 92651**
Project Address:	**Ontario International Airport, Ontario, CA 91761**
Project Size (acres):	**186.95 Acres**
Project Description:	**Light Industrial**

1st Submittal Date: 12/20/2021

Preliminary Water Quality Management Plan (PWQMP)

1. Introduction

The Preliminary Water Quality Management Plan (PWQMP) is a planning tool to improve integration of required water quality elements, stormwater management, water conservation, rainwater harvesting and re-use, and flood management in land use planning and the City's development process. The Preliminary WQMP will assist project applicants and planners in properly designing and laying out project sites so that water quality may be incorporated in the most effective manner and at the lowest cost for the developer.

The San Bernardino County Municipal Separate Storm Sewer System Permit (MS4 Permit) requires project-specific Water Quality Management plans (WQMP) to be prepared for all priority new development and significant redevelopment projects listed in Section 2 of this document. The MS4 Permit stipulates that the City of Ontario require priority project applicants to submit a Preliminary project-specific WQMP, as early as possible, during the environmental review or planning phase of a development project and that the Preliminary WQMP be approved prior to the issuance of land use entitlement.

2. Priority Projects (requiring a Preliminary WQMP)

Land Use entitlement shall not be issued for any of the listed projects, below, until a Preliminary WQMP has been approved by the City's Engineering Department. For construction projects not going through entitlement, a Preliminary and Final project specific WQMP shall be approved, prior to the issuance of construction permits:

Check the appropriate project category below, for this project:

Check below	**Project Categories**
	1. All significant re-development projects. Significant re-development is defined as the addition or replacement of 5,000 or more square feet of impervious surface on an already developed site subject to discretionary approval of the Permittee. Redevelopment does not include routine maintenance activities that are conducted to maintain original line and grade, hydraulic capacity, original purpose of the facility, or emergency redevelopment activity required to protect public health and safety. Where redevelopment results in an increase of less than fifty percent of the impervious surfaces of a previously existing developed site, and the existing development was not subject to WQMP requirements, the numeric sizing criteria discussed below applies only to the addition or replacement, and not to the entire developed site. Where redevelopment results in an increase of fifty percent or more of the impervious surfaces of a previously existing developed site, the numeric sizing criteria applies to the entire development (new and existing).
X	2. New development projects that create 10,000 square feet or more of impervious surface (collectively over the entire project site) including commercial, industrial, residential housing subdivisions (i.e., detached single family home subdivisions, multi-family attached subdivisions or townhomes, condominiums, apartments, etc.), mixed-use, and public projects. This category includes development projects on public and private land, which fall under the planning and building authority of the permitting agency.

Check below	Project Categories
	3. Automotive repair shops (with SIC codes 5013, 5014, 5541, 7532- 7534, 7536-7539).
	4. Restaurants and Food Service Establishments where the land area of development is 5,000 square feet or more.
	5. Developments of 2,500 square feet of impervious surface or more adjacent to (within 200 feet) or discharging directly into environmentally sensitive areas (ESA's) such as areas designated in the Ocean Plan as areas of special biological significance or waterbodies listed on the CWA Section 303(d) list of impaired waters.
X	6. Parking lots of 5,000 square feet or more exposed to storm water. Parking lot is defined as land area or facility for the temporary storage of motor vehicles.
	7. Retail Gasoline Outlets (RGOs) that are either 5,000 sq ft or more or have a projected average daily traffic of 100 or more vehicles per day.
	8. *This project is not covered under any of the categories listed above.

* If the development is not covered under any of the project categories listed in Section 2, the project is not required to design and install Site Design/LID BMPs or Treatment Control BMPs to treat the design storm event (Design Capture Volume) described in Section 4.

3. Preliminary WQMP Objectives

Through a combination of Site Design/LID BMPs (where feasible), Source Control, and/or Treatment Control BMPs, project-specific WQMPs shall address all identified pollutants and hydrologic conditions of concern from new development and significant re-development projects for the categories of projects (priority projects) listed in Section 2. Under each type of BMP, listed below, please indicate which BMPs are planned to be implemented and included in the Final WQMP for the project:

A. Site Design/LID (Low Impact Design) for Reducing Stormwater Runoff:

The MS4 Permit requires each priority development project to infiltrate, harvest and use, evapotranspire, or bio-treat the runoff from a 2-yr, 24-hour storm event (Design Capture Volume). If site conditions do not permit infiltration, harvest and use, evapotranspiration, and/or bio-treatment of the entire Design Capture Volume, at the project site, Site Design/LID techniques are required to be implemented to the Maximum Extent Practicable, at the project site, and the remainder of the DCV shall be infiltrated, harvested, bio-treated or treated by alternative measures. Project applicants shall submit a Preliminary WQMP that documents the LID/Site Design BMPs, proposed for the project. Please indicate, in the table below, which Site Design/LID BMPs will be utilized on this project to accomplish this requirement:

Site Design/LID Practice	Planned	Not Planned
Provide at least the minimum effective area required for LID BMPs, to comply with the WQMP (see Table 3-1 below).		**X[1]**
Grade parking lot areas/drive aisles/roof drains to sheet flow runoff into landscaped swales, via curb cuts or zero-face curbs or otherwise disconnect direct drainage from MS4.		**X[1]**
Design landscaped areas as swales and grade to accept runoff from building roofs, parking lots and project roadways.		**X[1]**
Install surface retention basins or infiltration trenches to receive impervious area runoff.		**X[2]**
Install pervious pavement in parking stalls, alleys, driveways, gutters, walkways, trails or patios.		**X[2]**
Install underground stormwater retention chambers where downstream landscaped areas are limited.	**X**	
Install approved Stormwater Drywells in detention areas.		**X[2]**
Construct streets, sidewalks, and parking lot stalls to the minimum widths necessary.	**X**	
Install on-site Biotreatment basins/trenches with underdrains, where soil type is poorly draining.		**X[2]**
Install “Engineered Soil” to increase uptake/soil storage capacity and/or evapotranspiration.		**X[2]**
Install Rainwater Harvesting/Use Equipment.		**X[3]**
Regional LID BMP facilities are installed, off-site, with the capacity and conveyances to accept post-development storm water runoff from this project and reserved capacity allocation credits have been assigned to the project, in a Certificate or other legally binding document, attached herein		**X[2]**

[1] Project capable of treating the full DCV onsite and not required to demonstrate this site design.
[2] The site will be captured and treated by the proposed underground infiltration facilities.
[3] Concept not utilized because the impervious area is much greater than landscape.

Table 3-1 Minimum Effective Area[1] Required for LID BMPs (surface + subsurface facilities) for Project WQMP to Demonstrate Infeasibility[2] (% of site)

Project Type	New Development	Re-Development
SF/MF Residential < 7 du/ac	10%	5%
SF/MF Residential < 7 - 18 du/ac	7%	3.5%
SF/MF Residential > 18 du/ac	5%	2.5%
Mixed Use, Commercial/Industrial w/FAR< 1.0	10%	5%
Mixed Use, Commercial/Industrial w/FAR 1.0-2.0	7%	3.5%
Mixed Use, Commercial/Industrial w/FAR> 2.0	5%	2.5%
Podium (parking under > 75% of project)	3%	1.5%
Zoning allowing development to property lines	2%	1%
Transit Oriented Development[3]	5%	2.5%
Parking	5%	2.5%

[1] "Effective area" is defined as land area which 1) is suitable for a retention/infiltration BMP (based on infeasibility criteria) and 2) is located down-gradient from building roof or paved areas, so that it may receive gravity flow runoff.

[2] Criteria only required if the project WQMP seeks to demonstrate that the full DCV cannot be feasibly managed on-site.

[3] Transit oriented development is defined as a project with development center within one half mile of a mass transit center.

Key: du/ac = dwelling units/acre, FAR = Floor Area Ratio = ratio of gross floor area of building to gross lot area, MF = Multi Family, SF = Single Family

B. Source Control BMPs – The following BMPs are designed to control stormwater pollutants and runoff water at the location where it is generated. Please indicate which of the listed BMPs are planned to be implemented for the project:

Source Control BMPs	Planned	Not Planned
Minimize non-stormwater site runoff through efficient irrigation system design and controllers.	**X**	
Minimize trash and debris in storm runoff through a regular parking lot, storage yard and roadway sweeping program.	**X**	
Provide proper covers/roofs and secondary containment for outside material storage & work areas.		**X[1]**
Provide solid roofs over all trash enclosures.	**X**	
Site Owner(s)/Property Manager/HOA or POA will be familiar with the project WQMP and stormwater BMPs.	**X**	
Owner or HOA or POA to provide Education/Training of site occupants and employees on stormwater BMPs.	**X**	
Install stormwater placards/stenciled messages with a "No Dumping" message on all on-site/off-site storm drain inlets.	**X**	
Provide contained equipment/vehicle wash rack areas that discharge to sanitary sewer.		**X[2]**

[1] Not applicable. No outside material storage or work areas. Secondary containment not needed.

[2] Not applicable, no vehicle wash areas.

C. Treatment Control BMPs – The following BMPs are designed to control stormwater pollutants where it is not feasible to install on-site or off-site Site Design/LID BMPs, with the requisite capacity to treat the Design Capture Volume for identified Pollutants of Concern or where pretreatment of stormwater runoff is required, ahead of infiltration BMPs. Please indicate which of the listed BMPs are planned to be implemented for the project:

Treatment Control BMP	Planned	Not Planned
Gravity Separator devices for pretreatment of sediment, trash/litter or Oil & Grease	**X**	
Proprietary Biofiltration vaults/devices		**X**
Media Cartridge Filtration Vaults		**X**
Proprietary Filter Inserts for on-site storm drain inlets or retention basin/trench overflow drains		**X**

4. Volume-based calculation (approximate) for sizing on-site or off-site Stormwater Retention/Infiltration, Harvest & Re-Use or Biotreatment facilities

1) After calculating the "Watershed Imperviousness Ratio", i, which is equal to the percent of impervious area in each Drainage Management Area, divided by 100, calculate the composite runoff coefficient C_{BMP} for the Drainage Area above using the following equation:

$$\mathbf{C_{BMP} = 0.858i^3 - 0.78i^2 + 0.774i + 0.04}$$

where: $\mathbf{C_{BMP}}$ = composite runoff coefficient; and,

i = watershed imperviousness ratio.

3) Determine the area-averaged "6-hour Mean Storm Rainfall", P_6, for the Drainage Area. This is calculated by multiplying the area averaged 2-year 1-hour value (0.5"-0.6") by the appropriate regression coefficient (1.4807). The 2-yr, 1-hr value for southern Ontario is approximately to 0.5" (P_6 = 0.5*1.4807 = 0.74 and northern Ontario is approximately 0.6" in/hr (P_6 = 0.6*1.4807 = 0.89).

4) Determine the appropriate drawdown time. Use the regression constant a = 1.582 for 24 hours and a = 1.963 for 48 hours. *Note: Regression constants are provided for both 24 hour and 48-hour drawdown times; however, 48-hour drawdown times should be used in most areas of California. Drawdown times in excess of 48 hours should be used with caution as vector breeding can be a problem after water has stood in excess of 72 hours. (Use of the 24-hour drawdown time should be limited to drainage areas with coarse soils (Class 'A' soils that readily drain.)*

5) Calculate the "Maximized Detention Volume", P_0, using the following equation:

$$\mathbf{P_0 = a \cdot C_{BMP} \cdot P_6}$$

where: $\mathbf{P_0}$ = Maximized Detention Volume, in inches

a = 1.582 for 24 hour and a = 1.963 for 48-hour drawdown,

C_{BMP} = composite runoff coefficient; and,

P_6 = 6-hour Mean Storm Rainfall, in inches

6) Calculate the "Target Capture Volume", V_0, using the following equation:

$$V_0 = (P_0 \cdot A) / 12$$

where: **V_0** = Target Capture Volume, in acre-feet

P_0 = Maximized Detention Volume, in inches; and,

A = BMP Drainage Area, in acres

Project Volume-based calculation (approximate) for planned on-site or off-site Stormwater Retention/Infiltration, Harvest & Re-Use or Biotreatment facilities:

Variable	Factor/Formula	DA 1-A	DA 2-A	DA 3-A	DA 4-A
Impervious surface/total surface, ratio	(i)	0.95	0.95	0.95	0.95
C_{BMP}= runoff coefficient	$0.858i^3 - 0.78i^2 + 0.774i + 0.04$	0.807	0.807	0.807	0.807
P_6	**P_6 = 2-yr,1-hr depth*1.4807 =	0.841	0.841	0.841	0.841
Detention Volume (acre inches)	$P_0 = a * C_{BMP} * P_6$ =	1.33	1.33	1.33	1.33
Drawdown rate of basin/trench (a)	1.963 for 48-hr drawdown =	1.963	1.963	1.963	1.963
Project Total Area (acre)	(A)	25.80	48.40	14.35	10.00
Design Capture Volume in cu. ft.	$V_0 = [(P_0 * A)/12] *43560$ =	124,774	234,072	69,399	48,362
Runoff Volume infiltrated in first 3 hours of storm (*not applicable for underground systems*)	Vol= in/hr/12 x ft^2 of infiltration area x 3 hrs	n/a	n/a	n/a	n/a
Retention Volume provided in cubic feet.	*Retention capacity of basins, trenches, underground storage or biotreatment basin	124,907	234,125	69,445	48,540

Variable	Factor/Formula	**DA 5-A**	**DA 6-A**	**DA 7-A**	**DA 8-A**
Impervious surface/total surface, ratio	(i)	0.95	0.95	0.95	0.95
C_{BMP}= runoff coefficient	$0.858i^3 - 0.78i^2 + 0.774i + 0.04$	0.807	0.807	0.807	0.807
P_6	**P_6 = 2-yr,1-hr depth*1.4807 =	0.841	0.841	0.841	0.841
Detention Volume (acre inches)	$P_0 = a * C_{BMP} * P_6$ =	1.33	1.33	1.33	1.33
Drawdown rate of basin/trench (a)	1.963 for 48-hr drawdown =	1.963	1.963	1.963	1.963
Project Total Area (acre)	(A)	17.90	18.65	8.80	23.25
Design Capture Volume in cu. ft.	$V_0 = [(P_0 * A)/12] *43560$ =	86,568	90,195	42,559	112,442
Runoff Volume infiltrated in first 3 hours of storm (*not applicable for underground systems*)	Vol= in/hr/12 x ft^2 of infiltration area x 3 hrs	n/a	n/a	n/a	n/a
Retention Volume provided in cubic feet.	*Retention capacity of basins, trenches, underground storage or biotreatment basin	86,816	90,530	42,723	112,574

Variable	Factor/Formula	**DA 9-A**			
Impervious surface/total surface, ratio	(i)	0.95			
C_{BMP}= runoff coefficient	$0.858i^3 - 0.78i^2 + 0.774i + 0.04$	0.807			
P_6	**P_6 = 2-yr,1-hr depth*1.4807 =	0.841			
Detention Volume (acre inches)	$P_0 = a * C_{BMP} * P_6$ =	1.33			
Drawdown rate of basin/trench (a)	1.963 for 48-hr drawdown =	1.963			
Project Total Area (acre)	(A)	19.80			
Design Capture Volume in cu. ft.	$V_0 = [(P_0 * A)/12]$ *43560 =	95,757			
Runoff Volume infiltrated in first 3 hours of storm (*not applicable for underground systems*)	Vol= in/hr/12 x ft^2 of infiltration area x 3 hrs	n/a			
Retention Volume provided in cubic feet.	*Retention capacity of basins, trenches, underground storage or biotreatment basin	96,094			

*Volume retained utilizing an underground infiltration facility. Refer to the DCV Calculations section for calculations.
**For P_6 value, use site coordinates and NOAA website to determine project's average 2-yr, 1-hr rainfall depth, at: http://hdsc.nws.noaa.gov/hdsc/pfds/sa/sca_pfds.html .

5. Flow-Based calculation (approximate) for sizing on-site or off-site Biotreatment facilities and proprietary treatment technology BMPs:

1) After calculating the "Watershed Imperviousness Ratio", i, which is equal to the percent of impervious area in each Drainage Management Area divided by 100, calculate the composite runoff coefficient C_{BMP} for the Drainage Area above using the following equation:

$$\mathbf{C_{BMP} = 0.858i^3 - 0.78i^2 + 0.774i + 0.04}$$

where: $\mathbf{C_{BMP}}$ = composite runoff coefficient; and,

i = watershed imperviousness ratio.

2) Determine BMP design rainfall intensity, $\mathbf{I_{BMP}}$, using the project site geo-coordinates and the NOAA website to determine project's average 2-yr, 1-hr rainfall intensity, at:

http://hdsc.nws.noaa.gov/hdsc/pfds/sa/sca_pfds.html .Multiply this value by 0.2787 (regression coefficient for Ontario) and a minimum safety factor of 2.

4) Calculate the target BMP flowrate, Q, using the following formula (for each DMA <50 acres*):

$$\mathbf{Q = C_{BMP} \cdot I_{BMP} \cdot A}$$

Where: **Q** = flow in cfs (Cubic feet per second)
$\mathbf{I_{BMP}}$ = BMP design rainfall intensity, in/hr
A = Drainage Area in acres

*For DMAs >50 acres, with C_{BMP} <0.5, the project applicant shall use the unit hydrograph method specified in the San Bernardino County Hydrology Manual, using the design storm pattern with rainfall return frequency such that the peak 1-hr rainfall intensity equals the 85th percentile 1-hr rainfall, multiplied by 2.

Project Flow-based calculation (approximate) for planned on-site or off-site flow-based Biotreatment facilities or Stormwater Treatment BMPs:

Variable	Factor/Formula	**DA 1-A**	**DA 2-A**	**DA 3-A**	**DA 4-A**
Impervious surface/ total surface, ratio	(i)	0.95	0.95	0.95	0.95
C_{BMP}= composite runoff coefficient	$0.858i^3+0.78i^2+0.774i+0.04$	0.81	0.81	0.81	0.81
I_{BMP}	I_{BMP} = 2-yr,1-hr storm intensity*0.2787*safety factor	0.279	0.279	0.279	0.279
Drainage area (ac)	A = DMA sq ft/43,560	25.80	48.40	14.35	10.00
Target BMP flowrate	Q = C_{BPM}* I_{BMP} * A	6.59	12.37	3.67	2.55

Variable	Factor/Formula	**DA 5-A**	**DA 6-A**	**DA 7-A**	**DA 8-A**
Impervious surface/ total surface, ratio	(i)	0.95	0.95	0.95	0.95
C_{BMP}= composite runoff coefficient	$0.858i^3+0.78i^2+0.774i+0.04$	0.81	0.81	0.81	0.81
I_{BMP}	I_{BMP} = 2-yr,1-hr storm intensity*0.2787*safety factor	0.279	0.279	0.279	0.279
Drainage area (ac)	A = DMA sq ft/43,560	17.90	18.65	8.80	23.25
Target BMP flowrate	Q = C_{BPM}* I_{BMP} * A	4.57	4.76	2.25	5.94

Variable	Factor/Formula	**DA 9-A**			
Impervious surface/ total surface, ratio	(i)	0.95			
C_{BMP}= composite runoff coefficient	$0.858i^3+0.78i^2+0.774i+0.04$	0.81			
I_{BMP}	I_{BMP} = 2-yr,1-hr storm intensity*0.2787*safety factor	0.279			
Drainage area (ac)	A = DMA sq ft/43,560	19.80			
Target BMP flowrate	Q = C_{BPM}* I_{BMP} * A	4.98			

6. Hydrologic Conditions of Concern (HCOC) and use of the on-line San Bernardino County HCOC Map for determining necessary mitigation steps necessary if there are HCOCs downstream of a project:

Project applicants may access the on-line HCOC Map at: http://permitrack.sbcounty.gov/WAP/. The map will indicate any hydrology concerns with downstream waterways that are hydraulically connected to the project and will indicate if there are any approved regional projects downstream that could be utilized for off-site mitigation of HCOCs. Please indicate here if the project will or will not be able to retain/infilter, harvest and use or biotreat and detain the DCV, on-site, as calculated in Section 4 and if there are HCOCs identified downstream of the project:

Retain or Harvest/Use the DCV on site?	Yes	**X**	No	
Biotreat the DCV but not infilter the runoff?	Yes		No	**X**
HCOCs identified downstream of site?	Yes		No	**X**

If the entire DCV will not be retained on site, the DCV is biotreated but not infiltered or additional detention capacity is needed to address identified HCOCs, downstream of the site, please list here, what additional mitigation measures will be utilized (on-site or off-site) to address HCOCs (see Section 4.2.1-4.2.3 of the SB County WQMP Technical Guidance):

HCOCs not applicable.

7. Site Plan and Conceptual Grading/Drainage Plan requirements for submission with the Preliminary WQMP:

Provide a Site Plan and Conceptual Grading/Drainage Plan along with this Preliminary WQMP, which conceptually shows the proposed locations of buildings, homes, parking lots, parks, new paved roadways, landscaped areas, drainage patterns and drainage sub-areas, methods of conveyance, proposed retention/infiltration, harvest & use or biotreatment facilities that are planned for installation. Where it is determined to be infeasible to capture and detain design storm runoff volumes, on-site, please include other design features, as described in Section 3, above. Include numbered or lettered notes on the Site Plan with a legend detailing other BMPs, as described in Section 3.

8. BMP Maintenance and Funding Mechanism & Description:

Ownership of the project will be held with McDonald Property Group. Long term maintenance will be the responsibility of the owner. This includes BMP maintenance, catch basin inspection, storm drain maintenance (on-site), efficient irrigation and landscape maintenance, and etcetera until the property is sold or transferred.

9. Acknowledgment:

As the property owner or developer, I understand that this project is required to install and implement permanent LID Storm Water Best Management Practices pursuant to the requirements of the San Bernardino County MS4 Permit and to document those BMPs in the submittal of a Water Quality Management Plan, which is binding on any current or successive owners of this property.

Yes	X	No	

10. Exemption Signature:

As the property owner or developer, I understand that this project is not required by the San Bernardino County MS4 Permit to install and implement permanent LID Storm Water Best Management Practices and will not be required to submit a Water Quality Management Plan.

Signature of Owner or Developer Date

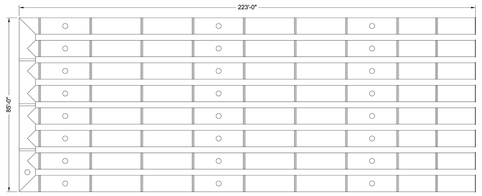
PROJECT SUMMARY

CALCULATION DETAILS
- LOADING = HS20 & HS25
- APPROX. LINEAR FOOTAGE = 1,805 lf.

STORAGE SUMMARY
- STORAGE VOLUME REQUIRED = 124,774 cf.
- PIPE STORAGE VOLUME = 90,729 cf.
- BACKFILL STORAGE VOLUME = 34,178 cf.
- TOTAL STORAGE PROVIDED = 124,907 cf.

PIPE DETAILS
- DIAMETER = 96 IN.
- CORRUGATION = 5x1
- GAGE = 16
- COATING = ALT2
- WALL TYPE = Perforated
- BARRELL SPACING = 36 IN.

BACKFILL DETAILS
- WIDTH AT ENDS = 12 IN.
- ABOVE PIPE = 6 IN.
- WIDTH AT SIDES = 12 IN.
- BELOW PIPE = 6 IN.



NOTES
- ALL RISER AND STUB DIMENSIONS ARE TO CENTERLINE. ALL ELEVATIONS, DIMENSIONS, AND LOCATIONS OF RISERS AND INLETS, SHALL BE VERIFIED BY THE ENGINEER OF RECORD PRIOR TO RELEASING FOR FABRICATION.
- ALL FITTINGS AND REINFORCEMENT COMPLY WITH ASTM A998.
- ALL RISERS AND STUBS ARE 2⅔" x ½" CORRUGATION AND 16 GAGE UNLESS OTHERWISE NOTED.
- RISERS TO BE FIELD TRIMMED TO GRADE.
- QUANTITY OF PIPE SHOWN DOES NOT PROVIDE EXTRA PIPE FOR CONNECTING THE SYSTEM TO EXISTING PIPE OR DRAINAGE STRUCTURES. OUR SYSTEM AS DETAILED PROVIDES NOMINAL INLET AND/OR OUTLET PIPE STUB FOR CONNECTION TO EXISTING DRAINAGE FACILITIES. IF ADDITIONAL PIPE IS NEEDED IT IS THE RESPONSIBILITY OF THE CONTRACTOR.
- BAND TYPE TO BE DETERMINED UPON FINAL DESIGN.
- THE PROJECT SUMMARY IS REFLECTIVE OF THE DYODS DESIGN, QUANTITIES ARE APPROX. AND SHOULD BE VERIFIED UPON FINAL DESIGN AND APPROVAL. FOR EXAMPLE, TOTAL EXCAVATION DOES NOT CONSIDER ALL VARIABLES SUCH AS SHORING AND ONLY ACCOUNTS FOR MATERIAL WITHIN THE ESTIMATED EXCAVATION FOOTPRINT.
- THESE DRAWINGS ARE FOR CONCEPTUAL PURPOSES AND DO NOT REFLECT ANY LOCAL PREFERENCES OR REGULATIONS. PLEASE CONTACT YOUR LOCAL CONTECH REP FOR MODIFICATIONS.

Sheet 3 of 5 Sheets

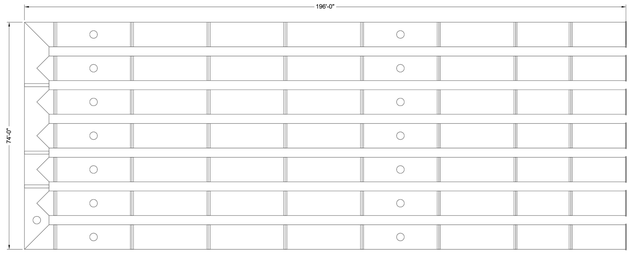
PROJECT SUMMARY

CALCULATION DETAILS
- LOADING = HS20 & HS25
- APPROX. LINEAR FOOTAGE = 1,390 lf.

STORAGE SUMMARY
- STORAGE VOLUME REQUIRED = 95,757 cf.
- PIPE STORAGE VOLUME = 69,869 cf.
- BACKFILL STORAGE VOLUME = 26,225 cf.
- TOTAL STORAGE PROVIDED = 96,094 cf.

PIPE DETAILS
- DIAMETER = 96 IN.
- CORRUGATION = 5x1
- GAGE = 16
- COATING = ALT2
- WALL TYPE = Perforated
- BARRELL SPACING = 36 IN.

BACKFILL DETAILS
- WIDTH AT ENDS = 12 IN.
- ABOVE PIPE = 6 IN.
- WIDTH AT SIDES = 12 IN.
- BELOW PIPE = 6 IN.



NOTES
- ALL RISER AND STUB DIMENSIONS ARE TO CENTERLINE. ALL ELEVATIONS, DIMENSIONS, AND LOCATIONS OF RISERS AND INLETS, SHALL BE VERIFIED BY THE ENGINEER OF RECORD PRIOR TO RELEASING FOR FABRICATION.
- ALL FITTINGS AND REINFORCEMENT COMPLY WITH ASTM A998.
- ALL RISERS AND STUBS ARE 2⅔" x ½" CORRUGATION AND 16 GAGE UNLESS OTHERWISE NOTED.
- RISERS TO BE FIELD TRIMMED TO GRADE.
- QUANTITY OF PIPE SHOWN DOES NOT PROVIDE EXTRA PIPE FOR CONNECTING THE SYSTEM TO EXISTING PIPE OR DRAINAGE STRUCTURES. OUR SYSTEM AS DETAILED PROVIDES NOMINAL INLET AND/OR OUTLET PIPE STUB FOR CONNECTION TO EXISTING DRAINAGE FACILITIES. IF ADDITIONAL PIPE IS NEEDED IT IS THE RESPONSIBILITY OF THE CONTRACTOR.
- BAND TYPE TO BE DETERMINED UPON FINAL DESIGN.
- THE PROJECT SUMMARY IS REFLECTIVE OF THE DYODS DESIGN, QUANTITIES ARE APPROX. AND SHOULD BE VERIFIED UPON FINAL DESIGN AND APPROVAL. FOR EXAMPLE, TOTAL EXCAVATION DOES NOT CONSIDER ALL VARIABLES SUCH AS SHORING AND ONLY ACCOUNTS FOR MATERIAL WITHIN THE ESTIMATED EXCAVATION FOOTPRINT.
- THESE DRAWINGS ARE FOR CONCEPTUAL PURPOSES AND DO NOT REFLECT ANY LOCAL PREFERENCES OR REGULATIONS. PLEASE CONTACT YOUR LOCAL CONTECH REP FOR MODIFICATIONS.

ASSEMBLY
SCALE: 1" = 20'

The design and information shown on this drawing is provided as a service to purchasers or specifiers of CONTECH Construction Engineered Solutions LLC ("Contech"). Neither this drawing, nor any part thereof, may be used, reproduced or distributed for any purpose except as authorized in writing by Contech. Failure to comply is done at the user's own risk and Contech expressly disclaims any liability arising from such use.

If discrepancies between the supplied information upon which the drawing is based and actual field conditions are encountered, it is the responsibility of the user of this drawing to notify Contech immediately for re-evaluation of the design. Contech is not responsible for inaccuracies in this drawing, incomplete or inaccurate information supplied by others.

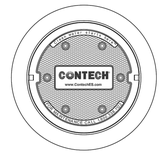
CDS3035-6-C DESIGN NOTES

CDS3035-6-C RATED TREATMENT CAPACITY IS 3.8 CFS [107.6 L/s], OR PER LOCAL REGULATIONS. MAXIMUM HYDRAULIC INTERNAL BYPASS CAPACITY IS 20.0 CFS [566 L/s]. IF THE SITE CONDITIONS EXCEED 20.0 CFS [566 L/s], AN UPSTREAM BYPASS STRUCTURE IS REQUIRED.

THE STANDARD CDS3035-6-C CONFIGURATION IS SHOWN. ALTERNATE CONFIGURATIONS ARE AVAILABLE AND ARE LISTED BELOW. SOME CONFIGURATIONS MAY BE COMBINED TO SUIT SITE REQUIREMENTS.

CONFIGURATION DESCRIPTION
GRATED INLET ONLY (NO INLET PIPE)
GRATED INLET WITH INLET PIPE OR PIPES
CURB INLET ONLY (NO INLET PIPE)
CURB INLET WITH INLET PIPE OR PIPES
SEPARATE OIL BAFFLE (SINGLE INLET PIPE REQUIRED FOR THIS CONFIGURATION)
SEDIMENT WEIR FOR NJDEP / NJCAT CONFORMING UNITS



FRAME AND COVER
(DIAMETER VARIES)
N.T.S.

SITE SPECIFIC DATA REQUIREMENTS

STRUCTURE ID			
WATER QUALITY FLOW RATE (CFS OR L/s)			*
PEAK FLOW RATE (CFS OR L/s)			*
RETURN PERIOD OF PEAK FLOW (YRS)			*
SCREEN APERTURE (2400 OR 4700)			*
PIPE DATA:	I.E.	MATERIAL	DIAMETER
INLET PIPE 1	*	*	*
INLET PIPE 2	*	*	*
OUTLET PIPE	*	*	*
RIM ELEVATION			*
ANTI-FLOTATION BALLAST	WIDTH		HEIGHT
	*		*

NOTES/SPECIAL REQUIREMENTS:

* PER ENGINEER OF RECORD

GENERAL NOTES
1. CONTECH TO PROVIDE ALL MATERIALS UNLESS NOTED OTHERWISE.
2. DIMENSIONS MARKED WITH ( ) ARE REFERENCE DIMENSIONS. ACTUAL DIMENSIONS MAY VARY.
3. FOR FABRICATION DRAWINGS WITH DETAILED STRUCTURE DIMENSIONS AND WEIGHTS, PLEASE CONTACT YOUR CONTECH ENGINEERED SOLUTIONS LLC REPRESENTATIVE. www.ContechES.com
4. CDS WATER QUALITY STRUCTURE SHALL BE IN ACCORDANCE WITH ALL DESIGN DATA AND INFORMATION CONTAINED IN THIS DRAWING.
5. STRUCTURE SHALL MEET AASHTO HS20 AND CASTINGS SHALL MEET HS20 (AASHTO M 306) LOAD RATING, ASSUMING GROUNDWATER ELEVATION AT, OR BELOW, THE OUTLET PIPE INVERT ELEVATION. ENGINEER OF RECORD TO CONFIRM ACTUAL GROUNDWATER ELEVATION.
6. PVC HYDRAULIC SHEAR PLATE IS PLACED ON SHELF AT BOTTOM OF SCREEN CYLINDER. REMOVE AND REPLACE AS NECESSARY DURING MAINTENANCE CLEANING.

INSTALLATION NOTES
A. ANY SUB-BASE, BACKFILL DEPTH, AND/OR ANTI-FLOTATION PROVISIONS ARE SITE-SPECIFIC DESIGN CONSIDERATIONS AND SHALL BE SPECIFIED BY ENGINEER OF RECORD.
B. CONTRACTOR TO PROVIDE EQUIPMENT WITH SUFFICIENT LIFTING AND REACH CAPACITY TO LIFT AND SET THE CDS MANHOLE STRUCTURE (LIFTING CLUTCHES PROVIDED).
C. CONTRACTOR TO ADD JOINT SEALANT BETWEEN ALL STRUCTURE SECTIONS, AND ASSEMBLE STRUCTURE.
D. CONTRACTOR TO PROVIDE, INSTALL, AND GROUT PIPES. MATCH PIPE INVERTS WITH ELEVATIONS SHOWN.
E. CONTRACTOR TO TAKE APPROPRIATE MEASURES TO ASSURE UNIT IS WATER TIGHT, HOLDING WATER TO FLOWLINE INVERT MINIMUM. IT IS SUGGESTED THAT ALL JOINTS BELOW PIPE INVERTS ARE GROUTED.

ITEM NUMBERS

1. **MANHOLE CONE** - MODIFIED FLAT BOTTOM.
2. **BOLTED RING & GRATE/COVER -** DIAMETER & TYPE AS SHOWN. CLEAN CAST IRON WITH WORDING **"STORM WATER ONLY"** IN RAISED LETTERS. **BOLTED IN 2 LOCATIONS** AND SECURED TO CONE WITH MORTAR. RIM ELEVATION ±0.02' OF PLANS.
3. **STABILIZED BACKFILL -** TWO-SACK SLURRY MIX.
4. **PRE-CAST LINER -** 4000 PSI CONCRETE 48" ID. X 54" OD. **CENTER IN HOLE** AND ALIGN SECTIONS **TO MAXIMIZE BEARING SURFACE.**
5. **INLET PIPE (BY OTHERS).** SEE SEPARATE PLAN FOR INVERT ELEVATIONS.
6. **GRADED BASIN OR PAVING** (BY OTHERS).
7. **COMPACTED BASE MATERIAL**, IF REQUIRED (BY OTHERS).
8. **FREEBOARD DEPTH VARIES** WITH INLET PIPE ELEVATION. INCREASE SETTLING CHAMBER DEPTH AS NEEDED TO MAINTAIN ALL INLET PIPE ELEVATIONS ABOVE RISER PIPE.
9. **NON-WOVEN GEOTEXTILE SLEEVE** - MIRAFI 140 NL, MIN. 6 FT Ø. HELD APPROX. 10 FEET OFF THE BOTTOM OF EXCAVATION.
10. **PUREFLO® DEBRIS SHIELD** - ROLLED 16 GA. STEEL X 24" LENGTH WITH VENTED ANTI-SIPHON AND INTERNAL 0.265" MAX. SWO FLATTENED EXPANDED STEEL SCREEN X 12" LENGTH. **FUSION BONDED EPOXY COATED.**
11. **MIN. 6' Ø DRILLED SHAFT.**
12. **RISER PIPE** - SCH. 40 PVC MATED TO DRAINAGE PIPE AT BASE SEAL.
13. **DRAINAGE PIPE -** ADS HIGHWAY GRADE OR SCH. 40 PVC WITH TRI-A COUPLER. SUSPEND PIPE DURING BACKFILL OPERATIONS. DIAMETER AS NOTED.
14. **ROCK** - WASHED, SIZED BETWEEN 3/8" AND 1-1/2".
15. **FLOFAST® DRAINAGE SCREEN** - SCH. 40 PVC 0.120" SLOTTED WELL SCREEN WITH 32 SLOTS PER ROW/FT. OVERALL LENGTH VARIES, UP TO 120" WITH TRI-B COUPLER.
16. **ABSORBENT** - HYDROPHOBIC PETROCHEMICAL SPONGE. MIN. 128 OZ. CAPACITY. TYPICAL, 2 PER CHAMBER.
17. **FABRIC SEAL** - U.V. RESISTANT GEOTEXTILE - **TO BE REMOVED BY CUSTOMER** AT PROJECT COMPLETION. GRATED ONLY.
18. **MIN. 6' Ø DRILLED SHAFT.**
19. **BASE SEAL** - GEOTEXTILE.
20. **6 PERFORATIONS MINIMUM PER FOOT, 2 ROWS MINIMUM.**

[1] Precipitation frequency (PF) estimates in this table are based on frequency analysis of partial duration series (PDS).

Numbers in parenthesis are PF estimates at lower and upper bounds of the 90% confidence interval. The probability that precipitation frequency estimates (for a given duration and average recurrence interval) will be greater than the upper bound (or less than the lower bound) is 5%. Estimates at upper bounds are not checked against probable maximum precipitation (PMP) estimates and may be higher than currently valid PMP values.

Please refer to NOAA Atlas 14 document for more information.

Estimates from the table in CSV format: Precipitation frequency estimates Submit

Worksheet H: Factor of Safety and Design Infiltration Rate Worksheet
DA 1-A

Factor Category		Factor Description	Assigned Weight (w)	Factor Value (v)	Product (p) p = w x v
A	Suitability Assessment	Soil assessment methods	0.25	1	0.25
		Predominant soil texture	0.25	1	0.25
		Site soil variability	0.25	1	0.25
		Depth to groundwater / impervious layer	0.25	1	0.25
		Suitability Assessment Safety Factor, $S_A = \Sigma p$			1.0
B	Design	Tributary area size	0.25	3	0.75
		Level of pretreatment/ expected sediment loads	0.25	1	0.25
		Redundancy	0.25	3	0.75
		Compaction during construction	0.25	1	0.25
		Design Safety Factor, $S_B = \Sigma p$			2.0
Combined Safety Factor, $S_{TOT} = S_A \times S_B$					2.0
Measured Infiltration Rate, inch/hr, K_M (corrected for test-specific bias)					6.3
Design Infiltration Rate, in/hr, $K_{DESIGN} = K_M / S_{TOT}$					3.15

Supporting Data

Briefly describe infiltration test and provide reference to test forms:

A site-specific infiltration test was conducted at the project site to support a minimum measured infiltration rate of 6.3 in/hr. The design infiltration rate will be 3.15 in/hr after applying the appropriate safety factors. This design rate is suitable for infiltration facilities.

Note: The minimum combined adjustment factor shall not be less than 2.0 and the maximum combined adjustment factor shall not exceed 9.0.

Worksheet H: Factor of Safety and Design Infiltration Rate Worksheet
DA 2-A

Factor Category		Factor Description	Assigned Weight (w)	Factor Value (v)	Product (p) p = w x v
A	Suitability Assessment	Soil assessment methods	0.25	1	0.25
		Predominant soil texture	0.25	1	0.25

		Design Safety Factor, $S_B = \Sigma p$			2.0
Combined Safety Factor, $S_{TOT} = S_A \times S_B$					2.0
Measured Infiltration Rate, inch/hr, K_M (corrected for test-specific bias)					13.5
Design Infiltration Rate, in/hr, $K_{DESIGN} = K_M / S_{TOT}$					6.75

Supporting Data

Briefly describe infiltration test and provide reference to test forms:

A site-specific infiltration test was conducted at the project site to support a minimum measured infiltration rate of 13.5 in/hr. The design infiltration rate will be 6.75 in/hr after applying the appropriate safety factors. This design rate is suitable for infiltration facilities.

Note: The minimum combined adjustment factor shall not be less than 2.0 and the maximum combined adjustment factor shall not exceed 9.0.

		Level of pretreatment/ expected sediment loads	0.25	1	0.25
		Redundancy	0.25	3	0.75
		Compaction during construction	0.25	1	0.25
		Design Safety Factor, $S_B = \Sigma p$			2.0
Combined Safety Factor, $S_{TOT} = S_A \times S_B$					1.75; use 2.0
Measured Infiltration Rate, inch/hr, K_M (corrected for test-specific bias)					1.3
Design Infiltration Rate, in/hr, $K_{DESIGN} = K_M / S_{TOT}$					0.65

Supporting Data

Briefly describe infiltration test and provide reference to test forms:

A site-specific infiltration test was conducted at the project site to support a minimum measured infiltration rate of 1.3 in/hr. The design infiltration rate will be 0.65 in/hr after applying the appropriate safety factors. This design rate is suitable for infiltration facilities.

Note: The minimum combined adjustment factor shall not be less than 2.0 and the maximum combined adjustment factor shall not exceed 9.0.

Worksheet H: Factor of Safety and Design Infiltration Rate Worksheet
DA 8-A

Factor Category		Factor Description	Assigned Weight (w)	Factor Value (v)	Product (p) p = w x v
A	Suitability Assessment	Soil assessment methods	0.25	1	0.25
		Predominant soil texture	0.25	1	0.25
		Site soil variability	0.25	1	0.25
		Depth to groundwater / impervious layer	0.25	1	0.25
		Suitability Assessment Safety Factor, $S_A = \Sigma p$			1.0
B	Design	Tributary area size	0.25	3	0.75
		Level of pretreatment/ expected sediment loads	0.25	1	0.25
		Redundancy	0.25	3	0.75
		Compaction during construction	0.25	1	0.25
		Design Safety Factor, $S_B = \Sigma p$			2.0
Combined Safety Factor, $S_{TOT} = S_A \times S_B$					2.0
Measured Infiltration Rate, inch/hr, K_M (corrected for test-specific bias)					10.8
Design Infiltration Rate, in/hr, $K_{DESIGN} = K_M / S_{TOT}$					5.4

Supporting Data

Briefly describe infiltration test and provide reference to test forms:

A site-specific infiltration test was conducted at the project site to support a minimum measured infiltration rate of 10.8 in/hr. The design infiltration rate will be 5.4 in/hr after applying the appropriate safety factors. This design rate is suitable for infiltration facilities.

Note: The minimum combined adjustment factor shall not be less than 2.0 and the maximum combined adjustment factor shall not exceed 9.0.

Worksheet H: Factor of Safety and Design Infiltration Rate Worksheet
DA 9-A

Factor Category		Factor Description	Assigned Weight (w)	Factor Value (v)	Product (p) p = w x v
A	Suitability Assessment	Soil assessment methods	0.25	1	0.25
		Predominant soil texture	0.25	1	0.25
		Site soil variability	0.25	1	0.25
		Depth to groundwater / impervious layer	0.25	1	0.25
		Suitability Assessment Safety Factor, $S_A = \Sigma p$			1.0
B	Design	Tributary area size	0.25	3	0.75
		Level of pretreatment/ expected sediment loads	0.25	1	0.25
		Redundancy	0.25	3	0.75
		Compaction during construction	0.25	1	0.25
		Design Safety Factor, $S_B = \Sigma p$			2.0
Combined Safety Factor, $S_{TOT} = S_A \times S_B$					2.0
Measured Infiltration Rate, inch/hr, K_M (corrected for test-specific bias)					4.33
Design Infiltration Rate, in/hr, $K_{DESIGN} = K_M / S_{TOT}$					2.165

Supporting Data

Briefly describe infiltration test and provide reference to test forms:

A site-specific infiltration test was conducted at the project site to support a minimum measured infiltration rate of 4.33 in/hr. The design infiltration rate will be 2.165 in/hr after applying the appropriate safety factors. This design rate is suitable for infiltration facilities.

Note: The minimum combined adjustment factor shall not be less than 2.0 and the maximum combined adjustment factor shall not exceed 9.0.

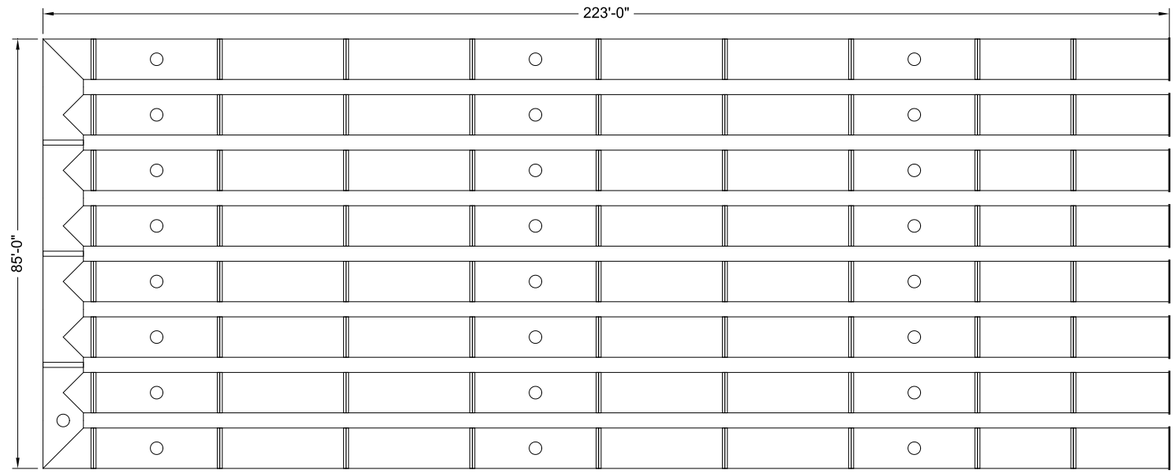
PROJECT SUMMARY

CALCULATION DETAILS
- LOADING = HS20 & HS25
- APPROX. LINEAR FOOTAGE = 1,805 lf.

STORAGE SUMMARY
- STORAGE VOLUME REQUIRED = 124,774 cf.
- PIPE STORAGE VOLUME = 90,729 cf.
- BACKFILL STORAGE VOLUME = 34,178 cf.
- TOTAL STORAGE PROVIDED = 124,907 cf.

PIPE DETAILS
- DIAMETER = 96 IN.
- CORRUGATION = 5x1
- GAGE = 16
- COATING = ALT2
- WALL TYPE = Perforated
- BARRELL SPACING = 36 IN.

BACKFILL DETAILS
- WIDTH AT ENDS = 12 IN.
- ABOVE PIPE = 6 IN.
- WIDTH AT SIDES = 12 IN.
- BELOW PIPE = 6 IN.



NOTES

- ALL RISER AND STUB DIMENSIONS ARE TO CENTERLINE. ALL ELEVATIONS, DIMENSIONS, AND LOCATIONS OF RISERS AND INLETS, SHALL BE VERIFIED BY THE ENGINEER OF RECORD PRIOR TO RELEASING FOR FABRICATION.
- ALL FITTINGS AND REINFORCEMENT COMPLY WITH ASTM A998.
- ALL RISERS AND STUBS ARE $2\frac{2}{3}$" x $\frac{1}{2}$" CORRUGATION AND 16 GAGE UNLESS OTHERWISE NOTED.
- RISERS TO BE FIELD TRIMMED TO GRADE.
- QUANTITY OF PIPE SHOWN DOES NOT PROVIDE EXTRA PIPE FOR CONNECTING THE SYSTEM TO EXISTING PIPE OR DRAINAGE STRUCTURES. OUR SYSTEM AS DETAILED PROVIDES NOMINAL INLET AND/OR OUTLET PIPE STUB FOR CONNECTION TO EXISTING DRAINAGE FACILITIES. IF ADDITIONAL PIPE IS NEEDED IT IS THE RESPONSIBILITY OF THE CONTRACTOR.
- BAND TYPE TO BE DETERMINED UPON FINAL DESIGN.
- THE PROJECT SUMMARY IS REFLECTIVE OF THE DYODS DESIGN, QUANTITIES ARE APPROX. AND SHOULD BE VERIFIED UPON FINAL DESIGN AND APPROVAL. FOR EXAMPLE, TOTAL EXCAVATION DOES NOT CONSIDER ALL VARIABLES SUCH AS SHORING AND ONLY ACCOUNTS FOR MATERIAL WITHIN THE ESTIMATED EXCAVATION FOOTPRINT.
- THESE DRAWINGS ARE FOR CONCEPTUAL PURPOSES AND DO NOT REFLECT ANY LOCAL PREFERENCES OR REGULATIONS. PLEASE CONTACT YOUR LOCAL CONTECH REP FOR MODIFICATIONS.

Region		Valley	
Drainage Area (acres)		17.90	acres
Drainage Area (sq-ft)		779,724	sq-ft
Impervious Coeff	i =	0.95	< 1.0
Runoff Coeff	**C =**	0.807	
1-hr 2-yr from NOAA		0.568	
P6 Coeff		1.4807	
Mean 6-hr (P6)		0.841	
Drawdown Rate (a)		1.963	
DCV		86,568	cu-ft
DCV		1.987	acre-ft

Design infiltration rate = 11.25 in/hr
d_{max} = 540.0 inches = Design infiltration rate x 48 hours = 11.25 in/hr x 48 hrs
d_{BMP} = 100.8 inches = [(6 inches + 6 inches) x 0.40] + 96 inches
$d_{max} > d_{BMP}$

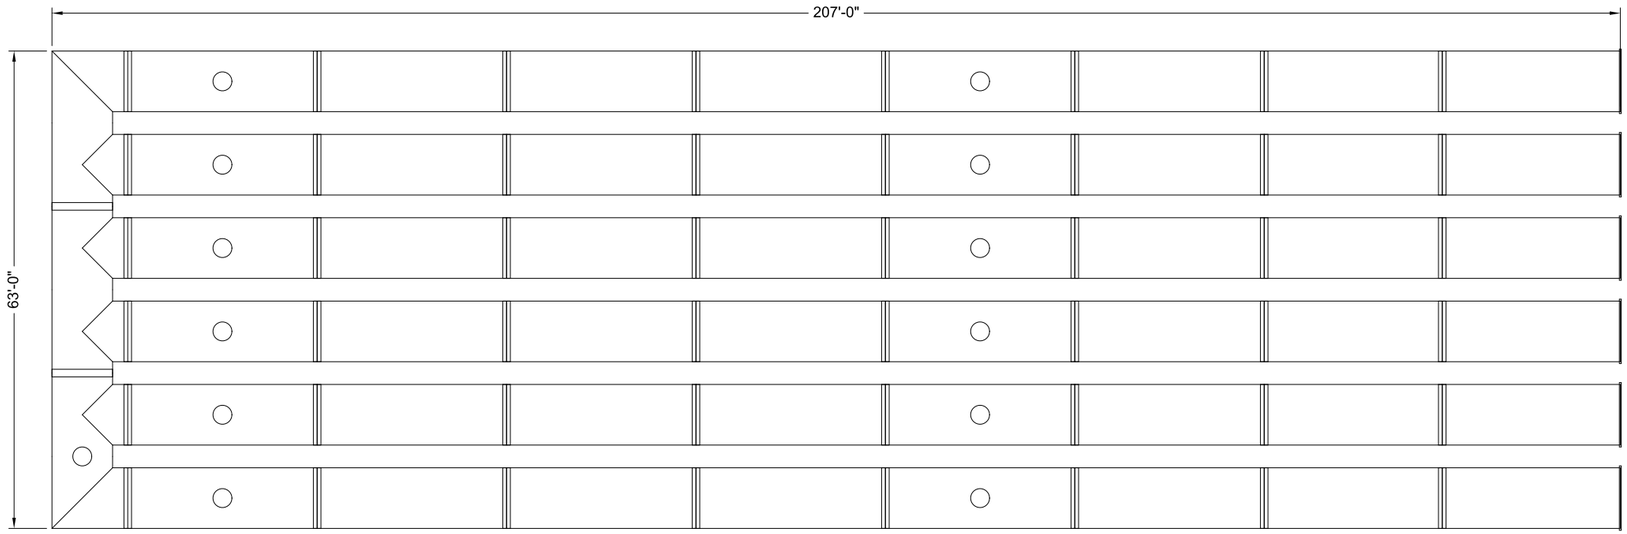
PROJECT SUMMARY

CALCULATION DETAILS
- LOADING = HS20 & HS25
- APPROX. LINEAR FOOTAGE = 1,257 lf.

STORAGE SUMMARY
- STORAGE VOLUME REQUIRED = 86,568 cf.
- PIPE STORAGE VOLUME = 63,184 cf.
- BACKFILL STORAGE VOLUME = 23,632 cf.
- TOTAL STORAGE PROVIDED = 86,816 cf.

PIPE DETAILS
- DIAMETER = 96 IN.
- CORRUGATION = 5x1
- GAGE = 16
- COATING = ALT2
- WALL TYPE = Perforated
- BARRELL SPACING = 36 IN.

BACKFILL DETAILS
- WIDTH AT ENDS = 12 IN.
- ABOVE PIPE = 6 IN.
- WIDTH AT SIDES = 12 IN.
- BELOW PIPE = 6 IN.



NOTES

- ALL RISER AND STUB DIMENSIONS ARE TO CENTERLINE. ALL ELEVATIONS, DIMENSIONS, AND LOCATIONS OF RISERS AND INLETS, SHALL BE VERIFIED BY THE ENGINEER OF RECORD PRIOR TO RELEASING FOR FABRICATION.
- ALL FITTINGS AND REINFORCEMENT COMPLY WITH ASTM A998.
- ALL RISERS AND STUBS ARE $2\frac{2}{3}$" x $\frac{1}{2}$" CORRUGATION AND 16 GAGE UNLESS OTHERWISE NOTED.
- RISERS TO BE FIELD TRIMMED TO GRADE.
- QUANTITY OF PIPE SHOWN DOES NOT PROVIDE EXTRA PIPE FOR CONNECTING THE SYSTEM TO EXISTING PIPE OR DRAINAGE STRUCTURES. OUR SYSTEM AS DETAILED PROVIDES NOMINAL INLET AND/OR OUTLET PIPE STUB FOR CONNECTION TO EXISTING DRAINAGE FACILITIES. IF ADDITIONAL PIPE IS NEEDED IT IS THE RESPONSIBILITY OF THE CONTRACTOR.
- BAND TYPE TO BE DETERMINED UPON FINAL DESIGN.
- THE PROJECT SUMMARY IS REFLECTIVE OF THE DYODS DESIGN, QUANTITIES ARE APPROX. AND SHOULD BE VERIFIED UPON FINAL DESIGN AND APPROVAL. FOR EXAMPLE, TOTAL EXCAVATION DOES NOT CONSIDER ALL VARIABLES SUCH AS SHORING AND ONLY ACCOUNTS FOR MATERIAL WITHIN THE ESTIMATED EXCAVATION FOOTPRINT.
- THESE DRAWINGS ARE FOR CONCEPTUAL PURPOSES AND DO NOT REFLECT ANY LOCAL PREFERENCES OR REGULATIONS. PLEASE CONTACT YOUR LOCAL CONTECH REP FOR MODIFICATIONS.

INFILTRATION FEASIBILITY

December 23, 2021

McDonald Property Group
1140 N. Coast Highway
Laguna Beach, California 92651

Attention: Mr. Bruce McDonald
President

Project No.: **21G197-3**

Subject: **Results of Additional Infiltration Testing**
Proposed California Logistics Center
SEC Airport Drive and Haven Avenue
Ontario, California

References: 1) Geotechnical Feasibility Study, California Logistics Center, SEC Airport Drive and Haven Avenue, Ontario, California, prepared by Southern California Geotechnical, prepared for McDonald Property Group, SCG Project No. 21G197-1, dated October 25, 2021.

2) Preliminary Infiltration Testing, Proposed California Logistics Center, SEC Airport Drive and Haven Avenue, Ontario, California, prepared by SCG, prepared for McDonald Property Group, SCG Project No. 21G197-2, dated October 26, 2021.

Mr. McDonald:

In accordance with your request, we have performed infiltration testing at the subject site. The infiltration testing was performed for the proposed stormwater disposal systems that will be utilized at the subject site. We are pleased to present this report summarizing the results of the infiltration testing and our design recommendations.

Scope of Services

The scope of services performed for this project was in general accordance with our Change Order No. 21G197-CO1, dated November 4, 2021. The scope of services included visual site reconnaissance, subsurface exploration, field testing, and engineering analysis to determine the infiltration rates of the on-site soils for the stormwater disposal system.

Shallow infiltration tests at depth of 10± feet were performed in order to analyze the infiltration characteristics of near-surface soils. The shallow infiltration testing was performed in general accordance with the guidelines published in the Technical Guidance Document for Water Quality Management Plans (WQMP), prepared for the County of San Bernardino Areawide Stormwater Program dated June 7, 2013. The San Bernardino County standards defer to guidelines published by Riverside County Department of Environmental Health (RCDEH).

Deep infiltration tests at 50± feet were performed using the constant-head method to analyze the infiltration characteristics of soils at depths greater than 50± feet.

Site and Project Description

The subject site is located at the southeast corner of Airport Drive and Haven Avenue in Ontario, California. The site is bounded to the west by the Ontario International Airport, to the north by Airport Drive, to the east by Doubleday Avenue and a commercial/industrial development, and to the south by Jurupa Street and commercial/industrial buildings. It should be noted that Airport Drive, which borders the northern boundary of the site, turns into South Commerce Parkway and transects the site in a north-to-south direction. The site is also partially transected by Carnegie Avenue (trending north-to-south), as well as Santa Ana Street and La Salle Street (both trending east-to-west). The general location of the site is illustrated on the Site Location Map, included as Plate 1 of this report.

The overall site is an irregular-shaped property that is comprised of numerous contiguous parcels totaling 197.08± acres. The overall site is currently vacant and undeveloped. Our review of historical aerial photographs indicates that the parcels may have been previously subdivided as agricultural lots. Based on our visit to the site, ground surface cover within the vacant lots consists of sparse to moderate native grass and weed growth. Occasional east-west trending soil berms approximate 2-3± feet in height are located every 500± feet throughout each region of the site except for the northern portion.

Detailed topographic information was not available at the time of this report. However, based on topographic information obtained from Google Earth, the overall site topography slopes gently downward to the south at a gradient of about 1 to 1½± percent.

Proposed Development

Our office was provided a site plan (SITE_2021, dated November 19, 2021), which was prepared by Thienes Engineering, inc. Based on the plan, the site will be developed with a total of nine (9) buildings, identified as Buildings 1 through 9. The buildings will range from 205,500± ft² to 930,300± ft² in size. Dock-high doors will be constructed along a portion of at least one building wall for all of the buildings. Building 3 will be constructed in a cross-dock configuration. The buildings will be surrounded by asphaltic concrete pavements in the parking and drive lane areas, Portland cement concrete pavements in the loading dock areas, and isolated areas of concrete flatwork and landscape planters.

We understand that the proposed development will include on-site infiltration for stormwater disposal. The infiltration systems will consist of a combination of below-grade chambers and deep dry wells. There will be a total of seven (7) infiltration areas throughout the site. The bottom of the below-grade chambers will be 10± feet below the existing site grades and the bottom of the dry wells will extend to a depth of 50± feet below the existing site grades.

Previous Studies

Southern California Geotechnical, Inc. (SCG) performed a feasibility study at the subject site (Reference 1). As a part of this study, ten (10) borings were advanced to depths of 20 to 25± feet below the previously existing site grades. A surficial layer of disturbed alluvium was encountered at the ground surface at most of the boring locations, extending to depths of 1½ to 2½± feet. The disturbed alluvium generally consists of loose to medium dense silty fine

sands with varying medium sand content. At greater depths, the native alluvium generally consists of loose to medium dense silty fine sands, fine sands and fine sandy silts with varying medium sand content, extending to at least the maximum depth explored of 25± feet. Some of the soils below depths of 13 feet are dense.

Southern California Geotechnical, Inc. (SCG) also previously performed a preliminary infiltration study at the subject site (Reference 2). As a part of this study, four (4) infiltration test borings (identified as Infiltration Test Nos. I-1 through I-4) were advanced to a depth of 10± feet below existing site grades. Artificial fill soils were encountered at the ground surface at one of the infiltration boring locations, extending to a depth of 3± below the existing site grades. The fill soils generally consisted of very dense fine sands, little silt. A surficial layer of disturbed alluvium was encountered at the ground surface at most of the infiltration boring locations, extending to a depth of 3± feet. The disturbed alluvium generally consisted of medium dense silty fine sands with varying medium to coarse sand content. Native alluvial soils were encountered beneath the fill soils or disturbed alluvium at all of the infiltration boring locations, extending to at least the maximum depth explored of 10± feet below the existing site grades. The alluvial soils generally consisted of medium dense to dense silty fine sands, silty fine to medium sands, and fine sandy silts.

Free water was not encountered during drilling of any of our previous studies borings. Based on the lack of water within the borings, the groundwater was considered to have existed at a depth in excess of 25± feet at the time of our subsurface exploration.

Subsurface Exploration

The subsurface exploration performed for the infiltration testing consisted of a total of twelve (12) infiltration test borings. Five (5) of the infiltration borings were advanced to a depth of 10± feet below the existing site grades for the below-grade chamber systems. Seven (7) deeper infiltration test borings were advanced to a depth of 50± feet below the existing site grades for the dry well infiltration systems. The infiltration borings were advanced using a truck-mounted drilling rig, equipped with 8-inch diameter hollow stem augers and were logged during drilling by a member of our staff. The approximate locations of the infiltration test borings (identified as Infiltration Boring Nos. I-5 through I-16) are indicated on the Infiltration Test Location Plan, enclosed as Plate 2 of this report.

Upon the completion of the infiltration borings, each infiltration test boring was filled with 2± inches of clean ¾-inch gravel. A sufficient length of 3-inch-diameter perforated PVC casing was then placed into each test hole so that the PVC casing extended from the bottom of the test hole to the ground surface. Clean ¾-inch gravel was installed in the annulus surrounding the PVC casing.

Geotechnical Conditions

Native alluvium was encountered at the ground surface of all twelve (12) infiltration test locations, extending to at least the maximum explored depth of 50± feet below existing site grades. The near-surface alluvium consists of loose to medium dense silty well-graded sands, well-graded sands, and fine sandy silts extending to depths of up to 25± feet. At greater depths, the alluvium consists of dense to very dense silty fine to coarse sands, fine to coarse

sands, and gravelly fine to coarse sands. The Boring Logs, which illustrate the conditions encountered at each of the borings, are included with this report.

Free water was not encountered during drilling of any of our infiltration borings. Based on the lack of water within the borings, the groundwater was considered to have existed at a depth in excess of 50± feet at the time of our subsurface exploration.

Recent water level data was obtained from the California State Water Resources Control Board, GeoTracker, website, https://geotracker.waterboards.ca.gov/. One monitoring well on record is located 2,916± south of the site. Water level readings within this monitoring well indicate a high groundwater level of 231± feet below the ground surface in July 2021.

Infiltration Testing

As previously mentioned, the infiltration testing was performed in general accordance with the guidelines published in the Technical Guidance Document for Water Quality Management Plans, prepared for the County of San Bernardino Areawide Stormwater Program and the constant head method.

Pre-soaking

In accordance with the county infiltration standards, all of the infiltration test borings were pre-soaked prior to the infiltration testing or until all of the water had percolated through each test hole. The pre-soaking process consisted of filling the test borings by inverting a full 5-gallon bottle of clear water supported over each hole so that the water level reaches a level of at least 5 times the hole's radius above the gravel at the bottom of each hole. The pre-soaking was completed after all of the water had percolated through each test hole or after 15 hours since initiating the pre-soak. Based on the results of the pre-soaking process, different infiltration procedures were used during the infiltration testing at each of the infiltration boring locations.

Shallow Infiltration Testing

Following the pre-soaking process of Infiltration Boring Nos. I-9 through I-11 and Infiltration Boring Nos. I-15 and I-16, SCG performed the infiltration testing. Each test hole was filled with water to a depth of at least 5 times the radius of the hole above the gravel at the bottom of each test hole, and less than or equal to the water level used during the pre-soaking process. In accordance with the San Bernardino County guidelines, since "sandy soils" were encountered at each of the Infiltration Borings (where 6 inches of water infiltrated into the surrounding soils for two-consecutive 25-minute readings), readings were taken at 10-minute intervals, for a total of 1 hour. After each reading, the borings were refilled to the original water level above the gravel. The water level readings are presented on the spreadsheets enclosed with this report. The infiltration rates for each of the timed intervals are also tabulated on the spreadsheets.
The infiltration rates from the shallow tests are tabulated in inches per hour. The rates for the deep tests are reported in gallons per square foot per day. In accordance with typically accepted practice, it is recommended that the most conservative reading from the latter part of the infiltration tests be used as the design infiltration rate. The rates are summarized below:

Infiltration Test No.	Depth (feet)	Soil Description	Infiltration Rate (inches/hour)
I-9	10	Brown Silty fine Sand	13.5
I-10	10	Brown to Gray fine to coarse Sand, little fine Gravel	18.4
I-11	10	Brown Gray fine to medium Sand, little Silt, trace coarse Sand	13.7
I-15	10	Brown fine to coarse Sand, little fine Gravel, trace Silt	22.4
I-16	10	Gray Brown fine to coarse Sand, little to some fine to coarse Gravel	10.8

Dry Wells

Following the pre-soaking process for Infiltration Boring Nos. I-5 through I-8 and Infiltration Boring Nos. I-12 through I-14, the constant-head infiltration test method was utilized to test the rates of deeper soils. This method consisted of filling the borings to a maximum water level of 10 to 19± feet below the ground surface, based on the soil conditions encountered. Once the hole was filled, the inflow of water was controlled via a ball valve in order to maintain the water level constant below ground surface. It was necessary to constantly monitor this depth due to varying inflows from the water source and the change in infiltration rate with time. Readings were taken every ten minutes using a water level meter. The ball valve was used to make adjustments by increasing or decreasing the inflow of water when slight changes in depth occurred. The water level readings are presented on the spreadsheets enclosed with this report. The infiltration rates for each of the timed intervals are also tabulated on the spreadsheets.

The infiltration rates from the deep infiltration test are tabulated in gallons per square foot per day.

Infiltration Test No.	Depth (feet)	Infiltration Rate (inches per hour)	Infiltration Rate ($gal/ft^2/day$)
I-5	50	1.3	18.8
I-6	50	5.6	83.0
I-7	50	4.3	64.8
I-8	50	8.8	131.8
I-12	50	4.7	70.4
I-13	50	2.5	37.6
I-14	50	1.5	22.3

Laboratory Testing

Moisture Content

The moisture contents for the recovered soil samples within the borings were determined in accordance with ASTM D-2216 and are expressed as a percentage of the dry weight. These test results are presented on the Boring Logs.

Grain Size Analysis

The grain size distribution of selected soils collected from the bottom of each infiltration test boring have been determined using a range of wire mesh screens. These tests were performed in general accordance with ASTM D-422 and/or ASTM D-1140. The weight of the portion of the sample retained on each screen is recorded and the percentage finer or coarser of the total weight is calculated. The results of these tests are presented on Plates C-1 through C-51 of this report.

Design Recommendations

Shallow Systems (Below-Grade Chambers)

Five (5) shallow infiltration tests were performed within the proposed below-grade chambers at the site for this investigation. As noted above, the infiltration rates at these locations range from 9.3 and 22.5 inches per hour. Based on the results of Infiltration Test Nos. I-9 through I-11 and Infiltration Test Nos. I-15 through I-16, we recommend infiltration rates as follows:

Below-Grade Chamber System	Infiltration Rate (inches/hour)	Location
"A"	13.5	Northwest
"B"	18.4	Central
"C"	13.7	Southwest
"D"	22.4	Northeast
"E"	10.8	Southeast

We recommend that a representative from the geotechnical engineer be on-site during the construction of the proposed infiltration systems to identify the composition of the soil at the base of each chamber system. It should be confirmed that the soils at the base of the proposed infiltration systems correspond with those presented in this report. If the soil conditions at the base of the system differ from those at the test locations, the performance of the system may be inconsistent with the recommended infiltration rates provided herein.

The design of the proposed storm water infiltration system should be performed by the project civil engineer, in accordance with the City of Ontario and/or County of San Bernardino guidelines. However, it is recommended that the system be constructed so as to facilitate removal of silt and clay, or other deleterious materials from any water that may enter the system. The presence of such materials would decrease the effective infiltration rate. **It is recommended that the project civil engineer apply an appropriate factor of safety.**

The infiltration rates recommended above are based on the assumption that only clean water will be introduced to the subsurface profile. Any fines, debris, or organic materials could significantly impact the infiltration rates. It should be noted that the recommended infiltration rates are based on infiltration testing at five (5) discrete locations and the overall infiltration rates of the storm water infiltration systems could vary considerably.

Dry Wells

Seven (7) deep infiltration tests were performed at the subject site using a constant head test method. As noted above, the infiltration rates range from 18.8 to 131.8 gallons per square foot per day hour. These rates are valid for dry wells extending to depths of 50± feet below existing grades at these locations. The infiltration rates recommended below are based on the assumption that only clean water will be introduced to the dry well. Any fines, debris, or organic materials could significantly impact the infiltration rate. The presence of such materials would decrease the effective infiltration rate. It is recommended that any dry wells be constructed so as to facilitate removal of silt and clay, or other deleterious materials of any water that may enter the storm water retention/disposal system. It should be noted that the recommended infiltration rate is based on infiltration testing at one discrete location and that infiltration rates may vary considerably at other locations. Based on the results of the deep infiltration tests, we recommend the following infiltration rates for the infiltration systems at these locations:

Dry Well System	Percolation Rate (gal/ft²/day)	Infiltration Rate (inches/hour)	Location
"A"	18.8	1.3	Northwest
"B"	83.0	5.6	Central
"C"	131.8	8.8	Southwest
"D"	70.4	4.7	Northeast
"E"	37.6	2.5	Southeast
"F"	64.8	4.3	Southeast
"G"	22.3	1.5	Southwest

We recommend that a representative from the geotechnical engineer be on-site during the construction of the proposed infiltration systems to identify the composition of the soil at the base of each chamber system. It should be confirmed that the soils at the base of the proposed infiltration systems correspond with those presented in this report. If the soil conditions at the base of the system differ from those at the test locations, the performance of the system may be inconsistent with the recommended infiltration rates provided herein.

The design of the proposed storm water infiltration system should be performed by the project civil engineer, in accordance with the City of Ontario and/or County of San Bernardino guidelines. However, it is recommended that the system be constructed so as to facilitate removal of silt and clay, or other deleterious materials from any water that may enter the system. The presence of such materials would decrease the effective infiltration rate. **It is recommended that the project civil engineer apply an appropriate factor of safety. The infiltration rates recommended above are based on the assumption that only clean water will be introduced to the subsurface profile. Any fines, debris, or organic materials could significantly impact the infiltration rates.** It should be noted that the

recommended infiltration rates are based on infiltration testing at seven (7) discrete locations and the overall infiltration rates of the storm water infiltration systems could vary considerably.

Construction Considerations

The infiltration rates presented in this report are specific to the tested locations and tested depths. Infiltration rates can be significantly reduced if the soils are exposed to excessive disturbance or compaction during construction. Therefore, the subgrade soils within proposed infiltration system areas should not be overexcavated, undercut or compacted in any significant manner. **It is recommended that a note to this effect be added to the project plans and/or specifications.**

Infiltration versus Permeability

Infiltration rates are based on unsaturated flow. As water is introduced into soils by infiltration, the soils become saturated and the wetting front advances from the unsaturated zone to the saturated zone. Once the soils become saturated, infiltration rates become zero, and water can only move through soils by hydraulic conductivity at a rate determined by pressure head and soil permeability. The infiltration rates presented herein were determined in accordance with the ASTM Test Method D-3385-03 standard and are considered valid for the time and place of the actual test. Changes in soil moisture content will affect these infiltration rates. Infiltration rates should be expected to decrease until the soils become saturated. Soil permeability values will then govern groundwater movement. Permeability values may be on the order of 10 to 20 times less than infiltration rates. The system designer should incorporate adequate factors of safety and allow for overflow design into appropriate traditional storm drain systems, which would transport storm water off-site.

Location of Infiltration Systems

The use of on-site storm water infiltration systems carries a risk of creating adverse geotechnical conditions. Increasing the moisture content of the soil can cause the soil to lose internal shear strength and increase its compressibility, resulting in a change in the designed engineering properties. Overlying structures and pavements in the infiltration areas could potentially be damaged due to saturation of subgrade soils. **The proposed infiltration systems for this site should be located at least 25 feet away from any structures, including retaining walls.** Even with this provision of locating the infiltration system at least 25 feet from the building, it is possible that infiltrating water into the subsurface soils could have an adverse effect on the proposed or existing structures. It should also be noted that utility trenches which happen to collect storm water can also serve as conduits to transmit storm water toward the structure, depending on the slope of the utility trench. Therefore, consideration should also be given to the proposed locations of underground utilities which may pass near the proposed infiltration systems.

General Comments

This report has been prepared as an instrument of service for use by the client in order to aid in the evaluation of this property and to assist the architects and engineers in the design and preparation of the project plans and specifications. This report may be provided to the contractor(s) and other design consultants to disclose information relative to the project.

However, this report is not intended to be utilized as a specification in and of itself, without appropriate interpretation by the project architect, structural engineer, and/or civil engineer. The design of the infiltration system is the responsibility of the civil engineer. The role of the geotechnical engineer is limited to determination of infiltration rate only. By using the design infiltration rates contained herein, the civil engineer agrees to indemnify, defend, and hold harmless the geotechnical engineer for all aspects of the design and performance of the infiltration system. The reproduction and distribution of this report must be authorized by the client and Southern California Geotechnical, Inc. Furthermore, any reliance on this report by an unauthorized third party is at such party's sole risk, and we accept no responsibility for damage or loss which may occur. The analysis of this site was based on a subsurface profile interpolated from limited discrete soil samples. While the materials encountered in the project area are considered to be representative of the total area, some variations should be expected between trench locations and testing depths. If the conditions encountered during construction vary significantly from those detailed herein, we should be contacted immediately to determine if the conditions alter the recommendations contained herein.

This report has been based on assumed or provided characteristics of the proposed development. It is recommended that the owner, client, architect, structural engineer, and civil engineer carefully review these assumptions to ensure that they are consistent with the characteristics of the proposed development. If discrepancies exist, they should be brought to our attention to verify that they do not affect the conclusions and recommendations contained herein. We also recommend that the project plans and specifications be submitted to our office for review to verify that our recommendations have been correctly interpreted. The analysis, conclusions, and recommendations contained within this report have been promulgated in accordance with generally accepted professional geotechnical engineering practice. No other warranty is implied or expressed.

Closure

We sincerely appreciate the opportunity to be of service on this project. We look forward to providing additional consulting services during the course of the project. If we may be of further assistance in any manner, please contact our office.

Respectfully Submitted,

SOUTHERN CALIFORNIA GEOTECHNICAL, INC.

SAMPLE TYPE	GRAPHICAL SYMBOL	SAMPLE DESCRIPTION
AUGER		SAMPLE COLLECTED FROM AUGER CUTTINGS, NO FIELD MEASUREMENT OF SOIL STRENGTH. (DISTURBED)
CORE		ROCK CORE SAMPLE: TYPICALLY TAKEN WITH A DIAMOND-TIPPED CORE BARREL. TYPICALLY USED ONLY IN HIGHLY CONSOLIDATED BEDROCK.
GRAB		SOIL SAMPLE TAKEN WITH NO SPECIALIZED EQUIPMENT, SUCH AS FROM A STOCKPILE OR THE GROUND SURFACE. (DISTURBED)
CS		CALIFORNIA SAMPLER: 2-1/2 INCH I.D. SPLIT BARREL SAMPLER, LINED WITH 1-INCH HIGH BRASS RINGS. DRIVEN WITH SPT HAMMER. (RELATIVELY UNDISTURBED)
NSR		NO RECOVERY: THE SAMPLING ATTEMPT DID NOT RESULT IN RECOVERY OF ANY SIGNIFICANT SOIL OR ROCK MATERIAL.
SPT		STANDARD PENETRATION TEST: SAMPLER IS A 1.4 INCH INSIDE DIAMETER SPLIT BARREL, DRIVEN 18 INCHES WITH THE SPT HAMMER. (DISTURBED)
SH		SHELBY TUBE: TAKEN WITH A THIN WALL SAMPLE TUBE, PUSHED INTO THE SOIL AND THEN EXTRACTED. (UNDISTURBED)
VANE		VANE SHEAR TEST: SOIL STRENGTH OBTAINED USING A 4 BLADED SHEAR DEVICE. TYPICALLY USED IN SOFT CLAYS-NO SAMPLE RECOVERED.

COLUMN DESCRIPTIONS

DEPTH: Distance in feet below the ground surface.

SAMPLE: Sample Type as depicted above.

BLOW COUNT: Number of blows required to advance the sampler 12 inches using a 140 lb hammer with a 30-inch drop. 50/3" indicates penetration refusal (>50 blows) at 3 inches. WH indicates that the weight of the hammer was sufficient to push the sampler 6 inches or more.

POCKET PEN.: Approximate shear strength of a cohesive soil sample as measured by pocket penetrometer.

GRAPHIC LOG: Graphic Soil Symbol as depicted on the following page.

DRY DENSITY: Dry density of an undisturbed or relatively undisturbed sample in lbs/ft^3.

MOISTURE CONTENT: Moisture content of a soil sample, expressed as a percentage of the dry weight.

LIQUID LIMIT: The moisture content above which a soil behaves as a liquid.

PLASTIC LIMIT: The moisture content above which a soil behaves as a plastic.

PASSING #200 SIEVE: The percentage of the sample finer than the #200 standard sieve.

UNCONFINED SHEAR: The shear strength of a cohesive soil sample, as measured in the unconfined state.

	Final	9:26 AM		9.35			

Per County Standards, Infiltration Rate calculated as follows:

$$Q = \frac{\Delta H(60r)}{\Delta t(r + 2H_{avg})}$$

Where:
- Q = Infiltration Rate (in inches per hour)
- ΔH = Change in Height (Water Level) over the time interval
- r = Test Hole (Borehole) Radius
- Δt = Time Interval
- H_{avg} = Average Head Height over the time interval
