OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 11/04/2024
Date Data Arrived at EDR: 11/05/2024

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

North Map:	50005338 GUASTI, CA
Version Date:	2021

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

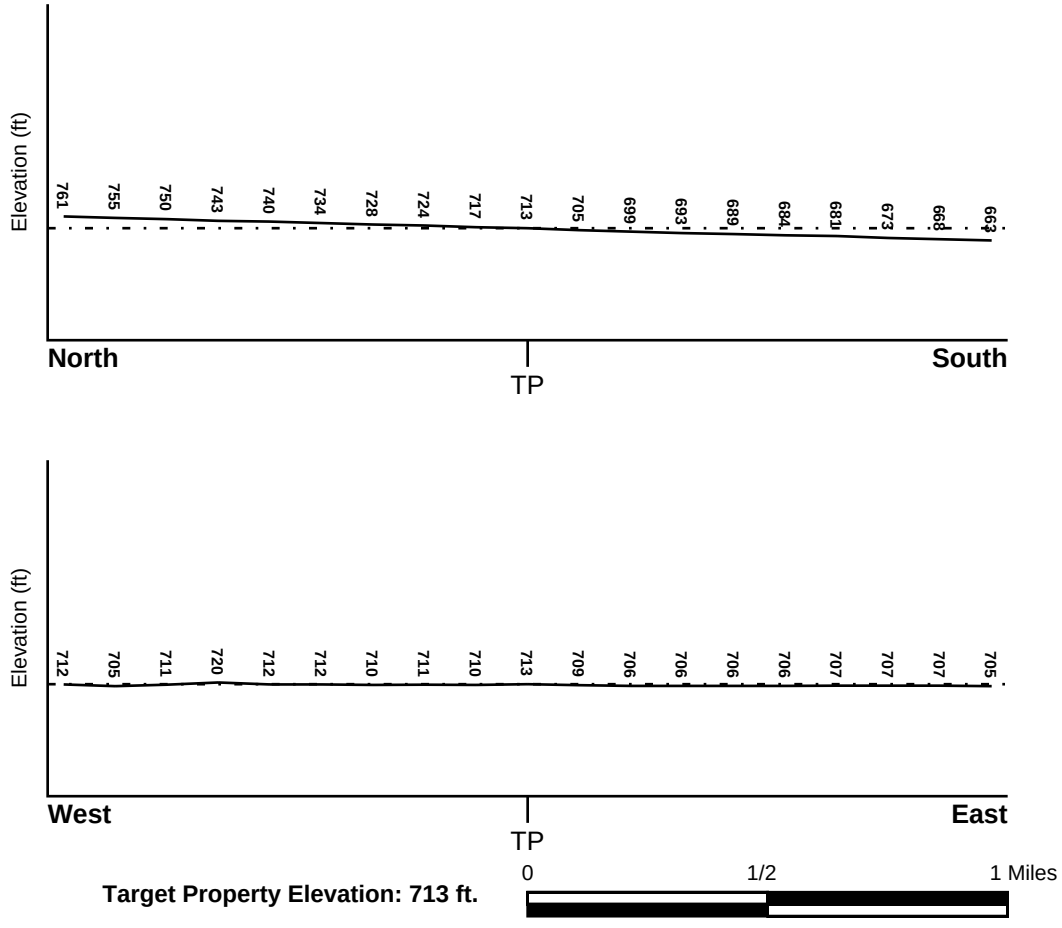
TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General South

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES



Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
06071C9375H	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type
06071C8639H	FEMA FIRM Flood data
06071C8643H	FEMA FIRM Flood data
06065C0681G	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
CORONA NORTH	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW

All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: DELHI

Soil Surface Texture: fine sand

Hydrologic Group: Class A - High infiltration rates. Soils are deep, well drained to excessively drained sands and gravels.

Soil Drainage Class: Somewhat excessively drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	18 inches	fine sand	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 141 Min: 42	Max: 7.8 Min: 6.1
2	18 inches	59 inches	sand	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 141 Min: 42	Max: 7.8 Min: 6.1

Soil Map ID: 2

Soil Component Name: HILMAR

Soil Surface Texture: loamy fine sand

Hydrologic Group: Class C - Slow infiltration rates. Soils with layers impeding downward movement of water, or soils with moderately fine or fine textures.

Soil Drainage Class: Somewhat poorly drained

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	22 inches	loamy fine sand	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay. FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), silt.	Max: 1.4 Min: 0.42	Max: 8.4 Min: 7.9
2	22 inches	59 inches	stratified loamy sand to loam	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay. FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), silt.	Max: 1.4 Min: 0.42	Max: 8.4 Min: 7.9

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005, 2010 and 2015 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory
Source: Department of Fish and Wildlife
Telephone: 916-445-0411

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

OTHER STATE DATABASE INFORMATION

Groundwater Ambient Monitoring & Assessment Program
State Water Resources Control Board
Telephone: 916-341-5577
The GAMA Program is Californias comprehensive groundwater quality monitoring program. GAMA collects data by testing the untreated, raw water in different types of wells for naturally-occurring and man-made chemicals. The GAMA data includes Domestic, Monitoring and Municipal well types from the following sources, Department of Water Resources, Department of Heath Services, EDF, Agricultural Lands, Lawrence Livermore National Laboratory, Department of Pesticide Regulation, United States Geological Survey, Groundwater Ambient Monitoring and Assessment Program and Local Groundwater Projects.

Water Well Database
Source: Department of Water Resources
Telephone: 916-651-9648

California Drinking Water Quality Database
Source: Department of Public Health
Telephone: 916-324-2319
The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

Geothermal Wells Listing
Department of Conservation
Telephone: 916-445-9686
Geothermal well means a well constructed to extract or return water to the ground after it has been used for heating or cooling purposes. Geothermal wells in California (except for wells on federal leases which are administered by the Bureau of Land Management) are permitted, drilled, operated, and permanently sealed and closed (plugged and abandoned) under requirements and procedures administered by the Geothermal Section of the Department of Conservations Geologic Energy Management Division (CalGEM, formerly DOGGR).

California Oil and Gas Well Locations
Source: Dept of Conservation, Geologic Energy Management Division
Telephone: 916-323-1779
Oil and Gas well locations in the state.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

California Earthquake Fault Lines
Source: California Division of Mines and Geology
The fault lines displayed on EDR's Topographic map are digitized quaternary fault lines prepared in 1975 by the United State Geological Survey. Additional information (also from 1975) regarding activity at specific fault lines comes from California's Preliminary Fault Activity Map prepared by the California Division of Mines and Geology.

RADON

State Database: CA Radon
Source: Department of Public Health
Telephone: 916-210-8558
Radon Database for California

Area Radon Information
Source: USGS
Telephone: 703-356-4020
The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones
Source: EPA
Telephone: 703-356-4020
Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

Owner and User Questionnaires

Project No.:
Project Name:

OWNER/OPERATOR QUESTIONNAIRE

Site Name: Esperanza PA-11

Site Address: Tract 18380, Lot 1
NWC of Eucalyptus and Clifton

Interviewee: David Waters

Title: VP California

Date: 3/7/25

SECTION I – Undeveloped Property (If this site is developed, go to SECTION II)

1. How long have you owned (or been involved in) this property?

   Since 2010 (15 years)

2. To the best of your knowledge, has there ever been any development on this property? If yes, what and when was the nature of that development?

   The site was historically a dairy farm operation, however operations ceased so

3. To the best of your knowledge, have there ever been any environmental or soils investigations conducted on this Property? If yes, what kind and when? Are there any reports available?

   There was a Phase 1 completed in 1998 by SID Geotech, in 2004 by Petra and

4. Are you aware of any environmental liens or deed restrictions associated with this property? If yes, please describe.

   No

5. To the best of your knowledge, have there ever been any incidents of chemical spills/dumping or waste disposal on or close to this property?

   No

6. Are there any wells on the site? If yes, what are they used for?

   Historically, but were all abandoned during grading.

SECTION II – Developed Property

1. What is your involvement with this property and when did that involvement begin?

   Ownership representative since 2010

2. To the best of your knowledge, how long has the current development been on the property? What was there before the current development?

   Last improvements completed on or around 2018 (perimeter and mass grading)

3. Does this facility use, store, manufacture, or dispose of chemicals or petroleum products? What types (be as specific as possible)?

   No

4. If the answer to Question 3 above was "Yes," may we review MSDS, business plans, hazardous material inventories, manifest files, SPCC plans (whatever is applicable)?

   n/a

5. Do you have any environmental permits (wastewater discharge, air emissions, hazardous material storage, etc.)? Have there ever been any Notices of Violation in regards to any of these permits?

   No

6. Have any environmental investigations ever been conducted on this property? When and why? Are there any reports available that we can review?

   Phase 1/2 referenced above are available.

7. Has the facility ever been subject to an environmental health and safety regulatory action, complaint, or lawsuit? When and why? What was the outcome?

   No

8. Have there been any know chemical spills or releases on this property?

   No

9. Are there any underground or aboveground storage tanks on this property? How many? Sizes? Ages?

   No

10. Where is wastewater discharged to? To the best of your knowledge, have there ever been any on-site wastewater disposal systems (septic tank, leach field, cesspool, dry well, etc.)?

    No wastewater improvements on site.

11. To the best of your knowledge, are there any environmental liens or deed restrictions associated with this property? If yes, please describe.

    No

Project No.:
Project Name:

USER QUESTIONNAIRE[1]

Site Name: Esperanza PA-11

Site Address: Tract 18380, Lot 1
NWC of Eucalyptus and Clifton

Interviewee: David Waters

Title: VP California

Date: 3/7/25

In reference to Section 6, User Responsibilities, of the ASTM E1527-21 Standard Practice, the Environmental Professional (SCS Engineers) for this Phase I ESA is required to inquire with the user (Client) regarding their knowledge or possession of information that may assist in identifying recognized environmental conditions (RECs) pertaining to the Subject Property.

In order to qualify for one of the Landowner Liability Protections (LLPs) offered by the Small Business Liability Relief and Brownfields Revitalization Act of 2001 (the "Brownfields Amendments"), the user must conduct the following inquiries required by 40 CFR §312.25, §312.28, §312.29, §312.30, and §312.31. These inquiries must also be conducted by U.S. EPA Brownfield Assessment and Characterization grantees. The user should provide the following information to the Environmental Professional overseeing this Phase I ESA. Failure to conduct these inquiries could result in a determination that "all appropriate inquiries" is not complete.

(1) Environmental Cleanup Liens (40 CFR §312.25). Did a search of land title records (or judicial records where appropriate) identify any environmental liens filed or recorded against the Subject Property under federal, tribal, state or local law? ☐ Yes ■ No

If Yes, explain and/or provide information:

(2) Activity and Use Limitations (40 CFR §312.26(a)(1)(v) and (vi)). Did a search of land title records (or judicial records, where appropriate) identify any Activity Use Limitations (AULs) such as engineering controls, land use restrictions, or institutional controls that are in place at the Subject Property and/or have been filed or recorded against the Subject Property under federal, tribal, state or local law? ☐ Yes ■ No

☐ Yes ☐ No

If Yes, explain and/or provide information:

Since 2010 (15 years)

[1] The document is designed to comply with Appendix X3, User Questionnaire, of ASTM E1527-21, Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process, and the U.S. EPA AAI regulations (40 CFR §312).

(3) Specialized Knowledge or Experience (40 CFR §312.28). Do you have any specialized knowledge or experience related to the Subject Property or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the Subject Property or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business? ■ Yes ☐ No

If Yes, explain and/or provide information:

The site was historically a dairy farm operation, however operations ceased sometime i

(4) Purchase Price vs. Fair Market Value (40 CFR §312.29). Does the purchase price being paid for this Subject Property reasonably reflect its fair market value? ■ Yes ☐ No

If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the Subject Property?

☐ Yes ☐ No

If Yes, explain and/or provide information:

There was a Phase 1 completed in 1998 by SID Geotech, in 2004 by Petra and in 2010

(5) Commonly Known or Reasonably Ascertainable Information (40 CFR §312.30). Are you aware of commonly known or reasonably ascertainable information about the Subject Property that would help the Environmental Professional to identify conditions indicative of releases or threatened releases? For example:

(a) Do you know the past use of the Subject Property?

(b) Do you know specific chemicals that are present or once were present at the Subject Property?

(c) Do you know of spills or other chemical releases that have taken place at the Subject Property?

(d) Do you know of any environmental cleanups that have taken place at the Subject Property?

■ Yes ☐ No to all

If Yes, explain and/or provide information:

No

(6) Obvious Indications of Contamination (40 CFR §312.31). Based on your knowledge and experience related to the Subject Property, are there any obvious indicators that point to the presence or likely presence of releases at the Subject Property? ☐ Yes ■ No

If Yes, explain and/or provide information:

No

Project Personnel Resumes

J. JUSTIN RAUZON, REPA

Justin Rauzon, REPA

Education

MEM – Environmental Management, Duke University, 2014
BS – Zoology (Double Emphasis: Human and Marine Biology), Brigham Young University, 2004

Professional Licenses

Registered Environmental Property Assessor (REPA), National Registry of Environmental Professionals (No. 485639)

Specialty Certifications

OSHA 40-Hour Health and Safety Training for Hazardous Waste Workers
8-Hour Annual Refresher Training for Hazardous Waste Site Activities
OSHA 16-Hour Initial Asbestos Operations and Maintenance Training
Thermo Scientific Niton XRF Analyzer Operator's Training
First-Aid and CPR Training

Professional Affiliations

National Ground Water Association, Member (2015 to Present)
Industrial Environmental Association, Member (2018 to Present)

Professional Experience

Mr. Rauzon has more than 16 years of environmental services experience, all with SCS. Fluent in Spanish, Mr. Rauzon is an SCS Project Manager with a diverse background in biological and environmental sciences, and regularly performs environmental assessments and compliance audits at sites in the U.S. and in Latin America. He has technical and management experience with soil, soil vapor, and groundwater investigations at industrial, commercial, landfill, greenfield, and residential properties. He has extensive experience with environmental laws and regulations in both the U.S. and Mexico. His work experience includes all project phases, from development of cost estimates for various site assessment and cleanup programs to implementing remediation programs and interfacing with regulatory agencies. His experience with and understanding of these issues led to his appointment as a National Partner in Environmental Due Diligence in 2021.

Selected projects in which he has participated are described below.

Environmental Management

Due Diligence Assessments of Properties Prior to Real Estate Transfer of Properties in California, Arizona, New Jersey, Mexico, Puerto Rico, and the Dominican Republic. Mr. Rauzon has completed numerous due diligence assessments of properties prior to acquisition, disposition, or loan financing by investment banks, insurance companies, corporations, non-profit entities, real

estate developers, and private parties. Projects have included Phase I assessments that meet federal All Appropriate Investigation (AAI) regulations, American Society for Testing and Materials (ASTM) standards, and client-specific guidelines; inspections for asbestos and lead-based paint; Phase II investigations; preparation of abatement and remediation cost estimates; and regulatory agency coordination. These projects frequently involve review of previous environmental reports and investigation of current and past on-site operations, regulatory agency records searches, evaluation of historical property use information, identification of nearby potentially contaminated sites, and development of appropriate conclusions about environmental risks. Investigations involve preparation of work plans, soil boring and subsequent sampling, groundwater well installation and sampling, soil gas probe installation and sampling, precision mapping, evaluation of contaminants in accordance with regulatory requirements or generally accepted guidelines, preparation of investigation report, and analysis of applicable remedial alternatives. Mr. Rauzon has served as the Project Manager for sites that have received regulatory closure from various regulatory agencies.

Planning, Coordinating, and Supervising Remedial Actions That Included Excavation, Transport, and Disposal of Contaminated Soils and Water. Investigations involve preparation of Remedial Action Plans (RAPs), direction of fieldwork, oversight of confirmatory sampling, and interfacing with regulatory agencies.

Groundwater Monitoring and Reporting for Simi Valley Landfill and Recycling Center, Simi Valley, CA. Mr. Rauzon is a key team member for the sampling and monitoring of 10 groundwater wells and 5 leachate locations to evaluate potential releases from waste units affecting groundwater at Simi Valley Landfill. He also prepares the annual leachate control system's effectiveness reports and documents results of resampling of groundwater wells based on initial statistical indications of a release.

The Characterization of Hazardous Waste Materials. These projects include collection of soil and/or liquid samples to profile the waste materials, interpretation of laboratory results, and evaluation of disposal/recycling options to minimize the costs and liabilities to clients associated with the removal of wastes.

Assessment and Certification of Hazardous Waste Tank Systems. These investigations involve working with a Professional Engineer to complete field inspections of hazardous waste tanks, associated ancillary equipment, leak-detection systems, and secondary containment devices, as well as interfacing with regulatory agencies.

Project Management

Project Manager for Environmental Due Diligence Assessment and Health and Safety Program Review of Six Geothermal Power Plants Located in California, Nevada, New Mexico, and Utah. SCS services included time-sensitive field inspection, environmental document and permit review, and preparation of environmental risk evaluation reports. Mr. Rauzon reviewed and assessed plant health and safety plans and procedures; facility response plans; incident reports; and arrangements for plant selection, appointment, and management of support contractors. SCS provided support consulting services in the successful client plant acquisition and integration support.

Project Manager for Due Diligence Investigations at Dry Mill and Biofuel Distillery Plant, Madera, CA. SCS services included Phase I environmental assessment and Phase II soil, soil vapor, and groundwater investigation to support client's acquisition of an ethanol production plant at which a lumber mill was historically located. SCS provided additional consulting services related to remediation cost analysis and management of ongoing environmental issues.

Project Manager for Due Diligence Investigation of a Portfolio With More Than 300 Industrial Sites Throughout Mexico. SCS services included conducting Phase I and Phase II environmental assessments within the strict timeline of the $1.2 billion industrial real estate transaction. Subsequent to the closing of the deal, SCS provided ongoing consulting services to facilitate integration and management of various facilities with ongoing environmental issues.

Project Manager for Hazardous Materials Consulting Services in Support of the State Route 91 Corridor Improvement Project in Orange and Riverside Counties, CA. SCS services included sampling and inventory of potentially hazardous materials associated with more than 25 bridges along the SR-91 and I-15 freeways; environmental assessments on properties within the proposed freeway expansion area; and soil testing for herbicides, pesticides, and fungicides on several land parcels.

Project Manager for Investigation and Remediation of Industrial Facility Located in Fontana, CA. SCS conducted a series of environmental assessments, investigations, and remedial activities that provided sufficient information to identify environmental issues and business risks, and facilitate the client's successful purchase of property. A number of recognized environmental conditions, including releases of coal tar, solvents, heavy metals, and total petroleum hydrocarbons, were identified. Project activities conducted during the acquisition and redevelopment of the property included shallow and deep soil and soil vapor investigations; installation of groundwater monitoring wells and subsequent groundwater sampling; subsequent remedial excavation under San Bernardino County Fire Department (SBCFD) oversight to obtain closure; and excavation and off-site disposition of contaminated soil.

Health and Safety

Mr. Rauzon has participated in a certified health and safety program in compliance with OSHA Standard 29 CFR 1910.120. He is knowledgeable in incident response operations, team functions, personnel safety, and field equipment. He is able to recognize and evaluate potential chemical and physical hazards and associated risks in field operations; discuss and use personal protective equipment (PPE), such as respiratory protection and protective clothing; use and interpret direct-reading instruments; and examine and establish Standard Operating Safety Guidelines to ensure safe and effective response operations.

MADDIE PETERSON

Education

BA – Environmental Science and Policy, California State University, Long Beach, 2022
AA – Liberal Arts and Sciences/Communications, College of the Canyons, 2017

Specialty Certifications

40-Hour HAZWOPER Trained
SCAQMD Dust Control Officer Trained (Rule 403)

Professional Experience

Ms. Peterson is an Associate Professional who has participated in Phase I and II site investigations, sampling and monitoring at landfills, methane assessments, geophysical surveys and monitoring well installations, and pesticide and heavy metal evaluations. She has a background in environmental law and policy and sustainability. As an undergraduate, she performed heavy metal analysis and research regarding lead and zinc concentrations in soil samples for the Environmental Science and Policy Capstone Project in Long Beach (2022), and has volunteered for habitat restoration and other environmental improvement projects in Southern California.

Her SCS project work includes:

Phase I Environmental Site Assessments (ESAs). Ms. Peterson has contributed to Phase I Environmental Site Assessments (ESAs), completed in accordance with various lender, American Society for Testing and Materials (ASTM), or government guidelines. Activities consisted of evaluating current and past on-site operations, generating historical property use information, identifying potentially contaminated sites in the surrounding areas, reviewing previous reports and/or files maintained by regulatory agencies, and developing conclusions regarding the presence of Recognized Environmental Conditions (RECs) and recommendations for further investigation.

Site Investigations. Ms. Peterson has conducted soil gas surveys and soil sampling with precision mapping of sites, installation of soil borings, lithologic logging, collection of soil samples, and evaluation of subsurface contaminants in soil and groundwater in accordance with regulatory agency requirements or generally accepted guidelines.

Quarterly and Semiannual Groundwater Monitoring Reports. Ms. Peterson has assisted in preparation of numerous routine monitoring reports for various sites with oversight of various regulatory agencies. Facilities have included landfills across California and manufacturing sites.

Construction Quality Assurance (CQA). Ms. Peterson has assisted in CQA and oversight of the construction of gas collection and control system (GCCS) vertical well installation at Simi Valley, Antelope Valley, and El Sobrante Landfills.

Investigation and Remediation for Industrial Facility Redevelopment, Downey, CA. SCS conducted a series of environmental assessments, investigations, and remedial activities that provided sufficient information to identify the environmental issues, and business risks to facilitate the client's successful purchase of property for redevelopment to a commercial warehouse and office. A number of Recognized Environmental Conditions (RECs) were identified. Ms. Peterson provided oversight for numerous activities conducted concurrently with the redevelopment of the property, including the installation of groundwater monitoring wells, both on and off site; oversight of well development; soil vapor extraction (SVE) network monitoring; and permitting and removal of clarifiers.

SECTION 1

DISCUSSION

PURPOSE:

This report was prepared to supplement the preliminary grading plan for Esperanza – PA II, Tentative Tract No. 20730 in the City of Ontario, County of San Beranrdino.

The project is bounded by Clifton Avenue to the north, Eucalyptus Avenue to the east, Amherst Avenue to the south and Chatham Street to the west, in the City of Ontario. This report includes the existing and proposed Q100 for the10.0-acre project site. The study abides by the most current City of Ontario requirements and the San Bernardino County Hydrology Manual procedures.

DESCRIPTION OF WATERSHED:

The existing site is undeveloped and relatively flat and surface flows in a southwesterly direction towards the intersection of Eucalyptus Avenue and Amherst Avenue where an onsite detention basin is located. The basin has a 36-inch inlet that joins a public storm drain in Amherst Avenue. The proposed site will drain in a similar direction with its own storm drain system throughout the development and will join the Amherst storm drain as stated above.

	Acreage	100-Year
Existing		
A	10.02 ac	20.34 cfs
Proposed		
A	8.42 ac	27.60 cfs
B	1.60 ac	6.92 cfs
Total	10.02 ac	34.52 cfs
Difference	**-**	**<-14.18> cfs**

Mitigation is required when the proposed exceeds the existing as shown in the table above; however, the city has confirmed that there is a more restrictive Q that must be used in place of the existing Q that was established by this study. The Q to be used was established by Tract 17931, at line 'D', using a Q100 of15.64 cfs.as the maximum flow allowed from the site into the public storm drain.

The tract's private onsite storm drain system will function with the necessary flow restriction as established by the City. This will be accomplished by over-sizing the private onsite storm drain system to provide on-site storage and installing a stainless-steel plate with a 16"x24" opening (orifice) over the downstream side of the junction structure, before entering the public system. This will restrict the outflow from the site to no more than 15.64 cfs at any time. The volume to be stored is approximately 5,100 cubic feet (cf) (See Table A) as determined by the hydrograph in this study

All proposed inlets and storm drain piping have been designed for a Q100 storm event, and emergency overflow drain patterns have been considered if drainage clogging should occur.

METHODOLOGY:

This Hydrology Study was performed using the rational Hydrology Method Program by CivilCADD / Civil Design Engineering software based on the San Bernardino County Hydrology Manual dated August 1986. The soil has been identified from the maps accompanying the San Bernardino County Hydrology Manual as being of Hydrologic Soil Group B. The calculations were done for a 100-year storm frequency for the storm drain system.

SUMMARY:

The plans for which this report supports has been prepared to meet the standards of rainstorm protection as adopted by the City of Ontario. Positive overflow is available throughout the development for protection of habitable areas against the 100-year storm when drainage obstructions occur, and there will be no adverse impact to the existing conditions.

HYDROLOGY STUDY
100-YEAR - EXISTING

San Bernardino County Rational Hydrology Program

(Hydrology Manual Date - August 1986)

CIVILCADD/CIVILDESIGN Engineering Software, (c) 1989-2012 Version 7.2
Rational Hydrology Study Date: 07/11/24

Program License Serial Number 6293

********* Hydrology Study Control Information **********

Rational hydrology study storm event year is 100.0
Computed rainfall intensity:
Storm year = 100.00 1 hour rainfall = 1.200 (In.)
Slope used for rainfall intensity curve b = 0.6000
Soil antecedent moisture condition (AMC) = 3

++

Process from Point/Station 1.000 to Point/Station 2.000
**** INITIAL AREA EVALUATION ****A-1

UNDEVELOPED (poor cover) subarea
Decimal fraction soil group A = 0.000
Decimal fraction soil group B = 1.000
Decimal fraction soil group C = 0.000
Decimal fraction soil group D = 0.000
SCS curve number for soil(AMC 2) = 78.00
Adjusted SCS curve number for AMC 3 = 92.80
Pervious ratio(Ap) = 1.0000 Max loss rate(Fm)= 0.140(In/Hr)
Initial subarea data:
Initial area flow distance = 420.000(Ft.)
Top (of initial area) elevation = 711.000(Ft.)
Bottom (of initial area) elevation = 705.000(Ft.)
Difference in elevation = 6.000(Ft.)
Slope = 0.01429 s(%)= 1.43
TC = k(0.525)*[(length^3)/(elevation change)]^0.2
Initial area time of concentration = 13.756 min.
Rainfall intensity = 2.904(In/Hr) for a 100.0 year storm
Effective runoff coefficient used for area (Q=KCIA) is C = 0.857
Subarea runoff = 3.259(CFS)
Total initial stream area = 1.310(Ac.)
Pervious area fraction = 1.000
Initial area Fm value = 0.140(In/Hr)

++

Process from Point/Station 2.000 to Point/Station 3.000

Preliminary Water Quality Management Plan (PWQMP)

For compliance with Santa Ana Regional Water Quality Control Board
Order Number R8-2010-0036 (NPDES Permit No. CAS618036)

Project Name:	Esperanza Townhomes
Ontario Project #:	2175-996-001 TM_20730 (PDEV24-017)
Applicant Name:	Genstar Development Company
Applicant Address:	12770 El Camino Real, Ste. 220 San Diego, CA 92130
Project Address:	Eucalyptus Avenue & Amherst Avenue Ontario, CA
Project Size (acres):	10.24-acres
Project Description:	Townhomes

Submittal Date: 3/12/2025

Preliminary Water Quality Management Plan (PWQMP)

1. Introduction

The Preliminary Water Quality Management Plan (PWQMP) is a planning tool to improve integration of required water quality elements, stormwater management, water conservation, rainwater harvesting and re-use, and flood management in land use planning and the City's development process. The Preliminary WQMP will assist project applicants and planners in properly designing and laying out project sites so that water quality may be incorporated in the most effective manner and at the lowest cost for the developer.

The San Bernardino County Municipal Separate Storm Sewer System Permit (MS4 Permit) requires project-specific Water Quality Management plans (WQMP) to be prepared for all priority new development and significant redevelopment projects listed in Section 2 of this document. The MS4 Permit stipulates that the City of Ontario require priority project applicants to submit a Preliminary project-specific WQMP, as early as possible, during the environmental review or planning phase of a development project and that the Preliminary WQMP be approved prior to the issuance of land use entitlement.

2. Priority Projects (requiring a Preliminary WQMP)

Land Use entitlement shall not be issued for any of the listed projects, below, until a Preliminary WQMP has been approved by the City's Engineering Department. For construction projects not going through entitlement, a Preliminary and Final project specific WQMP shall be approved, prior to the issuance of construction permits:

Check the appropriate project category below, for this project:

Check below	**Project Categories**
	1. All significant re-development projects. Significant re-development is defined as the addition or replacement of 5,000 or more square feet of impervious surface on an already developed site subject to discretionary approval of the Permittee. Redevelopment does not include routine maintenance activities that are conducted to maintain original line and grade, hydraulic capacity, original purpose of the facility, or emergency redevelopment activity required to protect public health and safety. Where redevelopment results in an increase of less than fifty percent of the impervious surfaces of a previously existing developed site, and the existing development was not subject to WQMP requirements, the numeric sizing criteria discussed below applies only to the addition or replacement, and not to the entire developed site. Where redevelopment results in an increase of fifty percent or more of the impervious surfaces of a previously existing developed site, the numeric sizing criteria applies to the entire development (new and existing).
✔	2. New development projects that create 10,000 square feet or more of impervious surface (collectively over the entire project site) including commercial, industrial, residential housing subdivisions (i.e., detached single family home subdivisions, multi-family attached subdivisions or townhomes, condominiums, apartments, etc.), mixed-use, and public projects. This category includes development projects on public and private land, which fall under the planning and building authority of the permitting agency.

Check below	Project Categories
	3. Automotive repair shops (with SIC codes 5013, 5014, 5541, 7532- 7534, 7536-7539).
	4. Restaurants and Food Service Establishments where the land area of development is 5,000 square feet or more.
	5. Developments of 2,500 square feet of impervious surface or more adjacent to (within 200 feet) or discharging directly into environmentally sensitive areas (ESA's) such as areas designated in the Ocean Plan as areas of special biological significance or waterbodies listed on the CWA Section 303(d) list of impaired waters.
	6. Parking lots of 5,000 square feet or more exposed to storm water. Parking lot is defined as land area or facility for the temporary storage of motor vehicles.
	7. Retail Gasoline Outlets (RGOs) that are either 5,000 sq ft or more or have a projected average daily traffic of 100 or more vehicles per day.
	8. *This project is not covered under any of the categories listed above.

* If the development is not covered under any of the project categories listed in Section 2, the project is not required to design and install Site Design/LID BMPs or Treatment Control BMPs to treat the design storm event (Design Capture Volume) described in Section 4.

3. Preliminary WQMP Objectives

Through a combination of Site Design/LID BMPs (where feasible), Source Control, and/or Treatment Control BMPs, project-specific WQMPs shall address all identified pollutants and hydrologic conditions of concern from new development and significant re-development projects for the categories of projects (priority projects) listed in Section 2. Under each type of BMP, listed below, please indicate which BMPs are planned to be implemented and included in the Final WQMP for the project:

A. Site Design/LID (Low Impact Design) for Reducing Stormwater Runoff:

The MS4 Permit requires each priority development project to infiltrate, harvest and use, evapotranspire, or bio-treat the runoff from a 2-yr, 24-hour storm event (Design Capture Volume). If site conditions do not permit infiltration, harvest and use, evapotranspiration, and/or bio-treatment of the entire Design Capture Volume, at the project site, Site Design/LID techniques are required to be implemented to the Maximum Extent Practicable, at the project site, and the remainder of the DCV shall be infiltrated, harvested, bio-treated or treated by alternative measures. Project applicants shall submit a Preliminary WQMP that documents the LID/Site Design BMPs, proposed for the project. Please indicate, in the table below, which Site Design/LID BMPs will be utilized on this project to accomplish this requirement:

Site Design/LID Practice	Planned	Not Planned
Provide at least the minimum effective area required for LID BMPs, to comply with the WQMP (see Table 3-1 below).		✔
Grade parking lot areas/drive aisles/roof drains to sheet flow runoff into landscaped swales, via curb cuts or zero-face curbs or otherwise disconnect direct drainage from MS4.		✔
Design landscaped areas as swales and grade to accept runoff from building roofs, parking lots and project roadways.		✔
Install surface retention basins or infiltration trenches to receive impervious area runoff.		✔
Install pervious pavement in parking stalls, alleys, driveways, gutters, walkways, trails or patios.		✔
Install underground stormwater retention chambers where downstream landscaped areas are limited.		✔
Install approved Stormwater Drywells in detention areas.		✔
Construct streets, sidewalks, and parking lot stalls to the minimum widths necessary.	✔	
Install on-site Biotreatment basins/trenches with underdrains, where soil type is poorly draining.		✔
Install “Engineered Soil” to increase uptake/soil storage capacity and/or evapotranspiration.		✔
Install Rainwater Harvesting/Use Equipment.		✔
Regional LID BMP facilities are installed, off-site, with the capacity and conveyances to accept post-development storm water runoff from this project and reserved capacity allocation credits have been assigned to the project, in a Certificate or other legally binding document, attached herein	✔	

Table 3-1 Minimum Effective Area[1] Required for LID BMPs (surface + subsurface facilities) for Project WQMP to Demonstrate Infeasibility[2] (% of site)

Project Type	New Development	Re-Development
SF/MF Residential < 7 du/ac	10%	5%
SF/MF Residential < 7 - 18 du/ac	7%	3.5%
SF/MF Residential > 18 du/ac	5%	2.5%
Mixed Use, Commercial/Industrial w/FAR< 1.0	10%	5%
Mixed Use, Commercial/Industrial w/FAR 1.0-2.0	7%	3.5%
Mixed Use, Commercial/Industrial w/FAR> 2.0	5%	2.5%
Podium (parking under > 75% of project)	3%	1.5%
Zoning allowing development to property lines	2%	1%
Transit Oriented Development[3]	5%	2.5%
Parking	5%	2.5%

[1] "Effective area" is defined as land area which 1) is suitable for a retention/infiltration BMP (based on infeasibility criteria) and 2) is located down-gradient from building roof or paved areas, so that it may receive gravity flow runoff.
[2] Criteria only required if the project WQMP seeks to demonstrate that the full DCV cannot be feasibly managed on-site.
[3] Transit oriented development is defined as a project with development center within one half mile of a mass transit center.
Key: du/ac = dwelling units/acre, FAR = Floor Area Ratio = ratio of gross floor area of building to gross lot area, MF = Multi Family, SF = Single Family

B. Source Control BMPs – The following BMPs are designed to control stormwater pollutants and runoff water at the location where it is generated. Please indicate which of the listed BMPs are planned to be implemented for the project:

Source Control BMPs	Planned	Not Planned
Minimize non-stormwater site runoff through efficient irrigation system design and controllers.	✔	
Minimize trash and debris in storm runoff through a regular parking lot, storage yard and roadway sweeping program.	✔	
Provide proper covers/roofs and secondary containment for outside material storage & work areas.		✔
Provide solid roofs over all trash enclosures.	✔	
Site Owner(s)/Property Manager/HOA or POA will be familiar with the project WQMP and stormwater BMPs.	✔	
Owner or HOA or POA to provide Education/Training of site occupants and employees on stormwater BMPs.	✔	
Install stormwater placards/stenciled messages with a "No Dumping" message on all on-site/off-site storm drain inlets.	✔	
Provide contained equipment/vehicle wash rack areas that discharge to sanitary sewer.		✔

C. Treatment Control BMPs – The following BMPs are designed to control stormwater pollutants where it is not feasible to install on-site or off-site Site Design/LID BMPs, with the requisite capacity to treat the Design Capture Volume for identified Pollutants of Concern or where pretreatment of stormwater runoff is required, ahead of infiltration BMPs. Please indicate which of the listed BMPs are planned to be implemented for the project:

Treatment Control BMP	Planned	Not Planned
Gravity Separator devices for pretreatment of sediment, trash/litter or Oil & Grease		✔
Proprietary Biofiltration vaults/devices		✔
Media Cartridge Filtration Vaults		✔
Proprietary Filter Inserts for on-site storm drain inlets or retention basin/trench overflow drains	✔	

4. Volume-based calculation (approximate) for sizing on-site or off-site Stormwater Retention/Infiltration, Harvest & Re-Use or Biotreatment facilities

1) After calculating the "Watershed Imperviousness Ratio", i, which is equal to the percent of impervious area in each Drainage Management Area, divided by 100, calculate the composite runoff coefficient C_{BMP} for the Drainage Area above using the following equation:

$$\mathbf{C_{BMP} = 0.858i^3 - 0.78i^2 + 0.774i + 0.04}$$

where: $\mathbf{C_{BMP}}$ = composite runoff coefficient; and,

i = watershed imperviousness ratio.

3) Determine the area-averaged "6-hour Mean Storm Rainfall", P_6, for the Drainage Area. This is calculated by multiplying the area averaged 2-year 1-hour value (0.5"-0.6") by the appropriate regression coefficient (1.4807). The 2-yr, 1-hr value for southern Ontario is approximately to 0.5" (P_6 = 0.5*1.4807 = 0.74 and northern Ontario is approximately 0.6" in/hr (P_6 = 0.6*1.4807 = 0.89).

4) Determine the appropriate drawdown time. Use the regression constant a = 1.582 for 24 hours and a = 1.963 for 48 hours. *Note: Regression constants are provided for both 24 hour and 48-hour drawdown times; however, 48-hour drawdown times should be used in most areas of California. Drawdown times in excess of 48 hours should be used with caution as vector breeding can be a problem after water has stood in excess of 72 hours. (Use of the 24-hour drawdown time should be limited to drainage areas with coarse soils (Class 'A' soils that readily drain.)*

5) Calculate the "Maximized Detention Volume", P_0, using the following equation:

$$\mathbf{P_0 = a \cdot C_{BMP} \cdot P_6}$$

where: $\mathbf{P_0}$ = Maximized Detention Volume, in inches

a = 1.582 for 24 hour and a = 1.963 for 48-hour drawdown,

$\mathbf{C_{BMP}}$ = composite runoff coefficient; and,

$\mathbf{P_6}$ = 6-hour Mean Storm Rainfall, in inches

6) Calculate the "Target Capture Volume", V_0, using the following equation:

$$\mathbf{V_0 = (P_0 \cdot A) / 12}$$

where: $\mathbf{V_0}$ = Target Capture Volume, in acre-feet

$\mathbf{P_0}$ = Maximized Detention Volume, in inches; and,

A = BMP Drainage Area, in acres

Project Volume-based calculation (approximate) for planned on-site or off-site Stormwater Retention/Infiltration, Harvest & Re-Use or Biotreatment facilities:

Variable	Factor/Formula	DA1, DMA A	DA1 DMA B	DA2 DMA A	DA2 DMA B
Impervious surface/total surface, ratio	(i)	0.79			
C_{BMP}= runoff coefficient	$0.858i^3 - 0.78i^2 + 0.774i + 0.04$	0.588			
P_6	**P_6 = 2-yr,1-hr depth*1.4807 =	0.797			
Detention Volume (acre inches)	$P_0 = a * C_{BMP} * P_6$ =	0.920			
Drawdown rate of basin/trench (a)	1.963 for 48-hr drawdown =	1.963			
Project Total Area (acre)	(A)	10.24			
Design Capture Volume in cu. ft.	$V_0 = [(P_0 * A)/12] *43560$ =	34,198			
Retention Volume provided in cubic feet.	Retention capacity of basins, trenches, underground storage or biotreatment basin				

**For P_6 value, use site coordinates and NOAA website to determine project's average 2-yr, 1-hr rainfall depth, at: http://hdsc.nws.noaa.gov/hdsc/pfds/sa/sca_pfds.html .

5. Flow-Based calculation (approximate) for sizing on-site or off-site Biotreatment facilities and proprietary treatment technology BMPs:

1) After calculating the "Watershed Imperviousness Ratio", i, which is equal to the percent of impervious area in each Drainage Management Area divided by 100, calculate the composite runoff coefficient C_{BMP} for the Drainage Area above using the following equation:

$$\mathbf{C_{BMP} = 0.858i^3 - 0.78i^2 + 0.774i + 0.04}$$

where: $\mathbf{C_{BMP}}$ = composite runoff coefficient; and,

i = watershed imperviousness ratio.

2) Determine BMP design rainfall intensity, **I_{BMP}**, using the project site geo-coordinates and the NOAA website to determine project's average 2-yr, 1-hr rainfall intensity, at: http://hdsc.nws.noaa.gov/hdsc/pfds/sa/sca_pfds.html .Multiply this value by 0.2787 (regression coefficient for Ontario) and a minimum safety factor of 2.

4) Calculate the target BMP flowrate, Q, using the following formula (for each DMA <50 acres*):

$$Q = C_{BMP} \cdot I_{BMP} \cdot A$$

Where: **Q** = flow in cfs (Cubic feet per second)
I_{BMP} = BMP design rainfall intensity, in/hr
A = Drainage Area in acres

*For DMAs >50 acres, with C_{BMP} <0.5, the project applicant shall use the unit hydrograph method specified in the San Bernardino County Hydrology Manual, using the design storm pattern with rainfall return frequency such that the peak 1-hr rainfall intensity equals the 85th percentile 1-hr rainfall, multiplied by 2.

Project Flow-based calculation (approximate) for planned on-site or off-site flow-based Biotreatment facilities or Stormwater Treatment BMPs:

Variable	Factor/Formula	DA1 DMA A	DA1 DMA B	DA2 DMA A	DA2 DMA B
Impervious surface/ total surface, ratio	(i)	0.79			
C_{BMP}= composite runoff coefficient	$0.858i^3 + 0.78i^2 + 0.774i + 0.04$	0.588			
I_{BMP}	I_{BMP} = 2-yr,1-hr storm intensity*0.2787*safety factor	0.300			
Drainage area (ac)	A = DMA sq ft/43,560	10.24			
Target BMP flowrate	Q = C_{BPM}* I_{BMP} * A	1.81			

6. Hydrologic Conditions of Concern (HCOC) and use of the on-line San Bernardino County HCOC Map for determining necessary mitigation steps necessary if there are HCOCs downstream of a project:

Project applicants may access the on-line HCOC Map at: http://permitrack.sbcounty.gov/WAP/. The map will indicate any hydrology concerns with downstream waterways that are hydraulically connected to the project and will indicate if there are any approved regional projects downstream that could be utilized for off-site mitigation of HCOCs. Please indicate here if the project will or will not be able to retain/infilter, harvest and use or biotreat and detain the DCV, on-site, as calculated in Section 4 and if there are HCOCs identified downstream of the project:

Retain or Harvest/Use the DCV on site?	Yes		No	✔
Biotreat the DCV but not infilter the runoff?	Yes		No	✔
HCOCs identified downstream of site?	Yes		No	✔

If the entire DCV will not be retained on site, the DCV is biotreated but not infiltered or additional detention capacity is needed to address identified HCOCs, downstream of the site, please list here, what additional mitigation measures will be utilized (on-site or off-site) to address HCOCs (see Section 4.2.1-4.2.3 of the SB County WQMP Technical Guidance):

_____

7. Site Plan and Conceptual Grading/Drainage Plan requirements for submission with the Preliminary WQMP:

Provide a Site Plan and Conceptual Grading/Drainage Plan along with this Preliminary WQMP, which conceptually shows the proposed locations of buildings, homes, parking lots, parks, new paved roadways, landscaped areas, drainage patterns and drainage sub-areas, methods of conveyance, proposed retention/infiltration, harvest & use or biotreatment facilities that are planned for installation. Where it is determined to be infeasible to capture and detain design storm runoff volumes, on-site, please include other design features, as described in Section 3, above. Include numbered or lettered notes on the Site Plan with a legend detailing other BMPs, as described in Section 3.

8. BMP Maintenance and Funding Mechanism & Description:

_____

_____

9. Acknowledgment:

As the property owner or developer, I understand that this project is required to install and implement permanent LID Storm Water Best Management Practices pursuant to the requirements of the San Bernardino County MS4 Permit and to document those BMPs in the submittal of a Water Quality Management Plan, which is binding on any current or successive owners of this property.

Yes	✔	No	

10. Exemption Signature:

As the property owner or developer, I understand that this project is not required by the San Bernardino County MS4 Permit to install and implement permanent LID Storm Water Best Management Practices and will not be required to submit a Water Quality Management Plan.

CITY OF ONTARIO
MEMORANDUM

TO: Rudy Zeledon, PLANNING DEPARTMENT
Mike Eskander, ENGINEERING DEPARTMENT
FROM: Steve Wilson
DATE: November 16, 2006
SUBJECT: File No. PMTT06-056 (TT 18380) -Esperanza Specific Plan area "A" Map

---

[X] The "A" Maps for these tracts are approved. Prior to DAB approval of the "B" Maps for these tracts, the following items must be included in the Tentative Tract Maps and resubmitted to Engineering:

1. The Tract Map "B" Map submittals for these tracts must conceptually address the use of the regional wetlands in the ultimate condition as well as interim conditions to comply with the water quality requirements for all new development in the Regional Water Quality Management Plan (WQMP). All stormwater runoff pollutants not adequately addressed by on-site Source Control and Site design BMPs or off-site treatment controls must be addressed by on-site Treatment BMPs.

2. Interim on-site treatment control BMPs to address water quality, until such time that the regional wetlands are constructed and operational, are required to be to be shown on the Tract Map/Drainage Plan for this tract or on other tracts within this same project that would be slated for interim treatment BMPs and would receive drainage from this tract. Tentative Tract Map approval will not be granted until this is addressed.

Note: Each landowner/developer in the Esperanza project will be conditioned in the Engineering DAB Report, to prepare and submit one Water Quality Management Plan (WQMP), along with separate Grading Plans, for all of the tracts being developed by that owner. The model WQMP form is available at: www.swrcb.ca.gov/rwqcb8/html/sb_wqmp.html
The WQMP shall identify and detail all appropriate site design, source control and treatment control BMPs to be implemented or installed in this development project in order to reduce storm water pollutants and site runoff. You may also request a revised copy of the WQMP document, and the Standard Erosion & Sediment Control Notes for the Grading Plans from me by emailing a request to: swilson@ci.ontario.ca.us . Please direct all questions to Mr. Steve Wilson at (909)395-2389.

CITY OF ONTARIO
MEMORANDUM

Development Plan Review

Project: Esperanza Specific Plan PA-11 Date: March 7, 2024

Location: NEC of Clifton Ave and Eucalyptus Ave By: Diego Tapia

The following comments on the subject project are provided for the benefit of City Engineering and Planning staff and the Applicant. These are not the conditions of approval which will be submitted under separate cover.

Preliminary Comments:

1. A Traffic Impact Analysis must be submitted that supports the Applicant/Developer's proposed land use change and evaluates potential project traffic impacts. Additional comments may be provided once the Traffic Impact Analysis review is complete.

2. The previous site plan had the tract entrance being proposed on Amherst Avenue, currently it's now being proposed on Clifton Avenue. Please restore the tract entrance onto Amherst Avenue and align the centerline of the tract entry with Shelburne Street. Chokers shall also be installed on the east side of the intersection on Amherst Avenue at tract entrance per City of Ontario Standard Drawing No. 1110. Our intent is that by having the tract entrance on Amherst Avenue with chokers, speeding along the straightaway segment of Amherst Avenue will be reduced.

3. The Applicant/Developer shall align the proposed tract entry onto Chatham Street with Ventura Avenue (existing tract entrance).

4. Install choker, ramp and crosswalk on Chatham Street east of Ventura Avenue and appropriate parking restrictions for sight distance.

5. Remove on-street parking stall markings from site plans.

6. The Applicant/Developer shall install ADA ramps for pedestrian crossings at the following locations per City of Ontario Standard Drawing No. 1213.

    a. Southwest corner of Chatham Street and Clifton Avenue
    b. Southeast corner of Chatham Street and Amherst Avenue

7. The Applicant/Developer shall be responsible to design and construct street improvements along property frontages of Eucalyptus Avenue, Amherst Avenue, Chatham Street, and Clifton Avenue in accordance with conditions issued by City's Land Development Division.

These, and all other street improvements required herein, shall include, but not be limited to, concrete curb and gutter, sidewalk, LED streetlights, signing and striping, and parkway landscaping.

8. The Applicant/Developer shall be responsible to design and construct intersection choker on the southeast corner of Amherst Avenue and Chatham Street per City of Ontario Standard Drawing No. 1110.

9. Existing parking restrictions along Eucalyptus Avenue shall remain in place.

10. All landscaping, block walls, and other obstructions shall be compatible with the stopping sight distance requirements per City of Ontario Standard Drawing No. 1309.

EXECUTIVE SUMMARY

Urban Crossroads, Inc. has prepared this noise study to determine the noise exposure and the necessary noise mitigation measures for the Esperanza Specific Plan Amendment ("Project"). The Project is located within the Esperanza Specific Plan. The original Specific Plan that was approved contemplated a 736-student elementary school within Planning Area 11. It is our understanding that the Project is to consist of 161 multifamily residential dwelling units (with a density of approximately 16.1 dwelling units per net acre). This noise study has been prepared to satisfy the applicable City of Ontario noise standards and significance criteria based on Appendix G of the California Environmental Quality Act (CEQA) Guidelines. (1)

The results of this Noise Impact Analysis are summarized below based on the significance criteria in Section 4 of this report, consistent with Appendix G of the California Environmental Quality Act (CEQA) Guidelines. (1) Table ES-1 shows the findings of significance for each potential noise and/or vibration impact under CEQA before and after any required mitigation measures.

TABLE ES-1: SUMMARY OF CEQA SIGNIFICANCE FINDINGS

Analysis	Report Section	Significance Findings	
		Unmitigated	Mitigated
Off-Site Traffic Noise	7	*Less Than Significant*	-
On-Site Traffic Noise	8	--[1]	--[1]
Operational Noise	10	*Less Than Significant*	-
Construction Noise	11	*Less Than Significant*	-
Construction Vibration		*Less Than Significant*	-

[1] Impacts to the Project from the environment are not considered a noise impact under CEQA.

This page was intentionally left blank.

1 INTRODUCTION

This noise analysis has been completed to determine the noise impacts associated with the development of the Esperanza Specific Plan Amendment ("Project"). This noise study briefly describes the Project, provides information regarding noise fundamentals, sets out the local regulatory setting, presents the study methods and procedures for noise analysis, and evaluates the future exterior noise environment. In addition, this study includes an analysis of the potential Project-related long-term stationary-source operational noise and short-term construction noise and vibration impacts.

1.1 SITE LOCATION

The Subarea 29 Specific Plan area is located on the northeast corner of Eucalyptus Avenue and Amherst Avenue in the City of Ontario. The location of the Project is shown in Exhibit 1-A. The Ontario International Airport (ONT) is located approximately 4 miles north of the Project site, and Chino Airport is located approximately 3 miles east of the Project site.

1.2 PROJECT DESCRIPTION

The Project is located within the Esperanza Specific Plan (ESP). The approved original Specific Plan contemplated a 736-student elementary school within Planning Area 11. As part of the Project, the land use designation will be updated from "School" to "MDR Medium Density Residential" consistent with the adjacent land use to the northeast, as shown in Exhibit 1-B.

It is our understanding that the Project consists of an amendment to the ESP to replace the elementary school with 161 multifamily residential dwelling units (with a density of approximately 16.1 dwelling units per net acre). The Project also includes a 6-foot-high wall along Eucalyptus Avenue. The Project site plan is illustrated in Exhibit 1-C.

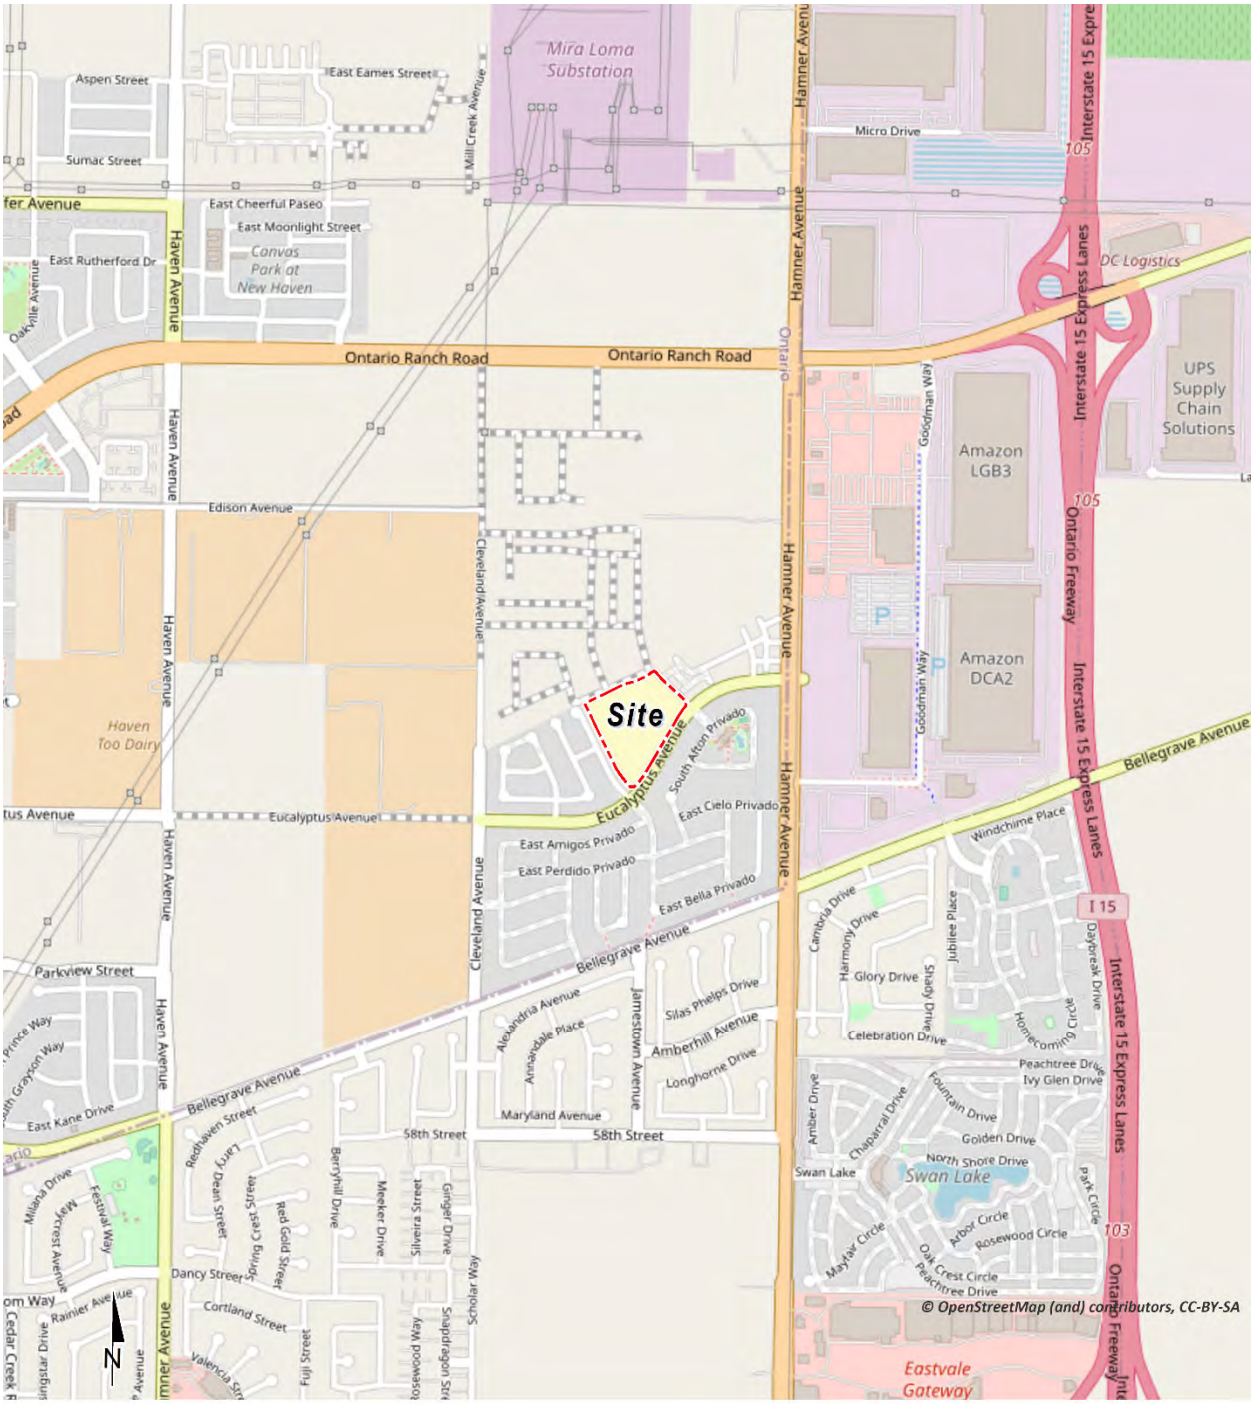

EXHIBIT 1-B: LAND USE PLAN

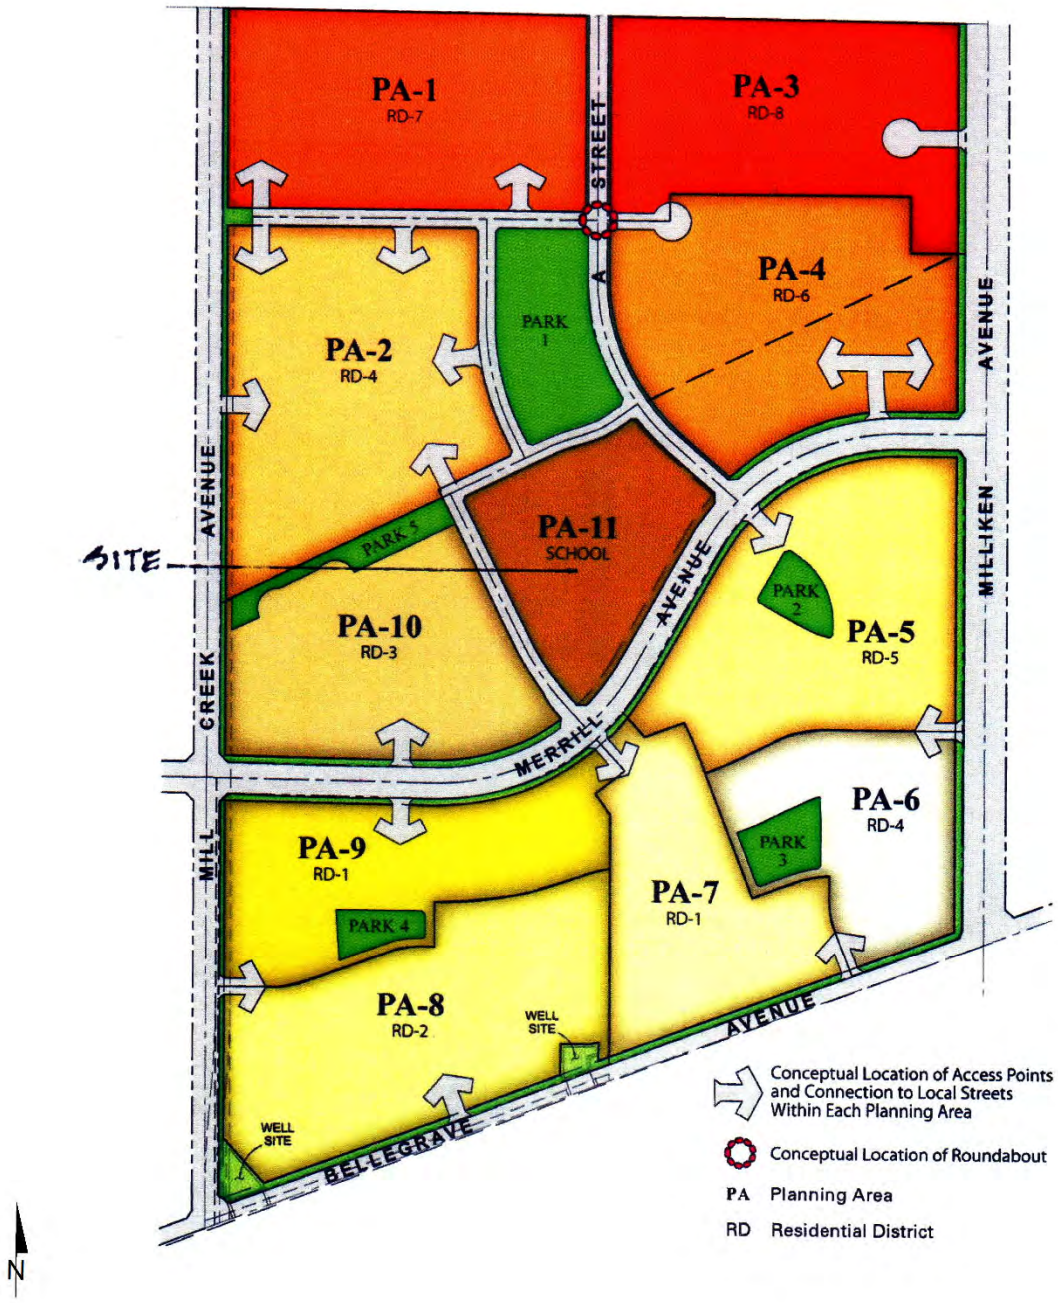

EXHIBIT 1-C: PROJECT SITE PLAN

2 FUNDAMENTALS

Noise is simply defined as "unwanted sound." Sound becomes unwanted when it interferes with normal activities, when it causes actual physical harm, or when it has adverse effects on health. Noise is measured on a logarithmic scale of sound pressure level known as a decibel (dB). A-weighted decibels (dBA) approximate the subjective response of the human ear to broad-frequency noise sources by discriminating against very low and very high frequencies of the audible spectrum. They are adjusted to reflect only those frequencies which are audible to the human ear. Exhibit 2-A presents a summary of the typical noise levels and their subjective loudness and effects, which are described in more detail below.

EXHIBIT 2-A: TYPICAL NOISE LEVELS

COMMON OUTDOOR ACTIVITIES	COMMON INDOOR ACTIVITIES	A - WEIGHTED SOUND LEVEL dBA	SUBJECTIVE LOUDNESS	EFFECTS OF NOISE
THRESHOLD OF PAIN		140	INTOLERABLE OR DEAFENING	HEARING LOSS
NEAR JET ENGINE		130		
		120		
JET FLY-OVER AT 300m (1000 ft)	ROCK BAND	110		
LOUD AUTO HORN		100	VERY NOISY	
GAS LAWN MOWER AT 1m (3 ft)		90		
DIESEL TRUCK AT 15m (50 ft), at 80 km/hr (50 mph)	FOOD BLENDER AT 1m (3 ft)	80		SPEECH INTERFERENCE
NOISY URBAN AREA, DAYTIME	VACUUM CLEANER AT 3m (10 ft)	70	LOUD	
HEAVY TRAFFIC AT 90m (300 ft)	NORMAL SPEECH AT 1m (3 ft)	60		
QUIET URBAN DAYTIME	LARGE BUSINESS OFFICE	50	MODERATE	SLEEP DISTURBANCE
QUIET URBAN NIGHTTIME	THEATER, LARGE CONFERENCE ROOM (BACKGROUND)	40		
QUIET SUBURBAN NIGHTTIME	LIBRARY	30	FAINT	NO EFFECT
QUIET RURAL NIGHTTIME	BEDROOM AT NIGHT, CONCERT HALL (BACKGROUND)	20		
	BROADCAST/RECORDING STUDIO	10	VERY FAINT	
LOWEST THRESHOLD OF HUMAN HEARING	LOWEST THRESHOLD OF HUMAN HEARING	0

2.1 RANGE OF NOISE

Since the range of intensities that the human ear can detect is so large, the scale frequently used to measure intensity is a scale based on multiples of 10, the logarithmic scale. The scale for measuring intensity is the decibel scale. Each interval of 10 decibels indicates a sound energy ten times greater than before, which is perceived by the human ear as being roughly twice as loud. (2) The most common sounds vary between 40 dBA (very quiet) to 100 dBA (very loud). Normal conversation at three feet is roughly at 60 dBA, while loud jet engine noises equate to 110 dBA at approximately 1,000 feet, which can cause serious discomfort. (3)

Another important aspect of noise is the duration of the sound and the way it is described and distributed in time.

2.2 NOISE DESCRIPTORS

Environmental noise descriptors are generally based on averages rather than instantaneous noise levels. The most used metric is the equivalent level (L_{eq}). Equivalent sound levels are not measured directly but are calculated from sound pressure levels typically measured in A-weighted decibels (dBA). The equivalent sound level (L_{eq}) represents a steady-state sound level containing the same total energy as a time-varying signal over a given sample period and is commonly used to describe the "average" noise levels within the environment.

Peak hour or average noise levels, while useful, do not completely describe a given noise environment. Noise levels lower than peak hour may be disturbing if they occur during times when quiet is most desirable, namely evening and nighttime (sleeping) hours. To account for this, the Community Noise Equivalent Level (CNEL), representing a composite 24-hour noise level is utilized. The CNEL is the weighted average of the intensity of a sound, with corrections for time of day, and averaged over 24 hours. The time-of-day corrections require the addition of 5 decibels to dBA L_{eq} sound levels in the evening from 7:00 p.m. to 10:00 p.m., and the addition of 10 decibels to dBA L_{eq} sound levels at night between 10:00 p.m. and 7:00 a.m. These additions are made to account for the noise-sensitive time periods during the evening and night hours when noise can become more intrusive. CNEL does not represent the actual sound level heard at any time but rather represents the total sound exposure. The City of Ontario relies on the 24-hour CNEL level to assess land use compatibility with transportation-related noise sources.

2.3 SOUND PROPAGATION

When sound propagates over a distance, it changes in level and frequency content. The way noise reduces with distance depends on the following factors.

2.3.1 GEOMETRIC SPREADING

Sound from a localized source (i.e., a stationary point source) propagates uniformly outward in a spherical pattern. The sound level attenuates (or decreases) at a rate of 6 dB for each doubling of distance from a point source. Highways consist of several localized noise sources on a defined path and hence can be treated as a line source, which approximates the effect of several point sources. Noise from a line source propagates outward in a cylindrical pattern, often referred to as cylindrical spreading. Sound levels attenuate at a rate of 3 dB for each doubling of distance from a line source. (2)

2.3.2 GROUND ABSORPTION

The propagation path of noise from a highway to a receiver is usually very close to the ground. Noise attenuation from ground absorption and reflective wave canceling adds to the attenuation associated with geometric spreading. Traditionally, the excess attenuation has also been expressed in terms of attenuation per doubling of distance. This approximation is usually sufficiently accurate for distances of less than 200 ft. For acoustically hard sites (i.e., sites with a

reflective surface between the source and the receiver, such as a parking lot or body of water), no excess ground attenuation is assumed. For acoustically absorptive or soft sites (i.e., those sites with an absorptive ground surface between the source and the receiver, such as soft dirt, grass, or scattered bushes and trees), an excess ground attenuation value of 1.5 dB per doubling of distance is normally assumed. When added to the cylindrical spreading, the excess ground attenuation results in an overall drop-off rate of 4.5 dB per doubling of distance from a line source. (4)

2.3.3 ATMOSPHERIC EFFECTS

Receivers located downwind from a source can be exposed to increased noise levels relative to calm conditions, whereas locations upwind can have lowered noise levels. Sound levels can be increased at large distances (e.g., more than 500 feet) due to atmospheric temperature inversion (i.e., increasing temperature with elevation). Other factors, such as air temperature, humidity, and turbulence, can also have significant effects. (2)

2.3.4 SHIELDING

A large object or barrier in the path between a noise source and a receiver can substantially attenuate noise levels at the receiver. The amount of attenuation provided by shielding depends on the size of the object and the frequency content of the noise source. Shielding by trees and other such vegetation typically only has an “out of sight, out of mind” effect. That is, the perception of noise impact tends to decrease when vegetation blocks the line of sight to nearby residents. However, for vegetation to provide a substantial, or even noticeable, noise reduction, the vegetation area must be at least 15 feet in height, 100 feet wide, and dense enough to completely obstruct the line of sight between the source and the receiver. This size of vegetation may provide up to 5 dBA of noise reduction. The Federal Highway Administration (FHWA) does not consider the planting of vegetation to be a noise abatement measure. (5)

2.4 NOISE CONTROL

Noise control is the process of obtaining an acceptable noise environment for an observation point or receiver by controlling the noise source, transmission path, receiver, or all three. This concept is known as the source-path-receiver concept. In general, noise control measures can be applied to these three elements.

2.5 NOISE BARRIER ATTENUATION

Effective noise barriers can reduce noise levels by 10 to 15 dBA, cutting the loudness of traffic noise in half. A noise barrier is most effective when placed close to the noise source or receiver. Noise barriers, however, do have limitations. For a noise barrier to work, it must block the line-of-sight path of sound from the noise source.

2.6 LAND USE COMPATIBILITY WITH NOISE

Some land uses are more tolerant of noise than others. For example, schools, hospitals, churches, and residences are more sensitive to noise intrusion than are commercial or industrial developments and related activities. As ambient noise levels affect the perceived amenity or livability of a development, so too can the mismanagement of noise impacts impair

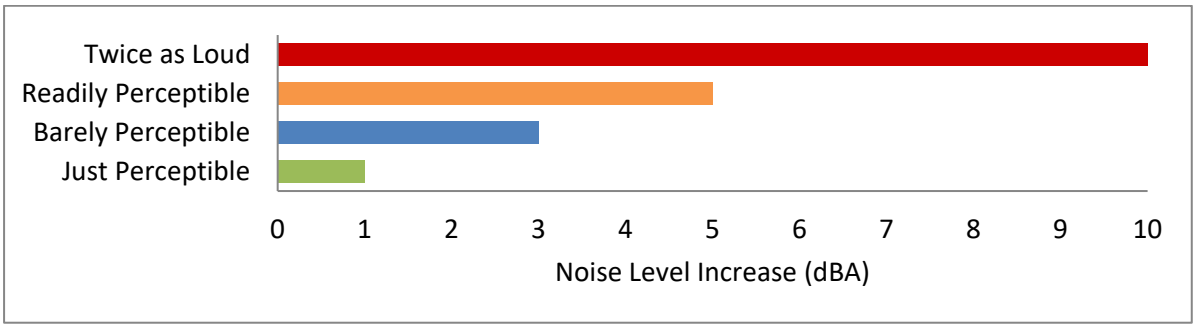
the economic health and growth potential of a community by reducing the area's desirability as a place to live, shop, and work. For this reason, land use compatibility with the noise environment is an important consideration in the planning and design process. The FHWA encourages State and Local government to regulate land development in such a way that noise-sensitive land uses are either prohibited from being located adjacent to a highway, or that the developments are planned, designed, and constructed in such a way that noise impacts are minimized. (6)

2.7 COMMUNITY RESPONSE TO NOISE

Approximately sixteen percent of the population has a very low tolerance for noise and will object to any noise not of their making. Consequently, even in the quietest environment, some complaints may occur. Twenty to thirty percent of the population will not complain even in very severe noise environments. (7 pp. 8-6) Thus, a variety of reactions can be expected from people exposed to any given noise environment.

Surveys have shown that community response to noise varies from no reaction to vigorous action for newly introduced noises averaging from 10 dB below existing to 25 dB above existing. (8) According to research originally published in the Noise Effects Handbook (7), the percentage of high annoyance ranges from approximately 0 percent at 45 dB or less, 10 percent are highly annoyed at around 60 dB, and increases rapidly to approximately 70 percent being highly annoyed at approximately 85 dB or greater. Despite this variability in behavior on an individual level, the population can be expected to exhibit the following responses to changes in noise levels, as shown in Exhibit 2-B. A change of 3 dBA is considered barely perceptible, and changes of 5 dBA are considered readily perceptible. (4)

EXHIBIT 2-B: NOISE LEVEL INCREASE PERCEPTION



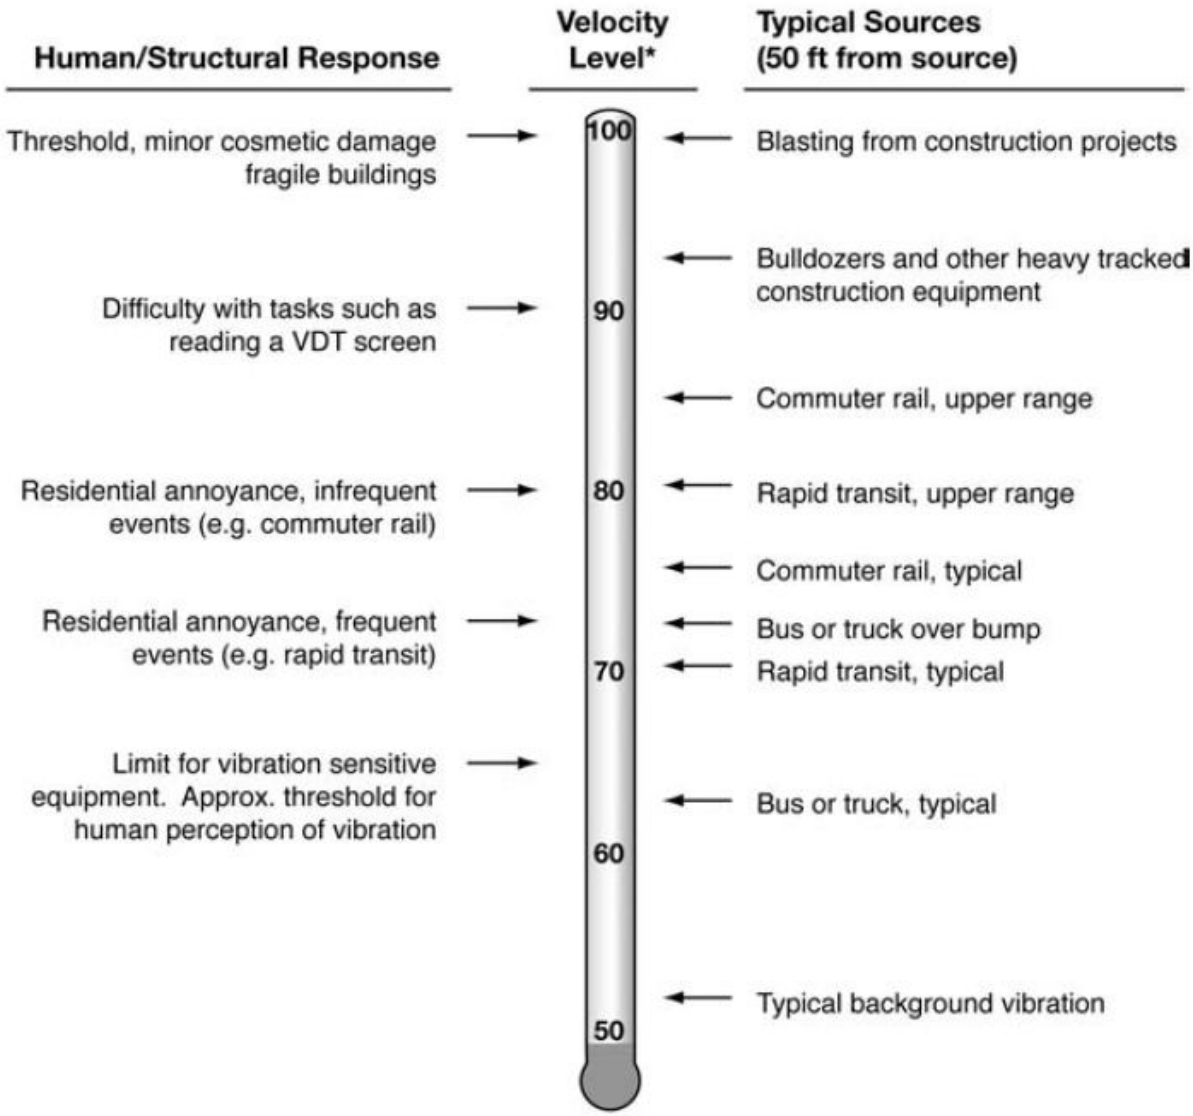
2.8 VIBRATION

Per the Federal Transit Administration (FTA) *Transit Noise Impact and Vibration Impact Assessment Manual* (8) , vibration is the periodic oscillation of a medium or object. The rumbling sound caused by the vibration of room surfaces is called structure-borne noise. Sources of ground-borne vibrations include natural phenomena (e.g., earthquakes, volcanic eruptions, sea waves, landslides) or human-made causes (e.g., explosions, machinery, traffic, trains, construction equipment). Vibration sources may be continuous, such as factory machinery, or transient, such as explosions. As is the case with airborne sound, ground-borne vibrations may be described by amplitude and frequency.

There are several different methods that are used to quantify vibration. The peak particle velocity (PPV) is defined as the maximum instantaneous peak of the vibration signal. The PPV is most frequently used to describe vibration impacts to buildings but is not always suitable for evaluating human response (annoyance) because it takes some time for the human body to respond to vibration signals. Instead, the human body responds to average vibration amplitude, often described as the root mean square (RMS). The RMS amplitude is defined as the average of the squared amplitude of the signal and is most frequently used to describe the effect of vibration on the human body. Decibel notation (VdB) is commonly used to measure RMS. Decibel notation (VdB) serves to reduce the range of numbers used to describe human response to vibration. Typically, ground-borne vibration generated by man-made activities attenuates rapidly with distance from the source of the vibration. Sensitive receivers for vibration include structures (especially older masonry structures), people (especially residents, the elderly, and the sick), and vibration-sensitive equipment and/or activities.

The background vibration-velocity level in residential areas is generally 50 VdB. Ground-borne vibration is normally perceptible to humans at approximately 65 VdB. For most people, a vibration-velocity level of 75 VdB is the approximate dividing line between barely perceptible and distinctly perceptible levels. Typical outdoor sources of perceptible ground-borne vibration are construction equipment, steel-wheeled trains, and traffic on rough roads. If a roadway is smooth, the ground-borne vibration is rarely perceptible. The range of interest is from approximately 50 VdB, which is the typical background vibration-velocity level, to 100 VdB, which is the general threshold where minor damage can occur in fragile buildings. Exhibit 2-C illustrates common vibration sources and the human and structural response to ground-borne vibration.

EXHIBIT 2-C: TYPICAL LEVELS OF GROUND-BORNE VIBRATION



Source: Federal Transit Administration (FTA) Transit Noise and Vibration Impact Assessment Manual.

3 REGULATORY SETTING

The federal government, the State of California, various county governments, and most municipalities in the state have established standards and ordinances to control noise. In most areas, automobile and truck traffic is the major source of environmental noise. Traffic activity generally produces an average sound level that remains constant with time. Air and rail traffic, and commercial and industrial activities are also major sources of noise in some areas. Federal, state, and local agencies regulate different aspects of environmental noise. Federal and state agencies generally set noise standards for mobile sources such as aircraft and motor vehicles, while regulation of stationary sources is left to local agencies.

3.1 STATE OF CALIFORNIA NOISE REQUIREMENTS

The State of California regulates freeway noise, sets standards for sound transmission, provides occupational noise control criteria, identifies noise standards, and provides guidance for local land use compatibility. State law requires that each county and city adopt a General Plan that includes a Noise Element, which is to be prepared per guidelines adopted by the Governor's Office of Planning and Research (OPR). (9) The purpose of the Noise Element is to *limit the exposure of the community to excessive noise levels*. In addition, the California Environmental Quality Act (CEQA) requires that all known environmental effects of a project be analyzed, including environmental noise impacts.

3.2 CITY OF ONTARIO GENERAL PLAN

The City of Ontario General Plan (Policy Plan) identifies several policies to minimize the impacts of excessive noise levels throughout the community. Policy Plan Section S4, Noise Hazards, establishes a goal of maintaining *an environment where noise does not adversely affect the public's health, safety, and welfare.* (10) To satisfy this goal, the Policy Plan identifies six policies related to: noise mitigation; coordination with transportation authorities; noise mitigation; truck traffic; roadway design; airport noise compatibility, and rail noise mitigation. Noise criteria identified in the General Plan Environmental Impact Report (EIR) in Table 5.13-3 are the guidelines used in the 2010 General Plan to evaluate land use compatibility within various noise environments. Table 5.13-3 is reproduced here in Exhibit 3-A *Noise Level Exposure and Land Use Compatibility Guidelines*. The Project residential land uses are considered *clearly acceptable* within exterior noise level environments approaching 60 dBA CNEL and *normally acceptable* within noise level environments up to 65 dBA CNEL. For noise level environments greater than 70 dBA CNEL, the Project land uses would be considered *clearly unacceptable* and no new construction should be permitted.

EXHIBIT 3-A: NOISE LEVEL EXPOSURE AND LAND USE COMPATIBILITY GUIDELINES

LAND USE CATEGORIES		COMMUNITY NOISE EQUIVALENT LEVEL (CNEL)						
Category	Land Use	55	60	65	70	75	80

	Outdoor Spectator Sports							
	Outdoor Music Shells/ Amphitheaters							
	Livestock/Wildlife Preserves							
	Crop Agriculture							

LEGEND

Clearly Acceptable:	No special noise insulation required, assuming buildings of normal conventional construction.
Normally Acceptable:	Acoustical reports will be required for major new residential construction. Conventional construction with closed windows and fresh air supply systems of air conditioning will normally suffice.
Normally Unacceptable:	New construction should be discouraged. Noise/aviation easements required for all new construction. If new construction does proceed, a detailed analysis of noise reduction requirements must be made and necessary noise insulation features included.
Clearly Unacceptable:	No new construction should be permitted.

Source: The Ontario Plan 2050 Environmental Impact Report (Table 5.13-3).

3.3 OPERATIONAL NOISE STANDARDS

To analyze noise impacts originating from a designated fixed location or private property such as the Project, stationary-source (operational) noise levels are evaluated against standards established under a City's Municipal Code, which is included in Appendix 3.1. The City of Ontario requires that noise from new stationary sources in the City comply with the City's Noise Ordinance, which limits the acceptable noise at the property line of the impacted property to reduce nuisances to sensitive land uses. Compliance with the City's Noise Ordinance would result in noise levels that are acceptable to the City and would result in less than significant noise impacts from stationary sources (11).

Section 5-29.04(a) identifies the allowable daytime and nighttime ambient exterior noise standards for each land use type. For residential land uses (Noise Zone I), ambient exterior noise levels may not exceed 65 dBA L_{eq} during the daytime hours (7:00 a.m. to 10:00 p.m.) and may not exceed 45 dBA L_{eq} during the nighttime hours (10:00 p.m. to 7:00 a.m.). (12) The lower noise level standard shall apply on the boundary between two (2) different noise zones. If the ambient noise level exceeds the resulting standard, the ambient noise level shall be the standard. The maximum acceptable Project-related operational noise levels received at off-site land uses in the City of Ontario are identified in Table 3-1.

TABLE 3-1: OPERATIONAL NOISE STANDARDS

Noise Zone	Land Use	Exterior Noise Levels (dBA Leq)[2]	
		Daytime (7 am-10 pm)	Nighttime (10 pm-7 am)
I	Single-Family Residential	65	45
II	Multi-Family Residential	65	50
III	Commercial	65	60
IV	Residential Mixed-Use	70	70
V	Manufacturing and Industrial	70	70

[1] Source: Section 5-29.04 of the City of Ontario Municipal Code (Appendix 3.1).
[2] L_{eq} represents a steady-state sound level containing the same total energy as a time-varying signal over a given period.

3.4 CONSTRUCTION NOISE STANDARDS

The City of Ontario has set restrictions to control noise impacts associated with construction. Section 5-29.09 of the Municipal Code states: No person, while engaged in construction, remodeling, digging, grading, demolition or any other related building activity, shall operate any tool, equipment or machine in a manner that produces loud noise that disturbs a person of normal sensitivity who works or resides in the vicinity, or a Police or Code Enforcement Officer, on any weekday except between the hours of 7:00 a.m. and 6:00 p.m. or on Saturday or Sunday between the hours of 9:00 a.m. and 6:00 p.m. (12) While the City establishes limits to the hours during which construction activity may take place, it does not identify specific noise level limits for construction noise levels at potentially affected receiver locations for CEQA analysis purposes. Therefore, a numerical construction threshold based on the Federal Transit

Administration (FTA) Transit Noise and Vibration Impact Assessment Manual is used for the analysis of daytime construction impacts, as discussed below.

According to the FTA, local noise ordinances are typically not very useful in evaluating construction noise. They usually relate to nuisance and hours of allowed activity and sometimes specify limits in terms of maximum levels but are generally not practical for assessing the impact of a construction project. Project construction noise criteria should account for the existing noise environment, the absolute noise levels during construction activities, the duration of the construction, and the adjacent land use. Due to the lack of standardized construction noise thresholds, the FTA provides guidelines that can be considered reasonable criteria for construction noise assessment. The FTA considers a daytime exterior construction noise level of 80 dBA L_{eq} as a reasonable threshold for noise-sensitive residential land use. (8 p. 179)

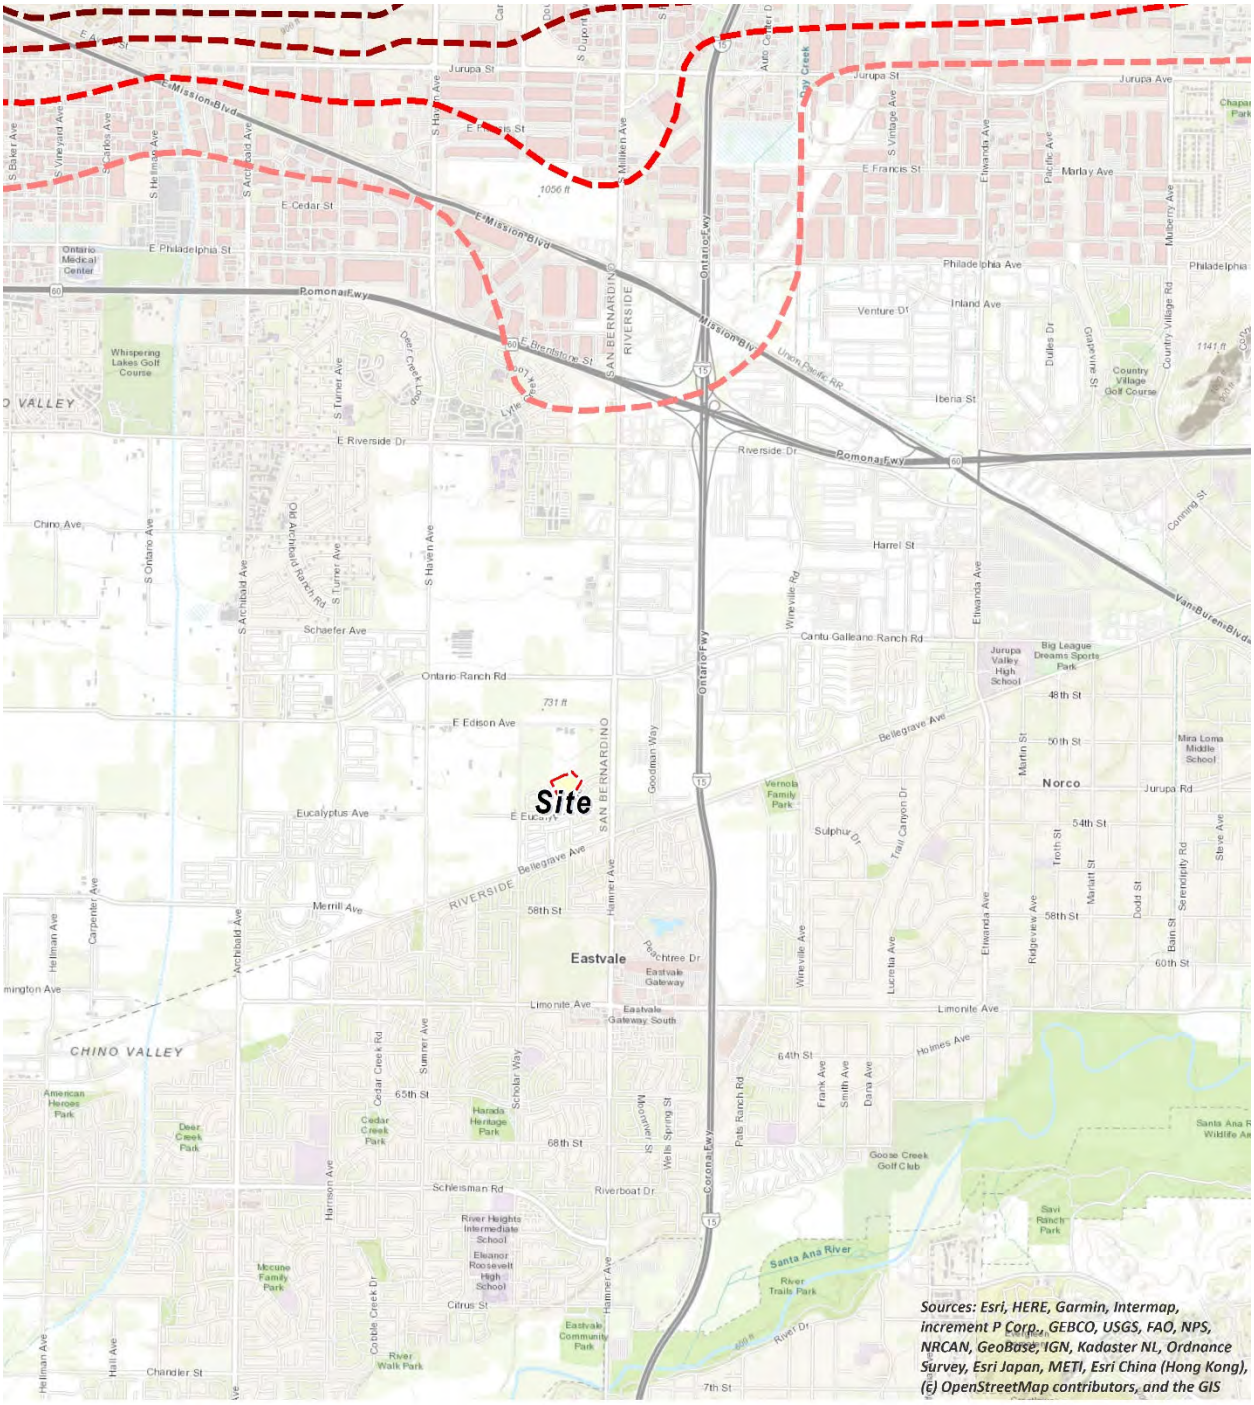
3.5 VIBRATION STANDARDS

Construction activity can result in varying degrees of ground-borne vibration, depending on the equipment and methods used, distance to the affected structures, and soil type. Construction vibration is generally associated with pile driving and rock blasting. Other construction equipment, such as air compressors, light trucks, hydraulic loaders, etc., generates little or no ground vibration. (8) To analyze vibration impacts originating from the operation and construction of a project, vibration-generating activities are appropriately evaluated against standards established under a City's Municipal Code, if such standards exist. However, the City of Ontario does not identify specific vibration level limits. Therefore, for analysis purposes, the Caltrans *Transportation and Construction Vibration Guidance Manual*, (13 p. 38) Table 19, vibration damage limit, is used in this noise study to assess potential temporary construction-related impacts at adjacent building locations. The nearest noise-sensitive buildings adjacent to the Project site can best be described as "older residential structures" with a maximum acceptable continuous vibration threshold of 0.3 PPV (in/sec).

3.6 AIRPORT LAND USE COMPATIBILITY

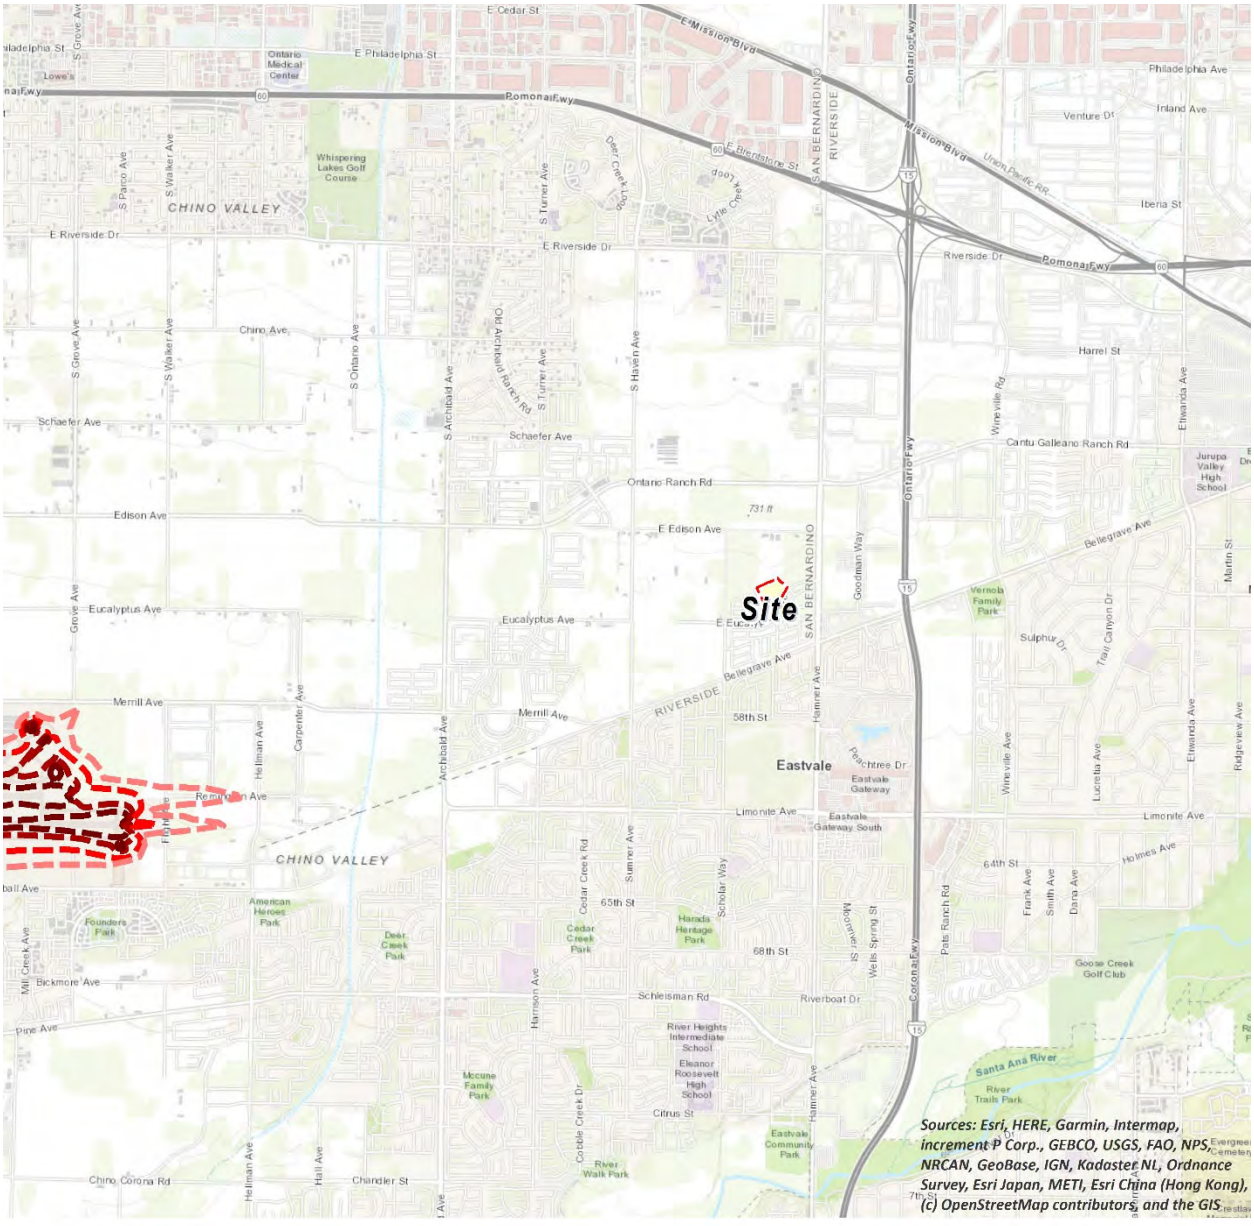
The Project site is located approximately 4 miles south of the Ontario International Airport (ONT). This places the Project site within the ONT Airport Influence Area according to Policy Map 2-1 of the *Ontario International Airport Land Use Compatibility Plan (ONT ALUCP).* The ONT ALUCP was amended in July 2018 to promote compatibility between the airport and the land uses that surround it (14). Since the Project site is located within the ONT Airport Influence Area, the Project is subject to the Noise Criteria established in Table 2-3 in the ONT ALUCP. As shown in Exhibit 3-B, the Project site is located within the ONT Airport Influence Area but outside the 60 dBA CNEL airport noise impact zone consistent with Policy Map 2-3. According to Table 2-3 of the ONT ALUCP, residential land uses and schools located outside the 60 dBA CNEL noise level contours of ONT, such as the Project, are considered *normally compatible land use.* For *normally compatible land use,* either the activities associated with the land use are inherently noisy or standard construction methods will sufficiently attenuate exterior noise to an acceptable indoor community noise equivalent level (CNEL).

EXHIBIT 3-B: ONT AIRPORT NOISE LEVEL CONTOURS



The Project site is located approximately 2.5 miles east of the Chino Airport (CNO). This places the Project site outside the Chino Airport Influence Area according to Figure 1-4 Airport Referral Areas of the *Comprehensive Land Use Plan for the Chino Airport.* As shown in Exhibit 3-C, the Project site is outside the 60 dBA CNEL airport noise level contour, and impacts would be *less than significant*.

EXHIBIT 3-C: CHINO AIRPORT NOISE LEVEL CONTOURS



4 SIGNIFICANCE CRITERIA

The following significance criteria are based on currently adopted guidance provided by Appendix G of the California Environmental Quality Act (CEQA) Guidelines. (15) For the purposes of this report, impacts would be potentially significant if the Project results in or causes:

A. Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?

B. Generation of excessive ground-borne vibration or ground-borne noise levels?

C. For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?

4.1 NOISE LEVEL INCREASES (THRESHOLD A)

Noise level increases resulting from the Project are evaluated based on the Appendix G CEQA Guidelines. Under CEQA, consideration must be given to the magnitude of the increase, the existing baseline ambient noise levels, and the location of receivers to determine if a noise increase represents a significant adverse environmental impact. This approach recognizes *that there is no single noise increase that renders the noise impact significant.* (16) This is primarily because of the wide variation in individual thresholds of annoyance and differing individual experiences with noise. Thus, an important way of determining a person's subjective reaction to a new noise is to compare it to the existing environment to which one has adapted—the so-called *ambient* environment. In general, the more a new noise exceeds the previously existing ambient noise level, the less acceptable the new noise will typically be judged.

The Federal Interagency Committee on Noise (FICON) (17) developed guidance to be used for the assessment of project-generated increases in noise levels that consider the ambient noise level. The FICON recommendations are based on studies that relate aircraft noise levels to the percentage of persons highly annoyed by aircraft noise. Although the FICON recommendations were specifically developed to assess aircraft noise impacts, these recommendations are often used in environmental noise impact assessments involving the use of cumulative noise exposure metrics, such as the average-daily noise level (CNEL) and equivalent continuous noise level (L_{eq}).

As previously stated, the approach used in this noise study recognizes *that there is no single noise increase that renders the noise impact significant*, based on a 2008 California Court of Appeal ruling on Gray v. County of Madera. (16) For example, if the ambient noise environment is quiet (<60 dBA) and the new noise source greatly increases the noise levels, an impact may occur if the noise criteria are exceeded. Therefore, for this analysis, a *readily perceptible* 5 dBA or greater project-related noise level increase is considered a significant impact when the without project noise levels are below 60 dBA. Per the FICON, in areas where the without project noise levels range from 60 to 64 dBA, a 3 dBA *barely perceptible* noise level increase

appears to be appropriate for most people. When the without project noise levels are 65 dBA and higher, any increase in community noise louder than 1.5 dBA or greater is considered a significant impact if the noise criteria for a given land use is exceeded since it likely contributes to an existing noise exposure exceedance. The FICON guidance provides an established source of criteria to assess the impacts of substantial temporary or permanent increases in baseline ambient noise levels. Based on the FICON criteria, the amount to which a given noise level increase is considered acceptable is reduced when the without Project (baseline) noise levels are already shown to exceed certain land-use specific exterior noise level criteria. The specific levels are based on typical responses to noise level increases of 5 dBA or *readily perceptible*, 3 dBA or *barely perceptible*, and 1.5 dBA depending on the underlying without Project noise levels for noise-sensitive uses. These levels of increase and their perceived acceptance are consistent with guidance provided by the Federal Aviation Administration, the Federal Highway Administration (4 p. 9), and Caltrans (18 p. 2_48).

4.2 VIBRATION (THRESHOLD B)

As described in Section 3.5, the vibration impacts originating from the construction of the Esperanza Specific Plan Amendment, vibration-generating activities are appropriately evaluated using the Caltrans vibration damage thresholds to assess potential temporary construction-related impacts at adjacent building locations. The nearest noise-sensitive buildings adjacent to the Project site can best be described as “older residential structures” with a maximum acceptable continuous vibration threshold of 0.3 PPV (in/sec).

4.3 CEQA GUIDELINES NOT FURTHER ANALYZED (THRESHOLD C)

CEQA Noise Threshold C applies when there are nearby public and private airports and/or airstrips and focuses on land use compatibility of the Project to nearby airports and airstrips. The closest airport that would require additional noise analysis under CEQA Guideline threshold C is the Ontario International Airport, which is located approximately 4 miles north of the Project site. As previously indicated in Section 3.6, the Project site is located within the ONT Airport Influence Area but is located outside the 60 dBA CNEL airport noise impact zone. Similarly, as indicated in Section 3.6, the Project site is not located within the CNO Airport Influence Area and is outside the 60 dBA CNEL airport noise impact zone. Therefore, airport noise impacts are considered *less than significant,* and no further noise analysis is provided under Guideline C.

4.4 SIGNIFICANCE CRITERIA SUMMARY

Noise impacts shall be considered significant if any of the following occur as a direct result of the Project. Table 4-1 shows the significance criteria summary matrix that includes the allowable criteria used to identify potentially significant incremental noise level increases.

TABLE 4-1: SIGNIFICANCE CRITERIA SUMMARY

Analysis	Receiving Land Use	Condition(s)	Significance Criteria	
			Daytime	Nighttime
Off-Site Traffic	All	If ambient is < 60 dBA CNEL[2]	≥ 5 dBA CNEL Project increase	
		If ambient is 60 - 64 dBA CNEL[2]	≥ 3 dBA CNEL Project increase	
		If ambient is >= 65 dBA CNEL[2]	≥ 1.5 dBA CNEL Project increase	
On-Site Traffic	All	See Exhibit 3-A		
Operational	Noise-Sensitive	Exterior Noise Level Standards[1]	65 dBA L_{eq}	45 dBA L_{eq}
		If ambient is < 60 dBA Leq[2]	≥ 5 dBA L_{eq} Project increase	
		If ambient is 60 - 65 dBA Leq[2]	≥ 3 dBA L_{eq} Project increase	
		If ambient is > 65 dBA Leq[2]	≥ 1.5 dBA L_{eq} Project increase	
Construction		Permitted hours of 7:00 a.m. and 6:00 p.m. on weekdays[3]		
		Noise Level Threshold[4]	80 dBA L_{eq}	
		Vibration Level Threshold[5]	0.3 PPV (in/sec)

5 EXISTING NOISE LEVEL MEASUREMENTS

To assess the existing noise level environment, six 24-hour noise level measurements were taken at sensitive receiver locations in the Project study area. The receiver locations were selected to describe and document the existing noise environment within the Project study area. Exhibit 5-A provides the boundaries of the Project study area and the noise level measurement locations. To fully describe the existing noise conditions, noise level measurements were collected by Urban Crossroads, Inc. on Wednesday, October 4, 2023. Appendix 5.1 includes study area photos.

5.1 MEASUREMENT PROCEDURE AND CRITERIA

To describe the existing noise environment, the hourly noise levels were measured during typical weekday conditions over a 24-hour period. By collecting individual hourly noise level measurements, it is possible to describe the daytime and nighttime hourly noise levels and calculate the 24-hour CNEL. The long-term noise readings were recorded using Piccolo Type 2 integrating sound level meter and dataloggers. The Piccolo sound level meters were calibrated using a Larson-Davis calibrator, Model CAL 150. All noise meters were programmed in "slow" mode to record noise levels in "A" weighted form. The sound level meters and microphones were equipped with a windscreen during all measurements. All noise level measurement equipment satisfies the American National Standards Institute (ANSI) standard specifications for sound level meters ANSI S1.4-2014/IEC 61672-1:2013.

5.2 NOISE MEASUREMENT LOCATIONS

The long-term noise level measurements were positioned as close to the nearest sensitive receiver locations as possible to assess the existing ambient hourly noise levels surrounding the Project site. Actual measurement locations may be affected by location access, equipment security, and proximity to noise sources or solid objects that would affect the measurement and thus may be located at locations that have similar acoustic conditions as the desired locations. Both Caltrans and the FTA recognize that it is not reasonable to collect noise level measurements that can fully represent any part of a private yard, patio, deck, or balcony normally used for human activity when estimating impacts for new development projects. This is demonstrated in the Caltrans general site location guidelines, which indicate that *sites must be free of noise contamination by sources other than sources of interest. Avoid sites located near sources such as barking dogs, lawnmowers, pool pumps, and air conditioners unless it is the express intent of the analyst to measure these sources*. (2) Further, FTA guidance states, t*hat it is not necessary nor recommended that existing noise exposure be determined by measuring at every noise-sensitive location in the project area. Rather, the recommended approach is to characterize the noise environment for clusters of sites based on measurements or estimates at representative locations in the community*. (19)

EXHIBIT 5-A: AMBIENT NOISE MEASUREMENT LOCATIONS

Based on recommendations of Caltrans and the FTA, it is not necessary to collect measurements at each individual building or residence because each measurement represents a group of locations that share acoustical equivalence. (19) In other words, the area represented by the measurement location shares similar shielding, terrain, and geometric relationship to the reference noise source as the receiver location. Receivers represent a location of noise-sensitive areas and are used to estimate the future noise level impacts. Collecting reference ambient noise level measurements at the nearby sensitive receiver locations allows for a comparison of the before and after Project noise levels and is necessary to assess potential noise impacts due to the Project's contribution to the ambient noise levels.

5.3 NOISE MEASUREMENT RESULTS

The noise measurements presented below focus on the average or equivalent sound levels (L_{eq}). The equivalent sound level (L_{eq}) represents a steady-state sound level containing the same total energy as a time-varying signal over a given sample period. Table 5-1 identifies the hourly daytime (7:00 a.m. to 10:00 p.m.) and nighttime (10:00 p.m. to 7:00 a.m.) noise levels at each noise level measurement location. Appendix 5.2 provides a summary of the existing hourly ambient noise levels.

TABLE 5-1: NOISE LEVEL MEASUREMENT SUMMARY

Location[1]	Description	Energy Average Noise Level (dBA L_{eq})[2]	
		Daytime	Nighttime
L1	Located East of the site at future residential	67.9	55.3
L2	Located Northwest of the site at future residential	45.1	36.9
L3	Located North of the site	47.4	34.9
L4	Located West of the site near the residence at 4500 S. Amherst Ave.	53.2	53.3
L5	Located South of the site near the residence at 4576 S Afton Privado	60.3	53.4
L6	Located South of the site near the residence at 4554 S Afton Privado	66.0	45.2

[1] See Exhibit 5-A for the noise level measurement locations.
[2] Energy (logarithmic) average levels. The long-term 24-hour measurement worksheets are included in Appendix 5.2.
"Daytime" = 7:00 a.m. to 10:00 p.m.; "Nighttime" = 10:00 p.m. to 7:00 a.m.

Table 5-1 provides the (energy average) noise levels used to describe the daytime and nighttime ambient conditions. These daytime and nighttime energy average noise levels represent the average of all hourly noise levels observed during these time periods expressed as a single number. Appendix 5.2 provides summary worksheets of the noise levels for each

hour as well as the minimum, maximum, L_1, L_2, L_5, L_8, L_{25}, L_{50}, L_{90}, L_{95}, and L_{99} percentile noise levels observed during the daytime and nighttime periods.

6 METHODS AND PROCEDURES

The following section outlines the methods and procedures used to model and analyze the future traffic noise environment.

6.1 FHWA TRAFFIC NOISE PREDICTION MODEL

The estimated roadway noise impacts from vehicular traffic were calculated using a computer program that replicates the Federal Highway Administration (FHWA) Traffic Noise Prediction Model- FHWA-RD-77-108. (20) The FHWA Model arrives at a predicted noise level through a series of adjustments to the Reference Energy Mean Emission Level (REMEL). In California, the national REMELs are substituted with the California Vehicle Noise (Calveno) Emission Levels. (21) Adjustments are then made to the REMEL to account for: the roadway classification (e.g., collector, secondary, major, or arterial), the roadway active width (i.e., the distance between the center of the outermost travel lanes on each side of the roadway), the total average daily traffic (ADT), the travel speed, the percentages of automobiles, medium trucks, and heavy trucks in the traffic volume, the roadway grade, the angle of view (e.g., whether the roadway view is blocked), the site conditions ("hard" or "soft" relates to the absorption of the ground, pavement, or landscaping), and the percentage of total ADT which flows each hour throughout a 24-hour period.

6.2 ON-SITE TRAFFIC NOISE PREDICTION MODEL INPUTS

Table 6-1 presents the on-site roadway parameters, including the ADT volumes used for this study. The on-site roadway parameters are based on the City of Ontario General Plan Mobility Element roadway classifications. The maximum two-way traffic volumes are based on the roadway design capacity and reflect future long-range traffic conditions needed to assess the on-site traffic noise environment and to identify potential noise abatement measures (if any) that address the worst-case future noise conditions.

TABLE 6-1: ON-SITE ROADWAY PARAMETERS

Location	Classification[1]	Lanes	Average Daily Traffic Volume[2]	Speed Limit (mph)[2]	Site Conditions[2]
Eucalyptus Ave	Arterial	4	21,700	40	Soft
Amherst Ave	Local	2	9,500	25	Soft
Clifton Ave	Local	2	9,500	25	Soft
Chatham St	Local	2	9,500	25	Soft

[1] Road classifications based upon the Esperanza Specific Plan, Exhibit 10 Master Circulation Plan.
[2] Volumes based upon the roadway capacity defined City of Ontario General Plan (TOP2050) Draft EIR, Appendix K.

6.3 TRAFFIC NOISE PREDICTION MODEL INPUTS

The average daily traffic (ADT) volumes used for this study are presented in Table 6-1. The Existing Plus Project ADT was derived based on the differences in Opening Year ADT volumes

added to the Existing ADT volumes. Tables 6-2 and 6-3 provide the time of day (daytime, evening, and nighttime) vehicle splits used for calculating CNEL values.

TABLE 6-2: TIME OF DAY VEHICLE SPLITS

Time Period	Vehicle Type		
	Autos	Medium Trucks	Heavy Trucks
Daytime (7:00 a.m. - 7:00 p.m.)	77.50%	84.80%	86.50%
Evening (7:00 p.m. - 10:00 p.m.)	12.90%	4.90%	2.70%
Nighttime (10:00 p.m. - 7:00 a.m.)	9.60%	10.30%	10.80%
Total:	100.00%	100.00%	100.00%

Source: Typical Southern California vehicle mix.

TABLE 6-3: DISTRIBUTION OF TRAFFIC FLOW BY VEHICLE TYPE (VEHICLE MIX)

Roadway	Total % Traffic Flow			Total
	Autos	Medium Trucks	Heavy Trucks	
All Roadways	97.42%	1.84%	0.74%	100.00%

Source: Typical Southern California vehicle mix.

7 OFF-SITE TRAFFIC NOISE ANALYSIS

The Project would result in a small increase in regional and local traffic volumes. Because sources are calculated on a logarithmic scale, a doubling of the energy is required to generate a noise level increase of 3 dBA. In the case of traffic, a doubling of the traffic volume, without changing the vehicle speeds or mix ratio, results in a noise increase of 3 dBA.

Based on the Project trip generation analysis, the Project is anticipated to generate a net -5 new trips daily (22). Therefore, the Project's traffic volumes would not result in an increase on Eucalyptus Avenue or other area roadways greater than predicted in the original Esperanza Specific Plan or The Ontario Plan 2050 (TOP 2050). Off-site traffic noise impacts would continue to be *less than significant* under CEQA.

This page was intentionally left blank.

8 ON-SITE TRAFFIC NOISE ANALYSIS

An on-site exterior noise impact analysis has been completed to determine the noise exposure levels resulting from adjacent transportation noise sources in the Project study area and identify potential noise attenuation measures that would achieve acceptable Project exterior and interior noise levels. The primary source of transportation noise affecting the Project site is anticipated to be from Eucalyptus Avenue, Clifton Avenue, Chatham Street, and Amherst Avenue. The Project would also be exposed to nominal traffic noise from the Project's internal roads. However, due to the low traffic volume/speed, traffic noise from these internal roads will not substantially contribute to ambient noise conditions.

8.1 EXTERIOR NOISE ANALYSIS

The expected exterior noise levels for the on-site Project land uses were estimated using the FHWA traffic noise prediction model and the parameters outlined in Tables 6-1 to 6-3. Table 8-1 presents a summary of future on-site exterior traffic noise levels at Project building facades, including the Project 6-foot-high wall along Eucalyptus Avenue. The on-site traffic noise analysis calculations are provided in Appendix 8.1.

TABLE 8-1: EXTERIOR NOISE LEVELS

Building	Roadway	Unmitigated Exterior Noise Level (dBA CNEL)[2]	Land Use Compatibility[3]
BLDG 20	Eucalyptus Ave	59.3	*Clearly Acceptable*
BLDG 7-14	Eucalyptus Ave	59.4	*Clearly Acceptable*
BLDG 6	Eucalyptus Ave	59.4	*Clearly Acceptable*
BLDG 5-6	Clifton Ave	62.7	*Normally Acceptable*
BLDG 4	Clifton Ave	61.0	*Normally Acceptable*
BLDG 4	Chatham St	64.4	*Normally Acceptable*
BLDG 1-3	Chatham St	63.9	*Normally Acceptable*
BLDG 27-28	Chatham St	62.3	*Normally Acceptable*
BLDG 27	Amherst Ave	62.9	*Normally Acceptable*
BLDG 26-22	Amherst Ave	62.9	*Normally Acceptable*
BLDG 20-21	Amherst Ave	62.9	*Normally Acceptable*

[1] Project buildings shown on Exhibit 1-B.
[2] Exterior on-site traffic noise level calculations are included in Appendix 8.1.
[3] Based on the General Plan land use compatibility guidelines as shown in Exhibit 3-A.

The on-site exterior traffic noise analysis indicates that all buildings will experience exterior noise levels ranging from 59.3 to 64.4 CNEL. Based on the City of Ontario Land Use Compatibility for Community Noise Exposure shown in Exhibit 3-A, the Project land uses are considered clearly acceptable to normally acceptable with unmitigated exterior noise levels of less than 65 dBA CNEL. For *normally acceptable* exterior noise levels, a*coustical reports will be*

required for major new residential construction. Conventional construction with closed windows and fresh air supply systems of air conditioning will normally suffice.

In addition, the Project will satisfy the City of Ontario 65 dBA CNEL exterior noise level standards for residential land uses. This noise analysis shows that the Project will satisfy the City of Ontario 65 dBA CNEL exterior noise level standards for residential use without additional noise abatement measures.

8.1.4 EXTERIOR TRAFFIC NOISE LEVEL COMPLIANCE

Table 8-1 shows that on-site traffic noise levels do not exceed the City of Ontario 65 dBA CNEL exterior noise level standards for noise-sensitive residential land uses.

8.2 INTERIOR NOISE ANALYSIS

To ensure that the interior noise levels comply with the interior noise level standards, future exterior noise levels were calculated at the first-, second-, and third-floor building façade/balcony locations.

8.2.1 NOISE REDUCTION METHODOLOGY

The interior noise level is the difference between the predicted exterior noise level at the building facade and the noise reduction of the structure. Typical building construction will provide a Noise Reduction (NR) of approximately 12 dBA with "windows open" and a minimum 25 dBA noise reduction with "windows closed." (4) (23)

8.2.2 INTERIOR NOISE LEVEL ASSESSMENT

To provide the necessary interior noise level reduction, Tables 8-2 through 8-4 indicate that Project land uses adjacent to Eucalyptus Avenue, Clifton Avenue, Chatham Street, and Amherst Avenue will require a windows-closed condition and mechanical ventilation (e.g., air conditioning). Table 8-2 shows that the future noise levels at the first-floor building façade are expected to range from 59.3 to 64.4 dBA CNEL, and with standard construction, interior noise levels will range from 33.9 to 39.4 dBA CNEL. Table 8-3 shows that the future noise levels at the second-floor building façade are expected to range from 60.8 to 65.5 dBA CNEL, and with standard construction, interior noise levels will range from 38.5 to 40.5 dBA CNEL. Table 8-4 shows that the future noise levels at the third-floor building façade are expected to range from 60.4 to 65.3 dBA CNEL, and with standard construction, interior noise levels will range from 35.4 to 40.3 dBA CNEL.

8.2.3 INTERIOR TRAFFIC NOISE LEVEL COMPLIANCE

Tables 8-2 through 8-4 show that on-site interior traffic noise levels will not exceed the City of Ontario 45 dBA CNEL interior noise level standard for residential development and additional noise abatement measures are unnecessary.

TABLE 8-2: FIRST-FLOOR INTERIOR NOISE LEVELS (CNEL)

Building	Roadway	Noise Level at Façade[2]	Required Interior Noise Reduction[3]	Estimated Interior Noise Reduction[4]	Upgraded Windows[5]	Interior Noise Level[6]	Threshold[7]	Threshold Exceeded?
BLDG 20	Keller Rd.	59.3	14.3	25.0	No	34.3	45	No
BLDG 7-14	Keller Rd.	59.4	14.4	25.0	No	34.4	45	No

9 RECEIVER LOCATIONS

To assess the potential for long-term operational and short-term construction noise impacts, the following sensitive receiver locations, as shown in Exhibit 9-A, were identified as representative locations for analysis. Sensitive receivers are generally defined as locations where people reside or where the presence of unwanted sound could otherwise adversely affect the use of the land. Noise-sensitive land uses are generally considered to include schools, hospitals, single-family dwellings, mobile home parks, churches, libraries, and recreation areas. Moderately noise-sensitive land uses typically include multi-family dwellings, hotels, motels, dormitories, outpatient clinics, cemeteries, golf courses, country clubs, athletic/tennis clubs, and equestrian clubs. Land uses considered relatively insensitive to noise include business, commercial, and professional developments. Land uses typically unaffected by noise include industrial, manufacturing, utilities, agriculture, undeveloped land, parking lots, warehousing, liquid and solid waste facilities, salvage yards, and transit terminals.

To describe the potential off-site Project noise levels, six receiver locations in the vicinity of the Project site were identified. The selection of receiver locations is based on FHWA guidelines and is consistent with additional guidance provided by Caltrans and the FTA. Other sensitive land uses in the Project study area located at greater distances than those identified in this noise study will experience lower noise levels than those presented in this report due to the additional attenuation from distance and the shielding of intervening structures. Distance is measured in a straight line from the project boundary to each receiver location.

R1: Location R1 represents the future residential area east of Clifton Avenue, approximately 83 feet east of the Project site. Receptor R1 is placed at the nearest potential location for future housing facing the Project site.

R2: Location R2 represents the future residential area northeast of the intersection of Clifton Avenue and Chatham Street, approximately 92 feet northeast of the Project site. Receptor R2 is placed at the nearest potential location for future housing facing the Project site.

R3: Location R3 represents the future park north of Chatham Street, approximately 75 feet north of the Project site. Receptor R3 is placed at the nearest potential location within the park use facing the Project site.

R4: Location R4 represents an existing residence at 4508 S. Amherst Avenue, approximately 130 feet west of the Project site. Receptor R4 is placed at the private outdoor living areas (backyards) facing the Project site.

R5: Location R5 represents the existing residence at 4095 E. Amigos Privado, approximately 202 feet south of the Project site. Receptor R5 is placed at the private outdoor living areas (backyards) facing the Project site.

R6: Location R6 represents the existing residence at 4556 S. Afton Privado, approximately 142 feet southeast of the Project site. Receptor R6 is placed at the private outdoor living areas (backyards) facing the Project site.

EXHIBIT 9-A: RECEIVER LOCATIONS

10 OPERATIONAL NOISE ANALYSIS

The Project is considered a noise-sensitive receiving land use and is not expected to include any specific type of operational noise levels beyond those typically associated with residential land uses in the Project study area. Additionally, Section 21085 of the California Public Resources Code states in part, "…for residential projects, the effects of noise generated by project occupants and their guests on human beings is not a significant effect on the environment." (29) A review of the legislative record indicates the author's intent for Section 21085 was to "remove the potential for litigants to challenge residential development based on the speculation that the new residents will create unwanted noises. It would also reestablish existing precedent that minor and intermittent noise nuisances, such as from unamplified human voices, be addressed through local nuisance ordinances and not via CEQA. Consequently, activities solely associated with occupants and quests, such as the swimming pool/spa activities, dog park activities, and outdoor activities in common spaces, are not considered part of this operational noise analysis for CEQA." Based on the intent of the author of Section 21085, the operational noise sources are limited to the mechanical and non-verbal noise sources that occur onsite, including air conditioning units, trash enclosure activity, and parking lot movements.

Therefore, this section analyzes the potential operational noise impacts at the nearby receiver locations, identified in Section 9, resulting from the operation of air conditioning units, trash enclosure activity, and parking lot movements. Exhibit 10-A identifies the noise source locations used to assess the equivalent Leq operational noise levels.

10.1 OPERATIONAL NOISE SOURCES

The proposed development is considered a noise-sensitive receiving land use and is not expected to include any operational noise source activities that would impact existing residential land uses. Operational noise sources associated with residential development are generally limited to Project construction and maintenance. However, to assess the potential operational noise source activities from the Project, this section analyzes the noise impacts resulting from the operation associated with the proposed air conditioning units, trash enclosure activity, and parking lot movements.

AIR CONDITIONING UNITS

To assess the noise levels generated by the air conditioning units, reference noise levels were taken from equipment specifications for a 3- to 5-ton residential packaged air conditioning unit (Carrier 24ABC6); see Appendix 10.1. The air conditioning units were modeled as operating 45 minutes per hour during the daytime and 30 minutes at night, representing the typical maximum operating time for properly sized AC systems. The air conditioning units are anticipated to be located 3 feet above ground level. At a uniform reference distance of 50 feet, the units would generate a reference noise level of 44.4 dBA L_{eq}.

EXHIBIT 10-A: OPERATIONAL NOISE SOURCE LOCATIONS

TRASH ENCLOSURE ACTIVITY

To describe the noise levels associated with trash enclosure activity, Urban Crossroads collected a reference noise level measurement at an existing trash enclosure containing two dumpster bins at the Old Town West Parking structure in the City of Orange. The trash enclosure noise levels describe metal gates opening and closing, metal scraping against concrete floor sounds, dumpster movement on metal wheels, and trash dropping into the metal dumpster. The reference noise levels describe trash enclosure noise activities when trash is dropped into an empty metal dumpster, as would occur at the Project site. The measured reference noise level at the uniform 50-foot reference distance is 72.7 dBA L_{max} and 57.4 dBA L_{eq} for the trash enclosure activity. The reference noise level describes the expected noise source activities associated with the Project trash enclosures. Typical trash enclosure activities are estimated to occur for 10 minutes per hour.

PARKING LOT ACTIVITIES

Parking activities are based on the area of the parking spaces. The Project includes approximately 56 new uncovered surface parking spaces on-site. The surface parking spaces are assumed to have up to 2 movements per hour for 112 events per hour. Based on studies conducted in Europe and Australia, the average parking procedure, which included movement associated with either entering or exiting the parking area, parking the vehicles, and opening and closing doors, resulted in a sound power level of approximately 63 dBA L_w/square meter per event (24) (25).

10.2 REFERENCE NOISE LEVELS

To estimate the operational noise impacts, reference noise level measurements were collected from similar types of activities to represent the noise levels expected with the development of the Project. While sound pressure levels (e.g., L_{eq}) quantify in decibels the intensity of given sound sources at a reference distance, sound power levels (L_w) are connected to the sound source and are independent of distance. Sound pressure levels vary substantially with distance from the source and diminish because of intervening obstacles (e.g., walls, buildings, etc.), air absorption, wind, and other factors. Sound power is the acoustic energy emitted by the sound source and is an absolute value not affected by the environment. The reference project operational noise levels are based on the Project related noise sources shown in Exhibit 10-A. The reference Project's operational sound power levels are summarized in Table 10-1.

TABLE 10-1: REFERENCE NOISE LEVELS

Noise Source	Noise Source Height (Feet)	Min./Hour[4]			Sound Power Level (dBA)[6]
		Day	Night	@ 50 Feet	
Air Conditioning Units[1]	3'	45	30	44.4	76.0
Trash Enclosure Activity[2]	8'	10	10	57.4	89.0
Parking Lot Movements[3]	5'	60	60	31.4	63.0

"Daytime" = 7:00 a.m. to 10:00 p.m.; "Nighttime" = 10:00 p.m. to 7:00 a.m.

10.3 CADNAA NOISE PREDICTION MODEL

To fully describe the exterior operational noise levels from the Project, Urban Crossroads, Inc. developed a noise prediction model using the CadnaA (Computer Aided Noise Abatement) computer program. CadnaA can analyze multiple types of noise sources using the spatially accurate Project site plan, georeferenced Nearmap aerial imagery, topography, buildings, and barriers in its calculations to predict outdoor noise levels.

Using the ISO 9613 protocol, CadnaA will calculate the distance from each noise source to the noise receiver locations, using the ground absorption, distance, and barrier/building attenuation inputs to provide a summary of the noise level at each receiver and the partial noise level contributions by noise source. Consistent with the ISO 9613 protocol, the CadnaA noise prediction model relies on the reference sound power level (L_w) to describe individual noise sources. While sound pressure levels (e.g., L_{eq}) quantify in decibels the intensity of given sound sources at a reference distance, sound power levels (L_w) are connected to the sound source and are independent of distance. Sound pressure levels vary substantially with distance from the source and diminish because of intervening obstacles (e.g., walls, buildings, terrain, etc.), air absorption, wind, and other factors. Sound power is the acoustic energy emitted by the sound source and is an absolute value not affected by the environment.

The operational noise level calculations in this noise study account for the distance attenuation provided due to geometric spreading, when sound from a localized stationary source (i.e., a point source) propagates uniformly outward in a spherical pattern. A default ground attenuation factor of 0.5 was used in the noise analysis to account for mixed ground representing a combination of hard and soft surfaces. Appendix 10.2 includes the detailed noise model inputs used to estimate the Project operational noise levels presented in this section.

10.4 PROJECT OPERATIONAL NOISE LEVELS

Using the reference noise levels to represent the Project operations that include air conditioning units, trash enclosure activity, and parking lot movements, Urban Crossroads, Inc. calculated the unmitigated operational source noise levels expected to be generated at the Project site and the Project-related noise level increases that would be experienced at each of

the sensitive receiver locations. Table 10-2 shows the Project's operational daytime noise levels. The hourly noise levels at the off-site receiver locations are expected to range from 38.3 to 46.4 dBA L_{eq}. Appendix 10.2 includes the detailed noise model inputs used to estimate the Project operational noise levels presented in this section.

TABLE 10-2: PROJECT DAYTIME OPERATIONAL NOISE LEVELS

Noise Source[1]	Operational Noise Levels by Receiver Location (dBA L_{eq})					
	R1	R2	R3	R4	R5	R6
Air Conditioning Units	45.7	37.4	39.8	43.3	38.8	37.9

[1] See Exhibit 10-A for the noise source locations. CadnaA noise model calculations are included in Appendix 10.2.

10.5 PROJECT OPERATIONAL NOISE LEVEL COMPLIANCE

To demonstrate compliance with local noise regulations, the Project-only operational noise levels are evaluated against exterior noise level thresholds based on the City of Ontario exterior noise level standards at the nearest noise-sensitive receiver locations. Table 10-4 shows the operational noise levels associated with the Project will satisfy the City of Ontario 65 dBA L_{eq} daytime and 45 dBA L_{eq} nighttime exterior noise level standards at all the nearest receiver locations. Therefore, the operational noise impacts are considered *less than significant* at the nearest noise-sensitive receiver locations.

TABLE 10-4: OPERATIONAL NOISE LEVEL COMPLIANCE

Receiver Location[1]	Project Operational Noise Levels (dBA Leq)[2]		Noise Level Standards (dBA Leq)[3]		Noise Level Standards Exceeded?[4]	
	Daytime	Nighttime	Daytime	Nighttime	Daytime	Nighttime
R1	46.4	44.1	65	45	No	No
R2	38.3	36.0	65	45	No	No
R3	40.3	37.8	65	45	No	No

R6	38.4	35.8	65	45	No	No

[1] See Exhibit 9-A for the receiver locations.
[2] Project operational noise levels as shown in Tables 10-2 and 10-3.
[3] City of Ontario Municipal Code, Section 5-29.04 (Appendix 3.1)
[4] Do the estimated Project operational noise source activities exceed the noise level standards?
"Daytime" = 7:00 a.m. to 10:00 p.m.; "Nighttime" = 10:00 p.m. to 7:00 a.m.

10.6 PROJECT OPERATIONAL NOISE LEVEL INCREASES

To describe the Project operational noise level increases, the Project operational noise levels are combined with the existing ambient noise level measurements for the nearest receiver locations potentially impacted by Project operational noise sources. Since the units used to measure noise, decibels (dB), are logarithmic units, the Project-operational and existing ambient noise levels cannot be combined using standard arithmetic equations. (2) Instead, they must be logarithmically added using the following base equation:

$$SPL_{Total} = 10\log_{10}[10^{SPL1/10} + 10^{SPL2/10} + \ldots 10^{SPLn/10}]$$

Where “SPL1,” “SPL2,” etc. are equal to the sound pressure levels being combined, or in this case, the Project-operational and existing ambient noise levels. The difference between the combined Project and ambient noise levels describes the Project noise level increases to the existing ambient noise environment. Noise levels that would be experienced at receiver locations when Project-source noise is added to the daytime and nighttime ambient conditions are presented in Tables 10-2 and 10-3, respectively.

As indicated in Table 10-5, the Project will generate daytime operational noise level increases ranging from less than 0.1 to 0.8 dBA L_{eq} at the nearest receiver locations. According to Table 10-6, the Project will generate nighttime operational noise level increases ranging from approximately 0.1 to 4.7 dBA L_{eq} at the nearest receiver locations. In effect, the amount to which a given noise level increase is considered acceptable is reduced based on existing ambient noise conditions. Based on the result shown in Tables 10-5 and 10-6, the Project-related operational noise level increases will satisfy the operational noise level increase criteria at the nearest sensitive receiver locations, and noise level increases will be *less than significant.*

11 CONSTRUCTION ANALYSIS

This section analyzes potential impacts resulting from the short-term construction activities associated with the development of the Project. Exhibit 11-A shows the construction activity boundaries in relation to the nearest sensitive receiver locations previously described in Section 9.

To prevent high levels of construction noise from impacting noise-sensitive land uses, section 5-29.09 of the Ontario Municipal Code states: *No person, while engaged in construction, remodeling, digging, grading, demolition or any other related building activity, shall operate any tool, equipment or machine in a manner that produces loud noise that disturbs a person of normal sensitivity who works or resides in the vicinity, or a Police or Code Enforcement Officer, on any weekday except between the hours of 7:00 a.m. and 6:00 p.m. or on Saturday or Sunday between the hours of 9:00 a.m. and 6:00 p.m.* (12)

While the City establishes limits to the hours during which construction activity may take place, it does not identify specific noise level limits for construction noise levels at potentially affected receiver locations for CEQA analysis purposes. Therefore, a numerical construction threshold based on the Federal Transit Administration (FTA) Transit Noise and Vibration Impact Assessment Manual is used for the analysis of daytime construction impacts. The FTA considers a daytime exterior construction noise level of 80 dBA L_{eq} as a reasonable threshold for noise-sensitive residential land use. (8 p. 179).

11.1 CONSTRUCTION NOISE LEVELS

The FTA *Transit Noise and Vibration Impact Assessment Manual* recognizes that construction projects are accomplished in several different stages and outlines the procedures for assessing noise impacts during construction. Each stage has a specific equipment mix, depending on the work to be completed during that stage. As a result of the equipment mix, each stage has its own noise characteristics; some stages have higher continuous noise levels than others, and some have higher impact noise levels than others. The Project construction activities are expected to occur in the following stages:

- Site Preparation
- Grading
- Building Construction
- Paving
- Architectural Coating

11.2 CONSTRUCTION REFERENCE NOISE LEVELS

To describe construction noise activities, this construction noise analysis was prepared using reference construction equipment noise levels from the Federal Highway Administration (FHWA) published the Roadway Construction Noise Model (RCNM), which includes a national database of construction equipment reference noise emission levels. (26) The RCNM equipment database provides a comprehensive list of the noise-generating characteristics for specific types of construction equipment. In addition, the database provides an acoustical usage

factor to estimate the fraction of time each piece of construction equipment is operating at full power (i.e., its loudest condition) during a construction operation.

[1] FHWA Road Construction Noise Model.

11.3 CONSTRUCTION NOISE ANALYSIS

Using the reference construction equipment noise levels and the CadnaA noise prediction model, calculations of the Project construction noise level impacts at the nearby sensitive receiver locations were completed. Consistent with FTA guidance for general construction noise assessment, Table 11-1 presents the combined noise levels for the loudest construction equipment, assuming they operate at the same time. As shown in Table 11-2, the construction noise levels are expected to range from 59.5 to 67.6 dBA L_{eq} at the nearby receiver locations. Appendix 11.1 includes the detailed CadnaA construction noise model inputs.

TABLE 11-2: CONSTRUCTION EQUIPMENT NOISE LEVEL SUMMARY

Receiver Location[1]	Construction Noise Levels (dBA L_{eq})					
	Site Preparation	Grading	Building Construction	Paving	Architectural Coating	Highest Levels[2]
R1	64.0	65.3	63.2	58.9	57.2	67.6

[1] Noise receiver locations are shown in Exhibit 9-A.
[2] Construction noise level calculations are based on distance from the construction activity, measured from the Project site boundary to the nearest receiver locations. CadnaA construction noise model inputs are included in Appendix 11.1.

11.4 CONSTRUCTION NOISE LEVEL COMPLIANCE

To evaluate whether the Project will generate potentially significant short-term noise levels at the nearest receiver locations, a construction-related daytime noise level threshold of 80 dBA L_{eq} is used as a reasonable threshold to assess the daytime construction noise level impacts. The construction noise analysis shows that the nearest receiver locations will satisfy the reasonable daytime 80 dBA L_{eq} significance threshold during Project construction activities, as shown in Table 11-3. Therefore, the noise impacts due to Project construction noise are considered *less than significant* at all receiver locations.

TABLE 11-3: CONSTRUCTION NOISE LEVEL COMPLIANCE

Receiver Location[1]	Construction Noise Levels (dBA L_{eq})		
	Highest Construction Noise Levels[2]	Threshold[3]	Threshold Exceeded?[4]
R1	67.6	80	No
R2	66.1	80	No
R3	66.6	80	No
R4	63.3	80	No
R5	59.5	80	No
R6	64.3	80	No

[1] Noise receiver locations are shown in Exhibit 9-A.
[2] Highest construction noise level calculations based on distance from the construction noise source activity to the nearest receiver locations, as shown in Table 11-2.
[3] Construction noise level thresholds as shown in Table 4-1.
[4] Do the estimated Project construction noise levels exceed the construction noise level threshold?

11.5 CONSTRUCTION VIBRATION ANALYSIS

Construction activity can result in varying degrees of ground vibration, depending on the equipment and methods employed. Operation of construction equipment causes ground vibrations that spread through the ground and diminish in strength with distance. Ground vibration levels associated with various types of construction equipment are summarized in Table 11-4. Based on the representative vibration levels presented for various construction equipment types, it is possible to estimate the potential for human response (annoyance) and building damage using the following vibration assessment methods defined by the FTA. To describe the vibration impacts, the FTA provides the following equation: $PPV_{equip} = PPV_{ref} \times (25/D)^{1.5}$

TABLE 11-4: VIBRATION SOURCE LEVELS FOR CONSTRUCTION EQUIPMENT

Equipment	PPV (in/sec) at 25 feet
Small bulldozer	0.003
Jackhammer	0.035
Loaded Trucks	0.076
Large bulldozer	0.089

Federal Transit Administration, Transit Noise and Vibration Impact Assessment Manual

Table 11-5 presents the expected Project related vibration levels at the nearby receiver locations. At distances ranging from 75 to 202 feet from Project construction activities, construction vibration velocity levels are estimated to range from less than 0.01 to 0.02 in/sec PPV. Based on the maximum acceptable continuous vibration threshold of 0.30 PPV (in/sec), the typical Project construction vibration levels will fall below the building damage thresholds at all the receiver locations. Therefore, the Project-related vibration impacts are considered *less than significant* during typical construction activities at the Project site. Moreover, the vibration levels reported at the sensitive receiver locations are unlikely to be sustained during the entire construction period but will occur rather only during the times that heavy construction equipment is operating adjacent to the Project site perimeter.

Moreover, the impacts at the site of the nearest sensitive receiver locations are unlikely to be sustained during the entire construction period but will occur rather only during the times that heavy construction equipment is operating adjacent to the Project site perimeter.

TABLE 11-5: PROJECT CONSTRUCTION VIBRATION LEVELS

Receiver[1]	Distance to Const. Activity (Feet)[2]	Typical Construction Vibration Levels PPV (in/sec)[3]					Thresholds PPV (in/sec)[4]	Thresholds Exceeded?[5]
		Small bulldozer	Jackhammer	Loaded Trucks	Large bulldozer	Highest Vibration Level		
R1	82'	0.00	0.01	0.01	0.01	0.01	0.3	No
R2	92'	0.00	0.00	0.01	0.01	0.01	0.3	No
R3	75'	0.00	0.01	0.01	0.02	0.02	0.3	No
R4	130'	0.00	0.00	0.01	0.01	0.01	0.3	No
R5	202'	0.00	0.00	0.00	0.00	0.00	0.3	No
R6	142'	0.00	0.00	0.01	0.01	0.01	0.3	No

Sec. 5-29.01. Declaration of findings and policy.

It is hereby found and declared that:

(a) The making and creation of excessive, unnecessary or unusually loud noises within the limits of the City is a condition that has existed for some time, however, the extent and volume of such noises is increasing;

(b) The making, creation or maintenance of such excessive, unnecessary, unnatural or unusually loud noises that are prolonged, unusual and unnatural in their time, place and use affect and are a detriment to public health, comfort, convenience, safety, welfare and prosperity of the residents of the City; and

(c) The necessity in the public interest for the provisions and prohibitions hereinafter contained and enacted, is declared as a matter of legislative determination and public policy, and it is further declared that the provisions and prohibitions hereinafter contained and enacted are in pursuance of and for the purpose of securing and promoting the public health, comfort, convenience, safety, welfare and prosperity and the peace and quiet of the residents of the City.

(§ 2, Ord. 2888, eff. March 6, 2008)

Sec. 5-29.02. Definitions.

As used in this chapter, specific words and phrases are defined as follows:

(a) "Ambient noise level" shall mean the all-encompassing noise level associated with a given environment and is a composite of sounds from all sources, excluding the alleged offensive noise or excessive sound, at the location and approximate time at which a comparison with the alleged offensive noise is to be made.

(b) "Applicable (noise) zone" shall mean the noise zone category based on the actual use of the property, provided that the actual use is a legal use in the City.

(c) "A-weighted sound level" shall mean the sound pressure level in decibels (dBAs) as measured with a sound level meter using the A-weighted filter network (scale) at slow response and at a pressure of twenty (20) micropascals. The A-weighted filter de-emphasizes the very low and a very high frequency component of sound in a manner similar to the response of the human ear, and is a numerical method of rating human judgment of loudness.

(d) "Decibel (dBA)" shall mean a unit for measuring the amplitude of a sound, equal to twenty (20) times the logarithm to the base ten (10) of the ratio of pressure of the sound measured to the reference pressure of twenty (20) micropascals.

(e) "Equivalent sound or noise level (Leq)" shall mean the International Electrotechnical Commission (IEC) 60804 Standard for measurement, or the most recent revision thereof, for the sound level corresponding to a steady state noise level over a given sample period with the same amount of acoustic energy as the actual time varying noise level or the energy average noise level during the sample period. The measurement period for the purposes of this chapter is fifteen (15) minutes.

(f) "Impulsive noise" shall mean a noise of short duration usually less than one (1) second and of high intensity, with an abrupt onset and rapid decay. Such objectionable noises may also be repetitive.

(g) "Intrusive noise" shall mean that noise that intrudes over and above the ambient noise at a given location. The relative intrusiveness of a sound depends upon its amplitude, duration, frequency, time of occurrence and tonal information content, as well as the prevailing ambient noise level.

(h) "Maintenance" shall mean the upkeep, repair or preservation of existing property or structures.

(i) "Noise" shall mean any unwanted sound or sound that is undesirable because it interferes with speech and hearing, or is intense enough to damage hearing or is otherwise annoying.

(j) "Noise level (sound level)" shall mean the weighted sound pressure level obtained by use of a sound level meter having a standard frequency filter for attenuating part of the sound spectrum. For purposes of this chapter, all noise levels (sound levels) shall be A-weighted sound pressure level.

(k) "Noise (sound) level meter" shall mean an instrument, including a microphone, an amplifier, an output meter and frequency weighting networks for the measurement and determination of noise and sound levels. For the purposes of this chapter, the sound level meter must meet the International Electrotechnical Commission (IEC) 60651 and 60804 Standards, or the most recent revisions thereof, for Type 1 sound level meters or an instrument and the associated recording and analyzing equipment that will provide equivalent data.

(§ 2, Ord. 2888, eff. March 6, 2008)

Sec. 5-29.03. Designated noise zones.

The properties hereinafter described shall be assigned to the following noise zones:

Noise Zone I:	All single-family residential properties;
Noise Zone II:	All multi-family residential properties and mobile home parks;
Noise Zone III:	All commercial property;
Noise Zone IV:	The residential portion of mixed use properties;
Noise Zone V:	All manufacturing or industrial properties and all other uses.

The actual use of the property, and not necessarily its zoning designation, shall be the determining factor in establishing whether a property is in Noise Zone I, II, III, IV or V, provided that the actual use is a legal use within the applicable zone.

(§ 2, Ord. 2888, eff. March 6, 2008)

Sec. 5-29.04. Exterior noise standards.

(a) The following exterior noise standards, unless otherwise specifically indicated, shall apply to all properties within a designated noise zone.

Allowable Exterior Noise Level (1)		***Allowed Equivalent Noise Level, Leq. (2)***	
Noise Zone	***Type of Land Use***	***7 a.m. to 10 p.m.***	***10 p.m. to 7 a.m.***
I	Single-Family Residential	65 dBA	45 dBA
II	Multi-Family Residential, Mobile Home Parks	65 dBA	50 dBA
III	Commercial Property	65 dBA	60 dBA
IV	Residential Portion of Mixed Use	70 dBA	70 dBA
V	Manufacturing and Industrial, Other Uses	70 dBA	70 dBA

(1) If the ambient noise level exceeds the resulting standard, the ambient noise level shall be the standard.

(2) Measurements for compliance are made on the affected property pursuant to § 5-29.15.

(b) It is unlawful for any person at any location within the incorporated area of the City to create noise, or to allow the creation of any noise on property owned, leased, occupied or otherwise controlled by such person, which noise causes the noise level, when measured at any location on any other property, to exceed either of the following:

(1) The noise standard for the applicable zone for any fifteen-minute (15) period; and

(2) A maximum instantaneous (single instance) noise level equal to the value of the noise standard plus twenty (20) dBA for any period of time (measured using A-weighted slow response).

(c) In the event the ambient noise level exceeds the noise standard, the maximum allowable noise level under such category shall be increased to reflect the maximum ambient noise level.

(d) The Noise Zone IV standard shall apply to that portion of residential property falling within one hundred (100) feet of a commercial property or use, if the noise originates from that commercial property or use.

(e) If the measurement location is on a boundary between two (2) different noise zones, the lower noise level standard applicable to the noise zone shall apply.

(§ 2, Ord. 2888, eff. March 6, 2008)

Sec. 5-29.05. Interior noise standards.

(a) The following interior noise standards, unless otherwise specifically indicated, shall apply to all properties within a designated noise zone.

Allowable Interior Noise Level (1)		**Allowed Equivalent Noise Level, Leq.** (2)	
Noise Zone	***Type of Land Use***	***7 a.m. to 10 p.m.***	***10 p.m. to 7 a.m.***
I	Single-Family Residential	45 dBA	40 dBA
II	Multi-Family Residential, Mobile Home Parks	45 dBA	40 dBA
IV	Residential Portion of Mixed Use	45 dBA	40 dBA

(1) If the ambient noise level exceeds the resulting standard, the ambient noise level shall be the standard.

(2) Measurements for compliance are made on the affected property pursuant to § 5-29.15.

(b) It is unlawful for any person at any location within the incorporated area of the City to create noise, or to allow the creation of any noise on property owned, leased, occupied or otherwise controlled by such person, which noise causes the noise level, when measured at any location on any other property, to exceed either of the following:

(1) The noise standard for the applicable zone for any fifteen-minute (15) period;

(2) A maximum instantaneous (single instance) noise level equal to the value of the noise standard plus twenty (20) dBA for any period of time (measured using A-weighted slow response).

(c) In the event the ambient noise level exceeds the noise standard, the maximum allowable noise level under such category shall be increased to reflect the maximum ambient noise level.

(d) The Noise Zone IV standard shall apply to that portion of residential property falling within one hundred (100) feet of a commercial property or use, if the noise originates from that commercial property or use.

(e) If the measurement location is on a boundary between two (2) different noise zones, the lower noise level standard applicable to the noise zone shall apply.

(§ 2, Ord. 2888, eff. March 6, 2008)

Sec. 5-29.06. Exemptions.

The following activities shall be exempted from the provisions of this chapter:

(a) Any activity conducted on public property, or on private property with the consent of the owner, by any public entity or its officers, employees, representatives, agents, subcontractors, permittees, licensees or lessees that the public entity has authorized are exempt from the provisions of this chapter. This includes, without limitation, sporting and recreational activities that are sponsored, co-sponsored, permitted or allowed by the City or any school district within the City's jurisdictional boundaries. This also includes, without limitation, occasional outdoor gatherings, public dances, shows or sporting and entertainment events, provided such events are conducted pursuant to an approval, authorization, contract, lease, permit or sublease by the appropriate public entity, specifically the planning commission or City Council;

(b) Occasional outdoor gatherings, public dances, show, sporting and entertainment events, provided said events are conducted pursuant to a permit or license issued by the appropriate jurisdiction relative to the staging of said events;

(c) Any mechanical device, apparatus or equipment used, related to or connected with emergency machinery, vehicle, work or warning alarm or bell, provided the sounding of any bell or alarm on any building or motor vehicle shall terminate its operation within forty-five (45) minutes in any hour of its being activated;

(d) Noise sources associated with construction, repair, remodeling, demolition or grading of any real property. Such activities shall instead be subject to the provisions of § 5-29.09;

(e) Noise sources associated with construction, repair, remodeling, demolition or grading of public rights-of-way or during authorized seismic surveys;

(f) All mechanical devices, apparatus or equipment associated with agriculture operations provided that:

(1) Operations do not take place between 8:00 p.m. and 7:00 a.m.;

(2) Such operations and equipment are utilized for the protection or salvage of agricultural crops during periods of potential or actual frost damage or other adverse weather conditions; or

(3) Such operations and equipment are associated with agricultural pest control through pesticide application, provided the application is made in accordance with permits issued by or regulations enforced by the California Department of Agriculture;

(g) Noise sources associated with the maintenance of real property. Such activities shall instead be subject to the provisions of § 5-29.08;

(h) Any activity to the extent regulation thereof has been preempted by state or federal law;

(i) Any noise sources associated with people and/or music associated with a party at a residential property. Such noise shall be subject to the provisions of OMC § 5-29.07;

(j) Any noise source emanating from an ice cream truck within the City. Such noise shall be subject to the provisions of OMC § 4-18.04;

(k) Any noise sources associated with barking dogs or other intermittent noises made by animals on any properly within the City. Such noise shall be subject to the provisions of OMC Chapter 1, Title 6;

(l) Noise sources related to uses approved by a permit or development agreement adopted prior to the date of adoption of this chapter and that contains acoustic or noise standard conditions of approval. This exemption shall only be applicable during the effective period of the City-approved permit or development agreement.

(§ 2, Ord. 2888, eff. March 6, 2008)

Sec. 5-29.07. Loud and disturbing noise.

(a) It is unlawful for any person or property owner within the City to make, cause or allow to be made any loud, excessive, impulsive or intrusive noise, disturbance or commotion that disturbs the peace or quiet of any area or that causes discomfort or annoyance to any reasonable person of normal sensitivities in the area, after a Police or Code Enforcement Officer has first requested that the person or property owner cease and desist from making such noise. The types of loud, disturbing, excessive, impulsive or intrusive noise may include, but shall not be limited to, yelling, shouting, hooting, whistling, singing, playing a musical instrument, or emitting or transmitting any loud music or noise from any mechanical or electrical sound making or sound-amplifying device.

(b) The factors, standards, and conditions that may be considered in determining whether a violation of the provisions of this section has been committed, included, but not limited to, the following:

(1) The level of the noise;

(2) The level and intensity of the background (ambient) noise, if any;

(3) The proximity of the noise to residential or commercial sleeping areas;

(4) The nature and zoning of the area within which the noise emanates;

(5) The density of inhabitation of the area within which the noise emanates;

(6) The time of day and night the noise occurs;

(7) The duration of the noise;

(8) Whether the noise is constant, recurrent or intermittent;

(9) Whether the noise is produced by a commercial or noncommercial activity; and

(10) Whether the use is lawful under the provisions of Title 5 of this Code and whether the noise is one that could reasonably be expected from the activity or allowed use.

(§ 2, Ord. 2888, eff. March 6, 2008)

Sec. 5-29.08. Real property maintenance noise regulations.

(a) No person, while engaged in maintenance of real property, shall operate any tool, equipment or machine in a manner that produces loud noise that disturbs a person of normal sensitivity who works or resides in the vicinity, or a Police or Code Enforcement Officer, except between the hours of 8:00 a.m. and 6:00 p.m.

(b) Trimming or pruning that requires the use of chainsaws or mulching machines shall only be allowed between the hours of 8:00 a.m. and 6:00 p.m. on a weekday and between the hours of 9:00 a.m. and 5:00 p.m. on Saturday or Sunday.

(c) The use of electrical or gasoline powered blowers, such as commonly used by gardeners or other persons for cleaning lawns, yards, driveways, gutters and other property shall only be allowed between the hours of 8:00 a.m. and 6:00 p.m. on a weekday and between the hours of 9:00 a.m. and 5:00 p.m. on Saturday or Sunday.

(d) No landowner, gardener, property maintenance service, contractor, subcontractor or employer shall permit or allow any person or persons working under his or her direction or control to operate any tool, equipment or machine in violation of the provisions of this section.

(e) Exceptions. The provisions of this section shall not apply to the following:

(1) Emergency property maintenance required by the building official;

(2) The maintenance, repair or improvement of any public work or facility by public employees, by any person or persons acting pursuant to a public works contract, or by any person or persons performing such work or pursuant to the direction of, or on behalf of, any public agency; provided, however, this exception shall not apply to the City, or its employees, contractors or agents, unless:

(i) The City Manager or department head determines that the maintenance, repair or improvement is immediately necessary to maintain public service,

(ii) The maintenance, repair or improvement is of a nature that cannot feasibly be conducted during normal business hours, or

(iii) The City Council has approved project specifications, contract provisions, or an environmental document that specifically authorizes maintenance during hours of the day that would otherwise be prohibited pursuant to this section; and

(3) Any maintenance that complies with the noise limits specified in § 5-29.04.

(§ 2, Ord. 2888, eff. March 6, 2008)

Sec. 5-29.09. Construction activity noise regulations.

(a) No person, while engaged in construction, remodeling, digging, grading, demolition or any other related building activity, shall operate any tool, equipment or machine in a manner that produces loud noise that disturbs a person of normal sensitivity who works or resides in the vicinity, or a Police or Code Enforcement Officer, on any weekday except between the hours of 7:00 a.m. and 6:00 p.m. or on Saturday or Sunday between the hours of 9:00 a.m. and 6:00 p.m.

(b) No landowner, construction company owner, contractor, subcontractor, or employer shall permit or allow any person or persons working under their direction and control to operate any tool, equipment or machine in violation of the provisions of this section.

(c) Exceptions.

(1) The provisions of this section shall not apply to emergency construction work performed by a private party when authorized by the City Manager or his or her designee;

(2) The maintenance, repair or improvement of any public work or facility by public employees, by any person or persons acting pursuant to a public works contract, or by any person or persons performing such

work or pursuant to the direction of, or on behalf of, any public agency; provided, however, this exception shall not apply to the City, or its employees, contractors or agents, unless:

(i) The City Manager or a department head determines that the maintenance, repair or improvement is immediately necessary to maintain public services,

(ii) The maintenance, repair or improvement is of a nature that cannot feasibly be conducted during normal business hours, or

(iii) The City Council has approved project specifications, contract provisions, or an environmental document that specifically authorizes construction during hours of the day that would otherwise be prohibited pursuant to this section; and

(3) Any construction that complies with the noise limits specified in §§ 5-29.04 or 5-29.05.

(§ 2, Ord. 2888, eff. March 6, 2008)

Sec. 5-29.10. Other public agency exceptions.

The provisions of this chapter shall not be construed to prohibit any work at different hours by or under the direction of any other public agency or public or private utility companies in cases of necessity or emergency.

(§ 2, Ord. 2888, eff. March 6, 2008)

Sec. 5-29.11. Schools, day care centers, churches, libraries, museums, health care institutions; Special provisions.

It is unlawful for any person to create any noise that causes the outdoor noise level at any school, day care center, hospital or similar health care institution, church, library or museum while the same is in use, to exceed the noise standards specified in § 5-29.04 prescribed for the assigned Noise Zone I.

(§ 2, Ord. 2888, eff. March 6, 2008)

Sec. 5-29.12. Sound amplifying equipment.

Loudspeakers, sound amplifiers, public address systems or similar devices used to amplify sounds shall be subject to the provisions of § 5-29.13. Such sound amplifying equipment shall not be construed to include electronic devices, including but not limited to, radios, tape players, tape recorders, compact disc players, MP3 players, electric keyboards, music synthesizers, record players or televisions, which are designed and operated for personal use, or used entirely within a building and are not designed or used to convey the human voice, music or any other sound to an audience outside such building, or which are used in vehicles and heard only by occupants of the vehicle in which installed.

(§ 2, Ord. 2888, eff. March 6, 2008)

Sec. 5-29.13. Amplified sound.

(a) The City Council enacts the following legislation for the sole purpose of securing and promoting the public health, comfort, safety and welfare for its citizenry. While recognizing that the use of sound amplifying equipment may be entitled to certain protection by the constitutional rights of freedom of speech and assembly, the City Council finds that in order to protect the public safety and the correlative rights of the citizens of this community to privacy and freedom from public nuisance of loud and unnecessary noise, reasonable regulation of the time, place and manner of the use of amplifying equipment is necessary. In no event shall approval or authorization required herein be withheld by reason of the constitutionally protected content of any material proposed to be broadcast through amplifying equipment.

(b) It is unlawful for any person, other than personnel of law enforcement or governmental agencies, to install, use or operate a loudspeaker or sound amplifying device in a fixed or movable position or mounted upon any vehicle within the City for the purpose of giving instructions, directions, talks, addresses or lectures to any persons or assemblages of persons in or upon any street, alley, sidewalk, park, place or public property without a permit to do so from the Police Chief or his or her designee. Notwithstanding any other provision of this chapter, the provisions of this section shall also apply to the use of sound amplifying equipment upon public or private property when used in connection with outdoor or indoor public or private events, whether or

not admission is charged or food or beverages are sold, when such activity is to be attended by more than one hundred (100) persons and the noise emanating from the event will be audible at the property plane, or in the case of a street dance or concert on the nearest residential property. Those activities listed in § 5-29.06(a) are exempt from the requirements of this section.

(c) The Police Chief or his or her designee is authorized to approve and issue permits under this section.

(d) An application for a permit required by this section shall be filed with the Police Chief at least sixteen (16) days and no more than one hundred twenty (120) days prior to the date on which the sound amplifying equipment is intended to be used. Applications for events covered by the First Amendment of the United States Constitution are exempt from the time requirements of this section if it is shown that circumstances require a shorter filing period and the event will not constitute an unsafe condition. The application shall contain the following information:

(1) The name, address and telephone number of both the owner and the user of the sound amplifying equipment;

(2) The license number, if a sound truck is to be used;

(3) A general description of the sound amplifying equipment which is to be used;

(4) Whether sound amplifying equipment will be used for commercial or noncommercial purpose;

(5) The dates and times upon and within which, and the streets or property over or upon which, the equipment is proposed to be operated;

(6) The name or names of one (1) or more persons who will be present during the conduct of any activities for which registration is sought and who will have authority to reduce the volume of any sound amplifying equipment during the course of the activities if required pursuant to this chapter and, otherwise, to insure compliance with the provisions of this chapter;

(7) A statement by the applicant that he or she is willing and able to comply with the provisions of this chapter and the conditions of the permit; and

(8) A sketch of the area or facilities within which the activities are to be conducted, with approximate dimensions and illustration of the location and orientation of all sound-amplifying equipment.

(e) The Police Chief shall deny the permit application or revoke any permit if the chief finds any of the following:

(1) The application contains materially false or intentionally misleading information;

(2) The use of sound amplifying equipment at an event or activity proposed will be located in or upon a premises, building or structure that is hazardous to the health or safety of the employees or patrons of the premises, business, activity, or event, or the general public, under the standards established by the Uniform Building or Fire Codes, or other applicable codes, as set forth in OMC Titles 4 and 8;

(3) The use of sound amplifying equipment at an event or activity proposed in or upon a premises, building or structure that lacks adequate on-site parking for participants attending the proposed event or activity under the applicable standards set forth in OMC Title 9;

(4) The conditions of any motor vehicle movement are such that, in his or her opinion, the use of the equipment would constitute an unreasonable interference with traffic safety;

(5) The conditions of pedestrian movement are such that the use of the equipment would constitute a detriment to traffic safety;

(6) The application submitted by the applicant reveals that the applicant would violate the provisions of this section or any other provision of federal, state and/or local law;

(7) The applicant is unwilling or unable to comply with the provisions of this chapter or any conditions imposed upon any permit issued;

(8) There had already been a permitted event at the intended location, or within a two hundred (200) yard radius of the intended location and the prior permitted event was located on residentially zoned property or on

a street, alley, public parking lot or neighborhood park within three (3) months prior to the intended event. Community parks are exempt from this subsection (8); or

(9) The applicant or location has had previous violations within the past calendar year, and in the judgment of the Police Chief, issuance would be contrary to the intent of this section.

(f) In determining whether the use of the equipment would constitute an unreasonable interference with or detriment to traffic safety, the Police Chief shall consider, but shall not necessarily be limited to:

(1) The volumes, patterns and speed of vehicular and pedestrian traffic in the proposed area of use;

(2) The relationship of the proposed use of equipment and potential impacts upon traffic patterns;

(3) Availability of sufficient room for the operation of the equipment without significantly interfering with the traffic patterns;

(4) Proximity to schools, playgrounds and similar facilities where use of such equipment might attract children into traffic patterns; or

(5) Proximity to busy intersections or other potentially hazardous conditions where use of such equipment might constitute a hazard by reason of its tendency to distract drivers of vehicles or pedestrians.

(g) Issuance or denial.

(1) If the application is approved, the Police Chief shall return an approved copy of the application to the applicant and shall issue a permit. The permit shall constitute permission for the use of the sound amplifying equipment as requested.

(2) Any application filed shall be either approved or disapproved within five (5) days of the filing thereof.

(3) If the application is disapproved, the Police Chief shall return a disapproved copy forthwith to the applicant with a written statement on the reason for disapproval.

(i) Any person aggrieved by a decision of the Police Chief or his or her designee may file an appeal to the City Manager. A complete and proper appeal shall be filed with the City Clerk within ten (10) calendar days of the action that is the subject of the appeal. If the applicant fails to file an appeal within the ten (10) day filing period provided herein, denial shall take effect immediately upon expiration of such filing period. All appeals shall be in writing and shall contain the following information: (a) name(s) of the person filing the appeal, (b) a brief statement in ordinary and concise language of the relief sought, and (c) the signatures of all parties named as appellants and their mailing addresses. After receiving the appeal, the City Clerk shall immediately forward the matter to the City Manager for handling.

(ii) The City Manager shall, upon receipt of the appeal, set the matter for hearing before the City Manager or a hearing officer. Any hearing officer shall be a licensed attorney or recognized mediator designated by the City Manager. The hearing shall be set for not more than ten (10) calendar days after the receipt of the appeal unless a longer time is requested or consented to by the appellant. Notice of such hearing shall be given in writing and mailed at least five (5) calendar days prior to the date of the hearing, by U.S. mail, with a proof of service attached, addressed to the address listed on the permit application, or the written appeal if different from the permit application. The notice shall state the grounds of the complaint or reason for the denial and shall state the time and place where such hearing will be held.

(iii) The City Manager or hearing officer shall, within ten (10) calendar days following the conclusion of the hearing, make a written finding and decision, which shall be delivered to the City and the appellant by first class mail. Notwithstanding any provision in this Code, the decision of the City Manager or hearing officer shall be the final administrative decision of the City. Any party dissatisfied with the decision of the City Manager or hearing officer may seek review of such decision under the provisions of Code Civil Procedure, §§ 1094.5 and 1094.8, as amended from time to time.

(h) In addition to any other provisions of this Code, the use of sound-amplifying equipment and sound trucks in the City shall be subject to the following regulations:

(1) The only sounds permitted are music and human speech;

(2) Sound shall not be emitted within one hundred (100) yards of hospitals, churches, schools and City Hall;

(3) The volume of sound shall be controlled so that it will not be audible for a distance in excess of one hundred (100) feet from the sound amplifying equipment or sound truck, and so that the volume is not unreasonably loud, raucous, jarring, disturbing or a nuisance to persons within the range of allowed audibility; or

(4) The sound amplifying equipment or sound truck shall not be used between the hours of 8:00 p.m. and 8:00 a.m.

(§ 2, Ord. 2888, eff. March 6, 2008)

Sec. 5-29.14. Motor vehicles.

The use of any motor vehicle in such a condition as to create excessive, impulsive or intrusive noises is prohibited. The discharge into the open air of the exhaust of any internal combustion engine, stationary or mounted on wheels, motorboat or motor vehicle, including motor cycle, whether or not discharged through a muffler or other similar device, which discharge creates excessive, unusual, impulsive or intrusive noise is prohibited. Motor vehicles shall comply with the noise regulations of the California Vehicle Code.

(§ 2, Ord. 2888, eff. March 6, 2008)

Sec. 5-29.15. Noise level measurement.

(a) The location selected for measuring exterior noise levels in a residential area shall be at any part of a private yard, patio, deck or balcony normally used for human activity and identified by the owner or, if occupied by someone other than the owner, the occupant of the affected property as suspected of exceeding the noise level standard. This location may be the closest point in the private yard or patio, or on the deck or balcony, to the noise source, but should not be located in nonhuman activity areas such as trash container storage areas, planter beds, above or contacting a property line fence, or other areas not normally used as part of the yard, patio, deck or balcony. The location selected for measuring exterior noise levels in a nonresidential area shall be at the closest point to the noise source. The measurement microphone height shall be five (5) feet above finish elevation or, in the case of a deck or balcony, the measurement microphone height shall be five (5) feet above the finished floor level.

(b) The location selected for measuring interior noise levels shall be made within the affected residential unit. The measurements shall be made at a point at least four (4) feet from the wall, ceiling or floor, or within the frame of a window opening, nearest the noise source. The measurements shall be made with windows in an open position.

(c) Any decibel measurement made pursuant to the provisions of this chapter shall be measured in decibels (dBAs) as measured with a sound level meter using the A-weighted sound pressure level.

(§ 2, Ord. 2888, eff. March 6, 2008)

Sec. 5-29.16. Prima facie violation.

Any noise exceeding the noise level standard as specified in §§ 5-29.04 and 5-29.05, shall be deemed to be prima facie evidence of a violation of the provisions of this chapter.

(§ 2, Ord. 2888, eff. March 6, 2008)

Sec. 5-29.17. Penalty.

(a) Any person who negligently or knowingly violates any provision of this chapter shall be guilty of an infraction and upon conviction shall be punishable by a fine specified in OMC § 1-2.01. Each day a violation occurs shall constitute a separate offense and shall be punishable as such.

(b) Any person who negligently or knowingly violates any provision of this chapter may also be subject to fine(s) specified in the administrative citation schedule of fines set forth in OMC § 1-5.04. The manner of issuing administrative citations shall comply with all the procedures specified in OMC Chapter 5, Title 1.

(c) As an additional remedy, the operation or maintenance of any device, instrument, vehicle or machinery in violation of any provisions of this chapter, which operation or maintenance causes or creates sound levels exceeding the allowable standards as specified in this chapter, shall be deemed and is declared to be a public nuisance and may be subject to abatement by a restraining order or injunction issued by a court of competent jurisdiction.

(d) Any violation of this chapter is declared to be a public nuisance and may be abated in accordance with law. The expense of enforcing this chapter is declared to be public nuisance and may be by resolution of the City Council declared to be a lien and special assessment against the property on which such nuisance is maintained, and any such charge shall also be a personal obligation of the property owner.

(§ 2, Ord. 2888, eff. March 6, 2008)

Sec. 5-29.18. Enforcement and administration.

(a) It shall be the responsibility of Police or Code Enforcement Officers to enforce the provisions of this chapter and to perform all other functions required by this chapter. Such duties shall include, but not be limited to investigating potential violations, issuing warning notices and citations, and providing evidence to the City prosecutor for legal action.

(b) For violations of § 5-29.07, Police or Code Enforcement Officers shall obtain a declaration under penalty of perjury from two (2) declarants living in separate households within a sixty (60) day period stating in detail all of the following:

(1) That the declarant is a resident of a residential neighborhood located within two hundred (200) yards of the noise source; and

(2) Within the past month declarant has heard noise for substantially long periods to the extreme annoyance of the declarant.

(3) Declarations from two (2) declarants are required to prove a violation of § 5-29.07, but are not required to prove that a person has violated any other provision of this chapter.

(§ 2, Ord. 2888, eff. March 6, 2008)

Sec. 5-29.19. City Manager waiver.

The City Manager is authorized to grant a temporary waiver to the provisions of this chapter for a period of time necessary to correct the violations of this chapter, if such temporary waiver would be in the public interest and there is no feasible and prudent alternative to the activity, or the method of conducting the activity, for which the temporary waiver is sought. This time period may include a commitment to a program that includes placing necessary orders and entering into necessary contracts within thirty (30) days for repair or installation.

(§ 2, Ord. 2888, eff. March 6, 2008)

Sec. 5-29.20. Noise abatement program.

(a) In circumstances where adopted community-wide noise standards and policies prove impractical in controlling noise generated from a specific source, the City Council may establish a noise abatement program that recognizes the characteristics of the noise source and affected property and that incorporates specialized mitigation measures.

(b) Noise abatement programs shall set forth in detail the approved terms, conditions and requirements for achieving maximum compliance with noise standards and policies. Said terms, conditions and requirements may include, but shall not be limited to, limitations, restrictions, or prohibitions on operating hours, location of operations, and the types of equipment.

FHWA-RD-77-108 HIGHWAY NOISE PREDICTION MODEL (CALVENO) - v10/31/19

Scenario: Backyard No Wall
Road Name: Eucalyptus Ave
Lot No: BLDG 20

Project Name: Esperanza Specific Plan
Job Number: 15662
Analyst: B. Maddux

SITE SPECIFIC INPUT DATA

Highway Data

Average Daily Traffic (Adt):	21,700 vehicles
Peak Hour Percentage:	10%
Peak Hour Volume:	2,170 vehicles
Vehicle Speed:	40 mph
Near/Far Lane Distance:	40 feet

Site Data

Barrier Height:	**0.0 feet**
Barrier Type (0-Wall, 1-Berm):	0.0
Centerline Dist. to Barrier:	83.0 feet
Centerline Dist. to Observer:	105.0 feet
Barrier Distance to Observer:	22.0 feet
Observer Height (Above Pad):	5.0 feet
Pad Elevation:	0.0 feet
Road Elevation:	0.0 feet
Barrier Elevation:	0.0 feet
Road Grade:	1.0%

NOISE MODEL INPUTS

Site Conditions (Hard = 10, Soft = 15)

Autos:	15
Medium Trucks (2 Axles):	15
Heavy Trucks (3+ Axles):	15

Vehicle Mix

VehicleType	*Day*	*Evening*	*Night*	*Daily*
Autos:	77.5%	12.9%	9.6%	97.42%
Medium Trucks:	84.8%	4.9%	10.3%	1.84%
Heavy Trucks:	86.5%	2.7%	10.8%	0.74%

Noise Source Elevations (in feet)

Autos:	0.00		
Medium Trucks:	2.30		
Heavy Trucks:	8.01	*Grade Adjustment:*	0.0

Lane Equivalent Distance (in feet)

Autos:	82.765
Medium Trucks:	82.658
Heavy Trucks:	82.668

FHWA Noise Model Calculations

24ABC6
Comfort™ 16 Air Conditioner with Puron® Refrigerant 1–1/2 to 5 Nominal Tons

Carrier turn to the experts

Product Data

Puron™ the environmentally sound refrigerant

Comfort SERIES

Carrier's Air Conditioners with Puron® refrigerant provide a collection of features unmatched by any other family of equipment. The 24ABC has been designed utilizing Carrier's Puron refrigerant. The environmentally sound refrigerant allows you to make a responsible decision in the protection of the earth's ozone layer.

This product has been designed and manufactured to meet Energy Star® criteria for energy efficiency when matched with appropriate coil components. Refer to the combination ratings in the Product Data for system combinations that meet Energy Star® guidelines.

NOTE: Ratings contained in this document are subject to change at any time. Always refer to the AHRI directory (www.ahridirectory.org) for the most up-to-date ratings information.

INDUSTRY LEADING FEATURES / BENEFITS

Efficiency

- 14 - 16.5 SEER/11.0- 13.5 EER
- Microtube Technology™ refrigeration system
- Indoor air quality accessories available

Sound

- Sound level as low as 76 dBA
- Sound level as low as 74 dBA with accessory sound blanket

Comfort

- System supports Edge® Thermidistat™ or standard thermostat controls

Reliability

- Puron® refrigerant - environmentally sound, won't deplete the ozone layer and low lifetime servce cost.
- Scroll compressor
- Internal pressure relief valve
- Internal thermal overload
- Filter drier
- Balanced refrigeration system for maximum reliability

Durability

WeatherArmor™ protection package:

- Solid, durable sheet metal construction
- Dense wire coil guard standard
- Baked-on, complete outer coverage, powder paint

Applications

- Long-line - up to 250 feet (76.20 m) total equivalent length, up to 200 feet (60.96 m) condenser above evaporator, or up to 80 ft. (24.38 m) evaporator above condenser (See Longline Guide for more information.)
- Low ambient (down to -20°F/-28.9°C)) with accessory kit

ENERGY STAR

This product has been designed and manufactured to meet Energy Star® criteria for energy efficiency when matched with appropriate coil components. However, proper refrigerant charge and proper air flow are critical to achieve rated capacity and efficiency. Installation of this product should follow all manufacturing refrigerant charging and air flow instructions. **Failure to confirm proper charge and air flow may reduce energy efficiency and shorten equipment life.**

† See *Liquid Line Sizing For Cooling Only Systems with Puron Refrigerant* tables.

REFRIGERANT PIPING LENGTH LIMITATIONS

Liquid Line Sizing and Maximum Total Equivalent Lengths† for Cooling Only Systems with Puron® Refrigerant:

The maximum allowable length of a residential split system depends on the liquid line diameter and vertical separation between indoor and outdoor units.

See Table below for liquid line sizing and maximum lengths :

Maximum Total Equivalent Length
Outdoor Unit BELOW Indoor Unit

Size	Liquid Line Connection	Liquid Line Diam. w/ TXV	AC with Puron Refrigerant Maximum Total Equivalent Length†: Outdoor unit BELOW Indoor Vertical Separation ft (m)								
			0–5 (0–1.5)	6–10 (1.8–3.0)	11–20 (3.4–6.1)	21–30 (6.4–9.1)	31–40 (9.4–12.2)	41–50 (12.5–15.2)	51–60 (15.5–18.3)	61–70 (18.6–21.3)	71–80 (21.6–24.4)

REFRIGERANT CHARGE ADJUSTMENTS

Liquid Line Size	Puron Charge oz/ft
3/8	0.60 (Factory charge for lineset = 9 oz)
5/16	0.40
1/4	0.27

Units are factory charged for 15 ft (4.6 m) of 3/8" liquid line. The factory charge for 3/8" lineset 9 oz. When using other length or diameter liquid lines, charge adjustments are required per the chart above.

Charging Formula:

[(Lineset oz/ft x total length) – (factory charge for lineset)] = charge adjustment

Example 1: System has 15 ft of line set using existing 1/4" liquid line. What charge adjustment is required?

Formula: (.27 oz/ft x 15ft) – (9 oz) = (-4.95) oz.

Net result is to remove 4.95 oz of refrigerant from the system

Example 2: System has 45 ft of existing 5/16" liquid line. What is the charge adjustment?

Formula: (.40 oz/ft. x 45ft) – (9 oz.) = 9 oz.

Net result is to add 9 oz of refrigerant to the system

LONG LINE APPLICATIONS

An application is considered Long Line, when the refrigerant level in the system requires the use of accessories to maintain acceptable refrigerant management for systems reliability. See Accessory Usage Guideline table for required accessories. Defining a system as long line depends on the liquid line diameter, actual length of the tubing, and vertical separation between the indoor and outdoor units.

For Air Conditioner systems, the chart below shows when an application is considered Long Line.

AC WITH PURON® REFRIGERANT LONG LINE DESCRIPTION ft (m)
Beyond these lengths, long line accessories are required

Liquid Line Size	Units On Same Level	Outdoor Below Indoor	Outdoor Above Indoor
1/4	No accessories needed within allowed lengths	No accessories needed within allowed lengths	175 (53.3)
5/16	120 (36.6)	50 (15.2)	120 (36.6)
3/8	80 (24.4)	35 (10.7)	80 (24.4)

Note: See Long Line Guideline for details

VAPOR LINE SIZING AND COOLING CAPACITY LOSS

Acceptable vapor line diameters provide adequate oil return to the compressor while avoiding excessive capacity loss. The suction line diameters shown in the chart below are acceptable for AC systems with Puron refrigerant:

Unit Nominal Size (Btuh)	Maximum Liquid Line Diameters (In. OD)	Vapor Line Diameters (In. OD)	Cooling Capacity Loss (%) Total Equivalent Line Length ft. (m)								
			26–50 (7.9–15.2)	51–80 (15.5–24.4)	81–100 (24.7–30.5)	101–125 (30.8–38.1)	126–150 (38.4–45.7)	151–175 (46.0–53.3)	176–200 (53.6–61.0)	201–225 (61.3–68.6)	226–250 (68.9–76.2)

ACCESSORY USAGE GUIDELINE

ACCESSORY	REQUIRED FOR LOW–AMBIENT COOLING APPLICATIONS (Below 55°F/12.8°C)	REQUIRED FOR LONG LINE APPLICATIONS* (Over 80 ft./24.38 m)	REQUIRED FOR SEA COAST APPLICATIONS (Within 2 miles/3.22 km)
Ball Bearing Fan Motor	Yes†	No	No
Compressor Start Assist Capacitor and Relay	Yes	Yes	No
Crankcase Heater	Yes	Yes	No
Evaporator Freeze Thermostat	Yes	No	No
Hard Shut–Off TXV	Yes	Yes	Yes
Liquid Line Solenoid Valve	No	No	No
Motor Master® Control or Low–ambient Pressure Switch	Yes	No	No
Support Feet	Recommended	No	Recommended
Winter Start Control	Yes	No	No

* For tubing line sets between 80 and 200 ft. (24.38 and 60.96 m) and/or 20 ft. (6.09 m) vertical differential, refer to Residential Split–System Longline Application Guideline.

† Required for Low–Ambient Controller (full modulation feature) MotorMaster® Control.

Accessory Description and Usage (Listed Alphabetically)

1. Ball-Bearing Fan Motor

A fan motor with ball bearings which permits speed reduction while maintaining bearing lubrication.

Usage Guideline:

Required on all units when MotorMaster® is used.

2. Compressor Start Assist - Capacitor and Relay

Start capacitor and relay gives a ”hard” boost to compressor motor at each start up.

Usage Guideline:

Required for reciprocating compressors in the following applications:

Long line

Low ambient cooling

Hard shut off expansion valve on indoor coil

Liquid line solenoid on indoor coil

Required for single-phase scroll compressors in the following applications:

Long line

Low ambient cooling

Suggested for all compressors in areas with a history of low voltage problems.

3. Compressor Start Assist — PTC Type

Solid state electrical device which gives a ”soft” boost to the compressor at each start-up.

Usage Guideline:

Suggested in installations with marginal power supply.

4. Crankcase Heater

An electric resistance heater which mounts to the base of the compressor to keep the lubricant warm during off cycles. Improves compressor lubrication on restart and minimizes the chance of liquid slugging.

Usage Guideline:

Required in low ambient cooling applications.

Required in long line applications.

Suggested in all commercial applications.

5. Cycle Protector

The cycle protector is designed to prevent compressor short cycling. This control provides an approximate 5-minute delay after power to the compressor has been interrupted for any reason, including power outage, protector control trip, thermostat jiggling, or normal cycling.

6. Evaporator Freeze Thermostat

An SPST temperature-actuated switch that stops unit operation when evaporator reaches freeze-up conditions.

Usage Guideline:

Required when low ambient kit has been added.

7. Low-Ambient Pressure Switch Kit

A long life pressure switch which is mounted to outdoor unit service valve. It is designed to cycle the outdoor fan motor in order to maintain head pressure within normal operating limits (approximately 100 psig to 225 psig). The control will maintain working head pressure at low-ambient temperatures down to 0°F (-18°C) when properly installed.

Usage Guideline:

A Low-Ambient Pressure Switch or MotorMaster® Low-Ambient Controller must be used when cooling operation is used at outdoor temperatures below 55°F (12.8°C).

8. MotorMaster® Low-Ambient Controller

A fan-speed control device activated by a temperature sensor, designed to control condenser fan motor speed in response to the saturated, condensing temperature during operation in cooling mode only. For outdoor temperatures down to -20°F (-28.9°C), it maintains condensing temperature at 100°F ±10°F (37.8°C ± 5.5°C).

Usage Guideline:

A MotorMaster® Low Ambient Controller or Low-Ambient Pressure Switch must be used when cooling operation is used at outdoor temperatures below 55°F (12.8°C).

Suggested for all commercial applications.

9. Outdoor Air Temperature Sensor

Designed for use with Carrier Thermostats listed in this publication. This device enables the thermostat to display the outdoor temperature. This device also

is required to enable special thermostat features such as auxiliary heat lock out.

Usage Guideline:

Suggested for all Carrier thermostats listed in this publication.

Accessory Description and Usage (Listed Alphabetically) (Continued)

10. Sound Hood

Wraparound sound reducing cover for the compressor. Reduces the sound level by about 2 dBA.

Usage Guideline:

Suggested when unit is installed closer than 15 ft (4.57 m) to quiet areas, bedrooms, etc.

Suggested when unit is installed between two houses less than 10 ft (3.05 m) apart.

11. Support Feet

Four stick-on plastic feet that raise the unit 4 in. (101.6 mm) above the mounting pad. This allows sand, dirt, and other debris to be flushed from the unit base, minimizing corrosion.

Usage Guideline:

Suggested in the following applications:

Coastal installations.

Windy areas or where debris is normally circulating.

Rooftop installations.

For improved sound ratings.

12. Thermostatic Expansion Valve (TXV)

A modulating flow-control valve which meters refrigerant liquid flow rate into the evaporator in response to the superheat of the refrigerant gas leaving the evaporator.

Kit includes valve, adapter tubes, and external equalizer tube. Hard shut off types are available.

NOTE: When using a hard shut off TXV with single phase reciprocating compressors, a Compressor Start Assist Capacitor and Relay is required.

Usage Guideline:

Required to achieve AHRI ratings in certain equipment combinations. Refer to combination ratings.

Hard shut off TXV or LLS required in air conditioner long line applications.

Required for use on all zoning systems.

13. Time-Delay Relay

An SPST delay relay which briefly continues operation of indoor blower motor to provide additional cooling after the compressor cycles off.

NOTE: Most indoor unit controls include this feature. For those that do not, use the guideline below.

Usage Guideline:

For improved efficiency ratings for certain combinations of indoor and outdoor units. Refer to AHRI Unitary Directory.

14. Winter Start Control

This control is designed to alleviate nuisance opening of the low-pressure switch by bypassing it for the first 3 minutes of operation.

* Permissible limits of the voltage range at which the unit will operate satisfactorily

† If wire is applied at ambient greater than 30°C, consult table 310–16 of the NEC (NFPA 70). The ampacity of non–metallic–sheathed cable (NM), trade name ROMEX, shall be that of 60°C conditions, per the NEC (NFPA 70) Article 334–80. If other than uncoated (no–plated), 60 or 75°C insulation, copper wire (solid wire for 10 AWG or smaller, stranded wire for larger than 10 AWG) is used, consult applicable tables of the NEC (NFPA 70).

‡ Length shown is as measured one way along wire path between unit and service panel for voltage drop not to exceed 2%.

** Time–Delay fuse.

FLA – Full Load Amps

LRA – Locked Rotor Amps

MCA – Minimum Circuit Amps

RLA – Rated Load Amps

NOTE: Control circuit is 24–V on all units and requires external power source. Copper wire must be used from service disconnect to unit. All motors/compressors contain internal overload protection.

Complies with 2007 requirements of ASHRAE Standards 90.1

MEMORANDUM

URBAN | CROSSROADS

DATE: May 29, 2024
TO: Dave Waters, Genstar Development Company/GDCI-13
FROM: Charlene So, Urban Crossroads
JOB NO: 15662-04 TG Letter

ESPERANZA SPECIFIC PLAN TRIP GENERATION ASSESSMENT

Urban Crossroads, Inc. is pleased to submit the following Trip Generation Assessment for Esperanza Specific Plan development (Project) to support the proposed Specific Plan Amendment (SPA), located on the northeast corner of Eucalyptus Avenue and Amherst Avenue in the City of Ontario. This letter describes the proposed Project trip generation methodology and determines whether any traffic operations analysis is required based on San Bernardino County's Transportation Impact Study Guidelines (July 9, 2019, County Guidelines). The County Guidelines have been utilized as the City does not have their own adopted guidelines.

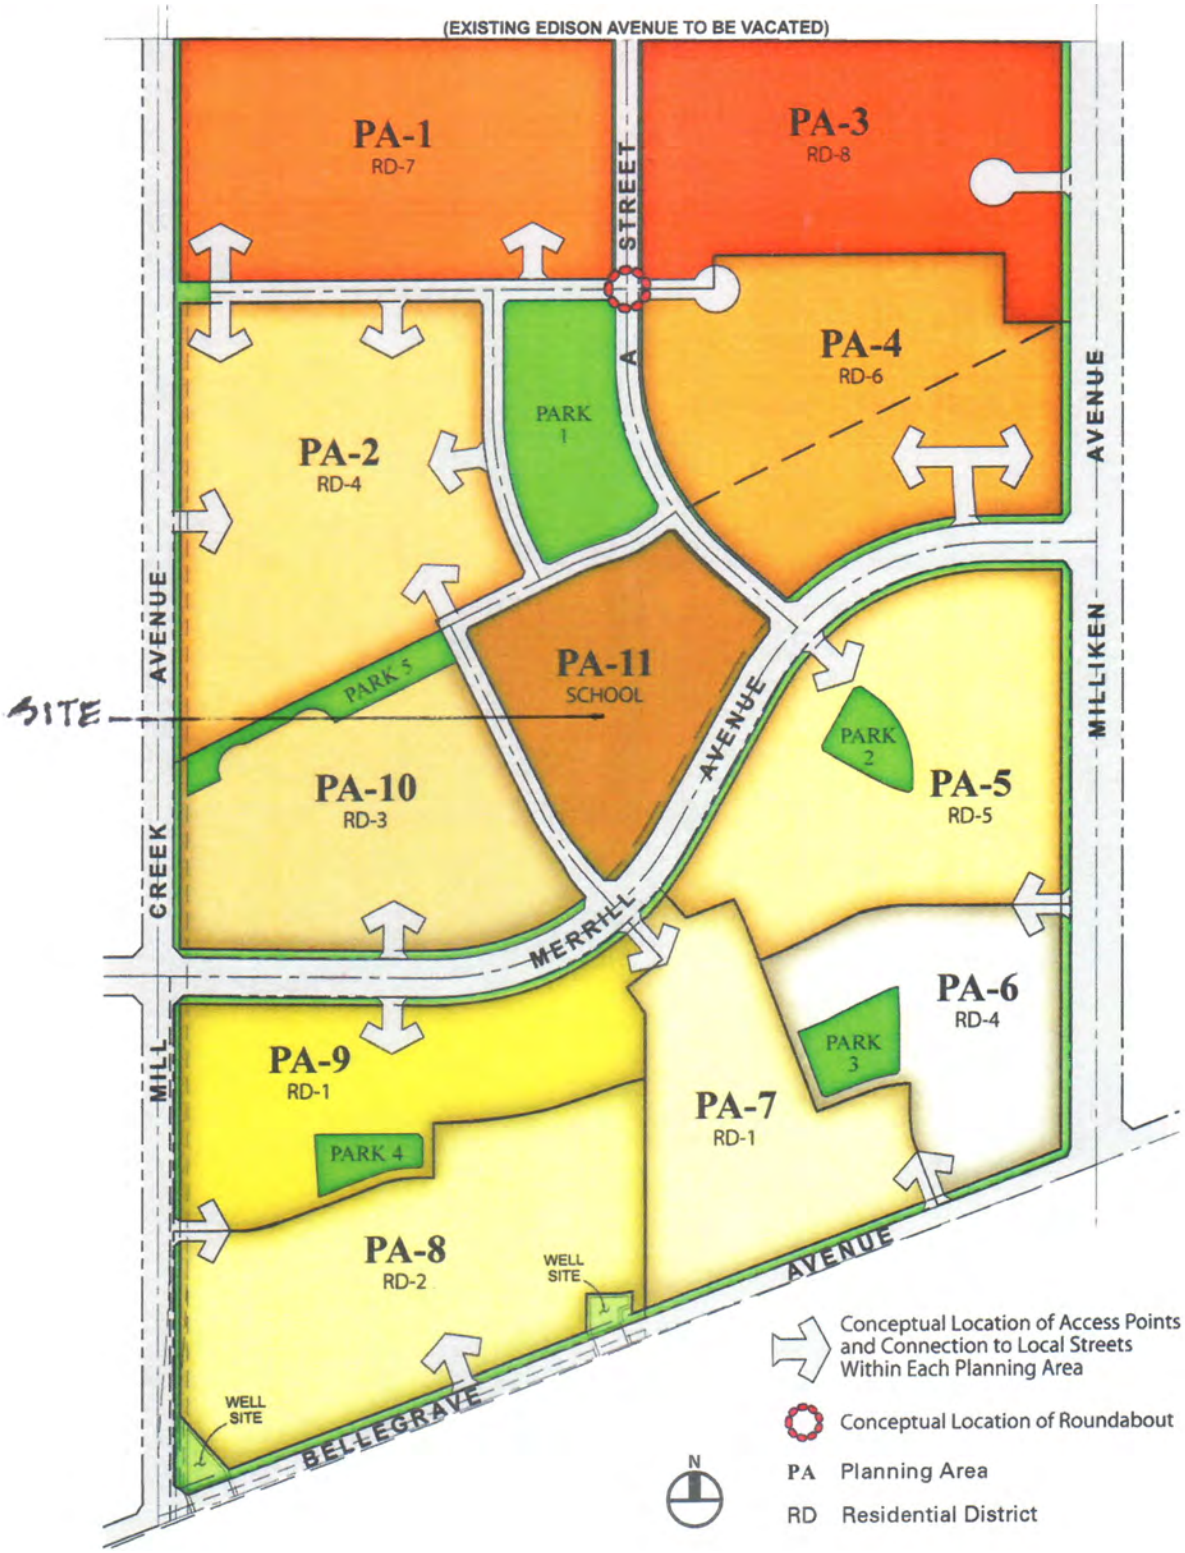
PROPOSED PROJECT

It is our understanding that the proposed Project is to consist of 161 multi-family residential dwelling units (with a density of approximately 16.1 dwelling units to the net acre). The Project is located within the Esperanza Specific Plan. The original currently-approved Specific Plan contemplated a 736-student elementary school within Planning Area 11. The land use will be updated from "School" to "MDR Medium Density Residential" consistent with the adjacent land use to the northeast.

Exhibit 1 shows the preliminary site plan. For comparison purposes, Exhibit 2 shows the currently-approved land use plan identifying Planning Area 11 with a school.

EXHIBIT 1: PRELIMINARY SITE PLAN

EXHIBIT 2: CURRENTLY APPROVED LAND USE PLAN



TRIP GENERATION

Trip generation represents the amount of traffic, which is both attracted to, and produced by, a development. Determining traffic generation for a specific project is therefore based upon forecasting the amount of traffic that is expected to be both attracted to, and produced by, the specific land uses being proposed for a given development.

APPROVED SPECIFIC PLAN

As noted previously, the site is located within the Esperanza Specific Plan. Specifically, the Project is located within Planning Area 11, which was approved with a 736-student elementary school. The Esperanza Specific Plan Traffic Impact Study Report (prepared by Albert A. Webb Associates, dated November 10, 2005, referred to as **2005 Traffic Study**) evaluated the 736-student elementary school within Planning Area 11. The trip generation is summarized in Table 1 and excerpts from the 2005 Traffic Study are included in Attachment A. The approved elementary school site is anticipated to generate an average of 949 two-way trips per day, with 309 trips during the AM peak hour and 206 trips during the PM peak hour.

TABLE 1: APPROVED SP TRIP GENERATION FOR PLANNING AREA 11

			AM Peak Hour			PM Peak Hour			
Land Use	Quantity	Units[1]	In	Out	Total	In	Out	Total	Daily

[1] STU = Students

PROPOSED PROJECT

The proposed Project consists of 161 multi-family (low-rise) residential dwelling units. In order to develop the traffic characteristics of the proposed Project, trip-generation statistics published in the Institute of Transportation Engineers (ITE) Trip Generation Manual (11th Edition, 2021) were used for the Project. Table 2 summarizes the trip generation rates for Multifamily (Low-Rise) Residential (ITE Code 220).

The trip generation summary illustrating daily, and peak hour trip generation estimates for the proposed Project are also summarized in Table 2. The proposed Project is anticipated to generate 944 vehicle trip-ends per day with 108 AM peak hour trips and 125 PM peak hour trips.

TABLE 2: PROPOSED PROJECT TRIP GENERATION SUMMARY

Land Use[1]	Units[2]	ITE LU Code	AM Peak Hour In	AM Peak Hour Out	AM Peak Hour Total	PM Peak Hour In	PM Peak Hour Out	PM Peak Hour Total	Daily
Multifamily (Low-Rise) Residential	DU	220	0.17	0.50	0.67	0.45	0.33	0.78	5.86

[1] Trip Generation Source: Institute of Transportation Engineers (ITE), Trip Generation Manual, 11th Edition (2021).

[2] DU = dwelling units

Land Use	Quantity	Units[1]	AM Peak Hour In	AM Peak Hour Out	AM Peak Hour Total	PM Peak Hour In	PM Peak Hour Out	PM Peak Hour Total	Daily
PA 11: Esperanza Multi-Family	161	DU	27	81	108	72	53	125	944

[1] DU = dwelling units

TRIP GENERATION COMPARISON

Table 3 shows the trip generation comparison between the approved use (elementary school) and proposed Project (multi-family residential) and identifies the resulting net change in trips. As shown, the Project is anticipated to generate a net reduction of 5 two-way trips per day with a reduction of 201 AM peak hour trips and 81 fewer PM peak hour trips as compared to the approved elementary school use.

TABLE 3: TRIP GENERATION COMPARISON

Project	AM Peak Hour In	AM Peak Hour Out	AM Peak Hour Total	PM Peak Hour In	PM Peak Hour Out	PM Peak Hour Total	Daily
Esperanza SP: Elementary School	169	140	309	96	110	206	949
Proposed Project: Multifamily Residential	27	81	108	72	53	125	944
Net Change in Trips	**-142**	**-59**	**-201**	**-24**	**-57**	**-81**	**-5**

FINDINGS

The City of Ontario adheres to the County Guidelines, which have been used to determine whether additional traffic analysis is necessary for the proposed Project. The County Guidelines indicate that development projects that generate a net increase of 100 or more peak hour vehicle trips (without pass-by reductions) would require the preparation and submittal of a Transportation Impact Analysis.

The Project is anticipated to generate fewer than 100 net new peak hour trips during the morning and evening peak hours (Project results in a net reduction from the currently approved land use). The Project would therefore contribute fewer than 50 net new peak hour trips to any off-site intersection. As such, additional peak hour traffic operations analysis is not necessary based on the County Guidelines.

If you have any questions or comments, I can be reached at cso@urbanxroads.com.

ATTACHMENT A: ESPERANZA SPECIFIC PLAN
TRIP GENERATION EXCERPTS

SECTION 4 - PROJECTED TRAFFIC

SITE TRAFFIC

Trip Generation

Trip generation represents the amount of traffic traveling to and from the proposed project. The traffic generation figures determined for the project are based upon the development of 765 single family residential dwelling units, 645 multi-family residential dwelling units, and a 736 student elementary school as currently proposed. Trip generation rates are based upon a publication entitled "Trip Generation" by the Institute of Transportation Engineers (ITE), seventh edition.

Table 4-1 shows the peak hour trip generation rates for the proposed project. The peak hour rates are based on the average peak hour generation rate multiplied by the directional distribution provided in ITE's trip generation publication referenced above.

Table 4-1 – Trip Generation Rates

Land Use	Unit of Measurement	AM Peak Hour			PM Peak Hour			Daily
		Total	In	Out	Total	In	Out	
Single Family Detached Land Use Category: 210	DU	0.75	0.19	0.56	1.01	0.64	0.37	9.57
Residential Condominium/Townhouse Land Use Category: 230	DU	0.44	0.07	0.37	0.52	0.35	0.17	5.86
Elementary School Land Use Category: 520	Students	0.42	0.23	0.19	0.28	0.13	0.15	1.29

Trip generation from *Trip Generation Manual, 7th Edition* by the Institute of Transportation Engineers (ITE), 2003.
DU – Dwelling Units, TSF – Thousand Square Feet

Table 4-2 shows the daily and peak hour trip generation for the proposed project. The project is estimated to generate approximately 12,050 daily trip-ends, including 1,166 trip-ends during the AM Peak hour and 1,315 trip-ends during the PM Peak hour.

Table 4-2 – Project Trip Generation

Land Use	Unit	Qty	AM Peak Hour			PM Peak Hour			Daily
			Total	In	Out	Total	In	Out	
Single Family Detached	DU	765	573	145	428	773	490	283	7,321
Residential Condominium/Townhouse	DU	645	284	45	239	336	226	110	3,780
Elementary School	Students	736	309	169	140	206	96	110	949
TOTAL			**1,166**	**359**	**807**	**1,315**	**812**	**503**	**12,050**

DU – Dwelling Units
TSF – Thousand Square Feet

The current City of Ontario General Plan circulation element is shown on Figure 4-1.

Trip Distribution

Trip distribution represents the directional orientation of traffic to and from the project site. Trip distribution is influenced by the geographical location of the site, type of land use in the study area, such as shopping centers and recreational sites, and proximity to the regional freeway system. The directional distribution of traffic for the proposed project was determined based upon the 2015 New Model Colony Traffic Forecast (Figure 4-2).

Modal Split

The traffic reducing potential of public transit has not been considered in this study. Therefore, the traffic projections provided in this report are considered conservative since public transit could reduce traffic volumes in the project area.

Trip Assignment

Trip assignment is the result of using the previously discussed trip generation numbers and trip distribution percentages. Figure 4-3 shows the project related traffic volumes, which are based upon the identified project traffic generation and distribution. AM and PM peak hour intersection turning movement volumes for the proposed project are shown on Figures 4-4 and 4-5, respectively.

JOB NO: 15662-03 VMT

PA-11 OF THE ESPERANZA SPECIFIC PLAN VEHICLE MILES TRAVELED (VMT) ANALYSIS

Urban Crossroads, Inc. is pleased to provide the following Vehicle Miles Traveled (VMT) Analysis for PA-11 of The Esperanza Specific Plan (**Project**), located on the northeast corner of Amherst Avenue and Eucalyptus Avenue in the City of Ontario.

PROJECT OVERVIEW

It is our understanding that the Project proposes a General Plan Amendment to change the land use from Public School to Medium Density Residential (MDR 11.1-24 du/ac) and an amendment to the Esperanza Specific Plan to change the land use designation for Planning Area 11 from Public School to Residential Development 9 (RD-9). More specifically the proposes 161 multi-family (townhome) residential dwelling units with a density of approximately 16.1 dwelling units to the net acre that would replace a 736-student elementary school. A preliminary site plan can be found in Attachment A.

BACKGROUND

The California Environmental Quality Act (CEQA) mandates that all lead agencies use VMT as the measure for identifying transportation impacts in land use projects. In June 2020, the City of Ontario developed and adopted its VMT methodologies and thresholds (Resolution No. 2020-071) (**City Guidelines**) (1). This VMT analysis is based on the adopted City Guidelines.

VMT ANALYSIS

TRAFFIC MODELING METHODOLOGY

Consistent with City Guidelines, a project-level VMT analysis shall be conducted using the San Bernardino Traffic Analysis Model (SBTAM) as the appropriate tool for conducting VMT analysis for land use projects within the City of Ontario. SBTAM is a useful tool to estimate VMT as it considers interaction between different land uses based on socio-economic data such as population, households, and employment.

As part of The Ontario Plan (TOP) 2050 implementation, the City of Ontario recently adopted an updated version of SBTAM, also referred to as the TOP model. This updated version includes the latest roadway network and socio-economic data specific to the City of Ontario, in alignment with the City's recently-adopted TOP. The model encompasses a base year of 2019 and a General Plan Buildout projection for 2050.

VMT ANALYSIS METHODOLOGY

As stated within the City's Guidelines, the analysis should include 'project-generated VMT' and 'project effect on VMT' estimates for the project transportation/traffic analysis zone (TAZ) for baseline and cumulative conditions. For the purposes of this analysis, Project VMT estimates have been prepared using the Origin/Destination (OD) method to estimate project-generated VMT and Boundary method to estimate project effect on VMT. VMT has been presented as total VMT and total VMT per service population (i.e., population and employees).

ORIGIN/DESTINATION (OD) VMT

The OD method for calculating VMT sums all weekday VMT generated by trips with at least one trip-end in the study area (i.e., Project boundary or City boundary) and tracks those trips to their origin or destination. Origins are all vehicle trips that start in a specific TAZ, while destinations are all vehicle trips that end in a specific TAZ. The OD method accounts for all trips (i.e., both passenger cars and trucks) and trip purposes (i.e., total VMT).

BOUNDARY VMT METHOD

The boundary method is the sum of all weekday VMT on the roadway network within a designated boundary (i.e., City boundary or other designated geographic area). The boundary method estimates VMT by multiplying vehicle trips on each roadway segment within the boundary by that segment's length. This approach consists of all trips, including those trips that do not begin or end in the designated boundary. Consistent with City VMT Guidelines, the City of Ontario was used as the boundary for this assessment. In addition, as the Project is located near the southeastern edge of the City, an additional assessment of a ten-mile boundary area surrounding the Project site has also been conducted to ensure trips associated with the Project are not omitted.

VMT METRIC AND SIGNIFICANCE THRESHOLD

The City of Ontario has adopted the following thresholds of significance related to VMT for land use projects:

The SBTAM model should be used to forecast total daily VMT per Service Population (SP) and is the required method for estimating VMT.

- A significant impact would occur if the project VMT per SP exceeds the Citywide average VMT per SP under General Plan Buildout Conditions.
- A significant impact would occur if the project caused total daily VMT per SP within the City to be higher than the no project scenario under cumulative conditions.

The City of Ontario's average VMT per SP under General Plan Buildout conditions has been calculated using the TOP General Plan Buildout (2050) model. Table 1 presents the Citywide average VMT per SP for General Plan Buildout (2050) conditions.

TABLE 1: CITYWIDE VMT PER SERVICE POPULATION

Ontario	TOP 2050
Service Population	707,369
VMT	19,506,377
VMT per SP	27.6

As shown in Table 1, the City of Ontario's VMT per SP for General Plan Buildout (2050) conditions has been calculated as **27.6 VMT per SP**.

VMT ESTIMATES

To estimate project-generated VMT, standard land use information such as the number of residential dwelling units must first be converted into a SBTAM compatible dataset. The SBTAM model utilizes socio-economic data (SED) (e.g., population, households, and employment) for the purposes of vehicle trip estimation. Table 2 summarizes the SED inputs used to represent the Project. Project SED data was then coded into the Project's TAZ to obtain project-generated VMT.

TABLE 2: POPULATION ESTIMATES

Land Use	Quantity	Conversion Factor[1]	Estimated Population
Residential	161 Dwelling Units	3.5 people per household	564

PROJECT-GENERATED VMT

Project-level VMT estimates were extracted from SBTAM using the OD trip matrices, which includes project-generated VMT for all vehicle trips (both passenger cars and trucks) and trip purposes. Project-generated VMT estimates for the Project are presented in Table 3.

TABLE 3: PROJECT-GENERATED VMT SUMMARY

	Baseline	General Plan Buildout Year (2050)
SP[1]	564	564
OD VMT	12,582	13,364
OD VMT per SP	22.3	23.7
City Threshold	27.6	27.6
Potentially Significant?	No	No

[1] SP = Service Population which refers to the Project's population estimate.

As shown in Table 3, project-generated VMT is forecast to be below the City's adopted threshold.

[1] Factors obtained consistent with land use assumptions within the TOP 2050 model.

PROJECT EFFECT ON VMT

The Project's effect on VMT has been calculated using the boundary method. Land use information representing the proposed land use changes contemplated by the Project were coded into the Project TAZ to represent the "With Project" condition. Table 4 summarizes the boundary VMT under the No Project and With Project scenarios for both baseline and cumulative conditions using the City boundary and a 10-mile radius from the Project site.

TABLE 4: GENERAL PLAN BUILDOUT (2050) BOUNDARY VMT RESULTS

	City Boundary		10-Mile Boundary	
Scenario	No Project	With Project	No Project	With Project
Service Population	706,494	707,058	2,579,062	2,579,626
Boundary VMT	9,602,250	9,598,040	41,605,554	41,614,834
VMT per SP	13.6	13.6	16.1	16.1
Change in VMT	0.0		0.0	
Potentially Significant?	No		No	

The boundary VMT is found to increase under the With Project scenario for both the baseline and cumulative conditions, as expected when increases in development are added to the model. However, to measure the efficiency of a land use project or land use plan, the boundary VMT is divided by the service population to frame an efficiency metric. The resulting VMT per service population was found to remain unchanged in the With Project scenario. The Project does not result in an increase total daily VMT per SP as compared to the No Project scenario.

ACTIVE TRANSPORTATION AND PUBLIC TRANSIT REVIEW

Potential impacts to:

- Circulation system
- Public transit
- Pedestrian facilities and travel
- Bicycle facilities

Were analyzed to determine if the proposed Project conflicts with adopted policies, plans, programs, and if the Project has the potential to decrease the performance or safety of such facilities.

CIRCULATION SYSTEM

Traffic is anticipated to be distributed through the City of Ontario, extending into the neighboring jurisdiction of the City of Eastvale. In general, the study area has a moderate level of active transportation facilities and transit service. Bicycle and pedestrian facilities are proposed as part of the City of Ontario and City of Eastvale General Plans on most roadways throughout the study area.

CITY OF ONTARIO GENERAL PLAN CIRCULATION ELEMENT EVALUATION

The Project site is located within the City of Ontario. Exhibit 1 shows The Ontario Plan 2050 mobility element. (2)

Principal Arterials serve the major centers and corridor of activity, carry the highest volumes of traffic, and serve the longest trips of all city roadways. The study area roadways that are classified as 8-lane Principal Arterials are identified as having four lanes of travel in each direction. The following study area roadway within the City of Ontario is classified as an 8-lane Principal Arterial:

- Ontario Ranch Road

The study area roadways that are classified as 6-lane Principal Arterials are identified as having three lanes of travel in each direction. The following study area roadway within the City of Ontario is classified as a 6-lane Principal Arterial:

- Hamner Avenue

The study area roadways that are classified as 4-lane Principal Arterials are identified as having two lanes of travel in each direction. The following study area roadway within the City of Ontario is classified as a 4-lane Principal Arterial:

- Haven Avenue

Minor Arterials accommodate less traffic than Principal Arterials and are for trips of moderate length. Minor Arterials allow more access to abutting properties and connect the community. The study area roadway that is classified as a 4-lane Minor Arterial is identified as having two lanes of travel in each direction. The following study area roadway within the City of Ontario is classified as a 6-lane Minor Arterial:

- Bellegrave Avenue

Collector streets provide access to abutting properties and traffic circulation within residential neighborhoods and business areas. Collector streets allow access to local and arterial roadways. The study area roadways that are classified as 4-lane Collector Streets are identified as having two lanes of travel in each direction. The following study area roadways within the City of Ontario are classified as 4-lane Collector Streets:

- Mill Creek Avenue
- Eucalyptus Avenue
- Merrill Avenue

CITY OF EASTVALE GENERAL PLAN CIRCULATION ELEMENT

Exhibit 2 shows the City of Eastvale General Plan Circulation Element. (3)

BICYCLE FACILITIES

There are four bicycle facility classifications recognized by the City of Ontario. The four bicycle facility classifications are as follows:

Class I Bikeways (Bike Paths)

Class I bikeways are dedicated for exclusive use by bicyclists along rivers, channels, and utility right-of-way.

Class II Bikeways (Bike Lanes)

Class II bikeways are dedicated lanes along streets, with no parking allowed in the bike lane.

Class III Bikeways (Bike Routes)

Class III bikeways are bike routes normally shared with motor vehicles on the street or with pedestrians on sidewalks, and parking is allowed.

Class IV Bikeways (Separated Bikeways)

Class IV bikeways are dedicated for exclusive use of bicycles and are physically separated from motor traffic with a vertical feature.

Many of the City of Ontario's bicycle paths are combined with sidewalks along each side of major streets.

The City of Ontario and City of Eastvale bike networks are shown on Exhibits 3 and 4, respectively. Adjacent to the Project site, there is a Class II bike lane along Eucalyptus Avenue. A Class I bike path is proposed along Hamner Avenue, east of the Project site. Many bicycle facilities are either existing or proposed within the study area on most major streets. As the study area builds out consistent with the City's proposed trail and bicycle facilities, the Project will be part of a well-connected bicycle network.

PEDESTRIAN FACILITIES

Pedestrian facilities include sidewalks, crosswalks, pedestrian signals, and multi-use trails. Exhibit 5 illustrates the existing crosswalks throughout the study area. As shown in Exhibit 5, pedestrian facilities are built out along portions of Eucalyptus Avenue, Hamner Avenue, and many other study area roadways. Under the assumption that pedestrian facilities will continue to be constructed as the study area develops, the Project will be part of a safe and efficient pedestrian network. The Project is to develop the sidewalks along the roadways adjacent to the Project.

PUBLIC TRANSIT REVIEW

There are bus and regional transit service options available to the City of Ontario. Limited routes and transit options are available near the Project site. It is anticipated that new routes will be proposed to support the future development, but those routes have not been identified at this time. Existing transit services and routes in the study area are shown on Exhibit 6.

Omnitrans

The study area is currently served by Omnitrans, a public transit agency serving various jurisdictions within San Bernardino County. Omnitrans provides countywide bus service and currently has five bus routes in the City of Ontario that provide connections between rail stations, Ontario International Airport (ONT), major employment and shopping centers, and residential areas. Exhibit 6 shows the existing transit facilities, which indicates that Omnitrans Route 87 could serve the Project site. Route 87 runs along portions of Hamner Avenue and Ontario Ranch Road. The nearest bus stop is at the intersection of Hamner Avenue and Eucalyptus Avenue, approximately 1,000 feet east of the Project site. Transit service is reviewed and updated by Omnitrans periodically to address ridership, budget, and community demand needs. Changes in land use can affect these periodic adjustments which may lead to either enhanced or reduced service where appropriate. As such, it is recommended that the Applicant work in conjunction with Omnitrans to potentially provide bus service to the site.

Metrolink

Commuter train service in the City of Ontario is provided by Metrolink, which provides service throughout the Southern California region. The nearest Metrolink station is the East Ontario Metrolink station, located approximately 4 miles north of the Project site. The Riverside Line links Riverside to Union Station in downtown Los Angeles and various other destinations. This line runs weekdays during peak commute hours only.

TRANSPORTATION IMPACT ANALYSIS

This assessment addresses the following Transportation thresholds stated in *CEQA Guidelines* Appendix G:

T-1 Potential to conflict with a program, plan, ordinance, or policy addressing the circulation system, including transit, roadway, bicycle, and pedestrian facilities.

T-2 Potential to conflict or be inconsistent with *CEQA Guidelines* Section 15064.3(b) regarding policies to reduce vehicle miles traveled (VMT).

T-3 Potential to substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment).

T-4 Potential to result in inadequate emergency access.

T-1 ASSESSMENT

The analysis presented here considers the degree to which the Project may hinder the safe and comfortable access to the Project site from other locations, with a special focus on people relying on transit services or active transportation modes such as biking or walking.

Applicable programs, plans, and policies addressing the circulation system are established under TOP 2050. Project consistency with applicable provisions of TOP 2050 is summarized at Table 5. As provided for under CEQA, the analysis presented here considers program, plan, and policy inconsistencies that could result in potentially significant environmental impacts. As a matter of law, the Project would be required to comply with City ordinances addressing the study area circulation system.

TABLE 5: TOP 2050 CONSISTENCY ANALYSIS

MOBILITY ELEMENT		
M-1 Roadway System		
Goal M1 A system of roadways that meets the mobility needs of a dynamic and prosperous Ontario.		
Policies		**Remarks**
M-1.1	**Roadway Design and Maintenance.** We require our roadways to: • Comply with federal, state and local design and safety standards. • Meet the needs of multiple transportation modes and users. • Handle the capacity envisioned in City of Ontario Master Plan of Streets and Highways. • Be maintained in accordance with best practices. • Be compatible with the streetscape and surrounding land uses.	**Consistent.** Project roadway designs and all proposed improvements would conform with the City's Master Plan of Streets and Highways, City design standards and applicable federal/state design and safety standards. City design review processes would ensure compliance with all applicable standards. Streetscape design concepts implemented pursuant to the Specific Plan establish compatible continuation of existing perimeter streetscapes. All public roadways would be maintained in accordance with City requirements to include implementation of City Best Management Practices and City Right-of-Way Management Plan.

TABLE 5: TOP 2050 CONSISTENCY ANALYSIS

MOBILITY ELEMENT		
	• Promote the efficient flow of all modes of traffic through the implementation of intelligent transportation systems and travel demand strategies.	On this basis, the Project is considered consistent with Policy M-1.1.
M-1.2	**Mitigation of Impacts.** We require development to mitigate its traffic impacts.	**Consistent.** The Project would not result in potentially significant VMT impacts. Level of Service (LOS) deficiencies are no longer CEQA considerations. Recommended improvements addressing any potential LOS deficiencies would be implemented consistent with City Conditions of Approval. On this basis, the Project is considered consistent with Policy M-1.2.
M-1.3	**Agency Coordination on Roadway Improvements.** We work with Caltrans, SBCTA and others to identify, fund and implement needed improvements to roadways when necessary. We work with neighboring jurisdictions to promote regional connectivity, access, and meet operational level of service standards at the City limits.	**Consistent.** Please refer to remarks at Policies M-1.1, M-1.2.
M-1.4	**Complete Streets.** We work to provide a complete, balanced, context-aware, multimodal transportation network that meets the needs of all users of streets, roads, and highways, including motorists, pedestrians, bicyclists, children, persons with disabilities, seniors, movers of commercial goods, and users of public transportation. We prioritize implementation of complete streets improvements in environmental justice areas to facilitate opportunities for residents to use active transportation systems.	**Consistent.** The Project would construct all circulation system improvements consistent with applicable provisions of the Specific Plan, TOP 2050 Mobility Element, and as required under City Conditions of Approval. On this basis, the Project is considered consistent with Policy M-1.4.
M-1.5	**Level of Service.** Maintain a peak hour Level of Service (LOS) E or better at all intersections. Maintain Level of Service D or better on arterial streets in the City. Develop and maintain a list of locations where LOS E or LOS F are considered acceptable and would be exempt from this level of service policy. Considerations for LOS exemption include being restricted by environmental constraints, lacking available right-of-way, deterring an	**Consistent.** The City recognizes that vehicle delay (Level of Service, LOS) deficiencies are no longer environmental impacts under CEQA. Recommended improvements addressing any LOS deficiencies would be implemented per City Conditions of Approval. On this basis, the Project is considered consistent with Policy M-1.5.

TABLE 5: TOP 2050 CONSISTENCY ANALYSIS

MOBILITY ELEMENT		
	increase in VMT, or degrading other modes of travel (such as bicycle or pedestrian infrastructure).	
M-1.6	**Reduce Vehicle Miles Traveled.** We will strive to reduce VMT through a combination of land use, transportation projects, travel demand management strategies, and other trip reduction measures in coordination with development projects and public capital improvement projects.	**Consistent.** While roadway improvements associated with the Project may facilitate vehicular travel within the City and surrounding areas, total VMT and environmental impacts of such travel would not result in any potentially significant VMT and VMT-related impacts. On this basis, the Project is considered consistent with Policy M-1.6.
M-2 Active Transportation		
Goal M-2 A system of trails and corridors that facilitate and encourage active modes of transportation.		
Policies		**Remarks**
M-2.1	**Active Transportation.** We maintain our Active Transportation Master Plan to create a comprehensive system of on- and off-street bikeways and pedestrian facilities that are safe, comfortable, and accessible and connect residential areas, businesses, schools, parks, and other key destination points.	**Consistent.** Bikeways and pedestrian facilities would be implemented consistent with provisions of the Specific Plan and as required under City Conditions of Approval. The Project does not propose or require facilities or operations that would conflict with the City's Active Transportation Master Plan. On this basis, the Project is considered consistent with Policy M-2.1.
M-2.2	**Bicycle System.** We provide off-street multipurpose trails and Class II bikeways as our preferred paths of travel and use the Class III for connectivity in constrained circumstances. When truck routes and bicycle facilities share a right-of-way, we prefer Class I or Class IV bicycle facilities. We require new development to include bicycle facilities, such as bicycle parking and secure storage areas.	**Consistent.** Bikeways and bicycle amenities would be implemented consistent with provisions of the Specific Plan and as required under City Conditions of Approval. On this basis, the Project is considered consistent with Policy M-2.2.
M-2.3	**Pedestrian Walkways.** We require streets to include sidewalks and visible crosswalks at major intersections where necessary to promote safe and comfortable mobility between residential areas, businesses, schools, parks, recreation areas, and other key destination points.	**Consistent.** Pedestrian paths would be provided within the Project site and along the Project perimeter consistent with City standards, provisions of the Specific Plan, and as required under City Conditions of Approval. On this basis, the Project is considered consistent with Policy M-2.3.

TABLE 5: TOP 2050 CONSISTENCY ANALYSIS

MOBILITY ELEMENT		
M.2-4	**Network Opportunities.** We use public rights-of-way and easements such as, utility easements, levees, drainage corridors, road rights-of-way, medians, and other potential options to maintain and expand our bicycle and pedestrian network. In urban, mixed-use, and transit-oriented Place Types, we encourage the use of underutilized public and private spaces to expand our public realm and improve pedestrian and bicycle connectivity.	**Consistent.** Bikeways and pedestrian facilities would be implemented consistent with provisions of the Specific Plan and as required under City Conditions of Approval. On this basis, the Project is considered consistent with Policy M-2.4.
M-3 Public Transit		
Goal M-3 A public transit system that is a viable alternative to automobile travel and meets basic transportation needs of the transit-dependent.		
Policies		**Remarks**
M-3.1	**Transit Partners.** We maintain a proactive working partnership with transit providers to ensure that adequate public transit service is available, cost-efficient, and convenient, particularly for residents in environmental justice areas.	**Consistent.** The Project would not interfere with or otherwise obstruct the City's cooperative partnership with transit providers. On this basis, the Project is considered consistent with Policy M-3.1.
M-3.2	**Alternative Transit Facilities at New Development.** We require new development adjacent to an existing or planned transit stop to contribute to the creation of transit facilities, such as bus shelters, transit bays and turnouts, and bicycle facilities, such as secure storage areas.	**Consistent.** The Project would support and would not conflict with City efforts to contribute to the creation of transit facilities. To these ends, the Applicant would coordinate Project development with the City and transit agencies to implement transit service and supporting amenities. On this basis, the Project is considered consistent with Policy M-3.2.
M-3.3	**Transit-Oriented Development.** We may provide additional development-related incentives to those inherent in the Land Use Plan for projects that promote transit use and reduce vehicle miles traveled.	**Consistent.** The Project would not interfere with or otherwise obstruct the City's incentive programs and policies. On this basis, the Project is considered consistent with Policy M-3.3.
M-3.4	**Bus Rapid Transit (BRT) Corridors.** We work with regional transit agencies to implement BRT service and reduce vehicle miles traveled by targeting destinations and corridors with the highest number of potential riders.	**Consistent.** The Project would not interfere with or otherwise obstruct the City's cooperative efforts with regional transit agencies. On this basis, the Project is considered consistent with Policy M-3.4.

TABLE 5: TOP 2050 CONSISTENCY ANALYSIS

MOBILITY ELEMENT		
M-3.5	**Light Rail.** We support extension of the Metro Rail Gold Line to Ontario, and will work to secure station locations at the proposed multimodal transit center.	**Consistent.** The Specific Plan area is not located near the potential Metro Rail Gold Line extension to the City; nor the proposed multimodal transit center. The Project would not impact, nor be impacted by, rail operations. On this basis, the Project is considered consistent with Policy M-3.5.
M-3.6	**Metrolink Expansion.** We advocate expansion of Metrolink service to include the Downtown and the multimodal transit center.	**Consistent.** The Project site is not located near the Metrolink rail line; nor the proposed multimodal transit center. The Project would not impact, nor be impacted by, Metrolink expansion. On this basis, the Project is considered consistent with Policy M-3.6.
M-3.7	**High Speed Rail.** We encourage the development of high-speed rail systems that would enhance regional mobility in Southern California and serve the City of Ontario.	**Consistent.** No railways exist within or near the Specific Plan area. The Project would not interfere with or otherwise obstruct the development of high-speed rail systems. On this basis, the Project is considered consistent with Policy M-3.7.
M-3.8	**Feeder Systems.** We work with regional transit agencies to secure convenient feeder service from the Metrolink station and the proposed multimodal transit center to employment centers in Ontario.	**Consistent.** The Project site is located in an area already served by public transit. The Project would implement feeder transit facilities as required by the City through its coordination with transit agencies serving the area. On this basis, the Project is considered consistent with Policy M-3.8.
M-3.9	**Ontario Airport Metro Center Circulator.** We will explore development of a convenient mobility system, including but not limited to shuttle service, people mover, and shared car system, for the Ontario Airport Metro Center.	**Consistent.** The Specific Plan area is not located in or near the Ontario Airport Metro Center. The Project would not interfere with or otherwise obstruct the City's development of a mobility system in this area. On this basis, the Project is considered consistent with Policy M-3.9.
M-3.10	**Multimodal Transportation Center.** We intend to ensure the development of a multimodal transportation center near ONT airport to serve as a transit hub with amenities for transit riders, pedestrians, and bicyclists transitioning to local buses, BRT, the Gold Line, high-speed rail, the proposed Ontario Airport Metro Center Circulator, and other future transit modes. We support locations for the multimodal	**Consistent.** The Specific Plan area is not located in/near the area intended for development of the Multimodal Transportation Center. The Project would not interfere with or otherwise obstruct the implementation of this transit hub. On this basis, the Project is considered consistent with Policy M-3.10.

TABLE 5: TOP 2050 CONSISTENCY ANALYSIS

MOBILITY ELEMENT		
	transportation center that are north of ONT airport, between Vineyard Avenue and Interstate 15.	
M-3.11	**Transit and Community Facilities.** We require the future development of community-wide serving facilities to be sited in transit-ready areas that can be served and made accessible by public transit. Conversely, we plan (and coordinate with other transit agencies to plan) future transit routes to serve existing community facilities.	**Consistent.** The Project site is located in an area already served by public transit. The Applicant would also coordinate with the City and transit agencies to implement transit service and thereby reduce vehicle miles traveled. On this basis, the Project is considered consistent with Policy M-3.11.
M-4 Goods Movement		
Goal M-4 An efficient flow of goods through the City that maximizes economic benefits and minimizes negative impacts.		
Policies		**Remarks**
M-4.1	**Truck Routes.** We designate and maintain a network of City truck routes that provide for the safe and efficient transport of goods while minimizing negative impacts on local circulation and noise-sensitive land uses, as shown on Exhibit M-04, Truck Routes. We will minimize conflicts on truck routes through the design and implementation of buffers between travel lanes and pedestrian and bicycle facilities on designated truck routes.	**Consistent.** The Project does not propose uses or activities that would generate substantial truck traffic. Any trucks accessing the Specific Plan area would utilize the City's designated truck routes, thereby minimizing negative impacts on local circulation and noise-sensitive land uses. On this basis, the Project is considered consistent with Policy M-4.1.
M-4.2	**Regional Participation.** We work with regional and subregional transportation agencies and adjacent cities to plan and implement goods movement strategies, including regional truck routes, plans and projects that improve mobility, support the efficient movement of goods, and minimize negative environmental impacts.	**Consistent.** The Project land uses take advantage of proximate available improved transportation systems acting generally to facilitate mobility, goods movement, and goods delivery on a local, sub-regional and regional basis. The Project would not interfere with or otherwise obstruct City efforts and actions to coordinate regional and sub-regional plans and strategies facilitating mobility, goods movement, and goods delivery. On this basis, the Project is considered consistent with Policy M-4.2.
M-4.3	**Railroad Grade Separations.** We eliminate at-grade rail crossings identified on Exhibit M-01, Roadway Classifications.	**Consistent.** No at-grade rail crossings are located within or adjacent to the Project site. The Project would not interfere with or otherwise obstruct the City's elimination actions in this regard.

TABLE 5: TOP 2050 CONSISTENCY ANALYSIS

MOBILITY ELEMENT		
		On this basis, the Project is considered consistent with Policy M-4.3.
M-4.4	**Environmental Considerations.** We support both local and regional efforts to reduce/eliminate the negative environmental impacts of goods movement through the planning and implementation of truck routing and the development of a plan to evaluate the future needs of clean fueling/recharging and electrified truck parking.	**Consistent.** The Specific Plan Design Guidelines and Development Regulations act globally to minimize potential environmental impacts of goods movement associated with the Project. Please refer also to remarks at Policies M-4.1, M-4.2.
M-4.5	**Air Cargo.** We support and promote a ONT airport that accommodates 1.6 million tons of cargo per year, as long as the impacts associated with that level of operations are planned for and mitigated.	**Consistent.** The Specific Plan area is not located within an identified Safety Zone of the ONT airport. The Project would not impact, nor be impacted by, ONT airport cargo operations. On this basis, the Project is considered consistent with Policy M-4.5.
M-5 Regional Transportation		
Goal M-5 A proactive leadership role in helping identify and facilitate implementation of strategies that address regional transportation challenges.		
Policies		**Remarks**
M-5.1	**Regional Leadership.** We maintain a leadership role to help identify and implement potential solutions to long-term regional transportation problems.	**Consistent.** The Project would not interfere with or otherwise obstruct the City's leadership efforts and actions. On this basis, the Project is considered consistent with Policy M-5.1.
M-5.2	**Land Use Compatibility with Regional Transportation Facilities.** We work with ONT, railroads, Caltrans, SBCTA, and other transportation agencies to minimize impacts.	**Consistent.** The Project would not interfere with or otherwise obstruct the City's cooperative efforts with regional transportation agencies. On this basis, the Project is considered consistent with Policy M-5.2.

Sources: Goal and Policy statements from TOP 2050; remarks by Urban Crossroads.

Prior to the issuance of Building Permits, the City would review the final Project designs to ensure consistency with City programs, plans, and policies as outlined above. Consistency with applicable City ordinance requirements is required as a matter of law.

Level of Significance: Less-Than-Significant. As summarized at Table 5, the Project does not propose or require uses or facilities that would conflict with applicable programs, plans, and

policies addressing the circulation system. Project impacts in these regards would therefore be **less-than-significant**.

T-2 ASSESSMENT

The Project is consistent with *CEQA Guidelines* section 15064.3, subdivision (b) regarding policies to reduce VMT. The City of Ontario has adopted the following thresholds of significance related to VMT for land use plans:

The SBTAM model should be used to forecast total daily VMT per Service Population (SP) is the required method for estimating VMT.

- A significant impact would occur if the project VMT per SP exceeds the Citywide average VMT per SP under General Plan Buildout Conditions.
- A significant impact would occur if the project caused total daily VMT per SP within the City to be higher than the no project scenario under cumulative conditions.

Based on the VMT analysis previously presented in this technical memorandum, Project-generated VMT per service population was found to be less than the City of Ontario VMT per service population under General Plan Buildout Conditions. Additionally, total daily VMT per service population within the City is forecast to remain unchanged under "With Project" for cumulative conditions. The Project therefore results in a **less-than-significant** VMT impact.

T-3 ASSESSMENT

Efficient and safe operations of the Project would be provided by on-site and localized circulation and intersection improvements to be developed as the Project individual site and building designs are finalized. The City would ensure that all on-site and localized circulation and intersection improvements would be designed and constructed consistent with applicable provisions of the Specific Plan and pursuant to City site plan and Building Permit review processes and requirements.

Traffic signing and striping would be implemented in conjunction with detailed Project construction plans. Sight distance at each Project access point would be reviewed with respect to standard Caltrans and City of Ontario sight distance standards at the time of preparation of final grading, landscape and street improvement plans.

The Project would generate passenger car trips typical of the proposed uses. As part of established site and Building Permit review processes, the City would require implementation of designated travel paths, signing, and traffic controls to ensure that traffic conflicts are minimized or avoided. Land uses proximate to the Project site are planned for, or are developed with urban uses similar to those proposed by the Project. These uses would generate urban traffic types similar to traffic generated by the Project and would not generate traffic that would be incompatible with the Project traffic types.

As supported by the preceding discussions, the potential for the Project to substantially increase hazards to a design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment); is considered **less-than-significant.**

T-4 ASSESSMENT

EMERGENCY ACCESS

Access to the Specific Plan area is provided by improved urban roadways. As part of the City's established design review processes, design and implementation of all Project circulation improvements, as well as final design(s) of the Project site plan(s), to include locations and design of proposed driveways, would be required to be reviewed and approved by the City Traffic Engineer. In addition, as part of the City's established design review processes, representatives of the City's Police and Fire Departments would review the Project's plans in regard to emergency access. Efficient and safe access within, and access to, the Project is provided by the Specific Plan design concepts, site access improvements, and site adjacent roadway improvements included as components of the Project. In combination, these elements act to facilitate emergency access and avoid conditions that would restrict or limit access under emergency conditions.

OTHER CONSIDERATIONS

It is also recognized that temporary and interim traffic detours and traffic disruptions could occur during Project construction. To minimize effects of Project construction on area traffic patterns, it is recommended that the following or similar Construction Area Traffic Management Plan (Plan) be implemented as a Project Condition of Approval. Typical elements and information incorporated in the Plan would include, but not be limited to:

- Name of on-site construction superintendent and contact phone number.
- Identification of Construction Contract Responsibilities - For example, for excavation and grading activities, describe the approximate depth of excavation, and quantity of soil import/export (if any).
- Identification and Description of Truck Routes - to include the number of trucks and their staging location(s) (if any).
- Identification and Description of Material Storage Locations (if any).
- Location and Description of Construction Trailer (if any).
- Identification and Description of Traffic Controls - Traffic controls shall be provided per the Manual of Uniform Traffic Control Devices (MUTCD) if the occupation or closure of any traffic lanes, parking lanes, parkways or any other public right-of-way is required. If the right-of-way occupation requires configurations or controls not identified in the MUTCD, a separate traffic control plan must be submitted to the City for review and approval. All right-of-way encroachments would require permitting through the City.
- Identification and Description of Parking - Estimate the number of workers and identify parking areas for their vehicles.
- Identification and Description of Maintenance Measures - Identify and describe measures taken to ensure that the work site and public right-of-way would be maintained (including dust control).

The Plan would be reviewed and approved by the City prior to the issuance of the first building permit. The Plan and its requirements would also be required to be provided to all contractors as one component of building plan/contract document packages.

Based on the preceding, the potential for the Project to result in inadequate emergency access would be **less-than-significant.**

If you have any questions, please contact me directly at aso@urbanxroads.com.

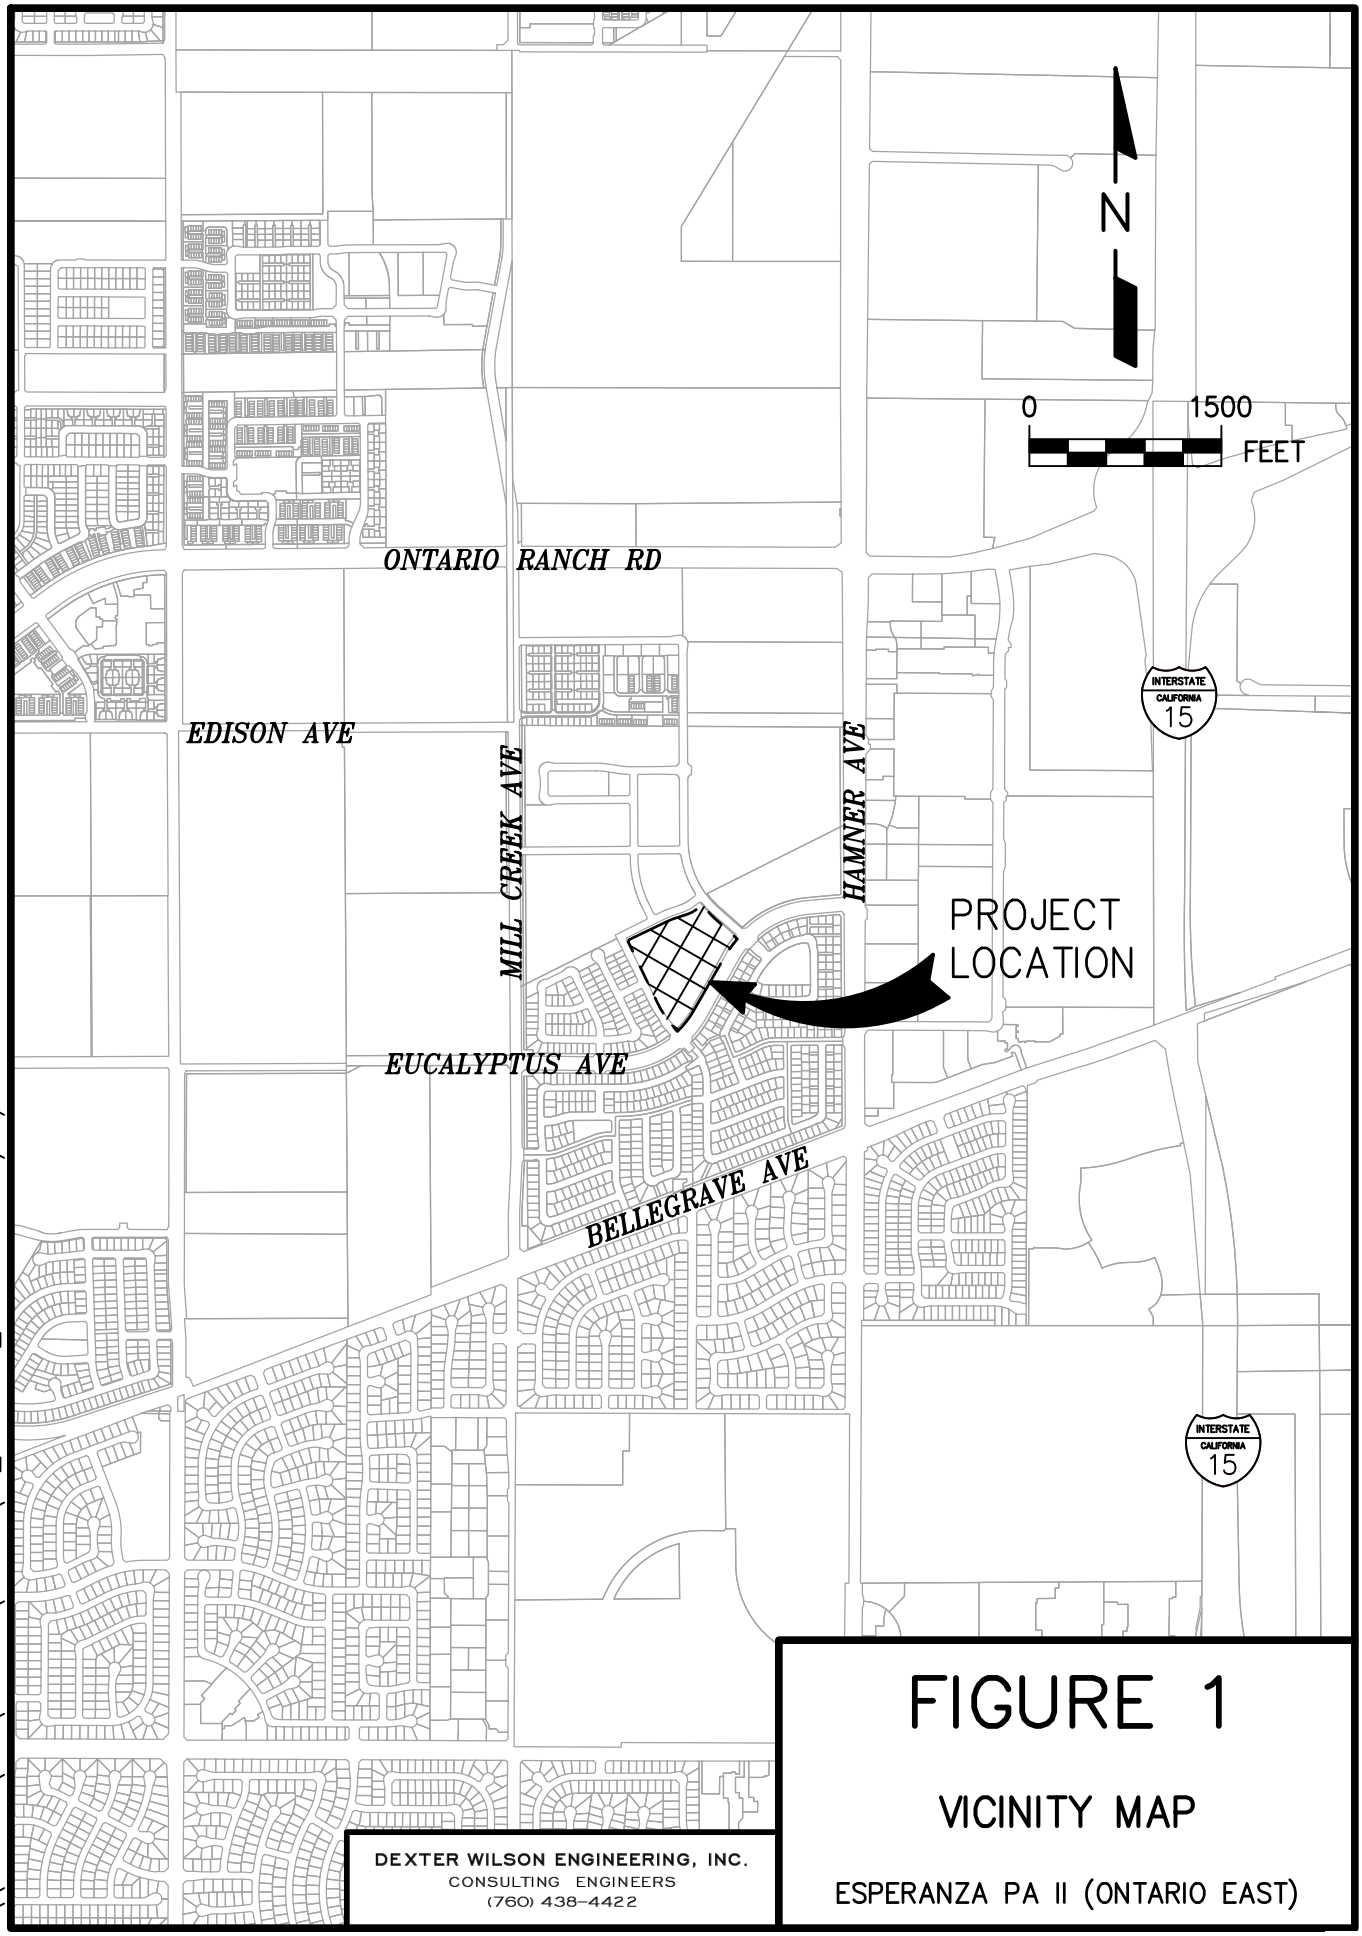
Subject: Water System Analysis for Esperanza PA 11 Project in the City of Ontario

Introduction

The Esperanza PA 11 project is located in the City of Ontario north of Eucalyptus Avenue between Amherst Avenue and Chatham Street. Access to the project will be from Amherst Avenue and Chatham Street. Water service for Esperanza PA 11 project will be provided by City of Ontario (City).

The proposed project is a mixed-use development consisting of 161 units on approximately 10 acres.

A Vicinity Map for the project is shown on Figure 1.



\\MERIDIAN\DWG\1551001\REPORT\EH_FIGURE-1_VICMAP.DWG 7/12/2024 1:38:24 PM LAYOUT:8x11 USER:Karam

Purpose of Study

The purpose of this letter report is to analyze the existing and proposed water system for Esperanza PA 11 project and determine if there are any water system deficiencies created by the proposed development of this property and land use change from school site to residential. This report will address any offsite (public) water system improvements are needed for the development of the project so that the offsite water system will be in conformance with the City water system design standards.

A previous Master Plan of Water was prepared for the entire project in 2015 for the overall developer.

Study Area and Available Water System Pressure

In general, the study area for this water report is Esperanza PA 11 project boundary. The extent of the existing water system which was incorporated into the analysis of the project site was based on the existing water distribution system that serves the project area.

Figure 2 presents the existing and proposed water facilities in the project area.

Water service to the project will be from the 925 Pressure Zone of the City's public water system. Finished floor elevations on the project property range between 705 feet and 711 feet. This results in a maximum static water pressure range of 93 psi to 95 psi on the project site.

Water System Design Criteria

The design criteria used for the evaluation of the proposed water system by Esperanza PA 11 project are based on City design criteria. This water design criteria is presented in the City's most recent Master Plan for the overall project. A copy of the pertinent sections where the design criteria is located is attached as Appendix A.

Water Demand Rates. The water demand rates for the project and surrounding area are presented as Table 1 below.

TABLE 1
ESPERANZA PA 11 WATER DEMAND FACTORS

Land Use	Demand Factor
Residential – Attached Dwellings (11-25 units/acre)	323 gpd/unit

Peaking Factors. The peaking factors utilized in this study are identified in the City's Master Plan. To convert average day demand to maximum day demand a peaking factor of 1.55 was utilized and to convert average day demand to peak hour demand a peaking factor of 1.98 was utilized.

Existing and Proposed Water System

There are existing public water facilities directly adjacent to the project site. There is an existing 24-inch diameter public water line in Eucalyptus Avenue and existing 8-inch public water lines surrounding the project. The project will be connecting its onsite private water systems to two existing water lines in Amherst Avenue and Chatham Street.

Figure 2 presents the existing and proposed water system in the project vicinity.

NOTE: ALL EXISTING AND PROPOSED WATER LINES ARE IN THE 925 PRESSURE ZONE.

\\MERIDIAN\DWG\1551001\REPORT\EH_WTR_FIGURE-2_EXPROWTR.DWG 4/17/2025 2:49:30 PM LAYOUT:11x17 USER:James

Table 2 provides the summary of projected water demand for the project.

TABLE 2
ESPERANZA PA 11 PROJECTED WATER DEMAND

Description	Quantity	Unit Demand Factor	Total Avg. Demand, gpd
Medium Density Residential	161 units	323 gpd/unit	52,003

Per the City design criteria, the maximum day demand calculates to be 80,605 gpd (56 gpm) and the peak hour demand calculates to be 102,966 (72 gpm).

Private Water System

Per the City's requirement, the onsite water system for Esperanza PA 11 will be private. One connection will be made for the domestic service and two connections will be made for the fire protection service to the project site. Connections will be made at Chatham Street and Amherst Avenue.

Domestic Meter and Service. The preliminary water fixture count (WFU) for the proposed units are estimated to be 30 to 35 WFUs per unit. Based on a WFU count of between 30 and 35 fixture units per home and an extrapolation curve as shown in Appendix B, the design demand for water meter sizing is estimated to be approximately 675 gpm for the project.

Based on the meter capacities established in AWWA C700-20, the project will likely require a 4-inch or 6-inch meter. A bypass meter will be provided in the event that the primary meter is temporarily of service. The final sizing of the service laterals and meters will need to be confirmed once the fixture units and plumbing plans for each home are finalized.

Private Fire Protection Service. The private fire protection system will consist of two DCDA backflow preventers at each connection point and 8-inch diameter water lines throughout the project. The 8-inch diameter private fire protection system will sufficiently convey the projected 1,500 gpm fire flow requirement. This was confirmed by a hydraulic computer model that is presented in the next section of this water study.

Hydraulic Model Development

The KYPIPE computer software program developed by the University of Kentucky was used to analyze the proposed onsite and existing offsite public water system. KYPIPE utilizes the Hazen-Williams equation for determining head loss in pipes. The program also determines the flow and velocity in the pipes as well as the available pressure at nodes in the water system. An assumed roughness coefficient "C" value of 120 was used for all pipes.

Available Hydraulic Grade Line. **F**ire flow test data in the vicinity of the project was performed by the City and is included in Appendix C for reference. Results from the hydrant flow test show a residual pressure of approximately 58 psi at the fire flow requirement for the project at the hydrant flow test location (Eucalyptus Avenue west of the project site).

Fitting and Valve Losses. To simulate minor losses through pipe fittings and valves, minor loss coefficients or "k" values for all fittings associated with pipes were included in the hydraulic model.

Meter and Backflow Assembly Losses. The pressure loss through the proposed meters and backflow preventers was incorporated into the computer model. Appendix B presents candidate DCDA and RP backflow preventers. The manufacturer's literature includes charts which show pressure loss through the backflow preventer as a function of flow. These charts were used to incorporate the pressure losses reflected in the computer modeling.

Hydraulic Model Analysis

Hydraulic modeling of the proposed onsite and existing offsite water system for the Esperanza PA 11 project was performed to confirm the pipe sizes necessary to provide adequate domestic and fire protection service. The water system was analyzed under an onsite 1,500 gpm fire flow scenario.

Appendix C provides the results of the computer model for the analyzed water system. Exhibit A at the back of Appendix C provides the Node and Pipe Diagram of the analyzed water system.

The results of the hydraulic analyses presented in Appendix C show that the proposed water system for the project site is adequate for domestic service and fire protection. For fire protection, the results of the computer runs show that a fire flow of 1,500 gpm can be delivered to the any fire hydrant within the project site with a residual pressure at the hydrant of greater than 20 psi. The minimum residual pressures are 31 psi under a 1,500 gpm fire flow scenario. Domestic demands can be provided with residual pressures of at least 58 psi.

The results of the computer hydraulic analyses for Esperanza PA 11 project indicate that the existing public water system can provide sufficient flow and pressure for the projects' domestic and expected fire protection service needs.

Conclusions and Recommendations

The following conclusions and recommendations are summarized based on the water system analysis prepared for the proposed Esperanza PA 11 project.

1. The project will be supplied from the existing City 925 Zone water system.

2. The project is proposing to make two connections to the existing public water system. These include a connection to an existing 8-inch diameter line in Chatham Street and a connection to an existing 8-inch line in Amherst Avenue.

3. Figure 2 presents the existing and proposed water system surrounding the project.

4. The estimated WFU count and corresponding peak water demand (675 gpm approximate) is provided on page 6 of this report.

5. A maximum day demand plus fire flow of 1,500 gpm can be met at the project site with existing and the proposed piping with all residual pressures greater than 20 psi.

6. **F**ire flow test data in the vicinity of the project was performed by the City and is included in Appendix C for reference

7. This report presents the sizing and a general schematic layout of the proposed onsite water system. The design engineer for the water system should incorporate valves, fittings, and appurtenances in accordance with the design guidelines of the City of Ontario.

8. The recommended material specification for all new potable water lines is AWWA C900 DR18 PVC.

Thank you for the opportunity to assist you with the water system planning for Esperanza PA 11 project. If you have any questions regarding the information and conclusions presented in this report, please do not hesitate to call.

Parks		1,000	1.04	1,400	58%
Schools		3,500	3.65	1,600	31%

[1]Recycled Water Demands include irrigation for right-of-way (medians and parkways), neighborhood edge, pocket parks, and common areas.

[2] The WDE is based on the Maximum Day Demand (MDD) with a peaking factor of 1.5 in the NMC for all land use categories.

Table B - Example Water Supply Calculation

Land Use	Acres[1] (gross)	Residential Units	WDE Factor (gpm)	Potable MDD (gpm)	Recycled Water ADD (gpm)
Development					
Detached Dwellings (less than 5 units per acre)	1,284	5,061	0.57	2,868	803
Detached or Attached Dwellings (between 5 and 11 units per acre)	369	2,530	0.48	1,223	256
Attached Dwellings (between 11 and 25 units per acre)	194	3,410	0.34	1,147	202
Retail/Services Uses (per acre)[2]	104		2.29	239	166
TOTAL	1,950	11,001		5,477	1,428

Three (3) Wells Are required to Support this example, assuming each well produces 2,000 gpm and connection to the Recycled Water System maximizing Recycled Water Use.

[1] Residential Acres are estimated based on the weighted average derived from the average number of units per land use category.

[2] Commercial acreage is calculated from a total square footage of 1,361,000 SF with an average Floor to Area Ratio (FAR) of 0.30 for commercial services in The Ontario Plan.

DRAFT

SECTION 4
WATER USE

4-1 Historic Water Production and Purchase

The City obtains its potable water supply from groundwater wells in Chino Basin and imported water from the Water Facilities Authority (WFA) and the Chino Basin Desalter Authority (CDA). Currently, the City operates seventeen (17) active wells.

The total annual water production and purchase from January 2007 to December 2018 is shown in Table 4-1 and on Figure 4-1. Figure 4-2 illustrates the historic water production and purchase by month. Over the last twelve years, the annual supply has averaged a total of 35,774 AFY (31.9 mgd). The average groundwater production is 23,520 AFY (21.0 mgd). Per the Chino Basin Watermaster 41st Annual Report, the City of Ontario has appropriative rights to 16,337 AFY, and its share of the initial operating safe yield is 11,374 AFY or 21 percent of the appropriative pool rights. The City has secured additional supply through transfers, purchase, and groundwater recharge. The average amount of imported water purchased is 12,253 AFY (10.9 mgd).

There has been a decrease in production over the past twelve years. This may be attributed to the expansion of the City's recycled water system, as well as a conscientious water conservation effort by the customers. Water conservation is discussed further in Section 4-9.

DRAFT

4-2 Water Consumption versus Water Production / Purchase

The City typically purchases/produces more water than the quantity measured by the customer meters. Table 4-2 summarizes the difference between the measured consumption and production from 2007 to 2018. Figure 4-3 graphically shows the City's water consumption versus production/purchase.

Table 4-2

Water Consumption versus Water Production/Purchase

Calendar Year	Water Consumption[1] (AFY)	Water Production/ Purchase[2] (AFY)	Non-Revenue Water (%)	Population[3]	Per Capita Production/ Purchase (gpcd)	Per Capita Consumption (gpcd)

[1] Consumption from annual Department of Water Resources Public Water System Statistics Report.

[2] Water Production/Purchase data extracted from City's Anuual System Operations Data

[3] Population data from California Department of Finance, E-5 Population and Housing Estimates for Cities 2000-2018, excluding estimate of population for areas in Ontario served by CVWD.

[4] Water consumption estimates are from monthly water billing data.

Per the historical records, the consumption between 2010 and 2012 was more than the amount of water produced and/or purchased, which could not have actually happened. Possible explanations for the discrepancy in data include the following:

- During this time, the City was expanding its recycled water system. Some customers were converted from potable water use to recycled water use. Some of the consumption data might have actually been a combination of the potable and recycled water use.
- City staff has been updating and reclassifying meter types in its billing database. Some of the data provided in the historical DWR reports might have been misclassified at the time the report was created.
- Meters are not always perfectly calibrated. The margin of error in few large meters that measure production and purchase amounts or the thousands of small meters measuring consumption could contribute to the discrepancy in data.

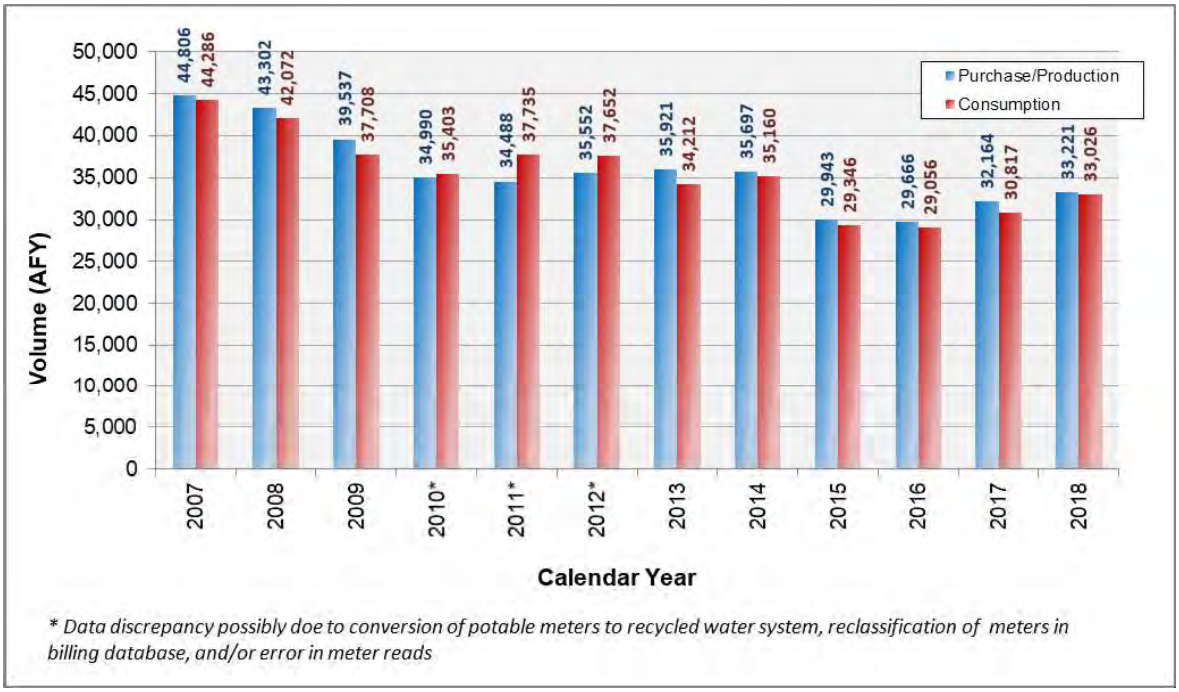
The water consumption data before the 2015 Calendar Year is based on Department of Water Resources Public Water System Statistics Reports. After the 2015 Calendar Year, the consumption data is based on the monthly water billing data. Non-revenue water makes up between 0.6% and 4.8% of the total production and purchase supply, respectively. The City strives to keep the percentage as low as possible. The City's non-revenue water is 2.6%, on average.

DRAFT

Non-revenue water occurs in all water systems. There will be differences in the accuracies of the few large meters which measure purchases and production, and the thousands of small customer meters which measure sales. Non-revenue water can also be due to unmeasured uses such as water main flushing and other maintenance related tasks. The remainder may be due to leaks from the system. The City's average non-revenue water rate of 2.6%.

Figure 4-3

Water Consumption versus Water Production/Purchase



4-3 Water Demand Variations

Demand variations through a year are influenced by seasonal effects such as temperature, humidity, and precipitation. System demand variations throughout a day are influenced by the customer base and the daily lifestyles of the customers. In primarily residential areas, the peak demands within a day typically occur in the morning hours between 6:00 am and 9:00 am, when customers wake to begin their daily routine. In largely commercial and industrial areas, the peaks may occur mid-day or the demand may even remain relatively constant throughout the work day. For this study, the variations are expressed as a ratio to the average demand, with the average demand being equal to one.

For the purpose of this master plan, the average day demand was based on the most recent twelve consecutive months of production and purchase data that was available at the time the hydraulic model was created. The average day demand is summarized in Table 4-3.

Table 4-3
Average Day Demand for the Hydraulic Water Model

	AF	MGD	gpm
September 2018	3,179	34.53	23,980
October 2018	2,850	29.95	20,800
November 2018	2,583	28.06	19,483
December 2018	2,053	21.58	14,988
January 2019	1,915	20.13	13,980

June 2019	2,966	32.22	22,373
July 2019	3,404	35.78	24,847
August 2019	3,479	36.57	25,397
Total	**31,153**	**27.76**	**19,280**

4-4 Monthly Demand Variations

Typical of most Southern California communities, the City's water consumption exhibits a distinct seasonal pattern. Peak and low monthly consumption occur during the dry summer months and wet winter months, respectively. Monthly demand

DRAFT

totals and factors for 2007 to 2018 are shown in Table 4-4. Peak demands typically occur in July and August. Low demands typically occur in February. The highest and lowest monthly demand factor for the 2018 Calendar year is 1.46 and 0.82, respectively.

The maximum month factor is estimated to be 1.46 times the ADD, which is representative of the OMC demands, since there is very little existing usage in the OR area. The OR maximum day peaking factor was estimated to be 1.36, which was developed by excluding a portion of the water use that is expected to be served through the recycled water system.

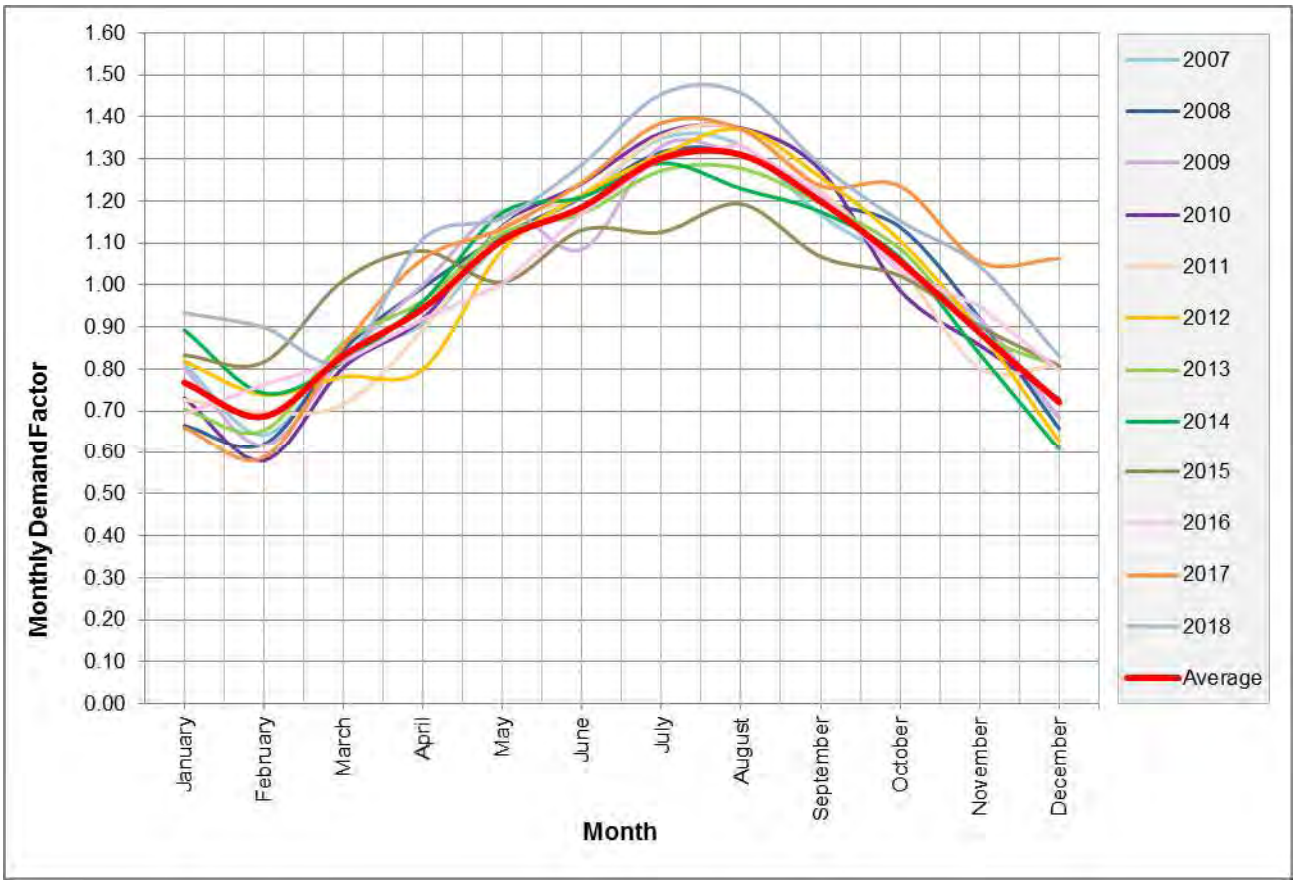
DRAFT

Figure 4-4

Monthly Demand Factors



4-5 Daily Demand Variations

In the predominately developed OMC service area, the MDD is estimated to be 1.60 times the ADD. The OR maximum day peaking factor was estimated to be 1.50, which was developed by excluding a portion of the water use that is expected to be served through the recycled water system. The MDD estimate is summarized in Table 4-5.

In the hydraulic model, demands and patterns for high water users were allocated based on field data that was captured during the calibration period. For modeling purposes, the calibration diurnal pattern and demands were used for the ADD and MDD scenarios.

Table 4-5

Maximum Day Demand Summary

	ADD (gpm)			MDD/ADD Peaking Factor	MDD (gpm)		
	Non-HWU	HWU[1]	Total		Non-HWU	HWU[1]	Total
Original Model Colony (OMC)	17,196	1,691	18,887	1.6	27,512	1,691	29,202
Ontario Ranch (OR)	391	2	393	1.5	586	2	588
Total	17,587	1,693	19,280		28,097	1,693	29,790

[1] *High water user demand and diurnal patterns are based on the calibration period*

DRAFT

4-6 Hourly Demand Variations

Knowledge of accurate demand variations over a 24-hour period is essential for proper analysis of water systems. For this study, diurnal use patterns were developed for each hydraulic zone. Customer specific diurnal patterns were developed for high water users. The development of diurnal use patterns are described in detail in Section 5 (Diurnal Patterns) of this report.

4-7 System Demands and Peaking Factors

It is important to evaluate a water system during various incremental peak demands. Typically, a water system is designed to meet the maximum demands placed on it. The system components must be designed to cope with these demands as they occur. Maximum month and maximum day demands are important factors in sizing a system's supply capability. Maximum day demands usually dictate the design criteria for both system transmission and storage needs. Peak hour criterion is a measure of the system's overall adequacy with respect to its transmission and distribution elements, as well as its operational storage capacity.

The peaking factors for Ontario Ranch (OR) was further refined to account for the fact that it is planned to be largely residential in nature and there were a dual recycled water system constructed in all major streets. The City anticipates a target of 12 percent of the total water use in low density residential areas to be provided by the recycled water system. It is expected that this percentage will increase as the residential density increases. With more recycled water and less irrigation use on the domestic water system, the peaking factors in OR are reduced as detailed in Table 4-6. These factors are utilized for future demand estimates in Ontario Ranch. The relationships between the peaking factors developed for this study with respect to the average day demand estimate are displayed graphically on Figure 4-5.

Table 4-6

Existing Water System Demands and Peaking Factors

Demand Description	OMC Demand (gpm)	OR Demand (gpm)	HWU Demand[1] (gpm)	Total System Demand (gpm)	Total System Demand (mgd)	Total System Demand (AFY)	(OMC) Peaking Factor	(OR) Peaking Factor	Total System Peaking Factor
Average Day	17,196	391	1,693	19,280	27.76	31,098	1.00	1.00	1.00
Max Month	25,107	531	1,693	27,331	39.36	44,085	1.46	1.36	1.42

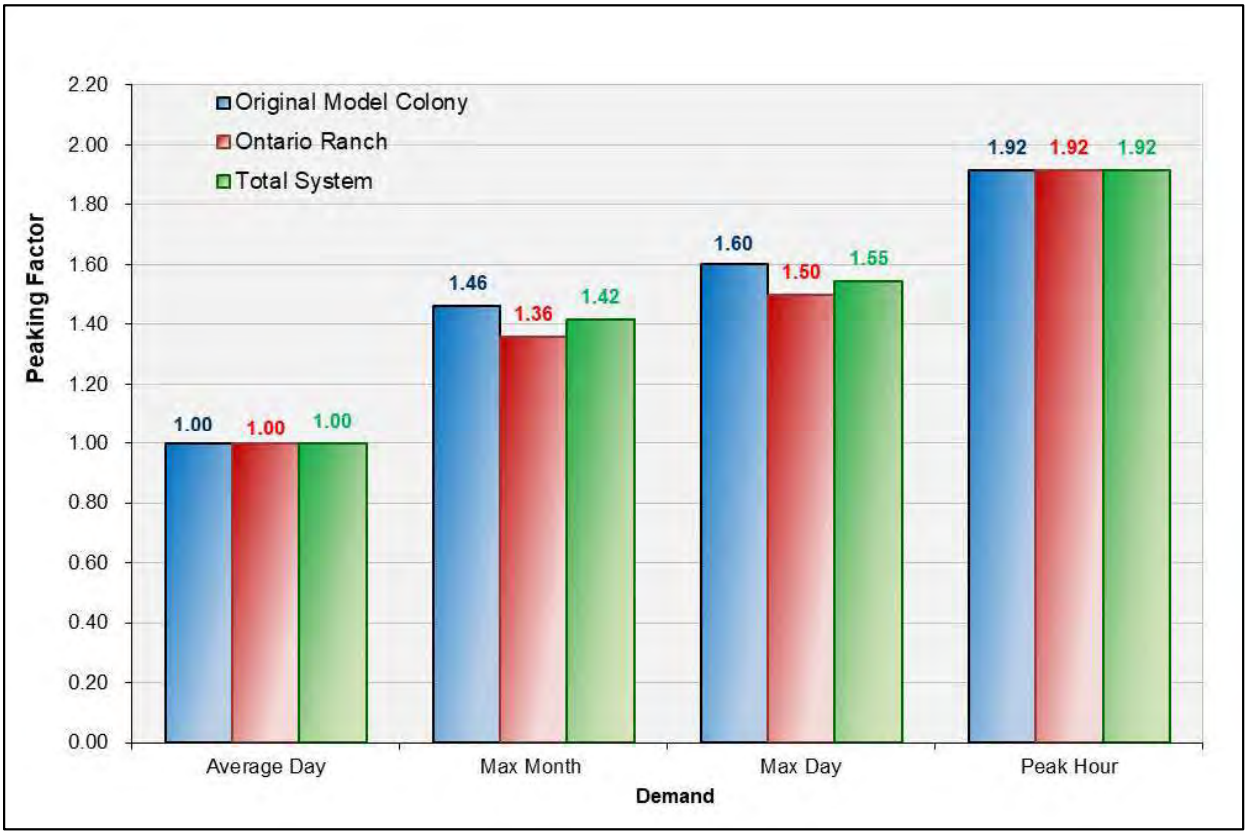
[2] *System Wide Peak Hour Factor was developed with multiple diurnal patterns that differ by zone, meter type, and for high water users.*

DRAFT

Figure 4-5

Water Demand Peaking Factors



4-7.1 Existing Demands

- **Average Day -** As detailed in Table 4-2, the average day demand is based on the City of Ontario's average daily production and purchase data between September 2018 and August 2019. As shown in Table 4-5, the average day demand is 31,153 AFY (19,280 gpm).
- **Maximum Month -** As detailed in Table 4-6, the maximum month peaking factor for OMC and OR are 1.46 and 1.36, respectively. The maximum month demand is estimated as 45,341 AFY (28,109 gpm).
- **Maximum Day -** As detailed in Table 4-6, the maximum day peaking factor for OMC and OR are 1.6 and 1.5, respectively. The maximum day demand is estimated as 48,051 AFY (29,790 gpm).
- **Peak Hour Demands -** Modeled peak hour demands were based upon the diurnal patterns that were developed for the hydraulic model, as detailed in Section 5. The overall peak hour system demand is estimated to be 1.98 times the average day demand or 61,656 AFY (38,224 gpm). This factor varies by zone depending on the diurnal patterns developed by zone, meter type, and for high water users.
- **Existing Water Demands by Zone -** Existing water demands by zone are shown in Table 4-5. These estimates are based upon the demand distribution generated from water billing historical data linked to the City's meter geodatabase. The average day demands (ADD) were distributed in the model using the 12-month consumption data from the City's billing department, adjusted to the most-recent production and purchase data (31,094 AFY; 27.8 mgd; 19,280 gpm) which takes into consideration non-revenue water.

  Generally, the ADD were increased with the factors included in Table 4-6 to develop the Maximum Day Demands (MDD), which are summarized by zone in Table 4-7. It should be noted that the MDD model demands for the high water users are based on actual field data collected during the calibration period, and they are not estimated with the MDD peaking factor included in Table 4-6. The MDD total 48,051 AFY (42.9 mgd; 29,790 gpm).

4-7.2 Water Unit Demand Factors

Existing consumption data was used in this study to represent the water use of existing customers. For future developments, water unit demand factors were used to estimate future water use. Potable water unit demand factors are generally based on the factors that were developed as a part of a study completed in May 2016 entitled "*Ultimate Citywide Water Demand Estimate*".

The revised potable water unit demand factors are shown in Table 4-8.

The residential unit demand factors were first developed in terms of gpd/person. Then the maximum densities (people/du and du/ac) were applied to determine the factors in other units. The resulting unit factors in terms of gpd/du and gpd/ac represent the maximum expected demand factors.

The 2016 study included maximum residential densities in the Ontario Ranch area, which were based on historical development projections that were provided by the City's planning department. Some of the recent actual projections are higher than those included in the Ontario Plan, which needed to be updated to appropriately develop the demand factors and the future demand estimate.

[1] *Max Density per the City's 2010 General Plan (The Ontario Plan) for OMC without recycled water. Density for LDR, LMDR, MDR, and HDR with recycled water (Ontario Ranch) were increased per the City Planning Department recommendation (March 2016).*

[2] *Density per the City's 2010 General Plan (The Ontario Plan)*

[3] *Unit Flow Factor Abbreviations:*

ac = acre *du = dwelling unit* *gpd = gallons per day*

room = hotel/motel room *stu = student* *tsf = thousand square feet*

[4] *If possible it is recommended to use 130 - 155 gpd/room on a case by case basis. It is difficult to estimate the number of rooms or square footage per acre.*

[5] *Mixed Use demands should be based on the types of landuse that make up the specific area and the unit demand factors provided above. The City's 2010 General Plan (The Ontario Plan) provides detailed information on the landuses that make up each mixed use area.*

4-7.3 Future Demands

The City of Ontario's Future water system demands utilized in this study are detailed in Table 4-9 by zone. Generally, the ADD were increased with the factors included in Table 4-6 to develop the Maximum Day Demands (MDD), which are summarized by zone in Table 4-7. It should be noted that the MDD model demands for the high water users are based on actual field data collected during the calibration period, and they are not estimated with the MDD peaking factor included in Table 4-6. The MDD total 48,051 AFY (42.9 mgd; 29,790 gpm).

Table 4-9

Future Water demands by Zone

[1] *MDD for high water users model demands are based on actual field data collected, not MDD peaking factors included in Table 4-6*

DRAFT

The increase in future water demand is due to development of Ontario Ranch, anticipated densification in land use and population per the City's 2010 General Plan, and the assumption that the area within the service area will be fully occupied (vacant land will be built upon and occupied).

The total water maximum day demand for the future system is estimated 54,778 gpm (78.88 mgd; 88,357 AFY). This Subsection describes the process of developing the future system demands for the areas that are going to be developed or redeveloped and distributing the demands in the hydraulic model. The existing demands remained the same unless an area was going to be redeveloped.

In summary, the following steps were used to estimate the future demands:

1. Existing meter data was used for existing uses.
2. Used Water Demand Factors included in Table 4-7 to estimate demand for the vacant and future densification areas. In areas of redevelopment the existing demands were updated with the estimated flows for the future development.
3. The "City Buildout Table" approved in April 2015 (*Appendix 4-1*) provided the population and job estimates for all future mixed use areas as defined by the Ontario Plan (General Plan). The unit flow factors provided in Table 4-7 were used to estimate the total average day water demand for mixed use areas. Any existing water demands were deducted from the total future average water demand estimate. If the existing demands were greater than the calculated future demands, the existing water demand was maintained in the hydraulic model. The difference was then applied to the hydraulic model in the specific mixed use area.
4. In the Original Model Colony, future average water demands were calculated for currently vacant parcels, assuming that they will be developed in the future per the land use designated in the General Plan. The parcel acreage and the water demand factors provided in Table 4-7 were utilized to estimate the total water demand.
5. All available specific plans and other more current planning information were utilized for Ontario Ranch. The specific plan areas are shown on Figure 4-6. The City compiled the information and provided table specifying the proposed land uses (*Appendix 4-1: Ontario Ranch Proposed Land Uses per Specific Plans*). The detailed land use information and the water demand factors provided in Table 4-7 were utilized for calculating the future water demands. Demands were applied to the nearest model junction. If less than 50 percent of a specific plan area was constructed at the time of this study, all existing water demand was removed and replaced with the projected future water demand. If a specific plan area was mostly constructed, the difference in existing and future water demand was added to the model in that particular area.
6. On the west side of Ontario Ranch, where no specific plans yet exist, the future water demands were calculated utilizing the General Plan land uses, parcel acreages, and the water demand factors provided in Table 4-7. Demands were applied to the nearest model junction.

PROJECT NO: 1001398.00
DATE: June 2020

Figure 3440

DRAFT

4-8 Recycled Water

The City's recycled water use was 9,653 AFY (3,042 gpm) in Fiscal Year 2018. The recycled water is supplied by Inland Empire Utilities Agency (IEUA). Recycled water from IEUA's treatment plants are conveyed through IEUA's pipe conveyance system to the City's recycled distribution system. According to the City's billing data, there are approximately 370 recycled customer meters in the City.

The City's Recycled Water Master Plan was last updated in April 2006. It is being updated concurrent to this master plan. Potable water customers that are anticipated to be converted to the recycled water system in the future will be identified as part of the recycled water master plan update.

4-9 Water Conservation

Title 6, Chapter 8A, The Emergency Water Conservation Plan of the City's Municipal Code addresses water conservation issues. The reference for this Chapter is Ordinance 2907, which became effective June 16, 2009.

Voluntary conservation is encouraged to limit the amount of water used to the amount absolutely necessary for health, business, and irrigation. The following elements of conservation apply at all times on a voluntary basis:

- Avoid hose washing of sidewalks, walkways, driveways, parking areas or other paved surfaces, except as required for sanitary purposes.
- Wash motor vehicles, trailers, boats and other types of mobile equipment using a hand held bucket or a hose equipped with a positive shutoff nozzle for quick rinses, or at the immediate premises of a commercial car wash or with recycled wastewater for approved uses.
- Avoid using water to clean, fill or maintain levels in decorative fountains, ponds, lakes or other similar aesthetic structures unless such water is part of a recycling system.
- Encourage restaurants, hotels, cafés, cafeterias or other public places where food is sold, served or offered for sale, to serve drinking water only to those customers expressly requesting water.
- Promptly repair all leaks from indoor and outdoor plumbing fixtures.
- Avoid watering lawn, landscape or other turf area more often than every other day and during the hours between 6:00 a.m. and 6:00 p.m.
- Avoid causing or allowing the water to run off landscape areas into adjoining streets, sidewalks or other paved areas due to incorrectly directed or maintained sprinklers or excessive watering.

The City maintains water conservation information on their website for viewing by the public. Information includes water use efficiency and conservation tips, links to other websites pertaining to water conservation, and links to IEUA's website where indoor and outdoor rebates are offered for residents of the IEUA service area. Indoor and outdoor rebates are also offered to commercial businesses

4-9.1 California Water Conservation

A variety of executive orders have been issued since 2009 regarding water conservation in the state of California. The following is a brief summary:

1. **November 2009 – Senate Bill SBx7-7 (i.e. The Water Conservation Act of 2009) enacted**
   - Requires State of California Department of Water Resources (DWR) in consultation with other state agencies, to develop a single standardized water use reporting form that can be used by both urban and agricultural water agencies.
   - For urban water conservation, the legislation sets an overall goal of reducing per capita urban water use by 20 percent by December 31, 2020.
2. **April 2014 Proclamation**
   - Governor declares a drought State of Emergency to exist in California due to severe drought conditions.

DRAFT

- Calls on Californians to reduce their water usage by 20 percent.
- Suspends California Environmental Quality Act to allow the emergency regulation and other actions to take place as quickly as possible

3. **December 2014 - Executive Order B-28-14**
   - Extends the California Environmental Quality Act suspension through May 2016
4. **April 2015 - Executive Order B-29-15**
   - Imposes restrictions on urban water suppliers to achieve a statewide 25 percent reduction in potable urban usage through February 2016
   - Requires commercial, industrial, and institutional users to implement water efficiency measures
   - Prohibits irrigation with potable water of ornamental turf in public street medians
   - Prohibits irrigation with potable water outside newly constructed homes and buildings that is not delivered by drip or microspray systems
   - Directs urban suppliers to develop rate structures and other pricing mechanisms to promote water conservation
   - Requires urban suppliers to increase enforcement against water waste
5. **November 2015 – Executive Order B-26-15**
   - Directs State agencies to prioritize and accelerate approvals for projects that enhance the ability of a local or state agency to capture high precipitation events
   - Extends drought restrictions through October 2016
6. **May 2016 - Executive Order B-37-16**
   - Aims to bolster California's climate and drought resilience by instructing State agencies to help Californians adopt permanent changes to use water more wisely.
   - Directs the State Water Resources Control Board to develop new mandatory water conservation regulations
   - Directs the Department of Water Resources to update new water use targets for urban water agencies. These new targets will build upon the existing requirement to achieve 20% reduction in usage by 2020. The executive order states that new targets would be developed no later than 2020, with the goal of reaching full compliance by 2025.
   - Directs the State Water Resources Control Board to eliminate water waste by
     - **i.** permanently prohibits practices that waste potable water
     - **ii.** directing actions to minimize water system leaks
     - **iii.** directing urban and agricultural water suppliers to accelerate data collection, improve water system management and prioritize capital projects to reduce water waste
   - Directs the Department of Water Resources to strengthen local drought resilience by updating requirements for Water Shortage Contingency Plans
   - Directs the Department of Water Resources to improve agricultural water use efficiency and drought planning
7. **April 2017 – Executive Order B-40-17 was issued**
   - Terminates the January 17, 2014 Drought State of Emergency
   - Rescinds Executive Orders B-26-14, B-28-14, B-29-15, and B-36-15

DRAFT

- Most of Executive Order B-37-16 (Making Water Conservation a California Way of Life) remains in full force. The Department of Water Resources and State Water Resources Control Board continues to:

  i. develop permanent prohibitions on wasteful water use and requirements for reporting water use by urban water agencies. Permanent restrictions include:

  - ✓ Hosing off sidewalks, driveways and other hardscapes
  - ✓ Washing automobiles with hoses not equipped with shut-off nozzle
  - ✓ Using non-recirculated water in a fountain or other decorative water feature
  - ✓ Watering lawns in a manner that causes runoff, or within 48 hours after measurable precipitation
  - ✓ Irrigating ornamental turf on public street medians

  ii. develop standards that urban water suppliers will use to set new urban water use efficiency targets

  iii. direct actions to minimize water system leaks that waste large amounts of water.

  iv. direct urban and agricultural water suppliers to accelerate their data collection, improve water system management, and prioritize capital projects to reduce water waste

  v. work with agencies and suppliers to identify mechanisms that would encourage and facilitate the adoption of rate structures and other pricing mechanisms that promote water conservation

8. Assembly Bill No. 606 – May 31, 2018

- authorizes State Water Resources Control Board (SWRCB), along with the Department of Water Resources (DWR) to issue regulation requiring wholesale water suppliers, urban retail water suppliers, or distributors of public water supply to submit information relating to water production, water use, or water conservation.
- require urban water suppliers to submit a urban water usage objective report by November 1, 2023
- updates the requirements of the urban water management plans

9. Assembly Bill No. 1668 – May 31, 2018

- authorizes State Water Board, along with the Department of Water Resources (DWR) to issue regulation requiring wholesale water suppliers, urban retail water suppliers, or distributors of public water supply to submit information relating to water production, water use, or water conservation.
- establishes 55 gallons per capita daily as the standard for indoor residential water use beginning January 1, 2025 and 50 gallons per capita daily beginning January 1, 2030
- require DWR and SWRCB to adopt standards to monitor the performance of commercial, industrial, and institutional water use.
- Includes penalties of $1,000 to $10,000 per day to the water supplier for violations to this order

APPENDIX B

PRIVATE WATER REFERENCE

APPENDIX A

RECOMMENDED RULES FOR SIZING THE WATER SUPPLY SYSTEM

The provisions contained in this appendix are not mandatory unless specifically adopted by a state agency, or referenced in the adopting ordinance.

A 101.0 General.

A 101.1 Applicability. This appendix provides a general procedure for sizing a water supply system. Because of the variable conditions encountered, it is impractical to lay down definite detailed rules of procedure for determining the sizes of water supply pipes in an appendix, which shall necessarily be limited in length. For an adequate understanding of the problems involved, refer to Water-Distributing Systems for Buildings, Report BMS 79 of the National Bureau of Standards; and Plumbing Manual, Report BMS 66, also published by the National Bureau of Standards.

A 102.0 Preliminary Information.

A 102.1 Daily Service Pressure. Obtain the necessary information regarding the minimum daily service pressure in the area where the building is to be located.

A 102.2 Water Meter. Where the building supply is to be metered, obtain information regarding friction loss relative to the rate of flow of meters in the range of sizes likely to be used. Friction-loss data is capable of being obtained from most manufacturers of water meters. Friction losses for disk-type meters shall be permitted to be obtained from Chart A 102.2.

A 102.3 Local Information. Obtain available local information regarding the use of different kinds of pipe with respect both to durability and to decrease in capacity with the length of service in the particular water supply.

A 103.0 Demand Load.

A 103.1 Supply Demand. Estimate the supply demand for the building main, the principal branches and risers of the system by totaling the fixture units on each, Table A 103.1, and then by reading the corresponding ordinate from Chart A 103.1(1) or Chart A 103.1(2), whichever is applicable.

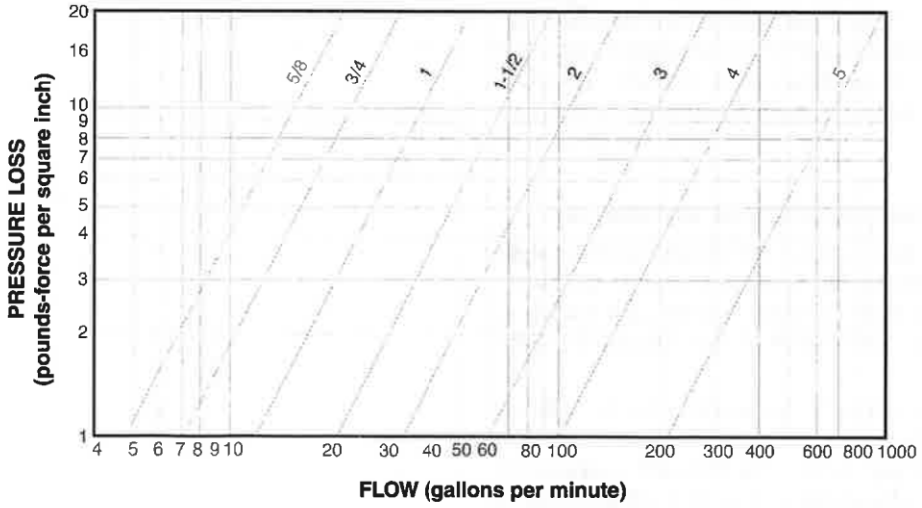
A 103.2 Continuous Supply Demand. Estimate continuous supply demands in gallons per minute (gpm) (L/s) for lawn sprinklers, air conditioners, etc., and add the sum to the total demand for fixtures. The result is the estimated supply demand of the building supply.

A 104.0 Permissible Friction Loss.

A 104.1 Residual Pressure. Decide what is the desirable minimum residual pressure that shall be maintained at the highest fixture in the supply system. Where the highest group of fixtures contains flushometer valves, the residual pressure for the group shall be not less than 15 pounds-force per square inch (psi) (103 kPa). For flush tank supplies, the available residual pressure shall be not less than 8 psi (55 kPa).

A 104.2 Elevation. Determine the elevation of the highest fixture or group of fixtures above the water (street) main. Multiply this difference in elevation by 0.43. The result is the loss of static pressure in psi (kPa).

CHART A 102.2
FRICTION LOSSES FOR DISK-TYPE WATER METERS



For SI units: 1 inch = 25 mm, 1 pound-force per square inch = 6.8947 kPa, 1 gallon per minute = 0.06 L/s

A 104.3 Available Pressure. Subtract the sum of loss in static pressure and the residual pressure to be maintained at the highest fixture from the average minimum daily service pressure. The result will be the pressure available for friction loss in the supply pipes, where no water meter is used. Where a meter is to be installed, the friction loss in the meter for the estimated maximum demand should also be subtracted from the service pressure to determine the pressure loss available for friction loss in the supply pipes.

A 104.4 Developed Length. Determine the developed length of pipe from the water (street) main to the highest fixture. Where close estimates are desired, compute with the aid of Table A 104.4(1), Table A 104.4(2), or Table A 104.4(3), whichever is applicable, the equivalent length of pipe for fittings in the line from the water (street) main to the highest fixture and add the sum to the developed length. The pressure available for friction loss in psi (kPa), divided by the developed lengths of pipe from the water (street) main to the highest fixture, times 100, will be the average permissible friction loss per 100 feet (30 480 mm) length of pipe.

A 105.0 Size of Building Supply.

A 105.1 Diameter. Knowing the permissible friction loss per 100 feet (30 480 mm) of pipe and the total demand, the diameter of the building supply pipe shall be permitted to be obtained from Chart A 105.1(1), Chart A 105.1(2), Chart A 105.1(3), Chart A 105.1(4) Chart A 105.1(5), Chart A 105.1(6), or Chart A 105.1(7), whichever is applicable. The diameter of pipe on or next above the coordinate point corresponding to the estimated total demand and the permissible friction loss will be the size needed up to the first branch from the building supply pipe.

A 105.2 Copper and Copper Alloy Piping. Where copper tubing or copper alloy pipe is to be used for the supply piping and where the character of the water is such that slight changes in the hydraulic characteristics are expected, Chart A 105.1(1) shall be permitted to be used.

A 105.3 Hard Water. Chart A 105.1(2) shall be used for ferrous pipe with the most favorable water supply in regards to corrosion and caking. Where the water is hard or corrosive, Chart A 105.1(3) or Chart A 105.1(4) will be applicable. For extremely hard water, it will be advisable to make additional allowances for the reduction of the capacity of hot-water lines in service.

A 106.0 Size of Principal Branches and Risers.

A 106.1 Size. The required size of branches and risers shall be permitted to be obtained in the same manner as the building supply, by obtaining the demand load on each branch or riser and using the permissible friction loss computed in Section A 104.0.

A 106.2 Branches. Where fixture branches to the building supply are sized for the same permissible friction loss per 100 feet (30 480 mm) of pipe as the branches and risers to the highest level in the building and lead to the inadequate water supply to the upper floor of a building, one of the following shall be provided:

(1) Selecting the sizes of pipe for the different branches so that the total friction loss in each lower branch is approximately equal to the total loss in the riser, including both friction loss and loss in static pressure.

(2) Throttling each such branch using a valve until the preceding balance is obtained.

(3) Increasing the size of the building supply and risers above the minimum required to meet the maximum permissible friction loss.

A 106.3 Water Closets. The size of branches and mains serving flushometer tanks shall be consistent with sizing procedures for flush tank water closets.

A 107.0 General.

A 107.1 Velocities. Velocities shall not exceed 10 feet per second (ft/s) (3 m/s), except as otherwise approved by the Authority Having Jurisdiction.

A 107.2 Pressure-Reducing Valves. Where a pressure-reducing valve is used in the building supply, the developed length of supply piping and the permissible friction loss shall be computed from the building side of the valve.

A 107.3 Fittings. The allowances in Table A 104.4(1) for fittings are based on non-recessed threaded fittings. For recessed threaded fittings and streamlined soldered fittings, one-half of the allowances given in the table will be ample.

TABLE A 103.1
WATER SUPPLY FIXTURE UNITS (WSFU) AND MINIMUM FIXTURE BRANCH PIPE SIZES[3]

APPLIANCES, APPURTENANCES, OR FIXTURES[2]	MINIMUM FIXTURE BRANCH PIPE SIZE[1,4] (inches)	PRIVATE	PUBLIC	ASSEMBLY[6]

Water Closet, greater than 1.6 GPF Gravity Tank	½	3.0	5.5	7.0
Water Closet, greater than 1.6 GPF Flushometer Valve	1	7.0	8.0	10.0

For SI units: 1 inch = 25 mm

Notes:

1 Size of the cold branch pipe, or both the hot and cold branch pipes.

2 Appliances, appurtenances, or fixtures not included in this table shall be permitted to be sized by reference to fixtures having a similar flow rate and frequency of use.

3 The listed fixture unit values represent their total load on the cold water building supply. The separate cold water and hot water fixture unit value for fixtures having both cold and hot water connections shall be permitted to be three-quarters of the listed total value of the fixture.

4 The listed minimum supply branch pipe sizes for individual fixtures are the nominal (I.D.) pipe size.

5 For fixtures or supply connections likely to impose continuous flow demands, determine the required flow in gallons per minute (gpm) (L/s) and add it separately to the demand in gpm (L/s) for the distribution system or portions thereof.

6 Assembly [Public Use (see Table 422.1)].

7 Reduced fixture unit loading for additional hose bibbs is to be used where sizing total building demand and for pipe sizing where more than one hose bibb is supplied by a segment of water distribution pipe. The fixture branch to each hose bibb shall be sized by 2.5 fixture units.

12	5000	3300	7	120–5000

*Does not include strainer, which may be required in some applications.

Sec. 3.2 Capacity

The nominal capacity ratings and the related pressure-loss limits shall be the same as those shown in Table 1 for the safe maximum operating capacities.

Sec. 3.3 Length, Width, and Height

Maximum overall meter length, face to face of spuds or flanges, shall not be greater than shown in Table 2. A filler piece may be used to increase the length of a shorter meter to meet this requirement. Meter width and height shall not be greater than shown in Table 2. The distance from the centerline of the meter outlet to the lowest point on the meter bottom shall not be greater than shown in Table 2.

Sec. 3.4 Test Plugs

The test plug is optional for the manufacturer.

Sec. 3.5 Pressure Requirement

Meters supplied under this standard shall operate without leakage or damage to any part when operated continuously at a working pressure of 150 psi (1050 kPa).

Sec. 3.6 Accessibility

Meters shall be designed for easy removal of all interior parts without disturbing the connections to the pipeline. Straightening vanes need not be removable while the meter case is still connected in line.

For Non-Health Hazard Applications

Series 774DCDA

Double Check Detector Assemblies

Sizes 2½" – 12" (65 – 300mm)

Series 774DCDA Double Check Detector Assemblies are designed for use in accordance with water utility non-health hazard containment requirements. It is mandatory to prevent the reverse flow of fire protection system substances, i.e., glycerin wetting agents, stagnant water and water of non-potable quality from being pumped or siphoned into the potable water supply.

Features

- Torsion spring check valve provides low head loss
- Short lay length is ideally suited for retrofit installations
- Stainless steel body is half the weight of competitive designs reducing installation and shipping cost
- Stainless steel construction provides long term corrosion protection and maximum strength
- Single top access cover with two-bolt grooved style coupling for ease of maintenance
- Thermoplastic and stainless steel check valves for trouble-free operation
- No special tools required for servicing
- Compact construction allows for smaller vaults and enclosures
- Furnished with ⅝" x ¾" (16x19mm) bronze meter (gpm or cfm)
- Detects underground leaks and unauthorized water use
- May be installed horizontal or vertical "flow up" position

Specifications

A Double Check Detector Assembly shall be installed on fire protection systems when connected to a potable water supply. Degree of hazard present is determined by the local authority having jurisdiction. The assembly shall consist of two positive seating check valves located between two resilient seated shutoffs with a hydraulically balanced bypass line and four test cocks. The main valve body shall be manufactured from 300 Series stainless steel to provide corrosion resistance. The check valves shall be of thermoplastic construction with stainless steel hinge pins, cam arm and cam bearing. The check valves shall utilize a single torsion spring design to minimize pressure drop through the assembly. The check valves shall be modular and shall seal to the main valve body by the use of an O-ring. There shall be no brass or bronze parts used within the check valve assembly. The check valve seats shall be of molded thermoplastic construction. The use of seat screws as a retention method is prohibited. All internal parts shall be accessible through a single cover on the valve assembly. The valve cover shall be held in place through the use of a single grooved style two-bolt coupling. The bypass line shall be hydraulically sized to accurately measure low flow. The bypass line shall consist of a meter, a small diameter double check assembly with test cocks and isolation valves. The bypass line double check valve shall have two independently operating modular poppet check valves, and top mounted test cocks. The assembly shall be a Watts Series 774DCDA.

SPECIFICATION SHEET

FEBCO®

MASTER series®

LEAD FREE*

MasterSeries® LF860

Reduced Pressure Zone Backflow Prevention Assemblies

Size: 2½" - 10" (65mm - 250mm)

The FEBCO MasterSeries LF860 Reduced Pressure Zone Assembly is specifically designed to protect against possible backpressure and backsiphonage conditions for high hazard [i.e., toxic] application in accordance with Local Governing Water Utility Code. This Backflow Prevention Assembly is primarily used on potable drinking water systems where Local Governing Code mandates protection from non-potable water being pumped or siphoned back into the potable water system.

The LF860 features Lead Free* construction to comply with low lead installation requirements. The Lead Free* Reduced Pressure Zone Assemblies shall comply with state codes and standards, where applicable, requiring reduced lead content.

Series LF860 Reduced Pressure Zone Assembly

Features

- Inline Serviceable Assembly
- No Special Tools Required for Servicing
- Captured Modular Spring Assembly
- Reversible & Replaceable Discs
- Field Replaceable Seats
- Ductile Iron Valve Body Design
- Stainless Steel Check Components
- Modular Pressure Differential Relief Valve
- Repairable Pressure Differential Relief Valve
- Clapper Check Assembly
- Captured O-ring Design

DOMESTIC

Specifications

The FEBCO MasterSeries LF860 Reduced Pressure Zone Assembly shall be installed on the potable water supply and at each point of cross-connection to protect against possible backpressure and backsiphonage conditions for high hazard [i.e., toxic] applications. The assembly shall consist of a main line valve body composed of a pressure differential relief valve located in a zone between two (2) independently acting approved clapper style check modules with replaceable seats and disc rubbers. Servicing of the pressure differential relief valve and both check modules does not require any special tools; both check modules are accessed through independently top entry covers. This assembly shall be fitted with AWWA Compliant inlet/outlet resilient seated shutoff valves; when used on a Fire-Sprinkler application, the assembly shall be fitted with approved UL/FM inlet/outlet resilient seated shutoff valves and contain four (4) properly located resilient seated test cocks as specified by AWWA Standard C511. Flow and pressure loss performance parameters shall meet the requirements of AWWA Standard C511.

NOTICE

This information is not intended to replace the product installation and safety information available or the experience of a trained product installer. Please refer to the product installation and safety instructions for further information.

***The wetted surface of this product contacted by consumable water contains less than 0.25% of lead by weight.**

Options - Suffix

OSY: UL/FM Approved OS&Y Gate Valves (ANSI/AWWA C515 Compliant)

NRS: Non-Rising Stem Gate Valves (ANSI/AWWA C509 Compliant)

LG: Less Shut-off valves; This is NOT an APPROVED ASSEMBLY

Example Ordering Descriptions:

4" LF860-OSY - Valve Assembly fitted with OS&Y Shutoff Valves

4" LF860-NRS - Valve Assembly fitted with NRS Shutoff Valves

Assembly Flow Orientation:

- Horizontal (2½" – 10") - Approved by FCCCHR-USC, ASSE, cULus, FM, IAPMO and CSA

Approvals - Standards

- Approved by the Foundation for Cross-Connection Control and Hydraulic Research at The University of Southern California (FCCCHR-USC)
- ASSE 1013 Listed
- **UL Classified (US & Canada)
- **FM Approved
- IAPMO
- AWWA Standard C511 Compliant
- End Connections: Compliant to ASME B16.1 Class 125 & AWWA Class D Flange

**Assembly configured with UL/FM Approved OS&Y RW Gate Valves. Less gate valve assemblies are not UL/FM approved configurations.

1048 B64.4

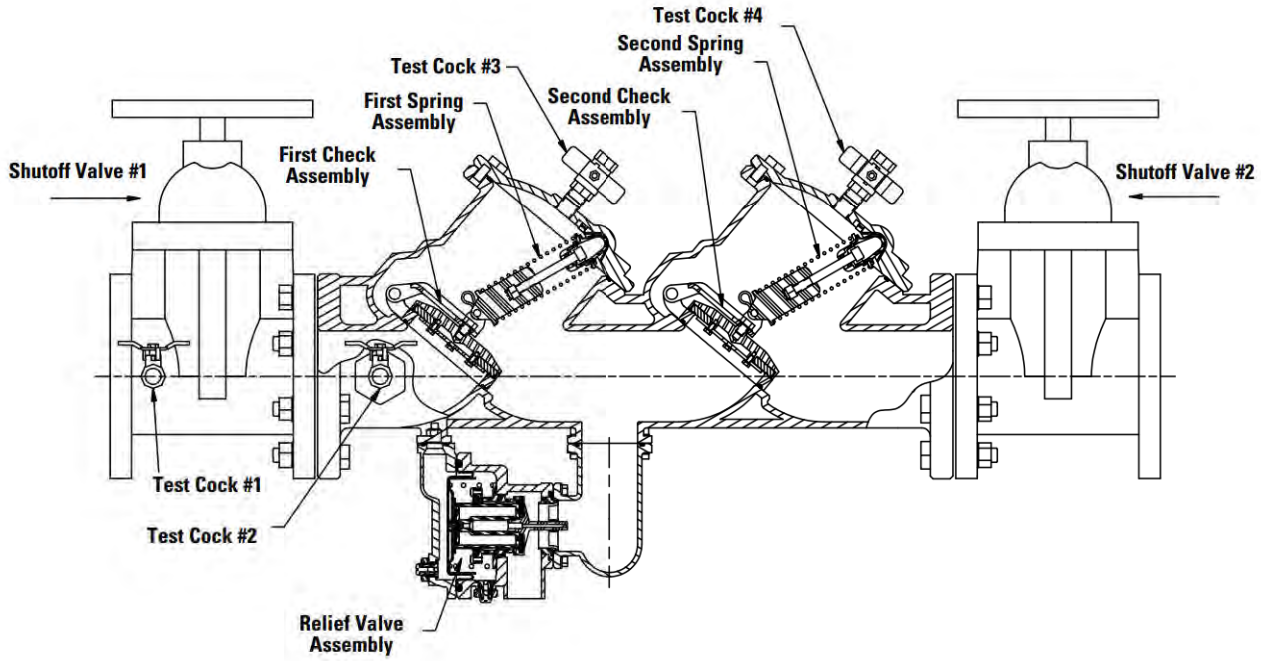
Materials

Below is a general materials list of the Series LF860. All assemblies size 2-1/2" through 10" is similar in materials and construction. Please contact your local FEBCO Representative if you require further information.

Main Valve Body:	Ductile iron Grade 65-45-12
Relief Valve Body:	Ductile iron Grade 65-45-12
Coating:	Fusion epoxy coated internal and external AWWA C550
Shutoff Valves:	NRS resilient wedge gate valve AWWA C509 (Standard) OSY resilient wedge gate valve AWWA C515 (UL/FM)
Check Seats:	Stainless Steel
Disc Holder:	Stainless Steel
Elastomer Disc:	Silicone
Spring:	Stainless Steel
Clamp:	AWWA C606 (10" Only)

Pressure - Temperature

Max. Working Pressure:	175 psi (12.1 bar)
Min. Working Pressure:	20 psi (1.4 bar)
Hydrostatic Test Pressure:	350 psi (24.1 bar)
Hydrostatic Safety Pressure:	700 psi (48.3 bar)
Temperature Range:	33°F - 140°F (0.5°C - 60°C) Continuous



Dimensions & Weights

Below are the nominal dimensions and physical weights for the Series LF860 size 2-1/2" through 10". Allowances must be made for normal manufacturing tolerances. Please visit our website to download a copy of this product's installation instructions, or contact your local FEBCO Representative for more information.

* Indicates nominal dimensions with NRS Gate Valves
** Indicates nominal dimensions with OSY Gate Valves (Full Open Position)
*** Indicates weight of complete Backflow Assemblies with specified Gate Valves

The gap drain is not designed to catch the maximum discharge possible from the relief valve. The installation of the FEBCO air gap with the drain line terminating above a floor drain will handle any normal discharge or nuisance spitting through the relief valve. However, floor drain size may need to be designed to prevent water damage caused by a catastrophic failure condition. Do not reduce the size of the drain line from the air gap fitting.

Performance

Flow capacity chart identifies valve performance based upon rated water Velocity up to 20fps

- Maximum service flow rate is determined by maximum rated Velocity of 7.5fps.
- AWWA Manual M-22 (Appendix C) recommends that the maximum water Velocity in the services be not more than 10fps.
- UL flow rate is determined by typically rated Velocity of 15 feet/sec.

Notes

These results were modeled with a 8-inch main being installed and looped on "A" Street, "B" Street, "C" Street,"E" Street, "D" Street, "F" Dr., "G" Dr., and "H" Dr. from Eucalyptus Ave to Parkview St. If said improvements are not installed, these results are null and void.

For Information on using Fire Flow Results contact the Fire Prevention Bureau at 909-395-2029.
For Details on how the Fire Flow Results were prepared, contact: UtilityFireFlows@ontarioca.gov

Disclaimer

The allowable design criteria shown above represents projected future maximum day water system conditions at the location of the test as determined by the City of Ontario's hydraulic water system computer model. This allowable design criteria does not constitute a guarantee by the City of the present or future conditions and availability, pursuant to City Resolution 85-85.

Actual water pressure will, in instances, exceed or fall below allowable design criteria due to seasonal and daily pressure variation within the City's water system. The designer is encouraged to provide an allowance in the fire protection system design to maintain adequate protection during such variations in system pressure.

The results are valid for a period of 12 months from the date of the test release unless extended in writing by the Ontario Fire Department.
These Fire Flow Results cannot be used to create Boundary Controls for use in Hydraulic Modeling.

Subject: Sewer System Analysis for Esperanza PA 11 Project in the City of Ontario

Introduction

The Esperanza PA 11 project is located in the City of Ontario north of Eucalyptus Avenue between Amherst Avenue and Chatham Street. Access to the project will be from Amherst Avenue and Chatham Street. Sewer service for Esperanza PA 11 project will be provided by City of Ontario (City).

The proposed project is a mixed-use development consisting of 161 medium density residential units on approximately 10 acres.

A Vicinity Map for the project is shown on Figure 1.

Purpose of Study

The purpose of this letter report is to analyze the existing public sewer system downstream of the Esperanza PA 11 project and determine if there are any sewer system deficiencies created by the proposed development of this property and land use change from school site to medium density residential. This report will address any offsite (public) sewer system deficiencies that are created as a result of the development of the residential project.

A previous Ontario Ranch East Master Plan Sewer Study was prepared by L.D. King, Inc. for the overall master plan area in 2022 for the overall developer. This study will utilize that 2022 master plan where appropriate and will serve as an amendment to that 2022 master plan. Red lines of pertinent sections of the L.D. King, Inc. study are included in Appendix B.

Study Area

In general, the study area for this sewer report is the sewer sub-basin comprising of the tributary area surrounding the Esperanza PA 11 project up to the Eastern Trunk Sewer in Archibald Avenue. This sub-basin system collects the wastewater flow from Esperanza PA 11 and adjacent development. The gravity sewer in adjacent Amherst Avenue is an 8-inch sewer line that conveys wastewater to the connection with the 15-inch diameter sewer line running westerly in Eucalyptus Avenue. The 15-inch diameter sewer line in Eucalyptus Avenue turns south at Mill Creek Avenue and increases to 21-inch diameter before increasing to 27-inch diameter at Bellegrave Avenue and Merrill Avenue.

These existing public sewer facilities can be seen on Figure 2 and Exhibit A.

Sewer System Design Criteria

The design criteria used for the evaluation of the offsite sewerage system impacts by Esperanza PA 11 project are based on City design criteria. The City's Master Plan itself was referenced to confirm the pertinent design criteria as well. A copy of the pertinent sections in the City's Master Plan where the design criteria is located is attached as Appendix A.

EXISTING AND PROPOSED SEWER FACILITIES

ESPERANZA PA 11 (ONTARIO EAST)

Sewer Generation Rates. The sewer generation rates for the project is presented as Table 1 below.

TABLE 1
ESPERANZA PA 11 SEWER GENERATION RATES

Land Use	Generation Rate
Medium Density Residential	174 gpd/unit

Peaking Factors

The peaking factor utilized in this study is identified in City's design criteria. To convert average dry weather flows to peak wet weather flows, the following equation was used:

$Q_{peak\ dry\ weather\ flow} = 1.77 \times Q_{avg}^{\ 0.893}$, where Q_{peak} equals peak flow in MGD (million gallons per day) and Q_{avg} equals average flow in MGD.

$Q_{peak\ wet\ weather\ flow} = 1.34 \times Q_{peak\ dry\ weather\ flow}$

Manning's "n"

The gravity sewer analyses are made using a computer spreadsheet calculation which uses the Manning Equation for all of its calculations. The Manning's "n" used by the computer spreadsheet calculation is held as a constant for all depths in a circular conduit. The value of Manning's "n" used for this study is 0.013 per the City criteria.

Depth and Velocity of Flow in Gravity Sewers

Gravity sewer lines are designed to convey peak flow. For pipes up to 12 inches in diameter, flow depths are maintained at or below a d/D ratio of 0.50 under peak dry weather flows. Pipes that are larger than 12-inches in diameter are designed for a maximum d/D ratio of 0.64 under peak dry weather flows. For either group, the depth of flow to d/D shall not exceed 0.82 with peak wet weather flows.

Gravity sewer lines are designed to maintain a minimum velocity of 2.0 feet per second at peak flow to prevent the deposition of solids.

Existing Sewer System

There are existing gravity sewer lines that are adjacent to the project site. The sewer line that will be utilized by the project is an 8-inch diameter gravity sewer line in Amherst Avenue on the western boundary of the project. This existing sewer line conveys flow southerly and westerly and ultimately connects to the existing Eastern Trunk Sewer line in Archibald Avenue. Appendix B provides reference information of the existing sewer lines utilized by the project.

Existing Sewer Flows. The sewer system analysis for Esperanza PA 11 project will need to consider sewage flows from existing development that is upstream and downstream of the project. Esperanza PA 11 project will be the most upstream development along this particular stretch of gravity sewer. Appendix B summarizes the projected sewage flows from existing downstream development.

Proposed Sewer Facilities

The projected sewer flow from Esperanza PA 11 project is based on the 161 residential unit site plan. Table 2 provides the summary of projected sewage flows for the project.

TABLE 2
ESPERANZA PA 11 PROJECTED SEWAGE FLOWS

Description	Quantity	Unit Flow Factor	Total Avg. Flow
Residential	161 units	174 gpd/unit	28,014

Per the City design criteria, the peak dry weather flow to average flow ratio is approximately 2.59 based on the formula presented earlier this study, resulting in an estimated peak dry weather flow of 72,691 gpd (50 gpm). The peak wet weather flow is calculated to be 97,406 gpd (68 gpm).

The project will construct an onsite gravity sewer collection system within the project's overall street distribution. The onsite sewer system within Esperanza PA 11 project is proposed to consist of 8-inch diameter gravity sewer lines. The existing and proposed sewer facilities for Esperanza PA 11 project are presented on Figure 2 and Exhibit A.

Sewer System Analysis

To analyze the impact of Esperanza PA 11 project on the existing sewer system, a hydraulic analysis was conducted. Appendix C provides the hydraulic analysis output and Exhibit A provides the corresponding Manhole Diagram. To perform this analysis, we obtained As-Built and design drawings information of the existing sewer system so that the pipe sizes and slopes could be inputted to the spreadsheet. A key component of the hydraulic analysis is to estimate existing flows within the sewer lines that will be utilized to serve the Esperanza PA 11 project. Appendix B provided the summary of existing flows from existing offsite upstream and downstream development.

The existing downstream 8-inch, 15-inch, 21-inch, 24-inch, and 27-inch gravity sewer lines were analyzed to the point where it connects to the Eastern Trunk Sewer in Archibald Avenue.

Sewer System Analysis Results

Appendix C presents the results of the hydraulic analysis for Esperanza PA 11 project. The results indicate that the existing system has adequate capacity to serve the project. With the additional sewer flow from Esperanza PA 11 residential project, all sections of downstream sewer lines will flow less than depth criteria during peak flow conditions.

The analysis results in Appendix C also indicate where changes due to the land use occur in the downstream sewer system. These changes are indicated via red lines and comments.

A summary of the impacts of the existing downstream gravity sewer to the proposed project is shown below in Table 3.

TABLE 3
ESPERANZA PA 11 EXISTING DOWNSTREAM SEWER IMPACTS

Existing Downstream Sewer Section	Maximum d/D Ratio		Minimum Velocity, fps	
	PDWF	PWWF	PDWF	PWWF
8-inch Diameter	0.14	0.28	1.7	1.9
15-inch Diameter	0.26	0.32	2.5	2.7
21-inch Diameter	0.35	0.41	4.3	4.7
24-inch Diameter	0.58	0.72	2.3	2.5
27-inch Diameter	0.59	0.73	2.3	2.5

Conclusions and Recommendations

The following conclusions have been made related to providing sewer service to Esperanza PA 11 project.

1. Esperanza PA 11 project can receive sewer service by connecting to an existing public 8-inch diameter gravity sewer line in Amherst Avenue and connecting to its proposed in-tract gravity sewer collection system. The project will construct an 8-inch diameter gravity sewer collection system onsite.

2. The development of the project is projected to result in an average sewage flow of 28,014 gpd.

3. Figure 2 provides the project layout including the location of existing and proposed sewer facilities.

4. A sewer system analysis was conducted (see Appendix C) and indicates that all existing and proposed sewer lines have adequate capacity to convey peak flows from existing development plus Esperanza PA 11 project while maintaining depth-to-diameter ratios of less than City criteria.

5. The sewer system analysis conducted indicates that the existing 8-inch, 15-inch, 21-inch, 24-inch, and 27-inch diameter public gravity sewer lines downstream of the project site up to the Eastern Trunk Sewer in Archibald Avenue can accommodate both existing sewer flow and the sewer flows of the proposed project.

6. A previous Ontario Ranch East Master Plan Sewer Study was prepared by L.D. King, Inc. for the overall master plan area in 2022 for the overall developer. This study will utilize that 2022 master plan where appropriate and will serve as an amendment to that 2022 master plan. Red lines of pertinent sections of the L.D. King, Inc. study are included in Appendix B.

Thank you for the opportunity to assist you with the sewer system planning for Esperanza PA 11 project. If you have any questions regarding the information and conclusions presented in this report, please do not hesitate to call.

[1] Max Density per the City's Buildout Table (April 2015) for Original Model Colony. Density for LDR, LMDR, MDR, and HDR in Ontario Ranch were increased per the City Planning Department recommendation (March 2016).

[2] Density per the City's Buildout Table (April 2015)

[3] The sewage generation for a hotel is best estimated by the number of rooms.

[4] Mixed Use demands should be based on the types of landuse that make up the specific area and the unit demand factors provided above. The City's Buildout Table (April 2015) provides detailed information on the landuses that make up each mixed use area.

Definitions: ac = acre; du = dwelling unit; gpd = gallons per day; OMC = Original Model Colony; OR = Ontario Ranch; tsf = thousand sqare feet

DRAFT

3-3.1 Residential Sewer Unit Flow Factors

As shown on Figure 3-1, the flow monitoring sites were primarily chosen in the Original Model Colony (OMC) areas, which are generally built out. The residential developments in this area is predominately low density residential (LDR) and high density residential (HDR), which were used to develop the sewage generation estimates in gallons per day per person.

The sewer unit flow factor for LDR and HDR were calculated to be 52 and 51 gpd/person, respectively, when applying annual sewer return ratios to the potable water unit flow factors. This calculation shows that the sewage generation per person is very similar, regardless of the residential land use categorization. For planning purposes, the sewage unit flow factor of 52 gpd per person was applied to all residential land use types, as shown in Table 3-2.

The majority of the new development is composed of low density residential (LDR) and low-medium density residential (LMDR) land use types, each with an estimated population density of 3.997 persons per dwelling unit. The sewer unit flow factor for both LDR and LMDR is 208 gpd/DU, when applying the sewage generation factor of 52 gpd per person.

The City's planning department estimates that the medium density residential (MDR) and high density residential (HDR) land use types have population densities of 3.347 persons per dwelling unit. With the sewage generation factor of 52 gpd per person, the unit flow factor for MDR and HDR are 174 gpd per dwelling unit.

3-3.2 Non-Residential Sewer Unit Flow Factors

Commercial Land Uses

The City's water meter billing data accounts for commercial indoor use, outdoor irrigation water use, as well as recycled water use. Excluding irrigation and recycled water use for commercial customers (business park, general commercial, office commercial, neighborhood commercial, and hospitality), a sewer return ratio of 89% of the annual average water use was developed. This return ratio was applied to the developed water demand factors to establish the sewer unit flow factors for commercial uses.

Hospitality Land Uses

The City's 2010 General Plan defines an area along Vineyard Avenue, south of the I-10 Freeway and north of the Ontario International Airport, as the hospitality area. It consists of numerous hotels and restaurants that provide service for patrons of the airport. A sewer return ratio of 89% of the annual average water use was applied to the hospitality land use to establish the sewer unit flow factors.

Industrial Land Uses

Industrial land use types include a wide variety of businesses and manufacturing processes that causes sewage generation to vary significantly from one customer to another. This is evident in the wide range water use for different businesses with these land use categorizations. For example, warehouses typically use a low amount of water and generate low amounts of sewage. On the other hand, some manufacturing businesses can use large of amounts of water and contribute large amounts of sewage to the City's sewer system.

The average sewer return ratio was estimated to be 75% of the annual average water use. For planning purposes and when no other specific planning information is available, the sewage generation will be based on

DRAFT

the sewer unit flow factor of 1,060 gpd/ac. This factor was based on the number of future estimated jobs and the 51 gpd/job divided by the number of future industrial acres. It is considered quite conservative in comparison to the currently estimated factor of 244 gpd/ac per flow monitoring in a primarily industrial area. The reason the existing factor is so low is because many of the industrial areas consist of warehouse uses that don't use a lot of water. In the future, these warehouses can be converted to manufacturing uses. Therefore, for planning purposes, the calculated unit flow factor of 1,060 gpd/ac is deemed appropriate.

It is recommended that the City evaluate future potential high water users on a case by case basis, as details regarding the proposed development or redevelopment area becomes available. The sewer hydraulic model should be utilized to make sure that the system is capable of handling the proposed sewage generation.

Public Facility and School Land Uses

Sewer return ratios of 85% and 80%, respectively were implemented for public facilities and schools. The sewer unit flow factor for public facilities is 1,450 gpd per acre. For schools, the sewer unit flow factor is 8 gpd per student.

3-4 Peaking Factors

3-4.1 Peak Dry Weather

The wastewater unit flow factors discussed in Section 3-3 are used to generate average dry weather flows (ADWF) entering the collection system. However, the adequacy of a sewage collection system is based upon its ability to convey the peak flows. At any individual point in the system, peak dry weather flow (PDWF) is estimated by converting the total average flow upstream of the point in question to peak dry weather flow by an empirical peak-to-average relationship.

The peaking formula commonly used in sewerage studies is of the following form:

$$PDWF = a \times ADWF^{b}$$

where PDWF = Peak Dry Weather Flow
ADWF = Average Dry Weather Flow
a, b = Peaking Formula Coefficients

In order to develop the peaking formula and establish coefficient "a" and "b", the maximum versus average flow measured was plotted for each flow monitoring site as shown in Figure 3-3.

Based on the best fit line through the data points shown in Figure 3-3, the following peaking relationship was selected for this study:

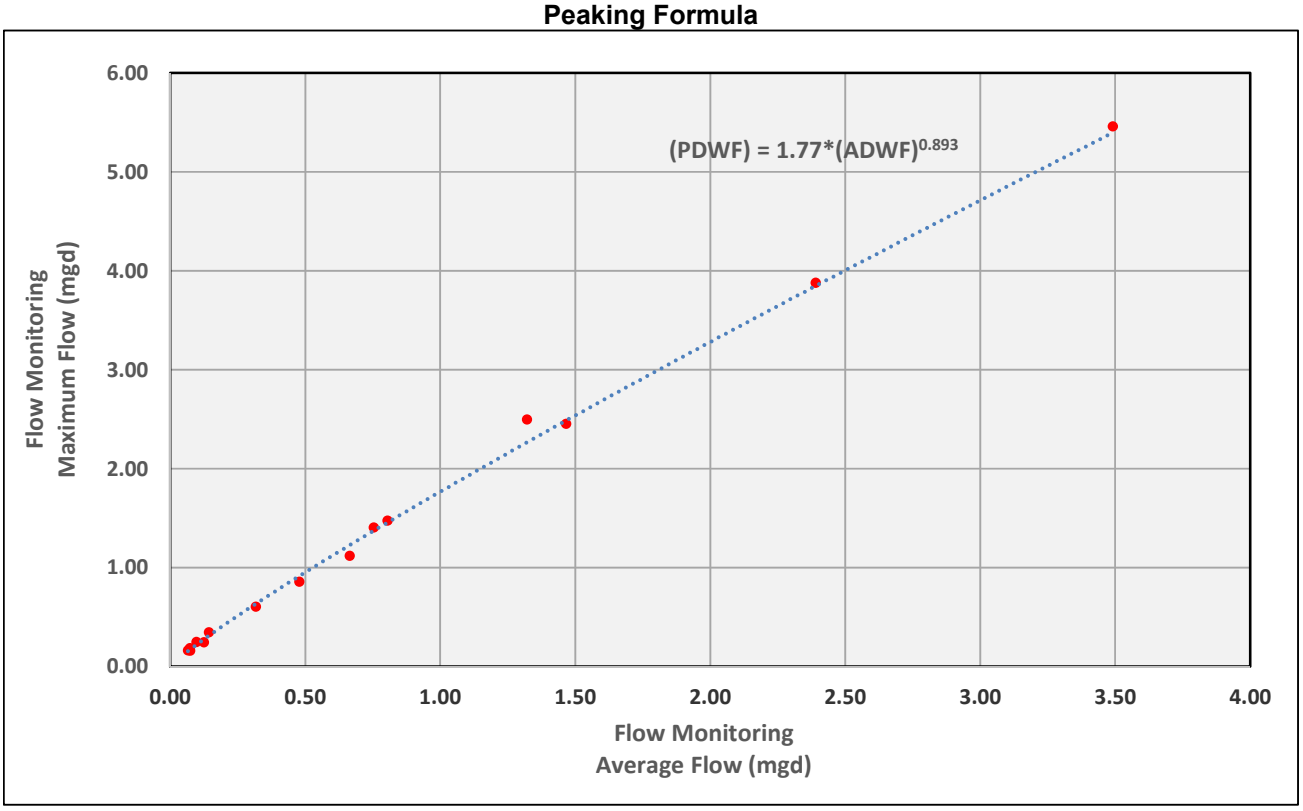
$$PDWF\ (mgd) = 1.77 \times ADWF\ (mgd)^{0.893}$$

The coefficient "b" factor accounts for smaller tributary areas with smaller ADWF, which generally experience greater PDWF. The change in usage of one customer in a very small tributary area will have a greater effect on its corresponding PDWF than a change in usage of one customer is a very large tributary area.

Note that the units of the selected peaking formula are in million gallons per day (mgd). These peaks are generally observed between the hours of 6:00 a.m. and 9:00 a.m. and 7:00 p.m. and 9:00 p.m. during weekdays and somewhat later in the morning hours during weekends in the predominantly residential areas.

DRAFT

Figure 3-3
Peaking Formula



3-4.2 Peak Wet Weather

The peak wet weather flow (PWWF) has two components: peak dry weather flow (PDWF) and rainfall dependent inflow/infiltration (I/I) as expressed by the following equation:

$$PWWF = PDWF + I/I$$

Inflow and infiltration is discussed further in Section 3-5.

The flow monitoring effort for this study did not cover a wet weather period. Until wet weather flow data can be collected, it is recommended that the peak wet weather flow be estimated as the following:

Peak Wet Weather Flow (PWWF) = 1.34 x Peak Dry Weather Flow (PDWF)

Although the PWWF/PDWF factor of 1.34 may not cover all situations, it is not reasonable or feasible to design the sewer system to carry the flows that would result from the use of a larger ratio. Instead, it is recommended that the City concentrate on projects such as replacing manhole covers, installing plugs in manhole covers, and replacing or relining cracked pipes to reduce inflow and infiltration.

3-5 Inflow and Infiltration

Inflow is the surface water that typically gains entry to the sewer system through perforated or unsealed manhole covers during rainfall events. Infiltration is defined as water entering the collection system from the ground through defective pipes, pipe joint connections, or manhole walls. The sewer system design capacity

DRAFT

must include allowances for these extraneous flow components, which inevitably become a part of the total flow. The amount of inflow and infiltration (I/I) that enters the system typically depends upon the availability, adequacy, and location of the storm water drainage facilities; age and condition of structures; materials and methods of construction; the location of the groundwater table; and the characteristics of the soil. In the absence of flow monitoring data, many regulating agencies utilize commonly accepted practices for estimating I/I. For example, I/I is often estimated based on the diameter and length of pipeline (100 to 400 gpd/ in. dia/ mile) or as a percentage of the peak flow or pipeline capacity.

AKM's experience from other master planning studies and review of limited flow monitoring information available during severe rainfall events indicate that the peak wet weather flow can vary from 10 percent of average dry weather flows in steeper areas with adequate drainage facilities, to over 400 percent of average dry weather flows in flat areas that lack significant drainage facilities.

For this study, extraneous flow due to inflow and infiltration is included in the peak wet weather flow formula described above. If better data becomes available subsequently for specific areas, the analysis shall be updated based upon that information.

3-6 Sewer System Performance Evaluation Criteria

Sewer system performance evaluation criteria are established to ensure that the wastewater collection system can operate effectively under all flow conditions. Each pipe segment must be capable of carrying peak wet weather flows in the hydraulically stable zone of the pipe. Low flows must be conveyed at a velocity that will prevent solids from settling and blocking the system.

The design capacity of a gravity pipeline is the calculated capacity of the pipeline based on the Manning formula:

$$Q = 1.486 * A * R^{\frac{2}{3}} \frac{S^{\frac{1}{2}}}{n}$$

where, **Q** = flow in cubic feet per second
R = hydraulic radius in feet = A / P
A = cross-sectional area of the pipe in square feet
P = wetted perimeter in feet
S = slope of pipe in feet of rise per foot of length
n = Manning's friction factor

Sewer system capacity is established using a Manning's friction factor of 0.013 for vitrified clay pipe.

The design and analysis of sewer pipes is typically based upon the depth to diameter ratio (d/D). In this study, **existing** pipes are considered capacity deficient if the d/D is above 0.64 at peak dry weather flows. This d/D ratio was arrived at by taking 75% of a pipe's maximum stable flow capacity, which is at a d/D of 0.82. The area above a d/D of 0.82 is considered hydraulically unstable. The 25% pipe capacity above the d/D ratio of 0.64 is reserved for inflow and infiltration.

By setting the maximum allowable PWWF equal to the maximum capacity of the pipe (d/D ratio = 0.82) and setting the maximum allowable PDWF equal to 75% of the maximum pipe capacity (d/D ratio = 0.64), the PWWF/PDWF ratio is 1.34 (100% pipe capacity/75% pipe capacity) as stated in Section 3-4.2.

DRAFT

The extra pipeline capacity also allows for the possibility that actual wastewater flows may be slightly higher than anticipated PDWF. Additionally, the area above the water surface helps to keep the sewage aerated, reducing the possibility of septic conditions and odors.

For **new construction**, the design and analysis of gravity sewer pipes shall be based on the following depth to diameter ratios:

- Pipes **12-inches and smaller** in diameter shall be designed to flow at a maximum **d/D of 0.50** under peak dry weather flows
- Pipes **15-inches and greater** in diameter shall be designed to flow at a maximum **d/D of 0.64** under peak dry weather flows
- For either group, the depth of flow to diameter ratio shall not exceed **0.82 with peak wet weather flows**

Although this Sewer Master Plan study defined existing pipes as deficient when the d/D ratio exceeded 0.64 under peak dry weather flows, for all practical purposes the aforementioned design criteria must be adhered to. For instance, if the sewer pipe is 12-inches and smaller and was designed to flow at a maximum PDWF d/D of 0.50 and is now constructed. The maximum PDWF d/D must be maintained at 0.50. Additional future development flow should not be allowed to contribute to this sewer pipe if the maximum PDWF d/D ratio is going to exceed 0.50.

At a minimum, all pipes shall be 8 inches or larger in diameter and the velocity of flow in the pipe shall be greater than 2 feet per second at average dry weather flow (ADWF). This velocity will prevent deposition of solids in the sewer and help to re-suspend any materials that may have already settled in the pipe. The minimum corresponding slopes for various pipe sizes are shown in Table 3-3.

It is important to note that the slopes listed in Table 3-3 assume the depth of flow in the pipe is 50 or 64 percent full depending on the size. If there is insufficient flow to create this condition, greater slopes than those shown may be required.

The peak flow velocity shall be less than 10 feet per second in vitrified clay pipe.

The City recognizes that minimum slopes and velocities are sometimes not achievable under certain circumstances. On a case by case basis, the City may approve sewer designs that do not meet these criteria.

Table 3-3
Example Sewer Slopes

Sewer Size	2 ft/s Velocity Slope
8"	0.0057
10"	0.0042
12"	0.0033
15"	0.0019
18"	0.0014
21"	0.0011
24"	0.0008
27"	0.0008
30"	0.0007
33"	0.0006
36" & larger	0.0005

**Pipes 12" and smaller assume depth of flow is 50 percent*

**Pipes 15" and greater assume depth of flow is 64 percent*

3-7 Sewer Pump Station Performance Evaluation Criteria

It is desirable to develop a sewer collection system with as few pump stations as possible due to the associated cost and maintenance required. The City's policy does not allow new pump stations. If a pump station is absolutely necessary, the following criteria shall be minimum standards.

proposed and/or existing sewer lines within the study and the calculated velocities and depth to diameter ratios.

- A **Tributary Area Map** is included for each study.

Sewer Analysis Comments:

Merrill Tributary: Merrill, Bellegrave, Mill Creek

Analysis 1: Using the 2050 TOP Land Uses and high end densities and Existing Uses and SPA for Subarea 29 propoerties

- There is an 80-acre property located on the northeast corner of Mill Creek Avenue and Schaefer Avenue owned by Southern California Edison, (SCE). In Analysis 1, the Land Use for this 80-acre property is Business Park per the 2050 TOP.

- There is a section of an existing and future 8-inch sewer line within the Esperanza Specific Plan where the depth of flow ratio, d/D exceeds the maximum criteria of 0.50. The range of the d/D's in this section is 0.56 to 0.81. The location of the deficient lines are shown in the attached **Master Plan Sewer Location Map.**

Analysis 2: A second analysis of the system was modeled using the following revisions;

- ❖ The Land Use for the existing 80-acre SCE property, which currently contains a Substation, was changed to its existing land use resulting in no sewer flows tributary to the Mill Creek Sewer.

- ❖ The Land Use and densities for the Esperanza Specific Plan Area were taken from the Specific Plan, (SP) in lieu of the 2050 TOP.

- There is still a section within the Esperanza Specific Plan where the 8-inch sewer lines depth of flow ratio, d/D, exceeds the maximum criteria of 0.50 However the d/D is reduced to a range of 0.56 to 0.62.

- The Esperanza PA 11 School Siet has been converted to a 161 unit medium density residential site.

Park 1		5.75*AC			
Residential land Use Total	**1491 DU**	**209.90 AC**	**7.10 DU/AC**	**164.08 AC**	**9.09 DU/AC**
Parks				9.89 AC	
Neighborhood Edge Buffers				6.62 AC	
Roadways				28.25 AC	
SCE Easements and Well Sites				4.14 AC	
Community Facilities Use					
PA-11 ~~(School)~~ Med. Density. Res.	161 DU	13.10 AC		10.02 AC	16.1 DU/AC
PROJECT TOTAL	~~1491~~ **DU** 1652	**223.00 AC**		**223.00 AC**	

NOTES:

1. *Gross residential acres do not include the 13.10 gross acres for a school site.*
2. *Net residential acres are gross acres less parks, neighborhood edge buffers, roadways, easements and net area for school site.*

** PA-2 includes 3.45 AC of Park 1*

Table 2
Land Use Summary

APPENDIX C

SEWER ANALYSIS RESULTS

The following conditions were modeled for Esperanza PA 11 Project:

1. Existing Flows (Peak Dry Weather Flow)
2. Existing Flows (Peak Wet Weather Flow)
3. Existing Plus Project Flows (Peak Dry Weather Flow)
4. Existing Plus Project Flows (Peak Wet Weather Flow)

- Reference Exhibit A for Manhole Diagram

RESOLUTION NO. _____

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF ONTARIO, CALIFORNIA, APPROVING FILE NO. PGPA24-003, AN AMENDMENT TO THE LAND USE ELEMENT OF THE POLICY PLAN (GENERAL PLAN), REVISING EXHIBIT LU-01 (OFFICIAL LAND USE PLAN) AND EXHIBIT LU-03 (FUTURE BUILDOUT), AFFECTING PROPERTY, LOCATED SOUTH OF CHATHAM STREET, WEST OF CLIFTON AVENUE, EAST OF AMHERST AVENUE, AND NORTH OF EUCALYPTUS AVENUE, FROM PUBLIC SCHOOL TO MEDIUM DENSITY RESIDENTIAL. AND MAKING FINDINGS IN SUPPORT THEREOF—APN: 1073-101-050. (SEE ATTACHMENTS 1 AND 2) (PART OF CYCLE 2 FOR THE 2025 CALENDAR YEAR).

WHEREAS, GDC Investments13, LP, has filed an Application for the approval of a General Plan Amendment, File No. PGPA24-003, as described in the title of this Resolution (hereinafter referred to as Application or Project); and

WHEREAS, the City of Ontario adopted the Policy Plan (General Plan) as part of the component framework for The Ontario Plan on January 27, 2010, and issued Resolution No. 2010-004; and

WHEREAS, the City of Ontario adopted a Supplemental Environmental Impact Report (SEIR) for the General Plan Amendment for The Ontario Plan 2050 Technical Update (TOP 2050) on August 16, 2022 and issued Resolution No. 2022-129. Since the adoption of TOP 2050, the City has evaluated Exhibits LU-01: Official Land Use Plan and LU-03: Future Buildout further and is proposing modifications; and

WHEREAS, the proposed changes to Exhibit LU-01 Official Land Use Plan include changes to land use designations of certain properties shown on Exhibit A to make the land use designations of these properties consistent with existing adjacent properties; and

WHEREAS, Policy Plan Exhibit LU-03 (Future Buildout) specifies the expected buildout for the City of Ontario, incorporating the adopted land use designations. The proposed changes to Exhibit LU-01 (Official Land Use Plan) will require that Exhibit LU-03 (Future Buildout) is modified to be consistent with Exhibit LU-01 (Official Land Use Plan), as depicted on Exhibit B, attached; and

WHEREAS, the Project proposes to amend TOP Policy Plan Land Use Map and associated buildout tables to change the land use designation of approximately 10.02 acres, located south of Chatham Street, west of Clifton Avenue, east of Amherst Avenue, and north of Eucalyptus Avenue, from Public School to Medium Density Residential (see Exhibit B), establishing a buildout capacity of 224 units; and

WHEREAS, this capacity offsets the loss of 128 units resulting from File No. PGPA23-003 and ensures compliance with SB 330 by maintaining the City's overall housing capacity; and

WHEREAS, the Planning Director of the City of Ontario prepared and approved for attachment to the certified Environmental Impact Report, an Addendum to the Certified EIR (hereinafter referred to as "EIR Addendum") in accordance with the requirements of the California Environmental Quality Act of 1970, together with State and local guidelines implementing said Act, all as amended to date (collectively referred to as "CEQA"); and

WHEREAS, the Application is a project pursuant to the California Environmental Quality Act — Public Resources Code Section 21000 et seq. — (hereinafter referred to as "CEQA") and an EIR Addendum has been prepared to determine possible environmental impacts; and

WHEREAS, Ontario Development Code Table 2.02-1 (Review Matrix) grants the City Council the responsibility and authority to review and act on the subject Application; and

WHEREAS, the Project is located within the Airport Influence Area of Ontario International Airport, which encompasses lands within parts of San Bernardino, Riverside, and Los Angeles Counties, and is subject to, and must be consistent with, the policies and criteria set forth in the Ontario International Airport Land Use Compatibility Plan (hereinafter referred to as "ALUCP"), which applies only to jurisdictions within San Bernardino County, and addresses the noise, safety, airspace protection, and overflight impacts of current and future airport activity; and

WHEREAS, City of Ontario Development Code Division 2.03 (Public Hearings) prescribes the manner in which public notification shall be provided and hearing procedures to be followed, and all such notifications and procedures have been completed; and

WHEREAS, on September 23, 2025, the Planning Commission of the City of Ontario conducted a hearing to consider the SEIR Addendum and the Project, and concluded said hearing on that date, voting to issue Resolution No. PC25-047, recommending the City Council adopt the SEIR Addendum, and voting to issue Resolution No. PC25-048, recommending the City Council approve the Application; and

WHEREAS, as the first action on the Project, on November 4, 2025, the City Council issued a Resolution adopting the SEIR Addendum, finding that the proposed Project introduces no new significant environmental impacts and applying all previously adopted mitigation measures to the Project, which were incorporated by reference; and

WHEREAS, on November 4, 2025, the City Council of the City of Ontario conducted a hearing to consider the Project, and concluded said hearing on that date; and

WHEREAS, all legal prerequisites to the adoption of this Resolution have occurred.

NOW, THEREFORE, IT IS HEREBY FOUND, DETERMINED, AND RESOLVED by the City Council of the City of Ontario, as follows:

SECTION 1: ***Housing Element Compliance.*** Pursuant to the requirements of California Government Code Chapter 3, Article 10.6, commencing with Section 65580, as the decision-making body for the Project, the City Council finds that based upon the facts and information contained in the Application and supporting documentation, at the time of Project implementation, the project is consistent with the Housing Element of the Policy Plan (General Plan) component of The Ontario Plan, as the project site is not one of the properties in the Housing Element Sites Inventory contained in Tables B-1 and B-2 of the Housing Element Technical Report.

SECTION 2: ***Airport Land Use Compatibility Plan ("ALUCP") Compliance.*** The California State Aeronautics Act (Public Utilities Code Section 21670 et seq.) requires that an Airport Land Use Compatibility Plan be prepared for all public use airports in the State; and requires that local land use plans and individual development proposals must be consistent with the policies set forth in the adopted Airport Land Use Compatibility Plan.

(1) On April 19, 2011, the City Council of the City of Ontario approved and adopted the Ontario International Airport Land use Compatibility Plan, establishing the Airport Influence Area for Ontario International Airport, which encompasses lands within parts of San Bernardino, Riverside, and Los Angeles Counties, and limits future land uses and development within the Airport Influence Area, as they relate to noise, safety, airspace protection, and overflight impacts of current and future airport activity. As the decision-making body for the Project, the City Council has reviewed and considered the facts and information contained in the Application and supporting documentation against the ONT ALUCP compatibility factors, including [1] Safety Criteria (ONT ALUCP Table 2-2) and Safety Zones (ONT ALUCP Map 2-2), [2] Noise Criteria (ONT ALUCP Table 2-3) and Noise Impact Zones (ONT ALUCP Map 2-3), [3] Airspace protection Zones (ONT ALUCP Map 2-4), and [4] Overflight Notification Zones (ONT ALUCP Map 2-5). As a result, the City Council, therefore, finds and determines that the Project, when implemented in conjunction with the conditions of approval, will be consistent with the policies and criteria set forth within the ONT ALUCP; and

SECTION 3: ***Concluding Facts and Reasons.*** Based upon the substantial evidence presented to the City Council during the above-referenced hearing, and upon the specific findings set forth in Sections 1 and 2, above, the City Council hereby concludes as follows:

(1) The proposed General Plan Amendment is consistent with the goals and policies of TOP 2050 as follows:

Policy Plan (General Plan)

Land Use Element:

- LU-1.1 Strategic Growth. We concentrate growth in strategic locations that help create place and identity, maximize available and planned infrastructure, foster the development of transit, and support the expansion of the active and multimodal transportation networks throughout the City.

- LU-1.6 Complete Community. We incorporate a variety of land uses and building types in our land use planning efforts that result in a complete community where residents at all stages of life, employers, workers, and visitors have a wide spectrum of choices of where they can live, work, shop and recreate within Ontario.

- Goal LU-2 Compatibility: Compatibility between a wide range of uses and a resultant urban patterns and forms.

Community Economics Element:

- Goal CE-1 Complete Community: A complete community that provides for all incomes and stages of life.

- Goal CE-2 Placemaking: A City of distinctive neighborhoods, districts, corridors, and centers where people choose to be; and

(2) The proposed General Plan Amendment would not be detrimental to the public interest, health, safety, convenience, or general welfare of the City; and

(3) The Land Use Element is a mandatory element allowed four general plan amendments per calendar year and this general plan amendment is the first amendment to the Land Use Element of the 2025 calendar year consistent with Government Code Section 65358; and

(4) The proposed General Plan Amendment action modifying land use designations for 10.2 acres from Public School to Medium-Density Residential, located south of Chatham Street, west of Clifton Avenue, east of Amherst Avenue, and north of Eucalyptus Avenue is consistent with the Housing Element of the Policy Plan (general plan) component of TOP 2050, as the Project site is not one of the properties in the Housing Element Sites contained in Tables B-1 and B-2 (Housing Element Sites Inventory) of the Housing Element Technical Report.; and

(5) The proposed General Plan Amendment would not be detrimental to the public interest, health, safety, convenience, or general welfare of the City; and

(6) The Land Use Element is a mandatory element allowed four general plan amendments per calendar year and this general plan amendment is the first amendment to the Land Use Element of the 2025 calendar year consistent with Government Code Section 65358; and

(7) During the amendment of the general plan, opportunities for the involvement of citizens, California Native American Indian tribes (Government Code Section 65352.3.), public agencies, public utility companies, and civic, education, and other community groups, through public hearings or other means were implemented consistent with Government Code Section 65351.

SECTION 4: ***City Council Action.*** Based upon the findings and conclusions set forth in Sections 1 through 3, above, the City Council hereby APPROVES the herein described General Plan Amendment, attached hereto as "Attachment A," and incorporated herein by this reference.

SECTION 5: ***Indemnification.*** The Applicant shall agree to defend, indemnify and hold harmless, the City of Ontario or its agents, officers, and employees from any claim, action or proceeding against the City of Ontario or its agents, officers or employees to attack, set aside, void, or annul this approval. The City of Ontario shall promptly notify the applicant of any such claim, action, or proceeding, and the City of Ontario shall cooperate fully in the defense.

SECTION 6: ***Custodian of Records.*** The documents and materials that constitute the record of proceedings on which these findings have been based are located at the City of Ontario City Hall, 303 East "B" Street, Ontario, California 91764. The custodian for these records is the City Clerk of the City of Ontario.

PASSED, APPROVED, AND ADOPTED this 4th day of November 2025.

RESOLUTION NO. _____

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF ONTARIO, CALIFORNIA, APPROVING FILE NO. PSPA24-004, AN AMENDMENT TO THE ESPERANZA SPECIFIC PLAN TO REVISE THE SPECIFIC PLAN FOR CONSISTENCY WITH THE ONTARIO PLAN POLICY PLAN (GENERAL PLAN) LAND USE MAP. THE AMENDMENT INCLUDES [I] REVISING THE ALLOWED USES WITHIN PLANNING AREA 11 FROM SCHOOL TO RD-7/ROW TOWNHOMES; AND [II] MODIFYING THE SPECIFIC PLAN LAND USE MAP, DEVELOPMENT STANDARDS, EXHIBITS, AND TEXT TO REFLECT THE PROPOSED LAND USE CHANGES, AND MAKING FINDINGS IN SUPPORT THEREOF—APN: 1073-101-050.

WHEREAS, GDC Investments 13, LP (hereinafter referred to as Applicant) has filed an Application for the approval of a Specific Plan Amendment, File No. PSPA24-004, as described in the title of this Resolution (hereinafter referred to as Application or Project); and

WHEREAS, the Application applies to approximately 10.02 acres of land generally located south of Chatham Street, west of Clifton Avenue, east of Amherst Avenue, and north of Eucalyptus Avenue, within Planning Area 11 (RD-7 / Row Townhomes) of the Esperanza Specific Plan, identified as Assessor's Parcel Number 1073-101-050, and presently vacant; and

WHEREAS, the property to the north of the Project site is within the Esperanza Specific Plan, designated Park, and developed with residential uses; the property to the east is within the Esperanza Specific Plan, designated PA-4 (RD-6 / 6-Pack Courtyard), and developed with residential uses; the property to the south is within the Esperanza Specific Plan, designated PA-7 (RD-1 / SFD 50' wide lots), and developed with residential uses; and the property to the west is within the Esperanza Specific Plan, designated PA-10 (RD-3 / SFD 2-Pack), and developed with residential uses; and

WHEREAS, on February 6, 2007, the City Council adopted Ordinance No. 2852, approving the Esperanza Specific Plan (File No. PSP05-002), establishing a master plan for the development of 223 acres of land, inclusive of the Project site; and

WHEREAS, the Application was submitted to amend the land use designation and development standards of Planning Area 11 of the Esperanza Specific Plan; and

WHEREAS, the Application was submitted to increase the number of units allowed within Planning Area 11 from 0 dwelling units to 161 dwelling units; and

WHEREAS, The Ontario Plan (TOP) 2050 Supplemental Environmental Impact Report (SEIR) (State Clearinghouse No. 2021070364), certified by the Ontario City Council on August 16, 2022, in conjunction with File No. PGPA20-002 (hereinafter referred to as Certified SEIR), in which development and use of the Project site was discussed; and

WHEREAS, the Planning Director of the City of Ontario prepared and approved for attachment to the certified Supplemental Environmental Impact Report, an Addendum to the Certified EIR (hereinafter referred to as "EIR Addendum") in accordance with the requirements of the California Environmental Quality Act of 1970, together with State and local guidelines implementing said Act, all as amended to date (collectively referred to as "CEQA"); and

WHEREAS, the environmental impacts of this project were thoroughly analyzed in the EIR Addendum, which concluded that implementation of the Project could result in a number of significant effects on the environment that were previously analyzed in the Certified EIR, and that the Certified EIR identified mitigation measures that would reduce each of those significant effects to a less-than-significant level; and

WHEREAS, the City's "Local Guidelines for the Implementation of the California Environmental Quality Act (CEQA)" provide for the use of a single environmental assessment in situations where the impacts of subsequent projects are adequately analyzed; and

WHEREAS, the Application is a project pursuant to the California Environmental Quality Act — Public Resources Code Section 21000 et seq. — (hereinafter referred to as "CEQA") and an SEIR Addendum has been prepared to determine possible environmental impacts; and

WHEREAS, Ontario Development Code Table 2.02-1 (Review Matrix) grants the City Council the responsibility and authority to review and act on the subject Application; and

WHEREAS, the Project has been reviewed for consistency with the Housing Element of the Policy Plan component of The Ontario Plan, as State Housing Element law (as prescribed in Government Code Sections 65580 through 65589.8) requires that development projects must be consistent with the Housing Element, if upon consideration of all its aspects, it is found to further the purposes, principals, goals, and policies of the Housing Element; and

WHEREAS, the Project is located within the Airport Influence Area of Ontario International Airport, which encompasses lands within parts of San Bernardino, Riverside, and Los Angeles Counties, and is subject to, and must be consistent with, the policies and criteria set forth in the Ontario International Airport Land Use Compatibility Plan (hereinafter referred to as "ALUCP"), which applies only to jurisdictions within San Bernardino County, and addresses the noise, safety, airspace protection, and overflight impacts of current and future airport activity; and

WHEREAS, City of Ontario Development Code Division 2.03 (Public Hearings) prescribes the manner in which public notification shall be provided and hearing procedures to be followed, and all such notifications and procedures have been completed; and

WHEREAS, on September 23, 2025, the Planning Commission of the City of Ontario conducted a hearing to consider the SEIR Addendum and the Project, and concluded said hearing on that date, voting to issue Resolution No. PC25-047, recommending the City Council adopt the SEIR Addendum, and voting to issue Resolution No. . PC25-049, recommending the City Council approve the Application; and

WHEREAS, as the first action on the Project, on November 4, 2025, the City Council issued a Resolution adopting the SEIR Addendum, finding that the proposed Project introduces no new significant environmental impacts and applying all previously adopted mitigation measures to the Project, which were incorporated by reference; and

WHEREAS, on November 4, 2025, the City Council of the City of Ontario conducted a hearing to consider the Project, and concluded said hearing on that date; and

WHEREAS, all legal prerequisites to the adoption of this Resolution have occurred.

NOW, THEREFORE, IT IS HEREBY FOUND, DETERMINED, AND RESOLVED by the City Council of the City of Ontario, as follows:

SECTION 1: ***Housing Element Compliance.*** Pursuant to the requirements of California Government Code Chapter 3, Article 10.6, commencing with Section 65580, as the decision-making body for the Project, the City Council finds that based upon the facts and information contained in the Application and supporting documentation, at the time of Project implementation, the project is consistent with the Housing Element of the Policy Plan (General Plan) component of The Ontario Plan, as the project site is not one of the properties in the Housing Element Sites Inventory contained in Tables B-1 and B-2 of the Housing Element Technical Report.

SECTION 2: ***Airport Land Use Compatibility Plan ("ALUCP") Compliance.*** The California State Aeronautics Act (Public Utilities Code Section 21670 et seq.) requires that an Airport Land Use Compatibility Plan be prepared for all public use airports in the State; and requires that local land use plans and individual development proposals must be consistent with the policies set forth in the adopted Airport Land Use Compatibility Plan.

(1) On April 19, 2011, the City Council of the City of Ontario approved and adopted the Ontario International Airport Land use Compatibility Plan, establishing the Airport Influence Area for Ontario International Airport, which encompasses lands within parts of San Bernardino, Riverside, and Los Angeles Counties, and limits future land uses and development within the Airport Influence Area, as they relate to noise, safety, airspace protection, and overflight impacts of current and future airport activity. As the decision-making body for the Project, the City Council has reviewed and considered the facts and information contained in the Application and supporting documentation against the ONT ALUCP compatibility factors, including [1] Safety Criteria (ONT ALUCP Table 2-2) and Safety Zones (ONT ALUCP Map 2-2), [2] Noise Criteria (ONT ALUCP Table 2-3) and Noise Impact Zones (ONT ALUCP Map 2-3), [3] Airspace protection Zones (ONT ALUCP Map 2-4), and [4] Overflight Notification Zones (ONT ALUCP Map 2-5). As a result, the City Council, therefore, finds and determines that the Project, when implemented in conjunction with the conditions of approval, will be consistent with the policies and criteria set forth within the ONT ALUCP; and

SECTION 3: ***Concluding Facts and Reasons.*** Based upon the substantial evidence presented to the City Council during the above-referenced hearing, and upon the specific findings set forth in Sections 1 and 2, above, the City Council hereby concludes as follows:

(1) ***The proposed Specific Plan, or amendment thereto, is consistent with the goals, policies, plans and exhibits of the Vision, Policy Plan (General Plan), and City Council Priorities components of The Ontario Plan.*** The proposed Specific Plan Amendment is consistent with the Vision, Policy Plan (General Plan), and City Council Priorities components of TOP 2050, in that the Specific Plan Amendment contributes towards the legislative framework for the implementation of TOP components, guiding growth and development within the Project area to achieve optimum results from the City's physical, economic, environmental, and human resources.

(2) ***The proposed Specific Plan, or amendment thereto, would not be detrimental to the public interest, health, safety, convenience, or general welfare of the City.*** The development standards and guidelines established by the proposed Specific Plan Amendment have been created with the intent to safeguard and further the public interest, health, safety, convenience, and/or general welfare, and to ensure that the purposes of TOP 2050 and the proposed Specific Plan Amendment are maintained.

(3) ***In the case of an application affecting specific property(ies), the proposed Specific Plan, or amendment thereto, will not adversely affect the harmonious relationship with adjacent properties and land uses.*** The location of the proposed Specific Plan Amendment, and the proposed conditions under which future developments will be constructed and maintained, is consistent with the Policy Plan component of TOP 2050 and the City's Development Plan, and, therefore, will not adversely affect the harmonious relationship with adjacent properties and land uses.

(4) ***In the case of an application affecting specific property(ies), the subject site is physically suitable, including, but not limited to, parcel size, shape, access, and availability of utilities, for the request and anticipated development.*** The proposed Specific Plan Amendment has been reviewed by all City departments, which have established that the project site is physically suitable for the anticipated development in terms of parcel size, shape, and availability of utilities.

SECTION 4: ***City Council Action.*** Based upon the findings and conclusions set forth in Sections 1 through 3, above, the City Council hereby APPROVES the herein described Application, subject to each and every condition set forth in the Department reports attached hereto as "Attachment A," and incorporated herein by this reference.

SECTION 5: ***Indemnification.*** The Applicant shall agree to defend, indemnify and hold harmless, the City of Ontario or its agents, officers, and employees from any claim, action or proceeding against the City of Ontario or its agents, officers or employees to attack, set aside, void, or annul this approval. The City of Ontario shall promptly notify the applicant of any such claim, action, or proceeding, and the City of Ontario shall cooperate fully in the defense.

SECTION 6: ***Custodian of Records.*** The documents and materials that constitute the record of proceedings on which these findings have been based are located at the City of Ontario City Hall, 303 East "B" Street, Ontario, California 91764. The custodian for these records is the City Clerk of the City of Ontario.

The City Clerk of the City of Ontario shall certify as to the adoption of this Resolution.

PASSED, APPROVED, AND ADOPTED this 4th day of November 2025.

CITY OF ONTARIO *Agenda Report* **November 4, 2025**	**SECTION:** **PUBLIC HEARINGS**
Department: Financial Services Prepared By: Cruz Torres Department: Prepared By: Stephanie Castro Staff Member Presenting: Armen Harkalyan, Executive Director of Finance Reviewed By: Claudia Hernandez, Matthew Hernandez Approved By:	Submitted To: Council/OHA Approved: _____ Continued To: _____ Denied: _____ Item No: 14

SUBJECT: **A PUBLIC HEARING TO CONSIDER A RESOLUTION REGARDING THE FORMATION OF THE CITY OF ONTARIO COMMUNITY FACILITIES DISTRICT NO. 76 (COMPASS POINTE); ADOPTION OF A RESOLUTION DEEMING IT NECESSARY TO INCUR BONDED INDEBTEDNESS; AND INTRODUCTION OF AN ORDINANCE LEVYING SPECIAL TAXES.**

RECOMMENDATION: That the City Council consider and:

A. Adopt a Resolution of Formation of Community Facilities District No. 76 (Compass Pointe), proposing that the community facilities district be authorized to levy a special tax and proposing that an appropriations limit of the community facilities district be established;
B. Adopt a Resolution deeming it necessary for the district to incur bonded indebtedness within Community Facilities District No. 76 (Compass Pointe);
C. Adopt a Resolution calling a special election for City of Ontario Community Facilities District No. 76 (Compass Pointe);
D. Adopt a Resolution declaring the results of the special election and directing the recording of a Notice of Special Tax Lien;
E. Introduce and waive further reading of an Ordinance levying special taxes within City of Ontario Community Facilities District No. 76 (Compass Pointe);
F. Adopt a Resolution authorizing the execution and delivery of an acquisition and funding agreement with KB Home Cal Management Services LLC; and
G. Adopt a Resolution making a declaration of official intent to reimburse facilities expenditures with bond proceeds and related actions.

THE FOLLOWING COUNCIL GOALS ARE BEING ACHIEVED:
Operate in a Businesslike Manner
Focus Resources in Ontario's Commercial and Residential Neighborhoods
Invest in the City's Infrastructure (Water, Streets, Sewers, Parks, Storm Drains and Public

Facilities)

Ensure the Development of a Well Planned, Balanced, and Self-Sustaining Community in Ontario Ranch

FISCAL IMPACT: The use of Mello-Roos financing in the Compass Pointe residential development is projected to generate approximately $462,518 per year, at buildout, to fund administrative fees and municipal services; and approximately $14.9 million in bond proceeds to be used to fund a portion of the public infrastructure improvements needed to serve the project. Mello-Roos bonds are not a direct obligation of the City and are paid from special taxes levied on each taxable parcel in the district; therefore, there is no fiscal impact to the General Fund from the issuance of Mello-Roos bonds. City Council approval will be required to process annual special tax levies in future years.

BACKGROUND & ANALYSIS: The Mello-Roos Community Facilities Act of 1982 provides local government, with the consent from the qualified electors, the authority to establish community facilities districts for the purpose of levying special taxes to finance various kinds of public infrastructure facilities and municipal services. Under the Mello-Roos Act the initial steps in the formation of a community facilities district to finance public improvements and municipal services include, among other things, adopting resolutions declaring the intention to establish a community facilities district, authorize the levy of special taxes, and determining the necessity to issue bonds for the financing of public improvements. Accordingly, on September 16, 2025, the City Council approved Resolution No. 2025-138, a Resolution of Intention to establish City of Ontario Community Facilities District No. 76 (Compass Pointe) and authorize the levy of special taxes; and Resolution No. 2025-139 declaring the necessity to issue bonds for the district. The Resolution of Intention set the public hearing date for the regularly scheduled City Council meeting on November 4, 2025, to consider formation matters. The City Council is now being asked to take the final steps in the formation process.

In the First Amended and Restated Agreement for the Financing and Construction of Limited Infrastructure Improvements to Serve an Easterly Portion of the New Model Colony ("First Amended and Restated Construction Agreement") between the City of Ontario and NMC Builders, LLC, the City agreed to cooperate with the members of NMC Builders, LLC, in the formation of community facilities districts to assist in the financing of the public improvements included in the agreement. The Compass Pointe project is approximately 51.1 gross acres located south of Eucalyptus Avenue, north of Parkview Street, west of Haven Avenue, and east of Archibald Avenue. At build-out, the project is expected to include 350 residential units consisting of 67 single-family units and 283 attached units.

Included, as part of the Resolution of Formation is the proposed Rate and Method of Apportionment of Special Tax for the District. Under the proposed Rate and Method of Apportionment, the portion of the maximum annual special tax rates which will be used to fund debt service payments on the bonds is fixed and will not increase over time. As proposed, the amount of bonds authorized for the district ($60 million) is set intentionally higher than the current estimated bond amount ($14.9 million) in order to allow future City Council the option, without increasing the amount of the annual special taxes, to issue additional bonds to replace and/or construct new public infrastructure improvements in the future, or to fund municipal services. The

term and structure of the Rate and Method of Apportionment of Special Tax for the Compass Pointe project is consistent with those of previously adopted Rates and Methods of Apportionment for Ontario Ranch community facilities districts. This ensures that the special tax rates levied on all residential property owners in community facilities districts in Ontario Ranch are developed in a consistent and equivalent manner. In addition, under the provisions of the Mello-Roos Act, to ensure that home buyers are making an informed decision, all residential builders in the Ontario Ranch districts are required to disclose the maximum annual special tax amount to each homeowner before entering into a sales contract.

Attached are six Resolutions and an Ordinance. The first attached Resolution establishes the community facilities district, with the rate and method of apportionment of special taxes and authorizes the levy of special taxes within the district. The second attached Resolution deeming it necessary to incur bonded indebtedness for the district. The third attached Resolution calls for a special landowner election to be held on November 4, 2025. The fourth attached Resolution declares the results of the election, including a statement from the City Clerk as to the canvass of ballots, and directs the recording of the Notice of Special Tax Lien. The fifth attached Resolution authorizes the execution and delivery of an acquisition and funding agreement. The sixth attached Resolution declares the intent to reimburse facilities expenditures with bond proceeds and related actions. Lastly, the attached Ordinance authorizes the levying of special taxes.

RESOLUTION NO. _____

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF ONTARIO, CALIFORNIA, OF FORMATION OF CITY OF ONTARIO COMMUNITY FACILITIES DISTRICT NO. 76 (COMPASS POINTE), PROPOSING THAT THE COMMUNITY FACILITIES DISTRICT BE AUTHORIZED TO LEVY A SPECIAL TAX AND PROPOSING THAT AN APPROPRIATIONS LIMIT OF THE COMMUNITY FACILITIES DISTRICT BE ESTABLISHED.

WHEREAS, on September 16, 2025, the City Council (the "City Council") of the City of Ontario (the "City"), pursuant to the Mello-Roos Community Facilities Act of 1982 (the "Act"), adopted a resolution entitled "A Resolution of the City Council of the City of Ontario, California, of Intention to Establish a Community Facilities District Proposed to be Named City of Ontario Community Facilities District No. 76 (Compass Pointe) and to Authorize the Levy of a Special Tax Therein" (the "Resolution of Intention"), stating its intention to establish City of Ontario Community Facilities District No. 76 (Compass Pointe) (the "Community Facilities District"), to authorize the Community Facilities District to levy a special tax within the Community Facilities District for the purpose of financing certain public facilities and services and setting the date for a public hearing to be held on the establishment of the Community Facilities District; and

WHEREAS, pursuant to the Resolution of Intention, notice of said public hearing was published in the *Inland Valley Daily Bulletin*, a newspaper of general circulation published in the area of the Community Facilities District, in accordance with the Act; and

WHEREAS, on this date, the City Council opened, conducted and closed said public hearing; and

WHEREAS, pursuant to the Resolution of Intention, each officer of the City who is or will be responsible for providing one or more of the proposed types of public facilities or services to be financed by the Community Facilities District was directed to study, or cause to be studied, the proposed Community Facilities District and, at or before said public hearing, file a report with the City Council containing a brief description of the public facilities and services by type that will in his or her opinion be required to adequately meet the needs of the Community Facilities District, and his or her estimate of the cost of providing such public facilities and services; such officers were also directed to estimate the fair and reasonable cost of the public facilities proposed to be purchased as completed public facilities and of the incidental expenses proposed to be paid; and

WHEREAS, said report was so filed with the City Council and made a part of the record of said public hearing; and

WHEREAS, at the hearing, the testimony of all persons for or against the establishment of the Community Facilities District, the extent of the Community Facilities District and the furnishing of the specified types of public facilities and services was heard; and

WHEREAS, written protests against the establishment of the Community Facilities District, the furnishing of any specified type or types of facilities and services within the Community Facilities District or the levying of a specified special tax were not made or filed at or before said hearing by 50% or more of the registered voters, or six registered voters, whichever is more, residing within the territory proposed to be included in the Community Facilities District, or the owners of one-half or more of the area of land in the territory proposed to be included in the Community Facilities District and not exempt from the special tax; and

WHEREAS, there has been filed with the City Clerk of the City a letter from the Registrar of Voters of the County of San Bernardino indicating that no persons were registered to vote within the territory of the proposed Community Facilities District as of October 23, 2025, which demonstrates that 12 or more persons have not been registered to vote within the territory of the proposed Community Facilities District for each of the 90 days preceding the close of said public hearing; and

WHEREAS, Section 53314.9 of the Act provides that, at any time either before or after the formation of a community facilities district, the legislative body may accept advances of funds from any source, including, but not limited to, private persons or private entities and may provide, by resolution, for the use of those funds for any authorized purpose, including, but not limited to, paying any cost incurred by the local agency in creating a community facilities district; and

WHEREAS, Section 53314.9 of the Act further provides that the legislative body may enter into an agreement, by resolution, with the person or entity advancing the funds, to repay all or a portion of the funds advanced, as determined by the legislative body, with or without interest, under all the following conditions: (a) the proposal to repay the funds is included in both the resolution of intention to establish a community facilities district adopted pursuant to Section 53321 of the Act and in the resolution of formation to establish a community facilities district pursuant to Section 53325.1 of the Act, (b) any proposed special tax is approved by the qualified electors of the community facilities district pursuant to the Act, and (c) any agreement shall specify that if the qualified electors of the community facilities district do not approve the proposed special tax, the local agency shall return any funds which have not been committed for any authorized purpose by the time of the election to the person or entity advancing the funds; and

WHEREAS, the City and KB HOME Cal Management Services LLC (the "Landowner"), have entered into the Deposit and Reimbursement Agreement, dated as of April 1, 2025 (the "Deposit Agreement"), that provides for the advancement of funds by the Landowner to be used to pay costs incurred in creating the Community Facilities District and the incurrence of bonded indebtedness thereby, and provides for the repayment to the Landowner of such funds advanced, without interest, from the proceeds of any such bonded indebtedness incurred by the Community Facilities District; and

WHEREAS, the City desires to include in this Resolution, in accordance with Section 53314.9 of the Act, the proposal to repay funds pursuant to the Deposit Agreement.

NOW, THEREFORE, BE IT RESOLVED by the City Council of the City of Ontario as follows:

SECTION 1. The foregoing recitals are true and correct, and the City Council so finds and determines.

SECTION 2. The Community Facilities District is hereby established.

SECTION 3. The name for the Community Facilities District is "City of Ontario Community Facilities District No. 76 (Compass Pointe)."

SECTION 4. The public facilities (the "Facilities") proposed to be financed by the Community Facilities District pursuant to the Act are described under the caption "Facilities" on Exhibit A hereto, which is by this reference incorporated herein. Those Facilities proposed to be purchased as completed public facilities are identified under the caption "Facilities to be Purchased" on Exhibit A hereto. The services (the "Services") proposed to be financed by the Community Facilities District pursuant to the Act are described under the caption "Services" on Exhibit A hereto. The incidental expenses proposed to be incurred are identified under the caption "Incidental Expenses" on Exhibit A hereto. All or any portion of the Facilities may be financed through a financing plan, including, but not limited to, a lease, lease-purchase or installment-purchase arrangement.

SECTION 5. The proposed special tax to be levied within the Community Facilities District has not been precluded by majority protest pursuant to Section 53324 of the Act.

SECTION 6. The City Council proposes that, except where funds are otherwise available, the Community Facilities District be authorized to annually levy within the Community Facilities District a special tax (the "Special Tax") sufficient to pay for all Facilities and Services, secured by recordation of a continuing lien against all nonexempt real property in the Community Facilities District. The rate, method of apportionment and manner of collection of the Special Tax in sufficient detail to allow each landowner or resident within the proposed Community Facilities District to estimate the maximum amount that he or she will have to pay, is specified in the Rate and Method of Apportionment of Special Tax (the "Rate and Method") attached hereto as Exhibit B, which is by this reference incorporated herein. The conditions under which the obligation to pay the Special Tax to be levied to pay for Facilities may be prepaid and permanently satisfied are specified in the Rate and Method. The Special Tax will be collected in the same manner as ordinary *ad valorem* property taxes or in such other manner as the City Council shall determine, including direct billing of the affected property owners.

SECTION 7. The Special Tax may only finance the Services to the extent that they are in addition to those provided in the territory of the Community Facilities District before the date the Community Facilities District is created. The Services may not supplant services already available within that territory when the Community Facilities District is created. Bonds of the Community Facilities District may not be issued to fund any of the Services.

SECTION 8. The tax year after which no further Special Tax to pay for Facilities shall be levied against any parcel used for private residential purposes is specified in the Rate and Method. Under no circumstances shall the Special Tax to pay for Facilities in any fiscal year against any parcel used for private residential purposes be increased as a consequence of delinquency or default by the owner or owners of any other parcel or parcels within the Community Facilities District by more than 10% above the amount that would have been levied in that fiscal year had there never been any such delinquencies or defaults. For purposes of this paragraph, a parcel shall be considered "used for private residential purposes" not later than the date on which an occupancy permit for private residential use is issued. The Special Tax to pay for Services will be levied in perpetuity, as provided in the Rate and Method.

SECTION 9. Pursuant to Section 53344.1 of the Act, the City Council hereby reserves to itself the right and authority to allow any interested owner of property within the Community Facilities District, subject to the provisions of said Section 53344.1 and to those conditions as it may impose, and any applicable prepayment penalties as prescribed in the bond indenture or comparable instrument or document, to tender to the Community Facilities District treasurer in full payment or part payment of any installment of the Special Tax or the interest or penalties thereon that may be due or delinquent, but for which a bill has been received, any bond or other obligation secured thereby, the bond or other obligation to be taken at par and credit to be given for the accrued interest shown thereby computed to the date of tender.

SECTION 10. The name, address and telephone number of the office, department or bureau that will be responsible for preparing annually a current roll of Special Tax levy obligations by assessor's parcel number and that will be responsible for estimating further Special Tax levies pursuant to Section 53340.2 of the Act are as follows: City of Ontario, Financial Services Agency, 303 East B Street, Ontario, California 91764, (909) 395-2015 or email CFD@ontarioca.gov.

SECTION 11. Upon recordation of a notice of special tax lien pursuant to Section 3114.5 of the California Streets and Highways Code, a continuing lien to secure each levy of the Special Tax shall attach to all nonexempt real property in the Community Facilities District and this lien shall continue in force and effect until the Special Tax obligation is prepaid, permanently satisfied and canceled in accordance with law or until the Special Tax ceases to be levied and a notice of cessation of the Special Tax is recorded in accordance with Section 53330.5 of the Act.

SECTION 12. The boundary map of the Community Facilities District has been recorded in San Bernardino County in Book 92 at Page 61 of Maps of Assessments and Community Facilities Districts in the San Bernardino County Recorder's Office (Document No. 2025-0225272).

SECTION 13. The City Council proposes that the annual appropriations limit, as defined by subdivision (h) of Section 8 of Article XIII B of the California Constitution, of the Community Facilities District be established at $60,000,000.

SECTION 14. Pursuant to the provisions of the Act, the propositions to authorize the Community Facilities District to levy the Special Tax and to establish the appropriations limit of the Community Facilities District specified above shall be subject to the approval of the qualified electors of the Community Facilities District at a special election. The City Council hereby finds and determines that no persons were registered to vote within the territory of the proposed Community Facilities District as of October 23, 2025, and that 12 or more persons have not been registered to vote within the territory of the Community Facilities District for each of the 90 days preceding the close of the public hearing held by the City Council on the establishment of the Community Facilities District. Accordingly, pursuant to Section 53326 of the Act, the vote shall be by the landowners of the Community Facilities District and each person who is the owner of land as of the close of said public hearing, or the authorized representative thereof, shall have one vote for each acre or portion of an acre that he or she owns within the Community Facilities District not exempt from the Special Tax. The voting procedure shall be by mailed or hand-delivered ballot.

SECTION 15. The Landowner has heretofore advanced certain funds, and may advance additional funds, that have been or may be used to pay costs incurred in creating the Community Facilities District and the incurrence of bonded indebtedness thereby. The City Council has previously approved the acceptance of such funds for the purpose of paying costs incurred in creating the Community Facilities District and the incurrence of bonded indebtedness thereby. The City Council proposes to repay the Landowner all or a portion of such funds so advanced, without interest, solely from the proceeds of any such bonded indebtedness incurred by the Community Facilities District, pursuant to the Deposit Agreement. The Deposit Agreement is hereby incorporated herein as though set forth in full herein.

SECTION 16. The City Council hereby finds and determines that all proceedings, up to and including the adoption of this Resolution, were valid and in conformity with the requirements of the Act. In accordance with Section 53325.1 of the Act, such finding shall be final and conclusive.

SECTION 17. All actions heretofore taken by the officers, employees and agents of the City with respect to the establishment of the Community Facilities District, or in connection with or related to any of the matters referred to herein, are hereby approved, confirmed and ratified.

SECTION 18. The officers, employees and agents of the City are hereby authorized and directed to take all actions and do all things that they, or any of them, may deem necessary or desirable to accomplish the purposes of this Resolution and not inconsistent with the provisions hereof.

SECTION 19. This Resolution shall take effect immediately upon its adoption.

The City Clerk of the City of Ontario shall certify as to the adoption of this Resolution.

PASSED, APPROVED AND ADOPTED this 4th day of November, 2025.

PAUL S. LEON, MAYOR

EXHIBIT A

FACILITIES, SERVICES AND INCIDENTAL EXPENSES

Facilities

The types of public facilities to be financed by the Community Facilities District are street and bridge improvements, including grading, paving, curbs and gutters, sidewalks, street signalization and signage, street lights and parkway and landscaping related thereto, domestic and recycled water distribution facilities, sewer collection facilities, solid waste facilities, storm drainage facilities, park and recreation facilities and equipment, aquatic facilities and equipment, fire facilities and equipment, police facilities and equipment, library facilities and equipment, fiber optic telecommunication, wireless communication and public safety camera facilities and equipment, general governmental office, administrative and meeting facilities, and land, rights-of-way and easements necessary for any of such facilities.

Facilities to be Purchased

The types of public facilities to be purchased as completed facilities are street and bridge improvements, including grading, paving, curbs and gutters, sidewalks, street signalization and signage, street lights and parkway and landscaping related thereto, domestic and recycled water distribution facilities, sewer collection facilities, solid waste facilities, storm drainage facilities, and land, rights-of-way and easements necessary for any of such facilities.

Services

The types of City services to be financed by the Community Facilities District are police protection services, fire protection and suppression services, ambulance and paramedic services, maintenance and lighting of parks, parkways, streets, roads and open space, flood and storm protection services, maintenance and operation of fiber optic telecommunication, wireless communication and public safety camera systems and maintenance and operation of any real property or other tangible property with an estimated useful life of five or more years that is owned by the City.

Incidental Expenses

The incidental expenses proposed to be incurred include the following:

(a) the cost of planning and designing public facilities to be financed, including the cost of environmental evaluations of those facilities;

(b) the costs associated with the creation of the Community Facilities District, issuance of bonds, determination of the amount of taxes, collection of taxes, payment of taxes, or costs otherwise incurred in order to carry out the authorized purposes of the Community Facilities District; and

(c) any other expenses incidental to the construction, completion, and inspection of the authorized work.

EXHIBIT B

RATE AND METHOD OF APPORTIONMENT OF SPECIAL TAX

CITY OF ONTARIO
COMMUNITY FACILITIES DISTRICT NO. 76
(COMPASS POINTE)

RATE AND METHOD OF APPORTIONMENT OF SPECIAL TAX

Special Taxes shall be levied on all Assessor's Parcels in the City of Ontario Community Facilities District No. 76 (Compass Pointe) ("CFD No. 76") and collected each Fiscal Year, commencing in Fiscal Year 2026-27, in an amount determined by the City Council of the City of Ontario through the application of the Rate and Method of Apportionment, as described below. All of the real property in CFD No. 76, unless exempted by law or by the provisions hereof, shall be taxed for the purposes, to the extent, and in the manner herein provided.

A. DEFINITIONS

The terms hereinafter set forth have the following meanings:

"Acre" or **"Acreage"** means the land area of an Assessor's Parcel as shown on an Assessor's Parcel Map, or if the land area is not shown on an Assessor's Parcel Map, the land area shown on the applicable Final Subdivision Map, parcel map, condominium plan, or other recorded County map.

"Act" means the Mello-Roos Community Facilities Act of 1982, as amended, being Chapter 2.5 of Part 1 of Division 2 of Title 5 of the California Government Code.

"Administrative Expenses" means the following actual or reasonably estimated costs directly related to the administration of CFD No. 76: the costs of computing the Special Taxes and preparing the annual Special Tax collection schedules (whether by the City or CFD No. 76 or both); the costs of collecting the Special Taxes (whether by the County or otherwise); the costs of remitting the Special Taxes to the Trustee; the costs of the Trustee (including its legal counsel) in the discharge of the duties required of it under the Indenture; the costs to the City or CFD No. 76 of complying with arbitrage rebate requirements; the costs to the City or CFD No. 76 of complying with City, CFD No. 76, or obligated persons disclosure requirements associated with applicable federal and state securities laws and of the Act; the costs associated with preparing Special Tax disclosure statements and responding to public inquiries regarding the Special Taxes; the costs of the City or CFD No. 76 related to the analysis and reduction, if any, of the Special Tax A on Single Family Property in accordance with Section C.1 herein; the costs of the City or CFD No. 76 related to an appeal of the Special Tax; the costs associated with the release of funds from any escrow account; the City's administration fees and third party expenses; the costs of City staff time and reasonable overhead relating to CFD No. 76; and amounts estimated or advanced by the City or CFD No. 76 for any other administrative purposes of the CFD, including attorney's fees and other costs related to commencing and pursuing to completion any foreclosure of delinquent Special Taxes.

"Assessor's Parcel" means a lot or parcel shown in an Assessor's Parcel Map with an assigned Assessor's Parcel Number.

"Assessor's Parcel Map" means an official map of the Assessor of the County designating parcels by Assessor's Parcel Number.

"Assessor's Parcel Number" means, with respect to an Assessor's Parcel, that number assigned to such Assessor's Parcel by the County for purposes of identification.

"Assigned Special Tax A" means the Special Tax A for each Land Use Class of Developed Property, as determined in accordance with Section C.1.a.2 below.

"Backup Special Tax A" means the Special Tax A for each Land Use Class of Developed Property, as determined in accordance with Section C.1.a.3 below.

"Bonds" means any bonds or other debt (as defined in Section 53317(d) of the Act) issued by CFD No. 76 under the Act and payable from Special Tax A.

"Buildable Lot" means an individual lot, within a Final Subdivision Map or an area expected by CFD No. 76 to become Final Mapped Property, such as the area within a Tentative Tract Map, for which a building permit may be issued without further subdivision of such lot.

"CFD Administrator" means an official of the City responsible for determining the Special Tax A Requirement and Special Tax B Requirement, providing for the levy and collection of the Special Taxes, and performing the other duties provided for herein.

"CFD No. 76" means City of Ontario Community Facilities District No. 76 (Compass Pointe).

"City" means the City of Ontario, California.

"City Council" means the City Council of the City, acting as the legislative body of CFD No. 76.

"Contractual Impositions" means (a) a voluntary contractual assessment established and levied on an Assessor's Parcel pursuant to Chapter 29 of Part 3 of Division 7 of the California Streets and Highways Code (commencing with Section 5898.10 *et seq.*), as amended from time to time, (b) a special tax established and levied on an Assessor's Parcel pursuant to Section 53328.1 of the California Government Code and related provisions of the Act, as amended from time to time, and (c) any other fee, charge, tax, or assessment established and levied on an individual Assessor's Parcel pursuant to a contractual agreement or other voluntary consent by the owner thereof (e.g., property owner association assessments).

"County" means the County of San Bernardino.

"Designated Buildable Lot" means a Buildable Lot for which a building permit has not been issued by the City as of the date of calculation of the Backup Special Tax A.

"Developed Property" means for each Fiscal Year, all Taxable Property, exclusive of Final Mapped Property, Taxable Property Owner Association Property, and Taxable Public Property, for which a building permit or other applicable permit for new construction was issued after January 1, 2025, and before May 1 of the prior Fiscal Year.

"Expected Residential Lot Count" means 154 Buildable Lots or Units of Single Family Attached Property and 196 Buildable Lots of Single Family Detached Property, or, as determined by the CFD Administrator, the number of Buildable Lots or Units of Single Family Property based on the most recent Tentative Tract Map(s) or most recently recorded Final Subdivision Map(s) or modified Final Subdivision Map(s).

"Facilities" means the public facilities authorized to be financed, in whole or in part, by CFD No. 76.

"Final Mapped Property" means, for each Fiscal Year, all Taxable Property, exclusive of Developed Property, Taxable Property Owner Association Property, and Taxable Public Property, which as of January 1 of the previous Fiscal Year was located within a Final Subdivision Map. The term Final Mapped Property shall include any parcel map or Final Subdivision Map, or portion thereof, that creates individual lots for which a building permit may be issued, including Parcels that are designated as a remainder Parcel (i.e., one where the size, location, etc., precludes any further subdivision or taxable use).

"Final Subdivision Map" means a final tract map, parcel map, or lot line adjustment approved by the City pursuant to the Subdivision Map Act (California Government Code Section 66410 et seq.) or a condominium plan recorded pursuant to California Civil Code Section 4285 that, in either case, creates individual lots for which building permits may be issued without further subdivision.

"Fiscal Year" means the period starting July 1 and ending on the following June 30.

"Gated Community Attached Dwelling Unit" means, with respect to Special Tax B, a Unit within any residential building containing two or more dwelling units (including attached condominiums, townhouses, duplexes, triplexes, and apartments) within a gated community that, within such community, is primarily served by private interior streets.

"Indenture" means the indenture, fiscal agent agreement, resolution, or other instrument pursuant to which Bonds are issued, as modified, amended, and/or supplemented from time to time.

"Land Use Class" means any of the classes listed in Tables 1 and 2 below.

"Lower Income Household Welfare Exemption Property" means, for each Fiscal Year, an Assessor's Parcel within the boundaries of CFD No. 76 that is subject to a welfare exemption under subdivision (g) of Section 214 of the California Revenue and

Taxation Code (or any successor statute), as indicated in the most recent County assessor's roll finalized prior to such Fiscal Year.

"Maximum Special Tax A" means, with respect to an Assessor's Parcel of Taxable Property, the Maximum Special Tax A determined in accordance with Section C.1 below that can be levied in any Fiscal Year on such Assessor's Parcel of Taxable Property.

"Maximum Special Tax B" means, with respect to an Assessor's Parcel of Taxable Property, the Maximum Special Tax B determined in accordance with Section C.2 below that can be levied in any Fiscal Year on such Assessor's Parcel of Taxable Property.

"Minimum Sale Price" means the minimum price at which Units of a given Land Use Class have sold or are expected to be sold in a normal marketing environment and shall not include prices for such Units that are sold at a discount to expected sales prices for the purpose of stimulating the initial sales activity with respect to such Land Use Class.

"Multiple Family Dwelling Unit" means, with respect to Special Tax B, a Unit within any residential building containing two or more dwelling units, including attached condominiums, townhomes, duplexes, triplexes, and apartments, but excluding Gated Community Attached Dwelling Units.

"Non-Residential Property" means all Assessor's Parcels of Developed Property for which a building permit was issued by the City permitting the construction of one or more non-residential structures or facilities.

"Other Residential Property" means, with respect to Special Tax A, all Assessor's Parcels of Developed Property for which a building permit was issued by the City for purposes of constructing Units, excluding Single Family Attached Property and Single Family Detached Property.

"Outstanding Bonds" means all Bonds which are outstanding under and in accordance with the provisions of the Indenture.

"Price Point Consultant" means any consultant or firm of such consultants selected by CFD No. 76 that (a) has substantial experience in performing price point studies for residential units within community facilities districts established under the Act or otherwise estimating or confirming pricing for residential units in such community facilities districts, (b) has recognized expertise in analyzing economic and real estate data that relates to the pricing of residential units in such community facilities districts, (c) is in fact independent and not under the control of CFD No. 76 or the City, (d) does not have any substantial interest, direct or indirect, with or in (i) CFD No. 76, (ii) the City, (iii) any owner of real property in CFD No. 76, or (iv) any real property in CFD No. 76, and (e) is not connected with CFD No. 76 or the City as an officer or employee thereof, but who may be regularly retained to make reports to CFD No. 76 or the City.

"Price Point Study" means a price point study or a letter updating a previous price point study prepared by the Price Point Consultant pursuant to Section C herein.

"Property Owner Association Property" means, for each Fiscal Year, any property within the boundaries of CFD No. 76 that was owned by a property owner association, including any master or sub-association, as of January 1 of the prior Fiscal Year.

"Proportionately" means (a) for Developed Property in the first step of Section D.1 below, that the ratio of the actual Special Tax A levy to the Maximum Special Tax A is equal for all Assessor's Parcels of Developed Property; however, for Developed Property in the fourth step of Section D.1 below, Proportionately means that the amount of the increase above the Assigned Special Tax A, if necessary, is equal for all Assessor's Parcels of Developed Property, except that if the Backup Special Tax A limits the increase on any Assessor's Parcel(s), then the amount of the increase shall be equal for the remaining Assessor's Parcels; (b) with respect to Special Tax B, that the ratio of the actual Special Tax B levy to the Maximum Special Tax B is equal for all Assessor's Parcels of Developed Property; (c) for Final Mapped Property, that the ratio of the actual Special Tax A levy to the Maximum Special Tax A is equal for all Assessor's Parcels of Final Mapped Property; (d) for Undeveloped Property, that the ratio of the actual Special Tax A levy to the Maximum Special Tax A is equal for all Assessor's Parcels of Undeveloped Property; (e) for Taxable Property Owner Association Property, that the ratio of the actual Special Tax A levy to the Maximum Special Tax A is equal for all Assessor's Parcels of Taxable Property Owner Association Property; and (f) for Taxable Public Property, that the ratio of the actual Special Tax A levy to the Maximum Special Tax A is equal for all Assessor's Parcels of Taxable Public Property.

"Public Property" means, for each Fiscal Year, property within the boundaries of CFD No. 76 that is (a) owned by, irrevocably offered to, or dedicated to the federal government, the State, the County, the City, or any local government or other public agency or (b) encumbered by an easement for purposes of public or utility right-of-way that makes impractical its use for any purpose other than that set forth in such easement; provided that any property leased by a public agency to a private entity and subject to taxation under Section 53340.1 of the Act shall be taxed and classified according to its use.

"Rate and Method of Apportionment" means this Rate and Method of Apportionment of Special Tax.

"Residential Floor Area" means all of the Square Footage of living area within the perimeter of a Unit, not including any carport, walkway, garage, overhang, patio, enclosed patio, or similar area. The determination of Residential Floor Area shall be as set forth in the building permit(s) issued for such Assessor's Parcel, or as set forth in other official records maintained by the City's Building Department or other appropriate means selected by CFD No. 76. The actual Square Footage shall be rounded up to the next whole square foot. Once such determination has been made for an Assessor's Parcel, it shall remain fixed in all future Fiscal Years unless an appeal pursuant to Section F below is approved that results in a change in the actual Square Footage.

"Residential Property" means, for each Fiscal Year, an Assessor's Parcel for which a building permit for new construction of one or more Units was issued after January 1, 2025, and before May 1 of the prior Fiscal Year.

"Services" means the services authorized to be financed, in whole or in part, by CFD No. 76.

"Single Family Attached Property" means all Assessor's Parcels of Developed Property for which a building permit or use permit was issued for construction of a residential structure consisting of two or more Units that share common walls, have separate Assessor's Parcel Numbers assigned to them (except for a duplex unit, which may share an Assessor's Parcel with another duplex unit), and may be purchased by individual homebuyers (which shall still be the case even if the Units are purchased and subsequently offered for rent by the owner of the Unit), including such residential structures within a condominium project as defined in Civil Code Section 4125.

"Single Family Detached Dwelling Unit" means, with respect to Special Tax B, a Unit of Single Family Detached Property.

"Single Family Detached Property" means all Assessor's Parcels of Developed Property for which a building permit was issued for construction of a Unit, on one legal lot, that does not share a common wall with another Unit.

"Single Family Property" means all Assessor's Parcels of Single Family Attached Property and Single Family Detached Property.

"Special Taxes" means, collectively, Special Tax A and Special Tax B.

"Special Tax A" means the special tax authorized by the qualified electors of CFD No. 76 to be levied within the boundaries of CFD No. 76 to pay for Facilities and Services.

"Special Tax A Requirement" means for any Fiscal Year that amount required, after taking into account available amounts held in the funds and accounts established under the Indenture, for CFD No. 76 to: (i) pay debt service on all Outstanding Bonds which is due in the calendar year that commences in such Fiscal Year; (ii) pay periodic costs on the Bonds, including, but not limited to, credit enhancement and rebate payments on the Bonds; (iii) pay a pro rata share of Administrative Expenses; (iv) provide any amounts required to establish or replenish any reserve fund for the Bonds; (v) pay directly for acquisition or construction of Facilities, or the cost of Services, to the extent that the inclusion of such amounts does not increase the Special Tax A levy on Final Mapped Property or Undeveloped Property; and (vi) provide an amount equal to Special Tax A delinquencies based on the historical delinquency rate for Special Tax A as determined by the CFD Administrator.

"Special Tax B" means the special tax authorized by the qualified electors of CFD No. 76 to be levied within the boundaries of CFD No. 76 to pay for Services.

"Special Tax B Requirement" means for any Fiscal Year that amount required, after taking into account available amounts in any funds and accounts established to pay for Services, to pay the cost of Services, a pro rata share of Administrative Expenses, and an

amount equal to Special Tax B delinquencies based on the historical delinquency rate for Special Tax B as determined by the CFD Administrator.

"Square Footage" or **"Sq. Ft."** means the floor area square footage reflected on the original construction building permit, or as set forth in other official records maintained by the City's Building Department or other appropriate means selected by CFD No. 76, issued for construction of Residential Property or Non-Residential Property, plus any square footage subsequently added to a building of Non-Residential Property after issuance of a building permit for expansion or renovation of such building.

"State" means the State of California.

"Taxable Property" means, for each Fiscal Year, all of the Assessor's Parcels within the boundaries of CFD No. 76 that are not exempt from the Special Taxes pursuant to law or Section E below.

"Taxable Property Owner Association Property" means, for each Fiscal Year, all Assessor's Parcels of Property Owner Association Property that are not exempt from the Special Taxes pursuant to Section E below.

"Taxable Public Property" means, for each Fiscal Year, all Assessor's Parcels of Public Property that are not exempt from the Special Taxes pursuant to law or Section E below.

"Tentative Tract Map" means a map: (i) showing a proposed subdivision of an Assessor's Parcel(s) and the conditions pertaining thereto; (ii) that may or may not be based on a detailed survey; and (iii) that is not recorded by the County to create legal lots.

"Total Tax Burden" means, for a Unit within a Land Use Class, for the Fiscal Year in which the Total Tax Burden is being calculated, the sum of (a) the Assigned Special Tax A for such Land Use Class for such Fiscal Year, plus (b) the Special Tax B for such Land Use Class for such Fiscal Year, plus (c) the *ad valorem* property taxes, special assessments, special taxes for any overlapping community facilities districts, and any other governmental fees, charges (other than fees or charges for services such as sewer and trash), taxes, and assessments (which do not include Contractual Impositions) collected by the County on *ad valorem* tax bills, plus (d) property owner association assessments (but excluding the refuse collection portion of such assessments), and that the CFD Administrator estimates would be levied or imposed on such Unit in such Fiscal Year if the residential dwelling unit thereon or therein had been completed and sold, and was subject to such fees, charges, taxes, and assessments in such Fiscal Year.

"Trustee" means the trustee or fiscal agent under the Indenture.

"TTM 20472" means Tentative Tract Map No. 20472, the area of which is located within CFD No. 76.

"Undeveloped Property" means, for each Fiscal Year, all Taxable Property not classified as Developed Property, Final Mapped Property, Taxable Public Property, or Taxable Property Owner Association Property.

"Unit" means an individual single-family detached or attached home, townhome, condominium, apartment, or other residential dwelling unit, including each separate living area within a half-plex, duplex, triplex, fourplex, or other residential structure.

B. ASSIGNMENT TO LAND USE CATEGORIES

Each Fiscal Year, beginning with Fiscal Year 2026-27, all Taxable Property within CFD No. 76 shall be classified as Developed Property, Final Mapped Property, Taxable Public Property, Taxable Property Owner Association Property, or Undeveloped Property, and shall be subject to Special Taxes in accordance with the Rate and Method of Apportionment as determined pursuant to Sections C and D below.

Assessor's Parcels of Developed Property shall be further classified as: Single Family Property (and further classified as Single Family Attached Property or Single Family Detached Property, as needed) or Other Residential Property (for Special Tax A); Single Family Detached Dwelling Unit, Multiple Family Dwelling Unit, or Gated Community Attached Dwelling Unit (for Special Tax B); or Non-Residential Property. For Special Tax A, Assessor's Parcels of Single Family Attached Property shall be assigned to Land Use Classes 1 through 6, and Single Family Detached Property shall be assigned to Land Use Classes 7 through 13, as listed in Table 1 below based on the Residential Floor Area of the Units on such Assessor's Parcels. Also for Special Tax A, Other Residential Property and Non-Residential Property shall be assigned to Land Use Classes 14 and 15, respectively.

C. MAXIMUM SPECIAL TAX

1. Special Tax A

At least 30 days prior to the issuance of Bonds, the Assigned Special Tax A on Developed Property (set forth in Table 1 below) shall be analyzed in accordance with and subject to the conditions set forth in this Section C. At such time, CFD No. 76 shall select and engage a Price Point Consultant and the CFD Administrator shall request the Price Point Consultant to prepare a Price Point Study setting forth the Minimum Sale Price of Units within each Land Use Class.

If based upon such Price Point Study the CFD Administrator calculates that the Total Tax Burden applicable to Units within one or more Land Use Classes of Single Family Attached Property to be constructed within CFD No. 76 exceeds 2.55% of the Minimum Sale Price of Units of Single Family Attached Property, the Assigned Special Tax A shall be reduced to the extent necessary to cause the Total Tax Burden that shall apply to Units within such Land Use Class(es) not to exceed 2.55% of the Minimum Sale Price of such Units.

In addition, if based upon such Price Point Study the CFD Administrator calculates that the Total Tax Burden applicable to Units within one or more Land Use Classes of Single Family Detached Property to be constructed within CFD No. 76 exceeds 2.15% of the Minimum Sale Price of Units of Single Family Detached Property, the Assigned Special Tax A shall be reduced to the extent necessary to cause the Total Tax Burden that shall apply to Units within such Land Use Class(es) not to exceed 2.15% of the Minimum Sale Price of such Units.

Finally, if based upon such Price Point Study the CFD Administrator calculates that the Total Tax Burden, excluding property owner association assessments, applicable to Units within one or more Land Use Classes of Single Family Property to be constructed within CFD No. 76 exceeds 1.95% of the Minimum Sale Price of such Units, the Assigned Special Tax A shall be reduced to the extent necessary to cause the Total Tax Burden, excluding property owner association assessments, that shall apply to Units within such Land Use Class(es) not to exceed 1.95% of the Minimum Sale Price of such Units.

Each Assigned Special Tax A reduction for a Land Use Class shall be calculated by the CFD Administrator separately, and it shall not be required that such reduction be proportionate among Land Use Classes. In connection with any reduction in the Assigned Special Tax A, the Backup Special Tax A shall also be reduced by the CFD Administrator based on the percentage reduction in Maximum Special Tax A revenues within the Tentative Tract Map area(s) where the Assigned Special Tax A reductions occurred. Upon determining the reductions, if any, in the Assigned Special Tax A and Backup Special Tax A required pursuant to this Section C, the CFD Administrator shall complete the Certificate of Modification of Special Tax substantially in the form attached hereto as Exhibit A (the "Certificate of Modification"), shall execute such completed Certificate of Modification, and shall deliver such executed Certificate of Modification to CFD No. 76. Upon receipt thereof, if in satisfactory form, CFD No. 76 shall execute such Certificate of Modification. The reduced Assigned Special Tax A and Backup Special Tax A specified in such Certificate of Modification shall become effective upon the execution of such Certificate of Modification by CFD No. 76.

The Special Tax A reductions required pursuant to this section shall be reflected in an amended notice of Special Tax lien, which CFD No. 76 shall cause to be recorded with the County Recorder as soon as practicable after execution of the Certificate of Modification by CFD No. 76. The reductions in this section apply to Single Family Property, but not to Other Residential Property or Non-Residential Property.

a. Developed Property

1) *Maximum Special Tax A*

The Maximum Special Tax A that may be levied in any Fiscal Year for each Assessor's Parcel classified as Developed Property shall be the greater of (i) the amount derived by application of the Assigned Special Tax A or (ii) the amount derived by application of the Backup Special Tax A. The Maximum Special Tax A shall not increase in future years, other than as calculated pursuant to Section C.1.a.3 below.

2) *Assigned Special Tax A*

The Assigned Special Tax A that may be levied in any Fiscal Year for each Land Use Class is shown below in Table 1.

TABLE 1
ASSIGNED SPECIAL TAX A – DEVELOPED PROPERTY

Land Use Class	Description	Residential Floor Area (Square Footage)	Assigned Special Tax A
1	Single Family Attached Property	< 1,301	$1,194 per Unit
2	Single Family Attached Property	1,301 – 1,400	$1,623 per Unit
3	Single Family Attached Property	1,401 – 1,500	$1,841 per Unit
4	Single Family Attached Property	1,501 – 1,600	$2,001 per Unit
5	Single Family Attached Property	1,601 – 1,700	$2,379 per Unit
6	Single Family Attached Property	> 1,700	$2,807 per Unit
7	Single Family Detached Property	< 1,951	$3,954 per Unit
8	Single Family Detached Property	1,951 – 2,150	$4,326 per Unit
9	Single Family Detached Property	2,151 – 2,350	$4,916 per Unit
10	Single Family Detached Property	2,351 – 2,550	$5,355 per Unit
11	Single Family Detached Property	2,551 – 2,750	$5,840 per Unit
12	Single Family Detached Property	2,751 – 2,950	$5,981 per Unit
13	Single Family Detached Property	> 2,950	$6,407 per Unit
14	Other Residential Property		$57,987 per Acre
15	Non-Residential Property		$57,987 per Acre

3) Backup Special Tax A

The Backup Special Tax A shall be $2,058 per Unit of Single Family Attached Property and $5,181 per Unit of Single Family

Detached Property. However, if the Expected Residential Lot Count for Single Family Attached Property does not equal 154 and for Single Family Detached Property does not equal 196, and the City has not issued Bonds, then the Backup Special Tax A for Designated Buildable Lots of Single Family Attached Property and Single Family Detached Property shall be calculated according to the following formulas:

Attached	=	$316,904 ÷ Expected Residential Lot Count for Single Family Attached Property
Detached	=	$1,015,455 ÷ Expected Residential Lot Count for Single Family Detached Property

If any portion of a Final Subdivision Map, or any area expected by CFD No. 76 to become Final Mapped Property – such as the area within TTM 20472, or any other Tentative Tract Map – changes any time after the City has issued Bonds, causing an adjustment to the number of Designated Buildable Lots, then the Backup Special Tax A for all Designated Buildable Lots of Single Family Property subject to the change shall be calculated according to the following steps:

Step 1: Determine the total Backup Special Tax A that could have been collected from Designated Buildable Lots of Single Family Attached Property or Single Family Detached Property prior to the Final Subdivision Map or expected Final Mapped Property change.

Step 2: Divide the amount determined in Step 1 by the number of Designated Buildable Lots of Single Family Attached Property or Single Family Detached Property that exists after the Final Subdivision Map or expected Final Mapped Property change.

Step 3: Apply the amount determined in Step 2 as the Backup Special Tax A per Unit for Single Family Attached Property or Single Family Detached Property.

The Backup Special Tax A for an Assessor's Parcel shall not change once an Assessor's Parcel is classified as Developed Property.

b. Final Mapped Property, Taxable Public Property, Taxable Property Owner Association Property, and Undeveloped Property

The Maximum Special Tax A for Final Mapped Property, Taxable Public Property, Taxable Property Owner Association Property, and Undeveloped Property shall be $57,987 per Acre, and shall not be subject to increase or reduction and, therefore, shall remain the same in every Fiscal Year.

2. Special Tax B

The Maximum Special Tax B for each Assessor's Parcel classified as Developed Property shall be determined by reference to Table 2 below.

TABLE 2
MAXIMUM SPECIAL TAX B – DEVELOPED PROPERTY

Land Use Class	Maximum Special Tax B Fiscal Year 2026-27
Residential Property	
Single Family Detached Dwelling Unit	$1,426.38 per Unit
Multiple Family Dwelling Unit	$1,236.46 per Unit
Gated Community Attached Dwelling Unit	$1,036.38 per Unit
Non-Residential Property	$0.260110 per Sq. Ft.

On January 1 of each Fiscal Year, commencing January 1, 2027, the Maximum Special Tax B to be applied in the next Fiscal Year shall be subject to an automatic increase at a rate equal to 4.0% of the amount in effect for the prior Fiscal Year.

3. Multiple Land Use Classes on an Assessor's Parcel

In some instances an Assessor's Parcel of Developed Property may contain more than one Land Use Class. The Maximum Special Tax A levied on such Assessor's Parcel shall be the sum of the Maximum Special Tax A for all Units of Single Family Property and Acres of Other Residential Property and Non-Residential Property (based on the pro rata share of Square Footage between Other Residential Property and Non-Residential Property, according to the applicable building permits, Final Subdivision Map, parcel map, condominium plan, or other recorded County map) located on that Assessor's Parcel. The Maximum Special Tax B levied on such Assessor's Parcel shall be the sum of the Maximum Special Tax B for all Units of Residential Property and all Square

Footage of Non-Residential Property (based on the applicable building permits, Final Subdivision Map, parcel map, condominium plan, or other recorded County map) located on that Assessor's Parcel.

4. Developed Property Special Tax Obligation

Once an Assessor's Parcel has been taxed in any Fiscal Year as Developed Property, the Assessor's Parcel shall continue to be taxed as Developed Property regardless of changes to or expiration of the original building permit, and regardless of revisions to or destruction of the structure that was, or was expected to be, constructed pursuant to the original building permit.

D. METHOD OF APPORTIONMENT OF THE SPECIAL TAX

1. Special Tax A

Each Fiscal Year, beginning with Fiscal Year 2026-27, the CFD Administrator shall determine the Special Tax A Requirement for such Fiscal Year. The Special Tax A shall then be levied as follows:

First: If needed to satisfy the Special Tax A Requirement, Special Tax A shall be levied Proportionately on each Assessor's Parcel of Developed Property up to 100% of the applicable Assigned Special Tax A;

Second: If additional monies are needed to satisfy the Special Tax A Requirement after the first step has been completed, then Special Tax A shall be levied Proportionately on each Assessor's Parcel of Final Mapped Property up to 100% of the Maximum Special Tax A for Final Mapped Property;

Third: If additional monies are needed to satisfy the Special Tax A Requirement after the first two steps have been completed, then Special Tax A shall be levied Proportionately on each Assessor's Parcel of Undeveloped Property up to 100% of the Maximum Special Tax A for Undeveloped Property;

Fourth: If additional monies are needed to satisfy the Special Tax A Requirement after the first three steps have been completed, then the levy of Special Tax A on each Assessor's Parcel of Developed Property whose Maximum Special Tax A is determined through the application of the Backup Special Tax A shall be increased Proportionately from the Assigned Special Tax A up to the Maximum Special Tax A for each such Assessor's Parcel;

Fifth: If additional monies are needed to satisfy the Special Tax A Requirement after the first four steps have been completed, then Special Tax A shall be levied Proportionately on each Assessor's Parcel of Taxable Property Owner Association Property up to the Maximum Special Tax A for Taxable Property Owner Association Property;

Sixth: If additional monies are needed to satisfy the Special Tax A Requirement after the first five steps have been completed, then Special Tax A shall be levied Proportionately

on each Assessor's Parcel of Taxable Public Property up to the Maximum Special Tax A for Taxable Public Property.

Notwithstanding the above, under no circumstances shall Special Tax A levied in any Fiscal Year on any Assessor's Parcel of Single Family Property or Other Residential Property for which an occupancy permit for private residential use has been issued be increased as a result of delinquency or default by the owner or owners of any other Assessor's Parcel or Assessor's Parcels within CFD No. 76 by more than ten percent above the amount that would have been levied in that Fiscal Year had there never been any such delinquencies or defaults.

2. Special Tax B

Each Fiscal Year, beginning with Fiscal Year 2026-27, the CFD Administrator shall determine the Special Tax B Requirement. The Special Tax B shall then be levied Proportionately on each Assessor's Parcel of Developed Property up to 100% of the applicable Maximum Special Tax B for such Assessor's Parcel, until the Special Tax B Requirement is satisfied. However, the Special Tax B levied in any Fiscal Year shall not increase by more than 4.0% of the amount of the Special Tax B levied in the prior Fiscal Year.

E. EXEMPTIONS

No Special Tax shall be levied on up to 10.97 Acres of Public Property and up to 14.55 Acres of Property Owner Association Property. Tax-exempt status will be assigned by the CFD Administrator in the chronological order in which property becomes Public Property or Property Owner Association Property.

Property Owner Association Property or Public Property that is not exempt from the Special Tax A under this section shall be subject to the levy of Special Tax A and shall be taxed Proportionately as part of the fifth or sixth step, respectively, in Section D above, up to 100% of the applicable Maximum Special Tax A for Taxable Property Owner Association Property and Taxable Public Property. No Special Tax A shall be levied in any Fiscal Year on Assessor's Parcels that have fully prepaid the Special Tax A obligation pursuant to the formula set forth in Section H.

No Special Tax shall be levied on Lower Income Household Welfare Exemption Property; provided, however, that if, in any Fiscal Year, applicable law does not require that Lower Income Household Welfare Exemption Property be exempt from some portion, or all, of the Special Tax, such portion, or all, of the Special Tax shall be levied on such property in accordance with this Rate and Method of Apportionment based on the Land Use Class to which the Assessor's Parcel is assigned.

F. APPEALS

Any property owner may file a written appeal of the Special Tax with CFD No. 76 claiming that the amount or application of the Special Tax is not correct. The appeal must be filed not later than one calendar year after having paid the Special Tax that is

disputed, and the appellant must be current in all payments of Special Taxes. In addition, during the term of the appeal process, all Special Taxes levied must be paid on or before the payment date established when the levy was made.

The appeal must specify the reasons why the appellant claims the Special Tax is in error. The CFD Administrator shall review the appeal, meet with the appellant if the CFD Administrator deems necessary, and advise the appellant of its determination.

If the property owner disagrees with the CFD Administrator's decision relative to the appeal, the owner may then file a written appeal with the City Council whose subsequent decision shall be final and binding on all interested parties. If the decision of the CFD Administrator or subsequent decision by the City Council requires the Special Tax to be modified or changed in favor of the property owner, then the CFD Administrator shall determine if sufficient Special Tax revenue is available to make a cash refund. If a cash refund cannot be made, then an adjustment shall be made to credit future Special Tax levy(ies).

This procedure shall be exclusive and its exhaustion by any property owner shall be a condition precedent to filing any legal action by such owner.

G. MANNER OF COLLECTION

The Special Taxes shall be collected in the same manner and at the same time as ordinary *ad valorem* property taxes; provided, however, that the Special Taxes may be collected in such other manner as the City Council shall determine, including direct billing of affected property owners.

H. PREPAYMENT OF SPECIAL TAX A

The following definitions apply to this Section H:

"CFD Public Facilities" means $16,638,000 for each Prepayment Period, or such lower number as determined by the City Council to be sufficient to fund the Facilities and Services to be provided by CFD No. 76.

"Expenditures Fund" means funds or accounts, regardless of their names, that are established to hold moneys that are available to acquire or construct Facilities and to fund Services.

"Future Facilities Costs" means the CFD Public Facilities minus (i) Facilities and Services costs previously paid from the Expenditures Fund during the Prepayment Period in which the prepayment is being made, (ii) moneys currently on deposit in the Expenditures Fund from deposits made during the Prepayment Period in which the prepayment is being made, and (iii) moneys currently on deposit in an escrow fund that are expected to be available to finance Facilities costs. In no event shall the amount of Future Facilities Costs be less than zero.

"Prepayment Period" means one of three periods of time during which a Special Tax prepayment may be made.

"Prepayment Period 1" means July 1, 2026, through June 30, 2060.

"Prepayment Period 2" means July 1, 2060, through June 30, 2093.

"Prepayment Period 3" means July 1, 2093, through June 30, 2127.

Only Special Tax A may be prepaid; Special Tax B shall continue to be levied on an annual basis on all Developed Property in CFD No. 76.

1. Prepayment in Full

The obligation of an Assessor's Parcel to pay the Special Tax A may be prepaid as described herein, provided that a prepayment may be made only for Assessor's Parcels for which a building permit for new construction was issued after January 1, 2025, and only if there are no delinquent Special Taxes with respect to such Assessor's Parcel at the time of prepayment. An owner of an Assessor's Parcel intending to prepay the Special Tax A obligation shall provide the CFD Administrator with written notice of intent to prepay. Within 30 days of receipt of such written notice, the CFD Administrator shall notify such owner of the prepayment amount for such Assessor's Parcel. The CFD Administrator may charge a fee for providing this service. Prepayment in any six month period must be made not less than 45 days prior to the next occurring date that notice of redemption of Bonds from the proceeds of such prepayment may be given to the Trustee pursuant to the Indenture.

The Special Tax A Prepayment Amount (defined below) shall be calculated as summarized below (capitalized terms as defined below):

Bond Redemption Amount	
plus	Redemption Premium
plus	Future Facilities Amount
plus	Defeasance Amount
plus	Administrative Fees and Expenses
less	Reserve Fund Credit
Total	Prepayment Amount

As of the proposed date of prepayment, the Special Tax A Prepayment Amount (defined below) shall be calculated by the CFD Administrator as follows:

Paragraph No.

1. Confirm that no Special Tax delinquencies apply to such Assessor's Parcel, and determine the Prepayment Period for the proposed prepayment.

2. Compute the Assigned Special Tax A and Backup Special Tax A for the Assessor's Parcel to be prepaid based on the Developed Property Special Tax A which is, or could be, charged in the current Fiscal Year. For Assessor's Parcels of Final Mapped Property (for which a building permit has been issued but which is not yet classified as Developed Property) to be prepaid, compute the Assigned Special Tax A and Backup Special Tax A for that Assessor's Parcel as though it was already designated as Developed Property, based upon the building permit which has already been issued for that Assessor's Parcel.

3. (a) Divide the Assigned Special Tax A computed pursuant to Paragraph 2 by the total estimated Assigned Special Tax A for CFD No. 76 based on the Developed Property Special Tax A which could be charged in the current Fiscal Year on all expected development through buildout of CFD No. 76, excluding any Assessor's Parcels which have been prepaid, and

   (b) Divide the Backup Special Tax A computed pursuant to Paragraph 2 by the estimated total Backup Special Tax A at buildout of CFD No. 76, excluding any Assessor's Parcels which have been prepaid.

4. Multiply the larger quotient computed pursuant to Paragraph 3(a) or 3(b) by the Outstanding Bonds to compute the amount of Outstanding Bonds to be retired and prepaid (the "Bond Redemption Amount").

5. Multiply the Bond Redemption Amount computed pursuant to Paragraph 4 by the applicable redemption premium (e.g., the redemption price minus 100%), if any, on the Outstanding Bonds to be redeemed (the "Redemption Premium").

6. Compute the Future Facilities Costs for the applicable Prepayment Period.

7. Multiply the larger quotient computed pursuant to Paragraph 3(a) or 3(b) by the amount determined pursuant to Paragraph 6 to compute the amount of Future Facilities Costs to be prepaid (the "Future Facilities Amount").

8. Compute the amount needed to pay interest on the Bond Redemption Amount from the first bond interest and/or principal payment date following the current Fiscal Year until the earliest redemption date for the Outstanding Bonds.

9. Determine the Special Tax A levied on the Assessor's Parcel in the current Fiscal Year which has not yet been paid.

10. Add the amounts computed pursuant to Paragraphs 8 and 9 to determine the "Defeasance Amount".

11. Verify the administrative fees and expenses of CFD No. 76, including the costs to compute the prepayment, the costs to invest the prepayment proceeds, the costs to redeem Bonds, and the costs to record any notices to evidence the prepayment and the redemption (the "Administrative Fees and Expenses").

12. If reserve funds for the Outstanding Bonds, if any, are at or above 100% of the reserve requirement (as defined in the Indenture) on the prepayment date, a reserve fund credit shall be calculated as a reduction in the applicable reserve fund for the Outstanding Bonds to be redeemed pursuant to the prepayment (the "Reserve Fund Credit"). No Reserve Fund Credit shall be granted if reserve funds are below 100% of the reserve requirement on the prepayment date or the redemption date.

13. The Special Tax A prepayment is equal to the sum of the amounts computed pursuant to Paragraphs 4, 5, 7, 10, and 11, less the amount computed pursuant to Paragraph 12 (the "Prepayment Amount").

14. From the Prepayment Amount, the amounts computed pursuant to Paragraphs 4, 5, 10, and 12 shall be deposited into the appropriate fund as established under the Indenture and be used to retire Outstanding Bonds or make debt service payments. The amount computed pursuant to Paragraph 7 shall be deposited into the Expenditures Fund. The amount computed pursuant to Paragraph 11 shall be retained by CFD No. 76.

The Special Tax A Prepayment Amount may be sufficient to redeem other than a $5,000 increment of Bonds. In such cases, the increment above $5,000, or integral multiple thereof, will be retained in the appropriate fund established under the Indenture to be used with the next prepayment of Bonds or to make debt service payments.

As a result of the payment of the current Fiscal Year's Special Tax A levy as determined under Paragraph 9 (above), the CFD Administrator shall remove the current Fiscal Year's Special Tax A levy for such Assessor's Parcel from the County tax rolls. With respect to any Assessor's Parcel that is prepaid during Prepayment Period 3, the CFD Administrator shall cause a suitable notice to be recorded in compliance with the Act to indicate that Special Tax A has been prepaid and that the obligation of such Assessor's Parcel to pay Special Tax A shall cease.

With respect to Special Tax A for any Assessor's Parcel that is prepaid during Prepayment Period 1 or Prepayment Period 2, the obligation of such Assessor's Parcel to pay Special Tax A shall be tolled, or suspended, through the end of such Prepayment Period, but shall resume in the first Fiscal Year of the subsequent Prepayment Period. The CFD Administrator shall cause a suitable notice to be recorded in compliance with the Act to indicate that Special Tax A has been satisfied for the remainder of the applicable Prepayment Period but has not been permanently satisfied and the obligation to pay Special Tax A will resume in the first Fiscal Year of the Prepayment Period following the Prepayment Period in which the prepayment was made. Once the obligation of an Assessor's Parcel to pay Special Tax A resumes, Special Tax A for the then applicable Prepayment Period may be prepaid.

Notwithstanding the foregoing, no Special Tax A prepayment shall be allowed unless the amount of Maximum Special Tax A that may be levied on Taxable Property within CFD No. 76 (after excluding 10.97 Acres of Public Property and 14.55 Acres of Property Owner Association Property) both prior to and after the proposed prepayment is at least 1.1 times the maximum annual debt service on all Outstanding Bonds.

2. Prepayment in Part

The Special Tax A on an Assessor's Parcel for which a building permit for new construction was issued after January 1, 2025, may be partially prepaid. The amount of the prepayment shall be calculated as in Section H.1, except that a partial prepayment shall be calculated by the CFD Administrator according to the following formula:

$$PP = (PF - AE) \times \% + AE.$$

The terms above have the following meaning:

PP = the partial prepayment
PF = the Prepayment Amount (full prepayment) for Special Tax A calculated according to Section H.1
AE = the Administrative Fees and Expenses determined pursuant to paragraph 11 above
% = the percentage by which the owner of the Assessor's Parcel(s) is partially prepaying Special Tax A

The Special Tax A partial prepayment amount must be sufficient to redeem at least a $5,000 increment of Bonds.

The owner of any Assessor's Parcel who desires such prepayment shall notify the CFD Administrator of such owner's intent to partially prepay Special Tax A and the percentage by which Special Tax A shall be prepaid. The CFD Administrator shall provide the owner with a statement of the amount required for the partial prepayment of Special Tax A for an Assessor's Parcel within thirty (30) days of the request and may charge a fee for providing this service. With respect to any Assessor's Parcel that is partially prepaid, the CFD Administrator shall (i) distribute the remitted prepayment funds according to Section H.1, and (ii) indicate in the records of CFD No. 76 that there has been a partial prepayment of Special Tax A and that a portion of Special Tax A with respect to such Assessor's Parcel, equal to the outstanding percentage (100% - "%", as defined above) of the Maximum Special Tax A, shall continue to be levied on such Assessor's Parcel pursuant to Section D during the Prepayment Period in which the partial prepayment is made.

For partial prepayments made during Prepayment Period 1 or Prepayment Period 2, the full amount of Special Tax A shall resume in the first Fiscal Year of the Prepayment Period following the Prepayment Period in which the partial prepayment was made. Once the obligation of an Assessor's Parcel to pay Special Tax A resumes, Special Tax A for the then applicable Prepayment Period may be prepaid.

I. TERM OF SPECIAL TAX

The Fiscal Year after which no further Special Tax A shall be levied or collected is Fiscal Year 2126-2127, except that Special Tax A that was lawfully levied in or before such Fiscal Year and that remains delinquent may be collected in subsequent years. Special Tax B shall continue to be levied indefinitely on an annual basis on all Developed Property in CFD No. 76.

EXHIBIT A

CERTIFICATE OF MODIFICATION OF SPECIAL TAX A
(PAGE 1 OF 3)

CITY OF ONTARIO AND CFD NO. 76 CERTIFICATE

1. Pursuant to Section C.1 of the Rate and Method of Apportionment of Special Tax (the "Rate and Method") for City of Ontario Community Facilities District No. 76 (Compass Pointe) ("CFD No. 76"), the Assigned Special Tax A and the Backup Special Tax A for Developed Property within CFD No. 76 has been modified.

    a. The information in Table 1 below relating to Assigned Special Tax A for Developed Property within CFD No. 76, as stated in Section C.1.a.2 of the Rate and Method of Apportionment, has been modified as follows:

TABLE 1
ASSIGNED SPECIAL TAX A – DEVELOPED PROPERTY

Land Use Class	Description	Residential Floor Area (Square Footage)	Assigned Special Tax A
1	Single Family Attached Property	< 1,301	$[ ] per Unit
2	Single Family Attached Property	1,301 – 1,400	$[ ] per Unit
3	Single Family Attached Property	1,401 – 1,500	$[ ] per Unit
4	Single Family Attached Property	1,501 – 1,600	$[ ] per Unit
5	Single Family Attached Property	1,601 – 1,700	$[ ] per Unit
6	Single Family Attached Property	> 1,700	$[ ] per Unit
7	Single Family Detached Property	< 1,951	$[ ] per Unit
8	Single Family Detached Property	1,951 – 2,150	$[ ] per Unit
9	Single Family Detached Property	2,151 – 2,350	$[ ] per Unit
10	Single Family Detached Property	2,351 – 2,550	$[ ] per Unit
11	Single Family Detached Property	2,551 – 2,750	$[ ] per Unit
12	Single Family Detached Property	2,751 – 2,950	$[ ] per Unit
13	Single Family Detached Property	> 2,950	$[ ] per Unit
14	Other Residential Property		$[ ] per Acre
15	Non-Residential Property		$[ ] per Acre

EXHIBIT A

CERTIFICATE OF MODIFICATION OF SPECIAL TAX A
(PAGE 2 OF 3)

b. The Backup Special Tax for Developed Property, as stated in Section C.1.a.3, shall be modified as follows:

The Backup Special Tax A shall be $[ ] per Unit of Single Family Attached Property and $[ ] per Unit of Single Family Detached Property. However, if the Expected Residential Lot Count for Single Family Attached Property does not equal 154 and for Single Family Detached Property does not equal 196, and the City has not issued Bonds, then the Backup Special Tax A for Designated Buildable Lots of Single Family Attached Property and Single Family Detached Property shall be calculated according to the following formulas:

Attached = $[ ] ÷ Expected Residential Lot Count for Single Family Attached Property

Detached = $[ ] ÷ Expected Residential Lot Count for Single Family Detached Property

2. The Special Tax A for Developed Property may only be modified prior to the first issuance of CFD No. 76 Bonds.

3. Upon execution of this certificate by CFD No. 76, CFD No. 76 shall cause an amended notice of Special Tax lien for CFD No. 76 to be recorded reflecting the modifications set forth herein.

EXHIBIT A

CERTIFICATE OF MODIFICATION OF SPECIAL TAX A
(PAGE 3 OF 3)

Capitalized undefined terms used herein have the meanings ascribed thereto in the Rate and Method. The modifications set forth in this Certificate have been calculated by the CFD Administrator in accordance with the Rate and Method.

CITY OF ONTARIO
COMMUNITY FACILITIES DISTRICT NO. 76
(COMPASS POINTE)

By:_____ Date:_____

RESOLUTION NO. _____

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF ONTARIO, CALIFORNIA, DEEMING IT NECESSARY FOR CITY OF ONTARIO COMMUNITY FACILITIES DISTRICT NO. 76 (COMPASS POINTE) TO INCUR BONDED INDEBTEDNESS.

WHEREAS, on September 16, 2025, the City Council (the "City Council") of the City of Ontario (the "City"), pursuant to the Mello-Roos Community Facilities Act of 1982 (the "Act"), adopted a resolution entitled "A Resolution of the City Council of the City of Ontario, California, of Intention to Establish a Community Facilities District Proposed to be Named City of Ontario Community Facilities District No. 76 (Compass Pointe) and to Authorize the Levy of a Special Tax Therein," stating its intention to establish City of Ontario Community Facilities District No. 76 (Compass Pointe) (the "Community Facilities District") and to authorize the Community Facilities District to levy a special tax (the "Special Tax") within the Community Facilities District for the purpose of financing certain public facilities (the "Facilities") and services; and

WHEREAS, on September 16, 2025, the City Council also adopted a resolution entitled "A Resolution of the City Council of the City of Ontario, California, Declaring it Necessary for City of Ontario Community Facilities District No. 76 (Compass Pointe) to Incur Bonded Indebtedness" (the "Resolution Declaring Necessity"), declaring it necessary for the Community Facilities District to incur bonded indebtedness and setting the date for a public hearing to be held on the proposed debt authorization; and

WHEREAS, pursuant to the Resolution Declaring Necessity, notice of said public hearing was published in the Inland Valley Daily Bulletin, a newspaper of general circulation published in the area of the Community Facilities District, in accordance with the Act; and

WHEREAS, on this date, the City Council opened, conducted and closed said public hearing; and

WHEREAS, at said public hearing, any person interested, including persons owning property within the area and desiring to appear and present any matters material to the questions set forth in the Resolution Declaring Necessity appeared and presented such matters; and

WHEREAS, oral or written protests against the proposed debt issue were not made or filed at or before said public hearing by 50% or more of the registered voters, or six registered voters, whichever is more, residing within the territory proposed to be included in the Community Facilities District, or the owners of one-half or more of the area of land in the territory proposed to be included in the Community Facilities District and not exempt from the Special Tax; and

WHEREAS, the City Council deems it necessary for the Community Facilities District to incur bonded indebtedness; and

WHEREAS, on this date, the City Council adopted a resolution entitled "A Resolution of the City Council of the City of Ontario, California, of Formation of City of Ontario Community Facilities District No. 76 (Compass Pointe), Proposing that the Community Facilities District Be Authorized to Levy a Special Tax and Proposing that an Appropriations Limit of the Community Facilities District Be Established;" and

WHEREAS, the City Clerk of the City (the "City Clerk") is the election official that will conduct the special election on the proposition to authorize the Community Facilities District to incur bonded indebtedness; and

WHEREAS, there has been filed with the City Clerk a letter from the Registrar of Voters of the County of San Bernardino indicating that no persons were registered to vote within the territory of the Community Facilities District as of October 23, 2025, which demonstrates that 12 or more persons have not been registered to vote within the territory of the Community Facilities District for each of the 90 days preceding the close of said public hearing; and

WHEREAS, there has been filed with the City Clerk consents and waivers of all of the landowners of record in the Community Facilities District consenting to the waiver of, and waiving, any time limit specified by Section 53326 of the Act and any requirement pertaining to the conduct of said special election, including any time limit or requirement applicable to an election pursuant to Article 5 of the Act (commencing with Section 53345 of the Act), consenting to the holding of said special election on November 4, 2025, and consenting to the waiver of, and waiving, any impartial analysis, arguments or rebuttals, as set forth in Sections 53326 and 53327 of the Act; and

WHEREAS, the City Clerk has concurred in said waivers and has concurred in holding said special election on November 4, 2025.

NOW, THEREFORE, BE IT RESOLVED by the City Council of the City of Ontario as follows:

SECTION 1. The foregoing recitals are true and correct, and the City Council so finds and determines.

SECTION 2. The City Council deems it necessary for the Community Facilities District to incur the bonded indebtedness.

SECTION 3. The bonded indebtedness will be incurred for the purpose of financing the costs of the Facilities, including all costs and estimated costs incidental to, or connected with, the accomplishment of said purpose, including, but not limited to, such costs and estimated costs as are described in Section 53345.3 of the Act.

SECTION 4. In accordance with the previous determination of the City Council, the whole of the Community Facilities District will pay for the bonded indebtedness.

SECTION 5. The maximum amount of debt to be incurred is $60,000,000.

SECTION 6. The maximum term the bonds to be issued shall run before maturity is 40 years.

SECTION 7. The maximum annual rate of interest to be paid shall not exceed the maximum interest rate permitted by applicable law at the time of sale of the bonds, payable semiannually or at such times as the City Council or its designee shall determine, the actual rate or rates and times of payment of such interest to be determined by the City Council or its designee at the time or times of sale of the bonds.

SECTION 8. The proposition to authorize the Community Facilities District to incur the bonded indebtedness shall be submitted to the qualified electors of the Community Facilities District.

SECTION 9. The City Council hereby finds and determines that no persons were registered to vote within the territory of the Community Facilities District as of October 23, 2025, and that 12 or more persons have not been registered to vote within the territory of the Community Facilities District for each of the 90 days preceding the close of the public hearing held by the City Council on the proposed debt issue for the Community Facilities District. Accordingly, pursuant to Section 53326 of the Act, the vote shall be by the landowners of the Community Facilities District and each person who is the owner of land as of the close of said public hearing, or the authorized representative thereof, shall have one vote for each acre or portion of an acre that he or she owns within the Community Facilities District not exempt from the Special Tax.

SECTION 10. The City Council hereby finds and determines that the qualified electors of the Community Facilities District have (a) unanimously consented to the waiver of, and have waived, any time limit specified by Section 53326 of the Act and any requirement pertaining to the conduct of said election, including any time limit or requirement applicable to an election pursuant to Article 5 of the Act (commencing with Section 53345 of the Act), (b) unanimously consented to the holding of said election on November 4, 2025, and (c) unanimously consented to the waiver of, and have waived, any impartial analysis, arguments or rebuttals, as set forth in Sections 53326 and 53327 of the Act. The City Council hereby finds and determines that the City Clerk has concurred in said waivers and has concurred in holding said election on November 4, 2025.

SECTION 11. The date of the special community facilities district election (which shall be consolidated with the special district election to authorize the Community Facilities District to levy the Special Tax) at which time the proposition to authorize the Community Facilities District to incur the bonded indebtedness shall be submitted to the voters is November 4, 2025.

SECTION 12. As authorized by Section 53353.5 of the Act, the propositions to authorize the Community Facilities District to incur such bonded indebtedness, to authorize the Community Facilities to levy the Special Tax and to establish an appropriations limit of the Community Facilities District shall be combined into one ballot proposition.

SECTION 13. Pursuant to Section 53326 of the Act, the election shall be conducted by mail or hand-delivered ballot. The voted ballots are required to be received in the office of the City Clerk no later than 7:30 p.m. on November 4, 2025; provided, however, that if all of the qualified electors have voted prior to such time, the election may be closed with the concurrence of the City Clerk.

SECTION 14. All actions heretofore taken by the officers, employees and agents of the City with respect to the incurrence of bonded indebtedness by the Community Facilities District, or in connection with or related to any of the matters referred to herein, are hereby approved, confirmed and ratified.

SECTION 15. The officers, employees and agents of the City are hereby authorized and directed to take all actions and do all things that they, or any of them, may deem necessary or desirable to accomplish the purposes of this Resolution and not inconsistent with the provisions hereof.

SECTION 16. This Resolution shall take effect immediately upon its adoption.

The City Clerk of the City of Ontario shall certify as to the adoption of this Resolution.

PASSED, APPROVED, AND ADOPTED this 4th day of November 2025.

RESOLUTION NO. _____

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF ONTARIO, CALIFORNIA, CALLING SPECIAL ELECTION FOR CITY OF ONTARIO COMMUNITY FACILITIES DISTRICT NO. 76 (COMPASS POINTE).

WHEREAS, on this date, the City Council (the "City Council") of the City of Ontario (the "City"), pursuant to the Mello-Roos Community Facilities Act of 1982 (the "Act"), adopted a resolution entitled "A Resolution of the City Council of the City of Ontario, California, of Formation of City of Ontario Community Facilities District No. 76 (Compass Pointe), Proposing that the Community Facilities District be Authorized to Levy a Special Tax and Proposing that an Appropriations Limit of the Community Facilities District Be Established" (the "Resolution of Formation"), establishing City of Ontario Community Facilities District No. 76 (Compass Pointe) (the "Community Facilities District"), proposing that the Community Facilities District be authorized to levy a special tax (the "Special Tax") within the Community Facilities District for the purpose of financing certain public facilities (the "Facilities") and services and proposing that an appropriations limit of the Community Facilities District be established at $60,000,000; and

WHEREAS, on this date, the City Council also adopted a resolution entitled "A Resolution of the City Council of the City of Ontario, California, Deeming it Necessary for City of Ontario Community Facilities District No. 76 (Compass Pointe) to Incur Bonded Indebtedness" (the "Resolution Deeming Necessity"), deeming it necessary for the Community Facilities District to incur bonded indebtedness in a maximum amount of $60,000,000; and

WHEREAS, pursuant to the provisions of the Act and said resolutions, the propositions to authorize the Community Facilities District to incur such bonded indebtedness, to authorize the Community Facilities District to levy the Special Tax and to establish such appropriations limit of the Community Facilities District are to be submitted to the qualified electors of the Community Facilities District at a special election; and

WHEREAS, the City Council desires to designate the City Clerk of the City (the "City Clerk") as the election official for such special election; and

WHEREAS, there has been filed with the City Clerk a letter from the Registrar of Voters of the County of San Bernardino indicating that no persons were registered to vote within the territory of the Community Facilities District as of October 23, 2025, which demonstrates that 12 or more persons have not been registered to vote within the territory of the Community Facilities District for each of the 90 days preceding the close of the public hearings on the establishment of the Community Facilities District and the proposed debt issue for the Community Facilities District; and

WHEREAS, there has been filed with the City Clerk consents and waivers of all of the landowners of record in the Community Facilities District consenting to the waiver of, and waiving, any time limit specified by Section 53326 of the Act and any requirement pertaining to the conduct of said special election, including any time limit or requirement

applicable to an election pursuant to Article 5 of the Act (commencing with Section 53345 of the Act), consenting to the holding of said special election on November 4, 2025 and consenting to the waiver of, and waiving, any impartial analysis, arguments or rebuttals, as set forth in Sections 53326 and 53327 of the Act; and

WHEREAS, the City Clerk has concurred in said waivers and has concurred in holding said special election on November 4, 2025.

NOW, THEREFORE, BE IT RESOLVED by the City Council of the City of Ontario as follows:

SECTION 1. The foregoing recitals are true and correct, and the City Council so finds and determines.

SECTION 2. Pursuant to Sections 53351, 53326 and 53325.7 of the Act, the propositions to authorize the Community Facilities District to incur bonded indebtedness, to authorize the Community Facilities District to levy the Special Tax and to establish the appropriations limit of the Community Facilities District shall be submitted to the qualified electors of the Community Facilities District at an election called therefor as provided below.

SECTION 3. The City Clerk is hereby designated as the official to conduct said election.

SECTION 4. As authorized by Section 53353.5 of the Act, the propositions to authorize the Community Facilities District to incur such bonded indebtedness, to authorize the Community Facilities District to levy the Special Tax and to establish such appropriations limit of the Community Facilities District shall be combined into one ballot proposition.

SECTION 5. The City Council hereby finds and determines that no persons were registered to vote within the territory of the Community Facilities District as of October 23, 2025, and that 12 or more persons have not been registered to vote within the territory of the Community Facilities District for each of the 90 days preceding the close of the public hearings heretofore held by the City Council on the establishment of the Community Facilities District and the proposed debt issue for the Community Facilities District. Accordingly, pursuant to Section 53326 of the Act, the vote shall be by the landowners of the Community Facilities District and each person who is the owner of land as of the close of said public hearings, or the authorized representative thereof, shall have one vote for each acre or portion of an acre that he or she owns within the Community Facilities District not exempt from the Special Tax.

SECTION 6. The City Council hereby finds and determines that the qualified electors of the Community Facilities District have (a) unanimously consented to the waiver of, and have waived, any time limit specified by Section 53326 of the Act and any requirement pertaining to the conduct of said election, including any time limit or requirement applicable to an election pursuant to Article 5 of the Act (commencing with Section 53345 of the Act), (b) unanimously consented to the holding of said election on November 4, 2025, and (c) unanimously consented to the waiver of, and have waived,

any impartial analysis, arguments or rebuttals, as set forth in Sections 53326 and 53327 of the Act. The City Council hereby finds and determines that the City Clerk has concurred in said waivers and has concurred in holding said election on November 4, 2025.

SECTION 7. The City Council hereby calls a special election to submit to the qualified electors of the Community Facilities District the combined ballot proposition to authorize the Community Facilities District to incur bonded indebtedness in a maximum amount of $60,000,000, to authorize the Community Facilities to levy the Special Tax and to establish the appropriations limit of the Community Facilities District at $60,000,000, which election shall be held at 303 East B Street, Ontario, California, on November 4, 2025. The City Council has caused to be provided to the City Clerk, as the official to conduct the election, the Resolution of Formation, the Resolution Deeming Necessity, a certified map of sufficient scale and clarity to show the boundaries of the Community Facilities District and a sufficient description to allow the City Clerk to determine the boundaries of the Community Facilities District.

The voted ballots shall be returned to the City Clerk not later than 7:30 p.m. on November 4, 2025; provided, however, that if all of the qualified electors have voted prior to such time, the election may be closed with the concurrence of the City Clerk.

SECTION 8. Pursuant to Section 53326 of the Act, the election shall be conducted by mail or hand-delivered ballot pursuant to Section 4000 *et. seq.* of the California Elections Code. Except as otherwise provided in the Act, the provisions of law regulating elections of the City, insofar as they may be applicable, shall govern the election.

SECTION 9. The form of the ballot for the election, which sets forth the measure to be submitted to the voters, is attached hereto as Exhibit A and by this reference incorporated herein, and such form of ballot is hereby approved. The City Clerk shall cause to be delivered to each of the qualified electors of the Community Facilities District a ballot in said form, together with all supplies and written instructions necessary for the use and return of the ballot. The number of votes to be voted by a particular landowner shall be specified on the ballot provided to that landowner.

The identification envelope for return of a ballot shall be enclosed with such ballot, shall have the return postage prepaid, and shall contain: (a) the name and address of the landowner, (b) a declaration, under penalty of perjury, stating that the voter is the owner of record or the authorized representative of the landowner entitled to vote and is the person whose name appears on the identification envelope, (c) the printed name and signature of the voter, (d) the date of signing and place of execution of the declaration described in clause (b) above, and (e) a notice that the envelope contains an official ballot and is to be opened only by the canvassing board.

Analysis and arguments with respect to the measure submitted to the voters are hereby waived, as provided in Section 53327 of the Act.

SECTION 10. The City Clerk shall accept the ballots of the qualified electors in the office of the City Clerk at 303 East B Street, Ontario, California, to and including 7:30 p.m. on November 4, 2025, whether said ballots be personally delivered or received by mail. The City Clerk shall have available ballots that may be marked at said location on the election day by said qualified electors.

SECTION 11. The City Council hereby determines that the facilities and services financed by the Community Facilities District are necessary to meet increased demands placed upon local agencies as a result of development occurring in the Community Facilities District.

SECTION 12. The specific purpose of the bonded indebtedness that the Community Facilities District is proposed to be authorized to incur is the financing of the Facilities, including all costs and estimated costs incidental to, or connected with, the accomplishment of such purpose, and the proceeds of such bonded indebtedness shall be applied only to such specific purpose.

Upon approval of the proposition to authorize the Community Facilities District to incur bonded indebtedness, and the sale of any bonds evidencing such indebtedness, the City Council shall take such action as may be necessary to cause to be established an account for deposit of the proceeds of sale of the bonds. For so long as any proceeds of the bonds remain unexpended, the Executive Director of Finance of the City shall cause to be filed with the City Council, no later than January 1 of each year, a report stating (a) the amount of bond proceeds received and expended during the preceding year, and (b) the status of any project funded or to be funded from bond proceeds. Said report may relate to the calendar year, fiscal year, or other appropriate annual period, as the Executive Director of Finance of the City shall determine, and may be incorporated into the annual budget, audit, or other appropriate routine report to the City Council.

SECTION 13. All actions heretofore taken by the officers, employees and agents of the City with respect to the special election called pursuant hereto, or in connection with or related to any of the matters referred to herein, are hereby approved, confirmed and ratified.

SECTION 14. The officers, employees and agents of the City are hereby authorized and directed to take all actions and do all things that they, or any of them, may deem necessary or desirable to accomplish the purposes of this Resolution and not inconsistent with the provisions hereof.

SECTION 15. This Resolution shall take effect immediately upon its adoption.

The City Clerk of the City of Ontario shall certify as to the adoption of this Resolution.

PASSED, APPROVED, AND ADOPTED this 4th day of November 2025.

RESOLUTION NO. _____

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF ONTARIO, CALIFORNIA, DECLARING RESULTS OF SPECIAL ELECTION AND DIRECTING RECORDING OF NOTICE OF SPECIAL TAX LIEN.

WHEREAS, on November 4, 2025, the City Council (the "City Council") of the City of Ontario (the "City"), pursuant to the Mello-Roos Community Facilities Act of 1982 (the "Act"), adopted a resolution entitled "A Resolution of the City Council of the City of Ontario, California, Calling Special Election for City of Ontario Community Facilities District No. 76 (Compass Pointe)" (the "Resolution Calling Election"), calling a special election to submit to the qualified electors of City of Ontario Community Facilities District No. 76 (Compass Pointe) (the "Community Facilities District") the combined ballot proposition to authorize the Community Facilities District to incur bonded indebtedness, to authorize the Community Facilities District to levy a special tax and to establish the appropriations limit of the Community Facilities District; and

WHEREAS, pursuant to the terms of the Resolution Calling Election and the provisions of the Act, the special election was held on November 4, 2025; and

WHEREAS, the City Clerk of the City (the "City Clerk") has certified the canvass of the returns of the election and has filed a Canvass and Statement of Results of Election (the "Canvass"), a copy of which is attached hereto as Exhibit A;

NOW, THEREFORE, BE IT RESOLVED by the City Council of the City of Ontario as follows:

SECTION 1. The foregoing recitals are true and correct, and the City Council so finds and determines.

SECTION 2. The City Council has received, reviewed and hereby accepts the Canvass.

SECTION 3. The City Council hereby finds and declares that the ballot proposition submitted to the qualified electors of the Community Facilities District pursuant to the Resolution Calling Election has been passed and approved by such electors in accordance with Section 53355, Section 53328 and Section 53325.7 of the Act.

SECTION 4. The City Clerk is hereby directed to execute and cause to be recorded in the office of the County Recorder of the County of San Bernardino a notice of special tax lien in the form required by the Act, said recording to occur no later than 15 days following adoption by the City Council of this Resolution.

SECTION 5. All actions heretofore taken by the officers, employees and agents of the City with respect to the special election, or in connection with or related to any of the matters referred to herein, are hereby approved, confirmed and ratified.

SECTION 6. The officers, employees and agents of the City are hereby authorized and directed to take all actions and do all things that they, or any of them, may deem necessary or desirable to accomplish the purposes of this Resolution and not inconsistent with the provisions hereof.

SECTION 7. This Resolution shall take effect immediately upon its adoption.

The City Clerk of the City of Ontario shall certify as to the adoption of this Resolution.

ORDINANCE NO. _____

AN ORDINANCE OF THE CITY COUNCIL OF THE CITY OF ONTARIO, CALIFORNIA, LEVYING A SPECIAL TAX WITHIN CITY OF ONTARIO COMMUNITY FACILITIES DISTRICT NO. 76 (COMPASS POINTE).

WHEREAS, on September 16, 2025, the City Council (the "City Council") of the City of Ontario (the "City"), pursuant to the Mello-Roos Community Facilities Act of 1982 (the "Act"), adopted a resolution entitled "A Resolution of the City Council of the City of Ontario, California, of Intention to Establish a Community Facilities District Proposed to be Named City of Ontario Community Facilities District No. 76 (Compass Pointe) and to Authorize the Levy of a Special Tax Therein," stating its intention to establish City of Ontario Community Facilities District No. 76 (Compass Pointe) (the "Community Facilities District") and to authorize the Community Facilities District to levy a special tax (the "Special Tax") within the Community Facilities District for the purpose of financing certain public facilities (the "Facilities") and services (the "Services"); and

WHEREAS, on November 4, 2025, the City Council held a noticed public hearing on the establishment of the Community Facilities District, as required by the Act; and

WHEREAS, subsequent to the close of said hearing, the City Council adopted resolutions entitled "A Resolution of the City Council of the City of Ontario, California, of Formation of City of Ontario Community Facilities District No. 76 (Compass Pointe), Proposing that the Community Facilities District be Authorized to Levy a Special Tax and Proposing that an Appropriations Limit of the Community Facilities District be Established" (the "Resolution of Formation"), "A Resolution of the City Council of the City of Ontario, California, Deeming it Necessary for City of Ontario Community Facilities District No. 76 (Compass Pointe) to Incur Bonded Indebtedness" and "A Resolution of the City Council of the City of Ontario, California, Calling Special Election for City of Ontario Community Facilities District No. 76 (Compass Pointe)," which resolutions established the Community Facilities District, proposed that the Community Facilities District be authorized to levy the Special Tax within the Community Facilities District, proposed that an appropriations limit of the Community Facilities District be established and called a special election to submit to the qualified electors of the Community Facilities District the combined ballot proposition to authorize the Community Facilities District to incur bonded indebtedness, to authorize the Community Facilities District to levy the Special Tax and to establish the appropriations limit of the Community Facilities District; and

WHEREAS, on November 4, 2025, an election was held in which the qualified electors of the Community Facilities District approved said proposition by more than the two-thirds vote required by the Act; and

WHEREAS, the City Council is the legislative body of the Community Facilities District.

THE CITY COUNCIL OF THE CITY OF ONTARIO DOES ORDAIN AS FOLLOWS:

SECTION 1. The City Council hereby authorizes and levies the Special Tax within the Community Facilities District pursuant to Sections 53328 and 53340 of the Act, at the rate and in accordance with the method of apportionment set forth in Exhibit B to the Resolution of Formation (the "Rate and Method"). The Special Tax is hereby levied commencing in fiscal year 2026-27 and in each fiscal year thereafter until the last fiscal year in which the Special Tax is authorized to be levied pursuant to the Rate and Method.

SECTION 2. The City Council may, pursuant to subdivision (b) of Section 53340 of the Act, provide, by resolution, for the levy of the Special Tax in the current tax year or in future tax years at the same rate or at a lower rate than the rate provided by this Ordinance. In no event shall the Special Tax be levied on any parcel within the Community Facilities District in excess of the maximum tax specified therefor in the Rate and Method.

SECTION 3. The Special Tax shall be levied on all of the parcels in the Community Facilities District, unless exempted by law or by the Rate and Method.

SECTION 4. The proceeds of the Special Tax shall only be used to pay, in whole or in part, the cost of providing the Facilities and Services and incidental expenses pursuant to the Act.

SECTION 5. The Special Tax shall be collected in the same manner as ordinary *ad valorem* property taxes are collected and shall be subject to the same penalties and the same procedure, sale and lien priority in the case of delinquency as is provided for *ad valorem* taxes or in such other manner as the City Council shall determine, including direct billing of the affected property owners.

SECTION 6. If for any reason any portion of this Ordinance is found to be invalid, or if the Special Tax is found inapplicable to any particular parcel within the Community Facilities District by a court of competent jurisdiction, the balance of this Ordinance and the application of the Special Tax to the remaining parcels within the Community Facilities District shall not be affected.

SECTION 7. The Mayor shall sign this Ordinance and the City Clerk shall certify as to the adoption and shall cause a summary thereof to be published at least once, in a newspaper of general circulation in the City of Ontario, California within fifteen (15) days of the adoption. The City Clerk shall post a certified copy of this ordinance, including the vote for and against the same, in the Office of the City Clerk, in accordance with Government Code Section 36933.

The City Clerk of the City of Ontario shall certify as to the adoption of this Ordinance.

RESOLUTION NO. _____

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF ONTARIO, CALIFORNIA, AUTHORIZING THE EXECUTION AND DELIVERY OF AN ACQUISITION AND FUNDING AGREEMENT WITH KB HOME CAL MANAGEMENT SERVICES LLC.

WHEREAS, certain real property within the boundaries of the City of Ontario (the "City") located generally south of State Route 60 is commonly referred to as Ontario Ranch; and

WHEREAS, the City has approved a General Plan Amendment for the New Model Colony (the name by which Ontario Ranch was formerly known), which has been supplemented by certain water, recycled water and sewer master plans (as so supplemented, the "General Plan Amendment") and has certified an Environmental Impact Report and adopted a Mitigated Negative Declaration in connection with the General Plan Amendment (together, the "Environmental Impact Report"); and

WHEREAS, the City has specified in the General Plan Amendment and the Environmental Impact Report the major backbone transportation, water, sewer, storm drainage, parks, public safety infrastructure and fiber optic systems required to serve Ontario Ranch; and

WHEREAS, KB HOME Cal Management Services LLC ("KB HOME"), is developing certain of the property within Ontario Ranch (the "Property"); and

WHEREAS, certain of such major backbone infrastructure is required to serve the Property; and

WHEREAS, in order to provide a mechanism to fund, in a timely manner, the costs of certain of such major backbone infrastructure required to serve Ontario Ranch (the "Facilities") so that such development may occur, the City has, pursuant to the provisions of the Mello-Roos Community Facilities Act of 1982 (the "Act"), established City of Ontario Community Facilities District No. 76 (Compass Pointe) (the "Community Facilities District"), the boundaries of which include the Property; and

WHEREAS, pursuant to the Act, the proceedings of the City Council of the City and an election held within the Community Facilities District, the Community Facilities District is authorized to levy a special tax (the "Special Tax") within the Community Facilities District and issue special tax bonds (the "Bonds") secured by the Special Tax in order to finance certain of the Facilities; and

WHEREAS, it is anticipated that the Special Tax will be levied by the Community Facilities District and that, from time to time, Bonds will be issued by the Community Facilities District; and

WHEREAS, KB HOME proposes to construct, or cause to be constructed, certain of the Facilities proposed to be financed by the Community Facilities District pursuant to the Act, and the City proposes to purchase such Facilities from KB HOME pursuant to an Acquisition and Funding Agreement by and between the City and KB HOME (such Acquisition and Funding Agreement, in the form presented to this meeting, with such changes, insertions and omissions as are made pursuant to this Resolution, being referred to herein as the "Acquisition Agreement"); and

WHEREAS, the City Council is the legislative body of the Community Facilities District.

NOW, THEREFORE, BE IT RESOLVED by the City Council of the City of Ontario as follows:

SECTION 1. The Acquisition Agreement, in substantially the form submitted to this meeting and made a part hereof as though set forth herein, be and the same is hereby approved. Each of the Mayor of the City, and such other member of the City Council as the Mayor may designate, the City Manager of the City and the Executive Director of Finance of the City, and such other officer or employee of the City as the City Manager may designate (the "Authorized Officers") is hereby authorized, and any one of the Authorized Officers is hereby directed, for and in the name of the City, to execute and deliver the Acquisition Agreement in the form submitted to this meeting, with such changes, insertions and omissions as the Authorized Officer executing the same may require or approve, such requirement or approval to be conclusively evidenced by the execution of the Acquisition Agreement by such Authorized Officer.

SECTION 2. All actions heretofore taken by the officers, employees and agents of the City with respect to the Acquisition Agreement, or in connection with or related to any of the matters referred to herein, are hereby approved, confirmed and ratified.

SECTION 3. The officers, employees and agents of the City are hereby authorized and directed to take all actions and do all things that they, or any of them, may deem necessary or desirable to accomplish the purposes of this Resolution and not inconsistent with the provisions hereof.

SECTION 4. This Resolution shall take effect immediately upon its adoption.

The City Clerk of the City of Ontario shall certify as to the adoption of this Resolution.

PASSED, APPROVED, AND ADOPTED this 4th day of November 2025.

RESOLUTION NO. _____

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF ONTARIO, CALIFORNIA, MAKING A DECLARATION OF OFFICIAL INTENT TO REIMBURSE EXPENDITURES FOR COSTS OF FACILITIES WITH BOND PROCEEDS AND RELATED ACTIONS.

WHEREAS, the City Council (the "City Council") of the City of Ontario (the "City") has formed City of Ontario Community Facilities District No. 76 (Compass Pointe) (the "Community Facilities District") under the provisions of the Mello-Roos Community Facilities Act of 1982 (the "Act"); and

WHEREAS, the Community Facilities District is authorized under the Act to levy a special tax (the "Special Tax") to pay for the costs of certain public facilities (the "Facilities") and to issue bonds payable from the Special Tax; and

WHEREAS, in order to provide funds to finance certain of the Facilities, the Community Facilities District proposes to issue its City of Ontario Community Facilities District No. 76 (Compass Pointe) Special Tax Bonds (the "Bonds"); and

WHEREAS, pursuant to the Act (a) the Community Facilities District is a legally constituted governmental entity established pursuant to the Act for the sole purpose of financing facilities and services, and (b) the City Council is the legislative body of the Community Facilities District; and

WHEREAS, the Community Facilities District and the City are related entities; and

WHEREAS, beginning on the 60-day period prior to the date hereof, the City has paid or incurred, or expects to pay or incur prior to the issuance of the Bonds, certain costs of the Facilities; and

WHEREAS, the City has also paid or incurred certain "preliminary expenditures" with respect to the Facilities and may pay or incur certain additional "preliminary expenditures" with respect to the Facilities; the term "preliminary expenditures" includes architectural, engineering, surveying, soil testing, bond issuance, and similar costs that are incurred prior to commencement of acquisition, construction, or rehabilitation of a project, other than land acquisition, site preparation, and similar costs incident to commencement of construction and such preliminary expenditures constitute costs of the Facilities; and

WHEREAS, in order to reimburse the City for the payment of costs of the Facilities, the Community Facilities District anticipates it will issue Bonds in an amount not expected to exceed $60,000,000 for the purpose of financing costs of the Facilities; and

WHEREAS, proceeds of the Bonds will be allocated to reimbursement of prior expenditures no later than 18 months after the later of (a) the date the cost is paid, or (b) the date the Facilities are, or each component thereof is, placed in service or abandoned (but in no event more than three years after the cost is paid); and

WHEREAS, Section 1.150-2 of the Treasury Regulations requires the Community Facilities District to declare its reasonable official intent to reimburse prior expenditures for costs of the Facilities with proceeds of indebtedness; and

WHEREAS, the Community Facilities District desires to declare its official intent to use proceeds of indebtedness, including the Bonds, to reimburse expenditures for costs of the Facilities paid before such indebtedness is incurred and to finance the costs of the Facilities on a long-term basis with the proceeds of such indebtedness;

NOW, THEREFORE, BE IT RESOLVED by the City Council of the City of Ontario as follows:

SECTION 1. The foregoing recitals are true and correct, and the City Council so finds and determines.

SECTION 2. This Resolution is adopted by the City Council, as the legislative body of the Community Facilities District, solely for purposes of establishing compliance with the requirements of Section 1.150-2 of the Treasury Regulations. Capitalized undefined terms used herein shall have the meanings ascribed thereto in the Internal Revenue Code of 1986 and in Section 1.150-2 of the Treasury Regulations. This Resolution does not bind the Community Facilities District or the City to make any expenditure, incur any indebtedness, or proceed with construction of the Facilities.

SECTION 3. All actions heretofore taken by the officers, employees and agents of the City with respect to the actions set forth above are hereby approved, confirmed and ratified.

SECTION 4. The officers, employees and agents of the City are, and each of them is, hereby authorized and directed, for and in the name of the Community Facilities District to take all actions and do any and all things and to execute and deliver any and all agreements, documents, certificates or instruments that they, or any of them, may deem necessary or advisable in order to consummate the transactions contemplated by this Resolution and otherwise to carry out, give effect to and comply with the terms and intent of this Resolution not inconsistent with the provisions hereof.

SECTION 5. This Resolution shall take effect immediately upon its adoption.

The City Clerk of the City of Ontario shall certify as to the adoption of this Resolution.

PASSED, APPROVED, AND ADOPTED this 4th day of November 2025.

ACQUISITION AND FUNDING AGREEMENT

THIS ACQUISITION AND FUNDING AGREEMENT (this "Acquisition Agreement"), dated as of November 1, 2025, is by and between the CITY OF ONTARIO, a general law city organized and existing under the laws of the State of California (the "City"), and KB HOME CAL MANAGEMENT SERVICES LLC, a limited liability company organized and existing under the laws of the State of Delaware (the "Developer").

W I T N E S S E T H:

WHEREAS, certain real property within the boundaries of the City located generally south of State Route 60 is commonly referred to as Ontario Ranch;

WHEREAS, such real property was previously known as the New Model Colony;

WHEREAS, the City has approved a General Plan Amendment for the New Model Colony, which has been supplemented by certain water, recycled water and sewer master plans (as so supplemented, the "General Plan Amendment") and has certified an Environmental Impact Report and adopted a Mitigated Negative Declaration in connection with the General Plan Amendment (together, the "Environmental Impact Report");

WHEREAS, the City has specified in the General Plan Amendment and the Environmental Impact Report the major backbone transportation, water, sewer, storm drainage, parks, public safety infrastructure and fiber optic systems required to serve Ontario Ranch;

WHEREAS, the Developer is developing certain of the property within Ontario Ranch (the "Property");

WHEREAS, certain of such major backbone infrastructure is required to serve the Property;

WHEREAS, in order to provide a mechanism to fund, in a timely manner, the costs of certain of such major backbone infrastructure required to serve Ontario Ranch (the "Facilities") so that such development may occur;

WHEREAS, in order to provide such a mechanism, the City has, pursuant to the provisions of the Mello-Roos Community Facilities Act of 1982 (the "Act"), established City of Ontario Community Facilities District No. 76 (Compass Pointe) (the "Community Facilities District"), the boundaries of which include the Property;

WHEREAS, pursuant to the Act, the proceedings of the City Council of the City and an election held within the Community Facilities District, the Community Facilities District is authorized to levy a special tax (the "Special Tax") within the Community Facilities District and issue special tax bonds (the "Bonds") secured by the Special Tax in order to finance certain of the Facilities;

WHEREAS, it is anticipated that the Special Tax will be levied by the Community Facilities District and that, from time to time, Bonds will be issued by the Community Facilities District;

WHEREAS, it is anticipated that, in accordance with the terms set forth in this Acquisition Agreement, the Developer will construct or cause to be constructed certain of the Facilities, that, upon satisfaction of the conditions specified herein, the City will acquire such Facilities and take title thereto and that the Developer will be paid the purchase price thereof, determined as set forth herein, from certain proceeds of the Special Tax, if any, and certain proceeds of the Bonds;

WHEREAS, Section 53313.5 of the Act provides that a community facilities district may only finance the purchase of facilities whose construction has been completed, as determined by the legislative body, before the resolution of formation to establish the community facilities district is adopted pursuant to Section 53325.1 of the Act, except that a community facilities district may finance the purchase of facilities completed after the adoption of the resolution of formation if the facility was constructed as if it had been constructed under the direction and supervision, or under the authority of, the local agency; and

WHEREAS, the Facilities are to be acquired by the City pursuant to this Acquisition Agreement pursuant to the Act and, specifically, pursuant to the provisions of Sections 53313.5 thereof;

NOW, THEREFORE, for and in consideration of the mutual promises and covenants contained herein, the parties hereto agree as follows:

ARTICLE I

DEFINITIONS

Section 1.1. Definitions. Unless the context otherwise requires (a) the terms defined in this Section shall, for all purposes of this Acquisition Agreement, have the meanings herein ascribed thereto, and (b) capitalized undefined terms used herein that are defined in the Indenture shall have the respective meanings ascribed thereto in the Indenture.

"Acceptable Title" means title to land, or an easement therein, delivered free and clear of all liens, taxes, assessments, leases, easements and encumbrances, whether any such item is recorded or unrecorded, except those non-monetary items that are reasonably determined by the City not to interfere with the intended use of such land or easement and therefore are not required to be cleared from title.

"Acceptance Date" means (a) with respect to a Segment, the date on which such Segment is accepted by the City pursuant to Section 2.2(e) hereof, and (b) with respect to a Component, the date on which the last Segment that is part of such Component is accepted by the City pursuant to Section 2.2(e) hereof.

"Acquisition Agreement" means this Acquisition and Funding Agreement, dated as of November 1, 2025, by and between the City and the Developer, as originally executed or as the same may be amended, supplemented or otherwise modified from time to time in accordance with its terms.

"Act" means the Mello-Roos Community Facilities Act of 1982, constituting Section 53311 *et seq.* of the California Government Code.

"Actual Cost" means, with respect to a Segment, as the description thereof is reflected in the then current Plans therefor, an amount equal to the sum of (a) the Developer's actual, reasonable cost of constructing such Segment (including grading for such construction), including labor, material and equipment costs and professional services directly related to materials testing, (b) the Developer's actual, reasonable cost of designing and preparing the Plans for such Segment, including engineering services provided in connection with designing and preparing such Plans, (c) the Developer's actual, reasonable cost of any performance and maintenance bonds and insurance, including title insurance, required hereby for such Segment, (d) the Developer's actual, reasonable cost of any real property or interest therein, other than any such real property or interest therein to be conveyed with a Circulation System Segment, which real property or interest therein is either necessary for the construction of such Segment (*e.g.*, temporary construction easements, haul roads, etc.) or is required to be conveyed with such Segment in order to convey Acceptable Title thereto to the City or its designee, (e) the Developer's actual, reasonable cost of environmental evaluations required in the City's reasonable determination specifically for such Segment, (f) the amount of any fees actually paid by the Developer to governmental agencies in order to obtain permits, licenses or other necessary governmental approvals and reviews for such Segment, including City plan check, processing and inspection fees for such Segment, (g) the Developer's actual, reasonable cost for construction management services for such Segment, which cost shall not exceed 5% of the cost

of constructing such Segment, as determined pursuant to clause (a) of this definition, and (h) the Developer's actual, reasonable cost for professional services directly related to the construction of such Segment, including engineering, inspection, construction staking and similar professional services, all as specified in a Payment Request that has been reviewed and approved by the City Engineer; provided, however, that (i) no item of cost relating to a Segment shall be included in more than one category of cost specified in clauses (a) through (h) of this definition, (ii) except with respect to items of cost for construction management services specified in clause (g) that are provided by the Developer or an Affiliate thereof rather than a third party, each item of cost shall include only amounts actually paid by the Developer to third parties, other than Affiliates of the Developer, and shall not include overhead or other internal expenses of the Developer, and (iii) the aggregate cost of items specified in clauses (e) through (h) shall not exceed 30% of the cost of constructing such Segment, as determined pursuant to clause (a) of this definition.

"Affiliate" of another Person means (a) each Person that, directly or indirectly, owns or controls, whether beneficially or as trustee, guardian, or other fiduciary, 50% or more of any class of equity securities of such other Person, and (b) each Person that controls, is controlled by or is under common control with or by such Person or any Affiliate of such Person. For the purpose of this definition, "control" of a Person shall mean the possession, directly or indirectly, of the power to direct or cause the direction of its management or policies, whether through the ownership of voting securities, by contract or otherwise.

"Bonds" means bonds, notes or other obligations of the Community Facilities District payable from the Special Tax and issued under the Indenture.

"Circulation System Segments" means Segment Nos. ST-1 through ST-8 inclusive.

"City" means the City of Ontario, a general law city organized and existing under the laws of the State, and its successors.

"City Council" means the City Council of the City.

"City Engineer" means the City Engineer of the City.

"City Event of Default" means any event or circumstance specified in Section 5.3 hereof.

"Community Facilities District" means City of Ontario Community Facilities District No. 76 (Compass Pointe), a community facilities district organized and existing under the laws of the State, and its successors.

"Complete" means, with respect to a Segment, that the construction of such Segment (including all ancillary, non-essential items included in such Segment) by the Developer is, in the reasonable judgment of the City Engineer, in all respects complete.

"Components" means the related groups of Segments identified as such and described in Exhibit A hereto; each Component is comprised of the Segments listed thereunder in Exhibit A.

"Conditions of Approval" means, with respect to any portion of the Property, the conditions of approval of all land use entitlements approved by the City for such portion of the Property and the conditions of any Development Agreement, subdivision improvement agreement or other agreement between the Developer and the City relating to such portion of the Property, which conditions the Developer must satisfy or cause to be satisfied in order to develop such portion of the Property.

"Construction Agreement" means the First Amended and Restated Agreement for Financing and Construction of Limited Infrastructure Improvements to Serve an Easterly Portion of the New Model Colony, made as of August 21, 2012, by and between the City and NMC Builders, as originally executed and as it may be amended, supplemented or otherwise modified from time to time in accordance with its terms.

"Developer" means KB HOME Cal Management Services LLC, a limited liability company organized and existing under the laws of the State of Delaware, and its successors and assigns.

"Developer Acquisition Account" means (a) prior to the initial issuance of Bonds, the fund or account established for the Community Facilities District by the City, howsoever denominated, into which the Net Proceeds of the Special Tax are to be deposited, and (b) from and after the initial issuance of Bonds, the account by that name within the Improvement Fund established and held by the Trustee pursuant to the Indenture, into which the Net Proceeds of Bonds available to pay the Purchase Prices of the Segments purchased by the City pursuant hereto are to be deposited.

"Developer Event of Default" means any event or circumstance specified in Section 5.1 hereof.

"Developer Representative" means the person or persons designated as such in a certificate signed by the Developer and delivered to the City, which certificate shall contain an original or specimen signature of each person so designated.

"Development Agreement" means a statutory development agreement between the City and the Developer, entered into pursuant to California Government Code Section 65864 *et seq.*, relating to the development of a portion of the Property.

"DIF Program Costs" has the meaning ascribed thereto in the definition of "Program Costs" or "DIF Program Costs" in the Construction Agreement.

"Effective Date" means November 4, 2025.

"Facilities" means the facilities described in Exhibit A hereto.

"General Prevailing Wage Rates" means those rates as determined by the Director of the Department of Industrial Relations of the State of California.

"Hazardous Material" means any hazardous or toxic substance, material or waste that is regulated by any local governmental authority, the State or the United States Government,

including any material or substance that is (a) designated as a "hazardous substance" pursuant to Section 311 of the Federal Water Pollution Control Act, 33 U.S.C. § 1251 *et seq.* (33 U.S.C. § 1321), (b) defined as a "hazardous waste" pursuant to Section 1004 of the Federal Resource Conservation and Recovery Act, 42 U.S.C. § 6901 *et seq.* (42 U.S.C. § 6903), (c) defined as a "hazardous substance" pursuant to Section 101 of the Comprehensive Environmental Response, Compensation and Liability Act of 1980, as amended, 42 U.S.C. § 9601 *et seq.*, (d) petroleum, or (e) asbestos.

"Improvement Fund" means the fund or account established under the Indenture, howsoever denominated, into the accounts established within which the Net Proceeds of Bonds are to be deposited.

"Indenture" means the indenture, trust agreement, fiscal agent agreement or similar instrument, howsoever denominated, pursuant to which Bonds of the Community Facilities District are issued, as originally executed and as it may be amended, supplemented or otherwise modified from time to time in accordance with its terms.

"Member" means a member of NMC Builders.

"Memorandum of Agreement" means the Amended and Restated Memorandum of Agreement, dated as of November 1, 2022, by and between the City and NMC Builders, as originally executed and as it may be amended, supplemented or otherwise modified from time to time in accordance with its terms.

"Net Proceeds" means (a) the proceeds, if any, of the Special Tax received prior to the initial issuance of Bonds and remaining after the payment or setting aside of, or provision for, administrative expenses of the Community Facilities District, and (b) the proceeds of Bonds remaining after the payment or setting aside of, or provision for (i) the underwriter's discount for such Bonds, (ii) the costs of issuance of such Bonds, including the costs of formation of the Community Facilities District, (iii) any required reserve fund deposit for such Bonds, (iv) capitalized interest on such Bonds, and (v) pre-funded administrative expenses of the Community Facilities District.

"NMC Acquisition Account" means the account by that name within the Improvement Fund established and held by the Trustee pursuant to the Indenture.

"NMC Builders" means NMC Builders, LLC, a limited liability company organized and existing under the laws of the State of California, and its successors and assigns.

"Payment Request" means the document to be provided by the Developer to substantiate the Purchase Price of one or more Segments, which shall be substantially in the form of Exhibit B attached hereto.

"Person" means an individual, a corporation, a partnership, an association, a limited liability company, a joint stock company, a trust, any unincorporated organization or a government or political subdivision thereof.

"Plans" means the plans and specifications for the Facilities prepared or to be prepared by or on behalf of the Developer pursuant to Section 3.1 hereof.

"Property" means the real property located within the boundaries of the Community Facilities District.

"Purchase Price" means, with respect to a Segment, subject to the provisions of Section 2.3 hereof, the Actual Cost of such Segment.

"Rate and Method" means the rate and method of apportionment of the Special Tax approved by the qualified electors of the Community Facilities District.

"Related Property" means, with respect to a Segment, the property on, in or over which such Segment is located, which property, or an easement thereon or other interest therein, is dedicated or otherwise conveyed to the City as provided in Section 2.2(d) hereof.

"Segments" means the discrete portions of the Components identified as such and described in Exhibit A hereto as Segments; provided, however, that each such Segment described therein shall constitute a Segment for purposes of this Acquisition Agreement only if such Segment was constructed by or on behalf of the Developer singly and not jointly or in conjunction with another Member or NMC Builders.

"Special Tax" means the special tax approved by the qualified electors of the Community Facilities District to be levied therein.

"State" means the State of California.

"Substantially Complete" means, with respect to a Circulation System Segment, that the construction of such Circulation System Segment by the Developer has, in the reasonable judgment of the City Engineer, reached a stage of completion sufficient to allow such Circulation System Segment to be utilized for the purpose for which it is intended and that only the construction of ancillary, non-essential items remains incomplete; provided, however, that a Circulation System Segment shall not be deemed to be Substantially Complete if, in the reasonable judgment of the City Engineer, the cost to complete the construction of such ancillary, non-essential items would exceed 15% of the Purchase Price of such Circulation System Segment.

"Trustee" means the commercial bank or trust company initially designated as trustee under the Indenture, and any successor thereto thereunder substituted in its place as provided therein.

Section 1.2. Rules of Construction. (a) The terms defined herein expressed in the singular shall, unless the context otherwise indicates, include the plural and vice versa.

(b) The use herein of the masculine, feminine or neuter gender is for convenience only and shall be deemed and construed to include correlative words of the masculine, feminine or neuter gender, as appropriate.

(c) References herein to a document shall include all amendments, supplements or other modifications to such document, and any replacements, substitutions or novation of, that document.

(d) Any term defined herein by reference to another document shall continue to have the meaning ascribed thereto whether or not such other document remains in effect.

(e) The use herein of the words "including" and "includes," and words of similar import, shall be deemed to be followed by the phrase "without limitation."

(f) Headings of Articles and Sections herein and the table of contents hereof are solely for convenience of reference, do not constitute a part hereof and shall not affect the meaning, construction or effect hereof.

(g) All references herein to designated "Articles," "Sections," "Exhibits," "subsections," "paragraphs," "clauses," and other subdivisions are to the designated Articles, Sections, Exhibits, subsections, paragraphs, clauses, and other subdivisions of this Acquisition Agreement.

(h) The words "hereof" (except when preceded by a specific Section or Article reference) "herein," "hereby," "hereunder," "hereinabove," "hereinafter," and other equivalent words and phrases used herein refer to this Acquisition Agreement and not solely to the particular portion hereof in which any such word is used.

(i) Any reference to a Person, or a Person in a specified capacity, shall be construed to include such Person's successors or such Person's successors in such capacity, as the case may be.

ARTICLE II

ACQUISITION OF FACILITIES

Section 2.1. Acquisition of Facilities; Limited Source of Payments. (a) Subject to the terms and conditions hereof, the Developer hereby agrees to sell to the City, and the City hereby agrees to purchase from the Developer, each Segment for the Purchase Price thereof.

(b) The Purchase Prices of Segments are to be paid from Net Proceeds of the Special Tax, if any, and Net Proceeds of Bonds deposited in the Developer Acquisition Account. Notwithstanding anything to the contrary contained herein, the City shall not be obligated to pay the Purchase Price of any Segment except from the Net Proceeds of the Special Tax and the Net Proceeds of the Bonds so deposited in the Developer Acquisition Account. The City makes no warranty, either express or implied, that the Community Facilities District will be able to issue and sell any Bonds or that the Net Proceeds of the Special Tax and the Net Proceeds of the Bonds so deposited in the Developer Acquisition Account and available for the payment of the Purchase Price of the Segments will be sufficient for such purpose.

(c) The Net Proceeds of the Special Tax and the Net Proceeds of the Bonds shall be applied to the uses in the priorities set forth in the Memorandum of Agreement. If amounts remain in the Developer Acquisition Account after the Purchase Price of each of the Segments has been paid, such remaining amounts shall be applied in accordance with the priorities set forth in the Memorandum of Agreement.

Section 2.2. Segment Review; Payment Requests. (a) When the Developer has concluded that the construction of a Segment by the Developer is in all respects complete, the Developer shall deliver to the City Engineer (i) a Payment Request for such Segment, together with all attachments and exhibits to be included therewith, (ii) a copy of the documents conveying, or that previously conveyed, to the City Acceptable Title to the Related Property of such Segment, as described in subsection (d) of this Section, and (iii) a copy of the Notice of Completion of such Segment that will be filed in accordance with Section 3093 of the California Civil Code, if applicable; provided, however, that, if, during the process of designing a Segment, obtaining bids for construction of a Segment or during construction of a Segment, the Developer determines that, because of changed conditions or circumstances, the actual cost of constructing such Segment may materially exceed the Developer's originally estimated cost thereof, the Developer shall, in order to facilitate and expedite the City Engineer's review and verification with respect to such Segment pursuant to subsection (b) of this Section, as soon as practicable, deliver to the City Engineer a written statement describing (i) such changed conditions or circumstances, (ii) the Developer's original estimated cost of constructing such Segment, (iii) the anticipated effect of such changed conditions or circumstances on the Actual Cost of such Segment, and (iv) an explanation as to why including the increased cost resulting from such changed conditions or circumstances would result in the Actual Cost of such Segment being no greater than the actual, reasonable cost thereof, determined in accordance with the provisions of the definition of Actual Cost set forth herein.

(b) Upon receipt of a completed Payment Request (and accompanying documentation) for a Segment, the City Engineer shall conduct a review in order to confirm that

such Segment is Complete and was constructed in accordance with the Plans therefor and to verify and approve the Actual Cost of such Segment specified in such Payment Request. As a reference in determining the reasonable cost of constructing such Segment, the City Engineer may use the most recently updated DIF Program Costs of such Segment, which reflect the City Engineer's determination, as of the date of such update, of the reasonable cost of constructing such Segment, recognizing that, depending on the date of such most recent update, such DIF Program Costs may not reflect the reasonable cost of constructing such Segment at the time it was constructed. The Developer agrees to cooperate with the City Engineer in conducting each such review and to provide the City Engineer with such additional information and documentation as is reasonably necessary for the City Engineer to conclude each such review. The City agrees to cause the City Engineer to conduct such review without unreasonable delay. If the City Engineer determines that the Actual Cost specified in such Payment Request as initially submitted exceeds the Developer's actual, reasonable cost of constructing such Segment, the Developer shall resubmit such Payment Request, with the Actual Cost specified therein modified so as to take into account such determination by the City Engineer. Upon confirmation that such Segment is Complete and has been constructed in accordance with the Plans therefor, and verification and approval of the Actual Cost of such Segment, the City Engineer shall sign the Payment Request, indicating thereon that such Segment is Complete and that the full amount of the Purchase Price of such Segment is eligible for payment, and forward the same to the City.

(c) With respect to a Circulation System Segment, if, as a result of the review described in subsection (b) of this Section, the City Engineer (i) determines that such Circulation System Segment, while not Complete, is Substantially Complete, (ii) confirms that such Circulation System Segment has been constructed in accordance with the Plans therefor, and (iii) verifies and approves the Actual Cost of such Circulation System Segment, the City Engineer shall sign the Payment Request, indicating thereon that such Circulation System Segment is Substantially Complete and that an amount equal to 85% of the Actual Cost of such Circulation System Segment is eligible for payment, and forward the same to the City.

When the Developer completes or causes to be completed all work with respect to such Circulation System Segment and concludes that such Circulation System Segment is Complete, the Developer shall deliver to the City Engineer (i) if as-built drawings or similar plans and specifications for such Circulation System Segment have not previously been submitted to the City Engineer, such drawings or plans and specifications, together with a certification of the Developer that such drawings or plans and specifications are true, correct and complete, and (ii) such information and documentation as is reasonably required by the City Engineer in order for the City Engineer to determine whether such Circulation System Segment is Complete. Upon receipt of such information and documentation, the City Engineer shall conduct a review in order to confirm that such Circulation System Segment is Complete. If, as a result of such review, the City Engineer determines that such Circulation System Segment is Complete, the City Engineer shall sign a copy of the original Payment Request therefor, indicating thereon that such Circulation System Segment is Complete and that the full amount of the Purchase Price of such Segment is eligible for payment, and forward the same to the City.

(d) Acceptable Title to all property on, in or over which each Segment will be located shall be conveyed to the City by way of grant deed, quitclaim, or dedication of such property, or easement thereon, if such easement is approved by the City as being a sufficient interest therein

to permit the City to properly own, operate and maintain such Segment located therein, thereon or thereover, and to permit the Developer to perform its obligations as set forth in this Acquisition Agreement.

Upon the request of the City, the Developer shall furnish to the City a title report for such property not previously dedicated or otherwise conveyed to the City or its designee, for review and approval at least 20 calendar days prior to the transfer of Acceptable Title to a Segment to the City or its designee. The City shall approve the title report unless it reveals a matter that, in the reasonable judgment of the City, could materially affect the City's or its designee's use and enjoyment of any part of the property or easement covered by the title report. In the event the City does not approve the title report, the City shall not be obligated to accept title to such Segment until such objections to title have been cured to the reasonable satisfaction of the City.

(e) Upon (i) the execution by the City Engineer of a Payment Request for a Segment indicating that such Segment is Complete, and (ii) the City's determination that Acceptable Title to the property on, in or over which each Segment is located has been or is being conveyed to the City, such Segment shall be accepted by the City. The Developer shall transfer to the City, by appropriate instrument in accordance with the Conditions of Approval, title to each Segment accepted by the City pursuant hereto; provided, however, that notwithstanding such transfer, as provided in Section 3.6 hereof, the Developer shall be responsible for the maintenance of such Segment until the Acceptance Date of the Component of which such Segment is a part.

Section 2.3. Payment of Purchase Price. (a) Upon receipt of a reviewed and fully signed Payment Request pursuant to Section 2.2(b) hereof indicating that a Segment is Complete and that the Purchase Price of such Segment is eligible for payment, the City shall, within five business days of the approval and confirmation thereof by the City Engineer, by written request, direct the Trustee to pay from the Developer Acquisition Account such Purchase Price. If the Payment Request for a Segment requests that the Purchase Price requested to be paid pursuant thereto be paid to the Person or Persons, in the amounts, set forth in the completed Purchase Price Payment Instructions attached thereto as Attachment B, the City shall direct the Trustee to pay from the Developer Acquisition Account such Purchase Price or portion thereof to such Person or Persons.

(b) Upon receipt of a reviewed and fully signed Payment Request pursuant to Section 2.2(c) hereof indicating that a Circulation System Segment is Substantially Complete and that an amount equal to 85% of the Purchase Price of such Circulation System Segment is eligible for payment, the City shall, within five business days of the approval and confirmation thereof by the City Engineer, by written request, direct the Trustee to pay from the Developer Acquisition Account 85% of the Purchase Price of such Circulation System Segment. If the Payment Request for a Circulation System Segment requests that the 85% of the Purchase Price of such Circulation System Segment requested to be paid pursuant thereto be paid to the Person or Persons, in the amounts, set forth in the completed Purchase Price Payment Instructions attached thereto as Attachment B, the City shall direct the Trustee to pay from the Developer Acquisition Account such 85% of such Purchase Price or portion thereof to such Person or Persons.

ARTICLE III

CONSTRUCTION OF FACILITIES

Section 3.1. Preparation and Approval of Plans and Specifications. The Developer shall cause Plans to be prepared for the Facilities to be acquired pursuant hereto in accordance with the Conditions of Approval. The Developer shall obtain the written approval of the Plans from all appropriate departments of the City or from any other public agency or public utility from which such approval must be obtained. The Developer shall provide copies of all such Plans to the City Engineer. The Plans for a Segment shall be updated from time to time to reflect changed conditions or circumstances with respect thereto, the Developer shall obtain the written approval of such updated Plans from all appropriate departments of the City and the Developer shall provide copies of all such updated Plans to the City Engineer.

Section 3.2. Duty of the Developer to Construct. The Developer shall construct or cause to be constructed the Segments in accordance with the Conditions of Approval and the approved Plans. The Developer shall perform all of its obligations hereunder and shall conduct or cause to be conducted all operations with respect to the construction of the Segments in a good, workmanlike and commercially reasonable manner, with the standard of diligence and care normally employed by duly qualified Persons utilizing commercially reasonable efforts in the performance of comparable work and in accordance with generally accepted practices appropriate to the activities undertaken. Notwithstanding the foregoing, the Developer shall not be required to construct any Facilities or cause such Facilities to be constructed other than at the time required by, and in accordance with, the Conditions of Approval or to perform any work requiring a contractor's license, nor shall the Developer be deemed to be performing construction services pursuant to this Acquisition Agreement.

Section 3.3. Public Works Requirements. (a) In order to ensure that the Segments that are acquired by the City pursuant to this Acquisition Agreement are constructed as if they had been constructed under the direction and supervision, or under the authority of, the City, so that they may be acquired pursuant to California Government Code Section 53313.5, the Developer shall comply with or cause to be complied with all of the requirements of this Section for each Segment for which the Developer submits a Payment Request.

(b) Notice inviting sealed bids for the construction of each Segment shall be given as required for public works projects in conformance with the California Public Contracts Code.

(c) The contract for the construction of each Segment shall be awarded to the responsible bidder submitting the lowest responsive bid for the construction of such Segment.

(d) The Developer shall require, and the specifications and bid and contract documents shall require, all contractors, subcontractors, vendors, equipment operators and owner operators, in each such case to the extent such Persons are engaged to perform work on a Segment, to pay at least General Prevailing Wage Rates to all workers employed in the execution of the contract, to post a copy of the General Prevailing Wage Rates at the job-site in a conspicuous place available to all employees and applicants for employment, and to otherwise

comply with applicable provisions of the California Labor Code, the California Government Code and the California Public Contracts Code relating to public works projects of cities.

The Developer shall require, and the specifications and bid and contract documents shall require, for all contracts involving in excess of $30,000 or 20 working days, all contractors, subcontractors, vendors, equipment operators and owner operators, in each such case to the extent such Persons are engaged to perform work on a Segment, to comply with the provisions of Section 1777.5 of the California Labor Code with respect to all apprenticeable occupations upon the project.

(e) In performing its obligations under this Acquisition Agreement, the Developer shall comply with, or cause to be complied with, the applicable nondiscrimination and affirmative action provisions of the laws of the United States of America, the State and the City. In performing its obligations under this Acquisition Agreement, the Developer shall not discriminate in its employment practices against any employee, or applicant for employment, because of such person's race, religion, national origin, ancestry, sex, sexual orientation, age, physical handicap, marital status or medical condition. The Developer shall require that any contract for the construction of any Segment subject the contractor thereunder to the provisions of this subsection.

(f) The Developer shall require that each contractor, subcontractor, vendor, equipment operator and owner operator, in each such case to the extent such Person is engaged to perform work on a Segment, provide proof of insurance coverage satisfying the requirements of Section 3.7 hereof throughout the term of the construction of such Segment; provided, however, that, rather than requiring such contractors, subcontractors, vendors, equipment operators and owner operators to provide such insurance, the Developer may provide the same for the benefit of such contractors, subcontractors, vendors, equipment operators and owner operators.

(g) The Developer shall comply, and shall cause each contractor, subcontractor, vendor, equipment operator and owner operator, in each such case to the extent such Person is engaged to perform work on a Segment, to comply, with such other requirements relating to the construction of the Segments as the City may impose by written notification delivered to the Developer, to the extent legally required as a result of changes in applicable federal, State or City laws.

(h) The Developer shall require, and the specifications and bid and contract documents shall require, all contractors, subcontractors, vendors, equipment operators and owner operators, in each such case to the extent such Persons are engaged to perform work on a Segment, to submit certified weekly payroll records to the Developer for inspection by the City, and to furnish certified payroll records to the City promptly upon request.

The Developer shall provide proof to the City, at such intervals and in such form as the City may reasonably require, that the foregoing requirements have been satisfied as to all of the Segments for which a Payment Request is submitted pursuant hereto.

Section 3.4. Bonding Requirements. Prior to the commencement of construction of a Segment, the Developer shall secure, or shall cause each contractor, subcontractor, vendor, equipment operator and owner operator, in each such case to the extent such Person is engaged to perform work on such Segment to secure, appropriate bonds for the construction and completion of construction of such Segment, a faithful performance bond and a bond for the security of laborers and materialmen, each in an amount that is equal to 100% of the contract price for such Segment. If any such bonds for a Segment are provided by such a contractor, subcontractor, vendor, equipment operator or owner operator, the City shall be named as an additional insured on such bonds. Each issuer of any such bond shall be duly authorized to issue such bond in the State. Each such bond shall comply with the provisions of California Government Code Sections 66499.1 and 66499.2.

Section 3.5. Inspection; Completion of Construction. The City shall have primary responsibility for providing inspection of the work of construction of the Segments to ensure that the work of construction is accomplished in accordance with the Plans. The City's personnel shall have access to the site of the work of construction at all reasonable times for the purpose of accomplishing such inspection. Upon the completion of the construction of a Segment to the satisfaction of the City's inspectors, the Developer shall notify the City and the City Engineer in writing that the construction of such Segment has been completed in accordance with the Plans.

No later than ten days after receiving notification pursuant to Section 2.2(b) or Section 2.2(c) hereof that a Segment was constructed in accordance with the Plans therefor, the Developer shall forthwith file with the San Bernardino County Recorder a Notice of Completion, in form acceptable to the City Engineer, pursuant to the provisions of Section 3093 of the California Civil Code, if applicable. The Developer shall furnish to the City a duplicate copy of each such Notice of Completion showing thereon the date of filing with said County Recorder.

Section 3.6. Maintenance of Facilities; Warranties. The Developer shall maintain each Segment in good and safe condition until the Acceptance Date of the Component of which such Segment is a part. Prior to the Acceptance Date of the Component of which such Segment is a part, the Developer shall be responsible for maintaining such Segment in proper operating condition, and shall perform such maintenance on such Segment as the City Engineer reasonably determines to be necessary. As of the Acceptance Date of the Component of which a Segment is a part, the Developer shall assign to the City all of the Developer's rights in any warranties, guarantees, maintenance obligations or other evidence of contingent obligations of third Persons with respect to such Segment. The Developer shall warrant each Segment to be free from construction defects (and shall correct or cause to be corrected any such defects) for a period of one year from the Acceptance Date of the Component of which such Segment is a part, or alternatively, shall provide a bond reasonably acceptable in form and substance to the City and the Developer for such period and such purpose to ensure that such defects that appear within said period will be repaired, replaced or corrected by the Developer, at its own cost and expense, to the reasonable satisfaction of the City. The Developer shall continue to repair, replace or correct any such defects within 30 Days after written notice thereof by the City to the Developer, and shall complete such repairs, replacement or correction as soon as practicable.

Section 3.7. Insurance Requirements. The Developer shall, at all times prior to the final Acceptance Date of all Segments, maintain, deliver to the City and keep in full force and

effect, the following insurance policies or, pursuant to Section 3.3(f) hereof, cause each contractor, subcontractor, vendor, equipment operator and owner operator, in each such case to the extent such Person is engaged to perform work on a Segment, to so maintain, deliver and keep the same in full force and effect:

(a) a protective liability policy providing for not less than the following amounts:

Bodily Injury	$1,000,000 each person $2,000,000 each occurrence $1,000,000 each accident for products and completed operations
Property Damage	$1,000,000 each accident
Workers' Compensation	Statutory, with a waiver of subrogation in favor of the City

(b) Automobile Liability Insurance to include all owned, non-owned or non-hired vehicles, including loading and unloading thereof:

Automobile Bodily Injury	$1,000,000 each person $2,000,000 each occurrence
Automobile Property Damage	$1,000,000 each accident

Each liability insurance policy shall bear an endorsement or shall have attached a rider whereby it is provided that, in the event of expiration or proposed cancellation of such policy for any reason whatsoever, the City shall be notified by registered mail, return receipt requested, giving a sufficient time before the date thereof to comply with any applicable law or statute, but in no event less than 30 days before expiration or cancellation is effective.

The following statement shall be included on the insurance certificate:

Additional Insured: The insurer agrees that the City, its City Council, and/or all City Council appointed groups, committees, boards and any other City Council appointed body, and/or elective and appointive officers, servants, agents or employees of the City, when acting as such, are additional insureds hereunder, for the acts of the insured, and such insurance shall be primary to any insurance of the City.

The Developer may effect such coverage under blanket insurance policies; provided, however, that (a) such policies are written on a per occurrence basis, (b) such policies comply in all other respects with the provisions of this Section, and (c) the protection afforded the City under any such policy shall be no less than that which would be available under a separate policy relating only to the Segments. All policies of insurance shall be with companies licensed or approved by the California Commissioner of Insurance and rated A-VII or better in the most recent edition of Best's Insurance Guide and shall be issued and delivered in accordance with State law and regulations.

If the Developer fails to maintain or cause to be maintained any insurance required hereby, the City may, but shall not be obligated to, procure such insurance and recover the amount of the premiums therefor from the Developer or retain such amount from any monies due to the Developer under this Acquisition Agreement. The failure of the City to procure any such insurance shall in no way relieve the Developer of any of its obligations under this Acquisition Agreement.

Section 3.8. Ownership of Facilities. Notwithstanding the fact that some or all of the Facilities may be constructed in dedicated street rights-of-way or on property that has been or will be dedicated to the City, the Facilities shall be and remain the property of the Developer until title thereto is conveyed to and accepted by the City as provided herein and in the Conditions of Approval. Such ownership by the Developer shall likewise not be affected by any agreement that the Developer may have entered into or may enter into with the City pursuant to the provisions of the Subdivision Map Act, Section 66410 *et seq.* of the California Government Code, and the provisions of this Section and the Conditions of Approval shall control.

ARTICLE IV

REPRESENTATIONS, WARRANTIES AND COVENANTS; INDEMNIFICATION

Section 4.1. Representations and Warranties of the Developer. The Developer makes the following representations and warranties for the benefit of the City:

(a) *Organization.* The Developer represents and warrants that the Developer is a limited liability company duly organized, validly existing and in good standing under the laws of the State of Delaware, is authorized to conduct business and is in good standing under the laws of the State, and has the power and authority to own its properties and assets and to carry on its business as now being conducted and as now contemplated.

(b) *Authority*. The Developer represents and warrants that the Developer has the power and authority to enter into this Acquisition Agreement, and has taken all action necessary to cause this Acquisition Agreement to be executed and delivered, and this Acquisition Agreement has been duly and validly executed and delivered on behalf of the Developer.

(c) *Binding Obligation*. The Developer represents and warrants that this Acquisition Agreement is a valid and binding obligation of the Developer and is enforceable against the Developer in accordance with its terms, subject to bankruptcy, insolvency, reorganization or other similar laws affecting the enforcement of creditors' rights in general and by general equity principles.

(d) *Environmental Matters Relating to Segments*. The Developer represents and warrants that none of the Developer, any Affiliate of the Developer, or any subcontractor, agent or employee of the Developer or an Affiliate thereof, has used, generated, manufactured, procured, stored, released, discharged or disposed of (whether accidentally or intentionally) any Hazardous Material on, under or in any Segment or the Related Property of such Segment, or transported (whether accidentally or intentionally) any Hazardous Material to or from such Segment or such Related Property, in violation of any federal, state or local law, ordinance, regulation, rule or decision regulating Hazardous Material.

The Developer represents and warrants that, as of the Acceptance Date of each Segment, there will not be present on, under or in such Segment or the Related Property of such Segment, or any portion thereof, any Hazardous Materials, except for (i) any types or amounts that do not require remediation or mitigation under federal, state or local laws, ordinances, regulations, rules or decisions, (ii) those that have been remediated or mitigated in full compliance with applicable federal, state or local laws, ordinances, regulations, rules or decisions, or (iii) those with respect to which ongoing remediation or mitigation is being performed in full compliance with applicable federal, state or local laws, ordinances, regulations, rules or decisions.

The Developer represents and warrants that neither the Developer nor any Affiliate thereof has received notice of, and, to the best of the Developer's knowledge, there is not, any proceeding or formal inquiry by any governmental authority, body or agency with respect to the presence of Hazardous Materials on, under or in any Segment or the Related Property of such Segment, or any portion thereof, or any structure, fixtures, equipment or other objects thereon, or the migration thereof from or to other property.

Section 4.2. Covenants of the Developer. The Developer makes the following covenants for the benefit of the City:

(a) *Completion of Segments*. The Developer covenants that it will use its reasonable and diligent efforts to do all things that may be lawfully required of it in order to cause the Segments to be completed in accordance with this Acquisition Agreement and the Conditions of Approval.

(b) *Compliance with Laws*. The Developer covenants that, while any of the Facilities are owned by the Developer or required pursuant to this Acquisition Agreement to be maintained by the Developer, it will not commit, suffer or permit any of its agents, employees or contractors to commit any act to be done in, upon or to such Facilities in violation in any material respect of any law, ordinance, rule, regulation or order of any governmental authority or any covenant, condition or restriction now or hereafter affecting such Facilities or the Property on, in or over which such Facilities are located.

(c) *Payment Requests*. The Developer covenants that (i) it will not request payment pursuant to this Acquisition Agreement for the acquisition of any improvements that are not part of a Segment, and (ii) it will diligently follow all procedures set forth in this Acquisition Agreement with respect to Payment Requests.

(d) *Financial Records*. Until the Acceptance Date of the last Segment accepted by the City pursuant hereto, the Developer covenants to maintain proper books of record and account for the Facilities and all costs related thereto. The Developer covenants that such accounting books will be maintained in accordance with generally accepted accounting principles and will be available for inspection by the City within a reasonable time after the City submits a written request to the Developer requesting that such books be made available for inspection.

(e) *Environmental Matters Relating to Segments*. The Developer covenants that none of the Developer, any Affiliate of the Developer or any subcontractor, agent or employee thereof, will use, generate, manufacture, procure, store, release, discharge or dispose of (whether accidentally or intentionally) at any time on or prior to the Acceptance Date of each Segment any Hazardous Material on, under or in such Segment or the Related Property of such Segment, or transport (whether accidentally or intentionally) any Hazardous Material to or from such Segment or such Related Property, in violation of any federal, state or local law, ordinance, regulation, rule or decision regulating Hazardous Material in effect at the time of such use, generation, manufacturing, procurement, storage, release, discharge, disposal or transportation.

(f) *Permits*. The Developer covenants that it will obtain all governmental or other permits required to proceed with the construction of the Facilities, and that it will pay all fees relating thereto that are required to be paid, in accordance with the Conditions of Approval.

Section 4.3. Covenants of the City. The City makes the following covenants for the benefit of the Developer:

(a) *Completion of Segments*. The City covenants that it will use its reasonable and diligent efforts to take all actions that may be lawfully required of it in issuing permits, processing and approving Plans and inspecting the Segments in accordance with this Acquisition Agreement.

(b) *Payment Requests*. The City covenants that it will diligently follow all procedures set forth in this Acquisition Agreement with respect to Payment Requests.

(c) *Developer Acquisition Account*. The City covenants (i) that, if the Special Tax is to be levied and collected prior to the issuance of Bonds, the City will, at or prior to the first receipt of proceeds of the Special Tax, establish the Developer Acquisition Account, (ii) that the City will deposit the Net Proceeds received prior to the issuance of Bonds in the Developer Acquisition Account, and (iii) that upon the issuance of Bonds, the City will transfer or cause to be transferred any Net Proceeds remaining in the Developer Acquisition Account to the Trustee for deposit in the Developer Acquisition Account established under the Indenture.

(d) *Accounting*. The City covenants to provide the Developer, within 30 days following the Developer's written request, an accounting of the Developer Acquisition Account, showing the current balance therein and all deposits thereto and disbursements therefrom since the last such accounting. The Developer shall not make more than two such written requests in any calendar year.

Section 4.4. Indemnification. The Developer agrees to protect, indemnify, defend and hold the City and the Community Facilities District, and its respective officers, employees and agents (the "Indemnified Parties"), and each of them, harmless from and against any and all claims, losses, expenses, suits, actions, decrees, judgments, awards, attorney's fees and court costs that any Indemnified Party may suffer or that may be sought against or recovered or obtained from any Indemnified Party as a result of or by reason of or arising out of or in consequence of (a) the acquisition, construction, installation or financing of the Facilities, (b) the untruth or inaccuracy of any representation or warranty made by the Developer in this Acquisition Agreement or in any certifications delivered by the Developer pursuant hereto or in connection with the issuance of any Bonds, (c) the release, threatened release, storage, treatment, transportation or disposal (as such terms are defined in applicable law) of any Hazardous Materials on, under, in, from or to any portion of the Property while such portion of the Property is owned by the Developer or an Affiliate thereof, and (d) any act or omission of the Developer, any Affiliate of the Developer or any of their subcontractors, or their respective officers, employees or agents, in connection with the Facilities, including noncompliance with any covenants made by the Developer in this Acquisition Agreement. If the Developer fails to do so,

the Indemnified Party shall have the right, but not the obligation, to defend the same and charge all of the direct or incidental costs of such defense, including any fees or costs, to and recover the same from the Developer.

Upon receipt by an Indemnified Party of notice of any claim, loss, expense, suit, action, decree, judgment or award for which the Developer is obligated to protect, indemnify, defend and hold such Indemnified Party harmless pursuant to this Section, such Indemnified Party shall promptly notify the Developer in writing of such claim, loss, expense, suit, action, decree, judgment or award. Neither the Developer nor an Indemnified Party shall, without the other's written consent, settle, compromise or consent to the entry of judgment with respect to any claim, suit or action for which the Developer is obligated to protect, indemnify, defend and hold such Indemnified Party harmless pursuant to this Section.

No indemnification is required to be paid by the Developer for any claim, loss or expense (a) arising from the willful misconduct or negligence of an Indemnified Party, or (b) arising from the use or operation of a Segment after the Acceptance Date of the Component of which such Segment is a part, unless such claim, loss or expense results from the defective or improper design, construction or installation of such Segment.

The provisions of this Section shall survive the termination of this Acquisition Agreement.

ARTICLE V

EVENTS OF DEFAULT AND REMEDIES; FORCE MAJEURE

Section 5.1. Developer Events of Default. The following shall be Developer Events of Default:

(a) the Developer shall voluntarily file for reorganization or other relief under any Federal or state bankruptcy or insolvency law;

(b) the Developer shall have any involuntary bankruptcy or insolvency action filed against it, or shall suffer a trustee in bankruptcy or insolvency or receiver to take possession of the assets of the Developer, or shall suffer an attachment or levy of execution to be made against its property unless, in any of such cases, such action, possession, attachment or levy shall have been terminated or released within 60 days after the commencement thereof;

(c) except to the extent that the Developer's obligation to construct or cause to be constructed the Facilities is excused pursuant to Section 5.5 hereof, the Developer shall abandon construction of the Facilities that, as of the time of such abandonment, the Developer is required to construct or cause to be constructed in accordance with the Conditions of Approval (failure for a period of three consecutive months or failure for two periods of two consecutive months to undertake substantial work related to the construction of the Facilities shall constitute a non-exclusive example of such abandonment);

(d) the Developer shall breach any covenant or default in the performance of any obligation under this Acquisition Agreement and such breach or default shall have continued for a period of 60 days after written notice thereof, specifying such breach or default and requiring the same to be remedied, shall have been given to the Developer by the City; provided, however, that, if in the reasonable opinion of the City such breach or default can be corrected, but not within such 60 day period, such breach or default shall not constitute a Developer Event of Default if corrective action is instituted by the Developer within such 60 day period and the Developer thereafter diligently and in good faith cures such breach or default in a period of time reasonably determined by the City to be appropriate under the circumstances;

(e) any representation or warranty of the Developer set forth herein or in any certifications delivered by the Developer hereunder shall prove to have been false or misleading in any material respect when made or deemed made;

(f) the Developer shall transfer any of its rights or obligations under this Acquisition Agreement, without the prior written consent of the City, as provided in Section 6.3 hereof;

(g) the Developer shall have made any material misrepresentation or material omission in any written materials furnished in connection with any preliminary official

statement, official statement or bond purchase contract that has not been corrected and is used in connection with the sale of any Bonds;

(h) the Developer, any Affiliate thereof or any permitted assign or successor-in-interest under this Acquisition Agreement shall at any time bring any action, suit, proceeding, inquiry or investigation at law or in equity, before any court, regulatory agency, public board or body that in any way seeks to challenge or overturn the Community Facilities District, the levy of the Special Tax in accordance with the Rate and Method or the validity of the Bonds or the proceedings leading up to their issuance; provided, however, that the Developer, any Affiliate thereof or any permitted assign or successor-in-interest under this Acquisition Agreement that owns any of the Property may bring an action or suit contending that the Special Tax has not been levied in accordance with the methodology contained in the Rate and Method;

(i) the Developer shall materially fail to complete the Facilities as contemplated by this Acquisition Agreement and the Conditions of Approval and such failure shall have continued for a period of 60 days after written notice thereof, specifying such failure and requiring the same to be remedied, shall have been given to the Developer by the City; provided, however, that, if in the reasonable opinion of the City such failure can be corrected, but not within such 60 day period, such failure shall not constitute a Developer Event of Default if corrective action is instituted by the Developer within such 60 day period and the Developer thereafter diligently and in good faith cures such breach or default in a period of time reasonably determined by the City to be appropriate under the circumstances; or

(j) the Developer, any Affiliate thereof or any permitted assign or successor-in-interest under this Acquisition Agreement that owns any of the Property on which the Special Tax has been levied shall fail to pay such Special Tax as and when due and such failure shall have continued for a period of 60 days after written notice thereof, specifying such failure and requiring the same to be remedied, shall have been given to the Developer by the City.

Section 5.2. Remedies for Developer Events of Default. (a) If a Developer Event of Default described in subsection (a), (b) or (h) of Section 5.1 hereof occurs, this Acquisition Agreement shall automatically terminate.

(b) If a Developer Event of Default described in subsection (c), (d), (e), (f), (g), (i) or (j) of Section 5.1 hereof occurs and is continuing, the City may terminate this Acquisition Agreement by delivering a written notice of such termination to the Developer.

(c) If a Developer Event of Default occurs and is continuing, the City may pursue any other remedy at law or equity available with respect thereto.

(d) If this Acquisition Agreement is terminated pursuant to this Section, the City may, but shall not be obligated to, complete the acquisition, construction and installation of any Segment not theretofore acquired from the Developer pursuant hereto, and the City may use all or any portion of the monies in the Developer Acquisition Account to pay for such acquisition,

construction and installation. In the event of such termination, the Developer shall have no claim or right to any further payment of the Purchase Price of any Segment.

Section 5.3. City Events of Default. The following shall be City Events of Default:

(a) the City shall voluntarily file for reorganization or other relief under any Federal or state bankruptcy or insolvency law;

(b) the City shall have any involuntary bankruptcy or insolvency action filed against it, or shall suffer a trustee in bankruptcy or insolvency or receiver to take possession of the assets of the City, or shall suffer an attachment or levy of execution to be made against its property, in any of such cases, such action, possession, attachment or levy shall have been terminated or released within 60 days after the commencement thereof;

(c) the City shall breach any covenant or default in the performance of any obligation under this Acquisition Agreement and such breach or default shall have continued for a period of 60 days after written notice thereof, specifying such breach or default and requiring the same to be remedied, shall have been given to the City by the Developer; provided, however, that, if in the reasonable opinion of the Developer such breach or default can be corrected, but not within such 60 day period, such breach or default shall not constitute a City Event of Default if corrective action is instituted by the City within such 60 day period and the City thereafter diligently and in good faith cures such breach or default in a period of time reasonably determined by the Developer to be appropriate under the circumstances;

(d) any representation or warranty of the City set forth herein shall prove to have been false or misleading in any material respect when made; and

(e) the City shall transfer any of its respective rights or obligations under this Acquisition Agreement, without the prior written consent of the Developer, as provided in Section 6.3 hereof.

Section 5.4. Remedies for City Events of Default. (a) If a City Event of Default occurs and is continuing, the Developer may terminate this Acquisition Agreement by delivering a written notice of such termination to the City.

(b) If a City Event of Default occurs and is continuing, the Developer may pursue any other remedy at law or equity available with respect thereto; provided, however, that the City shall not be liable in damages to the Developer. In light of the foregoing, the Developer covenants not to sue for or claim any damages for any alleged breach of, or dispute that arises out of, this Acquisition Agreement.

(c) The Developer understands and acknowledges that the City would not have entered into this Acquisition Agreement if it were to be liable in damages under or with respect to this Acquisition Agreement. Any and all obligations of the City hereunder shall be payable only from amounts on deposit in the Developer Acquisition Account. The City shall have no

pecuniary liability under this Acquisition Agreement for any act or omission of the City, except as set forth in this Section.

Section 5.5. Force Majeure. (a) Except as may be specifically provided in this Acquisition Agreement, the performance by the City or the Developer of its respective obligations hereunder shall be excused during, and the period of time for performance of its respective obligations hereunder shall be extended for a period of time equal to, any period of delay caused by reason of (i) acts of God or civil commotion, (ii) riots, strikes, picketing or other labor disputes, (iii) shortages of materials or supplies, (iv) damage to work in progress by reason of fire, floods, earthquakes or other casualty, (v) enactment of laws that prevent or preclude compliance by the City or the Developer with a material provision of this Acquisition Agreement, (vi) administrative proceedings challenging the Community Facilities District, any Bonds, this Acquisition Agreement or a Payment Request brought by Persons other than the City or the Developer, or any Affiliate thereof, (vii) litigation, including the pendency thereof, brought by Persons other than the City or the Developer, or any Affiliate thereof, including litigation challenging the Community Facilities District, the development of the Property, any Bonds, this Acquisition Agreement or a Payment Request, (viii) pendency of initiatives or referenda affecting the Community Facilities District, the development of the Property, the Bonds, this Acquisition Agreement or a Payment Request, or (ix) any other cause beyond the reasonable control of the City or the Developer, respectively; provided, however that, as to any party (A) the financial inability of such party itself to perform under this Acquisition Agreement, and (B) the negligence or willful misconduct of such party shall not constitute a permitted delay for purposes of this Section and, provided, further, that any action, omission, or failure to approve a Payment Request, or the imposition of additional requirements or restrictions in connection therewith by the City, caused by the Developer's actual failure to comply with applicable laws or regulations or the provisions of this Acquisition Agreement (other than an actual failure to comply that results from the enactment of laws that prevent or preclude compliance by a party with a material provision of this Acquisition Agreement, administrative proceedings challenging the Community Facilities District, any Bonds, this Acquisition Agreement, a Payment Request, litigation brought by Persons other than a party hereto, or an Affiliate of a party hereto, including litigation challenging the Community Facilities District, the development of the Property, any Bonds, this Acquisition Agreement, a Payment Request, or initiative or referenda affecting the Community Facilities District, the development of the Property, any Bonds, this Acquisition Agreement, a Payment Request), shall not constitute a permitted delay for the Developer for purposes of this Section.

(b) If the City or the Developer shall claim that performance of its respective obligations hereunder is excused by a permitted delay pursuant to this Section, such party shall give the other party hereto written notice of the commencement of such permitted delay within 30 days after first gaining knowledge of such permitted delay.

(c) If the City or the Developer shall claim that performance of its respective obligations hereunder is excused by a permitted delay pursuant to this Section, such party's performance shall only be excused during, and the period of time for performance of its obligations hereunder shall only be extended for a period of time equal to, the period of time for which the cause of such permitted delay is in effect and is actually causing a delay in performance by such party of its obligations hereunder.

(d) The City and the Developer shall act diligently and in good faith to avoid foreseeable delays in performance and to remove the cause of any permitted delay under this Section or develop a reasonable alternative means of performance of its respective obligations hereunder.

ARTICLE VI

MISCELLANEOUS

Section 6.1. Developer as Independent Contractor. Each of the City and the Developer hereby acknowledges and agrees that the Developer, in performing its obligations under this Acquisition Agreement, is acting as an independent contractor and not as an agent of the City. The City shall not have any responsibility for payment to any contractor, subcontractor or supplier of the Developer.

Section 6.2. Other Agreements. Nothing contained herein shall be construed as affecting the City's or the Developer's respective duty to perform its respective obligations under other agreements, land use regulations or subdivision requirements relating to the development of the Property, which obligations are and shall remain independent of the Developer's rights and obligations, and the City's rights and obligations, under this Acquisition Agreement; provided, however, that the Developer shall use its reasonable and diligent efforts to perform each and every covenant to be performed by it under any lien or encumbrance, instrument, declaration, covenant, condition, restriction, license, order or other agreement, the nonperformance of which could reasonably be expected to materially and adversely affect the acquisition, construction and installation of the Segments.

Section 6.3. Binding on Successors and Assigns. Neither this Acquisition Agreement nor the duties and obligations of the Developer hereunder may be assigned to any Person without the written consent of the City, which consent shall not be unreasonably withheld, conditioned or delayed. Neither this Acquisition Agreement nor the duties and obligations of the City hereunder may be assigned to any Person, without the written consent of the Developer, which consent shall not be unreasonably withheld, conditioned or delayed. The agreements and covenants included herein shall be binding on and inure to the benefit of any partners, permitted assigns, and successors-in-interest of the parties hereto.

Section 6.4. Amendments. This Acquisition Agreement may be amended, supplemented or otherwise modified only by an instrument in writing executed and delivered by the City and the Developer.

Section 6.5. Waivers. No waiver of, or consent with respect to, any provision of this Acquisition Agreement by a party hereto shall in any event be effective unless the same shall be in writing and signed by such party, and then such waiver or consent shall be effective only in the specific instance and for the specific purpose for which it was given.

Section 6.6. Third-Party Beneficiaries. The Community Facilities District shall be a third-party beneficiary hereof. No other Person shall be deemed to be a third-party beneficiary hereof, and nothing in this Acquisition Agreement, either express or implied, is intended to confer upon any Person, other than the City, the Developer and the Community Facilities District and their respective successors and assigns, any rights, remedies, obligations or liabilities under or by reason of this Acquisition Agreement.

Section 6.7. Notices. Any written notice, statement, demand, consent, approval, authorization, offer, designation, request or other communication to be given hereunder shall be given to the party entitled thereto at its address set forth below, or at such other address as such party may provide to the other party in writing from time to time, namely:

City:	City of Ontario 303 East "B" Street Ontario, California 91764 Attention: Executive Director of Finance
Developer:	KB HOME Cal Management Services LLC 36310 Inland Valley Drive, Suite 300 Wildomar, California 92595 Attention: Scott Hansen, Vice President, Forward Planning

Each such notice, statement, demand, consent, approval, authorization, offer, designation, request or other communication hereunder shall be deemed delivered to the party to whom it is addressed (a) if given by courier or delivery service or if personally served or delivered, upon delivery, (b) if given by registered or certified mail, return receipt requested, deposited with the United States mail postage prepaid, 72 hours after such notice is deposited with the United States mail, (c) if given by electronic mail, on the date sent, but only if confirmation of the receipt of such electronic mail is received or if notice is concurrently sent by another means specified herein, and (d) if given by any other means, upon delivery at the address specified in this Section.

Section 6.8. Attorneys' Fees. If any action is instituted to interpret or enforce any of the provisions of this Acquisition Agreement, the party prevailing in such action shall be entitled to recover from the other party thereto reasonable attorney's fees and costs of such suit (including both prejudgment and postjudgment fees and costs) as determined by the court as part of the judgment.

Section 6.9. Severability. If any term or provision of this Acquisition Agreement, or the application of the term or provision to any Person or circumstance is, to any extent, held to be invalid or unenforceable in any jurisdiction, but the extent of such invalidity or unenforceability does not destroy the basis of the bargain between the parties as contained herein, the remainder of this Acquisition Agreement, or the application of the term or provision to Persons or circumstances other than those as to which the term or provision is held invalid or unenforceable, shall not be affected by such invalidity or unenforceability, and each remaining term or provision of this Assignment Agreement shall be valid and will be enforced to the fullest extent permitted by law.

Section 6.10. Governing Law. This Acquisition Agreement and any dispute arising hereunder shall be governed by and interpreted in accordance with the laws of the State.

Section 6.11. Jurisdiction and Venue. Each of the City and the Developer (a) agrees that any suit, action or other legal proceeding arising out of or relating to this Acquisition Agreement shall be brought in a state or local court in the County of San Bernardino or in the

Courts of the United States of America in the district in which said county is located, (b) consents to the jurisdiction of each such court in any such suit, action or proceeding, and (c) waives any objection that it may have to the laying of venue of any suit, action or proceeding in any of such courts and any claim that any such suit, action or proceeding has been brought in an inconvenient forum. Each of the City and the Developer agrees that a final and non-appealable judgment in any such action or proceeding shall be conclusive and may be enforced in other jurisdictions by suit on the judgment or in any other manner provided by law.

Section 6.12. Electronic Signature. Each of the parties hereto agrees that the transaction consisting of this Acquisition Agreement may be conducted by electronic means. Each party agrees, and acknowledges that it is such party's intent, that if such party signs this Acquisition Agreement using an electronic signature, it is signing, adopting and accepting this Acquisition Agreement and that signing this Acquisition Agreement using an electronic signature is the legal equivalent of having placed its handwritten signature on this Acquisition Agreement on paper. Each party acknowledges that it is being provided with an electronic or paper copy of this Acquisition Agreement in a usable format.

Section 6.13. Counterparts. This Acquisition Agreement may be executed in any number of counterparts and each of such counterparts shall for all purposes be deemed to be an original, and all such counterparts shall together constitute but one and the same instrument.

Section 6.14. Effective Date. This Acquisition Agreement has been dated for convenience purposes only. Notwithstanding the stated date of this Acquisition Agreement, this Acquisition Agreement shall be effective on the Effective Date.

IN WITNESS WHEREOF, the parties hereto have executed this Acquisition Agreement as of the day and year first hereinabove written.

EXHIBIT A

FACILITIES

The Facilities consist of the following Components and Segments; provided, however, that each such Segment described below shall constitute a Segment for purposes of this Acquisition Agreement only if such Segment was constructed by or on behalf of the Developer singly and not jointly or in conjunction with another Member or NMC Builders:

Streets and Traffic Circulation System Facilities			
No.	**DIF Program Project No.**	**Component**	**Segment**
ST-1	ST-024	Ontario Ranch Traffic Control System	Signalized intersection improvements at Haven Avenue and Eucalyptus Avenue
ST-2	ST-014	Haven Avenue from Riverside Drive to Bellegrave (Merrill) Avenue	Construction of approximately 1,300 linear feet of full half width street improvements on the west side of Haven Avenue beyond the curb adjacent lanes along tract frontage from Eucalyptus Avenue to Parkview Street
ST-3	ST-011	Eucalyptus Avenue from Euclid Avenue to Milliken Avenue	Construction of approximately 1,340 linear feet of full half width street improvements on the south side of Eucalyptus Avenue beyond the curb adjacent lanes along tract frontage to Haven Avenue
ST-4	Last Lane	Last Lane	Construction of approximately 1,300 linear feet of curb adjacent last lane street, curb, gutter, sidewalk, and street lighting improvements on the west side of Haven Avenue along tract frontage from Eucalyptus Avenue to Parkview Street
ST-5	Last Lane	Last Lane	Construction of approximately 1,340 linear feet of curb adjacent last lane street, curb, gutter, sidewalk, and street lighting improvements on the south side of Eucalyptus Avenue along tract frontage to Haven Avenue

Streets and Traffic Circulation System Facilities			
ST-6	Parkway	Parkway	Construction of approximately 1,300 linear feet of neighborhood edge, landscaping, and public improvements in the right-of-way on the west side of Haven Avenue along tract frontage from Eucalyptus Avenue to Parkview Street
ST-7	Parkway	Parkway	Construction of approximately 1,205 linear feet of raised landscaped median in Haven Avenue from Eucalyptus Avenue to Parkview Street
ST-8	Parkway	Parkway	Construction of approximately 1,340 linear feet of neighborhood edge, landscaping, and public improvements in the right-of-way on the south side of Eucalyptus Avenue along tract frontage to Haven Avenue

Water and Recycled Water System Facilities			
No.	**DIF Program Project No.**	**Component**	**Segment**
W-1	WT-016	Recycled Water Systems	Approximately 1,193 linear feet of 8-inch of recycled water improvements in Haven Avenue along tract frontage
W-2	WT-016	Recycled Water Systems	Approximately 1,391 linear feet of 16-inch of recycled water improvements in Eucalyptus Avenue along tract frontage

Fiber Optic System Facilities			
No.	**DIF Program Project No.**	**Component**	**Segment**
F-1	FO-004	Distribution Network - Major Streets Conduit System	Approximately 1,391 linear feet of fiber optic conduit in Haven Avenue from Eucalyptus Avenue to the southerly boundary of TM 20472 (Parkview Street)

EXHIBIT B

FORM OF PAYMENT REQUEST

City of Ontario
Community Facilities District No. 76
(Compass Pointe)

The City of Ontario (the "City") and KB HOME Cal Management Services LLC (the "Developer"), are parties to the Acquisition and Funding Agreement, dated as of November 1, 2025 (the "Acquisition Agreement"). Capitalized undefined terms use herein shall have the meanings ascribed thereto in the Acquisition Agreement. Pursuant to the Acquisition Agreement, the Developer hereby requests confirmation that the Segment described in Attachment A attached hereto (the "Segment") is [Complete] [Substantially Complete] and hereby further requests approval of the Purchase Price of the Segment. In connection with this Payment Request, the Developer hereby represents and warrants to the City as follows:

(a) The person executing this Payment Request on behalf of the Developer is a Developer Representative, qualified to execute this Payment Request on behalf of the Developer and knowledgeable as to the matters set forth herein.

(b) The Developer has submitted or submits herewith to the City Engineer as-built drawings or similar plans and specifications for the Segments for which payment is requested, and such drawings or plans and specifications, as applicable, are true, correct and complete; provided, however, that if such Segment is a Circulation System Segment, and certification is being requested that such Segment is Substantially Complete but not Complete, such drawings or plans and specifications need not be submitted to the City Engineer until certification is being requested that such Segment is Complete.

(c) Each of the Segments described in Attachment A has been constructed in accordance with the Plans therefor, and in accordance with all applicable City standards and the requirements of the Acquisition Agreement, and the as-built drawings or similar Plans and specifications referenced in paragraph (b) above.

(d) The true and correct Actual Cost of each Segment is set forth in Attachment A.

(e) The Developer has submitted or submits herewith to the City Engineer invoices, receipts, worksheets and other evidence of costs that are in sufficient detail to allow the City Engineer to verify the Actual Cost of each Segment for which payment is requested.

(f) There are no liens, rights to lien or attachment upon, or claims affecting the right to receive the payment requested herein that has not been released or will not be released simultaneously with the payment of such obligation, other than materialmen's or mechanics' liens accruing by operation of law. Copies of lien releases for all work for which payment is requested hereunder are attached hereto.

(g) No Developer Event of Default has occurred and is continuing.

(h) The representations and warranties of the Developer set forth in Section 4.1 of the Acquisition Agreement are true and correct on and as of the date hereof with the same force and effect as if made on and as of the date hereof (except that no certification is made with respect to the representations and warranties contained in subsection (d) of said Section 4.1).

(i) As of the date hereof, there is not present on, under or in the Segment or the Related Property of the Segment, or any portion thereof, any Hazardous Materials, except for (i) any types or amounts that do not require remediation or mitigation under federal, state or local laws, ordinances, regulations, rules or decisions, (ii) those that have been remediated or mitigated in full compliance with applicable federal, state or local laws, ordinances, regulations, rules or decisions, (iii) those with respect to which ongoing remediation or mitigation is being performed in full compliance with applicable federal, state or local laws, ordinances, regulations, rules or decisions, or (iv) any types or amounts that do not present a human health risk or hazard to the public.

(j) Each of the Segments described in Attachment A was constructed by or on behalf of the Developer singly and not jointly or in conjunction with another Member or NMC Builders.

The Developer hereby declares under penalty of perjury that the above representations and warranties are true and correct.

The Developer hereby requests that the Purchase Price be paid to the Person or Persons, in the amounts, set forth in Attachment B hereto.

CONFIRMATION AND APPROVAL BY THE CITY ENGINEER

[The City Engineer has (a) confirmed that the Segment described in Attachment A is Complete and was constructed in accordance with the Plans therefor, and (b) reviewed, verified and approved the Actual Cost of such Segment described in Attachment A. Such Segment is Complete and the Purchase Price therefor described in Attachment A is eligible for payment to the Developer pursuant to the Acquisition Agreement.]

[The City Engineer has (a) confirmed that the Segment described in Attachment A, which is a Circulation System Segment, is Substantially Complete and was constructed in accordance with the Plans therefor, and (b) reviewed, verified and approved the Actual Cost of such Segment described in Attachment A. Such Segment is Substantially Complete and $_____, an amount equal to 85% of the Purchase Price therefor described in Attachment A, is eligible for payment to the Developer pursuant to the Acquisition Agreement.]

[The City Engineer previously confirmed that the Segment described in Attachment A was Substantially Complete, and previously indicated that $_____, an amount equal to 85% of the Purchase Price therefor described in Attachment A, was eligible for payment to the Developer pursuant to the Acquisition Agreement. The City Engineer has (a) now confirmed that such Segment is Complete and was constructed in accordance with the Plans therefor, and (b) reviewed, verified and approved the Actual Cost of such Segment described in Attachment A. Such Segment is Complete and $_____, an amount equal to the remaining 15% of the Purchase Price therefor described in Attachment A is eligible for payment to the Developer pursuant to the Acquisition Agreement.]

include an instruction to pay NMC Builders the portion of the Purchase Price allocable to such design costs.]

CITY OF ONTARIO *Agenda Report* **November 4, 2025**	**SECTION:** **PUBLIC HEARINGS**
Department: Planning Prepared By: Edmelynne V Hutter Staff Member Presenting: Rudy Zeledon, Executive Director Community Development Approved By:	Submitted To: Council/OHA Approved: _____ Continued To: _____ Denied: _____ Item No: 15

SUBJECT: A GENERAL PLAN AMENDMENT (FILE NO. PGPA23-003) PROPOSING TO AMEND THE ONTARIO PLAN 2050 POLICY PLAN (GENERAL PLAN) LAND USE MAP

RECOMMENDATION: That the City Council consider and adopt a Resolution approving File No. PGPA23-003, a General Plan Amendment to amend The Ontario Plan 2050 Policy Plan (General Plan) Land Use Map to change the land use designation of approximately 5.3 acres of land located on Euclid Avenue from Mixed Use to Business Park.

THE FOLLOWING COUNCIL GOALS ARE BEING ACHIEVED:
Invest in the Growth and Evolution of the City's Economy
Operate in a Businesslike Manner
Ensure the Development of a Well Planned, Balanced, and Self-Sustaining Community in Ontario Ranch

FISCAL IMPACT: There is not a direct fiscal impact associated with this action.

BACKGROUND & ANALYSIS: On August 16, 2022, City Council certified The Ontario Plan 2050 Policy Plan (File No. PGPA20-002) update and certified Supplemental Environmental Impact Report (SEIR) in conjunction with The Ontario Plan 2050 Update (TOP 2050; File No. PGPA20-002). On October 26, 2023, the Applicant applied for a General Plan Amendment, requesting to modify the TOP 2050 Land Use Plan for 5.3-acre Project site from Mixed Use to Business Park.
The Project site is located within the Euclid Mixed Use Specific Plan (File No. PSP22-001), which was approved by the City Council on September 3, 2024, establishing land use designations consistent with The Ontario Plan 2050 (TOP 2050). The associated Euclid Mixed Use Specific Plan Environmental Impact Report (State Clearing House No. 2023020281) was certified by the City Council on August 20, 2024.

The proposed General Plan Amendment will establish the following:

- Convert 5.3 acres of Mixed Use – Great Park (MU-Great Park) to Business Park (BP) located on Euclid Avenue, approximately 300 feet north of Edison Avenue.
- Maintain 128 residential unit capacity to comply with Senate Bill 330.
- Remove the Affordable Housing overlay on 5.3 acres Project site resulting in the reduction of 128 residential units.

In compliance with Senate Bill 330, in order to maintain 128 residential unit capacity, the City is moving forward with a General Plan Amendment application (File No. PGPA24-003), which proposes amending 10 acres of land within the Esperanza Specific Plan, from Public School to Medium Density Residential, resulting in an overall residential increase of 224 dwelling units, which results in a net gain of 96 units.

The Project site is identified in the Housing Element Sites Inventory, and its removal requires adjustments to maintain Housing Element and Regional Housing Needs Assessment (RHNA) compliance. The Affordable Housing Overlay identifies the buildout of 128 residential units, which includes 64 Lower-Income units, 32 Moderate-Income units, and 32 Above-Moderate-Income units.

HOUSING ELEMENT COMPLIANCE

The 5.3-acre Project site is listed in the Housing Elements Sites contained in Tables B-1 and B-2 (Housing Element Sites Inventory) of the Housing Element Technical Report. With this amendment request, the RHNA obligations for each income category will continue to be adequately accommodated by the City's RHNA obligation. The City retains sufficient capacity to meet the Lower Income and Moderate-Income RHNA obligations as stated above. The Housing Element Sites Inventory provides an excess capacity of 209 units for Lower Income and an excess capacity of 491 units for Moderate Income, both of which can accommodate the respective reductions resulting from the proposed removal of the Affordable Housing Overlay on the subject site.

PLANNING COMMISSION

On September 23, 2025, the Planning Commission held a public hearing on the proposed General Plan Amendment. During public comment period, concerns were expressed about the removal of affordable housing. Staff clarified that with the proposed removal of the affordable units the City is still in compliance with the affordable housing requirements for Lower and Moderate-Income units due to the City's excess capacity of 209 units for Lower Income and an excess capacity of 491 units for Moderate Income. After considering public comments, the Planning Commission voted 6-0, recommending City Council approval.

ENVIRONMENTAL REVIEW

The environmental impacts of this Project were previously reviewed in conjunction with the Euclid Mixed Use Specific Plan (File No. PSP22-001), for which the Euclid Mixed Use Specific Plan Environmental Impact Report (State Clearinghouse #2023020281) (EMUSP EIR) was adopted by the City Council on August 20, 2024. The EMUSP EIR analyzed the project site with a potential 122,898 square feet of business park uses and 30,225 square feet of commercial uses. This Application introduces no new significant environmental impacts. All previously adopted mitigation measures of the EMUSP EIR are a condition of Project approval and are incorporated herein by this reference.

CITY OF ONTARIO PLANNING DEPARTMENT

ZONING ADMINISTRATOR DECISION: ADMINISTRATIVE HOUSING ELEMENT SITES INVENTORY AMENDMENT

September 16, 2025

303 East B Street, Ontario, California 91764 Phone: 909.395.2036 / Email: PlanningDirector@OntarioCA.gov

DECISION NO.: **ZA25-034**

FILE NO.: PADV25-003

DESCRIPTION: An Administrative Housing Element Sites Inventory Amendment request to remove a total of 128 units from the housing inventory for 5.3 acres of land located on Euclid Avenue, about 300 feet north of Edison Avenue, from Mixed Use to Business Park. **Submitted by RDDC Inc. (APN: 1053-281-08)**

RELATES FILES: PGPA23-003

Part I — BACKGROUND & ANALYSIS

RCCD Inc. (herein after referred to as "Applicant") has filed an application requesting approval of an Administrative Housing Element Sites Inventory Amendment for File No. PADV25-003, as described in the subject of this Decision (herein after referred to as "Application" or "Project").

(1) **Project Setting:** The Project site for the requested removal of 128 units from the Housing Element Sites Inventory is comprised of 5.3 acres of and located on Euclid Avenue, 300 feet north of Edison Avenue, depicted in Exhibit *A: Project Location Map* and *Exhibit B: Zoning*, attached. Existing land uses, General Plan, and zoning designations on and surrounding the Project site are as follows:

	Existing Land Use	***Policy Plan Designation***	***Zoning Designation***	***Specific Plan Land Use***
Site	Vacant	Mixed Use – Great Park (MU-Great Park); Affordable Housing Overlay; Chino Airport Influence Area Overlay	Euclid Mixed Use Specific Plan; Affordable Housing Overlay; CNO Overlay	Mixed Use
North	Vacant, Utility Easement	Open Space – Non-Recreational (OS-NR); Chino Airport Influence Area Overlay	Euclid Mixed Use Specific Plan; CNO Overlay	Open Space – Non-Recreational
South	Residential, Vacant, RV storage	Mixed Use – Great Park (MU-Great Park); Chino Airport Influence Area Overlay	Euclid Mixed Use Specific Plan; CNO Overlay	Mixed Use
East	Agriculture	Mixed Use – Great Park (MU-Great Park); Chino Airport Influence Area Overlay	Euclid Mixed Use Specific Plan; CNO Overlay	Mixed Use

	Existing Land Use	***Policy Plan Designation***	***Zoning Designation***	***Specific Plan Land Use***
West	Commercial (City of Chino)	Commercial General (City of Chino)	East Chino Specific Plan (City of Chino)	Office Commercial (City of Chino)

(2) **Project Analysis:** The proposed Administrative Housing Element Sites Inventory Amendment is depicted in *Exhibit C: Proposed Amendment to the Housing Element Sites Inventory*. The requested changes are analyzed below:

(a) Background — The Housing Element is one of the 7 mandated elements of the General Plan, which each city and county in the State is required to adopt and periodically update. The City adopted the current Housing Element per File No. PGPA21-004 on March 1, 2022, and revised on August 16, 2022, which covers the planning period from October 15, 2021, through October 15, 2029. The Housing Element is required to identify sites that can accommodate housing units for all income categories allocated to Ontario through the Regional Housing Needs Assessment ("RHNA"). The Sites Inventory is included in Appendix B-1 and B-2 to the Housing Element and identifies specific parcels with density ranges, assumed densities, and minimum number of units that are counted towards the City's RHNA obligation. File No. PGPA16-003, approved by City Council on June 21, 2016, allows administrative changes to the Housing Element to periodically update the inventory to:

- Remove sites that are found to be no longer suitable for the intensity assumed; and
- Adjust the assumed density and/or number of units on a site on the inventory to reflect the intensity that can feasibly be achieved; and
- Add sites which are now vacant or underutilized to the inventory that were not available at the time the Housing Element was adopted.

As shown in Exhibit A: Project Location Map and Exhibit B: Zoning, the Project site is located on Euclid Avenue, approximately 300 feet north of Edison Avenue, within the Euclid Mixed Use Specific Plan. The site consists of 5.3 gross acres and is currently vacant. Under the TOP 2050 Land Use Plan, the site is designated Mixed Use – Great Park with an Affordable Housing Overlay, which assumes a buildout of 128 dwelling units (including 64 Lower-Income units, 32 Moderate-Income units, and 32 Above Moderate-Income units), along with 34,630 square feet of office and 46,173 square feet of retail. The applicant proposes a General Plan Amendment to redesignate the site from Mixed Use – Great Park to Business Park, and to remove the Affordable Housing Overlay. The Project site is identified in the Housing Element Sites Inventory, and its removal requires adjustments to maintain Housing Element and RHNA compliance, as analyzed in Exhibit C: Housing Element Compliance.

(b) Proposed Change — As shown in Exhibit C, one parcel (APN: 1053-281-08) is listed as Map ID No. 2-84, which has a total RHNA obligation of 128 units (including 64 units in the Lower Income category, 32 units in the Moderate-Income category, and 32 units in the Above Moderate-Income category). The City's total RHNA capacity is shown in Table 1: City Housing Element Sites Inventory Capacity. The City's RHNA Lower Income housing needs inventory provides capacity for 9,135 units, exceeding the RHNA allocation of 8,926 units, with an excess capacity of 209 units. The Moderate-Income category provides capacity for 3,820 units, exceeding the RHNA allocation of 3,329 units, with an excess capacity of 491 units. The Above Moderate-Income category provides capacity for 8,990 units, exceeding the RHNA allocation of 8,599 units, with an excess capacity of 391 units. The current inventory provides an overall excess housing capacity buffer of 1,091 units.

Table 1: City Housing Element Sites Inventory Capacity

Housing Element Available Land Inventory	***Lower Income***	***Moderate-Income***	***Above Moderate-Income***	***Total Capacity***
Existing Land Inventory	**9,135**	**3,820**	**8,990**	**21,945**
RHNA Allocation	**8,926**	**3,329**	**8,599**	**20,854**
Land Inventory in excess of RHNA	209	491	391	1,091

The proposed removal of 128 units from the Housing Element Sites Inventory (64 units from the Lower Income category, 32 units from the Moderate-Income category, and 32 units from the above-moderate income category) will not create a deficiency in either category (as shown in Table 2). No additional sites are required to be added to the inventory, as there is an excess capacity buffer for the Lower Income and Moderate-Income category.

Table 2: Revised City Housing Element Sites Inventory Capacity

Housing Element Available Land Inventory	***Lower Income***	***Moderate-Income***	***Above Moderate-Income***	***Total Capacity***
Existing Land Inventory	9,135	3,820	8,990	21,945
Proposed Land Inventory Reduction	(64)	(32)	(32)	(128)
Proposed Land Inventory Increase	0	0	0	0
Proposed Land Inventory	9,071	3,788	8,958	21,817
RHNA Allocation	**8,926**	**3,329**	**8,599**	**20,854**
Land Inventory in excess of RHNA	145	459	359	963

The revised Housing Element Sites Inventory provides capacity for 9,071 units in the Lower Income category, exceeding the RHNA allocation of 8,926 units, with an excess capacity of 145 units. The Moderate-Income category provides capacity for 3,788 units, exceeding the RHNA allocation of 3,329 units, with an excess capacity of 459 units. The Above Moderate-Income category provides capacity for 8,958 units, exceeding the RHNA allocation of 8,599 units, with an excess capacity of 359 units. The identified inventory unit count provides a revised overall total excess housing capacity buffer of 963 units.

(a) Recommendation —The removal of 128 units (64 Lower Income, 32 Moderate-Income, and 32 Above Moderate-Income) from the Housing Element Sites Inventory will not create a deficiency in any income category. Adequate sites remain to meet the City's RHNA obligations of 8,926 Lower Income units, 3,329 Moderate-Income units, and 8,599 Above Moderate-Income units. No additional sites are required to be added to the Housing Element Sites Inventory, as the City continues to maintain excess capacity in all income categories. Therefore, staff recommends approval of the proposed amendment to remove the 128 units from the Housing Element Sites Inventory.

Part II — RECITALS

WHEREAS, the City of Ontario has received a request for an Administrative Housing Element Sites Inventory Amendment approval as described in Part I, above; and

WHEREAS, all legal prerequisites to the adoption of this Decision have occurred.

Part III — THE DECISION

NOW, THEREFORE, it is hereby found, determined and resolved by the Zoning Administrator of the City of Ontario as follows:

(1) All facts set forth in this Zoning Administrator Report and Decision are true and correct.

(2) Based upon the evidence presented to the Zoning Administrator, the Zoning Administrator hereby makes the following Housing Element Sites Inventory Amendment findings:

(a) *The proposed amendment to the Housing Element Sites Inventory is consistent with the goals, policies, plans, and exhibits of the Vision, Policy Plan (General Plan) including the Housing Element, and City Council Priorities components of The Ontario Plan.* The revised Housing Element Sites Inventory provides 9,071 units in the Lower Income category, a RHNA allocation of 8,926 units, and an excess capacity of 145 units. The Moderate-Income category provides an inventory of 3,788 units, a RHNA allocation of 3,329 units, and an excess inventory of 459 units. The Above Moderate-Income category provides an inventory of 8,958 units, a RHNA allocation of 8,599 units, and an excess of 359 units. These identified inventory unit counts establish a revised excess housing capacity buffer of 963 units; and

(b) *The remaining sites identified in the Housing Element are adequate to meet the requirements of the State of California Government Code Section 65583.2 and to accommodate the City's share of the regional housing need (RHNA) pursuant to Section 65584.* With this amendment request, the RHNA obligations for each income category will continue to be adequately accommodated by the City's RHNA obligation and the City retains sufficient capacity to meet the Lower Income and Moderate-Income RHNA obligations as follows:

Table 3: Revised Housing Element Sites Inventory Capacity

Housing Element Available Land Inventory	***Lower Income***	***Moderate-Income***	***Above Moderate-Income***	***Total Capacity***
Existing Land Inventory	9,135	3,820	8,990	21,945
Proposed Land Inventory Reduction	(64)	(32)	(32)	(128)
Proposed Land Inventory Increase	0	0	0	0
Proposed Land Inventory	9,071	3,788	8,958	21,817
RHNA Allocation	**8,926**	**3,329**	**8,599**	**20,854**
Land Inventory in excess of RHNA	145	459	359	963

(c) *The proposed amendment to the Housing Element Sites Inventory is compatible with adjoining sites, any physical constraint identified on the subject site, and the characteristics of the area in which the site is located.* The proposed amendment to the Housing Element Sites Inventory will adjust the City's housing sites inventory to reflect the removal of units from the subject parcel. The amendment will not create a deficiency in the City's ability to meet its RHNA obligations, as adequate capacity remains in all income categories. The revision will not constrain future residential development opportunities elsewhere in the City nor alter the residential character of surrounding neighborhoods, since the reduction is offset by surplus capacity identified in the Housing Element; and

(d) *The strict enforcement of the Housing Element Sites Inventory obligations would result in practical difficulty or unnecessary physical hardship inconsistent with the objectives of the development regulations contained in the City of Ontario Development Code.* The revised Housing Element Sites Inventory provides an inventory of 9,071 units in the Lower Income category, a RHNA allocation of 8,926 units, and an excess capacity of 145 units. The Moderate-Income category provides an inventory of 3,788 units, a RHNA allocation of 3,329 units, and an excess inventory of 459 units. The Above Moderate-Income category provides an inventory of 8,958 units, a RHNA allocation of 8,599 units, and an excess inventory of 359 units. These identified inventory unit counts establish a revised excess housing capacity buffer of 963 units, confirming that the proposed amendment will not negatively impact the City's ability to meet its RHNA obligations; and

(e) *The strict enforcement of the Housing Element Sites Inventory obligations would deprive the applicant of privileges enjoyed by the owners of other properties in the same zoning district.* Because the City maintains an excess inventory of 145 units within the Lower Income category and 459 units within the Moderate-Income category, the removal of the units identified in Exhibit C as Map ID No. 2-84 is warranted. This amendment will not negatively impact the City's ability to meet its RHNA obligations, and the site should be removed from the Housing Element Sites Inventory List; and

(f) *The granting of the Housing Element Sites Inventory Amendment will not be detrimental to the public health, safety or welfare, or be materially injurious to properties or improvements in the vicinity.* The development of the related applications and the amendment to the Housing Element Sites Inventory will be within the existing density range of both the General Plan and zoning designations and will not be detrimental to the public health, safety, and welfare and will be compatible with the surrounding area.

(3) The Zoning Administrator hereby finds and determines that the potential environmental impacts of the project identified in this Decision were previously reviewed in conjunction with The Ontario Plan (File No. PGPA20-002) Supplemental Environmental Impact Report (SEIR) (SCH# 2021070364) certified by City Council on August 16, 2022. This Application introduces no new significant environmental impacts not previously analyzed in the SEIR. All previously adopted mitigation measures are a condition of project approval and are incorporated herein by reference.

Part IV — ZONING ADMINISTRATOR ACTION

Based upon the findings and conclusions set forth in Parts I through III, above, the Zoning Administrator hereby approves File No. PADV25-003.

- - - - - - - - - - - - -

APPROVED AND ADOPTED this 24th day of September 2025.

Henry K. Noh
Zoning Administrator

CITY OF ONTARIO PLANNING DEPARTMENT

PLANNING COMMISSION AGENDA REPORT

September 23, 2025

303 East B Street, Ontario, California 91764 Phone: 909.395.2036 / Email: PlanningDirector@OntarioCA.gov

FILE NO: PGPA23-003

SUBJECT: A General Plan Amendment to amend The Ontario Plan 2050 Policy Plan (General Plan) Land Use Map to change the land use designation of approximately 5.3 acres of land located on Euclid Avenue, about 300 feet north of Edison Avenue, from Mixed Use to Business Park. **Submitted by RDDC Inc.**

PROPERTY OWNER: RCCD Inc.

RECOMMENDED ACTION: That the Planning Commission consider and adopt a Resolution recommending the City Council approve File No. PGPA23-003, pursuant to the facts and reasons contained in the staff report and attached Resolution, and subject to the conditions of approval appended to the attached Resolution as Attachment A.

BACKGROUND: On January 27, 2010, the Ontario City Council certified The Ontario Plan Environmental Impact Report in conjunction with File No. PGPA06-001 (City Council Resolution No. 2010-006), and on August 16, 2022, the Ontario City Council certified The Ontario Plan 2050 Update Supplemental Environmental Impact Report (SEIR) in conjunction with The Ontario Plan 2050 Update (TOP 2050; File No. PGPA20-002). TOP 2050 and the associated Environmental Impact Report analyzed the Project site and established guidelines for development, including but not limited to, general land use (Mixed Use – Great Park; 10 percent office, 20 percent retail, 70 percent residential), maximum FAR (1.5 Office FAR, 1.0 Commercial FAR), and 14.0 to 65.0 du/ac residential density range. The SEIR designated areas north of the Project site as Business Park (0.6 FAR) and Open Space – Non-Recreation.

The Project site is located within the Euclid Mixed Use Specific Plan (File No. PSP22-001), which was approved by the City Council on September 3, 2024, establishing land use designations consistent with The Ontario Plan 2050 (TOP 2050), development standards, and infrastructure requirements for future development of business park and mixed use developments. The associated Euclid Mixed Use Specific Plan Environmental Impact Report (State Clearing House No. 2023020281) was certified by the City Council on August 20, 2024.

The Project site is within Planning Area 3A of the Euclid Mixed Use Specific Plan and is currently vacant.

CC	11/4/2025		Final

On October 26, 2023, the Applicant applied for a General Plan Amendment, requesting to modify the Project site designation in TOP 2050 Land Use Plan from Mixed Use to Business Park. The amendment request was submitted in anticipation of future requests for a minor specific plan amendment and development plan for a business park development.

PROJECT SETTING: The Project site consists of 5.3 acres of land located on Euclid Avenue approximately 300 feet north of Edison Avenue, within the Euclid Mixed Use Specific Plan, which is depicted in Exhibit A: Project Location Map. The site is currently vacant but was previously used for agriculture and dairy uses.

The Project site is generally surrounded by vacant land, trailer storage, residential, and commercial uses. The existing surrounding land uses, zoning, and Policy Plan (general plan) and specific plan land use designations are summarized in Table 1: Surrounding Zoning & Land Uses.

PROJECT ANALYSIS:

(1) General Plan Amendment (File No. PGPA23-003)

The Project would amend The Ontario Plan Policy Plan – Land Use Map and associated buildout tables to reflect the change in land use from Mixed Use – Great Park to Business Park (see Exhibit B). The proposed Project will establish the following:

- Convert 5.3 acres of Mixed Use – Great Park (MU-Great Park) to Business Park (BP) located on Euclid Avenue, approximately 300 feet north of Edison Avenue.

- Remove the Affordable Housing overlay on 5.3 acres of land located on Euclid Avenue, approximately 300 feet north of Edison Avenue.

Under the current land use, the Project site is anticipated to have a buildout capacity of 130 dwelling units, 34,630 square feet of office and 46,173 square feet of retail. The assumed buildout is based on 35 du/ac, 1.5 Floor-Area Ratio (FAR) office, and 1.0 FAR retail at the land area percentages established for Mixed Use – Great Park. The Project site is also designated as Affordable Housing Overlay in TOP 2050 Land Use Map, which means that the anticipated 130 dwelling units are included in the City's Regional Housing Needs Assessment (RHNA) analysis and calculations.

Changing the TOP 2050 land use designation would remove the anticipated residential, office and commercial developments, while increasing the Business Park buildout by approximately 138,520 square feet within Planning Area 3A of the Euclid Mixed Use Specific Plan. The proposed Project would have a removal and replacement effect regarding buildout and would have nominal changes in overall development intensity.

However, the reduction of 130 dwelling units impacts the City's RHNA obligation and the anticipated reduction in dwelling unit count in the Euclid Mixed Use Specific Plan will

have to be transferred to another location within the City to maintain the City's RHNA obligation and avoid a "net loss" in dwelling units.

The reduction in dwelling units will be offset by a proposed General Plan Amendment (File No. PGPA24-003) that will provide additional dwelling units within the Esperanza Specific Plan. The proposed PGPA24-003 would change the TOP 2050 land use designation of approximately 10 acres of land, located within the Esperanza Specific Plan area, from Public School to Medium Density Residential, which results in a net gain of 224 dwelling units. File No. PGPA24-003 will be considered by the Planning Commission during its public meeting on September 23, 2025. Additional analysis is provided in the Housing Element Compliance section below.

PUBLIC NOTIFICATION: The subject application was advertised as a public hearing in at least one newspaper of general circulation in the City of Ontario (the Inland Valley Daily Bulletin newspaper). In addition, the Project site was posted with one or more large public notification signs and notices were mailed to all owners of real property located within a minimum of 600 feet of the exterior boundaries of the property that is the subject of the hearing, as shown on the records of the County Assessor.

CORRESPONDENCE: As of the preparation of this Agenda Report, Planning Department staff has not received any written or verbal communications from the owners or occupants of properties surrounding the Project site or from the public in general, regarding the subject application.

AGENCY/DEPARTMENT REVIEWS: Each City agency/department has been provided the opportunity to review and comment on the subject application. Any applicable comments are reflected in the proposed amendment.

AIRPORT LAND USE COMPATIBILITY PLAN (ALUCP) COMPLIANCE: The California State Aeronautics Act (Public Utilities Code Section 21670 et seq.) requires that an Airport Land Use Compatibility Plan be prepared for all public use airports in the State; and requires that local land use plans and individual development proposals must be consistent with the policies set forth in the adopted Airport Land Use Compatibility Plan.

On April 19, 2011, the City Council of the City of Ontario approved and adopted the ONT ALUCP, establishing the Airport Influence Area for Ontario International Airport, which encompasses lands within parts of San Bernardino, Riverside, and Los Angeles Counties, and limits future land uses and development within the Airport Influence Area, as they relate to noise, safety, airspace protection, and overflight impacts of current and future airport activity. As the recommending authority for the Project, the Planning Commission has reviewed and considered the facts and information contained in the Application and supporting documentation against the ONT ALUCP compatibility factors, including [1] Safety Criteria (ONT ALUCP Table 2-2) and Safety Zones (ONT ALUCP Map 2-2), [2] Noise Criteria (ONT ALUCP Table 2-3) and Noise Impact Zones (ONT ALUCP Map 2-3), [3] Airspace protection Zones (ONT ALUCP Map 2-4), and [4] Overflight Notification Zones (ONT ALUCP Map 2-5). As a result, the Planning Commission finds and determines that the

Project, when implemented in conjunction with the conditions of approval, will be consistent with the policies and criteria set forth within the ONT ALUCP.

On August 2, 2022, the City Council of the City of Ontario approved and adopted a Development Code Amendment to establish the Chino Airport (CNO) Overlay Zoning District (OZD) and Reference I, Chino Airport Land Use Compatibility Plan (CNO ALUCP). The CNO OZD and CNO ALUCP established the Airport Influence Area for Chino Airport, solely within the City of Ontario, and limits future land uses and development within the Airport Influence Area, as they relate to safety, airspace protection, and overflight impacts of current and future airport activity. The CNO ALUCP is consistent with policies and criteria set forth within the Caltrans 2011 California Airport Land Use Planning Handbook. The proposed Project is located within the Airport Influence Area of Chino Airport and was evaluated and found to be consistent with the California Airport Land Use Planning Handbook and the CNO ALUCP. As the recommending body for the Project, the Planning Commission has reviewed and considered the facts and information contained in the Application and supporting documentation against the CNO ALUCP compatibility factors, including Safety, Airspace Protection, and Overflight. As a result, the Planning Commission finds and determines that the Project, when implemented in conjunction with the conditions of approval, will be consistent with the policies and criteria set forth within the California Airport Land Use Planning Handbook and the Chino ALUCP.

COMPLIANCE WITH THE ONTARIO PLAN: The proposed Project is consistent with the principles, goals and policies contained within the Vision, Governance, Policy Plan (General Plan), and City Council Priorities components of The Ontario Plan (TOP). More specifically, the goals and policies of TOP that are furthered by the proposed Project are as follows:

(1) City Council Goals

- Invest in the Growth and Evolution of the City's Economy
- Operate in a Businesslike Manner
- Ensure the Development of a Well Planned, Balanced, and Self-Sustaining Community in Ontario Ranch

(2) Governance

Decision Making

Goal G1: Sustained decision-making that consistently moves Ontario towards its Vision by using The Ontario Plan as a framework for assessing choices.

- G1-1 Consistency with Policies. We require that staff recommendations to the City Council be consistent with adopted City Council Priorities (Goals and Objectives) and The Policy Pan.

- G1-2 Long-term Benefit. We require decisions to demonstrate and document how they add value to the community and support the Ontario Vision.

(3) Policy Plan (General Plan)

Land Use Element

Goal LU-1: A community that has a spectrum of housing and price ranges that match the jobs in the City and that make it possible for people to live and work in Ontario and maintain a quality of life.

- LU-1.4 Jobs-Housing Balance. We coordinate land use, infrastructure, and transportation planning and analysis with regional, county, and other local agencies to further regional and subregional goals for jobs-housing balance.

- LU-1.6 Complete Community. We incorporate a variety of land uses and building types in our land use planning efforts that result in a complete community where residents at all stages of life, employers, workers, and visitors have a wide spectrum of choices of where they can live, work, shop and recreate within Ontario.

Goal LU-2: Compatibility between a wide range of uses and resultant urban patterns and forms.

- LU-2.1 Land Use Decisions. We minimize adverse impacts on adjacent properties when considering land use and zoning requests.

HOUSING ELEMENT COMPLIANCE: The proposed Project is not consistent with the Housing Element of the Policy Plan (general plan) component of The Ontario Plan. The site is one of the properties listed in the Housing Element Sites Inventory contained in Tables B-1 and B-2 (Housing Element Sites Inventory) of the Housing Element Technical Report, and the proposed Project is not consistent with the number of dwelling units or density specified. Therefore, a General Plan Amendment to remove the subject property from the Housing Element Sites Inventory is required. Removal of the subject property from the inventory will impact the City's Regional Housing Needs Assessment (RHNA) obligations, as there are not an adequate number of sites identified in the inventory to meet the RHNA obligation.

Consequently, the following site will be added to the Available Land Inventory:

APN: 1073-101-050

Parcel Size: 10.02 acres

	Housing Element Sites Inventory
Number of Units:	224
Assumed Density:	22.0 du/ac

Therefore, a separate General Plan Amendment application (File No. PGPA24-003; Esperanza GPA) proposes to allow additional dwelling units on the site noted above that was previously intended for a public school. The Esperanza GPA proposes to amend a Public School land use that allocated 0 dwelling units to a Medium Density Residential land use that will allow a maximum of 224 dwelling units. The reduction of 130 dwelling units resulting from the subject File No. PGPA23-003 will be transferred to the project site for the Esperanza GPA. The transfer of dwelling units will avoid a "net loss" with the City's RHNA obligations and result in a positive gain of approximately 94 dwelling units. The Esperanza GPA will be considered concurrently by the Planning Commission at the September 23, 2025 public meeting.

ENVIRONMENTAL REVIEW: The TOP 2050 established the 5.3-acre Project site with a Mixed Use Land Use designation, resulting in a potential buildout of 130 dwelling units, 34,630 square feet of office, and 46,173 square feet of commercial. The environmental impacts of the potential buildout were reviewed on a programmatic level under the Supplemental Environmental Impact Report (State Clearinghouse #2021070364), which was adopted by the City Council on August 16, 2022.

The environmental impacts of the proposed Land Use change were previously reviewed in conjunction with the Euclid Mixed Use Specific Plan (File No. PSP22-001), for which the Euclid Mixed Use Specific Plan Environmental Impact Report (State Clearinghouse #2023020281) (EMUSP EIR) was adopted by the City Council on August 20, 2024. The EMUSP EIR analyzed the project site with a potential 122,898 square feet of warehouse and 30,225 square feet of commercial uses. The adopted mitigation measures for the EMUSP EIR accounted for Business Park land use at the Project site.

This Application introduces no new significant environmental impacts. All previously adopted mitigation measures are a condition of Project approval and are incorporated herein by this reference.

TECHNICAL APPENDIX:

Table 1: Surrounding Zoning and Land Uses

	Existing Land Use	***Policy Plan Designation***	***Zoning Designation***	***Specific Plan Land Use***

Attachment A:
Resolution for File No. PGPA23-003

(Document to follow this page)

RESOLUTION NO. PC25-045

A RESOLUTION OF THE PLANNING COMMISSION OF THE CITY OF ONTARIO, CALIFORNIA, RECOMMENDING THE CITY COUNCIL APPROVE FILE NO. PGPA23-003, AN AMENDMENT TO THE ONTARIO PLAN 2050 POLICY PLAN LAND USE MAP TO CHANGE THE LAND USE DESIGNATION OF APPROXIMATELY 5.3 ACRES OF LAND LOCATED ON EUCLID AVENUE FROM MIXED USE TO BUSINESS PARK, AND MAKING FINDINGS IN SUPPORT THEREOF—APN: 1053-281-08. (PART OF CYCLE 1 FOR THE 2025 CALENDAR YEAR)

WHEREAS, RCCD Inc. ("Applicant") has filed an Application for the approval of a General Plan Amendment, File No. PGPA23-003, as described in the title of this Resolution (hereinafter referred to as "Application" or "Project"); and

WHEREAS, the Application applies to 5.3 acres of land located on Euclid Avenue, approximately 300 feet north of Edison Avenue, within the Euclid Mixed Use Specific Plan district, and is presently vacant; and

WHEREAS, the property to the north of the Project site is within the Euclid Mixed Use Specific Plan district and is an SCE Easement corridor. The property to the east is within the Euclid Mixed Use Specific Plan district and is currently occupied by agriculture and dairy uses. The properties to the south are within the Euclid Mixed Use Specific Plan district and are used for recreational vehicle storage, residences, as well as vacant land. The properties to the west are within the City of Chino, within a commercial zone and are occupied by commercial and industrial uses; and

WHEREAS, the Land Use Element of the Policy Plan establishes the Project area as a Mixed Use – Great Park (MU-Great Park) land use designation. The proposed Project necessitates a modification in the existing land use designation to accommodate business park and light industrial uses. As part of this conversion, the proposed Project aims to:

- Convert 5.3 acres of Mixed Use – Great Park (MU-Great Park) to Business Park (BP) located on Euclid Avenue, approximately 300 feet north of Edison Avenue;

- Remove the Affordable Housing overlay on 5.3 acres of land located on Euclid Avenue, approximately 300 feet north of Edison Avenue; and

WHEREAS, the City of Ontario adopted the Policy Plan (General Plan) as part of The Ontario Plan in January 2010. Since the adoption of The Ontario Plan, the City has evaluated Exhibits LU-01 (Official Land Use Plan) and LU-03 (Future Buildout) further and is considering the requested modification; and

WHEREAS, Policy Plan Exhibit LU-03 (Future Buildout) specifies the expected buildout for the City of Ontario, incorporating the adopted land use designations. The proposed changes to Exhibit LU-01 (Official Land Use Plan) will require Exhibit LU-03 (Future Buildout) be modified to be consistent with Exhibit LU-01 (Official Land Use Plan) as depicted on Exhibit B, attached; and

WHEREAS, the Application is a project pursuant to the California Environmental Quality Act — Public Resources Code Section 21000 et seq. — (hereinafter referred to as "CEQA") and an initial study has been prepared to determine possible environmental impacts; and

WHEREAS, the environmental impacts of this Project were previously reviewed in conjunction with File No. PSP22-001, an application for the Euclid Mixed Use Specific Plan for which an Environmental Impact Report — State Clearinghouse No. 2023020281 — (hereinafter referred to as "Certified EIR") was adopted by the City Council on August 20, 2024, and this Application introduces no new significant environmental impacts; and

WHEREAS, the City's "Local Guidelines for the Implementation of the California Environmental Quality Act (CEQA)" provide for the use of a single environmental assessment in situations where the impacts of subsequent projects are adequately analyzed; and

WHEREAS, Ontario Development Code Table 2.02-1 (Review Matrix) grants the Planning Commission the responsibility and authority to review and make recommendation on the subject Application; and

WHEREAS, the Project has been reviewed for consistency with the Housing Element of the Policy Plan component of The Ontario Plan 2050, as State Housing Element law (as prescribed in Government Code Sections 65580 through 65589.8) requires that development projects must be consistent with the Housing Element, if upon consideration of all its aspects, it is found to further the purposes, principals, goals, and policies of the Housing Element; and

WHEREAS, the Project’s consistency with the Housing Element of the Policy Plan component of The Ontario Plan 2050 is achieved in association with File No. PGPA24-003, a General Plan Amendment to change approximately 10 acres of land from Public School to Medium Density Residential land use designation; and

WHEREAS, the Project is located within the Airport Influence Area of Ontario International Airport, which encompasses lands within parts of San Bernardino, Riverside, and Los Angeles Counties, and is subject to, and must be consistent with, the policies and criteria set forth in the Ontario International Airport Land Use Compatibility Plan (hereinafter referred to as "ALUCP"), which applies only to jurisdictions within San

Bernardino County, and addresses the noise, safety, airspace protection, and overflight impacts of current and future airport activity; and

WHEREAS, the proposed Project is located within the Airport Influence Area of Chino Airport, within the City of Ontario boundary, and is subject to, and must be consistent with, the policies criteria set forth in Reference I, Chino Airport Land Use Compatibility Plan (CNO ALUCP), which applies only to jurisdictions within City of Ontario, and addresses the safety, airspace protection, and overflight impacts of current and future airport activity; and

WHEREAS, City of Ontario Development Code Division 2.03 (Public Hearings) prescribes the manner in which public notification shall be provided and hearing procedures to be followed, and all such notifications and procedures have been completed; and

WHEREAS, on September 23, 2025, the Planning Commission of the City of Ontario conducted a hearing to consider the Project, and concluded said hearing on that date; and

WHEREAS, all legal prerequisites to the adoption of this Resolution have occurred.

NOW, THEREFORE, IT IS HEREBY FOUND, DETERMINED, AND RESOLVED by the Planning Commission of the City of Ontario, as follows:

SECTION 1: ***Environmental Determination and Findings.*** As the recommending authority for the Project, the Planning Commission has reviewed and considered the information contained in the previous Certified EIR and supporting documentation. Based upon the facts and information contained in the previous Certified EIR and supporting documentation, the Planning Commission finds as follows:

(1) The environmental impacts of this Project were previously reviewed in conjunction with File No. PSP22-001, the Euclid Mixed Use Specific Plan for which a Certified EIR was adopted by the City Council on August 20, 2024.

(2) The previous Certified EIR contains a complete and accurate reporting of the environmental impacts associated with the Project; and

(3) The previous Certified EIR was completed in compliance with CEQA and the Guidelines promulgated thereunder; and

(4) The previous Certified EIR reflects the independent judgment of the Planning Commission; and

(5) The proposed Project will introduce no new significant environmental impacts beyond those previously analyzed in the previous Certified EIR, and all mitigation measures previously adopted with the Certified EIR, are incorporated herein by this reference.

SECTION 2: ***Subsequent or Supplemental Environmental Review Not Required.*** Based on the information presented to the Planning Commission, and the specific findings set forth in Section 1, above, the Planning Commission finds that the preparation of a subsequent or supplemental Certified EIR is not required for the Project, as the Project:

(1) Does not constitute substantial changes to the Certified EIR that will require major revisions to the Certified EIR due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects; and

(2) Does not constitute substantial changes with respect to the circumstances under which the Certified EIR was prepared, that will require major revisions to the Certified EIR due to the involvement of new significant environmental effects or a substantial increase in the severity of the previously identified significant effects; and

(3) Does not contain new information of substantial importance that was not known and could not have been known with the exercise of reasonable diligence at the time the Certified EIR was certified/adopted, that shows any of the following:

(a) The Project will have one or more significant effects not discussed in the Certified EIR; or

(b) Significant effects previously examined will be substantially more severe than shown in the Certified EIR; or

(c) Mitigation measures or alternatives previously found not to be feasible would in fact be feasible and would substantially reduce one or more significant effects of the Project, but the City declined to adopt such measures; or

(d) Mitigation measures or alternatives considerably different from those analyzed in the Certified EIR would substantially reduce one or more significant effects on the environment, but which the City declined to adopt.

SECTION 3: ***Housing Element Compliance.*** Pursuant to the requirements of California Government Code Chapter 3, Article 10.6, commencing with Section 65580, as the recommending authority for the Project, the Planning Commission finds that based on the facts and information contained in the Application and supporting documentation, at the time of Project implementation, the proposed Project is not consistent with the

Housing Element of the Policy Plan (General Plan) component of The Ontario Plan 2050. The Project site is listed in the Housing Element Sites Inventory contained in Tables B-1 and B-2 of the Housing Element Technical Report, and the proposed Project is not consistent with the number of dwelling units or density specified in the Housing Element Sites Inventory; therefore, a General Plan Amendment to remove the subject property from the Housing Element Sites Inventory is required. Removal of the subject property from the inventory will impact the City's Regional Housing Needs Assessment ("RHNA") obligations, as there are not an adequate number of sites identified in the inventory to meet the RHNA obligation. Consequently, the following site will be added to the Housing Element Sites Inventory through a separate General Plan Amendment (PGPA24-003):

APN: 1073-101-050

Parcel Size: 10.02 acres

	Available Land Inventory
Number of Units:	221
Assumed Density:	22.0 du/ac

SECTION 4: ***Airport Land Use Compatibility Plan ("ALUCP") Compliance.*** The California State Aeronautics Act (Public Utilities Code Section 21670 et seq.) requires that an Airport Land Use Compatibility Plan be prepared for all public use airports in the State; and requires that local land use plans and individual development proposals must be consistent with the policies set forth in the adopted Airport Land Use Compatibility Plan.

(1) On April 19, 2011, the City Council of the City of Ontario approved and adopted the Ontario International Airport Land use Compatibility Plan, establishing the Airport Influence Area for Ontario International Airport, which encompasses lands within parts of San Bernardino, Riverside, and Los Angeles Counties, and limits future land uses and development within the Airport Influence Area, as they relate to noise, safety, airspace protection, and overflight impacts of current and future airport activity. As the recommending authority for the Project, the Planning Commission has reviewed and considered the facts and information contained in the Application and supporting documentation against the ONT ALUCP compatibility factors, including [1] Safety Criteria (ONT ALUCP Table 2-2) and Safety Zones (ONT ALUCP Map 2-2), [2] Noise Criteria (ONT ALUCP Table 2-3) and Noise Impact Zones (ONT ALUCP Map 2-3), [3] Airspace protection Zones (ONT ALUCP Map 2-4), and [4] Overflight Notification Zones (ONT ALUCP Map 2-5). As a result, the Planning Commission finds and determines that the Project, when implemented in conjunction with the conditions of approval, will be consistent with the policies and criteria set forth within the ONT ALUCP; and

(2) On August 2, 2022, the City Council of the City of Ontario approved and adopted a Development Code Amendment to establish the Chino Airport ("CNO") Overlay

Zoning District ("OZD") and Reference I, Chino Airport Land Use Compatibility Plan ("CNO ALUCP"). The CNO OZD and CNO ALUCP established the Airport Influence Area for Chino Airport, solely within the City of Ontario, and limits future land uses and development within the Airport Influence Area, as they relate to safety, airspace protection, and overflight impacts of current and future airport activity. The CNO ALUCP is consistent with policies and criteria set forth within the Caltrans 2011 California Airport Land Use Planning Handbook. The proposed Project is located within the Airport Influence Area of Chino Airport and was evaluated and found to be consistent with the California Airport Land Use Planning Handbook and the CNO ALUCP. As the recommending authority for the Project, the Planning Commission has reviewed and considered the facts and information contained in the Application and supporting documentation against the CNO ALUCP compatibility factors, including Safety, Airspace Protection, Overflight. As a result, the Planning Commission finds and determines that the Project, when implemented in conjunction with the conditions of approval, will be consistent with the policies and criteria set forth within the California Airport Land Use Planning Handbook and the Chino ALUCP.

SECTION 5: ***Concluding Facts and Reasons.*** Based upon the substantial evidence presented to the Planning Commission during the above-referenced hearing, and upon the specific findings set forth in the Sections above, the Planning Commission hereby concludes as follows:

(1) The proposed General Plan Amendment is consistent with the goals and policies of The Ontario Plan as follows:

Policy Plan (General Plan)

Land Use Element:

- LU-1.4 Jobs-Housing Balance. We coordinate land use, infrastructure, and transportation planning and analysis with regional, county, and other local agencies to further regional and subregional goals for jobs-housing balance.

- LU-1.6 Complete Community. We incorporate a variety of land uses and building types in our land use planning efforts that result in a complete community where residents at all stages of life, employers, workers, and visitors have a wide spectrum of choices of where they can live, work, shop and recreate within Ontario.

- LU-2.1 Land Use Decisions. We minimize adverse impacts on adjacent properties when considering land use and zoning requests; and

(2) The proposed General Plan Amendment would not be detrimental to the public interest, health, safety, convenience, or general welfare of the City; and

(3) The Land Use Element is a mandatory element allowed for general plan amendments per calendar year and this general plan amendment is part of the first amendment to the Land Use Element of the 2025 calendar year consistent with Government Code Section 65358; and

(4) The Project has been reviewed for consistency with the Housing Element of the Policy Plan component of The Ontario Plan, as State Housing Element law (as prescribed in Government Code Sections 65580 through 65589.8) requires that development projects must be consistent with the Housing Element, if upon consideration of all aspects, it is found to further the purposes, principals, goals, and policies of the Housing Element; and

(5) During the amendment of the general plan, opportunities for the involvement of citizens, California Native American Indian tribes (Government Code Section 65352.3), public agencies, public utility companies, and civic, education, and other community groups, through public hearings or other means were implemented consistent with Government Code Section 65351.

SECTION 6: ***Planning Commission Action.*** Based upon the findings and conclusions set forth in the Sections above, the Planning Commission hereby recommends the City Council APPROVES the herein described Application, subject to each and every condition set forth in the Department reports attached hereto as "Attachment A," and incorporated herein by this reference.

SECTION 7: ***Indemnification.*** The Applicant shall agree to defend, indemnify and hold harmless, the City of Ontario or its agents, officers, and employees from any claim, action or proceeding against the City of Ontario or its agents, officers or employees to attack, set aside, void, or annul this approval. The City of Ontario shall promptly notify the Applicant of any such claim, action, or proceeding, and the City of Ontario shall cooperate fully in the defense.

SECTION 8: ***Custodian of Records.*** The documents and materials that constitute the record of proceedings on which these findings have been based are located at the City of Ontario City Hall, 303 East "B" Street, Ontario, California 91764. The custodian for these records is the City Clerk of the City of Ontario.

SECTION 9: ***Certification to Adoption.*** The Secretary shall certify to the adoption of the Resolution.

- - - - - - - - - - - - - -

The Secretary Pro Tempore for the Planning Commission of the City of Ontario shall certify as to the adoption of this Resolution.

I hereby certify that the foregoing Resolution was duly and regularly introduced, passed and adopted by the Planning Commission of the City of Ontario at a regular meeting thereof held on the 23rd day of September 2025, and the foregoing is a full, true and correct copy of said Resolution, and has not been amended or repealed.

Nicola Ricci
Planning Commission Chairman

ATTEST:

Henry K. Noh
Planning Director and
Secretary to the Planning Commission

STATE OF CALIFORNIA)
COUNTY OF SAN BERNARDINO)
CITY OF ONTARIO)

I, Gwen Berendsen, Secretary Pro Tempore of the Planning Commission of the City of Ontario, DO HEREBY CERTIFY that foregoing Resolution No. PC25-045, was duly passed and adopted by the Planning Commission of the City of Ontario at their regular meeting held on September 23, 2025, by the following roll call vote, to wit:

AYES: Anderson, DeDiemar, Gage, Lampkin, Marks, Ricci

NOES: None

RESOLUTION NO.

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF ONTARIO, CALIFORNIA, APPROVING FILE NO. PGPA23-003, AN AMENDMENT TO THE ONTARIO PLAN 2050 POLICY PLAN LAND USE MAP TO CHANGE THE LAND USE DESIGNATION OF APPROXIMATELY 5.3 ACRES OF LAND LOCATED ON EUCLID AVENUE FROM MIXED USE TO BUSINESS PARK, AND MAKING FINDINGS IN SUPPORT THEREOF— APN: 1053-281-08 (PART OF CYCLE 1 FOR THE 2025 CALENDAR YEAR)

WHEREAS, RCCD Inc. ("Applicant") has filed an Application for the approval of a General Plan Amendment, File No. PGPA23-003, as described in the title of this Resolution (hereinafter referred to as "Application" or "Project"); and

WHEREAS, the Application applies to 5.3 acres of land generally located on Euclid Avenue, approximately 300 feet north of Edison Avenue, within the Euclid Mixed Use Specific Plan district, and is presently vacant; and

WHEREAS, the property to the north of the Project site is within the Euclid Mixed Use Specific Plan district and is an SCE Easement corridor. The property to the east is within the Euclid Mixed Use Specific Plan district and is currently occupied by agriculture and dairy uses. The properties to the south are within the Euclid Mixed Use Specific Plan district and are used for recreational vehicle storage, residences, as well as vacant land. The properties to the west are within the City of Chino, within a commercial zone and are occupied by commercial and industrial uses; and

WHEREAS, the Land Use Element of the Policy Plan establishes the Project area as a Mixed Use – Great Park (MU-Great Park) land use designation. The proposed Project necessitates a modification in the existing land use designation to accommodate business park and light industrial uses. As part of this conversion, the proposed Project aims to;

- Convert 5.3 acres of Mixed Use – Great Park (MU-Great Park) to Business Park (BP) located on Euclid Avenue, approximately 300 feet north of Edison Avenue.
- Maintain 128 residential units' capacity to comply with Senate Bill 330.
- Remove the Affordable Housing overlay on 5.3 acres Project site resulting in the reduction of 128 residential units.

WHEREAS, in compliance with Senate Bill 330, in order to maintain 128 residential unit capacity, the city is moving forward with a General Plan Amendment application (File No. PGPA24-003), which proposes amending 10 acres of land within the Esperanza

Specific Plan, from Public School to Medium Density Residential, resulting in an overall residential increase of 224 dwelling units, which results in a net gain of 96 units.

WHEREAS, the Project site is identified in the Housing Element Sites Inventory, and its removal requires adjustments to maintain Housing Element and Regional Housing Needs Assessment (RHNA) compliance. The Affordable Housing Overlay identifies the buildout of 128 residential units, which includes 64 Lower-Income units, 32 Moderate-Income units, and 32 Above-Moderate-Income units.

WHEREAS, on August 16, 2022, City Council certified The Ontario Plan 2050 Policy Plan (File No. PGPA20-002) update and certified Supplemental Environmental Impact Report (SEIR) in conjunction with The Ontario Plan 2050 Update (TOP 2050; File No. PGPA20-002). On October 26, 2023, the Applicant applied for a General Plan Amendment, requesting to modify the TOP 2050 Land Use Plan for 5.3-acre Project site from Mixed Use to Business Park: and

WHEREAS, Policy Plan Exhibit LU-03 (Future Buildout) specifies the expected buildout for the City of Ontario, incorporating the adopted land use designations. The proposed changes to Exhibit LU-01 (Official Land Use Plan) as depicted on Attachment A will require Exhibit LU-03 (Future Buildout) to be modified to be consistent with Exhibit LU-01 (Official Land Use Plan) as depicted on Attachment B; and

WHEREAS, the Application is a project pursuant to the California Environmental Quality Act — Public Resources Code Section 21000 et seq. — (hereinafter referred to as "CEQA") and an initial study has been prepared to determine possible environmental impacts; and

WHEREAS, the environmental impacts of this Project were previously reviewed in conjunction with File No. PSP22-001, an application for the Euclid Mixed Use Specific Plan for which an Environmental Impact Report — State Clearinghouse No. 2023020281 — (hereinafter referred to as "Certified EIR") was adopted by the City Council on August 20, 2024, and this Application introduces no new significant environmental impacts; and

WHEREAS, the City's "Local Guidelines for the Implementation of the California Environmental Quality Act (CEQA)" provide for the use of a single environmental assessment in situations where the impacts of subsequent projects are adequately analyzed; and

WHEREAS, the Application is a project pursuant to CEQA (Public Resources Code Section 21000 et seq.), and an initial study has been prepared to determine possible environmental impacts; and

WHEREAS, Ontario Development Code Table 2.02-1 (Review Matrix) grants the City Council the responsibility and authority to review and act on the subject Application; and

WHEREAS, the Project has been reviewed for consistency with the Housing Element of the Policy Plan component of The Ontario Plan, as State Housing Element law (as prescribed in Government Code Sections 65580 through 65589.8) requires that development projects must be consistent with the Housing Element, if upon consideration of all its aspects, it is found to further the purposes, principals, goals, and policies of the Housing Element; and

WHEREAS, the Project is located within the Airport Influence Area of Ontario International Airport, which encompasses lands within parts of San Bernardino, Riverside, and Los Angeles Counties, and is subject to, and must be consistent with, the policies and criteria set forth in the Ontario International Airport Land Use Compatibility Plan ("ALUCP"), which applies only to jurisdictions within San Bernardino County, and addresses the noise, safety, airspace protection, and overflight impacts of current and future airport activity; and

WHEREAS, the proposed Project is located within the Airport Influence Area of Chino Airport, within the City of Ontario boundary, and is subject to, and must be consistent with, the policies criteria set forth in Reference I, Chino Airport Land Use Compatibility Plan (CNO ALUCP), which applies only to jurisdictions within City of Ontario, and addresses the safety, airspace protection, and overflight impacts of current and future airport activity; and

WHEREAS, City of Ontario Development Code Division 2.03 (Public Hearings) prescribes the manner in which public notification shall be provided and hearing procedures to be followed, and all such notifications and procedures have been completed; and

WHEREAS, on September 23, 2025, the Planning Commission of the City of Ontario conducted a hearing to consider the Project, and concluded said hearing on that date, voting 6-0 to issue Resolution No. PC25-045 recommending the City Council approve the Application; and

WHEREAS, on November 4, 2025, the City Council of the City of Ontario conducted a hearing to consider the Project, and concluded said hearing on that date; and

WHEREAS, all legal prerequisites to the adoption of this Resolution have occurred.

NOW, THEREFORE, IT IS HEREBY FOUND, DETERMINED, AND RESOLVED by the City Council of the City of Ontario, as follows:

SECTION 1: ***Environmental Determination and Findings.*** As the decision-making body for the Project, the City Council has reviewed and considered the information contained in the previous Certified EIR and supporting documentation. Based upon the facts and information contained in the previous Certified EIR and supporting documentation, the City Council finds as follows:

(1) The environmental impacts of this project were previously reviewed in conjunction with File No. PSP22-001, the Euclid Mixed Use Specific Plan for which a Certified EIR was adopted by the City Council on August 20, 2024; and

(2) The previous Certified EIR contains a complete and accurate reporting of the environmental impacts associated with the Project; and

(3) The previous Certified EIR was completed in compliance with CEQA and the Guidelines promulgated thereunder; and

(4) The previous Certified EIR reflects the independent judgment of the City Council; and

(5) The proposed project will introduce no new significant environmental impacts beyond those previously analyzed in the previous Certified EIR, and all mitigation measures previously adopted with the Certified EIR, are incorporated herein by this reference.

SECTION 2: ***Subsequent or Supplemental Environmental Review Not Required.*** Based on the information presented to the City Council, and the specific findings set forth in Section 1, above, the City Council finds that the preparation of a subsequent or supplemental Certified EIR is not required for the Project, as the Project:

(1) Does not constitute substantial changes to the Certified EIR that will require major revisions to the Certified EIR due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects; and

(2) Does not constitute substantial changes with respect to the circumstances under which the Certified EIR was prepared, that will require major revisions to the Certified EIR due to the involvement of new significant environmental effects or a substantial increase in the severity of the previously identified significant effects; and

(3) Does not contain new information of substantial importance that was not known and could not have been known with the exercise of reasonable diligence at the time the Certified EIR was certified/adopted, that shows any of the following:

(a) The project will have one or more significant effects not discussed in the Certified EIR; or

(b) Significant effects previously examined will be substantially more severe than shown in the Certified EIR; or

(c) Mitigation measures or alternatives previously found not to be feasible would in fact be feasible and would substantially reduce one or more significant effects of the Project, but the City declined to adopt such measures; or

(d) Mitigation measures or alternatives considerably different from those analyzed in the Certified EIR would substantially reduce one or more significant effects on the environment, but which the City declined to adopt.

SECTION 3: ***Housing Element Compliance.*** Pursuant to the requirements of California Government Code Chapter 3, Article 10.6, commencing with Section 65580, as the decision-making body for the Project, the City Council finds that based on the facts and information contained in the Application and supporting documentation, at the time of Project implementation, the Project is consistent with the Housing Element of the Policy Plan (General Plan) component of The Ontario Plan. The Project site is one of the properties listed in the Housing Elements Sites contained in Tables B-1 and B-2 (Housing Element Sites Inventory) of the Housing Element Technical Report. With this amendment request, the Regional Housing Needs Assessment (RHNA) obligations for each income category will continue to be adequately accommodated by the City's RHNA obligation and the City retains sufficient capacity to meet the Lower Income and Moderate-Income RHNA obligations, as provided in an Administrative Housing Elements Site Inventory Amendment (Zoning Administrator Decision No. ZA25-034).

SECTION 4: ***Airport Land Use Compatibility Plan ("ALUCP") Compliance.*** The California State Aeronautics Act (Public Utilities Code Section 21670 et seq.) requires that an Airport Land Use Compatibility Plan be prepared for all public use airports in the State; and requires that local land use plans and individual development proposals must be consistent with the policies set forth in the adopted Airport Land Use Compatibility Plan.

(1) On April 19, 2011, the City Council of the City of Ontario approved and adopted the Ontario International Airport Land use Compatibility Plan, establishing the Airport Influence Area for Ontario International Airport, which encompasses lands within parts of San Bernardino, Riverside, and Los Angeles Counties, and limits future land uses and development within the Airport Influence Area, as they relate to noise, safety, airspace protection, and overflight impacts of current and future airport activity. As the decision-making body for the Project, the City Council has reviewed and considered the facts and information contained in the Application and supporting documentation against the ONT ALUCP compatibility factors, including [1] Safety Criteria (ONT ALUCP Table 2-2) and Safety Zones (ONT ALUCP Map 2-2), [2] Noise Criteria (ONT ALUCP Table 2-3) and Noise Impact Zones (ONT ALUCP Map 2-3), [3] Airspace protection Zones (ONT ALUCP Map 2-4), and [4] Overflight Notification Zones (ONT ALUCP Map 2-5). As a result, the City Council, therefore, finds and determines that the Project, when implemented in conjunction with the conditions of approval, will be consistent with the policies and criteria set forth within the ONT ALUCP; and

(2) On August 2, 2022, the City Council of the City of Ontario approved and adopted a Development Code Amendment to establish the Chino Airport ("CNO") Overlay

Zoning District ("OZD") and Reference I, Chino Airport Land Use Compatibility Plan ("CNO ALUCP"). The CNO OZD and CNO ALUCP established the Airport Influence Area for Chino Airport, solely within the City of Ontario, and limits future land uses and development within the Airport Influence Area, as they relate to safety, airspace protection, and overflight impacts of current and future airport activity. The CNO ALUCP is consistent with policies and criteria set forth within the Caltrans 2011 California Airport Land Use Planning Handbook. The proposed Project is located within the Airport Influence Area of Chino Airport and was evaluated and found to be consistent with the California Airport Land Use Planning Handbook and the CNO ALUCP. As the decision-making body for the Project, the City Council has reviewed and considered the facts and information contained in the Application and supporting documentation against the CNO ALUCP compatibility factors, including Safety, Airspace Protection, Overflight. As a result, the City Council, therefore, finds and determines that the Project, when implemented in conjunction with the conditions of approval, will be consistent with the policies and criteria set forth within the California Airport Land Use Planning Handbook and the Chino ALUCP.

SECTION 5: ***Concluding Facts and Reasons.*** Based upon the substantial evidence presented to the City Council during the above-referenced hearing, and upon the specific findings set forth in Section 1 through 4, above, the City Council hereby concludes as follows:

(1) The proposed General Plan Amendment is consistent with the goals and policies of The Ontario Plan as follows:

Policy Plan (General Plan)

Land Use Element:

- LU-1.4 Jobs-Housing Balance. We coordinate land use, infrastructure, and transportation planning and analysis with regional, county, and other local agencies to further regional and subregional goals for jobs-housing balance.

- LU-1.6 Complete Community. We incorporate a variety of land uses and building types in our land use planning efforts that result in a complete community where residents at all stages of life, employers, workers, and visitors have a wide spectrum of choices of where they can live, work, shop and recreate within Ontario.

- LU-2.1 Land Use Decisions. We minimize adverse impacts on adjacent properties when considering land use and zoning requests; and

(2) The proposed General Plan Amendment would not be detrimental to the public interest, health, safety, convenience, or general welfare of the City; and

(3) The Land Use Element is a mandatory element allowed for general plan amendments per calendar year and this general plan amendment is part of the first

amendment to the Land Use Element of the 2025 calendar year consistent with Government Code Section 65358; and

(4) The Project has been reviewed for consistency with the Housing Element of the Policy Plan component of The Ontario Plan, as State Housing Element law (as prescribed in Government Code Sections 65580 through 65589.8) requires that development projects must be consistent with the Housing Element, if upon consideration of all aspects, it is found to further the purposes, principals, goals, and policies of the Housing Element; and

(5) During the amendment of the general plan, opportunities for the involvement of citizens, California Native American Indian tribes (Government Code Section 65352.3), public agencies, public utility companies, and civic, education, and other community groups, through public hearings or other means were implemented consistent with Government Code Section 65351.

SECTION 6: ***City Council Action.*** Based upon the findings and conclusions set forth in Sections 1 through 5, above, the City Council hereby APPROVES the herein described General Plan Amendment, attached hereto as "Attachment A" and “Attachment B” and incorporated herein by this reference.

SECTION 7: ***Indemnification.*** The Applicant shall agree to defend, indemnify and hold harmless, the City of Ontario or its agents, officers, and employees from any claim, action or proceeding against the City of Ontario or its agents, officers or employees to attack, set aside, void, or annul this approval. The City of Ontario shall promptly notify the applicant of any such claim, action, or proceeding, and the City of Ontario shall cooperate fully in the defense.

SECTION 8: ***Custodian of Records.*** The documents and materials that constitute the record of proceedings on which these findings have been based are located at the City of Ontario City Hall, 303 East "B" Street, Ontario, California 91764. The custodian for these records is the City Clerk of the City of Ontario.
