All development proposals within the Esperanza Specific Plan shall be subject to the implementation procedures established herein. Whenever the provisions and development standards contained herein conflict with those contained in the City of Ontario Development Code, the provisions of the Esperanza Specific Plan shall take precedence.

7.3 INTERPRETATION

Unless otherwise provided, any ambiguity concerning the content or application of the Esperanza Specific Plan shall be resolved by the City of Ontario Planning Director (Director) or his/her designee in a manner consistent with the goals, policies, purpose and intent established in this Specific Plan.

7.4 SEVERABILITY

If any portion of these regulations is declared to be invalid or ineffective in whole or in part, such decision shall not affect the validity of the remaining portions thereof. The legislative body hereby declares that they would have enacted these regulations and each portion thereof irrespective of the fact that any one or more portions be declared invalid or ineffective.

7.5 IMPLEMENTATION OF DESIGN GUIDELINES

Adoption of the Esperanza Specific Plan by the City includes adoption of the design guidelines contained herein, which shall be the design criteria by which development projects within the Specific Plan area will be reviewed during Development Plan Review. The design guidelines are intended to be flexible in nature while establishing basic evaluation criteria for the review by the City of developer projects during Development Plan Review.
Any major deviation from the design guidelines within the Esperanza Specific Plan shall require approval by the Planning Commission. The determination of a major deviation from the design guidelines shall be made by the Director.

7.6 DEVELOPMENT REVIEW PROCESS

7.6.1 Subdivision Maps

Approval of tentative tract maps may occur concurrently with the adoption of the Esperanza Specific Plan. All tentative and final tract maps will be reviewed and approved pursuant to applicable provisions of the City of Ontario Subdivision Ordinance and consistent with the applicable provisions of Land Use, Infrastructure, Design Guidelines, and Development Regulations contained within the Esperanza Specific Plan.

7.6.2 Development Plan

All development projects within Esperanza shall be subject to the Development Plan Review Process as established in Article 8 of the City's Development Code. Pursuant to these provisions, the Development Plan process constitutes a design review of project architecture, site plans, and landscape plans. Adoption of the Specific Plan by the City includes adoption of the design guidelines contained within the Specific Plan and which provide direction for the design of development projects within Esperanza. Where the Esperanza Specific Plan development regulations and design guidelines are silent, the applicable development regulations and design guidelines contained within the City's Development Code shall apply. The design guidelines are intended to be flexible in nature while establishing basic evaluation criteria for the review by the City of developer projects during design review.

All development project applications shall include a landscape and irrigation plan describing plant materials and their growth habits, plant size and spacing, methods of irrigation and landscaping maintenance, site plans, architectural elevations, floor plans, grading plans and other requirements as specified by the City.

7.6.3 Additional Entitlement Requirements

All entitlement applications shall prepare and submit a Conceptual Utilities Systems Map, Integrated Waste Management Report, and Solid Waste Handling Plan in accordance with requirements of the Development Application.

7.7 Dwelling Unit Allocations

The Esperanza Land Use Plan allocates a maximum number of dwelling units to each residential Planning Area. Variations in number of dwelling units, per Planning Area, may occur at the time of final design of the Planning Area subject to approval by the City and agreement by affected property owners/developers, depending upon the residential product identified for development. Variations in allocation of units within the Planning Areas of the Esperanza Specific Plan are permitted provided the increased number of dwelling units in a Planning Area does not exceed 15% and the maximum dwelling unit count for the entire Specific Plan area does not exceed that established for Esperanza.

1. Water and Sewer Technical Studies shall be prepared to study how the transfers change the quantity and locations of sewer and water demands and how those changes impact the Water and Sewer Master Plan Systems and local sewer and water systems.
2. If unit transfers result in net changes to the overall projected water demands, then the initializing project shall be responsible for processing an Amendment to the Water Master Plan as part of the entitlement process of Implementation.
3. If unit transfers result in net changes to the overall projected sewer demands or the sewer demands are transferred between different Master Plan Trunk Sewer Tributary Areas and Specific Plan Sewer Tributary Areas, then the initializing project shall be responsible for processing an Amendment to the Sewer Master Plan as part of the entitlement process of Implementation.

7.8 Specific Plan Modifications and Amendments

7.8.1 Minor Modifications

The following constitute minor modifications to the Specific Plan, not requiring a Specific Plan Amendment, and are subject to review and approval by the Zoning Administrator. The Zoning Administrator shall have the discretion to refer any such request for modification to the Planning Commission or the City Council.

1. Change in utility and/or public service provider.
2. Collector roadway alignment when the change results in a centerline shift of less than 250 feet.
3. An increase of more than fifteen percent (15%) in the number of units within an individual Planning Area are subject to approval of the City and agreement of the property owners, provided the total number of units for the entire Specific Plan area does not exceed that established in the Specific Plan.
4. Adjustment of a Planning Area boundary or acreage designated for a Planning Area provided the total acreage of the affected Planning Area does not increase by more than 15%.
5. Minor changes to landscape materials, wall materials, wall alignment, entry design, and streetscape design which are consistent with the conceptual design set forth in the design guidelines contained within the Specific Plan.
6. Minor changes to the design guidelines, which are intended to be conceptual in nature only, and are intended to be flexible in implementation.
7. Other modifications of a similar nature to those listed above, which are deemed minor by the Zoning Administrator, which are in keeping with the purpose and intent of the approved Esperanza Specific Plan and which are in conformance with the ~~NMC~~ Ontario Ranch General Plan.

7.8.2 Reversion of Planning Area 11 to Residential Uses

The ~~NMC~~ Ontario Ranch General Plan establishes a total residential unit allocation of ~~1,456~~ 1,652 units for the Esperanza Specific Plan. The Land Use Plan for Esperanza designates a total of ~~1,410~~ 1,491 residential dwelling units within Planning Areas 1-10 and reserves Planning Area 11, a 10.02 acre site, ~~for~~ was not purchased ~~and use~~ by the Mountain View School District (School District). ~~of an elementary school. In the event the School District does not purchase Planning Area 11 for development of an elementary school,~~ Planning Area 11 ~~may revert~~ will be converted to a Residential – Medium Density zoning district permitting development of a maximum of ~~46~~ 161 residential dwelling units subject to approval by the City of a Specific Plan Amendment. On ~~XX-XX-2020~~ 10-20-2020 a request for an increase in density for Planning Area 4, from 6.26 gross DU/AC to 14.0 gross DU/AC and an accompanying general plan amendment to increase the density from low density residential (2.1-5 DU/AC) to medium density residential (11.1-25 DU/AC) was approved, which increased the total residential allocation of ~~1,640~~ 1,652 units (~~1,594~~ 1,491 units if the school remains a school). The Environmental Impact Report prepared for the Esperanza Specific Plan has evaluated the impacts of development of Planning Area 11 alternatively for ~~46~~ 161 residential dwelling units in conjunction with the analysis of all other project related impacts. Development of Planning Area 11 for residential land uses shall be subject to all other review and administrative and discretionary approvals requirements required for residential land uses as established within the Esperanza Specific Plan.

7.8.3 Specific Plan Amendments

Amendments to the Esperanza Specific Plan may be requested by the applicant or by the City at any time pursuant to Section 65453(a) of the Government Code. Amendments shall be processed pursuant to the provisions of the Government Code for Specific Plan Amendments. In the event the proposed amendment requires supplemental environmental analysis pursuant to the California Environmental Quality Act (CEQA), the applicant(s) are responsible for preparing the necessary CEQA documentation.

7.9 VARIANCES

Variances and Administrative Exceptions to the development regulations contained in the Esperanza Specific Plan with respect to landscaping, screening, site area, site dimensions, yards and projects into yards, heights of structures, distances between buildings, open space and off-street parking and loading can be considered pursuant to Article 10, "Variances and Administrative Exceptions" of the City of Ontario Development Code.

7.10 CONDITIONAL USE PERMITS

Uses specified as conditionally permitted uses within Section 6, "Development Regulations, of the Esperanza Specific Plan shall be reviewed and approved by the City pursuant to the requirements of Article 9, "Conditional Use Permits."

7.11 COMPLIANCE WITH MITIGATION MONITORING PLAN

Certification of an Environmental Impact Report (EIR) shall be required prior to approval of the Esperanza Specific Plan. Development within the Esperanza Specific Plan area shall comply with all approved mitigation measures as described in the Mitigation Monitoring Program included as part of the Esperanza EIR.

7.12 PROJECT PHASING

Phasing of the Esperanza Specific Plan will meet the following objectives:

- Orderly build-out of the community based upon market and economic conditions.
- Provision of adequate infrastructure and public facilities as determined and deemed necessary by the City Engineer concurrent with development of each phase.
- Protection of public health, safety and welfare.
- Accommodation of continued agricultural operations within the proposed Specific Plan area.

7.12.1 Residential Development

The phasing of residential development areas will be determined by the developer. The development of residential uses will be implemented through the approval of tentative and final tract maps and development permits for each Planning Area as developed. Appropriate levels of infrastructure and community facilities shall be subject to the review and approval of the City Engineer and shall be installed and available to serve each subsequent phase of residential development as it occurs.

7.12.2 Infrastructure

Backbone infrastructure to serve all areas of Esperanza shall be installed by the developer in accordance with the City's adopted Master Plan or any approved amendments to it. Infill service mains will be installed and constructed in phases as development proceeds and conditioned by the City Engineer's office to support individual phases of development, which may require installation of offsite infrastructure improvements beyond a given phase boundary.

Grading and installation of infrastructure to serve Esperanza are anticipated to be completed in three phases. Following completion of grading and infrastructure installation, the developer will construct models for each product type within each neighborhood. Phase I will include installation of infrastructure adequate to serve Planning Areas 5-9 located south of Eucalyptus Avenue between Hamner Avenue and Mill Creek Avenue. Phase II will include installation of infrastructure adequate to serve Planning Areas 4A and 10. Phase III will include installation of infrastructure adequate to serve Planning Areas 1-4B and the Neighborhood Park. As the Specific Plan is Phased, the following minimum criteria shall be met for each Subdivision and Development of each Phase:

1. For Domestic Water, all the Master Plan, Regional and Local Infrastructure identified in Section 5 and the Conceptual Domestic Water Plan for the Water Pressure Zone that the Phase is within shall be completed as part of the Phase's infrastructure requirements. Also, any domestic water infrastructure necessary to provide primary looping, secondary looping, and meet all hydraulic criteria and fire fl ow shall be completed as part of the Phase's infrastructure requirements.
2. For Recycled Water, all the Master Plan, Regional and Local Infrastructure identified in Section 5 and the Conceptual Recycled Water Plan for the Recycled Water Pressure Zone that the Phase is within shall be completed as part of the Phase's infrastructure requirements. Also, any recycled water infrastructure necessary to provide primary looping, secondary looping, and meet all hydraulic criteria shall be completed as part of the Phase's infrastructure requirements.
3. For Sewer, all the Master Plan, Regional and Local Infrastructure identified in Section 5 and the Conceptual Sewer Plan for the Master Plan Sewer Tributary Area that the Phase is within and upstream of shall be completed as part of the Phase's infrastructure requirements. Also, any sewer infrastructure necessary to meet all hydraulic criteria shall be completed as part of the Phase's infrastructure requirements.

7.12.4 Parks

Following issuance of Certificates of Occupancy for no more than 50% of the total dwelling units within Esperanza, Park 1, the Neighborhood Park, will be developed. The timing for installation of infrastructure and utilities and the provision of public services will be determined as part of the City's approval of tentative maps or development plans. Facilities will be constructed and services made available in a timely manner as development progresses. Pocket Park 2 will be developed at the time of issuance of 50% of Certificates of Occupancy for Planning Area 5. Pocket Park 3 will be developed at the time of build-out of Planning Areas 6 and 7 combined. Pocket Park 4 will be developed at the time of issuance of 50% of Certificates of Occupancy for Planning Areas 8 and 9. Pocket Park 5 will be developed at the time of issuance of 50% of Certificates of Occupancy for Planning Area 10.

7.12.4 Community Facilities and Services

The timing for installation of community facilities and payment of impact fees for public improvements and services for the Esperanza Specific Plan will be determined as part of the City's approval of tentative tract maps in accordance with the provisions of the existing City development impact fee ordinances. Community facilities such as bike trails will be developed in conjunction with construction of the public street improvements.

7.13 APPEALS

Appeals from any determination of the City Planning Director, Zoning Administrator or the Planning Commission, may be made by the applicant or any other aggrieved party filing an application on forms provided by the City of Ontario and accompanied by the appropriate filing fee, where applicable, within ten (10) days following the final date of action for which an appeal is made. Appeals shall be processed consistent with the provisions of Article 5, "Appeals" of the City of Ontario Development Code.

7.14 PROJECT FINANCING

The financing of construction, operation, and maintenance of public improvements and facilities (the "facilities"), and public services will include funding through a combination of financing mechanisms. Final determination as to the facilities to be constructed and as to maintenance responsibilities, whether publicly or privately maintained, will be made prior to recordation of final maps. In order for the project to be fiscally self sufficient, the following financing options can be considered for implementation:

7.14.1 Facilities and Services

- Private capital investment for the construction of facilities.
- Community Facilities District (CFD) established pursuant to the Mello-Roos Community Facilities District Act of 1982, or other special district, to provide funding for the construction of a variety of public facilities and the provision of public services.

7.14.2 Operation and Maintenance

- By individual private property owner.
- By private property owners or Home Owners Association (HOA).
- By Community Facilities District (CFD) established pursuant to the Mello-Roos Community Facilities District Act of 1982, or other special district.

City Council approval is a prerequisite for the implementation and establishment of any and all special district-financing mechanisms. The use of the Mello-Roos Community Facilities District Act of 1982 (the "Act") to finance public facilities and services will be at the City's sole discretion. Moreover, the use of the Act must be consistent with the City's adopted goals and policies concerning the use of the Act.

7.15 MAINTENANCE RESPONSIBILITIES

The public and private improvements constructed within Esperanza will be maintained through a combination of public and private entities as described below and in Table 5.

7.15.1 Public Maintenance

1. All streets and sidewalks serving residential product areas RD–1 through RD–6 single family detached or attached residential will be dedicated as public streets to the City of Ontario and will be maintained by the City.
2. Landscape improvements within the public right-of-way of Master Plan streets, neighborhood edges, community and neighborhood entries, and public street lights within Esperanza shall be maintained through a landscape and lighting district or other special maintenance district established by the City for the ~~New Model Colony~~ Ontario Ranch.
3. All on site water, sewer, and storm drain facilities that meet public improvement design criteria within the public streets or easements dedicated to the City shall be constructed by the developer and, upon acceptance, shall be maintained by the City.
4. Offsite infrastructure improvements such as water, sewer and storm drain facilities will be maintained by the City. The City intends to participate in a Regional Water Quality Basin. In the event permanent on site basins are developed within Esperanza as an alternative to a regional water quality basin, such facilities shall be maintained by the HOA.
5. NPDES facilities within public streets and/or easements. Operation and Maintenance (O&M) requirements for all NPDES storm water runoff source control and treatment control Best Management Practices (BMP's) shall be identified in the approved Water Quality Management Plan for the project. An O&M Plan shall be created to ensure ongoing long-term maintenance of all structural and non-structure BMP's.

7.15.2 Homeowner Association

A Homeowner Association will be established for the maintenance of common area landscape improvements within residential areas of Esperanza. Improvements to be maintained by the Homeowner Association include: Designated private alleys and adjacent landscaping.

- Designated private streets and landscaping. During the course of maintenance of public utilities within public streets, private streets, private drive aisles, or alleys, the City will restore the streets to City standards for trench backfill, pavement repair, and hardscape or landscape, as applicable. Restoration of any enhancements above and beyond City standards, including but not limited to architectural paving, hardscape and landscape enhancements shall be the responsibility of the HOA or other entity maintaining those enhancements.
- Courts, parkways and landscaping within the residential areas.
- Parkways of Interior Local Streets including sidewalks, landscaping and street lights as well as common areas distinct to individual residential types and neighborhoods.
- Maintenance of interior local streets including landscaping and associated architectural monument elements required to restore these areas to their condition as originally installed.
- Internal slopes fronting streets and slope areas in the rear of homes.
- All internal open spaces, parks, and common areas.
- NPDES facilities within private streets and/or common areas.

	City CFD	Private Homeowners Association (HOA)	Private Homeowner	Utility Entity
Master Plan Roadways (Bellegrave Avenue, ~~Milliken~~ Hamner Avenue, Mill Creek Avenue, ~~Merrill~~ Eucalyptus Avenue)	●			
Interior Public Project Streets (curb to curb for primary entry streets, secondary entry streets, and neighborhood streets)	●			
Parkways of Master Plan Roadways and Neighborhood Edges (curb to perimeter walls, including landscape, sidewalks and street lights)	●			
Parkways of Interior Project Streets (landscaping and sidewalks)		●		
Traffic Signals and Street Lights	●			
Traffic Control Signs	●			
Alleys and Drive Aisles		●		
Interior Streets within Single Family Attached (Multi-Family) Developments		●		
Off -site and In-Tract Water, Sewer, and Storm Drain Improvements (only those facilities in public roads and those in private streets within public utilities easements that meet public improvement design criteria)				●
On-site water, sewer, and storm drain improvements (improvements that are: private, laterals, and lines behind meters and /or DCDAs, improvements serving only one lot/parcel, not within public or private roads, not within public utility easements, or not meeting public improvement design criteria)		●		
Neighborhood Park		●		
Pocket Parks		●		
Linear Parks		●		
Private Recreation Areas		●		
Front Yard and Corner Streetside Landscaping for Single Family Detached Areas RD-1 through RD-4			●	
Front Yard and Corner Streetside Landscaped Areas RD-5 through RD-8		●		
Community Theme Wall on Master Planned Roadways (outside face for graffiti removal and paint)	●			
Community Theme Wall on Master Planned Roadways: Surface (interior) opposite streetside (structural integrity and face repair)		●		
Private Interior Yard Walls		●	●	
Alley Landscaping and Lighting		●		
Police and Fire	●			
Electricity and Natural Gas				●
Communication Systems	●			●
NPDES Facilities (onsite) W.Q.M.P. (1)	●			
NPDES Facilities/Interim Detention Basin on Private Property		●		

NOTES:

(1) Only those facilities in public roads and/or easements, including restoration work following public street repair.

TABLE 5
Maintenance Responsibilities

SECTION 8. DESIGN GUIDELINES

8.1 INTRODUCTION

On a sunny morning in the fall of 1882, George Chaffey stands on a mesa between the floodwater washes of Cucamonga Canyon to the east and San Antonio Canyon on the west, gazing at the country directly in front of him lying at the foot of snow-capped Old Baldy, beneath the Sierra Madre Mountain Range. Having little capital, George would rely on his powers of leadership and vision and, at that moment, would throw his heart and soul into the new colonizing movement sweeping Southern California. With help of his brother William and surveyor J. C. Dunlap, he would purchase 6,218 acres and design what would become the "City of Ontario," named after his former home in Ontario, Canada. His vision of a model colony featured the first reclamation irrigation system, abundant electricity power and a beautiful parkway that captured the imagination and interest of people throughout the world. His vision was one of hope for a great community. "Esperanza," which means "hope" in Spanish and accurately describes the original vision intended for the "new" Ontario.

Ontario is a thriving city today, although the orchards and packing houses have since given way to new landmarks such as Ontario Mills, Ontario Convention Center and Ontario International Airport. Hundreds of new businesses have discovered that Ontario is "The Gateway" to Southern California, conveniently located 35 miles east of Los Angeles, and easily accessible to I-10, I-15 and I-60 freeways.

Ontario spans nearly 28,000 square miles, with a population of over 168,000, and is one of Southern California's fastest growing cities. Ontario's sun-belt mild weather and 312 days of sunshine, allows you to enjoy the many parks as well as the nearby mountains, beaches, and deserts. The world-class Empire Lakes Golf Course, designed by Arnold Palmer, will challenge the avid golfer. The wine aficionados will love sampling California's finest at Galleano Winery, Joseph Filippi Winery, and Vineyards.

8.2 DESIGN GUIDELINES FOR ARCHITECTURAL CHARACTER

Architectural design should provide for high quality neighborhoods.

- Residential project design should consider the total context of the site with the incorporation of appropriate scale and proportions of building massing and details.
- The use of transitional spaces between common and private areas such as entry courtyards, private patios, low walls, and porches is encouraged.
- The variation of both front and rear building setbacks should be implemented to create visual variety.
- The variation of garage placement on adjacent lots is encouraged to provide a more diverse street scene.
- Residential structures should be varied in massing and articulation to provide visual interest.

Neighborhoods should be sustained over time.

- Architectural design themes should reflect historic Southern California styles.
- The use of natural indigenous building materials and colors is encouraged.
- Structures should incorporate genuine architectural details and decorative features.
- Architectural design should relate to human scale.
- The location of doors and windows should consider indoor/outdoor relationships to create intimate and secure spaces.
- Architectural designs should create a cohesive community without dominating the overall street scene.

Building design should be sensitive to climatic conditions and context.

- Building elevations should consider sun orientation by including shaded and sheltered areas.
- Variation of architectural designs should include methods of protection from inclement weather.
- Residential structures should be compatible with, and responsive to, the environmental setting.
- Building designs should incorporate spaces that encourage outdoor use to take advantage of temperate climatic conditions.

Architectural design should incorporate materials and techniques that are cost effective.

- The use of building materials should reflect the implementation of efficient construction methods.
- Building elevations should include compatible window and doors sizes that create a consistent design theme.
- Construction techniques should incorporate the use of standard components and dimensions.

Varied floor plans and elevations in single-family detached residential architectural packages should be incorporated as follows:

Reverse elevations and floor plans are considered as a separate elevation and floor plan. Reverse floor plans and elevations are considered as a separate floor plan and/or elevation for purposes of implementing the table below.

Diversity is a fundamental guiding principle at Esperanza. This ensures that neighborhoods are varied and that blanket uniformity is avoided.

Builders are required to produce a minimum of two styles for a 3-plan design program, and three styles for a 4-plan or more design program.

Number of Dwelling Units	Number of Differing Floor Plans and Elevations
5-10	As required by Planning Commission
11-25	2
26-50	3
51-75	3
76-100	4
Over 100	4; +1 additional floor plan with 4 elevations for each additional 50 units exceeding 100

8.3 Architectural Context

The original model colony of Ontario has a rich agricultural legacy of farming including citrus orchards, grape vineyards and alfalfa fields. Typical of Southern California farming communities, Ontario has a variety of traditional architectural styles. Western European and East Coast architectural details and forms were incorporated into the farm houses and local styles evolved from Country French and Tuscan styles and new interpretations of Monterey, Traditional, Craftsman and Ranch styles were erected. Architectural styles, elements and massing were reinvented utilizing available indigenous building materials. Plan designs and elements such as window sizes and proportions were modified to address local climatic conditions which were warmer and drier. Materials were plaster, stucco and siding with brick, stone or other masonry accent materials. The sunny Southern California climate allowed year round use of outdoor spaces and inspired covered porches and balconies.

Southern California was also influenced by Spanish architectural styles brought to the region by Spanish settlers and missionaries. These homes were well suited for the temperate climate of Southern California. The architectural theme for Esperanza is based upon these historical styles found in Ontario and the architectural styles have been selected in order to be reflective of older neighborhoods of historic Ontario.

Each architectural style outlined in these guidelines should be detailed with elements that represent the authentic character of that particular style.

Together the styles should be designed to create a neighborhood character that will be sustainable over time. Each home should contribute to the architectural character of the neighborhood. Design elements such as porches, recessed windows, architectural details and accents, alternate garage configurations / orientations, covered balconies, and articulated elevations are encouraged to enhance individual homes and to promote the overall neighborhood character.

8.3.1 Residential Design Objectives

- Interpret architectural styles that are authentic and reflect the historical character of the region.
- Emphasize styles of architecture that are compatible, yet vary enough to create interest and diversity.
- Create visually interesting neighborhood streets by varying elevation and floor plan plotting.
- Utilize authentic materials and colors that reinforce the overall design theme.
- Emphasize front elevations that relate strongly to the street and contribute to the livability of that realm.
- Provide alternative garage configurations.

The Esperanza Design Guidelines are to be used as a tool to ensure the character and design quality anticipated for the Community. The Guidelines express objectives and approaches rather than formulas and standards, allowing certain architectural creativity and flexibility. The images and sketches illustrated in the Guidelines are intended to be conceptual in nature and are to be used as general visual aids in understanding the basic architectural design intent of Esperanza. They are not meant to depict specific floor plans or architectural elevations.

These Guidelines are organized into the following sections:

- Architectural Styles
- Massing Principles
- Materials & Detailing
- Home Types
- Landscape Design

8.3.2 Architectural Styles

The architectural character within each neighborhood shall consist of complementary traditional architectural styles. The materials and colors of these home styles shall complement the overall neighborhood design.

Architectural styles within each neighborhood and product area within each neighborhood should be compatible with one another and blend with the character of each neighborhood.

Within cluster court style residential products, a consistent architectural style shall be used throughout the individual cluster.

Acceptable architectural styles within Esperanza include:

- Country French
- Tuscany
- Monterey
- Spanish Colonial
- Craftsman
- Traditional
- Western Ranch

The styles selected share similar design attributes and have been selected in response to the following considerations:

- They have a historic relevance to the region.
- They are compatible and complementary.
- They can be interpreted in a variety of ways.
- They are generally accepted by the market.
- They can be constructed using current building materials and methods.

Note: Additional styles proposed by the homebuilder must be submitted to, and approved by, the City of Ontario. Builders may submit home designs using alternative architectural styles that meet the design objectives of the specific plan, provided they are appropriate to the region and compatible with the character of Esperanza.

8.3.2.1 Country French

History and Character:

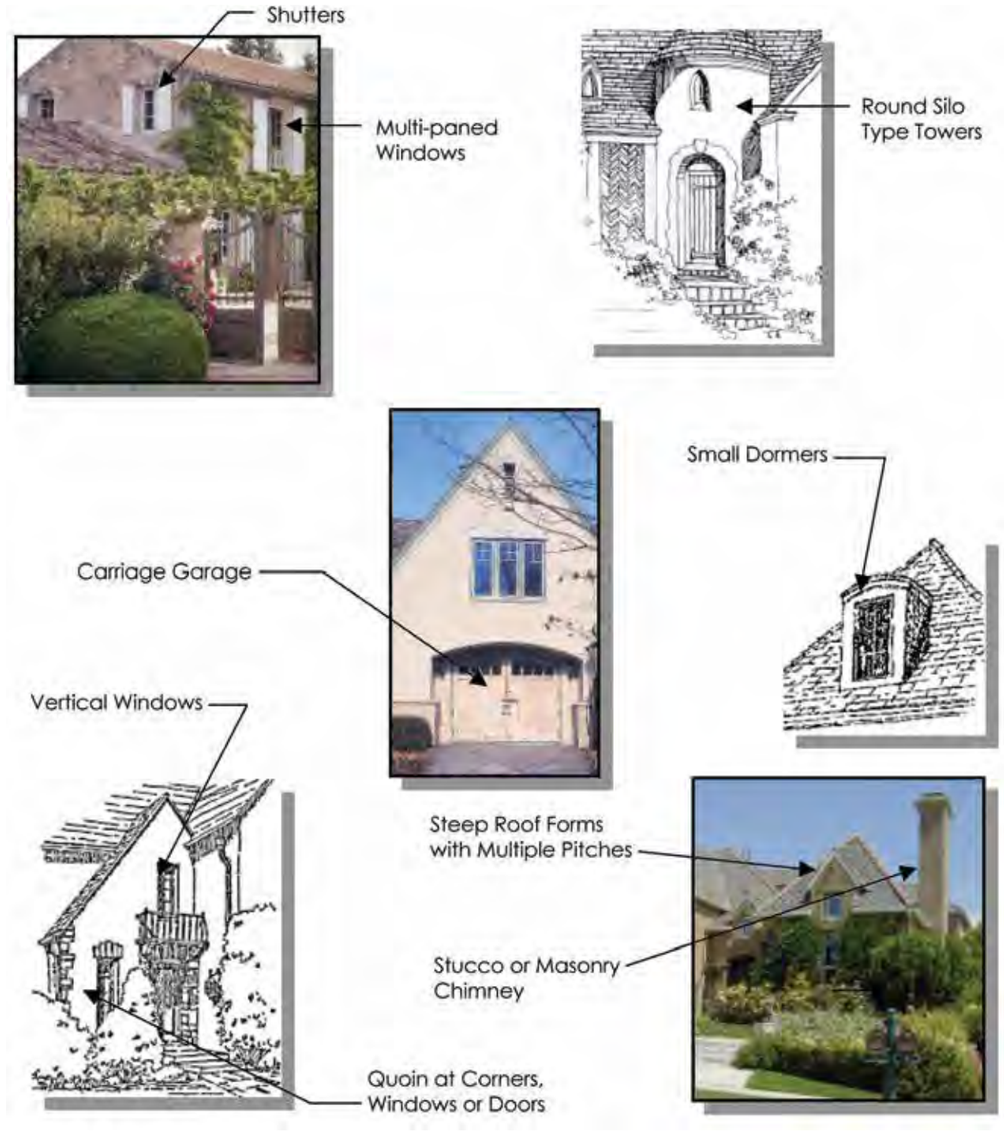
French Country architectural style is based upon early American interpretations of French Medieval architecture that made their way across the United States from the Mississippi regions around the turn of the century. Usually taking the form of larger manor homes and estates, this architectural style was adapted to fit smaller rural homes. The French Country style conveys a romantic and picturesque architecture. American interpretations include houses with simple forms with steeply-pitched roofs.

Massing:

- Simple massing with asymmetrical forms and gable roofs.

General Materials:

- Stucco finished walls.
- Deep recessed accents.
- Vertical windows.
- Simple detailing.
- Stucco or masonry chimneys.
- Decorative chimney caps.
- Carriage garage doors or roll-up doors with a variety of panel patterns to reflect architectural style.



Country French

Roof Materials and Forms:

- Small dormers.
- Steep roof forms with multiple pitches.
- Gable roof forms, accented with flared roof treatments.
- Large, simple roof planes. • Gable end venting in various styles.
- Rooflines may extend below window.
- Extended roof overhangs.
- Flat concrete tile to simulate slate materials.
- Round silo type towers.

Detail Elements:

- Decorative shutters.
- Wood balcony railings.
- Deep recessed windows.
- Multi-paned windows.
- Quoin at corners, windows or doors.

8.3.2.2 Tuscany

History and Character:

Tuscan-inspired homes began appearing at the turn of the 20th Century in Southern California as an interpretation of the picturesque movement in art where the architecture was less formalized and more responsive to the natural environs. Arranged building forms of predominantly stucco and stone with tile roofs reflecting the architectural styles of Northern Italy took root in informal plan arrangements and massing.

Massing:

- Simple massing with assembled forms and varied roof forms.

General Materials:

- Stucco finished walls and columns.
- Large, simple roof planes.
- Extended roof overhangs.
- Wood posts or masonry columns.
- Simple stucco chimneys.
- Decorative columns accents.
- Simple wrought iron, metal railings and details.
- Shutters as occasional accent.
- Deep recessed openings.
- Covered patios /porches.

Roof Materials and Forms:

- Tile hipped roofs.
- Low-pitched roofs.
- Stucco eave details or wood corbeled rafter tails.
- Gable end roof vents with decorative stucco accents.
- Gables and appropriate hip roofs.
- Shallow sloped, concrete 'S' tile roofs.

Detail Elements:

- Barrel/S-Tile roof.
- Varied stucco finish.
- Shallow pitch roof.
- Exposed rafter tails.
- Arched openings.
- Recessed windows.
- Wrought iron accents below windows.
- Vertical proportioned or arched windows.
- Balconies opened or roofed.
- Decorative brackets below roof overhangs.

Tuscany

8.3.2.3 Monterey

History and Character:

The Monterey style is a combination of Spanish construction methods and the basic two-story Eastern Colonial house. The wooden second story enabled single story Spanish Adobe homes to be developed as two story homes. Cantilevered balcony elements defined the front of the house which originally used adobe wall construction. Exposed rafters, gable or hipped roof, simple wood posts and side chimneys that anchor one end of the house, accompany the balcony as Monterey design elements.

Massing:

- Simple, straightforward rectangular or "L" shaped building forms.
- Cantilevered balcony and covered colonnades.

General Materials:

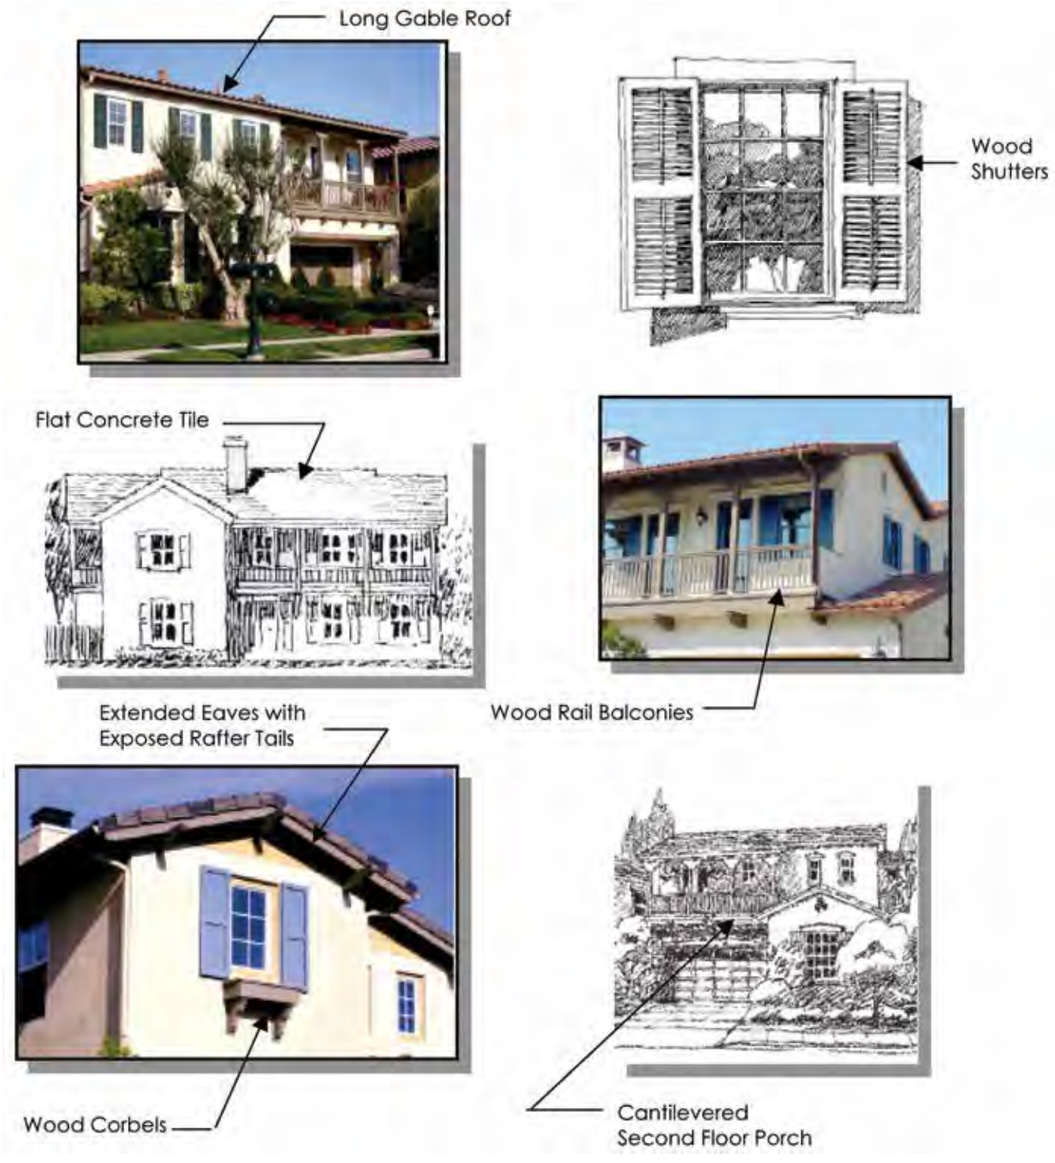
- Stucco on first level.
- Siding on second floor.
- Use of brick or stone on first level.
- Shutter accents.
- Wood or stucco trim.
- Brick and siding used to accent stucco forms.

Roof Materials and Forms:

- Flat concrete tile.
- Simple forms with low pitch.
- Gable forms are predominant. (Long gable roof)
- Tight rake ends.
- Extended eaves with exposed rafter tails.

Detail Elements:

- Wood balcony railing.
- Recessed windows, single hung.
- Wood corbels.
- Accent shutters.
- Cantilevered second floor porch.



Monterey

8.3.2.4 Spanish Colonial

History and Character:

Spanish Colonial homes are an adaptation of the Mission Revival style, reflecting features such as strong form and mass, plain wall surfaces, and tile roofs. The Spanish Colonial style is often characterized by a semi-formal plan arrangement such as a courtyard design.

Massing:

- Simple massing and forms and varied roof forms.

General Materials:

- Stucco finished walls.
- Wood / stucco columns.
- Decorative stucco chimneys.
- Round arches.
- Decorative columns and trim.
- Ornate wrought iron railing and accents.
- Wood shutter accents.
- Thick walls.
- Deep recessed openings.
- Stucco or tile details at gable ends.

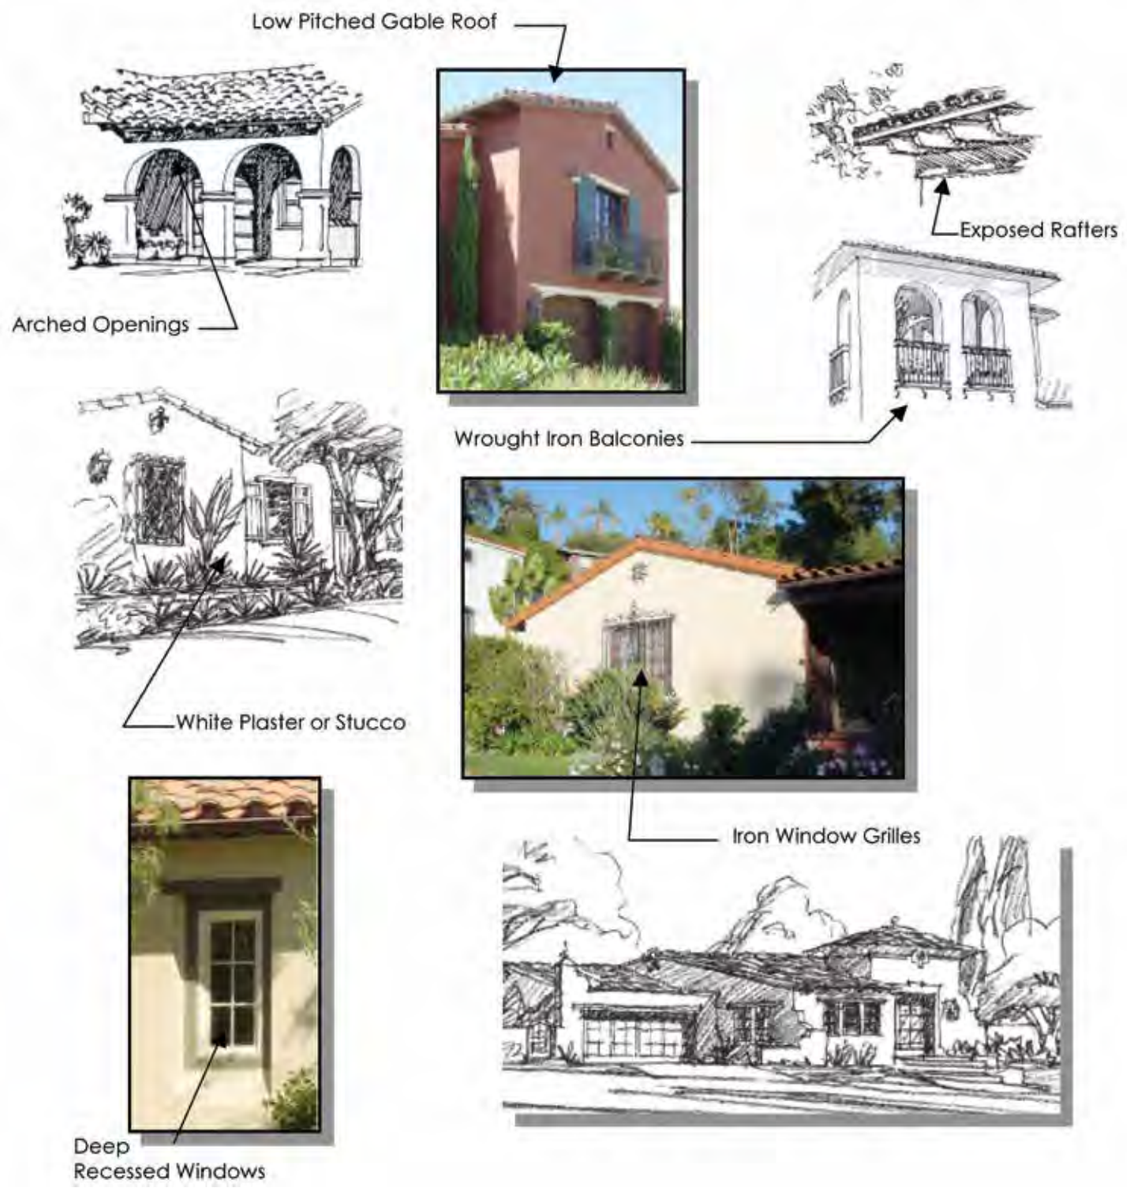
Roof Materials and Forms:

- Low-pitched roofs, with minimal overhang.
- Tight rake ends.
- Extended eaves with exposed rafter tails.
- Gables and hip roofs typical.
- Shallow sloped, concrete 'S' tile roofs.

Detail Elements:

- S-Tile roof.
- Arched window/door openings.
- Recessed window.
- Ornamental wrought iron details.
- Vertical proportioned windows.
- Wrought iron window. Grilles on windows.

Section 8. DESIGN GUIDELINES



Spanish Colonial

8.3.2.5 Craftsman

History and Character:

The Craftsman style home evolved from the late 19th century American Arts and Crafts movement. These moderately detailed buildings are characterized by the use of handcrafted architectural elements and details. Broad open porches, low sloping roofs, deep overhangs, multiple gables, trellis features, oversized first floor windows, expressive trim, rafters, brackets, and wood columns with masonry bases characterize the Craftsman style.

Massing:

- Horizontal proportions simple massing often asymmetrical at the second level.

General Materials:

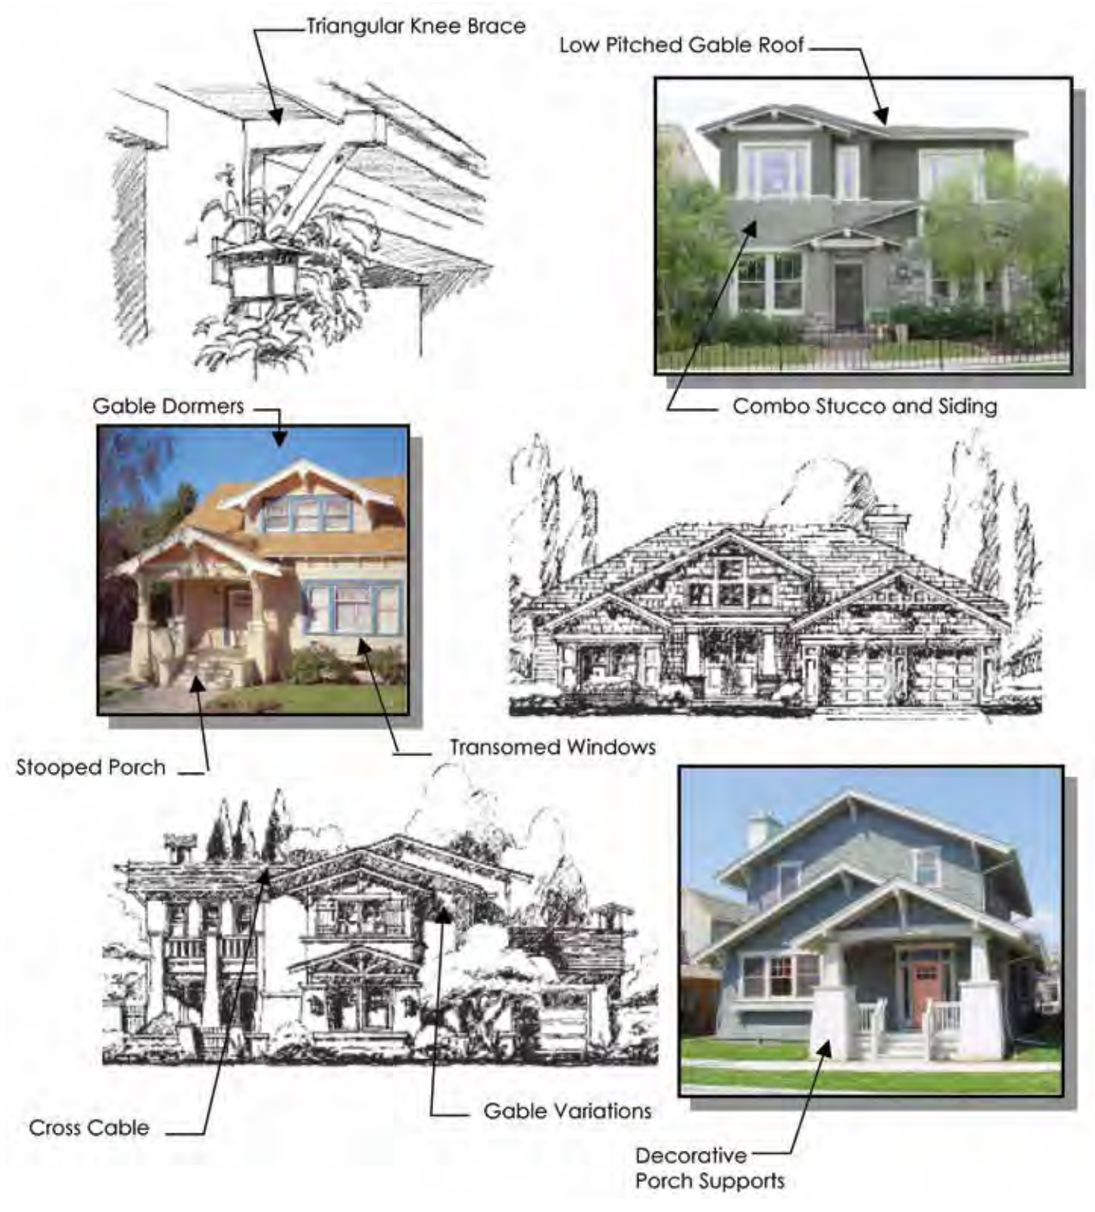
- Simple roof lines with wide projecting gables.
- Covered entry and roofed porches.
- Deep, broad porch elements.
- Expressive structural elements such as rafters, posts, and columns.
- Use of wood, stone or brick at porch columns typical.
- A mixture of materials such as stucco, stone, brick and shingle siding.
- Asymmetrical window and door compositions.

Roof Materials and Forms:

- Predominantly low-pitched gabled roofs, occasional hipped or shed roofs.
- Shallow-pitched roofs with deep overhangs.
- Roof dormers.
- Flat concrete tile or architectural grade asphalt shingle.
- Variation of the gable roof (i.e.: cross gable).

Detail Elements:

- Large gables
- Low pitch roofs with flat concrete tile.
- Windows with accent mullions.
- Exposed rafters and outlookers, triangular knee brace.
- Decorative gable vent detail.
- Decorative porch supports and railings.
- Transomed Windows.



Craftsman

Section 8. DESIGN GUIDELINES

8.3.2.6 Traditional

History and Character:

The Traditional style is based on classical design principles established the American Colonial period and interpreted or blended with the Prairie and Bungalow regional styles. Massing is horizontal in appearance with vertical proportioned windows and door surrounds. Front porches are common. The houses are composed of simple forms with centered entry elements over the front door.

Massing:

- Simple, symmetrical massing.
- Typical two story rectangular masses with added one-story elements such as porches forming more complex building configurations.

General Materials:

- Symmetrical and asymmetrical composition of doors and windows are common.
- Simple classical details such as columns.
- Siding or stucco with brick veneer accents.
- Front porches with wood columns and railings.
- Porches that extend length of the front elevation.
- Stone and brick veneer.

Roof Materials and Forms:

- Medium roof pitch with pitched roof dormer.
- Shallow roof pitch used over the porch.
- Flat concrete roof tile.
- Dormers reinforce symmetrical elevations.
- Bay windows and shed roofed elements added to simple building forms.
- Cupolas, weather vanes and other decorative roof ornamentations.

Detail Elements:

- Symmetrical or centered entry feature.
- Shutters accented with color.
- Columns at entries and porches.
- Roof dormers.
- Stooped porches.

Traditional

8.3.2.7 Western Ranch

History and Character:

The Western Ranch style is reminiscent of the early ranchers and farmers of Southern California. The Ranch Style evolved regionally in response to available building materials and environmental considerations. The distinctive porch covered terrace elements are a natural response to the temperate Southern California climate. Ranch style homes utilized simplified architectural details inspired by Spanish Colonial, Colonial and Monterey architecture.

Massing:

- Simple horizontal massing and rectilinear forms.

General Materials:

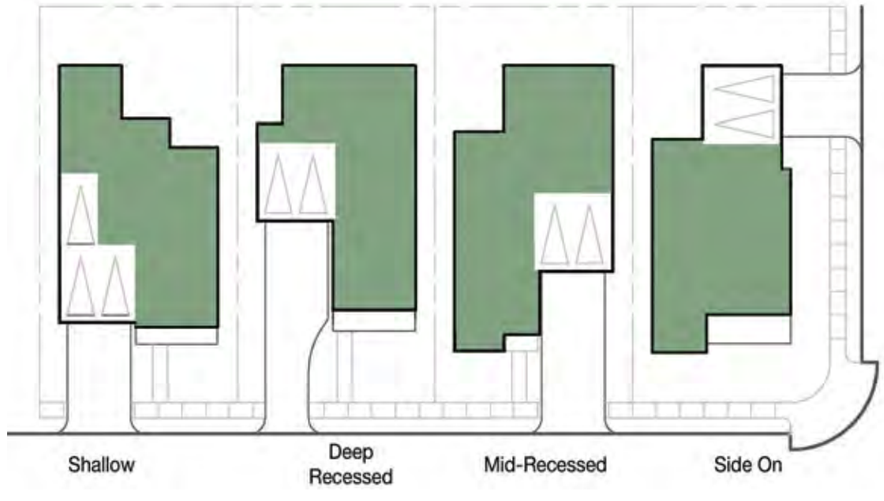
- Stucco, board and batten, and horizontal siding.
- Porches along front and rear elevations with a shallow roof break.
- Decorative shutters at windows.
- Wood window trim surrounds.
- Simple column and railing detailing.
- Substantial (8" x 8" min.) wood columns.

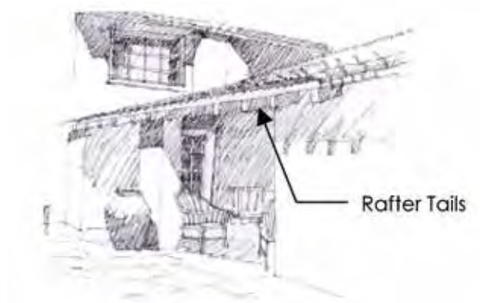
Roof Materials and Forms:

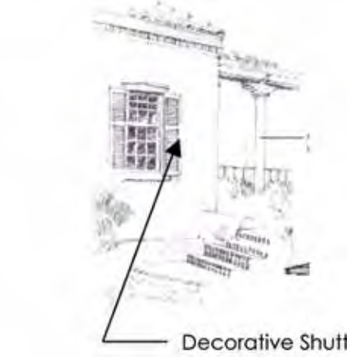
- Horizontal gable roofs with medium pitch and deep overhangs.
- Porches with shallow roof pitch.
- Gabled dormers.

Detail Elements:

- Corbeled wood columns.
- Heavy rafter elements.
- Simple accent shutters.
- Minimum 8" x 8" wood posts.







Western Ranch

8.4 Massing Principles

This section provides suggestions for creating neighborhoods and street scenes that have a variety of building forms that are proportionate to a human-scale and inviting to the pedestrian.

General Elements:

The general elements of building massing include:

- Front Articulation.
- Rear Articulation.
- Garage Placement.
- Roof Form.
- Balconies and Projections.
- Building Offsets/Variable Setbacks.

Objectives:

- Incorporate single-story elements.
- Avoid large flat two-story walls.
- Minimize two-story dominance on street scene, sidewalks and open spaces.
- Vary building setbacks along the street.
- Minimize visual impact of garages.

8.4.1 Front Articulation

Intent:

The front elevation of the home is an important element in creating a quality community at Esperanza. Close attention will be placed on the elevations and how they address the streetscene. Emphasis on location and entry designs, living areas and garages will provide a special street appeal. Emphasis on a variety of building massing will create a diverse street scene.

Guidelines:

- Building massing should reflect the architectural style.
- Massing elements should project enough to avoid elevations that appear to be "tacked on."
- Building details such as doors and windows should be in proportion to the overall massing.
- Building form is encouraged to reflect the interior uses of the home.
- Front elevations for two-story homes should incorporate a single-story element.
- Recessed two-story elements should create human-scale buildings.
- All homes should have at least two plane variations (excluding the garage) in front elevation massing.

8.4.2 Rear Articulation

Intent:

Special attention shall be given to the design of those dwellings adjacent to, or in close proximity of, major community roadways, common areas, open spaces, or entry features. Whether viewed from distant or close range, massing requirements will be implemented to ensure positive community character in these conditions. Generally, repetitious elements such as similar building profiles and continuous gable ends are to be avoided.

Guidelines:

- Architectural massing and articulation should be consistent with the style of the home.
- Plans shall incorporate projections and/or offsets that extend from the main wall lane.
- Vertical and horizontal plane breaks are encouraged.
- Homes directly adjacent to arterial roadways, collector roads, entry drives, common areas, and open spaces should be given particular attention in their rear articulation, contributing positively to these edges.

8.5 Garage Placement

Intent:

The configuration, location and orientation of the garage on the lot are integral design elements, both for the composition of the home and its contribution to the streetscene. Deemphasizing the garage is important in order to maintain the overall community design. Emphasizing the living areas of the home as they address the street will achieve this goal.

Placing living areas forward promotes social interaction and facilitates 'eyes on the street' for neighborhood security, while at the same time establishing neighborhood orientation to the pedestrian instead of the automobile.

Guidelines:

- Garage door patterns should vary among elevation types and reinforce the architectural theme of the home.
- Standard 3-car garage configurations are discouraged.

8.5.1 Garage Treatments

The home and the yard rather than the garage must be the primary emphasis of the elevation as seen from the street. Each plan shall incorporate one of the garage design techniques listed below and each parcel shall include at least two of these techniques to reduce the emphasis on the garage; and therefore, enhance the variable massing of the streetscene.

8.5.1.1 Shallow Recessed Garages

Setting the garage back a minimum of three feet in relationship to the front of the house/ or porch is intended to reduce the overall visual mass of the garage. The number of homes with shallow recess garage configurations shall be limited to 25% of the total number of units in each builder package.

8.5.1.2 Mid or Deep Recessed Garages

Setting the garage back to the middle or rear of the lot. This design treatment is intended to expose more living space areas toward the street, further reducing the visual impact of the garage along the street.

8.5.1.3 Alley Loaded

The use of the alleyways locates garages off a main loop road and creates a more traditional streetscene, with the fronts of the houses facing the street.

8.5.1.4 Split Garage

This treatment de-emphasizes the garage by reducing the length of the continuous door. Typically a one car garage and a one or two car garage are split to provide a variation in the appearance of the home. The single car garage elements in this split condition may option into living space that further enhances the streetscene by replacing the garage door with windows.

8.5.1.5 Tandem Garage

This garage layout de-emphasizes the third garage by concealing it behind a standard two-car garage condition. The tandem space is located so that it may option into living space. The two car garage is typically either shallow or deeply recessed into the lot and incorporated into the architecture of the home.

8.5.1.6 Setbacks

A varied setback is encouraged along the street frontage. Refrain from strict compliance to the minimum garage setback so as not to contribute to a repetitious and monotonous appearance along the street.

Where garages are adjacent to one another at common property lines, a two-foot minimum difference in setbacks shall occur.

8.6 Accessory Structures

Intent:

Accessory structures should be designed to reinforce the architectural style of the primary residence.

Guidelines:

- Detached structures, such as casitas, pool cabanas and guest quarters associated with the single-family lot shall be designed to match the style, detail, roof material/pitch and massing criteria of the primary home.
- Detached garages, storage buildings and outdoor sheds should incorporate design features, materials and colors compatible with the primary home.

8.7 Roof Form/Pitch

Intent:

- Roof form is another important design element as it relates to the character of the community, observed from both the external edges and inside the neighborhood.
- Variety of roof form along streets creates a positive visual edge.
- Appropriate massing of roof forms helps to create human scale architecture to the street.

Guidelines:

- Roof forms/pitch should reinforce the architectural style of the homes.
- Roofs shall be composed of a series of simple roof forms.
- Primary roof forms should be gable or hip designs.
- Roofs shall vary in massing along street scene and open spaces.
- Changes in the primary roof (ridge) orientation are encouraged.
- Flat roof elements should be minimized and incorporated only if appropriate to the architectural style.

8.8 Balconies And Projections

Intent:

As part of the overall design of a two-story dwelling, balconies and projections provide relief and interest at the second story. Balcony projections shall be consistent with the architectural character of the home. Additionally, these elements create ideal outdoor spaces.

8.9 Building Offsets/ Variable Setbacks

Intent:

Quality neighborhood design orients the 'living' areas of the home towards the street. To encourage this orientation, alternative setbacks are allowed for living areas as measured from the back of walk.

The development standards for each planning area/home type including building setbacks are established by the Esperanza Specific Plan. Additionally, building offsets or variable setbacks for both living and garages are encouraged to create variety in street scenes.

Guidelines:

- Setbacks shall be appropriate and proportionate to the housing type and lot size.
- Front setback should be varied along the street. A front offset of a minimum of two feet (2') is encouraged between the front walls of adjacent homes.
- Edge conditions such as homes backing to collector roads and back-to-back homes should incorporate variable rear setbacks to create variety.

8.10 Materials and Details

Architectural materials and detailing are central elements to creating quality communities. Appropriate focus should be given to the architectural details and the design of the details and architectural elements of the home.

General Elements:

The general elements comprising the materials and details of a building are:

- Wall Materials/Finishes.
- Doors and Windows.
- Roofing Materials and Slope.
- Fascias, Eaves and Rakes.
- Accent Materials.
- Exterior Colors.

8.10.1 Wall Materials/Finishes

Approved Materials:

- Board and batten siding.
- Cement plank siding.
- Stucco.
- Exposed masonry walls (brick, slump block, etc.)
- Stone, brick, brick veneers (accent materials).

Approved Finishes:

- Stucco finishes appropriate to the architectural style of the home.
- Smooth or sand finishes are encouraged. Heavy or Spanish Lace stucco finishes are prohibited.

Guidelines:

- Building materials should reflect the architectural style of the home.
- Siding materials should be wrapped beyond front elevations and should terminate at an inside corner or extend to the location of the lateral fence.
- Masonry elements and accents should reflect building forms and not appear as an applied veneer.
- Footings shall be exposed no higher than six inches (6") above finished grade.

8.10.2 Accent Materials

Accent materials promote individuality in each home and ensure diverse character within the neighborhood. Accents can be used to reinforce the architectural theme of the home.

Guidelines:

- Accent materials should complement the overall color and style of the home.
- Accent materials shall terminate at inside corners and be wrapped to coincide with an architectural element.
- Accent materials may terminate at location of the lateral fence or at logical end.
- Architectural trim applied to all elevations should be consistent with front elevation of the home.

8.10.3 Doors and Windows

The design and detail of the doors and windows on a home reinforce the architectural style and are key elements in the composition of the exterior elevation of the home.

Guidelines:

- Door designs shall be consistent with the architectural style of the home.
- Doors should be protected by porch elements or recessed entries.
- Garage and entry door design shall be appropriate to the style of the home.
- Maximum garage door height shall be eight feet (8').
- Garage doors should be recessed a minimum of twelve inches (12") from building plane.
- Alignment and proportions of windows shall be appropriate to the architectural style of the home.
- All windows (including garage door windows) are to be consistent with the architectural style of the home.
- Divided light windows are encouraged in keeping with the architectural style.
- Highly reflective glazing is not permitted.
- Window details such as shutters, trim surrounds, window boxes and window recesses are encouraged in keeping with the architectural style.

8.10.4 Roofing Materials and Details

Roofing materials as well as roof forms, pitch and design details are integral elements that reinforce the intended architectural style of the home.

Proposed roofs should be reflective of the architectural style of the home.

Attention should be given to address the context of the roof of each home relative to the adjacent homes along the street.

Approved Roofing Materials:

(Subject to compatibility with the intended architectural style)

- Concrete tile (flat or curved profile)
- Clay tile
- Slate
- High profile composition shingle (3-Dimensional)

Prohibited Roof Materials:

- Wood Shake
- Wood Shingle
- Low Profile Asphalt Composition
- Corrugated Metal

Guidelines:

- Roof materials and roof pitches need to be selected to reinforce the architectural style.
- Standing seam metal roofs painted in non-reflective neutral colors are allowed in appropriate architectural styles.
- Avoid repetition in continuous gable-ends and similar ridge heights.
- Skylights are not allowed on the sloped roofs of the front elevations of the building.

8.10.5 Roof Options

8.10.5.1 Eaves, Fascias and Rakes

Guidelines:

- Eave, fascia and rake proportions are to be appropriate to the architectural style.
- Larger eave overhangs provide opportunities for shading and should be used in appropriate architectural styles.
- Exposed rafter tails shall be a minimum of four inches (4") in thickness.
- Wood fascias and rafters shall be painted or stained to reinforce the style of the home.
- Attention shall be given to rake return detail.

8.10.5.2 Color

Intent:

Home colors are important to establishing a blended community at Esperanza, yet they should give the impression that each home was designed on its own.

Appropriate color selections make each home unique, but still look natural and in place in the neighborhood context.

Guidelines:

- Diversity of color is encouraged.
- Color shall contribute to distinguishing the overall architectural style of the home.
- Colors should reflect the natural hues found in Southern California.
- Color and hue variation in adjacent homes shall be provided to create neighborhood diversity.

8.10.6 Additional Design Elements

Intent:

Design elements that are utilitarian in nature should be designed as integral features that support the intended architectural style.

Guidelines:

- Exposed gutters and downspouts shall match roof or wall color.
- Faux copper patina is acceptable.
- Rooftop mechanical equipment is prohibited.
- Air conditioning/heating equipment shall be screened from the street and neighboring views and shall be ground mounted.
- Pool, spa, and water softening equipment shall be screened from neighboring views.
- Meters shall be screened from public view to the extent possible.

8.11 HOME TYPES

A variety of housing types, utilizing an architectural program composed of detached and attached housing, are offered at Esperanza. This diversity ensures a range of choices and a mix of homes within each neighborhood. Residences ranging from attached row townhomes and motorcourt townhome/condominiums to alley loaded and traditional single family homes along with innovative home types such as "two-pack" homes and courtyard homes, shall be articulated in traditional architectural styles. Providing a variety of housing programs allows homeowners the opportunity to move-up within the community as their lifestyles and needs change over time.

All project sites shall be designed to meet all the Integrated Waste Department's requirements, including the requirements for Sizing of Storage, Locations of Collection Area, Accessibility for Collection Vehicles and Collection of Sorted/ Diverted Waste Types.

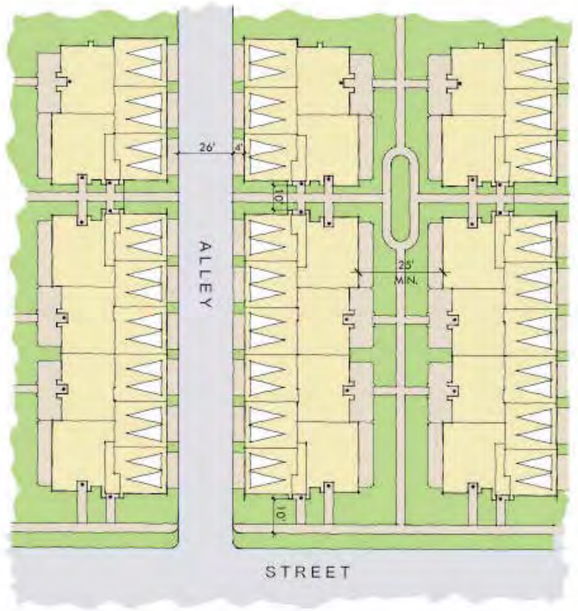
The following pages provide graphic and written information that describes the general appearance of each anticipated home type. Future homebuilders within Esperanza should use these descriptive pages as a guide when designing the home type designated for the appropriate planning area.

THIS PAGE WAS INTENTIONALLY LEFT BLANK.

8.11.1 Row Townhomes

ROW TOWNHOMES

- Neo-traditional design places garages onto alleys, hidden from streets.
- Grid street pattern reinforces traditional neighborhood pattern.
- Front doors and porches face onto streets and/or greenbelts.
- Neighborhood open space provides a focal point of the neighborhood.



ROW TOWNHOMES

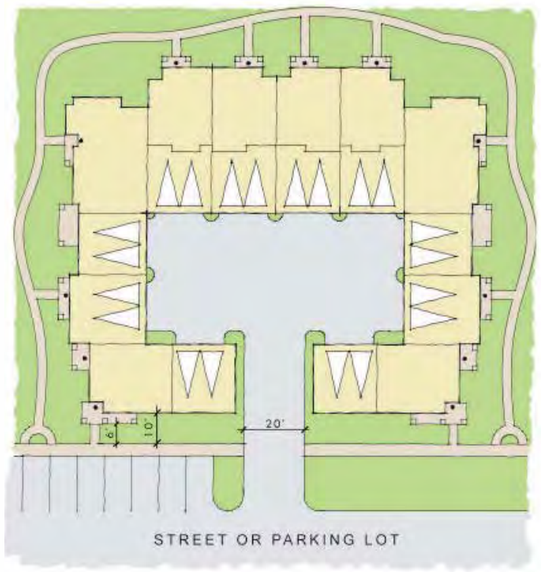
Cottage Single Family Homes

8.11.3 Motorcourt Homes

MOTORCOURT TOWNHOMES

- Motorcourt building design minimizes garage orientation along streets and common drives.
- Grid circulation pattern reinforces traditional neighborhood pattern.
- Orientation of front doors, porches and patios onto streets and/or greenbelts is encouraged.
- Neighborhood open space provides a focal point of the neighborhood.



MOTORCOURT TOWNHOMES

- Garage doors are oriented around a motorcourt hidden from residential streets
- Front doors face onto open space greenbelts

8.12 DESIGN GUIDELINES FOR LANDSCAPE ARCHITECTURAL CHARACTER

Careful consideration has been given to the design of the community landscape architectural character for the Ontario Esperanza Specific Plan. The following design guidelines are organized to help define the basic landscape design principles for the Ontario Esperanza Specific Plan. Observing these guidelines will help to assure the "design vision" and integrity of this planned community.

All landscape plans, streetscape plans, and graphic designs with regard to community identity, neighborhood identity, or entry monumentation shall conform to the guidelines as set forth herein, and shall be subject to review and approval by the City of Ontario.

The "Conceptual Landscape Master Plan," Exhibit 30 on the next page shows the perimeter streetscape design, Community entries and monumentation, neighborhood park and mini parks, pedestrian greenbelts, and general landscape features of the Ontario Esperanza Specific Plan area.

8.12.1 Perimeter Streetscape Design

Streetscape design guidelines establish a hierarchy for the landscape development along the surrounding roadways, as well as establishing a framework for consistency of design. Three major arterial roadways surround the Ontario Esperanza Specific Plan area: Hamner Avenue to the West, Bellegrave Avenue to the North, and Mill Creek Avenue to the East. Landscape easements associated with these roadways have been defined, as noted in the City of Ontario Ontario Ranch General Plan.

Landscape development surrounding this community will help to set the character, while maintaining consistency with the City of Ontario's pedestrian pathway system illustrated in the Trails and Bikeways section of the Ontario Ranch General Plan. The following section discusses the streetscapes for the Esperanza Specific Plan area. Exhibit 31, "Streetscapes Legend" provides a guide to the location of the streetscapes discussed below.

8.12.2 Hamner Avenue

Hamner Avenue streetscape shall include the following:

- A landscaped parkway (15' wide min.) with a row of street trees (24" Box min.) along both sides of the street.
- A 5' wide sidewalk along west side of the street.
- A 14' wide landscaped median with a single row of street trees.
- A landscape easement (neighborhood edge) of 45' taken from face of curb to perimeter wall.
- Background trees and shrub masses planted in series of layers (foreground, midground, background) to help define borders and plant groupings while combining interesting foliage textures and color.
- Monumentation as shown in Exhibit 30, "Conceptual Landscape Master Plan."
- Refer to Exhibit 32, "Hamner Avenue" section for streetscape illustration."

Exhibit 30
Conceptual Landscape Master Plan

Exhibit 31
Streetscapes Legend

8.12.3 Bellegrave Avenue

Bellegrave Avenue streetscape shall include the following:

- A 5 foot wide lineal sidewalk and a 7 foot wide landscaped parkway along north side of the street.
- A landscape easement (neighborhood edge) of 35' taken from face of curb to perimeter wall on both sides of the street.
- Background trees and shrub masses planted in series of layers (foreground, midground, background) to help define borders and plant groupings while combining interesting foliage textures and color.
- Monumentation as shown in the Conceptual Landscape Master Plan, Exhibit 30, "Conceptual Landscape Master Plan."
- Refer to Exhibit 33, "Bellegrave Avenue" section below for streetscape illustration.
- Additional landscaping requirements for well sites along Bellegrave Avenue may include: landscape screening, earth berming or combination of both to screen undesirable views from public.

8.12.4 Mill Creek Avenue

Mill Creek Avenue streetscape shall include the following:

- A 12 foot wide landscaped parkway on the west with an additional 23' landscape easement include a single row of street trees (24" Box min.) along both sides of the street. The east side of Mill Creek Avenue includes a 12 foot wide landscaped parkway with an additional 50' Southern California Edison (SCE) easement taken from back of improved street right-of-way.
- Provide drought tolerant large shrub (max. 15') and drought tolerant landscaping within the SCE easement.
- Background trees and shrub masses planted in series of layers (foreground, midground, background) to help define borders and plant groupings while combining interesting foliage textures and color.
- Monumentation as shown in Exhibit 30, "Conceptual Landscape Master Plan."
- Refer to Exhibit 34, "Mill Creek Avenue" and Exhibit 35 "Mill Creek Avenue at the SCE Corridor" for streetscape illustration."

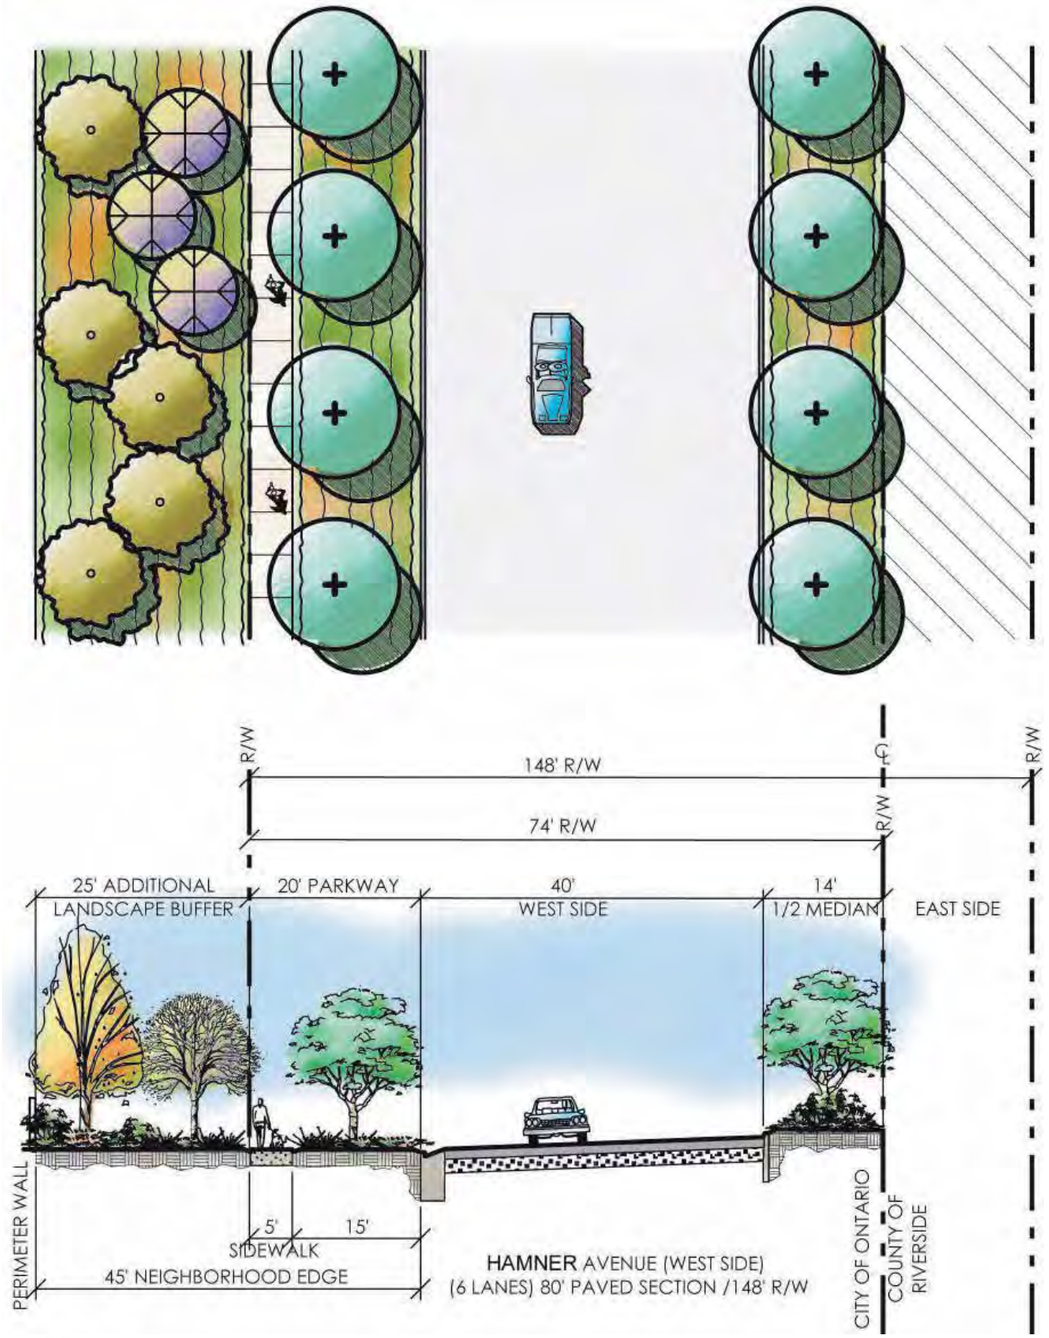

EXHIBIT 32
~~Milliken~~ Hamner Avenue

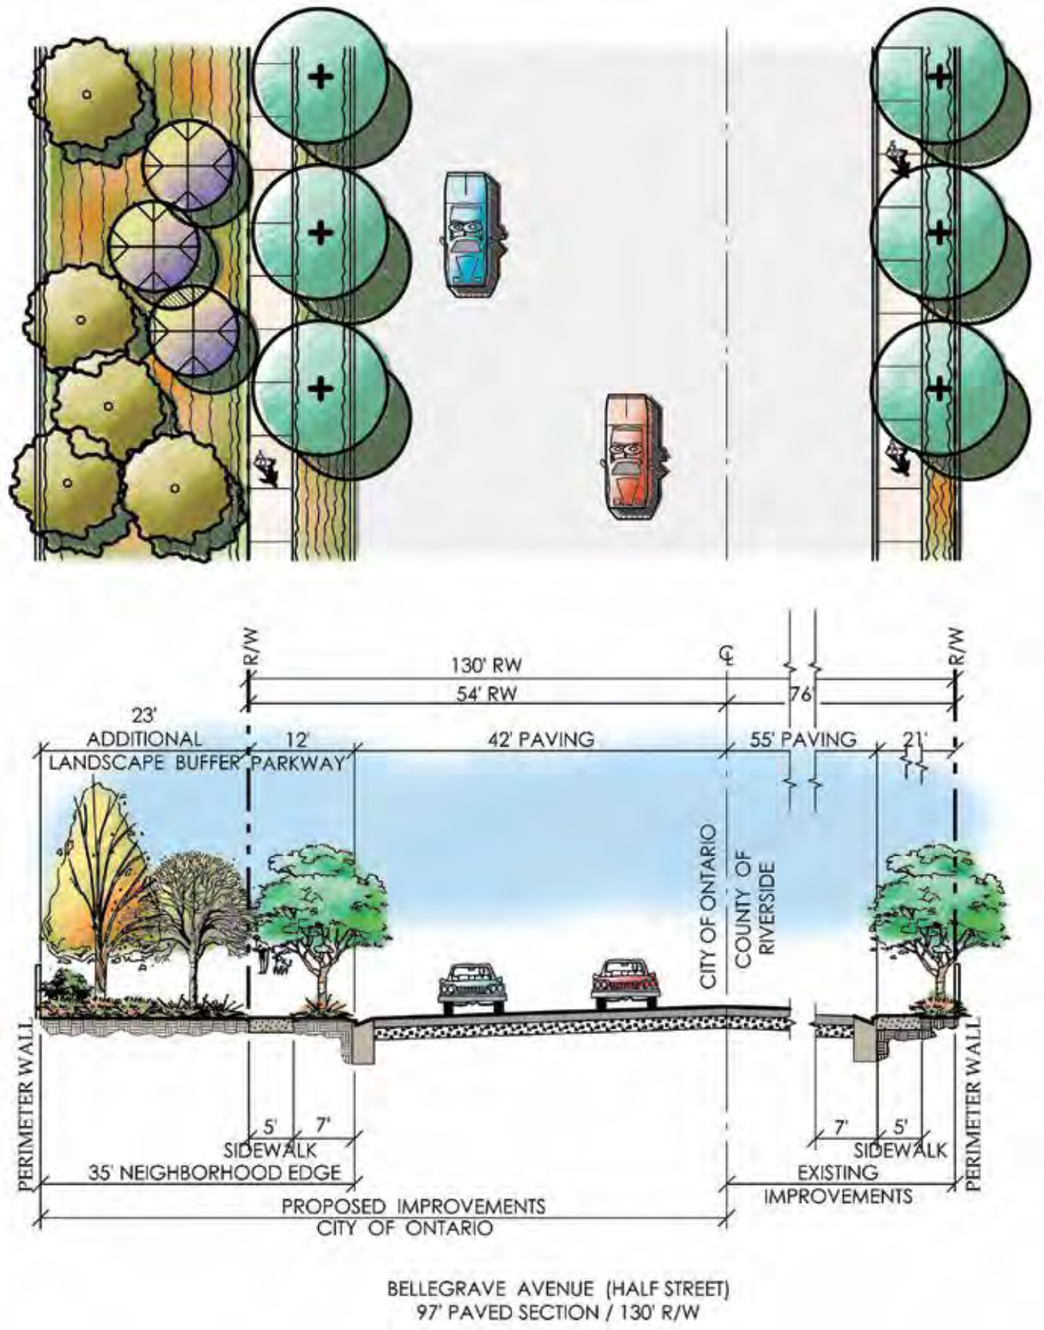

Exhibit 33
Bellegrave Avenue

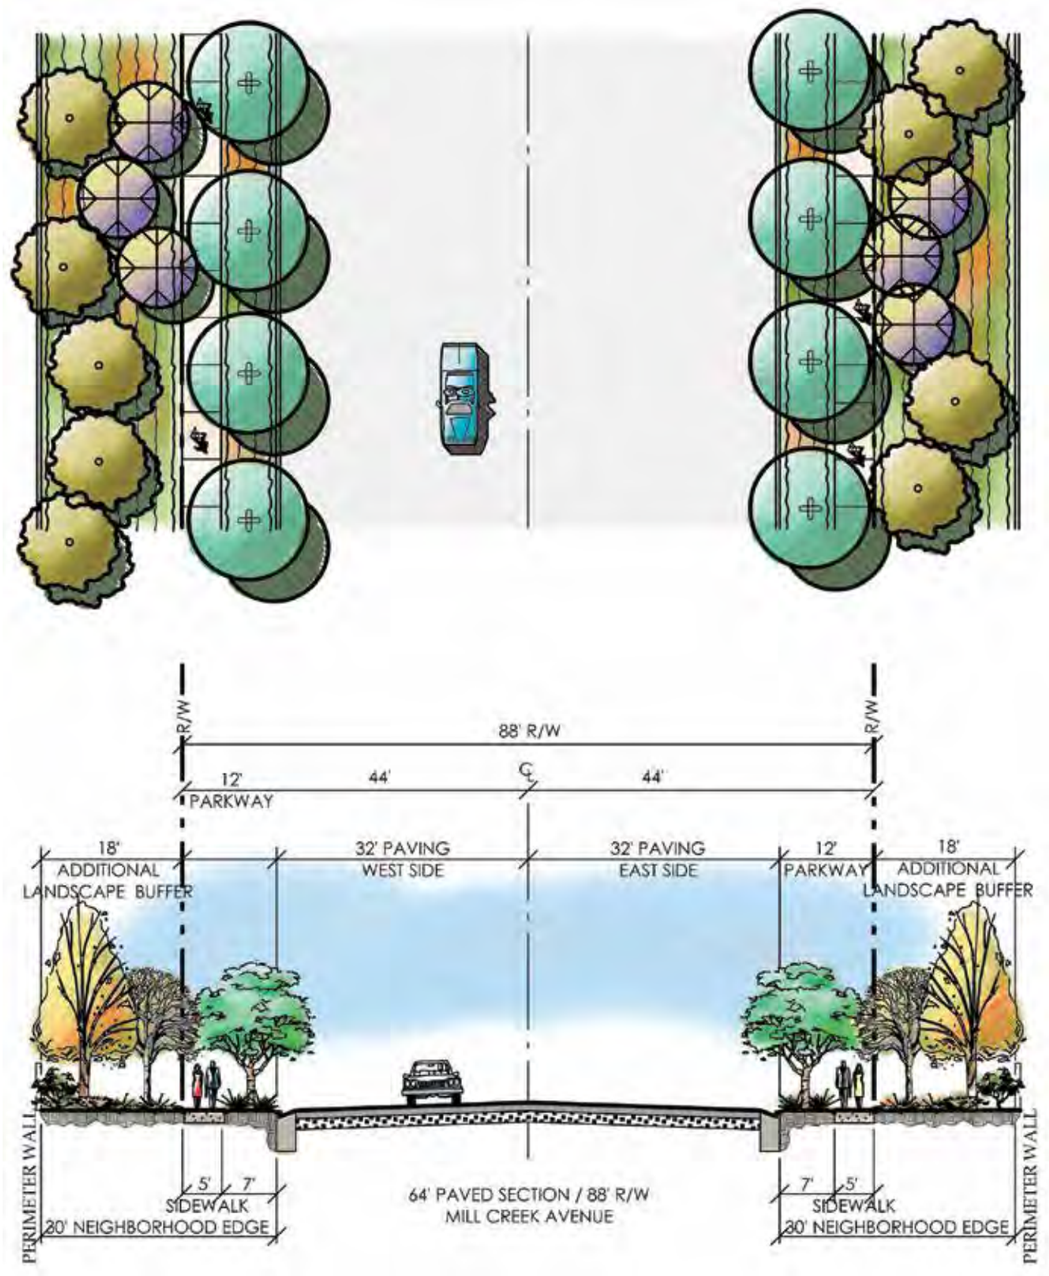

Exhibit 34
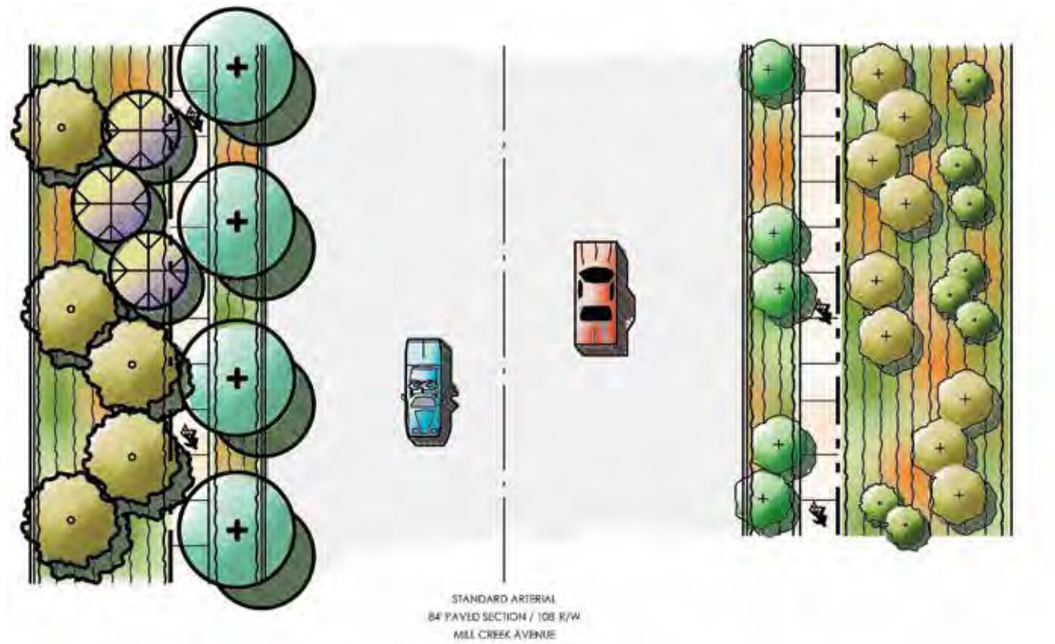
Mill Creek Avenue



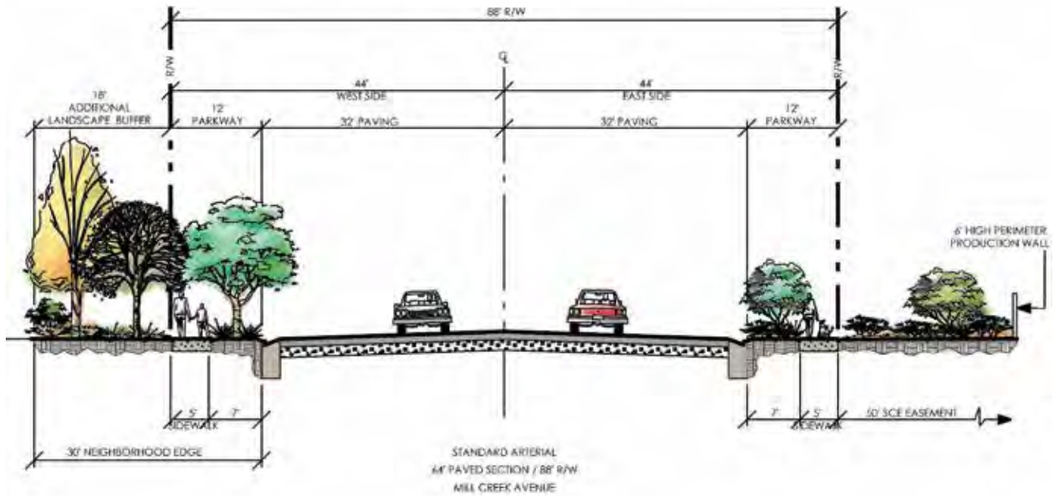


Exhibit 35
Mill Creek Avenue at the SCE Corridor

8.12.5 Interior Streetscape Design

Streetscape design within the interior of the Ontario Esperanza Specific Plan community shall be consistent in character with the perimeter streetscapes and should help to promote pedestrian circulation into the "Community Core."

Where interior streetscapes interface with neighborhood/mini parks and open space, special consideration should be taken to integrate pedestrian circulation into these areas via a streetside pedestrian system that links city sidewalks to active walking trails and open space uses. This is especially important within the multi-family/high density residential planning areas.

Two interior roadways bring residents into the "Community Core," Eucalyptus Avenue, running East/West, and "Street A" that intersects with Eucalyptus Avenue, running North/South.

8.12.6 Eucalyptus Avenue

Eucalyptus Avenue streetscape shall include the following:

- A 7 foot wide landscaped parkway with a single row of street trees (24" Box min.) along both sides of the street.
- A 5' wide concrete sidewalk with a 7' wide decomposed granite multi-purpose trail.
- A 7 foot wide Class II striped on-street bicycle trail within the right of way on both sides of the street.
- A landscape easement (neighborhood edge) of 35' taken from face of curb to perimeter wall on both sides of the street.
- Background trees and shrub masses planted in series of layers (foreground, midground, background) to help define borders and plant groupings while combining interesting foliage textures and color.
- Monumentation as shown in Exhibit 30, "Conceptual Landscape Master Plan."
- Refer to Exhibit 36, "Eucalyptus Avenue" section for streetscape illustration.

8.12.7 "A" Street

"A" Street streetscape shall include the following:

- A landscaped parkway (7' wide minimum) with a single row of street trees (24" box minimum) along both sides of the street.
- A 5' sidewalk separated from the street by a 7 foot wide landscaped parkway on both sides of the street.
- A landscaped buffer of 6' to 10' taken from the back of sidewalk to the perimeter wall on both sides of the street.
- Background trees and shrub masses planted in a series of layers (foreground, midground and background) to help define borders and plant groupings while combining interesting textures and colors.
- Monumentation as shown in Exhibit 30, "Conceptual Landscape Master Plan."
- Refer to Exhibit 37, "A Street" section for streetscape illustration.

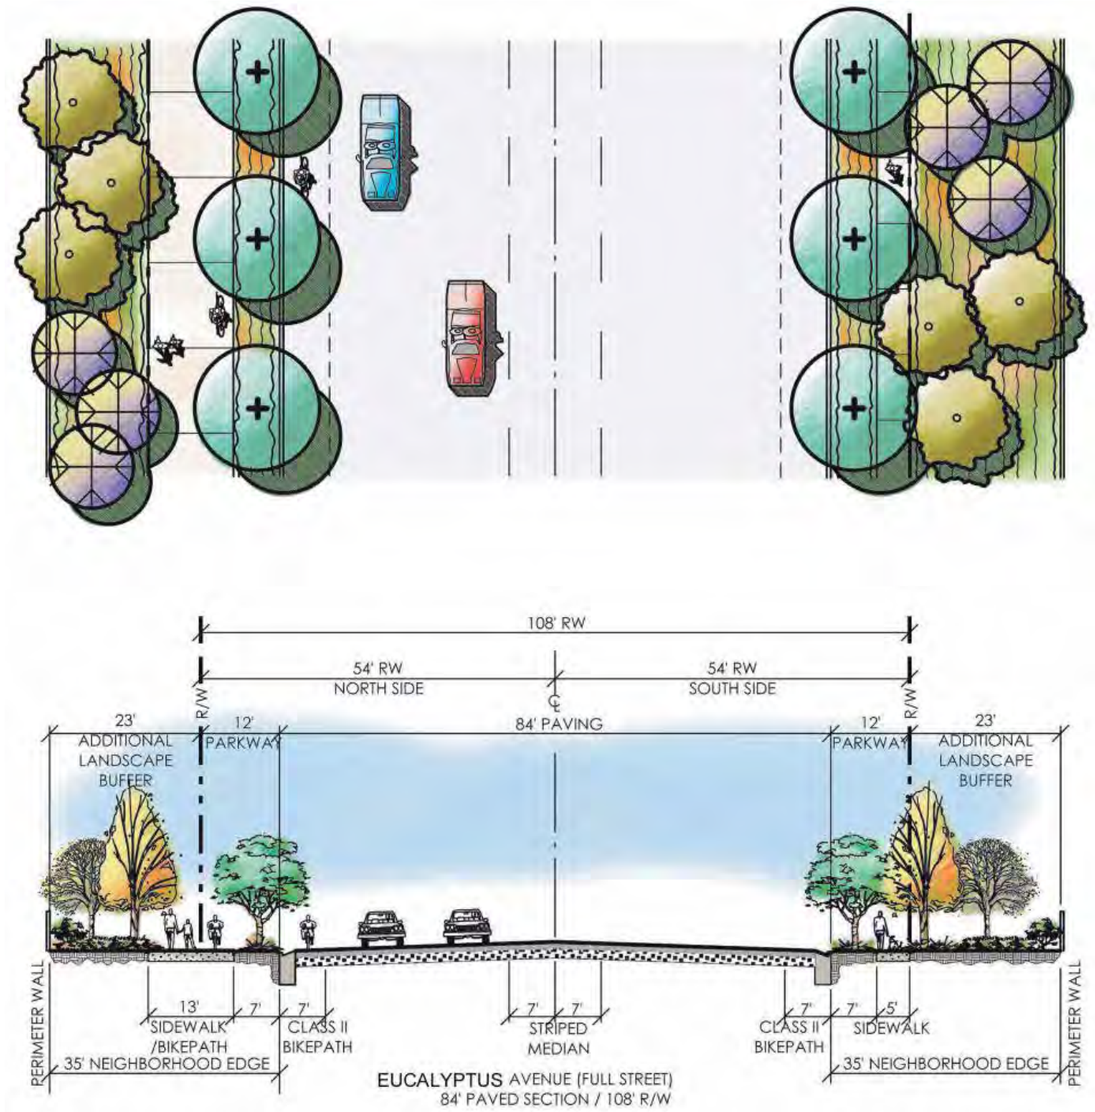

Exhibit 36
Eucalyptus Avenue

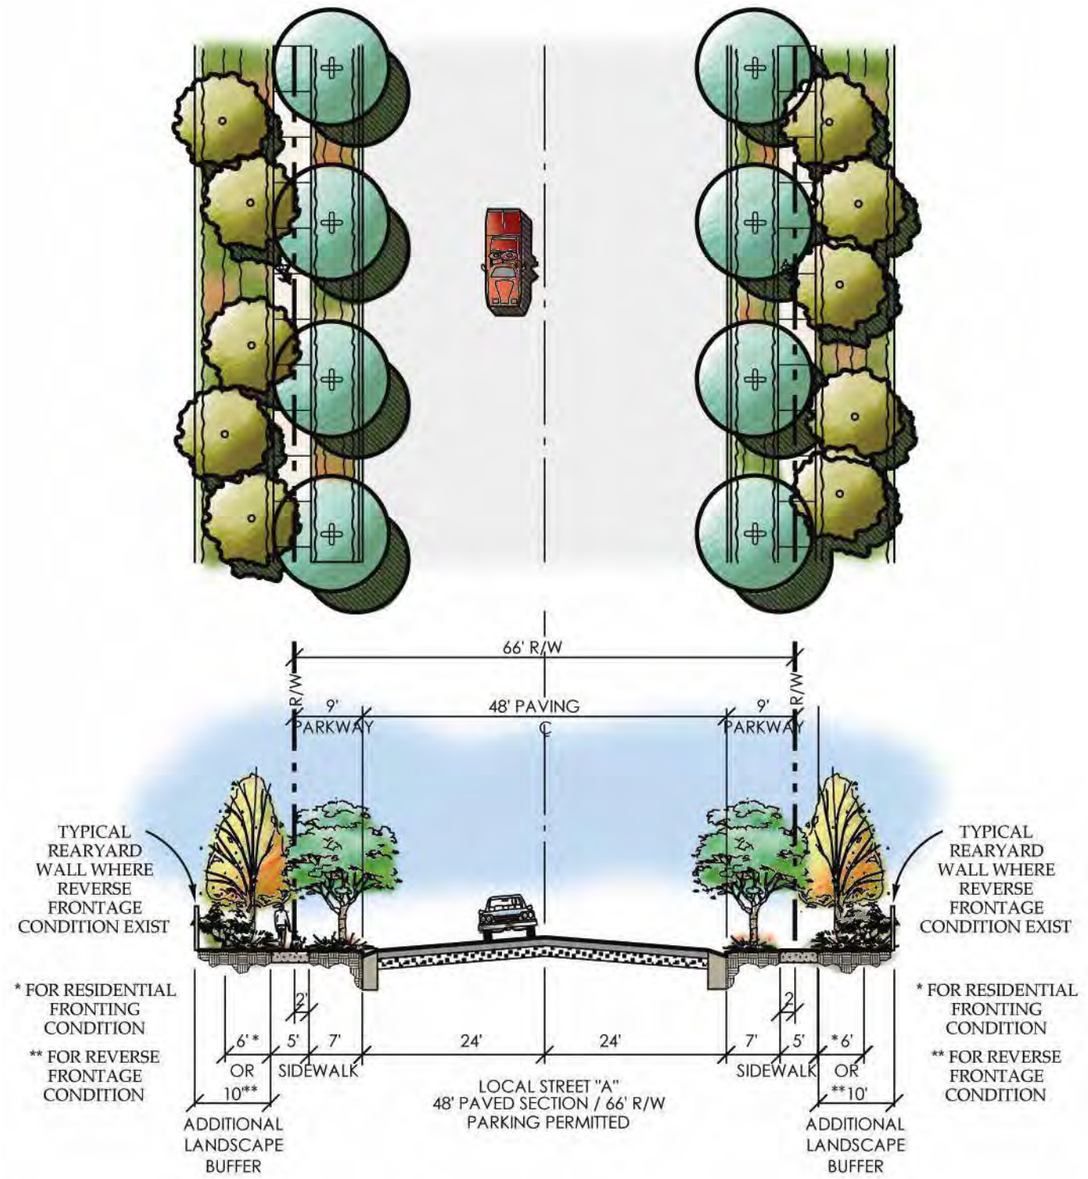

Exhibit 37
"A" Street

8.12.8 Local Streets, Private Alleys, and Private Neighborhood Streets

Local Streets

Local Street streetscapes shall include the following:

- A landscaped parkway (7' wide minimum) with a single row of street trees, 24" box minimum, along both sides of the street.
- A 5' wide sidewalk on both sides of the street.
- A 5' wide minimum planter area from sideyard wall to back of sidewalk along reverse frontage conditions.
- Refer to Exhibit 38, "Local Street and Cul-de-Sac" for streetscape illustration.

Private Neighborhood Streets

Private Neighborhood streets shall include the following:

- A landscaped parkway (7' wide minimum) with a single row of street trees, 24" box minimum, along both sides of the street.
- A 4' wide sidewalk on both sides of the street.
- A 7' wide minimum planter area from sideyard wall to back of sidewalk along reverse frontage conditions.
- Refer to Exhibit 39, "Private Neighborhood Street Section" for streetscape illustration.

Private Alleys

Private Alleys shall include a 5' wide landscaped area on both sides of the alley when the paved area is a maximum of 20' in width. Landscaping will be provided as appropriate in areas of less than 5' in width depending upon the final design of the private alley. Refer to Exhibit 40, "Private Alleys" for illustration.

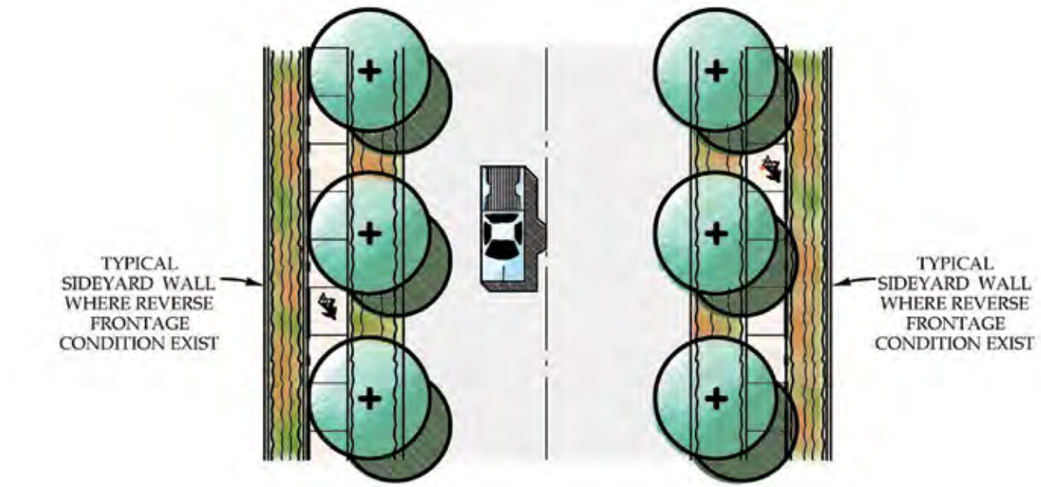

EXHIBIT 38
Local Street and Cul-de-Sac

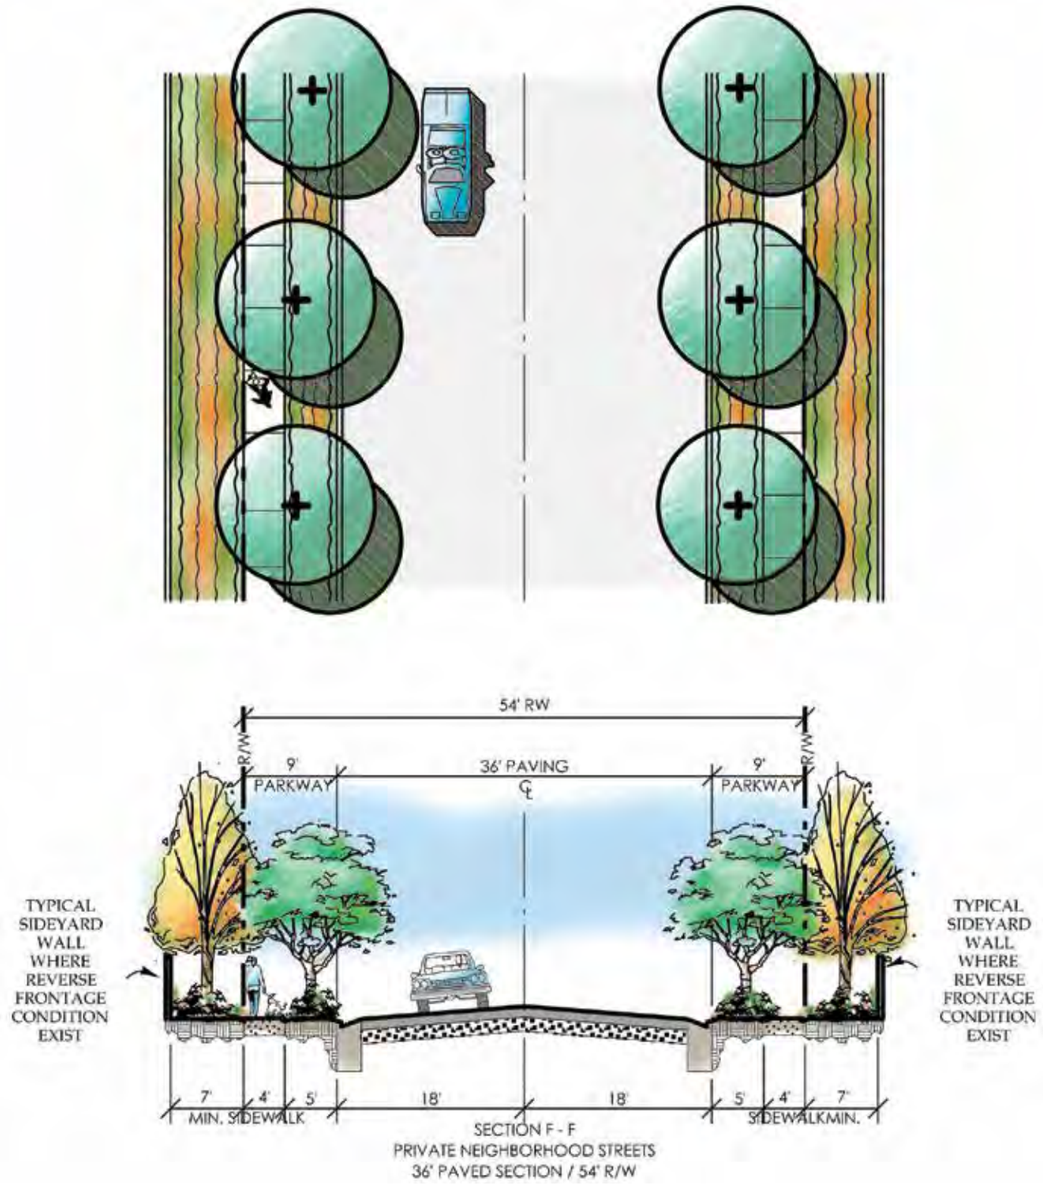

Exhibit 39
Private Neighborhood Street Section

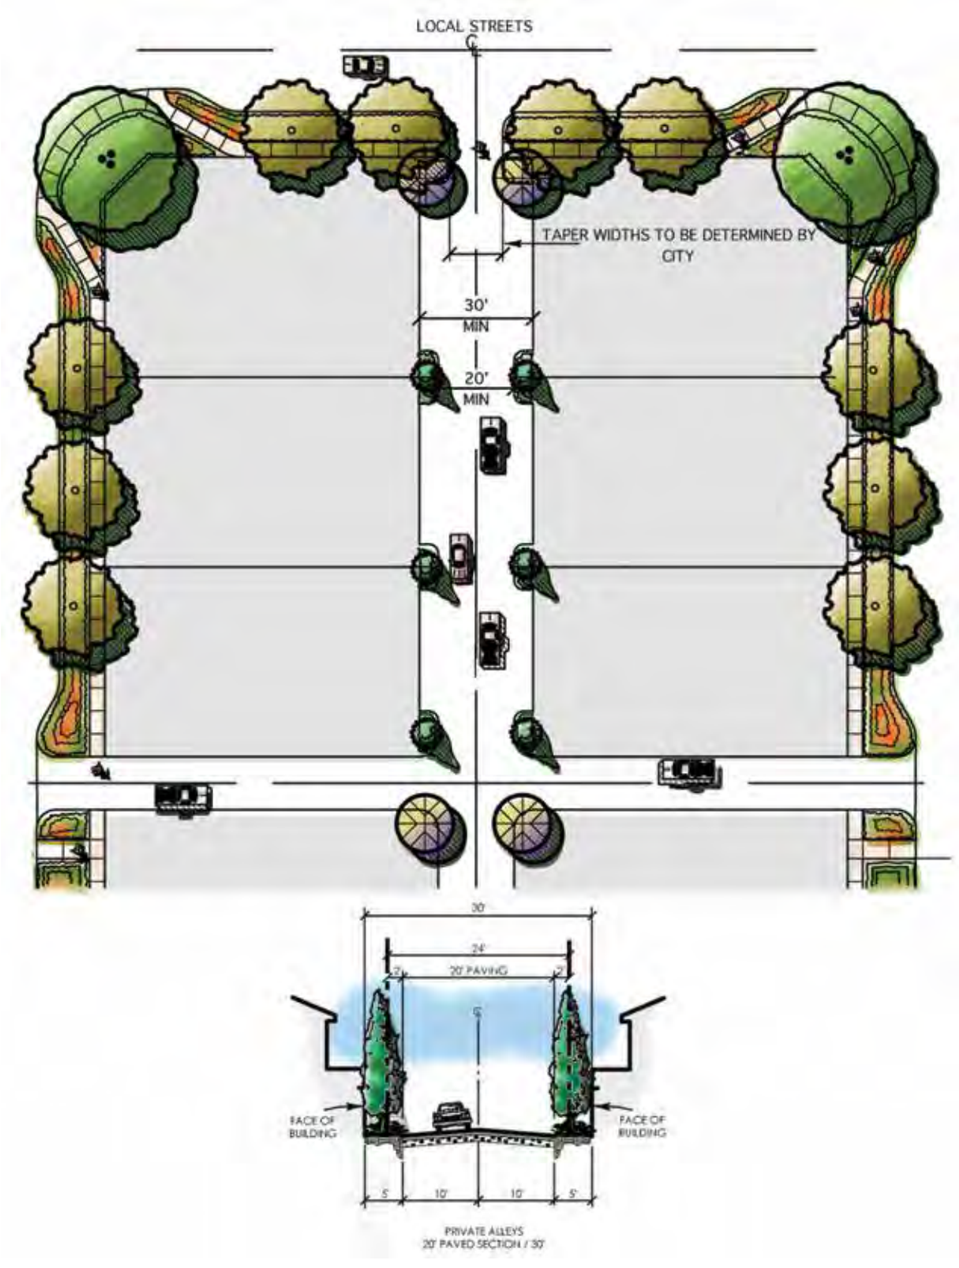

Exhibit 40
Private Alleys

8.13 City of Ontario "Gateway" Monument

At the corner of Hamner Avenue and Bellegrave Avenue, a city "Gateway" monument will be located. Special consideration should be made to integrate the perimeter landscaping along Hamner and Bellegrave Avenue into the final monument design and landscape character. The City of Ontario is currently developing the "Gateway" monument program for the Ontario Ranch. Additional coordination with the City of Ontario will be needed prior to developing this area.

8.14 Entries and Monumentation

Monumentation occurs throughout the Ontario Esperanza Specific Plan community and is designed to establish a basic hierarchy for entering each area of the community. Along the perimeter edges there are several entry points into the community. At key entries a landscape and monumentation program will be utilized to help identify the community as well as convey a "welcoming" feeling for both vehicular and pedestrian traffic. Inspired by the local historical village of "Guasti," home of the Italian Vineyard Company, the project monuments for Ontario Esperanza embody some of the character of this Ontario icon, through the use of similar materials, architectural styles/detailing and landscaping.

Three basic monument treatments are used to set the hierarchy of the entries and monumentation: the Primary Community Entry and Monumentation, the Secondary Community Entry and Monumentation, and the Neighborhood Entry and Monumentation.

8.14.1 Primary Community Entry and Monumentation

The Primary Community Entry and Monumentation shall include the following:

- Freestanding curved monument walls at each corner with highlighted pedestrian portal.
- Identification field for potential sign lettering placement.
- Architectural concrete caps, trim, and bases to help delineate architectural detailing and veneer material used.
- Use of "real" veneer materials instead faux concrete veneers.
- Use of large specimen native trees to anchor each side of entry drive at site entry.
- Seasonal perennial flowering to allow for seasonal flowering interest throughout the year.
- Enhanced pedestrian paving at street crossing and at monument location as approved by the City Engineer.
- Accent trees and shrub masses planted in series of layers (foreground, midground, background) to help define borders and plant groupings while combining interesting foliage textures and color.
- Accent lighting of landscape/monumentation.
- Handicapped ramps designed to City standards.
- Refer to Exhibit 30, "Conceptual Landscape Master Plan" and Exhibits 41-43, "Primary Community Entry and Monumentation" and, "Primary Community Entry and Monumentation – Hamner Avenue, and, "Primary Community Entry and Monumentation – Mill Creek Avenue" for detailed conceptual illustration.

8.14.2 Secondary Community Entry and Monumentation

The Secondary Community Entry and Monumentation shall include the following:

- Freestanding curved walls at each corner with anchoring entry pilaster.
- Identification field for potential sign lettering placement on enhanced perimeter corner cut wall.
- Architectural concrete caps, trim, and bases to help delineate architectural detailing and veneer material used
- Enhancement of corner cut wall and use of accent pilasters to balance each side.
- Use of "real" veneer materials instead faux concrete veneers.
- Use of large specimen native trees to anchor each side of entry drive at site entry.
- Seasonal perennial flowering to allow for seasonal flowering interest throughout the year.
- Enhanced pedestrian paving at street crossing and at monument location as approved by the City Engineer.
- Accent trees and shrub masses planted in series of layers (foreground, midground, background) to help define borders and plant groupings while combining interesting foliage textures and color.
- Accent lighting of landscape/monumentation.
- Handicapped ramps designed to City standards.
- Refer to Exhibit 30, "Conceptual Landscape Master Plan" and Exhibit 44, "Secondary Community Entry and Monumentation Elevation/Plan" for detailed conceptual illustration.

8.14.3 Neighborhood Entry and Monumentation

Neighborhood entries and monumentation should occur on interior corner entries within the Ontario Esperanza Specific Plan Community. These entries should be used to help continue the landscape character theme to the "core" of the community. Each neighborhood built within the project will have the opportunity to identify their individual project character while providing the basic design features of the other monuments. Refer to The Neighborhood Entry and Monumentation shall include the following:

- Freestanding large entry pilaster set within the landscaped parkway. This pilaster should embody the same character as that of the Primary Community Entry Monument portal, but is reduced in scale to create a "pedestrian gateway" into each neighborhood. Project identification plaque or icon can be located at this pilaster
- Identification field for potential sign lettering placement on enhanced perimeter corner cut wall.
- Architectural concrete caps, trim, and bases to help delineate architectural detailing and veneer material used.
- Enhancement of corner cut wall and use of accent pilasters to anchor each side.
- Use of "real" veneer materials instead faux concrete veneers.
- Seasonal perennial flowering to allow for seasonal flowering interest throughout the year.
- Enhanced pedestrian paving at street crossing and at monument location as approved by the City Engineer.
- Accent trees and shrub masses planted in series of layers (foreground, midground, background) to help define borders and plant groupings while combining interesting foliage textures and color.
- Accent lighting of landscape/monumentation.
- Handicapped ramps designed to City standards.
- Refer to Exhibit 30, "Conceptual Landscape Master Plan" and Exhibit 45, "Neighborhood Entry and Monumentation" for detailed conceptual illustration.

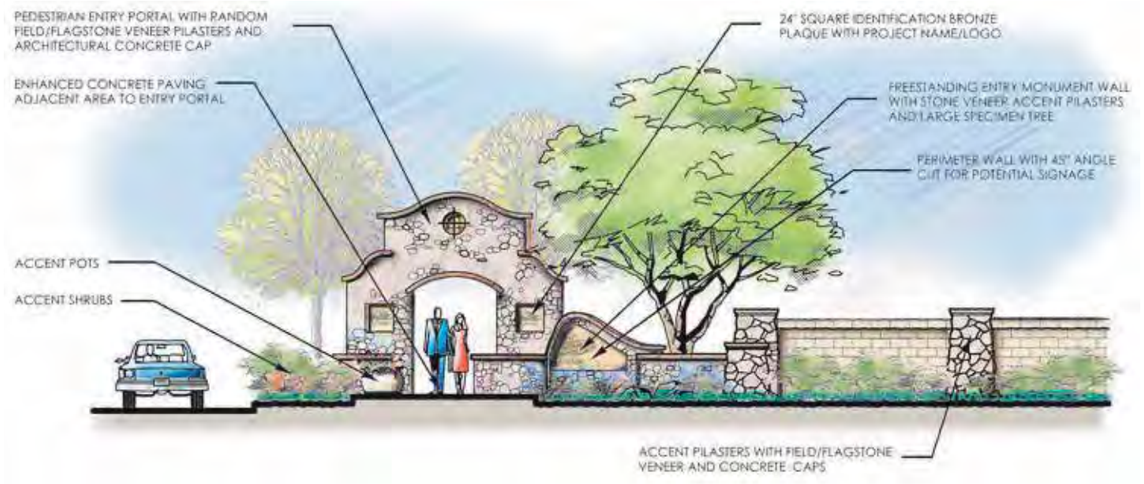

EXHIBIT 41

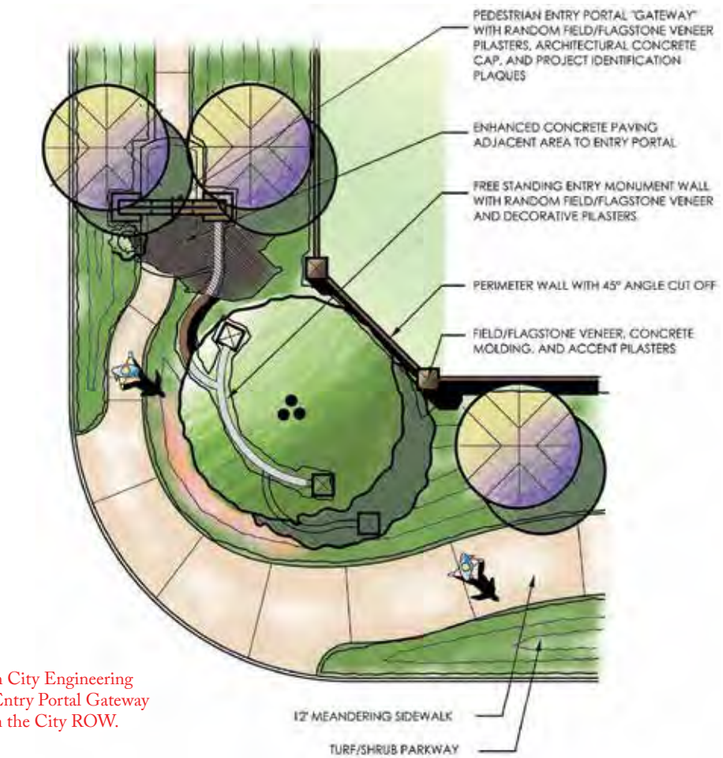
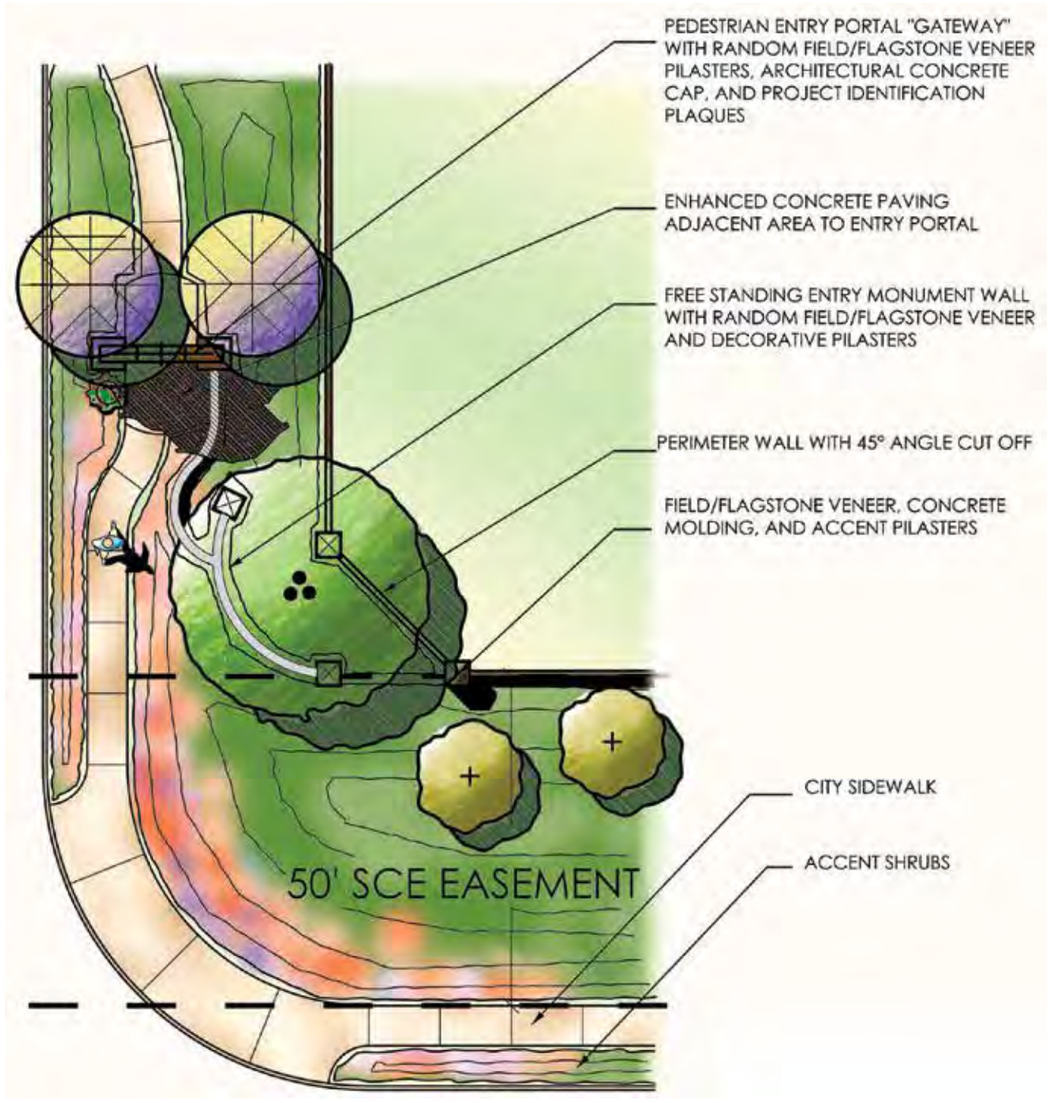
Primary Community Entry and Monumentation



Developer to verify with City Engineering Development that the Entry Portal Gateway will be permitted within the City ROW.

EXHIBIT 42

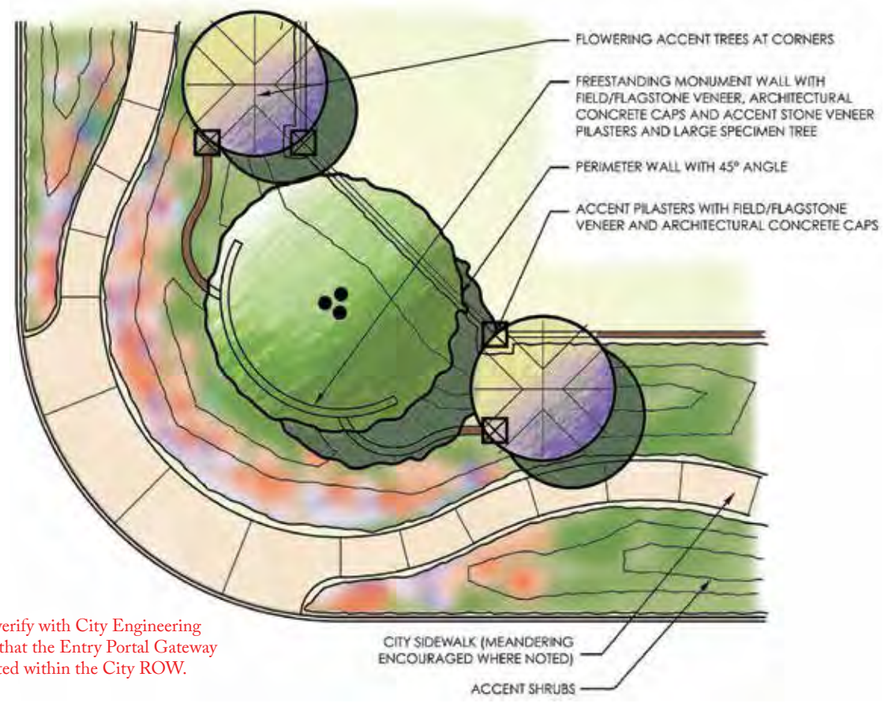
Primary Community Entry and Monumentation – Hamner Avenue



Developer to verify with City Engineering Development that the Entry Portal Gateway will be permitted within the City ROW.

Exhibit 43

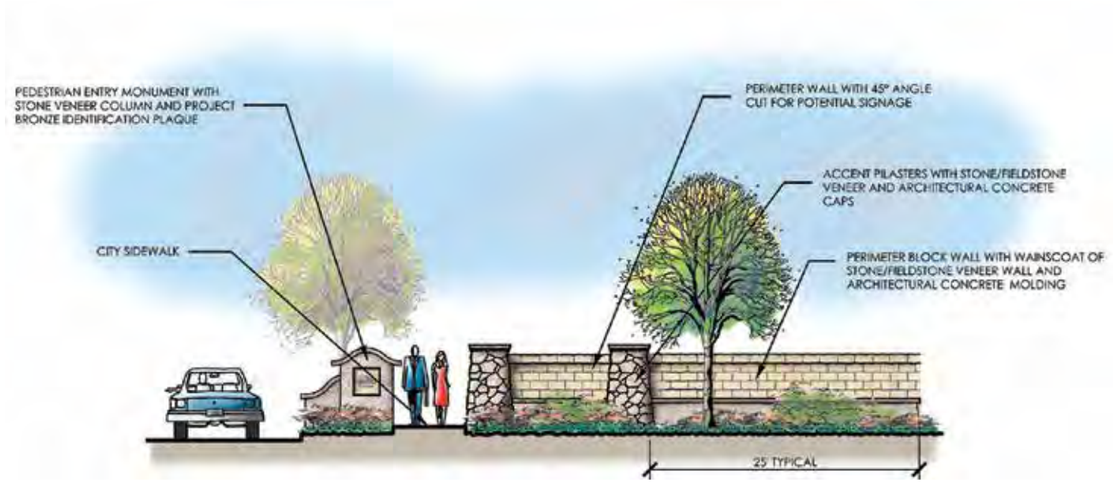
Primary Community Entry and Monumentation – Mill Creek Avenue

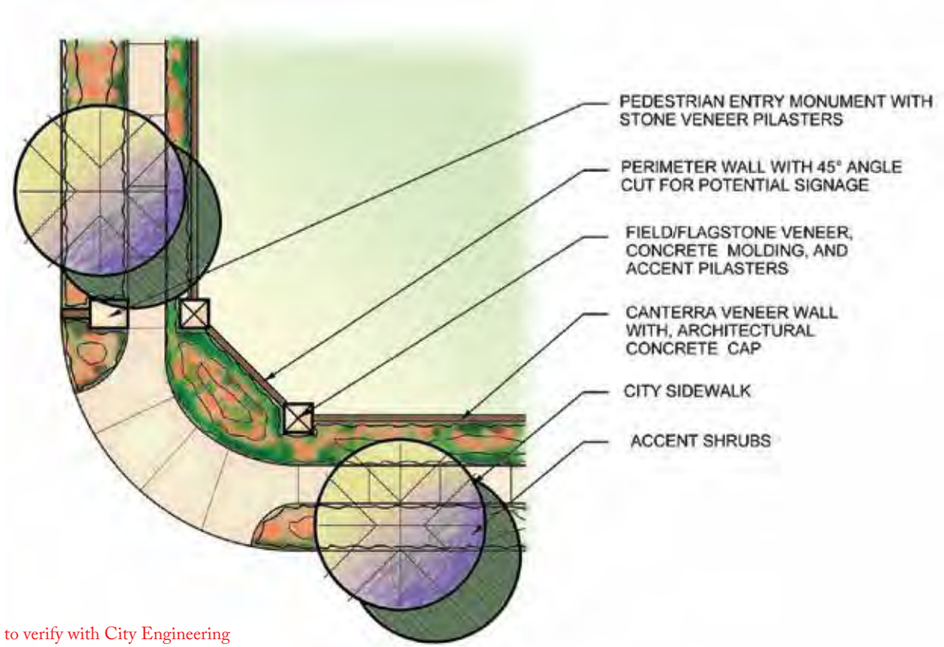


Developer to verify with City Engineering Development that the Entry Portal Gateway will be permitted within the City ROW.

Exhibit 44

Secondary Community Entry and Monumentation Elevation/Plan





Developer to verify with City Engineering Development that the Entry Portal Gateway will be permitted within the City ROW.

Exhibit 45

Neighborhood Entry and Monumentation Elevation/Plan

8.15 Parks and Open Space

The Ontario Esperanza Specific Plan Community will have a central "Community Core" that centers on the Neighborhood Park and the School. Exterior walkways and trails should lead to this centralized area. Exhibit 46, "Pedestrian Circulation Plan" illustrates the pedestrian accessibility and connectivity throughout the Esperanza Specific Plan area. Exhibits 47 through 50 illustrate the planning concepts for the Neighborhood Park and Mini-Parks planned for the Esperanza Specific Plan area.

- All project sites shall be designed to meet all the Integrated Waste Department's requirements, including the requirements for Sizing of Storage, Location of Collection Area, Accessibility for Collection Vehicles, and Collection of Sorted/Diverted Waste Types.

8.15.1 The Neighborhood Park

Park 1, the Neighborhood Park, consists of the following:

- Parking - Parking shall be adequate to accommodate daily use of the park, and should be screened from public view using a combination of berming and landscaping. In addition, the parking configuration should take into consideration alignment with proposed neighborhood streets and provide a minimum of (15) fifteen to (20) twenty parking stalls (including one van accessible handicap stall/unloading area).
- Children's Tot Lot Play Area - A Tot Lot will be located within close proximity to the parking lot and Restroom Building. Play structures and equipment should be staged to allow for separated use based on age (2-5 yr. and 5-12 yr.). The Tot Lot should also follow ADA guidelines and provide access based off of equipment selected. Play areas and fall zones shall be constructed with synthetic surfacing per ADA standards with wood fiber ("Fibar") being available as an alternative in non-fall zone areas. Seating areas shall be located near the Tot Lot to provide areas for parental supervision.
- Open turf area/Barbecue Picnic Facilities - The Neighborhood Park should provide an open turf area and barbecue picnic facilities scattered throughout a looped concrete walkway system. Barbecue facilities (minimum of 50%) should be located adjacent to the walkway system for ADA accessibility; the remaining percentage set in open turf areas. Each barbecue picnic facility shall provide a picnic table, freestanding barbecue, and trash receptacle. These barbecue facilities can be placed on concrete or any other ADA acceptable surfacing. The design of the Neighborhood Park open space should take into account pedestrian circulation and the linkage to the two adjacent roads as well as the surrounding community.
- Sports Fields for unorganized play – The open space turf area should be arranged to accommodate two baseball/softball fields and a soccer field overlay. Sports lighting should be discouraged at the park. Wherever feasible a minimum distance of 20 feet should be provided between streets and play areas. Sports fields will be improved in accordance with the City's Parks and Maintenance Department requirements.
- Landscaping – Landscaping within the Neighborhood Park shall harmonize with the surrounding streetscapes. Large specimen trees should be used within the open turf areas to help provide shade and screening of unwanted views. Accent trees should also be used at pedestrian entries and around the Tot Lot for color and seasonal interest. The park shall be irrigated with reclaimed water by an automated system per the City Standard Specifications for irrigation systems.
- Lighting – Security walkway lighting shall be provided in accordance with City requirements and the design guidelines contained herein.

- Restroom Building – A restroom building shall be located adjacent to the tot lot in clear view of the public streets surrounding the park. The building should be designed to provide separate restroom facilities for both sexes and shall conform to ADA design guidelines. Additional provisions for a storage room for the City of Ontario maintenance personnel shall also be designed (all designs shall be submitted to the City of Ontario and County Health Department for approval).
- Park monumentation/signage and a lockable trash enclosure area.
- Refer to Exhibit 47, "Neighborhood Park" for detailed conceptual illustrations.

8.15.2 Mini Parks and Pedestrian Trails

Pedestrian circulation is highly encouraged within the Ontario Esperanza Specific Plan Community. Landscape easements are provided along major roadways and are encouraged within the neighborhood communities.

- Interior walkways should be designed to provide connections to adjacent neighborhoods as well as linking the Neighborhood Park and School to dedicated neighborhood edge treatments and enhanced landscaped areas.
- Exhibit 47, shows a Neighborhood Park example (5 Acre)."
- Enhanced paving at pedestrian connections where pedestrian circulation crosses roadways.
- Paseos should provide strong connections to "Community Core" (~~school~~/5 AC neighborhood park).
- Connection of neighborhood pocket parks to community. The pocket parks are intended to provide minimal amenities, and should designed with strong neighborhood "eyes-on" approach. Pocket Parks should range between 3/4 – 1 acre in size.

Mini parks for children's play areas may contain the following amenities:

- Paseo walkway (meandering encouraged/ ADA accessible).
- Landscaping - Landscaping shall harmonize with the surrounding streetscapes and utilize trees, shrubs, and groundcovers identified in the plant matrix.
- Lighting – Pole mounted fixtures spaced at appropriate intervals for safety and security.
- Open turf play area

The Mini Parks might contain one or more of the following amenities:

- Barbecue Picnic Facilities
- Basketball/Volleyball Courts
- Tot Lots
- Rose Garden
- Covered Picnic Structures
- Seatwalls/benches
- Community Garden
- Refer to Exhibits 48 through 51 for detailed conceptual illustrations.

Mini Park Example (Park 4)

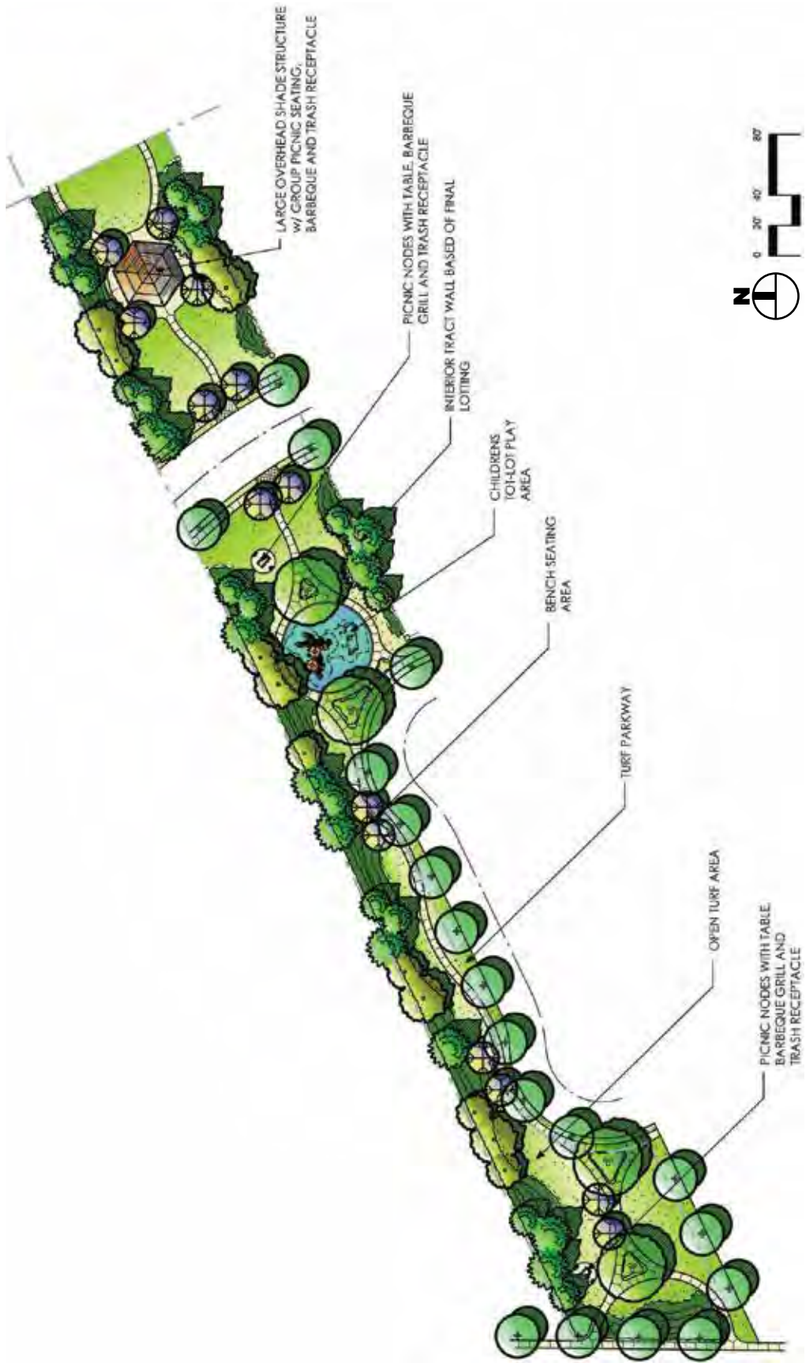

Exhibit 51
Mini Park Example (Park 5)

8.16 Community Walls and Fencing

Walls are a major component in achieving an overall community theme within the Ontario Esperanza Specific Plan. A strong cohesive appearance is achieved through the use of "community walls" and general overall wall guidelines as illustrated in Exhibit 52, "Master Walls and Fence Plan" and Exhibit 53, "Wall and Fence Details."

All walls that adjoin community street scenes (major streetscapes identified under Perimeter/ Interior Streetscapes) shall be deemed "community walls." All wall and fencing designs and layout shall be approved by the City of Ontario prior to construction.

8.16.1 Community Walls

Community walls shall be decorative in nature. Community walls shall incorporate the use of pilasters of a design consistent with the materials of the community walls. The location and spacing of pilasters shall be subject to Planning Department review and approval.

8.16.2 Solid Walls and Fencing

Solid walls shall be decorative. The use of vinyl fencing and wood fencing is prohibited. Reverse frontage walls and any wall return that is visible from public view, shall be constructed of split-face block or precision block that is veneered, burnished (using color other than common gray), plastered or stuccoed, and should complement color scheme dictated in Ontario Esperanza Specific Plan color palette. Decorative caps and the use of pilasters to help enhance the perimeter appeal of the walls are encouraged. Walls visible from the community streets may not be made of exposed or painted precision block or slumped block.

8.16.3 View Fencing

If applicable, view fences should be located in the rear yards of those properties abutting large slope areas where the adjacent property is a minimum of 15' above/below the house pad. These fences allow open views but not physical access; they shall be 5'-6" high and made of tubular steel or lexan glass panel construction. Areas where view fencing occurs will be subject to review by the City of Ontario. The use of tubular steel view fencing shall incorporate pilasters utilizing materials consistent with adjacent walls.

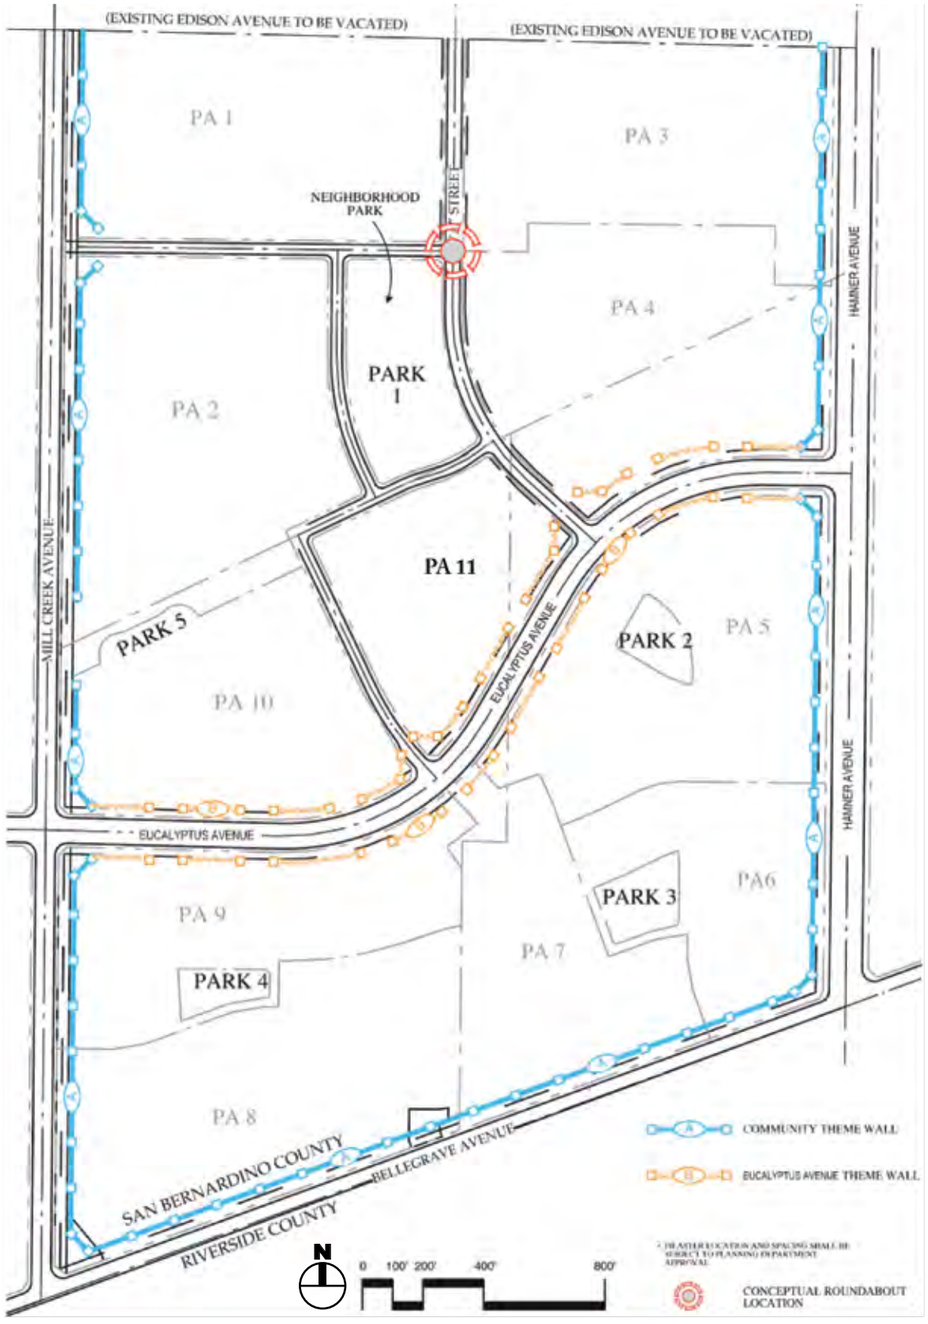

Exhibit 52
Master Walls and Fence Plan

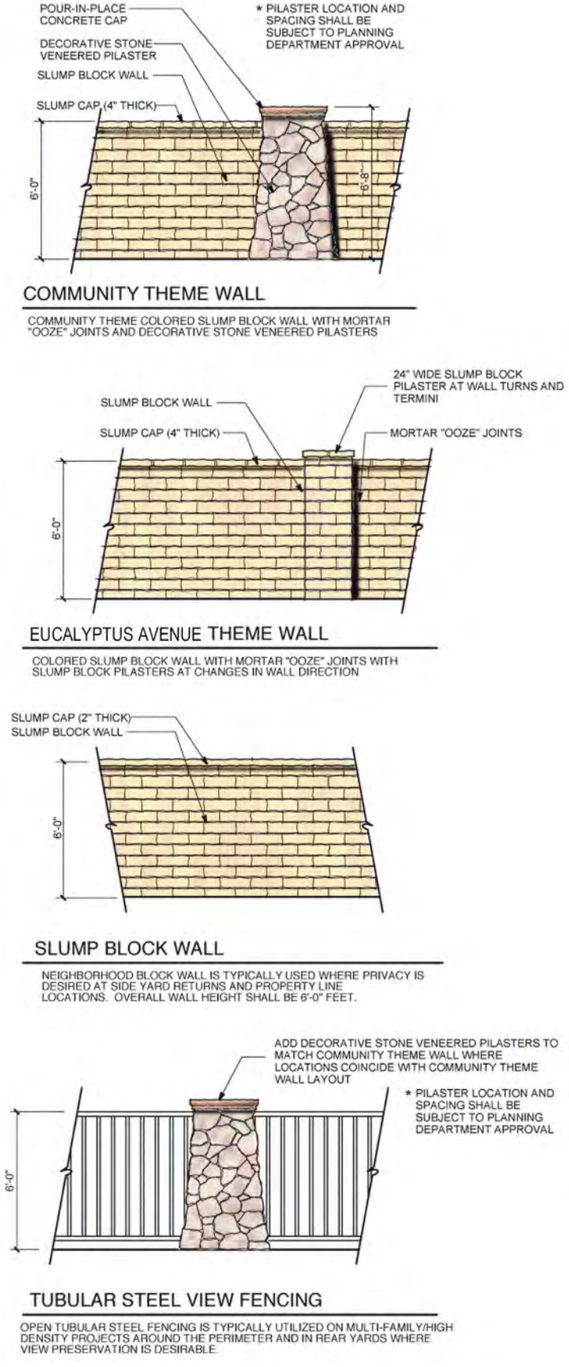

Exhibit 53
Wall and Fence Details

8.17 OUTDOOR LIGHTING

Lighting standards within the Ontario Esperanza community shall be consistent in style, color, and materials in order to maintain uniformity throughout. Lighting should be subtle, providing a soft wash of light over illuminated objects such as monumentation. Hierarchy shall be established by using a variety of lighting fixtures and illumination levels based off of lighting design intent. Lighting styles shall tie into architectural styles and provide sufficient illumination for the safety and well being of the community. Preservation of "Night-Sky" should be considered in lighting design layout and fixture selection. Use of "cutoff" or louvered lamps to preserve ambiance of "Night-Sky" is highly encouraged. Fixture locations should be designed so that light source is not visible by pedestrian or vehicular traffic. Frosted, louvered, or prismatic lens should be considered where decorative lighting fixtures are visible and part of the aesthetic lighting program. Accent lighting of landscape and monumentation shall be incorporated into the following areas:

8.17.1 Entry Monument Lighting:

Avoid intensely bright or "hot" lighting of monuments; rather, each should be lit to provide a soft wash of light across the monument signage. Specimen trees should be up-lit with several fixtures into the canopy to avoid creating dark sides of the trees.

8.17.2 Neighborhood Park/ Mini Parks/ Walkway Lighting

Lighting of the walkways, tot lots, restroom facility, and parking areas within the Parks should be considered for safety and security. All planned parking areas shall have a minimum maintained lighting level of one-foot candle (1 F.C.) or greater. The lighting shall be from sunset to sunrise and be operated by a photocell. The site plan shall be provided to the Police Department. It shall show all buildings, parking areas, walkways, detailed landscape areas and point-by-point photometry calculation of required light levels. Utilization of a traditional Globe/Acorn Post mounted light fixture should be considered for both the park open space areas as well as interior street lighting fixtures. Keeping with the character of traditional materials, (like those found in the "Model Colony" in Downtown Ontario) this will help to create a better sense of scale to the pedestrian. Fixtures shall be vandal resistant, not less than (8) eight feet from ground level. Luminaries of not less than (42") may be utilized to illuminate a walkway if adjacent landscaping is of a variety which does not mature higher than (2) two feet.

8.18 LANDSCAPE DESIGN

8.18.1 Public Landscapes

- Landscape plantings in public areas should reflect a commitment to both developing a "sense of place" and maintaining harmony with the Ontario Ranch.
- Community Facilities District (CFD) areas shall be separated with a 6" by 6" concrete mow strip when adjacent to private property.
- A landscape architect licensed in California shall be retained to prepare planting and irrigation plans for all public areas. Arrangement of plants should incorporate the concepts of mass planting; plants should be placed to allow them to grow to their natural sizes and forms, and sheared hedges should be kept to a minimum.

The plant matrix at the end of this section offers a suggested plant palette for Ontario Esperanza; while it is by no means all-inclusive, plantings in public areas should draw primarily from this palette for visual community continuity.

8.18.2 Front Yard Landscapes

Plantings in front yards may vary substantially from the Ontario Esperanza palette, but should retain some of the character and style of the public plantings. ~~No more than 25% of the total square footage of any front yard shall be lawn~~ Turf shall not exceed 25% of the landscape area in residential front yards; the balance shall be composed of shrubs and groundcovers, with an emphasis on drought tolerant plant species. No more than ~~55%~~ 45% of the front yard area shall be hardscape. Turf areas shall be sized and shaped to optimize irrigation efficiency. If turf is used in isolated areas such as driveway strips, subsurface irrigation or microspray heads shall be required to avoid overspraying of these areas. Irregular shapes that cannot be irrigated should be avoided.

- Each single-family lot shall be provided with front yard landscaping and a permanent automatic irrigation system. At a minimum, a seeded turf lawn, appropriate shrubs and trees shall be provided as landscaping materials. A variety of typical landscape designs shall be provided for use on each lot within the subdivision.
- Multiple family residential product areas shall be provided with full landscape improvements throughout the development. At a minimum, a seeded turf lawn, appropriate shrubs and trees, and a permanent irrigation system shall be provided.
- Landscape and irrigation drawings for each development shall be submitted in conjunction with house construction plans. The plans shall be approved by the Planning Department and the Landscape Planning Division prior to the issuance of building permits.
- Areas of a lot or site which are not used for drive entries, parking, or approved outdoor uses shall be fully landscaped; all unpaved areas shall be landscaped; and all future development phase areas shall be hydroseeded.

8.18.3 Soil Testing

Soil samples shall be taken from several locations after the completion of rough grading operations, and a reputable soil-testing laboratory shall perform an agronomic soils test. The test shall assess soil fertility needs for water-wise California native and Mediterranean plant types. No planting shall take place until the soil has been properly prepared based on the recommendations of the soils testing laboratory. Organic soils amendments shall be incorporated as necessary to achieve a recommended percolation rate of one inch per hour.

8.18.4 Slope Landscaping

All manufactured and cut/fill slopes which exceed 3' in height shall be planted with an effective mixture of groundcover, shrubs, trees, and include jute matting. Such slopes shall also be irrigated as necessary to ensure germination and establishment. Landscape slopes shall not exceed 3:1 or greater and shall include the installation of jute matting. Where 2:1 landscape slopes are unavoidable, erosion blankets shall be installed with a 3-year durability.

8.18.5 Interior Slopes: Residential Interior

- Interior slopes may be more ornamental in character than exterior slopes. They may have a somewhat broader range of plant materials than exterior slopes, but should still be chosen primarily from the Ontario Esperanza plant palette and are subject to the same fuel modification restrictions.
- All manufactured and cut/fill slopes which exceed 3' in height shall be planted with an effective mixture of groundcover, shrubs, and trees. Such slopes shall also be irrigated as necessary to ensure germination and establishment.

8.18.6 Streetscape Landscaping

Streetscape Development Standards

- Turf grass ~~shall only be used in areas with street side parking and shall be located adjacent to the sidewalk or curb line.~~ is only permitted within streetscapes where streetside parking is identified and recycled water is available.
- All new plantings within the Ontario Esperanza planned community shall draw substantially from the Ontario Esperanza Plant List included in this document.
- All streetscape landscaping within the Ontario Esperanza planned community will be implemented by the Developer in accordance with this Specific Plan.
- The Developer shall install all primary and secondary improvements concurrently with the construction of the roadway on which they front. Neighborhood intersections shall be constructed as each neighborhood street is built.
- The Developer shall provide site inspection of all construction and installation of entries and intersections in accordance the City of Ontario requirements.

8.18.7 Irrigation Design

Irrigation for both public and private landscapes should be designed to be as water-efficient as possible. All irrigation systems shall have automatic controllers designed to properly water plant materials given the site's soil conditions, and irrigation systems for all public landscapes shall have automatic rain shut-off devices. Drip irrigation is not permitted with CFD landscape areas. Spray systems shall have low volume (gpm) matched-precipitation heads. All CFD areas are to be controlled with a central control irrigation system and all trees are to be irrigated utilizing a flush grade bubbler system on a separate valve. All CFD areas shall be designed to City Standard Specifications.

All irrigation products specified shall achieve an irrigation operational distribution uniformity of ~~70%~~ 65% or greater in all turf areas and ~~80%~~ in all other landscaped areas. Turf areas shall be irrigated with equipment that has a precipitation rate of one inch or less per hour as specified by the manufacturer. Stream rotator heads or low volume spray heads are acceptable for turf areas. Use of standard spray heads shall be avoided. Non turf shrub areas shall be irrigated with low volume micro spray or point application devices, where manufacturer's specification indicates output measured and expressed in gallons per hour.

Plant Matrix - Shrubs

Section 9. General Plan Consistency

California Government Code (Title 7, Division 1, Section 3, Article 8, Section 65440- 65457) permits the adoption and administration of Specific Plans as an implementation tool for elements contained within a jurisdiction's local General Plan. Specific plans must demonstrate consistency in regulations, guidelines, and programs with the goals and policies set forth in the general plan.

The Esperanza Specific Plan has been prepared in conformance with the goals and policies of the City of Ontario General Plan. The "~~City of Ontario New Model Colony~~ Ontario Ranch Specific Plan Policy Matrix" which follows, describes the manner in which the Specific Plan complies with the General Plan.

THIS PAGE WAS INTENTIONALLY LEFT BLANK.

The Ontario Plan 2050
Specific Plan Policy Matrix

Following are policies from the Ontario Plan 2050. The Ontario Plan establishes the direction and vision for the City of Ontario and provides a single comprehensive document to shape its future. The Ontario Plan provides for policies to accommodate change over its 30 year lifespan. The Ontario Plan consists of a six (6) part Component Framework: ***1) Vision, 2) Governance Manual, 3) Policy Plan, 4) City Council Priorities, 5) Implementation, and 6) Tracking and Feedback****. The following matrix is intended to determine the adequacy of the proposed Specific Plan in meeting the polices of the Ontario Plan. The checklist shall be completed and submitted with the Specific Plan application. Check if the Specific Plan fully complies or partially complies with each respective policy, or if not applicable.*

Policy		Fully Complies	Partially Complies	SP Sec. No.	N/A
LAND USE ELEMENT					
LU-1 Balance					
Goal	**A community that has a spectrum of housing types and price ranges that match the jobs in the City and that make it possible for people to live and work in Ontario and maintain a quality of life.**				
LU-1.1	**Strategic Growth.** We concentrate growth in strategic locations that help create place and identity, maximize available and planned infrastructure, foster the development of transit, and support the expansion of the active and multimodal transportation networks throughout the City.	X		4 and 7	
Comments:					
LU-1.2	**Sustainable Community Strategy.** We integrate state, regional, and local Sustainable Community/Smart Growth principles into the development and entitlement process.	X		7	
Comments:					
LU-1.3	**Adequate Capacity.** We require adequate infrastructure and services for all development.	X		5	
Comments:					

Policy		Fully Complies	Partially Complies	SP Sec. No.	N/A
LU-1.4	**Multimodal Mobility.** We require development and urban design, where appropriate, that reduces reliance on the automobile and capitalizes on active transportation, transit, electric vehicles, and multimodal transportation opportunities.	X		5	
Comments:					
LU-1.5	**Jobs-Housing Balance.** We coordinate land use, infrastructure, and transportation planning and analysis with regional, county, and other local agencies to further regional and subregional goals for jobs-housing balance.	X		4 and 7	
Comments:					
LU-1.6	**Complete Community.** We incorporate a variety of land uses and building types in our land use planning efforts that result in a complete community where residents at all stages of life, employers, workers, and visitors have a wide spectrum of choices of where they can live, work, shop and recreate within Ontario.	X		4 and 7	
Comments:					
LU-1.7	**Revenues and Costs.** We require future amendments to our Land Use Plan to be accompanied by analyses of fiscal impacts.	X		7	
Comments:					
LU-2 Compatibility					
Goal	**Compatibility between a wide range of uses and resultant urban patterns and forms.**				
LU-2.1	**Land Use Decisions.** We minimize adverse impacts on adjacent properties when considering land use and zoning requests.	X		3 and 4	
Comments:					
LU-2.2	**Buffers.** We require new uses to provide mitigation or buffers between existing uses where potential adverse impacts could occur. Additional mitigation is required when new uses could negatively impact environmental justice areas.	X		4 and 5	
Comments:					
LU-2.3	**Hazardous Uses.** We regulate the development of industrial and similar uses that use, store, produce, or transport toxic substances, air emissions, other pollutants, or hazardous materials.				X
Comments:	*The General Plan does not designate the Esperanza Specific Plan for industrial land uses.*				

Policy		Fully Complies	Partially Complies	SP Sec. No.	N/A
LU-2.4	**Regulation of Nuisances.** We regulate the location, concentration, and operation of potential nuisances.	X		4	
Comments:					
LU-2.5	**Regulation of Uses.** We regulate the location, concentration, and operation of uses that have impacts on surrounding land uses.	X		4	
Comments:					
LU-2.6	**Infrastructure Compatibility.** We require infrastructure to be aesthetically pleasing and in context with the community character.	X		4, 5 and 8	
Comments:					
LU-2.7	**Inter-jurisdictional Coordination.** We maintain an ongoing liaison with ONT, Caltrans, Public Utilities Commission, the railroads, and other agencies to help minimize impacts and improve the operations and aesthetics of their facilities.	X		7	
Comments:					
LU-2.8	**Transitional Areas.** We require development in transitional areas to protect the quality of life of current residents.	X		4	
Comments:					
LU-2.9	**Methane Gas Sites.** We require sensitive land uses and new uses on former dairy farms or other methane-producing sites be designed to minimize health risks.	X		4 and 7	
Comments:					
LU-2.10	**Sensitive Uses.** We monitor and share information with the community about stationary and non-stationary emission sources. We encourage siting and design of facilities to minimize health and safety risks on existing and proposed sensitive uses, especially in environmental justice areas.	X		7	
Comments:					
LU-2.11	**Context-Aware Transitions and Connections.** We require new development projects and land-planning efforts to provide context-aware and appropriate transitions and connections between existing and planned neighborhoods, blocks, sites, and buildings.	X		4	
Comments:					

Policy		Fully Complies	Partially Complies	SP Sec. No.	N/A
LU-3 Flexibility					
Goal	**Staff, regulations and processes that support and allow flexible response to conditions and circumstances in order to achieve the Vision.**				
LU-3.1	**Development Standards.** We maintain clear development standards which allow flexibility to achieve our Vision and provide objective standards that ensure predictability and deliver the intended physical outcomes.	X		6 and 7	
Comments:					
LU-3.2	**Design Incentives.** We offer design incentives to help projects achieve the Vision.	X		6, 7 and 8	
Comments:					
LU-3.3	**Land Use Flexibility.** We consider uses not typically permitted within a land use category if doing so improves livability, reduces vehicular trips, creates community gathering places and activity nodes, and helps create identity.	X		6 and 8	
Comments:					
LU-4 Phased Growth					
Goal	**Development that provides short-term value only when the opportunity to achieve our Vision can be preserved.**				
LU-4.1	**Commitment to Vision.** We are committed to achieving our Vision but realize that it may take time and several interim steps to get there.	X		4 and 7	
Comments:					
LU-4.2	**Interim Development.** We allow development in urban, mixed use, and transit-oriented Place Types that is not immediately reflective of our ultimate Vision for the Place Type, provided it can be modified or replaced when circumstances are right to support development aligned with the Place Type Vision. We will not allow development that impedes, precludes, or compromises our ability to achieve our Vision.				X
Comments:	*The plan does not include the development of urban, mixed use, or transit-oriented Place Types.*				

Policy		Fully Complies	Partially Complies	SP Sec. No.	N/A
LU-4.3	**Infrastructure Timing.** We require that the necessary infrastructure and services be in place prior to or concurrently with development.	X		4 and 5	
Comments:					
LU-4.4	**Shared Infrastructure.** We encourage and facilitate the use of shared infrastructure (including shared or managed parking) in urban, mixed use, and transit-oriented Place Types.	X		4 and 5	
Comments:					
LU-5 Airport Planning					
Goal	**Integrated airport systems and facilities that minimize negative impacts to the community and maximize economic benefits.**				
LU-5.1	**Coordination with Airport Authorities.** We collaborate with FAA, Caltrans Division of Aeronautics, airport owners, neighboring jurisdictions, and other shareholders in the preparation, update, and maintenance of airport-related plans.				X
Comments:	*The plan is not within the airport impact zone.*				
LU-5.2	**Airport Planning Consistency.** We coordinate with airport authorities to ensure The Ontario Plan is consistent with state law, federal regulations, and/or adopted master plans, and airport land use compatibility plans for ONT and Chino Airport.				X
Comments:	*The plan is not within the airport impact zone.*				
LU-5.3	**Airport Impacts.** We work with agencies to maximize resources to mitigate the impacts and hazards related to airport operations – their homes.				X
Comments:	*The plan is not within the airport impact zone.*				
LU-5.4	**ONT Growth Forecast.** We support and promote an ONT that accommodates 30 million annual passengers and 1.6 million tons of cargo per year, as long as the impacts associated with that level of operations are planned for and mitigated.				X
Comments:	*The plan is not within the airport impact zone.*				
LU-5.5	**Airport Compatibility Planning for ONT.** We create and maintain the Airport Land Use Compatibility Plan for ONT.				X
Comments:	*The plan is not within the airport impact zone.*				

Policy		Fully Complies	Partially Complies	SP Sec. No.	N/A
LU-5.6	**Alternative Process.** We fulfill our responsibilities and comply with state law with regard to the Alternative Process for proper airport land use compatibility planning.				X
Comments:	*The plan is not within the airport impact zone.*				
LU-5.7	**ALUCP Consistency with Land Use Regulations.** We comply with state law that requires general plans, specific plans, and all new development to be consistent with the policies and criteria set forth within an Airport Land Use Compatibility Plan for any public-use airport.				X
Comments:	*The plan is not within the airport impact zone.*				
LU-5.8	**Chino Airport.** We will support the creation and implementation of the Airport Land Use Compatibility Plan for Chino Airport.				X
Comments:	*The plan is not within the airport impact zone.*				
HOUSING ELEMENT					
H-1 Neighborhoods & Housing					
Goal	**Stable neighborhoods of quality housing, ample community services and public facilities, well-maintained infrastructure, and public safety that foster a positive sense of identity.**				
H-1.1	**Housing Rehabilitation.** We support the rehabilitation, maintenance, and improvement of single-family, multiple-family, and mobile homes through code compliance, removal of blight where necessary, and provision of rehabilitation assistance where feasible.	X		4 and 8	
Comments:					
H-1.2	**Neighborhood Conditions.** We direct efforts to improve the long-term sustainability of neighborhoods through comprehensive planning, provision of neighborhood amenities, rehabilitation and maintenance of housing, and community building efforts.	X		4 and 8	
Comments:					
H-1.3	**Community Amenities.** We shall provide adequate public services, infrastructure, open space, parking and traffic management, pedestrian, bicycle, and equestrian routes and public safety for neighborhoods consistent with City master plans and neighborhood plans.	X		4 and 8	
Comments:					

Policy		Fully Complies	Partially Complies	SP Sec. No.	N/A
H-1.4	**Historical Preservation.** We support the preservation and enhancement of residential structures, properties, street designs, lot configurations, and other reminders of Ontario's past that are considered to be local historical or cultural resources.	X		3	
Comments:					
H-1.5	**Neighborhood Identity.** We strengthen neighborhood identity through creating parks and recreational outlets, sponsoring neighborhood events, and encouraging resident participation in the planning and improvement of their neighborhoods.	X		4 and 8	
Comments:					
H-2 Housing Supply & Diversity					
Goal	**Diversity of types of quality housing that are affordable to a range of household income levels, accommodate changing demographics, and support and reinforce the economic sustainability of Ontario.**				
H-2.1	**Corridor Housing.** We revitalize transportation corridors by encouraging the production of higher density residential and mixed-uses that are architecturally, functionally, and aesthetically suited to corridors.	X		3 and 4	
Comments:					
H-2.2	**Historic Downtown.** We foster a vibrant historic downtown through facilitating a wide range of housing types and affordability levels for households of all ages, housing preferences, and income levels.				X
Comments:	*The plan does not include the development of a historic downtown.*				
H-2.3	**Ontario Airport Metro Center.** We foster a vibrant, urban, intense, and highly amenitized community in the Ontario Airport Metro Center Area through a mix of residential, entertainment, retail, and office-oriented uses.				X
Comments:	*The plan does not include the development of a Ontario airport metro center.*				
H-2.4	**Ontario Ranch.** We support a premier lifestyle community in the Ontario Ranch, distinguished by diverse housing, highest design quality, and cohesive and highly amenitized neighborhoods.	X		4 and 8	
Comments:					

Policy		Fully Complies	Partially Complies	SP Sec. No.	N/A
H-2.5	**Housing Design.** We require architectural excellence through adherence to City design guidelines, thoughtful site planning, environmentally sustainable practices, and other best practices.	X		6 and 8	
Comments:					
H-2.6	**Infill Development.** We support the revitalization of neighborhoods through the construction of higher-density residential developments on underutilized residential and commercial sites.	X		3 and 4	
Comments:					
H-3 Governmental Regulations					
Goal	**A City regulatory environment that balances the need for creativity and excellence in residential design, flexibility and predictability in the project approval process, and the provision of an adequate supply and prices of housing.**				
H-3.1	**Incentives.** We maintain incentive programs that can be offered to projects that provide benefits to the community such as exceptional design quality, economic advantages, environmental sustainability, or other benefits that would otherwise be unrealized.	X		7	
Comments:					
H-3.2	**Flexible Standards.** We allow flexibility in the application of residential and mixed-use development standards in order to gain benefits such as exceptional design quality, economic advantages, sustainability, or other benefits that would otherwise be unrealized.	X		6 and 8	
Comments:					
H-3.3	**Development Review.** We maintain a residential development review process that provides certainty and transparency for project stakeholders and the public, yet allows for the appropriate review to facilitate quality housing development.	X		4 and 7	
Comments:					
H-3.4	**Financial Incentives.** We consider financial incentives to facilitate and encourage the production, rehabilitation or improvement of housing, or provision of services where such activity furthers housing and community-wide goals.	X		7	
Comments:					

Policy		Fully Complies	Partially Complies	SP Sec. No.	N/A
H-4 Housing Assistance					
Goal	**Increased opportunities for low- and moderate-income households and families to afford and maintain quality ownership and rental housing opportunities, including move-up opportunities. Inclusive communities, racial equity, fair housing choice, and access to opportunity.**				
H-4.1	**Preservation of Affordable Apartments.** We strive to facilitate the preservation of the affordability of publicly assisted apartments for lower-income households through financial assistance, technical assistance, rehabilitation, and collaborative partnerships.				X
Comments:					
H-4.2	**Homeownership Opportunities.** We increase and expand homeownership rates for lower- and moderate-income households by offering financial assistance, low-interest loans, and educational resources, and by working in collaboration with partnerships.		X	4 and 7	
Comments:	*The plan provides a variety of homeowner ownership opportunities but does not include any affordable housing units.*				
H-4.3	**Rental Assistance.** We support the provision of rental assistance for individuals and families earning extremely low, very low, and low income with funding from the state and federal government.	X		7	
Comments:					
H-4.4	**Mixed-income Housing.** We encourage the integration of affordable housing in the Ontario Ranch, Ontario Airport Metro Center Area, and existing neighborhoods.	X		4 and 7	
Comments:					
H-4.5	**Collaborative Partnerships.** We support collaborative partnerships of nonprofit organizations, affordable housing developers, major employers, and for-profit developers to produce affordable housing.	X		7	
Comments:					
H-4.6	**Fair Housing.** We further fair housing by prohibiting discrimination in the housing market, lifting barriers that restrict access to housing, and providing education, support, and enforcement services to address discriminatory practices.	X		4 and 7	
Comments:					

Policy		Fully Complies	Partially Complies	SP Sec. No.	N/A
H-5 Special Needs					
Goal	**A full range of housing types and community services that meet the special housing needs for all individuals and families in Ontario, regardless of income level, age, or other status.**				
H-5.1	**Senior Housing.** We support the development of accessible and affordable senior housing and provide financial assistance for seniors to maintain and improve their homes.	X		4 and 7	
Comments:	*The plan does not include the development of senior housing.*				
H-5.2	**Family Housing.** We support the development of larger rental apartments that are appropriate for families with children, including, as feasible, the provision of services, recreation, and other amenities.				X
Comments:					
H-5.3	**Disabled People.** We increase the supply of permanent, affordable, and accessible housing for people with disabilities, and provide assistance to allow them to maintain and improve their homes.				X
Comments:	*The plan meets all current ADA requirements but does not include any affordable housing units.*				
H-5.4	**Homeless People.** We partner with nonprofit partners to provide emergency shelters, transitional housing, permanent supportive housing, and supportive services for people who are homeless.				X
Comments:	*The plan does not include any emergency or homeless shelters.*				
H-5.5	**Supportive Services.** We financially support organizations, as feasible, that provide support services that meet the needs of those with special needs and further the greatest level of independence.				X
Comments:					
H-5.6	**Partnerships.** We collaborate with nonprofit organizations, private developers, employers, government agencies, and other interested parties to develop affordable housing and provide support services.				X
Comments:					

Policy		Fully Complies	Partially Complies	SP Sec. No.	N/A
PARKS & RECREATION ELEMENT					
PR-1 Planning & Design					
Goal	**A system of safe and accessible parks that meets the needs of the community.**				
PR-1.1	**Access to Parks.** In all new residential development areas, we strive to provide a park and/or recreational facility within walking distance (¼ mile) of every residence and prioritize the establishment of parks in environmental justice areas that do not have adequate access to parks.	X		4 and 8	
Comments:					
PR-1.2	**Adjacency to Schools.** We examine locating parks adjacent to school sites to promote joint-use opportunities.				X
Comments:	*The plan no longer includes plans to develop a school site.*				
PR-1.3	**Funding.** We shall seek outside, one-time sources of funding for capital improvements and reserve ongoing City funds primarily for operations and maintenance.	X		7	
Comments:					
PR-1.4	**Joint-use Opportunities.** In areas where there is a need but no City recreational facility, we explore joint-use opportunities. (e.g., school sites).	X		7	
Comments:					
PR-1.5	**Acreage Standard.** We strive to provide 5 acres of parkland (public and private) per 1,000 residents.	X		4 and 7	
Comments:					
PR-1.6	**Private Parks.** We expect development to provide a minimum of 2 acres of developed private park space per 1,000 residents.	X		4 and 7	
Comments:	*The Project developers will participate in the development impact fee program a s required for park fees.*				
PR-1.7	**Special Needs/Universal Design.** We attempt to provide recreational opportunities at parks for people of all ages and abilities.	X		7 and 8	
Comments:					
PR-1.8	**Renovation.** We examine renovating existing facilities prior to building replacement facilities.	X		7	
Comments:					

Policy		Fully Complies	Partially Complies	SP Sec. No.	N/A
PR-1.9	**Phased Development. We require parks be built in new communities before a significant proportion of residents move in.**	X		4 and 7	
Comments:					
PR-1.10	**Master Plans for Individual Park Facilities.** We require an individual park master plan for parks in excess of 10 acres.				X
Comments:	*The plan does not include any parks in excess of 10 acres. The City of Ontario is the entity responsible for updating the Parks & Recreational Facilities Master Plan.*				
PR-1.11	**Environmental Function of Parks.** We require new parks to meet environmental management objectives.	X		4 and 7	
Comments:					
PR-1.12	**Trails.** We promote connections between parks and local trails including those managed by other public agencies.	X		4 and 7	
Comments:	*The plan includes parks and trails that connect to Citywide planned trails.*				
PR-1.13	**Equestrian Trails.** We require the design, construction, and maintenance of equestrian trails in Rural Residential designated areas.				X
Comments:	*The plan does not include any equestrian trails.*				
PR-1.14	**Multi-family Residential Developments.** We require that new multi-family residential developments of five or more units provide recreational facilities or open space, in addition to paying adopted impact fees.				X
Comments:	*The project developers will participate in the development impact fee program as required for park fees.*				
PR-1.15	**Trail Connectivity.** We strengthen and improve equestrian, bike, and multipurpose trail connections within the City and work to improve trail connections into adjacent jurisdictions.	X		4 and 7	
Comments:	*The plan includes multipurpose trails that connect to Citywide planned trails.*				
PR-1.16	**Equestrian Master Plan.** We use Homer Briggs Park as the primary focal point for the development of a Master Plan of Equestrian Trails in the Rural Residential area.				X
Comments:	*The plan does not include any equestrian trails.*				

Policy		Fully Complies	Partially Complies	SP Sec. No.	N/A
PR-2 Programming					
Goal	**A range of recreational programs provided by public, private, and nonprofit organizations that meet the needs of the community's varied interests, age groups, and abilities.**				
PR-2.1	**Participation.** We program park facilities to maximize utilization and participation, while considering park size, location, and population served.	X		4 and 8	
Comments:					
PR-2.2	**Needs Assessment.** We track the needs and priorities for recreational programming and look for ways to meet demand.	X		7	
Comments:					
PR-2.3	**Community Involvement.** We involve the local community in planning programs for neighborhood and community park facilities.	X		7	
Comments:					
PR-2.4	**Access to Programs.** We provide a range of recreational and physical exercise programs that are accessible to residents of all income levels throughout the community and prioritize establishing and maintaining equitable access for residents in environmental justice areas.	X		7	
Comments:					
PR-2.5	**Partnerships.** We partner with local and regional agencies, nonprofit organizations, and the private sector to provide a comprehensive range of recreational programs.	X		7	
Comments:					
PR-2.6	**Crime Deterrents.** We promote and participate in recreational programming as part of our crime prevention effort.	X		7	
Comments:					

Policy		Fully Complies	Partially Complies	SP Sec. No.	N/A
ENVIRONMENTAL RESOURCES ELEMENT					
ER-1 Water & Wasterwater					
Goal	**A reliable and cost-effective system that permits the City to manage its diverse water resources and needs.**				
ER-1.1	**Local Water Supply.** We increase local water supplies to reduce our dependence on imported water. New and redevelopment projects are aligned with our available water supply and/or to enhance our available water supply.	X		3 and 5	
Comments:	*The plan incorporates the City's Master Plan for water.*				
ER-1.2	**Matching Supply to Use.** We match water supply and quality to the appropriate use.	X		3 and 5	
Comments:					
ER-1.3	**Conservation and Sustainable Water Supply.** We work with regional water providers and users to conserve water and ensure sustainable local water supplies as more frequent droughts reduce long term local and regional water availability	X		3 and 5	
Comments:	*The plan incorporates the City's Master Plan for water.*				
ER-1.4	**Supply-Demand Balance.** We require that available water supply and demands be balanced.	X		3 and 5	
Comments:	*The plan incorporates the City's Master Plan for water.*				
ER-1.5	**Water Resource Management.** Environmental justice areas are prioritized as we coordinate with local agencies to protect water quality, prevent pollution, address existing contamination, and remediate contaminated surface water and groundwater.	X		3 and 5	
Comments:	*The plan incorporates the City's Master Plan for water.*				
ER-1.6	**Urban Run-off Quantity.** We encourage the use of low impact development strategies, including green infrastructure, to intercept run-off, slow the discharge rate, increase infiltration, and ultimately reduce discharge volumes to traditional storm drain systems.	X		3 and 5	
Comments:					
ER-1.7	**Urban Run-off Quality.** We require the control and management of urban run-off, consistent with Regional Water Quality Control Board regulations.	X		3 and 5	
Comments:	*The plan will comply with the City's Master Plan requirements for Wastewater management.*				

Policy		Fully Complies	Partially Complies	SP Sec. No.	N/A
ER-1.8	**Wastewater Management.** We require the management of wastewater discharge and collection consistent with waste discharge requirements adopted by the Regional Water Quality Control Board.	X		3 and 5	
Comments:	*The plan will comply with the City's Master Plan requirements for Wastewater management.*				
ER-2 Solid Waste & Recycling					
Goal	**A cost effective, integrated waste management system that meets or exceeds state and federal recycling and waste diversion mandates.**				
ER-2.1	**Waste Diversion.** We shall meet or exceed AB 939 requirements.	X		3 and 5	
Comments:					
ER-2.2	**Hazardous and Electronic Wastes.** We prohibit the disposal of hazardous and electronic waste into the municipal waste stream pursuant to state law.	X		3 and 5	
Comments:					
ER-2.3	**Purchase Products Made from Recycled Materials.** We purchase recycled-content products where it is cost effective.	X		3 and 5	
Comments:					
ER-3 Energy					
Goal	**Cost-effective and reliable energy system sustained through a combination of low impact buildings, site and neighborhood energy conservation, and diverse sources of energy generation that collectively helps to minimize the region's carbon footprint.**				
ER-3.1	**Conservation Strategy.** We require conservation as the first strategy to be employed to meet applicable energy-saving standards.	X		3 and 5	
Comments:					

Policy		Fully Complies	Partially Complies	SP Sec. No.	N/A
ER-3.2	**Green Development– Communities.** We encourage the use of the LEED Neighborhood Development rating system, or similar mechanism, to guide the planning and development of all new communities.	X		3 and 5	
Comments:					
ER-3.3	**Building and Site Design.** We require new construction to incorporate energy efficient building and site design strategies, which could include appropriate solar orientation, maximum use of natural daylight, passive solar, and natural ventilation.	X		3 and 5	
Comments:					
ER-3.4	**Green Development– Public Buildings.** We require all new and substantially renovated City buildings in excess of 10,000 square feet achieve a LEED Silver Certification standard, as determined by the U.S. Green Building Council.	X		3 and 5	
Comments:					
ER-3.5	**Fuel-Efficient and Alternative Energy Vehicles and Equipment.** We require purchase and use vehicles and equipment that are fuel efficient and meet or surpass state emissions requirements and/or use renewable sources of energy.	X		3 and 5	
Comments:					
ER-3.6	**Generation- Renewable Sources.** We promote the use of renewable energy sources (e.g., solar, wind, biomass) in public and private sector development.	X		3 and 5	
Comments:					
ER-4 Air Quality					
Goal	**Improved indoor and outdoor air quality and reduced locally generated pollutant emissions.**				
ER-4.1	**Land Use.** We reduce GHG and other local pollutant emissions through compact, mixed use, and transit-oriented development and development that improves the regional jobs-housing balance.	X		3 and 5	
Comments:					
ER-4.2	**Sensitive Land Uses.** We prohibit the future siting of sensitive land uses within the distances defined by the California Air Resources Board for specific source categories, without sufficient mitigation.	X		3 and 5	
Comments:					

Policy		Fully Complies	Partially Complies	SP Sec. No.	N/A
ER-4.3	**Greenhouse Gases (GHG) Emissions Reductions.** We will reduce GHG emissions in accordance with regional, state, and federal regulations.	X		3 and 5	
Comments:					
ER-4.4	**Indoor Air Quality.** We will comply with State Green Building Codes relative to indoor air quality. We seek funding to improve indoor air quality for households with poor indoor air quality, with priority for lower income households in environmental justice areas.	X		3 and 5	
Comments:					
ER-4.5	**Transportation.** We promote mass transit and non-motorized mobility options (walking, biking) to reduce air pollutant emissions.	X		3 and 5	
Comments:					
ER-4.6	**Particulate Matter.** We support efforts to reduce particulate matter to meet State and Federal Clean Air Standards.	X		3 and 5	
Comments:					
ER-4.7	**Other Agency Collaboration.** We collaborate with other agencies within the South Coast Air Basin to improve regional air quality at the emission source, with a particular focus on sources that affect environmental justice areas in Ontario.	X		3 and 5	
Comments:					
ER-4.8	**Tree Planting.** We protect healthy trees within the City and plant new trees to increase carbon sequestration and help the regional/local air quality. We expand the tree canopy in environmental justice areas to enhance air quality and reduce the "heat island" effect.	X		3 and 5	
Comments:					

Policy		Fully Complies	Partially Complies	SP Sec. No.	N/A
ER-4.9	**New Localized Air Pollution Sources Near Existing Sensitive Receptors.** We require new developments to conduct a Health Risk Assessment for land uses that generate more than 100 trucks per day or 40 trucks per day by trucks operating transportation refrigeration units (TRU's) within 1,000 feet from sensitive land uses (California Health and Safety Code § 42705.5(a)(5)). If the health risk assessment determines the new development poses health hazards that increase the incremental cancer risk above the threshold established by the South Coast Air Quality Management District (AQMD), we will only approve permits upon the condition that adequate mitigation measures are proposed and implemented for potential impacts on the sensitive uses around the site and along the route within Ontario taken by the trucks to and from freeways. We require new developments that must perform a health risk assessment to conduct additional public outreach by sending notifications in multiple languages to all residents living within 500 feet, and encourage hosting a public meeting.	X		3 and 5	
Comments:					
ER-5 Biological, Mineral & Agricultural Resources					
Goal	**Protected high value habitat and farming and mineral resource extraction activities that are compatible with adjacent development.**				
ER-5.1	**Habitat Conservation Areas.** We support the protection of biological resources through the establishment, restoration, and conservation of high-quality habitat areas.				X
Comments:	*The Plan area is not within or near any habitat conservation areas.*				
ER-5.2	**Entitlement and Permitting Process.** We comply with state and federal regulations regarding protected species.	X		3 and 5	
Comments:					
ER-5.3	**Right to Farm.** We support the right of existing farms to continue their operations within the Ontario Ranch.				X
Comments:					
ER-5.4	**Transition of Farms.** We protect both existing farms and sensitive uses around them as agricultural areas transition to urban uses.	X		3, 4, 5, 6 and 7	
Comments:					

Policy		Fully Complies	Partially Complies	SP Sec. No.	N/A
ER-5.5	**Mining Operations.** We prohibit future mining operations where the resource extraction activities are incompatible with existing or proposed adjacent land uses.	X		3 and 5	
Comments:					
COMMUNITY ECONOMICS ELEMENT					
CE-1 Complete Community					
Goal	**A complete community that provides for all incomes and stages of life.**				
CE-1.1	**Jobs-Housing Balance.** We pursue improvement to the Inland Empire's balance between jobs and housing by promoting job growth that reduces the regional economy's reliance on out-commuting.				X
Comments:					
CE-1.2	**Jobs and Workforce Skills.** We use our economic development resources to: 1. Attract jobs suited for the skills and education of current and future City residents; 2. Work with regional partners to provide opportunities for the labor force to improve its skills and education; and 3. Attract businesses that increase Ontario's stake and participation in growing sectors of the regional and global economy.				X
Comments:					
CE-1.3	**Regional Approach to Workforce Development.** We work with our partners to provide workforce training and development services throughout the region, recognizing that Ontario employers rely on workers living outside of the City.				X
Comments:					
CE-1.4	**Business Retention and Expansion.** We continuously improve two-way communication with the Ontario business community and emphasize customer service to existing businesses as part of our competitive advantage.				X
Comments:					

Policy		Fully Complies	Partially Complies	SP Sec. No.	N/A
CE-1.5	**Business Attraction.** We proactively attract new and expanding businesses to Ontario in order to increase the City's share of growing sectors of the regional and global economy.				X
Comments:					
CE-1.6	**Diversity of Housing.** We collaborate with residents, housing providers, and the development community to provide housing opportunities for every stage of life; we plan for a variety of housing types and price points to encourage the development of housing supportive of our efforts to attract business in growing sectors of the community while being respectful of existing viable uses.	X		4 and 7	
Comments:					
CE-1.7	**Retail Goods and Services.** We seek to ensure a mix of retail businesses that provide the full continuum of goods and services for the community.				X
Comments:					
CE-1.8	**Regional Attraction.** We encourage the development and programming of regional, cultural, and entertainment destinations in Ontario.				X
Comments:					
CE-1.9	**Regional Leadership.** We provide leadership for public, quasi-public, and private-sector partners that help Ontario and its residents and businesses realize our goals and achieve our Vision.				X
Comments:					
CE-1.10	**Life-Long Education.** We work with our partners who provide life-long learning to ensure that our residents and workforce have access to education at all stages of life.				X
Comments:					
CE-1.11	**Socioeconomic Trends.** We continuously monitor, plan for, and respond to changing socioeconomic trends.				X
Comments:					
CE-1.12	**Circulation.** We continuously plan and improve public transit and non-vehicular circulation for the mobility of all, including those with limited or no access to private automobiles.	X		4 and 7	
Comments:					

Policy		Fully Complies	Partially Complies	SP Sec. No.	N/A
CE-1.13	**Safety and Security.** We invest in public safety and communicate our successes because the perception and reality of safety and security are necessary prerequisites for private investment and economic growth.				X
Comments:					
CE-2 Placemaking					
Goal	**A City of distinctive neighborhoods, districts, corridors, and centers where people choose to be.**				
CE-2.1	**Development Projects.** We require new development and redevelopment to create unique, high-quality places that add value to the community.	X		6 and 8	
Comments:					
CE-2.2	**Development Review.** We require those proposing new development and redevelopment to demonstrate how their projects will create appropriately unique, functional, and sustainable places that will compete well with their competition within the region.	X		6 and 8	
Comments:					
CE-2.3	**Interim Development.** We require interim development that does not reflect the long-term Vision, be limited in scale of development so that the investment can be sufficiently amortized to make Vision-compatible redevelopment financially feasible.				X
Comments:					
CE-2.4	**Protection of Investment.** We require that new development and redevelopment protect existing investment by providing architecture and urban design of equal or greater quality.	X		6 and 8	
Comments:					
CE-2.5	**Private Maintenance.** We require adequate maintenance, upkeep, and investment in private property because proper maintenance on private property protects property values.	X		7	
Comments:					

Policy		Fully Complies	Partially Complies	SP Sec. No.	N/A
CE-2.5	**Public Maintenance.** We require the establishment and operation of maintenance districts or other vehicles to fund the long-term operation and maintenance of the public realm whether on private land, in rights-of-way, or on publicly-owned property.	X		7	
Comments:					
CE-3 Fiscal Decision-making					
Goal	**Decision-making deliberations that incorporate the full short-term and long-term economic and fiscal implications of proposed City Council actions.**				
CE-3.1	**Fiscal Impact Disclosure.** We require requests for City Council action to disclose the full fiscal impacts, including direct and indirect costs.				X
Comments:					
CE-3.2	**General Plan Amendments.** We require those proposing General Plan amendments to disclose reasonably foreseeable impacts through a fiscal analysis.				X
Comments:					
CE-3.3	**Long-Term Funding Disclosure.** We require those requesting City support or funding for projects or programs to disclose if and how they can be continued without further City support.				X
Comments:					
CE-3.4	**Improving Fiscal Decision-Making.** We periodically assess the accuracy of projections for staff time and City resources and use the assessment results to improve our fiscal decision-making process.				X
Comments:					
CE-3.5	**Sustainable Development.** We recognize impacts to municipal finances as an element of sustainability, and we require claims of sustainability to assess fiscal impacts.				X
Comments:					
CE-3.6	**Fully Funded Liability.** We require long-term liabilities, such as retiree medical benefits, employee accrued leave balances, and self-insured liability claims to be fully funded to ensure sound, long-term fiscal health.				X
Comments:					

Policy		Fully Complies	Partially Complies	SP Sec. No.	N/A
CE-3.7	**Programmatically Balanced Budget.** We require that the annual budget include appropriations allocated in a manner to meet the goal of the programmatically balanced budget.			7	X
Comments:					
CE-3.8	**Budget Margins.** We require that the adopted budget for revenue and expenditures reflect sufficient budget margins to minimize negative impacts to City services due to economic uncertainties.			7	X
Comments:					
SAFETY ELEMENT					
S-1 Seismic & Geologic Hazards					
Goal	**Minimized risk of injury, loss of life, property damage, and economic and social disruption caused by earthquake-induced and other geologic hazards.**				
S-1.1	**Implementation of Regulations and Standards.** We require that all new habitable structures be designed in accordance with the most recent California Building Code adopted by the City, including provisions regarding lateral forces and grading.	X		6 and 8	
Comments:					
S-1.2	**Entitlement and Permitting Process.** We follow state guidelines and the California Building Code to determine when development proposals must conduct geotechnical and geological investigations.	X		7	
Comments:					
S-1.3	**Continual Update of Technical Information.** We maintain up-to-date California Geological Survey seismic hazard maps.				X
Comments:					
S-1.4	**Seismically Vulnerable Structures.** We conform to state law regarding unreinforced masonry structures and coordinate with not-for-profits to facilitate seismic retrofits in environmental justice areas and for low-income households.				X
Comments:					

Policy		Fully Complies	Partially Complies	SP Sec. No.	N/A
S-2 Flood Hazards					
Goal	**Minimized risk of injury, loss of life, property damage and economic and social disruption caused by flooding and inundation hazards.**				
S-2.1	**Entitlement and Permitting Process.** We require hydrological studies prepared by a state-certified engineer when new development is located in a 100-year or 500-year floodplain to assess the impact that the new development will have on the flooding potential of existing development down-gradient.	X		7	
Comments:	*Per project EIR.*				
S-2.2	**Floodplain Mapping.** We require any new development partially or entirely in 100-year flood zones to provide detailed floodplain mapping for 100- and 200-year storm events as part of the development approval process.	X		7	
Comments:					
S-2.3	**Facilities that Use Hazardous Materials.** We comply with state and federal law and do not permit facilities using, storing, or otherwise involved with substantial quantities of onsite hazardous materials to be located in the 100-year flood zone or 500-year flood zone unless all standards of elevation, floodproofing, and storage have been implemented to the satisfaction of the Building Department.				X
Comments:					
S-2.4	**Prohibited Land Uses.** We prohibit the development of new essential and critical facilities in the 100-year floodplain and discourage the development of new essential and critical facilities in the 500-year floodplain unless all standards of elevation and flood proofing demonstrate that a facility can be safe and operational during a flood event, implemented to the satisfaction of the Building Department.				X
Comments:					
S-2.5	**Stormwater Management.** We maintain the storm drain system to convey a 100-year storm, when feasible, and encourage environmental site design practices to minimize flooding and increase groundwater recharge, including natural drainage, green infrastructure, and permeable ground surfaces.	X		5 and 7	
Comments:					

Policy		Fully Complies	Partially Complies	SP Sec. No.	N/A
S-2.6	**Use of Flood Control Facilities.** We encourage joint use of flood control facilities as open space or other types of recreational facilities.				X
Comments:					
S-2.7	**Collaboration Between Agencies.** Collaborate with the San Bernardino County Flood Control District and other state and federal agencies to maintain flood-control infrastructure to minimize flood damage.				X
Comments:					
S-3 Fire & Rescue Hazards					
Goal	**Reduced risk of death, injury, property damage and economic loss due to fires, accidents and normal everyday occurrences through prompt and capable emergency response.**				
S-3.1	**Prevention Services.** We proactively mitigate or reduce the negative effects of fire, hazardous materials release, and structural collapse by implementing the regularly adopted California Fire Code and California Building Code.	X		7	
Comments:					
S-3.2	**Community Outreach.** We provide education to local schools and community groups to promote personal and public safety.				X
Comments:					
S-3.3	**Fire and Emergency Medical Services.** We maintain sufficient fire stations, equipment and staffing to respond effectively to emergencies and meet the needs of the community and state requirements.				X
Comments:					
S-3.4	**Special Team Services.** We maintain effective special rescue services.				X
Comments:	*The City of Ontario is the entity responsible for maintaining effective special rescue services.*				
S-3.5	**Emergency Notifications.** We maintain a public alert notification system that efficiently conveys information about imminent, developing, ongoing, and concluding emergency events to residents and visitors, working with network providers that translate information into other languages.				X
Comments:					

Policy		Fully Complies	Partially Complies	SP Sec. No.	N/A
S-3.6	**Interagency Cooperation.** In order to back up and supplement our capabilities to respond to emergencies, we participate in the California Fire Rescue and Mutual Aid Plan.				X
Comments:					
S-3.7	**Water Supply and System Redundancy.** We monitor our water system to manage and ensure adequate firefighting water supplies.				X
Comments:					
S-3.8	**Fire Prevention through Environmental Design.** We require new development to incorporate fire prevention consideration in the design of streetscapes, sites, open spaces, and buildings.	X		4, 5, 6, 7 and 8	
Comments:					
S-3.9	**Resource Allocation.** We analyze fire data to evaluate the effectiveness of our fire prevention and reduction strategies and allocate resources accordingly.				X
Comments:					
S-4 Noise Hazards					
Goal	**An environment where noise does not adversely affect the public's health, safety, and welfare.**				
S-4.1	**Noise Mitigation.** We utilize the City's Noise Ordinance, building codes, and subdivision and development codes to mitigate noise impacts.	X		6, 7 and 8	
Comments:	*Per project EIR noise study.*				
S-4.2	**Coordination with Transportation Authorities.** We collaborate with airport owners, FAA, Caltrans, SBCTA, SCAG, neighboring jurisdictions, and other transportation providers in the preparation and maintenance of, and updates to transportation-related plans to minimize noise impacts and provide appropriate mitigation measures.				X
Comments:					
S-4.3	**Airport Noise Mitigation.** We aggressively pursue funding and utilize programs to reduce effects of aircraft noise in impacted areas of our community.				X
Comments:	*The plan is not within the airport impact zone.*				

Policy		Fully Complies	Partially Complies	SP Sec. No.	N/A
S-4.4	**Truck Traffic.** We manage truck traffic to minimize noise impacts on sensitive land uses.	X		3, 5 and 6	
Comments:					
S-4.5	**Roadway Design.** We design streets and highways to minimize noise impacts.	X		3, 5 and 6	
Comments:					
S-4.6	**Airport Noise Compatibility.** We utilize information from Airport Land Use Compatibility Plans to prevent the construction of new noise-sensitive land uses within airport noise impact zones.				X
Comments:	*The plan is not within the airport impact zone.*				
S-4.7	**Rail Noise Mitigation.** We require residential and mixed use development of vibration-sensitive uses in areas within 200 feet of rail to evaluate for indoor vibration levels and mitigate any exceedances of the Federal Transit Administration vibration-annoyance criteria.				X
Comments:	*The plan is not within 200 feet of any rail system.*				
S-5 Wind-Related Hazards					
Goal	**Minimize the risk of injury, property damage, and economic loss resulting from windstorms and wind-related hazards.**				
S-5.1	**Dust Control Measures.** We require the implementation of Best Management Practices for dust control at all excavation and grading projects.	X		7	
Comments:					
S-5.2	**Grading in High Winds.** We prohibit excavation and grading during strong wind conditions, as defined by the Building Code.	X		7	
Comments:					
S-5.3	**Public Safety Power Shutoffs.** We coordinate with utility companies to minimize service interruptions, such as Public Safety Power Shutoffs, before, during, and after windstorms and wind-related hazards.				X
Comments:					

Policy		Fully Complies	Partially Complies	SP Sec. No.	N/A
S-6 Hazardous Materials & Waste					
Goal	**Reduced potential for hazardous materials exposure and contamination.**				
S-6.1	**Disclosure and Notification.** We enforce disclosure laws that require all users, producers, and transporters of hazardous materials and wastes to clearly identify the materials that they store, use, or transport.				X
Comments:					
S-6.2	**Response to Hazardous Materials Releases.** We respond to hazardous materials incidents and coordinate these services with other jurisdictions.				X
Comments:					
S-6.3	**Safer Alternatives.** We minimize our use of pesticides and other hazardous materials by choosing non-toxic alternatives that do not pose a threat to the environment, especially when it could affect public park facilities and open spaces.	X		7	
Comments:					
S-6.4	**Safe Storage and Maintenance Practices.** We require that the users of hazardous materials be adequately prepared to prevent and mitigate hazardous materials releases.				X
Comments:					
S-6.5	**Location of Hazardous Material Facilities.** We regulate facilities that will be involved in the production, use, storage, or disposal of hazardous materials, pursuant to federal, state, county, and local regulations, so that impacts to the environment and sensitive land uses are mitigated. We prohibit new hazardous waste facilities in close proximity to sensitive land uses and environmental justice areas.				X
Comments:					
S-6.6	**Location of Sensitive Land Uses.** We prohibit new sensitive land uses from locating within airport safety zones and near existing sites that use, store, or generate large quantities of hazardous materials.				X
Comments:	*The plan does not have any sensitive land uses.*				
S-6.7	**Household Hazardous Waste.** We support the proper disposal of household hazardous substances.	X		7	
Comments:					

Policy		Fully Complies	Partially Complies	SP Sec. No.	N/A
S-6.8	**Mitigation and Remediation of Groundwater Contamination.** We actively participate in local and regional efforts directed at both mitigating environmental exposure to contaminated groundwater and taking action to clean up contaminated groundwater once exposure occurs.	X		7	
Comments:					
S-6.9	**Remediation of Methane.** We require development to assess and mitigate the presence of methane, per regulatory standards and guidelines.	X		7	
Comments:					
S-7 Law Enforcement					
Goal	**Residential neighborhoods, commercial areas, and industrial districts that are kept safe through a multi-faceted approach of prevention, suppression, and community involvement in public safety.**				
S-7.1	**Police Unit Response.** We respond to calls for service in a timely manner.				X
Comments:					
S-7.2	**Community Oriented Problem Solving (C.O.P.S.).** We support and maintain the mission of COPS to identify and resolve community problems.				X
Comments:					
S-7.3	**Prevention Services.** We provide crime prevention programs targeted to youth, parents, seniors, businesses, and neighborhoods.				X
Comments:	*The City of Ontario is the entity responsible for providing crime prevention programs.*				
S-7.4	**Crime Prevention through Environmental Design (CPTED).** We require new development to incorporate CPTED in the design of streetscapes, sites, open spaces, and buildings.	X		4, 6 and 8	
Comments:					
S-7.5	**Interdepartmental Coordination.** We utilize all City departments to help reduce crime and promote public safety.				X
Comments:					

Policy		Fully Complies	Partially Complies	SP Sec. No.	N/A
S-7.6	**Partnerships.** We partner with other local, state, and federal law enforcement agencies and private security providers to enhance public safety services in Ontario.				X
Comments:					
S-7.7	**Resource Allocation.** We analyze crime data to evaluate the effectiveness of crime prevention and reduction strategies and allocate resources accordingly.				X
Comments:					
S-7.8	**Social Services.** We support behavioral health and social services as part of the public safety solution.				X
Comments:					
S-8 Emergency Management					
Goal	**Disaster resilient, prepared community through effective emergency/disaster preparedness, response, mitigation, and recovery.**				
S-8.1	**State and Federal Mandates.** We maintain emergency management programs that meet the requirements of the State of California Standardized Emergency Management System (SEMS) and the National Incident Management System (NIMS).				X
Comments:					
S-8.2	**Emergency Management Plans.** We maintain, update, and adopt the Emergency Operations Plan (EOP) and incorporate, by reference the City's Hazard Mitigation Plan (HMP).				X
Comments:					
S-8.3	**Emergency/Disaster Training Exercises.** We conduct training and exercises to prepare for and evaluate emergency/disaster response and recovery procedures.				X
Comments:					
S-8.4	**Interagency Collaboration.** We maintain partnerships, including automatic aid agreements, with fire protection, police and sheriff departments, and emergency management agencies in San Bernardino and Riverside County to strengthen emergency response.				X
Comments:					

Policy		Fully Complies	Partially Complies	SP Sec. No.	N/A
S-8.5	**Interdepartmental Coordination.** We utilize all City departments to help support emergency/disaster preparedness, response, mitigation, and recovery.				X
Comments:	*The City of Ontario is the entity responsible for interdepartmental coordination to support emergency/disaster situations.*				
S-8.6	**Community Outreach.** We provide education to the community to promote personal, family, and community emergency preparedness to both natural and human-generated hazards.				X
Comments:	*The City of Ontario is the entity responsible for providing education to the community.*				
S-8.7	**Extreme Heat and Air Quality.** We work to ensure that all community members are informed about and have access to community cooling centers and clean air centers during extreme heat events or wildfires, with a focus on serving environmental justice communities. We support the development of extreme heat emergency response policies and practices to address these critical health risks in the community.				X
Comments:	*The City of Ontario is the entity responsible for providing the community with information and access to situations of extreme heat and air quality conditions.*				
S-8.8	**Regional Partnerships for Climate Adaptation.** We partner with local governments in San Bernardino County, Riverside County, and Inland Southern California Climate Collaborative to develop regional climate change adaptation strategies and programs.				X
Comments:	*The City of Ontario is the entity responsible for local and regional partnerships for climate change adaptation strategies and programs.*				
S-8.9	**Backup Power in Critical Facilities.** We require backup power be maintained in critical facilities. We encourage backup power solutions that include renewable energy components.				X
Comments:	*The City of Ontario is the entity responsible for maintaining/providing backup power in critical facilities.*				
S-9 Energy Resiliency					
Goal	**Incorporate energy efficient practices and renewable energy systems to improve air quality, comfort, and energy reliability during temporary power outages.**				
S-9.1	**Solar Energy.** We support and may incentivize the installation of residential and commercial solar panels and battery storage systems that can provide electricity during power outages.	X		7	
Comments:	*The City of Ontario is the entity responsible for supporting and incentivizing the installation and use of solar energy.*				

Policy		Fully Complies	Partially Complies	SP Sec. No.	N/A
S-9.2	**Renewable Energy.** Renovate existing city-owned facilities and plan future facilities to include renewable energy generation capacity and battery storage as part of an effort to make public facilities and services greener and more resilient to power outages.				X
Comments:					
S-9.3	**Energy Efficiency Retrofits.** We support and may incentivize retrofits to residential and commercial buildings that improve energy efficiency and insulation from extreme temperatures, giving priority towards low-income applicants.				X
Comments:					
MOBILITY ELEMENT					
M-1 Roadway System					
Goal	**A system of roadways that meets the mobility needs of a dynamic and prosperous Ontario.**				
M-1.1	**Roadway Design and Maintenance.** We require our roadways to: 1. Comply with federal, state, and local design and safety standards; 2. Meet the needs of multiple transportation modes and users; 3. Handle the capacity envisioned in the City of Ontario Master Plan of Streets and Highways; 4. Be maintained in accordance with best practices; 5. Be compatible with the streetscape and surrounding land uses; and 6. Promote the efficient flow of all modes of traffic through the implementation of intelligent transportation systems and travel demand management strategies.	X		5, 7 and 8	
Comments:	*Per project EIR traffic study.*				
M-1.2	**Mitigation of Impacts.** We require development to mitigate its traffic impacts.	X		5	
Comments:					

Policy		Fully Complies	Partially Complies	SP Sec. No.	N/A
M-1.3	**Agency Coordination on Roadway Improvements.** We work with Caltrans, SBCTA, and others to identify, fund, and implement needed improvements to roadways when necessary. We work with neighboring jurisdictions to promote regional connectivity, access, and meet operational level of service standards at the City limits.				X
Comments:					
M-1.4	**Complete Streets.** We work to provide a complete, balanced, context-aware, multimodal transportation network that meets the needs of all users of streets, roads, and highways, including motorists, pedestrians, bicyclists, children, persons with disabilities, seniors, movers of commercial goods, and users of public transportation. We prioritize implementation of complete streets improvements in environmental justice areas to facilitate opportunities for residents to use active transportation systems.	X		5 and 8	
Comments:					
M-1.5	**Level of Service.** Maintain a peak hour Level of Service (LOS) E or better at all intersections. Maintain Level of Service D or better on arterial streets in the City. Develop and maintain a list of locations where LOS E or LOS F are considered acceptable and would be exempt from this level of service policy. Considerations for LOS exemption include being restricted by environmental constraints, lacking available right-of-way, deterring an increase in VMT, or degrading other modes of travel (such as bicycle or pedestrian infrastructure).				X
Comments:					
M-1.6	**Reduce Vehicle Miles Traveled.** We will strive to reduce VMT through a combination of land use, transportation projects, travel demand management strategies, and other trip reduction measures in coordination with development projects and public capital improvement projects.				X
Comments:					

Policy		Fully Complies	Partially Complies	SP Sec. No.	N/A
M-2 Active Transportation					
Goal	A system of trails and corridors that facilitate and encourage active modes of transportation.				
M-2.1	**Active Transportation.** We maintain our Active Transportation Master Plan to create a comprehensive system of on- and off-street bikeways and pedestrian facilities that are safe, comfortable, and accessible and connect residential areas, businesses, schools, parks, and other key destination points.	X		5 and 8	
Comments:					
M-2.2	**Bicycle System.** We provide off-street multipurpose trails and Class II bikeways as our preferred paths of travel and use the Class III for connectivity in constrained circumstances. When truck routes and bicycle facilities share a right-of-way, we prefer Class I or Class IV bicycle facilities. We require new development to include bicycle facilities, such as bicycle parking and secure storage areas.	X		5 and 8	
Comments:					
M-2.3	**Pedestrian Walkways.** We require streets to include sidewalks and visible crosswalks at major intersections where necessary to promote safe and comfortable mobility between residential areas, businesses, schools, parks, recreation areas, and other key destination points.	X		5 and 8	
Comments:					
M-2.4	**Network Opportunities.** We use public rights-of-way and easements such as, utility easements, levees, drainage corridors, road rights-of-way, medians, and other potential options to maintain and expand our bicycle and pedestrian network. In urban, mixed- use, and transit-oriented Place Types, we encourage the use of underutilized public and private spaces to expand our public realm and improve pedestrian and bicycle connectivity.	X		5 and 8	
Comments:					

Policy		Fully Complies	Partially Complies	SP Sec. No.	N/A
M-3 Public Transit					
Goal	**A public transit system that is a viable alternative to automobile travel and meets basic transportation needs of the transit-dependent.**				
M-3.1	**Transit Partners.** We maintain a proactive working partnership with transit providers to ensure that adequate public transit service is available, cost-efficient, and convenient, particularly for residents in environmental justice areas.				X
Comments:					
M-3.2	**Alternative Transit Facilities at New Development.** We require new development adjacent to an existing or planned transit stop to contribute to the creation of transit facilities, such as bus shelters, transit bays and turnouts, and bicycle facilities, such as secure storage areas.				X
Comments:					
M-3.3	**Transit-Oriented Development.** We may provide additional development-related incentives to those inherent in the Land Use Plan for projects that promote transit use and reduce vehicle miles traveled.	X		4, 5, and 8	
Comments:					
M-3.4	**Bus Rapid Transit (BRT) Corridors.** We work with regional transit agencies to implement BRT service and reduce vehicle miles traveled by targeting destinations and corridors with the highest number of potential riders.				X
Comments:					
M-3.5	**Light Rail.** We support extension of the Metro Rail Gold Line to Ontario, and will work to secure station locations at the proposed multimodal transit center.				X
Comments:	*The plan is not within proximity of a light rail station location.*				
M-3.6	**Metrolink Expansion.** We advocate expansion of Metrolink service to include the Downtown and the multimodal transit center.				X
Comments:	*The plan is not within proximity of a multimodal transit center or Downtown.*				
M-3.7	**High Speed Rail.** We encourage the development of high-speed rail systems that would enhance regional mobility in Southern California and serve the City of Ontario.				X
Comments:	*The plan is not within proximity of the high speed rail system.*				

Policy		Fully Complies	Partially Complies	SP Sec. No.	N/A
M-3.8	**Feeder Systems.** We work with regional transit agencies to secure convenient feeder service from the Metrolink station and the proposed multimodal transit center to employment centers in Ontario.				X
Comments:					
M-3.9	**Ontario Airport Metro Center Circulator.** We will explore development of a convenient mobility system, including but not limited to shuttle service, people mover, and shared car system, for the Ontario Airport Metro Center.				X
Comments:	*The plan is not within proximity of the Ontario Airport.*				
M-3.10	**Multimodal Transportation Center.** We intend to ensure the development of a multimodal transportation center near ONT airport to serve as a transit hub with amenities for transit riders, pedestrians, and bicyclists transitioning to local buses, BRT, the Gold Line, high-speed rail, the proposed Ontario Airport Metro Center Circulator, and other future transit modes. We support locations for the multimodal transportation center that are north of ONT airport, between Vineyard Avenue and Interstate 15.				X
Comments:	*The plan is not within proximity of the ONT airport.*				
M-3.11	**Transit and Community Facilities.** We require the future development of community-wide serving facilities to be sited in transit-ready areas that can be served and made accessible by public transit. Conversely, we plan (and coordinate with other transit agencies to plan) future transit routes to serve existing community facilities.				X
Comments:					
M-4 Goods Movement					
Goal	**An efficient flow of goods through the City that maximizes economic benefits and minimizes negative impacts.**				
M-4.1	**Truck Routes.** We designate and maintain a network of City truck routes that provide for the safe and efficient transport of goods while minimizing negative impacts on local circulation and noise-sensitive land uses, as shown on Exhibit M-04, Truck Routes. We will minimize conflicts on truck routes through the design and implementation of buffers between travel lanes and pedestrian and bicycle facilities on designated truck routes.				X
Comments:					

Policy		Fully Complies	Partially Complies	SP Sec. No.	N/A
M-4.2	**Regional Participation.** We work with regional and subregional transportation agencies and adjacent cities to plan and implement goods movement strategies, including regional truck routes, plans and projects that improve mobility, support the efficient movement of goods, and minimize negative environmental impacts.				X
Comments:					
M-4.3	**Railroad Grade Separations.** We eliminate at-grade rail crossings identified on Exhibit M-01, Roadway Classifications.				X
Comments:	*The plan is not within proximity of a railroad.*				
M-4.4	**Environmental Considerations.** We support both local and regional efforts to reduce/eliminate the negative environmental impacts of goods movement through the planning and implementation of truck routing and the development of a plan to evaluate the future needs of clean fueling/recharging and electrified truck parking.	X		5 and 7	
Comments:					
M-4.5	**Air Cargo.** We support and promote a ONT airport that accommodates 1.6 million tons of cargo per year, as long as the impacts associated with that level of operations are planned for and mitigated.				X
Comments:	*The plan is not within proximity of the ONT airport.*				
M-5 Regional Transportation					
Goal	**A proactive leadership role in helping identify and facilitate implementation of strategies that address regional transportation challenges.**				
M-5.1	**Regional Leadership.** We maintain a leadership role to help identify and implement potential solutions to long-term regional transportation problems.				X
Comments:					
M-5.2	**Land Use Compatibility with Regional Transportation Facilities.** We work with ONT, railroads, Caltrans, SBCTA, and other transportation agencies to minimize impacts.				X
Comments:					

Policy		Fully Complies	Partially Complies	SP Sec. No.	N/A
COMMUNITY DESIGN ELEMENT					
CD-1 Image & Identity					
Goal	**A dynamic, progressive city containing distinct and complete places that foster a positive sense of identity and belonging among residents, visitors, and businesses.**				
CD-1.1	**City Identity.** We take actions that are consistent with the City being a leading urban center in Southern California while recognizing, enhancing, and preserving the character of our existing viable neighborhoods.	X		7	
Comments:					
CD-1.2	**Place Types.** We establish Place Types in urban, mixed use, and transit-oriented areas to foster the City's identity as a premier community and require new development within each Place Type to incorporate prescribed urban patterns, forms, and placemaking priorities.				X
Comments:					
CD-1.3	**Existing Neighborhoods.** We require the existing character of viable residential and non-residential neighborhoods be preserved, protected, and enhanced.				X
Comments:					
CD-1.4	**Transportation Corridors.** We will enhance our major transportation corridors within the City through landscape, hardscape, signage and lighting. The extent of enhancement should be appropriate to the use, type, and context of each corridor.	X		7	
Comments:					
CD-1.5	**View Corridors.** We require all major north-south streets be designed and redeveloped to feature views of the San Gabriel Mountains, which are part of the City's visual identity and a key to geographic orientation. Such views should be free of visual clutter, including billboards and may be enhanced by framing with trees.				X
Comments:					

Policy		Fully Complies	Partially Complies	SP Sec. No.	N/A
CD-2 Design Quality					
Goal	**A high level of design quality resulting in neighborhoods, commercial areas, public spaces, parks, and streetscapes that are attractive, safe, functional, human- scale, and distinct.**				
CD-2.1	**Quality Building Design and Architecture.** We encourage all development projects to convey visual interest and character through: 1. Building volume, massing, and height to provide context-appropriate scale and proportion; 2. A true architectural style which is carried out in plan, section, and elevation through all aspects of the building and site design and appropriate for its setting; and 3. Exterior building materials that are articulated, high quality, durable, and appropriate for the architectural style.	X		6 and 8	
Comments:					
CD-2.2	**Neighborhood Design.** We create distinct residential neighborhoods that promote a sense of community and identity by emphasizing access, connectivity, livability, and social interaction through such elements as: 1. A pattern of smaller, walkable blocks that promote activity, safety, and access to nearby amenities and services; 2. Varied parcel sizes and lot configurations to accommodate a diversity of housing types; 3. Traffic calming measures to slow traffic and promote walkability while maintaining acceptable traffic flows and emergency evacuation access; 4. Floor plans that encourage views onto the street and de-emphasize the visual and physical dominance of garages (introducing the front porch as the "outdoor living room"), as appropriate; and 5. Landscaped parkways, with sidewalks separated from the curb and designed to maximize safety, comfort, and aesthetics for all users.	X		6 and 8	
Comments:					
CD-2.3	**Commercial Areas.** We desire commercial areas and centers to be distinctive, pedestrian friendly, functional, and vibrant with a range of businesses, places to gather, and connectivity to the neighborhoods they serve.				X
Comments:					

Policy		Fully Complies	Partially Complies	SP Sec. No.	N/A
CD-2.4	**Urban, Mixed Use, and Transit-oriented Areas.** We establish Place Types to require mixed use, urban, and transit-oriented areas to be designed and developed as pedestrian oriented areas that are integrated with adjacent neighborhoods and promote a vibrant, comfortable, and functional environment, as defined for each Place Type.				X
Comments:					
CD-2.5	**Streetscapes.** We design new and, when necessary, retrofit existing streets to improve walkability, bicycling and transit integration, strengthen connectivity, and enhance community identity through improvements to the public right-of-way such as sidewalks, street trees, parkways, curbs, street lighting and street furniture.	X		6 and 8	
Comments:					
CD-2.6	**Connectivity.** We promote development of local street patterns, multimodal networks, and connected public spaces that create and unify neighborhoods, rather than divide them, and create cohesive and continuous corridors, rather than independent "islands" through the following means: 1. Local street networks that provide access both between subdivisions and within neighborhoods and discourage through traffic; 2. A local street system that is logical and understandable for the user. A grid system is preferred to avoid circuitous and confusing travel paths between internal neighborhood areas and adjacent arterials and to provide adequate emergency and evacuation access; and 3. Pedestrian and bicycle networks that provide convenient access to neighborhoods and nearby destinations, such as schools, parks, other public spaces, commercial areas, and transit stops.	X		6 and 8	
Comments:					
CD-2.7	**Sustainability.** We collaborate with the development community to design and build neighborhoods, streetscapes, sites, outdoor spaces, landscaping, and buildings to reduce energy demand through solar orientation, maximum use of natural daylight, passive solar and natural ventilation, building form, mechanical and structural systems, building materials, and construction techniques.	X		6 and 8	
Comments:					

Policy		Fully Complies	Partially Complies	SP Sec. No.	N/A
CD-2.8	**Safe Design.** We incorporate defensible space design into new and existing developments to ensure the maximum safe travel and visibility on pathways, corridors, and open space and at building entrances and parking areas by avoiding physically and visually isolated spaces, maintaining visibility and accessibility, and using lighting.	X		6 and 8	
Comments:					
CD-2.9	**Landscape Design.** We encourage durable, sustainable, and drought-tolerant landscaping materials and designs that enhance the aesthetics of structures, create and define public and private spaces, and provide shade and environmental benefits.	X		6 and 8	
Comments:					
CD-2.10	**Parking Areas.** We require all development, including single-family residential, to minimize the visual impact of surface, structured, and garage parking areas visible from the public realm in an aesthetically pleasing, safe and environmentally sensitive manner. Examples include: 1. Surface parking: Shade trees, pervious surfaces, urban run-off capture and infiltration, and pedestrian paths to guide users through the parking field. 2. Structured parking: facade articulation, screening, appropriate lighting, and landscaping. 3. Garage parking: providing access to single-family residential garages through alley access, recessing garages from the frontage to emphasize front doors or active living spaces.	X		6 and 8	
Comments:					
CD-2.11	**Entry Statements.** We encourage the inclusion of amenities, signage, and landscaping at the entry to neighborhoods, commercial centers, mixed use areas, industrial developments, and public places that reinforce them as uniquely identifiable places.	X		6 and 8	
Comments:					
CD-2.12	**Site and Building Signage.** We encourage the use of sign programs that utilize complementary materials, colors, and themes. Project signage should be designed to effectively communicate and direct users to various aspects of the development and complement the character of the structures.	X		6 and 8	
Comments:					
CD-2.13	**Entitlement Process.** We work collaboratively with all stakeholders to ensure a high degree of certainty in the efficient review and timely processing of all development plans and permits.				X
Comments:					

Policy		Fully Complies	Partially Complies	SP Sec. No.	N/A
CD-2.14	**Availability of Information.** We provide easy access to information for developers, builders and the public about design quality, construction quality, and sustainable building practices.				X
Comments:					
CD-2.15	**Leverage Professional and Trade Organizations.** We support excellence in design and construction quality through collaboration with trade and professional organizations that provide expertise, resources and programs for developers, builders, and the public.				X
Comments:					
CD-2.16	**Transit Stops.** We require transit stops be conveniently located, well lit, safe, and clearly accessible to pedestrians, bicyclists, and people of all abilities.				X
Comments:					
CD-3 Urban, Mixed Use, and Transit-Oriented Place Types					
Goal	**Vibrant urban environments that are organized around intense buildings, pedestrian and transit areas, public plazas, and linkages between and within developments that are conveniently located, visually appealing and safe during all hours.**				
CD-3.1	**Unique Identity.** We promote development that heightens the unique character and identity of each Place Type by requiring compatible land uses and land planning, site design, and building design that promotes an active public realm.				X
Comments:					
CD-3.2	**Comfortable, Human-Scale Public Realm.** We require that public spaces, including streets, parks, and plazas on both public and private property be designed to maximize safety, comfort and aesthetics and connect to the citywide pedestrian, vehicular, and bicycle networks.				X
Comments:					

Policy		Fully Complies	Partially Complies	SP Sec. No.	N/A
CD-3.3	**Complete and Connected Network.** We require that pedestrian, vehicular, and bicycle circulation on both public and private property be coordinated to provide connections internally and externally to adjacent neighborhoods and properties (existing and planned) through a system of local roads and trails that promote walking and biking to nearby destinations (including existing and planned parks, commercial areas, and transit stops) and are designed to maximize safety, comfort, and aesthetics.	X		6 and 8	
Comments:					
CD-3.4	**Context-Aware and Appropriate Design.** We require appropriate building and site design that complements existing development, respects the intent and identity of the Place Type, and provides appropriate transitions and connections between adjacent uses to ensure compatibility of scale, maintain an appropriate level of privacy for each use, and minimize potential conflicts.	X		6 and 8	
Comments:					
CD-3.5	**Active Frontages.** We create lively pedestrian streetscapes by requiring primary building, business, and residential entrances, outdoor dining, and storefronts be located on ground floors adjacent to sidewalks or public spaces and designed to maximize safety, comfort, aesthetics, and the intended functionality (as defined by the Place Type).	X		6 and 8	
Comments:					
CD-3.6	**Managed Infrastructure.** We collaborate with developers and property owners to facilitate development that realizes the envisioned character and functionality of the Place Type through the use of green and shared infrastructure within each Place Type.	X		6 and 8	
Comments:					
CD-4 Historic Preservation					
Goal	**Historic buildings, streets, landscapes, and neighborhoods, as well as the story of Ontario's people, businesses, and social and community organizations, have been preserved and serve as a focal point for civic pride and identity.**				
CD-4.1	**Cultural Resource Management.** We update and maintain an inventory of historic sites and buildings, professional collections, artifacts, manuscripts, photographs, documents, maps, and other archives.				X
Comments:					

Policy		Fully Complies	Partially Complies	SP Sec. No.	N/A
CD-4.2	**Collaboration with Property Owners and Developers.** We educate and collaborate with property owners and developers to implement strategies and best practices that preserve the character of our historic buildings, streetscapes, and unique neighborhoods.				X
Comments:					
CD-4.3	**Collaboration with Outside Agencies.** We pursue opportunities to team with other agencies, local organizations, and nonprofits in order to preserve and promote Ontario's heritage.				X
Comments:					
CD-4.4	**Incentives.** We use the Mills Act and other federal, state, regional and local programs to assist property owners with the preservation of select properties and structures.				X
Comments:					
CD-4.5	**Adaptive Reuse.** We actively promote and support the adaptive reuse of historic sites and buildings to preserve and maintain their viability.				X
Comments:					
CD-4.6	**Promotion of Public Involvement in Preservation.** We engage in programs to publicize and promote the City's and the public's involvement in preservation efforts.				X
Comments:					
CD-4.7	**Public Outreach.** We provide opportunities for our residents to research and learn about the history of Ontario through the Planning Department, the Ontario Museum of History and Art, and the Robert E. Ellingwood Model Colony History Room.				X
Comments:					
CD-5 Protection of Investment					
Goal	**A sustained level of maintenance and improvement of properties, buildings, and infrastructure that protects the property values and encourages additional public and private investments.**				
CD-5.1	**Maintenance of Buildings and Property.** We require all public and privately-owned buildings and property (including trails and easements) to be properly and consistently maintained.				X
Comments:					

Policy		Fully Complies	Partially Complies	SP Sec. No.	N/A
CD-5.2	**Maintenance of Infrastructure.** We require the continual maintenance of infrastructure.				X
Comments:					
CD-5.3	**Improvements to Property & Infrastructure.** We provide programs to improve property and infrastructure.				X
Comments:					
CD-5.4	**Neighborhood Involvement.** We encourage active community involvement to implement programs aimed at the beautification and improvement of neighborhoods.				X
Comments:					
SOCIAL RESOURCES ELEMENT					
SR-1 Health					
Goal	**Residents have access to information, services and goods that improve their health and wellbeing.**				
SR-1.1	**Partnering for Healthcare.** We work with healthcare providers, and local, regional, state, and federal agencies to attract and retain a diversity of affordable, quality healthcare and facilities for the entire community.				X
Comments:					
SR-1.2	**Nutrition Choices.** We support the promotion of equitable access to affordable healthy food choices in the community, including community gardens, farmers markets, and cooking classes.				X
Comments:					
SR-1.3	**Health Education.** We promote equitable access to health education, including disease prevention, mental health, nutrition, and physical fitness.				X
Comments:					
SR-1.4	**Physical Activity.** We encourage activities and community design that improve the physical fitness of our community members, with an emphasis on the provision of activities and facilities in environmental justice areas.				X
Comments:					

Policy		Fully Complies	Partially Complies	SP Sec. No.	N/A
SR-2 Education					
Goal	**A range of educational and training opportunities for residents and workers of all ages and abilities that improves their life choices and provides a skilled workforce for our businesses.**				
SR-2.1	**Educational Partners.** We partner with educational institutions throughout the region in order to expand the range and quality of educational offerings available to the community.				X
Comments:					
SR-2.2	**Workforce Training.** We will work with industrial organizations, businesses, and educational institutions to create opportunities for workforce training.				X
Comments:					
SR-2.3	**Joint Use of Facilities.** We partner with public and private educational institutions to jointly use facilities for both City and educational purposes.				X
Comments:					
SR-2.4	**Access to Schools.** We work with local and regional partners to improve the safety in and around schools and to improve access for citizens of all ages and abilities to schools and community services, such as after school and other programs.				X
Comments:					
SR-2.5	**School Facilities.** We plan and coordinate with school districts for designing and locating school facilities to meet the City's goals, such as for health, walkability, and safety and to minimize impacts to existing neighborhoods.				X
Comments:					
SR-2.6	**Language.** We promote broad outreach in languages used by the community for proposed projects that could negatively affect environmental justice areas.				X
Comments:					
SR-2.7	**Community Engagement.** We promote targeted outreach and education to historically underrepresented groups to encourage meaningful participation in decision-making process for projects whose outcomes will affect land use in environmental justice areas.				X
Comments:					

Policy		Fully Complies	Partially Complies	SP Sec. No.	N/A
SR-3 Community & Leisure Activities					
Goal	**A range of community and leisure programs and activities provided by public, private, and nonprofit organizations that meet the needs of the community's varied interests, age groups and abilities.**				
SR-3.1	**Partnerships.** We partner with local and regional agencies, nonprofit organizations, and the private sector to provide a comprehensive range of community activities and events to citizens.				X
Comments:					
SR-3.2	**Needs Assessment.** We track the needs and priorities for community services and look for ways to meet demands and avoid duplication of offerings.				X
Comments:					
SR-3.3	**Program Outreach.** We promote information about leisure activities, classes, special events, and other services and activities to our community.				X
Comments:					
SR-3.4	**Community Events.** We plan and actively participate in regularly scheduled community events and seasonal or yearly citywide events.				X
Comments:					
SR-3.5	**Community Activities as Crime Deterrents.** We promote and participate in community activities as part of our crime prevention efforts.				X
Comments:					
SR-4 Library					
Goal	**City libraries that connect community members of all ages and abilities to a broad range of programs, communication, and informational resources.**				
SR-4.1	**Community Needs.** We identify and monitor community needs for library services, technology, and facilities, and tailor them to effectively meet those needs.				X
Comments:					

Policy		Fully Complies	Partially Complies	SP Sec. No.	N/A
SR-4.2	**Interagency Coordination.** We leverage relationships with outside agencies, educational institutions, and neighboring jurisdictions to share library resources to the benefit of Ontario residents.				X
Comments:					
SR-4.3	**Library Outreach.** We outreach to the community to increase the patronage of the library.				X
Comments:					
SR-4.4	**Coordination with Other Community Services.** We coordinate library programs with other recreational and community programs and facilities.				X
Comments:					
SR-4.5	**Focal Points of the Community.** We design and program Ontario's libraries as focal points of community engagement, including public outreach and community events.				X
Comments:					
SR-4.6	**Robert E. Ellingwood Model Colony History Room.** We work with the Ontario Museum of History and Art in order to collect, preserve, and display artifacts and images from Ontario's heritage and connect the City's past to the present through the History Room.				X
Comments:					
SR-5 Entertainment & Culture					
Goal	**Local heritage, entertainment, and cultural experiences that enrich the lives of Ontario's residents, workers, and visitors and serve to attract residents and businesses to the City.**				
SR-5.1	**Provision of Entertainment and Culture.** We support equitable access to a range of entertainment and cultural experiences such as public art, exhibitions, and performances.				X
Comments:					
SR-5.2	**Local Heritage Education.** We partner with educational providers to promote culture and heritage.				X
Comments:					

Policy		Fully Complies	Partially Complies	SP Sec. No.	N/A
SR-5.3	**Public Art.** We encourage public art in buildings, parks, open spaces, and other public and private spaces.				X
Comments:					
SR-5.4	**Private-Public Sector Events.** We partner with private and nonprofit sectors to provide and promote participation in cultural activities including fairs, festivals, and other events geared to neighborhoods, the City as a whole, and the region.				X
Comments:					
SR-5.5	**Promotion of Ontario Artists and Musicians.** We promote awareness of entertainment and culture produced in Ontario.				X
Comments:					

MEMORANDUM

TO: Robert Morales, Associate Planner
City of Ontario
FROM: Amy Flores

DATE: April 24, 2025

RE: Esperanza PA-11 SPA Project

The following matrix presents all mitigation required within the Esperanza Specific Plan EIR and provides an applicability determination for the Esperanza PA-11 SPA Project (File Nos.: PPA24-0139, PGPA24-004, PSPA24-004, PDEV24-017, PMTT24-008, PDA25-003). Measures that are not applicable are noted in ~~strikeout~~ format.

Esperanza Measure	Project Applicability
Aesthetics	
None.	-
Agriculture and Forest Resources	
~~MM Ag 1: In order to minimize conflicts between urban and agricultural land uses, each Specific Plan developed for properties within the NMC must comply with the Agricultural Overlay District requirements for urban development in proximity to existing agricultural operations. The proposed project shall establish a minimum 100-foot separation between active agricultural operations and new, non-agricultural development, or an equivalent easement that is approved by the City of Ontario~~.	**Not Applicable.** Ag 1 was developed as part of the NMC General Plan Amendment. The Esperanza Specific Plan was developed pursuant to Ag 1. Additionally, there are no active agricultural operations adjacent to the Project site.
~~MM Ag 2: In order to minimize conflicts between urban and agricultural land uses, all residential units in the Subarea 29 Specific Plan shall be provided with a deed disclosure, or similar notice, approved by the City Attorney regarding the proximity and nature, including odors, of neighboring agricultural uses.~~	**Not Applicable.** The Project site is not located within Subarea 29, as referenced in Ag 2.
Air Quality	
~~MM Air 1: During all construction activities, construction contractors shall use low emission mobile construction~~	**Not Applicable.** Project construction would not exceed SCAQMD thresholds; further mitigation is not required.

Esperanza Measure	Project Applicability
~~equipment where feasible to reduce the release of undesirable emissions.~~	
~~MM Air 2: During all construction activities, construction contractors shall encourage rideshare and transit programs for project construction personnel to reduce automobile emissions.~~	**Not Applicable.** Project construction would not exceed SCAQMD thresholds; further mitigation is not required.
~~MM Air 3: During all grading and site disturbance activities, construction contractors shall water active grading sites at least twice a day, and clean construction equipment in the morning and/or evening to reduce particulate emissions and fugitive dust.~~	**Not Applicable.** Project construction would not exceed SCAQMD thresholds; further mitigation is not required.
~~MM Air 4: During all construction activities, construction contractors shall, as necessary, wash truck tires leaving the site to reduce the amount of particulate matter transferred to paved streets as required by SCAQMD Rule 403.~~	**Not Applicable.** Project construction would not exceed SCAQMD thresholds; further mitigation is not required.
~~MM Air 5: During all construction activities, construction contractors shall sweep on and off site streets (recommend water sweepers with reclaimed water) if visible soil is carried over to adjacent public thoroughfares, as determined by the City Engineer to reduce the amount of particulate matter on public streets.~~	**Not Applicable.** Project construction would not exceed SCAQMD thresholds; further mitigation is not required.
~~MM Air 6: During all construction activities, construction contractors shall limit traffic speeds on all unpaved road surfaces to 15 miles per hour or less to reduce fugitive dust.~~	**Not Applicable.** Project construction would not exceed SCAQMD thresholds; further mitigation is not required.
~~MM Air 7: During grading and all site disturbances activities, construction contractors shall suspend all grading operations during first and second stage smog alerts to reduce fugitive dust and combustion related emissions.~~	**Not Applicable.** Project construction would not exceed SCAQMD thresholds; further mitigation is not required.
~~MM Air 8: During grading and all site disturbances activities, construction contractors shall suspend all grading operations when wind speeds (including instantaneous gusts) exceed 25 miles per hour to reduce fugitive dust.~~	**Not Applicable.** Project construction would not exceed SCAQMD thresholds; further mitigation is not required.
~~MM Air 9: During all construction activities, the construction contractors shall maintain construction~~	**Not Applicable.** Project construction would not exceed SCAQMD thresholds; further mitigation is not required.

Esperanza Measure	Project Applicability
~~equipment engines by keeping them tuned according to manufacturers' specifications.~~	
~~MM Air 10: During construction, mobile construction equipment will be properly maintained at an off-site location, which includes proper tuning and timing of engines. Equipment maintenance records and equipment design specification data sheets shall be kept on-site during construction.~~	**Not Applicable.** Project construction would not exceed SCAQMD thresholds; further mitigation is not required.
~~MM Air 11: During construction, all contractors will be advised to prohibit all vehicles from idling in excess of five minutes, both on-site and off-site.~~	**Not Applicable.** Project construction would not exceed SCAQMD thresholds; further mitigation is not required.
~~MM Air 12: Configure construction parking to minimize traffic interference.~~	**Not Applicable.** Project construction would not exceed SCAQMD thresholds; further mitigation is not required.
~~MM Air 13: Contractors shall use high-pressure-low-volume (HPLV) paint applicators with a minimum transfer efficiency of at least 50% or other application techniques with equivalent or higher transfer efficiency, where feasible.~~	**Not Applicable.** Project construction would not exceed SCAQMD thresholds; further mitigation is not required.
~~MM Air 14: Use architectural coatings with a VOC content lower than required under Rule 1113, where feasible.~~	**Not Applicable.** Project construction would not exceed SCAQMD thresholds; further mitigation is not required.
~~MM Air 15: Construct/build with materials that do not require painting, where feasible.~~	**Not Applicable.** Project construction would not exceed SCAQMD thresholds; further mitigation is not required.
~~MM Air 16: Use pre-painted construction materials, where feasible.~~	**Not Applicable.** Project construction would not exceed SCAQMD thresholds; further mitigation is not required.
~~MM Air 17: The contractor shall provide truck drivers with materials showing where sensitive receptors, such as schools, are located, and when congestion can be expected so that the drivers can avoid these routes and/or times of day.~~	**Not Applicable.** Project construction would not exceed SCAQMD thresholds; further mitigation is not required.
~~MM Air 18: Require construction equipment that meet or exceed Tier 2 standards; use emulsified diesel fuels; and equip construction equipment with oxidation catalysts, particulate traps, or other verified/certified retrofit technologies, etc., where feasible.~~	**Not Applicable.** Project construction would not exceed SCAQMD thresholds; further mitigation is not required.
~~MM Air 19: Local transit agencies shall be contacted to determine bus routing in the project area that can accommodate bus stops at the project access points and the project shall provide bus passenger benches and shelters at these project access points.~~	**Not Applicable.** The Project area is already served by transit services; Omnitrans Route 87 serves the area, with a stop located at the corner of Eucalyptus Avenue and Hamner Avenue, less than 1,000 feet from the Project site. The Project would provide internal

Esperanza Measure	Project Applicability
	driveways and pedestrian paths that connect to the existing street and sidewalk network surrounding the Project site.
Biological Resources	
MM Bio 1: There is a possibility of owl colonization within the project site prior to site grading. To ensure that no direct loss of individuals occurs, mitigation will be carried prior to initiation of on-site grading activities for each development phase. A pre-construction survey for resident burrowing owls shall be conducted by a qualified biologist. The survey shall be conducted 30 days prior to construction activities. If ground-disturbing activities are delayed or suspended for more than 30 days after the preconstruction survey, the site shall be resurveyed for owls. If owls are determined to be present within the construction footprint, they shall be captured and relocated. If non-breeding owls must be moved away from the disturbance area, passive relocation techniques will be used. The pre-construction survey and any relocation activity shall be conducted in accordance with the CDFG Report on Burrowing Owl Mitigation, 1995. According to CDFG guidelines, mitigation actions will be conducted from September 1 to January 31, which is prior to the nesting season. However, burrowing owl nesting activity is variable, and as such the time frame will be adjusted accordingly. Should eggs or fledglings be discovered in any owl burrow, the burrow cannot be disturbed (pursuant to CDFG guidelines) until the young have hatched and fledged (matured to a stage that they can leave the nest on their own). Occupied burrows shall not be disturbed during the nesting season (February 1 through August 31) unless a qualified biologist approved by the Department of Fish and Game verifies through non-invasive methods that either: a) the adult birds have not begun egg-laying and incubation; or b) the juveniles from the occupied	**Applicable.** The Project would conduct a pre-construction survey for resident burrowing owls, and follow the protocol set forth in this measure.

Esperanza Measure	Project Applicability
burrows are foraging independently and are capable of independent survival. If a biologist is unable to verify one of the above conditions, then no disturbance shall occur within 300 feet of the burrowing owl's nest during the breeding season to avoid abandonment of the young. Passive relocation can be used to exclude owls from their burrows (outside the breeding season or once the young are able to leave the nest and fly) by installing one-way doors in burrow entrances. These one-way doors allow the owl to exit the burrow, but not enter it. These doors should be left in place 48 hours to ensure owls have left the burrow. Artificial burrows should be provided nearby. The project area should be monitored daily for one week to confirm owl use of burrows before excavating burrows in the impact area. Burrows should be excavated using hand tools and refilled to prevent reoccupation. Sections of flexible pipe should be inserted into the tunnels during excavation to maintain an escape route for any animals inside the burrow.	
MM Bio 2: The project proponent shall be required to pay City of Ontario open space mitigation fees. Fees collected will be used "to acquire and restore mitigation lands to offset impacts to species now living in the New Model Community and impacts to existing open space", according to the City of Ontario Development Impacts Fee Calculation Report and the Settlement and general Release Agreement.	**Applicable.** The Project would pay City of Ontario open space mitigation fees.
~~MM Bio 3: Construction and/or removal of windrow trees will occur outside of the nesting season (February 1 through August 31). If tree removal activities must occur during the breeding season, the mitigation measure in MM Bio 4 shall be implemented.~~	**Not Applicable.** The Project site has been graded, no windrow trees exist on the site.
~~MM Bio 4: If project construction activities involving heavy equipment and/or windrow tree removal are to occur during the nesting/breeding season (between February 1st and August 31st) of potentially occurring sensitive bird species, a pre-construction field survey shall be conducted by a qualified biologist to determine~~	**Not Applicable.** The Project site has been graded, no windrow trees exist of the site.

Esperanza Measure	Project Applicability
~~if active nests of species protected by MBTA or CDFG are present in the construction zone or within a buffer of 500 feet. Pre-construction nesting/breeding surveys shall be conducted in all CDFG jurisdictional areas and within windrow trees. If no active nests are found during the survey, construction activities may proceed.~~ ~~If active nests are located during the pre-construction surveys, no grading, heavy equipment, or tree removal activities shall take place within at least 500 feet of an active listed species or raptor nest, 300 feet of other sensitive bird nests (non-listed), and 100 feet of most common songbird nests.~~	
Cultural Resources	
MM Cul 1: Should any cultural and/or archaeological resources be accidentally discovered during construction, construction activities shall be moved to other parts of the project site and a qualified archaeologist shall be contacted to determine the significance of these resources. If the find is determined to be a historical or unique archaeological resource, as defined in Section 15064.5 of the CEQA Guidelines, then procedures outlined in Section 15064.5 of the CEQA Guidelines shall be followed. Additionally, Ontario's Local CEQA Guidelines provide that curation may be an appropriate mitigation measure for an artifact that must be removed during project excavation or testing. (Local CEQA Guidelines, Section 5.13.)	**Applicable.** Although the site-specific Cultural Resources Study determined that no further archaeological study or mitigation would be required, this measure is directed at resources that may be inadvertantly found during Project construction. The Project would implement this measure.
MM Cul 2: If human remains are uncovered at any time, all activities in the area of the find shall be halted by the developer or its contractor and the County Coroner shall be notified immediately pursuant to CA Health & Safety Code Section 7050.5 and CA PRC Section 5097.98. If the Coroner determines that the remains are of Native American origin, the Coroner shall proceed as directed in Section 15064.5(e) of the CEQA Guidelines.	**Applicable.** The Project would be required to comply with all existing regulations, including the California Public Resources Code Section 5097.98, which would provide protection for any human remains discovered during development activities.
Energy	
None. (This topic was added to the CEQA Guidelines after the certification of the Esperanza Specific Plan DEIR.)	-

Esperanza Measure	Project Applicability
Geology and Soils	
MM Geo 1: To address potential wind erosion effects, prior to construction, all grading and other construction activities will apply for and adhere to the permit given by the City of Ontario and enforced by the Building Official found in Title 6, Chapter 12, sections 6-12.01 – 6-12.07. The permit lasts for one (1) year, therefore, all construction lasting for a period of more than one calendar year from the date of issue will reapply for the permit and pay the current annual fee. At a minimum, the permit prohibits the disturbance of the surface or subsurface of more than one (1) acre of land without meeting permit requirements which can include such things as the application of soil stabilizers and limitations on grading activities during wind events.	**Applicable.** The Project would obtain all required permits prior to any construction activities.
~~MM Geo 2: To assure soils suitable for construction, site materials should be tested for organics and excavated to a minimum of 4 feet where soils generally become denser. Actual removal depths will be determined during grading when subsurface conditions are exposed. GeoSoils, Inc (10/12/01) also recommends that soft and compressible colluvial and alluvial soils be removed prior to grading.~~ ~~Per recommendations of GeoSoils Inc. in the Updated Geotechnical Study, partial to complete removal of manure will be required, as soils with high concentrations of cow manure are generally unsuitable to be used as fill. On-site soils may be used for fill if the organic matter content is diluted to less than 2 percent using underlying soils with no more than 1 percent of the organic content being from manure.~~	**Not Applicable.** As part of the site-specific Geotechnical Evaluation, soil samples throughout the site were tested to determine their organic content. The majority of samples ranged from approximately 1.2 percent to 2.7 percent, indicating relatively low organics. Two areas of the site indicated higher levels (8.8 percent and 4.8 percent). The Geotechnical Evaluation provides remedial grading recommendations in those areas with a higher percentage of organic content. Mandatory compliance with the recommendations of the site-specific Geotechnical Evaluation negates the need for this mitigation measure.
~~MM Geo 3: Any soil to be used as fill, whether currently on-site or imported, should be approved by the soil engineer or his/her representative prior to their placement. To properly assess and address the suitability of on-site soils to be used as fill, a geotechnical evaluation shall be performed by a qualified professional prior to the approval of the Tentative Tract map or site plan for a given phase of~~	**Not Applicable.** On-site soils were evaluated for suitability as part of the site-specific Geotechnical Evaluation. Mandatory compliance with the recommendations of the site-specific Geotechnical Evaluation negates the need for this mitigation measure.

Esperanza Measure	Project Applicability
~~development. This evaluation will include an analysis of the organic matter content of soils on the site. If the organic matter content of the soils is greater than 2 percent when mixed with subsurface soils and/or imported fill, then manure will be removed from the site prior to grading operations.~~	
~~MM Geo 4: To reduce the risk of ground cracking, manure shall be removed from the site, such that the organic matter content of on-site soils shall not exceed 2 percent (a 2 percent total organic content is allowed, of which no more than 1 percent can be manure) in the building foundation areas when mixed with underlying clean soils and imported fill. On-site soils that will be used as on-site fill that contain organic contents will be diluted by mixing with underlying clean soils. The mix will be continuously sampled and tested during grading so that the fill does not exceed the recommended limit of 2 per cent of organics per total volume of fill. The soil engineer will observe the placement of all fill and take sufficient tests to monitor the moisture content and the uniformity and degree of compaction obtained.~~	**Not Applicable.** As part of the site-specific Geotechnical Evaluation, soil samples throughout the site were tested to determine their organic content. The majority of samples ranged from approximately 1.2 percent to 2.7 percent, indicating relatively low organics. Two areas of the site indicated higher levels (8.8 percent and 4.8 percent). The Geotechnical Evaluation provides remedial grading recommendations in those areas with a higher percentage of organic content. Mandatory compliance with the recommendations of the site-specific Geotechnical Evaluation negates the need for this mitigation measure.
~~MM Cul 3: Since grading plans have not yet been prepared to establish how deep excavation is needed, prior to the issuance of grading permits, and as recommended in the Phase I Cultural and Paleontological Resources Assessment for this site, a qualified paleontologist shall be retained to prepare a Paleontological Resources Survey of the project site, for approval by the City. Following City approval of the PRMTP, grading and construction activities may proceed in compliance with the provisions of the approved PRMTP.~~ ~~The PRMTP shall include the following measures:~~ ~~a. Identification of those locations within the project site where paleontological resources are likely to be uncovered during grading.~~ ~~b. A monitoring program specifying the procedures for the monitoring of grading activities by a qualified paleontologist or qualified designee.~~	**Not Applicable**. Consistent with the recommendations of the Project-specific Paleontological Resources Assessment, new Mitigation Measure 7-1 shall be implemented in place of MM Cul 3. Measure 7-1 requires the preparation of a PRIMP, as well as full-time paleontological monitoring starting at a depth of four feet below the surface during earth disturbance activities.

Esperanza Measure	Project Applicability
~~c. If fossil remains large enough to be seen are uncovered by earth-moving activities, a qualified paleontologist or qualified designee shall temporarily divert earth-moving activities around the fossil site until the remains have been evaluated for significance and, if appropriate, have been recovered; and the paleontologist or qualified designee allows earth-moving activities to proceed through the site. If potentially significant resources are encountered, a letter of notification shall be provided in a timely manner to the City, in addition to the report (described below) that is filed at completion of grading.~~ ~~d. If a qualified paleontologist or qualified designee is not present when fossil remains are uncovered by earth-moving activities, these activities shall be stopped and a qualified paleontologist or qualified designee shall be called to the site immediately to evaluate the significance of the fossil remains.~~ ~~e. At a qualified paleontologist or qualified designee's discretion and to reduce any construction delay, a construction worker shall assist in removing fossiliferous rock samples to an adjacent location for temporary stockpiling pending eventual transport to a laboratory facility for processing.~~ ~~f. A qualified paleontologist or qualified designee shall collect all significant identifiable fossil remains. All fossil sites shall be plotted on a topographic map of the project site.~~ ~~g. If the qualified paleontologist or qualified designee determines that insufficient fossil remains have been found after fifty percent of earthmoving activities have been completed, monitoring can be reduced or discontinued.~~ ~~h. Any significant fossil remains recovered in the field as a result of monitoring or by processing rock samples shall be prepared, identified, catalogued, curated, and accessioned into the fossil collections of the San Bernardino County Museum, or another museum repository complying with the Society of Vertebrate Paleontology standard guidelines. Accompanying~~	

Esperanza Measure	Project Applicability
~~specimen and site data, notes, maps, and photographs also shall be archived at the repository.~~ ~~i. Within 6 months following completion of the above tasks, a qualified paleontologist or qualified designee shall prepare a final report summarizing the results of the mitigation program and presenting an inventory and describing the scientific significance of any fossil remains accessioned into the museum repository. The report shall be submitted to the City Planning Department and the museum repository. The report shall comply with the Society of Vertebrate Paleontology standard guidelines for assessing and mitigating impacts on paleontological resources.~~	
Greenhouse Gases	
None. (This topic was added to the CEQA Guidelines after the certification of the Esperanza Specific Plan DEIR.)	-
Hazards and Hazardous Materials	
~~MM Haz 1: To the extent not previously prepared and to properly assess and address potential hazardous materials, including pesticide residues, within the specific plan area, a Phase I Environmental Site Assessment (ESA) shall be performed by a registered environmental assessor (REA) prior to the approval of a site plan for a given phase of development. Pursuant to mitigation measure HM-1 in the GPA for the NMC Final EIR, page 5.10-6, the Phase I ESA shall, at a minimum, meet with the requirements and current standards of investigation established by the American Society of Testing and Materials (ASTM Standard E 1527). If potential hazardous materials or conditions are identified in the Phase I report, an in-depth evaluation shall be performed including surficial sampling and chemical analysis within agricultural areas or where soil staining was observed. The Phase I ESA shall be provided to the City of Ontario and shall be included in any CEQA analysis prepared in connection with the consideration of the discretionary approval for development. All identified hazardous materials will be removed or remedial action taken prior to grading operations~~	**Not Applicable.** A Phase I ESA has been prepared for the Project site to evaluate the potential for on-site hazards. The Phase I determined that that no evidence of contamination or hazardous waste is located on the Project site. No further investigation was recommended.

Esperanza Measure	Project Applicability
~~pursuant to the recommendations of the Phase I ESA and appropriate City, county, state and federal laws and guidelines under the oversight of the San Bernardino County Fire Department's Hazardous materials Division Site Remediation/Local Oversight Program.~~	
~~MM Haz 2: Much of the site located south of Eucalyptus Avenue has been covered by undocumented fill and used as a dump site by the local community. To address possible contamination and remove appropriately all previously identified and unidentified types of hazardous waste on site, clearing and grading activities in this area shall be monitored by a Registered Environmental Assessor (REA), or other professional personnel approved by the City, and any known items of concern and those not previously identified which are uncovered can be removed or remediated per the appropriate regulations (see MM Haz 3 and 4, below).~~	**Not Applicable.** See above.
~~MM Haz 3: If, while performing any excavation as part of project construction, material that is believed to be hazardous waste is discovered, as defined in Section 25117 of the California Health & Safety Code, the developer shall contact the City of Ontario Fire Department and the County of San Bernardino Fire Department Hazardous Materials Division. Excavation shall be stopped or redirected to another location on site until the material has been tested and the presence of hazardous waste has been confirmed. If no hazardous waste is present, excavation may continue. If hazardous waste is determined to be present, the California Department of Toxic Substances Control shall be contacted and the material shall be removed and disposed of pursuant to applicable provisions of California law under the oversight of the San Bernardino County Fire Department's Hazardous materials Division Site Remediation/Local Oversight Program. Fill material imported from other areas shall be tested prior to placement on-site to assess that it is suitable to be used as fill, including testing for unsafe levels of hazardous materials.~~	**Not Applicable.** See above.

Esperanza Measure	Project Applicability
~~MM Haz 4: The biologically active materials, such as animal carcasses, should be removed and legally disposed of prior to any clearing and grubbing.~~	**Not Applicable.** The recent site visit conducted as part of the Phase I verified that no biologically active materials, such as animal carcasses, are present on the Project site.
~~MM Haz 5: All on-site buildings and remaining foundations that were built before 1979 shall be tested for the presence of asbestos, mercury and lead-based paint and those materials shall be removed according to the applicable regulations and guidelines established by the South Coast Management District, Department of Toxic Substances Control, and the United States Environmental Protection Agency. As per HM-2 in the GPA for the NMC Final EIR, page 5.10-6, the developer shall submit documentation to the City Building Department that asbestos, mercury and lead based paint are not present on their site, or that the above removal process has occurred.~~	**Not Applicable.** The recent site visit conducted as part of the Phase I verified that no buildings or foundations are present on the Project site.
~~MM Haz 6: All septic tanks on the project site will be properly removed and disposed of, per City and State procedures, prior to site development. All water wells on the project site will be properly destroyed in accordance with MM Util 8 in Section 12, Utilities, of this EIR. These activities will occur subject to City of Ontario Building Safety requirements.~~	**Not Applicable.** No septic tanks were identified onsite as part of the Phase I ESA conducted for the Project.
~~MM Haz 7: Pursuant to the City of Ontario Municipal Code Section 9-2.0435 (L), "a methane gas assessment shall be prepared by a licensed professional with expertise in soil gas assessments for subdivisions proposed on former dairies, poultry ranches, hog ranches, livestock feed operations and similar facilities to determine the presence of methane gas within the project boundary. The methane gas assessment shall identify monitoring and mitigation strategies and approaches. All mitigation measures/plans and specifications shall be reviewed and approved by the City of Ontario."~~ ~~Such an "assessment" may take two steps. A preliminary assessment should be done prior to grading to determine exactly where dairies have existed in the past~~	**Not Applicable.** Due to the extensive soil stockpiling, grading, and blending that has taken place on the Project site as part of surrounding development, the Phase I determined that no further investigation is warranted.

Esperanza Measure	Project Applicability
~~so that the post grading assessment/mitigation measures can be focused on the portions of the specific plan area that have included dairies. The second step may include actual testing of graded pads no sooner than 30 days after construction to determine if methane is detected above 5,000 ppm. If so, the types of mitigation measures described below, or those approved by the City, shall be implemented in the areas exceeding this limit. If the developer chooses not to do the post grading assessment, then mitigation as described below shall be required on all lots within former dairy areas of the specific plan.~~ ~~Mitigation shall include: 1) install a minimum 60-mil high density polyethylene (HDPE) membrane barrier (or equivalent), 2) install a subslab passive venting system, 3) seal utility or other penetrations through the membrane, 4) seal utility conduits where they enter a structure, and 4) construct a utility "dam" at the point where a "dry" utility trench approaches a structure. Liquid Boot, applied to a minimum 60-mil dry thickness per manufacturer's recommendations, may be substituted for the HDPE membrane.~~	
Hydrology and Water Quality	
~~MM Hydro 1: In order to ensure that construction activities associated with the Subarea 25 Esperanza Specific Plan will not cause a violation of any water quality standard or waste discharge requirements and to assure no substantial degradation of water quality occurs, and to implement the intent of mitigation measures included in the Final Environmental Impact Report for the NMC, the development within the project area shall comply with all applicable provisions of the State's General Permit for Construction Activities (Order No. 99-08-DWQ, or most recent version) during all phases of construction. A copy of evidence of the receipt of a Waste Discharge Identification Number from the State Regional Water Quality Control Board shall be filed with the City Engineer along with a copy of the Storm Water Pollution Prevention Plan (SWPPP) maps and~~	**Not Applicable.** The Esperanza Specific Plan EIR stated that measures Hydro 1 through 7 should be implemented, unless the Regional Water Quality Treatment Facility is complete and operational prior to project construction (p. III-7-21). The Regional Water Quality Facility referenced in the Esperanza SP DEIR (Regional Plant No. 5) was constructed in 2004. As such, these measures are not applicable to the Project.

Esperanza Measure	Project Applicability
~~BMPs. According to Title 6, Chapter 6, Section 6 of the City's code, the City Engineer shall review and approve the provisions of the SWPPP prior to implementation of any SWPPP provision or starting any construction activity.~~	
~~MM Hydro 2: In order to ensure the development within the Subarea 25 Esperanza Specific Plan will not cause or contribute to violations of any water quality standard or waste discharge requirements, and to assure no substantial degradation of water quality occurs, the project will complete a Water Quality Management Plan (WQMP) pursuant to the MS4 permit (Order No. 2002-0012) under which the City of Ontario is a permitee. The City adopted storm water management code Section 6-6.101 et seq. to implement the provisions of the permit. The project shall incorporate Site Design BMPs and Source Control BMPs, and potentially Treatment Control BMPs. The following table (III-7-F) provides guidelines and possible BMPs that may be incorporated into the project design (on construction drawings) and/or project specifications. Prior to acceptance of the WQMP, the City shall assure that maintenance responsibilities of BMPs approved for the project are identified and enforceable. Table III-7-G correlates each BMP to the pollutants of concern which it removes/reduces and/or meets the design objectives for the BMP.~~	**Not Applicable.** See above.
~~MM Hydro 5: In order to conserve water and to mitigate for any potential unforeseen adverse impacts to a reduction in ground water recharge, the following measure has been recommended by the Chino Basin Water Conservation District: Landscaping within individual development projects will retain and percolate both applied irrigation water and storm water in vegetated areas of parking lots and other areas, where appropriate; "depressed" planted areas bordered by shrubbery screens will be implemented rather than "mounded" grass and shrubbery planted screens. Neighborhood Edges and parks will be irrigated via reclaimed water.~~	**Not Applicable.** See above.

Esperanza Measure	Project Applicability
~~MM Hydro 3: In order to reduce the risk of flooding and to implement mitigation measures included in the Final Environmental Impact Report for the NMC prior to the issuance of a grading permit, the development within the Specific Plan, a final drainage plan for the proposed project shall be submitted for review and approval by the City Engineer and shall construct all necessary storm drain facilities internal to the development which are designed to connect with the City's master planned drainage system.~~	**Not Applicable.** See above.
~~MM Hydro 4: In order to reduce the risk of flooding and to implement mitigation measures included in the GPA for the NMC Final EIR, prior to issuance of grading permits, the City of Ontario shall coordinate with the San Bernardino County Flood Control District to ensure that the project meets County Flood Control requirements such as those established for encroachment permits.~~	**Not Applicable.** See above.
~~MM Hydro 6: In order to reduce pollutants in post construction run-off and to implement mitigation measures included in the Final Environmental Impact Report for the NMC, the individual project owners and operators (e.g., homeowner associations, parks department, etc.) shall ensure that all pest control, herbicide, insecticide and other similar substances used as part of maintenance of project features are handled, stored, applied and disposed of by those conducting facility maintenance in a manner consistent with all applicable federal, state and local regulations. According to Title 6, Chapter 6, Section 6 of the City's code, the City Engineer shall monitor and enforce this provision.~~	**Not Applicable.** See above.
~~MM Hydro: 7: To mitigate possible temporary run-off from undeveloped properties located north (up-gradient) of all or a portion of the project site, drainage from properties north of the developed portions of the project site shall be conveyed to appropriate drainage facilities, as approved by the City Engineer.~~	**Not Applicable.** See above.
Mineral Resources	
None.	-

Esperanza Measure	Project Applicability
Noise	
MM Noi 1: The construction activities of the proposed project shall comply with the City of Ontario Noise Ordinance that prohibits construction activities on Sundays, federal holidays, and other days between the hours of 7:00 p.m. and 7:00 a.m.	**Applicable.** The Project would comply with the permitted hours of construction, as set forth in the City of Ontario Noise Ordinance.
MM Noi 2: Construction staging areas shall not be located within 150 feet of existing sensitive receptors and construction equipment shall be fitted with properly operating and maintained mufflers.	**Applicable.** The Project would ensure that construction staging areas would not be located within 150 feet of existing sensitive receptors. Additionally, all construction equipment would be fitted with properly operating and maintained mufflers.
~~MM Noi 3: A sound wall at least 6 feet high shall be constructed along perimeter lots adjacent to Hamner/Milliken Avenue. If any residential structures are two stories high, then windows facing Hamner/Milliken Avenue would need upgraded sound-rated glazing products and the rooms would need supplemental ventilation. A final acoustical report shall be submitted to address wall heights based on final grading and site plans. The report shall be reviewed and approved by the Planning Department prior to building permit issuance to ensure that City standards are maintained (45 dB CNEL interior and 65 dB CNEL exterior).~~	**Not Applicable.** The Project site is not located adjacent to Hamner/Milliken Avenue.
~~MM Noi 4: A sound wall at least 6 feet high shall be constructed along perimeter lots adjacent to Bellegrave Avenue. If any residential structures are two stories high, then windows facing Bellegrave Avenue would need upgraded sound-rated glazing products and the rooms would need supplemental ventilation. A final acoustical report shall be submitted to address wall heights based on final grading and site plans. The report shall be reviewed and approved by the Planning Department prior to building permit issuance to ensure that City standards are maintained (45 dB CNEL interior and 65 dB CNEL exterior).~~	**Not Applicable.** The Project site is not located adjacent to Bellegrave Avenue.
~~MM Noi 5: A sound wall at least 6 feet high shall be constructed along perimeter lots adjacent to Merrill Avenue. If any residential structures are two stories high, then windows facing Merrill Avenue would need~~	**Not Applicable.** The Project site is not located adjacent to Merrill Avenue.

Esperanza Measure	Project Applicability
~~upgraded sound-rated glazing products and the rooms would need supplemental ventilation. A final acoustical report shall be submitted to address wall heights based on final grading and site plans. The report shall be reviewed and approved by the Planning Department prior to building permit issuance to ensure that City standards are maintained (45 dB CNEL interior and 65 dB CNEL exterior).~~	
MM Noi 6: Architectural plans shall be submitted to the City of Ontario for an acoustical plan check prior to the issuance of building permits to assure that second story windows are upgraded for sound reduction and proper ventilation systems are incorporated. Plans shall include a final acoustical report to be reviewed and approved by the Planning Department prior to building permit issuance to ensure that City standards are maintained (45 dB CNEL interior and 65 dB CNEL exterior).	**Applicable.** The Project Noise Impact Analysis verifies that City standards would be maintained. The Project would submit architectural plans in this regard.
Public Services	
~~MM Serv 1: To reduce fire hazards, wood-shingled and shake-shingled roofs are prohibited.~~	**Not Applicable.** No wood-shingled or shake-shingled roofs are proposed.
MM Serv 2: To reduce fire hazards, adequate fire hydrant locations and water main sizes shall meet standards established by the City of Ontario Fire Department and reviewed and implemented by the Engineering Department.	**Applicable.** All fire water lines and hydrants would meet the standards established by the City of Ontario Fire Department, and reviewed and approved by the Engineering Department.
MM Serv 3: To reduce fire hazards, adequate fire flow pressure shall be provided for residential areas and non-residential projects in accordance with currently adopted City standards.	**Applicable.** Adequate fire flow pressure would be provided in accordance with currently adopted City standards.
MM Serv 4: To reduce fire hazards, adequate water supply shall be provided as approved by the Fire Department prior to the framing stages of construction.	**Applicable.** Adequate water supply would be provided, as approved by the Fire Department.
MM Serv 5: To reduce fire hazards, houses located on cul-de-sacs longer than 300 feet shall be constructed with residential fire sprinklers.	**Applicable.** Residential fire sprinklers would be installed, as appropriate.
MM Serv 6: To reduce fire hazards, access roadways designed in accordance with Fire Department standards to within 150' of all structures, shall be provided prior to the framing stages of construction. This access is to be	**Applicable.** Fire access roadways would be provided prior to framing, and remain unobstructed throughout construction.

Esperanza Measure	Project Applicability
maintained in an unobstructed manner throughout construction.	
MM Serv 7: To mitigate for potential impacts to library, police, and fire departments, the developer shall pay library, police, and fire service development impacts fees.	**Applicable.** The Project Applicant would pay all required development impact fees.
~~MM Serv 8: To reduce the risks associated with inadequate fire service, one of the two fire stations described above (Edison/Archibald or Edison/Mill Creek) shall be in operation prior to the issuance of the first certificate of occupancy within the Esperanza Specific Plan area. The details of where and how this will be accomplished shall be included in the development agreement between the City and the developer. Potential impacts associated with the construction of these stations is evaluated in the EIRs prepared for their respective GPA Subareas.~~	**Not Applicable.** This measure has already been implemented.
MM Serv 9: The developer shall pay school fees or otherwise meet project obligations to schools, as approved by Mountain View School and Chaffey Joint Union High School Districts.	**Applicable.** The Project would pay all required school fees, as directed by the City.
MM Serv 10: To adequately address the need for recreation within the City, park development impact fees, Quimby fees, and/or developed parkland shall be provided to the City commensurate with the requirements of the General Plan equivalent to 24 acres total. The park fees shall be paid on a pro-rata share as building permits are issued in accordance with the negotiated DIF agreement. (Note: parkland shall be provided to the City commensurate with the requirements of the General Plan equivalent to 25 acres, if 46 additional homes are built in lieu of the school.)	**Applicable.** The Project would pay all required park fees, as directed by the City.
~~MM Serv 11: To ensure adequate parks are built commensurate with development, the pocket park located within Planning Area 9 of the Esperanza Specific Plan shall be constructed no later than the issuance of certificates of occupancy for 50 percent of the units within Planning Areas 8, 9 and 10 combined; the pocket park located within Planning Area 7 of the Esperanza Specific Plan shall be constructed no later than the~~	**Not Applicable.** The Project site is located within Planning Area 11, which is not reflected in this measure.

Esperanza Measure	Project Applicability
~~issuance of certificates of occupancy for 50 percent of the units within Planning Areas 6 and 7 combined; the pocket park located within Planning Area 5 of the Esperanza Specific Plan shall be constructed no later than the issuance of certificates of occupancy for 50 percent of the units within Planning Areas 4b and 5 combined; the 5-acre Neighborhood Park shall be constructed no later than the issue of the certificates of occupancy for 50 percent of the units within Planning Areas 1, 2, 3, and 4a combined.~~	
Recreation	
See MM Serv 10 and 11, above.	See MM Serv 10 and 11, above.
Transportation/Traffic	
MM Trans 1: Install traffic signal at the intersection of Mill Creek Avenue/Merrill Avenue with the following geometrics: Northbound: One left-turn lane. One shared through and right-turn lane. Southbound: One left-turn lane. One shared through and right-turn lane. Eastbound: One left-turn lane. One shared through and right-turn lane. (These developments to be constructed by development located west of the Specific Plan.) Westbound: One left-turn lane. One shared through and right-turn lane.	**Applicable.** The Project would pay fair share fees towards the improvements listed in the Esperanza SP DEIR and requisite City Development Impact Fees, as determined by the City.
MM Trans 2: Install traffic signal at the intersection of Project Street (W)/Merrill Avenue with the following geometrics: Northbound: One shared left, through and right-turn lane. Southbound: One shared left, through and right-turn lane. Eastbound: One left-turn lane. One shared through and right-turn lane. Westbound: One left-turn lane. One shared through and right-turn lane.	**Applicable.** The Project would pay fair share fees towards the improvements listed in the Esperanza SP DEIR and requisite City Development Impact Fees, as determined by the City.
MM Trans 3: Install traffic signal at the intersection of Project Street (E)/Merrill Avenue with the following geometrics:	**Applicable.** The Project would pay fair share fees towards the improvements listed in the Esperanza SP DEIR and requisite City Development Impact Fees, as determined by the City.

Esperanza Measure	Project Applicability
Northbound: One shared left, through and right-turn lane. Southbound: One shared left, through and right-turn lane. Eastbound: One left-turn lane. One through lane. One shared through and right-turn lane. Westbound: One left-turn lane. One through lane. One shared through and right-turn lane.	
MM Trans 4: Install traffic signal at the intersection of Milliken/Hamner Avenue/Merrill Avenue with the following geometrics: Northbound: One left-turn lane. Two through lanes. One shared through and right-turn lane. Southbound: One left-turn lane. Three through lanes. One right-turn lane. Eastbound: Two left-turn lanes. One shared through and right-turn lane. Westbound: (This leg of the intersection to be constructed by development in Riverside County.) One left-turn lane. One shared through and right-turn lane.	**Applicable.** The Project would pay fair share fees towards the improvements listed in the Esperanza SP DEIR and requisite City Development Impact Fees, as determined by the City.
MM Trans 5: Install traffic signal at the intersection of Mill Creek Avenue/Bellegrave Avenue with the following geometrics (Note: Riverside County encroachment permits required for some improvements.): Northbound: One shared left, through and right-turn lane. Southbound: One shared left, through and right-turn lane. Eastbound: One left-turn lane. One shared through and right-turn lane. Westbound: Two left-turn lanes. One shared through and right-turn lane.	**Applicable.** The Project would pay fair share fees towards the improvements listed in the Esperanza SP DEIR and requisite City Development Impact Fees, as determined by the City.
MM Trans 6: Modify the intersection of Milliken/Hamner Avenue/Bellegrave Avenue to include the following geometrics (Note: Riverside County encroachment permits required for some improvements.): Northbound: One left-turn lane. Two through lanes. One shared through and right-turn lane.	**Applicable.** The Project would pay fair share fees towards the improvements listed in the Esperanza SP DEIR and requisite City Development Impact Fees, as determined by the City.

Esperanza Measure	Project Applicability
Southbound: Two left-turn lanes. Two through lanes. One shared through and right-turn lane. Eastbound: One left-turn lane. Two through lanes. One right-turn lane. Westbound: Two left-turn lanes. Two through lanes. One right-turn lane.	
MM Trans 7: Sight distance at the project entrance roadways should be reviewed with respect to the City of Ontario Standard Drawing for Sight Distance in effect at the time of preparation of final grading, landscape and street improvement plans.	**Applicable.** All proposed sight distances would be reviewed and approved by the City, consistent with current City of Ontario Standard Drawing for Sight Distance.
MM Trans 8: Signing/striping should be implemented in conjunction with detailed construction plans for the project site.	**Applicable.** All proposed signing and striping plans would be reviewed and approved by the City in conjunction with construction plans.
MM Trans 9: Intersection, median opening and traffic signal spacing shall be in accordance with the City of Ontario New Model Colony Access Guidelines.	**Applicable.** All roadway improvements would be implemented consistent with applicable City standards.
MM Trans 10: Construction of full width of internal roadways and part width of the following roadways shall comply with City of Ontario Standards: • Construct partial width improvements on the easterly side of Mill Creek Avenue at its ultimate cross-section as a collector street (88' right-of-way) adjacent to project boundary line. • Construct partial width improvements on the westerly of Milliken/Hamner Avenue at its ultimate cross-section as a divided arterial parkway 1 (140' or more right-of-way) adjacent to project boundary line. • Construct partial width improvements on the northerly side of Bellegrave Avenue at its ultimate cross-section as a standard arterial (100' right-of-way) adjacent to project boundary line.	**Applicable.** The Project would pay fair share fees towards the improvements listed in the Esperanza SP DEIR and requisite City Development Impact Fees, as determined by the City.
~~MM Trans 11: In order to provide alternative modes of transportation and reduce vehicle trips, the City shall work with Omnitrans to develop additional routes and service to the project area.~~	**Not Applicable.** Measure Trans 11 applies to City staff, not a specific project within the Specific Plan area.
~~MM Trans 12: In order to ease traffic flow, reduce trips, and implement GPA for the NMC Final EIR mitigation measures, the City shall establish a Transportation~~	**Not Applicable.** Measure Trans 12 applies to City staff, not a specific project within the Specific Plan area.

Esperanza Measure	Project Applicability
~~System Management (TSM) Program with the goal of reducing vehicle trips to and from land uses within the City, and particularly focusing on the reduction of drive-alone vehicle use in work commuting.~~	
MM Trans 13: The project will participate in the cost of off-site improvements through fairshare payment of the Development Impact fee as established by the City of Ontario. These fees should be collected and utilized by the City to construct the improvements necessary to maintain the required level of service.	**Applicable.** The Project would pay fair share fees towards the improvements listed in the Esperanza SP DEIR and requisite City Development Impact Fees, as determined by the City.
MM Trans 14: Reconfigure Milliken Avenue/SR 60 WB Ramps to include the following geometrics: Northbound: Two left turn lanes and two through lanes. Southbound: Two through lanes and one right-turn lane. Eastbound: NA Westbound: One left-turn lane. One shared left and through lane. One right-turn lane.	**Applicable.** The Project would pay fair share fees towards the improvements listed in the Esperanza SP DEIR and requisite City Development Impact Fees, as determined by the City.
MM Trans 15: Reconfigure Milliken Avenue/SR 60 EB Ramps to include the following geometrics: Northbound: Three through lanes. One right-turn lane. Southbound: One left turn lane. Three through lanes. Eastbound: One shared left and through lane. One through lane. Two right-turn lanes. Westbound: NA	**Applicable.** The Project would pay fair share fees towards the improvements listed in the Esperanza SP DEIR and requisite City Development Impact Fees, as determined by the City.
MM Trans 16: Reconfigure Milliken/Hamner Avenue/Riverside Avenue intersection to include the following geometrics: Northbound: One left-turn lane. Three through lanes. One shared right-turn and through lane. Southbound: Two left-turn lanes. Four through lanes. One right-turn lane. Eastbound: Two left-turn lanes. Two through lanes. One shared through and right-turn lane. Westbound: One left-turn lane. Two through lanes. One right-turn lane.	**Applicable.** The Project would pay fair share fees towards the improvements listed in the Esperanza SP DEIR and requisite City Development Impact Fees, as determined by the City.
MM Trans 17: Reconfigure Milliken/Hamner Avenue/Chino Avenue intersection to include the following geometrics: Northbound: Two left-turn lanes. Two through lanes. One shared right-turn and through lane.	**Applicable.** The Project would pay fair share fees towards the improvements listed in the Esperanza SP DEIR and requisite City Development Impact Fees, as determined by the City.

Esperanza Measure	Project Applicability
Southbound: One left-turn lane. Two through lanes. One shared through and right-turn lane. Eastbound: One left-turn lane. One through lane. One shared through and right-turn lane. Westbound: One left-turn lane. One through lane. One shared through and right-turn lane.	
MM Trans 18: Install traffic signal at the intersection of Archibald Avenue/Schaefer Avenue and configure with the following geometrics: Northbound: One left-turn lane. Two through lanes. One shared through and right-turn lane. Southbound: One left-turn lane. Two through lanes. One shared through and right-turn lane. Eastbound: One shared through and left-turn lane. One through lane. One shared through and right-turn lane. Westbound: One shared through and left-turn lane. One through lane. One shared through and right-turn lane.	**Applicable.** The Project would pay fair share fees towards the improvements listed in the Esperanza SP DEIR and requisite City Development Impact Fees, as determined by the City.
MM Trans 19: Reconfigure Archibald Avenue/Edison Avenue intersection to include the following geometrics: Northbound: Two left-turn lanes. Four through lanes. One right-turn lane. Southbound: Two left-turn lanes. Four through lanes. One right-turn lane. Eastbound: Two left-turn lanes. Three through lanes. Two shared right-turn/shared lanes. Westbound: Two left-turn lanes. Three through lanes. One right-turn lane.	**Applicable.** The Project would pay fair share fees towards the improvements listed in the Esperanza SP DEIR and requisite City Development Impact Fees, as determined by the City.
MM Trans 20: Install traffic signal at the intersection of Schaefer Avenue/Edison Avenue and reconfigure with the following geometrics: Northbound: NA Southbound: One shared left and right-turn lane. Eastbound: One left-turn lane. One through lane. Westbound: One through lane. One shared through and right-turn lane.	**Applicable.** The Project would pay fair share fees towards the improvements listed in the Esperanza SP DEIR and requisite City Development Impact Fees, as determined by the City.
MM Trans 21: Install traffic signal at the intersection of Haven Avenue/Edison Avenue and reconfigure with the following geometrics:	**Applicable.** The Project would pay fair share fees towards the improvements listed in the Esperanza SP DEIR and requisite City Development Impact Fees, as determined by the City.

Esperanza Measure	Project Applicability
Northbound: One left-turn lane. One through lane. One shared through and right-turn lane. Southbound: One left-turn lane. One through lane. One right-turn lane. Eastbound: Two left-turn lanes. One through lane. One shared through and right-turn lane. Westbound: One left-turn lane. One through lane. One shared through and right-turn lane.	
MM Trans 22: Install traffic signal at the intersection of Archibald Avenue/Merrill Avenue and reconfigure with the following geometrics: Northbound: One left-turn lane. Three through lanes. One shared through and right-turn lane. Southbound: Two left-turn lanes. Three through lanes. One shared through and right-turn lane. Eastbound: One left-turn lane. One through lane. One shared through and right-turn lane. Westbound: Two left-turn lanes. One through lane. One shared through and right-turn lane.	**Applicable.** The Project would pay fair share fees towards the improvements listed in the Esperanza SP DEIR and requisite City Development Impact Fees, as determined by the City.
MM Trans 23: Install traffic signal at the intersection of Haven Avenue/Merrill Avenue and reconfigure with the following geometrics: Northbound: One left-turn lane. One through lane. One shared through and right-turn lane. Southbound: One left-turn lane. One through lane. One shared through and right-turn lane. Eastbound: One left-turn lane. Two through lanes. One shared through and right-turn lane. Westbound: One left-turn lane. Two through lanes. One shared through and right-turn lane.	**Applicable.** The Project would pay fair share fees towards the improvements listed in the Esperanza SP DEIR and requisite City Development Impact Fees, as determined by the City.
MM Trans 24: Install traffic signal at the intersection of Mill Creek (Cleveland) Avenue/Merrill Avenue and reconfigure with the following geometrics: Northbound: One left-turn lane. One through lane. One shared through and right-turn lane. Southbound: One left-turn lane. One through lane. One shared through and right-turn lane. Eastbound: One left-turn lane. One through lane. One shared through and right-turn lane.	**Applicable.** The Project would pay fair share fees towards the improvements listed in the Esperanza SP DEIR and requisite City Development Impact Fees, as determined by the City.

Esperanza Measure	Project Applicability
Westbound: One left-turn lane. One through lane. One shared through and right-turn lane.	
MM Trans 25: Install traffic signal at the intersection of Project Street West/Merrill Avenue and reconfigure with the following geometrics: Northbound: One shared through and left-turn lane. One through lane. One shared through and right-turn lane. Southbound: One shared through and left-turn lane. One through lane. One shared through and right-turn lane. Eastbound: One left-turn lane. One through lane. One shared through and right-turn lane. Westbound: One left-turn lane. One through lane. One shared through and right-turn lane	**Applicable.** The Project would pay fair share fees towards the improvements listed in the Esperanza SP DEIR and requisite City Development Impact Fees, as determined by the City.
MM Trans 26: Install traffic signal at the intersection of Project Street East/Merrill Avenue and reconfigure with the following geometrics: Northbound: One shared through and left-turn lane. One through lane. One shared through and right-turn lane. Southbound: One left-turn lane. One through lane. One shared through and right-turn lane. Eastbound: One left-turn lane. One through lane. One shared through and right-turn lane. Westbound: One left-turn lane. One through lane. One shared through and right-turn lane.	**Applicable.** The Project would pay fair share fees towards the improvements listed in the Esperanza SP DEIR and requisite City Development Impact Fees, as determined by the City.
MM Trans 27: Install traffic signal at the intersection of Milliken/Hamner Avenue/Merrill Avenue and reconfigure with the following geometrics: Northbound: One left-turn lane. Three through lanes. One shared through and right-turn lane. Southbound: One left-turn lane. Three through lanes. One right-turn lane. Eastbound: Two left-turn lanes. One through lane. One shared through and right-turn lane. Westbound: One left-turn lane. One through lane. One shared through and right-turn lane.	**Applicable.** The Project would pay fair share fees towards the improvements listed in the Esperanza SP DEIR and requisite City Development Impact Fees, as determined by the City.

Esperanza Measure	Project Applicability
MM Trans 28: Install traffic signal at the intersection of Mill Creek (Cleveland) Avenue/Bellegrave Avenue and reconfigure with the following geometrics: Northbound: One shared left-turn lane. One through lane. One shared through and right-turn lane. Southbound: One shared through and left-turn lane. One through lane. One shared through and right-turn lane. Eastbound: One left-turn lane. One through lane. One shared through and right-turn lane. Westbound: Two left-turn lanes. One through lane. One shared through and right-turn lane.	**Applicable.** The Project would pay fair share fees towards the improvements listed in the Esperanza SP DEIR and requisite City Development Impact Fees, as determined by the City.
MM Trans 29: Reconfigure Milliken/Hamner Avenue/Bellegrave Avenue intersection to include the following geometrics: Northbound: One left-turn lane. Three through lanes. One shared through and right-turn lane. Southbound: Two left-turn lanes. Three through lanes. One shared through and right-turn lane. Eastbound: One left-turn lane. Two through lanes. One right-turn lane. Westbound: Two left-turn lanes. Two through lanes. One right-turn lane.	**Applicable.** The Project would pay fair share fees towards the improvements listed in the Esperanza SP DEIR and requisite City Development Impact Fees, as determined by the City.
MM Trans 30: Reconfigure Hamner Avenue/Limonite Avenue intersection to include the following geometrics: Northbound: Two left-turn lanes. Three through lanes. One right-turn lane. Southbound: Two left-turn lanes. Three through lanes. One right-turn lane. Eastbound: Two left-turn lanes. Three through lanes. One right-turn lane. Westbound: Two left-turn lanes. Three through lanes. One right-turn lane.	**Applicable.** The Project would pay fair share fees towards the improvements listed in the Esperanza SP DEIR and requisite City Development Impact Fees, as determined by the City.
MM Trans 31: Reconfigure I-15/Limonite SB Ramps to include the following geometrics: Northbound: NA Southbound: One left-turn lane. One shared left, through, and right-turn lane. One right-turn lane. Eastbound: Three through lanes. One right-turn lane.	**Applicable.** The Project would pay fair share fees towards the improvements listed in the Esperanza SP DEIR and requisite City Development Impact Fees, as determined by the City.

Esperanza Measure	Project Applicability
Westbound: Three through lanes. One free-right-turn lane.	
MM Trans 32: Reconfigure I-15/Limonite NB Ramps to include the following geometrics: Northbound: One left-turn lane. One shared left, through, and right-turn lane. One right-turn lane. Southbound: NA. Eastbound: Three through lanes. One free right-turn lane. Westbound: Three through lanes. One right-turn lane.	**Applicable.** The Project would pay fair share fees towards the improvements listed in the Esperanza SP DEIR and requisite City Development Impact Fees, as determined by the City.
Tribal Cultural Resources

Utilities & Service Systems	
MM Util 1: To provide adequate water and sewer service, all water and sewer pipelines within and adjacent to the project boundaries, as required and conditioned to serve the associated Tentative Tract Maps, shall be constructed by the developer based on the NMC Infrastructure Master Plans phased by tract and to the satisfaction of the City.	**Applicable.** All water and sewer improvements proposed by the Project would be reviewed and approved by the City, and implemented pursuant to current City infrastructure plans.
MM Util 2: To ensure that adequate sewer facilities are in place to serve the proposed project, the Archibald trunk sewer line off-site connection to the IEUA Kimbal Avenue interceptor shall be completed by IEUA and operational prior to the City of Ontario's issuance of the first certificates of occupancy. The applicant shall participate on a fair share basis in the development of the necessary sewer facilities.	**Applicable.** The Project would pay fair share fees towards the improvements listed in the Esperanza SP DEIR and requisite City Development Impact Fees, as determined by the City.
MM Util 3: To ensure adequate water service to the project, off-site water lines, tanks, interconnectors and other facilities required in the Water Master Plan for the Francis loop to provide water to the site shall be constructed by the City and be in place and operational prior to the City of Ontario's issuance of the first certificate of occupancy. The applicant shall participate on a fair share basis in the development of these off-site facilities.	**Applicable.** The Project would pay fair share fees towards the improvements listed in the Esperanza SP DEIR and requisite City Development Impact Fees, as determined by the City.
MM Util 4: To mitigate for possible conflicts with existing utilities, prior to obtaining grading permit(s), the project proponent shall coordinate with the applicable natural	**Applicable.** The Project Applicant would coordinate with affected purveyers to prevent potential impacts to existing utility facilities.

Esperanza Measure	Project Applicability
gas, electrical, and telephone utility providers for the project site to ensure that all existing underground and overhead lines are not damaged during project construction.	
MM Util 5: To reduce the quantity of energy used and to conserve water resources, the project developer and City of Ontario should work to include sustainable systems for use of water and energy within the project design. One source of assistance in this regard is Southern California Gas Company Commercial/ Industrial Support Center at 1-800-GAS-2000, which should be contacted at the time of development of the commercial center located within the project.	**Applicable.** As detailed within the Project Description, the Project includes design features aimed at reducing energy and water usage, such as water efficient fixtures and irrigation methods, and a lack of natural gas infrastructure.
~~MM Util 6: To reduce the need for potable water and ensure adequate water supply, the project applicant shall plan and construct a dual pipe system to supply recycled water when available in the future (GP Policy 5.1.4). An Engineer's Report approved by the City and the Department of Health Services is required prior to the use of recycled water.~~	**Not Applicable.** This measure has already been implemented/completed.
~~MM Util 7: To reduce risks associated with improperly abandoned wells and the potential need for temporary water supplies, all existing agricultural wells on the project site will be destroyed/ abandoned per the California Department of Water Resources Standards (Bulletin 74-90). A well use/destruction plan and schedule for all existing agricultural wells on the project site shall be prepared and submitted for approval, prior to the issuance of grading permits. This plan shall also include a temporary water supply plan, as applicable, in order to avoid potential significant temporary impacts resulting from the disruption of current water supply through the abandonment of on-site wells. Construction of any temporary pipes or facilities needed to provide water to the existing uses which are to temporarily remain shall be installed per City requirements at the developer's expense.~~	**Not Applicable.** No wells are located on the Project site.
Wildfire	
None. (This topic was added to the CEQA Guidelines after the certification of the Esperanza Specific Plan DEIR.)	-

MEMORANDUM

URBAN CROSSROADS

DATE: March 28, 2025
TO: Dave Waters, Genstar Development Company/GDCI-13
FROM: Haseeb Qureshi, Shannon Wong
JOB NO: 15662-05 AQ Assessment

ESPERANZA SPECIFIC PLAN AMENDMENT OPERATIONAL AIR QUALITY ASSESSMENT

Dave Waters,

Urban Crossroads, Inc. is pleased to submit the following Operational Air Quality Assessment for Esperanza Specific Plan Amendment development (referred to as **Project**) to support the proposed Specific Plan Amendment (**SPA**), which is located on the northeast corner of Eucalyptus Avenue and Amherst Avenue in the City of Ontario. The purpose of this work effort is to determine if the Project would result in new or substantially different Air Quality Impacts than those considered and addressed in the Esperanza Specific Plan (**Approved Specific Plan**) Environmental Impact Report (EIR) and The Ontario Plan 2050 Supplemental EIR (SEIR).

As required by *The Ontario Plan 2050 Final Supplemental Environmental Impact Report* (SCH No. 2021070364) (TOP Final SEIR) mitigation measure MM AQ-1, Urban Crossroads, Inc. is pleased to provide the following Operational Air Quality Assessment for the Esperanza Specific Plan Amendment (**Project**), located in the City of Ontario.

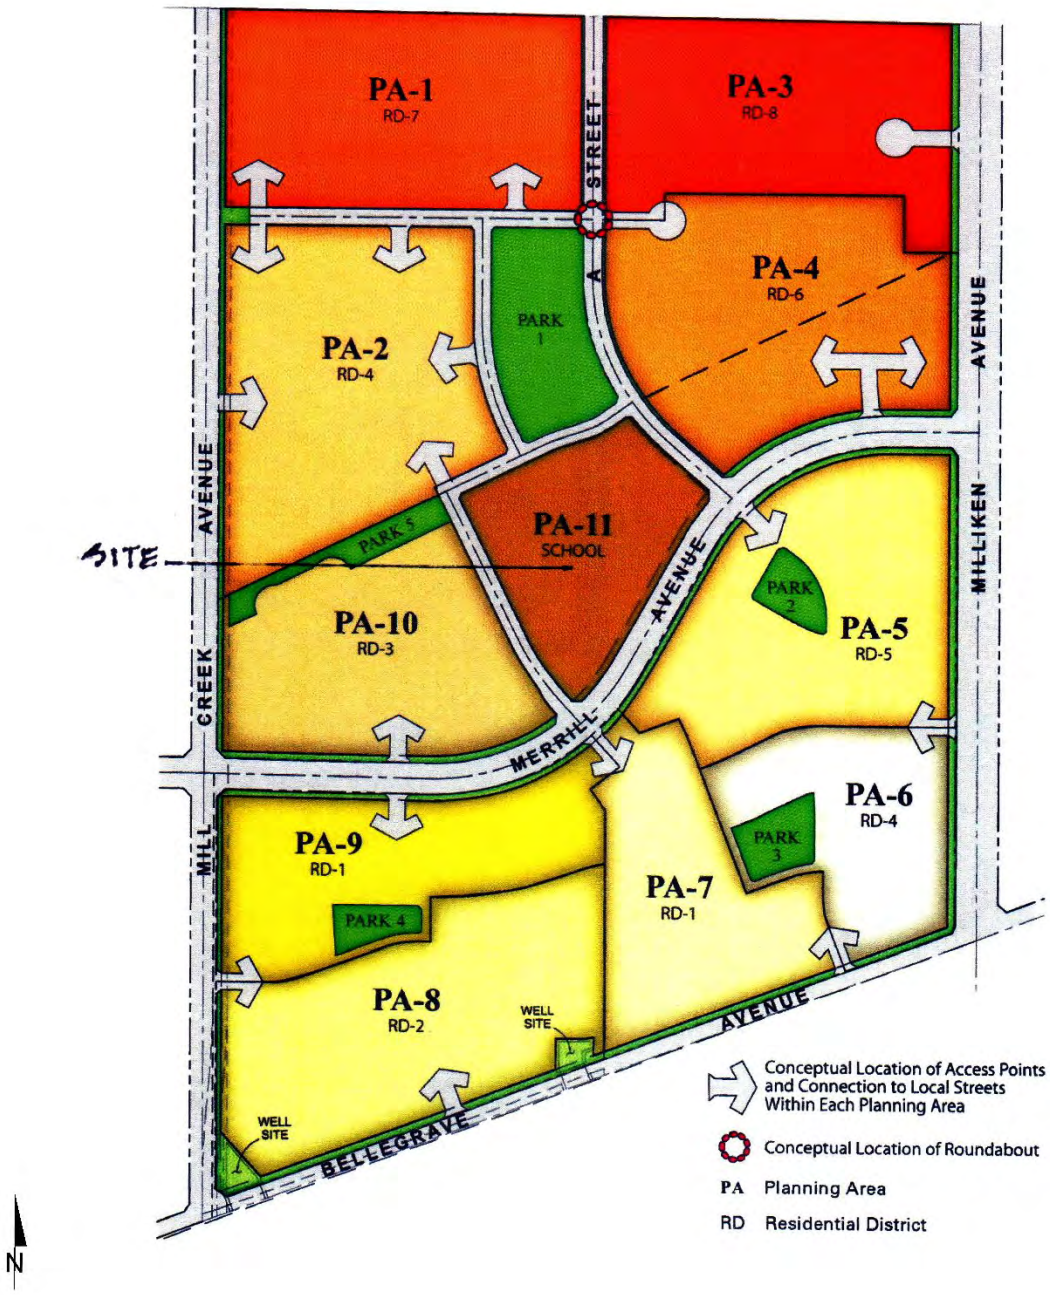
PROPOSED PROJECT

It is our understanding that the proposed Project is to consist of 161 multifamily residential dwelling units (with a density of approximately 16.1 dwelling units per net acre). The Project is located within the Esperanza Specific Plan. The original Specific Plan that was approved contemplated a 736-student elementary school within Planning Area 11. The land use will be updated from "School" to "MDR Medium Density Residential" consistent with the adjacent land use to the northeast. The Project is anticipated to be constructed in a single phase by the year 2029.

Exhibit 1 shows the preliminary site plan. For comparison purposes, Exhibit 2 shows the currently approved land use plan identifying Planning Area 11 with a school.

EXHIBIT 1: PRELIMINARY SITE PLAN

EXHIBIT 2: CURRENTLY APPROVED LAND USE PLAN



PROJECT AIR QUALITY EMISSIONS

METHODOLOGY

The California Air Pollution Control Officers Association (CAPCOA) in conjunction with other California air districts, including SCAQMD, released CalEEMod 2022 in May 2022. CalEEMod periodically releases updates, as such the latest version available at the time of this report has been utilized in this analysis. The purpose of this model is to calculate construction-source and operational-source criteria pollutant (VOCs, NO_X, SO_X, CO, PM_{10}, and $PM_{2.5}$) and GHG emissions from direct and indirect sources; and quantify applicable air quality and GHG reductions achieved from mitigation measures (1). Accordingly, the latest version of CalEEMod has been used for this Project to determine operational air quality emissions.

AIR QUALITY REGIONAL EMISSIONS THRESHOLDS

The SCAQMD has developed regional operational significance thresholds for criteria pollutants, as summarized at Table 1 (2). The SCAQMD's CEQA Air Quality Significance Thresholds (March 2023) indicate that any projects in the South Coast Air Basin (SCAB) with daily emissions that exceed any of the indicated thresholds should be considered as having an individually and cumulatively significant air quality impact.

TABLE 1: MAXIMUM DAILY REGIONAL EMISSIONS THRESHOLDS

Pollutant	Operations
NO_X	55 lbs/day
VOC	55 lbs/day
PM_{10}	150 lbs/day
$PM_{2.5}$	55 lbs/day
SO_X	150 lbs/day
CO	550 lbs/day

lbs/day – Pounds Per Day

AIR QUALITY LOCALIZED EMISSIONS THRESHOLDS

Sensitive Receptor Locations

Some people are especially sensitive to air pollution and are given special consideration when evaluating air quality impacts from projects. These groups of people include children, the elderly, and individuals with pre-existing respiratory or cardiovascular illness. Structures that house these persons or places where they gather are defined as "sensitive receptors". These structures typically include uses such as residences, hotels, and hospitals where an individual can remain for 24 hours. Consistent with the LST Methodology, the nearest land use where an individual could remain for 24 hours to the Project site has been used to determine construction and operational air quality impacts for emissions of PM_{10} and $PM_{2.5}$, since PM_{10} and $PM_{2.5}$ thresholds are based on a 24-hour averaging time.

Receptors in the Project study area are described below. All distances are measured from the Project site boundary to the outdoor living areas (e.g., backyards) or at the building façade, whichever is closer to the Project site. Receptors in the Project study area are shown on Exhibit 2 under the Localized Construction Emissions section later in the report.

- Receptor R1 represents the future residential area east of Clifton Avenue, approximately 83 feet east of the Project site.
- Receptor R2 represents the future residential area northeast of the intersection of Clifton Avenue and Chatham Street, approximately 106 feet northeast of the Project site.
- Receptor R3 represents the future park north of Chatham Street, approximately 66 feet north of the Project site.
- Receptor R4 represents the existing residence at 4508 S. Amherst Avenue, approximately 130 feet west of the Project site.
- Receptor R5 represents the 095 E. Amigos Privado, approximately 202 feet south of the Project site.
- Receptor R6 represents the existing residence at 4556 S. Afton Privado, approximately 143 feet southeast of the Project site.

For this Project, the appropriate SRA for the LST analysis is the SCAQMD Southwest San Bernardino Valley monitoring station (SRA 33). LSTs apply to CO, NO_2, PM_{10}, and $PM_{2.5}$. The SCAQMD produced look-up tables for projects less than or equal to 5 acres in size. The SCAQMD's screening look-up tables are utilized in determining localized impacts. It should be noted that since the look-up tables identify thresholds at only 1 acre, 2 acres, and 5 acres, linear regression has been utilized to determine localized significance thresholds. Consistent with SCAQMD guidance, the thresholds presented in Table 2 were calculated by interpolating the threshold values for the Project's disturbed acreage.

The acres disturbed is based on the equipment list and days in the site preparation and grading phase according to the anticipated maximum number of acres a given piece of equipment can pass over in an 8-hour workday. The equipment-specific grading rates are summarized in the CalEEMod user's guide, Appendix A: Calculation Details for CalEEMod (4). It should be noted that the disturbed area per day is representative of a piece of equipment making multiple passes over the same land area. In other words, one Rubber Tired Dozer can make multiple passes over the same land area totaling 0.5 acres in a given 8-hour day. Appendix A of the CalEEMod User Manual only identifies equipment-specific grading rates for Crawler Tractors, Graders, Rubber Tired Dozers, and Scrapers; therefore, Tractors/Loaders/Backhoes equipment that was included in the site preparation and grading phase was replaced with Crawler Tractors. For analytical purposes, emissions associated with peak site preparation and grading activities are considered for purposes of localized significance thresholds (LSTs) since this phase represents the maximum localized emissions that would occur. The Project's construction activities could disturb a maximum of approximately 3.5 acres per day for site preparation and 4 acres per day for grading activities. Any other construction phases of development would result in lesser emissions and consequently lesser impacts than what is disclosed herein. As such, Table 2 presents thresholds for localized construction and operational emissions.

TABLE 2: MAXIMUM DAILY LOCALIZED EMISSIONS THRESHOLDS

Source	Activity	Emissions (lbs/day)			
		VOC	NO_X	PM_{10}	$PM_{2.5}$
Construction	Site Preparation	220 lbs/day	1,713 lbs/day	11 lbs/day	7 lbs/day
	Grading	237 lbs/day	1,873 lbs/day	13 lbs/day	8 lbs/day

[1]Source of localized significance threshold (LSTs) is provided on page 7.

SENSITIVE RECEPTORS

The analysis uses the methodology included in the SCAQMD *Final Localized Significance Threshold Methodology* (LST Methodology) (6). The SCAQMD has established that impacts to air quality are significant if there is a potential to contribute or cause localized exceedances of the federal and/or state ambient air quality standards (NAAQS/CAAQS). Collectively, these are referred to as Localized Significance Thresholds (LSTs). The SCAQMD established LSTs in response to the SCAQMD Governing Board's Environmental Justice Initiative I-4[1]. LSTs represent the maximum emissions from a project that will not cause or contribute to an exceedance of the most stringent applicable federal or state ambient air quality standard at the sensitive receptor. The SCAQMD states that lead agencies can use the LSTs as another indicator of significance in its air quality impact analyses.

The SCAQMD recommends that the nearest sensitive receptor be considered when determining the Project's potential to cause an individual or cumulatively significant impact. The nearest land use where an individual could remain for 24 hours to the Project site has been used to determine localized construction and operational air quality impacts for emissions of PM_{10} and $PM_{2.5}$ (since PM_{10} and $PM_{2.5}$ thresholds are based on a 24-hour averaging time). The nearest receptor used for evaluation of localized impacts of PM_{10} and $PM_{2.5}$ is represented by the existing residence at 4516 Amherst Ave, approximately 52 feet (16 meters) west of the Project site.

As previously stated, and consistent with LST Methodology, the nearest industrial/commercial use to the Project site is used to determine construction and operational LST air impacts for emissions of NO_X and CO as the averaging periods for these pollutants are shorter (8 hours or less) and it is reasonable to assume that an individual could be present at these sites for periods of one to 8 hours. It should be noted that the existing residence is located at a closer distance than the nearest industrial/commercial use. As such, the same receptor will be used for evaluation of localized NO_x and CO.

It should be noted that the *LST Methodology* explicitly states that "*It is possible that a project may have receptors closer than 25 meters. Projects with boundaries located closer than 25 meters to the*

1 The purpose of SCAQMD's Environmental Justice program is to ensure that everyone has the right to equal protection from air pollution and fair access to the decision-making process that works to improve the quality of air within their communities. Further, the SCAQMD defines Environmental Justice as "…equitable environmental policymaking and enforcement to protect the health of all residents, regardless of age, culture, ethnicity, gender, race, socioeconomic status, or geographic location, from the health effects of air pollution."

nearest receptor should use the LSTs for receptors located at 25 meters (18)." As such, for evaluation of localized PM_{10}, $PM_{2.5}$, NO_X, and CO, a 25-meter distance will be used.

LOCALIZED CONSTRUCTION EMISSIONS

Table 3 identifies the localized impacts at the nearest receptor location in the vicinity of Project construction activities. Outputs from the model runs for construction LSTs are provided in Attachment A. For analytical purposes, emissions associated with peak site preparation and grading activities are considered for purposes of LSTs since these phases represent the maximum localized emissions that would occur. As shown in Table 3, emissions resulting from construction activity will not exceed the numerical thresholds of significance established by the SCAQMD for any criteria pollutant. Thus, a less than significant impact would occur for localized construction-source emissions and no mitigation is required.

TABLE 3: LOCALIZED CONSTRUCTION IMPACTS

On-Site Emissions	Emissions (lbs/day)			
	NO_X	CO	PM_{10}	$PM_{2.5}$
Site Preparation				
Maximum Daily Emissions	34.61	31.01	7.43	4.31
SCAQMD Localized Threshold	220	1,713	11	7
Threshold Exceeded?	NO	NO	NO	NO
Grading				
Maximum Daily Emissions	29.95	28.67	4.05	2.25
SCAQMD Localized Threshold	237	1,873	13	8
Threshold Exceeded?	NO	NO	NO	NO

REGIONAL CONSTRUCTION EMISSIONS

The proposed Project is to consist of 161 multifamily residential dwelling units (with a density of approximately 16.1 dwelling units per net acre) on 10.5 acres.

The estimated maximum daily construction emissions without mitigation are summarized in Table 4. Detailed construction model outputs are presented in Attachment A. Under the assumed scenarios, emissions resulting from the Project construction will not exceed thresholds established by the SCAQMD for emissions of any criteria pollutant.

TABLE 4: REGIONAL CONSTRUCTION EMISSIONS SUMMARY

Source	Emissions (lbs/day)					
	VOC	NO_X	CO	SO_X	PM_{10}	$PM_{2.5}$

SCAQMD Regional Threshold	75	100	550	150	150	55
Threshold Exceeded?	NO	NO	NO	NO	NO	NO

REGIONAL OPERATIONAL EMISSIONS

Operational activities associated with the Project would result in emissions of CO, VOCs, NO_X, SO_X, PM_{10}, and $PM_{2.5}$. Operational related emissions are expected from the following primary sources: area source emissions, energy source emissions, and mobile source emissions.

The Project related operational air quality impacts derive primarily from vehicle trips generated by buildout associated with the net increase in residential units. Trip characteristics available from the *Esperanza Specific Plan Amendment Trip Generation* were utilized in this analysis (3).

The estimated operation-source emissions associated with the net increase of 161 multifamily residential dwelling units, and reduction in a 736-student elementary school are summarized on Table 5. Detailed operational model outputs are presented in Attachments A and B. As shown on Table 5, operational-source emissions would not exceed the applicable SCAQMD regional thresholds for emissions of any criteria pollutant and no mitigation is required.

TABLE 5: OPERATIONAL EMISSIONS COMPARISON

Source	Emissions (lbs/day)					
	VOC	NO_X	CO	SO_X	PM_{10}	$PM_{2.5}$

5.4. Vehicles

5.4.1. Construction Vehicle Control Strategies

Non-applicable. No control strategies activated by user.

5.5. Architectural Coatings

Phase Name	Residential Interior Area Coated (sq ft)	Residential Exterior Area Coated (sq ft)	Non-Residential Interior Area Coated (sq ft)	Non-Residential Exterior Area Coated (sq ft)	Parking Area Coated (sq ft)
Architectural Coating	345,587	115,196	0.00	0.00	—

5.6. Dust Mitigation

5.6.1. Construction Earthmoving Activities

Phase Name	Material Imported (cy)	Material Exported (cy)	Acres Graded (acres)	Material Demolished (sq. ft.)	Acres Paved (acres)
Site Preparation	—	—	70.0	0.00	—
Grading	—	—	240	0.00	—
Paving	0.00	0.00	0.00	0.00	—

5.6.2. Construction Earthmoving Control Strategies

Control Strategies Applied	Frequency (per day)	PM10 Reduction	PM2.5 Reduction
Water Exposed Area	3	74%	74%

5.7. Construction Paving

Land Use	Area Paved (acres)	% Asphalt
Apartments Low Rise	—	0%

5.8. Construction Electricity Consumption and Emissions Factors

kWh per Year and Emission Factor (lb/MWh)

Year	kWh per Year	CO2	CH4	N2O
2026	0.00	346	0.03	< 0.005
2027	0.00	346	0.03	< 0.005
2028	0.00	346	0.03	< 0.005
2029	0.00	346	0.03	< 0.005

5.9. Operational Mobile Sources

5.9.1. Unmitigated

Land Use Type	Trips/Weekday	Trips/Saturday	Trips/Sunday	Trips/Year	VMT/Weekday	VMT/Saturday	VMT/Sunday	VMT/Year
Apartments Low Rise	943	733	621	316,575	15,986	12,412	10,530	5,363,927

5.10. Operational Area Sources

5.10.1. Hearths

5.10.1.1. Unmitigated

Hearth Type	Unmitigated (number)
Apartments Low Rise	—
Wood Fireplaces	0
Gas Fireplaces	161

Propane Fireplaces	0
Electric Fireplaces	0
No Fireplaces	0

5.10.2. Architectural Coatings

Residential Interior Area Coated (sq ft)	Residential Exterior Area Coated (sq ft)	Non-Residential Interior Area Coated (sq ft)	Non-Residential Exterior Area Coated (sq ft)	Parking Area Coated (sq ft)
345586.5	115,196	0.00	0.00	—

5.10.3. Landscape Equipment

Season	Unit	Value
Snow Days	day/yr	0.00
Summer Days	day/yr	250

5.11. Operational Energy Consumption

5.11.1. Unmitigated

Electricity (kWh/yr) and CO2 and CH4 and N2O and Natural Gas (kBTU/yr)

Land Use	Electricity (kWh/yr)	CO2	CH4	N2O	Natural Gas (kBTU/yr)
Apartments Low Rise	754,406	346	0.0330	0.0040	2,681,706

5.12. Operational Water and Wastewater Consumption

5.12.1. Unmitigated

Land Use	Indoor Water (gal/year)	Outdoor Water (gal/year)
Apartments Low Rise	6,710,669	1,933,654

5.13. Operational Waste Generation

5.13.1. Unmitigated

Land Use	Waste (ton/year)	Cogeneration (kWh/year)
Apartments Low Rise	119	—

5.14. Operational Refrigeration and Air Conditioning Equipment

5.14.1. Unmitigated

Land Use Type	Equipment Type	Refrigerant	GWP	Quantity (kg)	Operations Leak Rate	Service Leak Rate	Times Serviced

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	19.8	annual days of extreme heat
Extreme Precipitation	3.10	annual days with precipitation above 20 mm

Sea Level Rise	—	meters of inundation depth
Wildfire	6.78	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (Radke et al., 2017, CEC-500-2017-008), and consider inundation location and depth for the San Francisco Bay, the Sacramento-San Joaquin River Delta and California coast resulting different increments of sea level rise coupled with extreme storm events. Users may select from four scenarios to view the range in potential inundation depth for the grid cell. The four scenarios are: No rise, 0.5 meter, 1.0 meter, 1.41 meters
Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	2	0	0	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	0	0	N/A
Wildfire	1	0	0	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	0	0	0	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	2	1	1	3

Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	1	1	2
Wildfire	1	1	1	2
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	1	1	1	2

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Exposure Indicators	—
AQ-Ozone	77.1
AQ-PM	93.4
AQ-DPM	57.1
Drinking Water	100.0
Lead Risk Housing	17.5
Pesticides	84.9
Toxic Releases	67.6
Traffic	18.1
Effect Indicators	—

CleanUp Sites	80.3
Groundwater	98.1
Haz Waste Facilities/Generators	86.6
Impaired Water Bodies	87.0

7.3. Overall Health & Equity Scores

Metric	Result for Project Census Tract
CalEnviroScreen 4.0 Score for Project Location (a)	72.0
Healthy Places Index Score for Project Location (b)	55.0
Project Located in a Designated Disadvantaged Community (Senate Bill 535)	No
Project Located in a Low-Income Community (Assembly Bill 1550)	No
Project Located in a Community Air Protection Program Community (Assembly Bill 617)	No

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.
b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

7.4. Health & Equity Measures

No Health & Equity Measures selected.

7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

8. User Changes to Default Data

Screen	Justification
Land Use	Taken from site plan
Operations: Vehicle Data	Trip characteristics based on information provided in the Traffic Analysis
Operations: Hearths	SCAQMD Rule 445 no wood burning devices. Wood burning devices added to gas devices.
Operations: Refrigerants	Beginning 1 January 2025, all new air conditioning equipment may not use refrigerants with a GWP of 750 or greater.

Construction: Construction Phases	Based on client provided data, construction schedule to begin Q3 2026 and completed Q1 2029 Building Construction, Paving, and Architectural Coating overlap to present a conservative analysis
Construction: Off-Road Equipment	T/L/B replaced with Crawler Tractor to accurately calculate disturbance for Site Preparation and Grading phases. Standard 8 hours work days
Construction: Trips and VMT	Vendor Trips adjusted based on CalEEMod defaults for Building Construction and number of days for Site Preparation, Grading, and Building Construction

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	19.8	annual days of extreme heat
Extreme Precipitation	3.10	annual days with precipitation above 20 mm
Sea Level Rise	—	meters of inundation depth
Wildfire	6.78	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (Radke et al., 2017, CEC-500-2017-008), and consider inundation location and depth for the San Francisco Bay, the Sacramento-San Joaquin River Delta and California coast resulting different increments of sea level rise coupled with extreme storm events. Users may select from four scenarios to view the range in potential inundation depth for the grid cell. The four scenarios are: No rise, 0.5 meter, 1.0 meter, 1.41 meters
Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	2	0	0	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	0	0	N/A
Wildfire	1	0	0	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	0	0	0	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	2	1	1	3
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	1	1	2
Wildfire	1	1	1	2

Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	1	1	1	2

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Exposure Indicators	—
AQ-Ozone	77.1
AQ-PM	93.4
AQ-DPM	57.1
Drinking Water	100.0
Lead Risk Housing	17.5
Pesticides	84.9
Toxic Releases	67.6
Traffic	18.1
Effect Indicators	—
CleanUp Sites	80.3
Groundwater	98.1

Haz Waste Facilities/Generators	86.6
Impaired Water Bodies	87.0
Solid Waste	98.9
Sensitive Population	—
Asthma	16.5
Cardio-vascular	29.1
Low Birth Weights	49.0
Socioeconomic Factor Indicators	—
Education	52.9
Housing	59.3
Linguistic	68.9
Poverty	35.4
Unemployment	36.4

7.2. Healthy Places Index Scores

The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Economic	—
Above Poverty	73.60451687
Employed	6.274862056
Median HI	76.55588349
Education	—
Bachelor's or higher	64.85307327
High school enrollment	100
Preschool enrollment	66.93186193
Transportation	—
Auto Access	63.41588605

Active commuting	24.5989991
Social	—
2-parent households	66.95752598
Voting	70.69164635
Neighborhood	—
Alcohol availability	97.0101373
Park access	52.77813422
Retail density	10.02181445
Supermarket access	6.557166688
Tree canopy	8.238162453
Housing	—
Homeownership	60.78532016
Housing habitability	61.41408957
Low-inc homeowner severe housing cost burden	71.53856025
Low-inc renter severe housing cost burden	18.38829719
Uncrowded housing	64.30129603
Health Outcomes	—
Insured adults	73.78416528
Arthritis	95.7
Asthma ER Admissions	84.6
High Blood Pressure	97.7
Cancer (excluding skin)	89.7
Asthma	34.7
Coronary Heart Disease	98.7
Chronic Obstructive Pulmonary Disease	94.6
Diagnosed Diabetes	96.0
Life Expectancy at Birth	75.7

1152

Cognitively Disabled	56.3
Physically Disabled	69.8
Heart Attack ER Admissions	68.4

7.3. Overall Health & Equity Scores

Metric	Result for Project Census Tract
CalEnviroScreen 4.0 Score for Project Location (a)	72.0
Healthy Places Index Score for Project Location (b)	55.0
Project Located in a Designated Disadvantaged Community (Senate Bill 535)	No
Project Located in a Low-Income Community (Assembly Bill 1550)	No
Project Located in a Community Air Protection Program Community (Assembly Bill 617)	No

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.
b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

7.4. Health & Equity Measures

No Health & Equity Measures selected.

7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

8. User Changes to Default Data

Screen	Justification
Land Use	Taken from site plan
Operations: Vehicle Data	Trip characteristics based on information provided in the Traffic Analysis
Operations: Architectural Coatings	SCAQMD Rule 1113

Operations: Refrigerants	As of 1 January 2022, new commercial refrigeration equipment may not use refrigerants with a GWP of 150 or greater. Further, R-404A (the CalEEMod default) is unacceptable for new supermarket and cold storage systems as of 1 January 2019 and 2023, respectively. Beginning 1 January 2025, all new air conditioning equipment may not use refrigerants with a GWP of 750 or greater.

MANAGEMENT SUMMARY/ABSTRACT

In response to a request from the project applicant, a cultural resources study was conducted by BFSA Environmental Services, a Perennial Company (BFSA), for the proposed Eucalyptus and Amherst Avenues Project bound by Chatham Street, Clifton Avenue, South Amherst Avenue, and East Eucalyptus Avenue, within the city of Ontario, in San Bernardino County, California. The 10.02-acre property (Assessor's Parcel Number 1073-101-05) is situated within Section 13, Township 2 South, Range 7 West of the San Bernardino Baseline and Meridian on the United States Geological Survey (USGS) (7.5-minute) *Corona North* topographic quadrangle maps. As designed, the applicant proposes to clear the property for the construction of a multi-family residential development with associated landscape, hardscape, and infrastructure.

The purpose of this investigation was to locate and record cultural resources present within the project and subsequently evaluate any resources that will be impacted by the development as part of the City of Ontario's environmental review process conducted in compliance with California Environmental Quality Act (CEQA). The cultural resources investigation included the review of an archaeological records search conducted at the South Central Coastal Information Center (SCCIC) at California State University, Fullerton (CSU Fullerton), in order to assess previous archaeological studies and identify any recorded archaeological sites within the project. The records search identified 11 resources within one mile of the proposed project, none of which are located within the subject property. The records search also identified 38 previous studies conducted within one mile of the project, one of which overlaps the subject property (Dice 2002). A review of historic maps and aerial photographs illustrate that the subject property was utilized for agricultural purposes as early as 1938. Additionally, the property was entirely graded in 2018 resulting in the development of a water catchment basin and a graded pad. A Sacred Lands File (SLF) search was requested from the Native American Heritage Commission (NAHC). The SLF search results were negative for recorded Native American sacred sites or locations of religious or ceremonial importance within the project vicinity.

BFSA archaeologist Parker Sheriff conducted the archaeological survey of the project on February 27, 2025. The cultural resources survey did not identify any cultural resources within the project. Due to the previous ground-disturbing activities and the absence of identified cultural resources within the project boundaries, the potential for any significant resources to be present or impacted by the proposed project is minimal. Given that no archaeological sites, features, or artifacts have been identified within or directly adjacent to the project, no potential impacts to cultural resources associated with the proposed development are anticipated. Based upon the results of this study, no further archaeological study or mitigation measures are recommended.

A copy of this report will be permanently filed with the SCCIC at CSU Fullerton. All notes, photographs, and other materials related to this project will be curated at the BFSA archaeological laboratory in Poway, California.

1.0 INTRODUCTION

1.1 Project Description

The archaeological survey program for the proposed Eucalyptus and Amherst Avenues Project was conducted in order to comply with CEQA regulatory requirements and City of Ontario environmental requirements. The proposed project is bound by Chatham Street, Clifton Avenue, South Amherst Avenue, and East Eucalyptus Avenue, within the city of Ontario, in San Bernardino County, California (Figure 1.1–1). The 10.02-acre property (APN 1073-101-05) is located within Section 13, Township 2 South, Range 7 West as shown on the USGS 1:24,000-scale (7.5-minute) *Corona North* topographic quadrangle maps (Figure 1.1–2). As designed, the applicant proposes to clear the property for the construction of a multi-family residential development with associated landscape, hardscape, and infrastructure (Figures 1.1–3).

The decision to request this investigation was based upon the cultural resource sensitivity of the locality as suggested by known site density and predictive modeling. Sensitivity for prehistoric cultural resources in a given area is usually indicated by known settlement patterns, which, in southwestern San Bernardino County, were focused around freshwater resources and a food supply. Within the city of Ontario, historic resources tend to be associated with the historic agricultural, industrial, or residential development of the region.

1.2 Environmental Setting

The Eucalyptus and Amherst Avenues Project is situated in the Peninsular Ranges Geologic Province of southern California. The Peninsular Ranges are a series of northwest- to southeast-trending mountain ranges separated by similarly trending valleys, which make up the southernmost segment of a chain of North American Mesozoic batholiths that extend from Alaska to the southern tip of Baja California. Geologically, the project is mapped as Holocene and late Pleistocene-aged young eolian deposits (Morton et al. 2002). These surficial sediments are described as "chiefly unconsolidated, moderately well sorted, fine- to medium-grained sand" (Morton et al. 2002). The specific soil types found within the project are mapped as Delhi fine sand (Db) and Hilmar loamy fine sand (NRCS 2023). The average elevation within the project is approximately 700 feet above mean sea level.

The proposed project is situated approximately three miles north of the Santa Ana River. Historically, the property was utilized for agriculture. In 2018, the property was completely graded. The vegetation found within the property consists of non-native weeds and grasses.

1.3 Cultural Setting

1.3.1 Prehistoric Period

Paleo Indian, Archaic Period Milling Stone Horizon, and the Late Prehistoric Shoshonean groups are the three general cultural periods represented in San Bernardino County. The following discussion of the cultural history of San Bernardino County references the San Dieguito Complex, the Encinitas Tradition, the Milling Stone Horizon, the La Jolla Complex, the Pauma Complex, and the San Luis Rey Complex, since these culture sequences have been used to describe archaeological manifestations in the region. The Late Prehistoric component in the southwestern area of San Bernardino County was represented by the Gabrielino and Serrano Indians. According to Kroeber (1976), the Serrano probably owned a stretch of the Sierra Madre from Cucamonga east to above Mentone and halfway up to San Timoteo Canyon, including the San Bernardino Valley and just missing Riverside County. However, Kroeber (1976) also states that this area has been assigned to the Gabrielino, "which would be a more natural division of topography, since it would leave the Serrano pure mountaineers."

Absolute chronological information, where possible, will be incorporated into this discussion to examine the effectiveness of continuing to use these terms interchangeably. Reference will be made to the geologic framework that divides the culture chronology of the area into four segments: late Pleistocene (20,000 to 10,000 years before the present [YBP]), early Holocene (10,000 to 6,650 YBP), middle Holocene (6,650 to 3,350 YBP), and late Holocene (3,350 to 200 YBP).

Paleo Indian Period (Late Pleistocene: 11,500 to circa 9,000 YBP)

The Paleo Indian Period is associated with the terminus of the late Pleistocene (12,000 to 10,000 YBP). The environment during the late Pleistocene was cool and moist, which allowed for glaciation in the mountains and the formation of deep, pluvial lakes in the deserts and basin lands (Moratto 1984). However, by the terminus of the late Pleistocene, the climate became warmer, which caused glaciers to melt, sea levels to rise, greater coastal erosion, large lakes to recede and evaporate, extinction of Pleistocene megafauna, and major vegetation changes (Moratto 1984; Martin 1967, 1973; Fagan 1991). The coastal shoreline at 10,000 YBP, depending upon the particular area of the coast, was near the 30-meter isobath, or two to six kilometers further west than its present location (Masters 1983).

Paleo Indians were likely attracted to multiple habitat types, including mountains, marshlands, estuaries, and lakeshores. These people likely subsisted using a more generalized hunting, gathering, and collecting adaptation, utilizing a variety of resources including birds, mollusks, and both large and small mammals (Erlandson and Colten 1991; Moratto 1984; Moss and Erlandson 1995).

Archaic Period (Early and Middle Holocene: circa 9000 to 1300 YBP)

The Archaic Period of prehistory began with the onset of the Holocene around 9,000 YBP. The transition from the Pleistocene to the Holocene was a period of major environmental change

throughout North America (Antevs 1953; Van Devender and Spaulding 1979). The general warming trend caused sea levels to rise, lakes to evaporate, and drainage patterns to change. In southern California, the general climate at the beginning of the early Holocene was marked by cool/moist periods and an increase in warm/dry periods and sea levels. The coastal shoreline at 8,000 YBP, depending upon the particular area of the coast, was near the 20-meter isobath, or one to four kilometers further west than its present location (Masters 1983).

The rising sea level during the early Holocene created rocky shorelines and bays along the coast by flooding valley floors and eroding the coastline (Curray 1965; Inman 1983). Shorelines were primarily rocky with small littoral cells, as sediments were deposited at bay edges but rarely discharged into the ocean (Reddy 2000). These bays eventually evolved into lagoons and estuaries, which provided a rich habitat for mollusks and fish. The warming trend and rising sea levels generally continued until the late Holocene (4,000 to 3,500 YBP).

At the beginning of the late Holocene, sea levels stabilized, rocky shores declined, lagoons filled with sediment, and sandy beaches became established (Gallegos 1985; Inman 1983; Masters 1994; Miller 1966; Warren and Pavesic 1963). Many former lagoons became saltwater marshes surrounded by coastal sage scrub by the late Holocene (Gallegos 2002). The sedimentation of the lagoons was significant in that it had profound effects upon the types of resources available to prehistoric peoples. Habitat was lost for certain large mollusks, namely *Chione* and *Argopecten,* but habitat was gained for other small mollusks, particularly *Donax* (Gallegos 1985; Reddy 2000). The changing lagoon habitats resulted in the decline of larger shellfish, the loss of drinking water, and the loss of Torrey Pine nuts, causing a major depopulation of the coast as people shifted inland to reliable freshwater sources and intensified their exploitation of terrestrial small game and plants, including acorns (originally proposed by Rogers 1929; Gallegos 2002).

The Archaic Period in southern California is associated with a number of different cultures, complexes, traditions, and horizons, including San Dieguito, La Jolla, Encinitas, Milling Stone, and Pauma, as well as the Intermediate Period.

Late Prehistoric Period (Late Holocene: 1,300 YBP to 1790)

Approximately 1,350 YBP, a Shoshonean-speaking group from the Great Basin region moved into San Bernardino County, marking the transition to the Late Prehistoric Period. This period has been characterized by higher population densities and elaborations in social, political, and technological systems. Economic systems diversified and intensified during this period, with the continued elaboration of trade networks, the use of shell-bead currency, and the appearance of more labor-intensive, yet effective, technological innovations. Technological developments during this period included the introduction of the bow and arrow between A.D. 400 and 600 and the introduction of ceramics. Atlatl darts were replaced by smaller arrow darts, including the Cottonwood series points. Other hallmarks of the Late Prehistoric Period include extensive trade networks as far reaching as the Colorado River Basin and cremation of the dead.

Protohistoric Period (Late Holocene: 1790 to Present)

Gabrielino

At the time of Spanish contact, the territory of the Gabrielino, also known ethnographically as the Tongva, covered much of present-day Los Angeles and Orange counties. The southern extent of this culture area is bounded by Aliso Creek, the eastern extent is located east of present-day San Bernardino along the Santa Ana River, the northern extent includes the San Fernando Valley, and the western extent includes portions of the Santa Monica Mountains. The Gabrielino also occupied several Channel Islands including Santa Barbara Island, Santa Catalina Island, San Nicholas Island, and San Clemente Island. Because of their access to certain resources, including a steatite source from Santa Catalina Island, this group was among the wealthiest and most populous aboriginal groups in all of southern California. Trade of materials and resources controlled by the Gabrielino extended as far north as the San Joaquin Valley, as far east as the Colorado River, and as far south as Baja California (Bean and Smith 1978a; Kroeber 1976).

The Gabrielino lived in permanent villages and smaller resource gathering camps occupied at various times of the year depending upon the seasonality of the resource. Larger villages were comprised of several families or clans, while smaller, seasonal camps typically housed smaller family units. The coastal area between San Pedro and Topanga Canyon was the location of primary subsistence villages, while secondary sites were located near inland sage stands, oak groves, and pine forests. Permanent villages were located along rivers and streams, as well as in sheltered areas along the coast. As previously mentioned, the Channel Islands were also the locations of relatively large settlements (Bean and Smith 1978a; Kroeber 1976).

Resources procured along the coast and on the islands were primarily marine in nature and included tuna, swordfish, ray, shark, California sea lion, Stellar sea lion, harbor seal, northern elephant seal, sea otter, dolphin, porpoise, various waterfowl species, numerous fish species, purple sea urchin, and mollusks such as rock scallop, California mussel, and limpet. Inland resources included oak acorn, pine nut, Mohave yucca, cacti, sage, grass nut, deer, rabbit, hare, rodent, quail, duck, and a variety of reptiles such as western pond turtle and several different species of snakes (Bean and Smith 1978a; Kroeber 1976).

Little is known about the social structure of the Gabrielino; however, there appears to have been at least three social classes: 1) the elite, which included the rich, chiefs, and their immediate family; 2) a middle class, which included people of relatively high economic status or long-established lineages; and 3) a class of people that included most other individuals in the society. Villages were politically autonomous units comprised of several lineages. During times of the year when certain seasonal resources were available, the village would divide into lineage groups and move out to exploit them, returning to the village between forays (Bean and Smith 1978a; Kroeber 1976).

Each lineage had its own leader, with the village chief coming from the dominant lineage. Several villages might be allied under a paramount chief. Chiefly positions were of an ascribed status, most often passed to the eldest son. Chiefly duties included providing village cohesion, leading warfare and peace negotiations with other groups, collecting village tributes, and arbitrating disputes within the village(s). The status of the chief was legitimized by safekeeping of the sacred bundle, a representation of the link between the material and spiritual realms and the embodiment of power (Bean and Smith 1978a; Kroeber 1976).

Shamans were leaders in the spirit realm. The duties of the shaman included conducting healing and curing ceremonies, guarding the sacred bundle, locating lost items, identifying and collecting poisons for arrows, and making rain (Bean and Smith 1978a; Kroeber 1976).

Marriages were made between individuals of equal social status and, in the case of powerful lineages, marriages were arranged to establish political ties between the lineages (Bean and Smith 1978a; Kroeber 1976).

Men conducted the majority of the heavy labor, hunting, fishing, and trading with other groups. Women's duties included gathering and preparing plant and animal resources, and making baskets, pots, and clothing (Bean and Smith 1978a; Kroeber 1976).

Gabrielino houses were domed, circular structures made of thatched vegetation. Houses varied in size and could house from one to several families. Sweathouses (semicircular, earth-covered buildings) were public structures used in male social ceremonies. Other structures included menstrual huts and a yuvar, an open-air, ceremonial structure built near the chief's house (Bean and Smith 1978a; Kroeber 1976).

Clothing was minimal; men and children most often went naked, while women wore deerskin or bark aprons. In cold weather, deerskin, rabbit fur, or bird skin (with feathers intact) cloaks were worn. Island and coastal groups used sea otter fur for cloaks. In areas of rough terrain, yucca fiber sandals were worn. Women often used red ochre on their faces and skin for adornment or protection from the sun. Adornment items included feathers, fur, shells, and beads (Bean and Smith 1978a; Kroeber 1976).

Hunting implements included wood clubs, sinew-backed bows, slings, and throwing clubs. Maritime implements included rafts, harpoons, spears, hooks and lines, and nets. A variety of other tools included deer scapulae saws, bone and shell needles, bone awls, scrapers, bone or shell flakers, wedges, stone knives and drills, metates, mullers, manos, shell spoons, bark platters, and wooden paddles and bowls. Baskets were made from rush, deer grass, and skunkbush. Baskets were fashioned for hoppers, plates, trays, and winnowers for leaching, straining, and gathering. Baskets were also used for storing, preparing, and serving food, and for keeping personal and ceremonial items (Bean and Smith 1978a; Kroeber 1976).

The Gabrielino had exclusive access to soapstone, or steatite, procured from Santa Catalina Island quarries. This highly prized material was used for making pipes, animal carvings, ritual objects, ornaments, and cooking utensils. The Gabrielino profited well from trading steatite since it was valued so much by groups throughout southern California (Bean and Smith 1978a; Kroeber 1976).

Serrano

Aboriginally, the Serrano occupied an area east of present-day Los Angeles. According to Bean and Smith (1978b), definitive boundaries are difficult to place for the Serrano due to their sociopolitical organization and a lack of reliable data:

> The Serrano were organized into autonomous localized lineages occupying definite, favored territories, but rarely claiming any territory far removed from the lineage's home base. Since the entire dialectical group was neither politically united nor amalgamated into supralineage groups, as many of their neighbors were, one must speak in terms of generalized areas of usage rather than pan-tribal holdings. (Strong [1971] in Bean and Smith 1978b)

However, researchers place the Serrano in the San Bernardino Mountains east of Cajon Pass and at the base of and north of the mountains near Victorville, east to Twentynine Palms, and south to the Yucaipa Valley (Bean and Smith 1978b). Serrano has been used broadly for languages in the Takic family including Serrano, Kitanemuk, Vanyume, and Tataviam.

The Serrano were part of "exogamous clans, which in turn were affiliated with one of two exogamous moieties, *tuk^{w}utam* (Wildcat) and *wahiʔiam* (Coyote)" (Bean and Smith 1978b). According to Strong (1971), details such as number, structure, and function of the clans are unknown. Instead, he states that clans were not political, but were rather structured based upon "economic, marital, or ceremonial reciprocity, a pattern common throughout Southern California" (Bean and Smith 1978b). The Serrano formed alliances amongst their own clans and with Cahuilla, Chemehuevi, Gabrielino, and Cupeño clans (Bean and Smith 1978b). Clans were large, autonomous political and landholding units formed patrilineally, with all males descending from a common male ancestor, including all wives and descendants of the males. However, even after marriage, women would still keep their original lineage and would still participate in those ceremonies (Bean and Smith 1978b).

According to Bean and Smith (1978b), the cosmogony and cosmography of the Serrano are very similar to those of the Cahuilla:

> There are twin creator gods, a creation myth told in "epic poem" style, each local group having its own origin story, water babies whose crying foretells death, supernatural beings of various kinds and on various hierarchically arranged power-access levels, an Orpheus-like myth, mythical deer that no one can kill, and tales relating the adventures (and misadventures) of Coyote, a tragicomic trickster-transformer culture hero. (Bean [1962-1972] and Benedict [1924] in Bean and Smith 1978b)

The Serrano had a shaman who acquired powers through dreams, which were induced through ingestion of the hallucinogen datura. The shaman was mostly a curer/healer, using herbal remedies and "sucking out the disease-causing agents" (Bean and Smith 1978b).

Serrano village locations were typically located near water sources. Individual family dwellings were likely circular, domed structures. Daily household activities would either take place outside of the house out in the open, or under a ramada constructed of a thatched willow pole roof held up by four or more poles inserted into the ground. Families could consist of a husband, wife/wives, unmarried female children, married male children, the husband's parents, and/or widowed aunts and uncles. Rarely, an individual would occupy his own house, typically in the mountains. Serrano villages also included a large ceremonial house where the lineage leader would live, which served as the religious center for lineages or lineage-sets, granaries, and sweathouses (Bean and Smith 1978b).

The Serrano were primarily hunter/gatherers. Vegetal staples varied with locality. Acorns and piñon nuts were found in the foothills, and mesquite, yucca roots, cacti fruits, and piñon nuts were found in or near the desert regions. Diets were supplemented with other roots, bulbs, shoots, and seeds (Heizer 1978). Deer, mountain sheep, antelopes, rabbits, and other small rodents were among the principal food packages. Various game birds, especially quail, were also hunted. The bow and arrow was used for large game, while smaller game and birds were killed with curved throwing sticks, traps, and snares. Occasionally, game was hunted communally, often during mourning ceremonies (Benedict 1924; Drucker 1937; Heizer 1978). Earth ovens were used to cook meat, bones were boiled to extract marrow, and blood was either drunk cold or cooked to a thicker consistency and then eaten. Some meat and vegetables were sun-dried and stored. Food acquisition and processing required the manufacture of additional items such as knives, stone or bone scrapers, pottery trays and bowls, bone or horn spoons, and stirrers. Mortars, made of either stone or wood, and metates were also manufactured (Strong 1971; Drucker 1937; Benedict 1924).

The Serrano were very similar technologically to the Cahuilla. In general, manufactured goods included baskets, some pottery, rabbit-skin blankets, awls, arrow straighteners, sinew-backed bows, arrows, fire drills, stone pipes, musical instruments (rattles, rasps, whistles, bull-roarers, and flutes), feathered costumes, mats for floor and wall coverings, bags, storage pouches, cordage (usually comprised of yucca fiber), and nets (Heizer 1978).

1.3.2 Historic Period

Traditionally, the history of the state of California has been divided into three general periods: the Spanish Period (1769 to 1821), the Mexican Period (1822 to 1846), and the American Period (1848 to present) (Caughey 1970). The American Period is often further subdivided into additional phases: the nineteenth century (1848 to 1900), the early twentieth century (1900 to 1950), and the Modern Period (1950 to present). From an archaeological standpoint, all of these phases can be referred to together as the Ethnohistoric Period. This provides a valuable tool for archaeologists, as ethnohistory is directly concerned with the study of indigenous or non-Western peoples from a combined historical/anthropological viewpoint, which employs written documents,

oral narrative, material culture, and ethnographic data for analysis.

European exploration along the California coast began in 1542 with the landing of Juan Rodríguez Cabrillo and his men at San Diego Bay. Sixty years after the Cabrillo expeditions, an expedition under Sebastián Vizcaíno made an extensive and thorough exploration of the Pacific coast. Although the voyage did not extend beyond the northern limits of the Cabrillo track, Vizcaíno had the most lasting effect upon the nomenclature of the coast. Many of his place names have survived, whereas practically every one of the names created by Cabrillo have faded from use. For instance, Cabrillo named the first (now) United States port he stopped at "San Miguel"; 60 years later, Vizcaíno changed it to "San Diego" (Rolle 1969). The early European voyages observed Native Americans living in villages along the coast but did not make any substantial, long-lasting impact. At the time of contact, the Luiseño population was estimated to have ranged from 4,000 to as many as 10,000 individuals (Bean and Shipek 1978; Kroeber 1976).

The historic background of the project area began with the Spanish colonization of Alta California. The first Spanish colonizing expedition reached southern California in 1769 with the intention of converting and civilizing the indigenous populations, as well as expanding the knowledge of and access to new resources in the region (Brigandi 1998). As a result, by the late eighteenth century, a large portion of southern California was overseen by Mission San Luis Rey (San Diego County), Mission San Juan Capistrano (Orange County), and Mission San Gabriel (Los Angeles County), who began colonizing the region and surrounding areas (Chapman 1921).

Native Californians may have first coalesced with Europeans around 1769 when the first Spanish mission was established in San Diego. In 1771, Father Francisco Garcés first searched the Californian desert for potential mission sites. Interactions between local tribes and Franciscan priests occurred by 1774 when Juan Bautista de Anza made an exploration of Alta California.

Serrano contact with the Europeans may have occurred as early as 1771 or 1772, but it was not until approximately 1819 that the Spanish directly influenced the culture. The Spanish established asistencias in San Bernardino, Pala, and Santa Ysabel. Between the founding of the asistencia and secularization in 1834, most of the Serranos in the San Bernardino Mountains were moved to the nearby missions (Beattie and Beattie 1939:366) while the Cahuilla maintained a high level of autonomy from Spain (Bean 1978).

Each mission gained power through the support of a large, subjugated Native American workforce. As the missions grew, livestock holdings increased and became increasingly vulnerable to theft. In order to protect their interests, the southern California missions began to expand inland to try and provide additional security (Beattie and Beattie 1939; Caughey 1970). In order to meet their needs, the Spaniards embarked upon a formal expedition in 1806 to find potential locations within what is now the San Bernardino Valley. As a result, by 1810, Father Francisco Dumetz of Mission San Gabriel had succeeded in establishing a religious site, or capilla, at a Cahuilla rancheria called Guachama (Beattie and Beattie 1939). San Bernardino Valley received its name from this site, which was dedicated to San Bernardino de Siena by Father Dumetz. The Guachama rancheria was located in present-day Bryn Mawr in San Bernardino County.

These early colonization efforts were followed by the establishment of estancias at Puente (circa 1816) and San Bernardino (circa 1819) near Guachama (Beattie and Beattie 1939). These efforts were soon mirrored by the Spaniards from Mission San Luis Rey, who in turn established a presence in what is now Lake Elsinore, Temecula, and Murrieta (Chapman 1921). The indigenous groups who occupied these lands were recruited by missionaries, converted, and put to work in the missions (Pourade 1961). Throughout this period, the Native American populations were decimated by introduced diseases, a drastic shift in diet resulting in poor nutrition, and social conflicts due to the introduction of an entirely new social order (Cook 1976).

Mexico achieved independence from Spain in 1822 and became a federal republic in 1824. As a result, both Baja and Alta California became classified as territories (Rolle 1969). Shortly thereafter, the Mexican Republic sought to grant large tracts of private land to its citizens to begin to encourage immigration to California and to establish its presence in the region. Part of the establishment of power and control included the desecularization of the missions circa 1832. These same missions were also located on some of the most fertile land in California and, as a result, were considered highly valuable. The resulting land grants, known as "ranchos," covered expansive portions of California and, by 1846, more than 600 land grants had been issued by the Mexican government. Rancho Jurupa was the first rancho to be established and was issued to Juan Bandini in 1838. Although Bandini primarily resided in San Diego, Rancho Jurupa was located in what is now Riverside County (Pourade 1963). A review of Riverside County place names quickly illustrates that many of the ranchos in Riverside County lent their names to present-day locations, including Jurupa, El Rincon, La Sierra, El Sobrante de San Jacinto, La Laguna (Lake Elsinore), Santa Rosa, Temecula, Pauba, San Jacinto Nuevo y Potrero, and San Jacinto Viejo (Gunther 1984). As was typical of many ranchos, these were all located in the valley environments within western Riverside County.

The treatment of Native Americans grew worse during the Rancho Period. Most of the Native Americans were forced off of their land or put to work on the now privately-owned ranchos, most often as slave labor. In light of the brutal ranchos, the degree to which Native Americans had become dependent upon the mission system is evident when, in 1838, a group of Native Americans from Mission San Luis Rey petitioned government officials in San Diego to relieve suffering at the hands of the rancheros:

> We have suffered incalculable losses, for some of which we are in part to be blamed for because many of us have abandoned the Mission … We plead and beseech you … to grant us a Rev. Father for this place. We have been accustomed to the Rev. Fathers and to their manner of managing the duties. We labored under their intelligent directions, and we were obedient to the Fathers according to the regulations, because we considered it as good for us. (Brigandi 1998:21)

Native American culture had been disrupted to the point where they could no longer rely upon prehistoric subsistence and social patterns. Not only does this illustrate how dependent the Native Americans had become upon the missionaries, but it also indicates a marked contrast in the way the Spanish treated the Native Americans as compared to the Mexican and United States ranchers. Spanish colonialism (missions) is based upon utilizing human resources while integrating them into their society. The ranchers, both Mexican and American, did not accept Native Americans into their social order and used them specifically for the extraction of labor, resources, and profit. Rather than being incorporated, they were either subjugated or exterminated (Cook 1976).

By 1846, tensions between the United States and Mexico had escalated to the point of war (Rolle 1969). In order to reach a peaceful agreement, the Treaty of Guadalupe Hidalgo was put into effect in 1848, which resulted in the annexation of California to the United States. Once California opened to the United States, waves of settlers moved in searching for gold mines, business opportunities, political opportunities, religious freedom, and adventure (Rolle 1969; Caughey 1970). By 1850, California had become a state and was eventually divided into 27 separate counties. While a much larger population was now settling in California, this was primarily in the central valley, San Francisco, and the Gold Rush region of the Sierra Nevada mountain range (Rolle 1969; Caughey 1970). During this time, southern California grew at a much slower pace than northern California and was still dominated by the cattle industry that was established during the earlier rancho period.

Although the first orange trees were planted in Riverside County circa 1871, it was not until a few years later when a small number of Brazilian navel orange trees were established that the citrus industry truly began in the region (Patterson 1971). The Brazilian navel orange was well suited to the climate of Riverside County and thrived with assistance from several extensive irrigation projects. At the close of 1882, an estimated half a million citrus trees were present in California, nearly half of which were estimated to be in Riverside County. Population growth and 1880s tax revenue from the booming citrus industry prompted the official formation of Riverside County in 1893 out of portions of what was once San Bernardino County (Patterson 1971).

General History of the City of Ontario

In late 1881, Canadian brothers George and William Chaffey (Plates 1.3–1 and 1.3–2) purchased 6,218 acres of land in the Cucamonga Desert known as the "San Antonio lands." The Chaffey brothers soon expanded to the Southern Pacific Railroad tracks on the south and into the San Antonio Canyon to the north (City of Ontario n.d.). The Chaffey brothers intended to establish a "model colony" for migrants coming to the region and named the area "Ontario" after their hometown. Before the land could be used, however, water had to be found and brought into the town. Because of this, George laid miles of cement pipe leading from San Antonio Canyon, which was later tapped into by the San Antonio Water Company. The need for electric power to lift the water from the deep wells in San Antonio Canyon led to the establishment of the first commercially successful hydroelectric plant in the country, the Ontario Power Company (City of Ontario n.d.).

During the late nineteenth century, anyone purchasing land within the Ontario Colony automatically received shares in the water company, which ensured that water would be pumped to their property. This development aided in establishing agricultural properties, primarily citrus groves, within Ontario (Plate 1.3–3). The Ontario Colony was officially incorporated as a city in 1891 and continued to grow throughout the twentieth century (City of Ontario n.d.). The city became known for air flight after Judge Archie Mitchell, Waldo Waterman, and other airplane enthusiasts established Latimer Field in 1923. Urban growth pushed the airfield further and further east until it reached its present location, which currently functions as the Ontario International Airport. During World War II, the airport served as a busy training center for fighter jet pilots (City of Ontario n.d.).

Agriculture played a vital role in the development of the region. The area surrounding the subject property was historically tied to wine production. The most notable wine producer in the area was Secundo Guasti, an Italian immigrant who planted vineyards in the area in 1902. Guasti purchased a town site called Zucker in 1900, which had begun to grow around the 1875 Southern Pacific Railroad's South Cucamonga Station. Guasti established the Italian Vineyard Company and "His innovations in dry cultivation and processing techniques made the winemaking very productive" (Thirtieth Street Architects, Inc. 2011). Guasti organized the emigration of "experienced workers, coopers and craftsmen" and their families from Italy to work and live at his winery; by 1910, the Guasti vineyards consisted of 5,000 acres, which extended from the foothills of the San Gabriel Mountains to the valley floor, and Zucker was renamed Guasti (Thirtieth Street Architects, Inc. 2011). The vineyard cultivated a large variety of grapes specifically suited for wine, particularly for sherry and port varietals and "In spite of Prohibition and two World Wars, Guasti Winery remained in production until about 1962 when wine-making operations were relocated" (Thirtieth Street Architects, Inc. 2011). In 1975, the Guasti Winery was designated a California Point of Historical Interest (Meighan 1975).

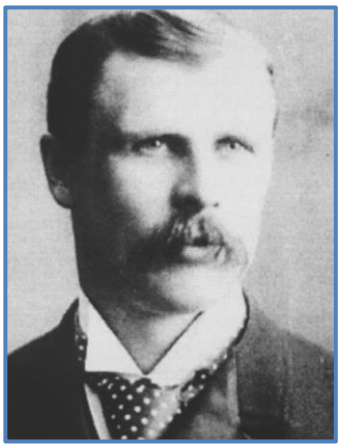

Plate 1.3–2: William Chaffey. ***(Photograph courtesy of the City of Ontario 2013)***

Between the 1950s and 1980s, the dairy industry flourished in other agricultural areas surrounding Ontario. Concerned with what many viewed as a decline in suitable agricultural land, the San Bernardino County Board of Supervisors designated 14,000 acres of agricultural land south and west of the city of Ontario as an "agricultural preserve" (City of Ontario 2006). With the dairy-friendly zoning in the southwest corner of San Bernardino County, many Dutch, Basque,

and Portuguese families relocated to the region and became the cornerstone of the dairy industry. By the 1980s, the area was recognized as having more cows per acre and higher milk yields than anywhere else in the world (City of Ontario 2006). Starting in the late twentieth century, much of the preserve began to be annexed by neighboring cities due to a housing boom and increased operating costs for dairies. In 1999, 8,200 acres were annexed by the City of Ontario with the remaining land annexed by either the City of Chino or Chino Hills. The portion annexed by the City of Ontario was labeled the "New Model Colony," creating a connection with the Chaffey brothers' original "Model Colony of Ontario" (Galvin and Associates 2004; City of Ontario 2006).

1.4 Results of the Archaeological Records Search

An archaeological records search was conducted by BFSA at the SCCIC (Appendix B). The records search identified 11 resources within one mile of the project, none of which are located within the subject property (Table 1.4–1). All of the recorded resources are historic and are primarily associated with the historic occupation and agricultural use of the project vicinity. These resources include four farm and single-family properties, two farms, one single-family property, one trash scatter, two transmission lines, and one site containing a trash scatter, water conveyance system, utility pole stumps, a cistern, and a possible well.

Table 1.4–1
Cultural Resources Located Within One Mile of the Project

Site Number(s)/Name	Resource Type
RIV-1848	Historic trash scatter
P-33-023815 and P-36-023626	Historic farm
RIV-12,624	Historic trash scatter, water conveyance system, utility pole stumps, cistern, and possible well
P-36-012622, P-36-012623, P-36-023625, and P-36-023627	Historic farm and single-family property
P-36-025440 and P-36-026051	Historic transmission line
11111 Edison Avenue	Historic single-family property

The records search also identified 38 previous studies which have been conducted within one mile of the proposed project, one of which overlaps the subject property (Dice 2002). The Dice (2002) study conducted an archaeological survey and records search that covered the western half of the subject property and did not identify any cultural resources within the subject property.

The following historic sources were also reviewed by BFSA:

- Historic USGS topographic maps (1942 to 1975)
- Historic aerial photographs (1938 to2025)
- The NRHP Index
- The Office of Historic Preservation (OHP), Archaeological Determinations of Eligibility (ADOE)
- The OHP, Built Environment Resources Directory (BERD)

Additionally, a review of historic maps and aerial photographs for the project illustrates that the subject property was developed for agricultural uses as early as 1938. Between 1938 and 2014, the subject property primarily consisted of cultivated fields. By 2018, the entire subject

property was graded during the development of the surrounding area which resulted in the creation of a water catchment basin in the northwest portion of the project. Subsequent aerial photographs demonstrate that as the surrounding neighborhood transitioned to residential development, the subject property remained vacant but at times was cleared of vegetation.

BFSA also requested a SLF search from the NAHC. This request is not part of any Assembly Bill 52 Native American consultation. The SLF search results were negative for recorded Native American sacred sites or locations of religious or ceremonial importance within the project vicinity. All correspondence with the NAHC is provided in Appendix C.

1.5 Applicable Regulations

Resource importance is assigned to districts, sites, buildings, structures, and objects that possess exceptional value or quality illustrating or interpreting the heritage of San Bernardino County in history, architecture, archaeology, engineering, and culture. A number of criteria are used in demonstrating resource importance. Specifically, the criteria outlined in CEQA provide the guidance for making such a determination. The following sections detail the criteria that a resource must meet in order to be determined important.

1.5.1 California Environmental Quality Act

According to CEQA (§ 15064.5a), the term "historical resource" includes the following:

1) A resource listed in or determined to be eligible by the State Historical Resources Commission for listing in the CRHR (Public Resources Code SS5024.1, Title 14 CCR [California Code of Regulations]. Section 4850 et seq.).
2) A resource included in a local register of historical resources, as defined in Section 5020.1(k) of the Public Resources Code, or identified as significant in a historical resource survey meeting the requirements of Section 5024.1(g) of the Public Resources Code, shall be presumed to be historically or culturally significant. Public agencies must treat any such resource as significant unless the preponderance of evidence demonstrates that it is not historically or culturally significant.
3) Any object, building, structure, site, area, place, record, or manuscript, which a lead agency determines to be historically significant or significant in the architectural, engineering, scientific, economic, agricultural, educational, social, political, military, or cultural annals of California may be considered a historical resource, provided the lead agency's determination is supported by substantial evidence in light of the whole record. Generally, a resource shall be considered by the lead agency to be "historically significant" if the resource meets the criteria for listing on the CRHR (Public Resources Code SS5024.1, Title 14, Section 4852) including the following:

    a) Is associated with events that have made a significant contribution to the broad patterns of California's history and cultural heritage;

b) Is associated with the lives of persons important in our past;
c) Embodies the distinctive characteristics of a type, period, region, or method of construction, or represents the work of an important creative individual, or possesses high artistic values; or
d) Has yielded, or may be likely to yield, information important in prehistory or history.

4) The fact that a resource is not listed in, or determined eligible for listing in the CRHR, not included in a local register of historical resources (pursuant to Section 5020.1[k] of the Public Resources Code), or identified in a historical resources survey (meeting the criteria in Section 5024.1(g) of the Public Resources Code) does not preclude a lead agency from determining that the resource may be a historical resource as defined in Public Resources Code Section 5020.1(j) or 5024.1.

According to CEQA (§ 15064.5b), a project with an effect that may cause a substantial adverse change in the significance of a historical resource is a project that may have a significant effect on the environment. CEQA defines a substantial adverse change as:

1) Substantial adverse change in the significance of a historical resource means physical demolition, destruction, relocation, or alteration of the resource or its immediate surroundings such that the significance of a historical resource would be materially impaired.
2) The significance of a historical resource is materially impaired when a project:

a) Demolishes or materially alters in an adverse manner those physical characteristics of a historical resource that convey its historical significance and that justify its inclusion in, or eligibility for inclusion in the CRHR; or
b) Demolishes or materially alters in an adverse manner those physical characteristics that account for its inclusion in a local register of historical resources pursuant to Section 5020.1(k) of the Public Resources Code or its identification in a historical resources survey meeting the requirements of Section 5024.1(g) of the Public Resources Code, unless the public agency reviewing the effects of the project establishes by a preponderance of evidence that the resource is not historically or culturally significant; or,
c) Demolishes or materially alters in an adverse manner those physical characteristics of a historical resource that convey its historical significance and that justify its eligibility for inclusion in the CRHR as determined by a lead agency for purposes of CEQA.

Section 15064.5(c) of CEQA applies to effects on archaeological sites and contains the following additional provisions regarding archaeological sites:

1) When a project will impact an archaeological site, a lead agency shall first determine whether the site is a historical resource, as defined in subsection (a).
2) If a lead agency determines that the archaeological site is a historical resource, it shall refer to the provisions of Section 21084.1 of the Public Resources Code, Section 15126.4 of the guidelines, and the limits contained in Section 21083.2 of the Public Resources Code do not apply.
3) If an archaeological site does not meet the criteria defined in subsection (a) but does meet the definition of a unique archaeological resource in Section 21083.2 of the Public Resources Code, the site shall be treated in accordance with the provisions of Section 21083.2. The time and cost limitations described in Public Resources Code Section 21083.2(c-f) do not apply to surveys and site evaluation activities intended to determine whether the project location contains unique archaeological resources.
4) If an archaeological resource is neither a unique archaeological nor historical resource, the effects of the project on those resources shall not be considered a significant effect on the environment. It shall be sufficient that both the resource and the effect on it are noted in the Initial Study or Environmental Impact Report, if one is prepared to address impacts on other resources, but they need not be considered further in the CEQA process.

Section 15064.5(d) and 15064.5(e) contain additional provisions regarding human remains. Regarding Native American human remains, paragraph (d) states:

(d) When an Initial Study identifies the existence of, or the probable likelihood of, Native American human remains within the project, a lead agency shall work with the appropriate Native Americans as identified by the NAHC as provided in Public Resources Code SS5097.98. The applicant may develop an agreement for treating or disposing of, with appropriate dignity, the human remains and any items associated with Native American burials with the appropriate Native Americans as identified by the NAHC. Action implementing such an agreement is exempt from:

    1) The general prohibition on disinterring, disturbing, or removing human remains from any location other than a dedicated cemetery (Health and Safety Code Section 7050.5).
    2) The requirements of CEQA and the Coastal Act.

2.0 RESEARCH DESIGN

The primary goal of the research design is to attempt to understand the way in which humans have used the land and resources within the project through time, as well as to aid in the determination of resource significance. For the current project, the study area under investigation is southwestern San Bernardino County. The scope of work for the cultural resources study conducted for the Eucalyptus and Amherst Avenues Project included the survey of a 10.02-acre property. Given the area involved, the research design for this project was focused upon realistic study options. Since the main objective of the investigation was to identify the presence of and potential impacts to cultural resources, the goal here is not necessarily to answer wide-reaching theories regarding the development of early southern California, but to investigate the role and importance of identified resources. The assessment of the significance of a resource must take into consideration a variety of factors, as well as the ability of a resource to address regional research topics and issues.

Although elementary resource evaluation programs are limited in terms of the amount of information available, several specific research questions were developed that could be used to guide the initial investigations of any observed cultural resources. The following research questions consider the small size and location of the project discussed above.

Research Questions:

- Can located cultural resources be associated with a specific time period, population, or individual?
- Do the types of any located cultural resources allow a site activity/function to be determined from a preliminary investigation? What are the site activities? What is the site function? What resources were exploited?
- How do located sites compare to others reported from different surveys conducted in the area?
- How do located sites fit existing models of settlement and subsistence for mountainous environments of the region?

Data Needs

At the survey level, the principal research objective is a generalized investigation of changing settlement patterns in both the prehistoric and historic periods within the study area. The overall goal is to understand settlement and resource procurement patterns of the project occupants. Therefore, adequate information on site function, context, and chronology from an archaeological perspective is essential for the investigation. The fieldwork and archival research were undertaken with the following primary research goals in mind:

1) To identify cultural resources occurring within the project;
2) To determine, if possible, site type and function, context of the resource(s), and chronological placement of each cultural resource identified;
3) To place each cultural resource identified within a regional perspective; and
4) To provide recommendations for the treatment of each cultural resources identified.

3.0 ANALYSIS OF PROJECT EFFECTS

The cultural resources study of the project consisted of an institutional records search, archival research, and an intensive cultural resources survey of the 10.02-acre property, along with the preparation of this technical report. This study was conducted in conformance with Section 21083.2 of the California Public Resources Code and CEQA. Regulatory requirements of CEQA (Section 15064.5) were followed for the identification and evaluation of resources. Specific definitions for archaeological resource type(s) used in this report are those established by the State Historic Preservation Office (SHPO 1995).

3.1 Survey Methods

The survey methodology employed during the current investigation followed standard archaeological field procedures and was sufficient to accomplish a thorough assessment of the project. The field methodology employed for the project included walking evenly spaced survey transects set approximately 15 meters apart when not obstructed by the current development within the property. Photographs documenting survey areas and overall survey conditions were taken frequently.

3.2 Results of the Field Survey

BFSA archaeologist Parker Sheriff conducted the archaeological survey of the project and off-site infrastructure improvement areas on February 27, 2025. Visibility of the natural ground surface was characterized as moderate to good (Plates 3.2–1 to 3.2–3). The vegetation within the property is dominated by non-native grasses and weeds. The survey confirmed that the entire property has been previsouly graded. Grading resulted in the devlopment of a water catchment basin within the northwest portion of the property and a pad within the southern half of the property (Plates 3.2–4 to 3.2–5). Additionally, within the southern corner of the project, a modern storm drain is present (Plate 3.2–6). No cultural resources were identified during the survey.

Plate 3.2–1: Overview of the project from the eastern corner, facing west.

Plate 3.2–2: Overview of the project from the southern corner, facing north.

Plate 3.2–3: Overview of the project from the northern corner, facing south.

Plate 3.2–4: Overview of the water catchment basin from the western corner of the project, facing east.

Plate 3.2–5: Western overview of the water catchment basin and graded pad, facing northeast.

Plate 3.2–6: Overview of the modern storm drain in the southern corner of the project, facing southeast.

4.0 RECOMMENDATIONS

The archaeological study for the Eucalyptus and Amherst Avenues Project was completed in accordance with City of Ontario environmental policies and CEQA regulatory requirements. No cultural resources were identified within the project during the survey. Further, no natural resources associated with archaeological sites such as natural water sources or bedrock outcroppings were present within the project. A review of historic aerial photographs demonstrate that the subject property was developed for agricultural uses as early as 1938. Further, in 2018, the entire subject property was graded resulting in the development of a water catchment basin and a graded pad.

Due to the prior ground disturbance and the absence of identified cultural resources within the project vicinity, the potential for any significant resources to be present or impacted by the proposed project is minimal. Given that no archaeological sites, features, or artifacts have been identified within or directly adjacent to the project, no potential impacts to cultural resources associated with the proposed development are anticipated. Based upon the results of this study, no further archaeological study or mitigation measures are recommended. A copy of this report will be submitted to the SCCIC at CSU Fullerton.

5.0 LIST OF PREPARERS AND ORGANIZATIONS CONTACTED

The archaeological survey program for the Eucalyptus and Amherst Avenues Project was directed by Principal Investigator Tracy A. Stropes, M.A., RPA. The archaeological fieldwork was conducted by BFSA archaeologists Parker Sheriff. The report text was prepared by Kathleen Krogh and Tracy A. Stropes. Graphics were created by Kathleen Krogh. Technical editing and report production was conducted by Payton Swanson. The archaeological records search was conducted by Emily Soong at the SCCIC at CSU Fullerton.

6.0 CERTIFICATION

I hereby certify that the statements furnished above and in the attached exhibits present the data and information required for this archaeological report, and that the facts, statements, and information presented are true and correct to the best of my knowledge and belief.

Association of Oregon Archaeologists

Experience

Vice President of Cultural Resources/Principal Archaeologist **March 2009–Present**
BFSA Environmental Services, a Perennial Company
Poway, California

Tracy A. Stropes has over 33 years of experience in cultural resource management, with experience in project management, report authorship, lithic analysis, laboratory management, Native American consultation, and technical report editing for numerous projects throughout the western United States. Mr. Stropes has conducted cultural resource surveys, archaeological site testing and evaluations for National Register eligibility and CEQA compliance, mitigation of resources through data recovery for archaeological sites, budget and report preparation, and direction of crews of all sizes for projects ranging in duration from a single-day site visit to multiple years. Mr. Stropes is a Registered Professional Archaeologist (RPA) and is on the list of archaeological consultants qualified to conduct archaeological investigations in the city and county of San Diego, county of Riverside, State of Oregon, State of Arizona, and on Arizona and California BLM lands. He has served as project archaeologist for hundreds of projects and composed data recovery and preservation programs for sites throughout the western United States for both CEQA- and NEPA-level compliance.

Archaeological Principal Investigator **June 2008–February 2009**
TRC Solutions **Irvine, California**

Cultural resource segment of Natural Sciences and Permitting Division; management of archaeological investigations for private companies and local, state, and federal agencies, personnel management, field and laboratory supervision, lithic analysis, Native American consultation and reporting, NRHP and CEQA site evaluations, and authoring/coauthoring cultural resource management reports.

Principal Investigator and Project Archaeologist **June 2006–May 2008**
Archaeological Resource Analysts **Oceanside, California**

As a sub consultant, served as Principal Investigator and Project Archaeologist for several projects for SRS Inc., including field direction, project and personnel management, lab analysis, and authorship of company reports.

Project Archaeologist **September 1996–June 2006**
Gallegos & Associates **Carlsbad, California**

Project management, laboratory management, lithic analysis, field direction, Native American consultation, report authorship/technical editing, and composition of several data recovery/preservation programs for both CEQA and NEPA level compliance.

Project Archaeologist **September 1993–September 1996**
Macko Inc. **Santa Ana, California**

Project management, laboratory management, lithic analysis, field supervision, and report authorship/technical editing.

Archaeological Field Technician **January 1993–September 1993**
Chambers Group Inc. **Irvine, California**

Archaeological excavation, surveying, monitoring, wet screen facilities management, and project logistics.

Archaeological Field Technician **May 1992–September 1992**
John Minch and Associates **San Juan Capistrano, California**

Archaeological excavation, surveying, monitoring, wet screen facilities management, and project logistics.

Subject: ***Geotechnical Evaluation of Mass Graded Site and Grading Plan Review of Proposed 10-Acre "Esperanza Townhomes" Residential Development, Buildings 1 through 28, Tentative Tract No. 20730, located North of Eucalyptus & Amherst Avenues, City of Ontario, County of San Bernardino, California***

In accordance with your request, LGC Geotechnical, Inc. has performed a geotechnical site evaluation of the mass graded site and grading plan review for the proposed "Esperanza Townhomes" multi-family residential development, Buildings 1 through 28, 161 unit, Tentative Tract No. 20730, located north of the intersection of Eucalyptus and Amherst Avenues in the City of Ontario, County of San Bernardino, California. This report summarizes the current geotechnical conditions and presents our findings, conclusions, and preliminary recommendations with regards to the proposed development.

If you should have any questions regarding this report, please do not hesitate to contact our office. We appreciate this opportunity to be of service.

Respectfully Submitted,

LGC Geotechnical, Inc.

1.0 INTRODUCTION

1.1 Purpose and Scope of Services

This report presents the results of our geotechnical evaluation for the proposed multi-family residential site, Buildings 1 through 28 and associated improvements of Tract 18380, located in the City of Ontario, California. The approximately 10-acre site is bound by residential development and existing streets including Eucalyptus and Amherst Avenues to the south and Chatham and Clifton to the north. Refer to the Site Location Map (Figure 1).

The purpose of our study was to provide a preliminary geotechnical evaluation of the mass graded pad conditions relative to the proposed residential development. As part of our scope of work, we have: 1) reviewed available geotechnical background information including in-house regional geologic maps and published geotechnical literature pertinent to the site (Appendix A); 2) performed excavation, testing, and sampling of regular-spaced test pits with backhoe across the site for evaluation of mass graded conditions; 3) nuclear gauge testing of in-situ graded fill placed under observation and testing by others; 4) laboratory testing of samples for design parameters and organic content testing of the compacted fill soils; and 5) prepared this geotechnical summary report presenting our findings and preliminary conclusions and recommendations for the proposed development.

1.2 Background

The subject site was originally part of the larger overall proposed "Esperanza West" residential development that covered areas north and south of a previous alignment of Eucalyptus Avenue. The northern portion of the area, encompassing the subject site, was reportedly used for agriculture since 1938, specifically "row crops", while the offsite southern portion was utilized as a dairy farm. Previous uses of the overall area were reviewed as part of the referenced methane site assessment by LGC Geo-Environmental (2014). The methane site assessment concluded that the subject parcel was not impacted by previous dairy farm uses and is not within the limits of a Methane Gas Potential Area.

As the surrounding areas have been developed over time, it is our understanding that the southern portion of the subject site was utilized as a borrow area for the surrounding developments. The site was eventually entitled for development with the referenced Updated Geotechnical Report and Manure Evaluation by LGC Geo-Environmental (2017) for the larger "Esperanza West" and "Esperanza East" proposed development. The report further confirmed that the subject parcel was not a part of previous dairy uses in the region. Recommendations were provided for earthwork of the site, aka Lot 1 (School Site) of Tract 18380, to a mass grade design with drainage to the southmost corner.

Mass grading of the site commenced during approximately 2020 as documented in the referenced Reliance Letter by LGC Geo-Environmental (2020). The mass grading operations reportedly included remedial grading to elevations between 695 feet and 698 feet and placement of compacted fill to existing grades, with exception of the northwest quadrant left low for intermittent soils import. Excess soils from specifically identified nearby development sites were reportedly end-dumped in the area left low, and presumably properly compacted over time. No as-graded report was available for review, therefore LGC Geotechnical's site

evaluation presented herein was focused on quality of the removals, quality of the fill to the existing grades, and verification of organics percentage within the compacted fill.

1.3 Project Description

The site is currently vacant, with a generally tightly compacted surface throughout, with light grasses. Drainage across the mass graded pad area flows from the northeast at elevation 708 to a low of approximately 700 at the southwest, to an existing storm drain inlet on-site. Based on the Preliminary Grading Plan by Walden & Associates dated January 24, 2025, the proposed development will consist of 161 units within 28 multi-family buildings, associated streets, recreation center, pool, and park.

Design grades for the proposed development are relatively close to existing mass graded elevations and will be achieved with minor cut-fill grading and import of soils for low areas.

PROJECT NAME	Genstar, Ontario
PROJECT NO.	25040-01

Site Location Map

1.4 Subsurface Geotechnical Evaluation

A subsurface evaluation was performed by LGC Geo-Environmental for a larger overall area prior to mass grading of the subject site (2017). Their investigation included excavation of test pits and a boring on-site and two closely adjacent. The boring logs are provided in Appendix B, approximate locations provided on the Geotechnical Map (Sheet 1).

The recent site evaluation by LGC Geotechnical consisted of excavation of a total of 16 test pits in an approximate grid formation throughout the site by a project geologist, using a Caterpillar backhoe with a three-feet wide bucket to expose the compacted fill and the contact with native soils. Existing fill soils were visually evaluated and probed, and a soil technician took intermittent field density tests with a nuclear gauge to gain an opinion about fill compaction. Numerous samples were collected at vertical intervals within test pits in order to perform laboratory testing for moisture content and organic content. Results of field density testing are presented in Appendix C along with laboratory test results, and moisture and organic content testing results are presented on the test pit logs, Appendix B. Recommendations for remedial measures during future rough grading to project design grades were determined based on a combination of observations during test pit evaluation and results of field and laboratory testing.

Test pits were backfilled and compacted back to existing grades at completion of the field evaluation.

1.5 Laboratory Testing

Laboratory testing on samples collected during the recent subsurface investigation was performed including organic percentage, expansion index, maximum density and optimum moisture, and corrosion testing.

The following is a summary of the laboratory test results:

- Forty-eight organic content tests were performed in an approximate grid pattern within compacted fill soils. Results are presented on test pit logs, Appendix B. The average organic testing percentage for the total of 48 tests performed was approximately 2 percent.
- Three expansion potential tests were performed on finished grade soils and indicated an expansion index value ranged approximately 2 to 5, corresponding to “Very Low” expansion potential.
- Maximum density tests on three bulk samples indicated maximum densities of previously placed compacted fill soils ranges from 125.5 to 129.5 pcf, with optimum moistures from 8.5 to 11.5 percent.
- Corrosion testing of finished grade soils indicated soluble sulfate content less than approximately 0.01 percent by weight or less and a chloride content of 0.006 percent by weight or less.

A summary of the laboratory test results is presented in Appendix C.

2.0 GEOTECHNICAL CONDITIONS

2.1 Geologic Conditions

The subject site is located south of the San Gabriel Mountains within the broad alluvial plain of the Santa Ana River Basin, within the Peninsular Ranges Geomorphic Province. Specifically, the site is located within the northern portion of the Perris Block, a geologic zone consisting of granitics overlain by sedimentary deposits that are bounded by active faults including the northwest-trending Whittier-Elsinore Fault Zone at the southwest and the northwest-trending San Jacinto Fault Zone at the northeast (Morton, 2002). The roughly rectangular Perris Block is transected by the southwest-trending Santa Ana River that passes several miles south of the subject site.

2.2 Site-Specific Geology & Generalized Subsurface Conditions

The site generally consists of engineered fill placed over alluvial deposits. Mass grading of the site was performed under observation and testing by LGC Geo-Environmental (2020). Based on previous reports and regional mapping (Morton, 2002), the subject site is underlain by Holocene- to Pleistocene-age eolian (wind-blown) sedimentary deposits over young alluvium. The material is described on-site as sand and silty sand, with some sandy silt, generally fine to medium grained, yellowish brown, gray, and olive, dry to damp, medium dense to dense. The materials below the eolian deposits are young alluvial fan deposits, described on-site as sand, silty sand and sandy silt, generally fine-grained, yellowish to orangish brown, gray, olive, dry to very moist, medium dense to very dense and stiff to very stiff.

During rough grading, the upper, potentially compressible soils were recommended to be removed to competent alluvium (LGC Geo-Environmental, 2017), as was generally confirmed/observed in our test pits. As indicated on our field exploration logs, compacted fill soils generally consist of silty sand with localized areas of clayey to gravelly sand, medium dense to very dense, slightly moist. The thickness of existing engineered fill was encountered at depths of approximately 3.5 feet to greater than 10 feet within the mass graded pad.

2.3 Groundwater

Groundwater was not encountered during the site investigation to 51 feet below ground (LGC Geo-Environmental, 2017). Groundwater was reportedly estimated to be at a depth of 120 to 130 feet below ground based on available water well data compiled by LGC Geo-Environmental, 2017.

Seasonal fluctuations of groundwater elevations should be expected over time. In general, groundwater levels fluctuate with the seasons and local zones of perched groundwater may be present due to local seepage caused by irrigation and/or recent precipitation. Local perched groundwater conditions or surface seepage may develop once site development is completed.

2.3 Seismic Design Criteria

The site seismic characteristics were evaluated per the guidelines set forth in Chapter 16, Section 1613 of the 2022 California Building Code (CBC) and applicable portions of ASCE 7-16 which has been adopted by the CBC. **Please note that the following seismic parameters are only applicable for code-based acceleration response spectra and are not applicable for where site-specific ground motion procedures are required by ASCE 7-16.** Representative site coordinates of latitude 33.9908 degrees north and longitude -117.5629 degrees west were utilized in our analyses. The maximum considered earthquake (MCE) spectral response accelerations (S_{MS} and S_{M1}) and adjusted design spectral response acceleration parameters (S_{DS} and S_{D1}) for Site Class D are provided in Table 1 on the following page. Since site soils are Site Class D, additional adjustments are required to code acceleration response spectrums as outlined below and provided in ASCE 7-16. The structural designer should contact the geotechnical consultant if structural conditions (e.g., number of stories, seismically isolated structures, etc.) require site-specific ground motions.

A deaggregation of the PGA based on a 2,475-year average return period (MCE) indicates that an earthquake magnitude of 6.68 at a distance of 13.60 km from the site would contribute the most to this ground motion. A deaggregation of the PGA based on a 475-year average return period (Design Earthquake) indicates that an earthquake magnitude of 6.70 at a distance of 17.23 km from the site would contribute the most to this ground motion (USGS, 2014).

Section 1803.5.12 of the 2022 CBC (per Section 11.8.3 of ASCE 7) states that the maximum considered earthquake geometric mean (MCE_G) Peak Ground Acceleration (PGA) should be used for liquefaction potential. The PGA_M for the site is equal to 0.735g (SEAOC, 2025). The design PGA is equal to 0.490g (2/3 of PGA_M).

TABLE 1

Seismic Design Parameters

Selected Parameters from 2022 CBC, Section 1613 - Earthquake Loads	Seismic Design Values	Notes/Exceptions
Distance to applicable faults classifies the site as a "Near-Fault" site.		Section 11.4.1 of ASCE 7
Site Class	D*	Chapter 20 of ASCE 7
Ss (Risk-Targeted Spectral Acceleration for Short Periods)	1.614g	From SEAOC, 2025
S_1 (Risk-Targeted Spectral Accelerations for 1-Second Periods)	0.582g	From SEAOC, 2025
F_a (per Table 1613.2.3(1))	1.000	For Simplified Design Procedure of Section 12.14 of ASCE 7, F_a shall be taken as 1.4 (Section 12.14.8.1)
F_v (per Table 1613.2.3(2))	1.718	Value is only applicable per requirements/exceptions per Section 11.4.8 of ASCE 7
S_{MS} for Site Class D [Note: $S_{MS} = F_aS_S$]	1.614g	-
S_{M1} for Site Class D [Note: $S_{M1} = F_vS_1$]	0.999g	Value is only applicable per requirements/exceptions per Section 11.4.8 of ASCE 7
S_{DS} for Site Class D [Note: $S_{DS} = (^2/_3)S_{MS}$]	1.076g	-
S_{D1} for Site Class D [Note: $S_{D1} = (^2/_3)S_{M1}$]	0.666g	Value is only applicable per requirements/exceptions per Section 11.4.8 of ASCE 7
C_{RS} (Mapped Risk Coefficient at 0.2 sec)	0.941	ASCE 7 Chapter 22
C_{R1} (Mapped Risk Coefficient at 1 sec)	0.918	ASCE 7 Chapter 22
*Since site soils are Site Class D and S_1 is greater than or equal to 0.2, the seismic response coefficient Cs is determined by Eq. 12.8-2 for values of $T \leq 1.5T_s$ and taken equal to 1.5 times the value calculated in accordance with either Eq. 12.8-3 for $T_L \geq T > T_s$, or Eq. 12.8-4 for $T > T_L$. Refer to ASCE 7-16.		

2.4 Faulting

Prompted by damaging earthquakes in Northern and Southern California, State legislation and policies concerning the classification and land-use criteria associated with faults have been developed. Their purpose was to prevent the construction of urban developments across the trace of active faults, resulting in the Alquist-Priolo Earthquake Fault Zoning Act. Earthquake Fault Zones have been delineated along the traces of active faults within California. Where developments for human occupation are proposed within these zones, the state requires detailed fault evaluations be performed so that engineering geologists can mitigate the hazards

associated with active faulting by identifying the location of active faults and allowing for a setback from the zone of previous ground rupture.

The subject site is not located within a State of California Earthquake Fault Zone (Alquist-Priolo) and no faults are identified on the site (CGS, 2025). The possibility of damage due to ground rupture is considered low since no active faults are known to cross the site. The closest known active faults that may impact the site include the Whittier-Elsinore, Cucamonga, San Jacinto, and San Andreas Fault Zones, among others.

Secondary effects of seismic shaking resulting from large earthquakes on the major faults in the Southern California region, which may affect the site, include ground lurching and shallow ground rupture, soil liquefaction, and dynamic settlement. These secondary effects of seismic shaking are a possibility throughout the Southern California region and are dependent on the distance between the site and causative fault and the onsite geology. A discussion of these secondary effects is provided in the following sections.

2.4.1 Liquefaction and Dynamic Settlement

Liquefaction is a seismic phenomenon in which loose, saturated, granular soils behave similarly to a fluid when subject to high-intensity ground shaking. Liquefaction occurs when three general conditions coexist: 1) shallow groundwater; 2) low density non-cohesive (granular) soils; and 3) high-intensity ground motion. Studies indicate that saturated, loose near surface cohesionless soils exhibit the highest liquefaction potential, while dry, dense, cohesionless soils and cohesive soils exhibit low to negligible liquefaction potential. In general, cohesive soils are not considered susceptible to liquefaction, depending on their plasticity and moisture content. Effects of liquefaction on level ground include settlement, sand boils, and bearing capacity failures below structures. Dynamic settlement of dry loose sands can occur as the sand particles tend to settle and densify as a result of a seismic event.

Based on the previous field evaluation data performed by others (references), the site soils are generally not susceptible to liquefaction due to a lack of groundwater and the relatively dense native soils in the upper 50 feet; therefore, liquefaction potential is considered very low.

2.4.2 Lateral Spreading

Lateral spreading is a type of liquefaction-induced ground failure associated with the lateral displacement of surficial blocks of sediment resulting from liquefaction in a subsurface layer. Once liquefaction transforms the subsurface layer into a fluid mass, gravity plus the earthquake inertial forces may cause the mass to move downslope towards a free face (such as a river channel or an embankment). Lateral spreading may cause large horizontal displacements and such movement typically damages pipelines, utilities, bridges, and structures.

Due to the lack of groundwater in the upper 50 feet, very low potential for liquefaction, and lack of a nearby "free face" condition, the potential for lateral spreading is considered very low.

2.5 Oversized Material

Oversized materials (material larger than 8 inches in maximum dimension) are not expected to be encountered during the minor site grading. If encountered, recommendations are provided for appropriate handling of oversized materials in Appendix D. If feasible, exporting oversized materials may be considered. Incorporating oversized materials into "rock fills" (windrows, rock blankets or individual rock burial) is not feasible due to the limited depth of rough grading.

2.6 Expansion Potential

Based on the results of previous laboratory testing (LGC Geo-Environmental, 2017), our experience in the area, and results of recent expansion index testing presented herein, site soils are anticipated to have a "Very Low" expansion potential. Final expansion potential of site soils should be confirmed at the completion of grading. Results of expansion testing at finish grades should be utilized to confirm final foundation design.

2.7 Organic Rich Soils

Based on our review of the geotechnical design report (LGC Geo-Environmental, 2017), the consultant who graded the site recommended that the high and low organic "soils" be blended and mixed to achieve 2 percent organics or less in the compacted fill. To verify the results of the mass grading operation, we collected a total of 48 soil samples throughout the existing on-site fill to determine their organic content (based on ASTM 2974). Organic percentage is indicated on test pit logs at the depths of collection, presented in Appendix B. The organic content of the majority of samples ranged from approximately 1.2 percent to 2.7 percent, indicating relatively low organics, with locally higher organic contents of 8.8 percent within TP-13 and 4.8 percent within TP-11. Remedial grading is recommended for field evaluation of the two locally high percentage of organic content (Refer to Geotechnical Map), and the upper two inches of existing grasses and rootlets that have accumulated over time are recommended to be cleared and removed from the site prior to future rough grading operations in order to avoid blending additional organics into future fill. Refer to Section 4.1.1 for recommendations.

3.0 CONCLUSIONS

Based on the results of our geotechnical evaluation, it is our opinion that the proposed development is feasible from a geotechnical standpoint, provided the following conclusions and recommendations are implemented.

The following is a summary of the primary geotechnical factors that may affect future development of the site:

- On site soils consist of engineered fill placed over alluvial deposits under observation and testing by LGC Geo-Environmental, as nominally reported in the referenced letter (2020). Compacted fill materials observed by LGC Geotechnical generally consist of silty sand with localized areas of clayey to gravelly sand, medium dense to very dense, slightly moist.
- Based on the previously mass-graded condition of the site, recommended remedial measures are limited to removal and recompaction of weathered, near-surface, previously placed engineered fill, and few localized areas of removal as deep as 6 feet. Locally deeper removals were determined based on field observations, field density testing, and laboratory test results.
- The subject site is not located within a State of California Earthquake Fault Zone (aka "AP Zone"); and no "Holocene-active" faults have been identified to cross the site. The main seismic hazard that may affect the site is ground shaking from one of the active regional faults. The subject site will likely experience strong seismic ground shaking during its design life.
- From a geotechnical perspective, onsite soils are anticipated to be suitable for use as general compacted fill provided, they are screened of organic materials, construction debris and oversized material (8 inches in greatest dimension).
- Groundwater was not encountered during previous subsurface evaluations and was estimated to be a depth of more than 120 feet below existing grade.
- Based on the previous field evaluation data performed by others (references), the site soils are generally not susceptible to liquefaction due to a lack of groundwater and the relatively dense native soils in the upper 50 feet; therefore, liquefaction potential is considered very low.
- Based on the results of preliminary laboratory testing, site soils are anticipated to have "Very Low" expansion potential. Final design expansion potential must be confirmed at the completion of rough/precise grading.

4.0 PRELIMINARY RECOMMENDATIONS

The following recommendations are to be considered preliminary and should be confirmed upon completion of grading and earthwork operations. In addition, they should be considered minimal from a geotechnical viewpoint, as there may be more restrictive requirements from the architect, structural engineer, building codes, governing agencies, or the owner.

It should be noted that the following geotechnical recommendations are intended to provide sufficient information to develop the site in general accordance with the 2022 CBC requirements. With regard to the potential occurrence of potentially catastrophic geotechnical hazards such as fault rupture, earthquake-induced landslides, liquefaction, etc. the following geotechnical recommendations should provide adequate protection for the proposed development to the extent required to reduce seismic risk to an "acceptable level." The "acceptable level" of risk is defined by the California Code of Regulations as "that level that provides reasonable protection of the public safety, though it does not necessarily ensure continued structural integrity and functionality of the project" [Section 3721(a)]. Therefore, repair and remedial work of the proposed improvements may be required after a significant seismic event. With regards to the potential for less significant geologic hazards to the proposed development, the recommendations contained herein are intended as a reasonable protection against the potential damaging effects of geotechnical phenomena such as expansive soils, fill settlement, groundwater seepage, etc. It should be understood, however, that although our recommendations are intended to maintain the structural integrity of the proposed development and structures given the site geotechnical conditions, they cannot preclude the potential for some cosmetic distress or nuisance issues to develop as a result of the site geotechnical conditions.

The geotechnical recommendations contained herein must be confirmed to be suitable or modified based on the actual as-graded conditions.

4.1 Site Earthwork

We anticipate that earthwork at the subject site will consist of minor grading, import of soils, utility installation, street improvements, and foundation construction. We recommend that earthwork onsite be performed in accordance with the following recommendations, the City of Ontario grading requirements, and the 2022 CBC. In case of conflict, the following recommendations shall supersede previous recommendations.

4.1.1 Site Preparation, Remedial Grading, and Fill Processing

Because the subject site was already mass graded as nominally reported in LGC Geo-Environmental, 2020, and generally verified with our recent site investigation, it is our opinion that the majority of fill placed to the current mass grade design remains acceptable for the intended uses with exception of specific localized areas of recommended removals as follows.

The site has undergone near-surface weathering and limited vegetation growth over the last five years of vacancy. In general, we recommend that the upper, organic-rich couple of inches (vegetation and dense rootlets) should be fully cleared and removed/exported

from the site. Additionally, soils with organic contents higher than 3 percent are recommended to be temporarily removed, mixed and blended with "clean" soils, and placed as compacted fill with an organic content of approximately 2 percent or less. Several areas have been identified as high concentrations of organics including the soils in the vicinity of test pits TP-11 and TP-13, refer to our Test Pit Logs (Appendix B) and our Geotechnical Map (Sheet 1) for recommendations. Import should consist of "clean" soils with organic contents 2 percent or less. We recommend the geotechnical consultant be present during grading to observe the mixing of the onsite soils and perform periodic testing of the compacted fill. Organic materials shall be thoroughly mixed such that no nesting of organic materials occurs.

Based on near-surface weathering, a minimum of 1 foot of the existing grades on-site will require temporary removal and re-compaction to achieve design grades. Areas of recommended removal depths greater 1 feet were identified from our field observations within test pits, results of field density testing, and results of organic content and moisture content testing. Therefore, temporary removal and recompaction is recommended to range from approximately 1 to 6 feet below existing grades, refer to Geotechnical Map (Sheet 1) for recommended depths. Alternatively, if the design cut is determined to exceed the removal of unsuitable weathered near-surface older fill materials, the cut may be left at grade. The temporary removal and recompaction depths will need to be confirmed by the geotechnical consultant during rough/precise grading based on the observed field conditions.

Removal bottoms and/or reprocessing of acceptable near-surface soils should be observed and accepted by the geotechnical consultant prior to fill placement or construction. Areas prepared to receive structural fill and/or other surface improvements should be scarified to a minimum of 6 to 8 inches, brought to at least optimum-moisture content, and recompacted to at least 90 percent relative compaction (based on ASTM Test Method D1557). Deeper reprocessing of the previously placed compacted fill may be required based on the conditions observed during post-grading.

4.1.2 Material for Fill

From a geotechnical perspective, the onsite soils are generally suitable for use as compacted fill, provided they are screened of organic materials, construction debris and oversized materials (material greater than 8 inches in maximum dimension).

From a geotechnical viewpoint, any required import soils should consist of clean, free draining, relatively granular soils of very low expansion potential (expansion index 20 or less based on ASTM D4829) and no particles larger than 3 inches in greatest dimension. Source samples of planned importation should be provided to the geotechnical consultant for laboratory testing a minimum of 4 working days prior to any planned importation for required laboratory testing.

Retaining wall backfill should consist of imported sandy soils with a maximum of 35 percent fines (passing the No. 200 sieve) per ASTM Test Method D1140 (or ASTM D6913/D422) and a "Very Low" expansion potential (EI of 20 or less per ASTM D4829). Soils should also be screened of organic materials, construction debris, and any material

greater than 3 inches in maximum dimension. Portions of the onsite soil may not be suitable for retaining wall backfill due to their fines content (i.e., silt and clay content). Therefore, either select grading and stockpiling and/or import of suitable sandy soils meeting the criteria outlined above will be required.

Aggregate base should conform to the requirements of Section 200-2 of the Standard Specifications for Public Works Construction ("Greenbook") for untreated base materials, Caltrans Class 2 aggregate base and/or the City of Ontario/County of San Bernardino requirements.

4.1.3 Placement and Compaction of Fills

Material to be placed as fill should be brought to near-optimum moisture content (generally within optimum and 2 percent above optimum moisture content) and recompacted to at least 90 percent relative compaction (per ASTM D1557). Moisture conditioning of site soils will be required in order to achieve adequate compaction. Soils are present that will require additional moisture in order to achieve the required compaction. Drying and/or mixing the very moist soils may also be required prior to reusing the materials in compacted fills.

The optimum lift thickness to produce a uniformly compacted fill will depend on the type and size of compaction equipment used. In general, fill should be placed in uniform lifts not exceeding 8 inches in compacted thickness. Each lift should be thoroughly compacted and accepted prior to subsequent lifts. Generally, placement and compaction of fill should be performed in accordance with local grading ordinances and with observation and testing performed by the geotechnical consultant. Oversized material as previously defined should be removed from site fills.

Fill placed on any slopes greater than 5:1 (horizontal to vertical) should be properly keyed and benched into firm and competent soils as it is placed in lifts. During backfill of temporary excavations, fill should be properly benched into firm and competent soils as it is placed in lifts and compacted.

Aggregate base material should be compacted to a minimum of 95 percent relative compaction at or slightly above optimum moisture content per ASTM D1557. Subgrade below aggregate base should be compacted to a minimum of 90 percent relative compaction (or per the city requirements, whichever is higher) at or slightly above optimum moisture content per ASTM D1557.

If gap-graded ¾-inch rock is used for backfill (around storm drain storage chambers, retaining wall backfill, etc.) it will require compaction. Rock shall be placed in thin lifts (typically not exceeding 6 inches) and mechanically compacted with observation by geotechnical consultant. Backfill rock shall meet the requirements of ASTM D2321. Gap-graded rock is required to be entirely wrapped in filter fabric (Mirafi 140N or approved alternative) or at the very minimum to be vertically separated from the trench backfill with filter fabric to prevent the migration of fines into the rock backfill.

4.1.4 Trench and Conventional Retaining Wall Backfill and Compaction

The onsite materials may generally be suitable as trench backfill provided the soils are screened of organic matter, rocks greater than 6 inches in diameter and construction debris. Trench backfill should be compacted in uniform lifts (generally not exceeding 12 inches in compacted thickness) by mechanical means to at least 90 percent relative compaction (per ASTM Test Method D1557). A representative from LGC Geotechnical should observe and test the backfill to verify compliance with the project recommendations.

If trenches are shallow or the use of conventional equipment may result in damage to the utilities, sand having a sand equivalent (SE) of 20 or greater (per California Test Method [CTM] 217) may be used to bed and shade the pipes. Sand backfill within the pipe bedding zone may be densified by jetting or flooding and then tamped to ensure adequate compaction. Sand grains should be from a natural source with rounded shape. Manufactured sand from crushed rock or recycled material is not suitable for jetting/flooding as the grains are typically angular in shape and do not densify well enough with these methods. Manufactured sand can be used as shading material when mechanical compaction efforts are used. Subsequent trench backfill should be compacted in uniform thin lifts by mechanical means to at least a minimum 90 percent relative compaction (per ASTM D1557). If any ¾-inch rock is used for backfill, see Section 4.1.3 for filter fabric requirements.

Retaining wall backfill should consist of sandy soils as outlined in preceding Section 4.1.2. The limits of select sandy backfill should extend at minimum ½ the height of the retaining wall or the width of the heel (if applicable), whichever is greater (Figure 2). Retaining wall backfill soils should be compacted in relatively uniform thin lifts to at least 90 percent relative compaction (per ASTM D1557). Jetting or flooding of retaining wall backfill materials should not be permitted.

In backfill areas where mechanical compaction of soil backfill is impractical due to space constraints, typically sand-cement slurry may be substituted for compacted backfill. The slurry should contain about one sack of cement per cubic yard. When set, such a mix typically has the consistency of compacted soil. Sand cement slurry placed near the surface within landscape areas should be evaluated for potential impacts on planned improvements.

A representative from LGC Geotechnical should observe, probe, and test the backfill to verify compliance with the project recommendations.

4.1.5 Temporary Excavations

Temporary excavations should be performed in accordance with project plans, specifications, and all Occupational Safety and Health Administration (OSHA) requirements. Excavations should be laid back or shored in accordance with OSHA requirements before personnel or equipment are allowed to enter. Based on the reference geotechnical reports, site soils are anticipated to be OSHA Type "B" soils. Sandy soils are present and should be considered susceptible to caving. Soil conditions should

be regularly evaluated during construction to verify conditions are as anticipated. The contractor shall be responsible for providing the "competent person," required by OSHA standards, to evaluate soil conditions. Close coordination with the geotechnical consultant should be maintained to facilitate construction while providing safe excavations. Excavation safety is the sole responsibility of the contractor.

Vehicular traffic, stockpiles, and equipment storage should be set back from the perimeter of excavations a distance equivalent to a 1:1 projection from the bottom of the excavation. Once an excavation has been initiated, it should be backfilled as soon as practical. Prolonged exposure of temporary excavations may result in some localized instability. Excavations should be planned so that they are not initiated without sufficient time to shore/fill them prior to weekends, holidays, or forecasted rain.

It should be noted that any excavation that extends below a 1:1 (horizontal to vertical) projection of an existing foundation will remove existing support of the structure foundation. If requested, temporary shoring and/or ABC slot cut parameters will be provided.

4.2 Preliminary Foundation Recommendations

Provided that the remedial grading recommendations provided herein are implemented, the site may be considered suitable for the support of the residential structures using a conventional or post-tensioned foundation system. Laboratory testing indicates that the site soils have a "Very Low" expansion potential (EI of 20 or less per ASTM D4829), however, the foundation designer should take into consideration the total and differential settlement in his/her design. Please note that the following foundation recommendations are preliminary and must be confirmed by LGC Geotechnical at the completion of grading.

Preliminary foundation recommendations are provided in the following sections. Recommended soil bearing and estimated settlement due to structural loads are provided in Section 4.4.

4.2.1 Provisional Conventional Foundation Design Parameters

Due to the very low expansion potential of the onsite soils, the foundation/structural engineer may design a conventional foundation system that is tied together based upon the anticipated dead and live loads (wind, seismic) that will be imparted by the structure. The recommendations provided in the "Soil Bearing and Lateral Resistance" section may be utilized in the design of a rigid slab-on-grade conventional foundation designed in accordance with Section 1808 of the 2022 C.B.C.

4.2.2 Provisional Post-Tensioned Foundation Design Parameters

The geotechnical parameters provided herein may be used for post-tensioned slab foundations. These parameters have been determined in general accordance with the Post-Tensioning Institute (PTI, 2012) Standard Requirements (PTI DC 10.5), referenced in Chapter 18 of the 2022 CBC. In utilizing these parameters, the foundation engineer

should design the foundation system in accordance with the allowable deflection criteria of applicable codes and the requirements of the structural designer/architect. Other types of stiff slabs may be used in place of the CBC post-tensioned slab design provided that, in the opinion of the foundation structural designer, the alternative type of slab is at least as stiff and strong as that designed by the CBC/PTI method to resist expansive soils.

Our design parameters are based on our experience with similar residential projects and the anticipated nature of the soil (with respect to expansion potential). Please note that implementation of our recommendations will not eliminate foundation movement (and related distress) should the moisture content of the subgrade soils fluctuate. It is the intent of these recommendations to help maintain the integrity of the proposed structures and reduce (not eliminate) movement, based upon the anticipated site soil conditions. Should future owners not properly maintain the areas surrounding the foundation, for example by overwatering, then we anticipate for expansive soils the maximum differential movement of the perimeter of the foundation to the center of the foundation to be on the order of a couple of inches. Soils of lower expansion potential are anticipated to show less movement.

TABLE 2

Provisional Geotechnical Parameters for Post-Tensioned Foundation Slab Design

Parameter	PT Slab with Perimeter Footing	PT Mat with Thickened Edge
Expansion Index	Very Low[1]	Very Low[1]
Thornthwaite Moisture Index	-20	-20
Constant Soil Suction	PF 3.9	PF 3.9
Center Lift Edge moisture variation distance, e_m Center lift, y_m	 9.0 feet < 0.25 inch	 9.0 feet 0.25 inch
Edge Lift Edge moisture variation distance, e_m Edge lift, y_m	 6.1 feet 0.25 inch	 6.1 feet 0.25 inch
Modulus of Subgrade Reaction, k (assuming presoaking as indicated below)	200 pci	200 pci
Minimum perimeter footing/thickened edge embedment below finish grade	12 inches	6 inches
Perimeter foundation reinforcement	N/A[2]	N/A[2]
Presoak (moisture conditioning)	100% of Optimum to 12 inches	100% of Optimum to 12 inches

1. Assumed for preliminary design purposes. Further evaluation is needed at the completion of grading.
2. Recommendations for foundation reinforcement and slab thickness are ultimately the purview of the foundation engineer/structural engineer based upon geotechnical criteria and structural engineering considerations.
3. Recommendations for sand below slabs have traditionally been included with geotechnical foundation recommendations, although they are not the purview of the geotechnical consultant. The sand layer requirements are the purview of the foundation engineer/structural engineer, and should be provided in accordance with ACI Publication 302 "Guide for Concrete Floor and Slab Construction".
4. Recommendations for vapor retarders below slabs are also the purview of the foundation engineer/structural engineer and should be provided in accordance with applicable code requirements.

4.2.3 Foundation Subgrade Preparation and Maintenance

Moisture conditioning of the subgrade soils is recommended prior to trenching the foundation. The duration of this process varies greatly based on the chosen method and is also dependent on factors such as soil type and weather conditions. Time duration for presoaking from completion of rough grading to trenching of foundations should be accounted for in the construction schedule (typically a few days for Very Low expansion soils). The recommendations specific to the anticipated site soil conditions, including recommended presoak, are presented in Table 2. The subgrade moisture condition of

the building pad soils should be maintained at near-optimum moisture content up to the time of concrete placement. This moisture content should be maintained around the immediate perimeter of the slab during construction and up to occupancy of the homes.

The geotechnical parameters provided herein assume that if the areas adjacent to the foundation are planted and irrigated, these areas will be designed with proper drainage and adequately maintained so that ponding, which causes significant moisture changes below the foundation, does not occur. Our recommendations do not account for excessive irrigation and/or incorrect landscape design. Plants should only be provided with sufficient irrigation for life and not overwatered to saturate subgrade soils. Sunken planters placed adjacent to the foundation should either be designed with an efficient drainage system or liners to prevent moisture infiltration below the foundation. Some lifting of the perimeter foundation beam should be expected even with properly constructed planters.

In addition to the factors mentioned above, future owners/property management personnel should be made aware of the potential negative influences of trees and/or other large vegetation. Roots that extend near the vicinity of foundations can cause distress to foundations. Future owners (and the owner's landscape architect) should not plant trees/large shrubs closer to the foundations than a distance equal to half the mature height of the tree or 20 feet, whichever is more conservative unless specifically provided with root barriers to prevent root growth below the building foundation.

It is the owner's responsibility to perform periodic maintenance during hot and dry periods to ensure that adequate watering has been provided to keep soil from separating or pulling back from the foundation. Future owners and property management personnel should be informed and educated regarding the importance of maintaining a constant level of soil-moisture. The owners should be made aware of the potential negative consequences of both excessive watering, as well as allowing potentially expansive soils to become too dry. Expansive soils can undergo shrinkage during drying, and swelling during the rainy winter season, or when irrigation is resumed. This can result in distress to building structures and hardscape improvements. The builder should provide these recommendations to future owners and property management personnel.

4.2.4 Slab Underlayment Guidelines

The following recommendations are for informational purposes since they are unrelated to the geotechnical performance of the foundation. Some post-construction moisture migration should be expected below the foundation; the foundation engineer must assume soil moisture to be present below the slab. The following recommendations may be superseded by the foundation engineer and/or owner.

In general, interior floor slabs with moisture sensitive floor coverings should be underlain by a minimum 10-15 mil thick vapor retarder, which has a water vapor transmission rate (permeance) of less than 0.3 perms, as determined by ASTM E 96, and meets the applicable code requirements (ASTM E 1745).

It is the responsibility of the contractor to ensure that the moisture/vapor retarder systems are properly installed in accordance with the project plans and manufacturer's specifications, and that the moisture/vapor retarder materials are free of tears and punctures prior to and as a result of concrete placement. Additional moisture reduction and/or prevention measures may be needed, depending on the performance requirements of future interior floor coverings.

The foundation engineer/architect should determine whether the use of a capillary break (sand or gravel layer) in conjunction with the vapor retarder is necessary or required by code. Sand layer thickness and location (above and/or below vapor retarder) should also be determined by the foundation engineer/architect. However, we often observe the membrane to be sandwiched between a layer of sand, 1-inch above and 1-inch below. Sand layers should be installed, where applicable, in accordance with ACI Publication 302 – "Guide for Concrete Floor and Slab Construction."

4.3 Soil Bearing and Lateral Resistance

Provided our earthwork recommendations are implemented, an allowable soil bearing pressure of 2,000 pounds per square foot (psf) may be used for the design of footings having a minimum width of 12 inches and minimum embedment of 12 inches below lowest adjacent ground surface. This value may be increased by 300 psf for each additional foot of embedment and 150 psf for each additional foot of foundation width to a maximum value of 3,000 psf. A post-tensioned mat foundation a minimum of 6 inches below lowest adjacent grade may be designed for an allowable soil bearing pressure of 1,200 psf. These allowable bearing pressures are applicable for level (ground slope equal to or flatter than 5H:1V) conditions only. Bearing values indicated are for total dead loads and frequently applied live loads and may be increased by ⅓ for short duration loading (i.e., wind or seismic loads).

In utilizing the above-mentioned allowable bearing capacity and provided our earthwork recommendations are implemented, foundation settlement due to structural loads is anticipated to be 1-inch or less. Differential static settlement may be taken as half of the static settlement (i.e., ½-inch over a horizontal span of 40 feet).

Resistance to lateral loads can be provided by friction acting at the base of foundations and by passive earth pressure. For concrete/soil frictional resistance, an allowable coefficient of friction of 0.35 may be assumed with dead-load forces. For slabs constructed over a moisture retarder, the allowable friction coefficient should be provided by the manufacturer. An allowable passive lateral earth pressure of 250 psf per foot of depth (or pcf) to a maximum of 2,500 psf may be used for the sides of footings poured against properly compacted fill. Allowable passive pressure may be increased to 340 pcf (maximum of 3,400 psf) for short duration seismic loading. This passive pressure is applicable for level (ground slope equal to or flatter than 5H:1V) conditions only. For a 2:1 sloping condition an allowable passive lateral earth pressure of 100 psf per foot of depth (or pcf) to a maximum of 1,000 psf may be used for lateral resistance. Allowable passive pressure may be increased to 130 pcf to a maximum of 1,300 psf for short duration seismic or wind loading. Frictional resistance and passive pressure may be used in combination without reduction. We recommend that the upper foot of passive resistance be neglected if finished grade will not be covered with concrete or asphalt. The provided allowable passive pressures are based on a factor of safety of 1.5 and 1.1 for static and seismic loading conditions,

respectively. The structural designer should incorporate appropriate factors of safety and/or load factors in their design.

4.4 Lateral Earth Pressures for Retaining Walls

Lateral earth pressures for approved sandy soils meeting indicated project recommendations (Section 4.1.2) are provided below. Lateral earth pressures are provided as equivalent fluid unit weights, in psf per foot of depth (or pcf). These values do not contain an appreciable factor of safety, so the retaining wall designer should apply the applicable factors of safety and/or load factors during design. A soil unit weight of 120 pcf may be assumed for calculating the actual weight of soil over the wall footing.

The following lateral earth pressures are presented on Table 3 are for backfilled retaining walls using approved select granular soils with a maximum of 35 percent fines (passing the No. 200 sieve per ASTM D-421/422) and a maximum Expansion Index of 20 (per ASTM D-4829). Portions of the onsite soil may not be suitable for retaining wall backfill due to their fines content (i.e., silt and clay content). Therefore, either select grading and stockpiling and/or import of suitable sandy soils meeting the criteria outlined above will be required. The retaining wall designer should clearly indicate on the retaining wall plans the required sandy soil backfill criteria.

TABLE 3

Lateral Earth Pressures – Approved On-site or Imported Sandy Soils

Conditions	Equivalent Fluid Weight (pcf)	Equivalent Fluid Weight (pcf)
	Level Backfill	2:1 Sloped Backfill
	Approved Sandy Soils	Approved Sandy Soils
Active	35	55
At-Rest	55	70

If the wall can yield enough to mobilize the full shear strength of the soil, it can be designed for "active" pressure. If the wall cannot yield under the applied load, the earth pressure will be higher. This would include 90-degree corners of retaining walls. Such walls should be designed for "at-rest." The equivalent fluid pressure values assume free-draining conditions. If conditions other than those assumed above are anticipated, the equivalent fluid pressure values should be provided on an individual-case basis by the geotechnical engineer.

Surcharge loading effects from any adjacent structures should be evaluated by the retaining wall designer. In general, structural loads within a 1:1 (horizontal to vertical) upward projection from the bottom of the proposed retaining wall footing will surcharge the proposed retaining wall. In addition to the recommended earth pressure, retaining walls adjacent to streets should be designed to resist a uniform lateral pressure of 85 pounds per square foot (psf) due to normal street vehicle traffic, if applicable. The retaining wall designer should contact the geotechnical consultant for any required geotechnical input in estimating surcharge

loads.

Retaining wall structures should be provided with appropriate drainage and appropriately waterproofed. To reduce, but not eliminate, saturation of near-surface (upper approximate 1-foot) soils in front of the retaining walls, the perforated subdrain pipe should be located as low as possible behind the retaining wall. The outlet pipe should be sloped to drain to a suitable outlet. In general, we do not recommend retaining wall outlet pipes be connected to area drains. If subdrains are connected to area drains, special care and information should be provided to homeowners to maintain these drains. Typical retaining wall drainage is illustrated in Figure 3. It should be noted that the recommended subdrain does not provide protection against seepage through the face of the wall and/or efflorescence. Efflorescence is generally a white crystalline powder (discoloration) that results when water containing soluble salts migrates over a period of time through the face of a retaining wall and evaporates. If such seepage or efflorescence is undesirable, retaining walls should be waterproofed to reduce this potential.

If retaining walls greater than 6 feet in height are proposed, the retaining wall designer should contact LGC Geotechnical for specific seismic lateral earth pressure increments based on the configuration and height of the planned retaining wall structures.

Soil bearing and lateral resistance (friction coefficient and passive resistance) are provided in Section 4.4. Earthwork considerations (temporary backcuts, backfill, compaction, etc.) for retaining walls are provided in Section 4.1 (Site Earthwork) and the subsequent earthwork related sub-sections.

4.5 Soil Corrosivity

Although not corrosion engineers (LGC Geotechnical is not a corrosion consultant), several governing agencies in Southern California require the geotechnical consultant to determine the corrosion potential of soils to buried concrete and metal facilities. We therefore present the results of our testing with regard to corrosion for the use of the client and other consultants, as they determine necessary.

Corrosion testing of near-surface bulk samples indicated a soluble sulfate content ranging from approximately 0.006 to 0.010 percent and chloride content ranging from approximately 37 to 60 parts per million (ppm). Based on Caltrans Corrosion Guidelines (Caltrans, 2021), soils are considered corrosive to structural elements if the chloride concentration is 500 ppm or greater, or the sulfate concentration is 2,000 ppm (0.2 percent) or greater. Based on test results, soils are not considered corrosive using Caltrans criteria. Note that based on minimum resistivity the soils are considered corrosive to metallic improvements. If improvements that may be susceptible to corrosion are proposed, it is recommended that further evaluation by a corrosion engineer be performed.

Based on laboratory sulfate test results, the near surface soils are designated to a class “S0” per ACI 318, Table 19.3.1.1 with respect to sulfates. Concrete in direct contact with the onsite soils can be designed according to ACI 318, Table 19.3.2.1 using the “S0” sulfate classification.

Laboratory testing may need to be performed at the completion of grading by the project corrosion engineer to further evaluate the as-graded soil corrosivity characteristics including sulfate, chloride, pH, minimum resistivity, etc. and provide design level recommendations. Accordingly, revision of the corrosion potential may be needed, should future test results differ substantially from the conditions reported herein. The client and/or other members of the development team should consider this during the design and planning phase of the project and formulate an appropriate course of action.

4.6 Control of Surface Water and Drainage Control

From a geotechnical perspective, positive drainage of surface water away from structures is very important. Water should not be allowed to pond adjacent to buildings or to flow freely down a graded slope. Per section 1804.4 of the 2022 CBC, positive drainage may be accomplished by providing drainage away from buildings at a gradient of at least 5 percent for earthen surfaces for a distance of at least 10 feet away from the face of wall. If a distance of 10 feet cannot be achieved, an alternative of a gradient of at least 5 percent to an area drain or swale having a gradient of 2 percent is acceptable. Where necessary, drainage paths may be shortened by use of area drains and collector pipes. Eave gutters are recommended and should reduce water infiltration into the subgrade soils if the downspouts are properly connected to appropriate outlets. Ultimately surface drainage and code compliance are the purview of the project civil engineer.

Planters with open bottoms adjacent to buildings should be avoided. Planters should not be designed adjacent to buildings unless provisions for drainage, such as catch basins, liners, and/or area drains, are made. Overwatering must be avoided.

Planters adjacent to a building or structure should be avoided wherever possible or be properly designed (e.g., lined with a membrane), to reduce the penetration of water into the adjacent footing subgrades and thereby reduce moisture related damage to the foundation. Planting areas at grade should be provided with appropriate positive drainage. Wherever possible, exposed soil areas should be above adjacent paved grades to facilitate drainage. Planters should not be depressed below adjacent paved grades unless provisions for drainage, such as multiple depressed area drains, are constructed. Adequate drainage gradients, devices, and curbing should be provided to prevent runoff from adjacent pavement or walks into the planting areas. Irrigation methods should promote uniformity of moisture in planters and beneath adjacent concrete flatwork. Overwatering and underwatering of landscape areas must be avoided.

Area drain inlets should be maintained and kept clear of debris in order to properly function. Homeowners should also be made aware that excessive irrigation of neighboring properties can cause seepage and moisture conditions on adjacent lots. Homeowners should be furnished with these recommendations communicating the importance of maintaining positive drainage away from structures, towards streets, when they design their improvements.

The impact of heavy irrigation or inadequate runoff gradients can create perched water conditions. This may result in seepage or shallow groundwater conditions where previously none existed. Maintaining adequate surface drainage and controlled irrigation will significantly reduce the potential for nuisance-type moisture problems. To reduce differential earth

movements such as heaving and shrinkage due to the change in moisture content of foundation soils, which may cause distress to a residential structure and associated improvements, moisture content of the soils surrounding the structure should be kept as relatively constant as possible.

Subdrains and v-ditches must be properly maintained, and their outlets kept free draining and clear of any potential obstructions. Routine maintenance should be performed, especially prior to and during the rainy season. Failure to properly maintain these elements may result in slope failures, slumps, excessive erosion, localized saturated zones, nuisance type water issues, etc.

Any future trenches excavated on a slope face for utility or irrigation lines and/or for any purpose should be properly backfilled and compacted to the slope face. Observation/testing and acceptance by the geotechnical consultant during trench backfill are recommended.

A program for the elimination of burrowing animals in both native and graded slope areas must be established and properly maintained to protect slope stability by reducing the potential for surface water to penetrate into the soil. Continuous erosion control, rodent control, and maintenance are essential to the long-term stability of all slopes.

4.7 Preliminary Asphalt Concrete Pavement Sections

The following provisional minimum asphalt concrete (AC) street sections are provided in Table 4 on the following page for Traffic Indices (TI) of 5.5 (or less) and 8.0. These sections are based on an assumed R-value of 40. These recommendations must be confirmed with R-value testing of representative near-surface soils at the completion of grading and after underground utilities have been installed and backfilled. Final pavement sections should be confirmed by the project civil engineer based upon the final design Traffic Index. The final Traffic Index is determined by the Civil Engineer or City Engineer. We are not responsible for selecting a design Traffic Index. If requested, LGC Geotechnical will provide sections for alternate TI values. The city of Ontario minimum pavement sections have been incorporated into our preliminary recommendations.

TABLE 4

Preliminary Asphalt Concrete Pavement Section Options

Assumed Traffic Index	5.5 (or less)	8.0
R -Value Subgrade	40	40
AC Thickness	4.0 inches	6.0 inches
Aggregate Base Thickness	6.0 inches	8.0 inches

Due to anticipated heavy construction traffic during installation of utilities and home construction, we recommend that the total thickness (base course and capping course) of AC be placed at essentially the same time. Allowing heavy construction traffic loading on only the base course of the AC will increase the potential for pavement distress. It should be noted that construction traffic such as concrete trucks will likely exceed traffic loading after completion of construction.

The pavement section thicknesses provided above are considered minimum thicknesses. Increasing the thickness of any of the above layers will reduce the likelihood of the pavement experiencing distress during its service life. The above recommendations assume that proper maintenance and irrigation of the areas adjacent to the roadway will occur throughout the design life of the pavement. Failure to maintain a proper maintenance and/or irrigation program may jeopardize the integrity of the pavement.

Earthwork recommendations regarding aggregate base and subgrade are provided in Section 4.1 "Site Earthwork" and the related sub-sections of this report.

4.8 Nonstructural Concrete Flatwork

Nonstructural concrete flatwork (such as walkways, private drives, patio slabs, etc.) has a potential for cracking due to changes in soil volume related to soil-moisture fluctuations. To reduce the potential for excessive cracking and lifting, concrete may be designed in accordance with the minimum guidelines outlined in Table 5. These guidelines will reduce the potential for irregular cracking and promote cracking along construction joints but will not eliminate all cracking or lifting. Thickening the concrete and/or adding additional reinforcement will further reduce cosmetic distress.

TABLE 5

Nonstructural Concrete Flatwork Guidelines for Very Low Expansion Potential

	Community Sidewalks (≤4 feet wide)	**Patios/ Walkways** (adjacent to homes or flatwork >4 feet wide)	**Private Vehicular Driveways**	**City Sidewalk Curb and Gutters**
Minimum Thickness (in.)	4 (full)	4 (full)	4 (full)	City/Agency Standard
Presoaking	Wet down prior to placing	Wet down prior to placing	Wet down prior to placing	City/Agency Standard
Reinforcement	—	No. 3 at 36 inches on centers	No. 3 at 36 inches on centers	City/Agency Standard
Thickened Edge (in.)	—	—	8 x 8	City/Agency Standard
Crack Control Joints	Saw cut or deep open tool joint to a minimum of $^1/_3$ the concrete thickness	Saw cut or deep open tool joint to a minimum of $^1/_3$ the concrete thickness	Saw cut or deep open tool joint to a minimum of $^1/_3$ the concrete thickness	City/Agency Standard
Maximum Joint Spacing	5 feet	6 feet	10 feet or quarter cut whichever is closer	City/Agency Standard

To reduce the potential for driveways to separate from the garage slab, the builder may elect to install dowels to tie these two elements together. Similarly, future homeowners should consider the use of dowels to connect flatwork to the foundation.

4.9 Geotechnical Plan Review

When available, grading, retaining wall and foundation plans should be reviewed by LGC Geotechnical in order to verify our geotechnical recommendations are implemented. Updated recommendations and/or additional fieldwork may be necessary.

4.10 Geotechnical Observation and Testing During Construction

The recommendations provided in this report are based on limited subsurface observations and geotechnical analysis. The interpolated subsurface conditions should be checked in the field during construction by a representative of LGC Geotechnical. Geotechnical observation and testing is required per Section 1705 of the 2022 California Building Code (CBC).

Geotechnical observation and/or testing should be performed by LGC Geotechnical at the following stages:

- During grading (removal bottoms, fill placement, etc.);
- During retaining wall backfill and compaction;
- During utility trench backfill and compaction;
- After presoaking building pads and other concrete-flatwork subgrades, and prior to placement of aggregate base or concrete;
- Preparation of pavement subgrade and placement of aggregate base;
- After building and wall footing excavation and prior to placing steel reinforcement and/or concrete; and
- When any unusual soil conditions are encountered during any construction operation subsequent to issuance of this report.

5.0 LIMITATIONS

Our services were performed using the degree of care and skill ordinarily exercised, under similar circumstances, by reputable soils engineers and geologists practicing in this or similar localities. No other warranty, expressed or implied, is made as to the conclusions and professional advice included in this report.

This report is based on data obtained from limited observations of the site, which have been extrapolated to characterize the site. While the scope of services performed is considered suitable to adequately characterize the site geotechnical conditions relative to the proposed development, no practical evaluation can completely eliminate uncertainty regarding the anticipated geotechnical conditions in connection with a subject site. Variations may exist and conditions not observed or described in this report may be encountered during grading and construction.

This report is issued with the understanding that it is the responsibility of the owner, or of his/her representative, to ensure that the information and recommendations contained herein are brought to the attention of the other consultants (at a minimum the civil engineer, structural engineer, landscape architect) and incorporated into their plans. The contractor should properly implement the recommendations during construction and notify the owner if they consider any of the recommendations presented herein to be unsafe, or unsuitable.

The findings of this report are valid as of the present date. However, changes in the conditions of a site can and do occur with the passage of time, whether they be due to natural processes or the works of man on this or adjacent properties. The findings, conclusions, and recommendations presented in this report can be relied upon only if LGC Geotechnical has the opportunity to observe the subsurface conditions during grading and construction of the project, in order to confirm that our preliminary findings are representative for the site. This report is intended exclusively for use by the client, any use of or reliance on this report by a third party shall be at such party's sole risk.

In addition, changes in applicable or appropriate standards may occur, whether they result from legislation or the broadening of knowledge. Accordingly, the findings of this report may be invalidated wholly or partially by changes outside our control. Therefore, this report is subject to review and modification.

Appendix C
Field and Laboratory Test Results

APPENDIX C

Laboratory Test Results

Samples collected by PSE that are considered representative of site conditions were generally tested in accordance with American Society for Testing and Materials (ASTM) procedures, where applicable. The following summary is a brief outline of the test type and a table summarizing the test results.

Expansion Index: The expansion potential of selected representative samples was evaluated by the Expansion Index Test per ASTM D4829.

Sample Location	Expansion Index	Expansion Potential*
TP-1 (B-1)	4	Very Low
TP-4 (B-1)	5	Very Low
TP-12 (B-1)	2	Very Low

*Per ASTM D 4829

Maximum Density Tests: The maximum dry density and optimum moisture content of materials were determined in accordance with ASTM Test Method D1557. The results of these tests are presented in the table below.

Sample Location (Soil Type)	Sample Description	Maximum Dry Density (pcf)	Optimum Moisture Content (%)
TP-1 (B-1); "1"	Pale Brown Silty Sand	125.5	11.5
TP-4 (B-1); "4"	Pale Brown Silty Sand	127.5	9.5
TP-12 (B-1); "12"	Pale Brown Silty Sand	129.5	8.5

Organic Content: The organic content of selected samples was determined by standard ASTM D 2974 (Test Methods A & C). Results of organic content testing are presented on Test Pit logs, Appendix B.

Laboratory Testing Procedures and Test Results

Chloride Content: Chloride content was tested in accordance with Caltrans Test Method (CTM) 422. The results are presented below.

Sample Location	Chloride Content (% by Weight)
TP-1 (B-1)	0.004
TP-4 (B-1)	0.004
TP-12 (B-1)	0.006

Soluble Sulfates: The soluble sulfate contents of selected samples were determined by standard geochemical methods (CTM 417). The soluble sulfate content is used to determine the appropriate cement type and maximum water-cement ratios. The test results are presented in the table below.

Sample Location/Number	Sulfate Content (% by Weight)
TP-1 (B-1)	0.008
TP-4 (B-1)	0.010
TP-12 (B-1)	0.006

Appendix D
General Earthwork and Grading Specifications

General Earthwork and Grading Specifications for Rough Grading

1.0 General

1.1 Intent

These General Earthwork and Grading Specifications are for the grading and earthwork shown on the approved grading plan(s) and/or indicated in the geotechnical report(s). These Specifications are a part of the recommendations contained in the geotechnical report(s). In case of conflict, the specific recommendations in the geotechnical report shall supersede these more general Specifications. Observations of the earthwork by the project Geotechnical Consultant during the course of grading may result in new or revised recommendations that could supersede these specifications or the recommendations in the geotechnical report(s).

1.2 The Geotechnical Consultant of Record

Prior to commencement of work, the owner shall employ a qualified Geotechnical Consultant of Record (Geotechnical Consultant). The Geotechnical Consultant shall be responsible for reviewing the approved geotechnical report(s) and accepting the adequacy of the preliminary geotechnical findings, conclusions, and recommendations prior to the commencement of the grading.

Prior to commencement of grading, the Geotechnical Consultant shall review the "work plan" prepared by the Earthwork Contractor (Contractor) and schedule sufficient personnel to perform the appropriate level of observation, mapping, and compaction testing.

During the grading and earthwork operations, the Geotechnical Consultant shall observe, map, and document the subsurface exposures to verify the geotechnical design assumptions. If the observed conditions are found to be significantly different than the interpreted assumptions during the design phase, the Geotechnical Consultant shall inform the owner, recommend appropriate changes in design to accommodate the observed conditions, and notify the review agency where required.

The Geotechnical Consultant shall observe the moisture-conditioning and processing of the subgrade and fill materials and perform relative compaction testing of fill to confirm that the attained level of compaction is being accomplished as specified. The Geotechnical Consultant shall provide the test results to the owner and the Contractor on a routine and frequent basis.

1.3 The Earthwork Contractor

The Earthwork Contractor (Contractor) shall be qualified, experienced, and knowledgeable in earthwork logistics, preparation and processing of ground to receive fill, moisture-conditioning and processing of fill, and compacting fill. The Contractor shall review and accept the plans, geotechnical report(s), and these Specifications prior to commencement of grading. The Contractor shall be solely responsible for performing the grading in accordance with the project plans and specifications. The Contractor shall prepare and submit to the owner and the Geotechnical Consultant a work plan that indicates the sequence of earthwork grading, the number of “equipment” of work and the estimated quantities of daily earthwork

contemplated for the site prior to commencement of grading. The Contractor shall inform the owner and the
Geotechnical Consultant of changes in work schedules and updates to the work plan at least 24 hours in advance of such changes so that appropriate personnel will be available for observation and testing. The Contractor shall not assume that the Geotechnical Consultant is aware of all grading operations.

The Contractor shall have the sole responsibility to provide adequate equipment and methods to accomplish the earthwork in accordance with the applicable grading codes and agency ordinances, these Specifications, and the recommendations in the approved geotechnical report(s) and grading plan(s). If, in the opinion of the Geotechnical Consultant, unsatisfactory conditions, such as unsuitable soil, improper moisture condition, inadequate compaction, insufficient buttress key size, adverse weather, etc., are resulting in a quality of work less than required in these specifications, the Geotechnical Consultant shall reject the work and may recommend to the owner that construction be stopped until the conditions are rectified. It is the contractor's sole responsibility to provide proper fill compaction.

2.0 Preparation of Areas to be Filled

2.1 Clearing and Grubbing

Vegetation, such as brush, grass, roots, and other deleterious material shall be sufficiently removed and properly disposed of in a method acceptable to the owner, governing agencies, and the Geotechnical Consultant.

The Geotechnical Consultant shall evaluate the extent of these removals depending on specific site conditions. Earth fill material shall not contain more than 1 percent of organic materials (by volume). Nesting of the organic materials shall not be allowed.

If potentially hazardous materials are encountered, the Contractor shall stop work in the affected area, and a hazardous material specialist shall be informed immediately for proper evaluation and handling of these materials prior to continuing to work in that area.

As presently defined by the State of California, most refined petroleum products (gasoline, diesel fuel, motor oil, grease, coolant, etc.) have chemical constituents that are considered to be hazardous waste. As such, the indiscriminate dumping or spillage of these fluids onto the ground may constitute a misdemeanor, punishable by fines and/or imprisonment, and shall not be allowed. The contractor is responsible for all hazardous waste relating to his work. The Geotechnical Consultant does not have expertise in this area. If hazardous waste is a concern, then the Client should acquire the services of a qualified environmental assessor.

2.2 Processing

Existing ground that has been declared satisfactory for support of fill by the Geotechnical Consultant shall be scarified to a minimum depth of 6 inches. Existing ground that is not satisfactory shall be over-excavated as specified in the following section. Scarification shall continue until soils are broken down and free of oversize material and the working surface is reasonably uniform, flat, and free of uneven features that would inhibit uniform compaction.

2.3 Over-excavation

In addition to removals and over-excavations recommended in the approved geotechnical report(s) and the grading plan, soft, loose, dry, saturated, spongy, organic-rich, highly fractured or otherwise unsuitable ground shall be over-excavated to competent ground as evaluated by the Geotechnical Consultant during grading.

2.4 Benching

Where fills are to be placed on ground with slopes steeper than 5:1 (horizontal to vertical units), the ground shall be stepped or benched. Please see the Standard Details for a graphic illustration. The lowest bench or key shall be a minimum of 15 feet wide and at least 2 feet deep, into competent material as evaluated by the Geotechnical Consultant. Other benches shall be excavated a minimum height of 4 feet into competent material or as otherwise recommended by the Geotechnical Consultant. Fill placed on ground sloping flatter than 5:1 shall also be benched or otherwise over-excavated to provide a flat subgrade for the fill.

2.5 Evaluation/Acceptance of Fill Areas

All areas to receive fill, including removal and processed areas, key bottoms, and benches, shall be observed, mapped, elevations recorded, and/or tested prior to being accepted by the Geotechnical Consultant as suitable to receive fill. The Contractor shall obtain a written acceptance from the Geotechnical Consultant prior to fill placement. A licensed surveyor shall provide the survey control for determining elevations of processed areas, keys, and benches.

3.0 Fill Material

3.1 General

Material to be used as fill shall be essentially free of organic matter and other deleterious substances evaluated and accepted by the Geotechnical Consultant prior to placement. Soils of poor quality, such as those with unacceptable gradation, high expansion potential, or low strength shall be placed in areas acceptable to the Geotechnical Consultant or mixed with other soils to achieve satisfactory fill material.

3.2 Oversize

Oversize material defined as rock, or other irreducible material with a maximum dimension greater than 8 inches, shall not be buried or placed in fill unless location, materials, and placement methods are specifically accepted by the Geotechnical Consultant. Placement operations shall be such that nesting of oversized material does not occur and such that oversize material is completely surrounded by compacted or densified fill. Oversize material shall not be placed within 10 vertical feet of finish grade or within 2 feet of future utilities or underground construction.

3.3 Import

If importing of fill material is required for grading, proposed import material shall meet the requirements of the geotechnical consultant. The potential import source shall be given to the Geotechnical Consultant at least 48 hours (2 working days) before importing begins so that its suitability can be determined and appropriate tests performed.

4.0 Fill Placement and Compaction

4.1 Fill Layers

Approved fill material shall be placed in areas prepared to receive fill (per Section 3.0) in near-horizontal layers not exceeding 8 inches in loose thickness. The Geotechnical Consultant may accept thicker layers if testing indicates the grading procedures can adequately compact the thicker layers. Each layer shall be spread evenly and mixed thoroughly to attain relative uniformity of material and moisture throughout.

4.2 Fill Moisture Conditioning

Fill soils shall be watered, dried back, blended, and/or mixed, as necessary to attain a relatively uniform moisture content at or slightly over optimum. Maximum density and optimum soil moisture content tests shall be performed in accordance with the American Society of Testing and Materials (ASTM Test Method D1557).

4.3 Compaction of Fill

After each layer has been moisture-conditioned, mixed, and evenly spread, it shall be uniformly compacted to not less than 90 percent of maximum dry density (ASTM Test Method D1557). Compaction equipment shall be adequately sized and be either specifically designed for soil compaction or of proven reliability to efficiently achieve the specified level of compaction with uniformity.

4.4 Compaction of Fill Slopes

In addition to normal compaction procedures specified above, compaction of slopes shall be accomplished by backrolling of slopes with sheepsfoot rollers at increments of 3 to 4 feet in fill elevation, or by other methods producing satisfactory results acceptable to the Geotechnical Consultant. Upon completion of grading, relative compaction of the fill, out to the slope face, shall be at least 90 percent of maximum density per ASTM Test Method D1557.

4.5 Compaction Testing

Field tests for moisture content and relative compaction of the fill soils shall be performed by the Geotechnical Consultant. Location and frequency of tests shall be at the Consultant's discretion based on field conditions encountered. Compaction test locations will not necessarily be selected on a random basis. Test locations shall be selected to verify adequacy of compaction levels in areas that are judged to be prone to inadequate compaction (such as close to slope faces and at the fill/bedrock benches).

4.6 Frequency of Compaction Testing

Tests shall be taken at intervals not exceeding 2 feet in vertical rise and/or 1,000 cubic yards of compacted fill soils embankment. In addition, as a guideline, at least one test shall be taken on slope faces for each 5,000 square feet of slope face and/or each 10 feet of vertical height of slope. The Contractor shall assure that fill construction is such that the testing schedule can be accomplished by the Geotechnical Consultant. The Contractor shall stop or slow down the earthwork construction if these minimum standards are not met.

4.7 Compaction Test Locations

The Geotechnical Consultant shall document the approximate elevation and horizontal coordinates of each test location. The Contractor shall coordinate with the project surveyor to assure that sufficient grade stakes are established so that the Geotechnical Consultant can determine the test locations with sufficient accuracy. At a minimum, two grade stakes within a horizontal distance of 100 feet and vertically less than
5 feet apart from potential test locations shall be provided.

5.0 Subdrain Installation

Subdrain systems shall be installed in accordance with the approved geotechnical report(s), the grading plan, and the Standard Details. The Geotechnical Consultant may recommend additional subdrains and/or changes in subdrain extent, location, grade, or material depending on conditions encountered during grading. All subdrains shall be surveyed by a land surveyor/civil engineer for line and grade after installation and prior to burial. Sufficient time should be allowed by the Contractor for these surveys.

6.0 Excavation

Excavations, as well as over-excavation for remedial purposes, shall be evaluated by the Geotechnical Consultant during grading. Remedial removal depths shown on geotechnical plans are estimates only. The actual extent of removal shall be determined by the Geotechnical Consultant based on the field evaluation of exposed conditions during grading. Where fill-over-cut slopes are to be graded, the cut portion of the slope shall be made, evaluated, and accepted by the Geotechnical Consultant prior to placement of materials for construction of the fill portion of the slope, unless otherwise recommended by the Geotechnical Consultant.

7.0 Trench Backfills

7.1 The Contractor shall follow all OHSA and Cal/OSHA requirements for safety of trench excavations.

7.2 All bedding and backfill of utility trenches shall be done in accordance with the applicable provisions of Standard Specifications of Public Works Construction. Bedding material shall have a Sand Equivalent greater than 30 (SE>30). The bedding shall be placed to 1 foot over

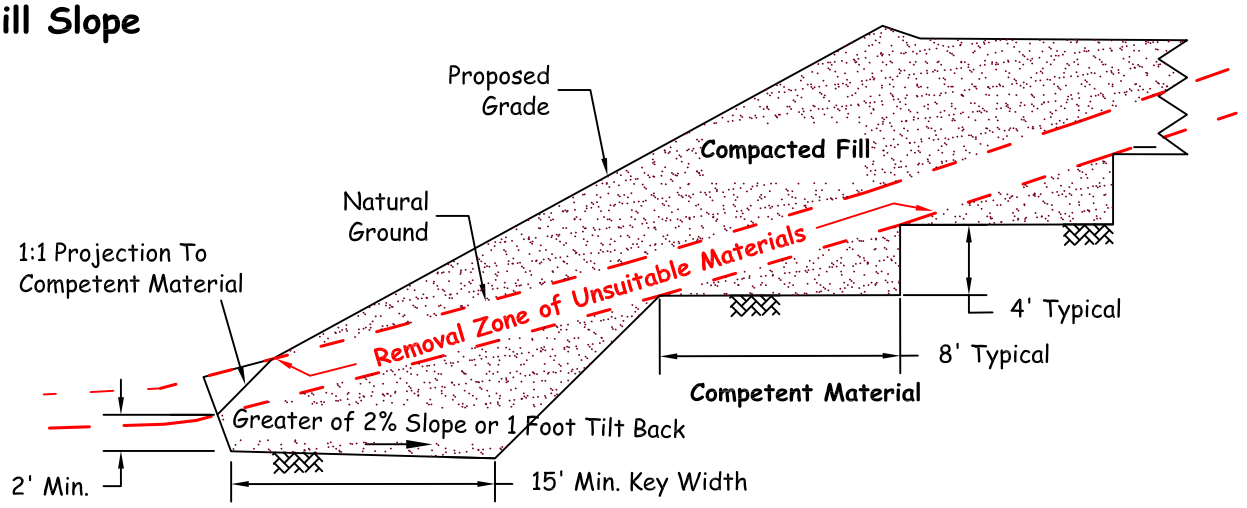
the top of the conduit and densified by jetting. Backfill shall be placed and densified to a minimum of 90 percent of maximum from 1 foot above the top of the conduit to the surface.

7.3 The jetting of the bedding around the conduits shall be observed by the Geotechnical Consultant.

7.4 The Geotechnical Consultant shall test the trench backfill for relative compaction. At least one test should be made for every 300 feet of trench and 2 feet of fill.

7.5 Lift thickness of trench backfill shall not exceed those allowed in the Standard Specifications of Public Works Construction unless the Contractor can demonstrate to the Geotechnical Consultant that the fill lift can be compacted to the minimum relative compaction by his alternative equipment and method.

Fill Slope



Fill-Over-Cut Slope

I. INTRODUCTION AND LOCATION

A paleontological resource assessment has been completed for the Eucalyptus and Amherst Avenues Project, located within the city of Ontario, San Bernardino County, California (Figures 1 and 2). The project, bounded by Chatham Street, Clifton Avenue, South Amherst Avenue, and East Eucalyptus Avenue, consists of one 10.02-acre parcel (Assessor's Parcel Number [APN] 1073-101-05) and is located within Section 13, Township 2 South, Range 7 West, as shown on the United States Geological Survey 1:24,000-scale (7.5-minute) *Corona North* topographic quadrangle maps (see Figure 2). As designed, the applicant proposes to clear the property for the construction of a multi-family residential development with associated landscape, hardscape, and infrastructure (Figure 3). The parcel is currently vacant and was previously graded.

As the lead agency, the City of Ontario has required the preparation of a paleontological assessment to evaluate the project's potential to yield paleontological resources. The paleontological assessment of the project included a review of paleontological literature and fossil locality records for a previous project in the area, a review of the underlying geology, and recommendations to mitigate impacts to potential paleontological resources.

II. REGULATORY SETTING

The California Environmental Quality Act (CEQA), which is patterned after the National Environmental Policy Act, is the overriding environmental regulation that sets the requirement for protecting California's paleontological resources. CEQA mandates that governing permitting agencies (lead agencies) set their own guidelines for the protection of nonrenewable paleontological resources under their jurisdiction.

State of California

Under "Guidelines for Implementation of the California Environmental Quality Act," as amended in December 2018 (California Code of Regulations [CCR] Title 14, Division 6, Chapter 3, Sections 15000 et seq.), procedures define the types of activities, persons, and public agencies required to comply with CEQA. Section 15063 of the CCR provides a process by which a lead agency may review a project's potential impact to the environment, determine whether the impacts are significant, and, if necessary, provide recommendations.

Project Development Map

The Eucalytpus and Amherst Avenues Project

In CEQA's Environmental Checklist Form, a question to respond to is, "Would the project directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?" (Appendix G, Section VII, Part f). This is to ensure compliance with California Public Resources Code Section 5097.5, the law that protects nonrenewable resources, including fossils, which is paraphrased below:

a) A person shall not knowingly and willfully excavate upon, or remove, destroy, injure or deface any historic or prehistoric ruins, burial grounds, archaeological or vertebrate paleontological site, including fossilized footprints, inscriptions made by human agency, rock art, or any other archaeological, paleontological or historical feature, situated on public lands, except with the express permission of the public agency having jurisdiction over such lands.
b) As used in this section, "public lands" means lands owned by, or under the jurisdiction of, the state, or any city, county, district, authority, or public corporation, or any agency thereof.
c) A violation of this section is a misdemeanor.

City of Ontario

The Ontario Plan (TOP) 2050 Final Supplemental Environmental Impact Report (FSEIR) sets forth goals and policies for the City to manage future growth and land uses. According to Impact 5.7-6 of the FSEIR:

> Ontario is underlain by deposits of Quaternary and upper-Pleistocene sediments deposited during Pliocene and early Pleistocene time. Quaternary Older Alluvial sediments may contain significant, nonrenewable, paleontological resources and are therefore considered to have high sensitivity. Older Pleistocene alluvial sediments can yield fossil remains, often found at depths of 10 feet or more below existing ground surface. As previously discussed, for the Approved TOP, the San Bernardino County Museum, Division of Geological Sciences, conducted the paleontological records search and found one previously known paleontological resource locality recorded by the Regional Paleontologic Locality Inventory, a computer database with positional and contextual data for more than 3,000 fossil localities throughout California and the southwestern United States. This review found one paleontological locality for the City area (SBCM 5.1.8). This locality yielded the remains of a mammoth from approximately 20 feet below the ground surface. As a result, the possibility of finding additional paleontological resources within City boundaries is moderate to high at depths of 10 feet or more below ground surface. (PlaceWorks 2022a)

To mitigate the potential impacts identified in Impact 5.7-6, the FSEIR proposes the following mitigation measures. These measures are also stated in the Mitigation Monitoring and Reporting Program of TOP 2050 (PlaceWorks 2022b):

> **Mitigation Measure MM 5-2:** In areas of documented or inferred archaeological and/or paleontological resource presence, City staff shall require applicants for development permits to provide studies to document the presence/absence of such resources. On properties where resources are identified, such studies shall provide a detailed mitigation plan, including a monitoring program and recovery and/or in situ preservation plan, based on the recommendations of a qualified cultural preservation expert. The mitigation plan shall include the following requirements:
>
> a) Archaeologists and/or paleontologist shall be retained for the project and will be on call during grading and other significant ground-disturbing activities.
>
> b) Should any cultural resources be discovered, no further grading shall occur in the area of the discovery until the Planning Director or designee is satisfied that adequate provisions are in place to protect these resources.
>
> c) Unanticipated discoveries shall be evaluated for significance by a San Bernardino County Certified Professional Archaeologist/Paleontologist. If significance criteria are met, then the project shall be required to perform data recovery, professional identification, radiocarbon dates, and other special studies; submit materials to a museum for permanent curation; and provide a comprehensive final report including a catalog with museum numbers. (PlaceWorks 2022a, 2022b)

III. GEOLOGY

Surficial sediments below the project are mapped by Morton and Miller (2006) as Holocene and late Pleistocene eolian (wind-blown) deposits, with nearby sandy alluvial sediments of similar age (Figure 4). These surficial units overlie the ancestral Santa Ana River flood plain deposits mapped as lower to middle Pleistocene very old sandy alluvial channel deposits that are exposed on the surface to the south of the project and closer to the present course of the Santa Ana River.

Geology after Morton and Miller (2006)

IV. PALEONTOLOGICAL RESOURCES

Definition

Paleontological resources are the remains of prehistoric life that have been preserved in geologic strata. These remains are called fossils and include bones, shells, teeth, and plant remains (including their impressions, casts, and molds) in the sedimentary matrix, as well as trace fossils such as footprints and burrows. Fossils are considered older than 5,000 years of age (Society of Vertebrate Paleontology 2010) but may include younger remains (subfossils) when viewed in the context of local extinction of the organism or habitat, for example. Fossils are considered a nonrenewable resource under state and local guidelines (see Section II).

Fossil Locality Records Search

A paleontological literature review and collections and locality records search was conducted for the project using records obtained for prior projects from the Division of Geological Sciences at the San Bernardino County Museum (SBCM), the Natural History Museum of Los Angeles County (LACM), and the Western Science Center (WSC) in Hemet, and data from published and unpublished paleontological literature. The nearest recorded fossil locality is situated about a mile southwest of the project in Eastvale, consisting of the bones of a Pleistocene snake (LACM locality no. (loc.) 7811). Farther southwest, between one and two miles, Pleistocene vertebrate fossils were discovered during trenching activities along the nearby County Line Channel Project by BFSA paleontological monitors (Kennedy et al. 2005). Fossils occurred at depths ranging from 11 to 17 feet deep, and consisted of fragmentary bones from a camel, *Camelops* sp. cf. *C. hesternus*, a fragmentary jaw of a bighorn sheep, *Ovis canadensis*, and several unidentifiable bone fragments of large mammals. These fossils were deposited at the WSC.

More Pleistocene fossils have been recovered from a number of completed and ongoing projects by BFSA, all within two miles of the current project. The Vernola Ranch project to the east in Jurupa Valley and the TTM 20472 and Merril Commerce Center projects to the west have all recently yielded the fossil bones of yet-unidentified large mammals and await curation. Fossil bones from these projects were variously collected from depths ranging from 2.5 to 25 feet. At the Ontario 432 Project, two miles to the west of the current project, the sacrum from a large artiodactyl (hoofed grazer) and other unidentified mammalian remains were discovered, at depths ranging from five to seven feet. These specimens have been deposited at the WSC (Wirths 2021).

The nearest known fossil localities held by the SBCM are situated between two and three miles northwest of the project, containing several isolated fossil bones of camels (*Camelops* sp.) and a mastodon (*Mammut pacificus*) rib fragment (SBCM localities 5.1.23 – 5.1.27; Kottkamp 2022). Kottkamp (2022) indicates that the deposits mapped at the surface of this area are unlikely to yield fossils, but the underlying, older deposits "have been found to be highly

fossiliferous in the local area." It should be noted that all of these discoveries post-date the research materials used for paleontological resources in the FSEIR (PlaceWorks 2022a) and, therefore, the document can be construed as out-of-date in that regard.

Project Survey

On February 27, 2025, BFSA staff, under the supervision of Principal Investigator Todd A. Wirths, conducted an intuitive review of the property to determine if any paleontological resources were visible. The field methodology employed for the project included walking evenly spaced survey transects set approximately 15 meters apart while visually inspecting the ground surface, when possible. All potentially sensitive areas where paleontological resources might be located were closely inspected. Visibility of the natural ground surface was characterized as moderate to good. The vegetation within the property is dominated by non-native grasses and weeds. The survey confirmed that the entire property has been previously graded. Grading resulted in the development of a water catchment basin within the northwest portion of the property and a pad at the property's south half. No bedrock outcrops were exposed that might indicate the presence of fossils. No paleontological resources, or evidence of paleontological resources, were observed during the survey.

V. PALEONTOLOGICAL SENSITIVITY

Overview

The degree of paleontological sensitivity of any particular area is based upon a number of factors, including the documented presence of fossiliferous resources on a site or in nearby areas, the presence of documented fossils within a particular geologic formation or lithostratigraphic unit, and whether or not the original depositional environment of the sediments is one that might have been conducive to the accumulation of organic remains that may have become fossilized over time. Holocene alluvium is generally considered to be geologically too young to contain significant nonrenewable paleontological resources (*i.e.,* fossils) and thus is typically assigned a low paleontological sensitivity. Pleistocene (over 11,700 years old) alluvial and alluvial fan deposits in the Inland Empire, however, often yield important terrestrial vertebrate fossils such as extinct mammoths, mastodons, and giant ground sloths, as well as extinct species of horse, bison, camel, saber-toothed cats, and others (Jefferson 1991). These Pleistocene sediments are thus accorded a high paleontological resource sensitivity.

Professional Standards

The Society of Vertebrate Paleontology (2010) has drafted guidelines that include four categories of paleontological sensitivity for geologic units (formations) that might be impacted by a proposed project, and are summarized below:

- *High Potential:* Rock units from which vertebrate or significant invertebrate, plant, or trace fossils have been recovered.
- *Undetermined Potential:* Rock units for which little information is available concerning their paleontological content, geologic age, and depositional environment, and further study is needed to determine the potential of the rock unit.
- *Low Potential:* Rock units that are poorly represented by fossil specimens in institutional collections or, based on a general scientific consensus, that only preserve fossils in rare circumstances.
- *No Potential:* Rock units that have no potential to contain significant paleontological resources, such as high-grade metamorphic rocks and plutonic igneous rocks.

Using these criteria, based upon nearby fossil localities in southern and eastern Ontario and western Jurupa Valley, and the mapped geology, the Holocene eolian deposits at the surface of the project may be considered to have a low potential for paleontological resources. However, with increasing depth and age, this potential increases to a high potential for yielding significant paleontological resources.

City of Ontario Assessment of Paleontological Sensitivity

The City of Ontario considers strata at depths of 10 feet or greater as having a moderate to high paleontological sensitivity. As such, the potential to uncover undiscovered paleontological resources is considered high (PlaceWorks 2022a: 5.7-17).

VI. CONCLUSIONS AND RECOMMENDATIONS

Potentially fossiliferous late Pleistocene alluvial wash or fan deposits likely occur at a depth below the project. These deposits underlie the Holocene eolian deposits mapped at the surface ("Qye" on Figure 4). The occurrence of terrestrial vertebrate fossils at shallow depths from Pleistocene alluvial fan sediments across the Inland Empire is well documented. The high paleontological sensitivity rating typically assigned to Pleistocene alluvial fan sediments for yielding paleontological resources supports the recommendation that paleontological monitoring be implemented during mass grading and excavation activities in undisturbed Pleistocene alluvial fan sediments to mitigate any adverse impacts (loss or destruction) to potential nonrenewable paleontological resources.

On the basis of these statements, a Paleontological Resources Impact Mitigation Program (PRIMP) is recommended, in accordance with Mitigation Measure (MM) 5-2 of the City of Ontario (PlaceWorks 2022a, 2022b). The PRIMP shall be approved by the Planning Department of the City of Ontario prior to the issuance of the project's grading permit. Based upon these findings, **full-time monitoring starting at a depth of four feet below the surface** during earth disturbance activities is strongly recommended. A proposed paleontological monitoring plan is

detailed below. When implemented with the provisions of CEQA, the City of Ontario (PlaceWorks 2022a, 2022b), and the guidelines of the Society of Vertebrate Paleontology (2010), this paleontological monitoring plan would mitigate any adverse impacts (loss or destruction) to potential nonrenewable paleontological resources (fossils), if present, to a level below significant.

Paleontological Monitoring Plan

1. All mitigation programs shall be performed by a qualified professional (project) paleontologist, defined as an individual with an M.S. or Ph.D. in paleontology or geology who has proven experience and who is knowledgeable in professional paleontological procedures and techniques. Fieldwork may be conducted by a qualified paleontological monitor, defined as an individual who has experience in the collection and salvage of fossil materials. The paleontological monitor shall always work under the direction of a qualified paleontologist.
2. Monitoring of mass grading and excavation activities shall be performed by a qualified paleontologist or paleontological monitor. Starting at a depth of four feet, monitoring will be conducted full-time in areas of grading or excavation in undisturbed sediments. Monitoring of artificial fill is not recommended.
3. If a fossil(s) is found at a shallower depth, earth disturbance activities should be halted within a radius of 50 feet from the location of the fossil, and a project-level paleontologist shall be consulted to determine the significance of the fossilized remains. If the fossil is deemed significant by the project-level paleontologist, full-time monitoring should be initiated at the project.
4. Paleontological monitors will be equipped to salvage fossils as they are unearthed to avoid construction delays. The monitor must be empowered to temporarily halt or divert equipment to allow removal of abundant or large specimens in a timely manner. Monitoring may be reduced if the potentially fossiliferous units are not present in the subsurface or, if present, are determined upon exposure and examination by qualified paleontological personnel to have low potential to contain fossil resources. The monitor shall notify the project paleontologist, who will then notify the concerned parties of the discovery.
5. Paleontological salvage during trenching and boring activities is typically from the generated spoils and does not delay the trenching or drilling activities. Fossils will be collected and placed in cardboard flats or plastic buckets and identified by field number, collector, and date collected. Notes will be taken on the map location and stratigraphy of the site, which will be photographed before it is vacated, and the fossils are removed to a safe place. On mass grading projects, discovered fossil sites will be protected by flagging to prevent them from being overrun by earthmovers (scrapers) before salvage begins. Fossils will be collected in a similar manner, with

notes and photographs being taken before removing the fossils. The precise location of the site is determined with the use of electronic handheld devices. If the site involves remains from a large terrestrial vertebrate, such as large bone(s) or a mammoth tusk, that is/are too large to be easily removed by a single monitor, a fossil recovery crew shall excavate around the find, encase the find within a plaster and burlap jacket, and remove it after the plaster is set. For large fossils, use of the contractor's construction equipment may be solicited to help move the jacket to a safe location.

6. Isolated fossils will be collected by hand, wrapped in protective materials, and placed in temporary collecting flats or five-gallon buckets. Notes will be taken on the map location and stratigraphy of the site, which will be photographed before it is vacated, and the fossils are moved to a safe place.
7. Particularly small invertebrate fossils typically represent multiple specimens of a limited number of organisms, and a scientifically suitable sample can be obtained from one to several five-gallon buckets of fossiliferous sediment. If it is possible to dry screen the sediment in the field, a concentrated sample may consist of one or two buckets of material.
8. In accordance with the "Microfossil Salvage" section of the SVP guidelines (2010:7), bulk sampling and screening of fine-grained sedimentary deposits (including carbonate-rich paleosols) must be performed if the deposits are identified to possess indications of producing fossil "microvertebrates" to test the feasibility of the deposit to yield fossil bones and teeth. If indicators of potential microvertebrate fossils are found, screening of a test sample (approximately 600 pounds) is recommended, according to the SVP guidelines. If feasible, wet screening shall be conducted on the project site. If screening yields significant fossils, then removing and processing a "standard sample" of 6,000 pounds shall be performed.
9. In the laboratory, individual fossils will be cleaned of extraneous matrix, any breaks will be repaired, and the specimen, if needed, will be stabilized by soaking in an archivally approved acrylic hardener (*e.g.,* a solution of acetone and Paraloid B-72).
10. Recovered specimens will be prepared to a point of identification and permanent preservation (not display), including screen-washing sediments to recover small invertebrates and vertebrates. Preparation of individual vertebrate fossils is often more time-consuming than for accumulations of invertebrate fossils.
11. Recovered specimens will be identified and curated into a professional, accredited public museum repository with a commitment to archival conservation and permanent retrievable storage (*e.g.,* the San Bernardino County Museum). The paleontological program should include a written repository agreement prior to the initiation of mitigation activities. Prior to curation, the lead agency (the City of Ontario) will be consulted on the repository/museum to receive the fossil material.

12. A final report of findings and significance will be prepared, including lists of all fossils recovered and necessary maps and graphics to accurately record their original location(s). The report, when submitted to and accepted by the appropriate lead agency, will signify satisfactory completion of the project program to mitigate impacts to any potential nonrenewable paleontological resources (*i.e.,* fossils) that might have been lost or otherwise adversely affected without such a program in place.

VII. CERTIFICATION

I hereby certify that the statements furnished above and in the attached exhibits present the data and information required for this paleontological report, and that the facts, statements, and information presented are true and correct to the best of my knowledge and belief and have been compiled in accordance with CEQA criteria.

MEMORANDUM

URBAN CROSSROADS

DATE: March 28, 2025
TO: Dave Waters, Genstar Development Company/GDCI-13
FROM: Haseeb Qureshi, Shannon Wong
JOB NO: 15662-05 GHG Assessment

ESPERANZA SPECIFIC PLAN AMENDMENT GREENHOUSE GAS ASSESSMENT

Dave Waters,

Urban Crossroads, Inc. is pleased to submit the following Greenhouse Gas Assessment for Esperanza Specific Plan Amendment development (referred to as **Project**) to support the proposed Specific Plan Amendment (**SPA**), which is located on the northeast corner of Eucalyptus Avenue and Amherst Avenue in the City of Ontario. The purpose of this work effort is to determine if the Project would result in new or substantially different Greenhouse Gas Impacts than those considered and addressed in the Esperanza Specific Plan (**Approved Specific Plan**) Environmental Impact Report (EIR) and The Ontario Plan 2050 Supplemental EIR (SEIR).

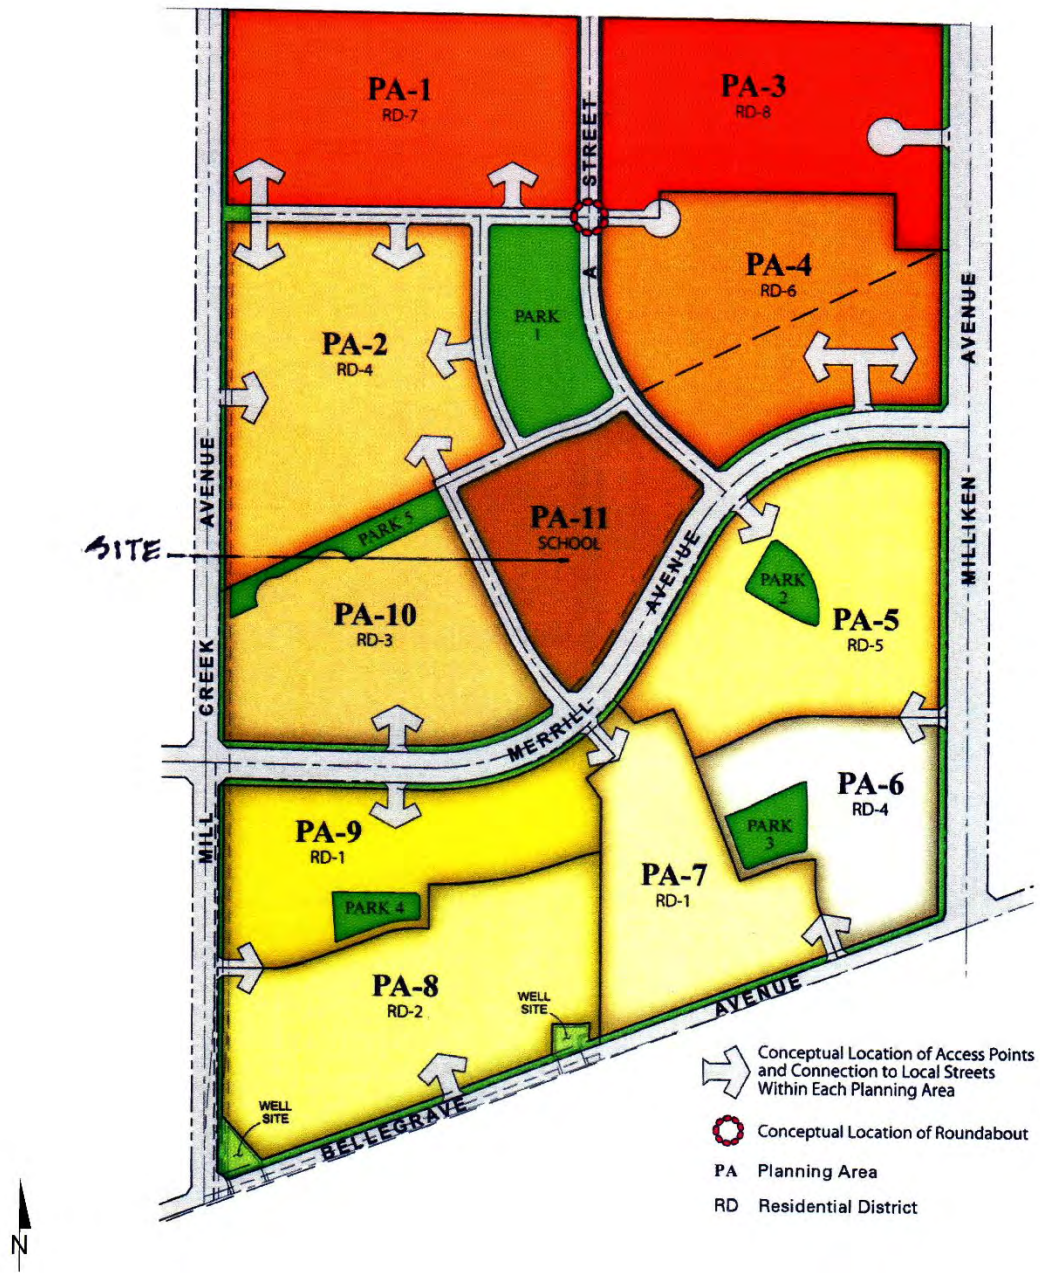
PROPOSED PROJECT

It is our understanding that the proposed Project is to consist of 161 multifamily residential dwelling units (with a density of approximately 16.1 dwelling units per net acre). The Project is located within the Esperanza Specific Plan. The original Specific Plan that was approved contemplated a 736-student elementary school within Planning Area 11. The land use will be updated from "School" to "MDR Medium Density Residential" consistent with the adjacent land use to the northeast. The Project is anticipated to be constructed in a single phase by the year 2029.

Exhibit 1 shows the preliminary site plan. For comparison purposes, Exhibit 2 shows the currently approved land use plan identifying Planning Area 11 with a school.

EXHIBIT 1: PRELIMINARY SITE PLAN

EXHIBIT 2: CURRENTLY APPROVED LAND USE PLAN



PROJECT GHG ANALYSIS

City of Ontario Community Climate Action Plan

The City of Ontario adopted the Community Climate Action Plan (CCAP) on December 16, 2014. The CAP contains further guidance on the City of Ontario's GHG Inventory reduction goals, policies, guidelines, and implementation programs. The purpose of the CAP is to provide guidance on how to analyze GHG emissions and determine significance during the CEQA review of proposed development projects within the City of Ontario (1). The CAP builds upon the Reduction Plan to address City-specific information and City-specific GHG reduction measures. To address the state's requirement to reduce GHG emissions, the City prepared its CAP with the goal of reducing GHG emissions within the City by 15% below 2008 levels by the year 2020. The City's target is consistent with the AB 32 target and ensures that the City of Ontario achieves GHG reductions locally that complement and are consistent with state efforts to reduce GHG emissions.

As part of the CAP, the City of Ontario published a guidance document titled "Greenhouse Gas Emissions, CEQA Thresholds and Screening Tables" (December 2014). As part of this guidance, the City determined that if GHG emissions of a given project exceeds 3,000 $MTCO_2e$/yr, then project emissions would need to be reduced by 25 percent when compared to year 2008 emissions levels. Alternatively, the project would need to achieve a minimum of 100 points pursuant to measures identified in the Screening Tables.

The Ontario Plan (TOP) 2050 includes an update to the City's Community Climate Action Plan (CCAP Update) which was adopted in 2014. The CCAP Update is a plan to reduce greenhouse gas (GHG) emissions and improve community resilience to hazardous conditions associated with climate change. The update to the CCAP includes updated emissions inventories; updated emissions forecasts; identifies GHG emissions reduction targets to achieve the GHG reduction goals of the City of Ontario consistent with Senate Bill 32, Executive Order S-03-05, and substantial progress toward the State's carbon neutrality goals of Executive Order B-55-18; and measures, that when quantified, achieve the GHG reduction targets for the City. As noted in The Ontario Plan 2050 Final Supplemental Environmental Impact Report (SCH No. 2021070364) certified by the City in 2022 (TOP 2050 SEIR), the measures included in the 2022 CCAP Update are not substantially different than that of the 2014 CCAP and therefore there is no change in the environmental impacts associated with the CCAP.

GHG IMPACTS

Standards of Significance

According to the CEQA Guidelines Appendix G thresholds, to determine whether impacts from GHG emissions are significant. Would the project:

- **Threshold 1**: Generate GHG emissions, either directly or indirectly, that may have a significant impact on the environment?
- **Threshold 2**: Conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of GHGs?

The evaluation of an impact under CEQA requires measuring data from a project against both existing conditions and a "threshold of significance." For establishing significance thresholds, the Office of

Planning and Research's amendments to the CEQA Guidelines Section 15064.7(c) state "[w]hen adopting thresholds of significance, a lead agency may consider thresholds of significance previously adopted or recommended by other public agencies, or recommended by experts, provided the decision of the lead agency to adopt such thresholds is supported by substantial evidence."

CEQA Guidelines Section 15064.4(a) further states, ". . . A lead agency shall have discretion to determine, in the context of a particular project, whether to: (1) Use a model or methodology to quantify greenhouse gas emissions resulting from a project, and which model or methodology to use . . .; or (2) Rely on a qualitative analysis or performance-based standards."

CEQA Guidelines Section 15064.4 provides that a lead agency should consider the following factors, among others, in assessing the significance of impacts from greenhouse gas emissions:

- **Consideration #1:** The extent to which the project may increase or reduce greenhouse gas emissions as compared to the existing environmental setting.
- **Consideration #2:** Whether the project emissions exceed a threshold of significance that the lead agency determines applies to the project.
- **Consideration #3:** The extent to which the project complies with regulations or requirements adopted to implement a statewide, regional, or local plan for the reduction or mitigation of greenhouse gas emissions. Such regulations or requirements must be adopted by the relevant public agency through a public review process and must reduce or mitigate the project's incremental contribution of greenhouse gas emissions. In determining the significance of impacts, the lead agency may consider a project's consistency with the State's long-term climate goals or strategies, provided that substantial evidence supports the agency's analysis of how those goals or strategies address the project's incremental contribution to climate change and its conclusion that the project's incremental contribution is not cumulatively considerable.

As noted above, the update to the CCAP includes updated emissions inventories; updated emissions forecasts; identifies GHG emissions reduction targets to achieve the GHG reduction goals of the City of Ontario consistent with Senate Bill 32, Executive Order S-03-05, and substantial progress toward the State's carbon neutrality goals of Executive Order B-55-18; and measures, that when quantified, achieve the GHG reduction targets for the City. As noted in the TOP EIR, the measures included in the 2022 update to the CCAP are not substantially different than that of the 2014 CCAP. Because the 2022 Update to the CCAP addresses GHG emissions reductions and is consistent with the requirements of AB 32, SB 32, and international efforts to reduce GHG emissions, Projects that comply with the CCAP Update would have a less than significant GHG impact.

PROJECT GHG EMISSIONS

The estimated GHG emissions for the Project are summarized in Table 1. The estimated GHG emissions include emissions from Carbon Dioxide (CO_2), Methane (CH_4), Nitrous Oxide (N_2O), and Refrigerants (R). As shown on Table 1, the Project would generate a total of approximately 2,238.00 $MTCO_2e$/yr.

TABLE 1: TOTAL PROJECT GHG EMISSIONS

Source	Emissions (MT/year)				
	CO_2	CH_4	N_2O	Refrigerants	Total CO_2e
Annual construction-related emissions amortized over 30 years	50.28	1.79E-03	1.40E-03	2.30E-02	50.77
Mobile Source	1,800.46	0.07	0.08	2.09	1,828.80
Area Source	41.21	0.00	0.00	0.00	41.26
Energy Source	260.76	0.02	0.00	0.00	261.84
Water	10.91	0.22	0.01	0.00	17.97
Waste	10.62	1.06	0.00	0.00	37.17
Refrigerants	0.00	0.00	0.00	0.18	0.18
Total CO_2e (All Sources)	**2,238.00**				

GHG IMPACT ANALYSIS

Would the Project have the potential to generate direct or indirect GHG emissions that would result in a significant impact on the environment?

Would the Project have the potential to conflict with any applicable plan, policy or regulation of an agency adopted for the purpose of reducing the emissions of GHGs?

The purpose of the 2022 CCAP Update is to provide guidance on how to analyze GHG emissions and determine significance during the CEQA review of proposed development projects within the City. Because the 2022 CCAP Update addresses GHG emissions reductions and is consistent with the requirements of AB 32, SB 32, and international efforts to reduce GHG emissions, compliance with the CAP Update fulfills the description of mitigation found in the State CEQA Guidelines.

The Project will implement Screening Table Measures providing for the required points pursuant to the City Screening Tables. As such, the Project would be consistent with the GHG Development Review Process' requirement to achieve the requisite number of points and thus the Project is considered to have a less than significant individual and cumulatively considerable impact on GHG emissions.

LEVEL OF SIGNIFICANCE BEFORE MITIGATION

Potentially Significant.

MM GHG-1

Project development proposals shall implement Screening Table Measures that achieve the requisite points per the City's Community Climate Action Plan (CCAP) Screening Tables. The City shall verify that Screening Table Measures achieving the requisite points are incorporated in development plans prior to the issuance of building permit(s) and/or site plans (as applicable). The City shall verify implementation of the selected Screening Table Measures prior to the issuance of Certificate(s) of Occupancy. At the discretion of the City, measures that provide GHG reductions equivalent to GHG emissions reductions achieved via the Screening Table Measures may be implemented.

LEVEL OF SIGNIFICANCE AFTER MITIGATION

Less than Significant

GREENHOUSE GAS CONCLUSION

Results of the assessment indicate that the Project is not anticipated to result in a significant impact during operational activities associated with greenhouse gas and with implementation of MM GHG-1 a less than significant impact is expected.

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	19.8	annual days of extreme heat
Extreme Precipitation	3.10	annual days with precipitation above 20 mm

Sea Level Rise	—	meters of inundation depth
Wildfire	6.78	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (Radke et al., 2017, CEC-500-2017-008), and consider inundation location and depth for the San Francisco Bay, the Sacramento-San Joaquin River Delta and California coast resulting different increments of sea level rise coupled with extreme storm events. Users may select from four scenarios to view the range in potential inundation depth for the grid cell. The four scenarios are: No rise, 0.5 meter, 1.0 meter, 1.41 meters
Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	2	0	0	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	0	0	N/A
Wildfire	1	0	0	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	0	0	0	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	2	1	1	3

Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	1	1	2
Wildfire	1	1	1	2
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	1	1	1	2

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Exposure Indicators	—
AQ-Ozone	77.1
AQ-PM	93.4
AQ-DPM	57.1
Drinking Water	100.0
Lead Risk Housing	17.5
Pesticides	84.9
Toxic Releases	67.6
Traffic	18.1
Effect Indicators	—

CleanUp Sites	80.3
Groundwater	98.1
Haz Waste Facilities/Generators	86.6
Impaired Water Bodies	87.0

Traffic Access	23.0
Other Indices	—
Hardship	45.2
Other Decision Support	—

2016 Voting	74.7

7.3. Overall Health & Equity Scores

Metric	Result for Project Census Tract
CalEnviroScreen 4.0 Score for Project Location (a)	72.0
Healthy Places Index Score for Project Location (b)	55.0
Project Located in a Designated Disadvantaged Community (Senate Bill 535)	No
Project Located in a Low-Income Community (Assembly Bill 1550)	No
Project Located in a Community Air Protection Program Community (Assembly Bill 617)	No

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.
b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

7.4. Health & Equity Measures

No Health & Equity Measures selected.

7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

8. User Changes to Default Data

Screen	Justification
Land Use	Taken from site plan
Operations: Vehicle Data	Trip characteristics based on information provided in the Traffic Analysis
Operations: Hearths	SCAQMD Rule 445 no wood burning devices. Wood burning devices added to gas devices.
Operations: Refrigerants	Beginning 1 January 2025, all new air conditioning equipment may not use refrigerants with a GWP of 750 or greater.

Construction: Construction Phases	Based on client provided data, construction schedule to begin Q3 2026 and completed Q1 2029 Building Construction, Paving, and Architectural Coating overlap to present a conservative analysis
Construction: Off-Road Equipment	T/L/B replaced with Crawler Tractor to accurately calculate disturbance for Site Preparation and Grading phases. Standard 8 hours work days
Construction: Trips and VMT	Vendor Trips adjusted based on CalEEMod defaults for Building Construction and number of days for Site Preparation, Grading, and Building Construction

EXECUTIVE SUMMARY

SCS Engineers (SCS) was retained by GDC Investments to prepare a Phase I Environmental Site Assessment (Phase I ESA) of a 10.02-acre site located at the northeast corner of Amherst Avenue and Eucalyptus Avenue, Ontario, California (the "Subject Property" or "Property"). This assessment was performed in conformance with 40 CFR 312, Standards for Conducting All Appropriate Inquiries, and in general conformance with ASTM E1527-21.

The Property is located on the northeastern side of Amherst Avenue, immediately north of the intersection with Eucalyptus Avenue. According to tax assessor information reviewed, it is 10.02 acres and is currently undeveloped, vacant land.

Based on the historical records reviewed, SCS identified no historical structures on the Property. It was undeveloped or agricultural land from at least 1902 through 2012. A row of trees functioning as a windbreak (likely eucalyptus trees) extended north-south across the eastern portion of the Property. Around 2016, grading activities were first visible on the eastern portion of the Property, associated with activities on the adjoining site to the east. Following 2016, much more extensive grading occurred and in 2020, hundreds of soil stockpiles were visible on the central and northern portions of the Property. The appearance of the stockpile coincided with the grading and paving of the adjoining streets and SCS considers it likely that the soil was from sites with similar history (undeveloped and/or agricultural land). Further grading occurred in 2021, which likely resulted in the export or blending of that that stockpiled soil. Since 2021, the Property has remained vacant and undeveloped, with relative low points at the northwestern and southeastern corners.

The Property was vacant and undeveloped at the time of the site inspection. A chain-link fence surrounds the Property with gate access in the northeastern corner. The Property is covered in low, grassy vegetation and bare soil, with small amounts of wind-blown trash observed on the outer edges of the Property (against the fence). A depression likely due to former grading activities was observed in the northwestern portion of the Property. Rumble grates were also noted in the northeastern corner. A sloped area was observed on the southeastern boundary of the Property. A storm drain was noted in the southwestern corner of the Property.

Regulatory database information identified no known and suspected contamination sites in the area surrounding the Property. Based on a review of the available information, it is unlikely that any of these sites has negatively affected the environmental condition of the Property.

Conclusions

In summary, SCS performed a Phase I ESA of a 10.02-acre site located at the northeast corner of Amherst Avenue and Eucalyptus Avenue, Ontario, California, in conformance with the scope and limitations of 40 CFR 312 and ASTM E1527-21. Any exceptions or deviations are described in Section 8 of this report.

In the opinion of the Environmental Professional, this assessment has revealed no recognized environmental conditions, controlled recognized environmental conditions, or significant data gaps in connection with the Property. Further investigation is not recommended.

1 INTRODUCTION

SCS Engineers (SCS) was retained by GDC Investments (the "User") to prepare a Phase I Environmental Site Assessment (Phase I ESA) of a 10.02-acre site located at the northeast corner of Amherst Avenue and Eucalyptus Avenue, Ontario, California (the "Subject Property" or "Property"). A location map for the Property is presented as **Figure 1** in **Appendix A**. This assessment was performed in conformance with 40 CFR 312, Standards for Conducting All Appropriate Inquiries (AAI), and in general conformance with ASTM International (ASTM) E1527-21.

PURPOSE

This Phase I ESA is intended to constitute appropriate inquiry into the previous ownership and uses of the Property, as required to support the assertion of the innocent landowner, contiguous property owner, and/or bona fide prospective purchaser defenses to liability (collectively, the landowner liability protections, or LLPs) under the Comprehensive Environmental Response, Compensation, and Liability Act of 1980 (CERCLA, a.k.a. Superfund), as amended by the Superfund Amendments and Reauthorization Act of 1986 (SARA), and the Small Business Liability Relief and Brownfields Revitalization Act of 2002.

The purpose of this investigation was to identify conditions indicative of the presence of hazardous substances as defined in CERCLA Section 101, and petroleum products, in, on, or at the Subject Property due to a release, likely release, or material threat of a future release to the environment.

If known or suspected contamination is identified, a User seeking to maintain LLPs has responsibilities in addition to completion of an AAI-compliant Phase I ESA. These "continuing obligations" include taking "appropriate care" and "reasonable steps" with respect to known or suspected releases of hazardous substances or petroleum products during the term of property ownership. In addition to these requirements under federal law, there are different requirements under state law with respect to liability protections. If warranted, SCS can provide support for clients with continuing obligations, as appropriate.

SCOPE OF SERVICES

This Phase I ESA is based on:

- Interviews with past and/or present owners, operators, and/or occupants of the Property.
- Reviews of federal, tribal, state, and local government records.
- Visual inspection of the Subject Property and adjoining sites performed on February 27, 2025.
- Review of historical Property use information (topographic maps, aerial photographs, fire insurance maps, previous environmental reports, etc.).
- Commonly known or reasonably ascertainable information about the Property (e.g., interviews with appropriate regulatory agency personnel, review of readily available agency files and documents, interviews with other knowledgeable persons, etc.).
- Degree of obviousness of the presence or likely presence of releases or threatened releases of hazardous substances or petroleum products at the Subject Property and the ability to detect releases or threatened releases by appropriate investigation.
- Information provided as a result of the additional inquiries conducted by the User.

- Review of environmental liens, if provided or authorized to obtain by the User.

SPECIAL TERMS AND CONDITIONS

This Phase I ESA for the 10.02-acre site at the northeast corner of Amherst Avenue and Eucalyptus Avenue, located in Ontario, California, has been prepared specifically for GDC Investments. The report has been prepared in accordance with the care and skill generally exercised by reputable professionals, under similar circumstances, in this or similar localities. No other warranty, express or implied, is made as to the professional opinions presented herein.

No other party, known or unknown to SCS, is intended as a beneficiary of this report. Third parties use this report at their own risk. SCS assumes no liability of any kind with respect to such use. Third party reliance letters may be issued on request to SCS subject to approval of GDC Investments and payment to SCS of a fee for such letters.

LIMITATIONS AND ASSUMPTIONS

The assessment focuses on releases and threatened releases of hazardous substances or petroleum products that could be considered a recognized environmental condition (REC) and/or a liability due to their possible presence in significant concentrations (e.g., above acceptable limits set by applicable regulatory authorities) or due to the potential for contaminant migration through exposure pathways (e.g., soil vapor migration or groundwater ingestion). Materials that may contain substances not currently deemed hazardous by the U.S. Environmental Protection Agency (U.S. EPA) or the California Environmental Protection Agency (CalEPA) were not considered as part of this study.

Unless specifically included in our scope of services, formal surveys for asbestos-containing materials (ACMs), lead-based paint (LBP), water supply plumbing, mold, indoor air quality, and similar matters are not part of this assessment. SCS did not evaluate the Subject Property for compliance with land use, zoning, wetlands, or similar laws. This report is not intended to be an environmental compliance audit.

Hazardous substances naturally occurring in plants, soils, and rocks (e.g., heavy metals, naturally occurring asbestos, radon, etc.) are not typically considered in a Phase I ESA. Similarly, construction debris (e.g., discarded concrete, asphalt, etc.) is not considered a concern unless observations suggest that hazardous substances are likely to be present in significant concentrations.

Unless otherwise noted, sampling and laboratory analyses of soil, water, air, building materials, or other media, were not performed as part of this investigation. Positive identification of hazardous substances can only be accomplished through sampling and appropriate laboratory analysis.

SCS assumes no responsibility for the accuracy of information obtained from, compiled by, or provided by third-party sources, including regulatory agency listings. SCS assumes that information collected during this Phase I ESA is accurate and correct, unless SCS determines that reliable information exists to the contrary or the information is obviously inaccurate. Additional information subsequently provided, discovered, or produced may alter findings or conclusions made in this Phase I ESA report. Unless warranted, information collected has not been independently validated as part of this assessment. SCS is not responsible for consequences or conditions arising from facts that were not fully disclosed to SCS during the assessment.

PHASE I ESA VIABILITY

This Phase I ESA is based on conditions at the time the individual elements of the report were completed. A Phase I ESA that meets or exceeds the requirements of ASTM E1527-21 and 40 CFR 312 is presumed to be viable when it is conducted within 180 days of the date of the intended transaction (acquisition, lease, refinance, etc.). The completion dates for the Phase I ESA components with a 180-day shelf life are identified below.

Component of Phase I ESA with Shelf Life Requirement	Completion Date
Interviews	March 7, 2025
Review of Governmental and Historical Records	February 25, 2025
Visual Inspection	February 27, 2025
Declaration of Environmental Professional	March 14, 2025
Environmental Lien Search	Not provided by User

2 GENERAL SITE CHARACTERISTICS

SUBJECT PROPERTY LOCATION

The Property is located on the northeastern side of Amherst Avenue, immediately north of the intersection with Eucalyptus Avenue. It has been assigned San Bernardino County tax assessor parcel number (APN) 1073-101-05. An APN map is provided as **Figure 2** in **Appendix A**.

GENERAL SUBJECT PROPERTY DESCRIPTION

According to tax assessor information reviewed, the Property is 10.02 acres. It is currently undeveloped, vacant land.

ADJOINING SITE USE

- Northwest – Chatham Street immediately adjoins the Property to the northwest. Vacant lots are located across the street to the northwest.
- Northeast – Clifton Avenue immediately adjoins the Property to the northeast. Newly constructed townhomes and private roads are located across the street to the northeast.
- Southeast – Eucalyptus Avenue immediately adjoins the Property to the southeast. Multiple residential homes are located across the street to the southeast.
- Southwest – South Amherst Avenue immediately adjoins the Property to the southwest. Multiple residential homes are located across the street to the southwest.

PHYSICAL SETTING

Physiographic Setting

According to the U.S. Geological Survey (USGS), Corona North, California 7.5-minute topographic maps (**Appendix C**), the Property is located in the eastern portion of San Bernardino County at an

elevation of 713 feet above mean sea level. Site topography is generally flat with a slight regional slope to the south.

Geologic Characteristics

The Property is located within the Chino Basin, which is underlain by Pleistocene and Recent Age alluvial and terrace deposits. Younger alluvium varies in thickness from a few feet at the northern portion of the basin to more than 100 feet in the southern portion. Older alluvium can be more than 1,100 feet in thickness, and averages 500 feet in thickness across the basin.

Hydrogeologic Characteristics

According to Bulletin 118 - California's Groundwater of the California Department of Water Resources (CDWR), the Upper Santa Ana Valley Subbasin underlies the City of Ontario and is bounded by the Rialto-Colton Fault to the east. The Santa Ana Valley Subbasin sediment units include Holocene and Upper Pleistocene alluvium. According to information reviewed on the State Water Resource Control Board (SWRCB) GeoTracker website for a the Exelsior Farms leaking underground storage tank (LUST) case located at 7401 Hamner Avenue (approximately 3,000 feet southeast of the Property), in 2003, first groundwater was reported to be approximately 25 feet below ground surface (bgs) and flow direction was reported to be to the west. Based on its proximity and comparable elevation, first groundwater is likely at a similar depth beneath the Property. Groundwater flow direction likely follows the regional surface topography to the south, potentially with a westerly component.

3 SITE RECONNAISSANCE

Maddie Peterson of SCS conducted a reconnaissance of the Property and surrounding area on February 27, 2025. An aerial image showing the Property is provided as **Figure 3** in **Appendix A**. Photographs taken during the site reconnaissance are included in **Appendix B**.

GENERAL SITE INFORMATION

The Property was vacant and undeveloped at the time of the site inspection. A chain-link fence surrounds the Property with gate access in the northeastern corner. The Property is covered in low, grassy vegetation and bare soil, with wind-blown trash observed on the outer edges of the Property (up against the fence). A depression likely due to former grading activities was observed in the northwestern portion of the Property. Rumble grates were also noted in the northeastern corner.

A sloped area was observed on the southeastern boundary of the Property. A storm drain was noted in the southwestern corner of the Property.

POTABLE WATER SUPPLY

Drinking water is not currently supplied to the Property.

SEWAGE DISPOSAL SYSTEM

Sanitary wastewater is not currently generated at the Property.

PROCESS WASTEWATER

No industrial wastewater is generated on the Property.

HAZARDOUS SUBSTANCES AND PETROLEUM PRODUCTS

No hazardous substances or hazardous wastes were observed at the Property.

STORAGE TANKS

No evidence (fill ports, vent lines, or dispensers) of underground storage tanks (USTs) was observed on the Property. No aboveground storage tanks (ASTs) were observed on the Property.

ELECTRICAL EQUIPMENT (POLYCHLORINATED BIPHENYLS)

One dry-type transformer was found on the northeastern side of the Property.

ELEVATORS AND OTHER HYDRAULIC EQUIPMENT

No elevators or other hydraulic equipment were observed at the Property.

PITS, PONDS, OR LAGOONS

No pits, ponds, or lagoons were observed at the Property.

WELLS

No water supply wells or groundwater monitoring wells were observed on the Property or in the immediately surrounding area.

NATURAL DRAINAGE

Natural waterways are not currently located on the Property. Stormwater runoff from the Property flows to a stormwater drain found on the southwestern corner of the Property or the adjoining streets.

SOLID WASTE DUMPING, LANDFILLING, OR SUSPECTED FILL MATERIAL

No indication of solid waste dumping, landfilling or buried material was observed during the site reconnaissance.

VISUAL INSPECTION OF ADJOINING SITES

SCS viewed the adjoining sites from the Property and/or publicly accessible areas (e.g., public roadways, etc.). No obvious evidence of a REC or indications of contamination (e.g. remediation equipment, staining, USTs, etc.), were observed on adjoining sites during the site inspection.

4 INTERVIEWS

An Owner Questionnaire was provided to and completed by the owner of the Property, Mr. David Waters, and is included in **Appendix F**. Mr. Waters has owned the Property since 2010. Mr. Waters indicated that there have been no underground storage tanks, no knowledge of spills or releases to the Property, and the site was historically associated with a dairy farm but had ceased operations in the early 2000's (a reference to the historically adjoining dairy to the north). The site was graded around 2018 but no other site improvements were installed.

5 HISTORICAL RESEARCH

Site history was evaluated from the following sources:

- Historical aerial photographs provided by Environmental Data Resources (EDR; February 25, 2025).
- USGS topographic maps provided by EDR (February 25, 2025).
- A search was made of EDR-Sanborn fire insurance map collection and no maps of the Property were found (February 25, 2025).
- A city directory review report provided by EDR (February 25, 2025).
- As the Property has never before been developed with structures, no building permit information was identified. SCS searched the City of Ontario Department of Building and Safety online records database using the APN number and identified no records.

Copies of aerial photographs, topographic maps, and city directories are included in **Appendix C**.

Year	Description	Source
1897	The Property and adjoining sites were shown to be unmapped.	Topographic map
1900	The Property and adjoining sites were shown to be unmapped.	Topographic map
1902	The Property and adjoining sites were shown to be undeveloped land.	Topographic map
1903	The Property and adjoining sites were shown to be unmapped.	Topographic map
1931	The Property was undeveloped or agricultural land, with a row of trees crossing the eastern side north-south, likely functioning as a windbreak. Agricultural fields were noted on the adjoining sites to the northwest, southwest, southeast, and southwest.	Aerial photo
1938	No significant changes from the 1931 aerial photo were noted. A portion of the southern corner of the Property was not photographed. Agricultural fields were noted on the adjoining sites to the northwest, southwest, northeast and southeast. Portions of the adjoining site to the southwest and southeast were not photographed.	Aerial photo
1941	The Property and adjoining sites were shown to be unmapped.	Topographic map
1942	The Property and adjoining sites were shown to be undeveloped land. An unnamed road was noted to the south of the Property.	Topographic map
1944 and 1947	The Property was shown to be undeveloped land with a road depicted on the southwestern corner of the Property.	Topographic map

1948	The Property was agricultural, planted with row crops.	Aerial photo
1953	No significant changes from the 1948 aerial photo were noted on the Property or adjoining sites.	Topographic map and Aerial photo
1954	The Property and adjoining sites appeared to be unmapped.	Topographic map
1966	The Property appeared to be undeveloped land, with a trail running centrally through the Property. The previous unnamed road, known currently as Eucalyptus Avenue, was shown to the south of the Property.	Topographic map
1967	No significant changes from the 1953 aerial photo or 1966 topographic map were noted on the Property. A dirt path was noted separating the agricultural fields on the adjoining site to the southwest. The adjoining site to the northeast appeared to be graded.	Topographic map and Aerial photo
1973	The Property was shown to be an agricultural. The adjoining sites to the southwest and south were shown to be agricultural, with a structure noted on the adjoining site to the southwest. Long rectangular structures were depicted on the adjoining site to the northwest.	Topographic map
1975	The Property remained agricultural land. A new residential structure was noted on the adjoining site to the southwest. A dairy farm with feeding troughs and a central milking area was visible on the adjoining site to the northwest. Furrer L A was listed as an occupant on the adjoining site to the southeast under historical address 11121 Eucalyptus Avenue. Sherwin Westra was listed as an occupant on the adjoining site to the southwest under historical address 11022 Eucalyptus Avenue from 1975 to 1985. Jake J Westra was listed as an occupant on the adjoining site to the southwest under historical address 11060 Eucalyptus Avenue from 1975 to 1995.	Topographic map, Aerial photo, and City directory
1976	The Property and adjoining sites were shown to be unmapped.	Topographic map
1981	No significant changes from the 1975 topographic map were noted on the Property.	Topographic map
1985	No significant changes from the 1975 aerial photo were noted on the Property or adjoining sites. Diana Furrer was listed as an occupant on the adjoining site to the southeast under historical address 11121 Eucalyptus Avenue.	Aerial photo and City directory
1989	No significant changes from the 1985 aerial photo were noted on the Property or adjoining sites.	Aerial photo

1990	No significant changes from the 1989 aerial photo were noted on the Property or adjoining sites. The Furniture Shop and Irrer LA were listed as occupants on the adjoining site to the southeast under historical address 11121 Eucalyptus Avenue. Calvin Westra was listed as an occupant on the adjoining site to the southwest under historical address 11022 Eucalyptus Avenue from 1990 to 1995.	Aerial photo and City directory
1992	Harvey Hettinga was listed as an occupant on the adjoining site to the southeast under historical address 11101 Eucalyptus Avenue from 1992 to 1995.	City directory
1994	No significant changes from the 1990 aerial photo were noted on the Property or adjoining sites.	Aerial photo
1995	Pete Hettinga was listed as an occupant on the adjoining site to the southeast under historical address 11101 Eucalyptus Avenue from 1995 to 2000. Weirama Philip & Sandy were listed as occupants on the adjoining site to the southeast under historical address 11121 Eucalyptus Avenue.	City directory
2000	Hettinga Harvey Milk was listed as an occupant on the adjoining site to the southeast under historical address 11101 Eucalyptus Avenue.	City directory
2002	No significant changes from the 1994 aerial photo were noted on the Property or adjoining sites.	Aerial photo
2005	Wheelin and Deelin was listed as an occupant on the adjoining site to the southeast under historical address 11101 Eucalyptus Avenue.	City directory
2006	No significant changes from the 2002 aerial photo were noted on the Property or adjoining sites.	Aerial photo
2009	The agricultural field and vegetation on the Property was removed. The Property appeared to be graded. The adjoining site to the southwest appeared to be graded.	Aerial photo
2010	Occupant Unknown was listed as an occupant on the adjoining site to the southeast under historical address 11101 Eucalyptus Avenue.	City directory
2012	The 2012 topographic map does not include Site-specific details. The western side of the Property was fallow agricultural land. The eastern side of the Property was still part of agricultural field, separated by a dirt path that runs north to south, where the windbreak trees were historically located.	Topographic map and Aerial photo
2015	The 2015 topographic map does not include Site-specific details.	Topographic map
2016	The Property was undeveloped land and no longer appeared to be used for agriculture purposes. Grading activities were visible on the eastern portion of the Property, associated with additional grading activities offsite to the east.	Aerial photo

	With the exception of grading to the east-southeast, no other significant changes were noted on the adjoining sites.	
2018	The 2018 topographic map does not include Site-specific details.	Topographic map
2020	The Property had been much more extensively graded, with a depression filled with rainwater on its northwestern side. Hundreds of soil stockpiles were present on the central and north-central portions of the Property. Eucalyptus Avenue was developed in its current configuration to the southeast of the Property. Amherst Avenue was newly paved to the southwest of the Property. Residential homes were under developed across the streets to the southwest and southeast.	Aerial photo
2021 and 2022	The 2021 topographic map does not include Site-specific details. Google Earth aerial photographs showed that Property was further graded and the stockpiles present in the 2020 aerial photo were no longer visible. They were either removed from the Property or blended into it during further onsite grading. Additional residential development on adjoining sites was visible.	Topographic map and Google Earth aerial photos
2023	No significant changes from the 2020 aerial photo was noted on the Property. The dairy farm on the adjoining site to the northwest was removed. Grading activities were observed on the adjoining sites to the northwest and the northeast. Multiple residential homes were developed on the adjoining sites to the southwest and southeast.	Google Earth aerial photo
2024	The Property remains undeveloped land that appeared to be graded. Residential homes were constructed on the adjoining sites to the northwest and northeast. A small park is located on the adjoining site to the northwest.	Google Earth aerial photo

SUBJECT PROPERTY HISTORICAL USE SUMMARY

Based on the historical records reviewed, SCS identified no historical structures on the Property. It was undeveloped or agricultural land from at least 1902 through 2012. A row of trees functioning as a windbreak (likely eucalyptus trees) extended north-south across the eastern portion of the Property. Around 2016, grading activities were first visible on the eastern portion of the Property, associated with activities on the adjoining site to the east. Following 2016, much more extensive grading occurred and in 2020, hundreds of soil stockpiles were visible on the central and northern portions of the Property. The appearance of the stockpile coincided with the grading and paving of the adjoining streets and SCS considers it likely that the soil was from sites with similar history (undeveloped and/or agricultural land). Further grading occurred in 2021, which likely resulted in the export or blending of that that stockpiled soil. Since 2021, the Property has remained vacant and undeveloped, with relative low points at the northwestern and southeastern corners.

The existence of past agricultural activities on the Property and in adjacent areas indicates a potential for pesticide and/or heavy metal (associated with dusting powders) contamination. In SCS's experience, it is not uncommon to find trace levels of pesticides in soils at former agricultural areas in Southern California. However, these trace concentrations are rarely cause for environmental concern. Additionally, Department of Toxic Substances Control (DTSC) has issued an Interim Guidance for Sampling Agricultural Properties (DTSC, August 7, 2008) which states that the guidance "does not apply to disturbed land, such as, land that has been graded in preparation for construction, areas where imported soil has been brought in, or any other activity that would redistribute or impact the soil, other than normal agricultural practices, such as disking and plowing." It is our opinion that, given the extensive grading that has occurred at the Property and without specific evidence of bulk pesticide storage or mismanagement on the Property, past use for agricultural purposes does not represent a significant environmental concern and collection and analysis of soil samples for pesticides is unwarranted.

HISTORICAL USE OF ADJOINING SITES

The adjoining sites were undeveloped from at least 1902 to 1931. Between the 1930s and early 2000s, they were primarily used for agriculture. Around 1973, a dairy farm was established on the adjoining site to the northwest, and a structure was observed on the adjoining site to the southwest. The sites continued as agricultural land until at least 2016, when the adjoining sites to the southwest, northeast, and southeast appeared to be graded. The dairy farm remained operational on the northwest site until approximately 2022. In 2023, new residential homes were built on the adjoining sites to the southwest and southeast, followed by additional residential construction on the northwest and northeast sites in 2024.

6 RECORD REVIEW

PREVIOUS ENVIRONMENTAL REPORTS

The User provided the following two previous environmental reports to SCS:

- David J. Tanner & Associates, Inc., January 9, 2003. Phase I Environmental Site Assessment, Assesors Parcel No's 0128-252-03, 05, 05, 0128-332-01, 02, 03 & 04, City of Ontario, California.

- LGC Geo-Environmental, Inc., August 26, 2014. Updated Methane Site Assessment for the Proposed "Esperanza West" Residential Development, Located at the Northeast Corner of Cleveland Avenue and Bellgrave Avenue, APN's 0218-332-11 and 0218-252-17, City of Ontario, San Bernardino County, California.

The Tanner & Associates 2003 Phase I ESA was prepared for Forecast PPI and covered a much larger land area (139 acres) extending from Mill Creek Avenue to the west to Hamner Avenue to the east, and from Bellegrave Avenue to the south to what is now Chatham Avenue to the north. Tanner & Associated identified multiple residences (with suspected lead-based paint and asbestos), diesel fuel tanks, diesel pumps, a few 55-gallon drums, diesel farm equipment, animal carcasses, unauthorized dumping (primarily south of Eucalyptus Avenue), etc. None of these features appears to have been related to the Subject Property of the current Phase I ESA. The report concluded that there was no obvious evidence of a REC.

The Methane report included coverage of the Property, but identified only areas to the south of Eucalyptus Avenue as areas associated with historical Dairy operations that might have potential

methane gas. SCS concurs with this conclusion. SCS identified no evidence that the Property was historically used for dairy operations.

REGULATORY AGENCY RECORDS

Local regulatory agencies and other sources were reviewed in an effort to identify any known or suspected contamination sites or incidents of hazardous waste storage or disposal, which might have resulted in soil and/or groundwater contamination, or volatile organic compound (VOC) vapor migration to the Subject Property. Generally, this includes records for the Property and adjacent parcels, although relevant information for other sites of possible interest in the area (up to one mile) may also be included. Within the City of Ontario, the San Bernardino County Fire Department (SBCFD) generally acts as the lead enforcement agency for UST compliance. If a tank has leaked and groundwater contamination is suspected, the Santa Ana Regional Water Quality Control Board (SARWQCB) generally becomes the lead agency in supervising contaminant characterization and cleanup.

California Environmental Protection Agency

The Property is not a listed site on the California Environmental Protection Agency (CalEPA) Regulated Site Portal website (**Appendix D**).

Santa Ana Regional Water Quality Control Board

The Property does not appear as a listed site on the State Water Resources Control Board (SWRCB) GeoTracker website. Recent SARWQCB case files, if any, would be listed on this website (**Appendix D**).

A request to review SARWQCB files was submitted and no files were found for the APN associated with the Property (**Appendix D**).

Department of Toxic Substances Control

The Property does not appear as a listed site on the California Department of Toxic Substances Control (DTSC) EnviroStor website. Recent DTSC case files, if any, would be listed on this website (**Appendix D**).

A request to review DTSC files was submitted and no files were found for the APN associated with the Property (**Appendix D**).

South Coast Air Quality Management District

The Property does not appear as a listed facility on the South Coast Air Quality Management District (AQMD) online Facility INformation Detail (FIND) website (**Appendix D**).

San Bernardino County Fire Department Files

Since the Property has never been developed and has no history of activities of concern, a request for records was not submitted to the SBCFD.

San Bernardino County Department of Environmental Health

A request to review San Bernardino County Department of Environmental Health (SBCDEH) files were submitted and no files were found for the APN associated with the Property. (**Appendix D**).

California Department of Conservation, Geologic Energy Management Division

Available oil and gas well maps from the California Department of Conservation, Geologic Energy Management Division (CalGEM) were reviewed to identify oil and gas wells on the Property or in the nearby area. According to the CalGEM Well Finder online database, the Property is not located within the boundaries of a delineated oil and gas field.

A map showing the location of the Property relative to nearby oil and gas wells is provided in **Appendix D**. One oil and gas production well was drilled approximately 0.77 miles to the southeast of the Property. It is identified as a dry, plugged well. No other oil or gas wells were identified within one mile of the Property. Based on the available information, no significant environmental impacts to the Property are anticipated from oil and gas wells.

National Pipeline Mapping System

SCS reviewed the National Pipeline Mapping System (NPMS) website for the Property and surrounding area to identify any hazardous materials pipelines. The NPMS is a geographic information system (GIS) created by the U.S. Department of Transportation, Pipeline and Hazardous Materials Safety Administration (PHMSA), and Office of Pipeline Safety (OPS) in cooperation with other federal and state governmental agencies and the pipeline industry. The NPMS consists of geospatial data, attribute data, public contact information, and metadata pertaining to the interstate and intrastate hazardous liquid trunklines and hazardous liquid low-stress lines, as well as gas transmission pipelines, liquefied natural gas (LNG) plants, and hazardous liquid breakout tanks (tanks that receive and store liquids transported by pipeline) jurisdictional to PHMSA. The nominal accuracy of geospatial data in the NPMS is +/-500 feet. The NPMS does not contain information on interconnects, pump and compressor stations, valves, direction of flow, capacity, throughput, or operating pressure. In addition, distribution and gathering pipelines are not included in the NPMS.

The NPMS is built from data submitted by pipeline, LNG plant, and breakout tank facility operators. Since 2002, transmission pipeline and LNG plant facility operators are required to submit mapping information to the NPMS and to update their submissions annually. Breakout tank operators are able to submit data to the NPMS on a voluntary basis.

Based on review of the NPMS website, one West Coast Terminals pipeline (Pipeline ID No.: 1825) is located along Edison Avenue that was permanently abandoned in 1957, approximately 0.33 miles to the north of the Property (**Appendix D**). The website does not contain any information about releases from these pipelines. Based on the available information, no negative environmental affects to the Property are anticipated from these pipelines.

DATABASE SEARCH

A database search for sites listed on various federal, state, tribal, and local databases in the area around the Property was obtained from EDR (February 25, 2025). A description of each of the databases searched is included in the report, which is attached as **Appendix E**. Among the databases

included in the EDR report are NPL (federal, tribal, and state-equivalent), proposed and delisted NPL, CORRACTS (RCRA facilities subject to corrective actions), hazardous waste sites identified for investigation or remediation (SEMS [Superfund Enterprise Management System, formerly known as CERCLIS], State CERCLIS, VCP, Brownfields, etc.), LUST, sites with engineering controls, former CERCLIS (NFRAP), RCRA and state hazardous waste generators, ERNS, SWLF, USTs, and Toxic Pits.

Review of these records satisfies all requirements as set forth in 40 CFR Section 312.26 (b) and (c) with regard to the review of federal, tribal, and state government records of databases of such government records and local government records and databases of such records pertaining to both the Property and the nearby or adjoining properties. Further, the search distances for each particular database are as specified in 40 CFR 312.26 and ASTM E1527-21.

Any known or suspected contaminated sites included on these lists within 0.25 miles of the Property are discussed in the following text. As a general rule, sites beyond 0.25 miles are not anticipated to impact a site significantly. Any sites beyond 0.25 miles with a high potential to impact the Property are also discussed. Please note: the distances and directions listed in this report have been field verified and might not always match those in the EDR report.

Sites such as TSD facilities, hazardous waste generators, HAZNET, FINDS, SQGs, LQGs, USTs, HIST UST, RCRA violations, and TRIS facilities with toxic chemical releases (generally in accordance with permitting requirements - into the air, water, or land as reported under SARA Title III) use or store hazardous materials and thus may pose a potential problem in the event of a spill or leak. However, unless these sites also appear in an agency list of contaminated sites, there is no evidence of any problems at this time. Therefore, sites on these lists will not be discussed unless on or in close proximity to the Property.

Please refer to **Appendix E** for further information on these sites.

Property Listings

The Subject Property is not listed in any of the databases searched by EDR.

Adjoining Site Listings

The adjoining sites are not listed in any of the databases searched by EDR.

Other Database Sites

The EDR report provides a summary table of regulatory database sites within specified distances of the Property, including standard environmental records, additional environmental records, high risk historical records, and recovered governmental records. This summary table is provided beginning on Page 4 of the EDR report (**Appendix E**).

Several sites located within 0.25 miles of the Property are listed in databases associated with known releases of hazardous substances such as LUST, UST FINDER RELEASE, and ENVIROSTOR, but are located relatively cross- or downgradient, or based on case status and/or distance are not anticipated to negatively affect the environmental condition of the Property. Several sites located within 0.25 miles also appear in databases not typically associated with documented releases, such as Cortese, Hist Cortese, CERS, ENF, San Bern Co. Permit, WDS, CIWQS, PFAS, SCH, and Notify 65. Based on a review of the database information, none of these sites are known to have any contamination at this time; therefore, none are anticipated to have negatively affected the

environmental condition of the Property. None of the sites situated beyond 0.25 miles are anticipated to have impacted the Property.

Unmappable or Orphan Sites

Three unmappable sites were identified in the EDR report. Unmappable sites cannot be plotted due to inaccurate or incomplete addresses. Based on review of the provided data, including the estimated locations of the unmappable sites in relation to the Property, it appears unlikely that the unmappable sites have adversely affected the environmental condition of the Property.

7 USER PROVIDED INFORMATION

The following information is the responsibility of the User (40 CFR 312.22) and is addressed in a questionnaire provided to the User and attached to this report as **Appendix F**:

- Identification of environmental cleanup liens against the Subject Property.
- Specialized knowledge or experience of the User.
- The relationship of the purchase price to the fair market value of the Subject Property.

A User Questionnaire was completed by Mr. David Waters and is included in **Appendix F**. The provided information is discussed below.

TITLE RECORDS

No title report was provided to SCS for review.

ENVIRONMENTAL LIENS OR ACTIVITY AND USE LIMITATIONS

No information regarding environmental liens or activity and use limitations was provided to SCS. No environmental liens or activity/use limitations were identified by SCS during the course of this assessment.

SPECIALIZED KNOWLEDGE OR EXPERIENCE

As described above, Mr. Waters indicated specialized knowledge of the Property in which the Property was historically a dairy farm operation, however, this appears to be a reference to its relationship with a much larger land area. Mr. Waters indicated that the dairy operations ceased sometime in the early 2000s, prior to their ownership. During their ownership the site was graded along with the surrounding land, however, no improvements other than those currently in place on the perimeter were installed. No other specialized knowledge regarding RECs or other environmental issues that could materially impact the current or future use of the Subject Property or have an impact on the current real estate transaction was noted by Mr. Waters.

VALUATION REDUCTION FOR ENVIRONMENTAL ISSUES

Mr. Waters is not aware of any environmental issues that would dimmish the Property value. No other property valuation information was provided to SCS.

8 DATA GAPS AND DEVIATIONS

Certain other limitations could affect the accuracy and completeness of this report, as follows:

- Site Access Limitations – None.
- Physical Obstructions to Observations – None.
- Outstanding Information Requests – None.
- Historical Data Sources Failure – SCS attempted to review the referenced historical sources (i.e., aerial photographs, topographic maps, city directories, etc.) in a minimum of five-year increments. Breaches in the sequence of reviewed sources are due to the limitations of the referenced collections. Based on the available information, this is not considered a significant data gap.
- Other Limitations – None.

9 FINDINGS AND OPINIONS

Based on the scope of work performed, SCS finds the following:

SCS was retained by GDC Investments to prepare a Phase I ESA of a 10.02-acre site located at the northeast corner of Amherst Avenue and Eucalyptus Avenue, Ontario, California (the "Subject Property" or "Property"). This assessment was performed in conformance with 40 CFR 312, Standards for Conducting All Appropriate Inquiries, and in general conformance with ASTM E1527-21.

The Property is located on the northeastern side of Amherst Avenue, immediately north of the intersection with Eucalyptus Avenue. According to tax assessor information reviewed, it is 10.02 acres and is currently undeveloped, vacant land.

Based on the historical records reviewed, SCS identified no historical structures on the Property. It was undeveloped or agricultural land from at least 1902 through 2012. A row of trees functioning as a windbreak (likely eucalyptus trees) extended north-south across the eastern portion of the Property. Around 2016, grading activities were first visible on the eastern portion of the Property, associated with activities on the adjoining site to the east. Following 2016, much more extensive grading occurred and in 2020, hundreds of soil stockpiles were visible on the central and northern portions of the Property. The appearance of the stockpile coincided with the grading and paving of the adjoining streets and SCS considers it likely that the soil was from sites with similar history (undeveloped and/or agricultural land). Further grading occurred in 2021, which likely resulted in the export or blending of that that stockpiled soil. Since 2021, the Property has remained vacant and undeveloped, with relative low points at the northwestern and southeastern corners.

The Property was vacant and undeveloped at the time of the site inspection. A chain-link fence surrounds the Property with gate access in the northeastern corner. The Property is covered in low, grassy vegetation and bare soil, with small amounts of wind-blown trash observed on the outer edges of the Property (against the fence). A depression likely due to former grading activities was observed in the northwestern portion of the Property. Rumble grates were also noted in the northeastern corner. A sloped area was observed on the southeastern boundary of the Property. A storm drain was noted in the southwestern corner of the Property.

Regulatory database information identified no known and suspected contamination sites in the area surrounding the Property. Based on a review of the available information, it is unlikely that any of these sites has negatively affected the environmental condition of the Property.

10 CONCLUSIONS

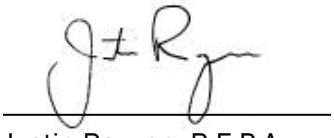
In summary, SCS performed a Phase I ESA of the property located at the 10.02-acre site at the northeast corner of Amherst Avenue and Eucalyptus Avenue, located in Ontario, California, in conformance with the scope and limitations of 40 CFR 312 and ASTM E1527-21. Any exceptions or deviations are described in Section 8 of this report.

In the opinion of the Environmental Professional, this assessment has revealed no recognized environmental conditions, controlled recognized environmental conditions, or significant data gaps in connection with the Property. Further investigation is not recommended.

11 DECLARATION OF ENVIRONMENTAL PROFESSIONAL

This Phase I ESA report for the property located at the 10.02-acre site at the northeast corner of Amherst Avenue and Eucalyptus Avenue, Ontario, California dated March 14, 2024, was prepared by Maddie Peterson and reviewed by Justin Rauzon.

I declare that, to the best of my professional knowledge and belief, I meet the definition of Environmental Professional as defined in §312.10 of 40 CFR 312. I have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. I have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312. The resume for the individual below is included in **Appendix G.**



Justin Rauzon, R.E.P.A.
Senior Project Manager
SCS ENGINEERS

13 GLOSSARY

AAI – All Appropriate Inquiry

AUL – Activity and Use Limitations

BER – Business environmental risk. As defined in ASTM E1527-21, a risk which can have a material environmental or environmentally-driven impact on the business associated with the current or planned use of commercial real estate, not necessarily related to those environmental issues required to be investigated in the ASTM E1527-21 practice.

BTEX – Benzene, toluene, ethylbenzene, and total xylenes

CERCLA – Comprehensive, Environmental Response, Compensation, and Liability Act

CERCLIS – Comprehensive Environmental Response, Compensation, and Liability Information System

CFR – Code of Federal Regulations

CORRACTS – Corrective Action Against Responsible Parties at a RCRA site

CREC – Controlled Recognized Environmental Condition. As defined in ASTM E1527-21, a recognized environmental condition affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority, or authorities with hazardous substances or petroleum products allowed to remain in place subject to implementation of required controls (for example, activity use limitations, or other property use limitations).

De Minimis Condition – A condition related to a release that generally does not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. A condition determined to be a *de minimis condition* is not a recognized environmental condition nor a controlled recognized environmental condition.

DTSC – California EPA Department of Toxic Substances Control

EDR – Environmental Data Resources, Inc.

ERNS – Emergency Response Notification System

ESA – Environmental Site Assessment

FINDS – Facility Index System

HAZNET – California EPA Hazardous Waste Facility and Manifest Data

HREC – Historical Recognized Environmental Condition. As defined in ASTM E1527-21, a previous release of hazardous substances or petroleum products affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities and meeting unrestricted use criteria established by the applicable regulatory authority or

authorities without subjecting the subject property to any controls (for example, activity use limitations or other property use limitations).

LQG – Large Quantity Hazardous Waste Generator

LUST – Leaking Underground Storage Tank

MCL – Maximum contaminant level

MTBE – Methyl-tert-butyl-ether

NFA – No Further Action determination

NFRAP – No Further Remedial Action Planned

NPL – National Priority List (Superfund)

PAHs – Polynuclear aromatic hydrocarbons

PCBs – Polychlorinated biphenyls

RCRA – Resource Conservation and Recovery Act

RCRIS – Resource Conservation and Recovery Information System

REC – Recognized environmental condition. As defined by ASTM E1527-21, a REC means (1) the presence of hazardous substances or petroleum products in, on, or at the subject property due to a release to the environment; (2) the likely presence of hazardous substances or petroleum products in, on, or at the subject property due to a release or likely release to the environment; or (3) the presence of hazardous substances or petroleum products in, on, or at the subject property under conditions that pose a material threat of a future release to the environment. A *de minimis condition* is not a recognized environmental condition.

ROD – Record of Decision

RBSLs – Risk-based Screening Levels

RSLs – Regional Screening Levels

RWQCB -- Regional Water Quality Control Board

SARA – Superfund Amendments and Reauthorization Act

SLIC -- Spills, Leaks, Investigations, and Cleanups database

SQG – Small Quantity Hazardous Waste Generator

SWIS – Solid Waste Information System

SWLF – Solid Waste Facility/Landfills

TPH – Total Petroleum Hydrocarbons

TRIS – Toxic Release Inventory System

TSD – Treatment, Storage, and/or Disposal Facility

User – As defined in ASTM E1527-21, the party seeking to use Practice E1527 to complete an environmental site assessment of the subject property.

U.S. EPA – United States Environmental Protection Agency

USGS – United States Geologic Survey

UST – Underground Storage Tank

VCP – Voluntary Cleanup Program

VOCs – Volatile organic compounds

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at approximately five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1922 through current. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 1320 feet of the target property.

Summary information obtained is provided in the text of this report.

RECORD SOURCES

The EDR City Directory Report accesses a variety of business directory sources, including Haines, InfoUSA, Polk, Cole, Bresser, and Stewart. Listings marked as EDR Digital Archive access Cole and InfoUSA records. The various directory sources enhance and complement each other to provide a more thorough and accurate report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer.

EDR Topographic Map Library has been searched by EDR and maps covering the target property location as provided by SCS Engineers were identified for the years listed below. EDR's Historical Topo Map Report is designed to assist professionals in evaluating potential liability on a target property resulting from past activities. EDRs Historical Topo Map Report includes a search of a collection of public and private color historical topographic maps, dating back to the late 1800s.

EDR Inquiry # 7908232.3	Contact: Jose William Padua

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by SCS Engineers were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Certified Sanborn Results:

Certification # 3ADF-461D-86D6

PO # 01225043.00 T1

Project Armherst Ave & Eucalyptus Ave

UNMAPPED PROPERTY

This report certifies that the complete holdings of the Sanborn Library, LLC collection have been searched based on client supplied target property information, and fire insurance maps covering the target property were not found.

Sanborn® Library search results

Certification #: 3ADF-461D-86D6

The Sanborn Library includes more than 1.2 million fire insurance maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow and others which track historical property usage in approximately 12,000 American cities and towns. Collections searched:

- ☑ Library of Congress
- ☑ University Publications of America
- ☑ EDR Private Collection

PR4-022425-03

Dear Requestor:

On Jan 24, 2025, the Department of Toxic Substances Control (DTSC) received your email requesting records under the Public Records Act. After a thorough review of our files, *no site records* were found pertaining to the sites/facilities referenced below.

1073-101-05 Ontario

We were unable to locate an address in the county database using the APNs provided and we are unable to search our records using APNs as our databases do not include this information.

A large number of our records are available on EnviroStor, an online database that provides non-confidential, public access to DTSCs data management system. It tracks our cleanup, permitting, enforcement, and investigation efforts at hazardous waste facilities and sites with known or suspected contamination issues. EnviroStor is available 24/7, 365 days a year. The data reflects the latest updates as they are entered in the system. Access it from your computer or smartphone, the local library – anywhere Internet access is available. Just go to www.envirostor.dtsc.ca.gov. You'll find a step-by-step tour of EnviroStor under the "How to Use EnviroStor" menu on the website.

If you have any questions or would like further information regarding your request, please contact me at 714.484.5336 or via email at jone.barrio@dtsc.ca.gov .

Sincerely,
Jone Barrio

This email originated from outside of SCS Engineers. Do not click links or open attachments unless you recognize the sender and know the content is safe.

Good morning,

Unfortunately, we do not use APNs or cross streets to maintain our files. We only use facility names and/or physical address numbers to locate files. If you can provide a numerical address or facility name, we can carry out your request.

If we can be of further assistance, please do not hesitate to contact us again.

Thank you,
File Review Desk

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E1527 - 21), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E2247 - 16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E1528 - 22) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Lists of state- and tribal hazardous waste facilities

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk

characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 10/21/2024 has revealed that there are 2 ENVIROSTOR sites within approximately 1 mile of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
CHAFFEY HIGH SCHOOL	***EDISON AVENUE / HAVE***	***WNW 1/2 - 1 (0.737 mi.)***	***6***	***31***
Facility Id: 36000007				
Status: No Further Action

Facility Id: 60000409				
Status: No Further Action				

Lists of state and tribal leaking storage tanks

LUST: Leaking Underground Storage Tank (LUST) Sites included in GeoTracker. GeoTracker is the Water Boards data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater.

A review of the LUST list, as provided by EDR, has revealed that there is 1 LUST site within approximately 0.5 miles of the target property.

Lower Elevation	Address	Direction / Distance	Map ID	Page
WESTRA DAIRY FARMS	***11009 EUCALYPTUS AVE***	***SW 0 - 1/8 (0.110 mi.)***	***A2***	***9***

Database: LUST, Date of Government Version: 08/28/2024				
Status: Completed - Case Closed				
Facility Status: Case Closed				
Global Id: T0607100611				
Global ID: T0607100611				

ADDITIONAL ENVIRONMENTAL RECORDS

Other Ascertainable Records

UST FINDER RELEASE: US EPA's UST Finder data is a national composite of leaking underground storage tanks. This data contains information about, and locations of, leaking underground storage tanks. Data was collected from state sources and standardized into a national profile by EPA's Office of Underground Storage Tanks, Office of Research and Development, and the Association of State and Territorial Solid Waste Management Officials.

A review of the UST FINDER RELEASE list, as provided by EDR, and dated 06/08/2023 has revealed that there is 1 UST FINDER RELEASE site within approximately 0.5 miles of the target property.

Lower Elevation	Address	Direction / Distance	Map ID	Page
WESTRA DAIRY FARMS	11009 EUCALYPTUS AVE	SW 0 - 1/8 (0.110 mi.)	A1	9

PFAS: A listing of PFAS sites included in the Envirostor and GeoTracker databases. Locations of potential sources of per - and polyfluoroalkyl substances (PFAS). This does not mean that PFAS has been produced, used, or discharged at these sites.

A review of the PFAS list, as provided by EDR, and dated 12/02/2024 has revealed that there is 1 PFAS site within approximately 0.25 miles of the target property.

Lower Elevation	Address	Direction / Distance	Map ID	Page
WELL II-3		S 1/8 - 1/4 (0.229 mi.)	4	19

Cortese: The sites for the list are designated by the State Water Resource Control Board (LUST), the Integrated Waste Board (SWF/LS), and the Department of Toxic Substances Control (Cal-Sites).

A review of the Cortese list, as provided by EDR, and dated 09/16/2024 has revealed that there is 1 Cortese site within approximately 0.5 miles of the target property.

Lower Elevation	Address	Direction / Distance	Map ID	Page
WESTRA DAIRY FARMS	***11009 EUCALYPTUS AVE***	***SW 0 - 1/8 (0.110 mi.)***	***A2***	***9***
Cleanup Status: COMPLETED - CASE CLOSED				

HIST CORTESE: The sites for the list are designated by the State Water Resource Control Board [LUST], the Integrated Waste Board [SWF/LS], and the Department of Toxic Substances Control [CALSITES]. This listing is no longer updated by the state agency.

A review of the HIST CORTESE list, as provided by EDR, and dated 04/01/2001 has revealed that there is 1 HIST CORTESE site within approximately 0.5 miles of the target property.

Lower Elevation	Address	Direction / Distance	Map ID	Page

Facility ID: FA0000570
Owner: SCI ONTARIO VENTURES LLC
Permit Number: PT0008766
Permit Category: SPECIAL GENERATOR
Facility Status: INACTIVE
Expiration Date: 04/30/1997

WDS:

Name:	GORZEMAN HEIFER RANCH - EUCALY
Address:	10869 EUCALYPTUS
City:	ONTARIO
Facility ID:	Santa Ana River 365899001
Facility Type:	Agricultural - Facility that treats and/or disposes of the wastes associated with confined and concentrated animal feeding, confined animal feeding, confined animal holding, confined and concentrated aquatic animal production facilities, and aquaculture. the treatment and/or disposal of agricultural return water is included in this category.
Facility Status:	Active - Any facility with a continuous or seasonal discharge that is under Waste Discharge Requirements.
NPDES Number:	CAG018001 The 1st 2 characters designate the state. The remaining 7 are assigned by the Regional Board
Subregion:	8
Facility Telephone:	9099476295
Facility Contact:	GLENN GORZEMAN
Agency Name:	GORZEMAN GLENN
Agency Address:	13948 WALKER AVENUE
Agency City,St,Zip:	CHINO 91710
Agency Contact:	GLENN GORZEMAN
Agency Telephone:	9099476295
Agency Type:	Private
SIC Code:	241
SIC Code 2:	Not reported
Primary Waste Type:	Designated/Influent or Solid Wastes that pose a significant threat to water quality because of their high concentrations (E.G., BOD, Hardness, TRF, Chloride). 'Manageable' hazardous wastes (E.G., inorganic salts and heavy metals) are included in this category.
Primary Waste:	STORMS
Waste Type2:	D
Waste2:	Stormwater Runoff
Primary Waste Type:	Designated/Influent or Solid Wastes that pose a significant threat to water quality because of their high concentrations (E.G., BOD, Hardness, TRF, Chloride). 'Manageable' hazardous wastes (E.G., inorganic salts and heavy metals) are included in this category.
Secondary Waste:	Solid Wastes
Secondary Waste Type:	Designated/Influent or Solid Wastes that pose a significant threat to water quality because of their high concentrations (E.G., BOD, Hardness, TRF, Chloride). 'Manageable' hazardous wastes (E.G., inorganic salts and heavy metals) are included in this category.
Design Flow:	0
Baseline Flow:	0
Reclamation:	No reclamation requirements associated with this facility.
POTW:	The facility is not a POTW.
Treat To Water:	Moderate Threat to Water Quality. A violation could have a major adverse impact on receiving biota, can cause aesthetic impairment to a significant human population, or render unusable a potential domestic or municipal water supply. Awsthetic impairment would include nuisance

MILK MAID DAIRY (Continued) **S102006045**

from a waste treatment facility.
Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 12/19/2024

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 12/19/2024

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Lists of Federal Delisted NPL sites

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Lists of Federal sites subject to CERCLA removals and CERCLA orders

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 11/20/2024

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Lists of Federal RCRA generators

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

RCRA-VSQG: RCRA - Very Small Quantity Generators (Formerly Conditionally Exempt Small Quantity Generators)

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

Lists of state- and tribal hazardous waste facilities

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites
Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

RCRA NonGen / NLR: RCRA - Non Generators / No Longer Regulated
RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

EPA WATCH LIST: EPA Watch List

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

PFAS RCRA MANIFEST: PFAS Transfers Identified In the RCRA Database Listing

To work around the lack of PFAS waste codes in the RCRA database, EPA developed the PFAS Transfers dataset by mining e-Manifest records containing at least one of these common PFAS keywords: PFAS, PFOA, PFOS, PERFL, AFFF, GENX, GEN-X (plus the VT waste codes). These keywords were searched for in the following text fields: Manifest handling instructions (MANIFEST_HANDLING_INSTR), Non-hazardous waste description (NON_HAZ_WASTE_DESCRIPTION), DOT printed information (DOT_PRINTED_INFORMATION), Waste line handling instructions (WASTE_LINE_HANDLING_INSTR), Waste residue comments (WASTE_RESIDUE_COMMENTS).

PFAS NPDES: Clean Water Act Discharge Monitoring Information

Any discharger of pollutants to waters of the United States from a point source must have a National Pollutant Discharge Elimination System (NPDES) permit. The process for obtaining limits involves the regulated entity (permittee) disclosing releases in a NPDES permit application and the permitting authority (typically the state but sometimes EPA) deciding whether to require monitoring or monitoring with limits. Caveats and Limitations: Less than half of states have required PFAS monitoring for at least one of their permittees and fewer states have established PFAS effluent limits for permittees. New rulemakings have been initiated that may increase the number of facilities monitoring for PFAS in the future.

PFAS ECHO: Facilities in Industries that May Be Handling PFAS Listing

Regulators and the public have expressed interest in knowing which regulated entities may be using PFAS. EPA has developed a dataset from various sources that show which industries may be handling PFAS. Approximately 120,000 facilities subject to federal environmental programs have operated or currently operate in industry sectors with processes that may involve handling and/or release of PFAS.

PFAS ECHO FIRE TRAIN: Facilities in Industries that May Be Handling PFAS Listing

A list of fire training sites was added to the Industry Sectors dataset using a keyword search on the permitted facilitys name to identify sites where fire-fighting foam may have been used in training exercises. Additionally, you may view an example spreadsheet of the subset of fire training facility data, as well as the keywords used in selecting or deselecting a facility for the subset. as well as the keywords used in selecting or deselecting a facility for the subset. These keywords were tested to maximize accuracy in selecting facilities that may use fire-fighting foam in training exercises, however, due to the lack of a required reporting field in the data systems for designating fire training sites, this methodology may not identify all fire training sites or may potentially misidentify them.

PFAS PT 139 AIRPORT: All Certified Part 139 Airports PFAS Information Listing

Since July 1, 2006, all certified part 139 airports are required to have fire-fighting foam onsite that meet military specifications (MIL-F-24385) (14 CFR 139.317). To date, these military specification fire-fighting foams are fluorinated and have been historically used for training and extinguishing. The 2018 FAA Reauthorization Act has a provision stating that no later than October 2021, FAA shall not require the use of fluorinated AFFF. This provision does not prohibit the use of fluorinated AFFF at Part 139 civilian airports; it only prohibits FAA from mandating its use. The Federal Aviation Administration?s document AC 150/5210-6D - Aircraft Fire Extinguishing Agents provides guidance on Aircraft Fire Extinguishing Agents, which includes Aqueous Film Forming Foam (AFFF).

AQUEOUS FOAM NRC: Aqueous Foam Related Incidents Listing

The National Response Center (NRC) serves as an emergency call center that fields initial reports for pollution and railroad incidents and forwards that information to appropriate federal/state agencies for response. The spreadsheets posted to the NRC website contain initial incident data that has not been validated or investigated by a federal/state response agency. Response center calls from 1990 to the most recent complete calendar year where there was indication of Aqueous Film Forming Foam (AFFF) usage are included in this dataset. NRC calls may reference AFFF usage in the ?Material Involved? or ?Incident Description? fields.

Data Release Frequency: Varies

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WASTEWATER PITS: Oil Wastewater Pits Listing
Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water boards review found that more than one-third of the region's active disposal pits are operating without permission.

WDR: Waste Discharge Requirements Listing
In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

CERS: CalEPA Regulated Site Portal Data
The CalEPA Regulated Site Portal database combines data about environmentally regulated sites and facilities in California into a single database. It combines data from a variety of state and federal databases, and provides an overview of regulated activities across the spectrum of environmental programs for any given location in California. These activities include hazardous materials and waste, state and federal cleanups, impacted ground and surface waters, and toxic materials

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants
The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

EDR Hist Cleaner: EDR Exclusive Historical Cleaners

EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes
Source: National Institutes of Health
Telephone: 301-594-6248
Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on private school locations in the United States.

Daycare Centers: Licensed Facilities

North Map:	50005338 GUASTI, CA
Version Date:	2021

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

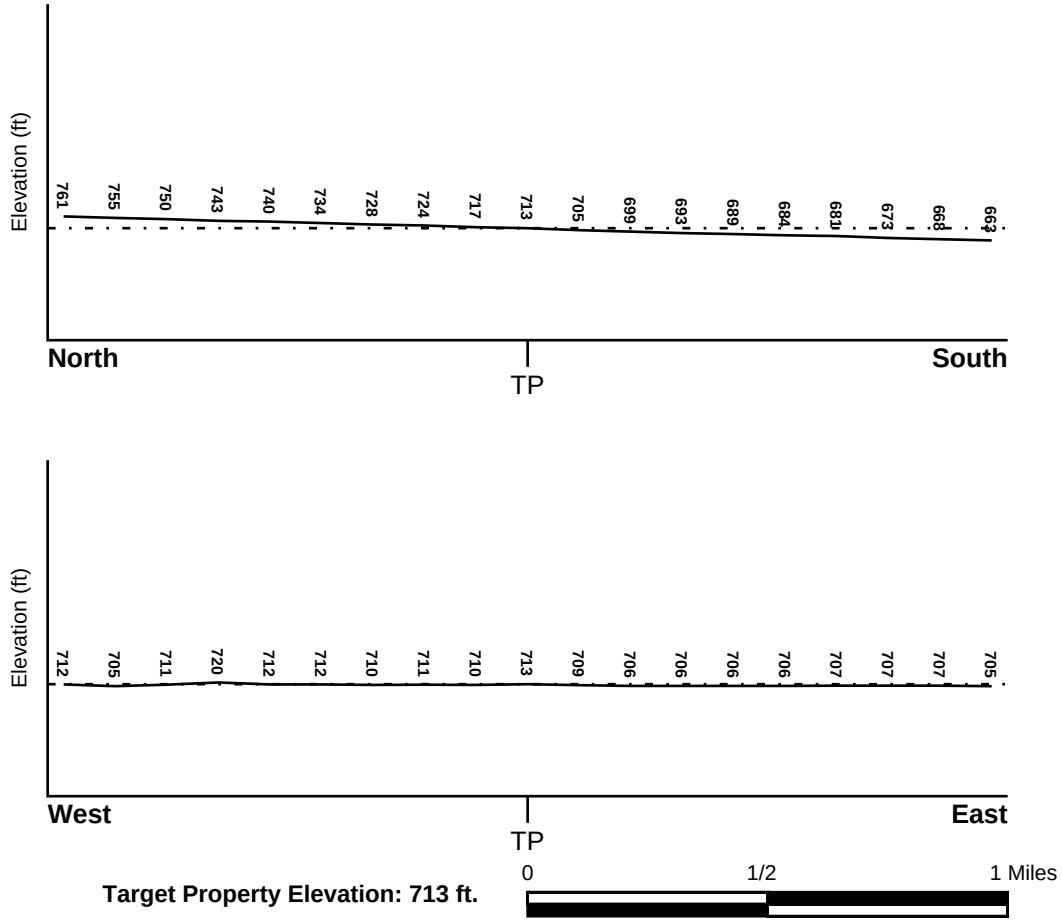
TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General South

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES



Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
06071C9375H	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type
06071C8639H	FEMA FIRM Flood data
06071C8643H	FEMA FIRM Flood data
06065C0681G	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
CORONA NORTH	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW

All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: DELHI

Soil Surface Texture: fine sand

Hydrologic Group: Class A - High infiltration rates. Soils are deep, well drained to excessively drained sands and gravels.

Soil Drainage Class: Somewhat excessively drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	18 inches	fine sand	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 141 Min: 42	Max: 7.8 Min: 6.1
2	18 inches	59 inches	sand	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 141 Min: 42	Max: 7.8 Min: 6.1

Soil Map ID: 2

Soil Component Name: HILMAR

Soil Surface Texture: loamy fine sand

Hydrologic Group: Class C - Slow infiltration rates. Soils with layers impeding downward movement of water, or soils with moderately fine or fine textures.

Soil Drainage Class: Somewhat poorly drained

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	22 inches	loamy fine sand	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay. FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), silt.	Max: 1.4 Min: 0.42	Max: 8.4 Min: 7.9
2	22 inches	59 inches	stratified loamy sand to loam	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay. FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), silt.	Max: 1.4 Min: 0.42	Max: 8.4 Min: 7.9

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005, 2010 and 2015 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory

Telephone: 916-445-0411

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

OTHER STATE DATABASE INFORMATION

Groundwater Ambient Monitoring & Assessment Program
State Water Resources Control Board
Telephone: 916-341-5577
The GAMA Program is Californias comprehensive groundwater quality monitoring program. GAMA collects data by testing the untreated, raw water in different types of wells for naturally-occurring and man-made chemicals. The GAMA data includes Domestic, Monitoring and Municipal well types from the following sources, Department of Water Resources, Department of Heath Services, EDF, Agricultural Lands, Lawrence Livermore National Laboratory, Department of Pesticide Regulation, United States Geological Survey, Groundwater Ambient Monitoring and Assessment Program and Local Groundwater Projects.

Water Well Database
Source: Department of Water Resources
Telephone: 916-651-9648

California Drinking Water Quality Database
Source: Department of Public Health
Telephone: 916-324-2319
The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

Geothermal Wells Listing
Department of Conservation
Telephone: 916-445-9686
Geothermal well means a well constructed to extract or return water to the ground after it has been used for heating or cooling purposes. Geothermal wells in California (except for wells on federal leases which are administered by the Bureau of Land Management) are permitted, drilled, operated, and permanently sealed and closed (plugged and abandoned) under requirements and procedures administered by the Geothermal Section of the Department of Conservations Geologic Energy Management Division (CalGEM, formerly DOGGR).

California Oil and Gas Well Locations

Owner and User Questionnaires

Project No.:
Project Name:

OWNER/OPERATOR QUESTIONNAIRE

Site Name: Esperanza PA-11

Site Address: Tract 18380, Lot 1
NWC of Eucalyptus and Clifton

Interviewee: David Waters

Title: VP California

Date: 3/7/25

SECTION I – Undeveloped Property (If this site is developed, go to SECTION II)

1. How long have you owned (or been involved in) this property?

   Since 2010 (15 years)

2. To the best of your knowledge, has there ever been any development on this property? If yes, what and when was the nature of that development?

   The site was historically a dairy farm operation, however operations ceased so

3. To the best of your knowledge, have there ever been any environmental or soils investigations conducted on this Property? If yes, what kind and when? Are there any reports available?

   There was a Phase 1 completed in 1998 by SID Geotech, in 2004 by Petra and

4. Are you aware of any environmental liens or deed restrictions associated with this property? If yes, please describe.

   No

5. To the best of your knowledge, have there ever been any incidents of chemical spills/dumping or waste disposal on or close to this property?

   No

6. Are there any wells on the site? If yes, what are they used for?

   Historically, but were all abandoned during grading.

SECTION II – Developed Property

1. What is your involvement with this property and when did that involvement begin?

   Ownership representative since 2010

2. To the best of your knowledge, how long has the current development been on the property? What was there before the current development?

   Last improvements completed on or around 2018 (perimeter and mass grading)

3. Does this facility use, store, manufacture, or dispose of chemicals or petroleum products? What types (be as specific as possible)?

   No

4. If the answer to Question 3 above was "Yes," may we review MSDS, business plans, hazardous material inventories, manifest files, SPCC plans (whatever is applicable)?

   n/a

5. Do you have any environmental permits (wastewater discharge, air emissions, hazardous material storage, etc.)? Have there ever been any Notices of Violation in regards to any of these permits?

   No

6. Have any environmental investigations ever been conducted on this property? When and why? Are there any reports available that we can review?

Phase 1/2 referenced above are available.

7. Has the facility ever been subject to an environmental health and safety regulatory action, complaint, or lawsuit? When and why? What was the outcome?

No

8. Have there been any know chemical spills or releases on this property?

No

9. Are there any underground or aboveground storage tanks on this property? How many? Sizes? Ages?

No

10. Where is wastewater discharged to? To the best of your knowledge, have there ever been any on-site wastewater disposal systems (septic tank, leach field, cesspool, dry well, etc.)?

No wastewater improvements on site.

11. To the best of your knowledge, are there any environmental liens or deed restrictions associated with this property? If yes, please describe.

No

Project No.:
Project Name:

USER QUESTIONNAIRE[1]

Site Name: Esperanza PA-11

Site Address: Tract 18380, Lot 1
NWC of Eucalyptus and Clifton

Interviewee: David Waters

Title: VP California

Date: 3/7/25

In reference to Section 6, User Responsibilities, of the ASTM E1527-21 Standard Practice, the Environmental Professional (SCS Engineers) for this Phase I ESA is required to inquire with the user (Client) regarding their knowledge or possession of information that may assist in identifying recognized environmental conditions (RECs) pertaining to the Subject Property.

In order to qualify for one of the Landowner Liability Protections (LLPs) offered by the Small Business Liability Relief and Brownfields Revitalization Act of 2001 (the "Brownfields Amendments"), the user must conduct the following inquiries required by 40 CFR §312.25, §312.28, §312.29, §312.30, and §312.31. These inquiries must also be conducted by U.S. EPA Brownfield Assessment and Characterization grantees. The user should provide the following information to the Environmental Professional overseeing this Phase I ESA. Failure to conduct these inquiries could result in a determination that "all appropriate inquiries" is not complete.

(1) Environmental Cleanup Liens (40 CFR §312.25). Did a search of land title records (or judicial records where appropriate) identify any environmental liens filed or recorded against the Subject Property under federal, tribal, state or local law? ☐ Yes ■ No

If Yes, explain and/or provide information:

(2) Activity and Use Limitations (40 CFR §312.26(a)(1)(v) and (vi)). Did a search of land title records (or judicial records, where appropriate) identify any Activity Use Limitations (AULs) such as engineering controls, land use restrictions, or institutional controls that are in place at the Subject Property and/or have been filed or recorded against the Subject Property under federal, tribal, state or local law? ☐ Yes ■ No

☐ Yes ☐ No

If Yes, explain and/or provide information:

Since 2010 (15 years)

[1] The document is designed to comply with Appendix X3, User Questionnaire, of ASTM E1527-21, Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process, and the U.S. EPA AAI regulations (40 CFR §312).

(3) Specialized Knowledge or Experience (40 CFR §312.28). Do you have any specialized knowledge or experience related to the Subject Property or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the Subject Property or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business? ■ Yes ☐ No

If Yes, explain and/or provide information:

The site was historically a dairy farm operation, however operations ceased sometime i

(4) Purchase Price vs. Fair Market Value (40 CFR §312.29). Does the purchase price being paid for this Subject Property reasonably reflect its fair market value? ■ Yes ☐ No

If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the Subject Property?

☐ Yes ☐ No

If Yes, explain and/or provide information:

There was a Phase 1 completed in 1998 by SID Geotech, in 2004 by Petra and in 2010

(5) Commonly Known or Reasonably Ascertainable Information (40 CFR §312.30). Are you aware of commonly known or reasonably ascertainable information about the Subject Property that would help the Environmental Professional to identify conditions indicative of releases or threatened releases? For example:

(a) Do you know the past use of the Subject Property?

(b) Do you know specific chemicals that are present or once were present at the Subject Property?

(c) Do you know of spills or other chemical releases that have taken place at the Subject Property?

(d) Do you know of any environmental cleanups that have taken place at the Subject Property?

■ Yes ☐ No to all

If Yes, explain and/or provide information:

No

(6) Obvious Indications of Contamination (40 CFR §312.31). Based on your knowledge and experience related to the Subject Property, are there any obvious indicators that point to the presence or likely presence of releases at the Subject Property? ☐ Yes ■ No

If Yes, explain and/or provide information:

No

Project Personnel Resumes

J. JUSTIN RAUZON, REPA

Justin Rauzon, REPA

Education

MEM – Environmental Management, Duke University, 2014
BS – Zoology (Double Emphasis: Human and Marine Biology), Brigham Young University, 2004

Professional Licenses

Registered Environmental Property Assessor (REPA), National Registry of Environmental Professionals (No. 485639)

Specialty Certifications

OSHA 40-Hour Health and Safety Training for Hazardous Waste Workers
8-Hour Annual Refresher Training for Hazardous Waste Site Activities
OSHA 16-Hour Initial Asbestos Operations and Maintenance Training
Thermo Scientific Niton XRF Analyzer Operator's Training
First-Aid and CPR Training

Professional Affiliations

National Ground Water Association, Member (2015 to Present)
Industrial Environmental Association, Member (2018 to Present)

Professional Experience

Mr. Rauzon has more than 16 years of environmental services experience, all with SCS. Fluent in Spanish, Mr. Rauzon is an SCS Project Manager with a diverse background in biological and environmental sciences, and regularly performs environmental assessments and compliance audits at sites in the U.S. and in Latin America. He has technical and management experience with soil, soil vapor, and groundwater investigations at industrial, commercial, landfill, greenfield, and residential properties. He has extensive experience with environmental laws and regulations in both the U.S. and Mexico. His work experience includes all project phases, from development of cost estimates for various site assessment and cleanup programs to implementing remediation programs and interfacing with regulatory agencies. His experience with and understanding of these issues led to his appointment as a National Partner in Environmental Due Diligence in 2021.

Selected projects in which he has participated are described below.

Environmental Management

Due Diligence Assessments of Properties Prior to Real Estate Transfer of Properties in California, Arizona, New Jersey, Mexico, Puerto Rico, and the Dominican Republic. Mr. Rauzon has completed numerous due diligence assessments of properties prior to acquisition, disposition, or loan financing by investment banks, insurance companies, corporations, non-profit entities, real

estate developers, and private parties. Projects have included Phase I assessments that meet federal All Appropriate Investigation (AAI) regulations, American Society for Testing and Materials (ASTM) standards, and client-specific guidelines; inspections for asbestos and lead-based paint; Phase II investigations; preparation of abatement and remediation cost estimates; and regulatory agency coordination. These projects frequently involve review of previous environmental reports and investigation of current and past on-site operations, regulatory agency records searches, evaluation of historical property use information, identification of nearby potentially contaminated sites, and development of appropriate conclusions about environmental risks. Investigations involve preparation of work plans, soil boring and subsequent sampling, groundwater well installation and sampling, soil gas probe installation and sampling, precision mapping, evaluation of contaminants in accordance with regulatory requirements or generally accepted guidelines, preparation of investigation report, and analysis of applicable remedial alternatives. Mr. Rauzon has served as the Project Manager for sites that have received regulatory closure from various regulatory agencies.

Planning, Coordinating, and Supervising Remedial Actions That Included Excavation, Transport, and Disposal of Contaminated Soils and Water. Investigations involve preparation of Remedial Action Plans (RAPs), direction of fieldwork, oversight of confirmatory sampling, and interfacing with regulatory agencies.

Groundwater Monitoring and Reporting for Simi Valley Landfill and Recycling Center, Simi Valley, CA. Mr. Rauzon is a key team member for the sampling and monitoring of 10 groundwater wells and 5 leachate locations to evaluate potential releases from waste units affecting groundwater at Simi Valley Landfill. He also prepares the annual leachate control system's effectiveness reports and documents results of resampling of groundwater wells based on initial statistical indications of a release.

The Characterization of Hazardous Waste Materials. These projects include collection of soil and/or liquid samples to profile the waste materials, interpretation of laboratory results, and evaluation of disposal/recycling options to minimize the costs and liabilities to clients associated with the removal of wastes.

Assessment and Certification of Hazardous Waste Tank Systems. These investigations involve working with a Professional Engineer to complete field inspections of hazardous waste tanks, associated ancillary equipment, leak-detection systems, and secondary containment devices, as well as interfacing with regulatory agencies.

Project Management

Project Manager for Environmental Due Diligence Assessment and Health and Safety Program Review of Six Geothermal Power Plants Located in California, Nevada, New Mexico, and Utah. SCS services included time-sensitive field inspection, environmental document and permit review, and preparation of environmental risk evaluation reports. Mr. Rauzon reviewed and assessed plant health and safety plans and procedures; facility response plans; incident reports; and arrangements for plant selection, appointment, and management of support contractors. SCS provided support consulting services in the successful client plant acquisition and integration support.

Project Manager for Due Diligence Investigations at Dry Mill and Biofuel Distillery Plant, Madera, CA. SCS services included Phase I environmental assessment and Phase II soil, soil vapor, and groundwater investigation to support client's acquisition of an ethanol production plant at which a lumber mill was historically located. SCS provided additional consulting services related to remediation cost analysis and management of ongoing environmental issues.

Project Manager for Due Diligence Investigation of a Portfolio With More Than 300 Industrial Sites Throughout Mexico. SCS services included conducting Phase I and Phase II environmental assessments within the strict timeline of the $1.2 billion industrial real estate transaction. Subsequent to the closing of the deal, SCS provided ongoing consulting services to facilitate integration and management of various facilities with ongoing environmental issues.

Project Manager for Hazardous Materials Consulting Services in Support of the State Route 91 Corridor Improvement Project in Orange and Riverside Counties, CA. SCS services included sampling and inventory of potentially hazardous materials associated with more than 25 bridges along the SR-91 and I-15 freeways; environmental assessments on properties within the proposed freeway expansion area; and soil testing for herbicides, pesticides, and fungicides on several land parcels.

Project Manager for Investigation and Remediation of Industrial Facility Located in Fontana, CA. SCS conducted a series of environmental assessments, investigations, and remedial activities that provided sufficient information to identify environmental issues and business risks, and facilitate the client's successful purchase of property. A number of recognized environmental conditions, including releases of coal tar, solvents, heavy metals, and total petroleum hydrocarbons, were identified. Project activities conducted during the acquisition and redevelopment of the property included shallow and deep soil and soil vapor investigations; installation of groundwater monitoring wells and subsequent groundwater sampling; subsequent remedial excavation under San Bernardino County Fire Department (SBCFD) oversight to obtain closure; and excavation and off-site disposition of contaminated soil.

Health and Safety

Mr. Rauzon has participated in a certified health and safety program in compliance with OSHA Standard 29 CFR 1910.120. He is knowledgeable in incident response operations, team functions, personnel safety, and field equipment. He is able to recognize and evaluate potential chemical and physical hazards and associated risks in field operations; discuss and use personal protective equipment (PPE), such as respiratory protection and protective clothing; use and interpret direct-reading instruments; and examine and establish Standard Operating Safety Guidelines to ensure safe and effective response operations.

MADDIE PETERSON

Education

BA – Environmental Science and Policy, California State University, Long Beach, 2022
AA – Liberal Arts and Sciences/Communications, College of the Canyons, 2017

Specialty Certifications

40-Hour HAZWOPER Trained
SCAQMD Dust Control Officer Trained (Rule 403)

Professional Experience

Ms. Peterson is an Associate Professional who has participated in Phase I and II site investigations, sampling and monitoring at landfills, methane assessments, geophysical surveys and monitoring well installations, and pesticide and heavy metal evaluations. She has a background in environmental law and policy and sustainability. As an undergraduate, she performed heavy metal analysis and research regarding lead and zinc concentrations in soil samples for the Environmental Science and Policy Capstone Project in Long Beach (2022), and has volunteered for habitat restoration and other environmental improvement projects in Southern California.

Her SCS project work includes:

Phase I Environmental Site Assessments (ESAs). Ms. Peterson has contributed to Phase I Environmental Site Assessments (ESAs), completed in accordance with various lender, American Society for Testing and Materials (ASTM), or government guidelines. Activities consisted of evaluating current and past on-site operations, generating historical property use information, identifying potentially contaminated sites in the surrounding areas, reviewing previous reports and/or files maintained by regulatory agencies, and developing conclusions regarding the presence of Recognized Environmental Conditions (RECs) and recommendations for further investigation.

Site Investigations. Ms. Peterson has conducted soil gas surveys and soil sampling with precision mapping of sites, installation of soil borings, lithologic logging, collection of soil samples, and evaluation of subsurface contaminants in soil and groundwater in accordance with regulatory agency requirements or generally accepted guidelines.

Quarterly and Semiannual Groundwater Monitoring Reports. Ms. Peterson has assisted in preparation of numerous routine monitoring reports for various sites with oversight of various regulatory agencies. Facilities have included landfills across California and manufacturing sites.

Construction Quality Assurance (CQA). Ms. Peterson has assisted in CQA and oversight of the construction of gas collection and control system (GCCS) vertical well installation at Simi Valley, Antelope Valley, and El Sobrante Landfills.

Investigation and Remediation for Industrial Facility Redevelopment, Downey, CA. SCS conducted a series of environmental assessments, investigations, and remedial activities that provided sufficient information to identify the environmental issues, and business risks to facilitate the client's successful purchase of property for redevelopment to a commercial warehouse and office. A number of Recognized Environmental Conditions (RECs) were identified. Ms. Peterson provided oversight for numerous activities conducted concurrently with the redevelopment of the property, including the installation of groundwater monitoring wells, both on and off site; oversight of well development; soil vapor extraction (SVE) network monitoring; and permitting and removal of clarifiers.

SECTION 1

DISCUSSION

PURPOSE:

This report was prepared to supplement the preliminary grading plan for Esperanza – PA II, Tentative Tract No. 20730 in the City of Ontario, County of San Beranrdino.

The project is bounded by Clifton Avenue to the north, Eucalyptus Avenue to the east, Amherst Avenue to the south and Chatham Street to the west, in the City of Ontario. This report includes the existing and proposed Q100 for the10.0-acre project site. The study abides by the most current City of Ontario requirements and the San Bernardino County Hydrology Manual procedures.

DESCRIPTION OF WATERSHED:

The existing site is undeveloped and relatively flat and surface flows in a southwesterly direction towards the intersection of Eucalyptus Avenue and Amherst Avenue where an onsite detention basin is located. The basin has a 36-inch inlet that joins a public storm drain in Amherst Avenue. The proposed site will drain in a similar direction with its own storm drain system throughout the development and will join the Amherst storm drain as stated above.

	Acreage	100-Year
Existing		
A	10.02 ac	20.34 cfs
Proposed		
A	8.42 ac	27.60 cfs
B	1.60 ac	6.92 cfs
Total	10.02 ac	34.52 cfs
Difference	**-**	**<-14.18> cfs**

Mitigation is required when the proposed exceeds the existing as shown in the table above; however, the city has confirmed that there is a more restrictive Q that must be used in place of the existing Q that was established by this study. The Q to be used was established by Tract 17931, at line 'D', using a Q100 of15.64 cfs.as the maximum flow allowed from the site into the public storm drain.

The tract's private onsite storm drain system will function with the necessary flow restriction as established by the City. This will be accomplished by over-sizing the private onsite storm drain system to provide on-site storage and installing a stainless-steel plate with a 16"x24" opening (orifice) over the downstream side of the junction structure, before entering the public system. This will restrict the outflow from the site to no more than 15.64 cfs at any time. The volume to be stored is approximately 5,100 cubic feet (cf) (See Table A) as determined by the hydrograph in this study

All proposed inlets and storm drain piping have been designed for a Q100 storm event, and emergency overflow drain patterns have been considered if drainage clogging should occur.

METHODOLOGY:

This Hydrology Study was performed using the rational Hydrology Method Program by CivilCADD / Civil Design Engineering software based on the San Bernardino County Hydrology Manual dated August 1986. The soil has been identified from the maps accompanying the San Bernardino County Hydrology Manual as being of Hydrologic Soil Group B. The calculations were done for a 100-year storm frequency for the storm drain system.

SUMMARY:

The plans for which this report supports has been prepared to meet the standards of rainstorm protection as adopted by the City of Ontario. Positive overflow is available throughout the development for protection of habitable areas against the 100-year storm when drainage obstructions occur, and there will be no adverse impact to the existing conditions.

HYDROLOGY STUDY
100-YEAR - EXISTING

San Bernardino County Rational Hydrology Program

(Hydrology Manual Date - August 1986)

CIVILCADD/CIVILDESIGN Engineering Software, (c) 1989-2012 Version 7.2
Rational Hydrology Study Date: 07/11/24

Program License Serial Number 6293

********* Hydrology Study Control Information **********

Rational hydrology study storm event year is 100.0
Computed rainfall intensity:
Storm year = 100.00 1 hour rainfall = 1.200 (In.)
Slope used for rainfall intensity curve b = 0.6000
Soil antecedent moisture condition (AMC) = 3

++

Process from Point/Station 1.000 to Point/Station 2.000
**** INITIAL AREA EVALUATION ****A-1

UNDEVELOPED (poor cover) subarea
Decimal fraction soil group A = 0.000
Decimal fraction soil group B = 1.000
Decimal fraction soil group C = 0.000
Decimal fraction soil group D = 0.000
SCS curve number for soil(AMC 2) = 78.00
Adjusted SCS curve number for AMC 3 = 92.80
Pervious ratio(Ap) = 1.0000 Max loss rate(Fm)= 0.140(In/Hr)
Initial subarea data:
Initial area flow distance = 420.000(Ft.)
Top (of initial area) elevation = 711.000(Ft.)
Bottom (of initial area) elevation = 705.000(Ft.)
Difference in elevation = 6.000(Ft.)
Slope = 0.01429 s(%)= 1.43
TC = k(0.525)*[(length^3)/(elevation change)]^0.2
Initial area time of concentration = 13.756 min.
Rainfall intensity = 2.904(In/Hr) for a 100.0 year storm
Effective runoff coefficient used for area (Q=KCIA) is C = 0.857
Subarea runoff = 3.259(CFS)
Total initial stream area = 1.310(Ac.)
Pervious area fraction = 1.000
Initial area Fm value = 0.140(In/Hr)

++

Process from Point/Station 2.000 to Point/Station 3.000
**** IRREGULAR CHANNEL FLOW TRAVEL TIME ****A-2

Estimated mean flow rate at midpoint of channel = 0.000(CFS)
Depth of flow = 0.901(Ft.), Average velocity = 2.372(Ft/s)

Preliminary Water Quality Management Plan (PWQMP)

For compliance with Santa Ana Regional Water Quality Control Board
Order Number R8-2010-0036 (NPDES Permit No. CAS618036)

Project Name:	Esperanza Townhomes
Ontario Project #:	2175-996-001 TM_20730 (PDEV24-017)
Applicant Name:	Genstar Development Company
Applicant Address:	12770 El Camino Real, Ste. 220 San Diego, CA 92130
Project Address:	Eucalyptus Avenue & Amherst Avenue Ontario, CA
Project Size (acres):	10.24-acres
Project Description:	Townhomes

Submittal Date: 3/12/2025

Preliminary Water Quality Management Plan (PWQMP)

1. Introduction

The Preliminary Water Quality Management Plan (PWQMP) is a planning tool to improve integration of required water quality elements, stormwater management, water conservation, rainwater harvesting and re-use, and flood management in land use planning and the City's development process. The Preliminary WQMP will assist project applicants and planners in properly designing and laying out project sites so that water quality may be incorporated in the most effective manner and at the lowest cost for the developer.

The San Bernardino County Municipal Separate Storm Sewer System Permit (MS4 Permit) requires project-specific Water Quality Management plans (WQMP) to be prepared for all priority new development and significant redevelopment projects listed in Section 2 of this document. The MS4 Permit stipulates that the City of Ontario require priority project applicants to submit a Preliminary project-specific WQMP, as early as possible, during the environmental review or planning phase of a development project and that the Preliminary WQMP be approved prior to the issuance of land use entitlement.

2. Priority Projects (requiring a Preliminary WQMP)

Land Use entitlement shall not be issued for any of the listed projects, below, until a Preliminary WQMP has been approved by the City's Engineering Department. For construction projects not going through entitlement, a Preliminary and Final project specific WQMP shall be approved, prior to the issuance of construction permits:

Check the appropriate project category below, for this project:

Check below	**Project Categories**
	1. All significant re-development projects. Significant re-development is defined as the addition or replacement of 5,000 or more square feet of impervious surface on an already developed site subject to discretionary approval of the Permittee. Redevelopment does not include routine maintenance activities that are conducted to maintain original line and grade, hydraulic capacity, original purpose of the facility, or emergency redevelopment activity required to protect public health and safety. Where redevelopment results in an increase of less than fifty percent of the impervious surfaces of a previously existing developed site, and the existing development was not subject to WQMP requirements, the numeric sizing criteria discussed below applies only to the addition or replacement, and not to the entire developed site. Where redevelopment results in an increase of fifty percent or more of the impervious surfaces of a previously existing developed site, the numeric sizing criteria applies to the entire development (new and existing).
✔	2. New development projects that create 10,000 square feet or more of impervious surface (collectively over the entire project site) including commercial, industrial, residential housing subdivisions (i.e., detached single family home subdivisions, multi-family attached subdivisions or townhomes, condominiums, apartments, etc.), mixed-use, and public projects. This category includes development projects on public and private land, which fall under the planning and building authority of the permitting agency.

Check below	Project Categories
	3. Automotive repair shops (with SIC codes 5013, 5014, 5541, 7532- 7534, 7536-7539).
	4. Restaurants and Food Service Establishments where the land area of development is 5,000 square feet or more.
	5. Developments of 2,500 square feet of impervious surface or more adjacent to (within 200 feet) or discharging directly into environmentally sensitive areas (ESA's) such as areas designated in the Ocean Plan as areas of special biological significance or waterbodies listed on the CWA Section 303(d) list of impaired waters.
	6. Parking lots of 5,000 square feet or more exposed to storm water. Parking lot is defined as land area or facility for the temporary storage of motor vehicles.
	7. Retail Gasoline Outlets (RGOs) that are either 5,000 sq ft or more or have a projected average daily traffic of 100 or more vehicles per day.
	8. *This project is not covered under any of the categories listed above.

* If the development is not covered under any of the project categories listed in Section 2, the project is not required to design and install Site Design/LID BMPs or Treatment Control BMPs to treat the design storm event (Design Capture Volume) described in Section 4.

3. Preliminary WQMP Objectives

Through a combination of Site Design/LID BMPs (where feasible), Source Control, and/or Treatment Control BMPs, project-specific WQMPs shall address all identified pollutants and hydrologic conditions of concern from new development and significant re-development projects for the categories of projects (priority projects) listed in Section 2. Under each type of BMP, listed below, please indicate which BMPs are planned to be implemented and included in the Final WQMP for the project:

A. Site Design/LID (Low Impact Design) for Reducing Stormwater Runoff:

The MS4 Permit requires each priority development project to infiltrate, harvest and use, evapotranspire, or bio-treat the runoff from a 2-yr, 24-hour storm event (Design Capture Volume). If site conditions do not permit infiltration, harvest and use, evapotranspiration, and/or bio-treatment of the entire Design Capture Volume, at the project site, Site Design/LID techniques are required to be implemented to the Maximum Extent Practicable, at the project site, and the remainder of the DCV shall be infiltrated, harvested, bio-treated or treated by alternative measures. Project applicants shall submit a Preliminary WQMP that documents the LID/Site Design BMPs, proposed for the project. Please indicate, in the table below, which Site Design/LID BMPs will be utilized on this project to accomplish this requirement:

Site Design/LID Practice	Planned	Not Planned
Provide at least the minimum effective area required for LID BMPs, to comply with the WQMP (see Table 3-1 below).		✔
Grade parking lot areas/drive aisles/roof drains to sheet flow runoff into landscaped swales, via curb cuts or zero-face curbs or otherwise disconnect direct drainage from MS4.		✔
Design landscaped areas as swales and grade to accept runoff from building roofs, parking lots and project roadways.		✔
Install surface retention basins or infiltration trenches to receive impervious area runoff.		✔
Install pervious pavement in parking stalls, alleys, driveways, gutters, walkways, trails or patios.		✔
Install underground stormwater retention chambers where downstream landscaped areas are limited.		✔
Install approved Stormwater Drywells in detention areas.		✔
Construct streets, sidewalks, and parking lot stalls to the minimum widths necessary.	✔	
Install on-site Biotreatment basins/trenches with underdrains, where soil type is poorly draining.		✔
Install “Engineered Soil” to increase uptake/soil storage capacity and/or evapotranspiration.		✔
Install Rainwater Harvesting/Use Equipment.		✔
Regional LID BMP facilities are installed, off-site, with the capacity and conveyances to accept post-development storm water runoff from this project and reserved capacity allocation credits have been assigned to the project, in a Certificate or other legally binding document, attached herein	✔	

Table 3-1 Minimum Effective Area[1] Required for LID BMPs (surface + subsurface facilities) for Project WQMP to Demonstrate Infeasibility[2] (% of site)

Project Type	New Development	Re-Development
SF/MF Residential < 7 du/ac	10%	5%
SF/MF Residential < 7 - 18 du/ac	7%	3.5%
SF/MF Residential > 18 du/ac	5%	2.5%
Mixed Use, Commercial/Industrial w/FAR< 1.0	10%	5%
Mixed Use, Commercial/Industrial w/FAR 1.0-2.0	7%	3.5%
Mixed Use, Commercial/Industrial w/FAR> 2.0	5%	2.5%
Podium (parking under > 75% of project)	3%	1.5%
Zoning allowing development to property lines	2%	1%
Transit Oriented Development[3]	5%	2.5%
Parking	5%	2.5%

[1] "Effective area" is defined as land area which 1) is suitable for a retention/infiltration BMP (based on infeasibility criteria) and 2) is located down-gradient from building roof or paved areas, so that it may receive gravity flow runoff.
[2] Criteria only required if the project WQMP seeks to demonstrate that the full DCV cannot be feasibly managed on-site.
[3] Transit oriented development is defined as a project with development center within one half mile of a mass transit center.
Key: du/ac = dwelling units/acre, FAR = Floor Area Ratio = ratio of gross floor area of building to gross lot area, MF = Multi Family, SF = Single Family

B. Source Control BMPs – The following BMPs are designed to control stormwater pollutants and runoff water at the location where it is generated. Please indicate which of the listed BMPs are planned to be implemented for the project:

Source Control BMPs	Planned	Not Planned
Minimize non-stormwater site runoff through efficient irrigation system design and controllers.	✔	
Minimize trash and debris in storm runoff through a regular parking lot, storage yard and roadway sweeping program.	✔	
Provide proper covers/roofs and secondary containment for outside material storage & work areas.		✔
Provide solid roofs over all trash enclosures.	✔	
Site Owner(s)/Property Manager/HOA or POA will be familiar with the project WQMP and stormwater BMPs.	✔	
Owner or HOA or POA to provide Education/Training of site occupants and employees on stormwater BMPs.	✔	
Install stormwater placards/stenciled messages with a "No Dumping" message on all on-site/off-site storm drain inlets.	✔	
Provide contained equipment/vehicle wash rack areas that discharge to sanitary sewer.		✔

C. Treatment Control BMPs – The following BMPs are designed to control stormwater pollutants where it is not feasible to install on-site or off-site Site Design/LID BMPs, with the requisite capacity to treat the Design Capture Volume for identified Pollutants of Concern or where pretreatment of stormwater runoff is required, ahead of infiltration BMPs. Please indicate which of the listed BMPs are planned to be implemented for the project:

Treatment Control BMP	Planned	Not Planned
Gravity Separator devices for pretreatment of sediment, trash/litter or Oil & Grease		✔
Proprietary Biofiltration vaults/devices		✔
Media Cartridge Filtration Vaults		✔
Proprietary Filter Inserts for on-site storm drain inlets or retention basin/trench overflow drains	✔	

4. Volume-based calculation (approximate) for sizing on-site or off-site Stormwater Retention/Infiltration, Harvest & Re-Use or Biotreatment facilities

1) After calculating the "Watershed Imperviousness Ratio", i, which is equal to the percent of impervious area in each Drainage Management Area, divided by 100, calculate the composite runoff coefficient C_{BMP} for the Drainage Area above using the following equation:

$$\mathbf{C_{BMP} = 0.858i^3 - 0.78i^2 + 0.774i + 0.04}$$

where: **C_{BMP}** = composite runoff coefficient; and,

i = watershed imperviousness ratio.

3) Determine the area-averaged "6-hour Mean Storm Rainfall", P_6, for the Drainage Area. This is calculated by multiplying the area averaged 2-year 1-hour value (0.5"-0.6") by the appropriate regression coefficient (1.4807). The 2-yr, 1-hr value for southern Ontario is approximately to 0.5" (P_6 = 0.5*1.4807 = 0.74 and northern Ontario is approximately 0.6" in/hr (P_6 = 0.6*1.4807 = 0.89).

4) Determine the appropriate drawdown time. Use the regression constant a = 1.582 for 24 hours and a = 1.963 for 48 hours. *Note: Regression constants are provided for both 24 hour and 48-hour drawdown times; however, 48-hour drawdown times should be used in most areas of California. Drawdown times in excess of 48 hours should be used with caution as vector breeding can be a problem after water has stood in excess of 72 hours. (Use of the 24-hour drawdown time should be limited to drainage areas with coarse soils (Class 'A' soils that readily drain.)*

5) Calculate the "Maximized Detention Volume", P_0, using the following equation:

$$\mathbf{P_0 = a \cdot C_{BMP} \cdot P_6}$$

where: **P_0** = Maximized Detention Volume, in inches

a = 1.582 for 24 hour and a = 1.963 for 48-hour drawdown,

C_{BMP} = composite runoff coefficient; and,

P_6 = 6-hour Mean Storm Rainfall, in inches

6) Calculate the "Target Capture Volume", V_0, using the following equation:

$$\mathbf{V_0 = (P_0 \cdot A) / 12}$$

where: **V_0** = Target Capture Volume, in acre-feet

P_0 = Maximized Detention Volume, in inches; and,

A = BMP Drainage Area, in acres

Project Volume-based calculation (approximate) for planned on-site or off-site Stormwater Retention/Infiltration, Harvest & Re-Use or Biotreatment facilities:

Variable	Factor/Formula	DA1, DMA A	DA1 DMA B	DA2 DMA A	DA2 DMA B
Impervious surface/total surface, ratio	(i)	0.79			
C_{BMP}= runoff coefficient	$0.858i^3 - 0.78i^2 + 0.774i + 0.04$	0.588			
P_6	**P_6 = 2-yr,1-hr depth*1.4807 =	0.797			
Detention Volume (acre inches)	$P_0 = a * C_{BMP} * P_6$ =	0.920			
Drawdown rate of basin/trench (a)	1.963 for 48-hr drawdown =	1.963			
Project Total Area (acre)	(A)	10.24			
Design Capture Volume in cu. ft.	$V_0 = [(P_0 * A)/12] *43560$ =	34,198			
Retention Volume provided in cubic feet.	Retention capacity of basins, trenches, underground storage or biotreatment basin				

**For P_6 value, use site coordinates and NOAA website to determine project's average 2-yr, 1-hr rainfall depth, at: http://hdsc.nws.noaa.gov/hdsc/pfds/sa/sca_pfds.html .

5. Flow-Based calculation (approximate) for sizing on-site or off-site Biotreatment facilities and proprietary treatment technology BMPs:

1) After calculating the "Watershed Imperviousness Ratio", i, which is equal to the percent of impervious area in each Drainage Management Area divided by 100, calculate the composite runoff coefficient C_{BMP} for the Drainage Area above using the following equation:

$$\mathbf{C_{BMP} = 0.858i^3 - 0.78i^2 + 0.774i + 0.04}$$

where: $\mathbf{C_{BMP}}$ = composite runoff coefficient; and,

i = watershed imperviousness ratio.

2) Determine BMP design rainfall intensity, **I_{BMP}**, using the project site geo-coordinates and the NOAA website to determine project's average 2-yr, 1-hr rainfall intensity, at: http://hdsc.nws.noaa.gov/hdsc/pfds/sa/sca_pfds.html .Multiply this value by 0.2787 (regression coefficient for Ontario) and a minimum safety factor of 2.

4) Calculate the target BMP flowrate, Q, using the following formula (for each DMA <50 acres*):

$$Q = C_{BMP} \cdot I_{BMP} \cdot A$$

Where: **Q** = flow in cfs (Cubic feet per second)
I_{BMP} = BMP design rainfall intensity, in/hr
A = Drainage Area in acres

*For DMAs >50 acres, with C_{BMP} <0.5, the project applicant shall use the unit hydrograph method specified in the San Bernardino County Hydrology Manual, using the design storm pattern with rainfall return frequency such that the peak 1-hr rainfall intensity equals the 85th percentile 1-hr rainfall, multiplied by 2.

Project Flow-based calculation (approximate) for planned on-site or off-site flow-based Biotreatment facilities or Stormwater Treatment BMPs:

Variable	Factor/Formula	DA1 DMA A	DA1 DMA B	DA2 DMA A	DA2 DMA B
Impervious surface/ total surface, ratio	(i)	0.79			
C_{BMP}= composite runoff coefficient	$0.858i^3 + 0.78i^2 + 0.774i + 0.04$	0.588			
I_{BMP}	I_{BMP} = 2-yr,1-hr storm intensity*0.2787*safety factor	0.300			
Drainage area (ac)	A = DMA sq ft/43,560	10.24			
Target BMP flowrate	Q = C_{BPM}* I_{BMP} * A	1.81			

6. Hydrologic Conditions of Concern (HCOC) and use of the on-line San Bernardino County HCOC Map for determining necessary mitigation steps necessary if there are HCOCs downstream of a project:

Project applicants may access the on-line HCOC Map at: http://permitrack.sbcounty.gov/WAP/. The map will indicate any hydrology concerns with downstream waterways that are hydraulically connected to the project and will indicate if there are any approved regional projects downstream that could be utilized for off-site mitigation of HCOCs. Please indicate here if the project will or will not be able to retain/infilter, harvest and use or biotreat and detain the DCV, on-site, as calculated in Section 4 and if there are HCOCs identified downstream of the project:

Retain or Harvest/Use the DCV on site?	Yes		No	✔
Biotreat the DCV but not infilter the runoff?	Yes		No	✔
HCOCs identified downstream of site?	Yes		No	✔

If the entire DCV will not be retained on site, the DCV is biotreated but not infiltered or additional detention capacity is needed to address identified HCOCs, downstream of the site, please list here, what additional mitigation measures will be utilized (on-site or off-site) to address HCOCs (see Section 4.2.1-4.2.3 of the SB County WQMP Technical Guidance):

_____

_____

7. Site Plan and Conceptual Grading/Drainage Plan requirements for submission with the Preliminary WQMP:

Provide a Site Plan and Conceptual Grading/Drainage Plan along with this Preliminary WQMP, which conceptually shows the proposed locations of buildings, homes, parking lots, parks, new paved roadways, landscaped areas, drainage patterns and drainage sub-areas, methods of conveyance, proposed retention/infiltration, harvest & use or biotreatment facilities that are planned for installation. Where it is determined to be infeasible to capture and detain design storm runoff volumes, on-site, please include other design features, as described in Section 3, above. Include numbered or lettered notes on the Site Plan with a legend detailing other BMPs, as described in Section 3.

8. BMP Maintenance and Funding Mechanism & Description:

_____

_____

9. Acknowledgment:

As the property owner or developer, I understand that this project is required to install and implement permanent LID Storm Water Best Management Practices pursuant to the requirements of the San Bernardino County MS4 Permit and to document those BMPs in the submittal of a Water Quality Management Plan, which is binding on any current or successive owners of this property.

Yes	✔	No	

10. Exemption Signature:

As the property owner or developer, I understand that this project is not required by the San Bernardino County MS4 Permit to install and implement permanent LID Storm Water Best Management Practices and will not be required to submit a Water Quality Management Plan.

MEMORANDUM

TO: Rudy Zeledon, PLANNING DEPARTMENT
Mike Eskander, ENGINEERING DEPARTMENT
FROM: Steve Wilson
DATE: November 16, 2006
SUBJECT: File No. PMTT06-056 (TT 18380) -Esperanza Specific Plan area "A" Map

---

[X] The "A" Maps for these tracts are approved. Prior to DAB approval of the "B" Maps for these tracts, the following items must be included in the Tentative Tract Maps and resubmitted to Engineering:

1. The Tract Map "B" Map submittals for these tracts must conceptually address the use of the regional wetlands in the ultimate condition as well as interim conditions to comply with the water quality requirements for all new development in the Regional Water Quality Management Plan (WQMP). All stormwater runoff pollutants not adequately addressed by on-site Source Control and Site design BMPs or off-site treatment controls must be addressed by on-site Treatment BMPs.

2. Interim on-site treatment control BMPs to address water quality, until such time that the regional wetlands are constructed and operational, are required to be to be shown on the Tract Map/Drainage Plan for this tract or on other tracts within this same project that would be slated for interim treatment BMPs and would receive drainage from this tract. Tentative Tract Map approval will not be granted until this is addressed.

Note: Each landowner/developer in the Esperanza project will be conditioned in the Engineering DAB Report, to prepare and submit one Water Quality Management Plan (WQMP), along with separate Grading Plans, for all of the tracts being developed by that owner. The model WQMP form is available at: www.swrcb.ca.gov/rwqcb8/html/sb_wqmp.html
The WQMP shall identify and detail all appropriate site design, source control and treatment control BMPs to be implemented or installed in this development project in order to reduce storm water pollutants and site runoff. You may also request a revised copy of the WQMP document, and the Standard Erosion & Sediment Control Notes for the Grading Plans from me by emailing a request to: swilson@ci.ontario.ca.us . Please direct all questions to Mr. Steve Wilson at (909)395-2389.

CITY OF ONTARIO
MEMORANDUM

Development Plan Review

Project: Esperanza Specific Plan PA-11 Date: March 7, 2024

Location: NEC of Clifton Ave and Eucalyptus Ave By: Diego Tapia

The following comments on the subject project are provided for the benefit of City Engineering and Planning staff and the Applicant. These are not the conditions of approval which will be submitted under separate cover.

Preliminary Comments:

1. A Traffic Impact Analysis must be submitted that supports the Applicant/Developer's proposed land use change and evaluates potential project traffic impacts. Additional comments may be provided once the Traffic Impact Analysis review is complete.

2. The previous site plan had the tract entrance being proposed on Amherst Avenue, currently it's now being proposed on Clifton Avenue. Please restore the tract entrance onto Amherst Avenue and align the centerline of the tract entry with Shelburne Street. Chokers shall also be installed on the east side of the intersection on Amherst Avenue at tract entrance per City of Ontario Standard Drawing No. 1110. Our intent is that by having the tract entrance on Amherst Avenue with chokers, speeding along the straightaway segment of Amherst Avenue will be reduced.

3. The Applicant/Developer shall align the proposed tract entry onto Chatham Street with Ventura Avenue (existing tract entrance).

4. Install choker, ramp and crosswalk on Chatham Street east of Ventura Avenue and appropriate parking restrictions for sight distance.

5. Remove on-street parking stall markings from site plans.

6. The Applicant/Developer shall install ADA ramps for pedestrian crossings at the following locations per City of Ontario Standard Drawing No. 1213.

    a. Southwest corner of Chatham Street and Clifton Avenue
    b. Southeast corner of Chatham Street and Amherst Avenue

7. The Applicant/Developer shall be responsible to design and construct street improvements along property frontages of Eucalyptus Avenue, Amherst Avenue, Chatham Street, and Clifton Avenue in accordance with conditions issued by City's Land Development Division.

These, and all other street improvements required herein, shall include, but not be limited to, concrete curb and gutter, sidewalk, LED streetlights, signing and striping, and parkway landscaping.

8. The Applicant/Developer shall be responsible to design and construct intersection choker on the southeast corner of Amherst Avenue and Chatham Street per City of Ontario Standard Drawing No. 1110.

9. Existing parking restrictions along Eucalyptus Avenue shall remain in place.

10. All landscaping, block walls, and other obstructions shall be compatible with the stopping sight distance requirements per City of Ontario Standard Drawing No. 1309.

EXECUTIVE SUMMARY

Urban Crossroads, Inc. has prepared this noise study to determine the noise exposure and the necessary noise mitigation measures for the Esperanza Specific Plan Amendment ("Project"). The Project is located within the Esperanza Specific Plan. The original Specific Plan that was approved contemplated a 736-student elementary school within Planning Area 11. It is our understanding that the Project is to consist of 161 multifamily residential dwelling units (with a density of approximately 16.1 dwelling units per net acre). This noise study has been prepared to satisfy the applicable City of Ontario noise standards and significance criteria based on Appendix G of the California Environmental Quality Act (CEQA) Guidelines. (1)

The results of this Noise Impact Analysis are summarized below based on the significance criteria in Section 4 of this report, consistent with Appendix G of the California Environmental Quality Act (CEQA) Guidelines. (1) Table ES-1 shows the findings of significance for each potential noise and/or vibration impact under CEQA before and after any required mitigation measures.

TABLE ES-1: SUMMARY OF CEQA SIGNIFICANCE FINDINGS

Analysis	Report Section	Significance Findings	
		Unmitigated	Mitigated
Off-Site Traffic Noise	7	*Less Than Significant*	-
On-Site Traffic Noise	8	--[1]	--[1]
Operational Noise	10	*Less Than Significant*	-
Construction Noise	11	*Less Than Significant*	-
Construction Vibration		*Less Than Significant*	-

[1] Impacts to the Project from the environment are not considered a noise impact under CEQA.

This page was intentionally left blank.

1 INTRODUCTION

This noise analysis has been completed to determine the noise impacts associated with the development of the Esperanza Specific Plan Amendment ("Project"). This noise study briefly describes the Project, provides information regarding noise fundamentals, sets out the local regulatory setting, presents the study methods and procedures for noise analysis, and evaluates the future exterior noise environment. In addition, this study includes an analysis of the potential Project-related long-term stationary-source operational noise and short-term construction noise and vibration impacts.

1.1 SITE LOCATION

The Subarea 29 Specific Plan area is located on the northeast corner of Eucalyptus Avenue and Amherst Avenue in the City of Ontario. The location of the Project is shown in Exhibit 1-A. The Ontario International Airport (ONT) is located approximately 4 miles north of the Project site, and Chino Airport is located approximately 3 miles east of the Project site.

1.2 PROJECT DESCRIPTION

The Project is located within the Esperanza Specific Plan (ESP). The approved original Specific Plan contemplated a 736-student elementary school within Planning Area 11. As part of the Project, the land use designation will be updated from "School" to "MDR Medium Density Residential" consistent with the adjacent land use to the northeast, as shown in Exhibit 1-B.

It is our understanding that the Project consists of an amendment to the ESP to replace the elementary school with 161 multifamily residential dwelling units (with a density of approximately 16.1 dwelling units per net acre). The Project also includes a 6-foot-high wall along Eucalyptus Avenue. The Project site plan is illustrated in Exhibit 1-C.

2 FUNDAMENTALS

Noise is simply defined as "unwanted sound." Sound becomes unwanted when it interferes with normal activities, when it causes actual physical harm, or when it has adverse effects on health. Noise is measured on a logarithmic scale of sound pressure level known as a decibel (dB). A-weighted decibels (dBA) approximate the subjective response of the human ear to broad-frequency noise sources by discriminating against very low and very high frequencies of the audible spectrum. They are adjusted to reflect only those frequencies which are audible to the human ear. Exhibit 2-A presents a summary of the typical noise levels and their subjective loudness and effects, which are described in more detail below.

EXHIBIT 2-A: TYPICAL NOISE LEVELS

COMMON OUTDOOR ACTIVITIES	COMMON INDOOR ACTIVITIES	A - WEIGHTED SOUND LEVEL dBA	SUBJECTIVE LOUDNESS	EFFECTS OF NOISE
THRESHOLD OF PAIN		140	INTOLERABLE OR DEAFENING	HEARING LOSS
NEAR JET ENGINE		130		
		120		
JET FLY-OVER AT 300m (1000 ft)	ROCK BAND	110		
LOUD AUTO HORN		100	VERY NOISY	
GAS LAWN MOWER AT 1m (3 ft)		90		
DIESEL TRUCK AT 15m (50 ft), at 80 km/hr (50 mph)	FOOD BLENDER AT 1m (3 ft)	80		SPEECH INTERFERENCE
NOISY URBAN AREA, DAYTIME	VACUUM CLEANER AT 3m (10 ft)	70	LOUD	
HEAVY TRAFFIC AT 90m (300 ft)	NORMAL SPEECH AT 1m (3 ft)	60		
QUIET URBAN DAYTIME	LARGE BUSINESS OFFICE	50	MODERATE	SLEEP DISTURBANCE
QUIET URBAN NIGHTTIME	THEATER, LARGE CONFERENCE ROOM (BACKGROUND)	40		
QUIET SUBURBAN NIGHTTIME	LIBRARY	30	FAINT	NO EFFECT
QUIET RURAL NIGHTTIME	BEDROOM AT NIGHT, CONCERT HALL (BACKGROUND)	20		
	BROADCAST/RECORDING STUDIO	10	VERY FAINT	
LOWEST THRESHOLD OF HUMAN HEARING	LOWEST THRESHOLD OF HUMAN HEARING	0

2.1 RANGE OF NOISE

Since the range of intensities that the human ear can detect is so large, the scale frequently used to measure intensity is a scale based on multiples of 10, the logarithmic scale. The scale for measuring intensity is the decibel scale. Each interval of 10 decibels indicates a sound energy ten times greater than before, which is perceived by the human ear as being roughly twice as loud. (2) The most common sounds vary between 40 dBA (very quiet) to 100 dBA (very loud). Normal conversation at three feet is roughly at 60 dBA, while loud jet engine noises equate to 110 dBA at approximately 1,000 feet, which can cause serious discomfort. (3)

Another important aspect of noise is the duration of the sound and the way it is described and distributed in time.

2.2 NOISE DESCRIPTORS

Environmental noise descriptors are generally based on averages rather than instantaneous noise levels. The most used metric is the equivalent level (L_{eq}). Equivalent sound levels are not measured directly but are calculated from sound pressure levels typically measured in A-weighted decibels (dBA). The equivalent sound level (L_{eq}) represents a steady-state sound level containing the same total energy as a time-varying signal over a given sample period and is commonly used to describe the "average" noise levels within the environment.

Peak hour or average noise levels, while useful, do not completely describe a given noise environment. Noise levels lower than peak hour may be disturbing if they occur during times when quiet is most desirable, namely evening and nighttime (sleeping) hours. To account for this, the Community Noise Equivalent Level (CNEL), representing a composite 24-hour noise level is utilized. The CNEL is the weighted average of the intensity of a sound, with corrections for time of day, and averaged over 24 hours. The time-of-day corrections require the addition of 5 decibels to dBA L_{eq} sound levels in the evening from 7:00 p.m. to 10:00 p.m., and the addition of 10 decibels to dBA L_{eq} sound levels at night between 10:00 p.m. and 7:00 a.m. These additions are made to account for the noise-sensitive time periods during the evening and night hours when noise can become more intrusive. CNEL does not represent the actual sound level heard at any time but rather represents the total sound exposure. The City of Ontario relies on the 24-hour CNEL level to assess land use compatibility with transportation-related noise sources.

2.3 SOUND PROPAGATION

When sound propagates over a distance, it changes in level and frequency content. The way noise reduces with distance depends on the following factors.

2.3.1 GEOMETRIC SPREADING

Sound from a localized source (i.e., a stationary point source) propagates uniformly outward in a spherical pattern. The sound level attenuates (or decreases) at a rate of 6 dB for each doubling of distance from a point source. Highways consist of several localized noise sources on a defined path and hence can be treated as a line source, which approximates the effect of several point sources. Noise from a line source propagates outward in a cylindrical pattern, often referred to as cylindrical spreading. Sound levels attenuate at a rate of 3 dB for each doubling of distance from a line source. (2)

2.3.2 GROUND ABSORPTION

The propagation path of noise from a highway to a receiver is usually very close to the ground. Noise attenuation from ground absorption and reflective wave canceling adds to the attenuation associated with geometric spreading. Traditionally, the excess attenuation has also been expressed in terms of attenuation per doubling of distance. This approximation is usually sufficiently accurate for distances of less than 200 ft. For acoustically hard sites (i.e., sites with a

reflective surface between the source and the receiver, such as a parking lot or body of water), no excess ground attenuation is assumed. For acoustically absorptive or soft sites (i.e., those sites with an absorptive ground surface between the source and the receiver, such as soft dirt, grass, or scattered bushes and trees), an excess ground attenuation value of 1.5 dB per doubling of distance is normally assumed. When added to the cylindrical spreading, the excess ground attenuation results in an overall drop-off rate of 4.5 dB per doubling of distance from a line source. (4)

2.3.3 ATMOSPHERIC EFFECTS

Receivers located downwind from a source can be exposed to increased noise levels relative to calm conditions, whereas locations upwind can have lowered noise levels. Sound levels can be increased at large distances (e.g., more than 500 feet) due to atmospheric temperature inversion (i.e., increasing temperature with elevation). Other factors, such as air temperature, humidity, and turbulence, can also have significant effects. (2)

2.3.4 SHIELDING

A large object or barrier in the path between a noise source and a receiver can substantially attenuate noise levels at the receiver. The amount of attenuation provided by shielding depends on the size of the object and the frequency content of the noise source. Shielding by trees and other such vegetation typically only has an "out of sight, out of mind" effect. That is, the perception of noise impact tends to decrease when vegetation blocks the line of sight to nearby residents. However, for vegetation to provide a substantial, or even noticeable, noise reduction, the vegetation area must be at least 15 feet in height, 100 feet wide, and dense enough to completely obstruct the line of sight between the source and the receiver. This size of vegetation may provide up to 5 dBA of noise reduction. The Federal Highway Administration (FHWA) does not consider the planting of vegetation to be a noise abatement measure. (5)

2.4 NOISE CONTROL

Noise control is the process of obtaining an acceptable noise environment for an observation point or receiver by controlling the noise source, transmission path, receiver, or all three. This concept is known as the source-path-receiver concept. In general, noise control measures can be applied to these three elements.

2.5 NOISE BARRIER ATTENUATION

Effective noise barriers can reduce noise levels by 10 to 15 dBA, cutting the loudness of traffic noise in half. A noise barrier is most effective when placed close to the noise source or receiver. Noise barriers, however, do have limitations. For a noise barrier to work, it must block the line-of-sight path of sound from the noise source.

2.6 LAND USE COMPATIBILITY WITH NOISE

Some land uses are more tolerant of noise than others. For example, schools, hospitals, churches, and residences are more sensitive to noise intrusion than are commercial or industrial developments and related activities. As ambient noise levels affect the perceived amenity or livability of a development, so too can the mismanagement of noise impacts impair

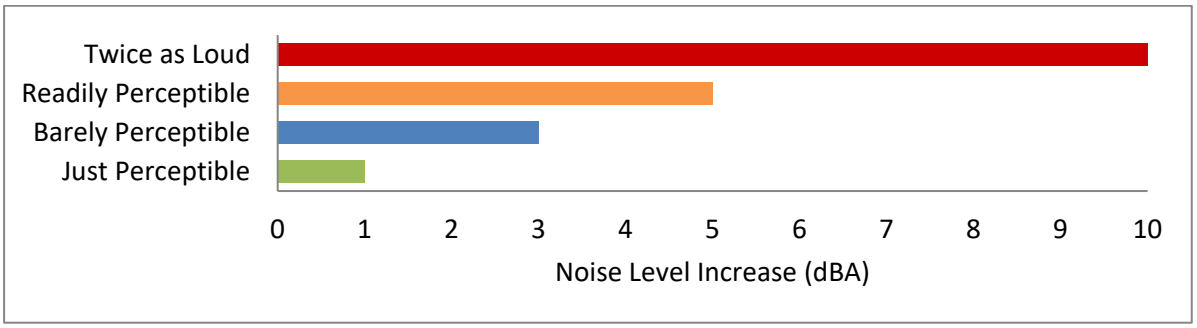
the economic health and growth potential of a community by reducing the area's desirability as a place to live, shop, and work. For this reason, land use compatibility with the noise environment is an important consideration in the planning and design process. The FHWA encourages State and Local government to regulate land development in such a way that noise-sensitive land uses are either prohibited from being located adjacent to a highway, or that the developments are planned, designed, and constructed in such a way that noise impacts are minimized. (6)

2.7 COMMUNITY RESPONSE TO NOISE

Approximately sixteen percent of the population has a very low tolerance for noise and will object to any noise not of their making. Consequently, even in the quietest environment, some complaints may occur. Twenty to thirty percent of the population will not complain even in very severe noise environments. (7 pp. 8-6) Thus, a variety of reactions can be expected from people exposed to any given noise environment.

Surveys have shown that community response to noise varies from no reaction to vigorous action for newly introduced noises averaging from 10 dB below existing to 25 dB above existing. (8) According to research originally published in the Noise Effects Handbook (7), the percentage of high annoyance ranges from approximately 0 percent at 45 dB or less, 10 percent are highly annoyed at around 60 dB, and increases rapidly to approximately 70 percent being highly annoyed at approximately 85 dB or greater. Despite this variability in behavior on an individual level, the population can be expected to exhibit the following responses to changes in noise levels, as shown in Exhibit 2-B. A change of 3 dBA is considered barely perceptible, and changes of 5 dBA are considered readily perceptible. (4)

EXHIBIT 2-B: NOISE LEVEL INCREASE PERCEPTION



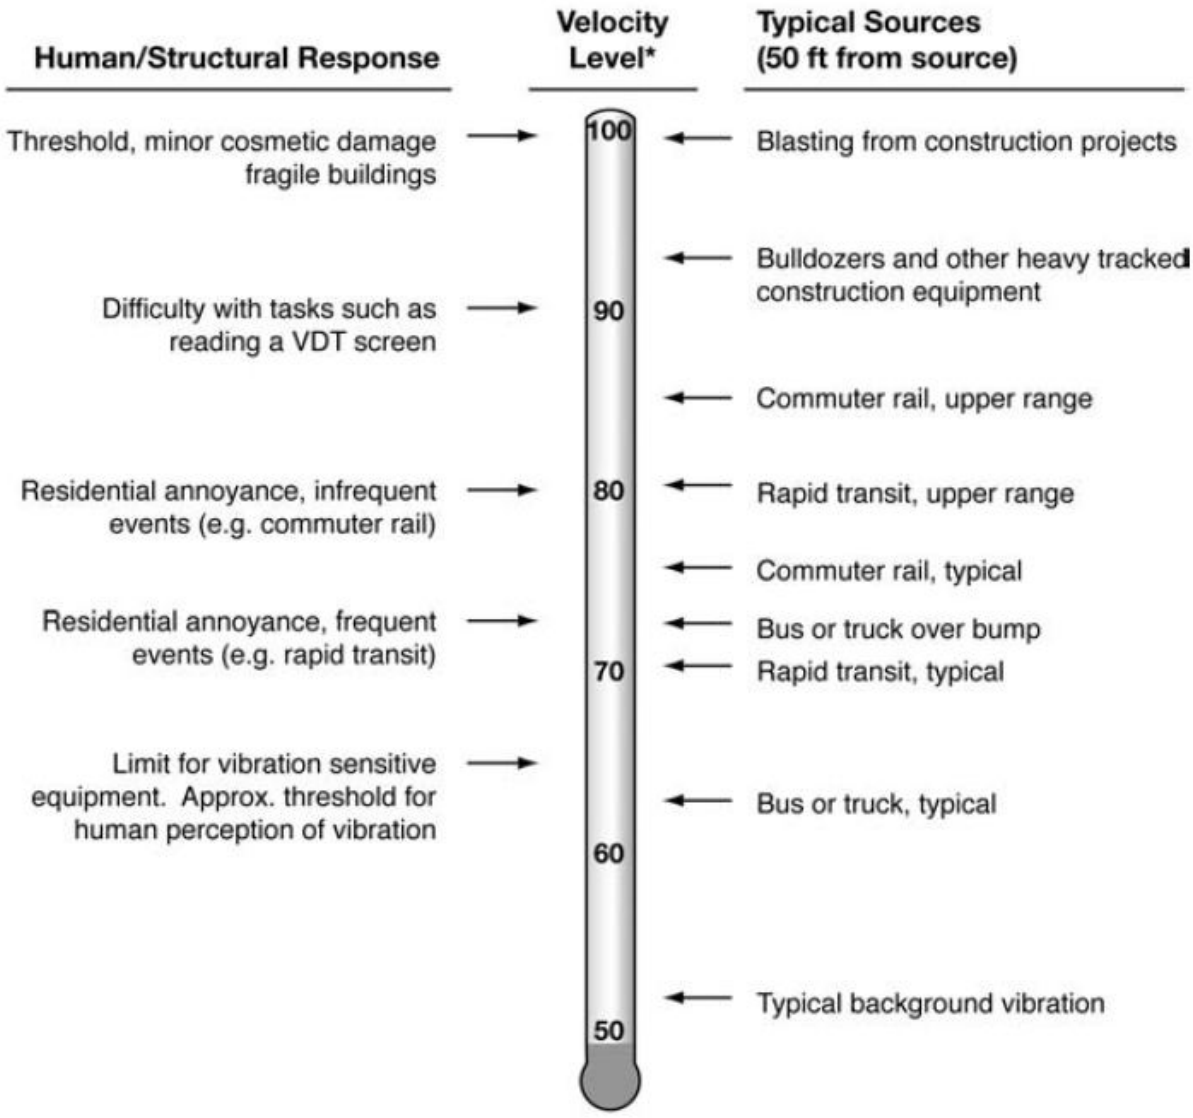
2.8 VIBRATION

Per the Federal Transit Administration (FTA) *Transit Noise Impact and Vibration Impact Assessment Manual* (8) , vibration is the periodic oscillation of a medium or object. The rumbling sound caused by the vibration of room surfaces is called structure-borne noise. Sources of ground-borne vibrations include natural phenomena (e.g., earthquakes, volcanic eruptions, sea waves, landslides) or human-made causes (e.g., explosions, machinery, traffic, trains, construction equipment). Vibration sources may be continuous, such as factory machinery, or transient, such as explosions. As is the case with airborne sound, ground-borne vibrations may be described by amplitude and frequency.

There are several different methods that are used to quantify vibration. The peak particle velocity (PPV) is defined as the maximum instantaneous peak of the vibration signal. The PPV is most frequently used to describe vibration impacts to buildings but is not always suitable for evaluating human response (annoyance) because it takes some time for the human body to respond to vibration signals. Instead, the human body responds to average vibration amplitude, often described as the root mean square (RMS). The RMS amplitude is defined as the average of the squared amplitude of the signal and is most frequently used to describe the effect of vibration on the human body. Decibel notation (VdB) is commonly used to measure RMS. Decibel notation (VdB) serves to reduce the range of numbers used to describe human response to vibration. Typically, ground-borne vibration generated by man-made activities attenuates rapidly with distance from the source of the vibration. Sensitive receivers for vibration include structures (especially older masonry structures), people (especially residents, the elderly, and the sick), and vibration-sensitive equipment and/or activities.

The background vibration-velocity level in residential areas is generally 50 VdB. Ground-borne vibration is normally perceptible to humans at approximately 65 VdB. For most people, a vibration-velocity level of 75 VdB is the approximate dividing line between barely perceptible and distinctly perceptible levels. Typical outdoor sources of perceptible ground-borne vibration are construction equipment, steel-wheeled trains, and traffic on rough roads. If a roadway is smooth, the ground-borne vibration is rarely perceptible. The range of interest is from approximately 50 VdB, which is the typical background vibration-velocity level, to 100 VdB, which is the general threshold where minor damage can occur in fragile buildings. Exhibit 2-C illustrates common vibration sources and the human and structural response to ground-borne vibration.

EXHIBIT 2-C: TYPICAL LEVELS OF GROUND-BORNE VIBRATION



Source: Federal Transit Administration (FTA) Transit Noise and Vibration Impact Assessment Manual.

3 REGULATORY SETTING

The federal government, the State of California, various county governments, and most municipalities in the state have established standards and ordinances to control noise. In most areas, automobile and truck traffic is the major source of environmental noise. Traffic activity generally produces an average sound level that remains constant with time. Air and rail traffic, and commercial and industrial activities are also major sources of noise in some areas. Federal, state, and local agencies regulate different aspects of environmental noise. Federal and state agencies generally set noise standards for mobile sources such as aircraft and motor vehicles, while regulation of stationary sources is left to local agencies.

3.1 STATE OF CALIFORNIA NOISE REQUIREMENTS

The State of California regulates freeway noise, sets standards for sound transmission, provides occupational noise control criteria, identifies noise standards, and provides guidance for local land use compatibility. State law requires that each county and city adopt a General Plan that includes a Noise Element, which is to be prepared per guidelines adopted by the Governor's Office of Planning and Research (OPR). (9) The purpose of the Noise Element is to *limit the exposure of the community to excessive noise levels*. In addition, the California Environmental Quality Act (CEQA) requires that all known environmental effects of a project be analyzed, including environmental noise impacts.

3.2 CITY OF ONTARIO GENERAL PLAN

The City of Ontario General Plan (Policy Plan) identifies several policies to minimize the impacts of excessive noise levels throughout the community. Policy Plan Section S4, Noise Hazards, establishes a goal of maintaining *an environment where noise does not adversely affect the public's health, safety, and welfare.* (10) To satisfy this goal, the Policy Plan identifies six policies related to: noise mitigation; coordination with transportation authorities; noise mitigation; truck traffic; roadway design; airport noise compatibility, and rail noise mitigation. Noise criteria identified in the General Plan Environmental Impact Report (EIR) in Table 5.13-3 are the guidelines used in the 2010 General Plan to evaluate land use compatibility within various noise environments. Table 5.13-3 is reproduced here in Exhibit 3-A *Noise Level Exposure and Land Use Compatibility Guidelines*. The Project residential land uses are considered *clearly acceptable* within exterior noise level environments approaching 60 dBA CNEL and *normally acceptable* within noise level environments up to 65 dBA CNEL. For noise level environments greater than 70 dBA CNEL, the Project land uses would be considered *clearly unacceptable* and no new construction should be permitted.

LEGEND

Clearly Acceptable:	No special noise insulation required, assuming buildings of normal conventional construction.
Normally Acceptable:	Acoustical reports will be required for major new residential construction. Conventional construction with closed windows and fresh air supply systems of air conditioning will normally suffice.
Normally Unacceptable:	New construction should be discouraged. Noise/aviation easements required for all new construction. If new construction does proceed, a detailed analysis of noise reduction requirements must be made and necessary noise insulation features included.
Clearly Unacceptable:	No new construction should be permitted.

Source: The Ontario Plan 2050 Environmental Impact Report (Table 5.13-3).

3.3 OPERATIONAL NOISE STANDARDS

To analyze noise impacts originating from a designated fixed location or private property such as the Project, stationary-source (operational) noise levels are evaluated against standards established under a City's Municipal Code, which is included in Appendix 3.1. The City of Ontario requires that noise from new stationary sources in the City comply with the City's Noise Ordinance, which limits the acceptable noise at the property line of the impacted property to reduce nuisances to sensitive land uses. Compliance with the City's Noise Ordinance would result in noise levels that are acceptable to the City and would result in less than significant noise impacts from stationary sources (11).

Section 5-29.04(a) identifies the allowable daytime and nighttime ambient exterior noise standards for each land use type. For residential land uses (Noise Zone I), ambient exterior noise levels may not exceed 65 dBA L_{eq} during the daytime hours (7:00 a.m. to 10:00 p.m.) and may not exceed 45 dBA L_{eq} during the nighttime hours (10:00 p.m. to 7:00 a.m.). (12) The lower noise level standard shall apply on the boundary between two (2) different noise zones. If the ambient noise level exceeds the resulting standard, the ambient noise level shall be the standard. The maximum acceptable Project-related operational noise levels received at off-site land uses in the City of Ontario are identified in Table 3-1.

TABLE 3-1: OPERATIONAL NOISE STANDARDS

Noise Zone	Land Use	Exterior Noise Levels (dBA Leq)[2]	
		Daytime (7 am-10 pm)	Nighttime (10 pm-7 am)
I	Single-Family Residential	65	45
II	Multi-Family Residential	65	50
III	Commercial	65	60
IV	Residential Mixed-Use	70	70
V	Manufacturing and Industrial	70	70

[1] Source: Section 5-29.04 of the City of Ontario Municipal Code (Appendix 3.1).
[2] L_{eq} represents a steady-state sound level containing the same total energy as a time-varying signal over a given period.

3.4 CONSTRUCTION NOISE STANDARDS

The City of Ontario has set restrictions to control noise impacts associated with construction. Section 5-29.09 of the Municipal Code states: No person, while engaged in construction, remodeling, digging, grading, demolition or any other related building activity, shall operate any tool, equipment or machine in a manner that produces loud noise that disturbs a person of normal sensitivity who works or resides in the vicinity, or a Police or Code Enforcement Officer, on any weekday except between the hours of 7:00 a.m. and 6:00 p.m. or on Saturday or Sunday between the hours of 9:00 a.m. and 6:00 p.m. (12) While the City establishes limits to the hours during which construction activity may take place, it does not identify specific noise level limits for construction noise levels at potentially affected receiver locations for CEQA analysis purposes. Therefore, a numerical construction threshold based on the Federal Transit

Administration (FTA) Transit Noise and Vibration Impact Assessment Manual is used for the analysis of daytime construction impacts, as discussed below.

According to the FTA, local noise ordinances are typically not very useful in evaluating construction noise. They usually relate to nuisance and hours of allowed activity and sometimes specify limits in terms of maximum levels but are generally not practical for assessing the impact of a construction project. Project construction noise criteria should account for the existing noise environment, the absolute noise levels during construction activities, the duration of the construction, and the adjacent land use. Due to the lack of standardized construction noise thresholds, the FTA provides guidelines that can be considered reasonable criteria for construction noise assessment. The FTA considers a daytime exterior construction noise level of 80 dBA L_{eq} as a reasonable threshold for noise-sensitive residential land use. (8 p. 179)

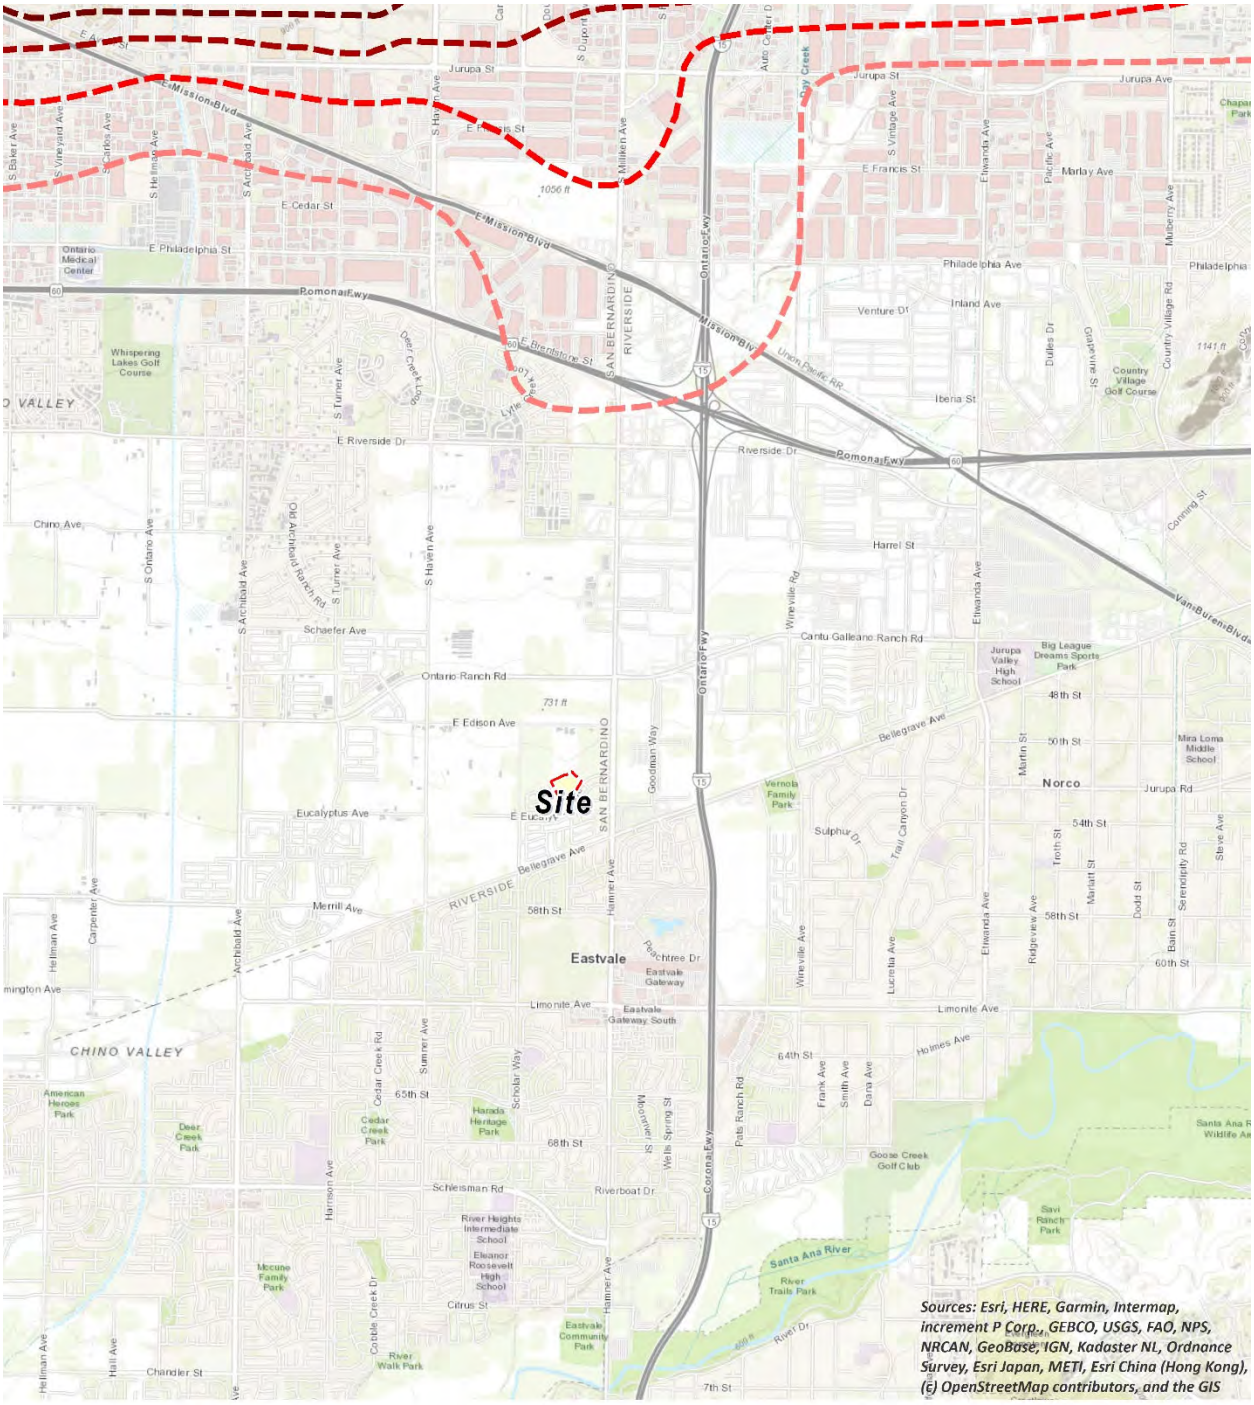
3.5 VIBRATION STANDARDS

Construction activity can result in varying degrees of ground-borne vibration, depending on the equipment and methods used, distance to the affected structures, and soil type. Construction vibration is generally associated with pile driving and rock blasting. Other construction equipment, such as air compressors, light trucks, hydraulic loaders, etc., generates little or no ground vibration. (8) To analyze vibration impacts originating from the operation and construction of a project, vibration-generating activities are appropriately evaluated against standards established under a City's Municipal Code, if such standards exist. However, the City of Ontario does not identify specific vibration level limits. Therefore, for analysis purposes, the Caltrans *Transportation and Construction Vibration Guidance Manual*, (13 p. 38) Table 19, vibration damage limit, is used in this noise study to assess potential temporary construction-related impacts at adjacent building locations. The nearest noise-sensitive buildings adjacent to the Project site can best be described as "older residential structures" with a maximum acceptable continuous vibration threshold of 0.3 PPV (in/sec).

3.6 AIRPORT LAND USE COMPATIBILITY

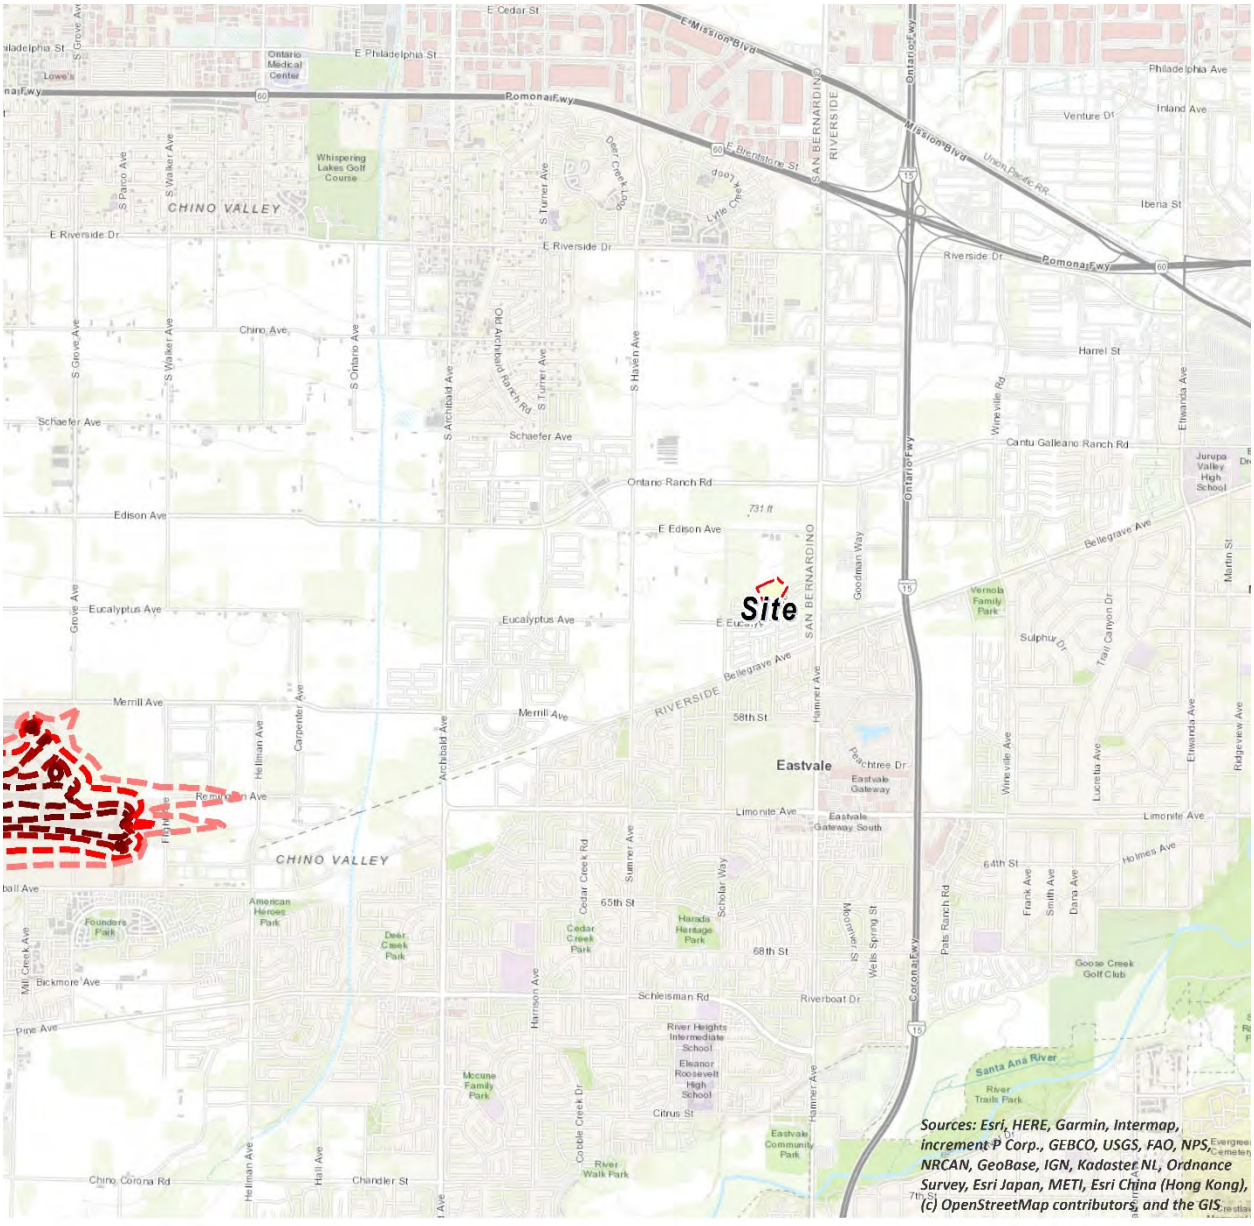
The Project site is located approximately 4 miles south of the Ontario International Airport (ONT). This places the Project site within the ONT Airport Influence Area according to Policy Map 2-1 of the *Ontario International Airport Land Use Compatibility Plan (ONT ALUCP).* The ONT ALUCP was amended in July 2018 to promote compatibility between the airport and the land uses that surround it (14). Since the Project site is located within the ONT Airport Influence Area, the Project is subject to the Noise Criteria established in Table 2-3 in the ONT ALUCP. As shown in Exhibit 3-B, the Project site is located within the ONT Airport Influence Area but outside the 60 dBA CNEL airport noise impact zone consistent with Policy Map 2-3. According to Table 2-3 of the ONT ALUCP, residential land uses and schools located outside the 60 dBA CNEL noise level contours of ONT, such as the Project, are considered *normally compatible land use.* For *normally compatible land use,* either the activities associated with the land use are inherently noisy or standard construction methods will sufficiently attenuate exterior noise to an acceptable indoor community noise equivalent level (CNEL).

EXHIBIT 3-B: ONT AIRPORT NOISE LEVEL CONTOURS



The Project site is located approximately 2.5 miles east of the Chino Airport (CNO). This places the Project site outside the Chino Airport Influence Area according to Figure 1-4 Airport Referral Areas of the *Comprehensive Land Use Plan for the Chino Airport.* As shown in Exhibit 3-C, the Project site is outside the 60 dBA CNEL airport noise level contour, and impacts would be *less than significant*.

EXHIBIT 3-C: CHINO AIRPORT NOISE LEVEL CONTOURS



4 SIGNIFICANCE CRITERIA

The following significance criteria are based on currently adopted guidance provided by Appendix G of the California Environmental Quality Act (CEQA) Guidelines. (15) For the purposes of this report, impacts would be potentially significant if the Project results in or causes:

A. Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?

B. Generation of excessive ground-borne vibration or ground-borne noise levels?

C. For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?

4.1 NOISE LEVEL INCREASES (THRESHOLD A)

Noise level increases resulting from the Project are evaluated based on the Appendix G CEQA Guidelines. Under CEQA, consideration must be given to the magnitude of the increase, the existing baseline ambient noise levels, and the location of receivers to determine if a noise increase represents a significant adverse environmental impact. This approach recognizes *that there is no single noise increase that renders the noise impact significant.* (16) This is primarily because of the wide variation in individual thresholds of annoyance and differing individual experiences with noise. Thus, an important way of determining a person's subjective reaction to a new noise is to compare it to the existing environment to which one has adapted—the so-called *ambient* environment. In general, the more a new noise exceeds the previously existing ambient noise level, the less acceptable the new noise will typically be judged.

The Federal Interagency Committee on Noise (FICON) (17) developed guidance to be used for the assessment of project-generated increases in noise levels that consider the ambient noise level. The FICON recommendations are based on studies that relate aircraft noise levels to the percentage of persons highly annoyed by aircraft noise. Although the FICON recommendations were specifically developed to assess aircraft noise impacts, these recommendations are often used in environmental noise impact assessments involving the use of cumulative noise exposure metrics, such as the average-daily noise level (CNEL) and equivalent continuous noise level (L_{eq}).

As previously stated, the approach used in this noise study recognizes *that there is no single noise increase that renders the noise impact significant*, based on a 2008 California Court of Appeal ruling on Gray v. County of Madera. (16) For example, if the ambient noise environment is quiet (<60 dBA) and the new noise source greatly increases the noise levels, an impact may occur if the noise criteria are exceeded. Therefore, for this analysis, a *readily perceptible* 5 dBA or greater project-related noise level increase is considered a significant impact when the without project noise levels are below 60 dBA. Per the FICON, in areas where the without project noise levels range from 60 to 64 dBA, a 3 dBA *barely perceptible* noise level increase

appears to be appropriate for most people. When the without project noise levels are 65 dBA and higher, any increase in community noise louder than 1.5 dBA or greater is considered a significant impact if the noise criteria for a given land use is exceeded since it likely contributes to an existing noise exposure exceedance. The FICON guidance provides an established source of criteria to assess the impacts of substantial temporary or permanent increases in baseline ambient noise levels. Based on the FICON criteria, the amount to which a given noise level increase is considered acceptable is reduced when the without Project (baseline) noise levels are already shown to exceed certain land-use specific exterior noise level criteria. The specific levels are based on typical responses to noise level increases of 5 dBA or *readily perceptible*, 3 dBA or *barely perceptible*, and 1.5 dBA depending on the underlying without Project noise levels for noise-sensitive uses. These levels of increase and their perceived acceptance are consistent with guidance provided by the Federal Aviation Administration, the Federal Highway Administration (4 p. 9), and Caltrans (18 p. 2_48).

4.2 VIBRATION (THRESHOLD B)

As described in Section 3.5, the vibration impacts originating from the construction of the Esperanza Specific Plan Amendment, vibration-generating activities are appropriately evaluated using the Caltrans vibration damage thresholds to assess potential temporary construction-related impacts at adjacent building locations. The nearest noise-sensitive buildings adjacent to the Project site can best be described as “older residential structures” with a maximum acceptable continuous vibration threshold of 0.3 PPV (in/sec).

4.3 CEQA GUIDELINES NOT FURTHER ANALYZED (THRESHOLD C)

CEQA Noise Threshold C applies when there are nearby public and private airports and/or airstrips and focuses on land use compatibility of the Project to nearby airports and airstrips. The closest airport that would require additional noise analysis under CEQA Guideline threshold C is the Ontario International Airport, which is located approximately 4 miles north of the Project site. As previously indicated in Section 3.6, the Project site is located within the ONT Airport Influence Area but is located outside the 60 dBA CNEL airport noise impact zone. Similarly, as indicated in Section 3.6, the Project site is not located within the CNO Airport Influence Area and is outside the 60 dBA CNEL airport noise impact zone. Therefore, airport noise impacts are considered *less than significant,* and no further noise analysis is provided under Guideline C.

4.4 SIGNIFICANCE CRITERIA SUMMARY

Noise impacts shall be considered significant if any of the following occur as a direct result of the Project. Table 4-1 shows the significance criteria summary matrix that includes the allowable criteria used to identify potentially significant incremental noise level increases.

TABLE 4-1: SIGNIFICANCE CRITERIA SUMMARY

Analysis	Receiving Land Use	Condition(s)	Significance Criteria	
			Daytime	Nighttime
Off-Site Traffic	All	If ambient is < 60 dBA CNEL[2]	≥ 5 dBA CNEL Project increase	
		If ambient is 60 - 64 dBA CNEL[2]	≥ 3 dBA CNEL Project increase	
		If ambient is >= 65 dBA CNEL[2]	≥ 1.5 dBA CNEL Project increase	
On-Site Traffic	All	See Exhibit 3-A		
Operational	Noise-Sensitive	Exterior Noise Level Standards[1]	65 dBA L_{eq}	45 dBA L_{eq}
		If ambient is < 60 dBA Leq[2]	≥ 5 dBA L_{eq} Project increase	
		If ambient is 60 - 65 dBA Leq[2]	≥ 3 dBA L_{eq} Project increase	
		If ambient is > 65 dBA Leq[2]	≥ 1.5 dBA L_{eq} Project increase	
Construction		Permitted hours of 7:00 a.m. and 6:00 p.m. on weekdays[3]		
		Noise Level Threshold[4]	80 dBA L_{eq}	
		Vibration Level Threshold[5]	0.3 PPV (in/sec)

5 EXISTING NOISE LEVEL MEASUREMENTS

To assess the existing noise level environment, six 24-hour noise level measurements were taken at sensitive receiver locations in the Project study area. The receiver locations were selected to describe and document the existing noise environment within the Project study area. Exhibit 5-A provides the boundaries of the Project study area and the noise level measurement locations. To fully describe the existing noise conditions, noise level measurements were collected by Urban Crossroads, Inc. on Wednesday, October 4, 2023. Appendix 5.1 includes study area photos.

5.1 MEASUREMENT PROCEDURE AND CRITERIA

To describe the existing noise environment, the hourly noise levels were measured during typical weekday conditions over a 24-hour period. By collecting individual hourly noise level measurements, it is possible to describe the daytime and nighttime hourly noise levels and calculate the 24-hour CNEL. The long-term noise readings were recorded using Piccolo Type 2 integrating sound level meter and dataloggers. The Piccolo sound level meters were calibrated using a Larson-Davis calibrator, Model CAL 150. All noise meters were programmed in "slow" mode to record noise levels in "A" weighted form. The sound level meters and microphones were equipped with a windscreen during all measurements. All noise level measurement equipment satisfies the American National Standards Institute (ANSI) standard specifications for sound level meters ANSI S1.4-2014/IEC 61672-1:2013.

5.2 NOISE MEASUREMENT LOCATIONS

The long-term noise level measurements were positioned as close to the nearest sensitive receiver locations as possible to assess the existing ambient hourly noise levels surrounding the Project site. Actual measurement locations may be affected by location access, equipment security, and proximity to noise sources or solid objects that would affect the measurement and thus may be located at locations that have similar acoustic conditions as the desired locations. Both Caltrans and the FTA recognize that it is not reasonable to collect noise level measurements that can fully represent any part of a private yard, patio, deck, or balcony normally used for human activity when estimating impacts for new development projects. This is demonstrated in the Caltrans general site location guidelines, which indicate that *sites must be free of noise contamination by sources other than sources of interest. Avoid sites located near sources such as barking dogs, lawnmowers, pool pumps, and air conditioners unless it is the express intent of the analyst to measure these sources*. (2) Further, FTA guidance states, t*hat it is not necessary nor recommended that existing noise exposure be determined by measuring at every noise-sensitive location in the project area. Rather, the recommended approach is to characterize the noise environment for clusters of sites based on measurements or estimates at representative locations in the community*. (19)

EXHIBIT 5-A: AMBIENT NOISE MEASUREMENT LOCATIONS

Based on recommendations of Caltrans and the FTA, it is not necessary to collect measurements at each individual building or residence because each measurement represents a group of locations that share acoustical equivalence. (19) In other words, the area represented by the measurement location shares similar shielding, terrain, and geometric relationship to the reference noise source as the receiver location. Receivers represent a location of noise-sensitive areas and are used to estimate the future noise level impacts. Collecting reference ambient noise level measurements at the nearby sensitive receiver locations allows for a comparison of the before and after Project noise levels and is necessary to assess potential noise impacts due to the Project's contribution to the ambient noise levels.

5.3 NOISE MEASUREMENT RESULTS

The noise measurements presented below focus on the average or equivalent sound levels (L_{eq}). The equivalent sound level (L_{eq}) represents a steady-state sound level containing the same total energy as a time-varying signal over a given sample period. Table 5-1 identifies the hourly daytime (7:00 a.m. to 10:00 p.m.) and nighttime (10:00 p.m. to 7:00 a.m.) noise levels at each noise level measurement location. Appendix 5.2 provides a summary of the existing hourly ambient noise levels.

TABLE 5-1: NOISE LEVEL MEASUREMENT SUMMARY

Location[1]	Description	Energy Average Noise Level (dBA L_{eq})[2]	
		Daytime	Nighttime
L1	Located East of the site at future residential	67.9	55.3
L2	Located Northwest of the site at future residential	45.1	36.9
L3	Located North of the site	47.4	34.9
L4	Located West of the site near the residence at 4500 S. Amherst Ave.	53.2	53.3
L5	Located South of the site near the residence at 4576 S Afton Privado	60.3	53.4
L6	Located South of the site near the residence at 4554 S Afton Privado	66.0	45.2

[1] See Exhibit 5-A for the noise level measurement locations.
[2] Energy (logarithmic) average levels. The long-term 24-hour measurement worksheets are included in Appendix 5.2.
"Daytime" = 7:00 a.m. to 10:00 p.m.; "Nighttime" = 10:00 p.m. to 7:00 a.m.

Table 5-1 provides the (energy average) noise levels used to describe the daytime and nighttime ambient conditions. These daytime and nighttime energy average noise levels represent the average of all hourly noise levels observed during these time periods expressed as a single number. Appendix 5.2 provides summary worksheets of the noise levels for each

hour as well as the minimum, maximum, L_1, L_2, L_5, L_8, L_{25}, L_{50}, L_{90}, L_{95}, and L_{99} percentile noise levels observed during the daytime and nighttime periods.

6 METHODS AND PROCEDURES

The following section outlines the methods and procedures used to model and analyze the future traffic noise environment.

6.1 FHWA TRAFFIC NOISE PREDICTION MODEL

The estimated roadway noise impacts from vehicular traffic were calculated using a computer program that replicates the Federal Highway Administration (FHWA) Traffic Noise Prediction Model- FHWA-RD-77-108. (20) The FHWA Model arrives at a predicted noise level through a series of adjustments to the Reference Energy Mean Emission Level (REMEL). In California, the national REMELs are substituted with the California Vehicle Noise (Calveno) Emission Levels. (21) Adjustments are then made to the REMEL to account for: the roadway classification (e.g., collector, secondary, major, or arterial), the roadway active width (i.e., the distance between the center of the outermost travel lanes on each side of the roadway), the total average daily traffic (ADT), the travel speed, the percentages of automobiles, medium trucks, and heavy trucks in the traffic volume, the roadway grade, the angle of view (e.g., whether the roadway view is blocked), the site conditions ("hard" or "soft" relates to the absorption of the ground, pavement, or landscaping), and the percentage of total ADT which flows each hour throughout a 24-hour period.

6.2 ON-SITE TRAFFIC NOISE PREDICTION MODEL INPUTS

Table 6-1 presents the on-site roadway parameters, including the ADT volumes used for this study. The on-site roadway parameters are based on the City of Ontario General Plan Mobility Element roadway classifications. The maximum two-way traffic volumes are based on the roadway design capacity and reflect future long-range traffic conditions needed to assess the on-site traffic noise environment and to identify potential noise abatement measures (if any) that address the worst-case future noise conditions.

TABLE 6-1: ON-SITE ROADWAY PARAMETERS

Location	Classification[1]	Lanes	Average Daily Traffic Volume[2]	Speed Limit (mph)[2]	Site Conditions[2]
Eucalyptus Ave	Arterial	4	21,700	40	Soft
Amherst Ave	Local	2	9,500	25	Soft
Clifton Ave	Local	2	9,500	25	Soft
Chatham St	Local	2	9,500	25	Soft

[1] Road classifications based upon the Esperanza Specific Plan, Exhibit 10 Master Circulation Plan.
[2] Volumes based upon the roadway capacity defined City of Ontario General Plan (TOP2050) Draft EIR, Appendix K.

6.3 TRAFFIC NOISE PREDICTION MODEL INPUTS

The average daily traffic (ADT) volumes used for this study are presented in Table 6-1. The Existing Plus Project ADT was derived based on the differences in Opening Year ADT volumes

added to the Existing ADT volumes. Tables 6-2 and 6-3 provide the time of day (daytime, evening, and nighttime) vehicle splits used for calculating CNEL values.

TABLE 6-2: TIME OF DAY VEHICLE SPLITS

Time Period	Vehicle Type		
	Autos	Medium Trucks	Heavy Trucks
Daytime (7:00 a.m. - 7:00 p.m.)	77.50%	84.80%	86.50%
Evening (7:00 p.m. - 10:00 p.m.)	12.90%	4.90%	2.70%
Nighttime (10:00 p.m. - 7:00 a.m.)	9.60%	10.30%	10.80%
Total:	100.00%	100.00%	100.00%

Source: Typical Southern California vehicle mix.

TABLE 6-3: DISTRIBUTION OF TRAFFIC FLOW BY VEHICLE TYPE (VEHICLE MIX)

Roadway	Total % Traffic Flow			Total
	Autos	Medium Trucks	Heavy Trucks	
All Roadways	97.42%	1.84%	0.74%	100.00%

Source: Typical Southern California vehicle mix.

7 OFF-SITE TRAFFIC NOISE ANALYSIS

The Project would result in a small increase in regional and local traffic volumes. Because sources are calculated on a logarithmic scale, a doubling of the energy is required to generate a noise level increase of 3 dBA. In the case of traffic, a doubling of the traffic volume, without changing the vehicle speeds or mix ratio, results in a noise increase of 3 dBA.

Based on the Project trip generation analysis, the Project is anticipated to generate a net -5 new trips daily (22). Therefore, the Project's traffic volumes would not result in an increase on Eucalyptus Avenue or other area roadways greater than predicted in the original Esperanza Specific Plan or The Ontario Plan 2050 (TOP 2050). Off-site traffic noise impacts would continue to be *less than significant* under CEQA.

This page was intentionally left blank.

8 ON-SITE TRAFFIC NOISE ANALYSIS

An on-site exterior noise impact analysis has been completed to determine the noise exposure levels resulting from adjacent transportation noise sources in the Project study area and identify potential noise attenuation measures that would achieve acceptable Project exterior and interior noise levels. The primary source of transportation noise affecting the Project site is anticipated to be from Eucalyptus Avenue, Clifton Avenue, Chatham Street, and Amherst Avenue. The Project would also be exposed to nominal traffic noise from the Project's internal roads. However, due to the low traffic volume/speed, traffic noise from these internal roads will not substantially contribute to ambient noise conditions.

8.1 EXTERIOR NOISE ANALYSIS

The expected exterior noise levels for the on-site Project land uses were estimated using the FHWA traffic noise prediction model and the parameters outlined in Tables 6-1 to 6-3. Table 8-1 presents a summary of future on-site exterior traffic noise levels at Project building facades, including the Project 6-foot-high wall along Eucalyptus Avenue. The on-site traffic noise analysis calculations are provided in Appendix 8.1.

TABLE 8-1: EXTERIOR NOISE LEVELS

Building	Roadway	Unmitigated Exterior Noise Level (dBA CNEL)[2]	Land Use Compatibility[3]
BLDG 20	Eucalyptus Ave	59.3	*Clearly Acceptable*
BLDG 7-14	Eucalyptus Ave	59.4	*Clearly Acceptable*
BLDG 6	Eucalyptus Ave	59.4	*Clearly Acceptable*
BLDG 5-6	Clifton Ave	62.7	*Normally Acceptable*
BLDG 4	Clifton Ave	61.0	*Normally Acceptable*
BLDG 4	Chatham St	64.4	*Normally Acceptable*
BLDG 1-3	Chatham St	63.9	*Normally Acceptable*
BLDG 27-28	Chatham St	62.3	*Normally Acceptable*
BLDG 27	Amherst Ave	62.9	*Normally Acceptable*
BLDG 26-22	Amherst Ave	62.9	*Normally Acceptable*
BLDG 20-21	Amherst Ave	62.9	*Normally Acceptable*

[1] Project buildings shown on Exhibit 1-B.
[2] Exterior on-site traffic noise level calculations are included in Appendix 8.1.
[3] Based on the General Plan land use compatibility guidelines as shown in Exhibit 3-A.

The on-site exterior traffic noise analysis indicates that all buildings will experience exterior noise levels ranging from 59.3 to 64.4 CNEL. Based on the City of Ontario Land Use Compatibility for Community Noise Exposure shown in Exhibit 3-A, the Project land uses are considered clearly acceptable to normally acceptable with unmitigated exterior noise levels of less than 65 dBA CNEL. For *normally acceptable* exterior noise levels, a*coustical reports will be*

required for major new residential construction. Conventional construction with closed windows and fresh air supply systems of air conditioning will normally suffice.

In addition, the Project will satisfy the City of Ontario 65 dBA CNEL exterior noise level standards for residential land uses. This noise analysis shows that the Project will satisfy the City of Ontario 65 dBA CNEL exterior noise level standards for residential use without additional noise abatement measures.

8.1.4 EXTERIOR TRAFFIC NOISE LEVEL COMPLIANCE

Table 8-1 shows that on-site traffic noise levels do not exceed the City of Ontario 65 dBA CNEL exterior noise level standards for noise-sensitive residential land uses.

8.2 INTERIOR NOISE ANALYSIS

To ensure that the interior noise levels comply with the interior noise level standards, future exterior noise levels were calculated at the first-, second-, and third-floor building façade/balcony locations.

8.2.1 NOISE REDUCTION METHODOLOGY

The interior noise level is the difference between the predicted exterior noise level at the building facade and the noise reduction of the structure. Typical building construction will provide a Noise Reduction (NR) of approximately 12 dBA with "windows open" and a minimum 25 dBA noise reduction with "windows closed." (4) (23)

8.2.2 INTERIOR NOISE LEVEL ASSESSMENT

To provide the necessary interior noise level reduction, Tables 8-2 through 8-4 indicate that Project land uses adjacent to Eucalyptus Avenue, Clifton Avenue, Chatham Street, and Amherst Avenue will require a windows-closed condition and mechanical ventilation (e.g., air conditioning). Table 8-2 shows that the future noise levels at the first-floor building façade are expected to range from 59.3 to 64.4 dBA CNEL, and with standard construction, interior noise levels will range from 33.9 to 39.4 dBA CNEL. Table 8-3 shows that the future noise levels at the second-floor building façade are expected to range from 60.8 to 65.5 dBA CNEL, and with standard construction, interior noise levels will range from 38.5 to 40.5 dBA CNEL. Table 8-4 shows that the future noise levels at the third-floor building façade are expected to range from 60.4 to 65.3 dBA CNEL, and with standard construction, interior noise levels will range from 35.4 to 40.3 dBA CNEL.

8.2.3 INTERIOR TRAFFIC NOISE LEVEL COMPLIANCE

Tables 8-2 through 8-4 show that on-site interior traffic noise levels will not exceed the City of Ontario 45 dBA CNEL interior noise level standard for residential development and additional noise abatement measures are unnecessary.

TABLE 8-2: FIRST-FLOOR INTERIOR NOISE LEVELS (CNEL)

Building	Roadway	Noise Level at Façade[2]	Required Interior Noise Reduction[3]	Estimated Interior Noise Reduction[4]	Upgraded Windows[5]	Interior Noise Level[6]	Threshold[7]	Threshold Exceeded?
BLDG 20	Keller Rd.	59.3	14.3	25.0	No	34.3	45	No
BLDG 7-14	Keller Rd.	59.4	14.4	25.0	No	34.4	45	No
BLDG 6	Keller Rd.	59.4	14.4	25.0	No	34.4	45	No
BLDG 5-6	Keller Rd.	62.7	17.7	25.0	No	37.7	45	No
BLDG 4	Keller Rd.	61.0	16.0	25.0	No	36.0	45	No

9 RECEIVER LOCATIONS

To assess the potential for long-term operational and short-term construction noise impacts, the following sensitive receiver locations, as shown in Exhibit 9-A, were identified as representative locations for analysis. Sensitive receivers are generally defined as locations where people reside or where the presence of unwanted sound could otherwise adversely affect the use of the land. Noise-sensitive land uses are generally considered to include schools, hospitals, single-family dwellings, mobile home parks, churches, libraries, and recreation areas. Moderately noise-sensitive land uses typically include multi-family dwellings, hotels, motels, dormitories, outpatient clinics, cemeteries, golf courses, country clubs, athletic/tennis clubs, and equestrian clubs. Land uses considered relatively insensitive to noise include business, commercial, and professional developments. Land uses typically unaffected by noise include industrial, manufacturing, utilities, agriculture, undeveloped land, parking lots, warehousing, liquid and solid waste facilities, salvage yards, and transit terminals.

To describe the potential off-site Project noise levels, six receiver locations in the vicinity of the Project site were identified. The selection of receiver locations is based on FHWA guidelines and is consistent with additional guidance provided by Caltrans and the FTA. Other sensitive land uses in the Project study area located at greater distances than those identified in this noise study will experience lower noise levels than those presented in this report due to the additional attenuation from distance and the shielding of intervening structures. Distance is measured in a straight line from the project boundary to each receiver location.

R1: Location R1 represents the future residential area east of Clifton Avenue, approximately 83 feet east of the Project site. Receptor R1 is placed at the nearest potential location for future housing facing the Project site.

R2: Location R2 represents the future residential area northeast of the intersection of Clifton Avenue and Chatham Street, approximately 92 feet northeast of the Project site. Receptor R2 is placed at the nearest potential location for future housing facing the Project site.

R3: Location R3 represents the future park north of Chatham Street, approximately 75 feet north of the Project site. Receptor R3 is placed at the nearest potential location within the park use facing the Project site.

R4: Location R4 represents an existing residence at 4508 S. Amherst Avenue, approximately 130 feet west of the Project site. Receptor R4 is placed at the private outdoor living areas (backyards) facing the Project site.

R5: Location R5 represents the existing residence at 4095 E. Amigos Privado, approximately 202 feet south of the Project site. Receptor R5 is placed at the private outdoor living areas (backyards) facing the Project site.

R6: Location R6 represents the existing residence at 4556 S. Afton Privado, approximately 142 feet southeast of the Project site. Receptor R6 is placed at the private outdoor living areas (backyards) facing the Project site.

EXHIBIT 9-A: RECEIVER LOCATIONS

10 OPERATIONAL NOISE ANALYSIS

The Project is considered a noise-sensitive receiving land use and is not expected to include any specific type of operational noise levels beyond those typically associated with residential land uses in the Project study area. Additionally, Section 21085 of the California Public Resources Code states in part, "…for residential projects, the effects of noise generated by project occupants and their guests on human beings is not a significant effect on the environment." (29) A review of the legislative record indicates the author's intent for Section 21085 was to "remove the potential for litigants to challenge residential development based on the speculation that the new residents will create unwanted noises. It would also reestablish existing precedent that minor and intermittent noise nuisances, such as from unamplified human voices, be addressed through local nuisance ordinances and not via CEQA. Consequently, activities solely associated with occupants and quests, such as the swimming pool/spa activities, dog park activities, and outdoor activities in common spaces, are not considered part of this operational noise analysis for CEQA." Based on the intent of the author of Section 21085, the operational noise sources are limited to the mechanical and non-verbal noise sources that occur onsite, including air conditioning units, trash enclosure activity, and parking lot movements.

Therefore, this section analyzes the potential operational noise impacts at the nearby receiver locations, identified in Section 9, resulting from the operation of air conditioning units, trash enclosure activity, and parking lot movements. Exhibit 10-A identifies the noise source locations used to assess the equivalent Leq operational noise levels.

10.1 OPERATIONAL NOISE SOURCES

The proposed development is considered a noise-sensitive receiving land use and is not expected to include any operational noise source activities that would impact existing residential land uses. Operational noise sources associated with residential development are generally limited to Project construction and maintenance. However, to assess the potential operational noise source activities from the Project, this section analyzes the noise impacts resulting from the operation associated with the proposed air conditioning units, trash enclosure activity, and parking lot movements.

AIR CONDITIONING UNITS

To assess the noise levels generated by the air conditioning units, reference noise levels were taken from equipment specifications for a 3- to 5-ton residential packaged air conditioning unit (Carrier 24ABC6); see Appendix 10.1. The air conditioning units were modeled as operating 45 minutes per hour during the daytime and 30 minutes at night, representing the typical maximum operating time for properly sized AC systems. The air conditioning units are anticipated to be located 3 feet above ground level. At a uniform reference distance of 50 feet, the units would generate a reference noise level of 44.4 dBA L_{eq}.

EXHIBIT 10-A: OPERATIONAL NOISE SOURCE LOCATIONS

TRASH ENCLOSURE ACTIVITY

To describe the noise levels associated with trash enclosure activity, Urban Crossroads collected a reference noise level measurement at an existing trash enclosure containing two dumpster bins at the Old Town West Parking structure in the City of Orange. The trash enclosure noise levels describe metal gates opening and closing, metal scraping against concrete floor sounds, dumpster movement on metal wheels, and trash dropping into the metal dumpster. The reference noise levels describe trash enclosure noise activities when trash is dropped into an empty metal dumpster, as would occur at the Project site. The measured reference noise level at the uniform 50-foot reference distance is 72.7 dBA L_{max} and 57.4 dBA L_{eq} for the trash enclosure activity. The reference noise level describes the expected noise source activities associated with the Project trash enclosures. Typical trash enclosure activities are estimated to occur for 10 minutes per hour.

PARKING LOT ACTIVITIES

Parking activities are based on the area of the parking spaces. The Project includes approximately 56 new uncovered surface parking spaces on-site. The surface parking spaces are assumed to have up to 2 movements per hour for 112 events per hour. Based on studies conducted in Europe and Australia, the average parking procedure, which included movement associated with either entering or exiting the parking area, parking the vehicles, and opening and closing doors, resulted in a sound power level of approximately 63 dBA L_w/square meter per event (24) (25).

10.2 REFERENCE NOISE LEVELS

To estimate the operational noise impacts, reference noise level measurements were collected from similar types of activities to represent the noise levels expected with the development of the Project. While sound pressure levels (e.g., L_{eq}) quantify in decibels the intensity of given sound sources at a reference distance, sound power levels (L_w) are connected to the sound source and are independent of distance. Sound pressure levels vary substantially with distance from the source and diminish because of intervening obstacles (e.g., walls, buildings, etc.), air absorption, wind, and other factors. Sound power is the acoustic energy emitted by the sound source and is an absolute value not affected by the environment. The reference project operational noise levels are based on the Project related noise sources shown in Exhibit 10-A. The reference Project's operational sound power levels are summarized in Table 10-1.

TABLE 10-1: REFERENCE NOISE LEVELS

Noise Source	Noise Source Height (Feet)	Min./Hour[4]			Sound Power Level (dBA)[6]
		Day	Night	@ 50 Feet	
Air Conditioning Units[1]	3'	45	30	44.4	76.0
Trash Enclosure Activity[2]	8'	10	10	57.4	89.0
Parking Lot Movements[3]	5'	60	60	31.4	63.0

[4] Anticipated duration (minutes within the hour) of noise activity during typical hourly conditions expected at the Project site.
"Daytime" = 7:00 a.m. to 10:00 p.m.; "Nighttime" = 10:00 p.m. to 7:00 a.m.

10.3 CADNAA NOISE PREDICTION MODEL

To fully describe the exterior operational noise levels from the Project, Urban Crossroads, Inc. developed a noise prediction model using the CadnaA (Computer Aided Noise Abatement) computer program. CadnaA can analyze multiple types of noise sources using the spatially accurate Project site plan, georeferenced Nearmap aerial imagery, topography, buildings, and barriers in its calculations to predict outdoor noise levels.

Using the ISO 9613 protocol, CadnaA will calculate the distance from each noise source to the noise receiver locations, using the ground absorption, distance, and barrier/building attenuation inputs to provide a summary of the noise level at each receiver and the partial noise level contributions by noise source. Consistent with the ISO 9613 protocol, the CadnaA noise prediction model relies on the reference sound power level (L_w) to describe individual noise sources. While sound pressure levels (e.g., L_{eq}) quantify in decibels the intensity of given sound sources at a reference distance, sound power levels (L_w) are connected to the sound source and are independent of distance. Sound pressure levels vary substantially with distance from the source and diminish because of intervening obstacles (e.g., walls, buildings, terrain, etc.), air absorption, wind, and other factors. Sound power is the acoustic energy emitted by the sound source and is an absolute value not affected by the environment.

The operational noise level calculations in this noise study account for the distance attenuation provided due to geometric spreading, when sound from a localized stationary source (i.e., a point source) propagates uniformly outward in a spherical pattern. A default ground attenuation factor of 0.5 was used in the noise analysis to account for mixed ground representing a combination of hard and soft surfaces. Appendix 10.2 includes the detailed noise model inputs used to estimate the Project operational noise levels presented in this section.

10.4 PROJECT OPERATIONAL NOISE LEVELS

Using the reference noise levels to represent the Project operations that include air conditioning units, trash enclosure activity, and parking lot movements, Urban Crossroads, Inc. calculated the unmitigated operational source noise levels expected to be generated at the Project site and the Project-related noise level increases that would be experienced at each of

the sensitive receiver locations. Table 10-2 shows the Project's operational daytime noise levels. The hourly noise levels at the off-site receiver locations are expected to range from 38.3 to 46.4 dBA L_{eq}. Appendix 10.2 includes the detailed noise model inputs used to estimate the Project operational noise levels presented in this section.

TABLE 10-2: PROJECT DAYTIME OPERATIONAL NOISE LEVELS

Noise Source[1]	Operational Noise Levels by Receiver Location (dBA L_{eq})					
	R1	R2	R3	R4	R5	R6
Air Conditioning Units	45.7	37.4	39.8	43.3	38.8	37.9
Trash Enclosure Activity	37.9	30.5	30.3	34.1	29.6	27.9
Parking Lot Movements	27.5	18.6	20.5	24.9	20.8	19.2

[1] See Exhibit 10-A for the noise source locations. CadnaA noise model calculations are included in Appendix 10.2.

10.5 PROJECT OPERATIONAL NOISE LEVEL COMPLIANCE

To demonstrate compliance with local noise regulations, the Project-only operational noise levels are evaluated against exterior noise level thresholds based on the City of Ontario exterior noise level standards at the nearest noise-sensitive receiver locations. Table 10-4 shows the operational noise levels associated with the Project will satisfy the City of Ontario 65 dBA L_{eq} daytime and 45 dBA L_{eq} nighttime exterior noise level standards at all the nearest receiver locations. Therefore, the operational noise impacts are considered *less than significant* at the nearest noise-sensitive receiver locations.

TABLE 10-4: OPERATIONAL NOISE LEVEL COMPLIANCE

Receiver Location[1]	Project Operational Noise Levels (dBA Leq)[2]		Noise Level Standards (dBA Leq)[3]		Noise Level Standards Exceeded?[4]	
	Daytime	Nighttime	Daytime	Nighttime	Daytime	Nighttime
R1	46.4	44.1	65	45	No	No

[4] Do the estimated Project operational noise source activities exceed the noise level standards?
"Daytime" = 7:00 a.m. to 10:00 p.m.; "Nighttime" = 10:00 p.m. to 7:00 a.m.

10.6 PROJECT OPERATIONAL NOISE LEVEL INCREASES

To describe the Project operational noise level increases, the Project operational noise levels are combined with the existing ambient noise level measurements for the nearest receiver locations potentially impacted by Project operational noise sources. Since the units used to measure noise, decibels (dB), are logarithmic units, the Project-operational and existing ambient noise levels cannot be combined using standard arithmetic equations. (2) Instead, they must be logarithmically added using the following base equation:

$$SPL_{Total} = 10\log_{10}[10^{SPL1/10} + 10^{SPL2/10} + \ldots 10^{SPLn/10}]$$

Where "SPL1," "SPL2," etc. are equal to the sound pressure levels being combined, or in this case, the Project-operational and existing ambient noise levels. The difference between the combined Project and ambient noise levels describes the Project noise level increases to the existing ambient noise environment. Noise levels that would be experienced at receiver locations when Project-source noise is added to the daytime and nighttime ambient conditions are presented in Tables 10-2 and 10-3, respectively.

As indicated in Table 10-5, the Project will generate daytime operational noise level increases ranging from less than 0.1 to 0.8 dBA L_{eq} at the nearest receiver locations. According to Table 10-6, the Project will generate nighttime operational noise level increases ranging from approximately 0.1 to 4.7 dBA L_{eq} at the nearest receiver locations. In effect, the amount to which a given noise level increase is considered acceptable is reduced based on existing ambient noise conditions. Based on the result shown in Tables 10-5 and 10-6, the Project-related operational noise level increases will satisfy the operational noise level increase criteria at the nearest sensitive receiver locations, and noise level increases will be *less than significant.*

11 CONSTRUCTION ANALYSIS

This section analyzes potential impacts resulting from the short-term construction activities associated with the development of the Project. Exhibit 11-A shows the construction activity boundaries in relation to the nearest sensitive receiver locations previously described in Section 9.

To prevent high levels of construction noise from impacting noise-sensitive land uses, section 5-29.09 of the Ontario Municipal Code states: *No person, while engaged in construction, remodeling, digging, grading, demolition or any other related building activity, shall operate any tool, equipment or machine in a manner that produces loud noise that disturbs a person of normal sensitivity who works or resides in the vicinity, or a Police or Code Enforcement Officer, on any weekday except between the hours of 7:00 a.m. and 6:00 p.m. or on Saturday or Sunday between the hours of 9:00 a.m. and 6:00 p.m.* (12)

While the City establishes limits to the hours during which construction activity may take place, it does not identify specific noise level limits for construction noise levels at potentially affected receiver locations for CEQA analysis purposes. Therefore, a numerical construction threshold based on the Federal Transit Administration (FTA) Transit Noise and Vibration Impact Assessment Manual is used for the analysis of daytime construction impacts. The FTA considers a daytime exterior construction noise level of 80 dBA L_{eq} as a reasonable threshold for noise-sensitive residential land use. (8 p. 179).

11.1 CONSTRUCTION NOISE LEVELS

The FTA *Transit Noise and Vibration Impact Assessment Manual* recognizes that construction projects are accomplished in several different stages and outlines the procedures for assessing noise impacts during construction. Each stage has a specific equipment mix, depending on the work to be completed during that stage. As a result of the equipment mix, each stage has its own noise characteristics; some stages have higher continuous noise levels than others, and some have higher impact noise levels than others. The Project construction activities are expected to occur in the following stages:

- Site Preparation
- Grading
- Building Construction
- Paving
- Architectural Coating

11.2 CONSTRUCTION REFERENCE NOISE LEVELS

To describe construction noise activities, this construction noise analysis was prepared using reference construction equipment noise levels from the Federal Highway Administration (FHWA) published the Roadway Construction Noise Model (RCNM), which includes a national database of construction equipment reference noise emission levels. (26) The RCNM equipment database provides a comprehensive list of the noise-generating characteristics for specific types of construction equipment. In addition, the database provides an acoustical usage

factor to estimate the fraction of time each piece of construction equipment is operating at full power (i.e., its loudest condition) during a construction operation.

EXHIBIT 11-A: CONSTRUCTION NOISE SOURCE LOCATIONS

TABLE 11-1: CONSTRUCTION REFERENCE NOISE LEVELS

Construction Stage	Reference Construction Equipmnet[1]	Reference Noise Level @ 50 Feet (dBA L_{eq})	Composite Reference Noise Level (dBA L_{eq})	Reference Power Level (dBA L_w)
Site Preparation	Tractor	80.0	82.9	114.5

[1] FHWA Road Construction Noise Model.

11.3 CONSTRUCTION NOISE ANALYSIS

Using the reference construction equipment noise levels and the CadnaA noise prediction model, calculations of the Project construction noise level impacts at the nearby sensitive receiver locations were completed. Consistent with FTA guidance for general construction noise assessment, Table 11-1 presents the combined noise levels for the loudest construction equipment, assuming they operate at the same time. As shown in Table 11-2, the construction noise levels are expected to range from 59.5 to 67.6 dBA L_{eq} at the nearby receiver locations. Appendix 11.1 includes the detailed CadnaA construction noise model inputs.

TABLE 11-2: CONSTRUCTION EQUIPMENT NOISE LEVEL SUMMARY

Receiver Location[1]	Construction Noise Levels (dBA L_{eq})					
	Site Preparation	Grading	Building Construction	Paving	Architectural Coating	Highest Levels[2]
R1	64.0	65.3	63.2	58.9	57.2	67.6
R2	62.5	63.8	61.7	57.4	55.7	66.1
R3	63.0	64.3	62.2	57.9	56.2	66.6
R4	59.7	61.0	58.9	54.6	52.9	63.3
R5	55.9	57.2	55.1	50.8	49.1	59.5
R6	60.7	62.0	59.9	55.6	53.9	64.3

[1] Noise receiver locations are shown in Exhibit 9-A.
[2] Construction noise level calculations are based on distance from the construction activity, measured from the Project site boundary to the nearest receiver locations. CadnaA construction noise model inputs are included in Appendix 11.1.

11.4 CONSTRUCTION NOISE LEVEL COMPLIANCE

To evaluate whether the Project will generate potentially significant short-term noise levels at the nearest receiver locations, a construction-related daytime noise level threshold of 80 dBA L_{eq} is used as a reasonable threshold to assess the daytime construction noise level impacts. The construction noise analysis shows that the nearest receiver locations will satisfy the reasonable daytime 80 dBA L_{eq} significance threshold during Project construction activities, as shown in Table 11-3. Therefore, the noise impacts due to Project construction noise are considered *less than significant* at all receiver locations.

TABLE 11-3: CONSTRUCTION NOISE LEVEL COMPLIANCE

Receiver Location[1]	Construction Noise Levels (dBA L_{eq})		
	Highest Construction Noise Levels[2]	Threshold[3]	Threshold Exceeded?[4]
R1	67.6	80	No
R2	66.1	80	No

[3] Construction noise level thresholds as shown in Table 4-1.
[4] Do the estimated Project construction noise levels exceed the construction noise level threshold?

11.5 CONSTRUCTION VIBRATION ANALYSIS

Construction activity can result in varying degrees of ground vibration, depending on the equipment and methods employed. Operation of construction equipment causes ground vibrations that spread through the ground and diminish in strength with distance. Ground vibration levels associated with various types of construction equipment are summarized in Table 11-4. Based on the representative vibration levels presented for various construction equipment types, it is possible to estimate the potential for human response (annoyance) and building damage using the following vibration assessment methods defined by the FTA. To describe the vibration impacts, the FTA provides the following equation: $PPV_{equip} = PPV_{ref} \times (25/D)^{1.5}$

TABLE 11-4: VIBRATION SOURCE LEVELS FOR CONSTRUCTION EQUIPMENT

Equipment	PPV (in/sec) at 25 feet
Small bulldozer	0.003
Jackhammer	0.035
Loaded Trucks	0.076
Large bulldozer	0.089

Federal Transit Administration, Transit Noise and Vibration Impact Assessment Manual

Table 11-5 presents the expected Project related vibration levels at the nearby receiver locations. At distances ranging from 75 to 202 feet from Project construction activities, construction vibration velocity levels are estimated to range from less than 0.01 to 0.02 in/sec PPV. Based on the maximum acceptable continuous vibration threshold of 0.30 PPV (in/sec), the typical Project construction vibration levels will fall below the building damage thresholds at all the receiver locations. Therefore, the Project-related vibration impacts are considered *less than significant* during typical construction activities at the Project site. Moreover, the vibration levels reported at the sensitive receiver locations are unlikely to be sustained during the entire construction period but will occur rather only during the times that heavy construction equipment is operating adjacent to the Project site perimeter.

Moreover, the impacts at the site of the nearest sensitive receiver locations are unlikely to be sustained during the entire construction period but will occur rather only during the times that heavy construction equipment is operating adjacent to the Project site perimeter.

TABLE 11-5: PROJECT CONSTRUCTION VIBRATION LEVELS

Receiver[1]	Distance to Const. Activity (Feet)[2]	Typical Construction Vibration Levels PPV (in/sec)[3]					Thresholds PPV (in/sec)[4]	Thresholds Exceeded?[5]
		Small bulldozer	Jackhammer	Loaded Trucks	Large bulldozer	Highest Vibration Level		
R1	82'	0.00	0.01	0.01	0.01	0.01	0.3	No
R2	92'	0.00	0.00	0.01	0.01	0.01	0.3	No
R3	75'	0.00	0.01	0.01	0.02	0.02	0.3	No
R4	130'	0.00	0.00	0.01	0.01	0.01	0.3	No
R5	202'	0.00	0.00	0.00	0.00	0.00	0.3	No
R6	142'	0.00	0.00	0.01	0.01	0.01	0.3	No

[1] Receiver locations are shown in Exhibit 9-A.
[2] Distance from receiver location to Project construction boundary.
[3] Based on the Vibration Source Levels of Construction Equipment (Table 10-4).

5-29.17 Penalty

5-29.18 Enforcement and administration

5-29.19 City Manager waiver

5-29.20 Noise abatement program

Sec. 5-29.01. Declaration of findings and policy.

It is hereby found and declared that:

(a) The making and creation of excessive, unnecessary or unusually loud noises within the limits of the City is a condition that has existed for some time, however, the extent and volume of such noises is increasing;

(b) The making, creation or maintenance of such excessive, unnecessary, unnatural or unusually loud noises that are prolonged, unusual and unnatural in their time, place and use affect and are a detriment to public health, comfort, convenience, safety, welfare and prosperity of the residents of the City; and

(c) The necessity in the public interest for the provisions and prohibitions hereinafter contained and enacted, is declared as a matter of legislative determination and public policy, and it is further declared that the provisions and prohibitions hereinafter contained and enacted are in pursuance of and for the purpose of securing and promoting the public health, comfort, convenience, safety, welfare and prosperity and the peace and quiet of the residents of the City.

(§ 2, Ord. 2888, eff. March 6, 2008)

Sec. 5-29.02. Definitions.

As used in this chapter, specific words and phrases are defined as follows:

(a) "Ambient noise level" shall mean the all-encompassing noise level associated with a given environment and is a composite of sounds from all sources, excluding the alleged offensive noise or excessive sound, at the location and approximate time at which a comparison with the alleged offensive noise is to be made.

(b) "Applicable (noise) zone" shall mean the noise zone category based on the actual use of the property, provided that the actual use is a legal use in the City.

(c) "A-weighted sound level" shall mean the sound pressure level in decibels (dBAs) as measured with a sound level meter using the A-weighted filter network (scale) at slow response and at a pressure of twenty (20) micropascals. The A-weighted filter de-emphasizes the very low and a very high frequency component of sound in a manner similar to the response of the human ear, and is a numerical method of rating human judgment of loudness.

(d) "Decibel (dBA)" shall mean a unit for measuring the amplitude of a sound, equal to twenty (20) times the logarithm to the base ten (10) of the ratio of pressure of the sound measured to the reference pressure of twenty (20) micropascals.

(e) "Equivalent sound or noise level (Leq)" shall mean the International Electrotechnical Commission (IEC) 60804 Standard for measurement, or the most recent revision thereof, for the sound level corresponding to a steady state noise level over a given sample period with the same amount of acoustic energy as the actual time varying noise level or the energy average noise level during the sample period. The measurement period for the purposes of this chapter is fifteen (15) minutes.

(f) "Impulsive noise" shall mean a noise of short duration usually less than one (1) second and of high intensity, with an abrupt onset and rapid decay. Such objectionable noises may also be repetitive.

(g) "Intrusive noise" shall mean that noise that intrudes over and above the ambient noise at a given location. The relative intrusiveness of a sound depends upon its amplitude, duration, frequency, time of occurrence and tonal information content, as well as the prevailing ambient noise level.

(h) "Maintenance" shall mean the upkeep, repair or preservation of existing property or structures.

(i) "Noise" shall mean any unwanted sound or sound that is undesirable because it interferes with speech and hearing, or is intense enough to damage hearing or is otherwise annoying.

(j) "Noise level (sound level)" shall mean the weighted sound pressure level obtained by use of a sound level meter having a standard frequency filter for attenuating part of the sound spectrum. For purposes of this chapter, all noise levels (sound levels) shall be A-weighted sound pressure level.

(k) "Noise (sound) level meter" shall mean an instrument, including a microphone, an amplifier, an output meter and frequency weighting networks for the measurement and determination of noise and sound levels. For the purposes of this chapter, the sound level meter must meet the International Electrotechnical Commission (IEC) 60651 and 60804 Standards, or the most recent revisions thereof, for Type 1 sound level meters or an instrument and the associated recording and analyzing equipment that will provide equivalent data.

(§ 2, Ord. 2888, eff. March 6, 2008)

Sec. 5-29.03. Designated noise zones.

The properties hereinafter described shall be assigned to the following noise zones:

Noise Zone I:	All single-family residential properties;
Noise Zone II:	All multi-family residential properties and mobile home parks;
Noise Zone III:	All commercial property;
Noise Zone IV:	The residential portion of mixed use properties;
Noise Zone V:	All manufacturing or industrial properties and all other uses.

The actual use of the property, and not necessarily its zoning designation, shall be the determining factor in establishing whether a property is in Noise Zone I, II, III, IV or V, provided that the actual use is a legal use within the applicable zone.

(§ 2, Ord. 2888, eff. March 6, 2008)

Sec. 5-29.04. Exterior noise standards.

(a) The following exterior noise standards, unless otherwise specifically indicated, shall apply to all properties within a designated noise zone.

Allowable Exterior Noise Level (1)		***Allowed Equivalent Noise Level, Leq. (2)***	
Noise Zone	***Type of Land Use***	***7 a.m. to 10 p.m.***	***10 p.m. to 7 a.m.***
I	Single-Family Residential	65 dBA	45 dBA
II	Multi-Family Residential, Mobile Home Parks	65 dBA	50 dBA
III	Commercial Property	65 dBA	60 dBA
IV	Residential Portion of Mixed Use	70 dBA	70 dBA
V	Manufacturing and Industrial, Other Uses	70 dBA	70 dBA

(1) If the ambient noise level exceeds the resulting standard, the ambient noise level shall be the standard.

(2) Measurements for compliance are made on the affected property pursuant to § 5-29.15.

(b) It is unlawful for any person at any location within the incorporated area of the City to create noise, or to allow the creation of any noise on property owned, leased, occupied or otherwise controlled by such person, which noise causes the noise level, when measured at any location on any other property, to exceed either of the following:

(1) The noise standard for the applicable zone for any fifteen-minute (15) period; and

(2) A maximum instantaneous (single instance) noise level equal to the value of the noise standard plus twenty (20) dBA for any period of time (measured using A-weighted slow response).

(c) In the event the ambient noise level exceeds the noise standard, the maximum allowable noise level under such category shall be increased to reflect the maximum ambient noise level.

(d) The Noise Zone IV standard shall apply to that portion of residential property falling within one hundred (100) feet of a commercial property or use, if the noise originates from that commercial property or use.

(e) If the measurement location is on a boundary between two (2) different noise zones, the lower noise level standard applicable to the noise zone shall apply.

(§ 2, Ord. 2888, eff. March 6, 2008)

Sec. 5-29.05. Interior noise standards.

(a) The following interior noise standards, unless otherwise specifically indicated, shall apply to all properties within a designated noise zone.

Allowable Interior Noise Level (1)		**Allowed Equivalent Noise Level, Leq.** (2)	
Noise Zone	***Type of Land Use***	***7 a.m. to 10 p.m.***	***10 p.m. to 7 a.m.***
I	Single-Family Residential	45 dBA	40 dBA
II	Multi-Family Residential, Mobile Home Parks	45 dBA	40 dBA
IV	Residential Portion of Mixed Use	45 dBA	40 dBA

(1) If the ambient noise level exceeds the resulting standard, the ambient noise level shall be the standard.

(2) Measurements for compliance are made on the affected property pursuant to § 5-29.15.

(b) It is unlawful for any person at any location within the incorporated area of the City to create noise, or to allow the creation of any noise on property owned, leased, occupied or otherwise controlled by such person, which noise causes the noise level, when measured at any location on any other property, to exceed either of the following:

(1) The noise standard for the applicable zone for any fifteen-minute (15) period;

(2) A maximum instantaneous (single instance) noise level equal to the value of the noise standard plus twenty (20) dBA for any period of time (measured using A-weighted slow response).

(c) In the event the ambient noise level exceeds the noise standard, the maximum allowable noise level under such category shall be increased to reflect the maximum ambient noise level.

(d) The Noise Zone IV standard shall apply to that portion of residential property falling within one hundred (100) feet of a commercial property or use, if the noise originates from that commercial property or use.

(e) If the measurement location is on a boundary between two (2) different noise zones, the lower noise level standard applicable to the noise zone shall apply.

(§ 2, Ord. 2888, eff. March 6, 2008)

Sec. 5-29.06. Exemptions.

The following activities shall be exempted from the provisions of this chapter:

(a) Any activity conducted on public property, or on private property with the consent of the owner, by any public entity or its officers, employees, representatives, agents, subcontractors, permittees, licensees or lessees that the public entity has authorized are exempt from the provisions of this chapter. This includes, without limitation, sporting and recreational activities that are sponsored, co-sponsored, permitted or allowed by the City or any school district within the City's jurisdictional boundaries. This also includes, without limitation, occasional outdoor gatherings, public dances, shows or sporting and entertainment events, provided such events are conducted pursuant to an approval, authorization, contract, lease, permit or sublease by the appropriate public entity, specifically the planning commission or City Council;

(b) Occasional outdoor gatherings, public dances, show, sporting and entertainment events, provided said events are conducted pursuant to a permit or license issued by the appropriate jurisdiction relative to the staging of said events;

(c) Any mechanical device, apparatus or equipment used, related to or connected with emergency machinery, vehicle, work or warning alarm or bell, provided the sounding of any bell or alarm on any building or motor vehicle shall terminate its operation within forty-five (45) minutes in any hour of its being activated;

(d) Noise sources associated with construction, repair, remodeling, demolition or grading of any real property. Such activities shall instead be subject to the provisions of § 5-29.09;

(e) Noise sources associated with construction, repair, remodeling, demolition or grading of public rights-of-way or during authorized seismic surveys;

(f) All mechanical devices, apparatus or equipment associated with agriculture operations provided that:

(1) Operations do not take place between 8:00 p.m. and 7:00 a.m.;

(2) Such operations and equipment are utilized for the protection or salvage of agricultural crops during periods of potential or actual frost damage or other adverse weather conditions; or

(3) Such operations and equipment are associated with agricultural pest control through pesticide application, provided the application is made in accordance with permits issued by or regulations enforced by the California Department of Agriculture;

(g) Noise sources associated with the maintenance of real property. Such activities shall instead be subject to the provisions of § 5-29.08;

(h) Any activity to the extent regulation thereof has been preempted by state or federal law;

(i) Any noise sources associated with people and/or music associated with a party at a residential property. Such noise shall be subject to the provisions of OMC § 5-29.07;

(j) Any noise source emanating from an ice cream truck within the City. Such noise shall be subject to the provisions of OMC § 4-18.04;

(k) Any noise sources associated with barking dogs or other intermittent noises made by animals on any properly within the City. Such noise shall be subject to the provisions of OMC Chapter 1, Title 6;

(l) Noise sources related to uses approved by a permit or development agreement adopted prior to the date of adoption of this chapter and that contains acoustic or noise standard conditions of approval. This exemption shall only be applicable during the effective period of the City-approved permit or development agreement.

(§ 2, Ord. 2888, eff. March 6, 2008)

Sec. 5-29.07. Loud and disturbing noise.

(a) It is unlawful for any person or property owner within the City to make, cause or allow to be made any loud, excessive, impulsive or intrusive noise, disturbance or commotion that disturbs the peace or quiet of any area or that causes discomfort or annoyance to any reasonable person of normal sensitivities in the area, after a Police or Code Enforcement Officer has first requested that the person or property owner cease and desist from making such noise. The types of loud, disturbing, excessive, impulsive or intrusive noise may include, but shall not be limited to, yelling, shouting, hooting, whistling, singing, playing a musical instrument, or emitting or transmitting any loud music or noise from any mechanical or electrical sound making or sound-amplifying device.

(b) The factors, standards, and conditions that may be considered in determining whether a violation of the provisions of this section has been committed, included, but not limited to, the following:

(1) The level of the noise;

(2) The level and intensity of the background (ambient) noise, if any;

(3) The proximity of the noise to residential or commercial sleeping areas;

(4) The nature and zoning of the area within which the noise emanates;

(5) The density of inhabitation of the area within which the noise emanates;

(6) The time of day and night the noise occurs;

(7) The duration of the noise;

(8) Whether the noise is constant, recurrent or intermittent;

(9) Whether the noise is produced by a commercial or noncommercial activity; and

(10) Whether the use is lawful under the provisions of Title 5 of this Code and whether the noise is one that could reasonably be expected from the activity or allowed use.

(§ 2, Ord. 2888, eff. March 6, 2008)

Sec. 5-29.08. Real property maintenance noise regulations.

(a) No person, while engaged in maintenance of real property, shall operate any tool, equipment or machine in a manner that produces loud noise that disturbs a person of normal sensitivity who works or resides in the vicinity, or a Police or Code Enforcement Officer, except between the hours of 8:00 a.m. and 6:00 p.m.

(b) Trimming or pruning that requires the use of chainsaws or mulching machines shall only be allowed between the hours of 8:00 a.m. and 6:00 p.m. on a weekday and between the hours of 9:00 a.m. and 5:00 p.m. on Saturday or Sunday.

(c) The use of electrical or gasoline powered blowers, such as commonly used by gardeners or other persons for cleaning lawns, yards, driveways, gutters and other property shall only be allowed between the hours of 8:00 a.m. and 6:00 p.m. on a weekday and between the hours of 9:00 a.m. and 5:00 p.m. on Saturday or Sunday.

(d) No landowner, gardener, property maintenance service, contractor, subcontractor or employer shall permit or allow any person or persons working under his or her direction or control to operate any tool, equipment or machine in violation of the provisions of this section.

(e) Exceptions. The provisions of this section shall not apply to the following:

(1) Emergency property maintenance required by the building official;

(2) The maintenance, repair or improvement of any public work or facility by public employees, by any person or persons acting pursuant to a public works contract, or by any person or persons performing such work or pursuant to the direction of, or on behalf of, any public agency; provided, however, this exception shall not apply to the City, or its employees, contractors or agents, unless:

(i) The City Manager or department head determines that the maintenance, repair or improvement is immediately necessary to maintain public service,

(ii) The maintenance, repair or improvement is of a nature that cannot feasibly be conducted during normal business hours, or

(iii) The City Council has approved project specifications, contract provisions, or an environmental document that specifically authorizes maintenance during hours of the day that would otherwise be prohibited pursuant to this section; and

(3) Any maintenance that complies with the noise limits specified in § 5-29.04.

(§ 2, Ord. 2888, eff. March 6, 2008)

Sec. 5-29.09. Construction activity noise regulations.

(a) No person, while engaged in construction, remodeling, digging, grading, demolition or any other related building activity, shall operate any tool, equipment or machine in a manner that produces loud noise that disturbs a person of normal sensitivity who works or resides in the vicinity, or a Police or Code Enforcement Officer, on any weekday except between the hours of 7:00 a.m. and 6:00 p.m. or on Saturday or Sunday between the hours of 9:00 a.m. and 6:00 p.m.

(b) No landowner, construction company owner, contractor, subcontractor, or employer shall permit or allow any person or persons working under their direction and control to operate any tool, equipment or machine in violation of the provisions of this section.

(c) Exceptions.

(1) The provisions of this section shall not apply to emergency construction work performed by a private party when authorized by the City Manager or his or her designee;

(2) The maintenance, repair or improvement of any public work or facility by public employees, by any person or persons acting pursuant to a public works contract, or by any person or persons performing such

work or pursuant to the direction of, or on behalf of, any public agency; provided, however, this exception shall not apply to the City, or its employees, contractors or agents, unless:

(i) The City Manager or a department head determines that the maintenance, repair or improvement is immediately necessary to maintain public services,

(ii) The maintenance, repair or improvement is of a nature that cannot feasibly be conducted during normal business hours, or

(iii) The City Council has approved project specifications, contract provisions, or an environmental document that specifically authorizes construction during hours of the day that would otherwise be prohibited pursuant to this section; and

(3) Any construction that complies with the noise limits specified in §§ 5-29.04 or 5-29.05.

(§ 2, Ord. 2888, eff. March 6, 2008)

Sec. 5-29.10. Other public agency exceptions.

The provisions of this chapter shall not be construed to prohibit any work at different hours by or under the direction of any other public agency or public or private utility companies in cases of necessity or emergency.

(§ 2, Ord. 2888, eff. March 6, 2008)

Sec. 5-29.11. Schools, day care centers, churches, libraries, museums, health care institutions; Special provisions.

It is unlawful for any person to create any noise that causes the outdoor noise level at any school, day care center, hospital or similar health care institution, church, library or museum while the same is in use, to exceed the noise standards specified in § 5-29.04 prescribed for the assigned Noise Zone I.

(§ 2, Ord. 2888, eff. March 6, 2008)

Sec. 5-29.12. Sound amplifying equipment.

Loudspeakers, sound amplifiers, public address systems or similar devices used to amplify sounds shall be subject to the provisions of § 5-29.13. Such sound amplifying equipment shall not be construed to include electronic devices, including but not limited to, radios, tape players, tape recorders, compact disc players, MP3 players, electric keyboards, music synthesizers, record players or televisions, which are designed and operated for personal use, or used entirely within a building and are not designed or used to convey the human voice, music or any other sound to an audience outside such building, or which are used in vehicles and heard only by occupants of the vehicle in which installed.

(§ 2, Ord. 2888, eff. March 6, 2008)

Sec. 5-29.13. Amplified sound.

(a) The City Council enacts the following legislation for the sole purpose of securing and promoting the public health, comfort, safety and welfare for its citizenry. While recognizing that the use of sound amplifying equipment may be entitled to certain protection by the constitutional rights of freedom of speech and assembly, the City Council finds that in order to protect the public safety and the correlative rights of the citizens of this community to privacy and freedom from public nuisance of loud and unnecessary noise, reasonable regulation of the time, place and manner of the use of amplifying equipment is necessary. In no event shall approval or authorization required herein be withheld by reason of the constitutionally protected content of any material proposed to be broadcast through amplifying equipment.

(b) It is unlawful for any person, other than personnel of law enforcement or governmental agencies, to install, use or operate a loudspeaker or sound amplifying device in a fixed or movable position or mounted upon any vehicle within the City for the purpose of giving instructions, directions, talks, addresses or lectures to any persons or assemblages of persons in or upon any street, alley, sidewalk, park, place or public property without a permit to do so from the Police Chief or his or her designee. Notwithstanding any other provision of this chapter, the provisions of this section shall also apply to the use of sound amplifying equipment upon public or private property when used in connection with outdoor or indoor public or private events, whether or

not admission is charged or food or beverages are sold, when such activity is to be attended by more than one hundred (100) persons and the noise emanating from the event will be audible at the property plane, or in the case of a street dance or concert on the nearest residential property. Those activities listed in § 5-29.06(a) are exempt from the requirements of this section.

(c) The Police Chief or his or her designee is authorized to approve and issue permits under this section.

(d) An application for a permit required by this section shall be filed with the Police Chief at least sixteen (16) days and no more than one hundred twenty (120) days prior to the date on which the sound amplifying equipment is intended to be used. Applications for events covered by the First Amendment of the United States Constitution are exempt from the time requirements of this section if it is shown that circumstances require a shorter filing period and the event will not constitute an unsafe condition. The application shall contain the following information:

(1) The name, address and telephone number of both the owner and the user of the sound amplifying equipment;

(2) The license number, if a sound truck is to be used;

(3) A general description of the sound amplifying equipment which is to be used;

(4) Whether sound amplifying equipment will be used for commercial or noncommercial purpose;

(5) The dates and times upon and within which, and the streets or property over or upon which, the equipment is proposed to be operated;

(6) The name or names of one (1) or more persons who will be present during the conduct of any activities for which registration is sought and who will have authority to reduce the volume of any sound amplifying equipment during the course of the activities if required pursuant to this chapter and, otherwise, to insure compliance with the provisions of this chapter;

(7) A statement by the applicant that he or she is willing and able to comply with the provisions of this chapter and the conditions of the permit; and

(8) A sketch of the area or facilities within which the activities are to be conducted, with approximate dimensions and illustration of the location and orientation of all sound-amplifying equipment.

(e) The Police Chief shall deny the permit application or revoke any permit if the chief finds any of the following:

(1) The application contains materially false or intentionally misleading information;

(2) The use of sound amplifying equipment at an event or activity proposed will be located in or upon a premises, building or structure that is hazardous to the health or safety of the employees or patrons of the premises, business, activity, or event, or the general public, under the standards established by the Uniform Building or Fire Codes, or other applicable codes, as set forth in OMC Titles 4 and 8;

(3) The use of sound amplifying equipment at an event or activity proposed in or upon a premises, building or structure that lacks adequate on-site parking for participants attending the proposed event or activity under the applicable standards set forth in OMC Title 9;

(4) The conditions of any motor vehicle movement are such that, in his or her opinion, the use of the equipment would constitute an unreasonable interference with traffic safety;

(5) The conditions of pedestrian movement are such that the use of the equipment would constitute a detriment to traffic safety;

(6) The application submitted by the applicant reveals that the applicant would violate the provisions of this section or any other provision of federal, state and/or local law;

(7) The applicant is unwilling or unable to comply with the provisions of this chapter or any conditions imposed upon any permit issued;

(8) There had already been a permitted event at the intended location, or within a two hundred (200) yard radius of the intended location and the prior permitted event was located on residentially zoned property or on

a street, alley, public parking lot or neighborhood park within three (3) months prior to the intended event. Community parks are exempt from this subsection (8); or

(9) The applicant or location has had previous violations within the past calendar year, and in the judgment of the Police Chief, issuance would be contrary to the intent of this section.

(f) In determining whether the use of the equipment would constitute an unreasonable interference with or detriment to traffic safety, the Police Chief shall consider, but shall not necessarily be limited to:

(1) The volumes, patterns and speed of vehicular and pedestrian traffic in the proposed area of use;

(2) The relationship of the proposed use of equipment and potential impacts upon traffic patterns;

(3) Availability of sufficient room for the operation of the equipment without significantly interfering with the traffic patterns;

(4) Proximity to schools, playgrounds and similar facilities where use of such equipment might attract children into traffic patterns; or

(5) Proximity to busy intersections or other potentially hazardous conditions where use of such equipment might constitute a hazard by reason of its tendency to distract drivers of vehicles or pedestrians.

(g) Issuance or denial.

(1) If the application is approved, the Police Chief shall return an approved copy of the application to the applicant and shall issue a permit. The permit shall constitute permission for the use of the sound amplifying equipment as requested.

(2) Any application filed shall be either approved or disapproved within five (5) days of the filing thereof.

(3) If the application is disapproved, the Police Chief shall return a disapproved copy forthwith to the applicant with a written statement on the reason for disapproval.

(i) Any person aggrieved by a decision of the Police Chief or his or her designee may file an appeal to the City Manager. A complete and proper appeal shall be filed with the City Clerk within ten (10) calendar days of the action that is the subject of the appeal. If the applicant fails to file an appeal within the ten (10) day filing period provided herein, denial shall take effect immediately upon expiration of such filing period. All appeals shall be in writing and shall contain the following information: (a) name(s) of the person filing the appeal, (b) a brief statement in ordinary and concise language of the relief sought, and (c) the signatures of all parties named as appellants and their mailing addresses. After receiving the appeal, the City Clerk shall immediately forward the matter to the City Manager for handling.

(ii) The City Manager shall, upon receipt of the appeal, set the matter for hearing before the City Manager or a hearing officer. Any hearing officer shall be a licensed attorney or recognized mediator designated by the City Manager. The hearing shall be set for not more than ten (10) calendar days after the receipt of the appeal unless a longer time is requested or consented to by the appellant. Notice of such hearing shall be given in writing and mailed at least five (5) calendar days prior to the date of the hearing, by U.S. mail, with a proof of service attached, addressed to the address listed on the permit application, or the written appeal if different from the permit application. The notice shall state the grounds of the complaint or reason for the denial and shall state the time and place where such hearing will be held.

(iii) The City Manager or hearing officer shall, within ten (10) calendar days following the conclusion of the hearing, make a written finding and decision, which shall be delivered to the City and the appellant by first class mail. Notwithstanding any provision in this Code, the decision of the City Manager or hearing officer shall be the final administrative decision of the City. Any party dissatisfied with the decision of the City Manager or hearing officer may seek review of such decision under the provisions of Code Civil Procedure, §§ 1094.5 and 1094.8, as amended from time to time.

(h) In addition to any other provisions of this Code, the use of sound-amplifying equipment and sound trucks in the City shall be subject to the following regulations:

(1) The only sounds permitted are music and human speech;

(2) Sound shall not be emitted within one hundred (100) yards of hospitals, churches, schools and City Hall;

(3) The volume of sound shall be controlled so that it will not be audible for a distance in excess of one hundred (100) feet from the sound amplifying equipment or sound truck, and so that the volume is not unreasonably loud, raucous, jarring, disturbing or a nuisance to persons within the range of allowed audibility; or

(4) The sound amplifying equipment or sound truck shall not be used between the hours of 8:00 p.m. and 8:00 a.m.

(§ 2, Ord. 2888, eff. March 6, 2008)

Sec. 5-29.14. Motor vehicles.

The use of any motor vehicle in such a condition as to create excessive, impulsive or intrusive noises is prohibited. The discharge into the open air of the exhaust of any internal combustion engine, stationary or mounted on wheels, motorboat or motor vehicle, including motor cycle, whether or not discharged through a muffler or other similar device, which discharge creates excessive, unusual, impulsive or intrusive noise is prohibited. Motor vehicles shall comply with the noise regulations of the California Vehicle Code.

(§ 2, Ord. 2888, eff. March 6, 2008)

Sec. 5-29.15. Noise level measurement.

(a) The location selected for measuring exterior noise levels in a residential area shall be at any part of a private yard, patio, deck or balcony normally used for human activity and identified by the owner or, if occupied by someone other than the owner, the occupant of the affected property as suspected of exceeding the noise level standard. This location may be the closest point in the private yard or patio, or on the deck or balcony, to the noise source, but should not be located in nonhuman activity areas such as trash container storage areas, planter beds, above or contacting a property line fence, or other areas not normally used as part of the yard, patio, deck or balcony. The location selected for measuring exterior noise levels in a nonresidential area shall be at the closest point to the noise source. The measurement microphone height shall be five (5) feet above finish elevation or, in the case of a deck or balcony, the measurement microphone height shall be five (5) feet above the finished floor level.

(b) The location selected for measuring interior noise levels shall be made within the affected residential unit. The measurements shall be made at a point at least four (4) feet from the wall, ceiling or floor, or within the frame of a window opening, nearest the noise source. The measurements shall be made with windows in an open position.

(c) Any decibel measurement made pursuant to the provisions of this chapter shall be measured in decibels (dBAs) as measured with a sound level meter using the A-weighted sound pressure level.

(§ 2, Ord. 2888, eff. March 6, 2008)

Sec. 5-29.16. Prima facie violation.

Any noise exceeding the noise level standard as specified in §§ 5-29.04 and 5-29.05, shall be deemed to be prima facie evidence of a violation of the provisions of this chapter.

(§ 2, Ord. 2888, eff. March 6, 2008)

Sec. 5-29.17. Penalty.

(a) Any person who negligently or knowingly violates any provision of this chapter shall be guilty of an infraction and upon conviction shall be punishable by a fine specified in OMC § 1-2.01. Each day a violation occurs shall constitute a separate offense and shall be punishable as such.

(b) Any person who negligently or knowingly violates any provision of this chapter may also be subject to fine(s) specified in the administrative citation schedule of fines set forth in OMC § 1-5.04. The manner of issuing administrative citations shall comply with all the procedures specified in OMC Chapter 5, Title 1.

(c) As an additional remedy, the operation or maintenance of any device, instrument, vehicle or machinery in violation of any provisions of this chapter, which operation or maintenance causes or creates sound levels exceeding the allowable standards as specified in this chapter, shall be deemed and is declared to be a public nuisance and may be subject to abatement by a restraining order or injunction issued by a court of competent jurisdiction.

(d) Any violation of this chapter is declared to be a public nuisance and may be abated in accordance with law. The expense of enforcing this chapter is declared to be public nuisance and may be by resolution of the City Council declared to be a lien and special assessment against the property on which such nuisance is maintained, and any such charge shall also be a personal obligation of the property owner.

(§ 2, Ord. 2888, eff. March 6, 2008)

Sec. 5-29.18. Enforcement and administration.

(a) It shall be the responsibility of Police or Code Enforcement Officers to enforce the provisions of this chapter and to perform all other functions required by this chapter. Such duties shall include, but not be limited to investigating potential violations, issuing warning notices and citations, and providing evidence to the City prosecutor for legal action.

(b) For violations of § 5-29.07, Police or Code Enforcement Officers shall obtain a declaration under penalty of perjury from two (2) declarants living in separate households within a sixty (60) day period stating in detail all of the following:

(1) That the declarant is a resident of a residential neighborhood located within two hundred (200) yards of the noise source; and

(2) Within the past month declarant has heard noise for substantially long periods to the extreme annoyance of the declarant.

(3) Declarations from two (2) declarants are required to prove a violation of § 5-29.07, but are not required to prove that a person has violated any other provision of this chapter.

(§ 2, Ord. 2888, eff. March 6, 2008)

Sec. 5-29.19. City Manager waiver.

The City Manager is authorized to grant a temporary waiver to the provisions of this chapter for a period of time necessary to correct the violations of this chapter, if such temporary waiver would be in the public interest and there is no feasible and prudent alternative to the activity, or the method of conducting the activity, for which the temporary waiver is sought. This time period may include a commitment to a program that includes placing necessary orders and entering into necessary contracts within thirty (30) days for repair or installation.

(§ 2, Ord. 2888, eff. March 6, 2008)

Sec. 5-29.20. Noise abatement program.

(a) In circumstances where adopted community-wide noise standards and policies prove impractical in controlling noise generated from a specific source, the City Council may establish a noise abatement program that recognizes the characteristics of the noise source and affected property and that incorporates specialized mitigation measures.

(b) Noise abatement programs shall set forth in detail the approved terms, conditions and requirements for achieving maximum compliance with noise standards and policies. Said terms, conditions and requirements may include, but shall not be limited to, limitations, restrictions, or prohibitions on operating hours, location of operations, and the types of equipment.

FHWA-RD-77-108 HIGHWAY NOISE PREDICTION MODEL (CALVENO) - v10/31/19

Scenario: Backyard No Wall
Road Name: Eucalyptus Ave
Lot No: BLDG 20

Project Name: Esperanza Specific Plan
Job Number: 15662
Analyst: B. Maddux

SITE SPECIFIC INPUT DATA

Highway Data

Average Daily Traffic (Adt):	21,700 vehicles
Peak Hour Percentage:	10%
Peak Hour Volume:	2,170 vehicles
Vehicle Speed:	40 mph
Near/Far Lane Distance:	40 feet

Site Data

Barrier Height:	**0.0 feet**
Barrier Type (0-Wall, 1-Berm):	0.0
Centerline Dist. to Barrier:	83.0 feet
Centerline Dist. to Observer:	105.0 feet
Barrier Distance to Observer:	22.0 feet
Observer Height (Above Pad):	5.0 feet
Pad Elevation:	0.0 feet
Road Elevation:	0.0 feet
Barrier Elevation:	0.0 feet
Road Grade:	1.0%

NOISE MODEL INPUTS

Site Conditions (Hard = 10, Soft = 15)

Autos:	15
Medium Trucks (2 Axles):	15
Heavy Trucks (3+ Axles):	15

Vehicle Mix

VehicleType	*Day*	*Evening*	*Night*	*Daily*
Autos:	77.5%	12.9%	9.6%	97.42%
Medium Trucks:	84.8%	4.9%	10.3%	1.84%
Heavy Trucks:	86.5%	2.7%	10.8%	0.74%

Noise Source Elevations (in feet)

Autos:	0.00		
Medium Trucks:	2.30		
Heavy Trucks:	8.01	*Grade Adjustment:*	0.0

Lane Equivalent Distance (in feet)

Autos:	82.765
Medium Trucks:	82.658
Heavy Trucks:	82.668

FHWA Noise Model Calculations

24ABC6
Comfort™ 16 Air Conditioner with Puron® Refrigerant 1–1/2 to 5 Nominal Tons

Carrier turn to the experts

Product Data

Puron™ the environmentally sound refrigerant

Comfort SERIES

Carrier's Air Conditioners with Puron® refrigerant provide a collection of features unmatched by any other family of equipment. The 24ABC has been designed utilizing Carrier's Puron refrigerant. The environmentally sound refrigerant allows you to make a responsible decision in the protection of the earth's ozone layer.

This product has been designed and manufactured to meet Energy Star® criteria for energy efficiency when matched with appropriate coil components. Refer to the combination ratings in the Product Data for system combinations that meet Energy Star® guidelines.

NOTE: Ratings contained in this document are subject to change at any time. Always refer to the AHRI directory (www.ahridirectory.org) for the most up-to-date ratings information.

INDUSTRY LEADING FEATURES / BENEFITS

Efficiency

- 14 - 16.5 SEER/11.0- 13.5 EER
- Microtube Technology™ refrigeration system
- Indoor air quality accessories available

Sound

- Sound level as low as 76 dBA
- Sound level as low as 74 dBA with accessory sound blanket

Comfort

- System supports Edge® Thermidistat™ or standard thermostat controls

Reliability

- Puron® refrigerant - environmentally sound, won't deplete the ozone layer and low lifetime servce cost.
- Scroll compressor
- Internal pressure relief valve
- Internal thermal overload
- Filter drier
- Balanced refrigeration system for maximum reliability

Durability

WeatherArmor™ protection package:

- Solid, durable sheet metal construction
- Dense wire coil guard standard
- Baked-on, complete outer coverage, powder paint

Applications

- Long-line - up to 250 feet (76.20 m) total equivalent length, up to 200 feet (60.96 m) condenser above evaporator, or up to 80 ft. (24.38 m) evaporator above condenser (See Longline Guide for more information.)
- Low ambient (down to -20°F/-28.9°C)) with accessory kit

ENERGY STAR

This product has been designed and manufactured to meet Energy Star® criteria for energy efficiency when matched with appropriate coil components. However, proper refrigerant charge and proper air flow are critical to achieve rated capacity and efficiency. Installation of this product should follow all manufacturing refrigerant charging and air flow instructions. **Failure to confirm proper charge and air flow may reduce energy efficiency and shorten equipment life.**

Note: See unit Installation Instruction for proper installation.

† See *Liquid Line Sizing For Cooling Only Systems with Puron Refrigerant* tables.

REFRIGERANT PIPING LENGTH LIMITATIONS

Liquid Line Sizing and Maximum Total Equivalent Lengths† for Cooling Only Systems with Puron® Refrigerant:

The maximum allowable length of a residential split system depends on the liquid line diameter and vertical separation between indoor and outdoor units.

See Table below for liquid line sizing and maximum lengths :

Maximum Total Equivalent Length
Outdoor Unit BELOW Indoor Unit

Size	Liquid Line Connection	Liquid Line Diam. w/ TXV	AC with Puron Refrigerant Maximum Total Equivalent Length†: Outdoor unit BELOW Indoor Vertical Separation ft (m)								
			0–5 (0–1.5)	6–10 (1.8–3.0)	11–20 (3.4–6.1)	21–30 (6.4–9.1)	31–40 (9.4–12.2)	41–50 (12.5–15.2)	51–60 (15.5–18.3)	61–70 (18.6–21.3)	71–80 (21.6–24.4)

– – = outside acceptable range

REFRIGERANT CHARGE ADJUSTMENTS

Liquid Line Size	Puron Charge oz/ft
3/8	0.60 (Factory charge for lineset = 9 oz)
5/16	0.40
1/4	0.27

Units are factory charged for 15 ft (4.6 m) of 3/8" liquid line. The factory charge for 3/8" lineset 9 oz. When using other length or diameter liquid lines, charge adjustments are required per the chart above.

Charging Formula:

[(Lineset oz/ft x total length) – (factory charge for lineset)] = charge adjustment

Example 1: System has 15 ft of line set using existing 1/4" liquid line. What charge adjustment is required?

Formula: (.27 oz/ft x 15ft) – (9 oz) = (-4.95) oz.

Net result is to remove 4.95 oz of refrigerant from the system

Example 2: System has 45 ft of existing 5/16" liquid line. What is the charge adjustment?

Formula: (.40 oz/ft. x 45ft) – (9 oz.) = 9 oz.

Net result is to add 9 oz of refrigerant to the system

LONG LINE APPLICATIONS

An application is considered Long Line, when the refrigerant level in the system requires the use of accessories to maintain acceptable refrigerant management for systems reliability. See Accessory Usage Guideline table for required accessories. Defining a system as long line depends on the liquid line diameter, actual length of the tubing, and vertical separation between the indoor and outdoor units.

For Air Conditioner systems, the chart below shows when an application is considered Long Line.

AC WITH PURON® REFRIGERANT LONG LINE DESCRIPTION ft (m)
Beyond these lengths, long line accessories are required

Liquid Line Size	Units On Same Level	Outdoor Below Indoor	Outdoor Above Indoor
1/4	No accessories needed within allowed lengths	No accessories needed within allowed lengths	175 (53.3)
5/16	120 (36.6)	50 (15.2)	120 (36.6)
3/8	80 (24.4)	35 (10.7)	80 (24.4)

Note: See Long Line Guideline for details

VAPOR LINE SIZING AND COOLING CAPACITY LOSS

Acceptable vapor line diameters provide adequate oil return to the compressor while avoiding excessive capacity loss. The suction line diameters shown in the chart below are acceptable for AC systems with Puron refrigerant:

Unit Nominal Size (Btuh)	Maximum Liquid Line Diameters (In. OD)	Vapor Line Diameters (In. OD)	Cooling Capacity Loss (%) Total Equivalent Line Length ft. (m)								
			26–50 (7.9–15.2)	51–80 (15.5–24.4)	81–100 (24.7–30.5)	101–125 (30.8–38.1)	126–150 (38.4–45.7)	151–175 (46.0–53.3)	176–200 (53.6–61.0)	201–225 (61.3–68.6)	226–250 (68.9–76.2)

* For tubing line sets between 80 and 200 ft. (24.38 and 60.96 m) and/or 20 ft. (6.09 m) vertical differential, refer to Residential Split–System Longline Application Guideline.

† Required for Low–Ambient Controller (full modulation feature) MotorMaster® Control.

Accessory Description and Usage (Listed Alphabetically)

1. Ball-Bearing Fan Motor

A fan motor with ball bearings which permits speed reduction while maintaining bearing lubrication.

Usage Guideline:

Required on all units when MotorMaster® is used.

2. Compressor Start Assist - Capacitor and Relay

Start capacitor and relay gives a ”hard” boost to compressor motor at each start up.

Usage Guideline:

Required for reciprocating compressors in the following applications:

Long line

Low ambient cooling

Hard shut off expansion valve on indoor coil

Liquid line solenoid on indoor coil

Required for single-phase scroll compressors in the following applications:

Long line

Low ambient cooling

Suggested for all compressors in areas with a history of low voltage problems.

3. Compressor Start Assist — PTC Type

Solid state electrical device which gives a ”soft” boost to the compressor at each start-up.

Usage Guideline:

Suggested in installations with marginal power supply.

4. Crankcase Heater

An electric resistance heater which mounts to the base of the compressor to keep the lubricant warm during off cycles. Improves compressor lubrication on restart and minimizes the chance of liquid slugging.

Usage Guideline:

Required in low ambient cooling applications.

Required in long line applications.

Suggested in all commercial applications.

5. Cycle Protector

The cycle protector is designed to prevent compressor short cycling. This control provides an approximate 5-minute delay after power to the compressor has been interrupted for any reason, including power outage, protector control trip, thermostat jiggling, or normal cycling.

6. Evaporator Freeze Thermostat

An SPST temperature-actuated switch that stops unit operation when evaporator reaches freeze-up conditions.

Usage Guideline:

Required when low ambient kit has been added.

7. Low-Ambient Pressure Switch Kit

A long life pressure switch which is mounted to outdoor unit service valve. It is designed to cycle the outdoor fan motor in order to maintain head pressure within normal operating limits (approximately 100 psig to 225 psig). The control will maintain working head pressure at low-ambient temperatures down to 0°F (-18°C) when properly installed.

Usage Guideline:

A Low-Ambient Pressure Switch or MotorMaster® Low-Ambient Controller must be used when cooling operation is used at outdoor temperatures below 55°F (12.8°C).

8. MotorMaster® Low-Ambient Controller

A fan-speed control device activated by a temperature sensor, designed to control condenser fan motor speed in response to the saturated, condensing temperature during operation in cooling mode only. For outdoor temperatures down to -20°F (-28.9°C), it maintains condensing temperature at 100°F ±10°F (37.8°C ± 5.5°C).

Usage Guideline:

A MotorMaster® Low Ambient Controller or Low-Ambient Pressure Switch must be used when cooling operation is used at outdoor temperatures below 55°F (12.8°C).

Suggested for all commercial applications.

9. Outdoor Air Temperature Sensor

Designed for use with Carrier Thermostats listed in this publication. This device enables the thermostat to display the outdoor temperature. This device also

is required to enable special thermostat features such as auxiliary heat lock out.

Usage Guideline:

Suggested for all Carrier thermostats listed in this publication.

Accessory Description and Usage (Listed Alphabetically) (Continued)

10. Sound Hood

Wraparound sound reducing cover for the compressor. Reduces the sound level by about 2 dBA.

Usage Guideline:

Suggested when unit is installed closer than 15 ft (4.57 m) to quiet areas, bedrooms, etc.

Suggested when unit is installed between two houses less than 10 ft (3.05 m) apart.

11. Support Feet

Four stick-on plastic feet that raise the unit 4 in. (101.6 mm) above the mounting pad. This allows sand, dirt, and other debris to be flushed from the unit base, minimizing corrosion.

Usage Guideline:

Suggested in the following applications:

Coastal installations.

Windy areas or where debris is normally circulating.

Rooftop installations.

For improved sound ratings.

12. Thermostatic Expansion Valve (TXV)

A modulating flow-control valve which meters refrigerant liquid flow rate into the evaporator in response to the superheat of the refrigerant gas leaving the evaporator.

Kit includes valve, adapter tubes, and external equalizer tube. Hard shut off types are available.

NOTE: When using a hard shut off TXV with single phase reciprocating compressors, a Compressor Start Assist Capacitor and Relay is required.

Usage Guideline:

Required to achieve AHRI ratings in certain equipment combinations. Refer to combination ratings.

Hard shut off TXV or LLS required in air conditioner long line applications.

Required for use on all zoning systems.

13. Time-Delay Relay

An SPST delay relay which briefly continues operation of indoor blower motor to provide additional cooling after the compressor cycles off.

NOTE: Most indoor unit controls include this feature. For those that do not, use the guideline below.

Usage Guideline:

For improved efficiency ratings for certain combinations of indoor and outdoor units. Refer to AHRI Unitary Directory.

14. Winter Start Control

This control is designed to alleviate nuisance opening of the low-pressure switch by bypassing it for the first 3 minutes of operation.

* Permissible limits of the voltage range at which the unit will operate satisfactorily

† If wire is applied at ambient greater than 30°C, consult table 310–16 of the NEC (NFPA 70). The ampacity of non–metallic–sheathed cable (NM), trade name ROMEX, shall be that of 60°C conditions, per the NEC (NFPA 70) Article 334–80. If other than uncoated (no–plated), 60 or 75°C insulation, copper wire (solid wire for 10 AWG or smaller, stranded wire for larger than 10 AWG) is used, consult applicable tables of the NEC (NFPA 70).

‡ Length shown is as measured one way along wire path between unit and service panel for voltage drop not to exceed 2%.

** Time–Delay fuse.

FLA – Full Load Amps

LRA – Locked Rotor Amps

MCA – Minimum Circuit Amps

RLA – Rated Load Amps

NOTE: Control circuit is 24–V on all units and requires external power source. Copper wire must be used from service disconnect to unit. All motors/compressors contain internal overload protection.

Complies with 2007 requirements of ASHRAE Standards 90.1

MEMORANDUM

URBAN | CROSSROADS

DATE: May 29, 2024
TO: Dave Waters, Genstar Development Company/GDCI-13
FROM: Charlene So, Urban Crossroads
JOB NO: 15662-04 TG Letter

ESPERANZA SPECIFIC PLAN TRIP GENERATION ASSESSMENT

Urban Crossroads, Inc. is pleased to submit the following Trip Generation Assessment for Esperanza Specific Plan development (Project) to support the proposed Specific Plan Amendment (SPA), located on the northeast corner of Eucalyptus Avenue and Amherst Avenue in the City of Ontario. This letter describes the proposed Project trip generation methodology and determines whether any traffic operations analysis is required based on San Bernardino County's Transportation Impact Study Guidelines (July 9, 2019, County Guidelines). The County Guidelines have been utilized as the City does not have their own adopted guidelines.

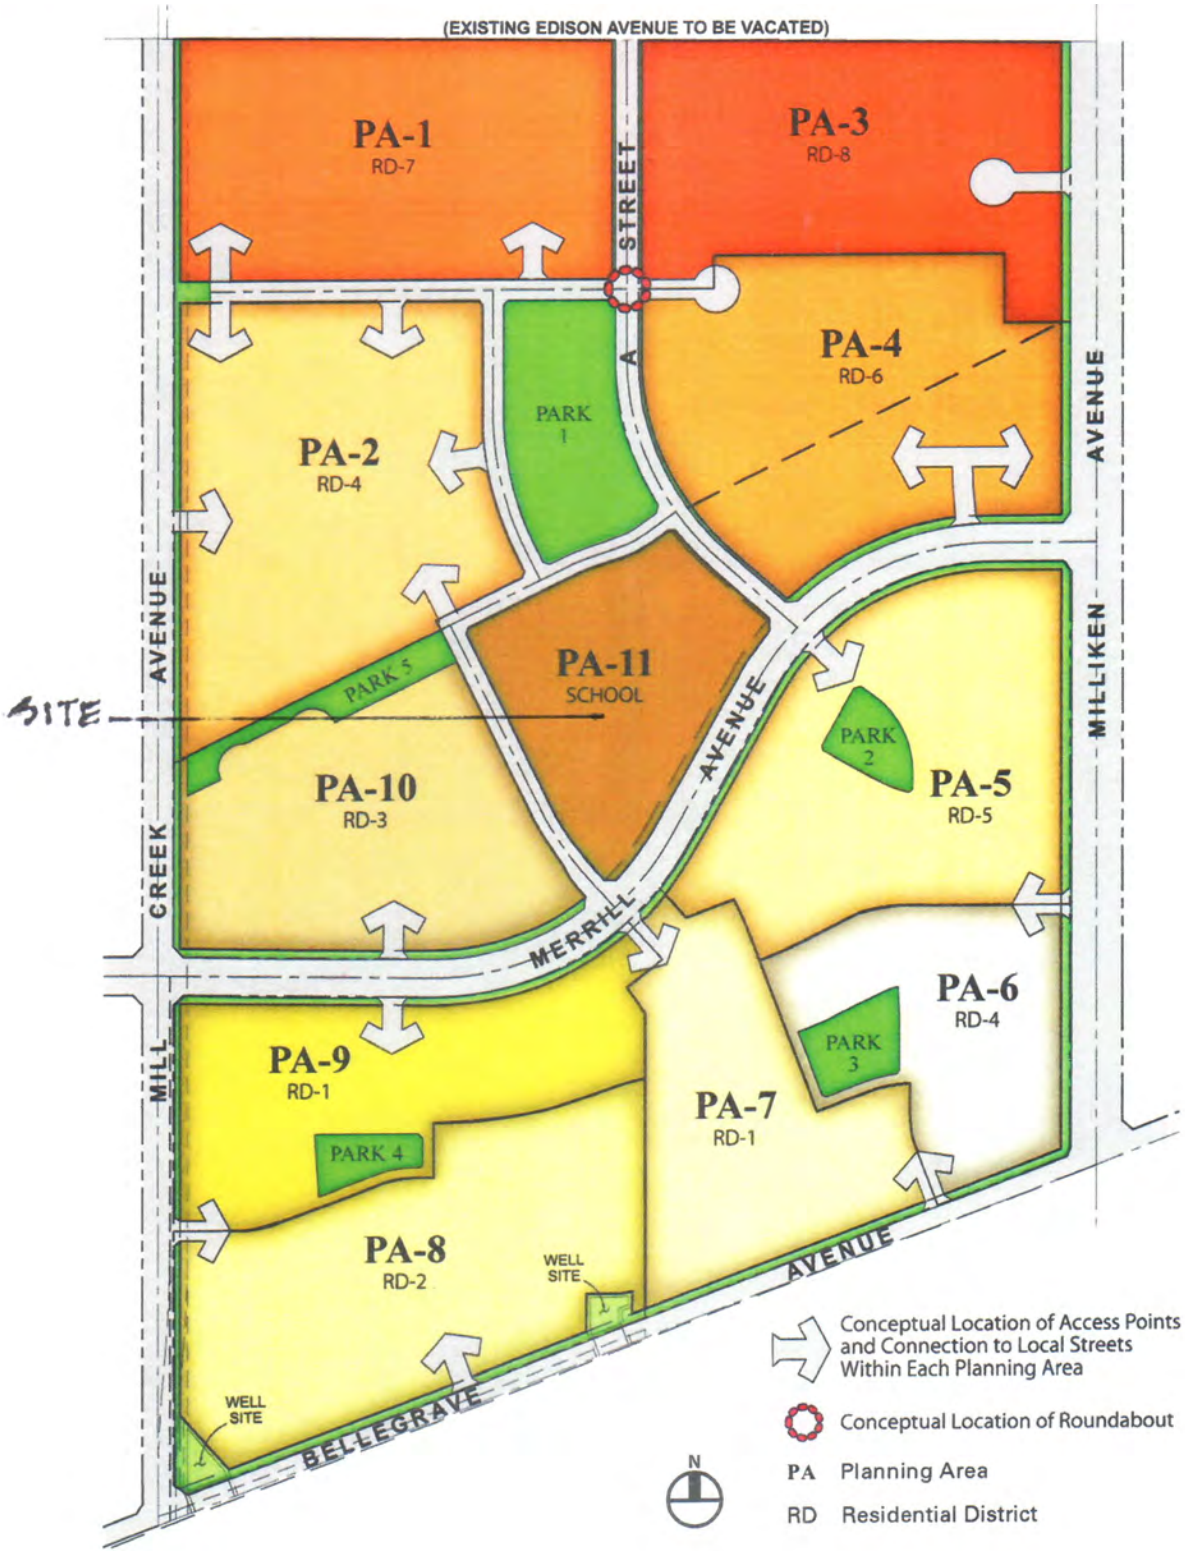
PROPOSED PROJECT

It is our understanding that the proposed Project is to consist of 161 multi-family residential dwelling units (with a density of approximately 16.1 dwelling units to the net acre). The Project is located within the Esperanza Specific Plan. The original currently-approved Specific Plan contemplated a 736-student elementary school within Planning Area 11. The land use will be updated from "School" to "MDR Medium Density Residential" consistent with the adjacent land use to the northeast.

Exhibit 1 shows the preliminary site plan. For comparison purposes, Exhibit 2 shows the currently-approved land use plan identifying Planning Area 11 with a school.

EXHIBIT 1: PRELIMINARY SITE PLAN

EXHIBIT 2: CURRENTLY APPROVED LAND USE PLAN



TRIP GENERATION

Trip generation represents the amount of traffic, which is both attracted to, and produced by, a development. Determining traffic generation for a specific project is therefore based upon forecasting the amount of traffic that is expected to be both attracted to, and produced by, the specific land uses being proposed for a given development.

APPROVED SPECIFIC PLAN

As noted previously, the site is located within the Esperanza Specific Plan. Specifically, the Project is located within Planning Area 11, which was approved with a 736-student elementary school. The Esperanza Specific Plan Traffic Impact Study Report (prepared by Albert A. Webb Associates, dated November 10, 2005, referred to as **2005 Traffic Study**) evaluated the 736-student elementary school within Planning Area 11. The trip generation is summarized in Table 1 and excerpts from the 2005 Traffic Study are included in Attachment A. The approved elementary school site is anticipated to generate an average of 949 two-way trips per day, with 309 trips during the AM peak hour and 206 trips during the PM peak hour.

TABLE 1: APPROVED SP TRIP GENERATION FOR PLANNING AREA 11

			AM Peak Hour			PM Peak Hour			
Land Use	Quantity	Units[1]	In	Out	Total	In	Out	Total	Daily

[1] STU = Students

PROPOSED PROJECT

The proposed Project consists of 161 multi-family (low-rise) residential dwelling units. In order to develop the traffic characteristics of the proposed Project, trip-generation statistics published in the Institute of Transportation Engineers (ITE) Trip Generation Manual (11th Edition, 2021) were used for the Project. Table 2 summarizes the trip generation rates for Multifamily (Low-Rise) Residential (ITE Code 220).

The trip generation summary illustrating daily, and peak hour trip generation estimates for the proposed Project are also summarized in Table 2. The proposed Project is anticipated to generate 944 vehicle trip-ends per day with 108 AM peak hour trips and 125 PM peak hour trips.

TABLE 2: PROPOSED PROJECT TRIP GENERATION SUMMARY

Land Use[1]	Units[2]	ITE LU Code	AM Peak Hour In	AM Peak Hour Out	AM Peak Hour Total	PM Peak Hour In	PM Peak Hour Out	PM Peak Hour Total	Daily
Multifamily (Low-Rise) Residential	DU	220	0.17	0.50	0.67	0.45	0.33	0.78	5.86

[2] DU = dwelling units

Land Use	Quantity	Units[1]	AM Peak Hour In	AM Peak Hour Out	AM Peak Hour Total	PM Peak Hour In	PM Peak Hour Out	PM Peak Hour Total	Daily
PA 11: Esperanza Multi-Family	161	DU	27	81	108	72	53	125	944

[1] DU = dwelling units

TRIP GENERATION COMPARISON

Table 3 shows the trip generation comparison between the approved use (elementary school) and proposed Project (multi-family residential) and identifies the resulting net change in trips. As shown, the Project is anticipated to generate a net reduction of 5 two-way trips per day with a reduction of 201 AM peak hour trips and 81 fewer PM peak hour trips as compared to the approved elementary school use.

TABLE 3: TRIP GENERATION COMPARISON

Project	AM Peak Hour In	AM Peak Hour Out	AM Peak Hour Total	PM Peak Hour In	PM Peak Hour Out	PM Peak Hour Total	Daily
Esperanza SP: Elementary School	169	140	309	96	110	206	949
Proposed Project: Multifamily Residential	27	81	108	72	53	125	944
Net Change in Trips	**-142**	**-59**	**-201**	**-24**	**-57**	**-81**	**-5**

FINDINGS

The City of Ontario adheres to the County Guidelines, which have been used to determine whether additional traffic analysis is necessary for the proposed Project. The County Guidelines indicate that development projects that generate a net increase of 100 or more peak hour vehicle trips (without pass-by reductions) would require the preparation and submittal of a Transportation Impact Analysis.

The Project is anticipated to generate fewer than 100 net new peak hour trips during the morning and evening peak hours (Project results in a net reduction from the currently approved land use). The Project would therefore contribute fewer than 50 net new peak hour trips to any off-site intersection. As such, additional peak hour traffic operations analysis is not necessary based on the County Guidelines.

If you have any questions or comments, I can be reached at cso@urbanxroads.com.

ATTACHMENT A: ESPERANZA SPECIFIC PLAN
TRIP GENERATION EXCERPTS

SECTION 4 - PROJECTED TRAFFIC

SITE TRAFFIC

Trip Generation

Trip generation represents the amount of traffic traveling to and from the proposed project. The traffic generation figures determined for the project are based upon the development of 765 single family residential dwelling units, 645 multi-family residential dwelling units, and a 736 student elementary school as currently proposed. Trip generation rates are based upon a publication entitled "Trip Generation" by the Institute of Transportation Engineers (ITE), seventh edition.

Table 4-1 shows the peak hour trip generation rates for the proposed project. The peak hour rates are based on the average peak hour generation rate multiplied by the directional distribution provided in ITE's trip generation publication referenced above.

Table 4-1 – Trip Generation Rates

Land Use	Unit of Measurement	AM Peak Hour			PM Peak Hour			Daily
		Total	In	Out	Total	In	Out	
Single Family Detached Land Use Category: 210	DU	0.75	0.19	0.56	1.01	0.64	0.37	9.57
Residential Condominium/Townhouse Land Use Category: 230	DU	0.44	0.07	0.37	0.52	0.35	0.17	5.86
Elementary School Land Use Category: 520	Students	0.42	0.23	0.19	0.28	0.13	0.15	1.29

Trip generation from *Trip Generation Manual, 7th Edition* by the Institute of Transportation Engineers (ITE), 2003.
DU – Dwelling Units, TSF – Thousand Square Feet

Table 4-2 shows the daily and peak hour trip generation for the proposed project. The project is estimated to generate approximately 12,050 daily trip-ends, including 1,166 trip-ends during the AM Peak hour and 1,315 trip-ends during the PM Peak hour.

Table 4-2 – Project Trip Generation

Land Use	Unit	Qty	AM Peak Hour			PM Peak Hour			Daily
			Total	In	Out	Total	In	Out	
Single Family Detached	DU	765	573	145	428	773	490	283	7,321
Residential Condominium/Townhouse	DU	645	284	45	239	336	226	110	3,780
Elementary School	Students	736	309	169	140	206	96	110	949
TOTAL			**1,166**	**359**	**807**	**1,315**	**812**	**503**	**12,050**

DU – Dwelling Units
TSF – Thousand Square Feet

The current City of Ontario General Plan circulation element is shown on Figure 4-1.

Trip Distribution

Trip distribution represents the directional orientation of traffic to and from the project site. Trip distribution is influenced by the geographical location of the site, type of land use in the study area, such as shopping centers and recreational sites, and proximity to the regional freeway system. The directional distribution of traffic for the proposed project was determined based upon the 2015 New Model Colony Traffic Forecast (Figure 4-2).

Modal Split

The traffic reducing potential of public transit has not been considered in this study. Therefore, the traffic projections provided in this report are considered conservative since public transit could reduce traffic volumes in the project area.

Trip Assignment

Trip assignment is the result of using the previously discussed trip generation numbers and trip distribution percentages. Figure 4-3 shows the project related traffic volumes, which are based upon the identified project traffic generation and distribution. AM and PM peak hour intersection turning movement volumes for the proposed project are shown on Figures 4-4 and 4-5, respectively.

PA-11 OF THE ESPERANZA SPECIFIC PLAN VEHICLE MILES TRAVELED (VMT) ANALYSIS

Urban Crossroads, Inc. is pleased to provide the following Vehicle Miles Traveled (VMT) Analysis for PA-11 of The Esperanza Specific Plan (**Project**), located on the northeast corner of Amherst Avenue and Eucalyptus Avenue in the City of Ontario.

PROJECT OVERVIEW

It is our understanding that the Project proposes a General Plan Amendment to change the land use from Public School to Medium Density Residential (MDR 11.1-24 du/ac) and an amendment to the Esperanza Specific Plan to change the land use designation for Planning Area 11 from Public School to Residential Development 9 (RD-9). More specifically the proposes 161 multi-family (townhome) residential dwelling units with a density of approximately 16.1 dwelling units to the net acre that would replace a 736-student elementary school. A preliminary site plan can be found in Attachment A.

BACKGROUND

The California Environmental Quality Act (CEQA) mandates that all lead agencies use VMT as the measure for identifying transportation impacts in land use projects. In June 2020, the City of Ontario developed and adopted its VMT methodologies and thresholds (Resolution No. 2020-071) (**City Guidelines**) (1). This VMT analysis is based on the adopted City Guidelines.

VMT ANALYSIS

TRAFFIC MODELING METHODOLOGY

Consistent with City Guidelines, a project-level VMT analysis shall be conducted using the San Bernardino Traffic Analysis Model (SBTAM) as the appropriate tool for conducting VMT analysis for land use projects within the City of Ontario. SBTAM is a useful tool to estimate VMT as it considers interaction between different land uses based on socio-economic data such as population, households, and employment.

As part of The Ontario Plan (TOP) 2050 implementation, the City of Ontario recently adopted an updated version of SBTAM, also referred to as the TOP model. This updated version includes the latest roadway network and socio-economic data specific to the City of Ontario, in alignment with the City's recently-adopted TOP. The model encompasses a base year of 2019 and a General Plan Buildout projection for 2050.

VMT ANALYSIS METHODOLOGY

As stated within the City's Guidelines, the analysis should include 'project-generated VMT' and 'project effect on VMT' estimates for the project transportation/traffic analysis zone (TAZ) for baseline and cumulative conditions. For the purposes of this analysis, Project VMT estimates have been prepared using the Origin/Destination (OD) method to estimate project-generated VMT and Boundary method to estimate project effect on VMT. VMT has been presented as total VMT and total VMT per service population (i.e., population and employees).

ORIGIN/DESTINATION (OD) VMT

The OD method for calculating VMT sums all weekday VMT generated by trips with at least one trip-end in the study area (i.e., Project boundary or City boundary) and tracks those trips to their origin or destination. Origins are all vehicle trips that start in a specific TAZ, while destinations are all vehicle trips that end in a specific TAZ. The OD method accounts for all trips (i.e., both passenger cars and trucks) and trip purposes (i.e., total VMT).

BOUNDARY VMT METHOD

The boundary method is the sum of all weekday VMT on the roadway network within a designated boundary (i.e., City boundary or other designated geographic area). The boundary method estimates VMT by multiplying vehicle trips on each roadway segment within the boundary by that segment's length. This approach consists of all trips, including those trips that do not begin or end in the designated boundary. Consistent with City VMT Guidelines, the City of Ontario was used as the boundary for this assessment. In addition, as the Project is located near the southeastern edge of the City, an additional assessment of a ten-mile boundary area surrounding the Project site has also been conducted to ensure trips associated with the Project are not omitted.

VMT METRIC AND SIGNIFICANCE THRESHOLD

The City of Ontario has adopted the following thresholds of significance related to VMT for land use projects:

The SBTAM model should be used to forecast total daily VMT per Service Population (SP) and is the required method for estimating VMT.

- A significant impact would occur if the project VMT per SP exceeds the Citywide average VMT per SP under General Plan Buildout Conditions.
- A significant impact would occur if the project caused total daily VMT per SP within the City to be higher than the no project scenario under cumulative conditions.

The City of Ontario's average VMT per SP under General Plan Buildout conditions has been calculated using the TOP General Plan Buildout (2050) model. Table 1 presents the Citywide average VMT per SP for General Plan Buildout (2050) conditions.

TABLE 1: CITYWIDE VMT PER SERVICE POPULATION

Ontario	TOP 2050
Service Population	707,369
VMT	19,506,377
VMT per SP	27.6

As shown in Table 1, the City of Ontario's VMT per SP for General Plan Buildout (2050) conditions has been calculated as **27.6 VMT per SP**.

VMT ESTIMATES

To estimate project-generated VMT, standard land use information such as the number of residential dwelling units must first be converted into a SBTAM compatible dataset. The SBTAM model utilizes socio-economic data (SED) (e.g., population, households, and employment) for the purposes of vehicle trip estimation. Table 2 summarizes the SED inputs used to represent the Project. Project SED data was then coded into the Project's TAZ to obtain project-generated VMT.

TABLE 2: POPULATION ESTIMATES

Land Use	Quantity	Conversion Factor[1]	Estimated Population
Residential	161 Dwelling Units	3.5 people per household	564

PROJECT-GENERATED VMT

Project-level VMT estimates were extracted from SBTAM using the OD trip matrices, which includes project-generated VMT for all vehicle trips (both passenger cars and trucks) and trip purposes. Project-generated VMT estimates for the Project are presented in Table 3.

TABLE 3: PROJECT-GENERATED VMT SUMMARY

	Baseline	General Plan Buildout Year (2050)
SP[1]	564	564
OD VMT	12,582	13,364
OD VMT per SP	22.3	23.7
City Threshold	27.6	27.6
Potentially Significant?	No	No

[1] SP = Service Population which refers to the Project's population estimate.

As shown in Table 3, project-generated VMT is forecast to be below the City's adopted threshold.

[1] Factors obtained consistent with land use assumptions within the TOP 2050 model.

PROJECT EFFECT ON VMT

The Project's effect on VMT has been calculated using the boundary method. Land use information representing the proposed land use changes contemplated by the Project were coded into the Project TAZ to represent the "With Project" condition. Table 4 summarizes the boundary VMT under the No Project and With Project scenarios for both baseline and cumulative conditions using the City boundary and a 10-mile radius from the Project site.

TABLE 4: GENERAL PLAN BUILDOUT (2050) BOUNDARY VMT RESULTS

	City Boundary		10-Mile Boundary	
Scenario	No Project	With Project	No Project	With Project
Service Population	706,494	707,058	2,579,062	2,579,626
Boundary VMT	9,602,250	9,598,040	41,605,554	41,614,834
VMT per SP	13.6	13.6	16.1	16.1
Change in VMT	0.0		0.0	
Potentially Significant?	No		No	

The boundary VMT is found to increase under the With Project scenario for both the baseline and cumulative conditions, as expected when increases in development are added to the model. However, to measure the efficiency of a land use project or land use plan, the boundary VMT is divided by the service population to frame an efficiency metric. The resulting VMT per service population was found to remain unchanged in the With Project scenario. The Project does not result in an increase total daily VMT per SP as compared to the No Project scenario.

ACTIVE TRANSPORTATION AND PUBLIC TRANSIT REVIEW

Potential impacts to:

- Circulation system
- Public transit
- Pedestrian facilities and travel
- Bicycle facilities

Were analyzed to determine if the proposed Project conflicts with adopted policies, plans, programs, and if the Project has the potential to decrease the performance or safety of such facilities.

CIRCULATION SYSTEM

Traffic is anticipated to be distributed through the City of Ontario, extending into the neighboring jurisdiction of the City of Eastvale. In general, the study area has a moderate level of active transportation facilities and transit service. Bicycle and pedestrian facilities are proposed as part of the City of Ontario and City of Eastvale General Plans on most roadways throughout the study area.

CITY OF ONTARIO GENERAL PLAN CIRCULATION ELEMENT EVALUATION

The Project site is located within the City of Ontario. Exhibit 1 shows The Ontario Plan 2050 mobility element. (2)

Principal Arterials serve the major centers and corridor of activity, carry the highest volumes of traffic, and serve the longest trips of all city roadways. The study area roadways that are classified as 8-lane Principal Arterials are identified as having four lanes of travel in each direction. The following study area roadway within the City of Ontario is classified as an 8-lane Principal Arterial:

- Ontario Ranch Road

The study area roadways that are classified as 6-lane Principal Arterials are identified as having three lanes of travel in each direction. The following study area roadway within the City of Ontario is classified as a 6-lane Principal Arterial:

- Hamner Avenue

The study area roadways that are classified as 4-lane Principal Arterials are identified as having two lanes of travel in each direction. The following study area roadway within the City of Ontario is classified as a 4-lane Principal Arterial:

- Haven Avenue

Minor Arterials accommodate less traffic than Principal Arterials and are for trips of moderate length. Minor Arterials allow more access to abutting properties and connect the community. The study area roadway that is classified as a 4-lane Minor Arterial is identified as having two lanes of travel in each direction. The following study area roadway within the City of Ontario is classified as a 6-lane Minor Arterial:

- Bellegrave Avenue

Collector streets provide access to abutting properties and traffic circulation within residential neighborhoods and business areas. Collector streets allow access to local and arterial roadways. The study area roadways that are classified as 4-lane Collector Streets are identified as having two lanes of travel in each direction. The following study area roadways within the City of Ontario are classified as 4-lane Collector Streets:

- Mill Creek Avenue
- Eucalyptus Avenue
- Merrill Avenue

CITY OF EASTVALE GENERAL PLAN CIRCULATION ELEMENT

Exhibit 2 shows the City of Eastvale General Plan Circulation Element. (3)

BICYCLE FACILITIES

There are four bicycle facility classifications recognized by the City of Ontario. The four bicycle facility classifications are as follows:

Class I Bikeways (Bike Paths)

Class I bikeways are dedicated for exclusive use by bicyclists along rivers, channels, and utility right-of-way.

Class II Bikeways (Bike Lanes)

Class II bikeways are dedicated lanes along streets, with no parking allowed in the bike lane.

Class III Bikeways (Bike Routes)

Class III bikeways are bike routes normally shared with motor vehicles on the street or with pedestrians on sidewalks, and parking is allowed.

Class IV Bikeways (Separated Bikeways)

Class IV bikeways are dedicated for exclusive use of bicycles and are physically separated from motor traffic with a vertical feature.

Many of the City of Ontario's bicycle paths are combined with sidewalks along each side of major streets.

The City of Ontario and City of Eastvale bike networks are shown on Exhibits 3 and 4, respectively. Adjacent to the Project site, there is a Class II bike lane along Eucalyptus Avenue. A Class I bike path is proposed along Hamner Avenue, east of the Project site. Many bicycle facilities are either existing or proposed within the study area on most major streets. As the study area builds out consistent with the City's proposed trail and bicycle facilities, the Project will be part of a well-connected bicycle network.

PEDESTRIAN FACILITIES

Pedestrian facilities include sidewalks, crosswalks, pedestrian signals, and multi-use trails. Exhibit 5 illustrates the existing crosswalks throughout the study area. As shown in Exhibit 5, pedestrian facilities are built out along portions of Eucalyptus Avenue, Hamner Avenue, and many other study area roadways. Under the assumption that pedestrian facilities will continue to be constructed as the study area develops, the Project will be part of a safe and efficient pedestrian network. The Project is to develop the sidewalks along the roadways adjacent to the Project.

PUBLIC TRANSIT REVIEW

There are bus and regional transit service options available to the City of Ontario. Limited routes and transit options are available near the Project site. It is anticipated that new routes will be proposed to support the future development, but those routes have not been identified at this time. Existing transit services and routes in the study area are shown on Exhibit 6.

Omnitrans

The study area is currently served by Omnitrans, a public transit agency serving various jurisdictions within San Bernardino County. Omnitrans provides countywide bus service and currently has five bus routes in the City of Ontario that provide connections between rail stations, Ontario International Airport (ONT), major employment and shopping centers, and residential areas. Exhibit 6 shows the existing transit facilities, which indicates that Omnitrans Route 87 could serve the Project site. Route 87 runs along portions of Hamner Avenue and Ontario Ranch Road. The nearest bus stop is at the intersection of Hamner Avenue and Eucalyptus Avenue, approximately 1,000 feet east of the Project site. Transit service is reviewed and updated by Omnitrans periodically to address ridership, budget, and community demand needs. Changes in land use can affect these periodic adjustments which may lead to either enhanced or reduced service where appropriate. As such, it is recommended that the Applicant work in conjunction with Omnitrans to potentially provide bus service to the site.

Metrolink

Commuter train service in the City of Ontario is provided by Metrolink, which provides service throughout the Southern California region. The nearest Metrolink station is the East Ontario Metrolink station, located approximately 4 miles north of the Project site. The Riverside Line links Riverside to Union Station in downtown Los Angeles and various other destinations. This line runs weekdays during peak commute hours only.

TRANSPORTATION IMPACT ANALYSIS

This assessment addresses the following Transportation thresholds stated in *CEQA Guidelines* Appendix G:

T-1 Potential to conflict with a program, plan, ordinance, or policy addressing the circulation system, including transit, roadway, bicycle, and pedestrian facilities.

T-2 Potential to conflict or be inconsistent with *CEQA Guidelines* Section 15064.3(b) regarding policies to reduce vehicle miles traveled (VMT).

T-3 Potential to substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment).

T-4 Potential to result in inadequate emergency access.

T-1 ASSESSMENT

The analysis presented here considers the degree to which the Project may hinder the safe and comfortable access to the Project site from other locations, with a special focus on people relying on transit services or active transportation modes such as biking or walking.

Applicable programs, plans, and policies addressing the circulation system are established under TOP 2050. Project consistency with applicable provisions of TOP 2050 is summarized at Table 5. As provided for under CEQA, the analysis presented here considers program, plan, and policy inconsistencies that could result in potentially significant environmental impacts. As a matter of law, the Project would be required to comply with City ordinances addressing the study area circulation system.

Goal M1 A system of roadways that meets the mobility needs of a dynamic and prosperous Ontario.		
Policies		**Remarks**
M-1.1	**Roadway Design and Maintenance.** We require our roadways to: • Comply with federal, state and local design and safety standards. • Meet the needs of multiple transportation modes and users. • Handle the capacity envisioned in City of Ontario Master Plan of Streets and Highways. • Be maintained in accordance with best practices. • Be compatible with the streetscape and surrounding land uses.	**Consistent.** Project roadway designs and all proposed improvements would conform with the City's Master Plan of Streets and Highways, City design standards and applicable federal/state design and safety standards. City design review processes would ensure compliance with all applicable standards. Streetscape design concepts implemented pursuant to the Specific Plan establish compatible continuation of existing perimeter streetscapes. All public roadways would be maintained in accordance with City requirements to include implementation of City Best Management Practices and City Right-of-Way Management Plan.

TABLE 5: TOP 2050 CONSISTENCY ANALYSIS

MOBILITY ELEMENT		
	• Promote the efficient flow of all modes of traffic through the implementation of intelligent transportation systems and travel demand strategies.	On this basis, the Project is considered consistent with Policy M-1.1.
M-1.2	**Mitigation of Impacts.** We require development to mitigate its traffic impacts.	**Consistent.** The Project would not result in potentially significant VMT impacts. Level of Service (LOS) deficiencies are no longer CEQA considerations. Recommended improvements addressing any potential LOS deficiencies would be implemented consistent with City Conditions of Approval. On this basis, the Project is considered consistent with Policy M-1.2.
M-1.3	**Agency Coordination on Roadway Improvements.** We work with Caltrans, SBCTA and others to identify, fund and implement needed improvements to roadways when necessary. We work with neighboring jurisdictions to promote regional connectivity, access, and meet operational level of service standards at the City limits.	**Consistent.** Please refer to remarks at Policies M-1.1, M-1.2.
M-1.4	**Complete Streets.** We work to provide a complete, balanced, context-aware, multimodal transportation network that meets the needs of all users of streets, roads, and highways, including motorists, pedestrians, bicyclists, children, persons with disabilities, seniors, movers of commercial goods, and users of public transportation. We prioritize implementation of complete streets improvements in environmental justice areas to facilitate opportunities for residents to use active transportation systems.	**Consistent.** The Project would construct all circulation system improvements consistent with applicable provisions of the Specific Plan, TOP 2050 Mobility Element, and as required under City Conditions of Approval. On this basis, the Project is considered consistent with Policy M-1.4.
M-1.5	**Level of Service.** Maintain a peak hour Level of Service (LOS) E or better at all intersections. Maintain Level of Service D or better on arterial streets in the City. Develop and maintain a list of locations where LOS E or LOS F are considered acceptable and would be exempt from this level of service policy. Considerations for LOS exemption include being restricted by environmental constraints, lacking available right-of-way, deterring an	**Consistent.** The City recognizes that vehicle delay (Level of Service, LOS) deficiencies are no longer environmental impacts under CEQA. Recommended improvements addressing any LOS deficiencies would be implemented per City Conditions of Approval. On this basis, the Project is considered consistent with Policy M-1.5.

TABLE 5: TOP 2050 CONSISTENCY ANALYSIS

MOBILITY ELEMENT		
	increase in VMT, or degrading other modes of travel (such as bicycle or pedestrian infrastructure).	
M-1.6	**Reduce Vehicle Miles Traveled.** We will strive to reduce VMT through a combination of land use, transportation projects, travel demand management strategies, and other trip reduction measures in coordination with development projects and public capital improvement projects.	**Consistent.** While roadway improvements associated with the Project may facilitate vehicular travel within the City and surrounding areas, total VMT and environmental impacts of such travel would not result in any potentially significant VMT and VMT-related impacts. On this basis, the Project is considered consistent with Policy M-1.6.
M-2 Active Transportation		
Goal M-2 A system of trails and corridors that facilitate and encourage active modes of transportation.		
Policies		**Remarks**
M-2.1	**Active Transportation.** We maintain our Active Transportation Master Plan to create a comprehensive system of on- and off-street bikeways and pedestrian facilities that are safe, comfortable, and accessible and connect residential areas, businesses, schools, parks, and other key destination points.	**Consistent.** Bikeways and pedestrian facilities would be implemented consistent with provisions of the Specific Plan and as required under City Conditions of Approval. The Project does not propose or require facilities or operations that would conflict with the City's Active Transportation Master Plan. On this basis, the Project is considered consistent with Policy M-2.1.
M-2.2	**Bicycle System.** We provide off-street multipurpose trails and Class II bikeways as our preferred paths of travel and use the Class III for connectivity in constrained circumstances. When truck routes and bicycle facilities share a right-of-way, we prefer Class I or Class IV bicycle facilities. We require new development to include bicycle facilities, such as bicycle parking and secure storage areas.	**Consistent.** Bikeways and bicycle amenities would be implemented consistent with provisions of the Specific Plan and as required under City Conditions of Approval. On this basis, the Project is considered consistent with Policy M-2.2.
M-2.3	**Pedestrian Walkways.** We require streets to include sidewalks and visible crosswalks at major intersections where necessary to promote safe and comfortable mobility between residential areas, businesses, schools, parks, recreation areas, and other key destination points.	**Consistent.** Pedestrian paths would be provided within the Project site and along the Project perimeter consistent with City standards, provisions of the Specific Plan, and as required under City Conditions of Approval. On this basis, the Project is considered consistent with Policy M-2.3.

TABLE 5: TOP 2050 CONSISTENCY ANALYSIS

MOBILITY ELEMENT		
M.2-4	**Network Opportunities.** We use public rights-of-way and easements such as, utility easements, levees, drainage corridors, road rights-of-way, medians, and other potential options to maintain and expand our bicycle and pedestrian network. In urban, mixed-use, and transit-oriented Place Types, we encourage the use of underutilized public and private spaces to expand our public realm and improve pedestrian and bicycle connectivity.	**Consistent.** Bikeways and pedestrian facilities would be implemented consistent with provisions of the Specific Plan and as required under City Conditions of Approval. On this basis, the Project is considered consistent with Policy M-2.4.
M-3 Public Transit		
Goal M-3 A public transit system that is a viable alternative to automobile travel and meets basic transportation needs of the transit-dependent.		
Policies		**Remarks**
M-3.1	**Transit Partners.** We maintain a proactive working partnership with transit providers to ensure that adequate public transit service is available, cost-efficient, and convenient, particularly for residents in environmental justice areas.	**Consistent.** The Project would not interfere with or otherwise obstruct the City's cooperative partnership with transit providers. On this basis, the Project is considered consistent with Policy M-3.1.
M-3.2	**Alternative Transit Facilities at New Development.** We require new development adjacent to an existing or planned transit stop to contribute to the creation of transit facilities, such as bus shelters, transit bays and turnouts, and bicycle facilities, such as secure storage areas.	**Consistent.** The Project would support and would not conflict with City efforts to contribute to the creation of transit facilities. To these ends, the Applicant would coordinate Project development with the City and transit agencies to implement transit service and supporting amenities. On this basis, the Project is considered consistent with Policy M-3.2.
M-3.3	**Transit-Oriented Development.** We may provide additional development-related incentives to those inherent in the Land Use Plan for projects that promote transit use and reduce vehicle miles traveled.	**Consistent.** The Project would not interfere with or otherwise obstruct the City's incentive programs and policies. On this basis, the Project is considered consistent with Policy M-3.3.
M-3.4	**Bus Rapid Transit (BRT) Corridors.** We work with regional transit agencies to implement BRT service and reduce vehicle miles traveled by targeting destinations and corridors with the highest number of potential riders.	**Consistent.** The Project would not interfere with or otherwise obstruct the City's cooperative efforts with regional transit agencies. On this basis, the Project is considered consistent with Policy M-3.4.

TABLE 5: TOP 2050 CONSISTENCY ANALYSIS

MOBILITY ELEMENT		
M-3.5	**Light Rail.** We support extension of the Metro Rail Gold Line to Ontario, and will work to secure station locations at the proposed multimodal transit center.	**Consistent.** The Specific Plan area is not located near the potential Metro Rail Gold Line extension to the City; nor the proposed multimodal transit center. The Project would not impact, nor be impacted by, rail operations. On this basis, the Project is considered consistent with Policy M-3.5.
M-3.6	**Metrolink Expansion.** We advocate expansion of Metrolink service to include the Downtown and the multimodal transit center.	**Consistent.** The Project site is not located near the Metrolink rail line; nor the proposed multimodal transit center. The Project would not impact, nor be impacted by, Metrolink expansion. On this basis, the Project is considered consistent with Policy M-3.6.
M-3.7	**High Speed Rail.** We encourage the development of high-speed rail systems that would enhance regional mobility in Southern California and serve the City of Ontario.	**Consistent.** No railways exist within or near the Specific Plan area. The Project would not interfere with or otherwise obstruct the development of high-speed rail systems. On this basis, the Project is considered consistent with Policy M-3.7.
M-3.8	**Feeder Systems.** We work with regional transit agencies to secure convenient feeder service from the Metrolink station and the proposed multimodal transit center to employment centers in Ontario.	**Consistent.** The Project site is located in an area already served by public transit. The Project would implement feeder transit facilities as required by the City through its coordination with transit agencies serving the area. On this basis, the Project is considered consistent with Policy M-3.8.
M-3.9	**Ontario Airport Metro Center Circulator.** We will explore development of a convenient mobility system, including but not limited to shuttle service, people mover, and shared car system, for the Ontario Airport Metro Center.	**Consistent.** The Specific Plan area is not located in or near the Ontario Airport Metro Center. The Project would not interfere with or otherwise obstruct the City's development of a mobility system in this area. On this basis, the Project is considered consistent with Policy M-3.9.
M-3.10	**Multimodal Transportation Center.** We intend to ensure the development of a multimodal transportation center near ONT airport to serve as a transit hub with amenities for transit riders, pedestrians, and bicyclists transitioning to local buses, BRT, the Gold Line, high-speed rail, the proposed Ontario Airport Metro Center Circulator, and other future transit modes. We support locations for the multimodal	**Consistent.** The Specific Plan area is not located in/near the area intended for development of the Multimodal Transportation Center. The Project would not interfere with or otherwise obstruct the implementation of this transit hub. On this basis, the Project is considered consistent with Policy M-3.10.

TABLE 5: TOP 2050 CONSISTENCY ANALYSIS

MOBILITY ELEMENT		
	transportation center that are north of ONT airport, between Vineyard Avenue and Interstate 15.	
M-3.11	**Transit and Community Facilities.** We require the future development of community-wide serving facilities to be sited in transit-ready areas that can be served and made accessible by public transit. Conversely, we plan (and coordinate with other transit agencies to plan) future transit routes to serve existing community facilities.	**Consistent.** The Project site is located in an area already served by public transit. The Applicant would also coordinate with the City and transit agencies to implement transit service and thereby reduce vehicle miles traveled. On this basis, the Project is considered consistent with Policy M-3.11.
M-4 Goods Movement		
Goal M-4 An efficient flow of goods through the City that maximizes economic benefits and minimizes negative impacts.		
Policies		**Remarks**
M-4.1	**Truck Routes.** We designate and maintain a network of City truck routes that provide for the safe and efficient transport of goods while minimizing negative impacts on local circulation and noise-sensitive land uses, as shown on Exhibit M-04, Truck Routes. We will minimize conflicts on truck routes through the design and implementation of buffers between travel lanes and pedestrian and bicycle facilities on designated truck routes.	**Consistent.** The Project does not propose uses or activities that would generate substantial truck traffic. Any trucks accessing the Specific Plan area would utilize the City's designated truck routes, thereby minimizing negative impacts on local circulation and noise-sensitive land uses. On this basis, the Project is considered consistent with Policy M-4.1.
M-4.2	**Regional Participation.** We work with regional and subregional transportation agencies and adjacent cities to plan and implement goods movement strategies, including regional truck routes, plans and projects that improve mobility, support the efficient movement of goods, and minimize negative environmental impacts.	**Consistent.** The Project land uses take advantage of proximate available improved transportation systems acting generally to facilitate mobility, goods movement, and goods delivery on a local, sub-regional and regional basis. The Project would not interfere with or otherwise obstruct City efforts and actions to coordinate regional and sub-regional plans and strategies facilitating mobility, goods movement, and goods delivery. On this basis, the Project is considered consistent with Policy M-4.2.
M-4.3	**Railroad Grade Separations.** We eliminate at-grade rail crossings identified on Exhibit M-01, Roadway Classifications.	**Consistent.** No at-grade rail crossings are located within or adjacent to the Project site. The Project would not interfere with or otherwise obstruct the City's elimination actions in this regard.

TABLE 5: TOP 2050 CONSISTENCY ANALYSIS

MOBILITY ELEMENT		
		On this basis, the Project is considered consistent with Policy M-4.3.
M-4.4	**Environmental Considerations.** We support both local and regional efforts to reduce/eliminate the negative environmental impacts of goods movement through the planning and implementation of truck routing and the development of a plan to evaluate the future needs of clean fueling/recharging and electrified truck parking.	**Consistent.** The Specific Plan Design Guidelines and Development Regulations act globally to minimize potential environmental impacts of goods movement associated with the Project. Please refer also to remarks at Policies M-4.1, M-4.2.
M-4.5	**Air Cargo.** We support and promote a ONT airport that accommodates 1.6 million tons of cargo per year, as long as the impacts associated with that level of operations are planned for and mitigated.	**Consistent.** The Specific Plan area is not located within an identified Safety Zone of the ONT airport. The Project would not impact, nor be impacted by, ONT airport cargo operations. On this basis, the Project is considered consistent with Policy M-4.5.
M-5 Regional Transportation		
Goal M-5 A proactive leadership role in helping identify and facilitate implementation of strategies that address regional transportation challenges.		
Policies		**Remarks**
M-5.1	**Regional Leadership.** We maintain a leadership role to help identify and implement potential solutions to long-term regional transportation problems.	**Consistent.** The Project would not interfere with or otherwise obstruct the City's leadership efforts and actions. On this basis, the Project is considered consistent with Policy M-5.1.
M-5.2	**Land Use Compatibility with Regional Transportation Facilities.** We work with ONT, railroads, Caltrans, SBCTA, and other transportation agencies to minimize impacts.	**Consistent.** The Project would not interfere with or otherwise obstruct the City's cooperative efforts with regional transportation agencies. On this basis, the Project is considered consistent with Policy M-5.2.

Sources: Goal and Policy statements from TOP 2050; remarks by Urban Crossroads.

Prior to the issuance of Building Permits, the City would review the final Project designs to ensure consistency with City programs, plans, and policies as outlined above. Consistency with applicable City ordinance requirements is required as a matter of law.

Level of Significance: Less-Than-Significant. As summarized at Table 5, the Project does not propose or require uses or facilities that would conflict with applicable programs, plans, and

policies addressing the circulation system. Project impacts in these regards would therefore be **less-than-significant**.

T-2 ASSESSMENT

The Project is consistent with *CEQA Guidelines* section 15064.3, subdivision (b) regarding policies to reduce VMT. The City of Ontario has adopted the following thresholds of significance related to VMT for land use plans:

The SBTAM model should be used to forecast total daily VMT per Service Population (SP) is the required method for estimating VMT.

- A significant impact would occur if the project VMT per SP exceeds the Citywide average VMT per SP under General Plan Buildout Conditions.
- A significant impact would occur if the project caused total daily VMT per SP within the City to be higher than the no project scenario under cumulative conditions.

Based on the VMT analysis previously presented in this technical memorandum, Project-generated VMT per service population was found to be less than the City of Ontario VMT per service population under General Plan Buildout Conditions. Additionally, total daily VMT per service population within the City is forecast to remain unchanged under "With Project" for cumulative conditions. The Project therefore results in a **less-than-significant** VMT impact.

T-3 ASSESSMENT

Efficient and safe operations of the Project would be provided by on-site and localized circulation and intersection improvements to be developed as the Project individual site and building designs are finalized. The City would ensure that all on-site and localized circulation and intersection improvements would be designed and constructed consistent with applicable provisions of the Specific Plan and pursuant to City site plan and Building Permit review processes and requirements.

Traffic signing and striping would be implemented in conjunction with detailed Project construction plans. Sight distance at each Project access point would be reviewed with respect to standard Caltrans and City of Ontario sight distance standards at the time of preparation of final grading, landscape and street improvement plans.

The Project would generate passenger car trips typical of the proposed uses. As part of established site and Building Permit review processes, the City would require implementation of designated travel paths, signing, and traffic controls to ensure that traffic conflicts are minimized or avoided. Land uses proximate to the Project site are planned for, or are developed with urban uses similar to those proposed by the Project. These uses would generate urban traffic types similar to traffic generated by the Project and would not generate traffic that would be incompatible with the Project traffic types.

As supported by the preceding discussions, the potential for the Project to substantially increase hazards to a design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment); is considered **less-than-significant.**

T-4 ASSESSMENT

EMERGENCY ACCESS

Access to the Specific Plan area is provided by improved urban roadways. As part of the City's established design review processes, design and implementation of all Project circulation improvements, as well as final design(s) of the Project site plan(s), to include locations and design of proposed driveways, would be required to be reviewed and approved by the City Traffic Engineer. In addition, as part of the City's established design review processes, representatives of the City's Police and Fire Departments would review the Project's plans in regard to emergency access. Efficient and safe access within, and access to, the Project is provided by the Specific Plan design concepts, site access improvements, and site adjacent roadway improvements included as components of the Project. In combination, these elements act to facilitate emergency access and avoid conditions that would restrict or limit access under emergency conditions.

OTHER CONSIDERATIONS

It is also recognized that temporary and interim traffic detours and traffic disruptions could occur during Project construction. To minimize effects of Project construction on area traffic patterns, it is recommended that the following or similar Construction Area Traffic Management Plan (Plan) be implemented as a Project Condition of Approval. Typical elements and information incorporated in the Plan would include, but not be limited to:

- Name of on-site construction superintendent and contact phone number.
- Identification of Construction Contract Responsibilities - For example, for excavation and grading activities, describe the approximate depth of excavation, and quantity of soil import/export (if any).
- Identification and Description of Truck Routes - to include the number of trucks and their staging location(s) (if any).
- Identification and Description of Material Storage Locations (if any).
- Location and Description of Construction Trailer (if any).
- Identification and Description of Traffic Controls - Traffic controls shall be provided per the Manual of Uniform Traffic Control Devices (MUTCD) if the occupation or closure of any traffic lanes, parking lanes, parkways or any other public right-of-way is required. If the right-of-way occupation requires configurations or controls not identified in the MUTCD, a separate traffic control plan must be submitted to the City for review and approval. All right-of-way encroachments would require permitting through the City.
- Identification and Description of Parking - Estimate the number of workers and identify parking areas for their vehicles.
- Identification and Description of Maintenance Measures - Identify and describe measures taken to ensure that the work site and public right-of-way would be maintained (including dust control).

The Plan would be reviewed and approved by the City prior to the issuance of the first building permit. The Plan and its requirements would also be required to be provided to all contractors as one component of building plan/contract document packages.

Based on the preceding, the potential for the Project to result in inadequate emergency access would be **less-than-significant.**

If you have any questions, please contact me directly at aso@urbanxroads.com.

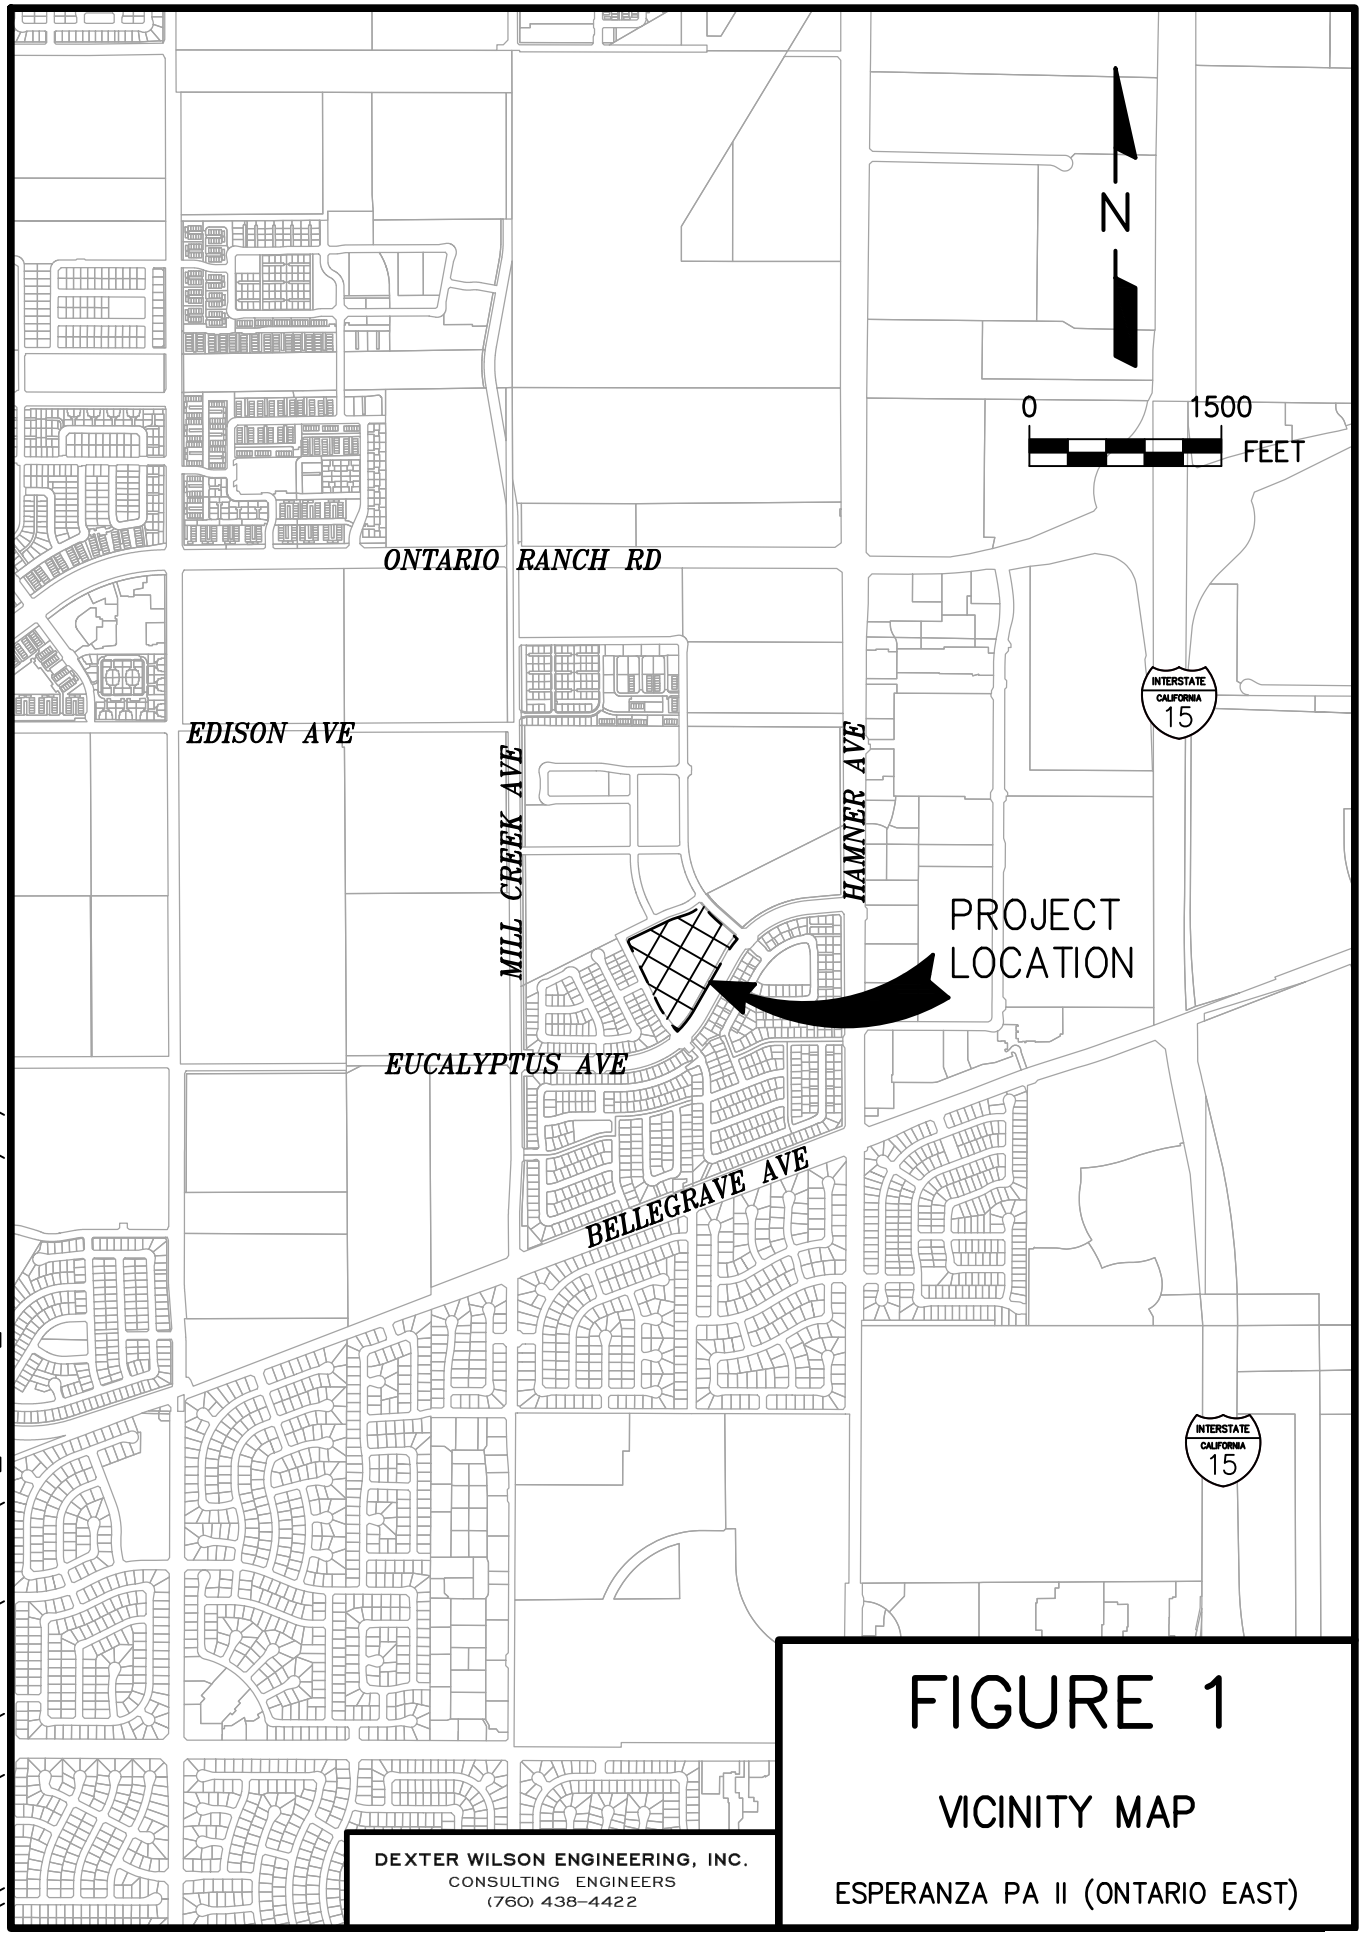
Subject: Water System Analysis for Esperanza PA 11 Project in the City of Ontario

Introduction

The Esperanza PA 11 project is located in the City of Ontario north of Eucalyptus Avenue between Amherst Avenue and Chatham Street. Access to the project will be from Amherst Avenue and Chatham Street. Water service for Esperanza PA 11 project will be provided by City of Ontario (City).

The proposed project is a mixed-use development consisting of 161 units on approximately 10 acres.

A Vicinity Map for the project is shown on Figure 1.



\\MERIDIAN\DWG\1551001\REPORT\EH_FIGURE-1_VICMAP.DWG 7/12/2024 1:38:24 PM LAYOUT:8x11 USER:Karam

Purpose of Study

The purpose of this letter report is to analyze the existing and proposed water system for Esperanza PA 11 project and determine if there are any water system deficiencies created by the proposed development of this property and land use change from school site to residential. This report will address any offsite (public) water system improvements are needed for the development of the project so that the offsite water system will be in conformance with the City water system design standards.

A previous Master Plan of Water was prepared for the entire project in 2015 for the overall developer.

Study Area and Available Water System Pressure

In general, the study area for this water report is Esperanza PA 11 project boundary. The extent of the existing water system which was incorporated into the analysis of the project site was based on the existing water distribution system that serves the project area.

Figure 2 presents the existing and proposed water facilities in the project area.

Water service to the project will be from the 925 Pressure Zone of the City's public water system. Finished floor elevations on the project property range between 705 feet and 711 feet. This results in a maximum static water pressure range of 93 psi to 95 psi on the project site.

Water System Design Criteria

The design criteria used for the evaluation of the proposed water system by Esperanza PA 11 project are based on City design criteria. This water design criteria is presented in the City's most recent Master Plan for the overall project. A copy of the pertinent sections where the design criteria is located is attached as Appendix A.

Water Demand Rates. The water demand rates for the project and surrounding area are presented as Table 1 below.

TABLE 1
ESPERANZA PA 11 WATER DEMAND FACTORS

Land Use	Demand Factor
Residential – Attached Dwellings (11-25 units/acre)	323 gpd/unit

Peaking Factors. The peaking factors utilized in this study are identified in the City's Master Plan. To convert average day demand to maximum day demand a peaking factor of 1.55 was utilized and to convert average day demand to peak hour demand a peaking factor of 1.98 was utilized.

Existing and Proposed Water System

There are existing public water facilities directly adjacent to the project site. There is an existing 24-inch diameter public water line in Eucalyptus Avenue and existing 8-inch public water lines surrounding the project. The project will be connecting its onsite private water systems to two existing water lines in Amherst Avenue and Chatham Street.

Figure 2 presents the existing and proposed water system in the project vicinity.

NOTE: ALL EXISTING AND PROPOSED WATER LINES ARE IN THE 925 PRESSURE ZONE.

\\MERIDIAN\DWG\1551001\REPORT\EH_WTR_FIGURE-2_EXPROWTR.DWG 4/17/2025 2:49:30 PM LAYOUT:11x17 USER:James

Table 2 provides the summary of projected water demand for the project.

TABLE 2
ESPERANZA PA 11 PROJECTED WATER DEMAND

Description	Quantity	Unit Demand Factor	Total Avg. Demand, gpd
Medium Density Residential	161 units	323 gpd/unit	52,003

Per the City design criteria, the maximum day demand calculates to be 80,605 gpd (56 gpm) and the peak hour demand calculates to be 102,966 (72 gpm).

Private Water System

Per the City's requirement, the onsite water system for Esperanza PA 11 will be private. One connection will be made for the domestic service and two connections will be made for the fire protection service to the project site. Connections will be made at Chatham Street and Amherst Avenue.

Domestic Meter and Service. The preliminary water fixture count (WFU) for the proposed units are estimated to be 30 to 35 WFUs per unit. Based on a WFU count of between 30 and 35 fixture units per home and an extrapolation curve as shown in Appendix B, the design demand for water meter sizing is estimated to be approximately 675 gpm for the project.

Based on the meter capacities established in AWWA C700-20, the project will likely require a 4-inch or 6-inch meter. A bypass meter will be provided in the event that the primary meter is temporarily of service. The final sizing of the service laterals and meters will need to be confirmed once the fixture units and plumbing plans for each home are finalized.

Private Fire Protection Service. The private fire protection system will consist of two DCDA backflow preventers at each connection point and 8-inch diameter water lines throughout the project. The 8-inch diameter private fire protection system will sufficiently convey the projected 1,500 gpm fire flow requirement. This was confirmed by a hydraulic computer model that is presented in the next section of this water study.

Hydraulic Model Development

The KYPIPE computer software program developed by the University of Kentucky was used to analyze the proposed onsite and existing offsite public water system. KYPIPE utilizes the Hazen-Williams equation for determining head loss in pipes. The program also determines the flow and velocity in the pipes as well as the available pressure at nodes in the water system. An assumed roughness coefficient "C" value of 120 was used for all pipes.

Available Hydraulic Grade Line. **F**ire flow test data in the vicinity of the project was performed by the City and is included in Appendix C for reference. Results from the hydrant flow test show a residual pressure of approximately 58 psi at the fire flow requirement for the project at the hydrant flow test location (Eucalyptus Avenue west of the project site).

Fitting and Valve Losses. To simulate minor losses through pipe fittings and valves, minor loss coefficients or "k" values for all fittings associated with pipes were included in the hydraulic model.

Meter and Backflow Assembly Losses. The pressure loss through the proposed meters and backflow preventers was incorporated into the computer model. Appendix B presents candidate DCDA and RP backflow preventers. The manufacturer's literature includes charts which show pressure loss through the backflow preventer as a function of flow. These charts were used to incorporate the pressure losses reflected in the computer modeling.

Hydraulic Model Analysis

Hydraulic modeling of the proposed onsite and existing offsite water system for the Esperanza PA 11 project was performed to confirm the pipe sizes necessary to provide adequate domestic and fire protection service. The water system was analyzed under an onsite 1,500 gpm fire flow scenario.

Appendix C provides the results of the computer model for the analyzed water system. Exhibit A at the back of Appendix C provides the Node and Pipe Diagram of the analyzed water system.

The results of the hydraulic analyses presented in Appendix C show that the proposed water system for the project site is adequate for domestic service and fire protection. For fire protection, the results of the computer runs show that a fire flow of 1,500 gpm can be delivered to the any fire hydrant within the project site with a residual pressure at the hydrant of greater than 20 psi. The minimum residual pressures are 31 psi under a 1,500 gpm fire flow scenario. Domestic demands can be provided with residual pressures of at least 58 psi.

The results of the computer hydraulic analyses for Esperanza PA 11 project indicate that the existing public water system can provide sufficient flow and pressure for the projects' domestic and expected fire protection service needs.

Conclusions and Recommendations

The following conclusions and recommendations are summarized based on the water system analysis prepared for the proposed Esperanza PA 11 project.

1. The project will be supplied from the existing City 925 Zone water system.

2. The project is proposing to make two connections to the existing public water system. These include a connection to an existing 8-inch diameter line in Chatham Street and a connection to an existing 8-inch line in Amherst Avenue.

3. Figure 2 presents the existing and proposed water system surrounding the project.

4. The estimated WFU count and corresponding peak water demand (675 gpm approximate) is provided on page 6 of this report.

5. A maximum day demand plus fire flow of 1,500 gpm can be met at the project site with existing and the proposed piping with all residual pressures greater than 20 psi.

6. **F**ire flow test data in the vicinity of the project was performed by the City and is included in Appendix C for reference

7. This report presents the sizing and a general schematic layout of the proposed onsite water system. The design engineer for the water system should incorporate valves, fittings, and appurtenances in accordance with the design guidelines of the City of Ontario.

8. The recommended material specification for all new potable water lines is AWWA C900 DR18 PVC.

Thank you for the opportunity to assist you with the water system planning for Esperanza PA 11 project. If you have any questions regarding the information and conclusions presented in this report, please do not hesitate to call.

WATER DEMAND EQUIVALENTS BY LAND USE

Available Water Supply - See Exhibit C-1R for Net MDD Available

Table A - Water Demand Equivalents By Land Use

The Ontario Plan Land Use	Potable Water			Recycled Water	
	Water Demand Factor (ADD)		Water Demand Equivalents (WDE)[2]	Recycled Water Demand Factor[1] (ADD)	Recycled Water Demand Of Total Water Demand
	(gpd/du)	(gpd/ac)	(gpm/unit)	(gpd/ac)	(%)
Detached Dwellings (less than 5 units per acre)	544		0.57	900	28%
Detached or Attached Dwellings (between 5 and 11 units per acre)	464		0.48	1,000	21%
Attached Dwellings (between 11 and 25 units per acre)	323		0.34	1,500	18%
High Density Dwellings (25+ units per acre)	152		0.16	1,500	27%
Commercial Lodging	150		0.16	1,700	50%
Retail/Services Uses		2,200	2.29	2,300	51%
Office Uses		3,400	3.54	2,300	40%
Business Park Uses		2,200	2.29	2,200	50%
Industrial Uses		2,000	2.08	2,200	52%
Institutional Use		2,200	2.29	1,600	42%
Parks		1,000	1.04	1,400	58%
Schools		3,500	3.65	1,600	31%

[1]Recycled Water Demands include irrigation for right-of-way (medians and parkways), neighborhood edge, pocket parks, and common areas.

[2] The WDE is based on the Maximum Day Demand (MDD) with a peaking factor of 1.5 in the NMC for all land use categories.

Table B - Example Water Supply Calculation

Land Use	Acres[1] (gross)	Residential Units	WDE Factor (gpm)	Potable MDD (gpm)	Recycled Water ADD (gpm)
Development					
Detached Dwellings (less than 5 units per acre)	1,284	5,061	0.57	2,868	803
Detached or Attached Dwellings (between 5 and 11 units per acre)	369	2,530	0.48	1,223	256
Attached Dwellings (between 11 and 25 units per acre)	194	3,410	0.34	1,147	202
Retail/Services Uses (per acre)[2]	104		2.29	239	166
TOTAL	1,950	11,001		5,477	1,428

Three (3) Wells Are required to Support this example, assuming each well produces 2,000 gpm and connection to the Recycled Water System maximizing Recycled Water Use.

[1] Residential Acres are estimated based on the weighted average derived from the average number of units per land use category.

[2] Commercial acreage is calculated from a total square footage of 1,361,000 SF with an average Floor to Area Ratio (FAR) of 0.30 for commercial services in The Ontario Plan.

DRAFT

SECTION 4
WATER USE

4-1 Historic Water Production and Purchase

The City obtains its potable water supply from groundwater wells in Chino Basin and imported water from the Water Facilities Authority (WFA) and the Chino Basin Desalter Authority (CDA). Currently, the City operates seventeen (17) active wells.

The total annual water production and purchase from January 2007 to December 2018 is shown in Table 4-1 and on Figure 4-1. Figure 4-2 illustrates the historic water production and purchase by month. Over the last twelve years, the annual supply has averaged a total of 35,774 AFY (31.9 mgd). The average groundwater production is 23,520 AFY (21.0 mgd). Per the Chino Basin Watermaster 41st Annual Report, the City of Ontario has appropriative rights to 16,337 AFY, and its share of the initial operating safe yield is 11,374 AFY or 21 percent of the appropriative pool rights. The City has secured additional supply through transfers, purchase, and groundwater recharge. The average amount of imported water purchased is 12,253 AFY (10.9 mgd).

There has been a decrease in production over the past twelve years. This may be attributed to the expansion of the City's recycled water system, as well as a conscientious water conservation effort by the customers. Water conservation is discussed further in Section 4-9.

4-2 Water Consumption versus Water Production / Purchase

The City typically purchases/produces more water than the quantity measured by the customer meters. Table 4-2 summarizes the difference between the measured consumption and production from 2007 to 2018. Figure 4-3 graphically shows the City's water consumption versus production/purchase.

Table 4-2

Water Consumption versus Water Production/Purchase

Calendar Year	Water Consumption[1] (AFY)	Water Production/ Purchase[2] (AFY)	Non-Revenue Water (%)	Population[3]	Per Capita Production/ Purchase (gpcd)	Per Capita Consumption (gpcd)
2007	44,286	44,806	1.2%	158,405	253	250
2008	42,072	43,302	2.8%	158,181	244	237

[1] Consumption from annual Department of Water Resources Public Water System Statistics Report.

[2] Water Production/Purchase data extracted from City's Anuual System Operations Data

[3] Population data from California Department of Finance, E-5 Population and Housing Estimates for Cities 2000-2018, excluding estimate of population for areas in Ontario served by CVWD.

[4] Water consumption estimates are from monthly water billing data.

Per the historical records, the consumption between 2010 and 2012 was more than the amount of water produced and/or purchased, which could not have actually happened. Possible explanations for the discrepancy in data include the following:

- During this time, the City was expanding its recycled water system. Some customers were converted from potable water use to recycled water use. Some of the consumption data might have actually been a combination of the potable and recycled water use.
- City staff has been updating and reclassifying meter types in its billing database. Some of the data provided in the historical DWR reports might have been misclassified at the time the report was created.
- Meters are not always perfectly calibrated. The margin of error in few large meters that measure production and purchase amounts or the thousands of small meters measuring consumption could contribute to the discrepancy in data.

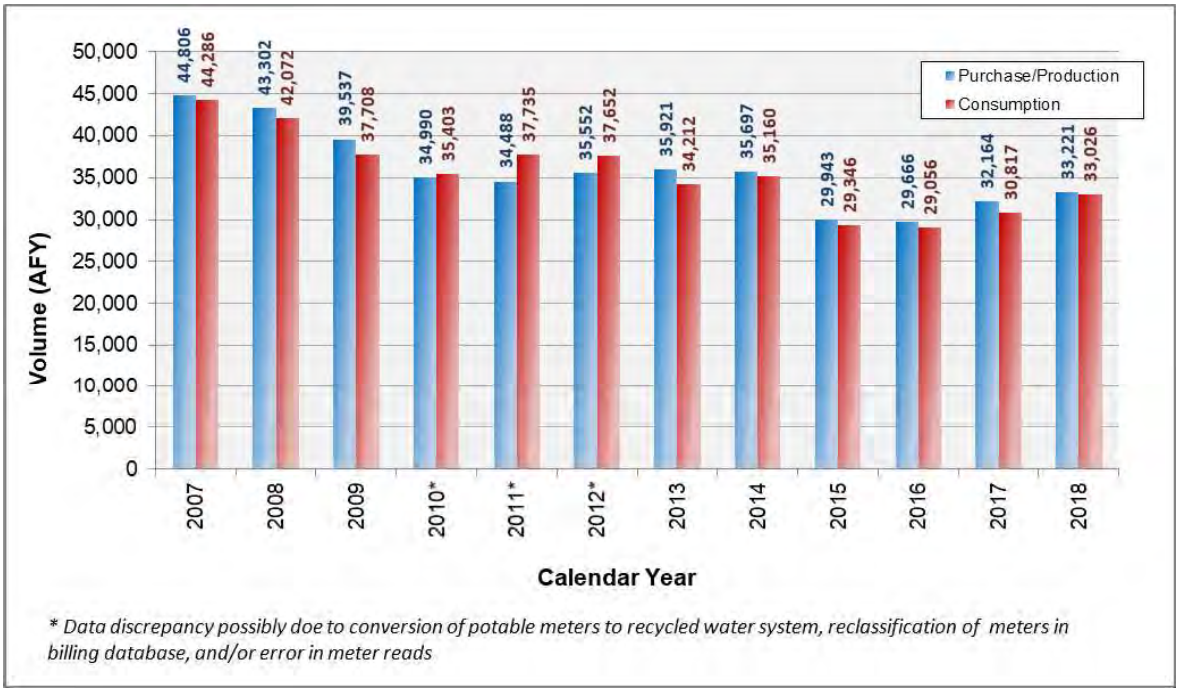
The water consumption data before the 2015 Calendar Year is based on Department of Water Resources Public Water System Statistics Reports. After the 2015 Calendar Year, the consumption data is based on the monthly water billing data. Non-revenue water makes up between 0.6% and 4.8% of the total production and purchase supply, respectively. The City strives to keep the percentage as low as possible. The City's non-revenue water is 2.6%, on average.

DRAFT

Non-revenue water occurs in all water systems. There will be differences in the accuracies of the few large meters which measure purchases and production, and the thousands of small customer meters which measure sales. Non-revenue water can also be due to unmeasured uses such as water main flushing and other maintenance related tasks. The remainder may be due to leaks from the system. The City's average non-revenue water rate of 2.6%.

Figure 4-3

Water Consumption versus Water Production/Purchase



4-3 Water Demand Variations

Demand variations through a year are influenced by seasonal effects such as temperature, humidity, and precipitation. System demand variations throughout a day are influenced by the customer base and the daily lifestyles of the customers. In primarily residential areas, the peak demands within a day typically occur in the morning hours between 6:00 am and 9:00 am, when customers wake to begin their daily routine. In largely commercial and industrial areas, the peaks may occur mid-day or the demand may even remain relatively constant throughout the work day. For this study, the variations are expressed as a ratio to the average demand, with the average demand being equal to one.

For the purpose of this master plan, the average day demand was based on the most recent twelve consecutive months of production and purchase data that was available at the time the hydraulic model was created. The average day demand is summarized in Table 4-3.

Table 4-3
Average Day Demand for the Hydraulic Water Model

	AF	MGD	gpm
September 2018	3,179	34.53	23,980
October 2018	2,850	29.95	20,800
November 2018	2,583	28.06	19,483
December 2018	2,053	21.58	14,988
January 2019	1,915	20.13	13,980
February 2019	1,503	17.49	12,147

July 2019	3,404	35.78	24,847
August 2019	3,479	36.57	25,397
Total	**31,153**	**27.76**	**19,280**

4-4 Monthly Demand Variations

Typical of most Southern California communities, the City's water consumption exhibits a distinct seasonal pattern. Peak and low monthly consumption occur during the dry summer months and wet winter months, respectively. Monthly demand

DRAFT

totals and factors for 2007 to 2018 are shown in Table 4-4. Peak demands typically occur in July and August. Low demands typically occur in February. The highest and lowest monthly demand factor for the 2018 Calendar year is 1.46 and 0.82, respectively.

The maximum month factor is estimated to be 1.46 times the ADD, which is representative of the OMC demands, since there is very little existing usage in the OR area. The OR maximum day peaking factor was estimated to be 1.36, which was developed by excluding a portion of the water use that is expected to be served through the recycled water system.

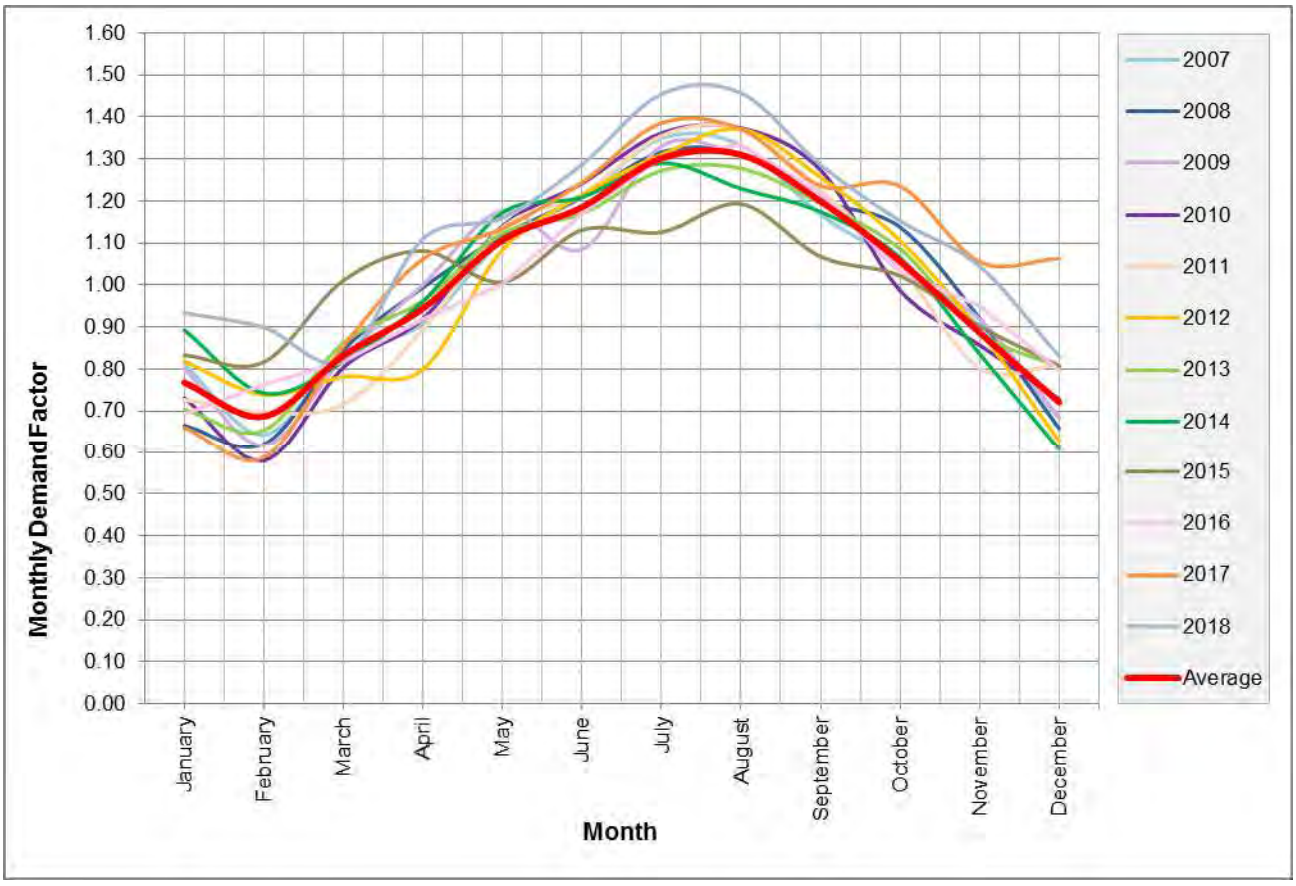
DRAFT

Figure 4-4

Monthly Demand Factors



4-5 Daily Demand Variations

In the predominately developed OMC service area, the MDD is estimated to be 1.60 times the ADD. The OR maximum day peaking factor was estimated to be 1.50, which was developed by excluding a portion of the water use that is expected to be served through the recycled water system. The MDD estimate is summarized in Table 4-5.

In the hydraulic model, demands and patterns for high water users were allocated based on field data that was captured during the calibration period. For modeling purposes, the calibration diurnal pattern and demands were used for the ADD and MDD scenarios.

Table 4-5

Maximum Day Demand Summary

	ADD (gpm)			MDD/ADD Peaking Factor	MDD (gpm)		
	Non-HWU	HWU[1]	Total		Non-HWU	HWU[1]	Total
Original Model Colony (OMC)	17,196	1,691	18,887	1.6	27,512	1,691	29,202
Ontario Ranch (OR)	391	2	393	1.5	586	2	588
Total	17,587	1,693	19,280		28,097	1,693	29,790

[1] *High water user demand and diurnal patterns are based on the calibration period*

DRAFT

4-6 Hourly Demand Variations

Knowledge of accurate demand variations over a 24-hour period is essential for proper analysis of water systems. For this study, diurnal use patterns were developed for each hydraulic zone. Customer specific diurnal patterns were developed for high water users. The development of diurnal use patterns are described in detail in Section 5 (Diurnal Patterns) of this report.

4-7 System Demands and Peaking Factors

It is important to evaluate a water system during various incremental peak demands. Typically, a water system is designed to meet the maximum demands placed on it. The system components must be designed to cope with these demands as they occur. Maximum month and maximum day demands are important factors in sizing a system's supply capability. Maximum day demands usually dictate the design criteria for both system transmission and storage needs. Peak hour criterion is a measure of the system's overall adequacy with respect to its transmission and distribution elements, as well as its operational storage capacity.

The peaking factors for Ontario Ranch (OR) was further refined to account for the fact that it is planned to be largely residential in nature and there were a dual recycled water system constructed in all major streets. The City anticipates a target of 12 percent of the total water use in low density residential areas to be provided by the recycled water system. It is expected that this percentage will increase as the residential density increases. With more recycled water and less irrigation use on the domestic water system, the peaking factors in OR are reduced as detailed in Table 4-6. These factors are utilized for future demand estimates in Ontario Ranch. The relationships between the peaking factors developed for this study with respect to the average day demand estimate are displayed graphically on Figure 4-5.

Table 4-6

Existing Water System Demands and Peaking Factors

Demand Description	OMC Demand (gpm)	OR Demand (gpm)	HWU Demand[1] (gpm)	Total System Demand (gpm)	Total System Demand (mgd)	Total System Demand (AFY)	(OMC) Peaking Factor	(OR) Peaking Factor	Total System Peaking Factor

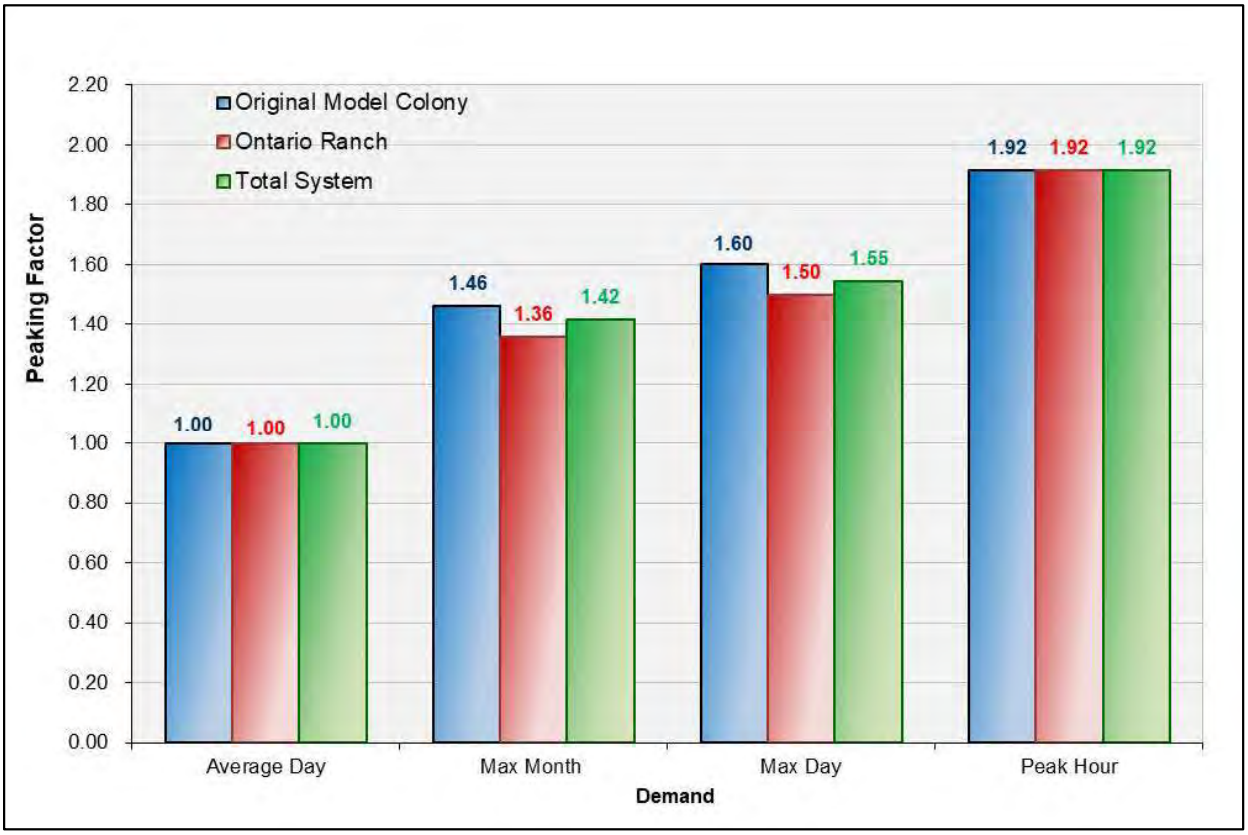
DRAFT

Figure 4-5

Water Demand Peaking Factors



4-7.1 Existing Demands

- **Average Day -** As detailed in Table 4-2, the average day demand is based on the City of Ontario's average daily production and purchase data between September 2018 and August 2019. As shown in Table 4-5, the average day demand is 31,153 AFY (19,280 gpm).
- **Maximum Month -** As detailed in Table 4-6, the maximum month peaking factor for OMC and OR are 1.46 and 1.36, respectively. The maximum month demand is estimated as 45,341 AFY (28,109 gpm).
- **Maximum Day -** As detailed in Table 4-6, the maximum day peaking factor for OMC and OR are 1.6 and 1.5, respectively. The maximum day demand is estimated as 48,051 AFY (29,790 gpm).
- **Peak Hour Demands -** Modeled peak hour demands were based upon the diurnal patterns that were developed for the hydraulic model, as detailed in Section 5. The overall peak hour system demand is estimated to be 1.98 times the average day demand or 61,656 AFY (38,224 gpm). This factor varies by zone depending on the diurnal patterns developed by zone, meter type, and for high water users.
- **Existing Water Demands by Zone -** Existing water demands by zone are shown in Table 4-5. These estimates are based upon the demand distribution generated from water billing historical data linked to the City's meter geodatabase. The average day demands (ADD) were distributed in the model using the 12-month consumption data from the City's billing department, adjusted to the most-recent production and purchase data (31,094 AFY; 27.8 mgd; 19,280 gpm) which takes into consideration non-revenue water.

  Generally, the ADD were increased with the factors included in Table 4-6 to develop the Maximum Day Demands (MDD), which are summarized by zone in Table 4-7. It should be noted that the MDD model demands for the high water users are based on actual field data collected during the calibration period, and they are not estimated with the MDD peaking factor included in Table 4-6. The MDD total 48,051 AFY (42.9 mgd; 29,790 gpm).

[1] *MDD for high water users model demands are based on actual field data collected, not MDD peaking factors included in Table 4-6*

4-7.2 Water Unit Demand Factors

Existing consumption data was used in this study to represent the water use of existing customers. For future developments, water unit demand factors were used to estimate future water use. Potable water unit demand factors are generally based on the factors that were developed as a part of a study completed in May 2016 entitled "*Ultimate Citywide Water Demand Estimate*".

The revised potable water unit demand factors are shown in Table 4-8.

The residential unit demand factors were first developed in terms of gpd/person. Then the maximum densities (people/du and du/ac) were applied to determine the factors in other units. The resulting unit factors in terms of gpd/du and gpd/ac represent the maximum expected demand factors.

The 2016 study included maximum residential densities in the Ontario Ranch area, which were based on historical development projections that were provided by the City's planning department. Some of the recent actual projections are higher than those included in the Ontario Plan, which needed to be updated to appropriately develop the demand factors and the future demand estimate.

[1] Max Density per the City's 2010 General Plan (The Ontario Plan) for OMC without recycled water. Density for LDR, LMDR, MDR, and HDR with recycled water (Ontario Ranch) were increased per the City Planning Department recommendation (March 2016).

[2] Density per the City's 2010 General Plan (The Ontario Plan)

[3] Unit Flow Factor Abbreviations:

ac = acre *du = dwelling unit* *gpd = gallons per day*

room = hotel/motel room *stu = student* *tsf = thousand square feet*

[4] If possible it is recommended to use 130 - 155 gpd/room on a case by case basis. It is difficult to estimate the number of rooms or square footage per acre.

[5] Mixed Use demands should be based on the types of landuse that make up the specific area and the unit demand factors provided above. The City's 2010 General Plan (The Ontario Plan) provides detailed information on the landuses that make up each mixed use area.

4-7.3 Future Demands

The City of Ontario's Future water system demands utilized in this study are detailed in Table 4-9 by zone. Generally, the ADD were increased with the factors included in Table 4-6 to develop the Maximum Day Demands (MDD), which are summarized by zone in Table 4-7. It should be noted that the MDD model demands for the high water users are based on actual field data collected during the calibration period, and they are not estimated with the MDD peaking factor included in Table 4-6. The MDD total 48,051 AFY (42.9 mgd; 29,790 gpm).

Table 4-9

Future Water demands by Zone

[1] MDD for high water users model demands are based on actual field data collected, not MDD peaking factors included in Table 4-6

DRAFT

The increase in future water demand is due to development of Ontario Ranch, anticipated densification in land use and population per the City's 2010 General Plan, and the assumption that the area within the service area will be fully occupied (vacant land will be built upon and occupied).

The total water maximum day demand for the future system is estimated 54,778 gpm (78.88 mgd; 88,357 AFY). This Subsection describes the process of developing the future system demands for the areas that are going to be developed or redeveloped and distributing the demands in the hydraulic model. The existing demands remained the same unless an area was going to be redeveloped.

In summary, the following steps were used to estimate the future demands:

1. Existing meter data was used for existing uses.
2. Used Water Demand Factors included in Table 4-7 to estimate demand for the vacant and future densification areas. In areas of redevelopment the existing demands were updated with the estimated flows for the future development.
3. The "City Buildout Table" approved in April 2015 (*Appendix 4-1*) provided the population and job estimates for all future mixed use areas as defined by the Ontario Plan (General Plan). The unit flow factors provided in Table 4-7 were used to estimate the total average day water demand for mixed use areas. Any existing water demands were deducted from the total future average water demand estimate. If the existing demands were greater than the calculated future demands, the existing water demand was maintained in the hydraulic model. The difference was then applied to the hydraulic model in the specific mixed use area.
4. In the Original Model Colony, future average water demands were calculated for currently vacant parcels, assuming that they will be developed in the future per the land use designated in the General Plan. The parcel acreage and the water demand factors provided in Table 4-7 were utilized to estimate the total water demand.
5. All available specific plans and other more current planning information were utilized for Ontario Ranch. The specific plan areas are shown on Figure 4-6. The City compiled the information and provided table specifying the proposed land uses (*Appendix 4-1: Ontario Ranch Proposed Land Uses per Specific Plans*). The detailed land use information and the water demand factors provided in Table 4-7 were utilized for calculating the future water demands. Demands were applied to the nearest model junction. If less than 50 percent of a specific plan area was constructed at the time of this study, all existing water demand was removed and replaced with the projected future water demand. If a specific plan area was mostly constructed, the difference in existing and future water demand was added to the model in that particular area.
6. On the west side of Ontario Ranch, where no specific plans yet exist, the future water demands were calculated utilizing the General Plan land uses, parcel acreages, and the water demand factors provided in Table 4-7. Demands were applied to the nearest model junction.

PROJECT NO: 1001398.00
DATE: June 2020

Figu 1934

DRAFT

4-8 Recycled Water

The City's recycled water use was 9,653 AFY (3,042 gpm) in Fiscal Year 2018. The recycled water is supplied by Inland Empire Utilities Agency (IEUA). Recycled water from IEUA's treatment plants are conveyed through IEUA's pipe conveyance system to the City's recycled distribution system. According to the City's billing data, there are approximately 370 recycled customer meters in the City.

The City's Recycled Water Master Plan was last updated in April 2006. It is being updated concurrent to this master plan. Potable water customers that are anticipated to be converted to the recycled water system in the future will be identified as part of the recycled water master plan update.

4-9 Water Conservation

Title 6, Chapter 8A, The Emergency Water Conservation Plan of the City's Municipal Code addresses water conservation issues. The reference for this Chapter is Ordinance 2907, which became effective June 16, 2009.

Voluntary conservation is encouraged to limit the amount of water used to the amount absolutely necessary for health, business, and irrigation. The following elements of conservation apply at all times on a voluntary basis:

- Avoid hose washing of sidewalks, walkways, driveways, parking areas or other paved surfaces, except as required for sanitary purposes.
- Wash motor vehicles, trailers, boats and other types of mobile equipment using a hand held bucket or a hose equipped with a positive shutoff nozzle for quick rinses, or at the immediate premises of a commercial car wash or with recycled wastewater for approved uses.
- Avoid using water to clean, fill or maintain levels in decorative fountains, ponds, lakes or other similar aesthetic structures unless such water is part of a recycling system.
- Encourage restaurants, hotels, cafés, cafeterias or other public places where food is sold, served or offered for sale, to serve drinking water only to those customers expressly requesting water.
- Promptly repair all leaks from indoor and outdoor plumbing fixtures.
- Avoid watering lawn, landscape or other turf area more often than every other day and during the hours between 6:00 a.m. and 6:00 p.m.
- Avoid causing or allowing the water to run off landscape areas into adjoining streets, sidewalks or other paved areas due to incorrectly directed or maintained sprinklers or excessive watering.

The City maintains water conservation information on their website for viewing by the public. Information includes water use efficiency and conservation tips, links to other websites pertaining to water conservation, and links to IEUA's website where indoor and outdoor rebates are offered for residents of the IEUA service area. Indoor and outdoor rebates are also offered to commercial businesses

4-9.1 California Water Conservation

A variety of executive orders have been issued since 2009 regarding water conservation in the state of California. The following is a brief summary:

1. **November 2009 – Senate Bill SBx7-7 (i.e. The Water Conservation Act of 2009) enacted**
   - Requires State of California Department of Water Resources (DWR) in consultation with other state agencies, to develop a single standardized water use reporting form that can be used by both urban and agricultural water agencies.
   - For urban water conservation, the legislation sets an overall goal of reducing per capita urban water use by 20 percent by December 31, 2020.
2. **April 2014 Proclamation**
   - Governor declares a drought State of Emergency to exist in California due to severe drought conditions.

DRAFT

- Calls on Californians to reduce their water usage by 20 percent.
- Suspends California Environmental Quality Act to allow the emergency regulation and other actions to take place as quickly as possible

3. **December 2014 - Executive Order B-28-14**
   - Extends the California Environmental Quality Act suspension through May 2016
4. **April 2015 - Executive Order B-29-15**
   - Imposes restrictions on urban water suppliers to achieve a statewide 25 percent reduction in potable urban usage through February 2016
   - Requires commercial, industrial, and institutional users to implement water efficiency measures
   - Prohibits irrigation with potable water of ornamental turf in public street medians
   - Prohibits irrigation with potable water outside newly constructed homes and buildings that is not delivered by drip or microspray systems
   - Directs urban suppliers to develop rate structures and other pricing mechanisms to promote water conservation
   - Requires urban suppliers to increase enforcement against water waste
5. **November 2015 – Executive Order B-26-15**
   - Directs State agencies to prioritize and accelerate approvals for projects that enhance the ability of a local or state agency to capture high precipitation events
   - Extends drought restrictions through October 2016
6. **May 2016 - Executive Order B-37-16**
   - Aims to bolster California's climate and drought resilience by instructing State agencies to help Californians adopt permanent changes to use water more wisely.
   - Directs the State Water Resources Control Board to develop new mandatory water conservation regulations
   - Directs the Department of Water Resources to update new water use targets for urban water agencies. These new targets will build upon the existing requirement to achieve 20% reduction in usage by 2020. The executive order states that new targets would be developed no later than 2020, with the goal of reaching full compliance by 2025.
   - Directs the State Water Resources Control Board to eliminate water waste by
     - **i.** permanently prohibits practices that waste potable water
     - **ii.** directing actions to minimize water system leaks
     - **iii.** directing urban and agricultural water suppliers to accelerate data collection, improve water system management and prioritize capital projects to reduce water waste
   - Directs the Department of Water Resources to strengthen local drought resilience by updating requirements for Water Shortage Contingency Plans
   - Directs the Department of Water Resources to improve agricultural water use efficiency and drought planning
7. **April 2017 – Executive Order B-40-17 was issued**
   - Terminates the January 17, 2014 Drought State of Emergency
   - Rescinds Executive Orders B-26-14, B-28-14, B-29-15, and B-36-15

DRAFT

- Most of Executive Order B-37-16 (Making Water Conservation a California Way of Life) remains in full force. The Department of Water Resources and State Water Resources Control Board continues to:

  i. develop permanent prohibitions on wasteful water use and requirements for reporting water use by urban water agencies. Permanent restrictions include:

  - ✓ Hosing off sidewalks, driveways and other hardscapes
  - ✓ Washing automobiles with hoses not equipped with shut-off nozzle
  - ✓ Using non-recirculated water in a fountain or other decorative water feature
  - ✓ Watering lawns in a manner that causes runoff, or within 48 hours after measurable precipitation
  - ✓ Irrigating ornamental turf on public street medians

  ii. develop standards that urban water suppliers will use to set new urban water use efficiency targets

  iii. direct actions to minimize water system leaks that waste large amounts of water.

  iv. direct urban and agricultural water suppliers to accelerate their data collection, improve water system management, and prioritize capital projects to reduce water waste

  v. work with agencies and suppliers to identify mechanisms that would encourage and facilitate the adoption of rate structures and other pricing mechanisms that promote water conservation

8. Assembly Bill No. 606 – May 31, 2018

- authorizes State Water Resources Control Board (SWRCB), along with the Department of Water Resources (DWR) to issue regulation requiring wholesale water suppliers, urban retail water suppliers, or distributors of public water supply to submit information relating to water production, water use, or water conservation.
- require urban water suppliers to submit a urban water usage objective report by November 1, 2023
- updates the requirements of the urban water management plans

9. Assembly Bill No. 1668 – May 31, 2018

- authorizes State Water Board, along with the Department of Water Resources (DWR) to issue regulation requiring wholesale water suppliers, urban retail water suppliers, or distributors of public water supply to submit information relating to water production, water use, or water conservation.
- establishes 55 gallons per capita daily as the standard for indoor residential water use beginning January 1, 2025 and 50 gallons per capita daily beginning January 1, 2030
- require DWR and SWRCB to adopt standards to monitor the performance of commercial, industrial, and institutional water use.
- Includes penalties of $1,000 to $10,000 per day to the water supplier for violations to this order

APPENDIX B

PRIVATE WATER REFERENCE

APPENDIX A

RECOMMENDED RULES FOR SIZING THE WATER SUPPLY SYSTEM

The provisions contained in this appendix are not mandatory unless specifically adopted by a state agency, or referenced in the adopting ordinance.

A 101.0 General.

A 101.1 Applicability. This appendix provides a general procedure for sizing a water supply system. Because of the variable conditions encountered, it is impractical to lay down definite detailed rules of procedure for determining the sizes of water supply pipes in an appendix, which shall necessarily be limited in length. For an adequate understanding of the problems involved, refer to Water-Distributing Systems for Buildings, Report BMS 79 of the National Bureau of Standards; and Plumbing Manual, Report BMS 66, also published by the National Bureau of Standards.

A 102.0 Preliminary Information.

A 102.1 Daily Service Pressure. Obtain the necessary information regarding the minimum daily service pressure in the area where the building is to be located.

A 102.2 Water Meter. Where the building supply is to be metered, obtain information regarding friction loss relative to the rate of flow of meters in the range of sizes likely to be used. Friction-loss data is capable of being obtained from most manufacturers of water meters. Friction losses for disk-type meters shall be permitted to be obtained from Chart A 102.2.

A 102.3 Local Information. Obtain available local information regarding the use of different kinds of pipe with respect both to durability and to decrease in capacity with the length of service in the particular water supply.

A 103.0 Demand Load.

A 103.1 Supply Demand. Estimate the supply demand for the building main, the principal branches and risers of the system by totaling the fixture units on each, Table A 103.1, and then by reading the corresponding ordinate from Chart A 103.1(1) or Chart A 103.1(2), whichever is applicable.

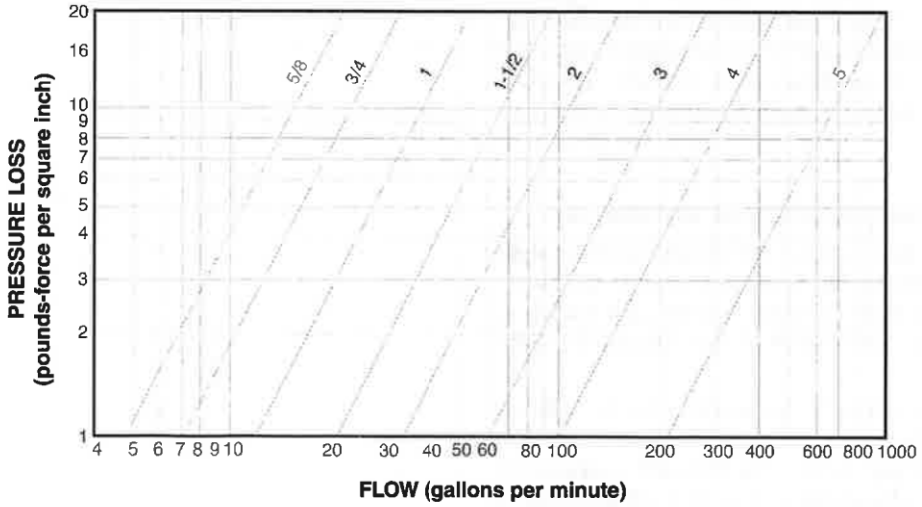
A 103.2 Continuous Supply Demand. Estimate continuous supply demands in gallons per minute (gpm) (L/s) for lawn sprinklers, air conditioners, etc., and add the sum to the total demand for fixtures. The result is the estimated supply demand of the building supply.

A 104.0 Permissible Friction Loss.

A 104.1 Residual Pressure. Decide what is the desirable minimum residual pressure that shall be maintained at the highest fixture in the supply system. Where the highest group of fixtures contains flushometer valves, the residual pressure for the group shall be not less than 15 pounds-force per square inch (psi) (103 kPa). For flush tank supplies, the available residual pressure shall be not less than 8 psi (55 kPa).

A 104.2 Elevation. Determine the elevation of the highest fixture or group of fixtures above the water (street) main. Multiply this difference in elevation by 0.43. The result is the loss of static pressure in psi (kPa).

CHART A 102.2
FRICTION LOSSES FOR DISK-TYPE WATER METERS



For SI units: 1 inch = 25 mm, 1 pound-force per square inch = 6.8947 kPa, 1 gallon per minute = 0.06 L/s

A 104.3 Available Pressure. Subtract the sum of loss in static pressure and the residual pressure to be maintained at the highest fixture from the average minimum daily service pressure. The result will be the pressure available for friction loss in the supply pipes, where no water meter is used. Where a meter is to be installed, the friction loss in the meter for the estimated maximum demand should also be subtracted from the service pressure to determine the pressure loss available for friction loss in the supply pipes.

A 104.4 Developed Length. Determine the developed length of pipe from the water (street) main to the highest fixture. Where close estimates are desired, compute with the aid of Table A 104.4(1), Table A 104.4(2), or Table A 104.4(3), whichever is applicable, the equivalent length of pipe for fittings in the line from the water (street) main to the highest fixture and add the sum to the developed length. The pressure available for friction loss in psi (kPa), divided by the developed lengths of pipe from the water (street) main to the highest fixture, times 100, will be the average permissible friction loss per 100 feet (30 480 mm) length of pipe.

A 105.0 Size of Building Supply.

A 105.1 Diameter. Knowing the permissible friction loss per 100 feet (30 480 mm) of pipe and the total demand, the diameter of the building supply pipe shall be permitted to be obtained from Chart A 105.1(1), Chart A 105.1(2), Chart A 105.1(3), Chart A 105.1(4) Chart A 105.1(5), Chart A 105.1(6), or Chart A 105.1(7), whichever is applicable. The diameter of pipe on or next above the coordinate point corresponding to the estimated total demand and the permissible friction loss will be the size needed up to the first branch from the building supply pipe.

A 105.2 Copper and Copper Alloy Piping. Where copper tubing or copper alloy pipe is to be used for the supply piping and where the character of the water is such that slight changes in the hydraulic characteristics are expected, Chart A 105.1(1) shall be permitted to be used.

A 105.3 Hard Water. Chart A 105.1(2) shall be used for ferrous pipe with the most favorable water supply in regards to corrosion and caking. Where the water is hard or corrosive, Chart A 105.1(3) or Chart A 105.1(4) will be applicable. For extremely hard water, it will be advisable to make additional allowances for the reduction of the capacity of hot-water lines in service.

A 106.0 Size of Principal Branches and Risers.

A 106.1 Size. The required size of branches and risers shall be permitted to be obtained in the same manner as the building supply, by obtaining the demand load on each branch or riser and using the permissible friction loss computed in Section A 104.0.

A 106.2 Branches. Where fixture branches to the building supply are sized for the same permissible friction loss per 100 feet (30 480 mm) of pipe as the branches and risers to the highest level in the building and lead to the inadequate water supply to the upper floor of a building, one of the following shall be provided:

(1) Selecting the sizes of pipe for the different branches so that the total friction loss in each lower branch is approximately equal to the total loss in the riser, including both friction loss and loss in static pressure.

(2) Throttling each such branch using a valve until the preceding balance is obtained.

(3) Increasing the size of the building supply and risers above the minimum required to meet the maximum permissible friction loss.

A 106.3 Water Closets. The size of branches and mains serving flushometer tanks shall be consistent with sizing procedures for flush tank water closets.

A 107.0 General.

A 107.1 Velocities. Velocities shall not exceed 10 feet per second (ft/s) (3 m/s), except as otherwise approved by the Authority Having Jurisdiction.

A 107.2 Pressure-Reducing Valves. Where a pressure-reducing valve is used in the building supply, the developed length of supply piping and the permissible friction loss shall be computed from the building side of the valve.

A 107.3 Fittings. The allowances in Table A 104.4(1) for fittings are based on non-recessed threaded fittings. For recessed threaded fittings and streamlined soldered fittings, one-half of the allowances given in the table will be ample.

TABLE A 103.1

For SI units: 1 inch = 25 mm

Notes:

1 Size of the cold branch pipe, or both the hot and cold branch pipes.

2 Appliances, appurtenances, or fixtures not included in this table shall be permitted to be sized by reference to fixtures having a similar flow rate and frequency of use.

3 The listed fixture unit values represent their total load on the cold water building supply. The separate cold water and hot water fixture unit value for fixtures having both cold and hot water connections shall be permitted to be three-quarters of the listed total value of the fixture.

4 The listed minimum supply branch pipe sizes for individual fixtures are the nominal (I.D.) pipe size.

5 For fixtures or supply connections likely to impose continuous flow demands, determine the required flow in gallons per minute (gpm) (L/s) and add it separately to the demand in gpm (L/s) for the distribution system or portions thereof.

6 Assembly [Public Use (see Table 422.1)].

7 Reduced fixture unit loading for additional hose bibbs is to be used where sizing total building demand and for pipe sizing where more than one hose bibb is supplied by a segment of water distribution pipe. The fixture branch to each hose bibb shall be sized by 2.5 fixture units.

*Does not include strainer, which may be required in some applications.

Sec. 3.2 Capacity

The nominal capacity ratings and the related pressure-loss limits shall be the same as those shown in Table 1 for the safe maximum operating capacities.

Sec. 3.3 Length, Width, and Height

Maximum overall meter length, face to face of spuds or flanges, shall not be greater than shown in Table 2. A filler piece may be used to increase the length of a shorter meter to meet this requirement. Meter width and height shall not be greater than shown in Table 2. The distance from the centerline of the meter outlet to the lowest point on the meter bottom shall not be greater than shown in Table 2.

Sec. 3.4 Test Plugs

The test plug is optional for the manufacturer.

Sec. 3.5 Pressure Requirement

Meters supplied under this standard shall operate without leakage or damage to any part when operated continuously at a working pressure of 150 psi (1050 kPa).

Sec. 3.6 Accessibility

Meters shall be designed for easy removal of all interior parts without disturbing the connections to the pipeline. Straightening vanes need not be removable while the meter case is still connected in line.

For Non-Health Hazard Applications

Series 774DCDA

Double Check Detector Assemblies

Sizes 2½" – 12" (65 – 300mm)

Series 774DCDA Double Check Detector Assemblies are designed for use in accordance with water utility non-health hazard containment requirements. It is mandatory to prevent the reverse flow of fire protection system substances, i.e., glycerin wetting agents, stagnant water and water of non-potable quality from being pumped or siphoned into the potable water supply.

Features

- Torsion spring check valve provides low head loss
- Short lay length is ideally suited for retrofit installations
- Stainless steel body is half the weight of competitive designs reducing installation and shipping cost
- Stainless steel construction provides long term corrosion protection and maximum strength
- Single top access cover with two-bolt grooved style coupling for ease of maintenance
- Thermoplastic and stainless steel check valves for trouble-free operation
- No special tools required for servicing
- Compact construction allows for smaller vaults and enclosures
- Furnished with ⅝" x ¾" (16x19mm) bronze meter (gpm or cfm)
- Detects underground leaks and unauthorized water use
- May be installed horizontal or vertical "flow up" position

Specifications

A Double Check Detector Assembly shall be installed on fire protection systems when connected to a potable water supply. Degree of hazard present is determined by the local authority having jurisdiction. The assembly shall consist of two positive seating check valves located between two resilient seated shutoffs with a hydraulically balanced bypass line and four test cocks. The main valve body shall be manufactured from 300 Series stainless steel to provide corrosion resistance. The check valves shall be of thermoplastic construction with stainless steel hinge pins, cam arm and cam bearing. The check valves shall utilize a single torsion spring design to minimize pressure drop through the assembly. The check valves shall be modular and shall seal to the main valve body by the use of an O-ring. There shall be no brass or bronze parts used within the check valve assembly. The check valve seats shall be of molded thermoplastic construction. The use of seat screws as a retention method is prohibited. All internal parts shall be accessible through a single cover on the valve assembly. The valve cover shall be held in place through the use of a single grooved style two-bolt coupling. The bypass line shall be hydraulically sized to accurately measure low flow. The bypass line shall consist of a meter, a small diameter double check assembly with test cocks and isolation valves. The bypass line double check valve shall have two independently operating modular poppet check valves, and top mounted test cocks. The assembly shall be a Watts Series 774DCDA.

FIRE PROTECTION

SPECIFICATION SHEET

FEBCO®

MASTER series®

LEAD FREE*

MasterSeries® LF860

Reduced Pressure Zone Backflow Prevention Assemblies

Size: 2½" - 10" (65mm - 250mm)

The FEBCO MasterSeries LF860 Reduced Pressure Zone Assembly is specifically designed to protect against possible backpressure and backsiphonage conditions for high hazard [i.e., toxic] application in accordance with Local Governing Water Utility Code. This Backflow Prevention Assembly is primarily used on potable drinking water systems where Local Governing Code mandates protection from non-potable water being pumped or siphoned back into the potable water system.

The LF860 features Lead Free* construction to comply with low lead installation requirements. The Lead Free* Reduced Pressure Zone Assemblies shall comply with state codes and standards, where applicable, requiring reduced lead content.

Series LF860 Reduced Pressure Zone Assembly

Features

- Inline Serviceable Assembly
- No Special Tools Required for Servicing
- Captured Modular Spring Assembly
- Reversible & Replaceable Discs
- Field Replaceable Seats
- Ductile Iron Valve Body Design
- Stainless Steel Check Components
- Modular Pressure Differential Relief Valve
- Repairable Pressure Differential Relief Valve
- Clapper Check Assembly
- Captured O-ring Design

DOMESTIC

Specifications

The FEBCO MasterSeries LF860 Reduced Pressure Zone Assembly shall be installed on the potable water supply and at each point of cross-connection to protect against possible backpressure and backsiphonage conditions for high hazard [i.e., toxic] applications. The assembly shall consist of a main line valve body composed of a pressure differential relief valve located in a zone between two (2) independently acting approved clapper style check modules with replaceable seats and disc rubbers. Servicing of the pressure differential relief valve and both check modules does not require any special tools; both check modules are accessed through independently top entry covers. This assembly shall be fitted with AWWA Compliant inlet/outlet resilient seated shutoff valves; when used on a Fire-Sprinkler application, the assembly shall be fitted with approved UL/FM inlet/outlet resilient seated shutoff valves and contain four (4) properly located resilient seated test cocks as specified by AWWA Standard C511. Flow and pressure loss performance parameters shall meet the requirements of AWWA Standard C511.

NOTICE

This information is not intended to replace the product installation and safety information available or the experience of a trained product installer. Please refer to the product installation and safety instructions for further information.

***The wetted surface of this product contacted by consumable water contains less than 0.25% of lead by weight.**

Options - Suffix

OSY: UL/FM Approved OS&Y Gate Valves (ANSI/AWWA C515 Compliant)

NRS: Non-Rising Stem Gate Valves (ANSI/AWWA C509 Compliant)

LG: Less Shut-off valves; This is NOT an APPROVED ASSEMBLY

Example Ordering Descriptions:

4" LF860-OSY - Valve Assembly fitted with OS&Y Shutoff Valves

4" LF860-NRS - Valve Assembly fitted with NRS Shutoff Valves

Assembly Flow Orientation:

- Horizontal (2½" – 10") - Approved by FCCCHR-USC, ASSE, cULus, FM, IAPMO and CSA

Approvals - Standards

- Approved by the Foundation for Cross-Connection Control and Hydraulic Research at The University of Southern California (FCCCHR-USC)
- ASSE 1013 Listed
- **UL Classified (US & Canada)
- **FM Approved
- IAPMO
- AWWA Standard C511 Compliant
- End Connections: Compliant to ASME B16.1 Class 125 & AWWA Class D Flange

**Assembly configured with UL/FM Approved OS&Y RW Gate Valves. Less gate valve assemblies are not UL/FM approved configurations.

1048 B64.4

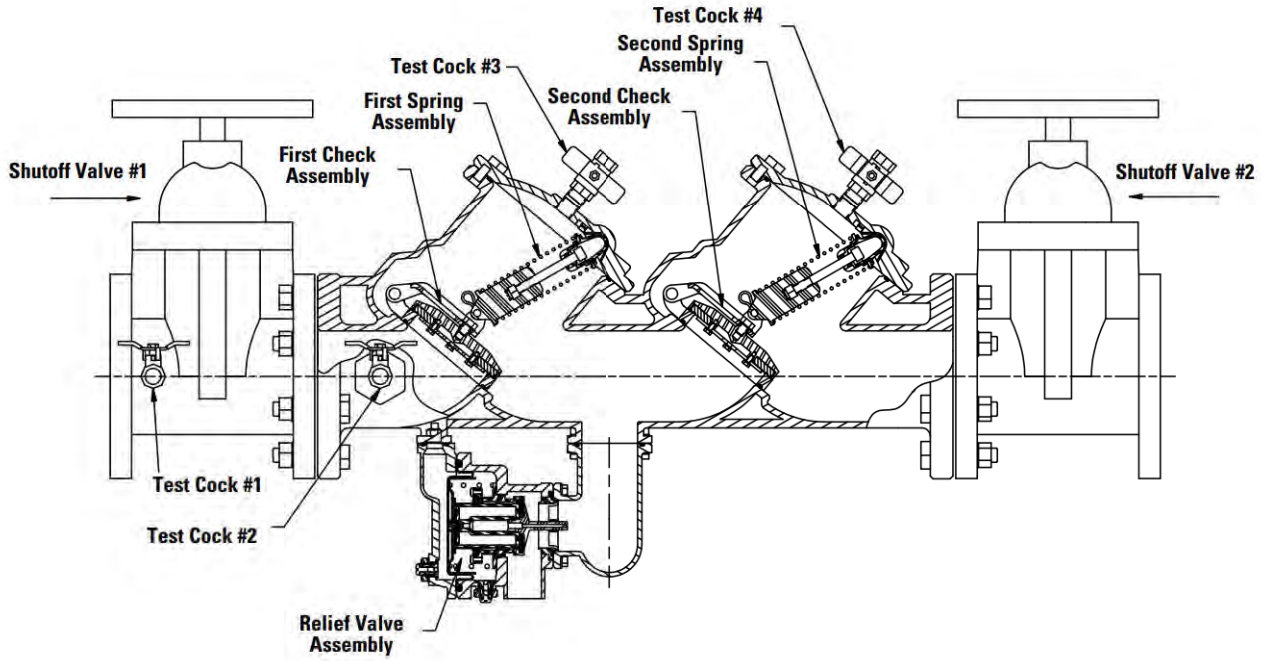
Materials

Below is a general materials list of the Series LF860. All assemblies size 2-1/2" through 10" is similar in materials and construction. Please contact your local FEBCO Representative if you require further information.

Main Valve Body:	Ductile iron Grade 65-45-12
Relief Valve Body:	Ductile iron Grade 65-45-12
Coating:	Fusion epoxy coated internal and external AWWA C550
Shutoff Valves:	NRS resilient wedge gate valve AWWA C509 (Standard) OSY resilient wedge gate valve AWWA C515 (UL/FM)
Check Seats:	Stainless Steel
Disc Holder:	Stainless Steel
Elastomer Disc:	Silicone
Spring:	Stainless Steel
Clamp:	AWWA C606 (10" Only)

Pressure - Temperature

Max. Working Pressure:	175 psi (12.1 bar)
Min. Working Pressure:	20 psi (1.4 bar)
Hydrostatic Test Pressure:	350 psi (24.1 bar)
Hydrostatic Safety Pressure:	700 psi (48.3 bar)
Temperature Range:	33°F - 140°F (0.5°C - 60°C) Continuous



Dimensions & Weights

Below are the nominal dimensions and physical weights for the Series LF860 size 2-1/2" through 10". Allowances must be made for normal manufacturing tolerances. Please visit our website to download a copy of this product's installation instructions, or contact your local FEBCO Representative for more information.

* Indicates nominal dimensions with NRS Gate Valves
** Indicates nominal dimensions with OSY Gate Valves (Full Open Position)
*** Indicates weight of complete Backflow Assemblies with specified Gate Valves

The gap drain is not designed to catch the maximum discharge possible from the relief valve. The installation of the FEBCO air gap with the drain line terminating above a floor drain will handle any normal discharge or nuisance spitting through the relief valve. However, floor drain size may need to be designed to prevent water damage caused by a catastrophic failure condition. Do not reduce the size of the drain line from the air gap fitting.

Performance

Flow capacity chart identifies valve performance based upon rated water Velocity up to 20fps

- Maximum service flow rate is determined by maximum rated Velocity of 7.5fps.
- AWWA Manual M-22 (Appendix C) recommends that the maximum water Velocity in the services be not more than 10fps.
- UL flow rate is determined by typically rated Velocity of 15 feet/sec.

Notes

These results were modeled with a 8-inch main being installed and looped on "A" Street, "B" Street, "C" Street,"E" Street, "D" Street, "F" Dr., "G" Dr., and "H" Dr. from Eucalyptus Ave to Parkview St. If said improvements are not installed, these results are null and void.

For Information on using Fire Flow Results contact the Fire Prevention Bureau at 909-395-2029.
For Details on how the Fire Flow Results were prepared, contact: UtilityFireFlows@ontarioca.gov

Disclaimer

The allowable design criteria shown above represents projected future maximum day water system conditions at the location of the test as determined by the City of Ontario's hydraulic water system computer model. This allowable design criteria does not constitute a guarantee by the City of the present or future conditions and availability, pursuant to City Resolution 85-85.

Actual water pressure will, in instances, exceed or fall below allowable design criteria due to seasonal and daily pressure variation within the City's water system. The designer is encouraged to provide an allowance in the fire protection system design to maintain adequate protection during such variations in system pressure.

The results are valid for a period of 12 months from the date of the test release unless extended in writing by the Ontario Fire Department.
These Fire Flow Results cannot be used to create Boundary Controls for use in Hydraulic Modeling.

Subject: Sewer System Analysis for Esperanza PA 11 Project in the City of Ontario

Introduction

The Esperanza PA 11 project is located in the City of Ontario north of Eucalyptus Avenue between Amherst Avenue and Chatham Street. Access to the project will be from Amherst Avenue and Chatham Street. Sewer service for Esperanza PA 11 project will be provided by City of Ontario (City).

The proposed project is a mixed-use development consisting of 161 medium density residential units on approximately 10 acres.

A Vicinity Map for the project is shown on Figure 1.

Purpose of Study

The purpose of this letter report is to analyze the existing public sewer system downstream of the Esperanza PA 11 project and determine if there are any sewer system deficiencies created by the proposed development of this property and land use change from school site to medium density residential. This report will address any offsite (public) sewer system deficiencies that are created as a result of the development of the residential project.

A previous Ontario Ranch East Master Plan Sewer Study was prepared by L.D. King, Inc. for the overall master plan area in 2022 for the overall developer. This study will utilize that 2022 master plan where appropriate and will serve as an amendment to that 2022 master plan. Red lines of pertinent sections of the L.D. King, Inc. study are included in Appendix B.

Study Area

In general, the study area for this sewer report is the sewer sub-basin comprising of the tributary area surrounding the Esperanza PA 11 project up to the Eastern Trunk Sewer in Archibald Avenue. This sub-basin system collects the wastewater flow from Esperanza PA 11 and adjacent development. The gravity sewer in adjacent Amherst Avenue is an 8-inch sewer line that conveys wastewater to the connection with the 15-inch diameter sewer line running westerly in Eucalyptus Avenue. The 15-inch diameter sewer line in Eucalyptus Avenue turns south at Mill Creek Avenue and increases to 21-inch diameter before increasing to 27-inch diameter at Bellegrave Avenue and Merrill Avenue.

These existing public sewer facilities can be seen on Figure 2 and Exhibit A.

Sewer System Design Criteria

The design criteria used for the evaluation of the offsite sewerage system impacts by Esperanza PA 11 project are based on City design criteria. The City's Master Plan itself was referenced to confirm the pertinent design criteria as well. A copy of the pertinent sections in the City's Master Plan where the design criteria is located is attached as Appendix A.

EXISTING AND PROPOSED SEWER FACILITIES

ESPERANZA PA 11 (ONTARIO EAST)

Sewer Generation Rates. The sewer generation rates for the project is presented as Table 1 below.

TABLE 1
ESPERANZA PA 11 SEWER GENERATION RATES

Land Use	Generation Rate
Medium Density Residential	174 gpd/unit

Peaking Factors

The peaking factor utilized in this study is identified in City's design criteria. To convert average dry weather flows to peak wet weather flows, the following equation was used:

$Q_{peak\ dry\ weather\ flow} = 1.77 \times Q_{avg}^{\ 0.893}$, where Q_{peak} equals peak flow in MGD (million gallons per day) and Q_{avg} equals average flow in MGD.

$Q_{peak\ wet\ weather\ flow} = 1.34 \times Q_{peak\ dry\ weather\ flow}$

Manning's "n"

The gravity sewer analyses are made using a computer spreadsheet calculation which uses the Manning Equation for all of its calculations. The Manning's "n" used by the computer spreadsheet calculation is held as a constant for all depths in a circular conduit. The value of Manning's "n" used for this study is 0.013 per the City criteria.

Depth and Velocity of Flow in Gravity Sewers

Gravity sewer lines are designed to convey peak flow. For pipes up to 12 inches in diameter, flow depths are maintained at or below a d/D ratio of 0.50 under peak dry weather flows. Pipes that are larger than 12-inches in diameter are designed for a maximum d/D ratio of 0.64 under peak dry weather flows. For either group, the depth of flow to d/D shall not exceed 0.82 with peak wet weather flows.

Gravity sewer lines are designed to maintain a minimum velocity of 2.0 feet per second at peak flow to prevent the deposition of solids.

Existing Sewer System

There are existing gravity sewer lines that are adjacent to the project site. The sewer line that will be utilized by the project is an 8-inch diameter gravity sewer line in Amherst Avenue on the western boundary of the project. This existing sewer line conveys flow southerly and westerly and ultimately connects to the existing Eastern Trunk Sewer line in Archibald Avenue. Appendix B provides reference information of the existing sewer lines utilized by the project.

Existing Sewer Flows. The sewer system analysis for Esperanza PA 11 project will need to consider sewage flows from existing development that is upstream and downstream of the project. Esperanza PA 11 project will be the most upstream development along this particular stretch of gravity sewer. Appendix B summarizes the projected sewage flows from existing downstream development.

Proposed Sewer Facilities

The projected sewer flow from Esperanza PA 11 project is based on the 161 residential unit site plan. Table 2 provides the summary of projected sewage flows for the project.

TABLE 2
ESPERANZA PA 11 PROJECTED SEWAGE FLOWS

Description	Quantity	Unit Flow Factor	Total Avg. Flow
Residential	161 units	174 gpd/unit	28,014

Per the City design criteria, the peak dry weather flow to average flow ratio is approximately 2.59 based on the formula presented earlier this study, resulting in an estimated peak dry weather flow of 72,691 gpd (50 gpm). The peak wet weather flow is calculated to be 97,406 gpd (68 gpm).

The project will construct an onsite gravity sewer collection system within the project's overall street distribution. The onsite sewer system within Esperanza PA 11 project is proposed to consist of 8-inch diameter gravity sewer lines. The existing and proposed sewer facilities for Esperanza PA 11 project are presented on Figure 2 and Exhibit A.

Sewer System Analysis

To analyze the impact of Esperanza PA 11 project on the existing sewer system, a hydraulic analysis was conducted. Appendix C provides the hydraulic analysis output and Exhibit A provides the corresponding Manhole Diagram. To perform this analysis, we obtained As-Built and design drawings information of the existing sewer system so that the pipe sizes and slopes could be inputted to the spreadsheet. A key component of the hydraulic analysis is to estimate existing flows within the sewer lines that will be utilized to serve the Esperanza PA 11 project. Appendix B provided the summary of existing flows from existing offsite upstream and downstream development.

The existing downstream 8-inch, 15-inch, 21-inch, 24-inch, and 27-inch gravity sewer lines were analyzed to the point where it connects to the Eastern Trunk Sewer in Archibald Avenue.

Sewer System Analysis Results

Appendix C presents the results of the hydraulic analysis for Esperanza PA 11 project. The results indicate that the existing system has adequate capacity to serve the project. With the additional sewer flow from Esperanza PA 11 residential project, all sections of downstream sewer lines will flow less than depth criteria during peak flow conditions.

The analysis results in Appendix C also indicate where changes due to the land use occur in the downstream sewer system. These changes are indicated via red lines and comments.

A summary of the impacts of the existing downstream gravity sewer to the proposed project is shown below in Table 3.

TABLE 3
ESPERANZA PA 11 EXISTING DOWNSTREAM SEWER IMPACTS

Existing Downstream Sewer Section	Maximum d/D Ratio		Minimum Velocity, fps	
	PDWF	PWWF	PDWF	PWWF
8-inch Diameter	0.14	0.28	1.7	1.9
15-inch Diameter	0.26	0.32	2.5	2.7
21-inch Diameter	0.35	0.41	4.3	4.7
24-inch Diameter	0.58	0.72	2.3	2.5
27-inch Diameter	0.59	0.73	2.3	2.5

Conclusions and Recommendations

The following conclusions have been made related to providing sewer service to Esperanza PA 11 project.

1. Esperanza PA 11 project can receive sewer service by connecting to an existing public 8-inch diameter gravity sewer line in Amherst Avenue and connecting to its proposed in-tract gravity sewer collection system. The project will construct an 8-inch diameter gravity sewer collection system onsite.

2. The development of the project is projected to result in an average sewage flow of 28,014 gpd.

3. Figure 2 provides the project layout including the location of existing and proposed sewer facilities.

4. A sewer system analysis was conducted (see Appendix C) and indicates that all existing and proposed sewer lines have adequate capacity to convey peak flows from existing development plus Esperanza PA 11 project while maintaining depth-to-diameter ratios of less than City criteria.

5. The sewer system analysis conducted indicates that the existing 8-inch, 15-inch, 21-inch, 24-inch, and 27-inch diameter public gravity sewer lines downstream of the project site up to the Eastern Trunk Sewer in Archibald Avenue can accommodate both existing sewer flow and the sewer flows of the proposed project.

6. A previous Ontario Ranch East Master Plan Sewer Study was prepared by L.D. King, Inc. for the overall master plan area in 2022 for the overall developer. This study will utilize that 2022 master plan where appropriate and will serve as an amendment to that 2022 master plan. Red lines of pertinent sections of the L.D. King, Inc. study are included in Appendix B.

Thank you for the opportunity to assist you with the sewer system planning for Esperanza PA 11 project. If you have any questions regarding the information and conclusions presented in this report, please do not hesitate to call.

[1] Max Density per the City's Buildout Table (April 2015) for Original Model Colony. Density for LDR, LMDR, MDR, and HDR in Ontario Ranch were increased per the City Planning Department recommendation (March 2016).

[2] Density per the City's Buildout Table (April 2015)

[3] The sewage generation for a hotel is best estimated by the number of rooms.

[4] Mixed Use demands should be based on the types of landuse that make up the specific area and the unit demand factors provided above. The City's Buildout Table (April 2015) provides detailed information on the landuses that make up each mixed use area.

Definitions: ac = acre; du = dwelling unit; gpd = gallons per day; OMC = Original Model Colony; OR = Ontario Ranch; tsf = thousand sqare feet

DRAFT

3-3.1 Residential Sewer Unit Flow Factors

As shown on Figure 3-1, the flow monitoring sites were primarily chosen in the Original Model Colony (OMC) areas, which are generally built out. The residential developments in this area is predominately low density residential (LDR) and high density residential (HDR), which were used to develop the sewage generation estimates in gallons per day per person.

The sewer unit flow factor for LDR and HDR were calculated to be 52 and 51 gpd/person, respectively, when applying annual sewer return ratios to the potable water unit flow factors. This calculation shows that the sewage generation per person is very similar, regardless of the residential land use categorization. For planning purposes, the sewage unit flow factor of 52 gpd per person was applied to all residential land use types, as shown in Table 3-2.

The majority of the new development is composed of low density residential (LDR) and low-medium density residential (LMDR) land use types, each with an estimated population density of 3.997 persons per dwelling unit. The sewer unit flow factor for both LDR and LMDR is 208 gpd/DU, when applying the sewage generation factor of 52 gpd per person.

The City's planning department estimates that the medium density residential (MDR) and high density residential (HDR) land use types have population densities of 3.347 persons per dwelling unit. With the sewage generation factor of 52 gpd per person, the unit flow factor for MDR and HDR are 174 gpd per dwelling unit.

3-3.2 Non-Residential Sewer Unit Flow Factors

Commercial Land Uses

The City's water meter billing data accounts for commercial indoor use, outdoor irrigation water use, as well as recycled water use. Excluding irrigation and recycled water use for commercial customers (business park, general commercial, office commercial, neighborhood commercial, and hospitality), a sewer return ratio of 89% of the annual average water use was developed. This return ratio was applied to the developed water demand factors to establish the sewer unit flow factors for commercial uses.

Hospitality Land Uses

The City's 2010 General Plan defines an area along Vineyard Avenue, south of the I-10 Freeway and north of the Ontario International Airport, as the hospitality area. It consists of numerous hotels and restaurants that provide service for patrons of the airport. A sewer return ratio of 89% of the annual average water use was applied to the hospitality land use to establish the sewer unit flow factors.

Industrial Land Uses

Industrial land use types include a wide variety of businesses and manufacturing processes that causes sewage generation to vary significantly from one customer to another. This is evident in the wide range water use for different businesses with these land use categorizations. For example, warehouses typically use a low amount of water and generate low amounts of sewage. On the other hand, some manufacturing businesses can use large of amounts of water and contribute large amounts of sewage to the City's sewer system.

The average sewer return ratio was estimated to be 75% of the annual average water use. For planning purposes and when no other specific planning information is available, the sewage generation will be based on

DRAFT

the sewer unit flow factor of 1,060 gpd/ac. This factor was based on the number of future estimated jobs and the 51 gpd/job divided by the number of future industrial acres. It is considered quite conservative in comparison to the currently estimated factor of 244 gpd/ac per flow monitoring in a primarily industrial area. The reason the existing factor is so low is because many of the industrial areas consist of warehouse uses that don't use a lot of water. In the future, these warehouses can be converted to manufacturing uses. Therefore, for planning purposes, the calculated unit flow factor of 1,060 gpd/ac is deemed appropriate.

It is recommended that the City evaluate future potential high water users on a case by case basis, as details regarding the proposed development or redevelopment area becomes available. The sewer hydraulic model should be utilized to make sure that the system is capable of handling the proposed sewage generation.

Public Facility and School Land Uses

Sewer return ratios of 85% and 80%, respectively were implemented for public facilities and schools. The sewer unit flow factor for public facilities is 1,450 gpd per acre. For schools, the sewer unit flow factor is 8 gpd per student.

3-4 Peaking Factors

3-4.1 Peak Dry Weather

The wastewater unit flow factors discussed in Section 3-3 are used to generate average dry weather flows (ADWF) entering the collection system. However, the adequacy of a sewage collection system is based upon its ability to convey the peak flows. At any individual point in the system, peak dry weather flow (PDWF) is estimated by converting the total average flow upstream of the point in question to peak dry weather flow by an empirical peak-to-average relationship.

The peaking formula commonly used in sewerage studies is of the following form:

$$PDWF = a \times ADWF^{b}$$

where PDWF = Peak Dry Weather Flow
ADWF = Average Dry Weather Flow
a, b = Peaking Formula Coefficients

In order to develop the peaking formula and establish coefficient "a" and "b", the maximum versus average flow measured was plotted for each flow monitoring site as shown in Figure 3-3.

Based on the best fit line through the data points shown in Figure 3-3, the following peaking relationship was selected for this study:

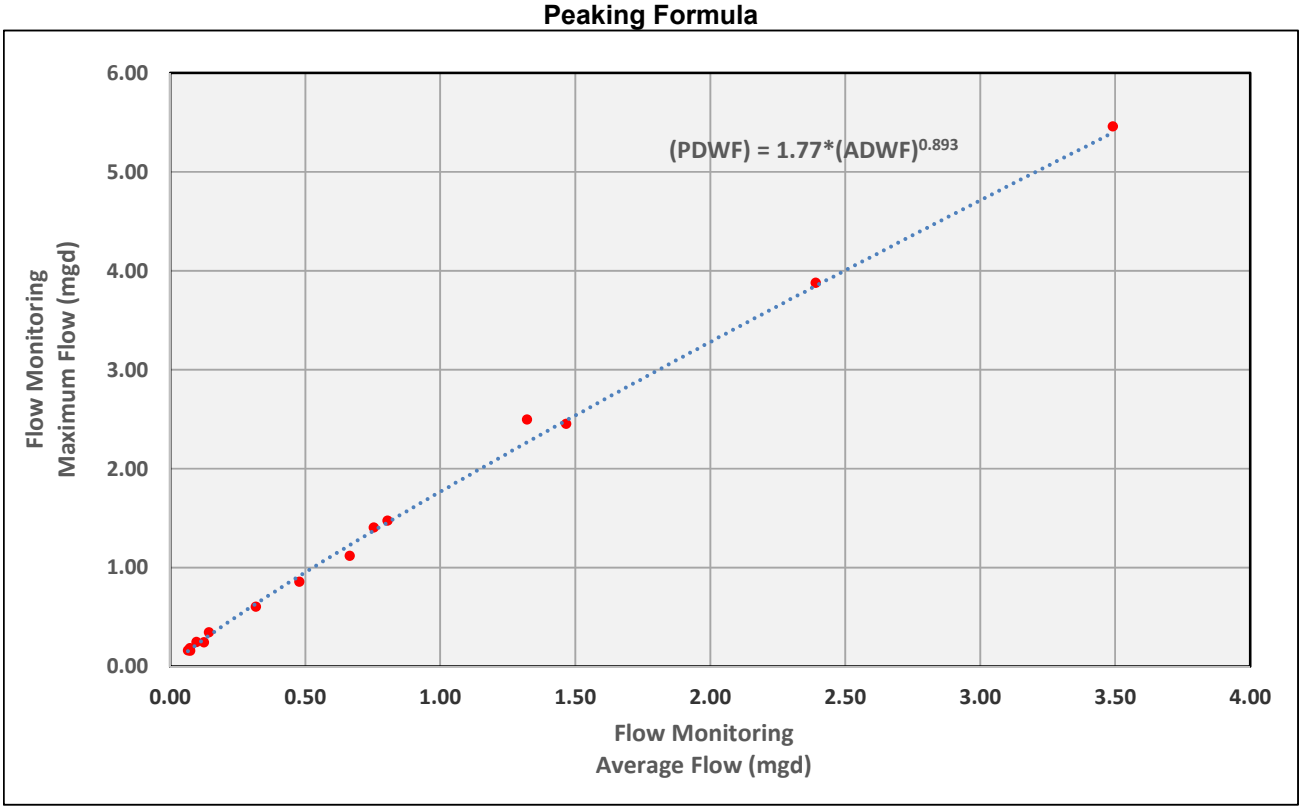
$$PDWF\ (mgd) = 1.77 \times ADWF\ (mgd)^{0.893}$$

The coefficient "b" factor accounts for smaller tributary areas with smaller ADWF, which generally experience greater PDWF. The change in usage of one customer in a very small tributary area will have a greater effect on its corresponding PDWF than a change in usage of one customer is a very large tributary area.

Note that the units of the selected peaking formula are in million gallons per day (mgd). These peaks are generally observed between the hours of 6:00 a.m. and 9:00 a.m. and 7:00 p.m. and 9:00 p.m. during weekdays and somewhat later in the morning hours during weekends in the predominantly residential areas.

DRAFT

Figure 3-3
Peaking Formula



3-4.2 Peak Wet Weather

The peak wet weather flow (PWWF) has two components: peak dry weather flow (PDWF) and rainfall dependent inflow/infiltration (I/I) as expressed by the following equation:

$$PWWF = PDWF + I/I$$

Inflow and infiltration is discussed further in Section 3-5.

The flow monitoring effort for this study did not cover a wet weather period. Until wet weather flow data can be collected, it is recommended that the peak wet weather flow be estimated as the following:

Peak Wet Weather Flow (PWWF) = 1.34 x Peak Dry Weather Flow (PDWF)

Although the PWWF/PDWF factor of 1.34 may not cover all situations, it is not reasonable or feasible to design the sewer system to carry the flows that would result from the use of a larger ratio. Instead, it is recommended that the City concentrate on projects such as replacing manhole covers, installing plugs in manhole covers, and replacing or relining cracked pipes to reduce inflow and infiltration.

3-5 Inflow and Infiltration

Inflow is the surface water that typically gains entry to the sewer system through perforated or unsealed manhole covers during rainfall events. Infiltration is defined as water entering the collection system from the ground through defective pipes, pipe joint connections, or manhole walls. The sewer system design capacity

DRAFT

must include allowances for these extraneous flow components, which inevitably become a part of the total flow. The amount of inflow and infiltration (I/I) that enters the system typically depends upon the availability, adequacy, and location of the storm water drainage facilities; age and condition of structures; materials and methods of construction; the location of the groundwater table; and the characteristics of the soil. In the absence of flow monitoring data, many regulating agencies utilize commonly accepted practices for estimating I/I. For example, I/I is often estimated based on the diameter and length of pipeline (100 to 400 gpd/ in. dia/ mile) or as a percentage of the peak flow or pipeline capacity.

AKM's experience from other master planning studies and review of limited flow monitoring information available during severe rainfall events indicate that the peak wet weather flow can vary from 10 percent of average dry weather flows in steeper areas with adequate drainage facilities, to over 400 percent of average dry weather flows in flat areas that lack significant drainage facilities.

For this study, extraneous flow due to inflow and infiltration is included in the peak wet weather flow formula described above. If better data becomes available subsequently for specific areas, the analysis shall be updated based upon that information.

3-6 Sewer System Performance Evaluation Criteria

Sewer system performance evaluation criteria are established to ensure that the wastewater collection system can operate effectively under all flow conditions. Each pipe segment must be capable of carrying peak wet weather flows in the hydraulically stable zone of the pipe. Low flows must be conveyed at a velocity that will prevent solids from settling and blocking the system.

The design capacity of a gravity pipeline is the calculated capacity of the pipeline based on the Manning formula:

$$Q = 1.486 * A * R^{\frac{2}{3}} \frac{S^{\frac{1}{2}}}{n}$$

where, **Q** = flow in cubic feet per second
R = hydraulic radius in feet = A / P
A = cross-sectional area of the pipe in square feet
P = wetted perimeter in feet
S = slope of pipe in feet of rise per foot of length
n = Manning's friction factor

Sewer system capacity is established using a Manning's friction factor of 0.013 for vitrified clay pipe.

The design and analysis of sewer pipes is typically based upon the depth to diameter ratio (d/D). In this study, **existing** pipes are considered capacity deficient if the d/D is above 0.64 at peak dry weather flows. This d/D ratio was arrived at by taking 75% of a pipe's maximum stable flow capacity, which is at a d/D of 0.82. The area above a d/D of 0.82 is considered hydraulically unstable. The 25% pipe capacity above the d/D ratio of 0.64 is reserved for inflow and infiltration.

By setting the maximum allowable PWWF equal to the maximum capacity of the pipe (d/D ratio = 0.82) and setting the maximum allowable PDWF equal to 75% of the maximum pipe capacity (d/D ratio = 0.64), the PWWF/PDWF ratio is 1.34 (100% pipe capacity/75% pipe capacity) as stated in Section 3-4.2.

DRAFT

The extra pipeline capacity also allows for the possibility that actual wastewater flows may be slightly higher than anticipated PDWF. Additionally, the area above the water surface helps to keep the sewage aerated, reducing the possibility of septic conditions and odors.

For **new construction**, the design and analysis of gravity sewer pipes shall be based on the following depth to diameter ratios:

- Pipes **12-inches and smaller** in diameter shall be designed to flow at a maximum **d/D of 0.50** under peak dry weather flows
- Pipes **15-inches and greater** in diameter shall be designed to flow at a maximum **d/D of 0.64** under peak dry weather flows
- For either group, the depth of flow to diameter ratio shall not exceed **0.82 with peak wet weather flows**

Although this Sewer Master Plan study defined existing pipes as deficient when the d/D ratio exceeded 0.64 under peak dry weather flows, for all practical purposes the aforementioned design criteria must be adhered to. For instance, if the sewer pipe is 12-inches and smaller and was designed to flow at a maximum PDWF d/D of 0.50 and is now constructed. The maximum PDWF d/D must be maintained at 0.50. Additional future development flow should not be allowed to contribute to this sewer pipe if the maximum PDWF d/D ratio is going to exceed 0.50.

At a minimum, all pipes shall be 8 inches or larger in diameter and the velocity of flow in the pipe shall be greater than 2 feet per second at average dry weather flow (ADWF). This velocity will prevent deposition of solids in the sewer and help to re-suspend any materials that may have already settled in the pipe. The minimum corresponding slopes for various pipe sizes are shown in Table 3-3.

It is important to note that the slopes listed in Table 3-3 assume the depth of flow in the pipe is 50 or 64 percent full depending on the size. If there is insufficient flow to create this condition, greater slopes than those shown may be required.

The peak flow velocity shall be less than 10 feet per second in vitrified clay pipe.

The City recognizes that minimum slopes and velocities are sometimes not achievable under certain circumstances. On a case by case basis, the City may approve sewer designs that do not meet these criteria.

Table 3-3
Example Sewer Slopes

Sewer Size	2 ft/s Velocity Slope
8"	0.0057
10"	0.0042
12"	0.0033
15"	0.0019
18"	0.0014
21"	0.0011
24"	0.0008
27"	0.0008
30"	0.0007
33"	0.0006
36" & larger	0.0005

**Pipes 12" and smaller assume depth of flow is 50 percent*

**Pipes 15" and greater assume depth of flow is 64 percent*

3-7 Sewer Pump Station Performance Evaluation Criteria

It is desirable to develop a sewer collection system with as few pump stations as possible due to the associated cost and maintenance required. The City's policy does not allow new pump stations. If a pump station is absolutely necessary, the following criteria shall be minimum standards.

proposed and/or existing sewer lines within the study and the calculated velocities and depth to diameter ratios.

- A **Tributary Area Map** is included for each study.

Sewer Analysis Comments:

Merrill Tributary: Merrill, Bellegrave, Mill Creek

Analysis 1: Using the 2050 TOP Land Uses and high end densities and Existing Uses and SPA for Subarea 29 propoerties

- There is an 80-acre property located on the northeast corner of Mill Creek Avenue and Schaefer Avenue owned by Southern California Edison, (SCE). In Analysis 1, the Land Use for this 80-acre property is Business Park per the 2050 TOP.

- There is a section of an existing and future 8-inch sewer line within the Esperanza Specific Plan where the depth of flow ratio, d/D exceeds the maximum criteria of 0.50. The range of the d/D's in this section is 0.56 to 0.81. The location of the deficient lines are shown in the attached **Master Plan Sewer Location Map.**

Analysis 2: A second analysis of the system was modeled using the following revisions;

- ❖ The Land Use for the existing 80-acre SCE property, which currently contains a Substation, was changed to its existing land use resulting in no sewer flows tributary to the Mill Creek Sewer.

- ❖ The Land Use and densities for the Esperanza Specific Plan Area were taken from the Specific Plan, (SP) in lieu of the 2050 TOP.

- There is still a section within the Esperanza Specific Plan where the 8-inch sewer lines depth of flow ratio, d/D, exceeds the maximum criteria of 0.50 However the d/D is reduced to a range of 0.56 to 0.62.

- The Esperanza PA 11 School Siet has been converted to a 161 unit medium density residential site.

West Haven

LAND USE	UNITS	GROSS ACRES	UNITS/ GROSS ACRES	NET ACRES	UNITS/ NET ACRES
Residential Uses					
PA-1 (RD-7/ Row Townhomes, RD-8/ Motorcourt Townhomes)	319 DU	29.35 AC	10.87 DU/AC	28.97 AC	11.01 DU/AC
PA-2 (RD-4/ SFD Cottages, RD-6/ 6-Pack Courtyard)	113 DU	22.84 AC	4.95 DU/AC	17.36 AC	6.51 DU/AC
PA-3 (RD-7 & RD-8/ Row Townhomes)	156 DU	11.40 AC	13.68 DU/AC	11.10 AC	14.05 DU/AC
PA-4 (RD-6/ 6-Pack Courtyard, 8-Pack Courtyard, Row Townhomes)	303 DU	27.41 AC	11.05 DU/AC	19.30 AC	15.70 DU/AC
PA-5 (RD-5/ 4-Pack Courtyard)	157 DU	23.78 AC	6.60 DU/AC	17.64 AC	8.90 DU/AC
PA-6 (RD-4/ SFD Cottages)	78 DU	13.64 AC	5.72 DU/AC	10.00 AC	7.80 DU/AC
PA-7 (RD-1/ SFD 50' wide lots)	76 DU	14.36 AC	5.29 DU/AC	12.56 AC	6.05 DU/AC
PA-8 (RD-2/ SFD 55' wide lots)	107 DU	23.72 AC	4.51 DU/AC	19.26 AC	5.56 DU/AC
PA-9 (RD-1/ SFD 50' x 80')	82 DU	17.75 AC	4.62 DU/AC	13.27 AC	6.18 DU/AC
PA-10 (RD-3/ SFD 2-Pack)	100 DU	19.92 AC	5.02 DU/AC	14.62 AC	6.84 DU/AC
Park 1		5.75*AC			
Residential land Use Total	**1491 DU**	**209.90 AC**	**7.10 DU/AC**	**164.08 AC**	**9.09 DU/AC**
Parks				9.89 AC	
Neighborhood Edge Buffers				6.62 AC	
Roadways				28.25 AC	
SCE Easements and Well Sites				4.14 AC	
Community Facilities Use					
PA-11 ~~(School)~~ Med. Density. Res.	161 DU	13.10 AC		10.02 AC	16.1 DU/AC
PROJECT TOTAL	~~1491~~ **DU** 1652	**223.00 AC**		**223.00 AC**	

NOTES:

1. *Gross residential acres do not include the 13.10 gross acres for a school site.*
2. *Net residential acres are gross acres less parks, neighborhood edge buffers, roadways, easements and net area for school site.*

** PA-2 includes 3.45 AC of Park 1*

Table 2
Land Use Summary

APPENDIX C

SEWER ANALYSIS RESULTS

The following conditions were modeled for Esperanza PA 11 Project:

1. Existing Flows (Peak Dry Weather Flow)
2. Existing Flows (Peak Wet Weather Flow)
3. Existing Plus Project Flows (Peak Dry Weather Flow)
4. Existing Plus Project Flows (Peak Wet Weather Flow)

- Reference Exhibit A for Manhole Diagram

RESOLUTION NO. PC25-048

A RESOLUTION OF THE PLANNING COMMISSION OF THE CITY OF ONTARIO, CALIFORNIA, RECOMMENDING THE CITY COUNCIL APPROVE FILE NO. PGPA24-003, AN AMENDMENT TO THE LAND USE ELEMENT OF THE POLICY PLAN (GENERAL PLAN), REVISING EXHIBIT LU-01 (OFFICIAL LAND USE PLAN) AND EXHIBIT LU-03 (FUTURE BUILDOUT), AFFECTING PROPERTY, LOCATED SOUTH OF CHATHAM STREET, WEST OF CLIFTON AVENUE, EAST OF AMHERST AVENUE, AND NORTH OF EUCALYPTUS AVENUE, FROM PUBLIC SCHOOL TO MEDIUM DENSITY RESIDENTIAL. AND MAKING FINDINGS IN SUPPORT THEREOF—APN: 1073-101-050. (SEE ATTACHMENTS 1 AND 2) (PART OF CYCLE 1 FOR THE 2025 CALENDAR YEAR)

WHEREAS, GDC Investments13, LP, has filed an Application for the approval of a General Plan Amendment, File No. PGPA24-003, as described in the title of this Resolution (hereinafter referred to as Application or Project); and

WHEREAS, the City of Ontario adopted the Policy Plan (General Plan) as part of the component framework for The Ontario Plan on January 27, 2010, and issued Resolution No. 2010-004; and

WHEREAS, the City of Ontario adopted a Supplemental Environmental Impact Report (SEIR) for the General Plan Amendment for The Ontario Plan 2050 Technical Update (TOP 2050) on August 16, 2022 and issued Resolution No. 2022-129. Since the adoption of TOP 2050, the City has evaluated Exhibits LU-01: Official Land Use Plan and LU-03: Future Buildout further and is proposing modifications; and

WHEREAS, the proposed changes to Exhibit LU-01 Official Land Use Plan include changes to land use designations of certain properties shown on Exhibit A to make the land use designations of these properties consistent with existing adjacent properties; and

WHEREAS, Policy Plan Exhibit LU-03 (Future Buildout) specifies the expected buildout for the City of Ontario, incorporating the adopted land use designations. The proposed changes to Exhibit LU-01 (Official Land Use Plan) will require that Exhibit LU-03 (Future Buildout) is modified to be consistent with Exhibit LU-01 (Official Land Use Plan), as depicted on Exhibit B, attached; and

WHEREAS, the Project proposes to amend TOP Policy Plan Land Use Map and associated buildout tables to change the land use designation of approximately 10.02 acres, located south of Chatham Street, west of Clifton Avenue, east of Amherst Avenue,

and north of Eucalyptus Avenue, from Public School to Medium Density Residential (see Exhibit B), establishing a buildout capacity of 221 units; and

WHEREAS, this capacity offsets the loss of 130 units resulting from File No. PGPA23-003 and ensures compliance with SB 330 by maintaining the City's overall housing capacity; and

WHEREAS, City of Ontario Development Code Division 2.03 (Public Hearings) prescribes the manner in which public notification shall be provided and hearing procedures to be followed, and all such notifications and procedures have been completed; and

WHEREAS, the Project is located within the Airport Influence Area of Ontario International Airport, which encompasses lands within parts of San Bernardino, Riverside, and Los Angeles Counties, and is subject to, and must be consistent with, the policies and criteria set forth in the Ontario International Airport Land Use Compatibility Plan (ALUCP), which applies only to jurisdictions within San Bernardino County, and addresses the noise, safety, airspace protection, and overflight impacts of current and future airport activity; and

WHEREAS, the Application is a project pursuant to the California Environmental Quality Act (Public Resources Code Section 21000, et seq.) (CEQA); and

WHEREAS, as the first action on the Project, on September 23, 2025, the Planning Commission recommended approval of a Resolution recommending City Council adopt an addendum to TOP 2050 Supplemental Environmental Impact Report (SEIR; State Clearinghouse No. 2021070364) adopted by City Council on August 16, 2022, for File No. PGPA20-002. The addendum finds that the proposed Project introduces no new significant environmental impacts, and all previously adopted mitigation measures are incorporated into the Project by reference; and

WHEREAS, on September 23, 2025, the Planning Commission of the City of Ontario conducted a hearing to consider the Project, and concluded said hearing on that date; and

WHEREAS, all legal prerequisites to the adoption of this Resolution have occurred.

NOW, THEREFORE, IT IS HEREBY FOUND, DETERMINED, AND RESOLVED by the Planning Commission of the City of Ontario, as follows:

SECTION 1: ***Environmental Determination and Findings.*** As the recommending body for the Project, the Planning Commission has reviewed and considered the information contained in the administrative record for the Project. Based

upon the facts and information contained in the administrative record, including all written and oral evidence presented to the Planning Commission, the Planning Commission finds as follows:

(1) The environmental impacts of this Project were reviewed in conjunction with an TOP 2050 Supplemental Environmental Impact Report — State Clearinghouse No. 2021070364 (Certified SEIR), which was certified by the Ontario City Council on August 16, 2022, in conjunction with File No. PGPA20-002; and

(2) The Addendum and administrative record have been completed in compliance with CEQA, the State CEQA Guidelines, and the City of Ontario Local CEQA Guidelines; and

(3) The City's "Local Guidelines for Implementing the California Environmental Quality Act (CEQA)" provide for the use of a single environmental assessment in situations where the impacts of subsequent projects are adequately analyzed. This Application introduces no new significant environmental impacts; and

(4) All previously adopted mitigation measures shall be a condition of Project approval, as they are applicable to the Project, and are incorporated herein by this reference; and

(5) The Addendum contains a complete and accurate reporting of the environmental impacts associated with the Project, and reflects the independent judgment of the Planning Commission; and

(6) There is no substantial evidence in the administrative record supporting a fair argument that the Project may result in significant environmental impacts.

SECTION 2: ***Additional Environmental Review Not Required.*** Based on the Addendum, all related information presented to the Planning Commission, and the specific findings set forth in Section 1, above, the Planning Commission finds that the preparation of a subsequent or supplemental environmental impact report is not required for the Project, as the Project:

(1) Does not constitute substantial changes to the certified SEIR that will require major revisions to the Certified SEIR due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects; and

(2) Does not constitute substantial changes with respect to the circumstances under which the Certified SEIR was prepared, that will require major revisions to the

Certified SEIR due to the involvement of new significant environmental effects or a substantial increase in the severity of the previously identified significant effects; and

(3) Does not contain new information of substantial importance that was not known and could not have been known with the exercise of reasonable diligence at the time the Certified SEIR was certified/adopted, that shows any of the following:

(a) The Project will have one or more significant effects not discussed in the Certified SEIR; or

(b) Significant effects previously examined will be substantially more severe than shown in the Certified SEIR; or

(c) Mitigation measures or alternatives previously found not to be feasible would in fact be feasible and would substantially reduce one or more significant effects of the Project, but the City declined to adopt such measures; or

(d) Mitigation measures or alternatives considerably different from those analyzed in the Certified SEIR would substantially reduce one or more significant effects on the environment, but which the City declined to adopt.

SECTION 3: ***Housing Element Compliance.*** Pursuant to the requirements of California Government Code Chapter 3, Article 10.6, commencing with Section 65580, as the recommending body for the Project, the Planning Commission finds that based upon the facts and information contained in the Application and supporting documentation, at the time of Project implementation, the Project is consistent with the Housing Element of the Policy Plan (General Plan) component of TOP 2050, as the Project site is not one of the properties in the Housing Element Sites Inventory contained in Tables B-1 and B-2 of the Housing Element Technical Report.

SECTION 4: ***Airport Land Use Compatibility Plan (ALUCP) Compliance.*** The California State Aeronautics Act (Public Utilities Code Section 21670, et seq.) requires that an Airport Land Use Compatibility Plan be prepared for all public use airports in the State; and requires that local land use plans and individual development proposals must be consistent with the policies set forth in the adopted Airport Land Use Compatibility Plan.

(1) On April 19, 2011, the City Council of the City of Ontario approved and adopted the Ontario International Airport Land use Compatibility Plan, establishing the Airport Influence Area for Ontario International Airport, which encompasses lands within parts of San Bernardino, Riverside, and Los Angeles Counties, and limits future land uses and development within the Airport Influence Area, as they relate to noise, safety, airspace protection, and overflight impacts of current and future airport activity. As the

recommending body for the Project, the Planning Commission has reviewed and considered the facts and information contained in the Application and supporting documentation against the ONT ALUCP compatibility factors, including [1] Safety Criteria (ONT ALUCP Table 2-2) and Safety Zones (ONT ALUCP Map 2-2), [2] Noise Criteria (ONT ALUCP Table 2-3) and Noise Impact Zones (ONT ALUCP Map 2-3), [3] Airspace protection Zones (ONT ALUCP Map 2-4), and [4] Overflight Notification Zones (ONT ALUCP Map 2-5). As a result, the Planning Commission finds and determines that the Project, when implemented in conjunction with the conditions of approval, will be consistent with the policies and criteria set forth within the ONT ALUCP; and

SECTION 5: ***Concluding Facts and Reasons.*** Based upon the substantial evidence presented to the Planning Commission during the above-referenced hearing, and upon the specific findings set forth in the Sections above, the Planning Commission hereby concludes as follows:

(1) The proposed General Plan Amendment is consistent with the goals and policies of TOP 2050 as follows:

Policy Plan (General Plan)

Land Use Element:

- LU-1.1 Strategic Growth. We concentrate growth in strategic locations that help create place and identity, maximize available and planned infrastructure, foster the development of transit, and support the expansion of the active and multimodal transportation networks throughout the City.

- LU-1.6 Complete Community. We incorporate a variety of land uses and building types in our land use planning efforts that result in a complete community where residents at all stages of life, employers, workers, and visitors have a wide spectrum of choices of where they can live, work, shop and recreate within Ontario.

- Goal LU-2 Compatibility: Compatibility between a wide range of uses and a resultant urban patterns and forms.

Community Economics Element:

- Goal CE-1 Complete Community: A complete community that provides for all incomes and stages of life.

- Goal CE-2 Placemaking: A City of distinctive neighborhoods, districts, corridors, and centers where people choose to be; and

(2) The proposed General Plan Amendment would not be detrimental to the public interest, health, safety, convenience, or general welfare of the City; and

(3) The Land Use Element is a mandatory element allowed four general plan amendments per calendar year and this general plan amendment is the first amendment to the Land Use Element of the 2025 calendar year consistent with Government Code Section 65358; and

(4) The proposed General Plan Amendment action modifying land use designations for 10.2 acres from Public School to Medium-Density Residential, located south of Chatham Street, west of Clifton Avenue, east of Amherst Avenue, and north of Eucalyptus Avenue is consistent with the Housing Element of the Policy Plan (general plan) component of TOP 2050, as the Project site is not one of the properties in the Housing Element Sites contained in Tables B-1 and B-2 (Housing Element Sites Inventory) of the Housing Element Technical Report.; and

(5) The proposed General Plan Amendment would not be detrimental to the public interest, health, safety, convenience, or general welfare of the City; and

(6) The Land Use Element is a mandatory element allowed four general plan amendments per calendar year and this general plan amendment is the first amendment to the Land Use Element of the 2025 calendar year consistent with Government Code Section 65358; and

(7) During the amendment of the general plan, opportunities for the involvement of citizens, California Native American Indian tribes (Government Code Section 65352.3.), public agencies, public utility companies, and civic, education, and other community groups, through public hearings or other means were implemented consistent with Government Code Section 65351.

SECTION 6: ***Planning Commission Action.*** Based upon the findings and conclusions set forth in the Sections above, the Planning Commission hereby RECOMMENDS THE CITY COUNCIL APPROVES the proposed General Plan Amendment, as depicted in Attachment 1 (Policy Plan Land Use Plan (Exhibit LU-01) Revision) and Attachment 2 (Future Buildout Table (Exhibit LU-03) Revision) of this Resolution.

SECTION 7: ***Indemnification.*** The Applicant shall agree to defend, indemnify and hold harmless, the City of Ontario or its agents, officers, and employees from any claim, action or proceeding against the City of Ontario or its agents, officers or employees to attack, set aside, void, or annul this approval. The City of Ontario shall promptly notify the Applicant of any such claim, action, or proceeding, and the City of Ontario shall cooperate fully in the defense.

SECTION 8: ***Custodian of Records.*** The documents and materials that constitute the record of proceedings on which these findings have been based are located at the City of Ontario City Hall, 303 East B Street, Ontario, California 91764. The custodian for these records is the City Clerk of the City of Ontario.

SECTION 9: ***Certification to Adoption.*** The Secretary shall certify to the adoption of the Resolution.

- - - - - - - - - - - - - -

The Secretary Pro Tempore for the Planning Commission of the City of Ontario shall certify as to the adoption of this Resolution.

I hereby certify that the foregoing Resolution was duly and regularly introduced, passed and adopted by the Planning Commission of the City of Ontario at a regular meeting thereof held on the 23rd day of September 2025, and the foregoing is a full, true and correct copy of said Resolution, and has not been amended or repealed.

Nicola Ricci

RESOLUTION NO. PC25-049

A RESOLUTION OF THE PLANNING COMMISSION OF THE CITY OF ONTARIO, CALIFORNIA, RECOMMENDING THAT THE CITY COUNCIL APPROVE FILE NO. PSPA24-004, AN AMENDMENT TO THE ESPERANZA SPECIFIC PLAN TO REVISE THE SPECIFIC PLAN FOR CONSISTENCY WITH THE ONTARIO PLAN POLICY PLAN (GENERAL PLAN) LAND USE MAP. THE AMENDMENT INCLUDES [I] REVISING THE ALLOWED USES WITHIN PLANNING AREA 11 FROM SCHOOL TO RD-7/ROW TOWNHOMES; AND [II] MODIFYING THE SPECIFIC PLAN LAND USE MAP, DEVELOPMENT STANDARDS, EXHIBITS, AND TEXT TO REFLECT THE PROPOSED LAND USE CHANGES, AND MAKING FINDINGS IN SUPPORT THEREOF—APN: 1073-101-050

WHEREAS, GDC Investments 13, LP (hereinafter referred to as Applicant) has filed an Application for the approval of a Specific Plan Amendment, File No. PSPA24-004, as described in the title of this Resolution (hereinafter referred to as Application or Project); and

WHEREAS, the Application applies to approximately 10.02 acres of land generally located south of Chatham Street, west of Clifton Avenue, east of Amherst Avenue, and north of Eucalyptus Avenue, within Planning Area 11 (RD-7 / Row Townhomes) of the Esperanza Specific Plan, identified as Assessor's Parcel Number 1073-101-050, and presently vacant; and

WHEREAS, the property to the north of the Project site is within the Esperanza Specific Plan, designated Park, and developed with residential uses; the property to the east is within the Esperanza Specific Plan, designated PA-4 (RD-6 / 6-Pack Courtyard), and developed with residential uses; the property to the south is within the Esperanza Specific Plan, designated PA-7 (RD-1 / SFD 50' wide lots), and developed with residential uses; and the property to the west is within the Esperanza Specific Plan, designated PA-10 (RD-3 / SFD 2-Pack), and developed with residential uses; and

WHEREAS, on February 6, 2007, the City Council adopted Ordinance No. 2852, approving the Esperanza Specific Plan (File No. PSP05-002), establishing a master plan for the development of 223 acres of land, inclusive of the Project site; and

WHEREAS, the Application was submitted to amend the land use designation and development standards of Planning Area 11 of the Esperanza Specific Plan; and

WHEREAS, the Application was submitted to increase the number of units allowed within Planning Area 11 from 0 dwelling units to 161 dwelling units; and

WHEREAS, The Ontario Plan (TOP) 2050 Supplemental Environmental Impact Report (State Clearinghouse No. 2021070364), certified by the Ontario City Council on August 16, 2022, in conjunction with File No. PGPA20-002 (hereinafter referred to as Certified SEIR), in which development and use of the Project site was discussed; and

WHEREAS, the Planning Director of the City of Ontario prepared and approved for attachment to the certified Environmental Impact Report, an Addendum to the Certified EIR (hereinafter referred to as SEIR Addendum) in accordance with the requirements of the California Environmental Quality Act of 1970, together with State and local guidelines implementing said Act, all as amended to date (collectively referred to as CEQA); and

WHEREAS, the environmental impacts of this Project were thoroughly analyzed in the SEIR Addendum, which concluded that implementation of the Project could result in a number of significant effects on the environment that were previously analyzed in the Certified SEIR, and that the Certified SEIR identified mitigation measures that would reduce each of those significant effects to a less-than-significant level; and

WHEREAS, the City's "Local Guidelines for Implementing the California Environmental Quality Act (CEQA)" provide for the use of a single environmental assessment in situations where the impacts of subsequent projects are adequately analyzed; and

WHEREAS, the Application is a project pursuant to the California Environmental Quality Act — Public Resources Code Section 21000, et seq. — (hereinafter referred to as CEQA) and an SEIR Addendum has been prepared to determine possible environmental impacts; and

WHEREAS, Ontario Development Code Table 2.02-1 (Review Matrix) grants the Planning Commission the responsibility and authority to review and make a recommendation to the City Council on the subject Application; and

WHEREAS, the Project has been reviewed for consistency with the Housing Element of the Policy Plan component of TOP 2050, as State Housing Element law (as prescribed in Government Code Sections 65580 through 65589.8) requires that development projects must be consistent with the Housing Element, if upon consideration of all its aspects, it is found to further the purposes, principals, goals, and policies of the Housing Element; and

WHEREAS, the Project is located within the Airport Influence Area of Ontario International Airport, which encompasses lands within parts of San Bernardino, Riverside, and Los Angeles Counties, and is subject to, and must be consistent with, the policies and criteria set forth in the Ontario International Airport Land Use Compatibility Plan (hereinafter referred to as ALUCP), which applies only to jurisdictions within San

Bernardino County, and addresses the noise, safety, airspace protection, and overflight impacts of current and future airport activity; and

WHEREAS, City of Ontario Development Code Division 2.03 (Public Hearings) prescribes the manner in which public notification shall be provided and hearing procedures to be followed, and all such notifications and procedures have been completed; and

WHEREAS, as the first action on the Project, on September 23, 2025, the Planning Commission issued a Resolution recommending the City Council adopt the SEIR Addendum, finding that the proposed Project introduces no new significant environmental impacts and applying all previously adopted mitigation measures to the Project, which were incorporated by reference; and

WHEREAS, on September 23, 2025, the Planning Commission of the City of Ontario conducted a hearing to consider the Project, and concluded said hearing on that date; and

WHEREAS, all legal prerequisites to the adoption of this Resolution have occurred.

NOW, THEREFORE, IT IS HEREBY FOUND, DETERMINED, AND RESOLVED by the Planning Commission of the City of Ontario, as follows:

SECTION 1: ***Environmental Determination and Findings.*** As the recommending body for the Project, the Planning Commission has reviewed and considered the information contained in the Addendum, the initial study, and the administrative record for the Project, including all written and oral evidence provided during the comment period. Based upon the facts and information contained in the Addendum, the initial study, and the administrative record, including all written and oral evidence presented to the Planning Commission, the Planning Commission finds as follows:

(1) The environmental impacts of the Project were reviewed in conjunction with an Addendum to TOP 2050 Supplemental Environmental Impact Report (SEIR)(State Clearinghouse No. 2021070364), certified by the Ontario City Council on August 16, 2022, in conjunction with File No. PGPA20-002; and

(2) The SEIR Addendum and administrative record have been completed in compliance with CEQA, the State CEQA Guidelines, and the City of Ontario Local CEQA Guidelines; and

(3) The City's "Local Guidelines for Implementing the California Environmental Quality Act (CEQA)" provide for the use of a single environmental assessment in

situations where the impacts of subsequent projects are adequately analyzed. This Application introduces no new significant environmental impacts; and

(4) All previously adopted mitigation measures shall be a condition of Project approval, as they are applicable to the Project, and are incorporated herein by this reference; and

(5) The SEIR Addendum contains complete and accurate reporting of the environmental impacts associated with the Project, and reflects the independent judgment of the Planning Commission; and

(6) There is no substantial evidence in the administrative record supporting a fair argument that the Project may result in significant environmental impacts.

SECTION 2: ***Subsequent or Supplemental Environmental Review Not Required.*** Based on the SEIR Addendum, all related information presented to the Planning Commission, and the specific findings set forth in Section 1, above, the Planning Commission finds that the preparation of a subsequent or supplemental Certified SEIR is not required for the Project, as the Project:

(1) Does not constitute substantial changes to the Certified SEIR that will require major revisions to the Certified SEIR due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects; and

(2) Does not constitute substantial changes with respect to the circumstances under which the Certified SEIR was prepared, that will require major revisions to the Certified SEIR due to the involvement of new significant environmental effects or a substantial increase in the severity of the previously identified significant effects; and

(3) Does not contain new information of substantial importance that was not known and could not have been known with the exercise of reasonable diligence at the time the Certified SEIR was certified/adopted, that shows any of the following:

(a) The Project will have one or more significant effects not discussed in the Certified SEIR; or

(b) Significant effects previously examined will be substantially more severe than shown in the Certified SEIR; or

(c) Mitigation measures or alternatives previously found not to be feasible would in fact be feasible and would substantially reduce one or more significant effects of the Project, but the City declined to adopt such measures; or

(d) Mitigation measures or alternatives are considerably different from those analyzed in the Certified SEIR would substantially reduce one or more significant effects on the environment, but which the City declined to adopt.

SECTION 3: ***Housing Element Compliance.*** Pursuant to the requirements of California Government Code Chapter 3, Article 10.6, commencing with Section 65580, as the recommending body for the Project, the Planning Commission finds that based upon the facts and information contained in the Application and supporting documentation, at the time of Project implementation, the Project is consistent with the Housing Element of the Policy Plan (General Plan) component of TOP 2050, as the Project site is not one of the properties in the Housing Element Sites Inventory contained in Tables B-1 and B-2 of the Housing Element Technical Report.

SECTION 4: ***Airport Land Use Compatibility Plan (ALUCP) Compliance.*** The California State Aeronautics Act (Public Utilities Code Section 21670, et seq.) requires that an Airport Land Use Compatibility Plan be prepared for all public use airports in the State; and requires that local land use plans and individual development proposals must be consistent with the policies set forth in the adopted Airport Land Use Compatibility Plan.

(1) On April 19, 2011, the City Council of the City of Ontario approved and adopted the Ontario International Airport Land use Compatibility Plan, establishing the Airport Influence Area for Ontario International Airport, which encompasses lands within parts of San Bernardino, Riverside, and Los Angeles Counties, and limits future land uses and development within the Airport Influence Area, as they relate to noise, safety, airspace protection, and overflight impacts of current and future airport activity. As the recommending body for the Project, the Planning Commission has reviewed and considered the facts and information contained in the Application and supporting documentation against the ONT ALUCP compatibility factors, including [1] Safety Criteria (ONT ALUCP Table 2-2) and Safety Zones (ONT ALUCP Map 2-2), [2] Noise Criteria (ONT ALUCP Table 2-3) and Noise Impact Zones (ONT ALUCP Map 2-3), [3] Airspace protection Zones (ONT ALUCP Map 2-4), and [4] Overflight Notification Zones (ONT ALUCP Map 2-5). As a result, the Planning Commission finds and determines that the Project, when implemented in conjunction with the conditions of approval, will be consistent with the policies and criteria set forth within the ONT ALUCP; and

SECTION 5: ***Concluding Facts and Reasons.*** Based upon the substantial evidence presented to the Planning Commission during the above-referenced hearing, and upon the specific findings set forth in the Sections above, the Planning Commission hereby concludes as follows:

(1) ***The proposed Specific Plan, or amendment thereto, is consistent with the goals, policies, plans and exhibits of the Vision, Policy Plan (General Plan), and***

City Council Priorities components of The Ontario Plan 2050. The proposed Specific Plan Amendment is consistent with the Vision, Policy Plan (General Plan), and City Council Priorities components of TOP 2050, in that the Specific Plan Amendment contributes towards the legislative framework for the implementation of TOP components, guiding growth and development within the Project area to achieve optimum results from the City's physical, economic, environmental, and human resources.

(2) ***The proposed Specific Plan, or amendment thereto, would not be detrimental to the public interest, health, safety, convenience, or general welfare of the City.*** The development standards and guidelines established by the proposed Specific Plan Amendment have been created with the intent to safeguard and further the public interest, health, safety, convenience, and/or general welfare, and to ensure that the purposes of TOP 2050 and the proposed Specific Plan Amendment are maintained.

(3) ***In the case of an application affecting specific property(ies), the proposed Specific Plan, or amendment thereto, will not adversely affect the harmonious relationship with adjacent properties and land uses.*** The location of the proposed Specific Plan Amendment, and the proposed conditions under which future developments will be constructed and maintained, is consistent with the Policy Plan component of TOP 2050 and the City's Development Plan, and, therefore, will not adversely affect the harmonious relationship with adjacent properties and land uses.

(4) ***In the case of an application affecting specific property(ies), the subject site is physically suitable, including, but not limited to, parcel size, shape, access, and availability of utilities, for the request and anticipated development.*** The proposed Specific Plan Amendment has been reviewed by all City departments, which have established that the project site is physically suitable for the anticipated development in terms of parcel size, shape, and availability of utilities.

SECTION 6: ***Planning Commission Action.*** Based upon the findings and conclusions set forth in the Sections above, the Planning Commission hereby RECOMMENDS THE CITY COUNCIL APPROVES the herein described Application, subject to each and every condition set forth in the Department reports attached hereto as "Attachment A," and incorporated herein by this reference.

SECTION 7: ***Indemnification.*** The Applicant shall agree to defend, indemnify and hold harmless, the City of Ontario or its agents, officers, and employees from any claim, action or proceeding against the City of Ontario or its agents, officers or employees to attack, set aside, void, or annul this approval. The City of Ontario shall promptly notify the Applicant of any such claim, action, or proceeding, and the City of Ontario shall cooperate fully in the defense.

SECTION 8: ***Custodian of Records.*** The documents and materials that constitute the record of proceedings on which these findings have been based are located at the City of Ontario City Hall, 303 East B Street, Ontario, California 91764. The custodian for these records is the City Clerk of the City of Ontario.

SECTION 9: ***Certification to Adoption.*** The Secretary shall certify to the adoption of the Resolution.

- - - - - - - - - - - - -

The Secretary Pro Tempore for the Planning Commission of the City of Ontario shall certify as to the adoption of this Resolution.

I hereby certify that the foregoing Resolution was duly and regularly introduced, passed and adopted by the Planning Commission of the City of Ontario at a regular meeting thereof held on the 23rd day of September 2025, and the foregoing is a full, true and correct copy of said Resolution, and has not been amended or repealed.

The Ontario Plan 2050
Specific Plan Policy Matrix 9.3

THIS PAGE WAS INTENTIONALLY LEFT BLANK.

Section 1. Executive Summary

The Esperanza Specific Plan is a proposal for the development of approximately 223 acres located within the City of Ontario ~~New Model Colony (NMC)~~ Ontario Ranch. The master plan for Esperanza will provide for development of a distinctive residential planned community offering a variety of housing types within walking distance to parks and private recreational amenities. The regional context and local setting of the Esperanza Specific Plan are illustrated in Exhibit 1, "Regional Location Map" and Exhibit 2, "Vicinity Map."

The Esperanza Specific Plan comprises all of Planning Subarea 25 as depicted on the City of Ontario ~~New Model Colony (NMC)~~ Ontario Ranch General Plan Land Use Map. The Esperanza Specific Plan reflects the current Land Use Plan in The Ontario Plan (General Plan). It encompasses the eastern edge of The Ontario Ranch Master Planned Community. The Specific Plan is bounded by Bellegrave Avenue to the south, ~~Milliken~~ Hamner Avenue to the east, and Mill Creek Avenue to the west. Old Edison Road abuts the Specific Plan area on the north. Approximately 174.10 net acres of Esperanza are proposed for residential uses along with 9.89 net acres of park uses.

The Esperanza Specific Plan establishes the regulations and guidelines which will govern development of the master planned community within the Ontario Ranch General Plan. The development plan as illustrated in Exhibit 3 "Land Use Plan," is consistent with the goals and policies of the ~~NMC~~ Ontario Ranch General Plan combining livable residential neighborhoods served by public and recreational facilities as well as active open space offering opportunities for social interaction among residents.

Pedestrian accessibility is provided throughout Esperanza, through a system of sidewalks separated from the street by landscaped parkways and landscaped buffer areas. Bicycle mobility is provided within the community through a system of on-street bicycle trails.

~~The NMC~~ The Ontario Ranch General Plan, adopted by the City of Ontario, designates The Esperanza Specific Plan for development of up to 1,456 residential dwelling units, however, ~~46~~ 161 residential dwelling units will be developed within the Specific Plan area originally anticipated to be a 10.02 acre school site within Esperanza. On ~~XX-XX-2020~~ 10-20-2020, a request to increase PA4 to 14DU/AC was approved in order to accommodate a more efficient, economical sized design, and more appropriate product type. The increase allows for the development of up to ~~1,640~~ 1,652 units.

Governing Documents

Development of Esperanza will be governed by the following:

- The City of Ontario ~~NMC~~ Ontario Ranch General Plan, as amended, which establishes policies governing land use, circulation, housing, conservation and open space, noise, safety, and public facilities within the Esperanza Specific Plan area.
- The Esperanza Specific Plan which includes a Land Use Plan, Infrastructure Plan, Design Guidelines, and Development Regulations. Where the Esperanza Specific Plan is silent, the City of Ontario Development Code shall govern.
- The City of Ontario Subdivision Ordinance regulating the subdivision of land within the Esperanza Specific Plan area.
- A development agreement to include methods for financing, acquisition, and construction of infrastructure, acquisition and development of parks and schools, as well as the provision for housing opportunities consistent with the regional housing needs assessment.
- Covenants, Conditions, and Restrictions (CC&R's) to be established by the developers of Esperanza as a means of ensuring and enforcing quality design and development of the master planned community.

Specific Plan Components

The Esperanza Specific Plan is organized into the following sections in addition to Section 1, Executive Summary.

Section 2
Introduction

The Introduction serves to acquaint the reader with:

- Community vision and objectives,
- The project setting,
- A general description of the project proposal,
- The goals and policies of the Esperanza Specific Plan,
- The entitlements to accompany the Esperanza Specific Plan; and
- The relationship of the Esperanza Specific Plan to the City of Ontario ~~NMC~~ Ontario Ranch General Plan, and the City of Ontario Development Code.

Section 3
Existing Conditions

The physical setting for Esperanza is described in this section outlining the existing physical conditions on and around the Specific Plan area.

Section 4
Land Use

The Land Use Section describes residential planning areas and residential types, allocations of residential dwelling units per planning area as well as the system of parks and public facilities planned within the community.

Section 5
Infrastructure and Services

This section provides information on circulation improvements, planned backbone water, sewer, and storm drain systems, the grading concept for the development of the project, and a discussion of public utilities and services to serve the Specific Plan.

Section 6
Development Regulations

Development Regulations established in this section will govern the permitted uses and the standards regulating the development of various residential types within the Esperanza Specific Plan area. The relationship of the Esperanza Specific Plan development regulations to the City of Ontario Development Code is also provided. The policies and procedures for the City's review and approval of specific development proposals within Esperanza are presented in this section as well as the methods and procedures for interpreting and amending the Esperanza Specific Plan as necessary.

Section 7
Implementation

The policies and procedures for the City's review and approval of specific development proposals, within Esperanza, are presented in this section. This section provides the methods and procedures for interpreting and amending the Esperanza Specific Plan as necessary. A summary of project financing and project maintenance responsibilities for new development within the Specific Plan area is provided in this section.

Section 8
Design Guidelines

The Esperanza Design Guidelines are intended to direct the site planning, landscaping, and architectural quality of the development. Streetscapes, entries, edge treatments, walls and fencing, lighting, signage, and architectural design are some of the features to be addressed in the Design Guidelines.

Exhibit 1
Regional Location Map

Section 9
General Plan Consistency

This section includes the City of Ontario General Plan consistency matrix describing the relationship of the Esperanza Specific Plan to each policy of the ~~NMC~~ Ontario Ranch General Plan.

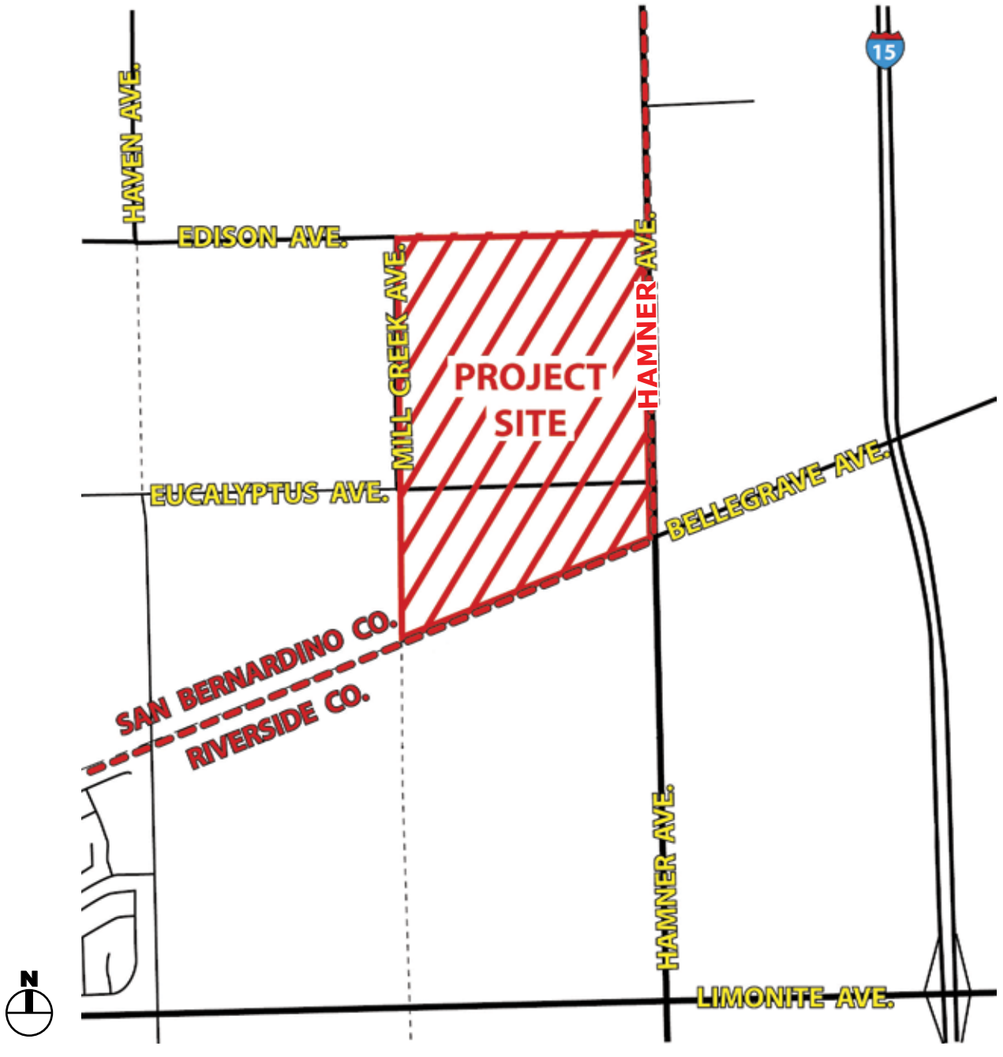

Exhibit 2
Vicinity Map

Exhibit 3 (cont.)
Land Use Table

Section 2. Introduction

The Esperanza Specific Plan (Specific Plan) includes 223 acres of land designated for residential uses as part of the Ontario Ranch area within the City of Ontario. Esperanza, at build out will be a residential master planned community within the City of Ontario with a traditional neighborhood design similar to that found in older established communities.

2.1 Community Vision and Objectives

The community vision for the Esperanza Specific Plan is implemented through the application of key design objectives guiding the development of the Specific Plan as discussed below.

Objective: Create a Livable Environment

The Esperanza Specific Plan combines residential, recreation and public facilities designed to create a livable community and includes features such as:

- A design which allows for alternative modes of travel such as biking and walking.
- Opportunities for informal neighborhood interaction.
- Diverse architectural design of a high quality.
- Connectivity among neighborhoods.
- Diversity and choice of housing types and opportunities to address a variety of lifestyles and economic segments of the marketplace.
- Residential neighborhoods developed at a human scale oriented to pedestrian activities with connectivity among residential neighborhoods, parks, and schools.
- A simple and well-designed street system providing street separated sidewalks and active and passive recreational opportunities allowing residents to experience increased outdoor living opportunities.
- A variety of housing types incorporated into the land use plan addressing lifestyle considerations of singles, families, and empty nesters.
- Residential neighborhoods designed around a network of centrally located parks, promoting outdoor activity and casual social interaction among neighbors.

Objective: Plan for a Circulation System Serving Motorists, Bicyclists and Pedestrians

The circulation plan for the Esperanza Specific Plan provides a comprehensive system of arterial, collector, and local streets accommodating bicycle and pedestrian travel as well as the safe and efficient movement of automobiles within the Specific Plan area:

- Street design includes landscaped buffer areas and pedestrian walkways, separated from the street, to create an intimate environment promoting social interaction.
- Internal project streets are designed to slow vehicular traffic through the use of traffic calming devices such as a roundabout at "A" Street adjacent to the neighborhood park, landscaped areas adjacent to local streets, and narrowed intersections to influence a driver's peripheral vision and encourage drivers to proceed more slowly.
- A system of bikeways is integrated into the design of the community to encourage bicycle travel as an alternative to the automobile.

Objective: Provide for Adequate Public Community Facilities

The Esperanza Specific Plan provides for the development of needed public facilities to serve the community as follows:

- New water, sewer, and storm drain facilities to serve the Specific Plan area.
- New planned bike paths connecting to the City of Ontario bikeway master plan bike paths.

Objective: Provision of New Parks and Open Space

New public park and open space amenities are provided to enhance outdoor recreational opportunities to residents of Esperanza and the surrounding community.

- Provision of approximately 9.89 acres of public parks, distributed throughout the community, will offer active and passive recreational opportunities within walking distance of all residential areas.
- Approximately 4.4 acres adjacent to Mill Creek Avenue, including a Southern California Edison Easement, will be landscaped for use as linear open space.
- Approximately 6.62 acres of landscaped open space to include pedestrian trails adjacent to public arterial and collector streets will be provided.
- A bicycle/pedestrian trail system will be developed within the street system of the Specific Plan area connecting the residential areas of the Specific Plan to parks and points surrounding the community providing accessibility to bicyclists and pedestrians throughout the community.

Objective: Promote Exceptional Architecture and Site Planning

Diverse and varied architecture combined with comprehensive site planning within the Esperanza Specific Plan will produce neighborhoods that have aesthetic and functional harmony, preserve residents privacy, and encourage neighborhood interaction.

- Streets will be linked together in a manner, which is pedestrian friendly, but also auto-accessible connecting homes with other neighborhoods, open space, public facilities, and recreational areas for residents to either walk, bike, or drive to.
- A variety of housing types, including attached and detached single family homes, will be provided within the Specific Plan area, all of which are located close to parks and open space.
- Residential planning areas include a variety of housing types oriented toward the street adding interest and encouraging neighborhood interaction along the street.
- Residential neighborhoods are designed with houses addressing the street by:
  - Designing homes to a more human level with porches, stoops, and walkways creating opportunities for neighborly interaction.
  - Homes fronting the street with garages accessed from rear alleys.
  - Minimizing views of garage doors through setback requirements, location, design elements, and landscaping.
  - Incorporating varied architectural styles and elements within each neighborhood.

2.2 SPECIFIC PLAN PURPOSE

The City of Ontario will adopt the Esperanza Specific Plan by ordinance thereby establishing the land use plan, development standards, infrastructure requirements, and implementation requirements for the Specific Plan area. The Esperanza Specific Plan establishes the type and distribution of residential land uses, defines the development regulations and design guidelines for residential land use, establishes appropriate locations for development of public parks, and describes the infrastructure requirements and the level of improvements necessary to support development of the Specific Plan area. The Esperanza Specific Plan establishes the procedures and requirements to approve new development within the Specific Plan area and identifies, where applicable, City of Ontario Development Code requirements.

2.3 SPECIFIC PLAN PROPOSAL

2.3.1 Project Summary

The Esperanza Land Use Plan is described below and in the Specific Plan "Statistical Summary," Table 1.

2.3.1.1 Residential Uses

Esperanza will provide for development of a variety of residential housing types oriented toward open space amenities and designed to promote walkability and interaction among residents. Residential development within the approximately 223 acre Specific Plan area will contain up to ~~1,594~~ 1,652 residential dwelling units, providing a mix of single family detached and single family attached housing types as described below. In the event Planning Area 11, reserved as for a 10.02 acre school site, is not purchased by the Mountain View School District Planning Area 11 may revert to a residential zoning district for development of up to ~~46~~ 161 additional dwelling units subject to approval by the City of a Specific Plan Amendment.

2.3.1.2.2 Residential Detached

Esperanza offers six different types of single family detached residential products for development within the Specific Plan area.

- SFD Conventional – Conventional single family detached residential units are proposed on lots ranging from 3,900 square feet to 4,900 square feet in size. Vehicular access is provided from interior streets and garages are set back from the front of the residence emphasizing the architectural elements forming the streetscene. These residential types will be developed at density levels between 5.56 to 6.18 dwelling units per net acre.
- SFD Cottage – Alley served single family detached residential dwelling units will be developed in two planning areas designed with an architectural orientation to the street by locating garages to the rear of residential units. Alley loaded residential areas will be developed at an average density of 7.89 dwelling units per net acre with a minimum lot size of 2,400 square feet.
- SFD 2 Pack – Residential single family detached development on minimum lots of 3,400 square feet in size will be developed in a 2 Pack configuration. Residential 2 Pack housing will be developed at a density of 6.84 dwelling units per net acre. Garages within this housing type are alternately placed to the rear of the lot or placed a significant distance from the street maintaining an architecture forward streetscene.

- SFD Courtyard – Two types of single family detached courtyard housing types are planned for Esperanza. Courtyard single family residential consisting of four units per courtyard will be developed at approximately 8.9 dwelling units per net acre. This type of housing will be developed around a 1 acre public park and will be served by public streets with private drive aisles accessing residential units developed around a common motorcourt. Courtyard single family residential courts of six units per courtyard will be developed at approximately 7.48 dwelling units per net acre. This type of courtyard housing will be developed around private streets and parks with private drive aisles serving residential units developed around a common motorcourt. The courtyard design planned for both housing types places garages in alternating side on and street facing conditions either minimizing or eliminating visibility of garages from the street.

2.3.1.3 Residential Attached

Two types of single family attached residential development products are planned within Esperanza. Alley loaded row townhomes designed around a private common green will be developed at approximately 14.05 dwelling units per net acre within PA 3 and at approximately 16.07 dwelling units per net acre in PA 11. Single family attached motorcourt townhomes will be developed at approximately 13.76 dwelling units per net acre. The motorcourt townhome residential housing type will be served by private streets with drive aisles providing access to a motorcourt serving 10 to 12 residential dwelling units. Both the alley loaded row townhome and the motorcourt townhome residential housing types are designed with garages located to the rear or turned to side on to the street preserving an architecturally interesting streetscene.

2.3.1.4 Parks, Trails, and Open Space

A centrally located 5.36 acre neighborhood park is planned to serve the Specific Plan area providing opportunities for informal active recreation such as soccer and baseball. Four additional parks ranging in size from .84 to 1.39 acres are provided offering opportunities for active and passive recreation and informal gathering among neighbors. Approximately 6.62 acres of the Specific Plan area will be developed as enhanced landscaped parkways along major streets serving the community. These enhanced parkways will include pedestrian walkways providing connectivity to and from the Specific Plan area and to the pedestrian network to be developed within the community, connecting all residential neighborhoods to parks. Within the townhome residential areas, private open space as well as private active recreation centers, including swimming pools and spas, will be provided.

2.4 AUTHORITY AND REQUIREMENTS

2.4.1 Authority

State of California Government Code, Title 7, Division 1, Chapter 3, Article 8, Section 65450-57 grants authority to cities to adopt Specific Plans for purposes of implementing the goals and policies of their General Plans. The Government Code specifies that Specific Plans may be adopted either by resolution or by ordinance and that the Specific Plan is required to be consistent with the General Plan. The City of Ontario will adopt the Esperanza Specific Plan by ordinance thereby establishing the zoning regulations for development of the Specific Plan area. The requirements of the Esperanza Specific Plan shall take precedence over the City of Ontario Development Code. In instances where the Esperanza Specific Plan is silent, the City of Ontario Development Code shall prevail.

LAND USE	ACRES
Residential Detached	**Residential Acres are Net [1]**
• RD 1 - 50 foot wide lots/PA-7 and PA-9	25.83 AC
• RD 2 – Typical 55 foot wide lots/ PA-8	19.26 AC
• RD 3 – 2 Pack lots/PA-10	14.62 AC
• RD 4 – Cottages 2,640 sf lots/PA-2 and PA-6	27.36 AC
• RD 5 – 4 Pack Courtyard/ PA-5	17.64 AC
• RD 6 – 6 Pack Courtyard & Rowtown/ PA-2 and PA-4	19.30 AC
Residential Attached	
• RD 7 – Row Townhomes/ PA-1, PA-3 and PA-11	30.67 AC
• RD 8 – Motorcourt Townhomes / PA-1 and PA-3	19.42 AC
Subtotal Residential:	**174.10 AC**
Other	
Neighborhood Park	5.36 AC
Pocket Parks	4.53 AC
Neighborhood Edge Buffers	6.62 AC
Roadways [2]	28.25 AC
SCE Easements and Well Sites	4.14 AC
Subtotal Other:	**48.90 AC**
PROJECT TOTAL	**223.00 AC**

NOTES:

1. *Net acres excludes all streets and uses listed as "Other Uses" but includes interior local streets and drive aisles.*
2. *Includes all Master Plan Streets, Street 'A' and Local Streets serving the Neighborhood Park and School Site.*

TABLE 1

Specific Plan Statistical Summary

2.4.2 Requirements of the Specific Plan

California Government Code Section 65451 sets forth the minimum requirements and review procedures for Specific Plans as follows.

A Specific Plan shall include a text and a diagram or diagrams, which specify all of the following in detail:

1. The distribution, location, and extent of the uses of land, including open space, within the area covered by the plan;
2. The proposed distribution, location, and extent and intensity of major components of public and private transportation, sewage, water, drainage, solid waste disposal, energy, and other essential facilities proposed to be located within the area covered by the plan and needed to support the land uses described in the plan;
3. Standards and criteria by which improvements will proceed, and standards for the conservation, development, and utilization of natural resources, where applicable;
4. A program of implementation measures including regulations, programs, public works projects and the financing measures necessary to carry out paragraphs 1, 2, and 3 above.
5. A statement of the relationship of the Specific Plan to the General Plan.

The Esperanza Specific Plan meets the requirements of the State of California Government Code.

2.5 DEVELOPMENT APPROVAL COMPONENTS

The components of the development approval process for Esperanza are discussed below.

2.5.1 Specific Plan

The Esperanza Specific Plan, when adopted, provides the zoning for the Specific Plan area. It serves as a "blueprint" for development by establishing the distribution of land use and criteria for development as set forth herein. The Esperanza Specific Plan also serves as the legal document to implement the City's General Plan.

2.5.2 Development Agreement

Unless done in a coordinated manner and with adequate fiscal planning, development projects within the ~~NMC~~ Ontario Ranch are likely to present a challenge in their implementation because of the lack of existing public facilities including street, sewerage, transportation, drinking water, school and utility facilities. California law has established a mechanism for ensuring the adequate provision of such facilities while at the same time providing assurances to applicants that, upon approval of the project, the applicants can proceed with their projects. Approval of this Specific Plan without a development agreement may result in a waste of resources, escalate the cost of housing to the consumer, and discourage investment in and commitment to comprehensive planning as envisioned by the City, which seeks to make maximum efficient utilization of resources at the least economic cost to the public.

Therefore, a statutory development agreement, authorized pursuant to California Government Code sections 65864 et seq., shall be required as part of the approval of this Specific Plan. For the above-mentioned reasons, the development agreement for this Specific Plan shall include, among other things, methods for financing acquisition and construction of infrastructure, acquisition and development of adequate levels of parkland, and schools, as well as the provision of adequate housing opportunities for various segments of the community consistent with the regional housing needs assessment. Such development agreement shall have been fully approved before the issuance of the first building permit for this project.

2.5.3 Subdivision Maps

A tentative tract map(s) will be approved by the City of Ontario for the Specific Plan area indicating the approximate location of lot lines, streets, and proposed grading. Following approval by the City of the tentative tract map(s), a final map(s) will be prepared. The final map(s) becomes a legal document that is recorded and defines legal parcels and lots that can be sold for development.

2.5.4 Development Plan Review

All development proposals for individual Planning Areas within the Specific Plan will be subject to the Development Plan Review process pursuant to Article 8 of the City's Development Code.

2.6 CEQA COMPLIANCE

A Project Environmental Impact Report (EIR) prepared by the City of Ontario for the Esperanza Specific Plan, in accordance with the California Environmental Quality Act (CEQA), addresses impacts associated with the Specific Plan and subdivision map(s). The EIR recommends mitigation measures to reduce impacts of the project to a less than significant level. The EIR has been prepared as a basis for the environmental review for all subsequent discretionary and ministerial actions.

2.7 RELATIONSHIP TO GENERAL PLAN AND ZONING

The City of Ontario ~~NMC~~ Ontario Ranch General Plan designates the Specific Plan area for development of the following land uses:

Land Use Designation	Approximate Acres (Gross)
Residential – Low Density (4.6 d.u. per gross acre)	95.1 AC
Residential – Medium Density (12.0 d.u. per gross acre)	114.8 AC
Residential – High Density (18.0 d.u. per gross acre)	13.1 AC
Total	**223 AC**

The General Plan establishes a target development capacity of ~~1,456~~ 1,652 residential dwelling units as further described below:

Single Family	878 dwelling units
Multi-Family	774 dwelling units
Total	**1,652 dwelling units**

The table below provides a summary of how the Esperanza Specific Plan land use plan implements the General Plan target development capacity.

GENERAL PLAN TARGET DEVELOPMENT CAPACITY			
Land Use	**Target DUs**	**Gross Acres**	**Gross Density**
Residential Medium Density	1,535 DU	127.9 AC	12.0 DU/AC
Residential Low Density	285 DU	95.1 AC	3.0 DU/AC
Total	**1,820 DU**	**223.0 AC**	8.2 **DU/AC**
ESPERANZA SPECIFIC PLAN LAND USE DISTRIBUTION			
Land Use	**Target DUs**	**Gross Acres**	**Gross Density**
Residential Medium Density	1,209 DU	127.9 AC	9.5 DU/AC
Residential Low Density	443 DU	95.1 AC	4.7 DU/AC
Total	**1,652 DU**	**223.0 AC**	7.4 **DU/AC**

The General Plan allows for development of multi-family residential units as small lot, single family detached units with a variety of parcel sizes and product types on property designated for multi-family uses, including "Residential-Medium" and "Residential-High" density housing.

The City of Ontario has pre-zoned the Specific Plan area as SP/AG (Specific Plan AG preserve). The zoning designation of "SP" requires the Specific Plan area to implement the objectives of the ~~NMC~~ Ontario Ranch General Plan land uses.

The Esperanza Specific Plan is designed to meet the requirements of the State of California Government Code and the City of Ontario ~~NMC~~ Ontario Ranch General Plan. The City of Ontario will adopt the Esperanza Specific Plan by ordinance, thereby establishing the zoning regulations for the development of the Specific Plan area. The requirements of the Specific Plan shall take precedence over the City of Ontario Development Code. In instances where the Specific Plan is silent, the City of Ontario Development Code shall prevail.

Section 3. Existing Conditions

This section describes the existing physical conditions within and surrounding the Esperanza Specific Plan area.

3.1 Property Ownerships

The Specific Plan area is comprised of approximately 223 gross acres. Richland Communities owns approximately 85 gross acres and RCCD Development owns the remaining 138 acres of the Specific Plan Area. Exhibit 4, "Existing Property Ownerships and Williamson Act Contract Status" illustrates the property ownerships within the Esperanza Specific Plan boundary.

3.2 Williamson Act Contracts

Exhibit 4, "Existing Property Ownerships and Williamson Act Contract Status" illustrates the status of Williamson Act Contracts within the Esperanza Specific Plan boundary.

3.3 Existing Improvements

The Specific Plan area historically has been used for agricultural purposes, primarily dairy and crop farming, and is currently in development as illustrated on Exhibit 5, "Existing and Surrounding Land Uses." Existing improvements within northern and eastern portions of the Specific Plan area controlled by RCCD Development, are currently in development. All dairy related structures in this area have been demolished and removed. Existing agricultural related facilities such as modular structures and feedlots located within the properties owned by Richland Communities have also been demolished and removed in preparation for development.

3.4 Surrounding Land Use Characteristics

Land uses adjacent to the Specific Plan area include:

North	Future Planned Residential Community and Mixed Use Development
West	Rural Residential and Dairy Operations
South	Planned Residential Communities
East	Commercial, Industreial, and Vacant Land

The City of Ontario ~~NMC~~ Ontario Ranch General Plan designates the undeveloped areas located directly to the west of the Specific Plan area as "LMDR - Low Medium Density Residential" and "MDR - Medium Density Residential". The undeveloped areas located to the north of the Specific Plan are designated as "MDR - Medium Density Residential" and "MU - Mixed Use". Land adjacent to the Specific Plan area to the east is located within Riverside County and is developed as a mixed use/retail center. Land south of the Specific Plan area is also located in Riverside County and developed with single family and low density residential land uses. Exhibit 6, "Land Use Designations" illustrates the proposed land uses adjacent to the Specific Plan area within the ~~NMC~~ Ontario Ranch and the County of Riverside.

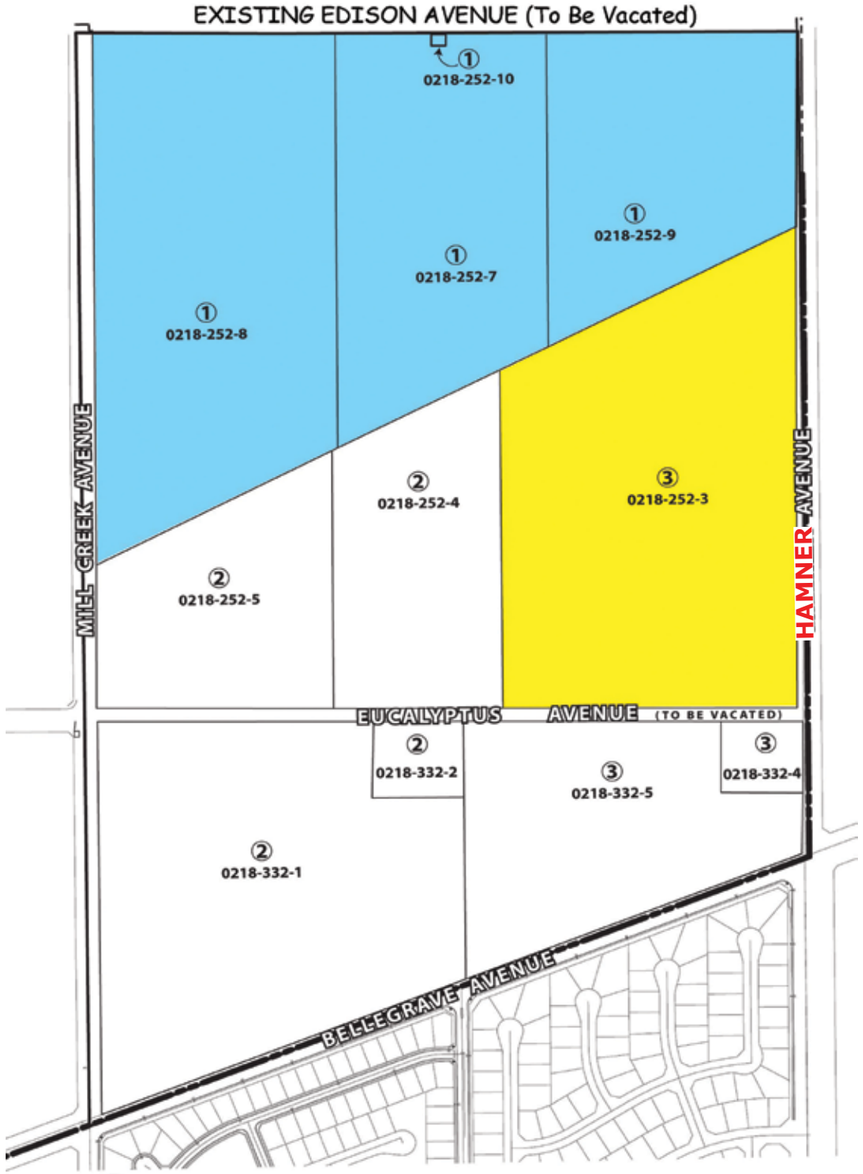

EXHIBIT 4
Existing Property Ownerships and Williamson Act Contract Status

EXHIBIT 5
Existing and Surrounding Land Uses

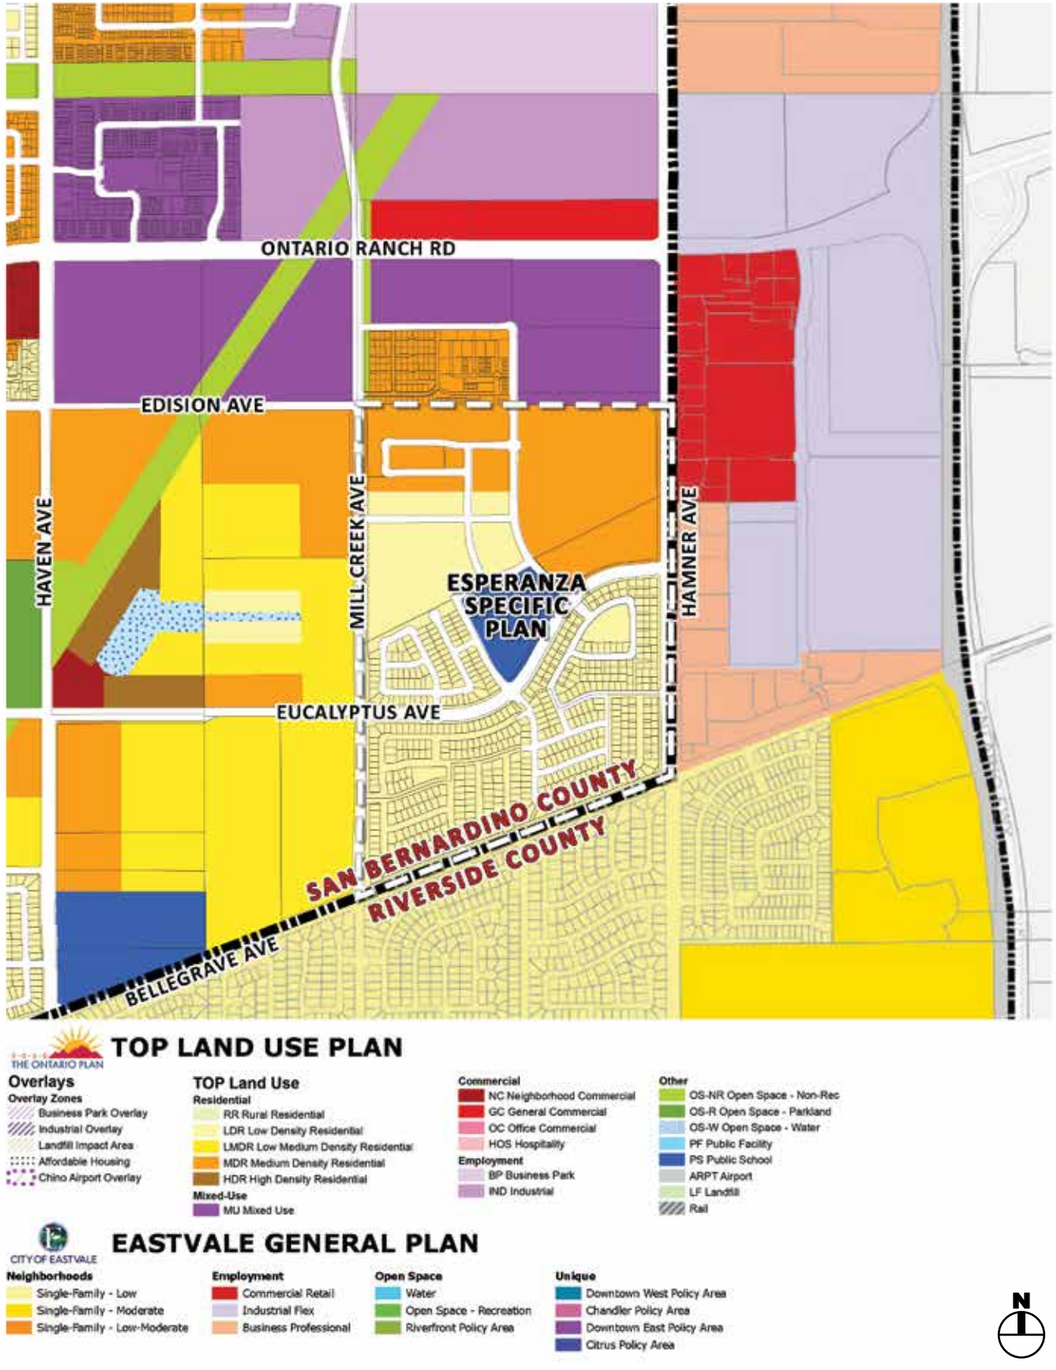

Exhibit 6
Land Use Designations

3.5 Topography

The Specific Plan area is relatively flat and generally slopes from the northeast to southwest as illustrated on Exhibit 7, "Existing Site Topography and Well Locations." The site falls at an average slope of approximately two percent (2%). There is an existing earthen drainage interceptor ditch paralleling the southerly boundary of the site and an existing drainage basin located in the southwest corner of the Specific Plan area.

3.6 Existing Circulation and Access

Interstate 15 (I-15) is located one-half mile east of the Specific Plan area. Access to I-15 is located approximately 1.5 miles southeast of the Specific Plan area, via Hamner and Limonite Avenues. The Specific Plan area is approximately 1.8 miles south of State Route 60.

Bellegrave Avenue, designated as a "Standard Arterial" in the City of Ontario's ~~NMC~~ Ontario Ranch General Plan, borders the Specific Plan on the south. The south half of Bellegrave Avenue within Riverside County has been improved with 55 feet of paving and a 21-foot parkway as part of the residential development to the south. ~~Milliken~~ Hamner Avenue, designated as a "Divided Arterial Parkway 1-1" borders the Specific Plan area on the east. ~~Milliken~~ Hamner Avenue is partially improved with two lanes for traffic and 38 feet of paving. Mill Creek Avenue, designated as a "Collector" street, borders the Specific Plan area to the west. Mill Creek Avenue is partially improved, north of Eucalyptus Avenue with two lanes for traffic and 20 feet of paving. Existing Edison Avenue borders the Specific Plan to the north and is partially improved with two lanes for traffic and 20 feet of paving. Existing Eucalyptus Avenue bisects the Specific Plan area and is partially improved with two lanes for traffic and 20 feet of paving.

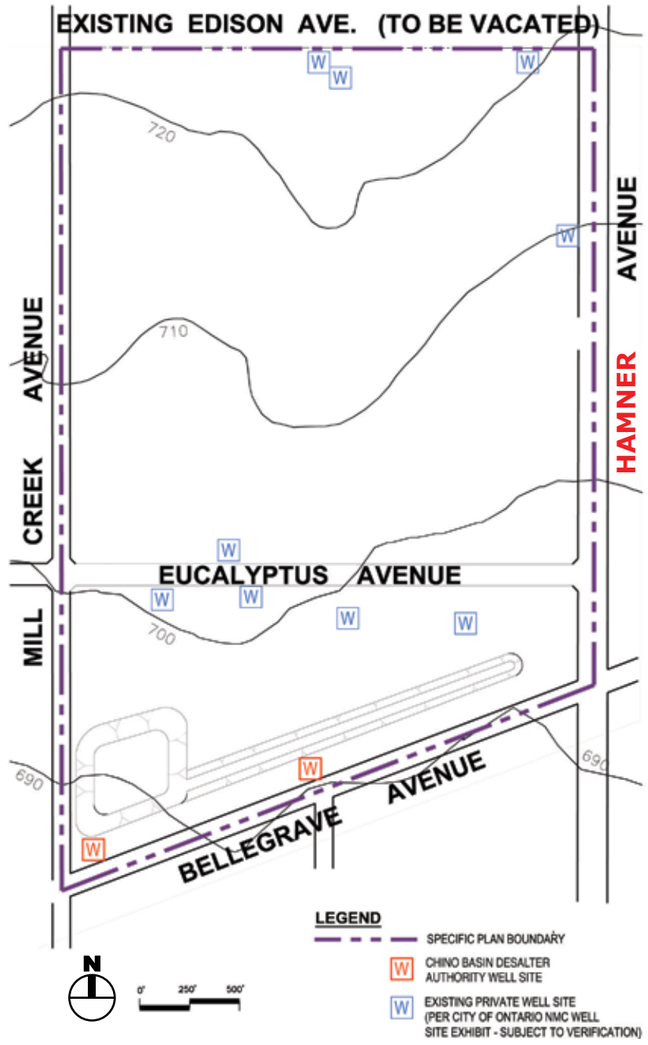

Exhibit 7
Existing Site Topography and Well Locations

3.7 EXISTING INFRASTRUCTURE / UTILITIES / PUBLIC SERVICES

3.7.1 Water

The Specific Plan area is located within the 925' Zone. The City of Ontario does not have water facilities in the vicinity of the project. The nearest City of Ontario water mains are in Riverside Drive, approximately 1.5 miles north of the Specific Plan area. These existing water mains have not been sized to serve development in the 925' Zone. On site residential use on the site are served by private wells. Existing well locations within the Specific Plan area are illustrated on Exhibit 7, "Existing Site Topography and Well Locations." A well use/destruction plan and schedule for all existing private or agricultural wells shall be submitted prior to issuance of permits for any construction activity. If a private well is actively used for water supply, the developer shall submit a plan to abandon the well and connect residential users to the City's domestic water system and agricultural users to the City's recycled water system when available. Well destruction requires permitting from the County Health Department. A copy of the permit and Well Completion Report DWR form 188 shall be provided to the City's Development Engineering Department and the Utilities Engineering Department prior to issuance of grading and/or building permits. If the developer proposes temporary use of an existing agricultural well for purposes other than agriculture, such as grading or dust control during project construction, the developer shall make a formal request to the City of Ontario for such use prior to issuance of permits for the construction activity. Upon approval, the developer shall enter into an agreement with the City of Ontario and pay any applicable fees as set forth by the agreement.

An existing 16" high-pressure water main is located along the east side of ~~Milliken~~ Hamner Avenue, adjacent to the Specific Plan area, in the County of Riverside, and is owned by Jurupa Community Services District, (JCSD). JCSD also owns a 30" water main in Bellegrave Avenue east of ~~Milliken~~ Hamner Avenue and a 30" water main in Hamner Avenue south of Bellegrave Avenue which provides water to the existing residential areas on the south side of Bellegrave Avenue.

3.7.2 Sewer

The City of Ontario does not have sewer facilities in the vicinity of the Specific Plan area. Existing on site residences utilize private septic systems. Prior to grading operations, existing septic tanks and subsurface disposal fields will need to be abandoned in accordance with Department of Health Services requirements. An existing 42" Santa Ana Regional Interceptor (SARI) sewer main extends southerly in Hamner Avenue south of Bellegrave Avenue. The SARI line is primarily available for industrial wastewater, which is conveyed to Orange County for treatment and disposal. JCSD is currently utilizing the SARI line for the disposal of residential wastewater, and has excess capacity for this purpose.

3.7.3 Drainage

The County Line Channel is located within Bellegrave Avenue. The channel is a City of Ontario Master Plan facility intended to carry urban runoff from those properties tributary to the north, to the Cucamonga Creek Channel. With the exception of the County Line Channel, the existing storm drain system throughout the Specific Plan area, is generally unimproved and consists primarily of open earthen swales along area roadways and the earthen drainage interceptor ditch paralleling the southerly boundary of the Specific Plan area which outlets into the existing drainage basin located at the southwest corner of the site. The drainage basin outlets into an existing Riverside County storm drain line in Mill Creek Avenue, formerly known as Cleveland Avenue. The on site basin and the connection to the Riverside County storm drain line are interim improvements. Upon development of the Specific Plan area the basin will be eliminated and the storm flows from the Specific Plan area will be tributary to the County Line Channel.

3.7.4 Recycled Water

The Specific Plan area is located within the 930 Zone. The City of Ontario does not have recycled water facilities in the vicinity of the project. As a part of the development of the Specific Plan area, the construction of new recycled water system facilities will be required by the developer consistent with the City's approved Recycled Water Master Plan.

3.7.5 Electricity

The Esperanza Specific Plan is located within the service territory of Southern California Edison Company.

3.7.6 Natural Gas

The Southern California Gas Company provides natural gas service within the Specific Plan area. Facilities in this area include an existing 6-inch main on ~~Milliken~~ Hamner Avenue; an existing 2-inch main on Eucalyptus Avenue; and an existing 2inch main on Cleveland Avenue (future Mill Creek Avenue).

3.7.7 Communication Systems

Verizon provides telephone service within the Specific Plan area.

3.7.8 Solid Waste

The City of Ontario Public Works Agency currently, by request, provides solid waste collection and disposal to the ~~NMC~~ Ontario Ranch.

3.8 HYDROLOGY

Since most of the Specific Plan area has been in agricultural use, only a limited portion of the Specific Plan area is now covered with impervious surfaces. Normal rainfall to the area is able to percolate through on-site soils and does not result in high volumes of surface runoff as is typically associated with urban use. During periods of heavy rainfall, when ground surfaces are saturated, surface runoff is collected in the existing storm drains, culverts, and retention basins located within the Specific Plan area.

With the exception of major regional flood control channels such as the Cucamonga Creek Channel, intended primarily to carry urban runoff, the existing storm drain system throughout the Specific Plan area is generally unimproved and consists primarily of open earthen swales along area roadways or curbed roadway surfaces.

Ground waters within the ~~NMC~~ Ontario Ranch; as a whole, contain high concentrations of salt, attributable to historic agricultural activities such as dairy farming. The high organic content of on-site soils has contributed incrementally to the degradation of surface and groundwater quality. Removal of the organic materials, which constitute by-products of those dairy operations, and compliance with National Pollution Discharge Elimination System (NPDES) and other storm water permit requirements, will beneficially impact regional water quality.

3.9 GEOLOGY AND SOILS

The City of Ontario ~~NMC~~ Ontario Ranch General Plan EIR identifies the Specific Plan area as underlain by Pleistocene age (older than 12,000 years) and Holocene age (less than 12,000 years old) alluvial deposits. The youngest surficial deposit is eolian sands (Qhs), comprising wind-blown sands having fine- to medium-sized grains.

These loose sands form sheets and low-dune deposits that have been stabilized by vegetation. These deposits are exposed in the eastern portion of the ~~NMC~~ Ontario Ranch area and extend westward to an area defined generally by a diagonal line extending from Harrison Avenue, within Riverside County, on the south to Vineyard Avenue on the north.

It is expected that most of these materials will be uncemented and subject to consolidation when saturated under structural loads. Erosion potential is considered high. Foundation and backfill suitability should be satisfactory with proper over-excavation, mixing with a finer-grained binder material, and compaction.

The Specific Plan area contains delhi series soils, as mapped by the United States Department of Agriculture, Soil Conservation Service in 1971 and 1980. Delhi series soils have been used for agriculture, primarily for grapes and citrus, since the 1800's. As part of the EIR prepared for the Esperanza Specific Plan additional geologic and soils information for the Specific Plan area will be provided.

3.10 Seismicity

The City of Ontario ~~NMC~~ Ontario Ranch General Plan EIR identified numerous earthquake faults within a 50-mile radius of the Specific Plan area. Major mapped faults include, but are not limited to, the Chino, Whittier and North Elsinore, and Cucamonga Faults. For the "maximum probable earthquake" (MPE), defined as the 100-year event normally considered in the design of noncritical structures, the values range from about 0.13 to 0.20 g (i.e., the unit force of gravity). In the design of certain critical or important facilities such as hospitals and dams, the "maximum credible earthquake" (MCE) event is considered. For the three faults, the MCE should yield an estimated peak horizontal acceleration in the range of 0.33 to 0.52 g.

A zone of concentrated, relatively low-magnitude seismicity extends to the southwest from the San Jacinto fault zone (Rialto-Colton branch) along what is referred to an "inferred fault near Fontana." Where the "inferred fault" (Fontana trend) stops, this zone of micro-seismicity continues in a southwesterly to westerly direction terminating in the Sphere of Influence area. It is expected that the MPE for this fault structure could produce horizontal accelerations in the range of 0.3 to 0.5g. More distant faults are capable of larger earthquakes with a higher probability of occurrence. The San Andreas fault is expected to generate a MCE event every 150 to 200 years, yielding a peak horizontal ground acceleration of approximately 0.21 to 0.26 g in the ~~NMC~~ Ontario Ranch.

In accordance with the "Uniform Building Code" (UBC), the Esperanza Specific Plan area is located within Seismic Zone No. 4. UBC procedures have been designed to ensure that all subsequent development occurs in a safe manner relative to those known hazards. As part of the EIR prepared for the Esperanza Specific Plan, additional seismicity analysis will be prepared.

3.11 Vegetation

The Specific Plan area has been extensively used for agricultural operations including dairy use. Those areas not in active agricultural production are occupied by rural residential housing. The natural vegetation and soils conditions that once occurred throughout the Specific Plan area have been significantly altered through agricultural uses, leaving little or no native vegetation. As part of the EIR prepared for the Esperanza Specific Plan, additional vegetation analysis will be prepared.

Section 4. Land Use

4.1 Introduction

The Esperanza Specific Plan offers a variety of residential housing types within a community designed around a system of parks located within easy walking distance from each residential Planning Area. Pedestrian and bicycle connectivity is provided through a system of street separated walkways and on-street bicycle trails linking each residential Planning Area and connecting to parks located within Esperanza.

Residential development, comprised of approximately ~~164.08~~ 174.10 net acres, is designed to address a variety of lifestyles, such as singles, families, executives and "empty nesters." Single family detached housing types will include conventional detached homes on lots varying between 3,900 and 4,900 square feet in size, homes designed in a 2-Pack configuration, alley loaded cottage homes, and two types of courtyard homes. Attached housing will include row townhomes and motorcourt townhomes designed around a common motorcourt.

Parks comprise approximately 9.89 net acres of Esperanza and are distributed throughout the community offering recreational opportunities within close proximity to each residential neighborhood.

The Land Use Plan shown in Exhibit 8, "Land Use Plan" depicts the proposed land uses for Esperanza. The "Land Use Summary," Table 2, provides a tabulation of land uses by acreage and residential density.

4.2 Residential Use

The Esperanza Specific Plan permits the development of up to ~~1,594~~ 1,652 residential dwelling units providing single-family detached homes and single family attached homes. Residential land use areas are contained within 11 distinctive Planning Areas linked by a network of street separated sidewalks and on-street bicycle paths connecting all the Planning Areas to a centrally located park.

4.2.1 Variety of Housing Types

Esperanza provides a mix of housing types to address a variety of lifestyle choices and economic segments. Single family detached and single family attached residential products, with a variety of architectural styles, will be offered within Esperanza. Altogether, a total of ~~1,594~~ 1,652 residential dwelling units will be developed at an overall average density of ~~7.65~~ 7.41 dwelling units per gross acre.

4.2.1.1 Single Family Detached – RD-1 (50' wide lots)

The Esperanza Specific Plan allows for the development of approximately 158 conventional single-family detached dwelling units at an average density of approximately 6.12 dwelling units per net acre. The RD-1 neighborhoods will be designed with access to homes from the local street with an emphasis on architectural orientation toward the street. Garage configurations will include shallow recessed garages, mid or deep recessed garages, split garages, and tandem garages, to highlight the home's architecture and create a more attractive streetscene. RD-1 homes are located within Planning Areas 7 and 9.

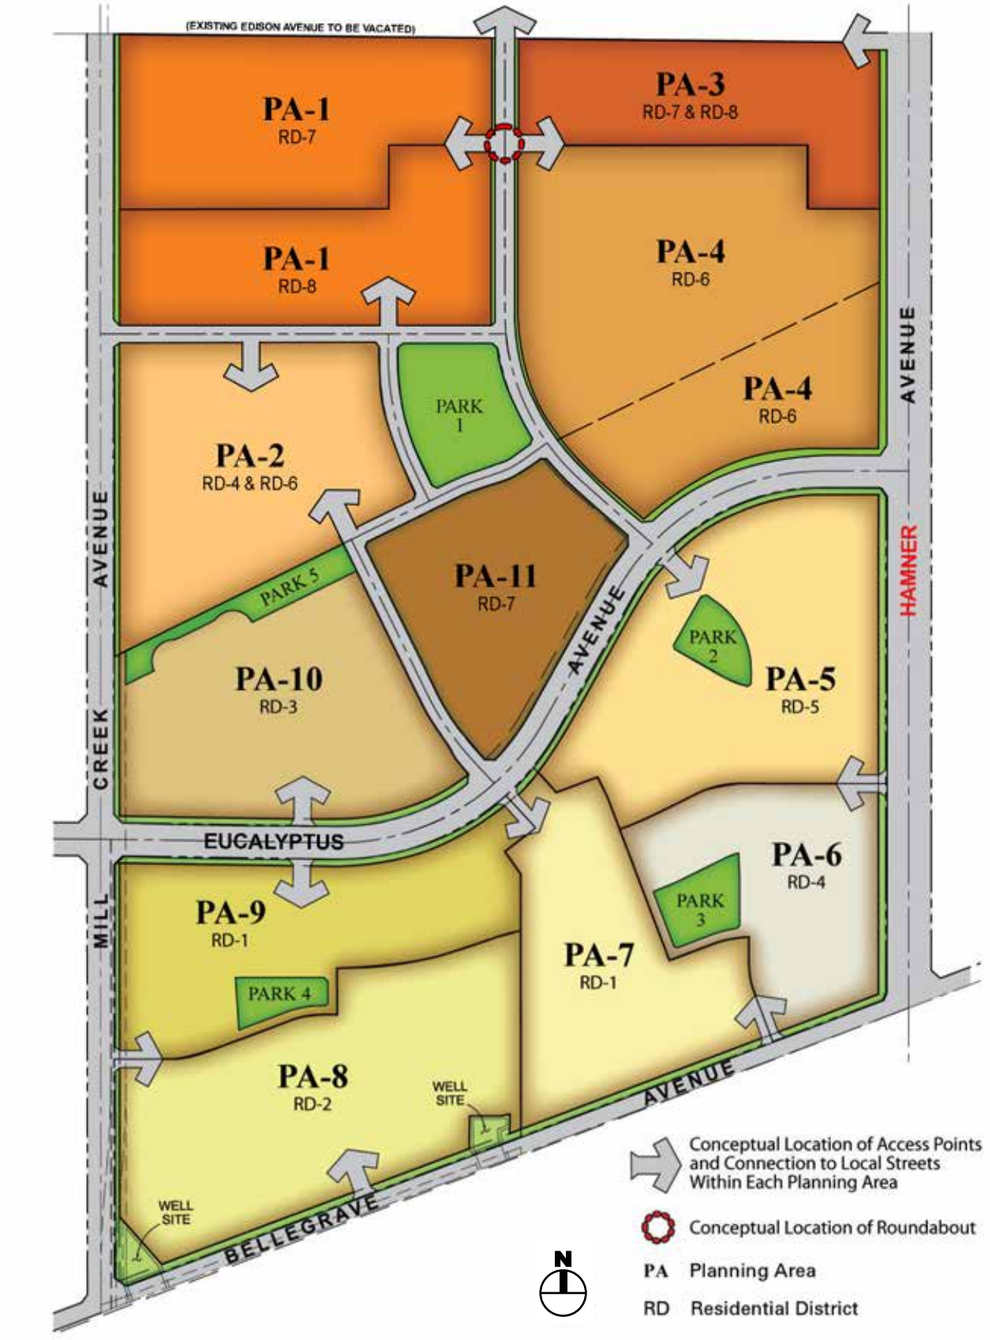

EXHIBIT 8
Land Use Plan

LAND USE	UNITS	GROSS ACRES	UNITS/ GROSS ACRES	NET ACRES	UNITS/ NET ACRES
Residential Uses

NOTES:

1. *Gross residential acres do not include the 13.10 gross acres for a school site.*
2. *Net residential acres are gross acres less parks, neighborhood edge buffers, roadways, and easements and net area for school site.*

** PA-2 includes 3.45 AC of Park 1*

TABLE 2
Land Use Summary

2051

4.2.1.2 Single Family Detached – RD-2 (55' wide lots)

The Esperanza Specific Plan allows for the development of approximately 107 conventional single-family dwelling units at a density of approximately 5.56 dwelling units per net acre. The RD-2 neighborhood is designed with access from the local street with garage configurations which include recessed garages, mid or deep recessed garages, split garages and tandem garages to present an architecture forward streetscene. RD-2 homes are planned within Planning Area 8.

4.2.1.3 Single Family Detached – RD-3 (2-Pack)

Approximately 100 residential 2-Pack dwelling units will be developed on approximately 14.62 acres at a density of 6.84 dwelling units per net acre with a minimum lot size of 3,400 square feet. By configuring the units in a 2 Pack design, a larger usable sideyard area is provided for each unit and garages can be either located to the rear of the lot or set back from the front of the homes at a distance, which preserves the streetscene for home frontage. Residential housing in a 2 Pack design is planned for Planning Area 10.

4.2.1.4 Single Family Detached – RD-4 (Cottage Homes)

Esperanza will allow for approximately 243 single family detached cottage home residential dwelling units developed on approximately 30.81 acres on lots of approximately 2,400 minimum square feet at an average density of 7.89 dwelling units per net acre. This alley loaded residential development will be designed to embrace the street and maintain an architectural orientation for the street. Cottage single family detached residential dwelling units are proposed for Planning Areas 2 and 6 within Esperanza.

4.2.1.5 Single Family Detached or Attached – RD-5 and RD-6 (Courtyard & Row-Townhomes)

Two types of single family detached housing in a courtyard design are proposed for Esperanza. A total of 157 dwelling units will be developed as RD-5 residential housing within a module comprised of 4 residential units surrounding a common motorcourt. RD-5 residential products are proposed for 17.64 acres of Esperanza within Planning Area 5 at a density of 8.90 dwelling units per net acre. A total of 303 dwelling units will be developed as RD-6 residential housing within a module comprised of 6 residential units surrounding a common motorcourt or row townhomes. RD-6 residential products are proposed for 19.92 acres of Esperanza within Planning Areas 2 and 4 at a density of 16.72 dwelling units per net acre. Garages are accessed from the motorcourt or alley, which allows for the fronts of garages to be turned away from the street or set back far enough from the street that the residential architecture is the predominant streetscene feature.

4.2.1.6 Single Family Attached – RD-7 (Row Townhomes)

RD-7 residential product proposed for Esperanza consists of 319 units of attached row and motorcourt townhomes within Planning Area 1, 156 units of attached row townhomes to be developed on approximately 11.1 acres at density of 14.05 dwelling units per net acre within Planning Area 3 and ~~46~~ 161 row townhomes at approximately 16.07 dwelling units per net acre in PA 11. RD-7 residential product is designed with alley access maintaining an architectural streetscene.

4.2.1.7 Single Family Attached – RD-8 (Motorcourt Townhomes)

RD-8 residential product proposed for Esperanza consists of 238 units of attached townhomes designed around a common motorcourt. RD-8 residential product will be developed on approximately 19.42 acres at a density of 13.76 dwelling units per net acre within Planning Area 3.

4.2.2 Neighborhood Design

The community plan for Esperanza offers a neighborhood design reminiscent of older traditional Southern California neighborhoods. The design features described below are intended to create a strong identity and sense of neighborhood for the residents of Esperanza.

A "modified grid" style of street design in residential neighborhoods with sidewalks separated by landscaped parkways provide visual interest, slow traffic on each street by providing alternate routes, and enhance a pedestrian orientation for neighborhoods. Sidewalks separated from streets by landscaped parkways promote pedestrian mobility and encourage opportunities for neighbors to meet and greet each other along the street.

A human scale of architecture within Esperanza will enhance the pedestrian friendly character of the community. Architectural features such as front porches, railings, enhanced entries, a mix of materials and textures, and authentic detailing on elements such as windows and doors, columns, balconies, and lighting combine to create a human scale of residential architecture.

Innovative garage designs will be utilized in order to de-emphasize the visual impact of garage doors on the streetscene. Such design techniques will include shallow, mid, or deep recessed garages , split-garages, turn-in garages, tandem garages, garages located on rear alleys, and garages located around a common courtyard in order to de-emphasize their view from the street.

4.3 PARKS

Parks are provided throughout the Esperanza Specific Plan area within easy walking distance to any residential neighborhood. Exhibit 9, "Master Plan of Parks," illustrates the types and locations of parks planned for Esperanza.

4.3.1 Neighborhood Park

An approximately 5.39 net acre centrally located neighborhood park will be developed as part of Esperanza. The neighborhood park will include picnic areas, tot lots, trails, and open play fields.

4.3.2 Pocket Parks

An approximately .84 net acre park will be provided for recreational use within Planning Area 9. An approximately 1.29 net acre park will be located within Planning Area 6, a one acre park will be provided within Planning Area 5, and an approximately 1.39 net acre linear park will be provided in Planning Area 10. Private open space areas of approximately ½ acre in size will be provided as part of the development of Planning Areas 1, 3 and 4. The exact size and locations of these private open space areas will be determined as part of the final site design for these neighborhoods.

4.4 SCHOOL SITE

A 10.02 net acre site was originally reserved within the Esperanza Specific Plan for the development of an elementary school to serve the K-5 school age needs of the Ontario community. In the event the school site in Esperanza is not purchased by the Mountain View School District the 10.02 acre site may revert to a residential zone for the development of an additional ~~46~~ 161 row townhome residential dwelling units pursuant to the provisions established in Section 7, "Implementation."

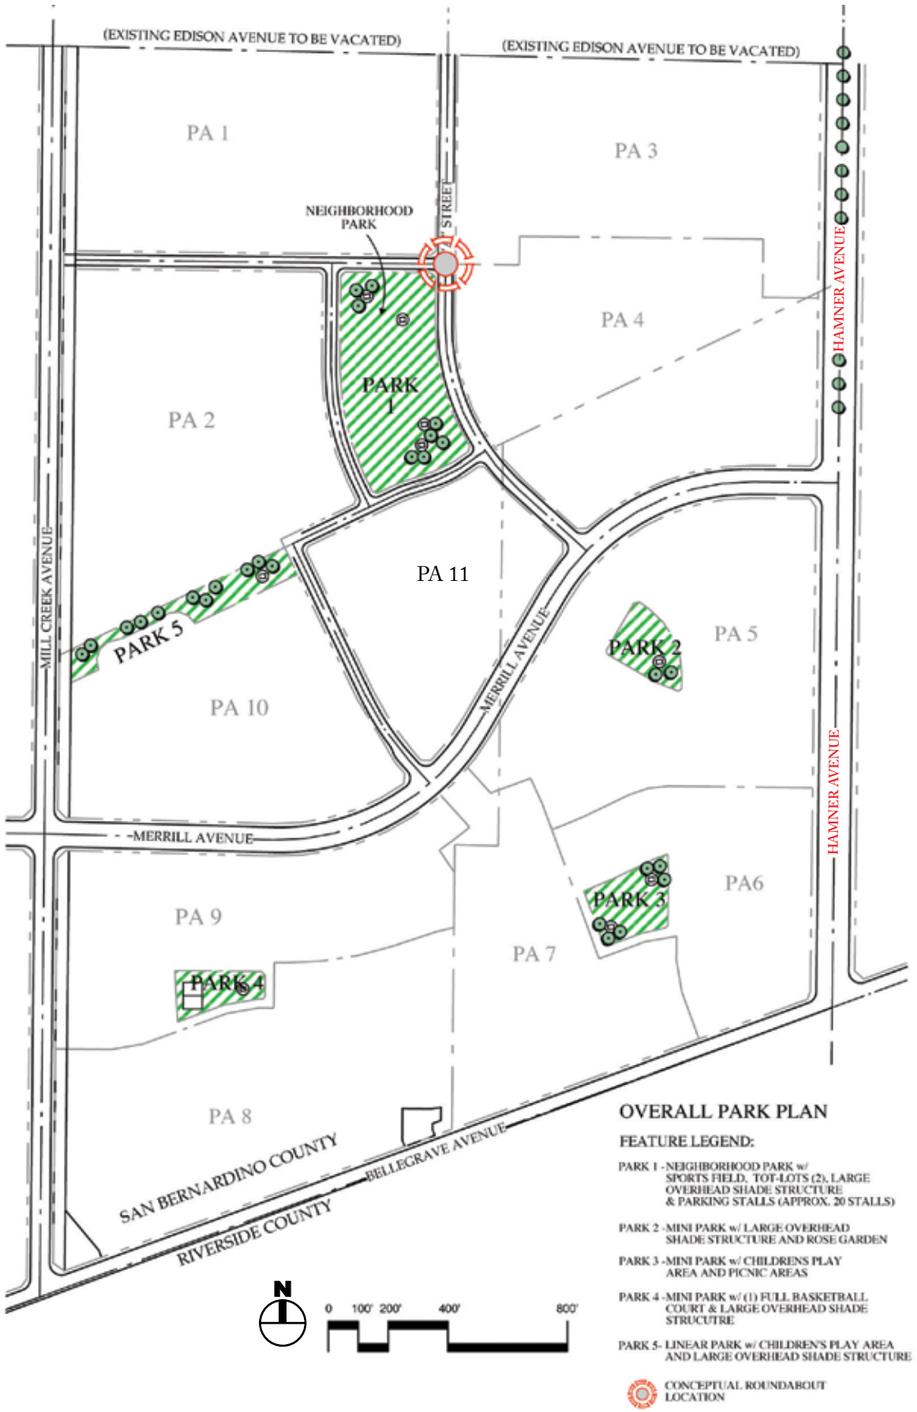

Exhibit 9
Master Plan of Parks

Section 5. Infrastructure and Services

The infrastructure, utilities, and public services to be provided as part of the development of the Esperanza Specific Plan are discussed in this section.

5.1 Circulation

The circulation plan for Esperanza reinforces the objectives of providing a traditional neighborhood design. In addition to providing safe and efficient movement of vehicular traffic through the project, the Circulation Plan also provides a safe environment for pedestrian movement and bicycle traffic reducing the reliance on the automobile as a means of travel. In addition, transit stops and bus turnouts will be provided as required by Omnitrans, along the Master Plan streets, which are a part of the Esperanza community. The "Master Circulation Plan," Exhibit 10 establishes the hierarchy and general location of roadways within Esperanza.

The minimum design speeds to be used for centerline curve radii, super elevation, corner sight distance; vertical and horizontal alignment and sight distance, etc. are listed below:

Hamner Avenue	50 m.p.h.
Eucalyptus Avenue	40 m.p.h.
Bellegrave Avenue	45 m.p.h.
Mill Creek Avenue	40 m.p.h.
"A" Street	45 m.p.h.

5.1.1 Master Planned Roadways

The Esperanza Specific Plan is bounded on the east, south, west, and is bisected by four City of Ontario Master Plan roadways, which will provide access to and from the Specific Plan area. Additional rights of way may be needed at critical intersections to accommodate additional left and right turn lanes pursuant to the recommendations of the traffic study prepared for the Ontario Ranch. Hamner Avenue bounds the Specific Plan area to the east and is the county line between San Bernardino and Riverside Counties; Bellegrave Avenue bounds the Specific Plan area to the south and is also the county line between San Bernardino and Riverside Counties; Mill Creek Avenue bounds the Specific Plan area to the west, and Eucalyptus Avenue bisects the Specific Plan area in an east/west direction.

Where the Specific Plan limits extend to the centerline of any roadway, the development project shall construct the full half-width street improvement, plus a 14-foot travel lane with a 5-foot paved shoulder beyond the centerline. If the roadway includes a raised median, the project shall construct the full median, and the additional 14-foot travel lane with a 5-foot paved shoulder. The 14-foot travel lane is a minimum that may be increased as necessary pursuant to the requirements of the City Engineer.

5.1.1.1 Hamner Avenue

Hamner Avenue abuts the Specific Plan area on the east. Hamner Avenue is a designated Divided Arterial Parkway 1-1 roadway with a total right-of-way of 148 feet. Hamner Avenue will carry regional traffic to and from Esperanza and will provide access to the specific plan area along the eastern boundary of the specific plan area. Exhibit 11, "Hamner Avenue" illustrates the improvements for Hamner Avenue. The developer of the Specific Plan area adjacent to Hamner Avenue will be responsible for all on site improvements for the westerly half of Hamner Avenue as determined by the City Engineer and pursuant to the mitigation measures identified in the EIR and the Conditions of Approval established on the approved tentative maps for the project. Bus turnouts will be required along Hamner Avenue to the satisfaction of the City Engineering Department and Omnitrans. Parking will be prohibited on Hamner Avenue.

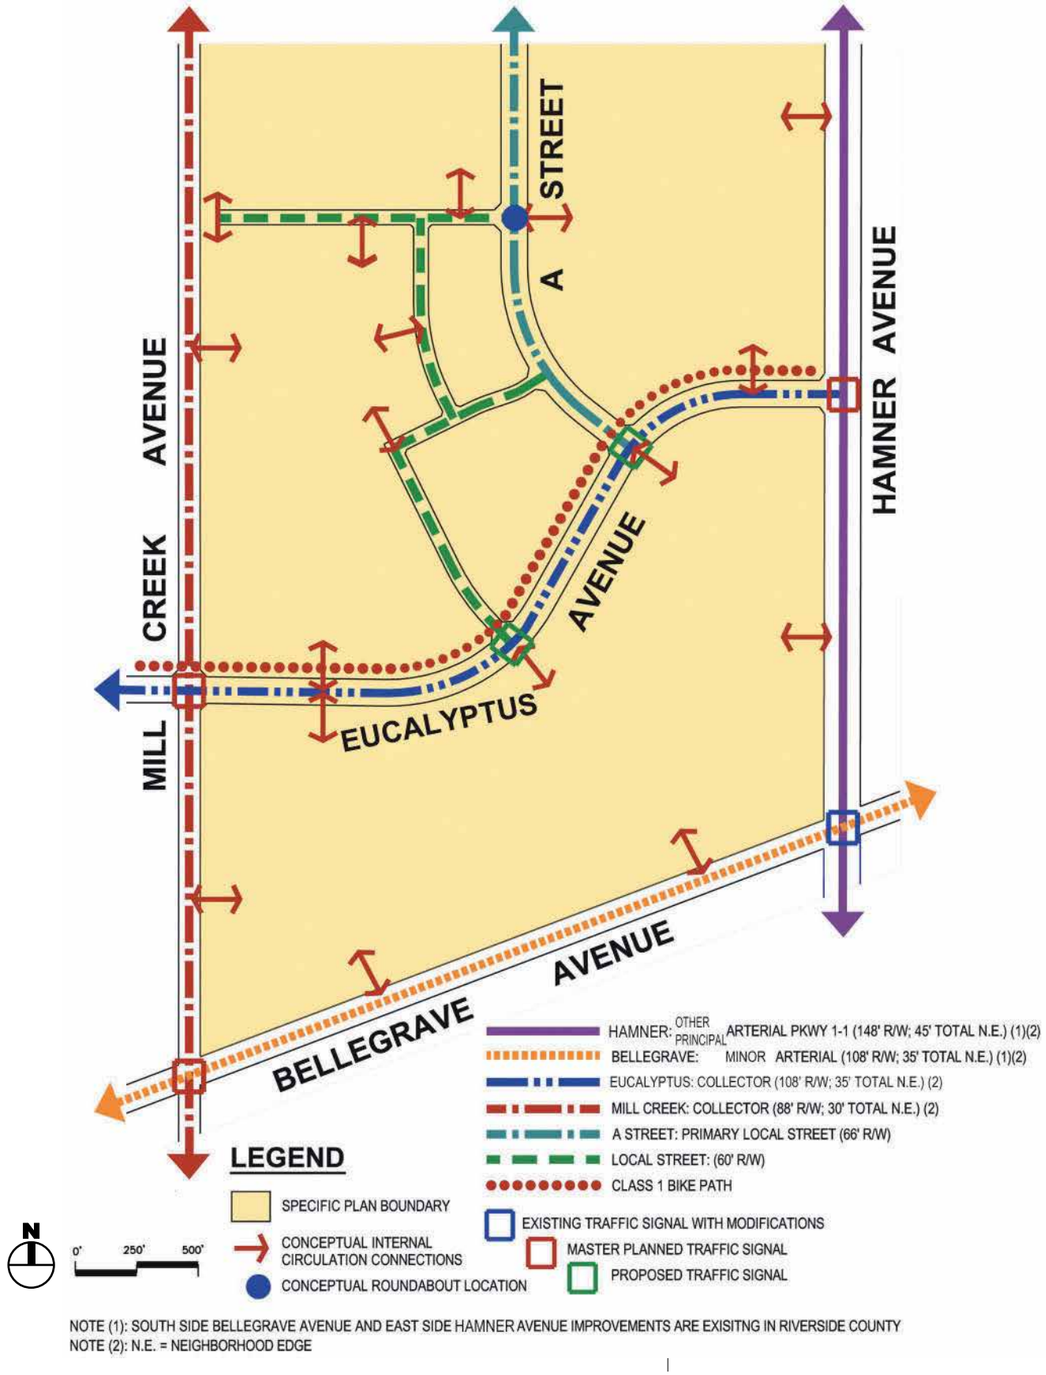

Exhibit 10
Master Circulation Plan

5.1.1.2 Bellegrave Avenue

Bellegrave Avenue, a Standard Arterial roadway, abuts the Specific Plan area on the south and carries regional east/west traffic to and from Esperanza. Improvements to the south side of Bellegrave Avenue currently exist. Exhibit 12, "Bellegrave Avenue" illustrates the half-street improvements for Bellegrave Avenue. The developer will be responsible for all on site improvements for the northerly half of Bellegrave Avenue. Phasing of the improvements will be determined by the City Engineer and pursuant to the mitigation measures identified in the EIR and the Conditions of Approval established on the approved tentative maps for the project. Bus turnouts will be required along Bellegrave Avenue to the satisfaction of the City and Omnitrans.

5.1.1.3 Mill Creek Avenue

Mill Creek Avenue abuts the Specific Plan area on the west. Mill Creek Avenue is a designated Collector Street with an ultimate right-ofway of 88 feet, with 64 feet of paved area and a 12-foot parkway on each side of the street, to include a 5-foot sidewalk separated from the street by a 7-foot landscaped area. In addition a landscaped buffer of 18 feet in width will be provided between the back of the sidewalk and the residential community wall. The rightof-way improvements required to Mill Creek Avenue are illustrated in Exhibit 13, "Mill Creek Avenue." The developer(s) will be responsible for the off site improvements as determined by the City Engineer and pursuant to the mitigation measures identified in the EIR and the Conditions of Approval established on the approved tentative maps for the project. Bus turnouts will be required along Mill Creek Avenue to the satisfaction of the City and Omnitrans. Parking will be prohibited on Mill Creek Avenue. Exhibit 13, "Mill Creek Avenue" illustrates these improvements.

5.1.1.4 Eucalyptus Avenue

Eucalyptus Avenue bisects the Specific Plan area and is designated as a Standard Arterial roadway. Exhibit 14, "Eucalyptus Avenue" illustrates the Eucalyptus Avenue full-street improvements. The developer will be responsible for all improvements to Eucalyptus Avenue. The phasing of these improvements will be determined by the City Engineer and pursuant to the mitigation measures identified in the EIR and the Conditions of Approval established on the tentative maps for the project. Parking will be prohibited on Eucalyptus Avenue.

5.1.2 Local Streets and Alleys

Within the Specific Plan area neighborhood streets of varying design will provide access and circulation through the community. Many of the neighborhoods will be served by private alleys, which are located in the rear of residences, in order to maintain a traditional, "architecture forward" streetscape for the community. Public and private local streets within residential areas are designed to distribute vehicular traffic from the public arterial and collector streets adjacent to the Specific Plan area into and through residential neighborhoods. Local streets and private alleys proposed for Esperanza are illustrated on Exhibit 15, "A Street" – Primary Local Street" Exhibit 16, "Local Streets and Cul-De-Sac Sections;" Exhibit 17, "Private Neighborhood Streets;" and Exhibit 18, "Private Alley and Drive Aisle Sections;" and discussed below.

5.1.2.1 "A" Street

"A Street" bisects the Specific Plan area in a north/south direction and is designated as a Primary Local Street. "A Street" will provide internal access and connectivity between residential areas and the Neighborhood Park. Exhibit 15, "A Street" – Primary Local Street" illustrates the improvements planned for "A Street."

5.1.2.2 Local Neighborhood Streets and Cul-De-Sac Streets

A network of local public neighborhood streets and cul-de-sac streets will provide internal circulation throughout Esperanza for residents. Exhibit 16, "Local Streets and Cul-de-sac Sections" illustrates these street concepts.

5.1.2.3 Private Neighborhood Streets

Private neighborhood streets will provide internal circulation within single family attached and single family courtyard product areas. Water, recycled water, and sewer utilities may be designated as "public utilities" if located within public or private streets. All public utilities within private streets shall be designed per City standards and contained within acceptable easements. The CC&Rs for the project shall contain language requiring all work proposed by the HOA within such easements to be plan checked and inspected by the City, including applicable fees. Generally, utilities will not be accepted as public within alleys, parking areas or driveways. The extent to which said utilities will be accepted as public utilities shall be at the full discretion of the City during final design review. Private Neighborhood Streets planned for Esperanza are illustrated in Exhibit 17, "Private Neighborhood Streets."

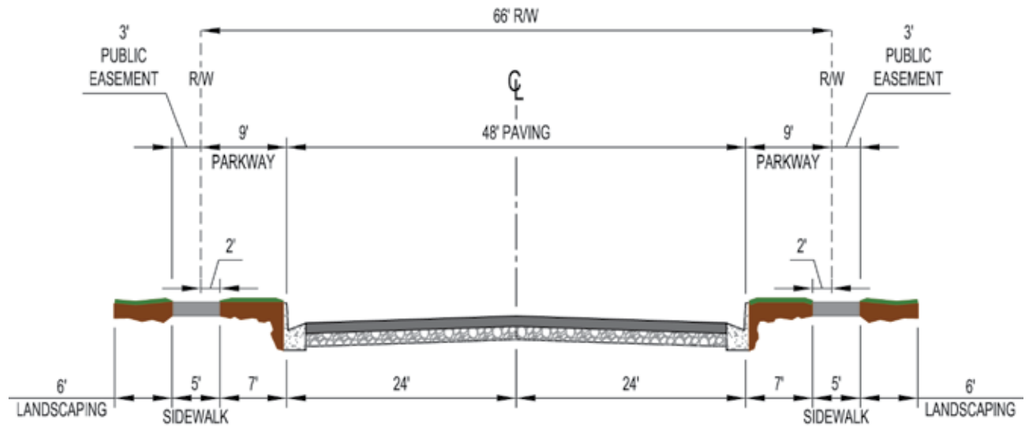
5.1.2.4 Private Alleys

Private alleys within the residential development will have a minimum of 20 feet of paved area with 5 feet of landscaping on each side. In areas where fire access is required, the minimum paved area will be 24 feet with 3 feet of landscaping on each side. Alleys with "dead end" conditions will be a maximum length of 150 feet. Parking is prohibited along alleys. Tapers will be incorporated at the point where private alleys intersect with public streets. The taper width will be determined per the approval of City of Ontario Fire Department, Engineering Department and Planning Department.

5.1.2.5 Private Drive Aisles

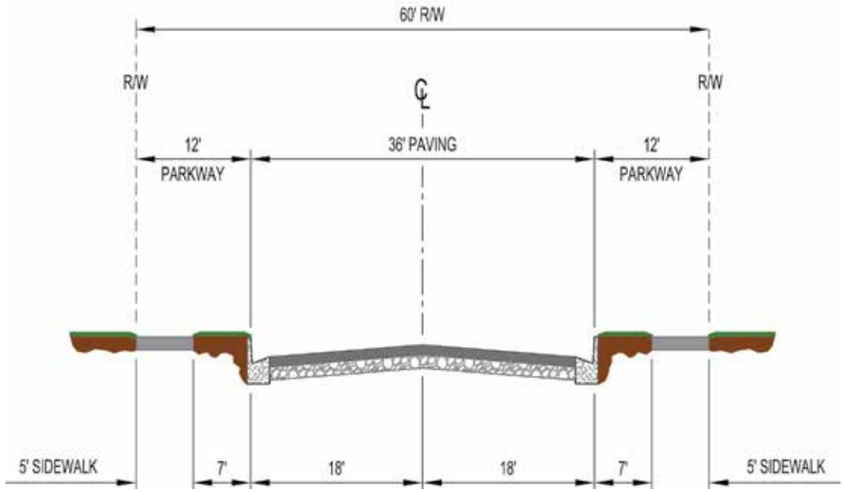
Private drive aisles are planned with a total paved width of 24 feet and an 18 foot deep parking area on each side.

Water, recycled water, and sewer utilities may be designated as "public utilities" if located within public or private streets. All public utilities within private streets shall be designed per City standards and contained within acceptable easements. The CC&Rs for the project shall contain language requiring all work proposed by the HOA within such easements to be plan checked and inspected by the City, including applicable fees. Generally, utilities will not be accepted as public within alleys, parking areas or driveways. The extent to which said utilities will be accepted as public utilities shall be at the full discretion of the City during final design review. Private Alleys and Private Drive Aisles planned for Esperanza are illustrated in Exhibit 18, "Private Alley and Drive Aisle Sections."



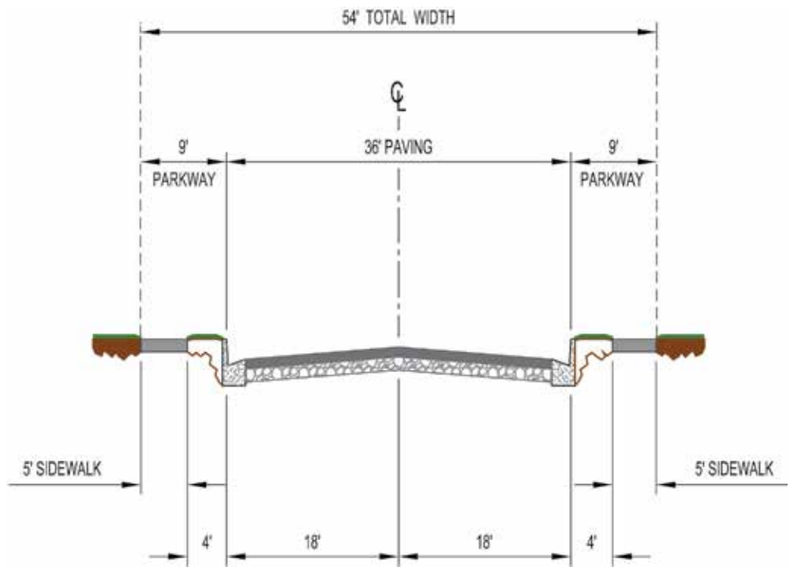
"A" Street
(Parking Permitted)

Exhibit 15
"A" Street - Primary Local Street



Note: Parking may be restricted within 100-150 feet of ~~Merrill~~ Eucalyptus Avenue, 'A' Street, Mill Creek Avenue and Hamner Avenue Intersections.

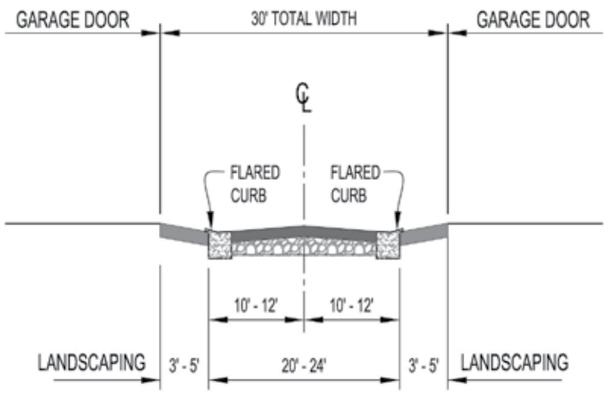
Exhibit 16
Local Street and Cul-De-Sac Sections



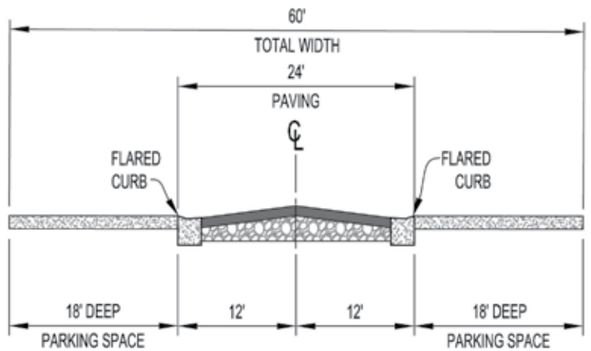
Private Neighborhood Streets
(Located in Planning Areas 1, 3, 4, 5 & 11)

Note: All public utilities within private streets shall be designed per City standards and contained within acceptable easements. The extent to which said utilities will be accepted as public utilities shall be determined at the full discretion of the City during final design reviews.

Exhibit 17
Private Neighborhood Streets



Private Alley
(On Street Parking is Prohibited)



Private Drive Aisle

Notes:

1. *Final Alley Design is subject to approval by the City Engineer, Fire Department and Planning Department.*
2. *All public utilities within private streets shall be designed per City standards and contained within acceptable easements. The extent to which said utilities will be accepted as public utilities shall be determined at the full discretion of the City during final design review.*

Exhibit 18
Private Alley and Drive Aisle Sections

5.1.3 Traffic Calming

The Esperanza Specific Plan includes design features within residential neighborhoods to encourage drivers to proceed slowly and reduce traffic noise on streets contributing to safe and livable neighborhoods in which to walk, bike, and drive.

Traffic calming within the Esperanza Specific Plan is designed to address the following goals:

- Reduction in traffic speeds.
- Reduction in traffic related noise.
- A safe and pedestrian friendly circulation system to encourage walking.

The following design features will be implemented in the roadways within Esperanza.

Local Neighborhood Street Design

Neighborhood streets within Esperanza are designed in a "modified grid" with landscaping on either side within parkways to add interest in the street encouraging drivers to slow their travel speed and observe their surroundings. Incorporating tapered intersections for local streets as illustrated in Exhibit 19, "Neighborhood Street Tapers," may reduce traffic speeds on local residential streets.

Alleys Tapers

Private alleys within Esperanza will consist of 20-24 feet of paved travel area with 3-5 feet of landscaping on each side. Speeds for traffic entering the alleys and cut through traffic can be reduced by incorporating tapers at the entrance to these alleys as illustrated on Exhibit 20, "Alley Tapers."

Landscaping

Landscaping adjacent to streets within the Specific Plan area will combine the use of shade trees, shrubs, and groundcover adjacent to sidewalks to create a more intimate streetscape encouraging drivers to reduce driving speeds. The landscape concept for Esperanza is designed to contribute to a sense of the street system as a pedestrian protected area to promote slower traffic speeds.

Roundabouts

A roundabout will be incorporated into the street design at the intersection of two local streets as illustrated in Exhibit 10, "Master Circulation Plan." The use of a roundabout rather than a conventional all-way stop at this intersection will maintain traffic flow by requiring traffic entering the roundabout to yield to traffic traveling within the roundabout. The lack of a stop sign allows entering traffic to merge with the flow of traffic.

5.1.4 Pedestrian Circulation

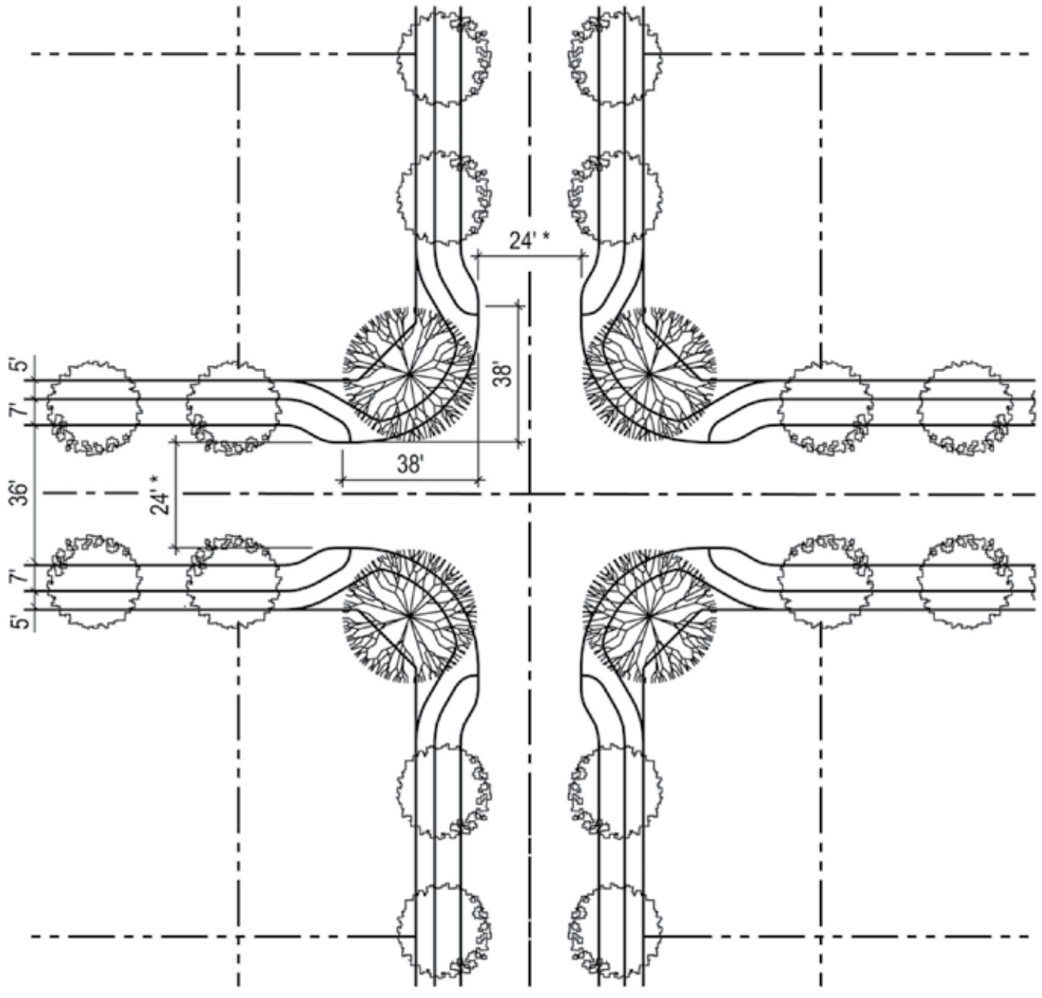
Off-street pedestrian circulation will be available throughout Esperanza by means of the interconnected, paved sidewalk system within the roadway right-of-way, separated from vehicular travel lanes by a landscaped parkway. The Esperanza pedestrian system provides connectivity among residential neighborhoods to the Neighborhood Park and pocket parks within the Specific Plan area.

5.1.5 Bicycle Trails

Bicycle trails are an integral element to creating accessibility and mobility within Esperanza. A Class 1 bike trail will be provided within the parkway on the north side of Eucalyptus Avenue and an on-street bike trail will be provided on both sides of Eucalyptus Avenue connecting to on-street bike trails provided on local residential streets within the Specific Plan to connect all residential neighborhoods to one another, and to the Neighborhood Park located towards the center of the Specific Plan boundary.

Class II on-street striped bike lanes shall be provided on roadways within the Esperanza Specific Plan area as determined by City Engineer.

The Master Plan for pedestrian and bicycle circulation for Esperanza is illustrated on Exhibit 21, "Pedestrian and Bicycle Circulation Plan."



* (TAPER WIDTHS SUBJECT TO PLANNING, ENGINEERING, & FIRE DEPARTMENT APPROVAL)

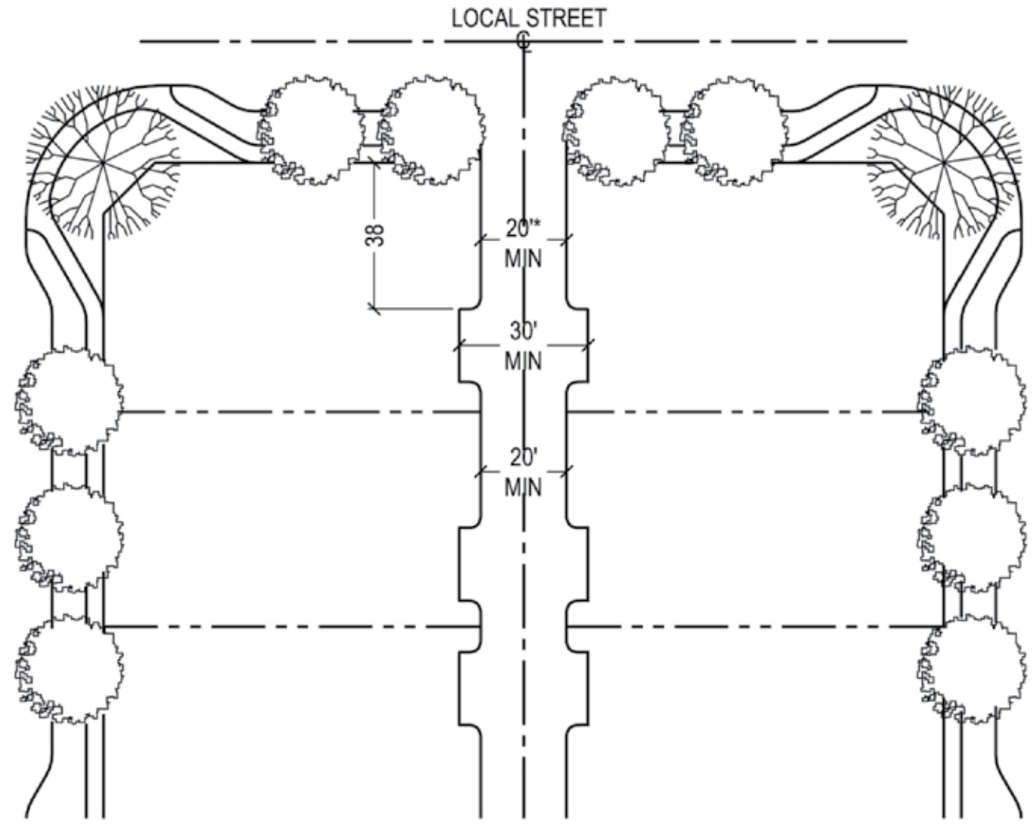
Neighborhood Street Tapers



(*) TAPER WIDTHS ARE SUBJECT TO PLANNING, ENGINEERING, & FIRE DEPARTMENT APPROVAL

Exhibit 20
Alley Tapers

Exhibit 21
Pedestrian and Bicycle Circulation Plan

5.2 Domestic and Recycled Water Master Plan

Domestic water will be provided by the City of Ontario. The Ontario Ranch Water Master Plan Phase 1 (Phases 1a–1d) identifies new water facilities to include one reservoir, three groundwater wells and potable and reclaimed transmission water lines. Construction of the on site and off site Master Plan water service improvements shall be the responsibility of the developer(s) and is required prior to issuance of building permits for Esperanza. Two of the waterlines included in the Phase 1 improvements are a 24 inch water line in Hamner Avenue, adjacent to the site on the east, and a 24-inch water main in Eucalyptus Avenue, which goes through the center of the project.

5.2.1 Domestic Water

The project lies within the 925 Zone. New domestic water mains to be constructed as part of the development of Esperanza will include a 12-inch Master Plan water main in Mill Creek Avenue, from the northerly boundary of the Specific Plan to Eucalyptus Avenue. Within the Specific Plan area, a network of 8-inch and 12' inch water lines will be installed. The On Site water system will include connections to two different transmission mains.

The City is in the process of updating the Water Master Plan. Any changes resulting from the updated Master Plan will be incorporated into the Esperanza Water Master Plan.

There are two groundwater wells located adjacent to Bellegrave Avenue to the north. These wells and water transmission lines in Bellegrave Avenue, are owned and operated by the Chino Basin Desalter Authority (CDA). As part of the development of the Specific Plan area, improvements shall be made, to the satisfaction of the CDA and the City of Ontario, surrounding the two existing well sites located at the north side of the ultimate right of way of Bellegrave Avenue. Improvements shall include, but are not limited to, perimeter fencing, relocation of existing utilities within the ultimate right of way, street landscaping within the right of way fronting the project, and driveway approaches. The Master Plan for domestic water for Esperanza is illustrated on Exhibit 22, "Conceptual Domestic Water Master Plan." The conceptual on site domestic water system is illustrated on Exhibit 23 "On Site Domestic Water Plan."

5.2.2 Recycled Water System

The Inland Empire Utilities Agency (IEUA) will ultimately provide recycled water from IEUA's RP-1 and RP-1 outfall parallel located in Carpenter Avenue via City of Ontario recycled water mains as presented in the Water Master Plan for the Ontario Ranch. The Specific Plan area is located within the 930 Zone. The construction phase source of recycled water to serve the Specific Plan area will be conveyed to the 930 Zone from the 1050 Zone via a Master Plan pressure reducing station located in Archibald Avenue north of Chino Avenue. The master planned recycled water mains to be constructed as part of the development of Esperanza will include the following:

- A 12-inch recycled water line in Mill Creek Avenue from the northerly boundary of the Specific Plan area to Eucalyptus Avenue.
- An 8-inch recycled water line in Hamner Avenue from the northern boundary of the Specific Plan area to Eucalyptus Avenue.
- An 8-inch recycled water line in Eucalyptus Avenue from Hamner Avenue to Mill Creek Avenue.
- A 12-inch line in Eucalyptus Avenue from Mill Creek Avenue to Haven Avenue.
- A 16-inch line in Eucalyptus Avenue from Haven Avenue to Archibald Avenue.
- A 16-inch line in Archibald Avenue from Eucalyptus Avenue to Edison Avenue.
- A 20-inch line in Archibald Avenue from Edison Avenue to Schaefer Avenue.
- A 36-inch line in Archibald Avenue reducing to a 24-inch line from Schaefer Avenue to Chino Avenue.
- Utilization of the existing 10-inch main which extends from the IEUA facility adjacent to Westwind Park to the intersection of Archibald Avenue and Schaefer Avenue.

The developer will provide all recycled water lines required to serve the Specific Plan area.

Within the Specific Plan area, 8-inch recycled water mains are proposed to serve the development. The City's goal is to maximize the use of recycled water including but not limited to irrigation of parks, schools, street landscaping, recreation trails, common area residential landscaping and commercial/industrial landscaping edges. The parks and landscaped areas that will be irrigated with recycled water and the calculated recycled water demand are contained in the report titled, "Esperanza Water and Recycled Water Hydraulic Analysis." An Engineer's Report approved by the City and the Department of Health is required prior to the use of recycled water.

The conceptual Master Plan for recycled water for Esperanza is illustrated on Exhibit 24, "Conceptual Recycled Water Plan." The conceptual on site recycled water system is illustrated on Exhibit 25, "Conceptual On Site Recycled Water System."

5.3 Sewer Master Plan

Sewer service for Esperanza will be provided by the City of Ontario. The City's Sewer Master Plan identifies ultimate sewer facilities from the Specific Plan area to the Eastern Trunk Sewer. These Master Planned facilities include a 15inch sewer main extending from the northerly boundary of the Specific Plan area, along Mill Creek Avenue increasing to a 21-inch sewer main at Eucalyptus Avenue and a 24-inch sewer main along Bellegrave Avenue westerly to the Master Planned Eastern Trunk Sewer. Completion of these Master Plan improvements is required to provide the ultimate sewer service to Esperanza. Within the Specific Plan area a network of 8-inch and 15-inch sewer lines will be installed. The sizing and alignment of all off site sewer improvements necessary for mitigation of impacts shall follow the results of the approved Sanitary Sewer Technical Study.

The Conceptual Sewer Master Plan for Esperanza is illustrated on Exhibit 26, "Sewer Master Plan." The conceptual on site sewer lines are illustrated on Exhibit 27, "Conceptual On Site Sewer."

5.4 Drainage

The City's Storm Drain Master Plan identifies new storm drain facilities to serve the Specific Plan area extending northerly from the County Line Channel within Mill Creek Avenue. Completion of these Master Plan improvements will provide permanent storm drain service to Esperanza.

That portion of the Master Planned line, which lies within Esperanza, will be constructed as a part of the development of the project. These improvements include a 90-inch storm drain in Mill Creek Avenue transitioning to a 102inch storm drain, connecting to the County Line Channel.

On site storm drains will be constructed to convey the on site flows to the proposed Master Planned storm drain line in Mill Creek Avenue. The locations and size of on site storm drains within Esperanza will be established in accordance with City requirements as part of the approval by the City of Ontario of tentative tract maps for the Esperanza Specific Plan area.

The Drainage Master Plan for Esperanza is illustrated in Exhibit 28, "Storm Drain Master Plan." The size and location of the proposed storm drain may change based on the final design.

5.4.1 NPDES Compliance

The grading and drainage of the Esperanza Specific Plan area shall be designed to detain, filter and treat surface runoff, in a manner and combination which is practical, to comply with the most recent requirements of the San Bernardino County NPDES Storm Water Program's Quality Management (WQMP) for significant new development projects. The objective of the WQMP for this project is to minimize the detrimental effects of urbanization on the beneficial uses of receiving waters, including effects caused by increased pollutants and changes in hydrology. These effects may be minimized through the implementation of site designs that reduce runoff and pollutant transport by minimizing impervious surfaces and maximizing on-site infiltration, Source Control Best Management Practices (BMP's) and/or either on-site Structural Treatment Control BMP's, or participation in regional or watershed-based Treatment Control BMP's.

Prior to the issuance of a grading or construction permit, a Storm Water Pollution Prevention Plan (SWPPP) will also be prepared. The SWPPP will be prepared to comply with the California State Water Resources Control Board's (State Water Board) current, "General Permit to Discharge Storm Water Associated With Construction Activity" and the current Area Wide Urban Storm Water Runoff (Regional NPDES Permit). The SWPPP will identify and detail all appropriate Best Management Practices (BMP's) to be implemented or installed during construction of the project.

In addition to the preparation of a SWPPP for construction-related activities, and as part of the approval of any grading plans within the Specific Plan Area, the applicant will be required to submit a Water Quality Management Plan (WQMP) on the regional model form provided by the City. The WQMP shall identify and detail all Site Design BMP's, Source Control BMP's and Treatment Control BMP's to be implemented or installed at this site in order to reduce storm water pollutants and site runoff.

An off site regional stormwater runoff treatment facility with capacity to accept and treat drainage from portions of the Specific Plan Area has been constructed. This regional treatment facility will be part of an overall solution for storm water treatment within this planned development area. Projects with reserved treatment capacity allocations sin the regional facility will utilize this off-site facility as their primary BMP for addressing urban runoff water quality and hydro-modification impacts, in their respective WQMPs. If a project cannot obtain treatment capacity in the regional stormwater treatment facility, alternative on-site or off-site Low Impact Design BMBs will be required based on the must current MS4 Permit requirements.

5.5 Schools

The Mountain View School District is the school district serving the K-8 school needs of Esperanza. The Chaffey Joint Union High School District serves the 9-12 school age needs of the Specific Plan area. Additional elementary, middle, and high schools are needed to serve the needs of school age children within the Ontario Ranch. An elementary school site has been proposed within the Esperanza Specific Plan and a middle school site has been proposed in Planning Subarea 24. Colony High School is located at the southwest intersection of Mill Creek Avenue and Riverside Drive and a future high school has been proposed in Planning Subarea 23. Development of the Esperanza Specific Plan area will generate an estimated student population as follows (based on student generation numbers supplied by the City of Ontario, "School Generation for Ontario Ranch Subareas," July 2, 2004. The developer(s) of Esperanza will be required to pay school fees as required by State of California.

Grades K- 5
Generation Factor 0.38/D.U.
0.38 x 1594 = 606

Grades 6-8
Generation Factor 0.22/D.U.
0.22 x 1594 = 351

Grades 9-12
Generation Factor 0.20/D.U.
0.20 x 1594 = 319

5.6 Public Utilities

5.6.1 Natural Gas

The Gas Company will provide natural gas to the Specific Plan area. Gas mains will be installed to the Specific Plan area by the Gas Company as necessary.

5.6.2 Electricity

Southern California Edison will provide electricity to the Specific Plan area from existing facilities in the vicinity of the Specific Plan area. Proposed new facilities to serve the project will be owned and operated by the City of Ontario and located underground. Existing lines within the Specific Plan area shall be placed underground by developer and according to the City of Ontario adopted ordinance.

5.6.3 Telecommunications

The City of Ontario will be providing OntarioNet, fiber-to-the-home. OntarioNet is a fiber-optic telecommunications system capable of providing advanced Internet/data services to all homes and businesses within the Ontario Ranch. OntarioNet will provide community related services including: traffic management; on-line civic services; meter reading; educational services; and a variety of other community services. Based on the demographics of the Ontario Ranch and the traffic issues into Orange and Los Angeles Counties, the demand for telecommuting in the Ontario Ranch is anticipated to be significant. OntarioNet and the high-speed data services it provides will allow residents of the Esperanza Specific Plan to effectively telecommute to their jobs and in general provide a significant economic benefit to Ontario. Verizon currently provides telephone service within the Specific Plan area and can provide telecommunication service if they choose to do so.

5.6.4 Solid Waste

The City of Ontario provides solid waste collection services for the Ontario Ranch and will service the Specific Plan area. The project will comply with Municipal Code Section 6-3.314, "Commercial Storage Standards" and Section 6-3.601, "Business Recycling Plan" for the use of any commercial bin service for apartment development. All residential development shall comply with Municipal Code Section 6-3.308.9 (a) and (d), "Residential Receptacles, Placement" for curbside automated container service. The project shall comply with Municipal Code Article 6, "Recycling Requirements for Specified Business Activity", Section 6-3.601 Business Recycling Plan, and Section 6-3.602, "Construction and Demolition Recycling Plan." All site development shall comply with the City of Ontario refuse collection standards. All project sites shall be designed to meet all the Integrated Waste Department's requirements, including the requirements for Sizing of Storage, Location of Collection Area, Accessibility for Collection Vehicles, and Collection of Sorted/ Diverted Waster Types including Organics.

5.7 Grading Concept

The site falls at an average slope of approximately two percent (2%). The Grading Concept for Esperanza is to work with the existing topography to maintain natural grade and elevations wherever possible. The grading operation for the Specific Plan area will generally consist of the removal of any manure remaining from dairy operations, clearing and grubbing, demolition of existing structures, and moving of surface soils to construct building pads and streets. Additionally, where slope conditions are present, the property shall be located at the top of the slope. In areas adjacent to a ridgeline or in moderate slope areas, dwelling units and structures should be sited to:

- Use the natural ridgeline as a backdrop for structures;
- Use landscape plant materials as a backdrop; and
- Use structure to maximize concealment of cut slope.

If retaining walls are required, the following criteria shall be used:

- Exposed walls and fences facing roadways shall be no greater than 3-feet retaining (9-foot total wall) in height, except as necessary for acoustical purposes to satisfy the intent of the noise ordinance.
- Where retaining walls or fences face roadways, they shall be built, when feasible, of decorative materials consistent with the wall theme of the neighborhood.

The Conceptual Grading Plan, as illustrated in Exhibit 29, "Conceptual Grading Plan," will provide for a balance of cut/fills for the site Grading plans for each tract in the Specific Plan area will be reviewed and approved by the City of Ontario Building, Planning, and Engineering Departments prior to the issuance of grading permits. All grading plans and activities will conform to the City grading ordinance and dust and erosion control requirements.

Section 6. Development Regulations

6.1 Introduction

The provisions contained herein will regulate design and development within the Esperanza Specific Plan.

6.2 Definition of Terms

The meaning and construction of words, phrases, titles, and terms shall be the same as provided in the City of Ontario Development Code Article 2, "Definitions," unless otherwise specifically provided herein. The definitions of product types shall be those defined in Section 4, "Land Use" within the discussion of each respective product type. The definition of architectural and design terms shall be the same as those provided in the City of Ontario Glossary of Design Terms which follows the City of Ontario Development Code.

6.3 Applicability

The development regulations contained herein provide specific standards for land use development within the Esperanza Specific Plan area. Regulations address residential land uses and provide for general landscaping regulations. Application of the following regulations is intended to encourage the most appropriate use of the land, ensure the highest quality of development, and protect the public health, safety, and general welfare. Whenever the provisions and development standards contained herein conflict with those contained in the City of Ontario Development Code, the provisions of the Esperanza Specific Plan shall take precedence. Where the Esperanza Specific Plan is silent, City codes shall apply. These regulations shall reinforce specific site planning, architectural design, and landscape design guidelines contained in Section 8, "Design Guidelines" of the Esperanza Specific Plan.

6.4 Administration

The Esperanza Specific Plan, upon adoption, will serve as the implementation tool for the General Plan as well as the zoning for the Specific Plan area. The Esperanza Specific Plan Development Regulations address general provisions, permitted uses, and development standards for the community.

6.5 General Site Development Criteria

The following general site development criteria shall apply to all land development proposed in Esperanza.

1. **Gross Acres** - Except as otherwise indicated, gross acres for all development areas are measured to the centerline of streets.
2. **Grading** - Development within the Specific Plan area shall utilize grading techniques as approved by the City of Ontario. Grading concepts shall respond to the design guidelines included in the Esperanza Specific Plan which guide the development of land use toward the goal of providing for a livable community with streets and entries designed for walking and resident interaction.
3. **Building Modification** - Additions and alterations permitted by the Esperanza Specific Plan shall match the architectural style of the primary unit and shall be constructed of the same materials, details, and colors as the primary unit.
4. **Utilities** - All new and existing public utility distribution lines of 35.5kV or less shall be subsurface throughout the planned community.
5. **Technology** - All homes and businesses shall accommodate modern telecommunications technology (OntarioNet) for computer internet access, phone, fax, and television. Broadband fiber optics cable will be installed to all the properties per the approved Fiber Optic Master Plan.

6. **Transfer of Dwelling Units** -The Esperanza Specific Plan allocates a total number of units to each Planning Area as indicated in the "Land Use Summary" Table 2, Section 4, of the Esperanza Specific Plan. Variations in the number and type of dwelling units within each residential Planning Area may occur at the time of final design of the neighborhood depending upon the residential product identified for development. Changes in allocation of residential units, up to a maximum of fifteen percent (15%), are permitted among the residential planning areas within the Esperanza Specific Plan, subject to approval by the City and upon agreement of each respective property owner/developer, provided the total number of units established for the Esperanza Specific Plan area is not exceeded.

7. **Best Management Practices –** Development of storm water runoff improvements, within the Esperanza Specific Plan, shall adhere to currently adopted Best Management Practices (BMP's). The Site Design BMP's may include but not be limited to creating landscape strips and landscaped setback areas that can be swaled and depressed to retain and infiltrate irrigation water and runoff from smaller storm events, drain rooftops into rain gutters which would drain into an area of porous subgrade, and depressing the park areas to provide storm water infiltration and water quality treatment. Common area landscaping and parks shall be designed to function as a series of shallow storm water treatment basins and infiltration zones for storm water runoff from surrounding areas wherever moderately well draining soils exist. Currently the City of Ontario is considering construction of a regional storm water runoff treatment facility for the sub-watershed area that this project lies within. If the treatment facility is constructed, it may satisfy the requirement for on-site treatment control BMP's for the Esperanza project.

8. **Maximum Number of Dwelling Units** - The maximum number of residential dwelling units permitted within the Esperanza Specific Plan is ~~1,594~~ 1,491 unless the 10.02 acre elementary school site is not purchased by the Mountain View School District. Pursuant to approval of a Specific Plan Amendment the total permitted residential dwelling units within the Esperanza Specific Plan area shall be ~~1,640~~ 1,652 dwelling units.

9. **Agricultural Buffer** - A minimum 100-foot separation shall be required between a new residential structure and an existing animal feed trough, corral/pen or an existing dairy/feed lot including manure stockpiles and related wastewater detention basins. The 100-foot separation requirement may be satisfied through an off-site easement with adjacent properties, acceptable to the Planning Director, submitted with a final map, and recorded prior to or concurrent with a final map.

10. **Solid Waste/Recycling** - Development within the Esperanza Specific Plan area shall comply with City of Ontario requirements for the provision and placement of solid waste and recycling receptacles.

6.6 Residential Development Standards

6.6.1 Residential Detached (RD-1 through RD-6)

6.6.1.1 General

This category includes the development of single family detached dwelling units. The purpose of the residential standards for single family detached housing is to establish the minimum criteria for the development of these product types on individual lots within the neighborhoods specified within Esperanza.

6.6.1.2 Permitted Uses

1. Single family detached dwellings.
2. Public or private parks, recreational buildings, greenbelts, and open space.
3. Accessory uses to include the following:
   a. Garages.
   b. Granny Flats (i.e. Second Dwelling Units, in accordance the City's Development Code.)
   c. Home occupations.
   d. Swimming pools, spas, sports courts, and other similar outdoor recreational amenities.
   e. Patios and patio covers.
   f. Storage, garden structures, cabanas, and greenhouses.
   g. Monument signage.
   h. Model home and subdivision sales trailers; temporary construction parking, offices, and facilities; real estate signs, signage indicating future development and directional signage in accordance with the City's Development Code.
